

CHARGING SYSTEM

	Page
PRECAUTIONS	CH-2
TROUBLESHOOTING	CH-2
CHARGING SYSTEM CIRCUIT	CH-3
ON-VEHICLE INSPECTION	CH-3
ALTERNATOR	CH-7

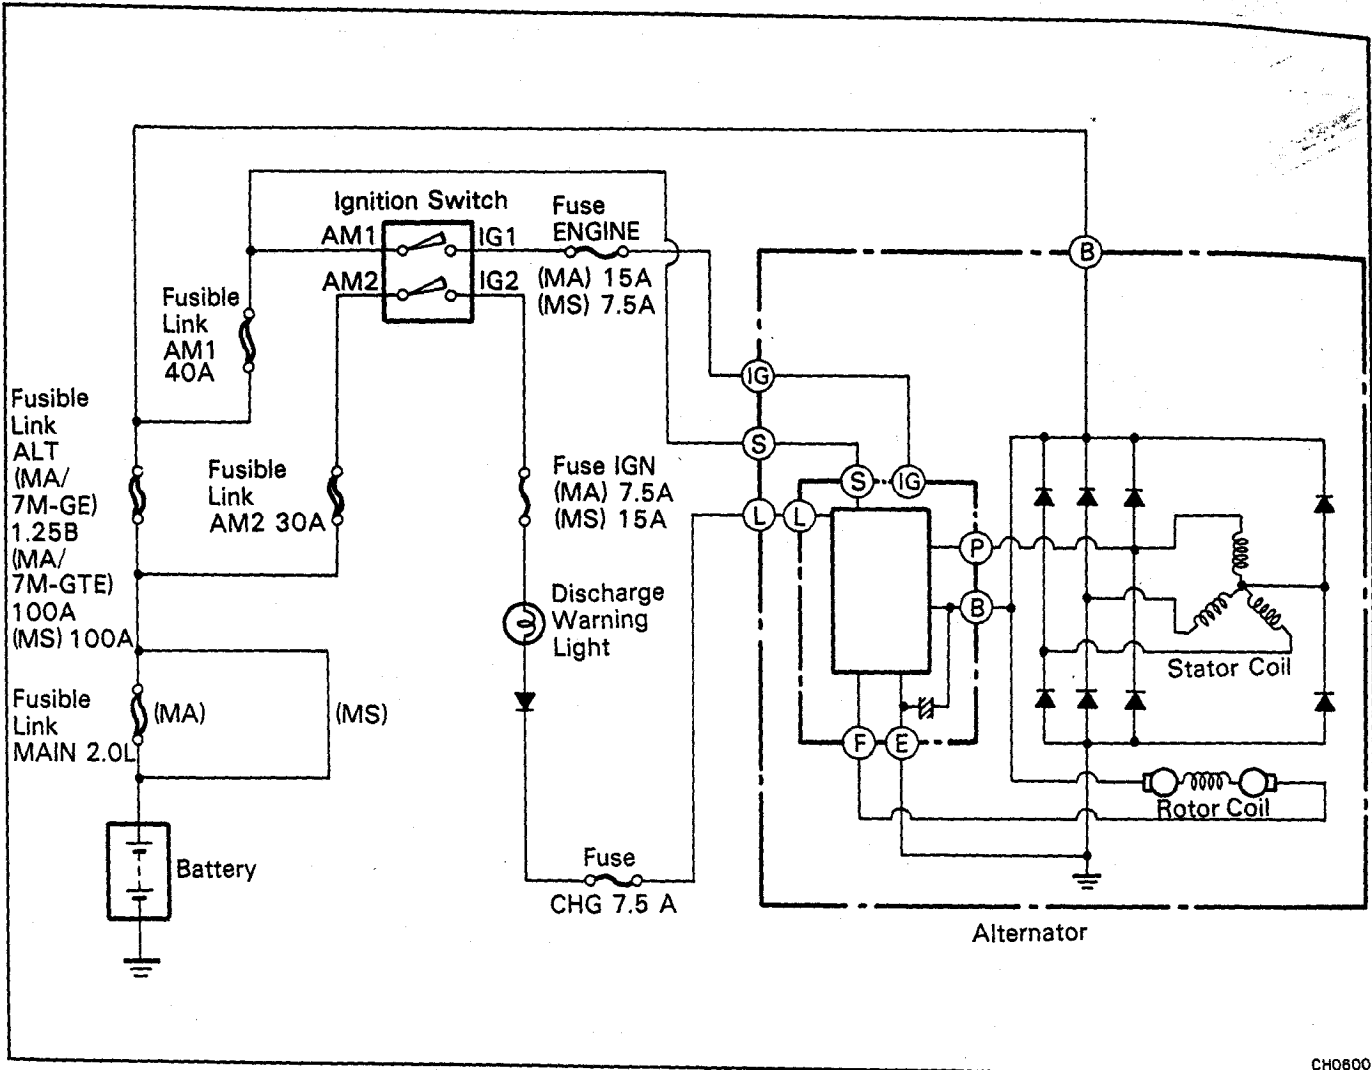

PRECAUTIONS

1. Check that the battery cables are connected to the correct terminals.
2. Disconnect the battery cables when the battery is given a quick charge.
3. Do not perform tests with a high voltage insulation resistance tester.
4. Never disconnect the battery while the engine is running.

TROUBLESHOOTING

Problem	Possible cause	Remedy	Page
Discharge warning light does not light with ignition ON and engine not running	Fuse blown	Check "CHG" and "IGN" fuses	CH-7
	Light burned out	Replace light	
Discharge warning light does not go out with engine running (battery requires frequent recharging)	Wiring connection loose	Tighten loose connections	CH-4
	IC regulator faulty	Replace IC regulator	
	Drive belt loose or worn	Adjust or replace drive belt	
	Battery cables loose, corroded or worn	Repair or replace cables	
	Fuse blown	Check "ENG" fuse	
	Fusible link blown	Replace fusible link	
	IC regulator or alternator faulty	Check charging system	CH-3
	Wiring faulty	Repair wiring	

CHARGING SYSTEM CIRCUIT

CH0600

CH0002

ON-VEHICLE INSPECTION

1. CHECK BATTERY SPECIFIC GRAVITY

- (a) Check the specific gravity of each cell.

Standard specific gravity

When fully charged at 20°C (68°F): 1.25 – 1.27

If not within specifications, charge the battery.

- (b) Check the electrolyte quantity of each cell.

If insufficient, refill with distilled (or purified) water.

