

Heated & Ventilated Seats System

The heated & ventilated seats system is provided to the driver and front passenger seat to realize a comfortable seat equipped with both heating and ventilation functions.

- The heating function operates to heat the seat contact surface with the occupant, and the ventilation function operates to blow air to the occupant to ensure comfort.
- The heating and ventilation functions cannot be operated simultaneously.

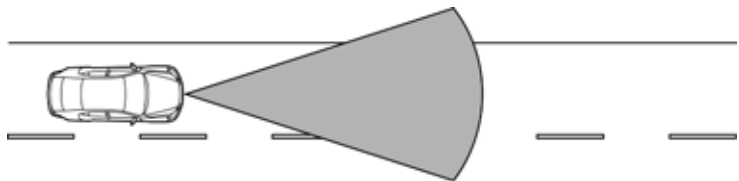

MO

Dynamic Radar Cruise Control System

Besides the conventional type cruise control, the dynamic radar cruise control system includes a function that controls the distance from the vehicle ahead while driving based on the information of the driving lanes of the vehicle, the preceding vehicle, and vehicle speed (Vehicle-to-Vehicle Distance Control Mode).

Maintaining a set driving speed
(No vehicle ahead)

Maintaining a set time-gap, or
adjusting the speed to that of
the preceding vehicle to
maintain a set distance.
(with a vehicle ahead)
