

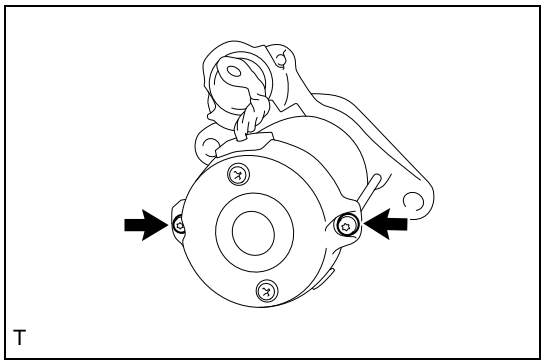
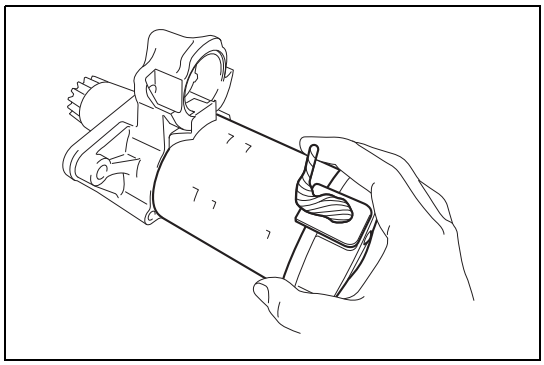
(2) Remove the 2 nuts and the magnet starter switch assembly from the starter drive housing assembly.

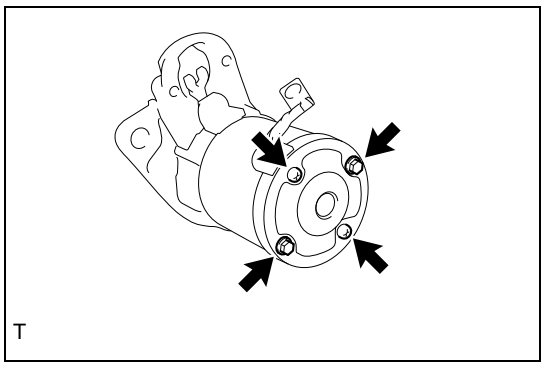
3. REMOVE STARTER YOKE ASSEMBLY (for Automatic Transmission)
(1) Using a "TORX" socket wrench T25, remove the 2 through bolts.



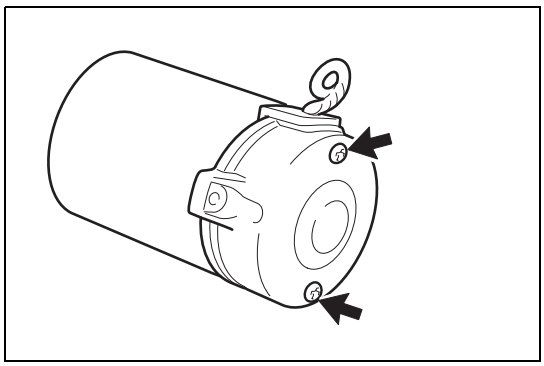


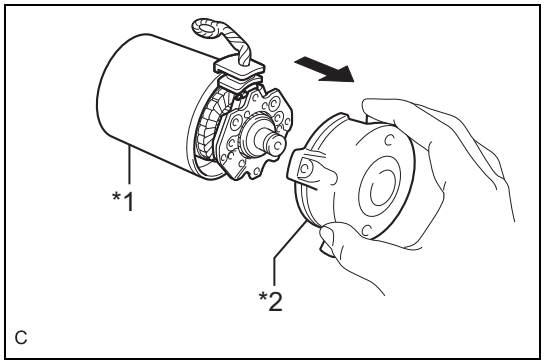
(2) Remove the starter yoke assembly and starter cover from the starter drive housing assembly.

4. REMOVE STARTER COVER (for Manual Transmission)
(1) Remove the 2 through bolts and 2 screws, and remove the starter cover.



5. REMOVE STARTER COVER (for Automatic Transmission)
(1) Remove the 2 screws.





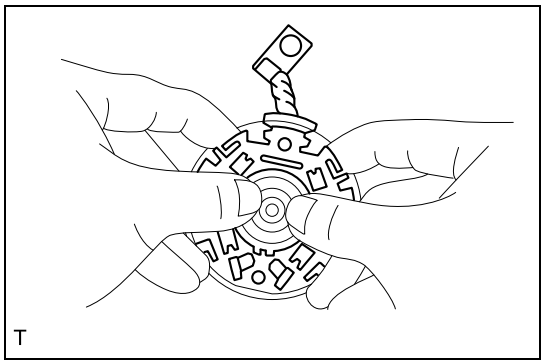
(2) Remove the starter cover from the starter yoke assembly.

Text in Illustration

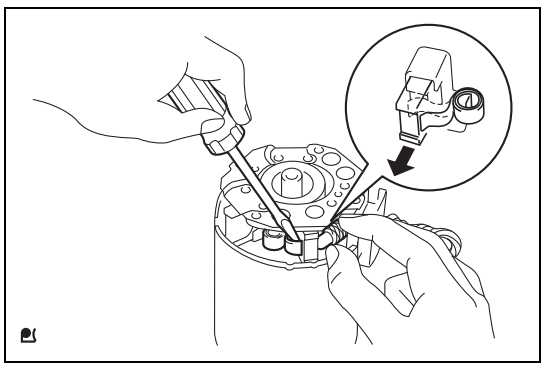
| | |
|---|---|
| *1 | Starter Yoke Assembly |
| *2 | Starter Cover |

CAUTION:
Hold the lead wire and remove the starter cover.

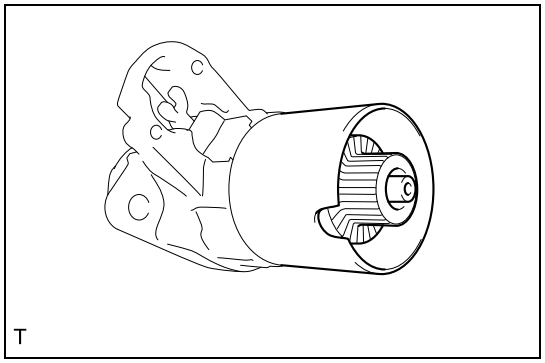
(3) Remove the dust starter protect from the starter yoke assembly.



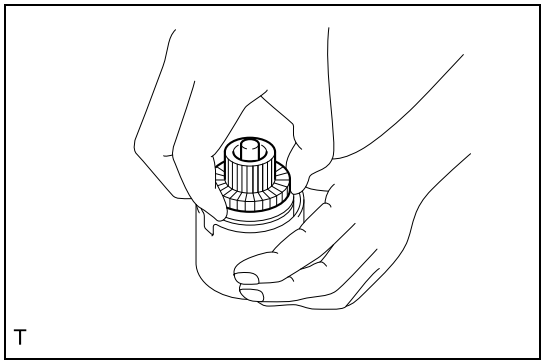
6. REMOVE STARTER BRUSH HOLDER ASSEMBLY(for Manual Transmission)
   (1) Remove the starter brush holder assembly.
   NOTE:
   Hold the brush with your fingers so that the brush spring does not come flying out.



7. REMOVE STARTER BRUSH HOLDER ASSEMBLY(for Automatic Transmission)
   (1) Using a screwdriver, disengage the spring from the bush.
   (2) Disconnect the 4 brush from the starter brush holder assembly.
   (3) Remove the starter brush holder assembly.

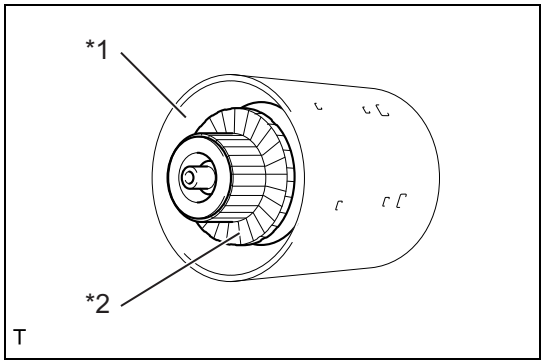


8. REMOVE STARTER YOKE ASSEMBLY (for Manual Transmission)
   (1) Remove the starter yoke assembly and starter armature assembly together from the starter drive housing assembly.



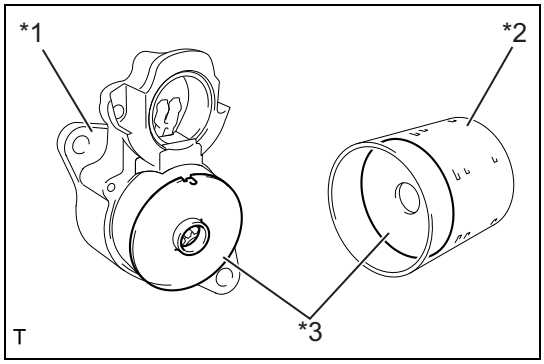
9. REMOVE STARTER ARMATURE ASSEMBLY (for Manual Transmission)
   (1) Pull out the starter armature assembly from the starter yoke assembly.

ST



10. REMOVE STARTER ARMATURE ASSEMBLY (for Automatic Transmission)
    (1) Pull out the starter armature assembly from the starter yoke assembly.
    Text in Illustration

| | |
|---|---|
| *1 | Starter Yoke Assembly |
| *2 | Starter Armature Assembly |



11. REMOVE STARTER ARMATURE PLATE (for Automatic Transmission)
    (1) Remove the starter armature plate from the starter yoke assembly and starter drive housing assembly.
    Text in Illustration

| | |
|---|---|
| *1 | Starter Drive Housing Assembly |
| *2 | Starter Yoke Assembly |

| *2 | Shaft |

ST

## INSPECTION

1. INSPECT STARTER ASSEMBLY

WARNING:

As a large electric current passes through the cable during this inspection, a thick cable must be used. If not, the cable may become hot and cause injury.

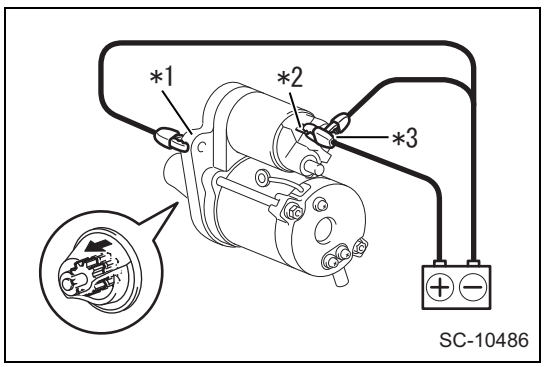
CAUTION:

The following tests must each be performed within 3 to 5 seconds to prevent the coil from burning out.

(1) Mount the starter in a vise between aluminum plates.

(2) Perform a pull-in test.

(a)Remove the nut, and then disconnect the lead wire from terminal M.

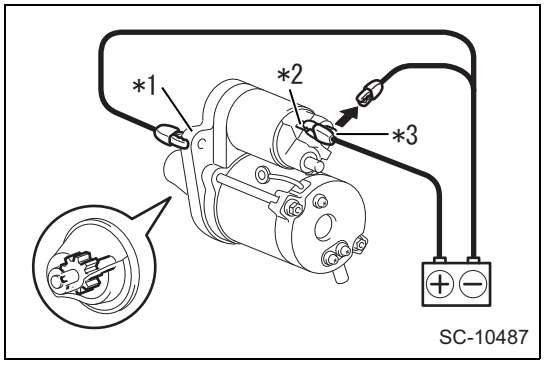


(b)Connect the battery to the starter as shown in the illustration. Check that the clutch pinion gear extends.

Text in Illustration

| | |
|---|---|
| *1 | Body |
| *2 | Terminal S |
| *3 | Terminal M |

If the clutch pinion gear does not move, inspect the magnet starter switch assembly. If the magnet starter switch assembly is not as specified, replace it.



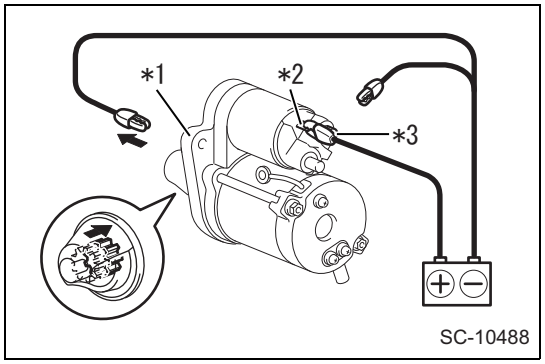
(3) Perform a holding test.

(a)Disconnect the negative (-) terminal lead from terminal M while the conditions specified in the pull-in test above are maintained. Check that the pinion gear remains out.

Text in Illustration

| | |
|---|---|
| *1 | Body |
| *2 | Terminal S |
| *3 | Terminal M |

If the clutch pinion gear returns inward, inspect the magnet starter switch assembly. If the magnet starter switch assembly is not as specified, replace it.

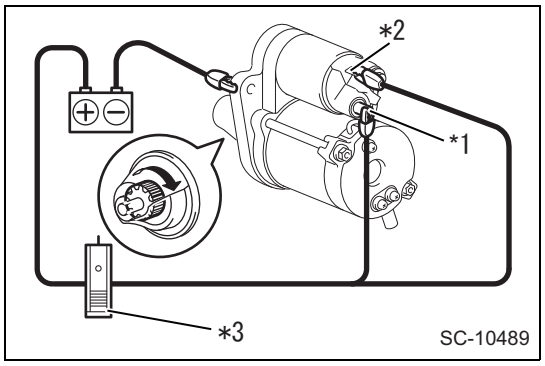


(4) Inspect the clutch pinion gear return.
(a) Disconnect the negative (-) terminal lead from the starter body. Check that the clutch pinion gear returns inward.

Text in Illustration

| | |
|---|---|
| *1 | Body |
| *2 | Terminal S |
| *3 | Terminal M |

If the clutch pinion gear does not return inward, inspect the magnet starter switch assembly. If the magnet starter switch assembly is not as specified, replace it.



(5) Perform an operation test without load.
(a) Connect the lead wire to terminal C with the nut.
Standard value: T=10N·m {102kgf·cm} {7.4ft·lbf}
(b) Connect the battery and an ammeter to the starter as shown in the illustration.

Text in Illustration

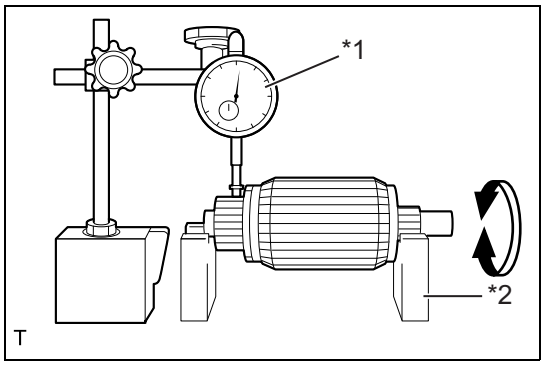
| | |
|---|---|
| *1 | Terminal B |
| *2 | Terminal S |
| *3 | Ammeter |

(c) Check that the starter rotates smoothly and steadily while the clutch pinion gear is extended. Then measure the current.
Standard Current

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| Battery positive terminal - Terminal B - Terminal S | 11.5 V | Below 90 A |

If the result is not as specified, inspect the starter assembly.
NOTE:
Inspect the starter armature assembly, starter commutator end frame assembly and magnet starter switch assembly. If there is a malfunction, replace the part and perform again this test.

2. INSPECT STARTER ARMATURE ASSEMBLY (for Manual Transmission)
(1) Check the commutator for signs of seizure or stepped wear caused by roughness of the surface. If there is light wear, use sandpaper to repair.

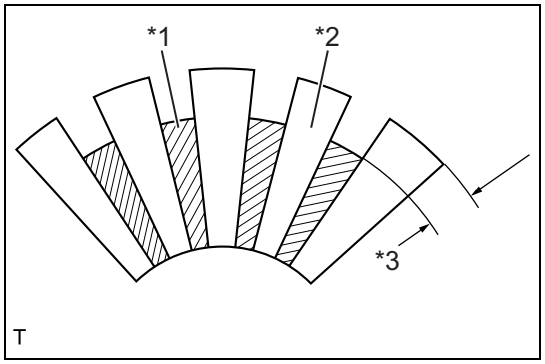


(2) Check for runout on the commutator. If excessive, replace the armature.
Standard runout: 0.05 mm (0.002 in.)
Maximum runout: 0.10 mm (0.004 in.)

Text in Illustration

| | |
|---|---|
| *1 | Dial Gauge |
| *2 | V-block |

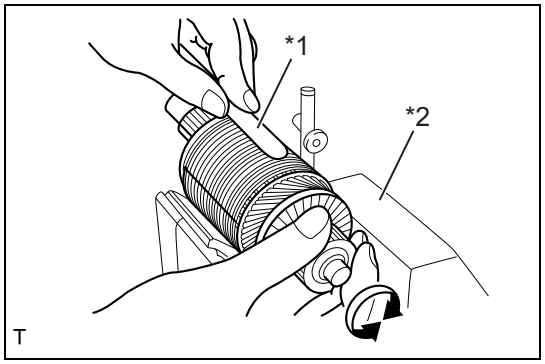
ST



(3) Check the depth of the segment mold. If it is not within the standard, replace the armature.
Standard depth: 0.05 mm (0.002 in.)

Text in Illustration

| | |
|---|---|
| *1 | Mold |
| *2 | Segment |
| *3 | Depth of Mold |

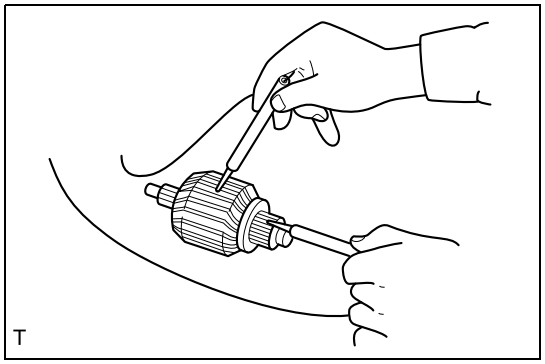


(4) Place the armature on the growler tester to check for short circuits. While slowly turning the armature, support the steel sheet for the armature core. If the circuit of the armature is shorted, the steel sheet will vibrate, causing it to move towards the core. When the steel sheet has moved or vibrated, replace the armature.

Text in Illustration

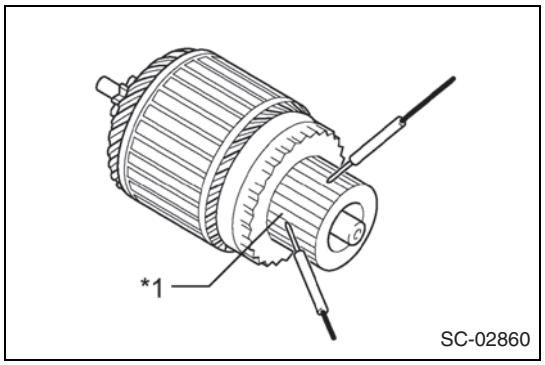
| | |
|---|---|
| *1 | Steel Sheet |
| *2 | Growler Tester |

(5) Touch the probe of one side to the commutator segment, and the other probe to the shaft. If there is continuity, replace the armature.



3. INSPECT STARTER ARMATURE ASSEMBLY (for Automatic Transmission)

(1) Check the commutator for dirt and/or burns on the surface. If the surface is dirty or burnt, correct it with sandpaper (No. 400) or a lathe. If necessary,replace the starter armature assembly.



(2) Inspect the commutator for an open circuit.
(a)Measure the resistance according to the value(s) in the table below.

Text in Illustration

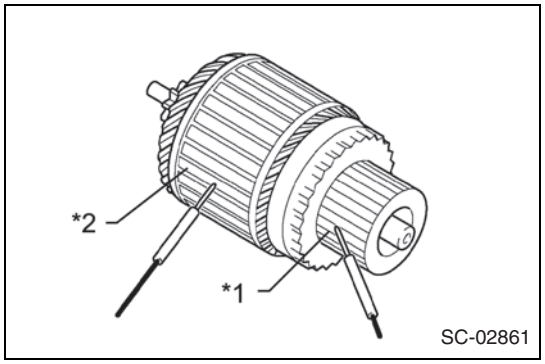
| | |
|---|---|
| *1 | Segment |

Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| Segment - Segment | Always | Below 1 Ω |

If the result is not as specified, replace the starter armature assembly.

ST



(3) Inspect the commutator for short circuits.
(a)Measure the resistance according to the value(s) in the table below.

Text in Illustration

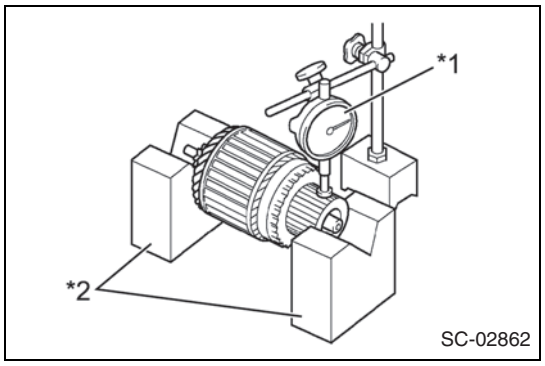
| | |
|---|---|
| *1 | Segment |
| *2 | Coil Core |

Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| Segment - Coil core | Always | 10 kΩ or higher |

If the result is not as specified, replace the starter armature assembly.

(4) Check the commutator for signs of seizure or stepped wear caused by roughness of the surface. If there is light wear, use sandpaper to repair.

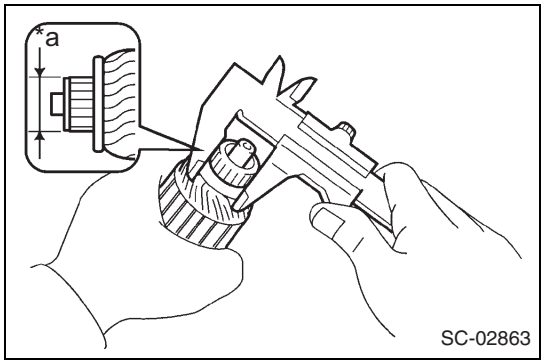


(5) Check for runout on the commutator. If excessive,replace the armature.
Standard runout: 0.02 mm (0.0008 in.)
Maximum runout: 0.05 mm (0.002 in.)

Text in Illustration

| | |
|---|---|
| *1 | Dial Gauge |
| *2 | V-block |

If the result is not as specified, replace the starter armature assembly.

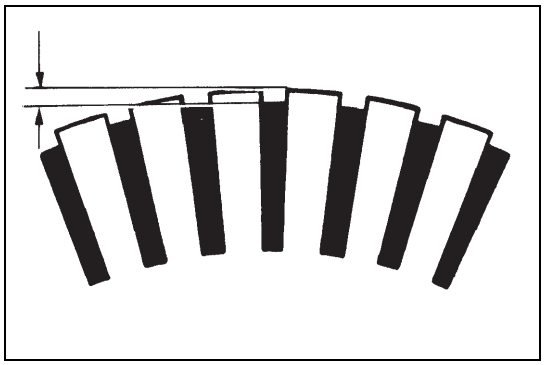


(6) Using vernier caliper, measure the commutator diameter.

Text in Illustration

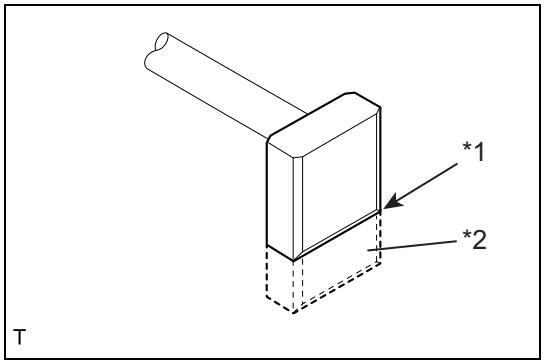
| | |
|---|---|
| *a | Diameter |

Standard diameter: 29 mm (1.1417 in.)
Minimum diameter: 28 mm (1.1024 in.)
If the diameter is less than the minimum, replace the starter armature assembly.



(7) Using vernier caliper, measure the under cut depth of the segment. If it is not within the standard, replace the starter armature assembly.
Standard depth: 0.7 mm (0.0276 in.)
Minimum depth: 0.2 mm (0.0079 in.)

4. INSPECT STARTER YOKE ASSEMBLY (for Manual Transmission)
(1) Make sure that the pole is set at the predetermined position.
5. INSPECT STARTER BRUSH HOLDER ASSEMBLY(for Manual Transmission)
(1) Visually check the brush. If there is any abnormal wear or cracks, replace the brush.



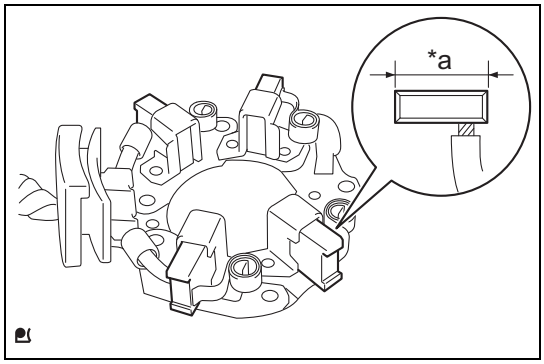
(2) Measure the length of the brush. If it exceeds the service limits, replace the brush.
Standard length: 12.3 mm (0.484 in.)
Minimum length: 7.0 mm (0.276 in.)

Text in Illustration

| | |
|---|---|
| *1 | Service Limit Line |
| *2 | Brush |

(3) Check that the brush moves smoothly in the brush holder.

(4) Measure the brush spring force with a spring scale. Replace the brush holder if below the service limit.
Standard brush spring force: 15.9 to 19.5 N (1.6 to 2.0 kgf, 3.6 to 4.4 lbf)
Minimum brush spring force: 2.5 N (0.3 kgf, 0.6 lbf)

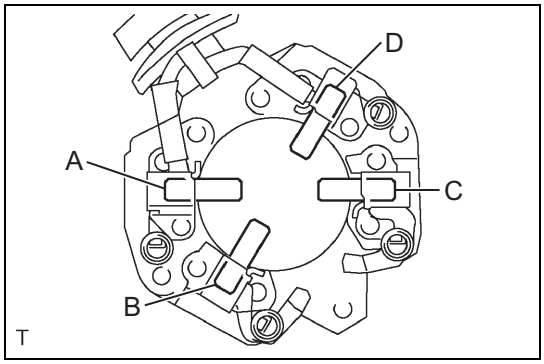


6. INSPECT STARTER BRUSH HOLDER ASSEMBLY (for Automatic Transmission)

(1) Using a vernier caliper, measure the brush length.
Text in Illustration

| | |
|---|---|
| *a | Length |

Standard length: 14.4 mm (0.5669 in.)
Minimum length: 9.0 mm (0.3543 in.)
If the length is less than the minimum, replace the starter brush holder assembly.



(2) Measure the resistance according to the value(s) in the table below.

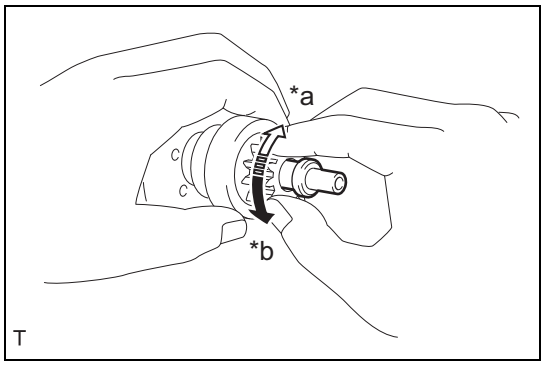
Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| A - BA - CB - DC - D | Always | 10 kΩ or higher |
| A - DB - C | Always Below | 1 Ω |

If the result is not as specified, replace the starter brush holder assembly.

7. INSPECT STARTER CLUTCH SUB-ASSEMBLY (for Manual Transmission)

(1) Check the gear teeth on the planetary gear, internal gear and starter clutch for wear or damage.
If any of the gears is damaged, replace the starter center bearing clutch sub-assembly.



(2) Check the starter clutch pinion gear.

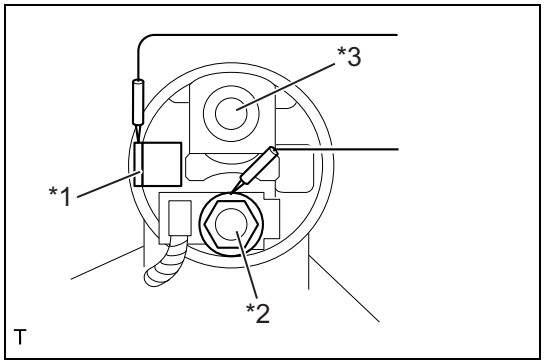
(a) Hold the starter clutch, rotate the pinion gear clockwise and check that it turns freely. Try to rotate the pinion gear counter-clockwise and check that it locks.

Text in Illustration

| | |
|---|---|
| *a | Free |
| *b | Lock |

If necessary, replace the starter clutch subassembly.

ST



8. INSPECT MAGNET STARTER SWITCH ASSEMBLY(for Manual Transmission)
   (1) Check that there is continuity between terminals B and M, and between terminal B and ground. Also, check to be sure there is no continuity between terminal M and S.
   Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| Terminal M - Terminal S | Always | Below 1 Ω |
| Terminal S - Switch body | Always | Below 1 Ω |
| Terminal M - Terminal B | Always | 1 M Ωor higher |

Text in Illustration

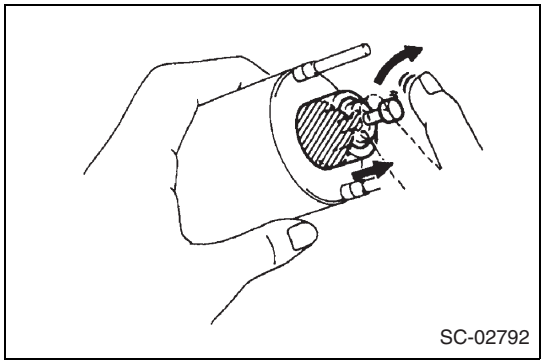
| | |
|---|---|
| *1 | Terminal S |
| *2 | Terminal M |
| *3 | Terminal B |

   (2) Using a lead wire, connect the switch assembly terminal B to the positive terminal of the battery, and the starter body to the ground terminal of the battery. The pinion should be forced to be pushed out on the shaft.
   NOTE:
   With the pinion forced to be pushed out on the shaft, the starter motor can sometimes rotate because the current flows, through pull-in coil, to motor. This is not a problem.

   (3) Disconnect the connector from terminal M. Then, using a lead wire, connect the positive terminal of the battery and terminal M, and ground terminal to starter body. In this test set up, the pinion should return to its original position even when it is pulled out with a screwdriver.

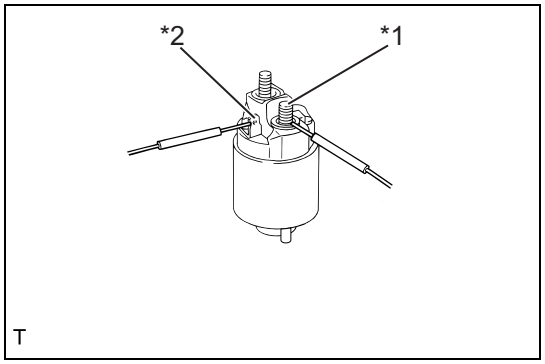
Text in Illustration

| | |
|---|---|
| *1 | Terminal S |
| *2 | Terminal B |



9. INSPECT MAGNET STARTER SWITCH ASSEMBLY(for Automatic Transmission)
   (1) Check the plunger.
      (a) Push in the plunger and check that it returns quickly to it is original position.
      If necessary, replace the magnet starter switch assembly.

ST



(2) Inspect the pull-in coil.

(a)Measure the resistance according to the value(s) in the table below.

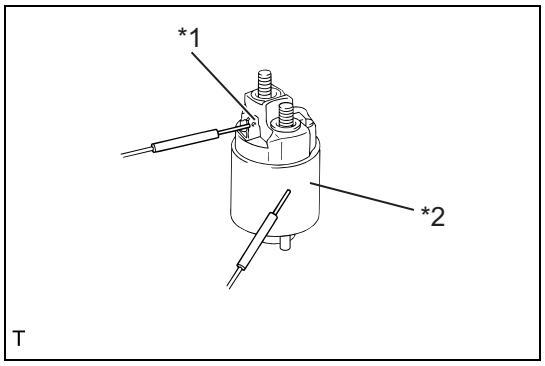
Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| Terminal M - Terminal S | Always | Below 1 Ω |

Text in Illustration

| | |
|---|---|
| *1 | Terminal M |
| *2 | Terminal S |

If the result is not as specified, replace the magnet starter switch assembly.



(3) Inspect the holding coil.

(a)Measure the resistance according to the value(s) in the table below.

Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| Terminal S - Switch body | Always | Below 2 Ω |

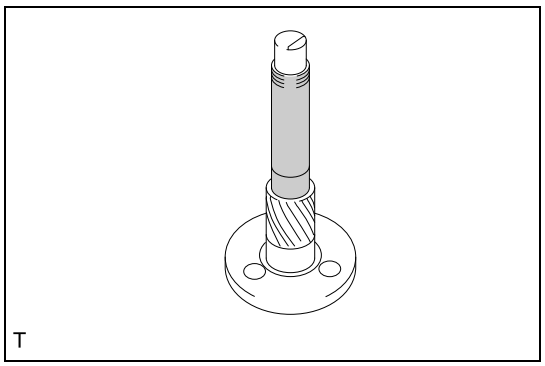
Text in Illustration

| | |
|---|---|
| *1 | Terminal S |
| *2 | Switch Body |

If the result is not as specified, replace the magnet starter switch assembly.

ST

## REASSEMBLY

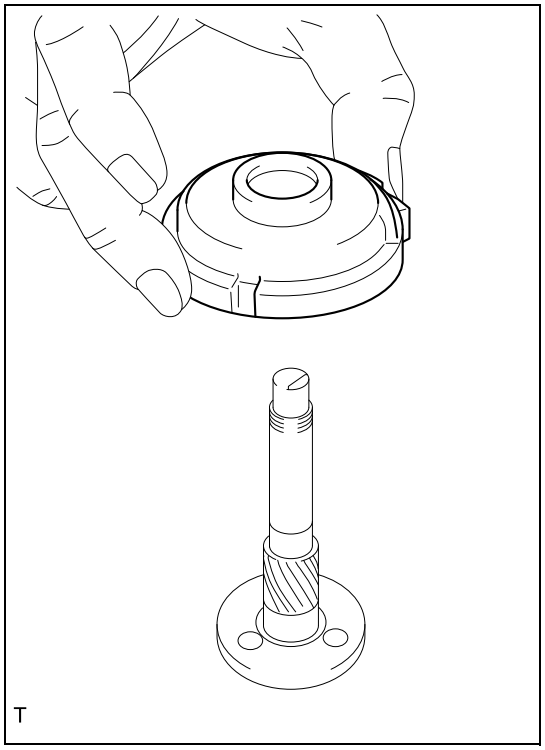


1. INSTALL STARTER CLUTCH SUB-ASSEMBLY (for Manual Transmission)

(1) Apply grease to the shaft as shown in the illustration.

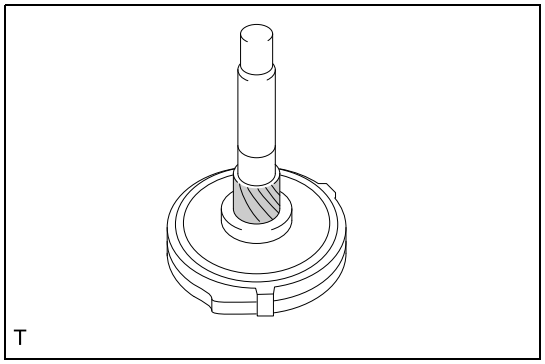
Text in Illustration

| | |
|---|---|
| | Multemp #6129 or equivalent |



(2) Install the internal gear to the shaft.

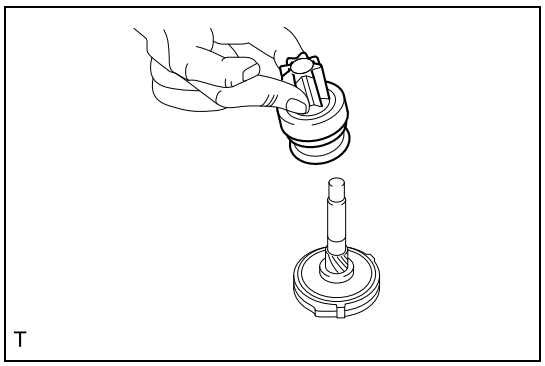
ST



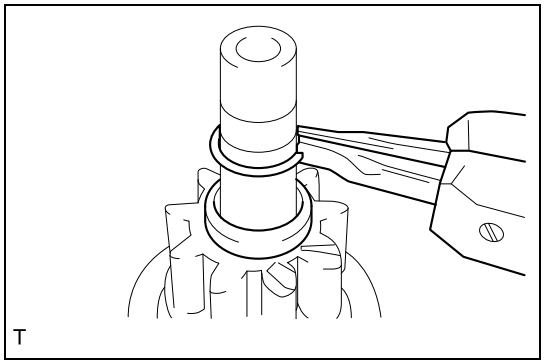
(3) Apply grease to the shaft as shown in the illustration.

Text in Illustration

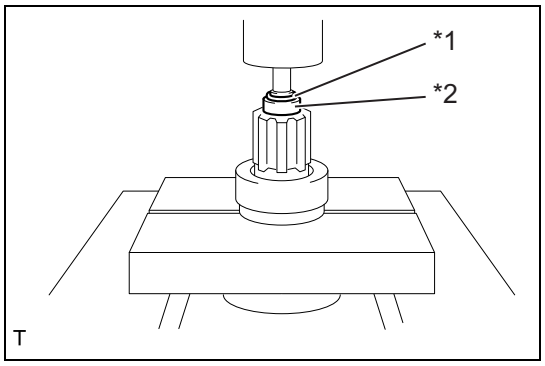
| | |
|---|---|
| | Multemp #6129 or equivalent |



(4) Install the over running clutch to the shaft.

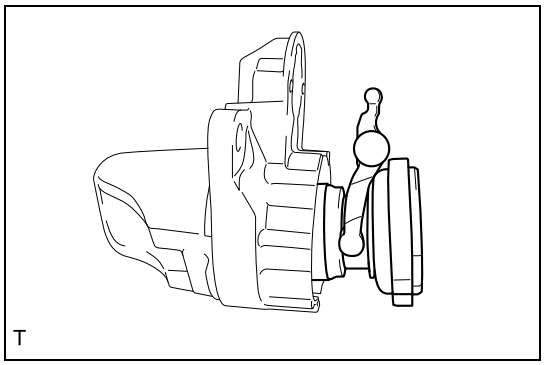


(5) Install the stopper to the shaft.
Using snap ring pliers, install the snap ring.

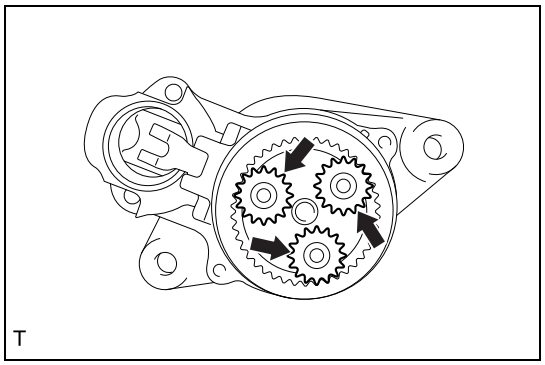


(6) Using a press, press the snap ring into the stopper.
Text in Illustration

| | |
|---|---|
| *1 | Snap Ring |
| *2 | Stopper |

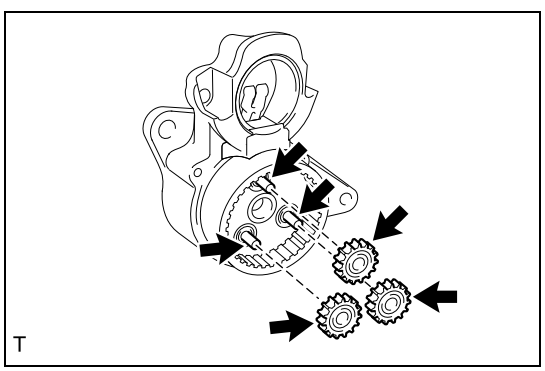


(7) Install the starter clutch sub-assembly together with the drive lever set pin to the starter drive housing assembly.



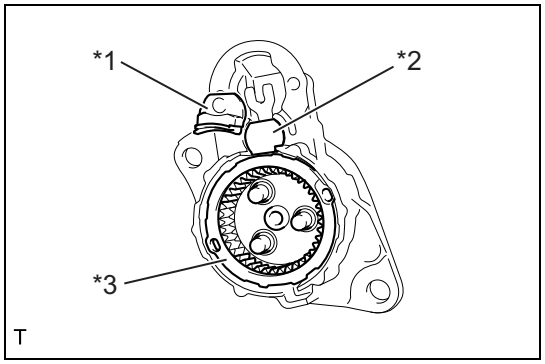
2. INSTALL STARTER PLANETARY GEAR (for Manual Transmission).
(1) Apply high-temperature grease to the planetary gears and pins of the planetary shaft.
(2) Install the 3 starter planetary gears.
Text in Illustration

| | |
|---|---|
| ➡ | Multemp #6129 or equivalent |



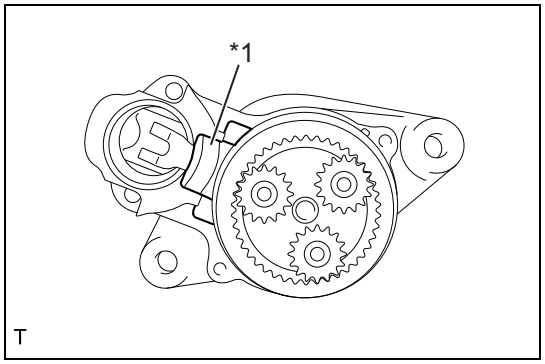
3. INSTALL STARTER PLANETARY GEAR (for Automatic Transmission)
(1) Apply high-temperature grease to the planetary gears and pins of the planetary shaft.
(2) Install the 3 starter planetary gears.
Text in Illustration

| | |
|---|---|
| ➡ | Denso HL50 or equivalent |



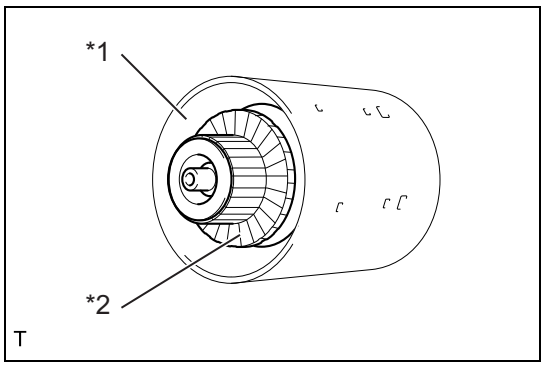
4. INSTALL STARTER HOUSING RUBBER (for Manual Transmission)
   (1) Install the starter housing rubber, seal rubber and plate to the starter drive housing assembly.
   Text in Illustration

| | |
|---|---|
| *1 | Starter Housing Rubber |
| *2 | Plate |
| *3 | Seal Rubber |



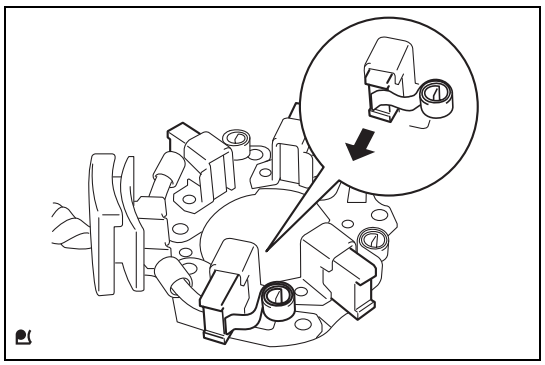
5. INSTALL RUBBER SEAL (for Automatic Transmission)
   (1) Install the rubber seal to the starter drive housing assembly.
   Text in Illustration

| | |
|---|---|
| *1 | Rubber Seal |

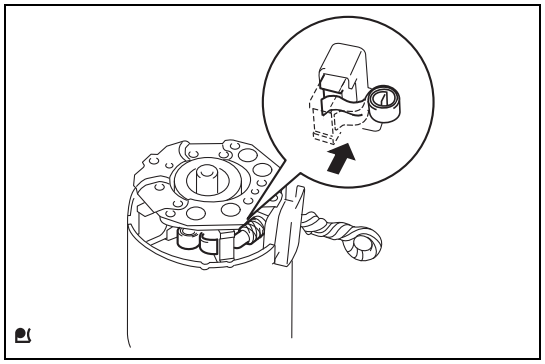


6. INSTALL STARTER ARMATURE ASSEMBLY (for Automatic Transmission)
   (1) Install the starter armature assembly to the starter yoke assembly.
   Text in Illustration

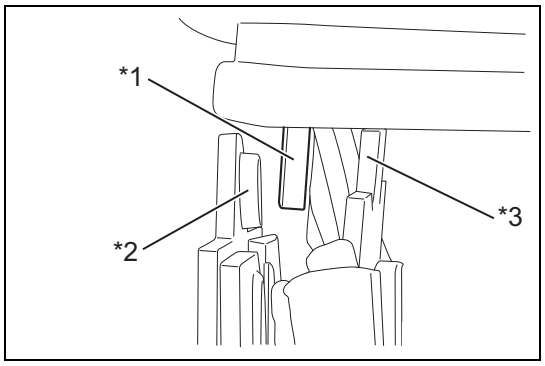
| | |
|---|---|
| *1 | Starter Yoke Assembly |
| *2 | Starter Armature Assembly |



7. INSTALL STARTER BRUSH HOLDER ASSEMBLY (for Automatic Transmission)
   (1) Install the 4 brushes and 4 brush springs.



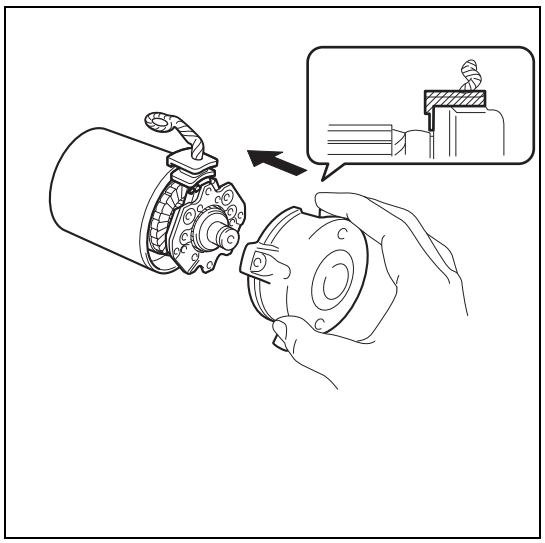
(2) Install the starter brush holder assembly to the starter armature assembly. Push the 4 brushes.



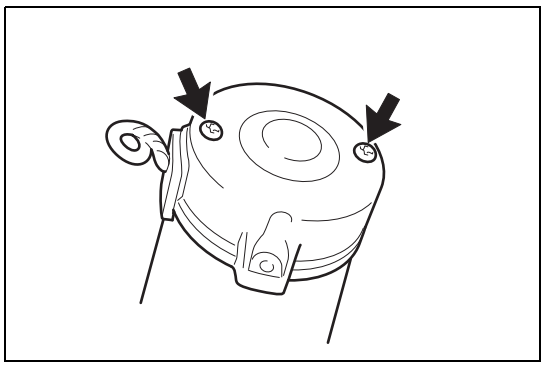
(3) Insert the grommet between the positive (+) motor read wire and the negative (-) brush holder plate.
Text in Illustration

| | |
|---|---|
| *1 | Grommet |
| *2 | Negative (-) Brush Holder Plate |
| *3 | Positive (+) Motor Read Wire |

8. INSTALL STARTER COVER (for Automatic Transmission)
(1) Install the dust starter protector to the starter yoke assembly.



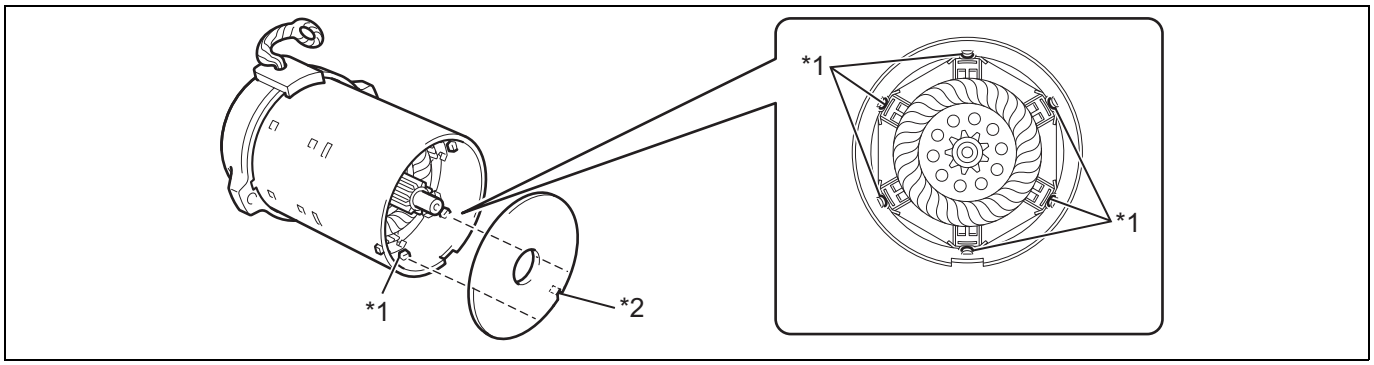
(2) Align the starter brush holder assembly read wire rubber with the groove of the starter cover.



(3) Install the starter cover to the starter brush holder assembly with 2 screws.
Standard value:T=1.5N·m {15kgf·cm} {1.1ft·lbf}

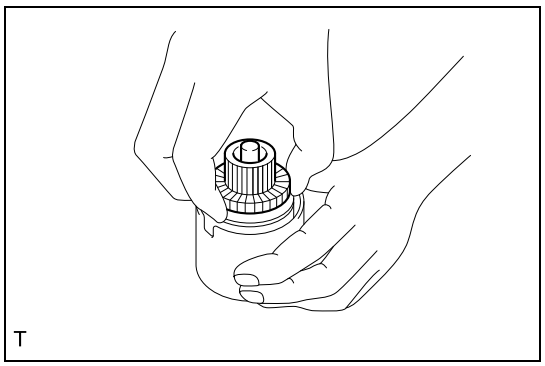
9. INSTALL STARTER ARMATURE PLATE (for Automatic Transmission)
(1) Align the claw of the starter yoke assembly with the groove the starter armature plate.

(2) Install the starter armature plate to the starter yoke assembly.

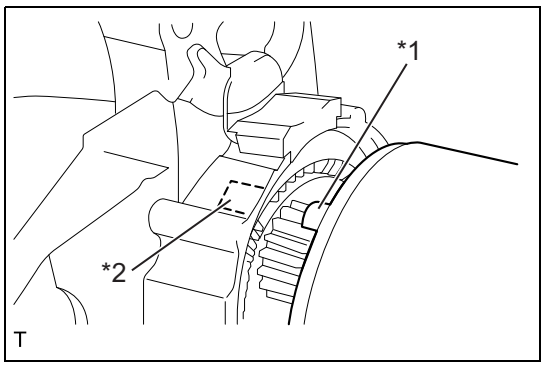


Text in Illustration

| | | | |
|---|---|---|---|
| *1 | Grommet | *2 | Groove |

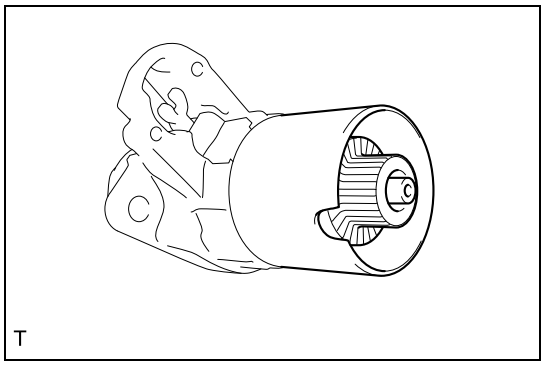


10. INSTALL STARTER ARMATURE ASSEMBLY (for Manual Transmission)
    (1) Install the starter armature assembly to the starter yoke assembly.



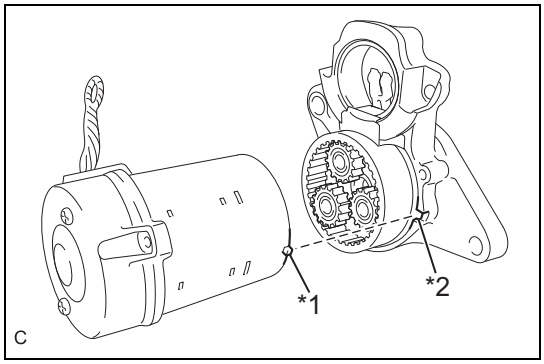
11. INSTALL STARTER YOKE ASSEMBLY (for Manual Transmission)
    (1) Align the claw of the starter yoke assembly with the groove inside the starter drive housing assembly.
    Text in Illustration

| | |
|---|---|
| *1 | Claw |
| *2 | Groove |



(2) Install the starter yoke assembly together with the starter armature assembly to the starter drive housing assembly.

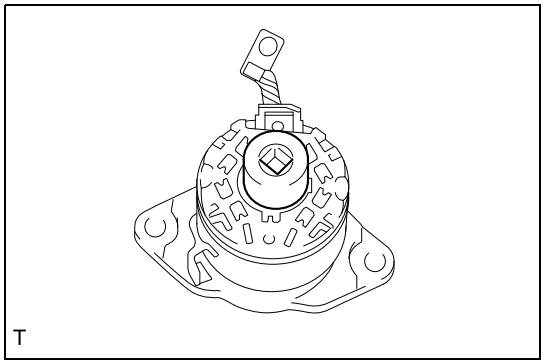
ST



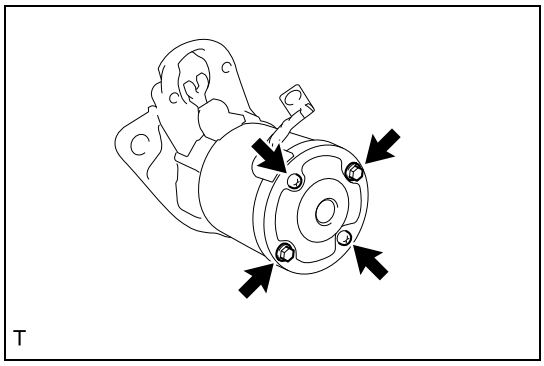
12. INSTALL STARTER YOKE ASSEMBLY (for Automatic Transmission)
    (1) Align the claw of the starter yoke assembly with the groove inside the starter drive housing assembly. Install the starter yoke assembly together with the starter armature assembly to the starter drive housing assembly.
    Text in Illustration

| | |
|---|---|
| *1 | Claw |
| *2 | Groove |

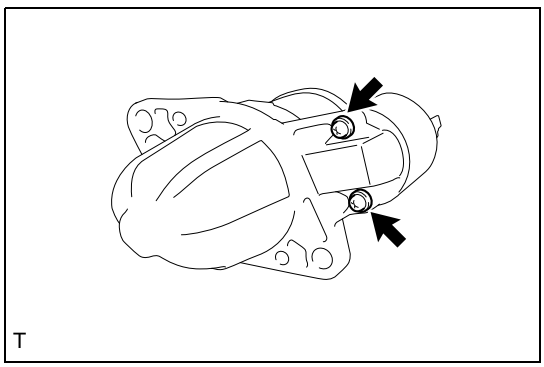
    (2) Using a "TORX" socket wrench T25, install the 2 through bolts.
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}



13. INSTALL STARTER BRUSH HOLDER ASSEMBLY (for Manual Transmission)
    (1) Install a socket to the starter brush holder assembly.
    (2) Install the starter brush holder assembly to the starter armature assembly.

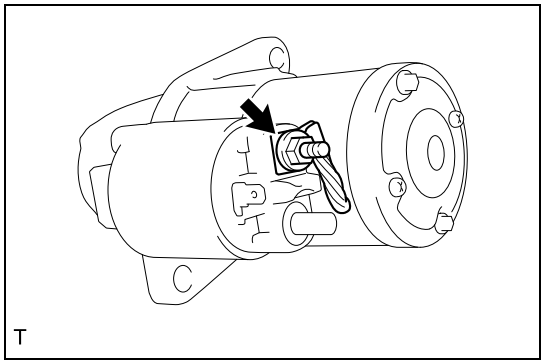


14. INSTALL STARTER COVER (for Manual Transmission)
    (1) Install the starter cover with 2 screws and 2 bolts.
    Torque: Bolt 6.0 N·m {61 kgf·cm} {4.4ft·lbf}
    Screw 1.4 N·m {14 kgf·cm} {1.0ft·lbf}



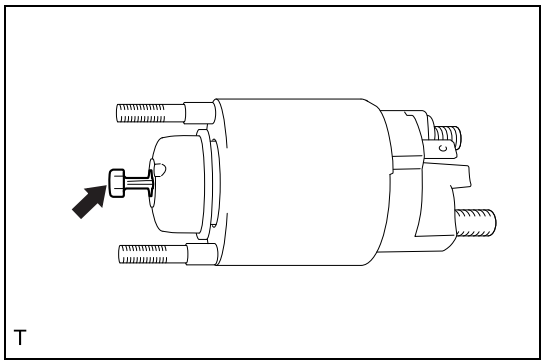
15. INSTALL MAGNET STARTER SWITCH ASSEMBLY (for Manual Transmission)
    (1) Install the magnet starter switch assembly with the 2 screws.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

ST



T

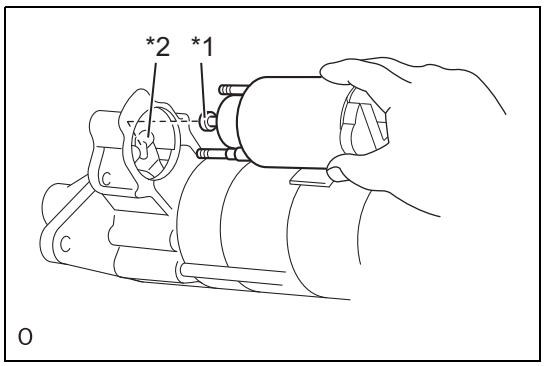
(2) Connect the lead wire to terminal M with the nut.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}



T

16. INSTALL MAGNET STARTER SWITCH ASSEMBLY (for Automatic Transmission)
(1) Apply grease to the plunger and hook as shown in the illustration.
Text in Illustration

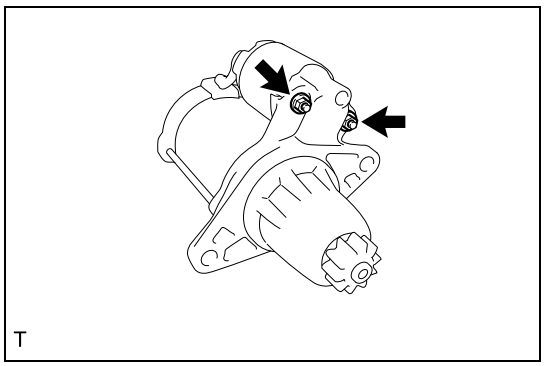
| | |
|---|---|
| ➡ | Denso HL50 or equivalent |



O

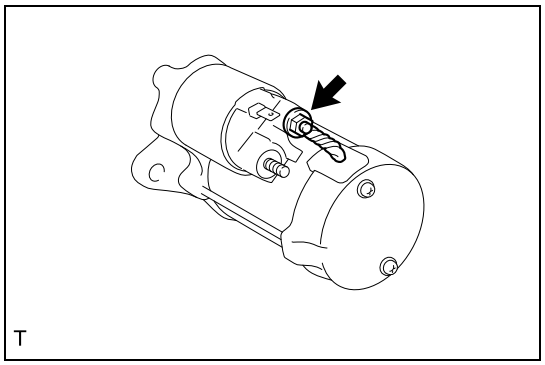
(2) Hook the plunger and hook of the magnet starter switch assembly to the lever of the starter drive housing assembly.
Text in Illustration

| | |
|---|---|
| *1 | Plunger and Hook |
| *2 | Lever |



T

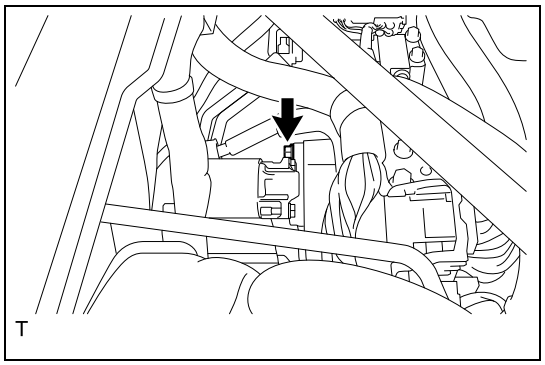
(3) Install the magnet starter switch assembly with the 2 screws.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}



T

(4) Connect the lead wire to terminal M with the nut.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

## Installation



1. Installation of starter ASSY
   (1) Install the starter ASSY to the transmission and temporarily tighten the upper mounting bolt.

   (2) Lower mounting bolt tightening
      1. Tighten the lower mounting bolt A.
         Standard value: 50 N·m {510 kgf·cm} {36.9 ft·lbf}
      2. Tighten the ground cable fixing bolt B.
         CAUTION:
         When installing the ground cable, make sure to secure the stay.
         Standard value: 14 N·m {143 kgf·cm} {10.3 ft·lbf}

   (3) Tighten the upper mounting bolt of starter ASSY using the SST.
      SST 18283AA000
      Standard value:Specified tightening torque
      T=50N·m {510kgf·cm} {36.9ft·lbf}
      When using the SST, calculate the torque using the following formula.

Formula: T2 = L2/(L1 + L2) ×T1

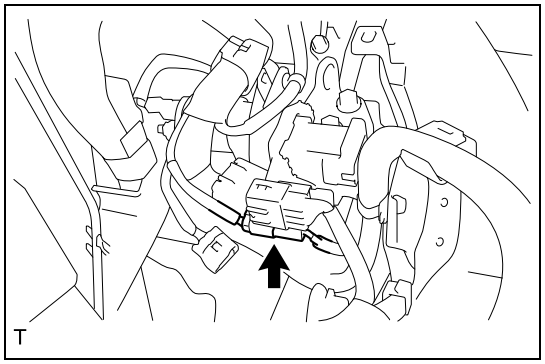
| | |
|---|---|
| T1 | 50 N·m |
| T2 | Tightening torque |
| L1 | Length of SST [0.085 m] |
| L2 | Torque wrench length [m] |

NOTE:
- This torque value is valid when the SST and torque wrench are aligned on a line.
- Attach the SST and torque wrench so that they are aligned on a line.

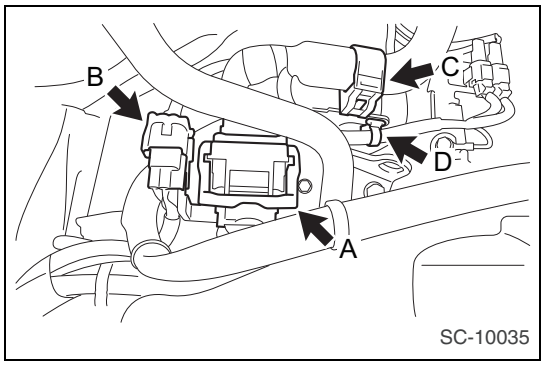
   (4) Connect the connector and terminal B to the starter ASSY.

2. CONNECT ENGINE WIRE
   (1) Connect the connector.

ST



(2) Install the wiring harness clamp (C) and clip (D).



(3) Connect the connector (B).

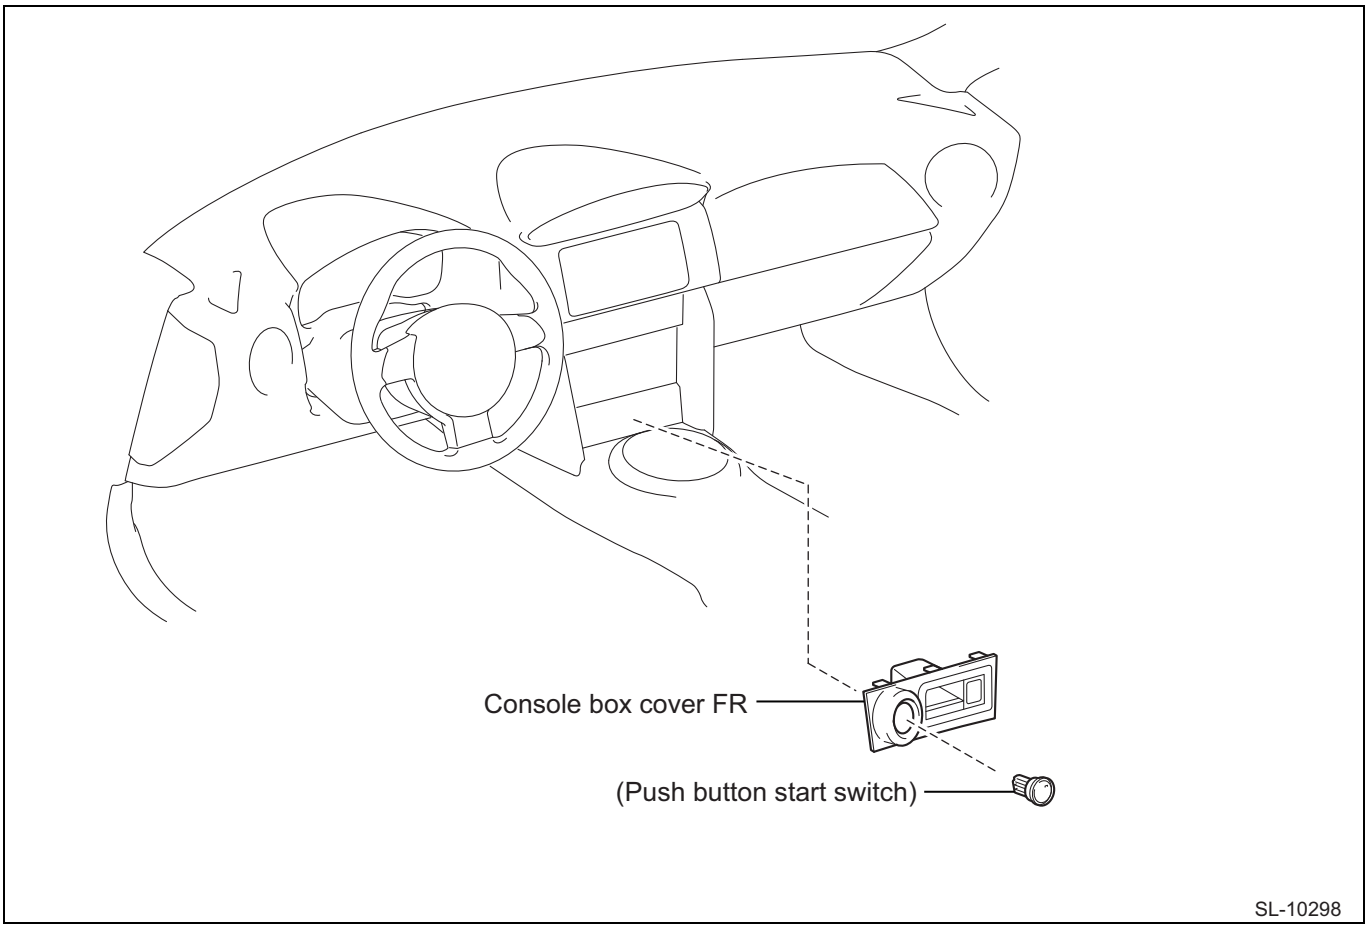
(4) Connect the wire harness connector (A) and securely lock the connector.

3. Installation of exhaust pipe ASSY FR (Refer to IE - 46)
4. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}

ST

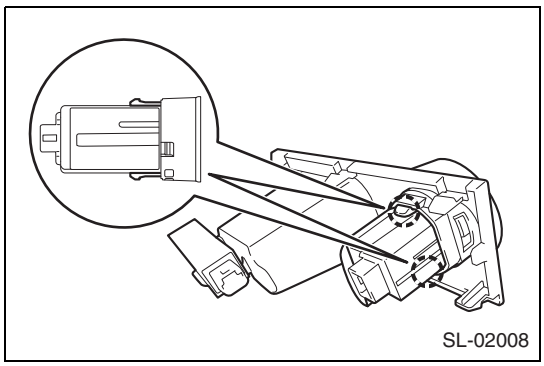
# Engine switch

## Exploded view



## Removal

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of console box cover FR (Refer to IT - 33)

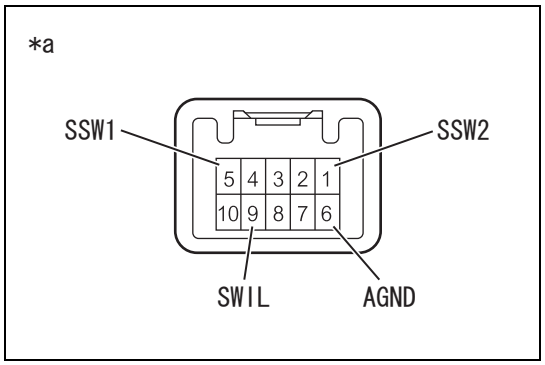


3. Push button start switch removal
   (1) Release the two claws from the back side of console box cover FR and remove the push button start switch.

## Installation

1. Push button start switch installation
   (1) Install the push button start switch to the console box cover FR.
   NOTE:
   Make sure that the claws are engaged completely.
2. Installation of console cover FR (Refer to IT - 39)
3. Connection of battery ground terminal (refer to IN - 6)
4. Settings when removing/installing battery terminals (Refer to IN - 6)

## Unit inspection



1. Push button start switch check
   (1) Resistance check
      (a)Measure the resistance between connector terminals.
      Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 5 (SSW1) - 6 (AGND) | When the switch is not pressed | 10 k Ωor more |
| 1 (SSW2) - 6 (AGND) | When the switch is not pressed | 10 k Ωor more |
| 5 (SSW1) - 6 (AGND) | When the switch is pressed | Less than 1 Ω |
| 1 (SSW2) - 6 (AGND) | When the switch is pressed | Less than 1 Ω |

NOTE:
If the resistance is not within the standard value, replace the push button start switch.

   (2) LED illumination check
      (a)Connect the battery positive and negative to the connector terminals and check the LED illumination condition.

Criteria

| Terminal No.<br>(Battery positive - battery negative) | Criteria |
|---|---|
| 9 (SWIL) - 6 (GND) | Character illumination lights up |

NOTE:
If the resistance is not within the standard value, replace the push button start switch.

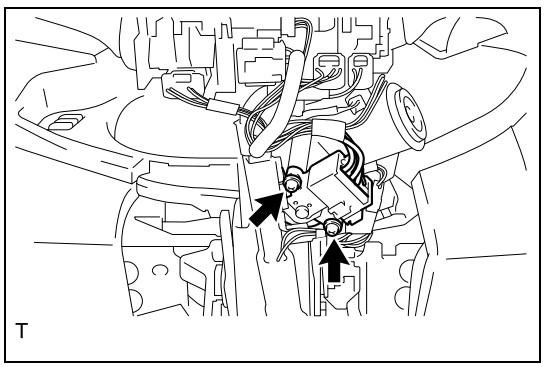
## Removal

1. Removal of instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)
2. Removal of the steering column cover LWR (Refer to WW - 22)
3. Removal of the steering column cover UPR (Refer to WW - 23)

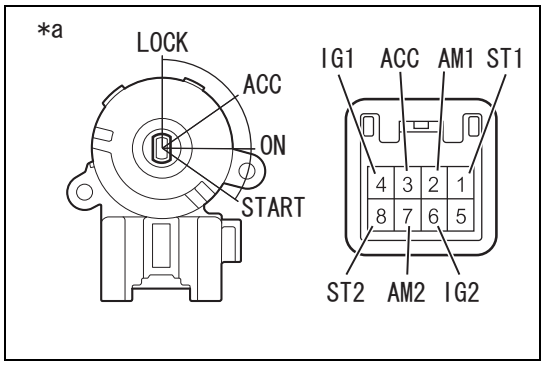


4. Ignition/starter switch ASSY removal
   (1) Disconnect the connector.
   (2) Remove the two screws and remove the ignition/starter switch ASSY.

## Installation

1. Ignition/starter switch ASSY installation
   (1) Install the ignition/starter switch ASSY with the two screws.
   (2) Connect the connector.
2. Installation of the steering column cover UPR (Refer to SR - 63)
3. Installation of the steering column cover LWR (Refer to SR - 63)
4. Installation of instrument panel under cover SUB-ASSY NO. 1 (Refer to ME - 69)
5. Settings when removing/installing battery terminals (Refer to IN - 6)

## Unit inspection



1. Ignition/starter switch ASSY check
   (1) Measure the resistance between connector terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| - | LOCK | 10 k Ωor more |
| 2 (AM1) - 3 (ACC) | ACC | Less than 1 Ω |
| 2 (AM1) - 3 (ACC) - 4 (IG1) | ON | Less than 1 Ω |
| 6 (IG2) - 7 (AM2) | | |
| 1 (ST1) - 2 (AM1) - 4 (IG1) | START | Less than 1 Ω |

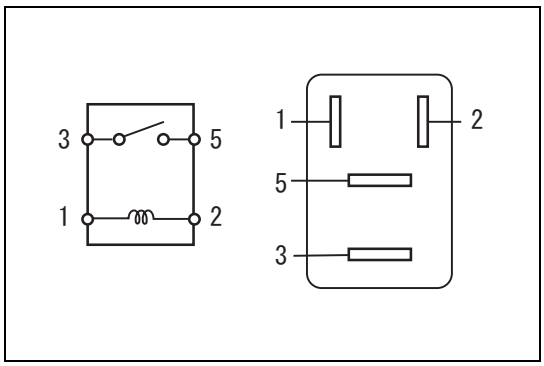
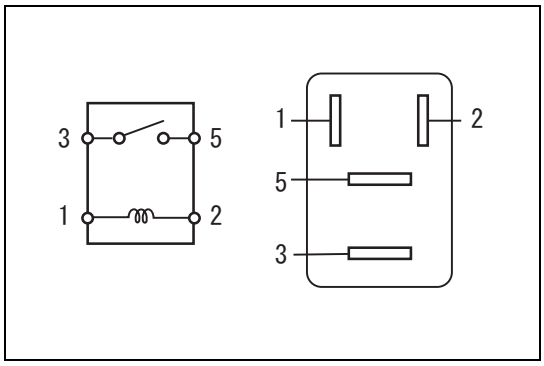
# Relay

## Unit inspection



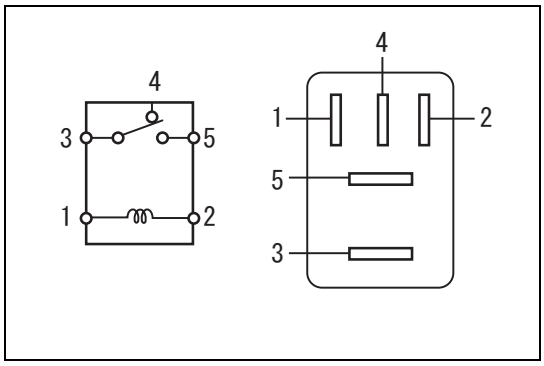
1. ST relay check
   (1) Check the resistance between relay connector terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | 20°C | 93.8 to 136.4Ω |
| 3 - 5 | When the battery voltage is not applied to the terminal 1 and terminal 2: | 10 k Ωor more |
| | When the battery voltage is applied to the terminal 1 and terminal 2: | Less than 1 Ω |



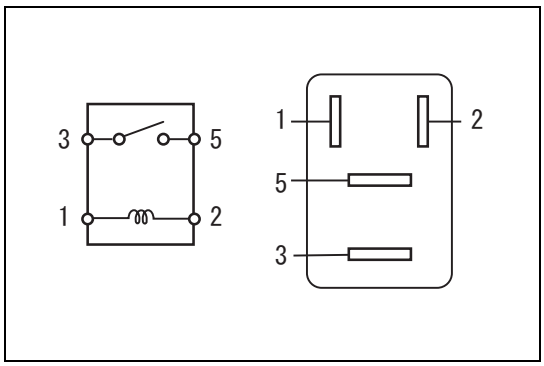
2. INHIBITOR relay check
   (1) Check the resistance between relay connector terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | 20°C | 93.8 to 136.4Ω |
| 3 - 5 | When the battery voltage is not applied to the terminal 1 and terminal 2: | 10 k Ωor more |
| | When the battery voltage is applied to the terminal 1 and terminal 2: | Less than 1 Ω |



3. ST CUT relay check (with smart key system)
   (1) Check the resistance between relay connector terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | 20°C | 93.8 to 136.4Ω |
| 3 - 4 | When the battery voltage is not applied to the terminal 1 and terminal 2: | Less than 1 Ω |
| | When the battery voltage is applied to the terminal 1 and terminal 2: | 10 k Ωor more |
| 3 - 5 | When the battery voltage is not applied to the terminal 1 and terminal 2: | 10 k Ωor more |
| | When the battery voltage is applied to the terminal 1 and terminal 2: | Less than 1 Ω |



4. IGS relay check (with smart key system)
   (1) Check the resistance between relay connector terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | 20°C | 93.8 to 136.4Ω |
| 3 - 5 | When the battery voltage is not applied to the terminal 1 and terminal 2: | 10 k Ωor more |
| | When the battery voltage is applied to the terminal 1 and terminal 2: | Less than 1 Ω |

# Cruise Control System

## Precautions

1. Precautions concerning cruise control system
   (1) When using the cruise control system, turn the cruise control system main switch (ON-OFF button) to ON after engine has started.
   (2) When not in use of cruise control system, turn the cruise control system main switch (ON-OFF button) to OFF.
   (3) Pay attention to vehicle speed while driving in declining lanes even if the cruise control system is active to control the vehicle speed.
   (4) When the cruise control indicator turns off or turns yellow against driver's intention, a malfunction of the cruise control function may be occurring.
   (5) Do not use the cruise control system under the following road conditions.
      - Roads where the certain vehicle distance is difficult to be maintained due to heavy traffic
      - Steep downhill lanes
      - Curving lanes with a sharp bend
      - Frozen or snowy roads
      - Slippery roads
   (6) Do not use the cruise control system while towing.

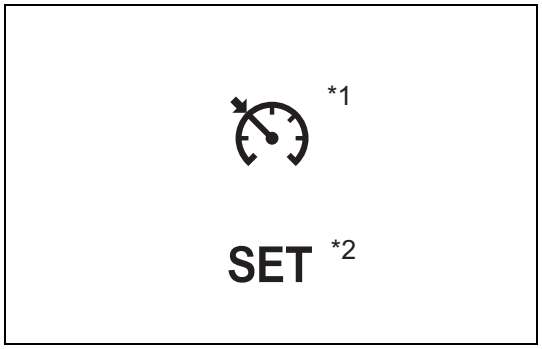
| ECM | Combination meter ASSY<br>(Cruise control indicator)<br>(Cruise control SET indicator) | Cruise control indicator and cruise control SET indicator operation signal | CAN |

## Description of functions

1. Cruise Control System
   (1) This function is controlled by ECM, and operated by throttle body. ECM controls the following functions.
   : ON-OFF, -(COAST)/SET, +(ACCEL)/RES (RESUME), CANCEL, vehicle speed operation
   (a)ECM compares the vehicle speed detected by speed sensor and the vehicle speed memorized through the cruise control main switch. When the vehicle speed exceeds the stored vehicle speed, ECM commands the throttle motor of the throttle body to close the valve, on the other hand, when the vehicle speed is lower than the stored vehicle speed, ECM commands to open the valve.
   (b)ECM receives signals such as ON-OFF, -SET, +RES, CANCEL through the cruise control main switch to execute these commands.
   (c)When the system turns to ON through the cruise control main switch (ON-OFF button), the cruise control indicator in the combination meter ASSY turns green through ECM.
   (d)When trouble occurs while driving with the cruise control function ON, the cruise control indicator in the combination meter ASSY turns off or turns yellow through ECM.
   (e)When the cruise control main switch turns to -SET while driving, the cruise control SET indicator in the combination meter ASSY turns green through ECM to start the vehicle speed control.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Cruise control indicator (illuminate green or yellow) | *2 | Cruise control SET indicator |

2. Vehicle speed control
   (1) Minimum speed
   Possible minimum speed setting is approx. 40 km/h {25 MPH}. When vehicle speed is lower than the minimum speed, the cruise control system cannot be set. When the vehicle speed drops below the controllable speed (approx. 30km/h {20 MPH}) while the cruise control controls the vehicle speed, the speed control deactivates automatically, however the stored vehicle speed will be maintained.
   (2) Maximum speed
   Possible maximum speed setting is approx. 144km/h {90 MPH}. When vehicle speed exceeds the maximum speed, the cruise control system cannot be set. Also, +(ACCEL)/RES (RESUME) is not available to set the maximum speed higher.
3. Operation of the cruise control
   (1) In addition to switching the cruise control system to ON/OFF, the cruise control main switch can operate the following seven functions.
   : SET, -(COAST), TAP-DOWN, RES(RESUME), +(ACCEL), TAP-UP, CANCEL
   (2) SET, -(COAST), TAP-DOWN activate with the switch down, while RES(RESUME), +(ACCEL), TAP-UP activate with the switch up.
   (3) As the cruise control main switch is an auto return type switch, it is ON while operated in each arrowed direction, and OFF while not operated.
   (a)SET control
   When the cruise control main switch is in -SET while driving with the cruise control system in use (the cruise control indicator illuminates green), the vehicle speed is stored and the speed control starts.
   (b)-(COAST) control

When the cruise control main switch is kept pressing to -SET while the cruise control system is controlling the vehicle speed, the cruise control system sends the signal to ECM to operate the throttle valve motor of the throttle with the motor body ASSY, and then the throttle valve is closed. After this, when the cruise control main switch is released, the vehicle speed is stored and maintained.

(c) TAP-DOWN control

When the cruise control main switch is pressed to -SET (for approx. 0.3 seconds) while the cruise control system is controlling the vehicle speed, the stored vehicle speed is decreased by 1 MPH {1.6 km/h}*1 or 1.0 km/h {0.6 MPH}*2 every time the switch is pressed. When the current and stored vehicle speed differs by 4 MPH {6.8 km/h}*1 or 4.4 km/h {3 MPH}*2 or more with the cruise control main switch pressed to -SET side, the current vehicle speed is stored and the speed control is executed.

*1: United States

*2: Canada

(d) Acceleration control

When the cruise control main switch is kept pressing to +RES while the cruise control system is controlling the vehicle speed, the cruise control system sends the signal to ECM to operate the throttle valve motor of the throttle with the motor body ASSY, and then the throttle valve is opened. After this, when the cruise control main switch is released, the vehicle speed is stored and maintained.

(e) TAP-UP control

When the cruise control main switch is pressed to +RES (for approx. 0.3 seconds) while the cruise control system is controlling the vehicle speed, the stored vehicle speed is increased by 1 MPH {1.6 km/h}*1 or 1.0 km/h {0.6 MPH}*2 every time the switch is pressed. When the current and stored vehicle speed differs by 4 MPH {6.8 km/h}*1 or 4.4 km/h {3 MPH}*2 or more with the cruise control main switch pressed to +/RES side, the stored vehicle speed does not change.

*1: United States

*2: Canada

(f) RESUME control

When the vehicle speed is approx. 30 km/h {20 MPH} or more after deactivating the cruise control intentionally (except by turning the cruise control ON-OFF switch to OFF), the vehicle speed stored at deactivating is resumed by pressing the cruise control main switch to +RES side.

(g) Shift down control (only AT)

When the vehicle drives downslope, the transmission shifts down when the actual vehicle speed exceeds the TCM control threshold by the specified value. When the TCM judges that the vehicle can drive according to the stored value, the transmission will shift up.

(h) Intentional cancel operation.

By performing the following operation, the vehicle speed control by the cruise control is cancelled. (The stored vehicle speed is maintained in ECM.)

- Brake pedal is depressed.
- Depress the clutch pedal. (for manual transmission)
- Shift the shift lever to 1st or R position. (for manual transmission)
- Shift the shift lever from D or M position to the other position. (for automatic transmission)
- Select the 1st with the shift lever in M position. (for automatic transmission)
- Use the shift paddle switch to select the 1st with the shift lever in M (using the shift paddle switch) . (for automatic transmission)
- Pull the cruise control main switch to CANCEL side.
- Turn the cruise control function to OFF using the cruise control main switch (ON-OFF button) (the stored vehicle speed in ECM will not be maintained).

4. Auto cancel

ECM cancels the cruise control under certain conditions. The cause of cancellation can be confirmed by referring “CANCEL CODE”.

## How to troubleshoot

NOTE:

- Follow the methods below to troubleshoot the cruise control functions.
- *: Use the SSM4.

CAUTION:
- Before performing all diagnostics or cruise control diagnostics, start the engine to check the initial illumination of ABS/VDC warning light turns off. (If you start the diagnostics before performing the procedures above, the cancel code “43” is recorded and CRUISE indicator does not illuminate even though the CRUISE switch is pressed.)
- When performing diagnosis, observe the legal speed limit on the road.
- The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
- Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Battery voltage check |

(1) Turn IG SW to OFF to check the battery.
Standard voltage: 11 to 14 V
NOTE:
When the voltage is below 11 V, replace or charge the battery before the next step.

Next

| | |
|---|---|
| 3 | Check CAN communication system. |

(1) Check CAN communication system. (Refer to NW - 30)
Criteria: No fault is found.

NO > Repair according to the check of CAN communication system.

YES

| | |
|---|---|
| 4 | Check malfunction indicator light. |

(1) Make sure the malfunction indicator light illuminates.
Criteria: No illumination

NO > Go to Step 8.

YES

| | |
|---|---|
| 5 | Check CRUISE indicator light. |

(1) Check the illumination of the CRUISE indicator.
Criteria: No yellow illumination

NO > Go to Step 10.

YES

| | |
|---|---|
| 6 | Check CRUISE switch operation. |

(1) Check the CRUISE switch operation. (Check the illumination of the CRUISE indicator.)

Criteria: CRUISE switch turns on (CRUISE indicator illuminates)

NO → Perform Diagnostics with Phenomenon 1 (Refer to CC - 11)

YES

| 7 | Check cruise control set operation. |
|---|---|

(1) Check the cruise control setting operation.
Criteria: The cruise control can be set while driving at 40 km/h {25 MPH} or more.

NO → Go to Step 10.

YES

Go to Step 11.

| 8 | Check DTC |
|---|---|

(1) Read all DTCs using SSM4.
Criteria: The engine or ABS/VDC related DTC displays.

NO → Perform Diagnostics with Phenomenon 2 (Refer to CC - 11)

YES

| 9 | Check freeze frame data. |
|---|---|

(1) Record the DTC displayed.
(2) Using the Subaru Select Monitor, check the Freeze Frame Data or Information in Trouble State.
Criteria: The Freeze Frame Data or Information in Trouble State is recorded.

NO → Perform the diagnosis according to the engine or ABS/VDC related DTC.

YES

Record the data. Perform the diagnosis according to the engine or ABS/VDC related DTC.

| 10 | Check cancel code. |
|---|---|

(1) Using SSM4, read the cancel codes.
NOTE:
- Do not turn the ignition switch to OFF after the cruise control is deactivated.
- Do not operate the cruise control command switch after the cruise control is deactivated.

If the above is performed, the cancel code will be cleared.

Criteria: Cancel codes are not recorded.

NO → Perform diagnosis according to the cancel codes.

YES

| 11 | Check set indicator. |
|---|---|

(1) Check the illumination of the SET indicator.
Criteria: SET indicator illuminates.

NO → Perform Diagnostics with Phenomenon 3 (Refer to CC - 11)

YES

| 12 | Check vehicle speed is held within set speed. |
|---|---|

(1) Vehicle speed is held within set speed ±3 km/h {±2 MPH}.
NOTE:
Check on level ground.
Criteria: Speed is held.

NO → Perform Diagnostics with Phenomenon 4 (Refer to CC - 11)

YES

| 13 | +RES operation check |
|---|---|

(1) Check +RES switch operation.
Criteria: The vehicle speed increases or returns to set speed after +RES switch has been pressed.

NO → Perform Diagnostics with Phenomenon 5 (Refer to CC - 11)

YES

| 14 | -SET operation check |
|---|---|

(1) Check -SET switch operation.
Criteria: The vehicle speed decreases after -SET switch has been pressed.

NO → Perform Diagnostics with Phenomenon 6 (Refer to CC - 11)

YES

| 15 | Cancel operation check |
|---|---|

(1) Check the CANCEL switch operation.
Criteria: Cruise control is released after CANCEL switch has been pressed.

NO → Perform Diagnostics with Phenomenon 7 (Refer to CC - 11)

YES

| 16 | Check cruise control release operation. |
|---|---|

(1) Check the cruise control release operation.
Criteria: Cruise control is released after brake pedal has been depressed.

NO → Perform Diagnostics with Phenomenon 8 (Refer to CC - 11)

YES

| 17 | Check cruise control release operation. |
|---|---|

(1) Check the cruise control release operation.
Criteria: Cruise control is released after shifting to the neutral position.

NO → Perform Diagnostics with Phenomenon 9 (Refer to CC - 11)

YES

| 18 | Check cruise control release operation. |
|---|---|

(1) Check the cruise control release operation.
Criteria: Cruise control is released after clutch pedal has been depressed.

NO → Perform Diagnostics with Phenomenon 10 (Refer to CC - 11)

YES

Complete

## Diagnostics with Phenomenon

1. Diagnostic procedures according to symptoms

| Phenomenon | | Check Item | Note |
|---|---|---|---|
| 1 | ON-OFF switch is not turned ON. (CRUISE indicator does not illuminate.) Or the cruise control is cancelled without CRUISE switch operation. | (1) Perform cruise cancel conditions diagnosis. | Perform the diagnosis according to displayed cancel code. |
| | | (2) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (3) Check the cruise control command switch. | Perform the diagnosis according to the Cancel Code 11. (Refer to CC - 16) |
| | | (4) Check the CRUISE indicator. | Perform the diagnosis according to the check of CRUISE indicator & SET indicator. |

| Phenomenon | | Check Item | Note |
|---|---|---|---|
| 2 | Cruise control cannot be set. Or cruise control is cancelled without releasing operation. | (1) Perform cruise cancel conditions diagnosis. | Perform the diagnosis according to displayed cancel code. |
| | | (2) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (3) Check the cruise control command switch. | Perform the diagnosis according to the Cancel Code 11. (Refer to CC - 16) |
| | | (4) Check stop light switch and brake switch. | Perform the diagnosis according to the Cancel Code 12. (Refer to CC - 19) |
| | | (5) Check the neutral position switch. | Perform the diagnosis according to the Cancel Code 14 or 62. |
| | | (6) Check vehicle speed sensor. | Perform the diagnosis according to the Cancel Code 22. (Refer to CC - 24) |
| 3 | SET indicator does not illuminate. | Check the SET indicator. | Perform the diagnosis according to the check of CRUISE indicator & SET indicator. |
| 4 | Vehicle speed is not held within set speed ±3 km/h (±2 MPH). | Check the vehicle speed sensor. | Perform the diagnosis according to the Cancel Code 22. (Refer to CC - 24) |
| 5 | Vehicle speed does not increase or does not return to set speed after +RES switch has been pressed. | (1) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (2) Check the +RES switch. | Perform the diagnosis according to the Cancel Code 11. (Refer to CC - 16) |
| 6 | Vehicle speed does not decrease after -SET switch has been pressed. | (1) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (2) Check the -SET switch. | Perform the diagnosis according to the Cancel Code 11. (Refer to CC - 16) |
| 7 | Cruise control is not released after CANCEL switch has been pressed. | (1) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (2) Check the CANCEL switch. | Perform the diagnosis according to the Cancel Code 11. (Refer to CC - 16) |
| 8 | Cruise control is not released after brake pedal has been depressed. | (1) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (2) Check stop light switch and brake switch. | Perform the diagnosis according to the Cancel Code 12. (Refer to CC - 19) |
| 9 | Cruise control is not released after shifting to the neutral position. | (1) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (2) Check the neutral position switch. | Perform the diagnosis according to the Cancel Code 14. (Refer to CC - 22) |
| 10 | Cruise control is not released after clutch pedal has been depressed. | (1) Perform the data list diagnosis. | Check the input signal of cruise control system. |
| | | (2) Check the clutch switch. | Perform the diagnosis according to the Cancel Code 13. (Refer to CC - 20) |

CC

2. Inspection of CRUISE indicator & SET indicator

TROUBLE SYMPTOM:

Cruise control can be set, but the CRUISE indicator & SET indicator do not illuminate.

| 1 | Check CRUISE indicator & SET indicator. |
|---|---|

(1) Check the combination meter.

Criteria: CRUISE indicator & SET indicator illuminate.

NO → Replace the combination meter.

YES

| 2 | Check CAN communication system. |
|---|---|

(1) Check CAN communication system. (Refer to NW - 30)

Criteria: No fault is found.

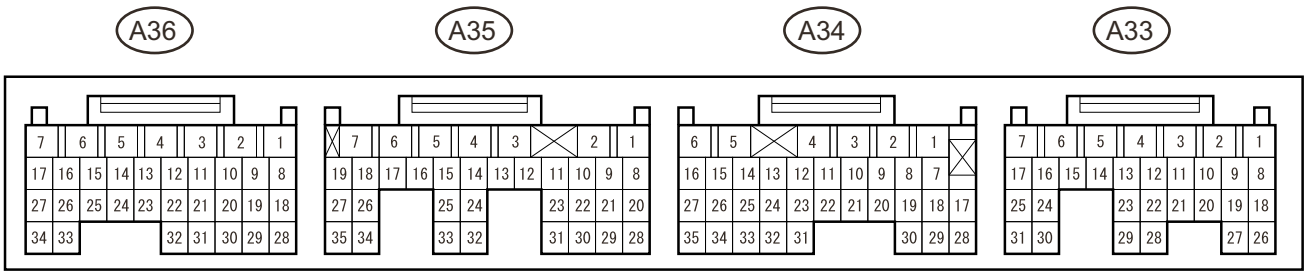
NO → Repair according to the check of CAN communication system.

YES

Replace the ECM.

## ECM terminal arrangement

1. Check ECM.



| Terminal No. (. symbol) | Wiring color | Terminal description | Condition | Standard value |
|---|---|---|---|---|
| A33-3 (BRK2) - A33-4 (GNDBY) | BRB - BL | Stop light signal | IG ON, brake pedal depressed | 11 to 14 V |
| | | | IG ON, brake pedal released | Less than 1 V |
| A33-7 (BRK1) - A33-4 (GNDBY) | R - BL | Brake signal | IG ON, brake pedal depressed | Less than 1 V |
| | | | IG ON, brake pedal released | 11 to 14 V |
| A33-15 (CLT)* - A33-4 (GNDBY) | RY - BL | Clutch switch circuit | IG ON, clutch pedal depressed | Less than 1 V |
| | | | IG ON, clutch pedal released | 11 to 14 V |
| A33-30 (CCMD) - A33-4(GNDBY) | WL - BL | Cruise control main switch circuit | All switch OFF released | 1 MΩ or more |
| | | | Cruise ON/OFF switch ON | Less than 1 Ω |
| | | | +/RES switch ON | 235 to 245 Ω |
| | | | -/SET Switch ON | 617 to 643 Ω |
| | | | CANCEL switch ON | 1509 to 1571 Ω |

*: For manual transmission

## SUBARU SELECT MONITOR

1. OPERATION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor. The on-board diagnosis function operates in two categories, which are used depending on the type of problems.

(1) Cruise Control Cancel Conditions Diagnosis:

- This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.
- Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.

CAUTION:

- In the cruise control memory, not only the cruise control "cancel" occurred (although the "cancel" operation is not entered by the driver), but also the "cancel" condition input by the driver is stored.
- The latest memory content (latest code) is cleared when ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.

(2) Data list diagnostics:

Data list diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.
- Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.
- Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION
For the operation procedure, refer to "PC application help".

## Cancel code reading

1. OPERATION
(1) Connect the SSM4 to the DLC3.
(2) Start the engine.
(3) Turn on the SSM4.
(4) Select from the following menu items: [Each System] / [Engine Control System] / [Cancel Code]
(5) Drive vehicle at 40 km/h {25 MPH} or more and set the cruise control.
CAUTION:
- When performing diagnosis, observe the legal speed limit on the road.
- The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
- Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

(6) When the set speed is cancelled by itself (when cancelled without a cancel operation such as applying the brake) or if the cruise control could not be set by performing the setting operation, selecting the [Cancel Code] on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.
NOTE:
The [Current] and [Past] are contained in the cancel code. The latest code recognized during current test drive is displayed in [Current]. Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in [Past].

CC

(7) Perform Engine DTC Clear Memory operation. Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.
NOTE:
- The latest code will be cleared by turning ignition switch to OFF.
- For detailed operation procedures, refer to "PC application help".
- For details on cancel codes, refer to List of Cancel Codes.

## List of Cancel Codes

NOTE:
- The cancel code is registered even when cancel is performed intentionally by the driver.
- Cancel codes are cleared if the ignition switch is turned to OFF.
- If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.
- If the cruise indicator light turns yellow, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.
- To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.

| Cancel code | Item | Content of diagnosis | Note |
|---|---|---|---|
| 11 | [Main switch] | ON-OFF switch of cruise control main switch is turned to OFF, and then the cruise control is released. | This code is displayed without operating the ON-OFF switch. Refer to Cancel Code 11. (Refer to CC - 16) |
| 12 | [Stop & Brake switch] | Stop light switch or brake switch is turned to ON, and then the cruise control is released. | This code is displayed without depressing the brake pedal. Refer to Cancel Code 12. (Refer to CC - 19) |
| 13 | [Clutch switch] | Clutch switch is turned to ON, and then the cruise control is released. | This code is displayed without depressing the clutch pedal. Refer to Cancel Code 13. (Refer to CC - 20) |
| 14 | [Neutral switch] | Neutral position switch is turned to ON, and then the cruise control is released. | This code is displayed without shifting to neutral position. Refer to Cancel Code 14. (Refer to CC - 22) |

| Cancel code | Item | Content of diagnosis | Note |
|---|---|---|---|
| 15 | [Cancel switch] | Cancel switch is turned to ON, and then the cruise control is released. | This code is displayed without operating the cancel switch. Refer to Cancel Code 15. (Refer to CC - 23) |
| 16 | [Ignition Switch] | Ignition switch is turned to OFF, and then the cruise control is released. | This code is displayed without operating the ignition switch. Refer to Cancel Code 16. (Refer to CC - 23) |
| 22 | [Abnormality of change in vehicle speed] | Malfunction of vehicle speed signal variation is detected. | Refer to Cancel Code 22. (Refer to CC - 24) |
| 24 | [Abnormality of switches related to cruise control] | Open circuit of cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.) | This code is displayed with normal operation. Refer to Cancel Code 24. (Refer to CC - 25) |
| 31 | [Abnormal engine speed Signal] | • Abnormal increase of engine speed is detected.<br>• Gear is placed in Neutral, 1st or Reverse position. | Cruise in 2nd shift position or more. Refer to Cancel Code 31. (Refer to CC - 25) |
| 32 | [Cruse Control out of Range] | • Controlled vehicle speed decreased under the limit during cruising.<br>• Set operation was performed at vehicle speed unavailable for setting.<br>• RESUME operation was performed without memorized vehicle speed. | This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. Refer to Cancel Code 32. (Refer to CC - 25) |
| 34 | [Prohibition of cruise control at continuing big Accel. angle] | The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving. | This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. Refer to Cancel Code 34. (Refer to CC - 26) |
| 35 | [Prohibition of cruise control at vehicle speed F/B malfunction] | Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving. | This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. Refer to Cancel Code 35. (Refer to CC - 26) |
| 41 | [VDC/TCS Operating] | Vehicle dynamics control (VDC) or TCS is activated during cruise driving or cruise setting. | This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. Refer to Cancel Code 41. (Refer to CC - 26) |
| 43 | [ABS/VDC Failure] | • During cruise driving or cruise setting, the situation that some or all functions for ABS or VDC can not work is detected.<br>• CRUISE indicator does not illuminate even though you pressed the CRUISE switch before starting the engine. | Refer to Cancel Code 43. (Refer to CC - 26) |
| 45 | [Meter Failure] | Combination meter malfunction is detected during cruise driving or cruise setting. | Refer to Cancel Code 45. (Refer to CC - 26) |
| 49 | [TCM Failure] | Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting. | Refer to Cancel Code 49. (Refer to CC - 26) |
| 61 | [Brake switch abnormal] | Malfunction in the stop light & brake switch is detected. | Refer to Cancel Code 61. (Refer to CC - 27) |
| 62 | [Neutral Switch Failure] | Neutral position switch malfunction is detected. | Refer to Cancel Code 62. (Refer to CC - 27) |
| 63 | [Abnormality 1 of change in vehicle speed] | Malfunction of vehicle speed signal variation is detected. | Refer to Cancel Code 63. (Refer to CC - 27) |
| 64 | [Engine Sensor Failure 1] | Malfunction related to engine is detected. | Refer to Cancel Code 64. (Refer to CC - 27) |
| 65 | [Abnormality 1 of switches related to cruise control] | Cruise control command switch malfunction is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.) | Refer to Cancel Code 65. (Refer to CC - 27) |

## Data list diagnostics

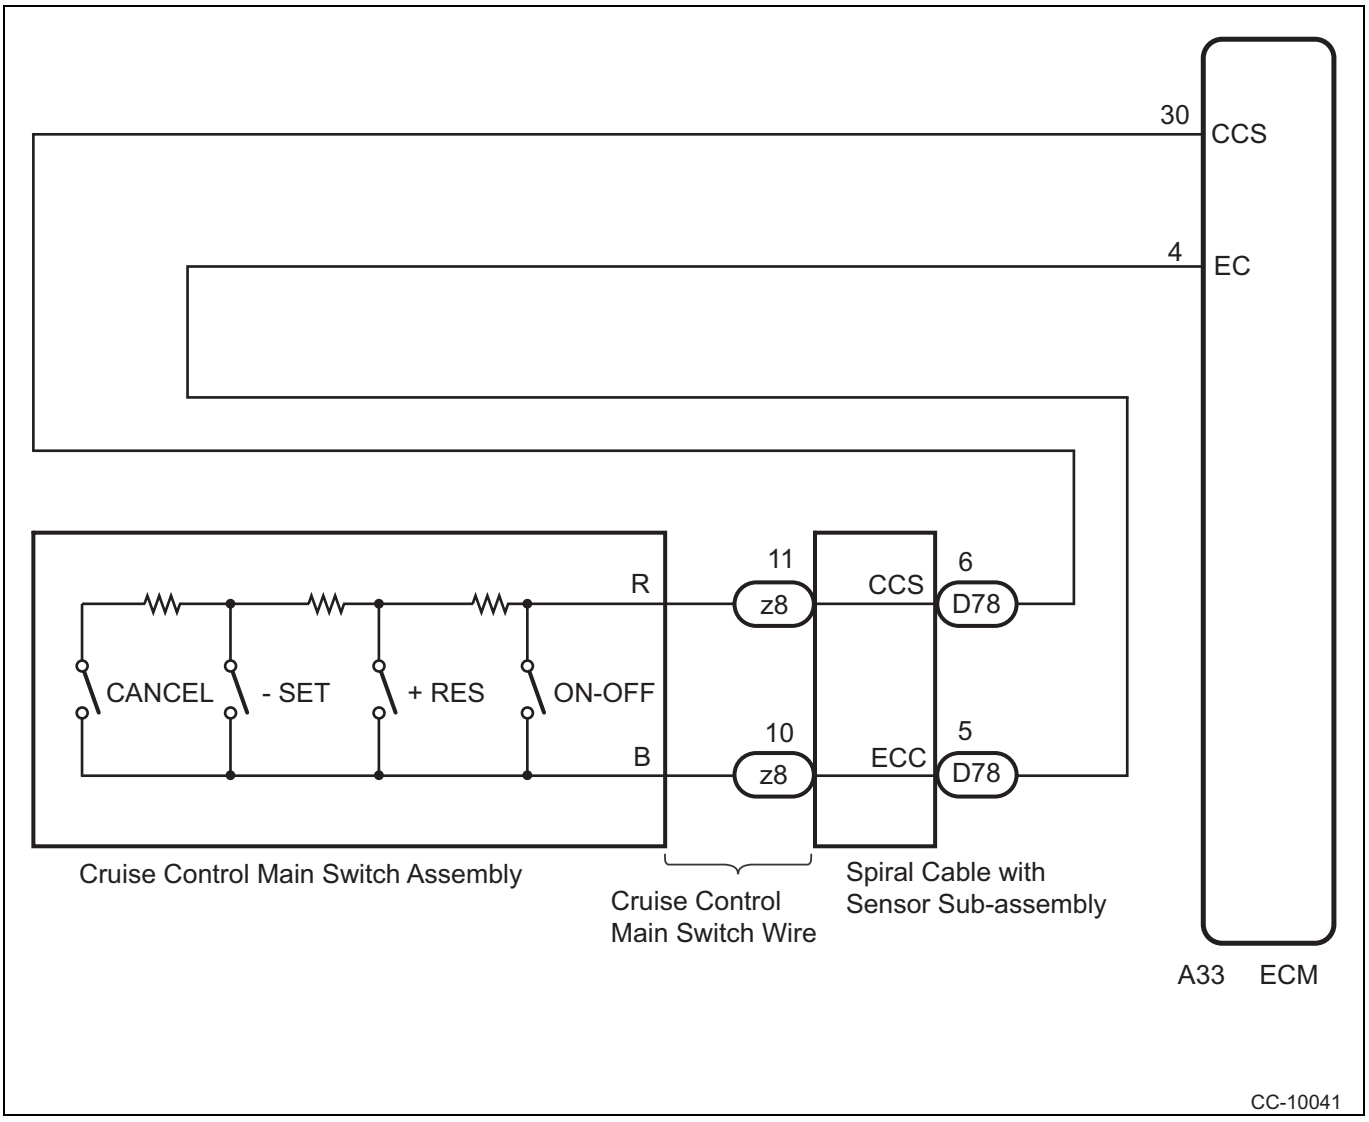
1. OPERATION
   (1) Connect the SSM4 to the DLC3.
   (2) Start the engine.
   (3) Turn on the SSM4.
   (4) Select from the following menu items: [Each System] / [Engine Control System] / [Data monitor]

(5) Make sure that normal display is shown when operated as follows:
- Depress and release the brake pedal. (Stop light switch and brake switch turn ON).
- Turn the "ON-OFF" switch to ON.
- Turn the "-SET" switch to ON.
- Turn the "+RES" switch to ON.
- Turn the "CANCEL" switch to ON.
- Depress or release the clutch switch.
- Place the shift lever in any position other than neutral.

NOTE:
For detailed operation procedures, refer to "PC application help".

## Cancel Code 11

Circuit description
In addition to switching the cruise control system to ON/OFF, the cruise control main switch can operate the following seven functions. For SET, -(COAST), TAP DOWN, use -SET switch. For RES, +(ACCEL), TAP UP, use +RES switch. For CANCEL, use CANCEL switch. As the cruise control main switch is an auto return type switch, it is ON while operated in each arrowed direction, and OFF while not operated. Inner contact of the cruise control main switch turns to ON by operating the switch. ECM identifies voltages for each switch operation.
Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Check cruise control main switch circuit. |

(1) Remove the driver's airbag module.
(2) Disconnect the cruise control command switch connector.
(3) Turn the ignition switch to ON.
(4) Measure the voltage between connector terminal and chassis ground.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Z8-11 - chassis ground | IG ON | 5V or more |

NG → Check the roll connector, and repair or replace the harness.

OK

| | |
|---|---|
| 2 | Check cruise control main switch circuit. |

(1) Turn the ignition switch to OFF.
(2) Measure the resistance between connector terminal and chassis ground.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Z8-10 - chassis ground | Always | Less than 10 Ω |

NG → Check ECM and roll connector, and repair or replace the harness.

OK

| | |
|---|---|
| 3 | Check cruise control main switch circuit. |

(1) Measure the resistance when the cruise control main switch is not in operation.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Cruise control main switch side connector terminal 10 - cruise control main switch side connector terminal 11 | IG ON | 1 MΩ or more |

NG → Replace the cruise control main switch.

OK

CC

| 4 | Check cruise control main switch circuit. |
|---|---|

(1) Measure the resistance when the cruise control ON-OFF switch is pressed.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Cruise control main switch side connector terminal 10 - cruise control main switch side connector terminal 11 | IG ON | Less than 1 Ω |

NG → Replace the cruise control main switch.

OK

| 5 | Check cruise control main switch circuit. |
|---|---|

(1) Measure the resistance when the CANCEL switch is pressed.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Cruise control main switch side connector terminal 10 - cruise control main switch side connector terminal 11 | Always | Approx. 1540 Ω |

NG → Replace the cruise control main switch.

OK

| 6 | Check cruise control main switch circuit. |
|---|---|

(1) Measure the resistance when the -SET switch is pressed.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Cruise control main switch side connector terminal 10 - cruise control main switch side connector terminal 11 | Always | Approx. 630 Ω |

NG → Replace the cruise control main switch.

OK

| 7 | Check cruise control main switch circuit. |
|---|---|

(1) Measure the resistance when the +RES switch is pressed.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Cruise control main switch side connector terminal 10 - cruise control main switch side connector terminal 11 | Always | Approx. 240 Ω |

NG → Replace the cruise control main switch.

OK

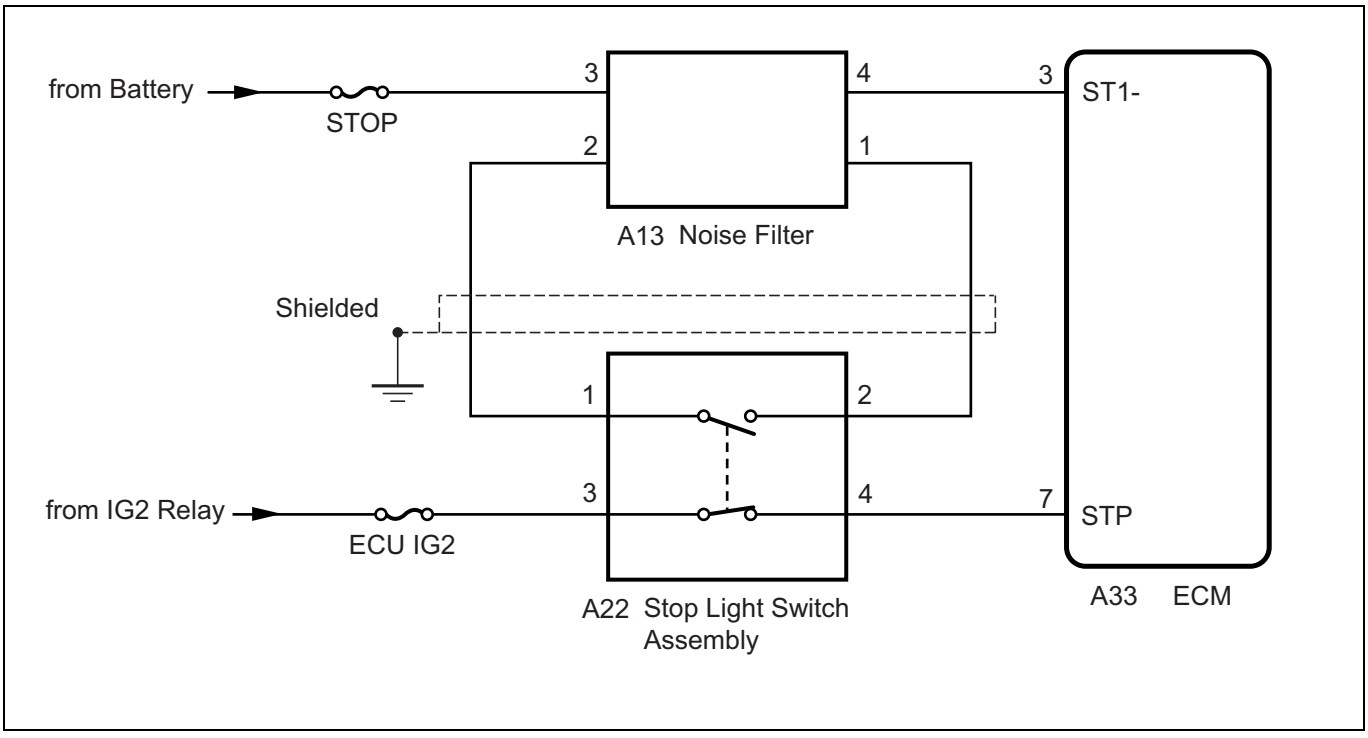
Replace the ECM.

## Cancel Code 12

Circuit description

When the brake pedal is released, ECM terminal BRK1 receives positive (+) battery voltage through IG2 fuse. While the brake pedal is depressed, the stop light switch sends signals to ECM terminal BRK1 and BRK2. When terminal BRK1 receives the signal, ECM cancels the cruise control driving.

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Check brake switch. |

(1) Check the brake switch. (Refer to LE - 78)

Criteria: The switch and its installation position is correct.

NG → Replace the switch main body or adjust its installation position.

OK

| 2 | Check brake switch circuit. |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the parking brake switch connector.
(3) Turn the ignition switch to ON.
(4) Measure the voltage between connector terminal and chassis ground.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A22-1 - chassis ground | Always | 10V or more |
| A13-3 - chassis ground | Always | 10V or more |

NG → Check the fuse, and repair or replace the harness.

OK

| 3 | Check brake switch circuit. |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the ECM connector.
(3) Turn the ignition switch to ON.
(4) Measure the resistance between ECM connector and brake switch.
Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-7 (BRK1) - A22-4 | Always | Less than 10 Ω |
| A33-3 (BRK2) - A22-2 | Always | Less than 10 Ω |

NG → Repair or replace the harness.

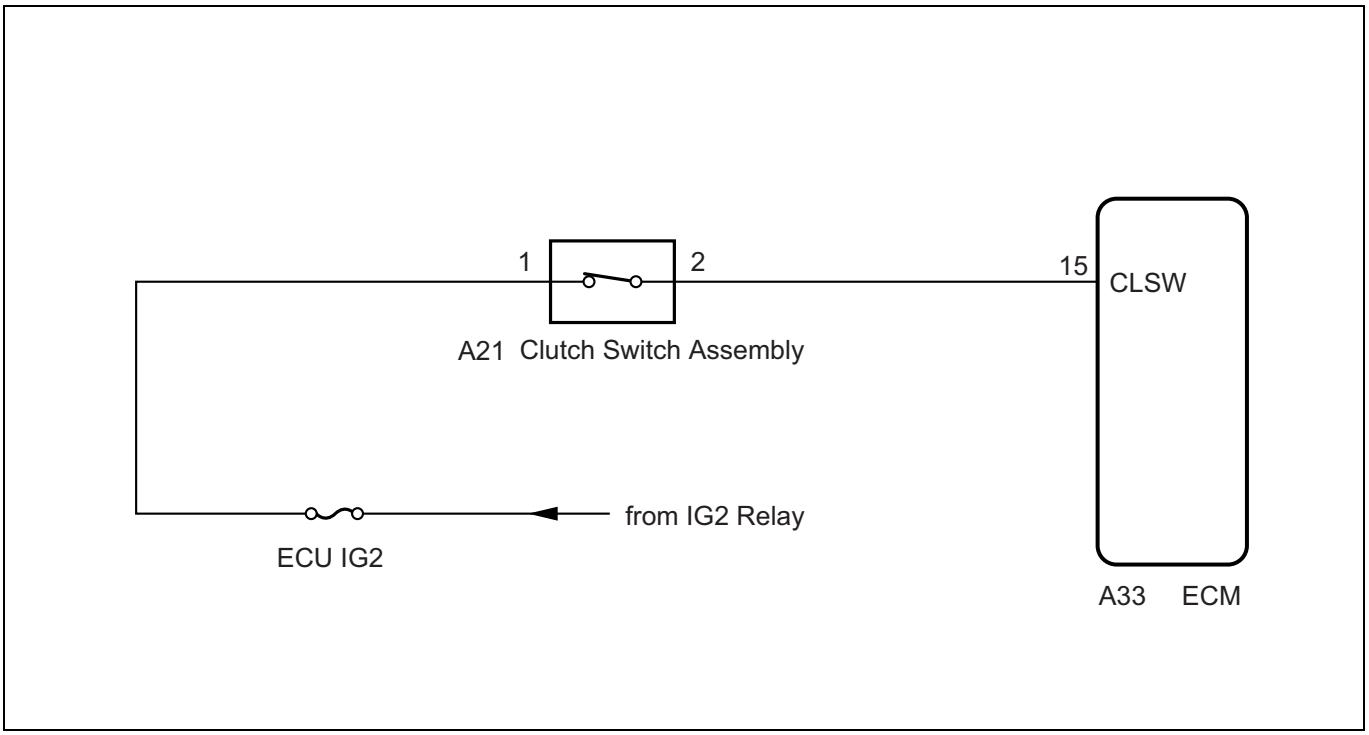
OK

Replace the ECM.

## Cancel Code 13

Circuit description
When the clutch pedal is released, ECM receives positive (+) battery voltage through IG2 fuse. While the clutch pedal is depressed, the clutch switch sends signals to ECM terminal CLT. When terminal CLT receives the signal, ECM cancels the cruise control driving.

Circuit figure



Inspection steps

CC

| | |
|---|---|
| 1 | Check clutch switch. |

(1) Check the clutch switch. (Refer to CL - 29)
Criteria: The switch and its installation position is correct.

NG → Replace the switch main body or adjust its installation position.

OK

| | |
|---|---|
| 2 | Check clutch switch circuit. |

(1) Turn the ignition switch to OFF.
(2) Disconnect the clutch switch connector.
(3) Turn the ignition switch to ON.
(4) Measure the voltage between connector terminal and chassis ground.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A21-1 - chassis ground | Always | 10V or more |

NG → Check the fuse, and repair or replace the harness.

OK

| | |
|---|---|
| 3 | Check clutch switch circuit. |

(1) Turn the ignition switch to OFF.

(2) Disconnect the ECM connector.
(3) Turn the ignition switch to ON.
(4) Measure the resistance between ECM connector and clutch switch.
Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-15 (CLT) - A21-2 | Always | Less than 10 Ω |

NG → Repair or replace the harness.

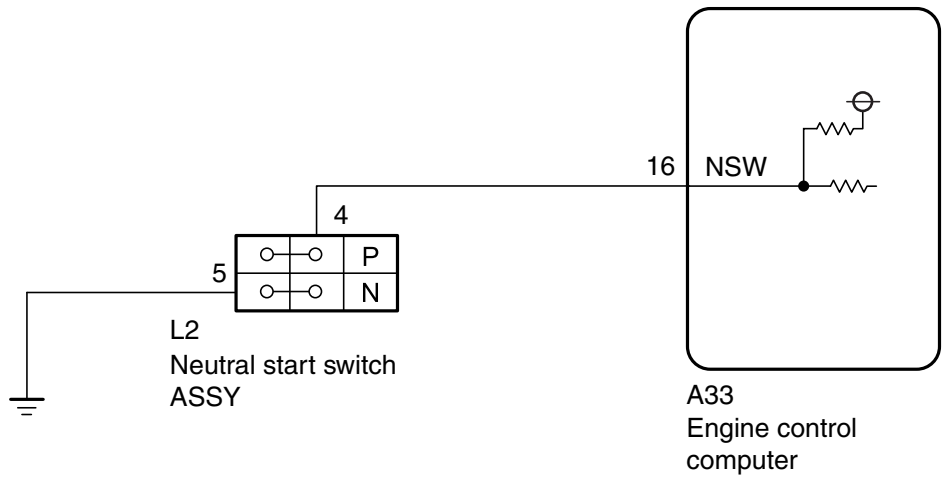
OK

Replace the ECM.

## Cancel Code 14

Circuit description
Detected when select lever is set in the neutral position, or when malfunction related to neutral position switch occurs.
Circuit figure

Transmission A/T:



Inspection steps

| | |
|---|---|
| 1 | Check neutral start switch circuit. |

(1) Disconnect the connector for neutral start switch ASSY.
(2) Turn the ignition switch to ON.
(3) Measure the voltage between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| L2-4 - chassis ground | Always | 10V or more |

NG → Repair or replace the harness.

OK

**2** Check neutral start switch circuit.

(1) Turn the ignition switch to OFF.
(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| L2-5 - chassis ground | Always | Less than 10 Ω |

NG → Repair or replace the harness.

OK

**3** Check neutral start switch.

(1) Perform a unit inspection of neutral start switch. (Refer to AT - 190)
Criteria: No fault is found.

NO → Replace neutral start switch.

YES

Replace the ECM.

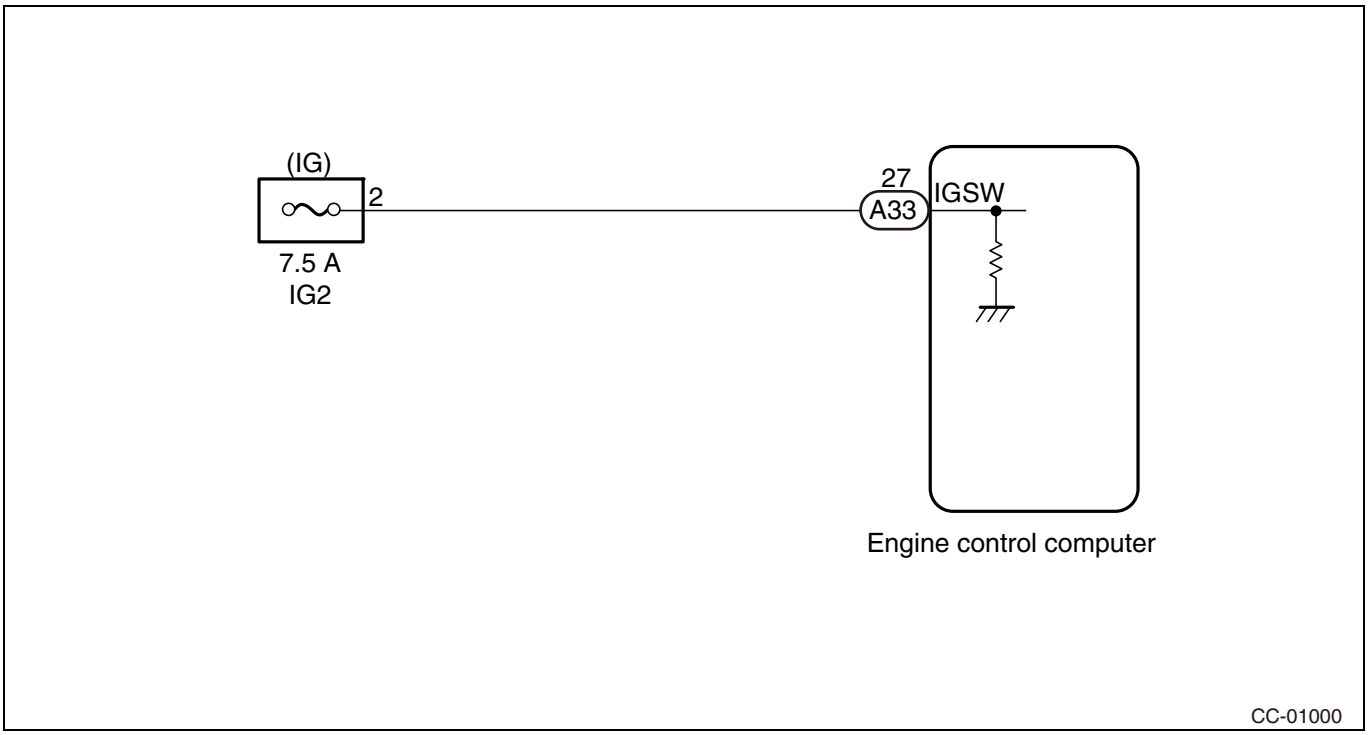
## Cancel Code 15

Circuit description
Detected when CANCEL switch is pressed or malfunction related to CRUISE switch occurs.
Inspection steps
Perform the inspection according to the Cancel Code 11. (Refer to CC - 16)

## Cancel Code 16

Circuit description
Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.

Circuit figure



CC

Inspection steps

| | |
|---|---|
| 1 | Check ignition switch circuit. |

(1) Turn the ignition switch to OFF.
(2) Disconnect the ECM harness connector.
(3) Turn the ignition switch to ON.
(4) Measure the voltage between harness connector terminal and chassis ground.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-27 (IGSW) - chassis ground | Always | 10V or more |

NG → Check the fuse, or repair or replace the harness.

OK

Check poor contact of connector.

## Cancel Code 22

Circuit description

Malfunction related to vehicle speed sensor is detected.

Inspection steps

| | |
|---|---|
| 1 | Check ABS or VDC warning light. |

(1) Turn the ignition switch to ON.
(2) After the initial operation of combination meter is completed, check if ABS or VDC warning light continues to illuminate.
Criteria: Warning light is OFF.

NO → Check VSC system. (For procedures, refer to BC - 9)

YES

| | |
|---|---|
| 2 | Check CAN communication system. |

(1) Check CAN communication system. (Refer to NW - 30)
Criteria: No fault is found.

NO → Repair according to the CAN communication system.

YES

Replace the ECM.

CC

## Cancel Code 24

Circuit description
Malfunction in cruise control-related switch is detected.
Inspection steps
Perform the inspection according to the Cancel Code 11. (Refer to CC - 16)

## Cancel Code 31

Circuit description
Engine speed signal malfunction is detected.
Abnormal increase of engine speed is detected.
Gear is placed in 1st or Reverse position.
Inspection steps
After driving at the 2nd gear position or higher, perform the cruise setting again. If a cancel code is not detected, it is normal.

## Cancel Code 32

Circuit description
Detected when the vehicle speed is out of the system controllable range.
Inspection steps
Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.
If cancel code is still detected after setting cruise again, perform the inspection according to Cancel Code 22. (Refer to CC - 24)

## Cancel Code 34

Circuit description
The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.
This cancel code is detected when driving for a long period of time at a speed higher than appropriate for cruise control setting by operating the accelerator pedal.
Inspection steps
Perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

## Cancel Code 35

Circuit description
Detected when it is impossible to perform the vehicle speed feedback.
Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, etc.) during cruise driving. Cancel code is detected when driving condition is not suitable for cruise control.
Inspection steps
Perform cruise set operation again after clearing the possible cause.

## Cancel Code 41

Circuit description
VDC/TCS has operated.
Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.
Inspection steps
Check VSC system. (Refer to BC - 9)

## Cancel Code 43

Circuit description
- The situation that some or all functions for ABS/VDC can not work is detected.
  During cruise driving or cruise setting, the situation that some or all functions for ABS/VDC can not work is detected.
- CRUISE indicator does not illuminate even though you pressed the CRUISE switch before starting the engine.
  Detected when the CRUISE switch is pressed during the initial diagnosis of ABS/VDC. It is normal if the CRUISE indicator illuminates when you press the CRUISE switch again after starting the engine and confirming that the initial illumination of the ABS/VDC warning light has been ended.

Inspection steps
Check VSC system. (Refer to BC - 9)

## Cancel Code 45

Circuit description
Combination meter malfunction is detected.
Combination meter malfunction is detected during cruise driving or cruise setting.
Inspection steps
Check CAN communication system. (Refer to NW - 30)

## Cancel Code 49

Circuit description
Automatic transmission malfunction is detected.

Automatic transmission malfunction is detected during cruise driving or cruise control setting.
Inspection steps
Check the automatic transmission system. (Refer to AT - 15)

## Cancel Code 61

Circuit description
Malfunction in the stop light & brake switch is detected.
Inspection steps
Perform the inspection according to the Cancel Code 12. (Refer to CC - 19)

## Cancel Code 62

Circuit description
Neutral position switch malfunction is detected.
Inspection steps
Perform the inspection according to the Cancel Code 14. (Refer to CC - 22)

## Cancel Code 63

Circuit description
Malfunction of vehicle speed signal variation is detected.
Inspection steps
Perform the inspection according to the Cancel Code 22. (Refer to CC - 24)
NOTE:
Additionally, this cancel code may be detected when the vehicle is started with a sudden acceleration on a low μ(friction) test road with VDC OFF. In this case restart the engine and perform the cruise control setting again. If the cancel code is not detected, the condition is normal.

## Cancel Code 64

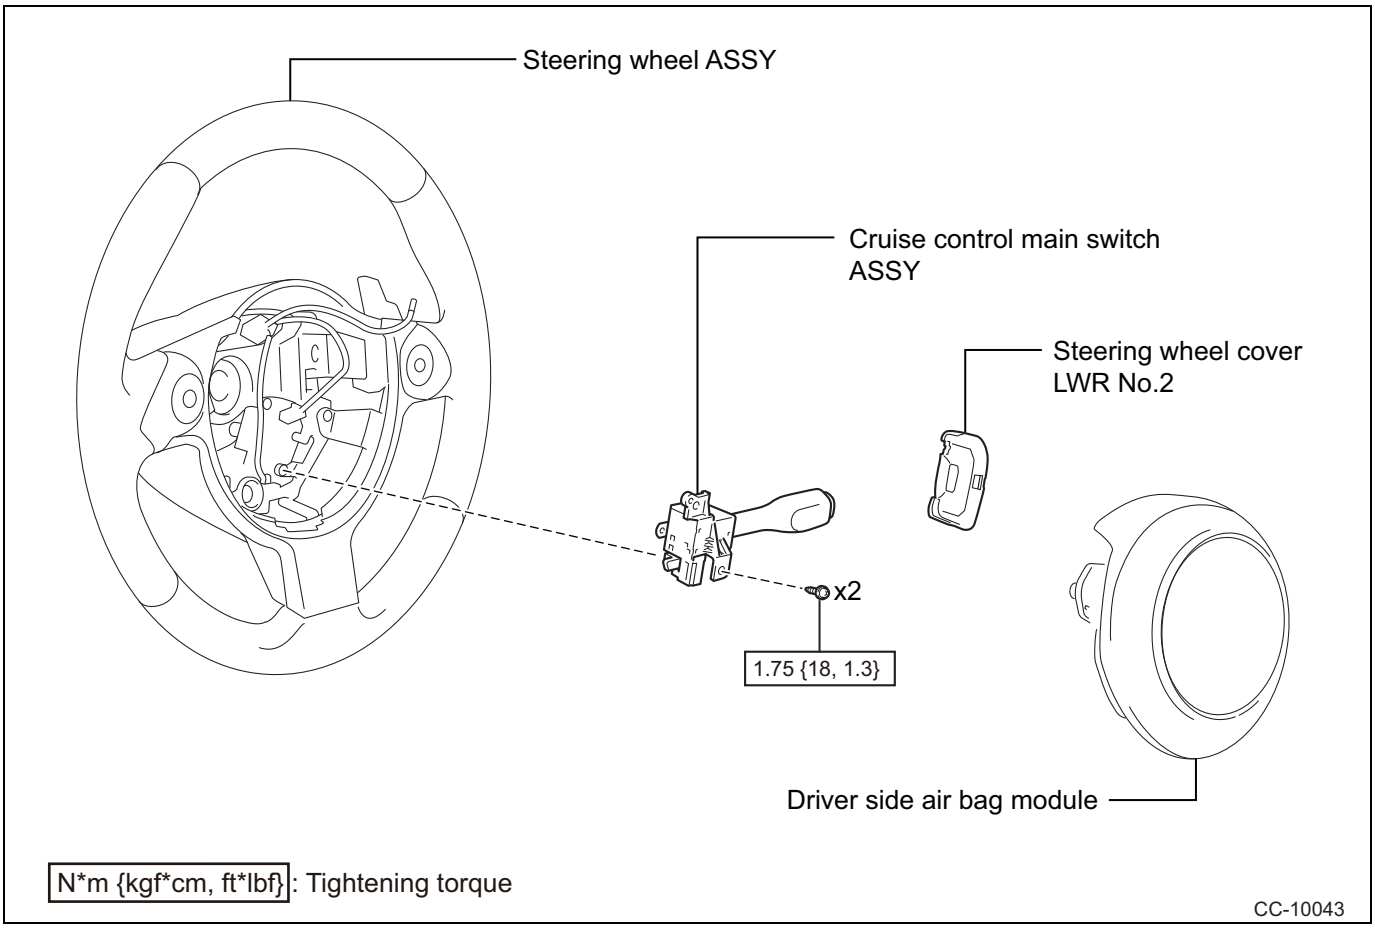
Circuit description
Malfunction related to engine is detected.
Inspection steps
Check the engine control. (Refer to ES - 19)

## Cancel Code 65

Circuit description
Cruise control main switch malfunction is detected.
Inspection steps
Perform the inspection according to the Cancel Code 11. (Refer to CC - 16)

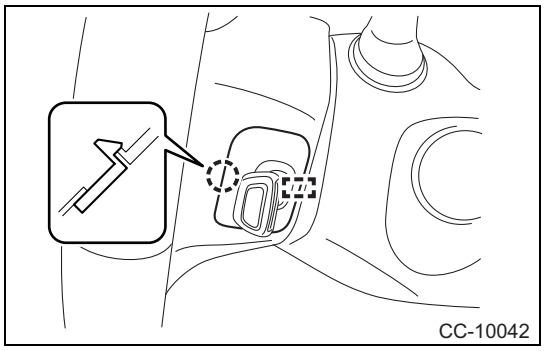
# CRUISE CONTROL MAIN SWITCH

## COMPONENTS

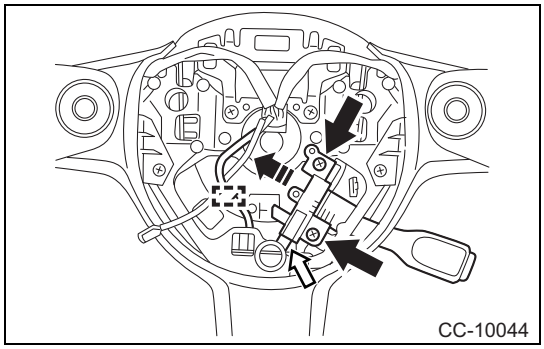


## REMOVAL

1. Disconnection of the battery ground terminal (Refer to IN - 6)
   WARNING:
   Airbag and pretensioner system are equipped with backup power supply. Therefore, if any operation is started within 60 seconds after disconnecting the battery ground terminal, the airbag can deploy.



2. Removal of the steering wheel cover LWR No. 2
   (1) Release the claw.
   (2) Release the claw of the guide, and remove the steering wheel cover LWR No. 2.



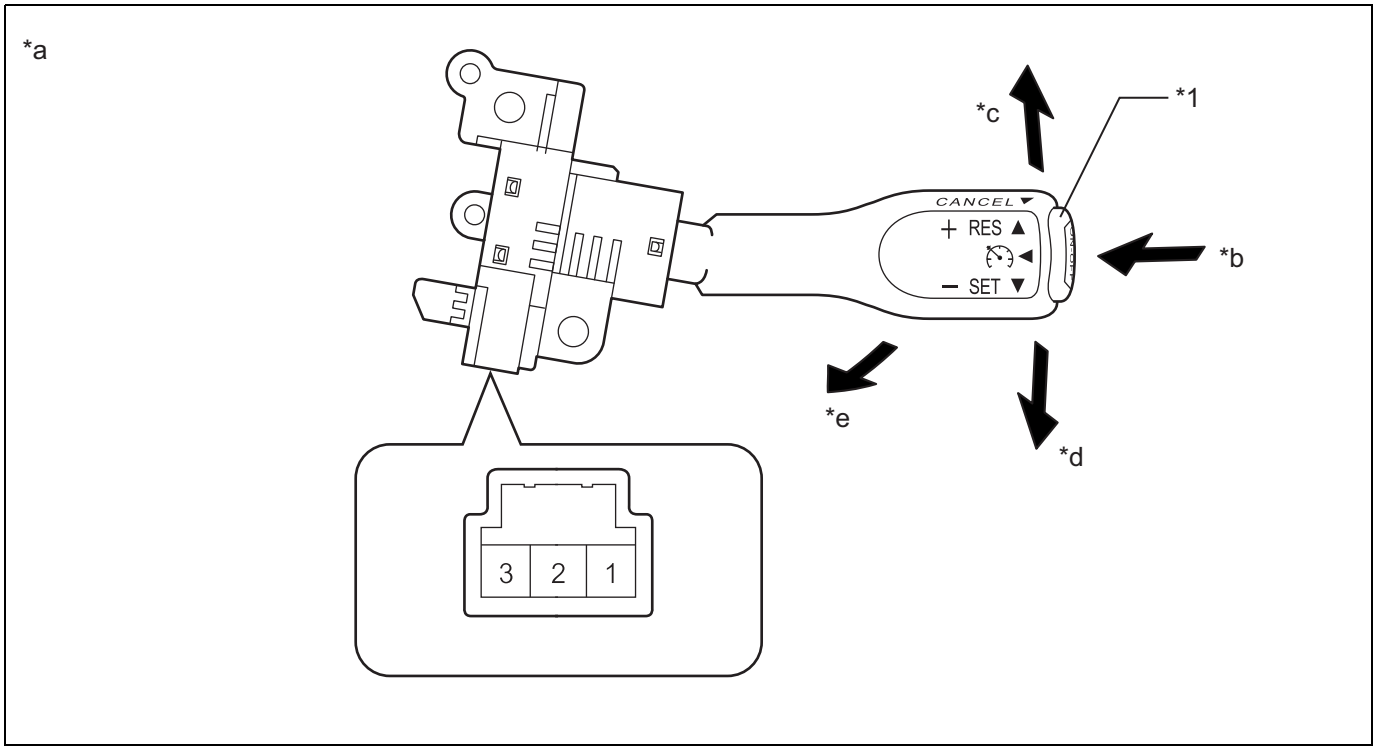
3. REMOVE CRUISE CONTROL MAIN SWITCH ASSEMBLY
   (1) Remove the harness from the holder, and disconnect the connector.
   (2) Remove the 2 screws.
   (3) Remove the cruise control main switch as shown in the figure.

## INSTALLATION

1. INSTALL CRUISE CONTROL MAIN SWITCH ASSEMBLY
   (1) Install the cruise control main switch with the 2 crews.
   Standard value:Cruise control main switch
   T=1.75N·m {18kgf·cm} {1.3ft·lbf}
   (2) Connect the connector and secure the harness to the holder.
2. Installation of the steering wheel cover LWR No. 2
   (1) Fit in the guide.
   (2) Fit the claw, and install the steering wheel cover LWR No. 2.
3. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.43ft·lbf}

## INSPECTION

1. INSPECT CRUISE CONTROL MAIN SWITCH ASSEMBLY
   (1) Measure the resistance according to the value(s) in the table below.



Text in Illustration

| | | | |
|---|---|---|---|
| *1 | Cruise Control Main Switch Assembly (ON-OFF button) | - | - |
| *a | Component without harness connected (Cruise Control Main Switch Assembly) | *b | ON-OFF |
| *c | +/RES | *d | -/SET |
| *e | CANCEL | - | - |

Standard Resistance

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 1 - 3 | All switch released | 1 MΩor higher |
| | Cruise control Main switch Assembly (ON-OFF button) pushed | Below 1 Ω |
| | +/RES switch ON | 235 to 245 Ω |
| | -/SET switch ON | 617 to 643 Ω |
| | CANCEL switch ON | 1509 to 1571 Ω |

# Automatic transmission system

## Precautions

CAUTION:

Execute reset memory operation (AT initialization) when replacing the automatic transmission ASSY, engine ASSY, valve body ASSY, transmission wire, or TCM. (Refer to AT - 17)

NOTE:

Reset memory operation is not completed just by disconnecting the battery cable.

1. Precautions for removal and installation procedures
   (1) Since the automatic transmission consists of parts with a very precise finish, careful inspection is required before assembling these parts. Even a small scratch may cause liquid leakage or affect the performance. Instructions in this chapter are organized so that the work for only 1 component group is performed at a time. This is to avoid confusion which can occur when parts having similar appearance but for different SUB-ASSY exist in the same workbench at the same time. Inspect and repair the component group from the converter housing side. Try to complete the inspection, repair, or assembly work before proceeding to the next component group. If any defect is found in a specific component group during assembly, immediately check and repair the group. When a component group cannot be assembled due to the parts order, be sure to store all parts of the group in another container while another component group is being disassembled, checked, and assembled. The auto fluid (ATF) WS is recommended.
   (2) Wash all of the removed parts and blow through all of the liquid passages and holes with compressed air.
   (3) Dry all parts with compressed air. Never dry the parts using rugs and cloths in the work area.
   (4) When using compressed air, do not point the air outlet toward you to prevent auto fluid and detergent from being blown to your face by mistake.
   (5) Use only the recommended automatic transmission fluid or appropriate detergent for cleaning.
   (6) After washing, arrange the parts in the correct order for efficient inspection, repair, and assembly.
   (7) When removing the valve body, be sure to keep each valve with the corresponding spring.
   (8) Soak new discs (for replacement) of the brake and clutch in ATF for at least 15 minutes before the assembly.
   (9) Before the assembly, apply ATF to all of the oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces.
   (10) Replace all gaskets and rubber O-rings with new parts.
   (11) Do not apply adhesive cement to gaskets and similar parts.
   (12) Check that the both ends of the snap ring do not overlap the notch and the snap ring is installed in the groove correctly.
   (13) When replacing a worn bushing, be sure to replace the SUB-ASSY including the bushing.
   (14) Check for wear and damage of the thrust bearing and race. Replace them as required.
   (15) Observe the following precautions when handling FIPG material.
      - Completely remove the old sealant (FIPG) material from the gasket surface using a razor or gasket scraper.
      - Carefully clean all the components and remove materials that are coming off.
      - Clean the both surfaces of the seal with appropriate detergent.
      - The parts must be assembled within 10 minutes after sealant (FIPG) is applied. If it is impossible, remove the sealant (FIPG) material and apply it again.

AT

## Definitions of terms

| Term | Definition |
|---|---|
| Monitor description | Description of what TCM monitor is and the failure detection method (purpose and detail of observation) |
| Applicable diagnostic codes | Diagnostic codes |
| Standard enabling condition | Conditions required so that TCM can detect failures.<br>When all of the required conditions are satisfied, TCM sets diagnostic codes if the observation value exceeds the failure threshold. |
| Operation order | Priority order applied to observation when multiple sensors and components are used for failure detection.<br>When a sensor is observed, the next sensor or component is not observed until the observation is completed. |
| Requirement sensor/component | The sensor and component used by TCM for failure detection |
| Operation frequency | The number of times that TCM checks failure per driving cycle<br>“Once per driving cycle” means that TCM detects failure only 1 time during a single driving cycle.<br>“Consecutive” means that TCM detects failure each time the enabling condition is satisfied. |
| Period | The minimum time period in which consecutive deviation of the observation value must be detected before TCM sets diagnostic codes. The time measurement starts after “standard enabling condition” is satisfied. |
| Failure threshold | If the value is exceeded, TCM concludes that a failure is found and sets diagnostic codes. |

| Term | Definition |
|---|---|
| MIL operation | The timing of MIL illumination after a defect is detected.<br>“Immediate” means that MIL illuminates at the moment when TCM judges that a failure is found.<br>“2nd driving cycle” means that MIL illuminates when TCM detects the same failure in the 2nd driving cycle. |
| Component operation range | Normal operation range of the sensor and solenoid under the normal driving condition<br>Use these ranges as reference.<br>Do not use them to judge whether the sensor or solenoid has a defect or not. |

## Function inspection

1. Check of shift lock operation
   (1) Shift the select lever to the P position.
   (2) Check that the select lever cannot be shifted to ranges other than P position when it is operated.
   (3) Check that the select lever can be shifted to ranges other than P position with IG ON and the brake pedal depressed.
2. Check of shift lock release button operation
   (1) Remove the button cover.
   (2) Use a driver or other tool to check that the select lever can be shifted to ranges other than P position when it is operated with the shift lock release button pressed.
3. Time lag check
   CAUTION:
   - Always perform the inspection after the engine check and adjustment.
   - Perform the inspection at an oil temperature (60 to 90°C {140 to 194°F}) in normal driving temperature.
   - Perform the inspection with the A/C OFF.

   (1) Apply the parking brake and set the wheel stoppers.
   (2) Start the engine.
   (3) Shift from N position to D or R position with idling while depressing the brake pedal, and measure the time until a small shock is felt.
   Standard value: N→D position 1.2 seconds or less
   N→R position 1.5 seconds or less
   CAUTION:
   - Make measurements 3 times and take the average value.
   - Allow 1 minute interval when performing consecutive measurements.
4. Stall speed check
   CAUTION:
   - Always perform the inspection after the engine check and adjustment.
   - Perform the inspection at an oil temperature (60 to 90°C {140 to 194°F}) in normal driving temperature.
   - Perform the inspection with the A/C OFF.
   - Do not perform the operation continuously for 5 seconds or more. (Working time for the sequence from the accelerator full close, full open, stall speed reading, to the accelerator full close) Ignoring this instruction causes engine oil and ATF deterioration which has adverse effect on the clutch and brake.
   - Perform in a place with high μ(friction coefficient) such as on asphalt to prevent the tires from spinning.
   - After performing the stall test, be sure to cool down the engine for at least 1 minute with the select lever set in P or N position, and at an idle speed of 1200 r/min or less.
   - If the stall speed is higher than the specified range, finish the stall test in as short a time as possible, in order to prevent the automatic transmission from being damaged.
   - Perform the stall test in normal mode.

   (1) Firmly apply the parking brake and set the wheel stoppers.
   (2) Start the engine.
   (3) Firmly depress the parking brake with left foot, shift to D position, and quickly read the maximum engine speed when the accelerator pedal is fully depressed with right foot.

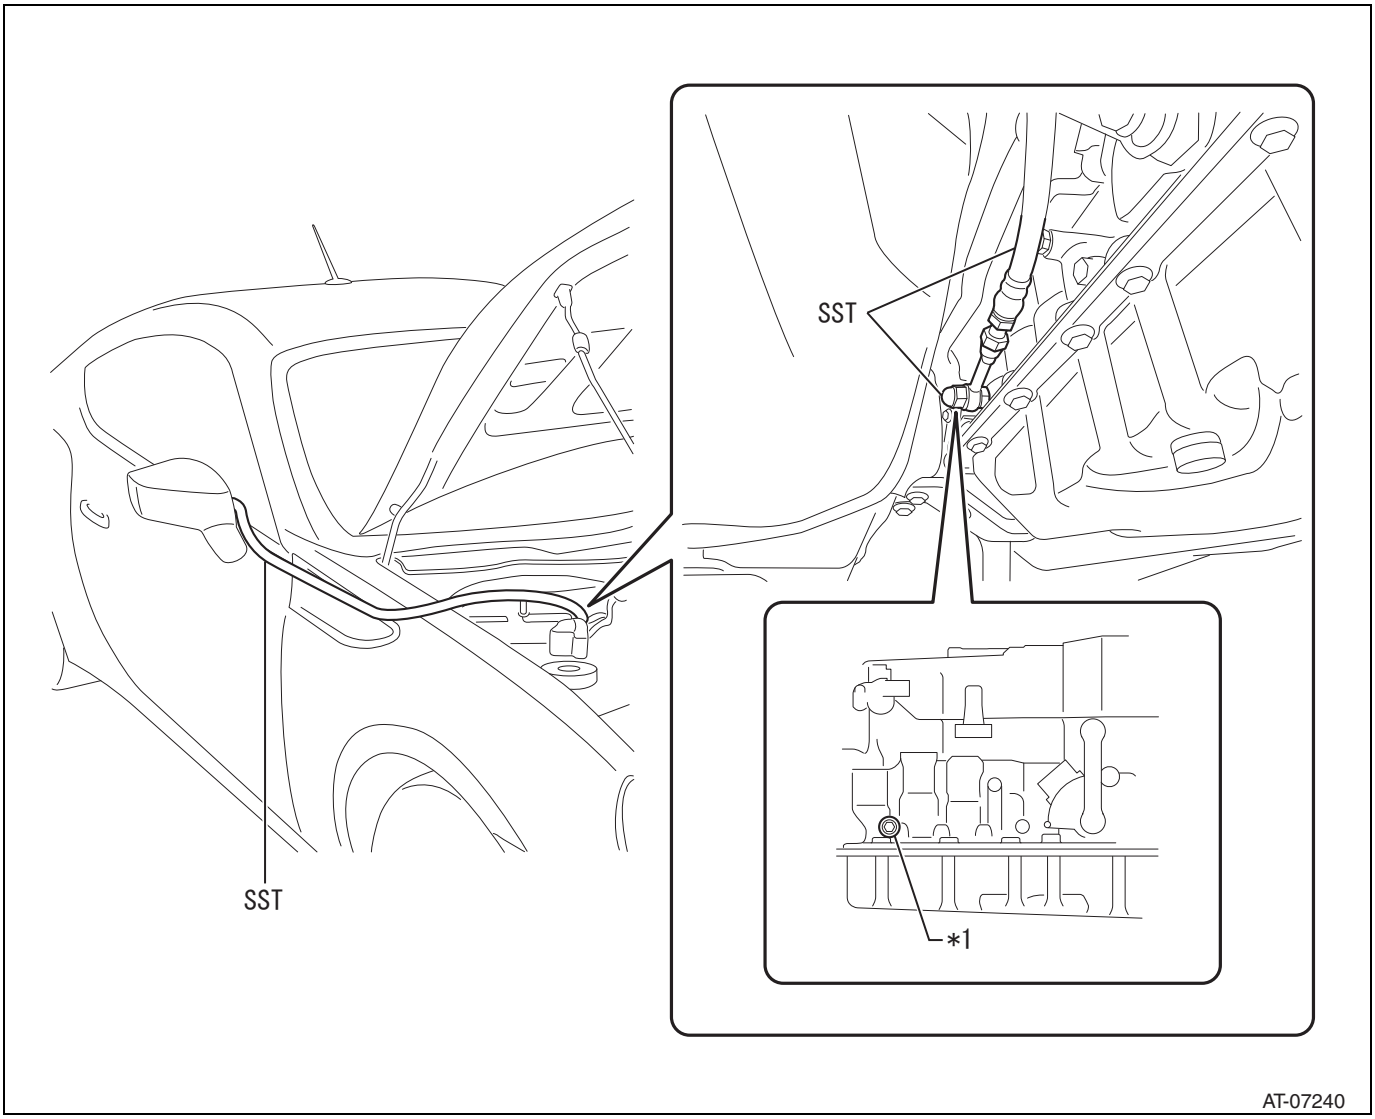
Standard value

| | |
|---|---|
| Stall speed [r/min] | 2350±250 |

5. Line pressure check
   CAUTION:
   - Wash the equipment and hoses with appropriate detergent before and after measurement.
   - Always perform the inspection after the engine check and adjustment.
   - Perform the inspection at an oil temperature (60 to 90°C {140 to 194°F}) in normal driving temperature.
   - Perform the inspection with the A/C OFF.

- Do not perform the inspection continuously for 5 seconds or more at stall. (Working time for the sequence from the accelerator full close, full open, stall speed reading, to the accelerator full close) Ignoring this instruction causes engine oil and ATF deterioration which has adverse effect on the clutch and brake.
- After performing the stall test, be sure to cool down the engine for at least 1 minute with the select lever set in P or N position, and at an idle speed of 1200 r/min or less.
- If the stall speed is higher than the specified range, finish the stall test in as short a time as possible, in order to prevent the automatic transmission from being damaged.
- Perform the stall test in normal mode.

(1) Remove the under cover front AL.
(2) Remove the under cover COMPL T/M.
(3) Remove the exhaust pipe ASSY FR.
(4) Attach the SST on the transmission.
SST 18681AA040, 498897700, 498575400
CAUTION:
- Use 18681AA040 with genuine O-ring (17006AA000) attached.
- Route the hose so that it does not contact the exhaust pipe.



AT-07240

Captions in illustration

| | |
|---|---|
| *1 | Test plug |

(5) Install the exhaust pipe ASSY FR.
(6) Firmly apply the parking brake and set the wheel stoppers.
(7) Start the engine.
(8) Firmly depress the brake pedal with left foot and shift to D or R position, then check the hydraulic pressure at idling and stalling.

Standard value

| Shift position | While idling [MPa {kgf/cm$^2$}] | While stalling [MPa {kgf/cm$^2$}] |
|---|---|---|
| D position | 0.35 to 0.43 {3.6 to 4.4} | 1.20 to 1.38 {12.2 to 14.0} |
| R position | 0.76 to 0.95 {7.7 to 9.7} | 1.41 to 1.63 {14.4 to 16.6} |

NOTE:
When there is an open or short circuit in the line pressure control solenoid ASSY (SLT) system, the line pressure reaches the maximum.

6. Shift table

WARNING:
Observe the legal speed limit and confirm the safety on the road.
CAUTION:
- Always perform the inspection after the engine check and adjustment.
- Perform the inspection at an oil temperature (40 to 110°C {104 to 230°F}) in normal driving temperature.
- Perform the inspection at an engine coolant temperature of 60 to 90°C {140 to 194°F}.
- Turn the A/C and the cruise control OFF.

NOTE:
- The values equal to or higher than the maximum speed are for reference because they cannot be achieved.
- Do not shift to 6th gear when the AT oil temperature is less than 20°C {68°F}.
- Lockup is prohibited when the AT oil temperature is less than 20°C {68°F}.
- Lockup does not occur at 1st gear of manual mode.
- Acceleration slipping lock-up is prohibited when the AT oil temperature is less than 40°C {104°F} or 110°C {230°F} or more.
- Reduction slipping lock-up is prohibited when the AT oil temperature is less than 20°C {68°F} or 110°C {230°F} or more.

(1) Shift table

(a) Use SSM4 to select [Data monitor], and then select [AT Speed], [Control the Shift Position], [Accel. Opening Angle], [A/T Oil Temperature], and [Coolant Temp].

(b) Confirm [AT Speed] when [Control the Shift Position] is up-shifted.

| Throttle opening angle | 100 % | | | | | 5 to 10 % | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Shift point | 1→2 | 2→3 | 3→4 | 4→5 | 5→6 | 1→2 | 2→3 | 3→4 | 4→5 | 5→6 |
| D position (km/h {MPH}) | 47 to 53 {29 to 33} | 96 {60} | 142 {88} | 201 {125} | 282 {175} | 12 {7} | 20 {12} | 30 {19} | 48 {30} | 59 {37} |

(2) Lock-up

(a) Use SSM4 to select [Data monitor], and then select [AT Speed], [Control the Shift Position], [Accel. Opening Angle], [Engine Speed], [Turbine Revolution Speed], [Coolant Temp.], and [Lock up status].

(b) Confirm that the difference between [Engine Speed] and [Turbine Revolution Speed] is 50 r/min or less.

| Throttle opening angle | 5 to 10 % |
|---|---|
| Lock-up | ON |
| Gear position | 6th |
| D position (km/h {MPH}) | 57 {35} or more |

(3) Manual downshift permission vehicle speed

| Shift position | M6→M5 | M5→M4 | M4→M3 | M3→M2 | M2→M1 |
|---|---|---|---|---|---|
| Vehicle speed (km/h {MPH}) | 284 {176} | 201 {125} | 142 {88} | 95 {59} | 53 {33} |

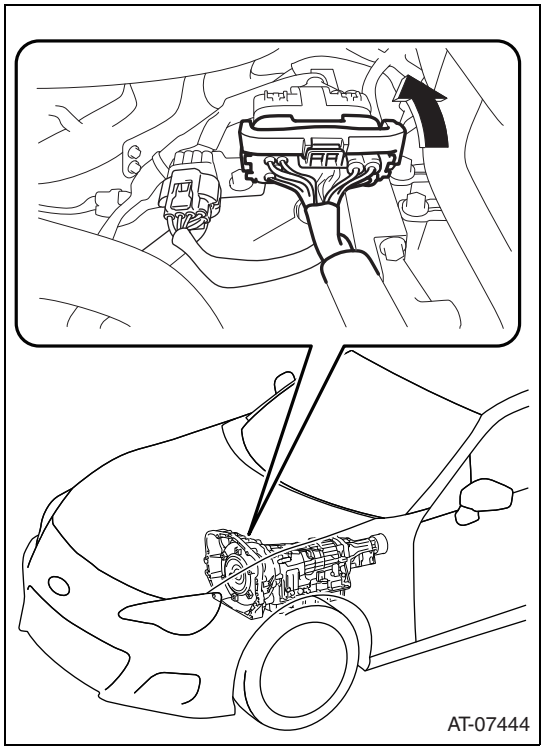
7. Driving test

WARNING:
Observe the legal speed limit and confirm the safety on the road.
CAUTION:
- Always perform the inspection after the engine check and adjustment.
- Perform the inspection at an oil temperature (60 to 90°C {140 to 194°F}) in normal driving temperature.
- Turn the A/C and the cruise control OFF.

Driving test list

| Check item | Inspection and confirmation procedure |
|---|---|
| D position shift function | Check shifting of 1st ←→2nd ←→3rd ←→4th ←→5th ←→6th during normal driving on city streets. |
| Shift shock level during D position driving | Check the shock level at each up-shifting during normal driving. |
| Kick-down function | • Perform kick-down operation in each gear and check for the down-shifting.<br>• Check the shock level at kick down. |
| Engine brake operation | • Shift the select lever to "-" while driving in M position 6th gear (approx. 70 to 80 km/h {43 to 50 MPH}) and check the engine brake operation in 5th gear.<br>• Shift the select lever to "-" while driving in M position 5th gear (approx. 55 to 65 km/h {34 to 40 MPH}) and check the engine brake operation in 4th gear.<br>• Shift the select lever to "-" while driving in M position 4th gear (approx. 40 to 50 km/h {25 to 31 MPH}) and check the engine brake operation in 3rd gear.<br>• Shift the select lever to "-" while driving in M position 3rd gear (approx. 25 to 35 km/h {16 to 22 MPH}) and check the engine brake operation in 2nd gear.<br>• Shift the select lever to "-" while driving in M position 2nd gear (approx. 10 to 20 km/h {6 to 12 MPH}) and check the engine brake operation in 1st gear. |
| Shift point at accelerator pedal in full throttle | Start in D position with the accelerator pedal in full throttle and check that the up-shifting speed of 1st →2nd conforms to the shift point. (Refer to the shift table for shift point speeds) |
| Lock-up function | When the accelerator is lightly depressed while driving on a flat road at a constant speed within the lock-up speed range, check that the engine speed does not change greatly. |
| P position operation | Stop the vehicle on an uphill grade (approx. 5° or more) and shift to P position, then check that the vehicle does not move when the parking brake is released. |
| Noise and vibration | Check for noise and vibration during driving and shifting. |
| Hill climb/down control function | • Check that up-shifting is performed at higher engine speed than driving on a level road when climbing a hill in D position.<br>• Check that down-shifting is performed at higher engine speed than driving on a level road when descending a hill in D position. |
| Oil leakage | Check that there is no oil leakage after the driving test. |

AT



8. Manual driving test
   (1) Disconnect the harness connector (24 pins) equipped with a lever on the upper part of the transmission.
   (2) Check that gear shift conforming to each position occurs during driving.

Criteria

| Select lever position | Gear position |
|---|---|
| P position | P |
| R position | R |
| D position | 4th |

   (3) Clear diagnostic codes after the manual driving test. (Refer to AT - 17)

9. Check of solenoid operation
   (1) SSM4 - active test
      (a) Turn the ignition switch to OFF.
      (b) Connect the SSM4 to data link connector.
      (c) Turn the ignition switch to ON with the engine stopped.
      (d) Display the [Active Test] screen according to the screen.
      (e) Perform the following active tests.

SSM4 screen: [Select Function] →[Active Test]

| Item name | Description | Restriction |
|---|---|---|
| [Activate the Solenoid(S1)] | Turning ON ←→OFF of transmission 3 way solenoid ASSY (S1) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(S2)] | Turning ON ←→OFF of transmission 3 way solenoid ASSY (S2) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(S3)] | Turning ON ←→OFF of transmission 3 way solenoid ASSY (S3) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(S4)] | Turning ON ←→OFF of transmission 3 way solenoid ASSY (S4) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(SL1)] | MIN current ←→MAX current of clutch control solenoid No. 1 (SL1) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(SL2)] | MIN current ←→MAX current of clutch control solenoid No. 1 (SL2) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(SLU)] | MIN current ←→MAX current of lock-up control solenoid (SLU) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(SR)] | Turning ON ←→OFF of transmission 3 way solenoid ASSY (SR) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(SLT)] | MIN current ←→MAX current of line pressure control solenoid ASSY (SLT) is possible.<br>(MAX current →duty ratio 100% (line pressure at idling))<br>(MIN current →duty ratio 0% (line pressure at stall)) | • Vehicle speed 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |

| | P switch | AT - 211 |
| | Stop light switch | LE - 80 |
| | Vehicle wiring harness and connector | IN - 36 |

AT

## Description of functions

1. Diagnosis function
   (1) The check engine warning light illuminates when a malfunction occurs in the AT system.
   CAUTION:
   The light goes off if the malfunction item returns to the normal state. However, diagnostic codes are recorded.

(2) Diagnostic results of malfunction occurrence are recorded in the transmission control computer.
CAUTION:
Do not disconnect the MAIN fuse, AT+B fuse, and battery terminal until the check finishes.

2. Failsafe function
(1) When there is an open or short circuit in any solenoid valve system, only the mechanical hydraulic circuit operates and the manual shift control is initiated. (When open and short circuits occur, the transmission control computer stops continuity of all solenoid valves.)

## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Interview and phenomenon check (Refer to AT - 17) |

Next

| | |
|---|---|
| 3 | Battery voltage check |

(1) Check the battery voltage.
Voltage: 11 to 14 V

NG → Battery charge or replacement

OK

| | |
|---|---|
| 4 | CAN communication system communication function check |

NOTE:
Refer to NW - 30
(1) Check CAN communication system.
Result

| Result | Go to |
|---|---|
| Functioning properly | A |
| Not functioning properly | B |

B → To CAN communication section NW - 30

A

| | |
|---|---|
| 5 | DTC check |

NOTE:
Refer to AT - 17
(1) Check diagnostic codes and freeze frame data.
(a) Record diagnostic codes and freeze frame data.
(2) Clear diagnostic codes and freeze frame data.
(3) Recheck DTC.

(a) Reproduce the trouble phenomenon based on the recorded diagnostic codes and freeze frame data and check that the diagnostic codes are output again.

Result

| Result | Go to |
|---|---|
| The diagnostic codes are normal and the trouble phenomenon can be checked and reproduced. | A |
| Abnormality codes are output. | B |
| The diagnostic codes are normal and the trouble phenomenon cannot be checked and reproduced. | C |

B → Refer to list of diagnostic codesAT - 11to troubleshoot each code and jump to step 9.

C → To trouble simulation IN - 32.

A

| | |
|---|---|
| 6 | Symptom table (Refer to AT - 13) |

Result

| Result | Go to |
|---|---|
| Not applicable to the symptom table. | A |
| Applicable to the symptom table. | B |

B → Perform troubleshooting for relevant symptom and go to step 8.

A

| | |
|---|---|
| 7 | Troubleshooting by the following methods based on trouble phenomenon |

(1) Data monitor (Refer to AT - 29)
(2) Active test (Refer to AT - 29)
(3) Manual driving test (refer to AT - 7)
(4) ECM terminal arrangement (Refer to AT - 24)

## Check list for interview

### AT Control System Check Sheet

Inspector: Inspection date: /

| | | | |
|---|---|---|---|
| Name | | Registration No. | |
| | | First registration Year Month | Year Month |
| Vehicle model | | Frame No. | |
| Year/month/date of vehicle bring-in | Month Date (Day ) | Odometer reading | |

| | |
|---|---|
| Date when trouble occurred | Month Date (Engine: ☐ Cold ☐ Warm) |
| Frequency of occurrence | ☐ Continuous ☐ Intermittent ( times/day) |

| | |
|---|---|
| Trouble symptom | ☐ Cannot drive (☐ All ranges ☐ Specific range [ range]) |
| | ☐ No up-shift ☐ 1st → 2nd ☐ 2st → 3rd ☐ 3rd → 4th ☐ 4th → 5th ☐ 5th → 6th |
| | ☐ No down-shift ☐ 6th → 5th ☐ 5th → 4th ☐ 4th → 3rd ☐ 3rd → 2nd ☐ 2nd → 1st |
| | ☐ Lock-up failure |
| | ☐ Shift point failure |
| | ☐ Excessive shift shock (☐ N → D/R ☐ Lock-up ☐ Shifting) |
| | ☐ Poor acceleration (slippage) |
| | ☐ Noise and vibration |
| | ☐ Others |

| | |
|---|---|
| Condition of indicator light | ☐ Lit ( ) ☐ Does not lit |

| | | | |
|---|---|---|---|
| DTC check | 1st | ☐ Normal code | ☐ Abnormal code |
| | 2nd | ☐ Normal code | ☐ Abnormal code |
| * If abnormal code appears at 1st time, record freeze frame data. | | | |
| Freeze frame data | | | |

AT-07691

AT

## Checking / clearing diagnostic codes

1. DTC check (read by SSM4)
   (1) Use SSM4 to display the [Transmission Control System] screen according to the screen display and select [DTC].

(2) Check the diagnostic codes.

2. Freeze frame data
   (1) Use SSM4 to select [FFD] from the [Transmission Control System] / [DTC] screen.
   NOTE:
   - The transmission condition (TCM data) when a diagnostic code is detected and 2 seconds before a diagnostic code is detected can be checked at intervals of 0.5 seconds. (Refer to IN - 27)
   - Check the consistency of the interviewed trouble phenomenon and the list of diagnostic codes.
   - After repair, perform a confirmation test by referring to the driving condition checked above.
3. Clearing diagnostic code records (Cleared by the SSM4)
   (1) Use SSM4 to display the [Transmission Control System] / [DTC] screen according to the screen display and select [Clear Memory].
   (2) Select [Yes] displayed on the screen to clear the data.
   CAUTION:
   Diagnostic codes and freeze frame data are cleared at the same time.

## Freeze frame data

1. Freeze data table
   (1) Use SSM4 to select [FFD] from the [Transmission Control System] / [DTC] screen.
   NOTE:
   - The transmission condition (TCM data) when a diagnostic code is detected and 2 seconds before a diagnostic code is detected can be checked at intervals of 0.5 seconds. (Refer to IN - 27)
   - Check the consistency of the interviewed trouble phenomenon and the list of diagnostic codes.
   - After repair, perform a confirmation test by referring to the driving condition checked above.

| Item name | |
|---|---|
| [Coolant Temp.] | [Shift SW Status History (P Range)] |
| [Engine Speed] | [Shift SW Status History (R Range)] |
| [Vehicle Speed] | [Shift SW Status History (N Range)] |
| [Time Since Engine Start] | [Shift SW Status History (D Range)] |
| [Number of warm-ups] | [Manual SW History] |
| [Meter since DTC cleared] | [Up SW History] |
| [Time since DTC cleared] | [Down SW History] |
| [Control module voltage] | [Snow Mode History] |
| [DTC that caused required Freeze Frame data storage] | [Snow SW History] |
| [Engine Speed] | [Sport SW History] |
| [Coolant Temp.] | [A/C Switch History] |
| [Accel. Opening Angle] | [TC Terminal] |
| [Throttle Opening Angle] | [Turbine Revolution Speed] |

| [Shift SW Status (P Range)] | [ATF Temp.] |
| [Shift SW Status (R Range)] | [Shift Indicator Lamp UP Shift] |
| [Shift SW Status (N Range)] | [Shift Indicator Lamp Down Shift] |
| [Shift SW Status (D Range)] | [Sport Mode] |
| [Manual SW] | [Control the Shift Position] |
| [Up SW] | [Lock up status] |
| [Down SW] | [SLT Solenoid Status] |
| [Snow Mode] | [Activate the Lock Up (SLT)] |
| [Snow SW] | [# Codes(Include History)] |
| [Sport SW] | [Number Of ALL DTCs] |
| [A/C Switch] | [Trip Count] |
| [Stop Light Switch History] | [Count] |
| | [Time Count] |

## Inspection for problems that do not normally occur

1. Check mode (wiring harness and connector instantaneous interruption check)

   NOTE:

   When a defective system is found by diagnostic codes output in DTC (check mode) check, narrow down defective part by the following procedure.

   (1) Use SSM4 to display the [Transmission Control System/Work Support] screen according to the screen display.
   (2) Select [Test Mode Change] to switch to the check mode.
   (3) After reading diagnostic codes in the check mode, clear the diagnostic codes memory.
   (4) Select the check mode and start the engine.
   (5) With the vehicle idling, swing the wiring harness and connector of the defective system which is output in DTC (check mode) check.
   (6) When the check engine warning light is illuminated, the wiring harness or connector at the point may have poor contact.
   (7) After check, be sure to select [Test Mode Change] to switch to the normal mode.

## Work support

1. AT learning values initialization

   CAUTION:

   - Execute [Clear the AT learned information] when any of transmission ASSY, valve body ASSY, transmission wire, engine ASSY, transmission control computer is replaced.
   - Wait for 1 minute or more after connecting the battery terminal when performing AT learning value initialization.

   NOTE:

   The learning value is not initialized (cleared) only by removing the ground terminal of the battery.

   (1) Check that the shift is in P position and connect SSM4 to DLC3 to turn IG and the power of SSM4 ON.

   CAUTION:

   Do not start engine.

   (2) Execute AT learning value initialization.

   (a) Select [Transmission Control System/Work Support] →[Clear the AT learned information] from the main menu according to SSM4 screen display and execute them to initialize AT learning value.

## Data monitor / active test

1. Inspection with SSM4 (data monitor)

   CAUTION:

   Subtle phenomena such as breathing and rough idling need to be totally judged based on all items in the computer data by using a method of comparing with an equivalent vehicle after collecting data under the same condition.

   (1) On the SSM4, navigate to the [Data monitor] display, and check the computer data.