2. CHECK BATTERY TERMINALS, FUSIBLE LINKS AND FUSES

- (a) Check that the battery terminals are not loose or corroded.

- (b) Check the fusible links and fuses for continuity.

CH0261

3. INSPECT DRIVE BELT

- (a) Visually check the belt for separation of the adhesive rubber above and below the core, separation from the belt side, severed core, separation of the rib from the adhesive rubber, cracking or separation of the ribs, torn or worn ribs or cracks in the inner ridges of the ribs.

If the belt has any of the above defects, replace it.

- (b) Check the drive belt deflection by pressing on the belt at the points indicated in the figure with 10 kg (22.0 lb, 98 N) of pressure.

Drive belt deflection:

New belt 10 – 12 mm (0.40 – 0.47 in.)

Used belt 15 – 17 mm (0.59 – 0.67 in.)

If necessary, adjust the drive belt deflection.

(Reference)

Using SST, check the drive belt tension.

SST A 09216-00020

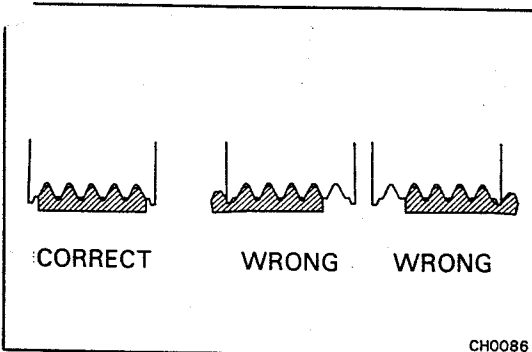

SST B 09216-00030

Drive belt tension:

New belt 70 – 80 kg

Used belt 30 – 45 kg

If necessary, adjust the drive belt tension.

NOTE:

- "New belt" refers to a belt which has been used less than 5 minutes on a running engine.
- "Used belt" refers to a belt which has been used on a running engine for 5 minutes or more.
- After installing the drive belt, check that it fits properly in the ribbed grooves.
- Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the crank pulley.
- After installing the belt, run the engine for about 5 minutes and recheck the deflection or tension.

