

POWER SEAT SYSTEM

DESCRIPTION

- A power seat with a memory system is used for driver and front passenger seats on all models as optional equipment.
- The memory system, the control of the front power seat (forward-and-rearward slide, reclining, front vertical, rear vertical, and reclining) is effected by the seat ECU, which is integrated with the power seat switch.
- The power seat system for front seat has a function with following equipment:

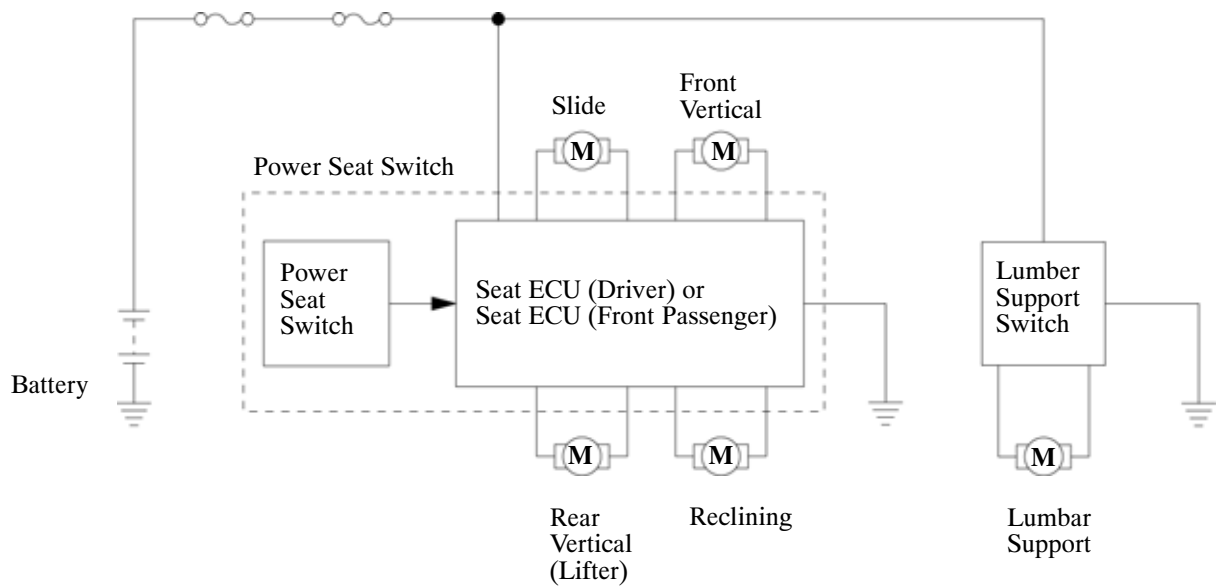

○: Optional

| Function |                        | Equipped | Memory | Stroke     |          |
|----------|------------------------|----------|--------|------------|----------|
| (1)      | Seat Slide             | ○        | ○      | 240 (9.45) | mm (in.) |
| (2)      | Reclining              | ○        | ○      | 50         | degrees  |
| (3)      | Front Vertical         | ○        | ○      | 25.4 (1.0) | degrees  |
| (4)      | Rear Vertical (Lifter) | ○        | ○      | 58 (2.3)   | mm (in.) |
| (5)      | Lumbar Support         | ○        | —      | 34.8 (1.4) | mm (in.) |