SSM4 screen: [Transmission Control System] →[Select Function] →[Data monitor]

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Coolant Temp.] | Indicating engine coolant temperature/ Display range: -40 to 140°C | Gradually increasing: Cold start →warmed up | When abnormal, the THW voltage may be abnormal. |
| | | 80 to 105°C: Warmed up | When abnormal, the THW voltage may be abnormal. |
| | | 215°C: When sensor is disconnected | When abnormal, the THW voltage may be abnormal. |
| | | 215°C or more: When sensor is shorted | When abnormal, the THW voltage may be abnormal. |
| [Engine Speed] | Indicating engine speed/ Display range: 0 to 16383.75r/min | 0 r/min: When engine is stopped (IG ON) | When abnormal, there may be an NE signal malfunction. |
| | | No significant fluctuation: When engine is running at a constant speed | When abnormal, there may be an NE signal malfunction. |
| [Vehicle Speed] | Indicating vehicle speed/ Display range: 0 to 255km/h {158MPH} | 0 km/h {0 MPH}: When vehicle is parked | When abnormal, there may be an SPD signal malfunction. |
| | | No significant fluctuation: When driving at a constant speed | When abnormal, there may be an SPD signal malfunction. |
| [Time Since Engine Start] | Indicating time elapsed after engine start (engine start →IG OFF)/ Display range: 0 to 65535sec | - | - |
| [Number of warm-ups] | Indicating number of warming-ups after DG is cleared/ Display range: 0 to 255 times | - | - |
| [Meter since DTC cleared] | Indicating travel distance after diagnostic codes cleared/ Display range: 0 to 65535km | - | - |
| [Time since DTC cleared] | Indicating time elapsed after diagnostic codes are cleared/ Display range: 0 to 65535min | - | - |
| [Control module voltage] | Indicating battery voltage/ Display range: 0 to 65.535V | 11 to 14 V: During idling | When abnormal, the BATT voltage may be abnormal. |
| [MIL Status] | Indicating TCM side MIL illumination indication status/ Display range: OFF ←→ON | OFF →ON : Normal →malfunction | - |
| [Number of Diagnostic Code(s):] | Indicating trouble codes stored in TCM/ Display range: 0 to 127 | - | - |

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Component monitoring(Supp)] | Indicating component monitor test/ Display range: without support ←→with support | With support | - |

| [Time while MIL lighted] | Indicating engine operation time from MIL illumination/ Display range: 0 to 65535min | - | - |
| [Engine Speed] | Indicating engine speed (CAN reception data)/ Display range: 0 to 51199.21875r/min | 0 r/min: When engine is stopped (IG ON) | When abnormal, there may be a CAN communication malfunction. |
| [Coolant Temp.] | Indicating coolant temperature (CAN reception data)/ Display range: -40 to 215°C | Gradually increasing: Cold start →warmed up | When abnormal, there may be a CAN communication malfunction. |
| [Accel. Opening Angle] | Indicating acceleration opening angle (CAN reception data)/ Display range: 0 to 127.5% | 0 %: Accelerator pedal not depressed | When abnormal, there may be a CAN communication malfunction. |
| [Throttle Opening Angle] | Indicating throttle opening angle (CAN reception data)/ Display range: 0 to 127.5% | 0 %: When engine is stopped (IG ON) | When abnormal, there may be a CAN communication malfunction. |

AT

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Stop Light Switch] | Indicating that the brake pedal is depressed/ Display range: ON←→OFF | OFF→ON: With brake pedal released →depressed | When abnormal, there may be a stop light switch ASSY signal malfunction. |
| [Shift SW Status (P Range)] | Indicating select lever in P position/ Display range: ON←→OFF | ON: Select lever in P | When abnormal, there may be a neutral start switch ASSY (P) signal malfunction. |
| [Shift SW Status (R Range)] | Indicating select lever in R position/ Display range: ON←→OFF | OFF→ON: Select lever in N→R | When abnormal, there may be a neutral start switch ASSY (R) signal malfunction. |
| [Shift SW Status (N Range)] | Indicating select lever in N position/ Display range: ON←→OFF | ON: Select lever in N | When abnormal, there may be a neutral start switch ASSY (N) signal malfunction. |
| [Shift SW Status (D Range)] | Indicating select lever in D position/ Display range: ON←→OFF | OFF→ON: Select lever in N→D | When abnormal, there may be a neutral start switch ASSY (D) signal malfunction. |
| [Manual SW] | Indicating M position/ Display range: ON←→OFF | OFF→ON: Select lever in D→M | When abnormal, there may be a transmission control switch (M) signal malfunction. |
| [Up SW] | Indicating transmission control switch (+)/ Display range: ON←→OFF | OFF→ON: Select lever in M →"+" | When abnormal, there may be a transmission control switch (SFTU) signal malfunction. |
| [Down SW] | Indicating transmission control switch (-)/ Display range: ON←→OFF | OFF→ON: Select lever in M →"-" | When abnormal, there may be a transmission control switch (SFTD) signal malfunction. |
| [Snow Mode] | Indicating SNOW mode status/ Display range: ON←→OFF | OFF→ON: 2nd start OFF →ON | When abnormal, there may be a pattern select SW system malfunction. |
| [Snow SW] | Indicating pattern select (SNOW) switch/ Display range: ON←→OFF | OFF→ON: Pattern select (SNOW) switch OFF→ON | When abnormal, there may be a pattern select (SNOW) switch malfunction. |
| [Sport SW] | Indicating pattern select (SPORT) switch/ Display range: ON←→OFF | OFF→ON: Pattern select (SPORT) switch OFF→ON | When abnormal, there may be a pattern select (SPORT) switch malfunction. |
| [A/C Switch] | Indicating A/C ON / OFF status/ Display range: ON←→OFF | - | - |
| [TC Terminal] | Indicating shorted (ON) condition of TC terminal (DLC3)/ Display range: ON←→OFF | ON: TC terminal shorted | - |
| [Turbine Revolution Speed] | Indicating input revolution speed/ Display range: 0 to 12750rpm | Almost the same as engine idle speed When the vehicle is parked with select lever in P or N position (when engine idling) | When abnormal, there may be an NT signal malfunction. |
| | | 0 r/min: The vehicle is parked with select lever in D position | When abnormal, there may be an NT signal malfunction. |
| | | Almost the same as engine speed When driving at a constant speed | When abnormal, there may be an NT signal malfunction. |
| [AT Speed] | Indicating output revolution speed/ Display range: 0 to 255km/h {158MPH} | 0 km/h {0 MPH}: When vehicle is parked | When abnormal, there may be an SP2 signal malfunction. |
| | | No significant fluctuation: When driving at a constant speed | When abnormal, there may be an SP2 signal malfunction. |
| [ATF Temp.] | Indicating transmission oil temperature/ Display range: -40 to 215°C | Ambient air temperature : IG ON when the engine is cold | When abnormal, the THO1 voltage may be abnormal. |
| | | 50 to 100°C: After stall test | When abnormal, the THO1 voltage may be abnormal. |
| | | -40°C: When sensor is disconnected | When abnormal, the THO1 voltage may be abnormal. |
| | | 150°C or more: When sensor is shorted | When abnormal, the THO1 voltage may be abnormal. |
| [Shift Indicator Lamp UP Shift] | Indicating illumination indication status on shift indicator lamp UP side/ Display range: ON←→OFF | - | - |

AT

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Shift Indicator Lamp Down Shift] | Indicating illumination indication status on shift indicator lamp DOWN side/ Display range: ON←→OFF | - | - |
| [Sport Mode] | Indicating SPORT mode status/ Display range: ON←→OFF | OFF→ON: SPORT mode OFF→ON | When abnormal, there may be a pattern select SW system malfunction. |
| [Control the Shift Position] | Indicating gear positions (ranges)/ Display range: 1st to 6th gear | Shifted into each gear position: Driving | • When abnormal, the VTA1 voltage may be abnormal.<br>• When abnormal, the VPA voltage may be abnormal.<br>• When abnormal, there may be an SPD signal malfunction.<br>• When abnormal, there may be a solenoid signal malfunction. |
| [Lock up status] | Indicating that lock-up is operating/ Display range: ON←→OFF | OFF→ON: Lock-up OFF →ON | • When abnormal, the VTA1 voltage may be abnormal.<br>• When abnormal, the VPA voltage may be abnormal.<br>• When abnormal, there may be an NT signal malfunction.<br>• When abnormal, there may be an SP2 signal malfunction.<br>• When abnormal, there may be an SLU signal malfunction. |
| [SLT Solenoid Status] | Indicating line pressure control solenoid ASSY (SLT) operating status/ Display range: ON←→OFF | OFF→ON: Acceleration fully opened →fully closed | When abnormal, there may be a line pressure control solenoid ASSY (SLT) signal malfunction. |
| [Activate the Lock Up (SLU)] | Indicating lock-up control solenoid (SLU) operating status/ Display range: ON←→OFF | OFF→ON: Lock-up OFF →ON | When abnormal, there may be a lock-up control solenoid (SLU) signal malfunction. |
| [Last 5 Digits ECU Part Number] | Indicating last 5 digits of ECM part number | - | - |
| [# Codes(Include History)] | Indicating the number of trouble codes which have not experienced normal driving cycle in consecutive 40 warming up | - | - |
| [Number Of ALL DTCs] | Indicating the number of all DTCs/ Display range: 0 to 255 | - | - |
| [Trip Count] | Indicating the number of all DTCs/ Display range: 0 to 65535trip | - | - |
| [Count] | Indicating the way to count time after IG ON | Normal count | When abnormal, there may be a CAN communication malfunction. |
| [Time Count] | Indicating time elapsed after IG ON/ Display range: 0 to 53687091100ms | - | - |

SSM4 screen: [Body Control] →[Select Function] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Stop Light Switch] | Indicating that the brake pedal is depressed/ Display range: ON←→OFF | OFF→ON: With brake pedal released →depressed | When abnormal, there may be a stop light switch ASSY signal malfunction. |
| [Shift P Signal] | Indicating select lever in P position/ Display range: ON←→OFF | ON: Select lever in P | When abnormal, there may be a select lever P switch malfunction. |
| [Ignition Power Supply Voltage] | Indicating IG power supply voltage/ Display range: 0 to 21.4V | 11 to 14 V: During idling | When abnormal, the IG voltage may be abnormal. |
| [Shift Lock Solenoid] | Indicating shift lock solenoid operation status/. Display range: ON←→OFF | OFF→ON: Shift lock OFF →ON | When abnormal, there may be a shift lock solenoid malfunction. |

2. Inspection with SSM4 (active test)
   (1) Using SSM4, display the [Active Test] screen according to the screen and perform the system operation check.

AT

SSM4 screen: [Transmission Control System] →[Select Function] →[Active Test]

| Item name | Description | Restriction |
|---|---|---|
| [Control the Shift Position] | Setting to any shift position is possible | • Vehicle speed is less than 50 km/h {31 MPH}<br>• Any of the following is established.<br>– Throttle idling status<br>– Gear range 4th or lower |
| [Activate the Solenoid(S1)] | Turning ON ←→OFF of transmission 3 way solenoid ASSY (S1) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |
| [Activate the Solenoid(S2)] | Turning ON ←→OFF of transmission 3 way solenoid ASSY (S2) is possible. | • Vehicle speed: 0 km/h {0 MPH}<br>• P or N position<br>• Engine speed: 0 r/min |

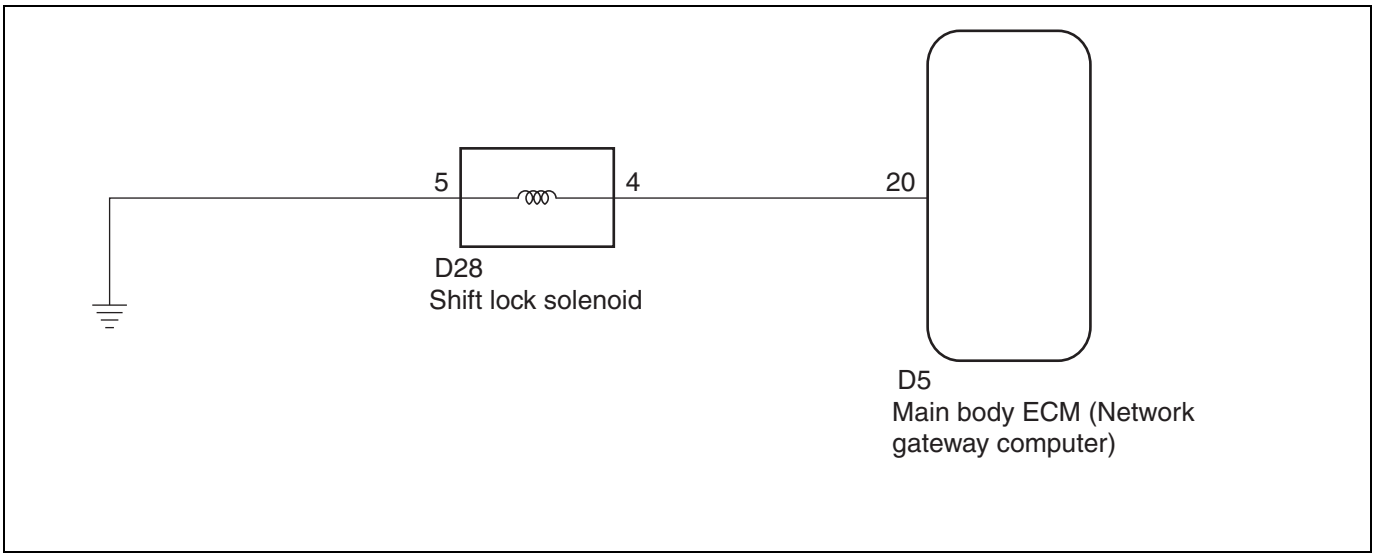
## DTC B1016 Shift lock circuit Failure

Circuit description

When IGN signal, P switch signal, and STP signal is input, the main body ECM (network gateway computer) outputs signals to the shift lock solenoid.

| DTC No. | DTC detecting condition<br>1.Diagnosis condition<br>2.Abnormal condition<br>3.Abnormal period<br>4.Other | Inspection parts |
|---|---|---|
| B1016 | 1. IG ON<br>2. Open, power supply-output short, or GND-output short in shift lock circuit<br>3. 3 seconds or more<br>4. 1 trip | • Main body ECM (network gateway computer)<br>• Shift lock solenoid<br>• Wiring harness or connector |

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Check of shift lock solenoid unit |

(1) Check the shift lock solenoid unit. (Refer to AT - 211)

NG → Replacement of shift lock solenoid (refer to AT - 199)

OK

| | |
|---|---|
| 2 | Check wiring harness and connector (main body ECM (network gateway computer) - shift lock solenoid) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.

(1) Disconnect the connector D5 of the main body ECM (network gateway computer).
(2) Disconnect the connector D28 of shift lock solenoid.
(3) Measure the resistance between the terminals.

Specified resistance (disconnection check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D5-20 - D28-4 | Always | Less than 1 Ω |

Specified resistance (short check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D5-20 and D28-4 - chassis ground | Always | 10 k Ωor more |

(4) Connect the connector D5 of the main body ECM (network gateway computer).
(5) Connect the connector D28 of the shift lock solenoid.

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Check wiring harness and connector (shift lock solenoid-chassis ground) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector D28 of shift lock solenoid.
(2) Measure the resistance between the terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D28-5 - chassis ground | Always | Less than 1 Ω |

(3) Connect the connector D28 of the shift lock solenoid.

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

## DTC P0601 Internal Control Module Memory Check Sum Error

Circuit description
The value calculated by the transmission control computer is compared with the data stored in the transmission control computer ASSY when IG is ON, and when they do not match 2 times consecutively, DTC is detected and the learning is prohibited.
If the problem persists, cut continuity to all the solenoid (lock at 4th gear).

AT

| DTC No. SAE/TCCS | DTC detecting condition<br>1.Diagnosis condition<br>2.Abnormal condition<br>3.Abnormal period<br>4.Other | Inspection parts |
|---|---|---|
| P0601 | 1. IG ON<br>When DTC clear required<br>2. Transmission control computer ASSY, internal error<br>3. -<br>4. 1 trip | • Transmission control computer ASSY |

Monitor description
TCM observes inner operation. If a defect is found in inner operation, TCM turns on MIL and records diagnostic codes.
MONITOR STRATEGY

| | |
|---|---|
| Applicable diagnostic codes | P0601: Internal Control Module Memory Check Sum Error |
| Required sensor / component | TCM |
| Operation frequency | Once per driving cycle |
| Period | 2 times |
| MIL operation | Immediate |
| Operation order | None |

TYPICAL ENABLING CONDITIONS
Either of the following conditions must be satisfied: condition (A) or (B)
Condition (A)

| | |
|---|---|
| If the following diagnostic code is not present, the monitor operates. | None |

| | |
|---|---|
| IG SW is turned from OFF to ON. | Yes |

Condition (B)

| | |
|---|---|
| If the following diagnostic code is not present, the monitor operates. | None |
| A request to clear the diagnostic code from the diagnosis tool is received. | Yes |

TYPICAL MALFUNCTION THRESHOLDS

| | |
|---|---|
| Total data calculated by flash ROM | None (flash ROM checksum data) |

Inspection steps

NOTE:

Read the freeze frame data using the SSM4. A part of the engine running conditions under which the engine trouble occurred is recorded in the freeze frame data, which is useful for troubleshooting.

| | |
|---|---|
| 1 | Replacement of transmission control computer ASSY |

(1) Replace the transmission control computer ASSY. (Refer to AT - 322)

Next

| |
|---|
| AT unit correction (refer to AT - 19) |

AT

| DTC | P062F | EEPROM Error |
|---|---|---|

Circuit description

The transmission control computer calculates the integration value in the transmission control computer ASSY when IG OFF turns to ON, and when the value does not match the value stored in the transmission control computer, DTC is output.
However, calculation is not performed when switching by consecutive operation of the ignition switch is executed.

| DTC No.<br>SAE/TCCS | DTC detecting condition<br>1.Diagnosis condition<br>2.Abnormal condition<br>3.Abnormal period<br>4.Other | Inspection parts |
|---|---|---|
| P062F | 1. IG ON<br>2. Transmission control computer ASSY inside malfunction<br>3. -<br>4. 1 trip | • Transmission control computer ASSY |

Monitor description

TCM observes inner operation. If a defect is found in inner operation, TCM turns on MIL and records diagnostic codes.

MONITOR STRATEGY

| | |

Monitor description

These diagnostic codes indicate problems of the wiring harness in the neutral start switch ASSY and neutral start switch ASSY circuit.

The neutral start switch ASSY detects the select lever position and sends signals to TCM.

For safety, the neutral start switch ASSY detects the select lever position. It is to allow the engine to start only when the select lever is in P or N position.

The neutral start switch ASSY sends signals corresponding to shift positions (P, R, N, D, or M) to TCM. When receiving 2 or more position signals at one time, TCM determines that the switch or related parts have a problem. TCM turns on MIL and records the diagnostic codes.

If open or short circuit is detected, all contacts of shift positions are turned to OFF.

MONITOR STRATEGY

AT

Inspection steps

CAUTION:

Before performing troubleshooting, check the fuse for this circuit.

| | |
|---|---|
| 1 | Perform a unit inspection of neutral start switch ASSY |

(1) Disconnect the connector A19 of the transmission control computer ASSY.

(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-3 (P) - L2-2 (RB) | Select lever in P position | Less than 1 Ω |
| A19-10 (R) - L2-2 (RB) | Select lever in R position | Less than 1 Ω |
| A19-21 (N) - L2-2 (RB) | Select lever in N position | Less than 1 Ω |
| A19-9 (D) - L2-2 (RB) | Select lever in D position | Less than 1 Ω |
| A19-3 (P) - L2-2 (RB) | Select lever in any other than P position | 10 k Ωor more |
| A19-10 (R) - L2-2 (RB) | Select lever in any other than R position | 10 k Ωor more |

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-21 (N) - L2-2 (RB) | Select lever in any other than N position | 10 k Ωor more |
| A19-9 (D) - L2-2 (RB) | Select lever in any other than D position | 10 k Ωor more |

(3) Connect the connector A19 of the transmission control computer ASSY.

NG → Go to Step 4.

OK

| 2 | Check of neutral start switch ASSY (power supply voltage) |
|---|---|

(1) Disconnect the connector L2 of the neutral start switch ASSY.
(2) Turn the ignition switch to ON.
(3) Measure the voltage between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| L2-2 (RB) - chassis ground | IG ON | 11 to 14 V |

(4) Connect the connector L2 of the neutral start switch ASSY.

NG → Repair or replacement of wiring harness or connector (power supply system)

OK

| 3 | Replacement of transmission control computer ASSY |
|---|---|

(1) Replace the transmission control computer ASSY. (Refer to AT - 322)

Next

AT unit correction (refer to AT - 19)

| 4 | Check wiring harness and connector (neutral start switch ASSY - transmission control computer) |
|---|---|

NOTE:
For the inspection procedure and precautions for wiring harnesses and connectors, refer to IN - 36.

(1) Disconnect the connector A19 of the transmission control computer ASSY.
(2) Disconnect the connector L2 of the neutral start switch ASSY.
(3) Measure the resistance between the terminals. (Refer to AT - 24for terminal arrangement of transmission control computer ASSY)

Resistance

| Terminal No. (terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A19-3 (P) - L2-6 (PL) | Always | Less than 1 Ω |
| A19-10 (R) - L2-1 (RL) | Always | Less than 1 Ω |

| Terminal No. (terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A19-21 (N) - L2-9 (NL) | Always | Less than 1 Ω |
| A19-9 (D) - L2-7 (DL) | Always | Less than 1 Ω |
| A19-3 (P) - chassis ground | Always | 10 k Ωor more |
| A19-10 (R) - chassis ground | Always | 10 k Ωor more |
| A19-21 (N) - chassis ground | Always | 10 k Ωor more |
| A19-9 (D) - chassis ground | Always | 10 k Ωor more |

(4) Measure the voltage between the terminals. (Refer to AT - 24for terminal arrangement of transmission control computer ASSY)

Voltage

| Terminal No. (terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A19-3 (P) - chassis ground | IG ON | 1 V or less |
| A19-10 (R) - chassis ground | IG ON | 1 V or less |
| A19-21 (N) - chassis ground | IG ON | 1 V or less |
| A19-9 (D) - chassis ground | IG ON | 1 V or less |

(5) Connect the connector A19 of the transmission control computer ASSY.

(6) Connect the connector L2 of the neutral start switch ASSY.

NG → Repair or replacement of wiring harness or connector

OK

Replacement of neutral start switch ASSY (Refer to AT - 186)

When continued for 300 seconds (5 minutes)<br>4. 2 trips | • Transmission wire (oil temperature sensor)<br>• Wiring harness or connector<br>• Transmission control computer ASSY |

Monitor description

This diagnostic code indicates that the automatic transmission fluid (ATF) temperature sensor output is abnormal and the sensor itself is defective. The ATF temperature sensor converts ATF temperature into electric resistance. TCM specifies ATF temperature based on the resistance and detects open or short circuit in the ATF temperature circuit or defects of the ATF temperature sensor.

If the vehicle drives for a certain period of time, the ATF temperature should rise. If the ATF temperature is less than 20°C and the input voltage fluctuation is 0.05 V or less after the vehicle drives for a certain period of time, TCM recognizes the defect and turns on MIL.

However, when the oil temperature sensor is faulty and the oil temperature is 20°C or lower, 10 seconds or more passed after shifting to D position).<br>2. When the transmission revolution sensor (SP2) outputs 12 pulses, the transmission revolution sensor (NT) does not detect even 1 pulse.<br>3. Detected 500 times consecutively<br>4. 1 trip | • Transmission revolution sensor (NT)<br>• Wiring harness or connector<br>• Transmission control computer ASSY |

Monitor description

This diagnostic code indicates whether pulse is not output from the transmission revolution sensor (NT) or the output is very small. The TCM transmission revolution sensor (NT) terminal detects revolution speed signals from the transmission revolution sensor (NT) (input r/min). TCM compares the transmission revolution sensor (NT) and transmission revolution sensor (SP2) and outputs shift signals.

If the output shaft speed is 550 r/min or more* while the vehicle is driving in D position, TCM detects a defect, turns on MIL, and records the diagnostic code.

*: Engine speed is 400 r/min or more.

A

| | |
|---|---|
| 2 | Shift position check |

CAUTION:
- Perform the inspection at an oil temperature (60-90°C) in normal driving condition.
- Turn the A/C and the cruise control OFF.

(1) Drive in manual mode and check the shift position.
WARNING:
Confirm the safety on the road.

| Gear position of transmission control computer ASSY | 1st | 2nd | 3rd | 4th | 5th | 6th |
|---|---|---|---|---|---|---|
| Gear positions when problems occur | 1st | 2nd | 3rd | 4th | 5th | 4th |

Criteria: Shift position changes.

NG → Repair or replacement of transmission valve body ASSY (refer to AT - 176)

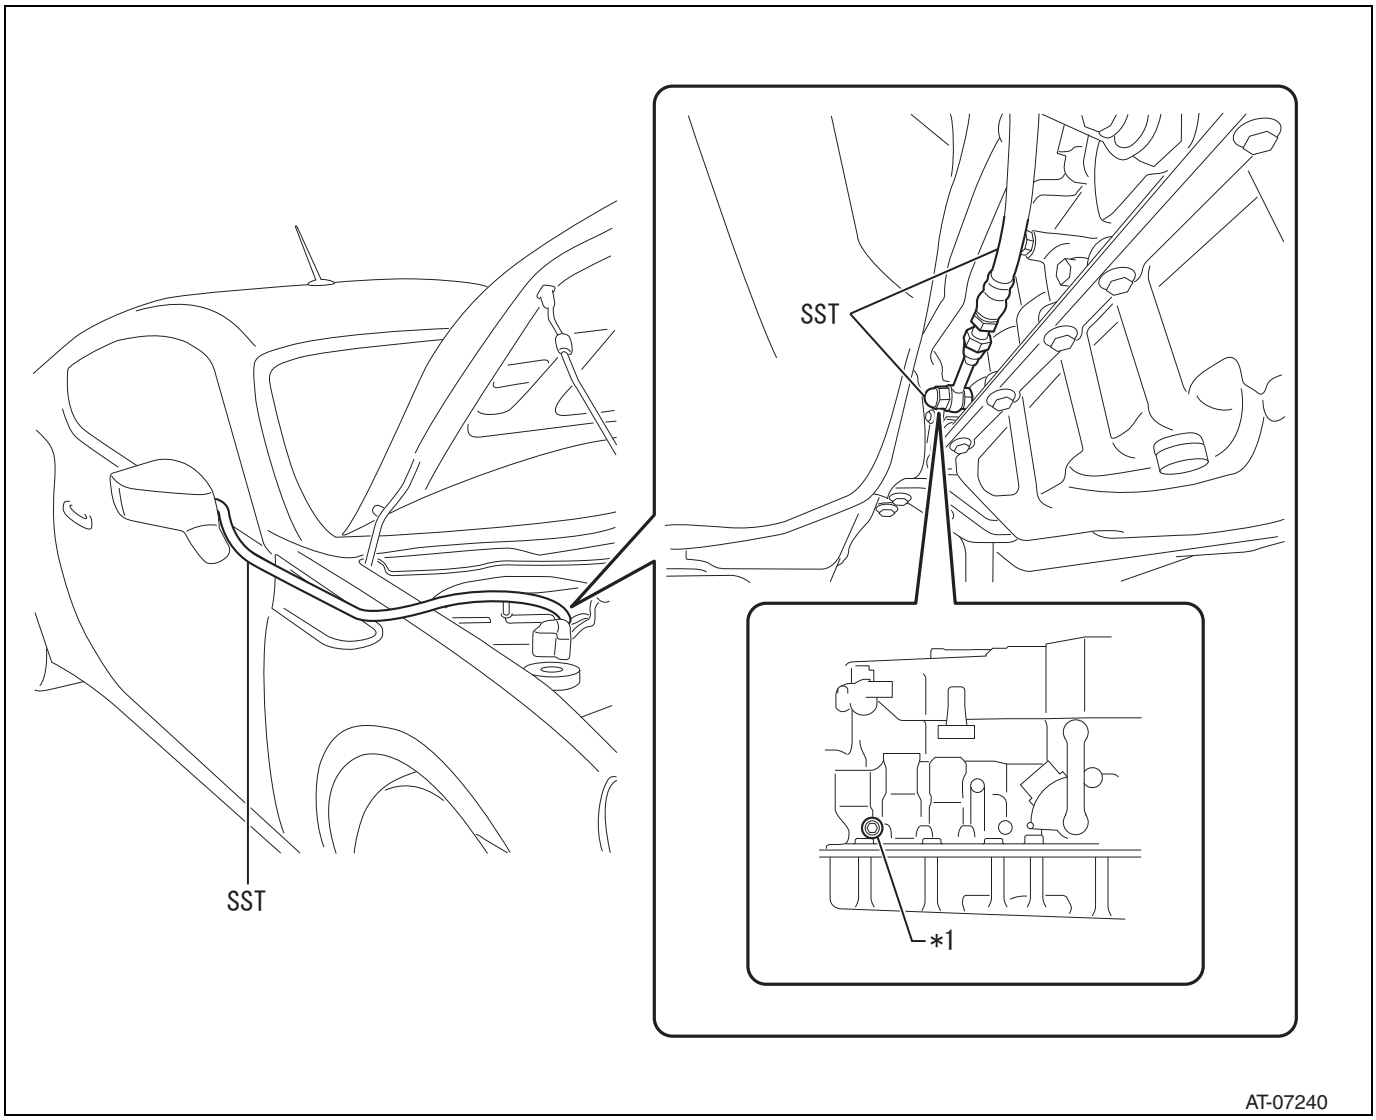
OK

| | |
|---|---|
| 3 | Line pressure check |

CAUTION:
- Wash the equipment and hoses with appropriate detergent before and after measurement.
- Always perform the inspection after the engine check and adjustment.
- Perform the inspection at an oil temperature (60 to 90°C) in normal driving condition.
- Perform the inspection with the A/C OFF.
- Do not perform the inspection continuously for 5 seconds or more at stall. (Time from the accelerator full close to full open, stall speed reading and the accelerator full close)
- After performing the stall test, be sure to cool down the engine for at least 1 minute with the select lever set in P or N position, and at an idle speed of 1200 r/min or less.
- If the stall speed is higher than the specified range, finish the stall test in as short a time as possible, in order to prevent the automatic transmission from being damaged.
- Perform the stall test in normal mode.

(1) Remove the under cover No.1.
(2) Remove the under cover No.2.
(3) Remove the exhaust pipe ASSY FR.
(4) Attach the SST on the transmission.
SST 18681AA040, 498897700, 498575400

CAUTION:
- Use 18681AA040 with genuine O-ring (17006AA000) attached.
- Route the hose so that it does not contact the exhaust pipe.



Captions in illustration

| | |
|---|---|
| *1 | Test plug |

(5) Install the center exhaust pipe.
(6) Firmly apply the parking brake and set the wheel stoppers.
(7) Remove the test plug, install the gauge and start the engine.
(8) Firmly depress the brake pedal with left foot and shift to D or R position, then check the hydraulic pressure at idling and stalling.

Standard value

| Shift position | While idling [MPa {kgf/cm$^2$}] | While stalling [MPa {kgf/cm$^2$}] |
|---|---|---|
| D position | 0.35 to 0.43 {3.6 to 4.4} | 1.20 to 1.38 {12.2 to 14.0} |
| R position | 0.76 to 0.95 {7.7 to 9.7} | 1.41 to 1.63 {14.4 to 16.6} |

NOTE:
When there is an open or short circuit in the line pressure control solenoid ASSY (SLT) system, the line pressure reaches the maximum.

NG → Repair or replacement of transmission valve body ASSY (refer to AT - 176)

AT

OK

| | |

AT

Circuit description
The transmission control computer ASSY detects the gear position based on signals from the transmission revolution sensor (NT) and the transmission revolution sensor (SP2). Then, the transmission control computer ASSY detects mechanical problems of related solenoid valve, valve body, or automatic transmission when the detected gear position differs from the commanded position.

Monitor description

This diagnostic code indicates "stuck ON" or "stuck OFF" of the transmission 3 way solenoid ASSY (S1).

TCM switches ON/OFF of the shift solenoid valve to command shifting. If the gear position commanded by TCM is different from the actual gear position, TCM turns on MIL and records the diagnostic code.

|---|---|
| 2 | Line pressure check |

CAUTION:
- Wash the equipment and hoses with appropriate detergent before and after measurement.
- Always perform the inspection after the engine check and adjustment.
- Perform the inspection at an oil temperature (60 to 90°C) in normal driving condition.
- Perform the inspection with the A/C OFF.
- Do not perform the inspection continuously for 5 seconds or more at stall. (Time from the accelerator full close to full open, stall speed reading and the accelerator full close)
- After performing the stall test, be sure to cool down the engine for at least 1 minute with the select lever set in P or N position, and at an idle speed of 1200 r/min or less.
- If the stall speed is higher than the specified range, finish the stall test in as short a time as possible, in order to prevent the automatic transmission from being damaged.
- Perform the stall test in normal mode.

(1) Remove the under cover No.1.
(2) Remove the under cover No.2.
(3) Remove the exhaust pipe ASSY FR.
(4) Attach the SST on the transmission.
SST 18681AA040, 498897700, 498575400

CAUTION:
- Use 18681AA040 with genuine O-ring (17006AA000) attached.
- Route the hose so that it does not contact the exhaust pipe.

TYPICAL MALFUNCTION THRESHOLDS

P0761: Shift Solenoid "C" Performance/Stuck Off

Compare the target gear specified by TCM and the gear ratio calculated from turbine shaft speed and vehicle speed.

When both of the following conditions are established: condition (A) and (B)

Condition (A)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 1st stage |

| | |
|---|---|
| Gear ratio calculated from turbine shaft speed and vehicle speed | 3rd stage |

Condition (B)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 6th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 6th stage |

When both of the following conditions are established: condition (C) and (D)

Condition (C)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 2nd stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 6th stage |

Condition (D)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 3rd stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 4th stage |

When both of the following conditions are established: condition (E) and (F)

Condition (E)

| | |
|---|---|
| Shift position | M position |
| Target gear position | 2nd stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 6th stage |

Condition (F)

| | |
|---|---|
| Shift position | M position |
| Target gear position | 3rd stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 4th stage |

P0762: Shift solenoid "C" (stuck ON)

Compare the target gear specified by TCM and the gear ratio calculated from turbine shaft speed and vehicle speed.

When both of the following conditions are established: condition (A) and (B)

Condition (A)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 4th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 3rd stage |

Condition (B)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 5th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | Neutral |

When both of the following conditions are established: condition (C) or (D)

Condition (C)

| | |
|---|---|
| Shift position | M position |
| Target gear position | 4th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 3rd stage |

Condition (D)

| | |
|---|---|
| Shift position | M position |
| Target gear position | 5th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | Neutral |

P0781: 1-2 Shift

Compare the target gear specified by TCM and the gear ratio calculated from turbine shaft speed and vehicle speed.

When both of the following conditions are established: condition (A) and (B)

Condition (A)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 4th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 3rd stage |

Condition (B)

| | |
|---|---|
| Shift position | D position |
| Target gear position | 5th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | Neutral |

When both of the following conditions are established: condition (C) or (D)

Condition (C)

| | |
|---|---|
| Shift position | M position |
| Target gear position | 4th stage |
| Gear ratio calculated from turbine shaft speed and vehicle speed | 3rd stage |

AT

Condition (D)

| | |

CAUTION:

- Wash the equipment and hoses with appropriate detergent before and after measurement.

- Always perform the inspection after the engine check and adjustment.
- Perform the inspection at an oil temperature (60 to 90°C) in normal driving condition.
- Perform the inspection with the A/C OFF.
- Do not perform the inspection continuously for 5 seconds or more at stall. (Time from the accelerator full close to full open, stall speed reading and the accelerator full close)
- After performing the stall test, be sure to cool down the engine for at least 1 minute with the select lever set in P or N position, and at an idle speed of 1200 r/min or less.
- If the stall speed is higher than the specified range, finish the stall test in as short a time as possible, in order to prevent the automatic transmission from being damaged.
- Perform the stall test in normal mode.

(1) Remove the under cover No.1.
(2) Remove the under cover No.2.
(3) Remove the exhaust pipe ASSY FR.
(4) Attach the SST on the transmission.

Circuit description

The transmission control computer ASSY detects the gear position based on signals from the transmission revolution sensor (NT) and the transmission revolution sensor (SP2). Then, the transmission control computer ASSY detects mechanical problems of related solenoid valve, valve body, or automatic transmission when the detected gear position differs from the commanded position.

Monitor description

This diagnostic code indicates "stuck OFF" of the transmission 3 way solenoid ASSY (S4), "stuck ON" of the clutch control solenoid No.1 (SL2), or a defect of the brake control valve. TCM switches ON/OFF of the shift solenoid valve to command shifting. If the gear position commanded by TCM is different from the actual gear position, TCM turns on MIL and records the diagnostic code.

Circuit description

Signals from the transmission control computer ASSY change the vehicle speed from 1st to 6th gear according to the combination of the transmission 3 way solenoid ASSY (S1, S2, S3, S4, SR) and the clutch control solenoid No.1 (SL1, SL2). When there is an open or short circuit in the solenoid valve system, the transmission control computer ASSY stops continuity to all solenoids as the fail safe function. As a result, only the mechanical hydraulic circuit is available and the manual shift control is initiated.

AT

Circuit description

Signals from the transmission control computer ASSY change the vehicle speed from 1st to 6th gear according to the combination of the transmission 3 way solenoid ASSY (S1, S2, S3, S4, SR) and the clutch control solenoid No.1 (SL1, SL2). When there is an open or short circuit in the solenoid valve system, the transmission control computer ASSY stops continuity to all solenoids as the fail safe function. As a result, only the mechanical hydraulic circuit is available and the manual shift control is initiated.

Monitor description

This diagnostic code indicates open or short circuit in the clutch control solenoid No.1 (SL2). TCM switches ON/OFF of the shift solenoid valve to command shifting. If there is open or short circuit in any of the shift solenoid valve circuits, TCM detects the defect, turns on MIL, and records the diagnostic code.

|---|---|---|

Circuit description

Signals from the transmission control computer ASSY change the vehicle speed from 1st to 6th gear according to the combination of the transmission 3 way solenoid ASSY (S1, S2, S3, S4, SR) and the clutch control solenoid No.1 (SL1, SL2). When there is an open or short circuit in the solenoid valve system, the transmission control computer ASSY stops continuity to all solenoids as the fail safe function. As a result, only the mechanical hydraulic circuit is available and the manual shift control is initiated.

| DTC | P2714 | Pressure Control Solenoid "D" Performance/Stuck Off |
|---|---|---|

| DTC | P0894 | Transmission Component Slipping |
|---|---|---|

Description of functions

The line pressure control solenoid ASSY (SLT) is controlled according to duty ratio which is predetermined by the transmission control computer ASSY based on signals from the accelerator position sensor and the transmission revolution sensor (NT, SP2). This adjusts line pressure to meet the throttle opening angle and engine output. The transmission control computer ASSY detects slippage of clutch, etc. based on the revolution speed of the transmission revolution sensor (NT, SP2).

AT

Monitor description

TCM calculates the heat amount absorbed by friction material based on the difference between turbine speed and output shaft speed (slipping clutch). When the amount of heat absorption exceeds a certain value, TCM turns on MIL and outputs diagnostic codes.

CAUTION:

If the vehicle continues driving in such a condition, the clutch burns out and the vehicle cannot be driven.

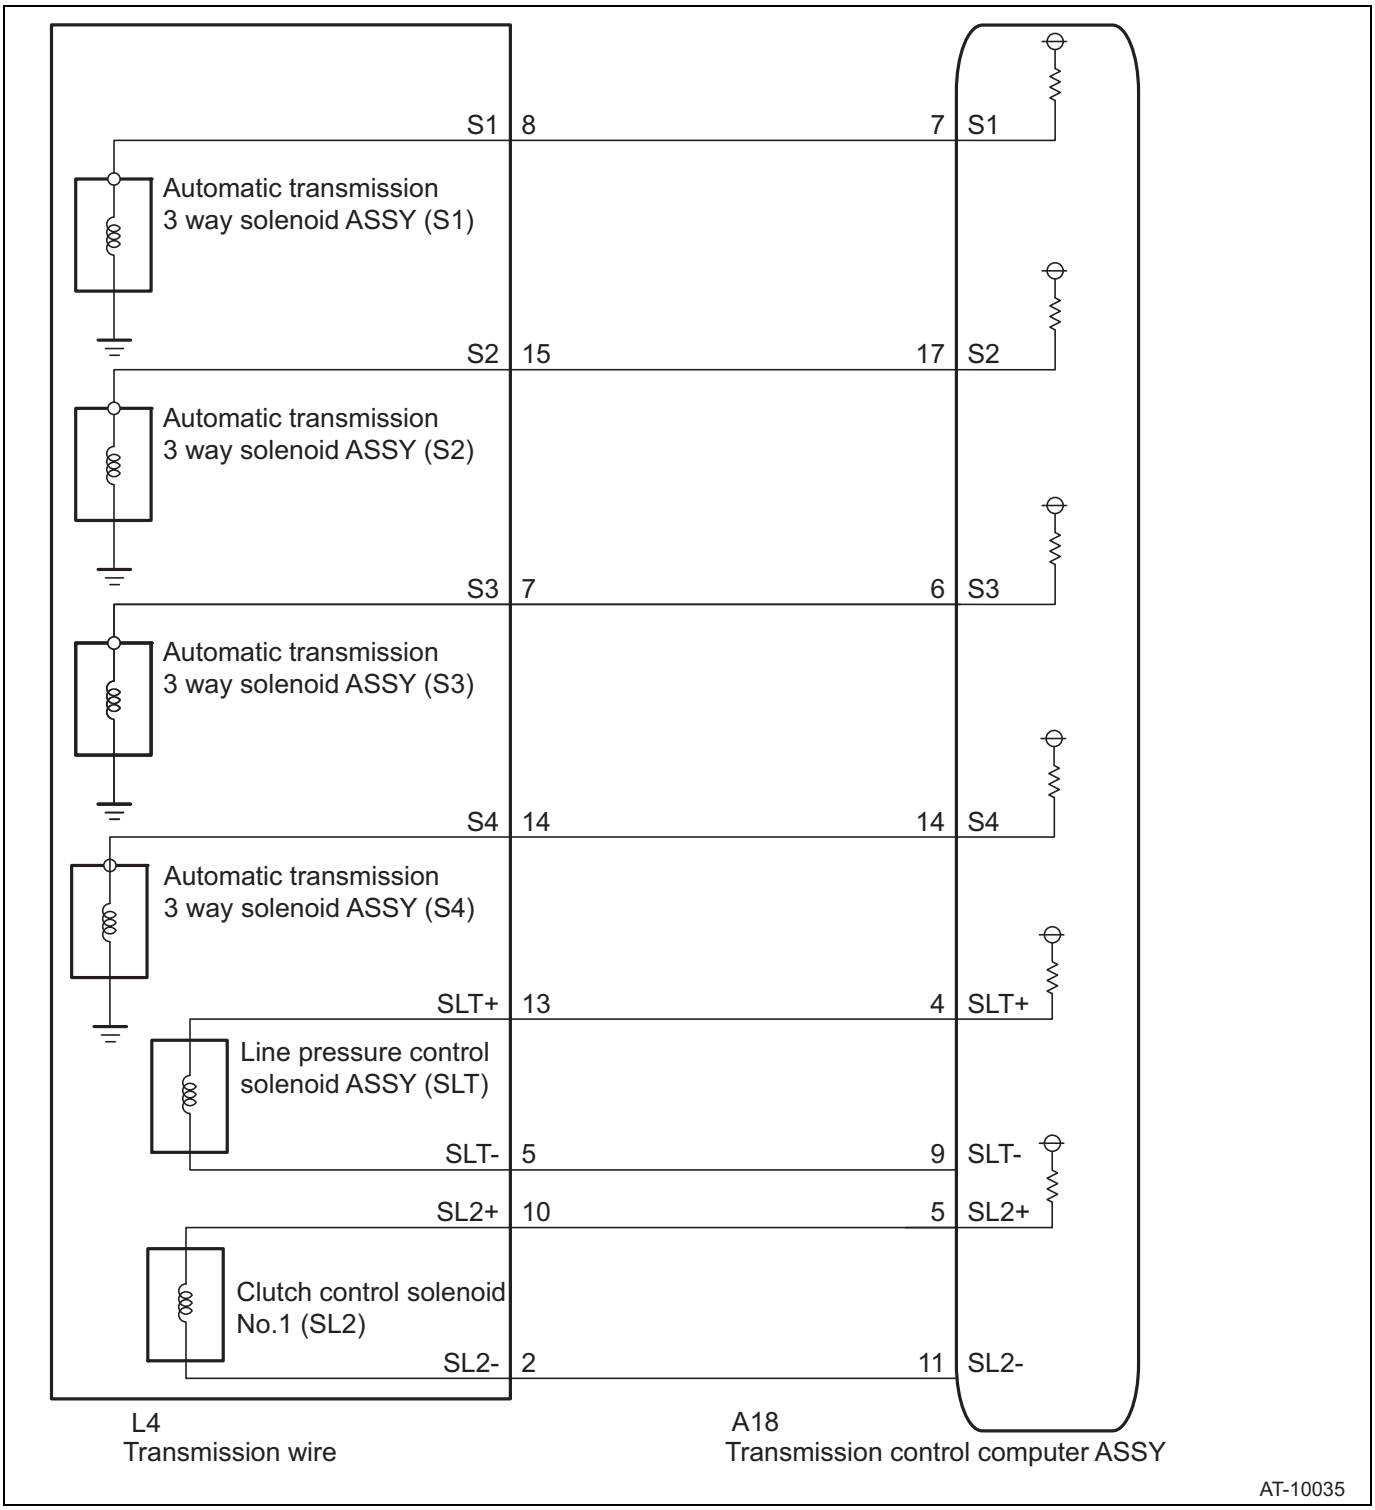
| Actual gear when judged as SLT malfunction | Unidentified |

Circuit figure



AT

Inspection steps

| | |
|---|---|
| 1 | Read the diagnostic code |

(1) Follow the SSM4 on-screen instructions to check the diagnostic codes. (Refer to AT - 17)

Result

| Result | Go to |
|---|---|
| P2714 and P0894, or only P0894 is output. | A |
| P2714 or P0894 and other diagnostic codes are output. | B |

B → Progress to the relevant diagnosis code chart (Refer to AT - 11)

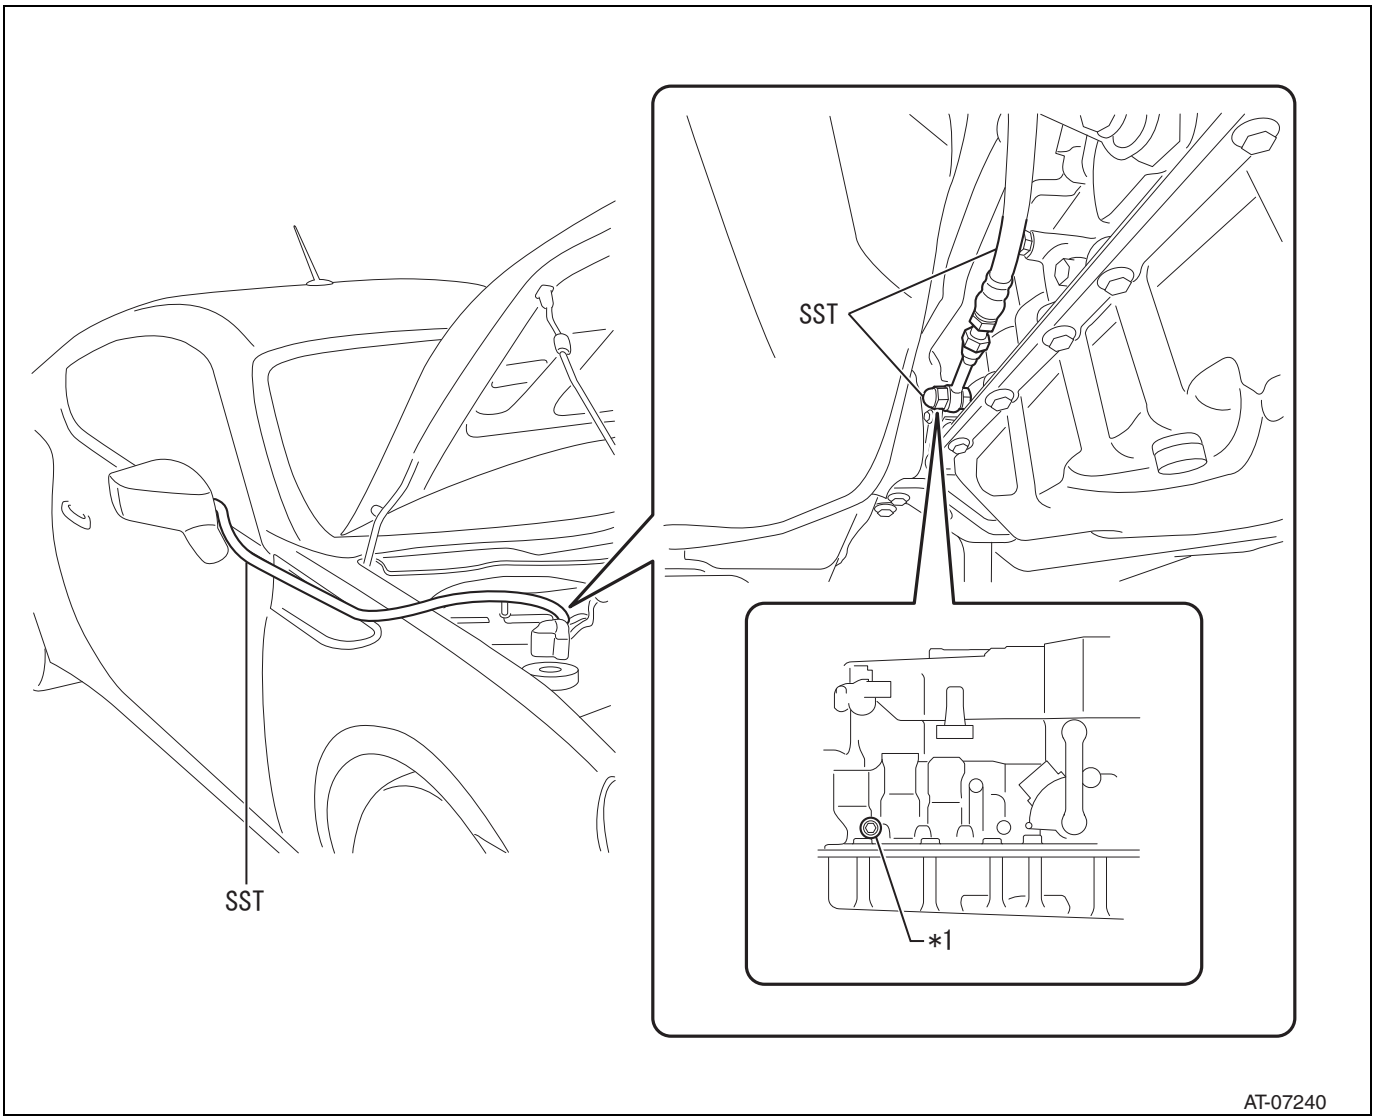
A

| | |
|---|---|
| 2 | Line pressure check |

CAUTION:
- Wash the equipment and hoses with appropriate detergent before and after measurement.
- Always perform the inspection after the engine check and adjustment.
- Perform the inspection at an oil temperature (60 to 90°C) in normal driving condition.
- Perform the inspection with the A/C OFF.
- Do not perform the inspection continuously for 5 seconds or more at stall. (Time from the accelerator full close to full open, stall speed reading and the accelerator full close)
- After performing the stall test, be sure to cool down the engine for at least 1 minute with the select lever set in P or N position, and at an idle speed of 1200 r/min or less.
- If the stall speed is higher than the specified range, finish the stall test in as short a time as possible, in order to prevent the automatic transmission from being damaged.
- Perform the stall test in normal mode.

(1) Remove the under cover No.1.
(2) Remove the under cover No.2.
(3) Remove the exhaust pipe ASSY FR.
(4) Attach the SST on the transmission.
SST 18681AA040, 498897700, 498575400

CAUTION:
- Use 18681AA040 with genuine O-ring (17006AA000) attached.
- Route the hose so that it does not contact the exhaust pipe.



Captions in illustration

| | |
|---|---|
| *1 | Test plug |

(5) Install the center exhaust pipe.
(6) Firmly apply the parking brake and set the wheel stoppers.
(7) Remove the test plug, install the gauge and start the engine.
(8) Firmly depress the brake pedal with left foot and shift to D or R position, then check the hydraulic pressure at idling and stalling.

Standard value

| Shift position | While idling [MPa {kgf/cm$^2$}] | While stalling [MPa {kgf/cm$^2$}] |
|---|---|---|
| D position | 0.35 to 0.43 {3.6 to 4.4} | 1.20 to 1.38 {12.2 to 14.0} |
| R position | 0.76 to 0.95 {7.7 to 9.7} | 1.41 to 1.63 {14.4 to 16.6} |

NOTE:
When there is an open or short circuit in the line pressure control solenoid ASSY (SLT) system, the line pressure reaches the maximum.

NG → Go to Step 16.

OK

| 3 | Shift position check |
|---|---|

CAUTION:
- Perform the inspection at an oil temperature (60 to 90°C) in normal driving condition.
- Turn the A/C and the cruise control OFF.

(1) Drive in M position and check the shift position.
WARNING:
Confirm the safety on the road.
Criteria: Shift position changes.

Result

| System status | | | Gear indication position of transmission control computer ASSY | | | | | | Go to |

Circuit description

The line pressure control solenoid ASSY (SLT) is controlled according to the duty signal which is predetermined by the transmission control computer ASSY based on signals from the accelerator position sensor and the transmission revolution sensor (SP2, NT). This adjusts line pressure to meet the throttle opening angle and engine output. The transmission control computer ASSY detects slippage of clutch, etc. based on the revolution speed of the transmission revolution sensor (SP2, NT).

Inspection steps

AT

| 1 | Wiring harness and connector check |
|---|---|

(1) Disconnect the connector A18 of the transmission control computer ASSY.
(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A18-4 (SLT+) - A18-9 (SLT-) | 20°C | 5.0 to 5.6Ω |

(3) Connect the connector A18 of the transmission control computer ASSY.

NG → Go to Step 4.

OK

| 2 | Check wiring harness and connector (transmission wire - transmission control computer) |
|---|---|

(1) Disconnect the connector A18 of the transmission control computer ASSY.
(2) Disconnect the connector L4 of the transmission wire.
(3) Measure the resistance of the vehicle side connector. (For terminal arrangement, refer to AT - 24.)

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A18-4 (SLT+) - L4-13 (SLT+) | Always | Less than 1 Ω |

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A18-9 (SLT-) - L4-5 (SLT-) | Always | Less than 1 Ω |

(4) Measure the voltage between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A18-4 (SLT+) - chassis ground | IG ON | 1 V or less |
| A18-9 (SLT-) - chassis ground | IG ON | 1 V or less |

(5) Connect the connector L4 of the transmission wire.

(6) Connect the connector A18 of the transmission control computer ASSY.

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Replacement of transmission control computer ASSY |
|---|---|

(1) Replace the transmission control computer ASSY. (Refer to AT - 322)

AT

Monitor description

The torque converter lock-up is controlled by TCM based on the transmission revolution sensor (NT, SP2), engine r/min, engine load, engine temperature, vehicle speed, transmission temperature, and selected gear. TCM compares engine r/min (NE) with input turbine r/min (NT) to determine the lock-up status of the torque converter. TCM compares input turbine r/min (NT) and output shaft r/min (SP2) to calculate the actual transmission gear. If the condition is appropriate, TCM applies control voltage to the lock-up control solenoid (SLU) and requires "lock up". When the lock-up control solenoid (SLU) turns to ON, it applies pressure to the lock up relay valve to lock the torque converter clutch.

If TCM does not detect lock up after the lock up is requested or detects lock up even though it is not requested, TCM recognizes it as a malfunction of the lock-up control solenoid (SLU) or lock up system performance. TCM turns on MIL and records the diagnostic codes.

Circuit description

The transmission control computer ASSY sends/receives signals to/from ECMs via CAN communication.

NOTE:

- Problems on the CAN bus (communication line) can be checked from the DLC3 connector. (Except when a DLC3 branch line is disconnected.)
- Diagnostic codes related to CAN communication can be checked using SSM4.
- Although DLC3 is connected to the CAN communication line, CAN communication cannot detect problems on the DLC3 branch lines.

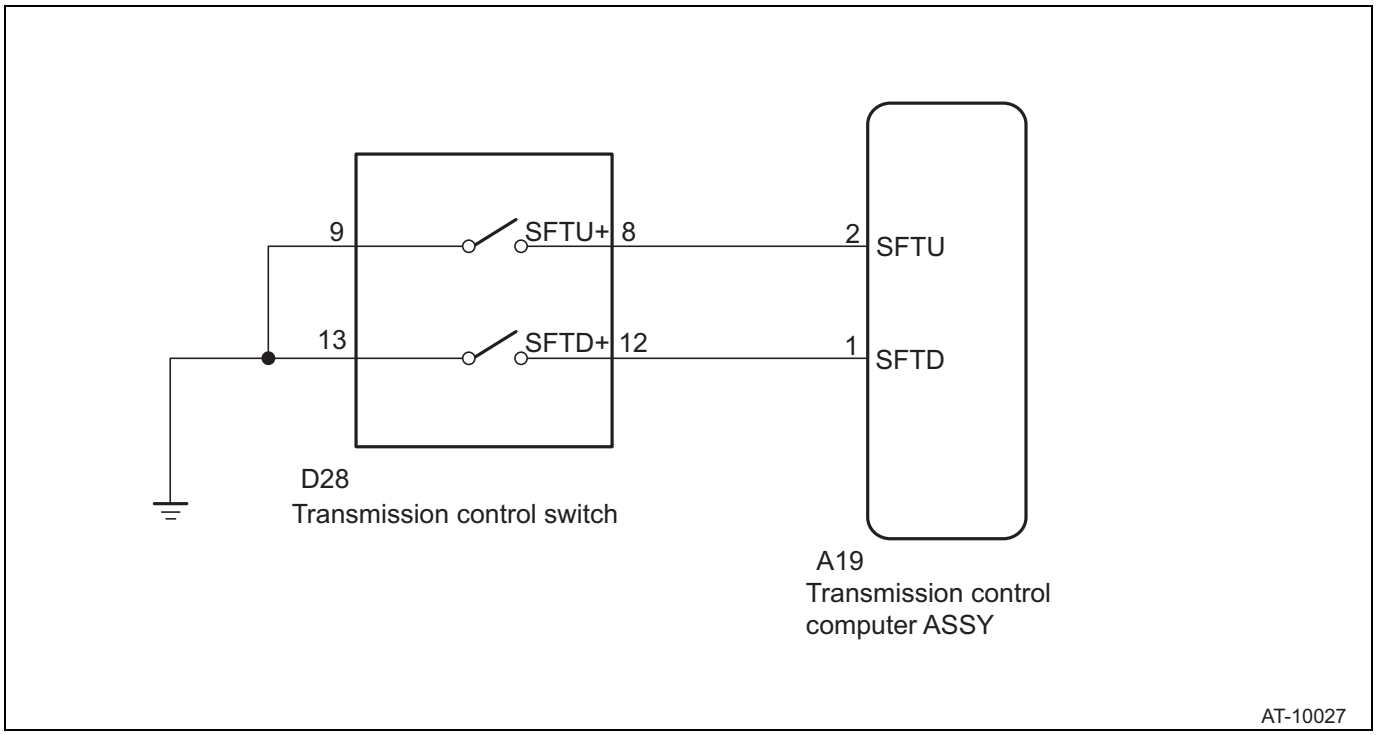
## Sports sequential shift switch system

Circuit description

When the shift is in M position, it can be changed to any gear using the sequential gate of the floor select lever ASSY.

Circuit figure



Inspection steps

AT

| | |
|---|---|
| 1 | Check of transmission control switch unit |

(1) Disconnect the connector D28 of the transmission control switch.
(2) Check the transmission control switch unit. (Refer to AT - 211)

NG → Replacement of transmission control switch (refer to AT - 199)

OK

| | |
|---|---|
| 2 | Check wiring harness and connector (transmission control switch - transmission control computer) |

(1) Disconnect the connector A19 of the transmission control computer ASSY.
(2) Measure the resistance of the vehicle side connector. (For terminal arrangement, refer to AT - 24.)

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-2 (SFTU) - chassis ground | When select lever is in M position and shifted to "+" | Less than 1 Ω |
| A19-1 (SFTD) - chassis ground | When select lever is in M position and shifted to "-" | Less than 1 Ω |
| A19-2 (SFTU) - chassis ground | Neutral position (M position) | 10 k Ωor more |
| A19-1 (SFTD) - chassis ground | Neutral position (M position) | 10 k Ωor more |

(3) Connect the connector A19 of the transmission control computer ASSY.

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Replacement of transmission control computer ASSY |
|---|---|

(1) Replace the transmission control computer ASSY. (Refer to AT - 322)

Next

AT unit correction (refer to AT - 19)

## Paddle shift switch system

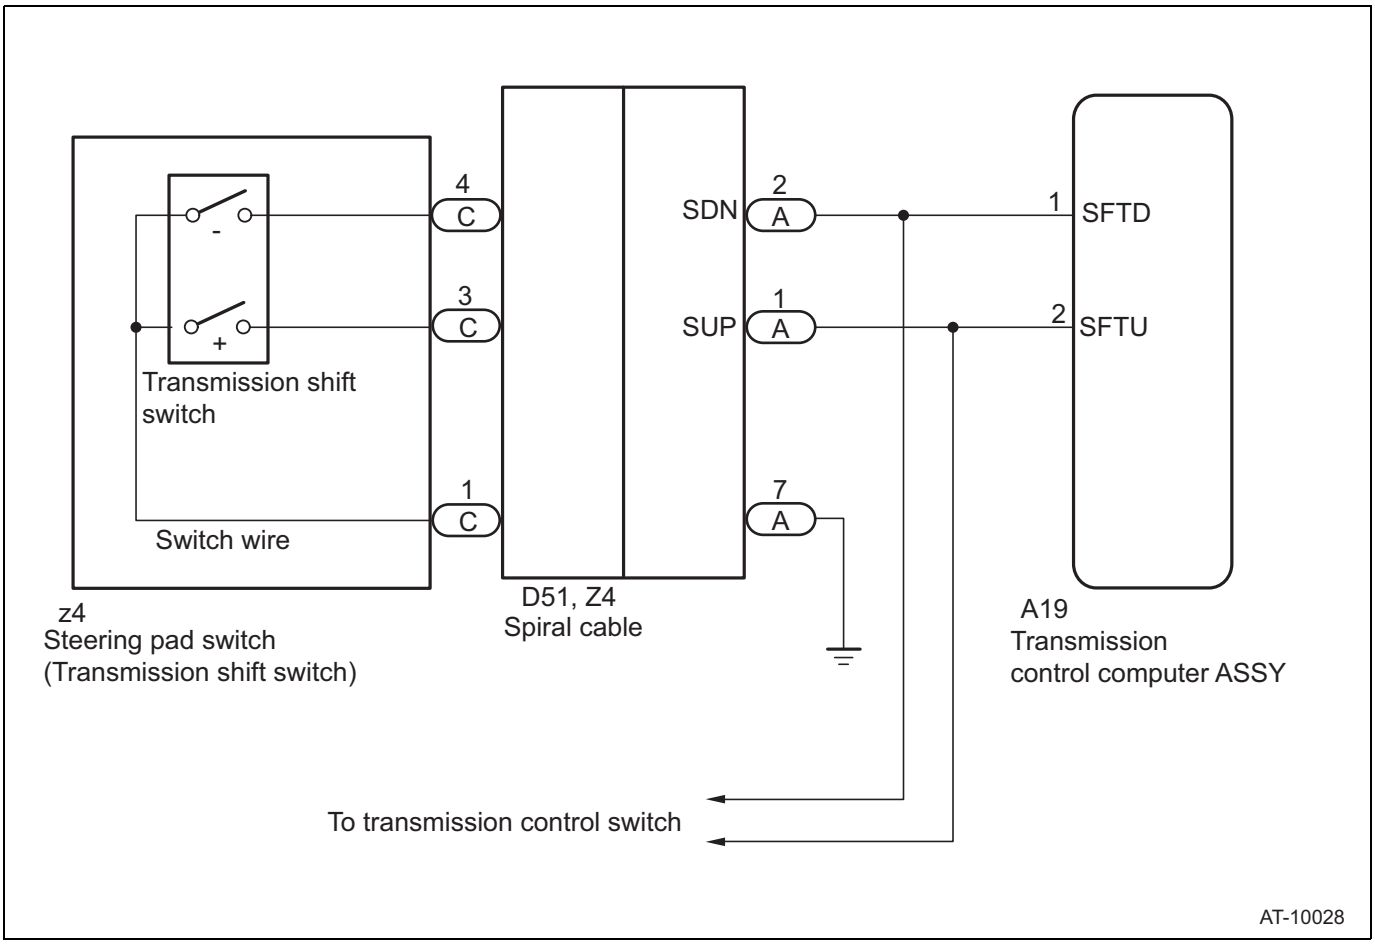
Description of functions

When the shift is in M position, it can be changed to any gear using the transmission shift switch (paddle shifter) of the steering wheel ASSY.

Also, when operating the switch of the transmission shift of the steering wheel ASSY while driving in D position, gear selection in D position is initiated and any gear can be selected.

AT

Circuit figure



Inspection steps

| 1 | Reading of SSM4 data (UP SW/DOWN SW) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Use SSM4 to display the [Data monitor] screen according to the screen display and check the computer data recorded when the transmission shift switch of the steering wheel ASSY is operated to +/-.

SSM4 screen: [Transmission Control System] →[Select Function] →[Data monitor]

| Item name [Symbol] | Item description Display range | Normal value | Remarks |
|---|---|---|---|
| UP SW | Indicating transmission control switch (+) ON/OFF | Release →pull the shift switch "+" lever. OFF →ON | - |
| DOWN SW | Indicating transmission control switch (-) ON/OFF | Release →pull the shift switch "-" lever. OFF →ON | - |

NG → Go to Step 2.

OK

Inspection for problems that do not normally occur (Refer to IN - 32)

AT

| 2 | Check wiring harness and connector (transmission shift switch - transmission control computer) |
|---|---|

(1) Disconnect the connector A19 of the transmission control computer ASSY.
(2) Check the resistance of the terminals. (Refer to AT - 24for terminal arrangement of transmission control computer ASSY)

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-1 (SFTD) - chassis ground | Shift switch Pull the "+" lever. | Less than 1 Ω |
| A19-1 (SFTD) - chassis ground<br>A19-2 (SFTU) - chassis ground | Neutral position | 10 k Ωor more |
| A19-2 (SFTU) - chassis ground | Shift switch Pull the "-" lever. | Less than 1 Ω |

(3) Connect the connector A19 of the transmission control computer ASSY.

NG → Go to Step 4.

OK

| 3 | Replacement of transmission control computer |
|---|---|

(1) Replace the transmission control computer ASSY. (Refer to AT - 322)

Next

AT unit correction

| 4 | Check wiring harness and connector (spiral cable - chassis ground) |
|---|---|

(1) Disconnect the spiral cable connector A from the spiral cable.
(2) Measure the resistance of the spiral cable vehicle side terminal.
Resistance

| Terminal No. (terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A-7 - chassis ground | Always | Less than 1 Ω |

(3) Connect the spiral cable connector A to the spiral cable.

NG → Check and replacement of wiring harness and connector

OK

| 5 | Check wiring harness and connector (spiral cable - transmission control computer) |
|---|---|

(1) Disconnect the connector A19 of the transmission control computer ASSY.
(2) Disconnect the spiral cable connector A from the spiral cable.
(3) Measure the resistance between the terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-1 (SFTD) - A-2 | Always | Less than 1 Ω |
| A19-2 (SFTU) - A-1 | Always | Less than 1 Ω |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-1 (SFTD) and A-2 - chassis ground | Always | 10 k Ωor more |
| A19-2 (SFTU) and A-1 - chassis ground | Always | 10 k Ωor more |

(4) Connect the connector A19 of the transmission control computer ASSY.
(5) Connect the spiral cable connector A to the spiral cable.

NG → Check and replacement of wiring harness and connector

OK

| 6 | Transmission shift switch check (transmission shift switch - spiral cable) |
|---|---|

CAUTION:
Refer to RS - 5for airbag handling and working precautions.
(1) Remove the driver's airbag module.

NOTE:
Refer to RS - 246for driver's airbag module installation/removal.

(2) Disconnect the connector C of the spiral cable.
(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| C-4 - C-1 | Shift switch<br>Pull the "+" lever. | Less than 1 Ω |
| C-4 - C-1<br>C-3 - C-1 | Shift switch<br>Neutral position | 10 k Ωor more |
| C-3 - C-1 | Shift switch<br>Pull the "-" lever. | Less than 1 Ω |

(4) Connect the connector C of the spiral cable.

NG → Go to Step 7.

OK

Spiral cable SUB-ASSY check (refer to RS - 250)

| 7 | Check of transmission shift switch unit |
|---|---|

(1) Remove the transmission shift switch. (Refer to AT - 212)
(2) Check the transmission shift switch unit. (Refer to AT - 213)

NG → Replacement of transmission shift switch (refer to AT - 212)

OK

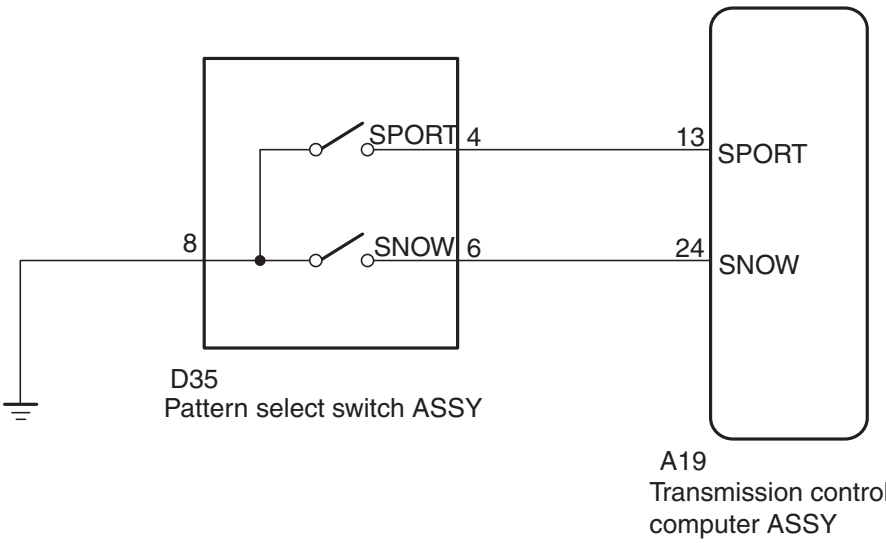
Check and replacement of switch wire (refer to AT - 212)

## Pattern select switch system

Circuit description

Drive mode can be switched by inputting signal of the pattern select switch ASSY to the transmission control computer.

Circuit figure



Inspection steps

AT

| | |
|---|---|
| 1 | Reading of SSM4 data |

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Use SSM4 to display the [Data monitor] screen according to the screen display and check the computer data recorded when the SPORT mode switch is operated.

SSM4 screen: [Transmission Control System] →[Select Function] →[Data monitor]

| Item name<br>[Symbol] | Item description<br>Display range | Normal value | Remarks |
|---|---|---|---|
| SPORT SW | Indicating pattern select (SPORT) switch<br>ON←→OFF | Pattern select (SPORT) switch<br>OFF→ON<br>OFF→ON | - |

NG → Go to Step 3.

OK

| | |
|---|---|
| 2 | Reading of SSM4 data |

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Use SSM4 to display the [Data monitor] screen according to the screen display and check the computer data recorded when the SNOW mode switch is operated.

SSM4 screen: [Transmission Control System] →[Select Function] →[Data monitor]

| Item name [Symbol] | Item description Display range | Normal value | Remarks |
|---|---|---|---|
| SNOW SW | Indicating pattern select (SNOW) switch ON←→OFF | Pattern select (SNOW) switch OFF→ON OFF→ON | - |

NG → Go to Step 6.

OK

Go to the symptom table (Refer to AT - 13)

| 3 | Check of pattern select switch ASSY unit |
|---|---|

(1) Disconnect the connector D35 of pattern select switch ASSY.
(2) Check the pattern select switch ASSY (SPORT switch) unit. (Refer to AT - 215)

NG → Replacement of pattern select switch ASSY (refer to AT - 214)

OK

| 4 | Check wiring harness and connector (pattern select switch - transmission control computer - chassis ground) |
|---|---|

(1) Disconnect the connector A19 of the transmission control computer.
(2) Disconnect the connector D35 of pattern select switch ASSY.
(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-13 (SPORT) - D35-4 (SPORT) | Always | Less than 1 Ω |
| D35-8 - chassis ground | Always | Less than 1 Ω |
| A19-13 (SPORT) - chassis ground | Always | 10 k Ωor more |

(4) Connect the connector A19 of the transmission control computer.
(5) Connect the connector D35 of the pattern select switch ASSY.

NG → Repair or replacement of wiring harness or connector

OK

| 5 | Replacement of transmission control computer ASSY |
|---|---|

(1) Replace the transmission control computer. (Refer to AT - 322)

Next

AT unit correction (refer to AT - 19)

AT

| 6 | Check of pattern select switch ASSY unit |
|---|---|

(1) Disconnect the connector D35 of pattern select switch ASSY.
(2) Check the pattern select switch ASSY (SNOW switch) unit. (Refer to AT - 215)

NG → Replacement of pattern select switch ASSY (refer to AT - 214)

OK

| 7 | Wiring harness or connector check (pattern select switch - transmission control computer - chassis ground) |
|---|---|

(1) Disconnect the connector A19 of the transmission control computer.
(2) Disconnect the connector D35 of pattern select switch ASSY.
(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A19-24 (SNOW) - D35-6 (SNOW) | Always | Less than 1 Ω |
| D35-8 - chassis ground | Always | Less than 1 Ω |
| A19-24 (SNOW) - chassis ground | Always | 10 k Ωor more |

(4) Connect the connector A19 of the transmission control computer.
(5) Connect the connector D35 of the pattern select switch ASSY.

NG → Repair or replacement of wiring harness or connector

OK

| 8 | Replacement of transmission control computer ASSY |
|---|---|

(1) Replace the transmission control computer. (Refer to AT - 322)

Next

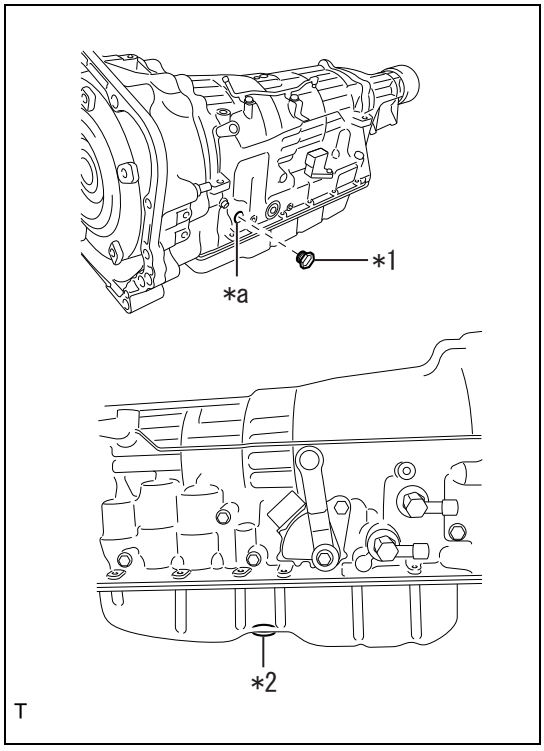
AT unit correction (refer to AT - 19)

AT

# Automatic transmission fluid

## Replacement

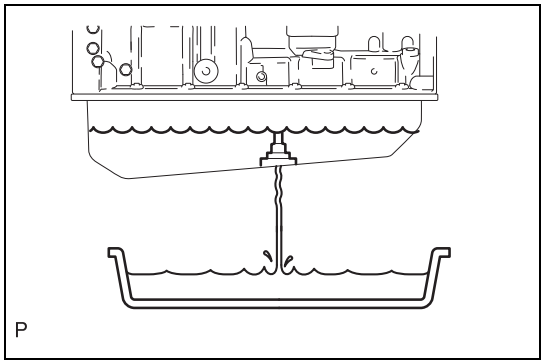
1. Replacement of automatic transmission fluid
   (1) Lift up the vehicle and maintain in a horizontal position. [*1]
   (2) Remove the under cover front AL. (Refer to IE - 39)
   (3) Remove the under cover COMPL T/M. (Refer to IE - 40)
   (4) Remove the drain plug and gasket to drain fluid. [*2]
   (5) Temporarily tighten the drain plug via the gasket. [*3]
   NOTE:
   Perform the replacement of the gasket and final tightening by following procedure [*16].
   (6) Remove the refill plug and the O-ring. [*4]



(7) Use a socket hexagon wrench to remove the overflow plug. [*5]

Captions in illustration

| | |
|---|---|
| *1 | Refill plug |
| *2 | Overflow plug |
| *a | Refill hole |



(8) Add fluid through the refill hole until the fluid flows out of the overflow tube. [*6]
CAUTION:
- Fill in auto fluid WS.
- Slowly add the fluid. Adding the fluid rapidly can cause the fluid to hit internal parts and splash around resulting in fluid flowing out of the refill hole.

(9) Wait until the fluid stops flowing and is only dripping. [*7]
(10) Use a socket hexagon to temporarily tighten the overflow plug via the gasket. [*8]
NOTE:
Perform the replacement of the gasket and final tightening after adjusting the fluid amount.
(11) Add fluid through the refill hole until reaching the specified amount when removing/installing the oil pan. [*9]
Specified amount: 2.0 L {2.1 US qt, 1.8 Imp qt}

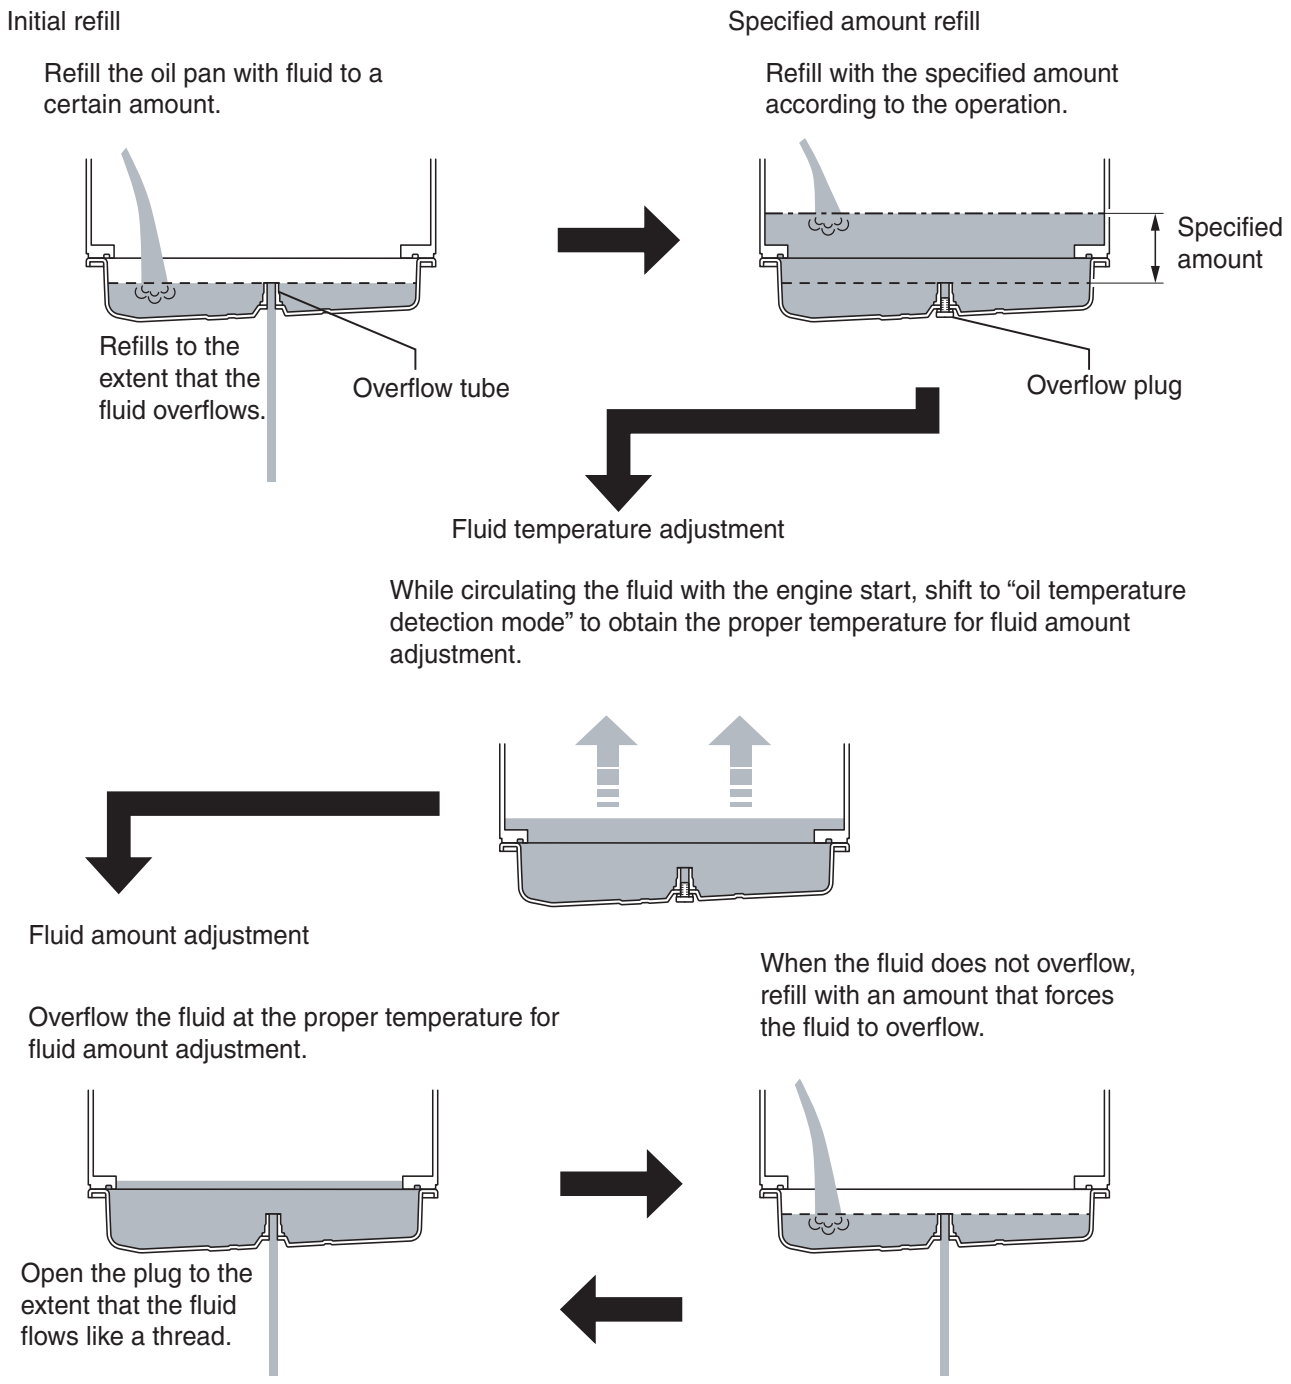
AT

NOTE:
If fluid flows out from the refill hole and you cannot fill the specified amount when adding fluid through the refill hole, perform procedures [*10] to [*15] below in order to circulate fluid until it reaches the oil passages in the transmission and inside the torque converter, then add the specified amount of fluid through the refill hole.

(12) Temporarily tighten the refill plug via the O-ring. [*10]
NOTE:
Perform the replacement of the O-ring and final tightening after adjusting the fluid amount.
(13) Lower the vehicle. [*11]
(14) Start the engine. [*12]
NOTE:
Start the engine with the A/C turned OFF.
(15) Move the select lever from P position to M position slowly, and shift it to P position again. [*13]
(16) Idle the engine for 30 seconds to warm up the engine. [*14]
(17) Turn the ignition switch to OFF. [*15]
(18) Repeat operations [*1] to [*15].
(19) Perform operations [*1] to [*2].
(20) Install the drain plug via a new gasket. [*16]
Standard value: T=20N·m {204kgf·cm} {14.8ft·lbf}
(21) Perform operations [*4] to [*11].
(22) Adjust the fluid amount. (Refer to AT - 163)
(23) Install the under cover COMPL T/M. (Refer to IE - 46)
(24) Install the under cover front AL. (Refer to IE - 46)
(25) Lower the vehicle.
(26) Operation finished.

## Adjustment

Fluid refill and adjustment image:



NOTE:

- Fill in auto fluid WS.
- Be sure to always park the vehicle on a level surface when adjusting the fluid amount.
- When a large amount of fluid filling is required for operations including replacement of automatic transmission ASSY, removal/installation and replacement of oil pan and drain plug, and replacement of torque converter ASSY, perform operations of [Filling of automatic transmission fluid] to [Adjustment of automatic transmission fluid amount].
- When a small amount of fluid filling is required for operations including replacement of extension housing rear oil seal and repair of oil bleeds, perform only [Adjustment of automatic transmission fluid amount].

1. Filling of automatic transmission fluid

CAUTION:

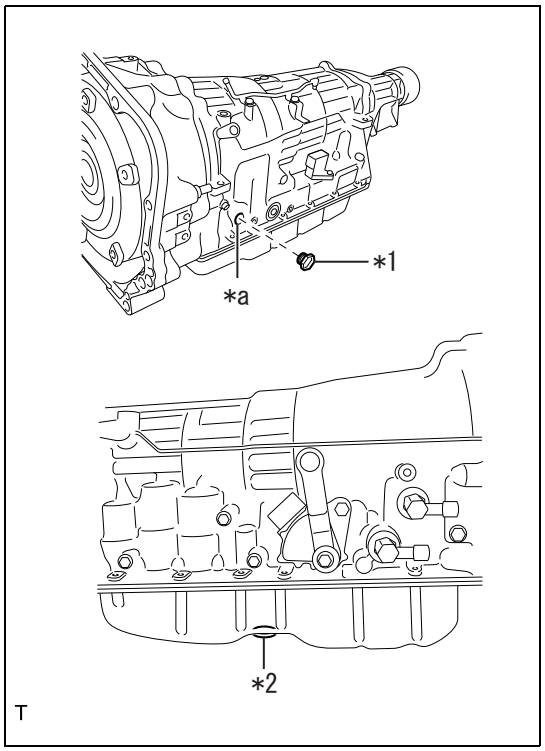
- Perform procedures when the automatic transmission fluid is sufficiently cool.
- Be sure to fill the automatic transmission fluid after switching to oil amount adjustment mode.
- Slowly add the fluid. Adding the fluid rapidly can cause the fluid to hit internal parts and splash around resulting in fluid flowing out of the refill hole.

(1) Lift up the vehicle and maintain in a horizontal position.

(2) Remove the under cover front AL. (Refer to IE - 39)

(3) Remove the under cover COMPL T/M. (Refer to IE - 40)

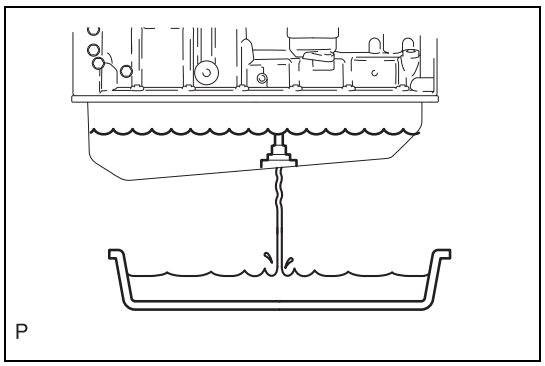
(4) Remove the refill plug and the O-ring.



(5) Use a socket hexagon wrench to remove the overflow plug.

Captions in illustration

| | |
|---|---|
| *1 | Refill plug |
| *2 | Overflow plug |
| *a | Refill hole |



(6) Add fluid through the refill hole until the fluid flows out of the overflow tube.

CAUTION:

Slowly add the fluid. Adding the fluid rapidly can cause the fluid to hit internal parts and splash around resulting in fluid flowing out of the refill hole.

(7) Wait until the fluid stops flowing and drops.

(8) Use a socket hexagon wrench to temporarily tighten the overflow plug.

NOTE:

Perform the replacement of the gasket and final tightening after adjusting the fluid amount.

(9) Fill the specified amount of fluid from the refill hole.

Specified amount

| Related operation | Filling amount (reference) |
|---|---|
| Removal/installation of oil pan and drain plug | 2.0 L {2.1 US qt, 1.8 Imp qt} |
| Installation/removal of transmission valve body ASSY | 3.0 L {3.2 US qt, 2.6 Imp qt} |

| Related operation | Filling amount (reference) |
|---|---|
| Replacement of torque converter | 4.5 L {4.8 US qt, 4.0 Imp qt} |

NOTE:

If fluid flows out from the refill hole and you cannot fill with the specified amount when adding fluid through the refill hole, perform the following procedures to circulate fluid until it reaches the oil passages in the transmission and inside the torque converter.

(a) Temporarily tighten the refill plug.

NOTE:

Perform the replacement of the O-ring and final tightening after adjusting the fluid amount.

(b) Start the engine.

(c) Move the select lever from P position to M position slowly, and shift it to P position again.

(d) Idle the engine for approx. 30 seconds.

(e) Turn the ignition switch to OFF.

2. Automatic transmission fluid amount adjustment

CAUTION:

- Be sure to adjust the amount of automatic transmission fluid when the fluid temperature is appropriate for the oil amount adjustment.
- Perform procedures when the automatic transmission fluid is sufficiently cool.

(1) When using SSM4

(a) Connect the SSM4 to data link connector.

(b) Turn the ignition to ON. (Engine OFF)

(c) Turn off all parts effecting an electrical load such as air conditioner, audio and lights.

(d) Select [Work Support] on the [Select Function] screen of SSM4. Select [ATF level adjustment mode] on the [Work Support] screen of SSM4.

NOTE:

If the ATF temperature is 42°C (107.6°F) or more, perform the procedure again after lowering the ATF temperature by leaving the vehicle in a cool place.

(e) While checking the ATF temperature on the screen of SSM4, raise the oil temperature by idling.

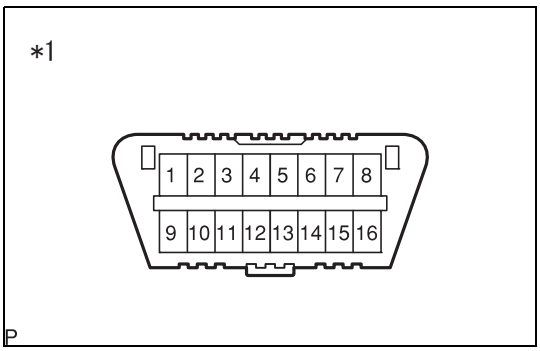
(f) Adjust the oil amount as soon as the oil reaches the appropriate temperature for the oil amount adjustment of 42°C (107.6°F).

CAUTION:

Be sure to adjust ATF (tightening the overflow plug) when the oil temperature is proper.

| Lower than proper oil temperature | Proper oil temperature | Higher than proper oil temperature |
|---|---|---|
| 43°C<br>Less than (109.4°F) | 43°C to 47°C<br>(109.4°F to 116.6°F) | 48°C<br>(118.4°F) or higher |

(2) When TC terminal is shorted



(a) Short No.13 and No.4 of the data link connector.

Captions in illustration

| | |
|---|---|
| *1 | Data link connector |

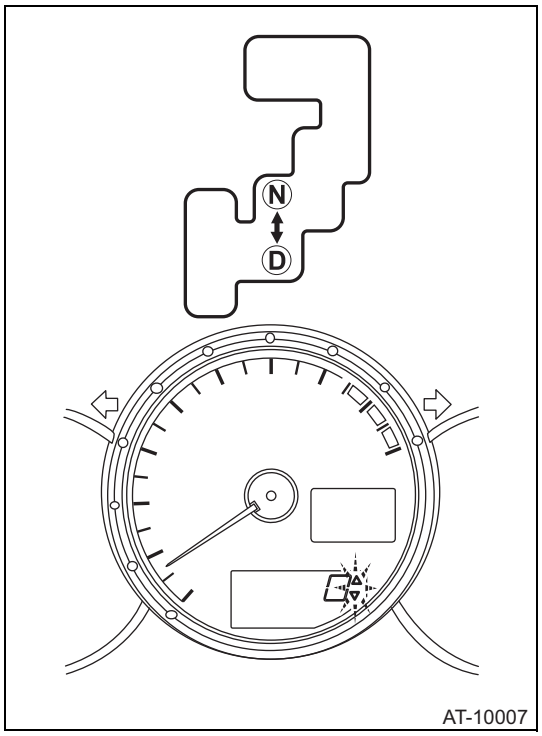
(b) Start the engine.

(c) Turn off all parts effecting an electrical load such as air conditioner, audio and lights.

(d) Operate the select lever in P→R→N→D→M→D→N→R→P to circulate ATF in the transmission.

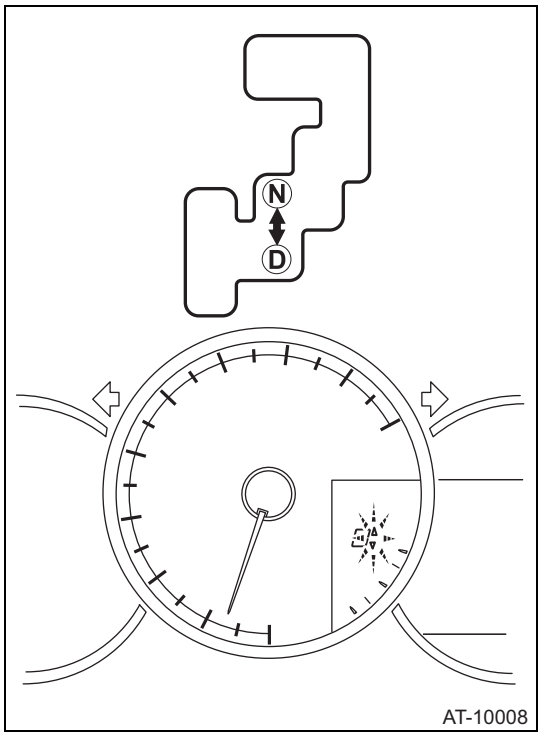
(e) Perform N←→D operation within 1.5 seconds for 6 seconds or more consecutively to switch to the oil temperature adjustment mode. When the oil temperature adjustment mode is activated, the up-shift permission indicator light [▲]/

down-shift permission indicator light [▼] in the combination meter illuminate for 2 seconds and go off simultaneously regardless of the range position.



AT-10007

AT



AT-10008

(f) After switching to oil temperature adjustment mode, shift the select lever to "P" position.

(g) Release short in No.13 and No.4 of the data link connector.

(h) Check the up-shift permission indicator light [▲]/down-shift permission indicator light [▼] status.

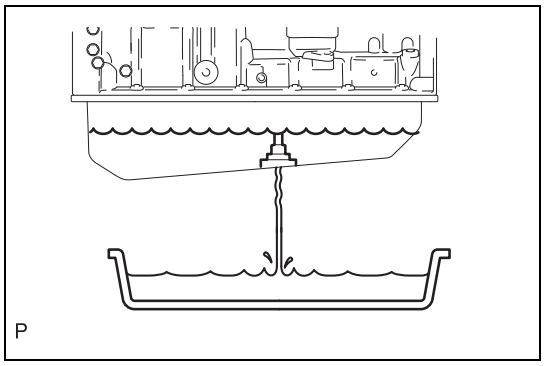
CAUTION:

When only the indicator light [▲] turns on or both [▲] and [▼] simultaneously turn on, stop the operation and leave the vehicle in a cool place to lower the ATF temperature. Wait until only the down-shift permission indicator light [▼] turns on when oil amount adjustment mode is activated, and then repeat the procedure from step (a).

(i) Adjust the oil amount as soon as the oil reaches the appropriate temperature for the oil amount adjustment.

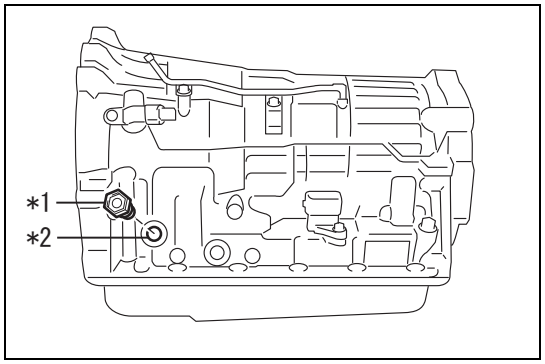
CAUTION:
Be sure to adjust ATF when the oil temperature is proper.

| Lower than proper oil temperature | Proper oil temperature | Higher than proper oil temperature |
|---|---|---|
| Only indicator light [▼] turns on. | Indicator lights [▲] and [▼] turn on simultaneously. | Only indicator light [▲] turns on. |



(3) Use a socket hexagon to remove the overflow plug, and check the oil amount when the temperature is appropriate for oil amount check.
- The oil amount is proper when fluid flows out of the overflow tube and then the flow of the fluid is thin.
- If fluid does not flow out of the overflow tube, fill through the refill hole until fluid flows out of the overflow tube. The oil amount is proper when the flow of the fluid is thin.

(4) Use a socket hexagon to install the overflow plug via a new gasket.
Standard value:T=20N·m {204kgf·cm} {14.8ft·lbf}
CAUTION:
Be sure to tighten the overflow plug when ATF temperature is 43°C to 47°C (109.4°F to 116.6°F) (when the indicator lights [▲] and [▼] turn on simultaneously).



(a)Tighten the refill plug via a new O-ring.

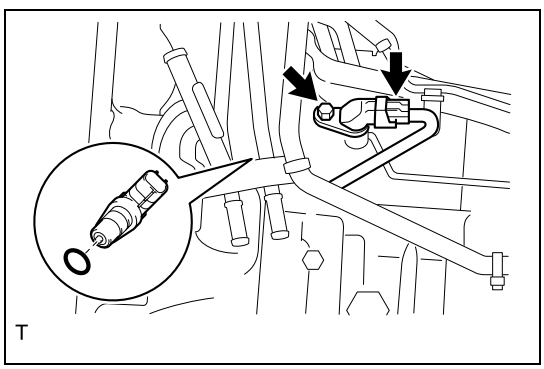
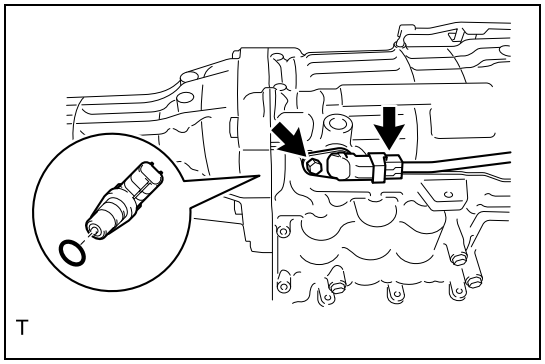
## Removal

1. Removal of under cover front AL (refer to IE - 39)
2. Removal of under cover COMPL T/M (refer to IE - 40)



3. Removal of transmission revolution sensor (NT)
   (1) Disconnect the connector.
   (2) Remove the bolt, and then remove the transmission revolution sensor (NT) and the O-ring.



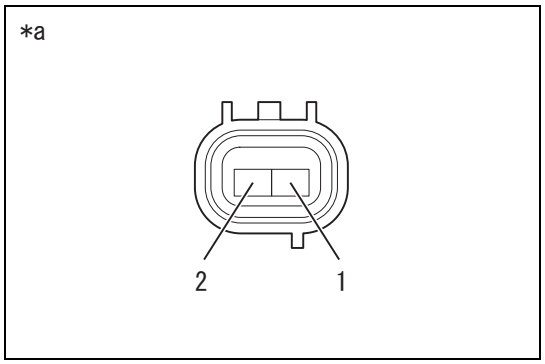
4. Removal of transmission revolution sensor (SP2)
   (1) Remove the automatic transmission ASSY. (Refer to AT - 220)
   (2) Disconnect the connector.
   (3) Remove the bolt, and then remove the transmission revolution sensor (SP2) and the O-ring.

## Installation

1. Installation of transmission revolution sensor (SP2)
   (1) Apply auto fluid WS to a new O-ring and install it to the transmission revolution sensor (SP2).
   (2) Install the transmission revolution sensor (SP2) with the bolt.
   Standard value:T=5.4 N·m {55 kgf·cm} {4.0 ft-lbf}
   (3) Connect the connector.
   (4) Install the automatic transmission ASSY. (Refer to AT - 227)
2. Installation of transmission revolution sensor (NT)
   (1) Apply auto fluid WS to a new O-ring and install it to the transmission revolution sensor (NT).
   (2) Install the transmission revolution sensor (NT) with the bolt.
   Standard value:T=5.4 N·m {55 kgf·cm} {4.0 ft-lbf}
   (3) Connect the connector.
3. Installation of under cover COMPL T/M (refer to IE - 46)
4. Installation of under cover front AL (refer to IE - 46)
5. Data monitor check
   (Refer to AT - 29)

AT

## Unit inspection



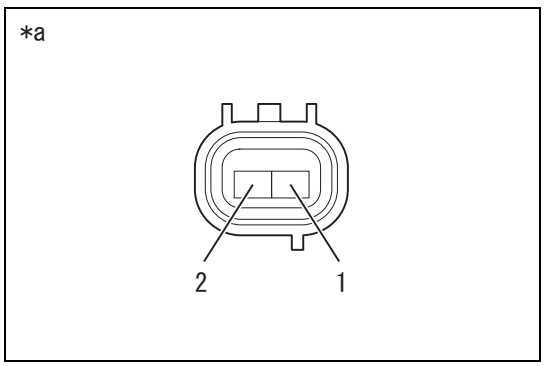
1. Transmission revolution sensor (SP2) check
   (1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Terminal 1 - terminal 2 | 20°C (68°F) | 560 to 680Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Transmission revolution sensor (SP2)) |



2. Check of transmission revolution sensor (NT)
   (1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Terminal 1 - terminal 2 | 20°C (68°F) | 560 to 680Ω |

Captions in illustration

| | |
|---|---|

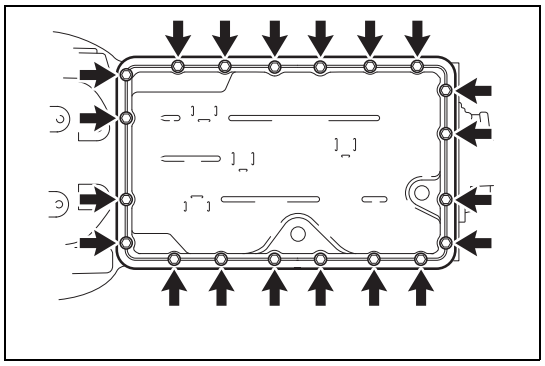
AT

## Removal

1. Removal of automatic transmission ASSY
   (Refer to AT - 220)



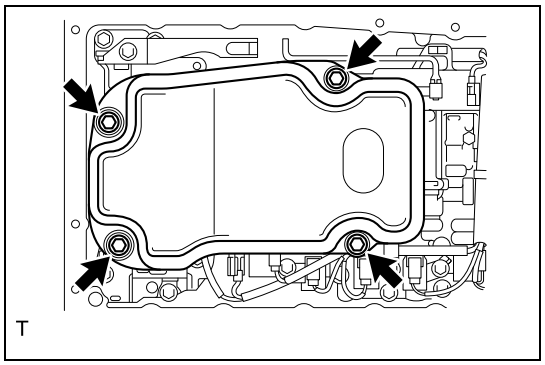
2. Removal of transmission oil pan SUB-ASSY (ATM)
   (1) Remove 20 bolts to remove the transmission oil pan SUB-ASSY (ATM).
   (2) Remove the gasket.

   (3) Remove 3 magnets from the transmission oil pan SUB-ASSY (ATM).

Captions in illustration

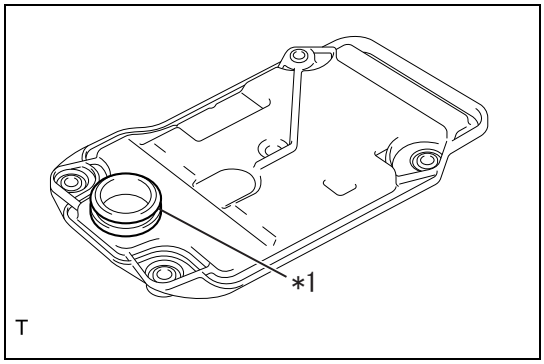
| | |
|---|---|
| *1 | Magnet |

CAUTION:
- Wash metal particles, sludge, etc. off the inner surface of the transmission oil pan SUB-ASSY (ATM).
- Clean metal particles off the magnets.



3. Removal of valve body oil strainer ASSY
   (1) Remove 4 bolts to remove the valve body oil strainer ASSY.
   CAUTION:
   Set a tray under it to receive discharged transmission fluid.

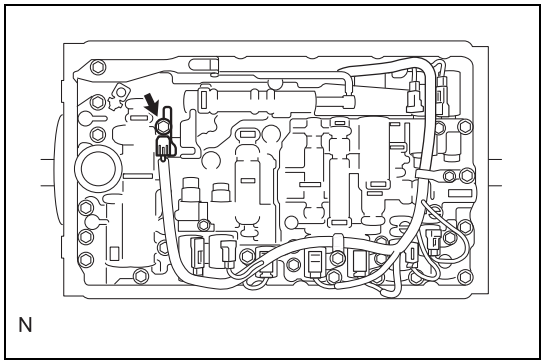
T



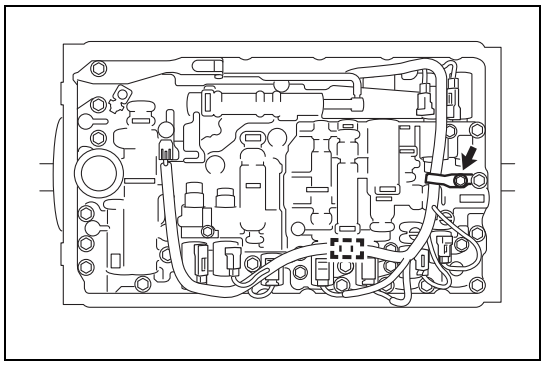
(2) Remove the O-ring from the valve body oil strainer ASSY.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

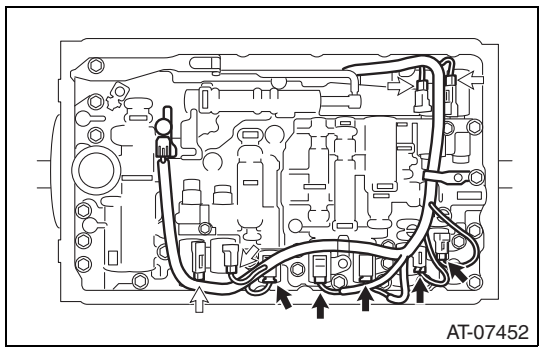


4. Disconnection of transmission wire
   (1) Remove the bolt and lock plate, and then disconnect the oil temperature sensor from the transmission valve body ASSY.

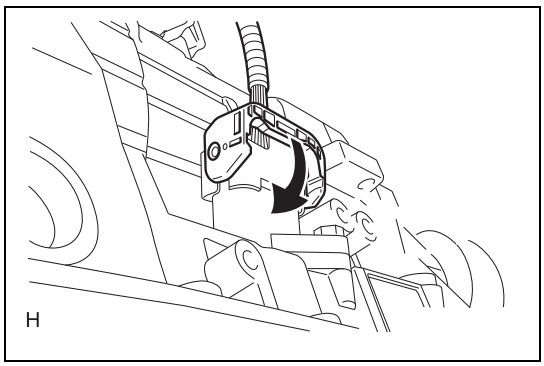


(2) Remove the bolt to remove the clamp from the valve body ASSY.
(3) Disconnect the wiring harness from the clamp.

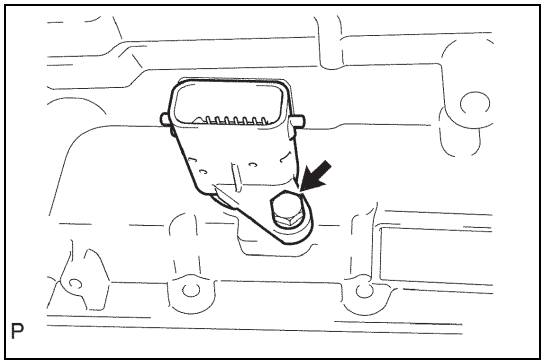
AT



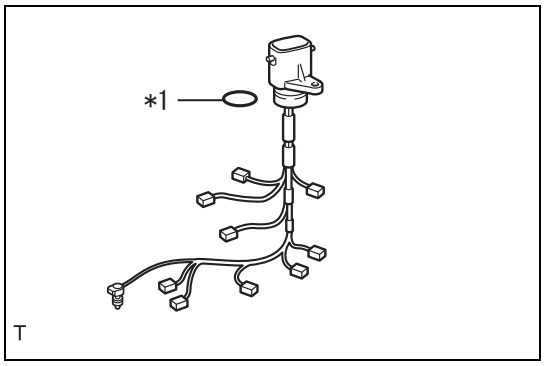
(4) Disconnect 9 connectors from each solenoid valve and disconnect the transmission wire from the transmission valve body ASSY.
NOTE:
Use a thin-tipped flat tip screwdriver for the connector indicated by the white arrow to disconnect the control solenoid connector.



5. Removal of transmission wire
   (1) Disconnect the transmission wire connector.
   NOTE:
   Release the claw and tilt the lever downward to disconnect the connector of the transmission wire.



(2) Remove the bolt and pull out the transmission wire from the transmission valve body ASSY.



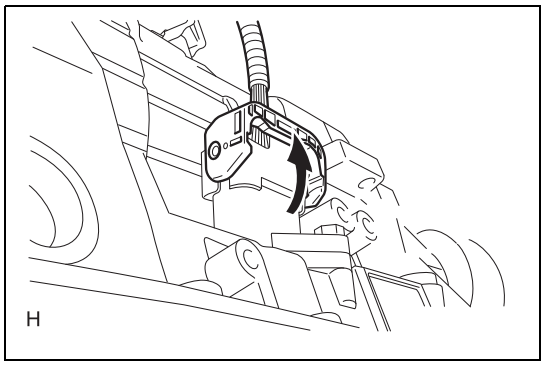
(3) Remove the O-ring from the transmission wire connector.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

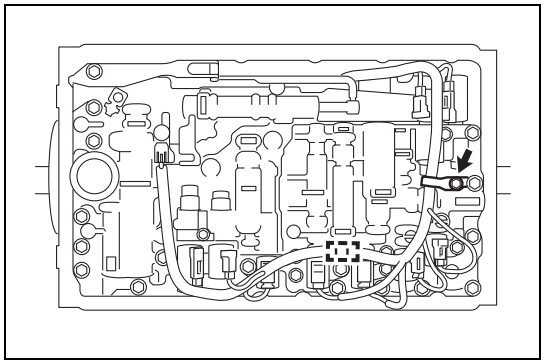
## Installation

1. Installation of transmission wire
   (1) Apply auto fluid WS to a new O-ring and install it to the oil temperature sensor.
   (2) Apply auto fluid WS to a new O-ring and install it to the transmission wire connector.
   (3) Draw the transmission wire through the transmission wire connector mounting slot of the transmission valve body ASSY.
   (4) Install the transmission wire connector with the bolt.
   Standard value:T=5.4N·m {55kgf·cm} {4.0ft·lbf}



(5) Connect the connector of the transmission wire.
NOTE:
For the transmission wire connector, push up the lever until a sound indicating the claw is hooked is heard.

2. Connection of transmission wire
   (1) Connect the 9 connectors to each solenoid valve.



(2) Install the wiring harness clamp bracket with the bolt.
Standard value:T=6.4N·m {65kgf·cm} {4.7ft·lbf}

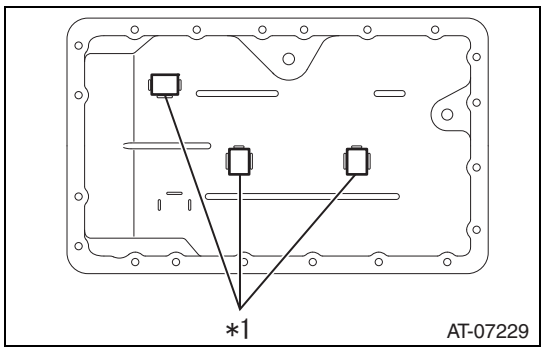
(3) Install the wiring harness to the clamp.

(4) Connect the oil temperature sensor to the transmission valve body ASSY with the lock plate and bolt.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

3. Installation of valve body oil strainer ASSY

(1) Apply auto fluid WS to the entire circumference of a new O-ring and install it to the valve body oil strainer ASSY.

(2) Install the valve body oil strainer ASSY to the transmission valve body ASSY with 4 bolts.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}



4. Installation of transmission oil pan SUB-ASSY (ATM)

(1) Install 3 magnets on the transmission oil pan SUB-ASSY (ATM).

Captions in illustration

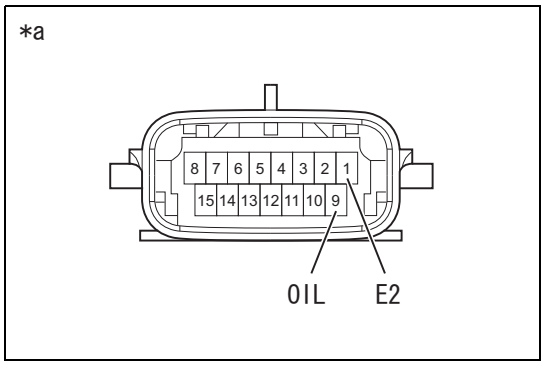
| | |
|---|---|
| *1 | Magnet |

(2) Install a new gasket on the transmission oil pan SUB-ASSY (ATM).

(3) Install the transmission oil pan SUB-ASSY (ATM) to the transmission case with 20 bolts.
Standard value:T=7.0N·m {71kgf·cm} {5.2ft·lbf}

5. Installation of automatic transmission ASSY
(Refer to AT - 227)

## Unit inspection



1. Transmission wire (oil temperature sensor) check

(1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 9(OIL) - 1(E2) | Always | 79Ω to 156kΩ |
| 9 (OIL) - chassis ground | Always | 10 k Ωor more |
| 1 (E2) - chassis ground | Always | 10 k Ωor more |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Transmission wire (oil temperature sensor)) |

NOTE:

If the resistance is out of the oil temperature range in the table below, the handling performance of the vehicle may be degraded.

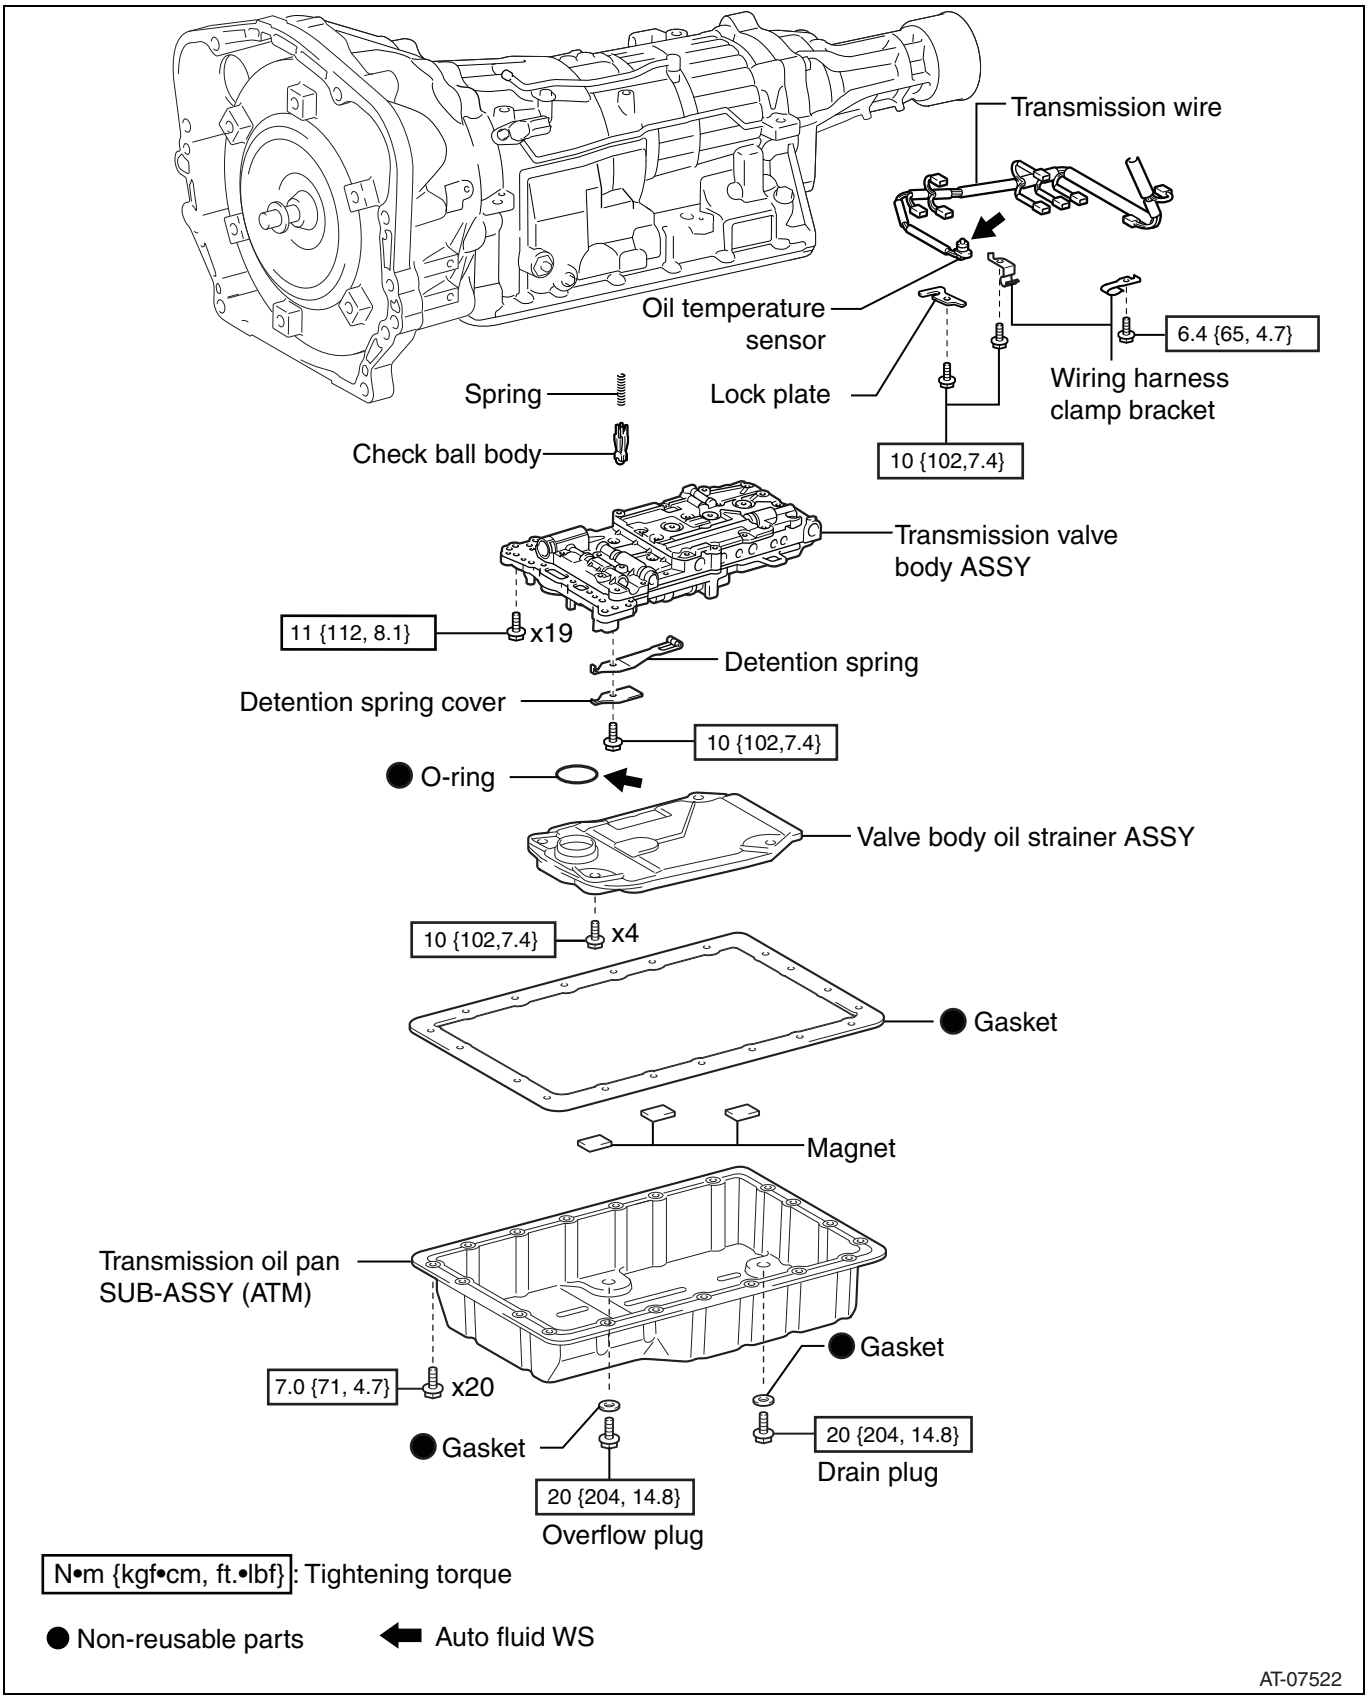
Resistance

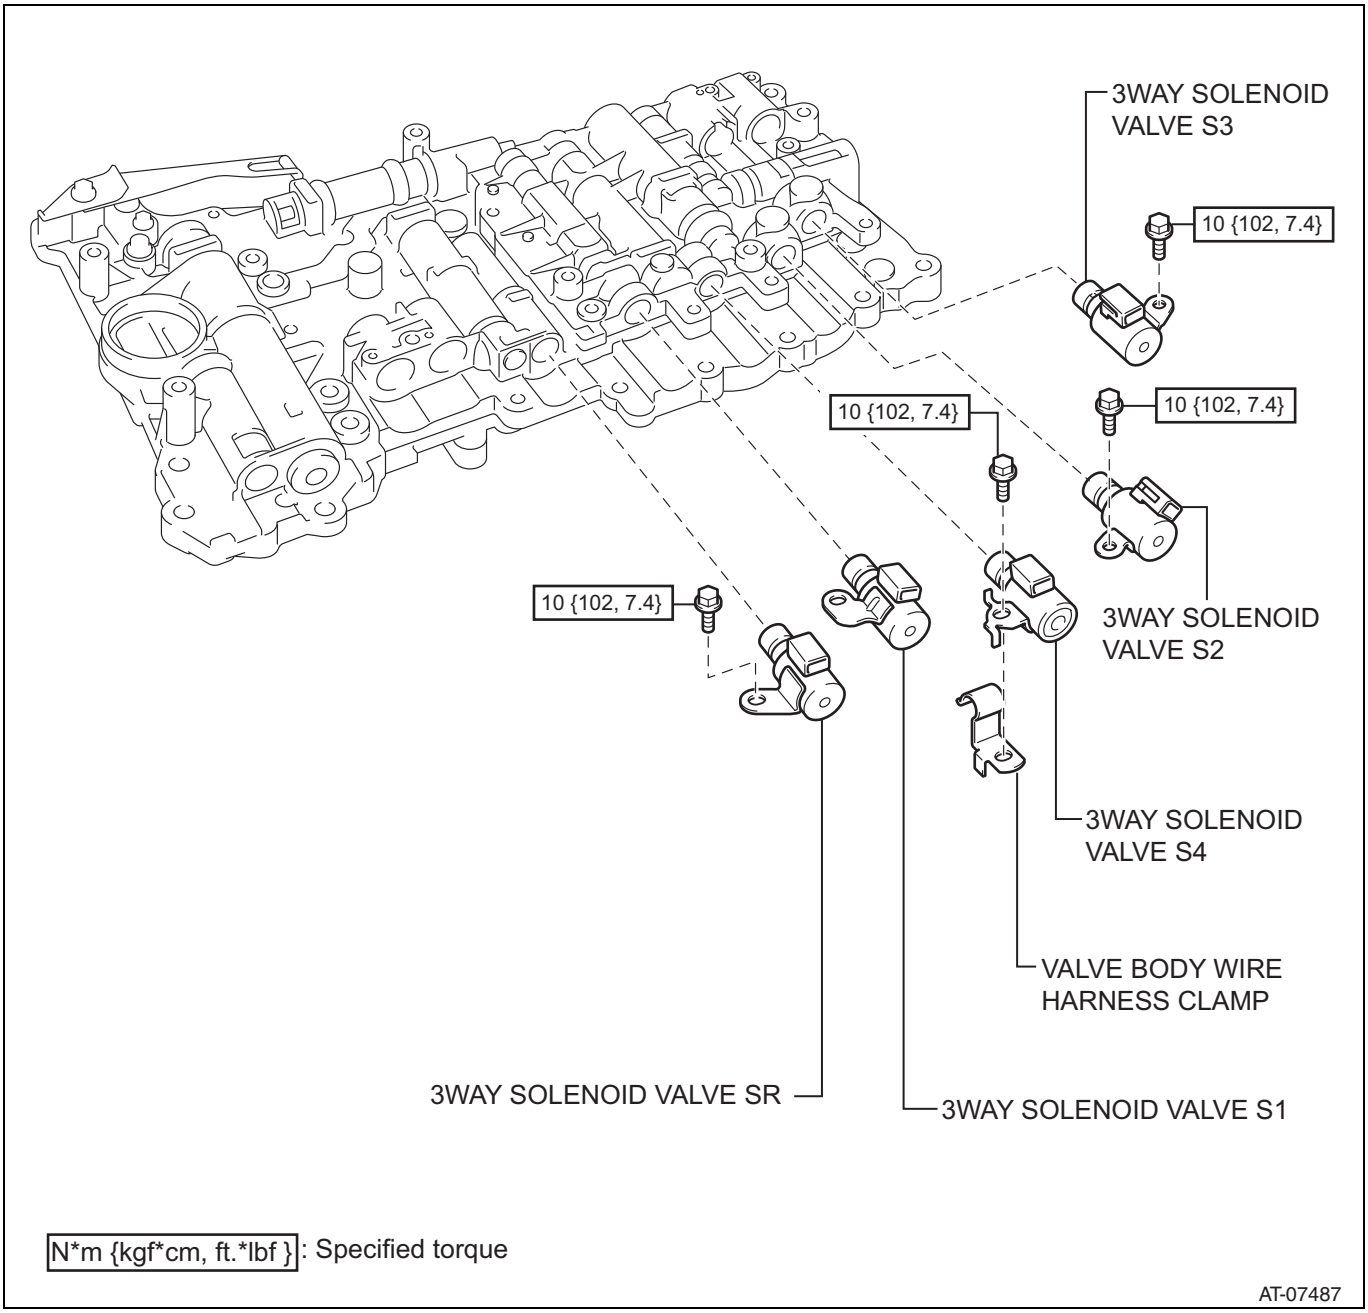
| Oil temperature | Standard value |
|---|---|
| 10°C (50°F) | 5 to 8kΩ |
| 25°C (77°F) | 2.5 to 4.5kΩ |
| 110°C (230°F) | 0.22 to 0.28kΩ |

AT

# Transmission valve body ASSY

## Exploded view

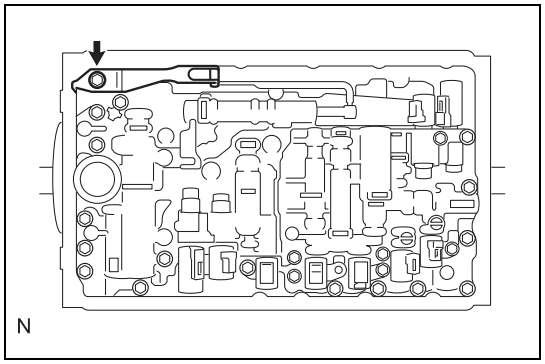




AT

## Removal

1. Disconnection of the battery ground terminal (Refer to BH - 31)
2. Removal of exhaust pipe SUB-ASSY FR
   (Refer to IE - 39)
3. Draining of automatic transmission fluid
   (1) Remove the drain plug and gasket to drain automatic transmission fluid.
   (2) Install the drain plug via a new gasket.
   Standard value:T=20N·m {204kgf·cm} {14.8ft·lbf}
4. Transmission oil pan SUB-ASSY (ATM) removal (refer to AT - 172)
5. Removal of valve body oil strainer ASSY (refer to AT - 172)
6. Disconnection of transmission wire (refer to AT - 173)



7. Removal of transmission valve body ASSY
   (1) Remove the bolt and then remove the detent spring cover and detent spring.

   (2) Remove 19 bolts to remove the transmission valve body ASSY from the automatic transmission case SUB-ASSY.

   (3) Remove the lever pin from the manual valve to remove the transmission valve body ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Lever pin |
| *2 | Manual valve |

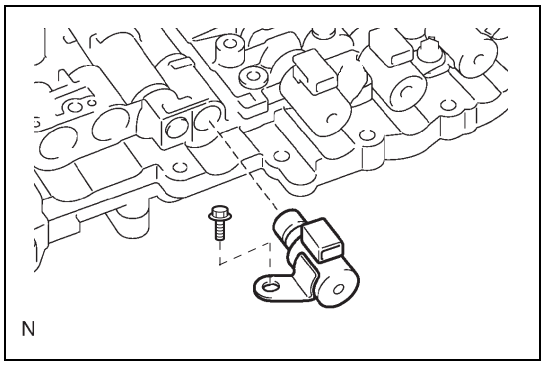
   (4) Remove the check ball body and spring.

Captions in illustration

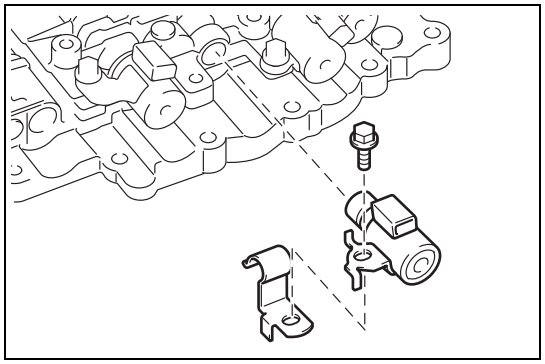
| | |
|---|---|
| *1 | Check ball body |
| *2 | Spring |

CAUTION:
Be careful not to drop and lose the check ball body.

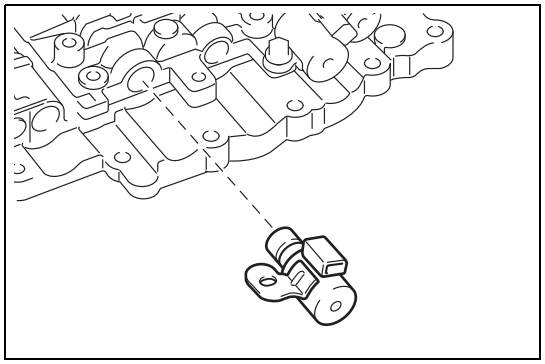
## Disassembly



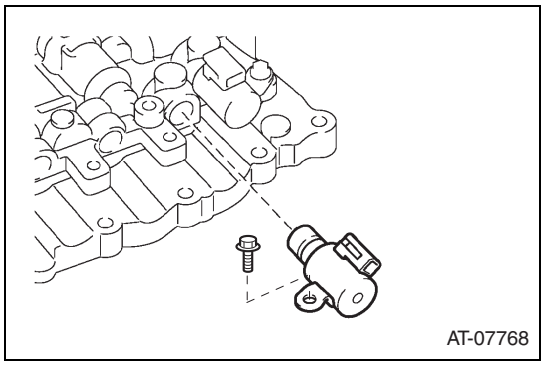
1. Removal of transmission 3 way solenoid ASSY (SR)
   (1) Remove the bolt to remove the transmission 3 way solenoid ASSY (SR).



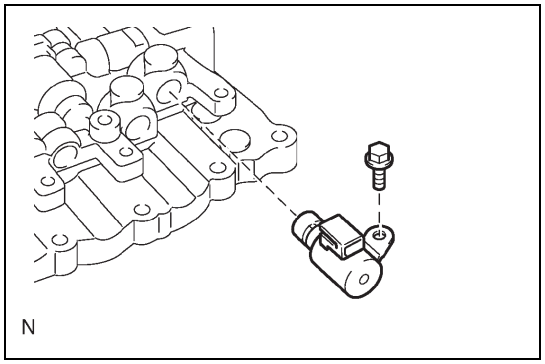
2. Removal of transmission 3 way solenoid ASSY (S4)
   (1) Remove the bolt to remove the transmission 3 way solenoid ASSY (S4) and harness clamp.



3. Removal of transmission 3 way solenoid ASSY (S1)
   (1) Remove the transmission 3 way solenoid ASSY (S1).

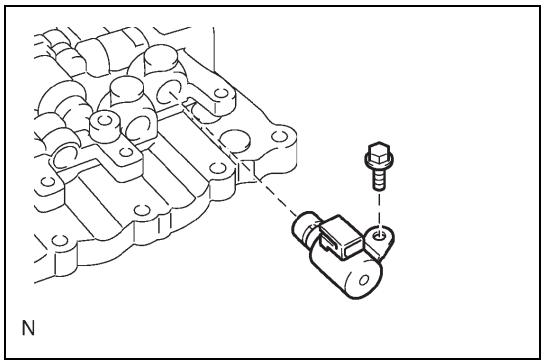


4. Removal of transmission 3 way solenoid ASSY (S2)
   (1) Remove the transmission 3 way solenoid ASSY (S2).

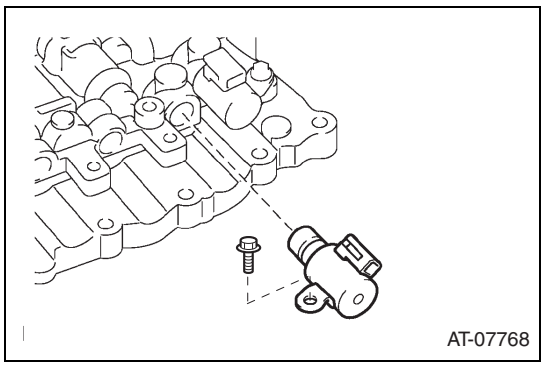


5. Removal of transmission 3 way solenoid ASSY (S3)
   (1) Remove the bolt to remove the transmission 3 way solenoid ASSY (S3).

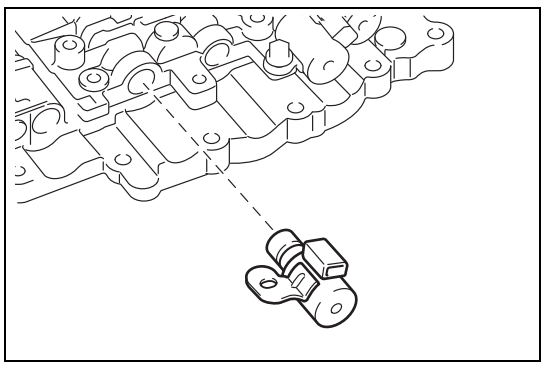
## Assembly



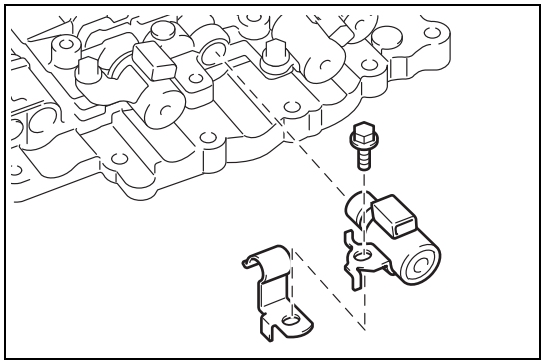
1. Installation of transmission 3 way solenoid ASSY (S3)
   (1) Install the transmission 3 way solenoid ASSY (S3) with a bolt.
   Standard value:T=10N·m {102kgf·cm} {7ft·lbf}



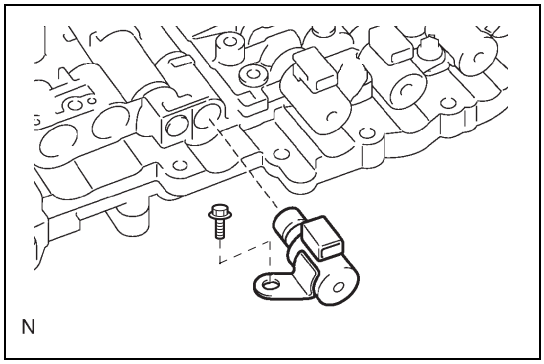
2. Installation of transmission 3 way solenoid ASSY (S2)
   (1) Install the transmission 3 way solenoid ASSY (S2).
   Standard value:T=10N·m {102kgf·cm} {7ft·lbf}



3. Installation of transmission 3 way solenoid ASSY (S1)
   (1) Install the transmission 3 way solenoid ASSY (S1).



4. Installation of transmission 3 way solenoid ASSY (S4)
   (1) Install the transmission 3 way solenoid ASSY (S4) and harness clamp with a bolt.
   Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}
   CAUTION:
   Do not contact the S1 solenoid connector with the bolt when tightening the bolt.



5. Installation of transmission 3 way solenoid ASSY (SR)
   (1) Install the transmission 3 way solenoid ASSY (SR) with a bolt.
   Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

## Installation

1. Installation of transmission valve body ASSY
   (1) Insert the spring and the check ball body into the transmission case.

   (2) Make sure that the accumulator piston, spring, and check ball body are installed to the transmission case.

Captions in illustration

| | |
|---|---|
| *1 | Check ball body |
| *2 | Accumulator piston |

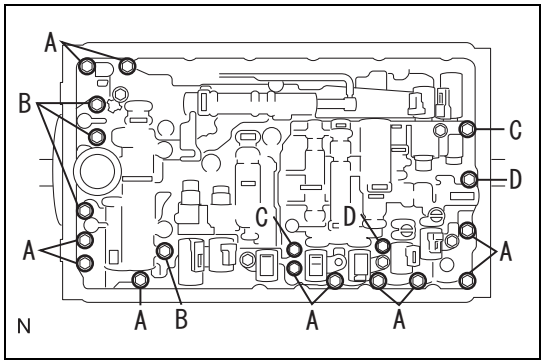
NOTE:
If the accumulator piston, spring, and check ball body come off, apply auto fluid WS and install them.

   (3) Connect the lever pin to the manual valve hole.

Captions in illustration

| | |
|---|---|
| *1 | Lever pin |
| *2 | Manual valve |

AT

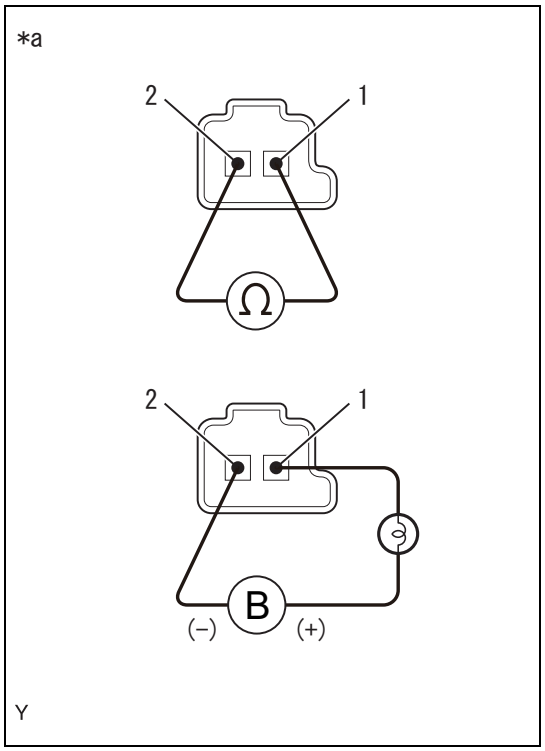


(4) Install the transmission valve body ASSY with 19 bolts.
Standard value:T=11N·m {112kgf·cm} {8.1ft·lbf}
NOTE:
Bolt under head length:
- 25 mm {0.984 in} (Bolt A)
- 36 mm {1.417 in} (Bolt B)
- 45 mm {1.772 in} (Bolt C)
- 50 mm {1.969 in} (Bolt D)

(5) Install the detent spring and detent spring cover with a bolt.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

2. Transmission wire connection (refer toAT - 174)
3. Installation of valve body oil strainer ASSY (refer to AT - 175)
4. Installation of transmission oil pan SUB-ASSY (ATM) (refer to AT - 175)
5. Installation of exhaust pipe SUB-ASSY FR (refer to IE - 44)
6. Connection of battery ground terminal (refer to BH - 35)
7. Fill of automatic transmission fluid (refer to AT - 163)

## Unit inspection



1. Check of clutch control solenoid No.1 (SL2)
(1) Measure the resistance between the terminals.

Resistance

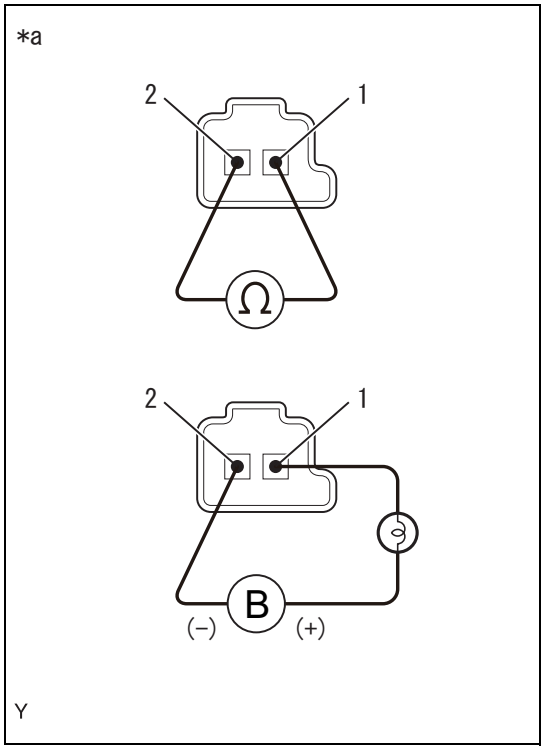
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Clutch control solenoid No.1 (SL2) terminal 1 - terminal 2 | 20°C (68°F) | 5.0 to 5.6Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Clutch control solenoid No.1 (SL2)) |

(2) Connect the battery positive to terminal 1 of the clutch control solenoid No.1 (SL2) via the 12 V-21 W valve and check that the valve in the solenoid operates when connecting the battery ground to terminal 2.
Criteria: Operates (with operating noise)

AT



2. Check of lock-up control solenoid (SLU)
   (1) Measure the resistance between the terminals.

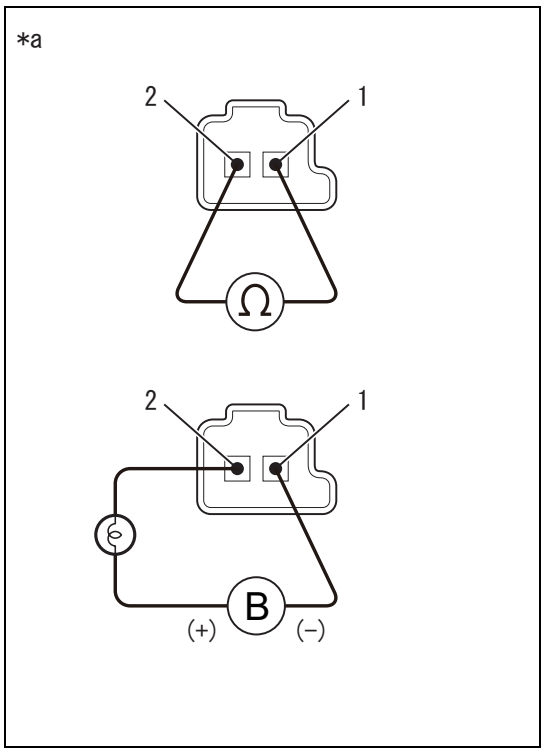
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Lock-up control solenoid (SLU) terminal 1 - terminal 2 | 20°C (68°F) | 5.0 to 5.6Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Lock-up control solenoid (SLU)) |

   (2) Connect the battery positive to terminal 2 of the lock-up control solenoid (SLU) via the 12 V-21 W valve and check that the valve in the solenoid operates when connecting the battery ground to terminal 1.
   Criteria: Operates (with operating noise)



3. Check of line pressure control solenoid ASSY (SLT)
   (1) Measure the resistance between the terminals.

Resistance

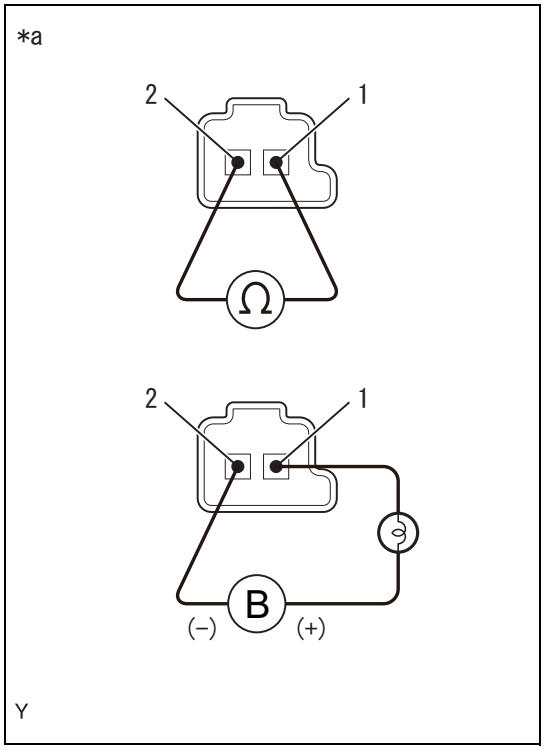
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Line pressure control solenoid ASSY (SLT) terminal 1 - terminal 2 | 20°C (68°F) | 5.0 to 5.6Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Line pressure control solenoid ASSY (SLT)) |

   (2) Connect the battery positive to terminal 2 of the line pressure control solenoid ASSY (SLT) via the 12 V-21 W valve and check that the valve in the solenoid operates when connecting the battery ground to terminal 1.
   Criteria: Operates (with operating noise)

AT



4. Check of clutch control solenoid No.1(SL1)
   (1) Measure the resistance between the terminals.

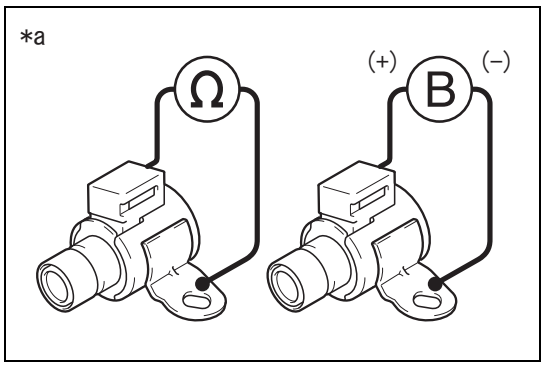
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Clutch control solenoid No.1 (SL1) terminal 1 - terminal 2 | 20°C (68°F) | 5.0 to 5.6Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Clutch control solenoid No.1 (SL1)) |

   (2) Connect the battery positive to terminal 1 of the clutch control solenoid No.1 (SL1) via the 12 V-21 W valve and check that the valve in the solenoid operates when connecting the battery ground to terminal 2.
   Criteria: Operates (with operating noise)



5. Check of transmission 3 way solenoid ASSY (SR)
   (1) Measure the resistance between the terminals.

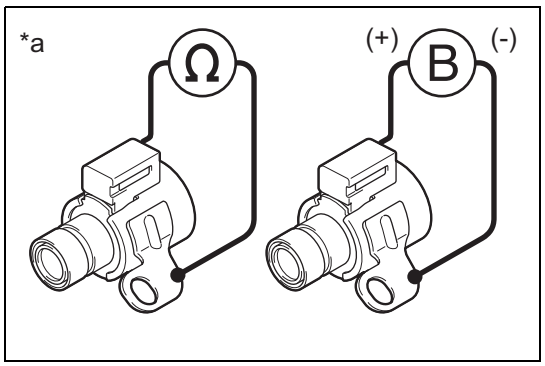
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Transmission 3 way solenoid ASSY (SR) connector - body | 20°C (68°F) | 11 to 15Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Transmission 3 way solenoid ASSY (SR)) |

   (2) Connect the battery positive to the connector of the transmission 3 way solenoid ASSY (SR) and check that the valve in the solenoid operates when connecting the battery ground to the solenoid body.
   Criteria: Operates (with operating noise)



6. Check of transmission 3 way solenoid ASSY (S1)
   (1) Measure the resistance between the terminals.

Resistance

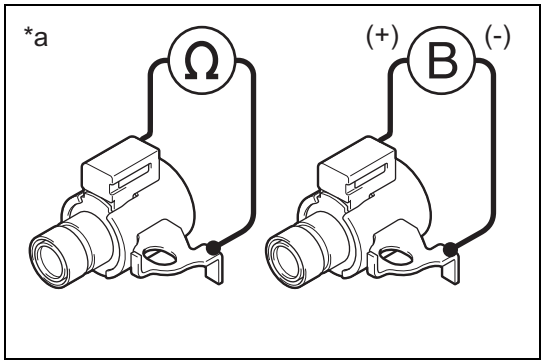
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Transmission 3 way solenoid ASSY (S1) connector - body | 20°C (68°F) | 11 to 15Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Transmission 3 way solenoid ASSY (S1)) |

   (2) Connect the battery positive to the connector of the transmission 3 way solenoid ASSY (S1) and check that the valve in the solenoid operates when connecting the battery ground to the solenoid body.
   Criteria: Operates (with operating noise)

AT



7. Check of transmission 3 way solenoid ASSY (S4)
   (1) Measure the resistance between the terminals.

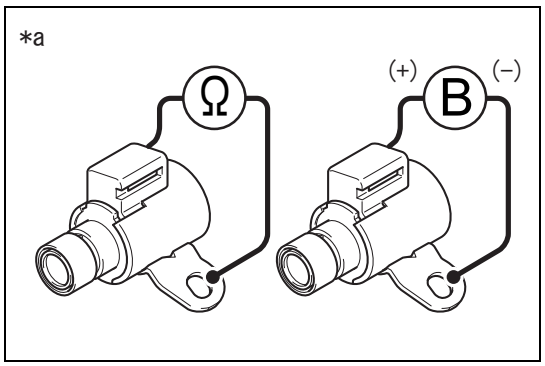
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Transmission 3 way solenoid ASSY (S4) connector - body | 20°C (68°F) | 11 to 15Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Transmission 3 way solenoid ASSY (S4)) |

   (2) Connect the battery positive to the connector of the transmission 3 way solenoid ASSY (S4) and check that the valve in the solenoid operates when connecting the battery ground to the solenoid body.
   Criteria: Operates (with operating noise)



8. Check of transmission 3 way solenoid ASSY (S2)
   (1) Measure the resistance between the terminals.

Resistance

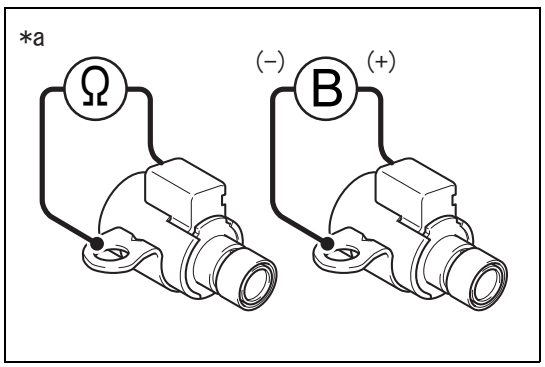
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Transmission 3 way solenoid ASSY (S2) connector - body | 20°C (68°F) | 11 to 15Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Transmission 3 way solenoid ASSY (S2)) |

   (2) Connect the battery positive to the connector of the transmission 3 way solenoid ASSY (S2) and check that the valve in the solenoid operates when connecting the battery ground to the solenoid body.
   Criteria: Operates (with operating noise)

AT



9. Check of transmission 3 way solenoid ASSY (S3)
   (1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Transmission 3 way solenoid ASSY (S3) connector - body | 20°C (68°F) | 11 to 15Ω |

Captions in illustration

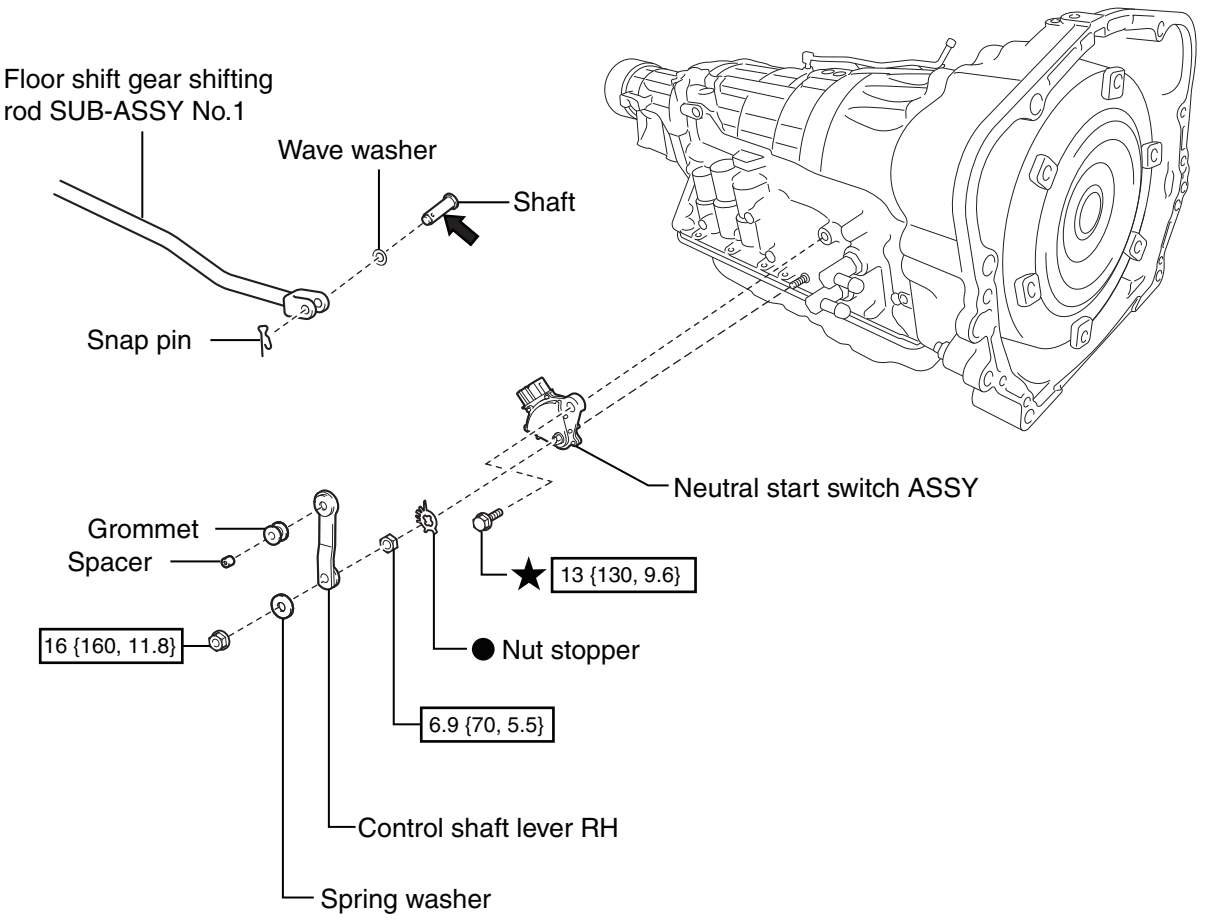
|---|---|
| *a | Connector not connected (Transmission 3 way solenoid ASSY (S3)) |

   (2) Connect the battery positive to the connector of the transmission 3 way solenoid ASSY (S3) and check that the valve in the solenoid operates when connecting the battery ground to the solenoid body.
   Criteria: Operates (with operating noise)

# Neutral start switch ASSY

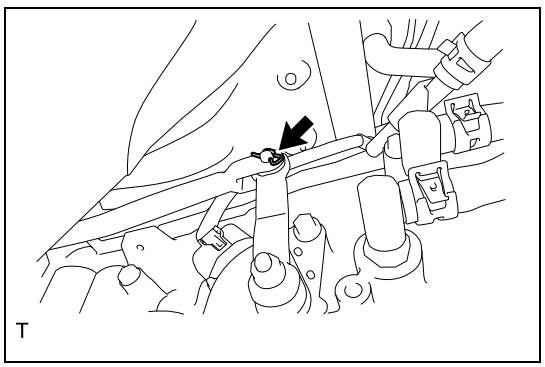
## Exploded view



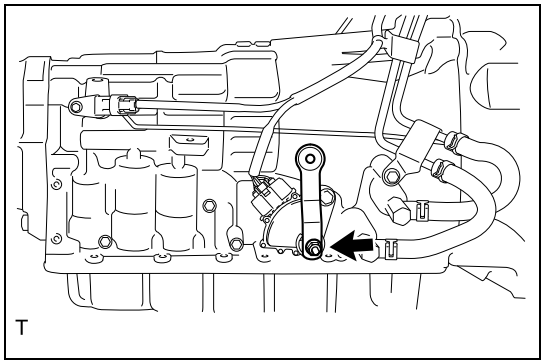
AT

## Removal

1. Disconnection of the battery ground terminal (Refer to BH - 31)
2. Removal of under cover front AL (refer to IE - 39)
3. Removal of under cover COMPL T/M (refer to IE - 40)
4. Removal of exhaust pipe ASSY FR (refer to IE - 40)



5. Disconnection of floor shift gear shifting rod SUB-ASSY No.1
   (1) Remove the snap pin, the wave washer, and the shaft. Then, disconnect the floor shift gear shifting rod SUB-ASSY No.1 from the control shaft lever RH.



6. Removal of control shaft lever RH
   (1) Remove the nut and the spring washer, and then remove the control shaft lever RH from the neutral start switch ASSY.

7. Removal of neutral start switch ASSY
   (1) Disconnect the connector from the neutral start switch ASSY.

   (2) Use a thin flat tip screwdriver to release the crimping of the nut stopper and remove the nut and the nut stopper.

   (3) Remove the bolt and then remove the neutral start switch ASSY.

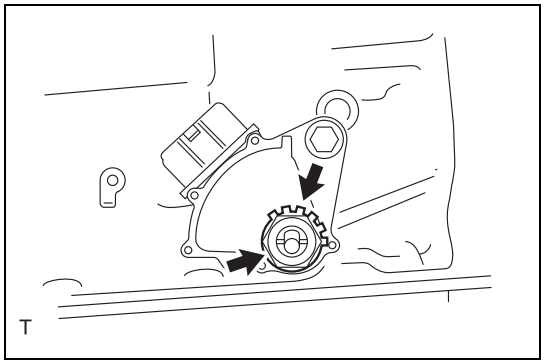
Captions in illustration

| | |
|---|---|
| *1 | Set bolt |

NOTE:
Do not turn the manual valve shaft lever before installing the neutral start switch ASSY. If the manual valve shaft lever is turned, it may be disconnected inside AT.

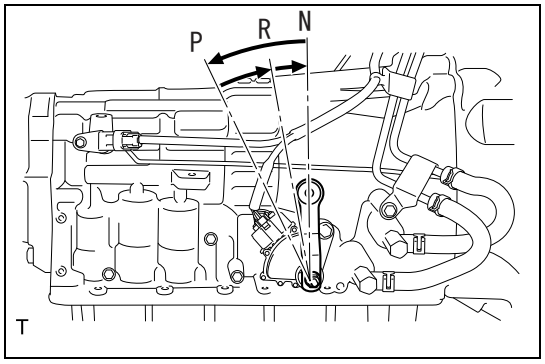
## Installation

1. Installation of neutral start switch ASSY
   NOTE:
   Do not turn the manual valve shaft lever before installing the neutral start switch ASSY. If the manual valve shaft lever is turned, it may be disconnected inside AT.
   (1) Clean the bolt and the bolt hole.
   (2) Engage the neutral start switch ASSY to the manual valve lever shaft.
   (3) Temporarily install the bolt to the neutral start switch ASSY.



(4) Install a new nut stopper and a nut.
Standard value:T=6.9N·m {70kgf·cm} {5.1ft·lbf}

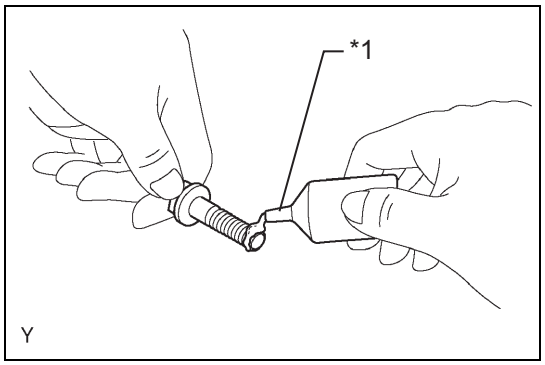
(5) Temporarily install the control shaft lever RH to the neutral start switch ASSY with the spring washer and the nut.



(6) Turn the control shaft lever RH toward the rear side of the vehicle until it stops, then turn it back from that position by 2 notches toward the front side of the vehicle to set to N position.

(7) Remove the nut and the spring washer, and then remove the control shaft lever RH from the neutral start switch ASSY.

AT

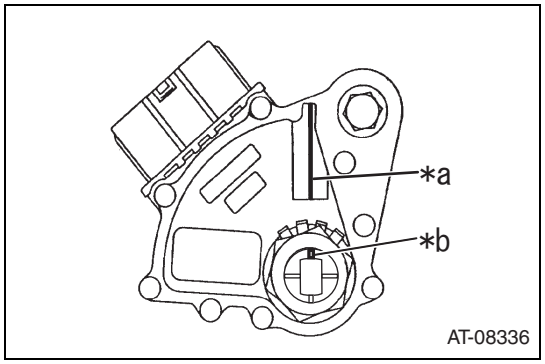


(8) Apply Adhesive to 2 or 3 threads at the tip of the bolt.

Captions in illustration

| | |
|---|---|
| *1 | Adhesive |

Adhesive: Three Bond 1344 or the equivalent

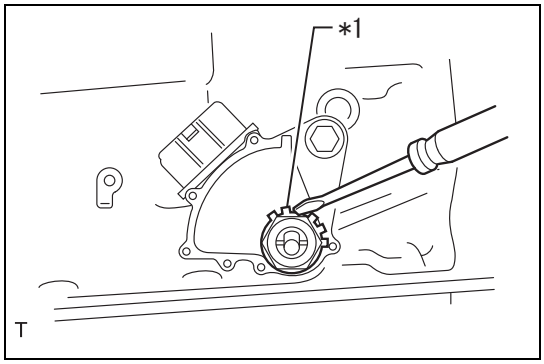


(9) Align the neutral reference line and the kerf.

Captions in illustration

| | |
|---|---|
| *a | Neutral reference line |
| *b | Kerf |

(10) Tighten the set bolt while holding the neutral start switch ASSY.
Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}



(11) Use a flat tip screwdriver to crimp the claw of the nut stopper.

Captions in illustration

| | |
|---|---|
| *1 | Nut stopper |

CAUTION:
Check that the nut is securely tightened.

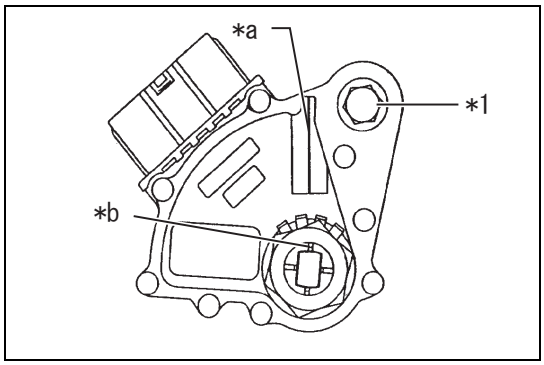
(12) Connect the connector to the neutral start switch ASSY.

2. Installation of control shaft lever RH
   (1) Install the control shaft lever RH to the neutral start switch ASSY with the spring washer and the nut.
   Standard value:T=16N·m {160kgf·cm} {11.8ft·lbf}
3. Connection of floor shift gear shifting rod SUB-ASSY No.1
   (1) Make sure that the grommet and spacer are attached to the control shaft lever RH.
   (2) Connect the floor shift gear shifting rod SUB-ASSY No.1 to the control shaft lever RH with the snap pin, the wave washer, and the shaft.
4. Installation of exhaust pipe ASSY FR
   (Refer to IE - 44)
5. Connection of battery ground terminal (Refer to BH - 35)
6. Check of select lever position (refer to AT - 210)
7. Neutral start switch ASSY check (Refer to AT - 189)
8. Initialization when removing/installing battery terminals
   (Refer to IN - 6)

AT

## Adjustment

1. Adjustment of neutral start switch ASSY
   (1) Set the select lever to N position.



(2) Loosen the set bolt on the neutral start switch ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Set bolt |
| *a | Neutral reference line |
| *b | Kerf |

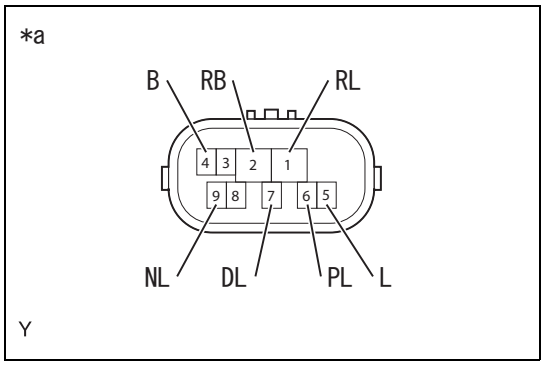
(3) Move the neutral start switch ASSY to align the neutral reference line and the kerf.
(4) Tighten the set bolt.
Standard value:T=13N·m {130kgf·cm} {9.6ft·lbf}
(5) After the adjustment, check the neutral start switch ASSY.
(Refer to AT - 189)

## On-vehicle inspection

1. Check of neutral start switch ASSY
   (1) Pull the parking brake and turn the ignition switch to ON.
   (2) Depress the brake pedal and check that the engine cannot start when the select lever is in positions other than "N" or "P".

(3) Check that the shift position is displayed on the shift position indicator in the combination meter and that the reverse warning buzzer sounds at "R" position.

## Unit inspection



1. Check of neutral start switch ASSY
   (1) Measure the resistance between the terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 2(RB) - 6(PL)<br>4(B) - 5(L) | Select lever in P position | Less than 1 Ω |
| 2(RB) - 1(RL) | Select lever in R position | Less than 1 Ω |
| 2(RB) - 9(NL)<br>4(B) - 5(L) | Select lever in N position | Less than 1 Ω |
| 2(RB) - 7(DL) | • Select lever in D position<br>• When select lever is in M position and shifted to "+" or "-" | Less than 1 Ω |
| 2(RB) - 6(PL)<br>4(B) - 5(L) | Select lever in any other than P position | 10 kΩ or more |

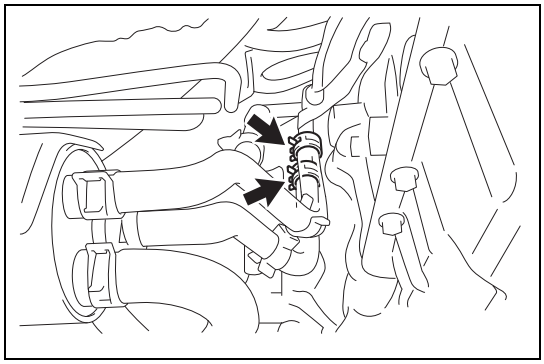
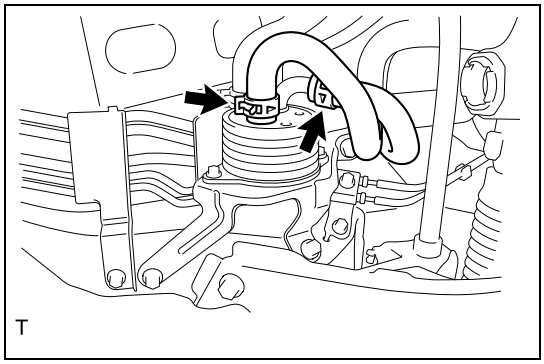
## Removal

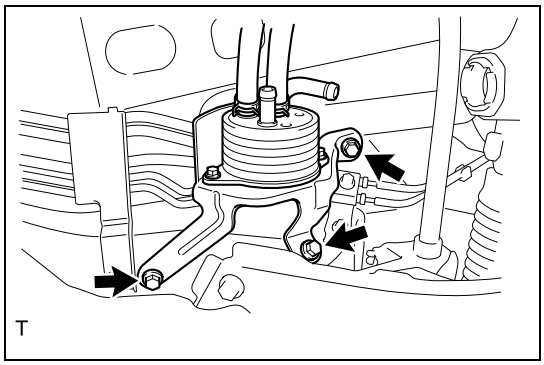
1. Removal of under cover front AL (refer to IE - 39)
2. Removal of under cover COMPL T/M (refer to IE - 40)
3. Drain of coolant (SUBARU genuine Super Coolant) (refer to CO - 16)



4. Disconnection of transmission oil cooler hose
   (1) Move 2 clamps and disconnect the 2 oil cooler hoses.
   CAUTION:
   Have a container ready for catching ATF remaining in the transmission oil cooler hoses.



5. Disconnection of water by-pass hose
   (1) Move 2 clamps and disconnect the 2 water by-pass hoses from the transmission oil cooler ASSY.
   CAUTION:
   Have a container ready for catching coolant remaining in the water by-pass hoses.

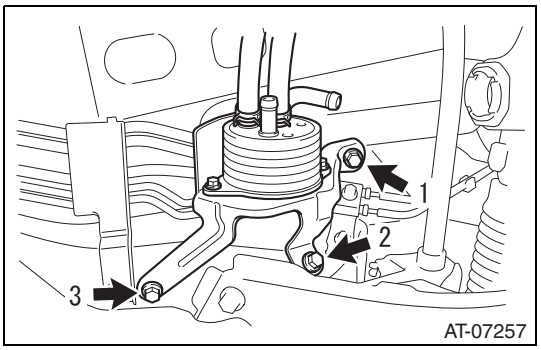


6. Removal of transmission oil cooler ASSY
   (1) Remove 3 bolts to remove the transmission oil cooler ASSY.

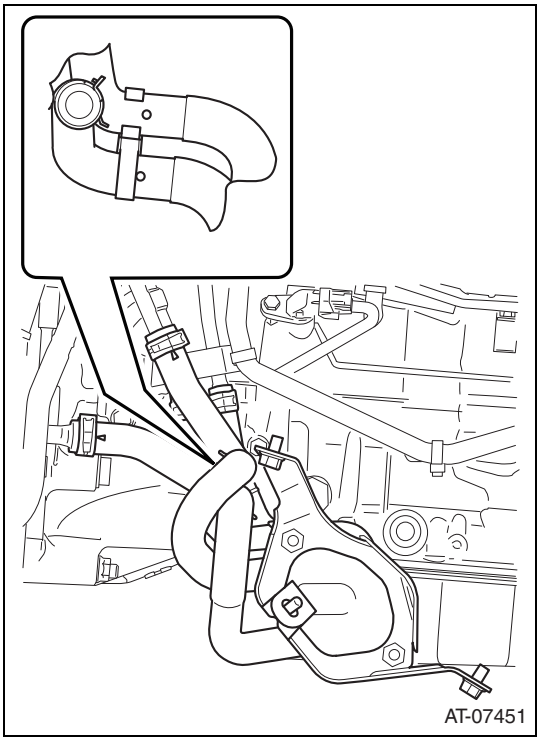
   (2) Move 2 clamps and remove the 2 transmission oil cooler hoses.

   (3) Remove 2 bolts to remove the transmission oil cooler from the oil cooler bracket.

## Installation



1. Installation of transmission oil cooler ASSY.
   (1) Install the transmission oil cooler ASSY to the oil cooler bracket with 2 bolts.
   Standard value:T=23N·m {235kgf·cm} {17ft·lbf}
   (2) Connect 2 new transmission oil cooler hoses to the transmission oil cooler ASSY with 2 clamps.
   (3) Temporarily tighten bolt 1 .
   (4) Install 2 bolts and tighten them in the order of 2 to 3, with the oil cooler bracket fitted to the vehicle by hand.
   Standard value:T=23N·m {235kgf·cm} {17ft·lbf}
   (5) Tighten bolt 1.
   Standard value:T=23N·m {235kgf·cm} {17ft·lbf}



2. Connection of water by-pass hose
   (1) Connect 2 water by-pass hoses to the transmission oil cooler ASSY with 2 clamps.
   (2) Install a clamp to the both water bypass hoses.

AT

3. Connection of transmission oil cooler hose
   (1) Connect 2 transmission oil cooler hoses to the transmission oil cooler ASSY with 2 clamps.
   CAUTION:
   - Prevent the clamp claws from interfering with the hoses.
   - Align the painted position of the oil cooler hose until it comes to the center of the hose when viewed vertically from the bracket surface of the oil cooler tube.
   - Prevent the oil cooler hoses and the water bypass hose from interfering with each other or with other parts.

   (2) Install a clamp to the positions of the oil cooler hoses shown in the figure.

Captions in illustration

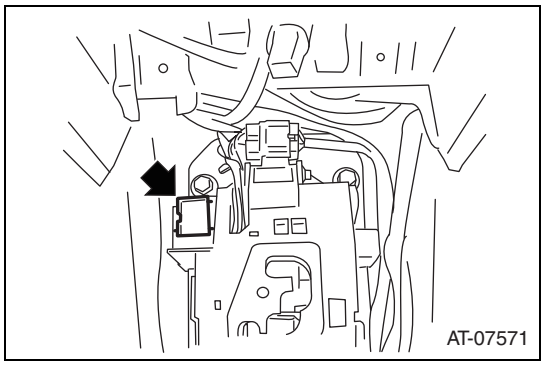
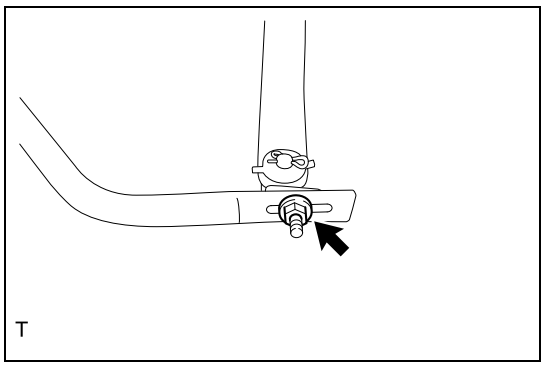
## Removal

1. Removal of console box ASSY
   (Refer to IT - 33)
2. Removal of under cover front AL (refer to IE - 39)
3. Removal of under cover COMPL T/M (refer to IE - 40)
4. Disconnection of floor shift gear shifting rod SUB-ASSY No.1



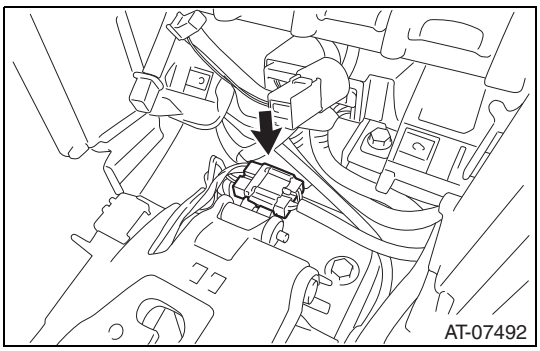
(1) While pressing the shift lock release button, set the select lever to N position.

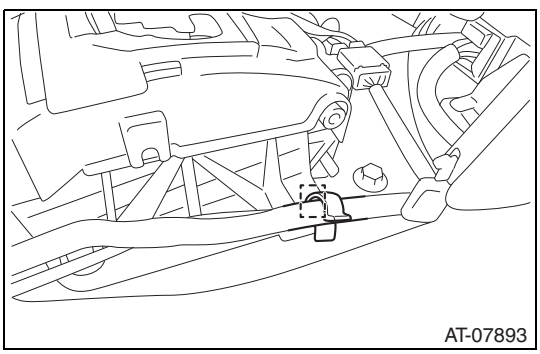


(2) Remove the nut and disconnect the floor shift gear shifting rod SUB-ASSY No.1 from the connecting rod swivel.