4. INSPECT FUSES FOR CONTINUITY

- CHG 7.5 A
- IGN 7.5 A
- ENGINE 15 A

5. **VISUALLY CHECK ALTERNATOR WIRING AND LISTEN FOR ABNORMAL NOISES**
- Check that the wiring is in good condition.
 - Check that there are no abnormal noises from the alternator while the engine is running.

6. **CHECK DISCHARGE WARNING LIGHT CIRCUIT**
- Warm up the engine and turn it off.
 - Turn off all accessories.
 - Turn the ignition switch to "ON". Check that the charge light is lit.
 - Start the engine. Check that the light goes out.
- If the light does not operate as specified, troubleshoot the charge light circuit.

7. **CHECK CHARGING CIRCUIT WITHOUT LOAD**

NOTE: If a battery/ alternator tester is available, connect the tester to the charging circuit according to the manufacturer's instructions.

- If a tester is not available, connect a voltmeter and ammeter to the charging circuit as follows:
 - Disconnect the wire from terminal B of the alternator and connect the wire to the negative (-) terminal of the ammeter.
 - Connect the test lead from the positive (+) terminal of the ammeter to terminal B of the alternator.
 - Connect the positive (+) lead of the voltmeter to terminal B of the alternator.
 - Ground the negative (-) lead of the voltmeter.

- Check the charging circuit as follows:
With the engine running from idling to 2,000 rpm, check the reading on the ammeter and voltmeter.

Standard amperage: 10 A or less

Standard voltage: 13.9 – 15.1 V at 25°C (77°F)
13.5 – 14.3 V at 115°C (239°F)

If the voltage reading is greater than standard voltage, replace the IC regulator.

If the voltage reading is less than standard voltage, check the IC regulator and alternator as follows:

- With terminal F grounded, start the engine and check the voltage reading of terminal B.
- If the voltage reading is more than standard voltage, replace the IC regulator.
- If the voltage reading is less than standard voltage, check the alternator.

8. CHECK CHARGING CIRCUIT WITH LOAD

- (a) With the engine running at 2,000 rpm, turn on the high beam headlights and place the heater fan control switch on "HI".
- (b) Check the reading on the ammeter.

Standard amperage: 30 A or more

If the ammeter reading is less than 30 A, repair the alternator. (See pages CH-7)

NOTE: If the battery is fully charged, the indication will sometimes be less than 30 A.

ALTERNATOR COMPONENTS

CH0329

CH0330

DISASSEMBLY OF ALTERNATOR

1. REMOVE REAR END COVER

- (a) Remove the nut and terminal insulator.
- (b) Remove the three nuts and end cover.

CH0331

2. REMOVE BRUSH HOLDER

Remove the two screws, brush holder and cover.

3. REMOVE IC REGULATOR

Remove the three screws and IC regulator.

4. REMOVE RECTIFIER HOLDER

- Remove the four screws and rectifier holder.
- Remove the four rubber insulators.

5. REMOVE PULLEY

- Hold SST A with a torque wrench, and tighten SST B clockwise to the specified torque.

SST 09820-63010

Torque: 400 kg-cm (29 ft-lb, 39 N·m)

- Check that SST A is secured to the rotor shaft.

- As shown in the figure, mount SST C in a vise, and install the alternator to SST C.

- To loosen the pulley nut turn SST A in the direction shown in the figure.

CAUTION: To prevent damage to the rotor shaft, do not loosen the pulley nut more than one-half of a turn.

- Remove the alternator from SST C.
- Turn SST B and remove SSTs A and B.
- Remove the pulley nut and pulley.

6. REMOVE RECTIFIER END FRAME

- Remove the four nuts.
 - Using SST, remove the rectifier end frame.
- SST 09286-46011

7. REMOVE ROTOR FROM DRIVE END FRAME

INSPECTION AND REPAIR OF ALTERNATOR

Rotor

1. INSPECT ROTOR FOR OPEN CIRCUIT

Using an ohmmeter, check that there is continuity between the slip rings.

Standard resistance (cold): 2.8 – 3.0 Ω

If there is no continuity, replace the rotor.

2. INSPECT ROTOR FOR GROUND

Using an ohmmeter, check that there is no continuity between the slip ring and the rotor.

If there is continuity, replace the rotor.

3. INSPECT SLIP RINGS

(a) Check that the slip rings are not rough or scored. If rough or scored, replace the rotor.

(b) Using calipers, measure the slip ring diameters.

