A black right-angled triangle pointing to the right, with the white letters "PD" inside it.

PD

PROPELLER SHAFT

PD427

General Inspection

- Inspect propeller shaft tube surface for dents or cracks.
If damaged, replace propeller shaft assembly
- If center bearing is noisy or damaged, replace center bearing.

PROPELLER SHAFT VIBRATION

To check and correct an unbalanced propeller shaft, proceed as follows

- 1 Remove undercoating and other foreign material which could upset shaft balance, and check shaft vibration by road test.
2. If shaft vibration is noted during road test, disconnect propeller shaft at differential carrier companion flange, rotate companion flange 180 degrees and reconnect propeller shaft

SPD102

- 3 Again check shaft vibration. If vibration still persists, replace propeller shaft assembly.

PROPELLER SHAFT

Removal and Installation

- Put match marks on flanges and separate propeller shaft from differential carrier

SPD103

- Draw out propeller shaft from transmission and plug up rear end of transmission rear extension housing

SPD359

Inspection

- Inspect propeller shaft runout. If runout exceeds specifications, replace propeller shaft assembly

SPD106

Runout limit: 0.6 mm (0.024 in)

- Inspect journal axial play. If the play exceeds specifications, replace propeller shaft assembly.

Journal axial play:
0 mm (0 in)

FINAL DRIVE (Model R200)

ON-VEHICLE SERVICE (Model R200)

Front Oil Seal Replacement

1. Remove propeller shaft
2. Loosen drive pinion nut.

Tool number: ST31520000 (-)

3. Remove companion flange.

SPD518

4. Remove front oil seal.

SPD519

Tool number: ST33290001 (J25810-A)

5. Apply multi-purpose grease to cavity at sealing lips of oil seal.
Press front oil seal into carrier.

SPD520

Tool number: KV38100500 (-)

6. Install companion flange and drive pinion nut.
7. Install propeller shaft

ON-VEHICLE SERVICE (Model R200)

Side Oil Seal Replacement

1. Remove drive shafts.
Refer to section RA.
2. Remove oil seal.

SPD521

3. Apply multi-purpose grease to cavity at sealing lips of oil seal.
Press-fit oil seal into carrier

SPD522

Tool number: KV38100200 (-)

4. Install drive shafts

Ring Gear to Drive Pinion Backlash

1. Support carrier with a jack.
2. Remove rear cover
3. Check ring gear to drive pinion backlash with a dial indicator, at several points. If it is not within specifications, adjust it after removing final drive assembly.

SPD523

REMOVAL AND INSTALLATION (Model R200)

Removal

- Remove propeller shaft
Refer to Propeller Shaft
- Remove drive shafts
Refer to RA section.
- Pull off differential carrier backward together with jack

SPD511

CAUTION:

- Be careful not to damage spline and sleeve yoke when removing propeller shaft.
- After carrier assembly is removed, support suspension member on a stand to prevent its insulators being twisted or damaged.

Installation

- Full final drive with recommended gear oil.
Refer to section GI

SPD348

DISASSEMBLY (Model R200)

Pre-inspection

Before disassembling final drive, perform the following inspection.

- Total preload
 - 1) Turn drive pinion in both directions several times to set bearing rollers
 - 2) Check total preload with Tool.

PD245

Tool number: ST3127S000 (See J25765-A.)

Total preload.

1.23 - 2.30 N·m

(12.5 - 23.5 kg-cm, 10.9 - 20.4 in-lb)

- Ring gear to drive pinion backlash
Check backlash of ring gear with a dial indicator at several points

SPD513

Ring gear-to-drive pinion backlash.

0.13 - 0.18 mm

(0.0051 - 0.0071 in)

- Ring gear runout
Check runout of ring gear with a dial indicator

SPD524

Runout limit.

0.05 mm (0.0020 in)

- Tooth contact
Check tooth contact, referring to Adjustment
- Side gear to pinion mate gear backlash
Measure clearance between side gear thrust washer and differential case with thickness gauge

SPD370

Clearance between side gear thrust washer and differential case:

Less than 0.15 mm (0.0059 in)

DISASSEMBLY (Model R200)

Differential Carrier

- 1 Using three spacers [45 mm (1 77 in)], mount carrier on Tool

SPD525

Tool number: KV38100800 (J25604-1)

- 2 Put match marks on one side of side bearing cap and gear carrier with paint or punch to ensure that it is replaced in proper position during reassembly

Bearing caps are line-board during manufacture and should be put back in their original places.

