

FRONT WHEEL ALIGNMENT

260HS-01

ADJUSTMENT

1. INSPECT TIRE (SEE PAGE 28-1)

2. MEASURE VEHICLE HEIGHT

Vehicle height:

Except air suspension:

Tire Size	Front B-A	Rear D-C
P225/55R17	105 mm (4.13 in.)	91 mm (3.58 in.)
245/45R18	104 mm (4.09 in.)	89 mm (3.50 in.)
Australia, Middle East, General	107 mm (4.21 in.)	89 mm (3.50 in.)

Air suspension:

Front B-A	Rear D-C
115 mm (4.53 in.)	109 mm (4.29 in.)

Measuring points:

A: Ground clearance of lower suspension arm No.1 bushing set bolt center

B: Ground clearance of front wheel center

C: Ground clearance of rear suspension arm No.2 set bolt center

D: Ground clearance of rear wheel center

NOTICE:

Before inspecting the wheel alignment, adjust the vehicle height to the specified value.

HINT:

Bounce the vehicle up and down to stabilize the suspension and inspect the vehicle height.

3. INSPECT TOE-IN

Toe-in:

Toe-in (total)	A + B: 0°06' ± 12' (0.1° ± 0.2°) C - D: 1 ± 2 mm (0.04 ± 0.08 in.)
----------------	---

If the toe-in is not within the specified range, adjust it at the rack ends.

4. ADJUST TOE-IN

- (a) Remove the rack boot set clips.
- (b) Loosen the tie rod end lock nuts.

- (c) Turn the right and left rack ends by equal amounts to adjust the toe-in.

HINT:

Try to adjust the toe-in to the center of the specified value.

- (d) Make sure that the lengths of the right and left rack ends are the same.
- (e) Torque the tie rod end lock nuts.
Torque: 56 N·m (570 kgf·cm, 41 ft·lbf)
- (f) Place the boots on the seats and install the clips.

HINT:

Make sure that the boots are not twisted.

- (g) Perform the zero point calibration of yaw rate and deceleration sensor (see page 05-387).

5. INSPECT WHEEL ANGLE

- (a) Turn the steering wheel fully left and right to measure the turning angle.

Wheel turning angle:

Inside wheel	42°10' (42.2°)
Outside wheel: Reference	36°15' (36.3°)

If the right and left inside wheel angles differ from the specified value, check and adjust the right and left rack end lengths.

6. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

- (a) Put the front wheel on the center of the alignment tester.
- (b) Set the camber-caster-kingpin gauge at the center of the axle hub.

Camber, caster and steering axis inclination:

	w/o Electronic modulated air suspension	w/ Electronic modulated air suspension
Camber	-0°05' ± 45' (-0.08° ± 0.75°)	-0°15' ± 45' (-0.25° ± 0.75°)
Left-right error	30' (0.5°) or less	30' (0.5°) or less
Caster	6°45' ± 45' (6.75° ± 0.75°)	7°15' ± 45' (7.25° ± 0.75°)
Left-right error	30' (0.5°) or less	30' (0.5°) or less
Steering axis inclination	9°00' ± 45' (9° ± 0.75°)	9°15' ± 45' (9.25° ± 0.75°)
Left-right error	30' (0.5°) or less	30' (0.5°) or less

7. ADJUST CAMBER

HINT:

- After adjusting the camber, inspect the caster and toe-in.
- Try to adjust the camber to the center value.

- (a) Loosen the camber adjusting cam nut.
- (b) Turn the camber adjusting cam and adjust the camber.

HINT:

Camber changes about 6'18" (0.11°) with each graduation of the cam.

- (c) Torque the camber adjusting cam.

Torque: 172 N·m (1,755 kgf·cm, 127 ft·lbf)

8. ADJUST CASTER

HINT:

The caster can be adjusted by replacing the No. 2 bushing bracket.

- (a) Jack up the vehicle and make the wheels in full rebound condition.

- (b) Remove the nut and washer from the rear of the lower No. 2 bushing.
- (c) Remove the bolts from the right and left sides of the lower No. 2 bushing bracket and take out the bracket from the lower arm.

- (d) Using SST and a press, remove the lower No. 2 bushing from the bracket. According to the table below, replace the bracket and press-fit the removed bushing.

SST 09613-26010, 09950-00020,
09950-60010 (09951-00650)

Part No.	Adjustment Amount
48652-50040	+30'
48652-50050	-30'

HINT:

- Push the part shown in the illustration to remove.
- For SST 09613-26010, use 2 thicker half-rings as a pair.

- (e) Using SST and a press, reinstall a bushing as shown in the illustration.

SST 09613-26010, 09950-60010 (09951-00650)

HINT:

- For SST 09613-26010, use 2 thicker half-rings as a pair.

- Set the protrusion of the bushing to the position shown in the illustration.
- (f) Install the lower bracket into the lower arm shaft. Temporarily install the washer and nut removed in (b) until it goes by hand.

NOTICE:

Do not install them completely in this stage.

- (g) install the 2 bolts that removed in (c).

Torque:

Vehicle inside: 60 N·m (612 kgf·cm, 44 ft·lbf)

Vehicle outside: 137 N·m (1,395 kgf·cm, 101 ft·lbf)

- (h) Put down the vehicle and, with its wheels completely grounded, tighten the nut that is temporarily installed in (e).

Torque: 137 N·m (1,395 kgf·cm, 101 ft·lbf)
