

Sliding Roof

A dial type switch is used for opening or closing the sliding roof to allow for more ease of operation.

- The comfort stop position is the sliding roof opening position at which wind that enters the cabin or wind noise is limited.
- When the PUSH AUTO dial is pushed with the sliding roof fully closed, the roof opens to the comfort stop position automatically. When the dial is pushed with the sliding roof open, the roof fully closes automatically.

MO

Rear Sunshade System

An electrical type rear sunshade system is provided to reduce the amount of direct sunlight entering through the rear window, realizing comfort for rear seat passengers.
