

FOREWORD

- This is Volume 1 of the 2010 PRIUS manual. There are four volumes to this manual. The sections included in each volume are indicated by black type in the Section Index. Use the Section Index of each volume to find the volume with the section you need.
- This manual applies to the models listed below. It covers all information in the previously issued Pub. No. RM1290U, and includes all production changes effective August, 2009 or later.

Applicable models	ZVW30 series
-------------------	--------------

- Please note that the publications below have also been prepared as relevant service manuals for the components and system in these vehicles.

Manual Name	Pub. No.
2010 PRIUS Electrical Wiring Diagram	EM1291U
2010 PRIUS New Car Features	NM1291U

- All information in this manual is based on the latest product information at the time of publication. However, specifications and procedures are subject to change without notice. For the most current information available, refer to the Toyota Technical Information System (TIS) online at dealership locations or on the Internet at <http://techinfo.toyota.com>.
- If you find any failures in this manual, you are kindly requested to inform us by using the report form on the next page.

- Repair Manual Quality Report

Att.) Service Manager, Your Distributor

Pub. No.

Issue Date

Name of Dealer

Name of Reporter

Subject

Problem Description

Correction Proposal

CAUTION

- This contents does not include all the necessary items about repair and service. This manual is made for the use of persons who have special techniques and certifications. If non-specialized or uncertified technicians perform repairs or service only using this manual or without proper equipment or tools, this may cause severe injury to you or other persons nearby and also cause damage to your customer's vehicle.
- In order to prevent dangerous operation and damage to your customer's vehicle, be sure to follow the instructions shown below.
 - This contents must be read thoroughly. It is especially important to have a good understanding of all the contents written in the PRECAUTION of "INTRODUCTION" section.
 - The service method written in this manual is very effective to perform repair and service. When performing the operations following the procedures using this manual, be sure to use tools specified and recommended. If using non-specified or tools other than recommended tools and service methods, be sure to confirm the safety of the technicians and that there is no possibility of causing personal injury or damage to the customer's vehicle before starting the operation.
 - If part replacement is necessary, the part must be replaced with the same part number or equivalent part. Do not replace it with an inferior quality part.
 - It is important to note that this manual contains various "Cautions" and "Notices" that must be carefully observed in order to reduce the risk of personal injury during service or repair, or reduce the possibility that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that these "Cautions" and "Notices" are not exaggerations and are possible hazardous consequences that might result from failure to follow these instructions.

GENERAL INFORMATION

- A large number of ECU controlled systems are used in this vehicle. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnosis and necessary repairs.
- (For using the Techstream*)

HINT:

*: The Techstream is the name for the diagnostic tester in North America.

- Before using the Techstream, read the operator's manual thoroughly.
- If the Techstream cannot communicate with the ECU controlled systems when connected to the DLC3 with the power switch on (IG) and the Techstream turned on, there is a problem on the vehicle side or the Techstream side.
 - i. If communication is possible when the Techstream is connected to another vehicle, inspect the diagnosis data link line (bus (+) line), CANH and CANL lines, and the power circuits for the vehicle ECUs.
 - ii. If communication is still not possible when the Techstream is connected to another vehicle, the problem is probably in the Techstream itself. Perform the Self Test procedure outlined in the Techstream operator's manual.

1. TROUBLESHOOTING PROCEDURES

- The troubleshooting procedures consist of diagnosis procedures for when a DTC is stored and diagnosis procedures for when no DTC is stored. The basic idea is explained in the following table.

Procedure Type	Details	Troubleshooting Method
DTC Based Diagnosis	The diagnosis procedure is based on the DTC that is stored.	The malfunctioning part is identified based on the DTC detection conditions using a process of elimination. The possible trouble areas are eliminated one-by-one by use of the Techstream and inspection of related parts.
Symptom Based Diagnosis (No DTCs stored)	The diagnosis procedure is based on problem symptoms.	The malfunctioning part is identified based on the problem symptoms using a process of elimination. The possible trouble areas are eliminated one-by-one by use of the Techstream and inspection of related parts.

- Vehicle systems are complex and use many ECUs that are difficult to inspect independently. Therefore, a process of elimination is used, where components that can be inspected individually are inspected, and if no problems are found in these components, the related ECU is identified as the problem and replaced.
- It is extremely important to ask the customer about the environment and the conditions present when the problem occurred (Customer Problem Analysis). This makes it possible to simulate the conditions and

confirm the symptom. If the symptom cannot be confirmed or the DTC does not recur, the malfunctioning part may not be identified using the troubleshooting procedure, and the ECU for the related system may be replaced even though it is not defective. If this happens, the original problem will not be solved.

- In order to prevent endless expansion of troubleshooting procedures, the troubleshooting procedures are written with the assumption that multiple malfunctions do not occur simultaneously for a single problem symptom.
- To identify the malfunctioning part, troubleshooting procedures narrow down the target by separating components, ECUs and wire harnesses during the inspection. If the wire harness is identified as the cause of the problem, it is necessary to inspect not only the connections to components and ECUs but also all of the wire harness connectors between the component and the ECU.

2. DESCRIPTION

(a) Each system data and the Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

3. CHECK DLC3

(a) The vehicle ECUs use ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbol	Terminal No.	Name	Reference Terminal	Result	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	11 to 14 V	Always
CANH	6	CAN "High" line	14 - CANL	54 to 69 Ω	Power switch off*
			Battery positive	6 k Ω or higher	Power switch off*
			4 - CG	200 Ω or higher	Power switch off*
CANL	14	CAN "Low" line	Battery positive	6 k Ω or higher	Power switch off*
			4 - CG	200 Ω or higher	Power switch off*

NOTICE:

*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

(1) Unless otherwise stated, all resistance measurements are standard values measured at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the vehicle has been running. Measurements should be made after the engine has cooled down.

(b) HANDLING CONNECTORS

Text in Illustration

*1	INCORRECT
*2	INCORRECT
*3	CORRECT

(1) When disconnecting a connector, first squeeze the mating connector housing halves tightly together to release the lock, and then press the lock claw and separate the connector.

(2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.

(3) Before connecting a connector, check that there are no deformations, damage, looseness or missing terminals.

(4) When connecting a connector, press firmly until it locks with a "click" sound.

(5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.

- As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.
- Do not damage the terminals by moving the inserted tester needle.

(c) CHECKING CONNECTORS

Text in Illustration

*1	Core Wire
*2	Looseness of Crimping
*3	Terminal Deformation
*4	Pull Lightly

(1) Checking when a connector is connected: Squeeze the connectors together to confirm that they are fully connected and locked.

(2) Checking when a connector is disconnected: Check by pulling the wire harness lightly from the backside of the connector. Look for unlatched terminals, missing terminals, loose crimps or broken conductor wires. Visually check for corrosion, metallic or foreign matter and water, and bent, rusted, overheated, contaminated or deformed terminals.

(3) Checking the contact pressure of the terminal: Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.

NOTICE:

When testing a gold-plated female terminal, always use a gold-plated male terminal.

(d) CONNECTOR TERMINAL REPAIR METHOD

Text in Illustration

*1	CORRECT
*2	INCORRECT

(1) If there is any foreign matter on the terminal, clean the contact point with compressed air or a cloth. Never rub the contact point using sandpaper as the plating may come off.

(2) If there is abnormal contact pressure, replace the female terminal. If

the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.

(3) Damaged, deformed or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.

(e) WIRE HARNESS HANDLING

Text in Illustration

*1	INCORRECT
*2	INCORRECT
*3	INCORRECT

(1) If removing a wire harness, check the wiring and clamps before proceeding so that it can be restored in the same way.

(2) Never twist, pull or slacken the wire harness more than necessary.

(3) The wire harness should never come into contact with any high temperature part, rotating, moving, vibrating or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.

(4) When installing parts, never pinch the wire harness.

(5) Never cut or break the cover of the wire harness. If it is cut or broken, repair it with insulating tape or replace the wire harness.

2. CHECK FOR OPEN CIRCUIT

(a) For an open circuit in the wire harness in Fig. 1, measure the resistance and voltage as follows:

(b) Check the resistance.

Fig. 2

(1) Disconnect connectors A and C and measure the resistance between the terminals of the connectors.

Standard Resistance (Fig. 2):

Tester Connection	Specified Condition
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1 Ω

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.

- If the results match the values specified above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance between the terminals of the connectors.

Fig. 3

Standard Resistance (Fig. 3):

Tester Connection	Specified Condition
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 2 - Connector C terminal 2	10 kΩ or higher

If the results match the values specified above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

(c) Check the voltage.

Fig. 4

(1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check.

With each connector still connected, measure the voltage between body ground and the following terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

Standard Voltage (Fig. 4):

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V

If the results match the values specified above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

3. CHECK FOR SHORT CIRCUIT

(a) If a wire in the harness is shorted to ground (Fig. 5), locate the shorted section by measuring the resistance as follows:

(b) Check the resistance to body ground.

(1) Disconnect connectors A and C and measure the resistance.

Standard Resistance (Fig. 6):

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 k Ω or higher

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.

- If the results match the values specified above, a short circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard Resistance (Fig. 7):

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	10 kΩ or higher
Connector B2 terminal 2 - Body ground	Below 1 Ω

If the results match the values specified above, a short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.
- When no measuring condition is specified, perform the inspection with the engine stopped and the power switch on (IG).
- Check that the connectors are fully seated. Check for loose, corroded or broken wires.

(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the symptoms occur. If the trouble symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.

Text in Illustration

*1	Ground
----	--------

Standard resistance:

Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminals on the ECU side and wire harness side for bent terminals, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

Text in Illustration

*1	Component without harness connected (ECU)

*3	Front view of wire harness connector (to ECU)
*4	Ground

HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:

Perform troubleshooting in accordance with the procedure below. The following is an outline of basic troubleshooting procedure. Confirm the troubleshooting procedure for the circuit you are working on before beginning troubleshooting.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	CUSTOMER PROBLEM ANALYSIS
----	---------------------------

(a) Ask the customer about the conditions and environment when the problem occurred.

NEXT

3.	INSPECT BATTERY VOLTAGE
----	-------------------------

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK
----	--

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.

(b) Warm up the engine to the normal operating temperature.

(c) Confirm the problem symptoms and conditions, and check for DTCs.

Result:

Result	Proceed to
DTC is output	A
DTC is not output	B

B ► GO TO STEP 6

A

5.	DTC CHART
----	-----------

(a) Find the output DTC in the DTC chart. Look at the Trouble Area column for a list of potentially malfunctioning circuits and/or parts.

NEXT ► GO TO STEP 7

6.	PROBLEM SYMPTOMS CHART
----	------------------------

(a) Find the problem symptoms in the problem symptoms table. Look at the Suspected Area column for a list of potentially malfunctioning circuits and/or parts.

NEXT
▼

7.	CIRCUIT INSPECTION OR PARTS INSPECTION
----	--

(a) Identify the malfunctioning circuit or part.

NEXT
▼

8.	ADJUST, REPAIR OR REPLACE
----	---------------------------

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT
▼

9.	CONFIRMATION TEST
----	-------------------

(a) After the adjustment, repairs or replacement of components, confirm that the malfunction no longer exists. If the malfunction does not recur, perform a confirmation test under the same conditions and in the same environment as when the malfunction first occurred.

NEXT ► END

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- When troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points for problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions

Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in this vehicle has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly.

By using these functions, the problem areas can be narrowed down and troubleshooting can be more effective. Diagnostic functions are incorporated in the following systems of this vehicle.

System	Symptom Confirmation and Diagnostic Trouble Code				
	DTC Check (Normal Mode)	DTC Check (Check Mode)	Sensor Check/Test Mode (Input Signal Check)	Data List	Active Test
SFI System (2ZR-FXE)	○	○	-	○	○

- In the DTC check, it is very important to determine whether the problem indicated by the DTC either: 1) still occurs, or 2) occurred in the past but has returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check for DTCs, depending on the case, may result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedure listed in the flowchart in the correct order.
- The following flowchart shows how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

1.	DTC CHECK
----	-----------

NEXT

2.	MAKE A NOTE OF DTC DISPLAYED AND THEN CLEAR MEMORY

----	----------------------

Result:

Result	Proceed to
No symptoms exist	A
Symptoms exist	B

If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.

B ▶ END

A ▶ TROUBLESHOOT FOR EACH PROBLEM SYMPTOM

The problem still occurs in a place other than the diagnostic circuit (the DTC displayed first is either for a past problem or a secondary problem).

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:

With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) is difficult to reproduce. The following symptom simulation tests are effective substitutes for the conditions and can be applied to a stationary vehicle. Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to Problem Symptoms Table for each system to narrow down the possible causes.

To reproduce DTCs, it is necessary to satisfy the respective DTC detection conditions.

(a) **VIBRATION METHOD:** When a malfunction seems to occur as a result of vibration.

Text in Illustration

*1	Vibrate Slightly
*2	Shake Slightly

(1) PART AND SENSOR

Apply slight vibration with a finger to the part of the sensor suspected to be the cause of the problem, and check whether the malfunction occurs.

NOTICE:

Applying strong vibration to relays may open the relays.

(2) CONNECTORS

Slightly shake the connector vertically and horizontally.

(3) WIRE HARNESS

Slightly shake the wire harness vertically and horizontally.

HINT:

The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

(b) HEAT METHOD: When a malfunction seems to occur when the area in question is heated.

(1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.

NOTICE:

- Do not heat components to more than 60°C (140°F). Exceeding this temperature may damage the components.
- Do not apply heat directly to parts in an ECU.

(c) WATER SPRINKLING METHOD: When a malfunction seems to occur on a rainy day or in high-humidity.

(1) Sprinkle water onto the vehicle and check if the malfunction occurs.

- Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.
- Never apply water directly onto the electronic components.

HINT:

If the vehicle has or had a water leak problem, the leak may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.

(d) **HIGH ELECTRICAL LOAD METHOD:** When a malfunction seems to occur when the electrical load is high.

(1) Turn on the heater blower, headlights, rear window defogger and all other electrical loads. Check if the malfunction recurs.

5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code Chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns is shown in the table below.

Item	Description
DTC No.	Indicates the diagnostic trouble code.
Detection Item	Indicates the system or details of the problem.
Trouble Area	Indicates the suspected areas of the problem.
See page	Indicates the page where the inspection procedure for each circuit is to be found, or gives instruction for checking and repairs.

6. PROBLEM SYMPTOMS TABLE

When no DTC is output but the problem still occurs, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptom are shown in the table. The suspected areas are listed in order of probability. A description of each of the table columns is shown in the following table.

HINT:

In some cases, the problem is not detected by the diagnostic system even though a problem symptom occurs. It is possible that the problem occurs outside the detection range of the diagnostic system, or that the problem occurs in a completely different system.

Item	Description
Symptom	-
Suspected Area	Indicates the circuit or part which needs to be checked.
See page	Indicates the page where the inspection procedure is located.

7. INSPECTION

A description of the main points for inspection of suspected areas is shown in the following table.

Item	Description
------	-------------

Item	Description
Description	The major role and operation of the circuit or system and its component parts are explained.
DTC No., DTC Detection Condition and Trouble Area	Indicates the diagnostic trouble codes, DTC detection conditions and suspected areas for a problem.
Wiring Diagram	<p>This is a wiring diagram for the circuit or system.</p> <p>This diagram can be used together with the Electrical Wiring Diagram to thoroughly understand the circuit.</p> <p>Wire colors are indicated by alphabetical codes. B = Black, L = Blue, R = Red, BR = Brown, LG = Light Green, V = Violet, G = Green, O = Orange, W = White, GR = Gray, P = Pink, Y = Yellow, SB = Sky Blue</p> <p>The first letter indicates the basic wire color and the second letter indicates the color of the stripe.</p>
Inspection Procedure	This shows the procedure not only to determine whether the circuit is normal or abnormal, but also to determine whether the problem is located in the sensors, actuators, wire harness or ECU.
Illustration of the ECU connector during the check	<p>The illustration shows whether the connector being checked is connected or disconnected.</p> <p>The connections for an electrical tester are indicated by (+) or (-) after the terminal name.</p> <p>For inspections between a connector and body ground, information about the ground is not shown in the illustration.</p>

GENERAL INFORMATION

1. GENERAL DESCRIPTION

- (a) This manual is written in accordance with SAE J2008.
- (b) Repair operations can be separated mainly into the following 3 processes:
 - (1) Diagnosis
 - (2) Removing / Installing, Replacing, Disassembling / Reassembling, Checking and Adjusting
 - (3) Final Inspection
- (c) The following procedure is omitted from this manual. However, this procedure must be performed.
 - (1) Use a jack or lift to perform operations.
 - (2) Clean all removed parts.
 - (3) Perform a visual check before and after performing any work.

2. INDEX

- (a) An alphabetical INDEX section is provided at the end of the manual as a reference to help find the item to be repaired.

3. PREPARATION

- (a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the work procedure properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

- (a) A component illustration is placed under the title where necessary.
- (b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.
 - The following illustration is an example.

(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedures.

HINT:

There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do it
Task heading	What work will be performed
Explanation text	<ul style="list-style-type: none"> • How to perform the task • Information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

(f) Procedures are presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

6. TERM DEFINITIONS

CAUTION	Possibility of injury to you or other people.
----------------	---

NOTICE	Possibility of damage to components being repaired.
HINT	Provides additional information to help you perform repairs.

7. INTERNATIONAL SYSTEM OF UNITS

(a) The units used in this manual comply with the International System of Units (SI UNIT) standard. Other units from the metric system and the English systems are also provided.

- Example:

Torque: **30 N·m (310 kgf·cm, 22ft·lbf)**

PRECAUTION

1. BASIC REPAIR HINT

(a) HINTS ON OPERATIONS

c

1	Attire	<ul style="list-style-type: none"> • Always wear a clean uniform. • A hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting work.
3	Safety procedures	<ul style="list-style-type: none"> • When working with 2 or more persons, be sure to check the safety of one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving, or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others. • When jacking up the vehicle, be sure to support the specified locations with safety stands. • When lifting up the vehicle, use appropriate safety equipment.
4	Preparation of tools and measuring equipment	Before starting work, prepare a tool stand, SST, measuring equipment, oil, and any replacement parts required.
5	Removal and installation, disassembly and	<ul style="list-style-type: none"> • Diagnose with a thorough understanding of proper procedures and of the reported problem.

	assembly operations	<ul style="list-style-type: none"> • Before removing any parts, check the general condition of the assembly and for deformation and damage. • If the procedure is complicated, take notes. For example, note the total number of electrical connections, bolts, or hoses removed. Add matchmarks to ensure reassembly of components in the original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.
6	Removed parts	<ul style="list-style-type: none"> • Place the removed parts in a separate box to avoid mixing them up with new parts or contaminating the new parts. • For non-reusable parts such as gaskets, O-rings and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection, if requested.

(b) JACKING UP AND SUPPORTING VEHICLE

(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.

(c) PRECOATED PARTS

Text in Illustration

*1	Seal Lock Adhesive
----	--------------------

(1) Precoated parts are bolts and nuts that are coated with seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.

(3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriately to that part.

(4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.

(d) GASKETS

(1) When necessary, use a sealer on gaskets to prevent leaks.

(e) BOLTS, NUTS AND SCREWS

(1) Carefully follow all the specifications for tightening torque. Always use a torque wrench.

(f) FUSES

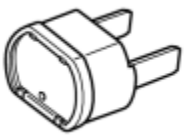

Text in Illustration

*1	INCORRECT
*2	CORRECT

- (1) When inspecting a fuse, check that the wire of the fuse is not broken.
- (2) If the wire of a fuse is broken, confirm that there are no shorts in its circuit.
- (3) When a fuse is replaced, a fuse with the same amperage rating must be used.

Illustration	Symbol	Part Name	Abbreviation
 N	 N	FUSE	FUSE
 N	 N	MEDIUM CURRENT FUSE	M-FUSE
 N	 N	HIGH CURRENT FUSE	H-FUSE
		FUSIBLE LINK	FL

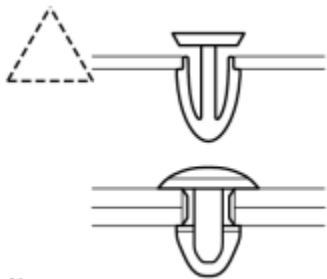

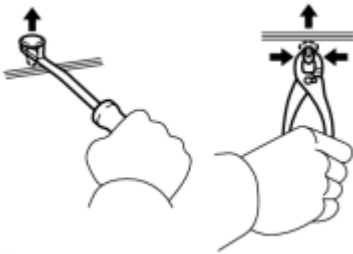

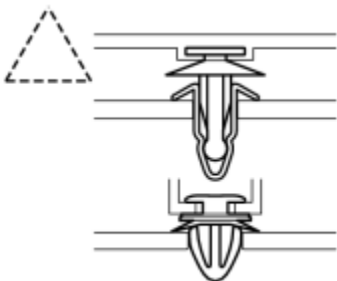

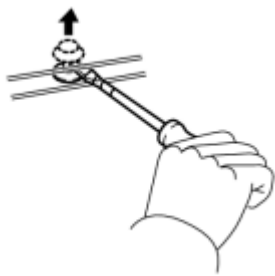

Illustration	Symbol	Part Name	Abbreviation
 N	 N		
 N	 N	CIRCUIT BREAKER	CB

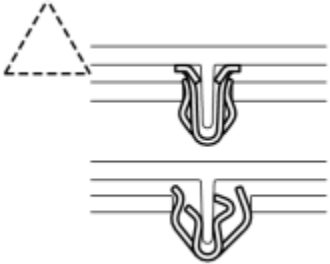

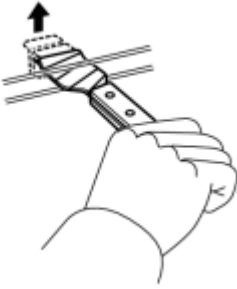

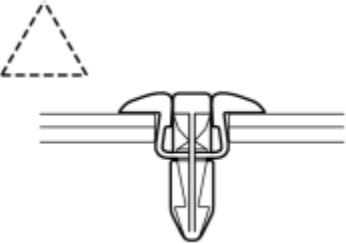

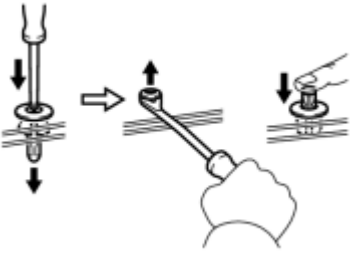

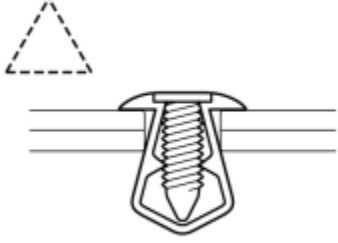

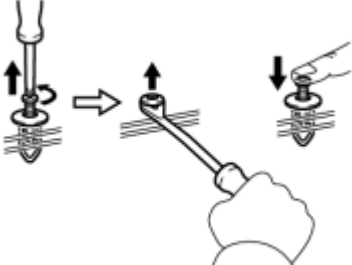

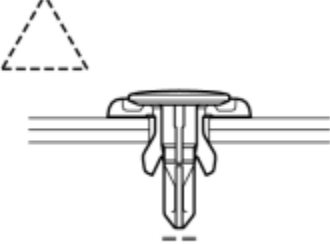

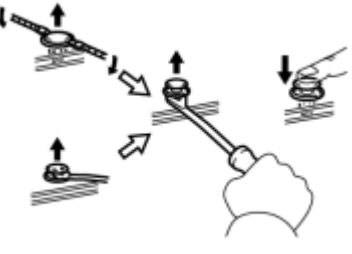

(g) CLIPS

(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

HINT:

If clips are damaged during a procedure, always replace the damaged clips with new ones.

Shape (Example)	Removal/Installation
 N	 N Remove the clips with a clip remover or pliers.
 N	 N Remove the clips with a clip remover or screwdriver.

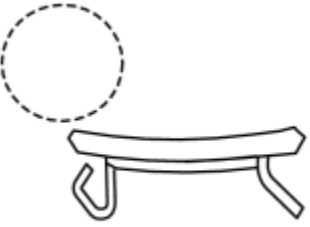

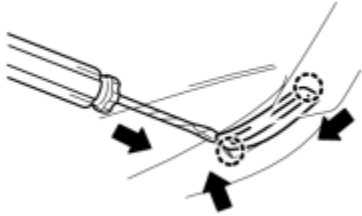

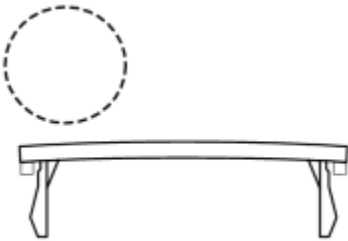

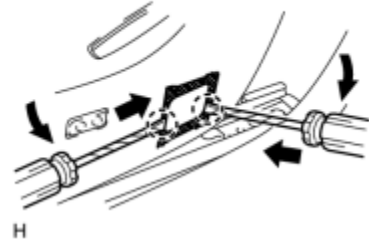

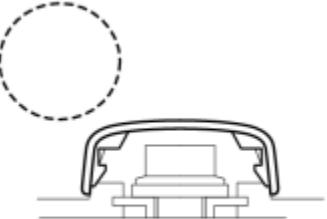

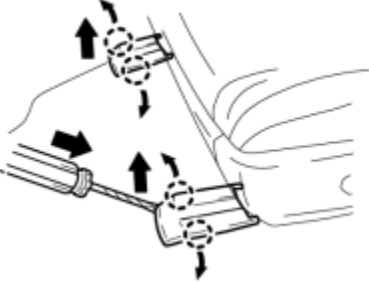

Shape (Example)	Removal/Installation
 <p>N</p>	 <p>N</p> <p>Remove the clips with a wide scraper to prevent panel damage.</p>
 <p>N</p>	 <p>N</p> <p>Remove the clips by pushing the center pin through and prying out the shell.</p>
 <p>N</p>	 <p>N</p> <p>Remove the clips by unscrewing the center pin and prying out the shell.</p>
 <p>N</p>	 <p>N</p> <p>Remove the clips by prying out the pin and then prying out the shell.</p>

(h) CLAWS

(1) The removal and installation methods of typical claws used for vehicle body parts are shown in the table below.

HINT:

If claws are damaged during a procedure, always replace the cap or cover that has damaged claws with a new one.

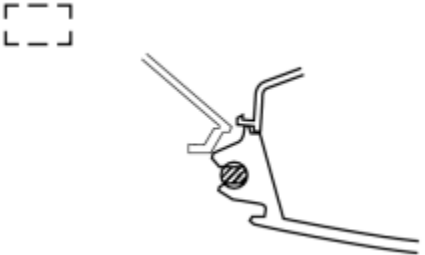

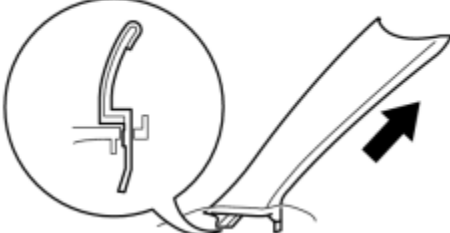

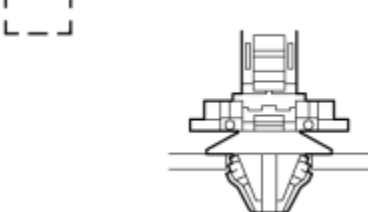

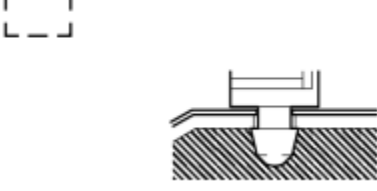

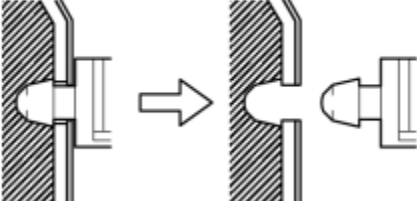

Shape (Example)	Illustration	Procedure
		<p>Using a screwdriver, disengage the claws and remove the cap or cover.</p>
		<p>Using a screwdriver, disengage the claws and remove the cap or cover.</p>
		<p>Using a screwdriver, detach the claws and remove the cap or cover.</p>

(i) HINGES, GUIDES, CLAMPS, PINS, ETC.

(1) The removal and installation methods of typical hinges, guides, clamps and pins used for vehicle body parts are shown in the table below.

HINT:

If clamps are damaged during a procedure, always replace the cap or cover that has damaged clamps with a new one.

Shape (Example)	Removal/Installation
	<p data-bbox="852 304 1242 325">Pull away from the pins to disengage.</p> 
	<p data-bbox="901 661 1209 682">Disengage the pins by pulling.</p> 
	<p data-bbox="909 1060 1234 1081">Remove the clamps with pliers.</p> 
	<p data-bbox="901 1459 1209 1480">Disengage the pins by pulling.</p> 

(j) REMOVAL AND INSTALLATION OF VACUUM HOSES

(1) To disconnect a vacuum hose, pull and twist it from the end of the hose. Do not pull it from the middle of the hose as this may damage the

hose.

Text in Illustration

*1	INCORRECT
*2	CORRECT

(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing any hose related repairs, double-check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, air may leak. Use a step-down adapter if necessary.

(k) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL

(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with a torque wrench.

Formula

$$T' = (L2 / (L1 + L2)) * T$$

T'	Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}
T	Torque {N*m (kgf*cm, ft.*lbf)}
L1	Length of SST or extension tool {cm (in.)}

NOTICE:

If an extension tool or SST is combined with a torque wrench and used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. PRECAUTIONS FOR HIGH-VOLTAGE CIRCUIT INSPECTION AND SERVICE**CAUTION:**

The vehicle has a hybrid system that operates at voltages up to 650 V. The hybrid system uses an HV battery that contains an electrolyte which is a strong alkali solution that includes potassium hydroxide. Be sure to follow the instructions in this manual to handle the system correctly. Failure to do so may result in serious injury or electrocution.

- (a) Technicians must undergo special training to be able to service and inspect the high-voltage system.
- (b) All high-voltage wire harnesses and connectors are colored orange. The HV battery and other high-voltage components have "High Voltage" caution labels. Do not carelessly touch these wires or components.
- (c) When there is a problem with the wire harness or connector of a high-voltage circuit, repairs to the harness or connector should not be attempted. Replace damaged or malfunctioning high voltage cables or connectors.
- (d) Before inspecting or servicing the high-voltage system, be sure to follow all safety measures, such as wearing insulated gloves and removing the service plug to prevent electrocution. Carry the removed service plug in your pocket to prevent other technicians from accidentally reconnecting it while you are servicing the vehicle.

c

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(e) After removing the service plug, wait 10 minutes before touching any of the high-voltage connectors and terminals.

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

(f) Before using insulated gloves, be sure to check them for cracks, tears and other types of damage by performing the following procedure.

T

1. Place the glove on its side.
2. Roll the opening up 2 or 3 times.
3. Fold the opening in half to close it.
4. Confirm that there are no air leaks.

(g) When servicing the vehicle, do not carry metal objects like mechanical pencils or rulers that can be dropped accidentally and cause a short circuit.

(h) Before touching a bare high-voltage terminal, wear insulated gloves and use a tester to make sure that the terminal voltage is 0 V.

(i) After disconnecting or exposing a high-voltage connector or terminal, insulate it immediately using insulating tape.

(j) Bolts and nuts for high-voltage terminals should be tightened firmly to the specified torque. Both insufficient and excessive torque can cause failure.

(k) Use the "CAUTION: HIGH VOLTAGE DO NOT TOUCH" sign to notify other technicians that the high-voltage system is being inspected and/or repaired.

P

(l) After servicing the high-voltage system and before reinstalling the service plug, check again that you have not left a part or tool inside, that the high-voltage terminals are firmly tightened, and that the connectors are correctly connected.

(m) When installing hybrid system components such as the HV battery, make sure that the polarity of all connections is correct.

3. PRECAUTIONS TO BE OBSERVED WHEN INSPECTING OR SERVICING ENGINE COMPARTMENT

(a) The vehicle automatically turns the engine on and off when the READY light on the instrument panel is illuminated. To avoid injury, make sure that both the indicator on the power switch and the READY light on the meter are off.

4. ACTIONS TO BE TAKEN WHEN A WARNING LIGHT IS LIT

Text in Illustration

*1	READY Light	*2	Master Warning Light
*3	MIL	*4	Charge Warning Light
*5	Multi-information Display	-	-

(a) If one of the warning lights (2) to (4) illuminates, connect the Techstream to the DLC3 to check the DTCs (Diagnostic Trouble Codes). Then, refer to the applicable troubleshooting steps in this manual to inspect and repair the affected area. The foregoing actions are also required if the READY light does not illuminate when attempting to turn the power switch on (READY).

Indicator Light	Vehicle Condition
(1) READY (TO DRIVE)	Illuminates when the power switch is turned on (READY), indicating that the vehicle is ready to be driven.
(2) Master Warning Light	The master warning light comes on or flashes to indicate that a warning is currently being displayed on the multi-information display. Depending on the warning, the buzzer may also sound.

Indicator Light	Vehicle Condition
	When any malfunction occurs in the hybrid system or hybrid battery system, the master warning light comes on or flashes along with a buzzer, and a warning, "CHECK HYBRID SYSTEM", is displayed on the multi-information display.
(3) MIL	Illuminates when there is a malfunction in the engine control system. (Also illuminates when the power switch is turned on.)
(4) Charge Warning Light	Illuminates when there is a malfunction in the charging system. (Be sure to check the DTC (Diagnostic Trouble Code) if this light illuminates together with the master warning light.)

5. ACTIONS TO BE TAKEN WHEN BATTERIES ARE DISCHARGED

HINT:

The vehicle uses a 12 V auxiliary and a 201.6 V hybrid vehicle battery. Therefore, there are two recharging methods when the batteries are discharged.

(a) Perform this procedure when the auxiliary battery is fully discharged.

HINT:

The following problems indicate that the auxiliary battery is discharged:

- No display appears on the instrument panel when the power switch is turned on (IG).
- The hybrid system does not start.
- The headlights are dim.
- The sound from the horn is weak.
- Park (P) cannot be disengaged.

NOTICE:

Never use a quick charger.

(1) Engage the parking brake.

(2) Turn the power switch off and remove the key from the interior detection area.

(3) Using booster cables, connect the 12 V battery of the rescue vehicle and the auxiliary battery of the stalled vehicle as shown in the illustration.

HINT:

Use the booster terminal in the engine compartment.

Connecting Sequence	Connecting Location
---------------------	---------------------

1	Positive booster terminal of stalled vehicle
2	Positive battery terminal of rescue vehicle
3	Negative battery terminal of rescue vehicle
4	Engine mounting insulator RH bolt

c

(4) Start the engine of the rescue vehicle and run the engine at a speed slightly higher than usual.

(5) Turn the power switch on (READY).

NOTICE:

Immediately disconnect the booster cables in the reverse order of connection after the hybrid system have started. Do not leave the booster cables connected because they are not designed for recharging purposes.

If the hybrid system fails to start and the HV battery warning illuminates, the HV battery may be discharged.

Text in Illustration

*1	Master Warning Light	*2	Multi-information Display
----	----------------------	----	---------------------------

(b) When the hybrid vehicle battery is discharged:

(1) Using the THS charger, charge the hybrid vehicle battery.

HINT:

Perform this operation when the hybrid vehicle battery is discharged or low, or if Low Traction Battery is displayed and DTC P3000-388 or 389 is stored in the power management control ECU (HV CPU).

6. ACTIONS TO BE TAKEN FOR VEHICLES DAMAGED BY IMPACT

CAUTION:

The vehicle has a hybrid system that operates at voltages of up to 650 V. The hybrid system uses an HV battery that contains an electrolyte which is a strong alkali solution that includes potassium hydroxide. Be sure to follow the instructions in this manual to handle the system correctly. Failure to do so may result in serious injury or electrocution.

(a) Items to be prepared for the accident site

- Protective clothing (insulated gloves, rubber gloves, goggles, and safety shoes)
- Saturated boric acid solution 20 liter (21.1 US qts, 17.6 Imp.qts) (obtain 800 g (1.7 lb) of boric acid powder, put it into a container, and dissolve it in water)
- Red litmus paper
- ABC fire extinguisher (effective against both oil flames and electrical flames)
- A shop rag or piece of cloth (for wiping off the electrolyte)
- Insulating tape (for insulating cable)

- Electrical tester

(b) Actions to be taken at the accident site

CAUTION:

- Do not touch any bare cables that may have high-voltage. If a cable must be touched or if accidental contact is possible, wear insulated gloves and insulate the cable using insulating tape.
- If the vehicle catches on fire, use an ABC fire extinguisher to extinguish the fire. Trying to extinguish a fire using only a small amount of water can be more dangerous than effective. Use a substantial amount of water or wait for firefighters.
- Visually check the HV battery and the immediate area for any electrolyte leakage. Do not touch any leaked liquid because it could be highly alkaline electrolyte.
- Work on the vehicle only after the vehicle has been pulled out of the water.

(1) Check the vicinity of the hybrid vehicle battery for any leakage of the electrolyte.

CAUTION:

Do not touch any leaked liquid because it could be highly alkaline electrolyte. Wear rubber gloves and goggles, neutralize the liquid with saturated boric acid solution, and then apply red litmus paper to the liquid. Check that the paper does not turn blue. Wipe the neutralized liquid with a shop rag or piece of cloth.

(2) If damage to any of the high-voltage components and cables is suspected, cut the high-voltage circuit using the following procedure.

CAUTION:

Be sure to wear insulated gloves, goggles, and safety shoes.

c

Text in Illustration

*1	Inverter with Converter Assembly	*2	Engine Room Junction Block Assembly
*3	Auxiliary Battery	*4	HV battery Assembly
*5	No. 3 Wire Frame	*6	Hybrid Vehicle Transaxle Assembly
*7	Water Pump with Motor Assembly	*8	Compressor with Motor Assembly

(3) Turn the power switch off.

Text in Illustration

*1	AM2 Fuse
*2	IGCT Fuse
*3	Engine Room Junction Block Assembly

HINT:

If the power switch cannot be turned off, remove the IGCT fuse and AM2 fuse from the engine room junction block assembly. Confirm that the READY light is off.

(4) Disconnect the cable from the negative terminal of the auxiliary battery.

(5) Wear insulated gloves, and then remove the service plug.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(c) Moving the damaged vehicle

If any of the following conditions is met, tow the vehicle away using a tow truck.

- One or more of the high-voltage components and cables are damaged.
- Components related to driving, the transaxle, or the fuel system are damaged.
- The master warning light is on.
- The READY light does not come on when attempting to turn the power switch on (READY).

CAUTION:

Before towing the vehicle away using a tow truck, disconnect the cable from the negative (-) terminal of the auxiliary battery and remove the service plug.

NOTICE:

Perform the procedure below if the READY light turns off, or there are abnormal noises, unusual smells, or strong vibrations while driving:

- (1) Park the vehicle in a safe place.
- (2) Push the P position switch, and apply the parking brake.
- (3) Turn the power switch off, and disconnect the cable from the negative (-) terminal of the auxiliary battery.
- (4) Remove the service plug while wearing insulated gloves.

(d) Actions required after moving the damaged vehicle

(1) Procedure

If you see any liquid on the road surface, it could be highly alkaline electrolyte leakage.

Wear rubber gloves and goggles, neutralize the liquid with saturated boric acid solution, and then apply red litmus paper to the liquid. Check that the paper does not turn blue. Wipe the neutralized liquid with a shop rag or piece of cloth.

(e) Items to be prepared (when repairing a damaged vehicle)

- Protective clothing (insulated gloves, rubber gloves, goggles, and safety shoes)
- Saturated boric acid solution 20 liter (21.1 US qts, 17.6 Imp.qts) (obtain 800 g (1.7 lb) of boric acid powder, put it into a container, and dissolve it in water)
- Red litmus paper
- A shop rag or piece of cloth (for wiping off the electrolyte)
- Insulating tape (for insulating cables)
- Electrical tester

(f) Precautions to be observed when servicing a damaged vehicle

CAUTION:

Always follow instructions to ensure safety.

(1) Wear insulated or rubber gloves, goggles, and safety shoes.

(2) Check the HV battery and immediate area for any electrolyte leakage.

CAUTION:

- Do not touch any leaked liquid because it could be highly alkaline electrolyte. Wear rubber gloves and goggles, neutralize the liquid with saturated boric acid solution, and then apply red litmus paper to the liquid. Check that the paper does not turn blue. Wipe the neutralized liquid with a shop rag or piece of cloth.
- If the electrolyte comes in contact with your skin, use a saturated boric acid solution or a large amount of water to wash it off. If the electrolyte comes in contact with an article of clothing, take it off immediately.
- If the electrolyte comes in contact with your eyes, call out loudly for help. Do not rub your eyes. Wash them immediately with a large amount of water and seek medical care.

(3) Do not touch any bare cables that could be high voltage cables. If a cable must be touched or if accidental contact is possible, follow the following instructions: 1) wear insulated gloves and goggles, 2) measure the voltage between the cable and body ground using an electrical tester, and 3) insulate the cable using insulating tape.

(4) If damage to any of the high-voltage components and cables is suspected, cut the high-voltage circuit using the procedure below.

CAUTION:

Do not touch any bare cables that may have high-voltage. If a cable must be touched or if accidental contact is possible, wear insulated gloves and insulate the cable using insulating tape.

(5) Turn the power switch off.

Text in Illustration

*1	AM2 Fuse
*2	IGCT Fuse
*3	Engine Room Junction Block Assembly

HINT:

If the power switch cannot be turned off, remove the IGCT fuse and AM2 fuse from the engine room junction block assembly. Confirm that the READY light is off.

(6) Disconnect the cable from the negative terminal of the auxiliary battery.

(7) Wear insulated gloves, and then remove the service plug.

NOTICE:

After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(g) Precautions to be taken when disposing of the vehicle

(1) Disposing of HV battery

When scrapping the vehicle, remove the HV battery from the vehicle and return it to the location specified by the manufacturer. Any damaged HV battery should also be returned to the specified location.

CAUTION:

- After removing the HV battery, keep it away from water. Water may heat the battery, resulting in a fire.
- Accidents such as electric shocks could result if the vehicle and its HV battery are disposed of improperly or abandoned. Therefore, make sure to return any HV battery using the prescribed recovery route through a TOYOTA dealer.

(h) Precautions to be observed when towing

(1) Tow the damaged vehicle with its front and rear wheels lifted off the ground.

CAUTION:

Towing the damaged vehicle with its front wheels on the ground will cause the motor to generate electricity. This electricity could, depending on the nature of the damage, leak and cause a fire.

(i) Towing with the 4 wheels on the ground

CAUTION:

- If the vehicle needs to be towed using a rope with all 4 wheels on the ground, do not exceed 30 km/h (19 mph) and tow only for a short distance and then have the vehicle towed by a truck.
- Turn the power switch on (IG) and move the selector lever to N.
- If any abnormality is present in the damaged vehicle during towing, stop towing immediately.

HINT:

Neutral (N) cannot be selected if the auxiliary battery is disconnected.

7. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

This vehicle is equipped with a Supplemental Restraint System (SRS).

CAUTION:

- Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.
- Failure to carry out the service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing and lead to serious injury. Furthermore, if a mistake is made when servicing the SRS, it is possible that the SRS may fail to operate properly. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following section carefully.

(a) GENERAL NOTICE

(1) As malfunctions of the SRS are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check for DTCs before disconnecting the battery.

(2) Work must be started at least 90 seconds after the power switch is turned off and after the cable is disconnected from the negative (-) battery terminal.

The SRS is equipped with a back-up power source. If work is started within 90 seconds after turning the power switch off and disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.

When the cable is disconnected from the negative (-) battery terminal, the clock and audio system memory will be cleared. Before starting work, make a note of the settings of each memory system. When work is finished, reset the clock and audio system as before.

CAUTION:

Never use a back-up power source (battery or other) to avoid clearing the system memory. The back-up power source may inadvertently power the SRS and cause it to deploy.

(3) If the vehicle has been involved in a minor collision where the SRS does not deploy, the steering pad, front passenger airbag assembly, knee airbag assembly, seat side airbag assembly, curtain shield airbag assembly and seat outer belt assembly should be inspected before further use of the vehicle.

- (4) Never use SRS parts from another vehicle. When replacing parts, use new parts.
- (5) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.
- (6) Never disassemble and attempt to repair any airbag sensor assemblies or airbag assemblies.
1. Steering pad
 2. Front passenger airbag assembly
 3. Knee airbag assembly
 4. Seat side airbag assembly
 5. Curtain shield airbag assembly
 6. Front seat outer belt assembly
- (7) Replace the airbag sensor assemblies and the airbag assemblies if: 1) damage has occurred from being dropped, or 2) cracks, dents or other defects in the case, bracket or connector are present.
- (8) Do not directly expose the airbag sensor assemblies or airbag assemblies to hot air or flames.
- (9) Use a voltmeter/ohmmeter with high impedance (minimum = 10 kΩ) for troubleshooting electrical circuits.
- (10) Information labels are attached to the SRS components. Follow the instructions on the labels.
- (11) After work on the SRS is completed, check the SRS warning light.

(b) SPIRAL CABLE

Text in Illustration

*1	Alignment Mark
----	----------------

(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position. Otherwise, cable damage and other problems may occur. Refer to the information about correct installation of the steering wheel INFO.

(c) STEERING PAD

(1) Always place a removed or new steering pad with the surface facing upward as shown in the illustration. Placing the steering pad with the pad surface facing downward could cause a serious accident if the airbag deploys. Also, do not place anything on top of the steering pad.

c

Text in Illustration

*1	CORRECT	*2	INCORRECT
----	---------	----	-----------

(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

(3) Grease or detergents of any kind should not be applied to the steering pad.

(4) Store the steering pad in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of the vehicle or the steering pad by itself, the airbag should be deployed using SST before disposal INFO. Deploy the airbag in a safe place away from electrical noise.

(d) FRONT PASSENGER AIRBAG ASSEMBLY

(1) Always place a removed or new front passenger airbag assembly with the pad surface facing upward as shown in the illustration. Placing the airbag assembly with the airbag deployment direction facing downward could cause a serious accident if the airbag deploys.

*1

*2

c

Text in Illustration

(3) Grease or detergents of any kind should not be applied to the front passenger airbag assembly.

(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of the vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal INFO. Deploy the airbag in a safe place away from electrical noise.

(e) KNEE AIRBAG ASSEMBLY

(1) Always place a removed or new knee airbag assembly with the airbag deployment direction facing upward as shown in the illustration. Placing the airbag assembly with the airbag deployment direction facing downward could cause a serious accident if the airbag deploys.

c

Text in Illustration

*1	CORRECT	*2	INCORRECT
----	---------	----	-----------

(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

H

(3) Grease or detergents of any kind should not be applied to the knee airbag assembly.

(4) Store the knee airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or knee airbag assembly unit by itself, the airbag should be deployed using SST before disposal INFO. Deploy the airbag in a safe place away from electrical noise.

(f) SEAT SIDE AIRBAG ASSEMBLY

(1) Always place a removed or new seat side airbag assembly with the airbag deployment direction facing upward.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

(3) Grease or detergents of any kind should not be applied to the seat side airbag assembly.

(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal INFO. Deploy the airbag in a safe place away from electrical noise.

(g) CURTAIN SHIELD AIRBAG ASSEMBLY

(1) Always place a removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.

P

Text in Illustration

*1	CORRECT	*2	INCORRECT
*3	Clear Plastic Bag	-	-

CAUTION:

The plastic bag should be disposed of after use.

NOTICE:

Never disassemble the curtain shield airbag assembly.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

(3) Grease or detergents of any kind should not be applied to the curtain shield airbag assembly.

(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal **INFO**. Deploy the airbag in a safe place away from electrical noise.

(h) FRONT SEAT OUTER BELT ASSEMBLY (SEAT BELT PRETENSIONER)

(1) Never measure the resistance of the front seat outer belt assembly. This may cause the pretensioner of the front seat outer belt assembly to activate, which could cause serious injury.

(2) Never disassemble the front seat outer belt assembly.

(3) Never install the front seat outer belt assembly on another vehicle.

(4) Store the front seat outer belt assembly in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the front seat outer belt assembly unit by itself, the front seat outer belt assembly should be activated before disposal **INFO**. Activate the front seat outer belt assembly in a safe place away from electrical noise.

(7) As the front seat outer belt assembly is hot after being activated, allow some time for it to cool down sufficiently before disposal. Never apply water to cool down the front seat outer belt assembly.

(8) Grease, detergents, oil or water should not be applied to the front seat outer belt assembly.

(i) CENTER AIRBAG SENSOR ASSEMBLY

(1) Never reuse a center airbag sensor assembly that has been involved in a collision where the SRS has deployed.

(2) The connectors to the center airbag sensor assembly should be connected or disconnected with the sensor installed to the vehicle. If the connectors are connected or disconnected while the center airbag sensor assembly is not installed, the SRS may activate.

(3) Work must be started at least 90 seconds after the power switch is turned off and the cable is disconnected from the negative (-) battery terminal, even if only loosening the bolts of the center airbag sensor assembly.

(j) WIRE HARNESS AND CONNECTOR

(1) All the connectors in the system are a standard yellow color. If an SRS wire harness has an open circuit or a connector is broken, replace it.

8. ELECTRONIC CONTROL

Text in Illustration

*1	Cable
*2	Negative (-) Battery Terminal

NOTICE:

- Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.
- When the auxiliary battery is replaced or the cable is disconnected from its negative (-) battery terminal, the ISC learning value will be initialized and symptoms as a loud rattle from the hybrid vehicle transaxle assembly may occur until ISC learning is performed. Therefore, perform ISC learning when the auxiliary battery is replaced or the cable is disconnected from the negative (-) terminal of the auxiliary battery INFO.

(a) DISCONNECTING AND RECONNECTING NEGATIVE BATTERY CABLE

(1) Before performing work on electronic components, disconnect the cable from the negative (-) battery terminal to prevent damage to the electrical system or components.

(2) When disconnecting the cable, turn the power switch and headlight switch off and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then, disconnect the cable.

(3) Clock settings, radio settings, audio system memory, DTCs and other data will be cleared when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.

(b) HANDLING OF ELECTRONIC PARTS

Text in Illustration

*1

INCORRECT

*1

(1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static electricity.

(2) Do not pull on the wires when disconnecting electronic connectors. Pull on the connector itself.

(3) Do not drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.

(4) When cleaning the engine compartment with steam, protect the electronic components, air filter and emission-related components from water.

(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.

(6) When measuring the resistance between terminals of a wire connector, insert the tester probe carefully to prevent the terminals from bending.

9. FOR VEHICLES EQUIPPED WITH REMOTE AIR CONDITIONING SYSTEM AND SOLAR VENTILATION SYSTEM

(a) Vehicles with the remote air conditioning system have the following risks that it is necessary to be aware of when performing repairs. Therefore, make sure to take care of the key (electrical transmitter) carefully so that the remote air conditioning system is not operated unexpectedly.

Risks

The electrical fan and other items in the engine compartment may operate resulting in various hazards.

The wipers may operate if the wiper switch is in the on position when the remote air conditioning system is activated. If this occurs, there is the potential for damage to the glass, wipers or injury.

When the light control switch is in the tail, head or AUTO position, the headlights may turn on.

Short circuits may occur if electrical inspections are being performed when the remote air conditioning system is turned on, because the IG circuit is powered at this time.

CAUTION:

Failure to take proper care with the key (electrical transmitter) may cause the system to be accidentally operated. This can lead to an accident and damage to parts or a serious injury.

HINT:

- Make sure to store the key (electrical transmitter) in a box with the switch side facing up, and place the box where it can be monitored so that no one cannot operate the remote A/C switch.
- For operating condition of the remote air conditioning system, refer to System Description .

(b) When performing repairs on vehicles with the solar ventilation system, turn the solar ventilation switch off.

CAUTION:

Depending on the environment around the vehicle, performing repairs with the solar ventilation switch on may cause the blower motor to operate unexpectedly, resulting in various hazards. This can lead to damage to parts or a serious injury.

10. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS

(1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other ignition sources nearby.

(2) Never work in a pit or near a pit as fuel vapors will collect there.

(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS

(1) Prepare a fire extinguisher before starting work.

(2) To prevent static electricity, install a ground wire between the fuel changer and vehicle, and do not spray the surrounding area with water. Be careful when performing work in this area, as the floor surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.

(3) Avoid using electric motors, work lights and other electric equipment that can cause sparks or high temperatures.

(4) Avoid using iron hammers as they may create sparks.

(5) Dispose of fuel-contaminated cloth separately using a fire resistant container.

11. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal particles enter intake system parts, this may damage the engine.

(b) When removing and installing intake system parts, cover the openings of the removed parts and engine openings. Use adhesive tape or other suitable materials.

(c) When installing intake system parts, check that no metal particles have entered the engine or installed parts.

12. HANDLING OF HOSE CLAMPS

Text in Illustration

*1	Clamp Track
*2	Spring Type Clamp

(a) Before removing a hose, check the clamp position so that it can be reinstalled in the same position.

(b) Replace any deformed or dented clamps with new ones.

(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.

(d) For a spring type clamp, it may be necessary to spread the tabs slightly after installation by pushing them in the direction of the arrows as shown in the illustration.

13. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

(a) Install an antenna as far away from the ECU and sensors of the vehicle electronic systems as possible.

(b) Install an antenna and feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensor locations, refer to the section on the applicable components.

(c) Keep the antenna and feeder separate from other wiring as much as possible. This will prevent signals sent from the communication equipment from affecting vehicle equipment and vice versa.

(d) Check that the antenna and feeder are correctly adjusted.

(e) Do not install a high-powered mobile communication system.

14. HEADLIGHT INSPECTION OR MAINTENANCE

*1

(a) When the headlights are illuminated, do not cover the headlights for 3 minutes or more.

Text in Illustration

*1 Illumination for 3 minutes or more prohibited if covered

NOTICE:

As the headlight outer lens is made of resin, the resulting heat created when covering the headlight for an extended period of time may deform the headlight.

15. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TR(A)C) AND VEHICLE STABILITY CONTROL (VSC) SYSTEMS

(a) NOTICES FOR WHEN TESTING WITH DRUM TESTER

(1) When testing with a 2-wheel drum tester such as a speedometer tester, a combination speedometer and brake tester, or a chassis dynamometer, perform the following procedure to enter inspection mode and disable the TR(A)C and VSC systems .

NOTICE:

- If the vehicle is tested in normal mode on the tester, TR(A)C and VSC operation may cause the vehicle to jump off of the tester.
- Secure the vehicle with chains for safety.

(b) NOTICES FOR VSC RELATED PROCEDURES

(1) For VSC related parts, adjustments are required after removal and installation. Therefore, perform removal and installation only when necessary.

(2) When performing VSC related procedures, be sure to strictly follow the preparation and completion procedures.

(3) When performing removal and installation or replacement of VSC related parts, first disconnect the cable from the negative (-) battery terminal.

16. WHEN INSPECTING VEHICLES

NOTICE:

When the vehicle is run in inspection mode for an operation such as a speedometer test, a DTC may be set. Therefore, if the warning light comes on, after canceling inspection mode, check for DTCs using the Techstream and clear the DTCs.

(a) VEHICLE CONDITIONS

(1) Before activating inspection mode, turn the air conditioning off, start the hybrid system with park (P) selected, and check that the engine stops within several seconds after starting (engine warm up check).

(2) Activate the appropriate inspection mode and inspect the vehicle .

HINT:

Different types of inspection mode are available. One is Maintenance Mode, and the other is Certification Mode. The following table indicates the mode appropriate for each test item.

The shift state for each test is as follows:

Test Item	Mode	Shift State
1. Vehicle straight travelling test (side slip inspection)	Maintenance mode or normal mode	D
2. Braking force test	Maintenance mode	N
3. Speedometer test	Maintenance mode	D
4. Exhaust gas test (idling)	Maintenance mode	P
5. Headlight test	Maintenance mode or normal mode	P

(3) Cancel inspection mode immediately after completion of inspection.

NOTICE:

Driving the vehicle without canceling inspection mode may damage the transaxle.

(b) WHEN USING A BRAKE TESTER

CAUTION:

Be sure to perform the test in maintenance mode.

NOTICE:

- A high-speed type brake tester cannot be used.
- Vehicle speed should be less than 0.5 km/h (0.3 mph).
- Follow all usage and safety procedures in the operator's manual for the brake tester.

(1) Place the wheels to be tested (front or rear) onto the rollers.

(2) Move the selector lever to N.

(3) Start the engine to allow normal brake booster operation.

(4) Operate the brakes to perform the test.

(c) WHEN USING A SPEEDOMETER TESTER

CAUTION:

Be sure to perform the test in maintenance mode.

NOTICE:

Do not perform rapid starting or quick acceleration on a speedometer tester. If rapid starting or quick acceleration is performed on a speedometer tester, damage may occur to the transaxle.

(1) Depress the accelerator pedal slowly and gradually accelerate the vehicle. Make a measurement.

(2) After the measurement, use the brakes to gradually decelerate the vehicle.

(d) WHEN USING A CHASSIS DYNAMOMETER

(1) Always set an appropriate load before starting the test.

NOTICE:

Sudden acceleration or deceleration of the vehicle on a chassis dynamometer under minimal load may damage the transaxle.

(e) WHEN USING AN ON-VEHICLE BALANCER

(1) Raise the vehicle until all 4 wheels are off the ground.

(2) Support the vehicle with safety stands at an appropriate height. Make sure that the vehicle does not lean in any direction, and that the tires are completely clear of the floor.

(3) Place the vibration pick-up unit into position for the wheel to be measured*1.

(4) Release the parking brake.

(5) Check that no dragging force exists when turning each wheel by hand.

(6) Put the wheel balancer in position.

(7) Wheel balance measurement should be done by using both the engine and the wheel balancer drive roller to spin the wheels.

HINT:

*1: Different on-vehicle wheel balancers have different requirements for mounting the vibration pick-up unit(s). Refer to the operator's manual for the wheel balancer to confirm requirements for use.

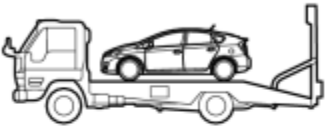

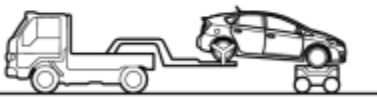

NOTICE:

- Be sure to perform the test in maintenance mode.
- Start the engine and then increase the vehicle speed gradually with drive (D) selected.
- Do not accelerate or decelerate suddenly.
- Deceleration should be done by braking gradually.
- Make sure that no one is standing in-line with the spinning wheels.
- Measurement should be done quickly.
- Confirm that the vehicle is securely immobilized.
- Follow all usage and safety procedures in the operator's manual for the wheel balancer.

17. WHEN TOWING VEHICLES

(a) Use one of the following methods to tow the vehicle.

(b) If the vehicle has trouble with the chassis or drive train, use method 1 (flatbed truck).

Conditions Towing Method	Parking Brake	Shift State
1. Flatbed Truck 	Applied	Any
2. Wheel Lift Type Truck From Front (using dollies)  From Rear 	Applied	Any
3. Wheel Lift Type Truck From Front (not using dollies) 	Released	P

NOTICE:

Do not use any towing method other than those shown above.

(c) If a tow truck is not available, in an emergency vehicle may be temporarily towed using a cable or chain secured to the emergency towing eyelet(s). This should only be attempted on hard surfaced roads for short distances below 30 km/h (19 mph).

A driver must be in the vehicle to steer and operate the brakes. The vehicle's wheels, drive train, axles, steering and brakes must be in good condition.

(1) Emergency towing procedure

1. Turn the power switch on (IG).
2. Depress the brake pedal and move the selector lever to N.
3. Release the parking brake.
4. Release the brake pedal slowly.

NOTICE:

- Use extreme caution when towing the vehicle.

Avoid sudden starts or erratic driving maneuvers which place excessive stress on the emergency towing eyelet and the cables or chains.

- If the hybrid system is off, the power assist for the brakes and steering will not function, making steering and braking more difficult.

(d) The following towing methods shown below are dangerous and can damage the vehicle, so do not use them.

(1) Do not tow the vehicle with only front wheels on the ground.

(2) Do not use a sling-type towing method either from the front or rear.

NOTICE:

If these towing methods are used either from the front or rear, the following may occur.

- The drive train may overheat and be damaged.
- If a sling-type tow truck is used, damage may occur to the vehicle body.

18. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause converter overheating and create a fire hazard. To prevent this, observe the following precautions:

(a) Use only unleaded gasoline.

(b) Avoid performing unnecessary spark tests.

(1) Perform a spark test only when absolutely necessary. Perform this test as rapidly as possible with the injector connector disconnected.

(c) While testing, never race the engine unless instructed.

(d) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN RAISING VEHICLE

- (a) The vehicle must be unloaded before jacking up or raising the vehicle. Never jack up or raise a heavily loaded vehicle.
- (b) When removing any heavy components like the engine or transaxle, the vehicle center of gravity will shift. To stabilize the vehicle, place a balance weight in a location that will prevent the vehicle from rolling or shifting, or place a transmission jack under the appropriate jack position at the opposite end of the vehicle.

2. NOTICE FOR USING 4 POST LIFT

- (a) Follow the safety procedures outlined in the lift's instruction manual.
- (b) Do not damage the tires or wheels while driving onto the lift.
- (c) Use wheel chocks to secure the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STANDS

- (a) Work on a level surface. Use wheel chocks at all times.

- (b) Use safety stands with rubber attachments as shown in the illustration.

Text in Illustration

*1	Rubber Attachment
----	-------------------

- (c) Set the jack and safety stands exactly under the specified locations on the vehicle.
- (d) Do not work on or leave the vehicle supported only by a jack. Be sure to support the vehicle with safety stands.
- (e) When jacking up the vehicle, first release the parking brake and move the selector lever to N.
- (f) When jacking up the entire vehicle:
 - (1) When jacking up the front wheels first, make sure wheel chocks are behind the rear wheels.
 - (2) When jacking up the rear wheels first, make sure wheel chocks are in front of the front wheels.
- (g) When jacking up only the front or rear wheels of the vehicle:
 - (1) Before jacking up the front wheels, place wheel chocks on both sides of the rear wheels.

(2) Before jacking up the rear wheels, place wheel chocks on both sides of the front wheels.

(h) When lowering a vehicle that only has its front or rear wheels jacked up.

● : JACK POSITION

□ : SUPPORT POSITION

- Safety stand

- Swing arm type lift

⊕ : VEHICLE CENTER OF GRAVITY (Unloaded Condition)

c

(1) Before lowering the front wheels, make sure wheel chocks are in front of the rear wheels.

(2) Before lowering the rear wheels, make sure wheel chocks are behind the front wheels.

4. NOTICE FOR USING A SWING ARM TYPE LIFT

(a) Follow the safety procedures outlined in the lift's instruction manual.

(b) Use swing arms equipped with rubber attachments as shown in the illustration.

(c) Position the vehicle so that its center of gravity is centered on the lift (length of "L" in the illustration should be as short as possible).

(d) Ensure that the rubber cushions or swing arms do not contact the body cladding or lower mouldings.

(e) Be sure to lock the swing arms before raising the vehicle (if equipped with arm locks).

(f) Use the lift to raise the vehicle until the tires are off the ground, then stop the lift and shake the front and rear of the vehicle to make sure that it is stable.

c

5. NOTICE FOR USING PLATE TYPE LIFT

- Follow the safety procedures outlined in the lift's instruction manual.
- Use plate lift attachments (rubber lifting blocks) on top of the plates.
- Be sure to set the vehicle to the specified position described in the following chart and shown in the following illustration.

Right and left set position	<ul style="list-style-type: none"> Center the vehicle on the lift.
Front and rear set position	<ul style="list-style-type: none"> Align the plate cushion ends with the lower ends of the attachments (A). Be sure to set the attachment to position (B) as shown in the illustration.

- Ensure that the plate lift or rubber lifting blocks do not contact the body cladding or lower moldings.

(e) Use the lift to raise the vehicle until the tires are off the ground, then stop the lift and shake the front and rear of the vehicle to make sure that it is stable.

Attachment Dimensions

c

CUSTOMIZE PARAMETERS

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

HINT:

The following items can be customized.

1. POWER DOOR LOCK CONTROL SYSTEM

Door Lock

Display	Default	Content	Setting
Unlock Key Twice	ON	Function that unlocks only the driver door when the driver door key cylinder is turned to unlock once, and unlock all doors when it is turned to unlock twice. For the OFF setting, turning it once unlocks all doors.	ON or OFF
Auto Lock	OFF ON*	Function that locks all doors when the vehicle speed reaches a certain level.	ON or OFF
Auto Lock/Shift	ON OFF*	Function that locks all doors when the shift lever is moved from P to any position other than P while the engine is running and all doors are closed.	ON or OFF
Auto Unlock/Shift	ON	Function that unlocks all doors when the shift lever is moved to P from any position other than P while the power switch is on (IG).	ON or OFF
All Unlock/Open-Close	OFF	Function that unlocks the other doors when the driver door is opened within 10 seconds after the power switch is turned off.	ON or OFF

- *: for Korea

Illuminated Entry

Display	Default	Content	Setting
Lighting Time	15 s	Function that changes the lighting time after closing all doors. (It will quickly fade out in case of turning the power switch from off to on (ACC) or (IG).)	7.5 s, 15 s or 30 s

2. WIRELESS DOOR LOCK CONTROL SYSTEM

Wireless Door Lock Control System

Display (item)	Default	Function	Setting
Wireless Control	ON	Function that turns wireless door lock function on or off	ON or OFF
Hazard Answer	ON	When the doors are locked by wireless operation, the hazard	ON or OFF

Display (item)	Default	Function	Setting
Back		warning lights flash once. When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	
Open Door Warning	ON	The buzzer sounds when lock is pressed when any of the doors are ajar.	ON or OFF
Unlock 2 Operation	ON	Function that unlocks driver door when unlock switch on transmitter is pressed once, and unlocks all doors when pressed twice. If setting is OFF, pressing unlock switch once makes all doors unlock.	ON or OFF
Panic Function	ON	Function to operate theft deterrent system by continuously pressing panic switch on transmitter for 0.8 seconds	ON or OFF
Auto Lock Time	60 s*1 or 30 s*2	Function that regulates the interval between unlocking and automatic relocking of doors	30 s, 60 s or 120 s
Wireless Auto Lock	ON	This function turns the wireless auto lock function on or off.	ON or OFF
Wireless Buzzer Resp	ON	Wireless door lock buzzer response	ON or OFF
Wireless Buzzer Vol	Level7	Wireless door lock buzzer volume	Level7, Level6, Level5, Level4, Level3, Level2, Level1 or Level0

- *1: except for Korea
- *2: for Korea

Illuminated Entry

Display	Default	Content	Setting
Lighting Time	15 s	Changes the lighting time after closing all doors. (It will quickly fade out in case of turning the power switch from off to on (ACC or IG).)	7.5 s, 15 s or 30 s

3. SMART KEY SYSTEM (for Entry Function)

Smart Key / Access

Tester Display	Default	Content	Setting
Park Wait Time	2.5 s	Function that sets waiting time to permit opening door after door is locked with entry lock function	0.5 s, 1.5 s, 2.5 s or 5 s
Ignition Available Area	All	Function that switches the entry hybrid vehicle control system start detection area	Front or All*1
Back Door Opening Operation*2	Long	Function that opens the back door when the driver has the key and presses back door opener switch assembly (opener switch)	Long, Twice or OFF

- *1: Weak radio waves will still be emitted from oscillators other than the front oscillator even when the "Front" customize setting is selected.

- *2: w/ Entry System Back Door Open Function

Warning

Tester Display	Default	Content	Setting
Key Low Battery Warning	ON	Function that warns driver that the key battery is weak	ON or OFF

4. ENTRY UNLOCK MODE SWITCHING* (SMART KEY SYSTEM (for Entry Function))

*: except for Korea and Mexico

(a) To change the vehicle entry unlock mode, make sure that the vehicle power is off and simultaneously push and hold the lock switch and another switch on the key for 5 seconds.

Driver door unlock default setting:

When the switches are pressed and held for 5 seconds, the entry door unlock mode changes to the mode that is not currently selected.

NOTICE:

After pressing and holding the switches for 5 seconds, wait 5 seconds before performing the same procedure again.

- Driver door unlock mode:

When the driver door touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.*

*: w/ Entry System Back Door Open Function

- All door unlock mode:

When any touch sensor is touched, all doors unlock.

(b) The certification ECU (smart key ECU assembly) receives this signal from the door control receiver assembly and changes the smart key system to entry unlock mode.

(c) The certification ECU (smart key ECU assembly) sounds the buzzers of the wireless door lock buzzer assembly.

Mode	Wireless Door Lock Buzzer Assembly
Driver Door (Default)	Sounds 3 times
All Doors (Customized)	Sounds 2 times

HINT:

The procedure only changes entry unlock mode of the smart key system. It does not switch the unlocking of the wireless door lock control.

5. ELECTRICAL KEY CANCEL (SMART KEY SYSTEM (for Entry Function))

The electrical key cancel operation disables the following functions:

- Entry Unlock/Lock
- Entry Hybrid Vehicle Control System Start
- Entry System Back Door Open Function*

*: w/ Entry System Back Door Open Function

- Electrical Key Lock-in Prevention
- Warning

(a) The operation procedure is as follows:

Precondition:

Power switch off, driver door closed and unlocked.

- (1) Push the unlock switch of the key once.
- (2) Open the driver door within 5 seconds.
- (3) Push the unlock switch of the key twice within 5 seconds.
- (4) Close and open the driver door twice within 30 seconds.
(Driver door: Close → Open → Close → Open)
- (5) Push the unlock switch of the key twice within 5 seconds.
- (6) Close and open the driver door within 30 seconds.
(Driver door: Close → Open)
- (7) Close the driver door within 5 seconds.

When electrical key cancel is activated, the wireless door lock buzzer sounds twice.

To return to the original condition, perform the procedure again. When the original condition is returned, the wireless door lock buzzer sounds once.

6. SMART KEY SYSTEM (for Start Function)

Smart Key / Access

Tester Display	Default	Content	Setting
Ignition Available Area (Entry	All	Function to choose the available area for electrical key	Front or

Tester Display	Default	Content	Setting
ignition available area)		to start the hybrid control system.	All*

- *: Weak radio waves will still be emitted from oscillators other than the front oscillator even when the "Front" customize setting is selected.

7. CUSTOMIZING FUNCTION WITHOUT TECHSTREAM (SMART KEY SYSTEM (for Start Function))

Performing the following procedure disables the smart key system.

HINT:

To start the hybrid control system while the smart key system is disabled, follow the procedure for when the key battery is low .

(a) The procedure to disable the smart key system is as follows:

HINT:

Repeating the following steps switches the smart key system status between activated and disabled.

Preconditions:

Power switch off, driver door closed and unlocked.

- (1) Press the unlock switch of the key once.
- (2) Open the driver door within 5 seconds after pressing the unlock switch of the key in the previous step.
- (3) Repeat closing and opening of the driver door twice within 30 seconds after opening the driver door in the previous step.
- (4) Press the unlock switch of the key twice within 30 seconds after the last closing of the driver door in the previous step.
- (5) Close and then open the driver door within 30 seconds after pressing the unlock switch of the key twice in the previous step.
- (6) Close the driver door within 5 seconds after opening the driver door in the previous step.
- (7) Check that the wireless buzzer sounds once*1 or twice*2.
 - *1: When the smart key system status is changed from activated to disabled.
 - *2: When the smart key system status is changed from disabled to activated.

8. LIGHTING SYSTEM (LIGHTING INT)

Illuminated Entry

Tester Display	Default	Content	Setting
----------------	---------	---------	---------

Tester Display	Default	Content	Setting
Lighting Time	15 s	Changes the lighting time after closing all of the doors. (It will fade out immediately in case of turning the power switch from off to on (ACC or IG).)	7.5 s, 15 s or 30 s
I/L when ACC OFF	ON	Lights up power switch illumination, front interior lights, rear interior light and footwell lights when the power switch is turned from on (ACC or IG) to off.	ON or OFF
I/L ON W/Door Key Unlock	ON	Lights up power switch illumination, front interior lights, rear interior light and footwell lights when doors are unlocked using a mechanical key or door control transmitter.	ON or OFF
Light Control	ON	Dims (ON setting) or turns off (OFF setting) the footwell lights under the following conditions: Power switch on (IG), shift lever not in P, and all doors closed.	ON or OFF
Room Light when Aprchd	ON	Lights up the power switch illumination, front interior lights, rear interior light and footwell lights when a key enters any actuation area around the doors.	ON or OFF
Inside Foot Light	ON	Lights up the footwell lights when one of the following occurs: the power switch is turned on (IG), or any door is unlocked or opened.	ON or OFF

9. METER / GAUGE SYSTEM

Warning

Tester Display	Default	Content	Setting
Key Remind Sound	Slow	Function to change the cycle of the key reminder buzzer	Normal, Fast or Slow
Driver Side Seatbelt Warning Buzzer*1	ON	Function to turn on/off the seat belt warning buzzer	ON or OFF
Front Passenger Side Seatbelt Warning Buzzer*1	ON	Function to turn on/off the seat belt warning buzzer	ON or OFF
Rear Seatbelt Warning Buzzer*2	ON	Function to turn on/off the rear seat belt warning buzzer	ON or OFF
Reverse Buzzer	Continual	Function to change the type of the reverse warning buzzer	Single or Continual

- *1: This setting is only valid for the buzzer which sounds at 20 km/h (12 mph) or more.
- *2: w/ Rear Seat Belt Warning

10. SEAT BELT WARNING SYSTEM

Combination Meter

Tester Display	Default	Content	Setting
Driver Side Seatbelt Warning Buzzer	ON	Function to sound the seat belt warning buzzer	ON / OFF
Front Passenger Side Seatbelt Warning	ON	Function to sound the seat belt warning	ON /

Tester Display	Default	Content	Setting
Buzzer		buzzer	OFF

HINT:

This setting is only valid when the vehicle is driven at 20 km/h (12 mph) or more.

11. AIR CONDITIONING SYSTEM

Air Conditioner

Display (Item)	Default	Content	Setting
Set Temperature Shift	Normal	Function to control with the shifted temperature against the displayed temperature.	+2 C, +1 C, Normal, -1 C or -2 C
Compressor Mode	Automatic	Function to automatically turn the A/C on by pressing the AUTO button when blower is on and the A/C is off.	Manual or Automatic
Air Inlet Mode	Automatic	Function to shift from INLET mode to RECIRCULATION mode when the A/C is turned on.	Manual or Automatic
Foot/DEF Auto Mode	ON	Function to automatically turn the airflow from FOOT/DEF on when AUTO mode is on.	OFF or ON
Foot/DEF Automatic Blow Up Function	ON	Function to automatically increase the blower level when the defroster is on.	OFF or ON
Ambient Temperature Shift	Normal	Function to control the shifted ambient temperature in relation to the displayed ambient temperature.	+3 C, +2 C, +1 C, Normal, -1 C, -2 C or -3 C
ECO MODE Cancel	OFF	Function to cancel the ECO mode drive when item is on.	OFF or ON
Noise and Vibration Reduction	OFF	Function to change speed of the compressor when item is on.	OFF or ON
Start Pre A/C*1	Long1	Function to set the activation operation method for the remote air conditioning system using the key (electrical transmitter).	1 tim ON, 2 tim ON, Long1 or Long2
Stop Pre A/C*1	2 tim ON	Function to set the stop operation method for the remote air conditioning system using the key (electrical transmitter).	1 tim ON, 2 tim ON, Long1 or Long2

- *1: w/ Remote Air Conditioning System

12. LIGHTING SYSTEM (LIGHTING EXT)

Light Control

Display	Default	Content	Setting
Disp Ex ON Sen	Normal	Changes the ambient brightness level required to dim the lights such as the indicator lights of the combination meter, A/C indicator light and clock.	Light2, Light1, Normal, Dark1 or Dark2

INSPECTION MODE PROCEDURE

1. INSPECTION MODE

NOTICE:

When the vehicle is run in inspection mode for an operation such as a speedometer test, a DTC may be set. Therefore, if the warning light comes on, after canceling inspection mode, check for DTCs using the Techstream and clear the DTCs.

HINT:

If the engine is warmed up and the battery is charged, the engine of the vehicle will stop after the vehicle stops. For example, if the engine is required to run continuously even after the vehicle stops, such as for an ignition timing check, switch to maintenance mode.

(a) The following table shows the types of inspection mode that are available, their purpose and the control that occurs in each mode.

Mode (Display)	Purpose	Control
MAINTENANCE MODE (2WD for measuring Exhaust Gas)	<ul style="list-style-type: none"> • Inspection of ignition timing etc. when performing engine maintenance, idle speed exhaust emissions testing (CO, HC), etc. • Tests using a speedometer tester, two-wheel chassis dynamometer, etc. 	<ul style="list-style-type: none"> • Keeps the engine idling when park (P) is selected • Cancels traction control
CERTIFICATION MODE (2WD for cutting TRC)	Tests using a speedometer tester, two-wheel chassis dynamometer, etc.	Cancels traction control

(b) Vehicle conditions

(1) Before activating inspection mode, turn the air conditioning off, start the hybrid system with park (P) selected, and check that the engine stops within several seconds after starting (engine warm up check).

(2) Activate the appropriate inspection mode and inspect the vehicle. The shift state for each test is as follows:

Test Item	Mode	Shift State
1. Vehicle straight travelling test (side slip inspection)	Maintenance mode or normal mode	D
2. Braking force test	Maintenance mode	N
3. Speedometer test	Maintenance mode	D
4. Exhaust gas test (idling)	Maintenance mode	P
5. Headlight test	Maintenance mode or normal mode	P

(3) Cancel inspection mode immediately after completion of inspection.

NOTICE:

Driving the vehicle without canceling inspection mode may damage the transaxle.

(c) Special notes for speedometer test

CAUTION:

Be sure to perform the test in maintenance mode.

NOTICE:

Do not perform rapid starting or quick acceleration on a speedometer tester. If rapid starting or quick acceleration is performed on a speedometer tester, damage may occur to the transaxle.

(1) Depress the accelerator pedal slowly and gradually accelerate the vehicle. Make a measurement.

(2) After the measurement, use the brakes to gradually decelerate the vehicle.

(d) Special notes for using a chassis dynamometer

(1) Always set an appropriate load before starting the test.

NOTICE:

Sudden acceleration or deceleration of the vehicle on a chassis dynamometer under minimal load may damage the transaxle.

(e) Activating maintenance mode (Not using the Techstream)

Perform the following steps from (1) through (4) in 60 seconds.

(1) Turn the power switch on (IG).

(2) Fully depress the accelerator pedal twice with park (P) selected.

(3) Fully depress the accelerator pedal twice with neutral (N) selected.

(4) Fully depress the accelerator pedal twice with park (P) selected.

(5) Check that "MAINTENANCE MODE" is displayed on the multi-information display.

MAINTENANCE MODE

(6) Start the engine by turning the power switch on (READY) while depressing the brake pedal.

HINT:

The idle speed in maintenance mode is approximately 1000 rpm with park (P) selected. The engine speed increases to 1500 rpm when the accelerator pedal is depressed midway with park (P) selected. When the accelerator pedal is depressed more than midway, or when the accelerator pedal is fully depressed, the engine speed increases to approximately 2500 rpm.

(f) Activating maintenance mode (Using the Techstream)

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Enter following menus: Powertrain / Hybrid Control / Utility / Inspection Mode - 2WD for measuring Exhaust Gas.

MAINTENANCE MODE

(5) Check that "MAINTENANCE MODE" is displayed on the multi-information display.

(6) Start the engine by turning the power switch on (READY) while depressing the brake pedal.

HINT:

The idle speed in maintenance mode is approximately 1000 rpm with park (P) selected. The engine speed increases to 1500 rpm when the accelerator pedal is depressed midway with park (P) selected. When the accelerator pedal is depressed more than midway, or when the accelerator pedal is fully depressed, the engine speed increases to approximately 2500 rpm.

(g) Activating certification mode (Not using the Techstream)

Perform the following steps from (1) through (4) in 60 seconds.

- (1) Turn the power switch on (IG).
- (2) Fully depress the accelerator pedal three times with park (P) selected.
- (3) Fully depress the accelerator pedal three times with neutral (N) selected.
- (4) Fully depress the accelerator pedal three times with park (P) selected.

CERTIFICATION MODE

(5) Check that "CERTIFICATION MODE" is displayed on the multi-information display.

(6) Start the engine by turning the power switch on (READY) while depressing the brake pedal.

(h) Activating certification mode (Using the Techstream)

- (1) Connect the Techstream to the DLC3.
- (2) Turn the power switch on (IG).
- (3) Turn the Techstream on.
- (4) Enter following menus: Powertrain / Hybrid Control / Utility / Inspection Mode - 2WD for cutting TRC.

CERTIFICATION MODE

(5) Check that "CERTIFICATION MODE" is displayed on the multi-information display.

(6) Start the engine by turning the power switch on (READY) while depressing the brake pedal.

(i) Deactivating inspection mode

- (1) Turn the power switch off. The HV system turns off simultaneously.

NOTICE:

- If a DTC is set during inspection mode, the master warning light will illuminate and a warning message will appear on the multi-information display.
- When the master warning light and the warning message illuminate during inspection mode, cancel inspection mode, and check for DTC(s).
- Driving the vehicle without canceling inspection mode may damage the transaxle.

ABBREVIATIONS USED IN MANUAL

Abbreviation	Meaning
ABS	Anti-lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACM	Active Control Engine Mount
ACSD	Automatic Cold Start Device
A.D.D	Automatic Disconnecting Differential
A/F	Air-Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSY	Assembly
A/T, ATM	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
AWD	All Wheel Drive Vehicle
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
B/L	Bi-Level
B/S	Bore-Stroke Ratio
BTDC	Before Top Dead Center
BVS	Bimetallic Vacuum Switching Valve
CAN	Controller Area Network
CB	Circuit Breaker
CCo	Catalytic Converter for Oxidation

Abbreviation	Meaning
CCV	Canister Closed Valve
CD	Compact Disc
CF	Cornering Force
CG	Center of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current
DEF	Defogger
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
EBD	Electric Brake Force Distribution
EC	Electrochromic
ECAM	Engine Control And Measurement System
ECD	Electronically Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Controlled Automatic Transmission
ECU	Electronic Control Unit
ED	Electro-Deposited Coating

Abbreviation	Meaning
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR-VM	EGR-Vacuum Modulator
ELR	Emergency Locking Retractor
EPS	Electric Power Steering
ENG	Engine
ES	Easy & Smooth
ESA	Electronic Spark Advance
ETCS-i	Electronic Throttle Control System-intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E-VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front-Engine-Front-Wheel-Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
FR	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front-Wheel-Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
GSA	Gear Shift Actuator
HAC	High Altitude Compensator
H/B	Hatchback
H-FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Headlight)
HPU	Hydraulic Power Unit

Abbreviation	Meaning
HSG	Housing
HT	Hard Top
HV	Hybrid Vehicle
HWS	Heated Windshield System
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick-Down
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left-Hand
LHD	Left-Hand Drive
LIN	Local Interconnect Network
L/H/W	Length, Height, Width
LLC	Long-Life Coolant
LNG	Liquefied Natural Gas
LO	Low
LPG	Liquefied Petroleum Gas
LSD	Limited Slip Differential
LSP & BV	Load Sensing Proportioning and Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum

Abbreviation	Meaning
MG1	Motor Generator No. 1
MG2	Motor Generator No. 2
MMT	Multi-mode Manual Transmission
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T, MTM	Manual Transmission (Transaxle)
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
NO.	Number
O2S	Oxygen Sensor
OC	Oxidation Catalyst
OCV	Oil Control Valve
O/D	Overdrive
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On-board Refilling Vapor Recovery
O/S	Oversize
P & BV	Proportioning and Bypass Valve
PBD	Power Back Door
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PROM	Programmable Read Only Memory
PS	Power Steering
PSD	Power Slide Door
PTC	Positive Temperature Coefficient
PTO	Power Take-Off
PZEV	Partial Zero Emission Vehicle
P/W	Power Window
R & P	Rack and Pinion
RAM	Random Access Memory

Abbreviation	Meaning
R/B	Relay Block
RBS	Recirculating Ball Type Steering
REAS	Relative Absorber System
R/F	Reinforcement
RFS	Rigid Front Suspension
RH	Right-Hand
RHD	Right-Hand Drive
RLY	Relay
ROM	Read Only Memory
RR	Rear
RRS	Rigid Rear Suspension
RSE	Rear Seat Entertainment
RWD	Rear-Wheel Drive
SC	Supercharger
SCV	Swirl Control Valve (for gasoline engine)
	Suction Control Valve (for diesel engine)
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SPV	Spill Control Valve
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold-Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
TACH	Tachometer
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer-Controlled System
TCM	Transmission Control Module

Abbreviation	Meaning
TCV	Timing Control Valve (for diesel engine)
	Tumble Control Valve (for gasoline engine)
TDC	Top Dead Center
TEMP.	Temperature
TFT	TOYOTA Free-Tronic
TIS	Total Information System for Vehicle Development
T/M	Transmission
TMC	TOYOTA Motor Corporation
TMMIN	PT. TOYOTA Motor Manufacturing Indonesia
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.
TMT	TOYOTA Motor Thailand Co. Ltd.
TRAC/TRC	Traction Control System
TURBO	Turbocharge
TVIP	TOYOTA Vehicle Intrusion Protection
TWC	Three-Way Catalyst
U/D	Underdrive
U/S	Undersize
VCV	Vacuum Control Valve
VDIM	Vehicle Dynamics Integrated Management
VENT	Ventilator
VIM	Vehicle Interface Module
VGRS	Variable Gear Ratio Steering
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Stability Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT-i	Variable Valve Timing-intelligent
W/	With
WGN	Wagon
W/H	Wire Harness
W/O	Without
1ST	First
2ND	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3RD	Third
4TH	Fourth

Abbreviation	Meaning
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5TH	Fifth

GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE Abbreviation	SAE Term	TOYOTA Term ()-Abbreviation
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI./INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine Electronic Control Unit (ECU)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)

SAE Abbreviation	SAE Term	TOYOTA Term ()-Abbreviation
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPRM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO ₂ S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	-
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Airflow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface Temperature	-
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O ₂ Sensor (O ₂ S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalytic Convert (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-
PNP	Park/Neutral Position	-

SAE Abbreviation	SAE Term	TOYOTA Term ()-Abbreviation
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CC _{RO}
TWC+OC	Three-Way + Oxidation Catalytic Converter	CC _R + CC _O
VAF	Volume Airflow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor

SAE Abbreviation	SAE Term	TOYOTA Term ()-Abbreviation
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-
3GR	Third Gear	-
4GR	Fourth Gear	-

GENERAL MAINTENANCE

1. TIGHTEN BOLTS AND NUTS ON CHASSIS AND BODY

(a) If necessary, tighten the bolts and nuts on the chassis parts listed below.

- Front axle and suspension
- Drive train
- Rear axle and suspension
- Brake system
- Engine mounts
- Other chassis parts

(b) If necessary, tighten the bolts and nuts on the body parts listed below.

- Seat belt system
- Seats
- Doors and hood
- Body mounts
- Fuel tank
- Exhaust system
- Other body parts

2. REPLACE AIR CONDITIONING FILTER

(a) Remove the air conditioning filter .

(b) Visually inspect the surface of the air conditioning filter.

(c) If the air conditioning filter is contaminated with foreign matter, replace it.

3. ROAD TEST

(a) Check the engine and chassis for abnormal noises.

(b) Check that the vehicle does not wander or pull to one side.

(c) Check that the brakes work properly and do not drag.

4. BODY INSPECTION

(a) Check the body exterior for dents, scratches and rust.

(b) Check the underbody for rust and damage.

If necessary, replace the damaged part or repair the damaged area.

5. FINAL INSPECTION

(a) Check the operation of the body parts.

(1) Hood

- Auxiliary catch operates properly.
- Hood locks securely when closed.

(2) Front and rear doors

- Door locks operate properly.
- Doors close properly.

(3) Luggage compartment door

- Luggage compartment door opens and closes properly.

(4) Seats

- Seat adjusts easily and lock securely in any position.
- Front seatbacks lock securely in any position.
- Fold-down rear seatbacks lock securely.

(5) Be sure to deliver a clean car. Make sure to check the following:

- Steering wheel
- Shift lever knob
- All switches and knobs
- Door handles
- Seats

GENERAL MAINTENANCE

1. INSPECT BRAKE LINE PIPES AND HOSES

HINT:

Work in a well-lighted area. Turn the front wheels fully to the right or left before beginning the inspection.

(a) Using a mirror, check the entire circumference and length of the brake lines and hoses for:

- Damage
- Wear
- Deformation
- Cracks
- Corrosion
- Leaks
- Bends
- Twists

(b) Check all clamps for tightness and check the connections for leakage.

(c) Check that the hoses and lines are not near sharp edges, moving parts or the exhaust system.

(d) Check that the lines are installed properly and pass through the center of the grommets.

2. INSPECT BRAKE PEDAL

(a) Check the brake pedal INFO.

3. INSPECT PARKING BRAKE

(a) Check the parking brake shoe clearance and parking brake pedal travel INFO.

(b) Check the parking brake cables to ensure that they are not deformed or binding.

4. INSPECT FRONT BRAKE

(a) Check the front brake pads and discs INFO.

5. INSPECT REAR BRAKE

(a) Check the rear brake pads and discs INFO.

6. INSPECT OR CHANGE BRAKE FLUID

(a) Inspect or change the brake fluid .

Fluid:

SAE J1703 or FMVSS No. 116 DOT3

GENERAL MAINTENANCE

1. INSPECT STEERING LINKAGE AND GEAR HOUSING

- (a) Check the steering wheel free play INFO.
- (b) Check the steering linkage for looseness or damage.
 - (1) Check that the tie rod ends do not have any play.
 - (2) Check that the dust seals and boots are not damaged.
 - (3) Check that the boot clamps are not loose.
 - (4) Check that the steering gear housing is not damaged.

2. INSPECT BALL JOINTS AND DUST COVERS

- (a) Inspect the ball joints for looseness.
 - (1) Jack up the front of the vehicle and place wooden blocks with a height of 180 to 200 mm (7.09 to 7.87 in.) under the front tires.
 - (2) Lower the vehicle until the front coil spring has about half its ordinary load. Place stands under the vehicle for safety.
 - (3) Check that the front wheels are pointing straight ahead. Use wheel chocks on all 4 wheels.
 - (4) Using a lever, pry up the end of the lower arm. Check the amount of play.

Maximum ball joint vertical play:

0 mm (0 in.)

If there is any play, replace the ball joint.

- (b) Check the dust cover for damage.

3. INSPECT DRIVE SHAFT BOOTS

- (a) Check the drive shaft boots for loose clamps, cracks, grease leaks, kinks or damage.

4. INSPECT HV TRANSAXLE

- (a) Visually check the transaxle for fluid leakage. If fluid is leaking, find the cause and repair it.

5. INSPECT FRONT AND REAR SUSPENSION

- (a) Check the front and rear suspension.

Suspension Type	See Procedure
Front Suspension	INFO
Rear Suspension	INFO

GENERAL MAINTENANCE

HINT:

Perform these procedures after the engine has cooled down.

1. REPLACE ENGINE OIL AND OIL FILTER

(a) Check the engine oil and oil filter **INFO**.

2. REPLACE ENGINE COOLANT

(a) Check the engine coolant **INFO**.

3. INSPECT SPARK PLUGS

(a) Check the spark plugs **INFO**.

4. INSPECT BATTERY

(a) Check the battery **INFO**.

5. INSPECT AIR CLEANER FILTER ELEMENT

(a) Remove the air filter.

(b) Check that the air cleaner is not excessively dirty.

If the air cleaner is excessively dirty, replace the air cleaner filter element.

P

(c) If cleaning the air cleaner filter element, blow compressed air as shown in the illustration to clean it.

(d) Reinstall the air filter.

6. INSPECT EXHAUST PIPES AND MOUNTINGS

(a) Visually check the pipes, hangers and connections for severe corrosion, leaks or damage.

7. INSPECT FUEL TANK CAP GASKET

(a) Check the fuel tank cap gasket **INFO**.

8. INSPECT FUEL LINES, CONNECTIONS, FUEL TANK VAPOR VENT SYSTEM HOSES AND FUEL TANK BANDS

- (a) Visually check the fuel lines and hoses for cracks, leaks, loose connections, or deformation.
- (b) Check for tank band looseness or deformation.

9. INSPECT CHARCOAL CANISTER

- (a) Check the charcoal canister .

GENERAL MAINTENANCE

- These are maintenance and inspection items that are considered to be the owner's responsibility.

The owner can do them or they can have them done at a service center.

These items include those that should be checked on a daily basis, those that in most cases do not require special tools, and those that are considered to be reasonable for the owner to do.

General maintenance items and procedures are as follows:

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. LIGHTS

(a) Check that the headlights, stop lights, taillights, turn signal lights, and other lights illuminate or blink properly. Also, check if they have enough brightness.

(b) Check that the headlights are aimed properly.

3. WARNING LIGHTS AND BUZZERS

(a) Check that all the warning lights and buzzers are working.

4. HORNS

(a) Check if the horn is working correctly.

5. WINDSHIELD GLASS

(a) Check for scratches, pits or abrasions.

6. WINDSHIELD WIPER AND WASHER

(a) Check that the washers are aimed properly. Also, check that the washer fluid hits the center of the operating range of each wiper on the windshield.

(b) Check if the wipers streak. Replace the wiper if necessary.

7. WINDSHIELD DEFROSTER

(a) When the air conditioning is on the defroster setting, check that air comes out of the defroster outlets.

8. REAR VIEW MIRROR

(a) Check that the rear view mirror is securely mounted.

9. SUN VISORS

(a) Check that the sun visors move freely and are securely mounted.

10. STEERING WHEEL

(a) Check that the steering wheel has the proper amount of free play. Also check for steering difficulty and unusual noises .

11. SEATS

(a) Check that the seat adjusters, seatback recliner and other seat controls operate smoothly.

(b) Check that all the latches lock securely in all positions.

(c) Check that the locks hold securely in all positions.

(d) Check that the headrests move up and down smoothly and that the locks hold securely in all latched positions.

(e) Check power seat function

(1) Operate the lumbar support switch and check to make sure the seat function works:

- Lumbar support function (*1)

H

12. SEAT BELTS

(a) Check that the seat belt components, such as the buckles, retractors and anchors, operate properly and smoothly.

(b) Check that the belt webbing is not cut, frayed, worn or damaged.

13. ACCELERATOR PEDAL

(a) Check that the pedal operates smoothly. Check that the pedal does not have uneven resistance or stick in certain positions.

14. BRAKE PEDAL

(a) Check that the brake pedal operates smoothly.

(b) Check that the pedal has the proper reserve distance and free play .

(c) Start the engine and check the brake booster function.

(d) Start the engine and check the brake system indicator.

15. BRAKES

(a) In a safe place, check that the vehicle does not pull or lead to the side when applying the brakes.

16. PARKING BRAKE

(a) Check that the parking brake pedal has the proper amount of travel .

(b) On a slight grade, check that the parking brake alone can hold the vehicle in place.

17. HYBRID TRANSAXLE "PARK" MECHANISM

(a) Check the operation of the P position switch.

(b) Check that park (P) can be disengaged by operating the selector lever.

(c) With park (P) selected, release all brakes in an area that has a slight grade and check that the vehicle is stable.

GENERAL MAINTENANCE

- These are maintenance and inspection items that are considered to be the owner's responsibility.

The owner can do them or they can have them done at a service center.

These items include those that should be checked on a daily basis, those that in most cases do not require special tools, and those that are considered to be reasonable for the owner to do.

General maintenance items and procedures are as follows:

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. TIRES

(a) Check the tire inflation pressure with a gauge. Make adjustments if necessary.

(b) Check the surfaces of the tires for cuts, damage or excessive wear.

3. WHEEL NUTS

(a) Check for nuts that are loose or missing. Tighten them if necessary.

4. TIRE ROTATION

(a) Check the maintenance schedule in the owner's manual supplement.

5. WINDSHIELD WIPER BLADES

(a) Check the blades for wear or cracks whenever they are unable to wipe the windshield clean. Replace them if necessary.

6. FLUID LEAKS

(a) Check under the vehicle for leaking fuel, oil, water and other fluids.

NOTICE:

If you smell fuel or notice any leaks, locate the cause and correct it.

7. DOORS AND ENGINE HOOD

- (a) Check that all of the doors and the hood operate smoothly, and that all the latches lock securely.
- (b) When the primary latch is released, check that the engine hood secondary latch prevents the hood from opening.

GENERAL MAINTENANCE

- These are maintenance and inspection items that are considered to be the owner's responsibility.

The owner can do them or they can have them done at a service center.

INSTALLATION

1. INSTALL AMPLIFIER ANTENNA ASSEMBLY

(a) Install the amplifier antenna assembly with the antenna nut.

Torque: 4.5 N·m (46 kgf·cm, 40in·lbf)

(b) Connect the 2 connectors.

2. INSTALL ROOF ANTENNA POLE SUB-ASSEMBLY

(a) Install the roof antenna pole sub-assembly as shown in the illustration.

3. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure from Install Roof Headlining Assembly  .

Last Modified: 7-21-2009	5.6 A	From: 200904
Model Year: 2010	Model: Prius	Doc ID: RM000003W91007X
Title: AUDIO / VIDEO: AMPLIFIER ANTENNA: REMOVAL (2010 Prius)		

REMOVAL

1. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure up to Remove Roof Headlining Assembly  .

2. REMOVE ROOF ANTENNA POLE SUB-ASSEMBLY

(a) Remove the roof antenna pole sub-assembly as shown in the illustration.

3. REMOVE AMPLIFIER ANTENNA ASSEMBLY

(a) Disconnect the 2 connectors.

(b) Remove the antenna nut and amplifier antenna assembly.

DTC CHECK / CLEAR

HINT:

If the system cannot enter diagnostic mode, inspect the AVC-LAN and all the components that are connected to the AVC-LAN for short circuits and repair or replace the malfunctioning part .

1. STARTING DIAGNOSTIC MODE

(a) Turn the power switch on (ACC).

(b) Turn off the audio system.

(c) While pressing preset switches "1" and "6" at the same time, press the "DISC" switch 3 times.

HINT:

A beep is emitted 3 times and the diagnostic function is activated. The system enters all element illumination mode and switch check mode.

2. ALL ELEMENT ILLUMINATION MODE AND SWITCH CHECK MODE

HINT:

Illumination status of all switches and operations of the panel switches can be checked.

(a) Check that all elements are on.

(b) When pressing each panel switch, check that a beep is emitted.

HINT:

Pressing the "SEEK TRACK UP" switch transfers the screen to the stereo jack adapter connection check screen. Check the operation of this switch by confirming the transfer of the screen.

3. STEREO JACK ADAPTER CONNECTION CHECK MODE

(a) Press the "SEEK TRACK UP" switch.

(b) Check if the stereo jack adapter is recognized.

HINT:

- The radio receiver assembly displays "AUX OK" or "AUX ON" when it recognizes a connection to the stereo jack adapter.
- Vehicles that do not have a stereo jack adapter also have this function.
- This function is not to check connection status to an external device, but to check recognition of the stereo jack adapter.

4. SERVICE CHECK MODE

(a) Press the "SEEK TRACK UP" switch.

HINT:

For details of service check mode, refer to following "6. Check DTC" and "7. DTC Clear/Recheck".

5. FINISHING DIAGNOSTIC MODE

(a) Press the "DISC" switch for 2 seconds or more, or turn the power switch off.

6. CHECK DTC

HINT:

Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

(a) Reference

In system check mode, the system check and diagnostic memory check are performed, and the check results are displayed in ascending order of the component codes (physical address).

TERM	MEANING
Component code (Physical address)	Three-digit code (in hexadecimal) is given to each device comprising AVC-LAN. Corresponding to its function, individual symbol is provided.
Logical address	Two-digit code (in hexadecimal) is given to each function and device unit in each device comprising AVC-LAN.

(b) Service check result display

DISPLAY	PREVIOUS TERM	MEANING	ACTION TO BE TAKEN
good	Good (normal)	No DTCs are detected in both "System Check Mode" and "Diagnostic Memory Mode".	-
nCon	No connection	The system recognized the component when it was registered, but the component gives no response to "Diagnostic Mode ON Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).
ECHn	Exchange	One or more DTCs for "Exchange" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC chart.
CHEC	Check	When no DTCs are detected for "Exchange", one or more DTCs for "Check" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC chart.
Old	Old version	Old DTC application is identified and DTC is detected in either "System Check Mode" or "Diagnostic Memory Mode".	-
nrES	No response	The device gives no response to any one of "System Check Mode ON Request", "System Check Result Request" and "Diagnostic Memory Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).

(c) Device name and physical address

PHYSICAL ADDRESS NO.	NAME
190	Radio receiver assembly
440	Stereo component amplifier assembly
1F1	Satellite radio tuner

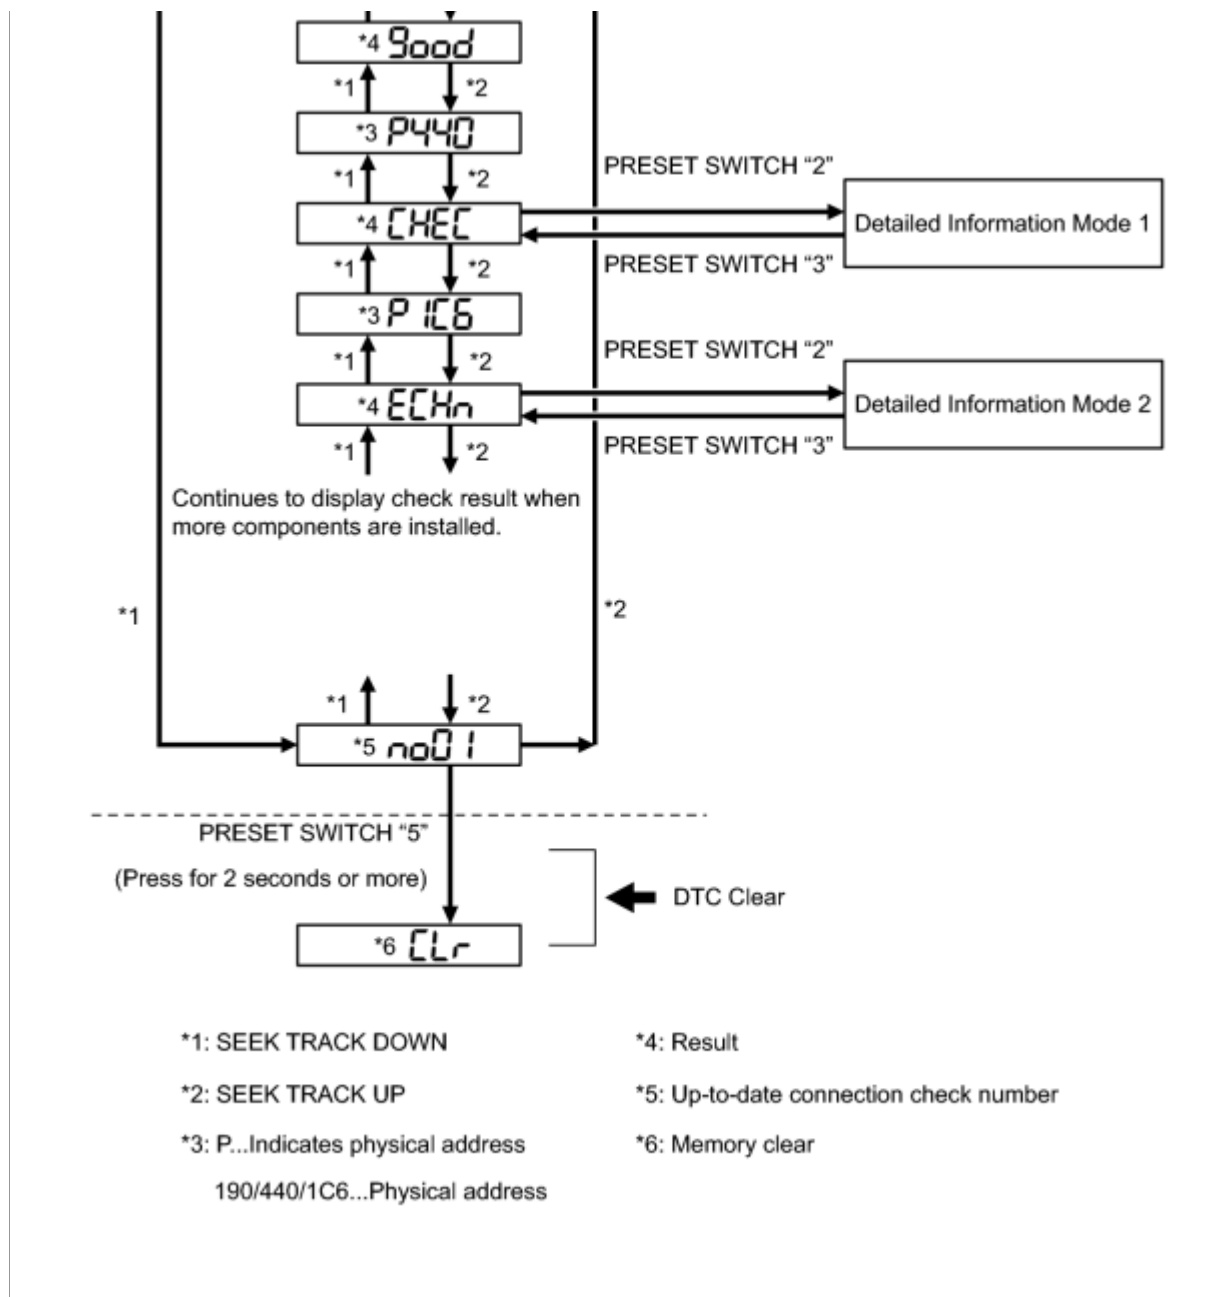

(d) Service check mode

- Press the "SEEK TRACK" switch to see the check result of each component.
- The component code (physical address) is displayed first, and then the check result follows.

HINT:

- If all check results are "good", the system judges that no DTC exists.
- If preset switch "1" is pressed in service check mode, service check is performed again.
- This illustration is only an example and may differ for each optional part and output DTCs.

(e) Detailed information mode 1

HINT:

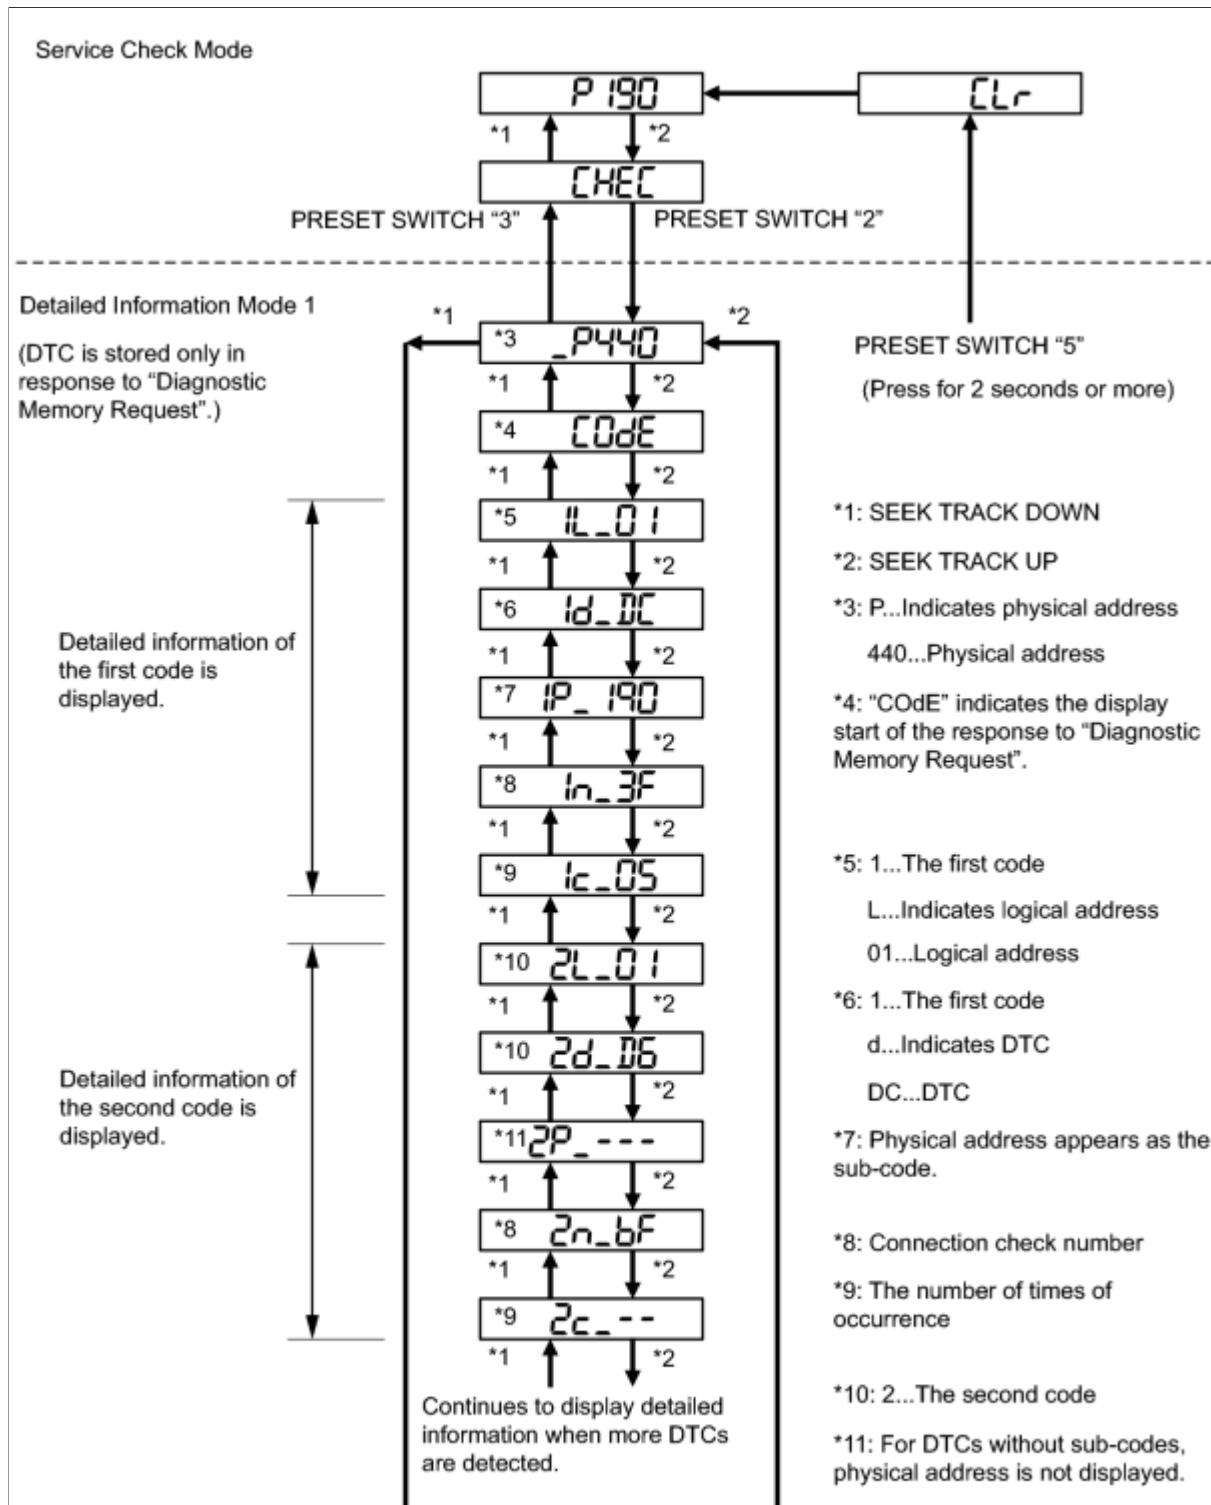

- "Detailed Information Mode 1" is displayed when there is no response to "System Check Result Request" and DTC is stored only in "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each optional part and output DTCs.

- (1) Press preset switch "2" to go to "Detailed Information Mode 1".
- (2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.
- (3) Press the preset switch "3" to go to "Service Check Mode".
- (4) Select between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "EChn", "CHEC", and "OLd" in "Detailed Information Mode 1", refer to the following:
 - "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
 - "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request"

are displayed.

HINT:

- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (Sys)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

(f) Detailed information mode 2

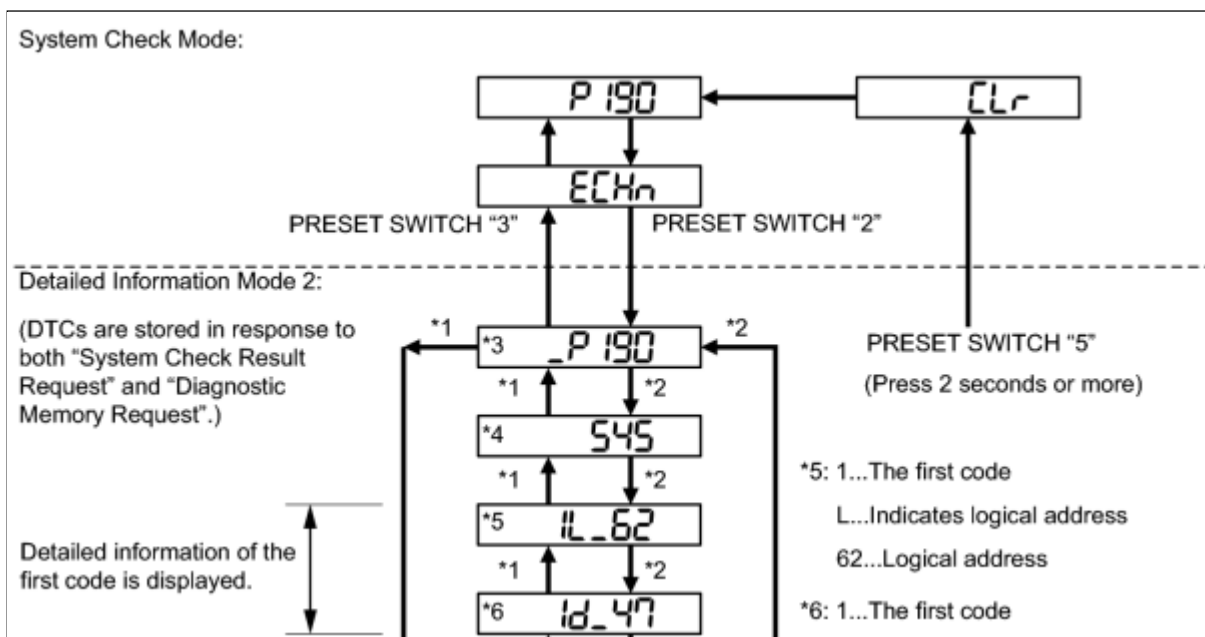

HINT:

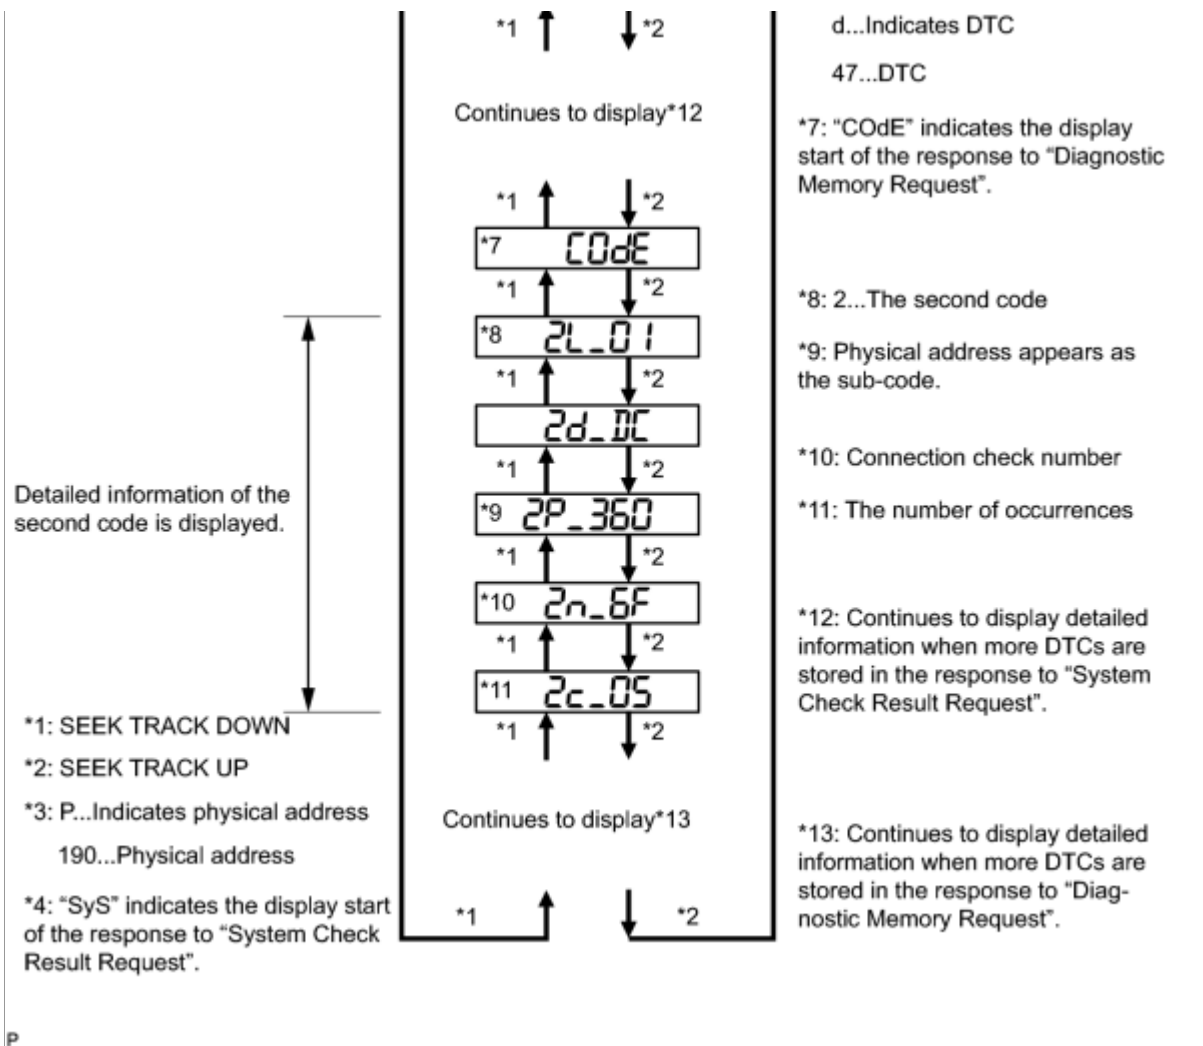

- "Detailed Information Mode 2" is displayed when DTCs are stored in responses to both "System Check Result Request" and "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

- (1) Press preset switch "2" to go to "Detailed Information Mode 2".
- (2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.
- (3) Press preset switch "3" to go to "Service Check Mode".
- (4) Select between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLD" in "Detailed Information Mode 2", refer to the following:
 - "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
 - "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

HINT:

- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

7. DTC CLEAR/RECHECK

(a) Clearing All DTC Memory (when clearing all the memory of the previously detected DTCs)

(1) When preset switch "5" is pressed for 2 seconds or more during "Service Check Mode", the DTCs for all components are cleared. ("CLr" is displayed at this time.)

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory for all the components is cleared, only the component codes (physical address) are displayed.
- After the DTC memory is cleared, "Service Check Mode" is restored.

(b) Clearing the specified DTC Memory (when clearing the specified memory of the previously detected DTC)

(1) When preset switch "5" is pressed for 2 seconds or more during "Detailed Information Mode 1" or "Detailed Information Mode 2", the DTCs for the target component are cleared.

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory is cleared, only the component code (physical address) is displayed for the target

component.

- After the DTC memory is cleared, the "Service Check Mode" is restored.
- To check DTCs, press preset switch "1" and perform the system check again.

(c) Press preset switch "1" to perform the service check again, and check that no DTCs are displayed for all the component codes (physical address).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

Use the following procedure to troubleshoot the audio and visual system.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. INSPECT BATTERY VOLTAGE

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3. BASIC INSPECTION

- (a) Turn the power switch on (IG).
- (b) Check whether or not the radio receiver assembly turns on.

Result:

RESULT	PROCEED TO
Radio receiver assembly turns on	A
Radio receiver assembly does not turn on	B

B  Go to step 7

A

4. CONFIRM MODEL

4. CONFIRM MODEL

Result:

RESULT	PROCEED TO
for 8 Speakers	A
except for 8 Speakers	B

B ▶ Go to step 7**A**
▼**5. CHECK FOR DTC****HINT:**Refer to DTC Check/Clear  .

- Check for DTCs and note any codes that are output.
- Clear the DTCs.
- Recheck for DTCs by simulating the operation indicated by the DTCs.

HINT:

- If the system cannot enter diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the malfunctioning part.
- Even if the symptom malfunction is not confirmed, check the DTCs. This is because the system stores history DTCs.
- Check and clear history DTCs. Then recheck for DTCs.

Result:

RESULT	PROCEED TO
DTC is output again	A
DTC is not output	B

B ▶ Go to step 7**A**
▼

10.	CONFIRMATION TEST
------------	--------------------------

NEXT  **END**

IDENTIFICATION OF NOISE SOURCE

1. RADIO DESCRIPTION

(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	3 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM ↔		FM ↔	
Modulation	Amplitude Modulation			Frequency Modulation	

LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

HINT:

In addition to static, other problems such as "phasing", "multipath" and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

(2) Multipath

Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.

(3) Fade out

Fade out is caused by objects (buildings, mountains and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are less likely to deflect.

(d) Noise problem

Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

RADIO FREQUENCY	NOISE OCCURRENCE CONDITION	PRESUMABLE CAUSE
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Signal phasing
FM	Noise occurs while driving in a specified area	Multipath resulting from a change in FM frequency

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

SYSTEM DESCRIPTION

1. DISC PLAYER OUTLINE

- (a) A CD player uses a laser pickup to read digital signals recorded on CDs. By converting the digital signals to analog, music and other content can be played.

CAUTION:

Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

NOTICE:

- Do not disassemble any part of the CD player.
- Do not apply oil to the CD player.
- Do not insert anything but a CD into the CD player.

- (b) Usable discs

- (1) The CD player can only play audio CDs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) that have any of the following marks:

- (c) Precautions for use of discs

NOTICE:

- Copy-protected CDs cannot be played.
- CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt or deterioration caused by leaving the discs in the cabin for a long time.
- Unfinalized CD-Rs and CD-RWs cannot be played.
- Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.
- Hold discs by the outer edge and center hole with the label side up.
- Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.
- If discs have adhesive tape, stickers, CD-R labels or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.
- Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)
- Do not use odd-shaped CDs because these may cause player malfunctions.
- Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.

HINT:

- When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD sound may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD sound may skip if the player experiences strong vibrations when the vehicle is driven on rough road or similar uneven surface(s).

- (d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

- Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.
- Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.

2. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER3)
Compatible sampling frequency	<ul style="list-style-type: none"> • MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	<ul style="list-style-type: none"> • MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8 and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate (Only compatible with 2-channel playback)	<ul style="list-style-type: none"> • Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps)

(c) ID3 tag and WMA tag

(1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

HINT:

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

(2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media

(1) Only CD-ROMs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

NOTICE:

• CD-R and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio.

- CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs do not play.
- If there are fingerprints or scratches on a disc, the disc may not play or the CD sound may skip.
- Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.
- Keep CD-Rs and CD-RWs in an opaque case.

(e) Usable media format

(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:

- As for MP3/WMA files written in any unlisted format, the contents of the files may not play normally or the file names or folder names may not display correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

(2) Standard and restrictions

Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names

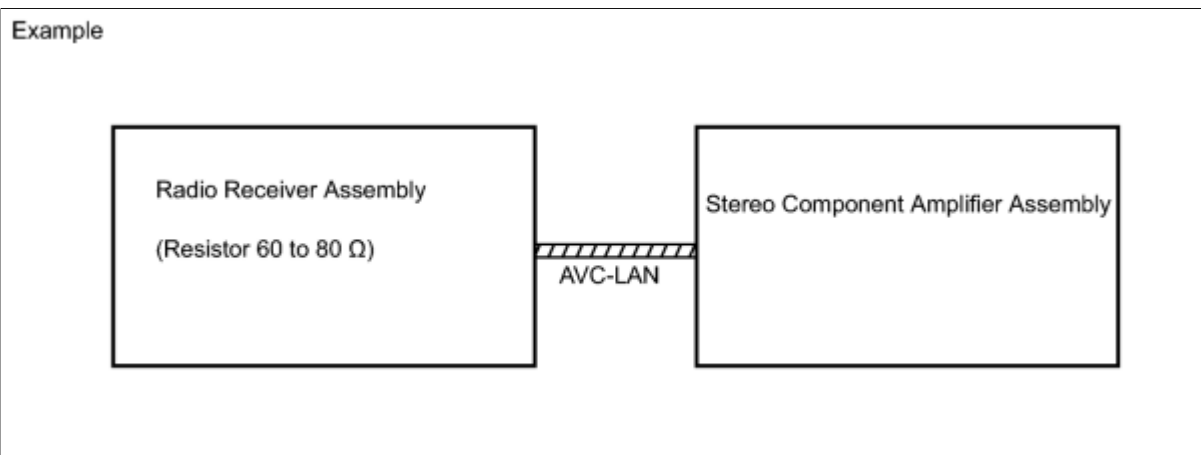

- (1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.
- (2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".

NOTICE:

If non-MP3 or non-WMA files are saved with an extension of ".mp3" or ".wma", those files may be wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

3. AVC-LAN DESCRIPTION

(a) What is AVC-LAN?

AVC-LAN, an abbreviation for Audio Visual Communication Local Area Network, is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

(b) Purpose

Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multi-media interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:

- (1) To solve sound problems etc. caused by using components of different manufacturers through signal standardization.
- (2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.

HINT:

- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.
- If the audio system has a navigation system installed, the multi-display unit acts as the master unit. If the navigation system is not installed, the audio head unit acts as the master unit instead. If the navigation receiver assembly is installed, it is the master unit.
- The radio receiver assembly contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.
- The car audio system with an AVC-LAN circuit has a diagnostic function.
- Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

4. COMMUNICATION SYSTEM OUTLINE

- (a) Components of the audio system communicate with each other via the AVC-LAN.
- (b) The master component of the AVC-LAN is a radio receiver assembly with a 60 to 80 Ω resistor. This is essential for communication.
- (c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.

5. DIAGNOSTIC FUNCTION OUTLINE

- (a) The audio system has a diagnostic function (the result is indicated on the master unit).
- (b) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

6. "BLUETOOTH" OUTLINE

- (a) "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.
- (b) "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band.

HINT:

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

- (c) Hands-free function

- (1) The "Bluetooth" built-in radio receiver and a "Bluetooth" compatible cellular phone*1 can be connected using a "Bluetooth" wireless connection. This enables use of the hands-free function on the cellular phone even the phone may be in a pocket or bag. For this reason, it is not necessary to use a connector or cable to connect the cellular phone.

*1: Some versions of "Bluetooth" compatible cellular phones may not function.

7. ASL (Automatic Sound Levelizer) FUNCTION OUTLINE

- (a) The Automatic Sound Levelizer (ASL) function automatically adjusts the sound data in order to enable to hear the clear sound from the audio system even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.). Vehicle speed signals are received from the combination meter assembly and used for the ASL.

8. RBDS FUNCTION OUTLINE (BROADCAST IN NORTH AMERICA ONLY)

The Radio Broadcast Data System (RBDS) is broadcast through conventional FM radio broadcasts. Even if a vehicle changes locations, the same information can be received from several FM stations without breaks. Information such as song names, traffic information, broadcast station names, etc. can be received.

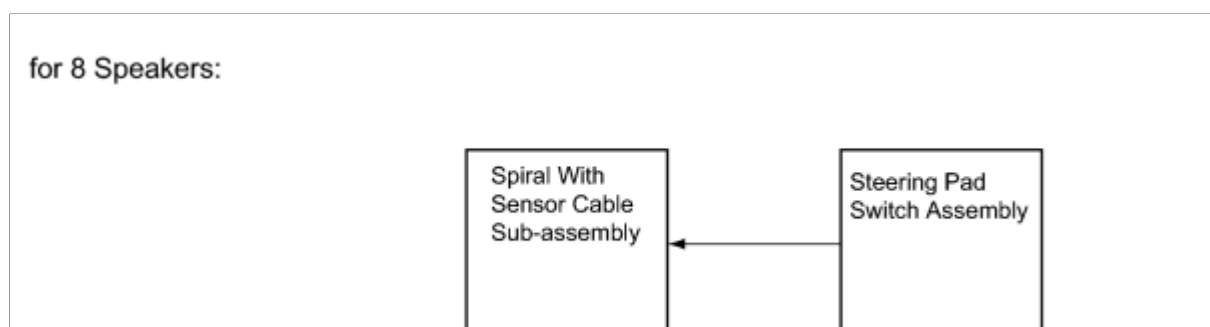

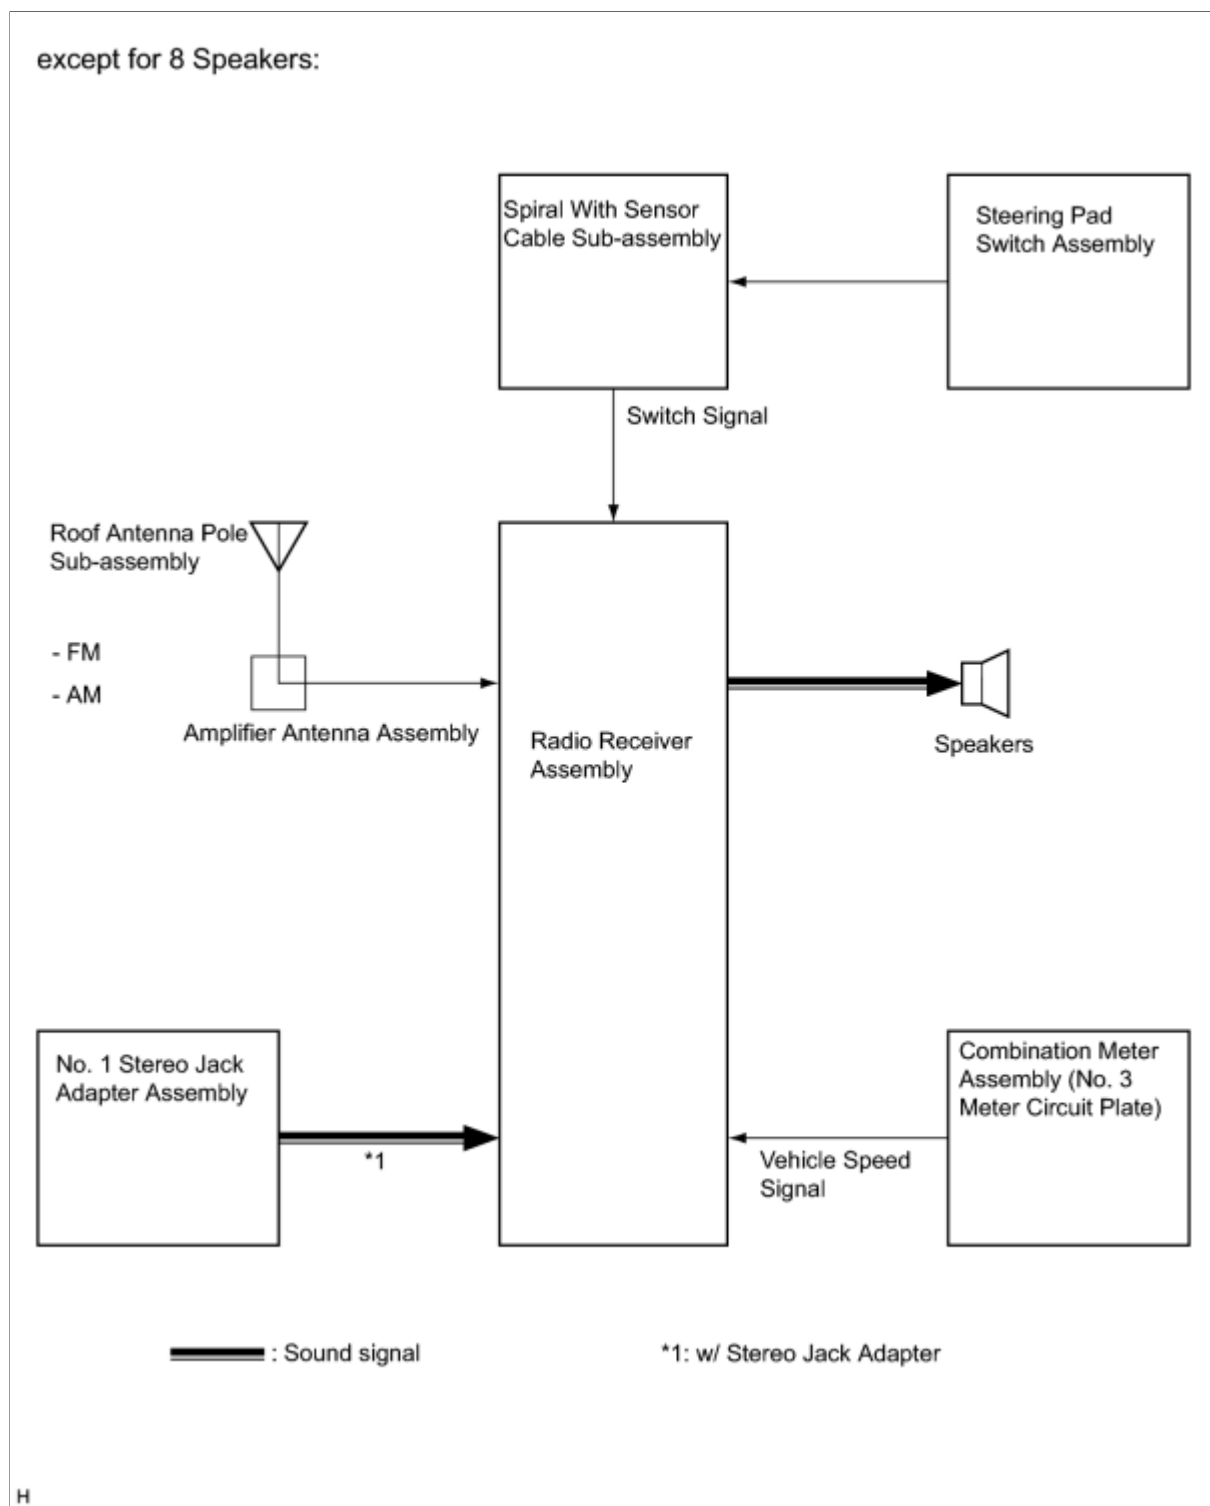

9. SDARS SYSTEM FUNCTION OUTLINE (BROADCAST IN NORTH AMERICA ONLY)

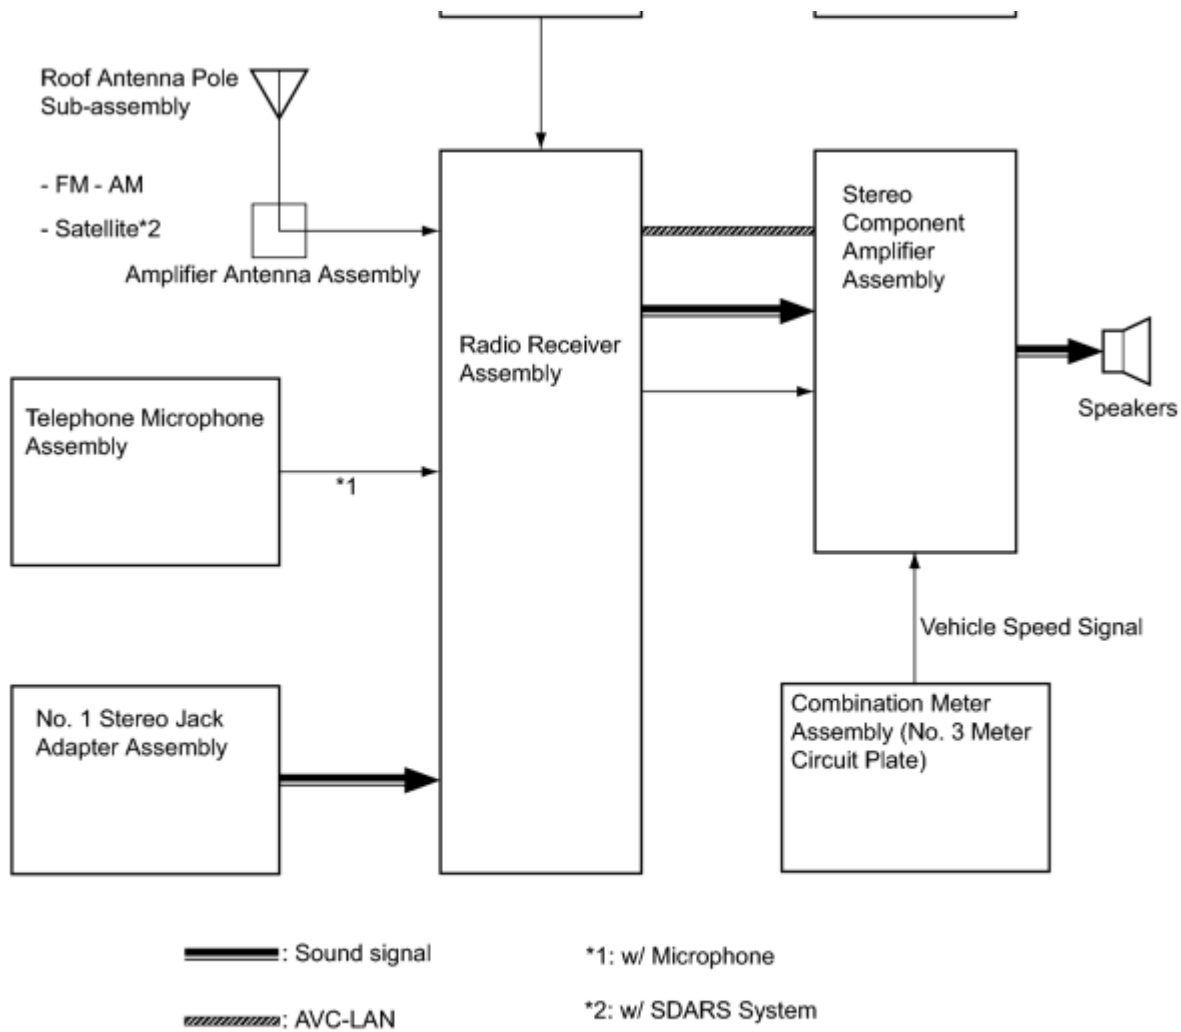

Satellite Digital Audio Radio Service (SDARS) is a satellite digital radio broadcast provided by Sirius XM Radio Inc. The broadcast (pay-type) is performed through satellites and terrestrial repeater networks. Several unique channels are available, and even if a vehicle changes locations, the same information can be received without breaks. Information such as song names, broadcast station names, etc. can be received.