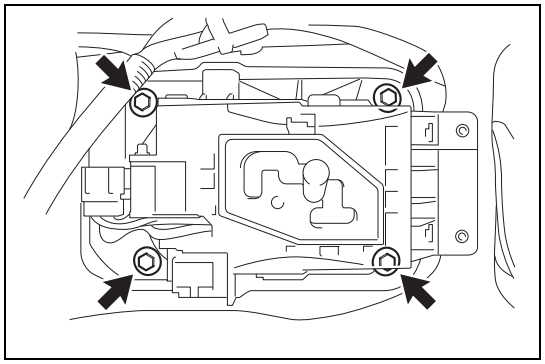
AT

5. Removal of select lever ASSY
   (1) Disconnect the connector.



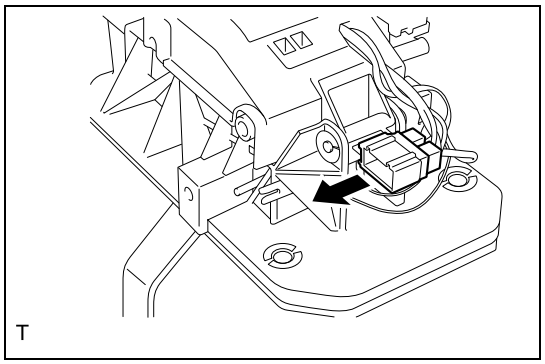


(2) Release the wiring harness clamp, and disconnect the wiring harness.



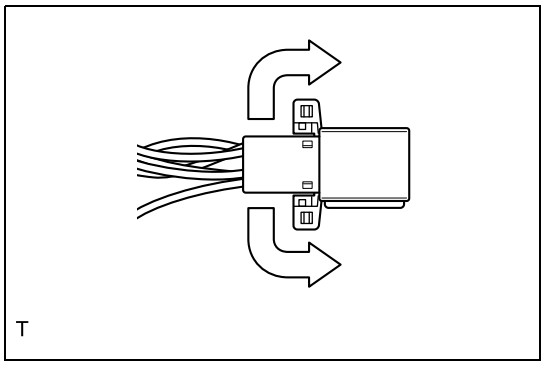
(3) Remove 4 bolts to remove the select lever ASSY.

## Disassembly

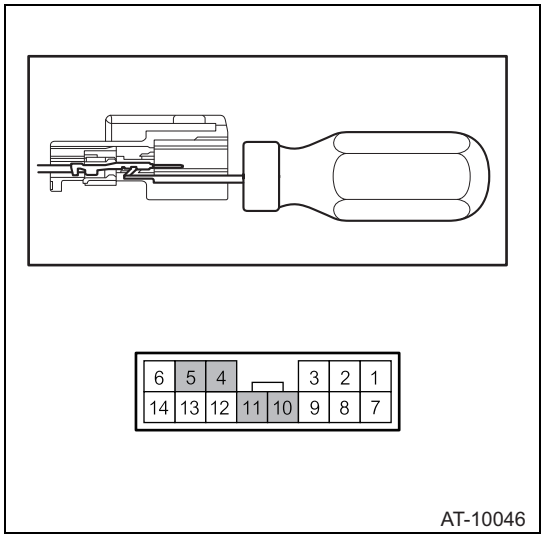


1. Removal of guide plate
   (1) Use a flat tip screwdriver to release the claws, and disconnect the connector.

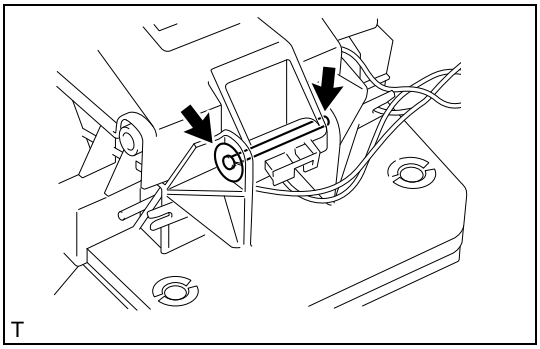
AT



(2) Use a precision screwdriver (flat tip) to release the connector lock.

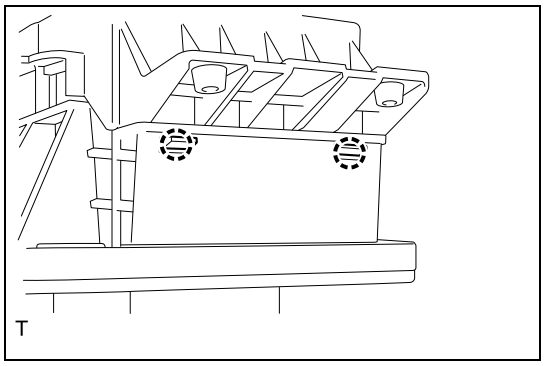


(3) Use a precision screwdriver (flat tip) to pull out the connectors No.4 and No.5 of the shift lock solenoid connector and the connectors No.10 and No.11 of the manual mode switch connector.



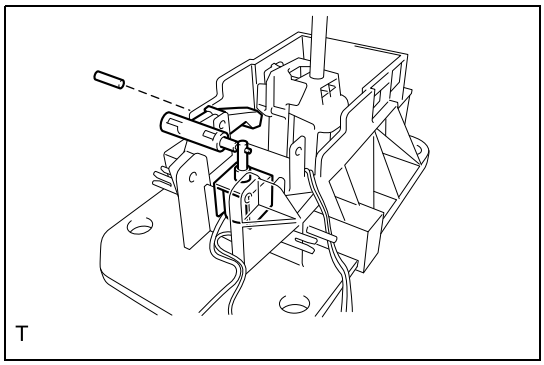
T

(4) Remove the clamp push nut and the shaft guide pin.



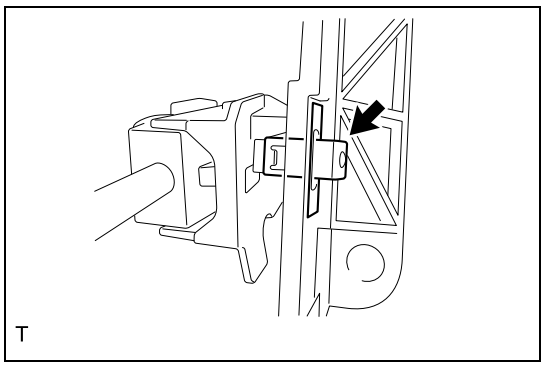
T

(5) Release the 2 claws to remove the guide plate from the base plate.



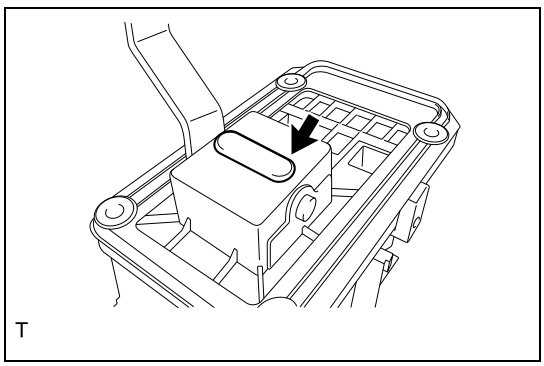
T

2. Removal of solenoid unit
   (1) Pull out the pin and remove the solenoid unit together with the shift lock release arm as a unit.
   (2) Remove the shift lock release arm from the solenoid unit.



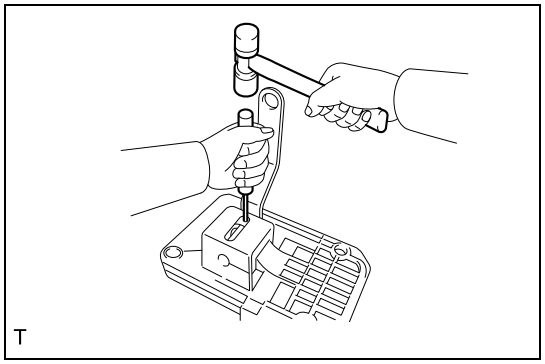
T

3. Removal of D rod
   (1) Remove the D lock clamp.
   (2) Remove the D lock spring and the D rod.
   (3) Remove the cushion D lock from the D rod.
   (4) Remove the bushing D lock.



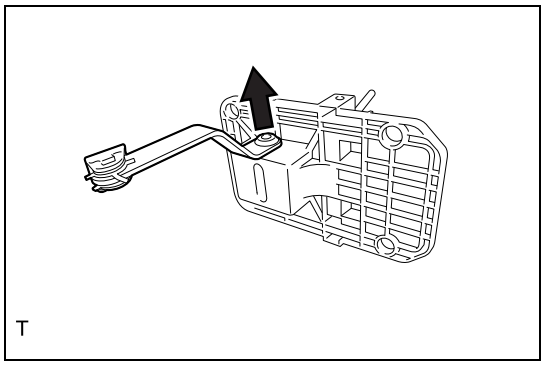
T

4. Removal of grommet
   (1) Remove the grommet from the base plate.



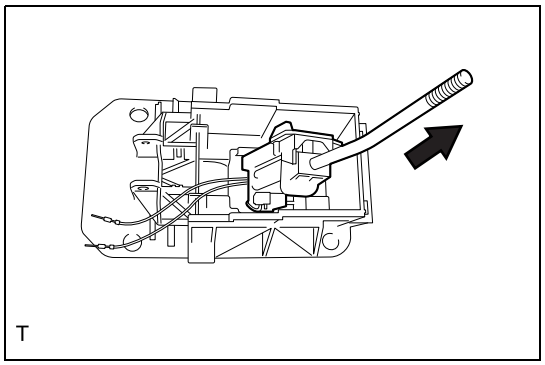
T

5. Removal of arm COMPL
   (1) Use a pin punch 3 and hammer to drive out a pin.



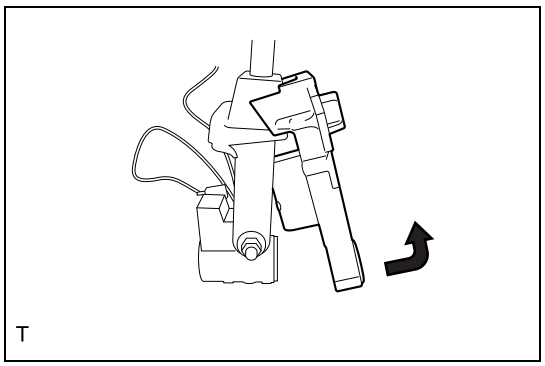
T

   (2) Pull out the arm COMPL from the base plate.



T

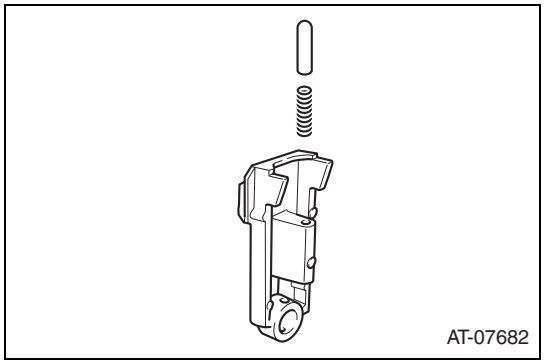
6. Removal of select lever COMPL
   (1) Remove the select lever COMPL together with the select arm bracket as a single unit.



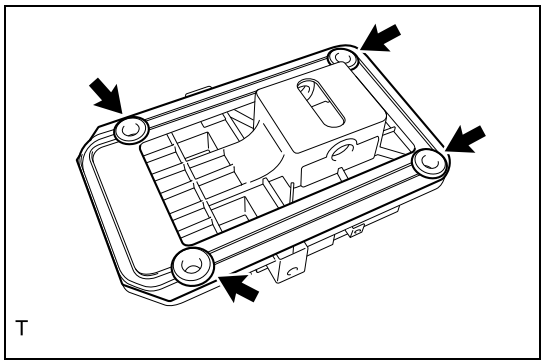
T

7. Removal of select lever arm bracket
   (1) Remove the select lever COMPL from the select arm bracket.

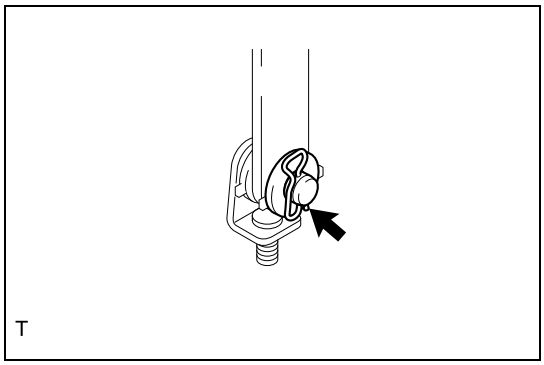
AT



(2) Remove the rod and the spring from the select arm bracket.



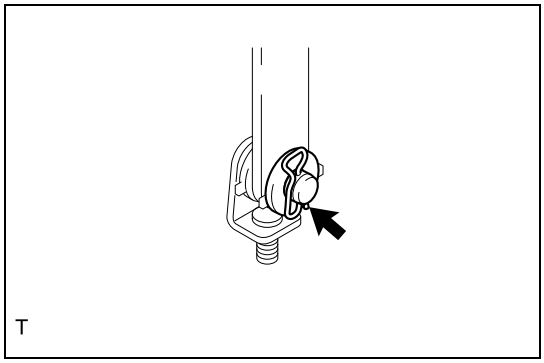
8. Removal of gasket
   (1) Remove 4 spacer plates to remove the gasket.



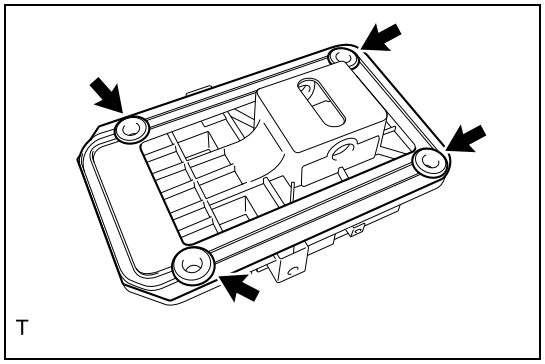
9. Removal of swivel
   (1) Remove the snap pin, then remove the 2 washers, bushing, spacer, and swivel.

AT

## Assembly

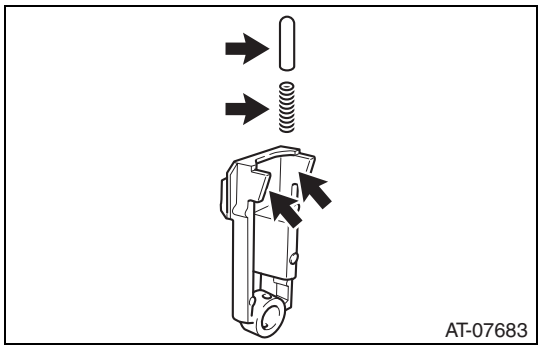


1. Installation of swivel
   (1) Install the 2 washers, spacer, bushing, and swivel with a snap pin.



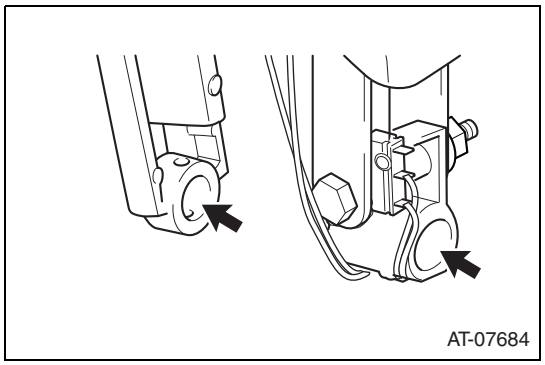
T

2. Installation of gasket
   (1) Install 4 spacer plates and the gasket.



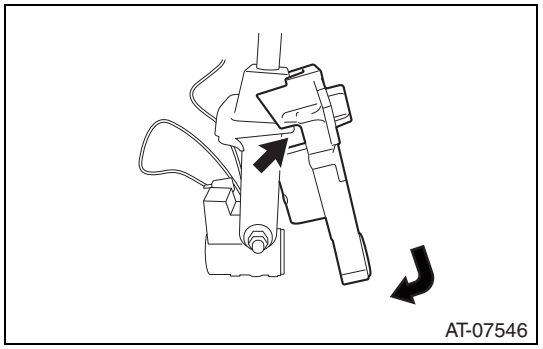
AT-07683

3. Installation of select arm bracket
   (1) Apply Multemp D to the spring and the rod.
   (2) Install the spring and the rod to the select arm bracket.



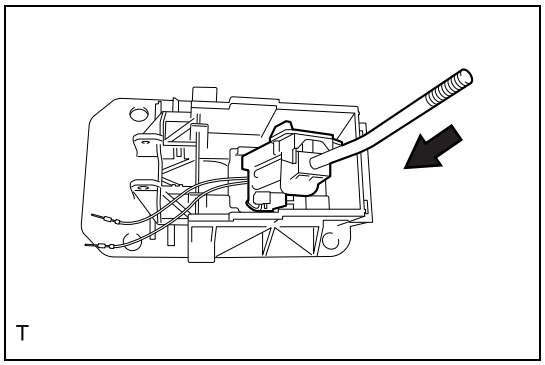
AT-07684

   (3) Apply Multemp D to the select lever COMPL and the select arm bracket.



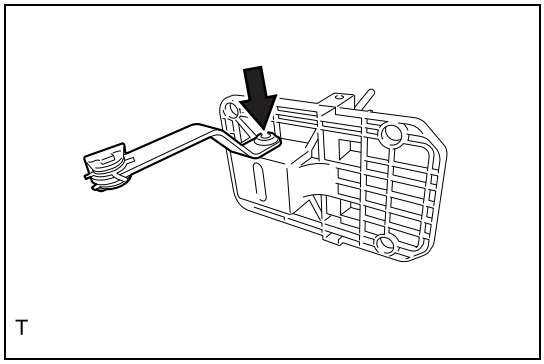
AT-07546

   (4) Apply Multemp D to the sliding surface of the rod and install the select arm bracket to the select lever COMPL.



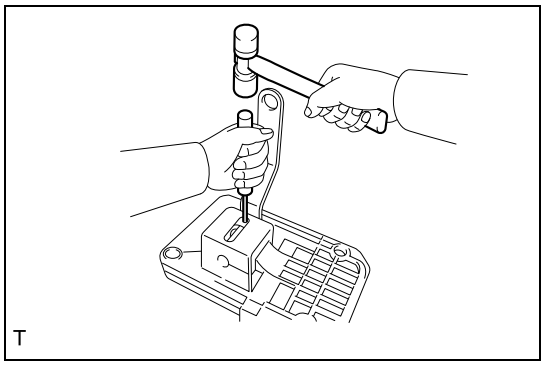
T

4. Installation of select lever COMPL
   (1) Set the select arm bracket together with the select lever COMPL as a single unit to the base plate.



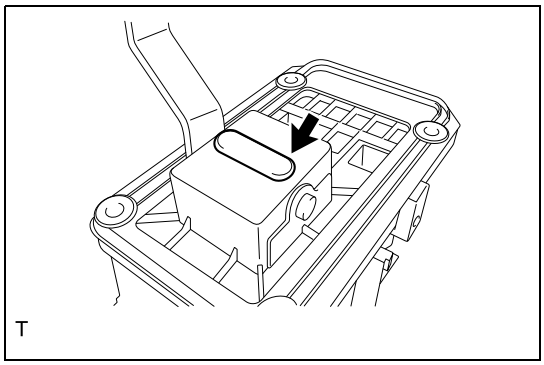
T

5. Installation of arm COMPL
   (1) Insert the arm COMPL to the base plate.



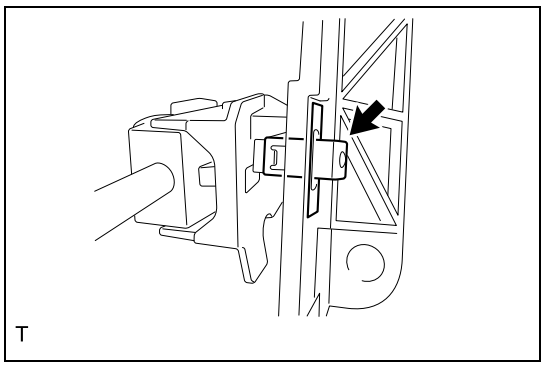
T

   (2) Use a pin punch 3 and hammer to drive in a new pin.



T

6. Installation of grommet
   (1) Install the grommet.

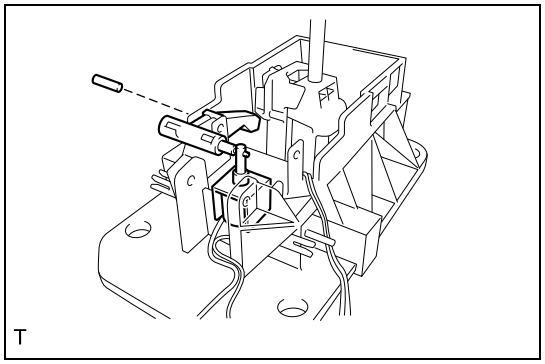


T

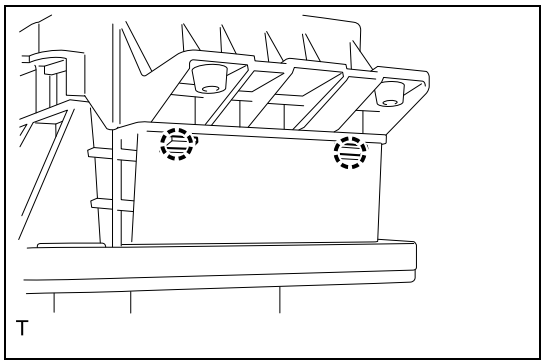
7. Installation of D rod
   (1) Install the bushing D lock.
   (2) Install the cushion detent lock to the D rod.
   (3) Apply Multemp D to the D lock spring and the D rod.
   (4) Install the D lock spring and the D rod.
   (5) Install the D lock clamp.

8. Installation of solenoid unit
   (1) Apply Multemp D to the solenoid unit and the pin.

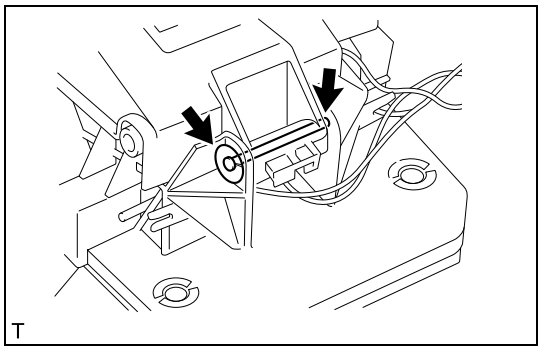
AT



(2) Set the solenoid unit together with the shift lock release arm as a unit to the base plate and insert the pin.

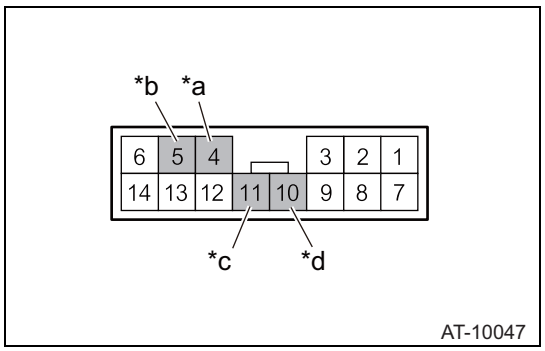


9. Installation of guide plate
(1) Engage the 2 claws and install the guide plate to the base plate.



(2) Install the shaft guide pin and a new clamp push nut.

AT



(3) Connect the connectors No.4 and No.5 of the shift lock solenoid connector and the connectors No.10 and No.11 of the manual mode switch connector.

Captions in illustration

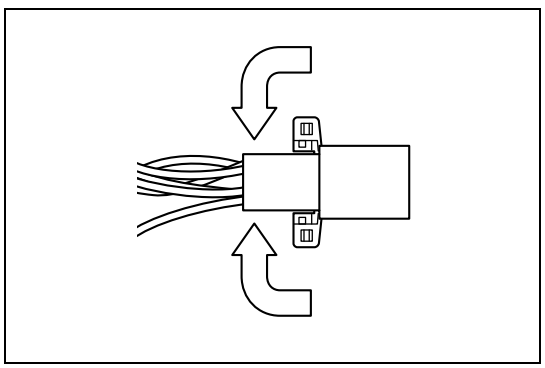
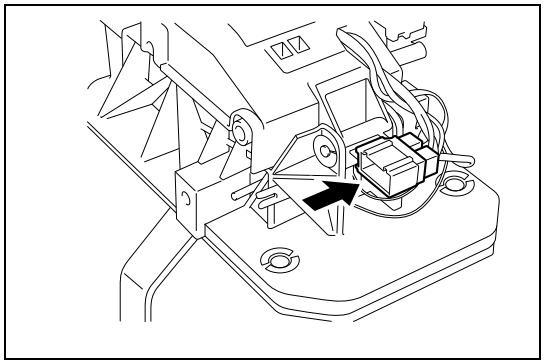
| *a | Blue |
| *b | Black |
| *c | White or black |
| *d | Black or white |

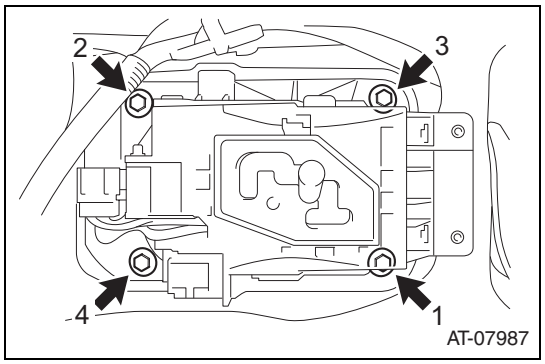


(4) Lock the terminal of the harness connector.

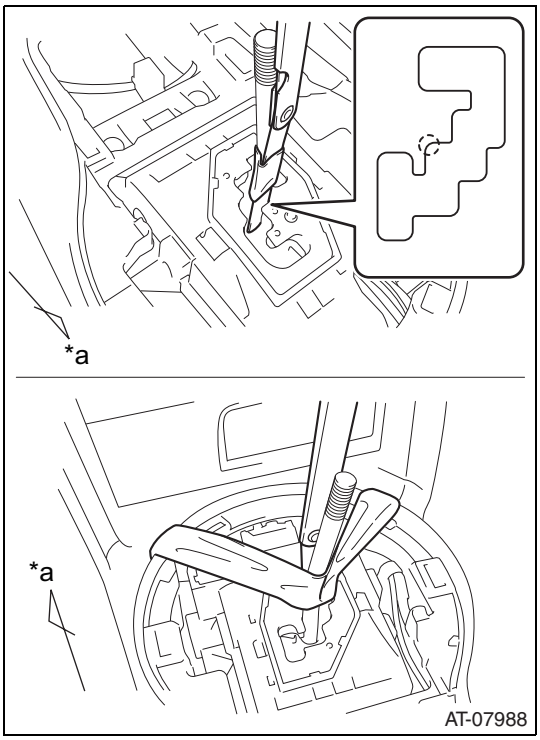


(5) Engage the claw and install the connector.

## Installation



1. Installation of select lever ASSY
   (1) Temporarily install the select lever ASSY with 4 bolts.
   CAUTION:
   Keep the wiring harness from being caught in.
   (2) Tighten 4 bolts to the specified torque in the order shown in the figure.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
   (3) Install the wiring harness clamp to the select lever ASSY.
   (4) Connect the connector.
   (5) Set the select lever to N position.



(6) Insert a 0.3 mm thickness gauge between the select lever and the guide plate, and secure it with tape, etc.
CAUTION:
Keep the thickness gauge from entering the portion (arc) shown in the figure.

Captions in illustration

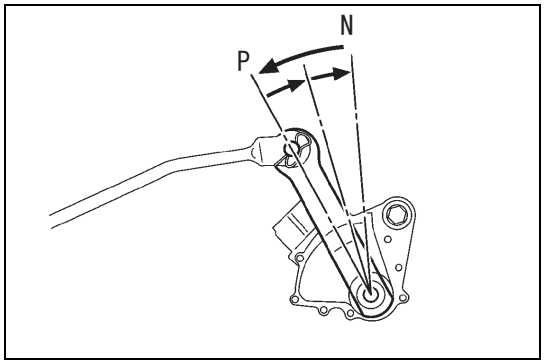
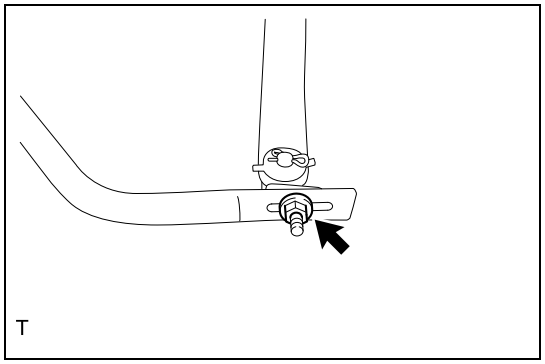
| *a | Front side of vehicle |

AT



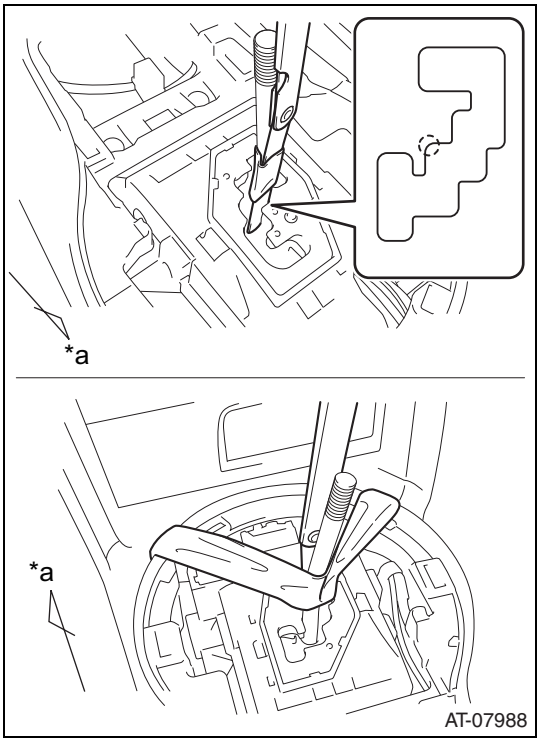


3. Installation of console box ASSY
   (Refer to IT - 38)
4. Installation of under cover COMPL T/M (refer to IE - 46)
5. Installation of under cover front AL (refer to IE - 46)
6. Check of select lever position (refer to AT - 210)

AT

## Adjustment

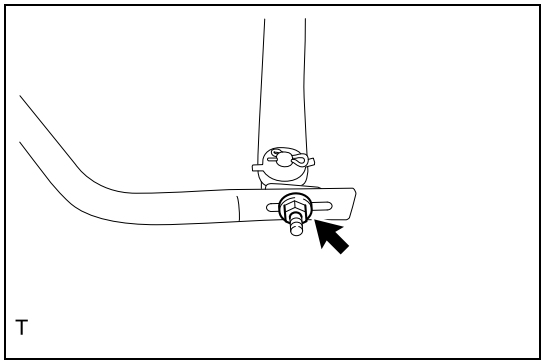
1. Removal of under cover COMPL T/M (refer to IE - 40)
2. Removal of under cover front AL (refer to IE - 39)
3. Adjustment of select lever position
   (1) Set the select lever to N position.
2. Connection of floor shift gear shifting rod SUB-ASSY No.1
   (1) Pull the floor shift gear shifting rod SUB-ASSY No.1 toward the rear of the vehicle until it stops, then put it back 2 steps (to N position).
   (2) Temporarily install the floor shift gear shifting rod SUB-ASSY No.1 with a nut while seating it on the flat surface of the swivel.
   CAUTION:
   Be sure to seat it by hand and temporarily tighten the nut.
   (3) Tighten the nut with the arm COMPL lightly pressed toward the rear of the vehicle.
   Standard value:T=18N·m {184kgf·cm} {13ft·lbf}
   CAUTION:
   - Do not press the arm COMPL excessively.
   - Check that the floor shift gear shifting rod SUB-ASSY No.1 remains seated on the flat surface of the swivel.



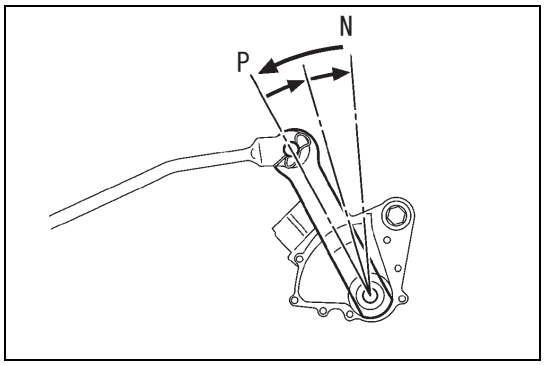
(2) Insert a 0.3 mm thickness gauge between the select lever and the guide plate, and secure it with tape, etc.
CAUTION:
Keep the thickness gauge from entering the portion (arc) shown in the figure.

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle |



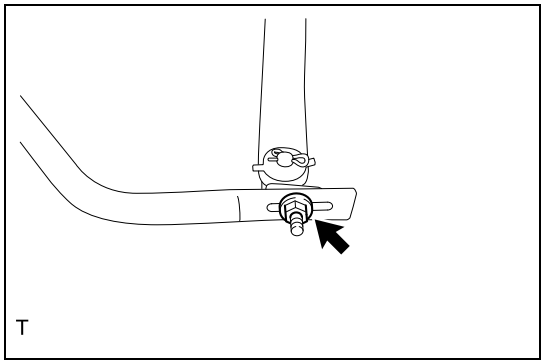
(3) Remove the nut and disconnect the floor shift gear shifting rod SUB-ASSY No.1 from the swivel.



(4) Pull the floor shift gear shifting rod SUB-ASSY No.1 toward the rear of the vehicle until it stops, then put it back 2 steps (to N position).

(5) Temporarily install the floor shift gear shifting rod SUB-ASSY No.1 with a nut while seating it on the flat surface of the swivel.
CAUTION:
Be sure to seat it by hand and temporarily tighten the nut.

AT



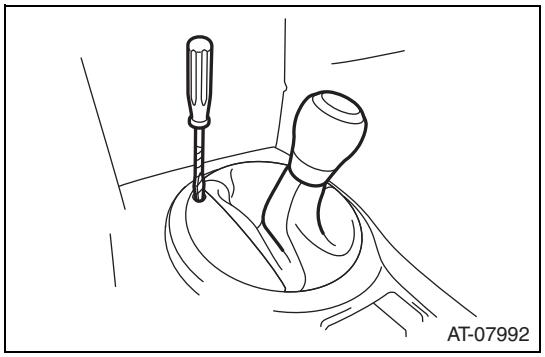
(6) Tighten the nut with the arm COMPL lever lightly pressed toward the rear of the vehicle.
Standard value:T=18N·m {184kgf·cm} {13ft·lbf}
CAUTION:
- Do not press the arm COMPL excessively.
- Check that the floor shift gear shifting rod SUB-ASSY No.1 remains seated on the flat surface of the swivel.

(7) After the adjustment, check the operability and behavior.

4. Select lever position check
   (1) Depress the brake pedal with IG ON.
   (2) Shift the select lever to each position. At this time, check that the select lever moves smoothly to each position without interference, and that the position indicator displays correctly.
   (3) Start the engine, and check that the vehicle moves forward when shifted from N to D position and backward when shifted to R position.
5. Installation of under cover COMPL T/M (refer to IE - 46)
6. Installation of under cover front AL (refer to IE - 46)

## On-vehicle inspection

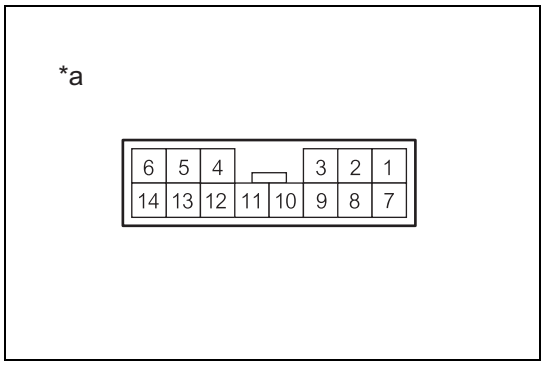
1. Select lever position check
   (1) Shift the select lever to each position. At this time, check that the select lever moves smoothly to each position without interference, and that the position indicator displays correctly.
   (2) Check that the select lever does not stop while shifting from R to P position and does not get caught during select operation from D to M position.
   NOTE:
   Perform with the parking brake released and the parking cam applied.
   (3) Start the engine, and check that the vehicle moves forward when shifted from N to D position and backward when shifted to R position.
2. Check of shift lock device operation
   (1) Shift the select lever to the P position.
   (2) Turn the ignition switch to OFF.
   (3) Check that the select lever cannot be shifted to positions other than P when it is operated.
   (4) Check that the shift lever can be shifted to ranges other than P position with IG ON and the brake pedal depressed.
3. Check of shift lock release button operation
   (1) Remove the button cover.



(2) Use a driver or other tool to check that the select lever can be shifted to ranges other than P position when it is operated with the shift lock release button pressed.

AT

## Unit inspection



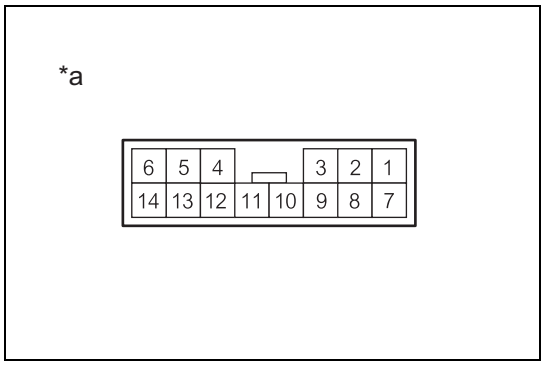
1. Check of select lever ASSY
   (1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions (shift position) | Standard value |
|---|---|---|
| 1 - 3 | Select lever in any other than P position | Less than 1 Ω |
| 2 - 3 | Select lever in P position | |
| 8 - 9 | When select lever is in M position and shifted to "+" | |
| 10 - 11 | Select lever in M position | |
| 12 - 13 | When select lever is in M position and shifted to "-" | |
| 1 - 3 | Select lever in P position | 10 k Ωor more |
| 2 - 3 | Select lever in any other than P position | |
| 8 - 9 | Except when select lever is in M position and shifted to "+" | |
| 10 - 11 | Select lever in any other than M position | |
| 12 - 13 | Except when select lever is in M position and shifted to "-" | |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Select lever ASSY) |



2. Check of shift lock solenoid ASSY
   (1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 4 - 5 | 20°C | 27.6 to 30.5 Ω |

Captions in illustration

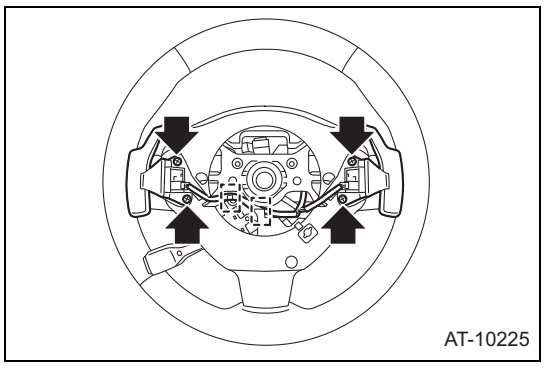
## Removal

1. Removal of the driver's airbag module ASSY
   (Refer to RS - 246)
2. Removal of steering wheel ASSY (refer to SR - 68)
3. Removal of transmission shift switch
   (1) Disconnect the connector clamps from the steering wheel ASSY.

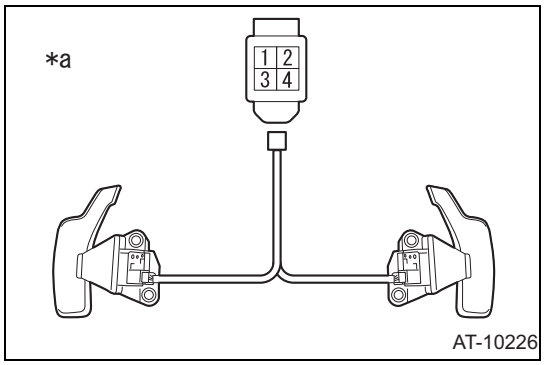


(2) Remove 4 screws to remove the transmission shift switch from the steering wheel ASSY.

## Installation

1. Installation of transmission shift switch
   (1) Install the transmission shift switch to the steering wheel ASSY with 4 screws.
   Standard value:T=1.75N·m {18kgf·cm} {1.3ft·lbf}
   (2) Install the connector clamp to the steering wheel ASSY.
2. Installation of steering wheel ASSY (refer to SR - 69)
3. Installation of the driver's airbag module ASSY
   (Refer to RS - 248)

## Unit inspection



1. Check of transmission shift switch
   (1) Resistance inspection
   (a)Measure the resistance between the terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3 - 4 | Pull the shift switch lever RH (+) side. | Less than 10 Ω |
| | Release the shift switch lever. | 1 MΩ or more |
| 1 - 4 | Pull the shift switch lever LH (-) side. | Less than 10 Ω |
| | Release the shift switch lever. | 1 MΩ or more |

AT

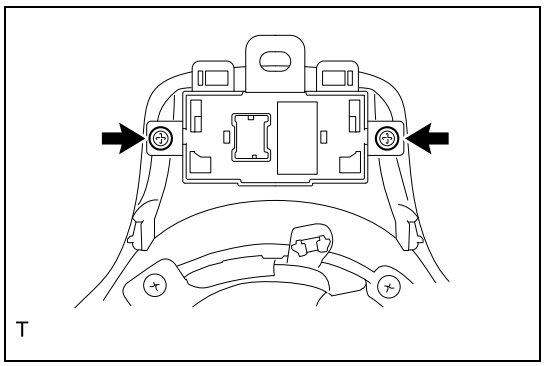
## Removal

1. Removal of select lever knob (refer to IT - 35)
2. Removal of console panel SUB-ASSY UPR (refer to IT - 35)



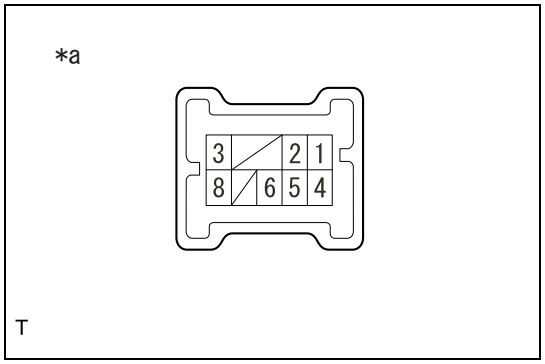
3. Removal of pattern select switch ASSY
   (1) Remove 2 screws to remove the pattern select switch ASSY.

## Installation

1. Installation of pattern select switch ASSY
   (1) Install the pattern select switch ASSY with 2 screws.

2. Installation of console panel SUB-ASSY UPR (refer to IT - 39)
3. Installation of select lever knob (refer to IT - 39)

## Unit inspection



1. Check of pattern select switch ASSY
   (1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 4 - 8 | Pattern select (SPORT) switch ON | Less than 1 Ω |
| 4 - 8 | Pattern select (SPORT) switch OFF | 10 k Ωor more |
| 6 - 8 | Pattern select (SNOW) switch ON | Less than 1 Ω |
| 6 - 8 | Pattern select (SNOW) switch OFF | 10 k Ωor more |

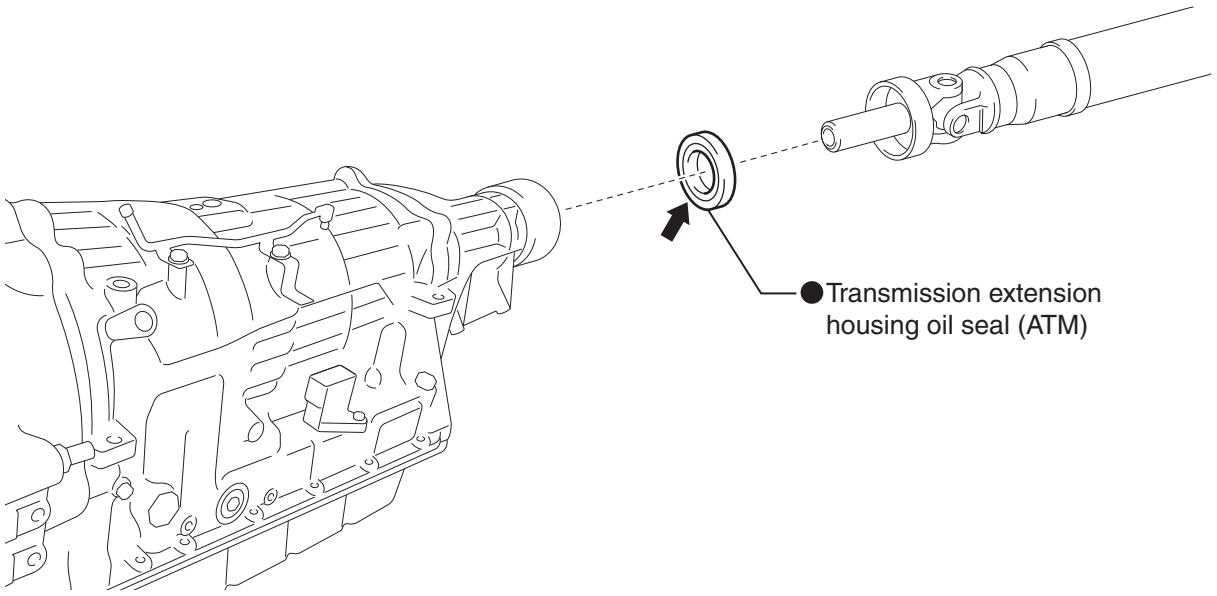
# Extension housing rear oil seal

## Exploded view



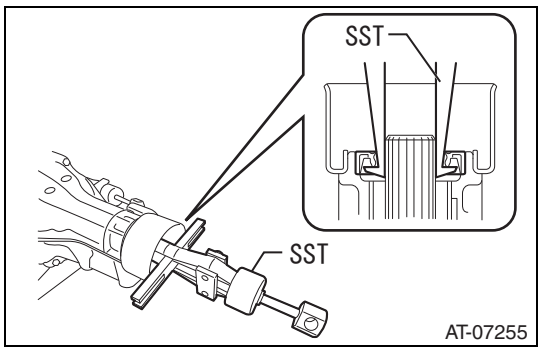
● Non-reusable parts

⬅ Auto fluid WS

AT-07283

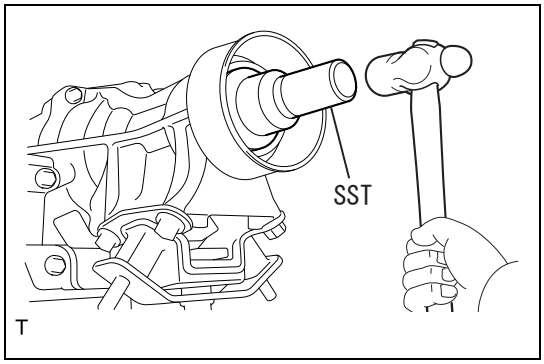
## Replacement

1. Removal of propeller shaft W/ center bearing ASSY
   (Refer to DP - 14)



2. Removal of transmission extension housing oil seal (ATM).
   (1) Use SST to remove the transmission extension housing oil seal (ATM).
   SST 398527700

3. Installation of transmission extension housing oil seal (ATM)
   (1) Apply a small amount of auto fluid WS to the lip of a new transmission extension housing oil seal (ATM).



4. Installation of propeller shaft W/ center bearing ASSY (Refer to DP - 16)

(2) Use SST and a hammer to drive in the transmission extension housing oil seal (ATM) in the extension housing.
SST 09325-40010
Drive-in depth: 5.4 to 5.8 mm {0.213 to 0.228 in} (from end face of extension housing)
CAUTION:
- Keep the lip from foreign substances such as dirt.
- Be careful not to mistake the installing direction of the transmission extension housing oil seal (ATM).

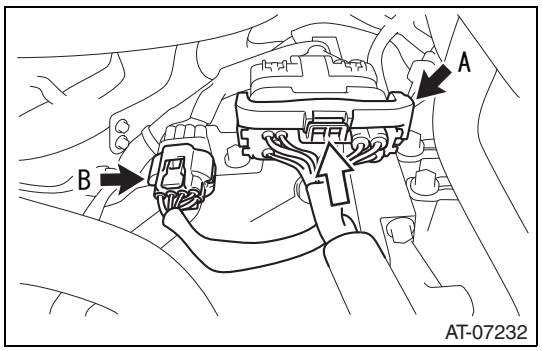
## Removal

1. Disconnection of the battery ground terminal (Refer to BH - 31)
2. Removal of under cover front AL (refer to IE - 39)
3. Removal of under cover COMPL T/M (refer to IE - 40)
4. Drainage of automatic transmission fluid (refer to AT - 161)
5. Removal of propeller shaft W/ center bearing ASSY
   (Refer to DP - 14)
6. Removal of stabilizer bar FR
   (Refer to FP - 21)
7. Removal of starter ASSY
   (Refer to ST - 21)
8. Disconnection of wiring harness
   NOTE:
   Secure the disconnected harnesses using tape, etc. to keep them out of the way.

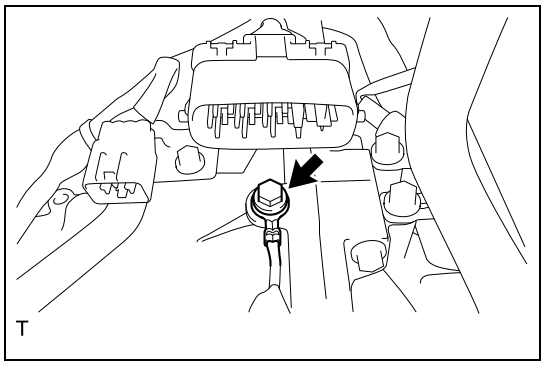


(1) Release the lock of the connector A to move the lock lever, and disconnect the connector.

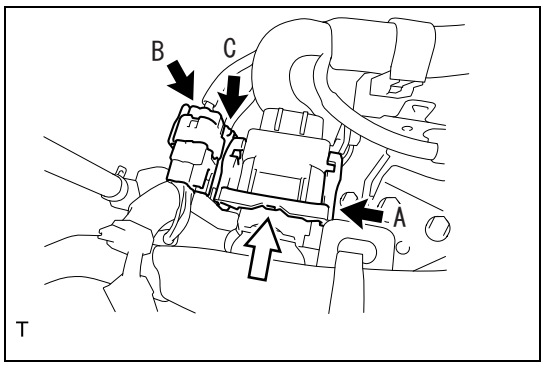
Captions in illustration

| | |
|---|---|
| ⇨ | Lock unit |

(2) Disconnect the connector B.



(3) Remove the bolts, then disconnect the ground wire.

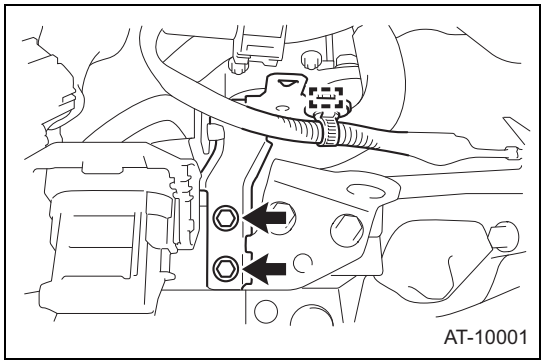


(4) Release the lock of the connector A to move the lock lever, and disconnect the connector.

Captions in illustration

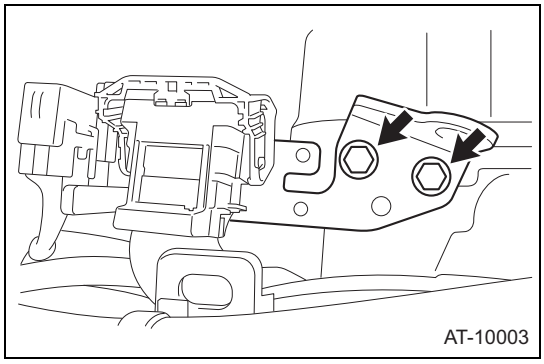
| | |
|---|---|
| ⇨ | Lock unit |

(5) Disconnect the connector B and C.

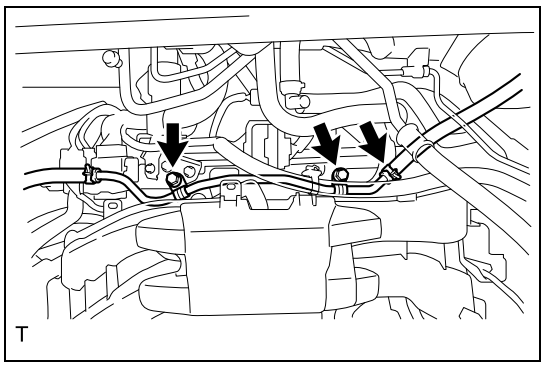


(6) Release the clamp and disconnect the wiring harness.

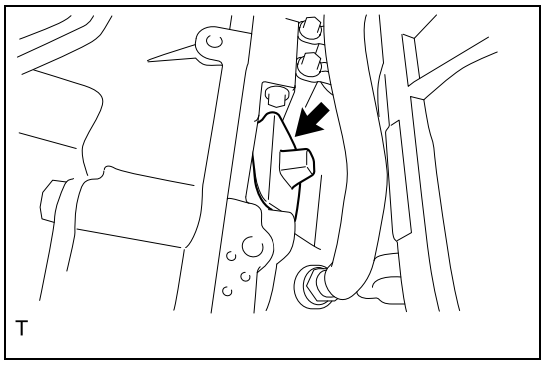
(7) Remove 2 bolts, and then remove the wiring harness clamp bracket.



(8) Remove 2 bolts to disconnect the engine hanger No.2.

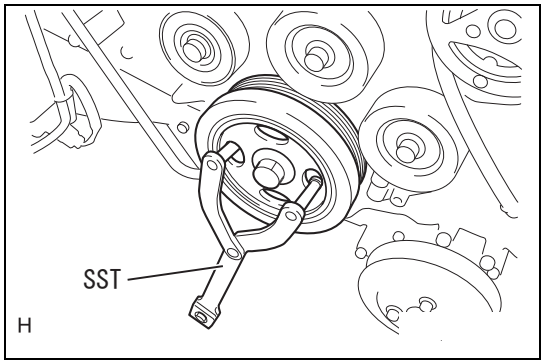


9. Disconnection of vacuum pipe
   (1) Remove 2 bolts to disconnect the vacuum pipe.



10. Removal of flywheel housing under cover
    (1) Remove the flywheel housing under cover.

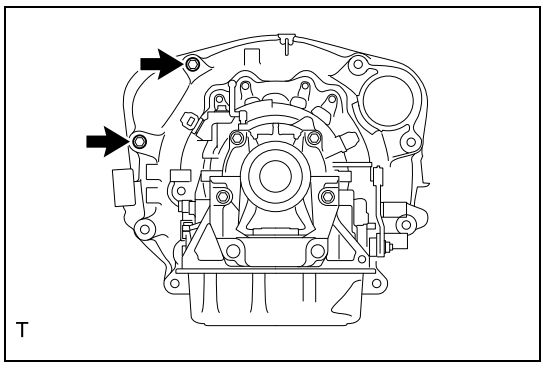
AT



11. Removal of drive plate and torque converter setting bolt
    (1) Use the SST to lock the crankshaft pulley.
        SST 18355AA000, 18334AA000

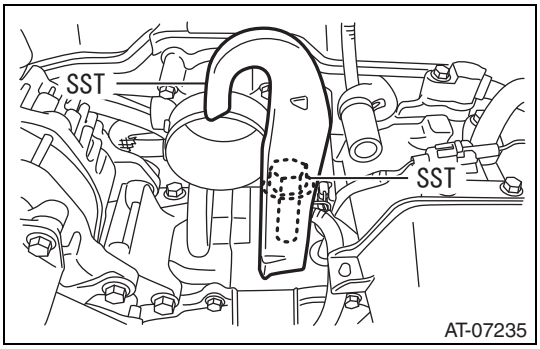
    (2) Remove the six drive plate & torque converter setting bolts through the service hole.

    (3) Install the SST to the converter case.
        SST 18750AA010



12. Disconnection of automatic transmission ASSY
    (1) Remove the 2 bolts connecting the automatic transmission ASSY.

13. Removal of exhaust pipe ASSY FR
    (Refer to IE - 35)

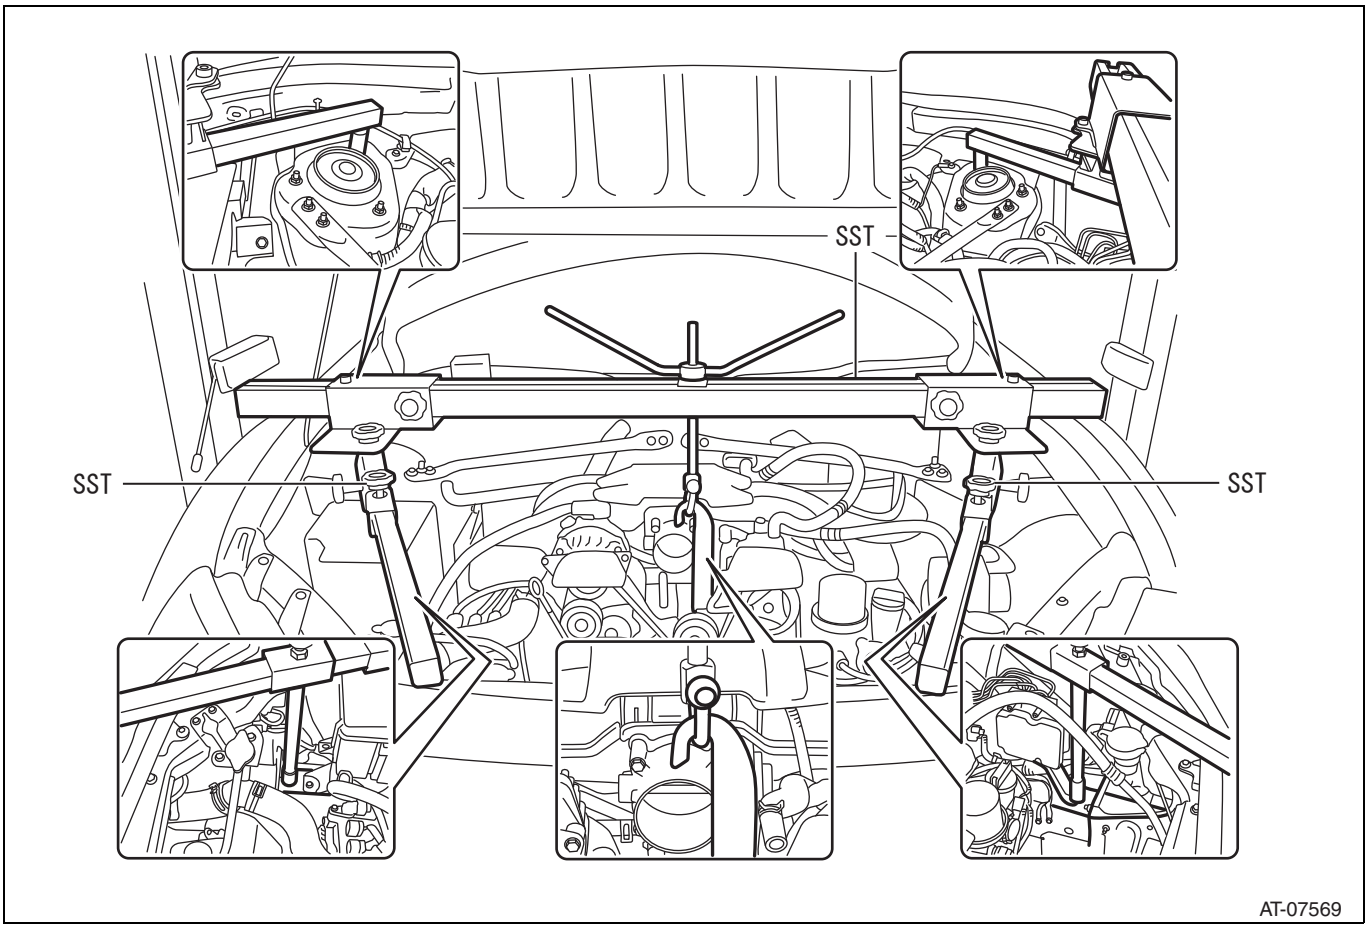


14. Engine ASSY support
    (1) Remove the air cleaner ASSY W/hose. (Refer to EM - 5)
    (2) Install the SST to the engine unit.
        SST 12281-38150, 90119-14120

    (3) Disconnect the clip fixing the bulkhead harness to the vehicle.

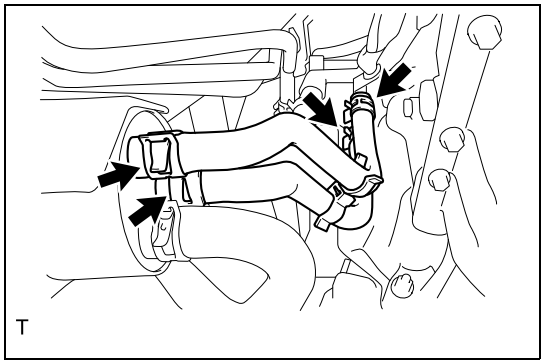
    (4) Install the SST to the engine and support the engine.
        SST 99099AJ000, 18679AA020
        CAUTION:
        - Keep the harness from being caught in when setting the SST on the vehicle.
        - Use a shackle with the load capacity of 250 kg or more.

AT

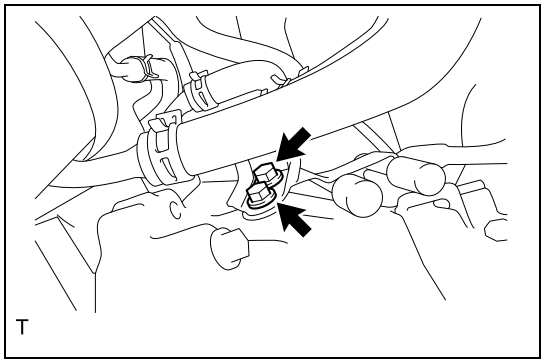


(5) Rotate the handle on the top of the SST to lift up the engine slightly.

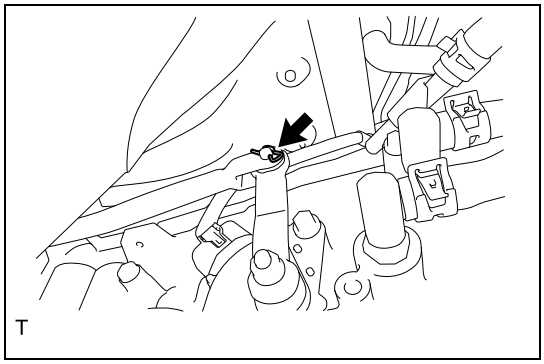
15. Removal of transmission oil cooler hose
    (1) Move the 4 hose clamps and remove the 2 transmission oil cooler hoses.
    CAUTION:
    Have a container ready for catching fluid remaining in the oil cooler hose.



16. Disconnection of oil cooler tube
    (1) Remove 2 bolts to disconnect the oil cooler tube.

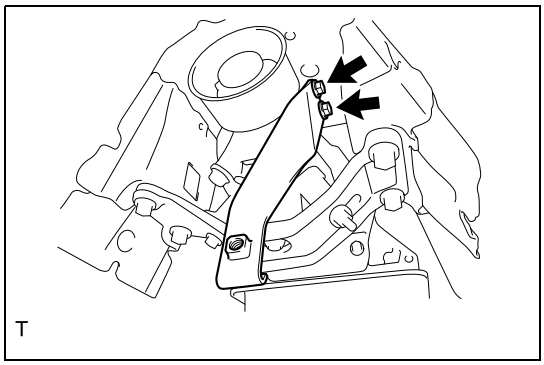


17. Removal of transmission revolution sensor (NT) (refer to AT - 169)



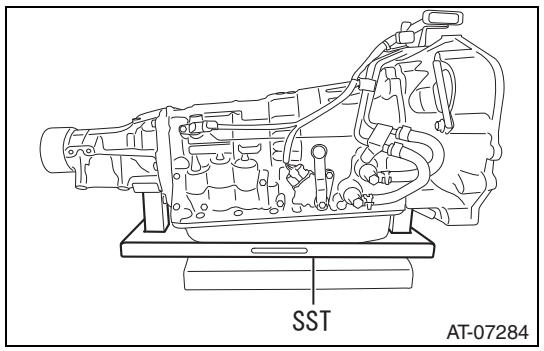
18. Removal of floor shift gear shifting rod SUB-ASSY No.1
    (1) Remove the snap pin and the shaft, and disconnect the floor shift gear shifting rod SUB-ASSY No.1 from the control shaft lever RH.

    (2) Remove the nut and remove the floor shift gear shifting rod SUB-ASSY No.1 from the swivel.
    (3) Remove the grommet and spacer from the control shaft lever RH.

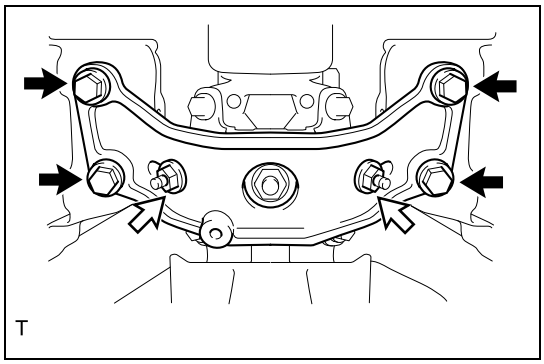


19. Removal of exhaust pipe bracket
    (1) Remove 2 bolts to remove the exhaust pipe bracket from the automatic transmission ASSY.

AT



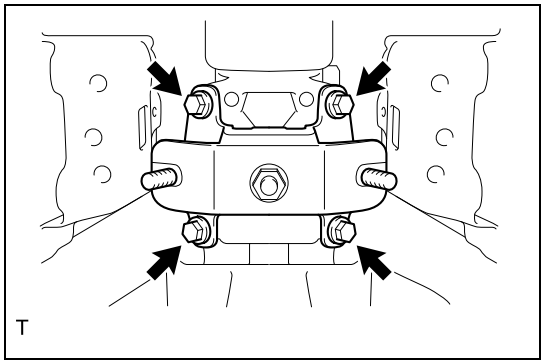
20. Automatic transmission ASSY support
    (1) Use the SST to support the automatic transmission ASSY.
    SST 18632AA010



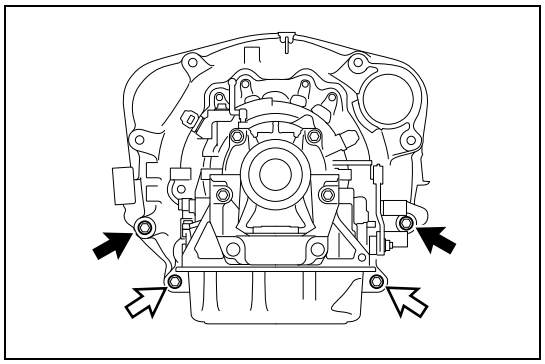
21. Removal of engine rear mounting member
    (1) Remove 4 bolts, 2 washers, and 2 nuts to remove the engine rear mounting member from the automatic transmission ASSY.

Captions in illustration

| | |
|---|---|
| ➡ | Bolt |
| ⇨ | Nut, washer |



22. Removal of engine mounting insulator RR No.1
    (1) Remove 4 bolts to remove the engine mounting insulator RR No.1 from the automatic transmission ASSY.



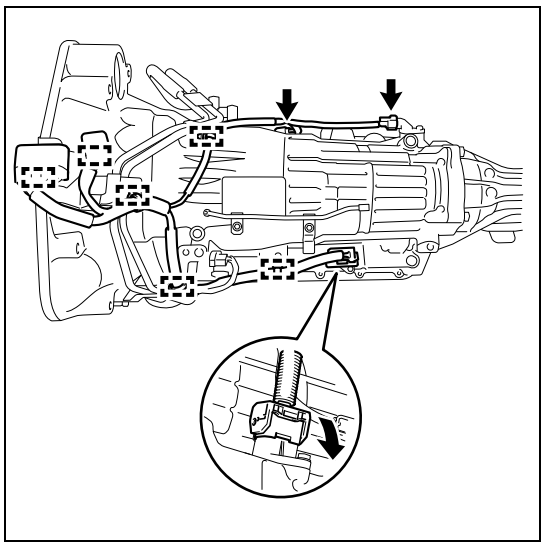
23. Removal of automatic transmission ASSY
    (1) Remove 2 bolts and 2 nuts to remove the automatic transmission ASSY.

Captions in illustration

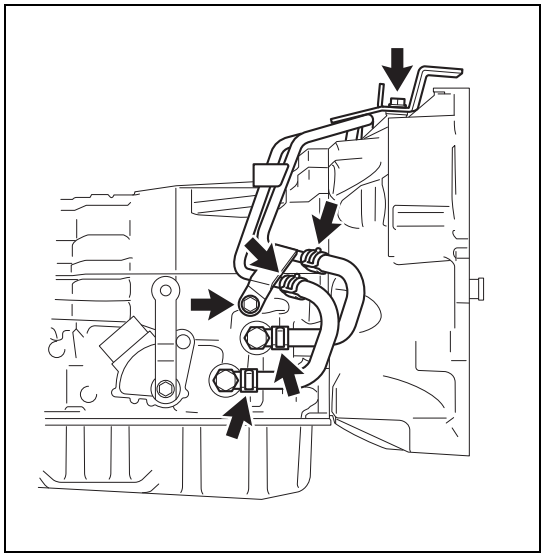
| | |
|---|---|
| ➡ | Bolt |
| ⇨ | Nut |

CAUTION:
To prevent damage to the knock pin, do not pry apart the contact surface of the automatic transmission ASSY and the engine.

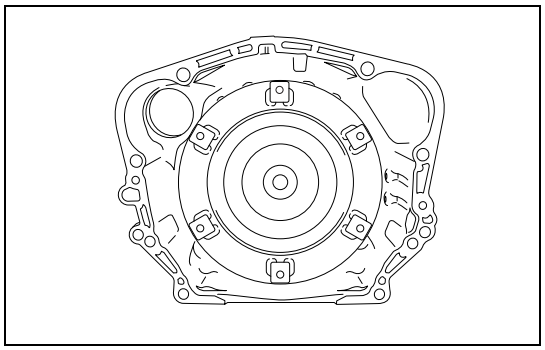
AT



24. Removal of wiring harness
    (1) Disconnect the neutral start switch ASSY connector, transmission wire connector, and transmission revolution sensor (SP2) connector.
    NOTE:
    Release the claw and tilt the lever downward to disconnect the connector of the transmission wire.
    (2) Release the 6 clamps to remove the wiring harness from the automatic transmission ASSY.



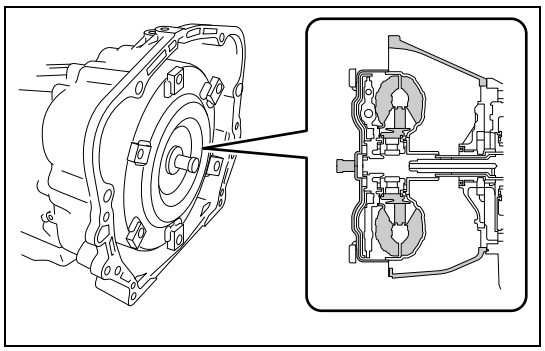
25. Removal of oil cooler tube
    (1) Move 4 hose clamps and remove the 2 oil cooler hoses.
    (2) Remove 2 bolts to remove the oil cooler tube.



26. Removal of torque converter ASSY
    (1) Remove the torque converter ASSY from the automatic transmission ASSY.

27. Torque converter ASSY check (refer to AT - 320)

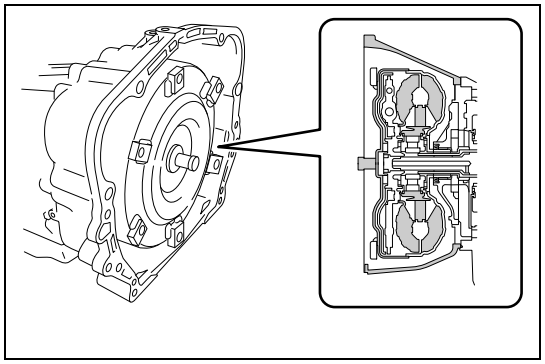
## Installation



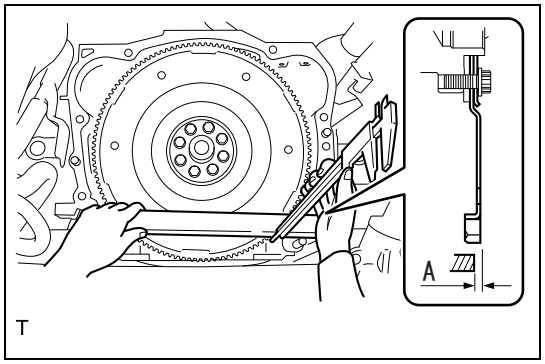
1. Installation of torque converter ASSY
    (1) Engage the input shaft spline with the turbine liner spline.

    (2) Engage the stator shaft spline with the stator spline while turning the torque converter ASSY about 180° clockwise.
    NOTE:
    If it is difficult to engage the stator shaft spline with the stator spline, reverse the converter about 10 mm and then turn the torque converter ASSY again to engage the splines.

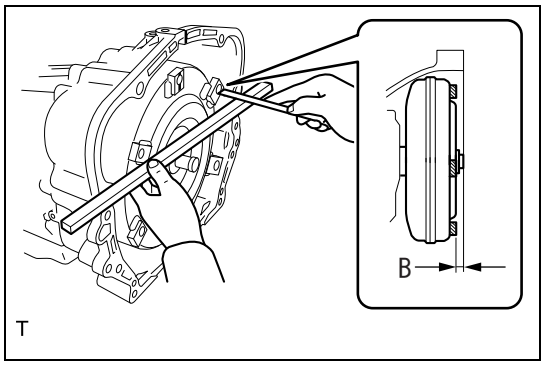
AT



(3) Turn the torque converter ASSY clockwise to engage the key of the oil pump drive gear with the key groove of the torque converter ASSY.
CAUTION:
Do not press the torque converter ASSY excessively to engage it.



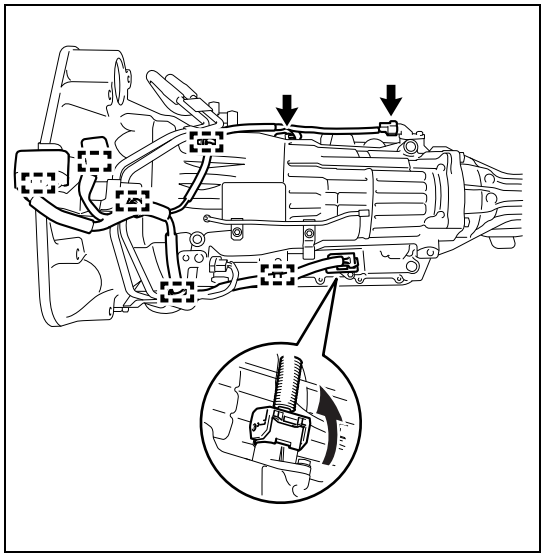
(4) Measure dimension A between the automatic transmission ASSY installing surface of the engine block and the torque converter installing surface of the drive plate.



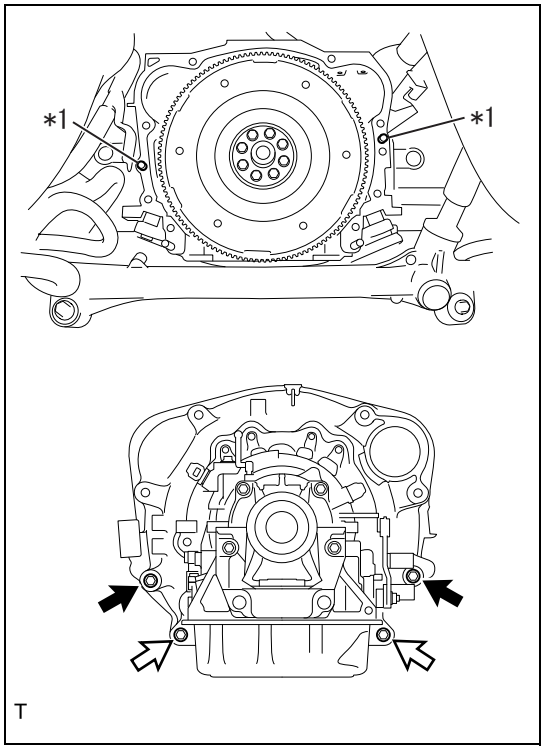
(5) Measure dimension B from the end face of the housing after the torque converter ASSY is installed to the converter set block, and check that it is larger than dimension A.
Standard value: B = A + 1 mm {0.04 in} or more

AT

2. Installation of oil cooler pipe
   (1) Install the oil cooler pipe with 2 bolts.
   Standard value:T=21N·m {214kgf·cm} {15.5ft·lbf}
   (2) Install 2 new oil cooler hoses with 4 hose clamps.



3. Installation of wiring harness
   (1) Engage the 6 clamps and install the wiring harness to the automatic transmission ASSY.
   (2) Connect the neutral start switch ASSY connector, transmission wire connector, and transmission revolution sensor (SP2) connector.
   NOTE:
   For the transmission wire connector, push up the lever until a sound indicating the claw is hooked is heard.



4. Installation of automatic transmission ASSY
   (1) Make sure that the knock pins are attached to 2 locations on the engine side.
   (2) Keep the engine and the automatic transmission ASSY horizontal, then align the knock pins and the knock pin holes and tighten the 2 bolts and 2 nuts shown in the figure.

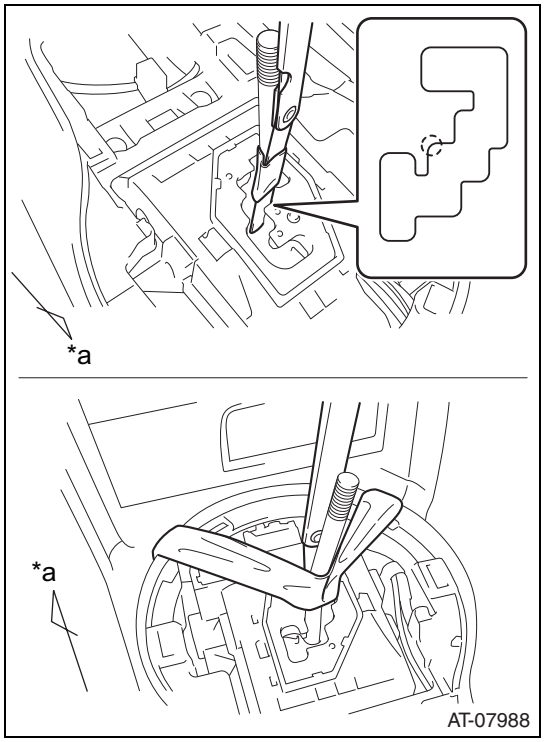
Captions in illustration

| | |
|---|---|
| *1 | Knock pin |
| ➡ | Bolt |
| ⇨ | Nut |

Standard value:T=50N·m {510kgf·cm} {36.9ft·lbf}

CAUTION:
Do not pry apart the automatic transmission ASSY with excessive force.

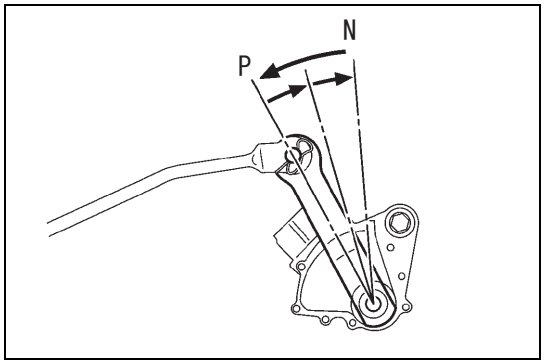
5. Installation of engine mounting insulator RR No.1
   (1) Install the engine mounting insulator RR No.1 to the automatic transmission ASSY with 4 bolts.
   Standard value:T=40N·m {408kgf·cm} {29.5ft·lbf}
6. Installation of engine rear mounting member
   (1) Install the engine rear mounting member with 4 bolts, 2 nuts, and 2 washers.
   Standard value:T=55N·m {561kgf·cm} {40.6ft·lbf} (nut)
   T=65N·m {663kgf·cm} {17.0ft·lbf} (bolt)
7. Installation of exhaust pipe bracket
   (1) Install the exhaust pipe bracket with 2 bolts.
   Standard value:T=23N·m {235kgf·cm} {17.0ft·lbf}
8. Connection of floor shift gear shifting rod SUB-ASSY No.1
   (1) Install the grommet and spacer to the control shaft lever RH.
   (2) Connect the floor shift gear shifting rod SUB-ASSY No.1 to the control shaft lever RH and install the snap pin and the shaft.
   (3) Set the select lever to N position.



(4) Insert a 0.3 mm thickness gauge between the select lever and the guide plate, and secure it with tape, etc.
CAUTION:
Keep the thickness gauge from entering the portion (arc) shown in the figure.

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle |



(5) Pull the floor shift gear shifting rod SUB-ASSY No.1 toward the rear of the vehicle until it stops, then put it back 2 steps (to N position).

(6) Temporarily install the floor shift gear shifting rod SUB-ASSY No.1 with a nut while seating it on the flat surface of the swivel.
CAUTION:
Be sure to seat it by hand and temporarily tighten the nut.

(7) Tighten the nut with the arm COMPL lightly pressed toward the rear of the vehicle.
Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
CAUTION:
- Do not press the arm COMPL excessively.
- Check that the floor shift gear shifting rod SUB-ASSY No.1 remains seated on the flat surface of the swivel.

9. Installation of transmission revolution sensor (NT) (refer to AT - 170)
10. Connection of oil cooler tube
    (1) Tighten the oil cooler pipe together with the oil cooler tube with 2 bolts.
    Standard value:T=21N·m {214kgf·cm} {15.5ft·lbf}
11. Installation of transmission oil cooler hose
    (1) Install 2 new transmission oil cooler hoses with 4 hose clamps.
12. Installation of exhaust pipe ASSY FR
    (Refer to IE - 36)
13. Connection of automatic transmission ASSY
    (1) Tighten the 2 connecting bolts on the automatic transmission ASSY.
    Standard value:T=50N·m {510kgf·cm} {36.9ft·lbf}
14. Remove the SST.

15. Installation of drive plate and torque converter setting bolt
    (1) Install the drive plate and 6 torque converter setting bolts.
    Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}
    CAUTION:
    - Be careful not to drop the drive plate and the torque converter setting bolts into the clutch housing.
    - Be careful not to damage the drive plate and the torque converter setting bolts.
16. Installation of flywheel housing under cover
    (1) Install the flywheel housing under cover.
17. Installation of vacuum pipe
    (1) Install the vacuum pipe with 2 bolts.
    Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
18. Connection of wiring harness
    (1) Install the engine hanger No.2 with 2 bolts.
    Standard value:T=21N·m {214kgf·cm} {15.5ft·lbf}
    (2) Install the wiring harness clamp bracket with 2 bolts.
    Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}
    (3) Engage the clamp to connect the wiring harness.

    (4) Connect the 3 connectors.
    NOTE:
    For connector A, push down the lever until a sound indicating the claw is hooked is heard.

Captions in illustration

| | |
|---|---|
| ⇨ | Lock unit |

    (5) Engage the 4 clamps to connect the wiring harness to the intake manifold.
    (6) Connect the ground wire with the bolt.
    Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}

    (7) Connect the 2 connectors.
    NOTE:
    For connector A, push down the lever until a sound indicating the claw is hooked is heard.

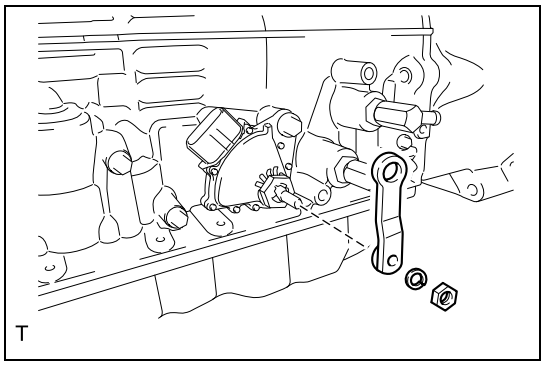
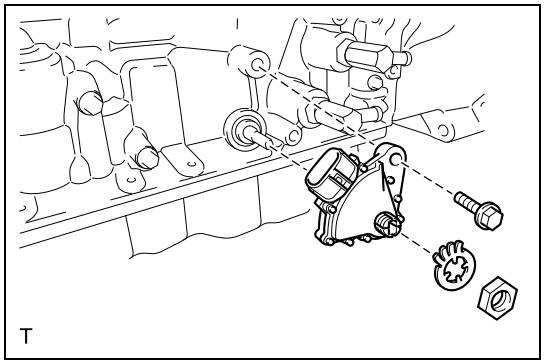
## Disassembly

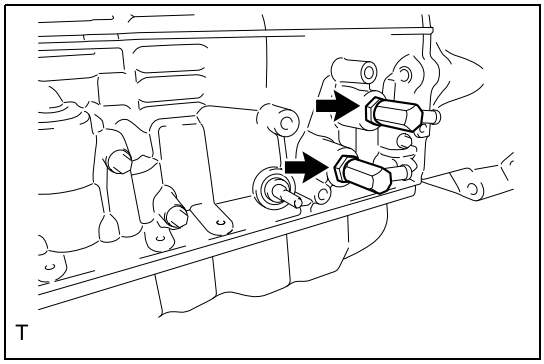
1. Removal of refill plug
   (1) Remove the refill plug.
   (2) Remove the O-ring from the refill plug.



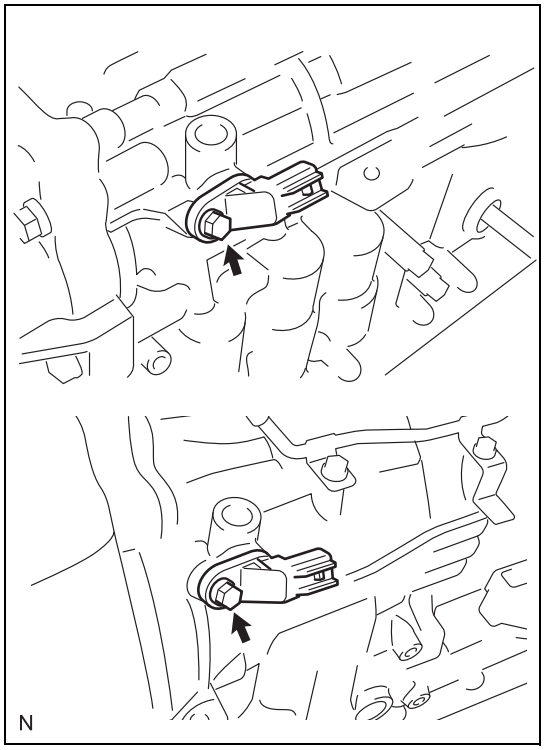
2. Removal of transmission control shaft lever RH
   (1) Remove the nut, spring washer, and transmission control shaft lever RH from the neutral start switch ASSY.



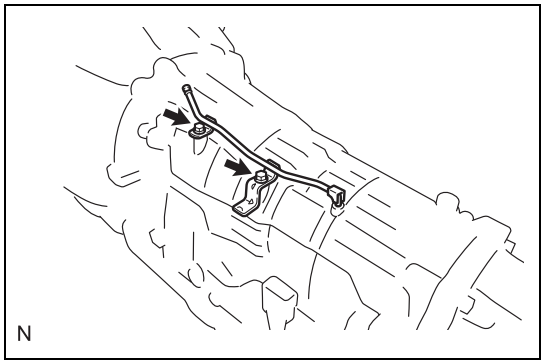
3. Removal of neutral start switch ASSY
   (1) Use a flat tip screwdriver to bend the tab of the lock washer.
   (2) Remove the nut and lock washer.
   (3) Remove the bolt and neutral start switch ASSY from the automatic transmission case SUB-ASSY.
   NOTE:
   Be sure to keep the manual valve lever shaft from rotating before installation of the neutral start switch ASSY so as to prevent the detent spring from being detached from the manual valve lever shaft.



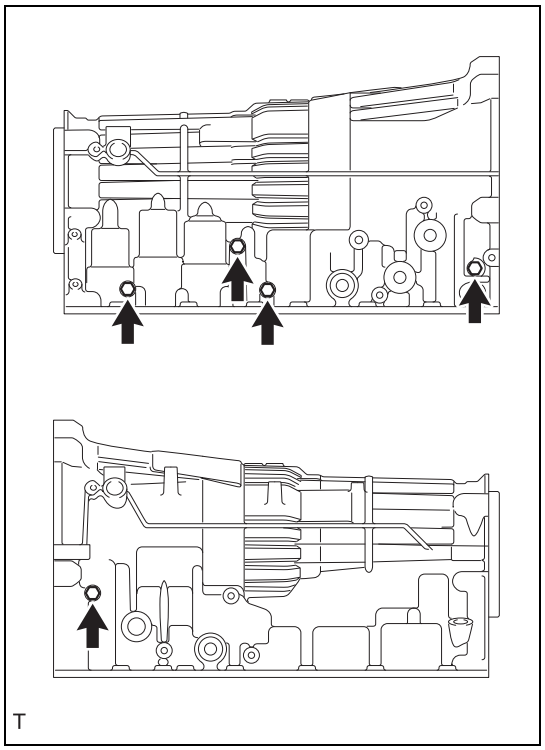
4. Removal of oil cooler tube union
   (1) Remove 2 oil cooler tube unions from the automatic transmission case SUB-ASSY.



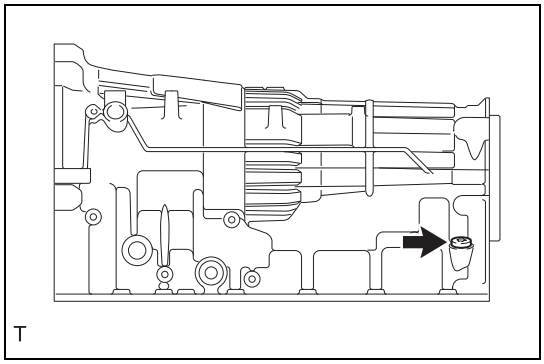
5. Removal of transmission revolution sensor
   (1) Remove 2 bolts and 2 transmission revolution sensors from the automatic transmission case SUB-ASSY.
   (2) Remove 2 O-rings from the 2 transmission revolution sensors.



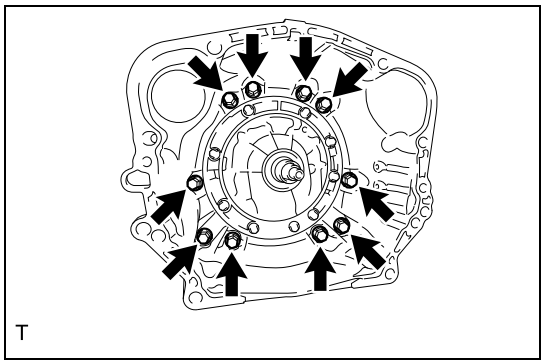
6. Removal of automatic transmission breather tube
   (1) Remove 2 bolts to remove the automatic transmission breather tube from the automatic transmission case SUB-ASSY.



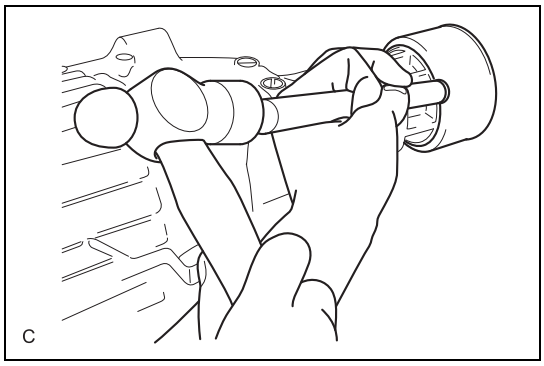
7. Removal of automatic transmission case plug
   (1) Remove 5 automatic transmission case plugs from the automatic transmission case SUB-ASSY.
   (2) Remove 5 O-rings from the 5 automatic transmission case plugs.



(3) Remove the automatic transmission case plug from the automatic transmission case SUB-ASSY using a TORX socket wrench T55.
(4) Remove the O-ring from the automatic transmission case plug.

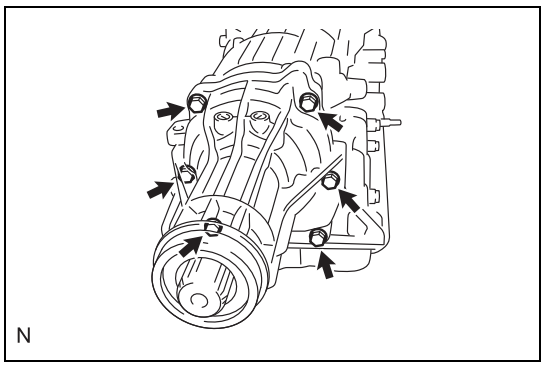


8. Removal of automatic transmission housing
(1) Remove 10 bolts to remove the automatic transmission housing from the automatic transmission case SUB-ASSY.

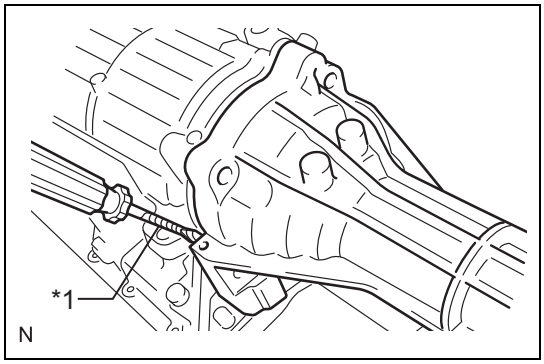


9. Removal of extension housing dust deflector
(1) Use a brass bar and a hammer to lightly tap the extension housing dust deflector and remove it from the extension housing SUB-ASSY.
CAUTION:
Be careful not to damage the extension housing SUB-ASSY.

AT



10. Removal of extension housing SUB-ASSY
(1) Remove the 6 bolts.

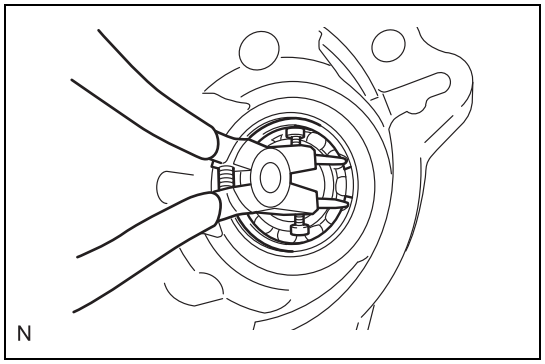


(2) Use a flat tip screwdriver to remove the extension housing SUB-ASSY from the automatic transmission case SUB-ASSY.

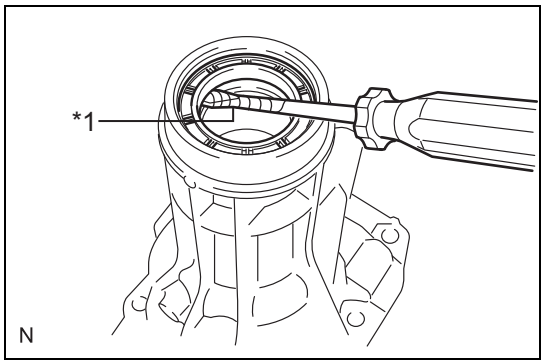
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to scratch the mating surface of the extension housing SUB-ASSY and the automatic transmission case SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



11. Removal of transmission case adapter radial ball bearing
    (1) Remove the snap ring from the extension housing SUB-ASSY.
    (2) Remove the transmission case adapter radial ball bearing from the extension housing SUB-ASSY.

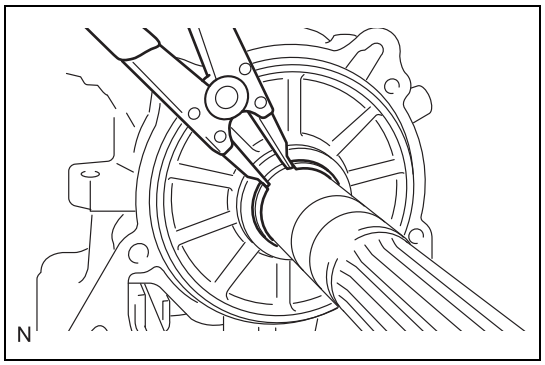


12. Removal of automatic transmission extension housing oil seal
    (1) Use a flat tip screwdriver to remove the automatic transmission extension housing oil seal from the extension housing SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the extension housing SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

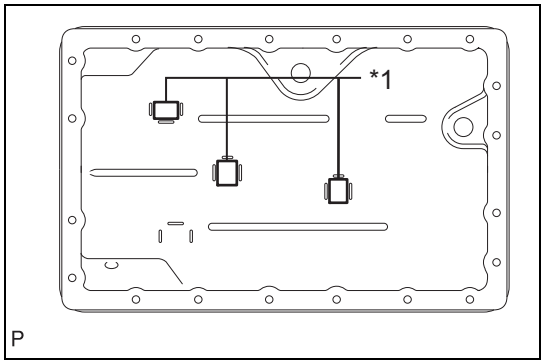


13. Removal of output shaft thrust bearing
    (1) Remove the snap ring from the output shaft of the rear planetary gear ASSY.
    (2) Remove the rear output shaft thrust bearing race, output shaft thrust bearing, and output shaft thrust bearing race.

AT

14. Removal of automatic transmission oil pan SUB-ASSY
    CAUTION:
    Be careful not to turn the transmission to prevent the valve body from becoming dirty with foreign substances accumulating at the bottom of the oil pan.
    (1) Use a 5-mm {0.2-in} socket hexagon wrench to remove the overflow plug and gasket.
    (2) Remove the drain plug and the gasket.

    (3) Remove 20 bolts to remove the automatic transmission oil pan SUB-ASSY and automatic transmission oil pan gasket.



(4) Remove 3 transmission oil cleaner magnets from the automatic transmission oil pan SUB-ASSY.

Captions in illustration

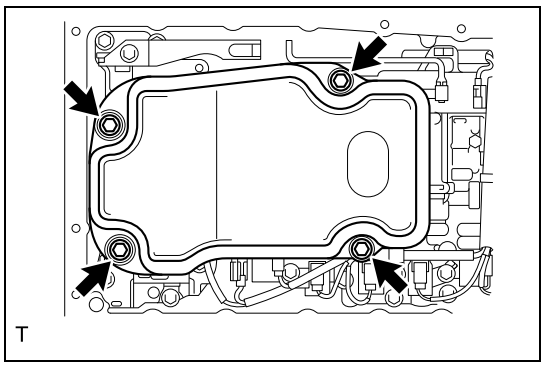
| | |
|---|---|
| *1 | Transmission oil cleaner magnet |

(5) Check the particles in the automatic transmission oil pan SUB-ASSY.

(a)If metallic fragments are found, collect them using the removed transmission oil cleaner magnets. Carefully inspect foreign substances or particles in the automatic transmission oil pan SUB-ASSY and on the transmission oil cleaner magnets to check for normal wear at the automatic transmission ASSY.

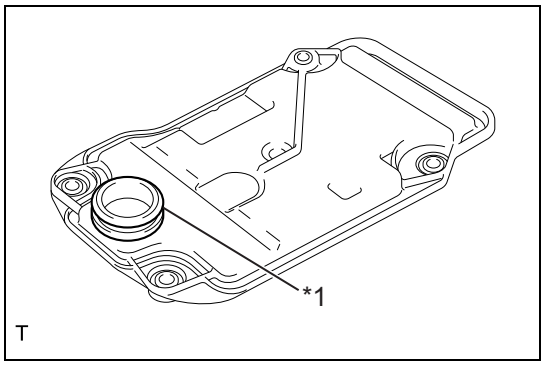
Steel (magnetic): worn bearing, gear, and clutch plate

Brass (non-magnetic): worn bushing



15. Removal of valve body oil strainer ASSY

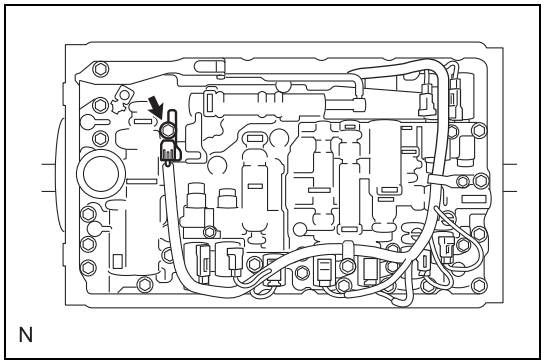
(1) Remove 4 bolts to remove the valve body oil strainer ASSY from the transmission valve body ASSY.



(2) Remove the O-ring from the valve body oil strainer ASSY.

Captions in illustration

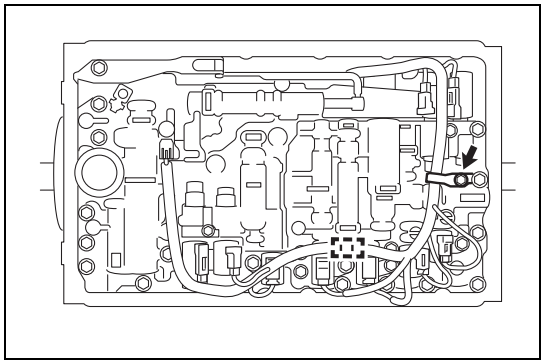
| | |
|---|---|
| *1 | O-ring |



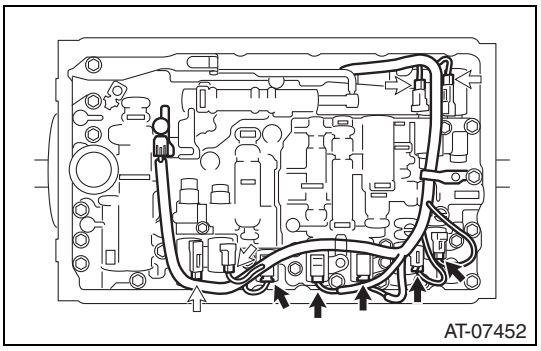
16. Removal of transmission wire

(1) Remove the bolt and hydraulic pressure sensor clamp, then disconnect the ATF hydraulic pressure sensor.

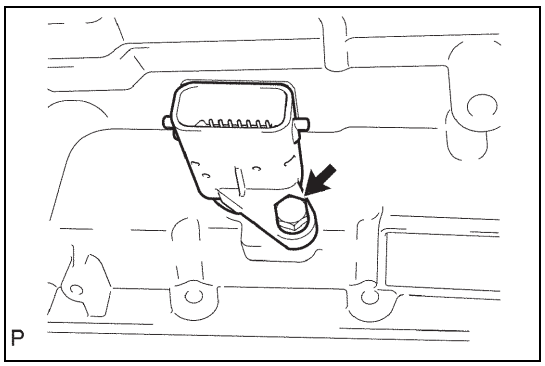
AT



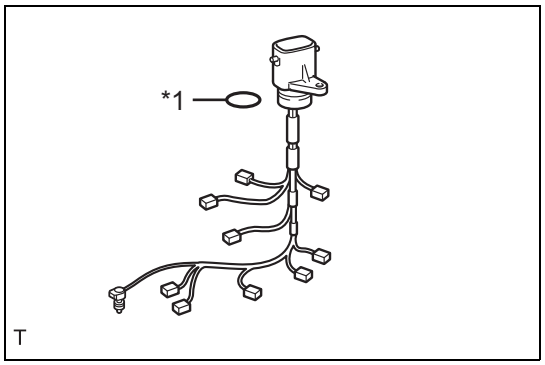
(2) Remove the bolt to remove the clamp from the valve body ASSY.
(3) Disconnect the wiring harness from the clamp.



(4) Disconnect the 9 solenoid valve connectors.
NOTE:
Use a thin-tipped flat tip screwdriver for the connector indicated by the white arrow to disconnect the control solenoid connector.



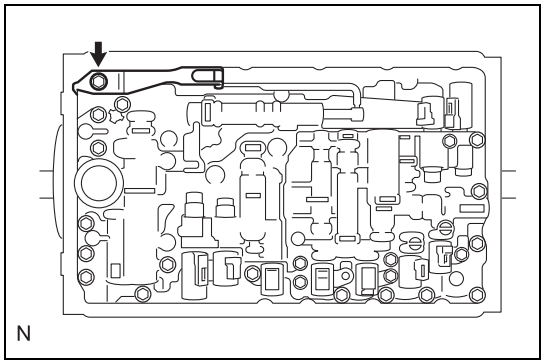
(5) Remove the bolt, then pull out the transmission wire.



(6) Remove the O-ring from the transmission wire.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |



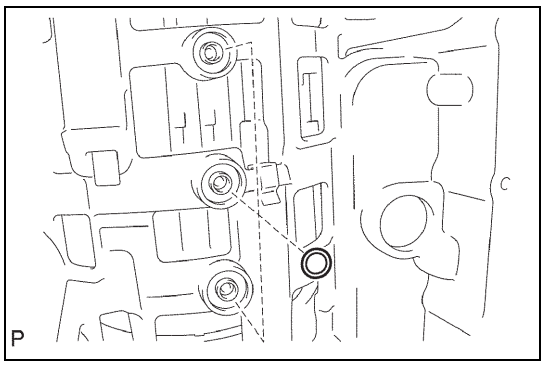
17. Removal of transmission valve body ASSY
    (1) Remove the bolt, detent spring cover, and detent spring from the transmission valve body ASSY.

    (2) Remove 19 bolts to remove the transmission valve body ASSY from the automatic transmission case SUB-ASSY.

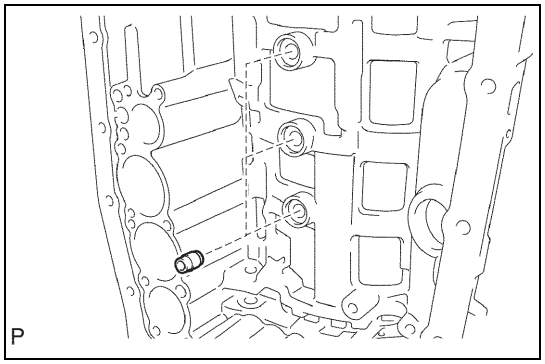
    (3) Remove the manual valve connecting rod SUB-ASSY from the manual valve lever SUB-ASSY.

Captions in illustration

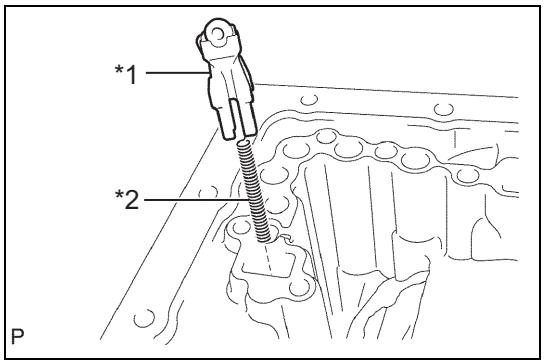
| | |
|---|---|
| *1 | Manual valve connecting rod SUB-ASSY |
| *2 | Manual valve lever SUB-ASSY |



18. Removal of transmission case gasket
    (1) Remove 3 transmission case gaskets from the automatic transmission case SUB-ASSY.



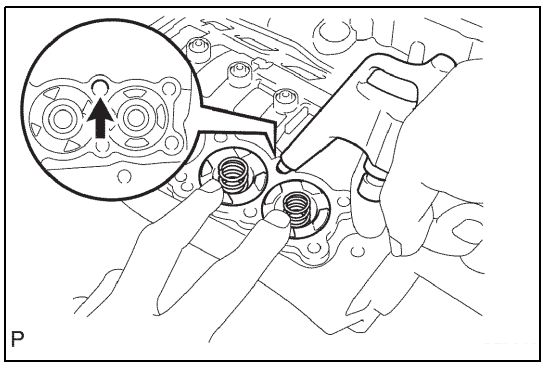
19. Removal of brake drum gasket
    (1) Remove 3 brake drum gaskets from the automatic transmission case SUB-ASSY.



20. Removal of check ball body
    (1) Remove the check ball body and compression spring from the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Check ball body |
| *2 | Compression spring |

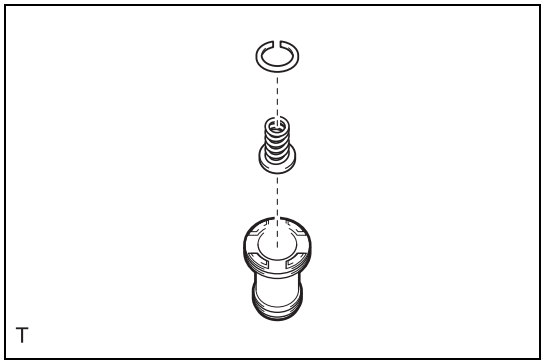


21. Removal of C-2 accumulator piston
    (1) Blow compressed air into the oil hole and remove the C-2 accumulator piston and spring from the automatic transmission case SUB-ASSY.
    CAUTION:
    Be careful as the C-3 and B-3 accumulator pistons may jump out.
    (2) Remove 2 O-rings from the C-2 accumulator piston.

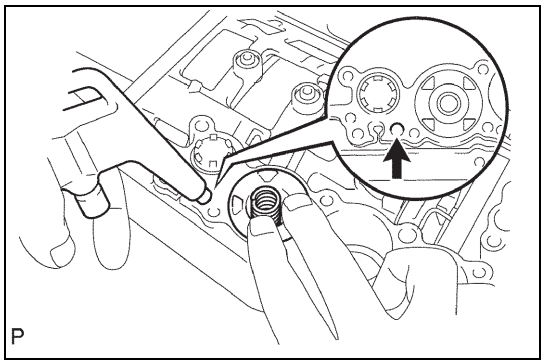
    (3) Use a flat tip screwdriver to remove the snap ring and spring SUB-ASSY from the C-2 accumulator piston.
    CAUTION:
    Be careful not to damage the C-2 accumulator piston.
    NOTE:
    Wrap the tip of a flat tip screwdriver with tape before using it.

22. Removal of B-3 accumulator piston
    (1) Blow compressed air into the oil hole to remove the B-3 accumulator piston and spring from the automatic transmission case SUB-ASSY.
    CAUTION:
    Be careful as the C-3 accumulator piston may jump out.
    (2) Remove 2 O-rings from the B-3 accumulator piston.

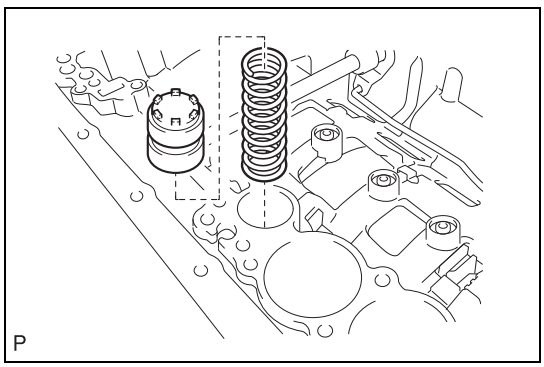
AT



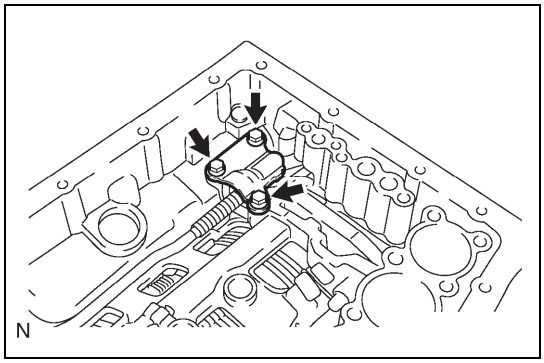
(3) Use a flat tip screwdriver to remove the snap ring and spring SUB-ASSY from the B-3 accumulator piston.
CAUTION:
Be careful not to damage the B-3 accumulator piston.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



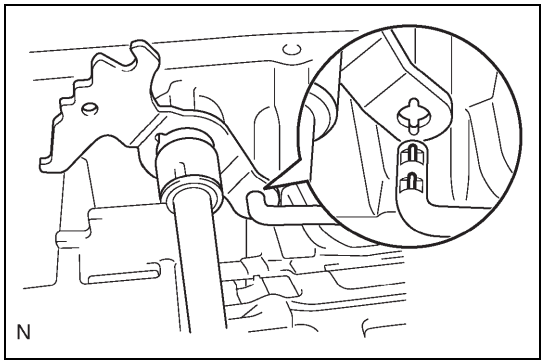
23. Removal of C-3 accumulator piston
(1) Blow compressed air into the oil hole and remove the C-3 accumulator piston and 2 springs from the automatic transmission case SUB-ASSY.
(2) Remove 2 O-rings from the C-3 accumulator piston.



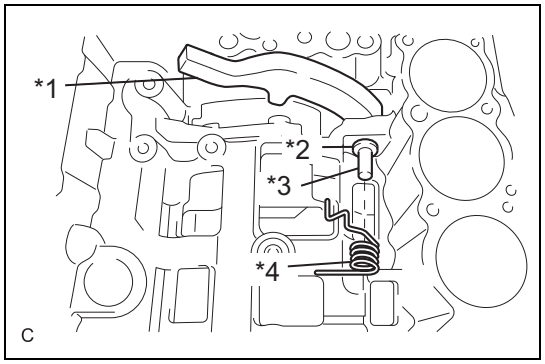
24. Removal of B-1 accumulator valve
(1) Remove the B-1 accumulator valve and spring from the automatic transmission case SUB-ASSY.



25. Removal of parking lock pole bracket
(1) Remove 3 bolts to remove the parking lock pole bracket from the automatic transmission case SUB-ASSY.



26. Removal of parking lock rod SUB-ASSY
(1) Remove the parking lock rod SUB-ASSY from the manual valve lever SUB-ASSY.

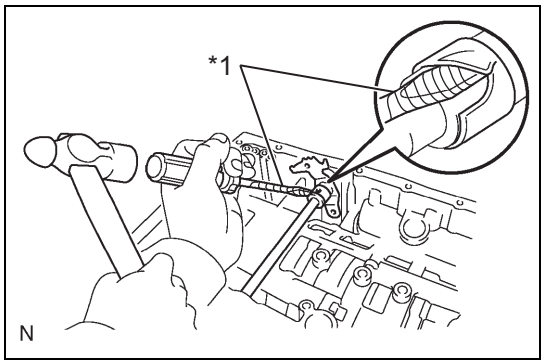


27. Removal of parking lock pole shaft
    (1) Pull out the parking lock pole shaft from the front side and remove the parking lock pole and torsion spring.

Captions in illustration

| | |
|---|---|
| *1 | Parking lock pole |
| *2 | E-ring |
| *3 | Parking lock pole shaft |
| *4 | Torsion spring |

    (2) Remove the E-ring from the parking lock pole shaft.



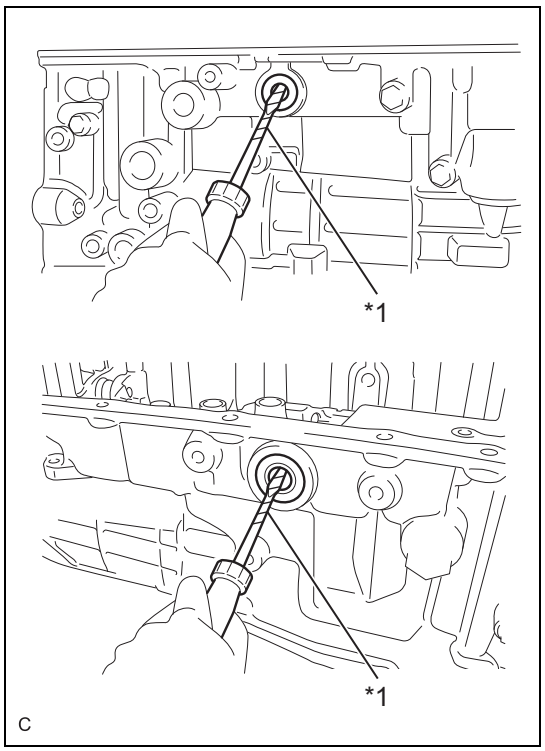
28. Removal of manual valve lever SUB-ASSY
    (1) Use a flat tip screwdriver and a hammer to disconnect the spacer and remove it from the manual valve lever shaft.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the manual valve lever shaft.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

    (2) Use a 3-mm pin punch and hammer to pull out the spring pin.
    NOTE:
    Pull out the spring pin slowly to prevent it from dropping in the automatic transmission case SUB-ASSY.
    (3) Pull out the manual valve lever shaft from the case and remove the manual valve lever SUB-ASSY.

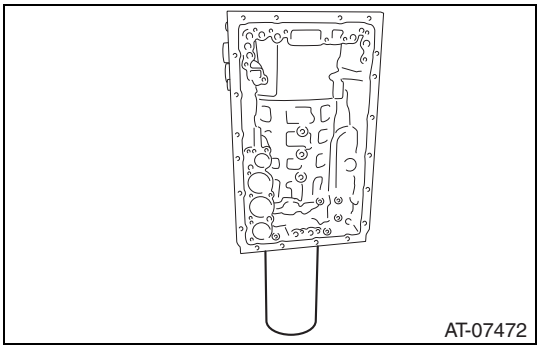


29. Removal of manual valve lever shaft oil seal
    (1) Use a flat tip screwdriver to remove the 2 manual valve lever shaft oil seals from the automatic transmission case SUB-ASSY.

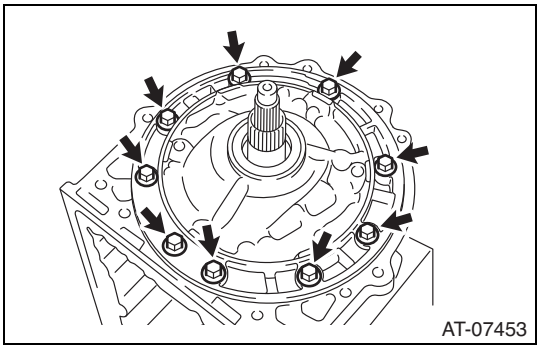
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the automatic transmission case SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



30. Setting of automatic transmission case SUB-ASSY
    (1) Place the automatic transmission case SUB-ASSY on a pipe or tube approx. 125 mm {4.92 in} in inner diameter.
    CAUTION:
    Place it on a level surface.



31. Removal of oil pump ASSY
    (1) Remove the 9 bolts.

    (2) Use a flat tip screwdriver to remove the oil pump ASSY from the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

    CAUTION:
    Be careful not to damage the oil pump ASSY and automatic transmission case SUB-ASSY.
    NOTE:
    Wrap the tip of a flat tip screwdriver with tape before using it.

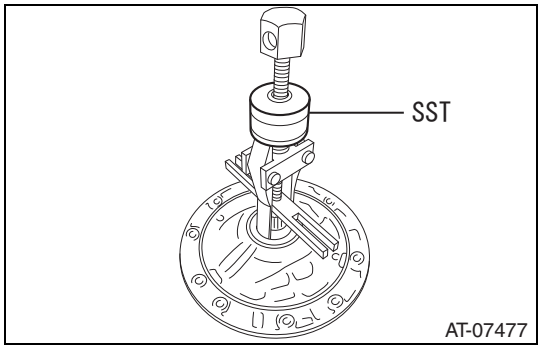
    (3) Remove No.1 thrust bearing race from the oil pump ASSY.

Captions in illustration

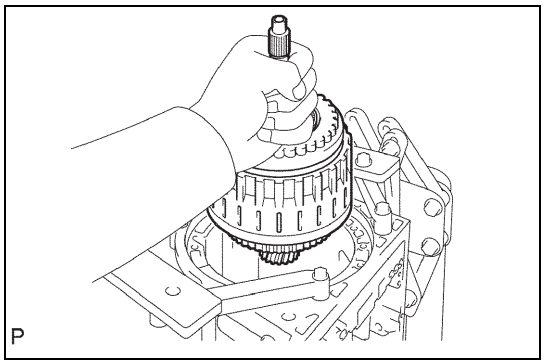
| | |
|---|---|
| *1 | No.1 thrust bearing race |
| *2 | Oil pump ASSY |
| *3 | O-ring |

    (4) Remove the O-ring from the oil pump ASSY.

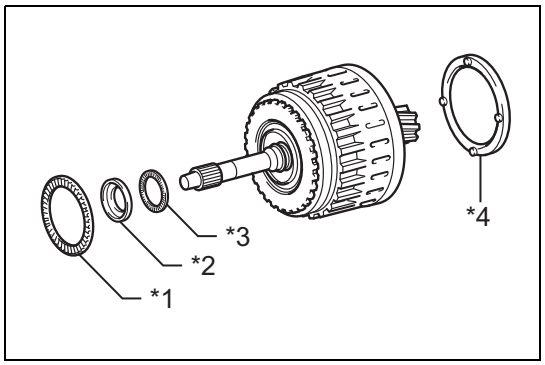
    (5) Remove the 3 oil seal rings from the oil pump.



(6) Use the SST to remove the oil seal from the oil pump.
SST 398527700



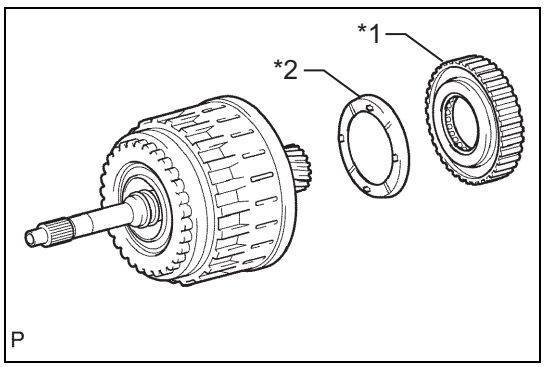
32. Removal of clutch drum & input shaft ASSY
(1) Remove the clutch drum and input shaft ASSY from the automatic transmission case SUB-ASSY.



(2) Remove the clutch drum thrust washer, thrust needle roller bearing, input shaft front thrust bearing race, and input shaft front thrust needle roller bearing from the clutch drum & input shaft ASSY.

Captions in illustration

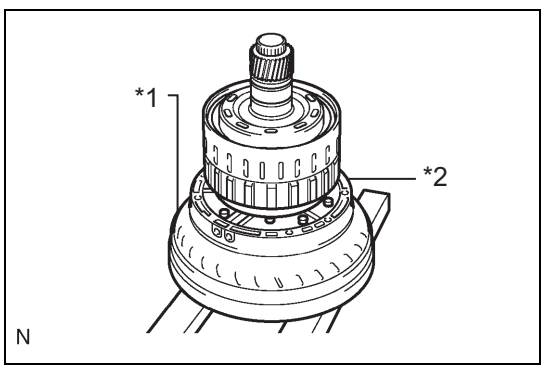
| | |
|---|---|
| *1 | Thrust needle roller bearing |
| *2 | Input shaft front thrust bearing race |
| *3 | Input shaft front thrust needle roller bearing |
| *4 | Clutch drum thrust washer |



33. Removal of No.2 one-way clutch ASSY
(1) Remove the No.2 one-way clutch ASSY and input shaft clutch drum thrust washer from the clutch drum & input shaft ASSY.

Captions in illustration

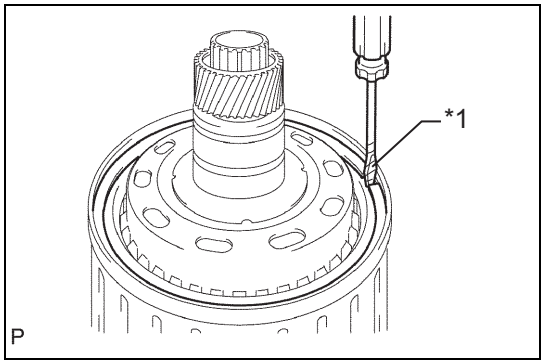
| | |
|---|---|
| *1 | No.2 one-way clutch ASSY |
| *2 | Input shaft clutch drum thrust washer |



34. Support clutch drum & input shaft ASSY
(1) Place the oil pump ASSY on the torque converter ASSY, then place the clutch drum & input shaft ASSY on the oil pump ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Torque converter ASSY |
| *2 | Oil pump ASSY |

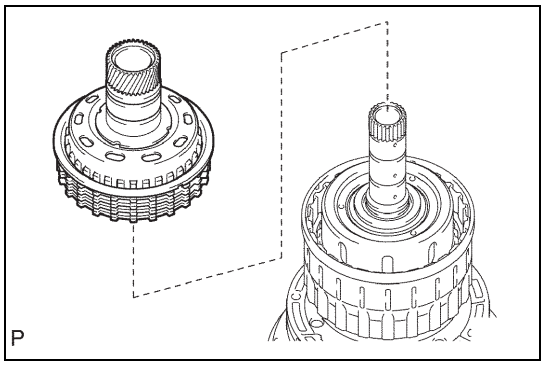


35. Removal of reverse clutch hub SUB-ASSY
    (1) Use a flat tip screwdriver to remove the snap ring from the reverse clutch piston SUB-ASSY.

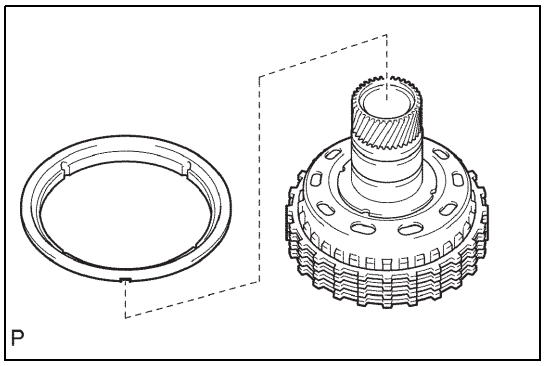
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

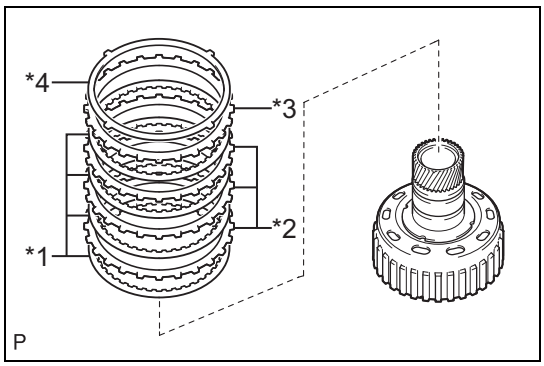
CAUTION:
Be careful not to damage the reverse clutch piston SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



(2) Remove the reverse clutch hub SUB-ASSY from the reverse clutch drum SUB-ASSY.



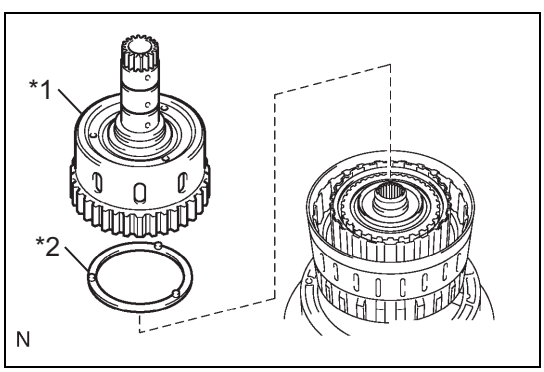
36. Removal of reverse clutch reaction sleeve
    (1) Remove the reverse clutch reaction sleeve from the reverse clutch hub SUB-ASSY.



37. Removal of No.3 clutch disc
    (1) Remove the clutch cushion plate, reverse clutch flange, 4 No.3 clutch discs, and 3 No.3 clutch plates from the reverse clutch hub SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | No.3 clutch disc |
| *2 | No.3 clutch plate |
| *3 | Reverse clutch flange |
| *4 | Clutch cushion plate |

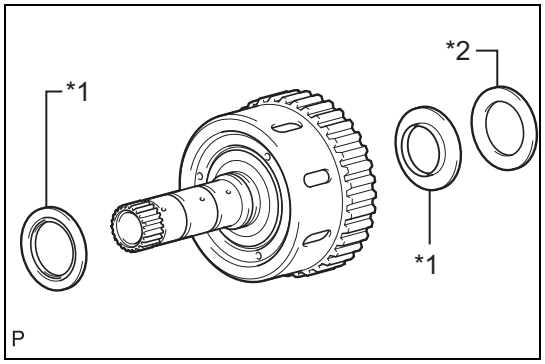


38. Removal of forward clutch hub SUB-ASSY
    (1) Remove the forward clutch hub SUB-ASSY and No.3 clutch hub thrust washer from the reverse clutch drum SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Forward clutch hub SUB-ASSY |
| *2 | No.3 clutch hub thrust washer |

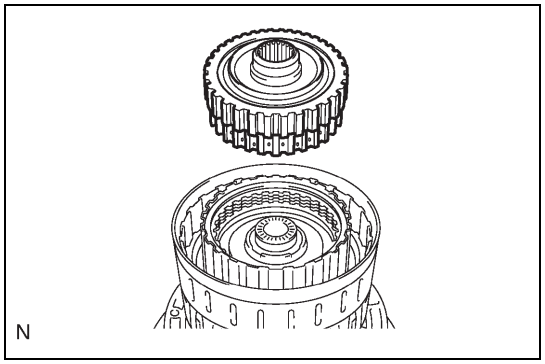
AT



(2) Remove the 2 thrust needle roller bearings and No.2 thrust bearing race from the forward clutch hub ASSY.

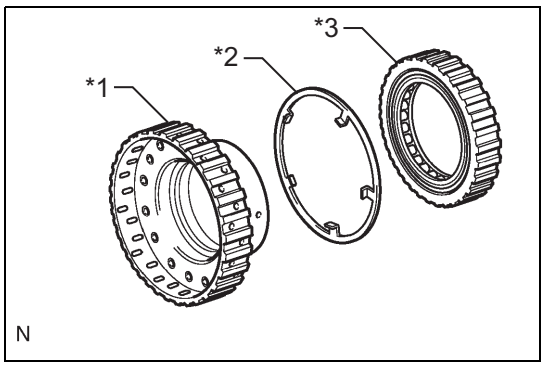
Captions in illustration

| | |
|---|---|
| *1 | Thrust needle roller bearing |
| *2 | No.2 thrust bearing race |



39. Removal of coast clutch hub SUB-ASSY

(1) Remove the coast clutch hub SUB-ASSY from the reverse clutch drum SUB-ASSY.

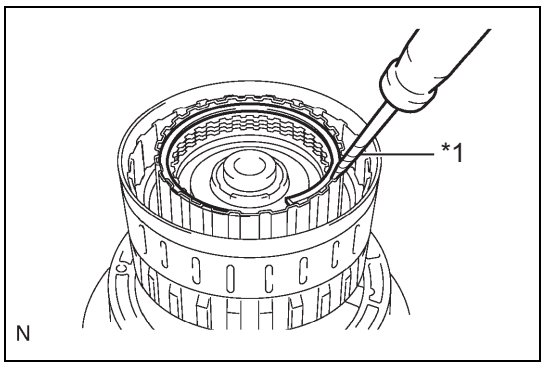


40. Removal of No.4 one-way clutch ASSY

(1) Remove the No.4 one-way clutch ASSY and No.2 clutch hub thrust washer from the coast clutch hub ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Coast clutch hub SUB-ASSY |
| *2 | No.2 clutch hub thrust washer |
| *3 | No.4 one-way clutch ASSY |



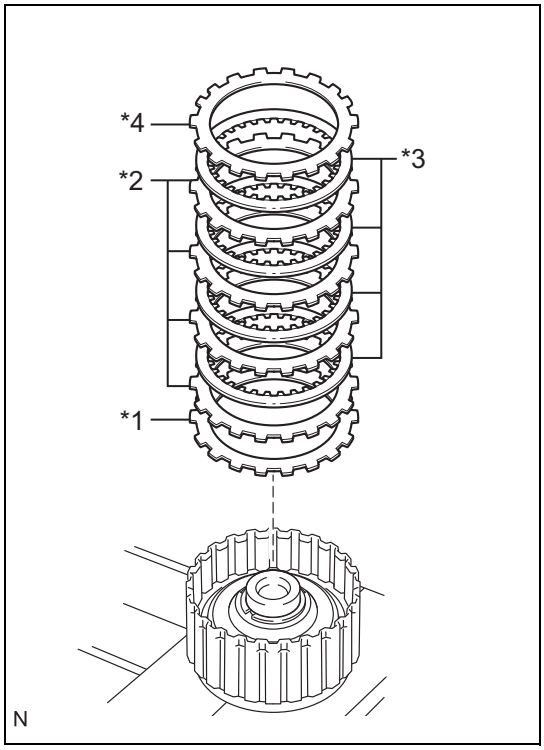
41. Removal of No.1 clutch disc (forward clutch disc)

(1) Use a flat tip screwdriver to remove the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

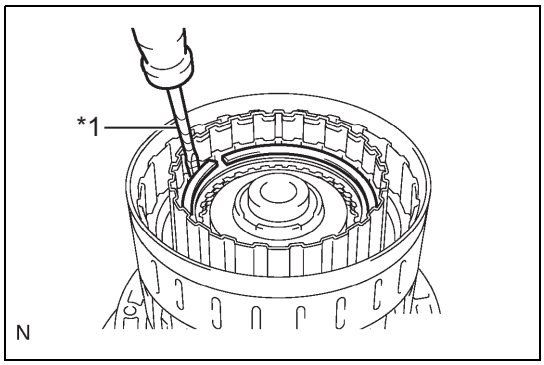
CAUTION:
Be careful not to damage the input shaft.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



(2) Remove the forward clutch flange, 4 No.1 clutch discs, 4 No.1 clutch plates, and clutch cushion plate from the input shaft.

Captions in illustration

| | |
|---|---|
| *1 | Clutch cushion plate |
| *2 | No.1 clutch plate |
| *3 | No.1 clutch disc |
| *4 | Forward clutch flange |



42. Removal of No.4 clutch disc (coast clutch disc)

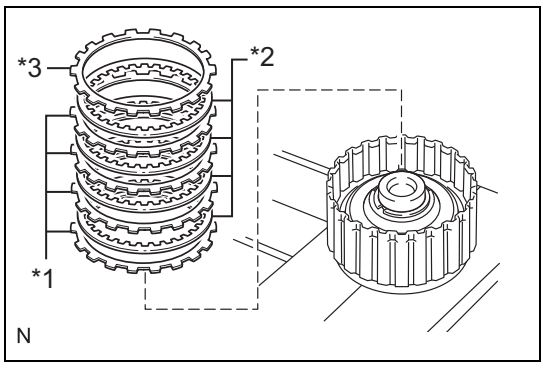
(1) Use a flat tip screwdriver to remove the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the forward clutch piston SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

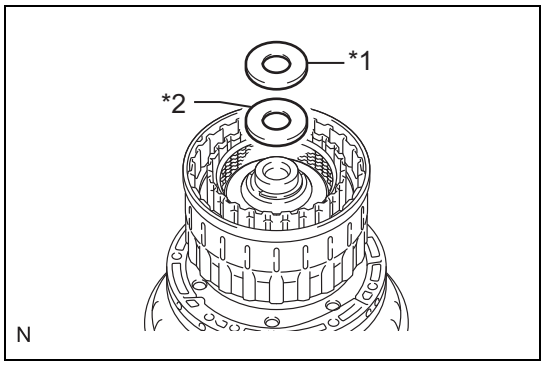
AT



(2) Remove the coast clutch flange, 4 No.4 clutch discs, 4 No.4 clutch plates from the forward clutch piston SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | No.4 clutch plate |
| *2 | No.4 clutch disc |
| *3 | Coast clutch flange |

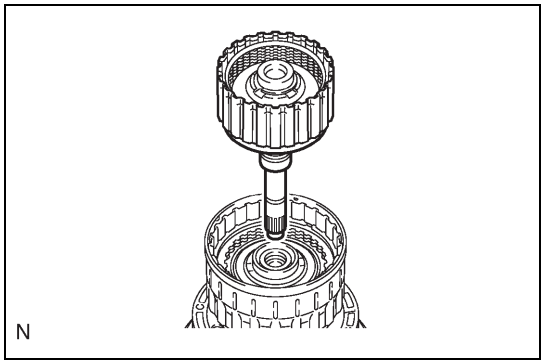


43. Removal of input shaft

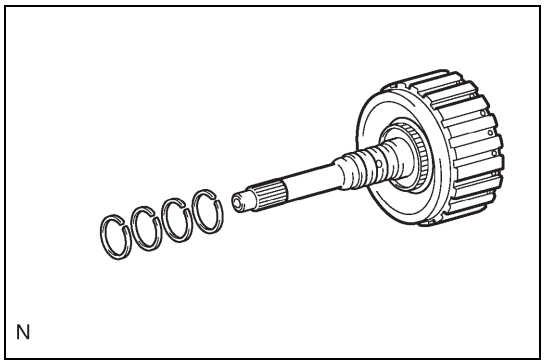
(1) Remove the thrust needle roller bearing and input shaft rear thrust bearing race from the input shaft.

Captions in illustration

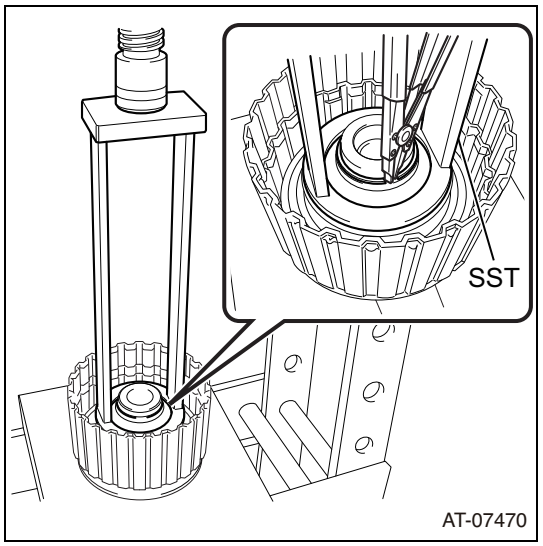
| | |
|---|---|
| *1 | Thrust needle roller bearing |
| *2 | Input shaft rear thrust bearing race |



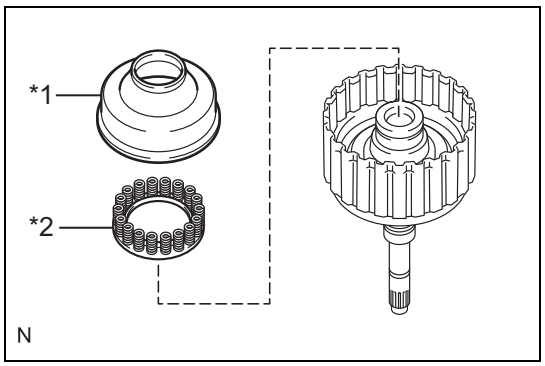
(2) Remove the input shaft from the reverse clutch drum SUB-ASSY.



44. Removal of clutch drum oil seal ring
(1) Remove the 4 clutch drum oil seal rings from the input shaft.



45. Removal of No.1 clutch balancer
(1) Place the SST on the No.1 clutch balancer and press the forward clutch return spring SUB-ASSY using a press.
SST 09387-00110
(2) Remove the snap ring.

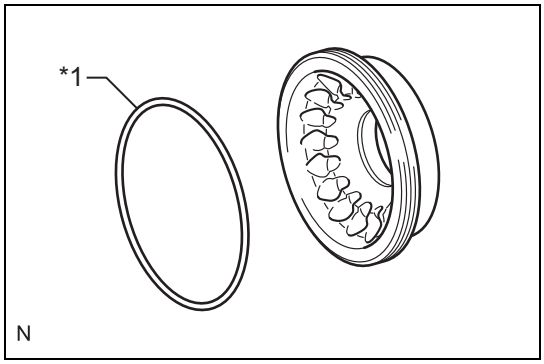


(3) Remove No.1 clutch balancer and forward clutch return spring SUB-ASSY from the input shaft.

Captions in illustration

| | |
|---|---|
| *1 | No.1 clutch balancer |
| *2 | Forward clutch return spring SUB-ASSY |

AT



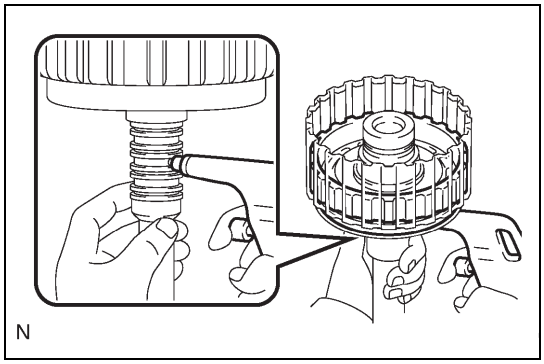
(4) Remove the D-ring from the No.1 clutch balancer.

Captions in illustration

| | |
|---|---|
| *1 | D-ring |

46. Removal of forward clutch piston SUB-ASSY

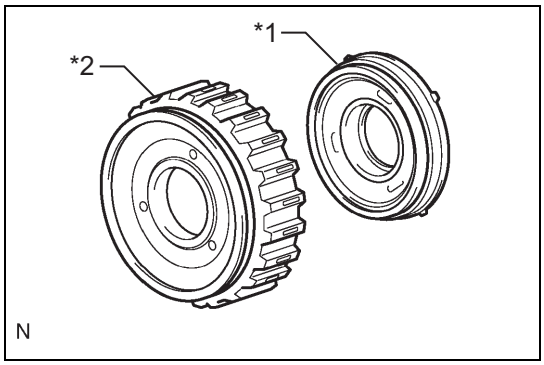
(1) Hold the forward clutch piston SUB-ASSY and blow compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) to the input shaft, then remove the forward clutch piston SUB-ASSY.



(2) Remove the coast clutch piston from the forward clutch piston SUB-ASSY.

Captions in illustration

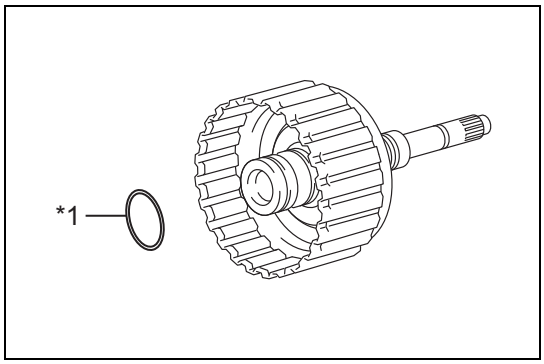
| | |
|---|---|
| *1 | Coast clutch piston |
| *2 | Forward clutch piston SUB-ASSY |



(3) Remove the O-ring from the input shaft.

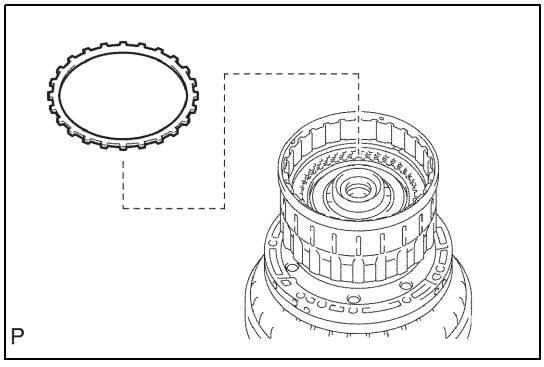
Captions in illustration

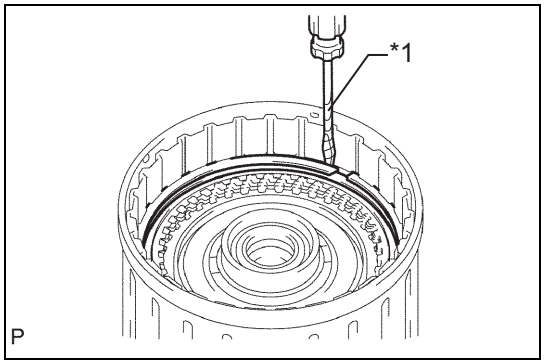
| | |
|---|---|
| *1 | O-ring |



47. Removal of reverse clutch flange

(1) Remove the reverse clutch flange from the reverse clutch drum SUB-ASSY.





48. Removal of No.2 clutch disc (direct clutch disc)
    (1) Use a flat tip screwdriver to remove the 2 snap rings from the reverse clutch drum SUB-ASSY.

Captions in illustration

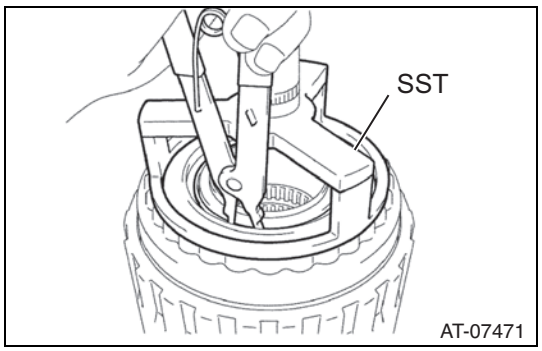
| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the reverse clutch drum SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

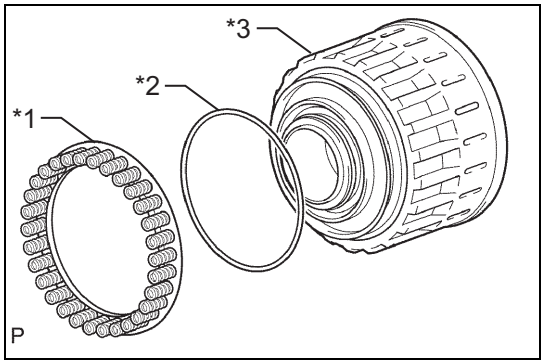
    (2) Remove the direct clutch flange, 5 No.2 clutch discs, 5 No.2 clutch plates from the reverse clutch drum SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | No.2 clutch plate |
| *2 | No.2 clutch disc |
| *3 | Direct clutch flange |



49. Removal of No.3 clutch balancer
    (1) Place the SST on the No.3 clutch balancer and press the reverse clutch return spring SUB-ASSY using a press.
        SST 09387-00070
    (2) Remove the snap ring.
    (3) Remove the No.3 clutch balancer.

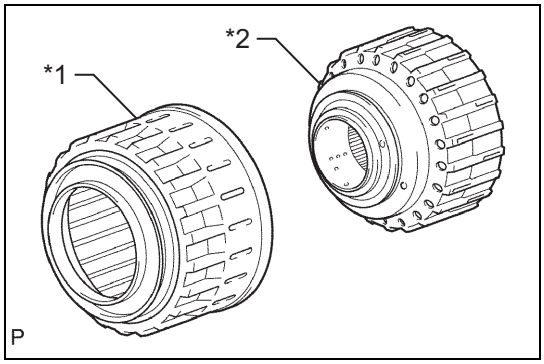


50. Removal of reverse clutch return spring SUB-ASSY
    (1) Remove the reverse clutch return spring SUB-ASSY and O-ring from the reverse clutch piston SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Reverse clutch return spring SUB-ASSY |
| *2 | O-ring |
| *3 | Reverse clutch piston SUB-ASSY |

AT



51. Removal of reverse clutch piston SUB-ASSY
    (1) Remove the reverse clutch piston SUB-ASSY from the reverse clutch drum SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Reverse clutch piston SUB-ASSY |
| *2 | Reverse clutch drum SUB-ASSY |

    (2) Remove the O-ring from the reverse clutch piston SUB-ASSY.

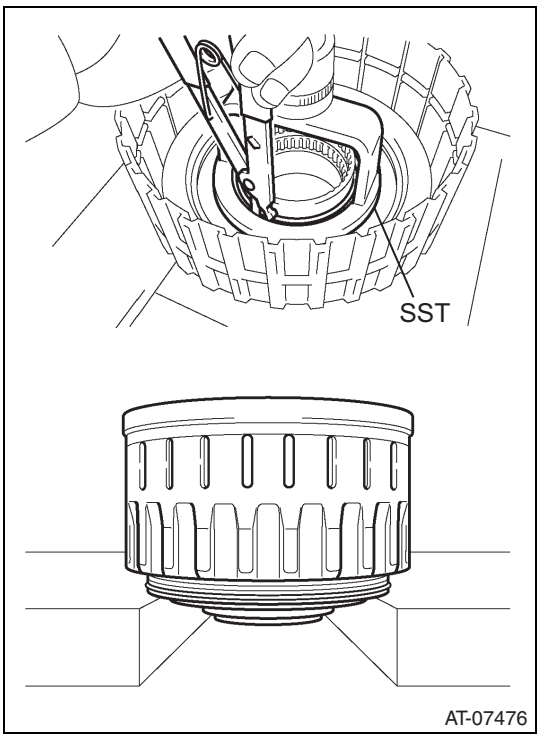
Captions in illustration

| | |
|---|---|
| *1 | O-ring |

    (3) Remove the O-ring from the reverse clutch drum SUB-ASSY.

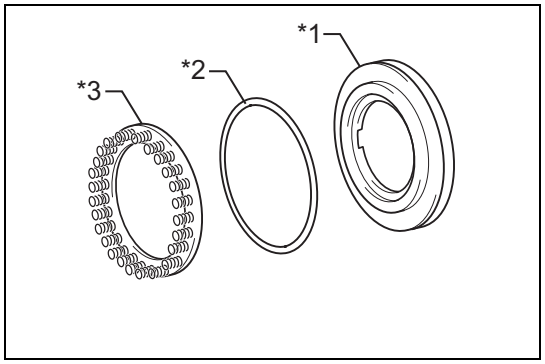
Captions in illustration

| | |
|---|---|
| *1 | O-ring |



52. Removal of direct clutch piston SUB-ASSY
    (1) Place the SST on the No.2 clutch balancer and press the direct clutch return spring SUB-ASSY using a press.
        SST 09320-89010
    (2) Remove the snap ring.

AT

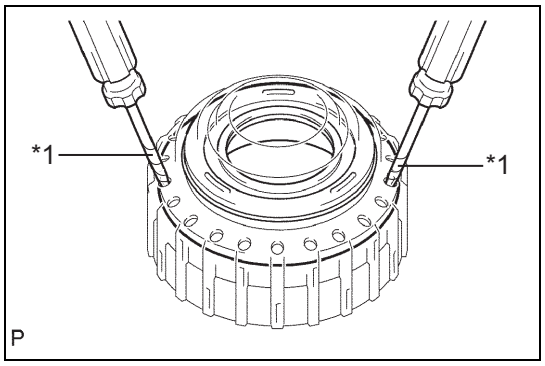


(3) Remove the No.2 clutch balancer and direct clutch return spring SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | No.2 clutch balancer |
| *2 | O-ring |
| *3 | Direct clutch return spring SUB-ASSY |

(4) Remove the O-ring from the No.2 clutch balancer.

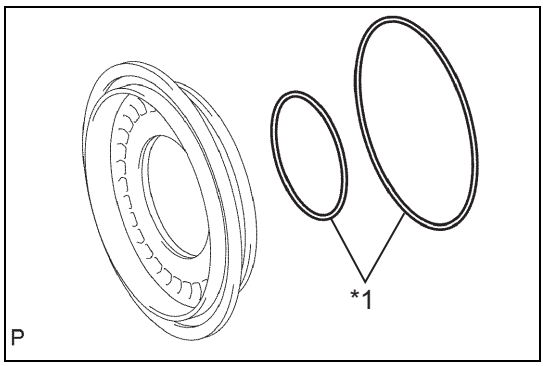


(5) Use 2 flat tip screwdrivers to remove the direct clutch piston SUB-ASSY from the reverse clutch drum SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the direct clutch piston SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

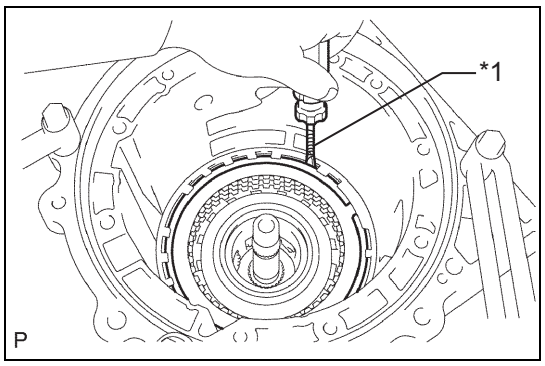


(6) Remove 2 O-rings from the direct clutch piston SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

AT



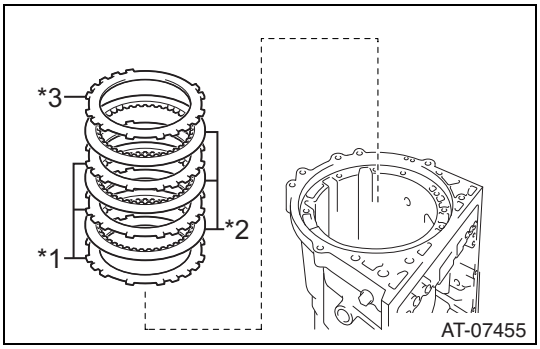
53. Removal of No.3 brake disc

(1) Use a flat tip screwdriver to remove the snap ring from the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the automatic transmission case SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



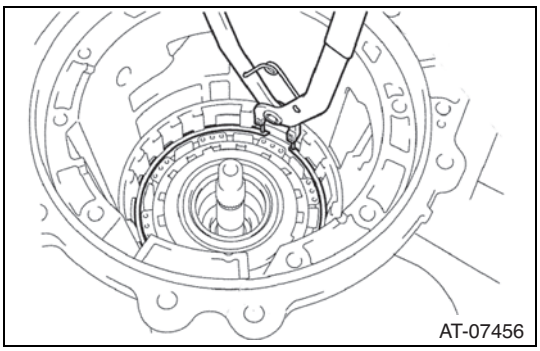
(2) Remove the No.3 brake flange, 3 No.3 brake discs, and 3 No.3 brake plates from the automatic transmission case SUB-ASSY.

Captions in illustration

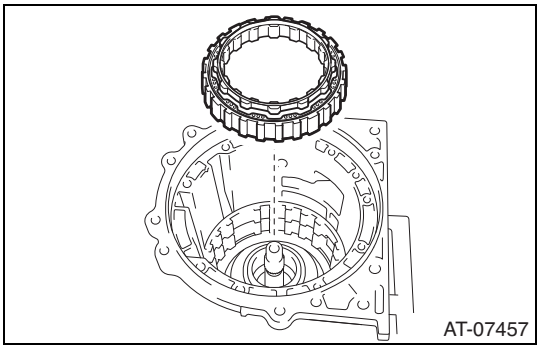
| | |
|---|---|
| *1 | No.3 brake plate |
| *2 | No.3 brake disc |
| *3 | No.3 brake flange |

54. Removal of No.3 brake cylinder

(1) Remove the snap ring from the automatic transmission case SUB-ASSY.



(2) Remove the No.3 brake cylinder from the automatic transmission case SUB-ASSY.

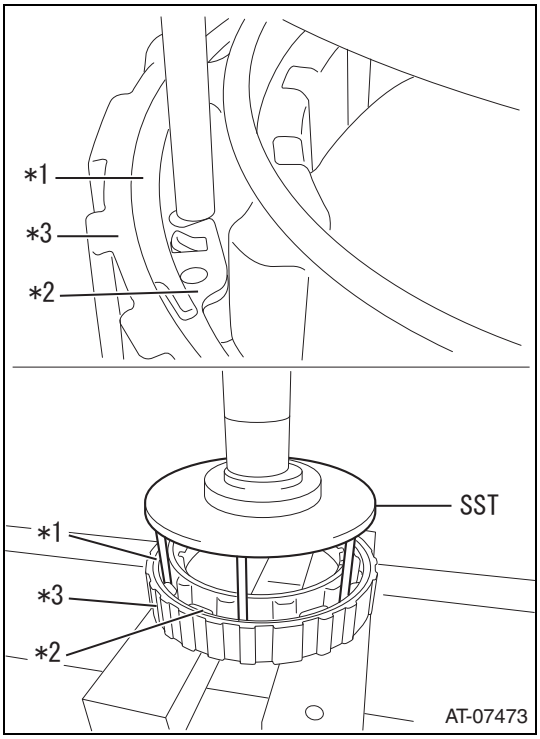


55. Removal of No.3 brake piston

(1) Use a flat tip screwdriver and press to remove the snap ring and No.3 brake piston return spring SUB-ASSY from the No.3 brake cylinder.

Captions in illustration

| | |
|---|---|
| *1 | Snap ring |
| *2 | No.3 brake piston return spring SUB-ASSY |
| *3 | No.3 brake cylinder |



SST 18762AA030

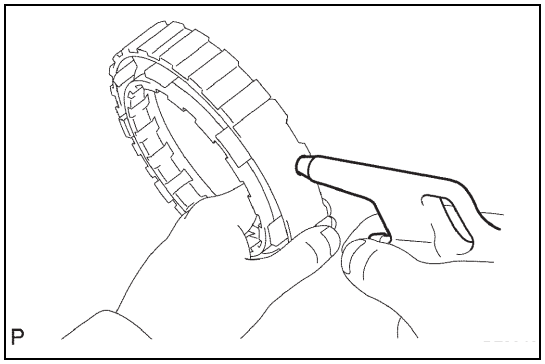
CAUTION:

- Be careful not to damage the No.3 brake cylinder.
- Keep the foot of SST from standing on the protrusion of the piston return spring SUB-ASSY.

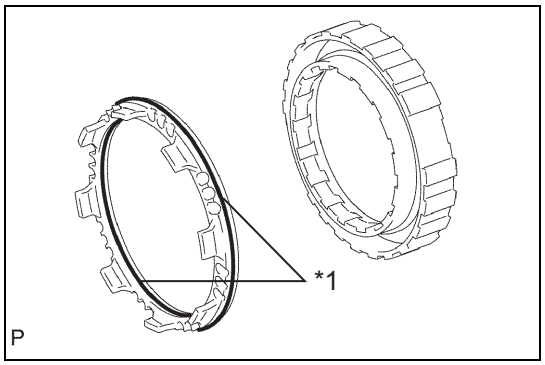
NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.

AT



(2) Hold the No.3 second brake piston and blow compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) to the No.3 brake cylinder, then remove the No.3 brake piston.



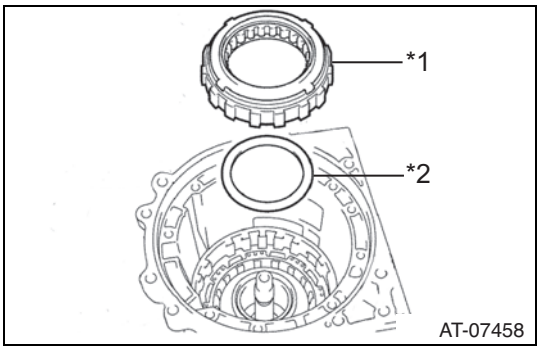
(3) Remove 2 O-rings from the No.3 brake piston.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

56. Removal of one-way clutch ASSY

(1) Remove the one-way clutch ASSY and No.1 planetary carrier thrust washer from the automatic transmission case SUB-ASSY.

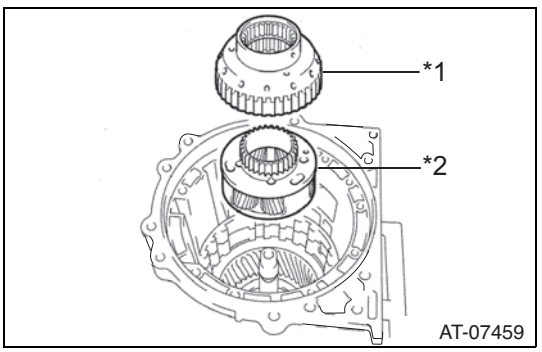


Captions in illustration

| | |
|---|---|
| *1 | One-way clutch ASSY |
| *2 | No.1 planetary carrier thrust washer |

57. Removal of front planetary gear ASSY

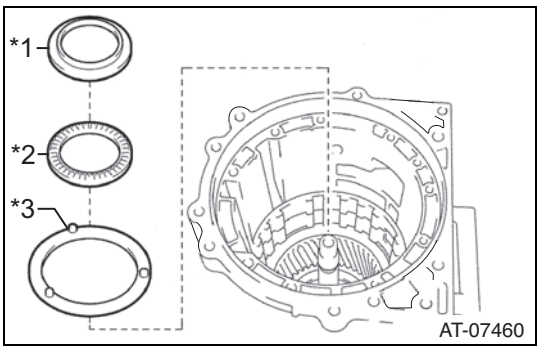
(1) Remove the front planetary gear ASSY and one-way clutch inner race SUB-ASSY from the automatic transmission case SUB-ASSY.



Captions in illustration

| | |
|---|---|
| *1 | One-way clutch inner race SUB-ASSY |
| *2 | Front planetary gear ASSY |

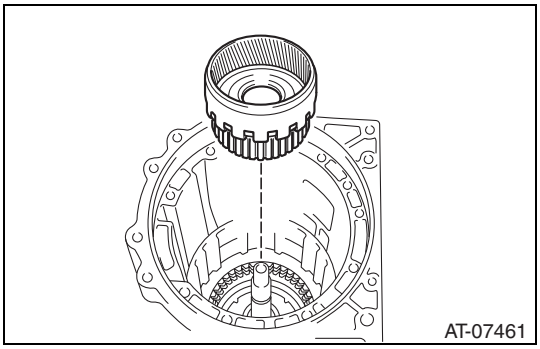
(2) Remove the front planetary flange rear thrust bearing race, front planetary flange thrust needle roller bearing, and No.2 planetary carrier thrust washer from the automatic transmission case SUB-ASSY.



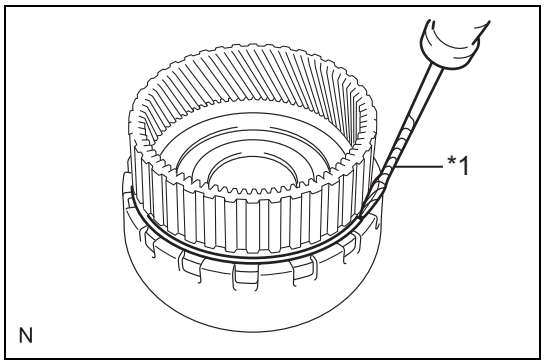
Captions in illustration

| | |
|---|---|
| *1 | Front planetary flange rear thrust bearing race |
| *2 | Front planetary flange thrust needle roller bearing |
| *3 | No.2 planetary carrier thrust washer |

AT



58. Removal of front planetary ring gear
    (1) Remove the front planetary ring gear from the automatic transmission case SUB-ASSY.



59. Removal of center planetary ring gear
    (1) Use a flat tip screwdriver to remove the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the front planetary ring gear.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

    (2) Remove the center planetary ring gear from the front planetary ring gear.

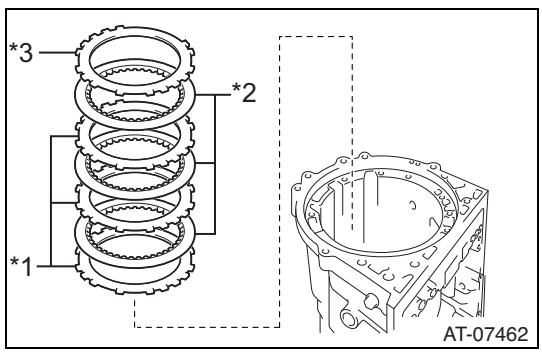
    (3) Use a flat tip screwdriver to remove the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the center planetary ring gear.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

    (4) Remove the front planetary ring gear flange SUB-ASSY from the center planetary ring gear.



60. Removal of No.1 brake disc
    (1) Remove the No.1 brake flange, 3 No.1 brake discs, 3 No.1 brake plates from the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | No.1 brake plate |
| *2 | No.1 brake disc |

|---|---|
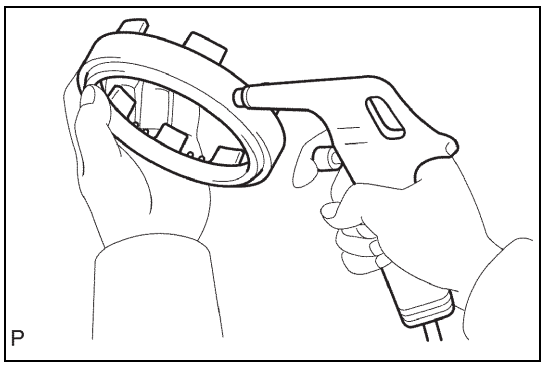
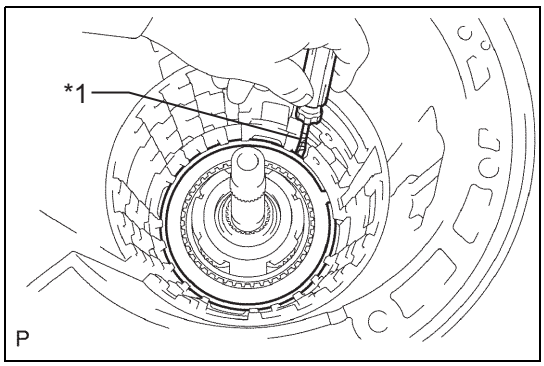
| *1 | Brake piston return spring SUB-ASSY |
| *2 | No.1 brake cylinder |



62. Removal of No.1 brake piston
    (1) Hold the No.1 brake piston and blow compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) to the No.1 brake cylinder, then remove the No.1 brake piston.
    NOTE:
    If the piston does not jump out by compressed air, use needle nose pliers to pick the piston up and take it out.
    (2) Remove 2 O-rings from the No.1 brake piston.

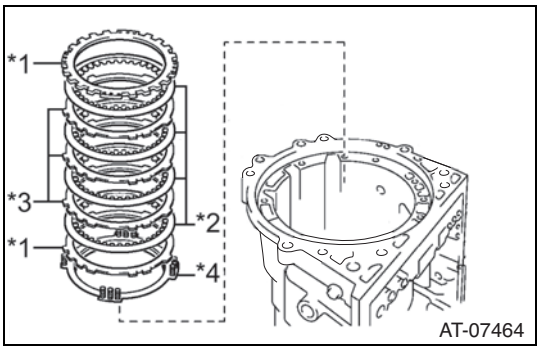


63. Removal of No.2 brake disc
    (1) Use a flat tip screwdriver to remove the snap ring from the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the automatic transmission case SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



(2) Remove 2 No.2 brake flanges, 4 No.2 brake discs, 3 No.2 brake plates, and No.2 brake piston return spring SUB-ASSY from the automatic transmission case SUB-ASSY.

Captions in illustration

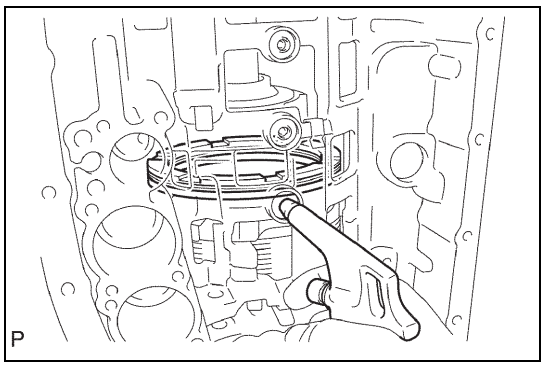
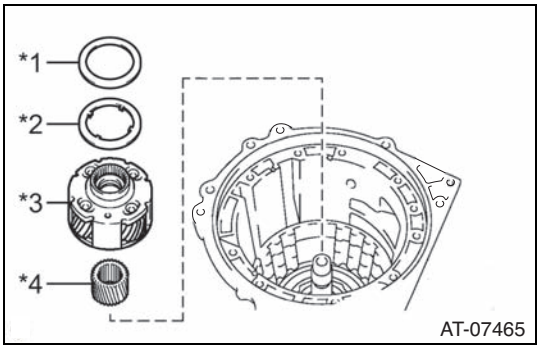
| *1 | No.2 brake flange |
| *2 | No.2 brake disc |
| *3 | No.2 brake plate |
| *4 | No.2 brake piston return spring SUB-ASSY |



64. Removal of No.2 brake piston
    (1) Hold the No.2 brake piston and blow compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) to the transmission case, then remove the No.2 brake piston and No.2 brake cylinder.
    NOTE:
    If the piston does not jump out by compressed air, use needle nose pliers to pick the piston up and take it out.
    (2) Remove the No.2 brake piston from the No.2 brake cylinder.
    (3) Remove the two O-rings from the No.2 brake piston.



65. Removal of center planetary gear ASSY
    (1) Remove the center planetary gear ASSY, planetary sun gear, thrust needle roller bearing, and No.4 thrust bearing race from the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Thrust needle roller bearing |
| *2 | No.4 thrust bearing race |

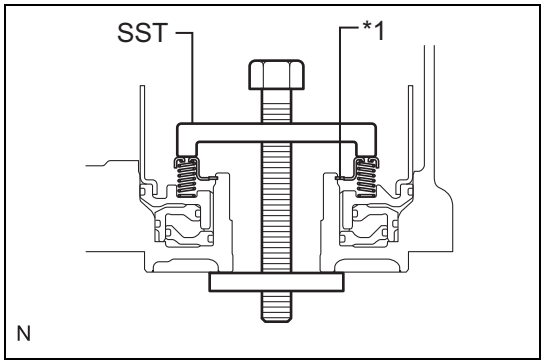
71. Removal of rear planetary gear ASSY
    (1) Remove the rear planetary gear ASSY from the automatic transmission case SUB-ASSY.

    (2) Remove the thrust bearing race, thrust needle roller bearing, and No.9 thrust bearing race from the rear planetary gear ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Thrust bearing race |
| *2 | Thrust needle roller bearing |
| *3 | No.9 thrust bearing race |

    (3) Remove the thrust needle roller bearing from the automatic transmission case SUB-ASSY.



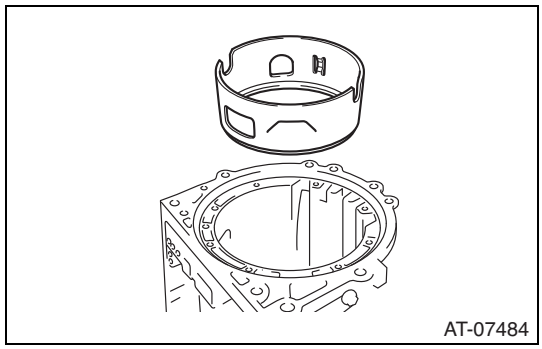
72. Removal of 1st & reverse brake return spring SUB-ASSY
    (1) Place the SST on the 1st & reverse brake return spring SUB-ASSY and press the 1st & reverse brake return spring SUB-ASSY.

Captions in illustration

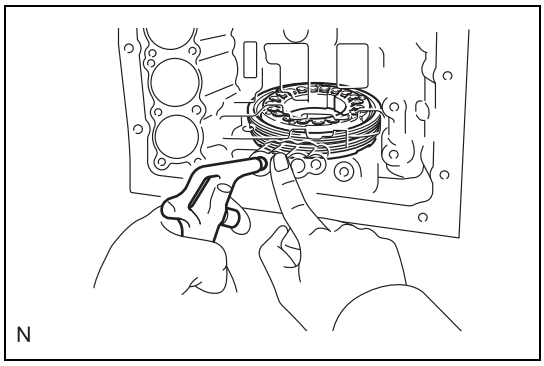
| | |
|---|---|
| *1 | Snap ring |

SST 09350-07050

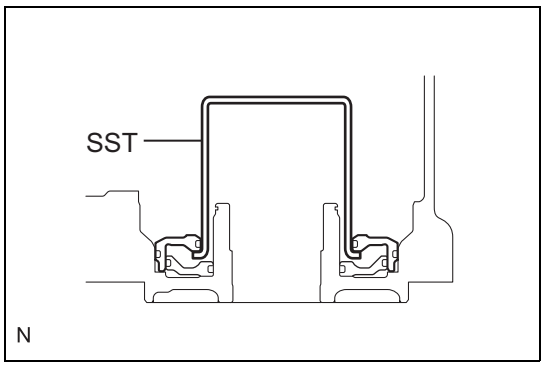
(2) Remove the snap ring and 1st & reverse brake return spring SUB-ASSY.



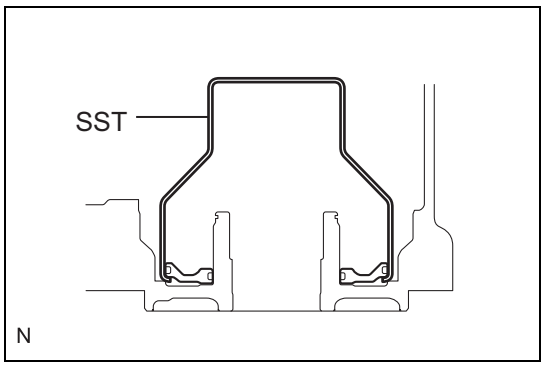
73. Removal of brake apply tube
    (1) Remove the brake apply tube from the automatic transmission case SUB-ASSY.



74. Removal of 1st & reverse brake piston
    (1) Hold the 1st & reverse brake piston and blow compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) to the transmission case, then remove the 1st & reverse brake piston.
    NOTE:
    If the piston does not jump out by compressed air, use needle nose pliers to pick the piston up and take it out.
    (2) Remove the O-ring from the 1st & reverse brake piston.



