

DTC	C1551 / 51	IG Power Source Voltage Malfunction
------------	-------------------	--

CIRCUIT DESCRIPTION

The VGRS ECU monitors IG power supply voltage. If the ECU detects a malfunction, it turns on the warning light, records the DTC, and stops VGRS operation.

DTC No.	DTC Detecting Condition	Trouble Area
C1551/51	The system checks that the battery voltage is normal and the IG terminal voltage is less than 9 V for 6 sec.	• ECU-IG1 fuse • IG circuit • Charging system • VGRS ECU

INSPECTION PROCEDURE

1	Check voltage between terminals IG and GND of the VGRS ECU connector.
----------	--

**PREPARATION:**

Record and clear VGRS DTCs.

CHECK:

Start the engine and measure the voltage between terminals IG and GND of the VGRS ECU.

A	9 to 16 V
B	Below 9 V
C	Above 16 V

B**Check or repair harness and ECU-IG1 fuse.****C****Check and repair charging system (See page CH-2).****A**

2	Check VGRS for DTC C1551/51.
----------	-------------------------------------

Is DTC C1551/51 present?

YES**Replace VGRS ECU.****NG****No fault detected.****NOTICE:**

Fault may be intermittent. Check harness and connectors carefully and retest.