NOTICE:

To receive an audio-visual pay-type broadcasts, the customer must enter into a pay-type contract with XM Satellite Radio Inc. After entering into a contract, registration of an 8-digit XM Radio ID is required. Also, if parts are replaced, the XM Radio ID must be reregistered.

DTC	01-21	ROM Error
-----	-------	-----------

DTC	01-22	RAM Error
-----	-------	-----------

DTC	01-2E	EEPROM Error
-----	-------	--------------

DESCRIPTION

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
01-21	A ROM malfunction exists.	Radio receiver assembly
01-22	A RAM malfunction exists.	
01-2E	A checksum malfunction exists.	

INSPECTION PROCEDURE

HINT:

After the inspection is completed, clear the DTCs.

PROCEDURE

1.	REPLACE RADIO RECEIVER ASSEMBLY
----	---------------------------------

(a) Replace the radio receiver assembly  .

NEXT  **END**

DTC	01-D5	Absence of Registration Unit
-----	-------	------------------------------

DTC	01-D8	No Response for Connection Check
-----	-------	----------------------------------

DTC	01-D9	Last Mode Error
-----	-------	-----------------

DTC	01-DA	No Response Against ON / OFF Command
-----	-------	--------------------------------------

DTC	01-DB	Mode Status Error
-----	-------	-------------------

DTC	01-DE	Slave Reset
-----	-------	-------------

DESCRIPTION

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
01-D5 *1, *3	A device indicated by the sub-code is (was) disconnected from the system while the power switch on (IG) or (ACC). The communication condition with the device that the DTC shows cannot be obtained when the engine starts.	<ul style="list-style-type: none"> • Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the radio receiver assembly and component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	The device indicated by the sub-code is (was) disconnected from the system after the engine starts.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system while the power switch on (IG) or (ACC).	
01-DA *3	No response is identified when changing mode. Sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3, *4	A slave device has been disconnected after the engine starts.	

HINT:

- *1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this DTC is stored after 180 seconds.
- *3: If the device is reported as not existing during verification, check the power source circuit and AVC-LAN circuit for the device.

for the device.

- *4: This DTC may be stored if the engine is started and the power switch start again.

NOTICE:

- Before starting troubleshooting, be sure to clear the DTCs stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.
- The radio receiver assembly is the master unit.
- Be sure to clear and recheck for the DTCs after the inspection is completed to confirm that no DTCs are output.

INSPECTION PROCEDURE

NOTICE:

Be sure to read Description before performing the following procedure.

PROCEDURE

- | | |
|----|--|
| 1. | CHECK "RADIO RECEIVER COMMUNICATION ERROR" IN FLOW CHART |
|----|--|

HINT:

Refer to Radio Receiver Communication Error  .

DTC	01-D6	No Master
-----	-------	-----------

DTC	01-D7	Connection Check Error
-----	-------	------------------------

DESCRIPTION

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
01-D6*1	Either condition is met: <ul style="list-style-type: none"> The device that stores (stored) the DTC has (had) been disconnected while the power switch on (IG) or (ACC). The master device has (had) been disconnected when this DTC is stored. 	<ul style="list-style-type: none"> Radio receiver assembly power source circuit Power source circuit of the component which has stored this code AVC-LAN circuit between the radio receiver assembly and component which has stored this code Component which has stored this code Radio receiver assembly
01-D7*2	Either condition is met: <ul style="list-style-type: none"> The device that stored the code has (had) been disconnected after the engine starts (started). The master device has (had) been disconnected when this DTC is (was) stored. 	

HINT:

- *1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the power switch on (IG) or (ACC), this DTC is stored.

NOTICE:

- Before starting troubleshooting, be sure to clear the DTCs stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.
- The radio receiver assembly is the master unit.
- Be sure to clear and recheck for the DTCs after the inspection is completed to confirm that no DTCs are output.

INSPECTION PROCEDURE

NOTICE:

Be sure to read Description before performing the following procedure.

PROCEDURE

1.	CHECK RADIO RECEIVER ASSEMBLY POWER SOURCE CIRCUIT
----	--

HINT:

Refer to Radio Receiver Power Source Circuit 

Refer to Radio Receiver Power Source Circuit .

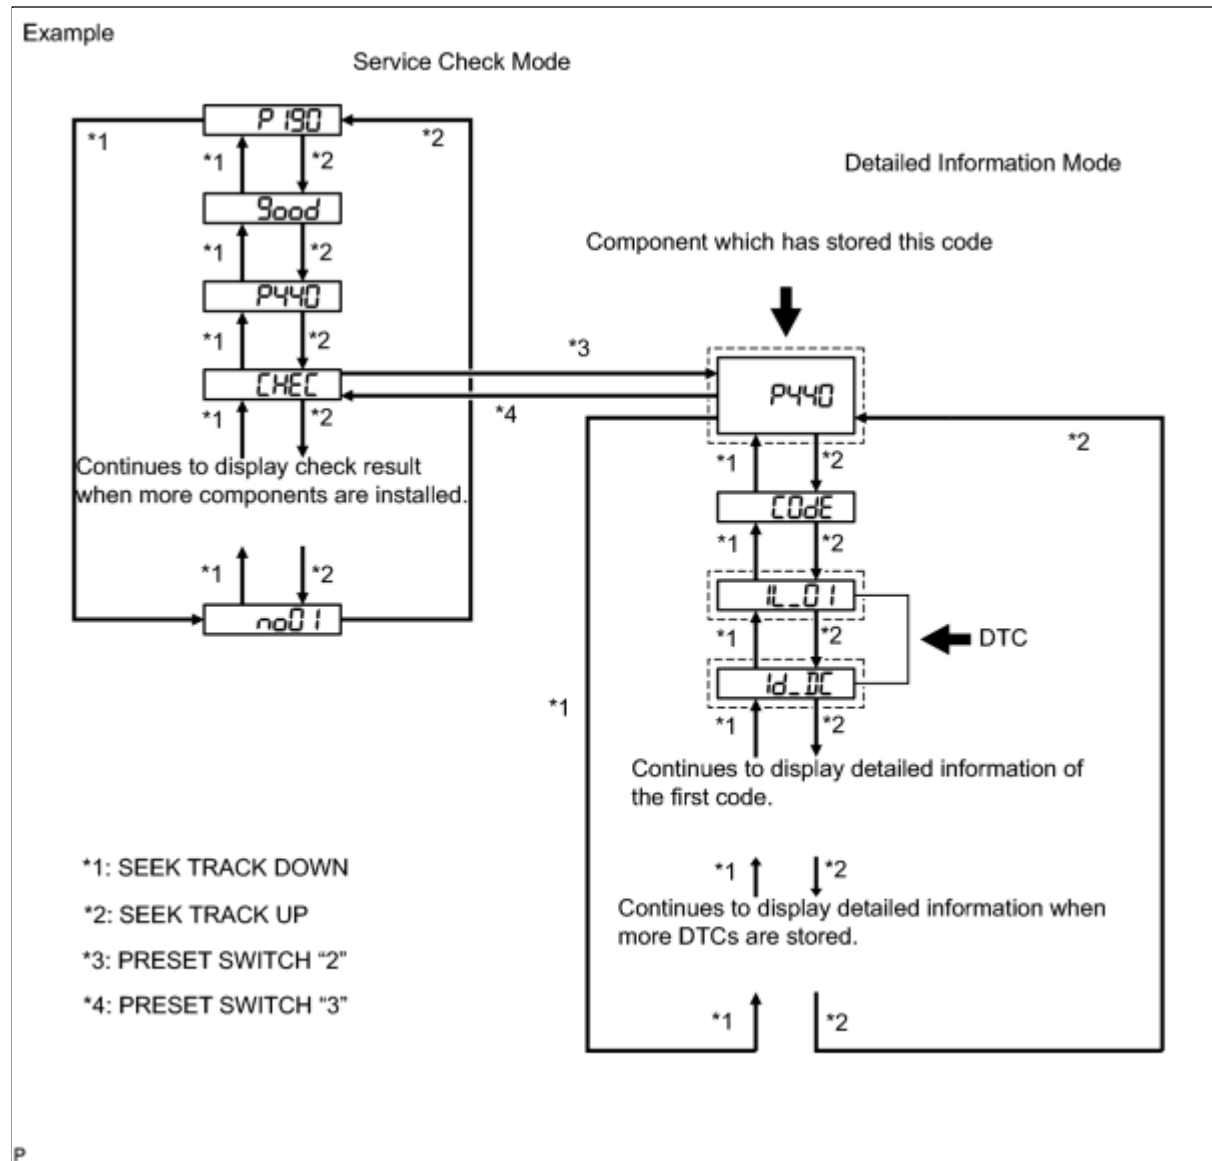

If the power source circuit is operating normally, proceed to the next step.

NEXT

2. IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

(a) Enter diagnostic mode.

(b) Press preset switch "2" to change the mode to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table

COMPONENT	PHYSICAL ADDRESS
-----------	------------------

COMPONENT	PHYSICAL ADDRESS
Stereo component amplifier assembly	440
Satellite radio tuner	1F1

HINT:

- "P440" set by the stereo component amplifier assembly shown in the preceding illustration as an example.
- For details of the DTC display, refer to DTC Check/Clear .

NEXT

3.	CHECK COMPONENT SHOWN BY SUB-CODE
-----------	--

(a) Select the component shown by the sub-code.

HINT:

The satellite radio tuner is built into the radio receiver assembly. If there is a problem between the satellite radio tuner and radio receiver assembly, replace the radio receiver assembly.

Component Table

COMPONENT	PROCEED TO
Except satellite radio tuner	A
Satellite radio tuner (1F1)	B

REPLACE RADIO RECEIVER ASSEMBLY

A

4.	CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE
-----------	---

(a) Inspect the power source circuit of the component which has stored this code.

If the power source circuit is operating normally, proceed to the next step.

Component Table

COMPONENT	PROCEED TO
Stereo component amplifier assembly	Stereo component amplifier power source circuit 

NEXT**5. INSPECT RADIO RECEIVER ASSEMBLY**

(a) Disconnect the radio receiver assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L40-5 (ATX+) - L40-15 (ATX-)	Always	60 to 80 Ω

Text in Illustration

*1	Component without harness connected (Radio Receiver Assembly)
----	--

NG **REPLACE RADIO RECEIVER ASSEMBLY**

OK**6. CHECK HARNESS AND CONNECTOR****HINT:**

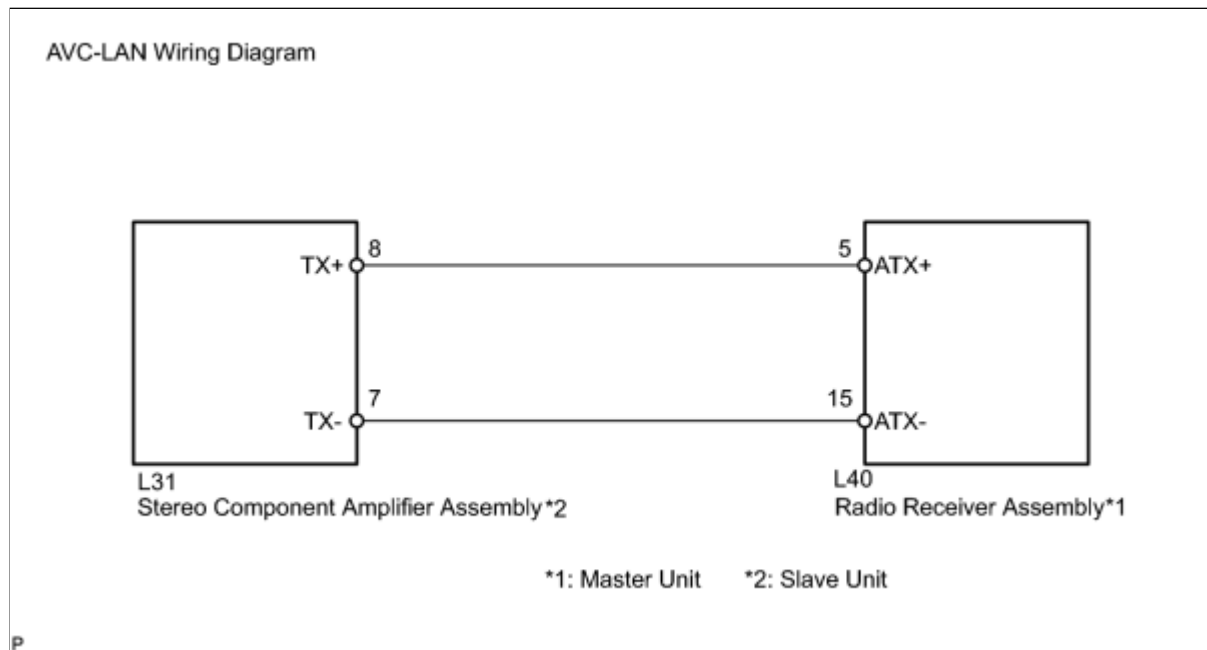

For details of the connectors, refer to Terminals of ECU .

(a) Referring to the following AVC-LAN wiring diagram, check the AVC-LAN circuit between the radio receiver assembly and component which has stored this code.

- (1) Disconnect all connectors between the radio receiver assembly and component which has stored this code.
- (2) Check for an open or short in the AVC-LAN circuit between the radio receiver assembly and component which has stored this code.

OK:

There is no open or short circuit.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7. REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a known good one.

NEXT

8. CLEAR DTC

(a) Clear the DTCs  .

NEXT

9.	RECHECK FOR DTC
-----------	------------------------

(a) Recheck for DTCs and check if the same problem occurs again.

OK:

Malfunction disappears.

NG  **REPLACE RADIO RECEIVER ASSEMBLY**

OK  **END**

DTC	01-DC	Transmission Error
-----	-------	--------------------

DESCRIPTION

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
01-DC *1	Transmission to component shown by sub-code failed (Detecting this DTC does not always mean actual failure).	If the same sub-code is stored in other components, check power source circuit and communication system of all components shown by sub-code

HINT:

***1: If the power switch is turned off after idling for 60 seconds, this DTC may be stored when the engine is started again.**

NOTICE:

- Before starting troubleshooting, be sure to clear the DTCs stored due to the reason described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.
- The radio receiver assembly is the master unit.
- Be sure to clear and recheck for the DTCs after the inspection is completed to confirm that no DTCs are output.

INSPECTION PROCEDURE

NOTICE:

Be sure to read Description before performing the following procedure.

PROCEDURE

1. CHECK FOR DTC OF OTHER COMPONENTS

(a) Check if the component shown by the sub-code is displayed in the check result of the other components.

(1) Check if DTC 01-DC is output for the other components.

(2) If DTC 01-DC is output for any other components, check if the same physical address is displayed.

Result:

RESULT	PROCEED TO
DTC 01-DC is output and the same physical address is displayed	A
DTC 01-DC is not output or the same physical address is not displayed	B

HINT:

For the list of the components shown by sub-codes, refer to the table in step 2.

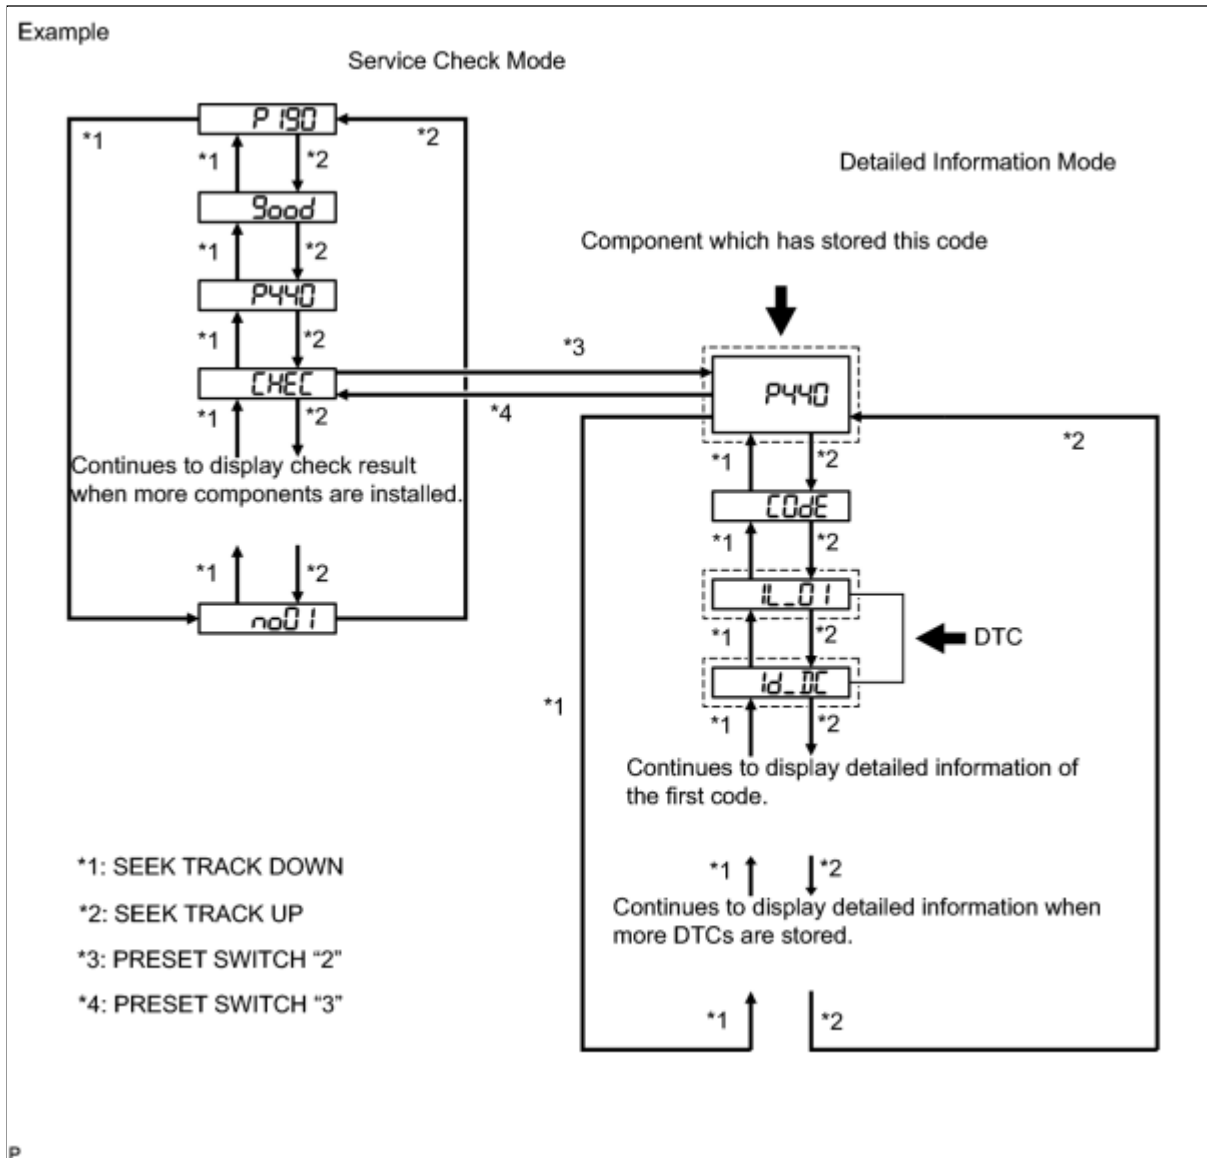

A

2. IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

(a) Enter diagnostic mode.

(b) Press preset switch "2" to change the mode to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table

COMPONENT	PHYSICAL ADDRESS
Stereo component amplifier assembly	440
Satellite radio tuner	151

Satellite radio tuner	1F1
Radio receiver assembly	190

HINT:

- "P440" set by the stereo component amplifier assembly is shown in the preceding illustration as an example.
- For details of the DTC display, refer to DTC Check/Clear .

NEXT

3.	CHECK COMPONENT WHICH HAS STORED THIS CODE

COMPONENTS

ILLUSTRATION

INSPECTION

1. INSPECT FRONT NO. 1 SPEAKER

- (a) With the speaker installed, check that there is no looseness or other abnormalities.
- (b) Check that there is no foreign matter in the speaker, no tears on the speaker's cone part or other abnormalities.

(c) Measure the resistance of the speaker.

Standard Resistance (except for 8 Speakers):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	3.2 to 4.8 Ω

Standard Resistance (for 8 Speakers):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	1.4 to 2.2 Ω

If the result is not as specified, replace the speaker assembly.

Text in Illustration

*1	Component without harness connected (Front No. 1 Speaker)
----	--

INSTALLATION

1. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY

(a) Using an air riveter or a hand riveter, install the front No. 1 speaker assembly with 4 new rivets.

Text in Illustration

*1	Riveter	*2	Mandrel
*a	INCORRECT	-	-

NOTICE:

- Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.
- Confirm that the rivet is seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any clearance between the rivet head and moulding.
- Do not leave any clearance between the moulding and door frame. Firmly hold the 2 items together while installing the rivet.

HINT:

If the rivet cannot be cut, pull it once and cut it.

(b) Connect the connector.

2. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY [INFO](#)
3. INSTALL COURTESY LIGHT ASSEMBLY [INFO](#)
4. INSTALL DOOR ARMREST COVER [INFO](#)
5. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side) [INFO](#)
6. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side) [INFO](#)
7. INSTALL ASSIST GRIP COVER [INFO](#)
8. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG [INFO](#)

REMOVAL

1. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG INFO
2. REMOVE ASSIST GRIP COVER INFO
3. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Driver Side) INFO
4. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH FRONT DOOR ARMREST BASE PANEL (for Front Passenger Side) INFO
5. REMOVE DOOR ARMREST COVER INFO
6. REMOVE COURTESY LIGHT ASSEMBLY INFO
7. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO
8. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY

(a) Disconnect the connector.

(b) Using a drill bit with a diameter of less than 4 mm (0.158 in.), drill out the 4 rivet heads and remove the front No. 1 speaker assembly.

NOTICE:

- Do not touch the cone part of the speaker.
- Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill out the rivet head.
- Be careful as the cut rivet will be very hot.

(c) Continue drilling and push out the remaining rivet fragments.

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the door.

COMPONENTS

ILLUSTRATION

P

INSPECTION

1. INSPECT FRONT NO. 2 SPEAKER (except for 8 Speakers)

- (a) With the speaker installed, check that there is no looseness or other abnormalities.
- (b) Check that there is no foreign matter in the speaker, no tears on the speaker's cone part or other abnormalities.
- (c) When there is a possibility that either the right or left speaker is malfunctioning, interchange the speakers and perform an inspection. If the malfunction disappears after interchanging the speakers, replace the malfunctioning speaker.

HINT:

Connect all connectors to the speakers when performing an inspection. If the result is not as specified, replace the speaker assembly.

2. INSPECT FRONT NO. 2 SPEAKER (for 8 Speakers)

- (a) With the speaker installed, check that there is no looseness or other abnormalities.
- (b) Check that there is no foreign matter in the speaker, no tears on the speaker's cone part or other abnormalities.

- (c) Measure the resistance of the speaker.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	1.5 to 2.5 Ω

If the result is not as specified, replace the speaker assembly.

Text in Illustration

*1	Component without harness connected (Front No. 2 Speaker)
----	--

INSTALLATION

1. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY

(a) Connect the connector.

(b) Install the front No. 2 speaker assembly with the 2 bolts.

2. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY [INFO](#)

3. INSTALL FRONT PILLAR GARNISH CORNER PIECE [INFO](#)

4. INSTALL FRONT PILLAR GARNISH [INFO](#)

REMOVAL

1. REMOVE FRONT PILLAR GARNISH [INFO](#)
2. REMOVE FRONT PILLAR GARNISH CORNER PIECE [INFO](#)
3. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY [INFO](#)
4. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY

(a) Remove the 2 bolts.

(b) Disconnect the connector and remove the front No. 2 speaker assembly.

NOTICE:

Do not touch the cone part of the speaker.

INSPECTION

1. INSPECT NOISE FILTER

- (a) With the noise filter installed, check that there is no looseness or other abnormalities.
 (b) Remove the noise filter.

- (c) Measure the resistance of the noise filter according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (+B) - 2 (GND)	Always	10 k Ω or higher
2 (GND) - 3	Always	Below 1 Ω

Text in Illustration

*1	Noise Filter
----	--------------

INSTALLATION

1. INSTALL NOISE FILTER

(a) Engage the claw to install a new terminal cover to the wire harness.

(b) Engage the 3 claws to install the new terminal cover with wire harness to a new condenser.

(c) Engage the clamp to temporarily install a new noise filter with wire harness to the back door.

(d) Install the new radio setting condenser with the bolt.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

2. INSTALL BACK DOOR TRIM BOARD ASSEMBLY

INFO

REMOVAL

1. REMOVE BACK DOOR TRIM BOARD ASSEMBLY INFO

2. REMOVE NOISE FILTER

NOTICE:

When the terminal cover is removed, the noise filter must be replaced because the terminal cover and condenser are supplied as a set.

(a) Remove the bolt.

(b) Disengage the clamp and disconnect the noise filter with wire harness from the vehicle body.

(c) Using a screwdriver with its tip wrapped with protective tape, disengage the 3 claws and remove the terminal cover with wire harness from the condenser.

Text in Illustration

*1

Protective Tape

(d) Using a screwdriver, bend back and break off the claw as shown in the illustration.

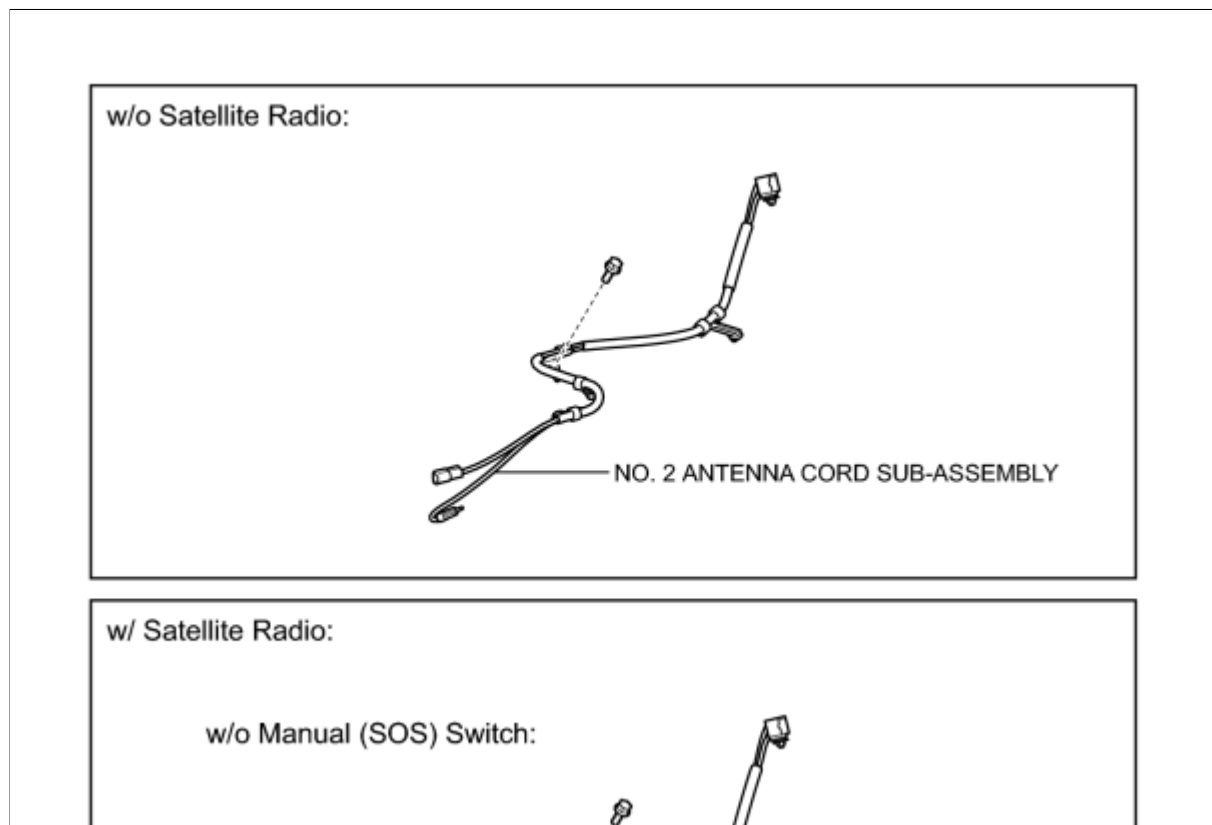

(e) Remove the terminal cover from the wire harness.

INSTALLATION

1. INSTALL NO. 5 ANTENNA CORD SUB-ASSEMBLY (w/o Manual (SOS) Switch)

(a) Engage the 4 clamps.

(b) Install the No. 5 antenna cord sub-assembly with the bolt.

(c) Connect the 2 connectors.

2. INSTALL NO. 5 ANTENNA CORD SUB-ASSEMBLY (w/ Manual (SOS) Switch)

(a) Engage the 4 clamps.

(b) Install the No. 5 antenna cord sub-assembly with the bolt.

(c) Connect the 4 connectors.

3. INSTALL NO. 4 ANTENNA CORD SUB-ASSEMBLY

HINT:

Double-sided tape and tape are not available as supply parts. If the tape still has enough adhesion to secure the roof headlining and antenna cord, reuse it. If the roof headlining has been replaced with a new one, or if the tape and/or the double-sided tape is no longer sticky, apply new tape following the procedure below.

If the double-sided tape cannot be reused:

(a) Peel off the release paper from one side of new double-sided tape and apply the new double-sided tape to the position indicated in the illustration. Be careful not to touch the adhesive surface.

position indicated in the illustration. Be careful not to touch the adhesive surface.

AREA	DIMENSION
X	1.0 mm (0.0394 in.)
Y	10.0 mm (0.394 in.)

NOTICE:

Be sure to apply the double-sided tape carefully so that the tape will not be misaligned or come off.

(b) Peel off the release paper from the double-sided tape. Be careful not to touch the adhesive surface.

(c) Align the vehicle front side marking (pink) on the No. 4 antenna cord sub-assembly with the vehicle front side tab

- (c) Align the vehicle front side marking (pink) on the No. 4 antenna cord sub-assembly with the vehicle front side tape on the roof headlining, and wrap the tape over the antenna cord to install it. (1)

HINT:

If the tape cannot be reused, packing tape can be used as a substitute.

- (d) Temporarily install the front side of the No. 4 antenna cord sub-assembly (2) with the adhesive tape.
- (e) Temporarily install the front side of the No. 4 antenna cord sub-assembly (3) with the adhesive tape.
- (f) Temporarily install the No. 4 antenna cord sub-assembly by placing it on the double-sided tape from the front of the vehicle to the point just before the extra cord storage area.
- (g) Align the vehicle rear marking (pink) on the No. 4 antenna cord sub-assembly with the tape attachment location (center line) of the roof headlining, and wrap the tape over the antenna cord to install it. (4)

(scribe line) of the roof headlining, and wrap the tape over the antenna cord to install it. (4)

HINT:

If the tape cannot be reused, packing tape can be used as a substitute.

- (h) Temporarily install the rear side of the No. 4 antenna cord sub-assembly (5) with the adhesive tape.
- (i) Temporarily install the No. 4 antenna cord sub-assembly by placing it on the double-sided tape from the rear of the vehicle to the point just before the extra cord storage area.

- (j) Using double-sided tape, place any excess No. 4 antenna cord sub-assembly in the extra cord storage area to finish installing the antenna cord.

HINT:

Attach 3 pieces of double-sided tape to the extra cord storage area as shown in the illustration.

4. INSTALL NO. 3 ROOF SILENCER PAD (w/o Sliding Roof) INFO

5. INSTALL NO. 2 ROOF SILENCER PAD (w/o Sliding Roof) INFO

6. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure from Install Roof Headlining Assembly INFO.

7. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/o Satellite Radio)

- (a) Engage the 4 clamps.

- (b) Install the No. 2 antenna cord sub-assembly with the bolt.
- (c) Connect the 2 connectors.

8. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/ Satellite Radio)

- (a) w/o Manual (SOS) Switch:

(1) Engage the 4 clamps.

(2) Install the No. 2 antenna cord sub-assembly with the bolt.

(3) Connect the 3 connectors.

(b) w/ Manual (SOS) Switch:

(1) Engage the 5 clamps.

(2) Install the No. 2 antenna cord sub-assembly with the bolt.

(3) Connect the 5 connectors.

9. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure from Install Upper Instrument Panel Assembly  .

REMOVAL

1. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the procedure up to Remove Upper Instrument Panel Assembly  .

2. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/o Satellite Radio)

(a) Disconnect the 2 connectors.

(b) Remove the bolt.

(c) Disengage the 4 clamps and remove the No. 2 antenna cord sub-assembly.

3. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (w/ Satellite Radio)

(a) w/o Manual (SOS) Switch:

(1) Disconnect the 3 connectors.

(2) Remove the bolt.

(3) Disengage the 4 clamps and remove the No. 2 antenna cord sub-assembly.

(b) w/ Manual (SOS) Switch:

(1) Disconnect the 5 connectors.

(2) Remove the bolt.

(3) Disengage the 5 clamps and remove the No. 2 antenna cord sub-assembly.

4. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure up to Remove Roof Headlining Assembly  .

5. REMOVE NO. 2 ROOF SILENCER PAD (w/o Sliding Roof) [INFO](#)**6. REMOVE NO. 3 ROOF SILENCER PAD (w/o Sliding Roof)** [INFO](#)**7. REMOVE NO. 4 ANTENNA CORD SUB-ASSEMBLY**

- (a) Peel the strips of the tape used to secure the antenna cord only to the extent that allows removal of the antenna cord.

- (b) Remove the No. 4 antenna cord sub-assembly.

8. REMOVE NO. 5 ANTENNA CORD SUB-ASSEMBLY (w/o Manual (SOS) Switch)

(a) Disconnect the 2 connectors.

(b) Remove the bolt.

(c) Disengage the 4 clamps and remove the No. 5 antenna cord sub-assembly.

9. REMOVE NO. 5 ANTENNA CORD SUB-ASSEMBLY (w/ Manual (SOS) Switch)

(a) Disconnect the 4 connectors.

(b) Remove the bolt.

(c) Disengage the 4 clamps and remove the No. 5 antenna cord sub-assembly.

H

INSTALLATION

1. INSTALL REAR SPEAKER ASSEMBLY (for 6 or 8 Speakers)

(a) Using an air riveter or a hand riveter, install the rear speaker assembly with 3 new rivets.

Text in Illustration

*1	Riveter	*2	Mandrel
*a	INCORRECT	-	-

NOTICE:

- Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.
- Confirm that the rivet is seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any clearance between the rivet head and moulding.
- Do not leave any clearance between the moulding and door frame. Firmly hold the 2 items together while installing the rivet.

HINT:

If the rivet cannot be cut, pull it once and cut it.

(b) Connect the connector.

2. INSTALL REAR NO. 2 SPEAKER ASSEMBLY (for 8 Speakers)

(a) Install the rear No. 2 speaker assembly with the 2 screws.

3. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY [INFO](#)

4. INSTALL REAR DOOR ARMREST COVER [INFO](#)

5. INSTALL REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH REAR DOOR ARMREST BASE PANEL [INFO](#)

6. INSTALL DOOR ASSIST GRIP COVER [INFO](#)

REMOVAL

1. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG INFO
2. REMOVE DOOR ASSIST GRIP COVER INFO
3. REMOVE REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY WITH REAR DOOR ARMREST BASE PANEL INFO
4. REMOVE REAR DOOR ARMREST COVER INFO
5. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY INFO
6. REMOVE REAR NO. 2 SPEAKER ASSEMBLY (for 8 Speakers)

(a) Remove the 2 screws and rear No. 2 speaker assembly.

7. REMOVE REAR SPEAKER ASSEMBLY (for 6 or 8 Speakers)

(a) Disconnect the connector.

(b) Using a drill bit with a diameter of less than 4 mm (0.158 in.), drill out the 3 rivet heads and remove the rear speaker assembly.

NOTICE:

- Do not touch the cone part of the speaker.
- Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill out the rivet head.
- Be careful as the cut rivet will be very hot.

(c) Continue drilling and push out the remaining rivet fragments.

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the door.

4. REMOVE MANUAL (SOS) SWITCH (MAP LIGHT ASSEMBLY) (w/ Sliding Roof) 

PRECAUTION

1. WHEN AUTOMATIC COLLISION NOTIFICATION HAS ACTIVATED

- (a) Perform "ACN CALL END" with Techstream to terminate ACN (Automatic Collision Notification) with the call center  .
- (b) The BUB (Back-Up Battery) must be replaced.

2. WHEN DISCONNECTING CONNECTORS FROM TELEMATICS DATA COMMUNICATION MODULE (DCM (TELEMATICS TRANSCEIVER))

- (a) The power switch must be off.

3. WHEN REPLACING THE DCM (TELEMATICS TRANSCEIVER)

- (a) After installing a new DCM (Telematics Transceiver), perform "DCM ACTIVATION" with the Techstream  . This allows the Telematics service provider to register the new DCM (Telematics Transceiver) and to delete the old DCM (Telematics Transceiver) information from their database.

NOTICE:

Do not swap the DCM (Telematics Transceiver) with one from another vehicle.

4. WHEN UNABLE TO CONTACT WITH CALL CENTER BUT NO DTC

- (a) This may occur when the cellular signal strength was very weak. Check "DCM OPERATION HISTORY" with the Techstream  .

5. WHEN DIAGNOSING DCM (TELEMATICS TRANSCEIVER)

- (a) While attempting to diagnose the DCM (Telematics Transceiver), do not use a DCM (Telematics Transceiver) from another vehicle. Each DCM (Telematics Transceiver) is registered to a specific VIN and should not be tested in another vehicle.

PARTS LOCATION

ILLUSTRATION

ILLUSTRATION

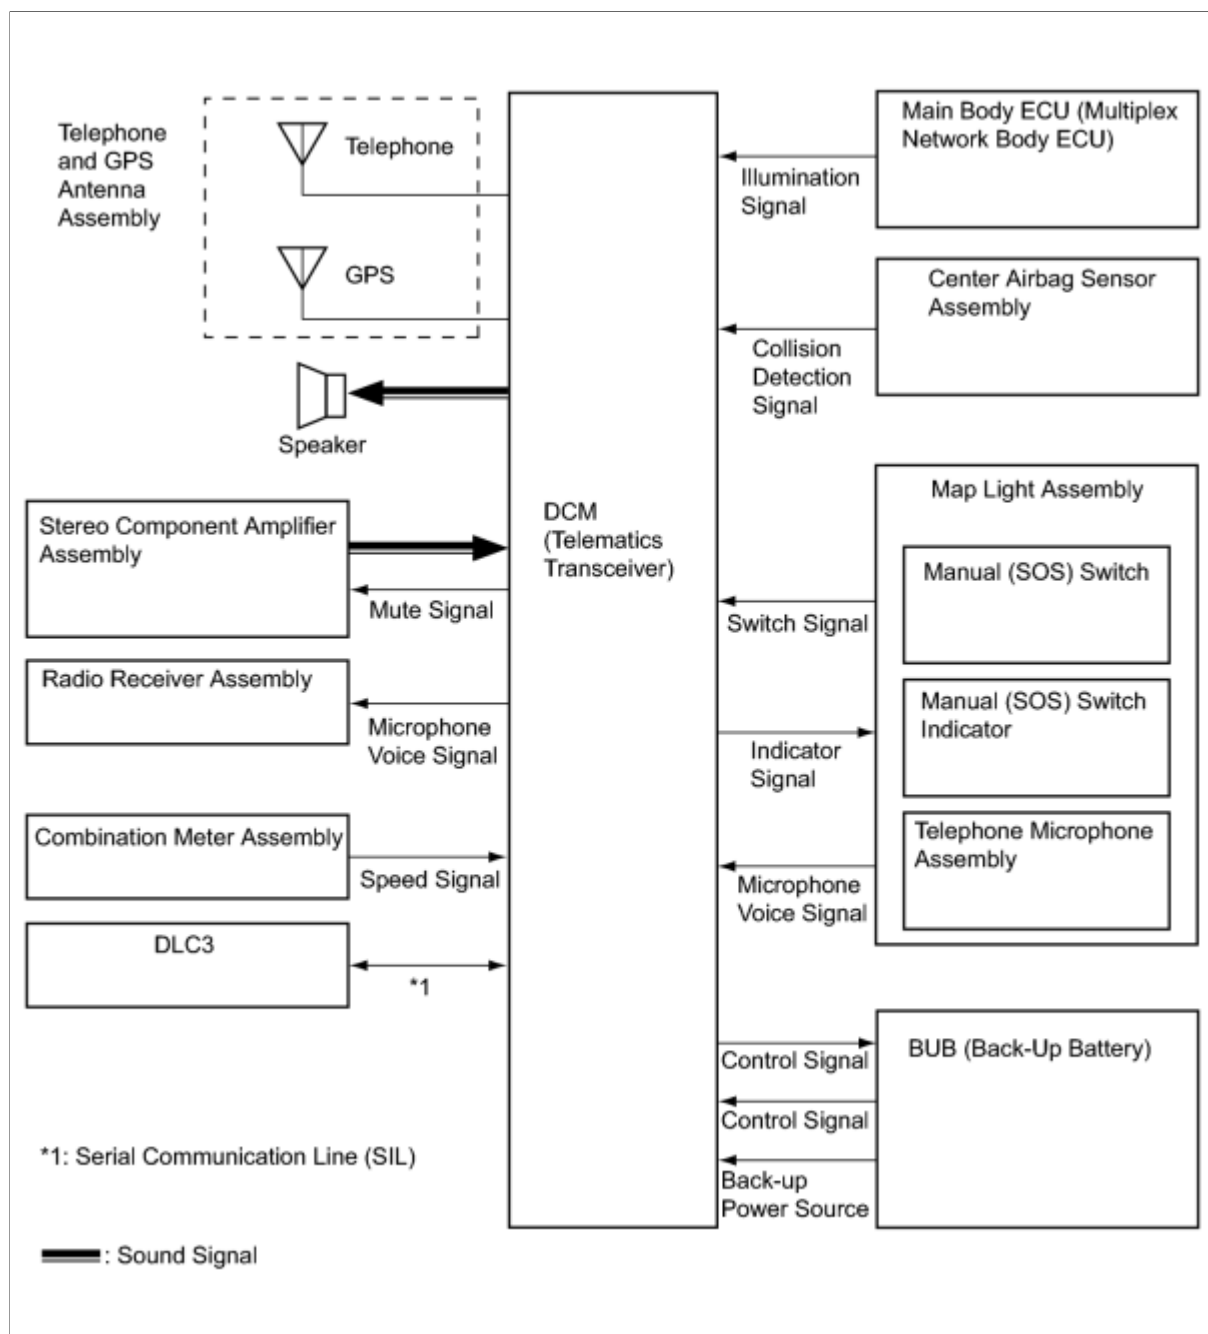

ILLUSTRATION

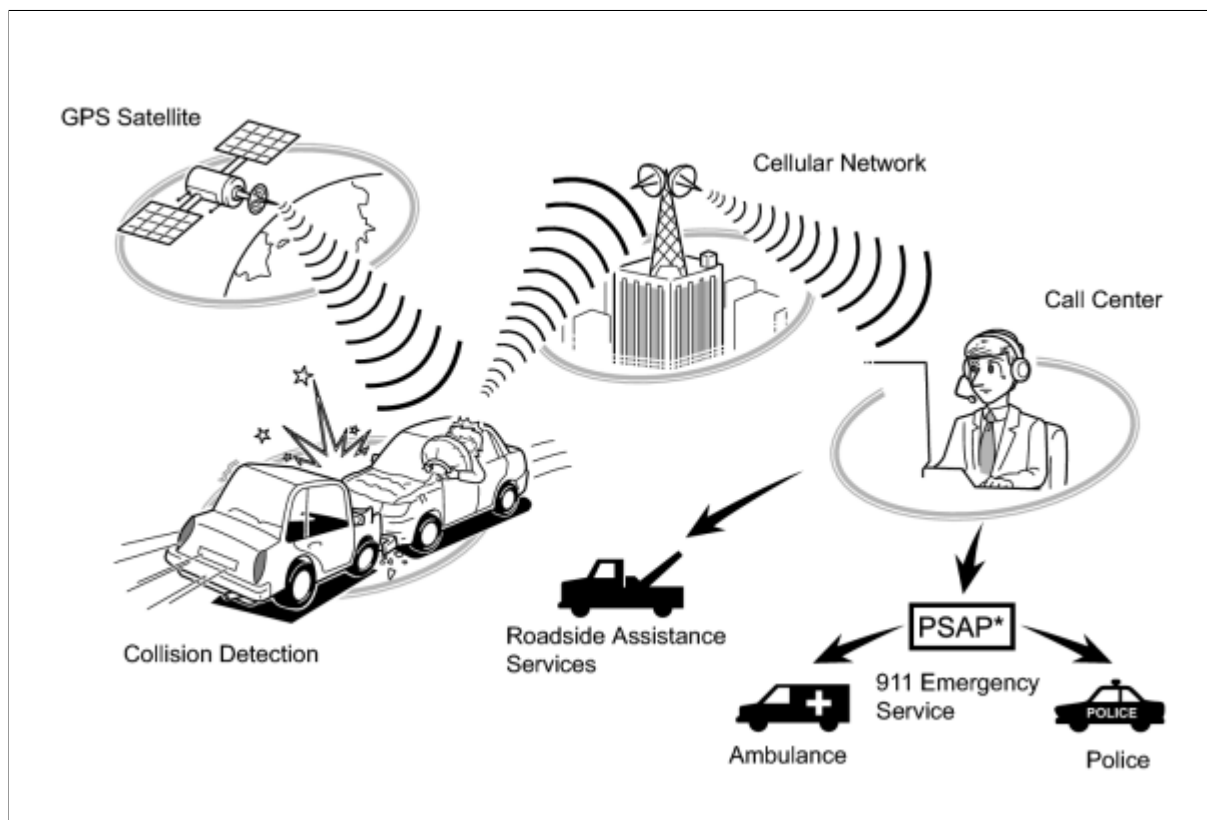

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. DESCRIPTION

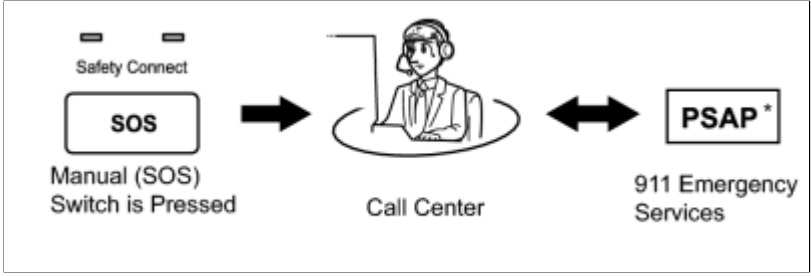

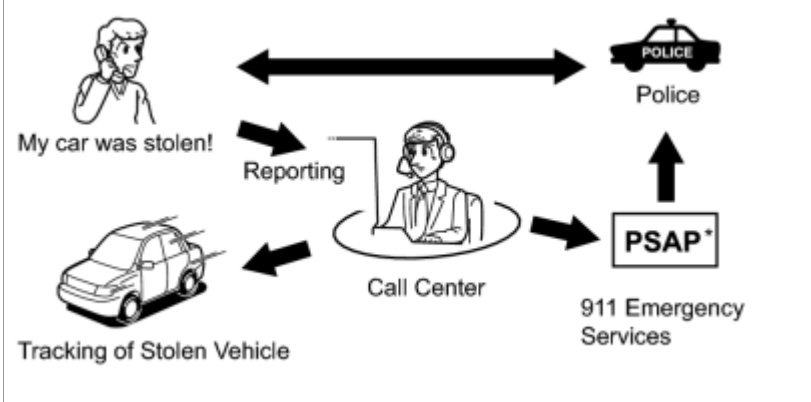

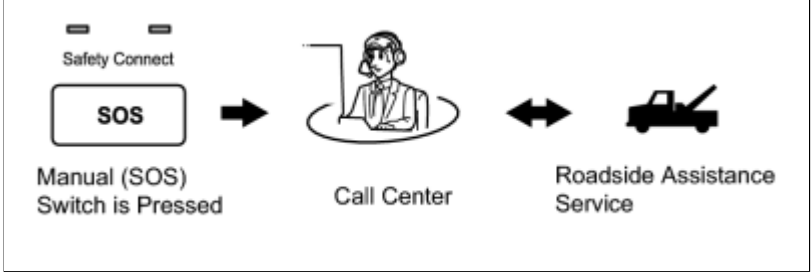

(a) Safety Connect performs ACN (Automatic Collision Notification), manual emergency calling, stolen vehicle tracking and roadside assistance service, by audio and data communications between the vehicle and call center through a cellular phone network. As shown in the illustration, when a collision is detected, the vehicle sends its location calculated based on GPS signals and the identification of DCM (Telematics Transceiver) to a call center. After the necessary information has been gathered, the call center will relay this information to emergency services.

*: Public Safety Answering Point

2. SYSTEM FUNCTION

FUNCTION	OUTLINE
ACN (Automatic Collision Notification)	<p>When a collision is detected, the vehicle connects to the call center automatically and reports the vehicle location and vehicle information by data communication. The operator will connect to the vehicle and communicate with the occupant. Even if the occupant does not answer, the operator can notify emergency services.</p> <div style="text-align: center;"> <p>Collision Detection Call Center PSAP* Calling an Ambulance</p> <p>911 Emergency Services</p> </div>
	<p>After pressing the manual (SOS) switch, the occupant can talk to an operator from the call center to seek assistance.</p>

<p>Manual Emergency Call</p>	<p>SAFETY ASSISTANCE:</p> 
<p>Stolen Vehicle Locator</p>	<p>After the vehicle has been reported stolen to the police, the customer can contact the call center to begin the stolen vehicle locator process. The operator locates this vehicle by GPS and provides information to the police.</p> 
<p>Roadside Assistance Service</p>	<p>Pressing the manual (SOS) switch will contact the call center, and a wide range of help, such as towing, flat tire, fuel delivery, etc. Can be provided.</p> 

*: Public Safety Answering Point

HINT:

The shape of the manual (SOS) switch shown in the illustration is an example, and may differ from that of an actual vehicle.

3. VOICE GUIDANCE FUNCTION

HINT:

The system plays back the following voice prompts in the situations shown.

VOICE PROMPT	USAGE CONDITION
Safety Connect failure detected, please contact your dealer.	When system detects LED failure (Red only), and another DTC is set. Message is played once at each power switch on (IGN) until the problem is fixed.

	on (IG) until the problem is fixed.
Connecting to the Call Center.	DCM Activation start.
Safety Connect Activation failed.	DCM Activation fails for some reason.
Safety Connect Activation complete.	DCM Activation completed successfully.
Please make sure you are in an area with good cellular coverage and try again. If you continue to receive this message, contact your dealer.	Follows Activation Sequence.
Unable to Connect to the Call Center.	-
Impact detected.	When DCM (Telematics Transceiver) receives collision detection signal.
Connecting to the Emergency Call Center.	Call initiated to call center.
Unable to Connect to the Emergency Call Center.	DCM (Telematics Transceiver) cannot connect to Emergency Call Center for some reason
To cancel, please press the button again.	To end the call manually.
Emergency call cancelled.	Confirmation the call has been canceled.
The system will try again.	Could not connect to call center.
Welcome to Safety Connect.	This voice prompt is short version for activation.
To activate, please press the button again within 5 seconds.	This voice prompt is instruction for activation.
Safety Connect is not initialized.	Reserve for activation.
Safety Connect is not active.	When DCM (Telematics Transceiver) is in Deactive mode.
For information on setting up a new subscription or to initialize a subscription you've already set up, please press the button again within 5 seconds.	When DCM (Telematics Transceiver) is in Deactive mode.

4. BUB (BACK-UP BATTERY) OUTLINE

- (a) The BUB (Back-Up Battery) is a non-rechargeable battery.
- (b) When ACN (Automatic Collision Notification) occurs, the BUB (Back-Up Battery) provides power to the DCM (Telematics Transceiver).

NOTICE:

- After ACN is performed, the BUB (Back-Up Battery) must be replaced.
- The BUB (Back-Up Battery) must not be replaced while an ACN call is in progress.

HINT:

When a Manual Emergency Call is made, the BUB (Back-Up Battery) is not used as the power source.

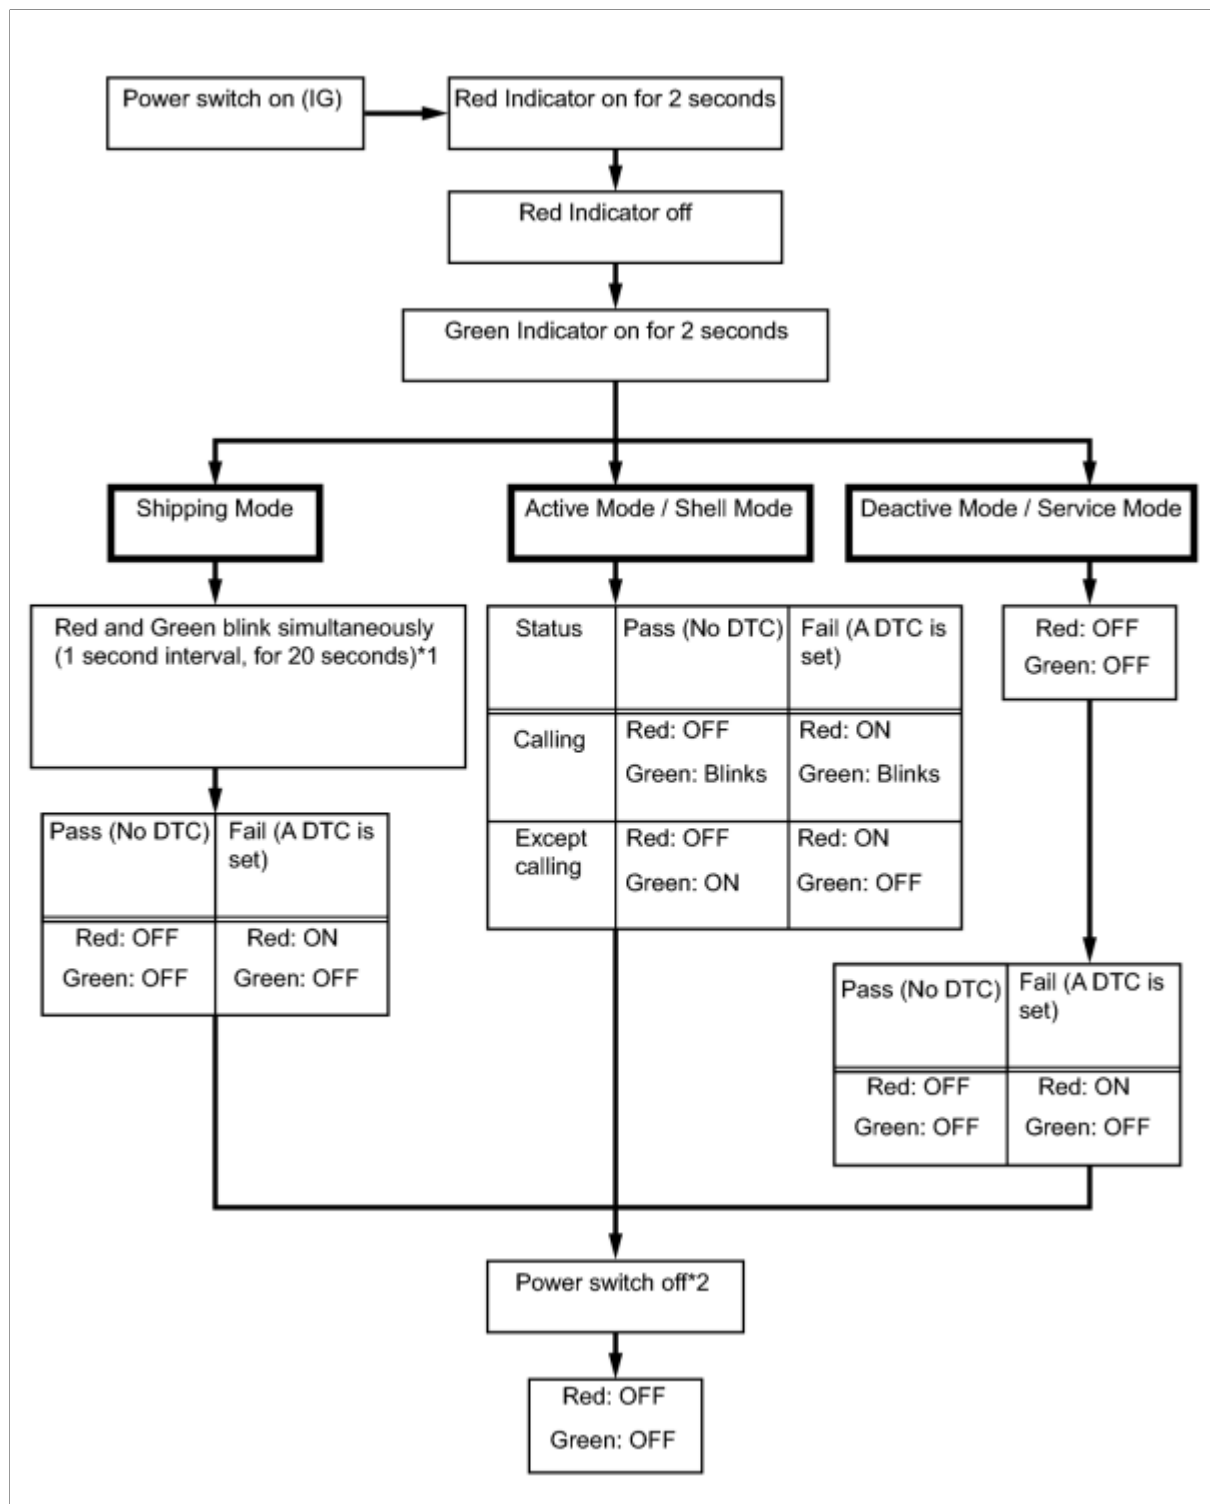

- (c) When it is time to replace the BUB (Back-Up Battery), the manual (SOS) switch red indicator will come on. The DCM (Telematics Transceiver) will also store a DTC.

5. INDICATOR CONTROL FUNCTION DURING DCM (TELEMATICS TRANSCEIVER) SELF CHECK MODE

HINT:

Every time after the power switch is turned on (IG), the DCM (Telematics Transceiver) will enter into a self check mode. The manual (SOS) switch red indicator will illuminate for 2 seconds and then turn off and then the manual

(SOS) switch green indicator will illuminate and will stay on throughout normal operation. The following chart indicates the possible scenarios.

- *1: System will automatically switch to shell mode if auto activation is successful.
- *2: If a call is in progress during power switch off, the call will continue and LED function will not change.

6. SWITCHING THE CONTRACT MODES

CONTRACT MODES	DESCRIPTION
Shipping Mode	This mode is the mode the DCM (Telematics Transceiver) is in from the factory and during shipping. In this mode, when power switch is turned on (IG), the system will automatically attempt to activate

CELLULAR COMMUNICATION: SAFETY CONNECT SYSTEM: SYSTEM DESCRIPTION (2010 Prius)

Shipping mode	In this mode, when power switch is turned on (IG), the system will automatically attempt to activate into shell mode.
Shell Mode	This mode begins after vehicle has been automatically activated (into shell mode) after arriving at port or leaving the manufacturing plant line. ACN and stolen vehicle locator are available.
Active Mode	This mode begins when the owner's information is provided to telematics and customer signs contract for Safety Connect system. All functions of Safety Connect system are available.
Service Mode	This mode applies to a service part DCM (Telematics Transceiver) that has not been activated after replacing DCM (Telematics Transceiver) in vehicle. DCM (Telematics Transceiver) has no associated phone numbers.
Deactive Mode	The mode occurs when Safety Connect subscription has been cancelled.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following to troubleshoot the Safety Connect system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3. INSPECT BATTERY VOLTAGE

(a) Measure the auxiliary battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the auxiliary battery before proceeding to the next step.

NEXT**4. VERIFY CUSTOMER SUBSCRIPTION IS ACTIVE**

(a) Enter the VIN into Vehicle Inquiry on Techstream and verify subscription type and expiration date.

NEXT**5. PERFORM HEALTH CHECK**

(a) Perform "Health Check" and check for current DTCs .

Result:

RESULT	PROCEED TO
No DTC is present.	A
DTC is present.	B
PRL update required.	C

B   GO TO DIAGNOSTIC TROUBLE CODE CHART

C   PERFORM PRL UPDATE

A**6. PROBLEM SYMPTOMS TABLE**

(a) Refer to Problem Symptoms Table .

Result:

10.	CONFIRMATION TEST
-----	-------------------

NEXT  **END**

DCM OPERATION HISTORY

1. DCM OPERATION HISTORY

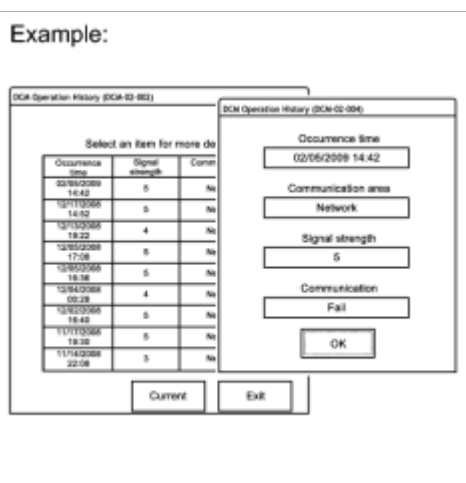

This function shows the telematics network status when the DCM (Telematics Transceiver) was operated. Use this when no DTC is present but this telematics system was unable to connect to the call center. This symptom may occur if cell phone signal strength was very weak.

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Choose "Telematics" from the System Selection Menu, and then click "Utility".
- Click "DCM Operation History" on the Utility Selection Menu.

(f) Follow the instructions on the Techstream.

- "Occurrence time" indicates date of the DCM (Telematics Transceiver) operation.
- "Communication area" indicates which communication network was used: Network (Verizon) or Roaming.
- "Signal strength" indicates the strength of the cellular signal received by the vehicle: 0 (no signal) to 5 (strong).
- "Communication" indicates connecting to the call center: Success or Fail.

Example:

RESULT	DESCRIPTION
Success(Navigation)	A call successfully made using a navigation telematics function (Destination Assist)
Success(SOS)	A call successfully made using the manual (SOS) switch.
Fail*	A call that was unsuccessful.

NOTICE:

*: A failure can also be caused by manually ending an SOS call, and does not necessarily indicate a device malfunction.

DCM ACTIVATION

1. DCM ACTIVATION

This function should be used to activate the DCM (Telematics Transceiver) after a new DCM (Telematics Transceiver) has been installed. During the DCM Activation process, Techstream automatically provides the telematics service provider with the new DCM (Telematics Transceiver) information and deletes the old DCM (Telematics Transceiver) information associated with the vehicle. The DCM (Telematics Transceiver) that was replaced should be returned to the parts department.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Choose "Telematics" from the System Selection Menu, and then click "Utility".
- (e) Click "DCM Service" on the Utility Selection Menu.

Example:

- (f) Choose "Activate DCM" and then click "Next" on the DCM Service Utility.

- (g) Follow the instructions on the Techstream.

HINT:

- If PRL is not latest version, utility will notify a PRL update must be performed before DCM Activation can be completed.
- If a fault occurs during DCM Activation, a specific fault message will be displayed with procedure guidelines.
- The manual (SOS) switch green indicator will turn on if activation is successful.

FAULT CODE	REASON
20	System timeout.
61	DCM (Telematics Transceiver) has been identified as a previously used part.
62	VIN is not recognized by telematics provider.
63	DCM (Telematics Transceiver) already associated with a vehicle. Use another authorized service part.
64	DCM (Telematics Transceiver) is not recognized.
66	DCM (Telematics Transceiver) is not a service part. Use only authorized service part.
67	Unable to activate at this time.

HINT:

If one these fault codes is present, follow the procedure indicated in the following list.

- Fault 20: Try DCM Activation again.
- Fault 61: Replace the DCM (Telematics Transceiver) with a new service part and perform DCM Activation.
- Fault 62*: Verify VIN is correct on ECM. Run Vehicle Inquiry and verify VIN.
- Fault 63: Replace the DCM (Telematics Transceiver) with a new service part and perform DCM Activation.
- Fault 64*: Verify that the DCM (Telematics Transceiver) is a new service part.
- Fault 66*: Replace the DCM (Telematics Transceiver) with a new service part and perform DCM Activation.
- Fault 67: Try DCM Activation again. If the fault occurs again, wait and try again later.

***: As the fault could also be caused by a problem in communicating with the call center, before replacing the DCM, check with the call center to determine if there is a database or communication problem.**

(Call Center number for TOYOTA vehicle: 800-331-4331)

- (h) Push the manual (SOS) switch to call an operator and confirm that the DCM (Telematics Transceiver) is activated.

HEALTH CHECK

1. HEALTH CHECK

Using the Techstream to perform a Health Check provides the technician with an overall view of vehicle status including telematics. Health Check will provide DCM (Telematics Transceiver) software version, PRL version, and applicable DTCs and fault codes related to telematics.

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Click "Health Check".

FAULT CODE	REASON
62	VIN is not recognized by telematics provider.
64	DCM (Telematics Transceiver) is not recognized.
65	VIN mismatch with DCM (Telematics Transceiver).

HINT:

- If Health Check results in a telematics issue, a specific Fault Code will be displayed.
- If a fault code occurs, follow the procedure.
- Fault 62*: Press the manual (SOS) switch and inform operator of error message.
- Fault 64: Press the manual (SOS) switch and inform operator of error message.
- Fault 65*: Contact the call center and request that they correct the DCM/VIN registration information in their database. (Call Center number for TOYOTA vehicle: 800-331-4331)

HINT:

*: Verify VIN is correct in ECM. Run Vehicle Inquiry on Techstream and verify VIN is correct.

- Data is displayed under "Telematics".

Example:

System	Current	Pending	History	Restricted	Monitor Status	Calibration	Update?
Air Conditioner	2	--	0	--	--	--	--

ACN CALL END

1. ACN CALL END

This function terminates the ACN (Automatic Collision Notification) to the telematics provider. After a collision in which the DCM receives "Collision Detection Signal", the vehicle will send the emergency call notification to the telematics provider until the ACN call end utility has been run, or the BUB (Back-Up Battery) (if equipped) depleted. Use the ACN Call End utility to stop the ACN call.

NOTICE:

The BUB (Back-Up Battery) must not be replaced while an ACN call is in progress.

HINT:

After ACN call end utility has been completed, BUB (Back-Up Battery) must be replaced.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Choose "Telematics" from the System Selection Menu, and then click "Utility".
- (e) Click "DCM Service" on the Utility Selection Menu.

Example:

- (f) Choose "ACN call end" and then click "Next" on the DCM Service Utility.

- (g) Follow the instructions by Techstream.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

DIAGNOSIS SYSTEM

1. DESCRIPTION

- (a) The DCM (Telematics Transceiver) controls the vehicle Safety Connect system functions. Safety Connect system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle Data Link Connector 3 (DLC3). In some cases, a malfunction may be occurring in the Safety Connect system. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

- (a) Check the DLC3  .

3. INSPECT BATTERY VOLTAGE

- (a) Measure the auxiliary battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the auxiliary battery.

4. CHECK INDICATOR

- (a) When a malfunction is detected in the Safety Connect system, the manual (SOS) switch red indicator on the manual (SOS) switch illuminates to inform the driver of the malfunction  .

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Telematics / Trouble Codes.
- (e) Check the details of the DTC(s)  .

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Telematics / Trouble Codes.
- (e) Clear the DTCs.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Telematics / Data List.
- (e) According to the display on the Techstream, read the "Data List".

Telematics (DCM (Telematics Transceiver))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Emergency Switch	Manual (SOS) switch / OFF or ON	OFF: Manual (SOS) switch not pressed	-
		ON: Manual (SOS) switch pressed	-
Current Com Back-Up Battery	BUB (Back-Up Battery) installation history / with or without	with: BUB (Back-Up Battery) was connected at some point (does not guarantee that BUB (Back-Up Battery) is currently connected)	-
		without: This DCM (telematics transceiver) has no record of a BUB (Back-Up Battery) ever being connected	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is stored during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

DTC	B1570	Manual (SOS) Switch Red Indicator Malfunction
-----	-------	---

DESCRIPTION

This DTC is set when the DCM (Telematics Transceiver) detects an open or short in the manual (SOS) switch red indicator circuit of the manual (SOS) switch.

The manual (SOS) switch red indicator illuminates for 2 seconds and goes off when the power switch is turned on (IG). If a malfunction in the Safety Connect system is detected, the manual (SOS) switch red indicator will illuminate.

However, the manual (SOS) switch red indicator may not illuminate when this DTC is set.

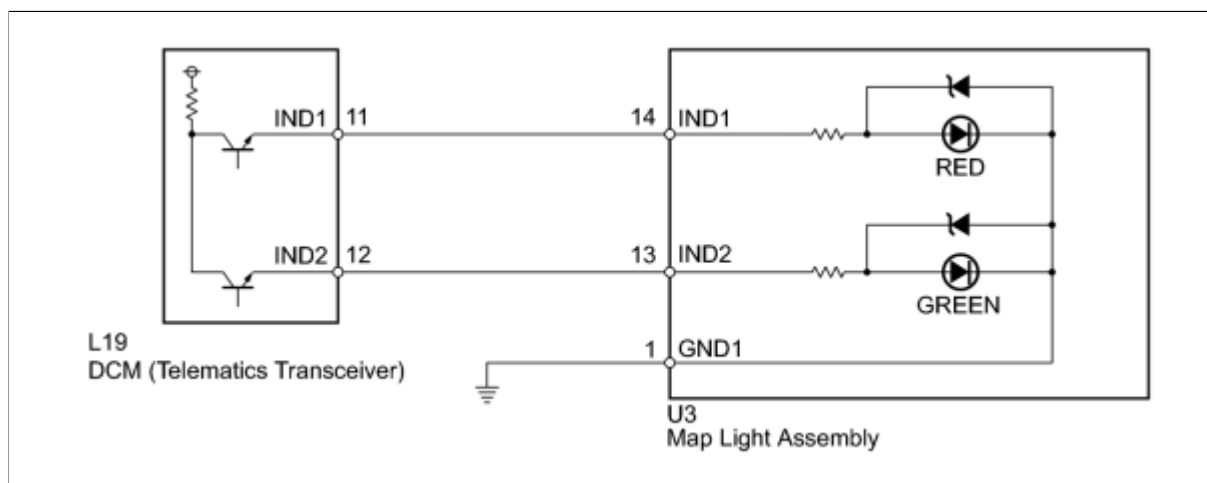

HINT:

The manual (SOS) switch red indicator will not operate to indicate another DTC is set, therefore a voice guidance will be heard.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1570	Current for manual (SOS) switch red indicator reaches malfunction criteria for 10 seconds when power switch is on (IG).	<ul style="list-style-type: none"> Map light assembly Wire harness or connector DCM (Telematics Transceiver)

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DTC

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG) and wait for 10 seconds.
- (d) Turn the Techstream on.
- (e) Perform "HEALTH CHECK" and check for current DTCs INFO.

Result:

RESULT	PROCEED TO
DTC B1570 and B1571 are output	A
DTC B1570 is output (DTC B1571 is not output)	B

B ▶ **INSPECT MAP LIGHT ASSEMBLY (MANUAL (SOS) SWITCH RED INDICATOR CONDITION)**

DESCRIPTION

This DTC is set when the DCM (Telematics Transceiver) detects an open or short in the manual (SOS) switch green indicator circuit of the manual (SOS) switch. The manual (SOS) switch green indicator illuminates after the power switch is turned on (IG).

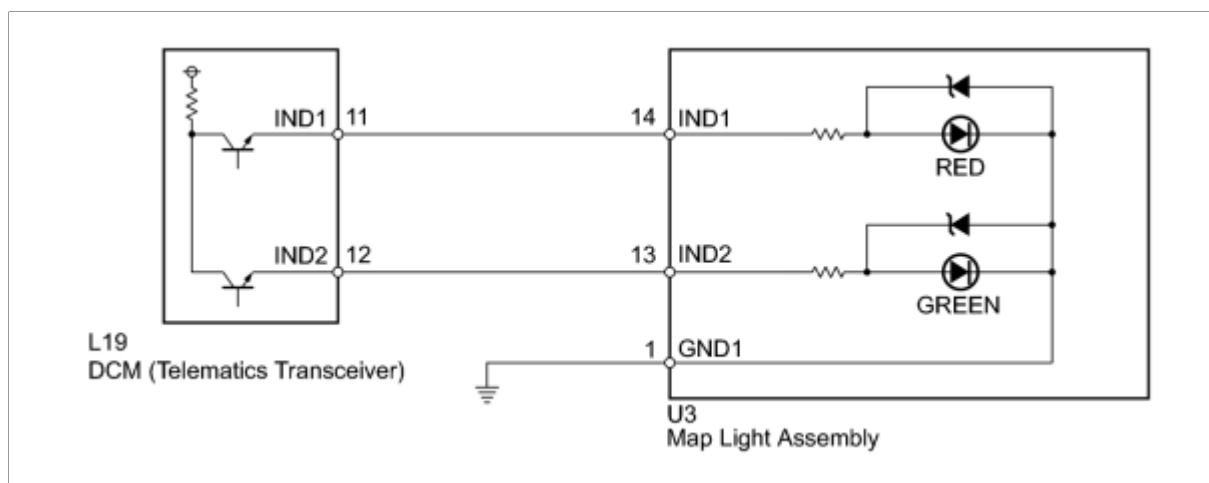

If the Safety Connect system is not active, the manual (SOS) switch green indicator will turn off.

If the Safety Connect system is active, the manual (SOS) switch green indicator will blink while communicating with call center.

DTC	B1583	GPS Signal Unreceived
-----	-------	-----------------------

DESCRIPTION

If GPS satellite signals cannot be acquired for 10 consecutive miles, this DTC is set.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1583	GPS signal is not received for 10 miles	<ul style="list-style-type: none"> • Telephone and GPS antenna assembly • DCM (Telematics Transceiver)

INSPECTION PROCEDURE

HINT:

If either DTC B15C0 or B15C1 is output at the same time, perform troubleshooting for DTC B15C0 or B15C1 first.

PROCEDURE

1. CHECK TELEPHONE AND GPS ANTENNA ASSEMBLY

(a) Check that there are no problems with the telephone and GPS antenna assembly.

OK:

The antenna is not excessively dirty, and there are no objects blocking signal reception.

NG  REMOVE FOREIGN OBJECT

OK

2. REPLACE TELEPHONE AND GPS ANTENNA ASSEMBLY

(a) Replace the telephone and GPS antenna assembly  .

NEXT

3. CLEAR DTC

(a) Clear the DTC  .

NEXT

4. CHECK DTC

- (a) Drive the vehicle for at least 15 miles, manual (SOS) switch red indicator will illuminate at approximately 10 miles if problem still exists.
- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG) and wait for 10 seconds.
- (e) Turn the Techstream on.
- (f) Perform "HEALTH CHECK" and check for current DTCs  .

HINT:

Basically turning power switch off will clear the current DTC until vehicle is driven about 10 miles again with the issue.

Result:

RESULT	PROCEED TO
DTC B1583 is output	A
DTC B1583 is not output	B

B  **END**

A

5. REPLACE DCM (TELEMATICS TRANSCEIVER)

(a) Replace the DCM (Telematics Transceiver)  .

NOTICE:

- The power switch must be off.
- Do not swap the DCM (Telematics Transceiver) with one from another vehicle.

NEXT  **PERFORM DCM ACTIVATION**

DTC	B15A8	Telematics Transceiver Malfunction
------------	--------------	---

DESCRIPTION

This DTC is set when an error in the EEPROM or PLL IC is detected on the DCM (Telematics Transceiver) self-check. The EEPROM (Electrically Erasable Programmable Read-Only Memory) stores the various data to operate the Safety Connect system. The PLL IC (Phase-Locked Loop Integrated Circuit) oscillates telephone radio frequency.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B15A8	Error in EEPROM or PLL IC is detected.	DCM (Telematics Transceiver)

INSPECTION PROCEDURE

NOTICE:

Regardless of whether DTC B15A8 has been output as a present or history DTC, the DCM (Telematics Transceiver) should be replaced.

PROCEDURE

1.	REPLACE DCM (TELEMATICS TRANSCEIVER)
-----------	---

(a) Replace the DCM (Telematics Transceiver)  .

NOTICE:

- The power switch must be off.
- Do not swap the DCM (Telematics Transceiver) with one from another vehicle.

NEXT  **PERFORM DCM ACTIVATION**

DTC	B15C0	Short in GPS Antenna
-----	-------	----------------------

DTC	B15C1	Open in GPS Antenna
-----	-------	---------------------

DESCRIPTION

This DTC is set when the DCM (Telematics Transceiver) detects an open or a short in the telephone and GPS antenna circuit. The DCM (Telematics Transceiver) receives 1574.42 - 1576.42 MHz radio frequency signal from satellites through the telephone and GPS antenna assembly. The cable is a 50 Ω coaxial cable.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B15C0	Current for telephone and GPS antenna assembly is more than malfunction criterion for 10 seconds when power switch is on (IG). (Short circuit)	<ul style="list-style-type: none"> • DCM (Telematics Transceiver) • Wire harness or connector (Telephone and GPS antenna cord) • Telephone and GPS antenna assembly
B15C1	Current for telephone and GPS antenna assembly is less than malfunction criterion for 10 seconds when power switch is on (IG). (Open circuit)	

HINT:

Refer to "PARTS LOCATION" for the installation location of telephone and GPS antenna cord .

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DTC
----	-----------

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG) and wait for 10 seconds.
- (d) Turn the Techstream on.

DTC	B15EC	Backup Battery Degradation
-----	-------	----------------------------

DESCRIPTION

This DTC is set when the DCM (Telematics Transceiver) detects either of the following conditions.

- The BUB (Back-Up Battery) charge level becomes less than the criteria.
- Automatic Collision Notification (ACN) occurred.

When this DTC is set, the BUB (Back-Up Battery) must be replaced.

BUB (Back-Up Battery) degradation DTC B15EC is not reported in deactive mode.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B15EC	BUB (Back-Up Battery) is deteriorated.	BUB (Back-Up Battery)

INSPECTION PROCEDURE

NOTICE:

- If this DTC is set, be certain to replace the BUB (Back-Up Battery) with a new one.
- After the BUB (Back-Up Battery) is replaced, it is necessary to clear this DTC.
- The BUB (Back-Up Battery) must not be replaced while an ACN call is in progress.

PROCEDURE

1. CHECK DTC

- Turn the power switch off.
- Connect the Techstream to the DLC3.
- Turn the power switch on (IG) and wait for 10 seconds.
- Turn the Techstream on.
- Perform "HEALTH CHECK" and check for current DTCs  .

Result:

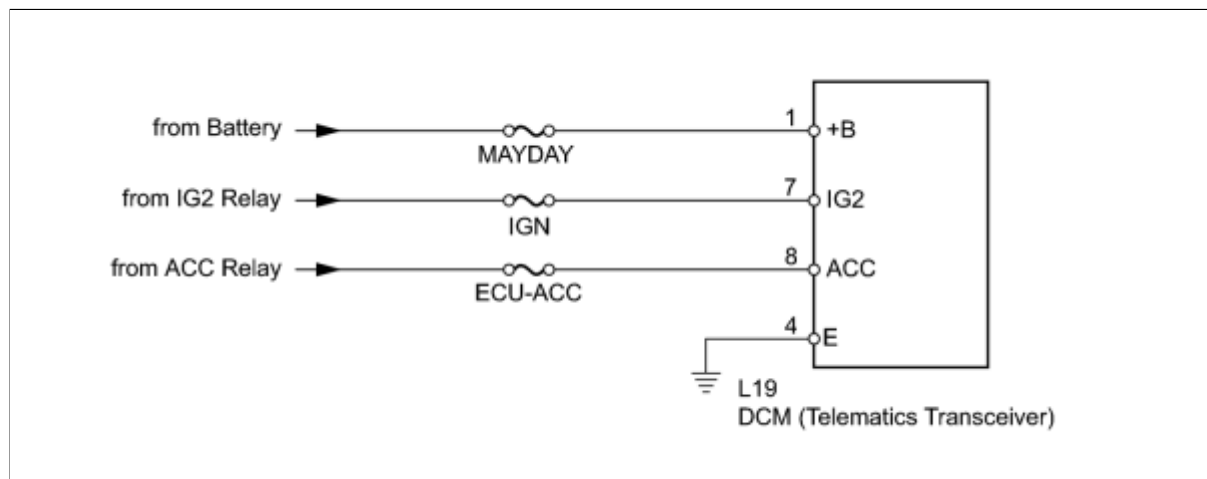

RESULT	PROCEED TO
DTC B15EC is output	A
DTC B15EC is not output	B

B  CHECK FOR INTERMITTENT PROBLEMS

A  REPLACE BUB (BACK-UP BATTERY)

DCM POWER SOURCE CIRCUIT**DESCRIPTION**

This is the power source circuit to operate the DCM (Telematics Transceiver).

WIRING DIAGRAM**INSPECTION PROCEDURE****NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

- CHECK HARNESS AND CONNECTOR (DCM (TELEMATICS TRANSCEIVER) - BATTERY AND BODY GROUND)**

(a) Disconnect the L19 DCM (Telematics Transceiver) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L19-4 (E) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L19-1 (+B) - L19-4 (E)	Power switch off	11 to 14 V
L19-7 (IG2) - L19-4 (E)	Power switch on (IG)	11 to 14 V
L19-8 (ACC) - L19-4 (E)	Power switch on (ACC)	11 to 14 V

----	---

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE**

GREEN AND RED INDICATORS BLINK SIMULTANEOUSLY**DESCRIPTION**

After the power switch on (IG), the DCM (Telematics Transceiver) will enter into a self check mode. The manual (SOS) switch red indicator will illuminate for 2 seconds and turn off followed by the manual (SOS) switch green indicator illuminating and remaining on under normal operation.

If both indicators illuminate and begin to blink simultaneously, this indicates that the DCM (Telematics Transceiver) is in "Shipping Mode." If no DTCs are present, both the green and red indicators will turn off after blinking. The activation sequence must be performed.

HINT:

In shipping mode, the system will attempt to activate to shell mode automatically at each power switch on (IG).

INSPECTION PROCEDURE**PROCEDURE****1. CHANGE SUBSCRIPTION MODE**

- (a) Turn the power switch on (IG).
- (b) Push the manual (SOS) switch.
- (c) The vehicle will issue a voice prompt: "Safety Connect is not initialized. To activate, please press the button again within 5 seconds."
- (d) Push the manual (SOS) switch and a beep will be emitted.
- (e) That telematics service provider will send an End Call command and the manual (SOS) switch green indicator will illuminate.
- (f) A voice prompt will state: "Activation Complete" (This may take up to 3 minutes)
- (g) Turn the power switch off.

NEXT**2. CHECK SUBSCRIPTION MODE**

- (a) Turn the power switch on (IG).
- (b) Confirm the manual (SOS) switch red indicator illuminates for 2 seconds and turns off and the manual (SOS) switch green indicator illuminates and remains on .

NEXT  **END**

GREEN AND RED INDICATORS DO NOT COME ON WHEN IG-ON**DESCRIPTION**

If the red and green indicators fail to illuminate after the power switch on (IG), the vehicle does not recognize the DCM (Telematics Transceiver). The DCM (Telematics Transceiver) connectors may have been disconnected or the DCM (Telematics Transceiver) is malfunctioning.

INSPECTION PROCEDURE**PROCEDURE****1. HEALTH CHECK**

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG) and wait for 10 seconds.
- (d) Turn the Techstream on.
- (e) Perform "Health Check" using the Techstream and check that Telematics (Safety Connect) is listed on "Health Check Result" .

Result:

RESULT	PROCEED TO
"Telematics" is displayed on the Techstream	A
"Telematics" is not displayed on the Techstream	B

B  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

A

2. CHECK DTC

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG) and wait for 10 seconds.
- (d) Turn the Techstream on.

(e) Check current DTC and history DTCs  .

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B  GO TO DIAGNOSTIC TROUBLE CODE CHART

A  CHECK FOR INTERMITTENT PROBLEMS

GREEN INDICATOR REMAINS OFF**DESCRIPTION**

After the power switch on (IG), the DCM (Telematics Transceiver) will enter into a self check mode. The manual (SOS) switch red indicator will illuminate for 2 seconds and turn off followed by the manual (SOS) switch green indicator illuminating and remaining on under normal operation. If neither the red nor green indicators remain on, verification of the subscription should be performed.

INSPECTION PROCEDURE**PROCEDURE****1. CONFIRM GREEN INDICATOR COMES ON**

(a) After the power switched on (IG) and the manual (SOS) switch red indicator has come on for 2 seconds, confirm that the manual (SOS) switch green indicator comes on for 2 seconds.

OK:

Green indicator comes on.

NG  **CHECK DTC**

OK

**2. CONFIRM SUBSCRIPTION MODE**

(a) Confirm the indicator status at 5 seconds after power switch on (IG).

Result:

RESULT	PROCEED TO
Green indicator remains on	A
Green indicator remains off	B
Red and Green indicators both flash (1 second intervals, for 20 seconds)	C

HINT:

If red and green indicator are flashing, the system is in shipping mode, so the system should be changed to either active mode or deactive mode.

C  **CHANGE SUBSCRIPTION MODE**

B ▶ INPUT VIN WITH TECHSTREAM**A** ▶ CHECK FOR INTERMITTENT PROBLEMS**3. INPUT VIN WITH TECHSTREAM**

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG) and wait for 10 seconds.
- (d) Turn the Techstream on.
- (e) Select "Vehicle Inquiry" and input VIN.

NEXT**4. CONFIRM SUBSCRIPTION MODE**

- (a) Confirm the indicator status at 5 seconds after the power switch on (IG).

Result:

RESULT	PROCEED TO
Green indicator remains on	A
Green indicator remains off	B

B ▶ REPLACE DCM (TELEMATICS TRANSCEIVER)**A** ▶ END**5. REPLACE DCM (TELEMATICS TRANSCEIVER)**

- (a) Replace the DCM (Telematics Transceiver)  .

NOTICE:

- The power switch must be off.
- Do not swap the DCM (Telematics Transceiver) with one from another vehicle.

NEXT ▶ PERFORM DCM ACTIVATION

6.	CHECK DTC
-----------	------------------

- (a) Turn the power switch off.

- (a) Replace the DCM (Telematics Transceiver)  .

NOTICE:

- The power switch must be off.
- Do not swap the DCM (Telematics Transceiver) with one from another vehicle.

NEXT  **PERFORM DCM ACTIVATION**

RED INDICATOR REMAINS ON**DESCRIPTION**

When the red indicator remains on, this means that the DCM (Telematics Transceiver) has detected a malfunction in the Safety Connect system and set a DTC.

INSPECTION PROCEDURE**PROCEDURE****1. CHECK DTC**

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG) and wait for 10 seconds.
- (d) Turn the Techstream on.
- (e) Perform "HEALTH CHECK" and check for current DTCs  .

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B  **GO TO DIAGNOSTIC TROUBLE CODE CHART**

A

2. REPLACE DCM (TELEMATICS TRANSCEIVER)

- (a) Replace the DCM (Telematics Transceiver)  .

NOTICE:

- The power switch must be off.
- Do not swap the DCM (Telematics Transceiver) with one from another vehicle.

NEXT  **PERFORM DCM ACTIVATION**

UNABLE TO CONNECT TO CALL CENTER**DESCRIPTION**

This may occur when the intensity of telephone radio frequency was very weak, PRL updates are required, or the Safety Connect system has a malfunction and a DTC is set.

INSPECTION PROCEDURE**PROCEDURE****1. CHECK COMMUNICATION SERVICE CONDITION**

(a) Move the vehicle.

(1) If the vehicle is outside the communication service area, move the vehicle to a communication service area, wait for a while and perform the operation again.

OK:

Same problem does not occur.

NG ► CHECK DTC

OK ► END

2. CHECK DTC

(a) Turn the power switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG) and wait for 10 seconds.

(d) Turn the Techstream on.

(e) Perform "HEALTH CHECK" and check for current DTCs  .

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ► GO TO DIAGNOSTIC TROUBLE CODE CHART

A
▼

3.	CHECK PRL UPDATE
-----------	-------------------------

(a) Check for PRL update  .

(b) Check if the same problem occurs again.

OK:

Same problem does not occur.

NG  **CHECK DCM OPERATION HISTORY**

OK  **END**

4.	CHECK DCM OPERATION HISTORY
-----------	------------------------------------

(a) Check "DCM OPERATION HISTORY"  .

Result:

RESULT	PROCEED TO
Signal strength is weak (0 or 1)	A
Communication indicates "Fail"	
No problems with signal strength or communication	B

HINT:

If there was a communication problem in the past but the communications are working correctly now, it is possible that the source of the problem was temporary radio interference, or the vehicle may have been outside the service area.

B  **END**

A

5.	REPLACE DCM (TELEMATICS TRANSCEIVER)
-----------	---

(a) Replace the DCM (Telematics Transceiver)  .

NOTICE:

- The power switch must be off.

- Do not swap the DCM (Telematics Transceiver) with one from another vehicle.

NEXT  **PERFORM DCM ACTIVATION**

COMPONENTS

ILLUSTRATION

ILLUSTRATION

REMOVAL

1. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure up to Remove Roof Headlining Assembly  .

2. REMOVE NO. 2 ROOF SILENCER PAD (w/o Sliding Roof)

3. REMOVE NO. 3 ROOF SILENCER PAD (w/o Sliding Roof)

4. REMOVE TELEPHONE AND GPS ANTENNA CORD SUB-ASSEMBLY

- (a) Peel the strips of the tape used to secure the antenna cord only to the extent that allows removal of the antenna cord.

(b) Remove the telephone and GPS antenna cord sub-assembly.

INSTALLATION

1. INSTALL TELEPHONE AND GPS ANTENNA CORD SUB-ASSEMBLY

HINT:

Double-sided tape and tape are not available as supply parts. If the tape still has enough adhesion to secure the roof headlining and antenna cord, reuse it. If the roof headlining has been replaced with a new one, or if the tape and/or the double-sided tape is no longer sticky, apply new tape following the procedure below.

If the double-sided tape cannot be reused:

- Peel off the release paper from one side of new double-sided tape and apply the new double-sided tape to the position indicated in the illustration. Be careful not to touch the adhesive surface.

AREA	DIMENSION
X	1.0 mm (0.0394 in.)

Y

10.0 mm (0.394 in.)

NOTICE:

Be sure to apply the double-sided tape carefully so that the tape will not be misaligned or come off.

AREA	DIMENSION
X	1.0 mm (0.0394 in.)
Y	10.0 mm (0.394 in.)

NOTICE:

Be sure to apply the double-sided tape carefully so that the tape will not be misaligned or come off.

(b) Peel off the release paper from the double-sided tape. Be careful not to touch the adhesive surface.

(c) Align the vehicle front side marking (pink) on the telephone and GPS antenna cord sub-assembly with the vehicle

front side tab on the roof headlining, and wrap the tape over the antenna cord to install it. (1)

HINT:

If the tape cannot be reused, packing tape can be used as a substitute.

(d) Temporarily install the front side of the telephone and GPS antenna cord sub-assembly (2) with the adhesive tape.

- (e) Temporarily install the front side of the telephone and GPS antenna cord sub-assembly (3) with the adhesive tape.
- (f) Temporarily install the telephone and GPS antenna cord sub-assembly by placing it on the double-sided tape from the front of the vehicle to the point just before the extra cord storage area.
- (g) Align the vehicle rear marking (pink) on the telephone and GPS antenna cord sub-assembly with the tape attachment location (scribe line) of the roof headlining, and wrap the tape over the antenna cord to install it. (4)

HINT:

If the tape cannot be reused, packing tape can be used as a substitute.

- (h) Temporarily install the rear side of the telephone and GPS antenna cord sub-assembly (5) with the adhesive tape.
- (i) Temporarily install the telephone and GPS antenna cord sub-assembly by placing it on the double-sided tape from the rear of the vehicle to the point just before the extra cord storage area.

- (j) Using double-sided tape, place any excess telephone and GPS antenna cord sub-assembly in the extra cord storage area to finish installing the antenna cord.

HINT:

Attach 3 pieces of double-sided tape to the extra cord storage area as shown in the illustration.

2. INSTALL NO. 3 ROOF SILENCER PAD (w/o Sliding Roof) INFO

3. INSTALL NO. 2 ROOF SILENCER PAD (w/o Sliding Roof) INFO

4. INSTALL ROOF HEADLINING ASSEMBLY

Wiring Diagram:

P

REGISTRATION

1. REGISTER TRANSMITTER CODE

HINT:

- The vehicle garage door opener system records transmitter codes for systems such as garage doors, gates, door locks, home lighting systems, security systems or other transmitter-code based systems.
- The garage door opener system is built into the inner rear view mirror assembly. If the inner rear view mirror assembly is replaced, transmitter codes previously registered in the garage door opener system must be re-registered.
- Ensure that the customer is aware that existing codes may be cleared from the garage door opener system while performing diagnosis of the system. All remotes required to reprogram the system should be made available at the time of inspection or repair of the garage door opener system.

(a) Re-registration of codes in the garage door opener system (registration mode)

CAUTION:

- When programming a garage door opener system, a garage door or other device may be operated. To prevent injury or damage, it is necessary to make sure that people and objects are out of the way of the garage door or other devices.
- Before beginning programming of the garage door opener system, turn off the power switch and remove the key from the vehicle.
- The garage door opener system cannot be used with openers that:

(1) Were manufactured before April 1, 1982.

(2) Do not meet Federal Safety Standards (for example, garage doors without a jam protection function).

HINT:

- A maximum of 3 transmitter codes can be registered with the garage door opener system. It is possible to register 1 handheld transmitter code (original transmitter) for each of the 3 garage door opener system switches.
- Disconnecting the vehicle battery will not clear the transmitter codes registered in the garage door opener system.
- An attempt to overwrite a previously registered code may fail. In this case, the previously registered handheld transmitter code will not be cleared.
- To successfully program the garage door opener system, it may be necessary to replace the handheld transmitter battery before programming.

(1) Step 1:

Select one of the garage door opener system switches to program.

Text in Illustration

*1	Garage Door Opener Switch
*2	LED

(2) Step 2:

Press and hold the selected switch for 20 seconds. The garage door opener system will enter registration mode. Continue to hold this switch during steps 3 and 4.

HINT:

The garage door opener system LED should stay on while holding the selected switch for the 20-second period. After entering registration mode, the LED will flash approximately once per second (1 Hz). This indicates that the garage door opener system has entered registration mode and is listening for a code from a handheld transmitter.

(3) Step 3:

After the garage door opener system has entered registration mode, bring the original handheld transmitter within 2 to 3 cm (within 1 in.) of the garage door opener system. Press and hold the switch on the handheld transmitter. If the flashing speed of the garage door opener system LED changes from the slow speed to a faster speed, proceed to step 4.

Text in Illustration

*1	Handheld Transmitter
*2	Press

HINT:

Some handheld transmitters stop transmitting after 1 to 2 seconds. In this case, continue to hold the selected garage door opener system switch while pressing the handheld transmitter switch for 2 seconds at a time. Repeat the cycle of pressing and releasing the transmitter switch while monitoring for a change of the flashing speed of the garage door opener system LED.

(4) Step 4:

When the LED begins to flash more rapidly, release both switches. This indicates that the garage door opener system has been successfully programmed. If the garage door opener system fails to program, review all hints before trying the programming process again.

Text in Illustration

*1	Garage Door Opener Switch
*2	LED

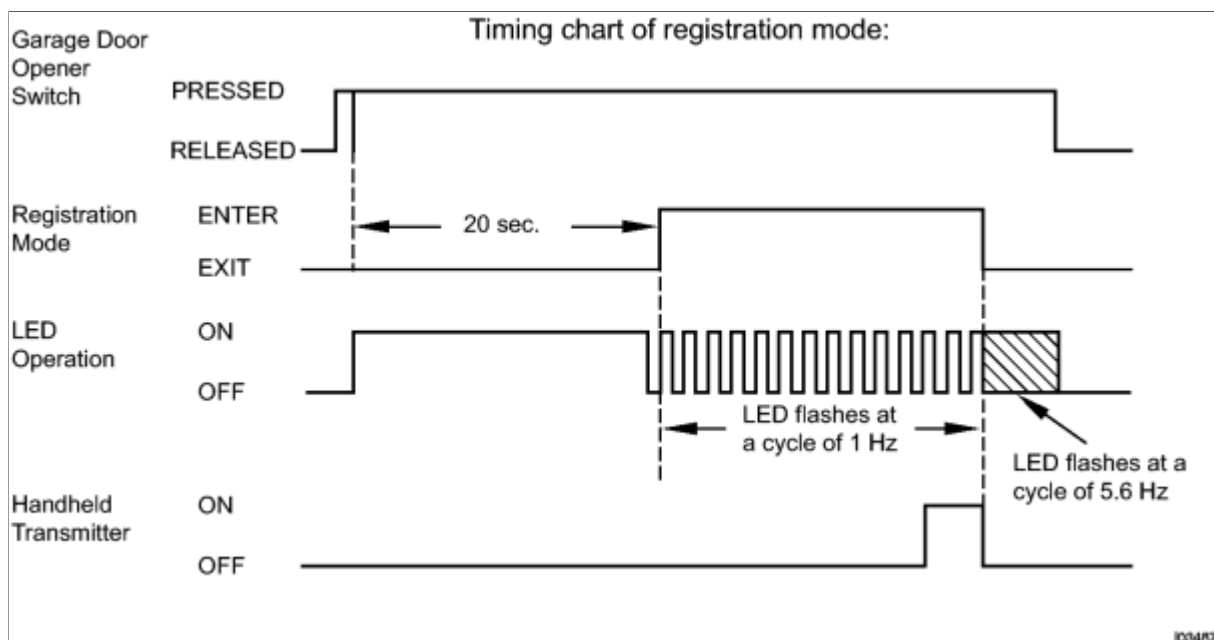

**Text in Illustration**

*1	Handheld Transmitter
*2	Press

HINT:

- If transmitter registration fails:
 - (1) The battery in the handheld transmitter may be weak or need to be replaced.
 - (2) The handheld transmitter and opener device to be registered may not be compatible with the vehicle garage door opener system.
- After entering garage door opener system registration mode, registration of the handheld transmitter code must be completed within 100 seconds. If 100 seconds have elapsed, the garage door opener system will enter low power mode.
- For first time programming, it may be necessary to press and hold the 2 outer switches until the garage door opener system LED begins to flash rapidly. The length of time that it is necessary to hold the switches in this case should be approximately 20 seconds.
- In some cases, the garage door opener system LED may flash slowly (once per second (1 Hz)) as soon as the selected garage door opener system switch is pressed. This indicates that the system is ready or "listening" for a code from a handheld transmitter. Continue to hold the switch and proceed from step 3 (above).

(b) Clearing transmitter codes in the garage door opener system (clear mode)

Text in Illustration

*1	Switch 1
----	----------

ID	SWITCH
*2	Switch 3
*3	LED

HINT:

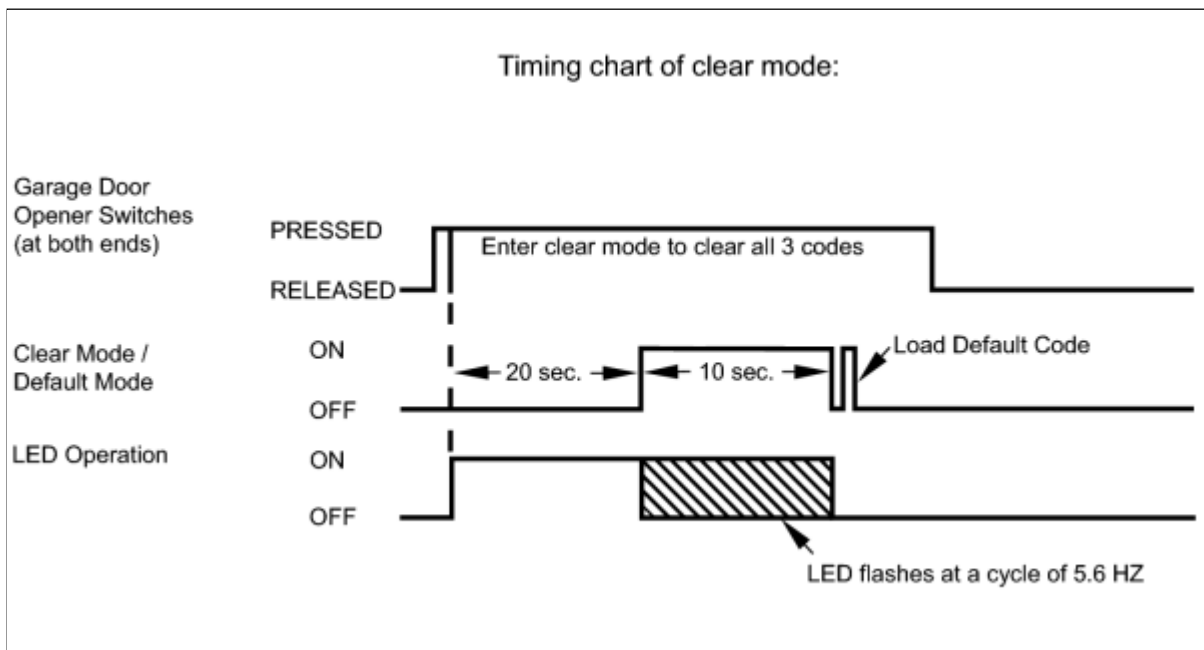

All 3 codes registered in the garage door opener system will be cleared. No option exists for clearing only 1 transmitter code.

(1) Press and hold the left and right switches of the garage door opener system for 20 seconds. The LED will begin to flash approximately 5 times per second (5.6 Hz). This indicates that the codes contained in the vehicle garage door opener system have been cleared. Releasing the switches ends clear mode.

- If the switches are released within 10 seconds after the transmitter codes have been cleared, the system will enter registration mode immediately the next time a garage door opener system switch is pressed.
- If the switches are held for 10 seconds or more after the transmitter codes have been cleared, default codes will be set to the 3 switches of the garage door opener system. These default codes may in some cases be used for training an opener device that uses rolling codes.

(c) Low power mode:

(1) If the garage door opener switch is stuck or held for 100 seconds or more while in registration mode, the garage door opener system will enter low power mode to economize on power consumption. When the garage door opener system has entered low power mode, the LED turns off. When the garage door opener system switch is released, low power mode will end.

2. ROLLING CODE SYSTEMS

(a) If the handheld transmitter for the opener device (customer's garage door) being programmed uses a rolling code, it may be necessary to

"train" the garage door opener device.

Text in Illustration

*1	Example
*2	Training Button

- "Train" refers to causing the opener device (customer's ceiling mounted garage door opener) to recognize a non-rolling code.
- The steps required to "train" an opener device may vary depending on the model, type, age, and manufacturer of the device.

- (1) Locate the training button on the opener device.
- (2) Press the training button.
- (3) Within 30 seconds, press and release the programmed garage door opener system switch twice. Some opener devices may require the garage door opener system switch to be pressed 3 times.
- (4) The vehicle garage door opener system should now operate the opener device.

HINT:

Opener device refers to a device such as a ceiling mounted garage door opener, which is located at the customer's residence. It is necessary to read the instructions for the customer's opener device, to allow the above procedure to be performed safely and successfully. The customer should be aware that performing this procedure will result in a lowered level of security for the customer's opener device.

SYSTEM DESCRIPTION

1. DESCRIPTION

- (a) A maximum of 3 codes for transmitter-code based systems such as garage doors, gates and entry gates can be registered to the vehicle garage door opener system. These stored codes can then be used to activate the transmitter controlled systems. It will not be necessary to keep the original handheld transmitters in the vehicle.

ON-VEHICLE INSPECTION

1. INSPECT GARAGE DOOR OPENER

- (a) To inspect the garage door opener system, press each switch and check that the LED illuminates as illustrated. If one or more of the switches do not cause the LED to illuminate, confirm that the fuse and the wiring to the garage door opener system unit are normal. If the fuse and wiring are normal, and the LED does not illuminate, replace the garage door opener system unit (inner rear view mirror assembly).

Text in Illustration

*1	Garage Door Opener Switch
*2	LED

2. INSPECT GARAGE DOOR OPENER REGISTRATION AND TRANSMITTING

HINT:

Use the **KENT-MOORE "HomeLink" tester**, and the **KENT-MOORE handheld transmitter** for this test. First clear the customer's transmitter codes, and then register the code of the **KENT-MOORE handheld transmitter** to the garage door opener system.

- (a) Check if the code of the KENT-MOORE handheld transmitter was successfully registered.

Text in Illustration

*1	Handheld Transmitter
*2	Press

HINT:

If the code of the **KENT-MOORE handheld transmitter** cannot be registered, replace the garage door opener system unit.

Text in Illustration

*1	Handheld Transmitter
----	----------------------

*2	Press
*3	"HomeLink" Tester
*4	Green LED

HINT:

If the green LED does not illuminate, replace the garage door opener system unit that is located in the roof console box assembly.

(c) When the inspection is complete, re-register the customer's handheld transmitter codes.

ILLUSTRATION

P

INSTALLATION

1. INSTALL NAVIGATION RECEIVER ASSEMBLY

2. INSTALL NO. 2 RADIO BRACKET

(a) Install the No. 2 radio bracket with the 4 screws.

3. INSTALL NO. 1 RADIO BRACKET

HINT:

Use the same procedure as for the No. 2 radio bracket.

4. INSTALL NAVIGATION RECEIVER WITH BRACKET

(a) Engage the 4 claws and temporarily install the navigation receiver with bracket as shown in the illustration.

(b) Install the navigation receiver with bracket with the 4 bolts.

5. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

6. INSTALL INSTRUMENT CLUSTER FINISH PANEL GARNISH INFO

7. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY INFO

8. INSTALL INTEGRATION CONTROL AND PANEL ASSEMBLY 

9. INSERT MAP DISC

REMOVAL

1. EJECT MAP DISC

- (a) Turn the power switch on (ACC).
- (b) Push the "INFO" button.
- (c) Touch "Map Data" on the navigation screen.
- (d) Touch "EJECT DVD" on the navigation screen to eject the map disc.
- (e) Turn the power switch off.

2. REMOVE INTEGRATION CONTROL AND PANEL ASSEMBLY INFO

3. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY INFO

4. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH INFO

5. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

6. REMOVE NAVIGATION RECEIVER WITH BRACKET

- (a) Remove the 4 bolts.

- (b) Disengage the 4 claws and remove the navigation receiver with bracket as shown in the illustration.

- (c) Disconnect each connector.

7. REMOVE NO. 2 RADIO BRACKET

- (a) Remove the 4 screws and No. 2 radio bracket.

8. REMOVE NO. 1 RADIO BRACKET

HINT:

Use the same procedure as for the No. 2 radio bracket.

9. REMOVE NAVIGATION RECEIVER ASSEMBLY

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the terminal is reconnected.

ILLUSTRATION

SYSTEM DIAGRAM

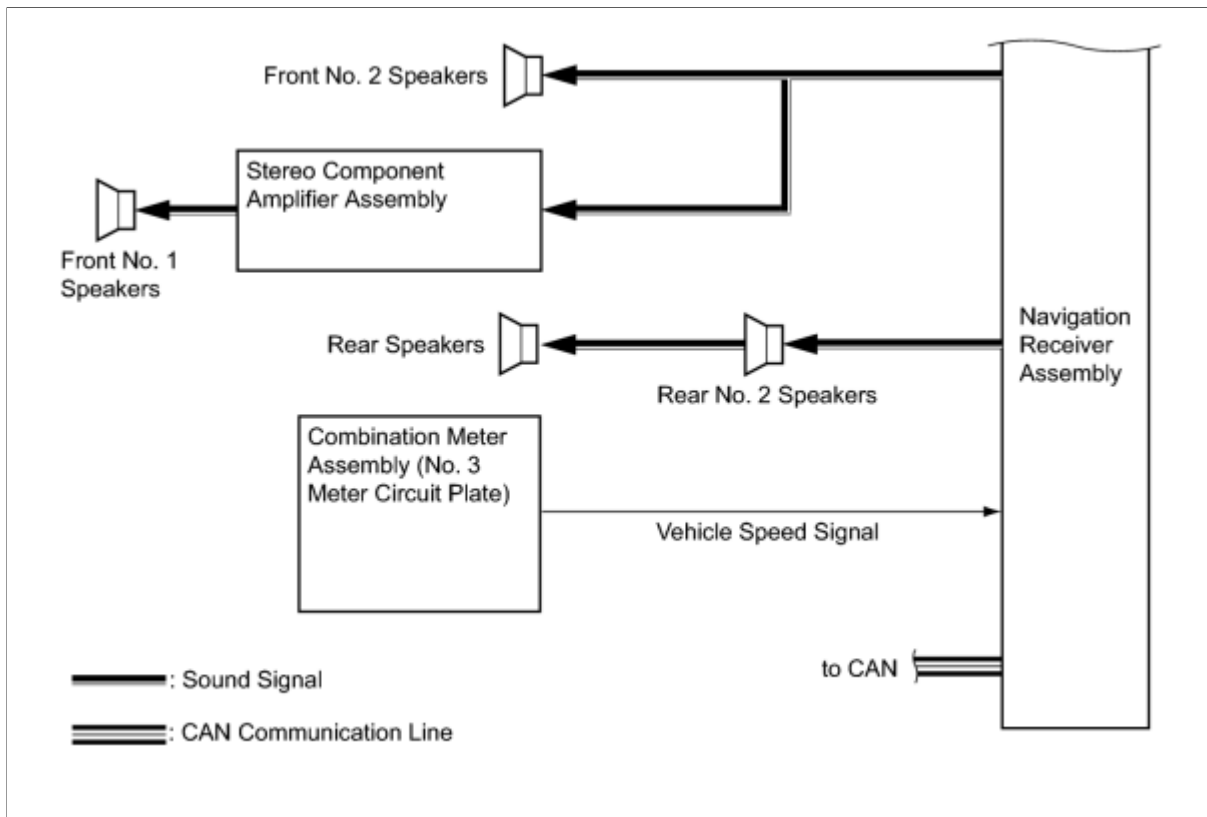

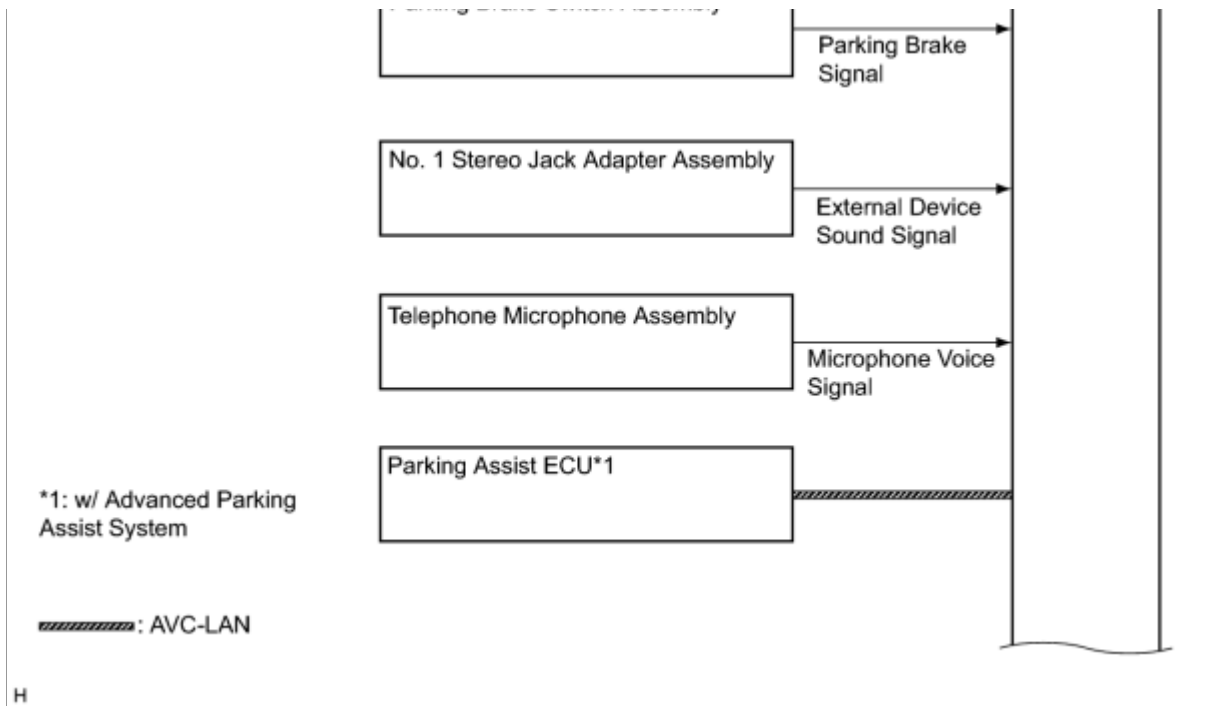

1. w/ "Bluetooth" Audio System

2. w/o "Bluetooth" Audio System

SYSTEM DESCRIPTION

1. NAVIGATION RECEIVER ASSEMBLY OUTLINE

- (a) Conventionally, 2 separate devices, a "radio and display" and a "navigation ECU" are used. This model has adopted a type that combines these devices into a single unit.

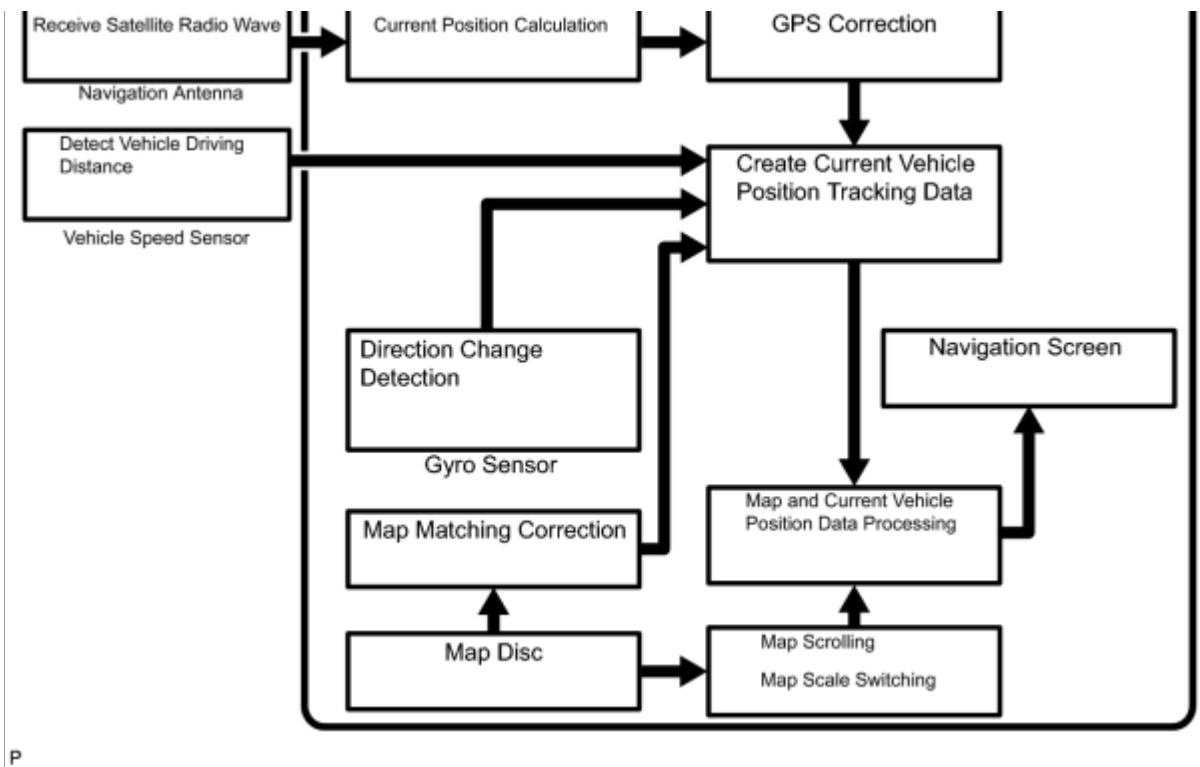

2. NAVIGATION SYSTEM OUTLINE

- (a) Vehicle position tracking methods

It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.

*GPS (Global Positioning System)

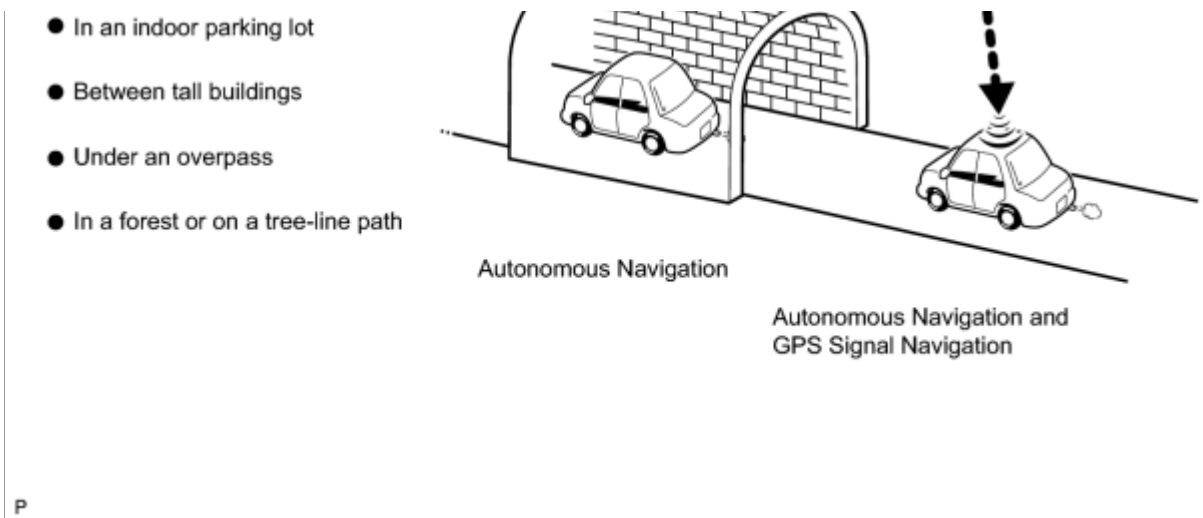

P

OPERATION	DESCRIPTION
Vehicle Position Calculation	The navigation receiver assembly calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and running distance signal from the vehicle speed sensor and creates the driving route.
Map Display Processing	The navigation receiver assembly processes the vehicle position data, vehicle running track and map data from the map disc.
Map Matching	The map data from the map disc is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road.
GPS Correction	The vehicle position is matched to the position measured by GPS. Then, the GPS measurement position data is compared with the vehicle position and running track data. If the position is very different, the GPS measurement position is used.
Distance Correction	The running distance signal from the vehicle speed sensor includes the error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The navigation receiver assembly automatically offsets the running distance signal to make up for the difference between it and the distance data of the map. The offset is automatically updated.

HINT:

The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS cannot receive a signal. When only autonomous navigation is used, however, the mapping accuracy may slightly decrease.

(b) Autonomous navigation

This method determines the relative vehicle position based on the running track determined by the gyro located in the navigation receiver assembly and the vehicle speed sensor signal.

(1) Gyro sensor

Used to calculate the direction by detecting angular velocity. It is located in the navigation receiver assembly.

(2) Vehicle speed sensor signal

Used to calculate the vehicle running distance.

(c) GPS* navigation (Satellite navigation)

This method detects the absolute vehicle position using radio waves from GPS satellites.

*GPS satellites were launched by the U.S. Department of Defense for military purposes.

P

NUMBER OF SATELLITES	MEASUREMENT	DESCRIPTION
2 or less	Measurement is impossible	Vehicle position cannot be obtained because the number of satellites is not enough.
3	2-dimensional measurement is possible	Vehicle position is obtained based on the current longitude and latitude. (This is less precise than 3-dimensional measurement.)
4	3-dimensional measurement is possible	Vehicle position is obtained based on the current longitude, latitude and altitude.

(d) Map matching

The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the map disc and the vehicle position is set onto the most appropriate road.

P

(e) Touch switch

Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends in to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

P

3. DVD (DIGITAL VERSATILE DISC) PLAYER OUTLINE (for navigation map)

(a) The navigation receiver assembly (built-in navigation ECU) uses a laser pickup to read the digital signals recorded on a DVD.

CAUTION:

Do not look directly at the laser pickup because the navigation receiver assembly (built-in navigation ECU) uses an invisible laser beam.

Be sure to operate the navigation system only as instructed.

NOTICE:

- Do not disassemble any part of the navigation receiver assembly (built-in navigation ECU).
- Do not apply oil to the navigation receiver assembly (built-in navigation ECU).
- Do not insert anything but a DVD into the navigation receiver assembly (built-in navigation ECU).

4. DVD (Digital Versatile Disc) PLAYER OUTLINE (for DVD Player Model)

(a) The DVD player can only play DVD videos that have any of the following marks:

(1) Precaution for use of discs

NOTICE:

- PAL or SECAM color television standard discs cannot be played (only NTSC discs can be played).
- Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.
- Hold discs by the outer edge and center hole with the label side up.
- Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.
- Do not use odd-shaped CDs because these may cause player malfunctions.
- Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.
- DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.

(b) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

- Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.
- Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.

5. CD (COMPACT DISC) PLAYER OUTLINE

(a) A compact disc player uses a laser pickup to read digital signals recorded on a compact disc (CD). By converting the digital signals to analog, it can play music and audio.

CAUTION:

Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

NOTICE:

- Do not disassemble any part of the CD player.
- Do not apply oil to the CD player.
- Do not insert anything but a CD into the CD player.

(b) Usable discs

- (1) This player can play only audio CDs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) that have any of the following marks:

(c) Precautions for use of discs

NOTICE:

- Copy-protected CDs cannot be played.
- CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt or deterioration caused by leaving the discs in the cabin for a long time.
- Unfinalized CD-Rs and CD-RWs cannot be played.
- DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.
- Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.
- Hold discs by the outer edge and center hole with the label side up.
- Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.
- If discs have adhesive tape, stickers, CD labels or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.
- Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)
- Do not use odd-shaped CDs because these may cause player malfunctions.
- Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.

HINT:

- When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough roads or similar uneven surface(s).

(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

- (1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

- Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.
- Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.

6. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER3)
Compatible sampling frequency	<ul style="list-style-type: none"> • MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	<ul style="list-style-type: none"> • MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8, and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate (Only compatible with 2-channel playback)	<ul style="list-style-type: none"> • Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps)

(c) ID3 tag and WMA tag

- (1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

HINT:

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

- (2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media

- (1) Only CD-ROMs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

NOTICE:

- CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs do not play.
- If there are fingerprints or scratches on a disc, the disc may not play or the CD may skip.
- Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.
- Keep CD-Rs and CD-RWs in an opaque case.

(e) Usable media format

- (1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form 1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:

- As for MP3/WMA files written in any unlisted format, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

(2) Standard and restrictions

Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names

- (1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.
- (2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".

NOTICE:

If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speaker may result.

7. "Bluetooth" OUTLINE

- (a) "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.
- (b) "Bluetooth" is a wireless connection technology that uses the 2.4 GHz frequency band.

HINT:

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

(c) Hands-free function

(1) The "Bluetooth" built-in navigation receiver assembly and a "Bluetooth" compatible cellular phone*1 can be connected using a "Bluetooth" wireless connection. This enables use of the hands-free function on the cellular phone even the phone may be in a pocket or bag. For this reason, it is not necessary to use a connector or cable to connect the cellular phone.

*1: Some versions of "Bluetooth" compatible cellular phones may not function.

(d) "Bluetooth" audio function (w/ "Bluetooth" Audio System)

(1) The "Bluetooth" built-in navigation receiver assembly and a "Bluetooth" compatible portable audio player*2 can be connected using a "Bluetooth" wireless connection. This enables files stored in the portable audio player to be heard from the vehicle speakers. In addition, operations such as play/stop can be performed directly from the navigation receiver assembly.

*2: Some versions of "Bluetooth" compatible audio players may not be able to operate the "Bluetooth" function, or music may play, but functions available using the navigation receiver assembly may be limited.

(2) Available "Bluetooth" audio devices

Required "Bluetooth" specifications	Ver. 1.1 or higher (Recommended: Ver. 2.0+EDR or higher)
Compatible profiles	<ul style="list-style-type: none"> • A2DP (Advanced Audio Distribution Profile) Ver. 1.0 or higher • AVRCP (Audio/Video Remote Control Profile) Ver. 1.0 or higher (Recommended: Ver. 1.3 or higher)
Maximum number of audio devices that can be registered	2

HINT:

The amount of remaining battery charge displayed on the navigation receiver assembly may be different from that of the portable player.

8. RADIO DESCRIPTION

(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	3 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM		FM	
Modulation	Amplitude modulation			Frequency modulation	

LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

(b) Service area

- (1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

HINT:

In addition to static, other problems such as "phasing", "multipath" and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

(2) Multipath

Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.

(3) Fade out

Fade out is caused by objects (buildings, mountains and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are less likely to deflect.

(d) Noise problem

Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

RADIO FREQUENCY	NOISE OCCURRENCE CONDITION	PRESUMABLE CAUSE
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Signal phasing
FM	Noise occurs while driving in a specified area	Multipath noise resulting from a change in FM frequency

9. RBDS FUNCTION OUTLINE (BROADCAST IN NORTH AMERICA ONLY)

The Radio Broadcast Data System (RBDS) is broadcast through conventional FM radio broadcasts. Information such as song names, traffic information, broadcast station names, etc. can be received.

10. SDARS SYSTEM FUNCTION OUTLINE (BROADCAST IN NORTH AMERICA ONLY)

Satellite Digital Audio Radio Service (SDARS) is a satellite digital radio broadcast provided by Sirius XM Radio Inc. The broadcast (pay-type) is performed through satellites and terrestrial repeater networks. Several unique channels are available, and even if a vehicle changes locations, the same information can be received without breaks. Information such as song names, broadcast station names, etc. can be received. Also, traffic information can be received and displayed on the navigation screen.

NOTICE:

To receive an audio-visual pay-type broadcasts, the customer must enter into a pay-type contract with XM Satellite Radio Inc. After entering into a contract, registration of the XM Radio ID is required. Also, if parts are replaced, the XM Radio ID must be re-registered.

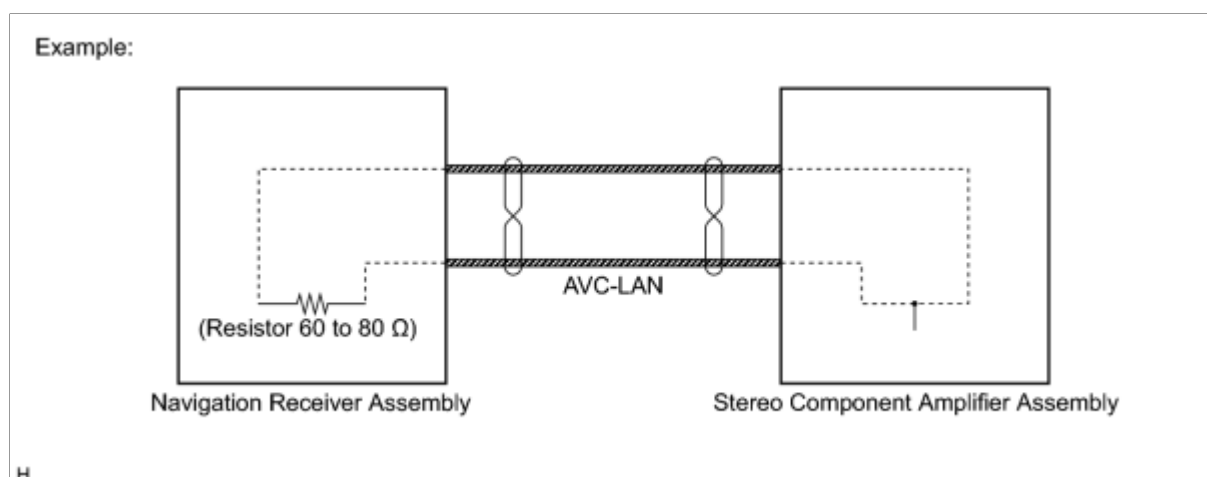

11. AUTOMATIC SOUND LEVELIZER (ASL) FUNCTION OUTLINE

- (a) The Automatic Sound Levelizer (ASL) function automatically adjusts the sound volume in order to enable clear audio quality even when vehicle noise increases (as vehicle noise increases, the volume is turned up, etc.).

Vehicle speed signals are received from the combination meter assembly and used for the ASL control.

12. COMMUNICATION SYSTEM

- (a) AVC-LAN Outline

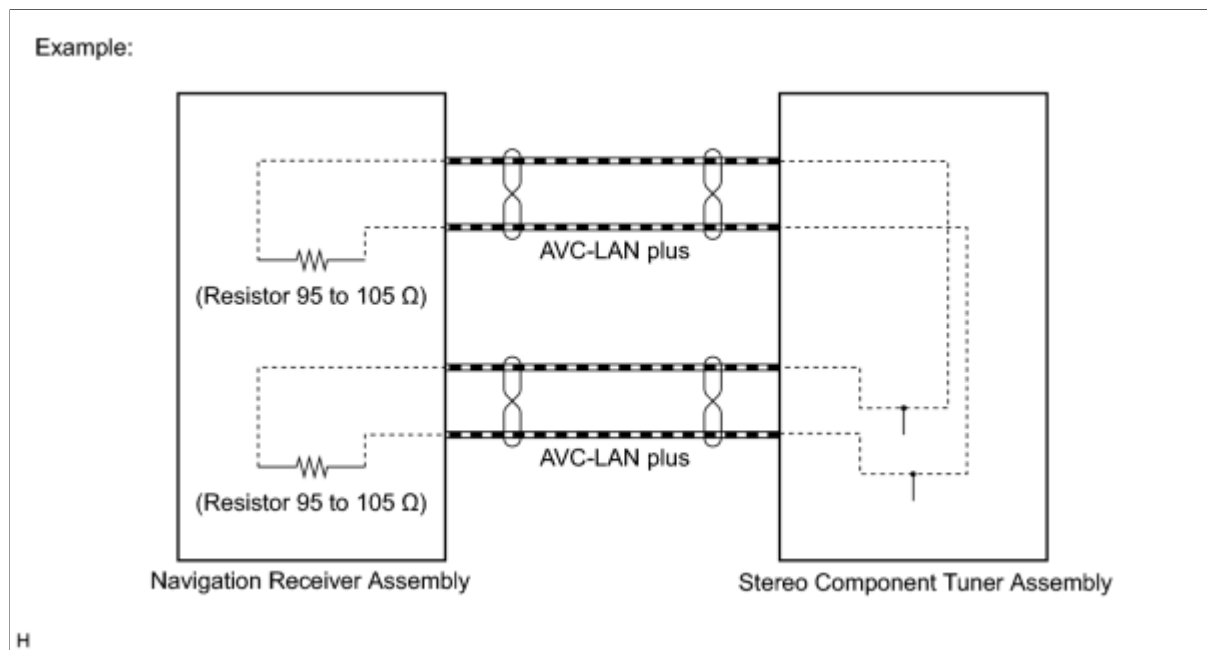

- (1) Components of the navigation system communicate with each other via the AVC-LAN.
- (2) The AVC-LAN uses a twisted pair of wires for its communication lines.
- (3) The master unit of the AVC-LAN is the navigation receiver assembly.

HINT:

- The navigation receiver assembly has enough resistance (60 to 80 Ω) necessary for communication.
- If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and system will not operate normally.

(b) AVC-LAN plus Outline

- (1) Navigation system components communicate with each other via the AVC-LAN plus.
- (2) The AVC-LAN plus uses two twisted pairs of cables for its communication lines.
- (3) The master unit of the AVC-LAN plus is the navigation receiver assembly.

HINT:

- The navigation receiver assembly has enough resistance (95 to 105 Ω) necessary for communication.
- If a short or open circuit occurs in the AVC-LAN plus circuit, communication will be interrupted and the system will not operate normally.

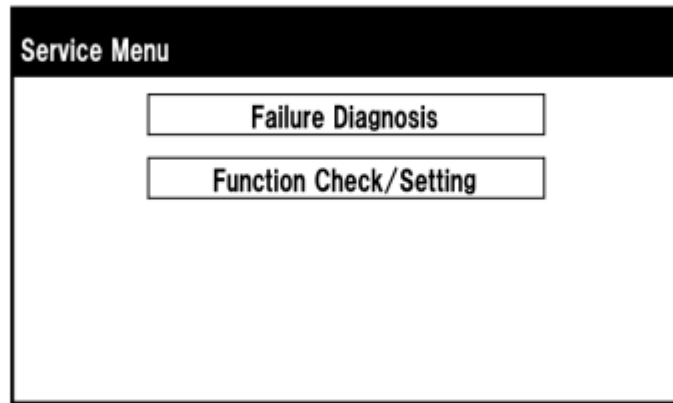

13. DIAGNOSTIC FUNCTION OUTLINE

- (a) The navigation system has a diagnostic function (the result will be displayed on the master unit or the Techstream).

14. DIAGNOSIS DISPLAY DETAILED DESCRIPTION**HINT:**

- This section contains a detailed description of displays in diagnostic mode.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

- (a) Service Menu Screen

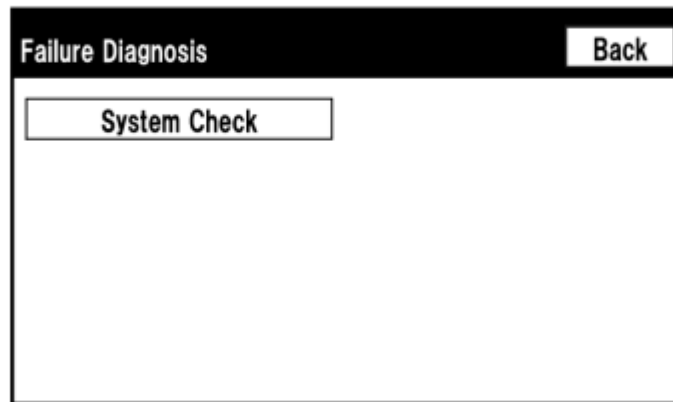

H

HINT:

Each item is grayed out or not displayed based on the device settings.

(b) Failure Diagnosis Screen

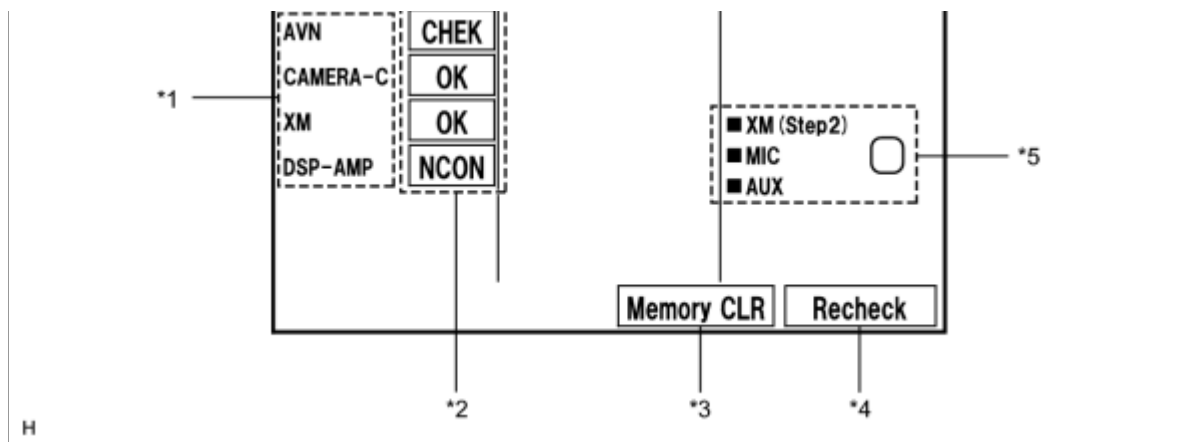

H

HINT:

Each item is grayed out or not displayed based on the device settings.

