

Environment

- TSOP (TOYOTA super olefin polymer) and TPO (thermo plastic olefin) materials that excel in recyclability, are used in the bumpers, pillar garnishes, and door trim skins. Furthermore, RSPP (Recycled Sound-Proofing Products) and recycled PP (polypropylene) are used in the engine under covers and floor silencers to promote recycling.
- Natural fibers, such as kenaf and sisal, which are effective in protecting natural resources and stabilizing CO₂, are used in the roof head-lining and the package tray trim in order to address environmental concerns.

Recycle-Related Material Application Areas

- *1 : Environmentally Friendly Natural Fiber Materials
 *2 : TOYOTA Super Olefin Polymer
 *3 : Recyclable Soundproof Materials
 *4 : Thermo Plastic Olefin
 *5 : Polypropylene