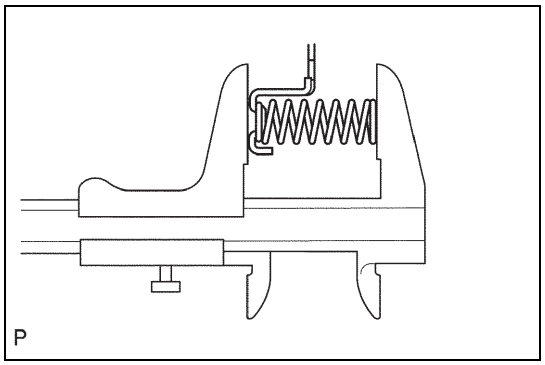
75. Removal of brake reaction sleeve
    (1) Use the SST to remove the brake reaction sleeve from the automatic transmission case SUB-ASSY.
    SST 09350-07080
    (2) Remove 2 O-rings from the brake reaction sleeve.



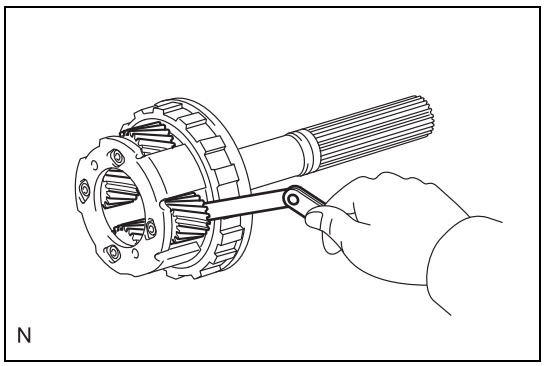
76. Removal of No.4 brake piston
    (1) Use the SST to remove the No.4 brake piston from the automatic transmission case SUB-ASSY.
    SST 09350-07090
    (2) Remove 2 O-rings from the No.4 brake piston.

AT

## Unit inspection



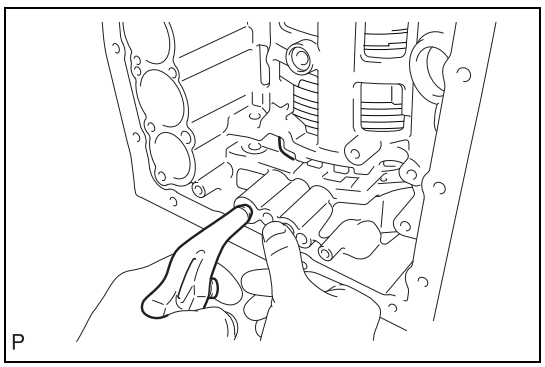
1. Check of 1st & reverse brake return spring SUB-ASSY
   (1) Measure the free length of the spring including the spring seat.
   Normal free length: 23.74mm {0.935in}
   If the measured free length is shorter than the normal free length, replace the 1st & reverse brake return spring SUB-ASSY.



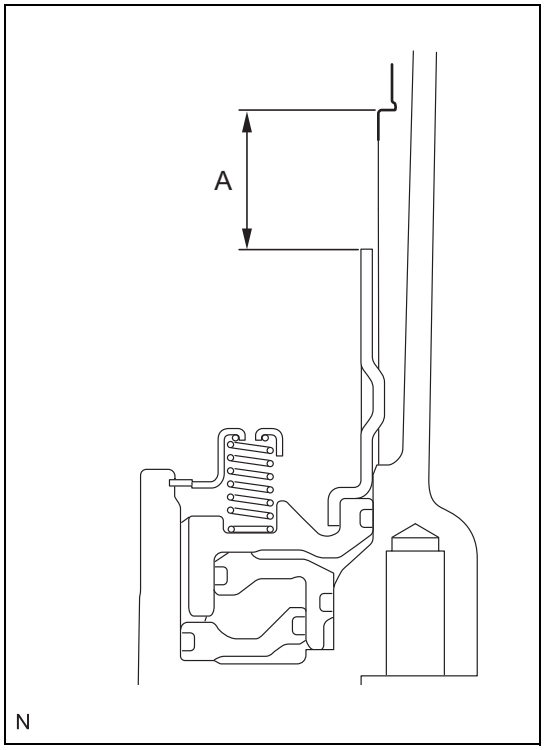
2. Check of rear planetary gear ASSY
   (1) Use a feeler gauge to measure the rear planetary gear pinion thrust clearance.
   Normal clearance: 0.2 to 0.6 mm {0.00788 to 0.0236 in}
   If the measured clearance is larger than the normal clearance, replace the rear planetary gear ASSY.

AT

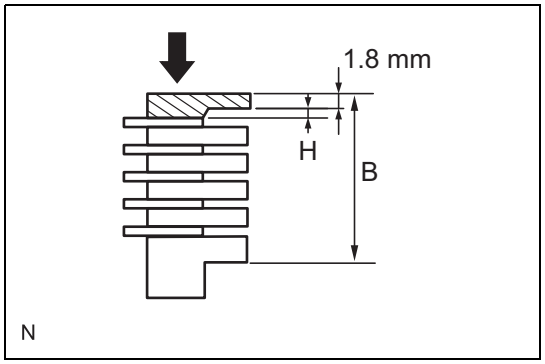
   (2) Measure the inner diameter of the rear planetary gear bushing.
   Normal inner diameter: 18.025mm {0.710in}
   If the measured inner diameter is larger than the normal inner diameter, replace the rear planetary gear ASSY.



3. Check of No.4 brake pack clearance
   (1) Apply compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}), release the air gun, and then check that the 1st & reverse brake piston moves smoothly.



(2) Measure the height difference (dimension A) between the upper surface of the brake apply tube and the No.4 brake flange contact surface at both ends of the diameter of the 1st & reverse brake piston, and calculate the average.
CAUTION:
The 1st & reverse brake piston must be installed to the end face of the transmission case securely.
NOTE:
Dimension A = 23.32 to 24.18 mm {0.919 to 0.951 in}

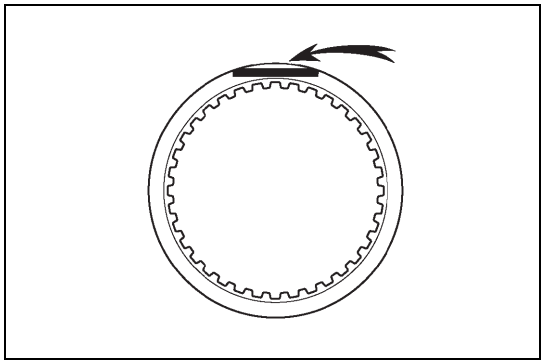


(3) While applying a pressure of 4.9 N {0.5 kgf, 1.1 lbf} or less, use a caliper to measure the total thickness of the 2 No.4 brake flanges, 4 No.4 brake plates, and 5 No.4 brake discs (dimension B) at both ends of the diameter, and calculate the average.
NOTE:
Dimension B = 23.64 to 26.00 mm {0.931 to 1.023 in}
Pack clearance = dimension A - dimension B - 0.18 mm {0.0071 in} + 1.8 mm {0.0709 in}
Pack clearance: 0.5 to 0.8 mm {0.0197 to 0.0315in}

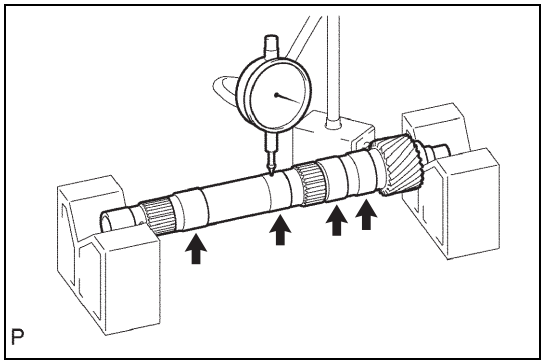
(4) If the pack clearance is out of the normal range, select a No.4 brake flange with the pack clearance within the normal range and install it.
NOTE:
There are 10 types of No.4 brake flanges that can be used for pack clearance adjustment. Select the one with the most suitable thickness.

Thickness H

| Part number | Mark | Thickness H |
|---|---|---|
| 30098AC170 | 0 | 0mm {0in} |
| 30098AC180 | 1 | 0.17mm {0.00669in} |
| 30098AC190 | 3 | 0.31mm {0.0122in} |
| 30098AC200 | 4 | 0.45mm {0.0177in} |
| 30098AC210 | 5 | 0.59mm {0.0232in} |
| 30098AC220 | 7 | 0.73mm {0.0287in} |
| 30098AC230 | 8 | 0.87mm {0.0342in} |
| 30098AC240 | 10 | 1.01mm {0.0397in} |
| 30098AC250 | 11 | 1.15mm {0.0452in} |
| 30098AC260 | 12 | 1.29mm {0.0507in} |

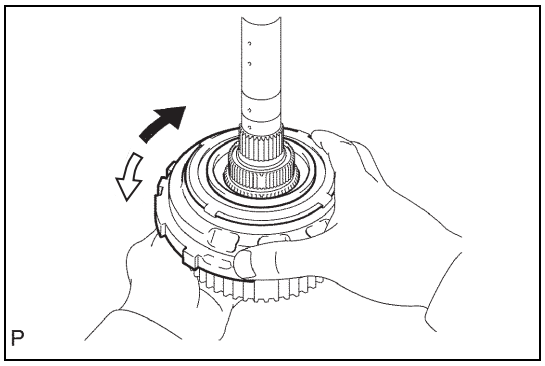


4. Check of No.4 brake disc
   (1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
   Replace them as required.
   CAUTION:
   - If the disc lining is peeling or discolored, or if even a part of the printed number is damaged, replace the all discs.
   - Soak new discs in ATF for at least 15 minutes before the assembly.



5. Check of intermediate shaft
   (1) Use a dial gauge to check the runout of the intermediate shaft.
   Normal runout: 0.03mm {0.00118in}
   If the runout is larger than the normal value, replace the intermediate shaft with a new one.

   (2) Use a micrometer to check the outer diameters of the intermediate shaft at the positions shown in the figure.
   Normal diameter:
   A: 22.962 to 22.975mm {0.9041 to 0.9045in}
   B: 27.759 to 27.775mm {1.0929 to 1.0935in}
   If the outer diameter is smaller than the normal value, replace the intermediate shaft with a new one.

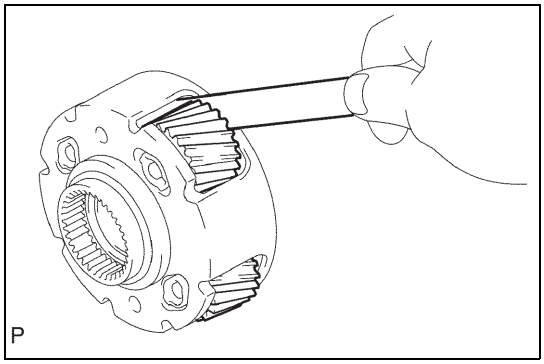


6. Check of No.3 one-way clutch ASSY
   (1) Hold the rear planetary ring gear flange SUB-ASSY and turn the No.3 one-way clutch ASSY.

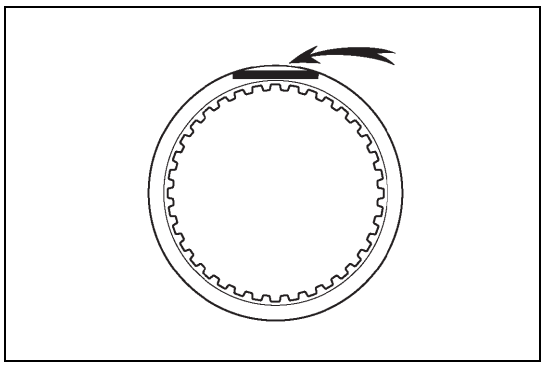
Captions in illustration

| | |
|---|---|
| ➡ | Lock |
| ⇨ | Release |

(2) Check that when the No.3 one-way clutch ASSY is turned counter-clockwise it turns freely, whereas when it is turned clockwise it is locked.
If any malfunction is found in the No.3 one-way clutch ASSY, replace it.

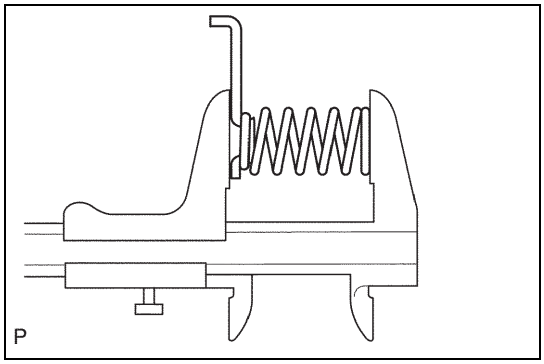


7. Check of center planetary gear ASSY
(1) Measure the center planetary gear pinion thrust clearance.
Normal clearance: 0.12 to 0.68mm {0.00473 to 0.0267in}
If the measured clearance is larger than the normal clearance, replace the center planetary gear ASSY.

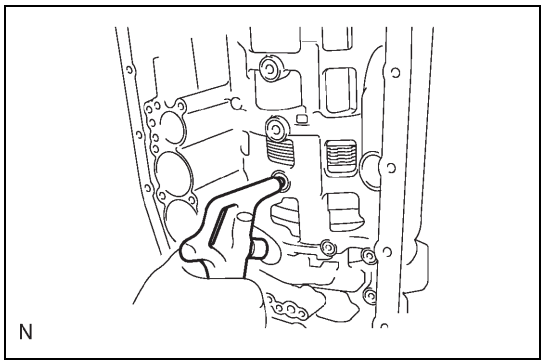


8. Check of No.2 brake disc
(1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
Replace them as required.
CAUTION:
- If the disc lining is peeling or discolored, or if even a part of the printed number is damaged, replace the all discs.
- Soak new discs in ATF for at least 15 minutes before the assembly.

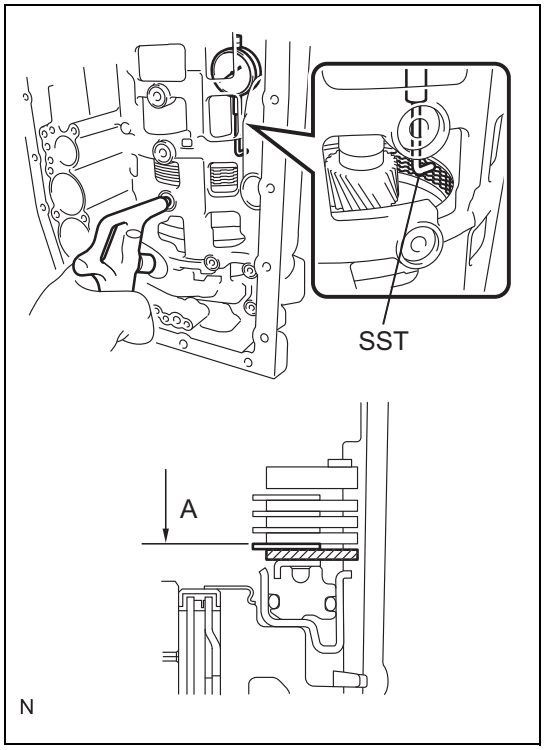
AT



9. Check of No.2 brake piston return spring SUB-ASSY
(1) Measure the free length of the spring including the spring seat.
Normal free length: 22.66mm {0.892in}
If the measured free length is shorter than the normal free length, replace the No.2 brake piston return spring SUB-ASSY.



10. Check of piston stroke of No.2 brake piston
(1) Apply compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}), release the air gun, and then check that the No.2 brake piston moves smoothly.

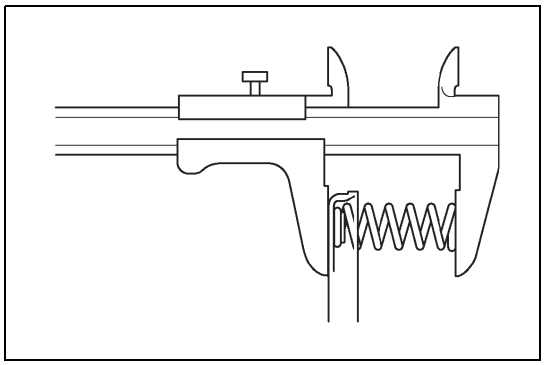


(2) While blowing compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) into the oil hole as shown in the figure, use the SST to measure the piston stroke of the No.2 brake piston (distance A) at both ends of the diameter, and calculate the average.
SST 09350-06120
Piston stroke: 0.6 to 0.9mm {0.0237 to 0.0354in}

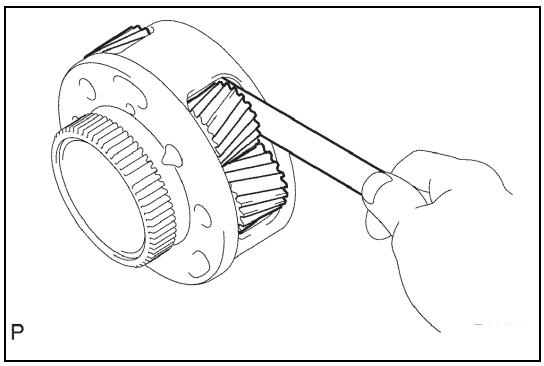
(3) If the piston stroke is out of the normal range, select a No.2 brake flange with the piston stroke within the normal range and install it.
NOTE:
There are 8 types of No.2 brake flanges that can be used for piston stroke adjustment. Select the one with the most suitable thickness.

Flange thickness

| Part number | Mark | Thickness |
|---|---|---|
| 30098AB230 | 0 | 2.0mm {0.0787in} |
| 30098AB240 | 1 | 2.1mm {0.0827in} |
| 30098AB250 | 2 | 2.2mm {0.0866in} |
| 30098AB260 | 3 | 2.3mm {0.0906in} |
| 30098AB270 | 4 | 2.4mm {0.0945in} |
| 30098AB280 | 5 | 2.5mm {0.0984in} |
| 30098AB290 | 6 | 2.6mm {0.102in} |
| 30098AB300 | 7 | 2.7mm {0.106in} |

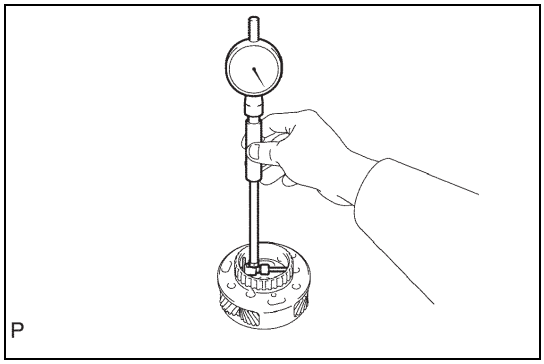


11. Check of brake piston return spring SUB-ASSY
(1) Measure the free length of the spring including the spring seat.
Normal free length: 17.05mm {0.671in}
If the measured free length is shorter than the normal free length, replace the brake piston return spring SUB-ASSY.

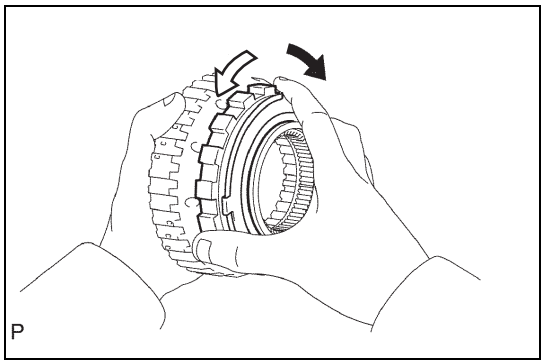


12. Check of front planetary gear ASSY
(1) Measure the front planetary gear pinion thrust clearance.
Normal clearance: 0.20 to 0.60mm {0.00788 to 0.0236in}
If the measured clearance is larger than the normal clearance, replace the front planetary gear ASSY.

AT



(2) Measure the inner diameter of the front planetary gear bushing.
Normal inner diameter: 48.78mm {1.92in}
If the measured inner diameter is larger than the normal inner diameter, replace the front planetary gear ASSY.

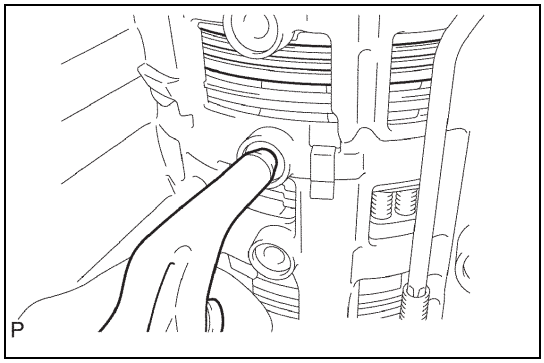


13. Check of one-way clutch ASSY
(1) Install the one-way clutch ASSY to the one-way clutch inner race SUB-ASSY.

Captions in illustration

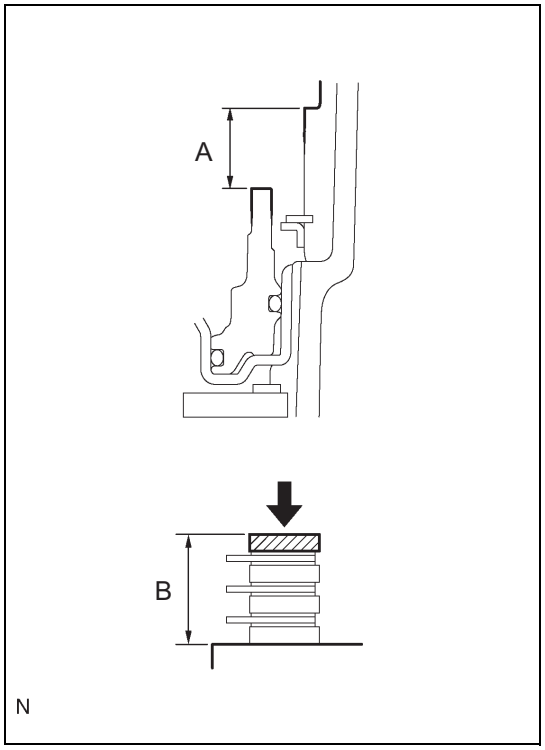
| | |
|---|---|
| ➡ | Lock |
| ⇨ | Release |

(2) Hold the one-way clutch inner race SUB-ASSY and turn the one-way clutch ASSY.
(3) Check that when the one-way clutch ASSY is turned counterclockwise it turns freely, whereas when it is turned clockwise it is locked. If any malfunction is found in the one-way clutch ASSY, replace it.
(4) Remove the one-way clutch ASSY from the one-way clutch inner race SUB-ASSY.



14. Check of piston stroke of No.1 brake piston
(1) Blow compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}), release the air gun, and then check that the No.1 brake piston moves smoothly.

AT



(2) While applying a pressure of 4.9 N {0.5 kgf, 1.1 lbf} or less, measure height difference between the upper surface of the No.1 brake piston and the No.1 brake flange contact surface (dimension A) at both ends of the diameter of the No.1 brake piston.

(3) Measure the total thickness of the No.1 brake flange, 3 No.1 brake plates, and 3 No.1 brake discs (dimension B) at both ends of the diameter, and calculate the average.
NOTE:
Dimension A = 15.27 to 15.92 mm {0.602 to 0.626 in}
Dimension B = 14.50 to 15.54 mm {0.571 to 0.611 in}
Piston stroke = dimension A - dimension B
Piston stroke: 0.42 to 0.72mm {0.0166 to 0.0283in}

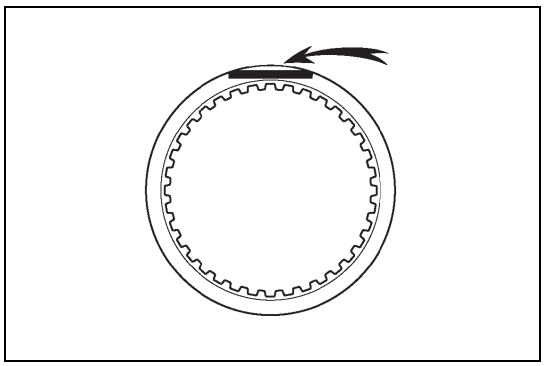
(4) If the piston stroke is out of the normal range, the parts may be assembled incorrectly. Check them and assemble again.

(5) If the piston stroke is still out of the normal range, select another No.1 brake flange with the piston stroke within the normal range.
NOTE:
There are 4 types of No.1 brake flanges that can be used for piston stroke adjustment. Select the one with the most suitable thickness.

Flange thickness

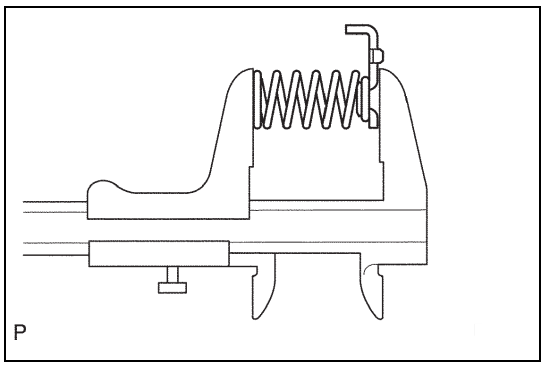
| Part number | Mark | Thickness |
|---|---|---|
| 30098AB170 | 0 | 2.0mm {0.0787in} |
| 30098AB180 | 1 | 2.2mm {0.0866in} |
| 30098AB190 | 2 | 2.4mm {0.0945in} |
| 30098AB200 | 3 | 2.6mm {0.102in} |

AT



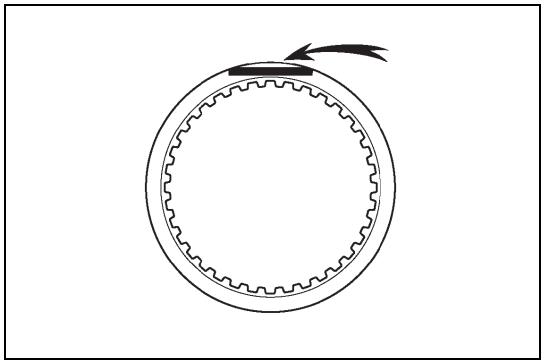
15. Check of No.1 brake disc

(1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
Replace them as required.
CAUTION:
- If the disc lining is peeling or discolored, or if even a part of the groove is damaged, replace the all discs.
- Soak new discs in ATF for at least 15 minutes before the assembly.

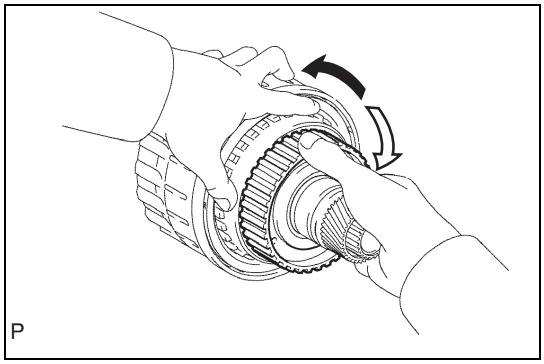


16. Check of No.3 brake piston return spring SUB-ASSY

(1) Measure the free length of the spring including the spring seat.
Normal free length: 15.72mm {0.619in}
If the measured free length is shorter than the normal free length, replace the No.3 brake piston return spring set SUB-ASSY.



17. Check of No.3 brake disc set
    (1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
    Replace them as required.
    CAUTION:
    - If the disc lining is peeling or discolored, or if even a part of the printed number is damaged, replace the all discs.
    - Soak new discs in ATF for at least 15 minutes before the assembly.



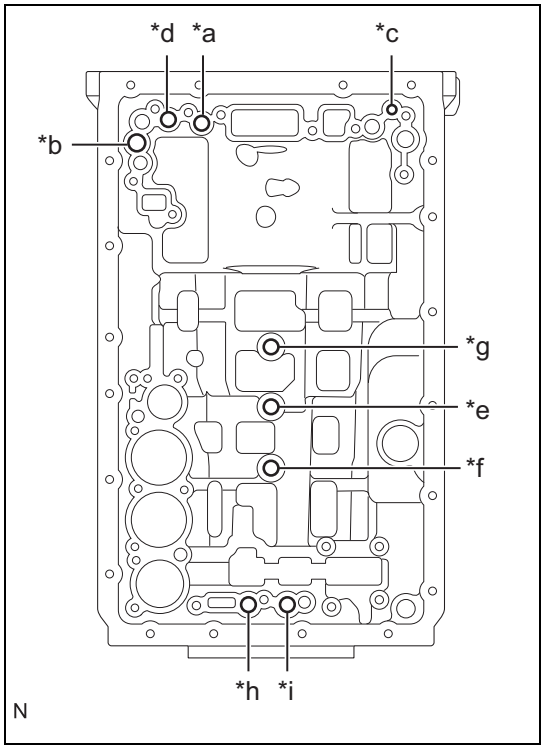
18. Check of No.2 one-way clutch ASSY
    (1) Hold the reverse clutch hub SUB-ASSY and turn the No.2 one-way clutch ASSY.

Captions in illustration

| | |
|---|---|
| ➡ | Lock |
| ⇨ | Release |

    (2) Check that when the No.2 one-way clutch ASSY is turned clockwise it turns freely, whereas when it is turned counterclockwise it is locked.
    If any malfunction is found in the No.2 one-way clutch ASSY, replace it.

AT

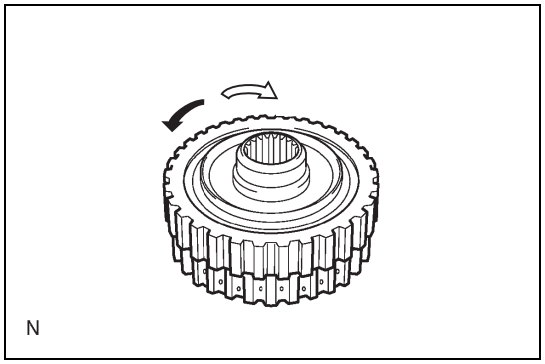


19. Operation check of each piston
    (1) Check the operation sound while blowing compressed air into the oil hole shown in the figure.

Captions in illustration

| | |
|---|---|
| *a | No.1 clutch |
| *b | No.2 clutch |
| *c | No.3 clutch |
| *d | No.4 clutch |
| *e | No.1 brake |
| *f | No.2 brake |
| *g | No.3 brake |
| *h | No.4 brake (in) |
| *i | No.4 brake (out) |

    NOTE:
    When checking the direct clutch, check the operation sound with the C3 accumulator piston hole closed.
    If no sound is heard, disassemble the parts and check their installation conditions.

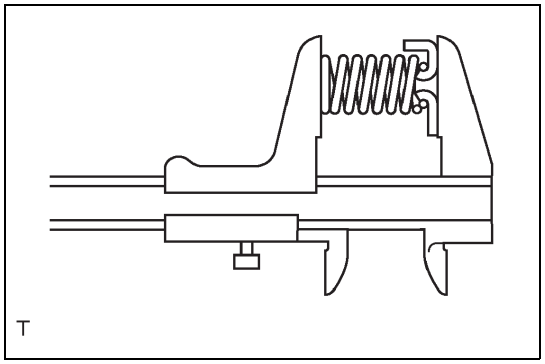


20. Check of No.4 one-way clutch ASSY
    (1) Hold the coast clutch hub SUB-ASSY and turn the No.4 one-way clutch ASSY.

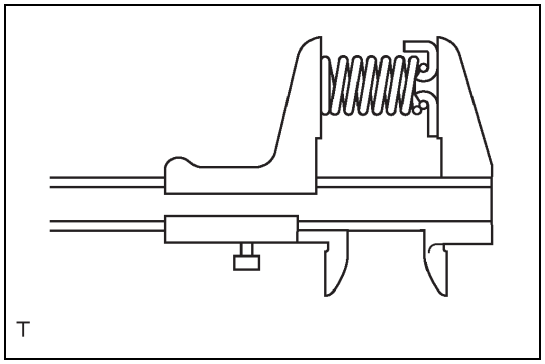
Captions in illustration

| | |
|---|---|
| ➡ | Lock |
| ⇨ | Release |

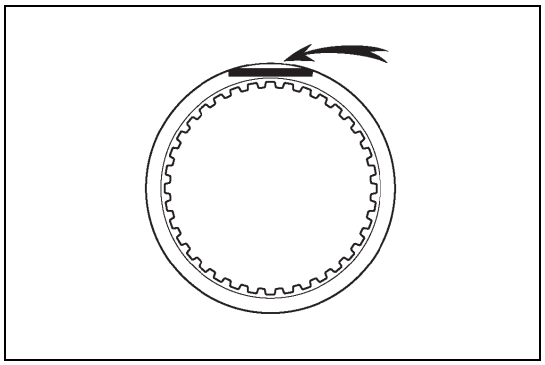
    (2) Check that when the No.4 one-way clutch ASSY is turned clockwise it turns freely, whereas when it is turned counterclockwise it is locked.
    If any malfunction is found in the No.4 one-way clutch ASSY, replace it.



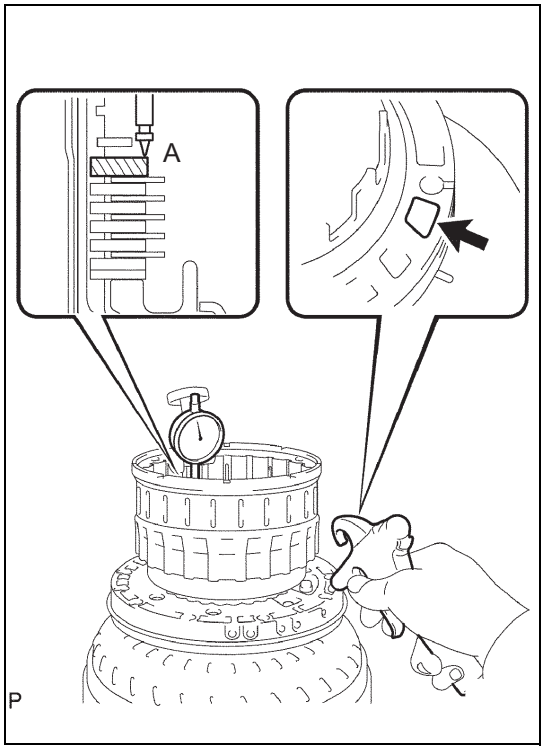
21. Check of direct clutch return spring SUB-ASSY
    (1) Measure the free length of the spring including the spring seat.
    Normal free length: 20.02mm {0.788in}
    If the measured free length is shorter than the normal free length, replace the direct clutch return spring SUB-ASSY.



22. Check of reverse clutch return spring SUB-ASSY
    (1) Measure the free length of the spring including the spring seat.
    Normal free length: 21.03mm {0.828in}
    If the measured free length is shorter than the normal free length, replace the reverse clutch return spring SUB-ASSY.



23. Check of No.2 clutch disc (direct clutch disc)
    (1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
    Replace them as required.
    CAUTION:
    - If the disc lining is peeling or discolored, or if even a part of the printed number is damaged, replace the all discs.
    - Soak new discs in ATF for at least 15 minutes before the assembly.



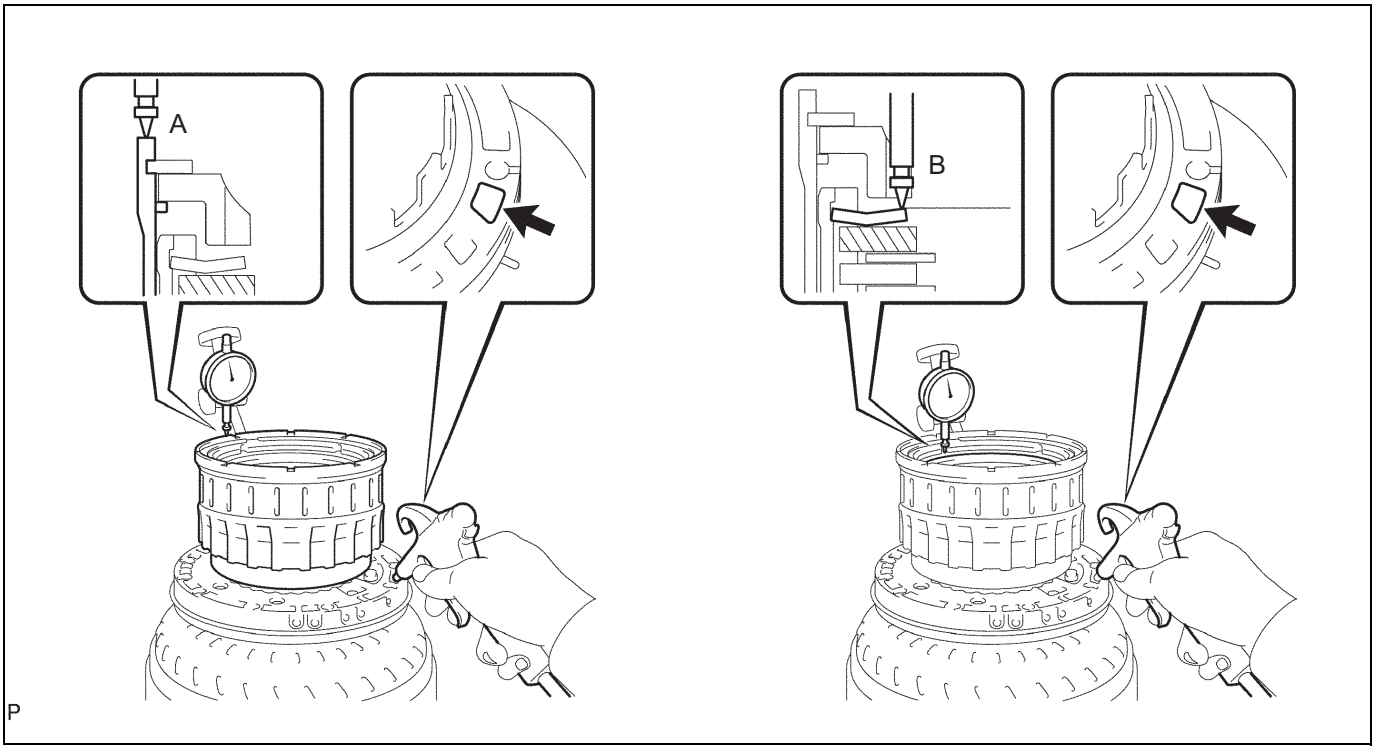
24. Check of No.2 clutch pack clearance
    (1) While blowing compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) into the oil hole as shown in the figure, use a dial gauge to measure the travel distance of the direct clutch flange (distance A) at both ends of the diameter, and calculate the average.
    NOTE:
    Flange travel distance A = 0.24 to 1.12 mm {0.00944 to 0.0440 in}
    Pack clearance = flange travel distance A - 0.03mm {0.00118in}
    Pack clearance: 0.5 to 0.8 mm {0.0197 to 0.0314 in}
    CAUTION:
    When measuring the travel distance, install a normal flange (3.4 mm {0.134 in} thick) to the position indicated with shadow in the figure.
    (2) If the pack clearance is out of the normal range, select a direct clutch flange with the pack clearance within the normal range and install it.
    NOTE:
    There are 9 types of direct clutch flanges that can be used for pack clearance adjustment. Select the one with the most suitable thickness.

Flange thickness

| Part number | Mark | Thickness |
|---|---|---|
| 30098AB080 | 0 | 3.0mm {0.118in} |
| 30098AB090 | 1 | 3.1mm {0.122in} |
| 30098AB100 | 2 | 3.2mm {0.126in} |
| 30098AB110 | 3 | 3.3mm {0.130in} |
| 30098AB120 | 4 | 3.4mm {0.134in} |
| 30098AB130 | 5 | 3.5mm {0.138in} |
| 30098AB140 | 6 | 3.6mm {0.142in} |
| 30098AB150 | 7 | 3.7mm {0.146in} |
| 30098AB160 | 8 | 3.8mm {0.150in} |

AT

25. Check of No.3 clutch pack clearance
    (1) While blowing compressed air (392 kPa {4.0 kgf/cm$^2$, 57 psi}) into the oil hole as shown in the figure, use a dial gauge to measure the reverse clutch piston stroke (distance A) and the travel distance of the reverse clutch flange (distance B) at both ends of the diameter, and calculate the average.



P

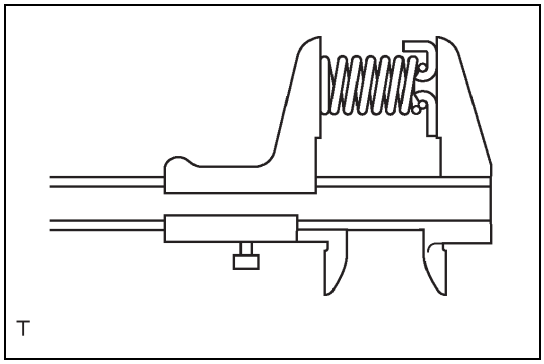
NOTE:
Piston stroke A = 1.62 to 2.68 mm {0.0638 to 0.105 in}
Flange travel distance B = 1.22 to 1.67 mm {0.0481 to 0.0657 in}
Pack clearance = piston stroke A - flange travel distance B - 0.02 mm {0.000787 in}
Pack clearance: 0.4 to 0.7mm {0.0158 to 0.0275in}
CAUTION:
When measuring the travel distance, install a normal flange (2.8 mm {0.110 in} thick) to the position indicated with shadow in the figure.

AT

(2) If the pack clearance is out of the normal range, select a reverse clutch flange with the pack clearance within the normal range and install it.
NOTE:
There are 12 types of reverse clutch flanges that can be used for pack clearance adjustment. Select the one with the most suitable thickness.

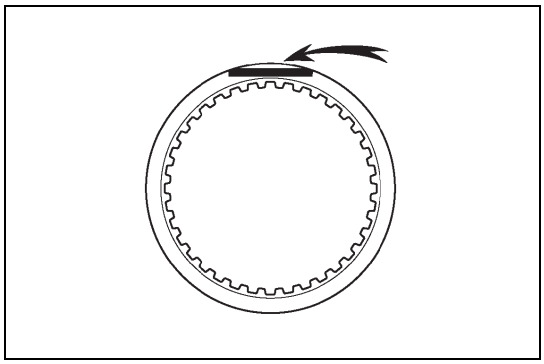
Flange thickness

| Part number | Mark | Thickness |
|---|---|---|
| 30098AA770 | 0 | 2.4mm {0.0945in} |
| 30098AA780 | 1 | 2.5mm {0.0984in} |
| 30098AA790 | 2 | 2.6mm {0.102in} |
| 30098AA800 | 3 | 2.7mm {0.106in} |
| 30098AA810 | 4 | 2.8mm {0.110in} |
| 30098AA820 | 5 | 2.9mm {0.114in} |
| 30098AA830 | 6 | 3.0mm {0.118in} |
| 30098AA840 | 7 | 3.1mm {0.122in} |
| 30098AA850 | 8 | 3.2mm {0.126in} |
| 30098AA860 | 9 | 3.3mm {0.130in} |
| 30098AA870 | A | 3.4mm {0.134in} |
| 30098AA880 | B | 3.5mm {0.138in} |

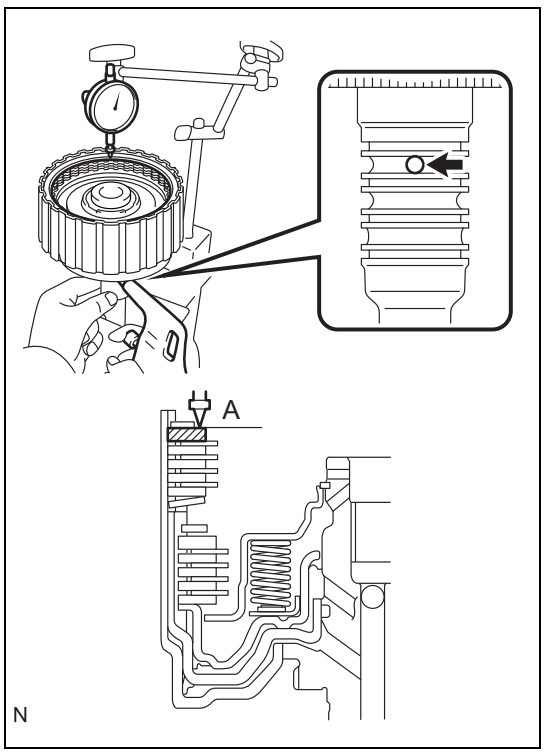


T

26. Check of forward clutch return spring SUB-ASSY
    (1) Use a caliper gauge to measure the free length of the spring including the spring seat.
    Normal free length: 26.29mm {1.04in}
    If the measured free length is shorter than the normal free length, replace the forward clutch return spring SUB-ASSY.



27. Check of No.4 clutch disc (coast clutch disc)
    (1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
    Replace them as required.
    CAUTION:
    - If the disc lining is peeling or discolored, or if even a part of the printed number is damaged, replace the all discs.
    - Soak new discs in ATF for at least 15 minutes before the assembly.

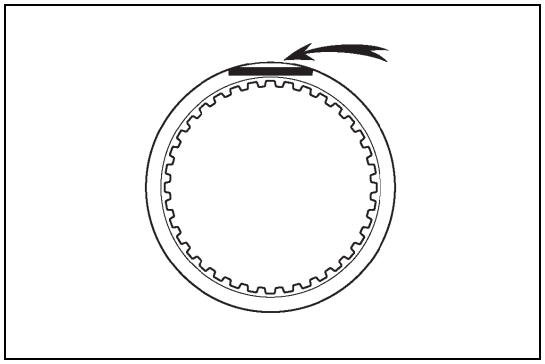


N

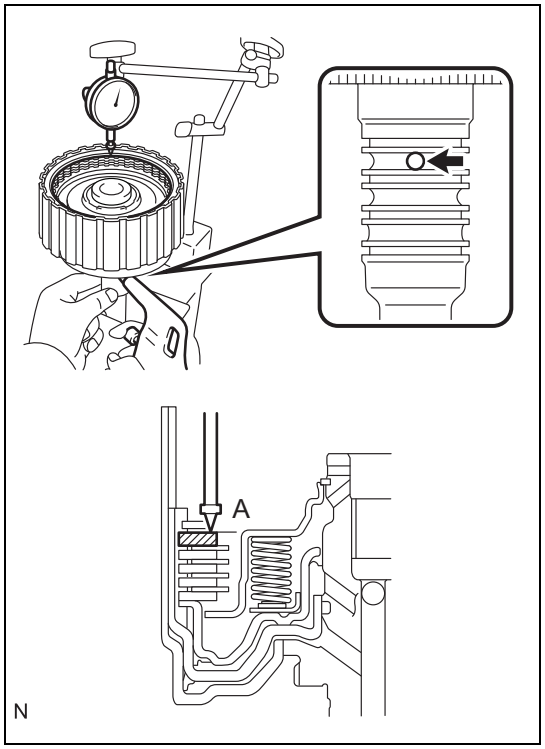
28. Check of No.1 clutch pack clearance
    (1) While blowing compressed air (196 kPa {2.0 kgf/cm$^2$, 28 psi}) into the oil hole as shown in the figure, use a dial gauge to measure the travel distance of the forward clutch flange (distance A) at both ends of the diameter, and calculate the average.
    NOTE:
    Flange travel distance A = 0.14 to 0.17 mm {0.0055 to 0.0067 in}
    Pack clearance = flange travel distance A - 0.01 mm {0.0004 in}
    Pack clearance: 0.56 to 0.86mm {0.0221 to 0.0338in}
    CAUTION:
    When measuring the travel distance, install a normal flange (3.5 mm {0.138 in} thick) to the position indicated with shadow in the figure.
    (2) If the pack clearance is out of the normal range, select a forward clutch flange with the pack clearance within the normal range and install it.
    NOTE:
    There are 10 types of forward clutch flanges that can be used for pack clearance adjustment. Select the one with the most suitable thickness.

Flange thickness

| Part number | Mark | Thickness |
|---|---|---|
| 30098AA630 | 0 | 3.0mm {0.118in} |
| 30098AA640 | 1 | 3.1mm {0.122in} |
| 30098AA650 | 2 | 3.2mm {0.126in} |
| 30098AA670 | 3 | 3.3mm {0.130in} |
| 30098AA680 | 4 | 3.4mm {0.134in} |
| 30098AA690 | 5 | 3.5mm {0.138in} |
| 30098AA700 | 6 | 3.6mm {0.142in} |
| 30098AA710 | 7 | 3.7mm {0.146in} |
| 30098AA720 | 8 | 3.8mm {0.150in} |
| 30098AA730 | 9 | 3.9mm {0.154in} |



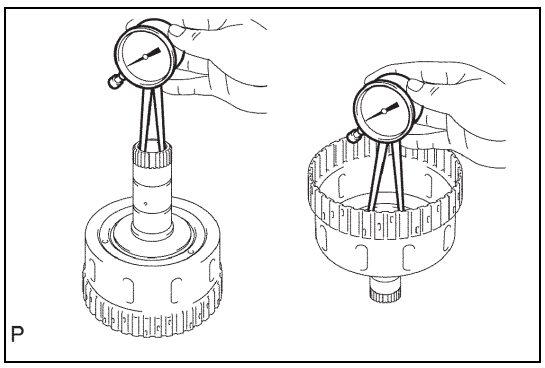
29. Check of No.1 clutch disc (forward clutch disc)
    (1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
    Replace them as required.
    CAUTION:
    - If the disc lining is peeling or discolored, or if even a part of the printed number is damaged, replace the all discs.
    - Soak new discs in ATF for at least 15 minutes before the assembly.



30. Check of No.4 clutch pack clearance
    (1) While blowing compressed air (196 kPa {2.0 kgf/cm2, 28 psi}) into the oil hole as shown in the figure, use a dial gauge to measure the travel distance of the coast clutch flange (distance A) at both ends of the diameter, and calculate the average.
    NOTE:
    Flange travel distance A = 0.02 to 1.01mm {0.000787 to 0.0397in}
    Pack clearance = flange travel distance A - 0.01 mm {0.000394in}
    Pack clearance: 0.4 to 0.7mm {0.0158 to 0.0275in}
    CAUTION:
    When measuring the travel distance, install a normal flange (3.5 mm {0.0158 to 0.0275 in} thick) to the position indicated with shadow in the figure.
    (2) If the pack clearance is out of the normal range, select a coast clutch flange with the pack clearance within the normal range and install it.
    NOTE:
    There are 10 types of coast clutch flanges that can be used for pack clearance adjustment. Select the one with the most suitable thickness.

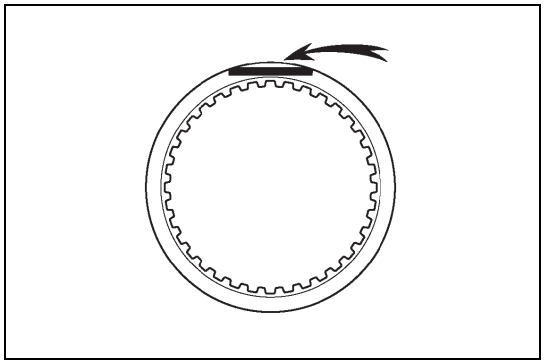
Flange thickness

| Part number | Mark | Thickness |
|---|---|---|
| 30098AA980 | 0 | 3.0mm {0.118in} |
| 30098AA990 | 1 | 3.1mm {0.122in} |
| 30098AB000 | 2 | 3.2mm {0.126in} |
| 30098AB010 | 3 | 3.3mm {0.130in} |
| 30098AB020 | 4 | 3.4mm {0.134in} |
| 30098AB030 | 5 | 3.5mm {0.138in} |
| 30098AB040 | 6 | 3.6mm {0.142in} |
| 30098AB050 | 7 | 3.7mm {0.146in} |
| 30098AB060 | 8 | 3.8mm {0.150in} |
| 30098AB070 | 9 | 3.9mm {0.154in} |

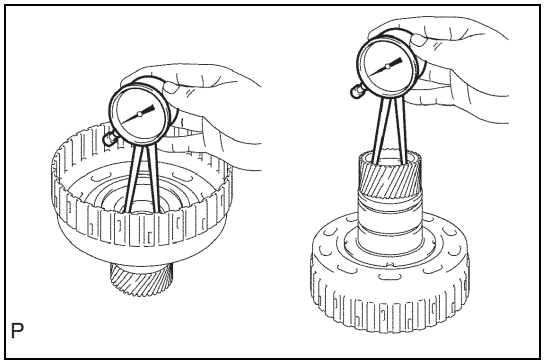


31. Check of forward clutch hub SUB-ASSY
    (1) Use a caliper gauge to check the inner diameter of the forward clutch hub bushing.
    Normal inner diameter: 23.037 to 23.062mm {0.9070 to 0.9079in}
    If the measured inner diameter is longer than the normal inner diameter, replace the forward clutch hub SUB-ASSY.

AT



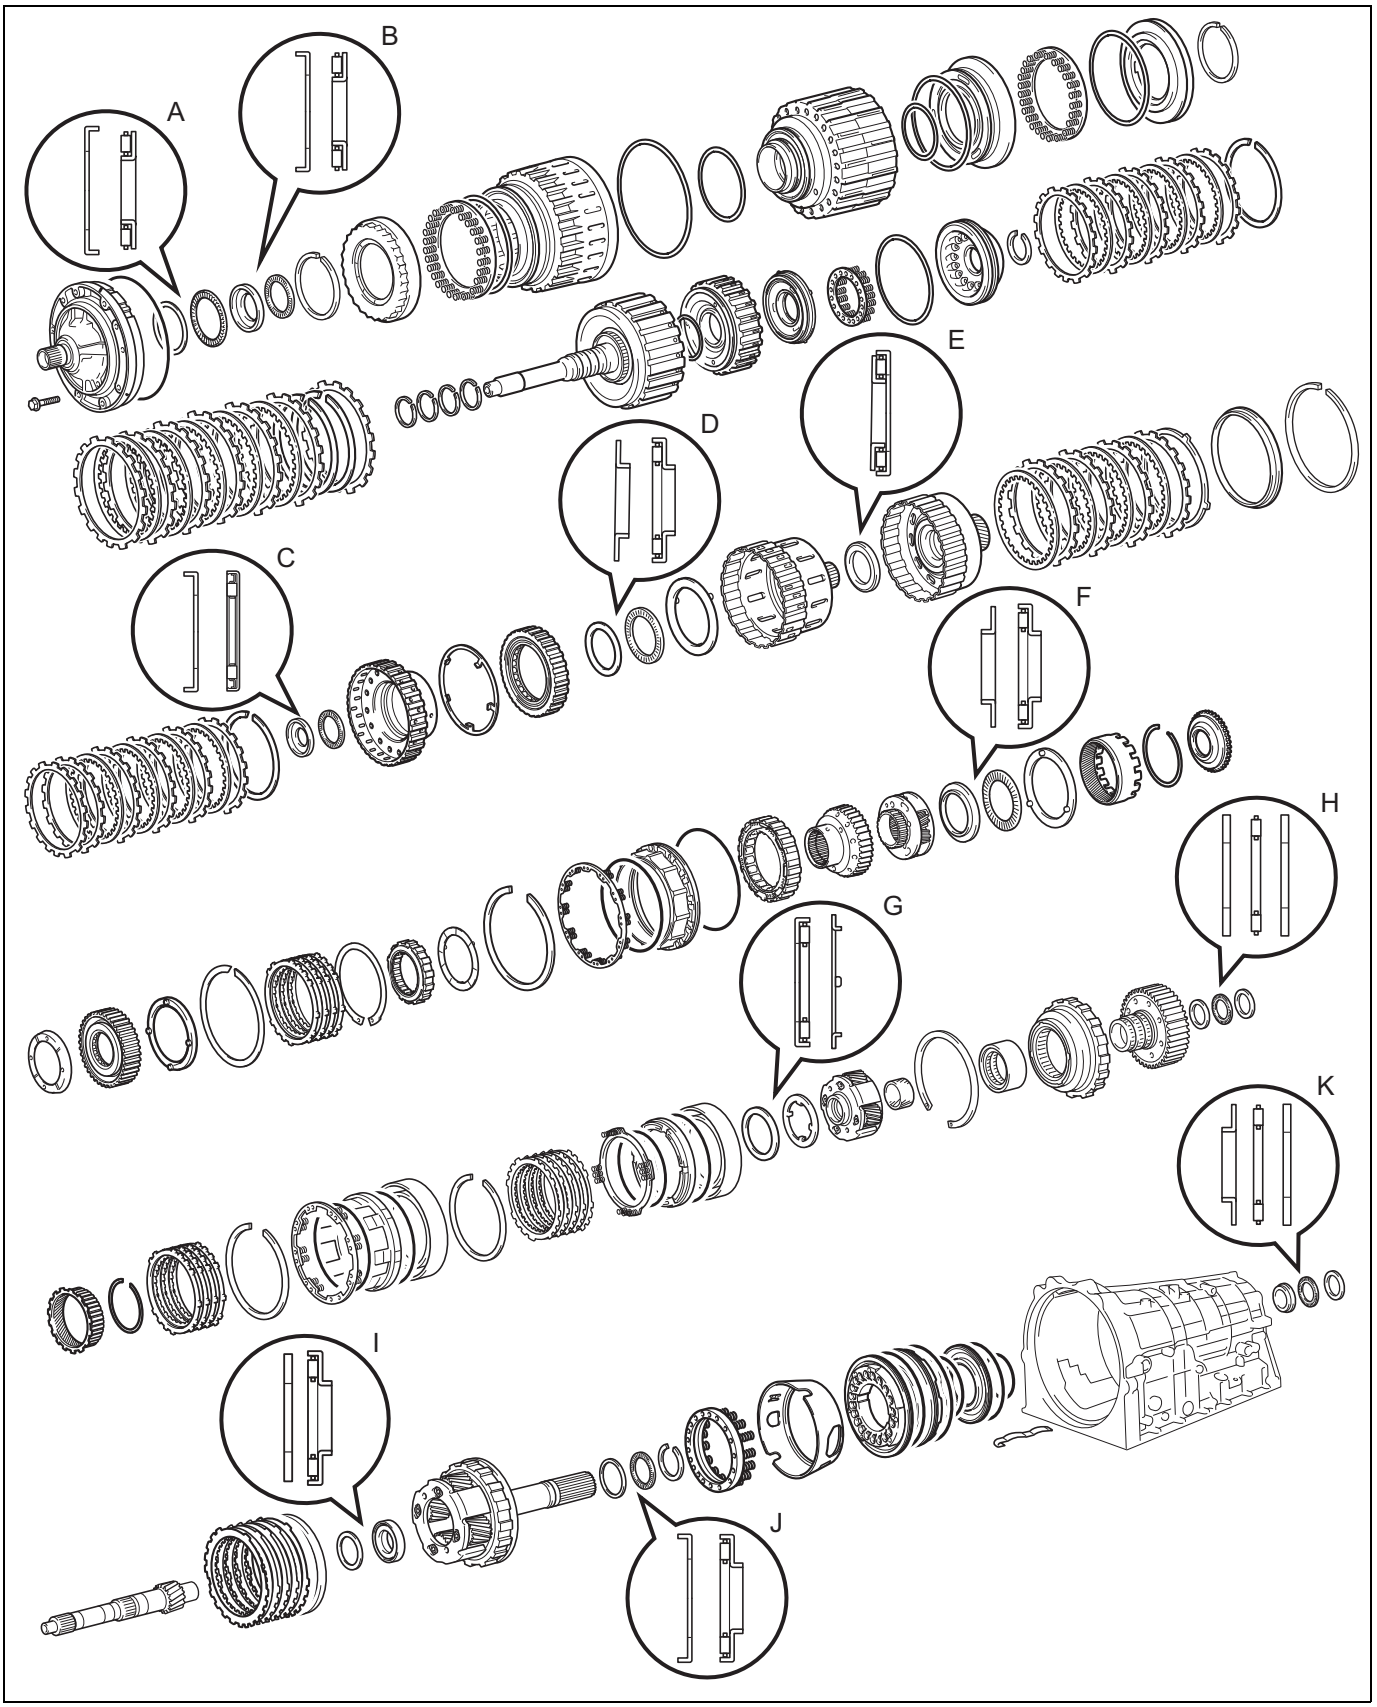
32. Check of No.3 clutch disc
    (1) Check for wear and seizing on the sliding surfaces of the disc, plate, and flange.
    Replace them as required.
    CAUTION:
    - If the disc lining is peeling or discolored, or if even a part of the printed number is damaged, replace the all discs.
    - Soak new discs in ATF for at least 15 minutes before the assembly.



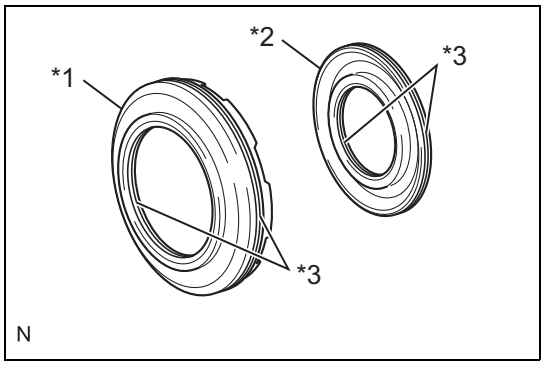
33. Check of reverse clutch hub SUB-ASSY
    (1) Measure the inner diameter of the reverse clutch hub bushing.
    Normal inner diameter: 33.312 to 33.337mm {1.3115 to 1.3125in}
    If the measured inner diameter is longer than the normal inner diameter, replace the reverse clutch hub SUB-ASSY.

## Assembly

1. Bearing position



| Mark | Front race diameter Inner/outer | Thrust bearing diameter Inner/outer | Rear race diameter Inner/outer |
|---|---|---|---|
| A | 74.2mm {2.921in} / 87.7 mm {3.453 in.) | 71.9mm {2.831 in} / 85.6 mm {3.370 in} | - |
| B | 37.0mm {1.457in} / 51.2 mm {2.016 in.) | 33.5mm {1.319 in} / 48.0 mm {1.890 in} | - |
| C | 20.0mm {0.787in} / 35.6 mm {1.402 in.) | 20.0mm {0.787 in} / 41.0 mm {1.614 in} | - |
| D | 31.0mm {1.220 in} / 48.0 mm {1.890 in} | 33.3mm {1.311 in} / 51.2 mm {2.016 in} | - |
| E | - | 42.5mm {1.673 in} / 61.2 mm {2.409 in} | - |
| F | 34.9mm {1.374 in} / 50.8 mm {1.999 in} | 38.6mm {1.520 in} / 53.1 mm {2.091 in} | - |
| G | - | 58.5mm {2.303 in} / 73.5 mm {2.894 in} | 55.2mm {2.173 in} / 71.2 mm {2.803 in} |
| H | 29.6mm {1.165 in} / 44.9 mm {1.768 in} | 27.8mm {1.095 in} / 43.8 mm {1.726 in} | 27.8mm {1.095 in} / 43.7 mm {1.721 in} |
| I | 19.0mm {0.748 in} / 35.0 mm {1.378 in} | 20.8mm {0.819 in} / 38.5 mm {1.516 in} | - |
| J | 43.3mm {1.705 in} / 56.7 mm {2.232 in} | 40.6 mm {1.598 in} / 58.0 mm {2.284 in} | - |
| K | 37.0mm {1.457 in} / 51.2 mm {2.016 in} | 36.1mm {1.421 in} / 52.5 mm {2.067 in} | 36.1mm {1.421 in} / 51.0 mm {2.007 in} |

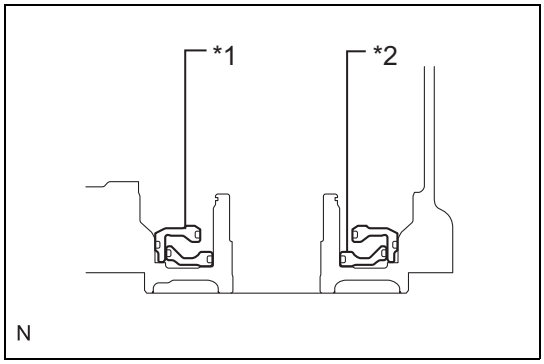


2. Installation of No.4 brake piston
   (1) Apply ATF to 2 new O-rings and install them to the brake reaction sleeve.

Captions in illustration

| | |
|---|---|
| *1 | Brake reaction sleeve |
| *2 | No.4 brake piston |
| *3 | O-ring |

   (2) Apply ATF to 2 new O-rings and install them to the No.4 brake piston.
   (3) Install the No.4 brake piston to the brake reaction sleeve.
   CAUTION:
   Be careful not to damage the O-ring.



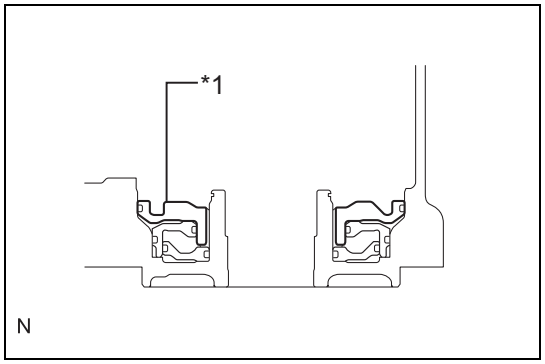
3. Installation of brake reaction sleeve
   (1) Install the brake reaction sleeve and No.4 brake piston to the automatic transmission case SUB-ASSY with the No.4 brake piston facing downward (rear side).

Captions in illustration

| | |
|---|---|
| *1 | Brake reaction sleeve |
| *2 | No.4 brake piston |

   CAUTION:
   Be careful not to damage the O-ring.

AT



4. Installation of 1st & reverse brake piston
   (1) Apply ATF to a new O-ring and install it to the 1st & reverse brake piston.

Captions in illustration

| | |
|---|---|
| *1 | 1st & reverse brake piston |

   (2) Place the 1st & reverse brake piston in the automatic transmission case SUB-ASSY with the spring seat of the 1st & reverse brake piston facing upward (front side).
   CAUTION:
   Be careful not to damage the O-ring.

5. Installation of 1st & reverse brake return spring SUB-ASSY
   (1) Place the 1st & reverse brake return spring SUB-ASSY on the 1st & reverse brake piston.

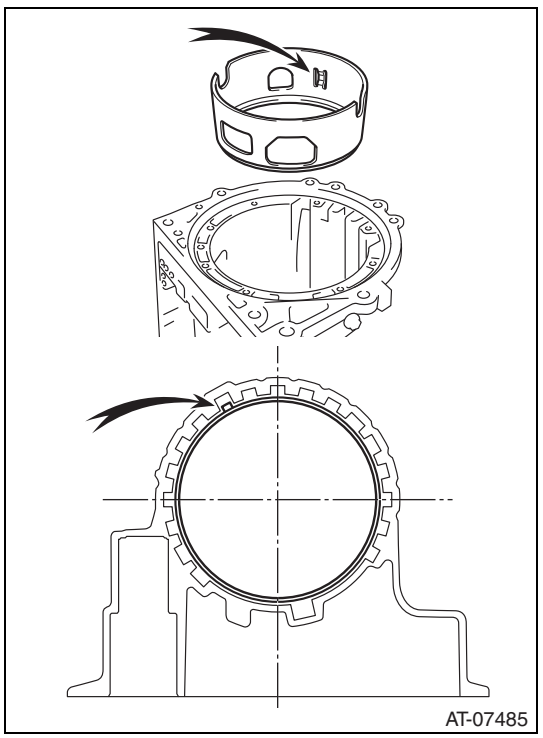
   (2) Place the SST on the 1st & reverse brake return spring SUB-ASSY and press the 1st & reverse brake return spring SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Snap ring |

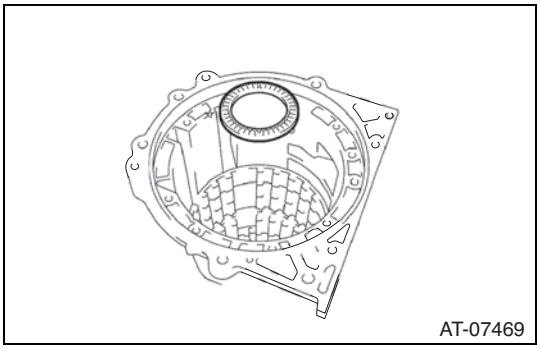
SST 09350-07050

   (3) Install the snap ring.



6. Installation of brake apply tube
   (1) Install the brake apply tube so that the protrusion fits into the groove of the automatic transmission case SUB-ASSY as shown in the figure.
   CAUTION:
   - Engage the claw of the 1st & reverse brake piston with the protrusion of the brake apply tube.
   - Peep through the rear side rotation sensor installation hole to check that the inside of the transmission case can be seen.

AT



7. Installation of rear planetary gear ASSY
   (1) Install the thrust needle roller bearing to the automatic transmission case SUB-ASSY.

Bearing diameter

| Item | Inner | Outer |
|---|---|---|
| Thrust needle roller bearing | 40.6mm {1.598in} | 58.0mm {2.284in} |

   (2) Install the thrust needle roller bearing to the rear planetary gear ASSY.

Captions in illustration

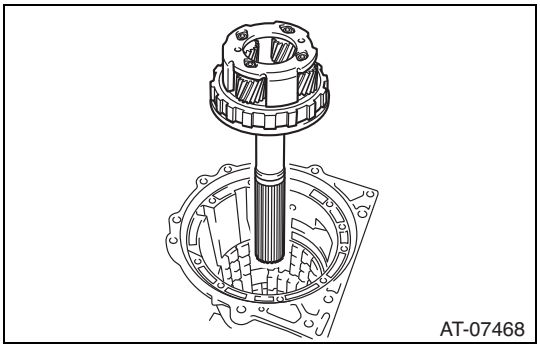
| | |
|---|---|
| *1 | Thrust bearing race |
| *2 | Thrust needle roller bearing |
| *3 | No.9 thrust bearing race |

Bearing and race diameter

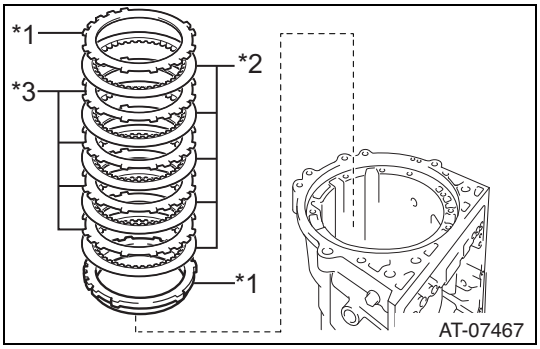
| Item | Inner | Outer |
|---|---|---|
| Thrust needle roller bearing | 20.8mm {0.819in} | 38.5mm {1.516in} |
| Thrust bearing race | 19.0mm {0.748in} | 35.0mm {1.378in} |
| No.9 thrust bearing race | 43.3mm {1.705in} | 56.7mm {2.232in} |

   (3) Apply petroleum jelly to the No.9 thrust bearing race and thrust bearing race and install them on the rear planetary gear ASSY.

   (4) Install the rear planetary gear ASSY to the automatic transmission case SUB-ASSY.



8. Check of No.4 brake pack clearance (refer to AT - 268)



9. Installation of No.4 brake disc
   (1) Install 2 No.4 brake flanges, 5 No.4 brake discs, 4 No.4 brake plates to the automatic transmission case SUB-ASSY.

Captions in illustration

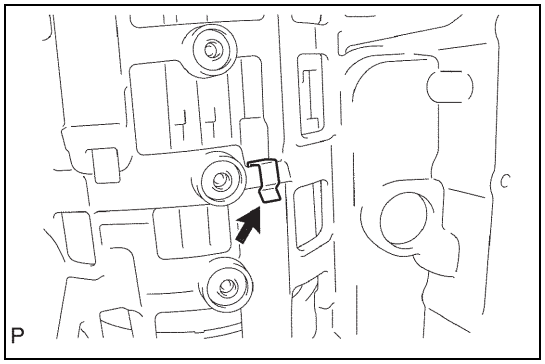
| | |
|---|---|
| *1 | No.4 brake flange |
| *2 | No.4 brake disc |
| *3 | No.4 brake plate |

Installation order: *1 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *1

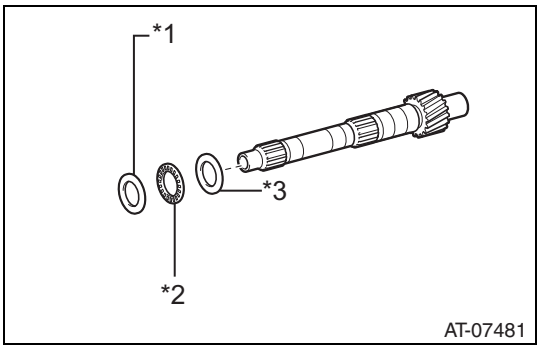
CAUTION:

Check that the disc, plate, and flange are installed in the correct order.

AT



10. Installation of brake plate stopper spring
    (1) Install the brake plate stopper spring to the automatic transmission case SUB-ASSY.



11. Installation of intermediate shaft
    (1) Install the No.8 thrust bearing race, thrust needle roller bearing, and No.7 thrust bearing race to the intermediate shaft.

Captions in illustration

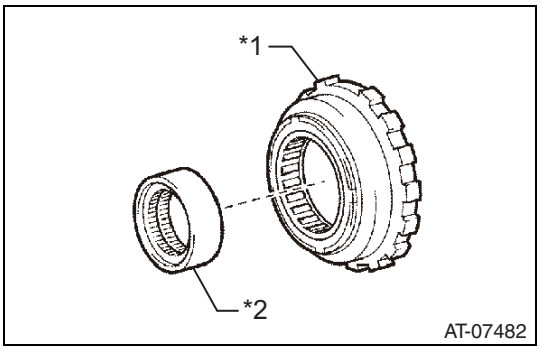
| | |
|---|---|
| *1 | No.7 thrust bearing race |
| *2 | Thrust needle roller bearing |
| *3 | No.8 thrust bearing race |

Bearing and race diameter

| Item | Inner | Outer |
|---|---|---|
| No.7 thrust bearing race | 29.6mm {1.165in} | 44.9mm {1.768in} |
| Thrust needle roller bearing | 27.8mm {1.095in} | 43.8mm {1.726in} |
| No.8 thrust bearing race | 27.8mm {1.095in} | 43.7mm {1.721in} |

    (2) Install the intermediate shaft to the transmission case SUB-ASSY.

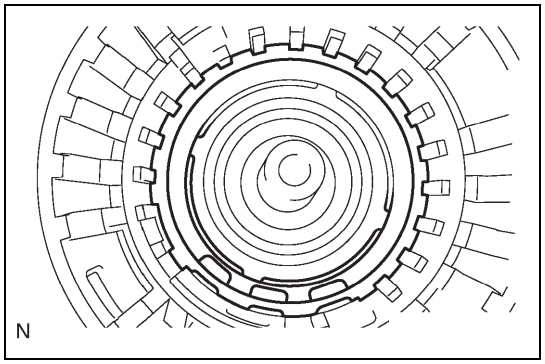
AT



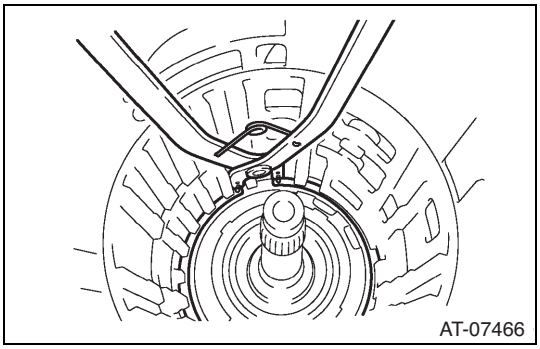
12. Installation of No.3 one-way clutch ASSY
    (1) Install the one-way clutch inner race to the No.3 one-way clutch ASSY.

Captions in illustration

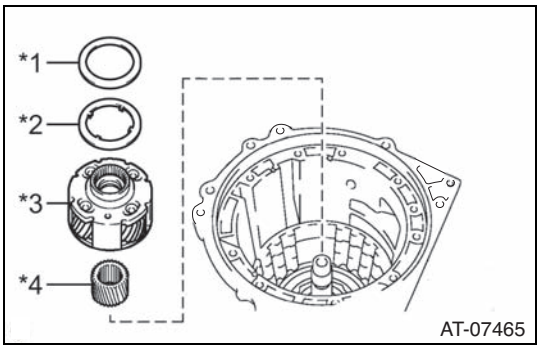
| | |
|---|---|
| *1 | No.3 one-way clutch ASSY |
| *2 | One-way clutch inner race |



13. Installation of intermediate shaft
    (1) Install the No.3 one-way clutch ASSY to the automatic transmission case SUB-ASSY.



(2) Install the snap ring to the automatic transmission case SUB-ASSY.
NOTE:
Install the joint of the snap ring toward the control valve side.



14. Installation of center planetary gear ASSY
(1) Install the center planetary gear ASSY and planetary sun gear to the automatic transmission case SUB-ASSY.

Captions in illustration

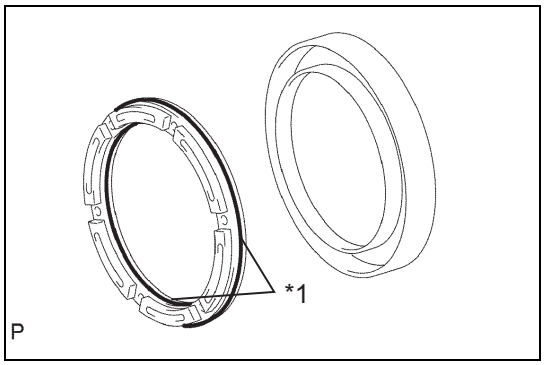
| | |
|---|---|
| *1 | Thrust needle roller bearing |
| *2 | No.4 thrust bearing race |
| *3 | Center planetary gear ASSY |
| *4 | Planetary sun gear |

Bearing and race diameter

| Item | Inner | Outer |
|---|---|---|
| Thrust needle roller bearing | 58.5mm {2.303in} | 73.5mm {2.894in} |
| No.4 thrust bearing race | 55.2mm {2.173in} | 71.2mm {2.803in} |

(2) Apply petroleum jelly to the No.4 thrust bearing race and install it on the center planetary gear ASSY.
(3) Install the thrust needle roller bearing to the center planetary gear ASSY.

AT

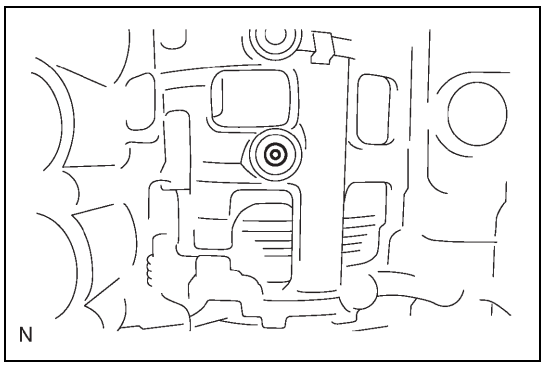


15. Installation of No.2 brake piston
(1) Apply ATF to 2 new O-rings and install them to the No.2 brake piston.

Captions in illustration

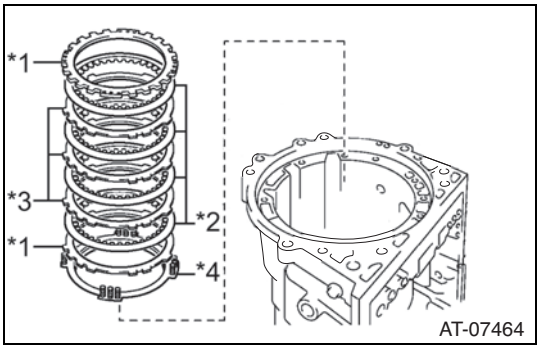
| | |
|---|---|
| *1 | O-ring |

(2) Press the No.2 brake piston into the No.2 brake cylinder.
CAUTION:
Be careful not to damage the O-ring.
(3) Install the No.2 brake piston to the automatic transmission case SUB-ASSY.
NOTE:
Install the No.2 brake cylinder so that the protrusion protrudes from the upper side of the automatic transmission case SUB-ASSY.



(4) Check that the oil pressure apply hole of the No.2 brake cylinder is aligned with the oil pressure apply hole of the automatic transmission case SUB-ASSY.

16. Installation of No.2 brake disc
(1) Install the brake piston return spring.



(2) Install 2 No.2 brake flanges, 4 No.2 brake discs, and 3 No.2 brake plates to the automatic transmission case SUB-ASSY.

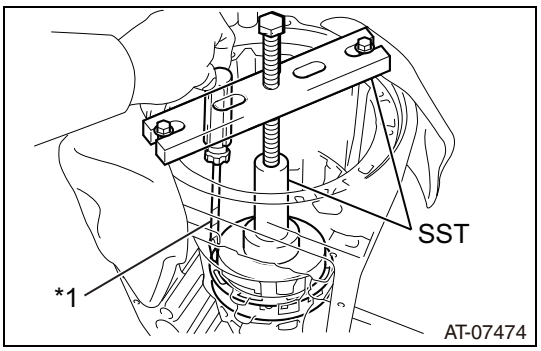
Captions in illustration

| | |
|---|---|
| *1 | No.2 brake flange |
| *2 | No.2 brake disc |
| *3 | No.2 brake plate |
| *4 | Brake piston return spring |

Installation order: *1 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *1

CAUTION:

Check that the disc, plate, and flange are installed in the correct order.



(3) Use the SST and a flat tip screwdriver to press the No.2 brake piston return spring SUB-ASSY and install the snap ring to the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

SST 09351-04010, 09350-07020, 18762AA020

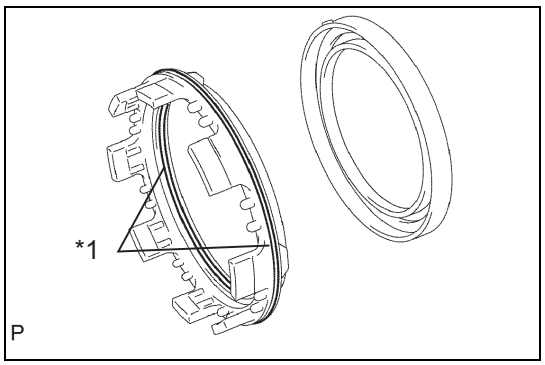
CAUTION:

Insert a cloth, etc. between the SST and transmission case to prevent damage to the case.

NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.

17. Check of piston stroke of No.2 brake piston (refer to AT - 271)



18. Installation of No.1 brake piston

(1) Apply ATF to 2 new O-rings and install them to the No.1 brake piston.

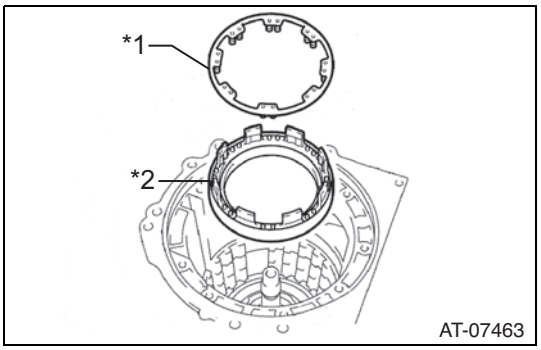
Captions in illustration

| | |
|---|---|
| *1 | O-ring |

(2) Press the No.1 brake piston into the No.1 brake cylinder.

CAUTION:

Be careful not to damage the O-ring.



19. Installation of brake piston return spring SUB-ASSY

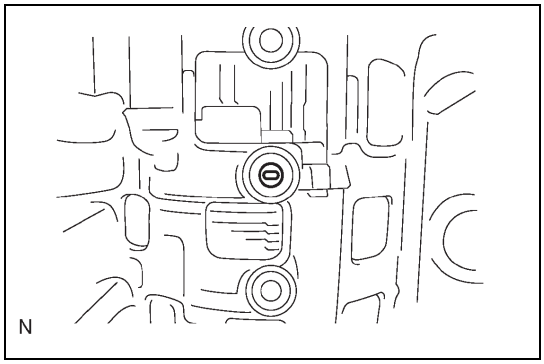
(1) Install the brake piston return spring SUB-ASSY and No.1 brake cylinder to the automatic transmission case SUB-ASSY.

Captions in illustration

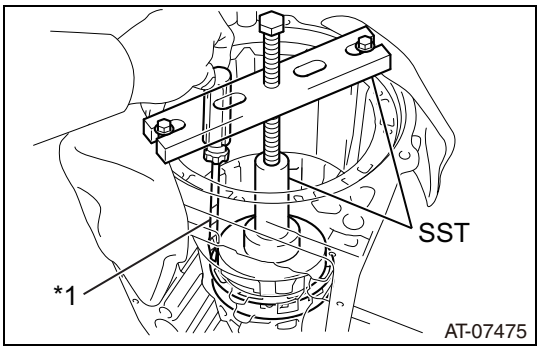
| | |
|---|---|
| *1 | Brake piston return spring SUB-ASSY |
| *2 | No.1 brake cylinder |

NOTE:

Install the No.1 brake cylinder so that the protrusion protrudes from the upper side of the automatic transmission case SUB-ASSY.



(2) Check that the oil pressure apply hole of the No.1 brake cylinder is aligned with the oil pressure apply hole of the automatic transmission case SUB-ASSY.



(3) Use the SST and a flat tip screwdriver to press the brake piston return spring SUB-ASSY and install the snap ring to the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

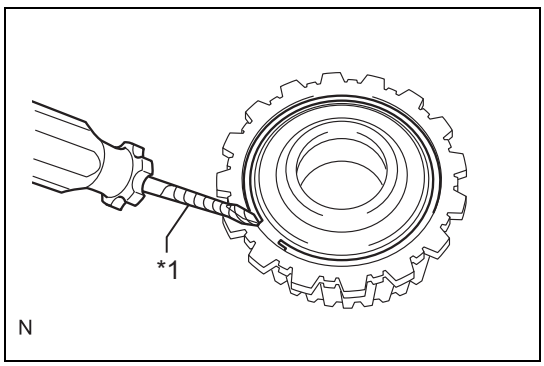
SST 09350-07020, 09351-04010, 09351-04020

CAUTION:

- Align the centers of the SST and the shaft to prevent the SST from contacting the No.1 brake cylinder.
- Insert a cloth, etc. between the SST and transmission case to prevent damage to the case.

NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.



20. Installation of center planetary ring gear

(1) Install the front planetary ring gear flange SUB-ASSY to the center planetary ring gear.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

(2) Use a flat tip screwdriver to install the snap ring.

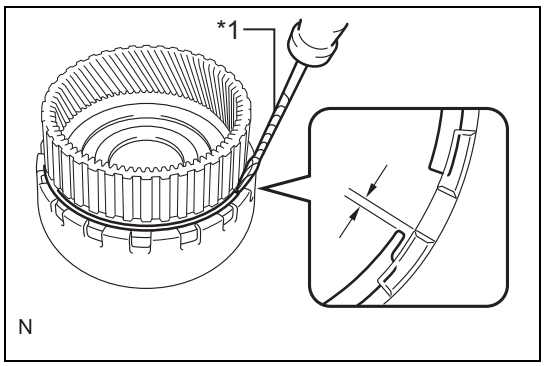
CAUTION:

Be careful not to damage the center planetary ring gear.

NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.

(3) Install the center planetary ring gear to the front planetary ring gear.



(4) Use a flat tip screwdriver to install the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

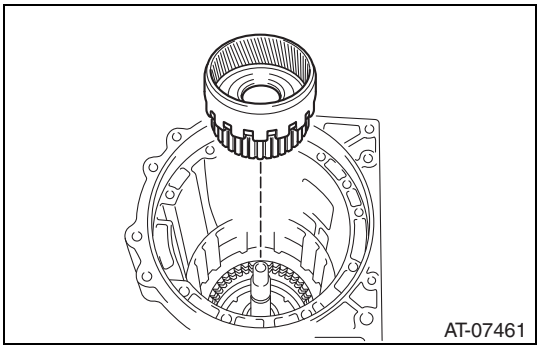
CAUTION:

- Be careful not to damage the front planetary ring gear.
- Install the snap ring to the front planetary ring gear so that the both ends of the snap ring is positioned to the center of the protrusion on the front planetary ring gear.

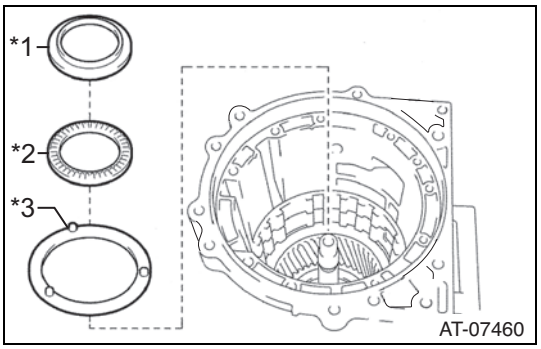
NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.

AT



21. Installation of front planetary ring gear
    (1) Install the front planetary ring gear to the automatic transmission case SUB-ASSY.



22. Installation of front planetary gear ASSY
    (1) Install the No.2 planetary carrier thrust washer and front planetary flange thrust needle roller bearing.

Captions in illustration

| | |
|---|---|
| *1 | Front planetary flange rear thrust bearing race |
| *2 | Front planetary flange thrust needle roller bearing |
| *3 | No.2 planetary carrier thrust washer |

Bearing and race diameter

| Item | Inner | Outer |
|---|---|---|
| Front planetary flange thrust needle roller bearing | 38.6mm {1.520in} | 53.1mm {2.091in} |
| Front planetary flange rear thrust bearing race | 34.9mm {1.374in} | 50.8mm {1.999in} |

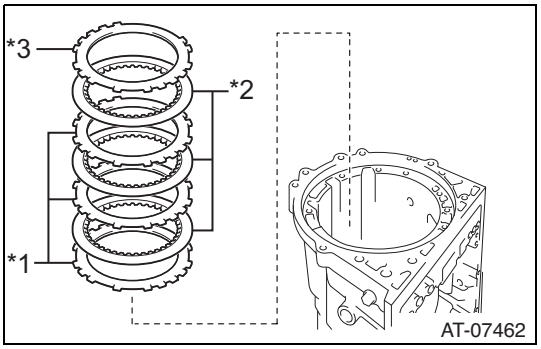
    (2) Apply petroleum jelly to the front planetary flange rear thrust bearing race and install it on the front planetary ring gear.

    (3) Install the front planetary gear ASSY and one-way clutch inner race SUB-ASSY to the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | One-way clutch inner race SUB-ASSY |
| *2 | Front planetary gear ASSY |

23. Check of piston stroke of No.1 brake piston (refer toAT - 273)



24. Installation of No.1 brake disc
    (1) Install No.1 brake flange, 3 No.1 brake discs, and 3 No.1 brake plates to the automatic transmission case SUB-ASSY.

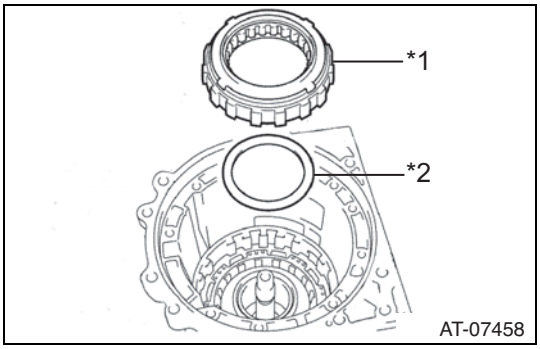
Captions in illustration

| | |
|---|---|
| *1 | No.1 brake plate |
| *2 | No.1 brake disc |
| *3 | No.1 brake flange |

Installation order: *1 - *2 - *1 - *2 - *1 - *2 - *3

CAUTION:
Check that the disc, plate, and flange are installed in the correct order.

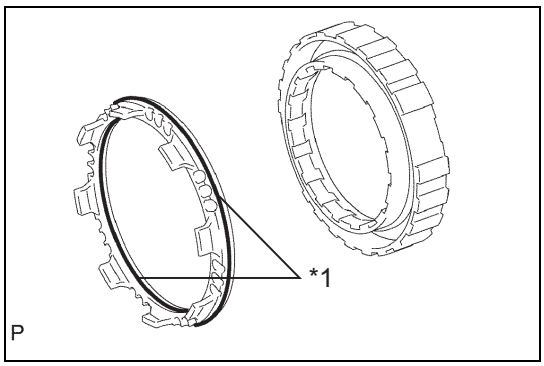
AT



25. Installation of one-way clutch ASSY
    (1) Install the No.1 planetary carrier thrust washer and one-way clutch ASSY to the automatic transmission case SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | One-way clutch ASSY |
| *2 | No.1 planetary carrier thrust washer |



26. Installation of No.3 brake piston
    (1) Apply ATF to 2 new O-rings and install them to the No.3 brake piston.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

    (2) Press the No.3 brake piston into the No.3 brake cylinder.
    CAUTION:
    Be careful not to damage the O-ring.

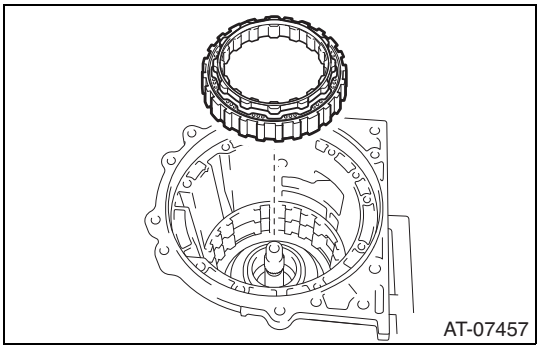
    (3) Use the SST and a press to install the snap ring and No.3 brake piston return spring SUB-ASSY to the No.3 brake cylinder.

Captions in illustration

| | |
|---|---|
| *1 | Snap ring |
| *2 | No.3 Brake piston return spring SUB-ASSY |
| *3 | No.3 brake cylinder |

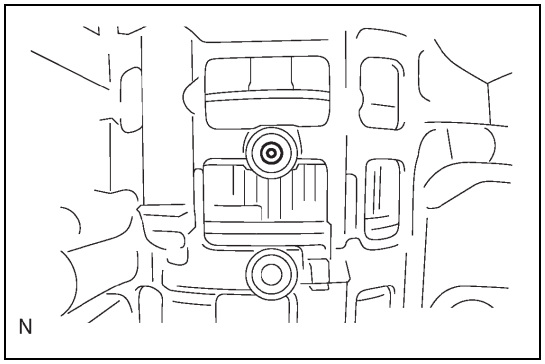
    SST 18762AA030
    CAUTION:
    - Check that the gap of the snap ring end is not aligned with the claw of the spring retainer.
    - Be careful not to damage the No.3 brake cylinder.
    - Keep the foot of SST from standing on the protrusion of the piston return spring SUB-ASSY.

    NOTE:
    Wrap the tip of a flat tip screwdriver with tape before using it.

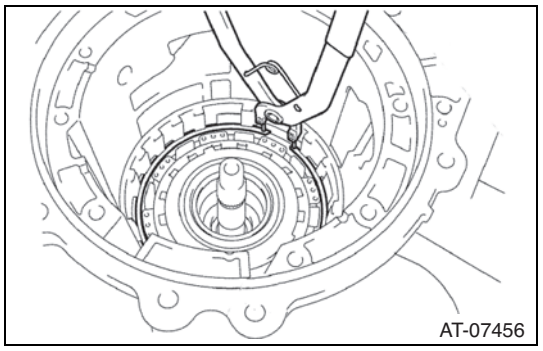


27. Installation of No.3 brake cylinder
    (1) Install the No.3 brake cylinder to the automatic transmission case SUB-ASSY.

AT



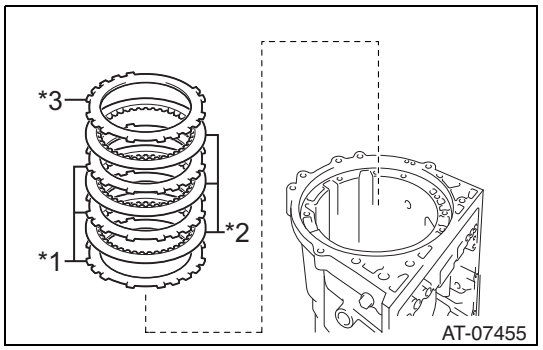
(2) Check that the oil pressure apply hole of the No.3 brake cylinder is aligned with the oil pressure apply hole of the automatic transmission case SUB-ASSY.



(3) Install the snap ring to the automatic transmission case SUB-ASSY.
NOTE:
Install the joint of the snap ring toward the control valve side.

28. Installation of No.3 brake disc set

(1) Install No.3 brake flange, 3 No.3 brake discs, and 3 No.3 brake plates to the automatic transmission case SUB-ASSY.

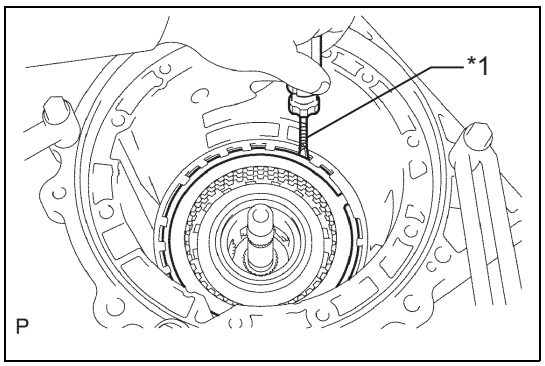


Captions in illustration

| | |
|---|---|
| *1 | No.3 brake plate |
| *2 | No.3 brake disc |
| *3 | No.3 brake flange |

Installation order: *1 - *2 - *1 - *2 - *1 - *2 - *3
CAUTION:
Check that the disc, plate, and flange are installed in the correct order.

(2) Use a flat tip screwdriver to install the snap ring to the automatic transmission case SUB-ASSY.



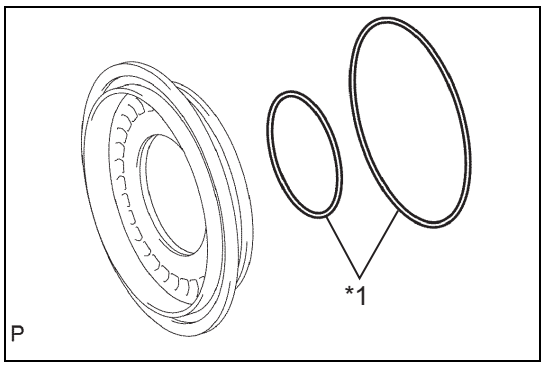
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the automatic transmission case SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

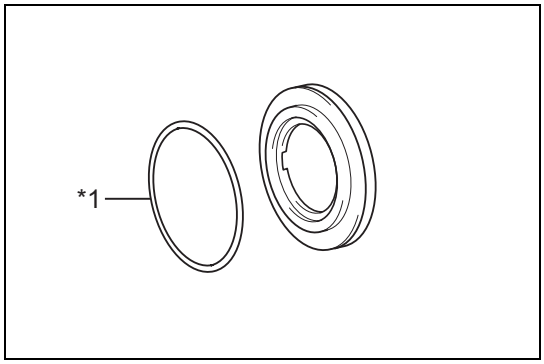
29. Installation of direct clutch piston SUB-ASSY

(1) Apply ATF to 2 new O-rings and install them to the direct clutch piston SUB-ASSY.



Captions in illustration

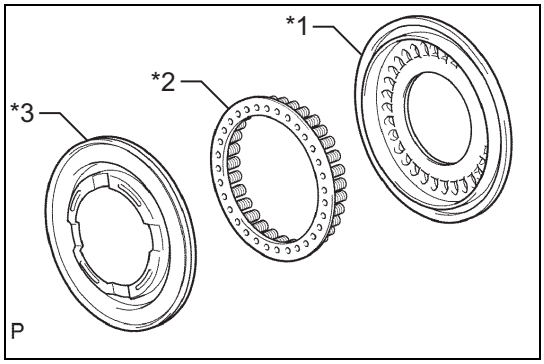
| | |
|---|---|
| *1 | O-ring |



(2) Apply ATF to a new O-ring and install it to the No.2 clutch balancer.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

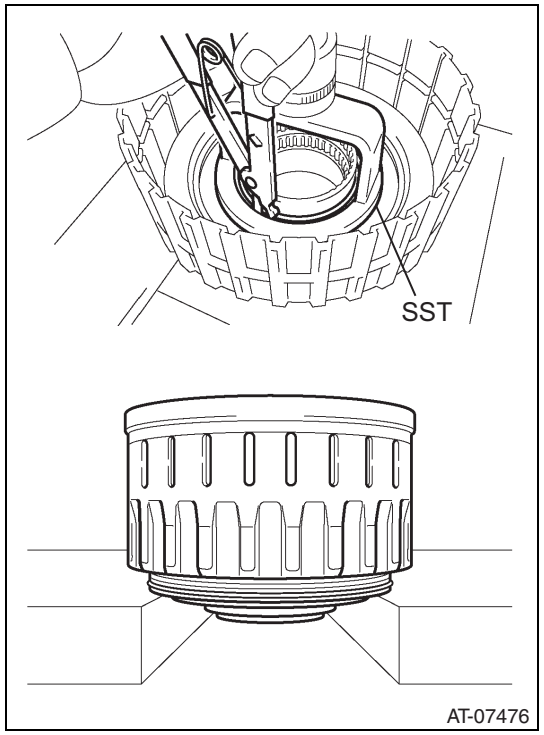


(3) Install the No.2 clutch balancer and direct clutch return spring SUB-ASSY to the direct clutch piston SUB-ASSY.

Captions in illustration

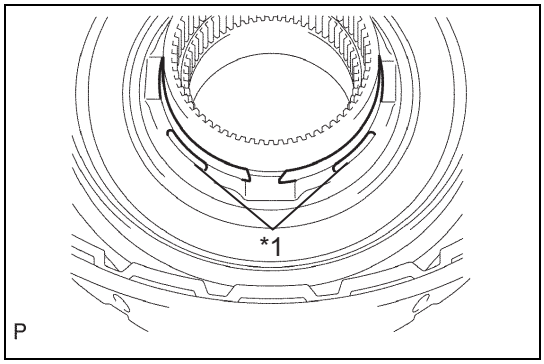
| | |
|---|---|
| *1 | Direct clutch piston SUB-ASSY |
| *2 | Direct clutch return spring SUB-ASSY |
| *3 | No.2 clutch balancer |

(4) Push the direct clutch piston SUB-ASSY into the reverse clutch drum SUB-ASSY by hand.
CAUTION:
Be careful not to damage the O-ring.



(5) Place the SST on the No.2 clutch balancer and press the direct clutch return spring SUB-ASSY using a press.
SST 09320-89010
CAUTION:
To avoid the deformation of the spring seat, stop pressing the spring seat when it descends to 1 to 2 mm {0.0394 to 0.0787 in} from the groove of the snap ring.

(6) Install the snap ring.
CAUTION:
- Check that the gap of the snap ring end is not aligned with the claw of the spring retainer.
- Do not stretch the snap ring excessively.



(7) Insert the gap of the snap ring end into the No.2 clutch balancer as shown in the figure.

Captions in illustration

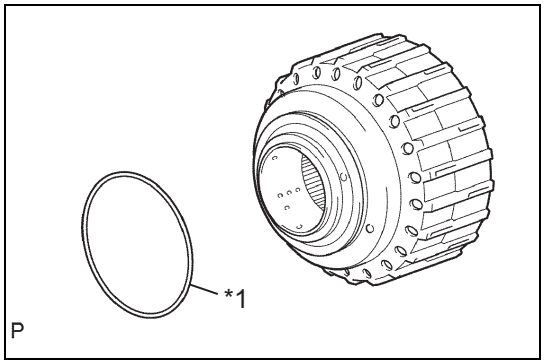
| *1 | Stopper |

AT



30. Installation of reverse clutch piston SUB-ASSY
    (1) Apply ATF to a new O-ring and install it to the reverse clutch drum SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

    (2) Apply ATF to a new O-ring and install it to the reverse clutch piston SUB-ASSY.

Captions in illustration

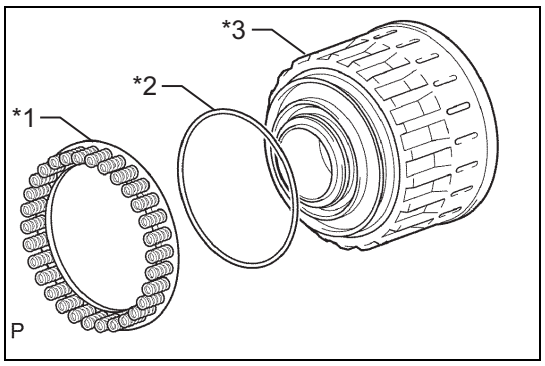
| | |
|---|---|
| *1 | O-ring |

    (3) Push the reverse clutch drum SUB-ASSY into the reverse clutch piston SUB-ASSY by both hands.

Captions in illustration

| | |
|---|---|
| *1 | Reverse clutch piston SUB-ASSY |
| *2 | Reverse clutch drum SUB-ASSY |

CAUTION:
Be careful not to damage the O-ring.

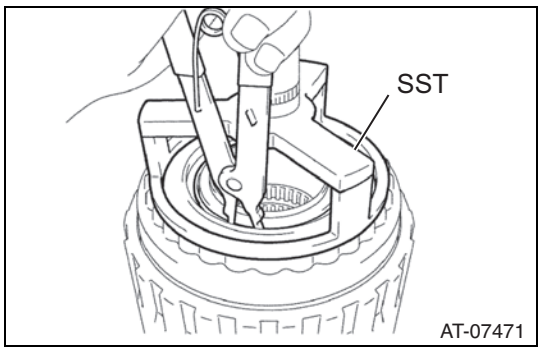


31. Installation of reverse clutch return spring SUB-ASSY
    (1) Apply ATF to a new O-ring and install it to the reverse clutch piston SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Reverse clutch return spring SUB-ASSY |
| *2 | O-ring |
| *3 | Reverse clutch piston SUB-ASSY |

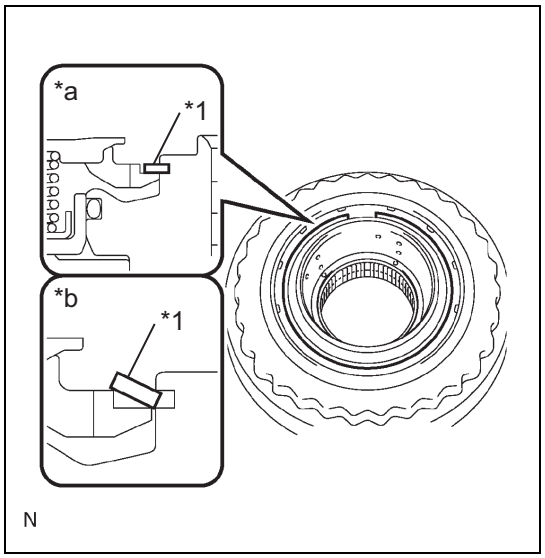
    (2) Install the reverse clutch return spring SUB-ASSY to the reverse clutch piston SUB-ASSY.



32. Installation of No.3 clutch balancer
    (1) Install the No.3 clutch balancer to the reverse clutch return spring SUB-ASSY.
    (2) Place the SST on the No.3 clutch balancer and press the reverse clutch return spring SUB-ASSY using a press.
    SST 09387-00070
    CAUTION:
    To avoid the deformation of the spring seat, stop pressing the spring seat when it descends to 1 to 2 mm {0.0394 to 0.0787 in} from the groove of the snap ring.
    (3) Install the snap ring.

CAUTION:
- Check that the gap of the snap ring end is not aligned with the claw of the spring retainer.
- Do not stretch the snap ring excessively.

(4) Insert the gap of the snap ring end into the No.3 clutch balancer as shown in the figure.

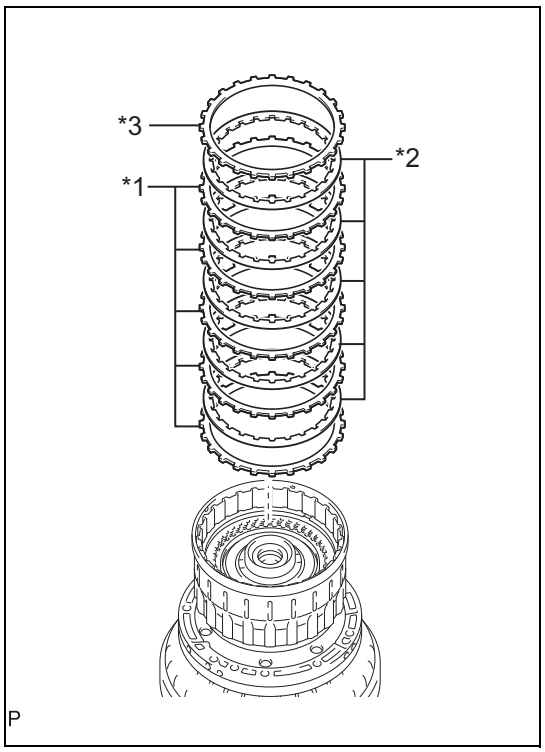


Captions in illustration

| | |
|---|---|
| *1 | Snap ring |
| *a | Correct |
| *b | Wrong |

33. Installation of No.2 clutch disc (direct clutch disc)

(1) Install the direct clutch flange, 5 No.2 clutch discs, and 5 No.2 clutch plates to the reverse clutch drum SUB-ASSY.



Captions in illustration

| | |
|---|---|
| *1 | No.2 clutch plate |
| *2 | No.2 clutch disc |

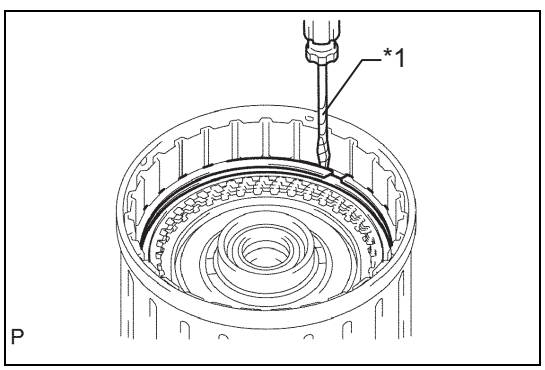
Installation order: *1 - *2 - *1 - *2 - *1 - *2 - *1 - *2 - *1 - *2 - *3

CAUTION:

Check that the disc, plate, and flange are installed in the correct order.

AT

(2) Use a flat tip screwdriver to install 2 snap rings to the reverse clutch drum SUB-ASSY.



Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

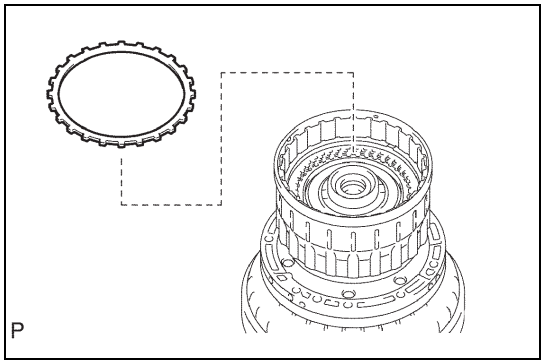
CAUTION:

Be careful not to damage the reverse clutch drum SUB-ASSY.

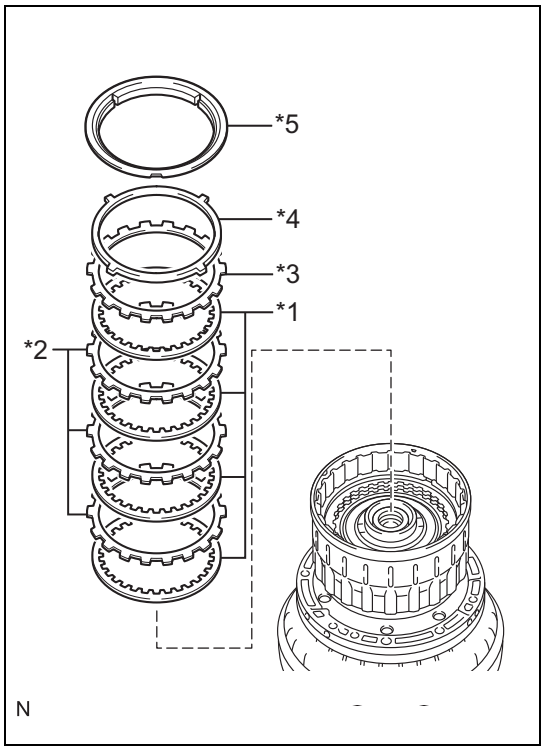
NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.

34. Check of No.2 clutch pack clearance (refer toAT - 277)



35. Installation of reverse clutch flange
    (1) Install the reverse clutch flange to the reverse clutch drum SUB-ASSY.



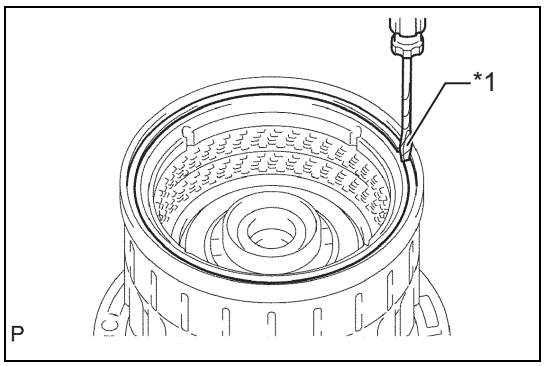
36. Installation of reverse clutch reaction sleeve
    (1) Install the clutch cushion plate, reverse clutch flange, 4 No.3 clutch discs, 3 No.3 clutch plates, and reverse clutch reaction sleeve to the reverse clutch drum SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | No.3 clutch disc |
| *2 | No.3 clutch plate |
| *3 | Reverse clutch flange |
| *4 | Clutch cushion plate |
| *5 | Reverse clutch reaction sleeve |

Installation order: *1 - *2 - *1 - *2 - *1 - *2 - *1 - *3 - *4 - *5

CAUTION:
Check that the disc, plate, flange, sleeve, and cushion plate are installed in the correct order.



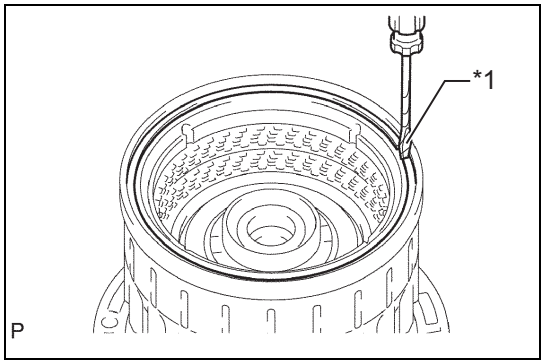
(2) Use a flat tip screwdriver to install the snap ring to the reverse clutch piston SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the reverse clutch piston SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

37. Check of No.3 clutch pack clearance (refer toAT - 277)

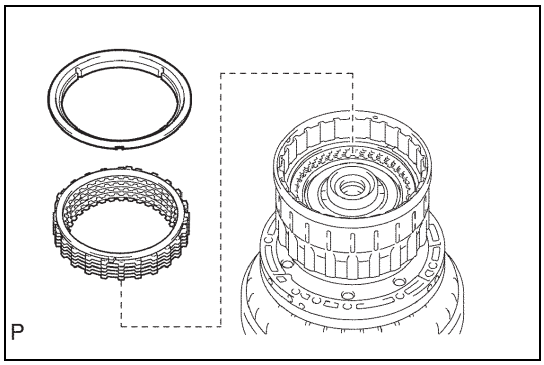


38. Removal of reverse clutch reaction sleeve
    (1) Use a flat tip screwdriver to remove the snap ring from the reverse clutch piston SUB-ASSY.

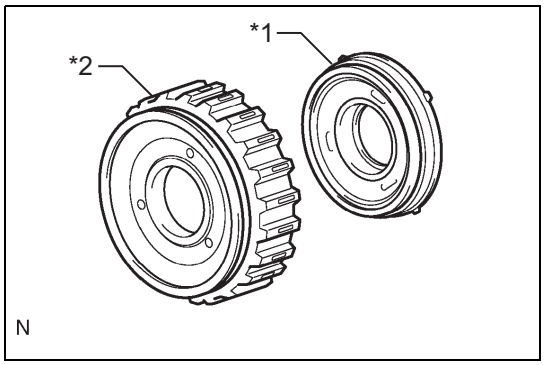
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the reverse clutch piston SUB-ASSY.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



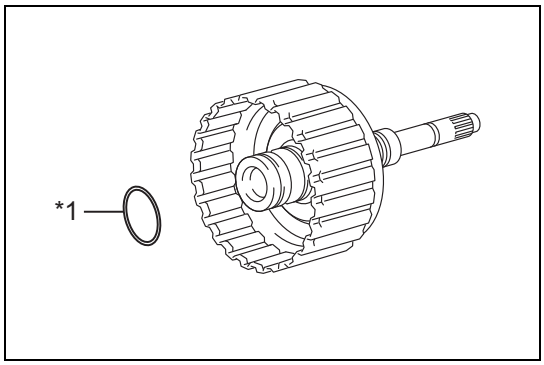
(2) Remove the reverse clutch reaction sleeve, clutch cushion plate, reverse clutch flange, 4 No.3 clutch discs, and 3 No.3 clutch plates from the reverse clutch drum SUB-ASSY.



39. Installation of forward clutch piston SUB-ASSY
    (1) Install the coast clutch piston to the forward clutch piston SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Coast clutch piston |
| *2 | Forward clutch piston SUB-ASSY |

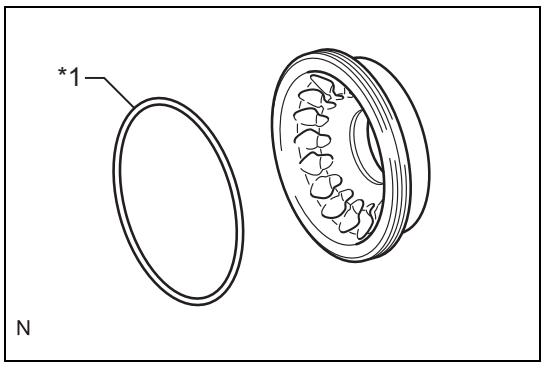


(2) Apply ATF to a new O-ring and install it to the input shaft.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |

(3) Install the forward clutch piston SUB-ASSY to the input shaft.

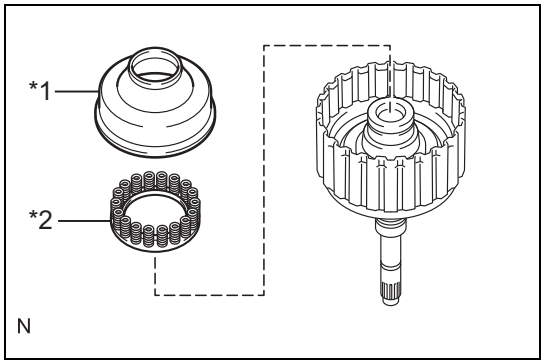


40. Installation of No.1 clutch balancer
    (1) Apply ATF to a new D-ring and install it to the No.1 clutch balancer.

Captions in illustration

| | |
|---|---|
| *1 | D-ring |

AT

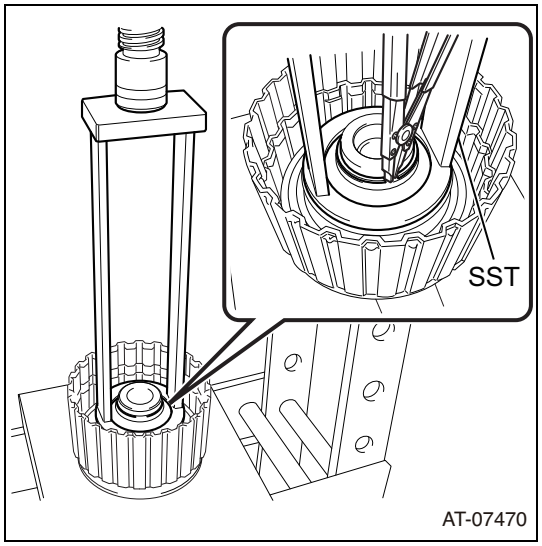


(2) Install the No.1 clutch balancer and forward clutch return spring SUB-ASSY to the input shaft.

Captions in illustration

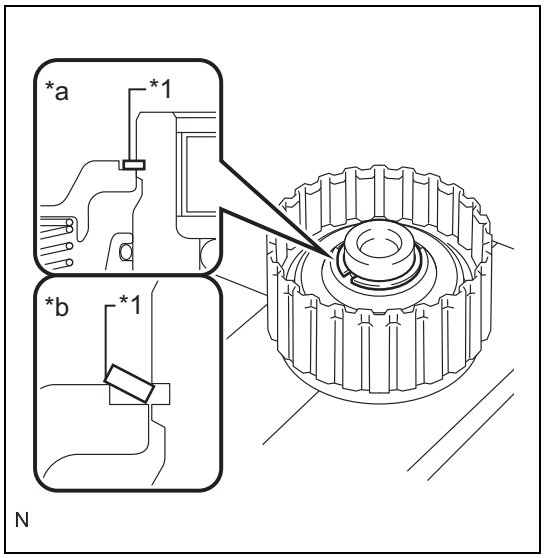
| | |
|---|---|
| *1 | No.1 clutch balancer |
| *2 | Forward clutch return spring SUB-ASSY |

CAUTION:
Be careful not to damage the D-ring.



(3) Place the SST on the No.1 clutch balancer and press the forward clutch return spring SUB-ASSY using a press.
SST 09387-00110
CAUTION:
To avoid the deformation of the spring seat, stop pressing the spring seat when it descends to 1 to 2 mm {0.0394 to 0.0787 in} from the groove of the snap ring.

(4) Install the snap ring.
CAUTION:
- Check that the gap of the snap ring end is not aligned with the claw of the spring retainer.
- Do not stretch the snap ring excessively.



(5) Insert the gap of the snap ring end into the No.1 clutch balancer as shown in the figure.

Captions in illustration

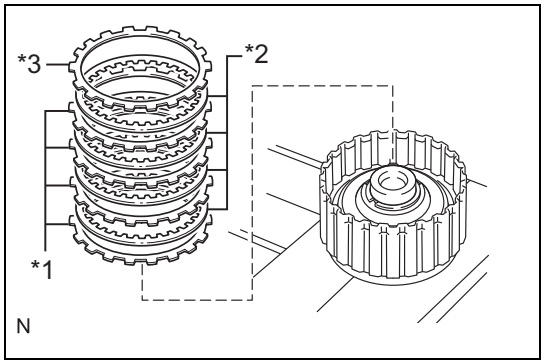
| *b | Wrong |

AT



41. Installation of No.4 clutch disc (coast clutch disc)
    (1) Install the coast clutch flange, 4 No.4 clutch discs, and 4 No.4 clutch plates to the forward clutch piston SUB-ASSY.

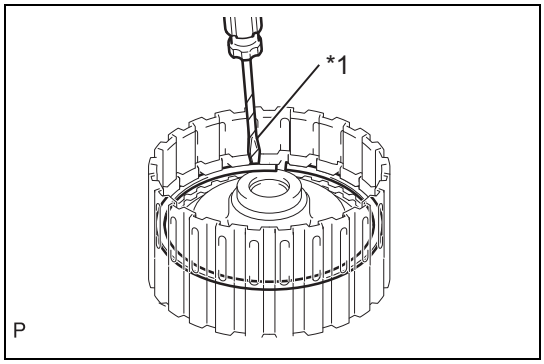
Captions in illustration

| | |
|---|---|
| *1 | No.4 clutch plate |
| *2 | No.4 clutch disc |
| *3 | Coast clutch flange |

Installation order: *1 - *2 - *1 - *2 - *1 - *2 - *1 - *2 - *3

CAUTION:

Check that the disc, plate, and flange are installed in the correct order.



(2) Use a flat tip screwdriver to install the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

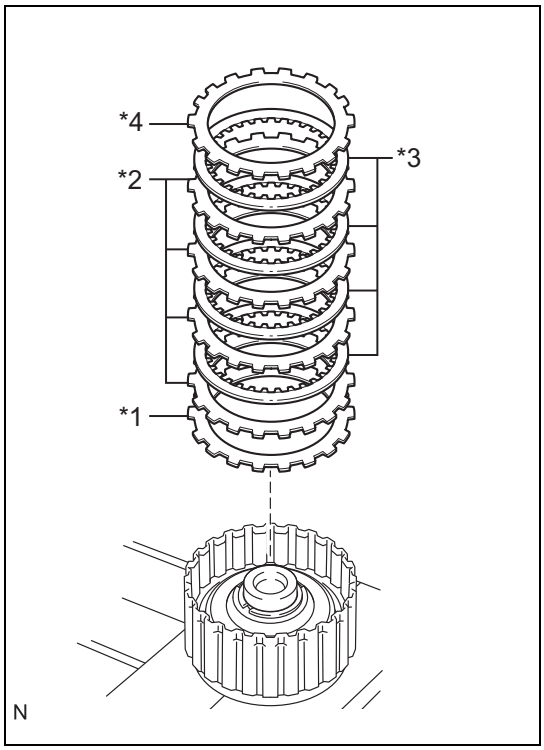
CAUTION:

Be careful not to damage the forward clutch piston SUB-ASSY.

NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.

42. Check of No.4 clutch pack clearance (refer toAT - 280)



43. Installation of No.1 clutch disc (forward clutch disc)
    (1) Install the forward clutch flange, 4 No.1 clutch discs, 4 No.1 clutch plates, and clutch cushion plate to the input shaft.

Captions in illustration

| | |
|---|---|
| *1 | Clutch cushion plate |
| *2 | No.1 clutch plate |
| *3 | No.1 clutch disc |

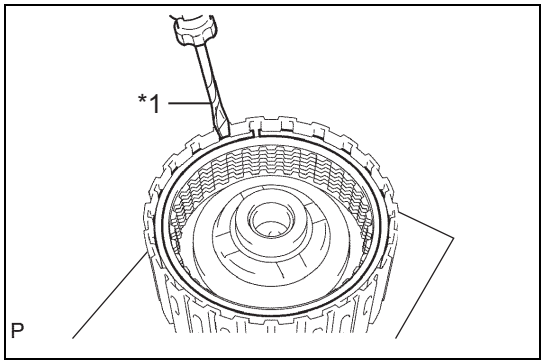
Installation order: *1 - *2 - *3 - *2 - *3 - *2 - *3 - *2 - *3 - *4

CAUTION:

Check that the disc, plate, flange, and cushion plate are installed in the correct order.

AT



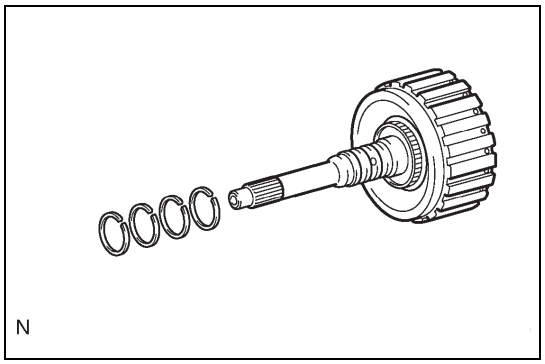
(2) Use a flat tip screwdriver to install the snap ring.

Captions in illustration

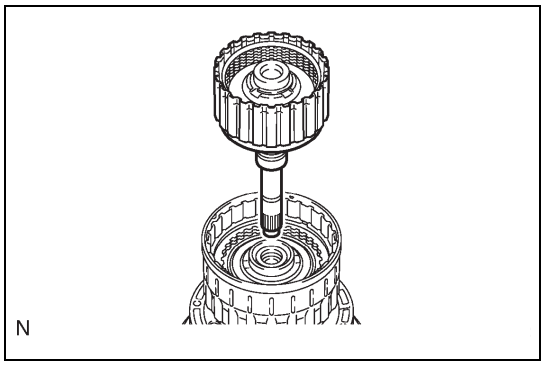
| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Be careful not to damage the input shaft.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.

44. Check of No.1 clutch pack clearance (refer toAT - 279)

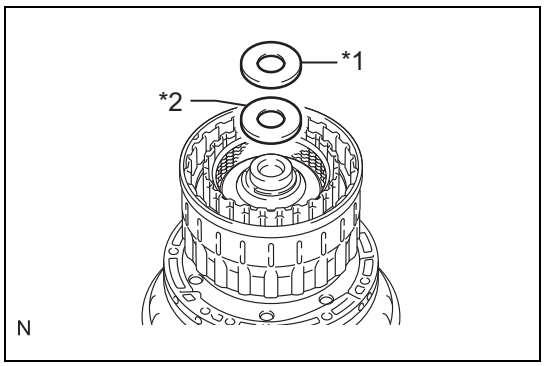


45. Installation of clutch drum oil seal ring
    (1) Apply ATF to 4 new clutch drum oil seal rings.
    (2) Push out both ends of the 4 clutch drum oil seal rings all together and install them to the input shaft groove.
    CAUTION:
    Do not stretch the ring ends excessively.
    NOTE:
    After installing the clutch drum oil seal rings, check that they can rotate smoothly.



AT

46. Installation of input shaft
    (1) Install the input shaft to the reverse clutch drum SUB-ASSY.



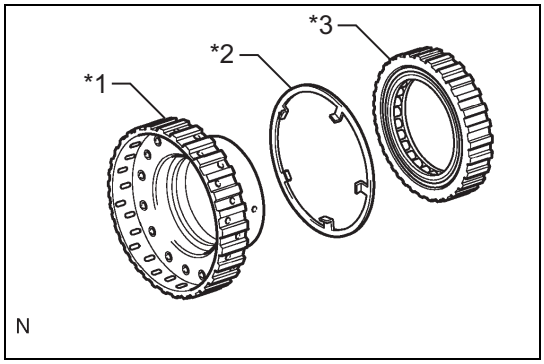
(2) Install the input shaft rear thrust bearing race and thrust needle roller bearing to the input shaft.

Captions in illustration

| | |
|---|---|
| *1 | Thrust needle roller bearing |
| *2 | Input shaft rear thrust bearing race |

Bearing and race diameter

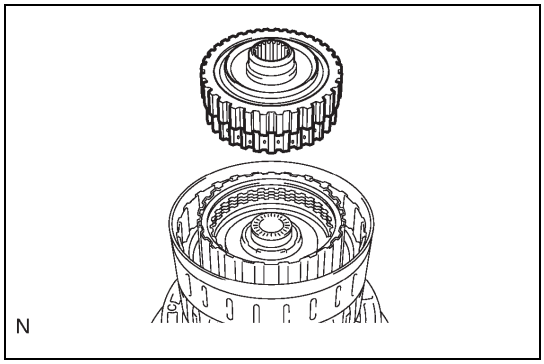
| Item | Inner | Outer |
|---|---|---|
| Thrust needle roller bearing | 50.8mm {1.999in} | 41.0mm {1.614in} |
| Input shaft rear thrust bearing race | 20.0mm {0.787in} | 35.6mm {1.402in} |



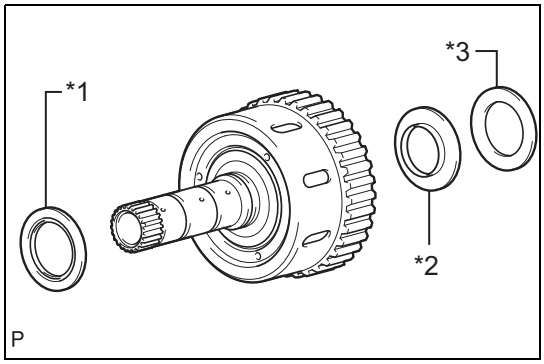
47. Installation of No.4 one-way clutch ASSY
    (1) Install the No.2 clutch hub thrust washer and No.4 one-way clutch ASSY to the coast clutch hub ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Coast clutch hub SUB-ASSY |
| *2 | No.2 clutch hub thrust washer |
| *3 | No.4 one-way clutch ASSY |



48. Installation of coast clutch hub SUB-ASSY
    (1) Install the coast clutch hub SUB-ASSY to the reverse clutch drum SUB-ASSY.



49. Installation of forward clutch hub SUB-ASSY
    (1) Install the 2 thrust needle roller bearings and No.2 thrust bearing race to the forward clutch hub ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Thrust needle roller bearing A |
| *2 | Thrust needle roller bearing B |

Bearing and race diameter

| Item | Inner | Outer |
|---|---|---|
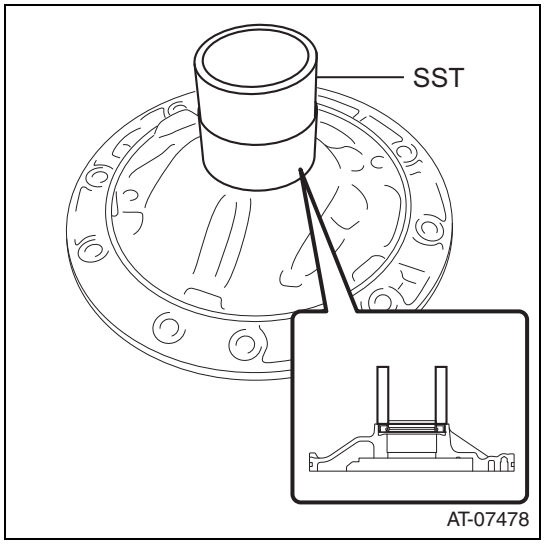
| Thrust needle roller bearing | 71.9mm {2.831in} | 85.6mm {3.370in} |
| Input shaft front thrust bearing race | 37.0mm {1.457in} | 51.2mm {2.016in} |
| Input shaft front thrust needle roller bearing | 33.5mm {1.319in} | 48.0mm {1.890in} |

AT

    (2) Apply petroleum jelly to the input shaft front thrust bearing race and clutch drum thrust washer, and then install them on the clutch drum & input shaft ASSY.

    (3) Install the clutch drum & input shaft ASSY to the automatic transmission case SUB-ASSY.



55. Installation of oil pump ASSY
    (1) Use the SST to install the oil seal to the oil pump.
        SST 499755602
    (2) Apply ATF to 3 new clutch drum oil seal rings.

    (3) Push out both ends of the clutch drum oil seal ring until the gap length becomes 8 mm {0.31 in} or less and install it to the stator shaft groove.
        CAUTION:
        Do not stretch the ring ends excessively.
        NOTE:
        After installing the clutch drum oil seal rings, check that the seal ring can rotate smoothly.

    (4) Install the No.1 thrust bearing race to the oil pump ASSY.

Captions in illustration

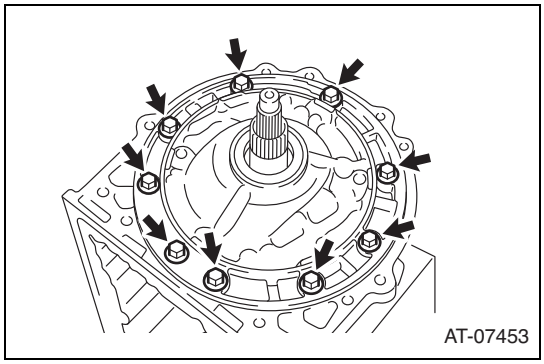
| | |
|---|---|
| *1 | No.1 thrust bearing race |
| *2 | Oil pump ASSY |
| *3 | O-ring |

Race diameter

| Item | Inner | Outer |
|---|---|---|
| No.1 thrust bearing race | 74.2mm {2.921in} | 87.7mm {3.453in} |

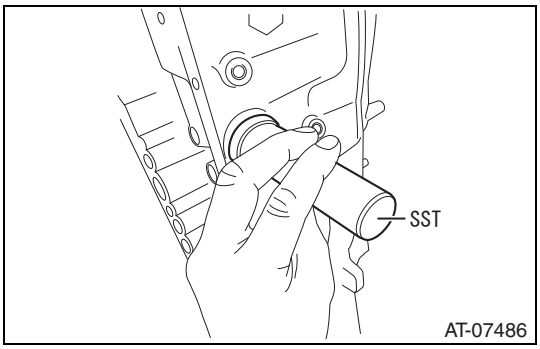
    (5) Apply ATF to a new O-ring and install it to the oil pump ASSY.
    (6) Insert the oil pump ASSY into the input shaft and align the bolt hole of the oil pump ASSY with the automatic transmission case SUB-ASSY.
        CAUTION:
        Be careful not to damage the O-ring.
    (7) Hold the input shaft and press the oil pump lightly to slide the clutch drum oil seal ring into the clutch drum & input shaft ASSY.

AT

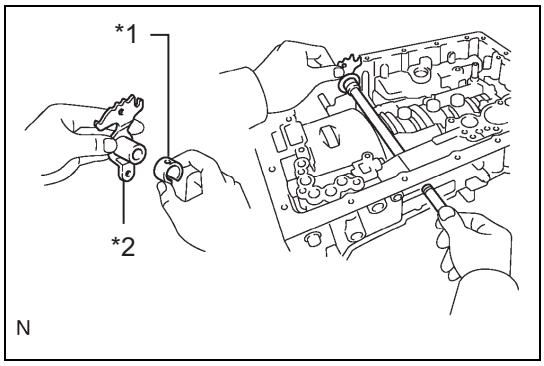


(8) Install 9 bolts.
Standard value:T=21N·m {215kgf·cm} {15.5ft·lbf}

56. Operation check of each piston (refer to AT - 275)



57. Installation of manual valve lever shaft oil seal
(1) Tap 2 manual valve lever shaft oil seals lightly to insert them into the automatic transmission case SUB-ASSY using the SST and a hammer.
SST 18657AA010
(2) Apply auto fluid WS to the manual valve lever shaft oil seal lip.

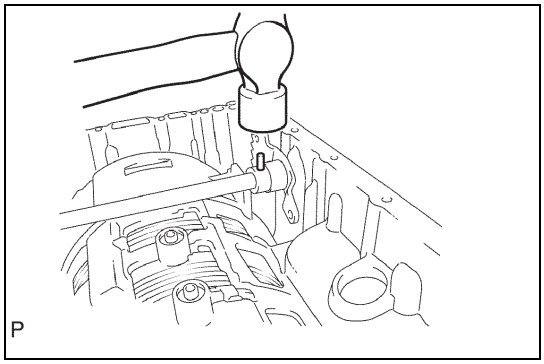


58. Installation of manual valve lever SUB-ASSY
(1) Install a new spacer to the manual valve lever SUB-ASSY.

Captions in illustration

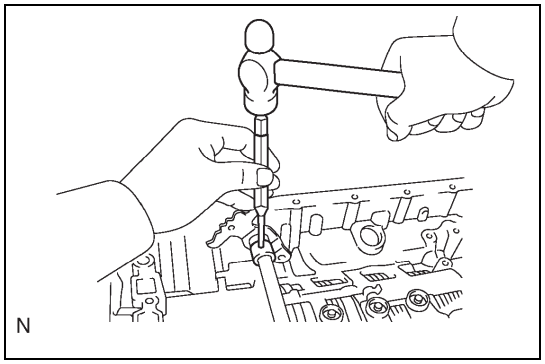
| | |
|---|---|
| *1 | Spacer |
| *2 | Manual valve lever SUB-ASSY |

(2) Install the manual valve lever shaft to the automatic transmission case SUB-ASSY through the manual valve lever SUB-ASSY.



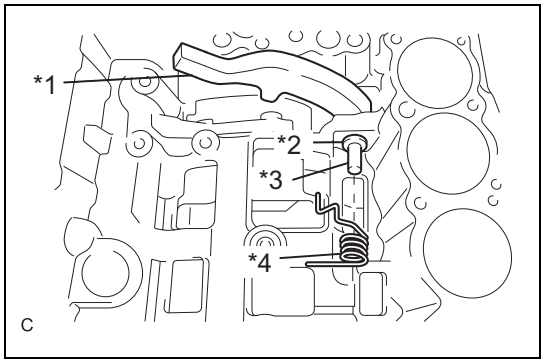
(3) Tap a new spring pin lightly to insert using a hammer.

AT



(4) Align the dent of the manual valve lever with the spacer hole and fix them together with a punch.
(5) Check that the shaft can rotate smoothly.

59. Installation of parking lock pole shaft
(1) Install a new E-ring to the parking lock pole shaft.

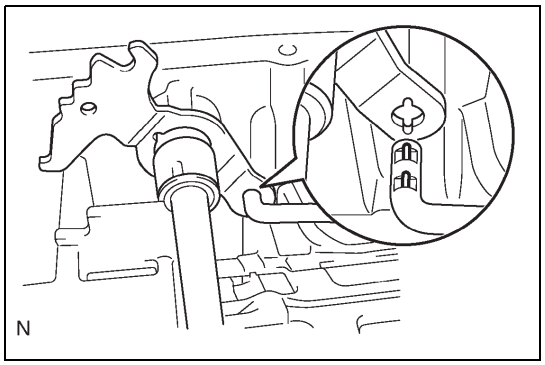


(2) Install the parking lock pole, parking lock pole shaft, and torsion spring to the automatic transmission case SUB-ASSY.

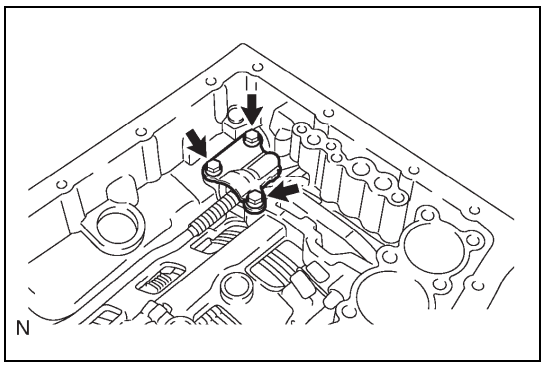
Captions in illustration

| | |
|---|---|
| *1 | Parking lock pole |
| *2 | E-ring |
| *3 | Parking lock pole shaft |
| *4 | Torsion spring |

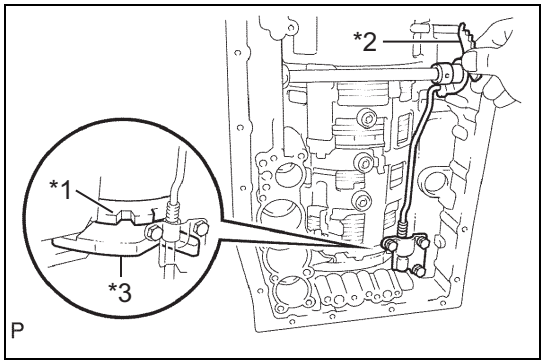
AT



60. Installation of parking lock rod SUB-ASSY
(1) Install the parking lock rod SUB-ASSY to the manual valve lever SUB-ASSY.



61. Installation of parking lock pole bracket
(1) Install the parking lock pole bracket to the automatic transmission case SUB-ASSY with 3 bolts.
Standard value:T=7.3N·m {74kgf·cm} {5.4ft·lbf}



(2) Shift the manual valve lever SUB-ASSY to P position and check that the rear planetary gear is properly locked with the parking lock pole.

Captions in illustration

| | |
|---|---|
| *1 | Rear planetary gear |
| *2 | Manual valve lever SUB-ASSY |

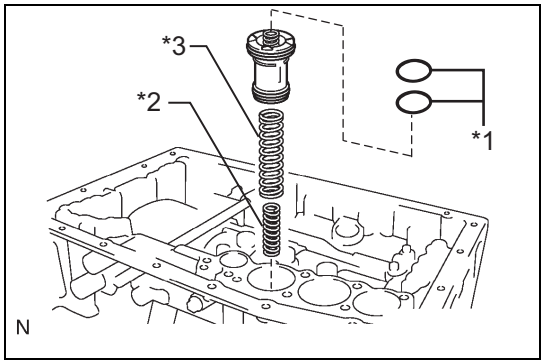
62. Installation of B-1 accumulator valve

(1) Install the spring and B-1 accumulator valve to the hole.

B-1 accumulator spring

| Free length | Outer diameter | Color |
|---|---|---|
| 46.36mm {1.825in} | 17.1mm {0.673in} | Natural |



(2) Apply ATF to 2 new O-rings and install them to the C-3 accumulator piston.

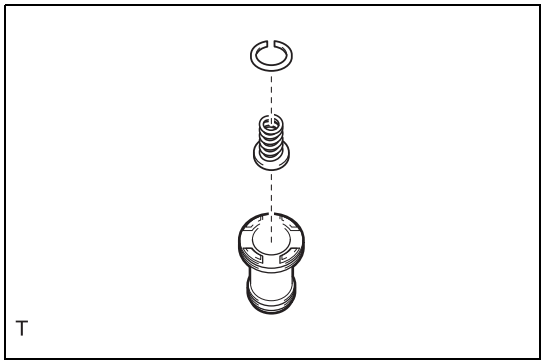
Captions in illustration

| | |
|---|---|
| *1 | O-ring |
| *2 | Inner spring |
| *3 | Outer spring |

(3) Install 2 springs and C-3 accumulator piston to the hole.

C-3 accumulator spring

| Spring | Free length | Outer diameter | Color |
|---|---|---|---|
| Inner | 44.0mm {1.732in} | 14.0mm {0.551in} | Yellow |
| Outer | 76.65mm {3.018in} | 20.1mm {0.791in} | White |



63. Installation of B-3 accumulator piston

(1) Use a flat tip screwdriver to install the spring SUB-ASSY to the B-3 accumulator piston with a snap ring.

B-3 accumulator spring SUB-ASSY

| Free length | Coil outer diameter | Color |
|---|---|---|
| 25.77mm {1.015in} | 16.3mm {0.642in} | Violet |

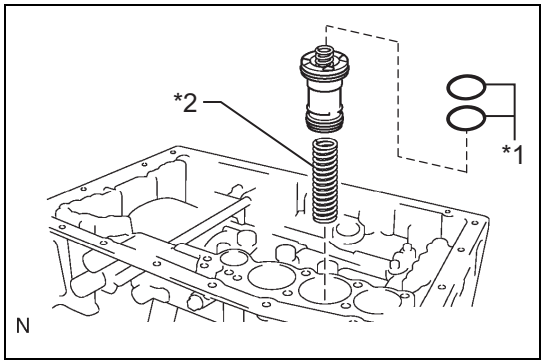
CAUTION:

Be careful not to damage the B-3 accumulator piston.

NOTE:

Wrap the tip of a flat tip screwdriver with tape before using it.

AT



(2) Apply ATF to 2 new O-rings and install them to the B-3 accumulator piston.

Captions in illustration

| | |
|---|---|
| *1 | O-ring |
| *2 | Spring |

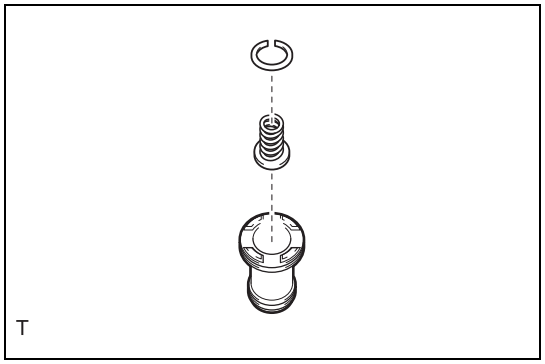
(3) Install the spring and B-3 accumulator piston to the hole.

B-3 accumulator spring

| Free length | Outer diameter | Color |
|---|---|---|
| 70.5mm {2.776in} | 19.7mm {0.776in} | Violet |

64. Installation of C-2 accumulator piston

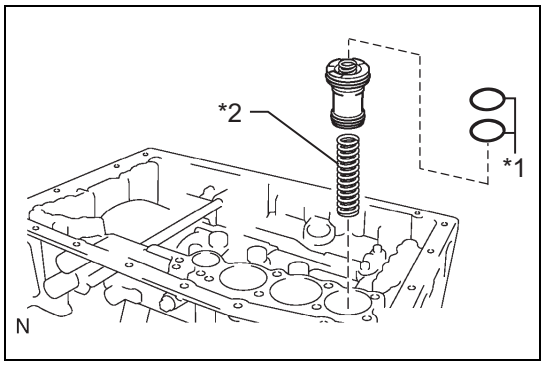
(1) Use a flat tip screwdriver to install the spring SUB-ASSY to the C-2 accumulator piston with a snap ring.



C-2 accumulator spring SUB-ASSY

| Free length | Coil outer diameter | Color |
|---|---|---|
| 15.16mm {0.597in} | 11.3mm {0.445in} | Natural |

CAUTION:
Be careful not to damage the C-2 accumulator piston.
NOTE:
Wrap the tip of a flat tip screwdriver with tape before using it.



(2) Apply ATF to 2 new O-rings and install them to the C-2 accumulator piston.

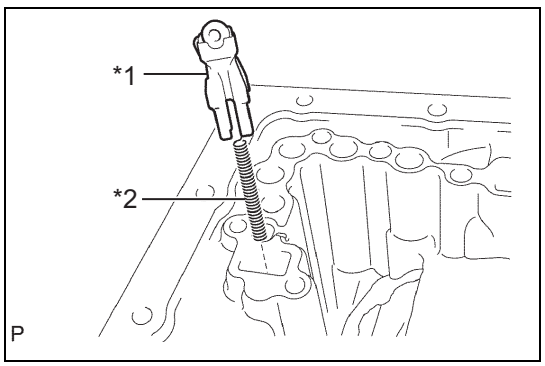
Captions in illustration

| | |
|---|---|
| *1 | O-ring |
| *2 | Spring |

(3) Install the spring and C-2 accumulator piston to the hole.

C-2 accumulator spring

| Free length | Outer diameter | Color |
|---|---|---|
| 65.07mm {2.562in} | 16.2mm {0.638in} | Pink |



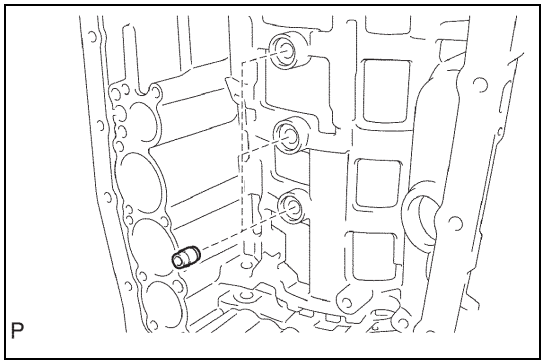
65. Installation of check ball body

(1) Install the check ball body and compression spring to the automatic transmission case SUB-ASSY.

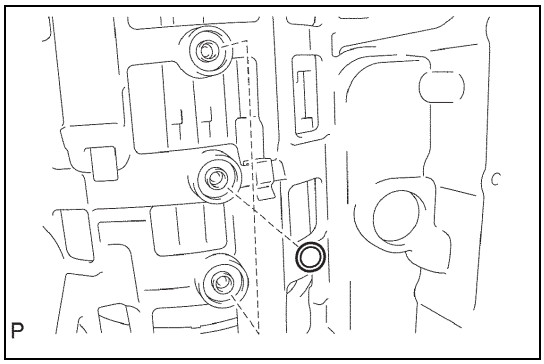
Captions in illustration

| | |
|---|---|
| *1 | Check ball body |
| *2 | Compression spring |

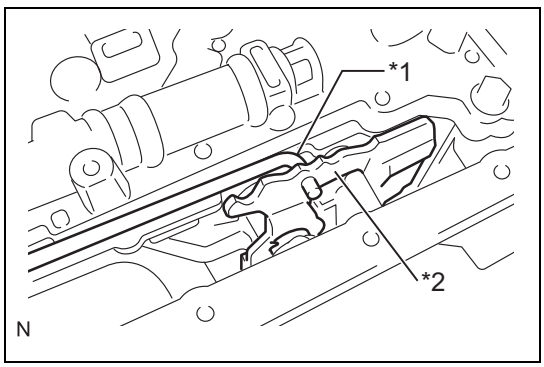
AT



66. Installation of brake drum gasket
    (1) Install 3 new brake drum gaskets to the automatic transmission case SUB-ASSY.



67. Installation of transmission case gasket
    (1) Install 3 new transmission case gaskets on the automatic transmission case SUB-ASSY.

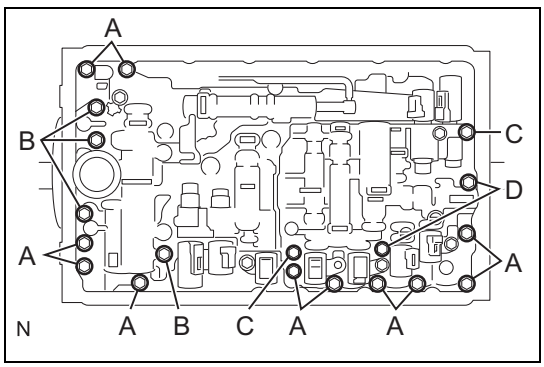


68. Installation of transmission valve body ASSY
    (1) Couple the manual valve connecting rod SUB-ASSY to the manual valve lever SUB-ASSY.

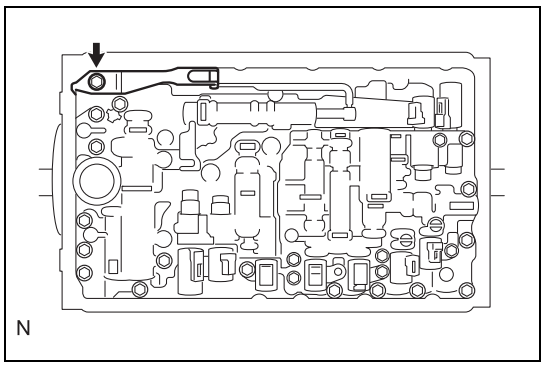
Captions in illustration

| | |
|---|---|
| *1 | Manual valve connecting rod SUB-ASSY |
| *2 | Manual valve lever SUB-ASSY |

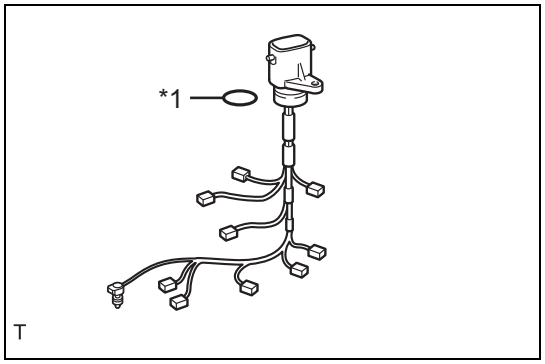
AT



(2) Install the transmission valve body ASSY to the automatic transmission case SUB-ASSY with 19 bolts.
Standard value:T=11N·m {112kgf·cm} {8.1ft·lbf}
NOTE:
The bolt lengths are shown below.
Bolt length:
Bolt A: 25mm {0.984in}
Bolt B: 36mm {1.42in}
Bolt C: 45mm {1.77in}
Bolt D: 50mm {1.97in}



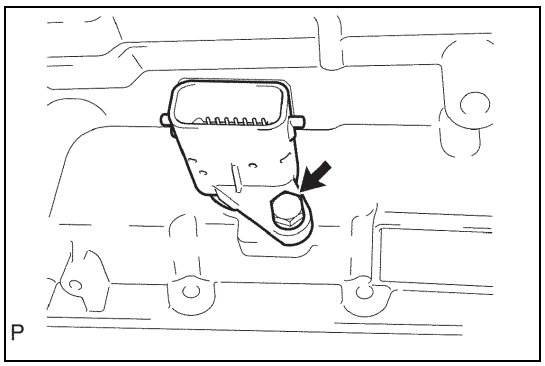
(3) Install the detent spring and detent spring cover to the transmission valve body ASSY with a bolt.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}



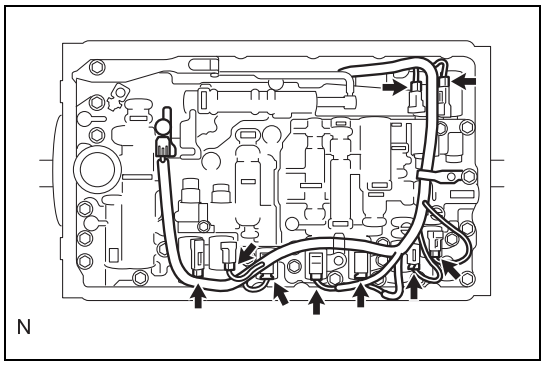
69. Installation of transmission wire
    (1) Apply ATF to a new O-ring and install it to the transmission wire.

Captions in illustration

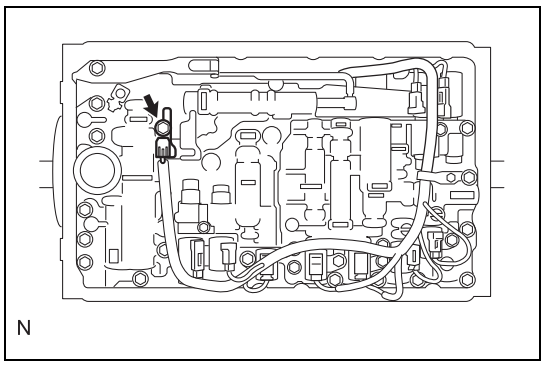
| | |
|---|---|
| *1 | O-ring |



(2) Install the transmission wire with the bolt.
Standard value:T=5.4N·m {55kgf·cm} {4.0ft·lbf}

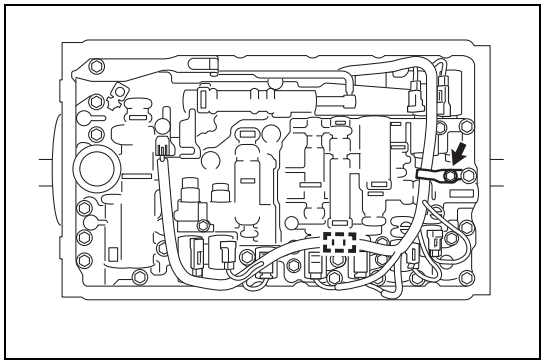


(3) Connect 9 solenoid valve connectors.
(4) Apply ATF to the ATF temperature sensor O-ring.

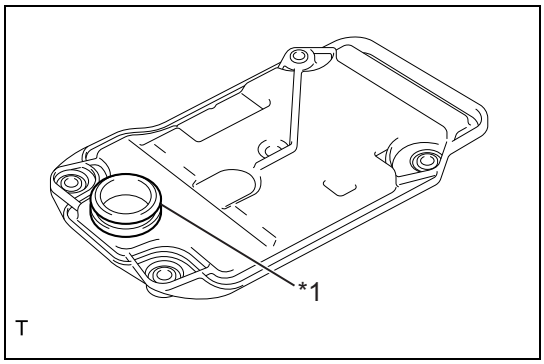


(5) Install the ATF temperature sensor and temperature sensor clamp with a bolt.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

AT



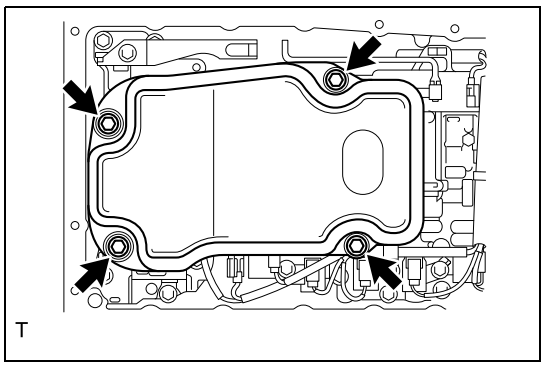
(6) Install the valve body wiring harness clamp with the bolt.
Standard value:T=6.4N·m {65kgf·cm} {4.7ft·lbf}
(7) Secure the wiring harness to the clamp.



70. Installation of valve body oil strainer ASSY
(1) Apply ATF to a new O-ring and install it to the valve body oil strainer ASSY.

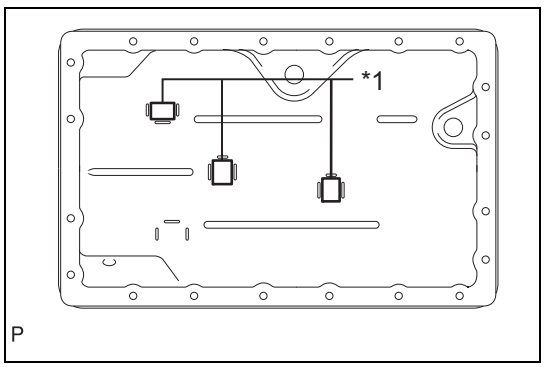
Captions in illustration

| | |
|---|---|
| *1 | O-ring |



(2) Install the valve body oil strainer ASSY to the transmission valve body ASSY with 4 bolts.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

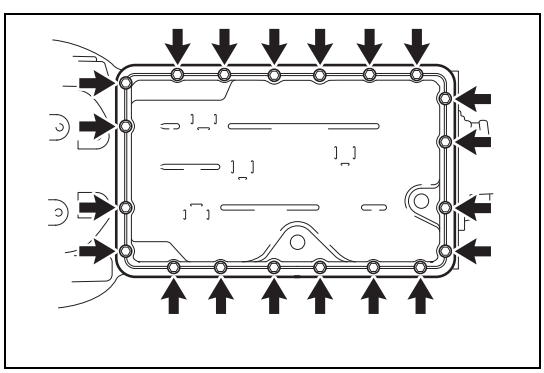
AT



71. Installation of automatic transmission oil pan SUB-ASSY
(1) Install 3 transmission oil cleaner magnets to the automatic transmission oil pan SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Transmission oil cleaner magnet |

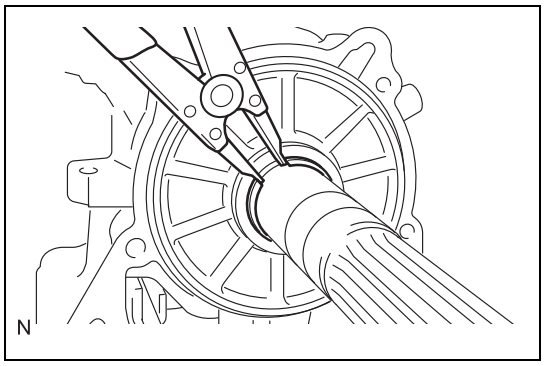


(2) Install a new automatic transmission oil pan gasket and automatic transmission oil pan SUB-ASSY with 20 bolts.
Standard value:T=7.0N·m {71kgf·cm} {5.2ft·lbf}
(3) Install the drain plug and a new gasket.
Standard value:T=20N·m {204kgf·cm} {14.8ft·lbf}
(4) Use a 5-mm socket hexagon wrench to install the overflow plug and a new gasket.
Standard value:T=20N·m {204kgf·cm} {14.8ft·lbf}

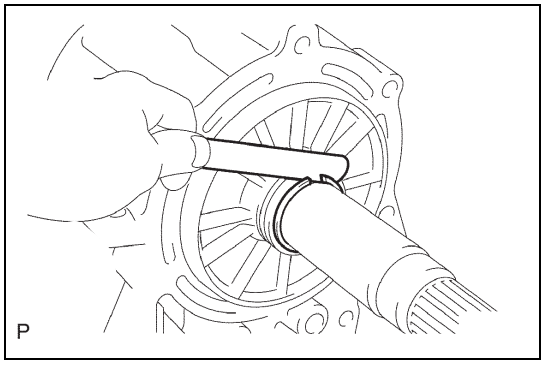
72. Installation of output shaft thrust bearing
    (1) Install the output shaft thrust bearing race, output shaft thrust bearing, and rear output shaft thrust bearing case to the output shaft of the rear planetary gear ASSY.

Bearing and race diameter

| Item | Inner | Outer |
|---|---|---|
| Output shaft thrust bearing race | 37.0mm {1.457in} | 51.2mm {2.016in} |
| Output shaft thrust bearing | 36.1mm {1.421in} | 52.5mm {2.067in} |
| Rear output shaft thrust bearing race | 36.1mm {1.421in} | 51.0mm {2.007in} |



(2) Use a snap ring expander to install the snap ring.



(3) Use a feeler gauge to measure the clearance between the snap ring and rear output shaft thrust bearing race.
Normal clearance: 0.02 to 0.12mm {0.000787 to 0.00472in}
If the clearance is out of the normal range, select another rear output shaft thrust bearing race with the clearance within the normal range.
NOTE:
There are 12 different thicknesses of rear output shaft thrust bearing races.

Race thickness

| Part number | Mark | Thickness |
|---|---|---|
| 35789-35060 | ▮ | 3.80mm {0.150in} |
| 35789-50070 | ▮ ▮ | 3.85mm {0.152in} |
| 35789-35070 | ▮ ▮ ▮ | 3.90mm {0.154in} |
| 35789-50080 | ▮ ▮ ▮ ▮ | 3.95mm {0.156in} |
| 35789-35080 | ▮▮ ▮ ▮▮ | 4.00mm {0.157in} |

AT

| Part number | Mark | Thickness |

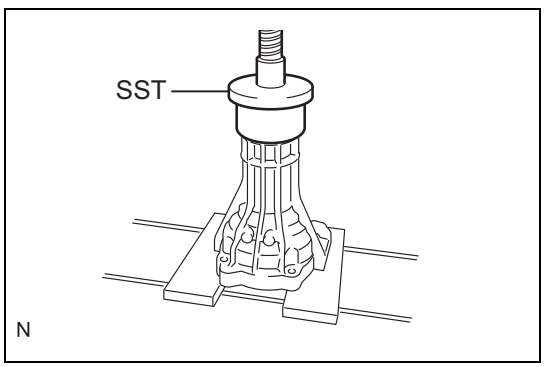
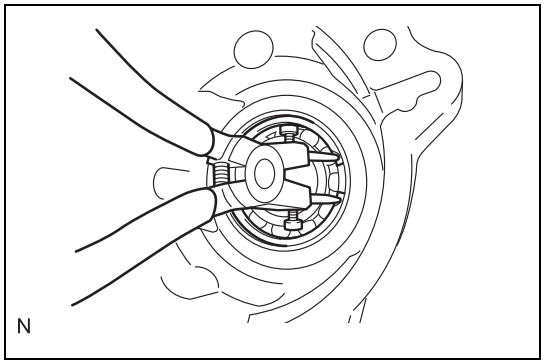
73. Installation of automatic transmission extension housing oil seal
    (1) Tap the automatic transmission extension housing oil seal lightly to insert it into the extension housing SUB-ASSY using the SST and a hammer.
    SST 09325-40010
    Insertion depth: 5.4 to 5.8mm {0.213 to 0.228in}
    (2) Apply auto fluid WS to the lip of the automatic transmission extension housing oil seal.



74. Installation of extension housing dust deflector
    (1) Use the SST and a press to install a new extension housing dust deflector to the extension housing SUB-ASSY.
    SST 398177700



75. Installation of transmission case adapter radial ball bearing
    (1) Install the transmission case adapter radial ball bearing to the extension housing SUB-ASSY.
    (2) Use snap ring pliers to install the snap ring to the extension housing SUB-ASSY.

76. Installation of extension housing SUB-ASSY
    (1) Clean the threads of the 6 bolts and the contact surfaces of the case and housing with appropriate detergent to remove grease.

    (2) Apply seal gasket to the extension housing SUB-ASSY as shown in the figure.

Captions in illustration

| | |
|---|---|
| *a | Seal gasket<br>(Seal diameter: 1.2 mm {0.0472 in}) |

Seal gasket: Three Bond 1281 or the equivalent

CAUTION:

Assemble the extension housing SUB-ASSY within 10 minutes after applying seal gasket.

    (3) Apply Adhesive to 2 or 3 threads at the tip of the 6 bolts.

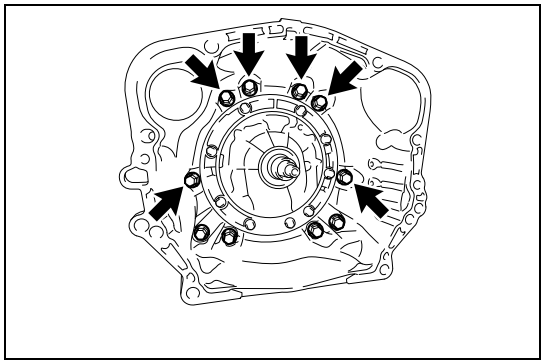
Captions in illustration

| | |
|---|---|
| *1 | Adhesive |

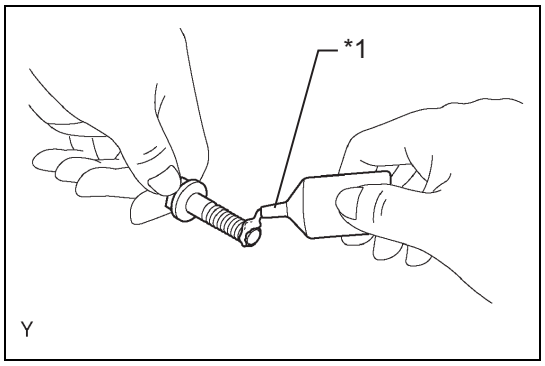
Adhesive: Three Bond 1344 or the equivalent

    (4) Install the extension housing SUB-ASSY to the automatic transmission case SUB-ASSY with 6 bolts.
    Standard value:T=34N·m {345kgf·cm} {25.1ft·lbf}
    NOTE:
    The bolt lengths are shown below.
    Bolt length
    Bolt A: 40mm {1.575in}
    Bolt B: 45mm {1.772in}

77. Installation of automatic transmission housing
    (1) Clean the bolts and the bolt holes with appropriate detergent to remove grease.



(2) Install the automatic transmission housing to the automatic transmission case SUB-ASSY with 6 bolts.
Standard value:T=34N·m {345kgf·cm} {25.1ft·lbf}

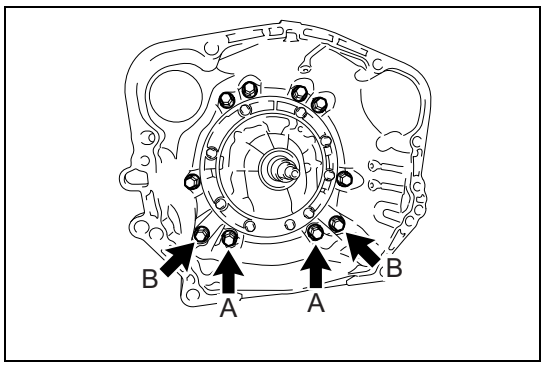


(3) Apply Adhesive to 2 or 3 threads at the tip of the 4 bolts.

Captions in illustration

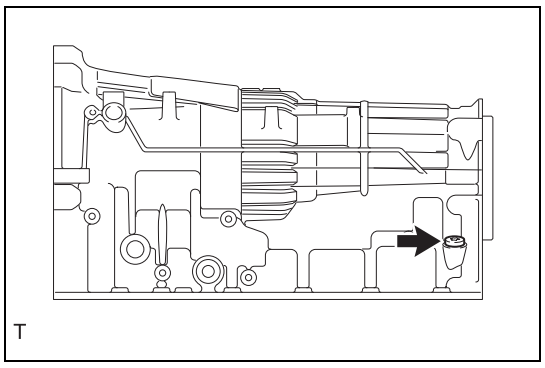
| | |
|---|---|
| *1 | Adhesive |

Adhesive: Three Bond 1344 or the equivalent

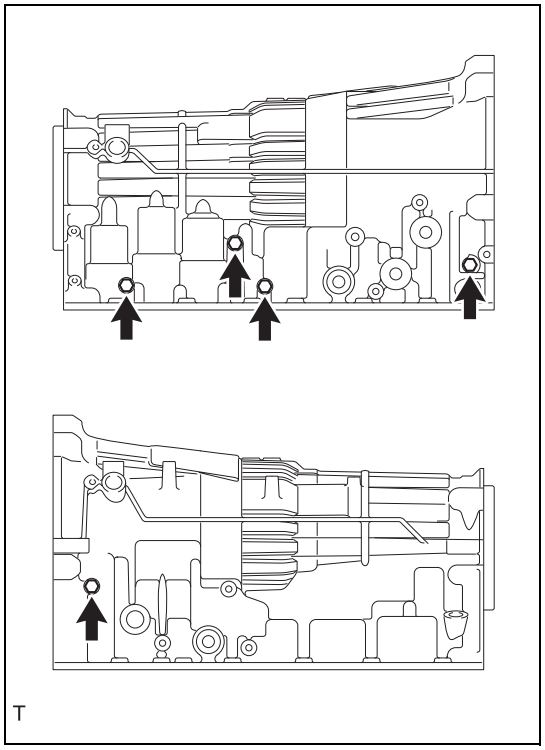


(4) Install the automatic transmission housing to the automatic transmission case SUB-ASSY with 4 bolts.
Standard value:Bolt A (M10 bolt)
T=34N·m {345kgf·cm} {25.1ft·lbf}
Bolt B (M12 bolt)
T=57N·m {579kgf·cm} {42.0ft·lbf}

78. Installation of automatic transmission case plug
(1) Apply ATF to a new O-ring and install it to the automatic transmission case plug.
(2) Use a TORX socket wrench T55 to install the automatic transmission case plug to the automatic transmission case SUB-ASSY.
Standard value:T=39N·m {400kgf·cm} {28.8ft·lbf}



AT

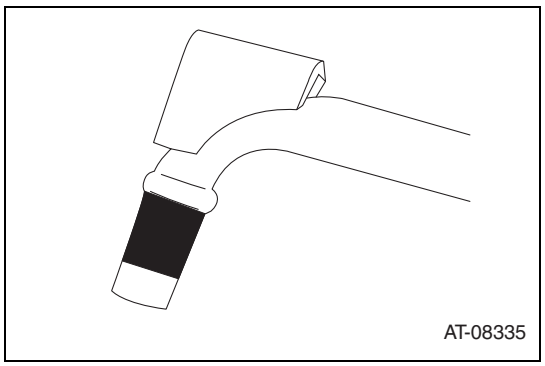


T

(3) Apply ATF to 5 new O-rings and install them to the 5 automatic transmission case plugs.
(4) Install the 5 automatic transmission case plugs to the automatic transmission case SUB-ASSY.
Standard value:T=7.4N·m {75kgf·cm} {5.5ft·lbf}

79. Installation of automatic transmission breather tube
(1) Clean and degrease the transmission case SUB-ASSY mounting area of the breather tube with appropriate detergent.
(2) Degrease the breather tube insert hole of the automatic transmission case SUB-ASSY.
CAUTION:
Keep foreign matter from entering automatic transmission case SUB-ASSY.