(1) System Check Mode Screen

*1: Device Name List No. 1

HINT:

Device Name List No. 1 displays some of the devices that make up the navigation system.
The names of the components from Device Name List No. 1 are shown in the following table.

NAME	COMPONENT	CONNECTION METHOD
AVN	Navigation receiver assembly	-
CAMERA-C	Parking assist ECU	Communication line for AVC-LAN
XM	Stereo component tuner assembly	Communication line for AVC-LAN
DSP-AMP	Stereo component amplifier assembly	Communication line for AVC-LAN

*2: Check Result

HINT:

Result codes for all devices are displayed.

RESULT	MEANING	ACTION
OK	The device does not respond with a DTC.	-
EXCH	The device responds with a "replace"-type DTC.	Look up the DTC in "Unit Check Mode" and replace the device.
CHEK	The device responds with a "check"-type DTC.	Look up the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	- Check power supply wire harness of the device. - Check the AVC-LAN of the device.
NRES	The device responds in diagnostic mode, but gives no DTC information.	- Check power supply wire harness of the device. - Check the AVC-LAN of the device.

*3: Memory Clear

HINT:

Present and history DTCs and registered connected device names are cleared.
Press the "Memory CLR" switch for 3 seconds.

*4: Recheck

HINT:

A system check will be performed again after the memory is cleared.
The "Recheck" switch will dim during a system check.

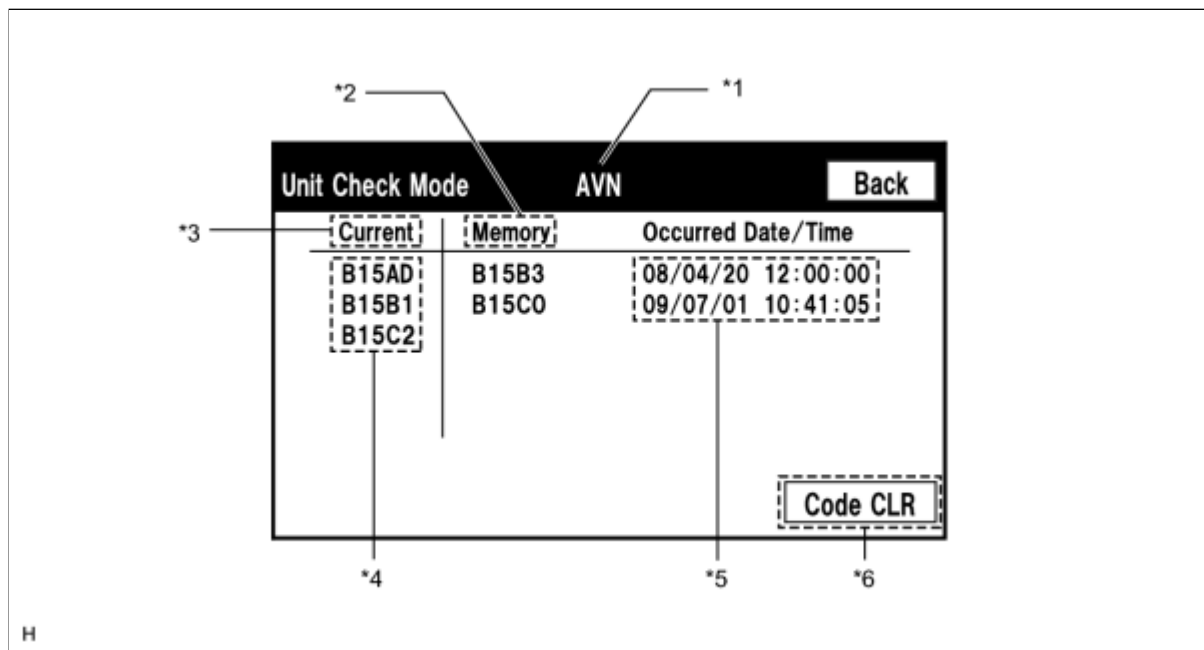

*5: Device Name List No. 2

HINT:

Device Name List No. 2 displays some of the devices that make up the navigation system.
The names of the components from Device Name List No. 2 are shown in the following table.

NAME	COMPONENT	CONNECTION METHOD
XM (Step2)	Stereo component tuner assembly	Communication line for AVC-LAN plus
MIC	Telephone microphone assembly	Vehicle wire harness
AUX	No. 1 stereo jack adapter assembly	Vehicle wire harness

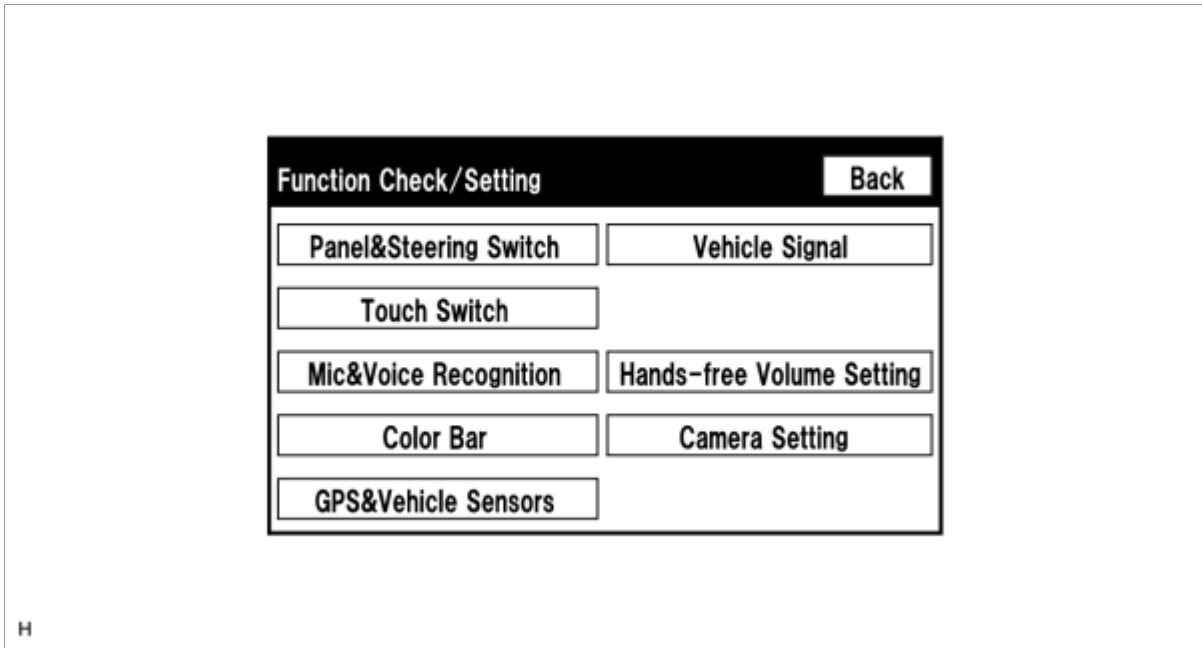

(2) Unit Check Mode Screen

Screen Description

DISPLAY	CONTENT
*1: Device name	Target device
*2: History DTC	Diagnostic memory results and stored DTCs are displayed.
*3: Present DTC	DTCs output in the service check are displayed.
*4: DTC	DTC (Diagnostic Trouble Code)
*5: Timestamp	The time and date of history DTCs are displayed. (The year is displayed in 2-digit format.)
*6: Diagnosis clear switch	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

(c) Function Check/Setting Screen

HINT:

Each item is grayed out or not displayed based on the device settings.

(1) Microphone & Voice Recognition Check Screen

Screen Description

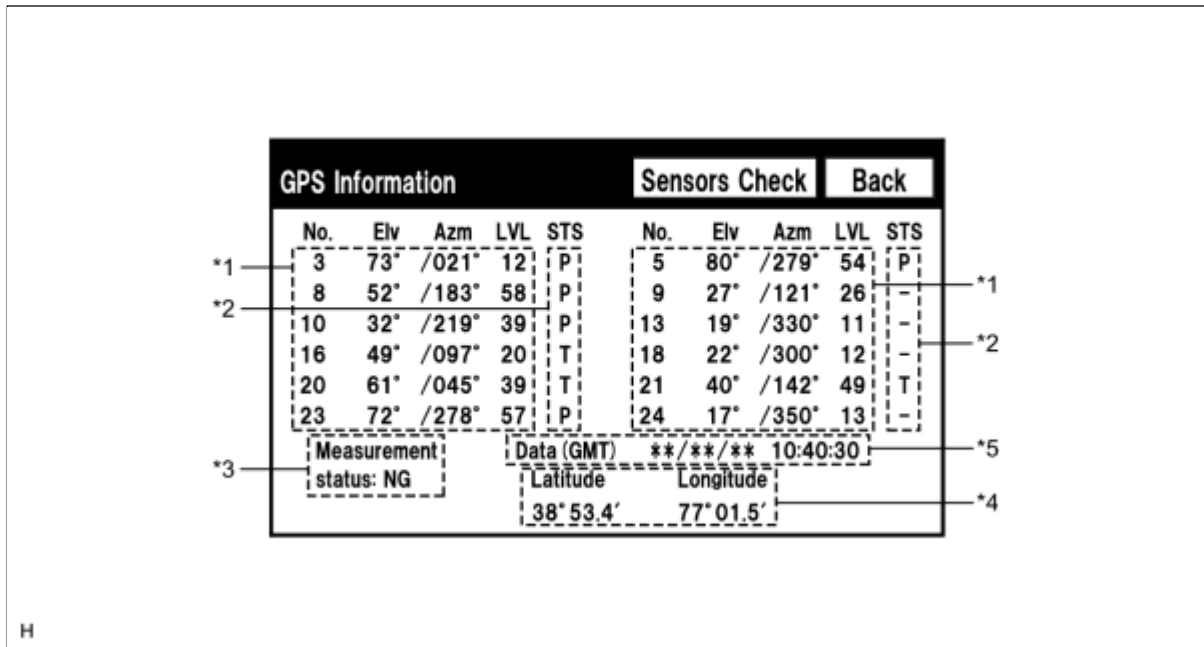

DISPLAY	CONTENT
*1: Microphone input level meter	Monitors the microphone input level every 0.1 sec. and displays the results in 8 different levels.
*2: Recording switch	Starts recording.
*3: Stop switch	Stops recording and playing.
*4: Play switch	Plays the recorded voice.

*5: Recording indicator	Comes on while recording.
-------------------------	---------------------------

HINT:

- The microphone is active at all times when this screen is displayed.
- While recording or playing, the switches other than the stop switch cannot be pushed.
- When no recording is present, the play switch cannot be pushed.
- Recording will stop after 5 seconds or when the stop switch is pushed.

(2) GPS Information Screen

*1: Satellite information

Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction and signal level.

*2: Receiving condition

Screen Description

DISPLAY	CONTENT
T	The system is receiving a GPS signal, but is not using it for location.
P	The system is using the GPS signal for location.
-	The system cannot receive a GPS signal.

*3: Measurement information

Screen Description

DISPLAY	CONTENT
2D	2-dimensional location method is being used.
3D	3-dimensional location method is being used.
NG	Location data cannot be used.
Error	Reception error has occurred.

-	Any other state.
---	------------------

***4:** Position information

Screen Description

DISPLAY	CONTENT
Position	Latitude and longitude information on the current position is displayed.

***5:** Date information

Screen Description

DISPLAY	CONTENT
Date	The date/time information obtained from GPS signal is displayed in Greenwich Mean Time (GMT).

(3) Vehicle Sensors Screen

Vehicle Signal

DISPLAY	CONTENT
*1: SPD	SPD signal condition is displayed.

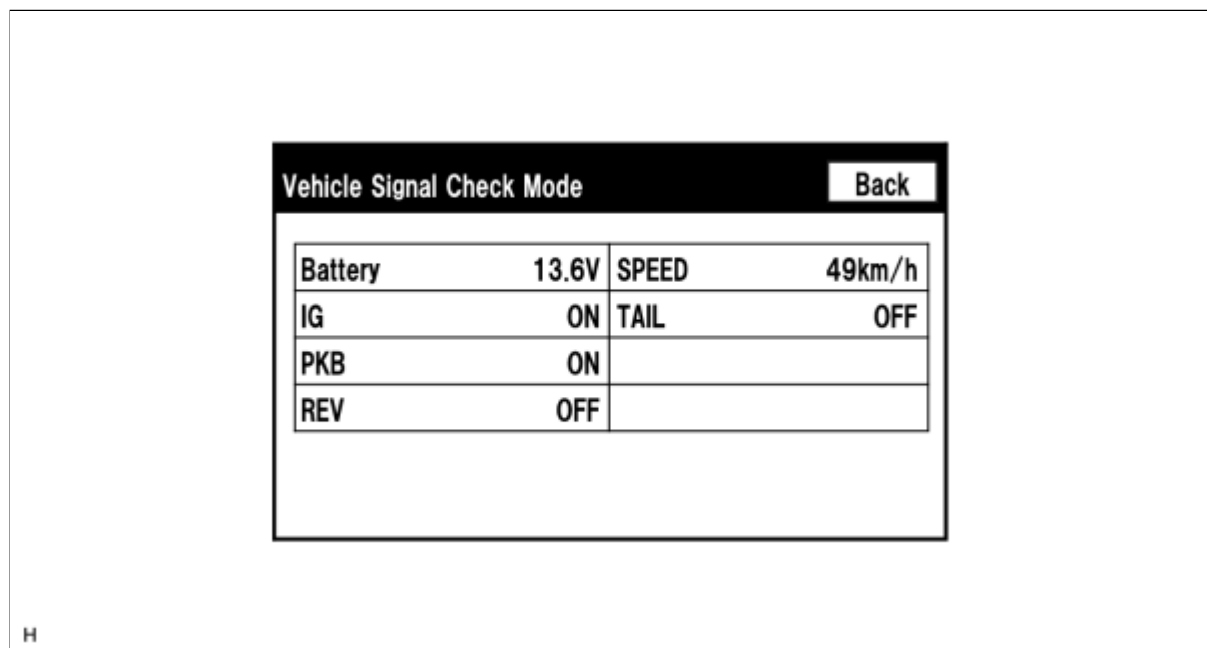

Sensor Signal

DISPLAY	CONTENT
*2: Gyro sensor	Gyro sensor output condition is displayed.

HINT:

Signals are updated once per second only when vehicle sensor signals are changed.

(4) Vehicle Signal Check Mode Screen

Screen Description

DISPLAY	CONTENT
Battery	Battery voltage is displayed.
IG	Power switch ON/OFF state is displayed.
PKB	Parking brake ON/OFF state is displayed.
REV	Reverse signal ON/OFF state is displayed.
SPEED	Vehicle speed is displayed in km/h.
TAIL	Tail signal (Light control switch) ON/OFF state is displayed.

HINT:

- Only items sending vehicle signals will be displayed.
- This screen is updated once per second when input signals to the vehicle are changed.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the navigation system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3. DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

(a) Ask the customer about symptoms and confirm malfunctions.

Result:

RESULT	PROCEED TO
Other symptoms.	A
The screen displays nothing.	B

B Go to step 6

A

4.	OPERATION CHECK
-----------	------------------------

(a) Refer to Check System Normal Condition  .

Result:

RESULT	PROCEED TO
Symptom is not normal operation.	A
Symptom is normal operation.	B

B  **SYMPTOM IS NORMAL OPERATION**

A

5.	CHECK CAN COMMUNICATION SYSTEM*
-----------	--

(a) Check for DTC output  .

Result:

RESULT	PROCEED TO
CAN DTC is not output.	A
CAN DTC is output.	B

B   **GO TO CAN COMMUNICATION SYSTEM**

A

6.	CHECK FOR DTC*
-----------	-----------------------

(a) Refer to DTC Check/Clear  .

Result:

RESULT	PROCEED TO
DTC is output.	A

DTC is not output.	B
--------------------	---

B  Go to step 10

A

7.	DTC CLEAR*
-----------	-------------------

(a) Refer to DTC Check/Clear  .

HINT:

The present DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

8.	RECHECK FOR DTC*
-----------	-------------------------

(a) Refer to DTC Check/Clear  .

Result:

RESULT	PROCEED TO
DTC is output.	A
DTC is not output.	B

HINT:

- Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.
- Check the DTCs and inspect the area code indicates.

B  Go to step 10

A

9. DIAGNOSTIC TROUBLE CODE CHART

(a) Find the output code in Diagnostic Trouble Code Chart .

NEXT  Go to step 12

10. PROBLEM SYMPTOMS TABLE

(a) Refer to Problem Symptoms Table .

Result:

RESULT	PROCEED TO
Fault is not listed in Problem Symptoms Table.	A
Fault is listed in Problem Symptoms Table.	B

HINT:

If the symptom does not recur and no DTC is output, perform the symptom reproduction method .

B  Go to step 12

A

**11. PERFORM TROUBLESHOOTING BASED ON MALFUNCTION SYMPTOM**

(a) Refer to Terminals of ECU .

NEXT

**12. CHECK CIRCUIT**

(a) Adjust, repair or replace as necessary.

NEXT

13.	RECHECK FOR DIAGNOSTIC TROUBLE CODE
-----	-------------------------------------

HINT:

After clearing the DTCs, recheck for DTCs.

NEXT

14.	PERFORM CONFIRMATION TEST
-----	---------------------------

NEXT  **END**

OPERATION CHECK

1. CHECK SYSTEM NORMAL CONDITION

(a) If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.

SYMPTOM	ANSWER
A longer route than expected is chosen.	Depending on the road conditions, the navigation receiver assembly may determine that a longer route is quicker.
Even when distance priority is high, the shortest route is not shown.	Some routes may not be advised due to safety concerns.
When the vehicle is put into motion immediately after the hybrid system starts, the navigation system deviates from the current position.	If the vehicle starts before the navigation system activates, the system may not react.
When running on certain types of roads, especially new roads, the vehicle position deviates from the current position.	When the vehicle is driving on new roads not available on the hard disk drive, the system attempts to match it to another nearby road, causing the position mark to deviate.

(b) The following symptoms are not malfunctions, but are caused by errors inherent in the GPS, gyro sensor, speed sensor or navigation receiver assembly.

(1) The current position mark may be displayed on a nearby parallel road.

(2) Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.

(3) When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.

P

- (4) When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.

- (5) When the vehicle travels on a steep hill, the current vehicle position mark may deviate from the correct position.

- (6) When the vehicle makes a continuous turn (e.g. 360, 720, 1080 degrees), the current vehicle position mark may deviate from the correct position.

- (7) When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

- (8) When the power switch is turned on (ACC or IG) on a turntable before parking, the current vehicle position mark may not indicate the correct direction. The same will occur when the vehicle comes out of the parking garage.

(9) When the vehicle travels on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

(10) When the tires are changed, the current vehicle position mark may deviate from the correct position.

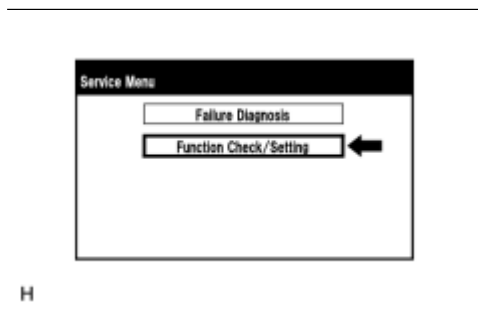

- A change in tire diameter may cause a speed sensor error.
- Performing "tire change" in calibration mode will allow the system to correct the current vehicle position faster.

2. CHECK PANEL & STEERING SWITCH

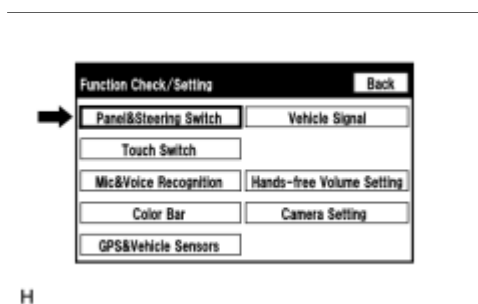

HINT:

- The navigation receiver assembly panel switches and steering switch are checked in the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

(a) Enter diagnostic mode  .

(b) Select "Function Check/Setting" from the "Service Menu" screen.

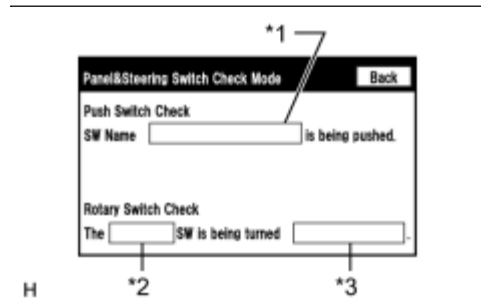

(c) Select "Panel & Steering Switch" from the "Function Check/Setting" screen.

(d) Panel & Steering Switch Check Mode

(1) Operate each switch and check that the switch names and condition are correctly displayed.

Screen Description

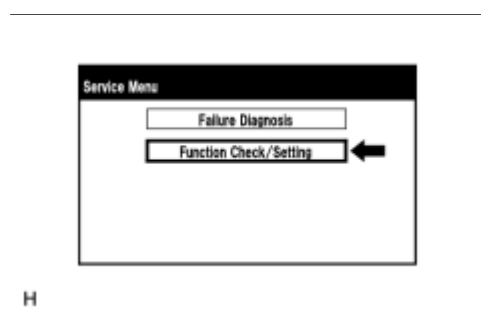

DISPLAY	CONTENT
*1: Push switch name	<ul style="list-style-type: none"> Name of the pressed switch is displayed. If more than one switch is pressed, "MULTIPLE" will be displayed.
*2: Rotary switch name	Name of the rotary switch is displayed.
*3: Rotary switch direction	Direction of the rotary switch is displayed.

3. CHECK TOUCH SWITCH

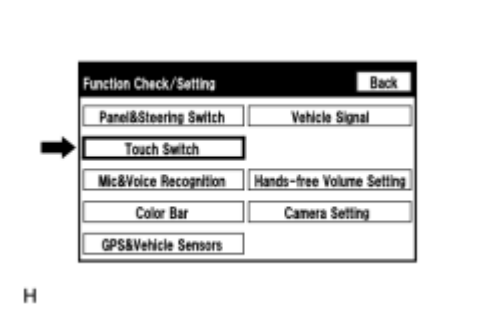

HINT:

- The touch switches on the screen are checked in the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

(a) Enter diagnostic mode  .

(b) Select "Function Check/Setting" from the "Service Menu" screen.

(c) Select "Touch Switch" from the "Function Check/Setting" screen.

(d) Touch Switch Check

(1) Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

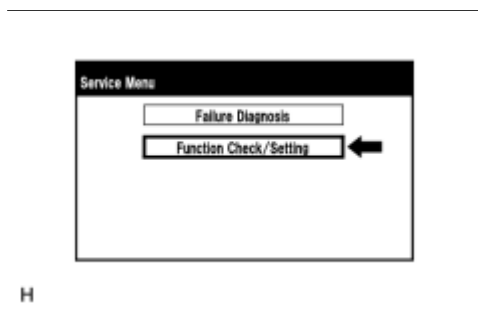

- A "+" mark is displayed where the display is touched.
- The "+" mark remains on the display even after the finger is removed.

4. CHECK MIC & VOICE RECOGNITION

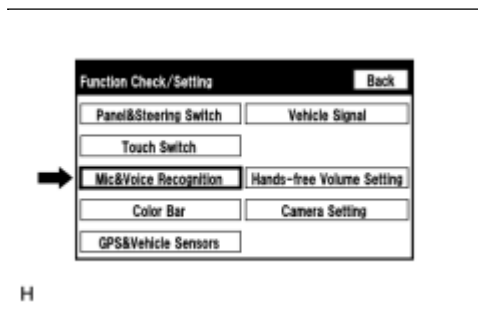

HINT:

- The microphone and microphone input level are checked in the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

(a) Enter diagnostic mode  .

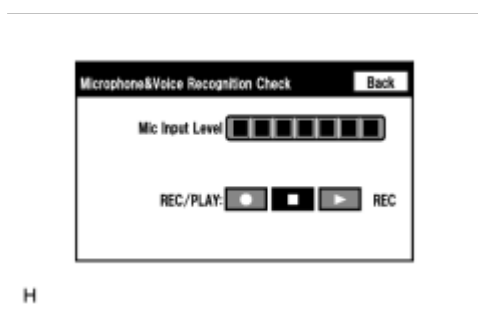

(b) Select "Function Check/Setting" from the "Service Menu" screen.

(c) Select "Mic & Voice Recognition" from the "Function Check/Setting" screen.

(d) Microphone & Voice Recognition Check

(1) When speaking into the microphone, check that the microphone input level meter changes according to the input level.

- (2) Push the recording switch and perform voice recording.
- (3) Check that the recording indicator remains on while recording and that the recording can be played normally.

HINT:

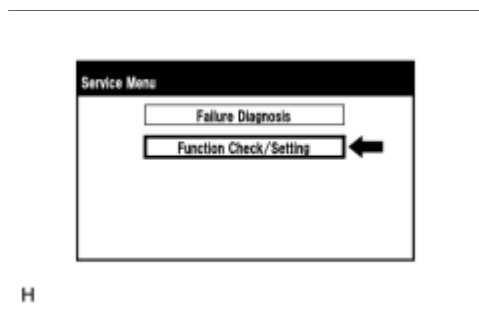

- For details of this function, refer to Diagnosis Display Detailed Description in System Description INFO.
- This function is controlled by the navigation receiver assembly (built-in navigation ECU).

5. CHECK COLOR BAR

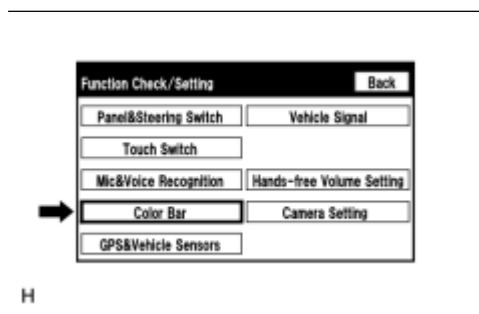

HINT:

- The display color on the screen is checked in the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

- (a) Enter diagnostic mode INFO.

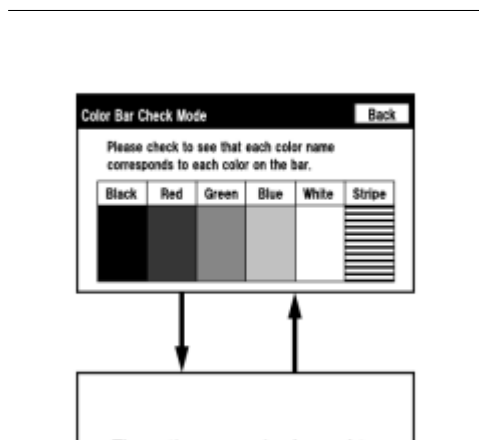

- (b) Select "Function Check/Setting" from the "Service Menu" screen.

- (c) Select "Color Bar" from the "Function Check/Setting" screen.

- (d) Color Bar Check Mode

- (1) Select a color bar from the "Color Bar Check Mode" screen.

The entire screen is changed to the color which is selected in the color bar check mode.

H

(2) Check the display color.

HINT:

- The entire screen turns to the color or stripe selected.
- Touching the display will return to the "Color Bar Check" screen.

6. CHECK GPS & VEHICLE SENSORS

HINT:

- GPS information, vehicle signals and sensor signals are checked in the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

(a) Enter diagnostic mode  .

H

(b) Select "Function Check/Setting" from the "Service Menu" screen.

H

(c) Select "GPS & Vehicle Sensors" from the "Function Check/Setting" screen.

(d) GPS information

GPS Information					Sensors Check					Back
No.	Elev	Azimuth	LVL	STS	No.	Elev	Azimuth	LVL	STS	
3	73°	/021°	12	P	5	80°	/278°	54	P	
8	52°	/183°	58	P	9	27°	/121°	26	-	
10	32°	/219°	39	P	13	16°	/330°	11	-	
16	46°	/097°	20	T	18	22°	/300°	12	-	
20	61°	/045°	39	T	21	40°	/142°	49	T	
23	72°	/278°	57	P	24	17°	/350°	13	-	
Measurement status: NG		Data (GMT): **/**/** 10:40:30		Latitude: 38°03.4'		Longitude: 77°01.5'				

(1) When the "GPS Information" screen is displayed, check the GPS conditions.

- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to [Diagnosis Display Detailed Description in System Description](#)  .

H

(e) Select "Sensors Check" from the "GPS information" screen.

(f) Vehicle Sensors

H

(1) Check all the signals and sensors when vehicle signal information is displayed.

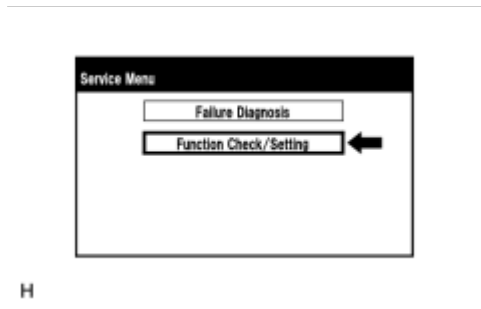

- This screen is updated once per second when input signals to the vehicle are changed.
- This screen displays vehicle signals input to the navigation receiver assembly (built-in navigation ECU).
- For details of this function, refer to [Diagnosis Display Detailed Description in System Description](#) INFO.

7. CHECK VEHICLE SIGNAL

HINT:

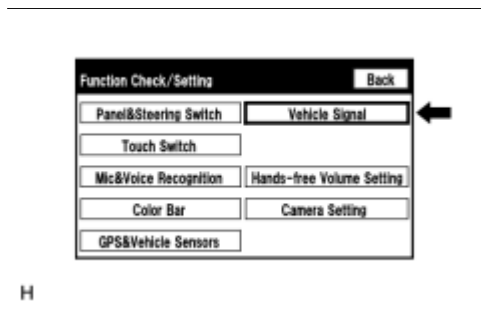

- Vehicle signals received by the navigation receiver assembly are checked in the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

(a) Enter diagnostic mode INFO.

H

(b) Select "Function Check/Setting" from the "Service Menu" screen.

H

(c) Select "Vehicle Signal" from the "Function Check/Setting" screen.

(d) Vehicle Signal Check Mode

(1) When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

- Only conditions having inputs are displayed.

IG	ON	TAIL	OFF
PKB	ON		
REV	OFF		

H

- This screen displays vehicle signals input to the navigation receiver assembly (built-in navigation ECU).
- For details of this function, refer to Diagnosis Display Detailed Description in System Description [INFO](#).

8. CHECK HANDS-FREE VOLUME SETTING

HINT:

- The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

(a) Enter diagnostic mode [INFO](#).

H

(b) Select "Function Check/Setting" from the "Service Menu" screen.

H

(c) Select "Hands-free Volume Setting" from the "Function Check/Setting" screen.

(d) Hands-free Volume Setting

(1) Check the hands-free volume level.

Screen Description

H

DISPLAY	CONTENT
*1: Receive voice level adjustment	Setting possible for the voice level received from "Bluetooth" compatible phones.

NOTICE:

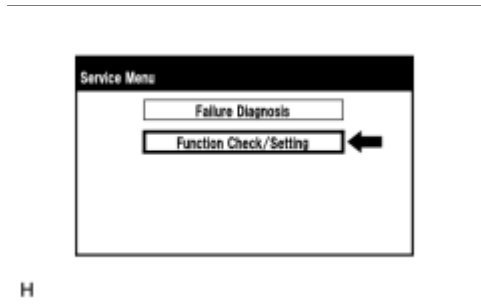

Sound quality may deteriorate when the receive voice level is changed more than necessary. For this reason, check that the receive voice quality is still acceptable after changing this setting.

9. CHECK CAMERA SETTING (W/ ADVANCED PARKING GUIDANCE SYSTEM)

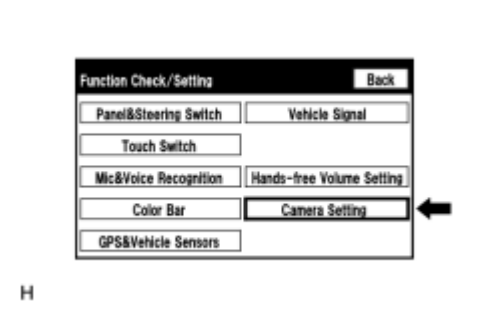

HINT:

- It is possible to make adjustments and check the signals received by the parking assist ECU.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

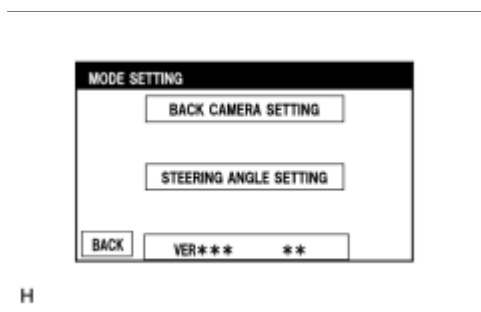

(a) Enter diagnostic mode  .

(b) Select "Function Check/Setting" from the "Service Menu" screen.

(c) Select "Camera Setting" from the "Function Check/Setting" screen.

(d) MODE SETTING

HINT:

Refer to the advanced parking guidance system for further information

 .

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

TERMINALS OF ECU

1. NAVIGATION RECEIVER ASSEMBLY (w/ "Bluetooth" Audio System)

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
L40-1 (B) - L40-20 (GND)	SB - BR	Battery	Power switch off	11 to 14 V
L40-2 (ILL+) - L40-20 (GND)	G - BR	Illumination signal	Power switch on (IG) Light control switch off → tail or on	Below 1 V → 11 to 14 V
L40-5 (ATX+)	G	AVC-LAN communication signal	-	-
L40-7 (MUTE) - L40-20 (GND)	B - BR	Mute signal	Audio system playing → Changing	Above 3.5 V → Below 1 V
L40-8 (R+) - L40-20 (GND)	G - BR	Sound signal (Right)	Audio system playing	A waveform synchronized with sounds is output
L40-9 (L+) - L40-20 (GND)	R - BR	Sound signal (Left)	Audio system playing	A waveform synchronized with sounds is output
L40-10 (SLD) - Body ground	Shield - Body ground	Shield ground	Always	Below 1 V
L40-11 (ACC) - L40-20 (GND)	GR - BR	Accessory (ON)	Power switch on (ACC)	11 to 14 V
			Power switch off	Below 1 V
L40-12 (ILL-) - L40-20 (GND)	W-B - BR	Illumination signal	Power switch on (IG) Light control switch off → tail or on (Light intensity not max. or min.)	Below 1 V → Pulse generation
L40-13 (ANT) - L40-20 (GND)	BE - BR	Power source of antenna	Power switch on (IG) Radio switch on and AM or FM	8 V or higher
L40-15 (ATX-)	R	AVC-LAN communication signal	-	-

L40-18 (R-) - L40-20 (GND)	B - BR	Sound signal (Right)	Audio system playing	A waveform synchronized with sounds is output
L40-19 (L-) - L40-20 (GND)	W - BR	Sound signal (Left)	Audio system playing	A waveform synchronized with sounds is output
L40-20 (GND) - Body ground	BR - Body ground	Ground	Always	Below 1 V
L41-6 (SWG) - Body ground	P - Body ground	Steering pad switch signal	Always	Below 1 V
L41-7 (SW1) - L41-6 (SWG)	R - P	Steering pad switch signal	No switch pushed → MODE switch pushed → ON HOOK switch pushed → OFF HOOK switch pushed → VOICE switch pushed	4.44 to 5.43 V → 0.45 to 0.65 V → 1.19 to 1.49 V → 2.09 to 2.54 V → 3.2 to 3.88 V
L41-8 (SW2) - L41-6 (SWG)	G - P	Steering pad switch signal	No switch is pushed → SEEK+ switch pushed → SEEK- switch pushed → VOL+ switch pushed → VOL- switch pushed	4.44 to 5.43 V → 0.45 to 0.65 V → 1.19 to 1.49 V → 2.09 to 2.54 V → 3.2 to 3.88 V
L41-9 (TX1+)*1	LG	AVC-LAN communication signal	-	-
L41-10 (TX1-)*1	P	AVC-LAN communication signal	-	-
L41-11 (IVO+) - L40-20 (GND)	Y - BR	Voice guidance signal	Voice guidance transmitting	A waveform synchronized with sounds is output
L41-12 (IVO-) - L40-20 (GND)	BR - BR	Voice guidance signal	Voice guidance transmitting	A waveform synchronized with sounds is output
L41-13 (SLD) - Body ground	Shield - Body ground	Voice sound signal shield ground	Always	Below 1 V
L41-15 (ARI) - L41-16 (ASGN)	B - W	Sound signal (Right)	External device playing (When stereo jack used)	A waveform synchronized with sounds is output
L41-16 (ASGN) - L40-20 (GND)	W - BR	Sound signal ground	Always	Below 1 V
L41-17 (ALI) - L41-16 (ASGN)	R - W	Sound signal (Left)	External device playing (When stereo jack used)	A waveform synchronized with sounds is output
L41-18 (AGND) - Body ground	Shield - Body ground	Shield ground	Always	Below 1 V
L41-19 (AUXI) - L40-20 (GND)	W - BR	External device connection detection signal	External device connected	Below 1 V
L42-1 (PKB) - L40-20 (GND)	R - BR	Parking brake signal	See "Vehicle Signal Check Mode" in Operation Check INFO	-
L42-2 (IG) - L40-20 (GND)	B - BR	Power source (IG)	Power switch on (IG)	11 to 14 V
			Power switch off	Below 1 V
L42-3 (SPD) - L40-20 (GND)	V - BR	Speed signal from combination meter assembly	See "Vehicle Signal Check Mode" in Operation Check INFO	-

L42-5 (REV) - L40-20 (GND)	P - BR	Reverse signal	See "Vehicle Signal Check Mode" in Operation Check INFO	-
L37-2 (CANH)	G	CAN communication signal	-	-
L37-3 (CANL)	W	CAN communication signal	-	-
L37-5 (SNS2) - L40-20 (GND)	B - BR	Microphone connection detection signal	Always	Below 1 V
L37-17 (MACC) - L40-20 (GND)*3	R - BR	Telephone microphone assembly power supply	Power switch off → on (IG)	Below 1 V → 5 V
L37-18 (SGND) - L40-20 (GND)	Shield - BR	Shield ground	Always	Below 1 V
L37-19 (MIN+) - L40-20 (GND)	B - BR	Microphone voice signal	See "Microphone & Voice Recognition Check" in Operation Check INFO	-
L37-20 (MIN-) - Body ground	W - Body ground	Microphone voice signal	See "Microphone & Voice Recognition Check" in Operation Check INFO	-
L37-21 (CGND) - Body ground*2	Shield - Body ground	Shield ground	Always	Below 1 V
L37-22 (V+) - L40-20 (GND)*2	R - BR	Television camera image signal	Power switch on (IG) Shift lever in R Camera lens not covered, displaying an image	Pulse generation (Refer to waveform 1)
			Power switch on (IG) Shift lever in R Camera lens covered, blacking out screen	Pulse generation (Refer to waveform 2)
L37-23 (V-) - L40-20 (GND)*2	B - BR	Ground	Always	Below 1 V
L37-24 (CA+) - L40-20 (GND)*2	W - BR	Television camera power supply	Power switch on (IG) Shift lever in R	5.5 to 7 V
L38-1 (CSLD) - Body ground	Shield - Body ground	Shield ground	Always	Below 1 V
L38-2 (CDR+) - L40-20 (GND)	R - BR	Satellite radio sound signal	Satellite radio playing	A waveform synchronized with sounds is output
L38-3 (CDR-) - L40-20 (GND)	W - BR	Satellite radio sound signal	Satellite radio playing	A waveform synchronized with sounds is output
L38-4 (CDL+) - L40-20 (GND)	G - BR	Satellite radio sound signal	Satellite radio playing	A waveform synchronized with sounds is output

L38-5 (CDL-) - L40-20 (GND)	B - BR	Satellite radio sound signal	Satellite radio playing	A waveform synchronized with sounds is output
L38-6 (MUTE) - L40-20 (GND)	G - BR	Mute signal	Satellite radio playing → Source changed	Above 3.5 V → Below 1 V
L38-9 (TXM+)	W	AVC-LAN communication signal	-	-
L38-10 (TXM-)	B	AVC-LAN communication signal	-	-

E39-3 (TXI+)	G	AVC-LAN plus communication signal	-	-
E39-5 (TXO-)	W	AVC-LAN plus communication signal	-	-
E39-6 (TXI-)	R	AVC-LAN plus communication signal	-	-

*1: w/ Advanced Parking Guidance System

*2: w/ Rear View Monitor System

*3: w/o Manual (SOS) Switch

(a) Reference (Oscilloscope waveform):

(1) Waveform 1 (camera lens not covered, displaying an image)

ITEM	CONTENT
Measurement terminal	L37-22 (V+) - L40-20 (GND)
Measurement setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

HINT:

The video waveform changes according to the image that the television camera assembly projects.

(2) Waveform 2 (camera lens is covered, blacking out the screen)

ITEM	CONTENT
Measurement terminal	L37-22 (V+) - L40-20 (GND)
Measurement setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

HINT:

The video waveform changes according to the image from the television camera assembly.

6. PARKING ASSIST ECU (w/ Advanced Parking Guidance System)

[INFO](#)

7. DCM (TELEMATICS TRANSCEIVER) (w/ Manual (SOS) Switch)

[INFO](#)

DTC CHECK / CLEAR

1. CHECK DTC (CHECK USING TECHSTREAM)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Navigation System / Trouble Codes.
- (e) Check for DTC(s) and freeze frame data, and then write them down.
- (f) Check the details of the DTC(s)  .

2. CLEAR DTC (CHECK USING TECHSTREAM)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Navigation System / Trouble Codes.
- (e) Clear the DTCs.

3. START DIAGNOSTIC MODE

HINT:

- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.
- To help find the malfunction when the system can not change to diagnostic mode, check for DTCs using the Techstream.
- After the power switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.

- (a) There are 2 methods to start diagnostic mode. Start the mode by using either of them.

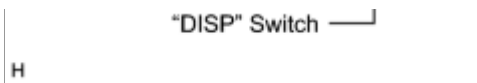

(b) Method 1

- (1) Start the hybrid system.
- (2) While pressing and holding the "INFO" switch, operate the light control switch: off → Turn on → Turn off → Turn on → Turn off → Turn on → Turn off.
- (3) Diagnostic mode starts and the "Service Menu" screen will be displayed. Service inspection starts automatically and the result will be displayed.

(c) Method 2

- (1) Start the hybrid system.
- (2) Press the "DISP" switch.

(3) From the display quality adjustment screen, touch the corners of the screen in the following order: Upper left → Lower left → Upper left → Lower left → Upper left → Lower left.

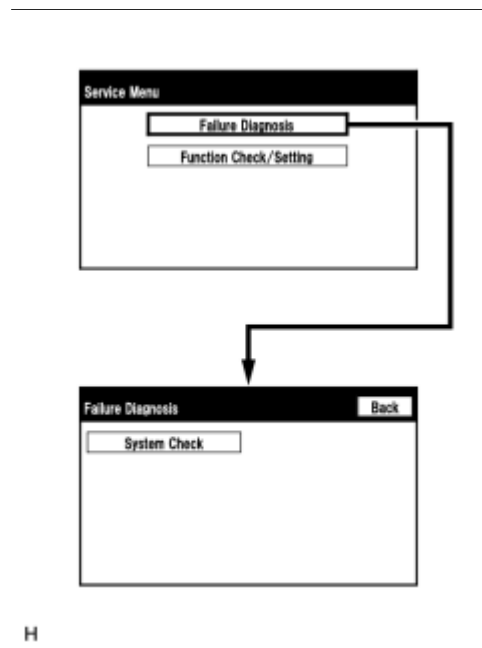

(4) Diagnostic mode starts and the "Service Menu" screen will be displayed.

4. FINISH DIAGNOSTIC MODE

(a) Turn the power switch off.

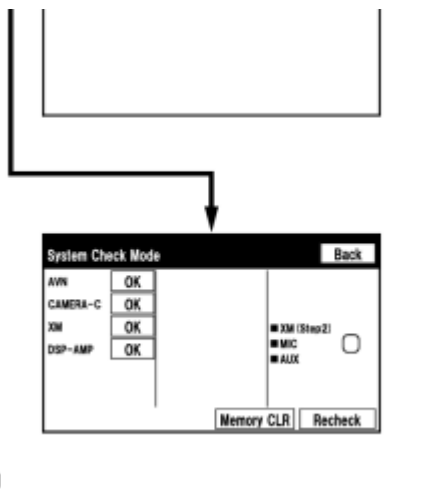

5. FAILURE DIAGNOSIS

(a) The "Failure Diagnosis" screen will be displayed by pressing the "Failure Diagnosis" switch on the "Service Menu" screen.

6. SYSTEM CHECK

H

(a) The "System Check Mode" screen will be displayed by pressing the "System Check" switch on the "Failure Diagnosis" screen.

7. CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

(a) Read the system check result.

(1) If the check result is "EXCH" or "CHEK", touch the displayed check result to view the results on the "Unit Check Mode" screen and record them.

- When all results are "OK", this means that no DTCs are present.
- When proceeding to view the results of another device, press the "Back" switch to return to the "System Check Mode" screen. Repeat the step above to view the results of other devices.

(2) Check the details of the DTC(s) .

NOTICE:

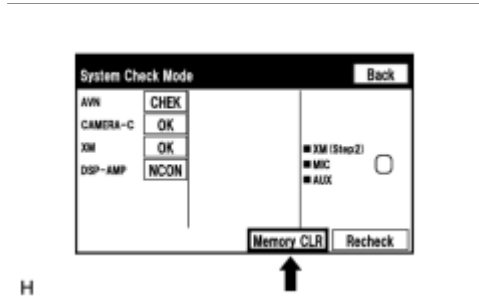

The navigation system outputs DTCs for the following system. When DTCs other than the codes in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

H

SYSTEM	PROCEED TO
Advanced parking guidance system (w/ Advanced parking guidance system)	

8. DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)

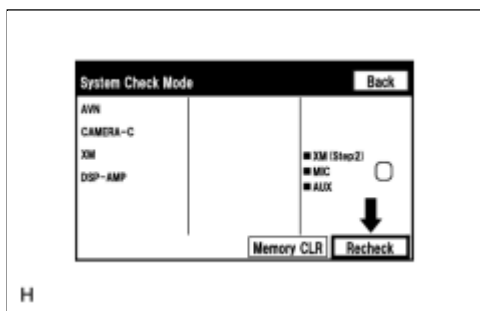

(a) Clear DTC

- (1) Press the "Memory CLR" switch for 3 seconds.
- (2) Confirm that the check results are cleared.

- To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.
- When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.

(b) Recheck

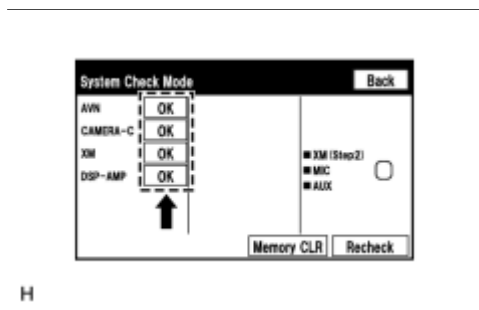

(1) Press the "Recheck" switch.

- (2) Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

HINT:

When a DTC was cleared using the "Unit Check Mode" screen, press the "Back" switch to return to the "System Check Mode" screen and perform this operation.

DTC	B1561	XM Tuner Disconnected (Command Line)
-----	-------	--------------------------------------

DTC	B159F	No Response from XM Tuner
-----	-------	---------------------------

DESCRIPTION

The navigation receiver assembly and stereo component tuner assembly are connected by the AVC-LAN communication line.

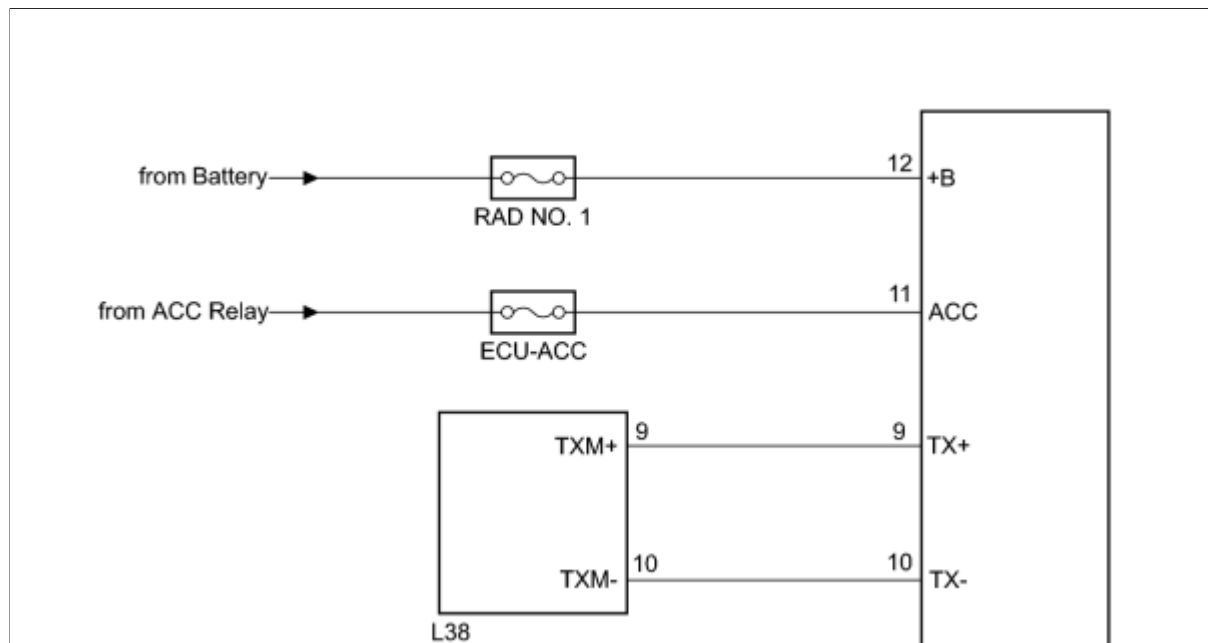

When an AVC-LAN communication error occurs between the navigation receiver assembly and stereo component tuner assembly, these DTCs will be stored.

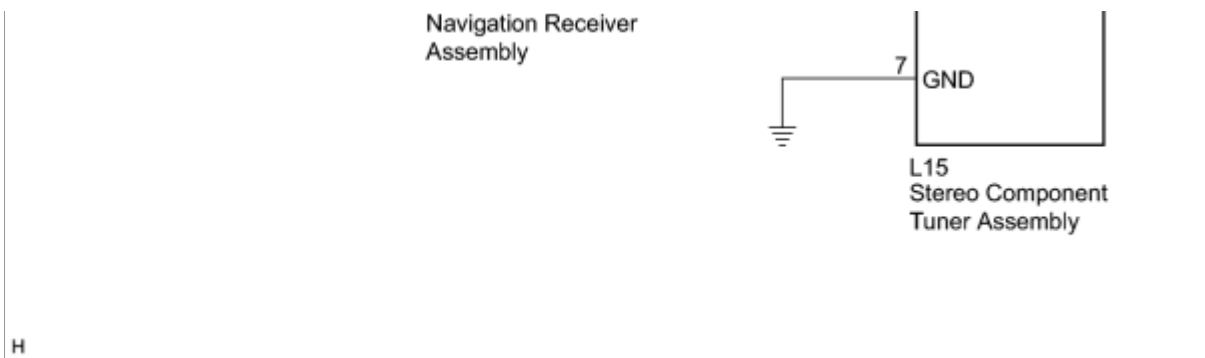

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1561*1	Stereo component tuner assembly is not/was not connected while the power switch is turned on (ACC or IG).	<ul style="list-style-type: none"> • Stereo component tuner assembly power source circuit • AVC-LAN circuit between navigation receiver assembly and stereo component tuner assembly • Navigation receiver assembly • Stereo component tuner assembly
B159F	Within the time-out period, there was no response from the stereo component tuner assembly to the following requests from the master unit: <ul style="list-style-type: none"> • System inspection request • System inspection result request • Diagnostic memory request 	

HINT:

- *1: Even if no fault is present, this DTC may be stored depending on the battery condition or hybrid system start voltage.
- The navigation receiver assembly is the master unit.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- After replacing the stereo component tuner assembly of vehicles subscribed to pay-type satellite radio broadcasts, registration of the XM radio ID is necessary.

PROCEDURE

1. CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

(a) Check for optional components

(1) Check that optional components (including associated wiring) which generate radio waves are not installed.

Result:

RESULT	PROCEED TO
Optional components (including associated wiring) are installed.	A
Optional components (including associated wiring) are not installed.	B

HINT:

- Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.
- These DTCs may be stored when an AVC-LAN communication error occurs due to electrical noise.

B ► CHECK DTC

DTC	B15C2	Speed Signal Malfunction
-----	-------	--------------------------

DESCRIPTION

The navigation receiver assembly receives a vehicle speed signal from the combination meter assembly (No. 3 meter circuit plate) and information from the navigation antenna, and then adjusts vehicle position.

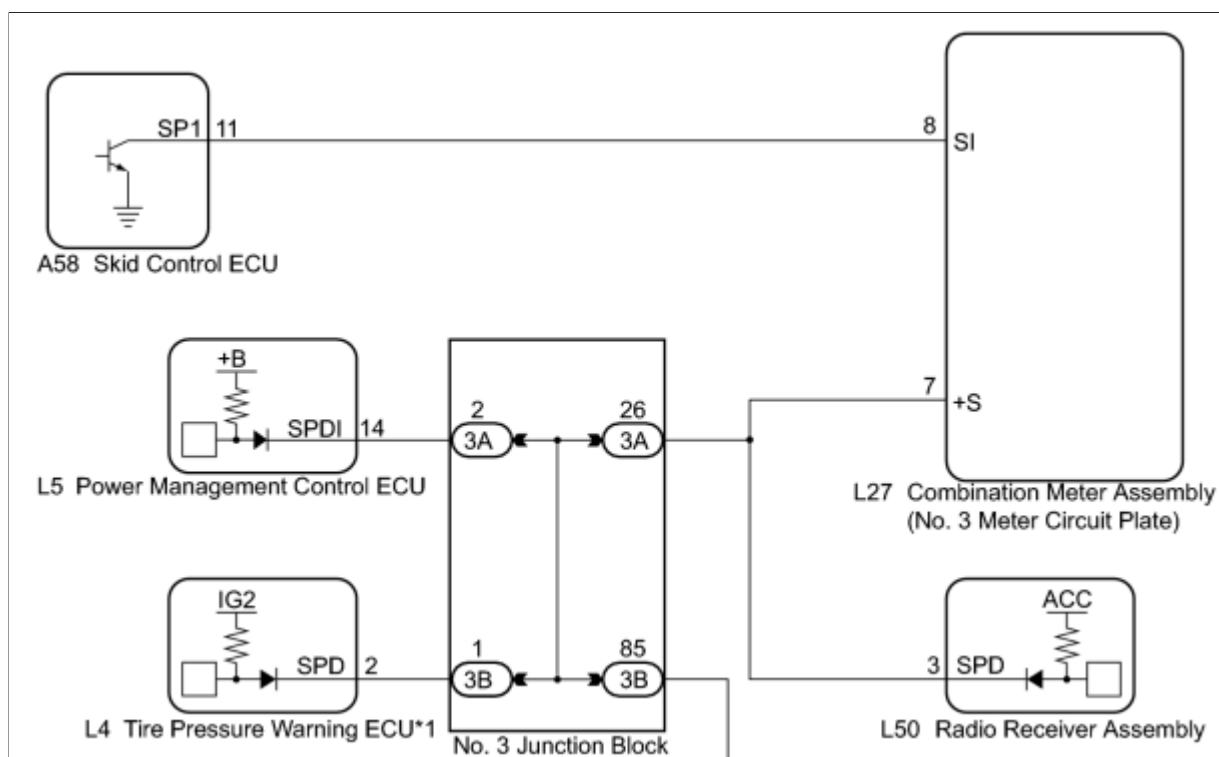

The navigation receiver assembly stores this DTC when the difference between the speed information that the navigation antenna receives and the SPD pulse received from the combination meter assembly (No. 3 meter circuit plate) becomes large.

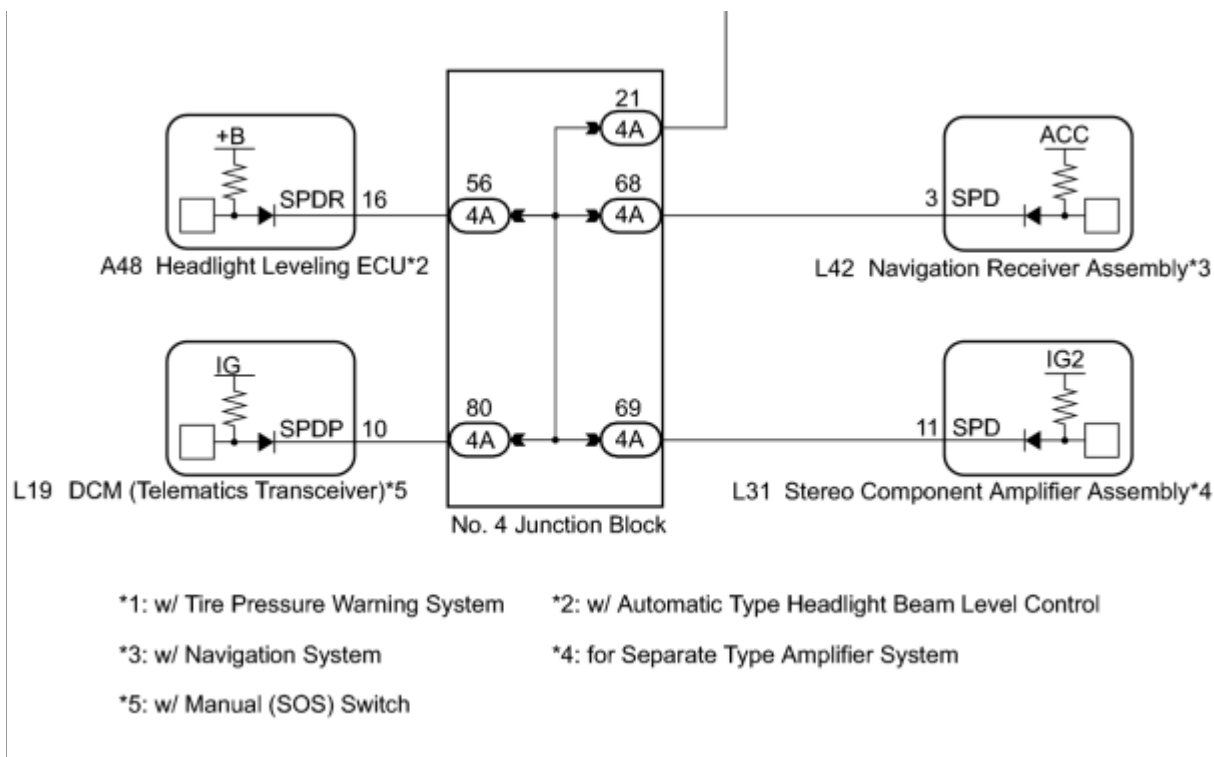

HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly (No. 3 meter circuit plate). The signal is changed to a pulse signal at the transistor in the combination meter assembly (No. 3 meter circuit plate). Each ECU controls the respective systems based on the pulse signal.
- If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B15C2	A difference between the GPS speed and SPD pulse is detected.	<ul style="list-style-type: none"> • Combination meter assembly (No. 3 meter circuit plate) • Wire harness or connector • No. 4 junction block • No. 3 junction block • Navigation receiver assembly

WIRING DIAGRAM

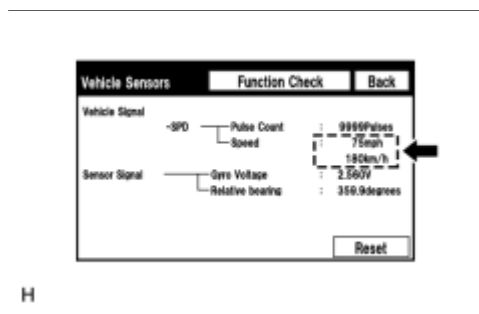

INSPECTION PROCEDURE

PROCEDURE

1. CHECK VEHICLE SENSOR (OPERATION CHECK)

(a) Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check [INFO](#).

(b) While driving the vehicle, compare the "SPD" indicator to the reading on the speedometer. Check if these readings are almost equal.

HINT:

The meter ECU receives the vehicle speed signal from the skid control ECU via CAN communication. Therefore, perform the following inspection referring to values on the Data List of the skid control ECU because it is the source of the vehicle speed signal.

OK:

Vehicle speed displayed on the "Vehicle Sensors" screen is almost the same as the actual vehicle speed measured using the Techstream [INFO](#).

NG ▶ METER CIRCUIT PLATE OUTPUT WAVEFORM

OK ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

2. INSPECT COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE OUTPUT WAVEFORM)

(a) Check the output waveform.

- (1) Remove the combination meter assembly with the connector(s) still connected.
- (2) Connect an oscilloscope to terminal L27-7 (+S) and body ground.
- (3) Turn the power switch on (IG).
- (4) Turn a wheel slowly.
- (5) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Measurement terminal	L27-7 (+S) - Body ground
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Wheel being rotated

OK:
The waveform is similar to that shown in the illustration.

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

----	----------------------

NG ▶ REPLACE NO. 3 JUNCTION BLOCK

OK ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

DTC | B15D8 | Monitor Disconnected

DESCRIPTION

The navigation receiver assembly and parking assist ECU are connected by the AVC-LAN communication line.

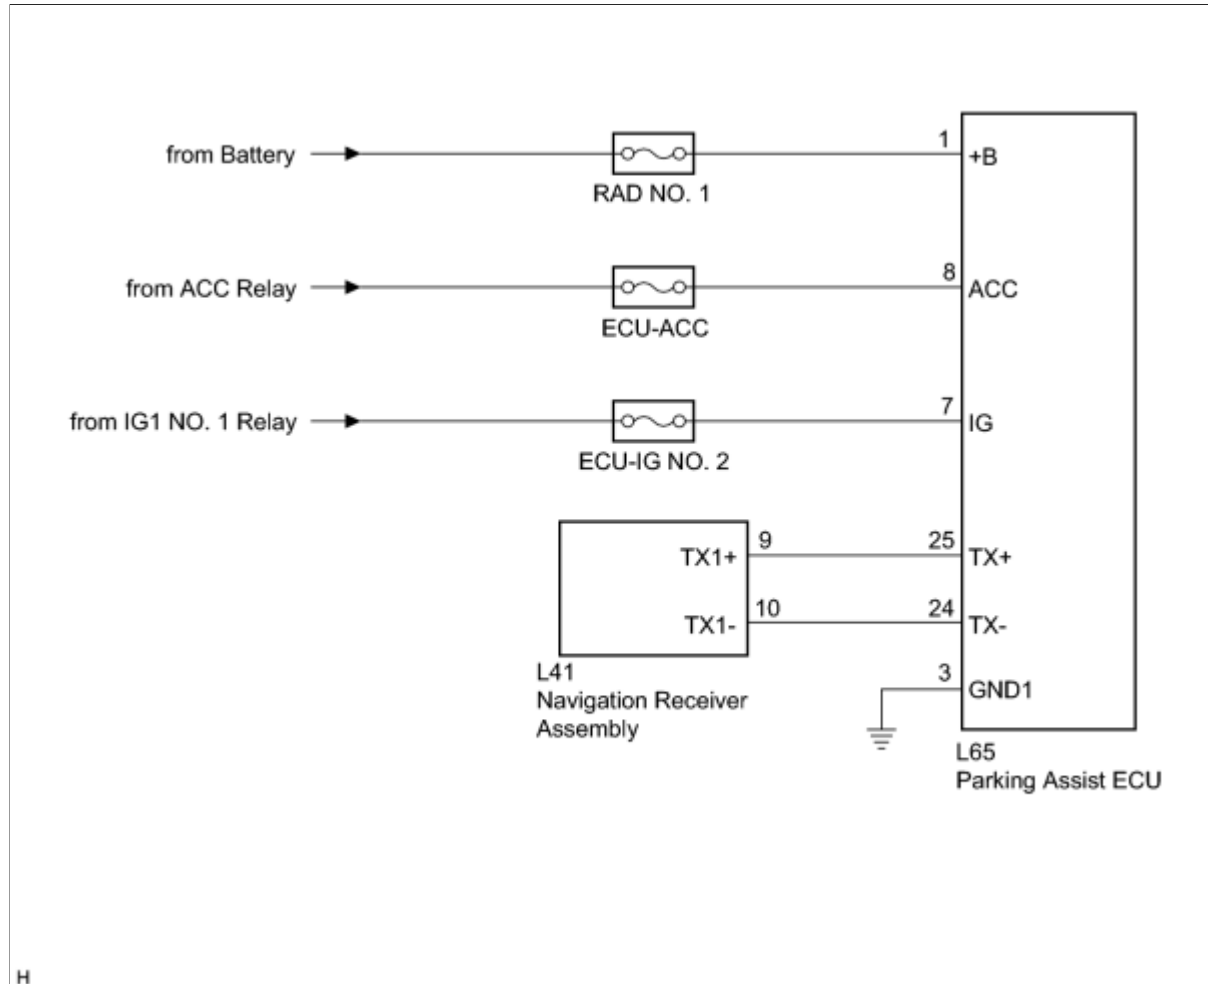

When an AVC-LAN communication error occurs between the navigation receiver assembly and parking assist ECU, this DTC will be stored.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B15D8	Parking assist ECU is not/was not connected while the power switch is turned to on (ACC or IG).	<ul style="list-style-type: none"> • Parking assist ECU power source circuit • AVC-LAN circuit between navigation receiver assembly and parking assist ECU • Parking assist ECU • Navigation receiver assembly

HINT:

The navigation receiver assembly is the master unit.

WIRING DIAGRAM

H

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)
-----------	--

(a) Check for optional components.

(1) Check that optional components (including associated wiring) which generate radio waves are not installed.

Result:

RESULT	PROCEED TO
Optional components (including associated wiring) are installed.	A
Optional components (including associated wiring) are not installed.	B

HINT:

- Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.
- This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.

B **CHECK DTC**

A

2.	REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)
-----------	---

(a) Remove optional components (including associated wiring).

NOTICE:

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

3.	CHECK DTC
-----------	------------------

3. CHECK DTC

- (a) Clear the DTCs INFO.
- (b) Recheck for DTCs and check if the same DTC is output again.
 - OK:
 - No DTCs are output.

NG ▶ **CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU POWER SOURCE)**

OK ▶ **END**

4. CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU POWER SOURCE)

(a) Disconnect the L65 parking assist ECU connector.

- (b) Measure the resistance according to the value(s) in the table below.
- Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L65-3 (GND1) - Body ground	Always	Below 1 Ω

- (c) Measure the voltage according to the value(s) in the table below.
- Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L65-1 (+B) - L65-3 (GND1)	Power switch off	11 to 14 V
L65-7 (IG) - L65-3 (GND1)	Power switch on (IG)	11 to 14 V
L65-8 (ACC) - L65-3 (GND1)	Power switch on (ACC)	11 to 14 V

*1 FRONT VIEW OF WIRE HARNESS CONNECTOR
(to Parking Assist ECU)

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5. CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - NAVIGATION RECEIVER ASSEMBLY)

(a) Disconnect the L65 parking assist ECU connector.

(b) Disconnect the L41 navigation receiver assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L65-25 (TX+) - L41-9 (TX1+)	Always	Below 1 Ω
L65-24 (TX-) - L41-10 (TX1-)	Always	Below 1 Ω
L65-25 (TX+) - Body ground	Always	10 kΩ or higher

L65-25 (1X+) - Body ground	Always	10 kΩ or higher
L65-24 (TX-) - Body ground	Always	10 kΩ or higher

Text in Illustration

*1	Front view of wire harness connector (to Parking Assist ECU)
*2	Front view of wire harness connector (to Navigation Receiver Assembly)

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6.	REPLACE PARKING ASSIST ECU
-----------	-----------------------------------

(a) Replace the parking assist ECU  .

(b) Clear the DTCs  .

(c) Recheck for DTCs and check if the same DTC is output again.

OK:

No DTCs are output.

NG  **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK  **END**

DTC | **B15E1** | **Media Malfunction**

DESCRIPTION

This DTC is stored when the navigation receiver assembly cannot read the media.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B15E1	When one of the conditions below is met: <ul style="list-style-type: none"> • An unsuitable disc is inserted. • The disc cannot be read. • The disc cannot be read because of dirt or scratches. • The disc cannot be read because it is inserted upside down. • The disc cannot be read because a high or low temperature is detected. • Internal power supply abnormality • There are no playable files. • The disc contains unreadable copy-protected content. 	<ul style="list-style-type: none"> • CD • Navigation receiver assembly

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DISC

(a) Check that the disc is not deformed or cracked.

OK:

No deformation or cracks on the disc

NG **CHANGE DISC**

OK

2. DISC CLEANING

(a) Disc cleaning

- (1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

NOTICE:

Do not use a conventional record cleaner or anti-static preservative.

NEXT

3.	REPLACE DISC WITH ANOTHER AND RECHECK
-----------	--

- (a) Replace the disc with another and recheck.

- (b) Clear the DTC .

- (c) Recheck for DTCs and check if the same DTC is output again.

OK:

No DTCs are output.

NG  **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK  **END**

DTC	B15FE	XM Tuner Antenna Disconnected
-----	-------	-------------------------------

DTC	B15FF	XM Tuner Antenna Short
-----	-------	------------------------

DESCRIPTION

These DTCs are stored when a malfunction occurs in the amplifier antenna assembly (satellite radio antenna) which is connected to the stereo component tuner assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B15FE	The satellite radio antenna is not connected.	<ul style="list-style-type: none"> • Amplifier antenna assembly (satellite radio antenna) • Stereo component tuner assembly
B15FF	A short occurs in the satellite radio antenna.	

INSPECTION PROCEDURE

NOTICE:

After replacing the stereo component tuner assembly of vehicles subscribed to pay-type satellite radio broadcasts, registration of the XM radio ID is necessary.

PROCEDURE

1.	CHECK CONNECTION OF ANTENNA CABLE
----	--

(a) Check if the satellite radio antenna cable is securely connected to the stereo component tuner assembly.

OK:

Satellite radio antenna cable is securely connected.

NG  **SECURELY CONNECT SATELLITE RADIO ANTENNA CABLE**

OK

2.	REPLACE AMPLIFIER ANTENNA ASSEMBLY (SATELLITE RADIO ANTENNA)
----	---

(a) Replace the amplifier antenna assembly (satellite radio antenna)  .

(b) Clear the DTCs  .

(c) Recheck for DTCs and check if the same DTC is output again.

OK

OK:

No DTCs are output.

NG  **REPLACE STEREO COMPONENT TUNER ASSEMBLY**

OK  **END**

DTC	U0073	Control Module Communication Bus OFF
-----	-------	--------------------------------------

DESCRIPTION

This DTC is stored when a malfunction occurs in the CAN communication circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
U0073	CAN bus connection error	CAN communication system

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DTC
----	-----------

(a) Clear the DTC .

(b) Recheck for DTCs and check if the same DTC is output again.

OK:

No DTCs are output.

NG  GO TO CAN COMMUNICATION SYSTEM

OK  USE SIMULATION METHOD TO CHECK

Satellite Radio Broadcast cannot be Received

INSPECTION PROCEDURE

NOTICE:

- Some satellite radio broadcasts require payment. A contract must be made between a satellite radio service and the user. If the contract expires, it will not be possible to listen to the broadcast.
- After replacing the stereo component tuner assembly of vehicles subscribed to pay-type satellite radio broadcasts, registration of the XM radio ID is necessary.

PROCEDURE

1.	CHECK SURROUNDINGS
-----------	---------------------------

(a) Check if the vehicle is in an environment where reception is difficult due to something blocking the area above the vehicle.

HINT:

If the area above the vehicle is blocked, such as when in a building or tunnel, reception may not be possible.

OK:

Area above vehicle is not blocked.

Text in Illustration

*1	Example	*2	In a tunnel
----	---------	----	-------------

*3	In a building	*4	Under an overpass
*5	On a forest or tree-lined path	*6	Between tall buildings
*7	Under a cliff or overhang	-	-

NG  **END (MOVE VEHICLE TO LOCATION WHERE RECEPTION IS BETTER)**

OK

2.	CHECK STEREO COMPONENT TUNER ASSEMBLY
-----------	--

(a) Check if CH001 (free broadcast) can be received.

OK:

CH001 can be received.

NG  **CHECK DISPLAY**

OK

3.	CHECK DISPLAY SETTING
-----------	------------------------------

(a) Check the display content.

Result:

RESULT	PROCEED TO
"UPDATING" is displayed	A
"-----" is displayed	B
None of the displays above are shown	C

C  **CHECK DISPLAY**

B  **THERE IS NO SONG/PROGRAM TITLE OR ARTIST NAME/FEATURE ASSOCIATED WITH CHANNEL AT THAT TIME**

A

4.	CHECK CONTRACT CONDITIONS
-----------	----------------------------------

(a) Check if the pay-type contract has been extended, or if the contract period has ended.

OK:

Pay-type contract is valid.

NG ▶ **TO RECEIVE PAY-TYPE BROADCASTS, CONTRACT MUST BE MADE WITH SATELLITE RADIO SERVICE**

OK

5.	PERFORM ACTIVATION REFRESH
-----------	-----------------------------------

(a) Perform activation refresh by referring to the satellite radio service web site (<http://www.xmradio.com/refresh/>).

OK:

Malfunction disappears.

HINT:

The XM radio ID that is necessary to perform activation refresh can be displayed when CH000 is selected on the satellite radio.

NG ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▶ **END**

6.	CHECK DISPLAY
-----------	----------------------

(a) Check the display content.

Result

RESULT	PROCEED TO
"ANTENNA" is displayed	A
"NO SIGNAL" is displayed	B
"LOADING" is displayed	B
"OFF AIR" is displayed	C
After " " is displayed, display automatically switches to CH001	D

After --- is displayed, display automatically switches to CH001	D
None of the displays above are shown	E

- E** ► CONFIRM CURRENTLY SELECTED CHANNEL
- D** ► CHANNEL BROADCAST HAS ENDED (CONFIRM WITH RADIO STATION)
- C** ► CHANNEL IS CURRENTLY NOT BEING BROADCAST. BROADCAST CAN BE LISTENED TO OR VIEWED WHEN IT IS BACK ON AIR (CONFIRM WITH RADIO STATION)
- B** ► END (MOVE VEHICLE TO LOCATION WHERE RECEPTION IS BETTER)

A
▼

7.	CHECK CONNECTION OF ANTENNA CABLE
-----------	--

(a) Check if the satellite radio antenna cable is securely connected to the stereo component tuner assembly.

OK:

Satellite radio antenna cable is securely connected.

- NG** ► SECURELY CONNECT SATELLITE RADIO ANTENNA CABLE
- OK** ► REPLACE AMPLIFIER ANTENNA ASSEMBLY (SATELLITE RADIO ANTENNA)

8.	CONFIRM CURRENTLY SELECTED CHANNEL
-----------	---

(a) Confirm if CH000 is currently selected.

OK:

CH000 is selected.

- NG** ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE
- OK** ► END (CH000 HAS NO SOUND. SELECT ANOTHER CHANNEL.)

Traffic Information is not Displayed

INSPECTION PROCEDURE

NOTICE:

- Traffic information requires payment. An XM nav traffic contract must be made between the satellite radio service and the user. If the contract expires, traffic information will not be available.
- Traffic information does not apply to all roads, only main roads. For the latest information on coverage areas, contact the satellite radio service.
- After replacing the stereo component tuner assembly of vehicles subscribed to pay-type satellite radio broadcasts, registration of the XM radio ID is necessary.

PROCEDURE

1. CHECK DISPLAY

(a) Check the traffic information screen.

Result:

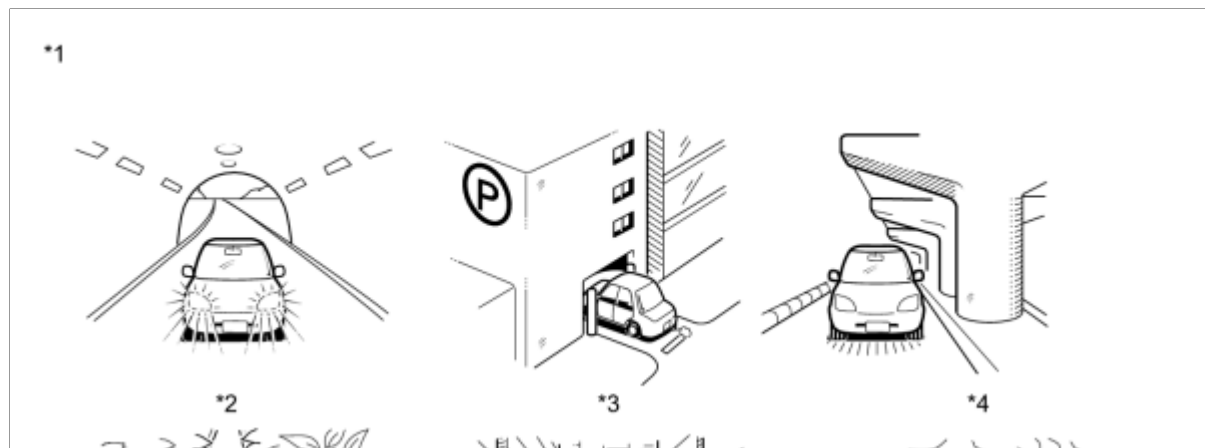

RESULT	PROCEED TO
Traffic information is not displayed	A
Traffic information is displayed but is not updated	B

B ▶ CHECK SURROUNDINGS

A

2. CHECK SURROUNDINGS

(a) Check if the vehicle is in an environment where reception is difficult due to something blocking the area above the vehicle.

HINT:

If the area above the vehicle is blocked, such as when in a building or tunnel, reception may not be possible.

OK:

Area above vehicle is not blocked.

Text in Illustration

*1	Example	*2	In a tunnel
*3	In a building	*4	Under an overpass
*5	On a forest or tree-lined path	*6	Between tall buildings
*7	Under a cliff or overhang	-	-

NG ▶ END (MOVE VEHICLE TO LOCATION WHERE RECEPTION IS BETTER)

OK

3.	CHECK COVERAGE AREA
-----------	----------------------------

(a) Check that your current position is within the traffic information coverage area.

OK:

Vehicle is within coverage area.

NG ▶ MOVE TO WITHIN COVERAGE AREA (FOR LATEST COVERAGE AREA, CONFIRM WITH RADIO STATION)

OK

4. CHECK SETTINGS OF TRAFFIC INFORMATION

H

(a) Press "Show on Map".

H

(b) Check if "Traffic Information" is on.

OK:
"Traffic Information" is on.

NG ▶ TURN "Traffic Information" ON

OK
▼

5. CHECK CONTRACT CONDITIONS

(a) Check if the "XM Nav Traffic Premium Package" contract has been extended, or if the contract period has ended.

OK:
Contract is valid.

NG ▶ TO RECEIVE TRAFFIC INFORMATION, CONTRACT MUST BE MADE WITH SATELLITE RADIO SERVICE

OK
▼

6. PERFORM ACTIVATION REFRESH

(a) Perform activation refresh by referring to the satellite radio service web site (<http://www.xmradio.com/refresh/>).

HINT:

The XM radio ID that is necessary to perform activation refresh can be displayed when CH000 is selected on the satellite radio.

OK:
Malfunction disappears.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ▶ END

7.	CHECK SURROUNDINGS
-----------	---------------------------

(a) Check if the vehicle is in an environment where reception is difficult due to something blocking the area above the vehicle.

HINT:

If the area above the vehicle is blocked, such as when in a building or tunnel, reception may not be possible.

OK:
Area above vehicle is not blocked.

Text in Illustration

*1	Example	*2	In a tunnel
----	---------	----	-------------

*3	In a building	*4	Under an overpass
*5	On a forest or tree-lined path	*6	Between tall buildings
*7	Under a cliff or overhang	-	-

NG  **END (MOVE VEHICLE TO LOCATION WHERE RECEPTION IS BETTER)**

OK

8.	CHECK COVERAGE AREA
-----------	----------------------------

(a) Check if the area on the display that does not match actual traffic conditions is within the XM Nav Traffic coverage area.

Result:

RESULT	PROCEED TO
Area that does not match is within coverage area.	A
Area that does not match is not within coverage area.	B

B  **END (TRAFFIC INFORMATION IS NOT DISPLAYED BECAUSE AREA IS NOT IN COVERAGE AREA)**

A

9.	CHECK CONTRACT CONDITIONS
-----------	----------------------------------

(a) Check if the "XM Nav Traffic Premium Package" contract has been extended, or if the contract period has ended.

OK:

Contract is valid.

NG  **TO RECEIVE TRAFFIC INFORMATION, CONTRACT MUST BE MADE WITH SATELLITE RADIO SERVICE**

OK

10.	PERFORM ACTIVATION REFRESH
------------	-----------------------------------

(a) Perform activation refresh by referring to the satellite radio service web site (<http://www.xmradio.com/refresh/>).

OK:
Malfunction disappears.

NG ▶ CHECK DISPLAY AGAIN

OK ▶ END

11.	CHECK DISPLAY AGAIN
------------	----------------------------

(a) Wait for 2.5 minutes, and check again if the actual traffic conditions match the display.

OK:
Actual traffic conditions match display.

NG ▶ CHECK DISPLAY AGAIN

OK ▶ END (NAVTEQ HAS UPDATED DATA OF TRAFFIC CONDITIONS)

12.	CHECK DISPLAY AGAIN
------------	----------------------------

(a) After 30 minutes have passed, check if all traffic information disappears.

HINT:
After traffic information updates have stopped, the navigation system continues displaying traffic information for a maximum of 30 minutes.

Result:

RESULT	PROCEED TO
All traffic information disappears.	A
Some traffic information is wrong.	B
Actual traffic conditions match display.	C

C ▶ NAVTEQ HAS UPDATED DATA OF TRAFFIC CONDITIONS

B ▶ NAVTEQ MAY NOT BE PROVIDING DATA VERSION OF CERTAIN TRAFFIC INFORMATION (DATA ERROR, PROBLEM, ETC.)

▶ END (MOVE VEHICLE TO LOCATION WHERE RECEPTION IS

A  **END (MOVE VEHICLE TO LOCATION WHERE RECEPTION IS BETTER)**

Noise Occurs

INSPECTION PROCEDURE

PROCEDURE

1. NOISE CONDITION

(a) Check from which direction the noise comes (front left or right, or rear left or right).

(1) Check from which direction the noise comes.

OK:

The location of the noise source can be determined.

NG  CHECK NOISE CONDITIONS

OK

2. CHECK SPEAKERS

(a) Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation or other failures.

Result:

RESULT	PROCEED TO
No malfunction is found	A
A speaker is installed incorrectly	B
Foreign objects are in the speaker	C
A speaker cone paper is broken	D

D  REPLACE SPEAKER

C  REMOVE FOREIGN OBJECT

B  REINSTALL SPEAKER

A

3.	CHECK NOISE CONDITIONS
-----------	-------------------------------

(a) Check the noise condition.

HINT:

The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

CONDITION UNDER WHICH NOISE OCCURS	NOISE SOURCE
Noise increases when the accelerator pedal is depressed, but stops when the hybrid system is stopped.	Generator
Noise occurs during A/C or heater operation.	Blower motor
Noise occurs when the horn switch is pressed and released or when pressed and held.	Horn
Noise occurs synchronously with the turn signal blinking pattern.	Flasher
Noise occurs during window washer operation.	Washer
Noise occurs during wiper operation.	Wiper
Noise occurs when the brake pedal is depressed.	Stop light switch
Others	Static electricity

HINT:

- In the left column of the table, find the situation that matches the customer's complaint. Then, in the right column, find the part that is causing the noise. Check the respective noise filter.
- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Troubleshoot noises in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.

OK:

The noise source cannot be determined.

NG **REPAIR OR REPLACE NOISE SOURCE**

OK **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

Pressing Power Switch does not Turn on System

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK CABIN
-----------	--------------------

(a) Check that conditions in the cabin are not likely to cause condensation.

HINT:

This problem occurs if the cabin is humid and the temperature rapidly changes. This condition may produce condensation, resulting in a short circuit.

OK:

Condensation is not likely to occur.

NG ▶ **DRY CABIN AND RECHECK CONDITIONS**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE**

No Sound can be Heard from Speakers

INSPECTION PROCEDURE

PROCEDURE

1. CHECK AUDIO SETTINGS

*1

(a) Enter the sound quality adjustment screen.

*2

(b) Set volume, fader and balance to the initial values and check that sound is normal.

OK:

Audio system returns to normal.

HINT:

Sound quality adjustment measures vary according to the type of the amplifier.

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ▶ END

CD cannot be Ejected

INSPECTION PROCEDURE

PROCEDURE

1. CHECK OPERATION

(a) Press the disc eject switch of the navigation receiver assembly for 5 seconds or more and check that the CD is ejected.

OK:

CD is ejected.

NG  REPLACE NAVIGATION RECEIVER ASSEMBLY

OK

2. REPLACE CD WITH ANOTHER AND RECHECK

(a) Insert another CD and check if it is ejected.

OK:

CD is ejected.

NG  REPLACE NAVIGATION RECEIVER ASSEMBLY

OK  CD WAS FAULTY

CD cannot be Inserted / Played or CD is Ejected Right After Insertion

INSPECTION PROCEDURE

PROCEDURE

1. CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, deteriorated or otherwise defective.

OK:

CD is normal.

HINT:

- Translucent or uniquely-shaped CDs cannot be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG  **CD IS FAULTY**

OK

2. CHECK THAT CD IS INSERTED PROPERLY

(a) Check whether or not the CD is inserted upside down.

OK:

CD is properly inserted.

NG  **SET CD PROPERLY**

OK

3. CLEAN CD AND RECHECK

(a) Disc cleaning

P

(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

OK:
Malfunction disappears.

NOTICE:

Do not use a conventional record cleaner or anti-static preservative.

NG ► **CHECK OPERATION WITH ANOTHER CD**

OK ► **END (CD WAS DIRTY)**

4.	CHECK OPERATION WITH ANOTHER CD
-----------	--

(a) Check using another CD.

(1) Check if the problem recurs using another CD.

OK:
The problem does not occur.

NG ► **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK ► **CD WAS FAULTY**

CD Sound Skips

INSPECTION PROCEDURE**PROCEDURE****1. CHECK CD**

(a) Check that the CD is not deformed or cracked.

OK:

No deformation or cracks on the CD

NG ▶ CD IS FAULTY

OK

**2. CHECK CD**

(a) Check the CD.

OK:

The CD is clean.

NOTICE:

Do not use a conventional record cleaner or anti-static preservative.

HINT:

If dirt is on the CD surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

NG ▶ CLEAN CD

OK

3. CHECK OPERATION WITH ANOTHER CD

(a) Check using another CD.

(1) Check if the problem recurs using another CD.

OK:

The problem does not occur.

NG ► **CHECK NAVIGATION RECEIVER ASSEMBLY**

OK ► **CD WAS FAULTY**

4. CHECK NAVIGATION RECEIVER ASSEMBLY

(a) Check the navigation receiver assembly installation condition.

(1) Check that the navigation receiver assembly is properly installed.

OK:

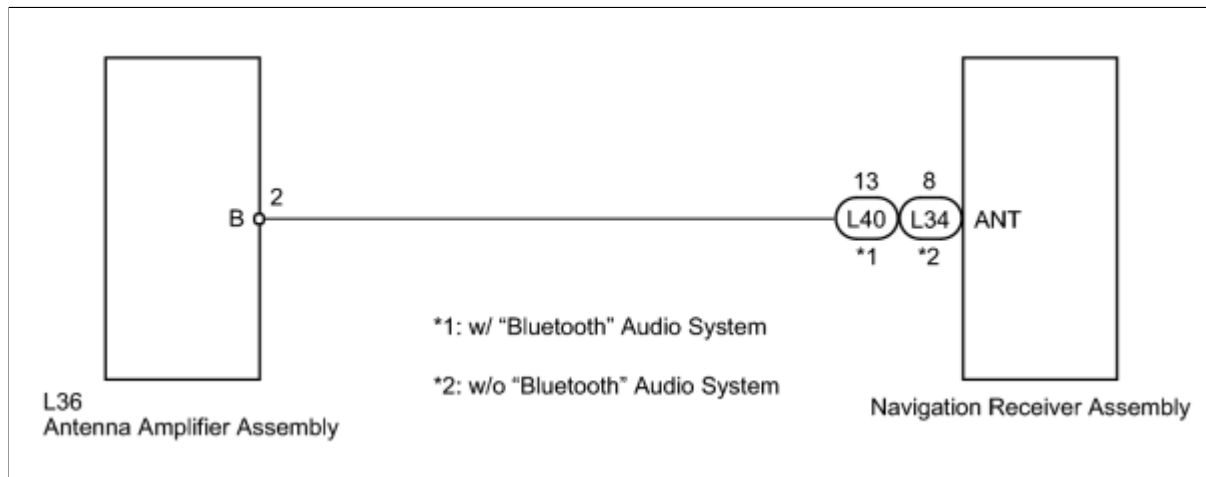

The navigation receiver assembly is properly installed.

NG ► **REINSTALL NAVIGATION RECEIVER ASSEMBLY
PROPERLY**

OK ► **REPLACE NAVIGATION RECEIVER ASSEMBLY**

Radio Broadcast cannot be Received or Poor Reception

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK NAVIGATION RECEIVER ASSEMBLY
-----------	---

(a) Check the radio automatic station search function.

(1) Check the radio automatic station search function by activating it.

Result:

RESULT	PROCEED TO
Automatic station search function does not stop	A
Automatic station search function stops on a station	B

B **REPLACE NAVIGATION RECEIVER ASSEMBLY**

A

2.	CHECK OPTIONAL COMPONENTS
-----------	----------------------------------

(a) Check optional components (sun-shade film, telephone antenna, etc.).

- (1) Check if any optional components that may decrease reception capacity, such as sunshade film or a telephone antenna, are installed.

Result:

RESULT	PROCEED TO
Optional components are installed	A
Optional components are not installed	B

NOTICE:

Do not remove optional components without the permission of the customer.

B  **CHECK RADIO ANTENNA**

A  **REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)**

3.	CHECK RADIO ANTENNA
-----------	----------------------------

- (a) Preparation for check

- (1) Remove the roof antenna pole sub-assembly from the amplifier antenna assembly.

- (b) Check for noise

- (1) Turn the power switch on (ACC) with the navigation receiver assembly connector connected.
- (2) Turn the radio on and tune into AM mode.
- (3) Place a screwdriver, thin wire, or other metal object on the amplifier antenna threaded installation portion for the roof antenna pole sub-assembly and check that noise can be heard from the speakers.

Result:

RESULT	PROCEED TO
Noise does not occur	A
Noise occurs	B

B  **REPLACE NAVIGATION RECEIVER ASSEMBLY**

A

4.	CHECK NAVIGATION RECEIVER ASSEMBLY
-----------	---

(a) Preparation for check

- (1) Remove the antenna plug from the navigation receiver assembly.

(b) Check for noise

- (1) Turn the power switch on (ACC) with the navigation receiver assembly connector connected.
- (2) Turn the radio on and tune into AM mode.
- (3) Place a screwdriver, thin wire, or other metal object on the navigation receiver assembly antenna jack and check that noise can be heard from the speaker.

OK:

Noise occurs.

NG ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

OK

5.	CHECK HARNESS AND CONNECTOR (NAVIGATION RECEIVER ASSEMBLY - ANTENNA AMPLIFIER ASSEMBLY)
----	--

- (a) Disconnect the L40 navigation receiver assembly connector (w/ "Bluetooth" Audio System).

- (b) Disconnect the L34 navigation receiver assembly connector (w/o

"Bluetooth" Audio System).

H

*3

(c) Disconnect the L36 antenna amplifier assembly connector.

H

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L40-13 (ANT) - L36-2 (B)*4	Always	Below 1 Ω
L40-13 (ANT) - Body ground*4	Always	10 k Ω or higher
L34-8 (ANT) - L36-2 (B)*5	Always	Below 1 Ω
L34-8 (ANT) - Body ground*5	Always	10 k Ω or higher

Text in Illustration

*5: w/o "Bluetooth" Audio System

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6. INSPECT NAVIGATION RECEIVER ASSEMBLY

(a) Reconnect the L40*2 or L34*3 navigation receiver assembly connector.

(b) Disconnect the L36 antenna amplifier assembly connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L36-2 (B) - Body ground	Power switch on (IG) Radio switch on	8 V or higher

Text in Illustration

*1	Front view of wire harness connector (to Antenna Amplifier Assembly)
----	---

*2: w/ "Bluetooth" Audio System

*3: w/o "Bluetooth" Audio System

NG **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK

7. CHECK ANTENNA CORD

(a) Remove the antenna plug of the navigation receiver assembly and antenna.

(b) Measure the resistance between the antenna and navigation receiver assembly to check for an open circuit in the antenna cord.

Standard Resistance:
Below 1 Ω

- (c) Measure the resistance between the antenna cord and body ground to check for a short circuit in the antenna cord.

Standard Resistance:
10 k Ω or higher

NG  **REPLACE ANTENNA CORD**

OK

8.	REPLACE AMPLIFIER ANTENNA ASSEMBLY
-----------	---

- (a) Replace the amplifier antenna assembly and check if radio broadcasts can be received normally  .

OK:
Radio broadcasts can be received.

NG  **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK  **NORMAL OPERATION**

Illumination for Panel Switch does not Come on with Tail Switch ON

INSPECTION PROCEDURE

PROCEDURE

1. CHECK VEHICLE SIGNAL (OPERATION CHECK)

(a) Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check  .

(b) Check that the display changes between ON and OFF according to the light control switch operation.

OK:

LIGHT CONTROL SWITCH	DISPLAY
tail or on	ON
off	OFF

H

HINT:

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

Display does not Dim when Light Control Switch is Turned ON

INSPECTION PROCEDURE

PROCEDURE

1. CHECK IMAGE QUALITY SETTING

(a) Enter the display quality adjustment screen.

(b) Turn the light control switch to the tail position.

(c) Check if "Day Mode" on the display quality adjustment screen is on.

Result:

RESULT	PROCEED TO
"Day Mode" is on	A
"Day Mode" is off	B

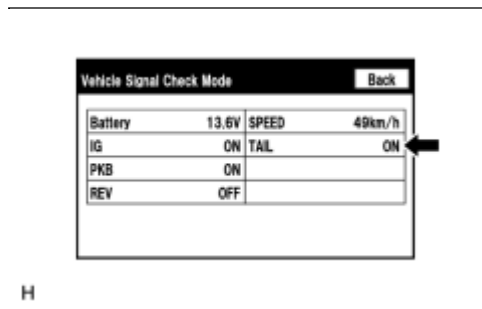

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

B ► CHECK VEHICLE SIGNAL (OPERATION CHECK)

A ► TURN "Day Mode" SETTING OFF

2. CHECK VEHICLE SIGNAL (OPERATION CHECK)

(a) Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check INFO.

(b) Check that the display changes between ON and OFF according to the light control switch operation.

OK:

LIGHT CONTROL SWITCH	DISPLAY
tail or on	ON
off	OFF

HINT:

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

Panel Switches do not Function

INSPECTION PROCEDURE

PROCEDURE

1. CHECK PANEL SWITCH

(a) Check for foreign matter around the switches that might prevent operation.

OK:

No foreign matter is found.

NG ▶ REMOVE ANY FOREIGN MATTER FOUND

OK

2. CHECK PANEL SWITCH (OPERATION CHECK)

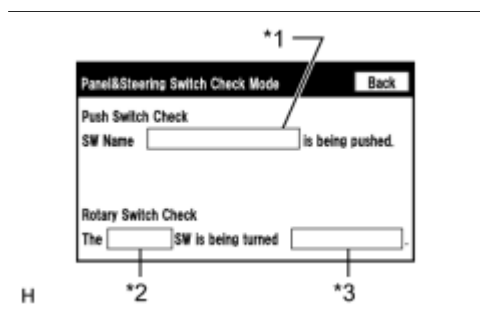

(a) Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check .

(b) Operate the abnormal switch and check if the switch name and status are correctly displayed.

OK:

The switch name and status are correctly displayed as operated.

**RECEIVER
ASSEMBLY**

Touch Panel Switch does not Function

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DISPLAY (FOREIGN MATTER)

(a) Check if there is any foreign matter caught between the display and exterior frame of the display.

OK:

No foreign matter is caught between the display and exterior frame of the display.

HINT:

If there is foreign matter between the display and exterior frame of the display, the touch panel will remain pressed, preventing touch switch operation.

NG  REMOVE FOREIGN MATTER

OK

2. CHECK TOUCH PANEL

(a) Check for foreign matter on the display.

OK:

The display is clean.

NG  CLEAN DISPLAY AND RECHECK TOUCH PANEL

OK

3. CHECK TOUCH SWITCH (OPERATION CHECK)

(a) Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check .

(b) Touch the display in the area where the switch malfunction

occurs.

OK:

A "+" mark appears at the touched position.

NG ▶ PROCEED TO NEXT

RECEIVER
ASSEMBLY

Display Panel does not Open, Tilt or Tilts Improperly

INSPECTION PROCEDURE

PROCEDURE

1. CHECK NAVIGATION RECEIVER ASSEMBLY

(a) Check for foreign matter or obstructions caught in the moving parts of the panel.

OK:

No obstruction or foreign matter is found.

Text in Illustration

*1	Example
----	---------

NG ▶ REMOVE ANY OBSTRUCTION OR FOREIGN MATTER

OK

2. CHECK OPERATION

(a) Check if the navigation and audio systems function properly.

OK:

Navigation and audio systems function properly.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

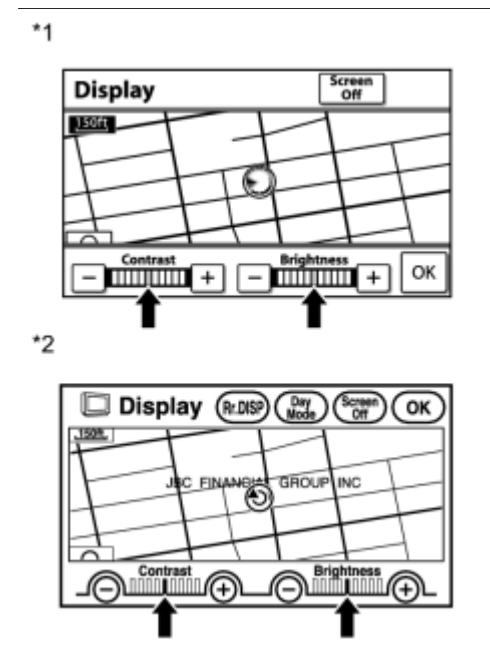

Last Modified: 7-21-2009	5.6 J	From: 200904
Model Year: 2010	Model: Prius	Doc ID: RM000000POJ056X
Title: NAVIGATION / MULTI INFO DISPLAY: NAVIGATION SYSTEM: Screen Flicker or Color Distortion (2010 Prius)		

[Screen Flicker or Color Distortion](#)

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DISPLAY SETTING
-----------	------------------------------

(a) Enter the display quality adjustment screen.

(b) Reset display settings (contrast, brightness) and check that the screen appears normal.

OK:

The display returns to normal.

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

NG ► CHECK CABIN

OK ► END

2. CHECK CABIN

(a) Check that the cabin temperature is higher than -20°C (-4°F).

OK:

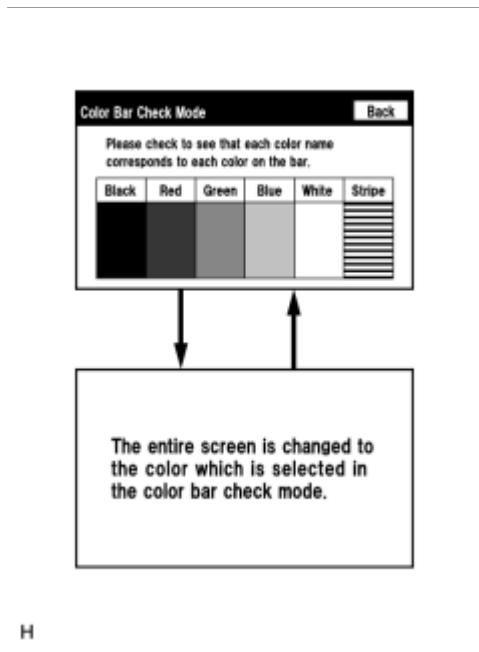

The cabin temperature is higher than -20°C (-4°F).

NG ▶ HEAT CABIN AND RECHECK TEMPERATURE

OK

3. CHECK COLOR BAR (OPERATION CHECK)

(a) Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check  .

(b) Check that the color bars match the displayed names.

OK:

Color bars match the displayed names.

NG ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

OK ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

Poor Sound Quality in All Modes (Low Volume)

INSPECTION PROCEDURE

PROCEDURE

1. CHECK AUDIO SETTINGS

(a) Enter the sound quality adjustment screen.

(b) Set "BASS", "MID" and "TREB" to the initial values and check that sound is normal.

OK:

Malfunction disappears.

HINT:

Sound quality adjustment measures vary according to the type of the amplifier.

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

NG ▶ COMPARE WITH ANOTHER VEHICLE OF SAME MODEL

OK ▶ END

2. COMPARE WITH ANOTHER VEHICLE OF SAME MODEL

(a) Compare with another vehicle of the same model.

(1) Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.

OK:

No difference is found.

NG  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE**

Vehicle Position Mark Deviates Greatly

INSPECTION PROCEDURE

PROCEDURE

1. CHECK GPS MARK

(a) Check that the GPS mark is displayed.

OK:
GPS mark is displayed.

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

NG ▶ GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE

OK
▼

2. CHECK VEHICLE SENSOR (OPERATION CHECK)

(a) Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check **INFO**.

H

(b) While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.

OK:

The readings are almost equal.

NG ▶ CHECK DTC OUTPUT

OK

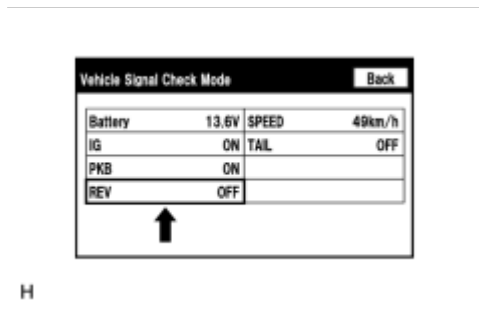

3. CHECK VEHICLE SIGNAL (OPERATION CHECK)

(a) Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check **INFO**.

(b) Check that the display changes between ON and OFF according to the shift lever operation.

OK:

H

SHIFT LEVER POSITION	DISPLAY
Except R	OFF
R	ON

HINT:

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG ▶ GO TO "REVERSE SIGNAL DOES NOT CHANGE IN VEHICLE SIGNAL CHECK MODE" IN PROBLEM SYMPTOMS TABLE

OK ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

Cursor or Map Rotates when Vehicle Stopped**INSPECTION PROCEDURE****PROCEDURE****1. CHECK CONDITION**

(a) Check with the customer if the vehicle has been turned by a turntable.

OK:

Vehicle has not been turned by turntable.

HINT:

If the vehicle is turned on a turntable with the power switch on (IG), the system may store the angular velocity. As a result, the vehicle position cursor may deviate.

NG ▶ TURN POWER SWITCH TO ON (IG) WHEN VEHICLE IS COMPLETELY STOPPED

OK ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

Vehicle Position Mark is not Updated

INSPECTION PROCEDURE

PROCEDURE

1. CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.

OK:

No deformations or cracks on the map disc

NG ▶ REPLACE MAP DISC

OK

2. CHECK NAVIGATION DISPLAY

(a) Check if touch scrolling can be performed on the map display.

OK:

Touch scrolling can be performed.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK

3. CHECK VEHICLE SENSOR (OPERATION CHECK)

H

(a) Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check **INFO** .

(b) While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.

OK:

The readings are almost equal.

NG ▶ CHECK DTC OUTPUT

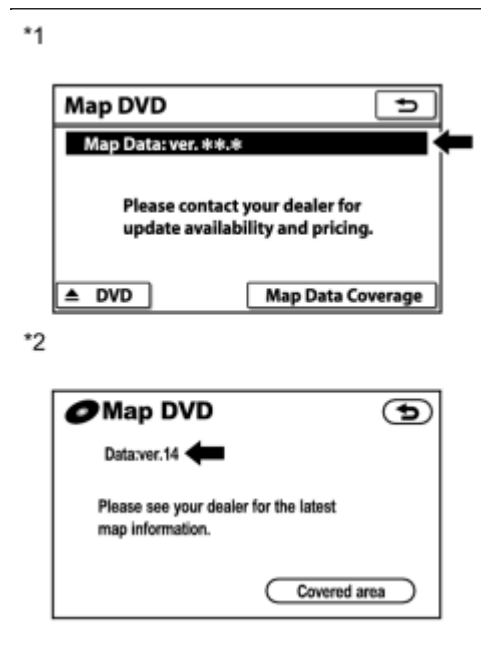

OK ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

Current Position Display does not Appear

INSPECTION PROCEDURE
PROCEDURE

1. CHECK NAVIGATION RECEIVER ASSEMBLY

(a) Enter the map data information screen.

(b) Check if a disc is inserted into the map disc slot.

(1) Check if the map data version is displayed.

OK:

The map data version is displayed.

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

NG **INSERT MAP DISC IN MAP DISC SLOT**

OK

2. CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.

OK:

No deformations or cracks on the map disc

NG ▶ REPLACE MAP DISC

OK ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE

GPS Mark is not Displayed

INSPECTION PROCEDURE

PROCEDURE

1. CHECK CABIN

(a) Check the cabin for any object that might interrupt radio reception on the instrument panel. If such an object exists, remove it and check if the GPS mark reappears.

HINT:

The GPS uses extremely faint radio waves originating from satellites. If the signal is interrupted by obstructions or other radio waves, the GPS may not be able to properly receive the signal.

OK:

The GPS mark appears.

NG ► CHECK SURROUNDINGS

OK ► NORMAL OPERATION

2. CHECK SURROUNDINGS

(a) Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.

HINT:

The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint your vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction and time. For examples, see the following illustration.

OK:

The GPS mark is displayed.

Text in Illustration

*1	Example	*2	In a tunnel
*3	In a building	*4	Under an overpass
*5	On a forest or tree-lined path	*6	Between tall buildings
*7	Under a cliff or overhang	-	-

NG ► CHECK GPS INFORMATION (OPERATION CHECK)

OK ► SYSTEM RETURNS TO NORMAL

3. CHECK GPS INFORMATION (OPERATION CHECK)

(a) Enter the "GPS Information" screen. Refer to Check GPS & Vehicle Sensors in Operation Check  .

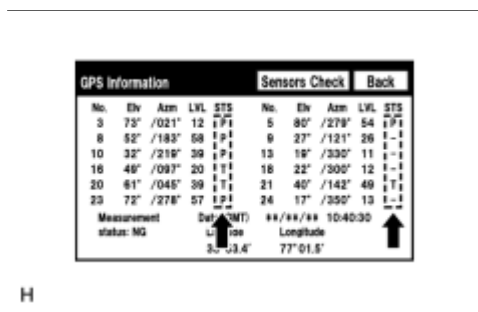

(b) Check how many of the following codes appear in the "STS" column.

HINT:

T or P appears.

OK:

At least 3 codes appear.

NG ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ► REPLACE NAVIGATION RECEIVER ASSEMBLY

Voice Guidance does not Function

INSPECTION PROCEDURE

PROCEDURE

1. CHECK NAVIGATION SETTING

(a) Display the "Voice Settings" or "Volume" screen.

(b) Check that "Off" or "OFF" is not selected.

OK:

"Off" or "OFF" is not selected.

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

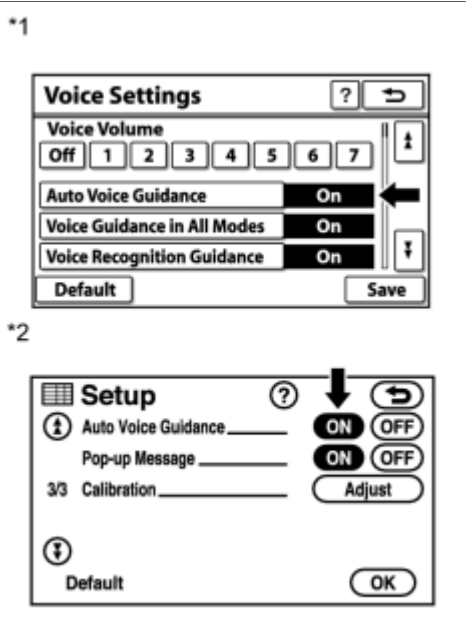

NG ▶ SELECT VOICE VOLUME SETTING OTHER THAN "Off" OR "OFF"

OK

2. CHECK NAVIGATION SETTING

(a) Display the "Voice Settings" or "Setup" screen.

(b) Check that "Auto Voice Guidance" is not "Off" or "OFF".

OK:

"Auto Voice Guidance" is not "Off" or "OFF".

Text in Illustration

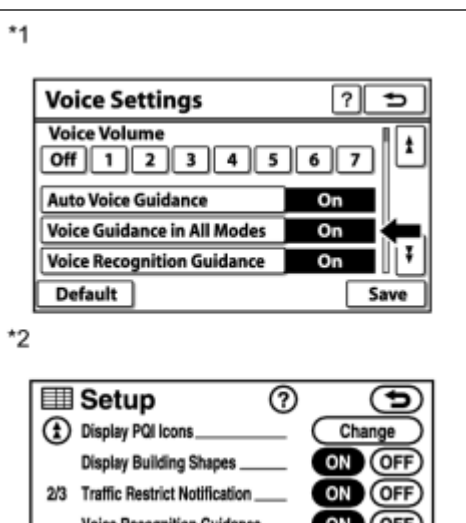

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

NG TURN AUTO VOICE GUIDANCE "On" OR "ON"

OK

3. CHECK NAVIGATION SETTING

(a) Display the "Voice Settings" or "Setup" screen.

(b) Check that "Voice Guidance in All Modes" is not "Off" or "OFF".

OK:

"Voice Guidance in All Modes" is not "Off" or "OFF".

Text in Illustration

*1	Example (w/ "Bluetooth" Audio System)
*2	Example (w/o "Bluetooth" Audio System)

NG ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

OK

4.	CHECK MAP DISC
-----------	-----------------------

(a) Check that the map disc is not deformed or cracked.

OK:

No deformations or cracks on the map disc

NG ▶ REPLACE MAP DISC

OK

5.	CHECK AUDIO FUNCTION
-----------	-----------------------------

(a) Check that audio sound can be heard from the driver side speaker.

OK:

Audio sound can be heard.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

INSPECTION PROCEDURE**PROCEDURE****1. CHECK MAP DISC**

(a) Check that the map disc is not deformed or cracked.

OK:

No deformations or cracks on the map disc

NG ▶ REPLACE MAP DISC

OK

**2. CHECK MAP DISC**

(a) Check for dirt on the map disc surface.

OK:

No dirt is on the map disc surface.

NOTICE:

Do not use a conventional record cleaner or anti-static preservative.

HINT:

If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

NG ▶ CLEAN MAP DISC

OK

3. CHECK NAVIGATION DISPLAY

(a) Check that displays other than the navigation display are complete.

OK:

No other incomplete displays are found.

NG  REPLACE NAVIGATION RECEIVER ASSEMBLY

OK  PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE

Route cannot be Calculated

INSPECTION PROCEDURE

PROCEDURE

1. CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.

OK:

No deformations or cracks on the map disc

NG ▶ REPLACE MAP DISC

OK

2. SET DESTINATION

(a) Set another destination and check if the system can calculate the route correctly.

OK:

Route can be correctly calculated.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE

OK ▶ NORMAL OPERATION

INSPECTION PROCEDURE

PROCEDURE

1. CHECK CONDITION

(a) Check if the system voice recognition level is low when recognizing a particular voice.

Result:

RESULT	PROCEED TO
System voice recognition level is low with any voice.	A
System voice recognition level is low only for a particular voice.	B

HINT:

System voice recognition level varies depending on voice and pronunciation. This is not a malfunction.

B ► END

A
▼

2. CHECK MAP DISC

(a) Check that the map disc is not deformed or cracked.

OK:

No deformations or cracks on the map disc

NG ► REPLACE MAP DISC

OK
▼

3. CHECK MAP DISC

P

(a) Check for dirt on the map disc surface.

OK:
No dirt is on the map disc surface.

NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

HINT:
If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

NG ▶ CLEAN MAP DISC

OK

4. CHECK MICROPHONE AND VOICE RECOGNITION (OPERATION CHECK)

H

(a) Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check **INFO**.

(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.

HINT:

- Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.
- Voice can be recorded up to 5 seconds.

(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

OK:
All check results are normal.

Sound of Portable Player cannot be Heard from Speakers or Sound is Low

INSPECTION PROCEDURE

PROCEDURE

1. CHECK PORTABLE PLAYER SETTINGS

(a) Check the portable player settings.

(1) Check that the volume is not set to "0".

(2) Check that the mute is off.

(b) Check that the sound of the portable player can be heard from the speakers.

OK:

Sound of the portable player can be heard from the speakers.

NG ► **CHECK AUDIO SETTINGS**

OK ► **END**

2. CHECK AUDIO SETTINGS

(a) Check the audio settings.

(1) Check that the volume is not set to "0".

(b) Check that the sound of the portable player can be heard from the speakers.

OK:

Sound of the portable player can be heard from the speakers.

NG ► **CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

OK ► **END**

3. CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

(a) Check that the sound of the portable player can be heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

OK:

Sound of the portable player can be heard from the speakers.

NG ► **MALEFUNCTION IN PORTABLE PLAYER**

▶ MALFUNCTION IN PORTABLE PLAYER

OK ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE

Does not Play even after Bluetooth Audio Mode is Selected

INSPECTION PROCEDURE

HINT:

Even if the portable player can play audio content, it may not be able to play via the in-vehicle device. This does not necessarily indicate a malfunction of the in-vehicle device.

PROCEDURE

1. CHECK OPERATION

(a) Check if the portable player operates normally.

OK:

The portable player operates normally.

NG ▶ MALFUNCTION IN PORTABLE PLAYER

OK

2. CHECK AUDIO SETTINGS

H

(a) Enter the "Sound Settings" screen by pressing the "Sound" switch on the audio display.

(b) Set volume, fader and balance to the initial values and check that sound is normal.

OK:

Audio system returns to normal.

HINT:

Sound quality adjustment measures vary according to the type of the amplifier.

NG ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

OK

OK

3.	CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL
-----------	---

(a) Check if the "Bluetooth" audio player plays normally on another "Bluetooth" audio compatible vehicle of the same model.

OK:

"Bluetooth" audio plays normally.

NG  **MALFUNCTION IN PORTABLE PLAYER**

OK  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

Noise Occurs or Sound Skips when Portable Player Plays**INSPECTION PROCEDURE****HINT:**

- Perform this check with the portable player volume set at an appropriate level.
- Make sure there are no obstructions between the portable player and navigation receiver assembly that may block signals, and that the portable player and radio receiver assembly are not excessively far apart.
- Make sure devices other than the navigation receiver assembly are not connected to the portable player.
- Make sure there is no interference from a wireless LAN, etc.

PROCEDURE**1. CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

- (a) Check that the same problem does not occur in the sound heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

OK:

The same problem does not occur in the sound heard from the speakers.

NG  **MALFUNCTION IN PORTABLE PLAYER****OK****2. REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES**

- (a) Remove additional devices which use radio waves.
- (b) Play the portable player and check that the same problem does not occur in the sound heard from the speakers.

OK:

The same problem does not occur in the sound heard from the speakers.

NG  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE****OK**  **END**

Portable Player cannot be Connected Manually/Automatically

INSPECTION PROCEDURE

HINT:

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the navigation receiver assembly, even if the portable audio player itself can play files .

PROCEDURE

1. CHECK CONNECTED DEVICE SETTINGS

(a) Display the "Select Portable Player" screen and check if the portable player is registered as a connected device.

NOTICE:

If a cellular phone is used as a portable player, it must be registered independently from the registration that is performed for the hands-free system.

HINT:

Only 2 portable players can be registered.

Result:

H

RESULT	PROCEED TO
The portable player is registered as a connected device.	A
The portable player is not registered as a connected device.	B

B REGISTER PORTABLE PLAYER AS CONNECTED DEVICE

A

2. CHECK SYMPTOMS

(a) Check the connection condition between the portable player and navigation receiver assembly.

The portable player cannot be connected under any of the following conditions:

- The portable player is connected to another device.
- The portable player is connected to the navigation receiver assembly using the hands-free function.
- The navigation receiver assembly has cleared the portable player registration.

- The portable player is off.

Result:

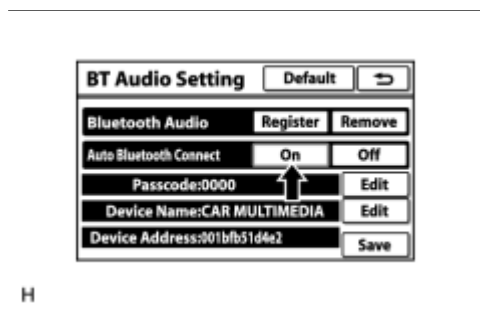

RESULT	PROCEED TO
The portable player cannot be connected manually.	A
The portable player cannot connect automatically.	B

B ▶ CHECK PORTABLE PLAYER STATUS

A
▼

3. CHECK AUTOMATIC CONNECTION SETTINGS

(a) Display the "BT Audio Setting" screen and check automatic connection settings of the "Bluetooth" audio.

(1) Check if "On" is displayed for "Auto Bluetooth Connect" on the "BT Audio Setting" screen.

OK:

"On" is displayed for "Auto Bluetooth Connect".

NG ▶ CHANGE AUTO BLUETOOTH CONNECT TO "On"

OK
▼

4. CHECK PORTABLE PLAYER STATUS

(a) Check the status of the portable player.

(1) Check that the portable player is in standby mode.

(2) Check that the portable player is not connected to another device (headphones etc.).

OK:

The portable player is in standby mode and not connected to another device (headphones etc.).

NG ▶ CHANGE PORTABLE PLAYER TO STANDBY MODE AND

NG ▶ **DISCONNECT OTHER DEVICES (HEADPHONES etc.)**

OK

5.	CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL
-----------	---

- (a) Check if the portable player can be connected manually/automatically on another "Bluetooth" audio compatible vehicle of the same model.

OK:

The portable player can be connected manually/automatically.

NG ▶ **PORTABLE PLAYER IS NOT COMPATIBLE**

OK

6.	REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES
-----------	--

- (a) Remove additional devices which use radio waves.
- (b) Check if the portable player can be connected manually/automatically.

OK:

The portable player can be connected manually/automatically.

NG ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE**

OK ▶ **END**

Registered Device cannot be Deleted

INSPECTION PROCEDURE

PROCEDURE

1. DELETE OPERATION

(a) Check if a registered portable player can be deleted normally.

OK:

Registered portable player can be deleted normally.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE

OK ▶ END

Portable Player cannot be Registered

INSPECTION PROCEDURE

HINT:

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the navigation receiver assembly, even if the portable audio player itself can play files .

PROCEDURE

1. CHECK THAT PORTABLE PLAYER IS "Bluetooth" AUDIO COMPATIBLE

(a) Check if the portable player is "Bluetooth" audio compatible.

Result:

RESULT	PROCEED TO
The portable player is "Bluetooth" audio compatible.	A
The portable player is not "Bluetooth" audio compatible.	B

B  USE A "Bluetooth" AUDIO COMPATIBLE PORTABLE PLAYER

A

2. CHECK CONNECTION PROCEDURE OF CONNECTED DEVICE

(a) Referring to the owner's manual, correctly register the portable player.

(b) Check that the portable player has been registered as a connected device.

The portable player cannot be registered under any of the following conditions:

- The A2DP (Advanced Audio Distribution Profile) is not used when registering a cellular phone.
- A different portable player registration remains in the navigation receiver assembly.
- A different navigation receiver assembly registration remains in the portable player.
- The portable player is off.

OK:

The portable player has been registered as a connected device.

NG  CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

OK  **END**

3.	CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL
-----------	---

(a) Check if the portable player can be registered normally on another "Bluetooth" audio compatible vehicle of the same model.

OK:

The portable player can be registered.

NG  **MALFUNCTION IN PORTABLE PLAYER****OK**

4.	REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES
-----------	--

(a) Remove additional devices which use radio waves.

(b) Check that the portable player can be registered as a connected device.

OK:

The portable player can be registered.

NG  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE****OK**  **END**

Black Screen

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DISPLAY SETTING

(a) Check that the display is not in "Screen OFF" mode.

OK:

The display setting is not in "Screen OFF" mode.

NG ► CHANGE SCREEN TO "SCREEN ON" MODE

OK

2. CHECK IMAGE QUALITY SETTING

(a) Check that the screen color quality can be set.

OK:

Setting is possible.

NG ► CHECK CABIN

OK ► PRESS PANEL SWITCH "DISPLAY" AND SET SCREEN COLOR QUALITY TO NORMAL

3. CHECK CABIN

(a) Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

HINT:

- A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.
- The appropriate cabin temperature is 20 to 30°C (68 to 86°F).

OK:

Condensation is not likely being produced and the temperature is not high or extremely low.

NG ► SET CABIN TO APPROPRIATE TEMPERATURE

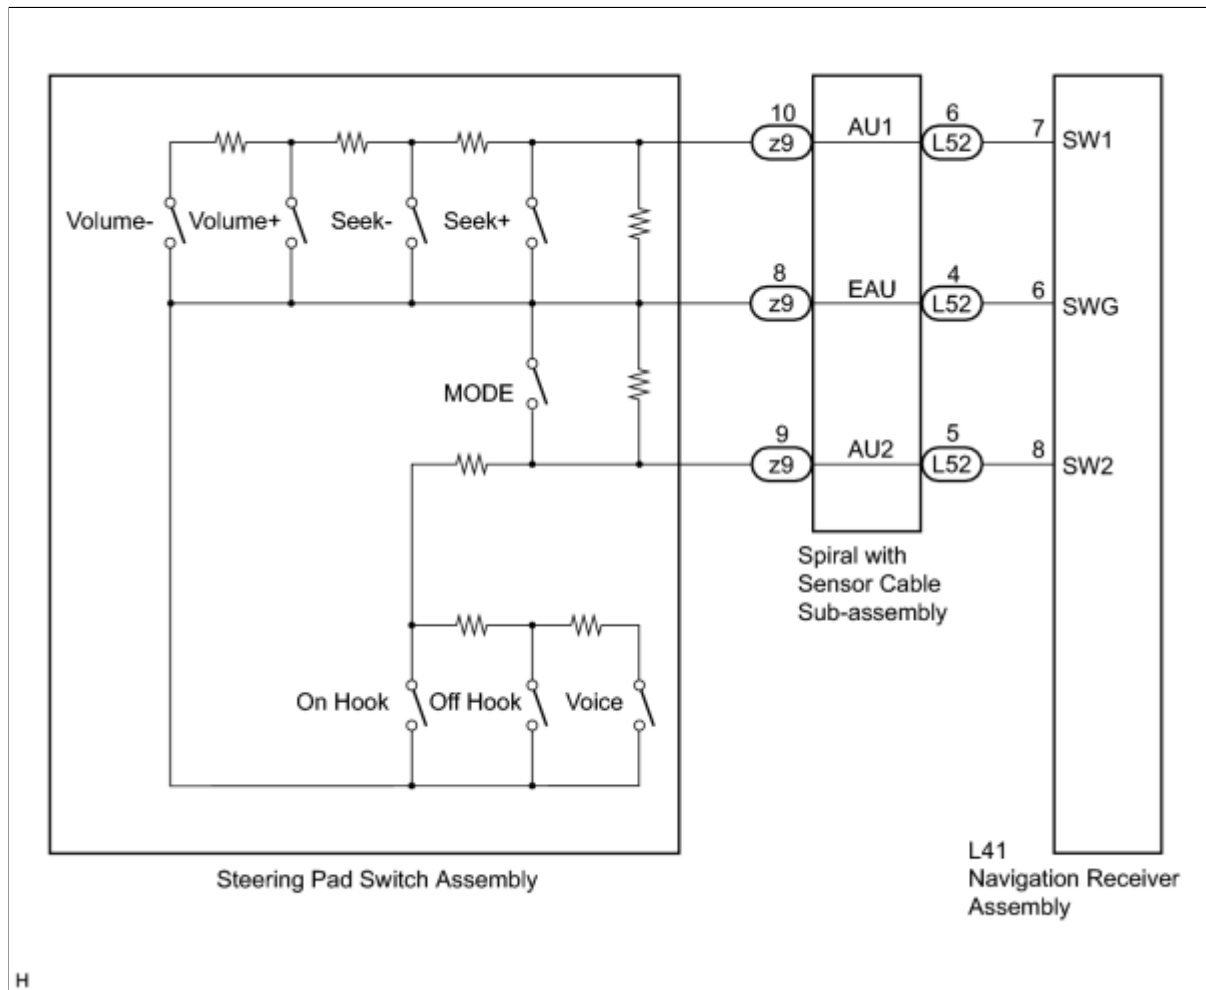

OK  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE**

Steering Pad Switch Circuit**DESCRIPTION**

This circuit sends an operation signal from the steering pad switch assembly to the navigation receiver assembly.

If there is an open in the circuit, the navigation system cannot be operated using the steering pad switch assembly.

If there is a short in the circuit, the resulting condition is the same as to if the switch were continuously pressed. Therefore, the navigation receiver assembly cannot be operated using the steering pad switch assembly, and the navigation receiver assembly itself cannot function.

WIRING DIAGRAM**INSPECTION PROCEDURE****NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System). Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System [INFO](#).

PROCEDURE

1. INSPECT NAVIGATION RECEIVER ASSEMBLY

(a) Disconnect the L41 navigation receiver assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L41-7 (SW1) - L41-6 (SWG)	No switch pushed	95 to 105 k Ω
L41-7 (SW1) - L41-6 (SWG)	Seek+ switch pushed	Below 2.5 Ω
L41-7 (SW1) - L41-6 (SWG)	Seek- switch pushed	323 to 335 Ω
L41-7 (SW1) - L41-6 (SWG)	Volume+ switch pushed	980 to 1020 Ω
L41-7 (SW1) - L41-6 (SWG)	Volume- switch pushed	3048 to 3172 Ω
L41-8 (SW2) - L41-6 (SWG)	No switch pushed	95 to 105 k Ω
L41-8 (SW2) - L41-6 (SWG)	MODE switch pushed	Below 2.5 Ω
L41-8 (SW2) - L41-6 (SWG)	Voice switch pushed	3048 to 3172 Ω
L41-8 (SW2) - L41-6 (SWG)	On Hook switch pushed	323 to 335 Ω
L41-8 (SW2) - L41-6 (SWG)	Off Hook switch pushed	980 to 1020 Ω

NG **INSPECT SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY**

OK **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	INSPECT SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY
-----------	--

(a) Disconnect the steering pad switch assembly and spiral with sensor cable sub-assembly connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
z9-8 (EAU) - L52-4 (EAU)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-10 (AU1) - L52-6 (AU1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
z9-9 (AU2) - L52-5 (AU2)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:

The spiral with sensor cable sub-assembly is an important part of the SRS airbag system. Incorrect removal or installation of the spiral with sensor cable sub-assembly may prevent the airbag from deploying. Refer to the pages shown in the brackets.

(NAVIGATION RECEIVER - SPIRAL WITH SENSOR
CABLE)

Illumination Circuit

DESCRIPTION

Power is supplied to the navigation receiver assembly and steering pad switch illumination when the light control switch is in the tail or head position.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Inspect the fuses for circuits related to this system before performing the following inspection procedure.
- The vehicle is equipped with an SRS (Supplemental Restraint System). Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System INFO.

PROCEDURE

1.	CHECK ILLUMINATION
-----------	---------------------------

(c) Check if the illumination for the navigation receiver assembly, steering pad switch assembly, glove box

(a) Check if the illumination for the navigation receiver assembly, steering pad switch assembly, glove box or others (hazard switch, transmission control switch, etc.) comes on when the light control switch is turned to the tail or head position.

Result:

RESULT	PROCEED TO
Illumination comes on for all components except steering pad switch assembly.	A
Illumination comes on for all components except navigation receiver assembly.	B
Illumination comes on for all components except navigation receiver assembly and steering pad switch assembly. (w/ "Bluetooth" Audio System)	C
Illumination comes on for all components except navigation receiver assembly and steering pad switch assembly. (w/o "Bluetooth" Audio System)	D

3. INSPECT PARKING BRAKE SWITCH ASSEMBLY

(a) Disconnect the parking brake switch assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Switch connector - Switch body	ON (When shaft is not pressed)	Below 1 Ω
Switch connector - Switch body	OFF (When shaft is pressed)	10 k Ω or higher

NG ▶ REPLACE PARKING BRAKE SWITCH ASSEMBLY

OK ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

Speaker Circuit

DESCRIPTION

The sound signals amplified by the stereo component amplifier assembly are sent to the speakers from the stereo component amplifier assembly via the speaker circuit.

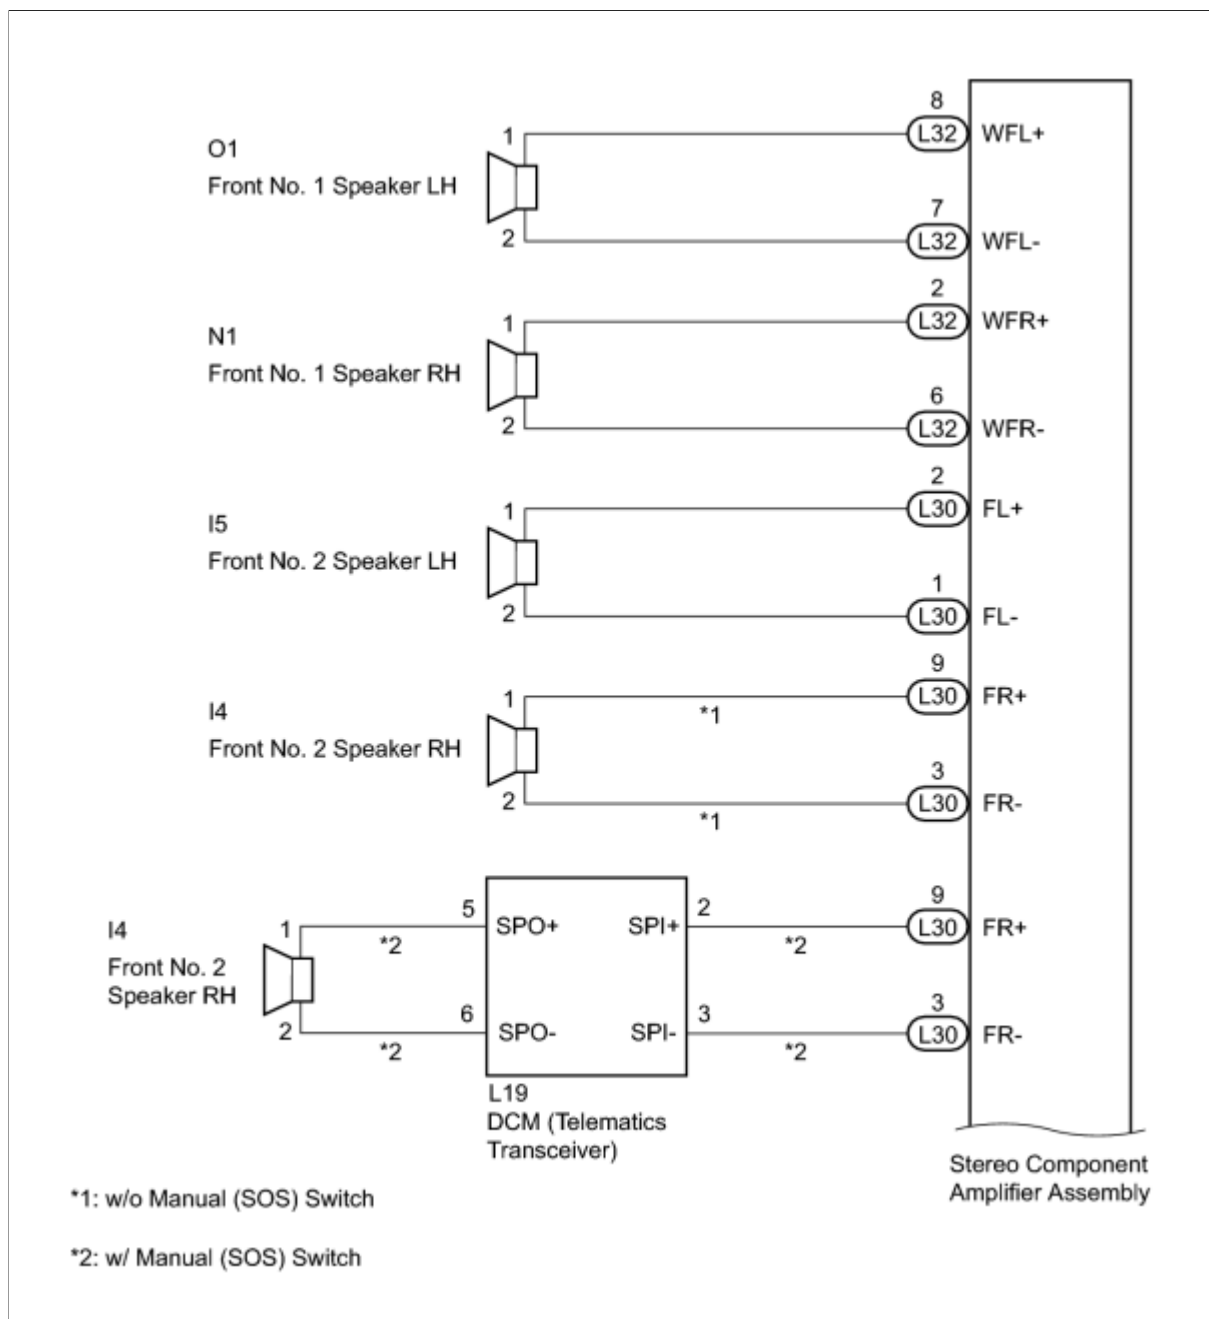

If there is a short in this circuit, the stereo component amplifier assembly detects it and stops output to the speakers.

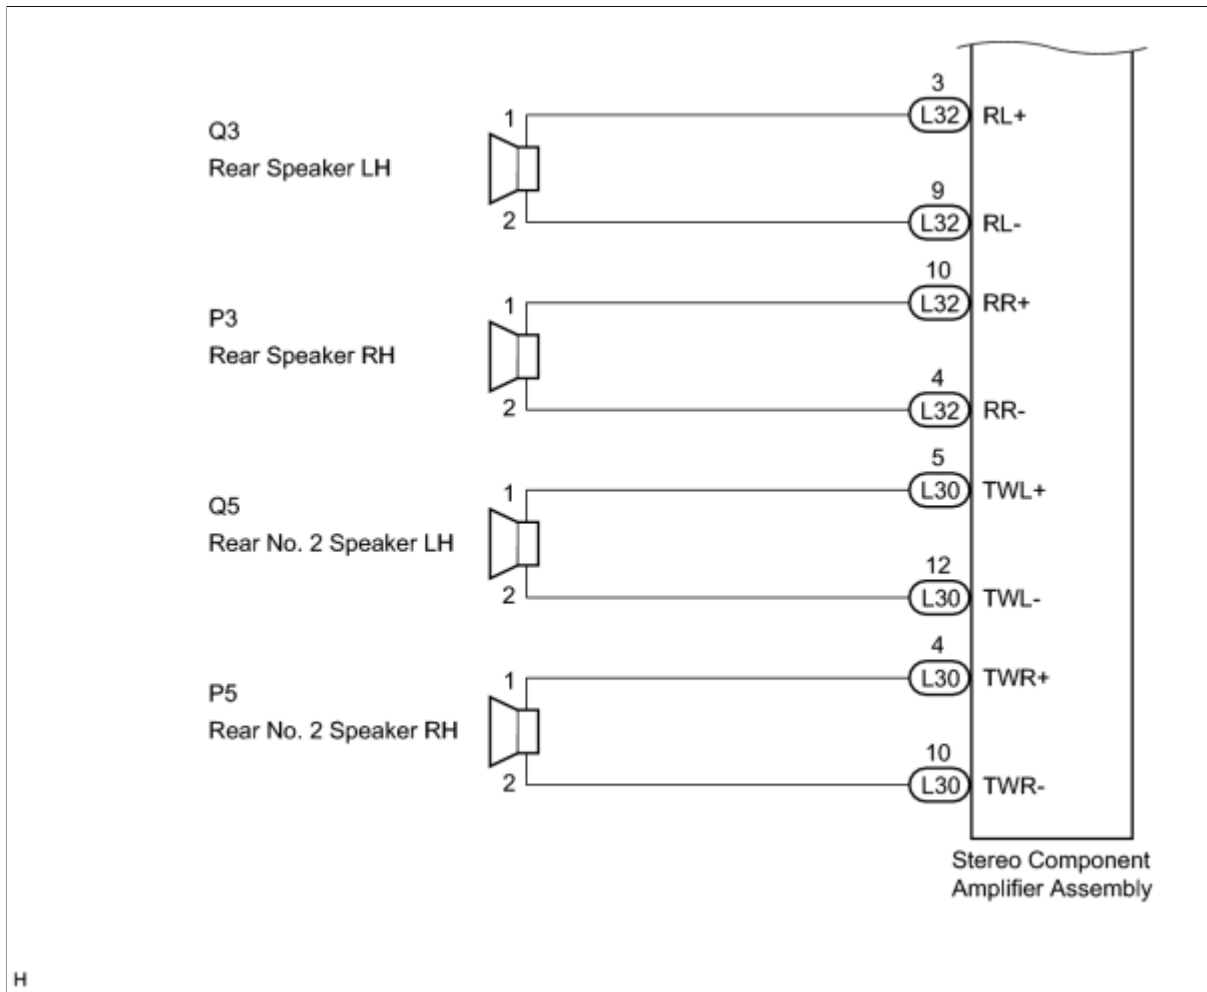

Thus sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly or speakers.

