

Dust Cover Construction

- The shape of the front dust cover has been optimized to efficiently direct cool air to the ventilated disc, thus ensuring excellent cooling performance. In addition, a brake cooling air duct that extends from the front bumper through the fender liner is provided to further improve cooling performance.

Rear Brake

- All models use the PG45R type rear brake calipers.
- The disc rotor is a 16" ventilated type. It has an in-built duo servo type parking brake.
