

Cooling Fan

EG

- The ECM outputs a signal to the cooling fan ECU, which steplessly controls the speed of the two fans in accordance with the engine conditions, driving conditions, and whether the air conditioner is operating. Through optimally controlled speeds at all times, the fans operate significantly quieter and improve cooling performance.
- Ring fans that are provided with band-shaped rings around them are used, which enhance rigidity and realize a lightweight and compact construction.
- The fan shroud is secured to the radiator without bolts.
