3. Details:

Inspection Procedure 6

The glass is not lowered when something is jammed in the window	Probable cause
The cause may be a malfunction of the revolution detection sensor in the power window motor-ECU.	<ul style="list-style-type: none"> Malfunction of the power window motor-ECU

Replace the power window motor-ECU.

Inspection Procedure 7

10 mm <Corrected>

When the glass is fully raised, it then lowers automatically.	Probable cause
When the window is within 45 mm of being fully closed, the limit switch turns off to prevent the window from being lowered. However, the above problem can occur if there is a malfunction of the limit switch in the power window motor-ECU.	<ul style="list-style-type: none"> Malfunction of the power window motor-ECU

Limit switch operation position adjustment (Refer to P.42-13.)

Check trouble symptoms.