If a short is detected in the speaker circuit, no sound can be heard from the speakers.

WIRING DIAGRAM

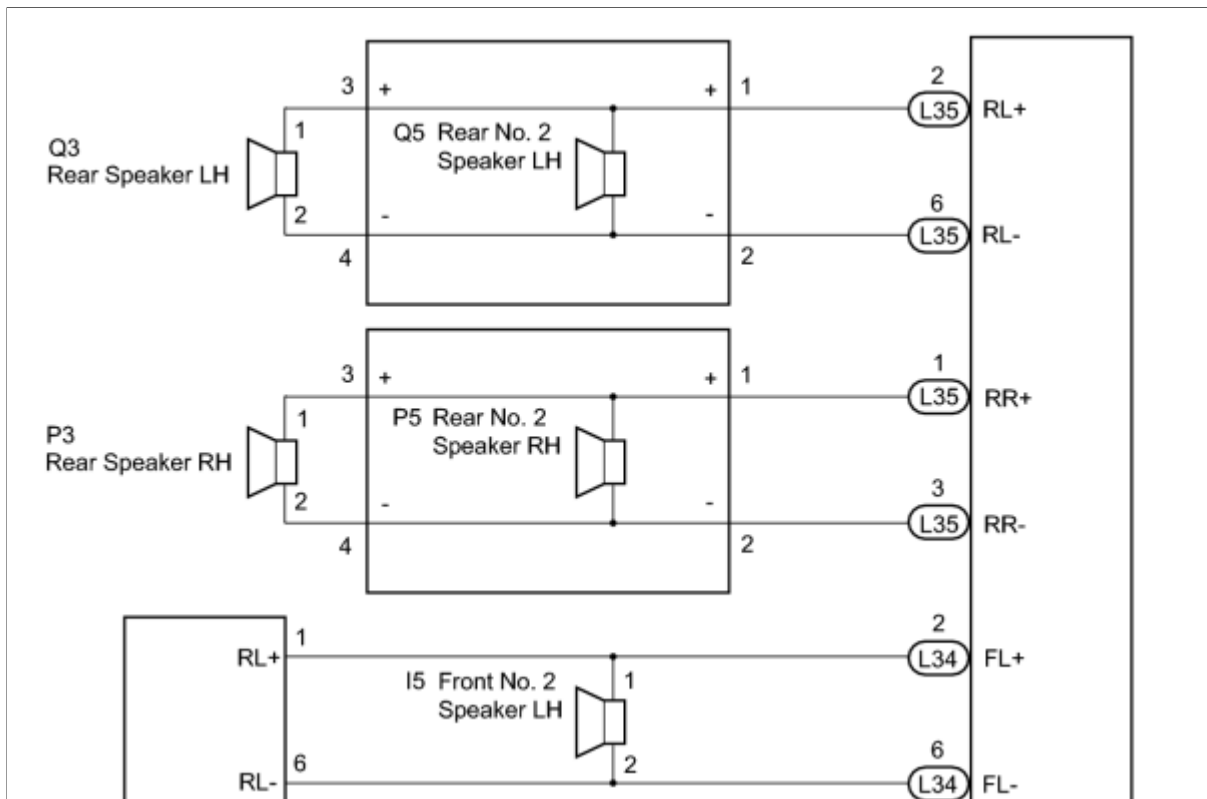

1. w/ "Bluetooth" Audio System

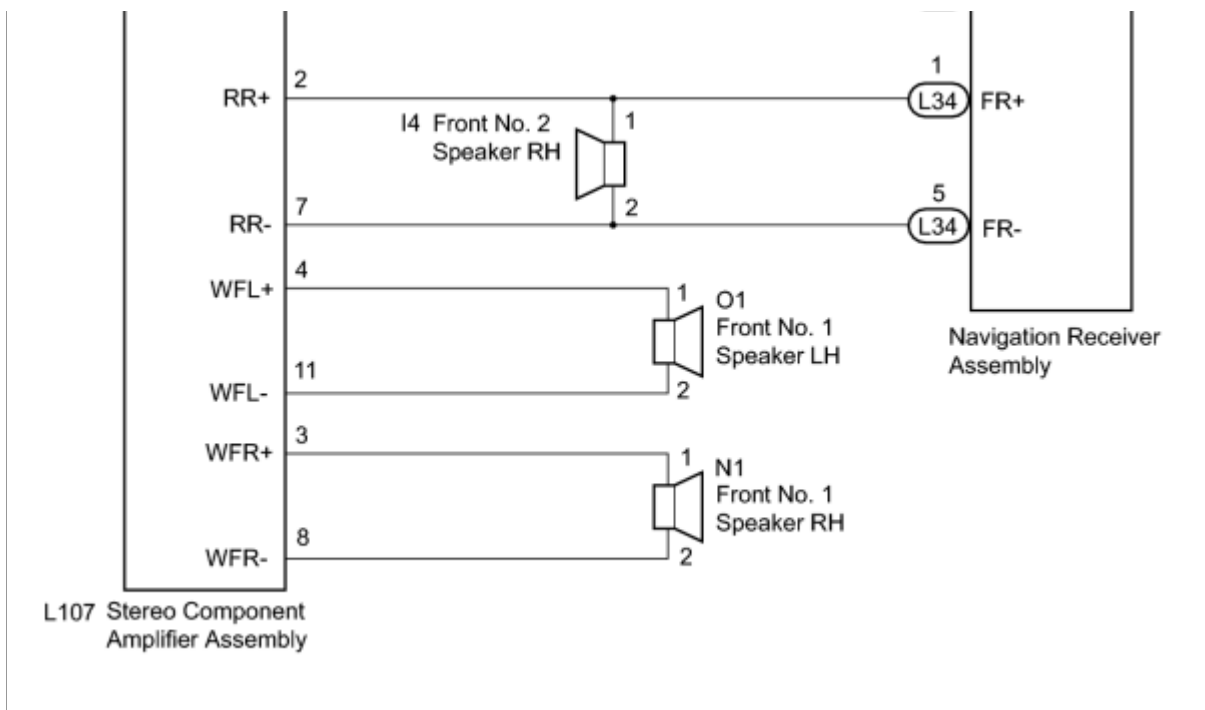

H

2. w/o "Bluetooth" Audio System

INSPECTION PROCEDURE

NOTICE:

If the DCM (telematics transceiver) has been replaced, perform the Activate DCM procedure using the Techstream  .

PROCEDURE

1.	CONFIRM MODEL

Result:

RESULT	PROCEED TO
w/ "Bluetooth" Audio System	A
w/o "Bluetooth" Audio System	B

B  CHECK HARNESS AND CONNECTOR

A

2.	CHECK HARNESS AND CONNECTOR
-----------	------------------------------------

(a) Disconnect the L32 stereo component amplifier assembly connector.

(b) Disconnect the L30 stereo component amplifier assembly connector.

(c) Disconnect the L19 DCM (telematics transceiver) connector (w/ Manual (SOS) Switch).

(d) Disconnect the O1 and N1 front No. 1 speaker connectors.

H

*5

(e) Disconnect the I5 and I4 front No. 2 speaker connectors.

H

*6

(f) Disconnect the Q3 and P3 rear speaker connectors.

H

*7

(g) Disconnect the Q5 and P5 rear No. 2 speaker connectors.

H

(h) Measure the resistance between each of the front No. 1 speakers and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
-------------------	-----------	---------------------

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L32-8 (WFL+) - O1-1	Always	Below 1 Ω
L32-7 (WFL-) - O1-2	Always	Below 1 Ω
L32-2 (WFR+) - N1-1	Always	Below 1 Ω
L32-6 (WFR-) - N1-2	Always	Below 1 Ω
L32-8 (WFL+) - Body ground	Always	10 k Ω or higher
L32-7 (WFL-) - Body ground	Always	10 k Ω or higher
L32-2 (WFR+) - Body ground	Always	10 k Ω or higher
L32-6 (WFR-) - Body ground	Always	10 k Ω or higher

(i) w/o Manual (SOS) Switch:

Measure the resistance between each of the front No. 2 speakers and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L30-2 (FL+) - I5-1	Always	Below 1 Ω
L30-1 (FL-) - I5-2	Always	Below 1 Ω
L30-9 (FR+) - I4-1	Always	Below 1 Ω
L30-3 (FR-) - I4-2	Always	Below 1 Ω
L30-2 (FL+) - Body ground	Always	10 k Ω or higher
L30-1 (FL-) - Body ground	Always	10 k Ω or higher
L30-9 (FR+) - Body ground	Always	10 k Ω or higher
L30-3 (FR-) - Body ground	Always	10 k Ω or higher

(j) w/ Manual (SOS) Switch:

Measure the resistance between the DCM (telematics transceiver) and the front No. 2 speaker RH to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L19-5 (SPO+) - I4-1	Always	Below 1 Ω
L19-6 (SPO-) - I4-2	Always	Below 1 Ω
L19-5 (SPO+) - Body ground	Always	10 k Ω or higher
L19-6 (SPO-) - Body ground	Always	10 k Ω or higher

(k) w/ Manual (SOS) Switch:

Measure the resistance between the DCM (telematics transceiver) and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L19-2 (SPI+) - L30-9 (FR+)	Always	Below 1 Ω
L19-3 (SPI-) - L30-3 (FR-)	Always	Below 1 Ω
L19-2 (SPI+) - Body ground	Always	10 k Ω or higher
L19-3 (SPI-) - Body ground	Always	10 k Ω or higher

(l) w/ Manual (SOS) Switch:

Measure the resistance between the front No. 2 speaker LH and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L30-2 (FL+) - I5-1	Always	Below 1 Ω
L30-1 (FL-) - I5-2	Always	Below 1 Ω
L30-2 (FL+) - Body ground	Always	10 k Ω or higher
L30-1 (FL-) - Body ground	Always	10 k Ω or higher

(m) Measure the resistance between each of the rear speakers and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L32-3 (RL+) - Q3-1	Always	Below 1 Ω
L32-9 (RL-) - Q3-2	Always	Below 1 Ω
L32-10 (RR+) - P3-1	Always	Below 1 Ω
L32-4 (RR-) - P3-2	Always	Below 1 Ω
L32-3 (RL+) - Body ground	Always	10 k Ω or higher
L32-9 (RL-) - Body ground	Always	10 k Ω or higher
L32-10 (RR+) - Body ground	Always	10 k Ω or higher
L32-4 (RR-) - Body ground	Always	10 k Ω or higher

(n) Measure the resistance between each of the rear No. 2 speakers and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L30-5 (TWL+) - Q5-1	Always	Below 1 Ω
L30-12 (TWL-) - Q5-2	Always	Below 1 Ω
L30-4 (TWR+) - P5-1	Always	Below 1 Ω
L30-10 (TWR-) - P5-2	Always	Below 1 Ω
L30-5 (TWL+) - Body ground	Always	10 k Ω or higher

L30-12 (TWL-) - Body ground	Always	10 kΩ or higher
L30-4 (TWR+) - Body ground	Always	10 kΩ or higher
L30-10 (TWR-) - Body ground	Always	10 kΩ or higher

*5

(e) Disconnect the I5 and I4 front No. 2 speaker connectors.

H

*6

(f) Disconnect the Q3 and P3 rear speaker connectors.

H

*7

(g) Disconnect the Q5 and P5 rear No. 2 speaker connectors.

H

(h) Measure the resistance between each of the front No. 2 speakers and the navigation receiver assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L34-2 (FL+) - I5-1	Always	Below 1 Ω
L34-6 (FL-) - I5-2	Always	Below 1 Ω
L34-1 (FR+) - I4-1	Always	Below 1 Ω
L34-5 (FR-) - I4-2	Always	Below 1 Ω
L34-2 (FL+) - Body ground	Always	10 k Ω or higher
L34-6 (FL-) - Body ground	Always	10 k Ω or higher
L34-1 (FR+) - Body ground	Always	10 k Ω or higher
L34-5 (FR-) - Body ground	Always	10 k Ω or higher

- (i) Measure the resistance between the navigation receiver assembly and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L34-2 (FL+) - L107-1 (RL+)	Always	Below 1 Ω
L34-6 (FL-) - L107-6 (RL-)	Always	Below 1 Ω
L34-1 (FR+) - L107-2 (RR+)	Always	Below 1 Ω
L34-5 (FR-) - L107-7 (RR-)	Always	Below 1 Ω
L34-2 (FL+) - Body ground	Always	10 k Ω or higher
L34-6 (FL-) - Body ground	Always	10 k Ω or higher
L34-1 (FR+) - Body ground	Always	10 k Ω or higher
L34-5 (FR-) - Body ground	Always	10 k Ω or higher

- (j) Measure the resistance between each of the front No. 1 speakers and the stereo component amplifier assembly to check for an open or a short circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L107-4 (WFL+) - O1-1	Always	Below 1 Ω
L107-11 (WFL-) - O1-2	Always	Below 1 Ω
L107-3 (WFR+) - N1-1	Always	Below 1 Ω
L107-8 (WFR-) - N1-2	Always	Below 1 Ω
L107-4 (WFL+) - Body ground	Always	10 k Ω or higher
L107-11 (WFL-) - Body ground	Always	10 k Ω or higher
L107-3 (WFR+) - Body ground	Always	10 k Ω or higher
L107-8 (WFR-) - Body ground	Always	10 k Ω or higher

- (k) Measure the resistance between each of the rear No. 2 speakers and the navigation receiver assembly

to check for an open circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L35-2 (RL+) - Q5-1 (+)	Always	Below 1 Ω
L35-6 (RL-) - Q5-2 (-)	Always	Below 1 Ω
L35-1 (RR+) - P5-1 (+)	Always	Below 1 Ω
L35-3 (RR-) - P5-2 (-)	Always	Below 1 Ω
L35-2 (RL+) - Body ground	Always	10 k Ω or higher
L35-6 (RL-) - Body ground	Always	10 k Ω or higher
L35-1 (RR+) - Body ground	Always	10 k Ω or higher
L35-3 (RR-) - Body ground	Always	10 k Ω or higher

(l) Measure the resistance between each of the rear No. 2 speakers and the rear speakers to check for an open circuit in the wire harness.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Q5-3 (+) - Q3-1	Always	Below 1 Ω
Q5-4 (-) - Q3-2	Always	Below 1 Ω
P5-3 (+) - P3-1	Always	Below 1 Ω
P5-4 (-) - P3-2	Always	Below 1 Ω
Q5-3 (+) - Body ground	Always	10 k Ω or higher
Q5-4 (-) - Body ground	Always	10 k Ω or higher
P5-3 (+) - Body ground	Always	10 k Ω or higher
P5-4 (-) - Body ground	Always	10 k Ω or higher

*1	Component without harness connected (Rear Speaker)
----	---

NG ▶ REPLACE REAR SPEAKER

OK

11. INSPECT REAR NO. 2 SPEAKER

(a) Check that the malfunction disappears when another speaker in good condition is installed.

Standard:

Malfunction disappears.

HINT:

- Connect all the connectors to the rear No. 2 speakers that were disconnected.
- If there is a possibility that either the right or left rear No. 2 speaker is defective, inspect by interchanging the right one with the left one.
- Perform the above inspection on both LH and RH sides.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN
PROBLEM SYMPTOMS TABLE

OK ▶ REPLACE REAR NO. 2 SPEAKER

Sound Signal Circuit between Navigation Receiver Assembly and Stereo Component Amplifier

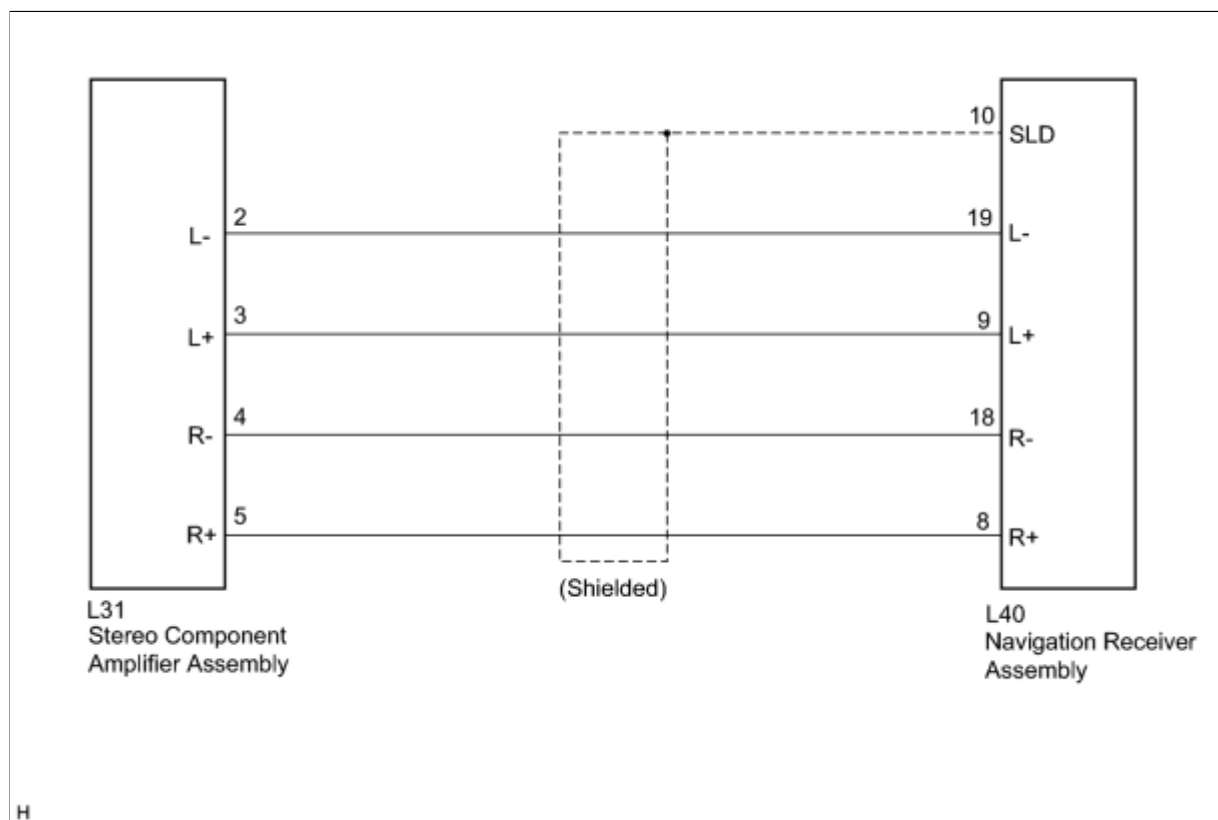

DESCRIPTION

The navigation receiver assembly sends a sound signal to the stereo component amplifier assembly via the sound signal circuit.

The sound signal that has been sent is amplified by the stereo component amplifier assembly, and then is sent to the speakers.

If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly or speakers.

WIRING DIAGRAM

Mute Signal Circuit between Navigation Receiver Assembly and Stereo Component Amplifier

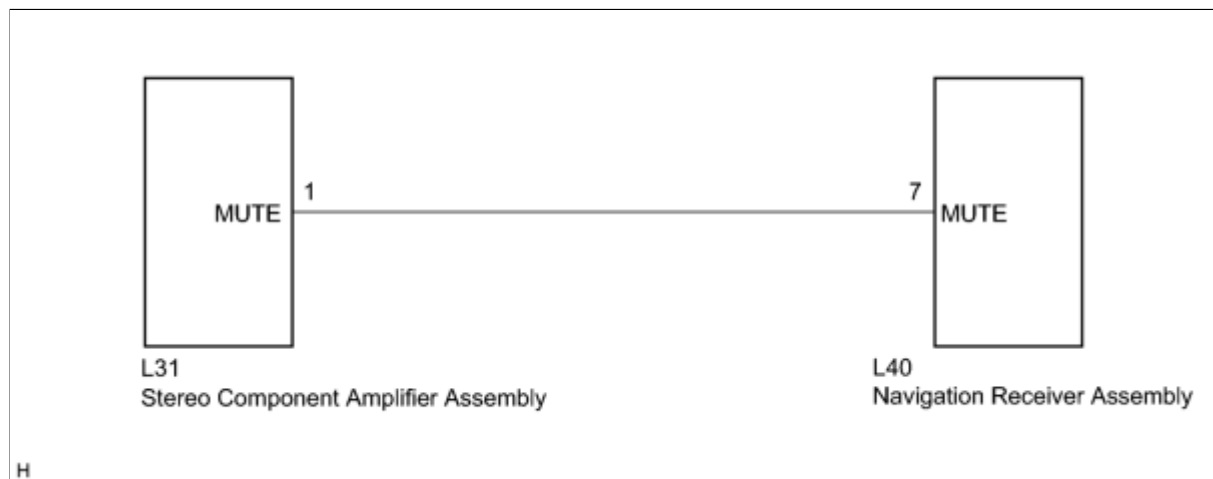

DESCRIPTION

This circuit sends a signal to the stereo component amplifier assembly to mute noise. Because of that, the noise produced by changing the sound source ceases.

If there is an open in the circuit, noise can be heard from the speakers when changing the sound source.

If there is a short in the circuit, even though the stereo component amplifier assembly is functioning normally, no sound or only an extremely faint sound can be heard.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

- INSPECT STEREO COMPONENT AMPLIFIER ASSEMBLY**

(a) Measure the voltage according to the value(s) in the table below.
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L31-1 (MUTE) - Body ground	Power switch on (ACC), Audio system playing → Changing source	Above 3.5 V → Below 1 V

3.	REPLACE STEREO COMPONENT TUNER ASSEMBLY
-----------	--

(a) Replace the stereo component tuner assembly and check if it operates normally  .

OK:

The navigation system operates normally.

NG  **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK  **END**

Mute Signal Circuit between Stereo Component Amplifier and Telematics Transceiver

DESCRIPTION

The DCM (telematics transceiver) sends a mute signal to the stereo component amplifier assembly.

The stereo component amplifier assembly controls the volume according to the mute signal from the DCM (telematics transceiver).

The mute signal is sent to reduce noise and popping sounds generated when switching modes.

If there is an open in the circuit, noise can be heard from the speakers when changing the sound source.

If there is a short in the circuit, even though the stereo component amplifier assembly is functioning, no sound, or only an extremely faint sound, can be heard.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the DCM (telematics transceiver) has been replaced, perform the Activate DCM procedure using the Techstream [INFO](#).

PROCEDURE

- INSPECT STEREO COMPONENT AMPLIFIER ASSEMBLY**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L31-24 (TMUT) - Body ground	Power switch on (ACC), Audio system is playing → Manual (SOS) switch on, Emergency call mode	Above 3.5 V → Below 1 V

emergency call mode

AVC-LAN Circuit

DESCRIPTION

Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers switch signals by the AVC-LAN.

If a short to +B or short to ground occurs in this AVC-LAN, the navigation system will not function normally as communication is stopped.

INSPECTION PROCEDURE

NOTICE:

- The navigation receiver assembly is the master unit.
- After replacing the stereo component tuner assembly of vehicles subscribed to pay-type satellite radio broadcasts, registration of the XM radio ID is necessary.

PROCEDURE

1. INSPECT NAVIGATION RECEIVER ASSEMBLY

(a) Disconnect the L40 navigation receiver assembly connector (w/ "Bluetooth" Audio System).

(b) Disconnect the L38 navigation receiver assembly connector (w/ SDARS System).

(c) Disconnect the L41 navigation receiver assembly connector (w/ Advanced Parking Assist System).

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L40-5 (ATX+) - L40-15 (ATX-)*2	Always	60 to 80 Ω
L38-9 (TXM+) - L38-10 (TXM-)*3	Always	60 to 80 Ω
L41-9 (TX1+) - L41-10 (TX1-)*4	Always	60 to 80 Ω

Text in Illustration

*1	Component without harness connected (Navigation Receiver Assembly)
----	---

*2: w/ "Bluetooth" Audio System

*3: w/ SDARS System

*4: w/ Advanced Parking Assist System

NG **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK

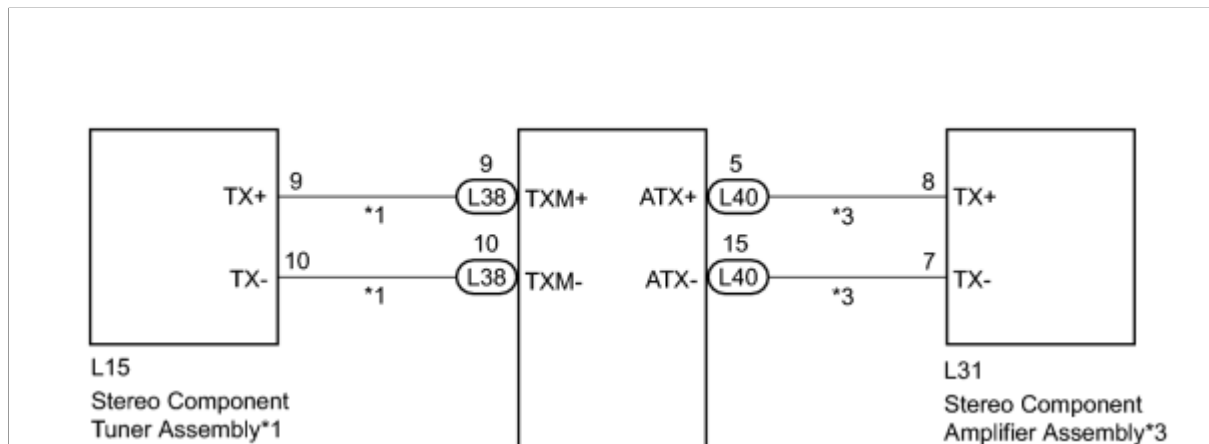

2.	CHECK HARNESS AND CONNECTOR (AVC-LAN CIRCUIT)
-----------	--

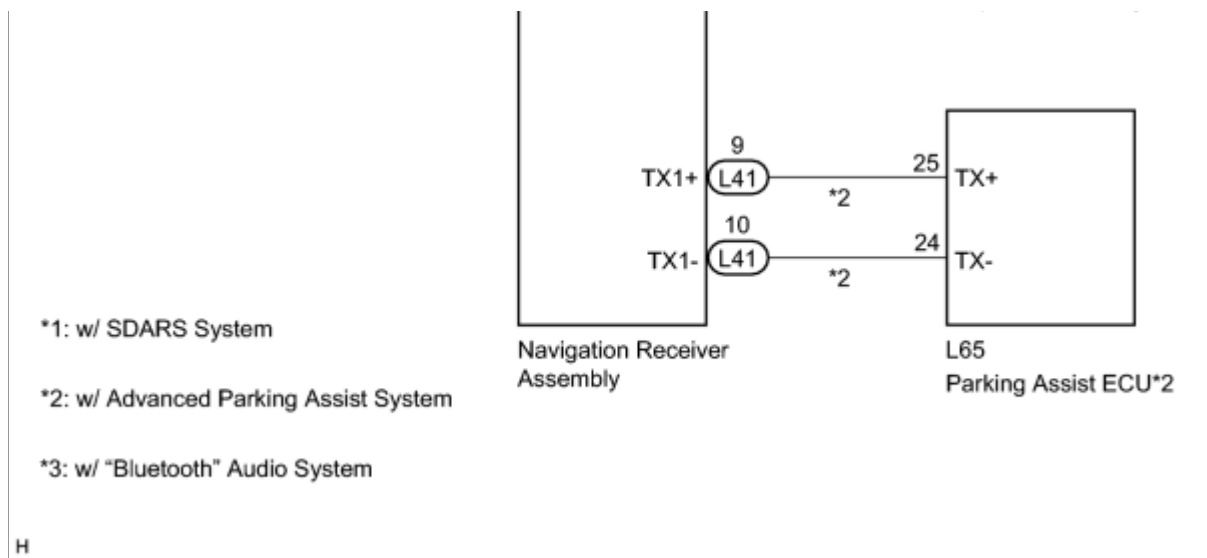

HINT:

For details of the connectors, refer to Terminals of ECU .

(a) Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.

- (1) Disconnect all connectors in all AVC-LAN circuits.
- (2) Check for an open or short in all AVC-LAN circuits.

OK:
 There is no open or short circuit.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
 ▼

3.	INSPECT MALFUNCTIONING PARTS
-----------	-------------------------------------

(a) Disconnect and reconnect each slave unit one by one until the master unit returns to normal operation.

HINT:

- Check all slave units.
- If disconnecting a slave unit causes the master unit to return to normal operation, the slave unit is defective and should be replaced.

OK:
 Master unit returns to normal operation.

NG ▶ REPLACE NAVIGATION RECEIVER ASSEMBLY

OK ▶ REPLACE MALFUNCTIONING PARTS

Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter

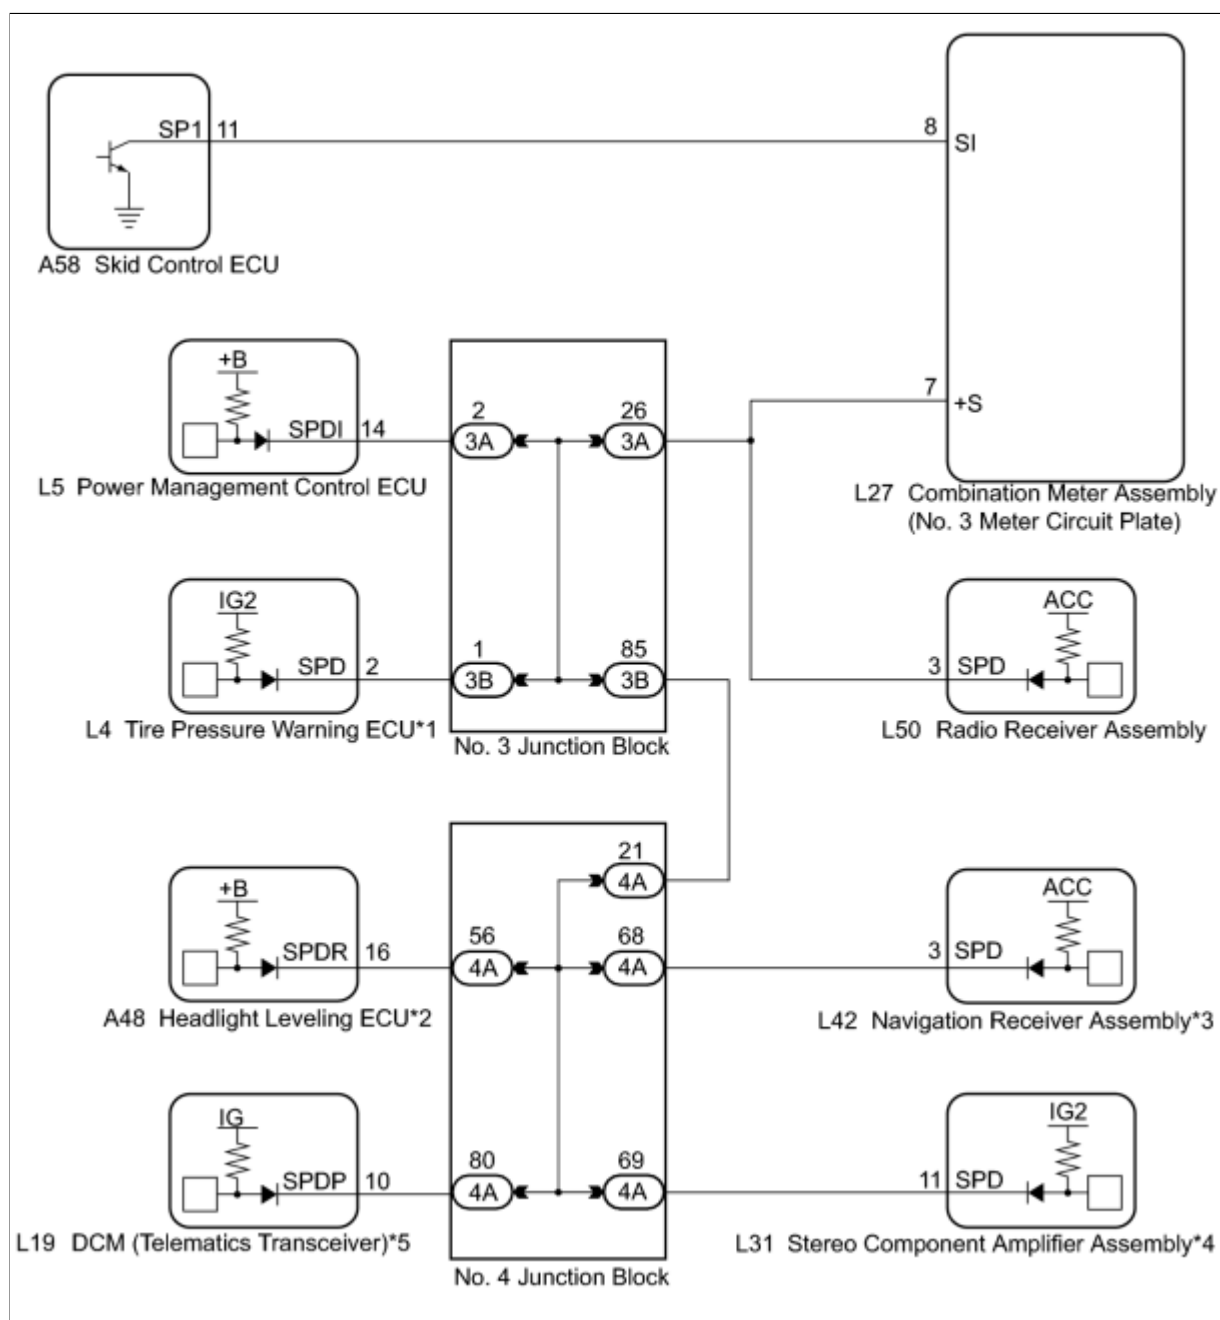

DESCRIPTION

The stereo component amplifier assembly (No. 3 meter circuit plate) receives a vehicle speed signal from the combination meter assembly (No. 3 meter circuit plate) to control the ASL function.

HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly (No. 3 meter circuit plate). The signal is changed to a pulse signal at the transistor in the combination meter assembly (No. 3 meter circuit plate). Each ECU controls the respective systems based on the pulse signal.
- If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.

WIRING DIAGRAM

- *1: w/ Tire Pressure Warning System
- *2: w/ Automatic Type Headlight Beam Level Control
- *3: w/ Navigation System
- *4: for Separate Type Amplifier System
- *5: w/ Manual (SOS) Switch

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT COMBINATION METER ASSEMBLY (NO. 3 METER CIRCUIT PLATE OUTPUT WAVEFORM)
-----------	---

(a) Check the output waveform.

- (1) Remove the combination meter assembly with the connector(s) still connected.
- (2) Connect an oscilloscope to terminal L27-7 (+S) and body ground.
- (3) Turn the power switch on (IG).
- (4) Turn a wheel slowly.
- (5) Check the signal waveform according to the condition(s) in the table below.

*1

ITEM	CONDITION
Measurement terminal	L27-7 (+S) - Body ground
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Wheel being rotated

OK:
The waveform is similar to that shown in the illustration.

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

Text in Illustration

*1	Component with harness connected (Combination Meter Assembly)
----	--

2. CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - COMBINATION METER)

(a) Disconnect the L31 stereo component amplifier assembly connector.

(b) Disconnect the L27 combination meter assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L31-11 (SPD) - L27-7 (+S)	Always	Below 1 Ω

Text in Illustration

Navigation Voice Circuit

DESCRIPTION

This circuit is used when the voice guidance in the navigation system is on.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

- | | |
|----|---|
| 1. | CHECK HARNESS AND CONNECTOR (NAVIGATION RECEIVER - STEREO COMPONENT AMPLIFIER) |
|----|---|

(a) Disconnect the L41 navigation receiver assembly connector.

(b) Disconnect the L31 stereo component amplifier assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L41-11 (IVO+) - L31-23 (INT+)	Always	Below 1 Ω
L41-12 (IVO-) - L31-22 (INT-)	Always	Below 1 Ω
L41-11 (IVO+) - Body ground	Always	10 k Ω or higher
L41-12 (IVO-) - Body ground	Always	10 k Ω or higher
L41-13 (SLD) - Body ground	Always	10 k Ω or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

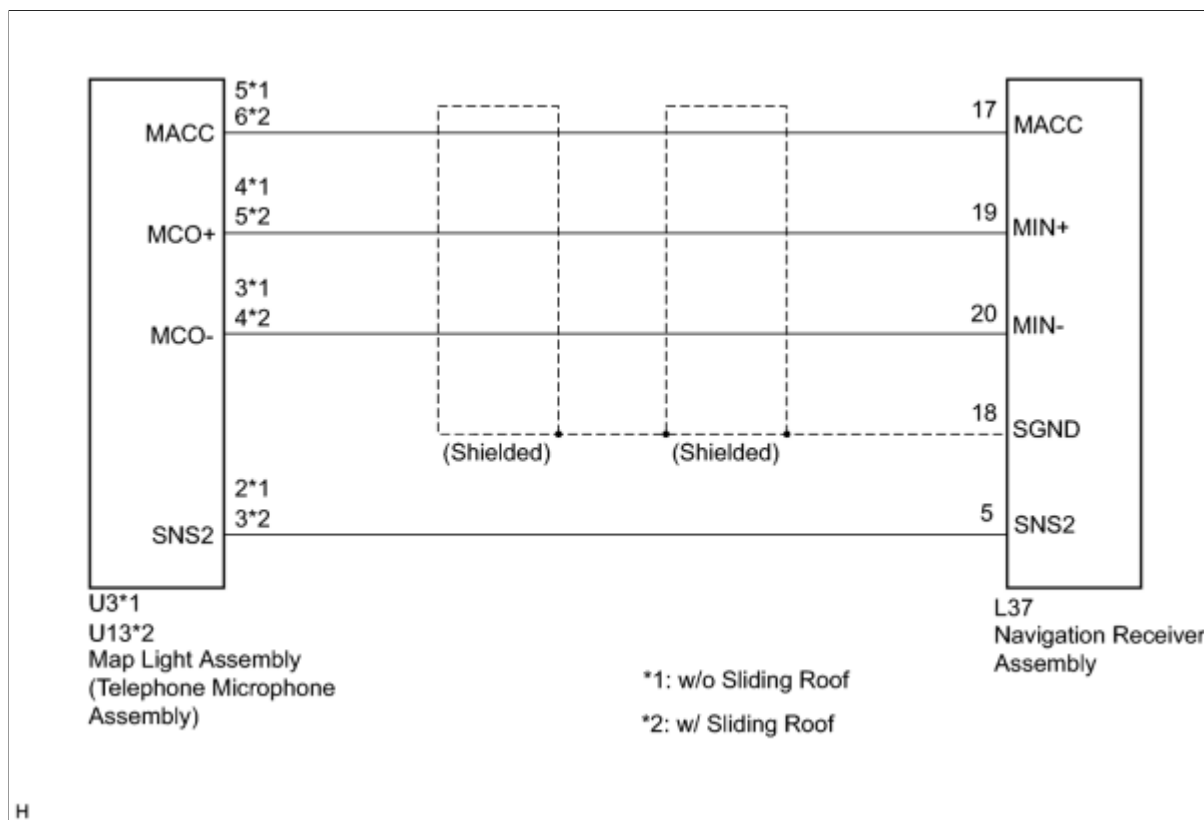

Microphone Circuit between Microphone and Navigation Receiver Assembly

DESCRIPTION

- Using this circuit, the navigation receiver assembly sends power to the map light assembly (telephone microphone assembly), and the map light assembly sends microphone signals to the navigation receiver assembly (w/o manual (SOS) switch).
- Using this circuit, the DCM (telematics transceiver) sends power to the map light assembly (telephone microphone assembly), and the map light assembly (telephone microphone assembly) sends microphone signals to the navigation receiver assembly via the DCM (telematics transceiver). The navigation receiver assembly and map light assembly (telephone microphone assembly) are connected to each other using the microphone connection detection signal lines (w/ manual (SOS) switch).

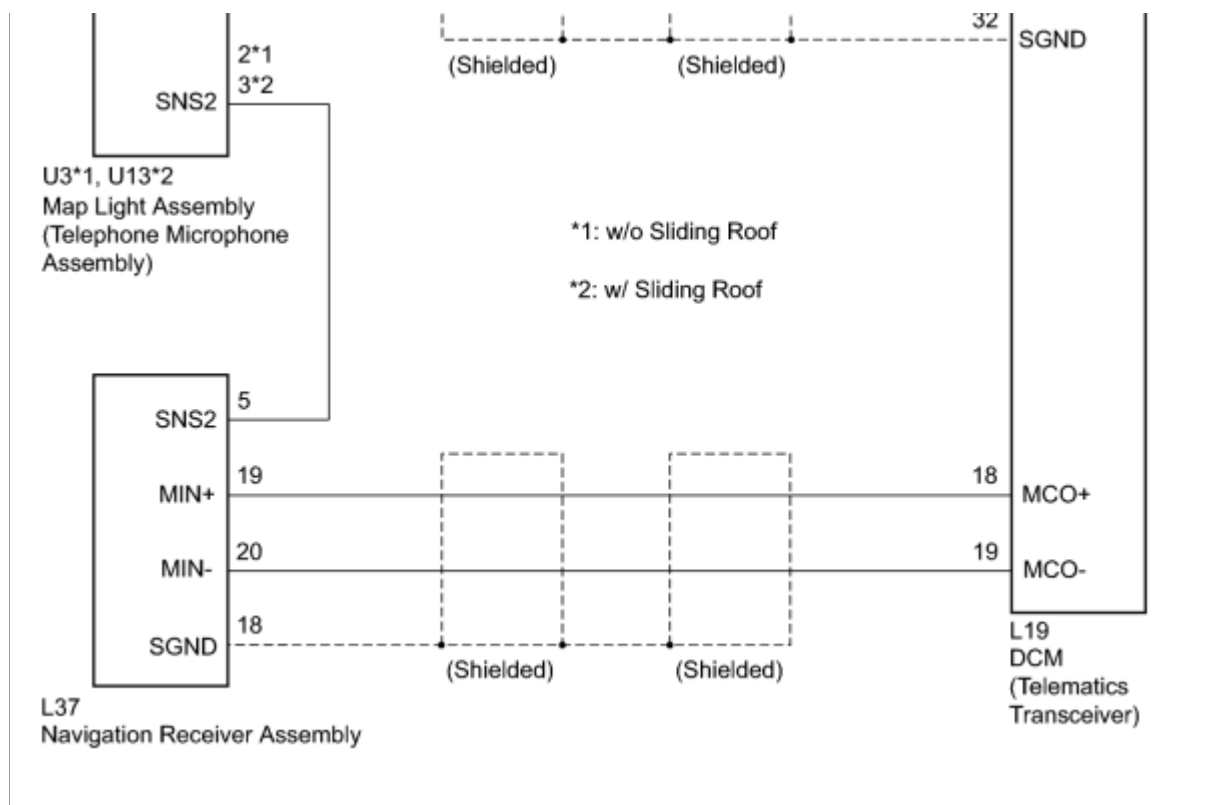

WIRING DIAGRAM

1. w/o Manual (SOS) Switch

2. w/ Manual (SOS) Switch

INSPECTION PROCEDURE

NOTICE:

If the DCM (telematics transceiver) has been replaced, perform the Activate DCM procedure using the Techstream [INFO](#).

PROCEDURE

1.	CONFIRM MODEL
-----------	----------------------

(a) Choose the model to be inspected.

Result:

MODEL	PROCEED TO
w/o Manual (SOS) Switch	A
w/ Manual (SOS) Switch	B

B **CONFIRM MODEL**

A

2.	CONFIRM MODEL
-----------	----------------------

2. CONFIRM MODEL

(a) Choose the model to be inspected.

Result:

MODEL	PROCEED TO
w/o Sliding Roof	A
w/ Sliding Roof	B

B ▶ **CHECK HARNESS AND CONNECTOR (NAVIGATION RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)**

A
▼

3. CHECK HARNESS AND CONNECTOR (NAVIGATION RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

(a) Disconnect the L37 navigation receiver assembly connector.

(b) Disconnect the U3 map light assembly connector.

H _____

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L37-5 (SNS2) - U3-2 (SNS2)	Always	Below 1 Ω
L37-17 (MACC) - U3-5 (MACC)	Always	Below 1 Ω
L37-19 (MIN+) - U3-4 (MCO+)	Always	Below 1 Ω
L37-20 (MIN-) - U3-3 (MCO-)	Always	Below 1 Ω
L37-5 (SNS2) - Body ground	Always	10 kΩ or higher
L37-17 (MACC) - Body ground	Always	10 kΩ or higher
L37-19 (MIN+) - Body ground	Always	10 kΩ or higher
L37-20 (MIN-) - Body ground	Always	10 kΩ or higher
L37-18 (SGND) - Body ground	Always	10 kΩ or higher

*2	Front view of wire harness connector (to Map Light Assembly)

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4. INSPECT NAVIGATION RECEIVER ASSEMBLY

(a) Disconnect the U3 map light assembly connector.

(b) Reconnect the L37 navigation receiver assembly connector.

H

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L37-17 (MACC) - Body ground	Power switch on (ACC)	4 to 6 V

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L37-18 (SGND) - Body ground	Always	Below 1 Ω
L37-20 (MIN-) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Component with harness connected (Navigation Receiver Assembly)
----	--

NG  **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK

5. INSPECT MAP LIGHT ASSEMBLY

*1

H

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U3-2 (SNS2) - U3-3 (MCO-)	Always	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Map Light Assembly)

PRECAUTION

1. PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the terminal is reconnected.

SYSTEM NAME	SEE PROCEDURE
Advanced Parking Guidance System	INFO

2. POINTS TO NOTE WHEN SERVICING

(a) Pay attention to the following points when servicing.

- (1) When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the navigation receiver assembly. In this case, restore the steering angle neutral point [INFO](#).
- (2) Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed [INFO](#).

HINT:

Each adjusted value for the calibration of the advanced parking guidance system will be stored in the parking assist ECU.

- (3) When the lens of the rear television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

3. NOTES FOR REAR TELEVISION CAMERA

(a) Notes for the rear television camera assembly

- (1) The advanced parking guidance system may not function properly if subjected to a severe blow by any hard object.
- (2) Do not scrub the cover part of the camera (resin made). Scrubbing may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the cover. If such material adheres to the cover, clean it off immediately and wash with water.
- (3) Exposing the camera to a sudden temperature change may affect proper functioning of the camera.
- (4) A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

(b) Images are difficult to discern even in normal conditions if:

- (1) Noise may occur in the image depending on electrical devices used in the cabin.
- (2) Noise may occur in the image if the outer mirror switch assembly is operated.
- (3) Noise may occur in the image if accessories that generate radio waves have been installed.
- (4) The camera screen is frosted over (the image immediately after turning the power switch on (IG) may be blurred or darker than normal).
- (5) The camera lens is dirty with snow, mud, etc.
- (6) A strong beam of light, such as a sunbeam or headlight, hits the camera.
- (7) It is too dark around the camera (at night etc.).
- (8) The ambient temperature around the camera is either too high or too low.
- (9) The vehicle is tilted at a steep angle.

- (10) The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)

4. NOTES FOR ULTRASONIC SENSOR

- (a) Under the following conditions, the detection function may not function properly:
- (1) A sensor or the front bumper is not installed in the correct position.
 - (2) A sensor is improperly located due to damage to the front bumper.
 - (3) A sensor is covered with foreign matter, such as mud or snow (detection function returns to normal when the sensor is cleaned).
 - (4) A sensor is frozen (detection function returns to normal when the temperature of the sensor rises).
 - (5) A hand is blocking a sensor.

HINT:

- In very cold weather where a malfunction display appears, the sensor may not be able to detect obstacles.
 - If the sensor has malfunction, the advanced parking guidance system DTC will be output .
 - If the malfunction display appears, visually check the sensor first. If the sensor is free of foreign matter but the malfunction display remains, the sensor may have a malfunction.
- (b) The detection range may be affected by the following conditions:

HINT:

Depending on a shape of a parked vehicle or an obstacle such as a wall or post near the parking space, the detection range may change even though the sensors are operating normally.

- (1) A sensor or the front bumper is not installed in the correct position.
 - (2) A sensor is improperly located due to damage to the front bumper.
 - (3) A sensor is covered with foreign matter, such as mud or snow.
 - (4) The vehicle is in an excessively hot or excessively cold area.
- (c) Under the following conditions, a detection error may occur:

HINT:

Depending on a shape of a parked vehicle or an obstacle such as a wall or post near the parking space, the detection range may change even though the sensors are operating normally.

- (1) A sensor or the front bumper is not installed in the correct position.
 - (2) A sensor is improperly located due to damage to the front bumper.
 - (3) Driving on a bumpy road, an unpaved road or in tall grass.
 - (4) Ultrasonic waves are received from the horn or parking sonar system of another vehicle, a motorcycle engine, or the air brakes of a large vehicle.
 - (5) It is raining heavily or the sensor is splashed with water.
 - (6) The vehicle is tilted at a steep angle.
 - (7) The vehicle is equipped with a fender pole or a wireless antenna mechanism.
 - (8) A sensor is covered with foreign matter, such as mud or snow.
 - (9) The vehicle is moving forward or backward towards high curbs or objects that are perpendicular to the ground.
 - (10) A sensor is sprayed with high pressure water or steam.
- (d) The sensors cannot detect the following objects:
- (1) Thin objects, such as wires and ropes.

- (2) Materials that absorb ultrasonic waves, such as cotton, snow, etc.
 - (3) Objects with sharp edges.
 - (4) Short objects.
 - (5) Objects that are tall and protrude toward the vehicle above the detection range of the sensors.
- (e) Other notices:
- (1) The sensors cannot detect objects directly under the bumper. (A sensor may detect low objects and thin poles, and then lose track of them.)
 - (2) Beware that the detection range of the ultrasonic sensor is limited. In certain conditions, some objects may not be detected. As a result, always make sure to check all around the vehicle when driving or parking.
 - (3) The sensors may not be able to detect obstacles that are too close to the sensor.
 - (4) The sensors may not be able to detect obstacles if the sensors have been dropped or subjected to a strong impact.

SYSTEM DESCRIPTION

1. GENERAL

- (a) The parking assist ECU uses vehicle condition signals from the spiral with sensor cable sub-assembly, power steering ECU, skid control ECU, power management control ECU, etc. to make calculations and estimates. These results are used to make various guidelines, which are combined together with video from the rear television camera, and output to the navigation receiver assembly. Also, control signals are output to each ECU and the advanced parking guidance system various controls are performed.
- (b) This system has a rear television camera assembly mounted on the back door to display an image of the area behind the vehicle on the navigation receiver assembly display. The display panel also shows a composite view consisting of the area behind the vehicle and parking guidelines to assist the driver in parking the vehicle by monitoring the area behind the vehicle.
- (c) This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

2. FUNCTION OF COMPONENTS

- (a) The parking assist ECU controls the system by using information from the following components.

COMPONENT	FUNCTION
Rear Television Camera Assembly	<ul style="list-style-type: none"> Mounted on the back door to transmit an image of the area behind the vehicle to the parking assist ECU. Has a color video camera that uses a Charge Coupled Device (CCD) and a wide-angle lens.
Parking Assist ECU	Receives vehicle condition signals from various ECUs, makes frame based on calculations, combines the frame with video from the rear television camera, and outputs the video with frame to the navigation receiver assembly. Also, control signals are output to each ECU and the advanced parking guidance system various controls are performed.
Navigation Receiver Assembly	<ul style="list-style-type: none"> Receives video signals containing a composite of an image of the area behind the vehicle and the frame signals from the parking assist ECU, and displays them on the display panel. Uses the yaw rate detected by the gyro sensor that is built into the navigation receiver assembly to transmit the movement of the vehicle to the parking assist ECU.
Spiral with Sensor Cable Sub-assembly	Detects the angle of the steering wheel and sends the resulting signals to the parking assist ECU through CAN communication.
ECM	Sends the shift position signal to the parking assist ECU through CAN communication.
Skid Control ECU	Sends stop switch, vehicle speed, driving distance, and other vehicle condition signals to the parking assist ECU.
Power Steering ECU Assembly	Sends EPS failure, intervention steering, and other related vehicle condition signals to the parking assist ECU. Also, based on advanced parking guidance control signals and steering-related signals, performs steering control.
Parking Assist Pre Support Switch	Sends the switch operation signal to the parking assist ECU.
No. 1 Ultrasonic Sensor	Controlled by the parking assist ECU and detects an available parking space.
Air Conditioner Amplifier Assembly	Sends the outside temperature signal to the parking assist ECU through CAN communication.
Rear Height Control	

Sensor	Sends the vehicle height signal to the parking assist ECU.
Sub-assembly RH	

3. OPERATION EXPLANATION

- (a) The parking assist ECU receives the camera activation information from the navigation receiver assembly. Then, the parking assist ECU switches the display signal for the navigation receiver assembly from the navigation system to the advanced parking guidance system.

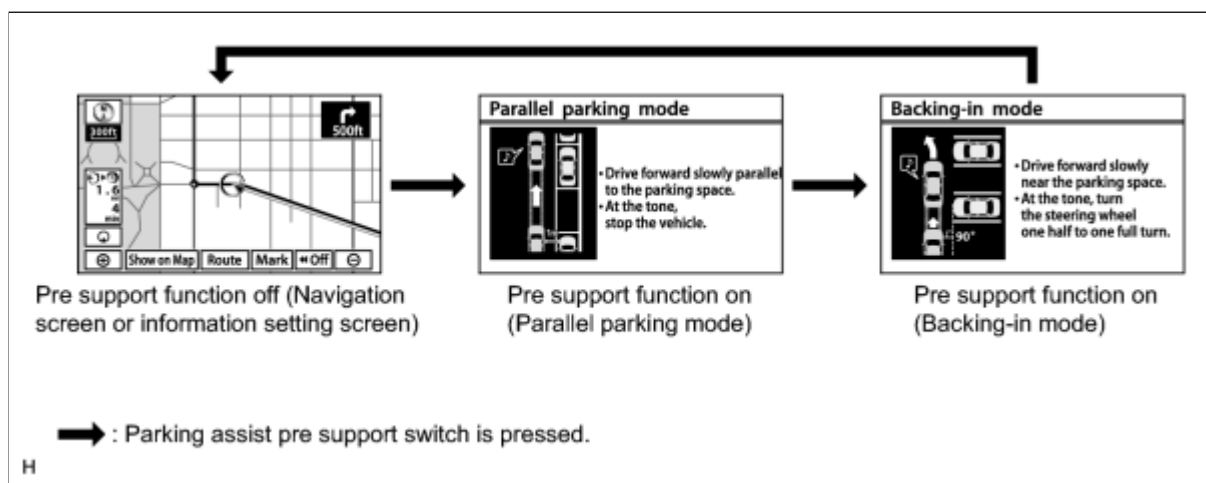

4. PRE SUPPORT FUNCTION

(a) Function Description

- (1) A pre support function is provided to assist the driver with initial positioning of the vehicle when backing-in mode or parallel parking mode operation is used.

(b) Pre Support Function Operation Condition

- (1) For the pre support function, when the advanced parking guidance system is operating normally (no DTCs are stored) and the following conditions are met, pressing the parking assist pre support switch changes the image displayed on the screen and pre support operation starts.

SCREEN DISPLAYED ON NAVIGATION RECEIVER ASSEMBLY	SHIFT POSITION	VEHICLE SPEED	SCREEN DISPLAYED (DISPLAY SWITCHES IN THE FOLLOWING SEQUENCE WHEN PARKING ASSIST PRE SUPPORT SWITCH IS PRESSED)
Navigation screen or information setting screen	Other than P or R	15 km/h (9.3 mph) or less	Pre support off (Navigation screen or information setting screen) → Pre support on (Parallel parking mode) → Pre support on (Backing-in mode) → Pre support off (Navigation screen or information setting screen)*1

*1: A tone sounds when the screen transfers.

(c) Backing-in Mode Operation

- (1) Press the parking assist pre support switch before the target parking space to turn on the pre support function (backing-in mode).
- (2) Drive the vehicle slowly while keeping a distance of approximately 1 m (3.3 ft.) from and perpendicular to the target parking space or vehicles around the target parking space. When the ultrasonic sensor (No. 1 ultrasonic sensor) detects an available parking space, start to turn the steering wheel from the straight ahead position when the tone sounds.

HINT:

- An available parking space may not be detected by the ultrasonic sensor (No. 1 ultrasonic sensor) depending on the distance between the vehicle being parked and the target parking space or vehicles around the target parking space, vehicle orientation and vehicle speed.
- A target parking space may not be detected by the ultrasonic sensor (No. 1 ultrasonic sensor) depending on the conditions around the target parking space. For details, refer to Precautions for the parking space detection sensor INFO.
- When the ultrasonic sensor (No. 1 ultrasonic sensor) cannot detect a target parking space, a tone will not sound.

- (3) Drive the vehicle while turning the steering wheel and when the vehicle reaches the support start position (the tone will sound twice), stop the vehicle, return the steering wheel to the straight ahead position, and move the shift lever to R.
- (4) When the advanced parking guidance screen is displayed, the target parking frame will also be displayed for the target parking space that is detected by the ultrasonic sensor (No. 1 ultrasonic sensor) during the pre support function operation.

(d) Parallel Parking Mode Operation

- (1) Press the parking assist pre support switch before the target parking space to turn on the pre support function (parallel parking mode).
- (2) Drive the vehicle slowly while keeping a distance of approximately 1 m (3.3 ft.) from and parallel to the target parking space or vehicles around the target parking space to allow the ultrasonic sensor (No. 1 ultrasonic sensor) to start detection.

HINT:

- For parallel parking mode, a tone will not sound when the ultrasonic sensor (No. 1 ultrasonic sensor) detects the available parking space.
- An available parking space may not be detected by the ultrasonic sensor (No. 1 ultrasonic sensor) depending on a distance between the vehicle being parked and the target parking space or vehicles around the target parking space, vehicle orientation and vehicle speed.
- A target parking space may not be detected by the ultrasonic sensor (No. 1 ultrasonic sensor) depending on the conditions around the target parking space. For details, refer to Precautions for the parking space detection sensor

- (3) Drive as is and stop the vehicle when the vehicle reaches the support start position (the tone will sound twice), and move the shift lever to R.

HINT:

When the ultrasonic sensor (No. 1 ultrasonic sensor) cannot detect a target parking space, the tone will not sound.

- (4) When the advanced parking guidance screen is displayed, the target parking frame will also be displayed for the target parking space that is detected by the ultrasonic sensor (No. 1 ultrasonic sensor) during the pre support function operation.

5. COMMUNICATION SYSTEM OUTLINE

- (a) The components of the advanced parking guidance system communicate with each other through the AVC-LAN. The parking assist ECU judges the vehicle angle data transmitted via the AVC-LAN from the navigation receiver assembly (the data is calculated by the navigation receiver assembly by integrating the yaw rate of the gyro sensor built into the navigation receiver assembly).
- (b) If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and this system will stop functioning.

6. DIAGNOSTIC FUNCTION OUTLINE

- (a) This advanced parking guidance system has a diagnostic function displayed in the navigation receiver assembly. This function enables the calibration (adjustment and verify) of the advanced parking guidance system .
- (b) The advanced parking guidance system can check the following items by using the Techstream.

ITEM	PROCEED TO
DTC	
Data List / Active Test	

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the advanced parking guidance system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage with the power switch off.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

NEXT

3. CHECK NAVIGATION SYSTEM

(a) Refer to the navigation system .

Result:

RESULT	PROCEED TO
Navigation system is normal	A
Navigation system is abnormal	B

B  GO TO NAVIGATION SYSTEM

A

4.	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*
-----------	--

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

RESULT	PROCEED TO
CAN DTC is not output	A
CAN DTC is output	B

INITIALIZATION

1. INITIALIZE ADVANCED PARKING GUIDANCE SYSTEM

(a) When "System initializing" message is displayed on the navigation receiver assembly, correct the steering angle neutral point using the following method.

(1) Fully turn the steering wheel to the right and left on the flat ground.

NOTICE:

Memorizing the steering angle neutral point must be carried out with the hybrid system started. Apply the parking brake, depress the brake pedal, push the P position switch, and ensure that the vehicle is not moving.

HINT:

"?" button is displayed at the same time as "System initializing" message. If the "?" button is selected, this method is displayed.

CALIBRATION

1. ADJUST ADVANCED PARKING GUIDANCE SYSTEM

- (a) This advanced parking guidance system can be set from the diagnostic screen of the navigation receiver assembly.
- (b) If the following operations are performed, it is necessary to perform adjustments and checks on the diagnostic screen.

PART NAME	OPERATION	ADJUSTMENT ITEM	PROCEED TO
Spiral with sensor cable sub-assembly	<ul style="list-style-type: none"> Removal and installation of the spiral with sensor cable sub-assembly Removal and installation of the connector of the spiral with sensor cable sub-assembly 	Steering angle neutral point	
		Steering angle setting	
Spiral with sensor cable sub-assembly	Replacement	Steering angle neutral point	
		Steering angle setting	
Parking assist ECU	Replacement	Parking assist ECU initialization	Step 2
Suspension, tires, etc.	The vehicle height changes because of suspension or tire replacement	Height control sensor vehicle height difference (Height set)	Step 3
		Rear television camera optical axis (Camera position setting)	Step 4
Rear television camera assembly	<ul style="list-style-type: none"> Replacement Installation angle of the rear television camera changes because of the removal and installation of the rear television camera, etc. 	Rear television camera optical axis (Camera position setting)	Step 4
Rear height control sensor sub-assembly RH	<ul style="list-style-type: none"> Replacement Installation position of the rear height control sensor sub-assembly RH changes because of the removal and installation of the rear height control sensor sub-assembly RH 	Height control sensor vehicle height difference (Height set)	Step 3
		Rear television camera optical axis (Camera position setting)	Step 4
		Lighting system initialization	
Rear bumper cover	<ul style="list-style-type: none"> Replacement Installation position of the rear bumper cover changes because of the removal and installation of the rear bumper cover 	Rear bumper position (BUMPER)	Step 5

HINT:

The adjustment values stored while performing advanced parking guidance system calibration are stored in the parking assist ECU.

2. PARKING ASSIST ECU INITIALIZATION

HINT:

Be sure to check for DTCs before performing this procedure INFO.

(a) Preparation for adjustment

(1) Park the vehicle on the flat place with the steering wheel centered.

HINT:

Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.

(2) Adjust the tire pressure to the specification.

(3) Measure the distance A between the ground and the edge of a rear wheel arch.

(4) Calculate the difference between the distance A and the standard height below.

Standard:

697 mm (2.29 ft.)

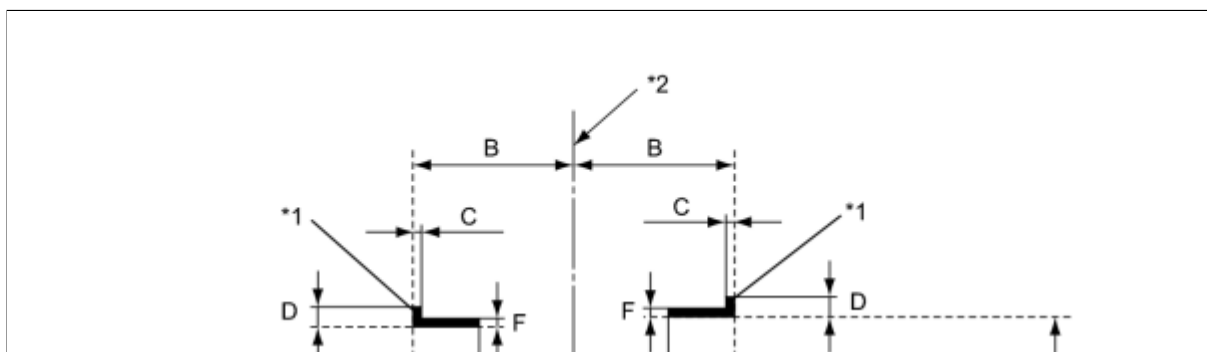

HINT:

Subtract the standard value from the measured value to get the standard height. When the measured value is 707 mm: $707 - 697 = +10$ (standard height is +10 mm).

(5) Set a target bar for optical axis adjustment of the rear television camera.

HINT:

Only when adjusting the optical axis of the camera, create a target bar for adjustment.

Dimension:

A	B	C	D	E	F
1100 mm (3.61 ft.)	1600 mm (5.25 ft.)	30 mm (1.18 in.)	100 mm (3.94 in.)	500 mm (1.64 ft.)	30 mm (1.18 in.)

Text in Illustration

*1	Target Bar for Camera Adjustment	*2	Vehicle Center
*3	Bumper Edge	*4	Front Side

HINT:

Check the tape color on the navigation receiver assembly and choose a tape color which can be easily seen.

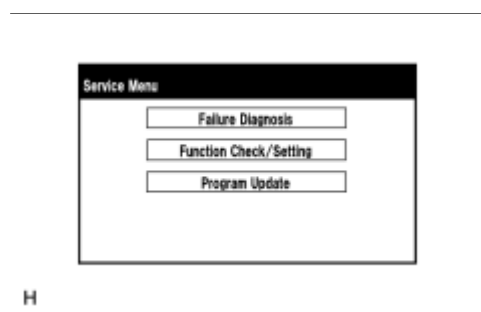

(b) Start diagnostic mode  .

NOTICE:

Mode setting must be carried out with the hybrid system started. Apply the parking brake, depress the brake pedal, push the P position switch, and ensure that the vehicle is not moving.

HINT:

The displayed items may differ depending on vehicle specifications.

(1) Select "Function Check/Setting" on the Service Menu screen.

(2) Select "Camera Setting" on the Function Check/Setting screen

H

(2) Select "Camera Setting" on the Function Check/Setting screen.

(3) Check that "CHK" (red) is not displayed on the SIGNAL CHECK screen.

- When "CHK" (red) is displayed for any items except "EPS TYPE" on the SIGNAL CHECK screen, selecting "NEXT" will not change the screen to the INDIVIDUAL SETTING screen.
- When "CHK" (red) is displayed for any items except "EPS TYPE" and "HT INIT" on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen  .

HINT:

When the screen is not change to the HEIGHT SET screen, check for DTCs and perform troubleshooting based on the output DTCs  .

(c) HEIGHT SET

NOTICE:

- The height control sensor vehicle height difference setting must be performed on the flat place.
- Before performing the television camera optical axis adjustment, the height control sensor vehicle height difference must be performed in the "HEIGHT SET" screen.

H

(1) Select the indicator "A" for "HT INIT" on the SIGNAL CHECK screen.

H

(2) Press "UP" and "DOWN" to input the calculated difference.

- A positive value is indicated in green and a negative value is indicated in red.
- When a value is "10 MM" in green, it means +10 mm.
- Available setting range: -102 mm to +102 mm (can be adjusted in 1 mm increments)

(3) After inputting the calculated difference, select "OK". The height control sensor vehicle height difference setting will be recorded.

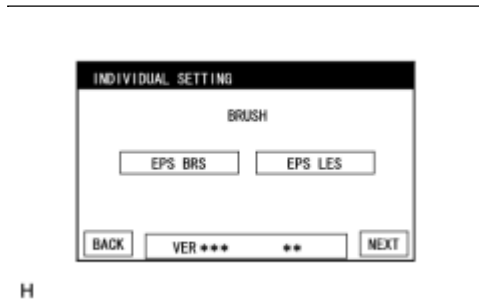

HINT:

- When "OK" is selected, a beep will sound to confirm that the height difference set values have been stored.
- The setting value will not be stored unless "OK" is selected.
- Until a beep finishes sounding, the adjustment values are not stored.
- When "BACK" is selected, the screen changes to SIGNAL CHECK screen without storing the set values.
- Press "OK" with the vehicle in the same condition as when the vehicle height was measured.
- If a person was in the driver seat when the vehicle height was measured, press "OK" with the same person in the driver seat.
- On the "SIGNAL CHECK" screen, check that the indicator "A" for "HT INIT" is "OK" (blue).

(4) Select "NEXT" on the SIGNAL CHECK screen.

(d) INDIVIDUAL SETTING

(1) Confirm the vehicle specification and select the EPS brush specification.

VEHICLE SPECIFICATION	EPS BRUSH SPECIFICATION
for 15 inch tire models	EPS BRS (Brush type)
for 17 inch tire models	EPS LES (Brushless type)

- Selected EPS brush specification is indicated in blue.
- EPS brush refers to the type of motor used for the EPS system (with brushes or brushless).

(2) Select "NEXT" on the INDIVIDUAL SETTING screen.

(e) CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT)

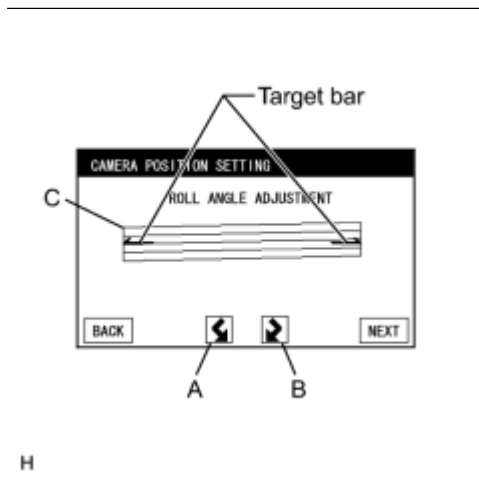

NOTICE:

Before performing the television camera optical axis adjustment, the height control sensor vehicle height difference setting must be performed in the "HEIGHT SET" screen.

- When the back door is open, the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message will be displayed and television camera optical axis adjustment will not be possible.
- If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (A back door open warning message is displayed even after back door is closed) INFO.

(1) Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

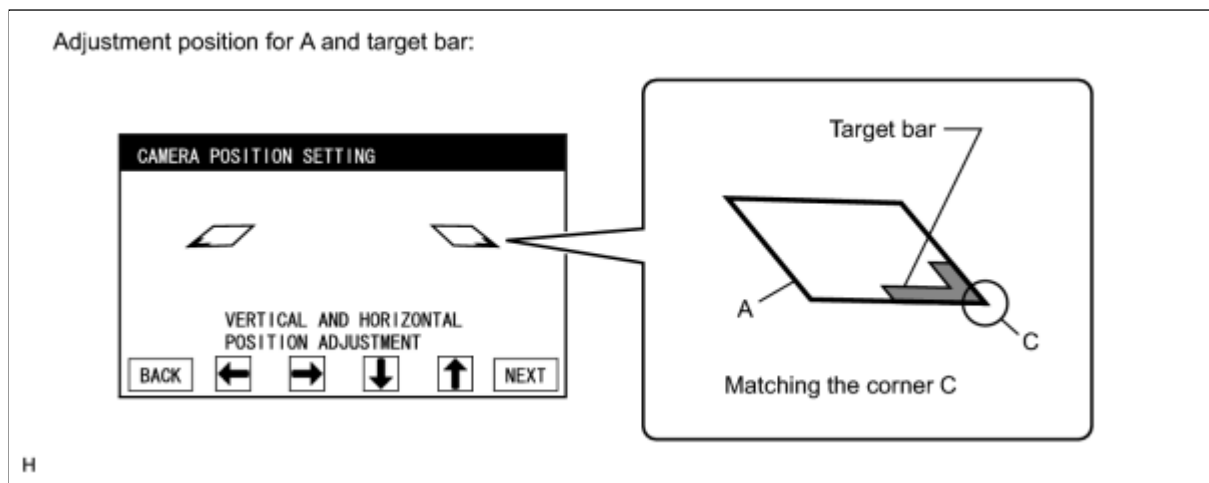

(2) Select "NEXT" on the CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT) screen.

(f) CAMERA POSITION SETTING (VERTICAL AND HORIZONTAL POSITION ADJUSTMENT)

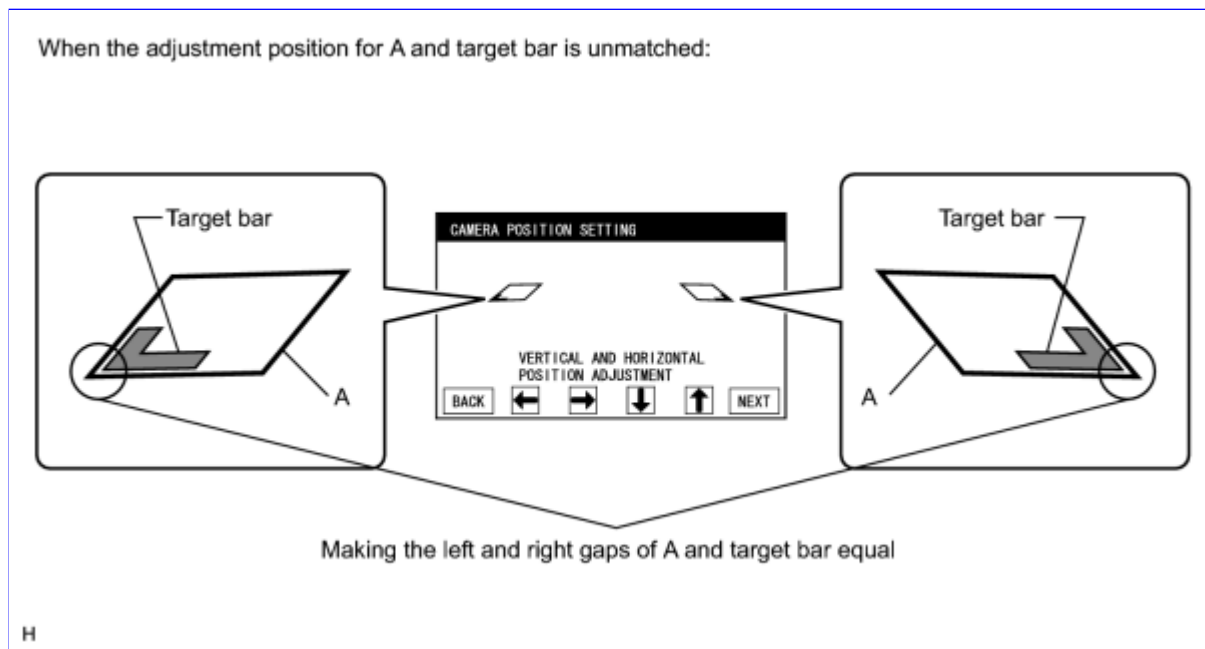

(1) By pressing the left and right, and up and down switches, move the parallelograms (A) vertically and horizontally so that the corners of the target bars (C) and the corners of the parallelograms (A) match.

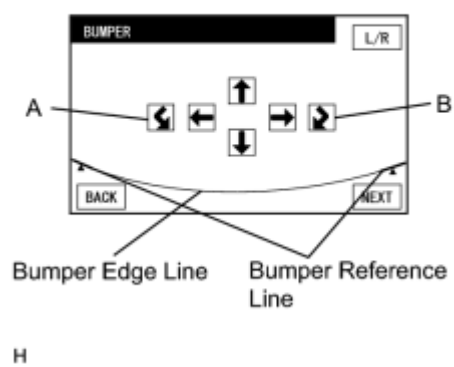

NOTICE:

- If the left and right parallelograms (A) and target bars do not match completely, just match the corners of the target bars (C) with the corners of the parallelograms (A).
- If the left and right parallelograms (A) and the corners of the target bars (C) do not match, make the gaps between each parallelogram (A) and the target bars equal on the left and right sides.

(2) Select "NEXT" on the CAMERA POSITION SETTING (VERTICAL AND HORIZONTAL POSITION ADJUSTMENT) screen.

Adjustment for left and right bumpers reference lines:

- (1) By pressing the left and right, up and down and A and B switches, move the bumper reference lines vertically and horizontally or rotate them so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

If the bumper reference lines do not overlap or contact the bumper edge line, select "L/R" to perform bumper reference line position adjustment (individual adjustment).

- (2) When the bumper reference lines and bumper edge line overlap or contact each other, select "NEXT".

(h) LEFT BUMPER

Adjustment for left bumper reference line:

- (1) By pressing the left and right, up and down and A and B switches, move the left bumper reference line vertically and horizontally or rotate it so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

When the left bumper reference line overlaps or contacts the bumper edge line in the bumper reference line position adjustment (individual adjustment) step, select "NEXT".

- (2) Select "NEXT" on the LEFT BUMPER screen.

(i) RIGHT BUMPER

Adjustment for right bumper reference line:

- (1) By pressing the left and right, up and down and A and B switches, move the right bumper reference line vertically and horizontally or rotate it so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

When the right bumper reference line overlaps or contacts the bumper edge line in the bumper reference line position adjustment (individual adjustment) step, select "NEXT".

- (2) Select "NEXT" on the RIGHT BUMPER screen.

(j) VERIFY MODE

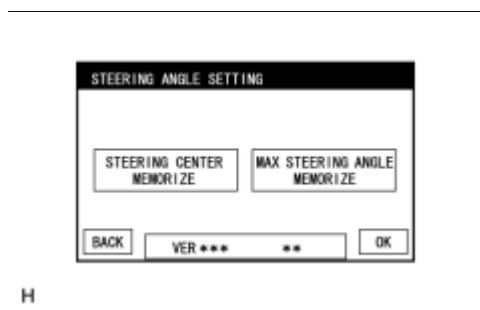

- (1) Check that line A (indicating 1100 mm forward from the bumper edge) and the target bars are nearly overlapping and that the bumper reference lines and bumper edge line are nearly overlapping. With the steering wheel centered, check that the predicted path line is straight (overlapping the vehicle width extension lines).

- (2) Selecting "NEXT" on the VERIFY MODE screen will be completed the camera aiming adjustment.

HINT:

- When "NEXT" is selected, a beep will sound to confirm that the camera aiming adjustment values have been stored.
- The adjustment value will not be stored unless "NEXT" is selected.
- Until a beep finishes sounding, the adjustment values are not stored.

(k) STEERING ANGLE SETTING

- (1) Perform the STEERING CENTER MEMORIZE operation.

- Check that the steering wheel is centered, and then select "STEERING CENTER MEMORIZE".

HINT:

When performing removal and installation, or replacement of the television camera, steering angle adjustment is not required.

- (2) Perform the MAX STEERING ANGLE MEMORIZE operation.

- After adjusting the steering angle neutral point, turn the steering wheel to the left and right lock positions and select "MAX STEERING ANGLE MEMORIZE". The maximum steering angle is then stored and the screen changes to the Function Check/Setting screen.

HINT:

- It is also possible to start by initially turning the steering to the right side.
- When "MAX STEERING ANGLE MEMORIZE" is selected, a beep will sound to confirm that the steering adjustment values have been stored.
- Until a beep finishes sounding, the adjustment values are not stored.
- The adjustment value will not be stored unless "MAX STEERING ANGLE MEMORIZE" is selected after turning the steering wheel side to side.
- When "BACK" is selected, the screen changes to VERIFY MODE without storing the set values.
- The "OK" button does not respond until the system stores the steering angle neutral point and maximum steering angle.
- Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" may not cause the adjustment value to be stored if the steering sensor is malfunctioning.
- If selecting "MAX STEERING ANGLE MEMORIZE" does not cause the adjustment value to be stored after adjusting the steering angle, replace the spiral with sensor cable sub assembly.

stored after adjusting the steering angle, replace the spiral with sensor cable sub-assembly

(l) Finish diagnostic mode  .

(m) Confirm steering angle adjustment.

HINT:

If the steering angle has been adjusted, confirm the steering angle adjustment on the advanced parking guidance screen after finishing diagnosis mode.

- (1) Check on the advanced parking guidance screen that the predicted path line moves until the steering wheel is fully turned to either the left or right.

HINT:

If the predicted path line stops moving before the steering wheel is fully turned to either the left or right, the steering angle adjustment values have not been stored correctly. In this case, perform "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" again.

3. HEIGHT CONTROL SENSOR VEHICLE HEIGHT DIFFERENCE SETTING (HEIGHT SET)

(a) Preparation for adjustment

HINT:

- The height control sensor vehicle height difference setting must be performed on the flat place.
- Before performing the television camera optical axis adjustment, the height control sensor vehicle height difference setting must be performed in the "HEIGHT SET" screen.

- (1) Adjust the tire pressure to the specification.

- (2) Measure the distance A between the ground and the edge of a rear wheel arch.

- (3) Calculate the difference between the distance A and the standard height below.

Standard:

697 mm (2.29 ft.)

HINT:

Subtract the standard value from the measured value to get the standard height. When the measured value is 707 mm: $707 - 697 = +10$ (standard height is +10 mm).

(b) Start diagnostic mode.

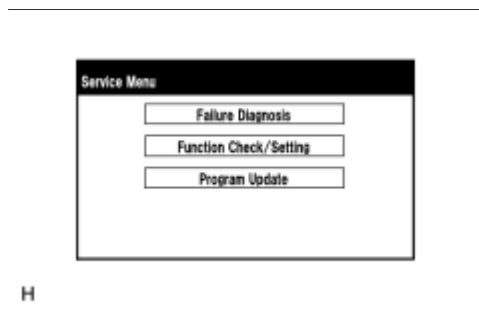

NOTICE:

Make certain that the vehicle is parked on a flat surface and the vehicle is in Park (P) position before starting the adjustment.

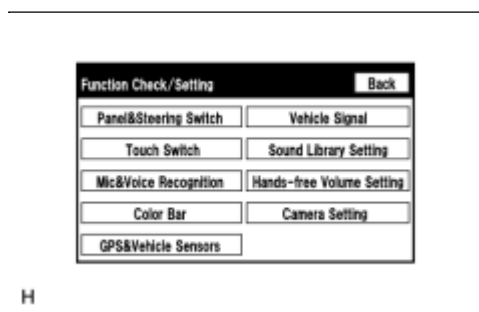

MODE SETTING must be carried out with the hybrid system started. Apply the parking brake, depress the brake pedal, push the P position switch, and ensure that the vehicle is not moving.

HINT:

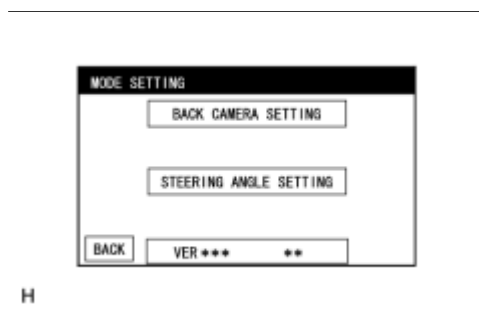

The displayed items may differ depending on vehicle specifications.

(1) Select "Function Check/Setting" on the Service Menu screen.

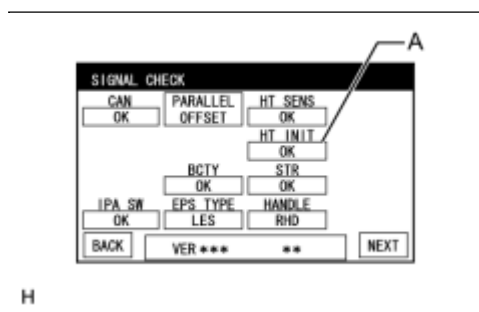

(2) Select "Camera Setting" on the Function Check/Setting screen.

(3) Select "BACK CAMERA SETTING" on the MODE SETTING screen.

HINT:

To select a grayed out item, select and hold the item for 2 seconds or more.

(4) Select the indicator "A" for "HT INIT" on the SIGNAL CHECK screen.

- When "CHK" (red) is displayed for any items except "EPS TYPE" and "HT INIT" on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen.
- When the screen is not change to the HEIGHT SET screen, check for DTCs and perform troubleshooting based on the output DTCs.

(c) HEIGHT SET

(1) Press "UP" and "DOWN" to input the calculated difference.

- A positive value is indicated in green and a negative value is indicated in red.
- When a value is "10 MM" in green, it means +10 mm.
- Available setting range: -102 mm to +102 mm (can be adjusted in 1 mm increments)

(2) After inputting the calculated difference, select "OK". The height control sensor vehicle height difference setting will be recorded.

HINT:

- When "OK" is selected, a beep will sound to confirm that the height difference set values have been stored.
- The setting value will not be stored unless "OK" is selected.
- Until a beep finishes sounding, the adjustment values are not stored.
- When "BACK" is selected, the screen changes to SIGNAL CHECK screen without storing the set values.
- Press "OK" with the vehicle in the same condition as when the vehicle height was measured.
- If a person was in the driver seat when the vehicle height was measured, press "OK" with the same person in the driver seat.
- On the "SIGNAL CHECK" screen, check that the indicator "A" for "HT INIT" is "OK" (blue).

(d) Finish diagnostic mode.

4. REAR TELEVISION CAMERA OPTICAL AXIS ADJUSTMENT (CAMERA POSITION SETTING)

HINT:

Be sure to check for DTCs before performing this procedure.

(a) Preparation for adjustment

NOTICE:

Before performing the television camera optical axis adjustment, the height control sensor vehicle height difference setting must be performed in the "HEIGHT SET" screen.

(1) Park the vehicle with the steering wheel centered.

HINT:

Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.

- (2) Adjust the tire pressure to the specification.
- (3) Set a target bar for optical axis adjustment of the rear television camera.

HINT:

Only when adjusting the optical axis of the camera, create a target bar for adjustment.

Dimension:

A	B	C	D	E	F
1100 mm (3.61 ft.)	1600 mm (5.25 ft.)	30 mm (1.18 in.)	100 mm (3.94 in.)	500 mm (1.64 ft.)	30 mm (1.18 in.)

Text in Illustration

*1	Target Bar for Camera Adjustment	*2	Vehicle Center
*3	Bumper Edge	*4	Front Side

HINT:

Check the tape color on the navigation receiver assembly and choose a tape color which can be easily seen.

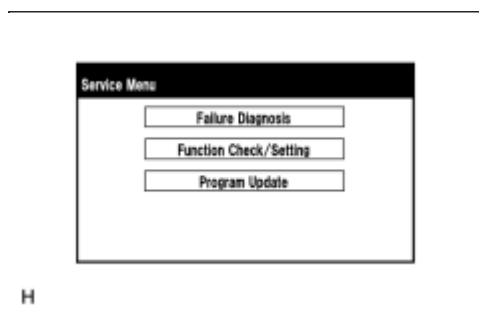

(b) Start diagnostic mode.

NOTICE:

Mode setting must be carried out with the hybrid system started. Apply the parking brake, depress the brake pedal, push the P position switch, and ensure that the vehicle is not moving.

HINT:

The displayed items may differ depending on vehicle specifications.

(1) Select "Function Check/Setting" on the "Service Menu" screen.

(2) Select "Camera Setting" on the Function Check/Setting screen.

H

(3) Select "BACK CAMERA SETTING" on the MODE SETTING screen.

HINT:

To select a grayed out item, select and hold the item for 2 seconds or more.

H

(4) Select "NEXT" on the SIGNAL CHECK screen.

- When "CHK" (red) is displayed for any items except "EPS TYPE" on the SIGNAL CHECK screen, selecting "NEXT" will not change the screen to the INDIVIDUAL SETTING screen.
- When "CHK" (red) is displayed for any items except "EPS TYPE" and "HT INIT" on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen.

H

(c) INDIVIDUAL SETTING

(1) Confirm the vehicle specification and select the EPS brush specification.

VEHICLE SPECIFICATION	EPS BRUSH SPECIFICATION
for 15 inch tire models	EPS BRS (Brush type)
for 17 inch tire models	EPS LES (Brushless type)

H

- Selected EPS brush specification is indicated in blue.
- EPS brush refers to the type of motor used for the EPS system (with brushes or brushless).
- If the selected EPS brush specification does not match the vehicle specification, select the one that matches the vehicle specification.
- When the EPS brush specification is modified, steering angle setting is required **INFO**.

(2) Select "NEXT" on the INDIVIDUAL SETTING screen.

- The INDIVIDUAL SETTING screen will not be displayed when "BACK" is selected after switching to the CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT) screen.
- To display the INDIVIDUAL SETTING screen again, go back to the Function Check/Setting screen, select "Camera Setting" and repeat the steps.

(d) CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT)

NOTICE:

Before performing the television camera optical axis adjustment, the height control sensor vehicle height difference setting must be performed in the "HEIGHT SET" screen.

- When the back door is open, the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message will be displayed and television camera optical axis adjustment will not be possible.
- If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (A back door open warning message is displayed even after back door is closed).

- (1) Select switches A and B to rotate C so that it is parallel to the target adjustment bar.
- (2) Select "NEXT" on the CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT) screen.

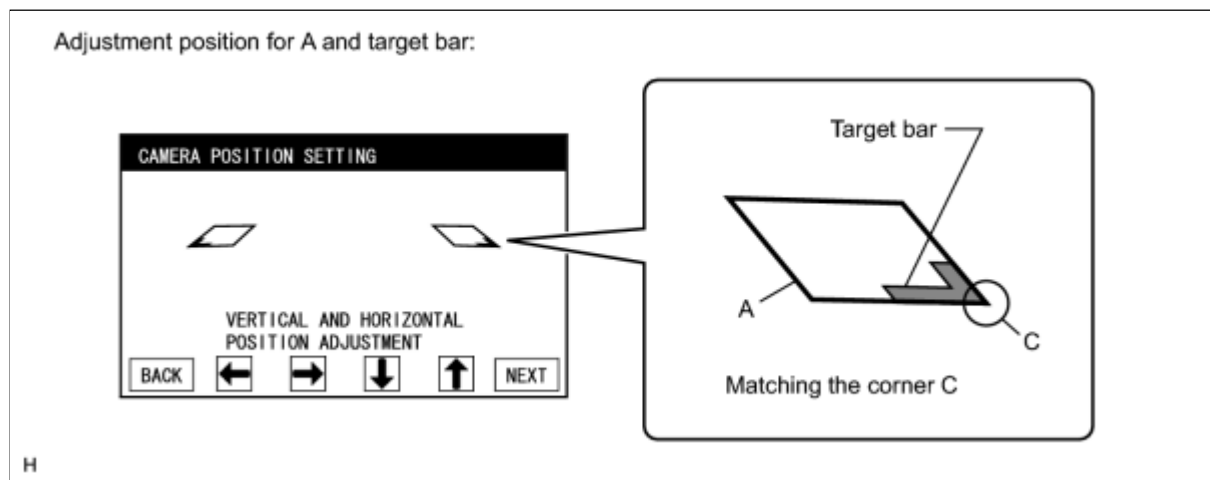

H

(e) CAMERA POSITION SETTING (VERTICAL AND HORIZONTAL POSITION ADJUSTMENT)

- (1) By pressing the left and right, and up and down switches, move the parallelograms (A) vertically and horizontally so that the corners of the target bars (C) and the corners of the parallelograms (A) match.

H

H

NOTICE:

- If the left and right parallelograms (A) and target bars do not match completely, just match the corners of the target bars (C) with the corners of the parallelograms (A).
- If the left and right parallelograms (A) and the corners of the target bars (C) do not match, make the gaps between each parallelogram (A) and the target bars equal on the left and right sides.

- (2) Select "NEXT" on the CAMERA POSITION SETTING (VERTICAL AND HORIZONTAL POSITION ADJUSTMENT) screen.

(f) BUMPER (SIMULTANEOUS ADJUSTMENT)

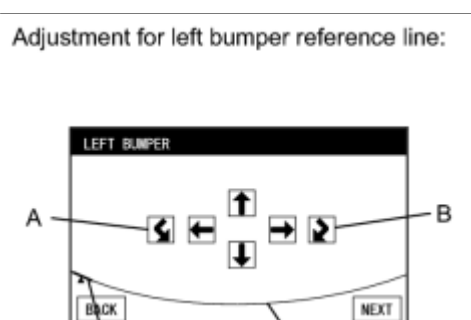

- (1) By pressing the left and right, up and down and A and B switches, move the bumper reference lines vertically and horizontally or rotate them so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

If the bumper reference lines do not overlap or contact the bumper edge line, select "L/R" to perform bumper reference line position adjustment (individual adjustment).

- (2) When the bumper reference lines and bumper edge line overlap or contact each other, select "NEXT".

(g) LEFT BUMPER

- (1) By pressing the left and right, up and down and A and B switches, move the left bumper reference line vertically and horizontally or rotate it so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

When the left bumper reference line overlaps or contacts the bumper

edge line in the bumper reference line position adjustment (individual adjustment) step, select "NEXT".

(2) Select "NEXT" on the LEFT BUMPER screen.

(h) RIGHT BUMPER

Adjustment for right bumper reference line:

(1) By pressing the left and right, up and down and A and B switches, move the right bumper reference line vertically and horizontally or rotate it so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

When the right bumper reference line overlaps or contacts the bumper edge line in the bumper reference line position adjustment (individual adjustment) step, select "NEXT".

(2) Select "NEXT" on the RIGHT BUMPER screen.

(i) VERIFY MODE

(1) Check that line A (indicating 1100 mm forward from the bumper edge) and the target bars are nearly overlapping and that the bumper reference lines and bumper edge line are nearly overlapping. With the steering wheel centered, check that the predicted path line is straight (overlapping the vehicle width extension lines).

(2) Selecting "NEXT" on the VERIFY MODE screen will be completed the camera aiming adjustment.

HINT:

- When "NEXT" is selected, a beep will sound to confirm that the camera aiming adjustment values have been stored.
- The adjustment value will not be stored unless "NEXT" is selected.
- Until a beep finishes sounding, the adjustment values are not stored.

(j) Finish diagnostic mode.

5. BUMPER POSITION SETTING

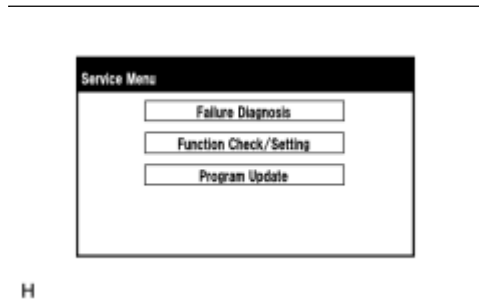

(a) Start diagnostic mode.

NOTICE:

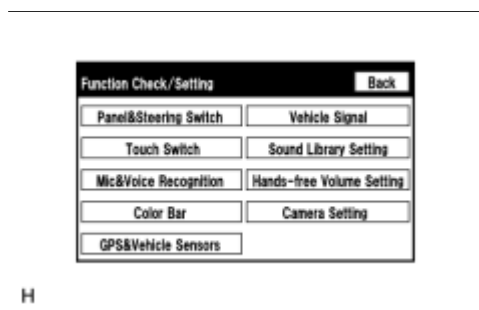

Mode setting must be carried out with the hybrid system started. Apply the parking brake, depress the brake pedal, push the P position switch, and ensure that the vehicle is not moving.

HINT:

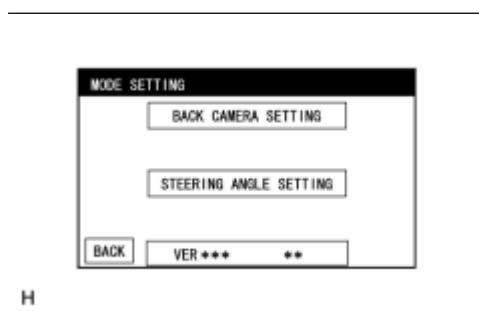

The displayed items may differ depending on vehicle specifications.

(1) Select "Function Check/Setting" on the "Service Menu" screen.

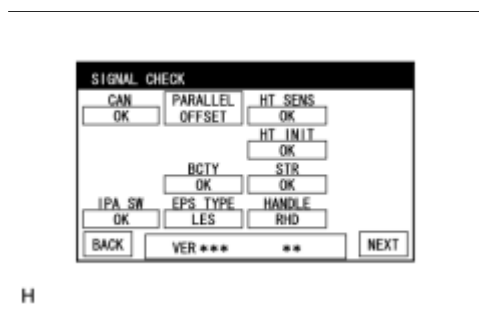

(2) Select "Camera Setting" on the Function Check/Setting screen.

(3) Select "BACK CAMERA SETTING" on the MODE SETTING screen.

HINT:

To select a grayed out item, select and hold the item for 2 seconds or more.

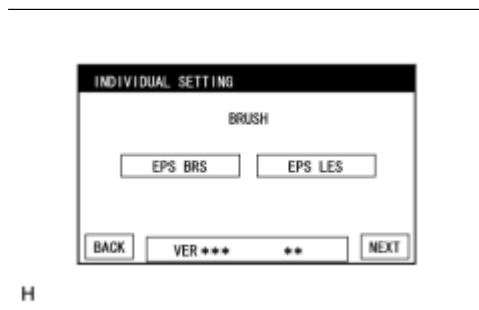

(4) Select "NEXT" on the SIGNAL CHECK screen.

- When "CHK" (red) is displayed for any items except "EPS TYPE" on the SIGNAL CHECK screen, selecting "NEXT" will not change the screen to the INDIVIDUAL SETTING screen.
- When "CHK" (red) is displayed for any items except "EPS TYPE" and "HT INIT" on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen.

(b) INDIVIDUAL SETTING

(1) Confirm the vehicle specification and select the EPS brush specification.

VEHICLE SPECIFICATION	EPS BRUSH SPECIFICATION
for 15 inch tire models	EPS BRS (Brush type)
for 17 inch tire models	EPS LES (Brushless type)

- Selected EPS brush specification is indicated in blue.
- EPS brush refers to the type of motor used for the EPS system (with brushes or brushless).
- If the selected EPS brush specification does not match the vehicle specification, select the one that matches the vehicle specification.
- When the EPS brush specification is modified, steering angle setting is required.

(2) Select "NEXT" on the INDIVIDUAL SETTING screen.

- The INDIVIDUAL SETTING screen will not be displayed when "BACK" is selected after switching to the CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT) screen.
- To display the INDIVIDUAL SETTING screen again, go back to the Function Check/Setting screen, select "Camera Setting" and repeat the steps.

(c) CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT)

- When only bumper reference line position adjustment is required after servicing the vehicle, CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT) is unnecessary. Select "NEXT".
- When the back door is open, the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message will be displayed and television camera optical axis adjustment will not be possible.
- If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (A back door open warning message is displayed even after back door is closed).

(1) Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

(2) Select "NEXT" on the CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT) screen.

(d) CAMERA POSITION SETTING (VERTICAL AND HORIZONTAL POSITION ADJUSTMENT)

(1) By pressing the left and right, and up and down switches, move the parallelograms (A) vertically and horizontally so that the corners of the target bars (C) and the corners of the parallelograms (A) match.

HINT:

When only bumper reference line position adjustment is required after servicing the vehicle, CAMERA POSITION SETTING (ROLL ANGLE ADJUSTMENT) is unnecessary. Select "NEXT".

- (2) Select "NEXT" on the CAMERA POSITION SETTING (VERTICAL AND HORIZONTAL POSITION ADJUSTMENT) screen.

(e) BUMPER (SIMULTANEOUS ADJUSTMENT)

- (1) By pressing the left and right, up and down and A and B switches, move the bumper reference lines vertically and horizontally or rotate them so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

If the bumper reference lines do not overlap or contact the bumper edge line, select "L/R" to perform bumper reference line position adjustment (individual adjustment).

- (2) When the bumper reference lines and bumper edge line overlap or contact each other, select "NEXT".

(f) LEFT BUMPER

- (1) By pressing the left and right, up and down and A and B switches, move the left bumper reference line vertically and horizontally or rotate it so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

When the left bumper reference line overlaps or contacts the bumper edge line in the bumper reference line position adjustment (individual adjustment) step, select "NEXT".

- (2) Select "NEXT" on the LEFT BUMPER screen.

(g) RIGHT BUMPER

- (1) By pressing the left and right, up and down and A and B switches, move the right bumper reference line vertically and horizontally or rotate it so that the bumper reference lines overlap or contact the bumper edge line.

HINT:

When the right bumper reference line overlaps or contacts the bumper edge line in the bumper reference line position adjustment (individual adjustment) step, select "NEXT".

(2) Select "NEXT" on the RIGHT BUMPER screen.

(h) VERIFY MODE

(1) Check that the bumper reference lines and bumper edge line are nearly overlapping.

(2) Selecting "NEXT" on the VERIFY MODE screen will be completed the camera aiming adjustment.

HINT:

- When "NEXT" is selected, a beep will sound to confirm that the bumper position adjustment values have been stored.
- The adjustment value will not be stored unless "NEXT" is selected.
- Until a beep finishes sounding, the adjustment values are not stored.

(i) Finish diagnostic mode.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

NOTICE:

The following inspection procedure of the advanced parking guidance is described on the assumption that the navigation system is normal. If navigation system has any malfunction, first proceed with troubleshooting of the navigation system.

General

SYMPTOM	SUSPECTED AREA	SEE PAGE
When the shift lever is in R, the advanced parking guidance image is not displayed (screen is not black).	Reverse signal circuit (Navigation System)	INFO
	Navigation receiver assembly	INFO
When the shift lever is in R, the advanced parking guidance image is not displayed (screen is black).	Power source circuit	INFO

TERMINALS OF ECU

1. PARKING ASSIST ECU

- (a) Disconnect the L65 connector from the parking assist ECU.
 (b) Measure the voltage and resistance of each terminal of the wire harness side connector.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
L65-1 (+B) - L65-3 (GND1)	SB - W-B	Power source signal	Always	11 to 14 V
L65-3 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L65-7 (IG) - L65-3 (GND1)	B - W-B	IG power source signal	Power switch on (IG)	11 to 14 V
L65-8 (ACC) - L65-3 (GND1)	GR - W-B	ACC power source signal	Power switch on (ACC)	11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

- (c) Reconnect the L65 connector to the ECU.
 (d) Measure the voltage and resistance, and check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
L64-11 (CV-) - L65-3 (GND1)	B - W-B	Rear television camera ground	Always	Below 1 V
L64-12 (CV+) - L65-3 (GND1)	R - W-B	Rear television camera display signal (NTSC) input	Power switch on (IG) Shift lever in R Under normal conditions	Pulse generation (See waveform 1)
			Power switch on (IG) Shift lever in R Camera lens is covered, blacking out screen	Pulse generation (See waveform 2)
L64-13 (CGND) - L65-3 (GND1)	Shield - W-B	Rear television camera ground (shield)	Always	Below 1 V
L64-14 (CB+) -	W - W-B	Power source to rear television	Power switch on (IG)	5 to 7 V

L65-3 (GND1)	W - W-B	camera	Shift lever in R	5.8 to 7.0 V
L64-19 (CSB3) - L65-3 (GND1)	G - W-B	Power source to ultrasonic sensor	Power switch on (IG)	7 to 9 V
L64-20 (CSG3) - L65-3 (GND1)	R - W-B	Ultrasonic sensor ground	Always	Below 1 Ω
L64-21 (LIN3)	GR	Ultrasonic sensor signal input and output	-	-
L65-11 (ISSW) - L65-3 (GND1)	L - W-B	Parking assist pre support signal input	Power switch on (IG) Parking assist pre support switch pushed in	Below 1 V
			Power switch on (IG) Parking assist pre support switch not pushed	4.75 to 5.25 V
L65-21 (CANL) - L65-3 (GND1)	BR - W-B	CAN communication signal	CAN communication circuit	Pulse generation
L65-22 (CANH) - L65-3 (GND1)	Y - W-B	CAN communication signal	CAN communication circuit	Pulse generation
L65-24 (TX-) - L65-25 (TX+)	P - LG	AVC-LAN communication signal	-	-

If the result is not as specified, the ECU may have a malfunction.

(e) Reference (Oscilloscope waveform):

HINT:

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

(1) Waveform 1 (under normal conditions)

ITEM	CONTENT
Terminal No. (Symbol)	L64-12 (CV+) - L65-3 (GND1)
Tool Setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

HINT:

The video waveform changes according to the image sent by the rear television camera assembly.

(2) Waveform 2 (camera lens is covered, blacking out the screen)

ITEM	CONTENT
Terminal No. (Symbol)	L64-12 (CV+) - L65-3 (GND1)
Tool Setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

H

HINT:

The video waveform changes according to the image sent by the rear television camera assembly.

Text in Illustration

*1	Waveform 1 (under normal conditions)
*2	Waveform 2 (camera lens is covered, blacking out the screen)
*3	Synchronized Signal
*4	Video Waveform

2. REAR TELEVISION CAMERA ASSEMBLY

- (a) Disconnect the V6 connector from the rear television camera assembly.
- (b) Measure the voltage of each terminal of the wire harness side connector.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
V6-3 (CGND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
V6-4 (CB+) - V6-3 (CGND)	W - W-B	Power source	Power switch on (IG) Shift lever in R	5.8 to 7.0 V

If the result is not as specified, there may be a malfunction on the wire harness side.

- (c) Reconnect the V6 connector to the rear television camera assembly.
- (d) Check for pulses according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
			Power switch on (IG)	Pulse generation

V6-2 (CV+) - V6-1 (CV-)	R - B	Display signal	Shift lever in R Under normal conditions	(See waveform 1)
			Power switch on (IG) Shift lever in R Camera lens covered, blacking out screen	Pulse generation (See waveform 2)

HINT:

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

If the result is not as specified, the camera may have a malfunction.

(e) Reference (Oscilloscope waveform):

HINT:

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

(1) Waveform 1 (under normal conditions)

ITEM	CONTENT

3. NAVIGATION RECEIVER ASSEMBLY

DIAGNOSIS SYSTEM

1. ADVANCED PARKING GUIDANCE OR DIAGNOSIS SYSTEM

(a) For advanced parking guidance system diagnosis, signals received by the parking assist ECU can be checked and the advanced parking guidance system can be calibrated, adjusted and checked using the navigation receiver assembly.

NOTICE:

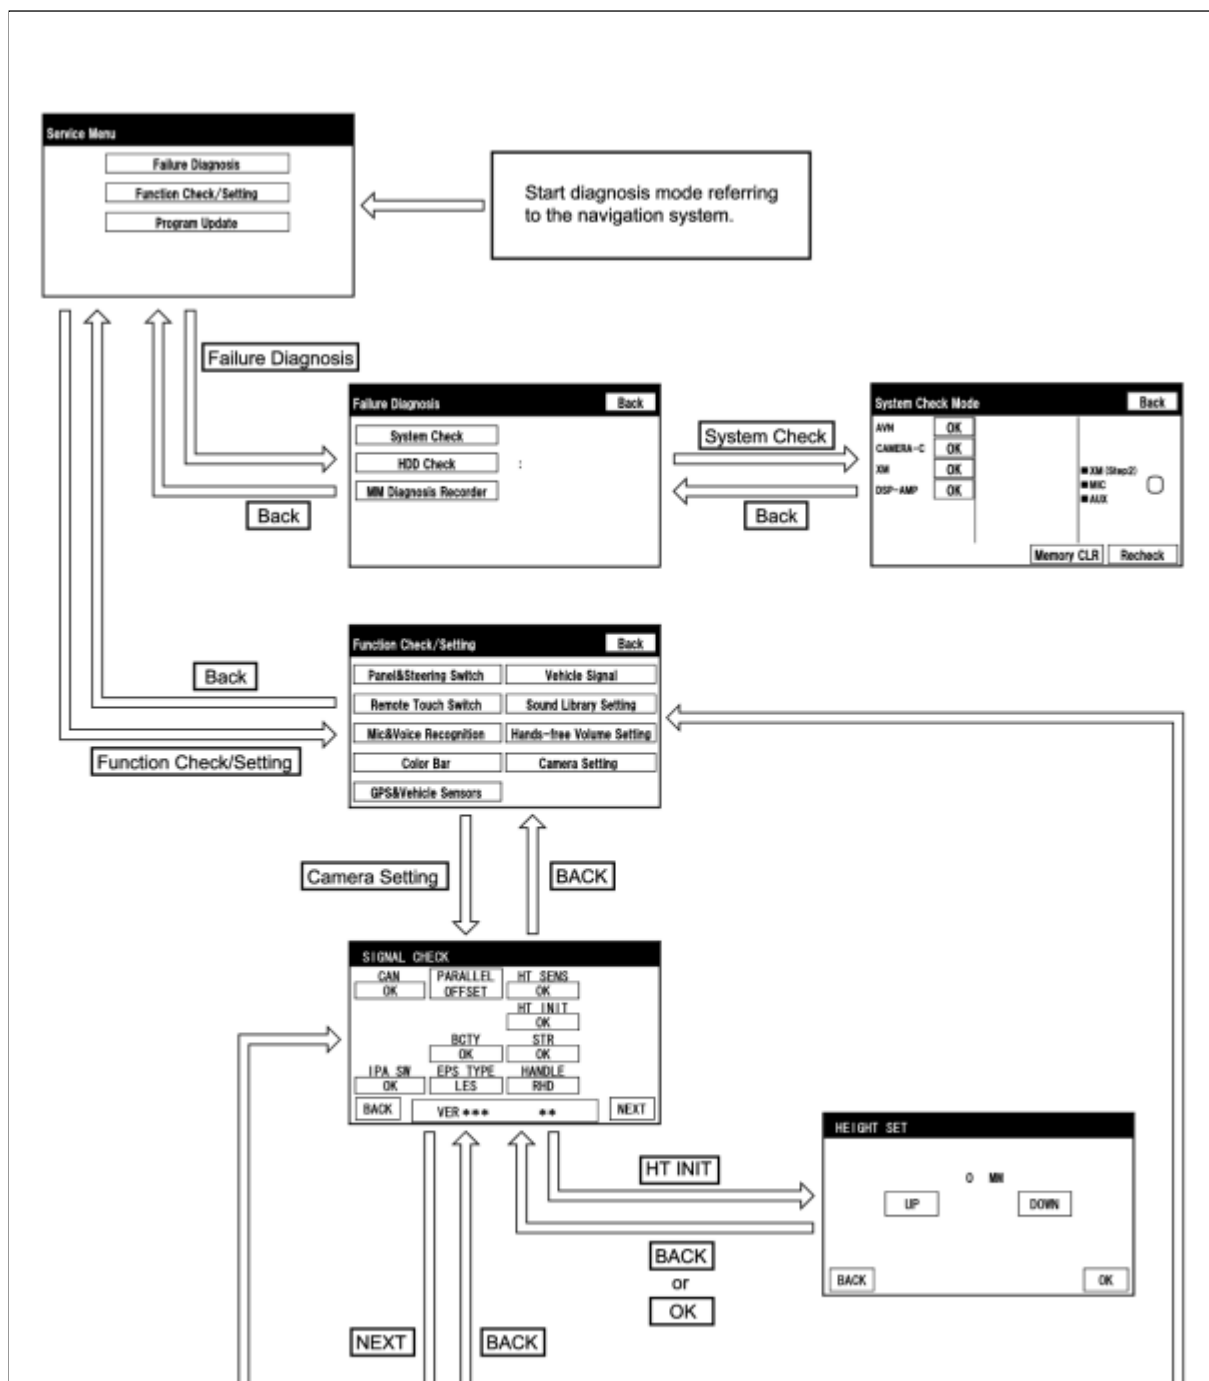

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed

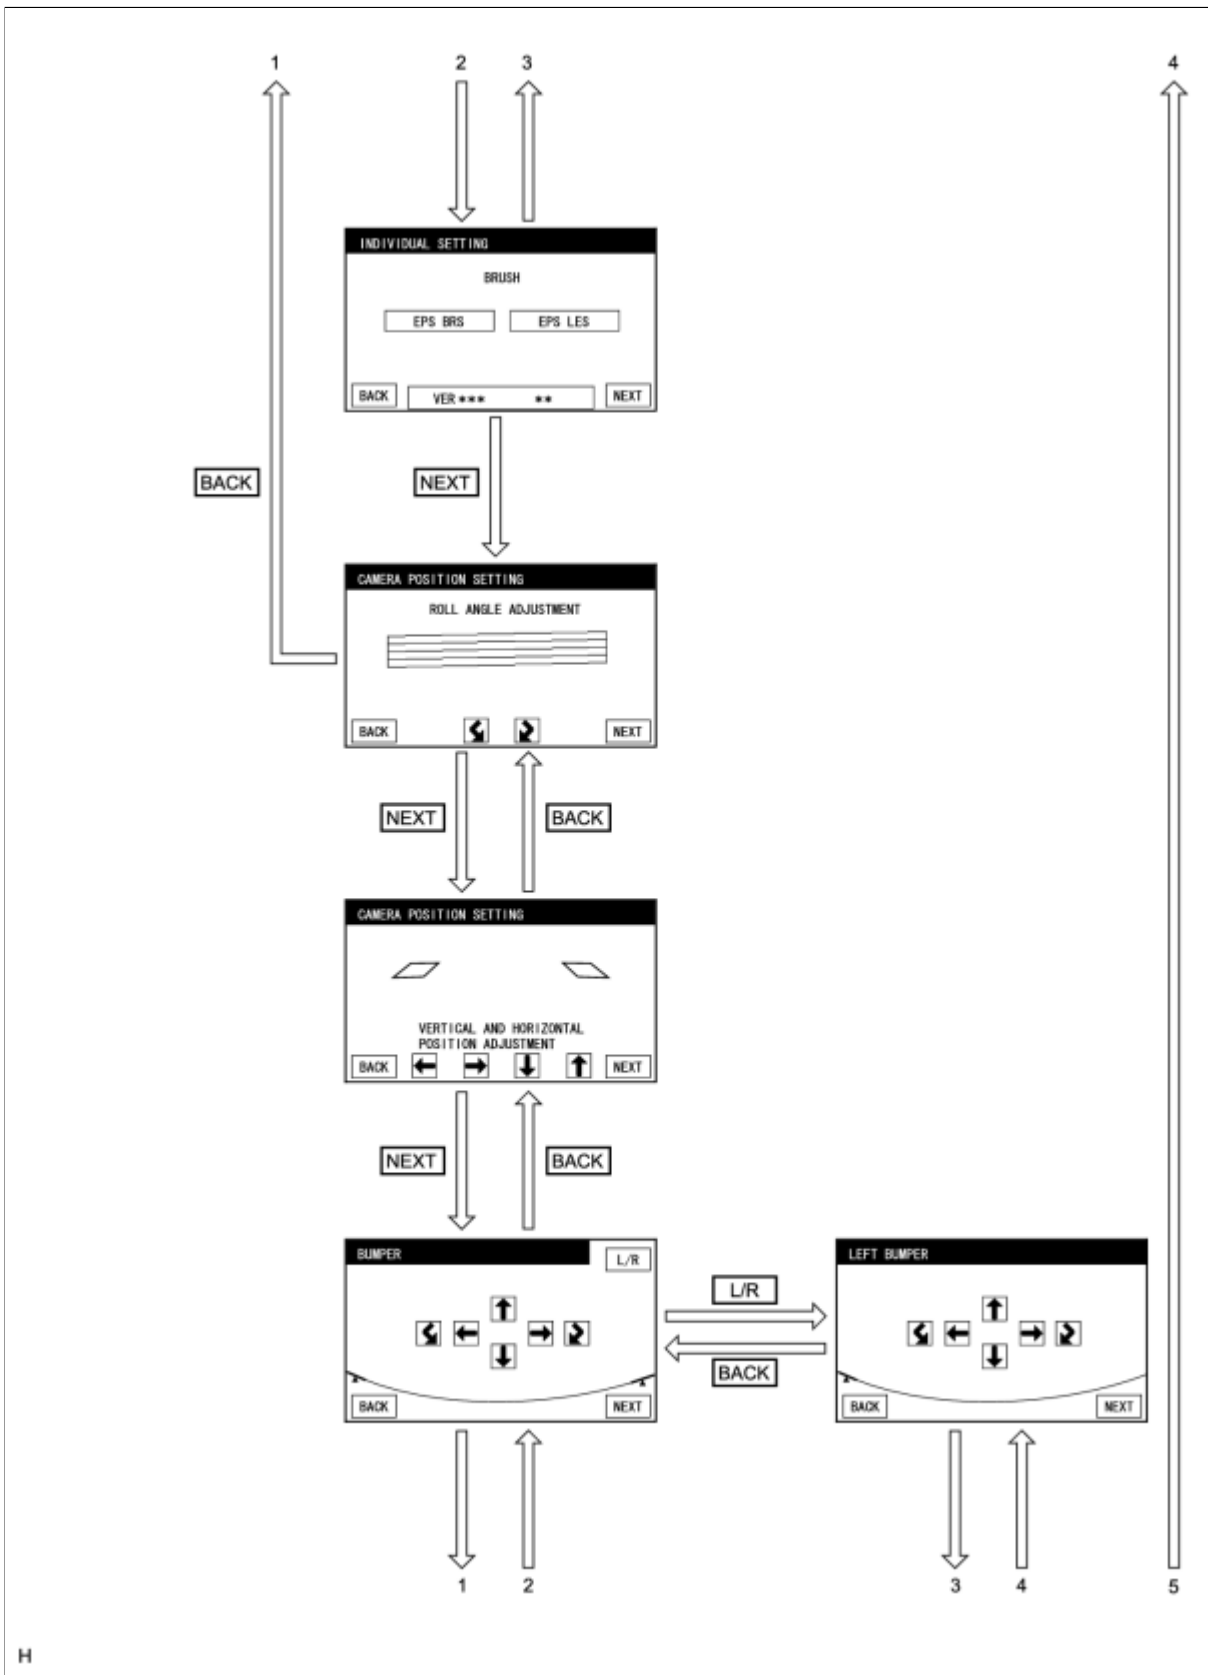

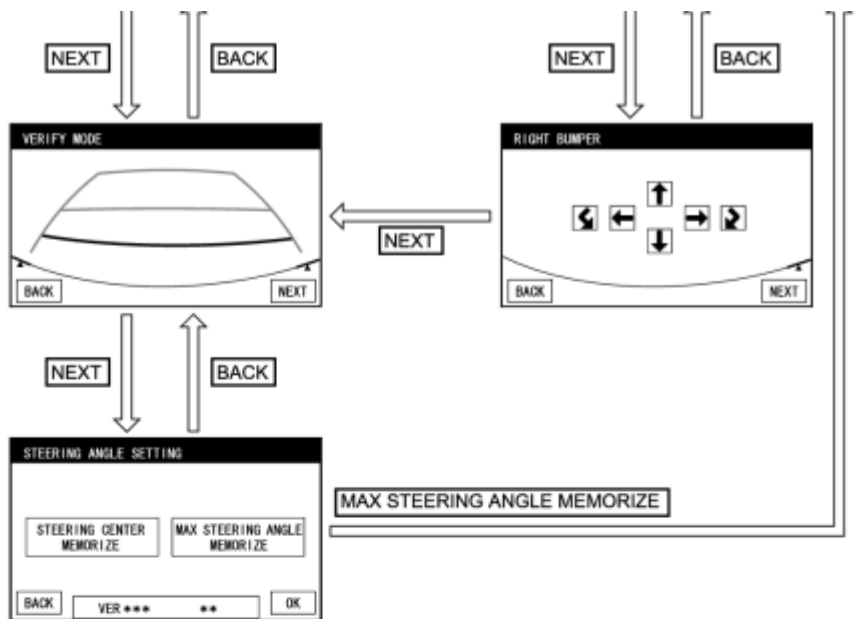

HINT:

The displayed screens and items may differ depending on vehicle specifications.

2. DIAGNOSIS SCREEN TRANSITION (during parking assist ECU initialization)

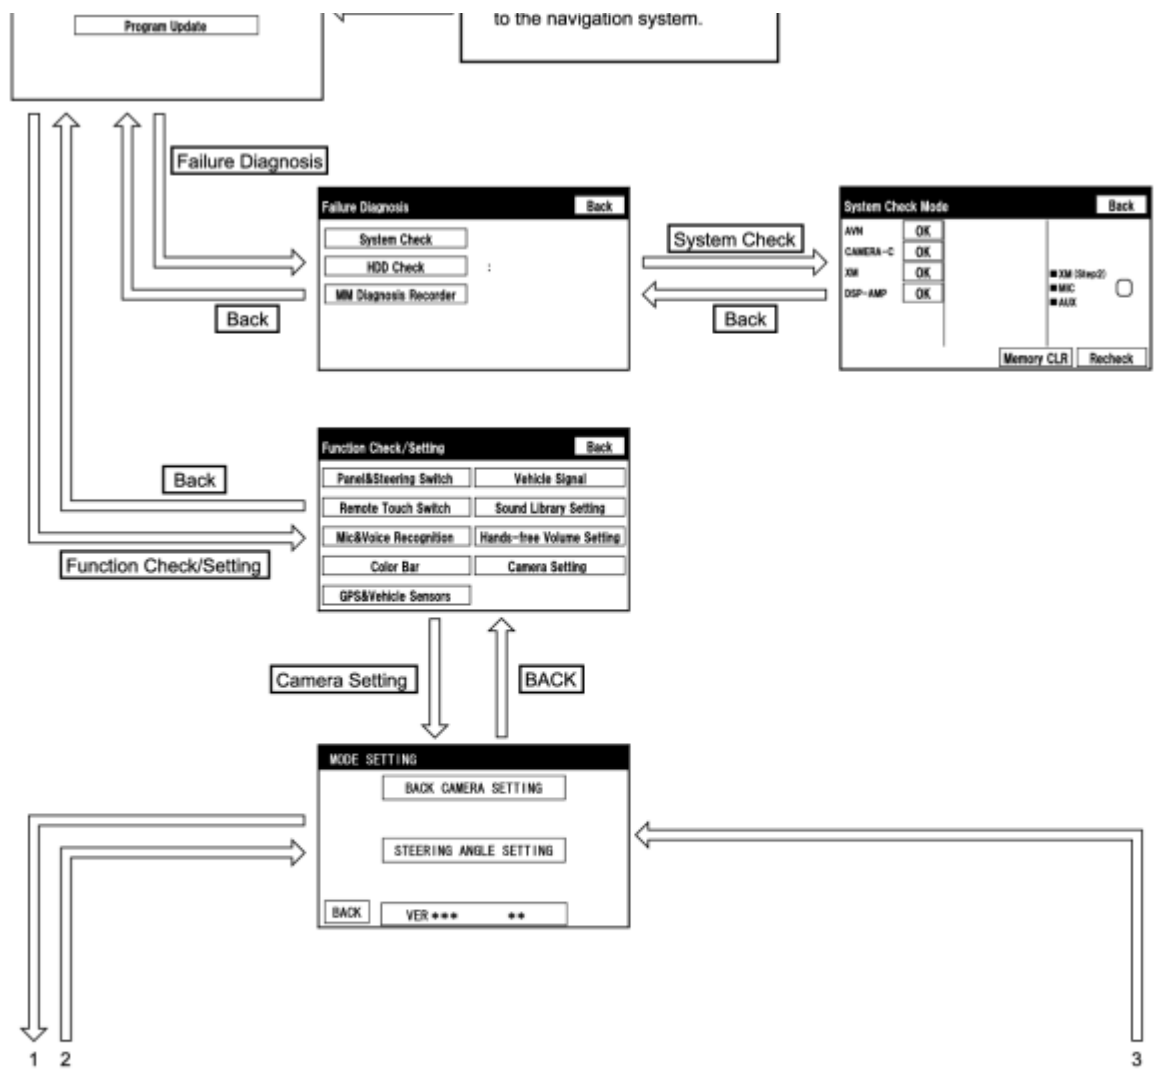

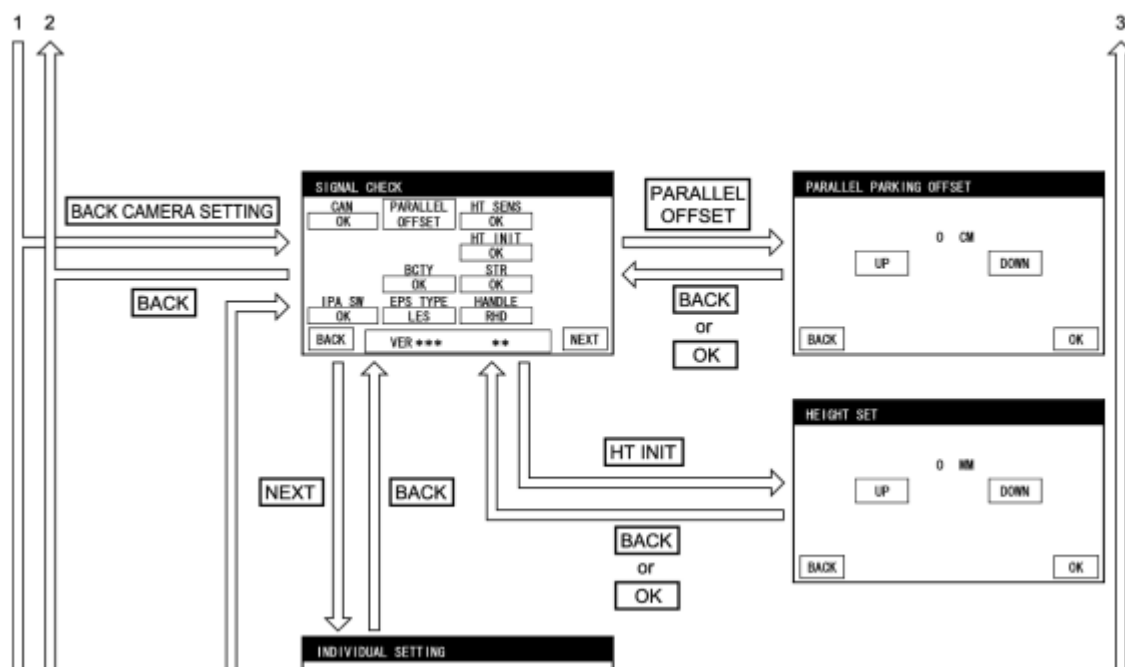

H

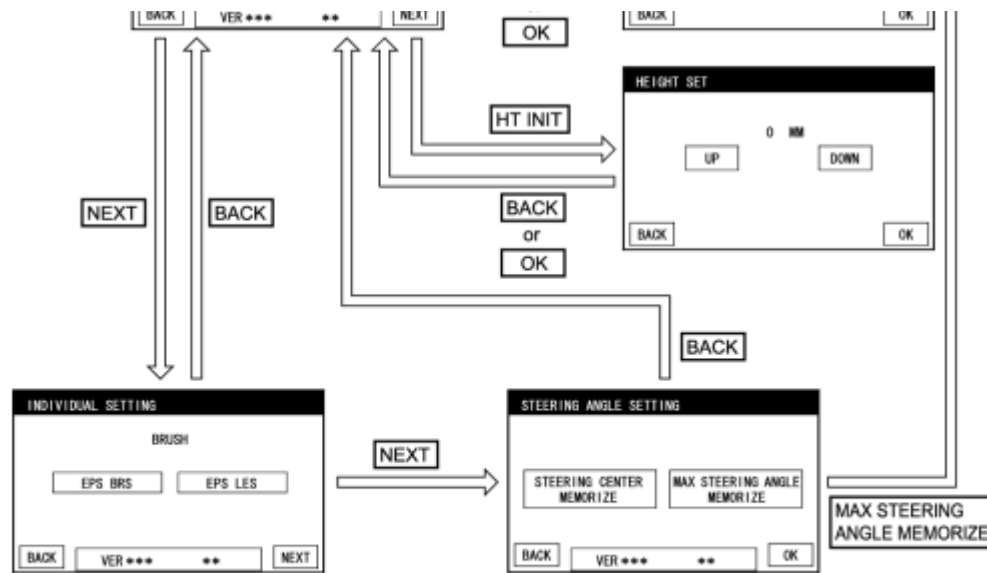

3. DIAGNOSIS SCREEN TRANSITION (after parking assist ECU initialization)

H

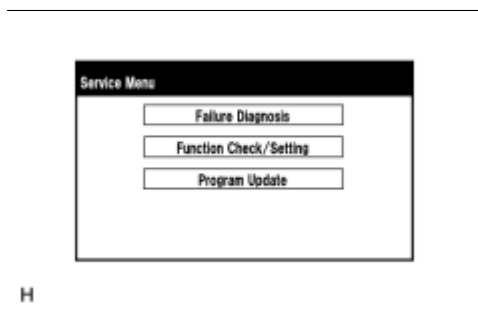

H

4. DIAGNOSTIC MODE

- (a) Start diagnostic mode INFO.
- (b) Failure diagnosis.
- (c) System check (check using system check mode screen).
- (d) Finish diagnostic mode.

5. SIGNAL CHECK (parking assist ECU input signal)

- (a) Start diagnostic mode INFO.

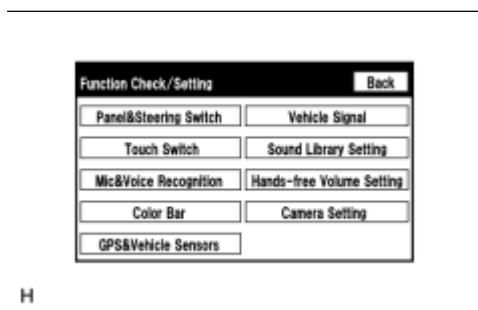

H

(1) Select "Function Check/Setting" on the Service Menu screen to display the Function Check/Setting screen.

(2) Select "Camera Setting" on the Function Check/Setting screen.

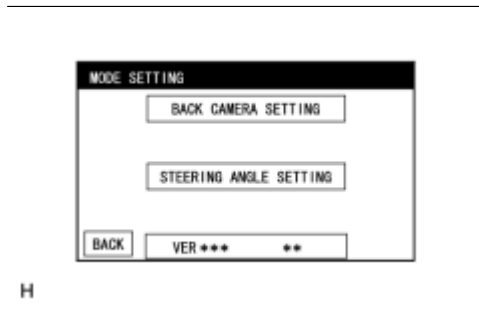

HINT:

After "Camera Setting" is selected, the screen transitions differ depending on whether initialization of the parking assist ECU was performed after parking assist ECU replacement.

H

PARKING ASSIST ECU INITIALIZATION	SCREEN TRANSITION
Not performed	SIGNAL CHECK screen
Performed	MODE SETTING screen

(3) When the screen changes to the MODE SETTING screen, select "BACK CAMERA SETTING" to display the SIGNAL CHECK screen.

HINT:

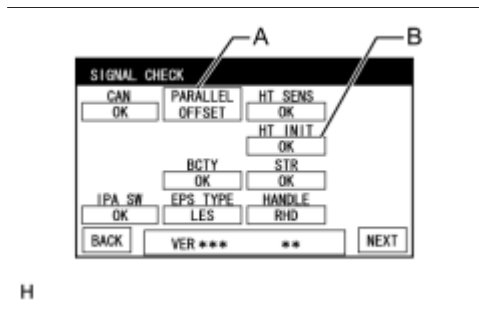

To select a grayed out item, select and hold the item for 2 seconds or more.

(b) SIGNAL CHECK

(1) On the SIGNAL CHECK screen, the following contents are possible:

- Inspect the state of signals sent to the parking assist ECU.
- Confirm the state of the height control sensor vehicle height difference setting.
- Adjust the parking position for parallel parking mode.

ITEM	INSPECTION DETAIL	NOTE
CAN	CAN communication status	When "CHK" (red) is displayed, selecting "NEXT" will not change to the next screen.
IPA SW	Parking assist pre support switch signal input	
BCTY	CAN communication condition with main body ECU (multiplex network body ECU)	
EPS TYPE	Brush information for EPS currently selected	-
HT SENS	Height control sensor signal input	When "CHK" (red) is displayed, selecting "NEXT" will not change to the next screen.
HT INIT	Vehicle height difference setting status	
STR	Steering angle sensor signal input	
HANDLE	Steering position signal input	

- When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.
- If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "NEXT".
- Select the following buttons changes to each adjustment screen.

BUTTON	TRANSIT SCREEN	ADJUSTMENT CONTENTS
A	PARALLEL PARKING OFF SET	Parking position for parallel parking mode
B	HEIGHT SET	Height control sensor vehicle height difference setting 

(c) CAN inspection

HINT:

If "CHK" (red) is displayed for "CAN", check for DTCs and perform troubleshooting based on the output DTCs

(d) IPA SW inspection

- (1) Check that "OK" (blue) is displayed for "IPA SW" and select "OK".
- (2) Check that "OK" (blue) changes to "CHK" (red). Press the parking assist pre support switch and check that "CHK" (red) returns to "OK" (blue).

HINT:

If "CHK" (red) remains displayed or the "IPA SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the SIGNAL CHECK screen)

(e) BCTY inspection

HINT:

If "CHK" (red) is displayed for "BCTY", check for DTCs and perform troubleshooting based on the output DTCs

(f) EPS TYPE inspection

- (1) Confirm the vehicle specification and check that the EPS brush information shown under "EPS TYPE" matches the vehicle specification.

VEHICLE SPECIFICATION	EPS BRUSH SPECIFICATION
for 15 inch tire models	EPS BRS (Brush type)
for 17 inch tire models	EPS LES (Brushless type)

NOTICE:

- If the EPS brush information shown under "EPS TYPE" does not match the vehicle specification, change the EPS brush specification to one that matches the vehicle specification.
- The EPS brush specification can be changed on the INDIVIDUAL SETTING screen which is displayed after "NEXT" is selected.
- When the EPS brush specification is modified, steering angle setting is required

(g) HT SENS inspection

HINT:

If "CHK" (red) is displayed for "HT SENS", check for DTCs and perform troubleshooting based on the output DTCs

(h) HT INIT inspection

HINT:

If "CHK" (red) is displayed for "HT INIT", perform troubleshooting according to the table below.

DISPLAYED	CAUSE	TROUBLESHOOTING

CONTENT		
<p>CHK (red)</p>	<ul style="list-style-type: none"> • Vehicle height difference setting is not completed • Rear height control sensor sub-assembly RH is malfunctioning 	<ul style="list-style-type: none"> • If "CHK" (red) is also displayed for "HT SENS", check for DTCs and perform troubleshooting based on the output DTCs . • If "OK" (blue) is displayed for "HT SENS", perform vehicle height difference setting .

(i) STR inspection

HINT:

If "CHK" (red) is displayed for "STR", check for DTCs and perform troubleshooting based on the output DTCs

(j) HANDLE inspection

HINT:

If "CHK" (red) is displayed for "HANDLE", check for DTCs and perform troubleshooting based on the output DTCs

(k) Finish diagnostic mode .

6. CALIBRATION WHEN SERVICING VEHICLE

NOTICE:

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed

7. STEERING ANGLE SETTING (after parking assist ECU is initialized)

HINT:

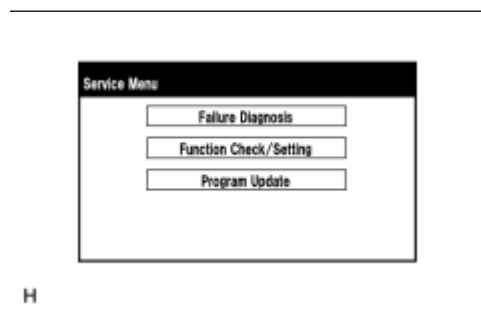

If the vehicle width extension lines and predicted path lines are not aligned when the steering wheel is centered, or if the predicted path line does not move before the steering wheel is fully turned to either the left or right, adjust the steering angle settings.

(a) Center the steering wheel and stop the vehicle.

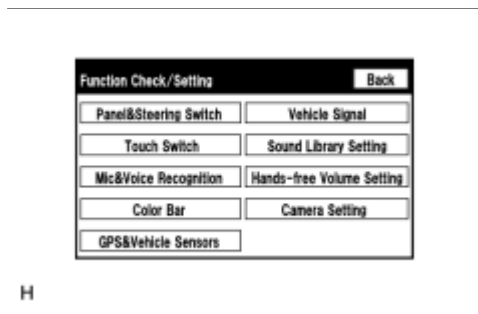

(b) Start diagnostic mode.

NOTICE:

Steering angle setting must be carried out with the hybrid system started. Apply the parking brake, depress the brake pedal, push the P position switch, and ensure that the vehicle is not moving.

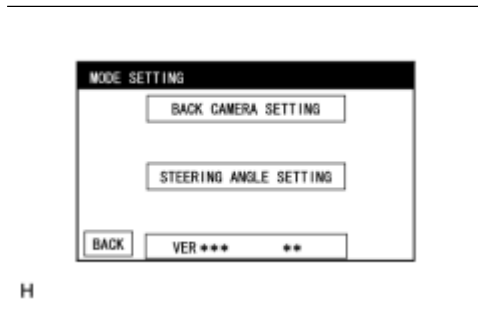

(1) Select "Function Check/Setting" on the Service Menu screen.