SPD526

3. Remove side bearing caps

PD343

- 4 Using Tool, lift differential case assembly out.

PD344

Tool number: HT72400000 (—)

Be careful to keep the side bearing outer races together with inner race — do not mix them up.

SPD527

DISASSEMBLY (Model R200)

Differential Carrier (Cont'd)

- 5 Loosen drive pinion nut and pull off companion flange

PD345

Tool number: ST31520000 (-)

PD346

6. Take out drive pinion together with rear bearing inner race, bearing spacer and adjusting washer

SPD528

- 7 Remove oil seal.
8. Remove pilot bearing together with pilot bearing spacer and front bearing inner race with Tool

PD348

Tool number KV38100401 (-)

9. Remove side oil seal
10 Remove pinion bearing outer races with a brass drift

PD349

DISASSEMBLY (Model R200)

Differential Carrier (Cont'd)

- 11 Remove pinion rear bearing inner race and pinion height adjusting washer

PD179

Tool number: ST30031000 (J22912-01)

Differential Case

- 1 Remove side bearing inner races

To prevent damage to bearing, engage puller paws with grooves

SPD529

Tool number: (A) ST33051001 (-)
(B) ST33061000 (J8107-2)

Be careful not to confuse the right and left hand parts

SPD022

DISASSEMBLY (Model R200)

Differential Case (Cont'd)

2. Loosen ring gear bolts in a criss-cross fashion.
- 3 Tap ring gear off the gear case with a soft hammer

Tap evenly all around to keep ring gear from binding.

SPD024

4. Punch off pinion mate shaft lock pin from ring gear side

Lock pin is calked at pin hole mouth on differential case.

SPD025

INSPECTION (Model R200)

Ring Gear and Drive Pinion

Check gear teeth for scoring, cracking or chipping. If any damaged part is evident, replace ring gear and drive pinion as a set (hypoid gear set).

Differential Case Assembly

Check mating surfaces of differential case, side gears, pinion mate gears, pinion mate shaft, thrust block and thrust washers

SPD584

Bearing

- 1 Thoroughly clean bearing and dry with compressed air
- 2 Check bearings for wear, scratches, pitching or flaking
Check tapered roller bearing for a burned out portion as shown in the figure below. If damaged, replace outer and inner races as a set.

SPD458

ADJUSTMENT (Model R200)

To avoid any confusion while calculating bearing shims, it is absolutely necessary to stay with the metric system. If you measure anything in inches, the results **MUST** be converted to the metric system. You can use a conversion chart or a calculator as illustrated

SPD531

Setting Up Each Tool

Set up each tool, rear pinion bearing and front pinion bearing before adjusting pinion height and drive pinion bearing preload

1. Install rear pinion bearing pilot into gauge plate and slide over hex head long bolt.

SPD532

Tool number:

- (A) Hex head long bolt (J25269-23)
- (B) Gauge plate (J25269-1)
- (C) Rear pinion bearing pilot (J25269-2)

2. Slide pinion rear bearing inner race, bearing preload adapter and pinion bearing adjusting spacer over hex head long bolt.

SPD533

Tool number:

- Bearing preload adapter (J25269-26)

3. Install these parts into gear carrier
4. Stand front bearing pilot support on the bench with the appropriate side up and assemble front pinion bearing pilot, front pinion bearing inner race and lead preload washer. Ensure that all parts are seated.

SPD534

Tool number:

- (A) Lead preload washer (J25269-25)
- (B) Front pinion bearing pilot (J25269-3)
- (C) Front bearing pilot support (J25269-29)

ADJUSTMENT (Model R200)

Setting Up Each Tool (Cont'd)

5. Holding these parts together, slide the assembly over hex head long bolt into gear carrier. Install support nut. Finger-tighten the nut and ensure that all parts turn freely and are properly aligned.

SPD535

6. Tighten support nut carefully to correct preload of 0.6 to 1.0 N·m (6 to 10 kg-cm, 5.2 to 8.7 in-lb).

SPD536

Tool number: (J25765-A)

Drive Pinion Height

1. Install two side bearing discs with arbor assembly. Ensure that arbor turns freely.

SPD537

Tool number.

- (A) Arbor assembly (J23597-1)
(B) Side bearing disc (J25269-4)

2. Place side bearing discs with arbor assembly into differential carrier.

Lift spring loaded plunger and place it on the face of gauge plate.

