

■ SRS AIRBAG SYSTEM

1. Airbag for Frontal Collision

A pretensioner mechanism is adopted to rear seats. Accordingly, if the vehicle receives strong impact from the front, the seat belt is retracted instantly to help restrain rear seat passengers.

2. Airbag for Side Collision

The mechanical safing sensor in the curtain shield airbag sensor is changed to the electrical safing type sensor in the airbag sensor assembly.

*: Safing sensor: sensor that detects deceleration during a collision