H

(2) Select "Camera Setting" on the Function Check/Setting screen.

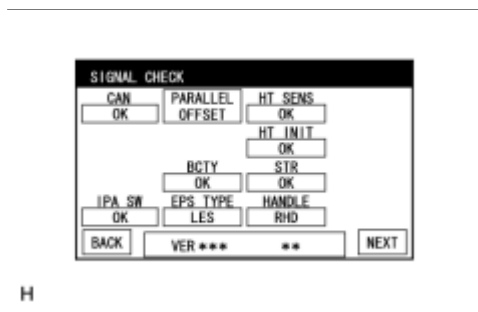

H

(3) Select "STEERING ANGLE SETTING" on the MODE SETTING screen.

HINT:

To select a grayed out item, select and hold the item for 2 seconds or more.

H

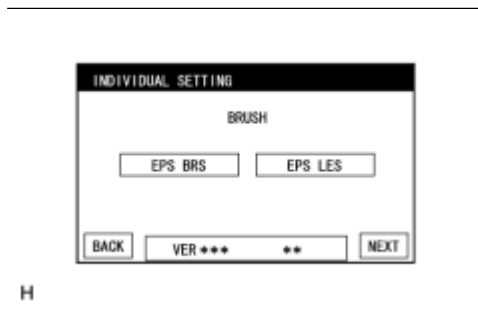

(4) Select "NEXT" on the SIGNAL CHECK screen.

- When "CHK" (red) is displayed for any items on the SIGNAL CHECK screen, selecting "NEXT" will not change the screen to the STEERING ANGLE SETTING screen.
- When "CHK" is displayed for any items on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen.

(c) Individual setting

(1) Confirm the vehicle specification and select the EPS brush specification.

VEHICLE SPECIFICATION	EPS BRUSH SPECIFICATION
for 15 inch tire models	EPS BRS (Brush type)
for 17 inch tire models	EPS LES (Brushless type)

H

- Selected EPS brush specification is indicated in blue.
- EPS brush refers to the type of motor used for the EPS system (with brushes or brushless).

NOTICE:

If the selected EPS brush specification does not match the vehicle specification, select the one that matches the vehicle specification.

(2) Select "NEXT" on the INDIVIDUAL SETTING screen.

- The INDIVIDUAL SETTING screen will not be displayed when "BACK" is selected after switching to the STEERING ANGLE SETTING screen.
- To display the INDIVIDUAL SETTING screen again, go back to the Function Check/Setting screen. select "Camera Setting" and repeat the

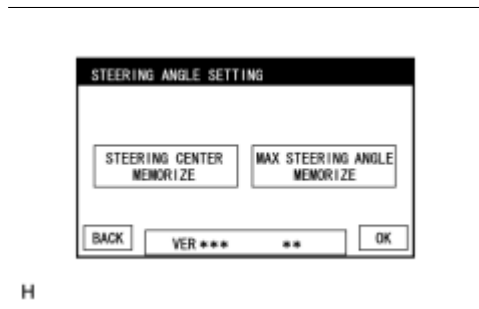

Function check setting screen, select "Camera Setting" and repeat the steps.

(d) Steering angle setting

- (1) Check that the steering wheel is centered (approximately +/- 5 degrees or less) and select "STEERING CENTER MEMORIZE".
- (2) After the centered steering position is memorized, turn the steering wheel to the left and then to the right full lock positions and select "MAX STEERING ANGLE MEMORIZE".

HINT:

It is also possible to start by initially turning the steering wheel to the right side.

- (3) Select "MAX STEERING ANGLE MEMORIZE" to store the steering angle adjustment value and change the screen to the MODE SETTING screen.

- When "MAX STEERING ANGLE MEMORIZE" is selected, a beep will sound to confirm that the steering angle adjustment values have been stored.
- The adjustment values will not be stored unless "MAX STEERING ANGLE MEMORIZE" is selected.
- Until a beep finishes sounding, the adjustment values are not stored.
- When "BACK" is selected, the screen changes to SIGNAL CHECK without storing the set values.
- Even if "OK" is selected, the adjustment values will not be stored.
- If the steering angle settings have not been adjusted, selecting "MAX STEERING ANGLE MEMORIZE" will not cause the adjustment values to be stored.
- Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" may not cause the adjustment value to be stored if the steering sensor is malfunctioning.
- If selecting "MAX STEERING ANGLE MEMORIZE" does not cause the adjustment value to be stored after adjusting the steering angle, replace the spiral with sensor cable sub-assembly .

(e) Finish diagnostic mode.

(f) Confirm steering angle adjustment.

HINT:

If the steering angle has been adjusted, confirm the steering angle adjustment on the advanced parking guidance screen after finishing diagnosis mode.

- (1) Check on the advanced parking guidance screen that the predicted path line moves until the steering wheel is fully turned to either the left or right.

HINT:

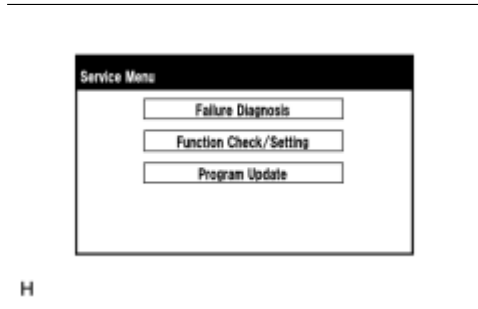

If the predicted path line stops moving before the steering wheel is fully turned to either the left or right, the steering angle adjustment values have not been stored correctly. In this case, perform "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" again.

8. PARKING POSITION HORIZONTAL ADJUSTMENT FOR PARALLEL PARKING MODE

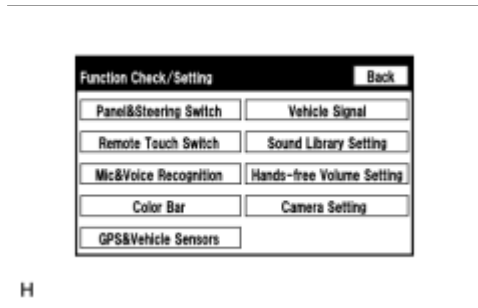

(a) Start diagnostic mode.

NOTICE:

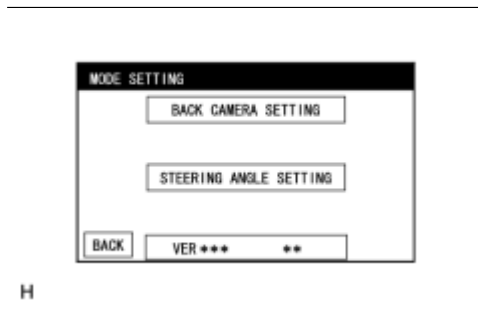

Parallel parking offset must be carried out with the hybrid system started. Apply the parking brake, depress the brake pedal, push the P position switch, and ensure that the vehicle is not moving.

(1) Select "Function Check/Setting" on the Service Menu screen.

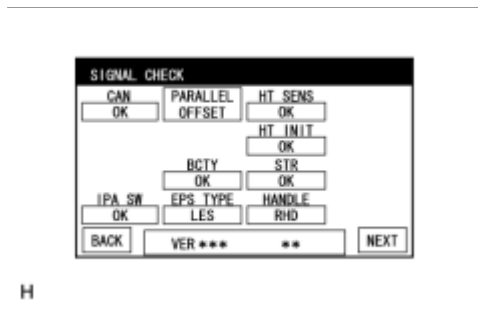

(2) Select "Camera Setting" on the Function Check/Setting screen.

(3) Select "BACK CAMERA SETTING" or "STEERING ANGLE SETTING" on the MODE SETTING screen.

HINT:

To select a grayed out item, select and hold the item for 2 seconds or more.

(4) Select "PARALLEL OFFSET" on the SIGNAL CHECK screen.

(b) PARALLEL PARKING OFFSET

**HINT:**

The **PARALLEL PARKING OFFSET** screen allows the parking position to be offset when the actual parking position deviates to the right or left of the set target parking position during parallel parking mode.

(1) Press "UP" or "DOWN" to adjust the parallel parking position horizontal offset amount.

**HINT:**

- A positive value is indicated in green and a negative value is indicated in red.
- The + direction indicates an offset toward the edge of the road, the - direction indicates an offset toward the road surface.
- When a value is shown as "10 CM" in red, it means -10 cm (the parking position is offset 10 cm towards the center of the road).
- Available setting range: +20 cm to -40 cm (can be adjusted in 1 cm increments)

(2) When "OK" is selected, the screen switches to the signal connection screen and a set value is stored.

- When "OK" is selected, the set value is stored after a "beep" sounds for confirmation.
- The memory is not updated until "OK" is selected.
- Until a beep finishes sounding, the adjustment values are not stored.
- When "BACK" is selected, the screen switches to the signal connection screen without storing a value (values entered are not stored).

(c) Finish diagnostic mode.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Chassis / Advanced Parking Guidance System / Trouble Codes.
- (e) Check the details of the DTCs  .

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Chassis / Advanced Parking Guidance System / Trouble Codes.
- (e) According to the display on the Techstream, select the trouble code data display with the clear button.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring disturbed. Reading the Data List information early in troubleshooting one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part faulty or not.

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Chassis / Advanced Parking Guidance System / Data List.
- According to the display on the Techstream, read the Data List.

Advanced Parking Guidance System

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

DTC	C1611	ECU Malfunction
-----	-------	-----------------

DESCRIPTION

This DTC is stored if the parking assist ECU judges that there is an internal malfunction as a result of its self check.

HINT:

The parking assist ECU stores different types of information during initialization. If the parking assist ECU cannot read the stored information when it is activated, the parking assist ECU judges that there is an internal malfunction and stores this DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1611	<p>When one of the following conditions is met:</p> <ul style="list-style-type: none"> • ROM/SUM check malfunction • Mirror check malfunction • High-speed RAM check malfunction • EEPROM (Initial read) malfunction • RAM check malfunction • CPU busy malfunction • CPU communication malfunction • Integer arithmetic malfunction • FPU calculation malfunction • AISIC output malfunction 	<ul style="list-style-type: none"> • Parking assist ECU initialization (not initialized parking assist ECU) • Height control sensor vehicle height difference setting (not initialized parking assist ECU) • Rear television camera optical axis adjustment (initialized parking assist ECU) • Steering angle setting (initialized parking assist ECU) • Parking assist ECU

INSPECTION PROCEDURE

NOTICE:

- When "System initializing" message is displayed on the navigation receiver assembly after the battery terminal disconnected, correct the steering angle neutral point .
- Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed .

PROCEDURE

1.	READ VALUE USING TECHSTREAM
-----------	------------------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Chassis / Advanced Parking Guidance System / Data List.

(e) Check the Data List for proper functioning of the following items.

Advanced Parking Guidance

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ROM/SUM Check	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
Mirror Check	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
High-Speed RAM Check	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
EEPROM Status (Initial read)	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
RAM Check	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
CPU Busy Status	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
CPU Communication Status	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
Integer Arithmetic Status	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
FPU Calculation Status	Parking assist ECU information/OK or NG	OK: Parking assist ECU is normal NG: Parking assist ECU is abnormal	-
AISIC Output Status	Output condition of camera display signal/OK or NG	OK: Output condition of camera display signal is normal NG: Output condition of camera display signal is abnormal	-

Result:

RESULT	PROCEED TO
OK is displayed for all items.	A
NG is displayed for EEPROM status (Initial read).	A
NG is displayed except EEPROM status (Initial read).	B

B  REPLACE PARKING ASSIST ECU

A 

2. ADJUST SETTINGS (PARKING ASSIST ECU INITIALIZATION)

HINT:

- The parking assist ECU stores different types of information during initialization. If the parking assist ECU cannot read the stored information when it is activated, the parking assist ECU judges that there is an internal malfunction and stores this DTC.
- If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.

(a) Use the transition of diagnosis screens (note which transition pattern occurs) to confirm if the parking assist ECU was able to properly store the information from initialization .

HINT:

The procedure to make the parking assist ECU store the vehicle information differs when the parking assist ECU has stored the information (initialized) and when the information has not been stored (not initialized).

(b) Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

CONDITION	PROCEDURE
Not initialized	Parking assist ECU initialization 
Initialized	<ul style="list-style-type: none"> • Height control sensor vehicle height difference setting  • Rear television camera optical axis adjustment  • Steering angle setting 

NEXT

3. CHECK DTC OUTPUT

(a) Clear the DTCs .

(b) Check for DTCs .

Result:

RESULT	PROCEED TO
DTC C1611 is output	A
No DTC is output	B

HINT:

- If DTC C1611 is output, perform the procedure to allow the parking assist ECU to store the vehicle information again.
- If DTC C1611 is still output after performing the procedure to make the parking assist ECU store the vehicle information 3 times, replace the parking assist ECU.
- If DTC C1611 is output frequently, replace the parking assist ECU even though the DTC is not output when rechecking for DTCs.

B  **END**

A  **REPLACE PARKING ASSIST ECU**

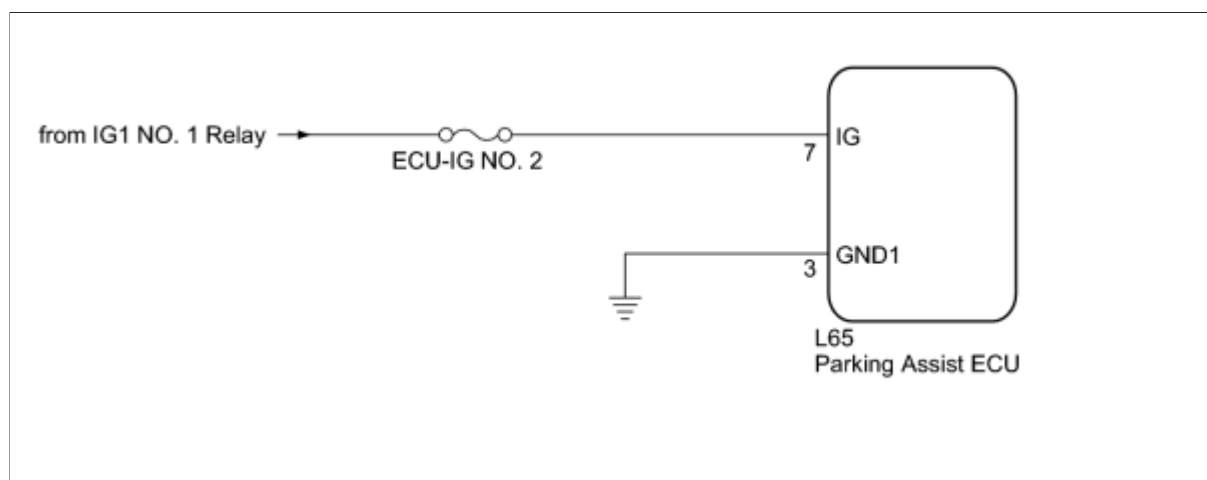

DTC	C1612	IG Voltage is Low or High
-----	-------	---------------------------

DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that the voltage received by terminal IG is low or high.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1612	<ul style="list-style-type: none"> IG voltage is low IG voltage is high 	<ul style="list-style-type: none"> Harness or connector Parking assist ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When "System initializing" message is displayed on the navigation receiver assembly after the battery terminal disconnected, correct the steering angle neutral point INFO.
- Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed INFO.

PROCEDURE

1. CHECK DTC OUTPUT

(a) Clear the DTCs INFO.

(b) Check for DTCs INFO.

Result:

RESULT	PROCEED TO
DTC C1612 is output	A
No DTC is output	B

HINT:

If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.

B  USE SIMULATION METHOD TO CHECK

A

2.	CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU IG VOLTAGE)
-----------	--

- (a) Disconnect the L65 connector from the parking assist ECU.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L65-7 (IG) - L65-3 (GND1)	Power switch on (IG)	11 to 14 V

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  REPLACE PARKING ASSIST ECU

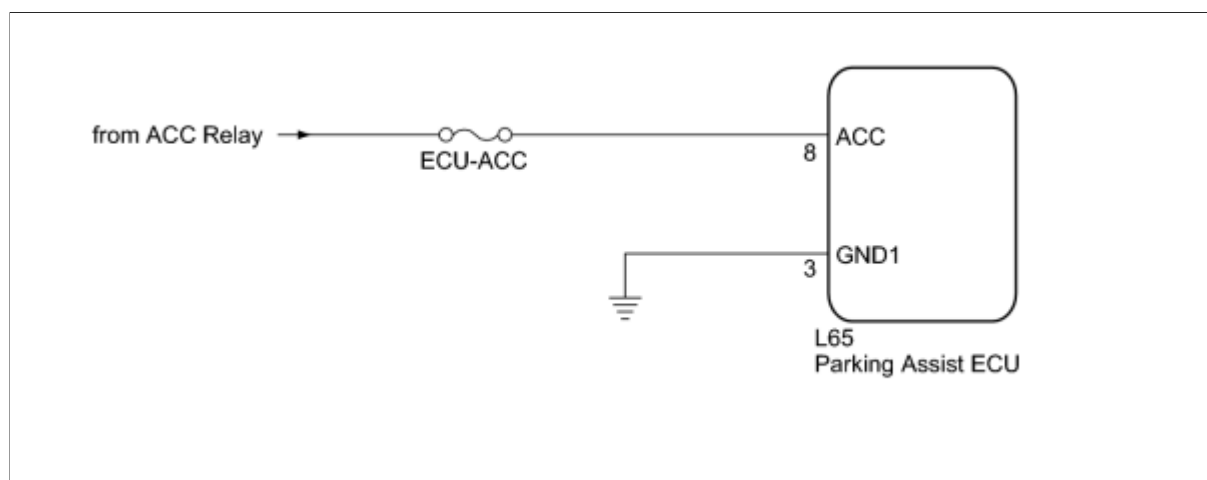

DTC	C1613	ACC Voltage is Low or High
-----	-------	----------------------------

DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that the voltage received by terminal ACC is not normal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1613	<ul style="list-style-type: none"> • ACC voltage is low • ACC voltage is high 	<ul style="list-style-type: none"> • Harness or connector • Parking assist ECU

Result:

RESULT	PROCEED TO
DTC C1613 is output	A
No DTC is output	B

HINT:

If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.

B  USE SIMULATION METHOD TO CHECK

A

2.	CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU ACC VOLTAGE)
-----------	---

- (a) Disconnect the L65 connector from the parking assist ECU.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L65-8 (ACC) - L65-3 (GND1)	Power switch on (ACC)	11 to 14 V

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  REPLACE PARKING ASSIST ECU

DTC	C1621	Back Camera Power Supply Failure
-----	-------	----------------------------------

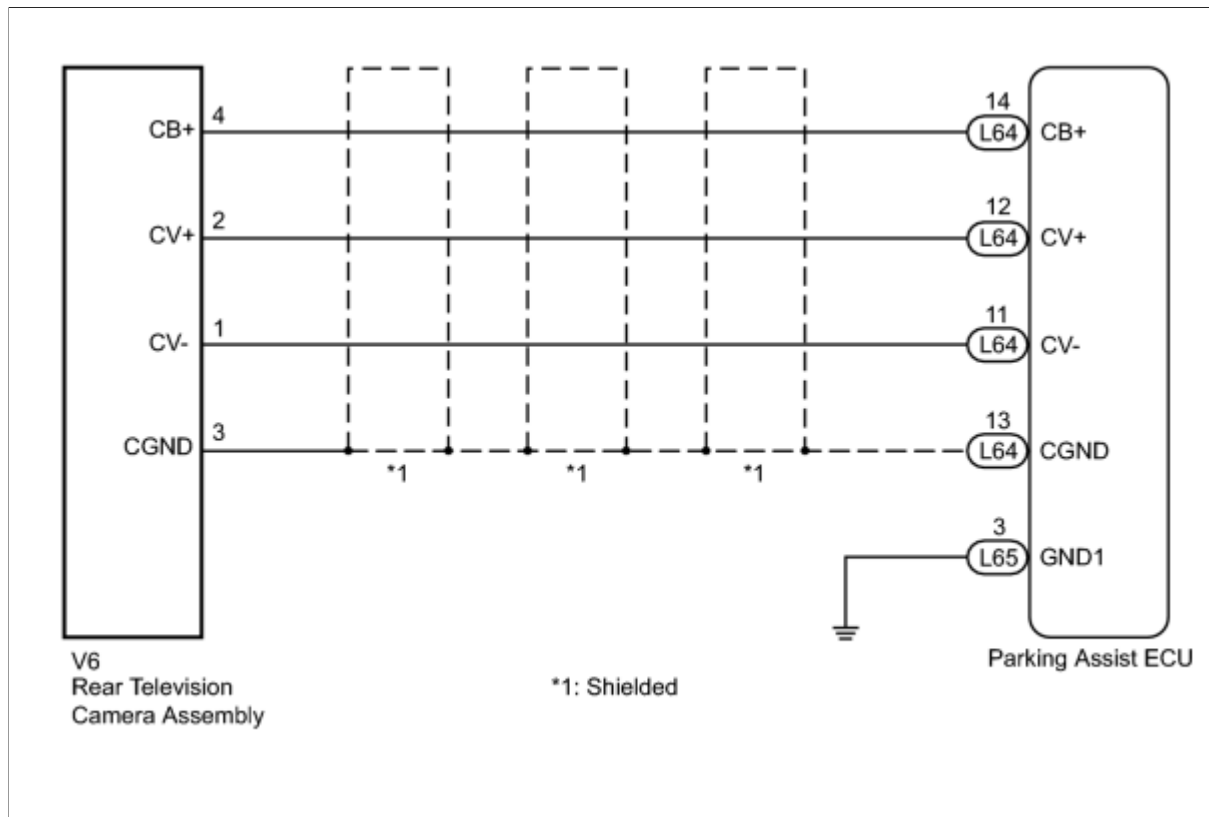

DTC	C1622	Open or Short Circuit in Back Camera Signal
-----	-------	---

DESCRIPTION

These DTCs are stored if the parking assist ECU judges as a result of its self check that the signals or signal lines between the parking assist ECU and rear television camera assembly are not normal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1621	Rear television camera power supply failure	<ul style="list-style-type: none"> • Harness or connector • Rear television camera assembly • Parking assist ECU
C1622	An open or short in the rear television camera signal circuit	<ul style="list-style-type: none"> • Harness or connector • Rear television camera assembly • Parking assist ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When "System initializing" message is displayed on the navigation receiver assembly after the battery terminal disconnected, correct the steering angle neutral point  .
- Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed  .

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - REAR TELEVISION CAMERA)
-----------	--

- (a) Disconnect the L64 connector from the parking assist ECU.
- (b) Disconnect the V6 connector from the rear television camera assembly.
- (c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L64-11 (CV-) - V6-1 (CV-)	Always	Below 1 Ω
L64-12 (CV+) - V6-2 (CV+)	Always	Below 1 Ω
L64-13 (CGND) - V6-3 (CGND)	Always	Below 1 Ω
L64-14 (CB+) - V6-4 (CB+)	Always	Below 1 Ω
L64-11 (CV-) - Body ground	Always	10 kΩ or higher
L64-12 (CV+) - Body ground	Always	10 kΩ or higher
L64-13 (CGND) - Body ground	Always	10 kΩ or higher
L64-14 (CB+) - Body ground	Always	10 kΩ or higher

NG  **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2.	CHECK PARKING ASSIST ECU (CV-, CGND)
-----------	---

*1

(a) Reconnect the L64 connector to the parking assist ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L64-11 (CV-) - Body ground	Always	Below 1 Ω
L64-13 (CGND) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Component with harness connected (Parking Assist ECU)
----	--

NG REPLACE PARKING ASSIST ECU

OK

3.	CHECK REAR TELEVISION CAMERA ASSEMBLY (CB+, CGND)
-----------	--

(a) Disconnect the V6 connector from the rear television camera assembly.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
V6-3 (CGND) - V6-4 (CB+)	Power switch on (IG) Shift lever in R	5.8 to 7.0 V

NG REPLACE PARKING ASSIST ECU

OK

4.	CHECK PARKING ASSIST ECU (CV+, GND1)
-----------	---

(a) Reconnect the V6 connector to the rear television camera assembly.

(b) Reconnect the L64 and L65 connectors to the parking assist ECU.

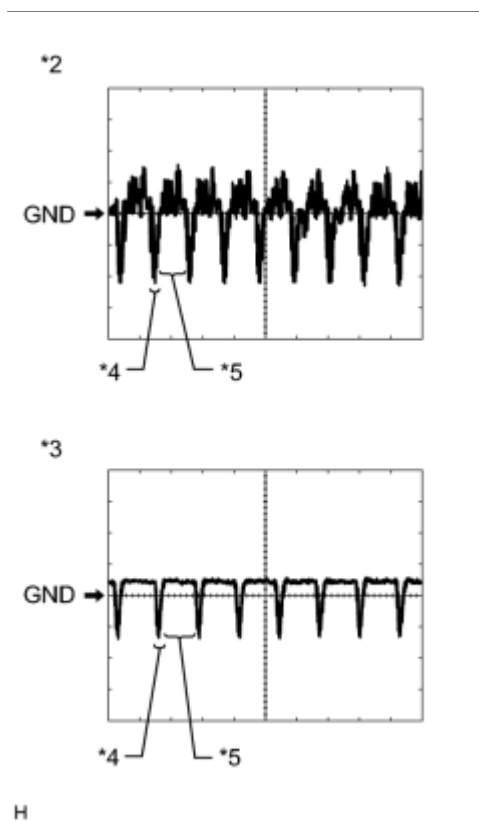

(c) Check the waveform of the rear television camera assembly using an oscilloscope.

HINT:

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

OK:

Waveform is as shown in the illustration.

ITEM	CONTENT
Terminal No. (Symbol)	L64-12 (CV+) - L65-3 (GND1)
Tool Setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

HINT:

The video waveform changes according to the image sent by the rear television camera assembly.

Text in Illustration

B ▶ END

A ▶ REPLACE PARKING ASSIST ECU

DTC	C168B	AVC-LAN Communication Malfunction
-----	-------	-----------------------------------

DTC	C168C	AVC-LAN Command Time Out
-----	-------	--------------------------

DESCRIPTION

These DTCs are stored if the parking assist ECU judges that there is a problem with the AVC-LAN communication system as a result of self check.

HINT:

These DTCs may be stored due to the battery condition or changes in the power supply waveform when starting the engine, even though there is no problem with the AVC-LAN communication system.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C168B	<ul style="list-style-type: none"> • AVC-LAN communication malfunction: No master • AVC-LAN communication malfunction: Master reset • AVC-LAN communication malfunction: Master malfunction • AVC-LAN communication malfunction: Abnormal connection check • AVC-LAN communication malfunction: Transmission not completed • AVC-LAN communication malfunction: Abnormal transmission completion notification • AVC-LAN communication malfunction: Registration request transmission • AVC-LAN communication malfunction: Abnormal ON/OFF parameter 	AVC-LAN communication
C168C	<ul style="list-style-type: none"> • AVC-LAN command time out: Output ON request notification command time out • AVC-LAN command time out: Output OFF request notification command time out • AVC-LAN command time out: Voice production start request notification command time out • AVC-LAN command time out: Voice production end request notification command time out 	

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DTC OUTPUT
----	------------------

(a) Clear the DTCs  .

(b) Check for DTCs  .

Result:

RESULT	PROCEED TO
DTC C168B or C168C is output (w/ navigation system)	A
No DTC is output	B

HINT:

- This DTC may be stored due to the battery condition or changes in the power supply waveform when starting the engine, even though there is no problem with the AVC-LAN communication system.
- If DTC C168B or C168C is output frequently, duplicate the problem symptoms and perform the inspection again, even though the DTC is not output when rechecking for DTCs  .

B  **USE SIMULATION METHOD TO CHECK**

A  **GO TO NAVIGATION SYSTEM**

DTC	C1691	Back Camera Initialization Incomplete
-----	-------	---------------------------------------

DESCRIPTION

This DTC is stored when the parking assist ECU judges that the back camera initial setting has not been memorized (rear television camera optical axis adjustment is incomplete).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1691	Back camera initial setting has not been memorized	<ul style="list-style-type: none"> • Height control sensor vehicle height difference setting • Rear television camera optical axis adjustment • Parking assist ECU

INSPECTION PROCEDURE

NOTICE:

- When "System initializing" message is displayed on the navigation receiver assembly after the battery terminal disconnected, correct the steering angle neutral point [INFO](#).
- Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed [INFO](#).

PROCEDURE

1. ADJUST SETTINGS (HEIGHT SET AND CAMERA POSITION SETTING)

(a) Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

HINT:

Before performing the rear television camera optical axis adjustment, the height control sensor vehicle height difference setting must be performed in the "HEIGHT SET" screen.

- (1) Height control sensor vehicle height difference setting [INFO](#)
- (2) Rear television camera optical axis adjustment [INFO](#)

No DTC is output	B

HINT:

- If the DTC is not output again when rechecking for DTCs, it may have been stored due to a temporary CAN malfunction.
- If DTC U1000 is output frequently, duplicate the problem symptoms and perform the inspection again, even though the DTC is not output when rechecking for DTCs .

B  USE SIMULATION METHOD TO CHECK

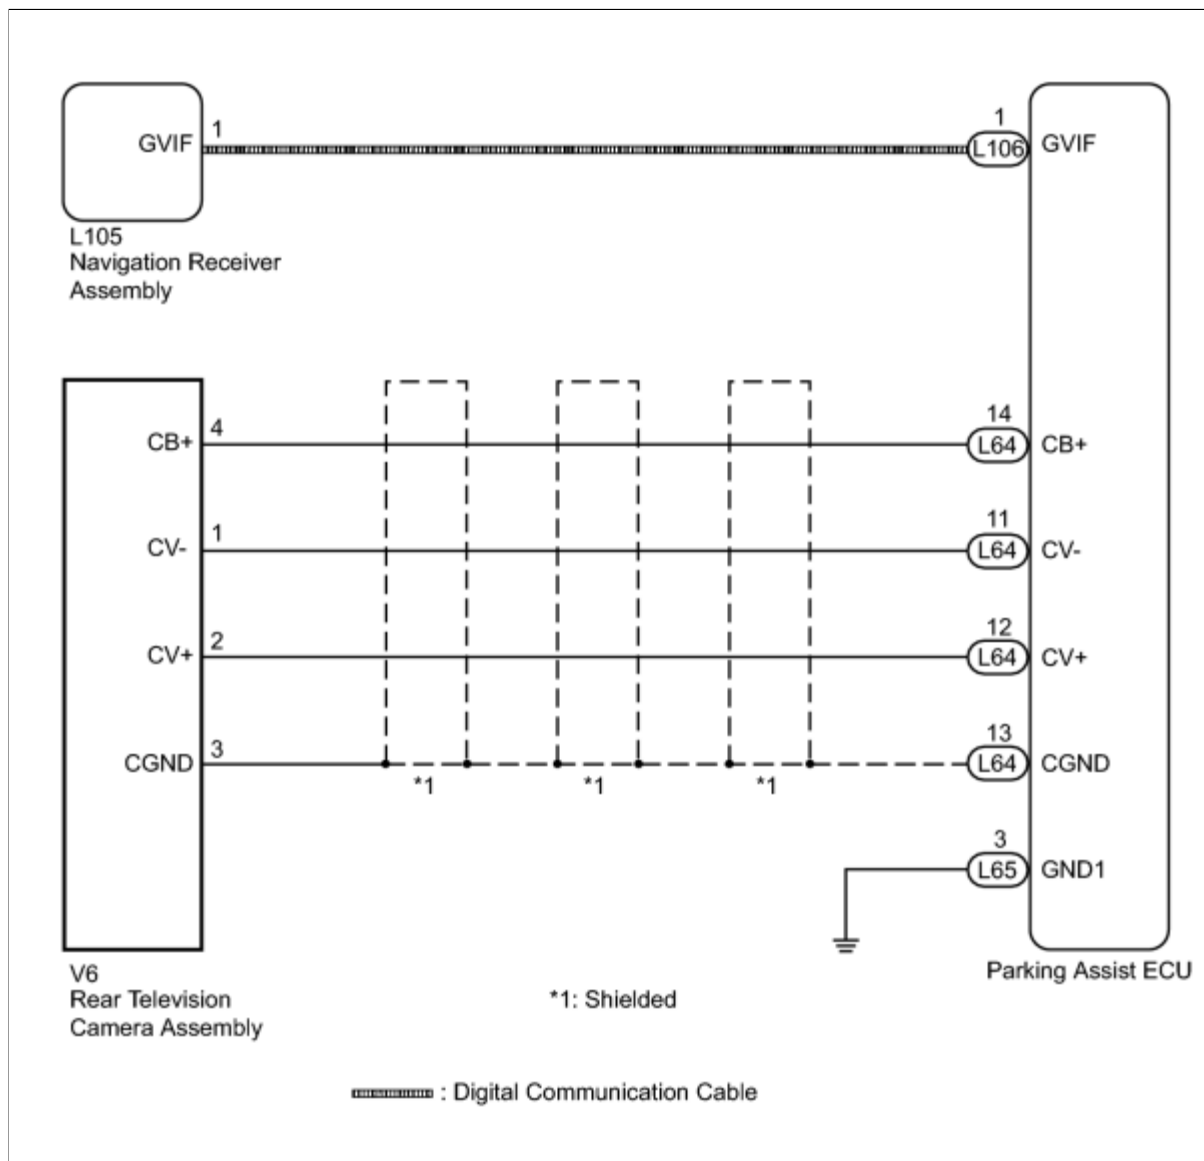

A  REPLACE PARKING ASSIST ECU

Image from Camera for Advanced Parking Guidance is Abnormal

DESCRIPTION

The display signal from the rear television camera assembly is transmitted to the navigation receiver assembly via the parking assist ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When "System initializing" message is displayed on the navigation receiver assembly after the battery terminal disconnected, correct the steering angle neutral point **INFO**.
- Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed **INFO**.

HINT:

Images are difficult to discern even in normal conditions if:

- Noise may occur in the image depending on electrical devices used in the cabin.
- Noise may occur in the image if the outer mirror switch assembly is operated.
- Noise may occur in the image if accessories that generate radio waves have been installed.
- The camera screen is frosted over (the image immediately after turning the power switch on (IG) may be blurred or darker than normal).
- The camera lens is dirty with snow, mud, etc.
- A strong beam of light, such as a sunbeam or headlight, hits the camera.
- It is too dark around the camera (at night etc.).
- The ambient temperature around the camera is either too high or too low.
- The vehicle is tilted at a steep angle.
- The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)

PROCEDURE

Malfunction reoccurs	B

B ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

A ▶ END

Vehicle does not Move to Set Parking Position

INSPECTION PROCEDURE

NOTICE:

- When "System initializing" message is displayed on the navigation receiver assembly after the battery terminal disconnected, correct the steering angle neutral point .
- Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the advanced parking guidance system may be needed .
- If initialization is necessary while performing an inspection, perform initialization first and then proceed to the next step.

PROCEDURE

1. CHECK TIRE SIZE

- (a) Check that the tire pressure and tire size are as specified. Check that there is no excessive wear on the tires.

Result:

RESULT	PROCEED TO
Tire size is as specified and there is no excessive wear	A
Tire size is as specified but there is excessive wear	B
Tire size is not as specified but there is no excessive wear	A
Tire size is not as specified and there is excessive wear	B
Tire size is totally different from specified size	B

B  REPLACE TIRES

A

2. CHECK TIRE ROTATION

- (a) Check tire movement distance.

5 Rotations

- (1) On a level surface, center the steering wheel and stop the vehicle.
- (2) Apply chalk to a point on the tire and on the ground.
- (3) Drive the vehicle straight ahead, and stop the vehicle after the tire rotates 5 times.
- (4) Mark the vehicle stop position on the ground, and measure the movement distance A mm (ft.). Check that the measured distance is within the standard range.

Standard:

9582 to 9776 mm (31.44 to 32.07 ft.)

NG **REPLACE TIRES**

OK

3.	CHECK SYMPTOMS
-----------	-----------------------

(a) Parallel parking

- (1) Move the vehicle to a level surface area with parking spaces.
- (2) Using the advanced parking guidance system, perform parallel parking. Check how the vehicle deviates from the set parking position.

HINT:

Begin the check with the vehicle at a 45° angle to the parking space. Perform the check from the right and left side of the parking space.

- (3) Select a case below that is most similar to the problem, and follow the instructions.

(b) Deviation examples

- (1) Case 1

CASE	TYPE OF DEVIATION	CAUSE	PROCEED TO
1	Vehicle deviates toward inner side (steering wheel is turned too much)	<ul style="list-style-type: none"> Actual turning radius is small Television camera adjustment value deviated 	A

NG ▶ REPLACE PARKING ASSIST PRE SUPPORT SWITCH

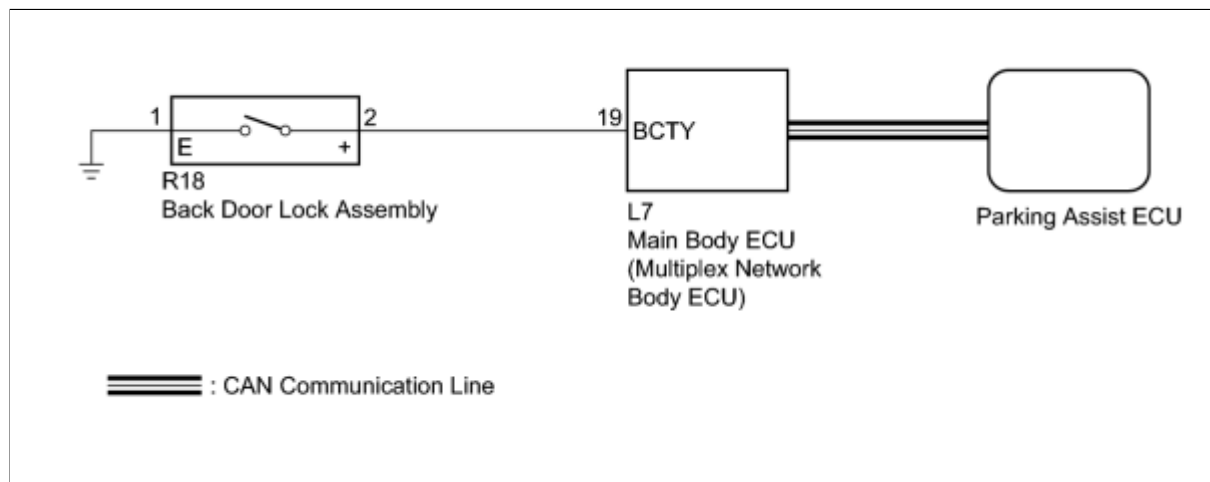

OK ▶ REPLACE PARKING ASSIST ECU

Message indicating Back Door is Open is Displayed even after Back Door is Closed

DESCRIPTION

The parking assist ECU receives back door lock assembly open/close signals from the main body ECU (multiplex network body ECU) via CAN communication. When the back door is open, the camera aiming cannot be adjusted correctly because the rear television camera assembly is installed on the back door. Therefore, when adjusting the camera aiming calibration while the back door is open, a back door open warning message will be displayed on the screen and camera aiming adjustment will be canceled.

ECU Power Source Circuit**DESCRIPTION**

This circuit is the power source circuit to operate the parking assist ECU. The parking assist ECU controls the advanced parking guidance system.

HINT:

- The parking assist ECU is connected to other ECUs via CAN communication or AVC-LAN communication.
- If the parking assist ECU does not operate due to a power source problem, a navigation system DTC may be stored due to an AVC-LAN communication interruption.
- If the parking assist ECU does not operate due to a power source problem, other system DTCs may be stored due to a CAN communication interruption.

WIRING DIAGRAM**INSPECTION PROCEDURE****PROCEDURE**

1.	CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - BATTERY AND BODY GROUND)
-----------	---

- (a) Disconnect the L65 connector from the parking assist ECU.
- (b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L65-3 (GND1) - Body ground	Always	Below 1 Ω

- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L65-1 (+B) - L65-3 (GND1)	Always	11 to 14 V

2. NOTES FOR REAR TELEVISION CAMERA

(a) Notes for the rear television camera assembly

- (1) The rear view monitor system may not function properly if subjected to a severe blow by any hard object.
- (2) Do not scrub the cover part of the camera (resin made). Scrubbing may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the cover. If such material adheres to the cover, clean it off immediately and wash with water.
- (3) Exposing the camera to a sudden temperature change may affect proper functioning of the camera.
- (4) A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

(b) Images are difficult to discern even in normal conditions if:

- (1) Noise may occur in the image depending on electrical devices used in the cabin.
- (2) Noise may occur in the image if the outer mirror switch assembly is operated.
- (3) Noise may occur in the image if accessories that generate radio waves have been installed.
- (4) The camera screen is frosted over (the image immediately after turning the power switch on (IG) may be blurred or darker than normal).
- (5) The camera lens is dirty with snow, mud, etc.
- (6) A strong beam of light, such as a sunbeam or headlight, hits the camera.
- (7) It is too dark around the camera (at night etc.).
- (8) The ambient temperature around the camera is either too high or too low.
- (9) The vehicle is tilted at a steep angle.
- (10) The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. GENERAL

- (a) To assist the driver with parking the vehicle by displaying an image of the area behind the vehicle, this system has a television camera mounted on the back door. The system displays the image on the navigation receiver assembly.
- (b) This system consists of the following components:
- (1) Navigation receiver assembly
 - (2) Rear television camera assembly
 - (3) BK/UP relay (integration relay)

2. FUNCTION OF COMPONENTS

- (a) The navigation receiver assembly controls the system by using information from the following components:

ITEM	FUNCTION
Rear Television Camera Assembly	<ul style="list-style-type: none"> • Mounted on the back door to transmit an image of the area behind the vehicle to the navigation receiver assembly. • Has a color video camera that uses a Charge Coupled Device (CCD) and a wide-angle lens.
Navigation Receiver Assembly	<ul style="list-style-type: none"> • Receives video signals, which contain an image of the area behind the vehicle taken with the rear television camera assembly. • Performs control of the system by receiving the shift position signal from the BK/UP relay (integration relay). • Displays the rear view monitor image on the display panel.
BK/UP Relay (Integration Relay)	Transmits a reverse shift position signal to the navigation receiver assembly.

3. OPERATION EXPLANATION

- (a) The navigation receiver assembly receives the reverse shift position signal from the BK/UP relay (integration relay) when the shift lever is moved to R. After receiving the reverse shift position signal, the navigation receiver assembly switches from the navigation system to the rear view monitor system.

4. DIAGNOSTIC FUNCTION

- (a) Navigation system has a diagnostic function displayed in the navigation receiver assembly. This function enables the confirmation of the input signal for reverse shift position  .

HOW TO PROCEED WITH TROUBLESHOOTING

- (a) Disconnect the U7 connector from the inner rear view mirror assembly.
- (b) Measure the voltage of each terminal of the wire harness side connector.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
--------------------------	-----------------	----------------------	-----------	------------------------

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
U7-1 (IG) - Body ground	BE - Body ground	Power switch signal	Power switch off	Below 1 V
			Power switch on (IG)	11 to 14 V
U7-2 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
U7-3 (REV) - U7-2 (E)	P - W-B	Reverse signal	Power switch on (IG)	Below 1 V
			Shift lever in any position except R	
			Power switch on (IG)	11 to 14 V
			Shift lever in R	
U7-13 (CGND) - U7-2 (E)	Shielded - W-B	Rear television camera ground (shielded)	Always	Below 1 V
U7-14 (CB+) - U7-2 (E)	W - W-B	Power source to television camera	Power switch on (IG)	5.8 to 7.0 V
			Shift lever in R	
U7-6 (CV-) - U7-2 (E)	B - W-B	Rear television camera ground	Always	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the U7 connector to the inner rear view mirror assembly.

(d) Check for pulses between each terminal of the connector.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
U7-7 (CV+) - U7- 2 (E)	R - W-B	Display signal	Power switch on (IG)	Pulse generation (See waveform 1)
			Shift lever in R	
			Under normal conditions	
			Power switch on (IG)	Pulse generation (See waveform 2)
Shift lever in R				
Camera lens covered, blacking out screen				

HINT:

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the inner rear view mirror assembly with the connector connected.

If the result is not as specified, the camera may have a malfunction.

(e) Reference (Oscilloscope waveform):

HINT:

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the inner rear view mirror assembly with the connector connected.

(1) Waveform 1 (under normal conditions)

Item	Content
Terminal No. (Symbol)	U7-7 (CV+) - U7-2 (E)
Tool Setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

HINT:

The video waveform changes according to the image sent by the rear television camera assembly.

(2) Waveform 2 (camera lens is covered, blacking out the screen)

Item	Content
Terminal No. (Symbol)	U7-7 (CV+) - U7-2 (E)
Tool Setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

HINT:

The video waveform changes according to the image sent by the rear television camera assembly.

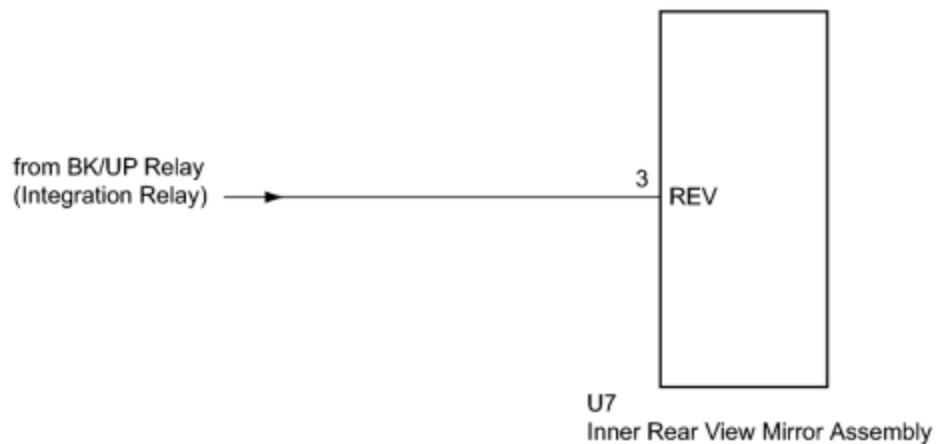

Text in Illustration

*1	Waveform 1 (under normal conditions)
*2	Waveform 2 (camera lens is covered, blacking out the screen)
*3	Synchronized Signal
*4	Video Waveform

DESCRIPTION

The inner rear view mirror assembly receives a reverse shift position signal from the BK/UP relay.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. CHECK BACK-UP LIGHT ASSEMBLY

(a) Move the shift lever to R and check if the back-up light comes on.

OK:

The back-up light comes on.

NG  GO TO LIGHTING SYSTEM

OK

2.	CHECK INNER REAR VIEW MIRROR ASSEMBLY (REV)
----	---

- (a) Disconnect the U7 connector from the inner rear view mirror assembly.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
U7-3 (REV) - Body ground	Power switch on (IG) Shift lever in R	11 to 14 V
U7-3 (REV) - Body ground	Power switch on (IG) Shift lever in any position except R	Below 1 V

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

Image from Camera for Rear View Monitor is Abnormal

DESCRIPTION

The display signal of the rear television camera assembly transmit to the inner rear view mirror assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (INNER REAR VIEW MIRROR - REAR TELEVISION CAMERA)

(a) Disconnect the U7 connector from the inner rear view mirror assembly.

(b) Disconnect the V6 connector from the rear television camera assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
U7-7 (CV+) - V6-2 (CV+)	Always	Below 1 Ω
U7-14 (CB+) - V6-4 (CB+)	Always	Below 1 Ω
U7-6 (CV-) - V6-1 (CV-)	Always	Below 1 Ω
U7-13 (CGND) - V6-3 (CGND)	Always	Below 1 Ω
U7-7 (CV+) - Body ground	Always	10 k Ω or higher
U7-14 (CB+) - Body ground	Always	10 k Ω or higher
U7-6 (CV-) - Body ground	Always	10 k Ω or higher
U7-13 (CGND) - Body ground	Always	10 k Ω or higher

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.	CHECK INNER REAR VIEW MIRROR ASSEMBLY
----	---------------------------------------

*1

(a) Reconnect the U7 connector to the inner rear view mirror assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
U7-6 (CV-) - Body ground	Always	Below 1 Ω
U7-13 (CGND) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
U7-14 (CB+) - U7-13 (CGND)	Power switch on (IG) Shift lever in R	5.8 to 7.0 V

Text in Illustration

*1	Component with harness connected (Inner Rear View Mirror Assembly)
----	---

NG  REPLACE INNER REAR VIEW MIRROR ASSEMBLY

OK

3.	CHECK REAR TELEVISION CAMERA ASSEMBLY
----	---------------------------------------

(a) Reconnect the V6 connector to the rear television camera assembly.

*1

(b) Connect the U7 connector to the inner rear view mirror assembly.

(c) Check the waveform of the rear television camera assembly using an oscilloscope.

HINT:

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the inner rear view mirror assembly with the connector connected.

OK:

Waveform is as shown in the illustration.

Item	Content
Terminal No. (Symbol)	U7-7 (CV+) - U7-2 (E)
Tool Setting	200 mV/DIV., 50 μsec./DIV.
Condition	Power switch on (IG), shift lever in R

HINT:

The video waveform changes according to the image sent by the rear television camera assembly.

Inner Rear View Mirror Power Source Circuit

DESCRIPTION

This circuit detects the state of the power switch, and sends it to the inner rear view mirror assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.

CHECK HARNESS AND CONNECTOR (BATTERY - INNER REAR VIEW MIRROR ASSEMBLY)

- (a) Disconnect the U7 inner rear view mirror assembly connector.
- (b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
U7-1 (IG) - U7-2 (E)	Power switch on (IG)	11 to 14 V
	Power switch off	Below 1 V

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

COMPONENTS ILLUSTRATION

● Non-reusable part

P

REMOVAL

1. REMOVE BACK DOOR TRIM BOARD ASSEMBLY [INFO](#)

2. REMOVE BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY [INFO](#)

3. REMOVE REAR TELEVISION CAMERA ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 2 screws.

(c) Disengage the 4 claws and remove the rear television camera assembly.

INSTALLATION

1. INSTALL REAR TELEVISION CAMERA ASSEMBLY

(a) Engage the 4 claws to temporarily install the rear television camera assembly.

(b) Install the rear television camera assembly with the 2 screws.

(c) Connect the connector.

2. INSTALL BACK DOOR OUTSIDE GARNISH SUB-ASSEMBLY [INFO](#)

3. INSTALL BACK DOOR TRIM BOARD ASSEMBLY [INFO](#)

4. ADJUST REAR TELEVISION CAMERA OPTICAL AXIS (CAMERA POSITION SETTINGS) (w/ Advanced Parking Guidance System)

[INFO](#)

COMPONENTS ILLUSTRATION

P

ILLUSTRATION

P

REMOVAL

1. REMOVE RADIATOR SUPPORT OPENING COVER INFO

2. REMOVE FRONT BUMPER ASSEMBLY INFO

3. REMOVE NO. 1 ULTRASONIC SENSOR

(a) Disconnect the connector.

(b) Disengage the 4 claws and disconnect the wire harness with bracket.

(c) Disengage the 2 claws and remove the No. 1 ultrasonic sensor.

HINT:

Use the same procedure for the RH side and LH side.

4. REMOVE NO. 1 ULTRASONIC SENSOR RETAINER

(a) Disengage the 2 claws and remove the No. 1 ultrasonic sensor retainer.

HINT:

Use the same procedure for the RH side and LH side.

INSPECTION

1. INSPECT NO. 1 ULTRASONIC SENSOR

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

*1

Tester Connection	Condition	Specified Condition
1 (BI) - 5 (EI)	Always	10 k Ω or higher
1 (BI) - 2 (BO)	Always	10 k Ω or higher
3 (SI) - 4 (SO)	Always	Below 1 Ω
5 (EI) - 6 (EO)	Always	Below 1 Ω

Text in Illustration

H

*1	Component without harness connected (No. 1 Ultrasonic Sensor)
----	--

If the result is not as specified, replace the No. 1 ultrasonic sensor.

INSTALLATION

1. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER

(a) Temporarily install the No. 1 ultrasonic sensor retainer to the front bumper.

Text in Illustration

*1	Protrusion
*2	Keyhole

- Do not damage the front bumper with the protrusion when installing the retainer.
- Securely install the No. 1 ultrasonic sensor retainer so that there are no gaps between the retainer and surface of the front bumper.

HINT:

When installing the retainer, align the keyhole and protrusion as shown in the illustration.

(b) Engage the 2 claws to install the No. 1 ultrasonic sensor retainer to the front bumper.

HINT:

Use the same procedure for the RH side and LH side.

2. INSTALL NO. 1 ULTRASONIC SENSOR

(a) Engage the 2 claws to install the No. 1 ultrasonic sensor as shown in the illustration.

NOTICE:

Push the No. 1 ultrasonic sensor retainer from the outside of the bumper when there is a gap between the retainer and the bumper surface. In this case, do not push on the ultrasonic sensor.

P

P

(b) Engage the 4 claws to connect the wire harness with bracket.

(c) Connect the connector.

HINT:

Use the same procedure for the RH side and LH side.

3. INSTALL FRONT BUMPER ASSEMBLY_ [INFO](#)

4. INSTALL RADIATOR SUPPORT OPENING COVER_ [INFO](#)

5. ADD WASHER FLUID (w/ Headlight Cleaner System)_ [INFO](#)

REMOVAL

NOTICE:

When the brake pedal is first depressed after replacing the brake pads or pushing back the disc brake piston, DTC C1214 may be output. As there is no malfunction, clear the DTC.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. DISABLE BRAKE CONTROL INFO

2. REMOVE FRONT WHEEL

3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately wash it off.

4. SEPARATE FRONT FLEXIBLE HOSE

c

(a) Remove the union bolt and gasket, and separate the front flexible hose from the disc brake cylinder assembly.

5. REMOVE DISC BRAKE CYLINDER ASSEMBLY

(a) Hold the front disc brake cylinder slide pin, and remove the 2 bolts and disc brake cylinder assembly.

Text in Illustration

*1

Hold

*2	Turn
----	------

6. REMOVE FRONT DISC BRAKE PAD

(a) Remove the 2 front disc brake pads from the front disc brake cylinder mounting.

7. REMOVE FRONT ANTI-SQUEAL SHIM

(a) Remove the front No. 1 anti-squeal shim and front No. 2 anti-squeal shim from each brake pad.

Text in Illustration

*1	Front No. 1 Anti-squeal Shim
*2	Front No. 2 Anti-squeal Shim

(b) Remove the pad wear indicator plate from each front disc brake pad.

8. REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Remove the 2 front No. 1 disc brake pad support plates and 2 front No. 2 disc brake pad support plates from the front disc brake cylinder mounting.

Text in Illustration

*1	Front No. 1 Disc Brake Pad Support Plate
*2	Front No. 2 Disc Brake Pad Support Plate

NOTICE:

Each front disc brake pad support plate has a different shape. Be sure to put an identification mark on each front disc brake pad support plate so that it can be reinstalled to its original position.

9. REMOVE FRONT NO. 1 DISC BRAKE CYLINDER SLIDE PIN

(a) Remove the front No. 1 disc brake cylinder slide pin from the front disc brake cylinder mounting.

10. REMOVE FRONT NO. 2 DISC BRAKE CYLINDER SLIDE PIN

(a) Remove the front No. 2 disc brake cylinder slide pin from the front disc brake cylinder mounting.

11. REMOVE FRONT DISC BRAKE BUSHING DUST BOOT

(a) Remove the 2 front disc brake bushing dust boots from the front disc brake cylinder mounting.

c

12. REMOVE FRONT DISC BRAKE CYLINDER MOUNTING

c

(a) Remove the 2 bolts and front disc brake cylinder mounting from the steering knuckle.

13. REMOVE FRONT DISC

(a) Remove the front disc.

c

Text in Illustration

*1	Matchmark
----	-----------

HINT:

Put matchmarks on the disc and the axle hub.

DISASSEMBLY

1. REMOVE CYLINDER BOOT

(a) Using a screwdriver with its tip wrapped with vinyl tape, remove the set ring and cylinder boot from the disc brake cylinder assembly.

Text in Illustration

*1	Vinyl Tape
----	------------

NOTICE:

Be careful not to damage the brake piston or cylinder.

2. REMOVE FRONT DISC BRAKE PISTON

(a) Place a piece of cloth between the front disc brake piston and disc brake cylinder assembly.

(b) Apply compressed air to remove the front disc brake piston from the disc brake cylinder assembly.

CAUTION:

Do not place your fingers in front of the piston when using compressed air.

NOTICE:

Do not allow any brake fluid to spatter.

3. REMOVE PISTON SEAL

(a) Using a screwdriver with its tip wrapped with vinyl

P

tape, remove the piston seal from the disc brake cylinder assembly.

Text in Illustration

*1	Vinyl Tape
----	------------

NOTICE:

Do not damage the inner surface or piston seal groove of the cylinder.

4. REMOVE FRONT DISC BRAKE BLEEDER PLUG CAP

5. REMOVE FRONT DISC BRAKE BLEEDER PLUG

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust and scoring. If necessary, replace the disc brake cylinder and piston.

2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Text in Illustration

*1	Ruler
----	-------

Standard thickness:

10.0 mm (0.394 in.)

Minimum thickness:

1.0 mm (0.0394 in.)

If the pad lining thickness is less than the minimum thickness, replace the disc brake pads.

HINT:

Be sure to check the wear of the front disc after replacing the brake pads with new ones.

3. INSPECT FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Make sure that the front disc brake pad support plates have sufficient rebound, no deformation, cracks or wear, and that all rust and dirt are cleaned off. If necessary, replace the front disc brake pad support plates.

4. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the disc thickness.

Text in Illustration

c

*1	Micrometer
----	------------

Standard thickness:

25.0 mm (0.984 in.)

Minimum thickness:

22.0 mm (0.866 in.)

If the disc thickness is less than the minimum, replace the front disc.

5. INSPECT DISC RUNOUT

(a) Inspect the front axle hub bearing looseness and front axle hub runout INFO.

c

(b) Using SST to hold the disc, tighten the disc with the 5 nuts.

SST: 09330-00021

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

(c) Using a dial indicator, measure the disc runout 10 mm (0.394 in.) away from the outer edge of the front disc.

Text in Illustration

c

*1	Dial Indicator
----	----------------

Maximum disc runout:

0.05 mm (0.00197 in.)

NOTICE:

Keep the magnet of the dial indicator away from the axle hub and speed sensor.

If the runout exceeds the maximum value, change the installation position of the disc to minimize the runout. If the runout exceeds the maximum even when the installation position is changed, grind the disc. If the disc thickness is less than the minimum, replace the front disc.

(d) Remove the 5 nuts and front disc.

REASSEMBLY

1. TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG

HINT:

Fully tighten the front disc brake bleeder plug after bleeding any air left in the system.

2. INSTALL FRONT DISC BRAKE BLEEDER PLUG CAP

3. INSTALL PISTON SEAL

(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new piston seal.

 Lithium soap base glycol grease

c

(b) Install the piston seal to the disc brake cylinder assembly.

NOTICE:

Securely install the piston seal into the groove of the disc brake cylinder.

4. INSTALL FRONT DISC BRAKE PISTON

 Lithium soap base glycol grease

c

(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new cylinder boot.

Text in Illustration

*1	Cylinder Boot
*2	Front Disc Brake Piston

(b) Install the cylinder boot to the front disc brake piston.

(c) Apply a light layer of lithium soap base glycol grease to the contact surfaces of the front disc brake piston, and install it to the disc brake cylinder assembly.

NOTICE:

Do not install the piston forcibly in the disc brake cylinder assembly.

5. INSTALL CYLINDER BOOT

(a) Install the cylinder boot to the disc brake cylinder assembly.

Text in Illustration

*1	Set Ring
*2	Cylinder Boot

NOTICE:

Securely install the cylinder boot to the groove of the disc brake cylinder assembly and front disc brake piston.

(b) Using a screwdriver with its tip wrapped with vinyl tape, install a new set ring.

Text in Illustration

*1	Vinyl Tape
----	------------

- Securely install the set ring to the outer groove of the cylinder boot.
- Do not damage the cylinder boot.

INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. INSTALL FRONT DISC

- (a) Align the matchmarks of the disc and axle hub, and install the disc.

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

When replacing the disc with a new one, select the installation position where the front disc has minimal runout.

2. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING

- (a) Install the front disc brake cylinder mounting to the steering knuckle with the 2 bolts.

Torque: **137 N·m (1394 kgf·cm, 101ft·lbf)**

3. INSTALL FRONT DISC BRAKE BUSHING DUST BOOT

- (a) Apply a light layer of lithium soap base glycol grease to the entire circumference of 2 new front disc brake bushing dust boots.

HINT:

Apply at least 0.3 g (0.01 oz.) of lithium soap base glycol

grease to each front disc brake bushing dust boot.

 Lithium soap base glycol grease

c

(b) Install the 2 front disc brake bushing dust boots to the front disc brake cylinder mounting.

c

4. INSTALL FRONT NO. 2 DISC BRAKE CYLINDER SLIDE PIN

(a) Apply a light layer of lithium soap base glycol grease to the sliding part and the seal surface of the front No. 2 disc brake cylinder slide pin.

 Lithium soap base glycol grease

c

(b) Install the front No. 2 disc brake cylinder slide pin to the front disc brake cylinder mounting.

c

(c) Push the front No. 2 disc brake cylinder slide pin into the front disc brake bushing dust boot to align them.

5. INSTALL FRONT NO. 1 DISC BRAKE CYLINDER SLIDE PIN

(a) Apply a light layer of lithium soap base glycol grease to the sliding part and the seal surface of the front No. 1 disc brake cylinder slide pin.

 Lithium soap base glycol grease

c

(b) Install the front No. 1 disc brake cylinder slide pin to the front disc brake cylinder mounting.

c

(c) Push the front No. 1 disc brake cylinder slide pin into the front disc brake bushing dust boot to align them.

6. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE

c

(a) Install the 2 front No. 1 disc brake pad support plates and 2 front No. 2 disc brake pad support plates to the front disc brake cylinder mounting.

Text in Illustration

*1	Front No. 1 Disc Brake Pad Support Plate
*2	Front No. 2 Disc Brake Pad Support Plate

NOTICE:

Be sure to install each front disc brake pad support plate in the correct position and direction.

7. INSTALL FRONT ANTI-SQUEAL SHIM

(a) Install the pad wear indicator plate to each front disc brake pad.

NOTICE:

Install each pad wear indicator plate in the correct position and direction.

(b) Apply disc brake grease to both sides of each front No. 1 anti-squeal shim as shown in the illustration.

- When replacing worn pads, the front anti-squeal shims must be replaced together with the pads.
- Apply disc brake grease to the area that contacts the anti-squeal shims.

(c) Install the front No. 1 anti-squeal shim and front No. 2 anti-squeal shim to each front disc brake pad.

Text in Illustration

*1	Front No. 1 Anti-squeal Shim
*2	Front No. 2 Anti-squeal Shim

- Install the shims in the correct positions and directions.
- Disc brake grease can seep out slightly from the area where the anti-squeal shim is installed.
- Make sure that disc brake grease is not applied onto the lining surface.

8. INSTALL FRONT DISC BRAKE PAD

(a) Install the 2 front disc brake pads to the front disc brake cylinder mounting.

NOTICE:

There should be no oil or grease on the friction surfaces of the disc brake pads or the front disc.

c

9. INSTALL DISC BRAKE CYLINDER ASSEMBLY

(a) Hold the front disc brake cylinder slide pin, and install the disc brake cylinder assembly to the front disc brake cylinder mounting with the 2 bolts.

Text in Illustration

*1	Hold
*2	Turn

Torque: **34 N·m (347 kgf·cm, 25ft·lbf)**

c

10. CONNECT FRONT FLEXIBLE HOSE

(a) Connect the front flexible hose to the disc brake cylinder assembly with a new union bolt and a new gasket.

Torque: **33 N·m (340 kgf·cm, 25ft·lbf)**

HINT:

Install the flexible hose lock securely into the lock hole in the disc brake cylinder.

c

11. BLEED BRAKE LINE INFO

12. PERFORM INITIALIZATION AND CALIBRATION OF LINEAR SOLENOID VALVE

HINT:

If the brake control has been disabled, make sure to perform initialization and calibration of the linear solenoid valve .

13. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

REMOVAL

NOTICE:

When the brake pedal is first depressed after replacing the brake pads or pushing back the disc brake piston, DTC C1214 may be output. As there is no malfunction, clear the DTC.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. DISABLE BRAKE CONTROL INFO

2. REMOVE REAR WHEEL

3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately wash it off.

4. REMOVE FRONT DOOR SCUFF PLATE LH INFO

5. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH INFO

6. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY INFO

7. LOOSEN PARKING BRAKE CABLE

(a) Completely release the parking brake pedal.

(b) Loosen the lock nut and adjusting nut to completely release the parking brake cable.

Text in Illustration

*1	Lock Nut
*2	Adjusting Nut

8. DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Separate the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

c

(b) Separate the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

Text in Illustration

*1	No. 3 Parking Brake Cable Assembly
*2	Clip
*3	Offset Wrench (14 mm)

HINT:

Insert an offset wrench (14 mm) at the base of the No. 3 parking brake cable assembly as shown in the illustration to disengage the clip. Pull out the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

c

9. SEPARATE REAR FLEXIBLE HOSE

(a) Remove the union bolt and gasket, and separate the rear flexible hose from the rear disc brake cylinder assembly.

c

10. REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY

(a) Hold the rear disc brake pad guide pin, and remove the 2 bolts and rear disc brake cylinder assembly.

Text in Illustration

*1	Hold
*2	Turn

NOTICE:

Remove the rear disc brake cylinder assembly while holding both of the rear disc brake pads because the anti-squeal springs may fall off the rear disc brake pads.

11. REMOVE REAR DISC BRAKE PAD

(a) Remove the 2 anti-squeal springs from the rear disc brake pads.

(b) Remove the 2 rear disc brake pads from the rear disc brake cylinder mounting.

12. REMOVE REAR DISC BRAKE ANTI-SQUEAL SHIM

(a) Remove the rear No. 1 disc brake anti-squeal shim and rear No. 2 disc brake anti-squeal shim from each rear disc brake pad.

Text in Illustration

*1	Rear No. 1 Disc Brake Anti-squeal Shim
*2	Rear No. 2 Disc Brake Anti-squeal Shim

c

13. REMOVE REAR DISC BRAKE PAD SUPPORT PLATE

(a) Remove the 2 rear disc brake pad support plates from the disc brake cylinder mounting.

NOTICE:

Each rear disc brake pad support plate has a different shape. Be sure to put an identification mark on each rear disc brake pad support plate so that it can be installed to its original position.

Y

14. REMOVE REAR DISC BRAKE PAD GUIDE PIN

(a) Remove the 2 rear disc brake pad guide pins from the rear disc brake cylinder mounting.

15. REMOVE REAR DISC BRAKE BUSHING DUST BOOT

(a) Remove the 2 rear disc brake bushing dust boots from the rear disc brake cylinder mounting.

16. REMOVE REAR DISC BRAKE CYLINDER MOUNTING

(a) Remove the 2 bolts and rear disc brake cylinder mounting from the axle beam.

17. REMOVE REAR DISC

(a) Remove the rear disc.

Text in Illustration

*1	Matchmark
----	-----------

HINT:

Place matchmarks on the disc and axle hub.

DISASSEMBLY

1. REMOVE REAR DISC BRAKE PISTON

(a) Using SST, remove the rear disc brake piston by turning it counterclockwise.

SST: 09960-10010

09963-00400

- Do not damage the piston.
- Do not allow any brake fluid to spatter.

2. REMOVE CYLINDER BOOT

(a) Remove the cylinder boot from the rear disc brake piston.

3. REMOVE PISTON SEAL

(a) Using a screwdriver with its tip wrapped with vinyl tape, remove the piston seal from the rear disc brake cylinder assembly.

Text in Illustration

*1	Vinyl Tape
----	------------

NOTICE:

Do not damage the inner surface or piston seal groove of the cylinder.

4. REMOVE REAR DISC BRAKE BLEEDER PLUG CAP

5. REMOVE REAR DISC BRAKE BLEEDER PLUG

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust and scoring. If necessary, replace the disc brake cylinder and piston.

2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Text in Illustration

*1	Ruler
----	-------

Standard thickness:

9.5 mm (0.374 in.)

Minimum thickness:

1.0 mm (0.0394 in.)

If the pad lining thickness is equal to the minimum thickness or less, replace the brake pads with a disc brake pad kit.

HINT:

Be sure to check the wear of the rear disc after replacing the brake pads with new ones.

3. INSPECT REAR DISC BRAKE PAD SUPPORT PLATE

(a) Make sure that the rear disc brake pad support plates have sufficient rebound, no deformation, cracks or wear, and that all rust and dirt are removed. If necessary, replace the rear disc brake pad support plates.

4. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the disc thickness.

Text in Illustration

*1	Micrometer
----	------------

Standard thickness:

9.0 mm (0.354 in.)

Minimum thickness:

7.5 mm (0.295 in.)

If the disc thickness is less than the minimum, replace the rear disc.

5. INSPECT DISC RUNOUT

(a) Inspect the rear axle hub bearing looseness and axle hub runout INFO.

(b) While holding the disc using SST, tighten the disc with the 5 hub nuts.

SST: 09330-00021

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

(c) Using a dial indicator with magnetic base, measure the disc runout 10 mm (0.394 in.) away from the outer edge of the rear disc.

Text in Illustration

*1	Dial Indicator
----	----------------

Maximum disc runout:

0.15 mm (0.00591 in.)

NOTICE:

Keep the magnet of the dial indicator away from the axle hub and speed sensor.

If the runout exceeds the maximum value, change the installation position of the disc to minimize the runout. If the runout exceeds the maximum even when the installation position is changed, grind the disc. If the disc thickness is less than the minimum, replace the rear disc.

(d) Remove the 5 nuts and rear disc.

REASSEMBLY

1. TEMPORARILY TIGHTEN REAR DISC BRAKE BLEEDER PLUG

HINT:

Fully tighten the rear disc brake bleeder plug after bleeding any air left in the system.

2. INSTALL REAR DISC BRAKE BLEEDER PLUG CAP

3. INSTALL PISTON SEAL

(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new piston seal.

 Lithium soap base glycol grease

c

(b) Install the piston seal to the rear disc brake cylinder assembly.

NOTICE:

Securely install the piston seal to the groove of the rear disc brake cylinder assembly.

4. INSTALL CYLINDER BOOT

(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of the rear disc brake piston and a new cylinder boot.

(b) Install the cylinder boot to the piston as shown in the illustration.

NOTICE:

Do not install the cylinder boot after installing the piston into the disc brake cylinder.

5. INSTALL REAR DISC BRAKE PISTON

(a) Install the seal portion of the cylinder boot into the groove portion of the rear disc brake cylinder assembly.

NOTICE:

Securely install the cylinder boot to the groove of the rear disc brake cylinder assembly.

(b) Using SST, install the rear disc brake piston by turning it clockwise as far as possible.

SST: 09960-10010

09963-00400

- Securely install the cylinder boot to the groove of the piston.
- Do not damage the piston or cylinder boot.

(c) Using SST, slowly return the piston until the piston

c

groove is positioned as shown in the illustration.

HINT:

When installing the rear disc brake cylinder assembly to the rear disc brake cylinder mounting, align the piston groove with the protrusion on the rear disc brake pad.

c

(d) Make sure that the cylinder boot is securely installed into the groove of the rear disc brake cylinder assembly and rear disc brake piston.

Text in Illustration

*1	Cylinder Boot
----	---------------

INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. INSTALL REAR DISC

(a) Align the matchmarks of the disc and axle hub, and install the disc.

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

When replacing the disc with a new one, select the installation position where the rear disc has minimal runout.

2. INSTALL REAR DISC BRAKE CYLINDER MOUNTING

(a) Install the rear disc brake cylinder mounting to the axle beam with the 2 bolts.

Torque: **57 N·m (585 kgf·cm, 42ft·lbf)**

3. INSTALL REAR DISC BRAKE BUSHING DUST BOOT

(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of 2 new rear disc brake bushing dust boots.

HINT:

Apply at least 0.3 g (0.01 oz.) of lithium soap base glycol

grease to each rear disc brake bushing dust boot.

 Lithium soap base glycol grease

c

y

(b) Install the 2 rear disc brake bushing dust boots to the rear disc brake cylinder mounting.

4. INSTALL REAR DISC BRAKE PAD GUIDE PIN

 Lithium soap base glycol grease

c

(a) Apply a light layer of lithium soap base glycol grease to the sliding and sealing surfaces of the 2 rear disc brake pad guide pins.

(b) Install the 2 rear disc brake pad guide pins to the rear disc brake cylinder mounting.

5. INSTALL REAR DISC BRAKE PAD SUPPORT PLATE

(a) Install the 2 rear disc brake pad support plates to the rear disc brake cylinder mounting.

NOTICE:

Be sure to install each rear disc brake pad support plate in the correct position and direction.

c

6. INSTALL REAR DISC BRAKE ANTI-SQUEAL SHIM

Inner Pad:

Outer Pad:

 Disc brake grease

(a) Apply disc brake grease to the back plate of the rear disc brake pads.

(b) Install the rear No. 1 disc brake anti-squeal shim and rear No. 2 disc brake anti-squeal shim to each rear disc brake pad.

Text in Illustration

*1	Rear No. 1 Disc Brake Anti-squeal Shim
----	--

***2 Rear No. 2 Disc Brake Anti-squeal Shim**

- When replacing worn pads, the anti-squeal shims must be replaced together with the pads.
- Apply disc brake grease to the area that contacts the anti-squeal shim.
- Disc brake grease may seep out slightly from the areas where the anti-squeal shims are installed.
- Make sure that disc brake grease is not applied onto the lining surface.

c

7. INSTALL REAR DISC BRAKE PAD

(a) Install the 2 rear disc brake pads to the rear disc brake cylinder mounting.

NOTICE:

There should be no oil or grease on the friction surfaces of the disc brake pads or the rear disc.

y

(b) Install the 2 anti-squeal springs to the rear disc brake pads.

- When replacing the rear disc brake pads with new ones, make sure to replace the anti-squeal springs at the same time.
- Be sure to install the anti-squeal springs into the rear disc brake pad installation holes as far as they will go.

c

8. INSTALL REAR DISC BRAKE CYLINDER ASSEMBLY

(a) To compensate for pad wear when reusing the pad, use SST to turn the piston to the position where the protrusion on the pad lines up properly with the piston groove.

Retract	Extend
Clockwise	Counterclockwise

SST: 09960-10010

09963-00400

NOTICE:

Place the disc between the 2 brake pads and determine the piston return value.

(b) Hold the rear disc brake cylinder pad guide pin, and install the rear disc brake cylinder assembly to the rear disc brake cylinder mounting with the 2 bolts.

Text in Illustration

*1	Hold
*2	Turn

Torque: **34 N·m (350 kgf·cm, 25ft·lbf)**

- Install the rear disc brake cylinder assembly while holding both of the rear disc brake pads because the anti-squeal springs may fall off the rear disc brake pads.
- Be sure that the anti-squeal springs are installed to the rear disc brake pads.

9. CONNECT REAR FLEXIBLE HOSE

(a) Connect the rear flexible hose to the rear disc brake cylinder assembly with a new union bolt and a new gasket.

Torque: **33 N·m (340 kgf·cm, 25ft·lbf)**

HINT:

Install the flexible hose lock securely into the lock hole in

the disc brake cylinder.

c

10. CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly.

Text in Illustration

*1	No. 3 Parking Brake Cable Assembly
*2	Clip

HINT:

Be sure to engage the No. 3 parking brake cable assembly clip onto the rear disc brake cylinder assembly as shown in the illustration.

c

(b) Connect the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly.

c

11. BLEED BRAKE LINE [INFO](#)

12. PERFORM INITIALIZATION AND CALIBRATION OF LINEAR SOLENOID VALVE

HINT:

If the brake control has been disabled, make sure to perform initialization and calibration of the linear solenoid valve [INFO](#).

13. ADJUST PARKING BRAKE

HINT: [INFO](#)

14. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY [INFO](#)

15. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH [INFO](#)

16. INSTALL FRONT DOOR SCUFF PLATE LH [INFO](#)

17. INSTALL REAR WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

COMPONENTS ILLUSTRATION

c

REMOVAL

NOTICE:

While the battery is connected, even if the power switch is off, the brake control system activates when the brake pedal is depressed or any door courtesy switch turns on. Therefore, when servicing the brake system components, do not operate the brake pedal or open/close the doors while the battery is connected.

1. REMOVE BRAKE PEDAL SUPPORT ASSEMBLY

HINT:

Refer to the procedure up to Remove Brake Pedal Support Assembly .

2. REMOVE BRAKE PEDAL STROKE SENSOR ASSEMBLY

(a) Remove the 2 nuts and brake pedal stroke sensor assembly.

NOTICE:

Do not drop the brake pedal stroke sensor assembly. If the brake pedal stroke sensor assembly has been dropped, replace the brake pedal stroke sensor assembly with a new one.

INSTALLATION

NOTICE:

While the battery is connected, even if the power switch is off, the brake control system activates when the brake pedal is depressed or any door courtesy switch turns on. Therefore, when servicing the brake system components, do not operate the brake pedal or open/close the doors while the battery is connected.

1. INSTALL BRAKE PEDAL STROKE SENSOR ASSEMBLY

NOTICE:

Do not drop the brake pedal stroke sensor assembly. If the brake pedal stroke sensor assembly has been dropped, replace the brake pedal stroke sensor assembly with a new one.

(a) When installing a new brake pedal stroke sensor assembly:

NOTICE:

Do not break the brake pedal stroke sensor assembly lever set pin before installing the brake pedal stroke sensor assembly with the bolts. If the brake pedal stroke sensor assembly lever set pin breaks while tightening a bolt, do not use that brake pedal stroke sensor assembly.

(1) Temporarily install a new brake pedal stroke sensor assembly with the 2 nuts.

Text in Illustration

*1	Brake Pedal Groove
*2	Brake Pedal Stroke Sensor Assembly Lever

- Engage the brake pedal stroke sensor assembly lever with the brake pedal groove.
- Check that there is no foreign matter attached to the contact surface of the brake pedal stroke sensor assembly.
- Check that the tip of the brake pedal stroke sensor assembly lever is protruding from the brake pedal groove.

(b) When reusing the brake pedal stroke sensor assembly:

(1) Temporarily install the brake pedal stroke sensor assembly with the 2 nuts.

Text in Illustration

*1	Brake Pedal Groove
*2	Brake Pedal Stroke Sensor Assembly Lever

- Engage the brake pedal stroke sensor assembly lever with the brake pedal groove.
- Check that there is no foreign matter attached to the contact surface of the brake pedal stroke sensor assembly.
- Check that the tip of the brake pedal stroke sensor assembly lever is protruding from the brake pedal groove.

2. INSTALL BRAKE PEDAL SUPPORT ASSEMBLY

HINT:

Refer to the instructions for installation of the Brake Pedal Support Assembly INFO

3. INSPECT AND ADJUST BRAKE PEDAL INFO

4. ADJUST BRAKE PEDAL STROKE SENSOR ASSEMBLY

(a) When installing a new brake pedal stroke sensor assembly:

(1) Fully tighten a new brake pedal stroke sensor assembly with the 2 nuts.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

(2) Firmly depress the brake pedal and break the brake pedal stroke sensor assembly lever set pin.

(3) Remove the broken lever set pin.

(b) When reusing the brake pedal stroke sensor assembly:

(1) Connect the cable to the negative (-) battery terminal.

(2) Connect the Techstream to the DLC3.

(3) Turn the power switch on (IG).

(4) Turn the Techstream on.

(5) Enter the following menus: Chassis / ABS/VSC/ TRAC / Data List.

(6) Reading the value of the brake pedal stroke sensor assembly shown in the Data List, turn the brake pedal stroke sensor assembly slowly to the right and left to adjust the output voltage to the standard voltage.

Standard Voltage:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stroke Sensor	Stroke sensor / min.: 0 V, max.: 5 V	0.8 to 1.2 V	-

(7) Tighten the 2 nuts.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

NOTICE:

Do not depress the brake pedal after turning the power switch on (IG).

(8) Turn the power switch off.

(9) Disconnect the Techstream.

5. CHECK AND CLEAR DTC

(a) Check and clear the DTCs .

6. PERFORM LINEAR VALVE OFFSET LEARNING

(a) Perform linear valve offset learning .

PRECAUTION

1. PRECAUTION FOR DISCONNECTING THE BATTERY CABLE

NOTICE:

When disconnecting the battery negative (-) cable, initialize the following system after the cable is reconnected:

System	See Procedure
Advanced Parking Guidance System	

2. TROUBLESHOOTING PRECAUTIONS

- (a) When there is a malfunction with terminal contact points or part installation problems, removal and installation of the suspected problem parts may return the system to the normal condition either completely or temporarily.
- (b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as DTC output and the Freeze Frame Data, and record it before disconnecting each connector or removing and installing parts.
- (c) Since the system may be influenced by malfunctions in systems other than the brake control system, be sure to check for DTCs in other systems.

3. HANDLING PRECAUTIONS

- (a) Do not remove or install electronically controlled brake system parts such as the steering angle sensor, yaw rate and acceleration sensor or brake pedal stroke sensor except when required, as they cannot be adjusted correctly after removal or installation.
- (b) Be sure to perform preparation before work and confirmation after work is completed by following the directions in the repair manual when working on the electronically controlled brake system.
- (c) Be sure that the power switch is off when removing and installing the ECU, actuator, each sensor, etc. unless it is specified otherwise in the inspection procedure.
- (d) If the brake booster with master cylinder (skid control ECU and brake actuator) or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the Techstream, also check that system functions and signals received by the ECU are normal using Test Mode.
- (e) If the brake pedal is depressed before the brake control system is prepared to operate, the pedal stroke may seem unusually long or short. This is due to the fact the stroke simulator cut solenoid has not yet operated and is not a malfunction.

After the power switch is turned on (IG) or the brake pedal is depressed twice or more, the stroke simulator will operate and the brake pedal stroke will remain consistent.

4. DTC PRECAUTION

(a) Warnings for some DTCs cannot be cleared only by repairing the malfunctioning parts. If the warning is displayed even after repair work, the DTC should be cleared after turning the power switch off.

NOTICE:

If a DTC part is still malfunctioning even after the DTC is cleared, the DTC will be stored again.

5. CHASSIS DYNAMOMETER PRECAUTION

(a) Enter Inspection Mode to disable TRAC and VSC control when using a chassis dynamometer .

NOTICE:

- Make sure that the slip indicator lights blink (Inspection Mode is activated).
- Secure the vehicle with a lock chain for safety.

6. CAN COMMUNICATION SYSTEM PRECAUTIONS

(a) The CAN communication system is used for the data communication between the skid control ECU, the steering angle sensor, yaw rate and acceleration sensor and other ECUs. If there are any problems in the CAN communication line, corresponding DTCs in the communication line are stored.

(b) If any CAN communication line DTCs are output, repair the malfunction in the communication line and troubleshoot the electronically controlled brake system when data communication is normal.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used, because the data being transmitted will be corrupted.

SYSTEM DESCRIPTION

1. FUNCTION DESCRIPTION

(a) Electronically Controlled Brake System

(1) Upon receiving signals from the skid control ECU, this system effects hydraulic pressure control at the four wheels.

(b) Regenerative Brake Cooperative Control

(1) Controls hydraulic braking in order to recover electrical energy by utilizing the regenerative brake of the hybrid control system as much as possible.

(c) Enhanced-VSC (Cooperative Control with EPS)

(1) Effects cooperative control with the power steering ECU in order to provide steering assist in accordance with the operating conditions of the vehicle.

(d) Anti-lock Brake System (ABS)

(1) The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.

(e) Electronic Brake force Distribution (EBD)

(1) The EBD control utilizes ABS, realizing proper brake force distribution between the front and rear wheels in accordance with the driving conditions. In addition, during braking while cornering, it also controls the brake forces of the right and left wheels, helping maintain vehicle behavior.

(f) Brake Assist (BA)

(1) The primary purpose of brake assist is to provide an auxiliary brake force to assist a driver who cannot generate a large brake force during emergency braking, thus helping draw the vehicles braking performance.

(g) Traction Control (TRAC)

(1) The TRAC helps restrain the slippage of the drive wheels if the driver depresses the accelerator pedal excessively when starting off or accelerating on a slippery surface.

(h) Vehicle Stability Control (VSC)

(1) The VSC helps restrain sideways slippage of the vehicle during a strong front wheel skid or strong rear wheel skid, during cornering.

(i) Hill-start Assist Control

(1) When starting uphill, this control maintains the brake hydraulic pressure to the four wheels, in order to momentarily prevent the vehicle from descending backward.

2. FUNCTION OF COMPONENTS

Component		Function
Brake Booster with Master Cylinder	Brake Actuator	<ul style="list-style-type: none">• Consists of four switching solenoid valves, two linear solenoid valves, eight control solenoid valves.• Changes the brake fluid path based on the signals from the skid control ECU during the operations of the ABS with EBD, BA, TRAC, VSC, hill-start assist control, and Enhanced-VSC in order to control the fluid pressure that is applied to the wheel cylinders.
	Hydraulic Brake Booster	<ul style="list-style-type: none">• Generates hydraulic pressure in accordance with the amount of effort applied to the brake pedal by the driver.• When a malfunction occurs in the brake system, the hydraulic brake booster supplies the fluid pressure (which is generated by the brake

Component		Function
		pedal effort) directly to the wheel cylinders.
	Stroke Simulator	Generates a pedal stroke during braking in accordance with the drivers pedal effort.
Brake Actuator	Skid Control ECU	<ul style="list-style-type: none"> Monitors the driving conditions of the vehicle in accordance with the signals received from the sensors and through cooperative control with the power management control ECU and power steering ECU calculates the required amount of braking force, and controls the brake actuator. Judges the vehicle driving condition based on signals from each sensor, and controls ABS with EBD, BA, TRAC, Enhanced-VSC and hill-start assist control. Operates the brake booster pump to control accumulator pressure based on accumulator pressure sensor signal.
Skid Control ECU	Relief Valve	Returns the brake fluid to the reservoir to prevent excessive pressure if the pump operates continuously due to a malfunction of the accumulator pressure sensor.
	Solenoid Relay	Supply or cut off power to solenoid valves in the brake actuator.
	Motor Relay	Normally supplies power to the pump motor using two out of three relays. Ensures power to the pump motor by using the rest relay if the skid control ECU malfunctions.
	Linear Solenoid Valve	Controls the wheel cylinder pressure to generate a braking force responsive to the braking force requirement when the brake pedal is depressed normally.
	Switching Solenoid Valve	Switches the brake hydraulic path when the brake control system is activated.
	Control Solenoid Valve	Controls the wheel cylinder pressure when the ABS with EBD, BA, TRAC, VSC, hill-start control and Enhanced-VSC are activated.
	Regulator Pressure Sensor	The regulator pressure sensor converts the fluid pressure generated by the hydraulic brake booster into electrical signals and transmits them to the skid control ECU. Accordingly, the skid control ECU determines the braking force required by the driver.
	Wheel Cylinder Pressure Sensor	This sensor detects the fluid pressure that acts on the respective wheel cylinders and transmits them to the skid control ECU in the form of feedback. Accordingly, the skid control ECU monitors the fluid pressure of the wheel cylinders and controls the linear solenoid valve, in order to achieve the optimal wheel cylinder pressures.
	Accumulator Pressure Sensor	The accumulator pressure sensor constantly detects the brake fluid pressure in the accumulator and transmits the signals to the skid control ECU. Accordingly, the skid control ECU controls the pump motor.
Brake Booster Pump		<ul style="list-style-type: none"> Consisting of a pump, pump motor and accumulator, the hydraulic power source portion generates and stores the hydraulic pressure, which the skid control ECU uses for controlling braking. The relief valve is installed in the hydraulic brake booster.

Component		Function
		<ul style="list-style-type: none"> The accumulator pressure sensor is installed in the brake actuator.
Speed Sensor		Detects the wheel speed of each of four wheels.
Brake Pedal Stroke Sensor		Directly detects the extent of the brake pedal stroke operated by the driver.
Brake Fluid Level Warning Switch		Detects the low brake fluid level.
Skid Control Buzzer		<ul style="list-style-type: none"> This buzzer sounds continuously to inform the driver when there is a malfunction in the hydraulic pressure or a failure in the power supply. This buzzer sounds intermittently to inform the driver of the vehicle skidding.
Stop Light Switch		Detects brake pedal operation.
Stop Light Control Relay		Illuminates the stop lights when hill-start assist control is operating.
Power Steering ECU		Operates cooperatively with the skid control ECU to control the steering assist torque.
Main Body ECU (Instrument Panel Junction Block)		Detects the parking brake signal and outputs it to the skid control ECU via CAN communication.
Power Management Control ECU		<ul style="list-style-type: none"> Actuates the regenerative brake on receiving signal from the skid control ECU. Sends the actual regenerative brake control value to the skid control ECU. Controls the motive force based on an output control request signal received from the skid control ECU while the VSC, TRAC or the dynamic radar cruise control system is operating.
Steering Angle Sensor		Detects the steering direction and angle of the steering wheel.
Yaw Rate and Acceleration Sensor		<ul style="list-style-type: none"> Detects the vehicles yaw rate. Detects the vehicles acceleration in the forward, rearward, and lateral.
Combination Meter	ABS Warning Light	Lights up to alert the driver when the skid control ECU detects the malfunction in the ABS, EBD, or BA.
	Brake Warning Light / Red (Malfunction)	<ul style="list-style-type: none"> Lights up to alert the driver when the skid control ECU detects the malfunction in the apportioning of the brake. Lights up to inform the driver when the parking brake is on or the brake fluid level is low.
	Brake Warning Light / Yellow (Minor Malfunction)	Lights up to alert the driver when a minor malfunction occurs in the brake system, which does not affect the braking force (such as a malfunction in the regenerative brake).
	Slip Indicator Light	<ul style="list-style-type: none"> Blinks to inform the driver when the TRAC, the VSC or the hill-start assist control is operated. Lights up to alert the driver in the event of malfunction of the TRAC or

Component		Function
		VSC.

HOW TO PROCEED WITH TROUBLESHOOTING

CHECK FOR INTERMITTENT PROBLEMS

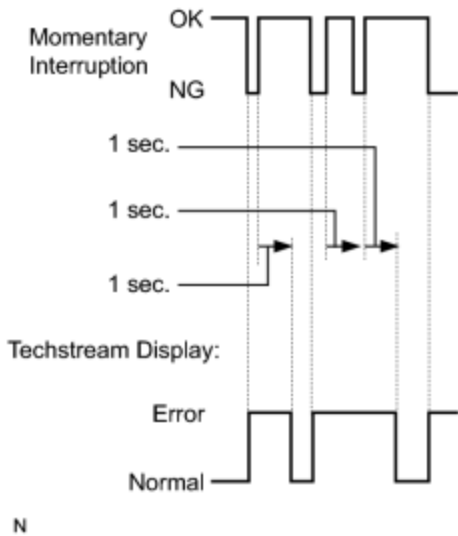

1. CHECK FOR INTERMITTENT PROBLEMS

HINT:

A momentary interruption (open circuit) in the connectors and/or wire harnesses between the sensors and ECUs can be detected using the ECU Data List function of the Techstream.

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Turn the Techstream on.
- (e) Follow the directions on the Techstream to display the Data List and select areas where momentary interruptions should be monitored.
 - A momentary interruption (open circuit) cannot be detected for 3 seconds after the power switch is turned on (IG) (initial check).
 - If the Error display remains displayed, check for continuity between the ECUs and the sensors, or between ECUs.
 - The Error display on the Techstream will remain displayed for 1 second after the harness signal changes from momentary interruption (open circuit) to normal condition.

Harness Signal:

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR Speed Open	Front speed sensor RH open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-
FL Speed Open	Front speed sensor LH open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-
RR Speed Open	Rear speed sensor RH open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-

		Normal: Normal

		interruption	
		Normal: Normal	
HV Communication Open	Hybrid vehicle communication open detection / Error or Normal	Error: Momentary interruption	-
		Normal: Normal	

(f) While observing the screen, gently jiggle the connectors or wire harnesses between the ECUs and sensors, or between ECUs.

OK:

Normal display appears.

HINT:

If the display changes, this indicates that there has been a momentary interruption (open circuit) in the connector and/or wire harness. In this case, repair or replace the connectors and/or wire harnesses as one of them is faulty.

F47126

INITIALIZATION

1. DESCRIPTION

(a) Perform initialization and calibration of the linear solenoid valve when the brake booster with master cylinder (skid control ECU, brake actuator or pressure sensor), brake pedal stroke sensor or brake pedal is replaced.

Follow the procedure to perform initialization.

HINT:

- If there is a problem with the auxiliary battery (12 V) voltage, initialization and calibration of the linear solenoid valve cannot be completed normally. Make sure to check the auxiliary battery voltage before performing initialization and calibration of the linear solenoid valve.
- If the actuator's temperature is high, initialization and calibration of the linear solenoid valve may not be completed normally. If so, wait until the temperature decreases and then perform initialization and calibration of the linear solenoid valve.
- If the power switch is turned off, the brake pedal is operated, parking brake is applied or vehicle speed signal is input while the linear solenoid valve offset learning is being performed, the learning will be cancelled.

Part to be Replaced	Necessary Operation
Brake booster with master cylinder (Skid control ECU, brake actuator or pressure sensor)	Initialization and calibration of the linear solenoid valve
<ul style="list-style-type: none">• Brake pedal stroke sensor• Brake pedal	<ol style="list-style-type: none">1. Clearing stored linear solenoid valve calibration data2. Initialization and calibration of the linear solenoid valve

2. PERFORM INITIALIZATION AND CALIBRATION OF LINEAR SOLENOID VALVE (When Using the Techstream)

NOTICE:

If the brake control has been disabled, or the brake pedal stroke sensor or brake pedal has been replaced, it is necessary to perform linear solenoid valve learning.

If the brake booster with master cylinder has been replaced, or the brake booster pump or brake master cylinder reservoir has been replaced, linear solenoid valve learning will be automatically performed during the Bleed Brake System procedure .

(a) Clear the stored linear solenoid valve calibration data.

(1) Turn the power switch off.

(2) Check that the steering wheel is centered.

(3) Check that park (P) is selected.

- (4) Connect the Techstream to the DLC3.
- (5) Turn the power switch on (IG).
- (6) Turn the Techstream on.
- (7) Select the skid control ECU to clear the linear solenoid valve calibration data using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Reset Memory.
- (8) Perform initialization and calibration of the linear solenoid valve.
- (9) Perform the zero point calibration of yaw rate and acceleration sensor .
- (b) Perform initialization and calibration of the linear solenoid valve.
- (1) Turn the power switch off.
- (2) Check that the steering wheel is centered.
- (3) Check that park (P) is selected.
- (4) Check that the parking brake is released.

NOTICE:

Linear valve offset learning cannot be started with the parking brake applied. If the parking brake is applied during offset learning, the learning process will be canceled and then restarted when the parking brake is released.

- (5) Connect the Techstream to the DLC3.
- (6) Turn the power switch on (IG) with the brake pedal released.

NOTICE:

- If the linear solenoid valve offset learning is performed without turning the power switch on (IG), the learning process may not be completed properly because of insufficient auxiliary battery voltage.
- When the linear solenoid valve offset learning is interrupted, or the learning process is performed with park (P) is not selected, DTC C1345 (Linear Solenoid Valve Offset Learning Undone) will be stored.

- (7) Turn the Techstream on.
- (8) Switch the skid control ECU to the Test Mode using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / ECB* Utility / Linear Valve Offset.

*: Electronically Controlled Brake System

- (9) Leave the vehicle stationary without depressing the brake pedal for 1 or 2 minutes.
- (10) Check that the interval between blinks of the brake warning light /

Test Mode Blinking Pattern:

yellow (minor malfunction) changes from 1 second to 0.25 seconds.

- The time needed to complete initialization and calibration of the linear solenoid valve varies depending on auxiliary battery voltage.
- The brake warning light / yellow (minor malfunction) blinks at 1 second intervals during initialization and calibration of the linear solenoid valve and changes to the Test Mode display.
- The brake warning light / yellow (minor malfunction) blinks at 0.25 seconds intervals if the Test Mode is normal.

(11) Check that DTC C1345 (Linear Solenoid Valve Offset Learning Undone) which indicates trouble with stroke sensor zero point learning is not output when the brake warning light / yellow (minor malfunction) changes to the Test Mode display upon initialization and calibration of the linear solenoid valve completion.

(12) Enter the normal mode from the Test Mode following the Techstream directions.

HINT:

Refer to the Techstream operator's manual for further details.

3. PERFORM INITIALIZATION AND CALIBRATION OF LINEAR SOLENOID VALVE (When not Using the Techstream)

NOTICE:

If the brake control has been disabled, or the brake pedal stroke sensor or brake pedal has been replaced, it is necessary to perform linear solenoid valve learning.

If the brake booster with master cylinder has been replaced, or the brake booster pump or brake master cylinder reservoir has been replaced, linear solenoid valve learning will be automatically performed during the Bleed Brake System procedure INFO.

(a) Clear the stored linear solenoid valve calibration data.

(1) Turn the power switch off.

(2) Check that the steering wheel is centered.

(3) Check that park (P) is selected.

(4) Check that the parking brake is released.

NOTICE:

Linear valve offset learning cannot be started with the parking brake applied. If the parking brake is applied during offset learning, the learning process will be canceled and then restarted when the parking brake is released.

(5) Turn the power switch on (IG) with the brake pedal released.

*1

(6) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.

SST: 09843-18040

Text in Illustration

*1	Front view of DLC3
----	--------------------

(7) Check that no codes other than ABS code 42, VSC code 45 and electronically controlled brake system code 48, 66, or 95 are stored in the diagnostic system.

Trouble Code Blinking Pattern (Example Code 42):

HINT:

The ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights do not indicate a normal system code.

(8) Remove SST from the terminals of the DLC3.

(9) Perform initialization and calibration of the linear solenoid valve.

(10) Perform the zero point calibration of yaw rate and acceleration sensor INFO.

(b) Perform initialization and calibration of the linear solenoid valve.

(1) Turn the power switch off.

(2) Check that the steering wheel is centered.

(3) Check that park (P) is selected.

(4) Using SST, connect terminals TS and CG of the DLC3.

SST: 09843-18040

Text in Illustration

*1 Front view of DLC3

(5) Turn the power switch on (IG) with the brake pedal released.

NOTICE:

- If the linear solenoid valve offset learning is performed without turning the power switch on (IG), the learning process may not be completed properly because of insufficient auxiliary battery voltage.
- When the linear solenoid valve offset learning is interrupted, or the learning process is performed with park (P) is not selected, DTC 66 (Linear Solenoid Valve Offset Learning Undone) will be stored.

(6) Leave the vehicle stationary without depressing the brake pedal for 1 or 2 minutes.

(7) Check that the interval between blinks of the brake warning light / yellow (minor malfunction) changes from 1 second to 0.25 seconds.

Test Mode Blinking Pattern:

- The time needed to complete initialization and calibration of the linear solenoid valve varies depending on the auxiliary battery voltage.
- The brake warning light / yellow (minor malfunction) blinks at 1 second intervals during initialization and calibration of the linear solenoid valve and changes to the Test Mode display.
- The brake warning light / yellow (minor malfunction) blinks at 0.25 seconds intervals if Test Mode is normal.

(8) Check that DTC 66 (Linear Solenoid Valve Offset Learning Undone) which indicates trouble with stroke sensor zero point learning is not output when the brake warning light / yellow (minor malfunction) changes to the Test Mode display upon initialization and calibration of the linear solenoid valve completion.

(9) Turn the power switch off and disconnect SST from the DLC3.

CALIBRATION

1. DESCRIPTION

(a) After replacing any VSC related components or performing front wheel alignment adjustment, clear and read the sensor calibration data.

Follow the chart below to perform calibration.

Part to be Replaced / Operation	Necessary Operation
Brake booster with master cylinder (Skid control ECU)	Yaw rate and acceleration sensor zero point calibration
Yaw rate and acceleration sensor	<ol style="list-style-type: none">1. Clearing zero point calibration data2. Yaw rate and acceleration sensor zero point calibration
Front wheel alignment adjustment	<ol style="list-style-type: none">1. Clearing zero point calibration data2. Yaw rate and acceleration sensor zero point calibration

2. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (When Using the Techstream)

NOTICE:

- While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it.
- Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).

(a) Clear the zero point calibration data.

(1) Turn the power switch off.

(2) Check that the steering wheel is centered.

(3) Check that park (P) is selected.

(4) Connect the Techstream to the DLC3.

(5) Turn the power switch on (IG).

(6) Turn the Techstream on.

(7) Select the skid control ECU to clear the zero point calibration data using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Reset Memory.

(8) Turn the power switch off.

NOTICE:

If the power switch is turned on (IG) for more than 15 seconds with park (P) is selected after the zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator light.

(b) Perform the zero point calibration of the yaw rate and acceleration sensor.

(1) Turn the power switch off.

(2) Check that the steering wheel is centered.

(3) Check that park (P) is selected.

NOTICE:

DTCs C1210 (Zero Point Calibration of Yaw Rate Sensor Undone) and C1336 (Zero Point Calibration of Acceleration Sensor Undone) will be stored if park (P) is not selected.

(4) Connect the Techstream to the DLC3.

(5) Turn the power switch on (IG).

(6) Turn the Techstream on.

(7) Switch the skid control ECU to Test Mode using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Test Mode.

(8) After Test Mode has been entered, keep the vehicle stationary on a level surface for 2 seconds or more.

Test Mode Blinking Pattern:

(9) Check that the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights come on for several seconds and then blink in Test Mode.

- If the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights do not blink, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(10) Turn the power switch off and disconnect the Techstream.

3. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (When not Using the Techstream)

NOTICE:

- While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it.
- Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).

- (a) Clear the zero point calibration data.
- (1) Turn the power switch off.
- (2) Check that the steering wheel is centered.
- (3) Check that park (P) is selected.
- (4) Turn the power switch on (IG).

(5) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.

SST: 09843-18040

Text in Illustration

*1	Front view of DLC3
----	--------------------

(6) Check that no codes other than ABS code 42, VSC code 45 and electronically controlled brake system code 48, 66, or 95 are stored in the diagnostic system.

Trouble Code Blinking Pattern (Example Code 42):

HINT:

The ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights do not indicate a normal system code.

NOTICE:

If the power switch is turned on (IG) for more than 15 seconds with park (P) is selected after the zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator light.

- (7) Turn the power switch off.
- (b) Perform the zero point calibration of the yaw rate and acceleration sensor.
- (1) Turn the power switch off.
- (2) Check that the steering wheel is centered.
- (3) Check that park (P) is selected.

NOTICE:

DTCs 36 (Zero Point Calibration of Yaw Rate Sensor Undone) and 98 (Zero Point Calibration of Acceleration Sensor Undone) will be recorded if park (P) is not selected.

- (4) Using SST, connect terminals TS and CG of the DLC3.

SST: 09843-18040

Text in Illustration

*1	Front view of DLC3
----	--------------------

- (5) Turn the power switch on (IG).
- (6) After Test Mode has been entered, keep the vehicle stationary on a level surface for 2 seconds or more.

Test Mode Blinking Pattern:

- (7) Check that the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights come on for several seconds and then blinks in Test Mode.

- If the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights do not blink, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

- (8) Turn the power switch off and disconnect SST from the DLC3.

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

When releasing the parking brake, push the P position switch for safety.

HINT:

When the parking brake is applied or the brake fluid level is low, the brake warning light / red (malfunction) comes on.

ABS Warning Light:

for U.S.A.: Except for
U.S.A.:

ABS

Brake Warning Light / Red (Malfunction):

for U.S.A.: Except for
U.S.A.:

BRAKE

Brake Warning Light / Yellow (Minor Malfunction):

Slip Indicator Light:

(b) When the power switch is turned on (IG), check that the ABS warning, brake warning / red (malfunction), brake warning / yellow (minor malfunction) and slip indicator lights come on until the power switch is turned on (READY).

- If the skid control ECU stores any DTCs, the ABS warning, brake warning / red (malfunction), brake warning / yellow (minor malfunction) and slip indicator lights will come on.
- If any of the indicators remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See Procedure
ABS warning light circuit (Remains on)	INFO
ABS warning light circuit (Does not come on)	INFO
Brake warning light / red (malfunction) circuit (Remains on)	INFO
Brake warning light / red (malfunction) circuit (Does not come on)	INFO
Brake warning light / yellow (minor malfunction) circuit (Remains on)	INFO
Brake warning light / yellow (minor malfunction) circuit (Does not come on)	INFO
Slip indicator light circuit (Remains on)	INFO
Slip indicator light circuit (Does not come on)	INFO

2. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (When Using the Techstream)

NOTICE:

Before performing the master cylinder pressure sensor check or yaw rate sensor zero point voltage check, perform linear valve offset learning.

HINT:

- If the power switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the sensor check will be cleared.
- During Test Mode (signal check), the skid control ECU records all DTCs detected in the sensor check. By performing Test Mode (signal check), the codes are cleared if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

(a) Procedure to enter the Test Mode

- (1) Turn the power switch off.
- (2) Check that the steering wheel is centered.
- (3) Check that the parking brake is released.
- (4) Check that park (P) is selected.
- (5) Connect the Techstream to the DLC3.
- (6) Turn the power switch on (IG).
- (7) Turn the Techstream on.
- (8) Switch the skid control ECU to Test Mode using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Signal Check.
- (9) Check that the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights come on for several seconds and then blink in Test Mode.

Test Mode Blinking Pattern:

HINT:

If the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights do not blink, inspect the TS and CG terminal circuit and ABS warning, brake warning / yellow (minor malfunction) and slip indicator light circuits.

- (10) Check the ABS sensors.

HINT:

Check that the ABS warning light is blinking in the Test Mode blinking pattern before performing the ABS sensor check.

(b) Acceleration Sensor Check

(1) Keep the vehicle stationary on a level surface for 1 second or more.

HINT:

The acceleration sensor check can be performed with the master cylinder pressure sensor check below.

(c) Master Cylinder Pressure Sensor Check

NOTICE:

Before performing the master cylinder pressure sensor check, perform linear valve offset learning.

(1) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force greater than 98 N (10 kgf, 22.0 lbf) for 1 second.

(2) Check that the ABS warning light stays on for 3 seconds.

HINT:

- Confirm that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the preceding brake pedal operation is performed.

(d) Speed Sensor Check

NOTICE:

Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.

(1) Drive the vehicle straight-ahead.

Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds and check that the ABS warning light goes off.

HINT:

- The sensor check may not be completed if wheelspin occurs.
- The ABS warning light comes on immediately if a malfunction is detected during the speed sensor check.

(2) Stop the vehicle.

NOTICE:

- The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.
- After the ABS warning light goes off, if vehicle speed exceeds 80 km/h (50 mph), a sensor check code will be stored again. Decelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

(3) Check the VSC sensor.

HINT:

Check that the brake warning / yellow (minor malfunction) and slip indicator lights are blinking in the Test Mode blinking pattern before performing the VSC sensor check.

(e) Yaw Rate Sensor Zero Point Voltage Check

NOTICE:

Before performing the yaw rate sensor zero point voltage check, perform linear valve offset learning.

- (1) Check that park (P) is selected.
- (2) Keep the vehicle stationary on a level surface for 1 second or more.
- (3) Check that the brake warning light / yellow (minor malfunction) blinks.

(f) Yaw Rate Sensor Output Check

(1) Move the shift lever from P to D and drive the vehicle at a speed of approximately 5 km/h (3 mph), and turn the steering wheel either to the left or right 90° or more until the vehicle makes a 180° turn.

- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +/-5° of its start position.
- Do not allow the wheels to spin.
- Do not turn the power switch off while turning.
- Do not push the P position switch while turning, but changing the vehicle speed, stopping, or driving in reverse is acceptable.

(2) Stop the vehicle and push the P position switch. Check that the skid control buzzer sounds for 3 seconds.

HINT:

- If the skid control buzzer sounds, the sensor check has completed normally.

- If the skid control buzzer does not sound, check the skid control buzzer circuit INFO, then perform the sensor check again.
- If the skid control buzzer still does not sound, the yaw rate sensor may be malfunctioning. Check for DTCs.

(g) End of Sensor Check

Test Mode Blinking Pattern:

(1) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle is stopped and goes off while the vehicle is driving.

- When all the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

(h) Read Sensor Check DTCs

(1) Read the DTC(s) by following the Techstream screen.

NOTICE:

- If only DTCs other than Test Mode sensor check DTCs are displayed, repair the malfunction and clear the DTCs.
- If Test Mode sensor check DTCs and other DTCs are displayed or if only Test Mode sensor check DTCs are displayed, repair the malfunction, clear the DTCs, and perform the Test Mode inspection again.

HINT:

See "Sensor Check DTCs".

(2) Turn the power switch off and disconnect the Techstream.

(i) Sensor Check DTCs

ABS Sensor

DTC Code	Detection Item	Trouble Area
C1271	Low Output Signal of Front Speed Sensor RH	<ul style="list-style-type: none"> • Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272	Low Output Signal of Front Speed Sensor LH	<ul style="list-style-type: none"> • Front speed sensor LH • Sensor installation • Speed sensor rotor

C1281	Master Cylinder Pressure Sensor Output Malfunction	<ul style="list-style-type: none"> • Stop light switch • Regulator pressure sensor

VSC Sensor

DTC Code	Detection Item	Trouble Area
C0371	Yaw Rate Sensor	<ul style="list-style-type: none"> • Sensor installation • Yaw rate and acceleration sensor

Electronically Controlled Brake System Sensor

DTC Code	Detection Item	Trouble Area
C1346	Stroke Sensor Zero Point Learning Malfunction	<ul style="list-style-type: none"> • Brake pedal stroke sensor • Brake pedal stroke sensor circuit

HINT:

The codes in this table are output only in Test Mode (signal check).

3. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (When not Using the Techstream)

NOTICE:

Before performing the master cylinder pressure sensor check or yaw rate sensor zero point voltage check, perform linear valve offset learning.

HINT:

- If the power switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the sensor check will be cleared.
- During Test Mode (signal check), the skid control ECU records all DTCs detected in the sensor check. By performing Test Mode (signal check), the codes are cleared if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

(a) Procedure to enter Test Mode

- (1) Turn the power switch off.
- (2) Check that the steering wheel is centered.
- (3) Check that the parking brake is released.
- (4) Check that park (P) is selected.

(5) Using SST, connect terminals TS and CG of the DLC3.

SST: 09843-18040

Text in Illustration

*1	Front view of DLC3
----	--------------------

(6) Turn the power switch on (IG).

Test Mode Blinking Pattern:

(7) Check that the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights come on for several seconds and then blink in Test Mode.

HINT:

If the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights do not blink, inspect the TS and CG terminal circuit and ABS warning, brake warning / yellow (minor malfunction) and slip indicator light circuits.

(8) Check the ABS sensors.

HINT:

Check that the ABS warning light is blinking in the Test Mode blinking pattern before performing the ABS sensor check.

(b) Acceleration Sensor Check

(1) Keep the vehicle stationary on a level surface for 1 second or more.

HINT:

The acceleration sensor check can be performed with the master cylinder pressure sensor check below.

(c) Master Cylinder Pressure Sensor Check

NOTICE:

Before performing the master cylinder pressure sensor check, perform linear valve offset learning.

(1) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force greater than 98 N (10 kgf, 22.0 lbf) for 1 second.

(2) Check that the ABS warning light stays on for 3 seconds.

HINT:

- Confirm that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the preceding brake pedal operation is performed.

(d) Speed Sensor Check

NOTICE:

Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.

(1) Drive the vehicle straight-ahead.

Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds and check that the ABS warning light goes off.

HINT:

- The sensor check may not be completed if wheelspin occurs.
- The ABS warning light comes on immediately if a malfunction is detected during the speed sensor check.

(2) Stop the vehicle.

NOTICE:

- The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.
- After the ABS warning light goes off, if vehicle speed exceeds 80 km/h (50 mph), a sensor check code will be stored again. Decelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

(3) Check the VSC sensor.

HINT:

Check that the brake warning / yellow (minor malfunction) and slip indicator lights are blinking in the Test Mode blinking pattern before performing the VSC sensor check.

(e) Yaw Rate Sensor Zero Point Voltage Check

NOTICE:

Before performing the yaw rate sensor zero point voltage check, perform linear valve offset learning.

- (1) Check that park (P) is selected.
- (2) Keep the vehicle stationary on a level surface for 1 second or more.
- (3) Check that the brake warning light / yellow (minor malfunction) blinks.

(f) Yaw Rate Sensor Output Check

(1) Move the shift lever from P to D and drive the vehicle at a speed of approximately 5 km/h (3 mph), and turn the steering wheel either to the left or right 90° or more until the vehicle makes a 180° turn.

- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +/-5° of its start position.
- Do not allow the wheels to spin.
- Do not turn the power switch off while turning.
- Do not push the P position switch while turning, but changing the vehicle speed, stopping, or driving in reverse is acceptable.

(2) Stop the vehicle and push the P position switch. Check that the skid control buzzer sounds for 3 seconds.

HINT:

- If the skid control buzzer sounds, the sensor check has completed normally.

- If the skid control buzzer does not sound, check the skid control buzzer circuit INFO, then perform the sensor check again.
- If the skid control buzzer still does not sound, the yaw rate sensor may be malfunctioning. Check for DTCs.

(g) End of Sensor Check

Test Mode Blinking Pattern:

(1) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle is stopped and goes off while the vehicle is driving.

- When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

(h) Read Sensor Check DTCs

*1

T

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

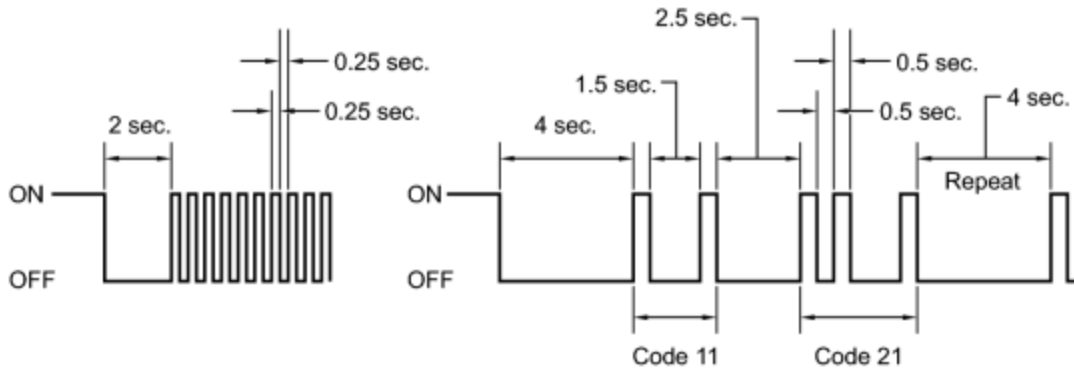

Text in Illustration

*1	Front view of DLC3
----	--------------------

(2) Count the number of blinks of the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights.

Normal System Code
Blinking Pattern:

Trouble Code Blinking Pattern
(Example Codes 11 and 21):

NOTICE:

- If only DTCs other than the Test Mode sensor check DTCs are displayed, repair the malfunctions and clear the DTCs.
- If Test Mode sensor check DTCs and other DTCs are displayed or if only the Test Mode sensor check DTCs are displayed, repair the malfunctions, clear the DTCs, and perform the Test Mode inspection again.

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See "Sensor Check DTCs".

(3) After performing the check, disconnect SST from terminals TS and CG, and TC and CG of the DLC3 and turn the power switch off.

HINT:

- If the power switch is not turned on (IG) after SST is removed from the DLC3, the previous Test Mode will continue.
- If the power switch is turned on (IG) with terminals TS and CG connected, the previous Test Mode will continue.

HINT:

The codes in this table are output only in Test Mode (signal check).

PROBLEM SYMPTOMS TABLE

If there are no DTCs but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), sensor, etc., make sure that the power switch is turned off, the stop light switch is off, and 2 minutes have elapsed since the driver's door was closed.

HINT:

- Since the hydraulic passage is blocked off by the master cut solenoid during electronically controlled brake system control, there is no kickback (vibration) to the brake pedal, creating a quiet sound even while the ABS is operating.
- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Electronically Controlled Brake System

Symptom	Suspected Area	See page
ABS, BA and/or EBD does not operate	Use a chassis dynamometer, etc. to check the electronically controlled brake system operation.	-
	Check the DTC again and make sure that the normal system code is output.	INFO

39 (VCSK)	Stroke sensor power supply output
40 (SKS2)	Stroke sensor signal input 2
41 (SKG)	Stroke sensor ground
42 (SKS)	Stroke sensor signal input

2. TERMINAL INSPECTION

(a) Disconnect the connector and measure the voltage or resistance on the wire harness side.

*1

H

Text in Illustration

*1	Front view of wire harness connected (to Skid Control ECU)
----	---

HINT:

Voltage cannot be measured with the connector connected to the skid control ECU as the connector is watertight.

Standard

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A58-1 (MRI1) - Body ground	B - Body ground	Motor power supply input 1	Always	11 to 14 V
A58-2 (MRI2) - Body ground	R - Body ground	Motor power supply input 2	Always	11 to 14 V
A58-3 (STP0) - Body ground	Y - Body ground	Stop light control relay output	Always	11 to 14 V
A58-6 (STP2) - Body ground	BE - Body ground	Stop light control relay input	Stop light switch ON → OFF (Brake pedal depressed → released)	11 to 14 V → Below 1.5 V
A58-10 (HZRI) - Body ground	SB - Body ground	Hazard warning switch input	Hazard warning switch ON → OFF	Below 1 Ω → 10 kΩ or higher
A58-12 (IG2) - Body ground	BE - Body ground	IG2 power source input	Power switch on (IG)	11 to 14 V
A58-13 (BZ) - Body ground	BR - Body ground	Skid control buzzer output	Power switch on (IG), buzzer not sounding	11 to 14 V
A58-14 (BI) - Body ground	W - Body ground	+B power source input	Always	11 to 14 V
A58-15 (BS) - Body ground	B - Body ground	Solenoid power supply input	Always	11 to 14 V
A58-16 (IG1) - Body ground	B - Body ground	IG1 power source input	Power switch on (IG)	11 to 14 V
A58-19 (CTY) - Body ground	V - Body ground	Courtesy switch input	Driver door close → open	11 to 14 V → Below 1.5 V
A58-23 (GND6) - Body ground	W-B - Body ground	Skid control ECU ground 6	Always	Below 1 Ω
A58-24 (GND5) - Body ground	W-B - Body ground	Skid control ECU ground 5	Always	Below 1 Ω
A58-25 (GND4) -	W-B - Body	Skid control ECU	Always	Below 1 Ω

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
Body ground	ground	ground 4		
A58-26 (GND3) - Body ground	W-B - Body ground	Skid control ECU ground 3	Always	Below 1 Ω
A58-27 (GND2) - Body ground	W-B - Body ground	Skid control ECU ground 2	Always	Below 1 Ω
A58-28 (GND) - Body ground	W - Body ground	Skid control ECU ground	Always	Below 1 Ω
A58-33 (STP) - Body ground	L - Body ground	Stop light switch input	Stop light switch ON → OFF (Brake pedal depressed → released)	11 to 14 V → Below 1.5 V
A58-36 (LBL) - Body ground	P - Body ground	Brake fluid level warning switch input	Brake fluid level warning switch OFF → ON	1.84 to 2.16 k Ω → Below 1 Ω

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting a vehicle with the diagnosis system, the only difference from the usual troubleshooting procedure is connecting the Techstream to the vehicle and reading various data output from the vehicle's skid control ECU.

The skid control ECU records DTCs when it detects a malfunction in the ECU itself or in its circuits.

To check the DTCs, connect the Techstream to the DLC3 on the vehicle. The Techstream enables you to clear the DTCs, activate the various actuators, and check the Freeze Frame Data and Data List.

(a) Check the auxiliary battery voltage.

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge the auxiliary battery before proceeding to the next step.

(b) Check the DLC3 .

2. DIAGNOSIS

(a) If the skid control ECU detects a malfunction, the ABS warning, brake warning / red (malfunction), brake warning / yellow (minor malfunction) and slip indicator lights will come on in order to warn the driver.

ABS Warning Light:

for U.S.A.: Except for
 U.S.A.:

ABS

Brake Warning Light / Red (Malfunction):

for U.S.A.: Except for
 U.S.A.:

BRAKE

Brake Warning Light / Yellow
(Minor Malfunction):

Slip Indicator Light:

(b) The DTCs are simultaneously stored in the memory.

The DTCs can be read by connecting SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights, or by connecting the Techstream .

(c) This system has a Test Mode (signal check) function.

The DTCs can be read by connecting SST between terminals TS and CG of the DLC3 and observing the blinking pattern of the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights, or by connecting the Techstream .

3. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

2010 Toyota Prius

Repair Manual

When releasing the parking brake, push the P position switch for safety.

HINT:

When the parking brake is applied or the brake fluid level is low, the brake warning light / red (malfunction) comes on.

ABS Warning Light:

for U.S.A.: Except for
U.S.A.:

ABS

Brake Warning Light / Red (Malfunction):

for U.S.A.: Except for
U.S.A.:

BRAKE

Brake Warning Light / Yellow
(Minor Malfunction):

Slip Indicator Light:

(b) When the power switch is turned on (IG), check that the ABS warning, brake warning / red (malfunction), brake warning / yellow (minor malfunction) and slip indicator lights come on until the power switch is turned on (READY).

- If the warning light and indicator light check result is not normal, proceed to troubleshooting for the ABS warning, brake warning / red (malfunction), brake warning / yellow (minor malfunction) and slip indicator light circuits.
- If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See Procedure
ABS warning light circuit (Remains on)	INFO
ABS warning light circuit (Does not come on)	INFO
Brake warning light / red (malfunction) circuit (Remains on)	INFO
Brake warning light / red (malfunction) circuit (Does not come on)	INFO
Brake warning light / yellow (minor malfunction) circuit (Remains on)	INFO
Brake warning light / yellow (minor malfunction) circuit (Does not come on)	INFO
Slip indicator light circuit (Remains on)	INFO
Slip indicator light circuit (Does not come on)	INFO

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (When Using the Techstream)

(a) Check for DTCs.

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Read the DTCs following the prompts on the Techstream screen. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(5) Check the details of the DTCs .

(b) Clear the DTCs.

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the Techstream on.

(4) Operate the Techstream to clear the codes. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(5) According to the display on the Techstream, select the trouble code data display with the clear button.

2. DTC CHECK/CLEAR (When not Using the Techstream)

(a) Check for DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

Text in Illustration

*1 Front view of DLC3

(2) Turn the power switch on (IG).

(3) Observe the blinking pattern of the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights in order to identify the DTC.

HINT:

If no code appears, inspect the TC and CG terminal circuit, and ABS warning, brake warning / yellow (minor malfunction) and slip indicator light circuits.

Trouble Area	See Procedure
TC and CG terminal circuit	INFO
ABS warning light circuit (Remains on)	INFO
ABS warning light circuit (Does not come on)	INFO
Brake warning light / yellow (minor malfunction) circuit (Remains on)	INFO
Brake warning light / yellow (minor malfunction) circuit (Does not come on)	INFO
Slip indicator light circuit (Remains on)	INFO
Slip indicator light circuit (Does not come on)	INFO

(4) As an example, the illustration below shows the blinking patterns of the normal system code and trouble codes 11 and 21 for the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights.

Normal System Code
Blinking Pattern:

Trouble Code Blinking Pattern
(Example Codes 11 and 21):

(5) Check the details of the DTCs [INFO](#).

(6) After completing the check, disconnect terminals TC and CG of the DLC3 to turn off the display.

If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.

(b) Clear the DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

Text in Illustration

*1	Front view of DLC3
----	--------------------

(2) Turn the power switch on (IG).

(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.

(4) Check that the warning light indicates a normal system code.

(5) Remove SST from the terminals of the DLC3.

HINT:

The DTCs cannot be cleared by disconnecting the battery terminal or the ECU-IG NO. 2 fuse.

3. END OF DTC CHECK/CLEAR

(a) Turn the power switch on (IG).

(b) Check that the ABS warning, brake warning / yellow (minor malfunction) and slip indicator lights go off when the power switch is turned on (READY).

FREEZE FRAME DATA

1. FREEZE FRAME DATA/INFORMATION

(a) Whenever an ABS, VSC, electronically controlled brake system DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.

(b) The skid control ECU stores the number of times (maximum: 31) the power switch has been turned from off to on (IG) since the last time the ABS was activated.

(c) For DTCs stored in the skid control ECU, information (INF) codes that are contained in the Freeze Frame Data can be displayed on the Techstream.

HINT:

- However, if the vehicle is stopped or at a low speed (7 km/h (4.3 mph) or less), or if a DTC is detected, the skid control ECU will stop counting the number of times the power switch has been turned from off to on (IG).
- Freeze Frame Data at the time the ABS operates:

The skid control ECU stores and updates data whenever the ABS system operates.

When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is cleared.

- Freeze Frame Data at the time a DTC is detected:

When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

2. CHECK FREEZE FRAME DATA AND INFORMATION

- (a) Connect the Techstream to the DLC3.
 - (b) Turn the power switch on (IG).
 - (c) Turn the Techstream on.
 - (d) Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.
 - (e) According to the display on the Techstream, select the trouble code data display with Freeze Frame Data.
 - (f) Read the Freeze Frame Data recorded when the DTC was set.
 - (g) Read the information.
- (1) Select the item that has an information (INF) code from the Freeze Frame Data screen.

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Detailed Freeze DTC	Detailed code for Freeze Frame DTC / Min.: 0, Max.: 65535	-	Number of information (INF) code output is displayed
Elapsed Time after Freeze Trigger	Elapsed time after freeze trigger / Min.: 0 msec, Max.: 500 msec	-	-
Number of IG ON	Number of operations of power switch on (IG) after storing Freeze Frame Data / 0 to 31	-	-
Elapsed Time	Elapsed time after power	-	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
	switch on (IG) / Min.: 0 sec., Max.: 100661.76 sec.		
Buzzer	Skid control buzzer / ON or OFF	ON: Buzzer on OFF: Buzzer off	-
Stop Light SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Parking Brake SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
Reservoir Warning SW	Brake fluid level warning switch / ON or OFF	ON: Reservoir level low OFF: Reservoir level normal	-
Shift Lever Position	Shift lever position information / Fail, 1st-6th/B, D/M, P/N or R	Actual shift lever position	-
Operated System	Operated system status / ABS, VSC, TRAC, BA, PB, PBA, HAB, HA-CTRL, Fail, Non or Sys	-	ABS: ABS activated VSC: VSC activated TRAC: TRAC activated BA: BA activated PB: PB activated PBA: PBA activated HAB: HAB activated HA-CTRL: Hill-start assist control activated Fail: Fail safe mode activated Non: No system activated Sys: System prohibited

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stroke Sensor	Brake pedal stroke sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.65 to 1.35 V	Reading increases when brake pedal is depressed
Accumulator Sensor	Accumulator pressure sensor / Min.: 0 V, Max.: 5 V	Specified value: 2.9 to 4.2 V	When brake fluid is stored in the accumulator: Accumulator pressure changes in accordance with volume of fluid stored in the accumulator
Yaw Rate Sensor	Yaw rate sensor / Min.: -128 °/s, Max.: 127 °/s	Vehicle stopped: 0 °/s Turning right: -128 to 0 °/s Turning left: 0 to 127 °/s	-
Lateral G	Lateral G / Min.: -25.20 m/s ² , Max.: 24.91 m/s ²	-	During turning: Changes in proportion with acceleration
Forward and Rearward G	Forward and backward G / Min.: -25.11 m/s ² , Max.: 24.91 m/s ²	-	During acceleration/deceleration: Changes in proportion with acceleration
FR Wheel Speed	Front speed sensor RH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
FL Wheel Speed	Front speed sensor LH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RR Wheel Speed	Rear speed sensor RH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RL Wheel Speed	Rear speed sensor LH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
Vehicle Speed	Maximum wheel speed sensor / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
Accelerator Opening Angle %	The difference of a present accelerator / Min.: 0%, Max.: 127%	When the accelerator pedal released: 0%	During accelerator pedal operation: Changes in proportion with the pedal movement

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ECB* Motor Relay	ABS motor relay / ON or OFF	ON: Relay on OFF: Relay off	-
ECB* Main Relay	ABS main relay / ON or OFF	ON: Relay on OFF: Relay off	-
IG1 Voltage Value	IG1 voltage value / Min.: 0 V, Max.: 20 V	-	Changes in proportion to auxiliary battery voltage
IG2 Voltage Value	IG2 voltage value / Min.: 0 V, Max.: 20 V	-	Changes in proportion to auxiliary battery voltage
BS1 Voltage Value	BS voltage value / Min.: 0 V, Max.: 20 V	-	Changes in proportion to auxiliary battery voltage
VM1 Voltage Value	VM1 voltage value / Min.: 0 V, Max.: 20 V	-	Changes in proportion to auxiliary battery voltage
Motor Relay Voltage Value	Motor relay voltage value / Min.: 0 V, Max.: 20 V	During motor operation: 12 V No motor operation: 0 V	-
Steering Angle Sensor	Steering angle sensor / Min.: - 3276.8 °, Max.: 3276.7 °	Left turn: Increase Right turn: Decrease	-
Regulator Pressure Sensor	Regulator pressure sensor / Min.: -1 MPa, Max.: 23.99 MPa	-	-
Regulator Pressure Sensor Output Variant	Regulator pressure sensor output variant / Min.: -30 MPa/s, Max.: 225 MPa/s	-	-
Wheel Cylinder Pressure Sensor	Wheel cylinder pressure sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.1 to 0.9 V	Reading increases when brake pedal is depressed
SLA Solenoid Current	Linear solenoid additional valve (SLA) current / Min.: 0 A, Max.: 1.5 A	When brake pedal released: 0 A	-
SLR Solenoid Current	Linear solenoid reduction valve (SLR) current / Min.: 0 A, Max.: 1.5 A	When brake pedal released: 0 A	-
Target Oil Pressure	Wheel target hydraulic pressure / Min.: 0 MPa, Max.: 20 MPa	Changes according to the target wheel cylinder hydraulic pressure	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ECB* Solenoid (SSC)	Simulator cut solenoid valve (SSC) / ON or OFF	ON: Solenoid on OFF: Solenoid off	-
ECB* Solenoid (SCC)	Switching solenoid valve (SCC) / ON or OFF	ON: Solenoid on OFF: Solenoid off	-
ECB* Solenoid (SMC)	Master cut solenoid valve (SMC) / ON or OFF	ON: Solenoid on OFF: Solenoid off	-
ECB* Solenoid (SRC)	Regulator cut solenoid valve (SRC) / ON or OFF	ON: Solenoid on OFF: Solenoid off	-

*: Electronically Controlled Brake System

3. CLEAR FREEZE FRAME DATA AND INFORMATION

NOTICE:

Clearing the DTCs will also clear the Freeze Frame Data and information (INF) codes.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Clear the DTCs and Freeze Frame Data  .

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION OF CONTROL SYSTEM

(a) When a malfunction is detected in the brake control system, the skid control ECU turns the ABS warning, brake warning / red (malfunction), brake warning / yellow (minor malfunction) and slip indicator lights come on, as well as prohibits ABS, BA, TRAC and VSC operations.

(b) If the skid control ECU detects that a system related to the hybrid control system is malfunctioning, it will prohibit operation of the TRAC and VSC system in order to prevent further malfunctions and to protect the system.

Item	Operation
Malfunction in the ABS system	ABS, BA, TRAC and VSC control prohibited
Malfunction in the BA system	ABS, BA, TRAC and VSC control prohibited
Malfunction in the EBD system	ABS, EBD, BA, TRAC and VSC control prohibited
Malfunction in the TRAC system	ABS, BA, TRAC and VSC control prohibited
Malfunction in the VSC system	ABS, BA, TRAC and VSC control prohibited

2. FAIL-SAFE FUNCTION OF HYDRAULIC SYSTEM

(a) If a malfunction is detected in the brake booster with master cylinder (skid control ECU or brake actuator) or an individual sensor, control will be stopped and brake effort will be generated by the brake booster with master cylinder (hydraulic brake booster).

(b) If brake control is stopped due to a malfunction in the hydraulic pressure source, the pressure generated in the master cylinder by the driver is applied to the wheel cylinders to ensure braking force.

Item	Operation
Skid control ECU malfunction	Brake booster with master cylinder (hydraulic brake booster) generated braking force
Hydraulic pressure controlling components malfunction	Brake booster with master cylinder (hydraulic brake booster) generated braking force
Power supply components (Hydraulic pressure source) malfunction	Braking force solely generated by the driver

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Warm up the engine.
- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG).
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List.
- (g) According to the display on the Techstream, read the Data List.

ABS/VSC/TRAC

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts to operate without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Warm up the engine.
- (b) Turn the power switch off.
- (c) Connect the Techstream to the DLC3.
- (d) Turn the power switch on (IG).
- (e) Turn the Techstream on.
- (f) Enter the following menus: Chassis / ABS/VSC/TRAC / Active Test.
- (g) According to the display on the Techstream, perform the Active Test.

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnostic Note
ABS Warning Light	ABS warning light	Warning light ON/OFF	Observe combination meter
Brake Warning Light	Brake warning light / red (malfunction)	Warning light ON/OFF	Observe combination meter
ECB* Warning Light	Brake warning light / yellow (minor malfunction)	Warning light ON/OFF	Observe combination meter
Buzzer	Skid control buzzer	Buzzer ON/OFF	Buzzer can be heard
Stop Light Relay	Stop light control relay	Relay ON/OFF	Stop lights come on
ECB* Main Relay	ABS main relay	Relay ON/OFF	-
ECB* Motor Relay	ABS motor relay	Relay ON/OFF	-
ABS Solenoid (SRLR)	Reduction solenoid valve (RLR)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ABS Solenoid (SRLH)	Holding solenoid valve (RLH)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ABS Solenoid (SRRR)	Reduction solenoid valve (RRR)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ABS Solenoid (SRRH)	Holding solenoid valve (RRH)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard

Tester Display	Test Part	Control Range	Diagnostic Note
ABS Solenoid (SFLR)	Reduction solenoid valve (FLR)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ABS Solenoid (SFLH)	Holding solenoid valve (FLH)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ABS Solenoid (SFRR)	Reduction solenoid valve (FRR)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ABS Solenoid (SFRH)	Holding solenoid valve (FRH)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ECB* Control Invalid	Electronically controlled brake system control invalid	Control invalid ON/OFF	Electronically controlled brake system control is disabled (braking with no accumulator assist)
Accumulator Zero Down	Accumulator zero down activation	Activation ON/OFF	Brake fluid in the accumulator makes noise
Actuator Air Bleeding Pattern	Actuator air bleeding pattern activation	Activation ON/OFF	When accumulator pressure lowers, pump operation creates sound
Power Supply Air Bleeding Pattern1	Power supply air bleeding pattern activation 1	Activation ON/OFF	When accumulator pressure lowers, pump operation creates sound
Power Supply Air Bleeding Pattern2	Power supply air bleeding pattern activation 2	Activation ON/OFF	When accumulator pressure lowers, pump operation creates sound
Slip Indicator Light	Slip indicator light	Indicator light ON/OFF	Observe combination meter
ECB* Solenoid (SLR) Valve Close	Linear solenoid reduction valve (SLR)	Valve close ON/OFF	-
ECB* Solenoid (SLA) Valve Close	Linear solenoid additional valve (SLA)	Valve close ON/OFF	-
Stroke Simulator Cut Valve Pattern	Simulator cut solenoid valve (SSC)	Pattern activation ON/OFF	(Difficult to identify visually)
ECB* Solenoid (SRC)	Regulator cut solenoid valve (SRC)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ECB* Solenoid (SMC)	Master cut solenoid valve (SMC)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ECB* Solenoid (SCC)	Switching solenoid valve (SCC)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ECB* Solenoid (SSC)	Simulator cut solenoid valve (SSC)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard
ECB* Solenoid (SMC/SRC/SCC)	Switching solenoid valve (SMC/SRC/SCC)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard

*: Electronically Controlled Brake System

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), sensor, etc., make sure that the power switch is turned off, the stop light switch is off, and 2 minutes have elapsed since the driver's door was closed.

HINT:

- If no abnormality is found when inspecting parts, inspect the skid control ECU and ground points for poor connections.
- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the page for the respective "DTC Code" in the DTC chart.
- When 2 or more DTCs are detected, perform circuit inspections one by one until the problem is identified.
- Inspect the fuses and relays before inspecting the trouble areas as shown in the table below.

ABS DTC

DTC	C0200/31	Front Speed Sensor RH Circuit
DTC	C0205/32	Front Speed Sensor LH Circuit
DTC	C1271/71	Low Output Signal of Front Speed Sensor RH (Test Mode DTC)
DTC	C1272/72	Low Output Signal of Front Speed Sensor LH (Test Mode DTC)

DESCRIPTION

The speed sensor detects wheel speed and sends the appropriate signals to the skid control ECU. These signals are used for ABS control.

