

■ DAYTIME RUNNING LIGHT SYSTEM

A daytime running light system is designed to automatically illuminate the headlights (Lo beam) parking lights, taillights and license plate lights during the daytime to keep the car highly visible to other vehicles.

- Main Body ECU RH controls this system.
- This system is enabled when the conditions given below are met:
 - Power Source: IG-ON.
 - Engine Speed Signal Input (Engine Running Condition)
 - Light Control Switch OFF or AUTO position (if taillight-on or headlight-on control is not being performed by the automatic light control.)