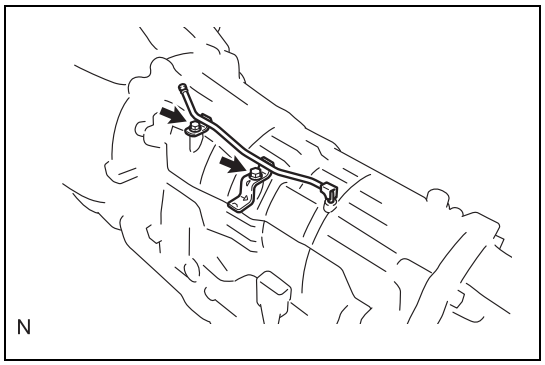
AT



(3) Apply Adhesive to the entire perimeter of the automatic transmission breather tube that fits to the automatic transmission case SUB-ASSY.
Adhesive: Three Bond 1281 or the equivalent
CAUTION:
Keep the Adhesive applied area from coming in contact with foreign matter.

Captions in illustration

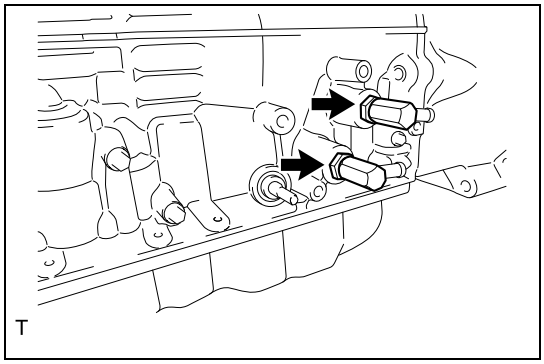
| | |
|---|---|
| ■ | Adhesive |



N

(4) Install the automatic transmission breather tube to the automatic transmission case SUB-ASSY with 2 bolts.
CAUTION:
Do not use excessive force to insert it into the case SUB-ASSY.
Standard value:T=5.4N·m {55kgf·cm} {4.0ft·lbf}

80. Installation of transmission revolution sensor
    (1) Apply ATF to 2 new O-rings and install them to the 2 transmission revolution sensors.
    (2) Install the 2 transmission revolution sensors to the automatic transmission case SUB-ASSY with 2 bolts.
    Standard value:T=5.4N·m {55kgf·cm} {4.0ft·lbf}



81. Installation of transmission oil cooler
    (1) Install the 2 oil cooler tube unions to the automatic transmission case SUB-ASSY.
    Standard value:T=29.4N·m {300kgf·cm} {21.7ft·lbf}

82. Installation of neutral start switch ASSY
    (1) Clean the bolt and the bolt hole.

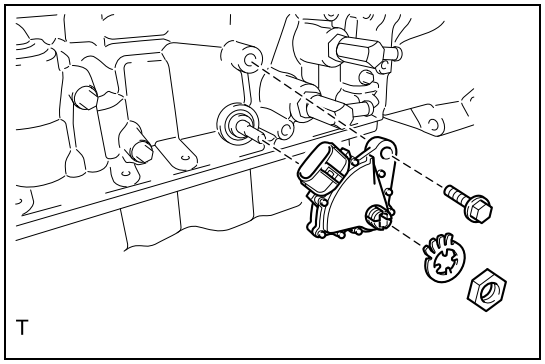
    (2) Apply adhesive to 2 or 3 threads at the tip of the bolt.

Captions in illustration

| | |
|---|---|
| *1 | Adhesive |

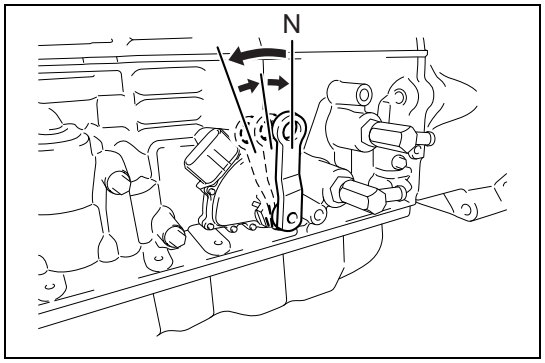
Adhesive: Three Bond 1344 or the equivalent

AT



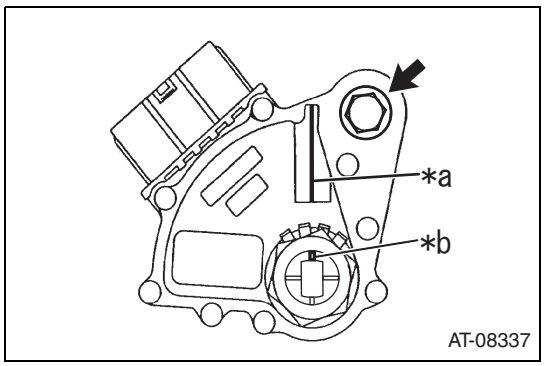
(3) Temporarily install the neutral start switch ASSY to the automatic transmission case SUB-ASSY with the bolt.

(4) Install a new lock washer and a nut.
Standard value:T=6.9N·m {70kgf·cm} {5.1ft·lbf}



(5) Turn the transmission control shaft lever RH counterclockwise until it stops, then turn it clockwise by 2 notches to set to N position.

AT

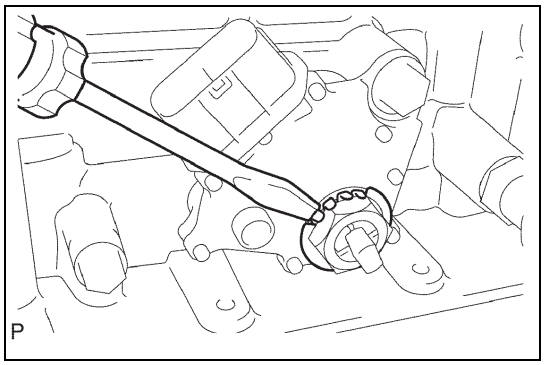


(6) Align the neutral basic line with the groove as shown in the figure and tighten the bolt.

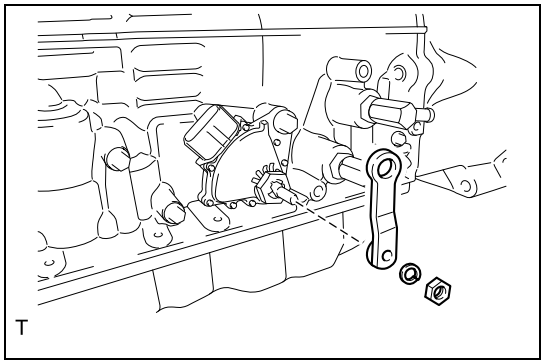
Captions in illustration

| | |
|---|---|
| *a | Neutral basic line |
| *b | Groove |

Standard value:T=13N·m {130kgf·cm} {9.6ft·lbf}



(7) Use a flat tip screwdriver to bend the tab of the lock washer.

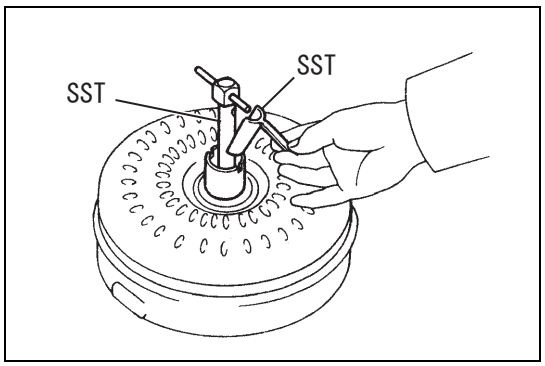


83. Installation of transmission control shaft lever RH
    (1) Install the transmission control shaft lever RH to the neutral start switch ASSY with the spring washer and the nut.
    Standard value:T=16N·m {160kgf·cm} {11.8ft·lbf}

84. Installation of refill plug.
    (1) Apply ATF to a new O-ring and install it to the refill plug.
    (2) Install the refill plug.
    Standard value:T=39N·m {400kgf·cm} {28.8ft·lbf}

# Torque converter & drive plate

## Inspection



1. Check of torque converter ASSY
   (1) Check of torque converter one-way clutch
      (a) Insert the SST into the stator shaft fitting area.
         SST 09351-32010
      (b) Insert the SST from the torque converter sleeve and engage it to the stator thrust washer cutout.
         SST 09351-32020

      (c) Raise the torque converter and turn the SST (tool).

Captions in illustration

| | |
|---|---|
| ➡ | Lock |
| ⇨ | Turn |

Criteria: Turns lightly when turned clockwise and locked when turned counterclockwise.

   (2) Quality check of torque converter ASSY
      (a) If the check result of the torque converter fits the criteria, replace the torque converter.

Captions in illustration

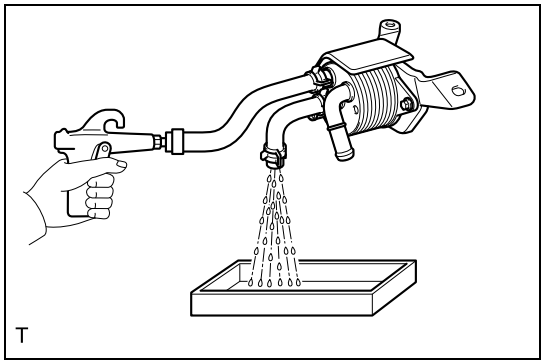
| | |
|---|---|
| *a | Limit sample of fines in auto fluid |

Criteria: Metallic sound is heard at the torque converter during stall test or in neutral.
1-way clutch is free in both directions or locked.
Auto fluid contains fines in amounts greater than the limit sample (see the limit sample)

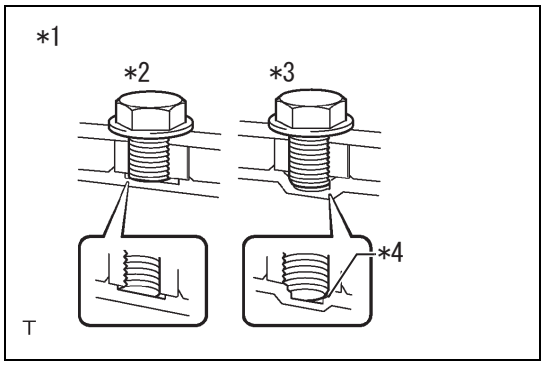
NOTE:
- The limit sample of fines in auto fluid is approx. 0.025 L {0.026 US qt, 0.022 Imp qt} of auto fluid drawn from the removed torque converter to a petri dish.
- For the limit sample of fines in auto fluid, refer to "Notes packaged with rebuilt A/T".

   (3) Replacement of auto fluid in torque converter
      (a) If auto fluid has an unusual odor and is discolored, thoroughly stir the auto fluid in the torque converter and draw the auto fluid with the installing surface facing upward.

AT



(4) Check of oil cooler and oil pipeline cleaning
(a)When checking the torque converter and filling auto fluid, clean the oil cooler and the pipeline.
NOTE:
Clean by blowing 196 kPa {2.0 kgf/cm$^2$, 28.4 psi} of compressed air from the inlet hose.
(b)If the auto fluid or the coolant is cloudy, check the oil cooler.

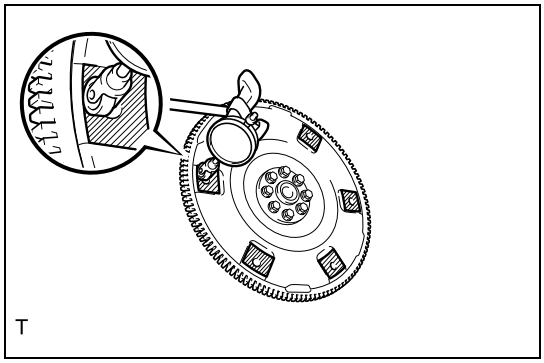


(5) Prevention of torque converter deformation and oil pump gear damage
(a)If interference marks are found at the end of the torque converter installation bolt and the bottom of the torque converter installation hole, replace the bolt and the torque converter.

Captions in illustration

| | |
|---|---|
| *1 | Example of damage in T/C set block |
| *2 | Normal |
| *3 | Defective |
| *4 | Scuffing<br>(Hole is deep.) |

(b)The installation bolt lengths shall be all the same. (10.3 to 10.8 mm {0.406 to 0.425 in})



2. Drive plate check
(1) Drive plate check
(a)Using a dial gauge, check the drive plate runout.

Captions in illustration

| | |
|---|---|
| ▨ | Measuring point |

Standard value: 0.30mm {0.0118in}
NOTE:
If it is not within the standard value, replace the drive plate and the ring gear. (Refer to EM - 53)

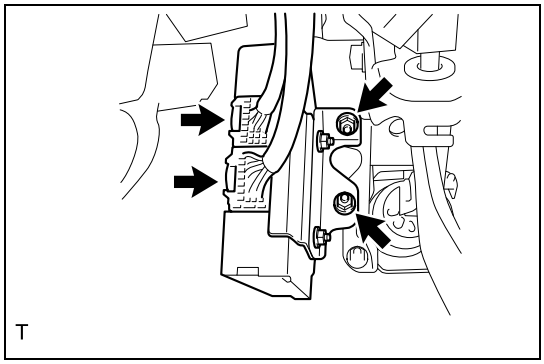
## Removal

1. Disconnection of the battery ground terminal (Refer to BH - 31)
2. Removal of the instrument side panel LH (Refer to IT - 24)
3. Removal of the instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)



4. Removal of transmission control computer ASSY
   (1) Disconnect the 2 connectors from the transmission control computer ASSY.
   (2) Remove 2 nuts to remove the transmission control computer ASSY.

   (3) Remove 2 nuts to remove the transmission control computer ASSY from the transmission control computer bracket.

## Installation

1. Installation of transmission control computer ASSY
   (1) Install the transmission control computer ASSY to the transmission control computer bracket with 2 nuts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Install the transmission control computer ASSY with 2 nuts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (3) Connect the 2 connectors to the transmission control computer ASSY.
2. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
3. Installation of the instrument side panel RH (Refer to IT - 29)
4. Connection of the battery ground terminal
5. Initialization when removing/installing battery terminals
   (Refer to IN - 6)

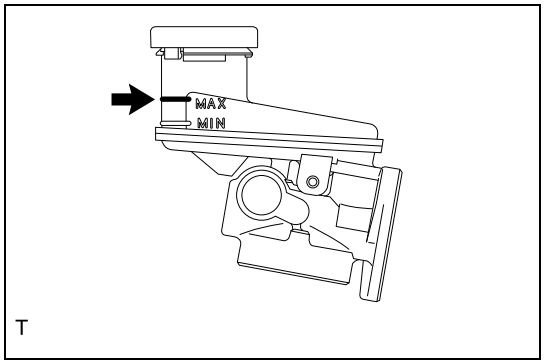
# Clutch fluid

## Replacement

CAUTION:

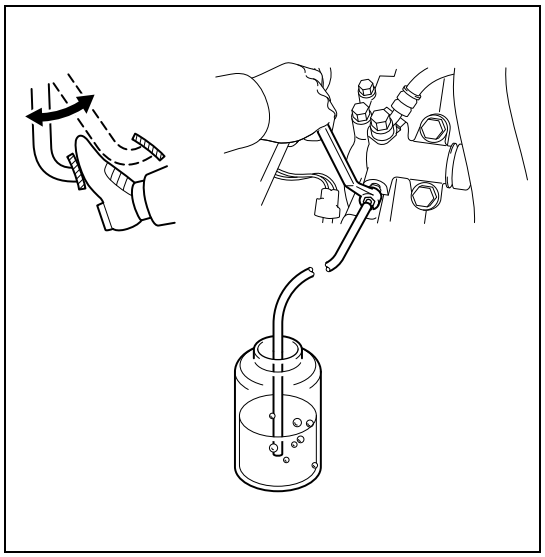
- Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will damage the paint surface; wash it off with water and wipe clean quickly if spilled.
- Be sure to use FMVSS No.116 DOT3 or DOT4.
- Cover the bleeder plug with cloth to prevent clutch fluid from being splashed on surrounding parts when loosening the plug.
- Avoid mixing clutch fluid of different brands to prevent fluid performance from degrading.
- Be careful not to allow dirt or dust to enter the reservoir tank.

1. Clutch fluid replenishment
   (1) Remove the master cylinder reservoir cap.



T

   (2) Fill the clutch master cylinder reservoir SUB-ASSY with clutch fluid up to the MAX level.

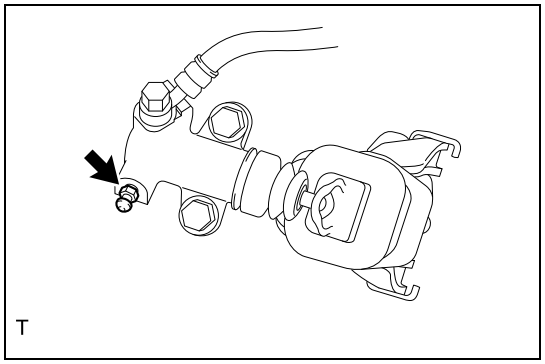


2. Clutch fluid replacement
   (1) Connect the vinyl tube to the release cylinder bleeder plug.
   (2) Depress the clutch pedal several times, then loosen the release cylinder bleeder plug with the clutch pedal depressed.
   (3) Depress the clutch pedal and drain the fluid from the release cylinder bleeder plug.
   CAUTION:
   During clutch fluid replacement work, keep the clutch fluid amount in the reservoir at the MIN line or above.
   (4) After the draining, tighten the release cylinder bleeder plug with the clutch pedal depressed.
   Standard value:T=7.8N·m {80kgf·cm} {5.8ft·lbf}

3. Clutch fluid leakage check
4. Clutch fluid amount check (refer to CL - 4)

## Air bleeding

1. Handling/working precautions
   CAUTION:
   - Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will damage the paint surface; wash it off with water and wipe clean quickly if spilled.
   - Be sure to use FMVSS No.116 DOT3 or DOT4.
   - Cover the bleeder plug with cloth to prevent clutch fluid from being splashed on surrounding parts when loosening the plug.
   - Avoid mixing clutch fluid of different brands to prevent fluid performance from degrading.
   - Be careful not to allow dirt or dust to enter the reservoir tank.
2. Filling of clutch fluid (refer to CL - 3)

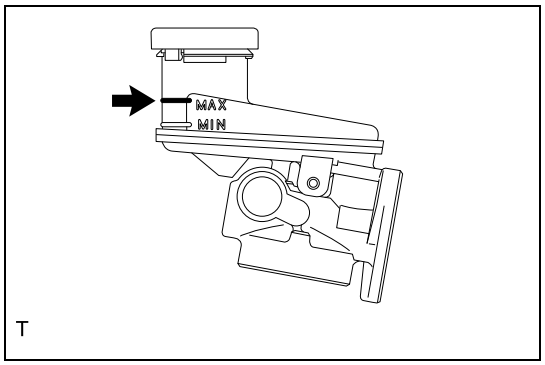


T

3. Air bleeding of clutch pipeline
   (1) Connect the vinyl tube to the release cylinder bleeder plug.
   (2) Depress the clutch pedal several times, then loosen the release cylinder bleeder plug with the clutch pedal depressed. (*a)
   (3) When the clutch fluid does not flow out anymore, tighten the release cylinder bleeder plug and release the clutch pedal. (*b)
   (4) Repeat the steps (*a) to (*b) until the air in the clutch fluid disappears.
   Standard value:T=7.8N·m {80kgf·cm} {5.8ft·lbf}
   (5) Depress the clutch pedal 10 times or more.
   CAUTION:
   Be sure to perform the operation before starting the engine.
   (6) Check that there is no air entry in the clutch fluid.

4. Clutch fluid leakage check
5. Clutch fluid amount check (refer to CL - 4)

## On-vehicle inspection



T

1. Clutch fluid amount check
   (1) Check the clutch fluid amount and fill it to the MAX level of the master cylinder reservoir SUB-ASSY as necessary .
   CAUTION:
   When using a tool such as a dropper to adjust the fluid amount, do not use one that has been used for mineral oil, water, or deteriorated clutch fluid. It will cause deterioration of sealing parts and fluid, resulting in fluid leakage and clutch ineffectiveness.

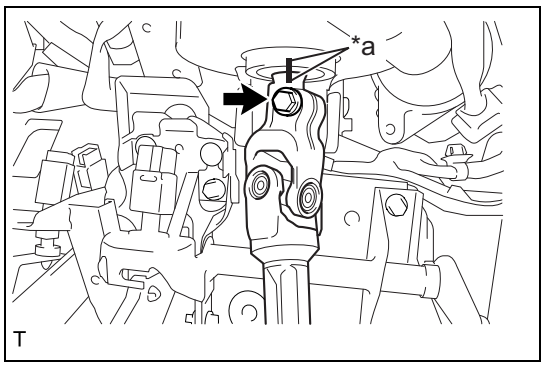
## Removal

1. Removal of instrument side panel LH (refer to IT - 24)
2. Removal of instrument panel under cover SUB-ASSY No. 1 (refer to ME - 68)
3. Removal of power steering computer (refer to PA - 40)

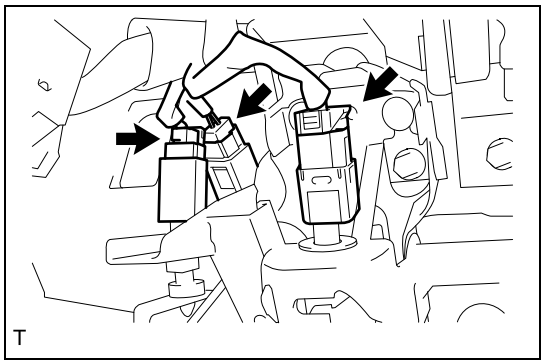


4. Disconnection of steering intermediate shaft ASSY
   (1) Mark an alignment mark on the steering intermediate shaft and the steering column ASSY.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

   (2) Remove the bolt to disconnect the steering intermediate shaft ASSY and the steering column ASSY.

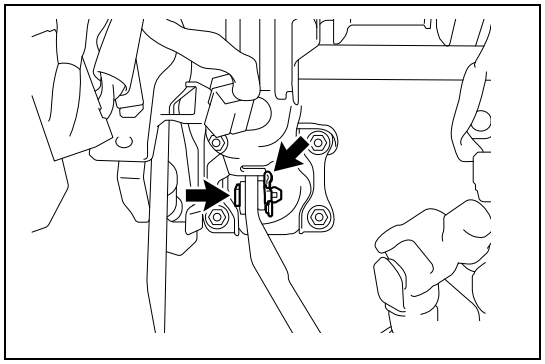


5. Removal of clutch pedal support SUB-ASSY
   (1) Disconnect the 3 connectors.

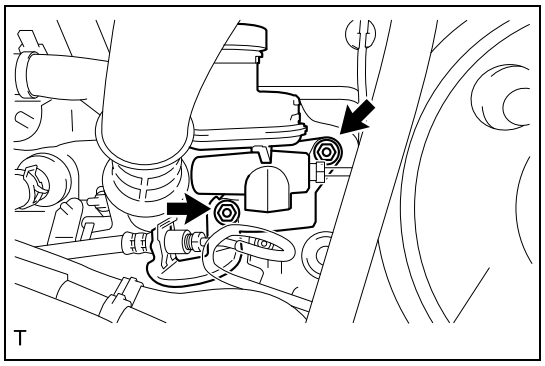
   (2) Remove the connector and wiring harness clamp.

   (3) Remove the clip and push rod clevis pin to remove the clutch master cylinder push rod clevis from the clutch pedal lever SUB-ASSY.

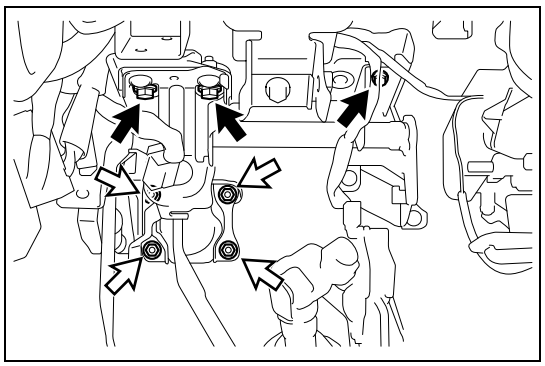
CL



(4) Remove the clip and push rod pin to remove the brake master cylinder push rod clevis from the brake pedal.



(5) Remove 2 nuts to remove the clutch master cylinder ASSY.

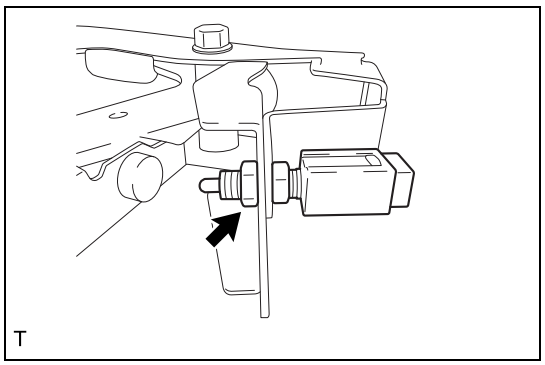


(6) Remove the 3 bolts, 4 nuts, and clutch pedal support SUB-ASSY.

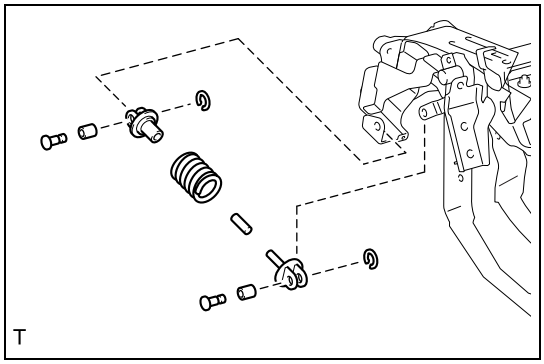
Captions in illustration

| | |
|---|---|
| ➡ | Bolt |
| ⇨ | Nut |

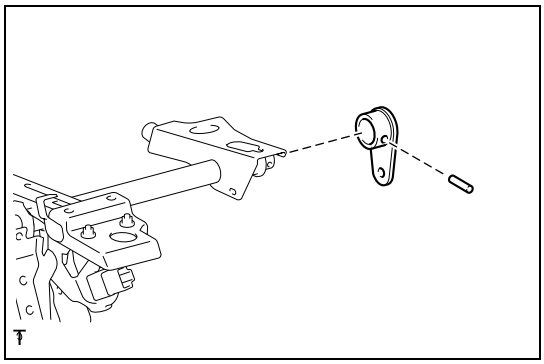
6. Removal of clutch start switch ASSY (refer to CL - 30)



7. Removal of clutch switch ASSY
   (1) Remove the nut and then remove the clutch switch ASSY from the clutch pedal support SUB-ASSY.

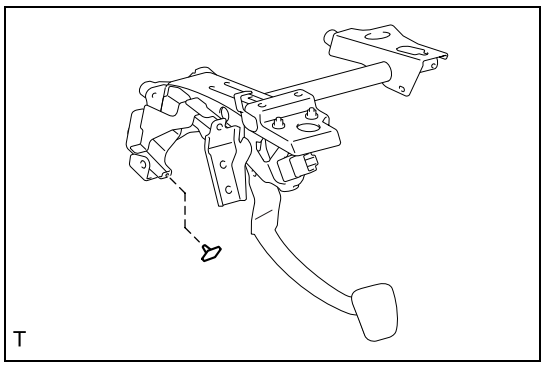


8. Removal of clutch pedal spring
   (1) Remove the 2 E-rings and 2 clutch clevis pins.
   (2) Remove the assist rod A, assist rod B, clutch pedal spring, and assist bushing.
   (3) Remove the 2 bushings from the clutch pedal SUB-ASSY and clutch pedal support SUB-ASSY.



9. Removal of clutch pedal SUB-ASSY
   (1) Use a pin punch and hammer to drive in a pin and remove the clutch pedal lever SUB-ASSY.

   (2) Remove the clutch pedal SUB-ASSY and 2 clutch pedal bushings from the clutch pedal support SUB-ASSY.



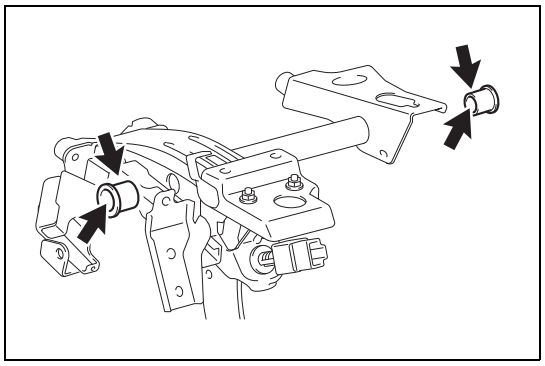
10. Removal of clutch pedal stopper
    (1) Remove the clutch pedal stopper from the clutch pedal SUB-ASSY.

11. Removal of clutch pedal cushion No.1
    (1) Remove the clutch pedal cushion No.1 from the clutch pedal SUB-ASSY.
12. Removal of clutch pedal pad
    (1) Remove the clutch pedal pad from the clutch pedal SUB-ASSY.

## Installation

1. Installation of clutch pedal pad
   (1) Install the clutch pedal pad to the clutch pedal SUB-ASSY.
2. Installation of clutch pedal cushion No.1
   (1) Install the clutch pedal cushion No.1 to the clutch pedal SUB-ASSY.

3. Installation of clutch pedal stopper
   (1) Install the clutch pedal stopper to the clutch pedal SUB-ASSY.



4. Installation of clutch pedal SUB-ASSY
   (1) Apply NIGTIGHT LYW No.2 grease to the inner and outer surfaces of the 2 clutch pedal bushings.

Captions in illustration

| | |
|---|---|
| ➡ | NIGTIGHT LYW No.2 grease |

   (2) Install the clutch pedal SUB-ASSY and 2 clutch pedal bushings to the clutch pedal support SUB-ASSY.
   (3) Align the holes of clutch pedal lever SUB-ASSY and clutch pedal SUB-ASSY, and drive in a pin using a pin punch and a hammer.

5. Installation of clutch pedal spring
   (1) Install 2 bushings to the clutch pedal SUB-ASSY and clutch pedal support SUB-ASSY.

   (2) Apply NIGTIGHT LYW No.2 grease to the assist rod A, assist rod B, and clutch pedal spring outer surface.

Captions in illustration

| | |
|---|---|
| ➡ | NIGTIGHT LYW No.2 grease |

CL

   (3) Install the assist rod A, assist rod B, clutch pedal spring, and assist bushing to the clutch pedal SUB-ASSY and clutch pedal support SUB-ASSY.

   (4) Apply NIGTIGHT LYW No.2 grease to the outer surfaces of the 2 clutch clevis pins.

Captions in illustration

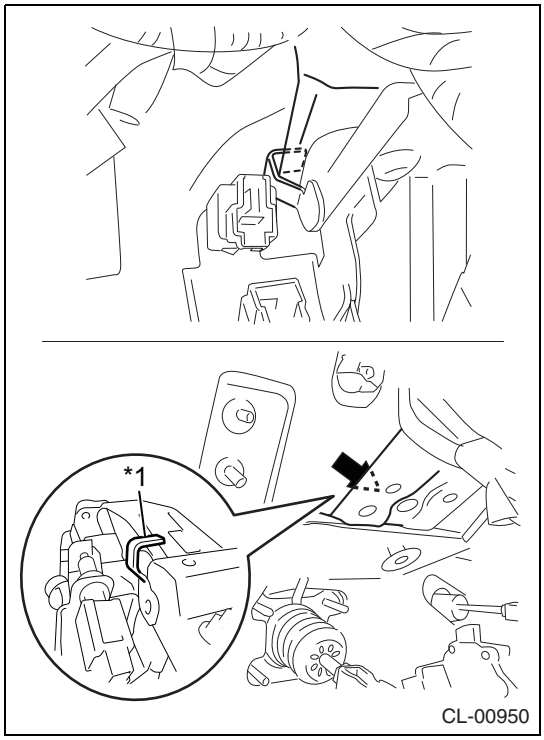
| | |
|---|---|
| ➡ | NIGTIGHT LYW No.2 grease |

   (5) Install 2 clutch clevis pins and 2 clips.
   NOTE:
   Insert the clutch clevis pin from the left side of the vehicle.

6. Installation of clutch switch ASSY
   (1) Install the clutch switch ASSY to the clutch pedal support SUB-ASSY with the nut.
   Standard value:T=8.0N·m {82kgf·cm} {5.9ft·lbf}

7. Installation of clutch start switch ASSY (refer to CL - 30)

8. Installation of clutch pedal support SUB-ASSY



(1) Hang the hook for the clutch pedal support SUB-ASSY on the pedal bracket.

Captions in illustration

| | |
|---|---|
| *1 | Hook |

(2) Install the clutch pedal support SUB-ASSY to the vehicle with 4 nuts and 3 bolts.
Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}

(3) Install to the clutch master cylinder ASSY with 2 nuts.
Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}

(4) Apply NIGTIGHT LYW No.2 grease to the inner and outer surfaces of a new push rod clevis pin.

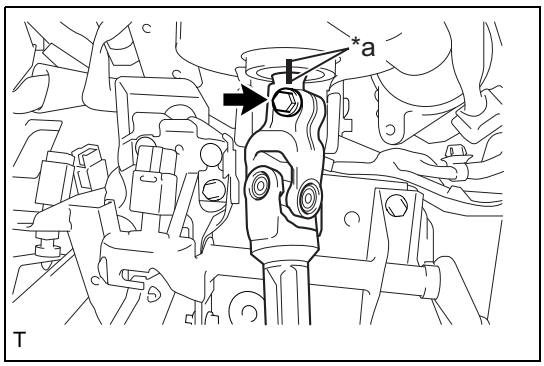
(5) Install the clutch master cylinder push rod clevis to the clutch pedal lever SUB-ASSY with the push rod clevis pin and clip.
NOTE:
Insert the push rod clevis pin from the left side of the vehicle.

(6) Apply NIGTIGHT LYW No.2 grease to the inner and outer surfaces of a new push rod pin.

(7) Install the brake master cylinder push rod clevis with the push rod pin and clip.
NOTE:
Insert the push rod from the left side of the vehicle.

(8) Connect the connector and install the wiring harness clamp.

(9) Connect the 3 connectors.



9. Installation of steering intermediate shaft ASSY

(1) Install the steering intermediate shaft ASSY to the steering column ASSY.

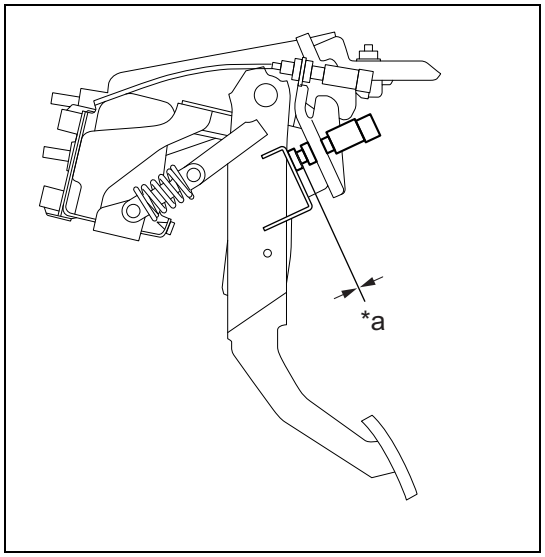
Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

CAUTION:
Align the alignment marks of the steering intermediate shaft ASSY and steering column ASSY.

(2) Install the bolt.
Standard value:T=35N·m {357kgf·cm} {25.8ft·lbf}

10. Check and adjustment of clutch pedal (refer to CL - 12)



11. Check of clutch switch ASSY
    (1) Check that there is no gap between the clutch switch shaft and clutch pedal stopper with clutch pedal SUB-ASSY not depressed.

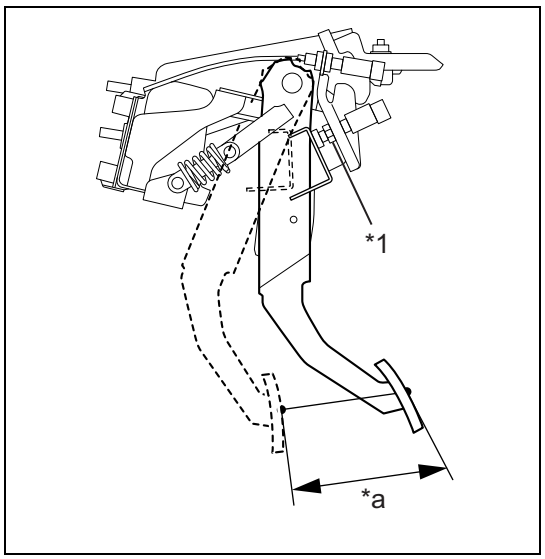
Captions in illustration

| | |
|---|---|
| *a | No gap |

12. Installation of power steering computer (refer to PA - 41)
13. Installation of instrument panel under-cover SUB-ASSY No. 1 (refer to ME - 69)
14. Installation of instrument side panel LH (refer to IT - 29)
15. Check and adjustment of clutch pedal (refer to CL - 12)
16. Check of clutch start system (refer to CL - 2)
17. Stop light check
    (1) Check that the stop light illuminates when the brake pedal is depressed.

## Adjustment

CL

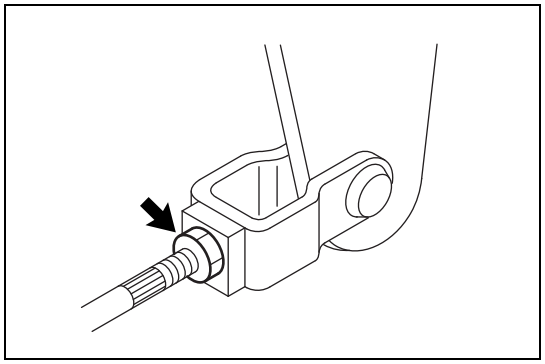


1. Check/adjustment of clutch pedal
    (1) If the full stroke of the clutch pedal SUB-ASSY is out of the standard range, loosen the lock nut on the clutch switch and adjust the full stroke of the clutch pedal with the clutch switch.

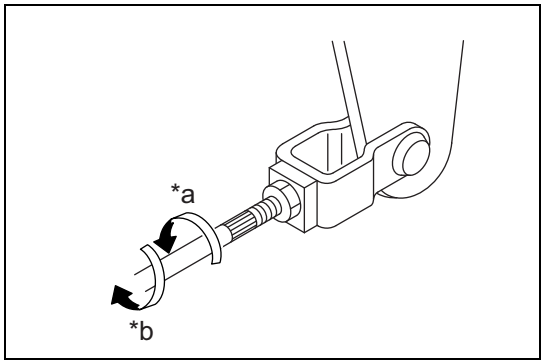
Captions in illustration

| | |
|---|---|
| *1 | Lock nut |
| *a | Clutch pedal stroke |

Clutch pedal stroke: 110 to 115 mm {4.331 to 4.528 in}
Standard value:T=8.0N·m {82kgf·cm} {5.9ft·lbf}
CAUTION:
When adjusting the full stroke of clutch pedal SUB-ASSY, do not turn the clutch switch ASSY.
NOTE:
If the clutch switch ASSY cannot adjust the full stroke of clutch pedal SUB-ASSY to the specified value, adjust it by turning the master cylinder push rod.



(2) Loosen the push rod lock nut of the clutch master cylinder ASSY.



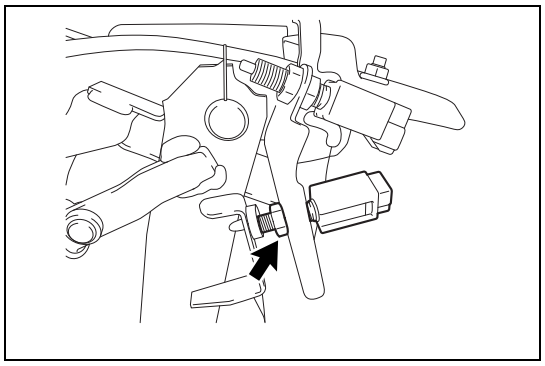
(3) Adjust the clutch master cylinder push rod by turning it.

Captions in illustration

| | |
|---|---|
| *a | Stroke extended |
| *b | Stroke contracted |

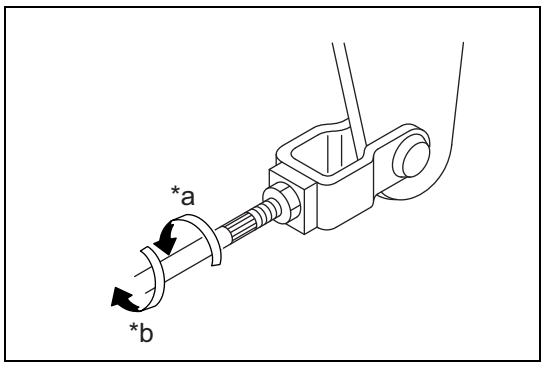
(4) Check that the clutch pedal SUB-ASSY contacts the clutch pedal stopper when the clutch pedal SUB-ASSY is at the full stroke.

(5) Check that the clutch pedal SUB-ASSY contacts the clutch switch side when the pedal is released.



(6) Turn the clutch master cylinder push rod to the contracting side until a clearance is created on the clutch switch side.

(7) Turn the clutch master cylinder push rod to the extending side until it contacts the clutch switch ASSY.

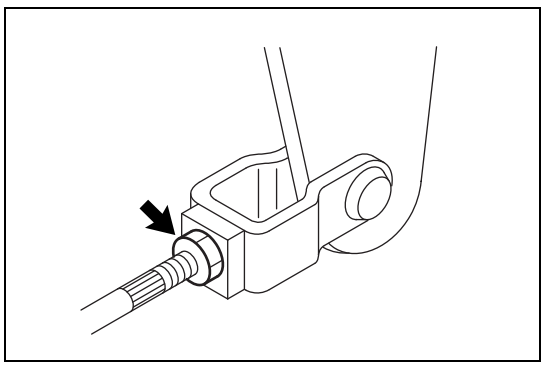


(8) Turn it additional 270° to the contracting side.

Captions in illustration

| | |
|---|---|
| *a | Stroke extended |
| *b | Stroke contracted |

(9) Move the push rod clevis pin from side to side to check that it operates smoothly.



(10) Tighten the clutch master cylinder push rod lock nut of the clutch master cylinder ASSY.

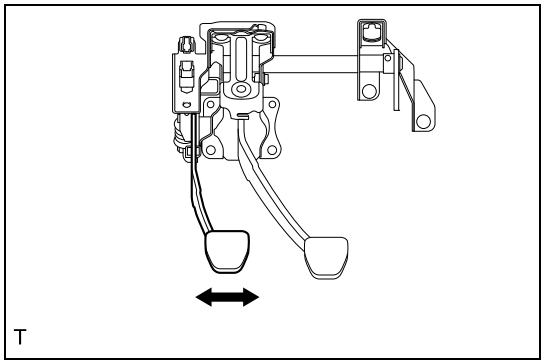
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

(11) Depress the clutch pedal SUB-ASSY 2 or 3 times to check that the clutch pedal SUB-ASSY and release lever operate smoothly. If the clutch pedal SUB-ASSY and release lever do not operate smoothly, execute air bleeding of the clutch line.

(12) Measure the full stroke of the clutch pedal SUB-ASSY and confirm that it is within the standard value. If it is out of the standard value, adjust again.

Clutch pedal stroke: 110 to 115 mm {4.331 to 4.528 in}

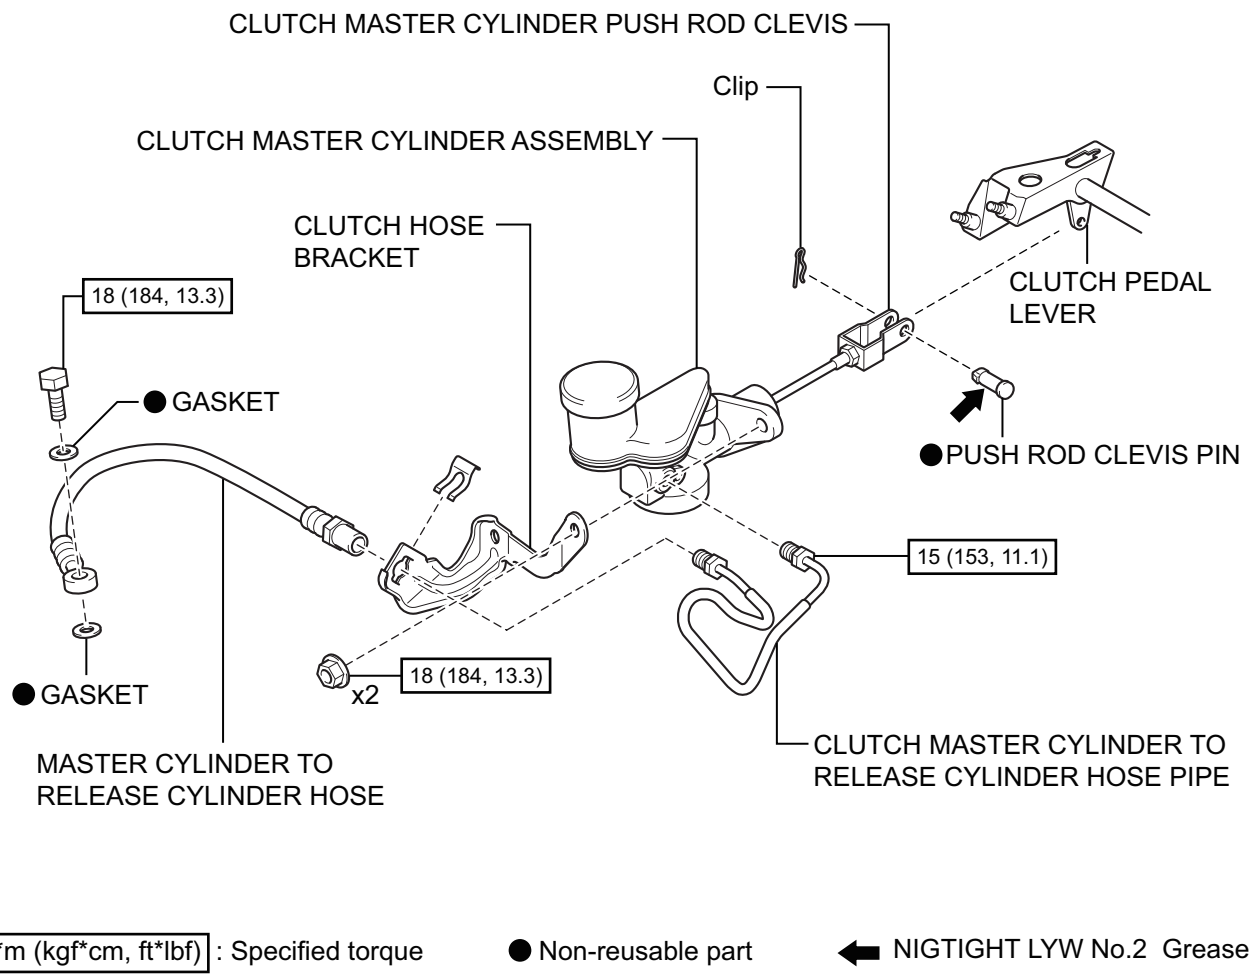
CL



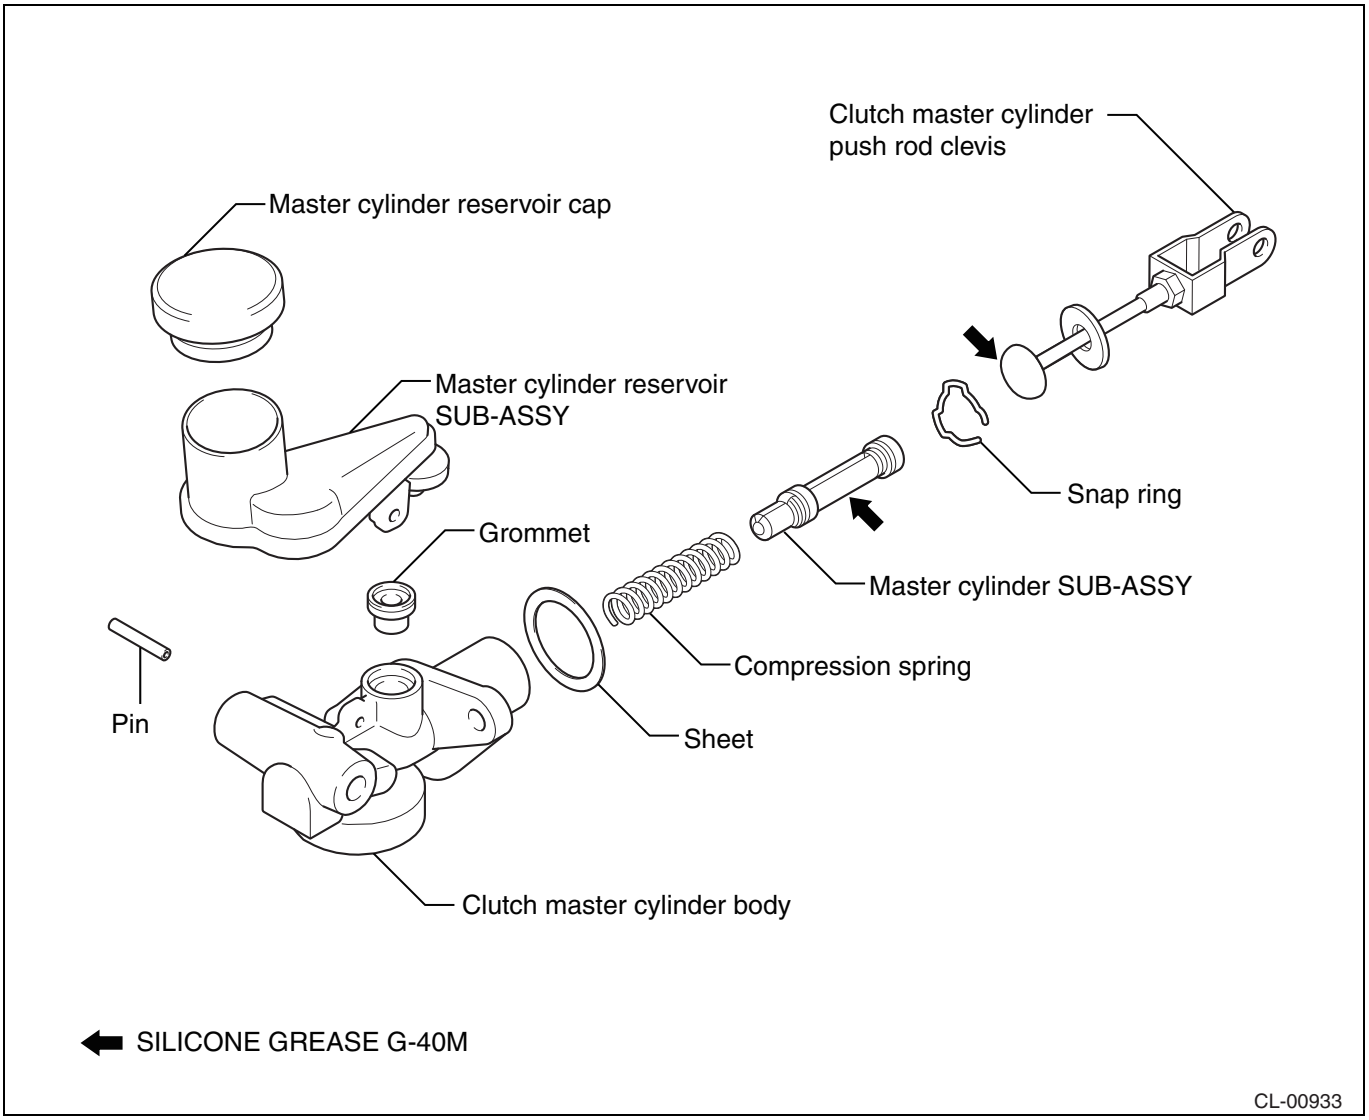
2. Check of clutch pedal SUB-ASSY
   (1) Move the clutch pedal in the lateral direction with a force of approximately 10 N {1.0 kgf, 2.2 lbf} to check that the clutch pedal deflection is within the standard value.
   Deflection of the clutch pedal: 4.0mm {0.158in} or less
   If the deflection exceeds the standard value, replace the clutch pedal SUB-ASSY.

# Clutch master cylinder ASSY

## Exploded view



CL

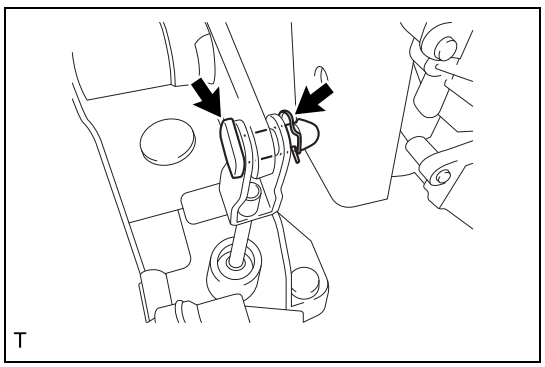


## Removal

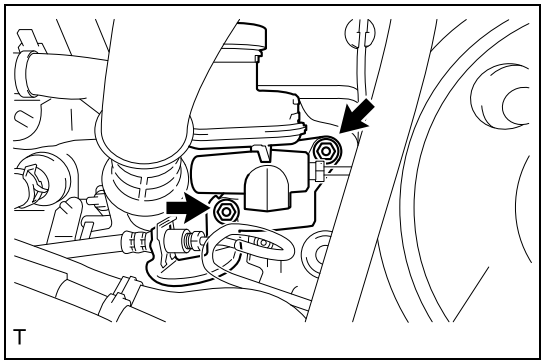
CAUTION:

- Do not let clutch fluid come into contact with the painted surface. If it is splashed, immediately wash it off with water.
- Remove the clutch master cylinder ASSY as a unit since the clutch hose bracket may be deformed if the clutch master cylinder to release cylinder hose pipe and master cylinder to release cylinder hose when they are still mounted on the vehicle.

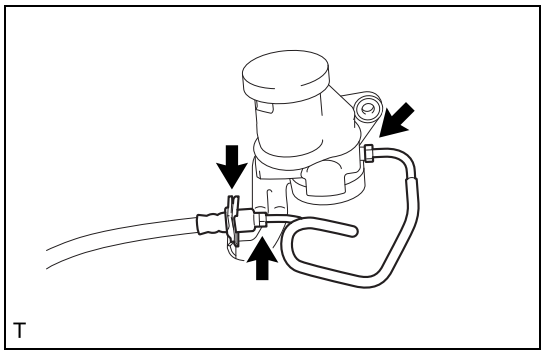
1. Draining of clutch fluid
2. Removal of the instrument side panel LH (Refer to IT - 24)
3. Removal of instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)
4. Disconnection of master cylinder-to-release cylinder hose (refer to CL - 20)



5. Removal of clutch master cylinder ASSY
   (1) Remove the clip from the push rod clevis pin.
   (2) Remove the push rod clevis pin and disconnect the clutch master cylinder push rod clevis from the clutch pedal SUB-ASSY.



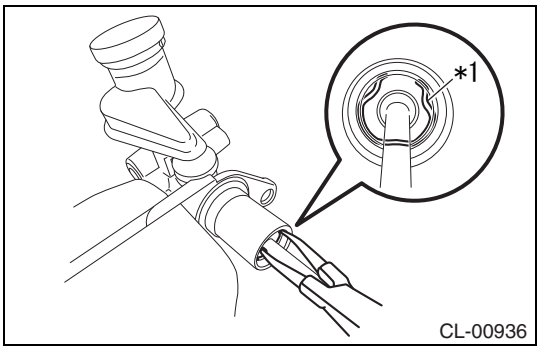
(3) Remove 2 nuts to remove the clutch hose bracket, clutch master cylinder ASSY, and seat.



(4) Secure the clutch master cylinder body through an aluminum plate with a vise.
CAUTION:
Do not vise excessively.
(5) Loosen the clutch master cylinder-to-release cylinder hose pipe nut.
(6) Remove the clip and clutch hose bracket.
(7) Disconnect the clutch master cylinder-to-release cylinder hose pipe from the clutch master cylinder ASSY.

## Disassembly

1. Removal of master cylinder reservoir SUB-ASSY.
   (1) Remove the master cylinder reservoir cap.
   (2) Secure the clutch master cylinder body through an aluminum plate with a vise.
   CAUTION:
   Do not vise excessively.
   (3) Use a pin punch and hammer to drive out a pin.
   (4) Remove the master cylinder reservoir SUB-ASSY from the clutch master cylinder body.
   (5) Remove the grommet.



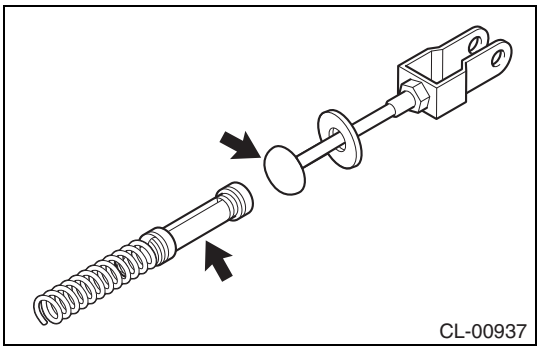
2. Removal of clutch master cylinder kit
   (1) Remove the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Snap ring |

(2) Remove the clutch master cylinder push rod clevis, master cylinder piston SUB-ASSY, and compression spring from the clutch master cylinder body.
CAUTION:
Avoid damage to the inner surface of the clutch master cylinder body.

## Assembly



1. Installation of clutch master cylinder kit
   (1) Apply SILICONE GREASE G40M to the points shown in the figure.

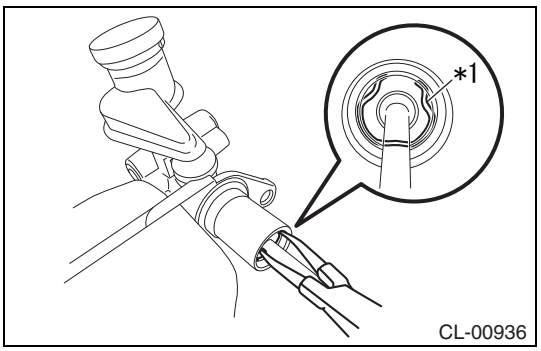
Captions in illustration

| | |
|---|---|
| ➡ | SILICONE GREASE G40M |

(2) Install the compression spring, master cylinder piston SUB-ASSY, and clutch master cylinder push rod clevis to the clutch master cylinder body.

CL

CAUTION:
Avoid damage to the inner surface of the clutch master cylinder body.



(3) Install the snap ring.

Captions in illustration

| | |
|---|---|
| *1 | Snap ring |

CAUTION:
Do not vise the cylinder portion to avoid deformation.

2. Installation of master cylinder reservoir SUB-ASSY
   (1) Install the grommet.
   (2) Install the master cylinder reservoir SUB-ASSY to the clutch master cylinder body.
   (3) Use a pin punch and hammer to drive in a pin.
   (4) Install the master cylinder reservoir cap.

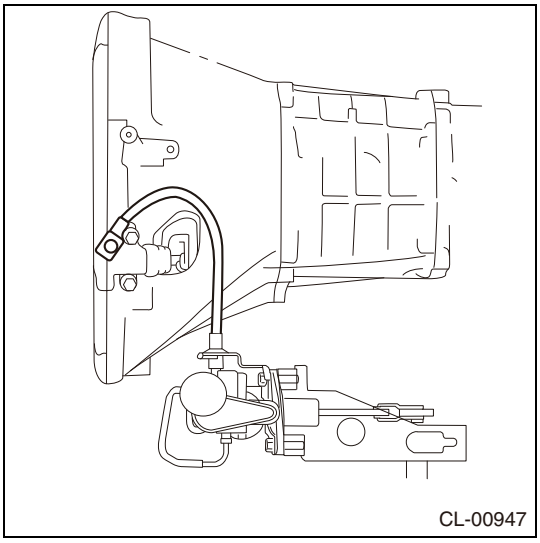
## Installation

1. Installation of clutch master cylinder-to-flexible hose tube
   (1) Install the master cylinder-to-release cylinder hose to the clutch hose bracket with the clip.
   CAUTION:
   - Install the master cylinder-to-release cylinder hose with the marking facing upward.
   - Install the clip securely as far as it will go.

   (2) Use a union nut wrench to install the master cylinder-to-release cylinder hose to the clutch master cylinder to release cylinder hose pipe.
   Standard value:T=15N·m {153kgf·cm} {11.1ft·lbf}
   CAUTION:
   When tightening by combining a torque wrench and union nut wrench, calculate the torque according to the calculation.

   (3) Use a union nut wrench to install the clutch master cylinder-to-release cylinder hose pipe to the clutch master cylinder ASSY.
   Standard value:T=15N·m {153kgf·cm} {11.1ft·lbf}
   CAUTION:
   When tightening by combining a torque wrench and union nut wrench, calculate the torque according to the calculation.

2. Installation of clutch master cylinder ASSY
   (1) Install the seat to the clutch master cylinder ASSY.
   (2) Install the clutch master cylinder ASSY and the clutch hose bracket with the 2 nuts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
   (3) Apply NIGTIGHT LYW No.2 grease to the inner and outer surfaces of a new push rod clevis pin.
   (4) Connect the clutch master cylinder push rod clevis to the clutch pedal with the push rod clevis pin.
   NOTE:
   Install the push rod clevis pin from the left side of vehicle.
   (5) Install the clip to the push rod clevis pin.



CL-00947

(6) Connect the master cylinder-to-release cylinder hose to the clutch release cylinder ASSY with the union bolt through 2 new gaskets.
Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
CAUTION:
- When tightening by combining a torque wrench and union nut wrench to extend the whole length, the actual torque will be excessive if tightened until the reading of the torque wrench reaches the specified tightening torque. (Refer to IN - 6)
- When restoring the clutch release cylinder ASSY, check that the clutch hose is deflected in the same direction as shown in the figure.
- Install the master cylinder-to-release cylinder hose with the marking facing upward.

3. Connection of master cylinder-to-release cylinder hose (refer to CL - 21)
4. Filling of clutch fluid (refer to CL - 3)
5. Air bleeding of clutch pipeline (refer to CL - 4)
6. Clutch fluid leakage check
7. Clutch fluid amount check (refer to CL - 4)
8. Check and adjustment of clutch pedal (refer to CL - 12)
9. Installation of instrument panel under cover SUB-ASSY NO. 1 (Refer to ME - 69)
10. Installation of the instrument side panel LH (Refer to IT - 29)

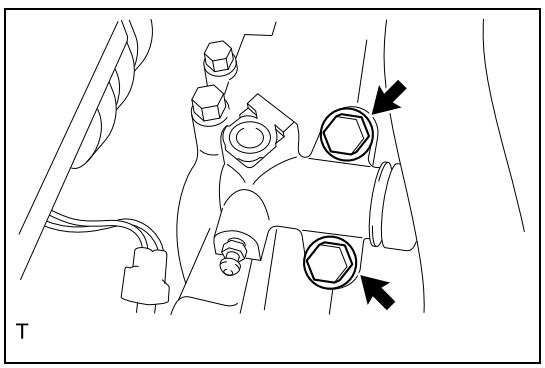
2. Disconnection of master cylinder-to-release cylinder hose
   (1) Remove the union bolt and 2 gaskets and disconnect the master cylinder-to-release cylinder hose from the clutch release cylinder ASSY.



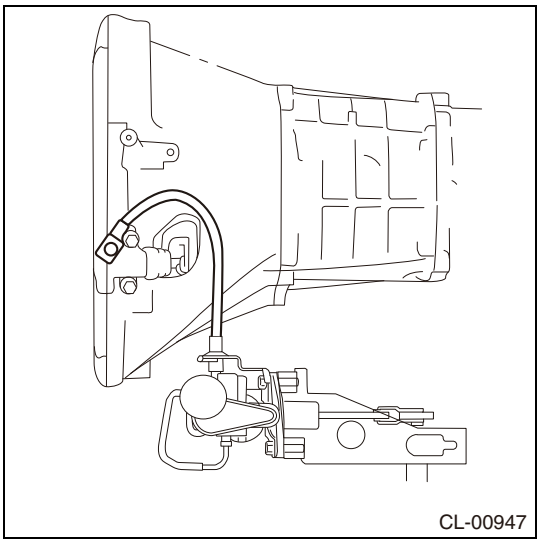
3. Removal of clutch release cylinder ASSY
   (1) Remove 2 bolts to remove the clutch release cylinder ASSY.

## Installation

1. Installation of clutch release cylinder ASSY
   (1) Install the clutch release cylinder ASSY with the 2 bolts.

Standard value:T=37N·m {377kgf·cm} {27.3ft·lbf}

2. Connection of master cylinder-to-release cylinder hose
   (1) Connect the master cylinder-to-release cylinder hose to the clutch release cylinder ASSY with the union bolt through 2 new gaskets.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}



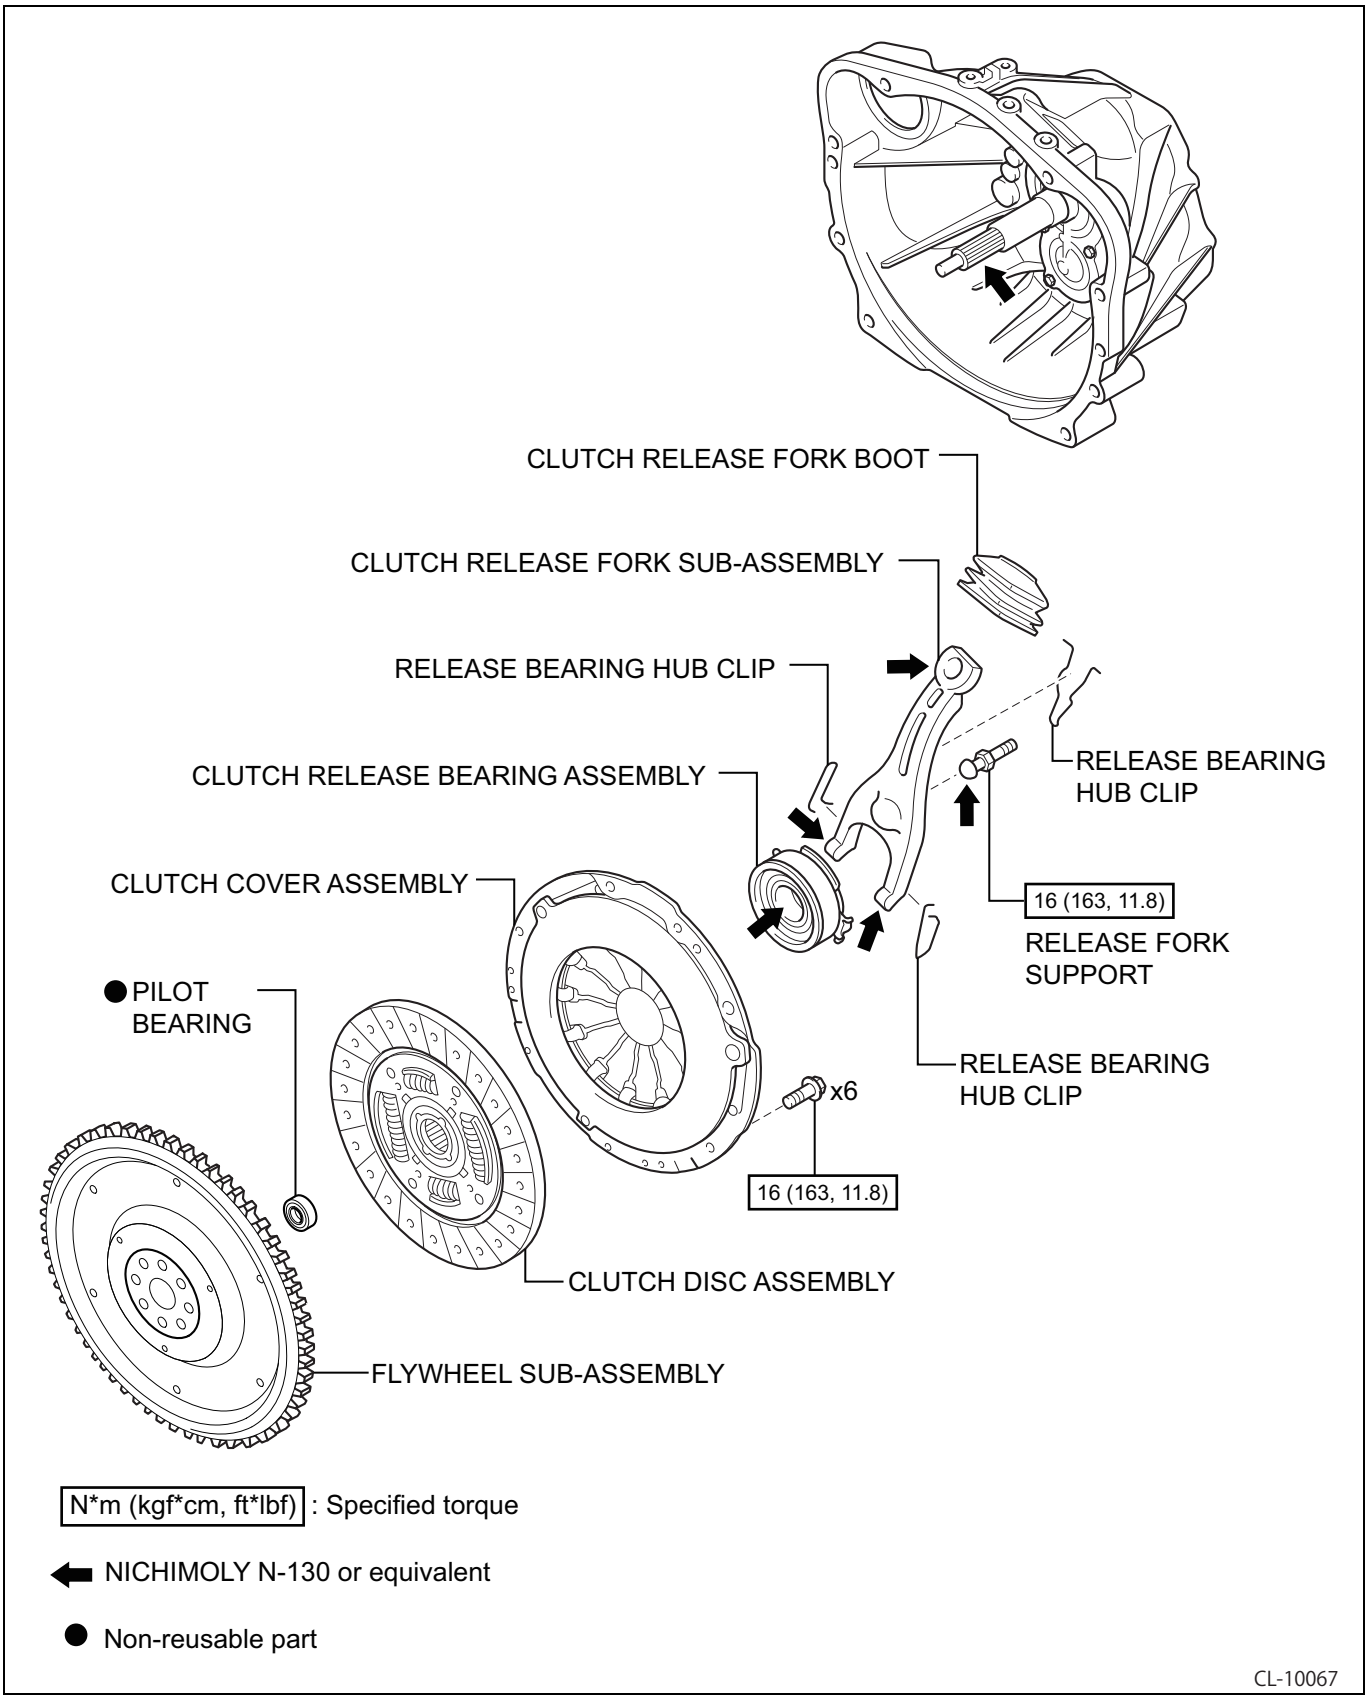
CL-00947

CAUTION:
- When tightening by combining a torque wrench and union nut wrench to extend the whole length, the actual torque will be excessive if tightened until the reading of the torque wrench reaches the specified tightening torque. (Refer to IN - 6)
- When restoring the clutch release cylinder ASSY, check that the clutch hose is deflected in the same direction as shown in the figure.
- Install the master cylinder-to-release cylinder hose with the marking facing upward.

3. Filling of clutch fluid (refer to CL - 3)
4. Air bleeding of clutch pipeline (refer to CL - 4)
5. Clutch fluid leakage check
6. Clutch fluid amount check (refer to CL - 4)

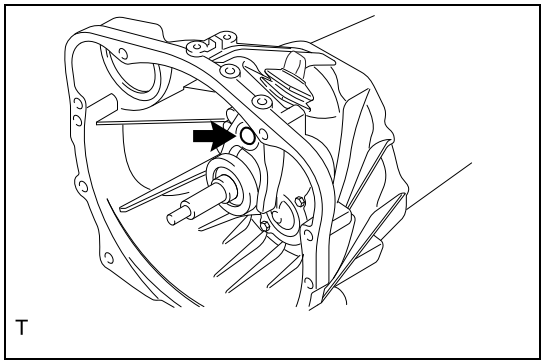
# Clutch

## Exploded view

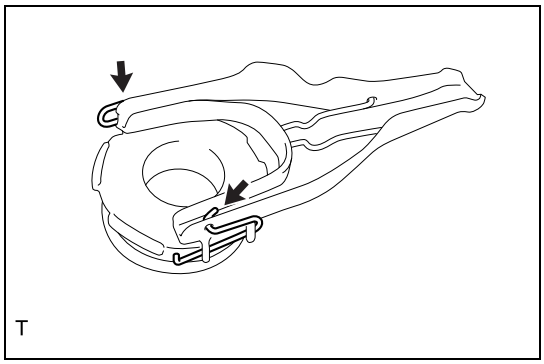


## Removal

1. Removal of manual transmission ASSY (refer to MT - 18)



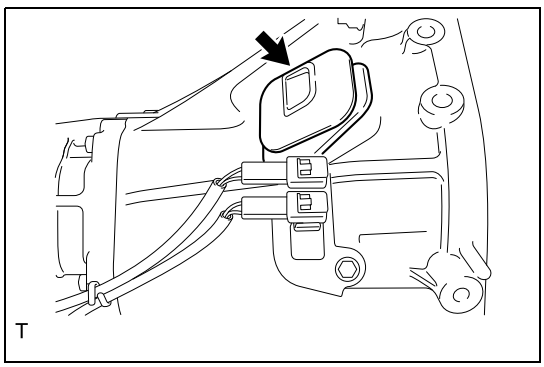
2. Removal of clutch release fork SUB-ASSY
   (1) Remove the clutch release fork SUB-ASSY and the release fork support.
   (2) Remove the clutch release fork SUB-ASSY and the clutch release bearing ASSY from the manual transmission ASSY.
   (3) Clean the input shaft and release fork support.



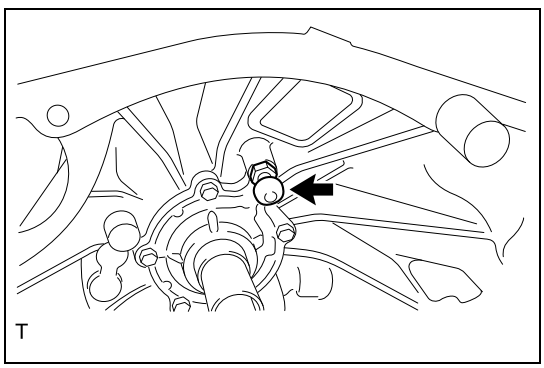
3. Removal of clutch release bearing ASSY
   (1) Remove 2 release bearing hub clips to remove the clutch release bearing ASSY.

4. Removal of release bearing hub clip
   (1) Remove 3 release bearing hub clips from the clutch release bearing ASSY.

5. Cleaning of clutch release fork SUB-ASSY and clutch release bearing ASSY
   (1) Clean the clutch release fork SUB-ASSY and clutch release bearing ASSY.

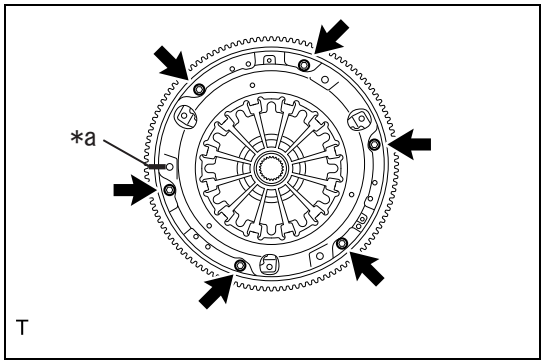


6. Removal of clutch release fork boot
   (1) Remove the clutch release fork boot from the manual transmission ASSY.



7. Removal of release fork support
   (1) Remove the release fork support from the manual transmission ASSY.

CL



8. Removal of clutch cover ASSY
   (1) Mark an alignment mark on the clutch cover ASSY and the flywheel.

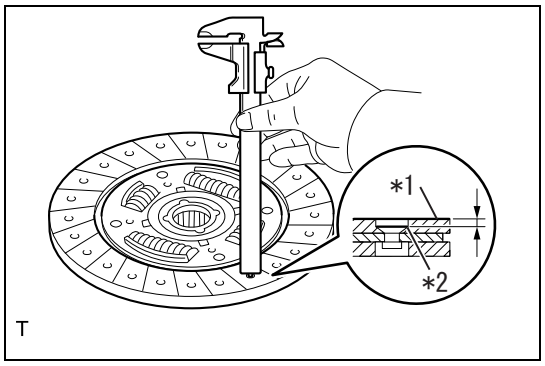
Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

   (2) Remove 6 bolts to remove the clutch cover ASSY.
   CAUTION:
   Prevent the clutch disc ASSY from falling off.

9. Removal of clutch disc ASSY
   CAUTION:
   Keep oil and foreign substances away from the lining area, pressure plate, and flywheel clutch disc sliding area of the clutch disc ASSY.
10. Check of pilot bearing
    Turn the pilot bearing while pressing it in the thrust direction to check for excessive play or noise of the bearing.
    NOTE:
    If defective, replace the pilot bearing.
11. Removal of pilot bearing
    (1) Remove the flywheel SUB-ASSY. (Refer to EM - 53)
    (2) Drive out the pilot bearing to remove.

## Inspection



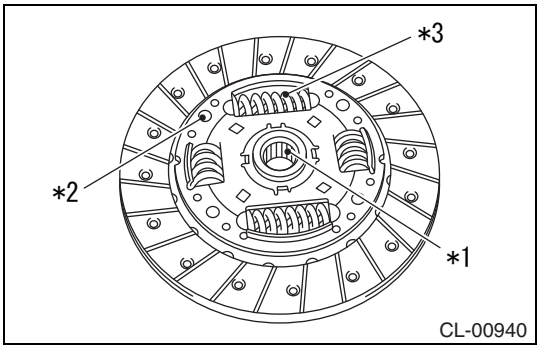
1. Check of clutch disc ASSY
   (1) Use a caliper gauge to check the wear of the facing.

Captions in illustration

| | |
|---|---|
| *1 | Facing |
| *2 | Rivet |

   Limit: 0.8 mm {0.031 in} (Depth to rivet head)
   NOTE:
   Replace the clutch disc ASSY if below the limit.

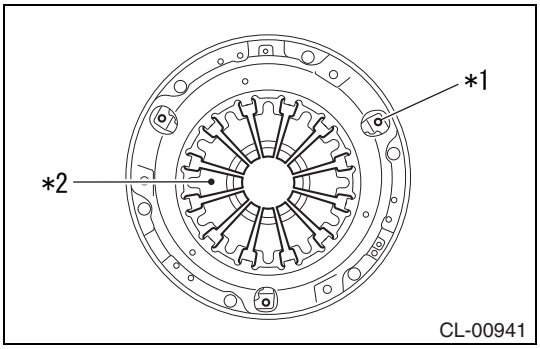
   (2) Using a dial gauge and the SST, check the deflection of the clutch disc ASSY by turning it.
   SST 499747100
   Limit: 0.7 mm {0.028in}
   NOTE:
   Replace the clutch disc ASSY if above the limit.



(3) Visually check the following items, and if any malfunction is found, replace the clutch disc ASSY.
1. Worn spline
2. Loose rivet
3. Worn damper spring

Captions in illustration

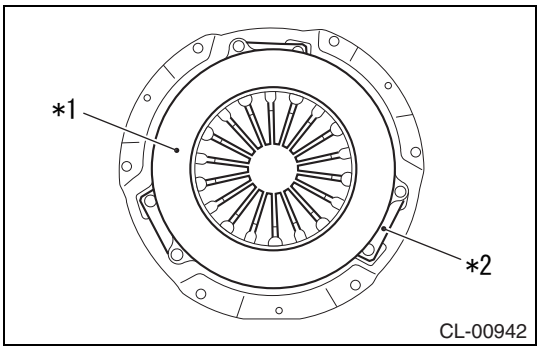
| | |
|---|---|
| *1 | Spline |
| *2 | Rivet |
| *3 | Damper spring |



2. Check of clutch cover ASSY
(1) Visually check the following items, and if any malfunction is found, replace the clutch cover ASSY.
1. Loose thrust rivet
2. Damaged or worn bearing contact area at the center of diaphragm spring

Captions in illustration

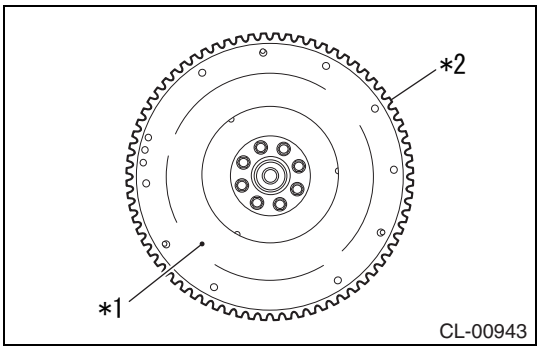
| | |
|---|---|
| *1 | Thrust rivet |
| *2 | Diaphragm spring |



3. Damaged or worn disc contact surface of the pressure plate
4. Loose strap plate installation area
5. Worn diaphragm spring sliding area

Captions in illustration

| | |
|---|---|
| *1 | Pressure plate |
| *2 | Strap plate |



3. Check of flywheel SUB-ASSY
(1) Check for damage and wear at the facing sliding area and the ring gear.

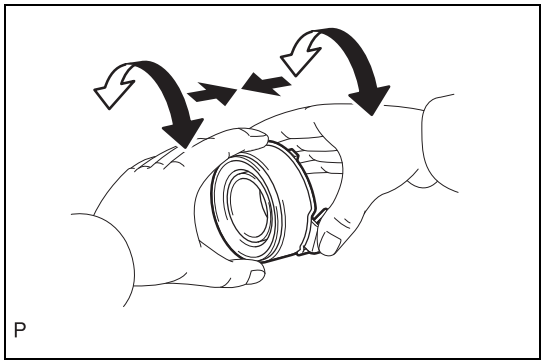
Captions in illustration

| | |
|---|---|
| *1 | Flywheel SUB-ASSY |
| *2 | Ring gear |

NOTE:
If defective, replace the flywheel SUB-ASSY.

(2) Check for rotation stuck, noise, and excessive play by rotating while applying pressure in the thrust direction.
NOTE:
If defective, replace the flywheel SUB-ASSY. (Refer to EM - 53, EM - 54)

CL



P

4. Check of clutch release bearing ASSY
   (1) Check for rotation stuck and noise by rotating while applying pressure in the thrust direction.
   CAUTION:
   Do not wash the clutch release bearing ASSY since it is filled with grease.
   NOTE:
   If any stuck or noise is observed, replace the clutch release bearing ASSY.

## Installation

1. Installation of pilot bearing

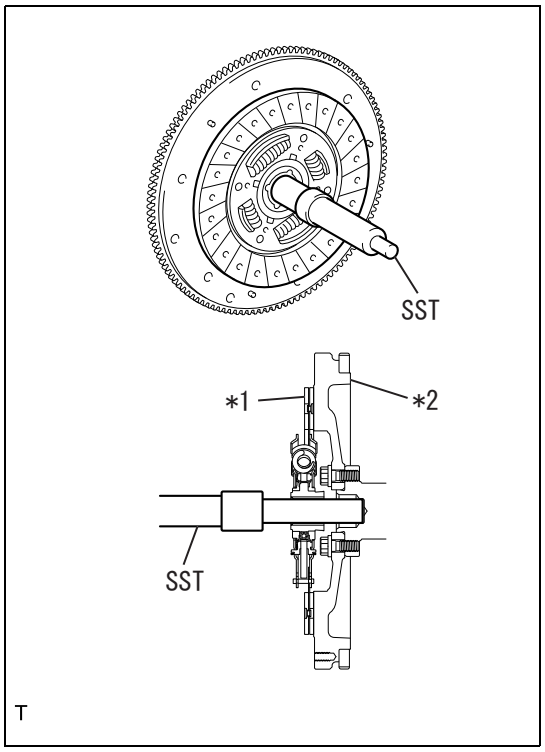
   (1) Using a hydraulic press, press-fit a new pilot bearing until 0.4 mm deeper than the end surface of flywheel SUB-ASSY.
   Standard value: 0 to 4 mm (press-fit depth from end surface of flywheel SUB-ASSY)
   CAUTION:
   Do not press the inner race of pilot bearing.

Captions in illustration

| | |
|---|---|
| *1 | Press-fit depth from end surface of flywheel SUB-ASSY |

   (2) Install the flywheel SUB-ASSY. (Refer to EM - 54)

CL



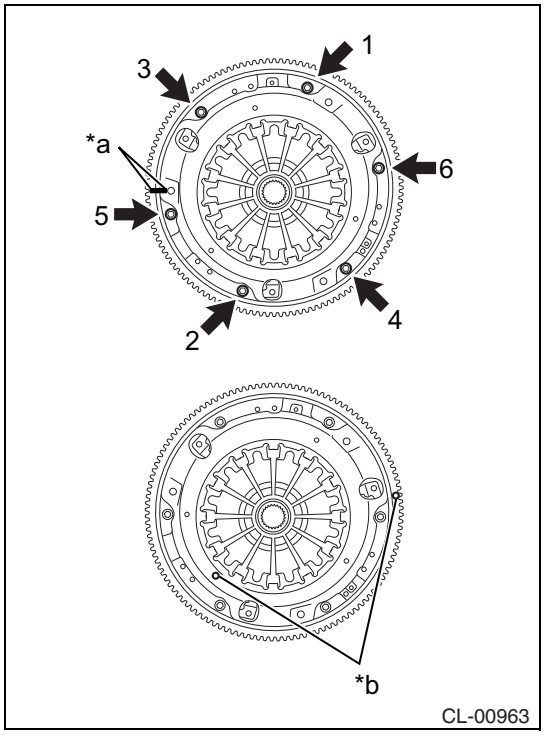
T

2. Installation of clutch disc ASSY
   (1) Center the clutch disc ASSY with the SST.

Captions in illustration

| | |
|---|---|
| *1 | Clutch disc ASSY |
| *2 | Flywheel |

   SST 499747100
   CAUTION:
   Be careful not to install the clutch disc ASSY in the wrong direction.



3. Installation of clutch cover ASSY
   (1) Match the alignment marks of the clutch cover ASSY and the flywheel and install the clutch cover ASSY.
   NOTE:
   When replacing the flywheel or the clutch cover with a new one, position the clutch cover so that the angle formed by the imbalance marks (paint marks) on the flywheel and clutch cover becomes 120 °or more. (The imbalance marks indicate the direction of residual imbalance.)

Captions in illustration

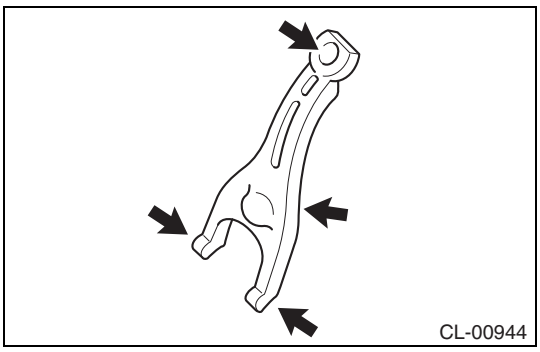
| | |
|---|---|
| *a | Alignment marks |
| *b | Imbalance mark (paint mark) |

   (2) Lightly tighten the bolts from the upper one near the flywheel knock pin and equally tighten the 6 bolts in the order shown in the figure after checking that the clutch disc ASSY is positioned at the center by lightly shaking the SST from side to side and up and down.
   SST 499747100
   Standard value:T=16N·m {163kgf·cm} {11.8ft·lbf}
   CAUTION:
   Equally tighten the bolts in several times.
   (3) Remove the SST.

4. Installation of release fork support
   (1) Install the release fork support to the manual transmission ASSY.
   Standard value:T=16N·m {163kgf·cm} {11.8ft·lbf}

5. Installation of clutch release fork boot
   (1) Install the clutch release fork boot to the manual transmission ASSY.

6. Installation of release bearing hub clip.
   (1) Install 3 release bearing hub clips to the clutch release bearing ASSY.



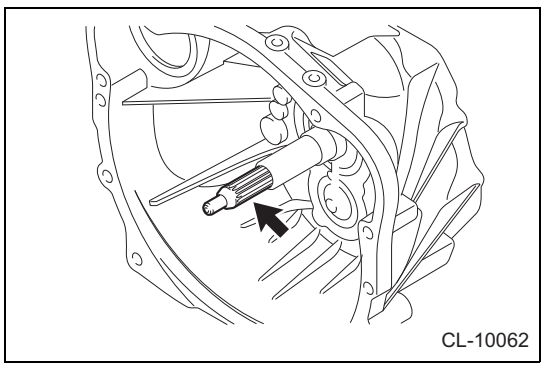
7. Installation of clutch release fork SUB-ASSY
   (1) Apply NICHIMOLY N-130 to the points of the clutch release fork SUB-ASSY shown in the figure.

Captions in illustration

| | |
|---|---|
| ➡ | NICHIMOLY N-130 |

   NOTE:
   - Contacting surface to release fork support (filling the recess)
   - Contacting surface to release cylinder push rod (filling the recess)
   - Contacting surface to release bearing hub

   (2) Install the clutch release fork SUB-ASSY to the clutch release bearing ASSY.

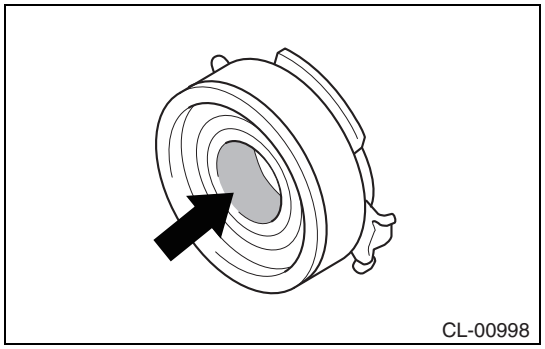


8. Installation of clutch release bearing ASSY
   (1) Apply NICHIMOLY N-130 to the input shaft spline area and inner periphery of the clutch release bearing ASSY for the manual transmission ASSY.

Captions in illustration

| | |
|---|---|
| ➡ | NICHIMOLY N-130 |

CL

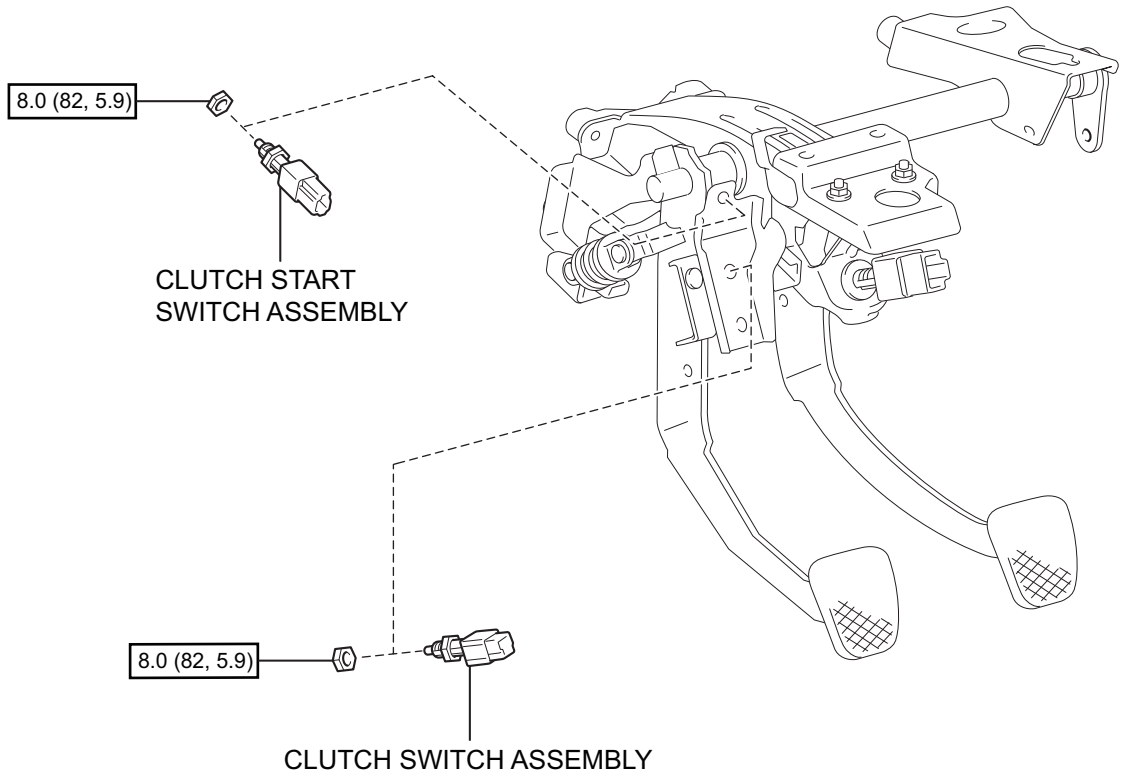


(2) Install the clutch release bearing ASSY and the clutch release fork SUB-ASSY to the manual transmission ASSY.
CAUTION:
After installation, make sure the clutch release bearing ASSY slides smoothly by moving the clutch release fork SUB-ASSY backward and forward.

9. Installation of manual transmission ASSY (refer to MT - 24)

# Clutch pedal switch

## Exploded view



N*m (kgf*cm, ft*lbf) : Specified torque

CL-00951

## Removal

1. Removal of instrument side panel LH (refer to IT - 24)
2. Removal of instrument panel under cover SUB-ASSY No. 1 (refer to ME - 68)
3. Removal of clutch switch ASSY
   (1) Remove the clutch switch connector.

   (2) Remove the nut and then remove the clutch switch ASSY from the clutch pedal support SUB-ASSY.

4. Removal of clutch pedal support SUB-ASSY (refer to CL - 7)

5. Removal of clutch start switch ASSY
   (1) Disconnect the clutch start switch connector.

   (2) Remove the nut and then remove the clutch start switch ASSY from the clutch pedal support SUB-ASSY.

## Installation

1. Installation of clutch start switch ASSY
   (1) Install the clutch start switch ASSY to the clutch pedal support SUB-ASSY with the nut.
   Standard value:T=8.0N·m {82kgf·cm} {5.9ft·lbf}
   (2) Connect the clutch start switch connector.

   (3) Measure the gap shown in the figure with the clutch pedal fully depressed.

Captions in illustration

| | |
|---|---|
| *a | Clearance |

   Normal clearance: 3.5 to 4.0 mm {0.138 to 0.157 in}

2. Installation of clutch pedal support SUB-ASSY (refer to CL - 11)
3. Installation of clutch switch ASSY
   (1) Install the clutch switch ASSY to the clutch pedal support SUB-ASSY with the nut.
   Standard value:T=8.0N·m {82kgf·cm} {5.9ft·lbf}
   (2) Connect the clutch switch connector.

   (3) Check that a gap is not created when the clutch pedal is not depressed.

Captions in illustration

| | |
|---|---|
| *a | No gap |

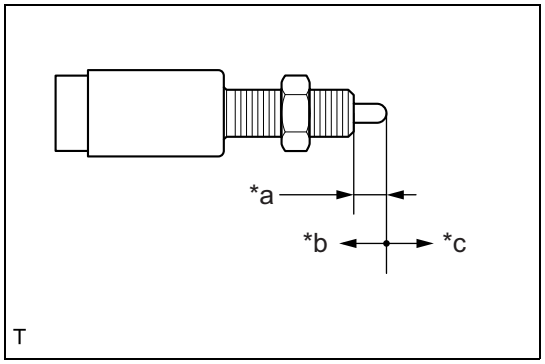
4. Installation of instrument panel under cover SUB-ASSY No. 1 (refer to ME - 69)

5. Installation of instrument side panel LH (refer to IT - 29)
6. Check of clutch start system (refer to CL - 2)

## On-vehicle inspection

1. Check of clutch start switch ASSY
   (1) Make sure that engine does not start with clutch pedal not depressed.
   (2) Make sure that engine starts with the clutch pedal fully depressed. If necessary, replace the clutch start switch ASSY with a new one.

## Unit inspection



1. Check of clutch start switch ASSY
   (1) Measure the resistance between terminals when operating the shaft.

Captions in illustration

| | |
|---|---|
| *a | 4.0 to 5.5 mm {0.157 to 0.217 in} |
| *b | ON |

| Hard to shift, or does not shift (at 1st-2nd operation). | Stopper (improper adjustment) | MT - 14 |

# Manual transmission oil

## Replacement

1. Drain of manual transmission oil
   (1) Park the vehicle on a level road.

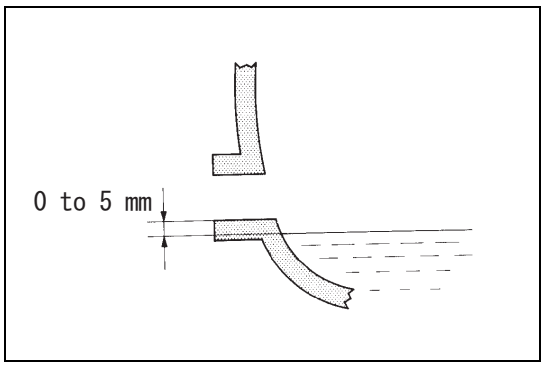
   (2) Remove the transmission filler plug and the gasket.

Captions in illustration

| | |
|---|---|
| *1 | Transmission filler plug |
| *2 | Transmission drain plug |

   (3) Remove the transmission drain plug and gasket to drain oil.
2. Fill of manual transmission oil
   (1) Install the transmission drain plug via a new gasket.
   Standard value:T=37N·m {377kgf·cm} {27.3ft·lbf}
   (2) Pour oil until it overflows from the filler plug hole.
   Oil amount (reference): 2.2 L {0.6 US gal, 0.5 Imp gal}
   Recommended product: MG GEAR OIL SPECIAL-II (API GL-3, SAE 75W-90)
   Substitute product: GL-3 or later (75W-90)
   CAUTION:
   - When using the substitute product for transmission gear oil, the function and performance may be inferior.
   - Do not mix different oils.

MT

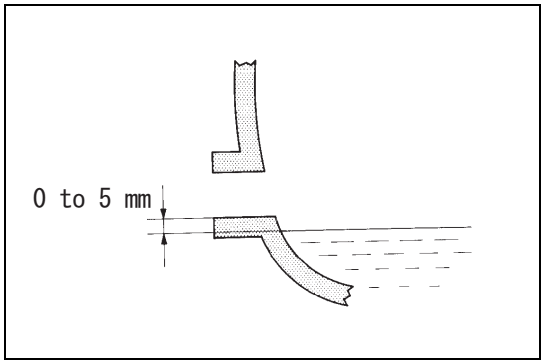


3. Check of manual transmission oil
   (1) Check that oil is filled to the level between 0 and 5 mm {0 to 0.197 in} from the bottom of the transmission filler plug hole.
   CAUTION:
   - Excess or shortage of oil may lead to trouble.
   - Check the oil amount after driving.
   (2) Install the transmission filler plug via a new gasket.
   Standard value:T=37N·m {377kgf·cm} {27.3ft·lbf}
   CAUTION:
   Thoroughly wipe away the spilled oil.
4. Check of manual transmission oil leakage

## On-vehicle inspection

1. Check of manual transmission oil
   (1) Park the vehicle on a level road.

   (2) Remove the transmission filler plug and the gasket.

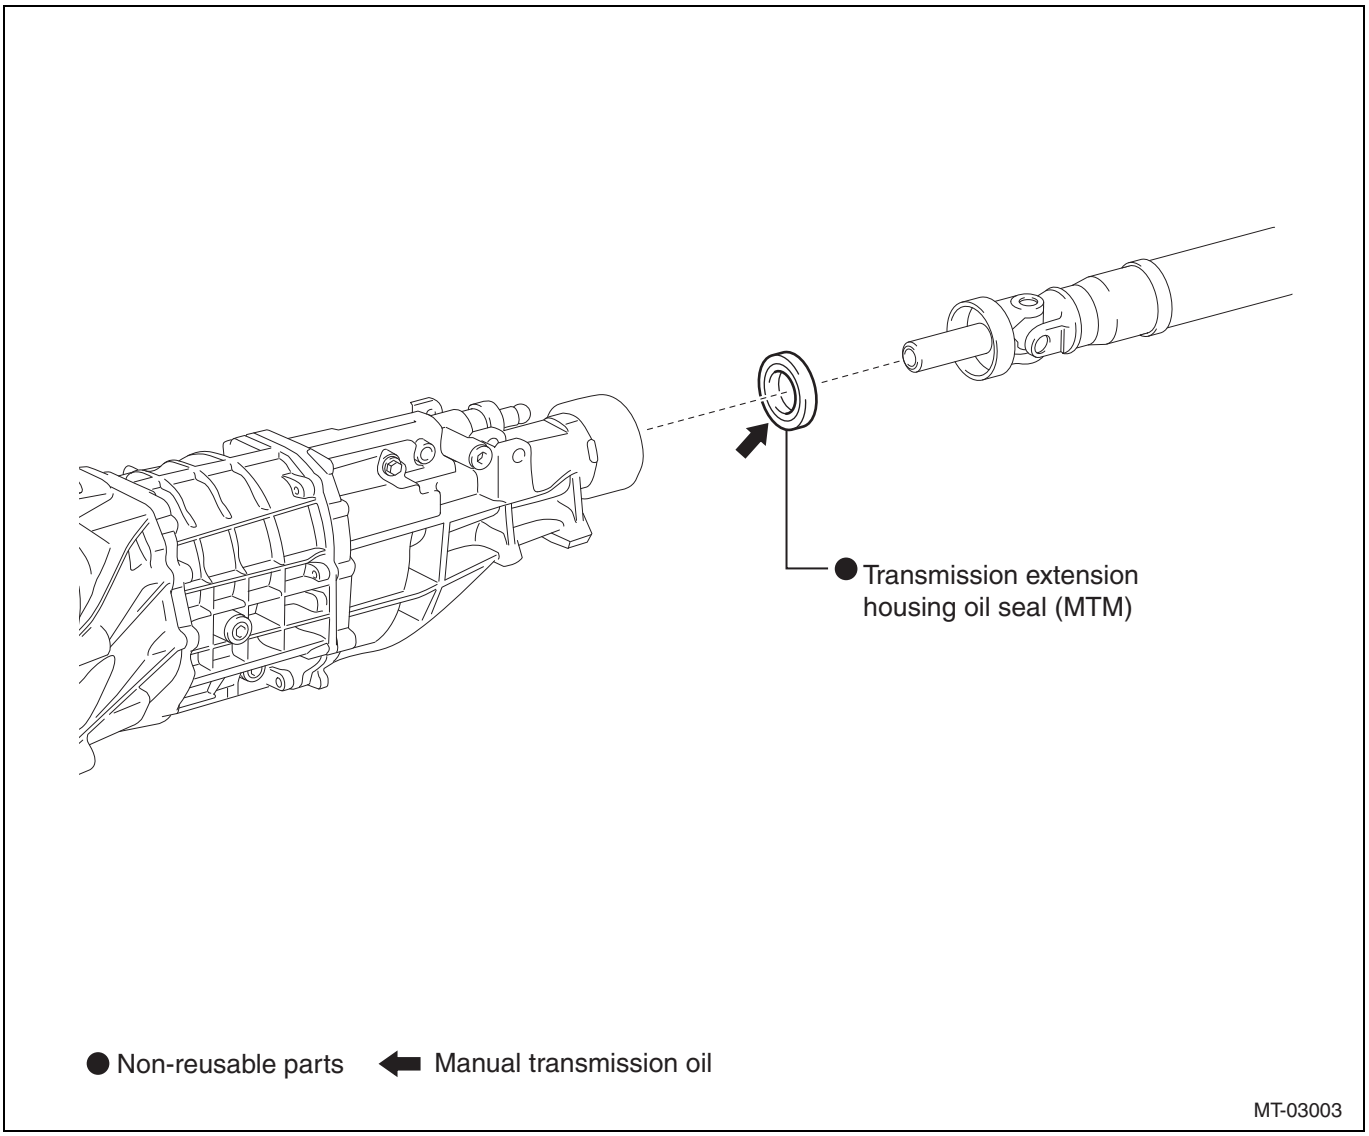


(3) Check that oil is filled to the level between 0 and 5 mm {0 to 0.197 in} from the bottom of the transmission filler plug hole.
CAUTION:
- Excess or shortage of oil may lead to trouble.
- When replacing oil, check the oil amount after driving.

(4) If the oil amount is insufficient, check for oil leaks.
(5) Install the transmission filler plug via a new gasket.
Standard value:T=37N·m {377kgf·cm} {27.3ft·lbf}

# Manual transmission extension housing oil seal

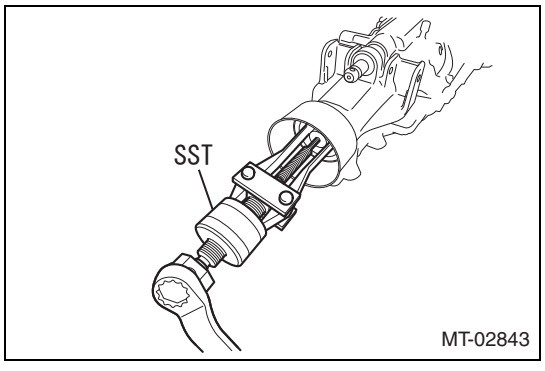
## Exploded view



NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

## Replacement

1. Drain of transmission gear oil (Refer to MT - 4)
2. Removal of propeller shaft with center bearing ASSY (Refer to DP - 14)



3. Removal of transmission extension housing oil seal (MTM)
   (1) Use the SST to remove the transmission extension housing oil seal (MTM).
   SST 398527700

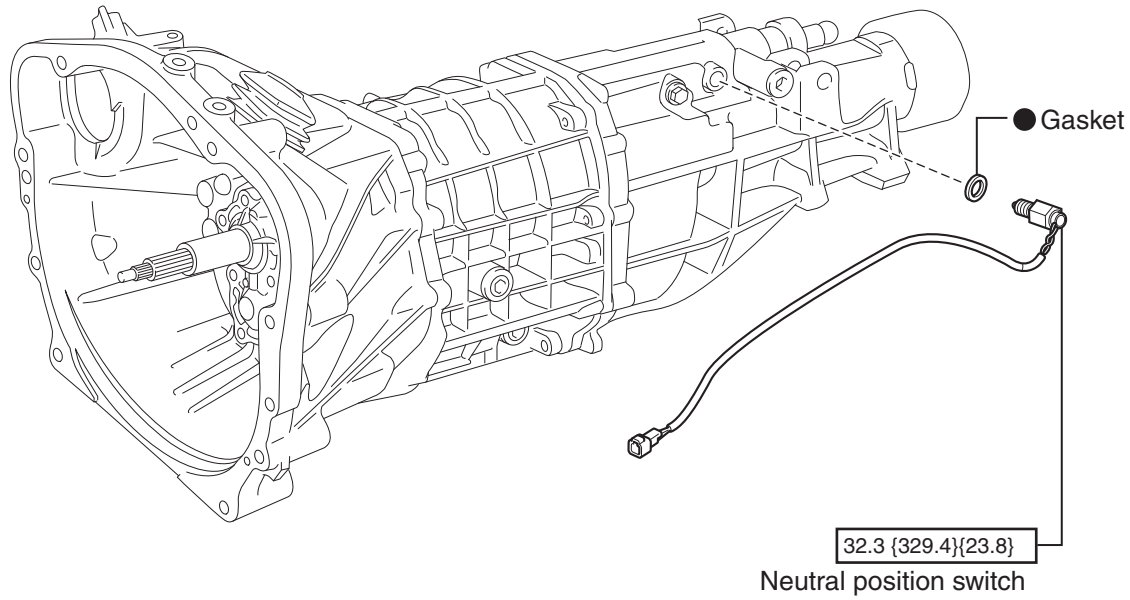
4. Installation of transmission extension housing oil seal (MTM)
   (1) Apply a small amount of manual transmission oil to the lip of a new transmission extension housing oil seal (MTM).
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

   (2) Use the SST to install the transmission extension housing oil seal (MTM).
   SST 09325-20010
   Standard value: 0.1 to 1.1 mm {0.00394 to 0.0433in} (from end face of extension housing)
   CAUTION:
   - Avoid damage to the lip of the transmission extension housing oil seal (MTM).
   - Be careful not to install the transmission extension housing oil seal (MTM) in the wrong direction.
   - Do not drive in the transmission extension housing oil seal (MTM) excessively.

5. Installation of propeller shaft with center bearing ASSY (Refer to DP - 16)
   CAUTION:
   Thoroughly wipe away the spilled oil.

# Neutral position switch

## Exploded view



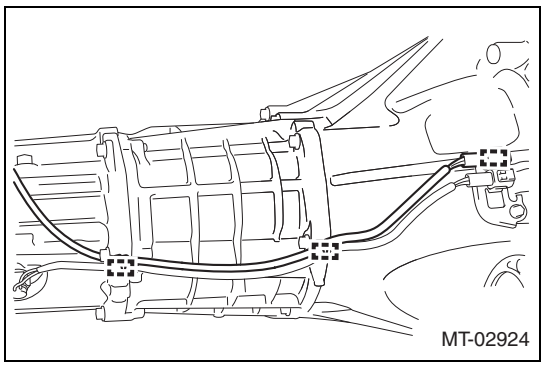
MT

N•m {kgf•cm, ft•lbf} : Tightening torque ● Non-reusable parts

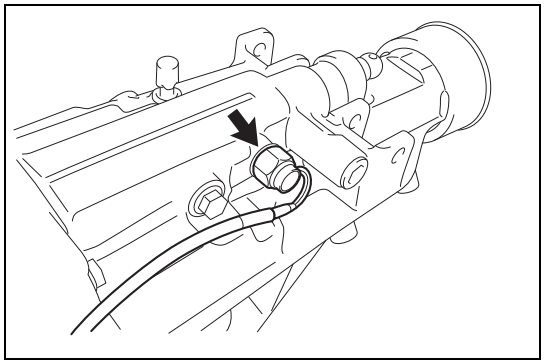
MT-02911

## Removal

1. Removal of manual transmission ASSY
   (Refer to MT - 18)



2. Removal of neutral position switch
   (1) Release the 3 clamps.

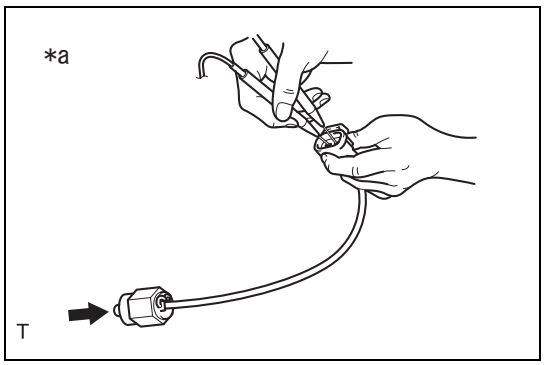


(2) Remove the neutral position switch and the gasket.

## Installation

1. Installation of neutral position switch
   (1) Install a new gasket to the neutral position switch.
   (2) Install the neutral position switch.
   Standard value:T=32.3N·m {329.4kgf·cm} {23.8ft·lbf}
   CAUTION:
   When tightening by combining a torque wrench and union nut wrench to extend the whole length, the actual torque will be excessive if tightened until the reading of the torque wrench reaches the specified tightening torque. (Refer to IN - 6)
   (3) Engage all of the 3 clamps from the rear side with a slack of the harness positioned only at the forward end, and connect the back-up light switch ASSY wire and the neutral position switch wire.
2. Installation of manual transmission ASSY
   (Refer to MT - 24)

## Unit inspection



1. Check of neutral position switch
   (1) Measure the resistance between the terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | When switch is pressed in | 1 MΩ or more |
| | When switch is not pressed in | Less than 1 Ω |

Captions in illustration

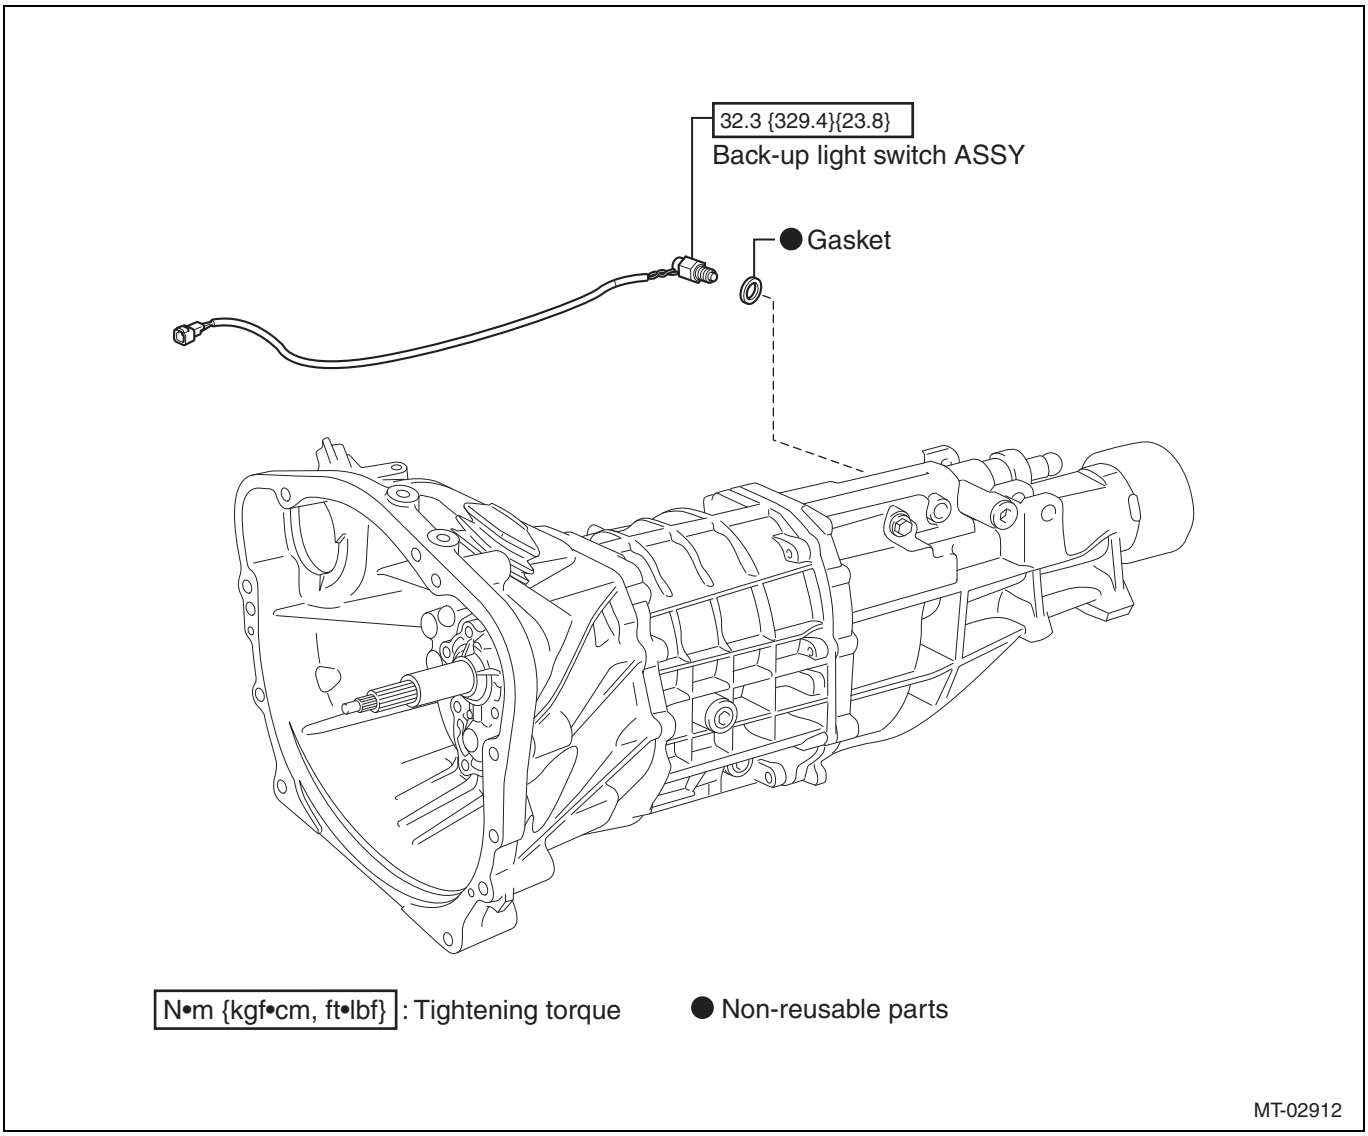
| | |
|---|---|
| *a | Connector not connected (Neutral position switch) |

If the resistance is not at the standard value, replace the neutral position switch.

MT

# Back-up light switch

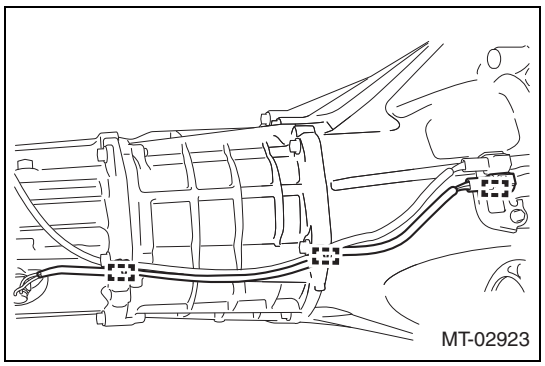
## Exploded view



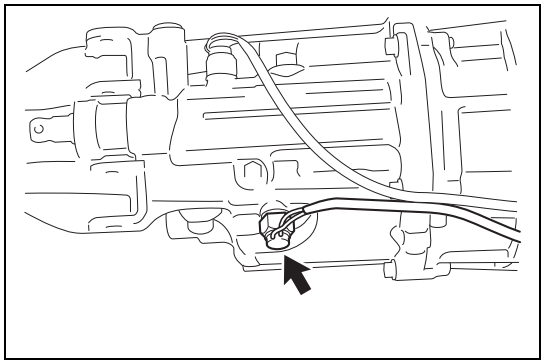
MT

## Removal

1. Removal of manual transmission ASSY
   (Refer to MT - 18)



2. Removal of back-up light switch ASSY
   (1) Release the 3 clamps.

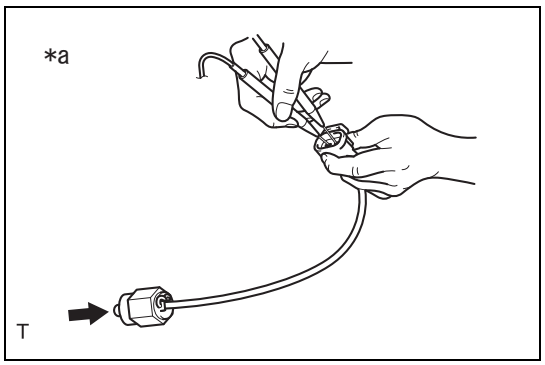


(2) Remove the back-up light switch ASSY and the gasket.

## Installation

1. Installation of back-up light switch ASSY
   (1) Install a new gasket to the back-up light switch ASSY.
   (2) Install the back-up light switch ASSY.
   Standard value:T=32.3N·m {329.4kgf·cm} {23.8ft·lbf}
   CAUTION:
   When tightening by combining a torque wrench and union nut wrench to extend the whole length, the actual torque will be excessive if tightened until the reading of the torque wrench reaches the specified tightening torque. (Refer to IN - 6)
   (3) Engage all of the 3 clamps from the rear side with a slack of the harness positioned only at the forward end, and connect the back-up light switch ASSY wire and the neutral position switch wire.
2. Installation of manual transmission ASSY
   (Refer to MT - 24)

## Unit inspection



1. Check of back-up light switch ASSY
   (1) Measure the resistance between the terminals.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | When switch is pressed in | Less than 1 Ω |
| | When switch is not pressed in | 1 MΩ or more |

Captions in illustration

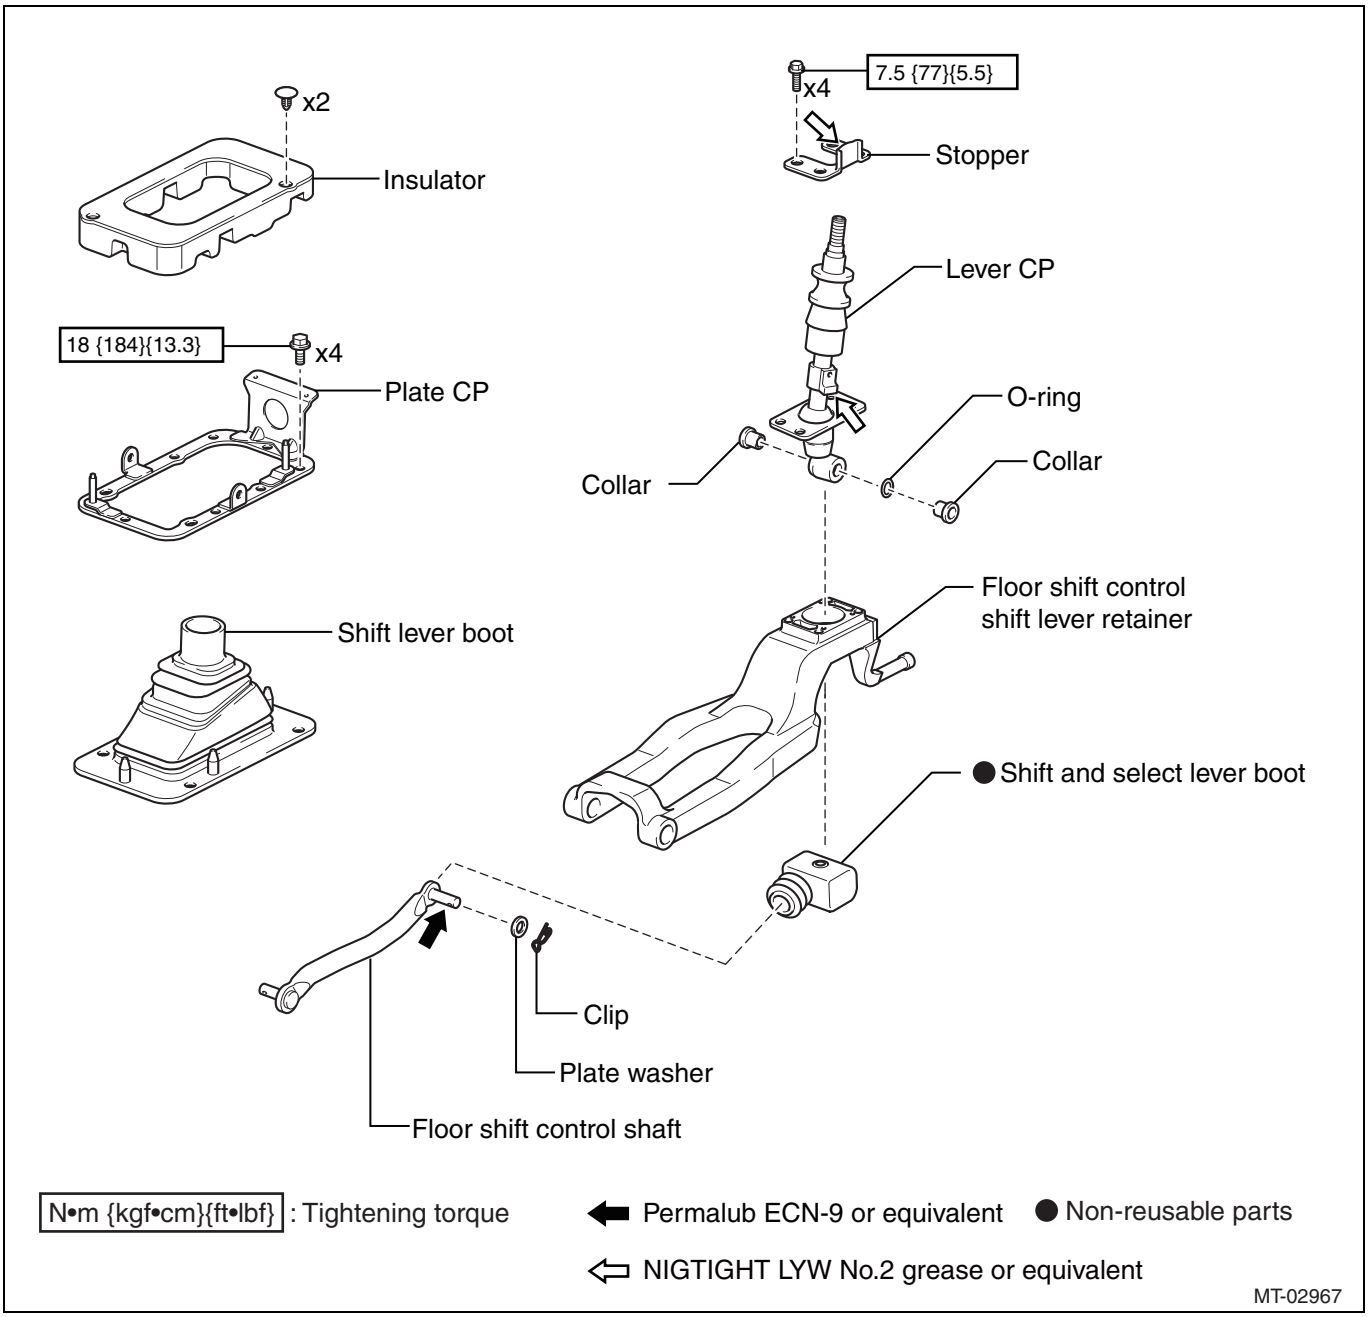
| | |
|---|---|
| *a | Connector not connected (Back-up light switch ASSY) |

If the resistance is not within the normal value, replace the back-up light switch ASSY.

MT

# Floor shift, shift lever ASSY

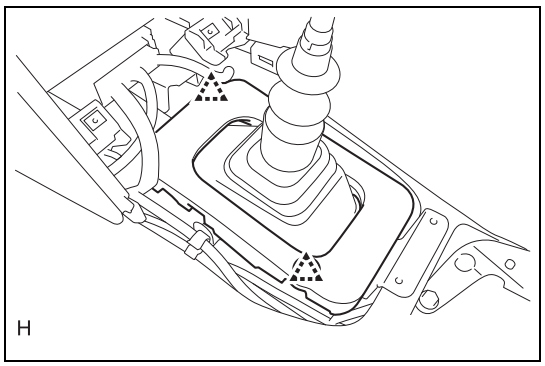
## Exploded view



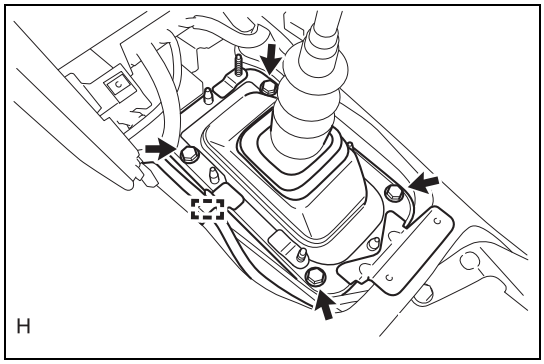
MT

## Removal

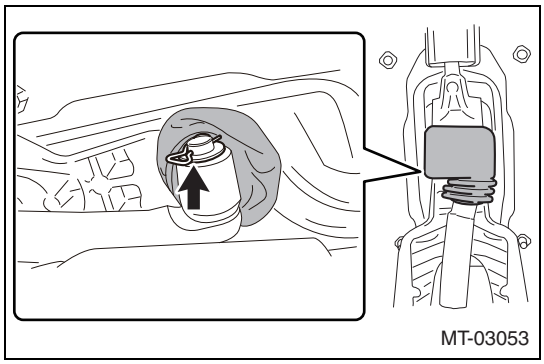
1. Removal of console box ASSY (refer to IT - 33)



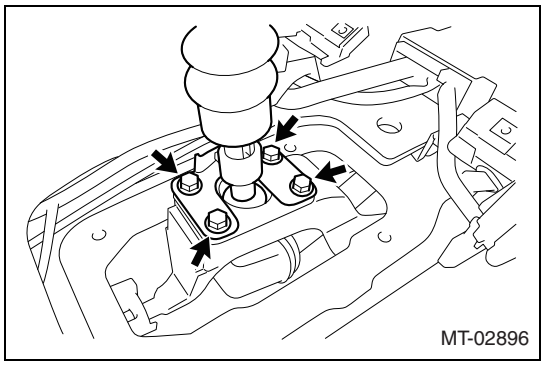
2. Removal of shift lever boot
   (1) Remove the 2 clips, then remove the insulator.



(2) Release the clamp and disconnect the wiring harness.
(3) Remove the 4 bolts, then remove the plate CP and the shift & select lever boot.



3. Disconnection of floor shift control shaft
   (1) Turn up the shift & select lever boot and remove the clip and the plate washer.
   (2) Disconnect the floor shift control shaft from the lever CP.
   (3) Remove the shift & select lever boot.

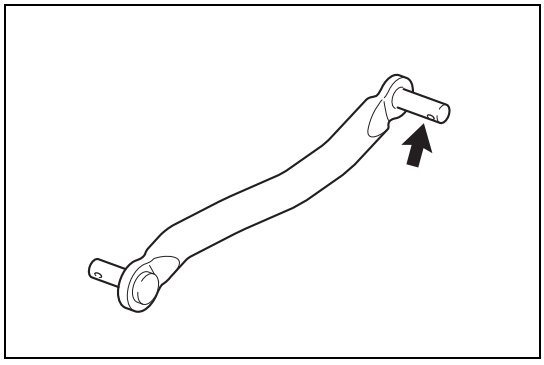


4. Removal of lever CP
   (1) Remove the 4 bolts, then remove the stopper.
   (2) Remove the lever CP from the floor shift control shift lever retainer.

MT

## Installation

1. Installation of lever CP
   (1) Install the lever CP to the floor shift control shift lever retainer.
   (2) Install the stopper with the 4 bolts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}



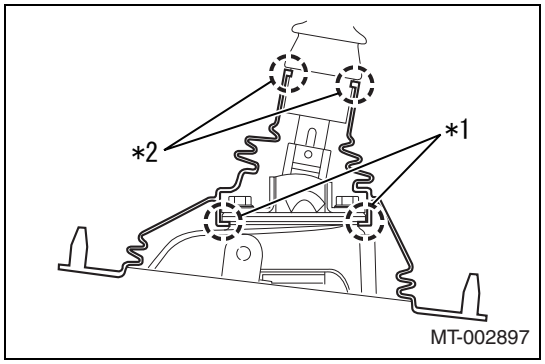
2. Connection of floor shift control shaft
   (1) Apply Permalub ECN-9 or equivalent to the tip of the floor shift control shaft.

Captions in illustration

| | |
|---|---|
| ➡ | Permalub ECN-9 or equivalent |

   (2) Temporarily install a new shift & select lever boot.
   (3) Connect the tip of the floor shift control shaft to the lever CP and install the plate washer and the clip, then install the shift & select lever boot.

3. Reverse check adjustment (refer to MT - 14)



4. Installation of shift lever boot
   (1) Install the plate CP and the shift lever boot with the 4 bolts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

Captions in illustration

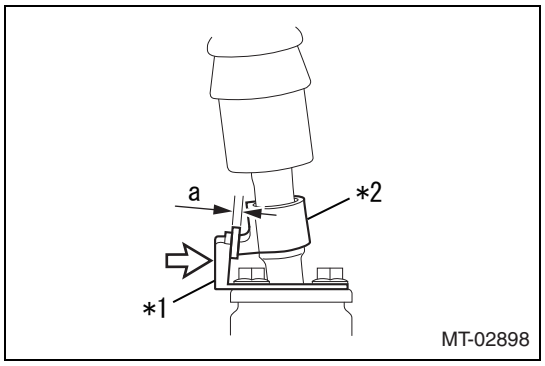
| | |
|---|---|
| *1 | Bottom of stopper |
| *2 | Groove on bottom of slider |

CAUTION:
Cover the lever CP with the shift lever boot, and install the inner sealing portion to the bottom of the stopper and the upper sealing portion to the groove on the bottom of the slider.

   (2) Connect the harness.
   (3) Install the insulator with the 2 clips.

5. Installation of console box (refer to IT - 38)

## Adjustment



1. Reverse check adjustment
   (1) Loosen the 4 flange bolts on the stopper.
   (2) Shift the lever CP to the 2nd.
   (3) Insert a shim that is 1.0 mm {0.0394 in} in thickness between the detent and the stopper, and push the stopper to the detent.

Captions in illustration

| | |
|---|---|
| *1 | Stopper |
| *2 | Detent |
| ⇨ | Push to |

Standard value

| Part | Dimension |
|---|---|
| a | 1.0mm {0.0394in} |

   (4) Tighten the 4 flange bolts on the stopper.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (5) Check that shift operation of 1st-2nd can be performed.
   (6) If shift operation of 1st-2nd cannot be performed in the above check, perform the steps (1) to (4) with a shim that is 0.2 mm {0.0079 in} thinner.
   (7) Check that shift operation of 1st-2nd can be performed.

   (8) After the completion of reverse check adjustment, apply NIGTIGHT LYW No.2 or equivalent to the detent and the stopper.

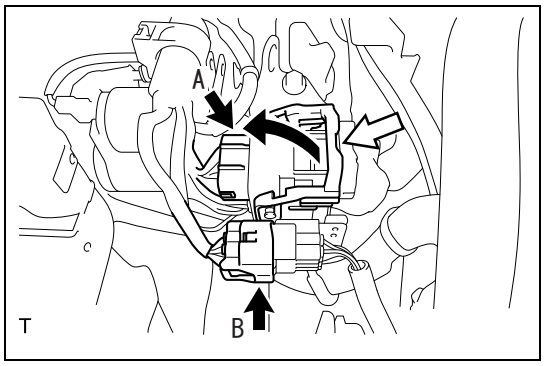
## Removal

CAUTION:

When removing the manual transmission ASSY, be sure to remove the clutch release fork SUB-ASSY and clean it. (Refer to CL - 23)

1. Disconnection of the battery ground terminal (Refer to BH - 31)
2. Removal of under cover front AL (refer to IE - 39)
3. Removal of under cover COMPL T/M (refer to IE - 40)
4. Drain of manual transmission oil (refer to MT - 4)
5. Removal of exhaust manifold
   (Refer to IE - 35)
6. Removal of propeller shaft with center bearing ASSY
   (Refer to DP - 14)
7. Removal of stabilizer bar FR
   (Refer to FP - 21)
8. Removal of starter ASSY
   (Refer to ST - 21)
9. Disconnection of wiring harness
   NOTE:
   Secure the disconnected harnesses using tape, etc. to keep them out of the way.

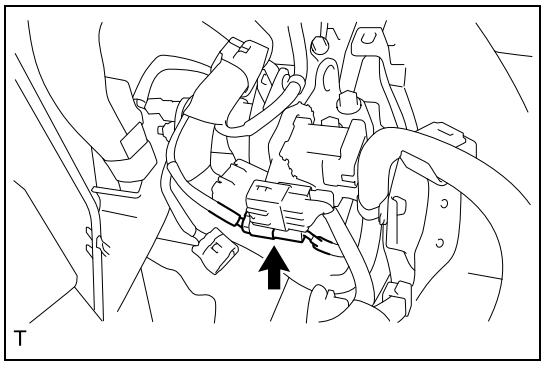


(1) Release the lock of the connector A to move the lock lever, and disconnect the connector.

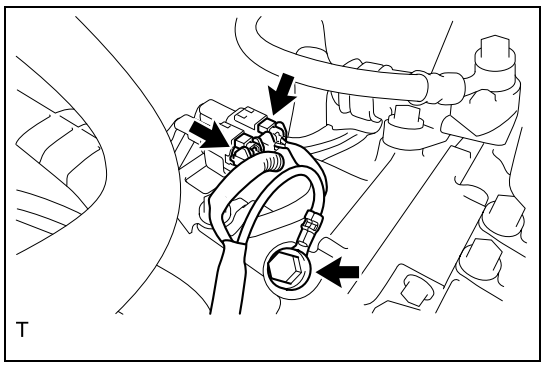
Captions in illustration

| | |
|---|---|
| ⇨ | Lock unit |

(2) Disconnect the connector B.



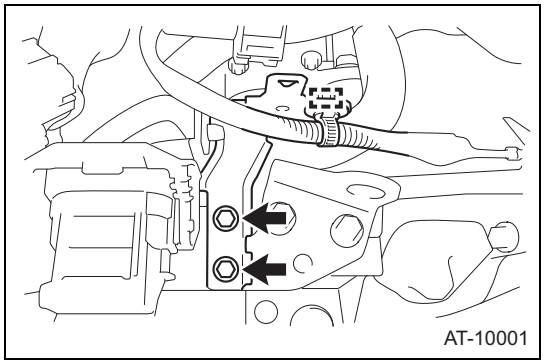
(3) Disconnect the connector.



(4) Disconnect the 2 connectors.

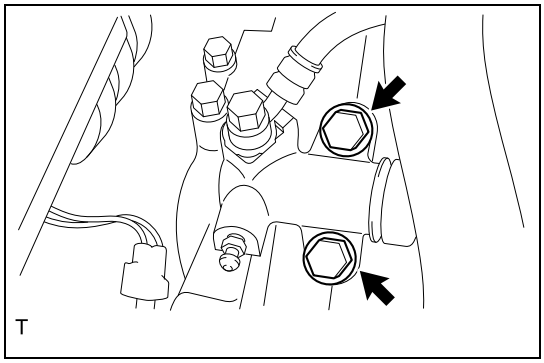
MT

(5) Remove the bolts, then disconnect the ground cable.

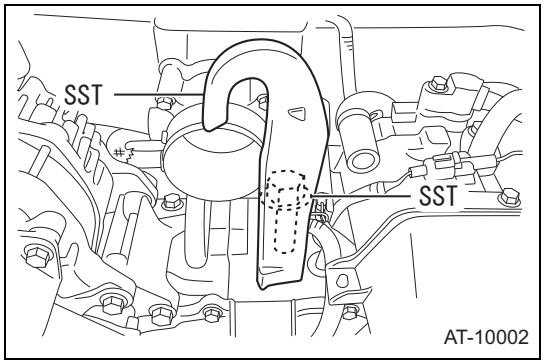


(6) Release the clamp and disconnect the wiring harness.

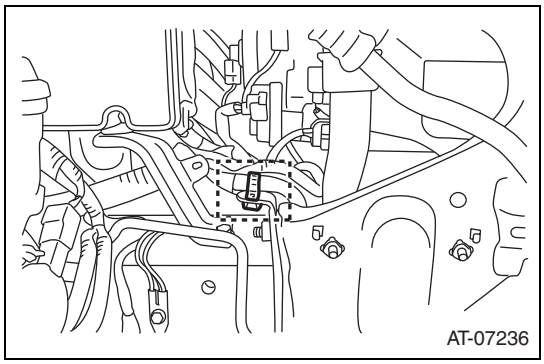
(7) Remove 2 bolts and disconnect the wiring harness clamp bracket.



10. Disconnection of clutch release cylinder ASSY
    (1) Remove 2 bolts to disconnect the clutch release cylinder ASSY.
    NOTE:
    Hang the clutch release cylinder ASSY with rope, etc. not to apply excessive force to the clutch pipe.

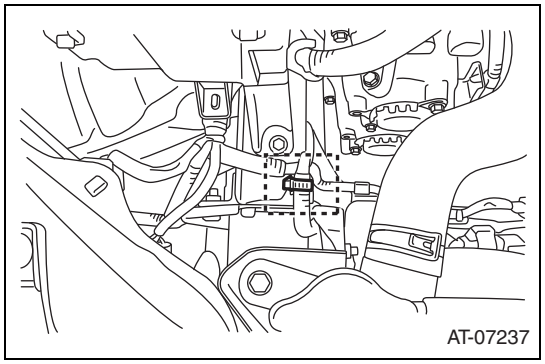


11. Install the SST to the engine unit.
    Standard value:T=43N·m {438kgf·cm} {31.7 ft-lb}
    SST 12281-38150 (Engine hanger No.1), 90119-14120 (Bolt)

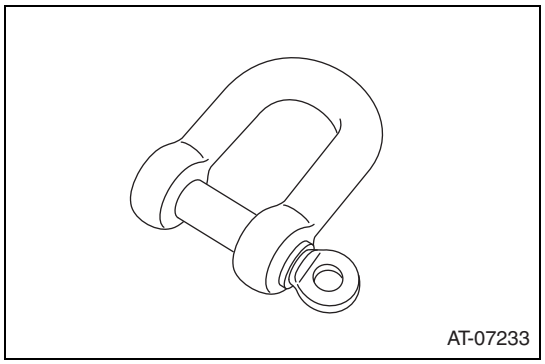


12. Remove the clip securing the bulkhead harness to the vehicle.
    • Left hand

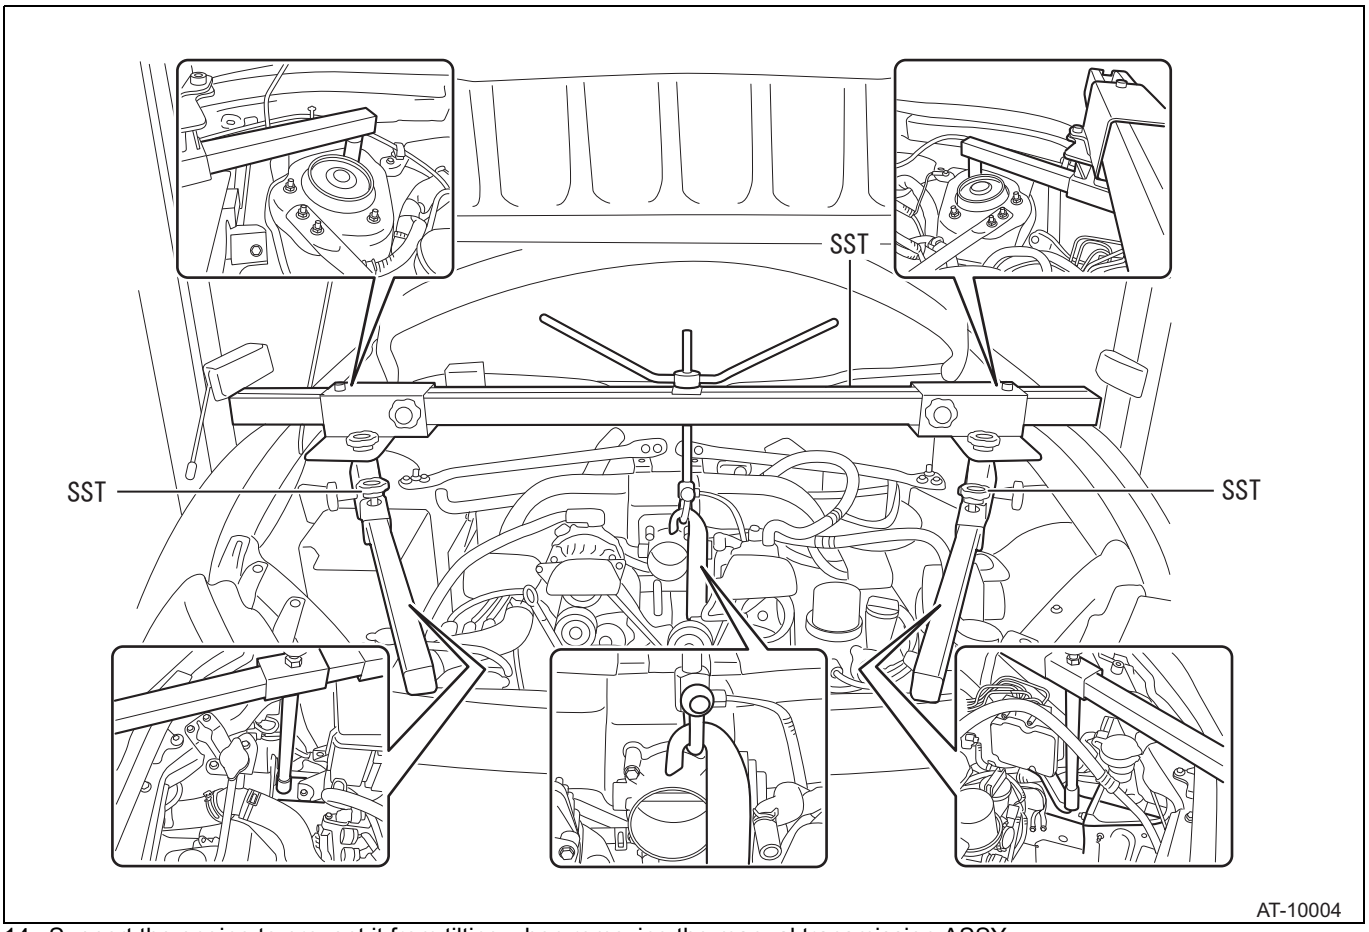
MT



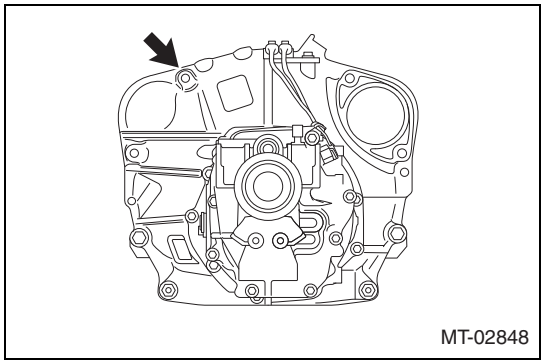
- Right hand



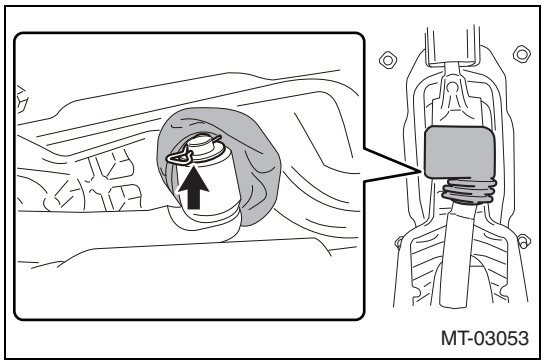
13. Set the SST to the vehicle to support the engine.
    SST 99099AJ000 (Engine hanger), 18679AA020 (Adjuster)
    CAUTION:
    - Keep the harness from being caught in when setting the SST on the vehicle.
    - Use a shackle with the load capacity of 250 kg {551 lb} or more.



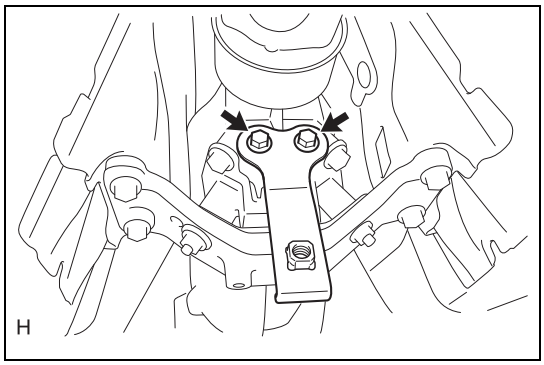
14. Support the engine to prevent it from tilting when removing the manual transmission ASSY.
    CAUTION:
    - To prevent damage to the SST threaded portion, turn the handle after applying grease or lubricants to the SST threaded portion.
    - To prevent damage caused by contact of parts, lift gradually while paying attention to the clearance of each part.



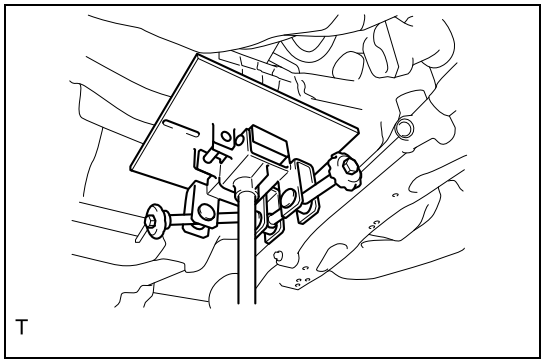
15. Removal of manual transmission ASSY (preparation)
    (1) Remove the bolt connecting the manual transmission ASSY.



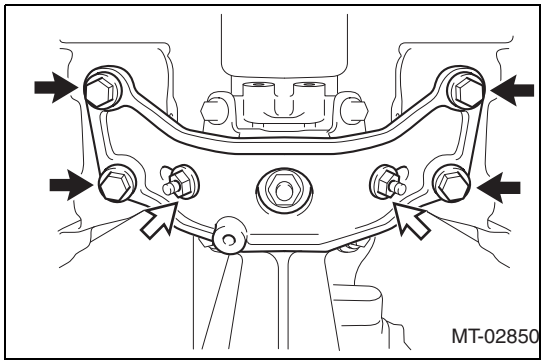
16. Disconnection of floor shift control shaft
    (1) Turn over the shift & select lever boot and remove the clip and the plate washer.
    (2) Disconnect the floor shift control shaft from the lever CP.
    (3) Remove the shift & select lever boot.



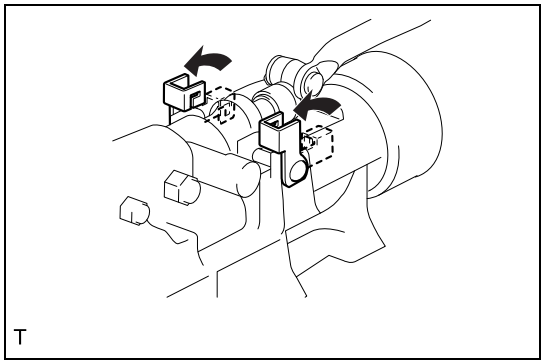
17. Removal of exhaust pipe support No.1
    (1) Remove 2 bolts to remove the exhaust pipe support No.1.



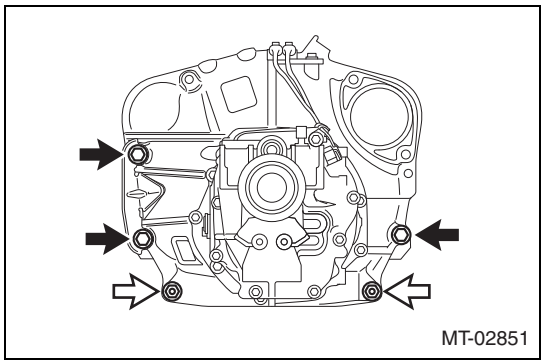
18. Support of manual transmission ASSY
    (1) Hold the manual transmission ASSY.
    CAUTION:
    Make sure that the manual transmission ASSY is placed at the center of the cradle of the high mission jack.



19. Removal of engine rear mounting member
    (1) Remove 4 bolts, 2 nuts, and 2 washers to remove the engine rear mounting member.



20. Removal of shift lever pin
    (1) Release the lock and pull out the 2 shift lever pins.



21. Removal of manual transmission ASSY
    (1) Remove 3 bolts and 2 nuts to remove the cover plate and manual transmission ASSY.

Captions in illustration

| | |
|---|---|
| ➡ | Bolt |
| ⇨ | Nut |

CAUTION:
- Retract the high mission jack until the input shaft is pulled out from the clutch cover.
- Be careful not to damage the extension housing breather plug.
- Do not shake the manual transmission ASSY excessively to prevent damage to the input shaft.
- To prevent damage to the knock pin, do not pry apart the contact surface of the manual transmission ASSY and the engine ASSY excessively.

NOTE:
If it is difficult to remove the manual transmission ASSY, use a KTC mighty bar or equivalent to pry apart the joint between the manual transmission ASSY and engine ASSY and remove the manual transmission ASSY.

Captions in illustration

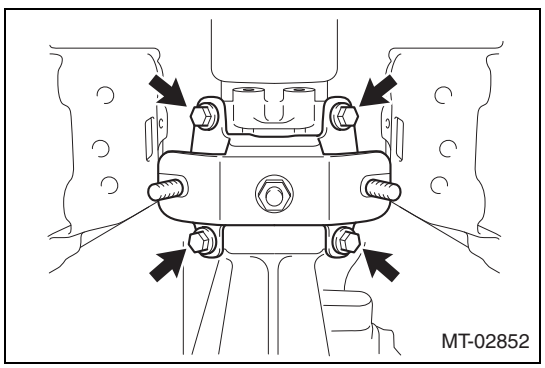
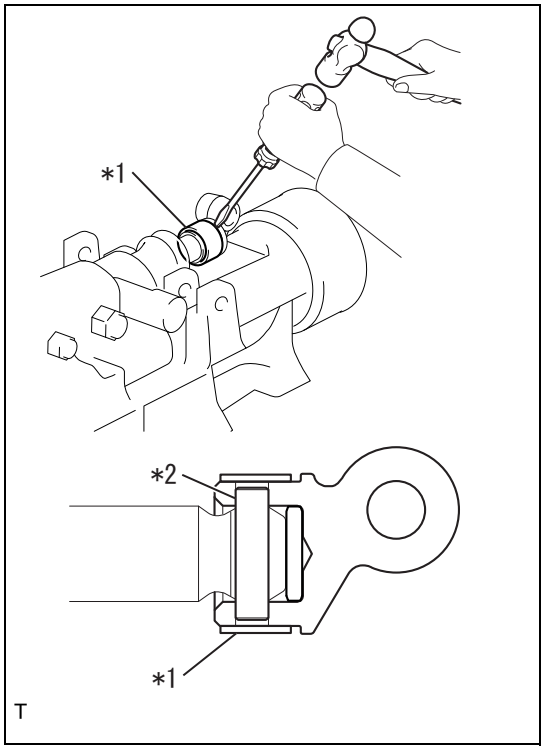
(2) Remove 4 bolts to remove the engine mounting insulator RR No.1.



MT



22. Removal of floor shift control shaft and knuckle
    (1) Release the crimp on the control shaft collar.
    (2) After sliding the control shaft collar, press down the pin with the L-shaped tool and push it up, then pull it out with pliers while applying a cloth to prevent damage to the pin.
    (3) Remove the floor shift control shaft and the knuckle as a unit from the manual transmission ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Control shaft collar |
| *2 | Pin |

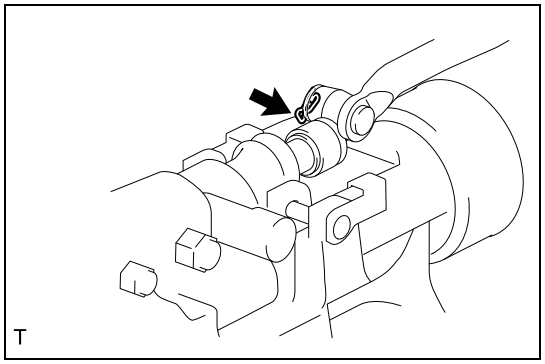
    (4) Remove the cushion from the knuckle.

23. When removing the floor shift control shift lever retainer SUB-ASSY and the floor shift control shift lever retainer
    (1) Remove the lever CP. (Refer to MT - 13)

    (2) Remove the floor shift control shift lever retainer SUB-ASSY from the floor shift control shift lever retainer.

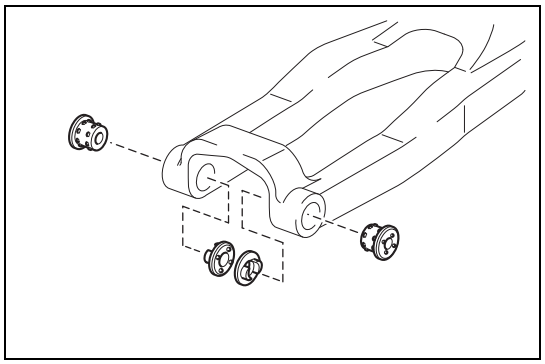
    (3) Remove the 2 outer bushings and 2 inner bushings from the control shift lever retainer.

24. When removing the floor shift control shaft or knuckle
    (1) Remove the clip and the plate washer, and remove the floor shift control shaft.

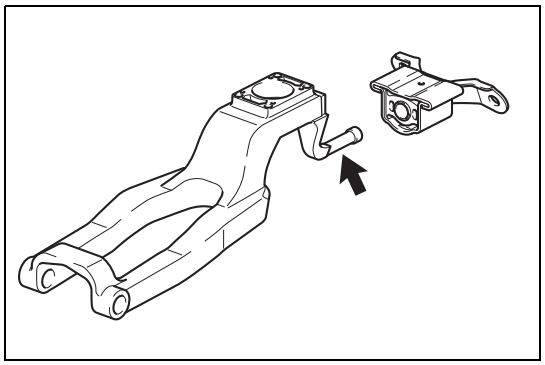


(2) Remove the 2 collars from the knuckle.

## Installation



1. When installing the control shift lever retainer SUB-ASSY and the floor shift control shift lever retainer
   (1) Apply NIGTIGHT LYW No.2 or equivalent to the inner bushing and outer bushing.
   (2) Install 2 inner bushings and 2 outer bushings to the control shift lever retainer.

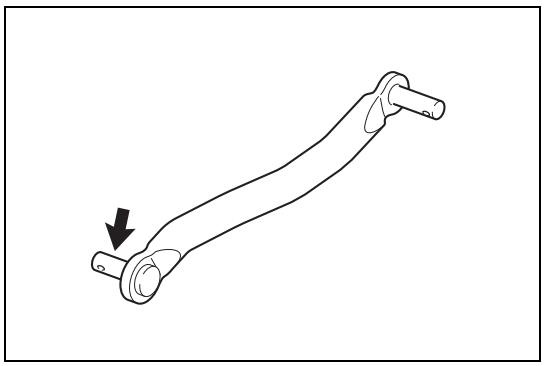


(3) Apply NIGTIGHT LYW No.2 or equivalent to the tip of the floor shift control shift lever retainer.

Captions in illustration

| | |
|---|---|
| ➡ | NIGTIGHT LYW No.2 or equivalent |

(4) Install the floor shift control shift lever retainer SUB-ASSY to the control shift lever retainer.
(5) Install the lever CP. (Refer to MT - 13)



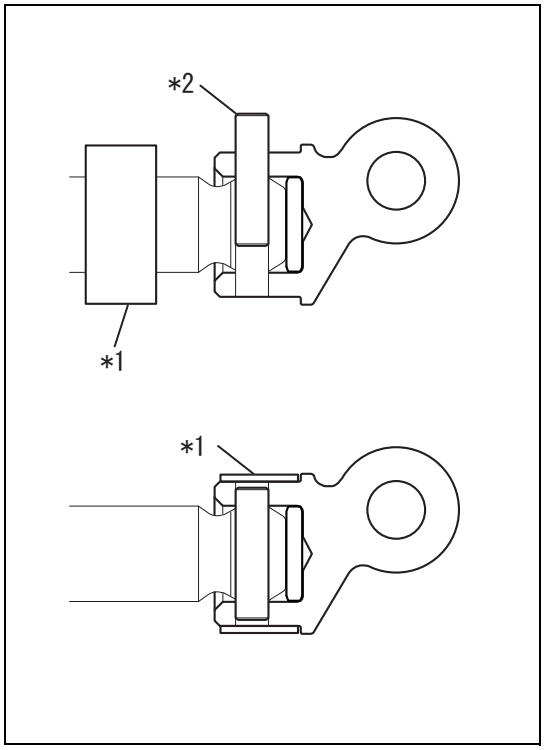
2. When installing floor shift control shaft or knuckle
   (1) Apply Permalub ECN-9 or equivalent to the tip of the floor shift control shaft.

Captions in illustration

| | |
|---|---|
| ➡ | Permalub ECN-9 or equivalent |

(2) Install the 2 collars to the knuckle.
(3) Connect the tip of the floor shift control shaft to the knuckle, and install the plate washer and the clip.

MT



3. Installation of floor shift control shaft shift and knuckle
   (1) Install a new control shaft collar to the shift shaft.

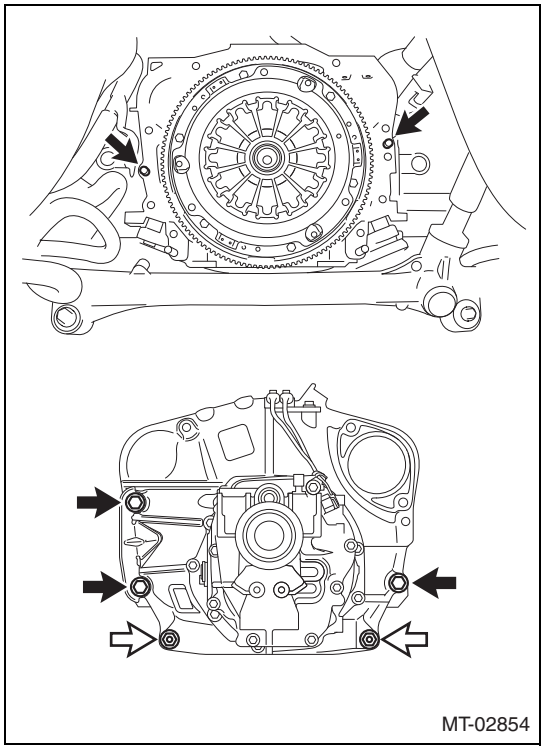
Captions in illustration

| | |
|---|---|
| *1 | Control shaft collar |
| *2 | Pin |

   (2) Install the cushion to the knuckle.
   (3) Install the floor shift control shaft and knuckle as a unit to the shift shaft.
   (4) Drive in the pin.
   (5) Slide the control shaft collar until it reaches to the knuckle stopper, and crimp the control shaft collar.

   (6) Install the engine mounting insulator RR No.1 with 4 bolts.
   Standard value:T=40N·m {408kgf·cm} {29.5ft·lbf}

4. Installation of manual transmission ASSY
   (1) Make sure that the knock pins are attached to 2 locations on the engine side.

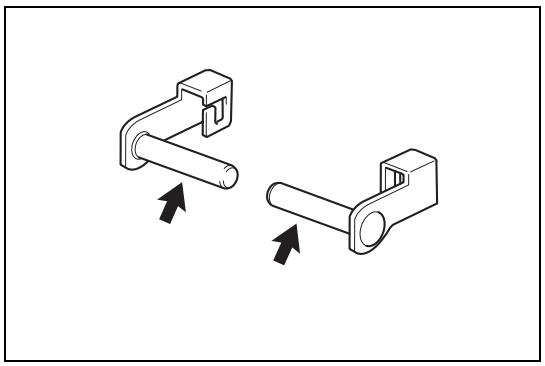


(2) Keep the engine and the manual transmission ASSY horizontal, then align the knock pins and the knock pin holes, set the cover plate, and tighten the 3 bolts and 2 nuts shown in the figure.
Standard value:T=50N·m {510kgf·cm} {36.9ft·lbf}

Captions in illustration

| | |
|---|---|
| ➡ | Bolt |
| ⇨ | Nut |

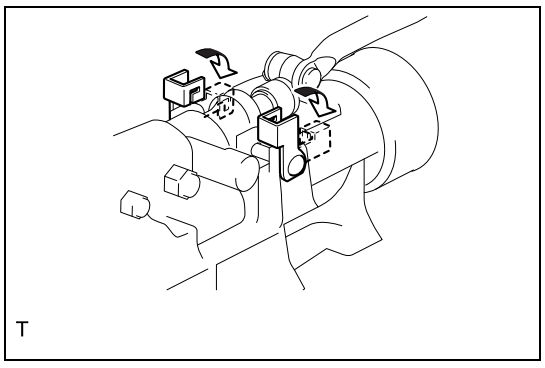
CAUTION:
- Do not shake the transmission ASSY excessively to prevent damage to the input shaft.
- Before installing the transmission ASSY, check that there are 2 knock pins on the engine transmission installing surface.
- Do not shake the transmission ASSY excessively to prevent damage to the knock pins.
- Be careful not to damage the extension housing breather plug.
- Be sure to install the transmission ASSY with the input shaft engaged to the clutch disc spline. Otherwise the clutch disc may be damaged and cause noise.



(3) Apply NIGTIGHT LYW No.2 or equivalent to the tip of new shift lever pins.

Captions in illustration

| | |
|---|---|
| ➡ | NIGTIGHT LYW No.2 or equivalent |

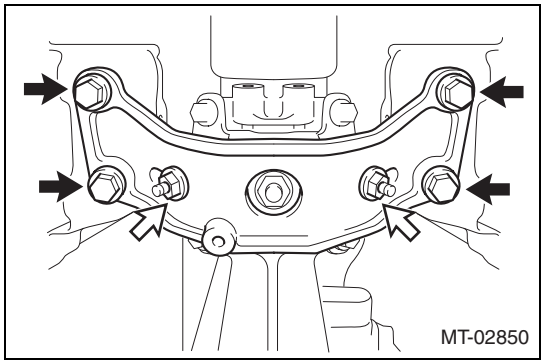


(4) Install the control shift lever retainer to the manual transmission ASSY with 2 shift lever pins.

(5) Lock the 2 shift lever pins.

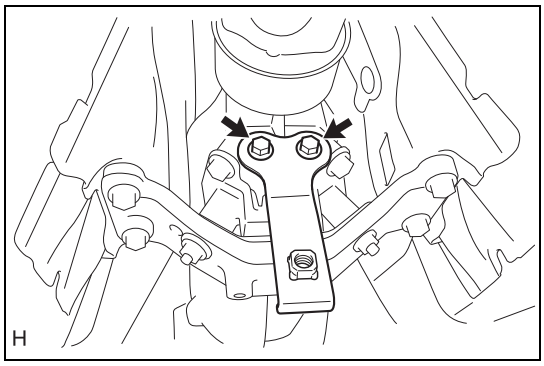
MT

5. Installation of engine rear mounting member

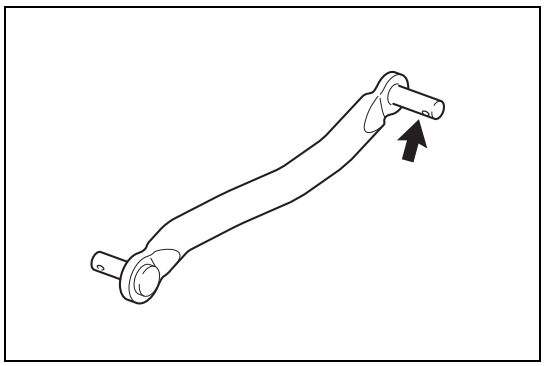


(1) Install the engine rear mounting member with 4 bolts, 2 nuts, and 2 washers.
Standard value:T=55N·m {561kgf·cm} {40.6ft·lbf} (nut)
T=65N·m {663kgf·cm} {47.9ft·lbf} (bolt)

6. Installation of exhaust pipe support No.1



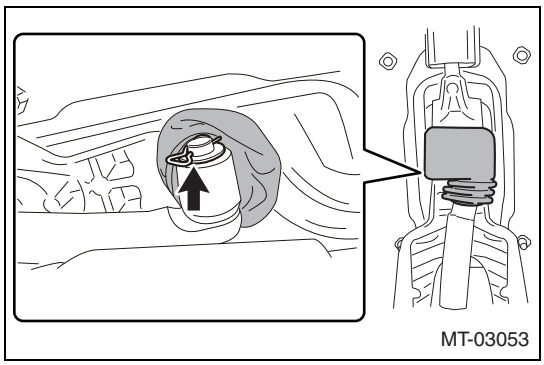
(1) Install the exhaust pipe support No.1 with 2 bolts.
Standard value:T=23N·m {235kgf·cm} {17.0ft·lbf}



7. Installation of floor shift control shaft
(1) Apply Permalub ECN-9 or equivalent to the tip of the floor shift control shaft.

Captions in illustration

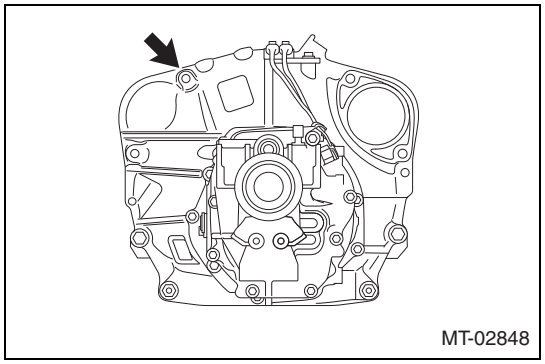
| | |
|---|---|
| ➡ | Permalub ECN-9 or equivalent |



(2) Connect the tip of the floor shift control shaft to the lever CP and install the plate washer and the clip, then install the shift & select boot.

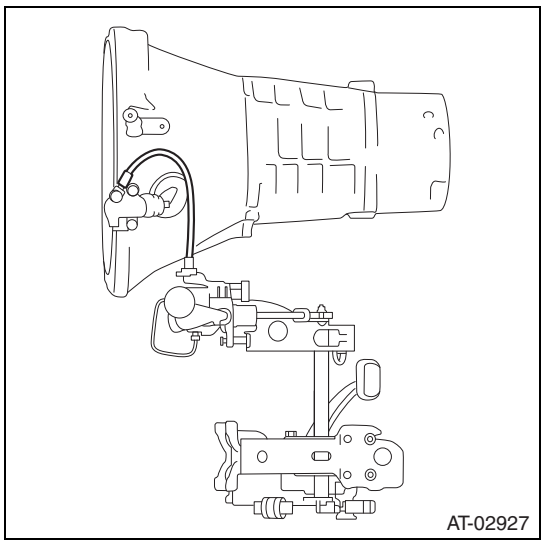
MT

8. Installation of manual transmission ASSY



(1) Tighten the connecting bolt on the manual transmission ASSY.
Standard value:T=50N·m {510kgf·cm} {36.9ft·lbf}

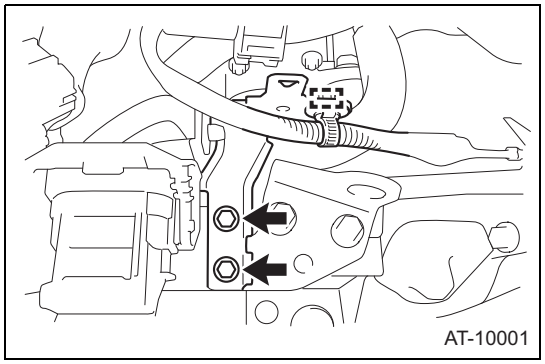
9. Remove the SST from the vehicle.
10. Remove the SST from the engine unit.
11. Connection of clutch release cylinder ASSY
    (1) Connect the clutch release cylinder ASSY with the 2 bolts.
    Standard value:T=37N·m {377kgf·cm} {27.3ft·lbf}



CAUTION:
When restoring the clutch release cylinder ASSY, check that the clutch hose is deflected in the same direction as shown in the figure.

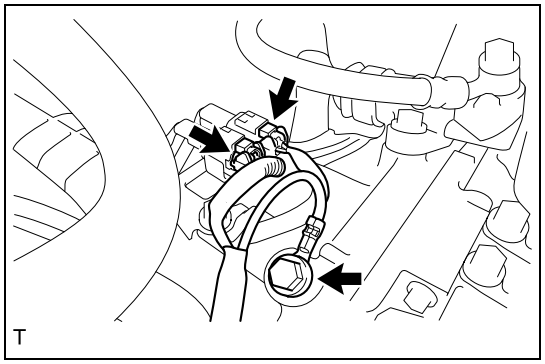
MT

12. Connection of wiring harness



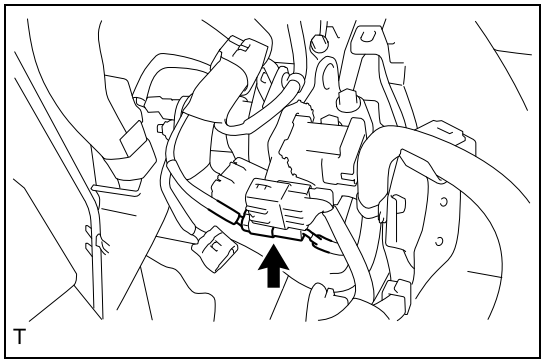
(1) Install the wiring harness clamp bracket with 2 bolts.
Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}

(2) Engage the clamp to connect the wiring harness.

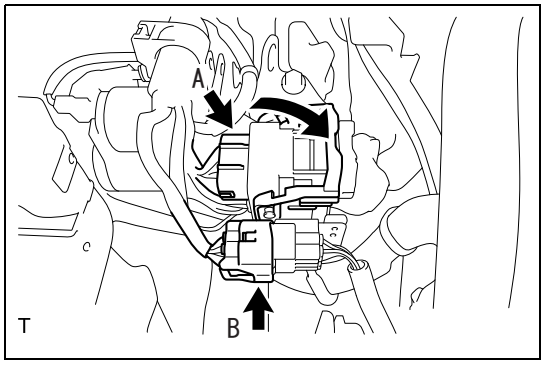


(3) Connect the ground cable with the bolt.
Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}

(4) Connect the 2 connectors.



(5) Connect the connector.



(6) Connect the 2 connectors.
NOTE:
For connector A, push down the lever until a sound indicating the claw is hooked is heard.

