TRACTION CONTROL SYSTEM (TCL) DIAGNOSIS INTRODUCTION TO TRACTION CONTROL SYSTEM (TCL) DIAGNOSIS

TCL Diagnostic Trouble Code Detection Conditions

TCL diagnostic trouble codes (TCL DTCs) are set under different conditions, depending on the malfunction detected. Most TCL DTCs will only be set during vehicle operation. Some TCL DTCs will also be set during the TCL self-check immediately after the engine is started. When you check if an TCL DTC will be displayed again after the DTC has been erased, you should recreate the TCL DTC set conditions. Depending on the detection timing and set conditions for the specific TCL DTC, you must either drive the vehicle or turn the engine off and restart it. To set the proper conditions for that DTC again, refer to "TCL DTC SET CONDITIONS" for each TCL DTC that you are trying to reset.

TROUBLESHOOTING STRATEGY

Use these steps to plan your diagnostic strategy. If you follow them carefully, you will check most of the possible causes of a TCL problem.

- 1. Gather information from the customer.
- Verify that the condition described by the customer exists.
- Check the vehicle for any TCL DTC. (Refer to P.13D-3, Diagnosis Function – How to Read and Erase Diagnostic Trouble Codes).
- If you can verify the condition but no TCL DTCs are set, and the malfunction may be intermittent. (Refer to GROUP 00, How to Use Troubleshooting/Inspection Service Points - How to Cope with Intermittent Malfunctions P.00-14).

M1136003100062 5. If you can verify the condition but there is no TCL

- DTCs, or the system cannot communicate with scan tool MB991958 (MUT-III sub assembly), and find the fault. (Refer to P. 13D-25, Symptom Chart).
- 6. If there is a TCL DTC, record the number of the code, then erase the code from vehicle memory using the scan tool MB991958 (MUT-III sub assembly). (Refer to P. 13D-3, Diagnosis Function How to Read and Erase Diagnostic Trouble Codes).
- 7. Re-create the TCL DTC set conditions to see if the same TCL DTC will set again. (Refer to P.13D-3, Diagnosis Function – How to Read and Erase Diagnostic Trouble Codes).
- If the same TCL DTC sets again, perform the diagnostic procedures for the set code. (Refer to P.13D-7, Diagnostic Trouble Code Chart).

U1120 CAN Communications System TCL Uncontrollable by Engine Malfunction

- If DTC U1120 is set in the ABS/TCL-ECU, always diagnose the CAN main bus line. If there is any fault in the CAN bus lines, an incorrect DTC may be set.
- Whenever the ABS/TCL-ECU is replaced, ensure that the communication circuit is normal.
- The engine control system-related DTC may be set when DTC U1120 is set. (For details refer to GROUP 00, Intersystem Affiliated DTC Reference Table P.00-17). Diagnose the engine control system first when the engine control system-related DTC is set.

DTC SET CONDITION

The ABS/TCL-ECU receives engine system-related signals from the PCM via CAN bus lines. If a fail-safe related data is contained in the signal from the PCM, DTC U1120 will be stored.

TROUBLESHOOTING HINTS (THE MOST LIKELY CAUSES FOR THESE DTCS ARE TO SET ARE:)

- Damaged harness or connector.
- Malfunction of the PCM.
- Malfunction of the ABS/TCL-ECU.

Required Special Tools:

- MB991958: Scan Tool (MUT-III Sub Assembly)
 - MB991824: V.C.I.
 - MB991827: MUT-III USB Cable
 - MB991910: MUT-III Main Harness A

To prevent damage to scan tool MB991958, always turn the ignition switch to the "LOCK" (OFF) position before connecting or disconnecting scan tool MB991958.

- 1. Connect scan tool MB991958 to the data link connector. (Refer to P.13D-3).
- 2. Turn the ignition switch to the "ON" position.

The engine speed increases after the actuator test because the actuator test continues for only three seconds. Therefore, release the accelerator pedal immediately.

- 3. Use scan tool MB991958 to check the actuator test. (Refer to P.13D-3).
 - Item 09: Engine TCL Drive.
 - When the accelerator pedal is depressed at the same time that the button for actuator test item 09 displayed on scan tool MB991958 is pressed, the system prevents the engine speed from rising for three seconds.
- 4. Turn the ignition switch to the "LOCK" (OFF) position.
- 5. Disconnect scan tool MB991958.
- If defective, repair it. (Refer to P. 13D-38, TCL diagnosis Symptom Procedures – Inspection Procedure 6).

TCL SWITCH CHECK

- 1. Remove the TCL switch. (Refer to P.13D-48).
- 2. Measure the resistance between terminal 1 and terminal 2 when the TCL switch is pressed or released. If the values measured at the time correspond to those in the table below, the resistance values are correct.

SWITCH POSITION	TESTER CONNECTION	SPECIFIED CONDITION
Pressed	1-2	Less than 2 ohms
Released	1-2	Open circuit
