

DTC	P0770	Shift Solenoid E Malfunction (Shift Solenoid Valve SL)
------------	--------------	---

SYSTEM DESCRIPTION

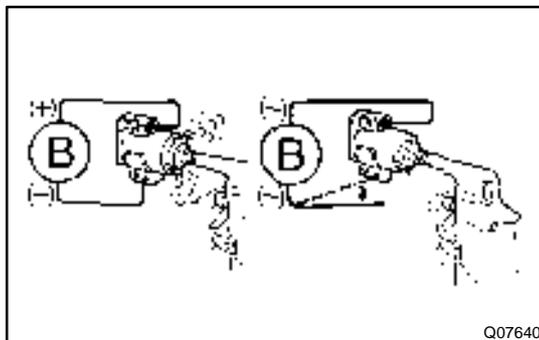

The ECM uses the signals from the Throttle position sensor, Air-flow meter and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.

Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect mechanical trouble of the shift solenoid valve SL, valve body and torque converter clutch.

DTC No.	DTC Detecting Condition	Trouble Area
P0770	Lock-up does not occur when driving in the lock-up range (normal driving at 80 km/h [50 mph]), or lock-up remains ON in the lock-up OFF range. (2-trip detection logic)	<ul style="list-style-type: none"> • Shift solenoid valve SL is stuck open or closed. • Valve body blocked up or stuck. • Lock-up clutch

INSPECTION PROCEDURE

1	Check shift solenoid valve SL operation.
----------	---

PREPARATION:

- (a) Remove the oil pan.
- (b) Remove the shift solenoid valve SL.

CHECK:

- (a) Applying 490 kPa (5 kgf/cm², 71 psi) of compressed air, check that the solenoid valve does not leak air.
- (b) When battery voltage is supplied to the shift solenoid valve, check that the solenoid valve opens.

OK:

- (a) Solenoid valve does not leak air.
- (b) Solenoid valve opens.

NG	Replace the solenoid valve SL.
-----------	---------------------------------------

2	Check valve body (See page DI-363).
----------	--

NG	Repair or replace the valve body.
-----------	--

OK

Replace the torque converter clutch (See page AT-24 or AT-30).
