

WIRELESS DOOR LOCK REMOTE CONTROL SYSTEM

DESCRIPTION

The wireless door lock remote control system has been provided as standard equipment.

This system is a convenient system for locking and unlocking all the doors, at a distance. This system in the new RX400h has the following features:

- In this system, the wireless door lock receiver performs the code identification process and the body ECU effects the door lock control. Serial data link is provided for communication between the wireless door control receiver and the body ECU.
- A rolling code system, in which the signal configuration changes each time when a signal is transmitted by the transmitter, is used.
- A key-integrated type transmitter is used, and it contains the following three switches: the door lock switch, door unlock switch, and power back door switch (models with power back door system).