DTCs C1271/71 and C1272/72 can be cleared when the speed sensor sends a wheel speed signal or when Test Mode ends. DTCs C1271/71 and C1272/72 are output only in Test Mode.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve .

PROCEDURE

- CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the Techstream, check for any momentary interruptions in the wire harness and connector corresponding to a DTC .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR Speed Open	Front speed sensor RH open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-
FL Speed Open	Front speed sensor LH open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-

OK:

There are no momentary interruptions.

HINT:

Perform the above inspection before removing the sensor and connector.

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.	READ VALUE USING TECHSTREAM (FRONT SPEED SENSOR)
----	--

(a) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR Wheel Speed	Front speed sensor RH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
FL Wheel Speed	Front speed sensor LH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations

(b) Check that the speed value output from the speed sensor displayed on the Techstream.

HINT:

Factors that affect the indicated vehicle speed include tire size, tire inflation, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of error, see the reference chart .

OK:

The speed value output from the speed sensor displayed on the Techstream is the similar speed as indicated on the speedometer.

NG  [CHECK FRONT SPEED SENSOR INSTALLATION](#)

OK

3.	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)
----	---

- (a) Turn the power switch off.
- (b) Perform the sensor check in the Test Mode procedure .

OK:

All Test Mode DTCs are cleared.

NG  [CHECK FRONT SPEED SENSOR INSTALLATION](#)

OK

4.	RECONFIRM DTC
----	---------------

- (a) Turn the power switch off.
- (b) Clear the DTCs .
- (c) Turn the power switch on (READY).
- (d) Perform a road test.
- (e) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTCs (C0200/31 and C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step .

B [REPLACE FRONT SPEED SENSOR](#)

A **CHECK FOR INTERMITTENT PROBLEMS**

5.	CHECK FRONT SPEED SENSOR INSTALLATION
----	---------------------------------------

Front Speed Sensor:

(a) Turn the power switch off.

(b) Check the speed sensor installation.

OK:

There is no clearance between the sensor and the front steering knuckle.

The installation bolt is tightened properly.

Torque

8.5 N*m (87 kgf*cm, 75 in.*lbf)

NG [INSTALL FRONT SPEED SENSOR CORRECTLY](#)

OK

6.	CHECK FRONT SPEED SENSOR TIP
----	------------------------------

(a) Remove the front speed sensor .

(b) Check the speed sensor tip.

OK:

The sensor tip is free of scratches, oil, and foreign matter.

NOTICE:

Check the speed sensor signal after cleaning or replacement .

NG▶ CLEAN OR REPLACE FRONT SPEED SENSOR

OK

7. CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)

*1

(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.

*2

(b) Disconnect the skid control ECU connector and the front speed sensor connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for RH

for LH

Tester Connection	Condition	Specified Condition
A58-18 (FR+) - A34-2 (FR+)	Always	Below 1 Ω
A58-18 (FR+) - Body ground	Always	10 k Ω or higher
A58-5 (FR-) - A34-1 (FR-)	Always	Below 1 Ω
A58-5 (FR-) - Body ground	Always	10 k Ω or higher

Tester Connection	Condition	Specified Condition
A58-31 (FL+) - A15-2 (FL+)	Always	Below 1 Ω
A58-31 (FL+) - Body ground	Always	10 k Ω or higher
A58-32 (FL-) - A15-1 (FL-)	Always	Below 1 Ω
A58-32 (FL-) - Body ground	Always	10 k Ω or higher

DTC	C1273/73	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)
DTC	C1274/74	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)

DESCRIPTION

The speed sensor detects wheel speed and sends the appropriate signals to the skid control ECU. These signals are used for ABS control.

DTCs C1273/73 and C1274/74 can be cleared when the speed sensor sends a wheel speed signal or when Test Mode ends. DTCs C1273/73 and C1274/74 are output only in Test Mode.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C0210/33	521	While driving at 10 km/h (6 mph) or more, speed sensor output from one or two wheels is lower than that from other wheels for 15 seconds or more.	<ul style="list-style-type: none"> • Open or short in speed sensor • Improperly installed speed sensor, or abnormal clearance between sensor and rotor • Open or short in wire harness • Improperly connected connector, deformation or corrosion of terminals • Rear speed sensor RH • Brake booster with master cylinder (Skid control ECU)

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve [INFO](#).

PROCEDURE

- CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the Techstream  ck for any momentary interruptions in the wire harness and connector corresponding to a DTC .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
RR Speed Open	Rear speed sensor RH open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-
RL Speed Open	Rear speed sensor LH open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-

OK:

There are no momentary interruptions.

HINT:

Perform the above inspection before removing the sensor and connector.

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.	READ VALUE USING TECHSTREAM (REAR SPEED SENSOR)
----	---

(a) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
RR Wheel Speed	Rear speed sensor RH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations
RL Wheel Speed	Rear speed sensor LH / Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)	Vehicle stopped: 0 km/h (0 mph)	When driving at constant speed: No large fluctuations

(b) Check that the speed value output from the speed sensor displayed on the Techstream.

HINT:

Factors that affect the indicated vehicle speed include tire size, tire inflation, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of error, see the reference chart .

OK:

The speed value output from the speed sensor displayed on the Techstream is the similar speed as indicated on the speedometer.

NG  [CHECK REAR SPEED SENSOR INSTALLATION](#)

OK

3.	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)
----	---

(a) Turn the power switch off.

(b) Perform the sensor check in the Test Mode procedure .

OK:

DTC	C0371/71	Yaw Rate Sensor (Test Mode DTC)
DTC	C1234/34	Yaw Rate Sensor Malfunction
DTC	C1243/43	Acceleration Sensor Stuck Malfunction
DTC	C1244/44	Open or Short in Acceleration Sensor Circuit
DTC	C1245/45	Acceleration Sensor Output Malfunction
DTC	C1279/79	Acceleration Sensor Output Voltage Malfunction (Test Mode DTC)
DTC	C1381/97	Acceleration Sensor Power Supply Voltage Malfunction

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built-in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).

If there are any problems in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, DTCs U0123/62 (Lost Communication with Yaw Rate Sensor Module) and U0124/95 (Lost Communication with Lateral Acceleration Sensor Module) are output.

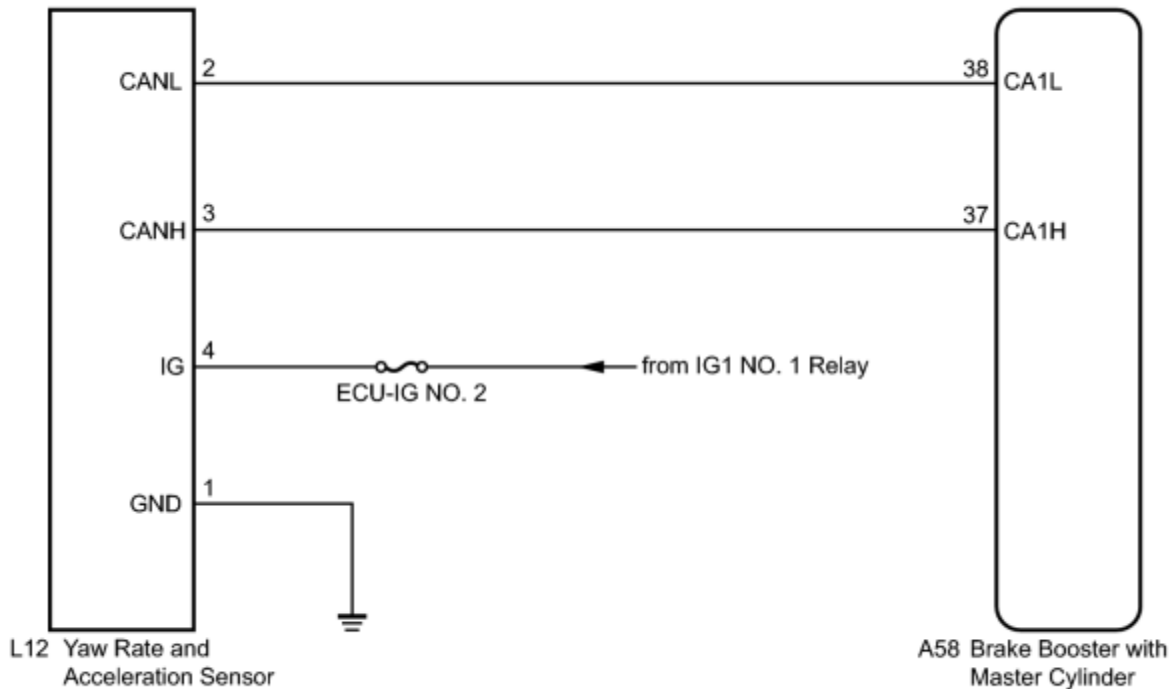

These DTCs are also output when calibration has not been completed.

DTCs C0371/71 and C1279/79 will be cleared when the yaw rate and acceleration sensor sends a yaw rate and/or acceleration signal or when Test Mode ends. DTCs C0371/71 and C1279/79 are output only in Test Mode.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1234/34	711	While yaw rate sensor communication is enabled, a malfunction signal output is received during the sensor self-check (sensor 1 (GL1) malfunction).	Yaw rate and acceleration sensor internal malfunction
↑	712	While yaw rate sensor communication is enabled, a malfunction signal output is received during the sensor self-check (sensor 2 (GL2) malfunction).	↑
↑	713	While yaw rate sensor communication is enabled, a malfunction signal output is received during the sensor self-check (0 point calibration malfunction).	↑
↑	714	While yaw rate sensor communication is enabled, a malfunction signal output is received during the sensor self-check (Two-value comparison malfunction).	↑
C1243/43	561	An acceleration sensor malfunction occurs 16 times or more when the vehicle speed drops from above 30 km/h (19 mph) to 0 km/h (0 mph).	Yaw rate and acceleration sensor internal stuck malfunction

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)

OK  **REPLACE YAW RATE AND ACCELERATION SENSOR**

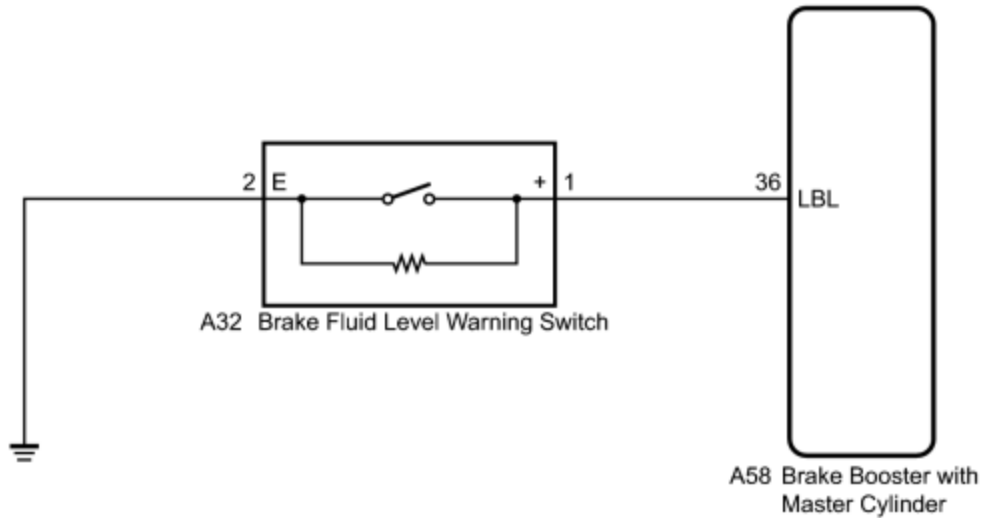

DESCRIPTION

When a fluid level drop in the master cylinder reservoir is detected, the signal is input to the skid control ECU.

If the DTC for the fluid level drop is memorized, the warning will be canceled and the DTC will not be stored when the fluid level returns to normal.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1202/68	371	An open is detected in the switch signal circuit for 2 seconds or more.	<ul style="list-style-type: none"> • Brake master cylinder reservoir (Brake fluid level warning switch) internal open circuit • Open in wire harness • Brake booster with master cylinder (Skid control ECU)
↑	-	The reservoir level remains low.	<ul style="list-style-type: none"> • Low brake fluid level • Brake fluid leaks • Brake master cylinder reservoir (Brake fluid level warning switch) internal short circuit • Short in wire harness • Brake disc rotor excessive wear • Brake booster with master cylinder (Skid control ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve INFO.

HINT:

When releasing the parking brake, chock the wheels for safety.

PROCEDURE

1.	CHECK BRAKE FLUID LEVEL
----	-------------------------

(a) Check that the brake fluid level is sufficient.

OK:

Brake fluid level is sufficient.

HINT:

If the fluid level is low, check for fluid leaks, and repair as necessary.

(1) Check for brake fluid leaks (Connection between the brake booster pump, brake master cylinder reservoir and brake booster with master cylinder, and the brake booster with master cylinder and wheel cylinders).

HINT:

If no leaks exist, add and adjust fluid using the Techstream .

(2) Check that the trouble code is not output again .

(b) Check that there are no leaks from the connections between the brake booster pump and brake booster with master cylinder.

HINT:

As a visual check is very difficult, perform the check with the following procedure.

(1) Bleed the air from the brake systems .

(2) Connect the Techstream to the DLC3.

(3) Turn the power switch on (IG).

(4) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Accumulator Sensor	Accumulator pressure sensor / Min.: 0 V, Max.: 5 V	Specified value: 2.9 to 4.2 V	When brake fluid is stored in the accumulator: Accumulator pressure changes in accordance with volume of fluid stored in the accumulator

(5) Wait for 30 seconds without depressing the brake pedal.

(6) Check that the accumulator pressure sensor output values change is within the specified range.

OK:

Accumulator pressure sensor output values change is within 0.55 V.

NG  CHECK AND REPAIR BRAKE FLUID LEAKS OR ADD FLUID

OK

2.	INSPECT BRAKE FLUID LEVEL WARNING SWITCH
----	--

(a) Turn the power switch off.

*1

H

- (b) Remove the reservoir filler cap and strainer.
- (c) Make sure that there is no looseness at the locking part and the connecting part of the connector.
- (d) Disconnect the brake fluid level warning switch connector.
- (e) Measure the resistance according to the value(s) in the table below.

HINT:

A float is located inside the reservoir. Its position changes according to the level of brake fluid.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 (+) - 2 (E)	Brake fluid level warning switch OFF (Float up)	1.84 to 2.16 kΩ
1 (+) - 2 (E)	Brake fluid level warning switch ON (Float down)	Below 1 Ω

----	---

*2	Front view of wire harness connector (to Brake Fluid Level Warning Switch)
----	---

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.	INSPECT SKID CONTROL ECU (SWITCH INPUT)
----	---

*1

(a) Reconnect the skid control ECU connector.

H

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A32-1 (+) - Body ground	Power switch on (IG)	4 to 7 V

Text in Illustration

*1	Front view of wire harness connector (to Brake Fluid Level Warning Switch)
----	---

NG ► REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK

5.	CHECK BRAKE DISC
----	------------------

- (a) Turn the power switch off.
- (b) Reconnect the brake fluid level warning switch connector.
- (c) Disconnect the brake pedal stroke sensor connector.
- (d) Perform a road test according to Freeze Frame Data or customer problem analysis. Check the brake line pressure vibration caused due to uneven wear of the disc according to brake pedal vibration.

OK:

Brake pedal does not vibrate during braking.

HINT:

- An unevenly worn disc may vibrate the caliper piston and cause fluctuations in brake line pressure, triggering a malfunction detection condition.
- The brake pedal does not kick back due to wheel cylinder piston vibration during electronically controlled brake system control.
- If the brake pedal stroke sensor connector is disconnected, the fail-safe function will prohibit electronically controlled brake system control.
- The Active Test does not prohibit electronically controlled brake system control when the vehicle is running, so disconnect the stroke sensor connector before continuing with inspection.
- Disc uneven wear can be checked by measuring the disc thickness variation INFO for front, or INFO for rear).

NG  REPLACE BRAKE DISC

OK

6.	RECONFIRM DTC
----	---------------

- (a) Reconnect the brake pedal stroke sensor connector.
- (b) Clear the DTCs INFO.
- (c) Turn the power switch on (READY).
- (d) Perform a road test.
- (e) Check if the same DTC is recorded INFO.

Result:

Result	Proceed to
DTC (C1202/68) is not output	A
DTC (C1202/68) is output	B

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step .

B ▶ REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A ▶ CHECK FOR INTERMITTENT PROBLEMS

DESCRIPTION

The circuit is used to send TRAC and VSC information from the skid control ECU to the power management control ECU, and hybrid control system information from the power management control ECU to the skid control ECU via the CAN communication system.

Identification information sent from other ECUs is stored when shipped from the factory and used as default values.

NOTICE:

DTC C1203/95 is output when an incorrect ECU is installed. If initialization is performed and learning occurs with an incorrect ECU installed, operations and functions will differ from that stored when the vehicle was shipped from the factory. Therefore, make sure that learning occurs properly.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1203/95	-	<p>Either of the following is detected:</p> <ol style="list-style-type: none"> 1. Identification information sent from other ECUs does not match with the value stored when shipped from the factory. 2. No stored information for destination. 	<ul style="list-style-type: none"> • The wrong ECU and sensor was installed • Brake booster with master cylinder (Skid control ECU)

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve .

PROCEDURE

1.	CHECK PART NUMBER
----	-------------------

(a) Check that a proper power management control ECU, main body ECU and yaw rate and acceleration sensor are installed.

OK:

Proper ECUs and sensor are installed.

(b) Check if the power management control ECU, main body ECU and yaw rate and acceleration sensor had been replaced before the DTC was recorded.

OK:

ECU and sensor had not been replaced.

Result:

Result	Proceed to
OK	A
NG (A proper power management control ECU is not installed and/or the power management control ECU had been replaced)	B
NG (A proper main body ECU is not installed and/or the main body ECU had been replaced)	C

B ▶ END

A ▶ **REPLACE BRAKE BOOSTER WITH MASTER CYLINDER**

DTC	C1210/36	Zero Point Calibration of Yaw Rate Sensor Undone
DTC	C1336/98	Zero Point Calibration of Acceleration Sensor Undone

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built-in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).

If there are any problems in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, DTCs U0123/62 (Lost Communication with Yaw Rate Sensor Module) and U0124/95 (Lost Communication with Lateral Acceleration Sensor Module) will be output.

The DTCs will be also output when the calibration has not been completed.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1210/36	-	Yaw rate sensor 0 point calibration is incomplete.	<ul style="list-style-type: none"> Zero point calibration undone Yaw rate and acceleration sensor Brake booster with master cylinder (Skid control ECU) (Perform 0 point calibration and check for DTCs. If no DTCs are output again, the sensor is normal.)
C1336/98	-	Either of the following is detected: <ol style="list-style-type: none"> The vehicle is driven normally without 0 point calibration completed. After completing 0 point calibration, 0 point voltage of the sensor is not within the range of 2.38 to 2.62 V. 	<ul style="list-style-type: none"> Zero point calibration undone Yaw rate and acceleration sensor Brake booster with master cylinder (Skid control ECU) (Perform 0 point calibration and check for DTCs. If no DTCs are output again, the sensor is normal.)

INSPECTION PROCEDURE

NOTICE:

- When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve INFO.
- When replacing the yaw rate and acceleration sensor, perform zero point calibration INFO.

HINT:

When U0123/62 and/or U0124/95 is output together with C1210/36 and/or C1336/98, inspect and repair trouble areas indicated by U0123/62 and/or U0124/95 first .

PROCEDURE

1. PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor .

NEXT

2. RECONFIRM DTC

(a) Turn the power switch off.

(b) Clear the DTCs .

(c) Turn the power switch on (READY).

(d) Drive the vehicle at a speed of 30 km/h (18 mph) or more, turn the steering wheel, and decelerate (depress the brake pedal) the vehicle.

(e) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTCs (C1210/36 and/or C1336/98) are output	A
DTCs (C1210/36 and C1336/98) are not output	B

HINT:

- The DTCs are recorded because zero point calibration has not been completed.
- End the procedure because the same DTCs are not recorded after completion of zero point calibration.

 END

A

3. CHECK YAW RATE AND ACCELERATION SENSOR INSTALLATION

(a) Turn the power switch off.

(b) Check that the yaw rate and acceleration sensor has been installed properly .

OK:

The sensor bolt should be tightened to the specified torque.

The sensor should not be tilted.

 **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

4.	REPLACE YAW RATE AND ACCELERATION SENSOR
----	---

(a) Replace the yaw rate and acceleration sensor .

DTC	C1353/23	Front Increasing Pressure Solenoid LH Malfunction
DTC	C1356/22	Front Decreasing Pressure Solenoid RH Malfunction
DTC	C1357/24	Front Decreasing Pressure Solenoid LH Malfunction

DESCRIPTION

Each solenoid adjusts pressure which affects each wheel cylinder according to signals from the skid control ECU and controls the vehicle.

The master cut solenoid is closed and blocks the regulator pressure from the electronically controlled brake system control pressure when the system is normal. The master cut solenoid is open and sends the master cylinder and regulator hydraulic pressure to the non-assisted brake wheel cylinders during the fail-safe due to a system malfunction.

HINT:

If the supply voltage decreases, a drop in current may cause a DTC to be stored.

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU or brake actuator), perform initialization and calibration of the linear solenoid valve .

PROCEDURE

1.	CHECK DTC
----	-----------

(a) Clear the DTCs .

(b) Check if the same DTC is recorded .

HINT:

If a DTC for undervoltage is output, first troubleshoot the power source system.

Result:

Result	Proceed to
DTCs (C1211/25, C1212/26, C1225/31, C1226/32, C1227/33, C1228/34, C1352/21, C1353/23, C1356/22 and C1357/24) are not output	A
A DTC (C1241/41) for undervoltage is output	B
DTCs (C1211/25, C1212/26, C1225/31, C1226/32, C1227/33, C1228/34, C1352/21, C1353/23, C1356/22 and/or C1357/24) are output	C

- C ▶ REPLACE BRAKE BOOSTER WITH MASTER CYLINDER
- B ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCS
- A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

DESCRIPTION

The skid control ECU controls braking force according to the hybrid control system regenerative braking force and inputs the hydraulic pressure necessary for operating each wheel cylinder according to the wheel cylinder pressure sensor.

DTCs may be stored if one of the following occurs:

- Brake fluid leaks.
- Wheel cylinder vibrates due to uneven wear of a brake rotor.
- Foreign matter enters solenoid valve.
- Line pressure drops during air bleeding.
- Brake pad is replaced.
- Rotor is replaced.

HINT:

When replacing the brake pad, retracting the brake calipers piston and attaching a new brake pad will greatly increase the clearance between the brake pad and brake disc, which will likely cause these DTCs to be set the next time the brake pedal is depressed. As there is not malfunction, clear the DTCs.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1214/62	431	Decrease in hydraulic pressure control performance. (Pressure increase malfunction)	<ul style="list-style-type: none"> • Brake fluid leaks • Brake disc rotor excessive wear • Brake booster with master cylinder (Brake actuator)
↑	432	Decrease in hydraulic pressure control performance. (Pressure decrease malfunction)	↑
↑	433	Malfunctions such as leaks occur in the SLA valve.	↑
↑	434 435	Malfunctions such as leaks occur in the SLR valve.	↑
↑	436 437	Decrease in hydraulic pressure control performance.	↑
↑	438	Malfunctions such as leaks occur in a hydraulic circuit valve.	Brake booster with master cylinder (Brake actuator)

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (brake actuator), perform initialization and calibration of the linear solenoid valve .

HINT:

When C1364/61 is output together with C1214/62, inspect and repair the trouble areas indicated by C1364/61 first .

PROCEDURE

1. CHECK FOR FLUID LEAK

- (a) Check that there is no fluid leaks in the brake line between the brake actuator and the wheel cylinder.
- (b) Check that the brake is not dragging.

OK:

There is no fluid leaks or dragging.

NG  REPAIR OR REPLACE APPLICABLE PART

OK

2. PERFORM AIR BLEEDING

- (a) Bleed the air from the brake systems .

NEXT

3. CHECK BRAKE BOOSTER WITH MASTER CYLINDER (ACTUATOR SIDE)

- (a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.
- (b) Disconnect the skid control ECU connector 2 minutes after the power switch is turned off.
- (c) Check both the connector case and the terminal for deformation and corrosion.

OK:

No deformation or corrosion.

NG ▶ REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK

4. CHECK HARNESS AND CONNECTOR (VEHICLE SIDE)

(a) Measure the voltage and resistance on the wire harness side .

OK:

Voltage and resistance readings are all normal.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5. READ VALUE USING TECHSTREAM (WHEEL CYLINDER PRESSURE SENSOR)

(a) Reconnect the skid control ECU connector.

(b) Connect a pedal effort gauge .

(c) Connect the Techstream to the DLC3.

(d) Turn the power switch on (IG).

(e) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Wheel Cylinder Pressure Sensor	Wheel cylinder pressure sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.1 to 0.9 V	Reading increases when brake pedal is depressed

(f) Check the output value of the wheel cylinder pressure sensor at each hydraulic pressure level during the electronically controlled brake system control.

Standard Voltage:

for Front Wheel Cylinder Pressure Sensor LH

for Front Wheel Cylinder Pressure Sensor RH

Hydraulic Pressure (MPa (kgf/cm ² , psi))	Wheel Cylinder Pressure Sensor (V)
2.0 (20.4, 290)	0.53 to 1.33
5.0 (51.0, 725)	1.12 to 1.92
7.0 (71.4, 1015)	1.52 to 2.32
10.0 (102.0, 1451)	2.14 to 2.94

Hydraulic Pressure (MPa (kgf/cm ² , psi))	Wheel Cylinder Pressure Sensor (V)
2.0 (20.4, 290)	0.53 to 1.33
5.0 (51.0, 725)	1.12 to 1.92
7.0 (71.4, 1015)	1.52 to 2.32
10.0 (102.0, 1451)	2.14 to 2.94

NG  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK

6.	CHECK BRAKE DISC
----	------------------

(a) Turn the power switch off.

(b) Disconnect the brake pedal stroke sensor connector.

(c) Perform a road test according to Freeze Frame Data or customer problem analysis. Check the brake line pressure vibration caused due to uneven wear of the disc according to brake pedal vibration.

OK:

Brake pedal does not vibrate during braking.

HINT:

- An unevenly worn disc may vibrate the caliper piston and cause fluctuations in brake line pressure, triggering a malfunction detection condition.
- The brake pedal does not kick back due to wheel cylinder piston vibration during electronically controlled brake system control.
- If the brake pedal stroke sensor connector is disconnected, the fail-safe function will prohibit electronically controlled brake system control.
- The Active Test does not prohibit electronically controlled brake system control when the vehicle is running, so disconnect the stroke sensor connector before continuing with inspection.
- Disc uneven wear can be checked by measuring the disc thickness variation  for front, or  for rear).

NG  REPLACE BRAKE DISC

OK

7.	RECONFIRM DTC
----	---------------

- (a) Reconnect the brake pedal stroke sensor connector.
- (b) Clear the DTCs .
- (c) Perform a road test under the same malfunction conditions recreated based on the Freeze Frame Data or customer problem analysis.
- (d) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTC (C1214/62) is not output	A
DTC (C1214/62) is output	B

HINT:

If the DTC is no longer output, it can be suspected that it was output due to an improperly connected connector.

B  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A  CHECK FOR INTERMITTENT PROBLEMS

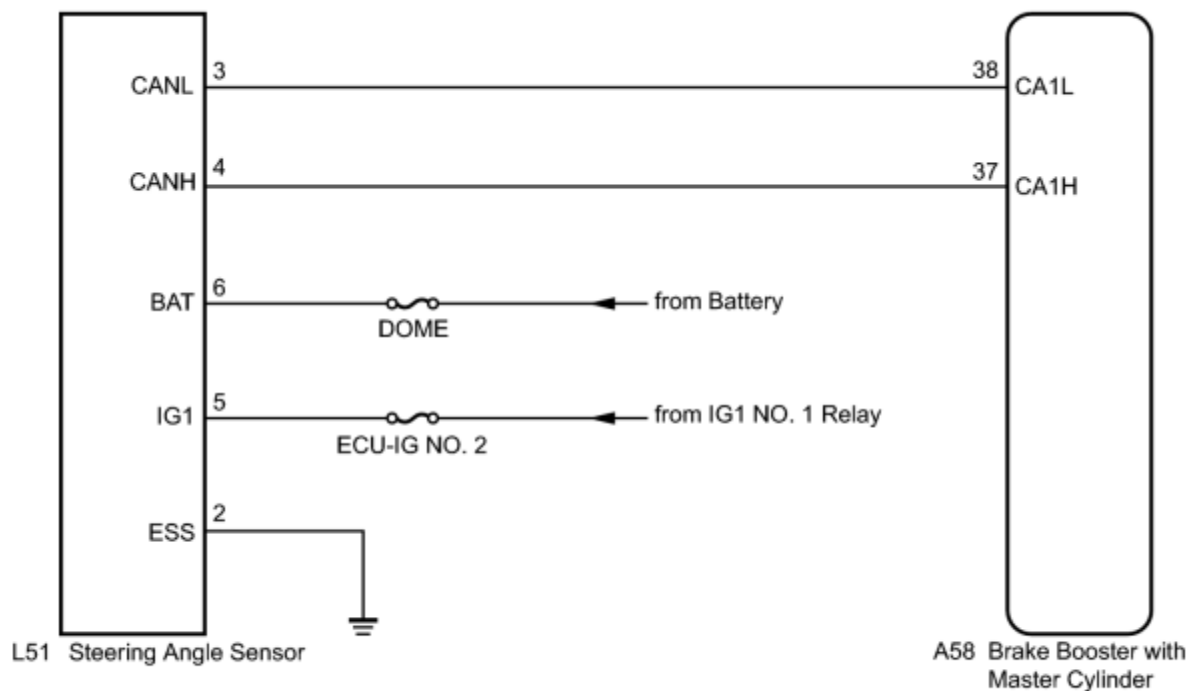

DTC	C1231/31	Steering Angle Sensor Circuit Malfunction
-----	----------	---

DESCRIPTION

The skid control ECU inputs steering angle sensor signals via the CAN communication. When a malfunction occurs in the communication line with the steering angle sensor, DTC U0126/63 (Lost Communication with Steering Angle Sensor Module) is output.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1231/31	701	While steering angle sensor communication is enabled, a malfunction signal output is received during the sensor self-check (sensor malfunction).	Steering angle sensor internal malfunction
↑	702	While steering angle sensor communication is enabled, a malfunction signal output is received during the sensor self-check (internal malfunction).	↑
↑	703	While steering angle sensor communication is enabled, a malfunction signal output is received during the sensor self-check (+B malfunction).	↑

WIRING DIAGRAM

N

INSPECTION PROCEDURE

HINT:

- When U0126/63 is output together with C1231/31, inspect and repair the trouble areas indicated by U0126/63 first **INFO**.
- When the speed sensor or the yaw rate and acceleration sensor are malfunctioning, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs for the speed sensor or yaw rate and acceleration sensor are output together with DTCs for the steering angle sensor, inspect and repair the speed sensor and yaw rate and acceleration sensor first, and then inspect and repair the steering angle sensor.

PROCEDURE

1.	CHECK DTC
----	-----------

- (a) Clear the DTCs **INFO**.
- (b) Turn the power switch off.
- (c) Turn the power switch on (IG) again and check that no CAN communication system DTC is output **INFO**.
- (d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 35 km/h (22 mph) and check that no speed sensor and/or yaw rate and acceleration sensor DTCs are output **INFO**.

Result:

Result	Proceed to
DTC (C1231/31) is output	A
CAN communication system DTC is output	B
Speed sensor and/or yaw rate and acceleration sensor DTC is output	C
DTC (C1231/31) is not output	D

HINT:

- When DTCs indicating CAN communication system malfunctions are output, repair the CAN communication system before repairing each corresponding sensor.
- If there is a malfunction in the speed sensor or the yaw rate and acceleration sensor, an abnormal value may be output although the steering angle sensor is normal.
- If speed sensor and yaw rate and acceleration sensor DTCs are output simultaneously, repair these two sensors and inspect the steering angle sensor.

D ▶ CHECK FOR INTERMITTENT PROBLEMS

C ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

B ▶ INSPECT CAN COMMUNICATION SYSTEM

A

2. INSPECT STEERING ANGLE SENSOR (POWER SOURCE TERMINAL)

*1

(a) Turn the power switch off.

(b) Remove the steering wheel and the column cover.

(c) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(d) Disconnect the steering angle sensor connector.

(e) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L51-5 (IG1) - Body ground	Power switch on (IG)	11 to 14 V
L51-6 (BAT) - Body ground	Always	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Steering Angle Sensor)
----	--

NG REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)

OK

3. INSPECT STEERING ANGLE SENSOR (GROUND TERMINAL)

(a) Turn the power switch off.

*1

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L51-2 (ESS) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Steering Angle Sensor)
----	--

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step .

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR (GROUND CIRCUIT)

OK  REPLACE SPIRAL CABLE SUB-ASSEMBLY (STEERING ANGLE SENSOR)

DTC	C1235/35	Foreign Object is Attached on Tip of Front Speed Sensor RH
DTC	C1236/36	Foreign Object is Attached on Tip of Front Speed Sensor LH
DTC	C1238/38	Foreign Object is Attached on Tip of Rear Speed Sensor RH
DTC	C1239/39	Foreign Object is Attached on Tip of Rear Speed Sensor LH
DTC	C1275/75	Abnormal Change in Output Signal of Front Speed Sensor RH (Test Mode DTC)
DTC	C1276/76	Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)
DTC	C1277/77	Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)
DTC	C1278/78	Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)

DESCRIPTION

When foreign matter adheres to the speed sensor tip or speed sensor rotor, these DTCs are output. An abnormal waveform input from the sensor determines these conditions.

These DTCs may be detected when a malfunction occurs in the connector terminals or wire harness of the speed sensor circuit.

DTCs C1275/75 to C1278/78 will be cleared when the speed sensor sends a wheel speed signal or when Test Mode ends. DTCs from C1275/75 to C1278/78 are output only in Test Mode.

NG  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK

13.	RECONFIRM DTC
-----	---------------

- (a) Reconnect the rear speed sensor connector.
- (b) Clear the DTCs .
- (c) Turn the power switch on (READY).
- (d) Drive the vehicle at a speed of 20 km/h (12 mph) or more for at least 15 seconds.
- (e) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTCs (C1238/38 and/or C1239/39) are output	A
DTCs (C1238/38 and C1239/39) are not output	B

B  CHECK FOR INTERMITTENT PROBLEMS

A

14.	REPLACE REAR SPEED SENSOR AND REAR SPEED SENSOR ROTOR
-----	---

- (a) Turn the power switch off.
- (b) Replace the rear speed sensor and the rear axle hub and bearing assembly (rear speed sensor rotor) .

HINT:

The rear speed sensor rotor is incorporated into the rear axle hub and bearing assembly.

If the rear speed sensor rotor needs to be replaced, replace it together with the rear axle hub and bearing assembly with rear speed sensor.

NOTICE:

Check the speed sensor signal after replacement .

NEXT

15.	RECONFIRM DTC

 A **REPLACE BRAKE BOOSTER WITH MASTER CYLINDER**

DTC	C1241/41	Low Battery Positive Voltage
DTC	C1242/42	Open in IG1 / IG2 Power Source Circuit

DESCRIPTION

If a malfunction is detected in the power supply circuit, the skid control ECU power source voltage drops, or there is insufficient voltage to operate ABS main relay, the skid control ECU will store these codes.

These codes may be also be stored if the auxiliary battery voltage drops below 9.5 V.

HINT:

DTC C1256/56 (Accumulator Low Pressure) may also be memorized if there is a drop in power source voltage.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1241/41	101	Any of the following conditions when the BS terminal voltage is 9.3 V or less: <ol style="list-style-type: none"> Vehicle not decelerated (brake pedal is not depressed) for 3 seconds or more. While depressing the brake pedal, linear solenoid current does not satisfy 1.34A. ----	---

NG REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)

OK

7. RECONFIRM DTC

(a) Reconnect the skid control ECU connector.

- (b) Clear the DTCs .
- (c) Turn the power switch on (READY).
- (d) Perform a road test.
- (e) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTCs (C1241/41 and C1242/42) are not output	A
DTCs (C1241/41 and/or C1242/42) are output	B

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step .

B ▶ REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A ▶ CHECK FOR INTERMITTENT PROBLEMS

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction
DTC	C1281/81	Master Cylinder Pressure Sensor Output Malfunction (Test Mode DTC)
DTC	C1364/61	Wheel Cylinder Pressure Sensor Malfunction

DESCRIPTION

The regulator pressure sensor and the wheel cylinder pressure sensor are built into the brake actuator, and measure the regulator pressure and the wheel cylinder pressure sent to the skid control ECU.

DTC C1281/81 will be cleared when the regulator pressure sensor sends a regulator pressure signal or when Test Mode ends. DTC C1281/81 is output only in Test Mode.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1246/46	201	Sensor supply voltage (VCM1) is 4.75 V or less, or 5.25 V or more for 0.05 seconds.	Brake booster with master cylinder (Skid control ECU or brake actuator)
↑	202	Regulator pressure sensor output voltage (Preg) is less than 8%, or 90.3% or more (less than 0.4 V, or 4.52 V or more) of sensor supply voltage (VCM1) for 0.05 seconds or more.	↑
↑	203	When not under braking, the regulator pressure sensor output voltage is 0.2 V or less or 0.88 V or more for 3 seconds or more.	↑

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU or brake actuator), perform initialization and calibration of the linear solenoid valve INFO.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (REGULATOR PRESSURE SENSOR)
----	---

(a) Set a pedal effort gauge and LSPV gauge to rear wheel INFO.

(b) Connect the Techstream to the DLC3.

(c) Turn the power switch on (IG).

(d) Select the Data List on the Techstream INFO.

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Regulator Pressure Sensor Output	Regulator pressure sensor output / Min.: 0 V, Max.: 5 V	When brake pedal released:	Reading increases when brake pedal is depressed

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		0.1 to 0.9 V	

(e) Check the output value of the regulator pressure sensor as the brake pedal is depressed.

Standard Voltage:

Brake Effort (N (kgf, lbf))	Regulator Pressure Sensor Output (V)	Rear Right Wheel Hydraulic Pressure (MPa (kgf/cm ² , psi))	Rear Left Wheel Hydraulic Pressure (MPa (kgf/cm ² , psi))
100 (10.2, 22.5)	1.35 to 2.15	4.10 to 8.10 (41.8 to 82.5, 595 to 1174)	4.10 to 8.10 (41.8 to 82.5, 595 to 1174)
200 (20.4, 45.0)	3.00 to 3.80	12.20 to 16.20 (124.4 to 165.1, 1770 to 2349)	12.20 to 16.20 (124.4 to 165.1, 1770 to 2349)

NG  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK

2.	READ VALUE USING TECHSTREAM (WHEEL CYLINDER PRESSURE SENSOR)
----	--

(a) Set a LSPV gauge to front wheel .

(b) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Wheel Cylinder Pressure Sensor	Wheel cylinder pressure sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.1 to 0.9 V	Reading increases when brake pedal is depressed

(c) Check the output value of the wheel cylinder pressure sensor at each hydraulic pressure during electronically controlled brake system control.

Standard Voltage:

for Front Wheel Cylinder Pressure Sensor LH

for Front Wheel Cylinder Pressure Sensor RH

Hydraulic Pressure (MPa (kgf/cm ² , psi))	Wheel Cylinder Pressure Sensor (V)
2.0 (20.4, 290)	0.53 to 1.33
5.0 (51.0, 725)	1.12 to 1.92
7.0 (71.4, 1015)	1.52 to 2.32
10.0 (102.0, 1451)	2.14 to 2.94

Hydraulic Pressure (MPa (kgf/cm ² , psi))	Wheel Cylinder Pressure Sensor (V)
2.0 (20.4, 290)	0.53 to 1.33
5.0 (51.0, 725)	1.12 to 1.92
7.0 (71.4, 1015)	1.52 to 2.32
10.0 (102.0, 1451)	2.14 to 2.94

NG  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK

3.	READ VALUE USING TECHSTREAM (BRAKE PEDAL STROKE SENSOR AND PRESSURE SENSOR COMPARISON)
----	--

(a) Set a pedal effort gauge and LSPV gauge to front and rear wheel .

(b) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stroke Sensor	Brake pedal stroke sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.65 to 1.35 V	Reading increases when brake pedal is depressed
Stroke Sensor2	Brake pedal stroke sensor 2 / Min.: 0 V, Max.: 5 V	When brake pedal released: 3.65 to 4.35 V	Reading decreases when brake pedal is depressed
Regulator Pressure Sensor Output	Regulator pressure sensor output / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.1 to 0.9 V	Reading increases when brake pedal is depressed
Wheel Cylinder Pressure Sensor	Wheel cylinder pressure sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.1 to 0.9 V	Reading increases when brake pedal is depressed

(c) Check the output value of the brake pedal stroke sensor as the brake pedal is depressed.

Standard Voltage:

Brake Effort (N (kgf, lbf))	Stroke Sensor (V)	Stroke Sensor2 (V)	Regulator Pressure Sensor Output (V)	Wheel Cylinder Pressure Sensor (V)
100 (10.2, 22.5)	1.10 to 1.80	3.20 to 3.90	1.35 to 2.15	1.17 to 1.97
200 (20.4, 45.0)	1.45 to 2.15	2.85 to 3.55	3.00 to 3.80	2.58 to 3.38

NG  REPLACE BRAKE PEDAL STROKE SENSOR

OK

4.	RECONFIRM DTC
----	---------------

- (a) Turn the power switch off.
- (b) Clear the DTCs .
- (c) Perform a road test.
- (d) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTCs (C1246/46 and C1364/61) are not output	A

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU) or brake pedal stroke sensor, perform initialization and calibration of the linear solenoid valve [INFO](#).

HINT:

Check the condition of each related circuit connector before troubleshooting [INFO](#).

PROCEDURE

- CHECK BRAKE PEDAL

(a) Check that the brake pedal and the brake pedal stroke sensor are properly installed and that the pedal can be operated normally.

(b) Check and adjust the brake pedal height INFO.

(c) Adjust the brake pedal stroke sensor INFO.

NEXT

2.	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE PEDAL STROKE SENSOR)
----	--

*1

(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.

*2

(b) Disconnect the skid control ECU connector and the brake pedal stroke sensor connector.

(c) Check both the connector case and the terminal for deformation and corrosion.

OK:

No deformation or corrosion.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A58-39 (VCSK) - A30-3 (VCSK)	Always	Below 1 Ω
A58-39 (VCSK) - Body ground	Always	10 k Ω or higher
A58-41 (SKG) - A30-1 (SKG)	Always	Below 1 Ω
A58-41 (SKG) - Body ground	Always	10 k Ω or higher
A58-42 (SKS) - A30-4 (SKS1)	Always	Below 1 Ω
A58-42 (SKS) - Body ground	Always	10 k Ω or higher
A58-40 (SKS2) - A30-2 (SKS2)	Always	Below 1 Ω
A58-40 (SKS2) - Body ground	Always	10 k Ω or higher

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► **REPLACE BRAKE BOOSTER WITH MASTER CYLINDER**

DTC	C1252/52	Brake Booster Pump Motor on Time Abnormally Long
DTC	C1253/53	Pump Motor Relay Malfunction

DESCRIPTION

The skid control ECU detects decreases in the accumulator pressure according to the data from the accumulator pressure sensor, and then starts and stops the pump motor by operating the motor relay.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1252/52	311	The pump motor is operating continuously for 178 seconds or more. (When relay malfunction is 98 seconds or more.)	<ul style="list-style-type: none"> • Short in motor circuit or motor monitor circuit • Motor relay stuck • Accumulator pressure sensor malfunction in brake actuator • Brake booster with master cylinder (Skid control ECU)
C1253/53	321	With the IG1 terminal voltage 9.5 V or more, the motor drive monitor remains off for 0.2 seconds or more after a motor drive on request.	<ul style="list-style-type: none"> • Open in motor circuit or motor monitor circuit • Brake booster with master cylinder (Skid control ECU)
↑	322	The motor drive monitor remains on for 2 seconds or more after a motor drive off request.	<ul style="list-style-type: none"> • Short in motor circuit or motor monitor circuit • Brake booster with master cylinder (Skid control ECU)
↑	323	The skid control ECU internal motor drive logical inconsistency continues for 2 seconds or more.	Brake booster with master cylinder (Skid control ECU)
↑	324	An open circuit in both skid control ECU internal motor relays 1 and 2.	<ul style="list-style-type: none"> • Open in motor circuit or motor monitor circuit • Brake booster with master cylinder (Skid control ECU)
↑	325	An open circuit in both skid control ECU internal motor relays 1 and 3.	↑
↑	326	An open circuit in both skid control ECU internal motor relays 2 and 3.	↑
↑	327	An open circuit in skid control ECU internal motor relay 1.	↑
↑	328	An open circuit in skid control ECU internal motor relay 2.	↑
↑	329	An open circuit in skid control ECU internal motor relay 3.	↑

When replacing the brake booster with master cylinder (skid control ECU or brake actuator), perform initialization and calibration of the linear solenoid valve .

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (ABS MOTOR RELAY)
----	--

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Select the Active Test on the Techstream .

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

9.	PERFORM ACTIVE TEST USING TECHSTREAM (SOLENOID VALVE)
----	---

(a) Select the Active Test on the Techstream **INFO**.

HINT:

The Active Test can be performed when the following conditions are met.

- ABS main relay is on.
- Park (P) selected.
- Parking brake is applied.
- Vehicle speed is 0 km/h (0 mph).

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnostic Note
ECB* Solenoid (SMC/SRC/SCC)	Switching solenoid valve (SMC/SRC/SCC)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard

*: Electronically Controlled Brake System

(b) Perform the Active Test of the solenoid using the Techstream.

(c) Select the Data List on the Techstream **INFO**.

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Wheel Cylinder Pressure Sensor	Wheel cylinder pressure sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.1 to 0.9 V	Reading increases when brake pedal is depressed

(d) Check that the output value of wheel cylinder does not increase.

OK:

The output value of wheel cylinder does not increase.

HINT:

If any output value increases, there may be brake fluid leaks in the brake actuator.

NG  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK  REPLACE BRAKE BOOSTER PUMP

DESCRIPTION

The accumulator pressure sensor is built into the actuator and detects the accumulator pressure.

The skid control ECU turns on the brake warning light / red (malfunction) and brake warning light / yellow (minor malfunction), and sounds the skid control buzzer if it senses a decrease in the accumulator pressure.

DTC C1256/56 may be output if the accumulator pressure drops due to frequent braking (this is not a malfunction).

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1256/56	341	Significant drop in accumulator pressure continues. (DTCs will be stored and the buzzer will operate when either condition is met.)	<ul style="list-style-type: none"> • Accumulator pressure dropped due to frequent brake pedal operation (not a malfunction) • Pump motor malfunction • Accumulator deterioration • Accumulator pressure sensor • Supply voltage reduced

WIRING DIAGRAM

Refer to DTCs C1252/52 and C1253/53 [INFO](#).

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (brake actuator), perform initialization and calibration of the linear solenoid valve [INFO](#).

HINT:

When C1202/68, C1241/41, C1252/52, C1253/53 and/or C1391/69 are output together with C1256/56, inspect and repair the trouble areas indicated by C1202/68, C1241/41, C1252/52, C1253/53 and/or C1391/69 first [INFO](#), [INFO](#), or [INFO](#)).

PROCEDURE

1. BRAKE PROBLEM CHECK

(a) Ask the customer if frequent braking was performed while the brake warning light / yellow (minor malfunction) was on.

OK:

Result	Proceed to
Frequent braking was not performed	A
Frequent braking was performed	B

HINT:

This DTC is output even if the accumulator pressure drops only temporarily due to frequent braking.

B ▶ END

A

2. INSPECT BRAKE BOOSTER PUMP

*1

(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.

(b) Disconnect the brake booster pump connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

If any output value increases, there may be brake fluid leaks in the brake actuator.

NG  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK  REPLACE BRAKE BOOSTER PUMP

DTC	C1257/57	Power Supply Drive Circuit
-----	----------	----------------------------

DESCRIPTION

The skid control ECU detects a drop in accumulator pressure according to the signals from the accumulator pressure sensor, then operates and stops the motor relay as well as the pump motor.

The skid control ECU troubleshoots the built-in motor relay drive circuit, and outputs this DTC when a malfunction is detected.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1257/57	361	While accumulator pressure falls below hard pump ON pressure, the hard drive circuit does not operate for 1 second or more.	Brake booster with master cylinder (Skid control ECU)
↑	362	When hard driving, one of the 3 built-in motor relays does not operate for 0.2 seconds or more.	↑

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve INFO.

HINT:

When C1241/41, C1242/42 and/or C1253/53 are output together with C1257/57, inspect and repair the trouble areas indicated by C1241/41, C1242/42 and/or C1253/53 first (INFO or INFO).

PROCEDURE

1.	REPLACE BRAKE BOOSTER WITH MASTER CYLINDER
----	--

(a) Replace the brake booster with master cylinder (skid control ECU) INFO.

NEXT  END

DTC	C1259/58	HV System Regenerative Malfunction
DTC	C1310/51	Malfunction in HV system

DESCRIPTION

The skid control ECU communicates with the power management control ECU and controls braking force according to the motor's regenerative force.

The skid control ECU sends Enhanced-VSC signals to the power management control ECU and inputs operating signals from the power management control ECU.

The skid control ECU uses CAN communication for communication with the power management control ECU. If a communication malfunction is memorized, the skid control ECU prohibits Enhanced-VSC operation and a part of electronically controlled brake system control by fail-safe function.

If the signals from the power management control ECU returned to normal, the warning light will go off and the DTCs C1259/58 and C1310/51 will be cleared.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1259/58	-	The regeneration malfunction signal is input for at least 0.036 seconds when IG2 terminal voltage is 9.5 V or more for at least 2 seconds and communication with power management control ECU is valid.	Power management control ECU (Hybrid vehicle control ECU)
C1310/51	-	The internal malfunction signal is input for at least 0.072 seconds when IG2 terminal voltage is 10.5 V or more for at least 2 seconds and communication with power management control ECU is valid.	Power management control ECU (Hybrid vehicle control ECU)

HINT:

This DTC will be output from the skid control ECU when the power management control ECU sends a malfunction signal to the skid control ECU.

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK HYBRID CONTROL SYSTEM
----	-----------------------------

(a) Check if the hybrid control system DTC is output .

Result:

Result	Proceed to
---------------	-------------------

Result	Proceed to
DTC is not output	A
DTC is output	B

B ▶ INSPECT HYBRID CONTROL SYSTEM

A ▶ REPLACE POWER MANAGEMENT CONTROL ECU

DESCRIPTION

The skid control ECU acquires the steering angle sensor zero point every time the power switch is turned on (READY) and the vehicle is driven at 35 km/h (22 mph) or more for approximately 5 seconds. The ECU also stores the previous zero point.

If the front wheel alignment or the steering wheel position is adjusted without disconnecting the cable from the negative (-) battery terminal, or if yaw rate and acceleration sensor zero point is not acquired after the adjustments have been completed, the skid control ECU detects the difference between the previous zero point and newly acquired zero point and outputs this DTC to indicate a poor adjustment.

The warning of the steering angle sensor zero point malfunction will be cancelled by turning the power switch off.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1290/66	751	The steering angle sensor 0 point is judged as an abnormal value.	<ul style="list-style-type: none"> • Yaw rate and acceleration sensor zero point calibration incomplete • Poor adjustment of the center position of the steering wheel • Poor adjustment of front wheel alignment

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve INFO.

PROCEDURE

1. PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor INFO.

HINT:

- When the stored zero point of the yaw rate and acceleration sensor is cleared, steering angle sensor zero point will also be cleared.
- If the zero point and output value of the yaw rate and acceleration sensor and the output value of the speed sensors are not normal, steering angle sensor zero point cannot be acquired normally even if the vehicle is driven straight ahead at 35 km/h (22 mph) or more.

NEXT

2.	CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION
----	--

- (a) Turn the power switch off.
- (b) Turn the power switch on (READY).
- (c) Drive the vehicle straight ahead at 35 km/h (22 mph) or more for at least 5 seconds.
- (d) Check that the steering wheel is centered correctly while driving straight ahead.

HINT:

If front wheel alignment and steering position are adjusted as a result of an off-center of the steering wheel, acquire yaw rate and acceleration sensor zero point again after the adjustments are completed.

OK:

The steering wheel is centered correctly.

NG  ADJUST FRONT WHEEL ALIGNMENT OR STEERING POSITION

OK

3.	RECONFIRM DTC
----	---------------

- (a) Turn the power switch off.
- (b) Clear the DTCs .
- (c) Turn the power switch on (READY).
- (d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 35 km/h (22 mph) or more.
- (e) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTC (C1290/66) is not output	A
DTC (C1290/66) is output	B

B  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A  END

DTC	C1300	Skid Control ECU Malfunction
-----	-------	------------------------------

DESCRIPTION

The skid control ECU outputs this DTC if malfunctions are found in the circuit inside the ECU by self diagnosis.

DTC Code	INF Code	DTC Detection Condition	Trouble Area

DTC	C1345/66	Linear Solenoid Valve Offset Learning Undone
DTC	C1368/67	Linear Solenoid Valve Offset Malfunction

DESCRIPTION

The skid control ECU stores and corrects the individual differences in the stroke sensor, actuator solenoids, and stroke simulator solenoid. Perform initialization of the linear solenoid valve and calibration if any of these parts is replaced.

The skid control ECU receives park (P) signal from the power management control ECU through the CAN communication system.

The DTCs are cleared when the linear valve offset learning results are normal.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1345/66	-	Linear valve offset learning undone.	Perform linear valve offset learning and check for DTCs. If no DTCs are output again, the valve is normal.
C1368/67	-	Offset learned value out of specification.	<ul style="list-style-type: none"> Perform linear valve offset learning and check for DTCs. If no DTCs are output again, the valve is normal. Brake booster with master cylinder (Brake actuator)

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (brake actuator), perform initialization and calibration of the linear solenoid valve INFO.

HINT:

When C1451/72 is output together with C1345/66 and/or C1368/67, inspect and repair the trouble areas indicated by C1451/72 first INFO.

PROCEDURE

1.	CHECK DTC
----	-----------

(a) Clear the DTCs INFO.

(b) Turn the power switch off.

(c) Turn the power switch on (IG).

(d) Check that the DTCs (electronically controlled brake system and hybrid control system) are recorded  for electronically controlled brake system, or  for hybrid control system).

Result:

Result	Proceed to
DTCs (except C1345/66, C1368/67 and hybrid control system DTC) are not output	A
Hybrid control system DTC is output	B
DTCs (except C1345/66 and/or C1368/67) are output	C

HINT:

Before carrying out Perform Initialization and Calibration of the Linear Solenoid Valve, C1203/95 will output.

 REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

 INSPECT HYBRID CONTROL SYSTEM

A

2.	PERFORM INITIALIZATION AND CALIBRATION OF LINEAR SOLENOID VALVE
----	---

(a) Turn the power switch off.

(b) Perform initialization and calibration of the linear solenoid valve .

NEXT

3.	RECONFIRM DTC
----	---------------

(a) Turn the power switch off.

(b) Clear the DTCs .

(c) Turn the power switch on (IG).

(d) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTCs (C1345/66 and C1368/67) are not output	A
DTCs (C1345/66 and/or C1368/67) are output	B

B ▶ REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A ▶ **END**

DESCRIPTION

The accumulator pressure sensor is built into the brake actuator.

The skid control ECU detects the accumulator pressure from the data sent from the accumulator pressure sensor, and then runs and stops the pump motor by operating the motor relay.

DTCs may be output if the accumulator pressure drops due to frequent braking (this is not a malfunction).

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1365/54	331	Sensor supply voltage (VACC) is 4.54 V or less, or 5.46 V or more for 0.8 seconds or more.	Brake booster with master cylinder (Skid control ECU or brake actuator)
↑	332	Accumulator pressure sensor output voltage (PACC) is less than 8%, or 88% or more of sensor supply voltage for 0.8 seconds or more (less than 0.4 V, or 4.4 V or more for 0.8 seconds or more).	↑
↑	333	Fluctuation of sensor output is out of specification (the difference between the present value and last value is 7.5 MPa) for 0.8 seconds or more.	↑
↑	334	With the vehicle driven at 6 km/h (4 mph) or more and output value of the accumulator pressure sensor 19.7 MPa or less, the pump motor does not operate for 12 seconds or more.	↑

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU or brake actuator), perform initialization and calibration of the linear solenoid valve INFO.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (ACCUMULATOR PRESSURE SENSOR)
----	---

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Select the Data List on the Techstream INFO.

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Accumulator Sensor	Accumulator pressure sensor / Min.: 0 V, Max.: 5 V	Specified value: 2.9 to 4.2 V	When brake fluid is stored in the accumulator: Accumulator pressure changes in accordance with volume of fluid stored in the accumulator

(d) Wait for 30 seconds without depressing the brake pedal.

(e) Check that the accumulator pressure sensor output values change is within the specified range.

OK:

Accumulator pressure sensor output values change is within 0.55 V.

NG  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

OK

2.	RECONFIRM DTC
----	---------------

(a) Turn the power switch off.

(b) Clear the DTCs .

(c) Perform a road test.

(d) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTC (C1365/54) is not output	A
DTC (C1365/54) is output	B

B  REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A  CHECK FOR INTERMITTENT PROBLEMS

DESCRIPTION

Upon receiving the dynamic radar cruise control system operating signal from the skid control ECU, the relay contact turns on and the stop light comes on.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1380/64	761	When the voltage at the BI terminal is 8.9 V or more and the stop light control relay drive output (STP0) is ON, a signal is not input to the STP2 terminal for 2 seconds or more.	<ul style="list-style-type: none"> • Stop light switch • Stop light switch circuit • Stop light control relay • Stop light control relay circuit • Brake booster with master cylinder (Skid control ECU)
↑	762	When the voltage at the BI terminal is 8.9 V or more and the stop light control relay drive output (STP0) is OFF, the signal at the STP terminal is different from the input signal at the STP2 for 5 seconds or more.	<ul style="list-style-type: none"> • Stop light switch • Stop light switch circuit • Stop light control relay • Stop light control relay circuit • Brake booster with master cylinder (Skid control ECU)

WIRING DIAGRAM

Refer to DTC C1249/49 INFO.

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve INFO.

HINT:

When C1249/49 is output together with C1380/64, inspect and repair the trouble areas indicated by C1249/49 first INFO.

PROCEDURE

1. CHECK STOP LIGHT OPERATION

(a) Check that the stop lights come on when the brake pedal is depressed and go off when the brake pedal is released.

OK:

Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

NG  INSPECT STOP LIGHT CIRCUIT

OK

2. READ VALUE USING TECHSTREAM (STOP LIGHT SWITCH)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stop Light SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

(d) Check that the stop light switch condition observed on the Techstream changes according to brake pedal operation.

OK:

The Techstream displays ON or OFF according to brake pedal operation.

NG  [INSPECT SKID CONTROL ECU \(STP TERMINAL\)](#)

OK

3. PERFORM ACTIVE TEST USING TECHSTREAM (STOP LIGHT CONTROL RELAY)

(a) Select the Active Test on the Techstream .

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnostic Note
Stop Light Relay	Stop light control relay	Relay ON/OFF	Stop lights come on

(b) Perform the Active Test of the stop light control relay using the Techstream.

(c) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stop Light Relay Output	Stop light control relay output / ON or OFF	ON: Relay output on OFF: Relay output off	-

(d) Check for stop light control relay operation using Data List and stop light operation by performing an Active Test.

Result:

Result	Proceed to
Data List content and stop light operation are normal	A
Data List content is normal but stop lights do not turn on or off	B

B  [INSPECT STOP LIGHT CONTROL RELAY](#)

A

4.	INSPECT SKID CONTROL ECU (STP2 TERMINAL)
----	--

(a) Turn the power switch off.

*1

- (b) Make sure that there is no looseness at the locking part and the connecting part of the connectors.
- (c) Disconnect the skid control ECU connector.
- (d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A58-6 (STP2) - Body ground	Stop light switch ON (Brake pedal depressed)	11 to 14 V
A58-6 (STP2) - Body ground	Stop light switch OFF (Brake pedal released)	Below 1.5 V

Text in Illustration

*1	Front view of wire harness connector (to Skid Control ECU)
----	---

NG REPAIR OR REPLACE HARNESS OR CONNECTOR (STP2 CIRCUIT)

OK

5.	RECONFIRM DTC
----	---------------

- (a) Reconnect the skid control ECU connector.
- (b) Clear the DTCs .
- (c) Turn the power switch on (READY).
- (d) Perform a road test.

(e) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTC (C1380/64) is not output	A
DTC (C1380/64) is output	B

B ▶ REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A ▶ CHECK FOR INTERMITTENT PROBLEMS

6.	INSPECT STOP LIGHT CONTROL RELAY
----	----------------------------------

(a) Inspect the stop light control relay .

OK:

The stop light control relay is normal.

NG ▶ REPLACE STOP LIGHT CONTROL RELAY

OK

7.	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - STOP LIGHT CONTROL RELAY)
----	---

(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.

*1

*2

(b) Disconnect the skid control ECU connector and the stop light control relay connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A58-3 (STP0) - A28-9 (ACC)	Always	Below 1 Ω
A58-3 (STP0) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector (to Skid Control ECU)
*2	Front view of wire harness connector (to Stop Light Control Relay)

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ **REPLACE BRAKE BOOSTER WITH MASTER CYLINDER**

8. INSPECT SKID CONTROL ECU (STP TERMINAL)

*1

(a) Turn the power switch off.

(b) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(c) Disconnect the skid control ECU connector.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A58-33 (STP) - Body ground	Stop light switch ON (Brake pedal depressed)	11 to 14 V
A58-33 (STP) - Body ground	Stop light switch OFF (Brake pedal released)	Below 1.5 V

Text in Illustration

*1	Front view of wire harness connector (to Skid Control ECU)
----	---

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STP CIRCUIT)**

OK ▶ **REPLACE BRAKE BOOSTER WITH MASTER CYLINDER**

DESCRIPTION

The DTC is stored if internal or external brake fluid leaks are detected due to improper sealing in the brake actuator or brake booster pump. Internal leaks are suspected if the pump motor operates frequently without braking.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1391/69	351	Either of the following is detected: <ol style="list-style-type: none"> 1. Accumulator pressure sensor input does not increase before braking or while the pump motor is operating. 2. Accumulator pressure sensor input reduction rate exceeds the specification before braking and while the pump motor is not operating. 	<ul style="list-style-type: none"> • Brake fluid leaks • Brake booster with master cylinder (Brake actuator) (Malfunctioning internal seal, low gas pressure in accumulator, etc.)

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (brake actuator), perform initialization and calibration of the linear solenoid valve .

PROCEDURE

1. CHECK FOR FLUID LEAK

(a) Check that there is no fluid leaks in the brake line between the brake actuator and the wheel cylinder which is indicated by DTCs.

(b) Check that the brake is not dragging.

OK:

There is no fluid leaks or dragging.

NG  REPAIR OR REPLACE APPLICABLE PART

OK

2. RECONFIRM DTC

- (a) Clear the DTCs .
- (b) Turn the power switch on (READY).
- (c) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTC (C1391/69) is output	A
DTC (C1391/69) is not output	B

 REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

A

3.	PERFORM ACTIVE TEST USING TECHSTREAM (SOLENOID VALVE)
----	---

- (a) Turn the power switch off.
- (b) Connect the Techstream to the DLC3.
- (c) Turn the power switch on (IG).
- (d) Select the Active Test on the Techstream .

HINT:

The Active Test can be performed when the following conditions are met.

- ABS main relay is on.
- Park (P) selected.
- Parking brake is applied.
- Vehicle speed is 0 km/h (0 mph).

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnostic Note
ECB* Solenoid (SMC/SRC/SCC)	Switching solenoid valve (SMC/SRC/SCC)	Solenoid ON/OFF	Operation sound of solenoid (clicking sound) can be heard

*: Electronically Controlled Brake System

- (e) Perform the Active Test of the solenoid using the Techstream.
- (f) Select the Data List on the Techstream .

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Wheel Cylinder Pressure Sensor	Wheel cylinder pressure sensor / Min.: 0 V, Max.: 5 V	When brake pedal released: 0.1 to 0.9 V	Reading increases when brake pedal is depressed

(g) Check that the output value of wheel cylinder does not increase.

OK:

The output value of wheel cylinder does not increase.

HINT:

If any output value increases, there may be brake fluid leaks in the brake actuator.

Result:

Result	Proceed to
The output value of wheel cylinder increases	A
The output values of wheel cylinders do not increase	B

B ▶ REPLACE BRAKE BOOSTER PUMP

A

4. REPLACE BRAKE BOOSTER WITH MASTER CYLINDER

(a) Replace the brake booster with master cylinder (brake actuator) .

NEXT ▶ REPLACE BRAKE BOOSTER PUMP

DTC	C1439/66	Steering Angle Sensor Initialization Incomplete
DTC	C1445/66	Vehicle Driven with Steering Angle Sensor not Initialized

DESCRIPTION

The skid control ECU acquires the steering angle sensor zero point every time the power switch is turned on (IG) and the vehicle is driven at 35 km/h (22 mph) or more for approximately 5 seconds. The ECU also stores previous zero points.

DTCs C1439/66 and C1445/66 will be cleared when the power switch is turned off.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1439/66	752	After the steering angle sensor zero point calibration is cleared due to, for example, fluctuations in the power source, the steering angle sensor zero point calibration cannot be obtained for 60 seconds of continuous driving.	<ul style="list-style-type: none"> Steering angle sensor Yaw rate and acceleration sensor Brake booster with master cylinder (Skid control ECU)
C1445/66	753	Steering angle sensor zero point calibration cannot be obtained when the vehicle is driven without a record of steering angle sensor zero point calibration at a speed of 35 km/h (22 mph) or more for 30 seconds or more without the brake pedal being depressed.	<ul style="list-style-type: none"> Steering angle sensor Yaw rate and acceleration sensor Brake booster with master cylinder (Skid control ECU)

INSPECTION PROCEDURE

NOTICE:

Before proceeding with the inspection, explain to the customer that the output DTC is related to temporary loss of the steering angle zero calibration, such as when the power source voltage drops when the battery is removed, and confirm that this condition occurred.

HINT:

- When DTC U0073/94, U0123/62, U0124/95 and/or U0126/63 is output together with DTC C1439/66 and/or C1445/66, inspect and repair the trouble areas indicated by DTC U0073/94, U0123/62, U0124/95 and/or U0126/63 first .
- When the speed sensor or the yaw rate and acceleration sensor has trouble, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs for the speed sensor or yaw rate and acceleration sensor are output together with other DTCs for the steering angle sensor, inspect and repair the speed sensor and yaw rate and acceleration sensor first, and then inspect and repair the steering angle sensor.

PROCEDURE

1. CHECK DTC

- (a) Clear the DTCs .
- (b) Turn the power switch off.
- (c) Turn the power switch on (IG) again and check that no CAN communication system DTCs are output .
- (d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 35 km/h (22 mph) and check that no speed sensor, yaw rate and acceleration sensor and steering angle sensor DTCs are output .

Result:

Result	Proceed to
DTCs (C1439/66 and/or C1445/66) are output	A
CAN communication system DTC is output	B
Speed sensor, yaw rate and acceleration sensor and/or steering angle sensor DTC is output	C
DTCs (C1439/66 and C1445/66) are not output	D

HINT:

- When DTCs indicating CAN communication system malfunctions are output, repair the CAN communication system before repairing each corresponding sensor.
- If there is a malfunction in the speed sensor or the yaw rate and acceleration sensor, an abnormal value may be output although the steering angle sensor is normal.
- If the speed sensor and the yaw rate and acceleration sensor DTCs are output simultaneously, repair the sensors and inspect the steering angle sensor.
- If the same DTC C1439/66 and/or C1445/66 is not output again, the DTC may have been stored due to a temporary loss of the steering angle zero calibration, such as when the power source voltage drops.

 CHECK FOR INTERMITTENT PROBLEMS

 REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

 INSPECT CAN COMMUNICATION SYSTEM

A

2. CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION

- (a) Drive the vehicle straight ahead at 35 km/h (22 mph) or more for at least 5 seconds.
- (b) Check that the steering wheel is centered correctly while driving straight ahead.

HINT:

If the front wheel alignment and steering position are adjusted as a result of an off-centered position of the steering wheel, acquire yaw rate and acceleration sensor zero point again after the adjustments are completed.

OK:

The steering wheel is centered correctly.

NG  ADJUST FRONT WHEEL ALIGNMENT OR STEERING POSITION

OK

3.	RECONFIRM DTC
----	---------------

- (a) Turn the power switch off.
- (b) Clear the DTCs .
- (c) Turn the power switch on (READY).
- (d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 35 km/h (22 mph) or more.
- (e) Check if the same DTC is recorded .

Result:

Result	Proceed to
DTCs (C1439/66 and C1445/66) are not output	A
Yaw rate and acceleration sensor and/or steering angle sensor DTC is output	B

HINT:

If the same DTC C1439/66 and/or C1445/66 is not output again, the DTC may have been stored due to a temporary loss of the steering angle zero calibration, such as when the power source voltage drops.

B  REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A  END

DTC	C1440/98	Unusual Bank Angle Detected
-----	----------	-----------------------------

DESCRIPTION

If the skid control ECU determines that the vehicle is being driven at a steep bank angle, the skid control ECU stores DTC C1440/98 while VSC operation is temporarily disabled.

It is not a malfunction if the system and sensor circuits are normal and if the normal VSC operation resumes.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1440/98	-	Driving at a steep bank angle.	Yaw rate and acceleration sensor

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DTC
----	-----------

- (a) Clear the DTCs .
- (b) Perform a road test.
- (c) Check if the same DTC is recorded .

Result:

Result	Proceed to

INSPECTION PROCEDURE

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the Techstream, check for any momentary interruptions in the wire harness and connector corresponding to a DTC INFO.

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Yaw Rate Open	Yaw rate sensor open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-
Steering Open	Steering angle sensor open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-
HV Communication Open	Hybrid vehicle communication open detection / Error or Normal	Error: Momentary interruption Normal: Normal	-

Result:

Result	Proceed to
There is a constant open circuit	A
There are no momentary interruptions	B
There are momentary interruptions	C

HINT:

Perform the above inspection before removing any sensor or connector.

C [REPAIR OR REPLACE HARNESS OR CONNECTOR](#)

B [RECONFIRM DTC](#)

A

2.	CHECK IF EACH SENSOR AND ECU CONNECTOR ARE SECURELY CONNECTED
----	---

(a) Turn the power switch off.

(b) Check if each sensor and ECU connector are securely connected.

OK:

Each sensor and ECU connector are securely connected.

NG [CONNECT CONNECTOR TO EACH SENSOR OR ECU CORRECTLY](#)

OK

3. RECONFIRM DTC

- (a) Turn the power switch off.
- (b) Record the output DTCs (for ABS, VSC, electronically controlled brake system, and/or CAN communication system) **INFO** for ABS, VSC and/or electronically controlled brake system, or **INFO** for CAN communication system).

HINT:

If the CAN communication system DTC and the relevant sensor DTCs are output simultaneously, troubleshoot the relevant sensor DTCs (for ABS, VSC and/or electronically controlled brake system) after the CAN communication system returns to normal.

Result:

Result	Proceed to
DTC is not output	A
DTC (ABS, VSC and/or electronically controlled brake system DTC) is output	B
DTC (CAN communication system DTC) is output	C

C ▶ INSPECT CAN COMMUNICATION SYSTEM

B ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A ▶ CHECK FOR INTERMITTENT PROBLEMS

4. REPAIR OR REPLACE HARNESS OR CONNECTOR

- (a) Turn the power switch off.
- (b) Repair or replace the harness or connector.
- (c) Check for any momentary interruption between the skid control ECU and each sensor or ECU **INFO**.
- (d) Check that there are no momentary interruptions.

NEXT

5. RECONFIRM DTC

- (a) Turn the power switch off.

- (b) Clear the DTCs **INFO**.
- (c) Turn the power switch on (READY).
- (d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 15 km/h (9 mph) or more.
- (e) Check that no CAN communication system DTC is output **INFO**.
- (f) If ABS, VSC and/or electronically controlled brake system DTCs are output, record them **INFO**.

Result:

Result	Proceed to
DTC is not output	A
DTC (ABS, VSC and/or electronically controlled brake system DTC) is output	B
DTC (CAN communication system DTC) is output	C

HINT:

The CAN communication system must be normal when repairing each sensor DTC (for ABS, VSC and/or electronically controlled brake system).

- C** ▶ INSPECT CAN COMMUNICATION SYSTEM
- B** ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCS
- A** ▶ END

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

If any of the following is detected, the ABS warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the harness between the combination meter and the skid control ECU.
- The ABS control system is defective.

HINT:

In some cases, the Techstream cannot be used when the skid control ECU is malfunctioning.

DESCRIPTION

In Test Mode (signal check), a malfunction in a speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.

Sensor check mode can be entered by connecting terminals TS and CG of the DLC3 and turning the power switch from off to on (IG).

WIRING DIAGRAM

N

INSPECTION PROCEDURE

NOTICE:

When replacing the brake booster with master cylinder (skid control ECU), perform initialization and calibration of the linear solenoid valve INFO.

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - TS of DLC3)

(a) Disconnect the skid control ECU connector.

*1

A58

*2

L61

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A58-4 (TS) - L61-12 (TS)	Always	Below 1 Ω
A58-4 (TS) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector (to Skid Control ECU)
*2	Front view of DLC3

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.	CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)
----	--

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L61-4 (CG) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of DLC3
----	--------------------

HINT:

If troubleshooting has been carried out according to Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part INFO.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ **REPLACE BRAKE BOOSTER WITH MASTER CYLINDER**

REMOVAL

NOTICE:

While the battery is connected, even if the power switch is off, the brake control system activates when the brake pedal is depressed or any door courtesy switch is turned on. Therefore, when servicing the brake system components, do not depress the brake pedal or open/ close the doors while the battery is connected.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.
- If the sensor rotor needs to be replaced, replace it together with the front axle hub and bearing assembly.

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

2. REMOVE REAR DECK FLOOR BOX INFO

3. REMOVE REAR NO. 3 FLOOR BOARD INFO

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE FRONT WHEEL

6. REMOVE FRONT FENDER LINER

(a) Remove the 12 clips, 4 screws, 3 grommets, and front fender liner.

HINT:

Use the same procedure for the RH side and LH side.

7. REMOVE FRONT SPEED SENSOR

(a) Remove the 2 clamps and disconnect the front speed sensor connector.

(b) Remove the bolt and No. 2 sensor clamp from the body.

Text in Illustration

*1	No. 2 Sensor Clamp
----	--------------------

(c) Remove the bolt, No. 1 sensor clamp and front brake flexible hose together from the shock absorber assembly.

Text in Illustration

*1	No. 1 Sensor Clamp
*2	Front Brake Flexible Hose

(d) Remove the clamp from the shock absorber assembly.

(e) Remove the bolt and front speed sensor.

- Prevent foreign matter from attaching to the front speed sensor tip.
- Clean the speed sensor installation hole and the contact surfaces every time the front speed sensor is removed.

INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.
- If the sensor rotor needs to be replaced, replace it together with the front axle hub and bearing assembly.

1. INSTALL FRONT SPEED SENSOR

(a) Install the front speed sensor with the bolt.

Torque: **8.5 N·m (87 kgf·cm, 76in·lbf)**

- Prevent foreign matter from attaching to the front speed sensor tip.
- Firmly insert the front speed sensor body into the knuckle before tightening the bolt.
- After installing the front speed sensor to the knuckle, make sure that there is no clearance between the front speed sensor stay and knuckle. Also make sure that no foreign matter is stuck between the parts.
- Before installing the clamp, firmly insert the points of the clamp into the installation holes.

(b) Temporarily install the front brake flexible hose.

Text in Illustration

*1	Front Brake Flexible Hose	*2	No. 1 Sensor Clamp
----	---------------------------	----	--------------------

(c) Install the front brake flexible hose and No. 1 sensor clamp together to the shock absorber with the bolt.

Torque: **19 N·m (192 kgf·cm, 14ft·lbf)**

NOTICE:

- Do not twist the wire harness for the front speed sensor when installing the speed sensor.
- Bolt tightens the brake flexible hose and front speed sensor together. Make sure that the front speed sensor is positioned over the front brake flexible hose.

(d) Install the clamp to the shock absorber assembly.

(e) Install the No. 2 sensor clamp to the body with the bolt.

Torque: **8.5 N·m (87 kgf·cm, 76in·lbf)**

Text in Illustration

*1	No. 2 Sensor Clamp
----	--------------------

(f) Connect the speed sensor connector.

(g) Connect the 2 speed sensor wire harness clamps to the body.

2. INSTALL FRONT FENDER LINER

(a) Install the front fender liner with the 12 clips, 3 grommets and 4 screws.

c

3. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

5. INSTALL REAR NO. 3 FLOOR BOARD **INFO**

6. INSTALL REAR DECK FLOOR BOX **INFO**

7. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) **INFO**

8. CHECK FOR SPEED SENSOR SIGNAL

REMOVAL

NOTICE:

- While the battery is connected, even if the power switch is off, the brake control system activates when the brake pedal is depressed or any door courtesy switch is turned on. Therefore, when servicing the brake system components, do not depress the brake pedal or open/ close the doors while the battery is connected.
- When the brake pedal is first depressed after replacing the brake pads or pushing back the disc brake piston, DTC C1214 may be output. As there is no malfunction, clear the DTC.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.
- If the sensor rotor needs to be replaced, replace it together with the rear axle hub and bearing assembly.
- The rear speed sensor is a component of the rear axle hub and bearing assembly. If the sensor malfunctions, replace the rear axle hub and bearing assembly.

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) 

2. REMOVE REAR DECK FLOOR BOX 

3. REMOVE REAR NO. 3 FLOOR BOARD 

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected .

5. REMOVE REAR WHEEL

6. REMOVE FRONT DOOR SCUFF PLATE LH 

7. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH 

8. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY 

9. LOOSEN PARKING BRAKE CABLE 

10. DISCONNECT REAR SPEED SENSOR WIRE

- (a) Using a screwdriver, disconnect the connector from the rear speed sensor.

NOTICE:

Be careful not to damage the rear speed sensor.

11. DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY_ **INFO**

12. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY_ **INFO**

13. REMOVE REAR DISC_ **INFO**

14. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY

(a) Remove the rear axle hub and bearing assembly **INFO**.

HINT:

The rear speed sensor is a component of the rear axle hub and bearing assembly. If the sensor malfunctions, replace the rear axle hub and bearing assembly.

INSTALLATION

HINT:

- If the sensor rotor needs to be replaced, replace it together with the rear axle hub and bearing assembly.
- The rear speed sensor is a component of the rear axle hub and bearing assembly. If the sensor malfunctions, replace the rear axle hub and bearing assembly.

1. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY

(a) Install the rear axle hub and bearing assembly [INFO](#).

HINT:

The rear speed sensor is a component of the rear axle hub and bearing assembly. If the sensor malfunctions, replace the rear axle hub and bearing assembly.

2. INSPECT REAR AXLE HUB BEARING LOOSENESS [INFO](#)

3. INSPECT REAR AXLE HUB RUNOUT [INFO](#)

4. INSTALL REAR DISC [INFO](#)

5. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY [INFO](#)

6. CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY [INFO](#)

7. CONNECT REAR SPEED SENSOR WIRE

(a) Connect the rear speed sensor wire connector to the rear speed sensor.

8. ADJUST PARKING BRAKE LEVER TRAVEL [INFO](#)

9. INSPECT REAR DISC BRAKE CYLINDER OPERATION LEVER AND STOPPER CLEARANCE [INFO](#)

10. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY [INFO](#)

11. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH [INFO](#)

12. INSTALL FRONT DOOR SCUFF PLATE LH [INFO](#)

13. INSTALL REAR WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

15. INSTALL REAR NO. 3 FLOOR BOARD **INFO**

16. INSTALL REAR DECK FLOOR BOX **INFO**

17. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) **INFO**

18. CHECK FOR SPEED SENSOR SIGNAL

INFO

COMPONENTS

ILLUSTRATION

c

REMOVAL

NOTICE:

While the battery is connected, even if the power switch is off, the brake control system activates when the brake pedal is depressed or any door courtesy switch is turned on. Therefore, when servicing the brake system components, do not depress the brake pedal or open/close the doors while the battery is connected.

1. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY

HINT:

Refer to the instructions for Removal of the Upper Instrument Panel Sub-assembly .

2. REMOVE SKID CONTROL BUZZER ASSEMBLY

(a) Remove the skid control buzzer assembly.

(b) Disconnect the skid control buzzer connector.

INSPECTION

1. INSPECT SKID CONTROL BUZZER ASSEMBLY

(a) Connect a negative (-) lead from the battery to terminal 1 of the skid control buzzer and a positive (+) lead to terminal 2, and then check that the buzzer sounds.

*1

Text in Illustration

*1	Component without harness connected (Skid Control Buzzer)
----	--

OK:

The skid control buzzer sounds.

If the result is not as specified, replace the switch.

N

INSTALLATION

1. INSTALL SKID CONTROL BUZZER ASSEMBLY

(a) Connect the skid control buzzer connector.

(b) Install the skid control buzzer assembly.

2. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY

HINT:

Refer to the instructions for Installation of the Upper Instrument Panel Sub-assembly INFO.

REMOVAL

NOTICE:

- Do not remove the steering angle sensor from the spiral cable.
- While the battery is connected, even if the power switch is off, the brake control system activates when the brake pedal is depressed or any door courtesy switch is turned on. Therefore, when servicing the brake system components, do not depress the brake pedal or open/ close the doors while the battery is connected.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing [INFO](#).

2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

3. REMOVE STEERING PAD

HINT:

Refer to the procedure up to Remove Steering Pad [INFO](#).

4. REMOVE STEERING WHEEL ASSEMBLY [INFO](#)

5. REMOVE LOWER STEERING COLUMN COVER [INFO](#)

6. REMOVE UPPER STEERING COLUMN COVER [INFO](#)

7. REMOVE SPIRAL CABLE WITH STEERING ANGLE SENSOR

(a) Remove the spiral cable with steering angle sensor [INFO](#).

NOTICE:

- Do not replace spiral cable with steering angle sensor with the battery connected and the power switch on (IG).
- Do not rotate the spiral cable with steering angle sensor with the battery connected and the power switch on (IG).
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering angle sensor.
- Do not remove the steering angle sensor from the spiral cable.

INSTALLATION

1. INSTALL SPIRAL CABLE WITH STEERING ANGLE SENSOR

(a) Install the spiral cable with steering angle sensor .

NOTICE:

- Do not replace the spiral cable with steering angle sensor with the battery connected and the power switch on (IG).
- Do not rotate the spiral cable with steering angle sensor with the battery connected and the power switch on (IG).
- Ensure that the steering wheel is installed and aligned straight when inspecting the steering angle sensor.
- Do not remove the steering angle sensor from the spiral cable.

2. INSTALL UPPER STEERING COLUMN COVER_ 

3. INSTALL LOWER STEERING COLUMN COVER_ 

4. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

5. ADJUST SPIRAL CABLE_ 

6. INSTALL STEERING WHEEL ASSEMBLY_ 

7. INSPECT STEERING WHEEL CENTER POINT

8. INSTALL STEERING PAD

HINT:

Refer to the procedure from Install Steering Pad .

9. CALIBRATE STEERING ANGLE SENSOR

23. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY_ [INFO](#)

24. REMOVE CONSOLE BOX ASSEMBLY_ [INFO](#)

25. REMOVE YAW RATE AND ACCELERATION SENSOR

(a) Remove the 2 bolts and yaw rate and acceleration sensor.

(b) Disconnect the connector from the yaw rate and acceleration sensor.

INSTALLATION

1. INSTALL YAW RATE AND ACCELERATION SENSOR

(a) Connect the yaw rate and acceleration sensor connector.

NOTICE:

Make sure that the yaw rate and acceleration sensor connector is connected securely.

c

(b) Install the yaw rate and acceleration sensor with the 2 bolts.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

NOTICE:

- Do not damage the yaw rate and acceleration sensor.
- Make sure that the yaw rate and acceleration sensor is installed securely.
- Do not use dropped or damaged parts.
- Keep the contact surfaces of the yaw rate and acceleration sensor and the body free of foreign matter.
- Make sure that the sensor is facing the correct direction.

2. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL ASSEMBLY [INFO](#)

3. INSTALL SHIFT LOCK CONTROL UNIT ASSEMBLY [INFO](#)

4. INSTALL AIR CONDITIONING CONTROL ASSEMBLY [INFO](#)

5. INSTALL CONSOLE BOX ASSEMBLY [INFO](#)

REMOVAL

1. DISABLE BRAKE CONTROL

(a) Wait at least 2 minutes after the power switch off.

NOTICE:

When the brake pedal is depressed or the door courtesy switch is turned on even if the power switch is off, the brake control system activates. Therefore do not depress the brake pedal or open/close the doors until the reservoir level switch connector is disconnected.

(b) Disconnect the reservoir level switch connector.

(c) Connect the Techstream to the DLC3 and turn the power switch on (IG).

(d) Turn the Techstream on and enter the following menu: Chassis / ABS/VSC/TRC / Active Test.

(e) Select "ECB (Electronically Controlled Brake system) Control Invalid".

(f) Depress the brake pedal 40 times or more to return the all fluid in the accumulator back to the reservoir.

NOTICE:

A drop in accumulator pressure may cause a buzzer to sound. This is not a malfunction, therefore continue with the operation.

(g) Check that the brake pedal can not be further depressed.

(h) Select "NEXT" to finish "ECB (Electronically Controlled Brake system) Invalid".

(i) Turn the power switch off and turn the Techstream off.

2. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) 

3. REMOVE REAR DECK FLOOR BOX 

4. REMOVE REAR NO. 3 FLOOR BOARD 

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

6. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY INFO

7. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

HINT:

Refer to the procedure up to Remove Windshield Wiper Motor And Link Assembly INFO.

8. REMOVE COWL BODY MOUNTING REINFORCEMENT LH

(a) Remove the 3 bolts and cowl body mounting reinforcement LH.

9. REMOVE OUTER COWL TOP PANEL SUB-ASSEMBLY

(a) Disengage the 2 clamps and guide of the wire harness.

Text in Illustration

*1	Clamp
*2	Guide

(b) Disengage the claw and bend the No. 1 heater air duct splash shield seal.

(c) Disengage the claw and bend the water guard plate RH.

c

c

(d) Remove the 9 bolts and outer cowl top panel sub-assembly.

10. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately wash it off.

11. REMOVE BRAKE PEDAL RETURN SPRING_ INFO

12. REMOVE PUSH ROD PIN_ INFO

13. SEPARATE BRAKE MASTER CYLINDER RESERVOIR WITH BRACKET

c

(a) Remove the 2 nuts and separate the brake master cylinder reservoir with bracket.

14. DISCONNECT NO. 1 RESERVOIR HOSE

(a) Move the 2 clips and disconnect the No. 1 reservoir hose and No. 2 reservoir hose from the brake booster with master cylinder assembly.

Text in Illustration

*1	No. 1 Reservoir Hose
*2	No. 2 Reservoir Hose

15. DISCONNECT NO. 2 RESERVOIR HOSE

16. DISCONNECT BRAKE ACTUATOR HOSE

(a) Move the clip and disconnect the brake actuator hose from the brake booster pump assembly.

17. REMOVE BRAKE MASTER CYLINDER RESERVOIR WITH BRACKET

18. REMOVE NO. 5 BRAKE ACTUATOR BRACKET

(a) Disengage the clamp.

(b) Remove the 2 nuts and No. 5 brake actuator bracket.

19. REMOVE BRAKE BOOSTER WITH MASTER CYLINDER ASSEMBLY

(a) Release the lock lever and disconnect the connector.

NOTICE:

Be careful not to allow the brake fluid to enter the removed connector.

(b) Remove the 2 bolts and No. 2 brake tube clamp bracket from the brake booster with master cylinder assembly.

(c) Using a union nut wrench, disconnect the 5 brake lines from the brake booster with master cylinder assembly.

(d) Use tags or make a memo to identify the places to reconnect.

Text in Illustration

*1	to Front Wheel Cylinder LH
*2	to Rear Wheel Cylinder RH
*3	to Brake Booster Pump Assembly
*4	to Rear Wheel Cylinder LH
*5	to Front Wheel Cylinder RH

(e) Disengage the 2 clamps and separate the brake line.

c

(f) Remove the 4 nuts and brake booster with master cylinder assembly.

Text in Illustration

*1	Connector Portion
*2	Union
*3	Push Rod Clevis and Boot
*4	Front No. 2 Brake Tube

c

- Do not kink or damage the brake lines.
- Do not carry the brake booster with master cylinder assembly by the portion shown in the illustration.

20. REMOVE BRAKE BOOSTER GASKET

INSTALLATION

1. INSTALL BRAKE BOOSTER GASKET

(a) Install a new brake booster gasket to the brake booster with master cylinder assembly.

2. INSTALL BRAKE BOOSTER WITH MASTER CYLINDER ASSEMBLY

(a) Install the brake booster with master cylinder assembly with the 4 nuts.

Text in Illustration

*1	Connector Portion
*2	Union
*3	Push Rod Clevis and Boot
*4	Front No. 2 Brake Tube

Torque: **13 N·m (130 kgf·cm, 9ft·lbf)**

c

- Do not kink or damage the brake lines.
- Do not carry the brake booster with master cylinder assembly by the portion shown in the illustration.
- Be careful not to allow brake fluid to enter the connector of ECU.
- If installing a new brake booster with master cylinder assembly, do not remove the hole plugs before connecting the brake lines because the brake booster with master cylinder is filled with brake fluid.

c

(b) Engage the 2 clamps to install the brake line.

(c) Temporarily tighten each brake line to the correct position on the brake booster with master cylinder assembly as shown in the illustration.

c

(d) Install the No. 2 brake tube clamp bracket to the brake booster with master cylinder assembly with the 2 bolts.

Text in Illustration

*1	Stopper
----	---------

Torque: **7.0 N·m (71 kgf·cm, 62in·lbf)**

NOTICE:

Securely install the No. 2 brake tube clamp bracket so that its stopper contacts the brake booster with master cylinder assembly as shown in the illustration.

(e) Using a union nut wrench, fully tighten each brake line.

Torque: **15 N·m (155 kgf·cm, 11ft·lbf)**

NOTICE:

- Do not kink or damage the brake lines.
- Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench INFO.

(f) Connect the connector.

- Make sure that the connector can be connected smoothly. Do not allow water, oil or dirt to enter.
- Make sure that the connector lock is locked securely.

3. INSTALL NO. 5 BRAKE ACTUATOR BRACKET

(a) Install the No. 5 brake actuator bracket with the 2 nuts.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

(b) Engage the clamp.

4. CONNECT BRAKE ACTUATOR HOSE

(a) Connect the brake actuator hose to the brake booster pump assembly with the clip.

Text in Illustration

*1	Front of Vehicle
----	------------------

- Make sure to match the identification mark (yellowish green) on the hose with the brake booster pump rib.
- Make sure to install the hose to the proper location.
- Install the clip within the range shown in the illustration.

5. CONNECT NO. 1 RESERVOIR HOSE

(a) Connect the No. 1 reservoir hose and No. 2 reservoir hose to the brake booster with master cylinder assembly with the 2 clips.

Text in Illustration

*1	No. 1 Reservoir Hose
*2	No. 2 Reservoir Hose
*3	Top of Vehicle

- Make sure to match the identification marks on the hoses and brake booster with master cylinder assembly.

	Hose Identification	Brake Booster with Mas
--	----------------------------	-------------------------------

	Mark Color	Cylinder Assembly Identification Mark Color
No. 1 Reservoir Hose	White	White (Unpainted Color)
No. 2 Reservoir Hose	Green	Green

- When connecting the reservoir hose, face the identification mark to the top of the vehicle.
- Make sure to install the hose to the proper location.
- Install the clip within the range shown in the illustration.

6. CONNECT NO. 2 RESERVOIR HOSE

7. INSTALL BRAKE MASTER CYLINDER RESERVOIR WITH BRACKET

- (a) Install the brake master cylinder reservoir with bracket with the 2 nuts.

Torque: **50 N·m (510 kgf·cm, 37ft·lbf)**

8. INSTALL PUSH ROD PIN INFO

(c) Remove the 2 bolts, No. 1 brake tube clamp and No. 2 brake tube clamp.

(d) Disconnect the front No. 1 brake tube.

(e) Separate the wire harness clamp, 2 fuel lines and front No. 4 brake tube from the brake booster pump assembly.

Text in Illustration

*1	Wire Harness Clamp
*2	Fuel Line
*3	Front No. 4 Brake Tube

(f) Remove the 3 nuts and brake booster pump assembly with bracket.

5. REMOVE BRAKE BOOSTER PUMP ASSEMBLY

(a) Remove the 2 nuts, brake booster pump bushings, brake actuator case collars and brake booster pump assembly from the brake actuator bracket assembly.

Text in Illustration

*1	Nut
*2	Brake Actuator Case Collar
*3	Brake Booster Pump Bushing
*4	Brake Actuator Bracket Assembly

*5	Brake Booster Pump Assembly
----	-----------------------------

c

INSPECTION

1. INSPECT BRAKE BOOSTER PUMP ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A17-1 (BM1) - A17-2 (GND1)	Always	Below 10 Ω
A18-2 (BM2) - A18-1 (GND2)	Always	Below 10 Ω
A17-1 (BM1) - A18-2 (BM2)	Always	Below 1 Ω
A17-2 (GND1) - A18-1 (GND2)	Always	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Brake Booster Pump)
----	---

INSTALLATION

1. INSTALL BRAKE BOOSTER PUMP ASSEMBLY

(a) Install the brake booster pump assembly, brake booster pump bushings and brake actuator case collars to the brake actuator bracket assembly with the 2 nuts.

Text in Illustration

*1	Nut
*2	Brake Actuator Case Collar
*3	Brake Booster Pump Bushing
*4	Brake Actuator Bracket Assembly
*5	Brake Booster Pump Assembly
*6	Cushion

Torque: **5.4 N·m (55 kgf·cm, 48in·lbf)**

- Do not drop the brake booster pump assembly when carrying it.
- Do not carry the brake booster pump assembly by the connector.
- Confirm that the 2 cushions are on the brake actuator bracket, bushings and collars on the brake booster pump assembly when assembling the brake booster pump assembly.
- Do not remove the hole plug before installing a new brake booster pump assembly because the brake booster pump assembly is filled with brake fluid.

2. INSTALL BRAKE BOOSTER PUMP ASSEMBLY WITH BRACKET

(a) Using SST, install the brake booster pump assembly with bracket with the 3 nuts.

SST: 09961-00950

without SST - Torque: **19 N·m (194 kgf·cm, 14ft·lbf)**

with SST - Torque: **12 N·m (121 kgf·cm, 9ft·lbf)**

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- Tighten the 3 nuts in the order shown in the illustration.
- Do not damage the fuel line, the brake lines and wire harness.
- Use the formula to calculate special torque values for situations where the SST is combined with a torque wrench [INFO](#).

(b) Install the wire harness clamp, 2 fuel lines and front No. 4 brake tube to the brake booster pump assembly.

NOTICE:

Do not damage the fuel line, the brake lines and wire harness.

Text in Illustration

*1	Wire Harness Clamp
*2	Fuel Line
*3	Front No. 4 Brake Tube

(c) Connect the front No. 1 brake tube.

(1) Install the No. 2 brake tube clamp to the brake booster pump assembly with the bolt.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

Text in Illustration

*1	Brake Actuator Hose
*2	No. 2 Brake Tube Clamp
*3	No. 1 Brake Tube Clamp
*4	Front No. 1 Brake Tube

(2) Install the front No. 1 brake tube to the brake booster pump assembly.

Torque: **15 N·m (155 kgf·cm, 11ft·lbf)**

NOTICE:

- This torque value is effective when the union nut wrench is parallel to the torque wrench.
- Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench **INFO**.

(3) Install the No. 1 brake tube clamp to the brake booster pump assembly with the bolt.

Torque: **7.0 N·m (71 kgf·cm, 62in·lbf)**

(d) Install the brake actuator hose and clip.

(e) Install the wire harness clamp.

c

(f) Connect the 2 connectors.

3. INSTALL NO. 5 BRAKE ACTUATOR BRACKET

(a) Install the No. 5 brake actuator bracket with the 2 nuts.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

NOTICE:

Tighten the 2 nuts in the order shown in the illustration.

c

(b) Install the wire harness clamp.

4. INSTALL FRONT CROSS MEMBER SUB-ASSEMBLY

HINT:

Refer to the procedure from Install Front Cross Member Sub-assembly **INFO**.

5. INSTALL BRAKE BOOSTER WITH MASTER CYLINDER ASSEMBLY

HINT:

Refer to the procedure from Install Brake Booster with Master Cylinder Assembly .

6. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

(a) Adjust front wheel alignment .

DISPOSAL

1. DISPOSE OF BRAKE BOOSTER PUMP ASSEMBLY

- (a) Remove the accumulator from the brake booster pump assembly.
- (b) Secure the accumulator in a vise.
- (c) Using a hacksaw, make a cut in the side of the accumulator at location [A] to release the high-pressure gas.

Point	Area
A	25 mm (0.984 in.)
B	60 mm (2.362 in.)

CAUTION:

Small pieces of metal may fly out when cutting into the accumulator. Put a cloth over the hacksaw when cutting the accumulator. Cut the accumulator slowly so that the gas will be released gradually.

HINT:

The gas is colorless, odorless and non-poisonous.

ON-VEHICLE INSPECTION

NOTICE:

If using a dropper to adjust the fluid amount, make sure that the dropper has not been used with mineral oils, water or deteriorated brake fluid. Sealed areas may deteriorate and lead to fluid leaks, or the fluid may deteriorate and lead to decreased efficiency.

HINT:

If the brake fluid level is lower than the MIN line, inspect for brake fluid leaks and brake pad wear. After repair or replacement, adjust the brake fluid level in the reservoir as specified below.

1. INSPECT AND ADJUST FLUID LEVEL IN RESERVOIR (for Using the Techstream)

- (a) Connect the Techstream to the DLC3 with the power switch off.
- (b) Check that park (P) is selected and the parking brake is applied, and turn the power switch on (IG).
- (c) Turn the Techstream on and enter the following menus: Chassis / ABS/VSC/TRC / Utility / ECB (Electronically Controlled Brake system) utility / Zero Down.
- (d) Select "Next" and wait for 10 seconds.
- (e) After the booster pump stopped, inspect the fluid level is between the MAX and MIN lines. If necessary, refill the brake fluid to the MAX line.

Text in Illustration

*1	MAX Line
*2	MIN Line

Brake fluid:

SAE J1703 or FMVSS No. 116 DOT3

2. INSPECT AND ADJUST FLUID LEVEL IN RESERVOIR (for not Using the Techstream)

- (a) Inspect the fluid level is above the MIN line with the power switch on (IG). If necessary, refill the brake fluid to the fluid level support line with the power switch on (IG).

Text in Illustration

*1	Fluid Level Support Line
----	--------------------------

REPLACEMENT

HINT:

There are 2 ways of brake fluid replacement: using the Techstream or not using the Techstream.

NOTICE:

- Perform fluid replacement with park (P) selected and the parking brake applied.
- As brake fluid may overflow when replacing brake fluid, do not place the fluid can on the reservoir filler opening.
- Perform fluid replacement while maintaining the brake fluid level between the MIN/MAX level on the brake fluid reservoir.
- Replacing brake fluid will be difficult if the following occurs:
 - a. The brake actuator hose (the hose between the brake booster pump and brake fluid reservoir) is lowered into the fluid and air enters the hose.
 - b. During the fluid replacement procedure, air enters the brake booster pump while operating the pump motor.
- While performing fluid replacement, the accumulator pressure drop may cause a buzzer to sound. As there is no problem, continue with the fluid replacement.
- During fluid replacement, DTCs for pressure sensor malfunctions, etc. may be stored. After fluid replacement and if instructed in the procedures, clear the DTCs.
- Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately clean it off.

1. REPLACE BRAKE FLUID (for Using the Techstream)

NOTICE:

- Add brake fluid carefully and check that the reservoir level remains between the MIN and MAX lines.
- Do not stand the fluid can on the reservoir inlet. Doing so will cause brake fluid to overflow.

(a) Remove the center cowl top ventilator cover.

(1) Slide the hood to cowl top seal and disengage the claw.

(2) Disengage the 2 claws and 3 guides, and remove the center cowl top ventilator cover.

(b) Replace brake fluid.

(1) Remove the brake master cylinder reservoir filler cap assembly.

(2) Add brake fluid into the reservoir between MAX and MIN level on the brake fluid reservoir.

Brake fluid:

SAE J1703 or FMVSS No. 116 DOT3

(3) Connect the Techstream to the DLC3 and turn the power switch on (IG).

(4) Turn the Techstream on and enter the following menus: Chassis / ABS/VSC/TRC / Air Bleeding.

(5) Select the "Usual air bleeding" on the Techstream display, and replace the brake fluid following the instructions on the Techstream.

(6) After replacing brake fluid, tighten each bleeder plug.

front bleeder plug - Torque: **8.3 N·m (85 kgf·cm, 73in·lbf)**

rear bleeder plug - Torque: **11 N·m (112 kgf·cm, 8ft·lbf)**

(c) Clear the DTCs INFO.

(d) Turn the Techstream off and turn the power switch off.

(e) Inspect for brake fluid leaks.

(f) Install the brake master cylinder reservoir filler cap.

(g) Install the center cowl top ventilator cover.

(1) Engage the 2 claws and 3 guides to install the center cowl top ventilator cover.

(2) Slide the hood to cowl top seal to engage the claw.

2. REPLACE BRAKE FLUID (for not Using the Techstream)

NOTICE:

- Performing the following procedure will select ECB (Electronically Controlled Brake system) Invalid Mode without using the Techstream.
- ECB (Electronically Controlled Brake system) Invalid Mode allows the brake fluid to be replaced without using the Techstream.
- The brake warning light / yellow will blink to indicate when ECB (Electronically Controlled Brake system) Invalid Mode is selected.
- Be sure to inspect that the brake warning light / yellow is blinking while replacing the brake fluid.
- When one of the following conditions is met, ECB (Electronically Controlled Brake system) Invalid Mode is cancelled, and then the DTCs may be stored. So do not cancel the ECB (Electronically Controlled Brake system) Invalid Mode while replacing brake fluid.

The shift lever is used to select from P to any other position.

Turn the power switch on (READY).

Turn the power switch off.

The parking brake is released.

The vehicle velocity is not 0 km/h (0 mph).

- Do not rotate the brake disc while ECB (Electronically Controlled Brake system) Invalid Mode is selected.
- When replacing the brake fluid from the brake line, do not depress the brake pedal to operate the brake booster pump more than 100 seconds. If the brake booster pump is operated more than 100 seconds, ECB (Electronically Controlled Brake system) Invalid Mode is automatically finished and the DTCs may be stored.
- Add brake fluid carefully and check that the reservoir level remains between the MIN and MAX lines.
- Do not stand the fluid can on the reservoir inlet. Doing so will cause brake fluid to overflow.

(a) Remove 4 wheels.

(b) Select ECB (Electronically Controlled Brake system) Invalid Mode.

(1) Perform the procedure listed below in 1 minute.

1. Turn the power switch on (IG) with park (P) selected and parking brake applied.
2. Select N and then depress the brake pedal more than 8 times in 5 seconds.
3. Push the P position switch and then depress the brake pedal more than 8 times in 5 seconds.
4. Select N and then depress the brake pedal more than 8 times in 5 seconds.
5. Push the P position switch.

(2) Check that the brake warning light / yellow is blinking.

N

(c) Remove the center cowl top ventilator cover.

(1) Slide the hood to cowl top seal and disengage the claw.

(2) Disengage the 2 claws and 3 guides, and remove the center cowl top ventilator cover.

(d) Replace the brake fluid.

(1) Remove the brake master cylinder reservoir filler cap assembly.

(2) Add brake fluid into the reservoir between MAX and MIN level on the brake fluid reservoir.

Brake fluid:

SAE J1703 or FMVSS No. 116 DOT3

(3) Connect a vinyl tube to the bleeder plug of the front disc brake cylinder assembly RH.

(4) Depress the brake pedal several times, and then loosen the bleeder plug with the pedal depressed.*1

(5) When fluid stops coming out, tighten the bleeder plug, and then release the brake pedal.*2

(6) Repeat *1 and *2 until all the air in the brake fluid is completely bled out and a new brake fluid comes out.

(7) Tighten the bleeder plug completely.

Torque: **8.3 N·m (85 kgf·cm, 73in·lbf)**

(8) Replace the brake fluid from the front disc brake cylinder assembly LH using the same procedure as for RH.

(9) Connect a vinyl tube to the bleeder plug of the rear disc brake cylinder assembly LH.

(10) Loosen the bleeder plug while depressing and holding the brake pedal, and replace the brake fluid while the brake booster pump assembly and solenoid running.*3

NOTICE:

- Be sure to keep the brake pedal depressed.
- Do not depress the brake pedal to operate the brake booster pump more than 100 seconds. When performing this procedure continuously, release the brake pedal to stop the brake booster pump operating and depress the brake pedal again.

(11) Tighten the bleeder plug, then release the brake pedal.*4

(12) Repeat steps *3 and *4 until all the air in the brake fluid is completely bled out and a new brake fluid comes out.

(13) Tighten the bleeder plug completely.

Torque: **11 N·m (112 kgf·cm, 8ft·lbf)**

(14) Replace the brake fluid from the rear disc brake cylinder assembly RH using the same procedure as for LH.

(15) Turn the power switch off.

(e) Inspect for brake fluid leaks.

(f) Adjust the brake fluid level in the reservoir INFO.

(g) Install the brake master cylinder reservoir filler cap.

(h) Install the center cowl top ventilator cover.

(1) Engage the 2 claws and 3 guides to install the center cowl top ventilator cover.

(2) Slide the hood to cowl top seal to engage the claw.

(i) Install the 4 wheels.

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

BLEEDING

CAUTION:

The Techstream must be used for air bleeding. If not used, the air bleeding will be incomplete, which is hazardous and may lead to an accident.

NOTICE:

- Perform air bleeding with park (P) selected and the parking brake applied.
- As brake fluid may overflow when bleeding, do not place the fluid can on the reservoir filler opening.
- Perform air bleeding while maintaining the brake fluid level between the MIN/MAX level on the brake fluid reservoir.
- Air bleeding will be difficult if the following occurs:
 - a. The brake actuator hose (the hose between the brake booster pump and brake fluid reservoir) is lowered into the fluid and air enters the hose.
 - b. During the air bleeding procedure, air enters the brake booster pump while operating the pump motor.
- While performing air bleeding, the accumulator pressure drop may cause a buzzer to sound. As there is no problem, continue with the operation.
- During air bleeding, DTCs for pressure sensor malfunctions, etc. may be stored. After air bleeding and if instructed in the procedures, clear the DTCs.
- Release the parking brake while the linear valve offset calibration procedure.
- Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately clean it off.
- When bleeding air, select the suitable procedure according to the table below.

Replaced/Installed Item	Work Procedure
Flexible hose (front/rear)	Bleed brake line
Disc brake cylinder assembly (front/rear)	
Brake booster pump assembly	Bleed brake system
Brake booster with master cylinder assembly	
Brake master cylinder reservoir assembly	

1. BLEED BRAKE LINE

- (a) Remove the center cowl top ventilator cover.

- (1) Slide the hood to cowl top seal and disengage the claw.

(2) Disengage the 2 claws and 3 guides, and remove the center cowl top ventilator cover.

(b) Bleed brake line.

(1) Remove the brake master cylinder reservoir filler cap assembly.

(2) Add brake fluid into the reservoir between MAX and MIN level on the brake fluid reservoir.

Brake fluid:

SAE J1703 or FMVSS No. 116 DOT3

(3) Connect the Techstream to the DLC3 and turn the power switch on (IG).

(4) Turn the Techstream on and enter the following menus: Chassis / ABS/VSC/TRC / Air Bleeding.

(5) Select the "Usual air bleeding" on the Techstream display, and bleed air from the brake fluid following the instructions on the Techstream.

(6) After air bleeding, tighten each bleeder plug.

front bleeder plug - Torque: **8.3 N·m (85 kgf·cm, 73in·lbf)**

rear bleeder plug - Torque: **11 N·m (112 kgf·cm, 8ft·lbf)**

(7) Clear the DTCs .

(8) Turn the Techstream off and turn the power switch off.

(c) Inspect for brake fluid leaks.

(d) Install the brake master cylinder reservoir filler cap.

(e) Install the center cowl top ventilator cover.

(1) Engage the 2 claws and 3 guides to install the center cowl top ventilator cover.

(2) Slide the hood to cowl top seal to engage the claw.

2. BLEED BRAKE SYSTEM

(a) Remove the outer cowl top panel sub-assembly INFO.

(b) Bleed the brake system.

(1) Wait at least 2 minutes with the power switch off, and disconnect the reservoir level switch connector.

NOTICE:

Do not depress the brake pedal or open/close the doors until the reservoir level switch connector is disconnected.

HINT:

This procedure is not required if the reservoir level switch connector has been disconnected.

(2) Remove the brake master cylinder reservoir filler cap assembly.

(3) Add brake fluid into the reservoir between MAX and MIN level on the brake fluid reservoir.

Brake fluid:

SAE J1703 or FMVSS No. 116 DOT3

(4) Connect the Techstream to the DLC3 and turn the power switch on (IG).

(5) Turn the Techstream on and enter the following menus: Chassis / ABS/VSC/TRC / Air Bleeding.

(6) Select the "ABS actuator has been replaced" on the Techstream display, and bleed air from the brake fluid following the instructions on the Techstream.

NOTICE:

Before following the instructions on the Techstream to perform linear valve offset calibration, release the parking brake. When calibration is complete, immediately apply the parking brake.

(7) After air bleeding, tighten each bleeder plug.

front bleeder plug - Torque: **8.3 N·m (85 kgf·cm, 73in·lbf)**

rear bleeder plug - Torque: **11 N·m (112 kgf·cm, 8ft·lbf)**

stroke simulator bleeder plug - Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

HINT:

The stroke simulator bleeder plug is positioned as shown in the illustration.

c

Text in Illustration

*1	Stroke Simulator Bleeder Plug
----	-------------------------------

(8) Clear the DTCs **INFO**.

(9) Turn the Techstream off and turn the power switch off.

(c) Install the brake master cylinder reservoir filler cap.

(d) Inspect for brake fluid leaks.

(e) Install the outer cowl top panel sub-assembly **INFO**.

PRECAUTION

NOTICE:

- Since the brake lines are classified as critical safety related parts, be sure to disassemble and inspect the components if any brake fluid leaks are found. If any abnormality is found, replace the component with a new one.
- When removing brake system components, cover the brake line connections to prevent foreign matter such as dust or dirt from entering the lines.
- Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately clean it off.
- When installing a grommet to the body, ensure that the brake line passes through the center of the grommet.
- Do not damage or deform the brake lines when removing and installing them.
- When installing a brake line or flexible hose, ensure that they are free from twists or bends.
- Do not deform the bracket and the body when connecting a brake line and flexible hose.
- If the cap of a flexible hose does not match the groove on the bracket, twist the hose slightly to insert it.
- Flexible hoses must be free from shock absorber oil, grease, etc.
- When installing a brake line to a plastic clamp, ensure that the brake line is not loose or pinched.
- Do not reuse any clips or plastic clamps removed from a flexible hose.
- After installing a brake line or flexible hose, ensure that they do not interfere with any other components.
- When disconnecting and connecting a flexible hose and brake line:

Disconnecting:

Connecting:

P

Text in Illustration

*1	Hold
*2	Turn

- a. Hold the flexible hose with a wrench and disconnect the brake line with a union nut wrench without deforming the line.
- b. Remove the clip.
- c. Install a new clip.
- d. Connect the brake line with a union nut wrench without deforming the line.

- When connecting a brake line and way:

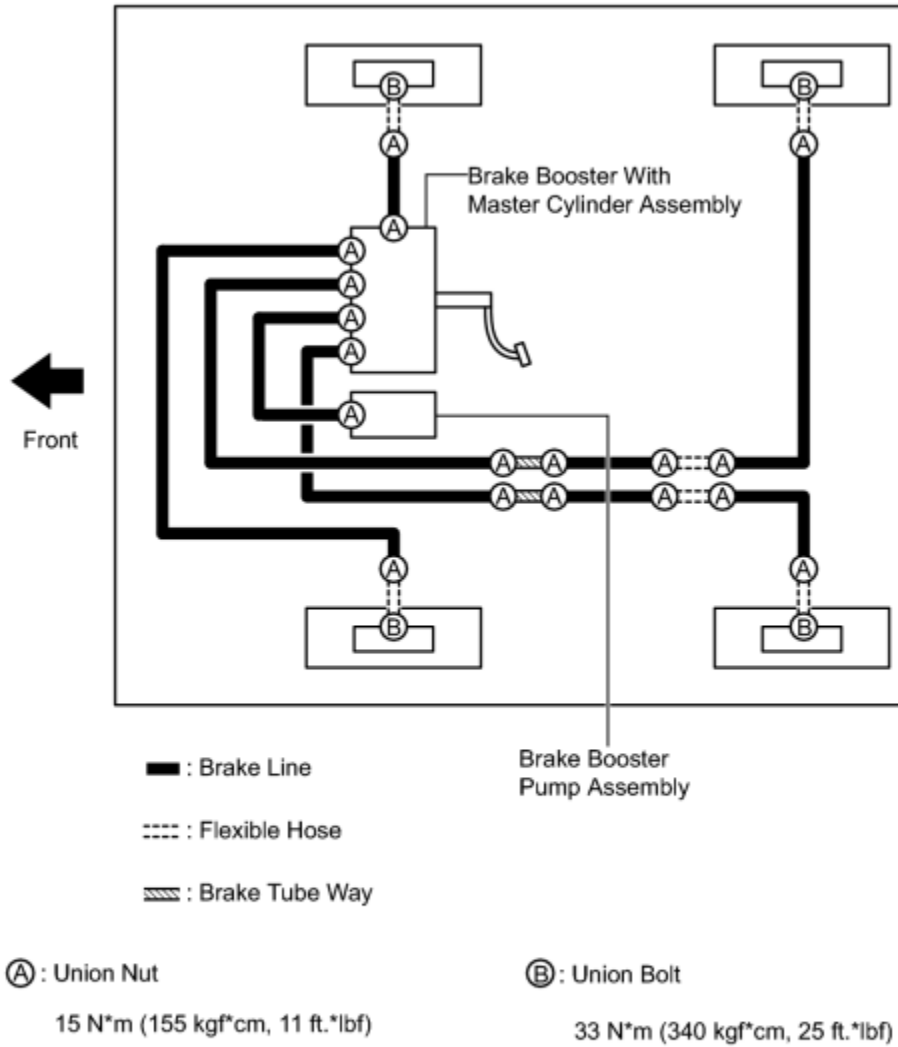

Text in Illustration

*1	Hold
*2	Turn
*3	Way

- Support the way to prevent deformation of the brake line and connect the brake line to the way with a union nut wrench.
- Support the way to prevent deformation of the brake line and install the bolt to secure the way to the body.

REMOVAL

1. REMOVE UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the instructions for Removal of the upper instrument panel assembly [INFO](#).

2. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY [INFO](#)

3. REMOVE STOP LIGHT SWITCH ASSEMBLY [INFO](#)

4. REMOVE STOP LIGHT SWITCH MOUNTING ADJUSTER

5. REMOVE BRAKE PEDAL RETURN SPRING

(a) Remove the brake pedal return spring from the brake pedal support sub-assembly and push rod pin.

6. REMOVE PUSH ROD PIN

(a) Remove the clip and push rod pin to separate the brake pedal sub-assembly from the push rod clevis.

7. SEPARATE DRIVER SIDE JUNCTION BLOCK ASSEMBLY

(a) Remove the bolt and nut, and separate the driver side junction block assembly.

8. REMOVE BRAKE PEDAL SUPPORT ASSEMBLY

(a) Remove the bolt and separate the brake pedal support assembly from the instrument panel reinforcement.

(b) Disengage the clamp and disconnect the connector from the brake pedal stroke sensor assembly.

(c) Remove the 4 nuts and brake pedal support assembly.

(d) Remove the nut from the brake pedal support assembly.

c

DISASSEMBLY

1. REMOVE BRAKE PEDAL STROKE SENSOR ASSEMBLY INFO

2. REMOVE BRAKE PEDAL SUB-ASSEMBLY

(a) Remove the brake pedal shaft and nut to remove the brake pedal sub-assembly from the brake pedal support sub-assembly.

3. REMOVE BRAKE PEDAL SHAFT COLLAR

(a) Remove the brake pedal shaft collar from the brake pedal sub-assembly.

4. REMOVE BRAKE PEDAL BUSHING

(a) Remove the 2 brake pedal bushings from the brake pedal sub-assembly.

5. REMOVE BRAKE PEDAL PAD

ADJUSTMENT

1. INSPECT AND ADJUST BRAKE PEDAL HEIGHT

(a) Check the brake pedal height.

(1) Turn back the carpet.

(2) Turn back the dash silencer from the slit provided on the dash silencer.

(3) Measure the shortest distance between the brake pedal surface and floor panel.

Text in Illustration

*1	Stop Light Switch Assembly
*2	Clevis Lock Nut
*3	Floor Panel
*4	Brake Pedal Height

Brake pedal height from floor panel:

127.7 to 137.7 mm (5.03 to 5.42 in.)

(b) Adjust the brake pedal height.

(1) Remove the stop light switch assembly **INFO**.

(2) Loosen the clevis lock nut.

(3) Adjust the brake pedal height by turning the push rod.

(4) Tighten the clevis lock nut.

Torque: **26 N·m (260 kgf·cm, 19ft·lbf)**

(5) Install and adjust the stop light switch assembly **INFO**.

2. INSPECT AND ADJUST BRAKE PEDAL STROKE SENSOR ASSEMBLY **INFO**

3. INSPECT BRAKE PEDAL FREE PLAY

(a) Depress the pedal until a slight resistance is felt. Measure the brake

pedal free play as shown in the illustration.

Text in Illustration

*1	Brake Pedal Free Play
----	-----------------------

Pedal free play:

1.0 to 6.0 mm (0.0394 to 0.236 in.)

If the pedal free play is not as specified, check the stop light switch clearance [INFO](#). If the pedal free play is as specified, proceed to the Inspect Brake Pedal Reserve Distance procedure.

4. INSPECT BRAKE PEDAL RESERVE DISTANCE

HINT:

Measure the distance at the same point used for the brake pedal height inspection.

(a) Release the parking brake pedal.

(b) With the power switch on (READY), depress the brake pedal and measure the pedal reserve distance.

Pedal reserve distance from the floor panel at 196 N (20 kgf, 44.1 lbf):

More than 78.0 mm (3.07 in.)

If the distance is not as specified, troubleshoot the brake system [INFO](#).

REASSEMBLY

1. INSTALL BRAKE PEDAL PAD

2. INSTALL BRAKE PEDAL BUSHING

- (a) Apply lithium soap base glycol grease to 2 new brake pedal bushings.
- (b) Install the 2 brake pedal bushings to the brake pedal sub-assembly.

3. INSTALL BRAKE PEDAL SHAFT COLLAR

- (a) Install the brake pedal shaft collar to the brake pedal sub-assembly.

4. INSTALL BRAKE PEDAL SUB-ASSEMBLY

- (a) Install the brake pedal sub-assembly to the brake pedal support sub-assembly with the brake pedal shaft and nut.

Torque: **17 N·m (176 kgf·cm, 13ft·lbf)**

c

5. INSTALL BRAKE PEDAL STROKE SENSOR ASSEMBLY INFO

INSTALLATION

1. INSTALL BRAKE PEDAL SUPPORT ASSEMBLY

(a) Install the nut to the brake pedal support assembly.

(b) Install the brake pedal support assembly with the 4 nuts.

Torque: **13 N·m (130 kgf·cm, 9ft·lbf)**

(c) Engage the clamp and connect the connector to the brake pedal stroke sensor assembly.

(d) Install the brake pedal support assembly to the instrument panel reinforcement with the bolt.

Text in Illustration

*1	Bolt Width
Bolt Variation	Bolt Width
Bolt A	14 mm (0.551 in.)
Bolt B	12 mm (0.472 in.)

for Bolt A - Torque: **14 N·m (140 kgf·cm, 10ft·lbf)**

for Bolt B - Torque: **24 N·m (241 kgf·cm, 17ft·lbf)**

HINT:

Two types of bolts each with a different torque specification are used.

2. INSTALL DRIVER SIDE JUNCTION BLOCK ASSEMBLY

(a) Install the driver side junction block assembly with the bolt and nut.

Torque: **14 N·m (138 kgf·cm, 10ft·lbf)**

3. INSTALL PUSH ROD PIN

(a) Apply lithium soap base glycol grease to the push rod pin and installation hole of the brake pedal sub-assembly.

(b) Install the push rod pin and a new clip to connect the push rod clevis to the brake pedal sub-assembly.

4. INSTALL BRAKE PEDAL RETURN SPRING

(a) Install the brake pedal return spring to the brake pedal support sub-assembly and push rod pin.

5. INSTALL STOP LIGHT SWITCH MOUNTING ADJUSTER

6. INSTALL STOP LIGHT SWITCH ASSEMBLY [INFO](#)

7. INSTALL UPPER INSTRUMENT PANEL ASSEMBLY

HINT:

Refer to the instructions for Installation of the upper instrument panel assembly [INFO](#).

8. INSPECT AND ADJUST BRAKE PEDAL

HINT: [INFO](#)

9. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY [INFO](#)

10. PERFORM INITIALIZATION AND CALIBRATION OF LINEAR SOLENOID VALVE

HINT: [INFO](#)

PRECAUTION

CAUTION:

- While the battery is connected, even if the power switch is off, the brake control system activates when the brake pedal is depressed or the door courtesy switch is turned on. Therefore during servicing of the brake system components, do not depress the brake pedal or open/close the doors while the battery is connected.
- The Techstream must be used when bleeding air. If not used, the air bleeding will be incomplete, which is hazardous and may lead to an accident.

NOTICE:

- Care must be taken to replace each part properly as it could affect the performance of the brake system and result in a driving hazard. Replace the parts with those having the same part number or equivalent.
- It is very important to keep parts and the area clean when repairing the brake system.
- If the vehicle is equipped with a mobile communication system, refer to Precaution in the INTRODUCTION section .
- Care must be taken when using magnets as they could affect the performance of the speed sensors.
- Make sure to disable brake control before disconnecting the brake lines.

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

ON-VEHICLE INSPECTION

NOTICE:

A DTC may be stored during the inspection procedure. Be sure to clear the DTC and check that a normal system code is output after the inspection is finished.

1. INSPECT PRESSURE SENSOR

(a) Check battery voltage.

Standard voltage:

11 to 14 V (while the power switch is off)

(b) Set a pedal effort gauge, SST (LSPV gauge) and connect the Techstream.

(1) Set a pedal effort gauge and SST (LSPV gauge).

SST: 09709-29018

Text in Illustration

*1	Pedal Effort Gauge
*2	SST (LSPV Gauge)

(2) Bleed air from SST (LSPV gauge) **INFO**.

(3) Connect the Techstream to the DLC3 with the power switch off, park (P) selected and parking brake applied.

(4) Turn the power switch on (IG) and turn the Techstream on.

(5) Clear the DTCs **INFO**.

(c) Inspect wheel cylinder pressure sensor and regulator pressure sensor.

(1) Enter the following menus: Chassis / ABS/VSC/TRC / Active Test / Power Supply Air Bleeding Pattern 1.

(2) Select "Wheel Cylinder Pressure Sensor" and "Regulator Pressure Sensor Output".

(3) Check the value output from "Wheel Cylinder Pressure Sensor" and "Pressure Regulator Sensor Output" by depressing the brake pedal.

Standard Result:

Pedal Effort	Regulator Pressure Sensor Output	Rear Right Wheel Hydraulic Pressure	Rear Left Wheel Hydraulic Pressure
N (kgf, lbf)	(V)	(MPa (kgf/cm², psi))	(MPa (kgf/cm², psi))
50 (5, 11.2)	0.52 to 1.32	0.0 to 4.0 (0.0 to 40.7, 0 to 580)	0.0 to 4.0 (0.0 to 40.7, 0 to 580)
100 (10, 22.5)	1.35 to 2.15	4.1 to 8.1 (41.8 to 82.5, 595 to 1174)	4.1 to 8.1 (41.8 to 82.5, 595 to 1174)
150 (15, 33.7)	2.17 to 2.97	8.15 to 12.15 (83.1 to 123.8, 1182 to 1762)	8.15 to 12.15 (83.1 to 123.8, 1182 to 1762)
200 (20, 45.0)	3.00 to 3.80	12.20 to 16.20 (124.4 to 165.1, 1770 to 2349)	12.20 to 16.20 (124.4 to 165.1, 1770 to 2349)

Standard Result:

Pedal Effort	Wheel Cylinder Pressure Sensor	Front Right Wheel Hydraulic Pressure	Front Left Wheel Hydraulic Pressure
N (kgf, lbf)	(V)	(MPa (kgf/cm², psi))	(MPa (kgf/cm², psi))
50 (5, 11.2)	0.46 to 1.26	0.0 to 3.76 (0.0 to 38.3, 0 to 545)	0.0 to 3.76 (0.0 to 38.3, 0 to 545)
100 (10, 22.5)	1.17 to 1.97	3.22 to 7.22 (32.8 to 73.6, 467 to 1047)	3.22 to 7.22 (32.8 to 73.6, 467 to 1047)
150 (15, 33.7)	1.87 to 2.67	6.69 to 10.69 (68.2 to 109.0, 970 to 1550)	6.69 to 10.69 (68.2 to 109.0, 970 to 1550)
200 (20, 45.0)	2.58 to 3.38	10.13 to 14.13 (103.3 to 144.0, 1469 to 2049)	10.13 to 14.13 (103.3 to 144.0, 1469 to 2049)

(4) After inspection, turn "Power Supply Air Bleeding Pattern 1" off.

(d) Inspect accumulator sensor.

(1) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List "Accumulator Sensor".

(2) Depress the brake pedal 4 or 5 times and operate the booster pump motor.

(3) After confirming that the booster pump motor stops, check the output voltage.

Standard voltage:

2.9 to 4.2 V

2. INSPECT BRAKE BOOSTER WITH MASTER CYLINDER ASSEMBLY

(a) Check battery voltage.

Standard voltage:

11 to 14 V (while the power switch is off)

(b) Connect the Techstream and set a pedal effort gauge.

(1) Set a pedal effort gauge.

(2) Connect the Techstream to the DLC3 with the power switch off, park (P) selected and parking brake applied.

(3) Turn the power switch on (IG) and turn the Techstream on.

(4) Clear the DTCs INFO.

(c) Check operation without the brake booster.

(1) Inspect and adjust the brake pedal height INFO.

(2) Adjust the brake fluid level in the reservoir between MIN line and fluid level support line.

Text in Illustration

*1	Fluid Level Support Line
*2	MIN Line

(3) Turn the Techstream on and enter the following menus: Chassis / ABS/VSC/TRAC / Utility / ECB (Electronically Controlled Brake system) Utility / Zero Down.

NOTICE:

Go to the next step without turning the power switch off.

(4) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List "Wheel Cylinder Pressure Sensor", "Stroke Sensor" and "Stroke Sensor 2".

(5) Check the value output from "Wheel Cylinder Pressure Sensor", "Stroke Sensor" and "Stroke Sensor 2" by depressing the brake pedal.

Standard Voltage:

Pedal Effort	Wheel Cylinder Pressure Sensor	Stroke Sensor	Stroke Sensor 2
N (kgf, lbf)	(V)	(V)	(V)
200 (20, 45.0)	0.453 to 1.253	0.98 to 1.68	3.32 to 4.02
500 (51, 112.4)	0.982 to 1.782	1.15 to 1.86	3.14 to 3.84

(6) Turn the power switch off to finish "Zero Down".

(7) Turn the power switch on and wait at 20 seconds, then enter the following menus: Chassis / ABS/VSC/TRAC / Data List "Accumulator Sensor", and check the output voltage.

Standard voltage:

2.9 to 4.2 V

3. INSPECT STROKE SIMULATOR

(a) Check battery voltage.

Standard voltage:

11 to 14 V (while the power switch is off)

(b) Connect the Techstream and set a pedal effort gauge.

(1) Set a pedal effort gauge.

(2) Connect the Techstream to the DLC3 with the power switch off, park (P) selected and parking brake applied.

(3) Turn the power switch on (IG) and turn the Techstream on.

(4) Clear the DTCs .

(c) Check operation with the brake booster.

(1) Turn the power switch on (IG).

(2) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List "Stroke Sensor" and "Stroke Sensor 2".

(3) Depress the brake pedal 4 or 5 times.

(4) Check the value output from "Stroke Sensor" and "Stroke Sensor 2" by depressing the brake pedal.

Standard Voltage:

Pedal Effort	Stroke Sensor	Stroke Sensor 2
N (kgf, lbf)	(V)	(V)

Pedal Effort	Stroke Sensor	Stroke Sensor 2
N (kgf, lbf)	(V)	(V)
50 (5 11.2)	1.03 to 1.73	3.26 to 3.96
100 (10, 22.4)	1.26 to 1.96	3.04 to 3.74
150 (15, 34.0)	1.30 to 2.00	3.00 to 3.70

P

REMOVAL

NOTICE:

If both RH side hose and LH side hose are disconnected at the same time, be sure to place identification marks indicating the position on each side.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. DISABLE BRAKE CONTROL INFO

2. REMOVE FRONT WHEEL

3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately wash it off.

4. REMOVE FRONT FLEXIBLE HOSE

c

(a) Remove the union bolt and gasket, and separate the front flexible hose from the disc brake cylinder assembly.

c

(b) Using a union nut wrench, disconnect the brake line while holding the front flexible hose with a wrench.

Text in Illustration

*1	Clip
----	------

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the clip or bracket.

(c) Remove the clip.

(d) Remove the bolt (A) and separate the front speed sensor bracket from

the absorber bracket.

Text in Illustration

*1	Front Speed Sensor Bracket
*2	Front Flexible Hose Bracket

(e) Remove the bolt (B) and front flexible hose from the steering knuckle.

INSTALLATION

NOTICE:

- Because the left and right hoses are not interchangeable, verify the part number when installing the flexible hoses.
- If the hoses are to be reused, connect them after checking the identification marks placed when each hose was disconnected.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. INSTALL FRONT FLEXIBLE HOSE

(a) Install a new clip to the front flexible hose.

Text in Illustration

*1	Clip
*2	Identification Mark

- Install the clip as far as it will go.
- When installing the front flexible hose, face the identification mark to the outside of the vehicle and minimize twisting of the hose.

(b) Using a union nut wrench, connect the brake line to the front flexible hose while holding the flexible hose with a wrench.

Torque: **15 N·m (155 kgf·cm, 11ft·lbf)**

NOTICE:

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the clip or bracket.
- Use the formula to calculate special torque values for situations where the union nut wrench is combined with a torque wrench INFO.

(c) Install the front flexible hose to the steering knuckle with the bolt (B).

Torque: **19 N·m (192 kgf·cm, 14ft·lbf)**

(d) Install the front flexible hose and front speed sensor bracket to the absorber bracket with the bolt (A).

Text in Illustration

*1	Front Speed Sensor Bracket
*2	Front Flexible Hose Bracket

Torque: **19 N·m (192 kgf·cm, 14ft·lbf)**

NOTICE:

Install the front flexible hose first and then the front speed sensor bracket.

(e) Connect the front flexible hose to the front disc brake cylinder assembly with a new union bolt and a new gasket.

Torque: **33 N·m (340 kgf·cm, 25ft·lbf)**

2. BLEED BRAKE LINE INFO

3. PERFORM INITIALIZATION AND CALIBRATION OF LINEAR SOLENOID VALVE

HINT:

If the brake control has been disabled, make sure to perform initialization and calibration of the linear solenoid valve INFO.

4. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

COMPONENTS

T

REMOVAL

NOTICE:

If both RH side hose and LH side hose are disconnected at the same time, be sure to place identification mark indicating the position on each side.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. DISABLE BRAKE CONTROL INFO

2. REMOVE REAR WHEEL

3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately wash it off.

4. REMOVE REAR BRAKE TUBE FLEXIBLE HOSE (for LH Side)

(a) Using a union nut wrench, disconnect the 2 brake lines while holding the rear brake tube flexible hose with a wrench.

c

NOTICE:

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the connecting points.

(b) Remove the clip, bolt and rear brake tube flexible hose.

5. REMOVE REAR BRAKE TUBE FLEXIBLE HOSE (for RH Side)

(a) Using a union nut wrench, disconnect the 2 brake lines while holding the rear brake tube flexible hose with a wrench.

c

NOTICE:

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the connecting points.

(b) Remove the 2 clips and rear brake tube flexible hose.

6. REMOVE REAR FLEXIBLE HOSE

c

(a) Using a union nut wrench, Disconnect the brake line while holding the rear flexible hose with a wrench.

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the connecting points.

(b) Remove the clip and separate the rear flexible hose from the brake line.

(c) Remove the union bolt, gasket and rear flexible hose.

INSTALLATION

NOTICE:

- Because the left and right rear flexible hoses are not interchangeable, verify the part number when installing the flexible hoses.
- If the hoses are to be reused, connect them after checking the identification marks placed when each hose was disconnected.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure is for the LH side.

1. INSTALL REAR BRAKE TUBE FLEXIBLE HOSE (for LH Side)

(a) Install the rear brake tube flexible hose with the bolt and a new clip.

c

c

REMOVAL

1. REMOVE REAR WHEEL

2. REMOVE PARKING BRAKE CONTROL PEDAL ASSEMBLY

HINT:

Refer to the instructions for Removal of the parking brake control pedal assembly [INFO](#).

3. REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Remove the adjusting nut.

c

(b) Pull up the parking brake pedal claw.

c

(c) Remove the clip from the No. 1 parking brake cable assembly.

c

(d) Remove the No. 1 parking brake cable assembly from the parking brake pedal assembly.

4. REMOVE FRONT EXHAUST PIPE ASSEMBLY

HINT:

Refer to the instructions for Removal of the front exhaust pipe assembly INFO.

5. REMOVE FRONT NO. 2 FLOOR HEAT INSULATOR

(a) Remove the 3 nuts and front No. 2 floor heat insulator.

6. REMOVE REAR FLOOR SIDE MEMBER COVER LH (w/ Floor Under Cover) INFO

7. REMOVE NO. 1 PARKING BRAKE PULL ROD SUB-ASSEMBLY

(a) Separate the No. 3 parking brake cable assembly from the No. 1 parking brake pull rod sub-assembly as shown in the illustration.

(b) Separate the No. 2 parking brake cable assembly to remove the No. 1 parking brake pull rod sub-assembly.

HINT:

Perform the same procedure as for the No. 3 parking brake cable assembly.

8. REMOVE NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Disengage the clamp to separate the No. 2 parking brake cable clamp.

(b) Separate the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

(c) Disconnect the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

Text in Illustration

*1	No. 3 Parking Brake Cable Assembly
*2	Clip
*3	Offset Wrench (14 mm)

HINT:

Insert an offset wrench (14 mm) at the base of the No. 3 parking brake cable assembly as shown in the illustration to disengage the clip. Pull out the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

(d) Remove the 5 bolts and No. 3 parking brake cable assembly.

C

9. REMOVE NO. 2 PARKING BRAKE CABLE CLAMP

(a) Disengage the 2 claws to remove the No. 2 parking brake cable clamp from the No. 3 parking brake cable assembly.

P

INSTALLATION

1. INSTALL NO. 2 PARKING BRAKE CABLE CLAMP

(a) Engage the 2 claws to install a new No. 2 parking brake cable clamp to the No. 3 parking brake cable assembly.

P

2. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the No. 3 parking brake cable assembly with the 5 bolts.

c

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

(b) Install the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly.

Text in Illustration

*1	No. 3 Parking Brake Cable Assembly
*2	Clip

c

HINT:

Be sure to engage the No. 3 parking brake cable assembly clip onto the rear disc brake cylinder assembly as shown in the illustration.

(c) Connect the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly.

c

c

(d) Engage the clamp to install the No. 2 parking brake cable clamp.

3. INSTALL REAR FLOOR SIDE MEMBER COVER LH (w/ Floor Under Cover) INFO

4. INSTALL FRONT NO. 2 FLOOR HEAT INSULATOR

c

(a) Install the front No. 2 floor heat insulator with the 3 nuts.

Torque: **5.5 N·m (56 kgf·cm, 49in·lbf)**

5. INSTALL FRONT EXHAUST PIPE ASSEMBLY

HINT:

Refer to the instructions for Installation of the front exhaust pipe assembly INFO.

6. INSTALL NO. 1 PARKING BRAKE PULL ROD SUB-ASSEMBLY

(a) Connect the No. 3 parking brake cable assembly to the No. 1 parking

brake pull rod sub-assembly as shown in the illustration.

c

(b) Connect the No. 2 parking brake cable assembly to the No. 1 parking brake pull rod sub-assembly.