13. Installation of starter ASSY
(Refer to ST - 41)
14. Installation of stabilizer bar FR
(Refer to FP - 23)
15. Installation of propeller shaft with center bearing ASSY
(Refer to DP - 16)

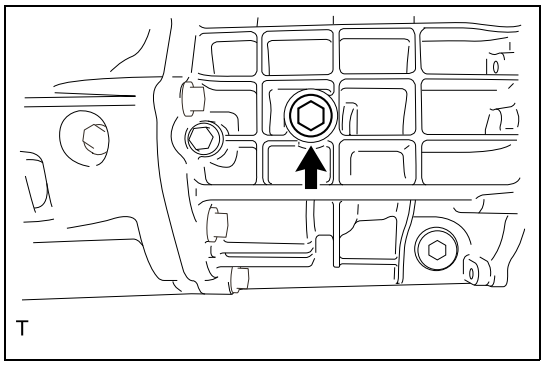
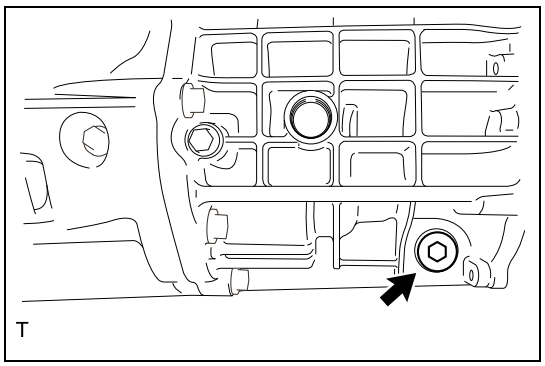
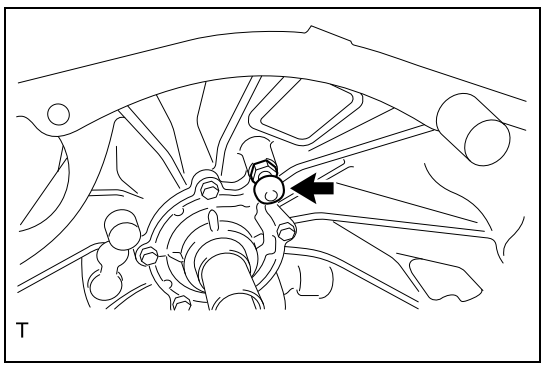
## Disassembly



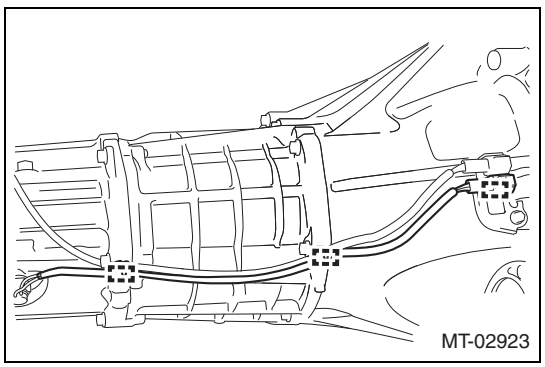
1. Removal of manual transmission filler plug
   (1) Remove the manual transmission filler plug and the gasket.



2. Removal of manual transmission drain plug
   (1) Remove the manual transmission drain plug and the gasket.

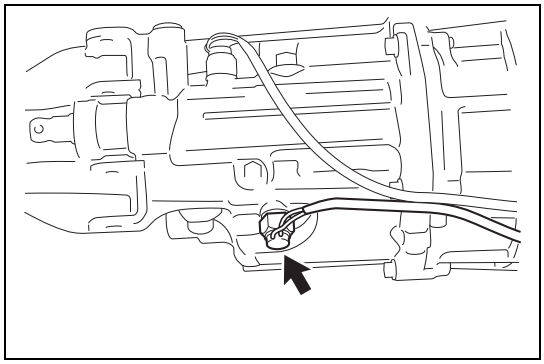


3. Removal of clutch release fork support
   (1) Remove the clutch release fork support from the clutch housing.



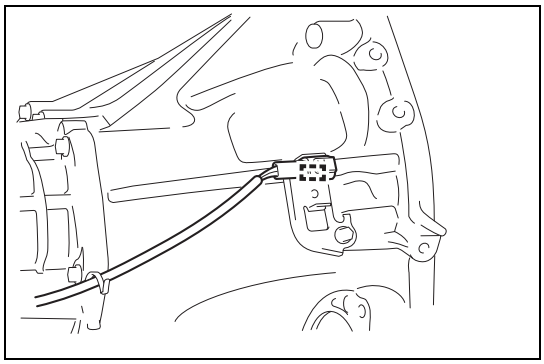
4. Removal of back-up light switch ASSY
   (1) Release the 3 clamps.

MT

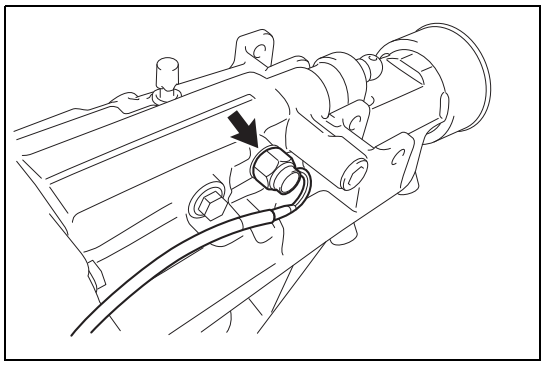


(2) Remove the back-up light switch ASSY and the gasket.

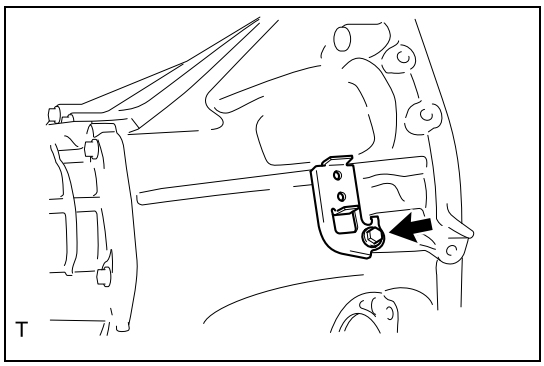
5. Removal of neutral switch
   (1) Release the clamp.



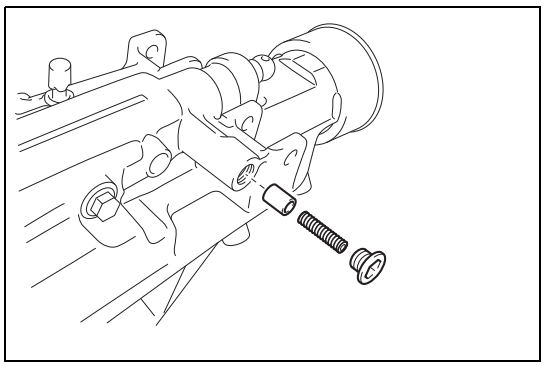
(2) Remove the neutral switch and the gasket.

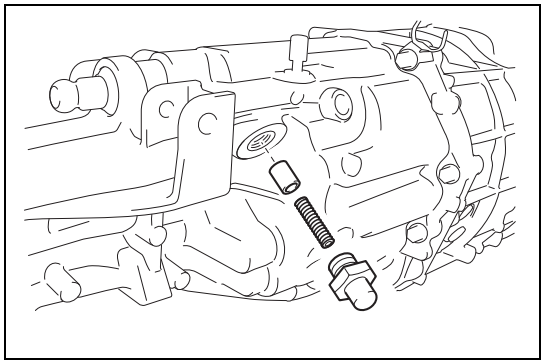


6. Removal of wiring harness clamp bracket
   (1) Remove the bolt, and then remove the wiring harness clamp bracket.

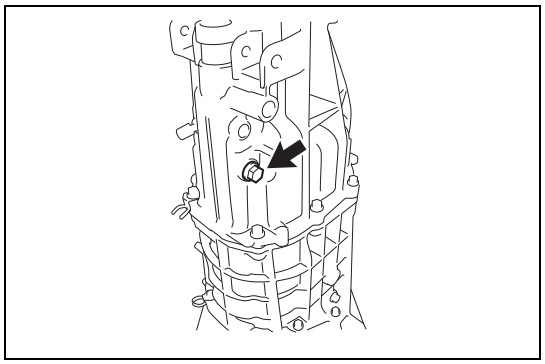


7. Removal of lock ball pin
   (1) Remove the head straight screw plug, compression spring, and lock ball pin.





8. Removal of holder
   (1) Remove the holder, compression spring, and lock ball pin.



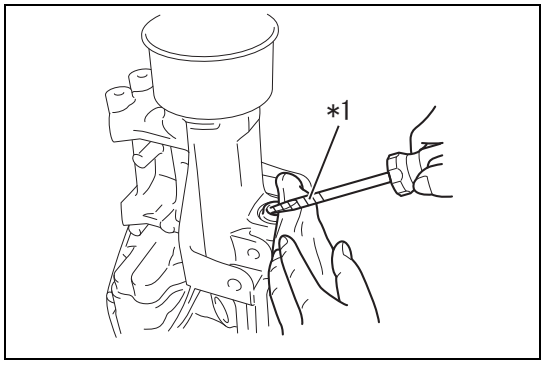
9. Removal of transmission extension housing SUB-ASSY (MTM)
   (1) Remove the bolt.

   (2) Remove the 8 bolts and the clump.

Captions in illustration

| | |
|---|---|
| *1 | Clamp |

   (3) Remove the transmission extension housing SUB-ASSY (MTM).
   CAUTION:
   - Do not damage the transmission extension housing SUB-ASSY (MTM).
   - Be sure to remove the transmission extension housing SUB-ASSY (MTM) with the shift position in neutral status.

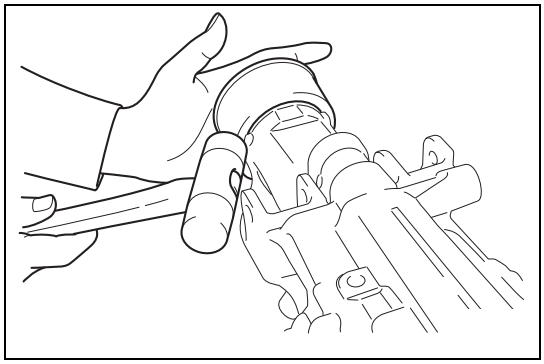


10. Removal of extension housing rear oil seal
    (1) Remove the extension housing rear oil seal.

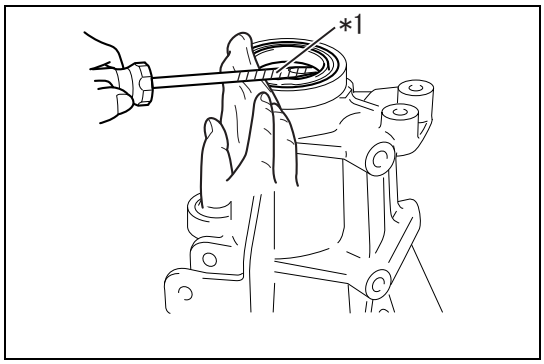
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Do not damage the transmission extension housing SUB-ASSY (MTM).
NOTE:
Remove while applying a cloth to prevent damage to the transmission extension housing SUB-ASSY (MTM).



11. Removal of extension housing dust deflector
    (1) Remove the extension housing dust deflector.

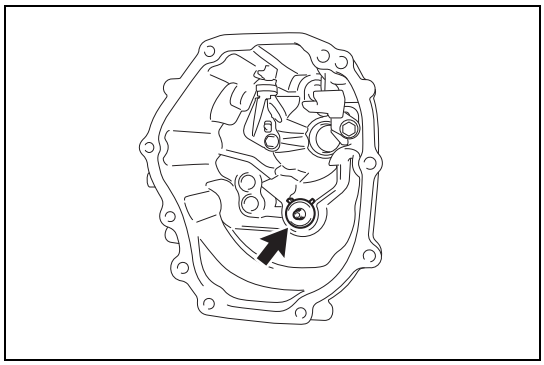


12. Removal of transmission extension housing oil seal
    (1) Remove the transmission extension housing oil seal.

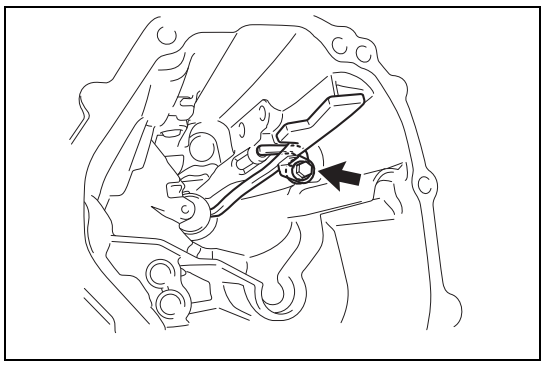
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Do not damage the transmission extension housing SUB-ASSY (MTM).
NOTE:
Remove while applying a cloth to prevent damage to the transmission extension housing SUB-ASSY (MTM).



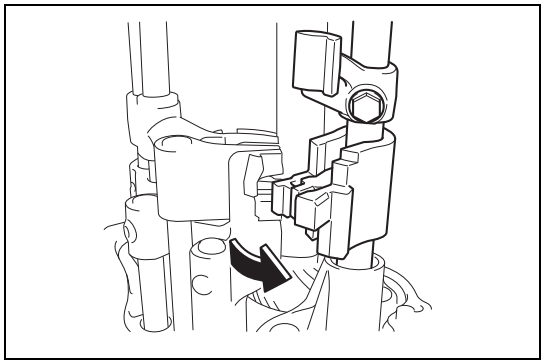
13. Removal of extension housing oil receiver pipe No.2
    (1) Remove the extension housing oil receiver pipe No.2.



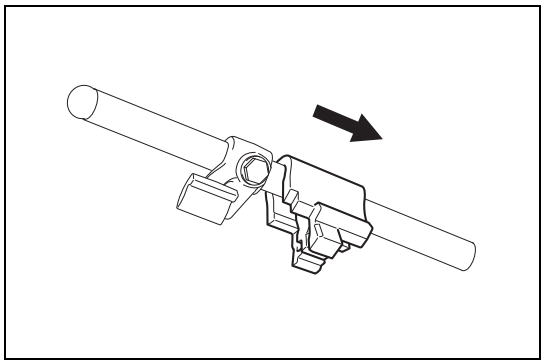
14. Removal of extension housing oil receiver pipe No.1
    (1) Remove the bolt to remove the extension housing oil receiver pipe No.1 and the stopper plate.

    (2) Remove the straight pin.

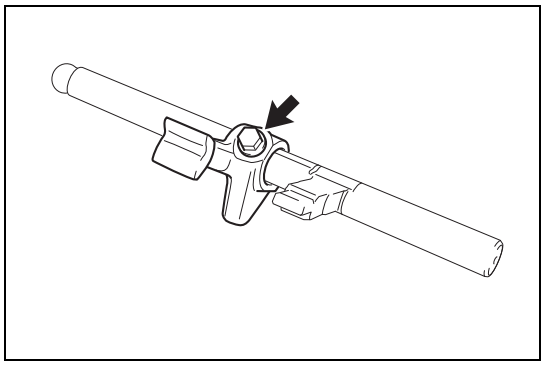
MT



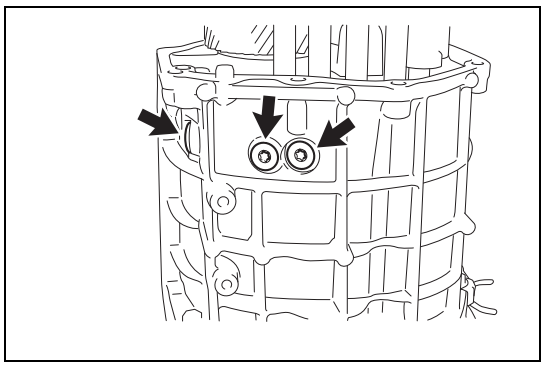
15. Removal of shift shaft
    (1) Slide and remove the shift shaft and the shift inner lock block No.1.



16. Removal of shift inner lock block No.1.
    (1) Remove the shift inner lock block No.1 from the shift shaft.

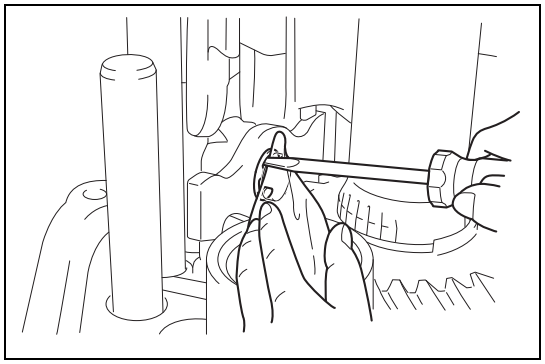


17. Removal of shift inner lever FR
    (1) Remove bolt, then remove the shift inner lever FR from the shift shaft.
    CAUTION:
    Verify the direction of the parts.



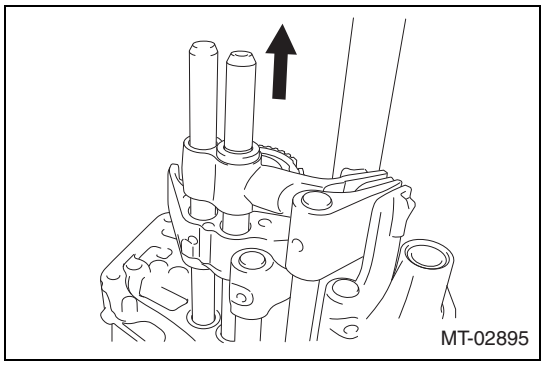
18. Removal of head straight screw plug
    (1) Remove the 3 head straight screw plugs.

    (2) Remove the 2 compression springs and the 2 balls.



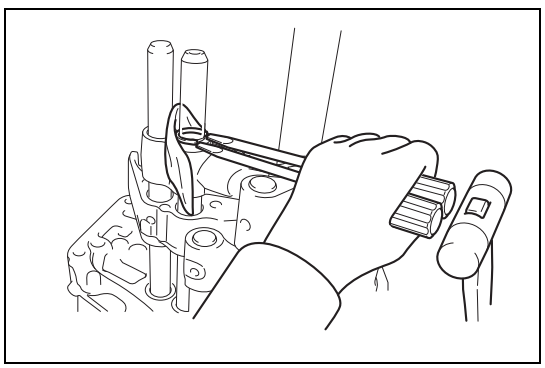
19. Removal of shift arm
    (1) Remove the E-ring.
    CAUTION:
    Hold the E-ring with a cloth to prevent it from flying out.

    (2) Remove the shift arm.



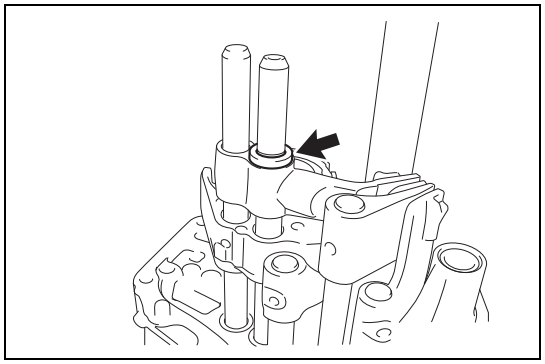
20. Removal of gear shift fork shaft No.3
    (1) Remove the gear shift fork shaft No.3.
    CAUTION:
    - Do not drop the ball of the 5th shift head.
    - The ball of the transmission case may fall in the transmission case. If the ball falls, pick the ball up when removing the transmission case.
    (2) Remove the ball of the 5th shift head.

    (3) Remove the ball.

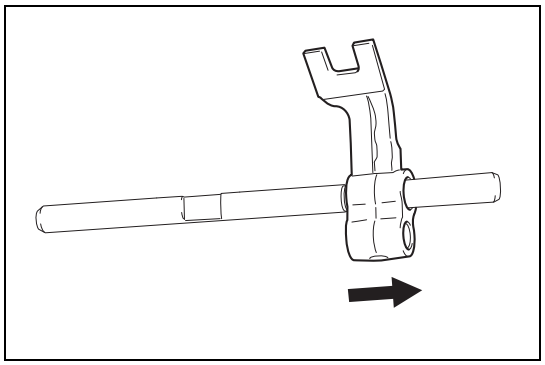


21. Removal of 5th shift head
    (1) Remove the shaft snap ring.
    CAUTION:
    Hold the shaft snap ring with a cloth to prevent it from flying out.

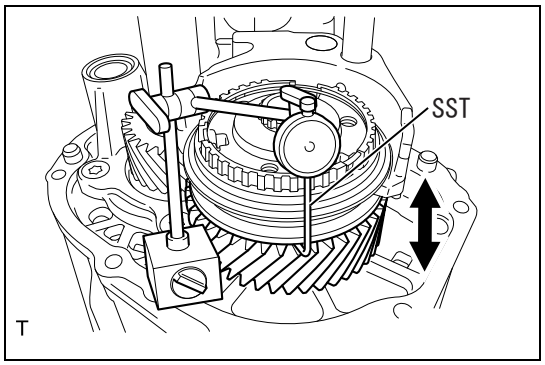
MT



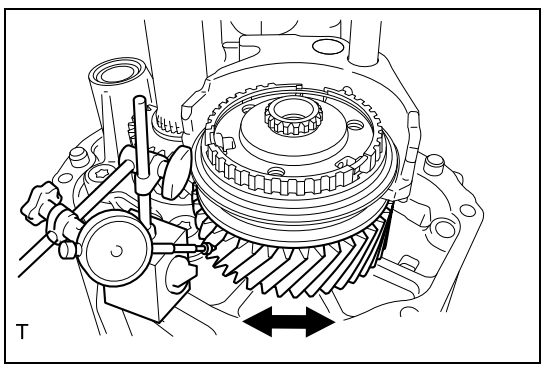
(2) Remove the washer.



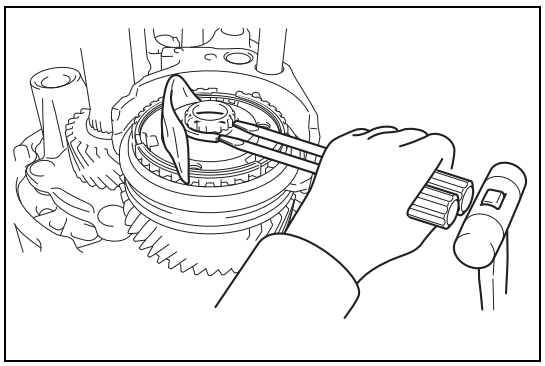
(3) Remove the 5th shift head, then remove the ball and the compression spring.
CAUTION:
Do not slide the 5th shift head to prevent the ball and the compression spring from falling.



22. Check of counter shaft 6th gear thrust clearance
(1) Use the SST to check the thrust clearance.
SST 09350-20015 (09350-06120), 498255400
Standard value: 0.10 to 0.40 mm {0.00394 to 0.0157 in}
Limit: 0.40 mm {0.0157 in}
NOTE:
If the value exceeds the limit, replace the counter shaft 6th gear, transmission clutch hub No.4, 6th gear thrust washer, needle roller bearing, and counter shaft with new ones.

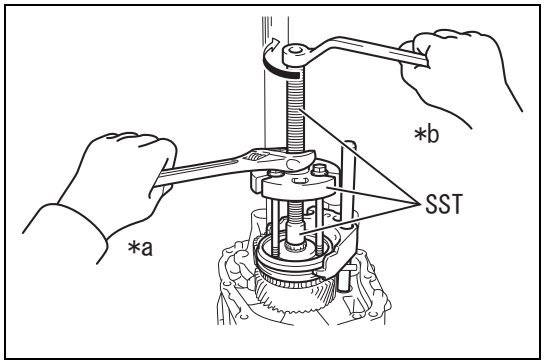


23. Check of counter shaft 6th gear radial clearance
(1) Check the radial clearance.
Standard value: 0.015 to 0.068 mm {0.000590 to 0.00268 in}
Limit: 0.068 mm {0.00268 in}
NOTE:
If the value exceeds the limit, replace the counter shaft 6th gear, needle roller bearing, and counter shaft with new ones.



24. Removal of transmission clutch hub No.4
(1) Remove the shaft snap ring.
CAUTION:
Hold the shaft snap ring with a cloth to prevent it from flying out.

MT



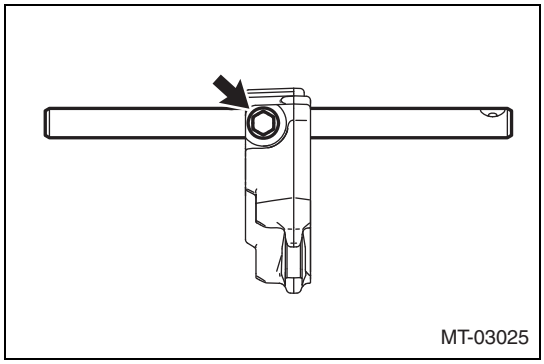
(2) Use the SST to remove the transmission clutch hub No.4 together with the transmission hub sleeve No.4, gear shift fork No.4, and gear shift fork shaft No.2 as a unit.

Captions in illustration

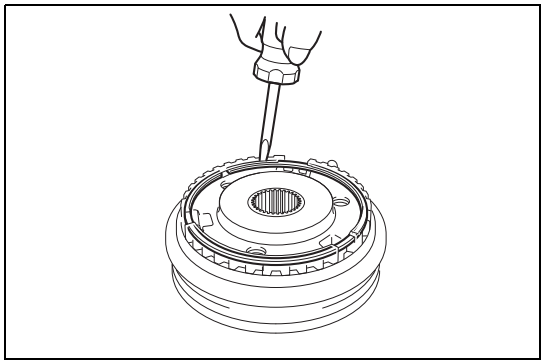
| | |
|---|---|
| *a | Hold |
| *b | Drive |

SST 09950-30012 (09951-03010, 09953-03010, 09956-03010)

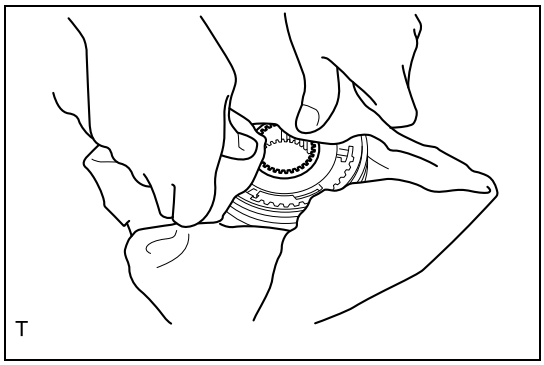
CAUTION:
Verify the direction of the parts.



25. Removal of gear shift fork No.4
    (1) Remove the bolt, then remove the gear shift fork No. 4 from the gear shift fork shaft No. 2.



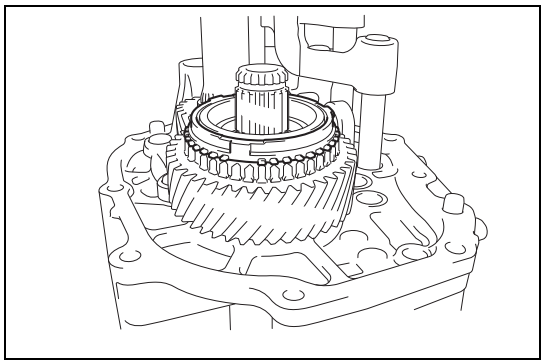
26. Removal of transmission hub sleeve No.4
    (1) Remove the hole snap ring.



(2) Remove the transmission hub sleeve No.4, then remove the 3 synchromesh shifting keys No.1, 3 synchromesh shifting key springs No.1, and 3 balls from the transmission clutch hub No.4.

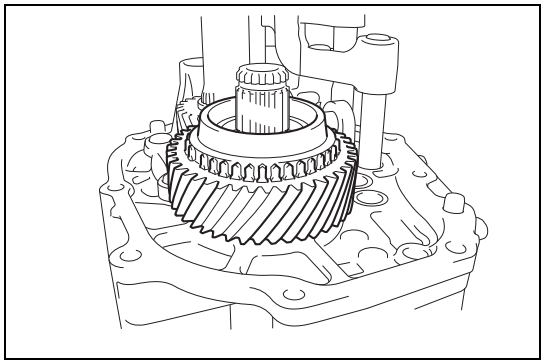
CAUTION:
- Keep the synchromesh shifting keys No.1, synchromesh shifting key springs No.1, and balls from flying out using a cloth.
- Be careful not to deform the synchromesh shifting key springs No.1.
- Verify the direction of the parts.

NOTE:
Perform the work without displacing the positions of the transmission clutch hub No.4 and synchromesh shifting keys No.1.

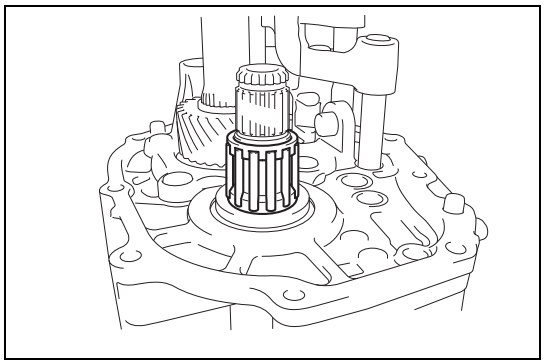


27. Removal of synchronizer ring No.2
    (1) Remove the synchronizer ring No.2.

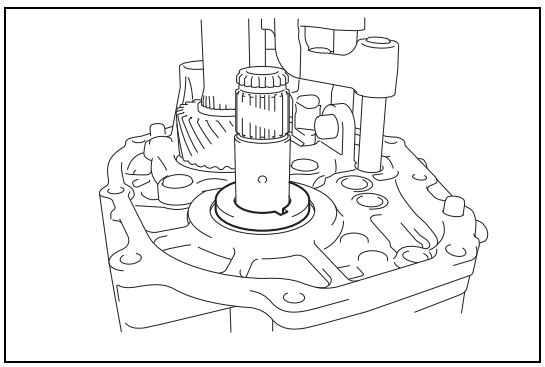
MT



28. Removal of counter shaft 6th gear
    (1) Remove the counter shaft 6th gear.

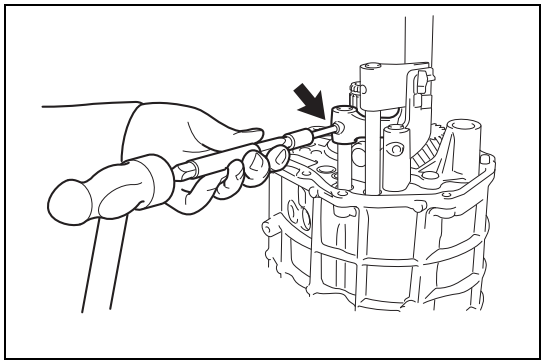


29. Removal of needle roller bearing
    (1) Remove the needle roller bearing.

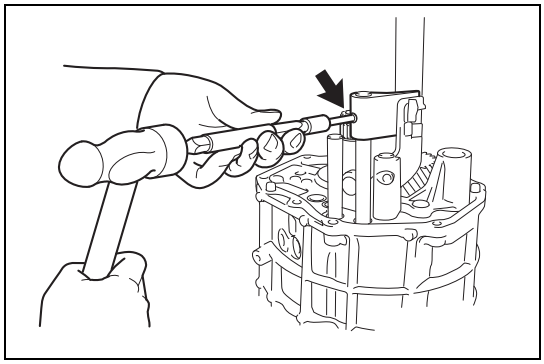


30. Removal of 6th gear thrust washer
    (1) Remove the 6th gear thrust washer.
    CAUTION:
    Verify the direction of the parts.

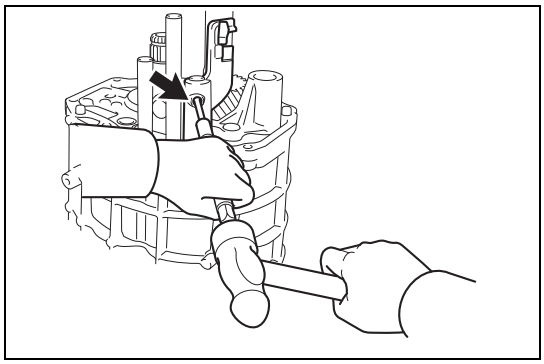
    (2) Remove the straight pin.



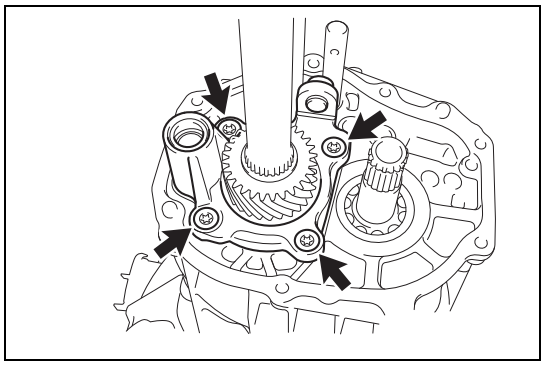
31. Removal of gear shift head No.2
    (1) Remove the slotted spring pin.
    (2) Remove the gear shift head No.2 from the gear shift fork shaft No.2.
    CAUTION:
    - Hold the slotted spring pin with a cloth to prevent it from flying out.
    - Do not drop the slotted spring pin from the fork shaft hole into the inside.
    - Verify the direction of the parts.



32. Removal of gear shift head No.1.
    (1) Remove the slotted spring pin.
    (2) Remove the gear shift head No.1 from the gear shift fork shaft No.1.

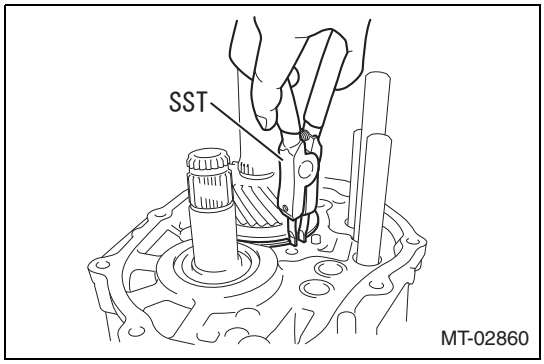


33. Removal of gear shift head No.3
    (1) Remove the slotted spring pin.
    (2) Remove the gear shift head No.3 from the gear shift fork shaft No.3.

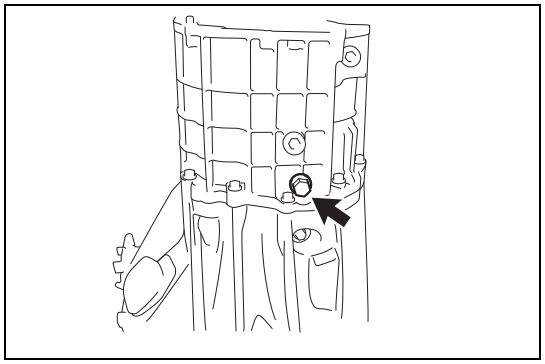


34. Removal of bearing retainer RR
    (1) Remove 4 TORX bolts to remove the bearing retainer RR.

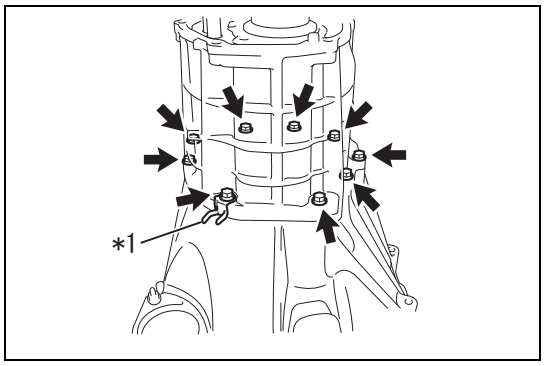
    (2) Remove the shift arm pivot.



35. Removal of transmission case
    (1) Use the SST to remove the shaft snap ring.
        SST 499895400



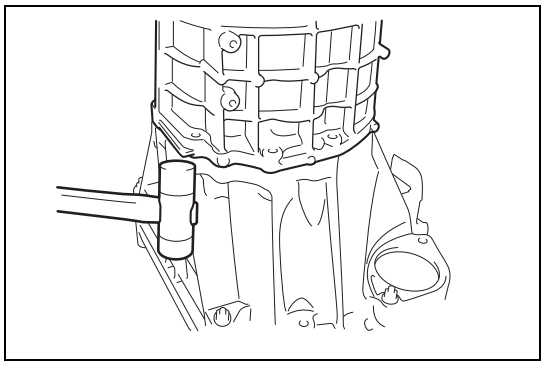
(2) Remove the reverse idler gear shaft fixing bolt and the gasket. (Transmission case side)



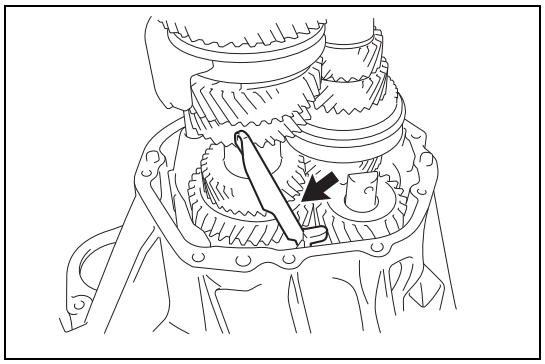
(3) Remove the 9 bolts and the clump.

Captions in illustration

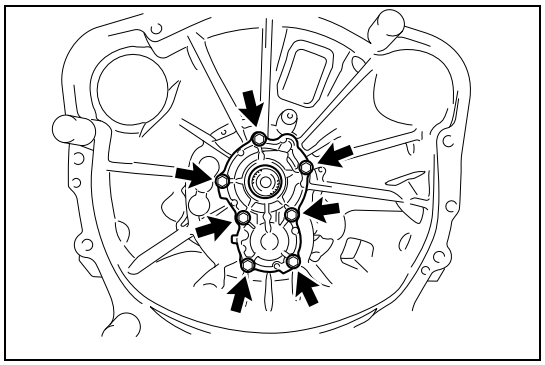
| | |
|---|---|
| *1 | Clamp |



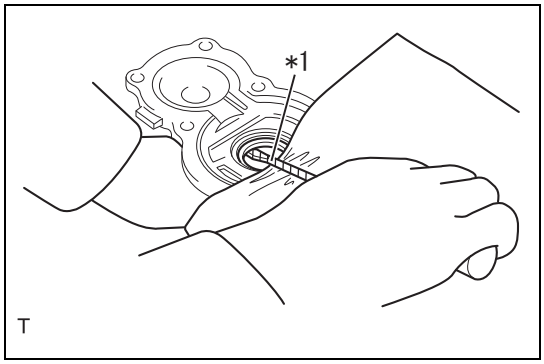
(4) Remove the transmission case.
CAUTION:
Do not damage the transmission case.



36. Removal of oil receiver pipe
(1) Remove the oil receiver pipe.



37. Removal of bearing retainer FR
(1) Remove the 7 bolts, then remove the bearing retainer FR.

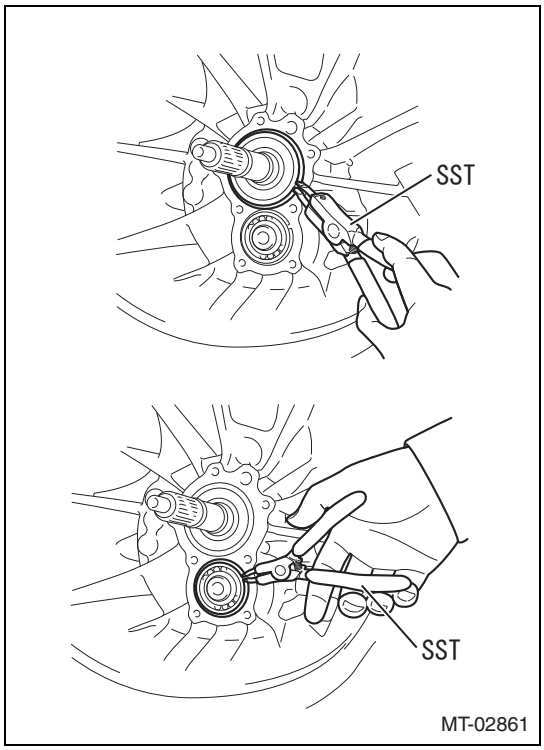


38. Removal of transmission front bearing retainer oil seal
    (1) Remove the transmission front bearing retainer oil seal.

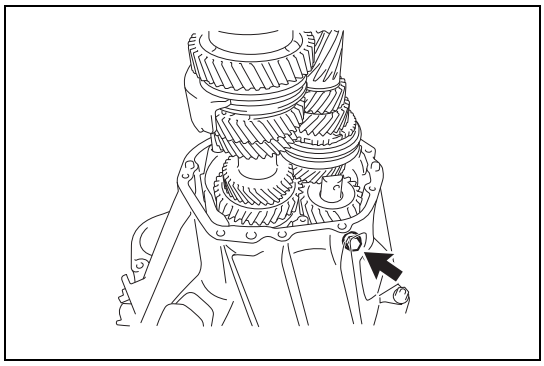
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Do not damage the bearing retainer FR.
NOTE:
Remove while applying a cloth to prevent damage to the bearing retainer FR.

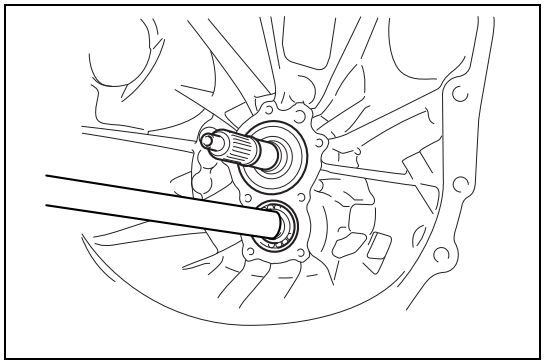


39. Removal of counter shaft
    (1) Use the SST to remove the 2 shaft snap rings.
    SST 499895400
    NOTE:
    Remove the shaft snap rings on the input shaft side and the counter shaft side.

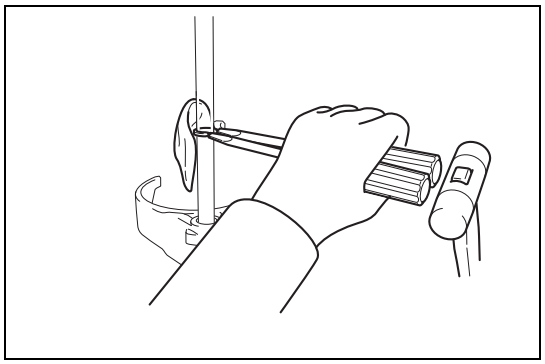


(2) Remove the bolt and the gasket to free the reverse idler gear and the reverse idler gear shaft. (Clutch housing side)

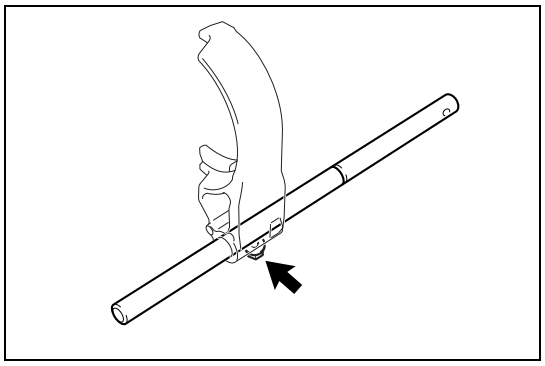
MT



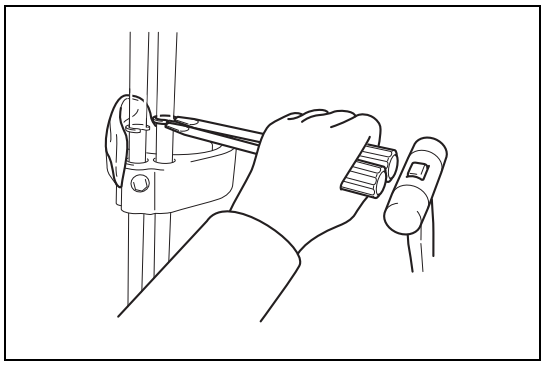
(3) Remove the input shaft, output shaft, counter shaft, reverse idler gear, reverse idler gear shaft, gear shift fork shaft No.1, gear shift fork shaft No.2, and gear shift fork shaft No.3 as a unit by hitting them from the clutch housing side with the handle of a hammer.



40. Removal of gear shift fork shaft No.2
    (1) Remove the shaft snap ring.
    CAUTION:
    Hold the shaft snap ring with a cloth to prevent it from flying out.

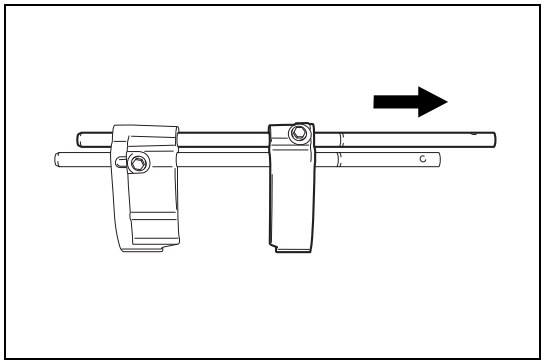


(2) Remove the bolt, then remove the gear shift fork shaft No.2.

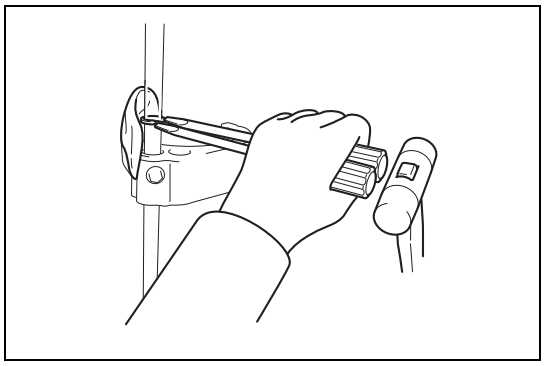


41. Removal of gear shift fork shaft No.1
    (1) Remove the shaft snap ring.
    CAUTION:
    Hold the shaft snap ring with a cloth to prevent it from flying out.

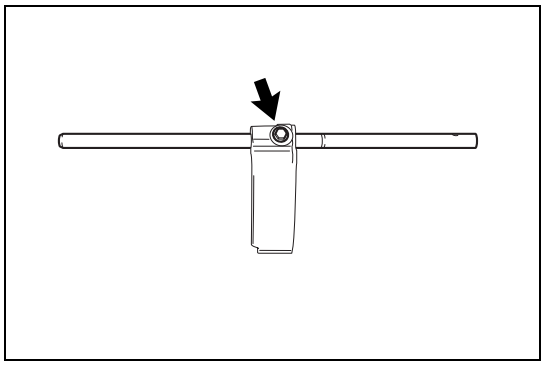
MT



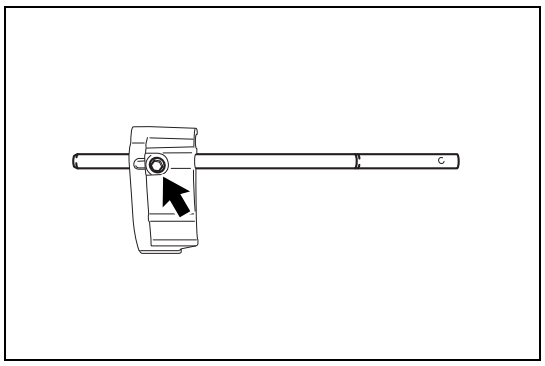
(2) Remove the gear shift fork shaft No.1 and the gear shift fork No.1 as a unit.



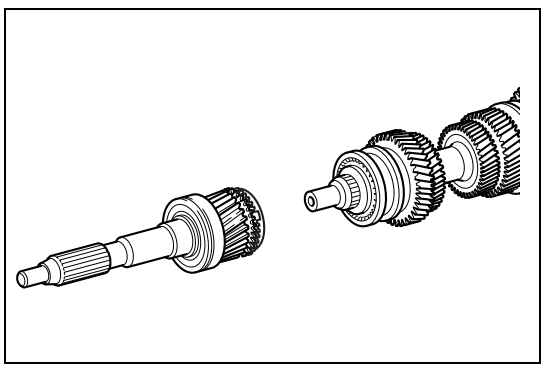
(3) Remove the shaft snap ring.
CAUTION:
Hold the shaft snap ring with a cloth to prevent it from flying out.



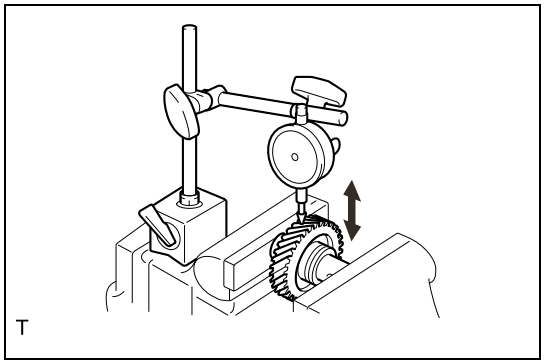
(4) Remove the bolt, then remove the gear shift fork shaft No.1.



42. Removal of gear shift fork shaft No.3
(1) Remove the bolt, then remove the gear shift fork shaft No.3.

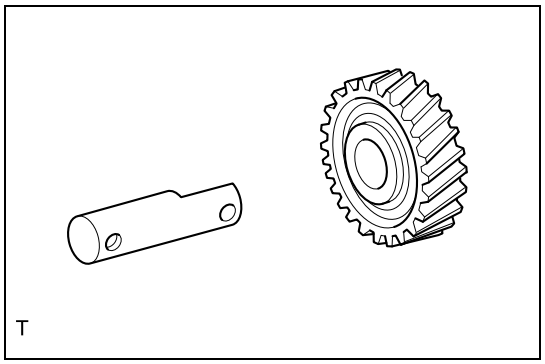


43. Removal of input shaft
(1) Remove the input shaft from the output shaft.



T

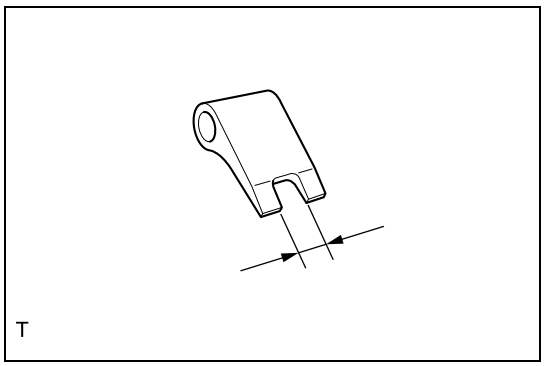
44. Check of reverse idler gear radial clearance
    (1) Secure the reverse idler gear shaft with a vise and check the radial clearance.
    Standard value: 0.040 to 0.082 mm {0.00157 to 0.00323 in}
    Limit: 0.082 mm {0.00323 in}
    NOTE:
    If the value exceeds the limit, replace the reverse idler gear and the reverse idler gear shaft with new ones.



T

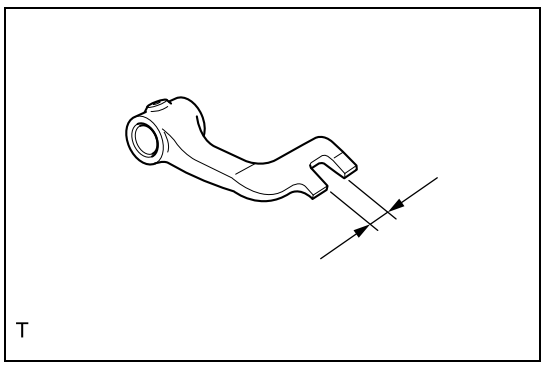
45. Removal of reverse idler gear shaft
    (1) Remove the reverse idler gear shaft from the reverse idler gear.

## Inspection



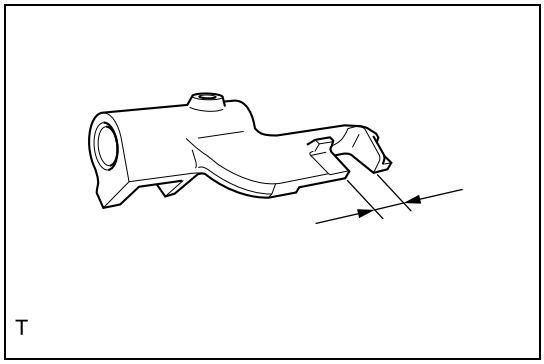
T

1. Gear shift head No.1 check
    (1) Check the dimension of the gear shift head No.1 groove.
    Standard value: 15.2 to 15.4 mm {0.59843 to 0.60630 in}
    Limit: 15.4 mm {0.60630 in}
    NOTE:
    If the value exceeds the limit, replace the gear shift head No.1 with a new one.

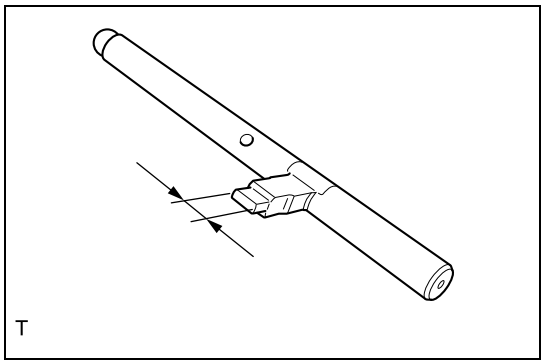


T

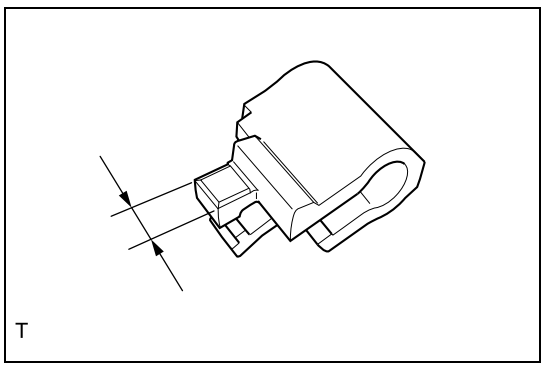
2. Gear shift head No.2 check
    (1) Check the dimension of the gear shift head No.2 groove.
    Standard value: 15.2 to 15.4 mm {0.59843 to 0.60630 in}
    Limit: 15.4 mm {0.60630 in}
    NOTE:
    If the value exceeds the limit, replace the gear shift head No.2 with a new one.



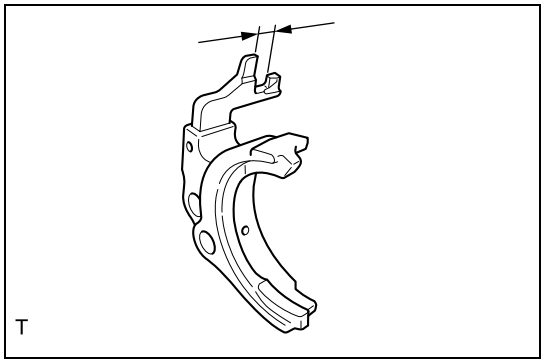
3. Gear shift head No.3 check
   (1) Check the dimension of the gear shift head No.3 groove.
   Standard value: 15.2 to 15.4 mm {0.59843 to 0.60630 in}
   Limit: 15.4 mm {0.60630 in}
   NOTE:
   If the value exceeds the limit, replace the gear shift head No.3 with a new one.



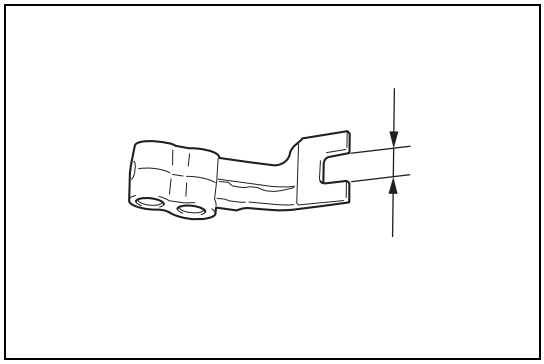
4. Shift shaft check
   (1) Check the thickness of the shift shaft claw.
   Standard value: 14.8 to 15.0 mm {0.583 to 0.591 in}
   Limit: 14.8 mm {0.583 in}
   NOTE:
   If the value is smaller than the limit, replace the shift shaft with a new one.



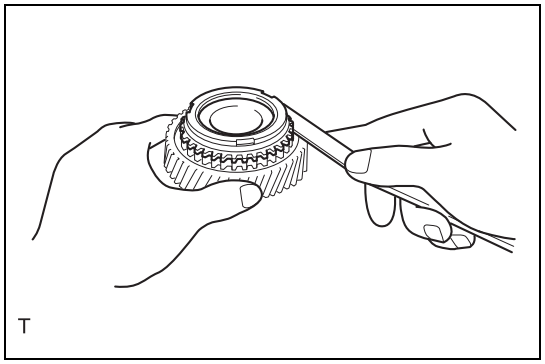
5. Check of shift inner lock block No.1.
   (1) Check the thickness of the shift inner lock block No.1 claw.
   Standard value: 14.8 to 15.0 mm {0.583 to 0.591 in}
   Limit: 14.8 mm {0.583 in}
   NOTE:
   If the value is smaller than the limit, replace the shift inner lock block No.1 with a new one.



6. Gear shift fork No.4 check
   (1) Check the dimension of the gear shift fork No.4 groove.
   Standard value: 15.2 to 15.4 mm {0.59843 to 0.60630 in}
   Limit: 15.4 mm {0.60630 in}
   NOTE:
   If the value exceeds the limit, replace the gear shift fork No.4 with a new one.

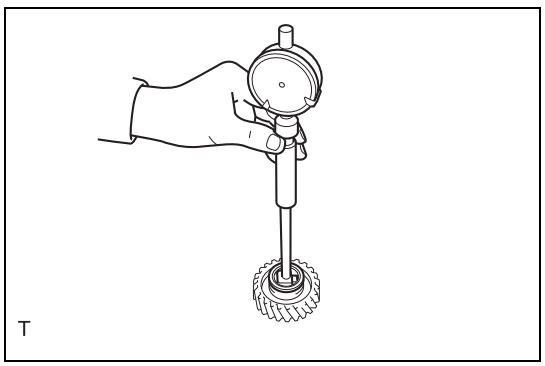


7. Check of 5th shift head
   (1) Check the dimension of the 5th shift head groove.
   Standard value: 15.2 to 15.4 mm {0.59843 to 0.60630 in}
   Limit: 15.4 mm {0.60630 in}
   NOTE:
   If the value exceeds the limit, replace the 5th shift head with a new one.

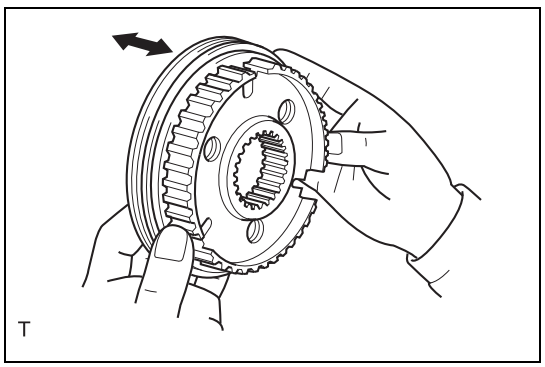


8. Check of synchronizer ring No.2
   (1) Apply manual transmission oil to the tapered cone portion of the counter shaft 6th gear. With the synchronizer ring No.2 pressed by hand, check the clearance between the synchronizer ring No.2 and the counter shaft 6th gear.
   Standard value: 0.88 to 1.52 mm {0.0346 to 0.0598 in}
   Limit: 0.88 mm {0.0346 in}
   CAUTION:
   Check the entire circumference of the gear.
   NOTE:
   - If the value is smaller than the limit, replace the synchronizer ring No.2 and the counter shaft 6th gear with new ones.
   - Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

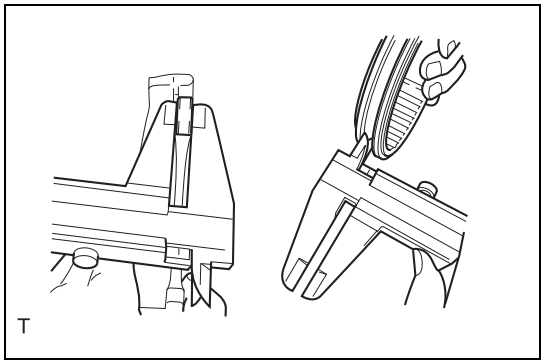
   (2) Apply manual transmission oil to the tapered cone portion of the counter shaft 6th gear, and check that the synchronizer ring No.2 does not slip in the circumferential direction while pressing it by hand.
   NOTE:
   - If it slips, replace the synchronizer ring No.2 and the counter shaft 6th gear with new ones.
   - Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



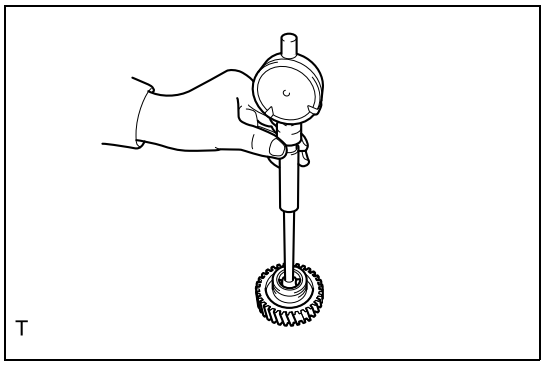
9. Check of counter shaft 6th gear
   (1) Check the inner diameter of the counter shaft 6th gear.
   Standard value: 34.015 to 34.040 mm {1.33917 to 1.34016 in}
   Limit: 34.040 mm {1.34016 in}
   NOTE:
   If the value exceeds the limit, replace the counter shaft 6th gear with a new one.



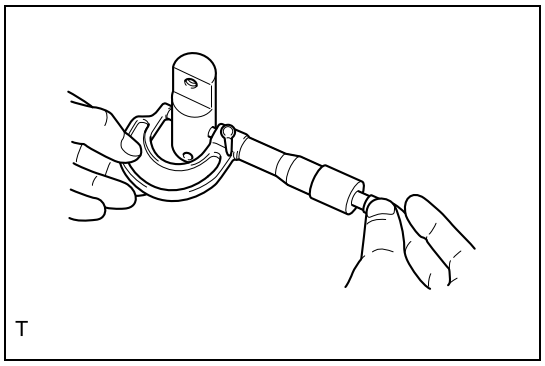
10. Check of transmission hub sleeve No.4
   (1) Check that the end of the spline gear of the transmission hub sleeve No.4 is not worn.
   NOTE:
   If it is worn, replace the transmission hub sleeve No.4 with a new one.
   (2) Install the transmission hub sleeve No.4 to the transmission clutch hub No.4 and check that they slide smoothly.
   NOTE:
   If they do not slide smoothly, replace the transmission hub sleeve No.4 and the transmission clutch hub No.4 with new ones.



11. Check of transmission hub sleeve No.4 clearance
    (1) Check the thickness of the gear shift fork No.4 claw.
        Standard value: 7.9 to 8.0 mm {0.311 to 0.315 in}
        Limit: 7.9 mm {0.311 in}
        NOTE:
        If the value is smaller than the limit, replace the gear shift fork No.4 with a new one.
    (2) Measure the groove of the transmission hub sleeve No.4 and calculate the clearance between it and the gear shift fork No.4.
        Standard value: 0.15 to 0.35 mm {0.00590 to 0.0138 in}
        Limit: 0.35 mm {0.0138 in}
        NOTE:
        If the value exceeds the limit, replace the gear shift fork No.4 and the transmission hub sleeve No.4 with new ones as a set.



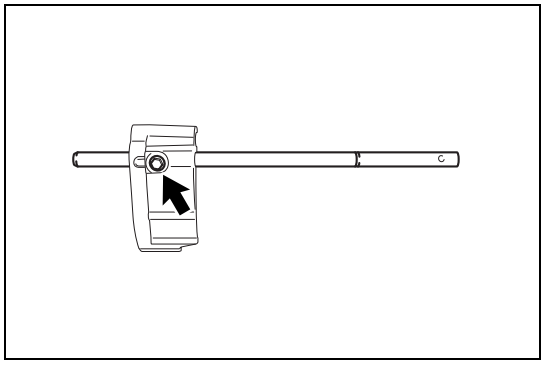
12. Reverse idler gear check
    (1) Check the inner diameter of the reverse idler gear.
        Standard value: 22.040 to 22.061mm {0.86771 to 0.86854 in}
        Limit: 22.061mm {0.86854 in}
        NOTE:
        If the value exceeds the limit, replace the reverse idler gear with a new one.



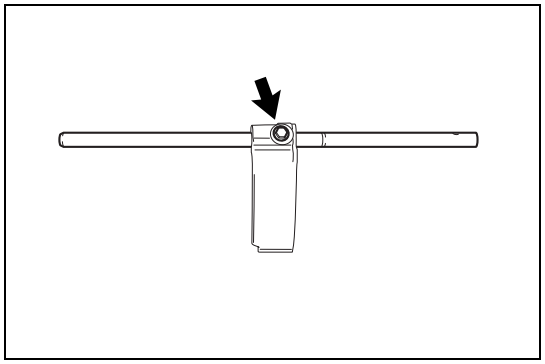
13. Reverse idler gear shaft check
    (1) Check the outer diameter of the reverse idler gear shaft.
        Standard value: 21.979 to 22.000 mm {0.86531 to 0.86614 in}
        Limit: 21.979 mm {0.86531 in}
        NOTE:
        If the value is smaller than the limit, replace the reverse idler gear shaft with a new one.

MT

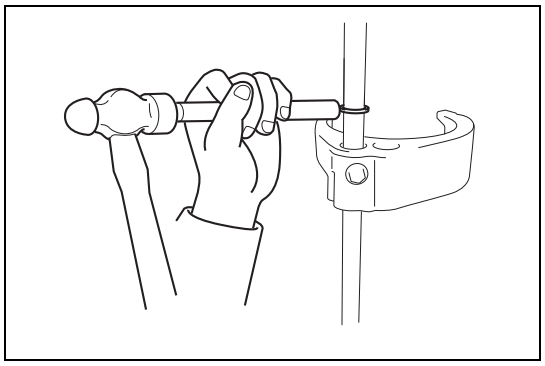
## Assembly



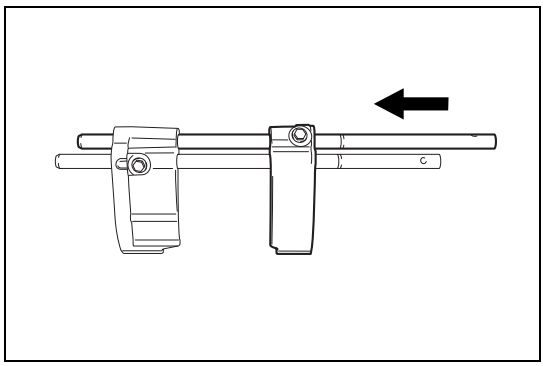
1. Installation of gear shift fork shaft No.3
    (1) Install the gear shift fork shaft No.3 to the gear shift fork No.3 with a new bolt.
        Standard value:T=19.5N·m {198.8kgf·cm} {14.4ft·lbf}



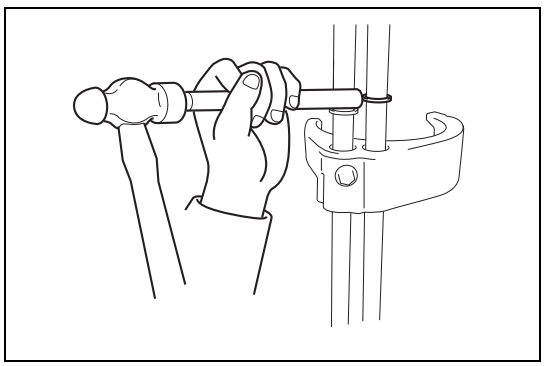
2. Installation of gear shift fork shaft No.1
   (1) Install the gear shift fork shaft No.1 to the gear shift fork No.1 with a new bolt.
   Standard value:T=19.5N·m {198.8kgf·cm} {14.4ft·lbf}



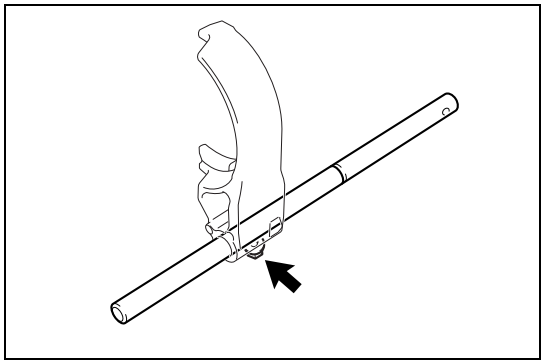
(2) Install a new shaft snap ring.



(3) Install the gear shift fork shaft No.1 and the gear shift fork No.1 as a unit to the gear shift fork shaft No.3 and the gear shift fork No.3.

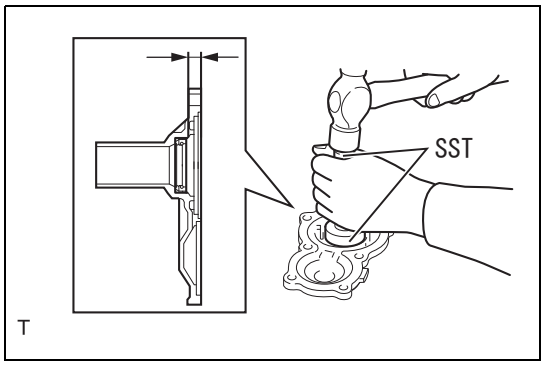


(4) Install a new shaft snap ring.

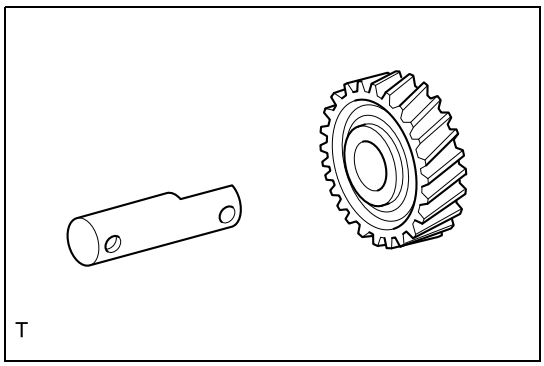


3. Installation of gear shift fork shaft No.2
   (1) Install the gear shift fork shaft No.2 to the gear shift fork No.2 with a new bolt.
   Standard value:T=19.5N·m {198.8kgf·cm} {14.4ft·lbf}

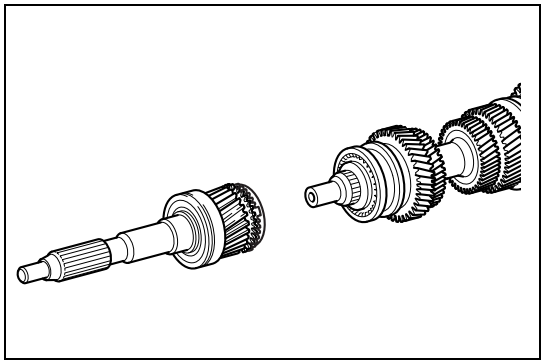
   (2) Install a new shaft snap ring.



4. Installation of transmission front bearing retainer oil seal
   (1) Use the SST to install a new transmission front bearing retainer oil seal.
   SST 09950-60010 (09951-00420), 09950-70010 (09951-07100)
   Standard value: 11.1 to 11.9 mm {0.437 to 0.469 in} (from end face of bearing retainer FR)
   CAUTION:
   - Do not damage the lip of the transmission front bearing retainer oil seal.
   - Do not damage the bearing retainer FR.
   (2) Apply manual transmission oil to the lip of the transmission front bearing retainer oil seal.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

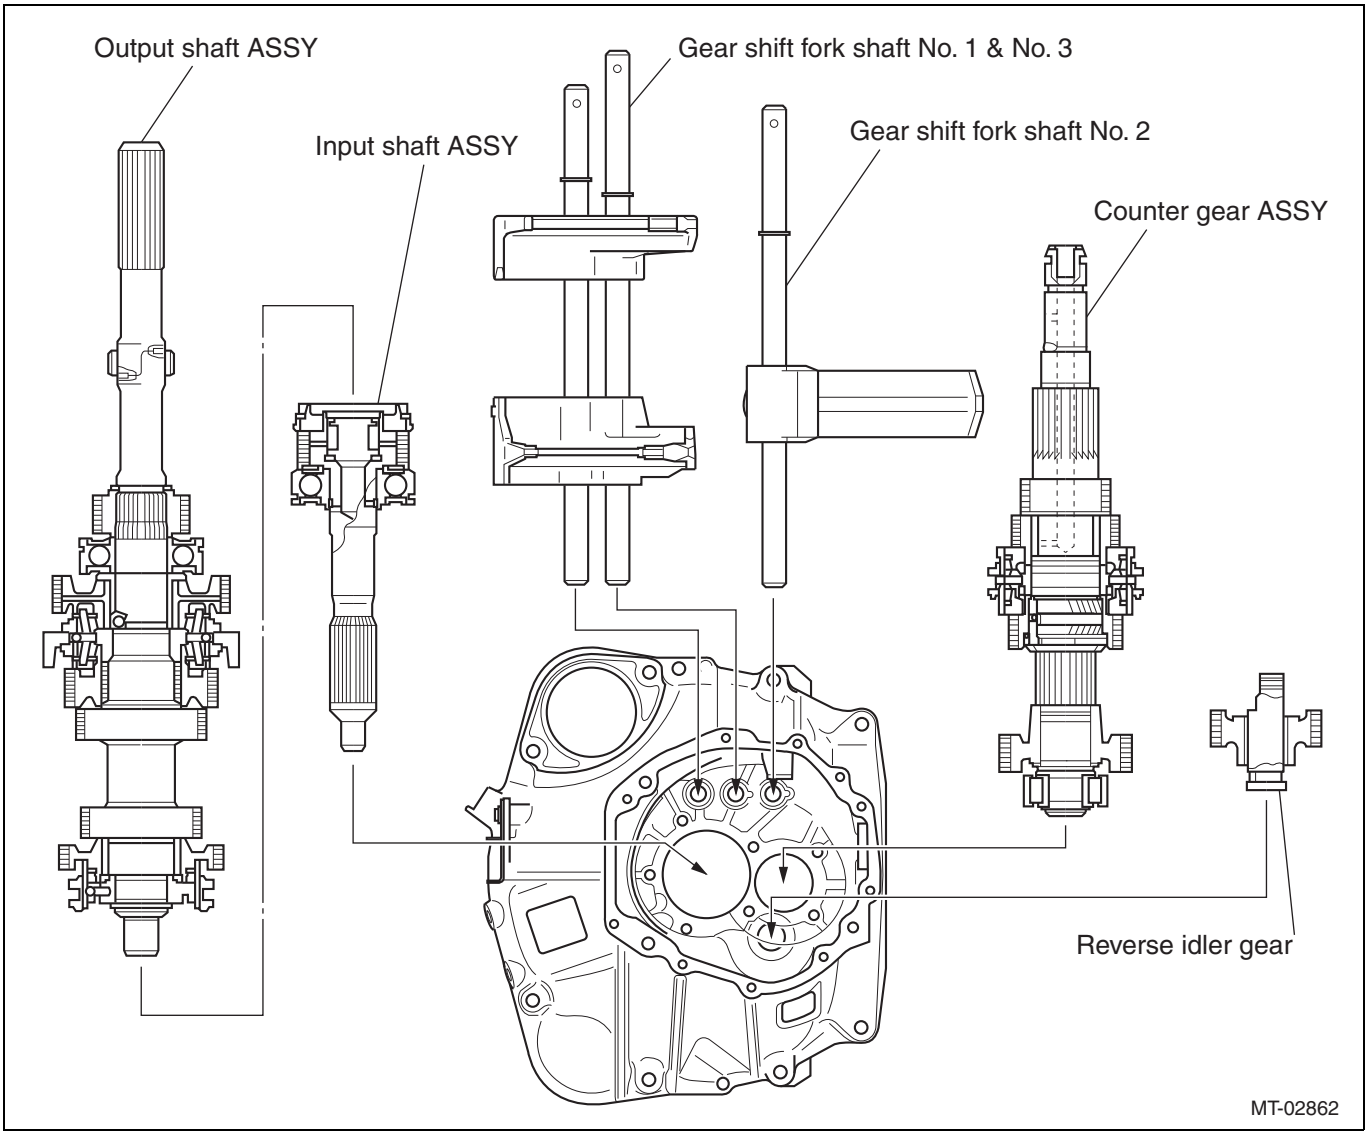


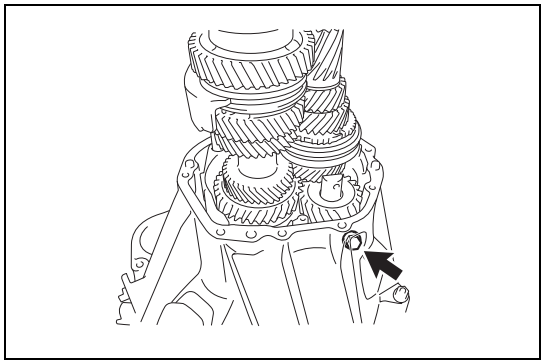
5. Installation of reverse idler gear shaft
   (1) Apply manual transmission oil to the reverse idler gear shaft and install the reverse idler gear shaft to the reverse idler gear.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



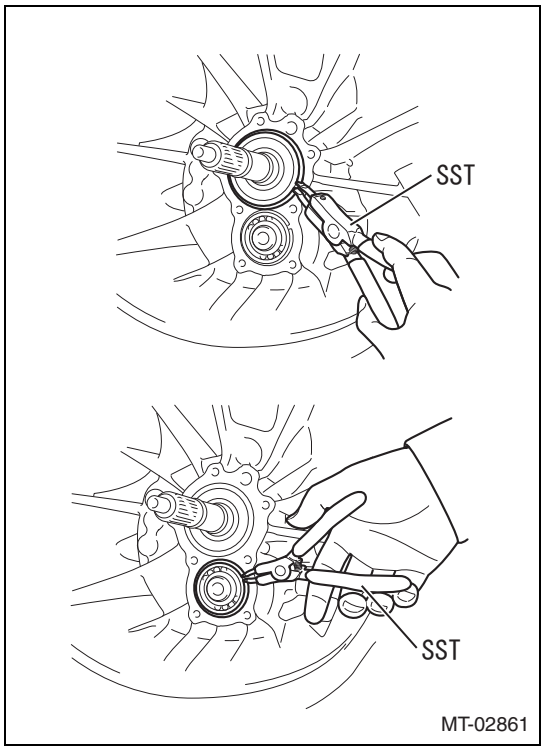
6. Installation of input shaft
   (1) Apply manual transmission oil to the needle roller bearing of the input shaft, and install the input shaft to the output shaft.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

7. Installation of counter shaft
   (1) Install the input shaft, output shaft, counter shaft, reverse idler gear, reverse idler gear shaft, gear shift fork shaft No.1, gear shift fork shaft No.2, and gear shift fork shaft No.3 as a unit to the clutch housing.

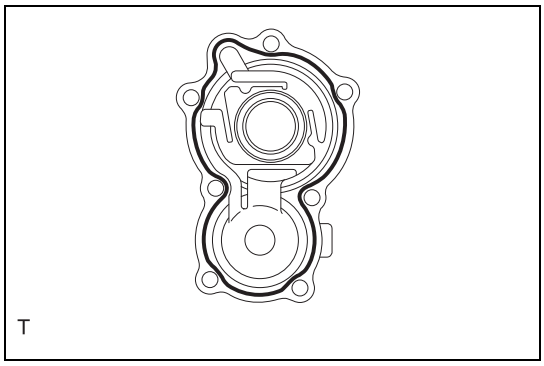




(2) Temporarily tighten the reverse idler gear shaft with a new bolt via a new gasket. (Clutch housing side)



(3) Use the SST to install 2 new shaft snap rings.
SST 499895400
NOTE:
Install the shaft snap rings on the input shaft side and the counter shaft side.



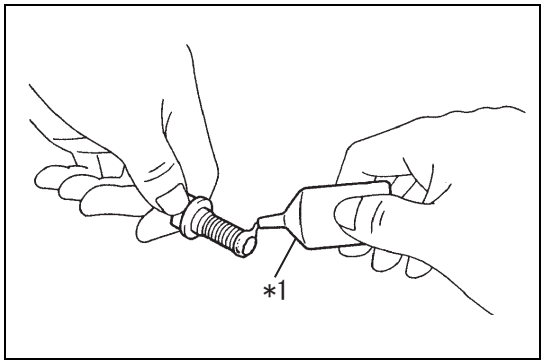
8. Installation of bearing retainer FR
(1) Apply Three Bond 1281 or equivalent continuously like beads to the position of the bearing retainer FR shown in the figure.

Captions in illustration

| | |
|---|---|
| ■ | Three Bond 1281 or equivalent |

CAUTION:
Install within 10 minutes after applying seal gasket.

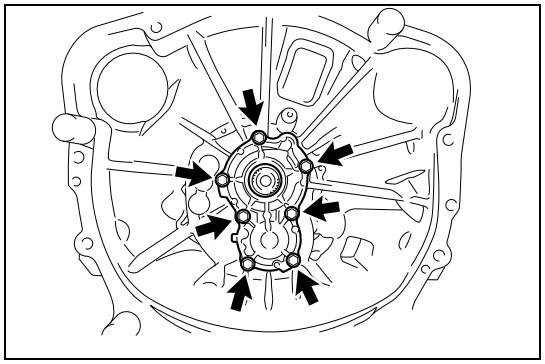
MT



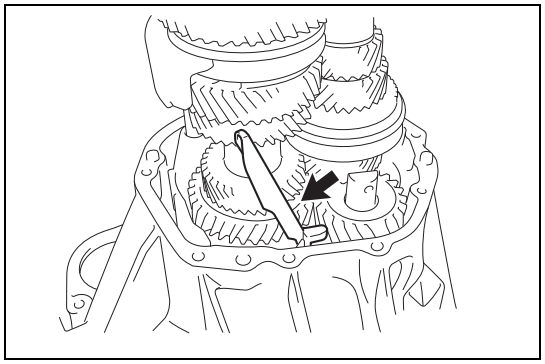
(2) Apply Adhesive 1344 or equivalent to the 2 to 3 pitches from the tip of a new bolt.

Captions in illustration

| | |
|---|---|
| *1 | Adhesive 1344 or equivalent |

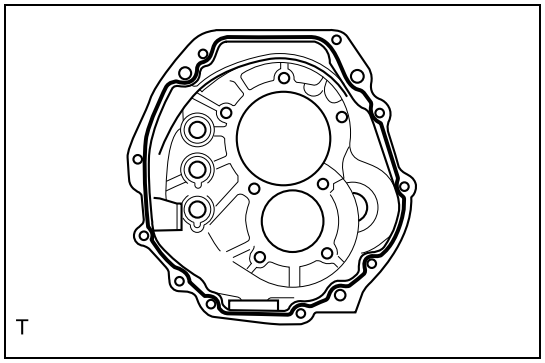


(3) Install the bearing retainer FR with the 7 bolts.
Standard value:T=17N·m {173kgf·cm} {12.5ft·lbf}
CAUTION:
Do not damage the lip of the bearing retainer FR oil seal.



9. Installation of oil receiver pipe
(1) Install the oil receiver pipe.
CAUTION:
Check that the tip of the oil receiver pipe is not lifted or disconnected.

MT

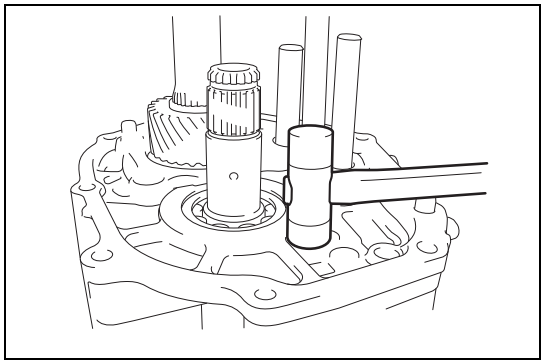


10. Installation of transmission case
(1) Apply Three Bond 1281 or equivalent continuously like beads to the position of the transmission case shown in the figure.

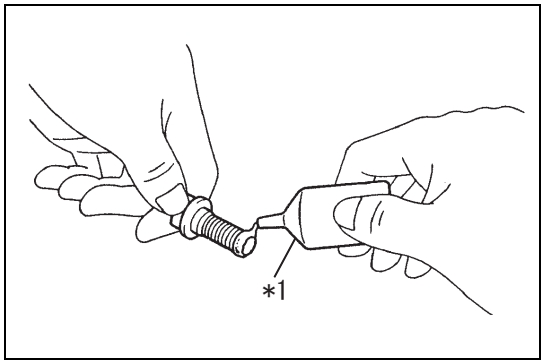
Captions in illustration

| | |
|---|---|
| ■ | Three Bond 1281 or equivalent |

CAUTION:
Install within 10 minutes after applying seal gasket.



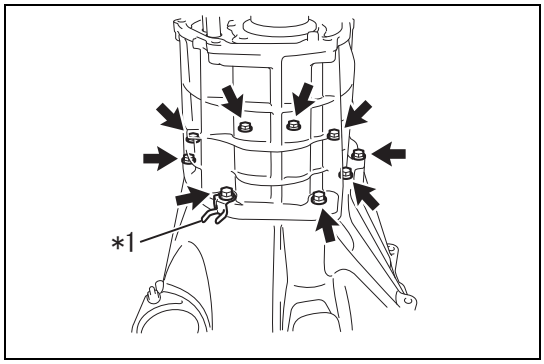
(2) Check the position of the knock pin and install the transmission case.



(3) Apply Adhesive 1324 or equivalent to the 2 to 3 pitches from the tip of a new bolt.

Captions in illustration

| | |
|---|---|
| *1 | Adhesive 1324 or equivalent |

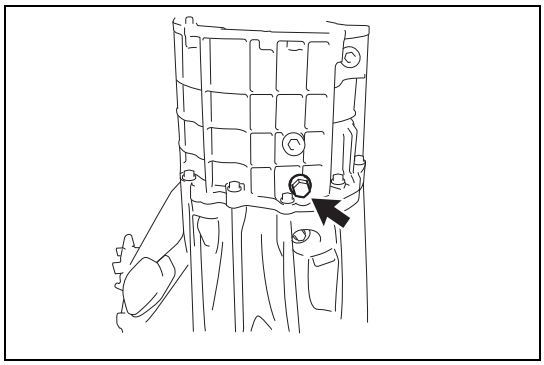


(4) Install the transmission case and clamp with the 9 bolts.

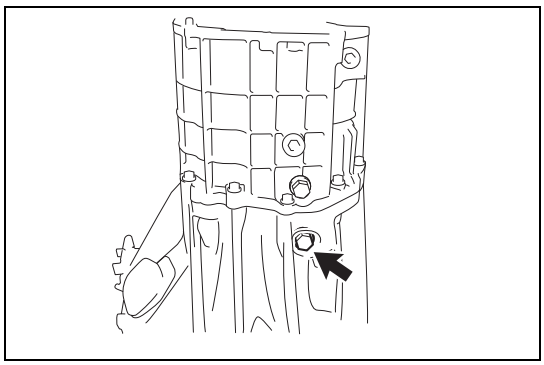
Captions in illustration

| | |
|---|---|
| *1 | Clamp |

Standard value:T=29N·m {296kgf·cm} {21.4ft·lbf}

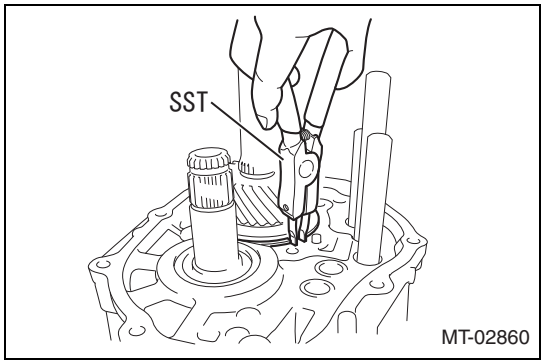


(5) Install a new reverse idler gear shaft fixing bolt via a new gasket. (Transmission case side)
Standard value:T=28N·m {286kgf·cm} {20.7ft·lbf}

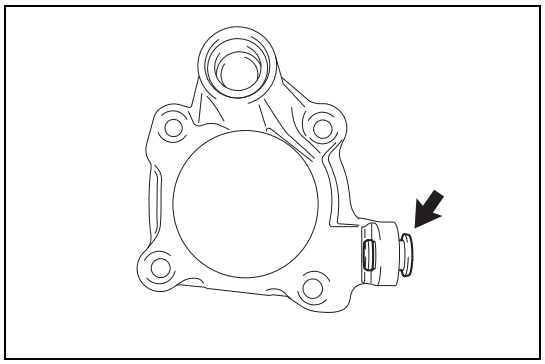


(6) Tighten the reverse idler gear shaft fixing bolt. (Clutch housing side)
Standard value:T=28N·m {286kgf·cm} {20.7ft·lbf}

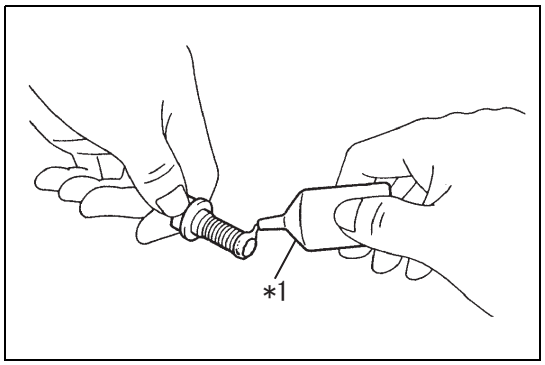
MT



(7) Use the SST to install a new shaft snap ring.
SST 499895400



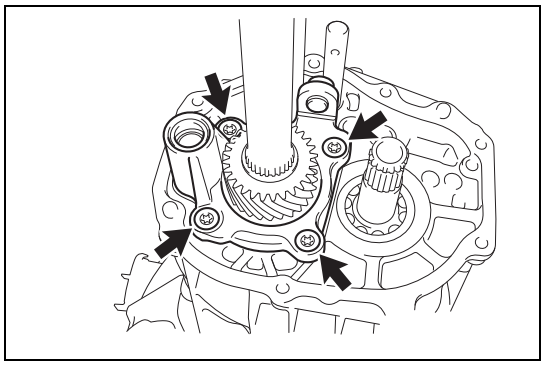
11. Installation of bearing retainer RR
(1) Install the shift arm pivot to the bearing retainer RR.



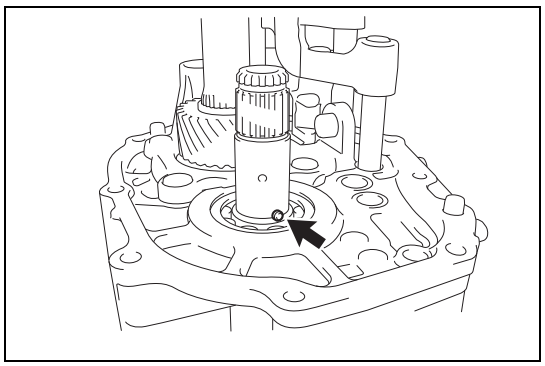
(2) Apply Adhesive 1324 or equivalent to the 2 to 3 pitches from the tip of a new bolt.

Captions in illustration

| | |
|---|---|
| *1 | Adhesive 1324 or equivalent |

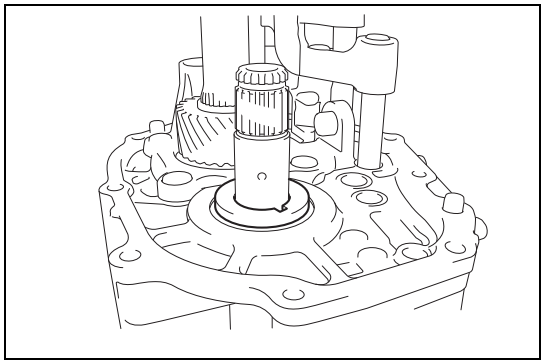


(3) Install the bearing retainer RR with 4 TORX bolts.
Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}

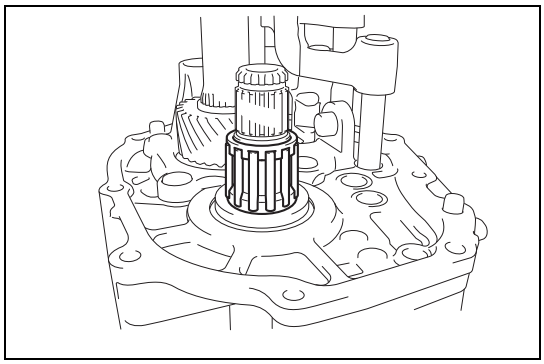


12. Installation of 6th gear thrust washer
(1) Install the straight pin to the counter shaft.

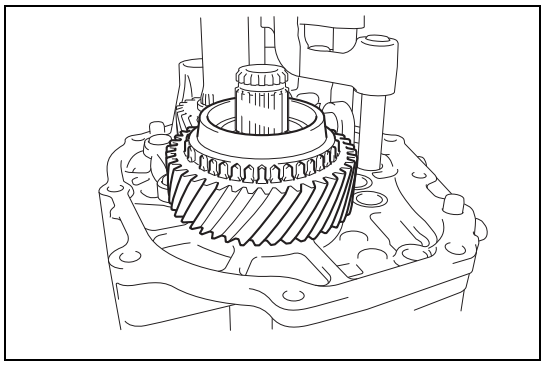
MT



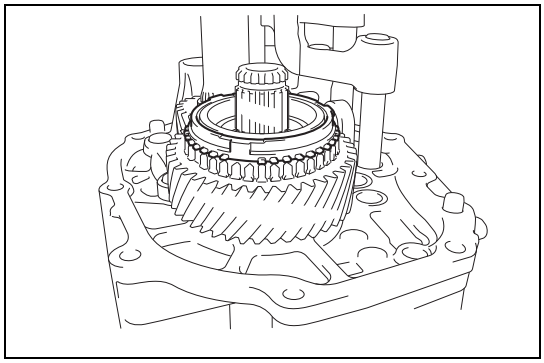
(2) Apply manual transmission oil to the 6th gear thrust washer, and install the 6th gear thrust washer to the counter shaft.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



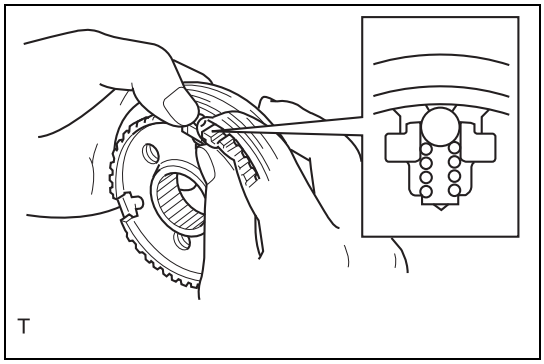
13. Installation of needle roller bearing
(1) Apply manual transmission oil to the needle roller bearing and install the needle roller bearing to the counter shaft.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



14. Installation of counter shaft 6th gear
(1) Apply manual transmission oil to the counter shaft 6th gear, and install the counter shaft 6th gear to the counter shaft.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



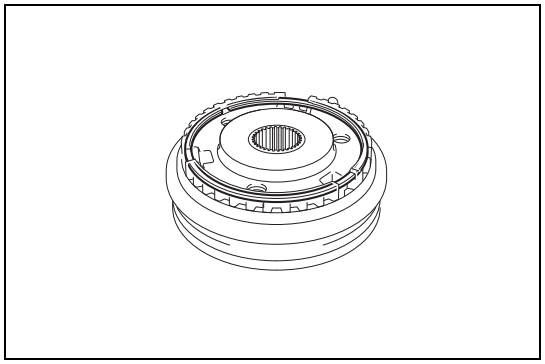
15. Installation of synchronizer ring No.2
(1) Apply manual transmission oil to the synchronizer ring No.2, and install the synchronizer ring No.2 to the counter shaft.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



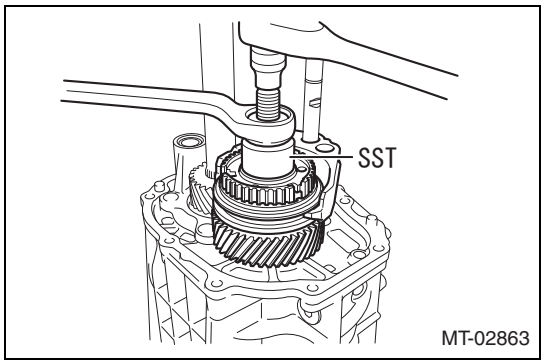
16. Installation of transmission hub sleeve No.4
(1) Apply manual transmission oil to the sliding area of the transmission clutch hub No.4.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
(2) Install the transmission hub sleeve No.4 to the transmission clutch hub No.4, and install the 3 balls after installing the 3 synchromesh shifting keys No.1 and the 3 synchromesh shifting key springs No.1 as a unit.

NOTE:
- Install the balls while pressing the synchromesh shifting key spring No.1.
- After the installation, settle the synchromesh shifting key spring No.1.

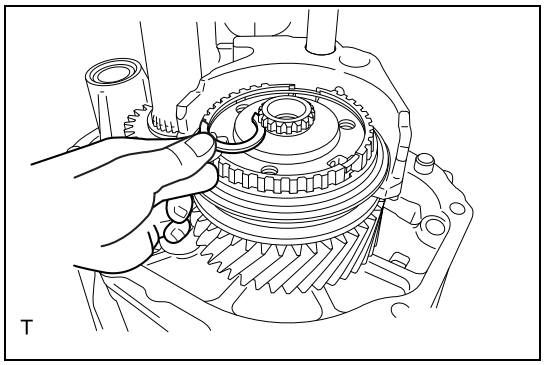
(3) Install a new hole snap ring.



17. Installation of transmission clutch hub No.4
    (1) Use the SST to install the transmission clutch hub No.4, transmission hub sleeve No.4, and gear shift fork No.4 as a unit.
    SST 18682AA000



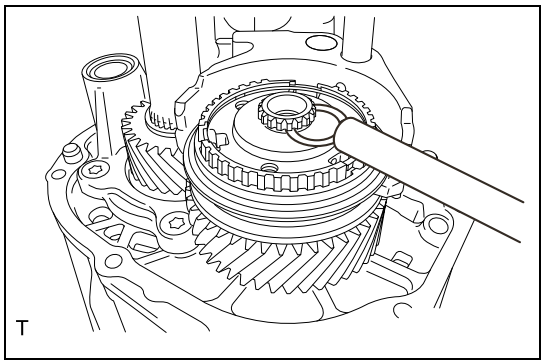
18. Installation of shaft snap ring
    (1) Select a shaft snap ring so that the thrust clearance between the transmission clutch hub No.4 and the snap ring is within the standard value.
    Standard value: 0 to 0.1 mm {0 to 0.00394 in}
    NOTE:
    Select a shaft snap ring with the maximum thickness that can be installed.

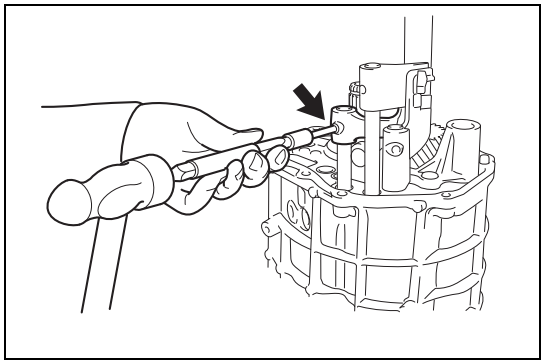


Shaft snap ring type

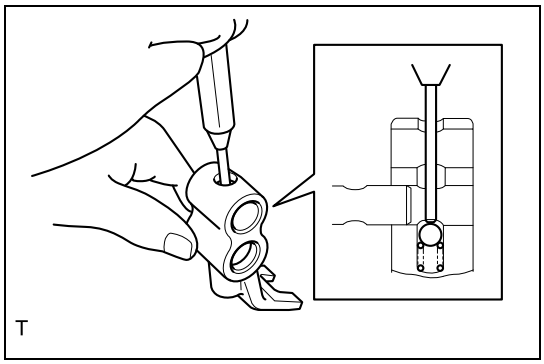
| Item number | Thickness mm {in} | Identification |
|---|---|---|
| 17005AA230 | 2.8 {0.110} | A |
| 17005AA240 | 2.85 {0.11220} | B |
| 17005AA250 | 2.90 {0.11417} | C |
| 17005AA260 | 2.95 {0.11614} | D |
| 17005AA270 | 3.00 {0.11811} | E |
| 17005AA280 | 3.05 {0.12007} | F |

(2) Install a new shaft snap ring to the counter shaft.





19. Installation of gear shift head No.2
    (1) Install the gear shift head No.2 to the gear shift fork shaft No.2.
    (2) Install a new slotted spring pin to the gear shift fork shaft No.2.
    CAUTION:
    Do not drive in the pin excessively.
    Standard value: 0 mm {0 in} (from end face of gear shift head No.2)

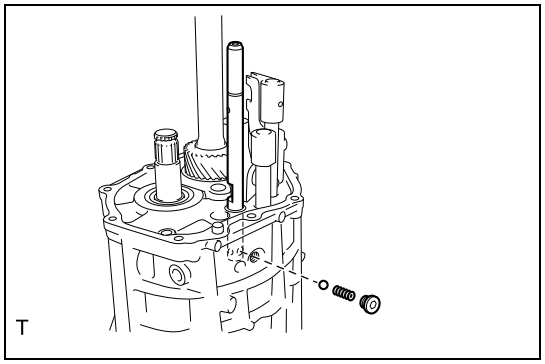


20. Installation of 5th shift head
    (1) Install the compression spring to the 5th shift head, and install the 5th shift head to the gear shift fork shaft No.3 while pressing the ball with the pin punch 5.

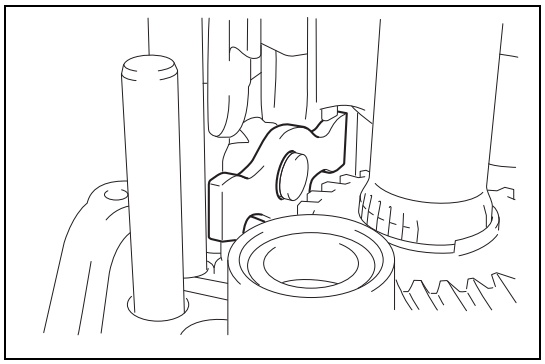
    (2) Install the washer.

    (3) Install a new shaft snap ring to the gear shift fork shaft No.3.

MT

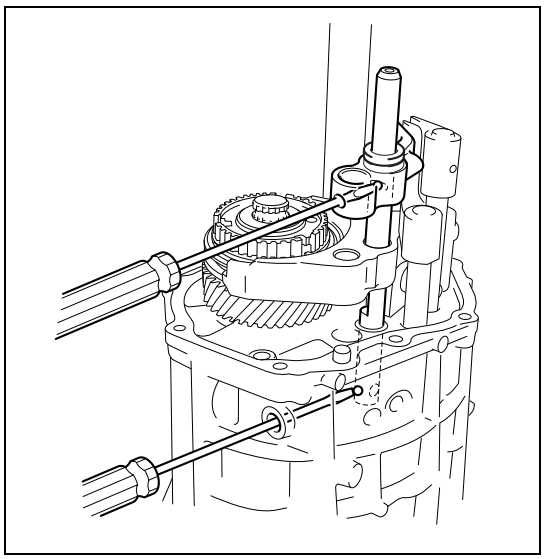


21. Installation of gear shift fork shaft No.3
    (1) Insert the gear shift fork shaft No.3 in the direction shown in the figure, install the ball and the compression spring, and tighten a new head straight screw plug.
    Standard value:T=19N·m {194kgf·cm} {14.0ft·lbf}

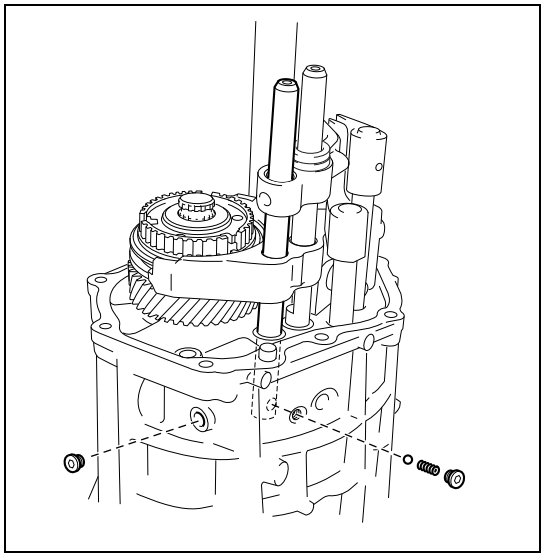


22. Installation of shift arm
    (1) Install the shift arm to the shift arm pivot.

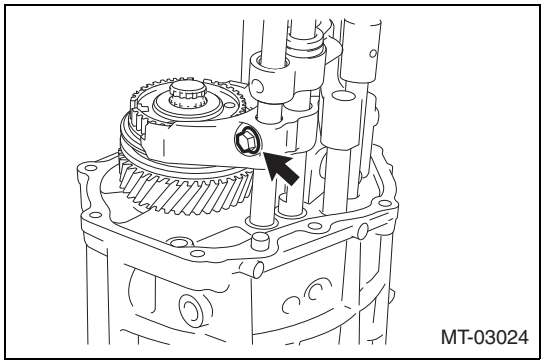
    (2) Install a new E-ring to the shift arm pivot.



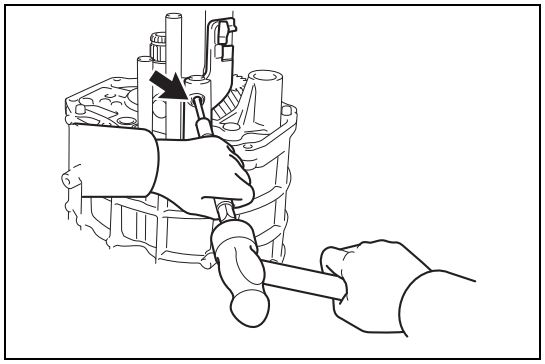
23. Installation of gear shift fork shaft No.2
    (1) Install 2 balls to the gear shift fork shaft No.3.



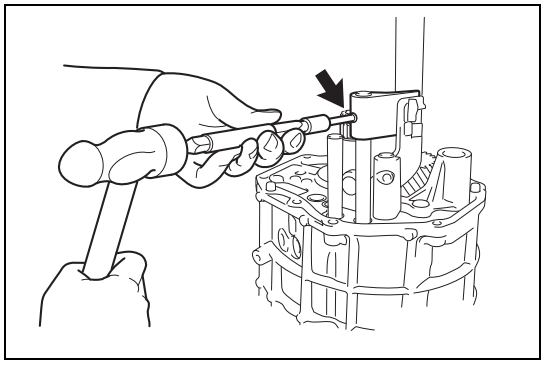
(2) Insert the gear shift fork shaft No.2 in the direction shown in the figure, install the ball and the compression spring, and tighten 2 new head straight screw plugs.
Standard value:T=19N·m {194kgf·cm} {14.0ft·lbf}



(3) Install a new bolt to the gear shift fork shaft No. 2.
Standard value:T=19.5N·m {198.8kgf·cm} {14.4ft·lbf}

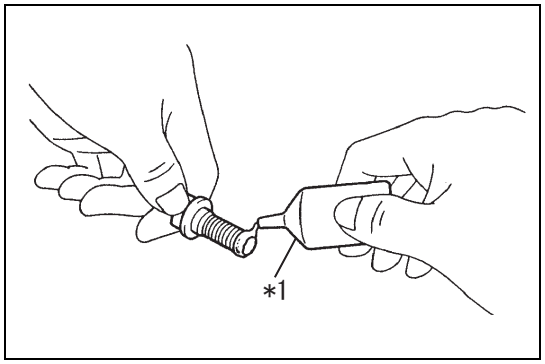


24. Installation of gear shift head No.3
(1) Install the gear shift head No.3 to the gear shift fork shaft No.3.
NOTE:
Install while rotating the gear shift head No.3 so as to insert the shift arm in the groove of the gear shift head No.3.
(2) Install a new slotted spring pin to the gear shift fork shaft No.3.
CAUTION:
Do not drive in the pin excessively.
Standard value: 0 mm {0 in} (from end face of gear shift head No.3)



25. Installation of gear shift head No.1
(1) Install the gear shift head No.1 to the gear shift fork shaft No.1.
(2) Install a new slotted spring pin to the gear shift fork shaft No.1.
CAUTION:
Do not drive in the pin excessively.
Standard value: 0 mm {0 in} (from end face of gear shift head No.1)

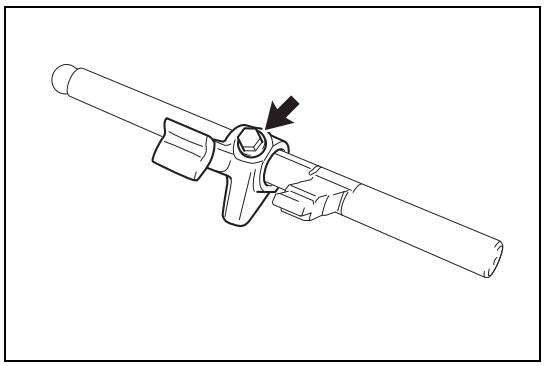
MT



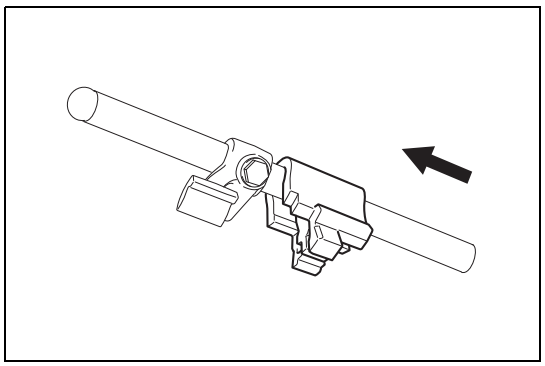
26. Installation of shift inner lever FR
    (1) Apply Adhesive 1324 or equivalent to the 2 to 3 pitches from the tip of a new bolt.

Captions in illustration

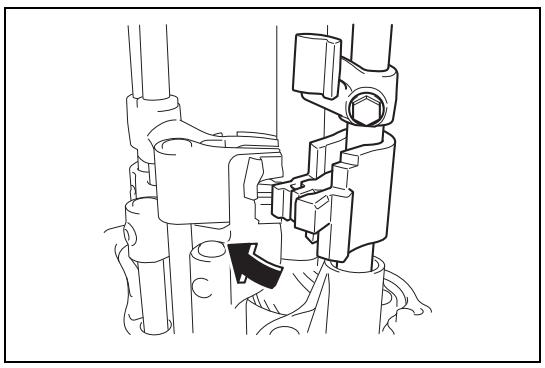
| | |
|---|---|
| *1 | Adhesive 1324 or equivalent |



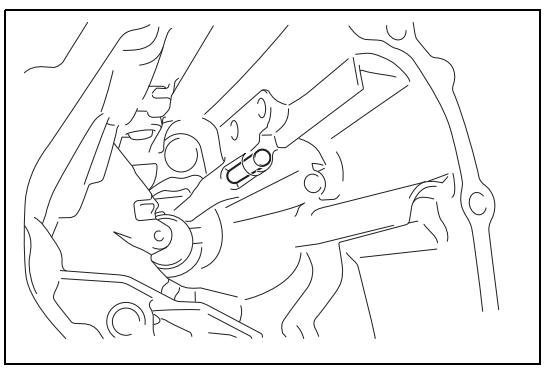
(2) Install the shift inner lever FR to the shift shaft with a new bolt.
Standard value:T=33.3N·m {339.5kgf·cm} {24.6ft·lbf}



27. Installation of shift inner lock block No.1
    (1) Install the shift inner lock block No.1 to the shift shaft.

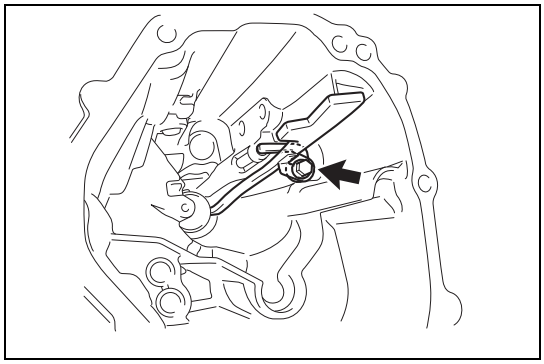


28. Installation of shift shaft
    (1) Slide and install the shift shaft and the shift inner lock block No.1.

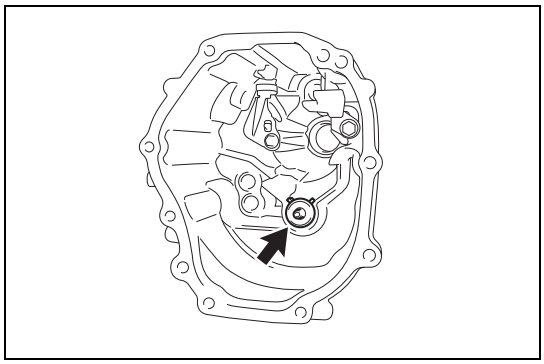


29. Installation of extension housing oil receiver pipe No.1
    (1) Install the straight pin.

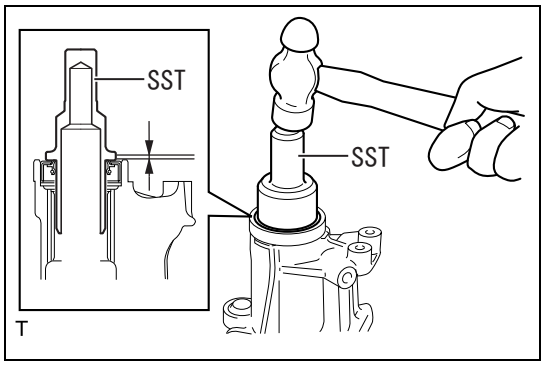
MT



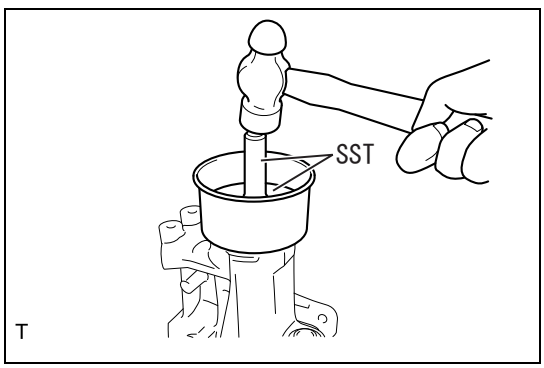
(2) Install the extension housing oil receiver pipe No.1 and the stopper plate with a new bolt.
Standard value:T=8.5N·m {87kgf·cm} {6.3ft·lbf}
NOTE:
Make sure the end of the oil receiver pipe No.1 is inserted in the groove.



30. Installation of extension housing oil receiver pipe No.2
(1) Install the extension housing oil receiver pipe No.2.

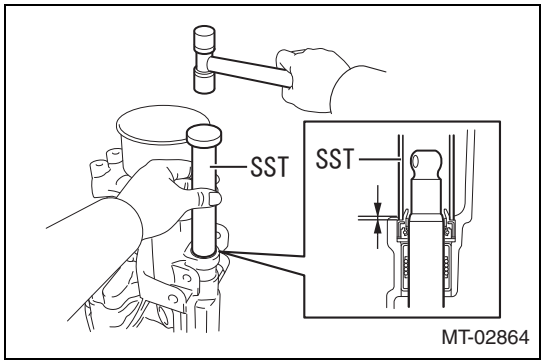


31. Installation of transmission extension housing oil seal
(1) Apply manual transmission oil to the lip of a new transmission extension housing oil seal.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
(2) Use the SST to install a new transmission extension housing oil seal.
SST 09325-20010
Standard value: 0.1 to 1.1 mm {0.00394 to 0.0433} (from end face of transmission extension housing SUB-ASSY (MTM))
CAUTION:
Do not damage the lip of the transmission extension housing oil seal.

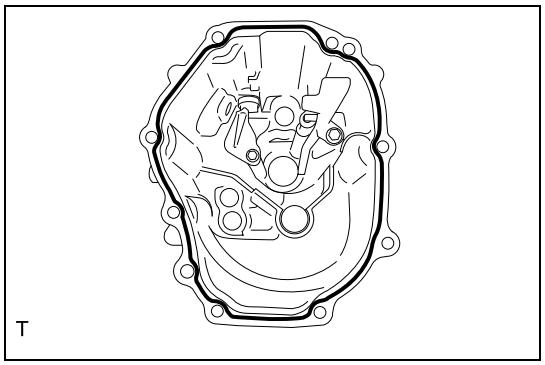


32. Installation of extension housing dust deflector
(1) Use the SST to install a new extension housing dust deflector.
SST 09950-60020 (09951-00750), 09950-70010 (09951-07100)
NOTE:
Drive in the deflector until it contacts the transmission extension housing SUB-ASSY (MTM).

MT



33. Installation of extension housing rear oil seal
    (1) Use the SST to install a new extension housing rear oil seal.
    SST 18657AA040
    Standard value: 1.0 to 2.0 mm {0.0394 to 0.0787 in} (from end face of transmission extension housing SUB-ASSY (MTM))
    CAUTION:
    Do not damage the lip of the extension housing rear oil seal.
    (2) Apply manual transmission oil to the lip of the extension housing rear oil seal.
    NOTE:
    Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



34. Installation of transmission extension housing SUB-ASSY (MTM)
    (1) Apply Three Bond 1281 continuously like beads to the position of the transmission extension housing SUB-ASSY (MTM) shown in the figure.

Captions in illustration

| | |
|---|---|
| ■ | Three Bond 1281 or equivalent |

CAUTION:
- Install within 10 minutes after applying seal gasket.
- Be sure to install the transmission extension housing SUB-ASSY (MTM) with the shift position in neutral status.

    (2) Install the transmission extension housing SUB-ASSY (MTM) and the clamp with the 8 new bolts.

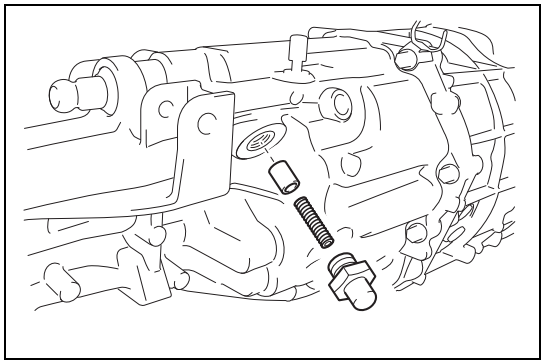
Captions in illustration

| | |
|---|---|
| *1 | Clamp |

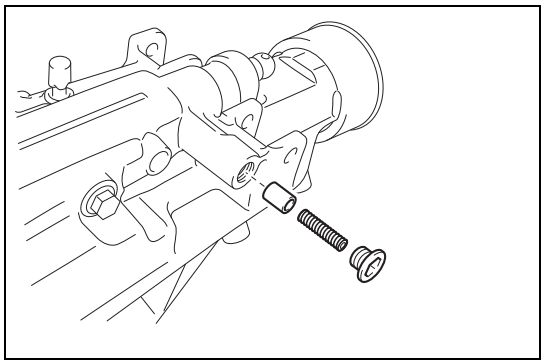
Standard value:T=29N·m {296kgf·cm} {21.4ft·lbf}
CAUTION:
Align the knock pin into the knock pin hole correctly.

    (3) Install a new bolt.
    Standard value:T=31N·m {316kgf·cm} {22.9ft·lbf}

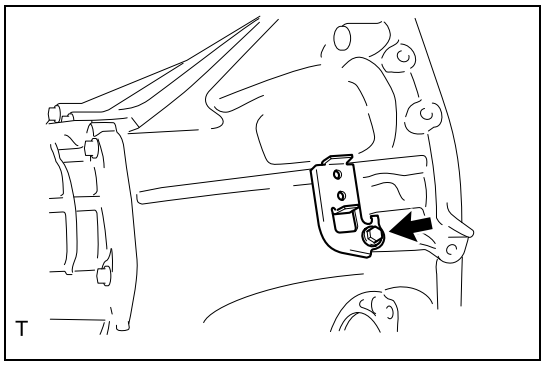
MT



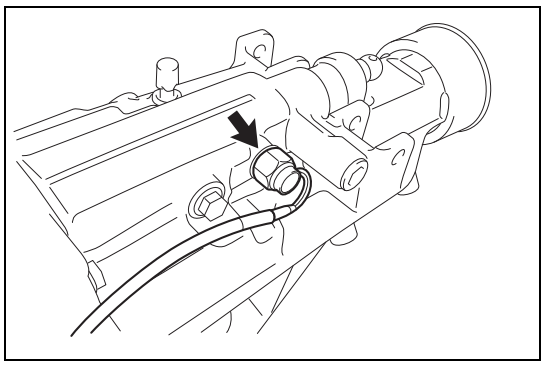
35. Holder installation
    (1) Install a new holder, compression spring, and lock ball pin.
    Standard value:T=39.2N·m {399.7kgf·cm} {28.9ft·lbf}



36. Installation of lock ball pin
    (1) Install a new head straight screw plug, compression spring, and lock ball pin.
    Standard value:T=24.5N·m {249.8kgf·cm} {18.1ft·lbf}



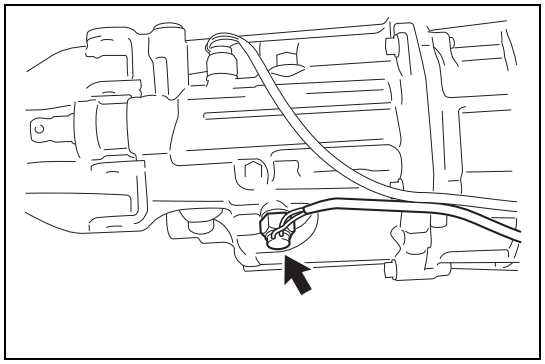
37. Installation of wiring harness clamp bracket
    (1) Install the wiring harness clamp bracket with a new bolt.
    Standard value:T=7.0N·m {71kgf·cm} {5.2ft·lbf}



38. Installation of neutral switch
    (1) Install the neutral switch and a new gasket.
    Standard value:T=32.3N·m {329.4kgf·cm} {23.8ft·lbf}
    CAUTION:
    When tightening by combining a torque wrench and union nut wrench to extend the whole length, the actual torque will be excessive if tightened until the reading of the torque wrench reaches the specified tightening torque. (Refer to IN - 6)

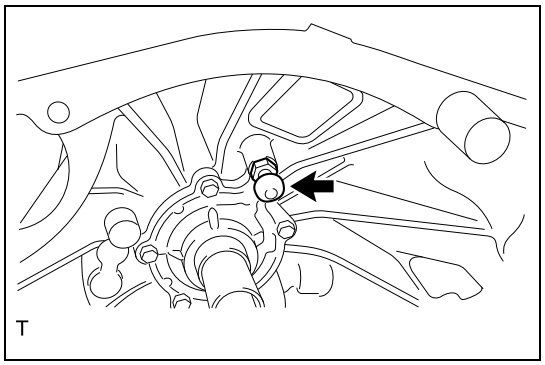
    (2) Engage the clamp to connect the neutral switch wire.

MT

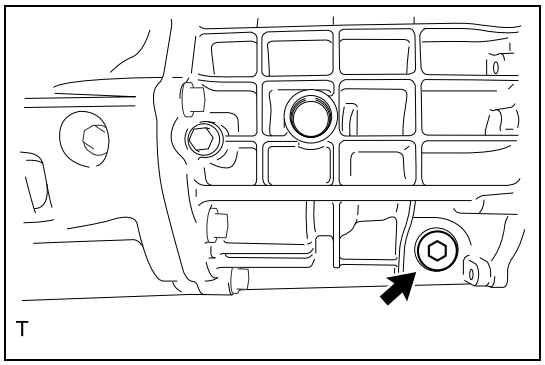


39. Installation of back-up light switch ASSY
    (1) Install the back-up light switch ASSY and a new gasket.
    Standard value:T=32.3N·m {329.4kgf·cm} {23.8ft·lbf}
    CAUTION:
    When tightening by combining a torque wrench and union nut wrench to extend the whole length, the actual torque will be excessive if tightened until the reading of the torque wrench reaches the specified tightening torque. (Refer to IN - 6)

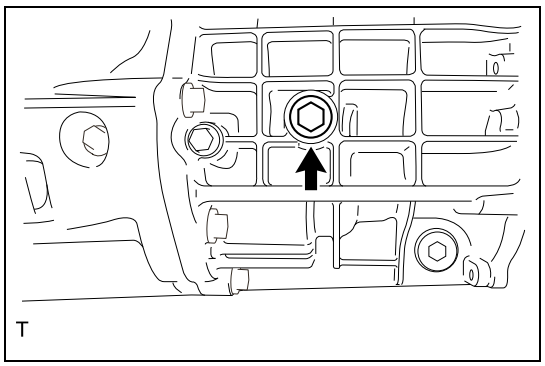
    (2) Engage all of the 3 clamps from the rear side with a slack of the harness positioned only at the forward end, and connect the back-up light switch ASSY wire and the neutral switch wire.



40. Installation of clutch release fork support
    (1) Install the clutch release fork support to the clutch housing.
    Standard value:T=16N·m {163kgf·cm} {11.8ft·lbf}



41. Installation of manual transmission drain plug
    (1) Install the manual transmission drain plug to the transmission case via a new gasket.
    Standard value:T=37N·m {377kgf·cm} {27.3ft·lbf}

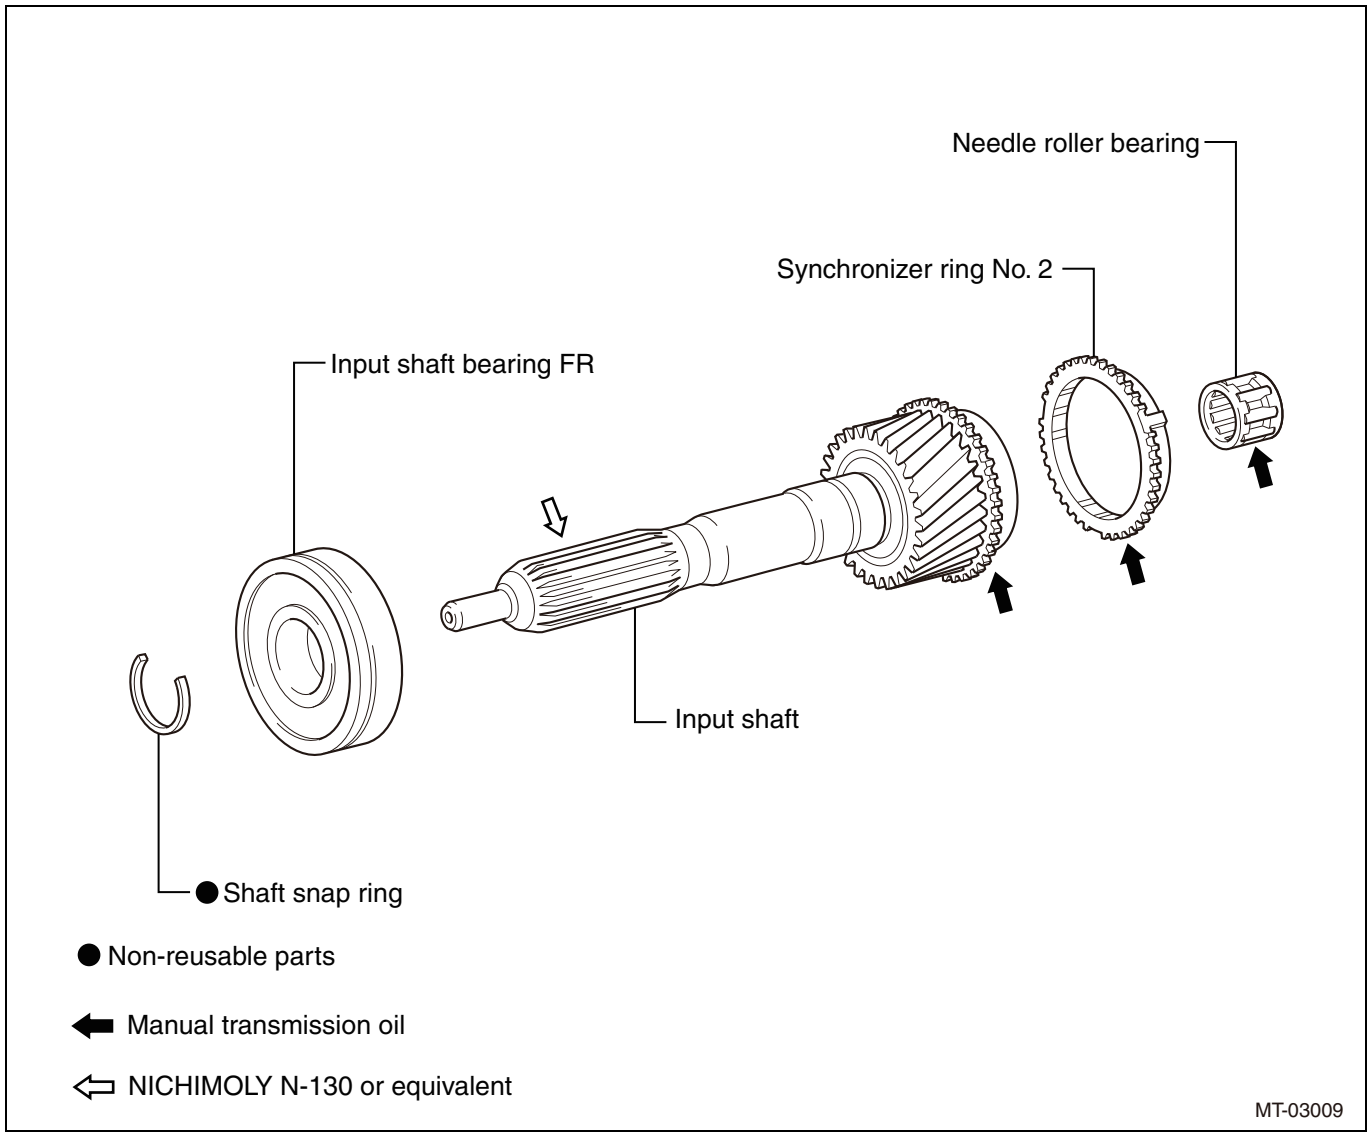


42. Installation of manual transmission filler plug
    (1) Install the manual transmission filler plug to the transmission case via a new gasket.
    Standard value:T=37N·m {377kgf·cm} {27.3ft·lbf}

MT

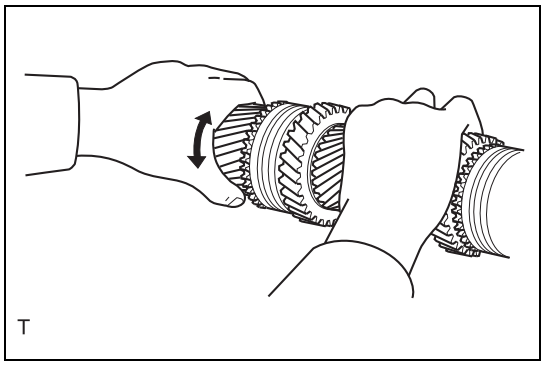
# Input shaft ASSY

## Exploded view

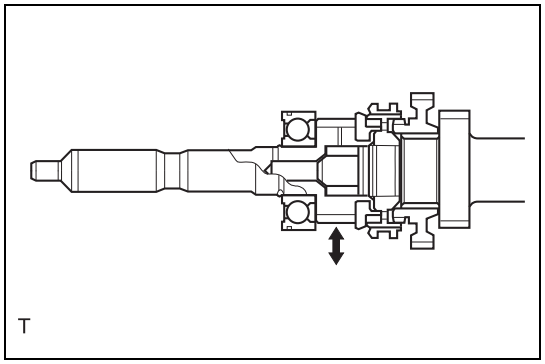


NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

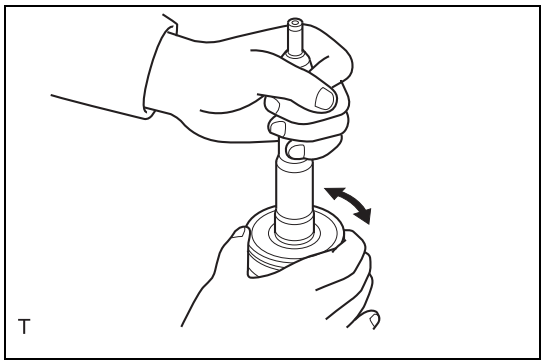
## Disassembly



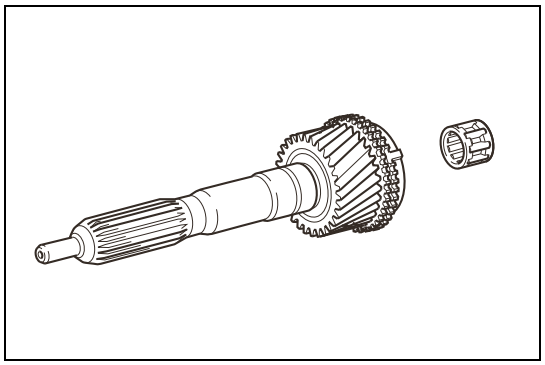
1. Check of needle roller bearing
   (1) Install the input shaft to the output shaft, and check the needle roller bearing.
   Criteria: There is no abnormal response, bind, noise, and play.
   NOTE:
   If defective, replace the needle roller bearing with a new one.



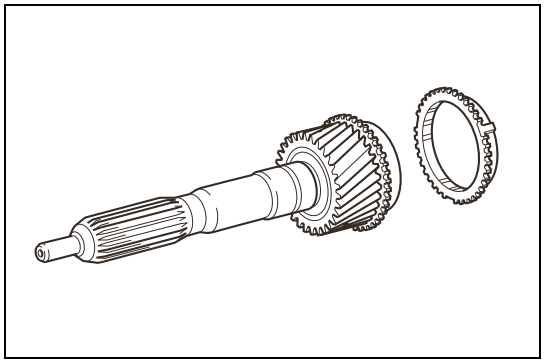
2. Radial clearance check
   (1) Install the input shaft to the output shaft, and check the radial clearance.
   Standard value: 0.029 to 0.072 mm {0.00114 to 0.00283 in}
   Limit: 0.072 mm {0.00283 in}
   NOTE:
   If the value exceeds the limit, replace the input shaft, needle roller bearing, and output shaft with new ones.



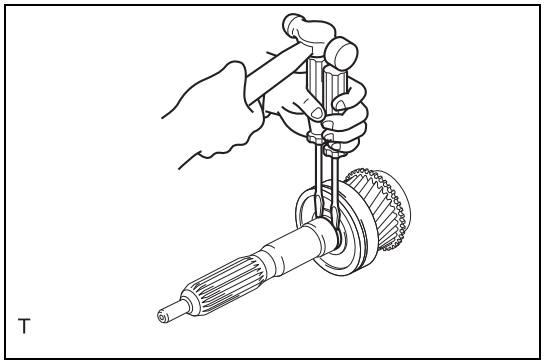
3. Check of input shaft bearing FR
   (1) Check the input shaft bearing FR.
   Criteria: There is no abnormal response, bind, noise, and play.
   NOTE:
   If defective, replace the input shaft bearing FR with a new one.



4. Removal of needle roller bearing
   (1) Remove the needle roller bearing from the input shaft.

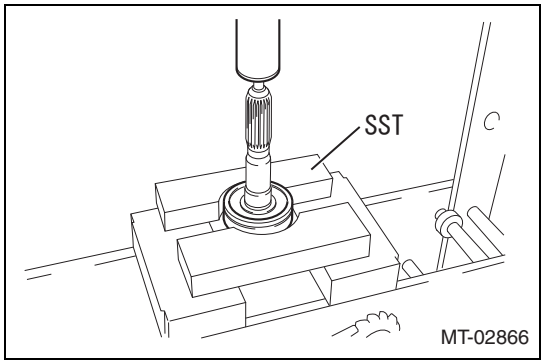


5. Removal of synchronizer ring No.2
   (1) Remove the synchronizer ring No.2 from the input shaft.



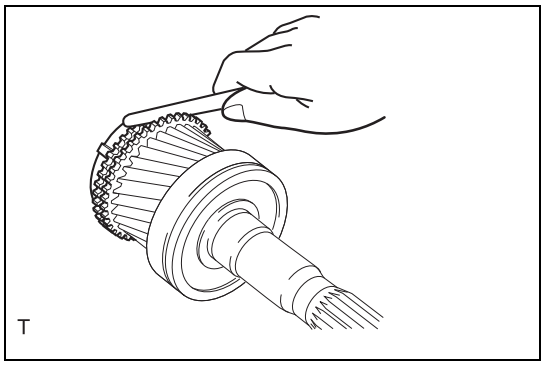
6. Removal of input shaft bearing FR
   (1) Remove the shaft snap ring from the input shaft.
   CAUTION:
   - Keep the shaft snap ring from flying out with a cloth, etc.
   - Verify the direction of the parts.

MT

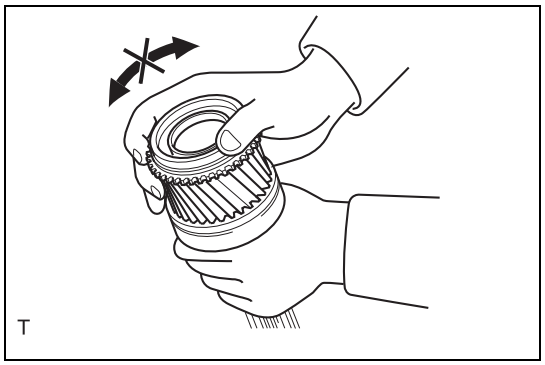


(2) Use the SST to remove the input shaft bearing FR from the input shaft.
SST 899714110
CAUTION:
Apply press pressure to the inner race of the input shaft bearing FR to remove the input shaft and the bearing FR.

## Inspection



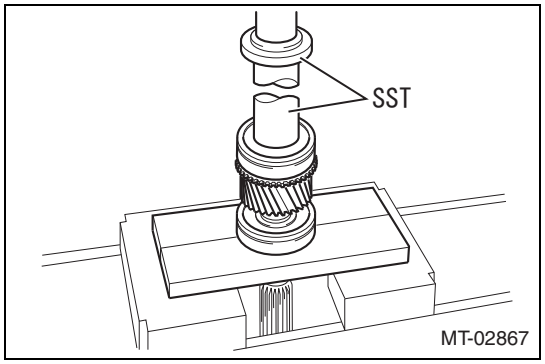
1. Check of synchronizer ring No.2
(1) Apply manual transmission oil to the cone portion of the 3rd gear, and check the clearance between the synchronizer ring No.2 and the 3rd gear while pressing the synchronizer ring No.2 by hand.
Standard value: 0.8 to 1.6 mm {0.0314 to 0.0629 in}
Limit: 0.8 mm {0.0314 in}
CAUTION:
Check the entire circumference of the gear.
NOTE:
- If the value is smaller than the limit, replace the synchronizer ring No.2 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



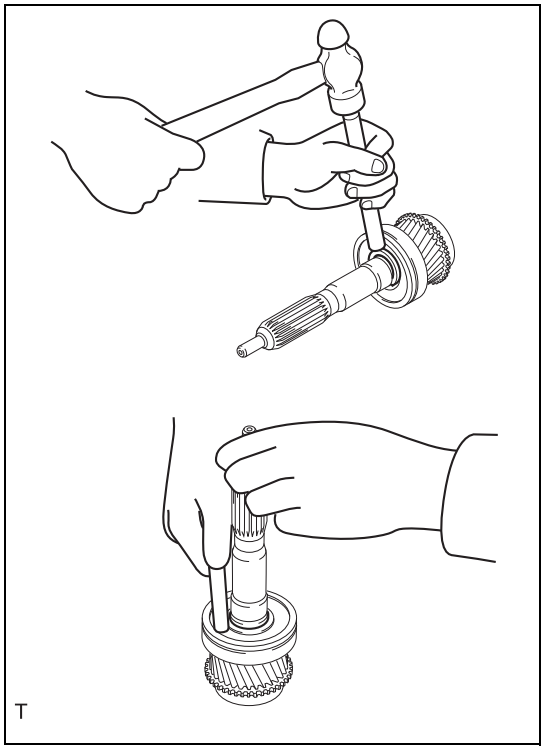
(2) Apply manual transmission oil to the cone portion of the 3rd gear, and check that the synchronizer ring No.2 does not slip in the circumferential direction while pressing it by hand.
NOTE:
- If it slips, replace the synchronizer ring No.2 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

MT

## Assembly



1. Installation of input shaft bearing FR
(1) Use the SST to install the input shaft bearing FR to the input shaft.
SST 499277000, 398477703
CAUTION:
Press-fit by holding the inner race of the input shaft bearing FR.

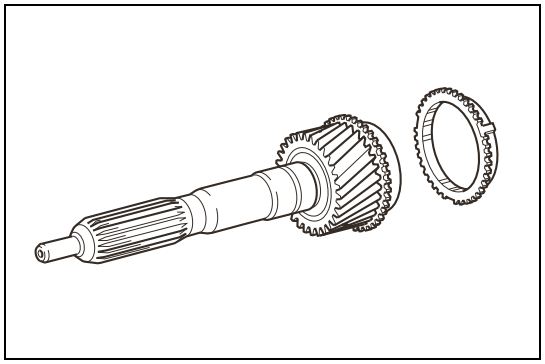


(2) Select a shaft snap ring so that the thrust clearance between the input shaft bearing FR and the shaft snap ring is within the standard value.
Standard value: 0 mm {0 in}
Limit: 0.1 mm {0.00394 in}

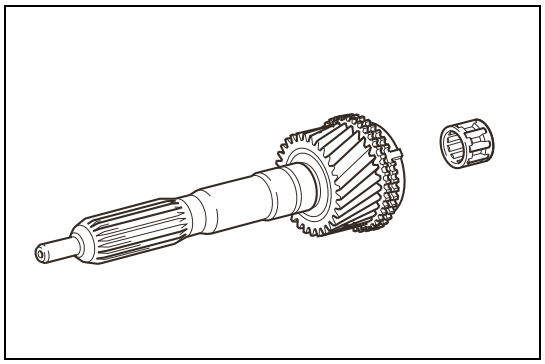
Shaft snap ring type

| Item number | Thickness mm {in} | Identification mark |
|---|---|---|
| 17005AA460 | 1.95 {0.07677} | 0 |
| 17005AA470 | 2.00 {0.07874} | 1 |
| 17005AA480 | 2.05 {0.08070} | 2 |
| 17005AA490 | 2.10 {0.08267} | 3 |
| 17005AA500 | 2.15 {0.08464} | 4 |
| 17005AA510 | 2.20 {0.08661} | 5 |

(3) Install a new shaft snap ring to the input shaft.



2. Installation of synchronizer ring No.2
(1) Apply manual transmission oil to the synchronizer ring No.2, and install the synchronizer ring No.2 to the input shaft.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



3. Installation of needle roller bearing
(1) Apply manual transmission oil to the needle roller bearing and install the needle roller bearing to the input shaft.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

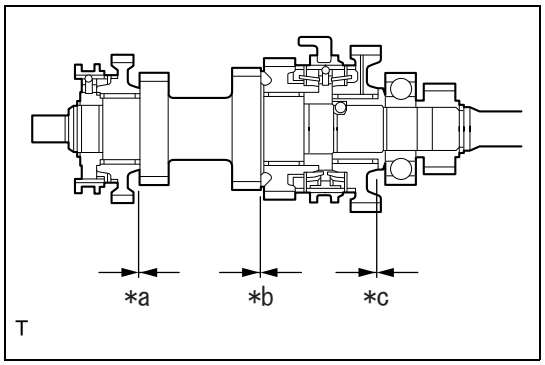
## Disassembly



1. Thrust clearance check
   (1) Check the thrust clearances of the 1st gear, 2nd gear, and reverse gear.

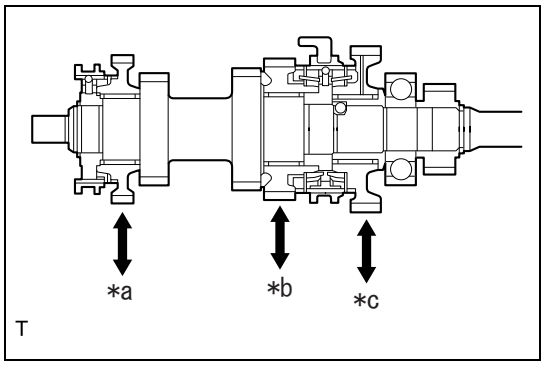
Captions in illustration

| | |
|---|---|
| *a | Reverse gear thrust clearance |
| *b | 2nd gear thrust clearance |
| *c | 1st gear thrust clearance |

Standard value

| Gear | Standard value mm {in} | Limit mm {in} |
|---|---|---|
| 1st gear | 0.15 to 0.40 {0.00590 to 0.0157} | 0.40 {0.0157} |
| 2nd gear | 0.10 to 0.45 {0.000394 to 0.0177} | 0.45 {0.0177} |
| Reverse gear | 0.10 to 0.45 {0.000394 to 0.0177} | 0.45 {0.0177} |

NOTE:
If the value exceeds the limit, replace the corresponding gear, transmission clutch hub, needle roller bearing, and output shaft with new ones.



2. Radial clearance check
   (1) Check the radial clearances of the 1st gear, 2nd gear, and reverse gear.

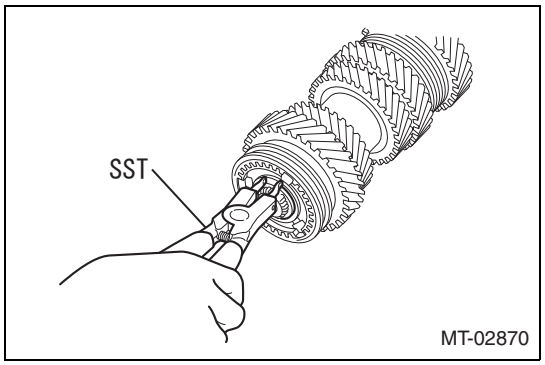
Captions in illustration

| | |
|---|---|
| *a | Reverse gear radial clearance |
| *b | 2nd gear radial clearance |
| *c | 1st gear radial clearance |

Standard value

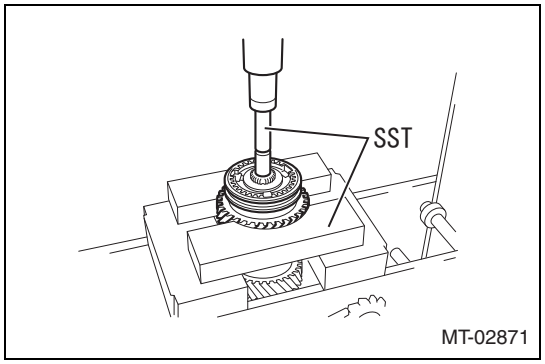
| Gear | Standard value mm {in} | Limit mm {in} |
|---|---|---|
| 1st gear | 0.015 to 0.066 {0.000590 to 0.00260} | 0.066 {0.00260} |
| 2nd gear | 0.015 to 0.066 {0.000590 to 0.00260} | 0.066 {0.00260} |
| Reverse gear | 0.015 to 0.066 {0.000590 to 0.00260} | 0.066 {0.00260} |

NOTE:
If the value exceeds the limit, replace the corresponding gear, needle roller bearing, and output shaft with new ones.

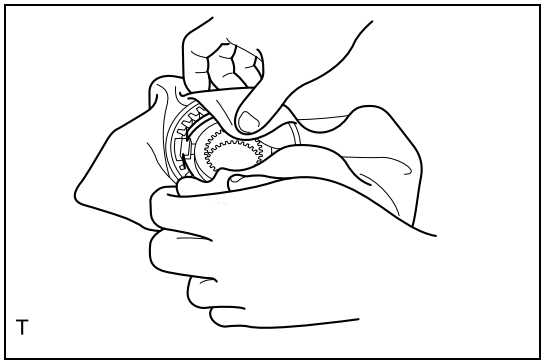


3. Removal of reverse gear
   (1) Use the SST to remove the shaft snap ring.
   SST 499895400

MT

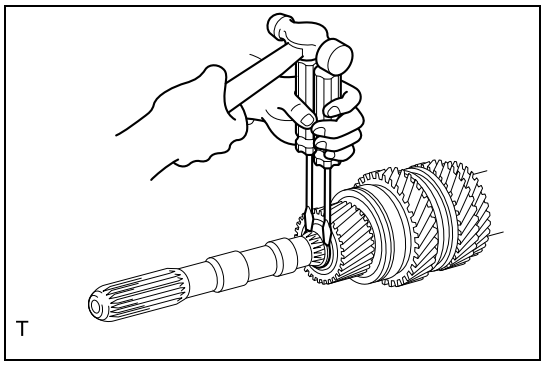


(2) Use the SST to remove the transmission clutch hub No.3, transmission hub sleeve No.3, reverse gear, synchronizer ring No.3, and reverse gear bearing from the output shaft.
SST 899714110, 899864100
CAUTION:
Verify the direction of the parts.

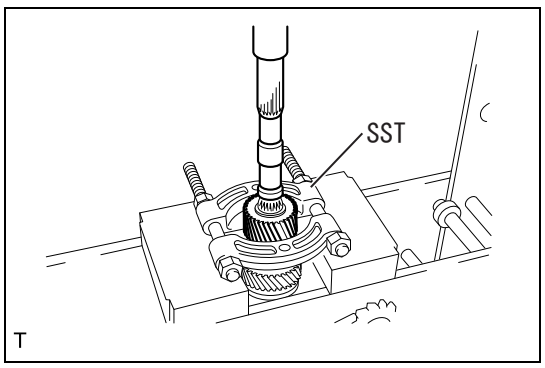


4. Removal of transmission hub sleeve No.3
(1) Remove the transmission hub sleeve No.3, then remove the 3 synchromesh shifting keys No.1, 3 synchromesh shifting key springs No.1, and 3 balls from the transmission clutch hub No.3.
CAUTION:
- Keep the synchromesh shifting keys No.1, synchromesh shifting key springs No.1, and balls from flying out using a cloth.
- Be careful not to deform the synchromesh shifting key springs No.1.

NOTE:
Perform the work without displacing the positions of the transmission clutch hub No.3 and synchromesh shifting keys No.1.

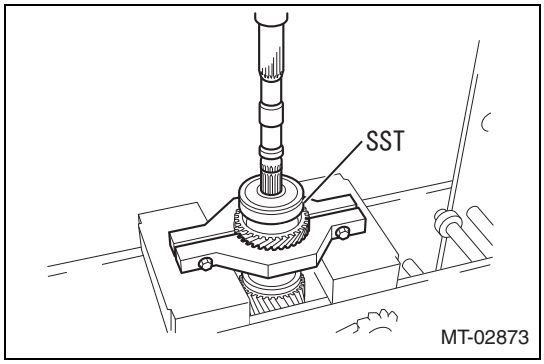


5. Removal of 6th gear
(1) Remove the shaft snap ring.
CAUTION:
Keep the shaft snap ring from flying out with a cloth, etc.

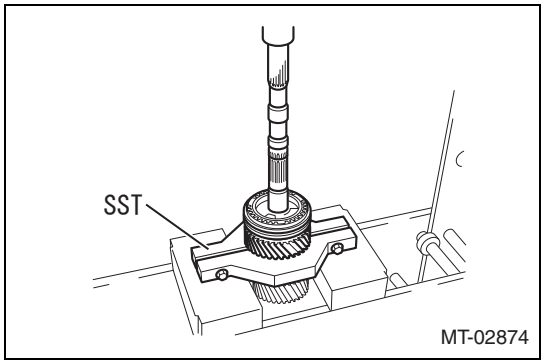


(2) Use the SST to remove the 6th gear.
SST 09950-00020

MT

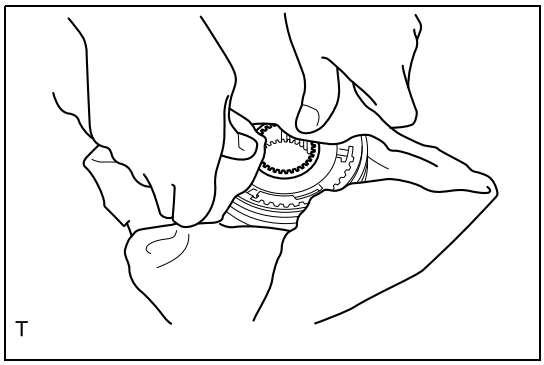


6. Removal of 1st gear
   (1) Use the SST to remove the output shaft bearing RR, 1st gear, 1st bearing inner race, 1st gear needle roller bearing, and 1st shift restrict ball.
   SST 18722AA000
   CAUTION:
   Verify the direction of the parts.



7. Removal of 2nd gear
   (1) Use the SST to remove the 2nd gear, transmission clutch hub No.1, transmission hub sleeve No.1, and 2nd gear needle roller bearing from the output shaft.
   SST 18722AA000
   CAUTION:
   Verify the direction of the parts.

8. Removal of synchronizer ring set No.1
   (1) Remove the 2 synchronizer ring No.1 sets.

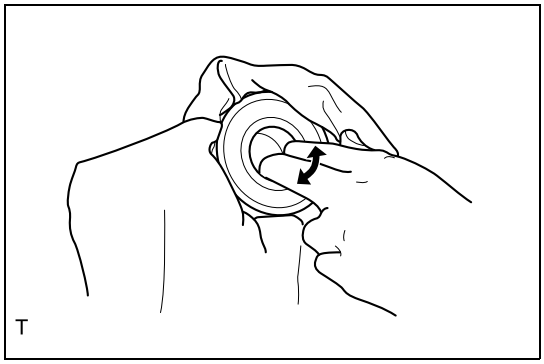


9. Removal of transmission hub sleeve No.1
   (1) Remove the transmission hub sleeve No.1, then remove the 3 synchromesh shifting keys No.1, 3 synchromesh shifting key springs No.1, and 3 balls from the transmission clutch hub No.1.
   CAUTION:
   - Keep the synchromesh shifting keys No.1, synchromesh shifting key springs No.1, and balls from flying out using a cloth.
   - Be careful not to deform the synchromesh shifting key springs No.1.

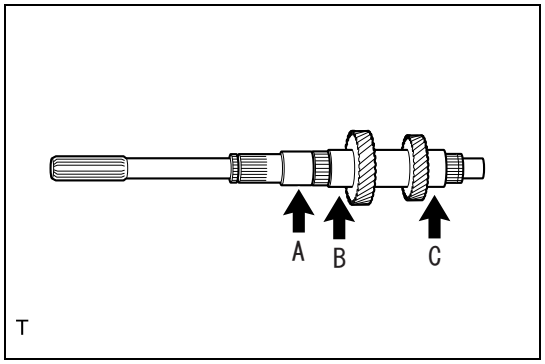
   NOTE:
   Perform the work without displacing the positions of the transmission clutch hub No.1 and synchromesh shifting keys No.1.

MT

## Inspection



1. Check of output shaft bearing RR
   (1) Check the output shaft bearing RR.
   Criteria: There is no abnormal response, bind, noise, and play.
   NOTE:
   If defective, replace the output shaft bearing RR with a new one.

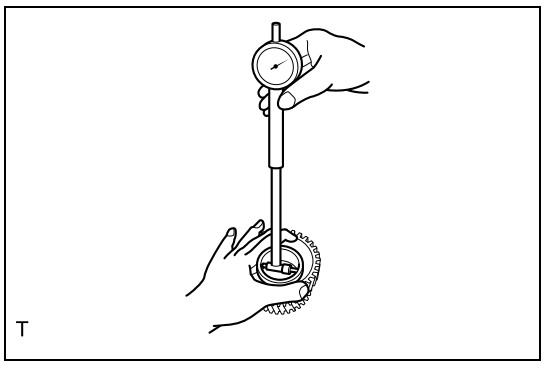


2. Output shaft check
   (1) Check the outer diameter of each part.
   Standard value

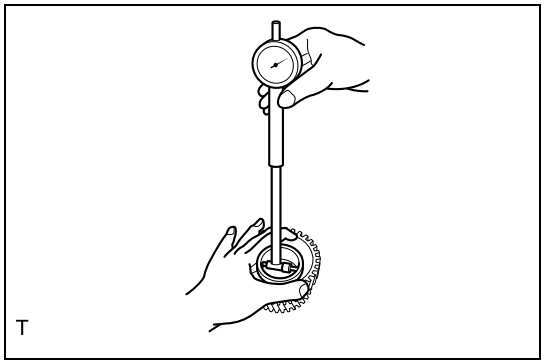
| Inspection parts | Standard value mm {in} | Limit mm {in} |
|---|---|---|
| A | 31.984 to 32.000 {1.25921 to 1.25984} | 31.984 {1.25984} |
| B | 42.984 to 43.000 {1.69228 to 1.69291} | 42.984 {1.69291} |
| C | 40.984 to 41.000 {1.61354 to 1.61417} | 40.984 {1.61417} |

   NOTE:
   If the value is smaller than the limit, replace the output shaft with a new one.

   (2) Check the runout at the points shown in the figure.
   Standard value: 0.03 mm {0.00118 in} or less
   NOTE:
   If the value is not within the limit, replace the output shaft with a new one.

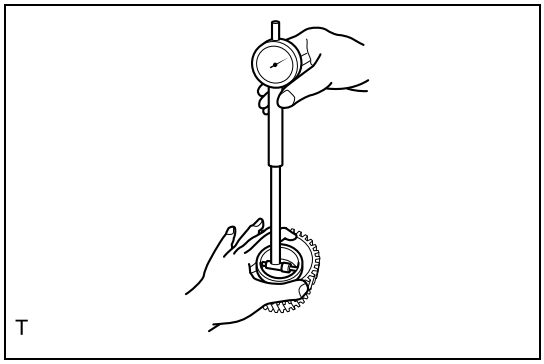


3. Reverse gear check
   (1) Check the inner diameter of the reverse gear.
   Standard value: 47.015 to 47.040 mm {1.85098 to 1.85197 in}
   Limit: 47.040 mm {1.85197 in}
   NOTE:
   If the value exceeds the limit, replace the reverse gear with a new one.



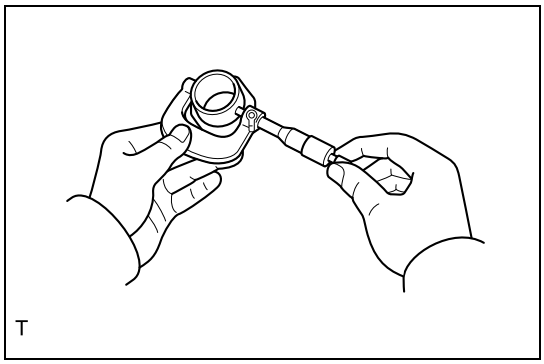
4. 1st gear check
   (1) Check the inner diameter of the 1st gear.
   Standard value: 46.315 to 46.340 mm {1.82425 to 1.82441 in}
   Limit: 46.340 mm {1.82441 in}
   NOTE:
   If the value exceeds the limit, replace the 1st gear with a new one.

MT



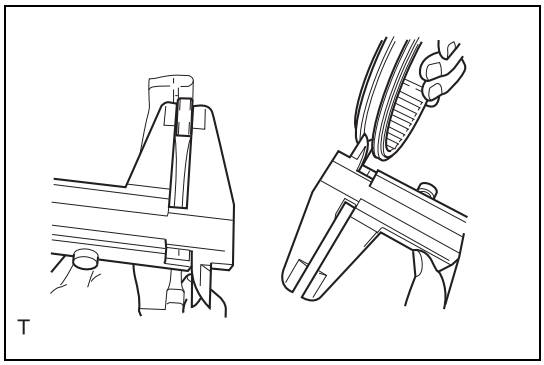
T

5. 2nd gear check
   (1) Check the inner diameter of the 2nd gear.
   Standard value: 49.015 to 49.040 mm {1.92972 to 1.93071 in}
   Limit: 49.040 mm {1.93071 in}
   NOTE:
   If the value exceeds the limit, replace the 2nd gear with a new one.



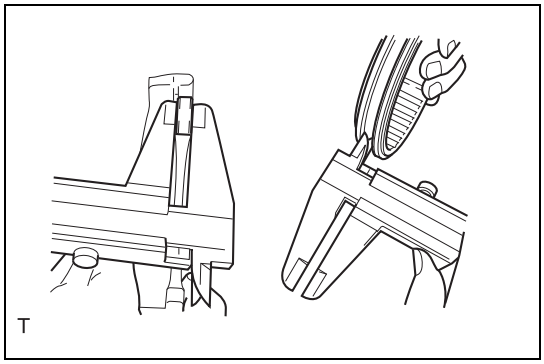
T

6. Check of 1st gear bearing inner race
   (1) Check the outer diameter of the 1st gear bearing inner race.
   Standard value: 40.284 to 40.300 mm {1.58598 to 1.58661 in}
   Limit: 40.284 mm {1.58598 in}
   NOTE:
   If the value is smaller than the limit, replace the 1st gear bearing inner race with a new one.



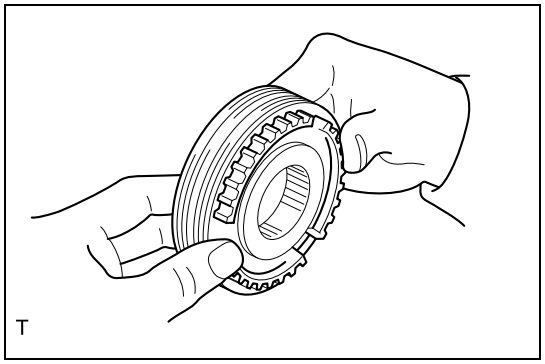
T

7. Check of transmission hub sleeve No.1 clearance
   (1) Check the thickness of the gear shift fork No.1 claw.
   Standard value: 7.9 to 8.0 mm {0.311 to 0.315 in}
   Limit: 7.9 mm {0.311 in}
   NOTE:
   If the value is smaller than the limit, replace the gear shift fork No.1 with a new one.
   (2) Measure the groove of the transmission hub sleeve No.1 and calculate the clearance between it and the gear shift fork No.1.
   Standard value: 0.15 to 0.35 mm {0.00590 to 0.0138 in}
   Limit: 0.35 mm {0.0138 in}
   NOTE:
   If the value exceeds the limit, replace the gear shift fork No.1 and the transmission hub sleeve No.1 with new ones as a set.

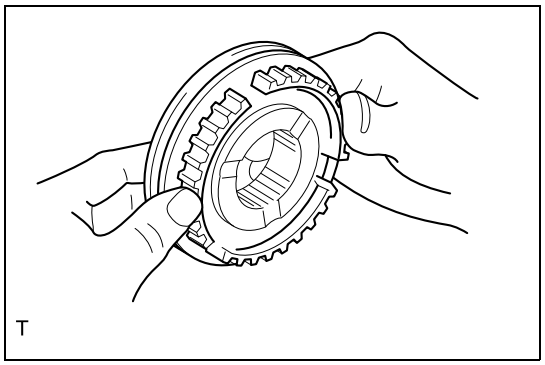


T

8. Check of transmission hub sleeve No.3 clearance
   (1) Check the thickness of the gear shift fork No.3 claw.
   Standard value: 7.9 to 8.0 mm {0.311 to 0.315 in}
   Limit: 7.9 mm {0.311 in}
   NOTE:
   If the value is smaller than the limit, replace the gear shift fork No.3 with a new one.
   (2) Measure the groove of the transmission hub sleeve No.3 and calculate the clearance between it and the gear shift fork No.3.
   Standard value: 0.15 to 0.35 mm {0.00590 to 0.0138 in}
   Limit: 0.35 mm {0.0138 in}
   NOTE:
   If the value exceeds the limit, replace the gear shift fork No.3 and the transmission hub sleeve No.3 with new ones as a set.

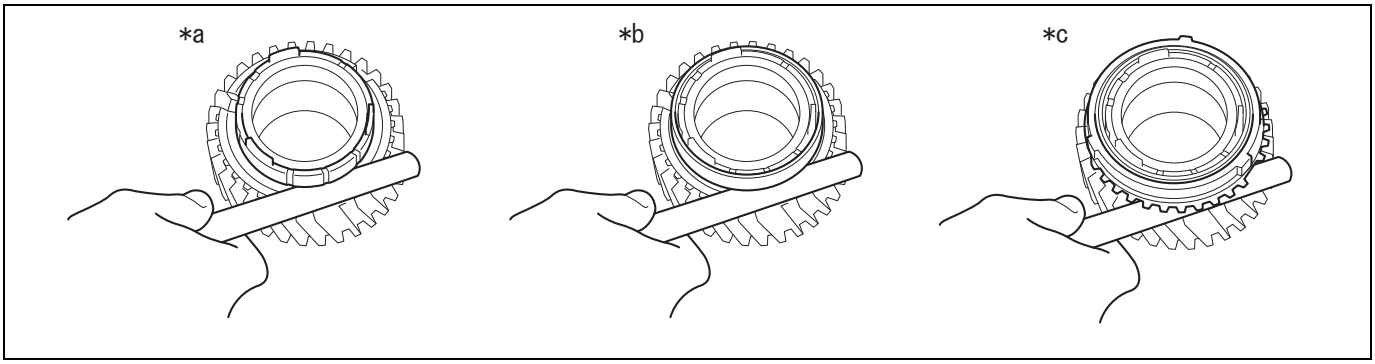


9. Check of transmission hub sleeve No.1
   (1) Check that the end of the spline gear of the transmission hub sleeve No.1 is not worn.
   NOTE:
   If it is worn, replace the transmission hub sleeve No.1 with a new one.
   (2) Install the transmission hub sleeve No.1 to the transmission clutch hub No.1 and check that they slide smoothly.
   NOTE:
   If they do not slide smoothly, replace the transmission hub sleeve No.1 and the transmission clutch hub No.1 with new ones.



10. Check of transmission hub sleeve No.3
   (1) Check that the end of the spline gear of the transmission hub sleeve No.3 is not worn.
   NOTE:
   If it is worn, replace the transmission hub sleeve No.3 with a new one.
   (2) Install the transmission hub sleeve No.3 to the transmission clutch hub No.3 and check that they slide smoothly.
   NOTE:
   If they do not slide smoothly, replace the transmission hub sleeve No.3 and the transmission clutch hub No.3 with new ones.

11. Check of synchronizer ring set No.1 (for 1st gear)
   (1) Apply manual transmission oil to the tapered cone portion of the 1st gear and the synchronizer ring set No.1, and check the clearance between the synchronizer ring set No.1 and the 1st gear while pressing the synchronizer ring set No.1 by hand.



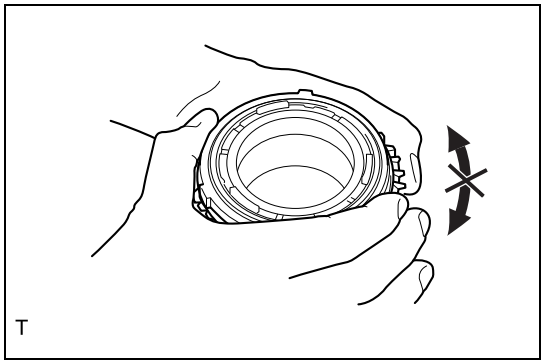
Captions in illustration

| | | | |
|---|---|---|---|
| *a | Inner | *b | Middle |
| *c | Outer | - | - |

Standard value

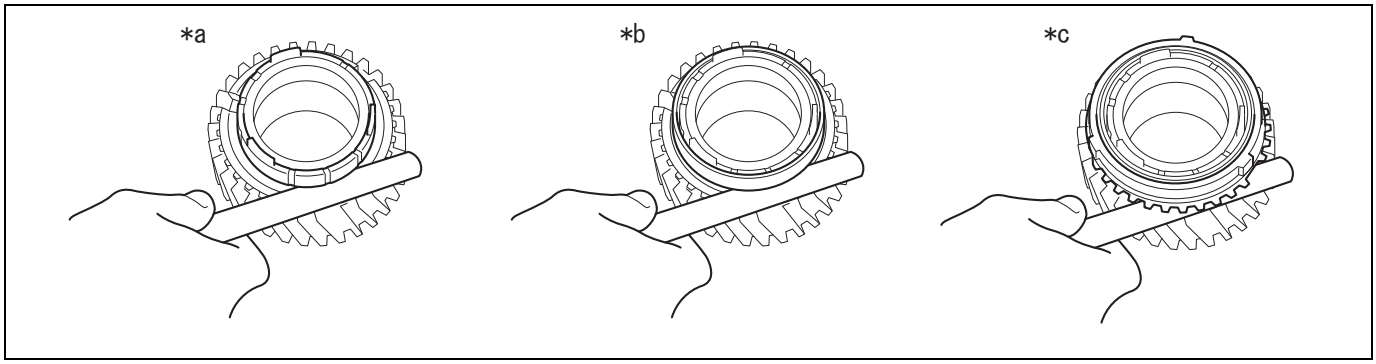
| Measured part | Standard value mm {in} |
|---|---|
| Inner | 0.48 to 1.12 {0.0189 to 0.0441} |
| Middle | 0.38 to 1.22 {0.0150 to 0.0480} |
| Outer | 0.8 to 1.8 {0.0315 to 0.0709} |

CAUTION:
Check the entire circumference of the gear.
NOTE:
- If the value is not within the standard value, replace the synchronizer ring set No.1 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



(2) Apply manual transmission oil to the tapered cone portion of the 1st gear, and check that the synchronizer ring set No.1 does not slip in the circumferential direction while pressing it by hand.
NOTE:
- If it slips, replace the synchronizer ring set No.1 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

12. Check of synchronizer ring set No.1 (for 2nd gear)
(1) Apply manual transmission oil to the tapered cone portion of the 2nd gear and the synchronizer ring set No.1, and check the clearance between the synchronizer ring set No.1 and the 2nd gear while pressing the synchronizer ring set No.1 by hand.



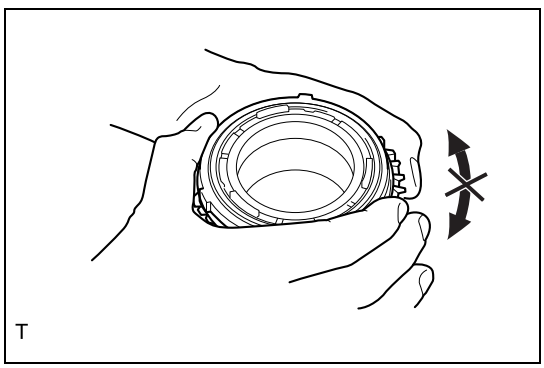
Captions in illustration

| | | | |
|---|---|---|---|
| *a | Inner | *b | Middle |
| *c | Outer | - | - |

Standard value

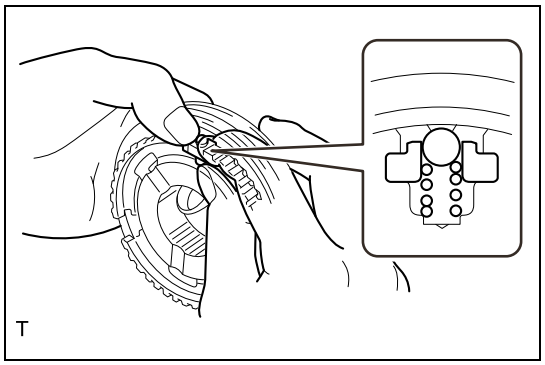
| Measured part | Standard value mm {in} |
|---|---|
| Inner | 0.48 to 1.12 {0.0189 to 0.0441} |
| Middle | 0.38 to 1.22 {0.0150 to 0.0480} |
| Outer | 0.8 to 1.8 {0.0315 to 0.0709} |

CAUTION:
Check the entire circumference of the gear.
NOTE:
- If the value is not within the standard value, replace the synchronizer ring set No.1 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

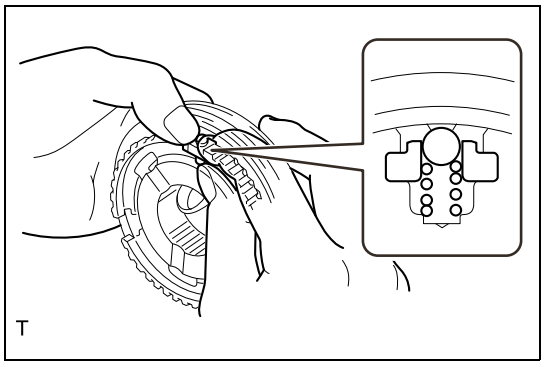


(2) Apply manual transmission oil to the tapered cone portion of the 2nd gear, and check that the synchronizer ring set No.1 does not slip in the circumferential direction while pressing it by hand.
NOTE:
- If it slips, replace the synchronizer ring set No.1 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

## Assembly

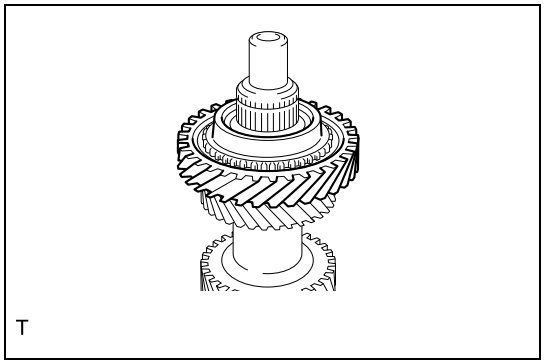


1. Installation of transmission hub sleeve No.1
   (1) Apply manual transmission oil to the sliding area of the transmission clutch hub No.1.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
   (2) Install the transmission hub sleeve No.1 to the transmission clutch hub No.1, and install the 3 balls after installing the 3 synchromesh shifting keys No.1 and the 3 synchromesh shifting key springs No.1 as a unit.
   NOTE:
   • Install the balls while pressing the synchromesh shifting key spring No.1.
   • After the installation, settle the synchromesh shifting key spring No.1.