SPD538

ADJUSTMENT (Model R200)

Drive Pinion Height (Cont'd)

3. Install bearing caps.
4. Install dial indicator and tighten hold down clamp

SPD539

Tool number:

- | | |
|--------------------------|-----------|
| (A) Hold down clamp | (J8001-1) |
| (B) Dial indicator clamp | (J8001-2) |
| (C) Dial indicator | (J8001-6) |

5. To zero dial indicator, rotate arbor and plunger back and forth and note highest deflection (the point where needle changes direction) Set dial indicator at zero.

SPD540

6. Rotate gauge plate until the plunger falls off gauge plate and read dial indicator (Read the dial indicator directly).
Repeat to ensure accuracy

SPD541

7. Read head number (H) on drive pinion head
The figure for H is a dimensional variation in units of 0.01 mm (0.0004 in) against a standard measurement.

SPD542

ADJUSTMENT (Model R200)

Drive Pinion Height (Cont'd)

- 8 Calculate washer thickness following the chart below

LINE #	OPERATION	
1	Standard number	3 00mm
2	Dial indicator reading (Step 6)	
3	ADD lines 1 and 2	
4	"H" factor (from drive pinion) (Step 7)	
5	"H" factor sign ☐	
	PLUS SIGN ☒ line 5, SUBTRACT line 4 from 3 Enter difference on line 6	
	MINUS SIGN ☐ line 5, ADD lines 3 and 4 Enter sum on line 6	
6	Washer size	

Example Dial Indicator Reading 0 3 mm

Number on Pinion Head +2

3.00 (standard measure)
+0 3 (indicator reading)
 3 3 (Pinion head is plus, so you
-0 02 SUBTRACT it)
 3 28 (mm = total pinion washer you
 will need)

- 9 Select the proper washer (Refer to S D.S).

If you cannot find the desired thickness of washer, use washer so that thickness is the closest to the calculated value.

Example.

3.28 mm (Calculated total pinion washer
in step 8)

The correct washer is 3.27 mm
(Part number 38154 P6023).

Drive Pinion Preload

- 1 To determine pinion bearing preload, disassemble pinion height/bearing preload tools and measure thickness of lead washer This is the correct size pinion bearing adjusting washer required

If a lead washer is not available, use a piece of thick roll solder to obtain preload washer size.

SPD543

- 2 Select the proper washer (Refer to S D.S.).
- If you cannot find shims with the desired thickness, use shims so that the total thickness is the closest to the calculated value.
 - Sometimes the correct dimension cannot be set with washers alone. In these cases, washers may be used in combination with drive pinion bearing adjusting spacers. (Refer to S.D.S.)

ADJUSTMENT (Model R200)

Side Bearing Preload

1. To simplify the job, make a chart, like the one below, to organize your calculations.

LETTERS	HUNDREDTHS OF A MILLIMETER
A - Left housing	
B - Right housing	
C - Differential case	
D - Differential case	
E - Left side bearing	
F - Right side bearing	
H - (+) or (-) ring gear	
G - Spacer measurement	

- 2 Write the following numbers down in the chart
A & B Figures marked on gear carrier

PD358

- C & D Figures marked on differential case

PD359

- H Figures marked on ring gear

SPD576

- G This is the difference in thickness of side spacer against standard width [8 10 mm (0 3189 in)]
(G = Standard spacer - Measured spacer).

SPD544

ADJUSTMENT (Model R200)

Side Bearing Preload (Cont'd)

- 3 Measure how far under the standard thickness [21 mm (0.83 in)] the side bearings are. It will require the tools shown below.

SPD545

Tool number

- (A) 4-step gauge block (J25407-1)
- (B) Base plate (J25407-2)
- (C) Weight block (J25407-3)

- 4 Set weight block, 4-step gauge block [21 mm (0.83 in)] and dial indicator on base plate.
5 Adjust dial indicator scale to zero.

SPD546

- 6 Carefully slide 4-step gauge block and weight block out from under dial indicator.
7 Lubricate side bearing and place side bearing on base plate.

Make sure that base plate has a recess in it and that bearing will turn freely when positioned over the recess as shown.

SPD547

- 8 Place weight block on side bearing.
9 Slide dial indicator on weight block.

SPD548

ADJUSTMENT (Model R200)

Side Bearing Preload (Cont'd)

10 Turn weight block a few times to ensure that bearing is properly seated.

11. Read dial indicator

- Normal indication:

0.10 - 0.30 mm (0.0039 - 0.0118 in)

- If the needle fluctuates erratically, then bearing is either dirty or defective and should be cleaned or replaced.