HINT:

Perform the same procedure as for the No. 3 parking brake cable assembly.

7. INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Pass the No. 1 parking brake cable assembly through the parking brake pedal assembly.

c

(b) Install the clip to the No. 1 parking brake cable assembly.

c

(c) Bend the parking brake pedal claw.

(d) Temporarily install the adjusting nut.

c

8. INSTALL PARKING BRAKE CONTROL PEDAL ASSEMBLY

HINT:

Refer to the instructions for Installation of the parking brake control pedal assembly [INFO](#).

9. INSTALL REAR WHEEL

c

REMOVAL

1. REMOVE PARKING BRAKE CONTROL PEDAL ASSEMBLY

HINT:

Refer to the procedures up to Remove Parking Brake Control Pedal Assembly INFO.

2. REMOVE PARKING BRAKE SWITCH ASSEMBLY

(a) Remove the screw and parking brake switch assembly from the parking brake control pedal assembly.

INSPECTION

1. INSPECT PARKING BRAKE SWITCH ASSEMBLY

(a) Measure the resistance between the connector terminal and the nut inside the parking brake switch assembly.

Standard Resistance

Tester Connection	Switch Condition	Specified Condition
Terminal - Nut	on (When shaft is not pressed)	Below 1 Ω
Terminal - Nut	off (When shaft is pressed)	10 k Ω or higher

Text in Illustration

*1	Terminal
*2	Nut

If the value is not as specified, replace the parking brake switch assembly.

INSTALLATION

1. INSTALL PARKING BRAKE SWITCH ASSEMBLY

(a) Install the parking brake switch assembly to the parking brake control pedal assembly with the screw.

Torque: **3.2 N·m (33 kgf·cm, 28in·lbf)**

2. INSTALL PARKING BRAKE CONTROL PEDAL ASSEMBLY

HINT:

Refer to the procedures from Install Parking Brake Control Pedal Assembly .

PRECAUTION

1. PRECAUTION FOR DISCONNECTING THE BATTERY CABLE

NOTICE:

When disconnecting the battery negative (-) cable, initialize the following system after the cable is reconnected:

System	See Procedure
Advanced Parking Guidance System	

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Parking Brake System

Symptom	Suspected Area	See page
Brake drag	Parking brake pedal travel (Out of adjustment)	INFO
	Parking brake cable (Sticking)	INFO
	Rear disc brake piston (Stuck)	INFO

ADJUSTMENT

1. INSPECT PARKING BRAKE PEDAL TRAVEL

- (a) Fully depress the parking brake pedal to engage the parking brake.
- (b) Depress the pedal again to disengage the parking brake.

- (c) Slowly depress the parking brake pedal using the specified force, and count the number of clicks.

Parking brake pedal travel:

8 to 11 notches at 300 N (31 kgf, 67.5 lbf)

If the parking brake pedal travel is not as specified, adjust the parking brake pedal travel.

P

2. ADJUST PARKING BRAKE PEDAL TRAVEL

- (a) Remove the lower instrument panel finish panel assembly INFO.
- (b) Completely release the parking brake pedal.

- (c) Loosen the lock nut and the adjusting nut to completely release the parking brake cable.

Text in Illustration

*1	Lock Nut
*2	Adjusting Nut

c

- (d) Turn the adjusting nut until the parking brake pedal travel is corrected to be within the specified range.

Parking brake pedal travel:

8 to 11 notches at 300 N (31 kgf, 67.5 lbf)

- (e) Using a wrench or an equivalent tool, hold the adjusting nut and tighten the lock nut.

Text in Illustration

*1	Lock Nut
----	----------

*2	Adjusting Nut
----	---------------

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

- (f) Operate the parking brake pedal 3 to 4 times, and check the parking brake pedal travel.
- (g) Check whether the parking brake drags or not.
- (h) Install the lower instrument panel finish panel assembly INFO.

3. INSPECT REAR DISC BRAKE CYLINDER OPERATION LEVER AND STOPPER CLEARANCE

- (a) Release the parking brake lever and check that the clearance measurement between the rear disc brake cylinder operation lever and the stopper is within the specified range.

Text in Illustration

*1	Stopper
*2	Operation Lever

Clearance:

0.5 mm (0.0197 in.) or less

If the clearance is not within the specified range, replace the rear disc brake caliper assembly.

4. INSPECT BRAKE WARNING LIGHT

- (a) When operating the parking brake pedal, check that the brake warning light illuminates.

Standard:

The brake warning light always illuminates at the first click.

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Axle System

Symptom	Suspected Area	See page
Wander or pulls	Tire (worn or improperly inflated)	INFO

REPLACEMENT

NOTICE:

When the brake pedal is first depressed after replacing the brake pads or pushing back the disc brake piston, DTC C1214 may be output. As there is no malfunction, clear the DTC.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE FRONT WHEEL

2. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY

(a) Remove the 2 bolts and separate the front disc brake caliper assembly.

NOTICE:

Use wire or an equivalent tool to keep the front disc brake caliper assembly from hanging down by the flexible hose.

3. REMOVE FRONT DISC INFO

4. REMOVE FRONT AXLE HUB BOLT

(a) Temporarily install 2 nuts to the front axle hub bolts as shown in the illustration.

Text in Illustration

*1	Nut
----	-----

Recommended service nut:

Thread diameter: 12.0 mm (0.472 in.)

Thread pitch: 1.5 mm (0.0591 in.)

NOTICE:

Install the nuts to prevent damage to the hub bolts.

(b) Using SST and a brass bar or an equivalent tool to hold the front axle, remove the front axle hub bolt.

SST: 09611-12010

NOTICE:

Do not damage the threads of the front axle hub bolts.

5. INSTALL FRONT AXLE HUB BOLT

(a) Install a washer and nut to a new front axle hub bolt as shown in the illustration.

Text in Illustration

*1	Nut
*2	Washer

Recommended service nut:

Thread diameter: 12.0 mm (0.472 in.)

Thread pitch: 1.5 mm (0.0591 in.)

HINT:

Recommended thickness of the washer is 5 mm (0.197 in.) or more.

(b) Using a brass bar or an equivalent tool to hold the front axle, install the hub bolt by tightening the nut.

NOTICE:

- Install the nuts to prevent damage to the front axle hub bolts.
- Do not damage the threads of the front axle hub bolts.

(c) Remove the 3 nuts and washer from the 3 front axle hub bolts.

6. INSTALL FRONT DISC INFO

7. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY

(a) Install the front disc brake caliper assembly to the steering knuckle with the 2 bolts.

Torque: **137 N·m (1394 kgf·cm, 101ft·lbf)**

NOTICE:

Do not twist the brake hose when installing the front disc brake caliper assembly.

8. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

ON-VEHICLE INSPECTION

NOTICE:

When the brake pedal is first depressed after replacing the brake pads or pushing back the disc brake piston, DTC C1214 may be output. As there is no malfunction, clear the DTC.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE FRONT WHEEL

2. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY INFO

3. REMOVE FRONT DISC INFO

4. INSPECT FRONT AXLE HUB BEARING LOOSENESS

(a) Using a dial indicator, check for looseness near the center of the axle hub.

Maximum looseness:

0.05 mm (0.00196 in.)

- Ensure that the dial indicator is set perpendicular to the measurement surface.
- Keep the magnet of the dial indicator away from the front speed sensor.

c

HINT:

If the looseness exceeds the maximum, replace the front axle hub bearing.

5. INSPECT FRONT AXLE HUB RUNOUT

(a) Using a dial indicator, check for runout on the surface of the axle hub outside the hub bolt.

Maximum runout:

0.05 mm (0.00196 in.)

- Ensure that the dial indicator is set perpendicular to the measurement surface.
- Keep the magnet of the dial indicator away from the front speed sensor.

c

sensor.

HINT:

If the runout exceeds the maximum, replace the front axle hub.

6. INSTALL FRONT DISC 

7. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY 

8. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

REMOVAL

NOTICE:

When the brake pedal is first depressed after replacing the brake pads or pushing back the disc brake piston, DTC C1214 may be output. As there is no malfunction, clear the DTC.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE FRONT WHEEL

2. REMOVE FRONT AXLE SHAFT NUT INFO

3. SEPARATE FRONT SPEED SENSOR

(a) Remove the 2 bolts and clamp, and separate the front speed sensor.

- Be sure to separate the front speed sensor from the front shock absorber with coil spring completely.
- Prevent foreign matter from attaching to the sensor tip.
- Be careful not to damage the front speed sensor.
- Clean the speed sensor installation hole and the contact surfaces every time the speed sensor is removed.

4. SEPARATE FRONT FLEXIBLE HOSE

(a) Remove the bolt and separate the front flexible hose from the steering knuckle.

5. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY INFO

6. REMOVE FRONT DISC INFO

7. SEPARATE TIE ROD END SUB-ASSEMBLY INFO

8. SEPARATE FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY

(a) Remove the bolt and 2 nuts, and separate the front No. 1 lower suspension arm sub-assembly from the front lower ball joint.

9. SEPARATE FRONT DRIVE SHAFT ASSEMBLY

(a) Put matchmarks on the front drive shaft assembly and front axle hub sub-assembly.

Text in Illustration

*1	Matchmark
----	-----------

(b) Using a plastic hammer, separate the front drive shaft assembly from the front axle assembly. If it is difficult to separate, tap the end of the front drive shaft assembly using a brass bar and a hammer.

NOTICE:

Be careful not to damage the drive shaft boot and speed sensor rotor.

10. REMOVE FRONT AXLE ASSEMBLY

(a) Remove the 2 bolts, 2 nuts and front axle assembly.

- When removing the nuts, keep the bolts from rotating.
- Be careful not to damage the drive shaft boot and speed sensor rotor.

11. REMOVE FRONT AXLE HUB SUB-ASSEMBLY

(a) Secure the front axle assembly between aluminium plates in a vise.

NOTICE:

Do not overtighten the vise.

(b) Remove the 4 bolts, front axle hub sub-assembly and front disc brake dust cover.

NOTICE:

Do not drop the front axle hub sub-assembly.

c

INSTALLATION

1. INSTALL FRONT AXLE HUB SUB-ASSEMBLY

(a) Secure the steering knuckle between aluminium plates in a vise.

NOTICE:

Do not overtighten the vise.

(b) Install the front axle hub sub-assembly and front disc brake dust cover with the 4 bolts.

Torque: **40 N·m (408 kgf·cm, 30ft·lbf)**

(c) Apply MP grease to the areas indicated by the arrows in the illustration on the front drive shaft assembly contact surface of the front axle hub sub-assembly.

Text in Illustration

*1	MP grease
----	-----------

HINT:

Apply 0.1 to 0.3 g (0.00353 to 0.0106 oz.) of MP grease to each area.

2. INSTALL FRONT AXLE ASSEMBLY

(a) Install the front axle assembly to the front shock absorber with the 2 bolts and 2 nuts.

Torque: **240 N·m (2447 kgf·cm, 177ft·lbf)**

NOTICE:

When installing the nuts, keep the bolts from rotating.

3. INSTALL FRONT DRIVE SHAFT ASSEMBLY

(a) Align the matchmarks and install the front drive shaft assembly to the

front axle hub sub-assembly.

Text in Illustration

*1	Matchmark
----	-----------

c

4. INSTALL FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY

c

(a) Install the front No. 1 lower suspension arm sub-assembly to the front lower ball joint with the bolt and 2 nuts.

Torque: **89 N·m (908 kgf·cm, 66ft·lbf)**

5. CONNECT TIE ROD END SUB-ASSEMBLY INFO

6. INSTALL FRONT DISC INFO

7. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY INFO

8. TEMPORARILY INSTALL FRONT AXLE SHAFT NUT

(a) Clean the threaded parts on the front drive shaft assembly and a new front axle shaft nut using a non-residue solvent.

NOTICE:

- Be sure to perform this work even when using a new drive shaft.
- Keep the threaded parts free of oil and foreign matter.

(b) Using a socket wrench (30 mm), while applying the brakes, temporarily install the front axle shaft nut.

Torque: **216 N·m (2203 kgf·cm, 159ft·lbf)**

NOTICE:

Stake the front axle shaft nut after inspecting for looseness and runout in the following steps.

HINT:

Keep depressing the brake pedal to prevent the drive shaft from rotating.

9. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY_ [INFO](#)

10. REMOVE FRONT DISC_ [INFO](#)

14. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY_ [INFO](#)

15. INSTALL FRONT FLEXIBLE HOSE

(a) Install the front flexible hose to the steering knuckle with the bolt.

Torque: **19 N·m (192 kgf·cm, 14ft·lbf)**

c

16. INSTALL FRONT SPEED SENSOR

(a) Install the front speed sensor and front flexible hose to the front shock absorber with the bolt and clamp.

Torque: **19 N·m (192 kgf·cm, 14ft·lbf)**

NOTICE:

Do not twist the front speed sensor when installing it.

HINT:

Install the front flexible hose first and then the speed sensor harness bracket.

c

(b) Install the front speed sensor to the steering knuckle with the bolt.

Torque: **8.5 N·m (87 kgf·cm, 75in·lbf)**

NOTICE:

Do not twist the front speed sensor when installing it.

c

17. INSTALL FRONT AXLE SHAFT NUT

(a) Using a chisel and hammer, stake the front axle shaft nut.

18. INSTALL FRONT WHEEL

Torque: **103 N·m (1050 kgf·cm, 76ft·lbf)**

19. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

13. REMOVE FRONT DRIVE SHAFT ASSEMBLY

(a) Using SST, remove the front drive shaft assembly.

SST: 09520-00031

SST: 09520-01010

SST: 09521-00020

- Do not damage the transaxle case oil seal.
- Do not damage the inboard joint boot.
- Do not drop the front drive shaft assembly.

14. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING

(a) Using a screwdriver, remove the front drive shaft hole snap ring.

T

DISASSEMBLY

1. SEPARATE FRONT NO. 2 AXLE INBOARD JOINT BOOT CLAMP

(a) Using a screwdriver, release the staked part of the front No. 2 axle inboard joint boot clamp and separate the front No. 2 axle inboard joint boot clamp as shown in the illustration.

c

2. SEPARATE FRONT AXLE INBOARD JOINT BOOT CLAMP

HINT:

Perform the same procedure as for the front No. 2 axle inboard joint boot clamp.

3. SEPARATE INBOARD JOINT BOOT

(a) Separate the inboard joint boot from the front drive inboard joint assembly.

4. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Remove the old grease from the front drive inboard joint assembly.

(b) Put matchmarks on the front drive inboard joint assembly and front axle outboard joint shaft assembly.

P

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

Do not punch the marks.

(c) Remove the front drive inboard joint assembly from the front axle outboard joint shaft assembly.

(d) Secure the front axle outboard joint shaft assembly in a vise using aluminum plates.

NOTICE:

Do not overtighten the vise.

(e) Using a snap ring expander, remove the shaft snap ring from the front

axle outboard joint shaft assembly.

(f) Put matchmarks on the front axle outboard joint shaft assembly and tripod joint.

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

Do not punch the marks.

(g) Using a brass bar and a hammer, tap out the tripod joint from the front axle outboard joint shaft assembly.

NOTICE:

- Do not tap the rollers.
- Do not drop the tripod joint.

(h) Remove the front No. 2 axle inboard joint boot clamp, inboard joint boot and front axle inboard joint boot clamp.

(i) Remove the front axle inboard joint grommet from the front drive inboard joint assembly.

5. SEPARATE FRONT DRIVE SHAFT DAMPER CLAMP (for LH Side)

(a) for one touch type:

(1) Using a screwdriver, release the staked part of the front drive shaft damper clamp and separate the front drive shaft damper clamp as shown in the illustration.

for One Touch Type:

for Claw Engagement Type:

(b) for claw engagement type:

(1) Using needle-nose pliers, disengage the 2 claws and remove the front drive shaft damper clamp as shown in the illustration.

6. SEPARATE FRONT DRIVE SHAFT DAMPER CLAMP (for RH Side)

c

(a) Using needle-nose pliers, disengage the 2 claws on each front drive shaft damper clamp, and then remove each clamp as shown in the illustration.

7. REMOVE FRONT DRIVE SHAFT DAMPER

(a) Remove the front drive shaft damper from the front axle outboard joint shaft assembly.

8. SEPARATE FRONT NO. 2 AXLE OUTBOARD JOINT BOOT CLAMP (for LH Side)

(a) Using a screwdriver, release the staked part of the front No. 2 axle outboard joint boot clamp and separate the front No. 2 axle outboard joint boot clamp as shown in the illustration.

c

9. SEPARATE FRONT AXLE OUTBOARD JOINT BOOT CLAMP (for LH Side)

HINT:

Perform the same procedure as for the front No. 2 axle outboard joint boot clamp.

10. REMOVE OUTBOARD JOINT BOOT (for LH Side)

(a) Remove the front axle outboard joint boot clamp, outboard joint boot and front No. 2 axle outboard joint boot clamp from the front axle outboard joint shaft assembly.

(b) Remove the old grease from the outboard joint.

11. REMOVE FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, remove the front drive shaft dust cover from the front drive inboard joint assembly.

SST: 09950-00020

NOTICE:

Do not drop the front drive inboard joint assembly.

INSPECTION

1. INSPECT FRONT DRIVE SHAFT ASSEMBLY

(a) Check that there is no excessive play in the outboard joint.

(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no excessive play in the radial directions of the inboard joint.

(d) Check the boots for damage.

NOTICE:

Keep the drive shaft assembly level during inspection.

HINT:

For dimensions (A), refer to the following values.

Dimension (A)

LH Side	RH Side
556.2 mm (1.82 ft.)	905.2 mm (2.96 ft.)

REASSEMBLY

1. INSTALL FRONT DRIVE SHAFT DUST COVER (for LH Side)

(a) Using SST and a press, install a new front drive shaft dust cover into the front drive inboard joint assembly until it is flush with the end.

SST: 09527-10011

- Install the front drive shaft dust cover in the correct direction.
- Do not deform the front drive shaft dust cover.

2. INSTALL FRONT DRIVE SHAFT DUST COVER (for RH Side)

(a) Using SST and a press, install a new front drive shaft dust cover into the front drive inboard joint assembly until it is flush with the end.

SST: 09527-10011

- Install the front drive shaft dust cover in the correct direction.
- Do not deform the front drive shaft dust cover.

3. INSTALL OUTBOARD JOINT BOOT (for LH Side)

(a) Wrap the splines of the front axle outboard joint shaft assembly with protective tape to prevent the boot from being damaged.

Text in Illustration

*1	Protective Tape
----	-----------------

(b) Install new parts onto the front axle outboard joint shaft assembly in the following order:

- (1) Front No. 2 axle outboard joint boot clamp (A)
- (2) Outboard joint boot (B)
- (3) Front axle outboard joint boot clamp (C)

(c) Pack the joint portion of the front axle outboard joint shaft assembly and outboard joint boot with grease.

Standard grease capacity:

135 to 145 g (4.8 to 5.1 oz.)

(d) Install the outboard joint boot onto the front axle outboard joint shaft assembly groove.

NOTICE:

- Do not allow grease to adhere to the boot clamp track of the outboard joint boot.
- Keep the inside of the outboard joint boot free of foreign matter.

4. INSTALL FRONT NO. 2 AXLE OUTBOARD JOINT BOOT CLAMP (for LH Side)

CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

(a) Install the front No. 2 axle outboard joint boot clamp onto the outboard joint boot and temporarily fold back the lever.

- Set the lever into the guide groove correctly and install the clamp as far into the inside of the vehicle as possible.
- Check the band and the lever for any deformation before folding back the lever.

(b) Lean your weight on your hand and roll the outboard joint forward while pressing the outboard joint against the work plane. Roll the outboard joint and fold the lever until a click sound can be heard.

- Do not damage the deflector.
- Make sure that the outboard joint is in direct contact with the work plane.

(c) Using a plastic hammer, tap the buckle to secure it while adjusting the clearance between the lever and the groove to make the clearance between the buckle edge and the lever end even.

NOTICE:

Do not damage the outboard joint boot.

5. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP (for LH Side)

CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

(a) Install the front axle outboard joint boot clamp onto the outboard joint boot and temporarily fold back the lever.

- Set the lever into the guide groove correctly.
- Check the band and the lever for any deformation before folding back the lever.

(b) Using water pump pliers, pinch the front axle outboard joint boot clamp to temporarily secure it.

(c) Using a plastic hammer, tap the buckle to secure it while adjusting the clearance between the lever and the groove to make the clearance between the buckle edge and the lever end even.

NOTICE:

Do not damage the outboard joint boot.

6. INSTALL FRONT DRIVE SHAFT DAMPER (for LH Side)

(a) Install the front drive shaft damper onto the front axle outboard joint shaft assembly as shown in the illustration.

HINT:

Make sure that the front drive shaft damper is on the shaft groove.

Dimension (A):

163 to 165 mm (6.42 to 6.49 in.)

7. INSTALL FRONT DRIVE SHAFT DAMPER (for RH Side)

(a) Install the front drive shaft damper onto the front axle outboard joint shaft assembly as shown in the illustration.

HINT:

Make sure that the front drive shaft damper is on the shaft groove.

Dimension (A):

460 to 462 mm (1.50 to 1.51 ft.)

8. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP (for LH Side)

(a) Secure the front axle outboard joint shaft assembly in a vise using aluminum plates.

NOTICE:

Do not overtighten the vise.

(b) for one touch type:

for One Touch Type:

(1) Using a screwdriver, install a new front drive shaft damper clamp, as shown in the illustration.

for Claw Engagement Type:

NOTICE:

Do not damage the outboard joint boot.

(c) for claw engagement type:

(1) Using needle-nose pliers, install a new front drive shaft damper clamp, as shown in the illustration.

9. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP (for RH Side)

(a) Using needle-nose pliers, install 2 new front drive shaft damper

clamps, as shown in the illustration.

c

10. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY

T

(a) Install new parts onto the front axle outboard joint shaft assembly in the following order:

- (1) Front axle inboard joint boot clamp (A)
- (2) Inboard joint boot (B)
- (3) Front No. 2 axle inboard joint boot clamp (C)

(b) Secure the front axle outboard joint shaft assembly in a vise using aluminum plates.

NOTICE:

Do not overtighten the vise.

(c) Remove the protective tape.

(d) Align the matchmarks and install the tripod joint onto the front axle outboard joint shaft assembly as shown in the illustration.

P

Text in Illustration

*1	Matchmark
----	-----------

NOTICE:

Face the serrated side of the tripod joint outward and install it onto the outboard joint end.

(e) Using a brass bar and a hammer, install the tripod joint to the front axle outboard joint shaft assembly.

NOTICE:

- Do not tap the rollers.
- Keep the tripod joint free of foreign matter.

(f) Using a snap ring expander, install a new shaft snap ring to the front axle outboard joint shaft assembly.

(g) Pack the front drive inboard joint assembly and inboard joint boot with grease.

Standard grease capacity:

168 to 178 g (5.9 to 6.2 oz.)

(h) Install a new front axle inboard joint grommet onto the inboard joint groove.

Text in Illustration

*1	Groove
----	--------

NOTICE:

Securely fit the protrusion on the inboard joint grommet into the inboard joint groove.

(i) Align the matchmarks and install the front drive inboard joint assembly onto the front axle outboard joint shaft assembly.

Text in Illustration

*1	Matchmark
----	-----------

11. INSTALL INBOARD JOINT BOOT

(a) Install the inboard joint boot into the grooves of the inboard joint grommet and inboard joint boot.

NOTICE:

Keep the grooves free of grease.

12. INSTALL FRONT NO. 2 AXLE INBOARD JOINT BOOT CLAMP

CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

(a) Install the boot clamp onto the inboard joint boot.

(b) Adjust dimension (A) until it is within the specified length.

Dimension (A)

LH Side	RH Side
556.2 mm (1.82 ft.)	905.2 mm (2.96 ft.)

Boot Clamp

Inboard Joint Grommet

(c) While keeping dimension (A) within the specified length, put the inside of the inboard joint under atmospheric pressure by pulling the recessed parts on the inboard joint grommet out.

(d) Set the lever fulcrum point at any point A indicated in the illustration and temporarily bend the lever.

NOTICE:

- Perform this work with the inside of the inboard joint kept at atmospheric pressure.
- Set the lever into the guide groove correctly and install the clamp as far into the inside of the vehicle as possible.
- Check the band and the lever for any deformation before folding back the lever.

(e) Lean your weight on your hand and roll the inboard joint forward while pressing the inboard joint against the work plane. Roll the inboard joint and fold the lever until a click sound can be heard.

NOTICE:

Make sure that the outboard joint is in direct contact with the work plane.

(f) Using a plastic hammer, tap the buckle to secure it while adjusting the clearance between the lever and the groove to make the clearance between the buckle edge and the lever end even.

NOTICE:

Do not damage the inboard joint boot.

13. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP

CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

(a) Install the front axle inboard joint boot clamp onto the inboard joint boot and temporarily fold back the lever.

- Set the lever into the guide groove correctly.
- Check the band and the lever for any deformation before folding back the lever.

(b) Using water pump pliers, pinch the front axle outboard joint boot clamp to temporarily secure it.

(c) Using a plastic hammer, tap the buckle to secure it while adjusting the clearance between the lever and the groove to make the clearance between the buckle edge and the lever end even.

NOTICE:

Do not damage the inboard joint boot.

14. INSPECT FRONT DRIVE SHAFT ASSEMBLY INFO

INSTALLATION

1. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING

(a) Install a new front drive shaft hole snap ring to the front drive inboard joint assembly.

HINT:

Face the end gap of the front drive inboard joint hole snap ring downward.

2. INSTALL FRONT DRIVE SHAFT ASSEMBLY

(a) Align the inboard joint splines, and using a brass bar and a hammer, install the front drive shaft assembly.

- Face the end gap of the front drive shaft hole snap ring downward.
- Do not damage the transaxle case oil seal.
- Do not damage the inboard joint boot.
- Make sure to center the front drive shaft assembly during installation to prevent damage to the front drive shaft hole snap ring.

HINT:

Confirm whether the drive shaft is securely driven in by checking the reaction force and sound.

(b) Align the matchmarks and install the front drive shaft assembly to the front axle hub sub-assembly.

Text in Illustration

3. CONNECT FRONT NO. 1 LOWER SUSPENSION ARM SUB-ASSEMBLY [INFO](#)

4. CONNECT FRONT STABILIZER LINK ASSEMBLY [INFO](#)

5. CONNECT TIE ROD END SUB-ASSEMBLY [INFO](#)

6. INSTALL FRONT FLEXIBLE HOSE [INFO](#)

7. CONNECT FRONT SPEED SENSOR [INFO](#)

8. INSTALL FRONT AXLE SHAFT NUT

(a) Clean the threaded parts on the drive shaft and a new axle shaft nut using a non-residue solvent.

HINT:

- Be sure to perform this work even when using a new drive shaft.
- Keep the threaded parts free of oil and foreign matter.

(b) Using a socket wrench (30 mm), install the axle shaft nut.

Torque: **216 N·m (2203 kgf·cm, 159ft·lbf)**

(c) Using a chisel and hammer, stake the front axle shaft nut.

PRECAUTION

1. PRECAUTION FOR DISCONNECTING THE CABLE FROM THE NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the cable is reconnected:

System	See Procedure
Advanced Parking Guidance System	

2. NOTICE FOR HYBRID SYSTEM ACTIVATION

(a) When the warning light is illuminated or the battery has been disconnected and reconnected, pressing the power switch may not start the system on the first try. If so, press the power switch again.

3. CAN COMMUNICATION SYSTEM PRECAUTIONS

(a) The CAN communication system is used for data communication between the transmission control ECU assembly, the power management control ECU and other ECUs. If there are any problems in the CAN communication lines, corresponding DTCs for the communication lines are output.

(b) If any CAN communication line DTCs are output, repair the malfunction in the communication lines and troubleshoot the electronic shift lever system after data communication becomes normal.

4. LIN COMMUNICATION SYSTEM PRECAUTIONS

(a) The LIN communication system is used for data communication between the transmission control ECU assembly, the certification ECU and other ECUs. If there are any problems in the LIN communication lines, the P position cannot be disengaged.

(b) If any LIN communication line DTCs are output, repair the malfunction in the communication lines and troubleshoot the electric shift lever system after data communication becomes normal.

5. DTC PRECAUTION

(a) It is not possible to clear the following DTCs using the Techstream: DTC C2300 (Actuator System Malfunction), C2301 (Shift Changing Time Malfunction), C2303 (Short in Power Source Relay Circuit), C2304 (Open or Short Circuit in U Phase), C2305 (Open or Short Circuit in V Phase), C2306 (Open or Short Circuit in W Phase), C2307 (Power Supply) and C2309 (Open in B+ Circuit). After the repair, it is necessary to disconnect the P CON MAIN fuse and wait for at least 60 seconds to clear the DTCs.

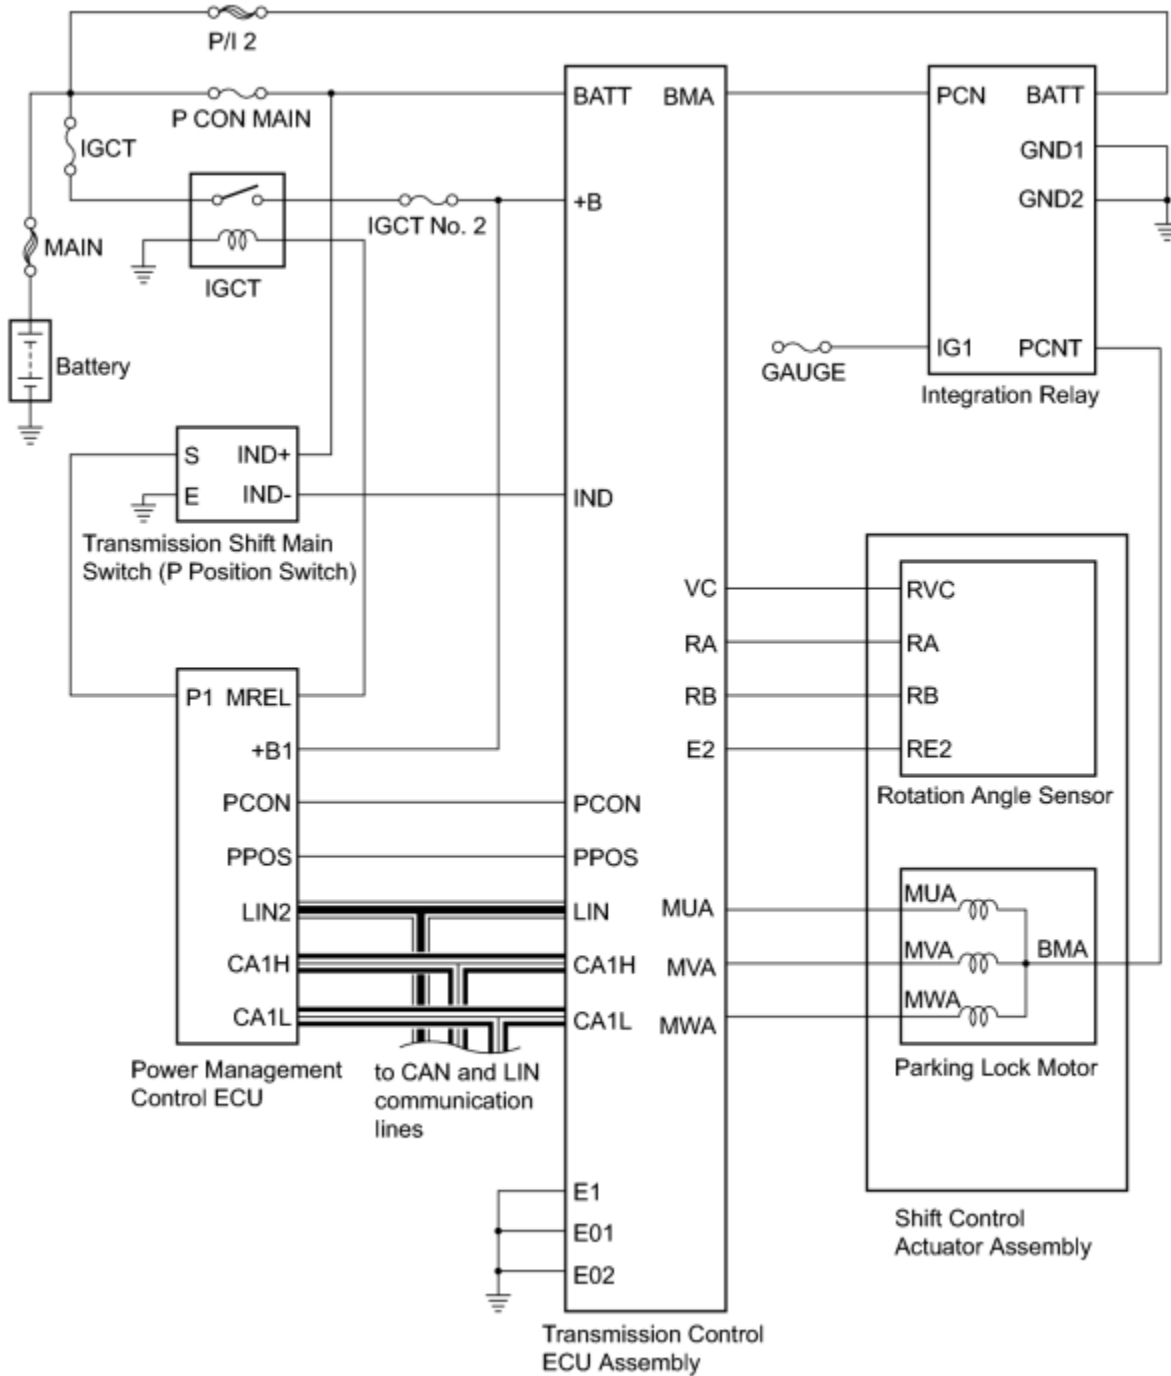

PARTS LOCATION

ILLUSTRATION

H

SYSTEM DIAGRAM

H

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

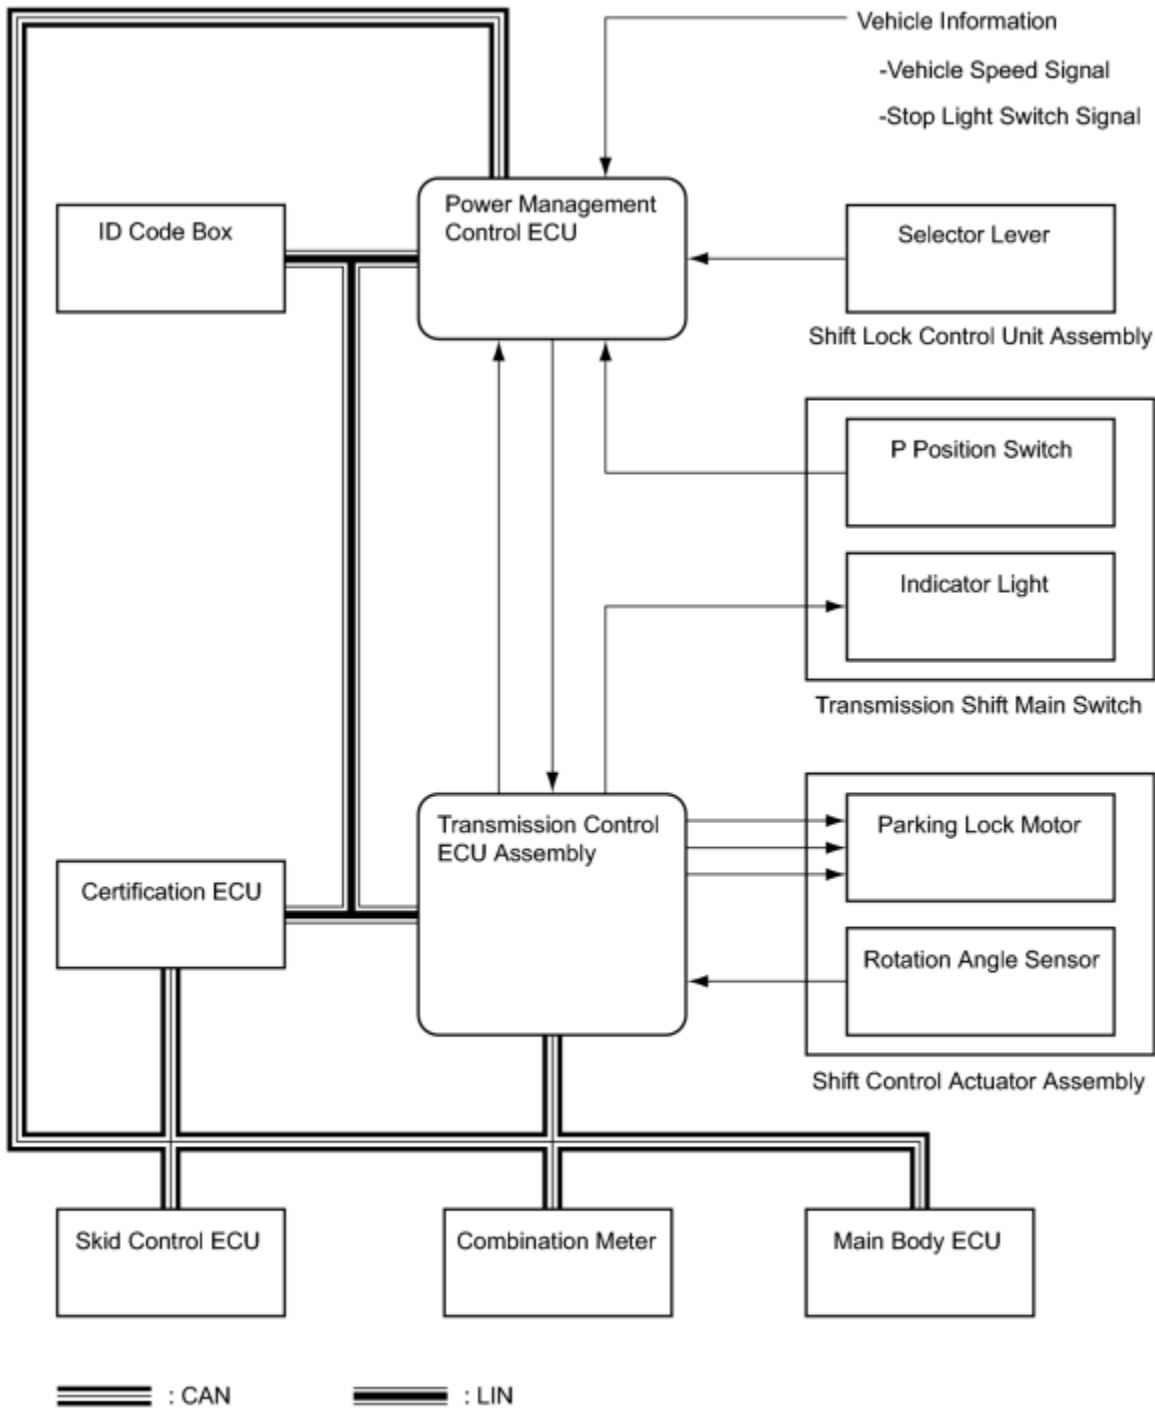

The electronic shift lever system electrically controls the parking lock mechanism by using the actuator.

The transmission control ECU assembly locks/unlocks gearshift control based on lock/unlock request signals from the certification ECU (smart key ECU assembly).

The transmission control ECU assembly controls the shift control actuator when gearshift control is unlocked, and also controls the entire system based on information from the power management control ECU.

The transmission control ECU assembly detects DTCs when there are any malfunctions in the system, and informs the driver of selected malfunctions by illuminating the P position switch indicator light and master warning light, and indicating an error message on the multi-display.

2. SYSTEM DIAGRAM

H

Input and Output Signals of Each ECU

Transmitting ECU (Transmitter)	Receiving ECU	Signal	Communication Method
Main Body ECU	Power Management Control ECU	Parking brake switch signal	CAN
Power Management	Power Management	Power off preparation signal	CAN

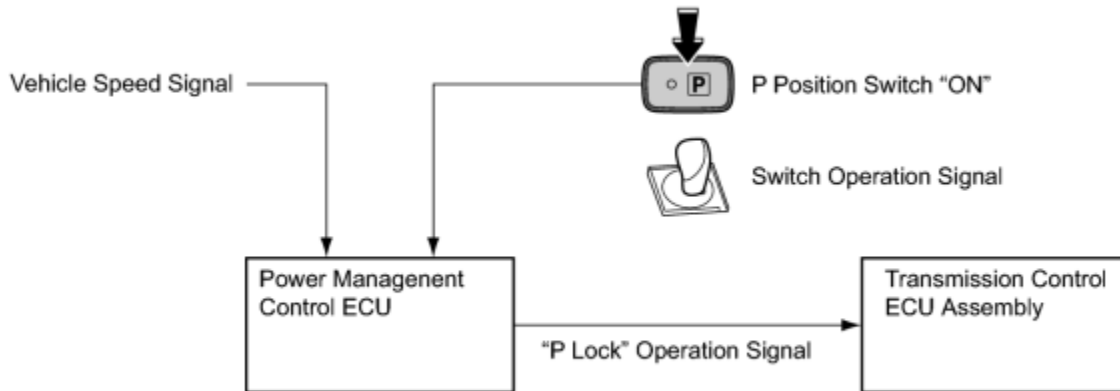

Transmitting ECU (Transmitter)	Receiving ECU	Signal	Communication Method
Control ECU	Control ECU

Transmission control ECU assembly	Power Management Control ECU	<ul style="list-style-type: none"> P position state signal Transmission control ECU assembly trouble condition signal Non-P position state signal 	CAN, SIL
Power Management Control ECU	Power Management Control ECU	<ul style="list-style-type: none"> Auto P cancel signal Auto P permit signal 	CAN
Transmission control ECU assembly	Combination Meter	Transmission control ECU assembly trouble signal	CAN
Power Management Control ECU	Certification ECU	P position state signal	LIN

3. FUNCTION OF EACH COMPONENT

Part Name	Function
Shift Control Actuator	<ul style="list-style-type: none"> Composed of the parking lock motor and the rotation angle sensor. The motor is activated by electric current from the transmission control ECU assembly. Motor rotation is reduced by the cycloid reduction mechanism in the shift control actuator and then output. The rotation angle sensor detects the motor rotation angle with the 2 Hall ICs.
Transmission control ECU assembly	<ul style="list-style-type: none"> The transmission control ECU assembly activates the shift control actuator based on signals from the power management control ECU. The transmission control ECU assembly controls the application timing of current to the parking lock motor based on signals from the rotation angle sensor.
Parking Lock Mechanism	The parking lock pawl rotates according to the movement of the parking lock rod when the parking lock motor rotates, and engages with the parking gear on the transaxle side, causing the parking lock mechanism to lock or unlock.
Power Management Control ECU	<ul style="list-style-type: none"> The power management control ECU sends a P lock or P unlock demand signal to the transmission control ECU assembly based on information from the selector lever and the P position switch. The power management control ECU sends a signal with power off information to the power management control ECU. The power management control ECU then sends the signal to the power management control ECU.
P Position Switch Indicator Light	The P position switch indicator light comes on/goes off to indicate the P lock/unlock status and blinks to indicate a malfunction in the electronic shift lever system.
Combination Meter	A malfunction in the transmission control ECU assembly is indicated by the illumination of the master warning light on the combination meter.

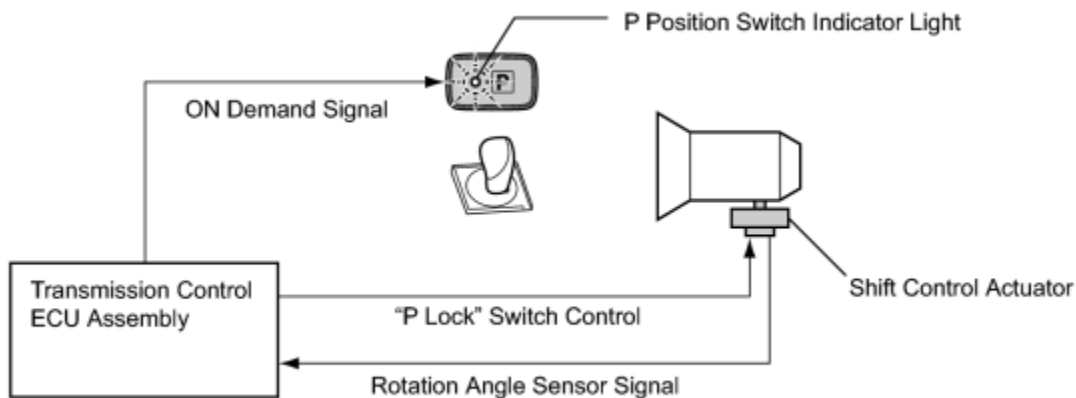

4. OPERATION DESCRIPTION

(a) Operation to switch to the P position:

H

- (1) When the park (P) is selected to activate parking lock, a signal is sent to the power management control ECU.
- (2) The power management control ECU determines whether "P lock" is possible or not based on this signal and other vehicle information.
- (3) If the power management control ECU determines that "P lock" is possible, it sends a "P lock" operation demand signal to the transmission control ECU assembly.
- (4) After receiving the signal, the transmission control ECU assembly activates the shift control actuator in order to lock the parking lock mechanism.

H

- (5) The transmission control ECU assembly controls motor rotation angle based on signals from the rotation angle sensor in the shift control actuator.

Cycloid Reduction Mechanism

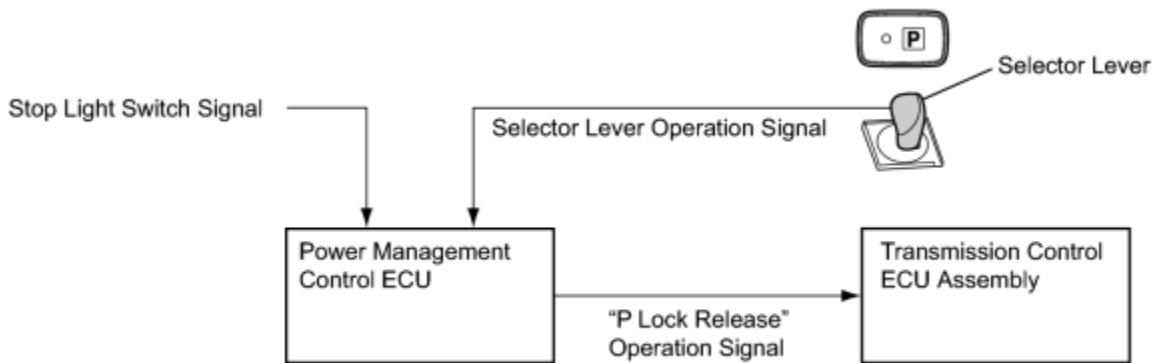

N

HINT:

In the cycloid reduction mechanism, the output shaft is linked to the external gear. Together, they rotate only a single tooth when the eccentric adapter, which is linked to the motor, rotates once. Driving force is increased in this way so that the parking lock mechanism can be switched even when high output is required for parking on a hill, etc.

(6) Turn on the P position switch indicator light.

(b) Operation to switch to a non-P position:

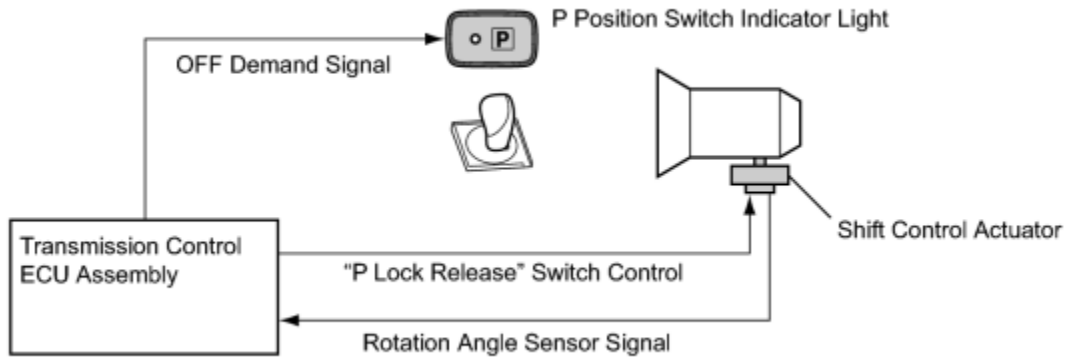

H

(1) When the hybrid system is started (the vehicle is ready to be driven) and the selector lever is moved to R, N, or D with the brake pedal depressed, a signal is sent to the power management control ECU.

(2) This signal is then sent from the power management control ECU to the transmission control ECU assembly as a "P lock release" operation demand signal.

(3) After receiving the signal, the transmission control ECU assembly activates the shift control actuator in order to unlock the parking lock mechanism.

H

(4) The transmission control ECU assembly controls motor rotation angle based on signals from the rotation angle sensor in the shift control actuator.

(5) Turn off the P position switch indicator light.

5. SHIFT POSITION CHANGE FUNCTION

(a) The electronic shift lever system comprehensively determines vehicle conditions and changes the shift position, as shown in the following chart, by cooperating with the shift control function of the hybrid system (except when the reject function, described later, is in operation).

(b) Other than indicated in the following chart, when the power switch is turned off with the vehicle stopped, the shift position is automatically changed to the P position and all power is turned off.

Power Status	Operation	P	R	N	D	B
ACC ON* (The vehicle cannot be driven.)	Selector lever operation	●	Unable to change the shift position			
	P position switch operation	←		●		
IG ON* (The vehicle cannot be driven.)	Selector lever operation	●	→			
	P position switch operation	←		●		
The hybrid system is started. (The vehicle can be driven.)	Selector lever operation	●	→	→	→	
	P position switch operation	←	←	←	←	←

*: The vehicle cannot be driven because the hybrid system has not been started.

● : Current position → : Positions to which the shift position can be changed

N

6. REJECT FUNCTION

(a) In the electronic shift lever system, there may be a situation in which a shift change cannot be done for safety reasons. When attempting to move the selector lever in such a situation, the system sounds a reject buzzer inside the meter and changes the shift position as shown in the following table.

Shift operation which causes reject function to operate	Shift position after rejection
Moving the selector lever to any position with park (P) selected and the brake pedal not depressed	Held in the P position

Shift operation which causes reject function to operate	Shift position after rejection
Pushing the P position switch while driving	Changed to the N position
Moving the selector lever from D to R or R to D while driving at 12 km/h or more	Changed to the N position
Moving the selector lever to B from a position other than D or P	Changed to the N position
Moving the selector lever to B with park (P) selected and the brake pedal depressed	Held in the P position

7. P POSITION SWITCH INDICATOR LIGHT CONTROL

(a) The indicator light comes on when the P position switch is pressed (the P position is engaged), goes off when the switch is released (the P position is disengaged) and blinks when the system malfunction occurs.

Indicator Light

DTC No.	Indicator Light	Suspected Cause
C2300	Blinks	<ul style="list-style-type: none"> Initial drive shift count malfunction Move shift range malfunction Feedbacks shift count malfunction Parking lock position memory malfunction Parking lock moving range memory malfunction
C2301	Blinks	Shift changing time malfunction
C2303	Normal (Comes on when the P position is engaged and goes off when it is disengaged)	Integration relay lockup
C2304	Blinks	Open or short in shift control actuator assembly [parking lock motor (MUA)] signal circuit
C2305	Blinks	Open or short in shift control actuator assembly [parking lock motor (MVA)] signal circuit
C2306	Blinks	Open or short in shift control actuator assembly [parking lock motor (MWA)] signal circuit
C2307	Blinks	Power source circuit malfunction
C2308	Normal (Comes on when the P position is engaged, and goes off when it is disengaged)	Transmission control ECU assembly internal error
C2309	Blinks	Open in +B signal circuit
C2310	Normal (Comes on when the P position is engaged, and goes off when it is disengaged)	Open or short in BATT signal circuit
C2311	Blinks	<ul style="list-style-type: none"> PCON DUTY malfunction Open or short in PCON signal circuit

DTC No.	Indicator Light	Suspected Cause
C2315	Normal (Comes on when the P position is engaged, and goes off when it is disengaged)	<ul style="list-style-type: none"> • Open or short in PCOS signal circuit • Transmission shift main switch (P position switch) circuit malfunction
U0146	Normal (Comes on when the P position is engaged, and goes off when it is disengaged)	CAN communication system malfunction

NOTICE:

Even if the system has returned to normal, the indicator light does not return to normal without the selector lever moved from the home position to N. (Normal refers to the indicator light coming on when the P position is engaged and it goes off when the P position is disengaged.)

HOW TO PROCEED WITH TROUBLESHOOTING

DTC CHECK / CLEAR

1. CHECK FOR DTCS (Using the Techstream)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Chassis / Transmission Control / Trouble Codes.
- (e) Check for DTCs and freeze frame data, and then write them down.
- (f) Check the details of the DTCs.

2. CHECK FOR DTCS (Systems other than the transmission control ECU)

HINT:

The transmission control ECU maintains communication with other ECUs, including the hybrid vehicle control ECU and other ECUs. Therefore, if the transmission control ECU outputs a warning, it is necessary to check and record the DTCs of all systems.

- (a) If DTCs are present, check the relevant systems.

HINT:

If DTCs for the CAN communication system are present in addition to other DTCs, first troubleshoot and repair any malfunctions in the CAN communication system.

3. CLEAR DTCS (Using the Techstream)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Chassis / Transmission Control / Trouble Codes.
- (e) Clear the DTCs and freeze frame data.

NOTICE:

- It is not possible to clear the following DTCs using the Techstream: DTCs C2300 (Actuator System Malfunction), C2301 (Shift Changing Time Malfunction), C2303 (Short in Power Source Relay Circuit), C2304 (Open or Short Circuit in U Phase), C2305 (Open or Short Circuit in V Phase), C2306 (Open or Short Circuit in W Phase), C2307 (Power Supply) and C2309 (Open in B+ Circuit). After the repair, it is necessary to disconnect the P CON MAIN fuse and wait for at least 60 seconds to clear the DTCs.

- Clearing the DTCs will also clear the freeze frame data.

4. CLEAR DTCS (Without using the Techstream)

(a) Turn the power switch off.

(b) Remove the P CON MAIN fuses from the engine room junction block assembly located inside the engine compartment for more than 1 minute.

(c) Check for DTCs again to see if the DTCs are cleared.

NOTICE:

- If the DTCs are output, repair the parts by following the diagnostic trouble code chart.
- Clearing the DTCs will also clear the freeze frame data.

FREEZE FRAME DATA

1. CHECK FREEZE FRAME DATA

HINT:

The transmission control ECU records vehicle and driving condition information as freeze frame data the moment a DTC is stored. Freeze frame data can help determine the vehicle conditions when the malfunction occurred and help duplicate conditions when troubleshooting.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Chassis / Transmission Control / Trouble Codes.
- (e) Select a DTC in order to display its freeze frame data.

2. LIST OF FREEZE FRAME DATA

Tester Display	Measurement Item	Reference Value
Shift Pos Display (P)	Shift position display (P)	ON / OFF
Shift Pos Display (Not P)	Shift position display (not P)	ON / OFF

FAIL-SAFE CHART

If the transmission control ECU detects a malfunction, the fail-safe functions shown in the table below are activated.

DTC No.	Fail-safe Function	Problem Symptoms
C2300 C2301	Only the P position release operation is possible and the shift control actuator is activated.	<ul style="list-style-type: none"> • The shift position is not indicated on the meter. • Although the shift position is indicated on the meter, the vehicle cannot be driven.
C2303	-	The battery is dead.
C2304 C2305 C2306	The integration relay is turned off.	The parking lock mechanism cannot be switched.
C2307	The integration relay is turned off.	<ul style="list-style-type: none"> • The shift position is not indicated on the meter. • Although the shift position is indicated on the meter, the vehicle cannot be driven.
C2308	-	<ul style="list-style-type: none"> • The parking lock mechanism cannot be switched. • The key reminder buzzer sounds constantly.
C2309	The integration relay is turned off.	The parking lock mechanism cannot be switched.
C2311	-	The parking lock mechanism cannot be switched.

DATA LIST / ACTIVE TEST

1. DATA LIST

NOTICE:

- Some Data List values may vary significantly if there are slight differences in the environment in which the vehicle is operating when measurements are obtained. Variations may also occur due to aging of the vehicle. Due to these considerations, it is not always possible to provide definite values to be used for judgment of malfunctions. It is possible that a malfunction may be present even if measured values are within the reference range.
- In the event of a problem with intricate symptoms, collect sample data from another vehicle of the same model operating under identical conditions in order to reach an overall judgment by comparing all the items in the Data List.

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values. when deciding whether a part is faulty or not.

- Warm up the engine.
- Turn the power switch off.
- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Chassis / Transmission Control / Data List.
- According to the display on the Techstream, read the Data List.

HINT:

When reading the Data List information, first determine which items need to be monitored before proceeding. Attempting to view all of the data may result in a delayed, inaccurate inspection.

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the circuit listed for that code in the table below and proceed to the appropriate page.

HINT:

- Remove the P CON MAIN fuse to clear DTCs C2300, C2301, C2303, C2304, C2305, C2306, C2307 and C2309 because they cannot be clear with the Techstream.
- When a DTC is detected, the master warning light comes on and an error message is indicated on the multi-display.

DTC	C2300	Actuator System Malfunction
-----	-------	-----------------------------

DESCRIPTION

The shift control actuator consists of the parking lock motor and the rotation angle sensor. The transmission control ECU receives a P position switch signal from the power management control ECU (HV CPU) and activates the parking lock motor by controlling current, causing the parking lock mechanism to switch. The transmission control ECU also detects the rotor rotation angle through the rotation angle sensor to control timing of current application to the coils. The transmission control ECU outputs this DTC when it detects a malfunction in the shift control actuator system.

DTC No.	DTC Detection Condition	Trouble Area
C2300	Open or short in the integration relay or shift control actuator assembly (parking lock motor or rotation angle sensor), or internal malfunction of the shift control actuator assembly (parking lock motor or rotation angle sensor).	<ul style="list-style-type: none"> • Transmission control ECU assembly • Auxiliary battery • Integration relay • Shift control actuator assembly • Hybrid vehicle transaxle assembly • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

It is not possible to clear the following DTCs using the Techstream: DTCs C2300 (Actuator System Malfunction), C2301 (Shift Changing Time Malfunction), C2303 (Short in Power Source Relay Circuit), C2304 (Open or Short Circuit in U Phase), C2305 (Open or Short Circuit in V Phase), C2306 (Open or Short Circuit in W Phase), C2307 (Power Supply) and C2309 (Open in B+ Circuit). After the repair, it is necessary to disconnect the P CON MAIN fuse and wait for at least 60 seconds to clear the DTCs.

PROCEDURE

1. CHECK FREEZE FRAME DATA

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Enter the following menus: Chassis / Transmission Control / Trouble Codes.

(d) Read the freeze frame data "Current flag record" of C2300.

Result

Result	Proceed to
OFF	A
ON	B

(e) Turn the power switch off.

B ▶ REPLACE TRANSMISSION CONTROL ECU ASSEMBLY

A

2.	CHECK DTC OUTPUT (TRANSMISSION CONTROL)
----	---

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Enter the following menus: Chassis / Transmission Control / Trouble Codes.

(d) Check if DTCs are output.

Result

Result	Proceed to
Any of the following DTCs are not output.	A
Any of the following DTCs are output.	B

DTC No.	Relevant Diagnosis
C2304	Open or Short Circuit in U Phase
C2305	Open or Short Circuit in V Phase
C2306	Open or Short Circuit in W Phase

(e) Turn the power switch off.

B ▶ GO TO DTC CHART

A

3.	CHECK FREEZE FRAME DATA
----	-------------------------

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Enter the following menus: Chassis / Transmission Control / Trouble Codes.

(d) Read the freeze frame data of C2300.

Result

Result	Proceed to
IG (+B) voltage is 9 V or more	A
IG (+B) voltage is less than 9 V	B

(e) Turn the power switch off.

B  **REPLACE AUXILIARY BATTERY**

A

4.	CLEAR DTC
----	-----------

(a) Turn the power switch on (IG).

(b) Enter the following menus: Chassis / Transmission Control / Trouble Codes.

(c) Read and record the DTCs and freeze frame data.

(d) Turn the power switch off.

(e) Disconnect the P CON MAIN fuse and wait for at least 60 seconds.

(f) Check for DTCs again to see if the DTCs are cleared.

NEXT

5.	CHARGE AUXILIARY BATTERY
----	--------------------------

(a) Charge the auxiliary battery.

NEXT

6.	CHECK DTC OUTPUT (SIMULATION TEST)
----	------------------------------------

(a) Connect the Techstream to the DLC3.

(b) Release the brake pedal and turn the power switch on (IG).

HINT:

Do not turn the power switch on (READY).

(c) Depress the brake pedal and move the selector lever to N.

(d) Enter the following menus: Chassis / Transmission Control / Trouble Codes.

(e) Check if DTCs are output.

Result

Result	Proceed to
C2300 is output	A
DTC is not output.	B

(f) Turn the power switch off.

B END (AUXILIARY BATTERY WAS INSUFFICIENTLY CHARGED)

A

7.	CHECK TRANSMISSION CONTROL ECU ASSEMBLY (VC, RA, RB, E2)
----	--

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A23-7 (VC) - A23-19 (E2)	Engine stopped (hybrid system stopped), power switch on (IG)	4.5 to 5.5 V
A23-17 (RA) - A23-19 (E2)	Power switch off to on (IG)	0 to 1.5 V ←→ 4 to 5.5 V
A23-8 (RB) - A23-19 (E2)	Power switch off to on (IG)	0 to 1.5 V ←→ 4 to 5.5 V

(d) Turn the power switch off.

(e) Connect the shift control actuator assembly.

NG [CHECK HARNESS AND CONNECTOR \(INTEGRATION RELAY POWER SOURCE CIRCUIT\)](#)

OK

9. READ VALUE USING TECHSTREAM (U, V, W VOLTAGE)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Enter the following menus: Chassis / Transmission Control / Data List / U Phase Voltage Value, V Phase Voltage Value, W Phase Voltage Value.

(d) Read the data list displayed on the Techstream.

Result:

Tester Display	Switch Condition	Specified Condition
----------------	------------------	---------------------

Tester Display	Switch Condition	Specified Condition
U Phase Voltage Value	Power switch on (IG)	9 to 14 V
V Phase Voltage Value	Power switch on (IG)	9 to 14 V
W Phase Voltage Value	Power switch on (IG)	9 to 14 V

Turn the power switch off.

NG ► [CHECK HARNESS AND CONNECTOR \(TRANSMISSION CONTROL ECU ASSEMBLY - SHIFT CONTROL ACTUATOR\)](#)

OK ► **REPLACE TRANSMISSION CONTROL ECU ASSEMBLY**

10.	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY POWER SOURCE CIRCUIT)
-----	--

(a) Disconnect the 1G and 1H integration relay connectors.

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
1H-7 (BATT) - Body ground	Always	9 to 14 V
1G-14 (IG1) - Body ground	Power switch on (IG)	9 to 14 V

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

17.	CHECK SHIFT CONTROL ACTUATOR ASSEMBLY
-----	---------------------------------------

- (a) Disconnect the shift control actuator assembly connector.
- (b) Remove the shift control actuator 3 bolts INFO.
- (c) Slightly pull the shift control actuator assembly from the hybrid vehicle transaxle.

(d) Using a screwdriver with its tip wrapped with protective tape or a piece of cloth, rotate the shaft.

P

OK:

The shift control actuator assembly turns smoothly.

- During this inspection, make sure to use a screwdriver with its tip wrapped with protective tape or a piece of cloth to prevent the splines of the actuator from being damaged.
- The shift control actuator cannot be disassembled.

NG ► REPLACE SHIFT CONTROL ACTUATOR ASSEMBLY

OK

18.	CHECK HYBRID VEHICLE TRANSAXLE ASSEMBLY
-----	---

- (a) Wrap the shaft with a piece of cloth and turn it using pliers.

OK:

The shaft rotates smoothly in the lock and unlock directions.

- Rotates the shaft using torque within 4 to 7 N*m (41 to 71 kgf*cm, 36 to 61 in.*lbf).

- During this inspection, ensure to use a piece of cloth to prevent the shaft splines from being damaged.

Text in Illustration

*1	Lock
*2	Unlock
*3	Rotate approximately 20°.

(b) Set the shaft in the lock position after the inspection.

NG ► REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY

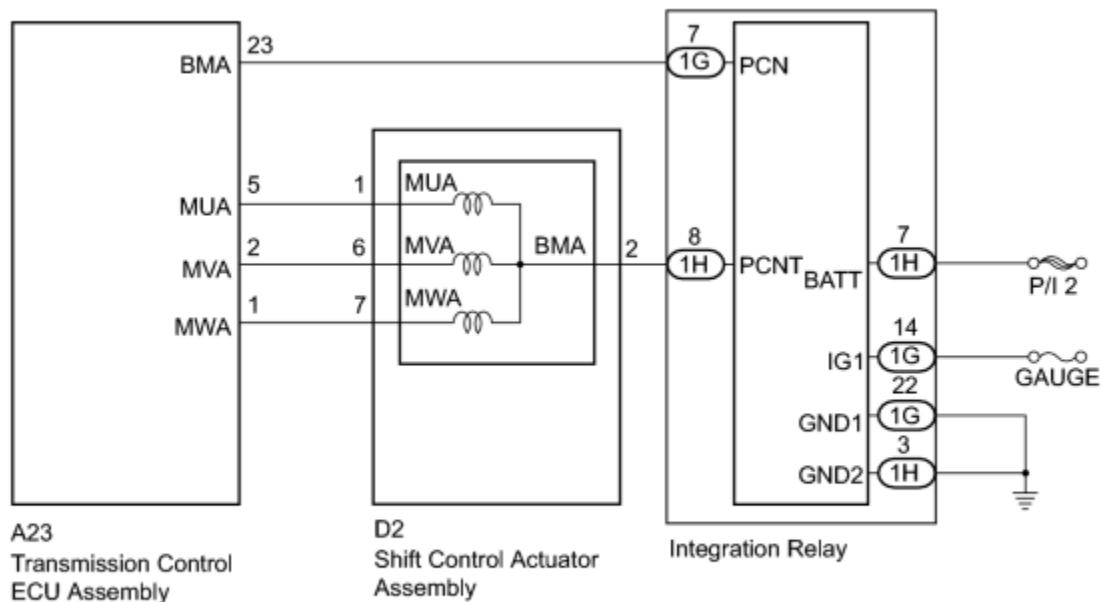

OK ► REPLACE TRANSMISSION CONTROL ECU ASSEMBLY

DESCRIPTION

The transmission control ECU receives a P position switch signal from the power management control ECU (HV CPU) and then activates the shift control actuator. At the same time, the transmission control ECU detects the length of time it takes for the parking lock mechanism to switch. The transmission control ECU outputs this DTC when this length of time is longer than specification.

DTC No.	DTC Detection Condition	Trouble Area
C2301	A shift control actuator assembly (parking lock motor) internal malfunction (parking lock motor spins freely) is detected for 2 seconds or more.	<ul style="list-style-type: none"> • Auxiliary battery • Shift control actuator assembly • Hybrid vehicle transaxle assembly • Transmission control ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

It is not possible to clear the following DTCs using the Techstream: DTCs C2300 (Actuator System Malfunction), C2301 (Shift Changing Time Malfunction), C2303 (Short in Power Source Relay Circuit), C2304 (Open or Short Circuit in U Phase), C2305 (Open or Short Circuit in V Phase), C2306 (Open or Short Circuit in W Phase), C2307 (Power Supply) and C2309 (Open in B+ Circuit). After the repair, it is necessary to disconnect the P CON MAIN fuse and wait for at least 60 seconds to clear the DTCs.

PROCEDURE

1.	CHECK FREEZE FRAME DATA
----	-------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Enter the following menus: Chassis / Transmission Control / Trouble Codes.

HINT:

Do not turn the power switch on (READY).

- (c) Depress the brake pedal and move the selector lever to N.
- (d) Enter the following menus: Chassis / Transmission Control / Trouble Codes.
- (e) Check if DTCs are output.

Result

Result	Proceed to
C2301 is output	A
DTC is not output.	B

(f) Turn the power switch off.

B END (AUXILIARY BATTERY WAS INSUFFICIENTLY CHARGED)

A

5. CHECK SHIFT CONTROL ACTUATOR ASSEMBLY

- (a) Disconnect the shift control actuator assembly connector.
- (b) Remove the shift control actuator 3 bolts .
- (c) Slightly pull the shift control actuator assembly from the hybrid vehicle transaxle.

(d) Using a screwdriver with its tip wrapped with protective tape or a piece of cloth, rotate the shaft.

OK:

The shift control actuator assembly turns smoothly.

- During this inspection, make sure to use a screwdriver with its tip wrapped with protective tape or a piece of cloth to prevent the splines of the actuator from being damaged.
- The shift control actuator cannot be disassembled.

NG **▶** REPLACE SHIFT CONTROL ACTUATOR ASSEMBLY

OK

6.	CHECK HYBRID VEHICLE TRANSAXLE ASSEMBLY
-----------	--

(a) Wrap the shaft with a piece of cloth and turn it using pliers.

OK:

The shaft rotates smoothly in the lock and unlock directions.

- Rotates the shaft using torque within 4 to 7 N*m (41 to 71 kgf*cm, 36 to 61 in.*lbf).
- During this inspection, ensure to use a piece of cloth to prevent the shaft splines from being damaged.

Text in Illustration

*1	Lock
*2	Unlock
*3	Rotate approximately 20°.

(b) Set the shaft in the lock position after the inspection.

NG **▶** REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY

OK **▶** REPLACE TRANSMISSION CONTROL ECU ASSEMBLY

DESCRIPTION

The integration relay is activated by output voltage from the transmission control ECU and supplies power to the shift control actuator (parking lock motor). The transmission control ECU outputs this DTC when it detects a malfunction in the integration relay.

DTC No.	DTC Detection Condition	Trouble Area
C2303	When the integration relay is off, voltage of transmission control ECU terminal MUA, MVA and MWA are 6 V or more for 0.064 seconds or more.	<ul style="list-style-type: none"> Transmission control ECU assembly Integration relay Wire harness or connector

(d) Install the IGCT No. 2 fuse.

(e) Connect the transmission control ECU assembly connector.

NG▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK  CHECK AND REPAIR POWER SOURCE CIRCUIT

DESCRIPTION

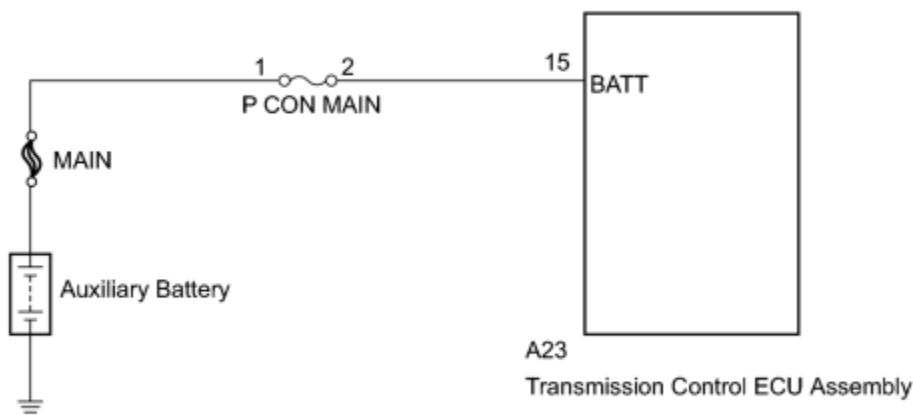

The battery voltage is constantly applied to terminal BATT. The terminal BATT voltage is used to power the transmission control ECU memory. The transmission control ECU outputs this DTC when it detects a malfunction related to terminal BATT.

HINT:

When there is an open or short in the BATT circuit, information on the actuator position ("P position" or "non-P position") stored in the transmission control ECU is cleared every time the power switch is turned off. Therefore, the ECU works to recognize the position each time the power switch is turned on (IG). As a result, the time from when the power switch is turned on (IG) until "READY ON" is indicated may become longer than normal.

DTC No.	DTC Detection Condition	Trouble Area
C2310	With the power switch on (IG) (IG circuit malfunction is not detected), voltage of transmission control ECU terminal BATT is 8 V or less for 1 second or more.	<ul style="list-style-type: none"> • P CON MAIN fuse • Transmission control ECU assembly • Wire harness or connector

*2	Rear view of wire harness connector (to Power Management Control ECU)

(d) Connect the power management control ECU connector.

(e) Connect the transmission control ECU assembly connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

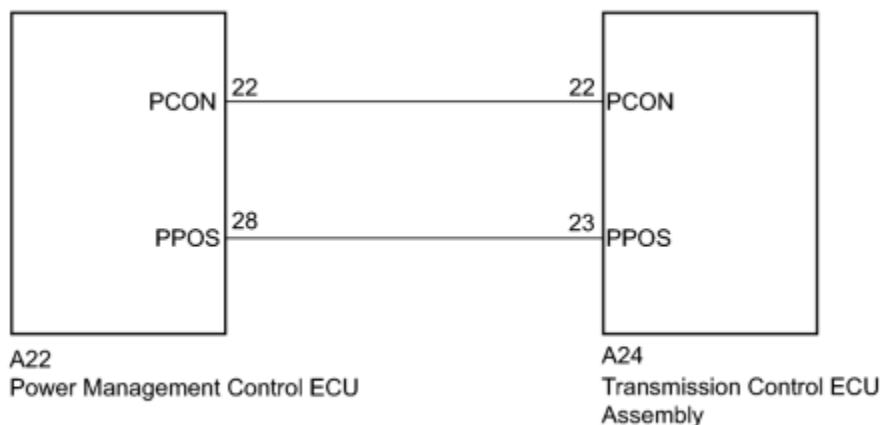

OK ► REPLACE POWER MANAGEMENT CONTROL ECU

DESCRIPTION

The transmission control ECU receives a P position switch signal from the power management control ECU (HV CPU) and activates the parking lock motor by controlling current, causing the parking lock mechanism to switch. When the power management control ECU (HV CPU) detects a malfunction with the P position switch or P position signal, it sends an information signal to the transmission control ECU. After receiving this signal, the transmission control ECU outputs this DTC.

DTC No.	DTC Detection Condition	Trouble Area
C2315	With the power switch on (IG) (IG circuit malfunction is not detected), a malfunction signal is received from the power management control ECU for 2 second or more.	Power management control ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

- CHECK DTC OUTPUT (HV)

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Enter the following menus: Powertrain / Hybrid Control / Trouble Codes.

(d) Check if DTCs are output.

Result

Result	Proceed to
Any of the following DTCs are not output.	A
Any of the following DTCs are output.	B

DTC No.	Relevant Diagnosis
P0851-579	Park/Neutral Switch Input Circuit Low
P0852-580	Park/Neutral Switch Input Circuit High
P085D-599	Gear Shift Control Module "A" Performance
P0861-597	Gear Shift Control Module "A" Communication Circuit Low
P0862-598	Gear Shift Control Module "A" Communication Circuit High
U1107-436	Lost Communication with Power Management Module

(e) Turn the power switch off.

B ▶ GO TO DTC CHART

A ▶ REPLACE POWER MANAGEMENT CONTROL ECU

DTC	U0146	Lost Communication with Body ECU
-----	-------	----------------------------------

DESCRIPTION

The transmission control ECU receives signals from the main body ECU via CAN communication. When a lost CAN communication malfunction is detected, the transmission control ECU stores this DTC.

DTC No.	DTC Detection Condition	Trouble Area
U0146	With the power switch on (IG), a signal cannot be received from the main body ECU for 10 seconds or more.	CAN communication system

INSPECTION PROCEDURE

PROCEDURE

1.	GO TO CAN COMMUNICATION SYSTEM
----	--------------------------------

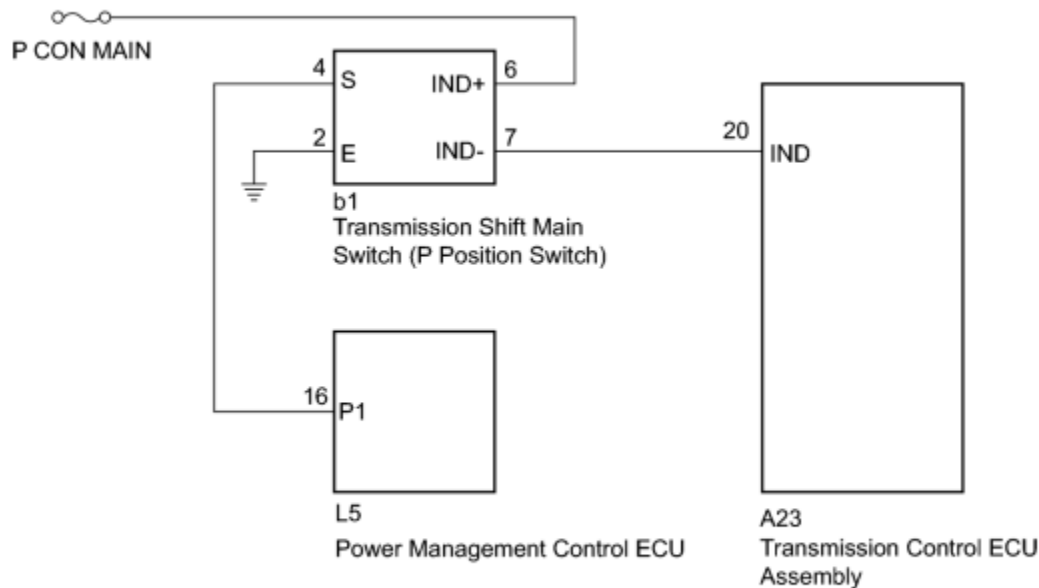

(a) Troubleshoot the CAN communication system .

NEXT  END

DESCRIPTION

The indicator light comes on when the P position switch is pressed (the P position is engaged), goes off when the switch is released (the P position is disengaged) and blinks when a system malfunction occurs.

WIRING DIAGRAM

H

INSPECTION PROCEDURE

PROCEDURE

1. CHECK TRANSMISSION SHIFT MAIN SWITCH (INDICATOR LIGHT)

- (a) Turn the power switch on (IG).
- (b) Depress the brake pedal and move the selector lever to N.
- (c) Inspect the indicator light condition by operating the transmission shift main switch (P position switch).

Result

Condition of Indicator Light	Proceed to
Indicator light does not go off. (Remains on)	A
Indicator light does not come on.	B

(d) Turn the power switch off.

B ▶ [CHECK HARNESS AND CONNECTOR \(TRANSMISSION SHIFT MAIN SWITCH POWER SOURCE CIRCUIT\)](#)

A

2.	CHECK TRANSMISSION SHIFT MAIN SWITCH (INDICATOR LIGHT)
----	--

(a) Disconnect the A23 transmission control ECU assembly.

(b) Turn the power switch on (IG).

(c) Inspect the indicator light condition by operating the transmission shift main switch (P position switch).

Result

Condition of Indicator Light	Proceed to
Comes on	A
Does not come on	B

NOTICE:

Turning the power switch on (IG) with the transmission control ECU assembly connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

(d) Turn the power switch off.

(e) Connect the transmission control ECU assembly connector.

B ▶ [REPLACE TRANSMISSION CONTROL ECU ASSEMBLY](#)

A

3.	CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL ECU - TRANSMISSION SHIFT MAIN SWITCH)
----	---

(a) Disconnect the A23 transmission control ECU assembly connector.

(b) Disconnect the b1 transmission shift main switch (P position switch) connector.

(c) Measure the resistance according to the value(s) in the table below.

*1

Standard Resistance (Check for Short):

Tester Connection	Switch Condition	Specified Condition
A23-20 (IND) or b1-7 (IND-) - Body ground and other terminals	Power switch off	10 kΩ or higher

Text in Illustration

*2

*1	Front view of wire harness connector (to Transmission Control ECU Assembly)
*2	Front view of wire harness connector (to Transmission Shift Main Switch (P Position Switch))

(d) Connect the transmission shift main switch (P position switch) connector.

(e) Connect the transmission control ECU assembly connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ► REPLACE TRANSMISSION SHIFT MAIN SWITCH

4.	CHECK HARNESS AND CONNECTOR (TRANSMISSION SHIFT MAIN SWITCH POWER SOURCE CIRCUIT)
----	---

(a) Disconnect the b1 transmission shift main switch (P position switch) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

*1

Tester Connection	Switch Condition	Specified Condition
b1-6 (IND+) - Body ground	Power switch off	9 to 14 V

Text in Illustration

H

*1	Front view of wire harness connector (to Transmission Shift Main Switch (P Position Switch))
----	---

(c) Connect the transmission shift main switch (P position switch) connector.

NG ▶ CHECK AND REPAIR POWER SOURCE CIRCUIT

OK

5. INSPECT TRANSMISSION SHIFT MAIN SWITCH

(a) Disconnect the b1 transmission shift main switch (P position switch) connector.

(b) Apply auxiliary battery voltage between terminals b1-6 (IND+) and b1-7 (IND-) and check the indicator light.

Result:

H

Condition	Specified Condition
Auxiliary battery voltage applied between terminals b1-6 (IND+) and b1-7 (IND-)	Comes on

Text in Illustration

*1	Component without harness connected (Transmission Shift Main Switch (P Position Switch))
----	---

(c) Connect the transmission shift main switch (P position switch) connector.

NG ▶ REPLACE TRANSMISSION SHIFT MAIN SWITCH

OK

6. CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL ECU - TRANSMISSION SHIFT MAIN SWITCH)

(a) Disconnect the A23 transmission control ECU assembly connector.

(b) Disconnect the b1 transmission shift main switch (P position switch) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Switch Condition	Specified Condition
A23-20 (IND) - b1-7 (IND-)	Power switch off	Below 1 Ω

*1

26. REMOVE RADIATOR PIPE

(a) Disconnect the clamps, No. 1 radiator hose, No. 4 water by-pass hose and No. 3 radiator hose.

(b) Remove the 2 bolts and radiator pipe.

27. REMOVE GENERATOR CABLE

NOTICE:

Wear insulated gloves.

(a) Disconnect the generator cable clamp from the motor cable bracket.

(b) Remove the 3 bolts and slide the generator cable connector shell back.

c

c

(c) Disengage the 2 claws to remove the terminal cap.

c

(d) Remove the 3 bolts and generator cable from the hybrid transaxle assembly.

INSTALLATION

1. INSTALL GENERATOR CABLE

NOTICE:

Wear insulated gloves.

(a) Install the generator cable to the hybrid transaxle assembly with the 3 bolts.

Torque: **10 N·m (102 kgf·cm, 7ft·lbf)**

NOTICE:

Keep the sealing surface of the generator cable and the connector terminal joint free of foreign matter.

(b) Engage the 2 claws to install a new terminal cap.

NOTICE:

When installing the terminal cap to the generator cable terminal block, keep the sealing surface free of foreign matter.

(c) Place the generator cable connector shell in position and install it with the 3 bolts.

Torque: **20 N·m (204 kgf·cm, 15ft·lbf)**

(d) Connect the generator cable clamp to the motor cable bracket.

2. INSTALL RADIATOR PIPE

(a) Install the radiator pipe with the 2 bolts.

Torque: **19 N·m (194 kgf·cm, 14ft·lbf)**

(b) Connect the No. 3 radiator hose, No. 4 water by-pass hose and No. 1 radiator hose with the clamps.

3. INSTALL INVERTER TRAY BRACKET [INFO](#)

4. INSTALL INVERTER RESERVE TANK ASSEMBLY [INFO](#)

24. INSPECT FOR COOLANT LEAK (for Engine)_ [INFO](#)

25. INSTALL NO. 1 ENGINE UNDER COVER

26. INSTALL FRONT SPOILER COVER (w/ Front Spoiler)

27. INSTALL ENGINE UNDER COVER (w/ Cover)

28. INSTALL RADIATOR SUPPORT OPENING COVER_ [INFO](#)

REPLACEMENT

1. DRAIN HYBRID TRANSAXLE FLUID

(a) Using a 10 mm hexagon socket wrench, remove the filler plug and gasket.

Text in Illustration

*1	Filler Plug
*2	Drain Plug

(b) Using a 10 mm hexagon socket wrench, remove the drain plug and gasket.

(c) Using a 10 mm hexagon socket wrench, install the drain plug, and a new gasket.

Torque: **39 N·m (398 kgf·cm, 29ft·lbf)**

2. ADD HYBRID TRANSAXLE FLUID

(a) Add transaxle fluid until the fluid level is between 0 to 10 mm (0 to 0.394 in.) from the bottom lip of the filler plug opening.

- Stop the vehicle on a flat road.
- Recheck the transaxle fluid level after driving when exchanging fluid.
- Insufficient or excessive amounts of transaxle fluid may be the cause of some trouble.

Reference:

3.3 liters (3.5 US qts, 2.9 Imp.qts)

3. INSPECT HYBRID TRANSAXLE FLUID

(a) Check that the fluid level is between 0 to 10 mm (0 to 0.394 in.) from the lowest position of the inner surface of the transaxle filler plug opening.

- Stop the vehicle on a flat road.
- Recheck the transaxle fluid level after driving when exchanging fluid.
- Insufficient or excessive amounts of transaxle fluid may be the cause of some trouble.

(b) Check for leaks if the quantity of transaxle fluid is low.

(c) Using a 10 mm hexagon socket wrench, install the filler plug with a new gasket.

Torque: **39 N·m (398 kgf·cm, 29ft·lbf)**

HINT: 

ON-VEHICLE INSPECTION

1. INSPECT TRANSAXLE FLUID PRESSURE

NOTICE:

Perform the test at normal operating transaxle fluid temperature 50 to 80°C (122 to 176°F).

- (a) Lift up the vehicle.
- (b) Remove the fluid pump cover plug and O-ring.

- (c) Install an oil pressure gauge with the adapter.

- (d) Put the engine in inspection mode INFO.

- (e) Measure the transaxle fluid pressure.

Standard:

Engine Speed	Transaxle Fluid Pressure
1000 rpm	3.0 kPa (0.03 kgf/cm ² , 0.4 psi) or more

NOTICE:

Be sure to cancel inspection mode immediately after the transaxle fluid pressure check is completed.

- (f) Install a new O-ring and fluid pump cover plug.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

(a) Remove the flywheel housing side cover.

9. REMOVE HYBRID VEHICLE TRANSAXLE ASSEMBLY

(a) Using wood blocks or equivalent, set an engine lifter to the hybrid vehicle transaxle assembly.

NOTICE:

Using a rope, wooden blocks or equivalent, secure the hybrid vehicle transaxle assembly to the engine lifter.

(b) Remove the 7 bolts and hybrid vehicle transaxle assembly.

NOTICE:

To avoid damage to the knock pin, do not pry the connecting portion of the hybrid transaxle and the engine.

10. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the 2 bolts and 2 wire harness clamp brackets.

c

11. REMOVE MOTOR CABLE BRACKET

c

(a) Remove the bolt and motor cable bracket.

12. REMOVE FRONT ENGINE MOUNTING BRACKET

c

(a) Remove the 3 bolts and front engine mounting bracket.

13. REMOVE REAR ENGINE MOUNTING BRACKET

(a) Remove the 4 bolts and rear engine mounting bracket.

c

14. REMOVE ENGINE MOUNTING BRACKET LH

c

(a) Remove the 3 bolts and engine mounting bracket LH.

INSTALLATION

1. INSTALL ENGINE MOUNTING BRACKET LH

(a) Install the engine mounting bracket LH with 3 new bolts in several steps.

Torque: **64 N·m (653 kgf·cm, 47ft·lbf)**

NOTICE:

Temporarily tighten bolt A, and then fully tighten the 3 bolts in the order of B, C and A.

2. INSTALL REAR ENGINE MOUNTING BRACKET

(a) Install the rear engine mounting bracket with the 4 bolts in several steps.

Torque: **45 N·m (459 kgf·cm, 33ft·lbf)**

NOTICE:

Temporarily tighten bolt A, and then fully tighten the 4 bolts in the order of C, B, D and A.

3. INSTALL FRONT ENGINE MOUNTING BRACKET

(a) Install the front engine mounting bracket with the 3 bolts in several steps.

Torque: **64 N·m (653 kgf·cm, 47ft·lbf)**

NOTICE:

Temporarily tighten bolt A, and then fully tighten the 3 bolts in the order of B, C and A.

4. INSTALL MOTOR CABLE BRACKET

(a) Install the motor cable bracket with the bolt.

Torque: **23 N·m (235 kgf·cm, 17ft·lbf)**

c

5. INSTALL WIRE HARNESS CLAMP BRACKET

(a) Install the 2 wire harness clamp brackets with the 2 bolts.

Torque: **23 N·m (235 kgf·cm, 17ft·lbf)**

6. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY

(a) Make sure that the knock pins are installed on the engine.

Text in Illustration

*1

Knock Pin

(b) Using an engine lifter, align the engine assembly and hybrid vehicle transaxle assembly, fit the knock pins into the knock pin holes, and tighten the 7 bolts shown in the illustration.

Torque: **33 N·m (337 kgf·cm, 24ft·lbf)**

NOTICE:

- Make sure to align the hybrid vehicle transaxle so that the input shaft of the hybrid vehicle transaxle will be inserted straight into the inner splines of the transmission input damper.
- When inserting the input shaft of the hybrid vehicle transaxle into the inner splines of the transmission input damper, do not shake the hybrid vehicle transaxle excessively.
- When mounting the hybrid vehicle transaxle to the engine, make sure to securely fit the knock pins into the knock holes.
- Push in the hybrid vehicle transaxle so that the contact surfaces of the engine and the hybrid vehicle transaxle will be aligned evenly.
- While mounting the hybrid vehicle transaxle to the engine, temporarily tighten the bolt (A), fully tighten the bolt (B), fully tighten the bolt (A), and then fully tighten the bolts (C).
- Do not hang the hybrid vehicle transaxle off of the engine if the contact surfaces of the engine and the hybrid vehicle transaxle are not in full contact. The knock holes of the hybrid vehicle transaxle case may be deformed due to the excessive weight of the engine and hybrid vehicle transaxle, resulting in misalignment between the engine and hybrid vehicle transaxle.

7. INSTALL FLYWHEEL HOUSING SIDE COVER

(a) Install the flywheel housing side cover.

8. INSTALL STARTER HOLE INSULATOR

(a) Install the starter hole insulator with the 2 bolts.

Torque: **37 N·m (377 kgf·cm, 27ft·lbf)**

9. CONNECT WIRE HARNESS

(a) Connect the 12 wire harness clamps and 6 connectors and install the 2 bolts.

Torque: **12 N·m (122 kgf·cm, 9ft·lbf)**

REMOVAL

1. REMOVE NO. 1 ENGINE UNDER COVER

2. REMOVE SHIFT CONTROL ACTUATOR ASSEMBLY

(a) Disconnect the connector from the shift control actuator assembly.

(b) Using pliers or an equivalent tool, turn the shift control actuator bolt covers counterclockwise and remove the 3 shift control actuator bolts and shift control actuator assembly.

Text in Illustration

*1	Shift Control Actuator Bolt
*2	Cover
*3	Shift Control Actuator Assembly
*4	Transaxle Assembly

- Use pliers or an equivalent tool to initially rotate the cover, and then proceed to remove the shift control actuator bolt and cover by pulling the cover towards the front of the vehicle by hand while rotating the bolt counterclockwise.
- This actuator is a precision instrument. Do not strike it with a plastic hammer or the like during installation.
- This actuator detects its own position when a battery is reinstalled. Thus it does not require initialization.

INSTALLATION

1. INSTALL SHIFT CONTROL ACTUATOR ASSEMBLY

(a) Install the shift control actuator assembly with the 3 new shift control actuator bolts.

Torque: **9.5 N·m (97 kgf·cm, 84in·lbf)**

(b) Install the 3 new shift control actuator bolt caps to the shift control actuator bolts.

NOTICE:

Push in each shift control actuator cap firmly until the claw of the shift control actuator bolt cap engages with the control actuator bolt.

(c) Connect the connector to the shift control actuator assembly.

2. INSTALL NO. 1 ENGINE UNDER COVER

5. REMOVE INTEGRATION CONTROL AND PANEL ASSEMBLY **INFO**
6. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY **INFO**
7. REMOVE SHIFT LOCK CONTROL UNIT ASSEMBLY

(a) Disconnect the connector from the shift lock control unit assembly.

(b) Remove the 3 nuts and shift lock control unit assembly.

INSTALLATION

1. INSTALL SHIFT LOCK CONTROL UNIT ASSEMBLY

(a) Install the shift lock control unit assembly with the 3 nuts.

Torque: **12 N·m (122 kgf·cm, 9ft·lbf)**

(b) Connect the connector to the shift lock control unit assembly.

2. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY [INFO](#)

3. INSTALL INTEGRATION CONTROL AND PANEL ASSEMBLY [INFO](#)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

5. INSTALL REAR NO. 3 FLOOR BOARD [INFO](#)

6. INSTALL REAR DECK FLOOR BOX [INFO](#)

7. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

8. INSPECT SHIFT LEVER

(a) Turn the power switch on (READY).

(b) Check that all available shift positions can be selected moving the shift lever.

HINT:

After the shift lever is replaced with a new one, perform the above operation. If this operation is not performed, moving the shift lever may not initially select shift positions.

When disconnecting the cable, some systems need to be initialized after the cable is reconnected [INFO](#).

6. INSTALL REAR NO. 3 FLOOR BOARD [INFO](#)

7. INSTALL REAR DECK FLOOR BOX [INFO](#)

8. INSTALL REAR NO. 2 FLOOR BOARD (for Separate Type) [INFO](#)

REPLACEMENT

1. REMOVE FRONT SPOILER COVER (w/ Front Spoiler)
2. REMOVE ENGINE UNDER COVER (w/ Cover)
3. DRAIN COOLANT (for Engine)

NOTICE:

Do not remove the reservoir tank cap, cylinder block drain cock plugs and radiator drain cock plug while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

- (a) Loosen the radiator drain cock plug and drain the coolant.

HINT:

Collect the coolant in a container and dispose of it according to the local regulations.

- (b) Loosen the cylinder block drain cock plug.

HINT:

The plug is on the back of the generator on the exhaust manifold side.

c

Text in Illustration

*1	Reservoir Tank Cap	*2	Cylinder Block Drain Cock Plug
*3	Radiator Drain Cock Plug	*4	Air Release Valve

4. ADD COOLANT (for Engine)

- (a) Tighten the radiator drain cock plug.
- (b) Tighten the cylinder block drain cock plug.

Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

- (c) Remove the reservoir tank cap.
- (d) Connect the hose to the air release valve.
- (e) Loosen the air release valve.
- (f) Add TOYOTA Super Long Life Coolant (SLLC) to the reservoir tank filler opening until coolant overflows from the air release valve. Then tighten the air release valve.

Standard Capacity:

Item	Capacity
Engine coolant	w/ Exhaust Heat Recirculation System: 7.3 liters (7.7 US qts, 6.4 Imp. qts)
	w/o Exhaust Heat Recirculation System: 6.5 liters (6.8 US qts, 5.7 Imp. qts)

HINT:

- TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology is a combination of low phosphates and organic acids).
- Contact your TOYOTA dealer for further details.

NOTICE:

Never use water as a substitute for engine coolant.

(g) Disconnect the hose from the air release valve.

(h) Add coolant to B line of the reservoir tank.

Text in Illustration

*1	B Line
----	--------

(i) Squeeze the inlet and outlet radiator hoses several times by hand, and then check the level of the coolant.

If the coolant level is low, add coolant.

(j) Put the engine in inspection mode **INFO**.

(k) Install the reservoir tank cap, and warm up the engine sufficiently.

(l) Bleed air from the cooling system.

NOTICE:

- Before starting the engine, turn the A/C switch off.
- Adjust the heater control to the maximum hot setting.

- Adjust the blower speed to low setting.

(1) Warm up the engine until the thermostat opens. While the thermostat is open, allow the coolant to circulate for several minutes.

HINT:

The thermostat opening timing can be confirmed by squeezing the inlet radiator hose by hand, and sensing vibrations when the engine coolant starts to flow inside the hose.

When squeezing the radiator hose:

- Wear protective gloves.
- Be careful as the radiator hoses are hot.
- Keep your hands away from the radiator fan.

(2) After the engine is warmed up, let it idle for 7 minutes or more.

(3) Squeeze the inlet and outlet radiator hoses several times by hand to bleed air from the system.

When squeezing the radiator hose:

- Wear protective gloves.
- Be careful as the radiator hoses are hot.
- Keep your hands away from the radiator fan.

(m) After the engine has cooled down, check that the coolant level is between full and low.

Text in Illustration

*1	Full Line
*2	Low Line

If the coolant level is low, add coolant to the full line on the reservoir tank.

5. INSPECT FOR COOLANT LEAK (for Engine) INFO

6. INSTALL ENGINE UNDER COVER (w/ Cover)

7. INSTALL FRONT SPOILER COVER (w/ Front Spoiler)

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses related to this system before inspecting the suspected areas below.

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN SYSTEM

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Enter the following menus: Powertrain / Engine / Active Test / Control the Electric Cooling Fan.
- (d) Check operation of the cooling fans while operating them using the Techstream. If the cooling fans do not operate, check the cooling fan circuit .

DESCRIPTION

The ECM turns on or off the fan relays using signals calculated from the engine coolant temperature, air conditioning switch (on/off), air conditioning refrigerant pressure, engine speed, and vehicle speed signals.

The ECM switches the circuit of the cooling fan motors between series and parallel by turning on or off the fan relays in order to control the speed of the cooling fan motors in two steps.

WIRING DIAGRAM

Refer to System Diagram .

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE ELECTRIC COOLING FAN)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Electric Cooling Fan.

OK:

Tester Operation	Specified Condition
ON	Fans operate
OFF	Fans do not operate

NG  [INSPECT ECM \(FANL AND FANH VOLTAGE\)](#)

OK  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2. INSPECT ECM (FANL AND FANH VOLTAGE)

- (a) Disconnect the ECM connector.

*1

N

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A57-22 (FANH) - Body ground	Power switch on (IG)	11 to 14 V
A57-21 (FANL) - Body ground	Power switch on (IG)	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to ECM)
----	--

(d) Reconnect the ECM connector.

NG  [CHECK FUSE \(ECU-IG NO. 1 FUSE VOLTAGE\)](#)

OK

3.	INSPECT ENGINE ROOM RELAY BLOCK (FAN NO. 1 RELAY AND FAN NO. 3 RELAY VOLTAGE)
----	---

(a) Remove the FAN No. 1 relay and FAN No. 3 relay from the engine room relay block.

*1

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
3 (FAN No. 1 relay) - Body ground	Always	11 to 14 V
5 (FAN No. 3 relay) - Body ground	Always	11 to 14 V

Text in Illustration

*1	Engine Room Relay Block
----	-------------------------

(c) Reinstall the FAN No. 1 relay and FAN No. 3 relay.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - ENGINE ROOM RELAY BLOCK)

OK

4.	INSPECT FAN NO. 1 RELAY
----	-------------------------

(a) Remove the FAN No. 1 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

(c) Reinstall the FAN No. 1 relay.

NG ► REPLACE FAN NO. 1 RELAY

OK

5.	INSPECT FAN NO. 2 RELAY
----	-------------------------

(a) Remove the FAN No. 2 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 4	Battery voltage is not applied between terminals 1 and 2	Below 1 Ω
	Battery voltage is applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

(c) Reinstall the FAN No. 2 relay.

NG ► REPLACE FAN NO. 2 RELAY

OK

6. INSPECT FAN NO. 3 RELAY

(a) Remove the FAN No. 3 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 k Ω or higher
	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

(c) Reinstall the FAN No. 3 relay.

NG ► REPLACE FAN NO. 3 RELAY

OK

7. CHECK HARNESS AND CONNECTOR (FAN NO. 2 RELAY - BODY GROUND)

(a) Remove the FAN No. 2 relay from the engine room relay block.

*1

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
5 (FAN No. 2 relay) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Engine Room Relay Block
----	-------------------------

(c) Reinstall the FAN No. 2 relay.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (FAN NO. 2 RELAY - BODY GROUND)

OK

8.	INSPECT COOLING FAN MOTOR
----	---------------------------

(a) Disconnect the cooling fan motor connector.

c

(b) Check that the cooling fan motor operates smoothly when the battery is connected to the cooling fan motor connector.

(c) Measure the current while the motor is operating.

Standard Current:

Tester Connection	Condition	Specified Condition
1 - 2	Always	11.2 to 14.5 A

Text in Illustration

*1	Component without harness connected (Cooling Fan Motor)
----	--

(d) Reconnect the cooling fan motor connector.

NG  REPLACE COOLING FAN MOTOR

OK

9.	CHECK HARNESS AND CONNECTOR (COOLING FAN MOTOR - BODY GROUND)
----	---

(a) Disconnect the cooling fan motor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
A5-1 - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Cooling Fan Motor)
----	--

(c) Reconnect the cooling fan motor connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (COOLING FAN MOTOR - BODY GROUND)

OK

10.	CHECK HARNESS AND CONNECTOR (COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)
-----	---

(a) Disconnect the cooling fan motor connector.

(b) Remove the FAN No. 1 relay and FAN No. 2 relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
A5-2 - 5 (FAN No. 1 relay)	Always	Below 1 Ω
A5-2 - 4 (FAN No. 2 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
A5-2 or 5 (FAN No. 1 relay) - Body ground	Always	10 kΩ or higher
A5-2 or 4 (FAN No. 2 relay) - Body ground	Always	10 kΩ or higher

Text in Illustration

*1	Front view of wire harness connector (to Cooling Fan Motor)
*2	Engine Room Relay Block

(d) Reconnect the cooling fan motor connector.

(e) Reinstall the FAN No. 1 relay and FAN No. 2 relay.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)

OK

11.	INSPECT NO. 2 COOLING FAN MOTOR
-----	---------------------------------

*1

(a) Disconnect the No. 2 cooling fan motor connector.

c

(b) Check that the No. 2 cooling fan motor operates smoothly when the battery is connected to the No. 2 cooling fan motor connector.

(c) Measure the current while the motor is operating.

Standard Current:

Tester Connection	Condition	Specified Condition
1 - 2	Always	7.4 to 10.9 A

Text in Illustration

*1	Component without harness connected (No. 2 Cooling Fan Motor)
----	--

(d) Reconnect the No. 2 cooling fan fan motor connector.

NG ► REPLACE NO. 2 COOLING FAN MOTOR

OK

12.	CHECK HARNESS AND CONNECTOR (NO. 2 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)
-----	--

(a) Disconnect the No. 2 cooling fan motor connector.

(b) Remove the FAN No. 2 relay and FAN No. 3 relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
A6-1 - 3 (FAN No. 2 relay)	Always	Below 1 Ω
A6-2 - 3 (FAN No. 3 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
A6-1 or 3 (FAN No. 2 relay) - Body ground	Always	10 kΩ or higher
A6-2 or 3 (FAN No. 3 relay) - Body ground	Always	10 kΩ or higher

Text in Illustration

*1	Front view of wire harness connector (to No. 2 Cooling Fan Motor)
*2	Engine Room Relay Block

(d) Reconnect the No. 2 cooling fan motor connector.

(e) Reinstall the FAN No. 2 relay and FAN No. 3 relay.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (NO. 2 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)

OK

13.	INSPECT ENGINE ROOM RELAY BLOCK (FAN NO. 1 RELAY - FAN NO. 2 RELAY)
-----	---

*1

(a) Remove the FAN No. 1 relay and FAN No. 2 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
1 (FAN No. 1 relay) - 1 (FAN No. 2 relay)	Always	Below 1 Ω

Tester Connection	Condition	Specified Condition
2 (FAN No. 1 relay) - 2 (FAN No. 2 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
1 (FAN No. 1 relay) or 1 (FAN No. 2 relay) - Body ground	Always	10 k Ω or higher
2 (FAN No. 1 relay) or 2 (FAN No. 2 relay) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Engine Room Relay Block
----	-------------------------

(c) Reinstall the FAN No. 1 relay and FAN No. 2 relay.

NG  REPLACE ENGINE ROOM RELAY BLOCK

OK  REPLACE ECM

14.	CHECK FUSE (ECU-IG NO. 1 FUSE VOLTAGE)
-----	--

*1

(a) Remove the ECU-IG No. 1 fuse from the instrument panel junction block.

c

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
-------------------	------------------	---------------------

Tester Connection	Switch Condition	Specified Condition
1 (ECU-IG No. 1 fuse) - Body ground	Power switch on (IG)	11 to 14 V

Text in Illustration

*1	Driver Side Junction Block
----	----------------------------

(d) Reinstall the ECU-IG No. 1 fuse.

NG [▶ INSPECT DRIVER SIDE JUNCTION BLOCK ASSEMBLY \(IG1 NO. 1 RELAY\)](#)

OK

15.	INSPECT DRIVER SIDE JUNCTION BLOCK ASSEMBLY
-----	---

(a) Disconnect the driver side junction block assembly connector.

(b) Remove the ECU-IG No. 1 fuse from the driver side junction block assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
2C-30 - 2 (ECU-IG No. 1)	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
2C-30 or 2 (ECU-IG No. 1) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Component without harness connected (Driver Side Junction Block Assembly)	*2	Driver Side Junction Block Assembly
----	--	----	-------------------------------------

(d) Reconnect the ECU-IG No. 1 fuse.

(e) Reconnect the Driver side junction block assembly connector.

NG  REPLACE DRIVER SIDE JUNCTION BLOCK ASSEMBLY

OK

16.	INSPECT FAN NO. 1 RELAY
-----	-------------------------

(a) Remove the FAN No. 1 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 k Ω or higher
	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

(c) Reinstall the FAN No. 1 relay.

NG  REPLACE FAN NO. 1 RELAY

OK

17. INSPECT FAN NO. 2 RELAY

(a) Remove the FAN No. 2 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 4	Battery voltage is not applied between terminals 1 and 2	Below 1 Ω
	Battery voltage is applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

(c) Reinstall the FAN No. 2 relay.

NG REPLACE FAN NO. 2 RELAY

OK

18. INSPECT FAN NO. 3 RELAY

(a) Remove the FAN No. 3 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 k Ω or higher
	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

(c) Reinstall the FAN No. 3 relay.

NG  REPLACE FAN NO. 3 RELAY

OK

19.	CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - ECM)
-----	---

(a) Remove the FAN No. 1 relay, FAN No. 2 relay and FAN No. 3 relay from the engine room relay block.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
2 (FAN No. 1 relay) - A57-22 (FANH)	Always	Below 1 Ω

Tester Connection	Condition	Specified Condition
2 (FAN No. 2 relay) - A57-22 (FANH)	Always	Below 1 Ω
2 (FAN No. 3 relay) - A57-21 (FANL)	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
2 (FAN No. 1 relay) or A57-22 (FANH) - Body ground	Always	10 k Ω or higher
2 (FAN No. 2 relay) or A57-22 (FANH) - Body ground	Always	10 k Ω or higher

OK ► CHECK SMART KEY SYSTEM

ON-VEHICLE INSPECTION

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized hot engine coolant and steam may be released and cause serious burns.

NOTICE:

Before performing each inspection, turn the A/C switch off.

1. INSPECT FOR COOLANT LEAK (for Engine)

CAUTION:

Do not remove the reservoir tank cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

NOTICE:

Before performing each inspection, turn the A/C switch off.

(a) Remove the reservoir tank cap.

(b) Fill the radiator and reservoir with coolant, and then attach a radiator cap tester.

(c) Put the engine in inspection mode INFO.

(d) Warm up the engine.

(e) Using the reservoir cap tester, increase the pressure inside the radiator to 108 kPa (1.1 kgf/cm², 16 psi), and check that the pressure does not drop. If the pressure drops, check the hoses, radiator, front exhaust pipe assembly and the heater hose around and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and cylinder head.

(f) Remove the radiator cap tester.

(g) Install the reservoir tank cap.

2. INSPECT RESERVOIR TANK ENGINE COOLANT LEVEL (for Engine)

(a) Check that the engine coolant level is between the low and full lines when the engine is cold.

Text in Illustration

*1	Full line
*2	Low line

HINT:

If the engine coolant level is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the full line.

3. INSPECT ENGINE COOLANT QUALITY (for Engine)

(a) Remove the reservoir tank cap.

CAUTION:

Do not remove the reservoir tank cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

(b) Check if there are any excessive deposits of rust or scales around the radiator cap and radiator filler hole. Also, the coolant should be free of oil.

If excessively dirty, clean the coolant passage and replace the coolant.

(c) Install the reservoir tank cap.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Exhaust Heat Recirculation System

Symptom	Suspected Area	See page
Engine overheating	Engine coolant leaks (for engine side)	INFO
	Engine coolant leaks (for exhaust heat recirculation system)	INFO
	Front exhaust pipe assembly	INFO
	Exhaust pipe gas control actuator	INFO
	Exhaust heat recirculation system circuit	INFO
	Engine coolant temperature sensor (for exhaust heat recirculation system)	INFO

ON-VEHICLE INSPECTION

1. INSPECT FRONT EXHAUST PIPE ASSEMBLY

(a) Inspect exhaust flow control valve operation.

(1) Using a screwdriver, move the exhaust flow control valve from the bottom of the vehicle. Check that the valve moves smoothly.

Text in Illustration

*1	Protective Tape
----	-----------------

OK:

Valve moves smoothly.

(2) If the valve is stuck or does not move smoothly, replace the front exhaust pipe assembly INFO.

(b) Inspect the exhaust pipe gas control actuator.

(1) Connect the Techstream to the DLC3.

(2) Turn the power switch on (IG) and turn the Techstream on.

(3) Enter the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

(4) While checking the engine coolant temperature with the Techstream check the operation of the exhaust pipe gas control actuator rod when the temperature rises.

Standard:

Condition	Rod Operation
Cold (below approx. 71°C (160°F)) → Warmed up (approx. 80°C (176°F) or more)	Rod gradually extends as the temperature rises.

- After the engine has warmed up (thermostat temperature is approximately 80°C (176°F) or more), the rod should be extended approximately 7.2 mm (0.284 in.) or more compared to when the engine is cold (thermostat temperature is below 71°C (160°F)).
- The water temperature shown in the Data List may slightly deviate from the thermostat temperature. This is because the Data List value indicates the temperature detected by the water temperature sensor, which is mounted on the engine, while the thermostat is

positioned in the exhaust pipe gas control actuator.

- If it is difficult to check while the rod is operating, allow the engine to cool down until the water temperature matches the ambient temperature and then check the rod operation again.

(5) If the exhaust pipe gas control actuator rod does not move smoothly, replace the exhaust pipe gas control actuator **INFO**.

(6) Check for any cracks or damage on the exhaust pipe gas control actuator rod.

OK:

No cracks or damage is found.

(7) If any cracks or damage is found, replace the front exhaust pipe assembly **INFO**.

2. INSPECT FOR ENGINE COOLANT LEAK FROM FRONT EXHAUST PIPE ASSEMBLY

CAUTION:

Do not remove the reservoir tank cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

NOTICE:

Be sure to turn the A/C switch off before starting the following inspection.

(a) Turn the power switch off. Check for engine coolant leaks from the front exhaust pipe assembly and the heater hose around the engine coolant temperature sensor.

(b) Add engine coolant to the radiator and install the radiator cap tester.

(c) Pump it to 108 kPa (1.1 kgf/cm², 16 psi), then check that the pressure does not drop.

If the reading drops, check for leaks from the front exhaust pipe assembly and the heater hose around the engine coolant temperature sensor.

DESCRIPTION

In the exhaust heat recirculation system, coolant is warmed up using conventionally wasted exhaust gas heat to accelerate engine warm-up time, enhancing fuel efficiency and heater performance.

The heat recirculator is positioned in the front exhaust pipe assembly after the catalyst. Coolant from the engine flows around the heat recirculator and then returns to the engine. If the engine is started while the engine is cold, the exhaust pipe gas control actuator rod is contracted and the exhaust flow control valve is closed, routing the exhaust gas around the heat recirculator to warm up the coolant.

After the engine coolant temperature rises and the engine has warmed up, the heat of the coolant expands the thermostat and the exhaust pipe gas control actuator rod extends. This opens the exhaust flow control valve to switch to the normal exhaust gas path.

The exhaust flow control valve can also be opened by exhaust gas pressure to prevent insufficient acceleration performance when the engine is cold. In addition, to monitor the engine coolant temperature, a engine coolant temperature sensor (for exhaust heat recirculation system) is provided between the engine and the heat recirculator. The engine coolant temperature sensor (for exhaust heat recirculation system) has a built-in thermistor with a resistance that varies according to the temperature of the engine coolant. When the engine coolant temperature becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are transmitted to the No. 3 meter circuit plate as voltage changes. If the engine coolant temperature is excessively high (overheating), the water temperature indicator light in the No. 3 meter circuit plate illuminate to inform the driver of the malfunction.

Valve Closed:

Valve Open:

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - COMBINATION METER)
----	---

*1

(a) Disconnect the engine coolant temperature sensor (for exhaust heat recirculation system) connector.

*2

(b) Disconnect the No. 3 meter circuit plate connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
G2-2 (TWS3) - L27-16 (TWS3)	Always	Below 1 Ω
G2-1 (E2) - L27-9 (E2)	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Condition	Condition	Specified Condition
G2-2 (TWS3) or L27-16 (TWS3) - Body ground	Always	10 kΩ or higher

Text in Illustration

*1	Front view of wire harness connector (to No. 3 Meter Circuit Plate)
*2	Front view of wire harness connector (to Engine Coolant temperature sensor)

(d) Reconnect the No. 3 meter circuit plate connector.

(e) Reconnect the engine coolant temperature sensor (for exhaust heat recirculation system) connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - COMBINATION METER)

OK

2.

INSPECT ENGINE COOLANT TEMPERATURE SENSOR (FOR EXHAUST HEAT RECIRCULATION SYSTEM)

(a) Inspect the engine coolant temperature sensor (for exhaust heat recirculation system) .

NG ► REPLACE ENGINE COOLANT TEMPERATURE SENSOR (FOR EXHAUST HEAT RECIRCULATION SYSTEM)

OK ► REPLACE NO. 3 METER CIRCUIT PLATE

*1	Exhaust Pipe Gas Control Stopper
*2	Exhaust Pipe Gas Control Actuator
*3	Port A
*4	Port B

HINT:

Use a piece of cloth to catch the exhaust pipe gas control actuator.

INSTALLATION

1. INSTALL EXHAUST PIPE GAS CONTROL ACTUATOR

NOTICE:

When installing the water hose, ensure that the exhaust heat recirculation system is filled with coolant. Otherwise, the electric water pump may be damaged.

(a) Apply engine coolant to the O-ring.

Text in Illustration

*1	Exhaust Pipe Gas Control Actuator Case
*2	Exhaust Pipe Gas Control Stopper
*3	Exhaust Pipe Gas Control Actuator
*4	O-ring
*5	Piston

(b) Install the exhaust pipe gas control actuator and exhaust pipe gas control stopper.

NOTICE:

- Be sure to install the exhaust pipe gas control stopper in the correct direction.
- Check that the O-ring is not deformed, cracked or swollen.
- Be sure to install the exhaust pipe gas control actuator until it touches the exhaust pipe gas control stopper.
- When installing the exhaust pipe gas control actuator, do not push on the piston.
- Make sure that the exhaust pipe gas control actuator and the exhaust pipe gas control stopper are free of oil.

(c) Install a new gasket and the exhaust pipe gas control actuator case with the 3 bolts and 3 nuts.

Text in Illustration

*1	Gasket

ON-VEHICLE INSPECTION

1. CHECK RESERVE TANK CAP (for Engine)

(a) Measure the valve opening pressure.

(1) If there are water stains or foreign matter on O-ring 1, clean it with water and finger scouring.

(2) Check that O-ring 1 is not deformed, cracked or swollen.

(3) Apply engine coolant to O-ring 1 and rubber packing 2 before using a radiator cap tester.

(4) When using the cap tester, tilt it upwards 30 degrees or more.

(5) Pump the cap tester several times, and check the maximum pressure*1.

Text in Illustration

*1	Radiator Cap Tester
*2	Radiator Cap

Pumping speed:

1 pump per second

HINT:

*1: Even if the cap cannot maintain the maximum pressure, it is not a defect.

Judgment Criterion:

Item	Specified Condition
Standard value (for brand-new cap)	94 to 122 kPa (1.0 to 1.2 kgf/cm ² , 13.5 to 17 psi)

Minimum standard value (after using cap)	79 kPa (0.8 kgf/cm ² , 11.4 psi)
---	---

If the maximum pressure is less than the minimum standard value, replace the radiator cap sub-assembly.

REMOVAL

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 k Ω or higher
3 - 5	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the cooling fan relay.

2. INSPECT NO. 2 COOLING FAN RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 4	Battery voltage is not applied between terminals 1 and 2	Below 1 Ω
3 - 4	Battery voltage is applied between terminals 1 and 2	10 k Ω or higher
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 k Ω or higher
3 - 5	Battery voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the cooling fan relay.

3. INSPECT NO. 3 COOLING FAN RELAY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 k Ω or higher

3 - 5	Battery voltage is applied between terminals 1 and 2	Below 1 Ω
-------	--	------------------

If the result is not as specified, replace the cooling fan relay.

REMOVAL

1. REMOVE NO. 1 ENGINE UNDER COVER

2. DRAIN ENGINE COOLANT (for Engine)_INFO

3. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

(a) Disconnect the engine coolant temperature sensor connector.

(b) Using a union nut wrench (19 mm), remove the engine coolant temperature sensor.

NOTICE:

Do not apply any excessive force to the heater pipe when removing the engine coolant temperature sensor.

INSPECTION

1. INSPECT ENGINE COOLANT TEMPERATURE SENSOR

(a) Measure the resistance according to the value(s) in the table below.

6

Standard Resistance:

Condition	Specified Condition
Approximately 20°C (68°F)	2.32 to 2.59 kΩ
Approximately 80°C (176°F)	0.310 to 0.326 kΩ

NOTICE:

When checking the engine coolant temperature sensor in water, keep the terminals dry. After the check, dry the engine coolant temperature sensor.

If the resistance is not as specified, replace the engine coolant temperature sensor.

INSTALLATION

1. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Using a union nut wrench (19 mm), install the engine coolant temperature sensor.

Torque: **8.0 N·m (82 kgf·cm, 71in·lbf)**

NOTICE:

Do not apply any excessive force to the heater pipe when installing the engine coolant temperature sensor.

10. INSPECT SRS WARNING LIGHT

(a) Inspect SRS warning light [INFO](#).

PRECAUTION

1. NOTICE FOR INITIALIZATION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	

2. HANDLING PRECAUTION FOR CRUISE CONTROL SYSTEM

- (a) Turn the cruise control main switch (ON-OFF button) off when not using the cruise control system.
- (b) Be careful as the vehicle speed increases when driving downhill with the cruise control system on.
- (c) The +RES operation changes according to the cruise control system status. When the cruise control system is operating, the + function operates. When the cruise control system is not operating, the RES function operates.
- (d) If the cruise main indicator light blinks while the cruise control system is operating, turn the cruise control main switch (ON-OFF button) off to reset the cruise control system. After the reset, if the cruise control main switch (ON-OFF button) cannot be turned on, or the cruise control system is canceled immediately after turning the cruise control main switch (ON-OFF button) on, the system may have a malfunction.
- (e) Do not use the cruise control system where the road conditions are as follows:
 - Heavy traffic
 - Steep decline
 - Roads with sharp turns
 - Icy or snowy roads
 - Slippery roads
- (f) Do not use the cruise control system while towing.

SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

The cruise control system maintains constant vehicle speed. It enables the driver to adjust the vehicle speed by operating the cruise control main switch without using the accelerator pedal.

The power management control ECU receives signals from each switch and sensor, and maintains constant vehicle speed by optimizing the use of the engine and motor driving force.

- The power management control ECU receives signals such as ON-OFF, - SET, + RES, and CANCEL from the cruise control main switch and executes the command.
- The power management control ECU illuminates the combination meter's cruise main indicator light when it receives a cruise control main switch (ON-OFF button) ON signal.

Text in Illustration

*1	Cruise Main Indicator Light
*2	"SET" Indicator

SET *2

- The power management control ECU displays "SET" on the multi-information display when constant speed control is started by pushing the cruise control main switch to "- SET".
- The power management control ECU cancels cruise control operation when the brake pedal is depressed and the power management control ECU receives a stop light switch signal.
- The power management control ECU cancels cruise control operation when the shift lever is moved from D to N or B position, and the power management control ECU receives a shift position sensor signal.

2. LIMIT CONTROL

(a) Low speed limit

The lowest possible limit of the speed setting range is set at approximately 40 km/h (25 mph). The cruise control system cannot be set when the vehicle speed is below the low speed limit. Cruise control operation will

be automatically canceled but the stored vehicle speed will be retained when the vehicle speed drops below the low speed limit of 40 km/h (25 mph) while the cruise control is in operation.

(b) High speed limit

The highest possible limit of the speed setting range is set at approximately 200 km/h (125 mph). The cruise control system cannot be set when the driving vehicle speed is over the high speed limit. Also, + RES cannot be used to increase speed over the high speed limit.

3. CRUISE CONTROL OPERATION

The cruise control main switch operates 7 functions: SET, -, TAP-DOWN, RES, +, TAP-UP, and CANCEL. The SET, TAP-DOWN, and - functions, and the RES, TAP-UP, and + functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while it is being operated in the direction of each arrow and turns off after being released.

(a) SET CONTROL

Vehicle speed is stored and constant speed control is maintained when pushing the cruise control main switch to - SET while driving with the main switch on (the cruise main indicator light and "SET" indicator come on), and the vehicle speed is within the set speed range (between the low and high speed limits).

(b) - CONTROL

The power management control ECU decreases the cruise control demand speed and controls the engine and motor driving force to decelerate the vehicle when - SET on the cruise control main switch is pressed and held while the cruise control system is in operation. When the cruise control main switch is released from - SET, vehicle speed is stored and constant speed control is maintained.

(c) TAP-DOWN CONTROL

When tapping down the cruise control main switch to - SET (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed decreases each time by approximately 1.6 km/h (1 mph). When the cruise control main switch is released from - SET and the difference between the driving and stored vehicle speeds is more than 5 km/h (3 mph), the vehicle speed is stored and constant speed control is maintained.

(d) + CONTROL

The power management control ECU increases the cruise control demand speed and controls the engine and motor driving force to accelerate the vehicle when pushing and holding the cruise control main switch to + RES while the cruise control system is in operation.

When the cruise control main switch is released from + RES, vehicle speed is stored and constant speed control is maintained.

(e) TAP-UP CONTROL

When tapping up the cruise control main switch to + RES (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed increases each time by approximately 1.6 km/h (1 mph).

However, when the difference between the driving and the stored vehicle speeds is more than 5 km/h (3 mph), the stored vehicle speed will not be changed.

(f) RES CONTROL

If cruise control operation was canceled with the stop light switch assembly or the CANCEL switch, and if driving speed is within the limit range, pushing the cruise control main switch to + RES restores vehicle speed memorized at the time of cancellation, and maintains constant speed control.

(g) MANUAL CANCEL CONTROL

Performing any of the following cancels the cruise control system while it is operating (the stored vehicle speed in the ECM is maintained).

- Depressing the brake pedal
- Moving the shift lever from D to N or B position
- Pushing the cruise control main switch to CANCEL
- Turning the cruise control main switch (ON-OFF button) off (the stored vehicle speed in the ECM is not maintained)

4. AUTO CANCEL (FAIL-SAFE)

This system has an automatic cancellation function (fail-safe)  .

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the cruise control system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	INSPECT BATTERY VOLTAGE
----	-------------------------

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

NEXT

3.	CHECK COMMUNICATION FUNCTION OF CONTROLLER AREA NETWORK (CAN)*
----	--

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B  GO TO CAN COMMUNICATION SYSTEM

A

4.	CHECK FOR DTC*
----	----------------

Refer to DTC Check / Clear .

(a) Check for DTCs and note any codes that are output.

(b) Clear the DTCs.

(c) Recheck for DTCs. Try to reproduce the DTCs by duplicating the conditions indicated by the DTCs.

Result:

Result	Proceed to
DTC does not reoccur	A

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Inspect the SET function.

Text in Illustration

*1	ON/OFF
*2	- SET

(1) Turn the cruise control main switch (ON-OFF button) on.

(2) Check that the cruise main indicator light illuminates on the combination meter assembly.

(3) Drive at a speed of between 40 km/h (25 mph) and 200 km/h (125 mph).

(4) Push the cruise control main switch to - SET.

Text in Illustration

*1	Cruise Main Indicator Light
*2	"SET" Indicator

(5) Check that "SET" is indicated on the multi-information display.

(6) After releasing the switch, check that the vehicle cruises at the set speed.

(b) Inspect the + function.

Text in Illustration

*1	ON/OFF
*2	- SET
*3	+ RES

- (1) Turn the cruise control main switch (ON-OFF button) on.
 - (2) Drive at the required speed (40 km/h (25 mph) or higher).
 - (3) Push the cruise control main switch to - SET.
 - (4) Check that vehicle speed increases while the cruise control main switch is pushed to + RES, and that the vehicle cruises at the newly set speed when the switch is released.
 - (5) Push the cruise control main switch to + RES and then release it immediately. Check that vehicle speed increases by approximately 1.6 km/h (1 mph) (tap-up control).
- (c) Inspect the - function.

Text in Illustration

*1	ON/OFF
*2	- SET

H

- (1) Turn the cruise control main switch (ON-OFF button) on.
 - (2) Drive at a speed of between 40 km/h (25 mph) and 200 km/h (125 mph).
 - (3) Push the cruise control main switch to - SET.
 - (4) Check that vehicle speed decreases while the cruise control main switch is pushed to - SET, and the vehicle cruises at the newly set speed when the switch is released.
 - (5) Push the cruise control main switch to - SET, and then release it immediately. Check that vehicle speed decreases by approximately 1.6 km/h (1 mph) (tap-down control).
- (d) Inspect the CANCEL function.

Text in Illustration

*1	ON/OFF
*2	- SET

*3	CANCEL
----	--------

- (1) Turn the cruise control main switch (ON-OFF button) on.
- (2) Drive at a speed of between 40 km/h (25 mph) and 200 km/h (125 mph).
- (3) Push the cruise control main switch to - SET.
- (4) When performing any one of the following, check that the operation of the cruise control system is cancelled, normal driving resumes and "SET" on the multi-information display goes off.
 - Depressing the brake pedal
 - Moving the shift lever from D to N or selecting 3rd, 2nd, or 1st gear with the shift lever in S
 - Turning the cruise control main switch off
 - Pulling the cruise control main switch to CANCEL
- (e) Inspect the RES function.

Text in Illustration

*1	ON/OFF
*2	- SET
*3	+ RES

- (1) Turn the cruise control main switch (ON-OFF button) on.
- (2) Drive at a speed of between 40 km/h (25 mph) and 200 km/h (125 mph).
- (3) Push the cruise control main switch to - SET.
- (4) Cancel cruise control operation by performing any of the above operations (other than turning the main switch off).
- (5) After pushing the cruise control main switch to "+ RES" at a speed of more than 40 km/h (25 mph), check that the vehicle resumes the speed set prior to the cancellation and that "SET" is also displayed on the multi-information display.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

DIAGNOSIS SYSTEM

1. DESCRIPTION

The power management control ECU controls the cruise control system of the vehicle. The data and DTCs relating to the cruise control system can be read from the DLC3 of the vehicle. If either DTC or CRUISE OK is not displayed on the multi-information display on the combination meter when checking for DTCs, there may be a problem with either the combination meter or the CAN communication system. Use the Techstream to check and solve the problem.

HINT:

If a vehicle speed sensor, stop light switch or any other related part malfunctions, the power management control ECU cancels cruise control operation automatically.

2. CHECK DLC3

(a) Check the DLC3 INFO.

3. CHECK INDICATOR

(a) Turn the power switch on (IG).

Text in Illustration

*1	Cruise Main Indicator Light
----	-----------------------------

(b) Check that the CRUISE main indicator light turns on when the cruise control switch (ON-OFF button) is turned on, and that the indicator light turns off when the control switch (ON-OFF button) is turned off.

HINT:

- If the indicator check result is not normal, proceed to troubleshooting for the cruise main indicator light circuit INFO.

CRUISE Main Indicator Light

If a malfunction occurs in the speed sensor or stop light switch, etc., during cruise control driving, the power management control ECU activates the AUTO CANCEL of the cruise control and turns on and

off the CRUISE main indicator light to inform the driver of a malfunction. At the same time, the malfunction is stored in memory as a diagnostic trouble code.

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Tune the Techstream on.
- (d) Enter the following menus: Powertrain / Cruise Control / Trouble Codes.
- (e) Read the DTCs.

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Cruise Control / Trouble Codes.
- (e) Clear the DTCs.

FAIL-SAFE CHART

HINT:

If the following conditions are detected while cruise control is in operation, the system clears the stored vehicle speed in the hybrid vehicle control ECU and cancels the cruise control operation.

Vehicle Condition	Auto Cancel Condition	Re-operation Condition
Cruise main indicator light blinks	<ul style="list-style-type: none"> • There is problem with input circuit of stop light switch circuit • There is problem with cancel circuit • There is problem with electronically controlled brake system • There is open or short in stop light switch circuit • Communication stop between brake booster with master cylinder (skid control ECU) and power management control ECU • There is problem with hybrid vehicle control system 	<ul style="list-style-type: none"> • Turn cruise control main switch on again • Turn power switch off then on (IG) again
Cruise main indicator light remains on (Cruise control is canceled)	<ul style="list-style-type: none"> • Vehicle speed is lower than low speed limit (approximately. 40 km/h (25 mph)) while running with cruise control on • Electronically controlled brake system operates 	Push cruise control main switch to + RES
	<ul style="list-style-type: none"> • Vehicle speed is lower than stored speed by approximately 16 km/h (10 mph) or more 	Push cruise control main switch to - SET

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Cruise Control / Data List.
- (e) According to the display on the Techstream, read the Data List.

Cruise Control (Power Management Control ECU)

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
CCS Vehicle Spd	Vehicle speed/min.: 0 km/h (0 mph), max.: 255 km/h (159 mph)	Actual vehicle speed is displayed	-

# Codes	Number of present trouble codes/min.: 0, max.: 255	Number of DTCs displayed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (e) According to the display on the Techstream, perform the "Active Test".

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Lamp Cruise	Cruise main indicator light	ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is displayed during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

Cruise Control System

DTC Code	Detection Item	Trouble Area	See page
P0571	Brake Switch "A" Circuit	- Stop light switch assembly - Stop light switch assembly circuit - Power management control ECU	INFO
P0575	Cruise Control Input Circuit	- Power management control ECU	INFO

U0122	Lost Communication with Vehicle Dynamics Control Module	- Brake booster with master cylinder (skid control ECU) - CAN communication system - Power management control ECU	INFO

DTC

P0571

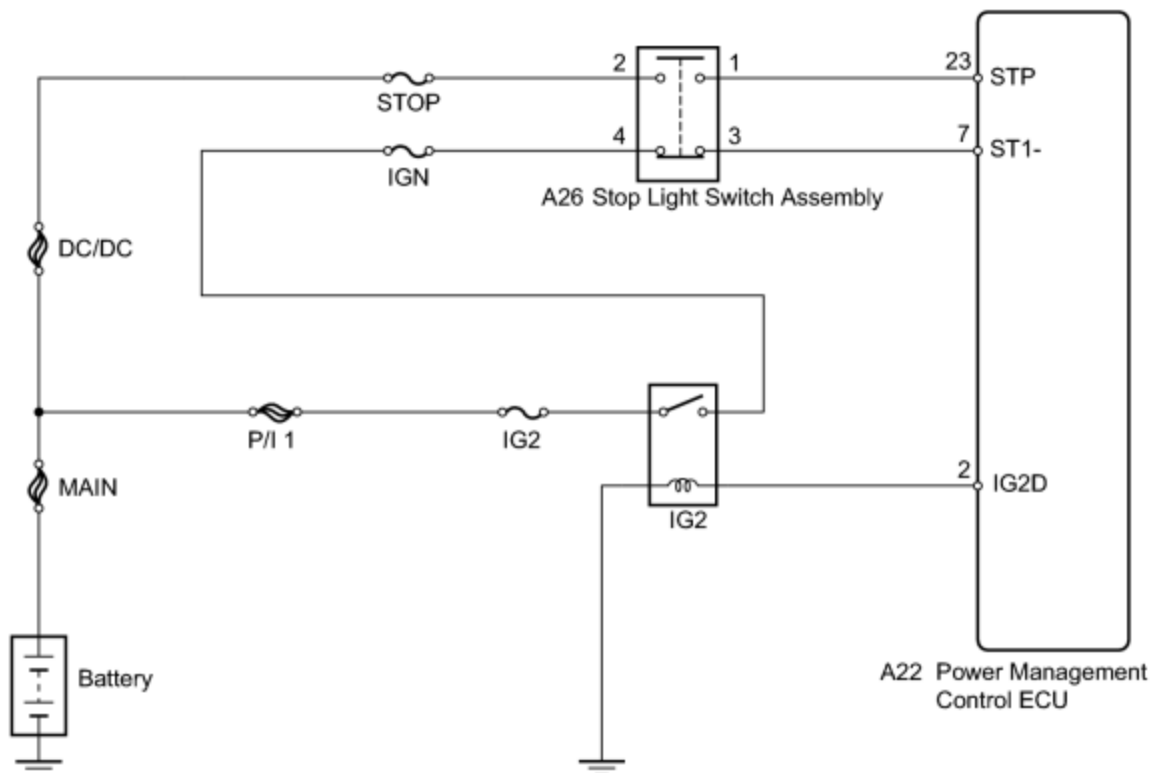

Brake Switch "A" Circuit

DESCRIPTION

When the brake pedal is depressed, the stop light switch assembly sends a signal to the power management control ECU. When the power management control ECU receives this signal, it cancels the cruise control. The fail-safe function operates to enable normal driving even if there is a malfunction in the stop light signal circuit. Cruise control cancellation occurs when voltage is applied to terminal STP. When the brake is applied, voltage is normally applied to terminal STP of the power management control ECU through the STOP fuse and the stop light switch assembly, and the power management control ECU turns the cruise control off.

DTC	DTC Detection Condition	Trouble Area
P0571	Voltage of STP signal and that of ST1- signal of power management control ECU are less than 1 V for 0.5 seconds or more	<ul style="list-style-type: none"> • Stop light switch assembly • Stop light switch assembly circuit • Power management control ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. INSPECT STOP LIGHT SWITCH ASSEMBLY (POWER SOURCE)

*1

(a) Disconnect the stop light switch assembly connector.

N

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A26-2 - Body ground	Always	11 to 14 V

Text in Illustration

*1

Front view of wire harness connector
(to Stop Light Switch Assembly)

(c) Reconnect the stop light switch assembly connector.

NG REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - BATTERY)

OK

2. INSPECT STOP LIGHT SWITCH ASSEMBLY (POWER SOURCE)

(a) Disconnect the stop light switch assembly connector.

*1

N

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A26-4 - Body ground	Power switch on (IG)	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Stop Light Switch Assembly)
----	---

(d) Reconnect the stop light switch assembly connector.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - IG2 RELAY)

OK

3.	INSPECT STOP LIGHT SWITCH ASSEMBLY
----	------------------------------------

(a) Remove the stop light switch assembly  .

*1

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin not pushed	Below 1 Ω
3 - 4	Switch pin not pushed	10 k Ω or higher
1 - 2	Switch pin pushed	10 k Ω or higher
3 - 4	Switch pin pushed	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Stop Light Switch Assembly)
*2	Not pushed
*3	Pushed

(c) Reinstall the stop light switch assembly INFO.

NG ▶ REPLACE STOP LIGHT SWITCH ASSEMBLY

OK

4.	CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - STOP LIGHT SWITCH ASSEMBLY)
----	---

(a) Disconnect the power management control ECU connector.

*1

*2

(b) Disconnect the stop light switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
A22-23 (STP) - A26-1	Always	Below 1 Ω
A22-7 (ST1-) - A26-3	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
A22-23 (STP) or A26-1 - Body ground	Always	10 k Ω or higher
A22-7 (ST1-) or A26-3 - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector (to Stop Light Switch Assembly)
*2	Front view of wire harness connector (to Power Management Control ECU)

(d) Reconnect the stop light switch assembly connector.

(e) Reconnect the power management control ECU connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - STOP LIGHT SWITCH ASSEMBLY)

OK ► **REPLACE POWER MANAGEMENT CONTROL ECU**

DTC

P0575

Cruise Control Input Circuit

DESCRIPTION

This DTC indicates the internal abnormalities of the power management control ECU.

DTC	DTC Detection Condition	Trouble Area
P0575	When both of the following conditions are met: <ul style="list-style-type: none"> • STP signals input to the power management control ECU supervisory CPU and control ECU are different for 0.15 seconds or more • 0.4 seconds have passed after cruise cancel input signal (STP input) is input to the power management control ECU 	Power management control ECU

HINT:

The power management control ECU receives signals from each sensor to control all functions of the cruise control system. When a trouble code is detected, the fail-safe function activates and remains on until the power switch is turned off.

INSPECTION PROCEDURE

PROCEDURE

1.	READ OUTPUT DTC (P0575)
----	-------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Clear the DTC .
- (e) Perform the following to make sure that the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the malfunction cannot be detected.