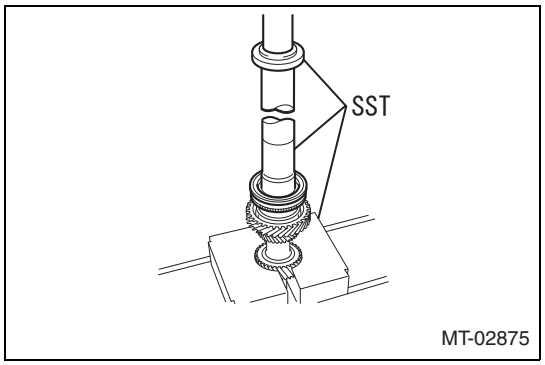


2. Installation of transmission hub sleeve No.3
   (1) Apply manual transmission oil to the sliding area of the transmission clutch hub No.3.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
   (2) Install the transmission hub sleeve No.3 to the transmission clutch hub No.3, and install the 3 balls after installing the 3 synchromesh shifting keys No.1 and the 3 synchromesh shifting key springs No.1 as a unit.
   NOTE:
   • Install the balls while pressing the synchromesh shifting key spring No.1.
   • After the installation, settle the synchromesh shifting key spring No.1.

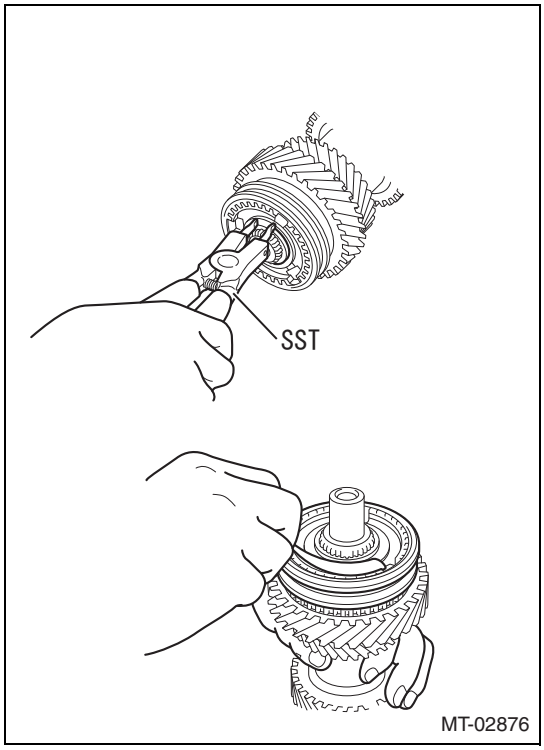
MT



3. Reverse gear installation
   (1) Apply manual transmission oil to the output shaft installation portion, the reverse gear bearing, and the inner surface and the tapered cone portion of the reverse gear.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
   (2) Install the reverse gear bearing and the reverse gear to the output shaft.



4. Installation of transmission clutch hub No.3
   (1) Install the synchronizer ring No.3 to the reverse gear.
   (2) Use the SST to install the transmission clutch hub No.3.
   SST 499277100, 398477703, 899714110
   NOTE:
   • After installing the transmission clutch hub No.3, check that the synchronizer ring moves in the thrust direction.
   • Press-fit the transmission clutch hub No.3 until it contacts the output shaft.
   • Match the phases of the transmission clutch hub No.3 and the synchronizer ring No.3.

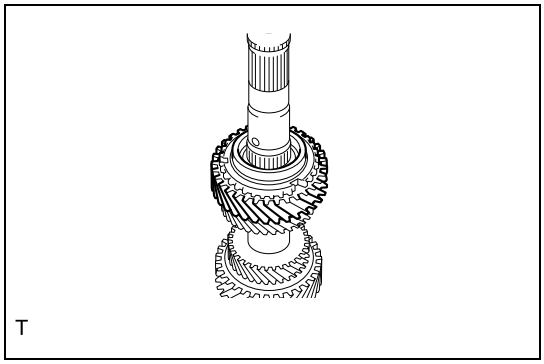


5. Installation of shaft snap ring (transmission clutch hub No.3)
   (1) Select a shaft snap ring so that the thrust clearance between the transmission clutch hub No.3 and the shaft snap ring is within the standard value.
   Standard value: 0 to 0.1 mm {0 to 0.00394 in}
   NOTE:
   Select a shaft snap ring with the maximum thickness that can be installed.

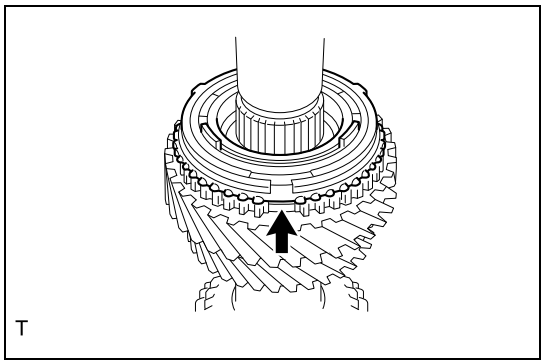
Shaft snap ring type

| Item number | Thickness mm {in} | Identification mark |
|---|---|---|
| 17005AA520 | 1.80 {0.07086} | A |
| 17005AA530 | 1.85 {0.07283} | B |
| 17005AA540 | 1.90 {0.07480} | C |
| 17005AA550 | 1.95 {0.07677} | D |
| 17005AA560 | 2.00 {0.07874} | E |
| 17005AA570 | 2.05 {0.08070} | F |

   (2) Use the SST to install a new shaft snap ring to the output shaft.
   SST 499895400

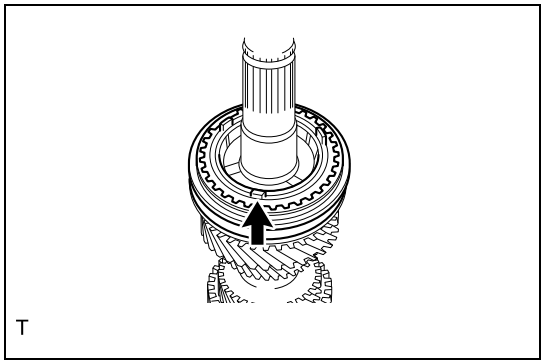


6. 2nd gear installation
   (1) Apply manual transmission oil to the output shaft installation portion, the 2nd gear needle roller bearing, and the inner surface and the tapered cone portion of the 2nd gear.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
   (2) Install the 2nd gear needle roller bearing and the 2nd gear to the output shaft.



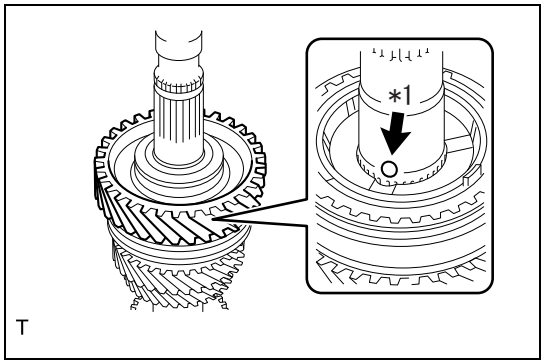
7. Installation of transmission clutch hub No.1
   (1) Align the synchronizer ring set No.1 (for 2nd gear) to the position shown in the figure and install it.
   CAUTION:
   - Align the middle ring claw with the gear groove.
   - Align the inner ring claw with the outer ring claw groove.

   (2) Use the SST to install the transmission clutch hub No.1.
   SST 499277100, 899714110, 398477703, 499277000
   NOTE:
   - After installing the transmission clutch hub No.1, check that the synchronizer ring set No.1 (for 2nd gear) moves in the thrust direction.
   - Press-fit the transmission clutch hub No.1 until it contacts the output shaft.



T

(3) Align the synchronizer ring set No.1 (for 1st gear) to the position shown in the figure and install it.
CAUTION:
- Align the protruded section of the outer ring with the hub groove.
- Align the inner ring claw with the outer ring claw groove.

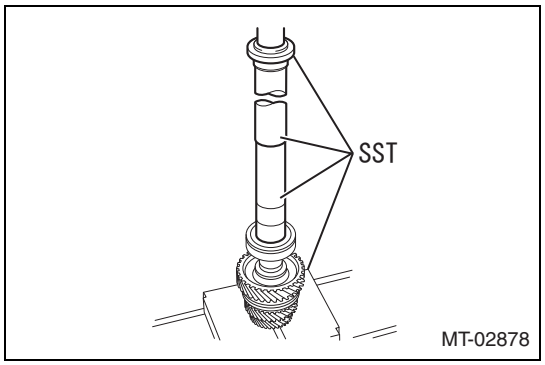


T

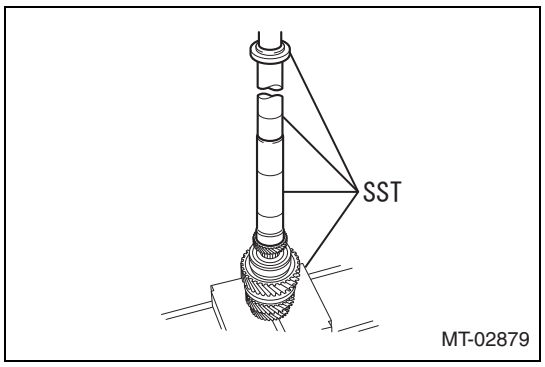
8. 1st gear installation
(1) Apply manual transmission oil to the output shaft installation portion, the needle roller bearing inner race, and the inner surface and the tapered cone portion of the 1st gear.
NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
(2) Install the 1st shift restrict ball, 1st gear, 1st gear needle roller bearing, and 1st gear bearing inner race to the output shaft.
CAUTION:
Align the middle ring claw with the gear groove.

Captions in illustration

| | |
|---|---|
| *1 | 1st shift restrict ball |

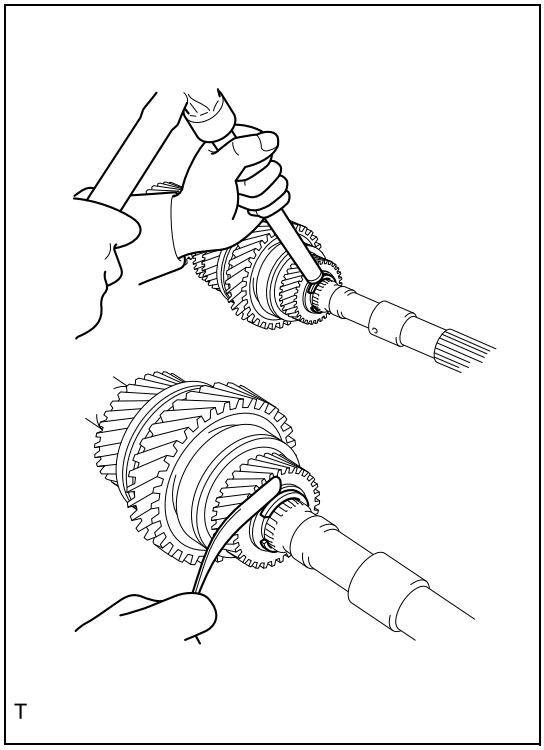


9. Installation of output shaft bearing RR
(1) Use the SST to install the output shaft bearing RR.
SST 499277100, 899714110, 398477703, 499277000
NOTE:
Press-fit the output shaft bearing RR until it contacts the 1st gear bearing inner race.



10. 6th gear installation
(1) Use the SST to install the 6th gear.
SST 499277100, 899714110, 398477703, 499277000
NOTE:
Press-fit the 6th gear until it contacts the output shaft bearing RR.

MT



T

11. Installation of shaft snap ring (6th gear)
    (1) Select a shaft snap ring so that the thrust clearance between the 6th gear and the shaft snap ring is within the standard value.
    Standard value: 0.1 to 0.11 mm {0.00394 to 0.00433 in}
    NOTE:
    Select a shaft snap ring with the maximum thickness that can be installed.

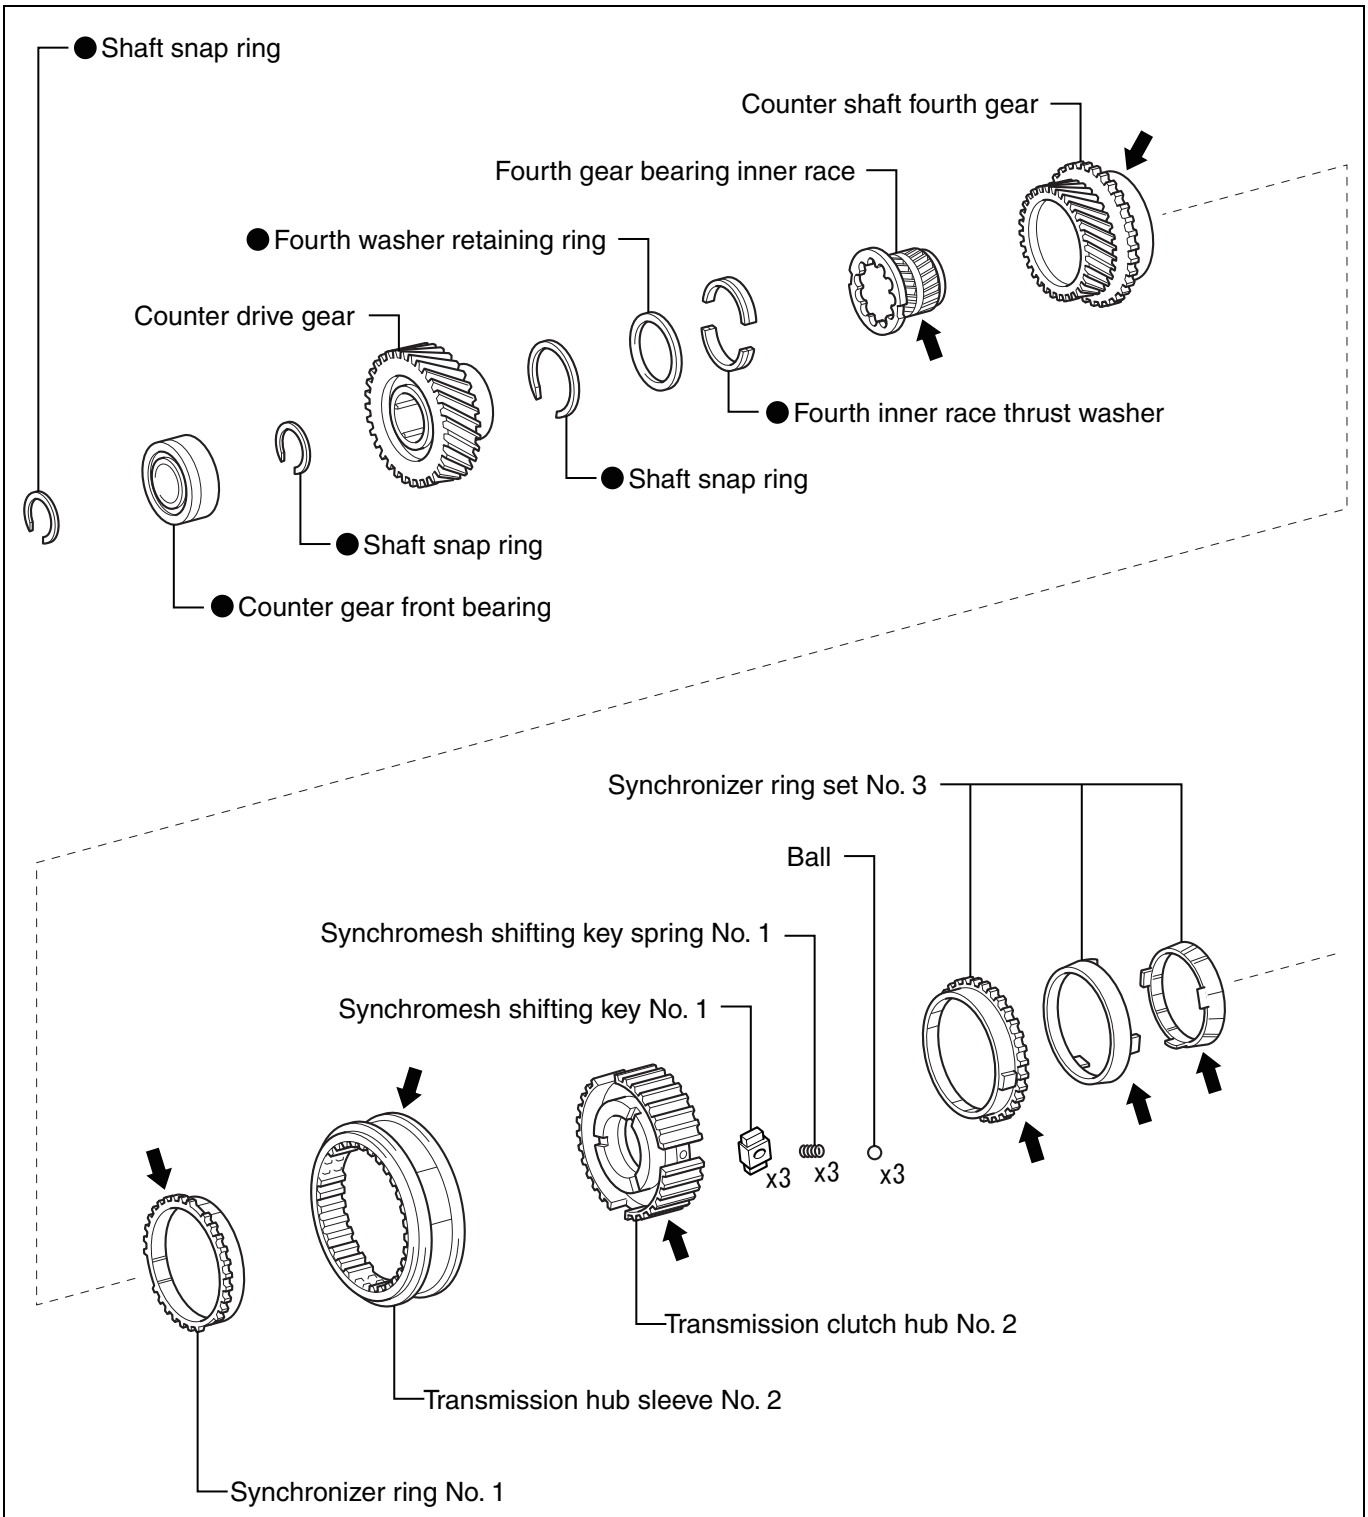
Shaft snap ring type

| Item number | Thickness mm {in} | Identification mark |
|---|---|---|
| 17005AA350 | 2.67 {0.10511} | A |
| 17005AA360 | 2.73 {0.10748} | B |
| 17005AA370 | 2.79 {0.10984} | C |
| 17005AA380 | 2.85 {0.11220} | D |
| 17005AA390 | 2.91 {0.11456} | E |
| 17005AA400 | 2.97 {0.11692} | F |
| 17005AA410 | 3.03 {0.11929} | G |
| 17005AA420 | 3.09 {0.12165} | H |
| 17005AA430 | 3.15 {0.12401} | J |
| 17005AA440 | 3.21 {0.12638} | K |
| 17005AA450 | 3.27 {0.12874} | L |

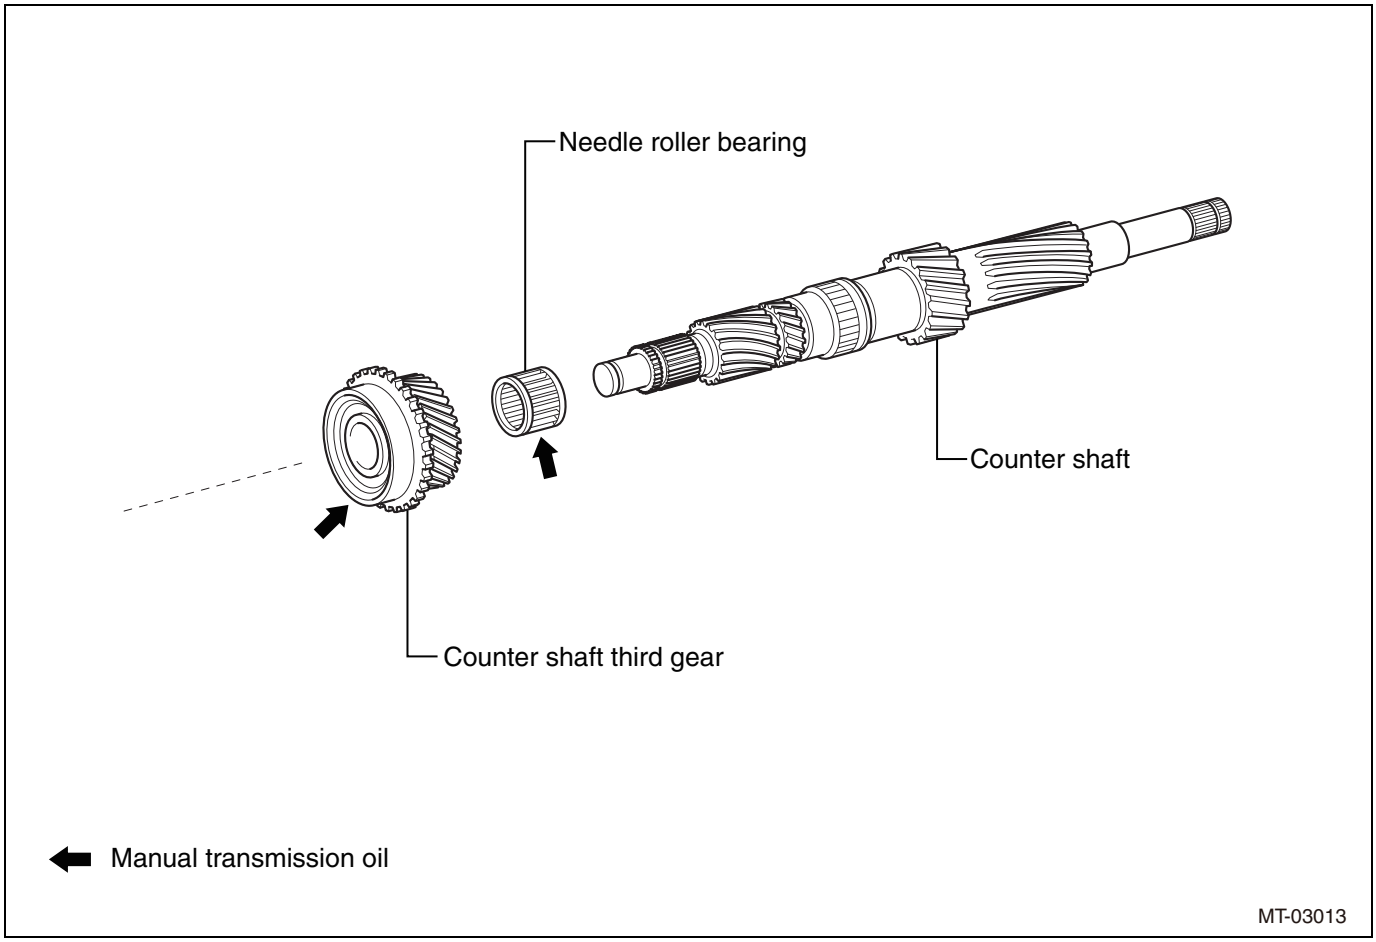
    (2) Install a new shaft snap ring to the output shaft.

# Counter gear ASSY

## Exploded view

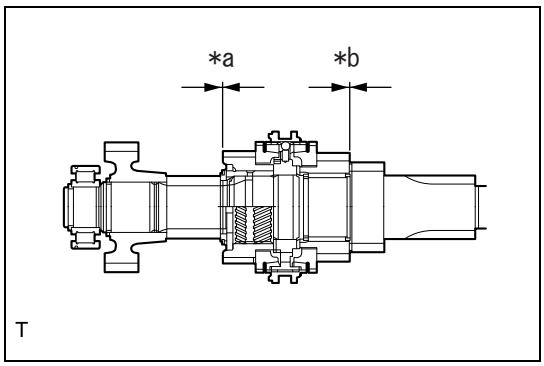


NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



NOTE:
Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

## Disassembly



1. Thrust clearance check
   (1) Check the thrust clearances of the counter shaft 3rd gear and counter shaft 4th gear.

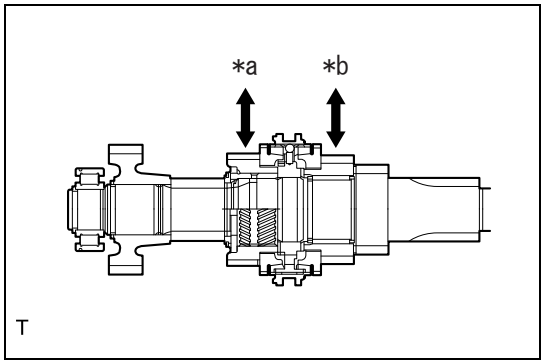
Captions in illustration

| | |
|---|---|
| *a | Counter shaft 4th gear thrust clearance |
| *b | Counter shaft 3rd gear thrust clearance |

Standard value

| Gear | Standard value mm {in} | Limit mm {in} |
|---|---|---|
| Counter shaft 3rd gear | 0.10 to 0.35 {0.00394 to 0.0138} | 0.35 {0.0138} |
| Counter shaft 4th gear | 0.10 to 0.35 {0.00394 to 0.0138} | 0.35 {0.0138} |

NOTE:
If the value exceeds the limit, adjust with the 4th inner race thrust washer.



2. Radial clearance check
   (1) Check the radial clearances of the counter shaft 3rd gear and counter shaft 4th gear.

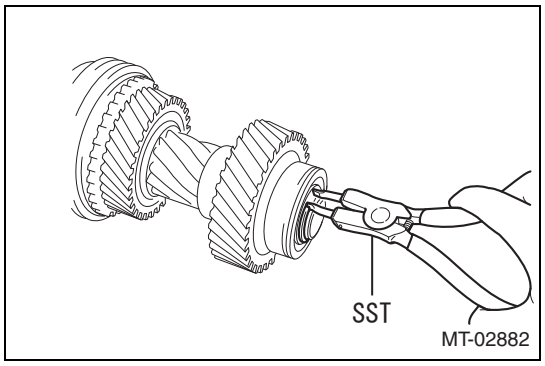
Captions in illustration

| | |
|---|---|
| *a | Counter shaft 4th gear radial clearance |
| *b | Counter shaft 3rd gear radial clearance |

Standard value

| Gear | Standard value mm {in} | Limit mm {in} |
|---|---|---|
| Counter shaft 3rd gear | 0.015 to 0.068 {0.000590 to 0.00268} | 0.068 {0.00268} |
| Counter shaft 4th gear | 0.065 to 0.115 {0.002559 to 0.00453} | 0.115 {0.00453} |

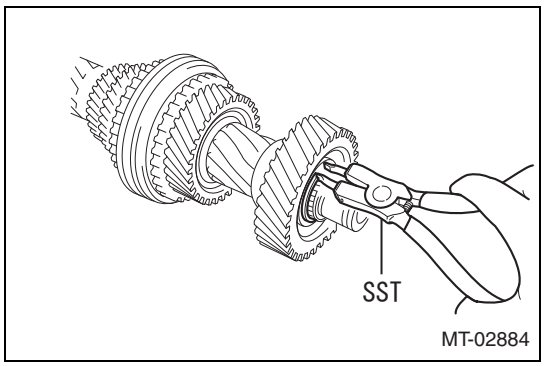
NOTE:
If the value exceeds the limit, replace the corresponding gear and needle roller bearing or 4th gear bearing inner race with new ones as a set.



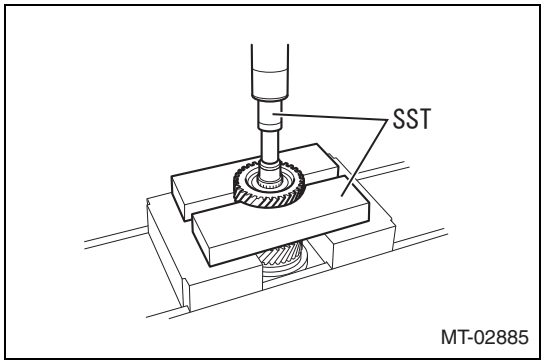
3. Removal of counter gear front bearing
   (1) Use the SST to remove the shaft snap ring.
   SST 499895400
   CAUTION:
   Verify the direction of the parts.

   (2) Use the SST to remove the counter gear front bearing.
   SST 09950-00020, 899864100

4. Removal of counter drive gear
   (1) Use the SST to remove the shaft snap ring.
   SST 499895400

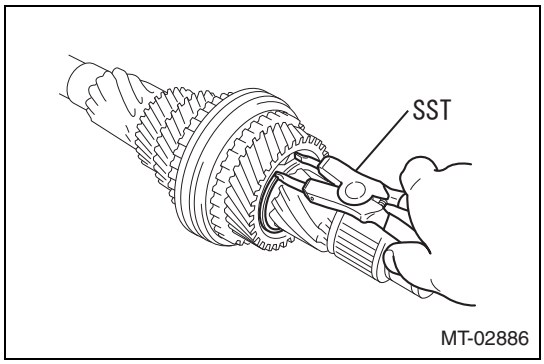


MT

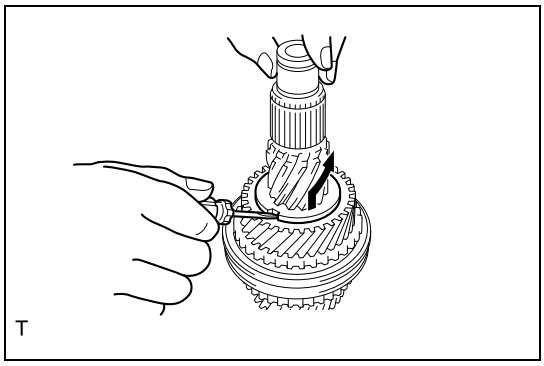


(2) Use the SST to remove the counter drive gear.
SST 899714110, 899864100

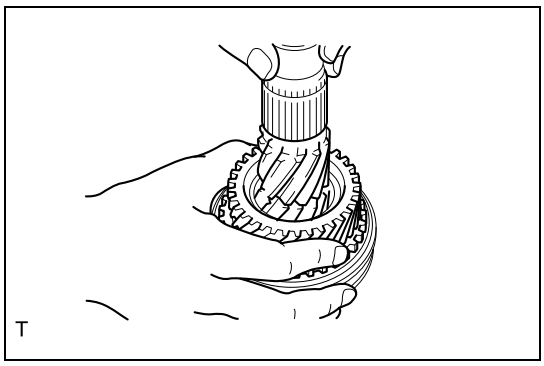
5. Removal of counter shaft 4th gear



(1) Use the SST to remove the shaft snap ring, then remove the 4th inner race thrust washer after removing the 4th washer retaining ring.
SST 499895400
CAUTION:
Verify the direction of the parts.

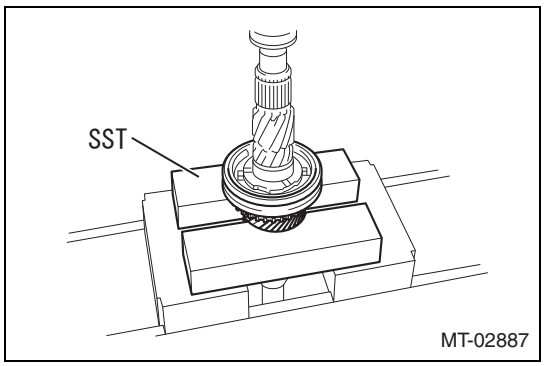


(2) Remove the 4th gear bearing inner race by turning it counterclockwise along the gear while prying with a flat tip screwdriver.



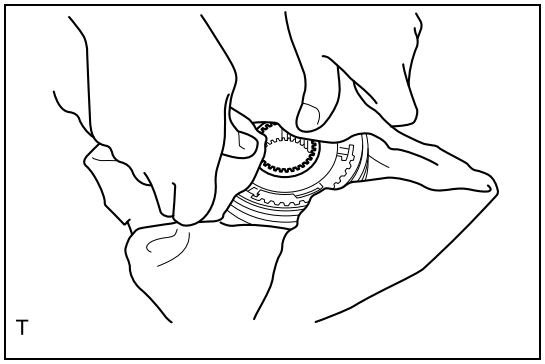
(3) Remove the counter shaft 4th gear and synchronizer ring No.1.

6. Removal of counter shaft 3rd gear



(1) Use the SST to remove the transmission clutch hub No.2, counter shaft 3rd gear, synchronizer ring set No.3, and needle roller bearing.
SST 899714110
CAUTION:
Verify the direction of the parts.

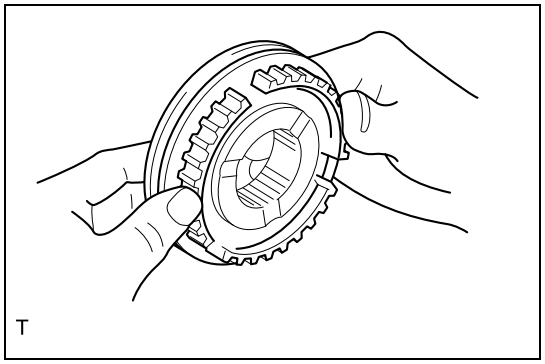
MT



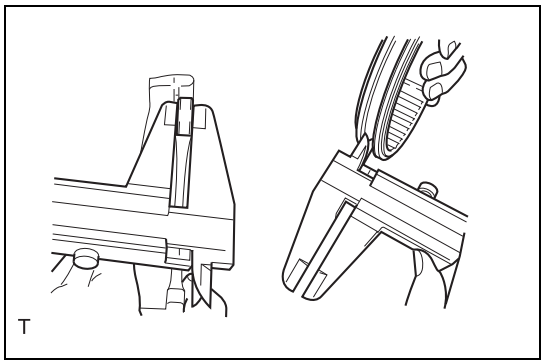
7. Removal of transmission hub sleeve No.2
   (1) Remove the transmission hub sleeve No.2, then remove the 3 synchromesh shifting keys No.1, 3 synchromesh shifting key springs No.1, and 3 balls from the transmission clutch hub No.2.
   CAUTION:
   - Keep the synchromesh shifting keys No.1, synchromesh shifting key springs No.1, and balls from flying out using a cloth.
   - Be careful not to deform the synchromesh shifting key springs No.1.
   - Verify the direction of the parts.

   NOTE:
   Perform the work without displacing the positions of the transmission clutch hub No.2 and synchromesh shifting keys No.1.

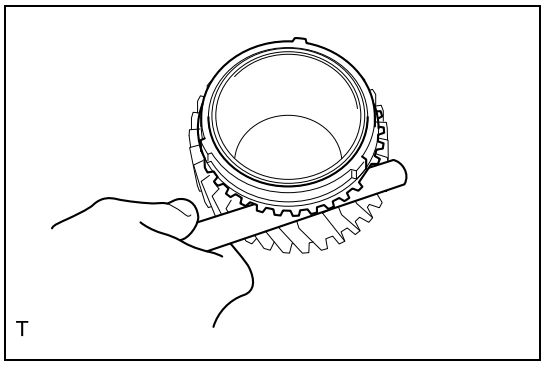
## Inspection



1. Check of transmission hub sleeve No.2
   (1) Check that the end of the spline gear of the transmission hub sleeve No.2 is not worn.
   NOTE:
   If it is worn, replace the transmission hub sleeve No.2 with a new one.
   (2) Install the transmission hub sleeve No.2 to the transmission clutch hub No.2 and check that they slide smoothly.
   NOTE:
   If they do not slide smoothly, replace the transmission hub sleeve No.2 and the transmission clutch hub No.2 with new ones.

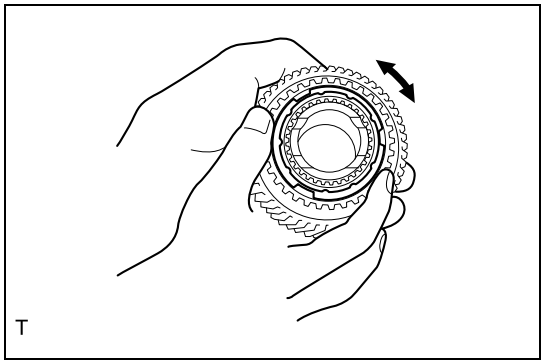


2. Check of transmission hub sleeve No.2 clearance
   (1) Check the thickness of the gear shift fork No.2 claw.
   Standard value: 7.9 to 8.0 mm {0.311 to 0.315 in}
   Limit: 7.9 mm {0.311 in}
   NOTE:
   If the value is smaller than the limit, replace the gear shift fork No.2 with a new one.
   (2) Measure the groove of the transmission hub sleeve No.2 and calculate the clearance between it and the gear shift fork No.2.
   Standard value: 0.15 to 0.35 mm {0.00590 to 0.0138 in}
   Limit: 0.35 mm {0.0138 in}
   NOTE:
   If the value exceeds the limit, replace the gear shift fork No.2 and the transmission hub sleeve No.2 with new ones as a set.



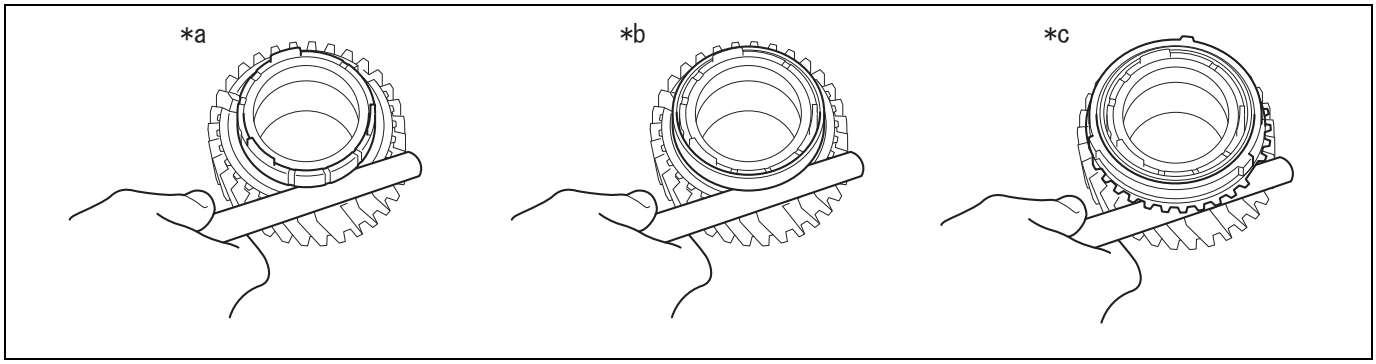
3. Check of synchronizer ring No.1
   (1) Apply manual transmission oil to the tapered cone portion of the counter shaft 4th gear, and check the clearance between the synchronizer ring No.1 and the counter shaft 4th gear while pressing the synchronizer ring No.1 by hand.
   Standard value: 0.8 to 1.6 mm {0.0314 to 0.0629 in}
   Limit: 0.8 mm {0.0314 in}
   CAUTION:
   Check the entire circumference of the gear.
   NOTE:
   - If the value is smaller than the limit, replace the synchronizer ring No.1 and counter shaft 4th gear with new ones.
   - Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

MT



(2) Apply manual transmission oil to the tapered cone portion of the counter shaft 4th gear, and check that the synchronizer ring No.1 does not slip in the circumferential direction while pressing it by hand.
NOTE:
- If it slips, replace the synchronizer ring No.1 and counter shaft 4th gear with new ones.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

4. Check of synchronizer ring No.3
(1) Apply manual transmission oil to the tapered cone portion of the counter shaft 3rd gear and the synchronizer ring set No.3, and check the clearance between the synchronizer ring set No.3 and the counter shaft 3rd gear while pressing the synchronizer ring set No.3 by hand.



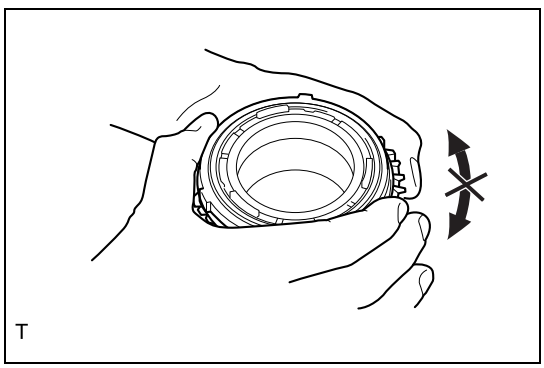
Captions in illustration

| | | | |
|---|---|---|---|
| *a | Inner | *b | Middle |
| *c | Outer | - | - |

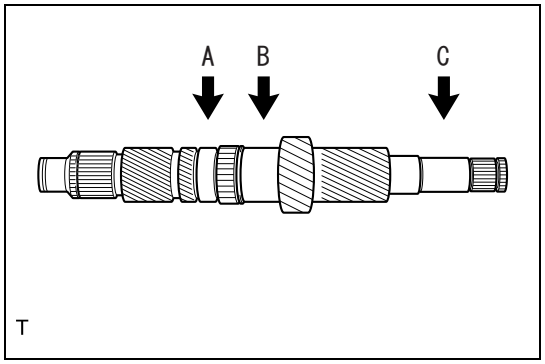
Standard value

| Measured part | Standard value mm {in} |
|---|---|
| Inner | 0.4 to 1.2 {0.0157 to 0.0472} |
| Middle | 0.3 to 1.3 {0.0118 to 0.0512} |
| Outer | 0.8 to 1.8 {0.0315 to 0.0709} |

CAUTION:
Check the entire circumference of the gear.
NOTE:
- If the value exceeds the limit, replace the synchronizer ring set No.3 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)



(2) Apply manual transmission oil to the tapered cone portion of the counter shaft 3rd gear, and check that the synchronizer ring set No.3 does not slip in the circumferential direction while pressing it by hand.
NOTE:
- If it slips, replace the synchronizer ring set No.3 with a new one.
- Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)

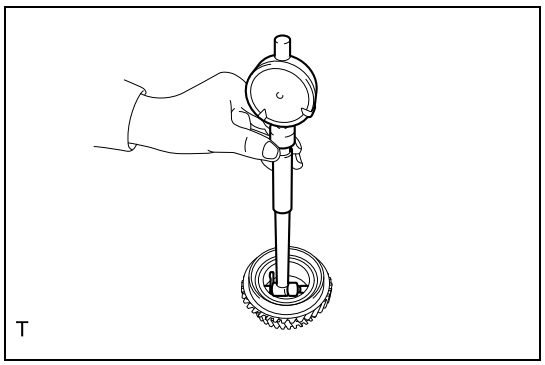


5. Counter shaft check
   (1) Check the outer diameter of each part.
   Standard value

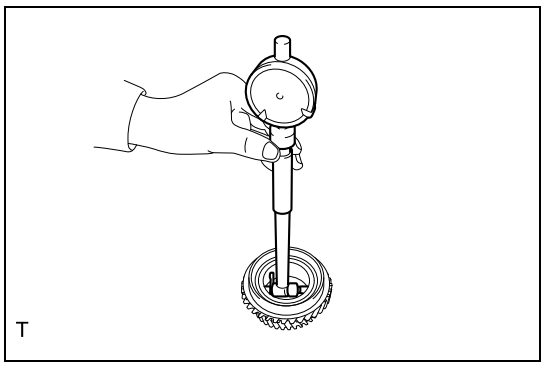
| Inspection parts | Standard value mm {in} | Limit mm {in} |
|---|---|---|
| A | 39.284 to 39.300 {1.54661 to 1.54721} | 39.284 {1.54661} |
| B | 37.984 to 38.000 {1.49543 to 1.49606} | 37.984 {1.49543} |
| C | 24.987 to 25.000 {0.98374 to 0.98425} | 24.987 {0.98374} |

   NOTE:
   If the value is smaller than the limit, replace the counter shaft with a new one.

   (2) Check the runout of the points shown in the figure.
   Standard value: 0.03 mm {0.00118 in} or less
   NOTE:
   If the value is not within the limit, replace the counter shaft with a new one.

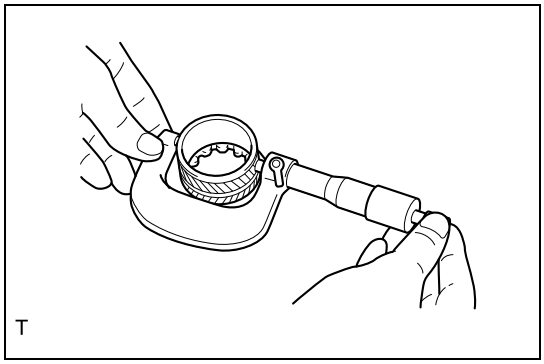


6. Check of counter shaft 3rd gear
   (1) Check the inner diameter of the counter shaft 3rd gear.
   Standard value: 43.015 to 43.040 mm {1.69350 to 1.69448 in}
   Limit: 43.040 mm {1.69448 in}
   NOTE:
   If the value exceeds the limit, replace the counter shaft 3rd gear with a new one.



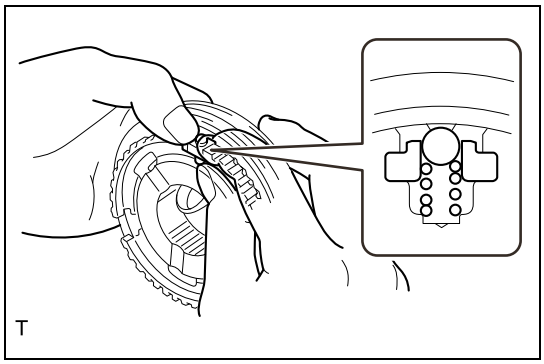
7. Counter shaft 4th gear check
   (1) Check the inner diameter of the counter shaft 4th gear.
   Standard value: 46.315 to 46.340 mm {1.82425 to 1.82441 in}
   Limit: 46.340 mm {1.82441 in}
   NOTE:
   If the value exceeds the limit, replace the counter shaft 4th gear with a new one.

MT

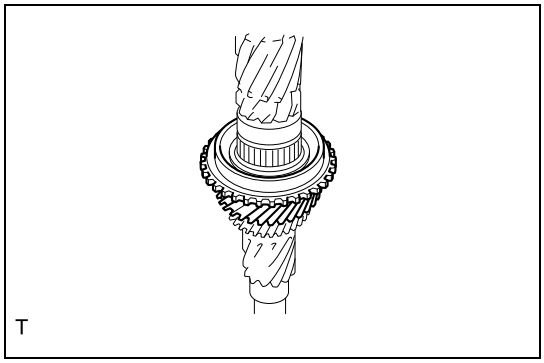


8. Check of 4th gear bearing inner race
   (1) Check the outer diameter of the 4th gear bearing inner race.
   Standard value: 46.225 to 46.250 mm {1.81988 to 1.82087 in}
   Limit: 46.225 mm {1.81988 in}
   CAUTION:
   Do not measure the oil groove.
   NOTE:
   If the value is smaller than the limit, replace the 4th gear bearing inner race with a new one.

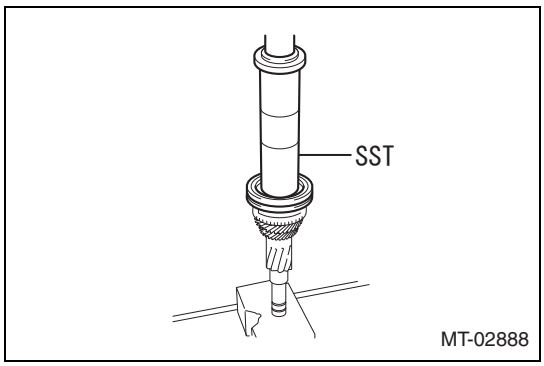
## Assembly



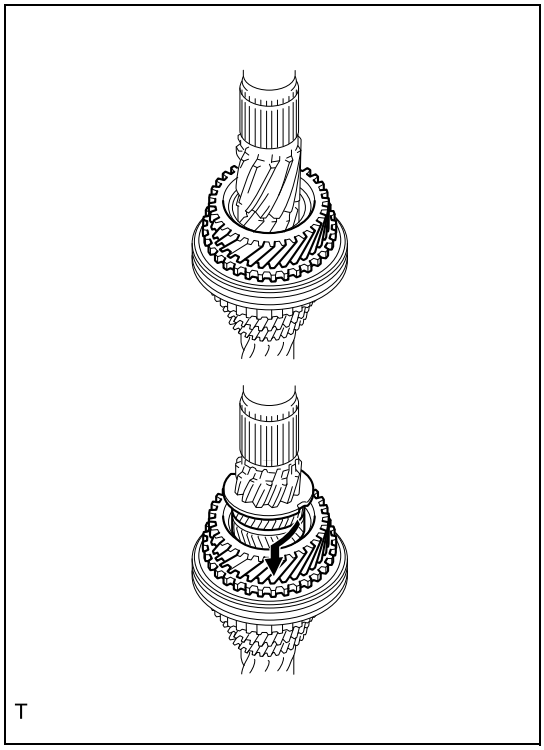
1. Installation of transmission hub sleeve No.2
   (1) Apply manual transmission oil to the sliding area of the transmission clutch hub No.2.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
   (2) Install the transmission hub sleeve No.2 to the transmission clutch hub No.2, and install the 3 balls after installing the 3 synchromesh shifting keys No.1 and the 3 synchromesh shifting key springs No.1 as a unit.
   NOTE:
   - Install the shifting key pole while pressing the shifting key spring. Install the balls while pressing the synchromesh shifting key spring No.1.
   - After the installation, settle the synchromesh shifting key spring No.1.



2. Installation of counter shaft 3rd gear
   (1) Apply manual transmission oil to the counter shaft installation portion, the needle roller bearing, and the inner surface and the tapered cone portion of the counter shaft 3rd gear.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
   (2) Install the needle roller bearing and the counter shaft 3rd gear.

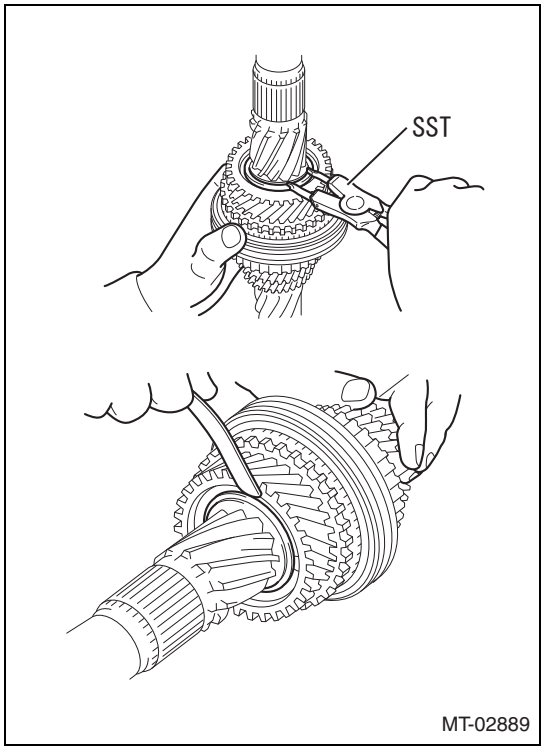


3. Installation of transmission clutch hub No.2
   (1) Install the synchronizer ring set No.3 to the counter shaft 3rd gear.
   - Align the middle ring claw with the gear groove.
   - Align the inner ring claw with the outer ring claw groove.
   (2) Use the SST to install the transmission clutch hub No.2.
   SST 18654AA000, 398477703
   CAUTION:
   Check the position of the synchronizer ring set No.3.
   NOTE:
   - Press-fit the transmission clutch hub No.2 until it contacts the counter shaft.
   - After the press-fitting, check that the synchronizer ring set No.3 moves in the thrust direction.



T

4. Installation of counter shaft 4th gear
   (1) Install the synchronizer ring No.1 to the transmission clutch hub No.2.
   (2) Apply manual transmission oil to the 4th gear bearing inner race, and the inner surface and the tapered cone portion of the counter shaft 4th gear.
   NOTE:
   Be sure to use the recommended product or the substitute product for manual transmission oil. (Refer to MT - 4)
   (3) Install the counter shaft 4th gear and 4th gear bearing inner race.
   NOTE:
   Install the 4th gear bearing inner race by turning it clockwise along the gear.



MT-02889

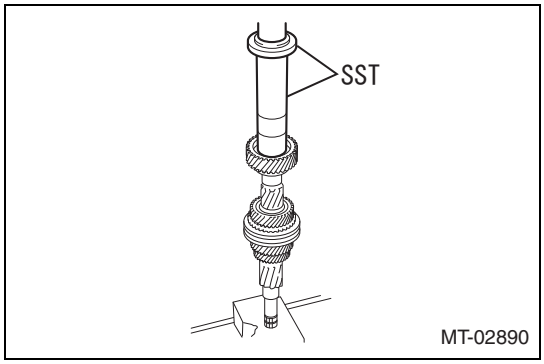
5. Installation of 4th inner race thrust washer
   (1) Select a 4th inner race thrust washer so that the thrust clearance between the 4th gear bearing inner race and the 4th inner race thrust washer is within the standard value.
   Standard value: 0 to 0.1 mm {0 to 0.00394 in}
   NOTE:
   Select a 4th inner race thrust washer with the maximum thickness that can be installed.

Type of 4th inner race thrust washer

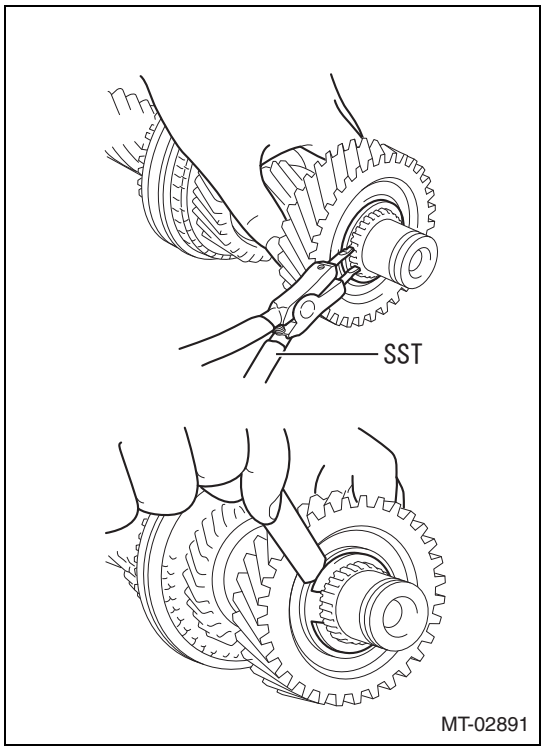
| Item number | Thickness mm {in} | Identification mark |
|---|---|---|
| 17002AA090 | 3.75 {0.14763} | A |
| 17002AA100 | 3.80 {0.14960} | B |
| 17002AA110 | 3.85 {0.15157} | C |
| 17002AA120 | 3.90 {0.15354} | D |
| 17002AA130 | 3.95 {0.15551} | E |
| 17002AA140 | 4.00 {0.15748} | F |
| 17002AA150 | 4.05 {0.15944} | G |
| 17002AA160 | 4.10 {0.16141} | H |

   (2) Use the SST to install a new 4th inner race thrust washer, a new 4th washer retaining ring, and a new shaft snap ring to the counter shaft.
   SST 499895400

MT



6. Installation of counter drive gear
   (1) Use the SST to install the counter drive gear.
   SST 499277000, 398477703

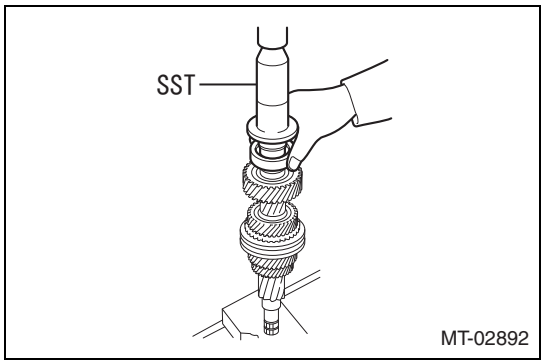


7. Installation of shaft snap ring (transmission clutch hub No.3)
   (1) Select a shaft snap ring so that the thrust clearance between the counter drive gear and the shaft snap ring is within the standard value.
   Standard value: 0 to 0.1 mm {0 to 0.00394 in}
   NOTE:
   Select a shaft snap ring with the maximum thickness that can be installed.

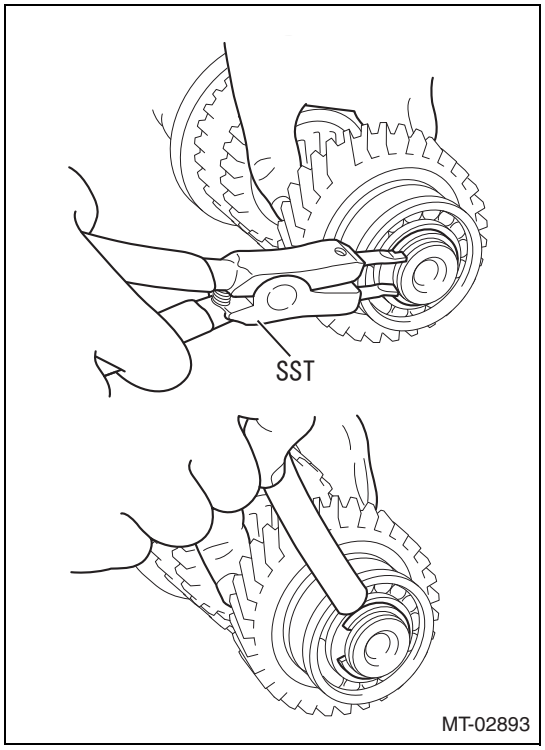
Shaft snap ring type

| Item number | Thickness mm {in} | Identification mark |
|---|---|---|
| 17005AA520 | 1.80 {0.07086} | A |
| 17005AA530 | 1.85 {0.07283} | B |
| 17005AA540 | 1.90 {0.07480} | C |
| 17005AA550 | 1.95 {0.07677} | D |
| 17005AA560 | 2.00 {0.07874} | E |
| 17005AA570 | 2.05 {0.08070} | F |

   (2) Use the SST to install a new shaft snap ring to the counter shaft.
   SST 499895400



8. Installation of counter gear front bearing
   (1) Use the SST to install a new counter gear front bearing while holding it by hand.
   SST 498057300



9. Installation of shaft snap ring (counter gear front bearing)
   (1) Select a shaft snap ring so that the thrust clearance between the counter gear front bearing and the shaft snap ring is within the standard value.
   Standard value: 0 to 0.1 mm {0 to 0.00394 in}
   NOTE:
   Select a shaft snap ring with the maximum thickness that can be installed.

Shaft snap ring type

| Item number | Thickness mm {in} | Identification mark |
|---|---|---|
| 17005AA310 | 2.05 {0.08070} | 1 |
| 17005AA290 | 2.10 {0.08267} | 2 |
| 17005AA320 | 2.15 {0.08464} | 3 |
| 17005AA300 | 2.20 {0.08661} | 4 |
| 17005AA330 | 2.25 {0.08858} | 5 |
| 17005AA340 | 2.30 {0.09055} | 6 |

   (2) Use the SST to install a new shaft snap ring to the counter shaft.
   SST 499895400

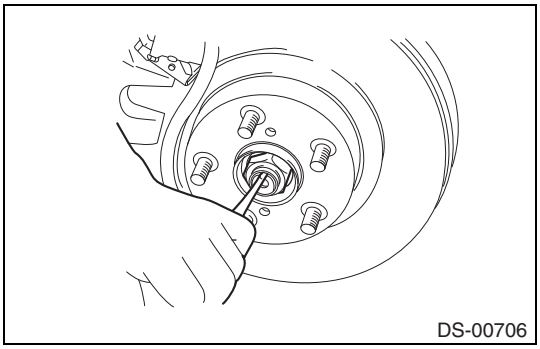
DP

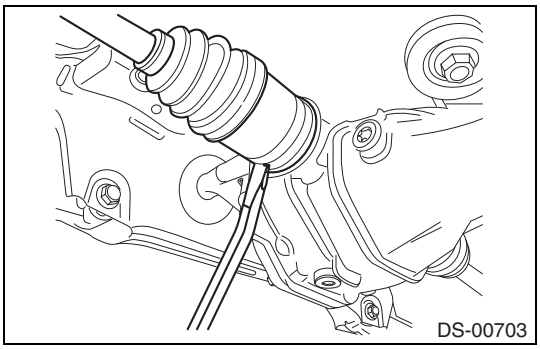
## Removal

1. Lift up the vehicle, and then remove the rear wheels.



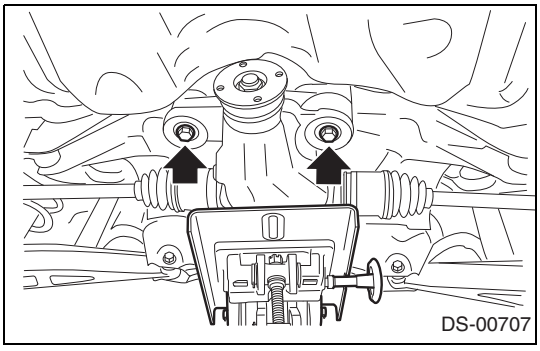
DS-00706

2. Remove the rear axle shaft nut.
   CAUTION:
   Do not loosen the rear axle shaft nut with the rear axle loaded. Doing so may damage the rear axle hub & bearing ASSY.
   (1) Lift the crimped section of the rear axle shaft nut.
   (2) Using a socket wrench, remove the rear axle shaft nut while depressing the brake pedal.
3. Drain differential gear oil. (Refer to AD - 40)
4. Remove the propeller shaft. (Refer to DP - 14)



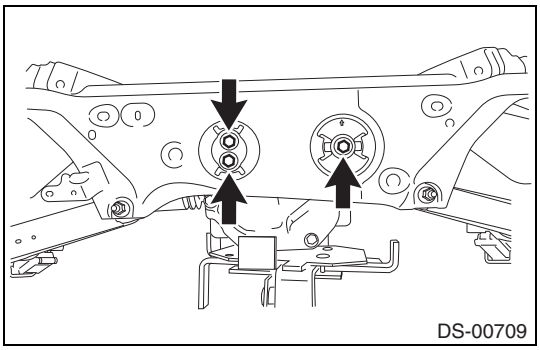
DS-00703

5. Loosen the joint of rear differential carrier ASSY and rear drive shaft ASSY.
   Using a tool such as a crowbar, loosen the rear drive shaft ASSY attached to the rear differential carrier ASSY as shown in the figure.
   CAUTION:
   If a crowbar, etc. contacts the cover, the cover may be damaged. A crowbar, etc. is allowed to contact the differential carrier.
6. Disconnect the installation section of rear differential carrier ASSY.
   (1) Support the rear differential carrier ASSY with a transmission jack.



DS-00707

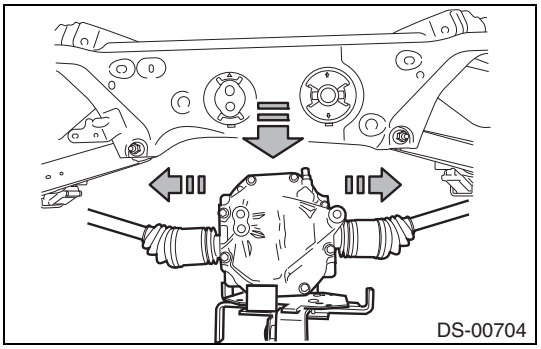
   (2) Remove 2 bolts which hold the front side of the rear differential carrier ASSY from the rear suspension member SUB-ASSY.



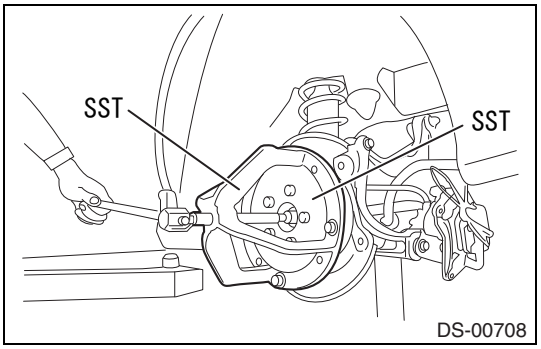
DS-00709

   (3) Remove 3 bolts securing the rear differential carrier ASSY to the rear suspension member SUB-ASSY.

DP



7. Completely pull out the rear drive shaft ASSY while lowering the rear differential carrier ASSY.
   CAUTION:
   Be careful not to damage the boot.

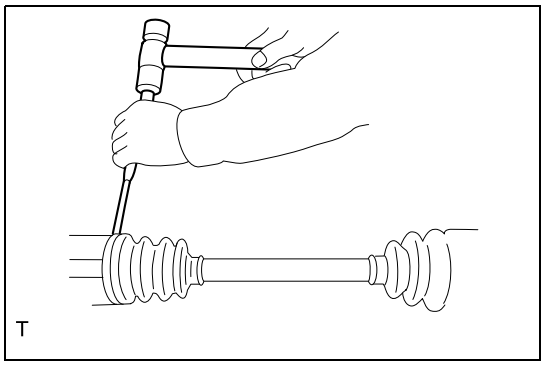


8. Remove the rear drive shaft ASSY from the rear axle carrier.
   NOTE:
   If it is hard to be removed, use the SST.
   SST 926470000, 28099PA110

## Disassembly

NOTE:

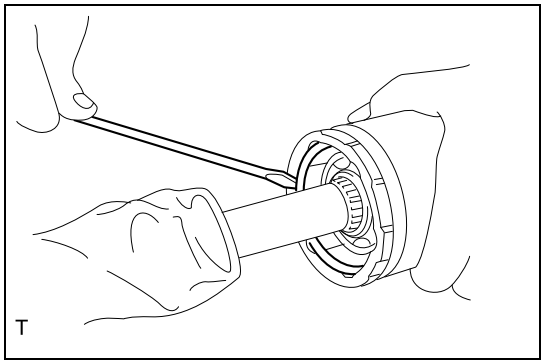
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.



1. Removal of rear drive shaft inboard joint boot clamp NO. 2
   (1) Using a flat tip screwdriver or pliers, loosen the rear drive shaft inboard joint boot clamp NO. 2.
   CAUTION:
   Be careful not to damage the boot.

DP

2. Removal of rear drive shaft inboard joint boot clamp
   NOTE:
   For the rear drive shaft inboard joint boot clamp, perform the same procedure as the rear drive shaft inboard joint boot clamp NO. 2.
3. Removal of rear drive shaft outboard joint boot clamp NO. 2
   NOTE:
   For the rear drive shaft outboard joint boot clamp NO. 2, perform the same procedure as the rear drive shaft inboard joint boot clamp NO. 2.
4. Removal of rear drive shaft outboard joint boot clamp
   NOTE:
   For the rear drive shaft outboard joint boot clamp, perform the same procedure as the rear drive shaft inboard joint boot clamp NO. 2.



5. Removal of snap ring (LH)
   (1) Remove the round snap ring at the neck of EDJ outer race with a flat tip screwdriver.

6. Removal of EDJ outer race (LH)
   (1) Remove the EDJ outer race from shaft ASSY.

   (2) Wipe off grease and take out the ball.

Captions in illustration

| | |
|---|---|
| *1 | EDJ outer race |
| *2 | Grease |
| *3 | Ball (8 pieces) |

CAUTION:
The grease is a special grease (exclusively provided for constant velocity joints). Do not mix with other greases.
NOTE:
Disassemble the parts taking care not to lose balls.

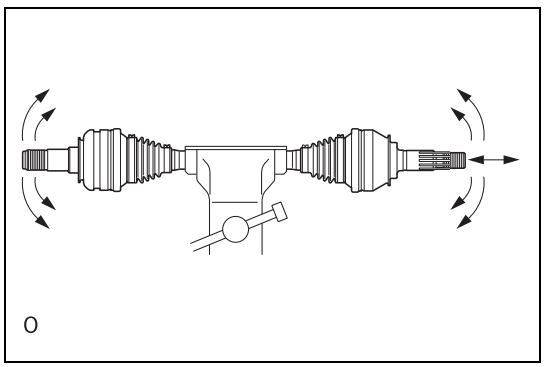
   (3) In order to remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.

7. Removal of EDJ inner race (LH)
   (1) Using pliers, remove the snap ring fixing the inner race to the shaft.
   (2) Remove the EDJ inner race.

8. Removal of EDJ boot (LH)
   (1) Remove the EDJ cage from shaft, and then remove the EDJ boot.
   CAUTION:
   Wrap shaft splines with vinyl tape to protect the EDJ boot from scratches.

9. Removal of EBJ boot (LH)
   (1) Remove the EBJ boot using the same procedures as for the EDJ boot.
   NOTE:
   The EBJ is a non-disassembly part, so the drive shaft disassembly stops here.

## Inspection



1. Inspection of rear drive shaft ASSY
   (1) Check that the joint portion works smoothly and there is no excessive play by moving the joint portion up/down, to the right/left and in the axial direction.
   (2) Check each joint boot for cracks, damage or grease leakage.
   CAUTION:
   Carry the drive shaft ASSY while keeping it horizontally.

## Assembly

NOTE:

- The following procedure is for LH side.

• Perform the same procedures for the RH and LH side.

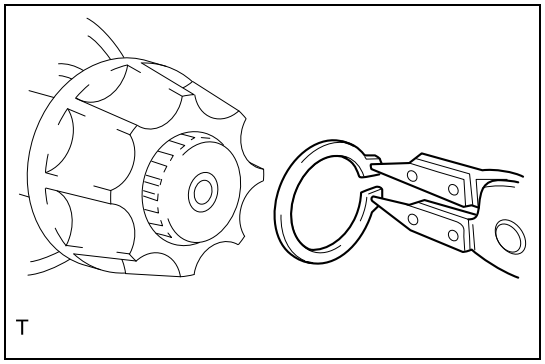
1. Installation of EBJ boot (LH)
   (1) Wrap vinyl tape around the shaft splines.
   CAUTION:
   Wrap shaft splines with vinyl tape to protect the boot from scratches.
   (2) Install the EBJ boot to the specified position, and fill it with NKG106 grease.
   Standard value: 50 to 60g{1.76 to 2.12 oz}
2. Installation of EDJ boot (LH)
   (1) Place the EDJ boot at the center of shaft.

   (2) Insert the EDJ cage into shaft.

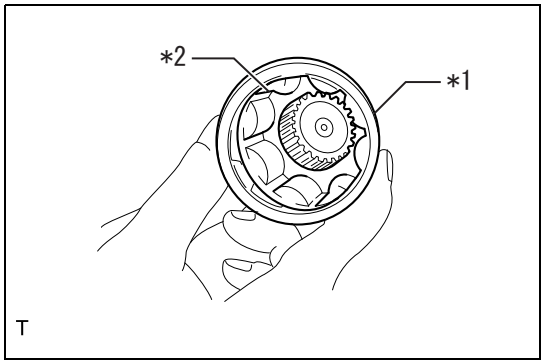
Captions in illustration

| | |
|---|---|
| *1 | EDJ cage |
| *a | Cutout portion |

NOTE:
Insert the cage with the cutout portion facing the shaft end, because the EDJ cage has the specified orientation.



3. Installation of EDJ inner race
   (1) Install the EDJ inner race on shaft and fix the snap ring in place with pliers.
   NOTE:
   Confirm that the snap ring is completely fitted in the shaft groove.



4. Installation of EDJ cage
   (1) Install the EDJ cage to inner race fixed onto the shaft.

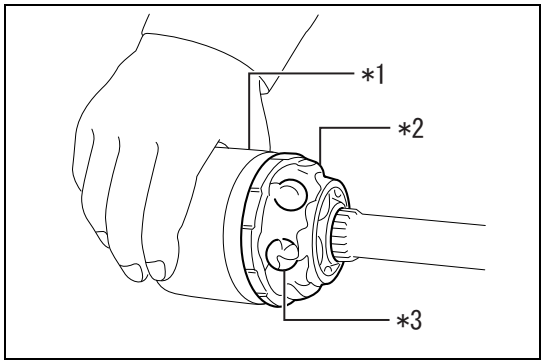
Captions in illustration

| | |
|---|---|
| *1 | EDJ cage |
| *2 | Inner race |

NOTE:
Fit the cage with the protruding section aligned with the track on the inner race, and turn by a half pitch.

   (2) Fill the inner side of the EDJ outer race with NKG814 grease.
   Standard value: 80 to 90g{2.82 to 3.17 oz}
   (3) Apply a thin coat of specified grease to the cage pocket and ball.
   (4) Insert the ball into the cage pocket.

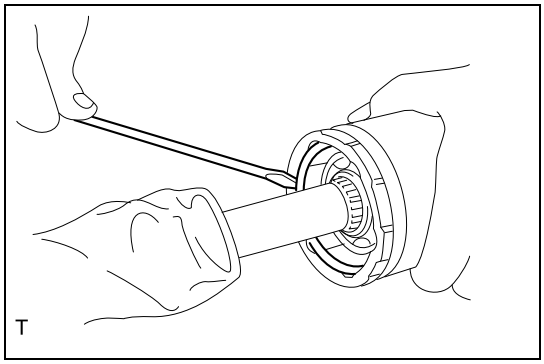
DP



(5) Align the outer race track and ball positions, and place the shaft, inner race, cage and ball in the original positions, and then fix the outer race in place.

Captions in illustration

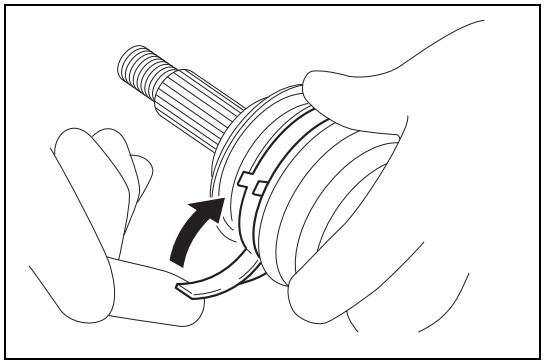
| | |
|---|---|
| *1 | Outer race |
| *2 | Grease |
| *3 | Ball (8 pieces) |



(6) Install the snap ring to the groove on the EDJ outer race.
NOTE:
- Assure that the balls, cage and inner race are completely fitted in the outer race of EDJ.
- Use care not to place the matched position of snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the snap ring is completely fitted in the groove.

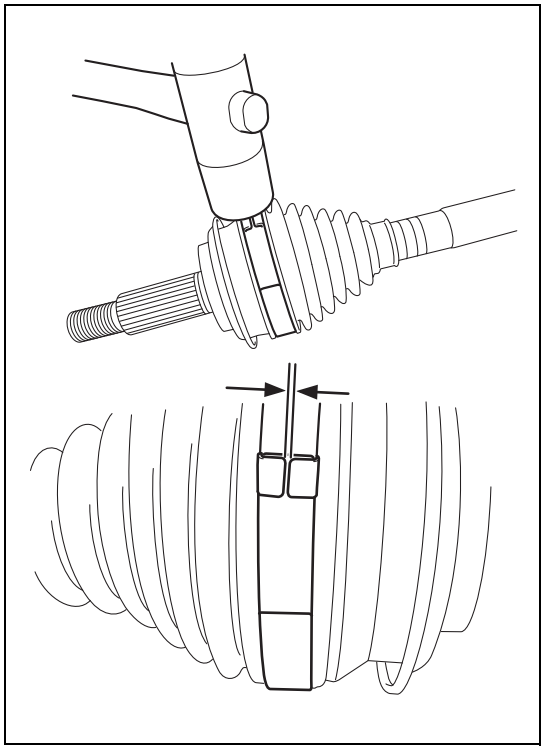
(7) Apply an even coat of NKG814 grease over the entire inner surface of boot. Also apply grease to the shaft.
Standard value: 20 to 30g{0.71 to 1.06 oz}

(8) Install the EDJ boot taking care not to twist it.
NOTE:
- The inside of the large end of EDJ boot and the boot groove shall be cleaned thoroughly so as to be free from grease and other substances.
- When installing the EDJ boot, position the outer race of EDJ at center of the stroke.

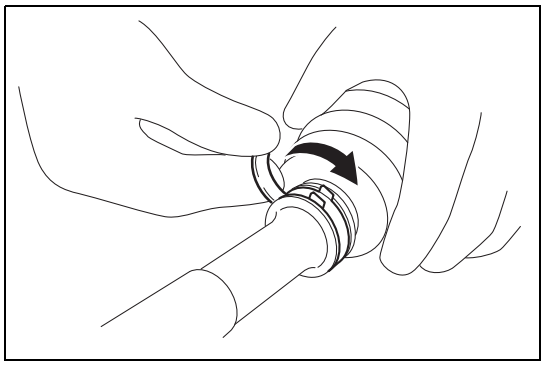


5. Installation of rear drive shaft outboard joint boot clamp NO. 2
(1) Apply lubricants to the inner surface of a new rear drive shaft outboard joint boot clamp NO. 2.
(2) Install the rear drive shaft outboard joint boot clamp NO. 2 to the EDJ boot, and then temporarily bend the lever.
WARNING:
Wear protective gloves during operation. Use extra caution to prevent hands from being injured.
CAUTION:
- When temporarily bending the lever, make sure no bend is found on the band and lever.
- Do not repeat bending the lever many times to prevent the rear drive shaft outboard joint boot clamp NO. 2 from being cut.

(3) While holding the bent lever by hand, bend the buckle.

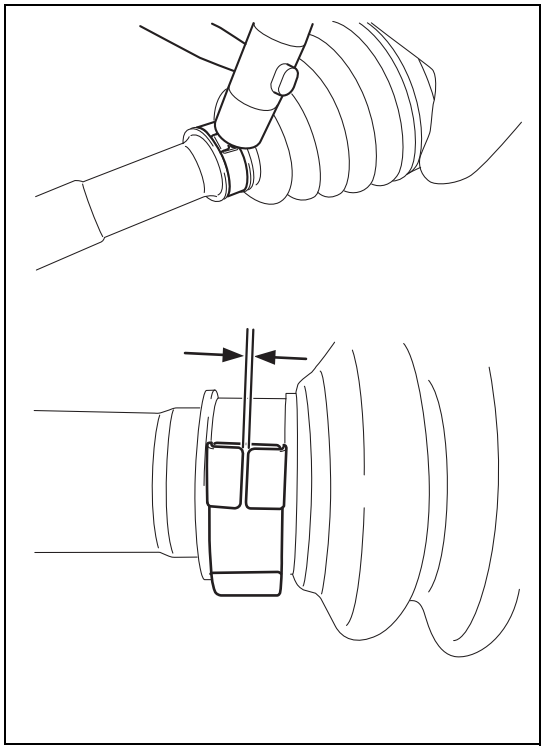


(4) Using a plastic hammer, tap the buckle to secure.
CAUTION:
- Do not tap the buckle excessively with a plastic hammer.
- Install the lever so that there is no lifting portion.
- Make sure that the gap between 2 buckles becomes parallel.



6. Installation of rear drive shaft outboard joint boot clamp
(1) Install a new rear drive shaft outboard joint boot clamp to the outboard joint boot, and then temporarily bend the lever.
WARNING:
Wear protective gloves during operation. Use extra caution to prevent hands from being injured.
CAUTION:
- When temporarily bending the lever, make sure no bend is found on the band and lever.
- Do not repeat bending the lever many times to prevent the rear drive shaft outboard joint boot clamp from being cut.

(2) While holding the bent lever by hand, bend the buckle.



(3) Using a plastic hammer, tap the buckle to secure.
CAUTION:
- Do not tap the buckle excessively with a plastic hammer.
- Install the lever so that there is no lifting portion.
- Make sure that the gap between 2 buckles becomes parallel.

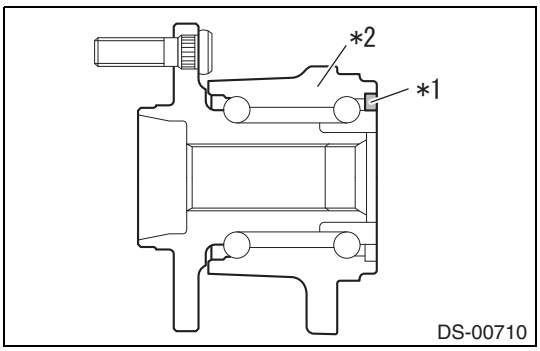
7. Installation of rear drive shaft inboard joint boot clamp NO. 2
NOTE:
For the rear drive shaft inboard joint boot clamp NO. 2, perform the same procedure as the rear drive shaft outboard joint boot clamp NO. 2.

8. Installation of rear drive shaft inboard joint boot clamp
NOTE:
For the rear drive shaft inboard joint boot clamp, perform the same procedure as the rear drive shaft outboard joint boot clamp.

DP

## Installation

1. Replace the rear differential side oil seal
NOTE:
After pulling out the axle shaft ASSY, be sure to replace with a new oil seal.

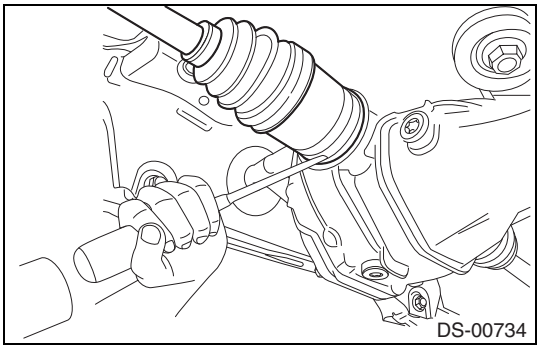


2. Insert the axle shaft ASSY into the rear hub spline, and pull it into the specified position
CAUTION:
- Be careful not to damage the magnetic encoder.
- Do not bring the magnetized tool closer to the magnetic encoder.
- Do not tap the axle shaft using a hammer when installing axle shaft ASSY.

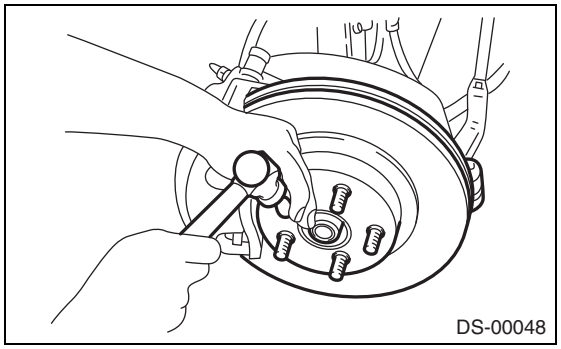
Captions in illustration

| | |
|---|---|
| *1 | Magnetic encoder |
| *2 | Rear axle hub & bearing ASSY |

3. Temporarily tighten the rear axle shaft nut



4. Install the rear axle shaft ASSY to the rear differential
5. Install the rear differential ASSY to the rear suspension member SUB ASSY
   CAUTION:
   Be sure to use a new self-locking nut.
   Standard value: T=62 N·m {632 kgf·cm} {45.7 ft-lbf}
   Differential ASSY to rear side of rear differential mount cushion (3 bolts)
   Standard value: T=95 N·m {969 kgf·cm} {70.1 ft-lbf}
   Differential ASSY to front side of rear suspension member SUB ASSY (2 bolts)
6. While pressing the brake pedal, tighten the new axle nuts to the specified torque
   CAUTION:
   Do not apply load to the rear axle before tightening the rear axle shaft nut. Doing so may damage the rear axle hub & bearing ASSY.
   Standard value:T=190N·m {1937kgf·cm} {140.1 ft-lbf}



7. Crimp and lock the rear axle shaft nut securely
8. Fill with differential gear oil
9. Install the rear wheels.
   Standard value:T=120N·m {1224kgf·cm} {88.5 ft-lbf}

DP

# Propeller shaft system

## Symptom table

NOTE:

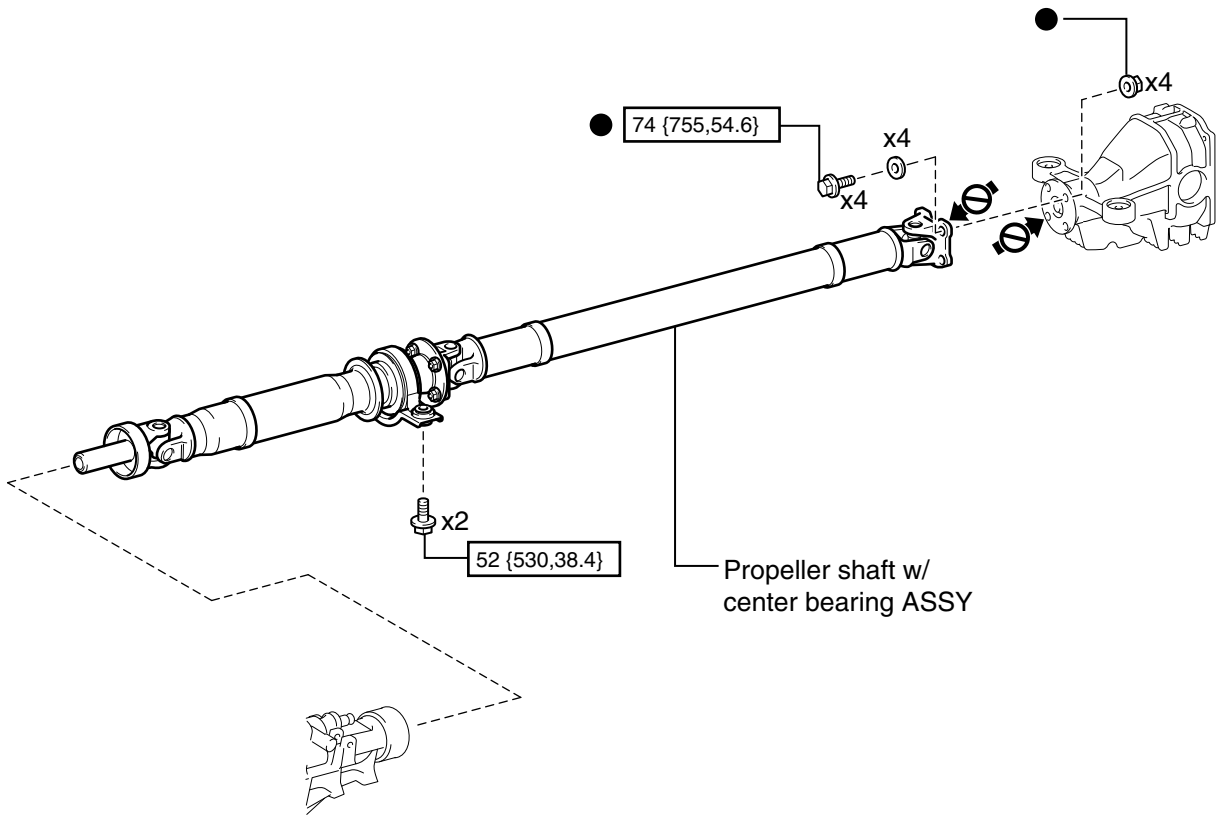
Use the following table to identify the trouble cause. Check each part, and repair or replace it if necessary.

Propeller shaft system

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Noise or vibration from propeller shaft ASSY | Center bearing (wear/play) | DP - 16 |
| | Propeller shaft (runout) | DP - 15 |
| | Universal joint spider | DP - 16 |

# Propeller shaft ASSY

## Exploded view



N•m {kgf•cm, ft•lbf} : Tightening torque

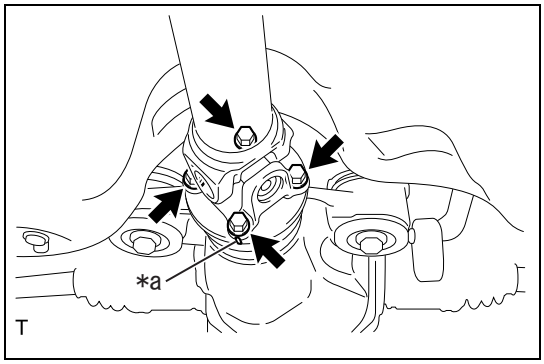
● Non-reusable parts

No oil is attached.

DS-00724

## Removal

1. Draining of manual transmission oil (Transmission M/T) (Refer to MT - 4)
2. Draining of automatic transmission fluid (Transmission A/T) (Refer to AT - 161)
3. Removal of exhaust pipe ASSY CTR (Refer to IE - 41)



4. Removal of propeller shaft W/ center bearing ASSY
   (1) Place alignment marks on the differential side companion flange and flexible coupling.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

   (2) Remove 4 bolts, 4 washers and 4 nuts.

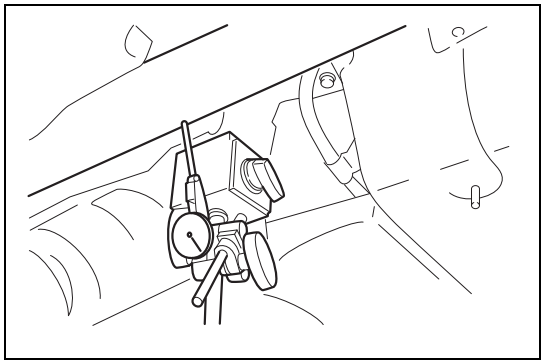
   (3) Remove the 2 bolts.

   (4) Remove the propeller shaft W/ center bearing ASSY from the extension housing, and insert the SST into the extension housing to prevent oil leakage. (Transmission M/T)
   SST 09325-20010
   CAUTION:
   - Do not apply excessive force to the parts such as the universal joint during removal.
   - Do not damage the oil seal.

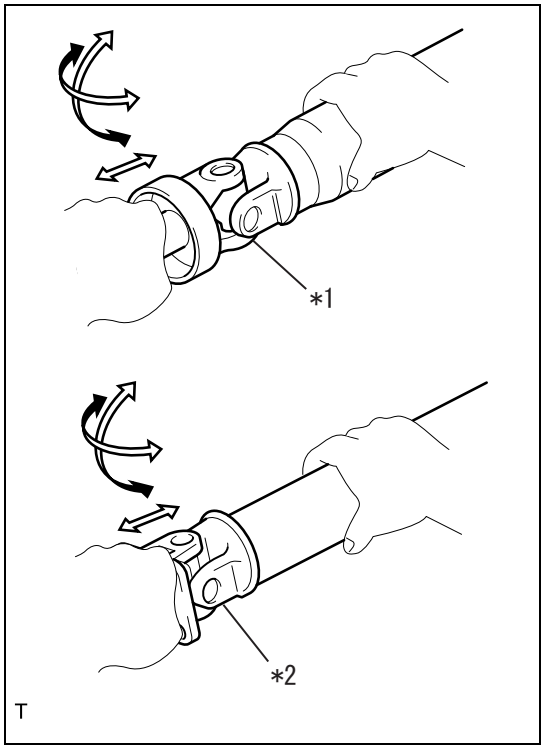
   (5) Remove the propeller shaft ASSY from the extension housing, insert the SST into the extension housing to prevent oil leakage. (Transmission A/T)
   SST 09325-40010
   CAUTION:
   - Do not apply excessive force to the parts such as the universal joint during removal.
   - Do not damage the oil seal.

## Inspection

1. Inspection of propeller shaft W/ center bearing ASSY
   (1) Set the dial gauge with its gauge head at the center of the propeller shaft W/ center bearing ASSY.



(2) Turn the propeller shaft W/ center bearing ASSY slowly by hand to check for runout.
Limit: 0.6mm {0.0236in}
CAUTION:
Attach the dial gauge at a right angle to the center of the propeller shaft W/ center bearing ASSY.

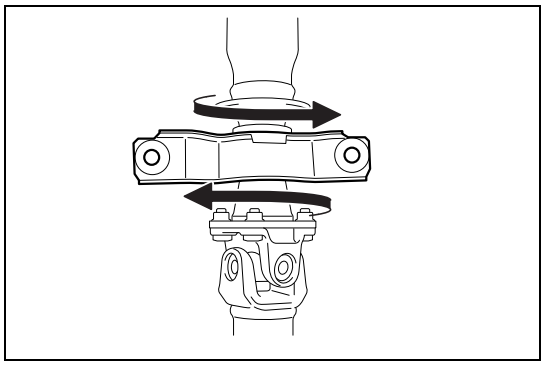


2. Inspection of universal joint spider ASSY
(1) Rotate the spider to check there is no drag.
(2) Strongly shake the spider in the axial and transverse directions with both hands to check there is no play in the joint.

Captions in illustration

| | |
|---|---|
| *1 | Front side spider |
| *2 | Rear side spider |

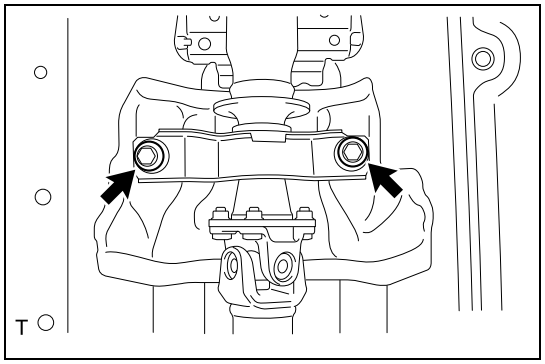
T



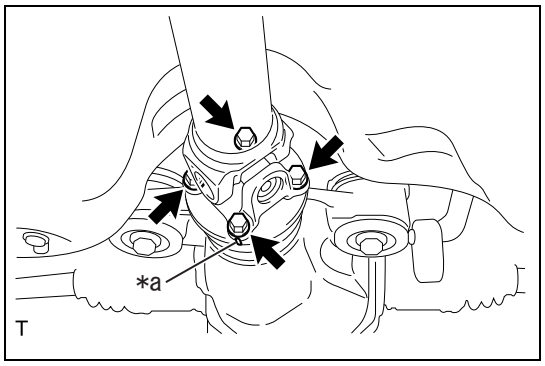
3. Inspection of center bearing ASSY
(1) Check there is no play and drag by rotating the bearing.
(2) Check the rubber part for damage or cracks and the spring for dislocation.
(3) Check the bracket part of the center bearing for cracks or deformation.

## Installation

1. Installation of propeller shaft W/ center bearing ASSY
(1) Clean and remove oil, etc. completely from the joint of the rear differential flange.
(2) Remove the SST from the extension housing.
(3) Insert the propeller shaft W/ center bearing ASSY into the extension housing.



(4) Install the center support bearing bracket of the propeller shaft center bearing ASSY using 2 bolts.
Standard value:T=52N·m {530kgf·cm} {38.4ft·lbf}



(5) Align the alignment marks on the differential side companion flange and flexible coupling.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

(6) Install with 4 bolts, 4 washers and 4 nuts.
CAUTION:
Secure the nut and turn the bolt.
Standard value:T=74N·m {755kgf·cm} {54.6ft·lbf}

2. Filling of manual transmission oil (Transmission M/T) (Refer to MT - 4)
3. Inspection of manual transmission oil leakage (Transmission M/T) (Refer to MT - 4)
4. Filling of automatic transmission fluid (Transmission A/T) (Refer to AT - 164)
5. Adjustment of automatic transmission fluid level (Transmission A/T) (Refer to AT - 165)
6. Installation of exhaust pipe ASSY CTR (Refer to IE - 44)

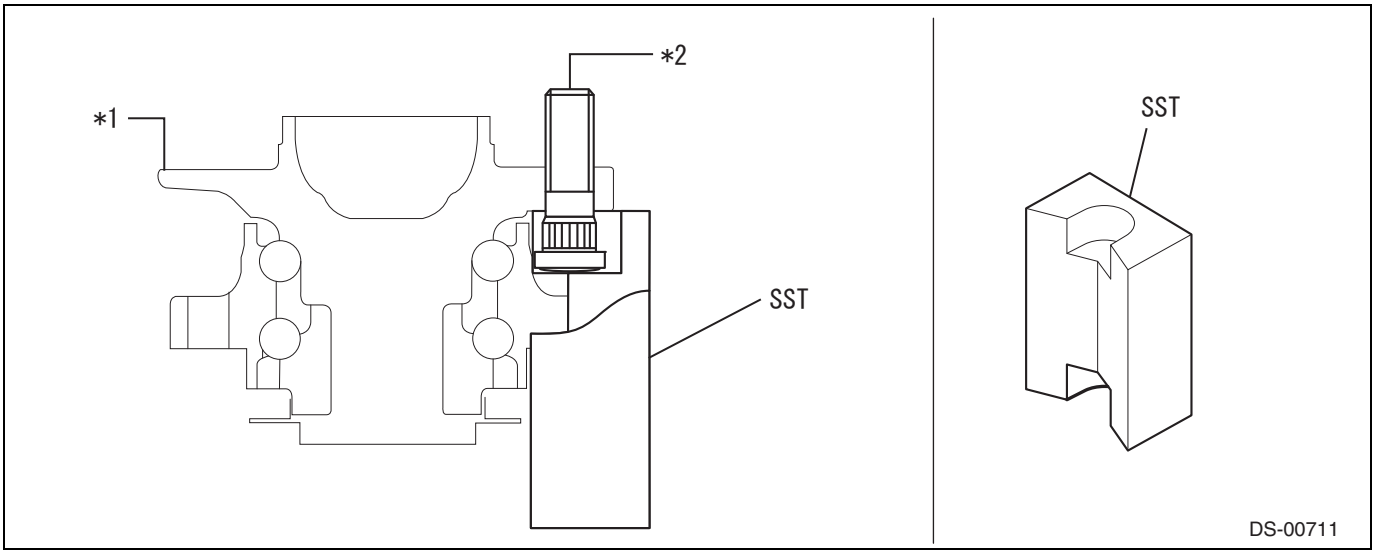
## Replacement

NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Removal of front tire
2. Removal of front disc brake caliper ASSY LH
   (1) Remove 2 bolts, and disconnect the disc brake caliper ASSY LH from the steering knuckle.
   CAUTION:
   Suspend the caliper using a wire, etc.
3. Removal of front disc (Refer to FB - 8)
4. Removal of front axle hub & bearing ASSY LH
   Using the SST and a hydraulic press, push out the hub bolt from the front axle hub & bearing ASSY.
   CAUTION:
   - Do not hammer the hub bolts. This may deform the front axle hub & bearing ASSY.
   - Do not reuse the hub bolt.



Captions in illustration

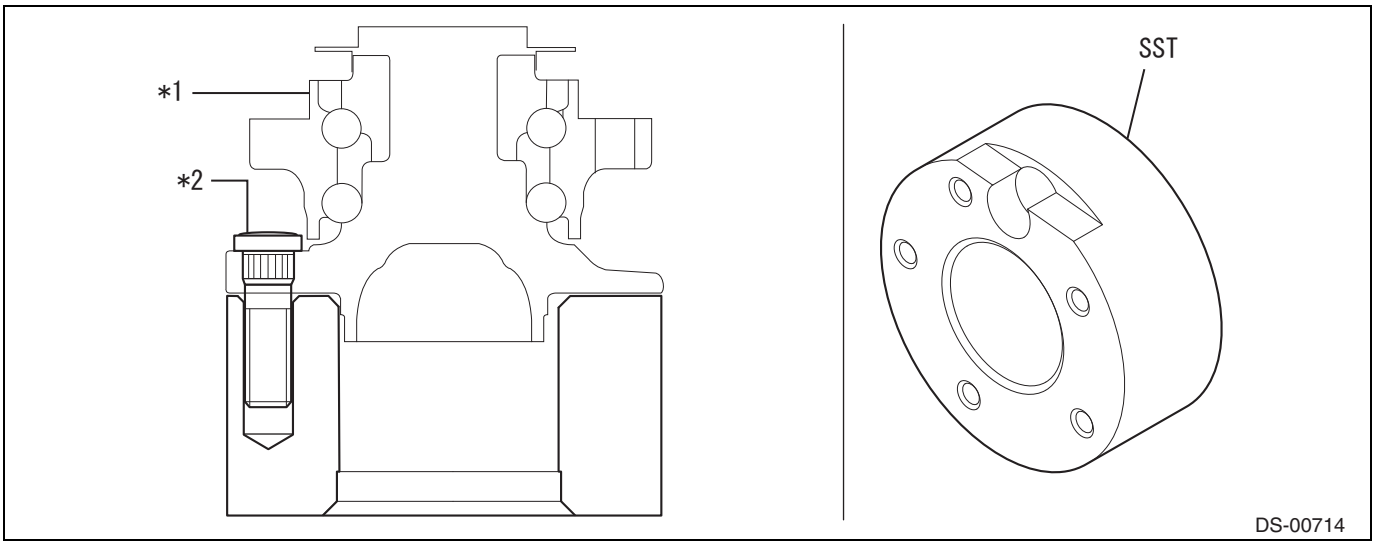
| | | | |
|---|---|---|---|
| *1 | Front axle hub & bearing ASSY | *2 | Hub bolt |

SST 28399AG000

NOTE:

Because the front axle hub & bearing ASSY can not be disassembled, only hub bolts can be removed.

5. Installation of front axle hub & bearing ASSY LH
   (1) Install the front axle hub & bearing ASSY to the SST securely.
   (2) Using a press, press the new hub bolts until their seating surfaces come in contact snugly with the front axle hub & bearing ASSY.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Front axle hub & bearing ASSY | *2 | Hub bolt |

SST 927080000

NOTE:

Use the 12 mm (0.47 in) dia. holes in the SST to prevent bolts from tilting.

6. Installation of front disc (Refer to FB - 14)
7. Installation of front disc brake caliper ASSY LH
   (1) Install the disc brake caliper ASSY LH to the steering knuckle with 2 bolts.

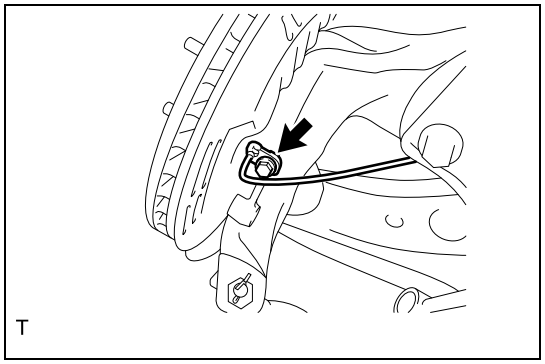
## Removal

NOTE:

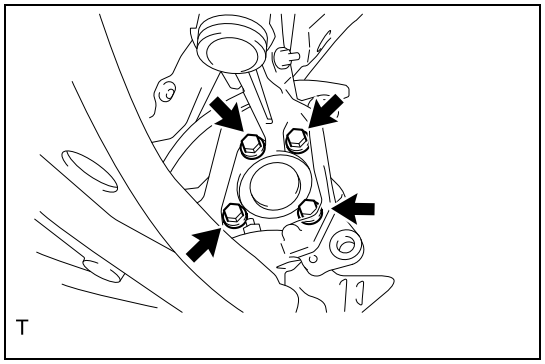
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Removal of front tire
2. Removal of front disc brake caliper ASSY LH (Refer to AD - 5)
3. Removal of front disc (Refer to FB - 8)

AD



4. Disconnection of speed sensor FR LH
   (1) Remove the bolt, and disconnect the speed sensor FR LH from the steering knuckle.
   CAUTION:
   - Keep the tip and mounting portion of the speed sensor FR LH free from foreign matter.
   - The speed sensor FR LH is easily damaged. When removing the speed sensor FR LH from the front axle hub & bearing ASSY LH, do not apply excessive force or turn the sensor.



5. Removal of front axle hub & bearing ASSY LH
   (1) Remove 4 bolts, and remove the front axle hub & bearing ASSY from the steering knuckle.

## Installation

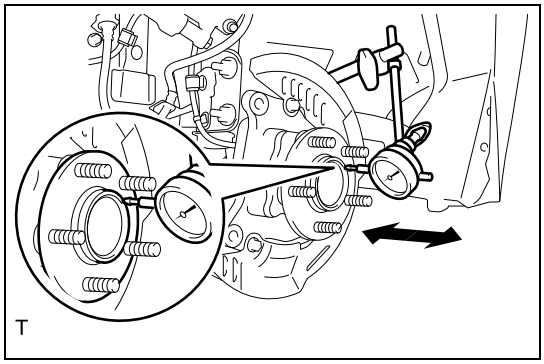
NOTE:
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Installation of front axle hub & bearing ASSY LH
   (1) Install the front axle hub & bearing ASSY to the steering knuckle with 4 bolts.
   Standard value:T=65N·m {663kgf·cm} {47.9ft·lbf}
2. Inspection of front axle hub & bearing ASSY axial play (Refer to AD - 11)
3. Inspection of front axle hub & bearing ASSY runout (Refer to AD - 11)
4. Installation of speed sensor FR LH
   (1) Install the speed sensor FR LH to the steering knuckle with a bolt.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   CAUTION:
   - Do not damage the tip of the speed sensor when installing the speed sensor body.
   - Do not allow foreign matter to attach to the mounting surfaces.
   - Be careful not to twist the speed sensor wire during installation.
5. Installation of front disc (Refer to FB - 14)
6. Installation of front disc brake caliper ASSY LH (Refer to AD - 6)
7. Installation of front tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
8. Inspection of test mode (speed sensor check) (Refer to BC - 15)

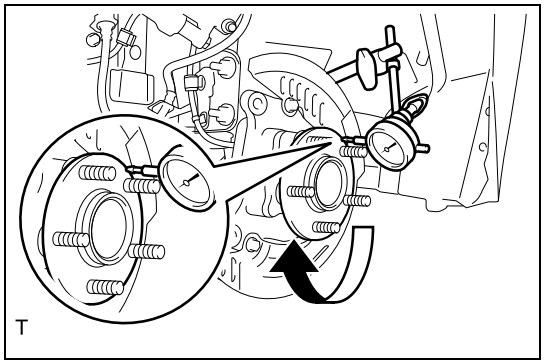
## On-vehicle inspection

NOTE:
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Removal of front tire
2. Removal of front disc brake caliper ASSY LH (Refer to AD - 5)
3. Removal of front disc (Refer to FB - 8)



4. Inspection of front axle hub & bearing ASSY axial play
   (1) Inspect axial play of the bearing near the axle hub inner periphery (flange portion) using a dial gauge.
   Limit: 0.05mm {0.00196in}
   CAUTION:
   If it exceeds the limit, replace the front axle hub with a new part.



5. Inspection of front axle hub & bearing ASSY runout
   (1) Inspect runout of the axle hub near the axle hub outer periphery using a dial gauge.
   Limit: 0.05mm {0.00196in}
   CAUTION:
   If it exceeds the limit, replace the front axle hub with a new part.

6. Installation of front disc (Refer to FB - 14)
7. Installation of front disc brake caliper ASSY LH (Refer to AD - 6)
8. Installation of front tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

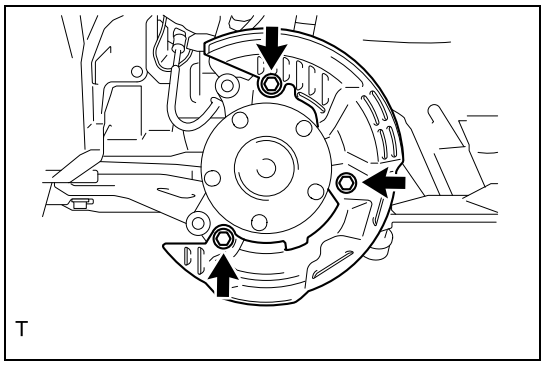
## Removal

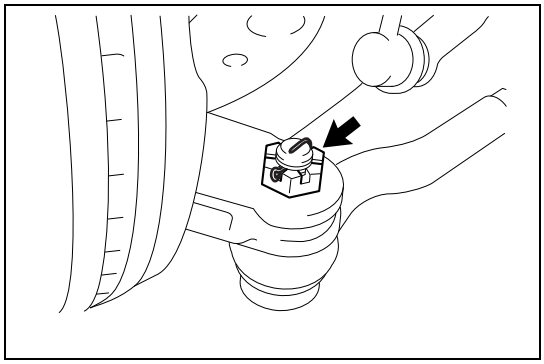
NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

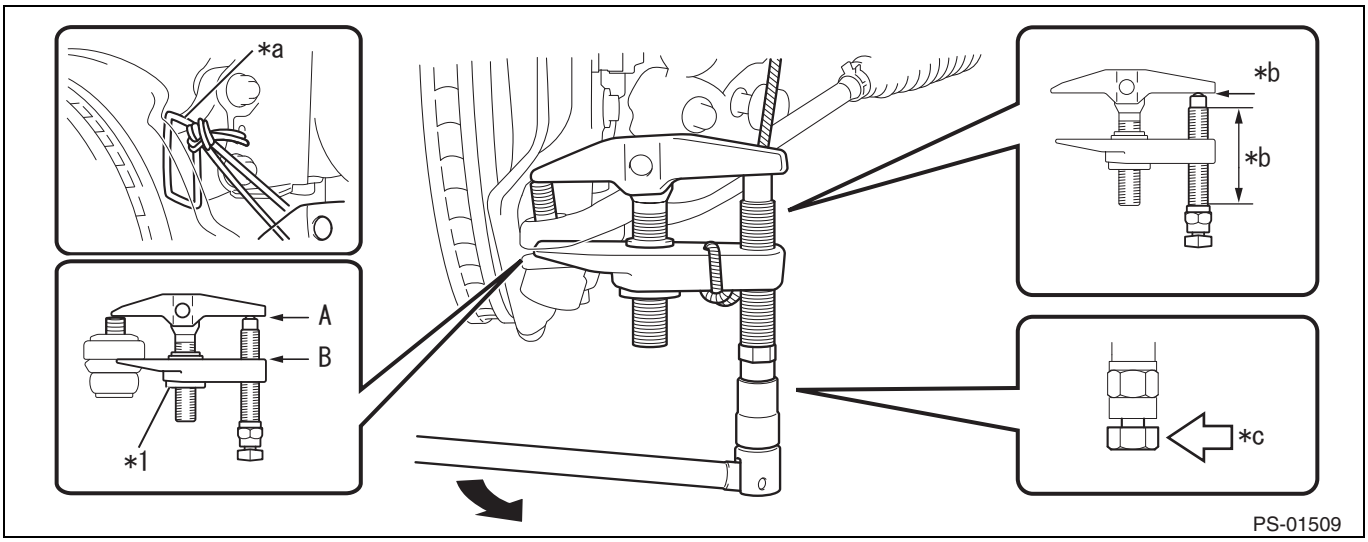
1. Removal of front axle hub LH (Refer to AD - 9)



2. Removal of disc brake dust cover FR LH
   (1) Remove 3 bolts, and remove the disc brake dust cover FR LH.



3. Disconnection of tie-rod end SUB-ASSY LH
   (1) Remove the cotter pin, and then remove the castle nut.
   (2) Use a tie-rod ball joint puller to detach the tie-rod end SUB-ASSY LH from the steering knuckle.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Nut | - | - |
| *a | Tie the string without slack | *b | Application area of lubricant |
| *c | Use a wrench here | - | - |

WARNING:

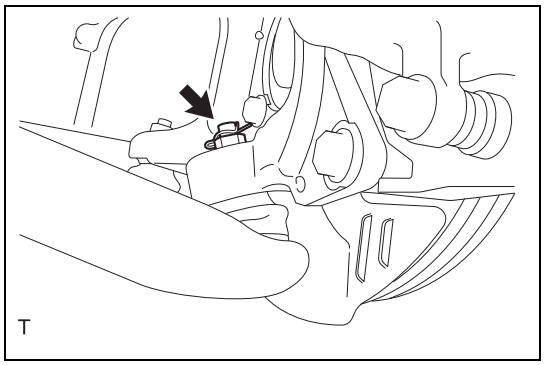
Apply lubricant to the thread and the tip of the tie-rod ball joint puller bolt.

CAUTION:

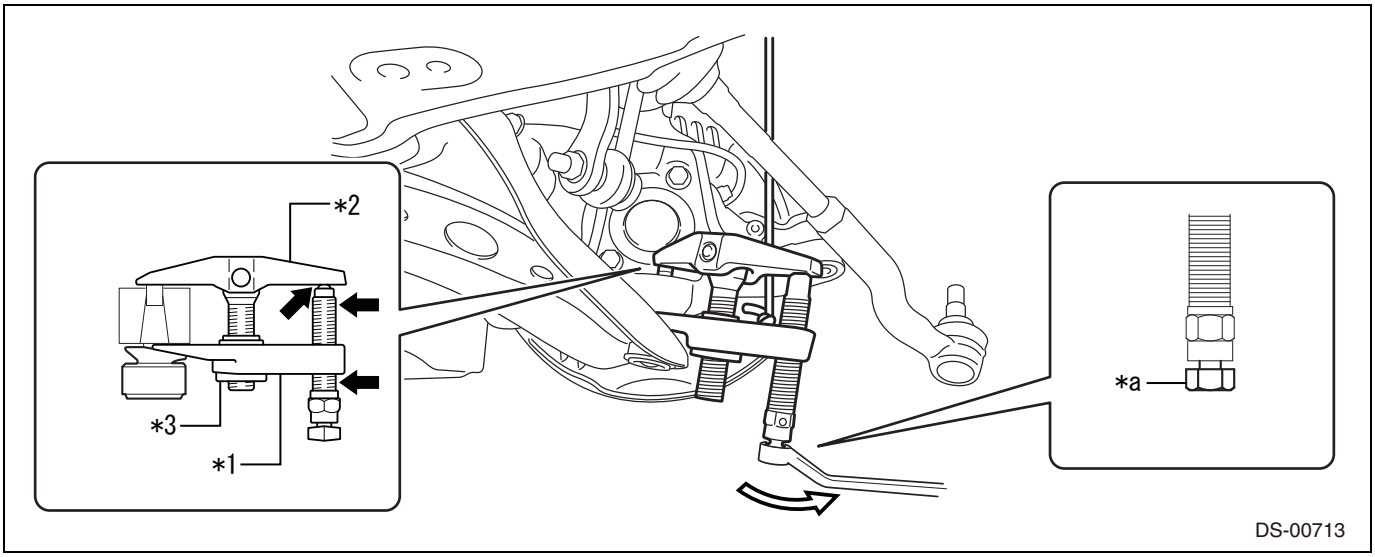
- Always tie a string to the steering knuckle without slack to prevent the tie-rod ball joint puller from falling.
- Install the tie-rod ball joint puller so as to make A parallel to B with the nut located in the center. Otherwise the dust cover may be damaged.

AD

- Always use a wrench at the point shown in the figure.
- Do not damage the ball joint boot of the tie-rod end SUB-ASSY LH.
- Do not damage the steering knuckle.
- Do not damage the disc brake dust cover FR.



4. Disconnection of front suspension lower arm ASSY LH
   (1) Remove the cotter pin and nut.
   (2) Install the tie-rod ball joint puller to the thread of the front suspension lower arm ASSY LH.
   (3) Use a tie-rod ball joint puller to detach the front suspension lower arm ASSY LH.

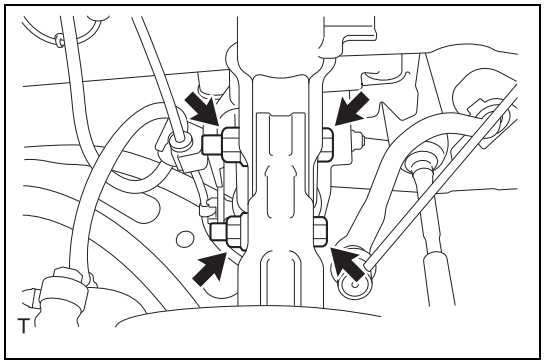


Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Claw | *2 | Body |
| *3 | Nut | *a | Place the wrench here. |
| ➡ | Application area of lubricant | ⇨ | Drive |

WARNING:
Apply lubricant to the thread and the tip of the tie-rod ball joint puller bolt.
CAUTION:

- Install the tie-rod ball joint puller so as to make the body parallel to the claw with the nut located in the center. Otherwise the dust cover of the front suspension lower arm ASSY may be damaged.
- Always tie a string to the vehicle without slack to prevent the tie-rod ball joint puller from falling.
- Do not damage the dust cover of the front suspension lower arm ASSY.
- Do not damage the front suspension lower arm ASSY.
- Do not damage the disc brake dust cover FR.
- Do not damage the steering knuckle.



5. Removal of steering knuckle LH
   (1) Remove the 2 bolts and 2 nuts to remove the steering knuckle LH.
   CAUTION:
   Secure the bolt and turn the nut.

## Installation

NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Installation of steering knuckle LH
   (1) Install the steering knuckle LH with 2 bolts and 2 new nuts.
   Standard value:T=155N·m {1581kgf·cm} {114.3ft·lbf}
2. Installation of front suspension lower arm ASSY LH
   (1) Install the front suspension lower arm ASSY LH with the nut.
   Standard value:T=51N·m {520kgf·cm} {37.6ft·lbf}
   (2) Install a new cotter pin.
3. Installation of tie-rod end SUB-ASSY LH
   (1) Install the tie-rod end SUB-ASSY LH to the steering knuckle LH with the nut.
   Standard value:T=27N·m {275kgf·cm} {19.9ft·lbf}
   (2) Install a new cotter pin.
   CAUTION:
   When aligning the clip holes after tightening the castle nut, tighten the castle nut further but within 60°.
4. Installation of disc brake dust cover FR LH
   (1) Install the front disc brake dust cover to the steering knuckle with 3 bolts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
5. Installation of front axle hub & bearing ASSY LH (Refer to AD - 10)
6. Inspection and adjustment of front wheel alignment (Refer to AL - 2)
7. VDC sensor mid point setting (Refer to BC - 15)

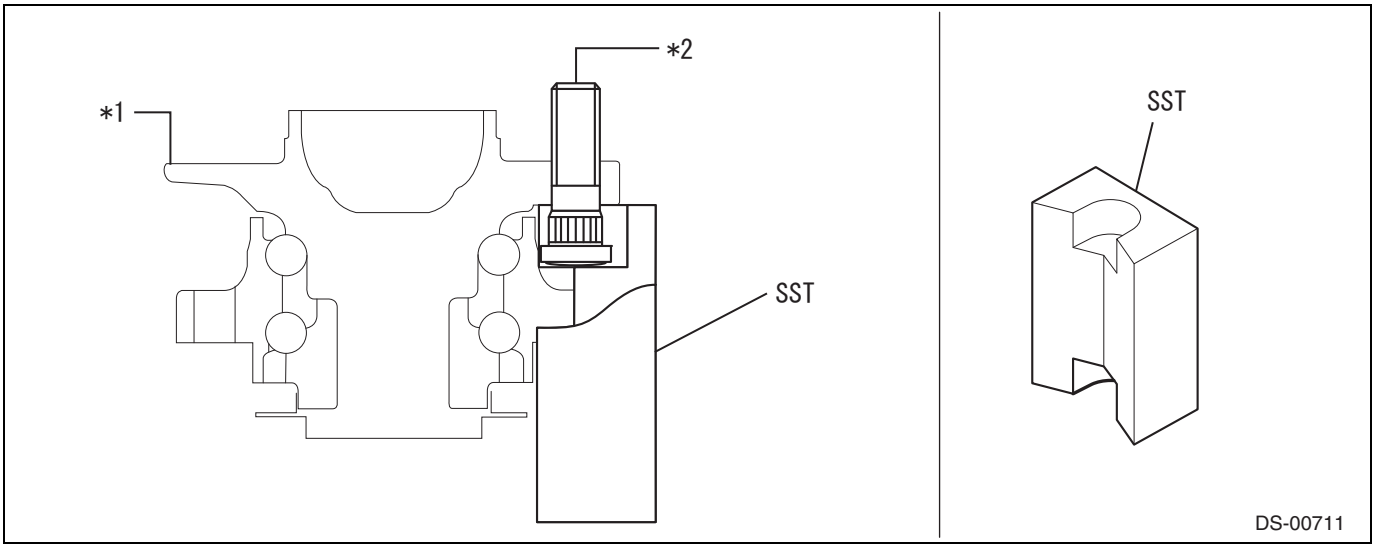
## Replacement

NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Removal of rear tire
2. Disconnection of rear disc brake caliper ASSY LH (Refer to PB - 16)
3. Removal of rear disc (Refer to RB - 7)
4. Removal of rear axle hub bolt & bearing ASSY LH
   Using the SST and a hydraulic press, push out the hub bolt from the rear axle hub & bearing ASSY.
   CAUTION:
   - Do not hammer the hub bolts. This may deform the rear axle hub & bearing ASSY.
   - Do not reuse the hub bolt.



Captions in illustration

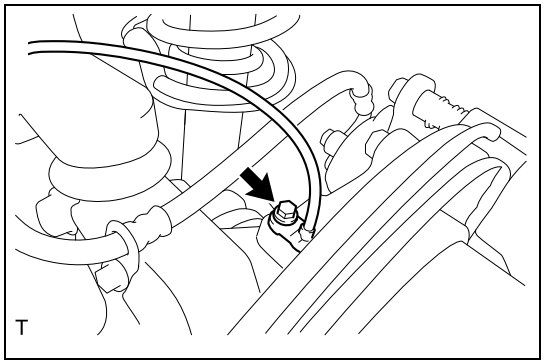
## Removal

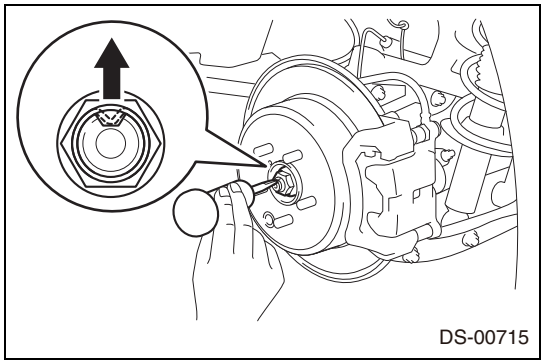
NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Removal of rear tire



2. Disconnection of speed sensor RR LH
   (1) Remove the bolt, and then remove the speed sensor.
   CAUTION:
   Keep the tip and mounting portion of the speed sensor RR free from foreign matter.



3. Removal of rear axle shaft nut LH
   (1) Remove the crimp of the rear axle shaft nut LH.
   CAUTION:
   Completely release the crimp of the nut to avoid damage to the thread of the rear drive shaft ASSY LH.
   (2) Remove the rear axle shaft nut using a socket wrench.
   CAUTION:
   Do not loosen the rear axle shaft nut LH with the rear axle loaded. Doing so may damage the rear axle hub and bearing ASSY LH.
4. Removal of rear drive shaft ASSY (Refer to DP - 5)
5. Disconnection of rear disc brake caliper ASSY LH (Refer to PB - 16)
6. Removal of rear disc (Refer to RB - 7)
7. Removal of rear axle hub and bearing ASSY LH

   (1) Remove 4 bolts, and remove the rear axle hub and bearing ASSY LH from the rear axle carrier.
   NOTE:
   Suspend the rear backing plate and the parking brake shoe with a string, etc.

AD

## Installation

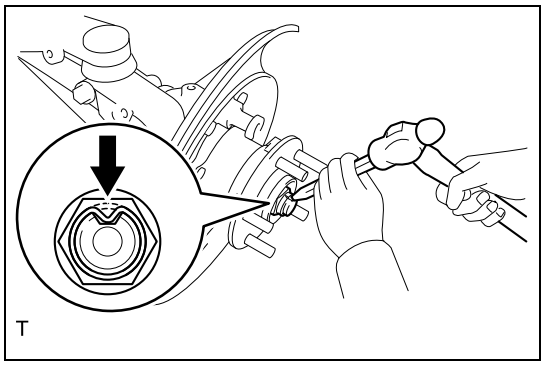
NOTE:
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Installation of rear axle hub and bearing ASSY LH
   (1) Install the rear axle hub and bearing ASSY LH to the rear axle carrier with 4 bolts.
   Standard value:T=65N·m {663kgf·cm} {47.9ft·lbf}
2. Installation of rear disc (Refer to RB - 16)
3. Installation of rear drive shaft ASSY (Refer to DP - 11)
4. Connection of rear disc brake caliper ASSY LH (Refer to PB - 25)
5. Installation of rear axle shaft nut LH
   CAUTION:
   - Always clean the drive shaft even if it is new.
   - Clean and remove oil, foreign matter, etc. completely.

   (1) Install a new rear axle shaft nut LH using a socket wrench.
   Standard value:T=190N·m {1938kgf·cm} {140.1ft·lbf}

CAUTION:
Do not crimp the rear axle shaft nut LH.
NOTE:
After the inspection of the rear axle hub and bearing ASSY LH play and runout, crimp the rear axle shaft nut LH.

6. Inspection of rear axle hub & bearing ASSY axial play (Refer to AD - 22)
7. Inspection of rear axle hub & bearing ASSY runout (Refer to AD - 23)



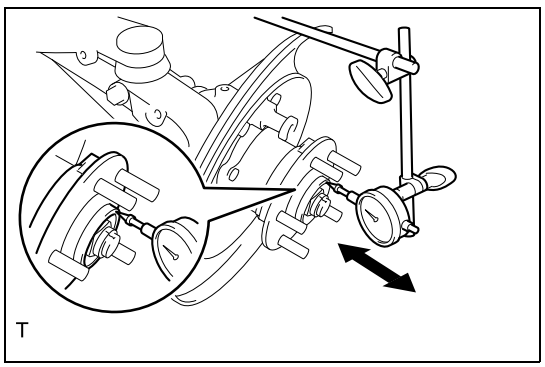
8. Securing of rear axle shaft nut LH
   (1) Crimp the rear axle shaft nut LH using a chisel and a hammer.
9. Installation of speed sensor RR LH
   (1) Install the speed sensor RR LH with a bolt.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   CAUTION:
   Keep the tip and mounting portion of the speed sensor RR LH free from foreign matter.
10. Installation of rear tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
11. Adjustment of parking brake lever free play (Refer to PB - 2)
12. Inspection of test mode (speed sensor check) (Refer to BC - 15)

## On-vehicle inspection

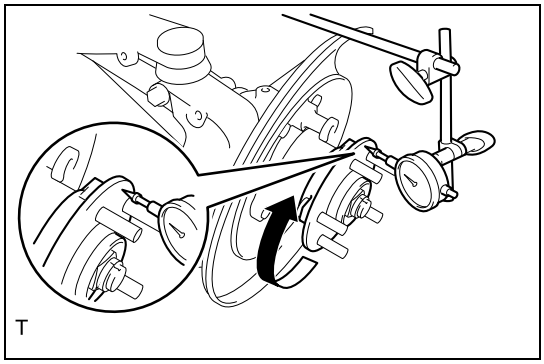
NOTE:
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

AD

1. Removal of rear tire
2. Disconnection of rear disc brake caliper ASSY LH (Refer to PB - 16)
3. Removal of rear disc (Refer to RB - 7)



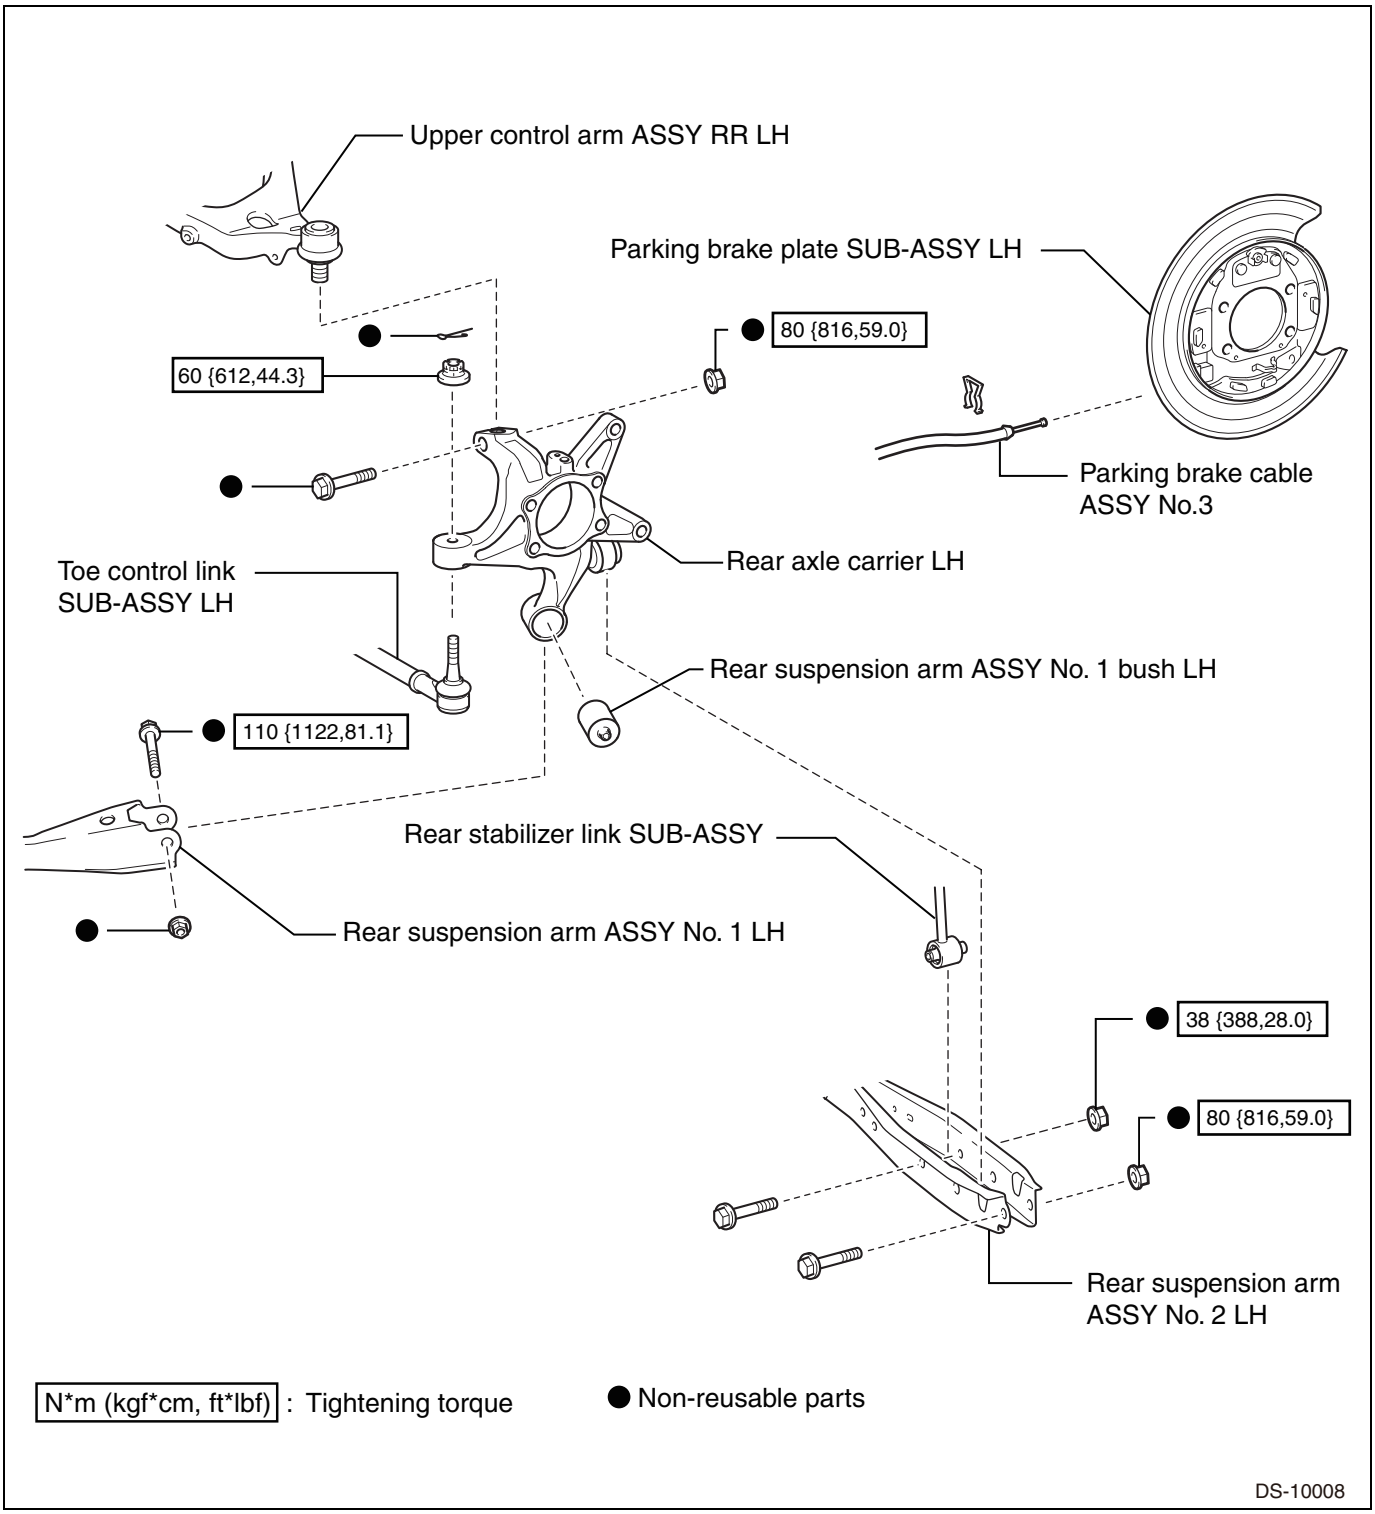
4. Inspection of rear axle hub & bearing ASSY axial play
   (1) Inspect axial play of the bearing near the axle hub inner periphery (flange portion) using a dial gauge.
   Limit: 0.05mm {0.00196in}
   CAUTION:
   If it exceeds the limit, replace the rear axle hub & bearing ASSY with a new part.



5. Inspection of rear axle hub & bearing ASSY runout
   (1) Inspect runout of the bearing near the axle hub outer periphery using a dial gauge.
   Limit: 0.05mm {0.00196in}
   CAUTION:
   If it exceeds the limit, replace the rear axle hub & bearing ASSY with a new part.
6. Installation of rear disc (Refer to RB - 16)
7. Connection of rear disc brake caliper ASSY LH (Refer to PB - 25)
8. Installation of rear tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

# Rear axle carrier

## Exploded view



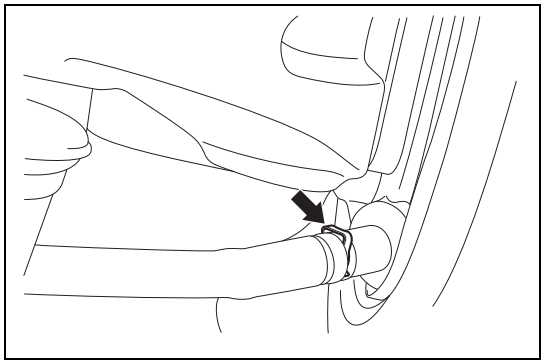
## Removal

NOTE:

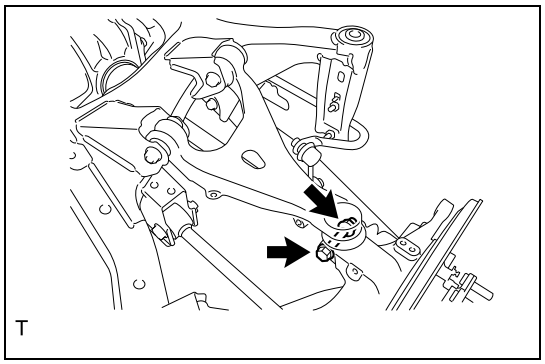
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Removal of rear axle hub & bearing ASSY LH (Refer to AD - 20)
2. Disassembly of parking brake (Refer to PB - 16)

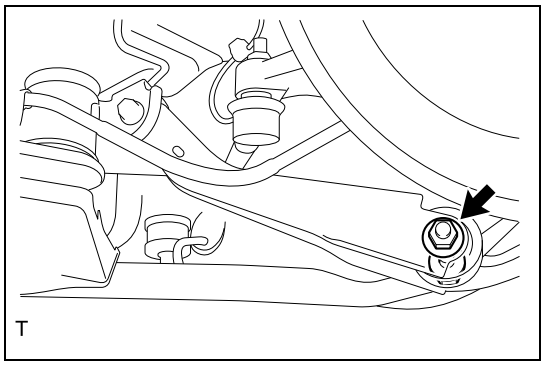
3. Disconnection of rear stabilizer link SUB-ASSY (installed on LH side) (Refer to RP - 6)



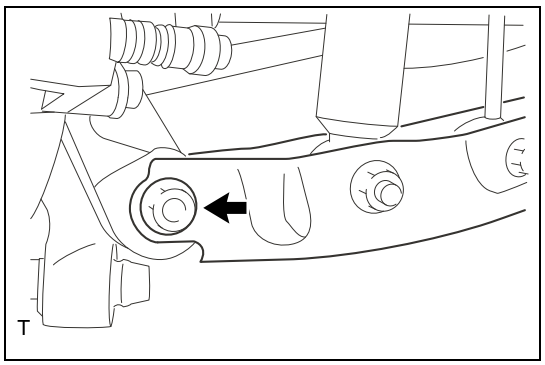
4. Disconnection of parking brake cable ASSY NO. 3
   (1) Remove the clip, and detach the parking brake cable ASSY NO. 3 from the back plate.



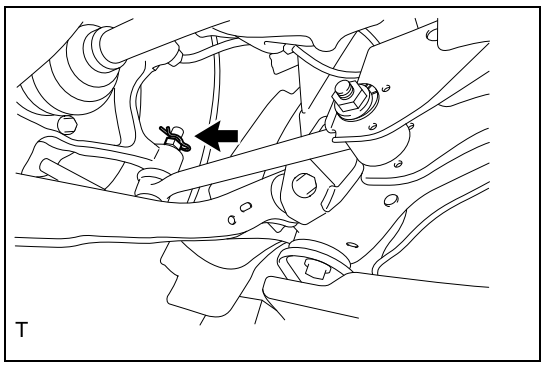
5. Disconnection of upper control arm ASSY RR LH
   (1) Remove the bolts and nuts, and detach the upper control arm ASSY RR LH from the rear axle carrier.



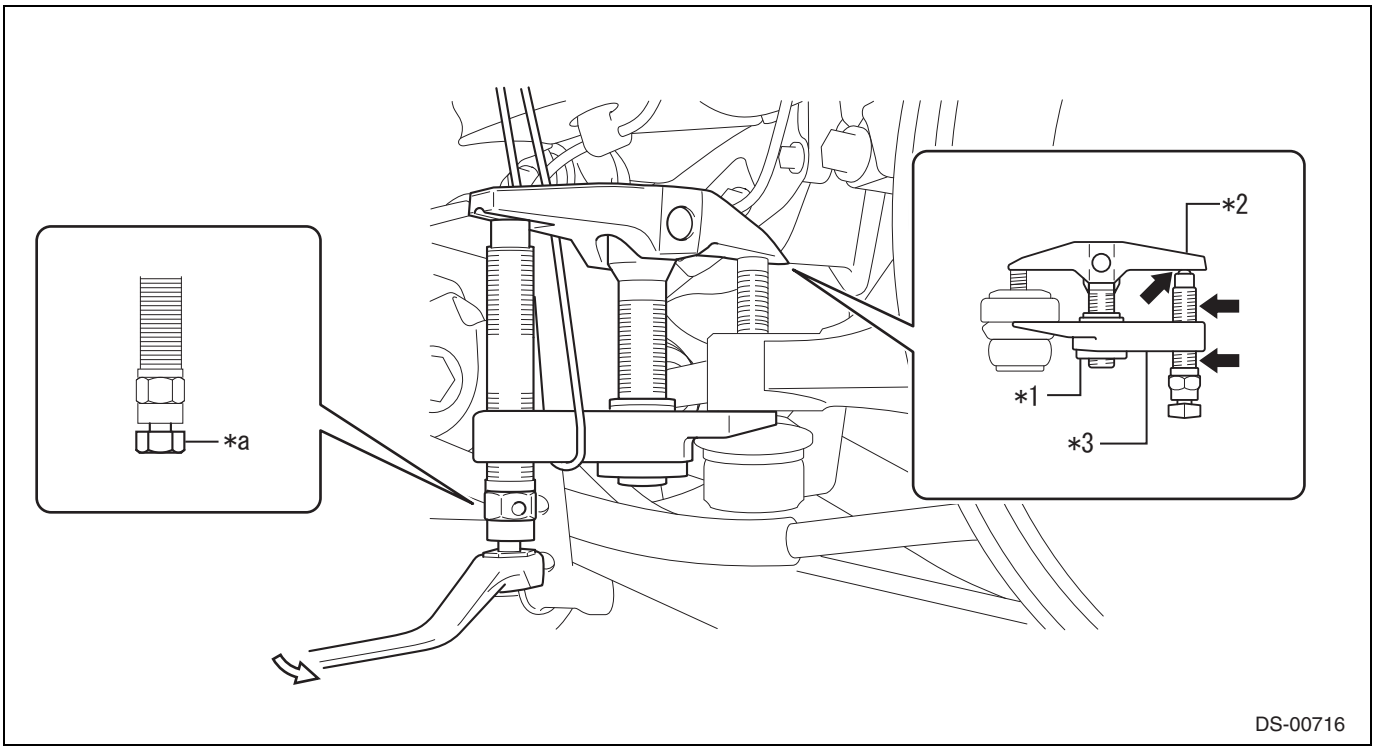
6. Disconnection of rear suspension arm ASSY NO. 1 LH
   (1) Remove the bolts and nuts, and detach the rear suspension arm ASSY NO. 1 LH from the rear axle carrier.



7. Disconnection of rear suspension arm ASSY NO. 2 LH
   (1) Remove the bolts and nuts, and detach the rear suspension arm ASSY NO. 2 LH from the rear axle carrier.



8. Disconnection of toe control link SUB-ASSY LH
   (1) Remove the cotter pin.
   (2) Remove the nut.
   (3) Using a tie-rod ball joint puller, detach the toe control link SUB-ASSY LH from the rear axle carrier.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Nut | *2 | Body |
| *3 | Claw | *a | Place the wrench here. |
| ➡ | Application area of lubricant | ⇨ | Direction of rotation |

WARNING:
Apply lubricant to the thread and the tip of the tie-rod ball joint puller bolt.
CAUTION:
- Install the tie-rod ball joint puller so as to make the body parallel to the claw with the nut located in the center. Otherwise the dust cover of the toe control link SUB-ASSY may be damaged.
- Always tie a string to the vehicle without slack to prevent the tie-rod ball joint puller from falling.
- Do not damage the dust cover portion of the toe control link SUB-ASSY.
- Do not damage the toe control link SUB-ASSY.
- Do not damage the parking brake plate SUB-ASSY.
- Do not damage the rear axle carrier.

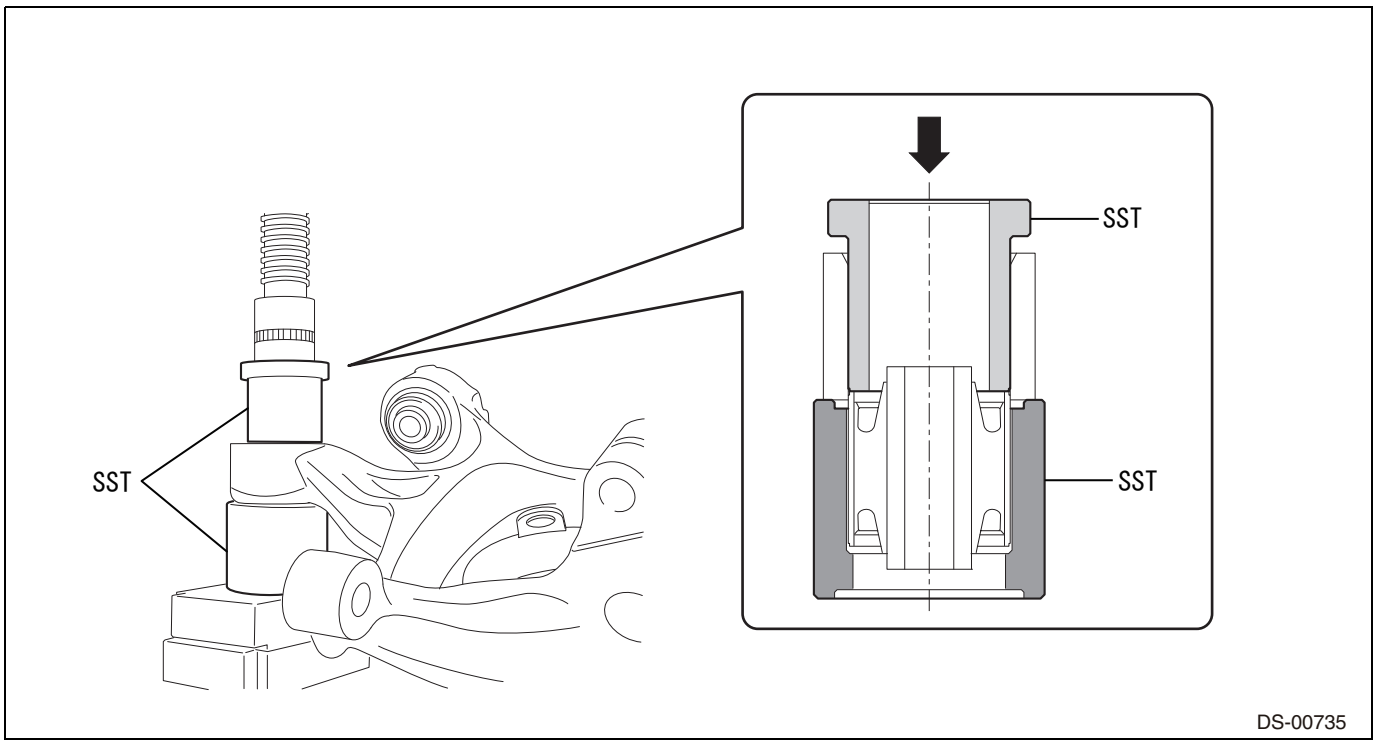
9. Removal of parking brake plate SUB-ASSY LH
10. Removal of rear axle carrier LH
    (1) Remove the rear axle carrier LH while supporting the drive shaft.
    CAUTION:
    - Do not damage the drive shaft outboard joint boot.
    - Do not push out the rear axle ASSY more than necessary to the vehicle outside.

    NOTE:
    Suspend the drive shaft ASSY using a rope or wire, etc.

## Disassembly

NOTE:
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Extraction of rear suspension arm ASSY NO. 1 bushing LH
   (1) Pull out the rear suspension arm ASSY NO. 1 bushing LH using the SST and a press.



SST 20099FG000, 20099PA010

Captions in illustration

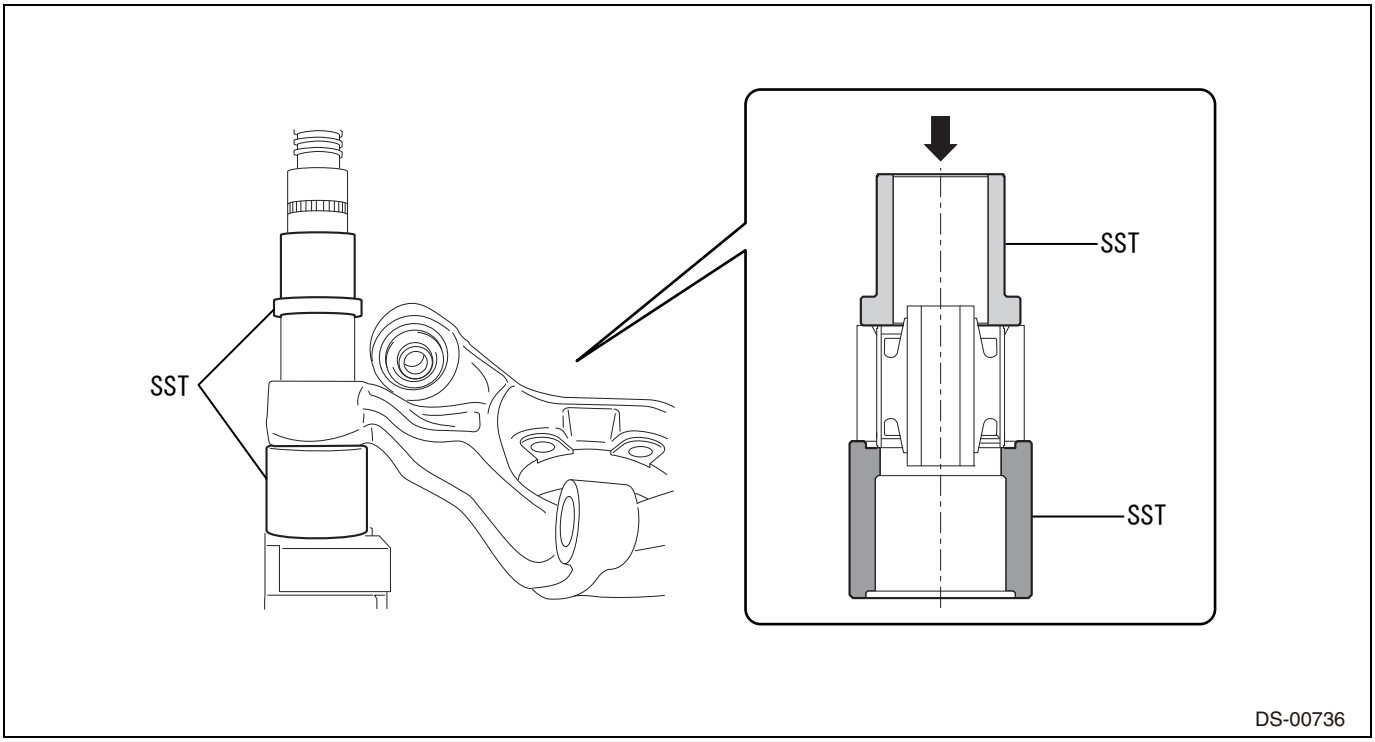
| | | | |
|---|---|---|---|
| ➡ | Press weighting direction | - | - |

## Assembly

NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

1. Installation of rear suspension arm ASSY NO. 1 bushing LH
   (1) Install the rear suspension arm ASSY NO. 1 bushing LH using the SST and a press.



SST 20099FG000, 20099PA010

| | | | |
|---|---|---|---|
| ➡ | Press weighting direction | - | - |

## Installation

NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

AD

1. Installation of rear axle carrier LH
   (1) Using a jack, lift the rear axle carrier and align the installation position of each arm.
   CAUTION:
   Use a jack with wooden blocks so that the rear axle carrier will not be damaged.
2. Temporary tightening of upper control arm ASSY RR LH
   (1) Install the upper control arm ASSY RR LH to the rear axle carrier, and temporarily tighten it with new bolts and nuts.
3. Temporary tightening of rear suspension arm ASSY NO. 1 LH
   (1) Install the rear suspension arm ASSY NO. 1 LH to the rear axle carrier, and temporarily tighten it with new bolts and nuts.
4. Temporary tightening of rear suspension arm ASSY NO. 2 LH
   (1) Install the rear suspension arm ASSY NO. 2 LH to the rear axle carrier, and temporarily tighten it with new bolts and nuts.
5. Installation of toe control link SUB-ASSY LH
   (1) Install the toe control link to the rear axle carrier with the nut.
   Standard value:T=60N·m {612kgf·cm} {44.2ft·lbf}
   (2) Install the cotter pin.
6. Temporary tightening of rear stabilizer link SUB-ASSY (installation position LH side) (Refer to RP - 11)
7. Installation of parking brake cable ASSY NO.3
   (1) Install the parking brake cable ASSY NO. 3 to the rear axle carrier with the clip.
8. Assembly of parking brake (Refer to PB - 20)
9. Stabilization of vehicle (Refer to RP - 11)
10. Final tightening of upper control arm ASSY RR LH
    (1) Tighten the mounting bolts and nuts of the upper control arm ASSY RR LH.
    Standard value:T=80N·m {816kgf·cm} {59.0ft·lbf}

11. Final tightening of rear suspension arm ASSY NO. 1 LH
    (1) Tighten the mounting bolts and nuts of the rear suspension arm ASSY NO. 1 LH.
        CAUTION:
        Secure the nut and turn the bolt.
        Standard value:T=110N·m {1122kgf·cm} {81.1ft·lbf}
12. Final tightening of rear suspension arm ASSY NO. 2 LH
    (1) Tighten the mounting bolts and nuts of the rear suspension arm ASSY NO. 2 LH.
        Standard value:T=80N·m {59kgf·cm} {59.0ft·lbf}
13. Tightening of rear stabilizer link SUB-ASSY (installation position LH side) (Refer to RP - 11)
14. Installation of rear axle hub & bearing ASSY LH (Refer to AD - 21)
15. Inspection and adjustment of rear wheel alignment (Refer to AL - 7)
16. Inspection and adjustment of headlight (Refer to LE - 51)
17. VDC sensor mid point setting (Refer to BC - 15)

# Differential system

## Precautions

1. Wash the outside of the rear differential ASSY to remove sand, mud, etc. before disassembly so that they will not enter the inside of the rear differential during disassembly and installation.
2. When disassembling the joint sections of light alloy parts such as the differential carrier cover, disassemble them by slightly tapping with a plastic hammer. Do not pry apart with a screwdriver or other tools.
3. Keep the disassembled parts in order, and protect them from dust and dirt covering with a cloth.
4. Before installation, all disassembled parts should be thoroughly washed and dried, and then apply grease or oil to the necessary sections. When washing aluminum and rubber parts, bolts with lubricant, etc., do not use alkaline chemical solvent. In addition, do not wash rubber base parts such as O-rings and oil seals with wash oil (appropriate detergent, etc.).
5. Before installation, apply sufficient amount of differential oil used for each differential ASSY to the sliding surfaces and rotating sections.
6. When fixing the parts in a vise, do not place the parts directly in a vise but use an aluminum plates in between.
7. Be careful of handling the mating surfaces of the case. If they are damaged, oil leakage may occur.
8. Before applying seal material, completely remove the old seal material adhering to the sealing portions, and then wash the sealing portion with wash oil (appropriate detergent, etc.).
9. After assembling the parts with seal material, leave them for 1 hour or more, and then fill them with oil. Avoid rapid acceleration and deceleration for 12 hours or more.
10. Be careful of handling the contact surfaces to the oil seals, O-rings and gaskets. If they are damaged, oil leakage may occur.
11. When press-fitting the oil seal farther than the end face of the differential carrier, oil leakage may occur. To avoid oil leakage, measure the press-fitting amount at more than 3 points on the oil seal circumference. Then, make sure that the difference between the maximum and the minimum of the measured values is within the specification.
12. Be careful not to damage the oil seal lip and outer circumference while press-fitting the oil seal.
13. When replacing the bearing, replace the outer race and the inner race as a set.
14. When replacing the bearing, do not apply excessive force to the roller, the holder and the rolling contact surface.
15. Anti-rust oil is applied to a new bearing. Do not wash off this oil.
16. If the seat or the thread of the bolt is heavily rusted, replace it with a new part.

AD

## Symptom table

NOTE:

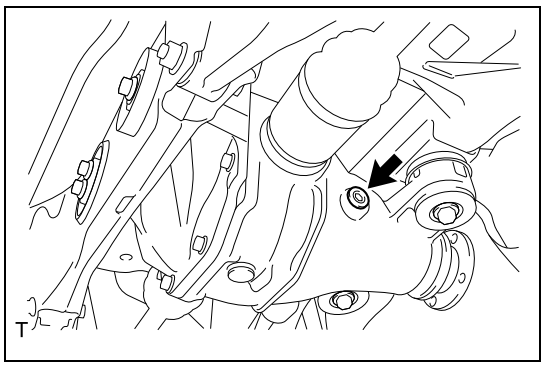
Use the following table to identify the trouble cause. The check points are listed in the order of priority from the viewpoint of possible trouble causes. Check each part in the sequence. If necessary, replace the parts.

Rear differential

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Noise from differential carrier | Oil level (too low) | AD - 31 |
| | Ring gear or pinion (worn or chipped) | AD - 41 |
| | Improper adjustment of backlash | AD - 41 |
| | Improper adjustment of preload | AD - 41 |
| | Improper adjustment of tooth contact | AD - 41 |
| | Wear of bearing | AD - 41 |
| Oil leakage from differential carrier | Oil level (too high) | AD - 31 |
| | Side gear shaft oil seal (worn or damaged) | AD - 35 |
| | Carrier oil seal (worn or damaged) | AD - 32 |

# Differential oil

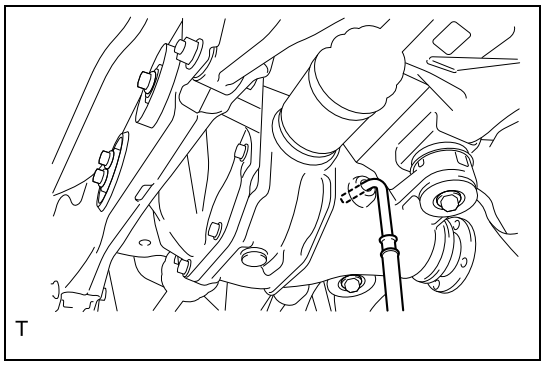
## Adjustment



1. Inspection of differential oil
   (1) Remove the filler plug and the gasket.

   (2) Make sure that the oil level is within 0 to 5 mm {0 to 0.2 in} from the bottom of filler plug hole.
   CAUTION:
   - Excess or shortage of oil may lead to trouble.
   - Park the vehicle on a level road.

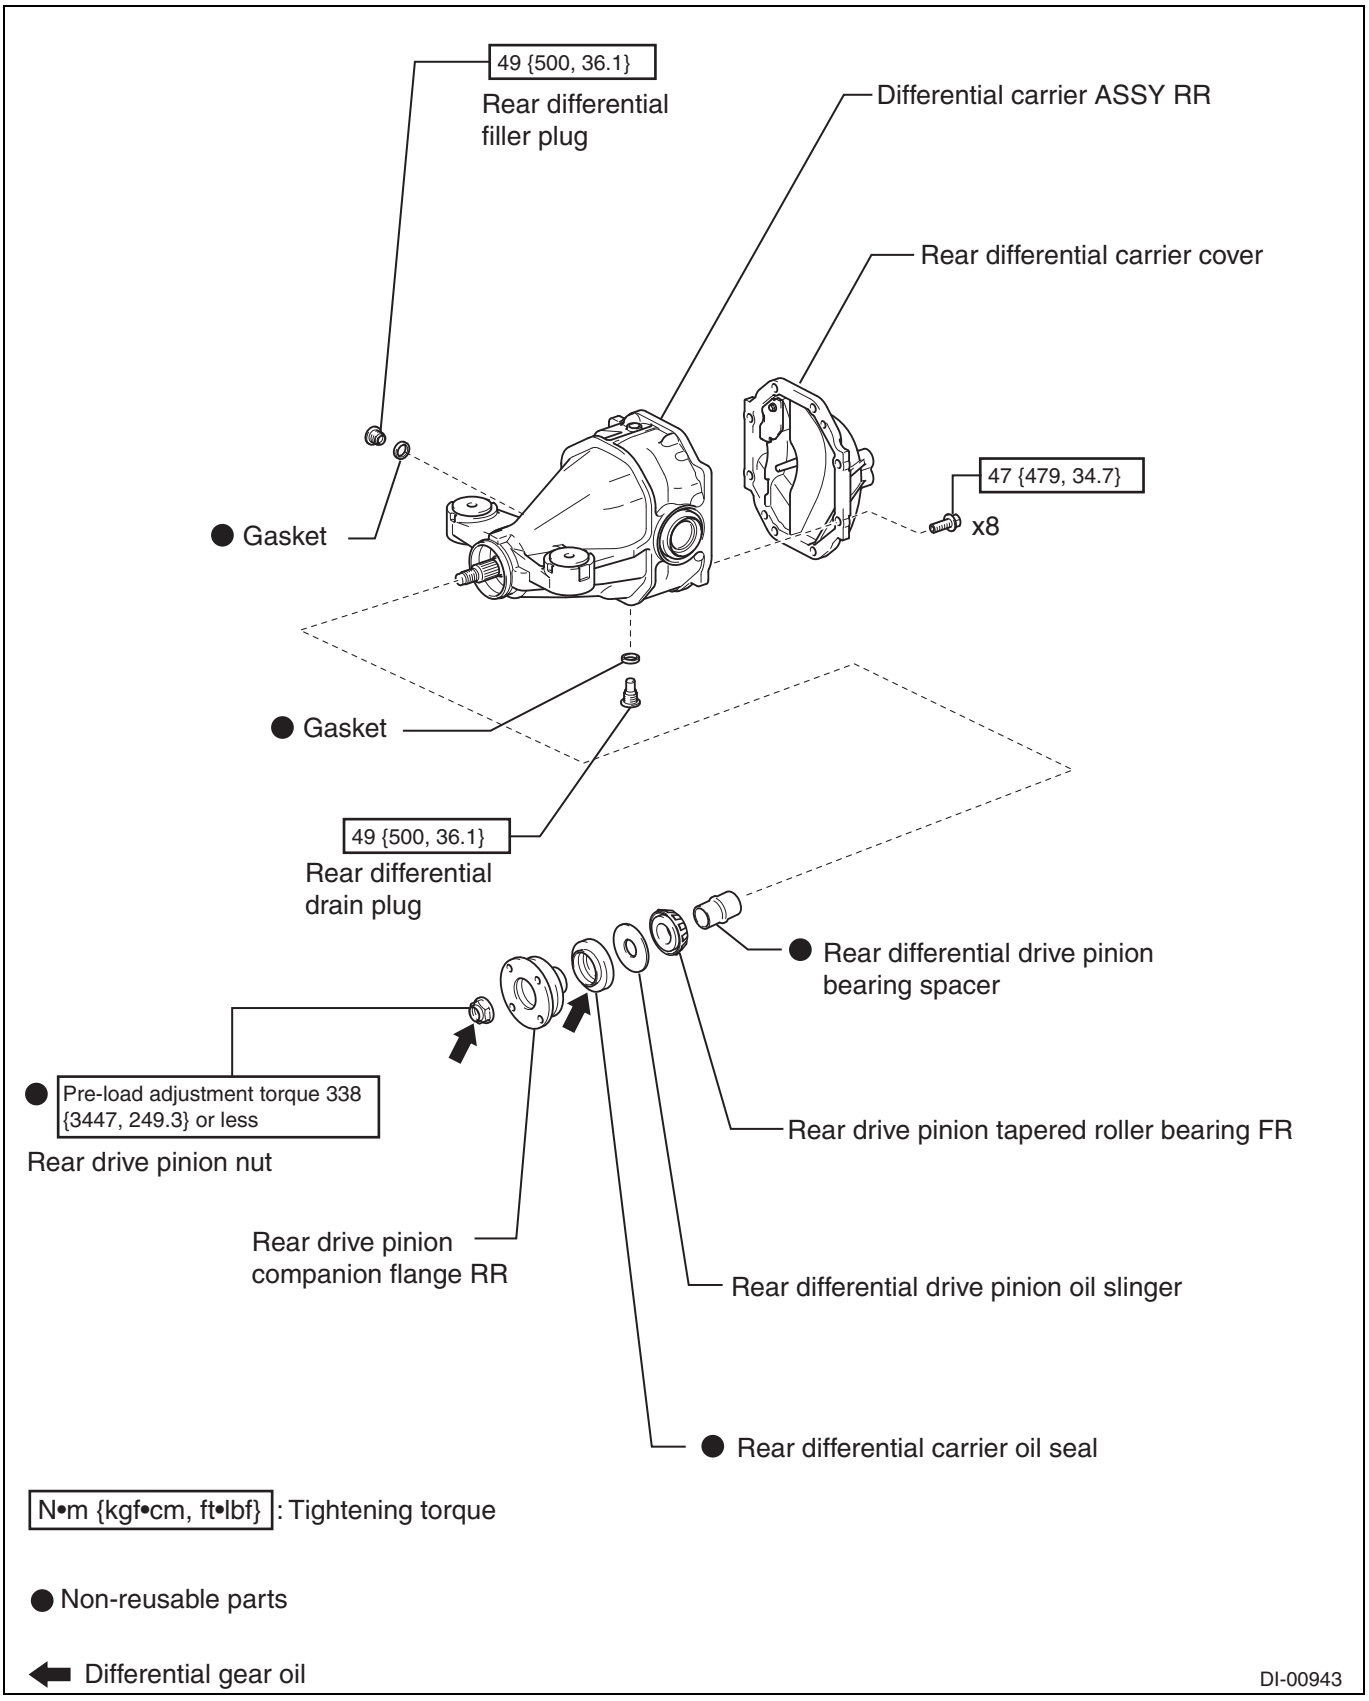
   (3) If the oil level is low, perform the inspection of oil leakage.
   (4) Tighten the filler plug via a new gasket.
   Standard value:T=49N·m {500kgf·cm} {36.1ft·lbf}
   CAUTION:
   When oil is replaced, check the oil level again after driving.



2. Refilling of differential oil
   CAUTION:
   Do not mix different types of oil.
   (1) Remove the filler plug and the gasket.
   (2) Refill with differential oil.
   Recommended product: Differential gear oil LX (API GL-5, SAE 75W-85)
   Substitute product: GL-5 75W-85 or GL-5 75W-90
   CAUTION:
   When using the substitute product, the function and performance may be inferior.
   NOTE:
   Oil level: 1.15±0.05 L {1.22±0.05 US qt, 1.01±0.04 Imp qt}
   (3) Check the oil level.
   (4) Tighten the filler plug via a new gasket.
   Standard value:T=49N·m {500kgf·cm} {36.1ft·lbf}
   CAUTION:
   When oil is replaced, check the oil level again after driving.

# Rear differential carrier oil seal

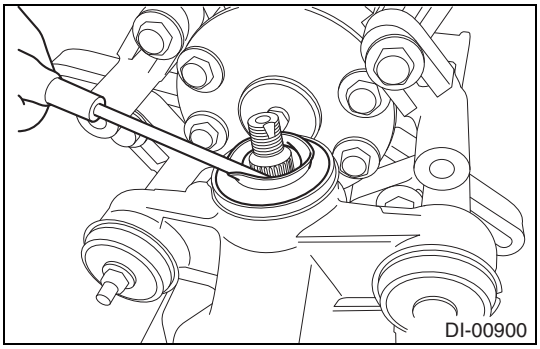
## Exploded view



## Replacement

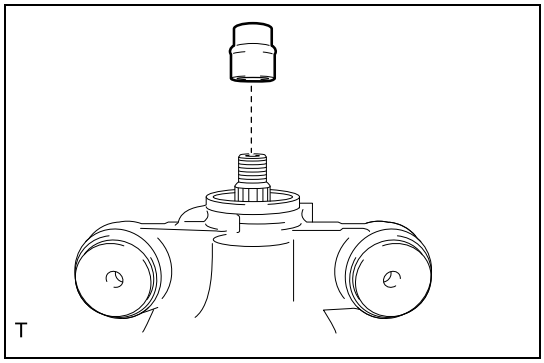
1. Removal of differential carrier ASSY RR (Refer to AD - 40)

2. Fixation of differential carrier ASSY RR (Refer to AD - 41)
3. Removal of rear drive pinion nut (Refer to AD - 46)
4. Removal of rear drive pinion companion flange RR (Refer to AD - 46)



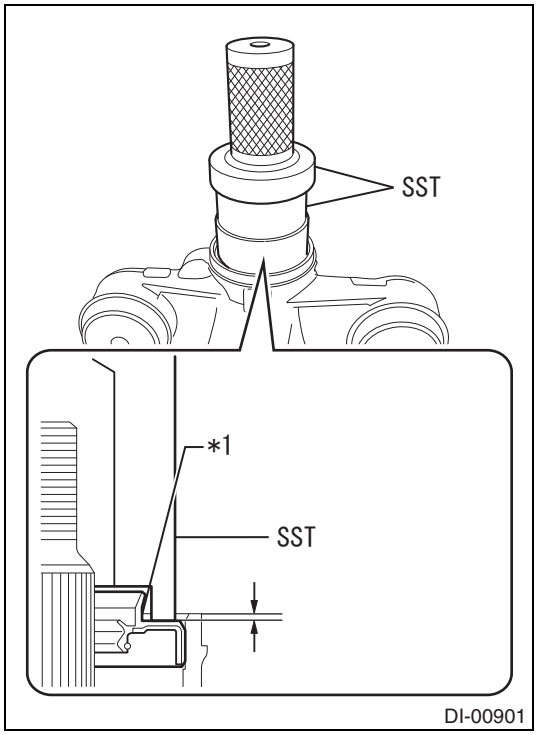
5. Removal of rear differential carrier oil seal
   (1) Remove the oil seal from the differential carrier using a flat tip screwdriver.
   NOTE:
   When replacing the oil seal, replace the rear differential drive pinion bearing spacer and readjust the drive pinion preload.

6. Removal of rear differential drive pinion oil slinger (Refer to AD - 47)
7. Removal of rear drive pinion tapered roller bearing FR (Refer to AD - 47)



8. Replacement of rear differential drive pinion bearing spacer
   (1) Replace the bearing spacer with a new part.

9. Installation of rear drive pinion tapered roller bearing FR (Refer to AD - 65)
10. Installation of rear differential drive pinion oil slinger (Refer to AD - 65)
11. Installation of rear drive pinion companion flange RR (Refer to AD - 66)
12. Removal of rear drive pinion companion flange RR (Refer to AD - 46)



13. Installation of rear differential carrier oil seal
   (1) Press-fit a new oil seal into the bottom position of the differential carrier taper portion using the SST and a hammer.
   SST 498447120 , 499755502

Captions in illustration

| | |
|---|---|
| *1 | Rear differential carrier oil seal |

   CAUTION:
   - Evenly tap and press-fit the oil seal in a straight forward direction.
   - Do not press-fit the oil seal excessively.

   (2) Measure the press-fitting amount of the oil seal using a caliper gauge.
   Standard value: 2±0.45 mm {0.08±0.018 in} (from the differential carrier end face)
   CAUTION:
   Perform the measurement at 3 points or more on the oil seal circumference, and the difference between the maximum and the minimum of the measured values must be 0.65 mm {0.026 in} or less.
   (3) Apply a thin coat of differential gear oil to the lip of the oil seal.

14. Installation of rear drive pinion companion flange RR (Refer to AD - 66)

AD

15. Adjustment of differential drive pinion preload (Refer to AD - 67)
16. Inspection of overall preload (Refer to AD - 68)
17. Fixation of rear drive pinion nut (Refer to AD - 69)

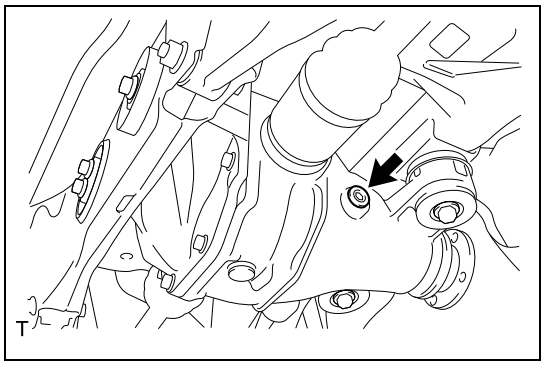
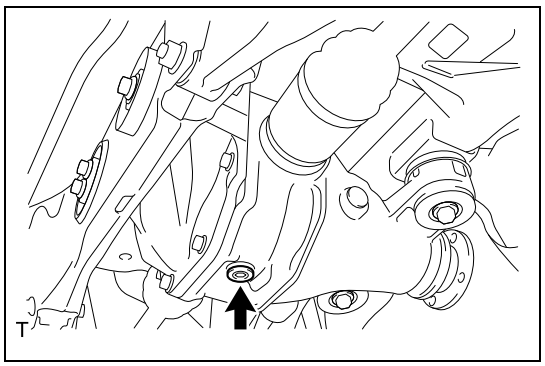
## Removal

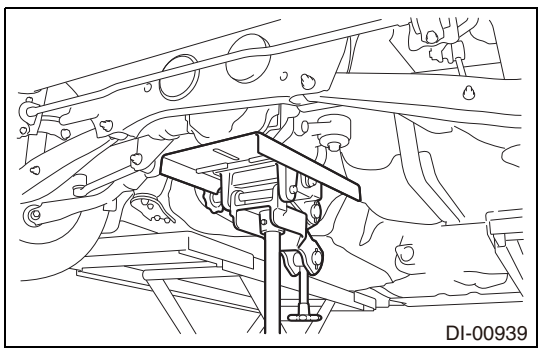


1. Draining of differential oil
   (1) Remove the filler plug and the gasket.

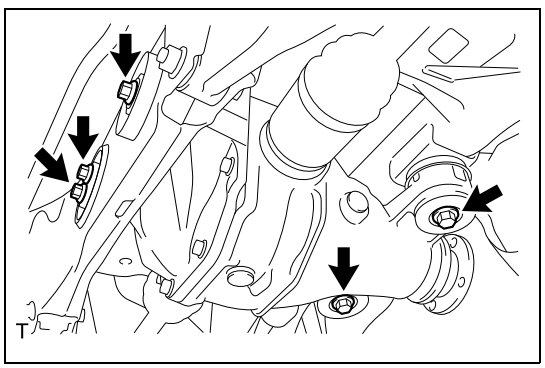


(2) Remove the drain plug and the gasket, and then drain oil.

2. Removal of propeller shaft with center bearing ASSY (Refer to DP - 14)

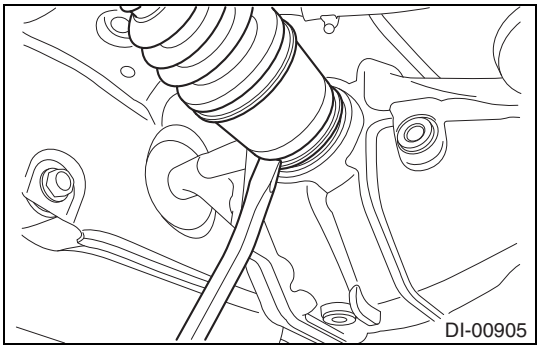


3. Removal of differential carrier ASSY RR
   (1) Using a tall transmission jack, support the differential carrier ASSY RR.
   WARNING:
   - The differential carrier ASSY RR is heavy. Be sure to support it with a tall transmission jack.
   - In order to prevent the differential carrier ASSY RR from being excessively tilted or coming off, perform the operation while holding it with several assistants.