SPD549

12 Measure both bearings in the same way and write the left side bearing measurement next to "E" and the right side bearing measurement next to "F".

13 Calculate washer thickness following the charts below

Left (ring gear) side:

LINE #	OPERATION	
1L	Left side standard number	2 05 mm
2L	Enter "A" factor (gear carrier)	
3L	Enter "D" factor (differential case)	
4L	Enter "E" factor (left bearing)	
5L	ADD Lines 1L, 2L, 3L, and 4L Enter SUM	
6L	Enter "C" factor (differential case)	
7L	SUBTRACT Line 6L from 5L — Enter DIFFERENCE	
8L	Enter "H" factor (ring gear)	
9L	Enter "H" factor's sign ☐	
	PLUS SIGN + Line 9L, SUBTRACT Line 8L from 7L Enter difference on Line 10L	
	MINUS SIGN — Line 9L, ADD Lines 7L and 8L Enter sum on Line 10L	
10L	Left side shim size "T ₁ "	

ADJUSTMENT (Model R200)

Side Bearing Preload (Cont'd)

Right side:

LINE #	OPERATION	
1R	Right side standard number	1 95 mm
2R	Enter "B" factor (gear carrier)	
3R	Enter "F" factor (right bearing)	
4R	Enter "G" factor (R 200 only) (See Chart Below)	
5R	ADD Lines 1R, 2R, 3R, and 4R Enter SUM	
6R	Enter "D" factor (differential case)	
7R	SUBTRACT Line 6R from 5R — Enter DIFFERENCE	
8R	Enter "H" factor (ring gear)	
9R	Enter "H" factor's sign ☐	
	PLUS SIGN + Line 9R, ADD Lines 7R and 8R Enter sum on Line 10R	
	MINUS SIGN — Line 9R, SUBTRACT Line 8R from 7R Enter difference on line 10R	
10R	Right side shim size "T ₂ "	

	G FACTOR CALCULATION R200 ONLY	
A	Side bearing spacer — Standard size	8 10 mm
B	Enter actual spacer measurement	
C	SUBTRACT Line B from Line A and enter DIFFERENCE on Line 4R of right side of chart	

The formulas are as follows

$$T_1 = A - C + D + E - H + 2.05 \text{ (mm)}$$

$$T_2 = B - D + F + G + H + 1.95 \text{ (mm)}$$

Example:

Left Side T1		Right Side T2	
+	—	+	—
A 3	C 3	B 3	D 3
D 3		F 14	H 2
E 18		G 7	
H 2		std shim 1 95	
std shim 2 05		2 19	5
2 31	3	—5	
—3			
2 28		2 14	

The measurement for the shim pack on the left (T1) should be 2.28 mm and for the right (T2) 2 14 mm. To check the accuracy of your work in the previous step, the side bearing shim measurement should be figured with a Side Bearing Shim Calculator

ADJUSTMENT (Model R200)

Side Bearing Preload (Cont'd)

Follow the instructions for the sample given below:

EXAMPLE CALCULATOR

Left Side

- Step 1 Move slide 1 to place C 3 in line with an arrow
- Step 2 Move slide 2 to place D 3 in line with C 3
- Step 3 Move slide 3 to place E 18 in line with H -2
- Step 4. Read answer at left side arrow, 2 28mm or close to 087 in

SPD550

Right Side

- Step 1 Move slide 1 to place B 3 in line with an arrow
- Step 2 Move slide 2 to place G 7 in line with D 3.
- Step 3 Move slide 3 to place F 14 in line with H 2 (red scale for right side)
- Step 4 Read answer at right side arrow 2 14mm or closer to 086 in

SPD551

14 Compare these answers with the answers on the previous page. If both answers agree, proceed to the next step.

15. Select the proper washer (Refer to S D S)

If you cannot find the desired thickness of washer, use washer so that thickness is the closest to the calculated value.

ADJUSTMENT (Model R200)

Tooth Contact

Gear tooth contact pattern check is necessary to verify correct relationship between ring gear and drive pinion.

Hypoid gear set which are not positioned properly may be noisy, or have short life or both. With a pattern check, the most desirable contact for low noise level and long life can be assured

1. Thoroughly clean ring gear and drive pinion teeth.
2. Sparingly apply a mixture of powdered ferric oxide and oil or equivalent to 3 or 4 teeth of ring gear drive side.