- (1) Drive the vehicle at a speed of 40 km/h (25 mph) or more.
- (2) Turn the cruise control main switch (ON-OFF button) on.
- (3) Push the -SET switch to activate the cruise control.
- (f) Enter the following menus: Powertrain / Cruise Control / Trouble Codes.

(g) Read the DTCs.

Result:

Result	Proceed to
DTC is not output	A
DTC P0575 is output	B

INSPECTION PROCEDURE

HINT:

This circuit uses CAN communication. Therefore, if there are any malfunctions in the communication circuit, one or more DTCs in the CAN communication system are output.

PROCEDURE

1. CHECK DTC (ELECTRONICALLY CONTROLLED BRAKE SYSTEM)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.

(d) Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(e) Read the DTC.

Result:

Result	Proceed to
DTC is not output	A
DTC is output	B

B ▶ [GO TO ELECTRONICALLY CONTROLLED BRAKE SYSTEM](#)

U0122

Lost Communication with Vehicle Dynamics Control Module

DESCRIPTION

The vehicle speed sensor sends the vehicle speed signal to the brake booster with master cylinder (skid control ECU), and then it is sent to the power management control ECU.

DTC Code	DTC Detection Condition	Trouble Area
U0122	While power switch is on (IG), communication stop between brake booster with master cylinder (skid control ECU) and power management control ECU continues for 2.6 seconds or more	<ul style="list-style-type: none"> • Brake booster with master cylinder (skid control ECU) • CAN communication system • Power management control ECU

INSPECTION PROCEDURE

Refer to CAN Communication System .

PROCEDURE

1. CHECK CAN COMMUNICATION SYSTEM

- Connect the Techstream to the DLC3.
- Select "Bus Check" from the "System Select".
- Select "Communication Malfunction DTC" from the "Bus Check" screen, and then select "Enter".

Result:

Result	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

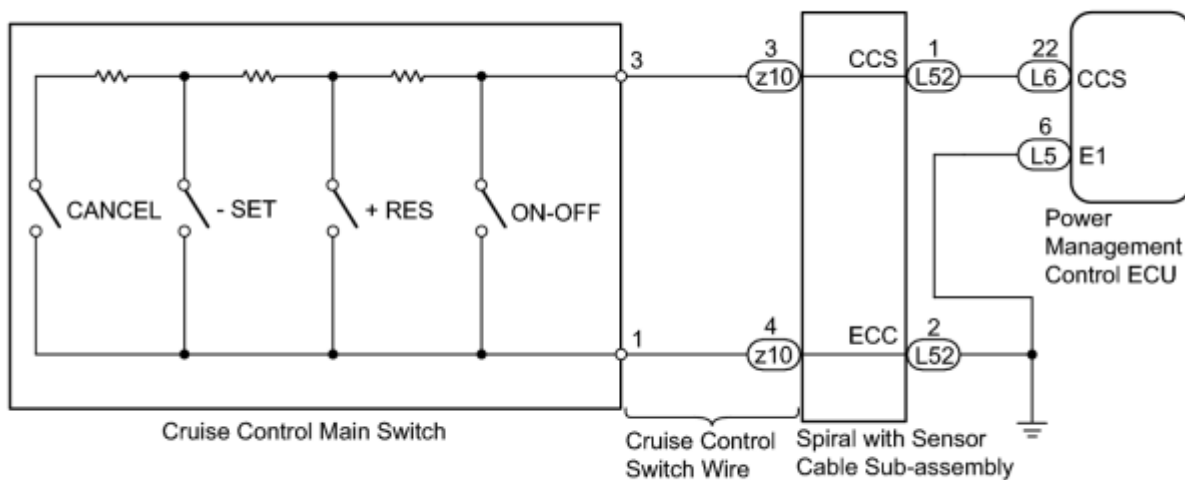

B ▶ GO TO CAN COMMUNICATION SYSTEM

A ▶ USE SIMULATION METHOD TO CHECK

DESCRIPTION

The cruise control main switch operates 7 functions: SET, -, TAP-DOWN, RES, +, TAP-UP, and CANCEL. The SET, TAP-DOWN, and - functions, and the RES, TAP-UP, and + functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while it is being operated in the direction of each arrow and turns off after being released. The internal contact point of the cruise control main switch is turned on with the switch operation. Then the power management control ECU reads the voltage value that has been changed by the switch operation to control SET, -, RES, +, and CANCEL.

REMOVAL

1. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY INFO

2. REMOVE DRIVING SUPPORT ECU

(a) Disconnect the connector.

(b) Remove the nut and driving support ECU.

INSTALLATION

1. INSTALL DRIVING SUPPORT ECU

(a) Install the driving support ECU with the nut.

NOTICE:

Do not install the driving support ECU if it has been damaged or impacted in any way.

(b) Connect the connector.

2. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY INFO

PRECAUTION

1. NOTICE FOR INITIALIZATION

NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

System Name	See Procedure
Advanced Parking Guidance System	INFO

2. HANDLING PRECAUTION FOR DYNAMIC RADAR CRUISE CONTROL SYSTEM

Keep in mind the following points when inspecting the dynamic radar cruise control system.

- As there is a limitation on the vehicle-to-vehicle distance controlling capability, do not overly rely on the dynamic radar cruise control system.
- Do not neglect to pay constant attention to the vehicle-to-vehicle distance and the traffic conditions when using the dynamic radar cruise control system. Decelerate with the brake pedal, or accelerate with the accelerator pedal, according to the situation, to keep an appropriate distance with the vehicle in front.
- When the vehicle in front decelerates rapidly or another vehicle moves in front of the vehicle, decelerating in time to avoid a collision may not be possible without additional braking.
- The dynamic radar cruise control system is designed to assist in maintaining an appropriate distance with the vehicle in front. However, the system alone is not sufficient. It is imperative that the driver pays attention at all times.
- The millimeter wave radar sensor can automatically detect dirt on the sensor face and inform the driver, but dirt may not always be detected. Keep the sensor face clean.
- The dynamic radar cruise control system does not work, or give vehicle-approaching warning, for vehicles which are stopped or driving at significantly slower speeds. Always pay attention to those other vehicles.
- The millimeter wave radar sensor detection area is narrow at close range, so detection of a vehicle moving just in front may be delayed, or a motorcycle running on the side of the same lane may not be detected. The distance to the vehicle in front may not be maintained properly due to these reasons.
- Even if + (ACCEL) is operated to increase the set vehicle speed, the vehicle does not accelerate because the speed is controlled in accordance with the speed of the vehicle in front while driving with the vehicle-to-vehicle distance control mode on (follow-up cruising). However, as the set vehicle speed has been increased by + (ACCEL) operation, the vehicle keeps accelerating to the set speed when there is no vehicle in front. Check the set speed with the set vehicle speed indication on the display.
- The controlled vehicle distance may be shorter than the set vehicle distance when cruising on a long downhill road.
- The cruise control main switch (ON-OFF button) must be turned off and then on if all of the following occur: 1) the cruise main indicator light blinks, 2) the master warning light illuminates at the same time as a "pong" sound, and 3) the fail message is shown on the multi-information display.
- The vehicle-approaching warning buzzer does not sound in the constant speed control mode because the presence of the vehicle in front and the distance to it are not judged as in the vehicle-to-vehicle distance control mode. Pay attention to the distance to the vehicle in front.
- The dynamic radar cruise control system has 2 cruise control modes: constant speed control mode and vehicle-to-vehicle distance control mode. Confirm which mode is selected when using the dynamic radar cruise control system.

SYSTEM DESCRIPTION

1. GENERAL

(a) The dynamic radar cruise control system has two cruise control modes: constant speed control mode and vehicle-to-vehicle distance control mode.

- Vehicle-to-vehicle distance control mode is always selected when starting the dynamic radar cruise control system.
- Operation of constant speed control mode is the same as that for a conventional cruise control system.

(b) This system maintains the vehicle running at the speed that the driver has set, as long as there are no vehicles ahead. Then, the system maintains the vehicle distance that has been set by the driver. If the system detects a vehicle driving at a slower speed ahead while the driver is driving at a constant speed, it closes the throttle valve to decelerate. If further deceleration is required, the system controls the brake actuator in order to apply the brakes. Thereafter, if there are no vehicles ahead within the set vehicle-to-vehicle distance because either the vehicle ahead or the driver has changed lanes, the system accelerates slowly to reach the set vehicle speed and resumes driving at the constant speed.

(c) Constant speed control mode is designed to maintain a constant cruising speed. The vehicle-to-vehicle distance control mode is designed to control cruising at a constant speed function, deceleration cruising function, follow-up cruising function, and acceleration cruising function.

(d) The millimeter wave radar sensor and the driving support ECU control the system while the vehicle-to-vehicle distance control mode is operating, and send signals to each actuator and ECU.

(e) In vehicle-to-vehicle distance control mode, the dynamic radar cruise control system receives signals from the yaw rate sensor and the steering angle sensor. Based on these signals, the system then estimates curve radius and compensates for information on the preceding vehicle while turning. It can also compensate using brake control when approaching another vehicle.

(f) This system judges the presence of a vehicle in front and the distance to it based on the signals from the radar sensor while vehicle-to-vehicle distance control mode is in operating. Using this information, the system informs the driver of any danger with the warning buzzer, performs brake control, and turns on the stop light when approaching the vehicle in front.

(g) The following illustration shows a control example under the following conditions: own vehicle speed is 100 km/h (62 mph) and the speed of the vehicle in front is 80 km/h (50 mph). Setting of the vehicle distance can be changed to 3 distances by operating the distance control switch (distance control switch): long (approximately 50 m (160 ft.)), middle (approximately 40 m (130 ft.)), and short (approximately 30 m (100 ft.)) when the vehicle speed is approximately 80 km/h (50 mph).

HINT:

- Vehicle distance increases and decreases in accordance with vehicle speed.
- Controlling condition is indicated on the multi-information display in the combination meter.

2. FUNCTION OF MAIN COMPONENTS

Item	Outline
Combination Meter Assembly (Cruise main indicator Light)	<ul style="list-style-type: none"> • Comes on when the main switch (ON-OFF button) is on • If the driving support ECU detects a malfunction, this light flashes to warn the driver
Combination Meter Assembly (Master Warning Light)	If the driving support ECU detects an automatic cancel signal while the vehicle is operating under cruise control, this light comes on to inform the driver
Combination Meter Assembly (Buzzer)	If the driving support ECU detects an automatic cancel signal while the vehicle is operating under cruise control, this buzzer sounds only once to inform the driver
Combination Meter Assembly (Multi-information Display)	<ul style="list-style-type: none"> • The driving support ECU displays "SET" on the multi-information display when constant speed control is started by pushing the cruise control main switch to "- SET". • While the system is in vehicle-to-vehicle distance control mode, the multi-information display receives signals from the driving support ECU, in order to display system conditions in the graphic area • If the driving support ECU detects a malfunction signal while the vehicle is operating under cruise control, a warning message will be displayed in the warning area to inform the driver
Cruise Control Main Switch (ON-OFF button)	Turns the cruise control system on or off

Item	Outline
Cruise Control Main Switch (Control Switch)	<ul style="list-style-type: none"> • Vehicle speed setting, deceleration setting, preset speed resumption, acceleration setting, and cancel signals are output to the driving support ECU through the operation of this switch • Switches the control mode: constant speed control mode and vehicle-to-vehicle distance control mode
Steering Pad Switch (Vehicle-to-vehicle Distance Control Switch)	While the system is in vehicle-to-vehicle distance control mode, the driver can operate the steering pad switch (vehicle-to-vehicle distance control switch) to select the vehicle-to-vehicle distance in three stages: long, middle, and short
Stop Light Switch Assembly	Detects the depression of the brake pedal and transmits its signal to the ECM
Windshield Wiper Switch	Transmits wiper control switch information to the driving support ECU
Millimeter Wave Radar Sensor	Radiates radar rays forward, uses the reflected rays for detecting the presence of a vehicle in front, vehicle-to-vehicle distance, and relative speed, and transmits this information to the driving support ECU
Steering Angle Sensor	Detects the angle and direction of steering and transmits its signal to the driving support ECU
Vehicle Speed Sensor (SP1)	A vehicle speed signal which is output from the brake booster with master cylinder (skid control ECU) is sent to the driving support ECU
Yaw Rate Sensor	Detects the yaw rate of the vehicle and transmits its signal to the driving support ECU
Brake Booster with Master Cylinder (Skid Control ECU)	<ul style="list-style-type: none"> • Actuates the brakes in accordance with signals from the brake booster with master cylinder (skid control ECU) • While the system is in vehicle-to-vehicle distance control mode, the brake booster with master cylinder (skid control ECU) actuates the brake actuator in accordance with a brake request signal received from the driving support ECU • Upon receiving a signal from the driving support ECU, the brake booster with master cylinder (skid control ECU) sounds the skid control buzzer
Skid Control Buzzer	This buzzer sounds upon receiving a signal from the brake booster with master cylinder (skid control ECU)
Power Management Control ECU	Controls the dynamic radar cruise control system in accordance with signals from switches, sensors, and the driving support ECU
Throttle Position Sensor and Motor	Upon receiving a signal from the ECM, the throttle control motor actuates the throttle valve
Driving Support ECU	<ul style="list-style-type: none"> • While the system is in vehicle-to-vehicle distance control mode, the driving support ECU detects a vehicle in front based on a signal from the millimeter wave radar sensor. Then, the driving support ECU calculates the acceleration or deceleration rate in order to attain the target vehicle-to-vehicle distance, and outputs a request signal to the ECM and brake booster with master cylinder (skid control ECU) • If the driving support ECU detects a malfunction in the dynamic radar cruise control system, it will store DTCs (Diagnostic Trouble Codes)

3. LIMIT CONTROL

(a) Low speed limit

The lowest possible limit of the speed setting range is set at approximately 40 km/h (25 mph). The cruise control system cannot be set when the driving vehicle speed is below the low speed limit. Cruise control operation will be automatically canceled when the vehicle speed decreases below the low speed limit of 40 km/h (25 mph) while the cruise control is operating.

(b) High speed limit (constant speed control mode)

The highest possible limit of the speed setting range is set at approximately 200 km/h (125 mph). The cruise control system will be set at the high speed limit when the cruise control is set and the vehicle speed is over the high speed limit. Also, + RES cannot be used to increase speed over the high speed limit.

(c) High speed limit (vehicle-to-vehicle distance control mode)

The highest possible limit of the speed setting range is set at approximately 170 km/h (105 mph).

4. CRUISE CONTROL OPERATION

The cruise control main switch operates 8 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, CANCEL, and MODE. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow and turns off after releasing it. The dynamic radar cruise control system has two cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode.

- The vehicle-to-vehicle distance control mode is always selected when starting up the dynamic radar cruise control system (cruise main indicator light and "RADAR READY" indicator comes on).

*1	Cruise Main Indicator Light (Vehicle-to-vehicle distance control mode)	*2	"RADAR READY" Indicator
----	---	----	-------------------------

- Operation of the constant speed control mode is the same as that for a conventional cruise control system.

(a) MODE CONTROL

Pushing the switch to MODE for more than 1 second while driving with the cruise control main switch ON-OFF button on ("RADAR READY" is on) switches the mode to constant speed control mode.

(b) SET CONTROL (Constant speed control mode)

The vehicle speed is stored and constant speed control is maintained when pushing the switch to - SET while driving with the vehicle speed within the set speed range (between the low and high speed limits) after pushing the cruise control main switch ON-OFF button on, and entering constant speed control mode (cruise main indicator light and "SET" indicator comes on).

Text in Illustration

*1	Cruise Main Indicator Light (Constant speed control mode)
*2	"SET" Indicator

(c) SET CONTROL (Vehicle-to-vehicle distance control mode)

The vehicle speed is stored and vehicle-to-vehicle distance control is maintained when pushing the switch to - SET while driving with the cruise control main switch on ("RADAR READY" is on), and vehicle speed is within the set speed range (between the low and high speed limits) (cruise main indicator light and "SET" indicator comes on).

Text in Illustration

*1	Cruise Main Indicator Light (Vehicle-to-vehicle distance control mode)
*2	"SET" Indicator

(d) - (COAST) CONTROL (Constant speed control mode)

The power management control ECU decreases the cruise control demand speed and controls the engine and motor driving force to decelerate the vehicle when - SET on the cruise control main switch is pressed and held while the cruise control system is operating. When the cruise control main switch is released from - SET, vehicle speed is stored and constant speed control is maintained.

(e) - (COAST) CONTROL (Vehicle-to-vehicle distance control mode)

When the cruise control main switch is held to - SET while the cruise control system is operating, the stored vehicle speed decreases by approximately 5 km/h or 5 mph per second.

(f) TAP-DOWN - (CONTROL) (Constant speed control mode)

When tapping down the cruise control main switch to - SET (for approximately 0.6 seconds or less) while the constant speed control mode is operating, the stored vehicle speed decreases each time by approximately 1.6 km/h (1 mph). When the cruise control main switch is released from - SET and the difference between the driving and stored vehicle speeds is more than 5 km/h (3 mph), the driving vehicle speed is stored and constant speed control is maintained.

(g) TAP-DOWN CONTROL (Vehicle-to-vehicle distance control mode)

When tapping down the cruise control main switch to - SET (for approximately 0.6 seconds or less) while the vehicle-to-vehicle distance control mode is operating, the stored vehicle speed decreases each time by approximately 1.6 km/h or 1 mph.

(h) + (ACCEL) CONTROL (Constant speed control mode)

The power management control ECU increases the cruise control demand speed and controls the engine and motor driving force to accelerate the vehicle when + RES on the cruise control main switch is pressed and held while the cruise control system is operating.

When the cruise control main switch is released from + RES, vehicle speed is stored and constant speed control is maintained.

(i) + (ACCEL) CONTROL (Vehicle-to-vehicle distance control mode)

When + RES on the cruise control main switch is pressed and held while vehicle-to-vehicle distance control mode is operating, the stored vehicle speed increases by approximately 5 km/h or 5 mph per second. Pushing the cruise control main switch to + RES while following the vehicle in front with the vehicle-to-vehicle distance control mode does not increase the actual vehicle speed, but changes only the set vehicle speed.

(j) TAP-UP CONTROL (Constant speed control mode)

When tapping up the cruise control main switch to + RES (approximately 0.6 seconds or less) while the constant speed control mode is operating, the stored vehicle speed increases each time by approximately 1.6 km/h (1 mph). However, when the difference between the driving and the stored vehicle speeds is more than 5 km/h (3 mph), the stored vehicle speed will not be changed.

(k) TAP-UP CONTROL (Vehicle-to-vehicle distance control mode)

When tapping up the cruise control main switch to + RES (for approximately 0.6 seconds or less) while vehicle-to-vehicle distance control mode is operating, the stored vehicle speed increases each time by approximately 1.6 km/h or 1 mph.

(l) MANUAL CANCEL CONTROL

Performing any of the following cancels the cruise control system while it is operating (the stored vehicle speed in the driving support ECU is maintained).

- Depressing the brake pedal
- Moving the shift lever from D to N or, selecting 3rd, 2nd, or 1st range with the shift lever in S
- Pushing the cruise control main switch to CANCEL
- Turning the cruise control main switch off (the stored vehicle speed in the driving support ECU is not maintained)

(m) RES (RESUME) CONTROL

If the cruise control operation was canceled by the stop light switch, CANCEL switch, or shift lever operation, and if driving speed is within the set speed range, pushing the cruise control main switch to + RES restores the vehicle speed memorized at the time of cancellation, and maintains constant speed control. In constant speed control mode, once the vehicle speed drops below the low speed limit, RESUME operation is possible after accelerating past the low speed limit and pushing the cruise control main switch to + RES.

5. BRAKE CONTROL

The driving support ECU determines the distance to the vehicle in front, relative speed, target decreasing speed, and deceleration rate. Based on these data, the ECU transmits a brake demand signal to the brake booster with master cylinder (skid control ECU) via the driving support ECU.

6. AUTO CANCEL (FAIL-SAFE)

This system has an automatic cancellation function (fail-safe) .

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the dynamic radar cruise control system.
- *: Use the Techstream.

1.	VEHICLE BROUGHT TO WORKSHOP
----	-----------------------------

NEXT

2.	INSPECT BATTERY VOLTAGE
----	-------------------------

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

NEXT

3.	CHECK COMMUNICATION FUNCTION OF CONTROLLER AREA NETWORK (CAN)*
----	--

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B   GO TO CAN COMMUNICATION SYSTEM

A

4.	CHECK FOR DTC*
----	----------------

Refer to DTC Check / Clear .

(a) Check for DTCs and note any codes that are output.

(b) Clear the DTCs.

(c) Recheck for DTCs. Try to prompt the DTCs by duplicating the conditions indicated by the DTCs.

Result:

Result	Proceed to
DTC does not reoccur	A

Result	Proceed to
DTC reoccurs	B

B   GO TO DTC CHART

8.	CONFIRMATION TEST
----	-------------------

NEXT  END

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

HINT:

The dynamic radar cruise control system has two cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode.

- The vehicle-to-vehicle distance control mode is always selected when starting up the dynamic radar cruise control system.
- Operation of the constant speed control mode is the same as that for a conventional cruise control system.

(a) Inspect the SET function.

Text in Illustration

*1	ON/OFF
*2	- SET

(1) Turn the main switch on.

(2) Check that the cruise main indicator light illuminates on the combination meter assembly.

(3) Drive at a speed between 50 km/h (30 mph) and 170 km/h (105 mph).

(4) Push the cruise control main switch to - SET.

Text in Illustration

*1	Cruise Main Indicator Light
*2	"SET" Indicator
*3	Multi-information Display

SET *2

(5) Check that "SET" is indicated on the multi-information display.

(6) After releasing the switch, check that the vehicle cruises at the set speed.

(b) Inspect the + (ACCEL) function.

Text in Illustration

*1	ON/OFF
*2	- SET
*3	+ RES

(1) Turn the main switch on.

(2) Drive at a speed between 50 km/h (30 mph) and 170 km/h (105 mph).

(3) Push the cruise control main switch to - SET.

(4) Check that vehicle speed increases while the cruise control main switch is pushed to + RES, and that the vehicle cruises at the newly set speed when the switch is released.

(5) Push the cruise control main switch to + RES and then release it immediately. Check that vehicle speed increases* (tap-up control).

HINT:

*: Constant speed control mode: increases by 1.6 km/h (1.0 mph); vehicle-to-vehicle distance control mode: increases by 1 km/h or 1 mph.

(c) Inspect the - (COAST) function.

Text in Illustration

*1	ON/OFF
----	--------

H

*2	- SET
----	-------

- (1) Turn the main switch on.
- (2) Drive at a speed between 50 km/h (30 mph) and 170 km/h (105 mph).
- (3) Push the cruise control main switch to - SET.
- (4) Check that vehicle speed decreases while the cruise control main switch is pushed to - SET, and the vehicle cruises at the newly set speed when the switch is released.
- (5) Push the cruise control main switch to - SET, and then release it immediately. Check that vehicle speed decreases* (tap-down control).

HINT:

*: Constant speed control mode: decreases by 1.6 km/h (1.0 mph); vehicle-to-vehicle distance control mode: decreases by 1.6 km/h or 1 mph.

(d) Inspect the CANCEL function.

Text in Illustration

*1	ON/OFF
*2	- SET
*3	CANCEL

- (1) Turn the main switch on.
- (2) Drive at a speed between 50 km/h (30 mph) and 170 km/h (105 mph).
- (3) Push the cruise control main switch to - SET.
- (4) When performing any one of the following, check that the cruise control system is canceled and that the normal driving mode is reset.

- Depressing the brake pedal
- Moving the shift lever from D to N or selecting shift lever in B
- Turning the main switch off
- Pulling the cruise control main switch to CANCEL

(e) Inspect the RES (RESUME) function.

Text in Illustration

*1	ON/OFF
*2	- SET

*3

+ RES

- (1) Turn the main switch on.
- (2) Drive at a speed between 50 km/h (30 mph) and 170 km/h (105 mph).
- (3) Push the cruise control main switch to - SET.
- (4) Cancel the cruise control system by performing any of the above operations (other than turning the main switch off).
- (5) After pushing the cruise control main switch to "+ RES" at a driving speed of more than 40 km/h (25 mph), check that the vehicle resumes the speed set prior to the cancellation and that "SET" is also displayed on the multi-information display.

HINT:

The stored vehicle speed is retained even if vehicle speed drops below 40 km/h (25 mph) once. The previously stored vehicle speed can be resumed by pushing the cruise control main switch to + RES when vehicle speed returns to approximately 40 km/h (25 mph) or more.

OPERATION CHECK

1. INPUT SIGNAL CHECK

H

(a) Connect the Techstream to the DLC3.

(b) Check the cruise control main switch using the Data List function of the Techstream (ON-OFF, - SET and + RES).

Text in Illustration

*1	ON/OFF
*2	- SET
*3	+ RES

2. INSPECT MODE SWITCH

H

(a) Turn the power switch on (IG).

Text in Illustration

*1	ON/OFF
*2	MODE

(b) Turn the cruise control main switch on. Then push the main switch to MODE for 1 second or more to change to the constant speed control mode. Check that "RADAR READY" goes off on the display.

(c) Check that the cruise main indicator light (vehicle-to-vehicle distance control mode) goes off and the cruise main indicator light (constant speed control mode) illuminates.

Text in Illustration

*1	Multi-information Display
----	---------------------------

*2	Cruise Main Indicator Light (Vehicle-to-vehicle distance control mode)
*3	Cruise Main Indicator Light (Constant speed control mode)

NOTICE:

Do not push any other switches before pushing the main switch to MODE. If another switch is pushed, turn the main switch off and repeat the procedure above.

HINT:

If a malfunction is detected, turn the power switch off and repeat the procedure above.

3. INSPECT STEERING PAD SWITCH ASSEMBLY

- (a) Turn the power switch on (IG).
- (b) Turn the cruise control main switch (ON-OFF button) on.
- (c) Turn on the vehicle-to-vehicle distance control switch of the steering pad switch.
- (d) Check that the indication of the vehicle-to-vehicle distance, which is shown on the multi-information display on the combination meter, changes from long to middle to short in that order.

Text in Illustration

*1	Steering Wheel	*2	Steering Pad Switch
*3	Distance Control Switch	*4	Multi-information Display
*5	Long	*6	Middle
*7	Short	*8	Combination Meter

HINT:

The indication is automatically set to long each time the engine is started.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

DIAGNOSIS SYSTEM

1. DIAGNOSIS FUNCTION

(a) The diagnosis function makes the master warning light and the multi-information display come on, and the cruise main indicator light blinks as shown in the illustration. When a malfunction occurs in the dynamic radar cruise control system, the DTCs are stored in the driving support ECU.

Text in Illustration

*1	Multi-information Display
*2	Master Warning Light
*3	Cruise Main Indicator Light (Constant speed control mode)
*4	Cruise Main Indicator Light (Vehicle-to-vehicle distance control mode)

HINT:

During constant speed control mode, the cruise main indicator light (constant speed control mode) flashes.
During vehicle-to-vehicle distance control, the cruise main indicator light (vehicle-to-vehicle distance control mode) flashes.

NOTICE:

The master warning light goes off if the system returns to normal condition.

Cruise Main Indicator Light:

2. DESCRIPTION

(a) The driving support ECU controls the dynamic radar cruise control system of the vehicle. The data and DTCs relating to the dynamic radar cruise control system can be read from the DLC3 of the vehicle. If either DTC or CRUISE OK is not displayed on the multi-information display on the combination meter assembly when checking for DTCs, there may be a problem with either the combination meter or the CAN communication system. Use the Techstream to check and solve the problem.

3. CHECK DLC3

(a) Check the DLC3 INFO.

4. CHECK INDICATOR

*1

*2

(a) Turn the power switch on (IG).

Text in Illustration

*1	Multi-information Display
*2	Cruise Main Indicator Light (Vehicle-to-vehicle distance control mode)

(b) Check that the cruise main indicator light and RADAR READY indicator come on when the main switch ON-OFF button is pushed on, and that the indicator light and the indicator go off when the ON-OFF button is pushed off.

HINT:

- If the indicator check result shows a problem, proceed to troubleshooting the combination meter assembly.
- If a malfunction occurs in the vehicle speed sensors, the stop light switch assembly, or other related parts during cruise control driving, the ECU actuates AUTO CANCEL of the cruise control and blinks the cruise main indicator light. This indicator light informs the driver of the malfunction. At the same

time, the malfunction is stored as a diagnostic trouble code.

Cruise Main Indicator Light:

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.
- (e) Read the DTCs.

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.
- (e) Clear the DTCs.

FAIL-SAFE CHART

1. Constant speed control mode and vehicle-to-vehicle distance control mode:

If the following conditions are detected while the dynamic radar cruise control system is operating, the system clears the stored vehicle speed in the ECM and cancels the dynamic radar cruise control operation.

HINT:

During constant speed control mode, the cruise main indicator light (constant speed control mode) flashes. During vehicle-to-vehicle distance control, the cruise main indicator light (vehicle-to-vehicle distance control mode) flashes.

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition	
<ul style="list-style-type: none"> Master warning light 	There is dirt on millimeter wave radar	Recover from condition on left	

<ul style="list-style-type: none"> comes on Cruise main indicator light blinks "CLEAN RADAR SENSOR" is displayed "Pong" warning sound is heard 	sensor	(RESUME operation is possible after recovery)
<ul style="list-style-type: none"> Cruise main indicator light blinks Master warning light comes on "CRUISE NOT AVAILABLE" is displayed "Pong" warning sound is heard 	<ul style="list-style-type: none"> Wiper switch is in HI position Millimeter wave radar sensor is least sensitive because of bad weather such as rain, fog, snow, and sandstorms 	<ul style="list-style-type: none"> Recover from condition on left (RESUME operation is possible after recovery) Turn cruise control main switch on again

4. Constant speed control mode and vehicle-to-vehicle distance control mode:

If the following conditions are detected while the dynamic radar cruise control system is operating, the system clears the stored vehicle speed and cancels the dynamic radar cruise control operation.

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition
Cruise main indicator light goes off	<ul style="list-style-type: none"> Vehicle speed is lower than low speed limit (approximately 40 km/h (25 mph)) while cruise control is operating Constant Speed Control Mode: Vehicle speed is lower than stored vehicle speed by 16 km/h (10 mph) or more while cruise control is operating 	Push the cruise control main switch to + RES

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Entire the following menus: Powertrain / Radar Cruise / Data List.
- (e) According to the display on the Techstream, read the "Data List".

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Test allows relays, VSVs, actuators and parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be display while performing Active Test.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) For Cruise Main Indicator Light (Combination Meter):

Enter the following menus: Body Electrical / Combination Meter / Active Test.

- (e) For Skid Control Buzzer (ABS/VSC/TRAC):

Enter the following menus: Chassis / ABS/VSC/ TRAC / Active Test.

- (f) Perform Active Test according to the display on the tester.

HINT:

The power switch must be turned on (IG) to proceed with the Active Test using the Techstream.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Lamp Cruise	Cruise main indicator light (Constant speed control mode)	OFF or ON	Confirm that the vehicle is stopped with engine idling
Indicat. Radar Cruise	Cruise main indicator light (Vehicle-to-vehicle distance control mode)	OFF or ON	Confirm that the vehicle is stopped with engine idling

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnostic Note
Buzzer	Skid control buzzer	Buzzer ON/OFF	Buzzer can be heard

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is displayed during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

DTC	C1A01	Driving Support ECU	

DESCRIPTION

This DTC indicates the internal abnormalities of the driving support ECU.

DTC Code	DTC Detection Condition	Trouble Area
C1A01	While power switch is on (IG) and dynamic radar cruise control system is operating,	Driving

DTC Code	DTC Detection Condition	Trouble Area
	driving support ECU detects an internal malfunction for 1 sec.	support ECU

INSPECTION PROCEDURE

PROCEDURE

1.	READ OUTPUT DTC
----	-----------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Clear the DTCs .
- (d) Perform the following to make sure that the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the malfunction cannot be detected.

- (1) Drive the vehicle at a speed of 40 km/h (25 mph) or more.
- (2) Turn the cruise control main switch on.
- (3) Push the -SET switch to activate the cruise control.
- (e) Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.
- (f) Read the DTCs.

Result:

Result	Proceed to
DTC is not output	A
DTC C1A01 is output	B

B  REPLACE DRIVING SUPPORT ECU

A  USE SIMULATION METHOD TO CHECK

DTC

C1A02

Vehicle Information Not Obtained

DESCRIPTION

When the driving support ECU is replaced with a new one, it acquires the country specification information (destination, steering wheel position, etc.) from the main body ECU. When the country specification information in the driving support ECU and main body ECU do not match, DTC C1A02 is output.

DTC Code	DTC Detection Condition	Trouble Area
C1A02	While power switch is on (IG) and dynamic radar cruise control system is operating, driving support ECU does not receive vehicle destination information	<ul style="list-style-type: none"> Driving support ECU Main body ECU

INSPECTION PROCEDURE

PROCEDURE

1. CHECK CAN COMMUNICATION SYSTEM

- Select the "CAN Bus Check" from the "System Selection Menu" screen on the Techstream.
- Select "Communication Malfunction DTC" from the "CAN Bus Check" screen, and then select "Enter".

OK:

CAN communication system DTC is not output.

NG  GO TO CAN COMMUNICATION SYSTEM

OK

2. CHECK WHETHER DTC OUTPUT RECURS

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Clear the DTCs .
- Perform the following to make sure that the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the malfunction cannot be detected.

- Drive the vehicle at a speed of 40 km/h (25 mph) or more.

- (2) Turn the cruise control main switch on.
- (3) Push the -SET switch to activate the cruise control.
- (e) Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.
- (f) Read the DTCs.

Result:

Result	Proceed to
DTC is not output	A
DTC C1A02 is output	B

B ▶ REPLACE DRIVING SUPPORT ECU

A ▶ USE SIMULATION METHOD TO CHECK

DTC	C1A03	Driving Support ECU Internal Logical Error
DTC	C1A06	Stop Light Switch Input Circuit

DESCRIPTION

This DTC indicates the internal abnormalities of the driving support ECU.

DTC Code	DTC Detection Condition	Trouble Area
C1A03	Cruise control input signal abnormal	Driving support ECU
C1A06	Stop light switch input signal abnormal	Driving support ECU

INSPECTION PROCEDURE

PROCEDURE

1.	READ OUTPUT DTC
----	-----------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Clear the DTCs .
- (d) Perform the following to make sure that the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the malfunction cannot be detected.

- (1) Drive the vehicle at a speed of 40 km/h (25 mph) or more.
 - (2) Turn the cruise control main switch on.
 - (3) Push the -SET switch to activate the cruise control.
- (e) Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.
 - (f) Read the DTCs.

Result:

Result	Proceed to
DTC is not output	A
DTC C1A03 or C1A06 is output	B

 REPLACE DRIVING SUPPORT ECU

A  **USE SIMULATION METHOD TO CHECK**

DTC	C1A05	Stop Light Switch Circuit
DTC	C1A4B	Stop Light Relay Circuit

DESCRIPTION

When the brake pedal is depressed, the stop light switch sends a signal to the driving support ECU. Upon receiving the signal, the driving support ECU cancels the dynamic radar cruise control system. Even if there is a malfunction in the stop light signal circuit while the cruise control is operating, normal driving is maintained due to the fail-safe function. Dynamic radar cruise control is canceled when positive battery voltage is applied to terminal STP-.

When the brake pedal is released, positive voltage is applied to terminal ST1- of the driving support ECU through the IGN fuse and the stop light switch, and the driving support ECU operates the dynamic radar cruise control.

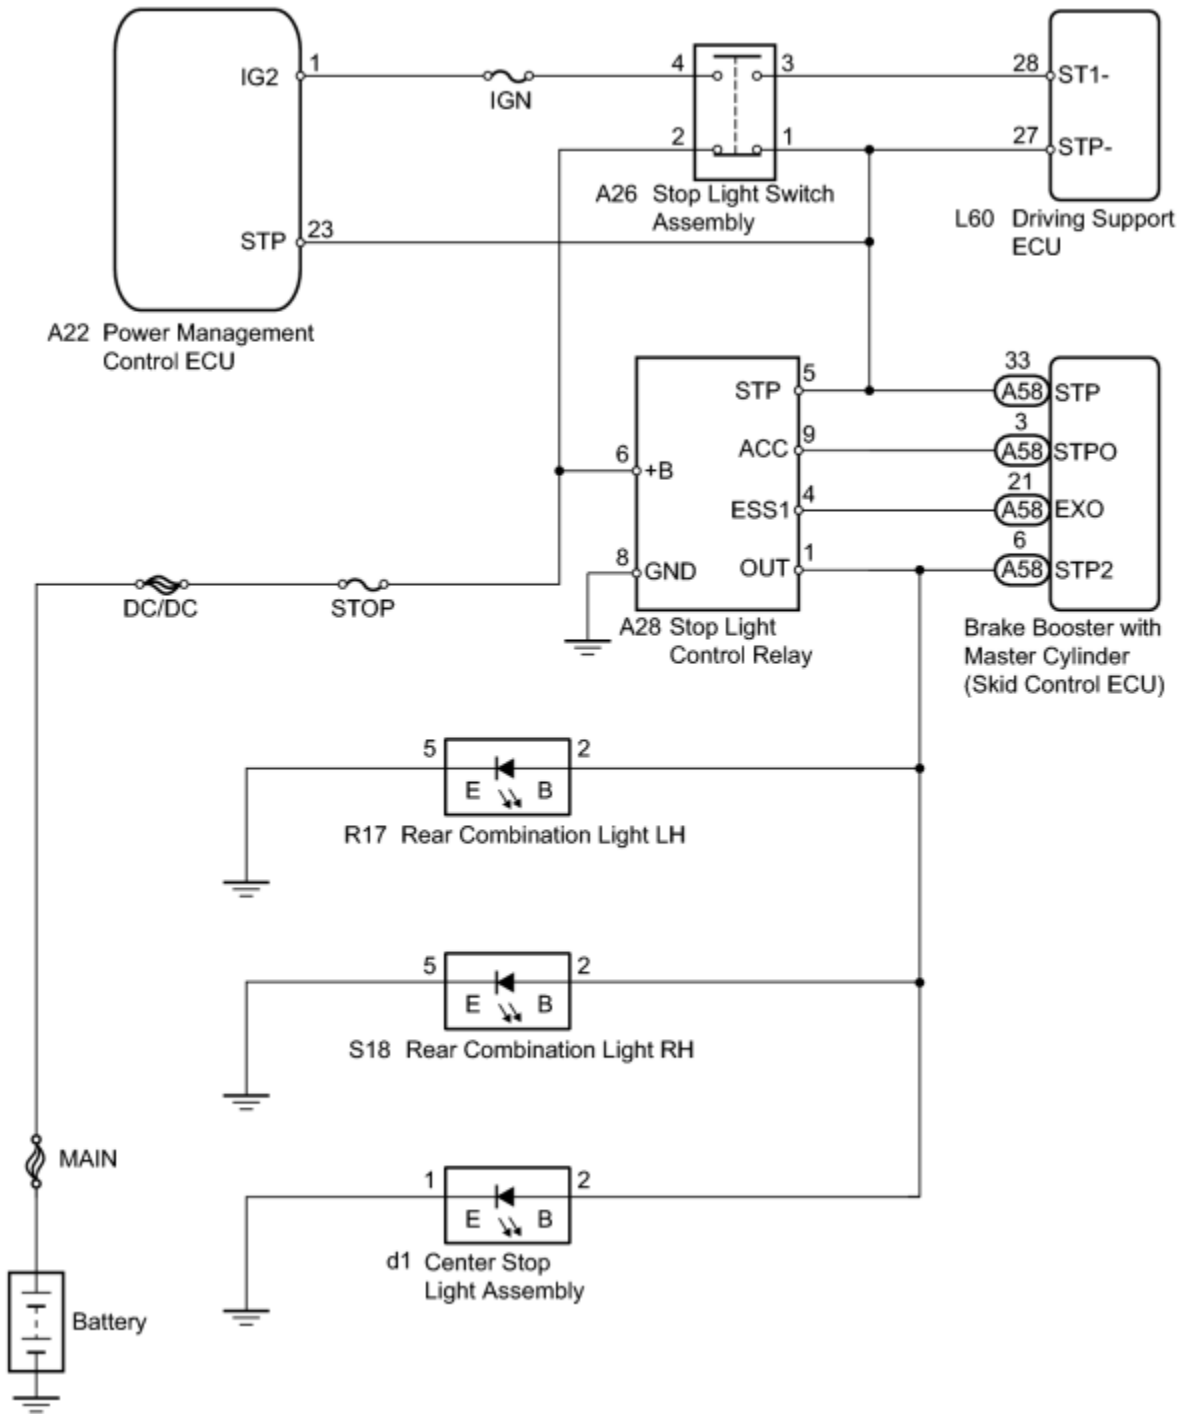

The brake booster with master cylinder (skid control ECU) receives a signal from the driving support ECU and operates the brake actuator. The brake booster with master cylinder (skid control ECU) operates the brake actuator and at the same time illuminates the stop lights by operating the stop light control relay.

The stop light switch assembly sends a brake pedal operation signal to the driving support ECU.

After receiving the signal, the ECM performs fail-safe control by canceling the cruise control function.

DTC No.	DTC Detection Condition	Trouble Area
C1A05	Voltages of terminals ST1- and STP- of driving support ECU are both below 1 V for 1 second	<ul style="list-style-type: none"> • Stop light switch assembly • Stop light switch circuit • Driving support ECU
C1A4B	This trouble code is stored when the brake booster with master cylinder (skid control ECU) detects a malfunction in the stop light control relay circuit for 1 second while the dynamic cruise control is operating.	<ul style="list-style-type: none"> • Stop light control relay • Stop light control relay circuit • Brake booster with master cylinder (Skid control ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. READ VALUE USING TECHSTREAM (STOP LIGHT SWITCH ASSEMBLY)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Radar Cruise / Data List.
- (e) Check the Data List for proper functioning of the stop light switch.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stop Light SW 1 (M CPU)	Stop light switch (Main-CPU) signal/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Stop Light SW 1 (S CPU)	Stop light switch (Sub-CPU) signal/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Stop Light SW 2 (M CPU)	Stop light switch (Main-CPU) signal/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:

Display changes according to brake pedal operation described in above table.

NG [▶ CHECK HARNESS AND CONNECTOR \(STOP LIGHT SWITCH ASSEMBLY - POWER SOURCE\)](#)

OK

2. CHECK HARNESS AND CONNECTOR (STOP LIGHT CONTROL RELAY POWER SOURCE)

- (a) Disconnect the stop light control relay connector.

*1

c

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A28-6 (+B) - Body ground	Always	11 to 14 V

DTC	C1A0A	Front Radar Sensor Region Code Mismatch
-----	-------	---

DESCRIPTION

The driving support ECU uses the millimeter wave radar sensor and lane recognition camera sensor to detect obstacles in front of the vehicle.

When the millimeter wave radar sensor assembly is replaced with a new one, it acquires the country specification information from the driving support ECU. Also, when the driving support ECU is replaced with a new one, it receives the country specification information from the main body ECU. When the country specification information in the sensor and ECU do not match, DTC C1A0A is output.

DTC Code	DTC Detection Condition	Trouble Area
C1A0A	While power switch is on (IG), country specification information in driving support ECU and front millimeter wave radar sensor do not match for 1 second	<ul style="list-style-type: none"> • Millimeter wave radar sensor assembly • Main body ECU • Driving support ECU

INSPECTION PROCEDURE

NOTICE:

When the millimeter wave radar sensor is replaced with a new one, adjustment of the radar sensor beam axis must be performed .

PROCEDURE

1.	READ VALUE USING TECHSTREAM
----	-----------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Radar Cruise / Data List / Country# (F Radar Sens).
- (e) Read the Data List and check the country specification information of the front millimeter wave radar sensor and vehicle.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Country# (F)	Millimeter wave radar sensor country signal/JPN, NA, EURO,	Actual country	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Radar Sens)	AUS, SAFC, OTHER, TWN, CHINA, THAI, GCC, NOFIX	code	

Result

Result	Proceed to
Country specification information for vehicle and millimeter wave radar sensor match	A
Country specification information for vehicle and millimeter wave radar sensor do not match	B

B ▶ REPLACE MILLIMETER WAVE RADAR SENSOR ASSEMBLY

A

2.	CHECK WHETHER DTC OUTPUT RECURS (DTC C1A0A)
----	---

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Clear the DTCs .

(d) Perform the following to make sure that the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the malfunction cannot be detected.

(1) Drive the vehicle at a speed of 40 km/h (25 mph) or more.

(2) Turn the cruise control main switch on.

(3) Push the -SET switch to activate the cruise control.

(e) Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.

(f) Read the DTCs.

Result:

Result	Proceed to
DTC is not output	A
DTC C1A0A is output	B

B ▶ REPLACE DRIVING SUPPORT ECU

A ▶ END

DTC

C1A0C

Object Recognition Camera Region Code Mismatch

DESCRIPTION

w/ Lane-keeping Assist System

When the lane recognition camera sensor assembly is replaced with a new one, it acquires the country specification information from the driving support ECU. The lane recognition camera sensor assembly has information about the market it is intended for use in (country specification information such as the destination, steering wheel position etc.). When a new camera sensor is installed and the country specification information does not match that of the driving support ECU, the ECU stores DTC C1A0C.

DTC Code	DTC Detection Condition	Trouble Area
C1A0C	While initial check is running, power switch is on (IG) and system is operating, country specification information in driving support ECU and lane recognition camera sensor assembly do not match	<ul style="list-style-type: none"> Lane recognition camera sensor assembly Driving support ECU

INSPECTION PROCEDURE

NOTICE:

When the lane recognition camera sensor assembly is replaced with a new one, adjust the lane recognition camera sensor assembly .

PROCEDURE

1. REPLACE LANE RECOGNITION CAMERA SENSOR ASSEMBLY

(a) Replace lane recognition camera sensor assembly .

(b) Adjust the lane recognition camera sensor assembly .

NEXT

2. CHECK DTC OUTPUT

(a) Connect the Techstream to the DLC3.

(b) Turn the power switch on (IG).

(c) Clear the DTCs .

(d) Perform the following to make sure that the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the malfunction cannot be detected.

- (1) Drive the vehicle at a speed of 40 km/h (25 mph) or more.
- (2) Turn the cruise control main switch on.
- (3) Push the -SET switch to activate the cruise control.
- (e) Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.

DTC	C1A11	Front Radar Sensor Incorrect Axial Gap
DTC	C1A14	Front Radar Sensor Beam Axis Not Adjusted

DESCRIPTION

The driving support ECU uses the millimeter wave radar sensor and lane recognition camera sensor to detect obstacles in front of the vehicle.

When the vehicle is determined to be driving in a straight line or on a slow curve based on signals from the yaw rate sensor, the millimeter wave radar sensor assembly performs a self diagnosis to check if the sensor beam axis is deviated from the vehicle movement direction. When the millimeter wave radar sensor assembly's beam axis is deviated, the driving support ECU detects this, and outputs DTC C1A11.

After installing a new millimeter wave radar sensor assembly, if the sensor beam axis adjustment is not performed, DTC C1A14 is stored.

DTC Code	DTC Detection Condition	Trouble Area
C1A11	While power switch is on (IG) and after driving at approximately 50 km/h (31 mph) for 10 hours, driving support ECU determines that aim of front millimeter wave radar sensor's beam axis is deviated	<ul style="list-style-type: none"> Millimeter wave radar sensor assembly Driving support ECU
C1A14	Driving at 10 km/h (6 mph) or more while front millimeter wave radar sensor's axis adjustment has not been performed	<ul style="list-style-type: none"> Millimeter wave radar sensor assembly Driving support ECU

INSPECTION PROCEDURE

PROCEDURE

1.	ADJUST FRONT MILLIMETER WAVE RADAR SENSOR

DTC

U1119

Lost Communication with Object Recognition ECU (CAN)

DESCRIPTION

with Lane-keeping Assist System.

Because of the location of the lane recognition camera assembly, it is subject to high temperatures. If the lane recognition camera sensor assembly becomes too hot, the power source is shut down to protect the system. At that time CAN communication also stops. However, in order to inform the driving support ECU that CAN communication has not stopped because of a CAN communication error, on/off signals are periodically sent from the HITP terminal.

DTC Code	DTC Detection Condition	Trouble Area
U1119	While power switch is on (IG), communication stop between lane recognition camera sensor and driving support ECU continues for 1 second or more	<ul style="list-style-type: none"> • Lane recognition camera sensor assembly • CAN communication system • Driving support ECU

DTC U1119 is output	B

B ▶ REPLACE DRIVING SUPPORT ECU

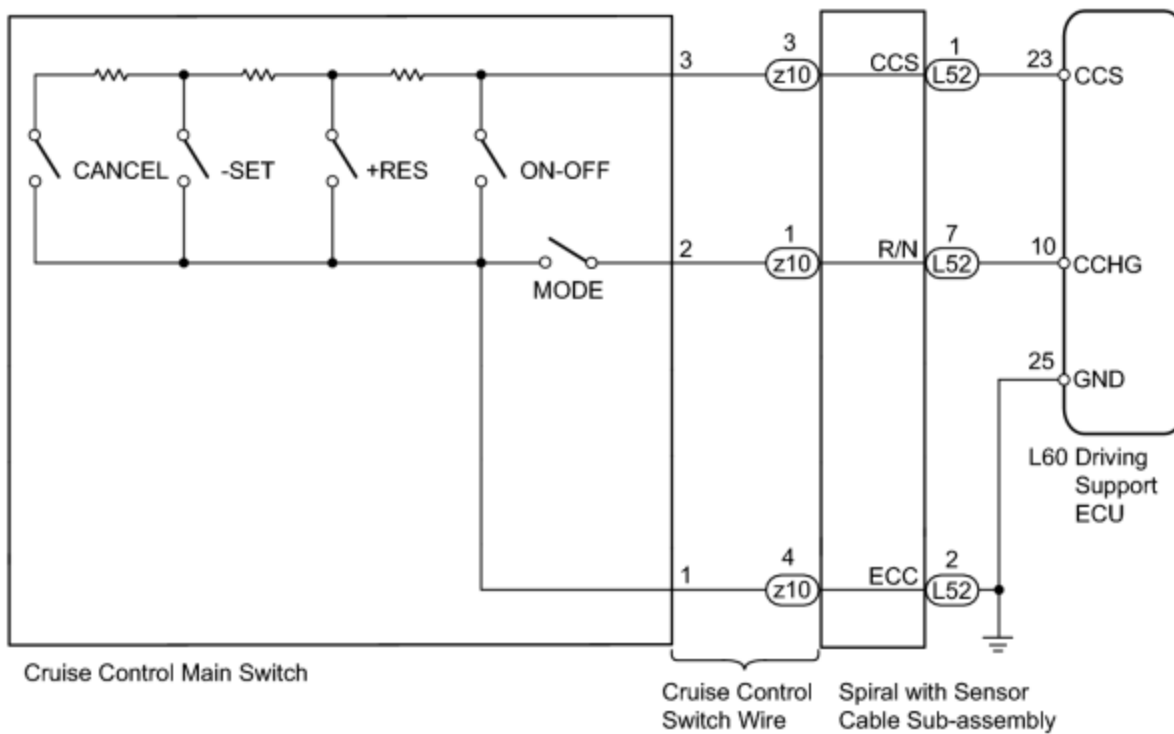

A ▶ END

DESCRIPTION

The cruise control main switch operates 8 functions: SET, -(COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, CANCEL, and MODE. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while it is being operated in the direction of each arrow and turns off after being released. The internal contact points of the cruise control main switch are turned on with the switch operation. The driving support ECU then reads the voltage value that has been changed by the switch operation to control MODE, SET, - (COAST), RES (RESUME), + (ACCEL), and CANCEL. The dynamic radar cruise control system has two cruise control modes: constant speed control mode and vehicle-to-vehicle distance control mode.

- Vehicle-to-vehicle distance control mode is always selected when starting up the dynamic radar cruise control system.
- The operation of constant speed control mode is the same as that for a conventional cruise control system.

DESCRIPTION

When the power switch is turned on (IG), battery voltage is applied to terminal IGB of the millimeter wave radar sensor assembly.

This circuit provides power to the millimeter wave radar sensor. The millimeter wave radar sensor emits radio waves towards an object in front and measures the distance and direction of the object by receiving the beam reflections. Based on the reflections, the sensor calculates the difference in speed between the vehicle and the object in front. This data is transmitted to the distance control ECU.

OK ► **REPAIR OR REPLACE HARNESS OR CONNECTOR (MILLIMETER WAVE RADAR SENSOR ASSEMBLY - IG1 NO. 1 RELAY)**

DESCRIPTION

The distance control switch sets vehicle-to-vehicle distance control mode. The distance control switch is installed in the steering pad switch assembly. The vehicle-to-vehicle distance set value can be changed by operating the steering pad switch assembly (distance control switch) while the dynamic radar cruise control system is operating.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. READ VALUE USING TECHSTREAM (DISTANCE CONTROL SWITCH)

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Cruise / Data List / Distance Control Switch.
- (e) Check the Data List proper functioning of the distance control switch.

Radar Cruise:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
----------------	------------------------	------------------	-----------------

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Distance Control Switch	Distance control switch signal/ON or OFF	ON: Distance control switch on OFF: Distance control switch off	-

OK:

When the distance control switch is operated, the display changes in accordance with switch operation.

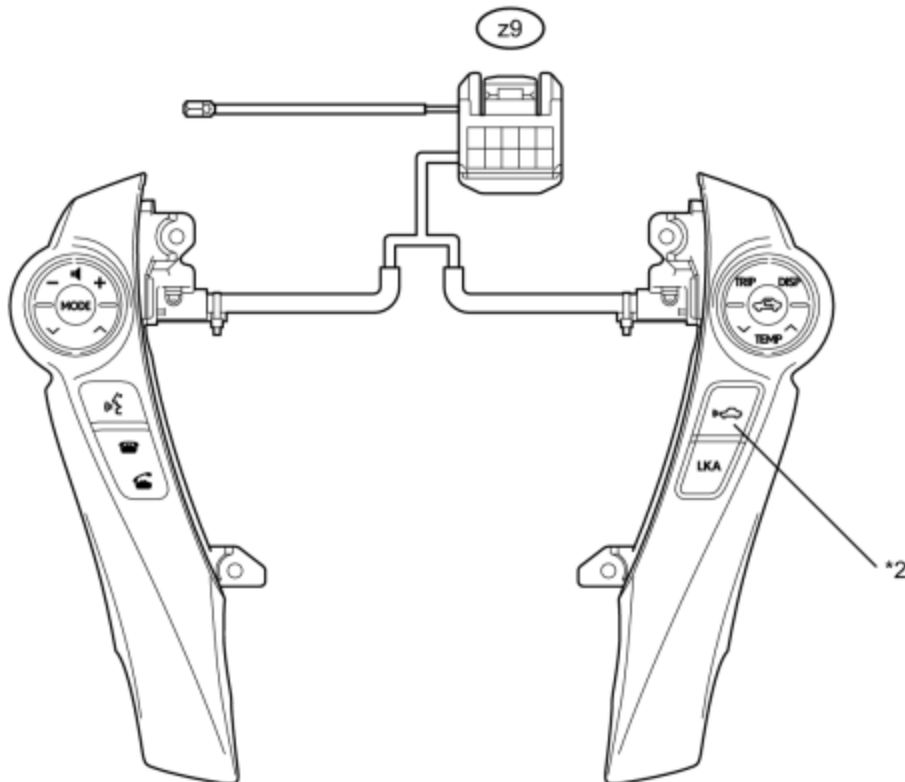

NG  [INSPECT STEERING PAD SWITCH ASSEMBLY](#)

OK  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	INSPECT STEERING PAD SWITCH ASSEMBLY
----	--------------------------------------

(a) Remove the steering pad switch assembly .

*1

H

Text in Illustration

*1	Component without harness connected	*2	Distance Control Switch
----	-------------------------------------	----	-------------------------

	(Steering Pad Switch Assembly)		
--	--------------------------------	--	--

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
z9-4 - z9-6	Distance control switch ON	Below 2.5 Ω
z9-4 - z9-6	Distance control switch OFF	10 k Ω or higher

(c) Install the steering pad switch assembly .

NG  REPLACE STEERING PAD SWITCH ASSEMBLY

OK

3.	INSPECT SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY
----	---

NOTICE:

The spiral with sensor cable sub-assembly is an important part of the SRS airbag system. Incorrect removal or installation of the spiral with sensor cable sub-assembly may cause airbag deployment. Be sure to read the page shown in the brackets.

(a) Remove the spiral with sensor cable sub-assembly .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z9-4 - L52-11 (DIST)	The spiral with sensor cable sub-assembly is centered	Below 1 Ω
	The spiral with sensor cable sub-assembly position is 2.5 rotations to the left	
	The spiral with sensor cable sub-assembly position is 2.5 rotations to the right	
z9-6 - L52-2 (ECC)	The spiral with sensor cable sub-assembly is centered	Below 1 Ω
	The spiral with sensor cable sub-assembly position is 2.5 rotations to the left	
	The spiral with sensor cable sub-assembly position is 2.5 rotations to the right	

Text in Illustration

*1	Component without harness connected (Spiral with Sensor Cable Sub-assembly)
----	--

HINT:

The spiral with sensor cable sub-assembly makes a maximum of approximately 5 rotations.

(c) Install the spiral with sensor cable sub-assembly INFO.

NG ▶ REPLACE SPIRAL WITH CABLE SUB-ASSEMBLY

OK

4.	CHECK HARNESS AND CONNECTOR (SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY - DRIVING SUPPORT ECU)
----	---

*1

(a) Disconnect the driving support ECU connector.

*2

(b) Disconnect the spiral with sensor cable sub-assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-------------------	-----------	---------------------

Tester Connection	Condition	Specified Condition
L60-6 (SPSW) - L52-11 (DIST)	Always	Below 1 Ω
L60-6 (SPSW) or L52-11 (DIST) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Spiral with Sensor Cable Sub-assembly)
*2	Front view of wire harness connector (to Driving Support ECU)

(d) Reconnect the driving support ECU connector.

(e) Reconnect the spiral with sensor cable sub-assembly connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY - DRIVING SUPPORT ECU)

OK

5.	CHECK HARNESS AND CONNECTOR (SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY - BODY GROUND)
----	---

(a) Disconnect the spiral with sensor cable sub-assembly connector.

c

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
L52-2 (ECC) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Spiral with Sensor Cable Sub-assembly)
----	--

(c) Reconnect the spiral with sensor cable sub-assembly connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY - BODY GROUND)

OK ► REPLACE DRIVING SUPPORT ECU

DESCRIPTION

When the driving support ECU detects that the wipers are operating at high speed, the dynamic radar cruise control system will be canceled.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. INSPECT DRIVING SUPPORT ECU

(a) Disconnect the driving support ECU connector.

- (b) Turn the power switch on (IG).
- (c) Set the windshield wiper switch assembly to the HI position.
- (d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L60-32 (WIP2) - Body ground	Power switch on (IG) Windshield wiper switch assembly Hi position	11 to 14 V

Text in Illustration

*1	Front view of wire harness connector (to Driving Support ECU)
----	--

- (e) Reconnect the driving support ECU connector.

NG ► [CHECK HARNESS AND CONNECTOR \(DRIVING SUPPORT CONTROL ECU - WINDSHIELD WIPER SWITCH\)](#)

OK ► **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	CHECK HARNESS AND CONNECTOR (DRIVING SUPPORT CONTROL ECU - WINDSHIELD WIPER SWITCH)
----	---

- (a) Disconnect the driving support ECU connector.

(b) Disconnect the windshield wiper switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
L60-32 (WIP2) - L48-4 (+2)	Always	Below 1 Ω

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
L60-32 (WIP2) or L48-4 (+2) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1	Front view of wire harness connector (to Driving Support ECU)
*2	Front view of wire harness connector (to Windshield Wiper Switch Assembly)

(d) Reconnect the driving support ECU connector.

(e) Reconnect the windshield wiper switch assembly connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (DRIVING SUPPORT CONTROL ECU - WINDSHIELD WIPER SWITCH)

OK ► **GO TO WIPER AND WASHER SYSTEM**

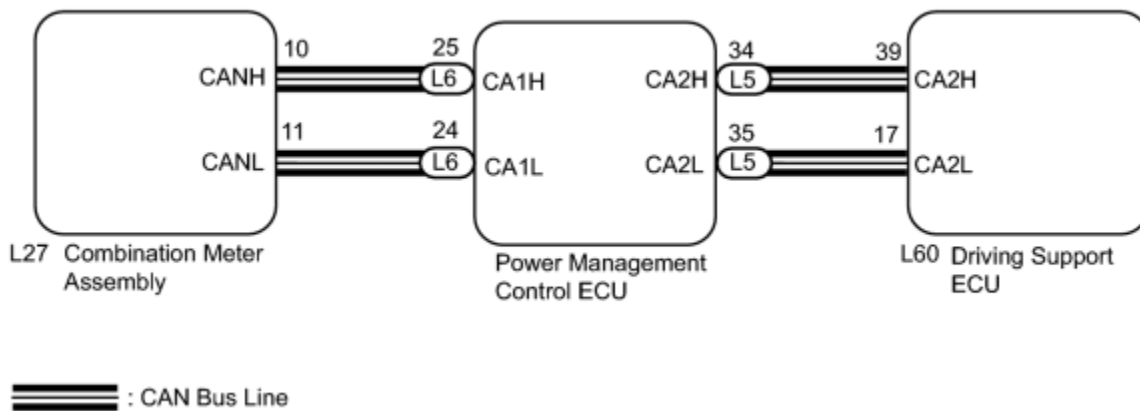

DESCRIPTION

When the cruise control main switch is turned on, the cruise main indicator light and "RADAR READY" indicator come on. This indicates the control condition (presence or absence of a vehicle in front, vehicle-to-vehicle distance, and set vehicle speed) and fail-safe state through the CAN communication system. The master warning light and cruise main indicator light come on and vehicle-to-vehicle distance information is displayed on the combination meter assembly as the alarm buzzer sounds. Items such as "Clean Radar Sensor", "Cruise not Available", "Check Cruise System", and "Radar Cruise Ready" are displayed on the multi-information display on the combination meter assembly when the driving support ECU detects signals from each sensor and actuator and sends them to the combination meter assembly via CAN.

HINT:

If the vehicle in front in the same lane significantly decreases vehicle speed or another vehicle moves in front of your vehicle, adequate deceleration cannot be applied by the cruise control system and the vehicle-to-vehicle distance will shorten. At this time, the system sounds the buzzer and the master warning light blinks to warn the driver. Each indicator in the dynamic radar cruise control uses CAN for communication. Therefore, if there are any malfunctions in this circuit, check for DTCs in the CAN communication system before troubleshooting this circuit.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Body Electrical / Combination Meter / Active Test.
- (e) Check the cruise main indicator light by performing Active Test.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Lamp Cruise	Cruise main indicator light (Constant speed control mode)	OFF or ON	Confirm that the vehicle is stopped with engine idling
Indicat. Radar Cruise	Cruise main indicator light (Vehicle-to-vehicle distance control mode)	OFF or ON	Confirm that the vehicle is stopped with engine idling

OK:

The display changes in accordance with Active Test operation.

NG  REPLACE NO. 3 METER CIRCUIT PLATE

OK

2.	READ VALUE USING TECHSTREAM
----	-----------------------------

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: Powertrain / Radar Cruise / Data List.
- (e) Check the Data List for proper functioning of the cruise main indicator light.

Radar Cruise

Techstream Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Cruise Control Main Switch	Cruise control switch signal/ON or OFF	ON: Main switch on OFF: Main switch off	-

OK:

When the cruise control main switch is operated, the display changes in accordance with switch operation.

NG  REPLACE DRIVING SUPPORT ECU

OK  **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

DESCRIPTION

- The driving support ECU detects a cruise control switch signal and sends it to the combination meter assembly through CAN. Then the SET indicator light comes on.
- The SET indicator light circuit uses CAN for communication. If there is a malfunction in this circuit, check for DTCs in the CAN communication system before troubleshooting this circuit.

WIRING DIAGRAM

Refer to "Cruise Main Indicator Light Circuit" .

INSPECTION PROCEDURE

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).
- Turn the Techstream on.
- Enter the following menus: Body Electrical / Combination Meter / Active Test.
- Check the SET indicator light by performing the Active Test.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Lamp SET	CRUISE SET indicator light	SET indicator light BLINK / OFF	-

OK:

The SET indicator light blinks or goes off according to Techstream operation.

NG  REPLACE NO.3 METER CIRCUIT PLATE

OK

2. READ VALUE USING TECHSTREAM

- Connect the Techstream to the DLC3.
- Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Radar Cruise / Data List.

(e) According to the display on tester, read the Data List.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
SET/COAST Switch	- SET switch / ON or OFF	ON: - SET switch ON OFF: - SET switch off	-

OK:

The display changes as shown above according to cruise control main switch operation.

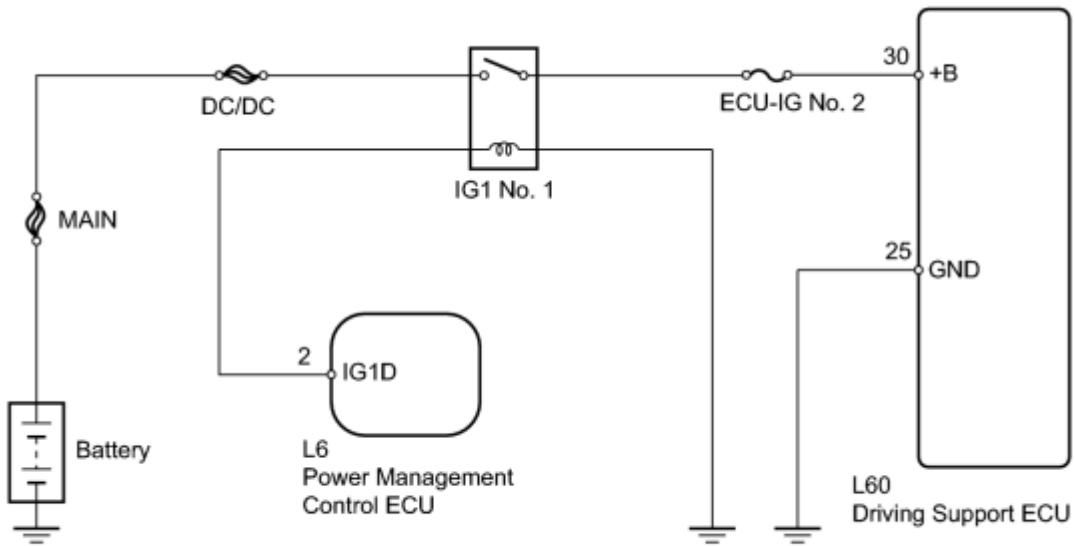

NG ► REPLACE DRIVING SUPPORT ECU

OK ► PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

DESCRIPTION

- The driving support ECU assembly controls the cruise control system based on information sent from switches, sensors and ECUs.
- The power management control ECU sends current to the IG1 No. 1 relay. This closes the contact points in the relay so that power is supplied to the driving support ECU +B terminal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1. CHECK DRIVING SUPPORT ECU (+B VOLTAGE)

(a) Disconnect the driving support ECU connector.

*1

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L60-30 (+B) - Body ground	Power switch on (IG)	11 to 14 V

----	---

*1

*2

2B

(a) Disconnect the driving support ECU connector.

(b) Disconnect the instrument panel junction block assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L60-30 (+B) - 2B-16	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Driving Support ECU)
*2	Instrument Panel Junction Block

(d) Reconnect the instrument panel junction block assembly connector.

(e) Reconnect the driving support ECU connector.

NG▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (DRIVING SUPPORT ECU - INSTRUMENT

PANEL JUNCTION BLOCK)

OK

5.	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK POWER SOURCE CIRCUIT)
----	--

(a) Disconnect the instrument panel junction block assembly connector.

*1

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
2E-1 - Body ground	Always	11 to 14 V

Text in Illustration

*1	Instrument Panel Junction Block Assembly	-	-
----	--	---	---

(c) Reconnect the instrument panel junction block assembly connector.

NG REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BATTERY)

OK

6. CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)

*1

(a) Disconnect the instrument panel junction block assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2B-6 - Body ground	Always	Below 1 Ω

Text in Illustration

*1 Instrument Panel Junction Block Assembly

(c) Reconnect the instrument panel junction block assembly connector.

NG REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)

OK

7. CHECK HARNESS AND CONNECTOR (POWER MANAGEMENT CONTROL ECU - INSTRUMENT PANEL J/B ASSEMBLY)

(a) Disconnect the power management control ECU connector.

*1

*2

Text in Illustration

*1	Front view of wire harness connector (to Power Management Control ECU)	*2	Instrument Panel Junction Block Assembly
----	---	----	--

(b) Disconnect the instrument panel junction block assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

Tester Connection	Condition	Specified Condition
2B-25 - L6-2 (IG1D)	Always	Below 1 Ω

Standard Resistance (Check for Short):

Tester Connection	Condition	Specified Condition
2B-25 or L6-2 (IG1D) - Body ground	Always	10 k Ω or higher

(d) Reconnect the power management control ECU connector.

(e) Reconnect the instrument panel junction block assembly connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER MANAGEMENT CONTROL ECU - INSTRUMENT PANEL J/B ASSEMBLY)

OK ► GO TO SMART KEY SYSTEM

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the system to enter self-diagnostic mode. If a malfunction is present, the cruise main indicator light will blink.

HINT:

When a particular warning light remains blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in the relevant ECU is suspected.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1. CHECK HARNESS AND CONNECTOR (TERMINAL TC of DLC3 - ECM)

(a) Disconnect the power management control ECU connector.

*1

*2

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L5-11 (TC) - L61-13 (TC)	Always	Below 1 Ω

COMPONENTS

ILLUSTRATION

REMOVAL

1. REMOVE INNER REAR VIEW MIRROR COVER [INFO](#)

2. REMOVE ROOF TOP MOULDING [INFO](#)

3. REMOVE LANE RECOGNITION CAMERA SENSOR ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 3 bolts.

(c) Detach the clip and remove the lane recognition camera sensor assembly.

ADJUSTMENT

HINT:

If the lane recognition camera sensor is replaced or removed and installed, or the toe-in is adjusted, perform the lane recognition camera sensor adjustment.

1. ADJUST LANE RECOGNITION CAMERA SENSOR ASSEMBLY

P

Text in Illustration

*1	1.5 m or more
*2	3 m or more

- Make sure there are no black and white patterned objects in front of the vehicle.
- Be sure to perform the measurement on a level surface that is free of obstacles and extends 1.5 m (4.92 ft.) or more in front of the vehicle.
- Make sure that there is no wind when performing the measurement.
- Check that there are no reflective materials in the surroundings or on the ground within a 3 m (9.84 ft.) x 3 m (9.84 ft.) area in front of the vehicle.
- Perform the inspection in a bright area.

(a) Prepare for beam axis learning.

(1) Move the vehicle to a level surface.

(2) Make sure the engine oil in the vehicle is at the specified level.

(3) Make sure the engine coolant in the vehicle is at the specified level.

(4) Make sure the fuel tank is full.

(5) Make sure the spare tire is in the vehicle.

(6) Make sure the standard tools are in the vehicle.

(7) Make sure nobody is in the vehicle.

(8) Make sure no extra loads are in the vehicle.

(9) Adjust the tire pressures to the specified pressure.

(10) Clean the windshield.

(11) If the lens of the lane recognition camera sensor is dirty, apply a small amount of lens cleaner to a clean and soft cloth, and clean the lens.

(b) Perform the front wheel alignment adjustment.

(1) Perform the front wheel alignment adjustment INFO.

NOTICE:

Perform this procedure as accurately as possible.

(c) Perform the rear wheel alignment adjustment.

(1) Perform the rear wheel alignment adjustment INFO.

NOTICE:

- Perform this procedure as accurately as possible.

(d) Create a target sheet.

(1) Print or copy the illustration. Check that the dimensions are +/- 5 mm (0.197 in.) of the ones in the table below.

P

Dimension:

Area	Specification
A	160 mm (6.30 in.)
B	160 mm (6.30 in.)
C	80 mm (3.15 in.)

Area	Specification
D	16 mm (0.630 in.)

NOTICE:

- Make sure that the black areas of the target sheet it not glossy.
- Make sure that the borders of the black and white areas on the target sheet it straight, and are not warped or blurry.

If the print or copy's dimensions are not as specified, adjust settings and reprint or recopy so that the print or copy's dimensions are as specified.

(e) Attach the target sheet.

P

Text in Illustration

*1	Target Sheet
*2	Cardboard, etc.

(1) Place the prepared target sheet on a piece of cardboard of the same size with the black area on the top right, as shown in the illustration. Then use double-sided tape to fix the target sheet in place.

NOTICE:

Do not attach reflective tape, such as transparent adhesive tape, etc. to the target face, as this may affect target recognition.

(2) Hang a weight with a pointed tip from the center of the target sheet. Then, with double-sided tape, attach the target sheet to the reflector so that the weight aligns with the mark-off line of SST (laser radar adjusting reflector).

SST: 09870-60000

09870-60010

09870-60020

P

Text in Illustration

*1	Pointed Tip Weight
*2	Mark-off Line

- Perform this procedure as accurately as possible.
- Attach the target sheet so that it is horizontal with the ground.

(3) Move the reflector up and down to position the center of the target at the height shown in the illustration, and fix it in place.

Dimension A:

986 mm (3.23 ft.)

SST: 09870-60000

09870-60010

09870-60020

NOTICE:

Perform this procedure as accurately as possible.

P

(f) Measure the target placement point.

NOTICE:

- Do not place black and white patterned objects near the target.
- Face the vehicle toward a wall with no patterns, or make sure the background behind the target has no patterns.
- Perform this procedure as accurately as possible.
- Do not place reflective materials in the area behind the target.
- Make sure the distance between the target and wall is within 3 m (9.84 ft.).
- Make sure the target's shadow is not on the wall, as the camera may have a recognition error.

(1) From the center of the front and back bumpers (center of the emblems), hang a weight with a pointed tip, and mark the front bumper center point A and the rear bumper center point B on the ground.

Text in Illustration

*1	Line
*2	Approx. 2 m
*3	Point A
*4	Point B

P

(2) Draw a line that connects points A and B, and extend the line approximately 2 m (6.56 ft.) beyond the front of the vehicle.

HINT:

Secure the end of a string to point B. Then hold the other end of the string approximately 2 m (6.56 ft.) in front of the vehicle, and move it to the left or right to align the string with point A to make a straight line.

(3) Mark point C 1220 mm (4.00 ft.) from the front bumper center point A (placement point 1).

P

Text in Illustration

*1	Point A	*2	Point B
*3	Placement Point 1 Point C	*4	Point D
*5	Line E	*6	Point F
*7	Place Tape (Gray Area) Approx. 400 mm from Point C	*8	Placement Point 2 Point G
*9	Placement Point 3 Point H	*10	Lane Recognition Camera Sensor Position

(4) From point C, move 300 mm (11.8 in.) towards the front bumper center point A and mark point D.

(5) From point C, place marking tape at the point 400 mm (1.30 ft.) perpendicular to the line that connects points A and B.

NOTICE:

Place the tape so that there is plenty of surface area along the perpendicular line.

(6) Using a measuring tape of 5 m (16.41 ft.) or more, and point D as the center point, draw the part of a 500 mm (1.64 ft.) circle that overlaps the marking tape (line E).

(7) Mark point F where the following intersect: 1) from point C, the point that is 400 mm (1.30 ft.) perpendicular from the line that connects point A and B; and 2) line E.

(8) Set the measuring tape from point C to F. Then mark point G 780 mm (2.56 ft.) from point C (line extending from point C to F) (placement point 2).

(9) Set the measuring tape from point F to C. Then mark point H 780 mm (2.56 ft.) beyond point C (placement point 3).

(10) Set a string between points G and H, and draw a line on the ground (target placement line).

(g) Measure lane recognition camera sensor height.

NOTICE:

- Do not place black and white patterned objects near the target.
- Face the vehicle toward a wall with no patterns, or make sure the background behind the target has no patterns.
- Perform this procedure as accurately as possible.
- Do not place reflective materials in the area behind the target.
- Make sure the distance between the target and wall is within 3 m (9.84 ft.).
- Make sure the target's shadow is not on the wall, as the camera may have a recognition error.

(1) Measure the distance (X mm or in.) from the ground to point H for the front left wheel arch.

P

(2) Measure the distance (Y mm or in.) from the ground to point H' for the front right wheel arch.

(3) The average of the 2 distances (X mm or in, Y mm or in.) plus 617 mm (2.03 ft.) is the height of the lane recognition camera sensor.

(h) Memorize camera/target position.

NOTICE:

- Close all doors.
- Perform the procedure with no one in the vehicle.
- During the procedure, do not lean on the vehicle.
- Turn on the clearance lights.
- Do not turn on the headlights.

(1) When using the Techstream:

1. Connect the Techstream to the DLC3.
2. Turn the power switch on (IG).*1
3. Turn the Techstream on.
4. Select "Chassis" from the display screen.
5. Select "Lane Keeping Assist" from the display screen.
6. Select "Utility" from the display screen.
7. Select "Camera/target position memory".

HINT:

A buzzer will sound for 1 second.

8. Follow the Techstream display, and continue with the adjustment.

(2) Input the measured height of the lane recognition camera sensor and the horizontal position of the camera "-62 mm (-2.44 in.)" into the input screen. Then press the "Enter" button on the display screen.

(3) Input "3000 mm (9.833 ft.)" for the distance from the camera to the target and "986 mm (3.23 ft.)" for the height of the target into the input screen. Then press the "Enter" button on the display screen.

(4) Press the "Exit" button to finish the camera/target position memory mode.

NOTICE:

If "Error Camera/target position memory" is displayed on the screen, press the "Try Again" button, and repeat from procedure *1 again.

(i) Perform beam axis learning.

(1) Select "Chassis" from the display screen.

(2) Select "Lane Keeping Assist" from the display screen.*1

(3) Select "Utility" from the display screen.

(4) Select "Camera Axis Adjust" from the display screen.

(5) Follow the Techstream display, and continue with the adjustment.

(6) Align the target sheet with the target placement line, and align the mark-off line with placement point 1 (point C).

Text in Illustration

*1	Mark-off Line
*2	Point C
*3	Target Placement Line

(7) Check that the screen displays beam axis learning for target 1, then press the "Enter" button on the display screen.

(8) Align the target sheet with the target placement line, and align the mark-off line with placement point 2 (point G).

Text in Illustration

*1	Mark-off Line
*2	Point G
*3	Target Placement Line

(9) Check that the screen displays beam axis learning for target 2, then press the "Enter" button on the display screen.

NOTICE:

Within 3 minutes after the screen displays the beam axis learning for target 2, move the target and press the "Enter" button on the display screen.

(10) Align the target sheet with the target placement line, and align the mark-off line with placement point 3 (point H).

Text in Illustration

*1	Mark-off Line
*2	Point H
*3	Target Placement Line

(11) Check that the screen displays beam axis learning for target 3, then press the "Enter" button on the display screen.

NOTICE:

Within 3 minutes after the screen displays the beam axis learning for target 3, move the target and press the "Enter" button on the display screen.

(12) Press the "Exit" button to finish the beam axis learning mode.

If "Error camera axis adjust" is displayed on the screen, press the "Exit" button. Then after checking the conditions below, turn the power switch on (IG) and off, and repeat from procedure *1 again.

- Height of the target.
- Distance from lane recognition camera sensor to target.
- Orientation of target (black area positioned on top right).
- If surrounding area is bright enough.
- If black and white patterned objects are placed near the target.

INSTALLATION

1. INSTALL LANE RECOGNITION CAMERA SENSOR ASSEMBLY

- (a) Attach the lane recognition camera sensor assembly with the clip.
- (b) Temporarily install the lane recognition camera sensor assembly with the 3 bolts.
- (c) Tighten the 3 bolts in the order shown in the illustration to install the lane recognition camera sensor assembly.
- (d) Connect the connector.

SYSTEM DESCRIPTION

1. LANE-KEEPING ASSIST DESCRIPTION

(a) The lane-keeping assist system uses an image of the road from the lane-recognition camera sensor to detect the lane markers for the lane that the vehicle is in. If the system detects that the vehicle is about to move out of its lane, it uses the warning buzzer, multi-information display and steering assistance to warn the driver.

H

Text in Illustration

*1	White lines	*2	Steering wheel
*3	Radar cruise display	*4	Radar cruise set vehicle speed
*5	LKA Indicator	-	-

- White lines
 - The white line indicate the condition of the lane keeping assist system.
 - i. Lines are not displayed: Lane keeping assist system is off.
 - ii. Thin lines are displayed: Lane keeping assist system is off.
 - iii. Thick lines are displayed: Lane keeping assist system is operating.
- Steering wheel
 - When the steering wheel is displayed, this indicates that the lane keeping assist function is operating.
- Radar cruise display
 - Indicates operation conditions for radar cruise
- Radar cruise set vehicle speed

- Indicates the set vehicle speed when the radar cruise is activated

However, in the following conditions, the lane-keeping assist system may not function normally.

- Vehicle is near toll booths or similar areas
- Road has no lane marker
- Lane marker are cracked
- Road has yellow lines
- There is a shadow on either of the lane marker
- As a result of reflections, road surface is bright
- Road with reflective surface similar to concrete road
- Area where brightness changes suddenly, such as entrances and exits of tunnels or similar area
- Bright light directed at sensor
- Incline of road varies, winding road or other type of road where road surface is irregular
- Bad weather
- Frozen or snowy roads
- Road surface with water or other liquid

2. SYSTEM OPERATION

(a) Lane departure warning function:

The lane departure warning function operates when the lane-keeping assist switch is on, the vehicle speed is 48 km/h (30 mph) or more, and lane markers on the road surface are detected. With the lane departure warning function operating, if the vehicle is about to move out of the lane and this is detected by the driving support ECU, the ECU uses the warning buzzer and the multi-information display to warn the driver. Also, the ECU uses the electronic power steering system's motor to apply steering force and give suggestions to the driver for lane departure avoidance.

HINT:

This function only provides suggestions for lane departure avoidance. This function does not automatically move the vehicle within a lane.

Lane Departure Warning Function Operation Stop Condition	Restart Condition
When vehicle speed is less than 48 km/h (30 mph)	When vehicle speed is 48 km/h (30 mph)
When turn signal light switch is operated	When turn signal light switch is turned off
When steering force above a specified amount is applied	When steering force above a specified amount is not applied
When windshield wiper switch is set to Lo or Hi	When windshield wiper switch is turned off
When lane recognition camera sensor cannot detect lane marker	When lane recognition camera sensor can detect lane marker
While brake pedal operation is being detected	After brake pedal operation is completed
After lane departure warning has been issued	When the vehicle is back to its lane, or a few seconds have passed since warning was executed

(b) Lane-keeping assist function:

The lane-keeping assist function operates when the lane-keeping assist switch is ON, the vehicle speed is approximately 72 to 180 km/h (45 to 112 mph) and the dynamic radar cruise control system is ON. With the lane-keeping assist function operating, steering assistance is provided for the driver according to the driving conditions so that the vehicle stays near the midpoint of a lane. When the vehicle cannot be maintained within a lane and this is detected by the driving support ECU, the ECU uses the warning buzzer and the multi-information display to warn the driver. During the lane-keeping assist function operation, if any of the following conditions occurs, the lane-keeping assist function will stop operating. If the condition is no longer detected, the lane-keeping assist function will automatically start operating again.

Lane-keeping Assist Function Operation Stop Condition	Restart Condition
When lane recognition camera sensor cannot detect lane marker	When lane recognition camera sensor can detect lane marker
When vehicle speed is not within 72 to 180 km/h (45 to 112 mph)	When vehicle speed is within 72 to 180 km/h (45 to 112 mph)
When turn signal light switch is operated	When turn signal light switch is turned off
When windshield wiper switch is set to Lo or Hi	When windshield wiper switch is turned off
When steering force above a specified amount is applied	When steering force above specified amount is not detected
When steering force above a specified amount does not occur*	When steering operation is detected
When changing lanes	When driving within a lane is confirmed

HINT:

*: This refers to situations where the vehicle is driven for 15 seconds or more on a lane that is straight; or 5 seconds or more on a curved road (curve radius 1000 m (3281 ft.) or less).

During the lane-keeping assist function operation, if any of the following conditions is detected, the lane-keeping assist function will stop operating.

- When dynamic radar cruise control system is canceled*
- When lane-keeping assist switch is turned off
- When object recognition camera sensor's interior temperature is 70°C (158°F) or more
- When lane-keeping assist system is malfunctioning

HINT:

*: During the lane-keeping assist function operation, if the dynamic radar cruise control system is canceled, the lane-keeping assist system will change from the lane-keeping assist function to the lane departure warning function.

3. LKA INDICATOR LIGHT

The LKA indicator light is built into the combination meter. It informs the driver of the operational condition or malfunctions of the lane keeping assist system.

LKA Indicator	System Condition
Off	Not activated
On	Activated
Blink	Malfunction

4. FUNCTION OF MAIN COMPONENTS

Item	Outline
Power steering control ECU	<ul style="list-style-type: none"> Based on signal from driving support ECU, power steering control ECU applies steering force Sends driver's steering operation information to driving support ECU
Brake booster with master cylinder (skid control ECU)	<ul style="list-style-type: none"> Receives buzzer operation signal from driving support ECU, and sends it to skid control buzzer. Sends vehicle speed information to driving support ECU
Steering angle sensor	Detects driver's steering torque and transmits its signal to power steering control ECU
Yaw rate sensor	Detects yaw rate of vehicle and transmits its signal to driving support ECU
Combination meter (LKA indicator light)	<ul style="list-style-type: none"> Turns on when lane-keeping assist switch is on If driving support ECU detects malfunction, this light flashes to warn driver
Combination meter (Warning buzzer)	When lane-keeping assist system detects malfunction, warning buzzer sounds once to inform driver
Cruise control main switch	Turns cruise control system on / off
Stop light switch assembly	Detects depressing of brake pedal and transmits its signal to driving support ECU
Skid control buzzer	This buzzer sounds upon receiving signal from brake booster with master cylinder (skid control ECU)
Vehicle speed sensor	Sends vehicle speed signal to brake booster with master cylinder (skid control ECU), and then it is sent to driving support ECU
Driving support ECU	<ul style="list-style-type: none"> Based on lane marker information and information from other functions, driving support ECU sends signals to electronic power steering control ECU so that it applies steering force Controls multi-information display and buzzer sound condition Monitors lane-keeping assist malfunctions, and records diagnostic information
Lane-recognition camera sensor	Obtains an image of the road in front of the vehicle. An internal image processor generates information such as lane width, road curvature, yaw angle and the amount of vehicle offset from the center of the lane, and this information is sent to the driving support ECU.
Millimeter wave radar sensor	Detects a preceding vehicle and calculates the distance to the preceding vehicle.
Lane keeping assist main switch	Activates or deactivates the system.

Item	Outline
Windshield wiper switch	Sends the operation condition of the windshield wiper switch to the driving support ECU.
Turn signal switch	Sends the operation condition of the turn signal switch to the driving support ECU.
Combination meter	<ul style="list-style-type: none"> • Controls the multi-information display and illumination of the LKA indicator in accordance with the respective display request signals from the driving support ECU. • Sounds the meter buzzer in accordance with the buzzer request signal from the driving support ECU.
Multi-information display	Displays the operating condition of the system.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the lane-keeping assist system.
- *: Use the Techstream.

1. VEHICLE BROUGHT TO WORKSHOP

NEXT

2. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3. CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Lane-keeping Assist System

Symptom	Suspected Area	See page
Lane-keeping assist system does not operate	Main switch circuit	INFO

TERMINALS OF ECU

1. CHECK DRIVING SUPPORT ECU

(a) Measure the voltage and/or resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L60-6 (SPSW) - L60-25 (GND)	R - W-B	Steering pad switch signal (Lane keeping assist main switch signal)	Power switch on (IG) Lane keeping assist main switch off	10 to 14 V
L60-6 (SPSW) - L60-25 (GND)	R - W-B	Steering pad switch signal (Lane keeping assist main switch signal)	Power switch on (IG) Lane keeping assist main switch on	6 to 7 V
L60-10 (CCHG) - L60-25 (GND)	G - W-B	Cruise control main switch signal	Power switch on (IG) MODE switch on	Below 1 V
L60-10 (CCHG) - L60-25 (GND)	G - W-B	Cruise control main switch signal	Power switch on (IG) MODE switch off	10 to 14 V
L60-9 (WASH) - L60-25 (GND)	V - W-B	Washer switch signal	Power switch on (IG) Washer switch off	10 to 14 V
L60-9 (WASH) - L60-25 (GND)	V - W-B	Washer switch signal	Power switch on (IG) Washer switch on	Below 1 V
L60-17 (CA2L) - L60-25 (GND)	W - W-B	CAN communication signal	Power switch on (IG)	Pulse generation (See waveform 1)
L60-18 (CA1N) - L60-25 (GND)	L - W-B	CAN communication signal	Power switch on (IG)	Pulse generation

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
				(See waveform 2)
L60-23 (CCS) - L60-25 (GND)	V - W-B	Cruise control main switch signal	Power switch on (IG)	10 to 14 V
L60-23 (CCS) - L60-25 (GND)	V - W-B	Cruise control main switch signal	Power switch on (IG), CANCEL switch on	6.6 to 10.1 V
L60-23 (CCS) - L60-25 (GND)	V - W-B	Cruise control main switch signal	Power switch on (IG), Main switch on	Below 1 V
L60-24 (HITP) - L60-25 (GND)	G - W-B	CAN signal (Hi temperature)	Power switch on (IG)	10 to 14 V
L60-30 (B) - Body ground	B - Body ground	Power supply	Always	11 to 14 V
L60-25 (GND) - Body ground	W-B - Body ground	Body ground	Always	Below 1 Ω
L60-27 (STP-) - Body ground	Y - Body ground	Stop light switch assembly signal input	Depress brake pedal	7.5 to 14 V
L60-27 (STP-) - Body ground	Y - Body ground	Stop light switch assembly signal input	Release brake pedal	Below 1 V
L60-28 (ST1-) - Body ground	R - Body ground	Stop light switch assembly signal input	Power switch on (IG), release brake pedal	7.5 to 14 V
L60-28 (ST1-) - Body ground	R - Body ground	Stop light switch assembly signal input	Power switch on (IG), depress brake pedal	Below 1 V
L60-30 (+B) - L60-25 (GND)	B - W-B	Power source	Power switch on (IG)	11 to 14 V
L60-32 (WIP2) - L60-25 (GND)	P - W-B	Wiper switch signal	Power switch on (IG), Wiper switch off	Below 1 V
L60-32 (WIP2) - L60-25 (GND)	P - W-B	Wiper switch signal	Power switch on (IG), Wiper switch LO position	6 to 7 V
L60-32 (WIP2) - L60-25 (GND)	P - W-B	Wiper switch signal	Power switch on (IG), Wiper switch HI position	10 to 14 V
L60-34 (WNKR) - L60-25 (GND)	B - W-B	Winker R signal	Power switch on (IG) Winker off	10 to 14 V

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L60-34 (WNKR) - L60-25 (GND)	B - W-B	Winker R signal	Power switch on (IG) Winker R	Below 1 V
L60-35 (WNKL) - L60-25 (GND)	P - W-B	Winker L signal	Power switch on (IG) Winker off	10 to 14 V
L60-35 (WNKL) - L60-25 (GND)	P - W-B	Winker L signal	Power switch on (IG) Winker L	Below 1 V
L60-39 (CA2H) - L60-25 (GND)	B - W-B	CAN communication signal	Power switch on (IG)	Pulse generation (See waveform 3)
L60-40 (CA1P) - L60-25 (GND)	Y - W-B	CAN communication signal	Power switch on (IG)	Pulse generation (See waveform 4)

(b) WAVEFORM 1

(1) CAN communication signal

Driving support ECU Terminal Name	Between CA2L and GND
Tester Range	1 V/DIV., 10 μsec./DIV.
Condition	Power switch on (IG)

HINT:

The waveform varies depending on the CAN communication signal.

(c) WAVEFORM 2

(1) CAN communication signal

Driving support ECU Terminal Name	Between CA1N and GND
Tester Range	1 V/DIV., 10 μsec./DIV.
Condition	Power switch on (IG)

(d) WAVEFORM 3

(1) CAN communication signal

Driving support ECU Terminal Name	Between CA2H and GND
-----------------------------------	----------------------

Tester Range	1 V/DIV., 10 μsec./DIV.
Condition	Power switch on (IG)

HINT:

The waveform varies depending on the CAN communication signal.

(e) WAVEFORM 4

(1) CAN communication signal

Driving support ECU Terminal Name	Between CA1P and GND
Tester Range	1 V/DIV., 10 μsec./DIV.
Condition	Power switch on (IG)

DTC CHECK / CLEAR

1. CHECK DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: All ECUs / Lane Keeping Assist / Trouble Codes.
- (e) Read the DTCs.

2. CLEAR DTC

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Enter the following menus: All ECUs / Lane Keeping Assist / Trouble Codes.
- (e) Clear the DTCs.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows values or status of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).
- (c) Turn the Techstream on.
- (d) Using the Techstream, enter the following menus:
 - (1) Select: All ECUs / (desired menu) / Data List /
- (e) Check the values by referring to the table below.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Country# (F Radar Sens)	Millimeter wave radar sensor country signal / JPN, NA, EURO, AUS, SAFC, OTHER TWN, CHINA, THAI, GCC, NOFIX	Actual country code	-

Lane Keeping Assist

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Wiper Information	Wiper operation status / Unoperate, Oil off, Mist, Washer, Unknown, Lo, Hi	The respective operational status displayed	-

Head Light	Head light signal / ON or OFF	Head light signal status	-
Head Light (High Beam)	Head Light (Hi Beam) signal / ON or OFF	Head Light (Hi Beam) signal status	-
Turn Light RH	Turn Light RH signal / ON or OFF	Turn Light RH signal status	-
Turn Light LH	Turn Light LH signal / ON or OFF	Turn Light LH signal status	-
Left Lane Type	Left lane type signal / Dashed or Solid	Dashed: Left lane dashed Solid: Left lane solid	-
Right Lane Type	Right lane type signal / Dashed or Solid	Dashed: Right lane dashed Solid: Right lane solid	-
Lane Undetectable	Lane undetectable signal / Undetectable or Detect	Undetectable: Lane undetectable Detect: Lane detected	-
Left Lane Detection	Left lane detection signal / Undetectable or Detect	Undetectable: Left lane undetectable Detect: Left lane detected	-
Right Lane Detection	Right lane detection signal / Undetectable or Detect	Undetectable: Right lane undetectable Detect: Right lane detected	-
Left Lane Change	Left lane change signal / ON or OFF	ON: When left lane change is performed OFF: When left lane change is not performed	-
Right Lane Change	Right lane change signal / ON or OFF	ON: When right lane change is performed OFF: When right lane change is not performed	-
Lane Position	Lane position / min.: -327.68 m, max.: 327.67 m	Actual lane position	-
Lane Width	Lane width / min.: 0 m, max.: 655.35 m	Actual lane width	-
Small Steering Force Demand	Small steering force demand signal / ON or OFF	ON: Steering assist function operates	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		OFF: Steering assist function does not operate	
Lane-Keeping Assist Demand	Lane-keeping assist demand signal / ON or OFF	ON: Lane-keeping assist function operates OFF: Lane-keeping assist function does not operate	-
Skid Control Buzzer Demand	Skid control buzzer demand signal / ON or OFF	ON: Skid control buzzer sounds OFF: Skid control buzzer does not sound	-
Target Steering Wheel Torque	Target steering wheel torque / min.: -100 N*m, max.: 100 N*m	Actual steering wheel torque	-
Left Lane Indicator	Left lane recognition signal / Nothing, Heavy, Closing or H blink	Nothing: Left lane indicator is not shown Heavy: Left lane indicator is fully shown Closing: Only left lane indicator outline is shown H blink: Left lane indicator is blinking	-
Right Lane Indicator	Right lane recognition signal / Nothing, Heavy, Closing or H blink	Nothing: Right lane indicator is not shown Heavy: Right lane indicator is fully shown Closing: Only right lane indicator outline is shown H blink: Right lane indicator is blinking	-
Steering Indicator	Meter display signal of lane-keeping assist function / Nothing, Light or Blink	Nothing: Steering wheel assistance is not displayed Light: Steering wheel assistance is displayed Blink: Steering wheel assistance is blinking	-
LKA Abnormal Buzzer	Lane-keeping assist system abnormal buzzer signal / ON or OFF	ON: Lane-keeping assist system abnormal	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		OFF: Lane-keeping assist system normal	
Lane Detection Impossible Buz	Lane-keeping detection impossible buzzer signal / Nothing, Light or Blink	Light: Lane-keeping detection impossible buzzer sounds Nothing: Lane-keeping detection impossible buzzer does not sound Blink: Ready indicator turns blink	-
Ready Indicator	Ready indicator light signal / Nothing, Light or Blink	Nothing: Ready indicator turns on Blink: Ready indicator turns off Light: Ready indicator turns blinking	-
LKA Temporarily Disable	Lane-keeping assist system temporarily disabled signal / ON or OFF	ON: Lane-keeping assist system is temporarily disabled OFF: Lane-keeping assist system is operating	-
EPS Trq Sens Output	EPS torque sensor output signal / -7 N/m to 7 N/m	The torque sensor output signal status displayed	-
The Number of DTCs	Number of DTCs / min.: 0, max.: 255	Actual number of DTCs	-

ABS/VSC/TRAC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Vehicle Speed	Vehicle speed/ min.: 0 km/h (0 mph), max.: 326.4 km/h (204 mph)	Actual vehicle speed is displayed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Test allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

- (a) Connect the Techstream to the DLC3.
- (b) Turn the power switch on (IG).

(c) Turn the Techstream on.

(d) Using the Techstream, enter the following menus:

(1) Select: All ECUs / (desired menu) / Active Test /

(e) Perform the Active Test by referring to the table below.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Drift From The Lane	LKA indicator light ON / OFF	ON / OFF	-

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnosis Note
Buzzer	Skid control buzzer sounds	ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:

If a trouble code is displayed during the DTC check, inspect the trouble area listed for that code. For details of the code, refer to the "See page" below.

DTC	C1A01	Driving Support ECU
-----	-------	---------------------

DESCRIPTION

The driving support ECU uses the lane-recognition camera sensor assembly to detect obstacles in front of the vehicle and the direction that the driver's head is facing.

DTC Code	DTC Detection Condition	Trouble Area
C1A01	While initial check is running, power switch is on (IG) and system is operating, driving support ECU detects an internal malfunction for 1 second or more	Driving support ECU

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK DTC OUTPUT
----	------------------

- (a) Using the Techstream, enter the following menus: All ECUs / Lane Keeping Assist / Trouble Codes.
- (b) Clear the DTC .
- (c) Turn the power switch off.
- (d) Turn the power switch on (IG).
- (e) Drive the vehicle and operate lane keeping assist control.
- (f) Recheck for DTCs .

OK:

DTC C1A01 is not output.

NG  REPLACE DRIVING SUPPORT ECU

OK  USE SIMULATION METHOD TO CHECK

DTC

C1A02

Vehicle Information Not Obtained

DESCRIPTION

When the driving support ECU is replaced with a new one, it acquires the country specification information (destination, steering wheel position, etc.) from the main body ECU. When the country specification information in the driving support ECU and main body ECU do not match, DTC C1A02 is stored.

DTC Code	DTC Detection Condition	Trouble Area
C1A02	Inconsistent vehicle specification information between the main body ECU and driving support ECU continues for 1 second or more	<ul style="list-style-type: none"> • Driving support ECU • Main body ECU

INSPECTION PROCEDURE

PROCEDURE

1. CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Using the Techstream, enter the following menus: All ECUs / Lane Keeping Assist / Trouble Codes.

(b) Clear the DTCs .

(c) Turn the power switch on (IG).

(d) Recheck for DTCs .

OK:

DTC C1A02 is not output.

NG  GO TO CAN COMMUNICATION SYSTEM

OK  REPLACE DRIVING SUPPORT ECU

DTC

C1A05

Stop Light Switch Circuit

DESCRIPTION

When the brake pedal is depressed, the stop light switch assembly sends signal to the driving support ECU.

Receiving the signal, the driving support ECU cancels the dynamic radar cruise control system. Even if there is a malfunction in the stop light signal circuit while the cruise control is operating, normal driving is maintained due to fail-safe function.

When the brake pedal is depressed, positive voltage is applied to terminal STP- of the driving support ECU through the STOP fuse and the stop light switch assembly, and the driving support ECU cancels the cruise control.

When the brake pedal is released, positive voltage is applied to terminal ST1- of the driving support ECU through the IGN fuse and the stop light switch assembly, and the driving support ECU operates the dynamic radar cruise control.

DTC Code	DTC Detection Condition	Trouble Area
C1A05	When vehicle speed is 50 km/h (31 mph) or more with lane-keeping assist switch on, voltages of terminals ST1- and STP- of driving support ECU are both below 1 V for 0.5 sec. or more	<ul style="list-style-type: none"> • Stop light switch assembly • Stop light switch assembly circuit • Harness or connector • Driving support ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

- STP signal conditions can be checked using the Techstream.
 - a. Connect the power switch on (IG).
 - b. Turn the power switch on (IG).
 - c. Enter the following menus: Powertrain / Radar Cruise / Data List / Stop Light SW 1 (M-CPU).
 - d. Check the STP signal when the brake pedal is depressed and released.

Brake Pedal Operation	Tester Display
Depressed	ON
Released	OFF

PROCEDURE

1.	CHECK STOP LIGHT SWITCH ASSEMBLY (TERMINAL VOLTAGE)
----	---

*1

(a) Disconnect the stop light switch assembly connector.

N

- (b) Turn the power switch on (IG).
- (c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A26-2 - Body ground	Power switch on (IG)	9 to 14 V
A26-4 - Body ground	Power switch on (IG)	9 to 14 V

Text in Illustration

*1	Front view of wire harness connector
----	--------------------------------------

(to Stop Light Switch Assembly)

(d) Reconnect the stop light switch assembly connector.

NG REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT FOR STOP LIGHT SWITCH ASSEMBLY)

OK

2. INSPECT STOP LIGHT SWITCH ASSEMBLY

*1

(a) Disconnect the stop light switch assembly connector.

(b) Remove the stop light switch assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Position	Specified Condition
1 - 2	Switch pin not pushed	Below 1 Ω
	Switch pin pushed	10 k Ω or higher
3 - 4	Switch pin not pushed	10 k Ω or higher
	Switch pin pushed	Below 1 Ω

Text in Illustration

*1	Component without harness connected (Stop Light Switch Assembly)
*2	Not pushed
*3	Pushed

(d) Reinstall the stop light switch assembly.

(e) Reconnect the stop light switch assembly connector.

NG ▶ REPLACE STOP LIGHT SWITCH ASSEMBLY

OK

3. CHECK DRIVING SUPPORT ECU (STP- AND ST1 - VOLTAGE)

(a) Disconnect the driving support ECU connector.

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Position	Specified Condition
L60-27 (STP-) - Body ground	Released	Below 1.5 V
	Depressed	7.5 to 14 V
L60-28 (ST1-) - Body ground	Released	7.5 to 14 V
	Depressed	Below 1.5 V

Text in Illustration

NG  REPLACE DRIVING SUPPORT ECU

OK  USE SIMULATION METHOD TO CHECK

DTC

C1A0C

Object Recognition Camera Region Code Mismatch

DESCRIPTION

When the lane recognition camera sensor assembly is replaced with a new one, it acquires the country specification information from the driving support ECU. The lane recognition camera sensor assembly has information about the market it is intended for use in (country specification information such as the destination, steering wheel position etc.). When a new camera sensor is installed and the country specification information does not match that of the driving support ECU, the ECU stores DTC C1A0C.

DTC Code	DTC Detection Condition	Trouble Area
C1A0C	While initial check is running, power switch is on (IG) and system is operating, country specification information in driving support ECU and lane recognition camera sensor assembly do not match	<ul style="list-style-type: none"> • Lane recognition camera sensor assembly • Driving support ECU

INSPECTION PROCEDURE

NOTICE:

When the lane recognition camera sensor assembly is replaced with a new one, adjust the lane recognition camera sensor assembly .

PROCEDURE

1. REPLACE LANE RECOGNITION CAMERA SENSOR ASSEMBLY

(a) Replace lane recognition camera sensor assembly .

DTC

U1119

Lost Communication with Object Recognition ECU (CAN)

DESCRIPTION

Because of the location of the lane recognition camera assembly, it is subject to high temperatures. If the lane recognition camera sensor assembly becomes too hot, the power source is shut down to protect the system. At that time CAN communication also stops. However, in order to inform the driving support ECU that CAN communication has not stopped because of a CAN communication error, on/off signals are periodically sent from the HITP terminal.

DTC Code	DTC Detection Condition	Trouble Area
U1119	When vehicle speed is 50 km/h (31 mph) or more with lane-keeping main switch is on, communication stop from lane recognition camera sensor to driving support ECU continues for 1 second or more	<ul style="list-style-type: none"> • Lane recognition camera sensor • CAN communication system • Driving support ECU • Harness or connector

(Spiral Cable Sub-assembly)

HINT:

The spiral cable makes a maximum of approximately 5 rotations.

(c) Install the spiral cable sub-assembly INFO.

NG ▶ REPLACE SPIRAL CABLE SUB-ASSEMBLY

OK

3. CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DRIVING SUPPORT ECU)

*1

*2

(a) Disconnect the driving support ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L52-11 (DIST) - L60-6 (SPSW)	Always	Below 1 Ω
L52-11 (DIST) - Body ground	Always	10 k Ω or higher

Text in Illustration

*1

Front view of wire harness connector

	(to Spiral Cable Sub-assembly)
*2	Front view of wire harness connector (to Driving Support ECU)

(c) Reconnect the driving support ECU connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (SPIRAL CABLE - DRIVING SUPPORT ECU)

OK

4.	CHECK HARNESS AND CONNECTOR (BODY GROUND CIRCUIT)
----	---

*1

(a) Disconnect the spiral cable connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L52-2 (ECC) - Body ground	Always	Below 1 Ω

Text in Illustration

*1	Front view of wire harness connector (to Spiral Cable Sub-assembly)
----	--

(c) Reconnect the connector.

NG ► REPAIR OR REPLACE HARNESS OR CONNECTOR (BODY GROUND CIRCUIT)

OK

5.	INSPECT DRIVING SUPPORT ECU
----	-----------------------------

(a) Turn the power switch on (IG).

*1

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L60-6 (SPSW) - Body ground	<ul style="list-style-type: none"> • Power switch on (IG) • Lane keeping assist main switch ON 	6 to 7 V
	<ul style="list-style-type: none"> • Power switch on (IG) • Lane keeping assist main switch OFF 	10 to 14 V

*1	Component without harness connected (Driving Support ECU)
----	--

NG ➡ REPLACE DRIVING SUPPORT ECU

OK ➡ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

DESCRIPTION

- When the driving support ECU detects a lane-keeping assist main switch signal, it sends the signal to the combination meter via CAN communication. Then the LKA indicator light turns on.
- The LKA indicator light circuit uses CAN communication. If there is a malfunction in this circuit, check for DTCs in the CAN communication system before troubleshooting this circuit.

INSPECTION PROCEDURE

PROCEDURE

1. PERFORM ACTIVE TEST USING TECHSTREAM (LKA INDICATOR LIGHT)

(a) Select the Active Test, use the Techstream to generate a control command, and then check that the LKA indicator light illuminates.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Drift From The Lane	LKA indicator light	ON / OFF	-

OK:

LKA indicator light turns on / turns off.

NG ▶ REPLACE NO. 3 METER CIRCUIT PLATE

OK

2. READ VALUE USING TECHSTREAM (LKA INDICATOR LIGHT)

(a) Using the Techstream, enter the following menus: All ECUs / Lane Keeping Assist / Data List / LKA Indicator.

(b) Check the Data List for proper functioning of the LKA indicator light.

Lane Keeping Assist

Tester Display	Test Details	Normal Condition	Diagnostic Note
LKA Indicator	LKA indicator light signal / ON or OFF	ON: LKA indicator light turns on OFF: LKA indicator light turns off	-

OK:

LKA indicator light turns on / turns off.

NG▶ REPLACE DRIVING SUPPORT ECU

OK▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

COMPONENTS

N*m (kgf*cm, ft.*lbf): Specified torque

REMOVAL

1. REMOVE RADIATOR SUPPORT OPENING COVER INFO

2. REMOVE FRONT BUMPER ASSEMBLY INFO

3. REMOVE MILLIMETER WAVE RADAR SENSOR ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 5 bolts and millimeter wave radar sensor assembly.

ADJUSTMENT

1. ADJUST MILLIMETER WAVE RADAR SENSOR ASSEMBLY

P

Text in Illustration

*1	Approx. 10 m
*2	Approx. 14 m

CAUTION:

Exposure to radio frequency emissions is hazardous to your health. It is hazardous to your health to be within 20 cm (7.87 in.) of the device's radio frequency aperture.

NOTICE:

- This device complies with FCC radio frequency emission regulations.
- Perform measurements on a level surface.
- Make sure that no large pieces of metal are within a 10 m (32.8 ft.) x 14 m (45.9 ft.) area in front of the vehicle. If possible, the surrounding area should also be free of large metal objects.

(a) Before adjusting the radar beam axis, prepare the vehicle as follows.

- (1) Check the tire pressure and adjust it if necessary.
- (2) Remove all excess weight from the vehicle (luggage, heavy objects, etc.).

(b) Check and adjust the vertical direction of the radar sensor.

P

Text in Illustration

*1	Level
----	-------

(1) Remove dust, oil and foreign matter from the radar sensor's level rack.

(2) Set a level on the radar sensor's level rack.

(3) Check that the level's air bubble is within the red frame.

Text in Illustration

*1	FR
*2	LH
*3	Level
*4	Air Bubble
*5	Bolt A

OK:

Level's air bubble is within the red frame.

If the bubble is not within the red frame, use a screwdriver to adjust the bolt A until the air bubble is within the red frame.

- The adjustable range within the level's red frame is $\pm 0.2^\circ$.
- The target angle is $+0.2^\circ$ (upward angle of 0.2°).

Result:

Adjustment Direction	Adjustment Procedure	Adjustment Angl
Vertical adjustment	Upward direction: Turn bolt A to negative (-) side	For every 1.4 rotations adjustment bolt, sensor moves about 1°
	Downward direction: Turn bolt A to positive (+) side	

(c) Adjust the reflector height.

Text in Illustration

*1	Millimeter Wave Radar Sensor
----	------------------------------

(1) Adjust the reflector so that the center of SST reflector is the same

height as the millimeter wave radar sensor.

SST: 09870-60000

09870-60010

SST: 09870-60040

HINT:

Prepare a 10 m (32.8 ft.) string, string with a sharp-pointed weight (plumb bob), and 5 m (16.4 ft.) tape measure.

(d) Place the reflector.

P

(1) Hang the string (with weight) from the center of the vehicle's rear emblem. Mark the vehicle's rear center point on the ground. Repeat for the front of the vehicle.

(2) Set one end of the 10 m (32.8 ft.) string on the vehicle's rear center point. Run the string over the vehicle's front center point to a position 5 m (16.4 ft.) beyond the vehicle's front center point, as shown in the illustration. Mark the 5 m (16.4 ft.) position.

P

(3) Using a tape measure, measure 15.7 mm (0.618 in.) to the right of the 5 m (16.4 ft.) position. Place the reflector at that position.

NOTICE:

Perform the operation as precisely as possible.

P

Text in Illustration

*1	Reflector Placement Point	*2	Millimeter Wave Radar Sensor Position
----	---------------------------	----	---------------------------------------

(e) Check the radar beam axis.

(1) When using the Techstream:

1. Connect the Techstream to the DLC3.
2. Turn the power switch on (IG).
3. Turn the Techstream on, and turn the cruise control main switch on.
4. Select "Connect to Vehicle".
5. Select each item on the display screen and proceed to the next screen.
6. Under "System Selection Menu", select "Radar Cruise".
7. Select "Utility".
8. Select "Beam Axis Adjustment" and proceed to the next screen.

HINT:

A buzzer will sound for 1 second.

9. Follow the Techstream display, and continue with the adjustment.

CAUTION:

Do not come within 20 cm (7.87 in.) of the radar sensor.

NOTICE:

- Turn the cruise control main switch on before pressing "Next".
- Make sure there is at least 20 cm (7.87 in.) between the radar sensor and any nearby individuals.

(2) Check the following items on the laser cruise divergence data screen.

NOTICE:

While using the Techstream beam axis adjustment mode, the actual direction and angle of the radar sensor may be different from the Techstream data. In such a case, the deviation is displayed on the combination meter's multi-information display.

1. Confirm that the distance value is approximately 5 m (16.4 ft.).

HINT:

- A value between 0.0 m (0.0 ft.) and 6.3 m (20.7 ft.) should be indicated.
 - If the distance is 0.0 m (0.0 ft.), the sensor cannot detect the target. Reconfirm that there is no metal in the specified area in front of the vehicle (refer to the Notice at the beginning of this adjustment procedure).
2. Confirm that the left/right side value is between 0.0 m (0.0 ft.) and 6.3 m (20.7 ft.).

HINT:

If the distance is 0.0 m (0.0 ft.), the sensor cannot detect the target. Reconfirm that there is no metal in the specified area in front of the vehicle (refer to the Notice at the beginning of this adjustment procedure).

(f) Check and adjust the horizontal direction of the radar sensor.

(1) Check that the divergence of the radar beam axis is 0°.

Standard:

0° (Both right and left)

If the axis is not as specified, use a screwdriver to adjust the bolt B until the divergence of the radar beam axis is 0°.

(2) Based on the measured divergence of the beam axis, turn and adjust the bolt B for horizontal adjustment of the millimeter wave radar sensor using a screwdriver.

Text in Illustration

P

*1	Bolt B
----	--------

Result:

Adjustment Direction	Adjustment Procedure	Adjustment Angle
Horizontal adjustment	Right direction: Turn bolt B to positive (+) side.	For every 2.5 rotations of adjustment bolt, sensor moves about 1°
	Left direction: Turn bolt B to negative (-) side.	

- If "LEFT SIDE: 1.0°" is displayed, the divergence is 1.0° in the left direction. Turn the bolt B approximately 2.5 turns to the negative (-) side.
- If the value does not change to 0°, it is possible that the sensor is aiming at something different. Reconfirm that there are no reflective materials in the surrounding area.

(3) Select "Next". The driving learning value is automatically reset.

HINT:

A buzzer will sound for 10 seconds or more.

(4) Disconnect the Techstream from the DLC3.

(g) Recheck and readjust the vertical direction of the radar sensor.

(1) Set a level on the radar sensor's level rack.

Text in Illustration

*1	Level
----	-------

P

(2) Check that the level's air bubble is within the red frame.

Text in Illustration

*1	FR
*2	LH
*3	Level
*4	Air Bubble
*5	Bolt A

OK:

Level's air bubble is within the red frame.

If the bubble is not within the red frame, use a screwdriver to adjust the bolt A until the level's air bubble is within the red frame.

- The adjustable range within the red frame is +/-0.2°.
- The target angle is +0.2° (upward angle of 0.2°).

P

Result:

Adjustment Direction	Adjustment Procedure	Adjustment Angle
Vertical adjustment	Upward direction: Turn bolt A to negative (-) side Downward direction: Turn bolt A to positive (+) side	For every 1.4 rotations adjustment bolt, sensor moves about 1°

INSTALLATION

1. INSTALL MILLIMETER WAVE RADAR SENSOR ASSEMBLY

(a) Tighten the 5 bolts on the millimeter wave radar sensor assembly.

Torque: **6.2 N·m (63 kgf·cm, 55in·lbf)**

HINT:

Tighten the bolts in the order indicated in the illustration.

(b) Connect the connector.

2. INSTALL FRONT BUMPER ASSEMBLY [INFO](#)

3. ADD WASHER FLUID (w/ Headlight Cleaner System) [INFO](#)

4. PREPARE VEHICLE FOR FOG LIGHT AIMING ADJUSTMENT [INFO](#)

5. PREPARE FOR FOG LIGHT AIMING [INFO](#)

6. INSPECT FOG LIGHT AIMING [INFO](#)

7. ADJUST FOG LIGHT AIMING [INFO](#)

8. ADJUST MILLIMETER WAVE RADAR SENSOR ASSEMBLY [INFO](#)

9. INSTALL RADIATOR SUPPORT OPENING COVER [INFO](#)

REMOVAL

1. REMOVE REAR NO. 2 FLOOR BOARD (for Separate Type) INFO

2. REMOVE REAR DECK FLOOR BOX INFO

3. REMOVE REAR NO. 3 FLOOR BOARD INFO

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO.

5. REMOVE REAR FLOOR STEP UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

(a) Remove the 5 clips (A) and nut.

(b) Disconnect the 3 clips (B) and remove the rear floor step under cover sub-assembly.

6. REMOVE CHARCOAL CANISTER ASSEMBLY

(a) Using a screwdriver, pry up the retainer.

HINT:

Do not remove the retainer.

P

(b) Disconnect the tube clamp, purge line hose and vent line tube.

NOTICE:

- Remove any dirt or foreign matter on the vent line tube connector before performing this work.

P

Text in Illustration

*1	Vent Line Tube Connector
*2	O-ring
*3	Retainer

- Do not allow any scratches or foreign matter on the parts when disconnecting them as the vent line tube connector has an O-ring that seals the pipe.
- Perform this work by hand. Do not use any tools.
- Do not forcibly bend, twist or turn the nylon tube.
- Protect the disconnected part by covering it with a plastic bag after disconnecting the vent line tube.
- If the vent line tube connector and pipe are stuck, push and pull to release them.

(c) Disconnect the tube clamp, wire harness clamp and connector air inlet line tube.

(d) Remove the 3 bolts, clip and charcoal canister assembly.

INSPECTION

1. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister assembly.

(1) Visually check the charcoal canister for cracks or damage.

If cracks or damage are found, replace the charcoal canister assembly.

T

(b) Check canister operation.

(1) With the purge port closed, blow 5 kPa (0.1 kgf/cm², 0.7 psi) of air into the vent port, and check that air flows from the air inlet port.

Text in Illustration

*1	Vent Port
*2	Air
*3	Air Inlet Port
*4	Purge Port

T

If the result is not as specified, replace the charcoal canister assembly.

(2) With the vent port closed, blow 5 kPa (0.1 kgf/cm², 0.7 psi) of air into the air inlet port, and check that air flows from the purge port.

Text in Illustration

*1	Purge Port
*2	Air Inlet Port
*3	Vent Port
*4	Air

T

If the result is not as specified, replace the charcoal canister assembly.

(c) Check for air leaks.

(1) Connect a pressure gauge to the vent port of the charcoal canister.

Text in Illustration

*1	Purge Port
*2	Air Inlet Port
*3	Vent Port
*4	Pressure Gauge

T

(2) With the purge port and the air inlet port closed, apply 20 kPa (150 mmHg, 5.91 in.Hg) of pressurized air into the vent port, then confirm that pressure is retained for 1 minute.

If the result is not as specified, replace the charcoal canister assembly.

(d) Check the leak detection pump.

(1) Connect a positive (+) lead of the battery to terminal 5 and a negative (-) lead to terminal 1.

T

(2) Check that a clicking sound is heard from the leak detection pump.

If the result is not as specified, replace the charcoal canister assembly.

INSTALLATION

1. INSTALL CHARCOAL CANISTER ASSEMBLY

(a) Install the charcoal canister assembly with the 3 bolts and clip.

Torque: **19 N·m (194 kgf·cm, 14ft·lbf)**

(b) Connect the air inlet line tube, connector, tube clamp and wire harness clamp.

(c) Connect the vent line tube.

(1) Connect the pipe to the fuel tube connector, as shown in A in the illustration. Then push up the retainer to lock the claws, as shown in B in the illustration.

- Check that there are no scratches or foreign matter around the connected parts of the vent line tube connector and pipe before performing this work.
- After connecting the vent line tube, check that the vent line tube is securely connected by pulling the vent line tube connector and pipe.

(d) Connect the purge line hose and tube clamp.

2. INSTALL REAR FLOOR STEP UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

(a) Connect the 3 clips (B).

(b) Install the rear floor step under cover sub-assembly with the nut and 5 clips (A).

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected **INFO**.

4. INSTALL REAR NO. 3 FLOOR BOARD **INFO**

5. INSTALL REAR DECK FLOOR BOX **INFO**

(c) Remove the 4 bolts, EGR pipe assembly and 2 gaskets.

T

10. REMOVE EGR VALVE ASSEMBLY

T

(a) Disconnect the connector, wire harness clamp and 4 water hoses.

T

(b) Remove the 4 nuts and bolt.

Text in Illustration

*1	Stud Bolt and Nut
----	-------------------

(c) Using an E8 "TORX" wrench, remove the 4 stud bolts and EGR valve with cooler assembly.

(d) Remove the gasket.

T

(e) Remove the 2 nuts, EGR valve assembly and gasket.

11. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the bolt and wiring harness clamp bracket.

T

INSPECTION

1. INSPECT EGR VALVE ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
5 (B1) - 4 (S1)	20°C (68°F)	18 to 22 Ω
5 (B1) - 6 (S3)	20°C (68°F)	18 to 22 Ω
2 (B2) - 1 (S4)	20°C (68°F)	18 to 22 Ω
2 (B2) - 3 (S2)	20°C (68°F)	18 to 22 Ω

If the result is not as specified, replace the EGR valve assembly.

INSTALLATION

1. INSTALL WIRE HARNESS CLAMP BRACKET

(a) Install the wiring harness clamp bracket with the bolt.

T

2. INSTALL EGR VALVE ASSEMBLY

(a) Temporarily install the EGR valve assembly with the 2 nuts (A and B).

Text in Illustration

*1	Bolt
*2	Stud Bolt and Nut

(b) Set a new gasket and EGR valve with cooler assembly.

(c) Using an E8 "TORX" wrench, install the 4 stud bolts.

Torque: **9.5 N·m (97 kgf·cm, 84in·lbf)**

(d) Temporarily install the 2 nuts (C) and bolt.

(e) Tighten the nut (A).

Torque: **21 N·m (214 kgf·cm, 15ft·lbf)**

(f) Tighten the 3 nuts (B and C) and bolt.

Torque: **21 N·m (214 kgf·cm, 15ft·lbf)**

NOTICE:

Make sure that all installation surfaces of the EGR valve with cooler assembly are in even contact when tightening the bolts and nuts.

(g) Connect the connector, wire harness clamp and 4 water hoses.

3. INSTALL EGR PIPE ASSEMBLY

(a) Install 2 new gaskets and EGR pipe assembly with the 4 bolts.

Torque: **10 N·m (102 kgf·cm, 7ft·lbf)**

NOTICE:

Make sure to tighten the 4 bolts evenly until the flanges of the EGR pipe assembly contact with the installation surfaces.

(b) Install the wire harness support with the bolt.

(c) Connect the 2 wire harness clamps.

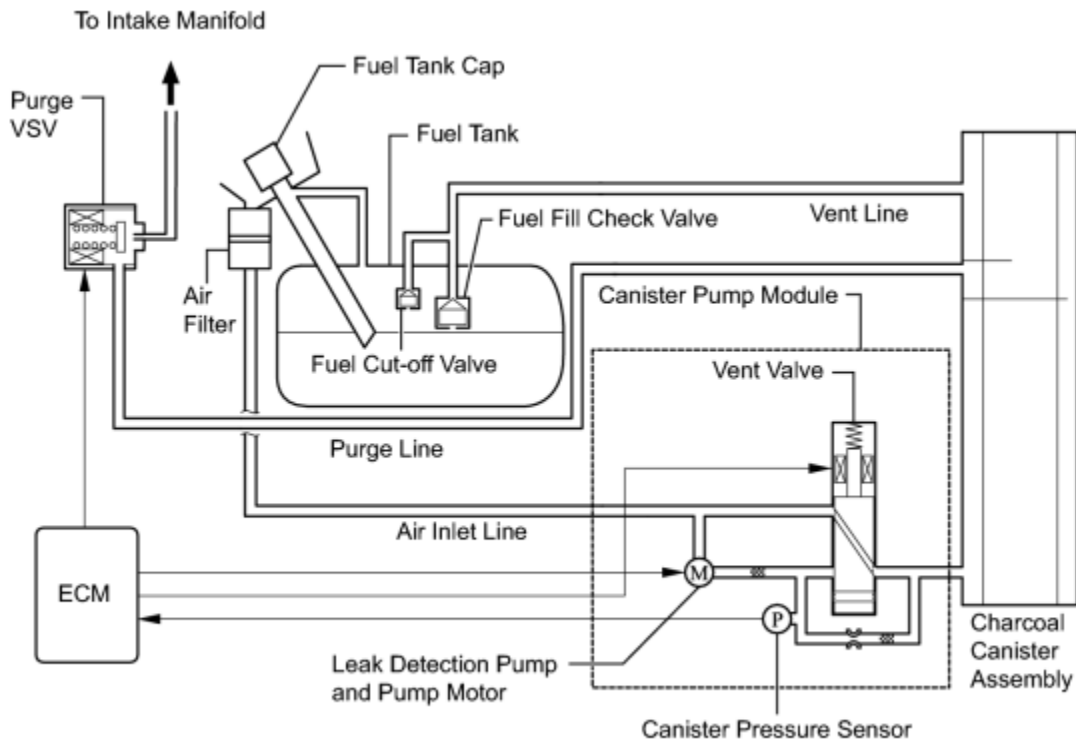

4. INSTALL AIR CLEANER CASE_ [INFO](#)
5. INSTALL INLET AIR CLEANER ASSEMBLY_ [INFO](#)

SYSTEM DIAGRAM

ON-VEHICLE INSPECTION

1. CHECK FUEL CUT RPM

(a) Put the engine in inspection mode INFO.

(b) Start and warm up the engine.

(c) Increase the engine speed to at least 2500 rpm.

(d) Use a sound scope to check for injector operating sounds.

Text in Illustration

*1	Injector
*2	Sound Scope

(e) When the accelerator pedal is released, check that injector operating sounds stop momentarily (at 2500 rpm or higher) and then resume (at 1200 rpm).

Standard:

Item	Specified Condition
Fuel cut off rpm	2500 rpm
Fuel injection restart rpm	1200 rpm

If the result is not as specified, check the injectors, wiring and ECM.

2. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

(a) Visually check that the hoses, connections and gaskets have no cracks, leaks or damage.

- Detachment or other problems with the engine oil dipstick, filler cap, ventilation hose and other components may cause the engine to run improperly.
- Air suction caused by disconnections, looseness or cracks in any part of the air induction system between the throttle body and cylinder head will cause an engine failure or engine malfunction.

If any defects are found, replace parts as necessary.

3. INSPECT EVAPORATIVE EMISSION CONTROL SYSTEM

(a) Connect the Techstream to the DLC3.

(b) Disconnect the fuel vapor feed hose from the purge valve shown in the illustration.

(c) Put the engine in inspection mode **INFO**.

(d) Start the engine.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for Evap Control.

(f) Check that vacuum occurs at the purge valve port.

(g) If vacuum does not occur, check the following items.

HINT:

- VSV (for canister purge)
- Clogging in the fuel vapor feed hose connecting the intake air surge tank and VSV
- Voltage from the ECM PRG terminal

(h) Exit Active Test mode and reconnect the fuel vapor feed hose.

(i) Enter the following menus: Powertrain / Engine and ECT / Data List / EVAP Purge VSV.

(j) Warm up the engine and drive the vehicle.

(k) Confirm that the purge valve opens.

If the result is not as specified, replace the purge valve, wire harness or ECM.

4. CHECK FUEL TANK AND VENT LINE

(a) Disconnect the vent line hose from the canister.

(b) Connect the pressure gauge to the vent line hose.

T

Text in Illustration

*1	Fuel Tank Cap	*2	Vent Line Hose
*3	Pressure Gauge	-	-

(c) Apply 4 kPa (0.04 kgf/cm², 0.6 psi) of pressure to the vent line of the fuel tank.

HINT:

Perform this inspection with the fuel tank less than 90% full. When the fuel tank is full, the fuel fill check valve closes and the pressure is released through the 2 mm orifice. As a result, when the fuel tank cap is removed, the pressure does not decrease smoothly.

(d) Check that the fuel tank pressure is maintained for some time, and does not decrease immediately.

HINT:

If the pressure decreases immediately, one of the following may apply:

- The fuel tank cap is not completely tightened.
- The fuel tank cap is damaged.
- Air is leaking from the vent line.
- The fuel tank is damaged.

(e) When the fuel tank cap is removed, check that the pressure is released smoothly.

HINT:

If the pressure does not drop, replace the fuel tank assembly.

(f) Reconnect the vent line hose to the canister.

5. INSPECT AIR INLET LINE

(a) Disconnect the air inlet line hose from the charcoal canister.

Text in Illustration

*1	Air
----	-----

(b) Check that air flows freely into the air inlet line.

If air does not flow freely into the air inlet line, repair or replace the air inlet line hose.

(c) Reconnect the air inlet line hose to the charcoal canister.

INSPECTION

1. INSPECT FUEL TANK CAP ASSEMBLY

c

(a) Visually check that the cap and gasket are not deformed or damaged.

If the result is not as specified, replace the fuel tank cap assembly.

Text in Illustration

*1	Gasket

(a) Remove the ventilation hose from the ventilation valve sub-assembly.

(b) Using a ball joint lock nut wrench (22 mm), remove the ventilation valve sub-assembly.

Text in Illustration

*1	Ball Joint Lock Nut Wrench (22 mm)
----	------------------------------------

INSPECTION

1. INSPECT VENTILATION VALVE SUB-ASSEMBLY

(a) Install a clean hose to the ventilation valve sub-assembly.

(b) Check the ventilation valve sub-assembly operation.

(1) Blow air into the cylinder block side, and check that air passes through easily.

CAUTION:

Do not suck air through the valve.

Petroleum substances inside the valve are hazardous to your health.

If the result is not as specified, replace the ventilation valve sub-assembly.

(2) Blow air into the intake air surge tank side, and check that air passes through with difficulty.

CAUTION:

Do not suck air through the valve.

Petroleum substances inside the valve are hazardous to your health.

If the result is not as specified, replace the ventilation valve sub-assembly.

(c) Remove the clean hose from the ventilation valve sub-assembly.

INSTALLATION

1. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Apply adhesive to 2 or 3 threads of the ventilation valve sub-assembly.

N

Torque: **20 N·m (204 kgf·cm, 15ft·lbf)**

NOTICE:

Use the formula to calculate special torque values for situations where a ball joint lock nut wrench is combined with a torque wrench [INFO](#).

T

T

(c) Install the ventilation hose to the ventilation valve sub-assembly.

2. INSTALL NO. 1 ENGINE UNDER COVER

3. INSTALL AIR CLEANER CASE [INFO](#)

4. INSTALL INLET AIR CLEANER ASSEMBLY [INFO](#)

5. INSTALL AIR CLEANER CAP SUB-ASSEMBLY [INFO](#)

6. INSTALL NO. 2 CYLINDER HEAD COVER [INFO](#)

COMPONENTS

ILLUSTRATION

REMOVAL

1. REMOVE NO. 2 CYLINDER HEAD COVER [INFO](#)
2. REMOVE AIR CLEANER CAP SUB-ASSEMBLY [INFO](#)
3. REMOVE INLET AIR CLEANER ASSEMBLY [INFO](#)
4. REMOVE AIR CLEANER CASE [INFO](#)
5. REMOVE VACUUM SWITCHING VALVE ASSEMBLY

(a) Disconnect the connector and 2 fuel vapor feed hoses.

(b) Remove the bolt and vacuum switching valve assembly.

INSPECTION

1. INSPECT VACUUM SWITCHING VALVE ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	23 to 26 Ω

If the result is not as specified, replace the vacuum switching valve assembly.

(b) Check operation of the vacuum switching valve assembly.

(1) Blow air into port E. Check that air does not come out of port F.

Text in Illustration

*1	Port F
*2	Port E
*3	Air Blow

(2) Apply battery voltage across the terminals.

Text in Illustration

*1	Port F
*2	Port E
*3	Air Blow

(3) Blow air into port E. Check that air comes out from port F.

If the result is not as specified, replace the vacuum switching valve assembly.

INSTALLATION

1. INSTALL VACUUM SWITCHING VALVE ASSEMBLY

(a) Install the vacuum switching valve assembly with the bolt.

Torque: **21 N·m (214 kgf·cm, 15ft·lbf)**

(b) Connect the 2 fuel vapor feed hoses and connector to the vacuum switching valve assembly.

(c) Connect the No. 1 vacuum switching valve connector.

2. INSTALL AIR CLEANER CASE_ [INFO](#)

3. INSTALL INLET AIR CLEANER ASSEMBLY_ [INFO](#)

4. INSTALL AIR CLEANER CAP SUB-ASSEMBLY_ [INFO](#)

5. INSTALL NO. 2 CYLINDER HEAD COVER_ [INFO](#)

COMPONENTS

REMOVAL

1. REMOVE NO. 2 CYLINDER HEAD COVER [INFO](#)
2. REMOVE AIR CLEANER CAP SUB-ASSEMBLY [INFO](#)
3. REMOVE INLET AIR CLEANER ASSEMBLY [INFO](#)
4. REMOVE AIR CLEANER CASE [INFO](#)
5. REMOVE MANIFOLD ABSOLUTE PRESSURE SENSOR

(a) Disconnect the connector.

(b) Remove the bolt and manifold absolute pressure sensor.

INSTALLATION

1. INSTALL MANIFOLD ABSOLUTE PRESSURE SENSOR

(a) Install the manifold absolute pressure sensor with the bolt.

Torque: **7.0 N·m (71 kgf·cm, 62in·lbf)**

(b) Connect the connector.

2. INSTALL AIR CLEANER CASE [INFO](#)

3. INSTALL INLET AIR CLEANER ASSEMBLY [INFO](#)

4. INSTALL AIR CLEANER CAP SUB-ASSEMBLY [INFO](#)

5. INSTALL NO. 2 CYLINDER HEAD COVER [INFO](#)

N*m (kgf*cm, ft.*lbf): Specified torque

* For use with SST

REMOVAL

1. REMOVE WINDSHIELD WIPER MOTOR AND LINK

(a) Remove the windshield wiper motor and link [INFO](#).

2. REMOVE OUTER COWL TOP PANEL SUB-ASSEMBLY [INFO](#)

3. REMOVE NO. 2 CYLINDER HEAD COVER [INFO](#)

4. REMOVE AIR FUEL RATIO SENSOR

(a) Disconnect the air fuel ratio sensor connector and clamp.

c

(b) Using SST, remove the air fuel ratio sensor.

SST: 09224-00010

c

INSPECTION

1. INSPECT AIR FUEL RATIO SENSOR

Text in Illustration

*1	Ohmmeter
----	----------

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
(HT) - (+B)	20°C (68°F)	1.8 to 3.4 Ω
(HT) - (AF-)	-	10 k Ω or higher

If the result is not as specified, replace the air fuel ratio sensor.

INSTALLATION

1. INSTALL AIR FUEL RATIO SENSOR

(a) Using SST, install the air fuel ratio sensor.

SST: 09224-00010

c

without SST - Torque: **44 N·m (449 kgf·cm, 32ft·lbf)**

with SST - Torque: **40 N·m (408 kgf·cm, 30ft·lbf)**

- The "with SST" torque value is effective when using SST with a fulcrum length of 30 mm (1.18 in.).
- The "with SST" torque value is effective when using a torque wrench with a fulcrum length of 300 mm (11.81 in.) **INFO**.
- This torque value is effective when SST is parallel to the torque wrench.

c

(b) Connect the air fuel ratio sensor connector and clamp.

2. INSTALL NO. 2 CYLINDER HEAD COVER **INFO**

3. INSPECT FOR EXHAUST GAS LEAK

4. INSTALL OUTER COWL TOP PANEL SUB-ASSEMBLY **INFO**

5. INSTALL WINDSHIELD WIPER MOTOR AND LINK

(a) Install the windshield wiper motor and link **INFO**.

ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Connect the Techstream to the DLC3.

(b) Turn the Techstream on.

(c) Set the vehicle to the inspection mode .

(d) Start the engine.

(e) Inspect the oil control valve.

(1) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(2) Check the engine speed when the oil control valve is operated using the Techstream with the engine coolant temperature at 50°C (122°F) or less.

HINT:

- When performing the Active Test, the air conditioning should be on.
- Engine coolant temperature when the engine is started should be 30°C (86°F) or less.

Standard:

Control Range	Specified Condition
OFF	Normal engine speed
ON	Rough idle or engine stalls (soon after oil control valve switched from OFF to ON)

REMOVAL

1. REMOVE NO. 2 CYLINDER HEAD COVER INFO

2. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Disconnect the camshaft timing oil control valve assembly connector.

(b) Remove the bolt and remove the camshaft timing oil control valve assembly.

(c) Remove the O-ring from the camshaft timing oil control valve assembly.

T

INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

If the result is not as specified, replace the oil control valve assembly.

(b) Check the operation.

(1) Connect a positive (+) battery lead to terminal 1 and a negative (-) lead to terminal 2, and check the movement of the valve.
