

SEAT BELTS - AUTOMATIC

1990 Nissan 240SX

1990 ACCESSORIES/SAFETY EQUIPMENT
Nissan Automatic Seat Belt

Nissan; 240SX

DESCRIPTION

OPERATION

Shoulder belt buckle mainly operates while ignition is ON.

IGNITION SWITCH IS ON

When door is opened, shoulder buckle is moved forward and when door is closed, buckle is moved rearward.

IGNITION SWITCH IS OFF

When door is opened, shoulder buckle is moved forward. When door is closed, buckle will remain in this position.

(Voltage of output signal is approximate value.)

Input signal	Ignition switch	OFF	OFF	ON	ON	ON	ON	ON	ON	ON	ON	OFF	OFF	OFF	OFF	OFF
	Door latch switch	OFF	ON	OFF	OFF	ON	ON	ON	OFF	OFF	OFF	OFF	ON	ON	ON	OFF

Fig. 1: Automatic Seat Belt Quick Test

TIMER (IGNITION SWITCH EITHER ON OR OFF)

If limit switch does not operate (when accomplishing forward operation, front limit switch cannot be turned OFF or when accomplishing rearward operation, rear limit switch cannot be turned OFF, control unit will continue to supply power to drive motor for 15 seconds and control unit will stop supplying power.

QUICK WARNING (IGNITION SWITCH ON)

If front limit switch is not turned OFF after accomplishing forward operation, control unit will stop supplying power 15 seconds later and warning lamp will flash and chime will operate rapidly for approximately 6 seconds.

REAR LOCK

If quick warning functions twice successively while ignition switch is ON, shoulder belt buckle will move to rear position when door is closed as normal but will remain in rear position even if door is opened. This function is canceled when ignition switch is OFF.

TROUBLE SHOOTING

DESCRIPTION

Since left and right component parts are basically the same, harness layout and methods for electrical components inspection are shown for one side only.

Although methods for checking component parts on both sides are described in the flow chart, making it easier to troubleshoot, apply checking procedures to either side that have malfunction during trouble diagnosis. For those methods enclosed by double rectangulars, however, component parts on both sides must be checked as problems occurring on either side cannot be easily determined by a symptom.

SYMPTOMS

No Operation Has Made. No Warning Indicated & No Buckles Movement Performed

- * Main Power Supply & Ground Circuit Check (Diagnostic Procedure 1)
- * Diagnostic Procedures 1, 3 & 4
- * The following Electrical Components Inspection: Warning Lamp, Warning Chime, LEFT SIDE (Front Limit Switch, Rear Limit Switch, Door Latch Switch, Shoulder Belt Buckles Switch, Motor, Lap Belt Switch), RIGHT SIDE (Front Limit Switch, Rear Limit Switch, Door Latch Switch, Shoulder Belt Buckles Switch, Motor)

Shoulder Belt Buckle In L.H. or R.H. Side Does Not Move

- * Preliminary Check (Diagnostic Procedure 1)
- * Main Power Supply & Ground Circuit Check (Diagnostic Procedure 2)
- * Diagnostic Procedures 1, 3 & 4
- * The following Electrical Components Inspection: Warning Lamp, Warning Chime, LEFT & RIGHT Side (Front & Rear Limit Switch, Motor)

Shoulder Belt Buckle Moves FORWARD Only

- * Preliminary Check (Diagnostic Procedure 1)
- * Diagnostic Procedures 2 & 4
- * The following Electrical Components Inspection: LEFT & RIGHT Side (Rear Limit & Door Latch Switch)

- Shoulder Belt Buckle Moves REARWARD Only
- * Preliminary Check (Diagnostic Procedure 1)
- * Diagnostic Procedures 2 & 3
- * The following Electrical Components Inspection: LEFT & RIGHT Side (Front Limit & Door Latch Switch)

- Warnings Indicate Incorrectly Or Do Not Function
- * Preliminary Check (Diagnostic Procedure 2)
- * Diagnostic Procedures 4-8
- * The following Electrical Components Inspection: Warning Lamp & Chime, LEFT SIDE (Rear Limit & Shoulder Belt Buckle Switch, Lap Belt Switch), RIGHT SIDE (Rear Limit & Shoulder Belt Buckle Switch)

- Quick Warning Operates
- * Diagnostic Procedure 3
- * The following Electrical Components Inspection: LEFT & RIGHT Side (Front Limit Switch)