SPD357

3. Hold companion flange steady by hand and rotate the ring gear in both directions

SPD308

Usually the pattern will be correct if you have calculated the shims correctly and the backlash is correct.

However, in extremely rare cases you will have to use trial-and-error processes until you get a good tooth contact pattern.

The tooth pattern is the best indication of how well a differential has been set up.

SPD007

ASSEMBLY (Model R200)

Differential Case

- 1 Install side gears, pinion mate gears, thrust washers and thrust block into differential case

SPD552

2. Fit pinion mate shaft to differential case so that it meets lock pin holes.

SPD553

- 3 Adjust clearance between rear face of side gear and thrust washer by selecting side gear thrust washer (Refer to S D S)

SPD029

Clearance between side gear thrust washer and differential case:

Less than 0.15 mm (0.0059 in)

- 4 Install pinion mate shaft lock pin with a punch punch

Make sure lock pin is flush with case

SPD030

- 5 Apply gear oil to gear tooth surfaces and thrust surfaces and check to see they turn properly.

SPD322

ASSEMBLY (Model R200)

Differential Case (Cont'd)

6. Apply locking agent [Locktite (stud lock) or equivalent] to contacting surfaces of ring gear and differential case, then place differential case on ring gear

SPD600

- 7 Apply locking agent [Locktite (stud lock) or equivalent] to ring gear bolts, and install them.

Tighten bolts in a criss-cross fashion, lightly tapping bolt head with a hammer.

- 8 Press fit side bearing inner races on differential case with Tool.

PD353

Tool number:

- (A) KV38100300 (J25523)
- (B) ST33061000 (J8107-2)

Differential Carrier

- 1 Press-fit front and rear bearing outer races with Tools

SPD555

Tool number:

- (A) ST30611000 (J25742-1)
- (B) ST30621000 (—)
- (C) ST30613000 (J25742-3)

ASSEMBLY (Model R200)

Differential Carrier (Cont'd)

- 2 Select pinion height adjusting washer and pinion bearing adjusting washer spacer, referring to Adjustment.
3. Install pinion height adjusting washer in drive pinion, and press fit rear bearing inner race in it with press and Tool

SPD377

Tool number ST30901000 (—)

4. Set drive pinion assembly (as shown in figure below) in differential carrier and install drive pinion with press and suitable tool.

Stop when drive pinion touches bearing.

SPD556

- 5 Apply multi-purpose grease to cavity at sealing lips of oil seal.
Install front oil seal

SPD557

Tool number: KV38100500 (—)

6. Install companion flange, and tighten pinion nut to specified torque.

Ascertain that threaded portion of drive pinion and pinion nut are free from oil or grease.

PD466

Tool number ST31520000 (—)

ASSEMBLY (Model R200)

Differential Carrier (Cont'd)

7. Turn drive pinion in both directions several times, and measure pinion bearing preload.

PD340

Tool number.

ST3127S000 (See J25765-A.)

Pinion bearing preload (With front oil seal)

1 13 - 1.72 N·m

(11.5 - 17.5 kg-cm, 10.0 - 15.2 in-lb)

When pinion bearing preload is outside the specifications, replace pinion bearing adjusting washer and spacer with a different thickness

- 8 Select side bearing adjusting washer
Refer to Adjustment.
- 9 Install differential case assembly with side bearing outer races into gear carrier.

SPD527

- 10 Insert left and right side bearing adjusting washers in place between side bearings and carrier.

SPD558

- 11 Drive in side bearing spacer with Tool

SPD559

Tool number: KV38100600 (J25267)

ASSEMBLY (Model R200)

Differential Carrier (Cont'd)

12. Align mark on bearing cap with that on gear carrier and install bearing cap on gear carrier

SPD526

13. Apply multi-purpose grease to cavity at sealing lips of oil seal
Install side oil seal.

SPD560

Tool number. KV38100200 (—)

14. Measure ring gear-to-drive pinion backlash with a dial indicator.

SPD513

Ring gear-to-drive pinion backlash:

0.13 - 0.18 mm

(0.0051 - 0.0071 in)

- If backlash is too small, decrease thickness of right shim and increase thickness of left shim by the same amount.

If backlash is too great, reverse the above procedure

Never change the total amount of shims as it will change the bearing preload.

15. Check total preload with Tool

When checking preload, turn drive pinion in both directions several times to set bearing rollers.

PD340

Tool number: ST3127S000 (See J25765-A.)