Standard diameter: 14.2 – 14.4 mm
(0.559 – 0.567 in.)

Minimum diameter: 12.8 mm (0.504 in.)

If the diameter is less than minimum, replace the rotor.

Stator

1. INSPECT STATOR FOR OPEN CIRCUIT

Using an ohmmeter, check that there is continuity between the coil leads.

If there is no continuity, replace the drive end frame assembly.

2. INSPECT STATOR FOR GROUND

Using an ohmmeter, check that there is no continuity between the coil leads and drive end frame.

If there is continuity, replace the drive end frame assembly.

Brushes

1. INSPECT EXPOSED BRUSH LENGTH

Using a scale, measure the exposed brush length.

Standard exposed length: 10.5 mm (0.413 in.)

Minimum exposed length: 1.5 mm (0.059 in.)

If the exposed length is less than minimum, replace the brushes.

2. IF NECESSARY, REPLACE BRUSHES

- (a) Unsolder and remove the brush and spring.
- (b) Run the wire of the brush through the hole in the brush holder, and insert the spring and brush into the brush holder.

- (c) Solder the brush wire to the brush holder at the exposed length.

Exposed length: 10.5 mm (0.413 in.)

- (d) Check that the brush moves smoothly in the brush holder.
- (e) Cut off the excess wire.
- (f) Apply insulation paint to the soldered point.

Rectifiers (Rectifier Holder)

1. INSPECT POSITIVE SIDE RECTIFIER

- (a) Using an ohmmeter, connect one tester probe to the positive (+) stud and the other to each rectifier terminal.

- (b) Reverse the polarity of the tester probes.
 - (c) Check that one shows continuity and the other shows no continuity.
- If not, replace the rectifier holder.

2. INSPECT NEGATIVE SIDE RECTIFIER

- (a) Connect one tester probe to each rectifier terminal and the other to each rectifier negative (-) terminal.

- (b) Reverse the polarity of the tester probes.

- (c) Check that one shows continuity and the other shows no continuity.

If not, replace the rectifier holder.

Bearings

1. INSPECT FRONT BEARING

Check that the bearing is not rough or worn.

2. IF NECESSARY, REPLACE FRONT BEARING

- (a) Remove the four screws and bearing retainer.

- (b) Using a press and socket wrench, press out the front bearing.

(c) Using SST and a press, press a new front bearing into the drive end frame.

SST 09608-20012 (09608-00030)

(d) Install the bearing retainer with the four screws.

3. INSPECT REAR BEARING

Check that the bearing is not rough or worn.

4. IF NECESSARY, REPLACE REAR BEARING

(a) Using SST, remove the bearing cover and bearing.

SST 09820-00021

(b) Using SST and a press, press in a new bearing and the bearing cover.

SST 09285-76010

ASSEMBLY OF ALTERNATOR

(See page CH-7)

1. INSTALL ROTOR TO DRIVE END FRAME

2. INSTALL RECTIFIER END FRAME

- Using a plastic-faced hammer, lightly tap in the end frame.
- Install the four nuts.

3. INSTALL PULLEY

- Install the pulley to the rotor shaft by tightening the pulley nut by hand.
- Hold SST A with a torque wrench, and tighten SST B clockwise to the specified torque.

SST 09820-63010

Torque: 400 kg-cm (29 ft-lb, 39 N·m)

- Check that SST A is secured to the pulley shaft.

- As shown in the figure, mount SST C in a vise, and install the alternator to SST C.

- To torque the pulley nut turn SST A in the direction shown in the figure.

Torque: 1,125 kg-cm (81 ft-lb, 110 N·m)

- Remove the alternator from SST C.

- Turn SST B and remove SSTs A and B.

4. INSTALL RECTIFIER HOLDER

- Install the four rubber insulators on the lead wires.

- Install the rectifier holder with the four screws.

5. INSTALL BRUSH HOLDER AND IC REGULATOR

- (a) Place the brush holder.
- (b) Install the IC regulator and brush holder to the rear end frame horizontally as shown in the figure.

NOTE: Make sure the brush holder's cover doesn't slip to one side during installation.

- (c) Tighten the five screws until there is a clearance of at least 1 mm (0.04 in.) between the brush holder cover and connector.

6. INSTALL REAR END COVER

- (a) Install the end cover with the three nuts.
- (b) Install the terminal insulator with the nut.

7. MAKE SURE ROTOR ROTATES SMOOTHLY