Total preload:

1.23 - 2.30 N·m

(12.5 - 23.5 kg-cm, 10.9 - 20.4 in-lb)

ASSEMBLY (Model R200)

Differential Carrier (Cont'd)

- If preload is too great, add the same amount of shim to each side.
- If preload is too small, remove the same amount of shim to each side

Never add or remove a different number of shims for each side as it will change ring gear-to-drive pinion backlash.

SPD561

- 16 Recheck ring gear-to-drive pinion backlash because increase or decrease in thickness of shims will cause change of ring gear-to-pinion backlash
- 17 Check runout of ring gear with a dial indicator

SPD524

Runout limit:

0.05 mm (0.0020 in)

- If backlash varies excessively in different places, the variance may have resulted from foreign matter caught between the ring gear and the differential case.

- If the backlash varies greatly when the runout of the ring gear is within a specified range, the hypoid gear set or differential case should be replaced

- 18 Check tooth contact
Refer to Adjustment
- 19 Install rear cover and gasket

NISSAN FACTORY SERVICE MANUAL CDROM END-USER LICENSE AGREEMENT

NOTICE TO USER: THIS IS A CONTRACT. BY PURCHASING AND USING THE SERVICE MANUAL ON CDROM, YOU ACCEPT ALL THE TERMS AND CONDITIONS OF THIS AGREEMENT.

This End User License Agreement accompanies the Service Manual on CDROM product and related explanatory materials. Please read this Agreement carefully. By purchasing and using the Service Manual on CDROM, you are implying that you have carefully read, agree with, and will adhere to the conditions set forth in this agreement. If you do not wish to accept the terms of this End User Agreement please do not use the Service Manual on CDROM. You will not be permitted to use the Service Manual on CDROM without consenting to this end user agreement.

Upon your acceptance of this Agreement, Courtesy Nissan grants to you a nonexclusive license to use the Service Manual on CDROM, provided that you agree to the following:

USE OF SOFTWARE

You may install the contents of the CD on a hard disk or other storage device for personal use only. Each Service Manual on CDROM comes with a single user license. Under no circumstances should the contents of the Service Manual CDROM be placed on a server for purposes of distributing or allowing access to the material over a network.

COPYRIGHT AND TRADEMARK RIGHTS

The Service Manual CDROM is owned by Courtesy Nissan and its structure and organization, all graphics and coding are considered intellectual property of Courtesy Nissan. The Service Manual on CDROM is also protected by United States Copyright Law and International Treaty provisions. This Agreement does not grant you any intellectual property or resale rights to the Service Manual CDROM.

RESTRICTIONS

You agree not to modify, adapt, translate, reverse engineer, decompile or disassemble the PDF file on the Service Manual CDROM. The Service Manual on CDROM is licensed and distributed by Courtesy Nissan for single user utilization of its contents only. Licensed users will be permitted to use the contents of the Service Manual CDROM for multimedia presentation to an audience from a single machine using a large display or projection device but the Service Manual CDROM may not otherwise be distributed, sold to or made accessible to multiple users.

NO WARRANTY

The software is being delivered to you AS IS and Courtesy Nissan makes no warranty as to its use or performance. COURTESY NISSAN DOES NOT AND CANNOT WARRANT THE PERFORMANCE OR RESULTS YOU MAY OBTAIN BY USING THE SERVICE MANUAL CDROM OR DOCUMENTATION, NOR MAKES ANY WARRANTIES, EXPRESS OR IMPLIED, AS TO NONINFRINGEMENT OF THIRD-PARTY RIGHTS, MERCHANTABILITY, OR FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT WILL COURTESY NISSAN BE LIABLE TO YOU FOR ANY CONSEQUENTIAL, INCIDENTAL, OR SPECIAL DAMAGES FOR ANY REASON.

GOVERNING LAW AND GENERAL PROVISIONS

This Agreement will be governed by the laws of the State of Texas, USA, excluding the application of its conflicts of law rules. This Agreement will not be governed by the United Nations Convention on Contracts for the International Sale of Goods, the application of which is expressly excluded. If any part of this Agreement is found void and unenforceable, it will not affect the validity of the balance of the Agreement, which shall remain valid and enforceable according to its terms. You agree that the Service Manual on CDROM will not be shipped, transferred or exported into any country or used in any manner prohibited by the United States Export Administration act or any other export laws, restrictions or regulations. This Agreement shall automatically terminate upon failure by you to comply with its terms. This Agreement may only be modified in writing signed by and authorized officer for Courtesy Nissan.