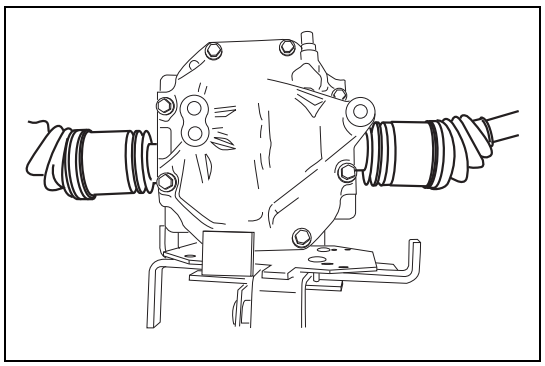


(2) Remove 5 bolts, and then remove the rear differential mount stopper UPR and the rear differential mount stopper LWR.

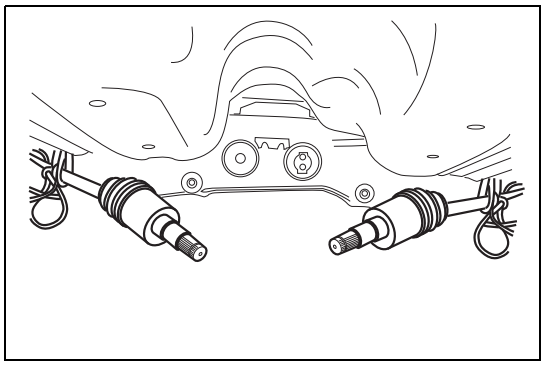
AD



(3) Lower the tall transmission jack slowly. Using a tire lever, etc., detach the rear drive shaft ASSY from the differential carrier ASSY RR as shown in the figure.
CAUTION:
If a tire lever, etc. contacts the rear cover, the cover may be damaged. A tire lever, etc. is allowed to contact the differential carrier.



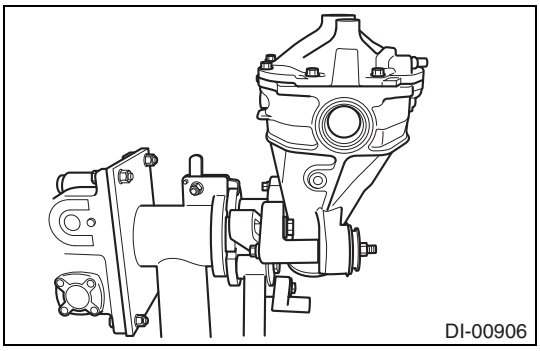
(4) Lower the tall transmission jack. Pull out the rear drive shaft ASSY from the differential carrier ASSY RR, and then remove the differential carrier ASSY RR.



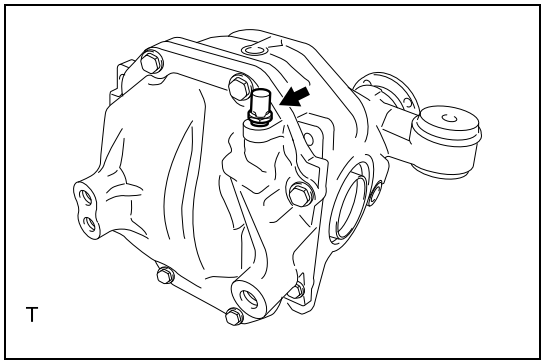
NOTE:
Suspend the detached rear drive shaft ASSY using a string, etc.

AD

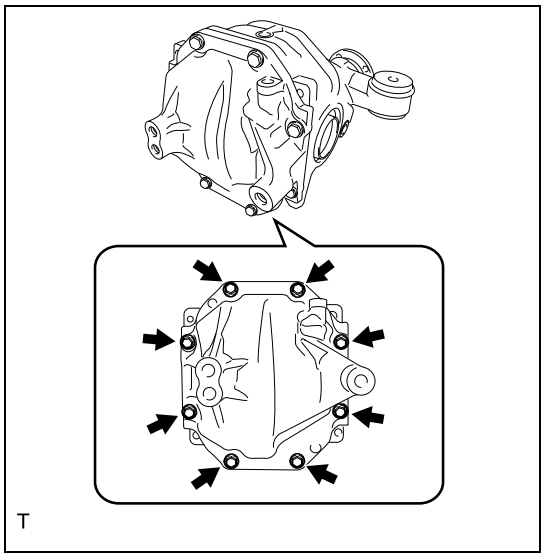
## Disassembly



1. Fixation of rear differential carrier ASSY RR
   (1) Install the rear differential carrier to the overhaul stand.

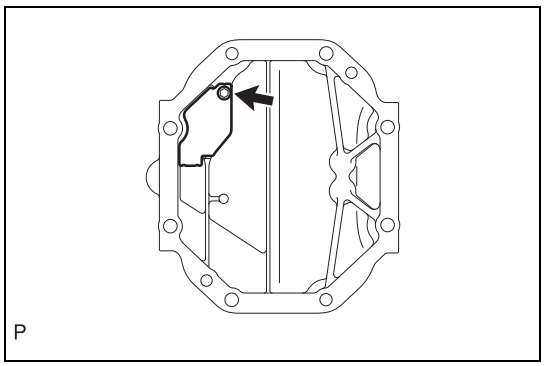


2. Removal of rear differential breather plug
   (1) Remove the differential breather plug from the differential carrier.

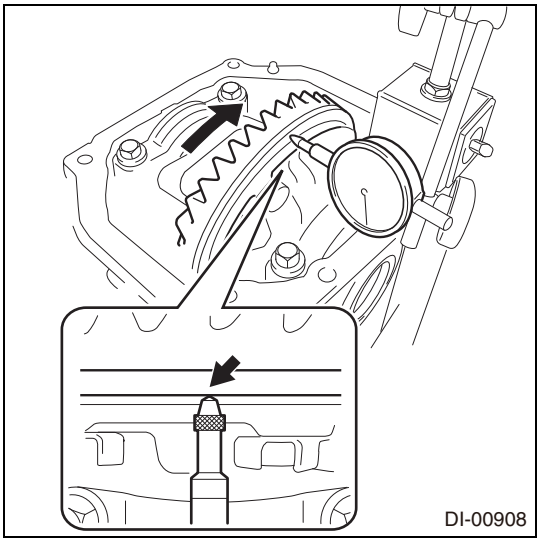


3. Removal of rear differential carrier cover
   (1) Remove the 8 bolts.

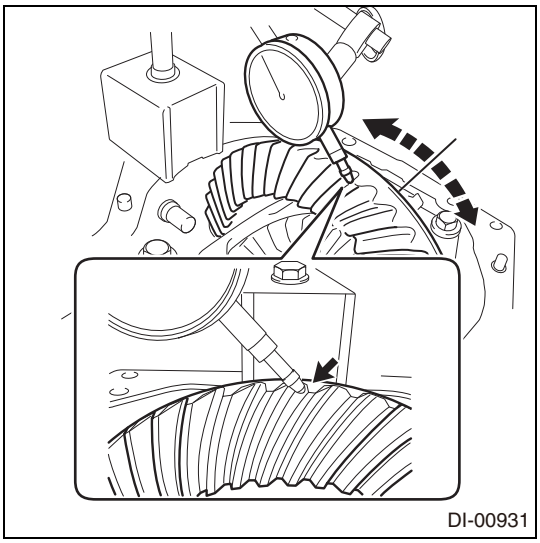
   (2) Using a plastic hammer, lightly tap the rib portion of the differential carrier cover, and remove it from the differential carrier.
   CAUTION:
   Be careful not to damage the mating surface of the differential carrier.



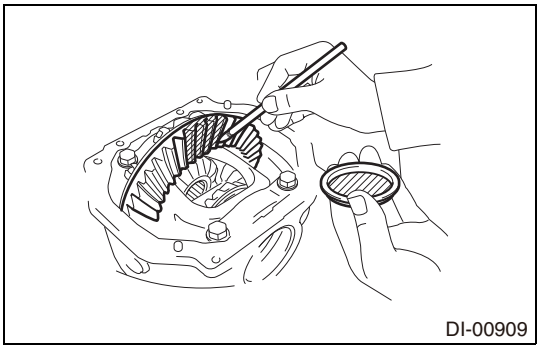
4. Removal of rear differential breather plug oil deflector
   (1) Remove the bolts, and then remove the breather plug oil deflector from the differential carrier cover.



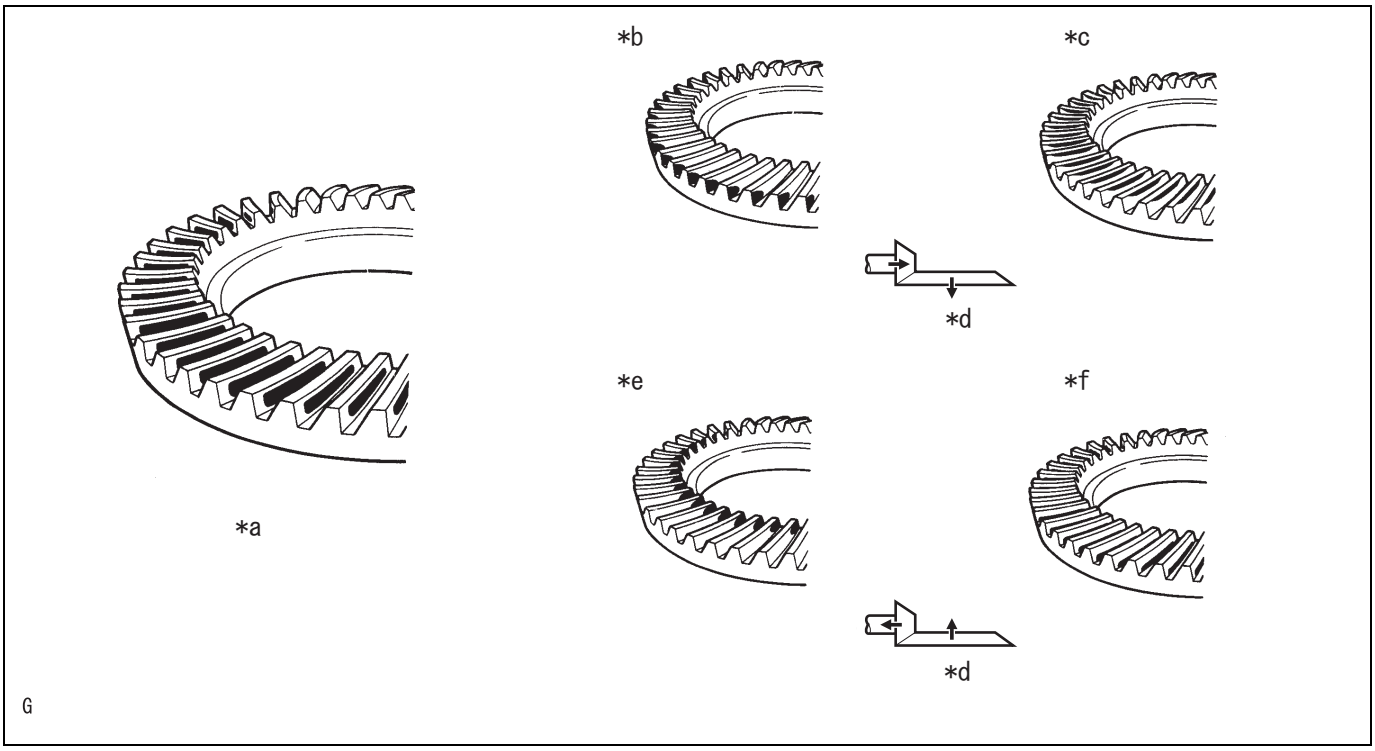
5. Inspection of differential ring gear runout
   (1) Inspect the runout of the ring gear by contacting a dial gauge at a right angle to the back surface of the ring gear.
   Limit: 0.07 mm {0.003 in}
   NOTE:
   If it exceeds the limit, remove the ring gear and inspect runout of the differential case.



6. Inspection of backlash between differential ring gear and differential drive pinion
   (1) Contact a dial gauge at a right angle to the tooth surface end of the ring gear.
   (2) Secure the companion flange RR by hand, and inspect the ring gear backlash.
   Standard value: 0.13 to 0.18mm {0.005 to 0.007in}
   NOTE:
   Measure at 3 points or more on the ring gear circumference.



7. Inspection of tooth contact between differential ring gear and differential drive pinion
   (1) Apply a thin uniform coat of red lead on both teeth surfaces of the ring gear.
   (2) Rotate the companion flange RR forward and backward several times.
   (3) Check the tooth contact between the drive pinion and the ring gear.

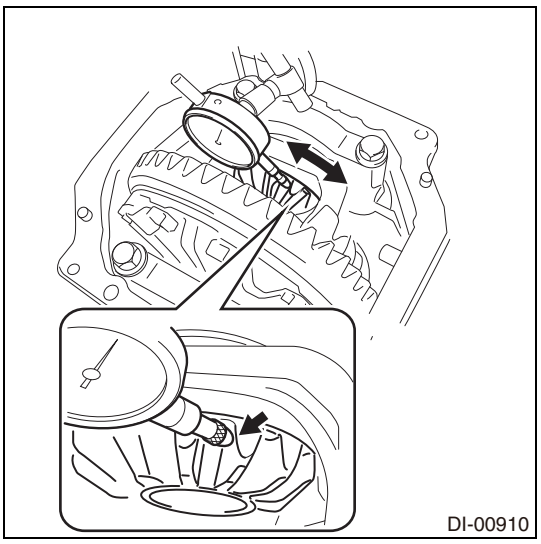


Captions in illustration

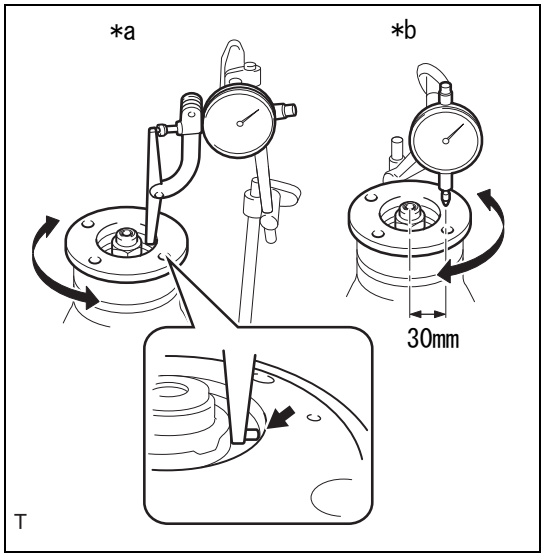
| | | | |
|---|---|---|---|
| *a | Correct tooth contact | *b | Heel contact |
| *c | Face contact | *d | Adjust the drive pinion and the ring gear in the direction of arrow. |
| *e | Toe contact | *f | Flank contact |

NOTE:
- Check the tooth contact condition at 4 points on the ring gear circumference.
- The pattern shown on red lead is the position of tooth contact.

8. Inspection of differential side gear backlash
   (1) Contact a dial gauge at a right angle to the tooth surface end of the differential side gear.
   (2) Secure the differential pinion to the differential case side, and then check that the backlash of differential side gear is 0 mm {0 in}.



AD



9. Inspection of rear drive pinion companion flange RR runout
   (1) Wipe off the inner surface of the companion flange RR with a cloth to remove dust or foreign matter.

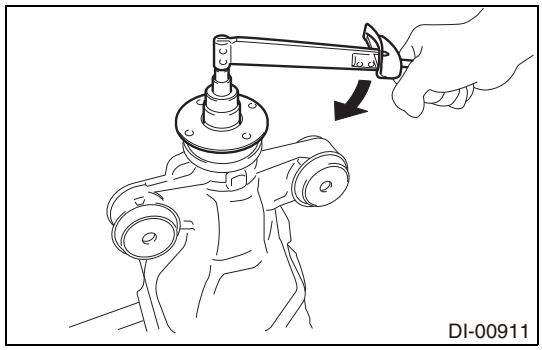
Captions in illustration

| | |
|---|---|
| *a | Inspection of radial runout |
| *b | Inspection of lateral runout |

   (2) Inspection of companion flange RR radial runout
      (a) Contact the lever type probe of a dial gauge at a right angle to the inner circumference of the companion flange RR.
      (b) Inspect radial runout of the companion flange RR.
         Limit: 0.09mm {0.004in}
   (3) Inspection of companion flange RR lateral runout
      (a) Contact a dial gauge at a right angle to the surface of the companion flange RR as shown in the figure.
      (b) Inspect lateral runout of the companion flange RR.
         Limit: 0.09mm {0.004in}

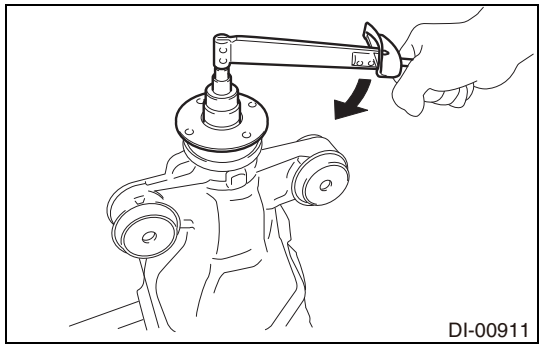
10. Inspection of differential drive pinion preload
   (1) Using a socket wrench (30 mm) and a torque wrench, check preload of the drive pinion within the ring gear backlash.

| | |
|---|---|
| Standard value | T = 1.87 to 2.17 N·m {19.1 to 22.1 kgf·cm} {1.38 to 1.60ft·lbf} |

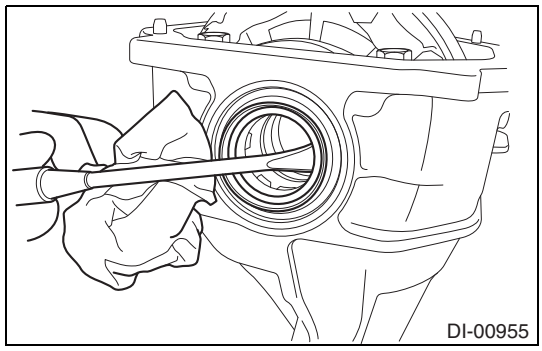


11. Inspection of overall preload
   (1) Using a socket wrench (30 mm) and a torque wrench, check overall preload with the drive pinion contacting the ring gear tooth surface.

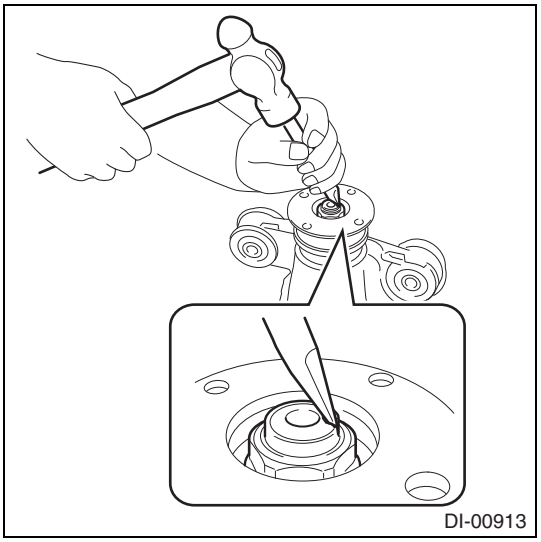
| | |
|---|---|
| Standard value | T = 2.19 to 2.70N·m {22.3 to 27.5 kgf·cm} {1.62 to 1.99ft·lbf} |



12. Removal of rear differential side gear shaft oil seal
   (1) Using a flat tip screwdriver, remove the right and left side oil seals from the differential carrier.

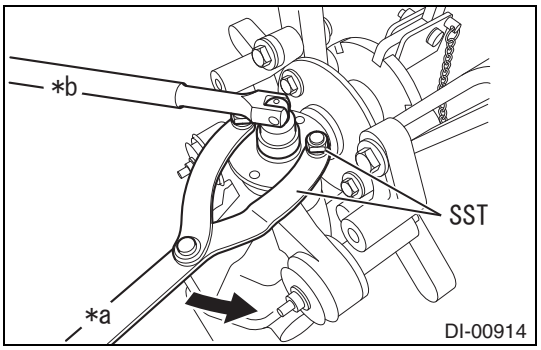


AD



DI-00913

13. Removal of rear drive pinion nut
    (1) Release the crimp of the drive pinion nut using a chisel and a hammer.
    CAUTION:
    In order to prevent the thread of the drive pinion from being damaged, completely release the crimp of the nut.



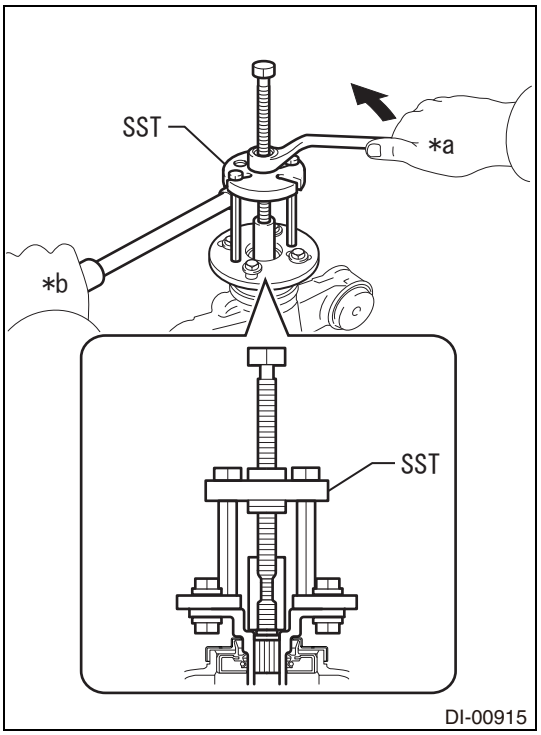
DI-00914

    (2) Using the SST, secure the companion flange RR.
    SST 18355AA000, 18334AA000

Captions in illustration

| | |
|---|---|
| *a | Drive |
| *b | Hold |

    (3) Using a socket wrench (30 mm), remove the drive pinion nut from the differential carrier.
    WARNING:
    During operation, support the overhaul stand.



DI-00915

14. Removal of rear drive pinion companion flange RR
    (1) Using the SST, remove the companion flange RR from the differential carrier.
    SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)

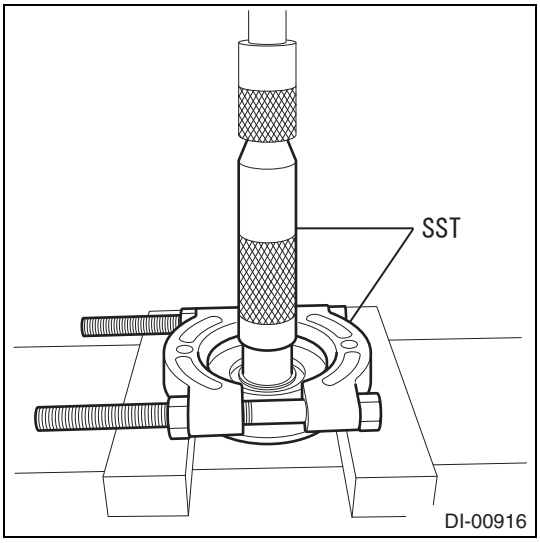
Captions in illustration

| | |
|---|---|
| *a | Drive |
| *b | Hold |

    NOTE:
    - Apply grease to the thread and end portions of the SST center bolt (09953-03010) before using it.
    - The bolts and nuts used for securing the SST and the companion flange RR are recommended to be M8 ×P1.25 with a bolt length of approx. 40 mm {1.6 in}.

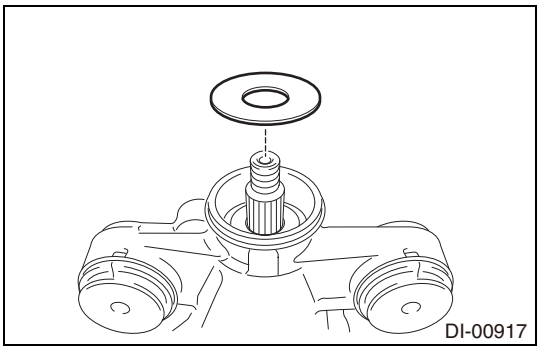
15. Removal of rear differential dust deflector
    NOTE:
    Perform the operation only when the dust deflector is damaged.

AD

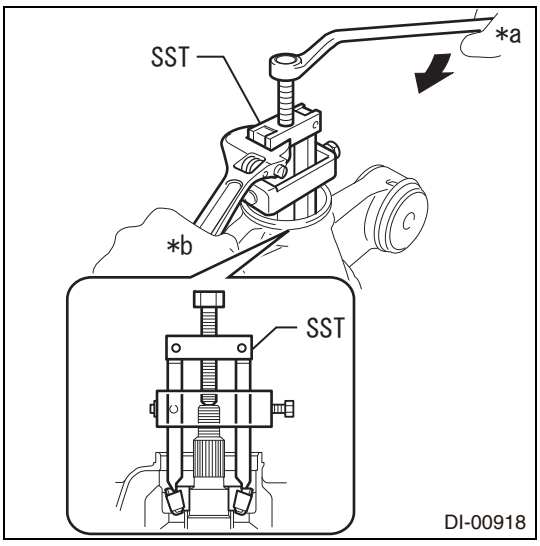


(1) Using the SST and a press, remove the dust deflector from the companion flange RR.
SST 09950-00020, 499877000
CAUTION:
Be careful not to drop the companion flange RR.
NOTE:
In order to ensure the contact surface between the SST and the dust deflector, perform the operation while tightening the nut of the SST.

16. Removal of rear differential carrier oil seal (Refer to AD - 33)



17. Removal of rear differential drive pinion oil slinger
(1) Using a magnet hand, remove the oil slinger from the differential carrier.

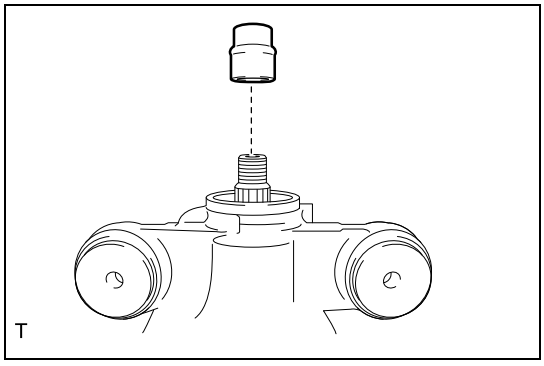


18. Removal of rear drive pinion tapered roller bearing FR
(1) Using the SST, remove the tapered roller bearing FR (inner race) from the differential carrier.
SST 09556-22010

Captions in illustration

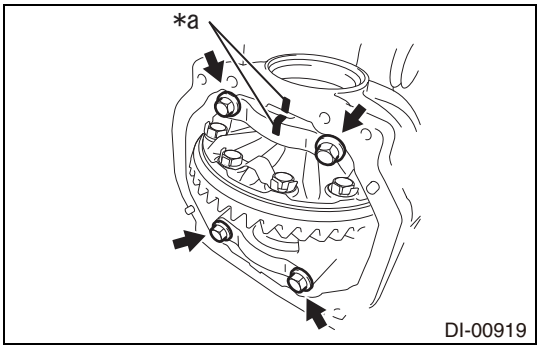
| | |
|---|---|
| *a | Drive |
| *b | Hold |

NOTE:
Apply grease to the thread and end portions of the SST center bolt before using it.



19. Removal of rear differential drive pinion bearing spacer
(1) Remove the bearing spacer from the drive pinion.

AD



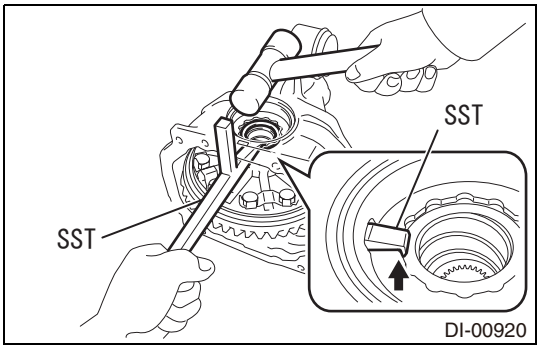
20. Removal of rear differential carrier
    (1) Place an identification mark on the bearing cap and the differential carrier.

Captions in illustration

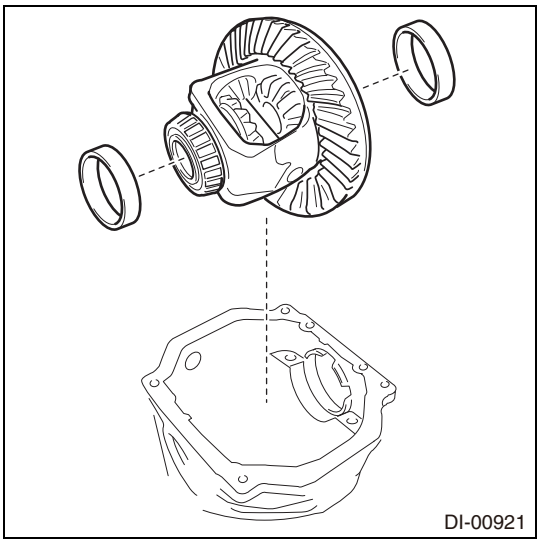
| | |
|---|---|
| *a | Identification mark |

NOTE:
Place an identification mark on one end only.

(2) Remove 4 bolts, and remove 2 bearing caps from the differential carrier.
CAUTION:
The bearing cap and the carrier are manufactured as a unit; do not change the combination.

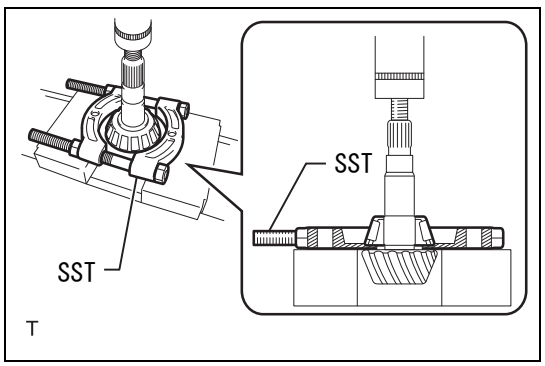


(3) Using the SST and a plastic hammer, remove the right and left side gear shaft washers from the differential carrier.
SST 09504-22012
NOTE:
- For reference when reassembling, record thickness of the right and left (back face side and tooth face side) side gear shaft washers.
- Place a right or left identification mark (back face side or tooth face side) on the side gear shaft washers, and arrange them separately.



(4) Remove the differential case and the case bearing (outer race) as a single unit from the differential carrier.
CAUTION:
Be careful not to damage the differential case bearing and the ring gear.
NOTE:
Place a right or left identification mark (back face side or tooth face side) on the case bearing (outer race), and arrange them separately.

21. Removal of rear drive pinion tapered roller bearing RR
    (1) Remove the drive pinion from the differential carrier.

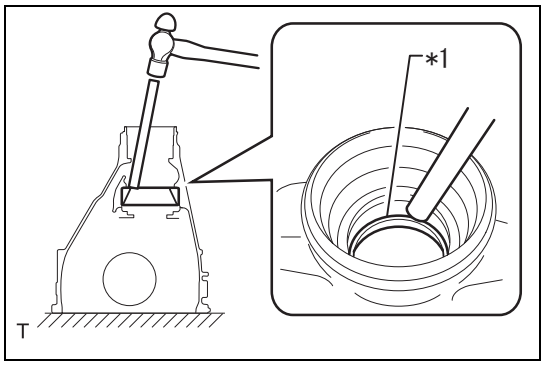


(2) Using the SST and a press, remove the tapered roller bearing RR (inner race) from the drive pinion.
SST 09950-00020
CAUTION:
Be careful not to drop the drive pinion.
NOTE:
In order to ensure the contact surface between the SST and the tapered roller bearing RR (inner race), perform the operation while tightening the nut of the SST.

(3) Remove the drive pinion washer from the drive pinion.

AD

NOTE:
For reference when reassembling, record thickness of the drive pinion washer.

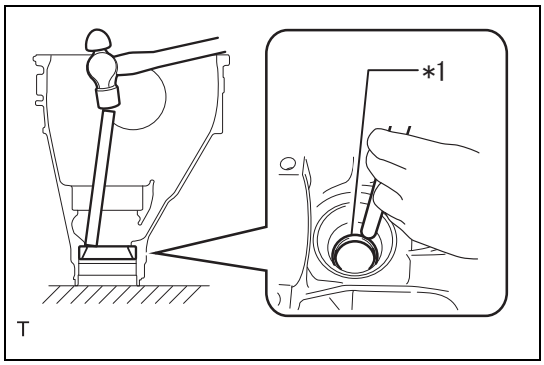


(4) Using a brass bar and a hammer, lightly and evenly tap the entire perimeter of the tapered roller bearing RR (outer race), and remove it from the differential carrier.

Captions in illustration

| | |
|---|---|
| *1 | Outer race |

CAUTION:
Always let the brass bar come in contact with the range of the tapered roller bearing RR (outer race) during operation. Be careful not to damage the differential carrier.



22. Removal of rear drive pinion tapered roller bearing FR

(1) Using a brass bar and a hammer, lightly and evenly tap the entire perimeter of the tapered roller bearing FR (outer race), and remove it from the differential carrier.

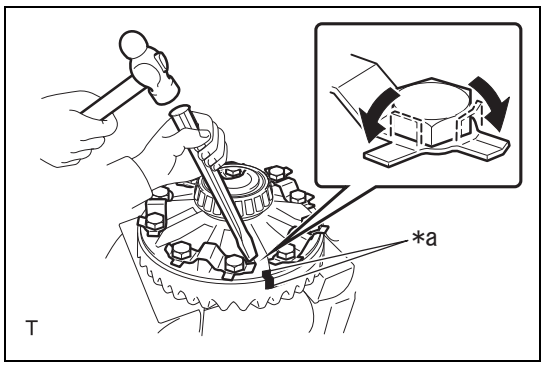
Captions in illustration

| | |
|---|---|
| *1 | Outer race |

CAUTION:
Always let the brass bar come in contact with the range of the tapered roller bearing RR (outer race) during operation. Be careful not to damage the differential carrier.

23. Removal of differential ring gear

(1) Using aluminum plates in between, secure the differential case in a vise.
CAUTION:
Do not vise excessively.



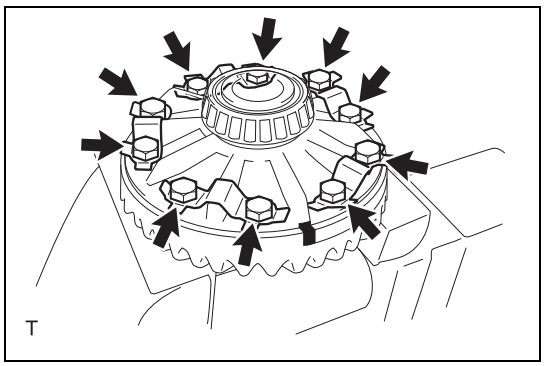
(2) Place an alignment mark on the differential case and the ring gear.

Captions in illustration

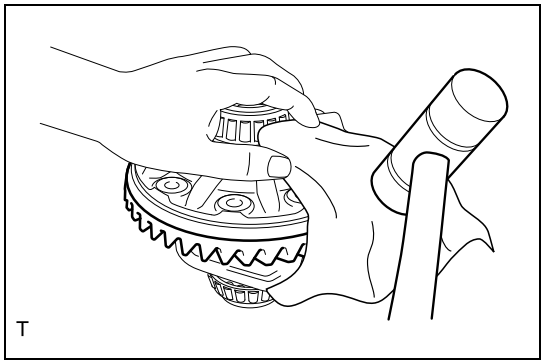
| | |
|---|---|
| *a | Alignment marks |

AD

(3) Release the crimps of 5 lock plates using a chisel and a hammer.

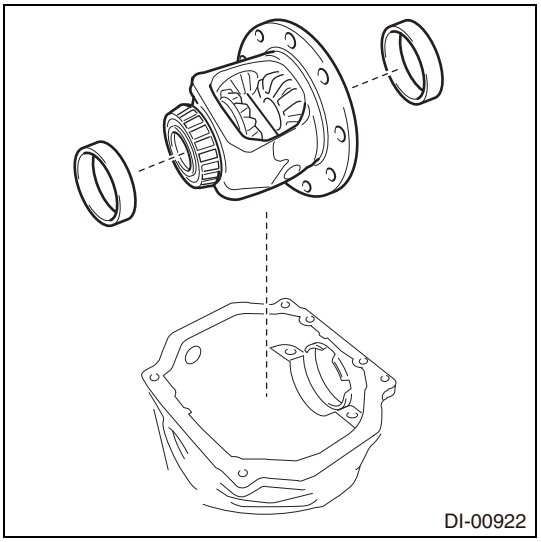


(4) Remove 10 bolts and 5 lock plates from the differential case.



(5) Using a plastic hammer, evenly tap the periphery of the ring gear, and remove the ring gear from the differential case.
NOTE:
Cover the tooth surface side of the ring gear with a cloth to prevent damage.

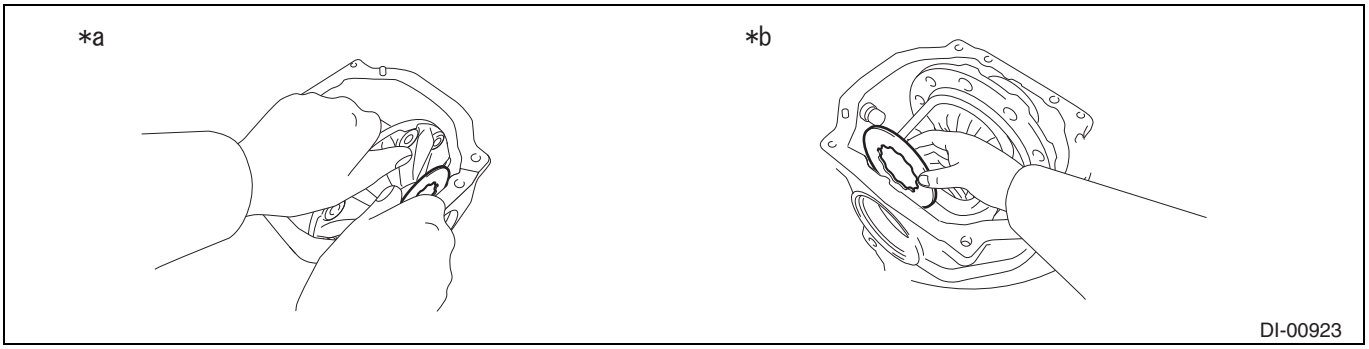
24. Inspection of differential case ASSY runout
NOTE:
Perform only when the inspection result of the differential ring gear runout exceeds the limit.



(1) Install the case bearing (outer race LH/RH) to the case bearing (inner race LH/RH), and install the differential case to the differential carrier.
CAUTION:
- When installing the bearing outer races, do not confuse the left and right.
- Be careful not to damage the differential case bearing.

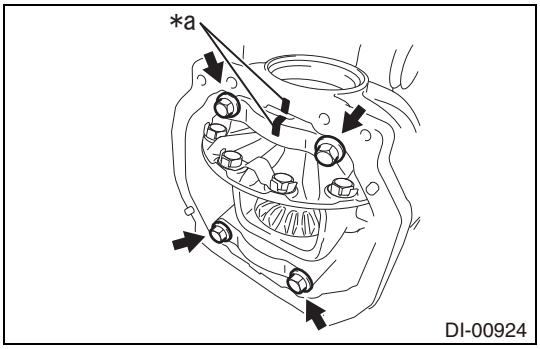
(2) Install the right and left (back face side and tooth face side) side gear shaft washer to the differential carrier while avoiding play of the case bearing.

AD



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Back face side | *b | Tooth face side |



(3) Install the right and left bearing caps to the differential carrier with 4 bolts.

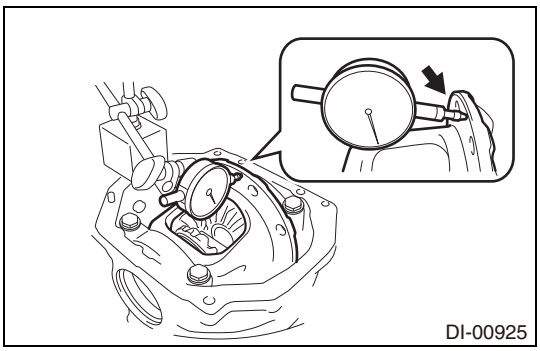
Captions in illustration

| | |
|---|---|
| *a | Identification mark |

Standard value:T=85N·m {867kgf·cm} {62.7ft·lbf}

CAUTION:

The bearing cap and the carrier are manufactured as a unit; do not change the combination.



(4) Contact a dial gauge at a right angle to the flange surface of the differential case.

(5) Check runout of the differential case.
Limit: 0.07 mm {0.003 in}

(6) Remove 4 bolts, and remove 2 bearing caps from the differential carrier.

(7) Remove the differential case, right and left case bearings and right and left side gear shaft washers from the differential carrier.

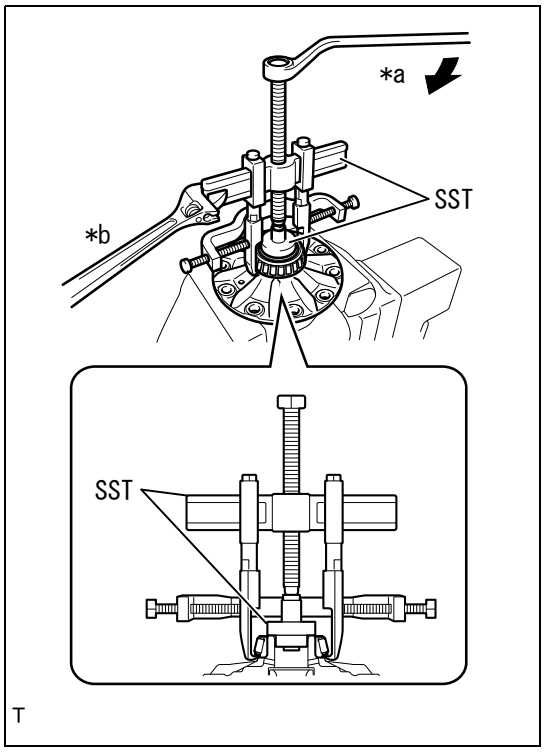
CAUTION:

Be careful not to damage the differential case bearing.

25. Removal of rear differential case bearing

NOTE:

Perform the operation only when the case bearing or the differential case is replaced.



(1) Using the SST, remove the case bearings (inner race LH and RH) from the differential case.

SST 09950-40011 (09951-04020, 09952-04010, 09953-04030, 09954-04010, 09955-04061, 09957-04010, 09958-04011), 09950-60010 (09951-00350, 09951-00480, 09952-06010)

Captions in illustration

| | |
|---|---|
| *a | Drive |
| *b | Hold |

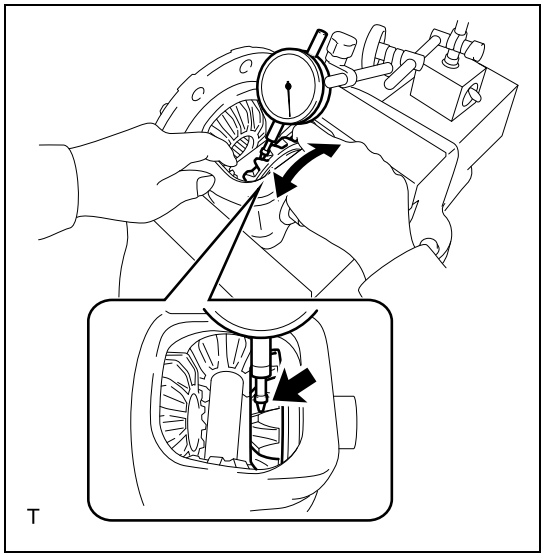
CAUTION:

Be careful not to deform the cage of the differential case bearing. (When the bearing is reused)

NOTE:

- Apply grease to the thread and end portions of the SST center bolt (09953-04030) before using it.
- Pinch the bearing inner race from the cutout portion of the differential case using the claws of the SST.
- Place a right or left identification mark (back face side or tooth face side) on the differential case bearings, and arrange them separately.

AD



26. Inspection of differential side gear backlash
    (1) Using aluminum plates in between, secure the differential case in a vise.
    CAUTION:
    Do not vise excessively.
    (2) Contact a dial gauge at a right angle to the tooth surface end of the differential side gear, secure the differential pinion gear to the differential case, and then check that the backlash is 0 mm {0 in}.
    NOTE:
    If the backlash is not 0 mm {0 in}, replace the differential case ASSY.

## Assembly

1. Installation of differential ring gear
    (1) Clean the screw hole of the differential case.

    (2) Heat the ring gear up to 100°C {212°F} with hot water.
    WARNING:
    The ring gear becomes hot. Perform the operation after protecting hands with thick gloves.

AD

    (3) Completely wipe off grease and water from the mating surface of the differential case and the ring gear.
    (4) Using aluminum plates in between, secure the differential case in a vise.
    CAUTION:
    Do not vise excessively.
    (5) Completely wipe off grease and water from the ring gear (mating surface of the differential case).

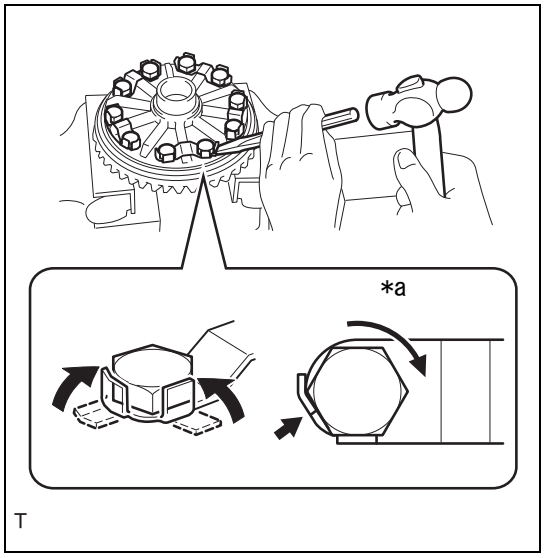
    (6) Align the alignment marks on the differential case and the ring gear, and then quickly install the ring gear to the differential case.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

    CAUTION:
    Align the bolt hole of the differential case and the screw hole of the ring gear.

    (7) Temporarily tighten 10 differential case bolts several times through 5 new lock plates, and then tighten them to the specified torque.
    Standard value:T=97N·m {989kgf·cm} {71.5ft·lbf}
    CAUTION:
    Tighten the bolts after the ring gear cools down sufficiently.
    NOTE:
    Tighten the bolts diagonally in several stages.



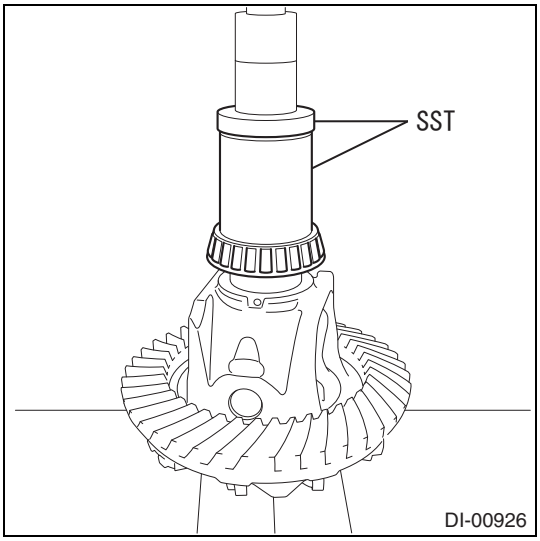
(8) Release the crimps of the lock plate using a chisel and a hammer to counter the rotation.

Captions in illustration

| | |
|---|---|
| *a | Tightening direction |

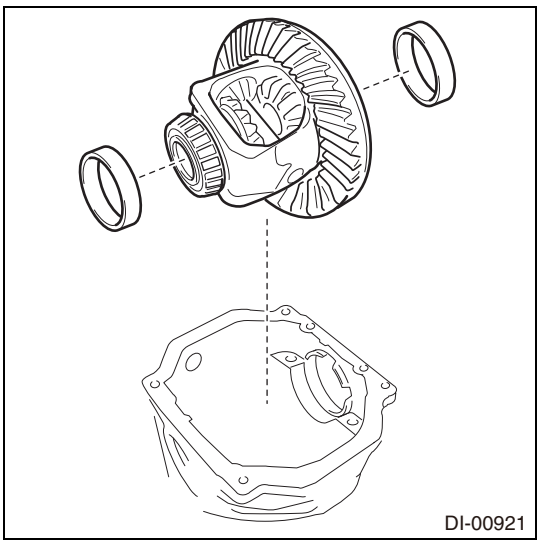
NOTE:
If the crimp contacts the angled portion of the bolt head and should be divided into 2 sections, the section facing the tightening side of the bolt head must be in close contact as shown in the figure.

2. Installation of rear differential case bearing



(1) Using the SST and a press, press-fit the case bearings (inner race LH and RH) into the differential case.
SST 09710-30012 (09710-04081), 398477702
NOTE:
- Press until the case bearing is in close contact with the differential case.
- Align the SST in the center of the differential case.

CAUTION:
- When using new bearings, do not apply differential gear oil.
- Be careful not to deform the cage of the bearing.
- When replacing the bearing, replace the outer race and the inner race as a set.

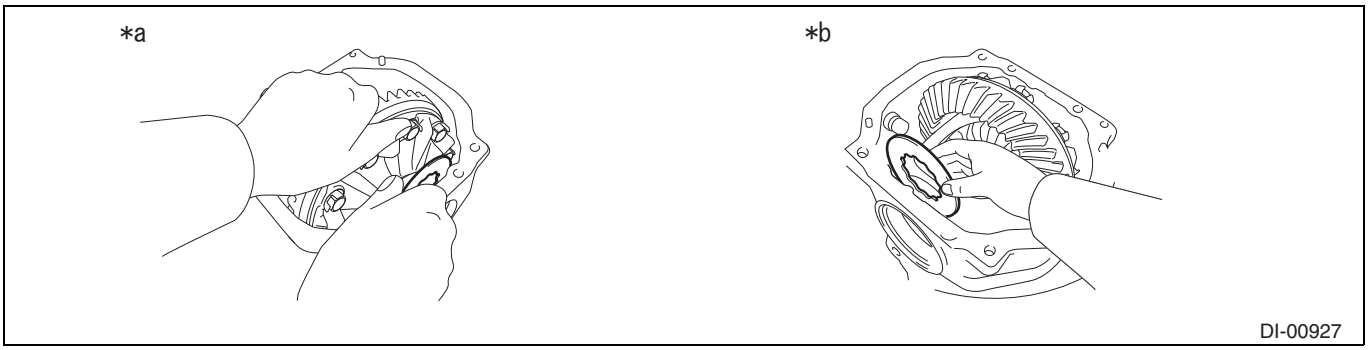


3. Inspection of differential ring gear runout

(1) Install the case bearing (outer race LH and RH) to the case bearing (inner race LH and RH), and install the differential case to the carrier.
CAUTION:
- When installing the bearing outer races, do not confuse the left and right.
- When using new bearings, do not apply differential gear oil.

(2) Install the right and left (back face side and tooth face side) side gear shaft washer to the differential carrier while avoiding play of the case bearing.

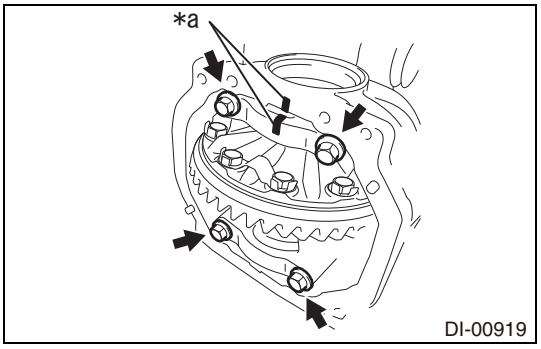
AD



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Back face side | *b | Tooth face side |

NOTE:
- When the final gear set (drive pinion & ring gear) and the case bearings are replaced, select a side gear shaft washer with thin thickness and install it.
- When the drive pinion, ring gear and case bearings are reused, select a side gear shaft washer with the same thickness as that of the one before disassembly and install it.



(3) Install the right and left bearing caps to the differential carrier with 4 bolts.

Captions in illustration

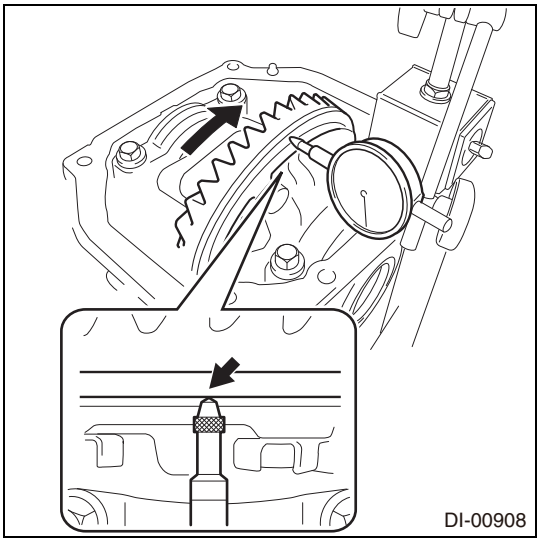
| | |
|---|---|
| *a | Identification mark |

Standard value:T=85N·m {867kgf·cm} {62.7ft·lbf}

CAUTION:

The bearing cap and the carrier are manufactured as a unit; do not change the combination.

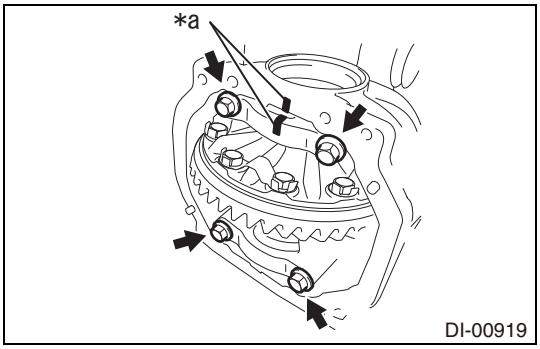
AD



(4) Contact a dial gauge at a right angle to the back surface of the ring gear.

(5) Check for runout of the ring gear.

Limit: 0.07 mm {0.003 in}

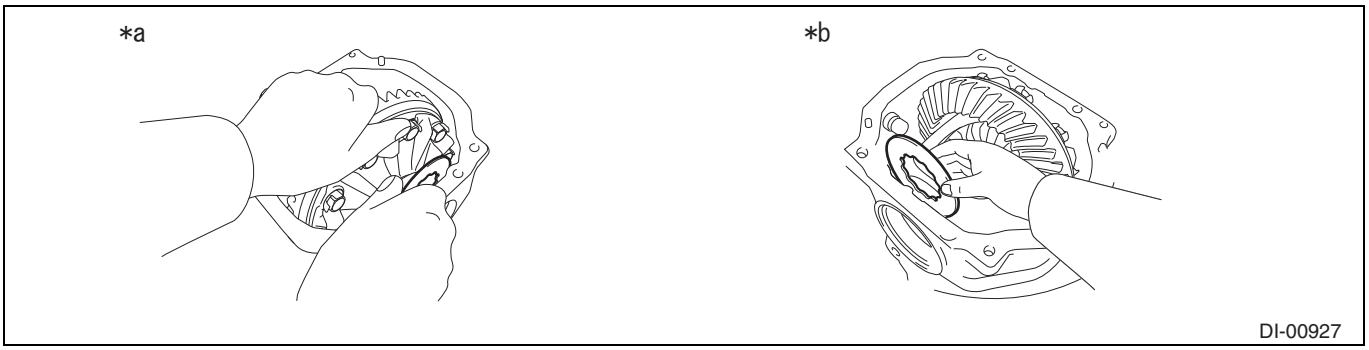


(6) Remove 4 bolts, and remove 2 bearing caps from the differential carrier.

Captions in illustration

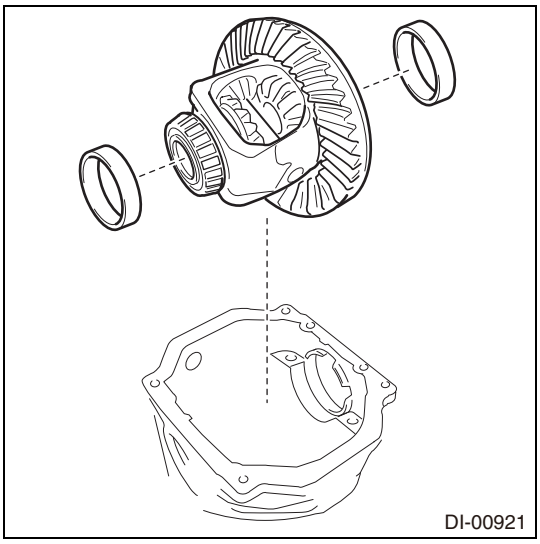
| | |
|---|---|
| *a | Identification mark |

(7) Remove the right and left side gear shaft washers from the differential carrier.



Captions in illustration

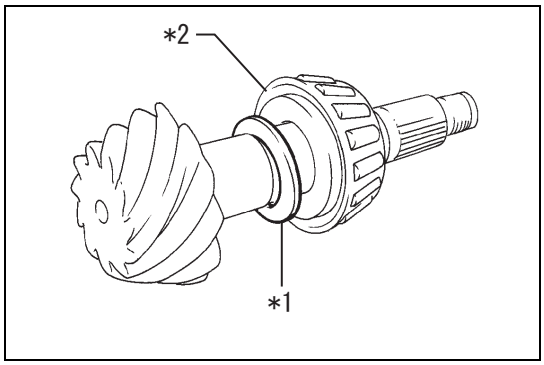
| | | | |
|---|---|---|---|
| *a | Back face side | *b | Tooth face side |



(8) Remove the differential case and right and left case bearings from the differential carrier.

CAUTION:

Be careful not to damage the differential case bearing and the ring gear.



4. Installation of rear drive pinion tapered roller bearing RR

(1) Install the drive pinion washer to the drive pinion.

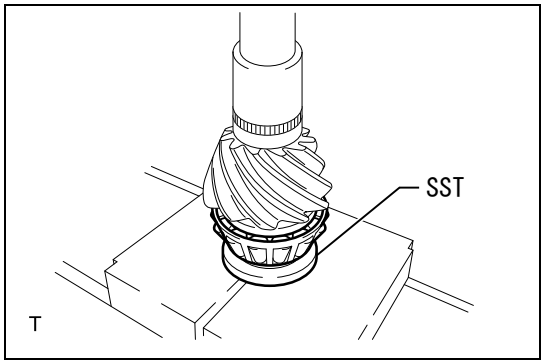
Captions in illustration

| | |
|---|---|
| *1 | Drive pinion washer |
| *2 | Inner race |

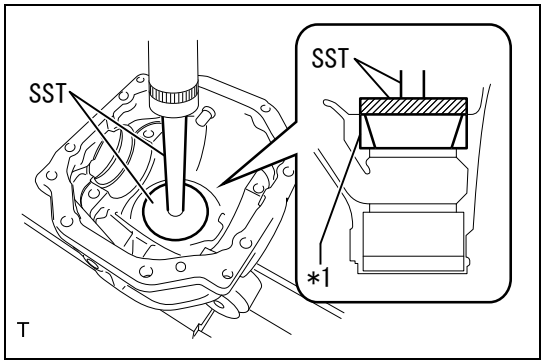
NOTE:

- In order to prevent the drive pinion washer from dropping, temporarily install the tapered roller bearing RR (inner race).
- Install the drive pinion washer with the same thickness as that of the removed one.
- The drive pinion washer has no installation direction.

AD



(2) Using the SST and a press, press-fit the tapered roller bearing RR (inner race) into the drive pinion.
SST 09506-30012
CAUTION:
When using new bearings, do not apply differential gear oil.

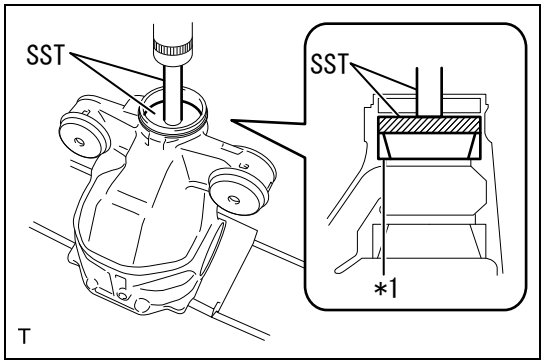


(3) Using the SST and a press, press-fit the tapered roller bearing RR (outer race) into the differential carrier.
SST 09950-60020 (09951-00890), 09950-70010 (09951-07200)

Captions in illustration

| | |
|---|---|
| *1 | Outer race |

CAUTION:
When using new bearings, do not apply differential gear oil.

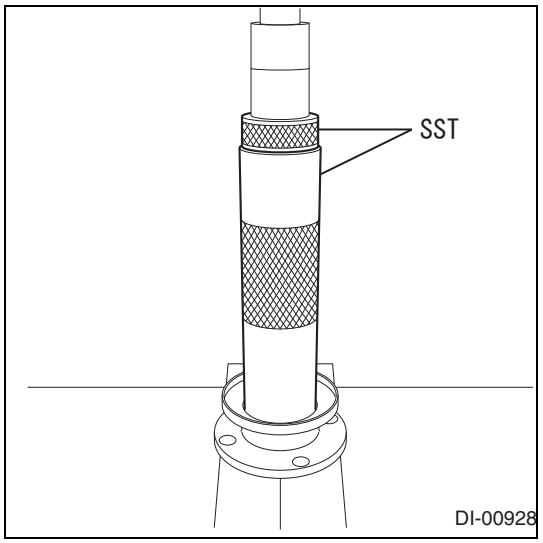


5. Installation of rear drive pinion tapered roller bearing FR
(1) Using the SST and a press, press-fit the tapered roller bearing FR (outer race) into the differential carrier.
SST 09950-60020 (00951-00720), 09950-70010 (09951-07100)

Captions in illustration

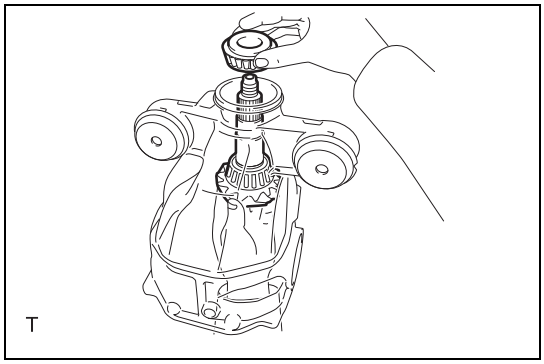
| | |
|---|---|
| *1 | Outer race |

CAUTION:
When using new bearings, do not apply differential gear oil.



6. Installation of rear differential dust deflector
(1) Using the SST and a press, press-fit a new dust deflector into the companion flange RR.
SST 499277200, 499225500
CAUTION:
- When press-fitting, gradually insert the dust deflector while checking the condition.
- Do not press-fit excessively.
- Remove a burr if it occurs when press-fitting.

AD



7. Adjustment of differential drive pinion preload
   (1) While supporting the drive pinion by hand, install the drive pinion tapered roller bearing FR (inner race) to the differential carrier.
   CAUTION:
   - Be careful not to drop the drive pinion.
   - In order to check the tooth contact of the ring gear, install the spacer and oil seal after checking and adjusting the tooth contact.
   - When using new bearings, do not apply differential gear oil.

   (2) Install the oil slinger to the differential carrier.

   (3) Using the SST, install the companion flange RR to the differential carrier.
   SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)

Captions in illustration

| | |
|---|---|
| *a | Drive |
| *b | Hold |

   CAUTION:
   - Be careful not to drop the drive pinion. Support it by hands until the SST is installed.
   - The bearing spacer is not installed, therefore, install the companion flange RR until there is a small play in the drive pinion.

   NOTE:
   - Apply grease to the thread and end portions of the SST center bolt (09953-03010) before using it.
   - The bolts and nuts used for securing the SST and the companion flange RR are recommended to be M8 ×P1.25 with a bolt length of approx. 40 mm {1.6 in}.

   (4) Using the SST, secure the companion flange RR.
   SST 18355AA000, 18334AA000

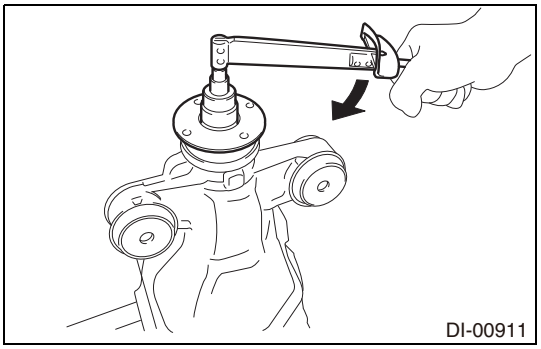
Captions in illustration

| | |
|---|---|
| *a | Drive |
| *b | Hold |

   (5) Using a socket wrench (30 mm) and a torque wrench, gradually tighten a new drive pinion nut to the specified preload.
   Limit: T = 338 N·m {3447 kgf·cm} {249.3 ft·lbf}
   WARNING:
   During operation, support the overhaul stand.

CAUTION:
Note that no bearing spacer is inserted. Therefore, tighten the nut gradually. Never overtighten it.
NOTE:
- Tighten to approx. 100 N·m {1020 kgf·cm} {73.8 ft·lbf} while checking the preload.
- Apply differential gear oil to the thread portions of the nut and the drive pinion.

(6) Turn it forward and backward several times to seat the bearing properly.



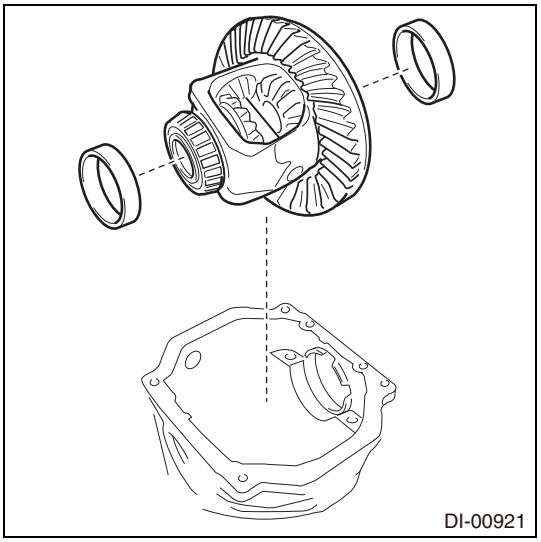
DI-00911

(7) Using a socket wrench (30 mm) and a torque wrench, check preload of the drive pinion.

| | | |
|---|---|---|
| Standard value | When the bearing is new | T = 1.77 to 2.14N·m {18.0 to 21.8 kgf·cm} {1.31 to 1.58ft·lbf} |
| | When the bearing is reused | T = 1.77 to 2.07N·m {18.0 to 21.1 kgf·cm} {1.31 to 1.53ft·lbf} |

CAUTION:
For inspection of overall preload, record the preload.

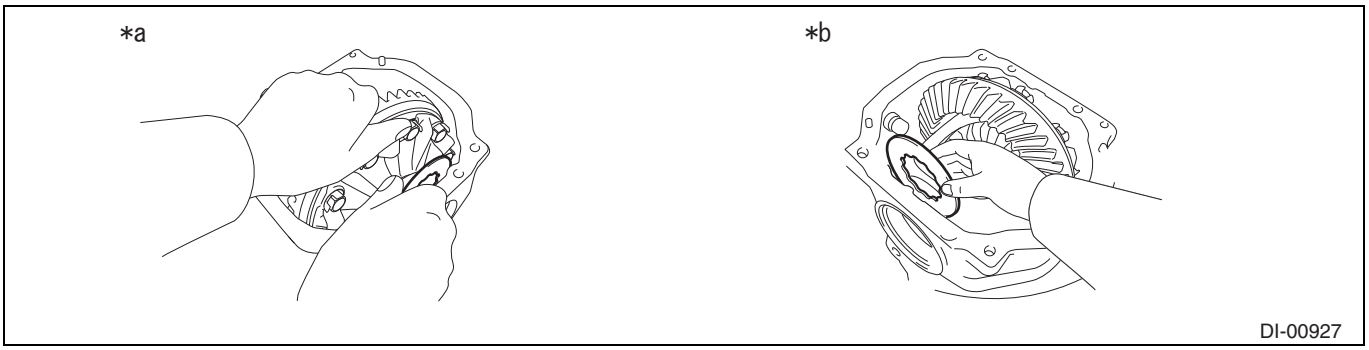
8. Installation of rear differential case SUB-ASSY



DI-00921

(1) Install the case bearing (outer race LH and RH) to the case bearing (inner race LH and RH), and install the differential case to the differential carrier.
CAUTION:
When installing the bearing outer races, do not confuse the left and right.

(2) Install the right and left (back face side and tooth face side) side gear shaft washer to the differential carrier while avoiding play of the case bearing.



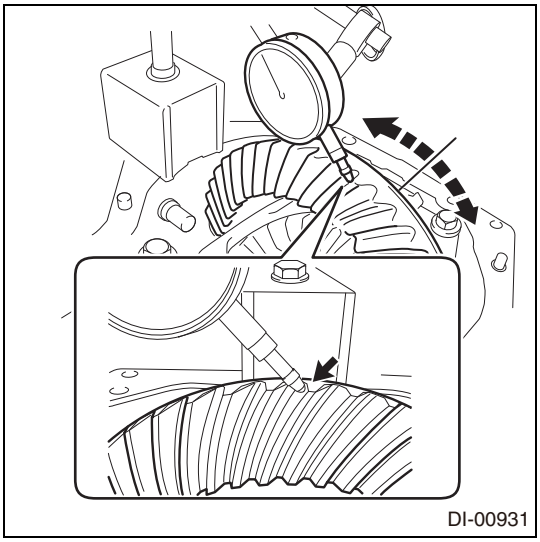
Captions in illustration

| | | | |
|---|---|---|---|
| *a | Back face side | *b | Tooth face side |

NOTE:
- When the final gear set (drive pinion & ring gear) and the differential case bearings are replaced, select a differential side gear shaft washer with thin thickness and install it.

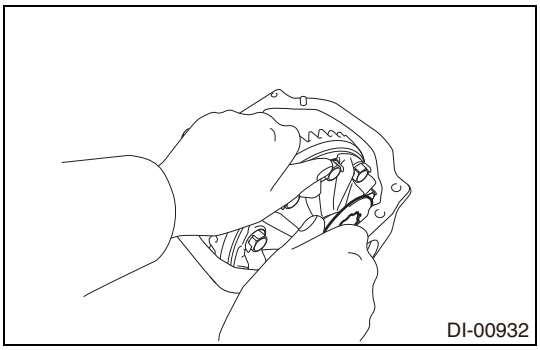
AD

- When the drive pinion, ring gear and differential case bearings are reused, select a differential side gear shaft washer with the same thickness as that of the disassembled one and install it.



DI-00931

9. Inspection and adjustment of backlash between differential ring gear and differential drive pinion
   (1) Contact a dial gauge at a right angle to the tooth surface end of the ring gear.
   (2) Secure the companion flange RR by hand, and inspect the ring gear by moving it.
   Standard value: 0.13 to 0.18mm {0.005 to 0.007in}
   NOTE:
   - Inspect at 3 points or more on the ring gear circumference.
   - Record the measured value for reference when selecting the side gear shaft washer.
   - For reference when selecting the side gear shaft washer, inspect the tooth contact between the differential ring gear and the drive pinion.



DI-00932

   (3) Select the side gear shaft washer which allows the ring gear's backlash to be within the standard value, and install it to the back face side of the ring gear.

Type of rear differential side gear shaft washer

| Thickness (mm {in}) | Identification mark | Thickness (mm {in}) | Identification mark |
|---|---|---|---|
| 2.57 to 2.59 {0.1012 to 0.1020} | 01 | 3.03 to 3.05 {0.1193 to 0.1201} | 47 |

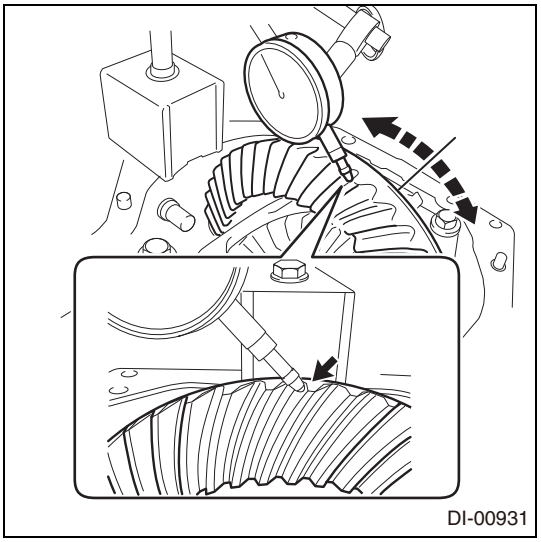
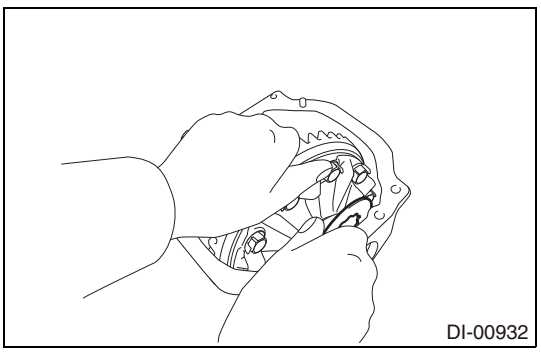
DI-00933

(4) Using a plastic hammer, lightly tap the differential carrier for better fitting of the case bearing and the side gear shaft washer.



DI-00931

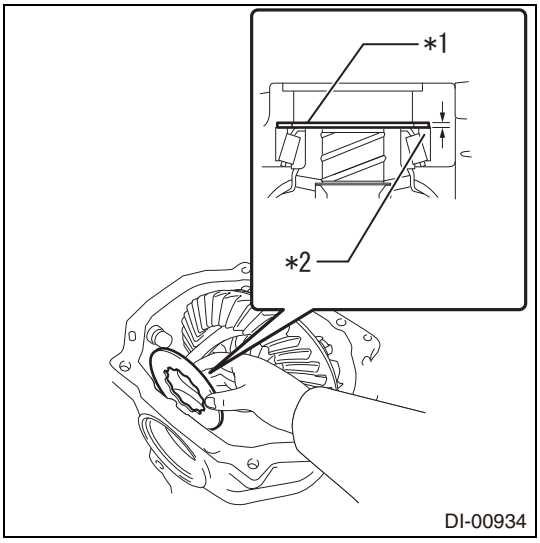
(5) Contact a dial gauge at a right angle to the tooth surface end of the ring gear.
(6) Secure the companion flange RR by hand, and inspect the backlash by moving the ring gear.
Standard value: 0.13 to 0.18mm {0.005 to 0.007in}



DI-00932

(7) If out of the standard, select the side gear shaft washer which allows the ring gear's backlash to be around the standard value, and install it to the back face side of the ring gear.

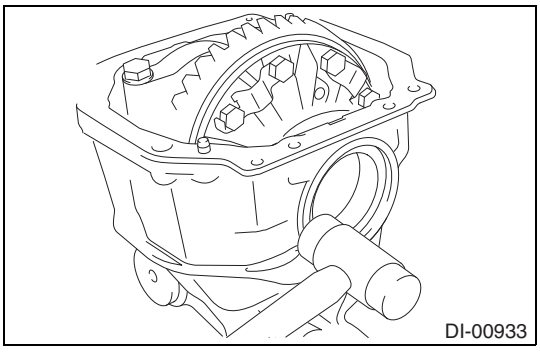
AD



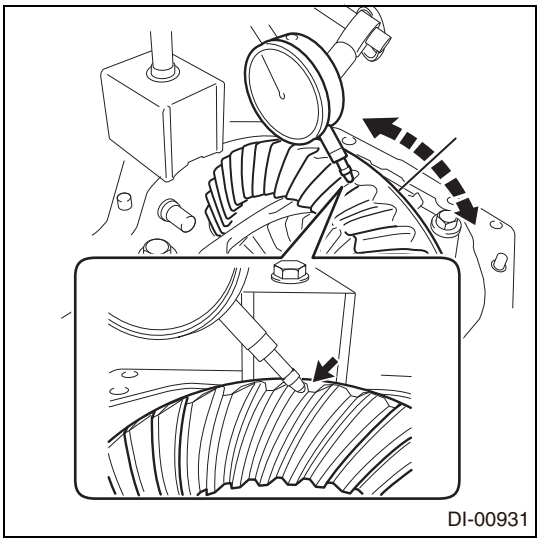
(8) Select the thickest side gear shaft washer that provides no gap or almost no gap between the end face of the case bearing outer race on the tooth face side of the ring gear and the carrier.

Captions in illustration

| | |
|---|---|
| *1 | Side gear shaft washer |
| *2 | Outer race |



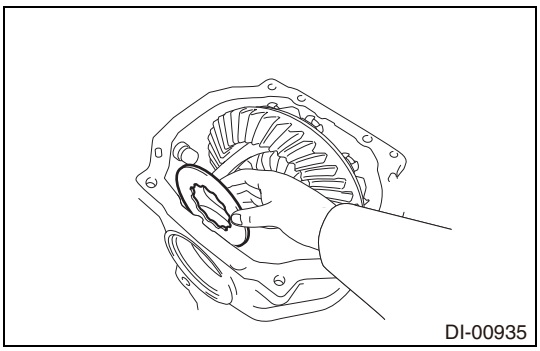
(9) Using a plastic hammer, lightly tap the differential carrier for better fitting of the case bearing.



(10) Contact a dial gauge at a right angle to the tooth surface end of the ring gear.

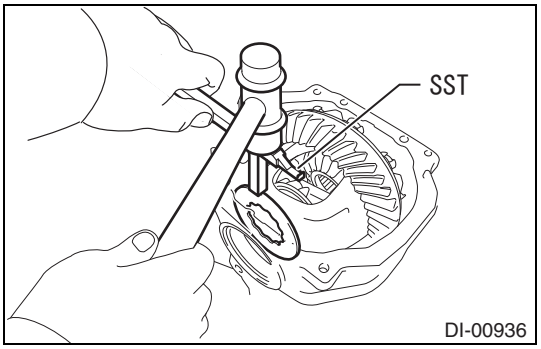
(11) Secure the companion flange RR by hand, and inspect the backlash by moving the ring gear.
Standard value: 0.13 to 0.18mm {0.005 to 0.007in}

(12) If out of the standard, adjust the thickness of the right and left side gear shaft washers, increasing or decreasing by the same amount.
NOTE:
- Record the measured value for reference when selecting the side gear shaft washer.
- For reference when selecting the side gear shaft washer, inspect the tooth contact between the differential ring gear and the drive pinion.

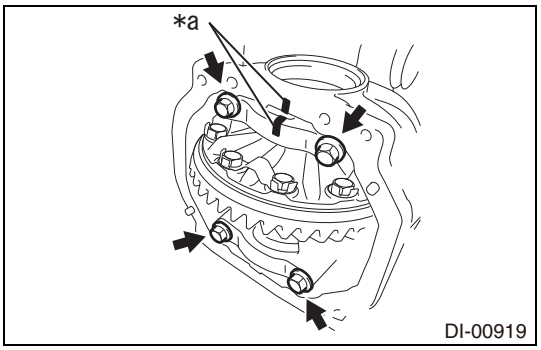


10. Inspection and adjustment of differential case bearing preload
(1) After adjusting the backlash of the ring gear, remove the side gear shaft washer on the tooth face side of the ring gear.
(2) Using a micrometer, inspect the thickness of the side gear shaft washer.
(3) Select the side gear shaft washer that is 0.06 to 0.09 mm {0.002 to 0.004 in} thicker than the removed side gear shaft washer.
CAUTION:
Install the side gear shaft washer that can be inserted into about two thirds of the way using a finger.

AD



(4) Using the SST and a hammer, press-fit the side gear shaft washers into the differential carrier.
SST 09504-22012

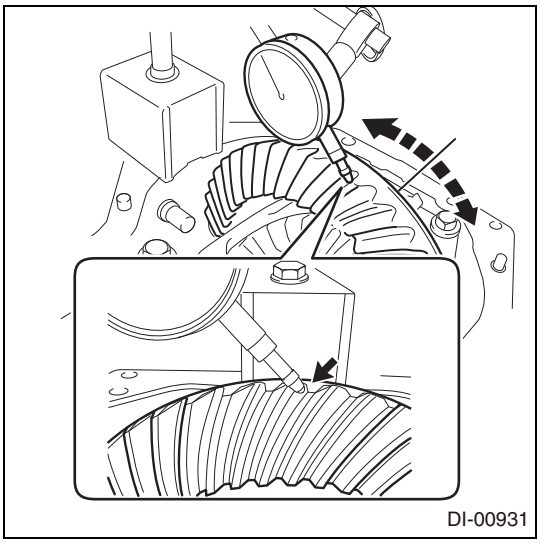


(5) Align the alignment marks on the bearing cap and the differential carrier, and install the bearing cap.

Captions in illustration

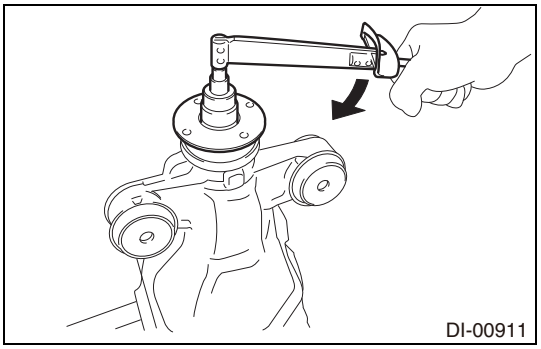
| | |
|---|---|
| *a | Identification mark |

(6) Using 4 bolts, tighten the right and left bearing caps.
Standard value:T=85N·m {867kgf·cm} {62.7ft·lbf}
CAUTION:
The bearing cap and the carrier are manufactured as a unit; do not change the combination.



(7) Contact a dial gauge at a right angle to the tooth surface end of the ring gear.
(8) Secure the companion flange RR by hand, and inspect the backlash by moving the ring gear.
Standard value: 0.13 to 0.18mm {0.005 to 0.007in}
NOTE:
- Measure at 3 points or more on the ring gear circumference.
- If any small backlash is found, replace the side gear shaft washer on the tooth face side of the ring gear with a thicker one.
- Record the measured value for reference when selecting the side gear shaft washer.
- For reference when selecting the side gear shaft washer, inspect the tooth contact between the differential ring gear and the drive pinion.
- When adjusting the backlash, bring the average value close to 0.1 mm {0.004 in}.

11. Inspection and adjustment of overall preload
(1) Using a socket wrench (30 mm) and a torque wrench, check overall preload with the drive pinion contacting the ring gear tooth surface.



Preload for new drive pinion tapered roller bearing

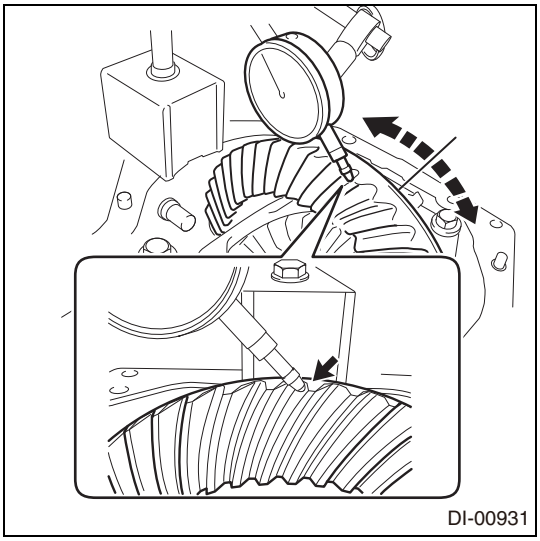
| | | |
|---|---|---|
| Standard value | When the differential case bearing is new | T = 2.17 to 2.77 N·m {22.1 to 28.2 kgf·cm} {1.60 to 2.04 ft·lbf} |
| | When the differential case bearing is reused | T = 2.09 to 2.67N·m {21.3 to 27.2 kgf·cm} {1.54 to 1.97ft·lbf} |

AD

Preload with reused drive pinion tapered roller bearing

| | | |
|---|---|---|
| Standard value | When the differential case bearing is new | T = 2.17 to 2.70N·m {22.1 to 27.5 kgf·cm} {1.60 to 1.99 ft·lbf} |
| | When the differential case bearing is reused | T = 2.09 to 2.60N·m {21.3 to 26.5 kgf·cm} {1.54 to 1.92ft·lbf} |

NOTE:
- If out of the standard, perform the adjustment using the side gear shaft washer on the tooth face side of the ring gear.
- If the measured preload is less than standard, replace the side gear shaft washer with a thicker one.
- If the measured preload is more than standard, replace the side gear shaft washer with a thinner one.
- Record the measured value for reference when reassembling.

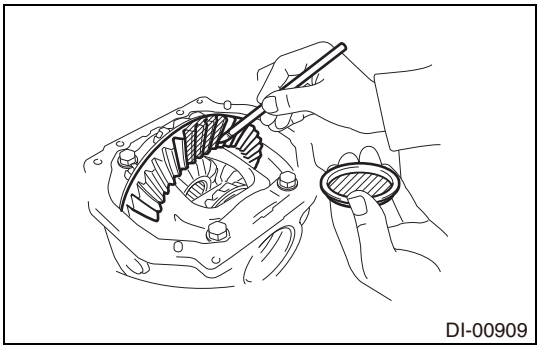


DI-00931

(2) Contact a dial gauge at a right angle to the tooth surface end of the ring gear.
(3) Secure the companion flange RR by hand, and inspect the backlash by moving the ring gear.
Standard value: 0.13 to 0.18mm {0.005 to 0.007in}
NOTE:
- Measure at 3 points or more on the ring gear circumference.
- If the backlash is out of the standard, adjust the thickness of the right and left side gear shaft washers, increasing or decreasing by the same amount.
- When adjusting the backlash, bring the average value close to 0.1 mm {0.004 in}.
- If any small backlash is found, replace the side gear shaft washer on the tooth face side of the ring gear with a thicker one.
- Record the measured value for reference when selecting the side gear shaft washer.
- For reference when selecting the side gear shaft washer, inspect the tooth contact between the differential ring gear and the drive pinion.

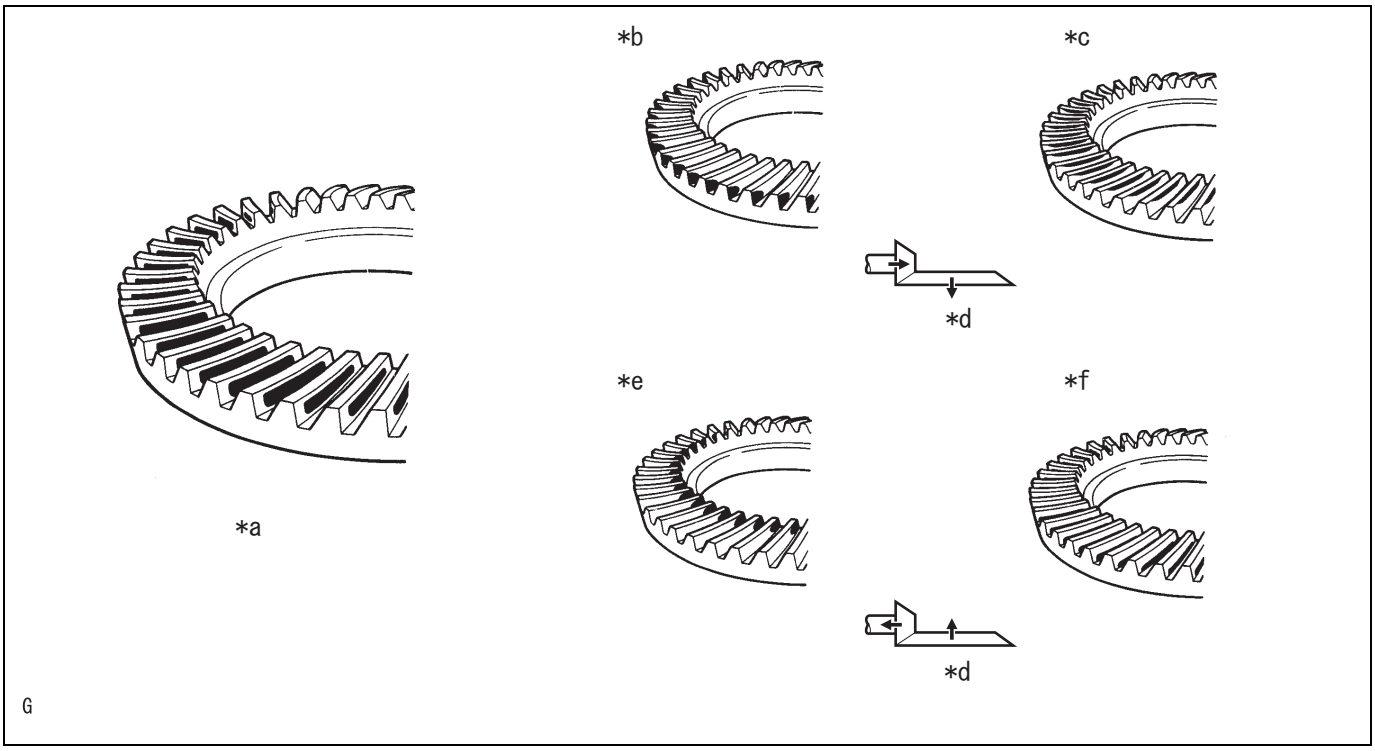
(4) Recheck the overall preload.

12. Inspection of tooth contact between differential ring gear and differential drive pinion
(1) Apply a thin uniform coat of red lead on both teeth surfaces of the ring gear.
(2) Rotate the companion flange forward and backward several times.
(3) Check the tooth contact between the drive pinion and the ring gear.



DI-00909

AD

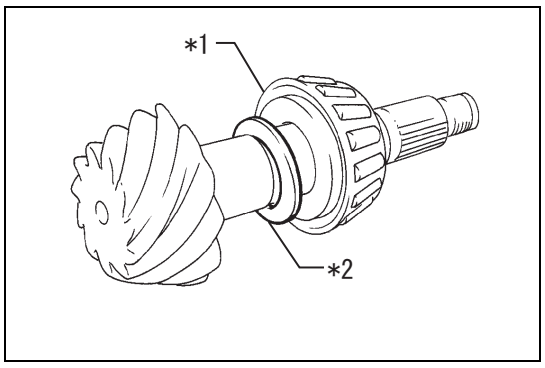


Captions in illustration

| | | | |
|---|---|---|---|
| *a | Correct tooth contact | *b | Heel contact |
| *c | Face contact | *d | Adjust the drive pinion and the ring gear in the direction of arrow. |
| *e | Toe contact | *f | Flank contact |

NOTE:
- Check the contact condition at 4 points on the ring gear circumference.
- The pattern shown on red lead is the position of tooth contact.

AD



(4) If an improper tooth contact occurs, select a drive pinion washer from the table, remove the tapered roller bearing RR, and then reinstall it.

Captions in illustration

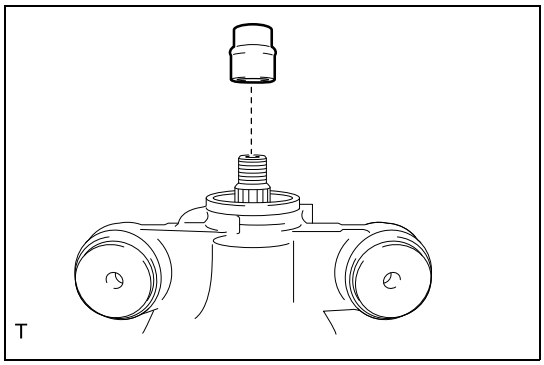
13. Removal of rear drive pinion nut
    (1) Using the SST, secure the flange and remove the drive pinion nut from the differential carrier.
    SST 18355AA000, 18334AA000

Captions in illustration

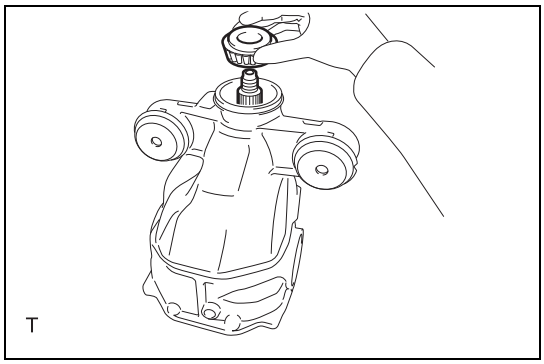
| | |
|---|---|
| *a | Drive |
| *b | Hold |

WARNING:
During operation, support the overhaul stand.
NOTE:
The bolts and nuts used for securing the SST and the companion flange RR are recommended to be M8 ×P1.25 with a bolt length of approx. 45 mm {1.8 in}.

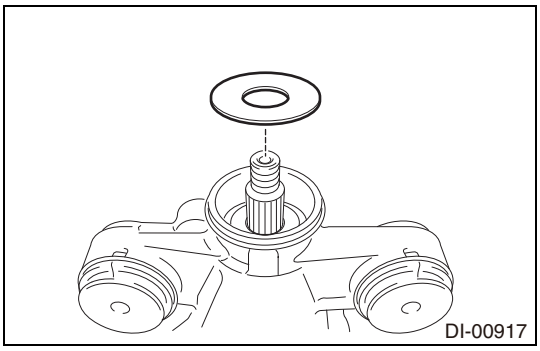
14. Removal of rear drive pinion companion flange RR (Refer to AD - 46)
15. Removal of rear differential drive pinion oil slinger (Refer to AD - 47)
16. Removal of rear drive pinion tapered roller bearing FR (Refer to AD - 47)



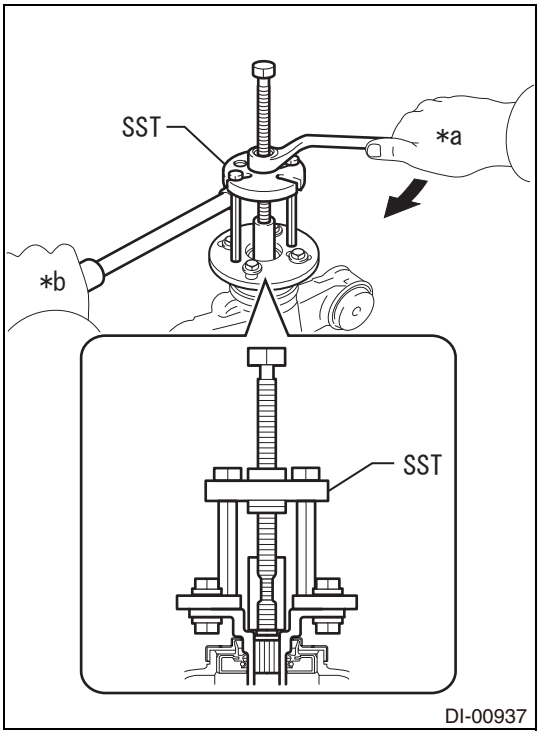
17. Installation of rear differential drive pinion bearing spacer
    (1) Install a new bearing spacer to the drive pinion.
    CAUTION:
    Install the part with a larger inner diameter to the drive pinion side, and the part with a smaller to the companion flange RR side.



18. Installation of rear drive pinion tapered roller bearing FR
    (1) Install the tapered roller bearing FR (inner race) to the differential carrier.



19. Installation of rear differential drive pinion oil slinger
    (1) Install the oil slinger to the differential carrier.



20. Installation of rear drive pinion companion flange RR
    (1) Using the SST and the companion flange RR, press-fit the tapered roller bearing RR (inner race) into the differential carrier.
        SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09955-03030, 09956-03030)

NOTE:
- Apply grease to the thread and end portions of the SST center bolt (09953-03010) before using it.
- The bolts and nuts used for securing the SST and the companion flange RR are recommended to be M8 ×P1.25 with a bolt length of approx. 40 mm {1.6 in}.

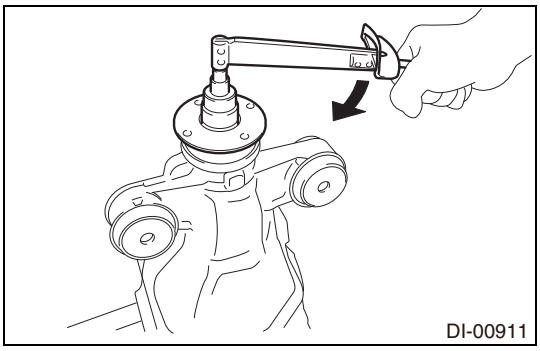
(2) Using the SST, secure the companion flange RR.
SST 18355AA000, 18334AA000

Captions in illustration

| | |
|---|---|
| *a | Drive |
| *b | Hold |

(3) Using a socket wrench (30 mm) and a torque wrench, tighten the drive pinion nut while checking the preload.
Limit: T = 338 N·m {3447 kgf·cm} {249.3 ft·lbf}
WARNING:
During operation, support the overhaul stand.
CAUTION:
Do not tighten excessively, or the thread portion may be damaged if it exceeds the limit.
NOTE:
- Tighten to approx. 100 N·m {1020 kgf·cm} {73.8 ft·lbf} while checking the preload.
- Apply differential gear oil to the thread portions of the nut and the drive pinion.



24. Adjustment of differential drive pinion preload
(1) Using a socket wrench (30 mm) and a torque wrench, check preload within the backlash of the drive pinion and ring gear.

| | | |
|---|---|---|
| Standard value | When the bearing is new | T = 1.87 to 2.24N·m {19.1 to 22.8 kgf·cm} {1.38 to 1.65ft·lbf} |
| | When the bearing is reused | T = 1.87 to 2.17 N·m {19.1 to 22.1 kgf·cm} {1.38 to 1.60ft·lbf} |

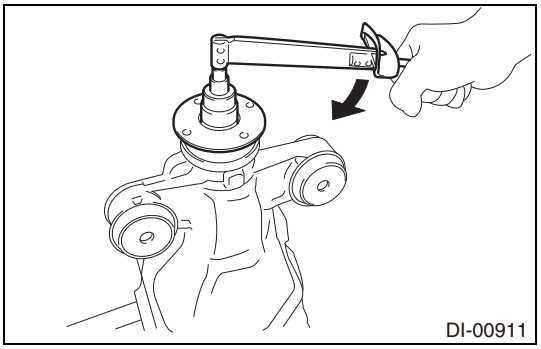
NOTE:
- In order to seat the bearing properly, rotate the companion flange forward and backward several times.
- For inspection of general preload, record the preload of the drive pinion.

(2) Replace the bearing spacer if preload is excessive.
CAUTION:
The bearing spacer is used in plastic deformation, therefore, always replace it with a new part if excessively high preload is set to the drive pinion by mistake.

(3) If the preload is insufficient, check the preload after further tightening the drive pinion nut by 5 to 10°, and repeat the adjustment to be within the standard.
Limit: T = 338 N·m {3447 kgf·cm} {249.3 ft·lbf}

(4) If the preload is still insufficient after the tightening torque of the drive pinion nut exceeds the limit, loosen the drive pinion nut, and then check that the drive pinion nut and drive pinion thread are not and broken.

(5) If there is no malfunction, replace the bearing spacer, apply differential gear oil to the thread of the drive pinion, and repeat the operation.



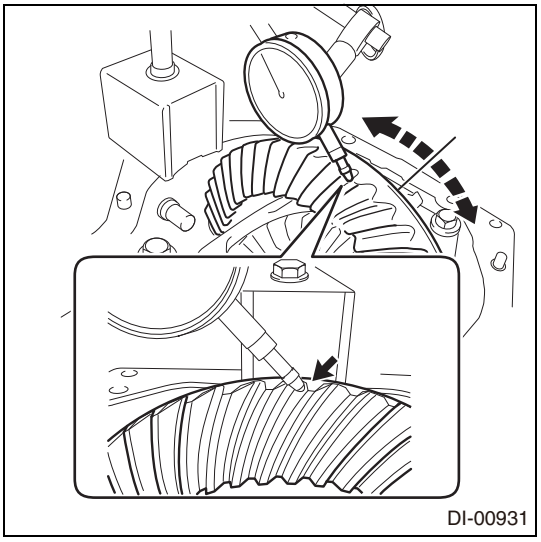
25. Inspection of overall preload
    (1) Using a socket wrench (30 mm) and a torque wrench, check preload with the drive pinion contacting the ring gear tooth surface.

Preload for new drive pinion tapered roller bearing

| | | |
|---|---|---|
| Standard value | When the differential case bearing is new | T = 2.27 to 2.87N·m {23.1 to 29.3 kgf·cm} {1.67 to 2.12ft·lbf} |
| | When the differential case bearing is reused | T = 2.19 to 2.77 N·m {22.3 to 28.2 kgf·cm} {1.62 to 2.04 ft·lbf} |

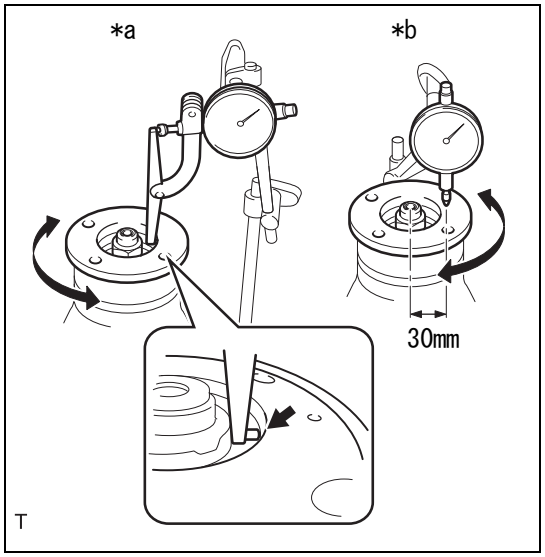
Preload with reused drive pinion tapered roller bearing

| | | |
|---|---|---|
| Standard value | When the differential case bearing is new | T = 2.27 to 2.80N·m {23.1 to 28.6 kgf·cm} {1.67 to 2.07ft·lbf} |
| | When the differential case bearing is reused | T = 2.19 to 2.70N·m {22.3 to 27.5 kgf·cm} {1.62 to 1.99ft·lbf} |



26. Inspection of backlash between differential ring gear and differential drive pinion
    (1) Contact a dial gauge at a right angle to the tooth surface end of the ring gear.
    (2) Secure the companion flange RR by hand, and inspect the ring gear backlash.
    Standard value: 0.13 to 0.18mm {0.005 to 0.007in}
    NOTE:
    Measure at 3 points or more on the ring gear circumference.

AD

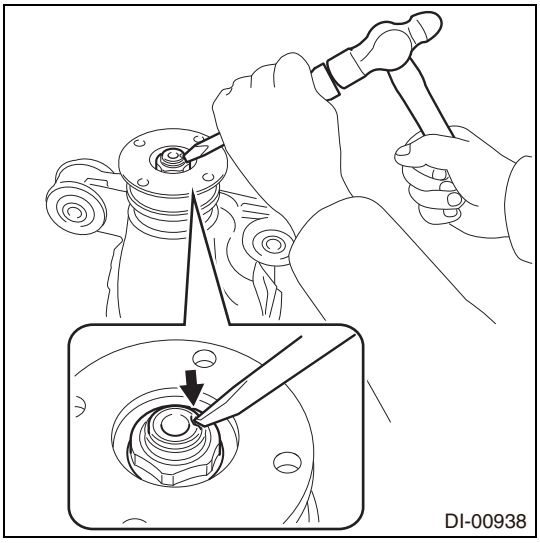


27. Inspection of rear drive pinion companion flange RR runout
    (1) Wipe off the inner surface of the companion flange RR with a cloth to remove dust or foreign matter.

Captions in illustration

| | |
|---|---|
| *a | Inspection of radial runout |
| *b | Inspection of lateral runout |

    (2) Inspection of companion flange RR radial runout
        (a) Contact the lever type probe of a dial gauge at a right angle to the inner circumference of the companion flange RR.
        (b) Inspect radial runout of the companion flange RR.
        Limit: 0.09mm {0.004in}
    (3) Inspection of companion flange RR lateral runout
        (a) Contact a dial gauge at a right angle to the surface of the companion flange RR as shown in the figure.
        (b) Inspect lateral runout of the companion flange RR.
        Limit: 0.09mm {0.004in}



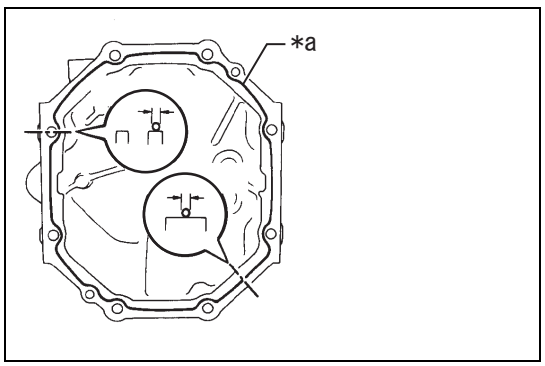
28. Fixation of rear drive pinion nut
    (1) Crimp the drive pinion nut using a chisel and a hammer.

29. Installation of rear differential side gear shaft oil seal (Refer to AD - 36)

30. Installation of rear differential drain plug
    (1) Install the drain plug to the differential carrier through a new gasket using a socket hexagon wrench 10.
    Standard value:T=49N·m {500kgf·cm} {36.1ft·lbf}

31. Installation of rear differential breather plug oil deflector
    (1) Using a scraper and a wire brush, clean the seal gasket that is attached to the differential carrier and the carrier cover, and then degrease it with a cleaning solvent, etc.
    CAUTION:
    Be careful not to damage the mating surface of the differential carrier.

    (2) Using bolts, install the breather plug oil deflector to the differential carrier cover.
    Standard value:T=8.0N·m {82kgf·cm} {5.9ft·lbf}



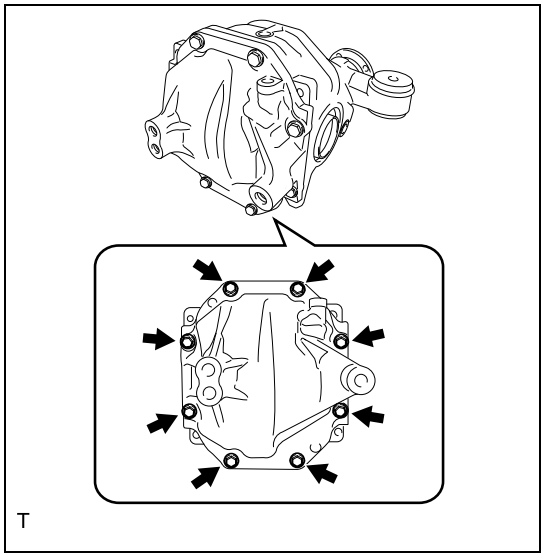
32. Installation of rear differential carrier cover
    (1) Apply Three Bond 1281 or equivalent to the position of the differential carrier cover as shown in the figure.

Captions in illustration

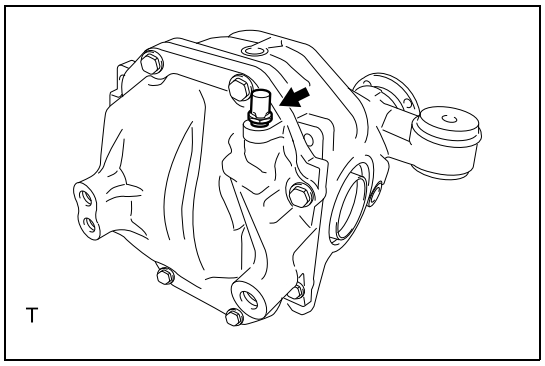
| | |
|---|---|
| *a | Applying position of Three Bond 1281 or equivalent |

CAUTION:
- Apply seal gasket in a diameter of 2 to 3 mm {0.08 to 0.12 in} seamlessly.
- There must be 10 mm {0.4 in} or more overlapped portion between the starting and ending sections.
- Install within 3 minutes after applying seal gasket.

AD



(2) Install the differential carrier cover to the differential carrier with 8 bolts.
Standard value:T=47N·m {479kgf·cm} {34.7 ft·lbf}
CAUTION:
Do not fill with oil or drive the vehicle immediately after installing the differential carrier cover. Leave the vehicle unattended for one hour or more. Also, avoid abrupt acceleration and deceleration for 12 hours or more.

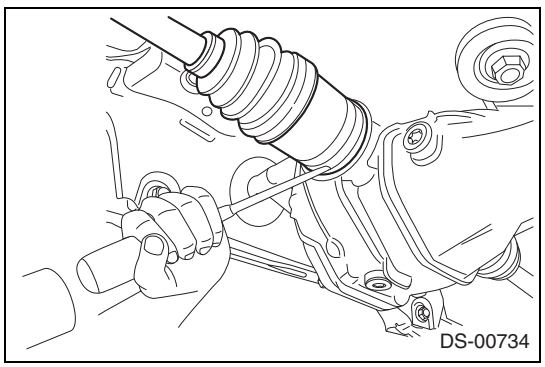


33. Installation of rear differential breather plug
(1) Install the differential breather plug to the differential carrier.
Standard value:T=21N·m {214kgf·cm} {15.5ft·lbf}

34. Removal of rear differential carrier ASSY RR
(1) Remove the rear differential carrier ASSY RR from the overhaul stand.

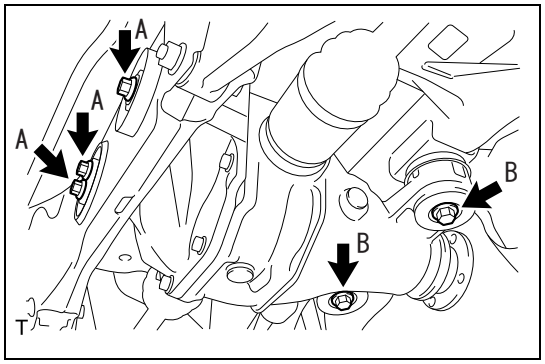
## Installation

1. Installation of differential carrier ASSY RR
(1) Using a tall transmission jack, support the differential carrier ASSY RR.
(2) Install a new snap ring to the rear drive shaft ASSY.
(3) Apply differential gear oil to the spline of the inboard joint ASSY.
(4) Align the spline of the rear drive shaft inboard joint, and then press-fit the rear drive shaft ASSY using a brass bar and a hammer.



CAUTION:
- Place the snap ring with its cut end facing downward.
- Do not damage the oil seal during insertion.
- Be careful not to strike the tip of the outboard joint with a hammer.
- If there is a malfunction, such as dislocation, etc., in the inboard joint of the drive shaft, replace it with a new part.

NOTE:
Check that the drive shaft is completely press-fit by feeling the change of reaction force or sound quality.



(5) Gradually lift the tall transmission jack, and install the differential carrier ASSY RR through the rear differential mount stopper UPR and the rear differential mount stopper LWR with 5 bolts
SST 41399CA170
CAUTION:
When tightening the bolt B, use the SST.
Standard value:T=62N·m {632kgf·cm} {45.7 ft·lbf} (bolt A)
T=95N·m {969kgf·cm} {70.1 ft·lbf} (bolt B)

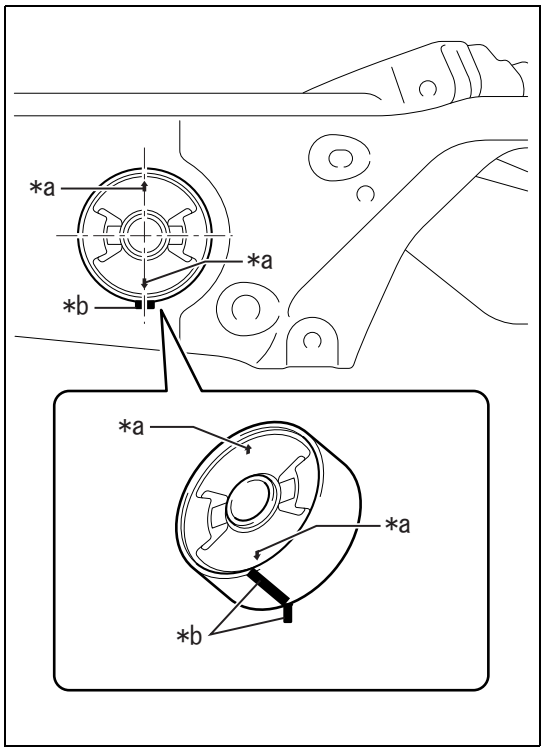
## Installation



1. Installation of rear differential mount cushion NO. 2
   (1) Place alignment marks on the new rear differential mount cushion NO. 2 and the rear suspension member as shown in the figure.
   CAUTION:
   Install the rear differential mount cushion NO. 2 with the arrow marks facing upward and downward.
   NOTE:
   Before installation, place alignment marks on the rear suspension member and the rear differential mount cushion NO. 2.

Captions in illustration

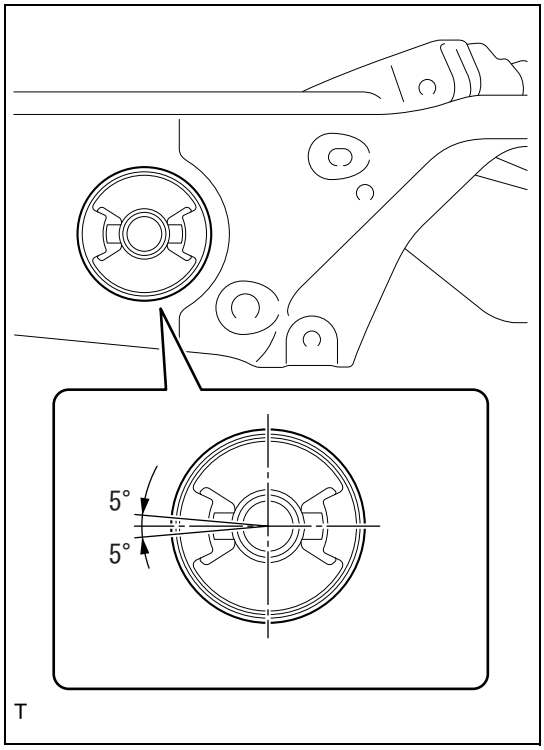
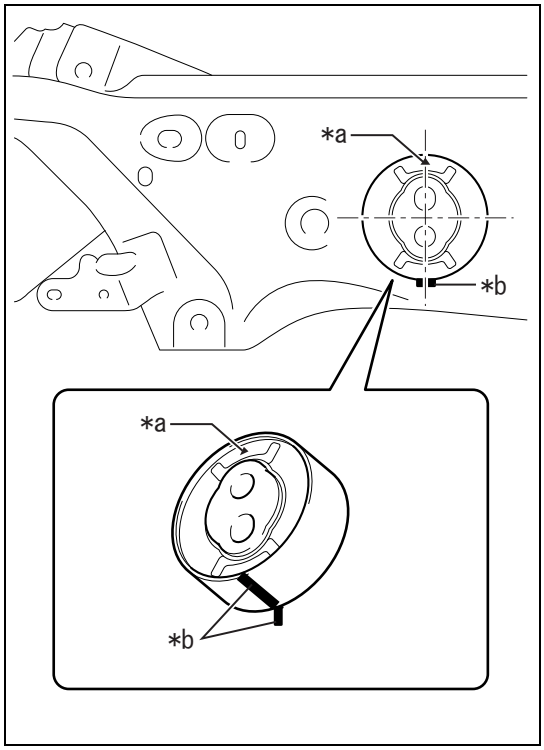
| *9 | SST(41399FG061) |
| *a | Hold |
| *b | Drive |
| *c | Start. |
| *d | Complete |
| ➡ | Rear side of vehicle |

NOTE:
- Align the alignment marks on the rear differential mount cushion NO. 2 and the rear suspension member, and install it while checking how it is off-centered.
- The allowable range of the rear differential mount cushion NO. 2 installation angle should be within 5°.

AD



- Insert the rear differential mount cushion NO. 2 until *7 (SST) contacts the rear suspension member.



2. Installation of rear differential mount cushion NO. 1
   (1) Place alignment marks on the new rear differential mount cushion NO. 1 and the rear suspension member as shown in the figure.
   CAUTION:
   Install the rear differential mount cushion NO. 1 with the triangle mark facing upward.
   NOTE:
   Before installation, place alignment marks on the rear suspension member and the rear differential mount cushion NO. 1.

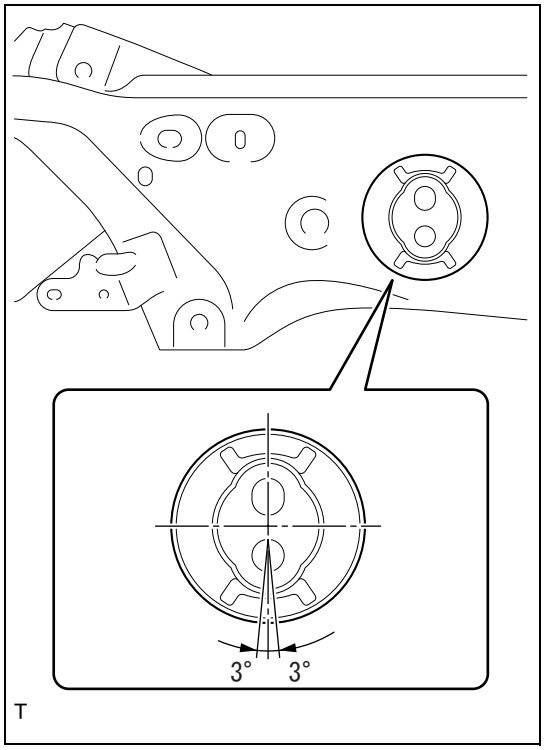
| *a | Hold |
| *b | Drive |
| *c | Start. |
| *d | Complete |
| ➡ | Rear side of vehicle |

CAUTION:
- Perform installation while checking the SST and the rear differential mount cushion NO. 1 are not tilted.
- If the rear differential mount cushion NO. 1 is tilted, the operation becomes less efficient. When setting the rear differential mount cushion NO. 1 in the rear suspension member, make sure there are no gaps between the SST and the rear differential mount cushion NO. 1.

NOTE:
- Align the alignment marks on the rear differential mount cushion NO. 1 and the rear suspension member, and install it while checking how it is off-centered.
- The allowable range of the rear differential mount cushion NO. 1 installation angle should be within 3°.



- Insert the rear differential mount cushion until *4 (SST) contacts the rear suspension member.

3. Installation of stabilizer bar RR (Refer to RP - 27)
4. Installation of exhaust tail pipe ASSY (Refer to IE - 44)
5. Installation of rear differential carrier ASSY (Refer to AD - 70)

Adjustment . . . . . AL-2
**Rear wheel alignment**
Adjustment . . . . . AL-7

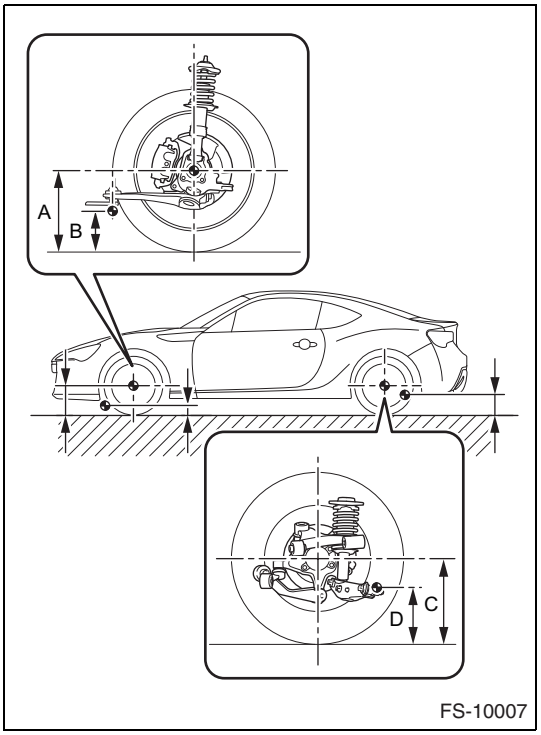
# Front wheel alignment

## Adjustment

CAUTION:

To ensure proper functioning of the brake system, be sure to perform the neutral position setting of the VDC sensor as initialization after alignment adjustment or removal ·replacement of suspension or underbody parts. (Refer to BC - 15)

1. Tire inspection (Refer to TW - 2)



2. Vehicle height inspection
   (1) Perform vehicle height inspection after bouncing the vehicle at the corners by large amounts to stabilize the suspension.
   Standard value

| Dimension A - Dimension B (mm {in}) | Dimension C - Dimension D (mm {in}) |
|---|---|
| 146 {5.75} | 110 {4.33} |

CAUTION:

- Perform the inspection while the vehicle is at curb weight (with no spare tire and no service tool loaded).
- These values are for adjusting the wheel alignment and do not indicate the actual vehicle height.

NOTE:

- Dimension A ···Center of the front wheel
- Dimension B ···Center of the tip of the front arm ASSY front side bushing mounting bolt
- Dimension C ···Center of the rear wheel
- Dimension D ···Center of the rear end of the rear lower arm No. 2 bushing mounting bolt threaded portion

3. Inspection of camber, caster, and kingpin angle
   CAUTION:
   Perform the inspection while the vehicle is at curb weight (with the spare tire, jack, and service tools loaded and with a full fuel tank).
   (1) Place the front wheel on the turning radius gauge.

Standard value

AL

| Tire size | Camber | Caster | Kingpin angle |
|---|---|---|---|
| 215/45R17<br>215/40R18 | 0°00±0°45' | 5°55' (Reference) | 15°30' (Reference) |

NOTE:

Make sure the ground contact surfaces of the front and rear wheels are at the same height.

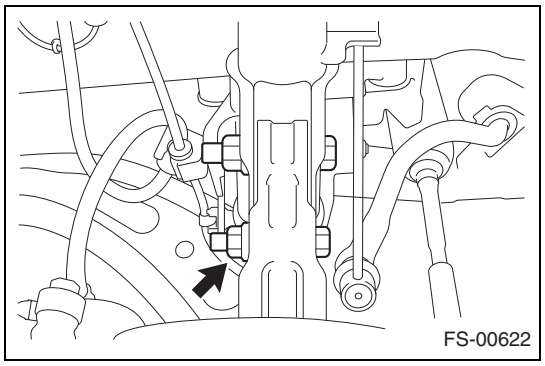
   (2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.

Captions in illustration

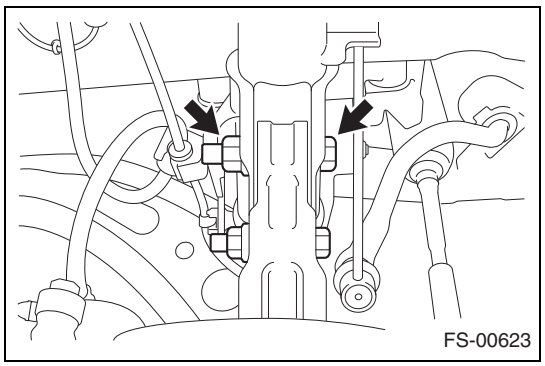
| | |
|---|---|
| (1) | Wheel alignment gauge |
| (2) | Turning radius gauge |
| (3) | Adapter |

   (3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.
   (4) Check whether the measured value is within standard value.
   (5) Measure the caster angle in accordance with the operation manual for wheel alignment gauge.
   (6) Check whether the measured value is within standard value.

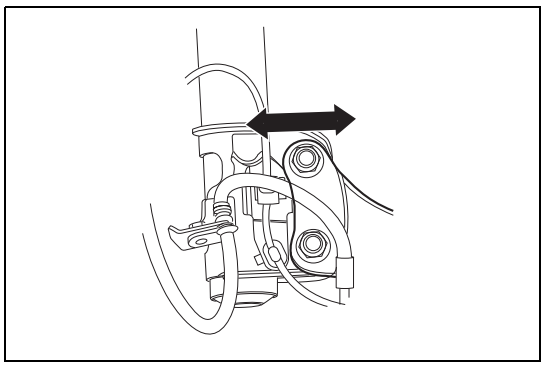
4. Camber adjustment
   CAUTION:
   Perform the inspection while the vehicle is at curb weight (with the spare tire, jack, and service tools loaded and with a full fuel tank).
   (1) Jack up the vehicle, and then remove the front tires.



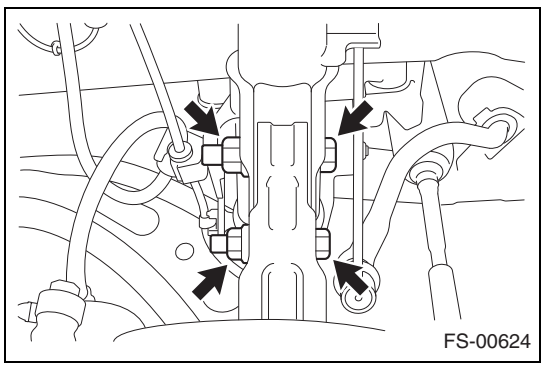
(2) Loosen the lower mounting bolt and nut of the shock absorber ASSY FR and knuckle.



(3) Replace the upper mounting bolt of the shock absorber ASSY FR and knuckle with a replacement bolt. (Part No.: Flange bolt 14×60 (901000394))
CAUTION:
Insert the bolts from the rear of the vehicle.



(4) Using the lower mounting bolt of the shock absorber ASSY FR and knuckle as a supporting point, adjust the camber with the play in the bolt, steering knuckle bolt hole, and shock absorber ASSY FR bolt hole.
CAUTION:
The limit of difference between the left and right camber values is 0° 30'.
NOTE:
The range adjustable by replacing the bolts is 0°±45'.



(5) Tighten the two bolts using two new nuts.
Standard value:T=155N·m {1581kgf·cm} {114.3ft·lbf}

(6) Install the front tires.
Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
(7) Lower and remove the jack, and bounce the vehicle several times to stabilize the front suspension.
(8) Check the camber again.
(9) Check the toe-in.

AL

5. Side slip inspection
   (1) Check the side slip using a side slip tester.
   Standard value: 0±5 mm {0±0.197in} (per 1 m {3.28ft})
   CAUTION:
   - Enter onto the side slip tester in the straight ahead position at a speed equal to or less than the walking speed (approx. 4 km/h {2.5 MPH}), and perform the inspection while in neutral.
   - Do not depress the brake pedal on the side slip tester.
   - Do not turn the steering wheel on the side slip tester.

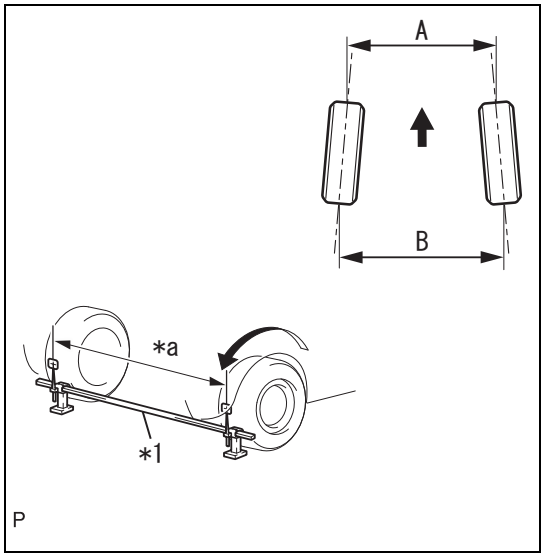
   (2) If it is out of standard value, check the wheel alignment.
6. Toe-in inspection
   (1) Bounce the vehicle to stabilize the suspension.
   (2) Move the vehicle straight 5 m {16.4 ft} forward by manually pushing it.
   CAUTION:
   If the vehicle has been moved backward, be sure to move it forward by the same distance.

   (3) Adjust the height of the toe-in gauge pointer so that it is at the same height as the center of the front wheel axis, and set it behind the tire.

Captions in illustration

| | |
|---|---|
| *1 | Toe-in gauge |
| *a | Tread center |
| *b | Dimension B |
| ➡ | Front of vehicle |

   (4) Place a tread center mark on the back of both front tires, and measure the distance between the marks (dimension B).
   (5) Move the vehicle forward by pushing it slowly to rotate the front wheels 180°.
   CAUTION:
   Be sure not to rotate more than 180°, and if the wheels have been over-rotated, repeat from the setting up of the toe-in gauge.



(6) Measure the distance between the marks at the front of the vehicle (dimension A).

Captions in illustration

| | |
|---|---|
| *1 | Toe-in gauge |
| *a | Dimension A |
| ➡ | Front of vehicle |

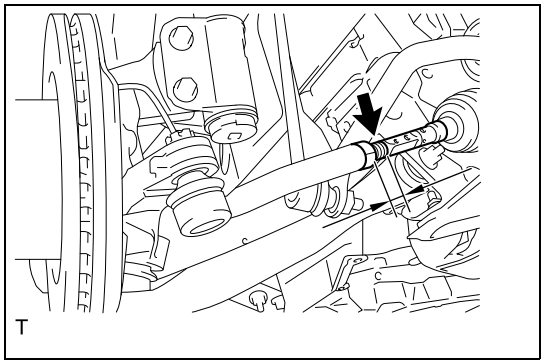
(7) Calculate the toe-in.

Standard value

| Toe-in (mm {in}) |
|---|
| 0±3 {0±0.12} (at curb weight) |

NOTE:

Toe-in = Dimension B - Dimension A



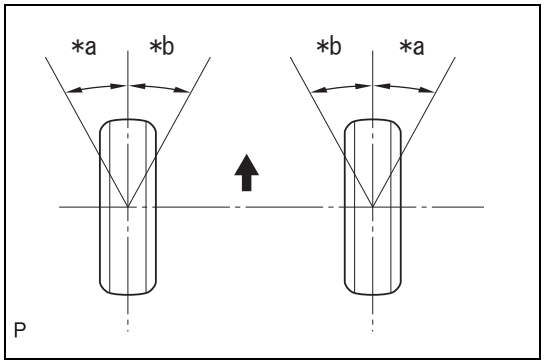
7. Toe-in adjustment
   (1) Measure the length of the threaded portion of the left and right tie-rods.
   Criteria: Difference between left and right is 2.0 mm {0.079 in} or less
   (2) Remove the rack boot clips.
   (3) Loosen the tie-rod end lock nuts.
   (4) If the difference between the threaded portion of the left and right tie-rods is out of standard value, adjust them.
   (a) If the measured toe-in deviates toward the outer side, extend the shorter tie-rod.
   (b) If the measured toe-in deviates toward the inner side, shorten the longer tie-rod.
   (c) Check the toe-in again.
   (5) Turn the left tie-rod to right and turn the right tie-rod to left by an equal amount to adjust the toe-in so that it is within standard value.

Standard value

| Toe-in (mm {in}) |
|---|
| 0±2 {0±0.08} |

(6) Tighten the tie-rod end lock nuts.
Standard value: T=85N·m {867kgf·cm} {62.7ft·lbf}
CAUTION:
Temporarily tighten the lock nut while holding the hexagonal part of the tie-rod so that the lock nut and the steering rack end do not turn together, and then tighten the lock nut while holding the width across flat of the tie-rod end.
(7) Install the clips on the rack boots.
CAUTION:
Make sure that there is no abnormal protrusion or dent on the boot and that it is installed correctly.

AL



8. Wheel turning angle inspection
   (1) Set the turning radius gauge.
   (2) Check the wheel turning angle.

Standard value

| Inside | Outside |
|---|---|
| 36°54' (Reference) | 31°12' (Reference) |

CAUTION:
- Perform the inspection while the vehicle is at curb weight (with the spare tire, jack, and service tools loaded and with a full fuel tank).
- While the vehicle is at curb weight, apply the foot brake using a brake pedal depressor, etc. to prevent the front wheels from rotating during the inspection.
- Remove the stop light fuse to prevent the stop light from illuminating during the inspection.

Captions in illustration

| | |
|---|---|

| *b | Outside |
| ➡ | Front |

9. Confirmation of front tires in the straight-ahead position
10. VDC sensor mid point setting (Refer to BC - 15)

# Rear wheel alignment

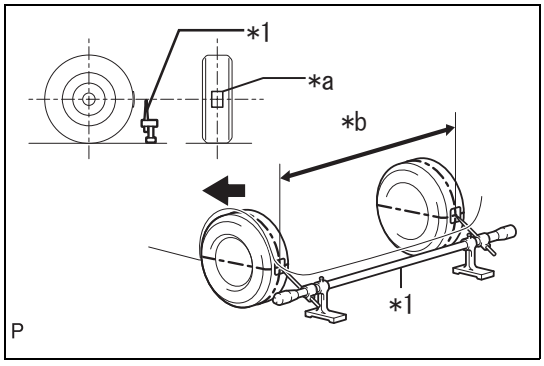
## Adjustment

CAUTION:

To ensure proper functioning of the brake system, be sure to perform the neutral position setting of the VDC sensor as initialization after alignment adjustment or removal ·replacement of suspension or underbody parts. (Refer to BC - 15)

1. Tire inspection (Refer to TW - 2)
2. Vehicle height inspection (Refer to AL - 2)
3. Side slip inspection
   (1) Check the side slip using a side slip tester.
   Standard value: 0±5 mm {0±0.20in} (per 1 m {3.3ft})
   CAUTION:
   - Enter onto the side slip tester in the straight ahead position at a speed equal to or less than the walking speed (4 km/h {2.5 MPH}), and perform the inspection while in neutral.
   - Do not depress the brake pedal on the tester.
   - Do not turn the steering wheel on the tester.

   (2) If it is out of standard value, check the wheel alignment.
4. Toe-in inspection
   (1) Bounce the vehicle to stabilize it.
   (2) Move the vehicle straight 5 m {16.4 ft} forward by manually pushing it.
   CAUTION:
   If the vehicle has been moved backward, be sure to move it forward by the same distance.



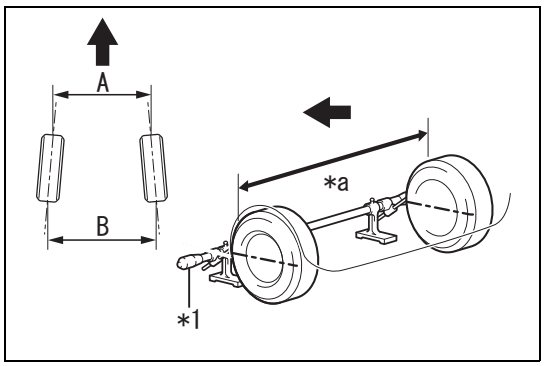
(3) Adjust the height of the toe-in gauge pointer so that it is at the same height as the center of the rear wheel axis, and set it behind the tire.

Captions in illustration

| | |
|---|---|
| *1 | Toe-in gauge |
| *a | Tread center |
| *b | Dimension B |
| ➡ | Front of vehicle |

(4) Place a tread center mark on the back of both rear tires, and measure the distance between the marks (dimension B).

(5) Move the vehicle forward by pushing it slowly to rotate the rear wheels 180°.
CAUTION:
Be sure not to rotate the tires more than 180°. If the wheels have been over-rotated, repeat from the setting up of the toe-in gauge.



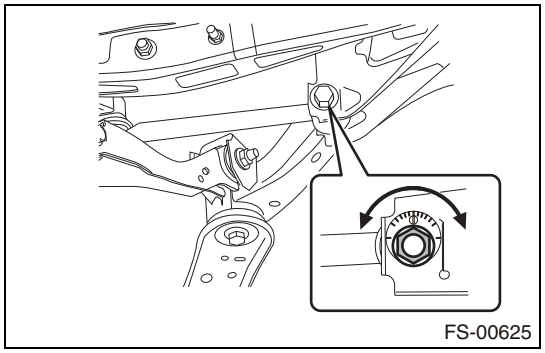
(6) Measure the distance between the marks at the front of the tires (dimension A).

Captions in illustration

| | |
|---|---|
| *1 | Toe-in gauge |
| *a | Dimension A |
| ➡ | Front of vehicle |

(7) Calculate the toe-in.
Standard value: 2±3mm {0.08±0.12in}
NOTE:
Toe-in = Dimension B - Dimension A

AL



FS-00625

5. Toe-in adjustment
   (1) Loosen the toe adjust cam nut.
   (2) When adjusting the toe-in of the left and right wheels at the same time, adjust the toe-in by turning the toe adjust plate No. 2.
   Standard value: 2±2 mm {0.08±0.08 in}
   NOTE:
   When the left and right toe adjust plate No.2 are turned by one graduation, the toe will change approx. 5.2mm {0.20in}.
   (3) Tighten the toe adjust cam nut.
   Standard value:T=100N·m {1020kgf·cm} {73.8ft·lbf}

6. Camber inspection
   (1) Lift up the vehicle on a level surface.
   (2) Set the wheel alignment gauge. (Refer to AL - 2)
   (3) Calibrate the wheel alignment gauge. (Refer to AL - 2)
   (4) Lower the vehicle and check the camber.

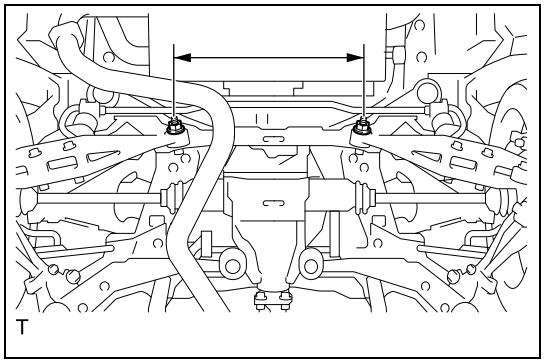
Standard value

| Camber |
|---|
| -1°10' ±45' |

CAUTION:
- Perform the inspection while the vehicle is at curb weight (with the spare tire, jack, and service tools loaded and with a full fuel tank).
- The limit of difference between the left and right camber values is 45'.
- Remove foreign matter from the axle hub end surface before performing the inspection.

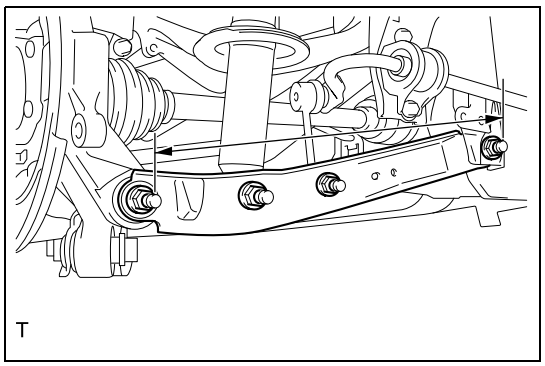
NOTE:
The rear camber is not adjustable. When the value is not within the left and right difference range, check the suspension parts and the joint for deformation, and replace the faulty parts, if any.

(5) Remove the wheel alignment gauge.



T

7. Rear suspension inspection
   (1) Inspection of rear suspension member
      (a) Check the distance between the center of rear suspension arm ASSY No. 2 LH and RH mounting bolts.
      Standard value: 457.5±3mm {18.01±0.12in}
      NOTE:
      If it is out of standard value, replace with a new rear suspension member.



T

   (2) Inspection of rear suspension arm ASSY No. 2
      (a) Check the distance between the center of rear suspension arm ASSY No. 2 mounting bolts.
      Standard value: 450.9±2 mm {17.75±0.08 in}
      NOTE:
      If it is out of standard value, replace with a new rear suspension arm ASSY No. 2.
   (3) Inspection and adjustment of toe-in and camber
      (a) Check the toe-in and camber, and if they are out of standard value, adjust them with the play in the mounting portion of the rear suspension member or that of the upper control arm and rear suspension arm.

8. Confirmation of front tires in the straight-ahead position
9. VDC sensor mid point setting (Refer to BC - 15)

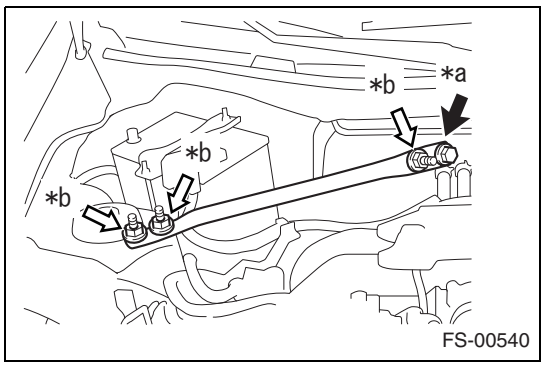
## Removal

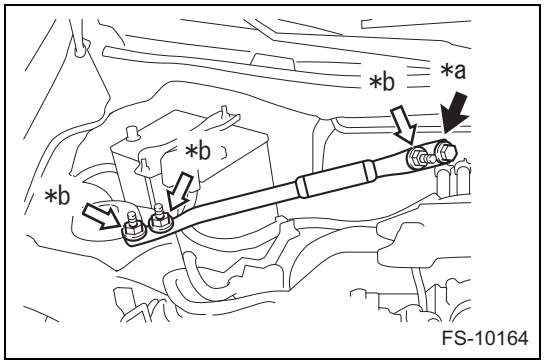


1. Removal of front strut tower bar RH
   (1) Remove the bolt and three nuts, and remove the front strut tower bar RH.

Captions in illustration

| | |
|---|---|
| *a | Bolt |
| *b | Nut |

2. Removal of flexible V-shaped bar RH (tS model)



(1) Remove the bolt and 3 nuts, and then remove the flexible V-shaped bar RH.

Captions in illustration

| | |
|---|---|
| *a | Bolt |
| *b | Nut |

3. Removal of front strut tower bar LH
   NOTE:
   Service the LH side in the same procedure as the RH side.
4. Removal of flexible V-shaped bar LH (tS model)
   NOTE:
   Service the LH side in the same procedure as the RH side.

## Installation

1. Installation of front strut tower bar LH
   (1) Using a new bolt and three new nuts, install the front strut tower bar LH.
   Standard value:T=16N·m {163kgf·cm} {11.8ft·lbf}
2. Installation of flexible V-shaped bar LH (tS model)
   (1) Using a new bolt and three new nuts, install the flexible V-shaped bar LH.
   Standard value:T=16N·m {163kgf·cm} {11.8ft·lbf}
   CAUTION:
   When installing the flexible V-shaped bar, face the boot to the center of the vehicle and adjust the direction so that the "STI" mark is visible.
3. Installation of front strut tower bar RH
   NOTE:
   Service the RH side in the same procedure as the LH side.
4. Installation of flexible V-shaped bar RH (tS model)
   NOTE:
   Service the RH side in the same procedure as the LH side.

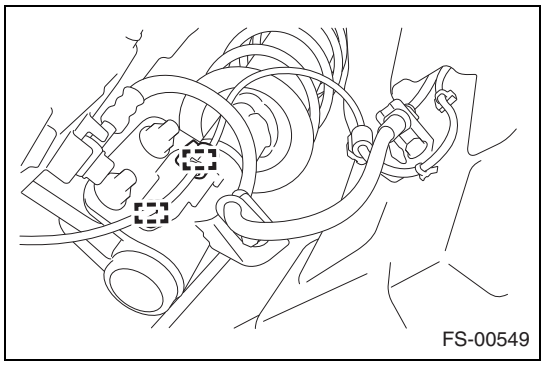
## Removal

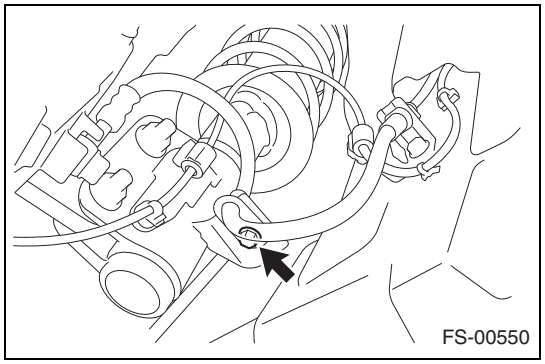
NOTE:

- The following servicing procedures are for the RH side.
- Service the LH side in the same procedure as the RH side.

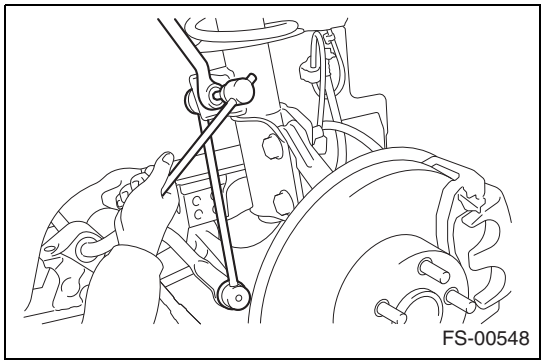
1. Removal of front tire



2. Disconnection of speed sensor FR RH
   (1) Remove the two clamps, and remove the speed sensor FR RH.



3. Disconnection of front flexible hose No.1
   (1) Remove the bolt, and disconnect the front flexible hose No. 1 from the front shock absorber w/ coil spring.

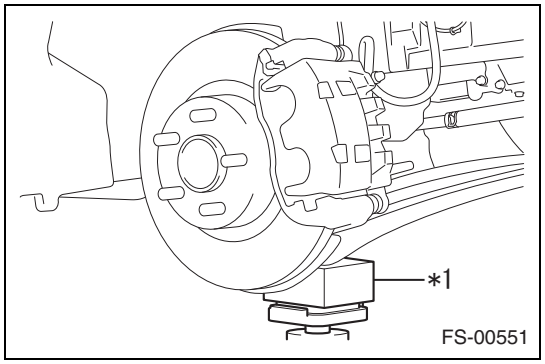


4. Disconnection of front stabilizer link ASSY RH
   (1) Secure the stud bolt and remove the nut.
   (2) Disconnect the front stabilizer link ASSY RH from the front shock absorber w/ coil spring.

FP

5. Removal of front suspension support dust cover RH
   NOTE:
   If the front shock absorber w/ coil spring must be disassembled, remove the front suspension support dust cover RH.

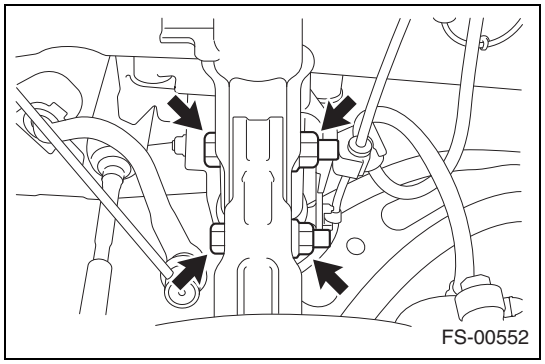
   (1) Remove the front suspension support dust cover RH.



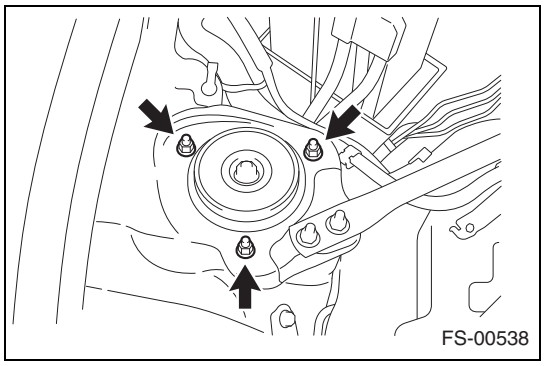
6. Removal of front shock absorber w/ coil spring
   (1) Support the front suspension lower arm ASSY RH with a garage jack.

Captions in illustration

| | |
|---|---|
| *1 | Wooden block |



(2) Remove the two bolts and two nuts, and disconnect the front shock absorber w/ coil spring from the steering knuckle RH.

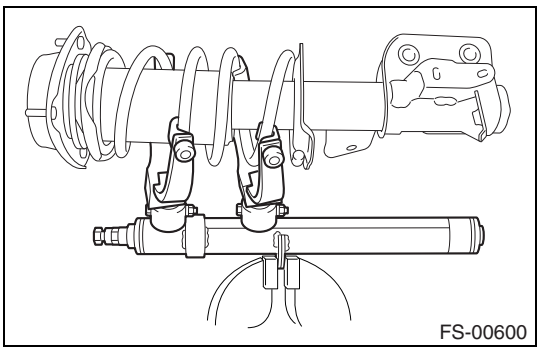


(3) Remove the three nuts of the front suspension support SUB-ASSY RH.
(4) Remove the front shock absorber w/ coil spring from the vehicle.

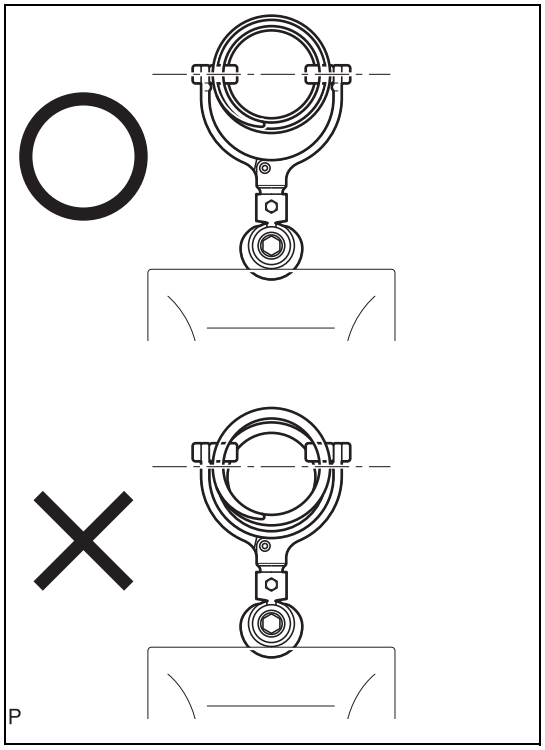
## Disassembly

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.



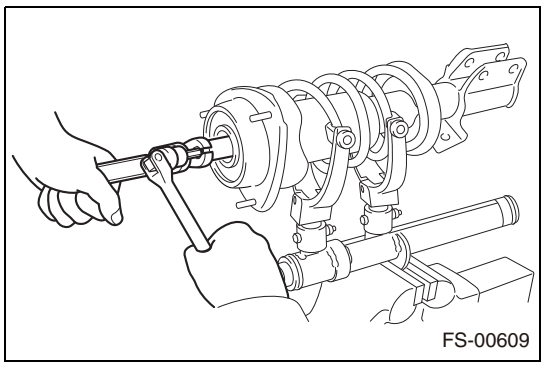
1. Removal of front suspension support to front shock absorber nut LH
   (1) Secure a spring compressor in a vise.



(2) Place the hooks of the spring compressor arms across the diameter of the front coil spring LH.
WARNING:
- Make sure that the upper and lower hooks of the spring compressor are placed as far from each other as possible on the front coil spring LH.
- Make sure that the claws of the hooks are securely in place.

(3) Using a spring compressor, compress the front coil spring LH.
WARNING:
- If the front coil spring LH becomes curved like a bow during the compression process, stop the procedure immediately, and remove and reconnect the spring compressor.
- Do not compress to the point where parts of the coil spring touch each other.
- Do not use an impact wrench.

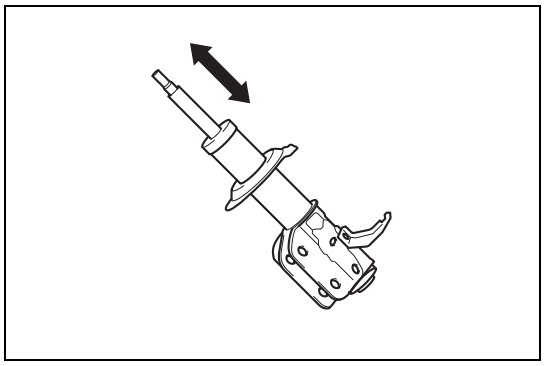
(4) Prevent the piston rod from turning using a deep socket hexagon.



(5) After making sure that the front coil spring LH is free, remove the front suspension support to front shock absorber nut LH from the shock absorber ASSY FR LH using the SST.
SST 20399AG000
WARNING:
Do not remove the front suspension support to front shock absorber nut LH without the front coil spring LH being free.
CAUTION:
- Be careful not to damage or deform the threaded portion.
- Fully insert the deep socket hexagon.

2. Removal of front suspension support SUB-ASSY LH
   (1) Remove the front suspension support SUB-ASSY LH.
3. Removal of front spring seat
   (1) Remove the front spring seat.
4. Removal of front spring insulator LH
   (1) Remove the front spring insulator LH.
5. Removal of front shock absorber dust cover LH
   (1) Remove the front shock absorber dust cover LH.
6. Removal of front spring bumper LH
   (1) Remove the front spring bumper LH.
7. Removal of front coil spring LH
   (1) Release the spring compressor and remove the front coil spring LH.

## Inspection



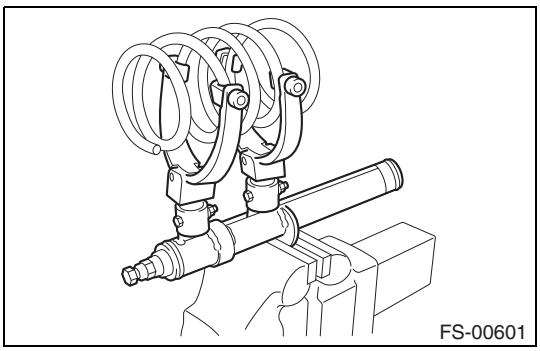
1. Inspection of shock absorber ASSY FR LH
   (1) Operation inspection of shock absorber ASSY FR LH
      (a) Press the shock absorber ASSY FR LH to the lowest position while holding it up and let it extend on its own. Repeat the process four times or more.
      (b) Inspect the shock absorber ASSY FR LH.
         Criteria: When it is compressed at a certain speed, the heaviness of each stroke is consistent, and it does not make any abnormal movement or sound. Also, when it extends, it returns to its original length at a consistent speed without any abnormal sound.
         NOTE:
         If defective, replace the shock absorber ASSY FR LH with a new part.

## Assembly

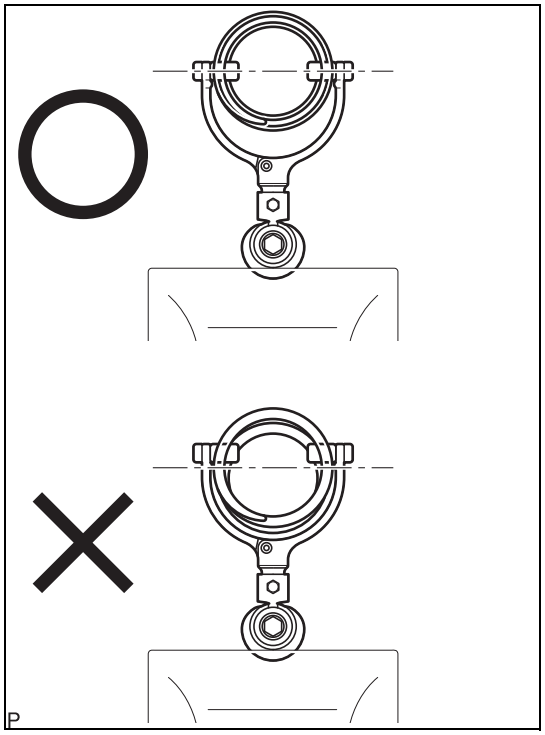
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Installation of front spring bumper LH
   (1) Install the front spring bumper LH on the shock absorber ASSY FR LH.
2. Installation of front shock absorber dust cover LH
   (1) Install the front shock absorber dust cover LH on the shock absorber ASSY FR LH.

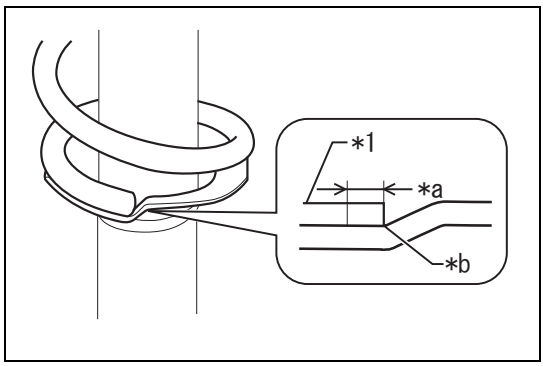


3. Installation of front coil spring LH
   (1) Secure a spring compressor in a vise.



(2) Place the hooks of the spring compressor arms across the diameter of the front coil spring LH.
WARNING:
- Make sure that the upper and lower hooks of the spring compressor are placed as far from each other as possible on the front coil spring LH.
- Make sure that the claws of the hooks are securely in place.

(3) Using the spring compressor, compress the front coil spring LH.
WARNING:
- If the front coil spring LH becomes curved like a bow during the compression process, stop the procedure immediately, and remove and reconnect the spring compressor.
- Do not compress to the point where parts of the coil spring touch each other.
- Do not use an impact wrench.

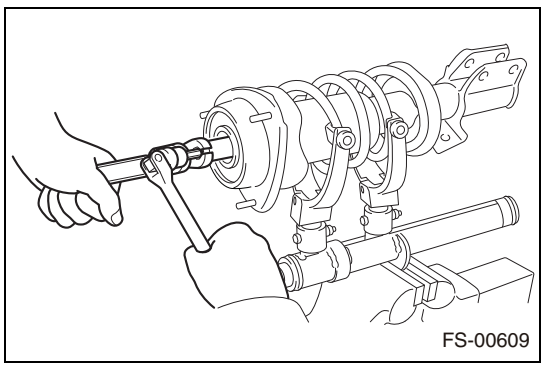


(4) Set the front coil spring LH so that the end surface of the spring seats well in the stopper section of the lower spring seat.

Captions in illustration

| | |
|---|---|
| *1 | Front coil spring LH |
| *a | 0 to 10mm {0 to 0.394in} |
| *b | Stopper section of spring seat |

4. Installation of front spring insulator LH
   (1) Install the front spring insulator LH on the shock absorber ASSY FR LH.
5. Installation of front spring seat
   (1) Install the front spring seat on the shock absorber ASSY FR LH.
6. Installation of front suspension support SUB-ASSY LH
7. Installation of front suspension support to front shock absorber nut LH
   (1) Prevent the piston rod from turning using a deep socket hexagon.



(2) Using the SST and a new front suspension support to front shock absorber nut LH, install the front suspension support on the shock absorber ASSY FR LH.
SST 20399AG000
Standard value:T=55N·m {561kgf·cm} {40.6ft·lbf}
CAUTION:
- When extending the overall tool length by combining a torque wrench with the SST during tightening, tightening to the point where the value on the torque wrench reaches the specified tightening torque will cause the actual tightening torque to be excessive. (Refer to IN - 6)
- Be careful not to damage or deform the threaded portion.
- Fully insert the deep socket hexagon.

## Installation

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Installation of front shock absorber w/ coil spring
   (1) Using three new nuts, install the front shock absorber w/ coil spring (upper side).
   Standard value:T=23N·m {235kgf·cm} {17.0ft·lbf}
   (2) Using the two bolts and two new nuts, install the shock absorber w/ coil spring to the steering knuckle LH.
   CAUTION:
   Insert the bolts from the rear of the vehicle.
   Standard value:T=155N·m {1581kgf·cm} {114.3ft·lbf}
2. Installation of front stabilizer link ASSY LH
   (1) Install the front stabilizer link ASSY LH to the shock absorber w/ coil spring.
   (2) Secure the stud bolt and install the part with a new nut.
   Standard value:T=46N·m {469kgf·cm} {33.9ft·lbf}
3. Installation of front flexible hose No.1
   (1) Using a bolt, install the front flexible hose No. 1 to the shock absorber w/ coil spring.
   Standard value:T=33N·m {337kgf·cm} {24.3ft·lbf}
4. Installation of front suspension support dust cover LH
   (1) Install the front suspension support dust cover LH on the shock absorber w/ coil spring.
5. Installation of speed sensor FR LH
   (1) Install the two clamps of the wiring harness for the speed sensor FR LH on the shock absorber w/ coil spring.
6. Installation of front tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
7. Stabilization of vehicle
   (1) Lower and remove the jack, and bounce the vehicle several times to stabilize the front suspension.
8. Inspection and adjustment of front wheel alignment (refer to AL - 2)
9. Initialization of head light leveling computer (refer to LE - 38)
10. Headlight beam adjustment (refer to LE - 51)
11. VDC sensor mid point setting (refer to BC - 15)

## Disposal

1. Disposal of shock absorber ASSY FR LH
   (1) Secure the shock absorber ASSY FR LH in a vertical position.
   (2) Press down on the piston rod with hands by approximately 70mm {2.756in}.

   (3) Using a saw, etc., slowly make a hole in the section shown in the figure to purge the gas.

Captions in illustration

| | |
|---|---|
| ▭ | Range to be bored |

CAUTION:

- Wear protective eye wear.
- Since the gas pressure may spray metal chips, perform the procedure by covering the saw with a piece of cloth, etc.

NOTE:

Gas to be released is colorless, odorless, and harmless.

FP

# Front suspension lower arm

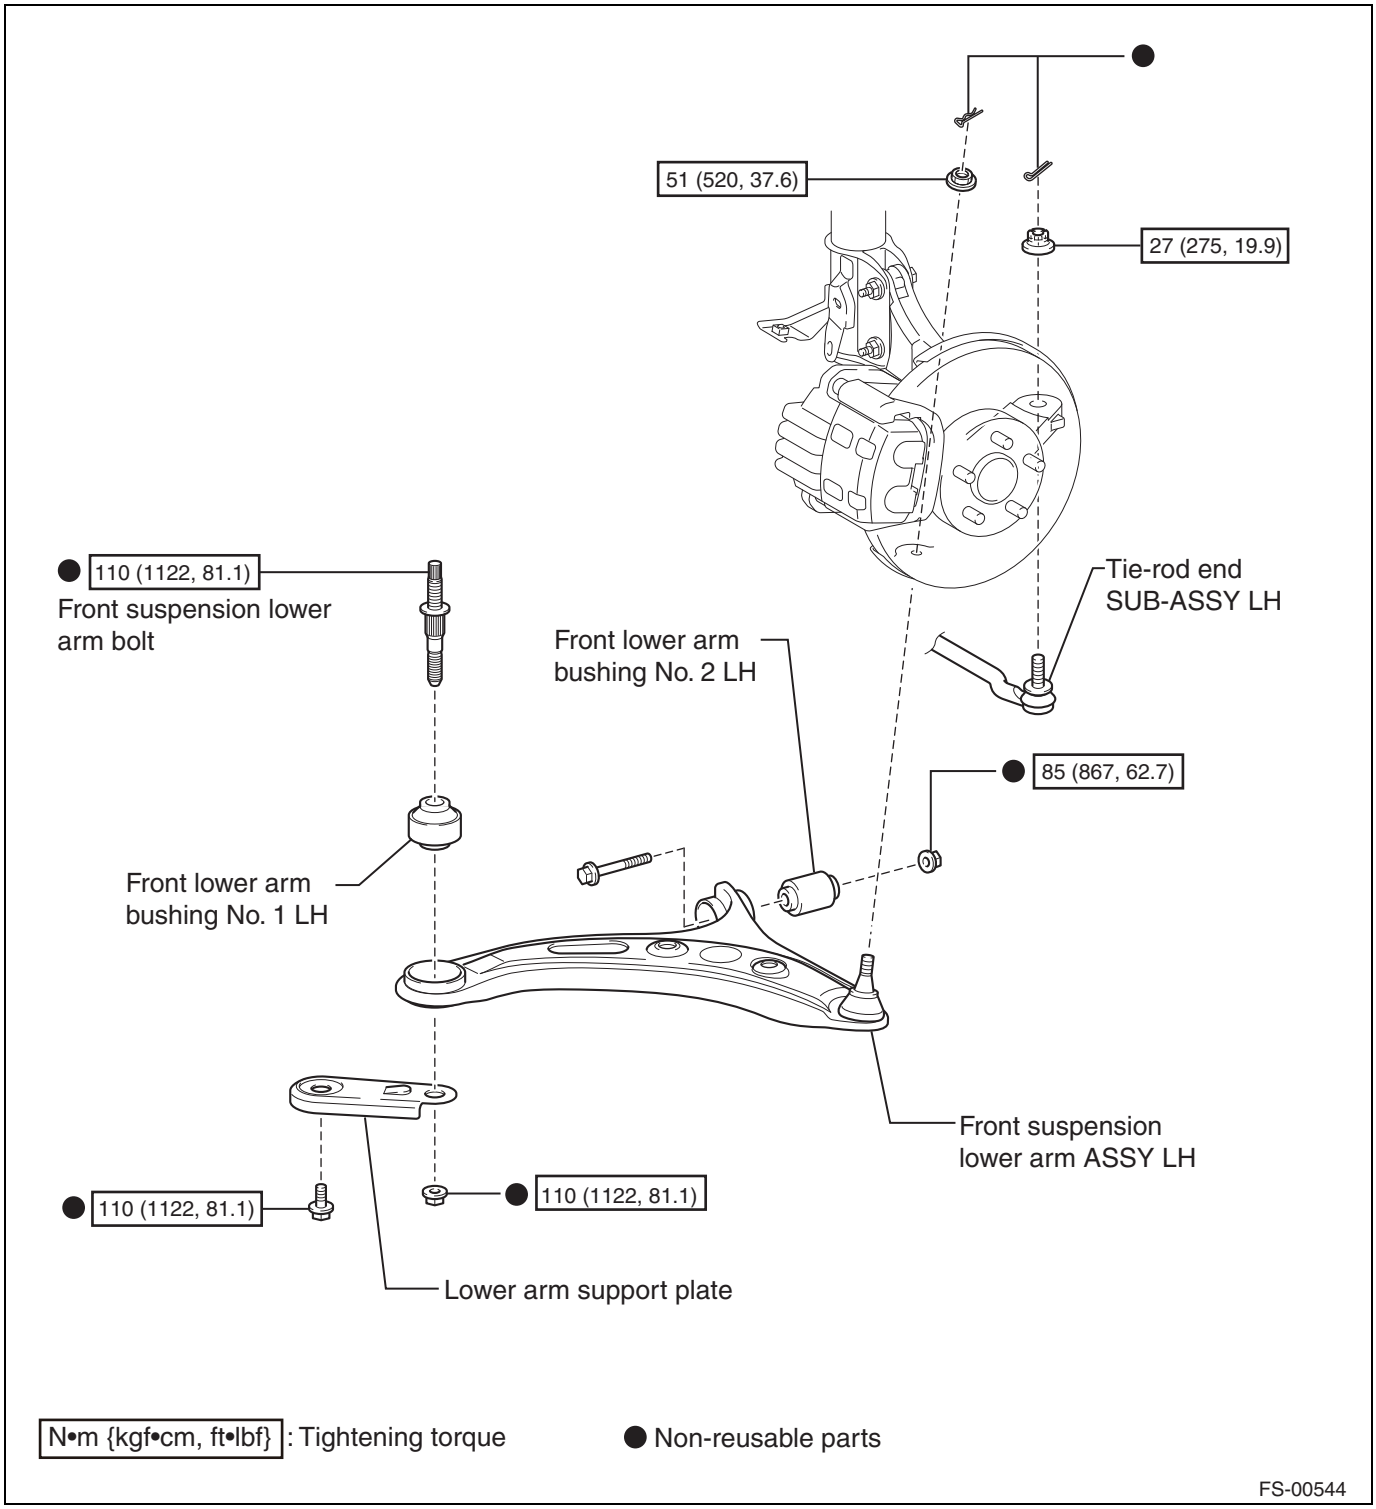
FP



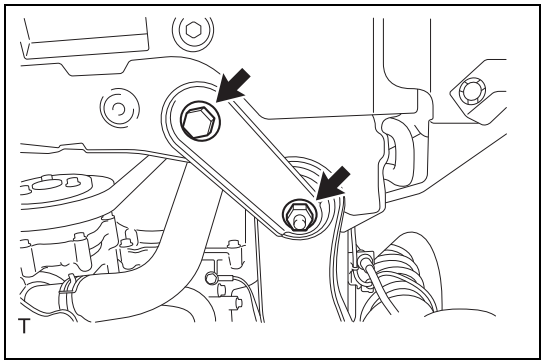
## Removal

NOTE:

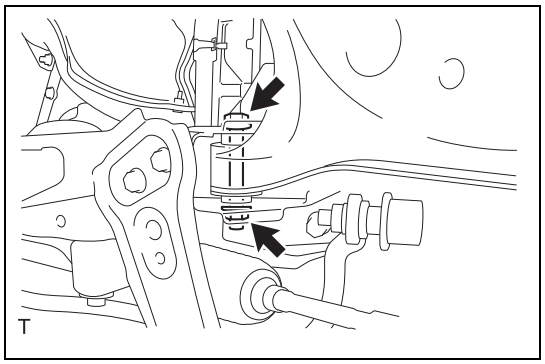
- The following procedure is for LH side.
- Service the RH side in the same procedure as the LH side.

1. Removal of front tire
2. Removal of undercover front AL (Refer to IE - 39)
3. Removal of undercover COMPL T/M (Refer to IE - 40)

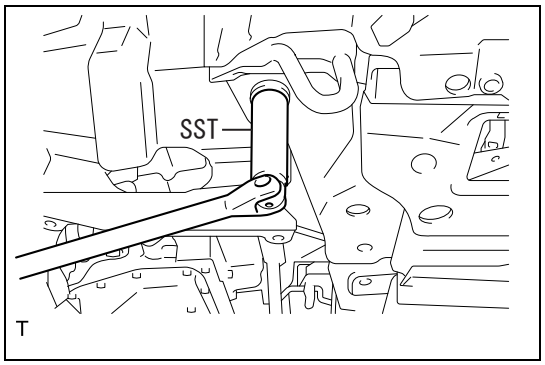
FP



4. Removal of lower arm support plate
   (1) Remove the bolt and nut, and remove the lower arm support plate.
5. Disconnection of tie-rod end SUB-ASSY LH (Refer to AD - 13)
6. Disconnection of steering knuckle LH (Refer to AD - 14)
7. Removal of stabilizer link ASSY LH (Refer to FP - 22)



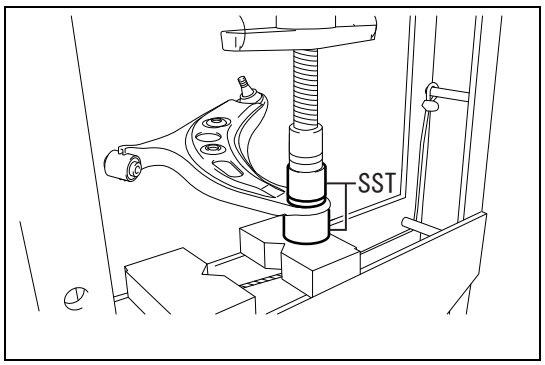
8. Removal of front suspension lower arm ASSY LH
   (1) Remove the bolt and nut, and remove the front suspension lower arm ASSY LH.



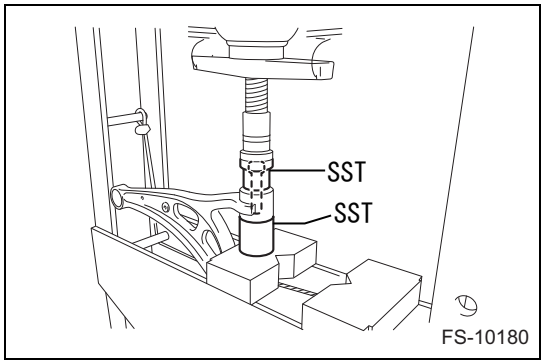
9. Removal of front suspension lower arm bolt
   (1) Using the SST, remove the front suspension lower arm bolt.
   SST 20299AG020

FP

## Disassembly

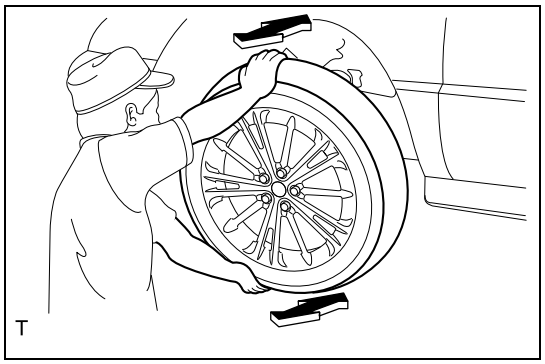


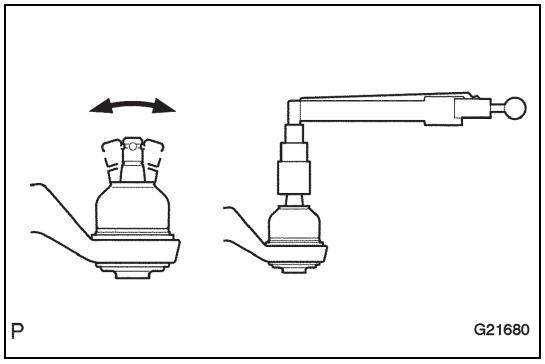
1. Removal of front lower arm bushing No. 1 LH
   (1) Using the SST, remove the front lower arm bushing No. 1 LH.
   SST 20299AG000, 20299AG010



2. Removal of front lower arm bushing No. 2 LH
   (1) Using the SST, remove the front lower arm bushing No. 2 LH.
   SST 927680000

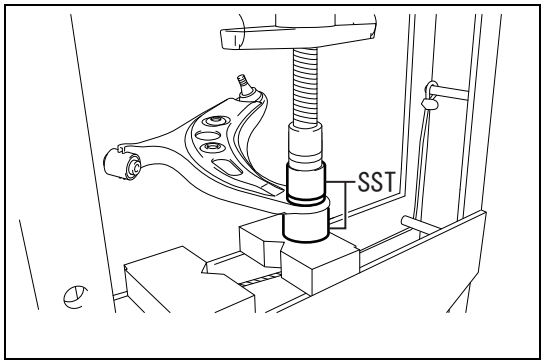
## Inspection



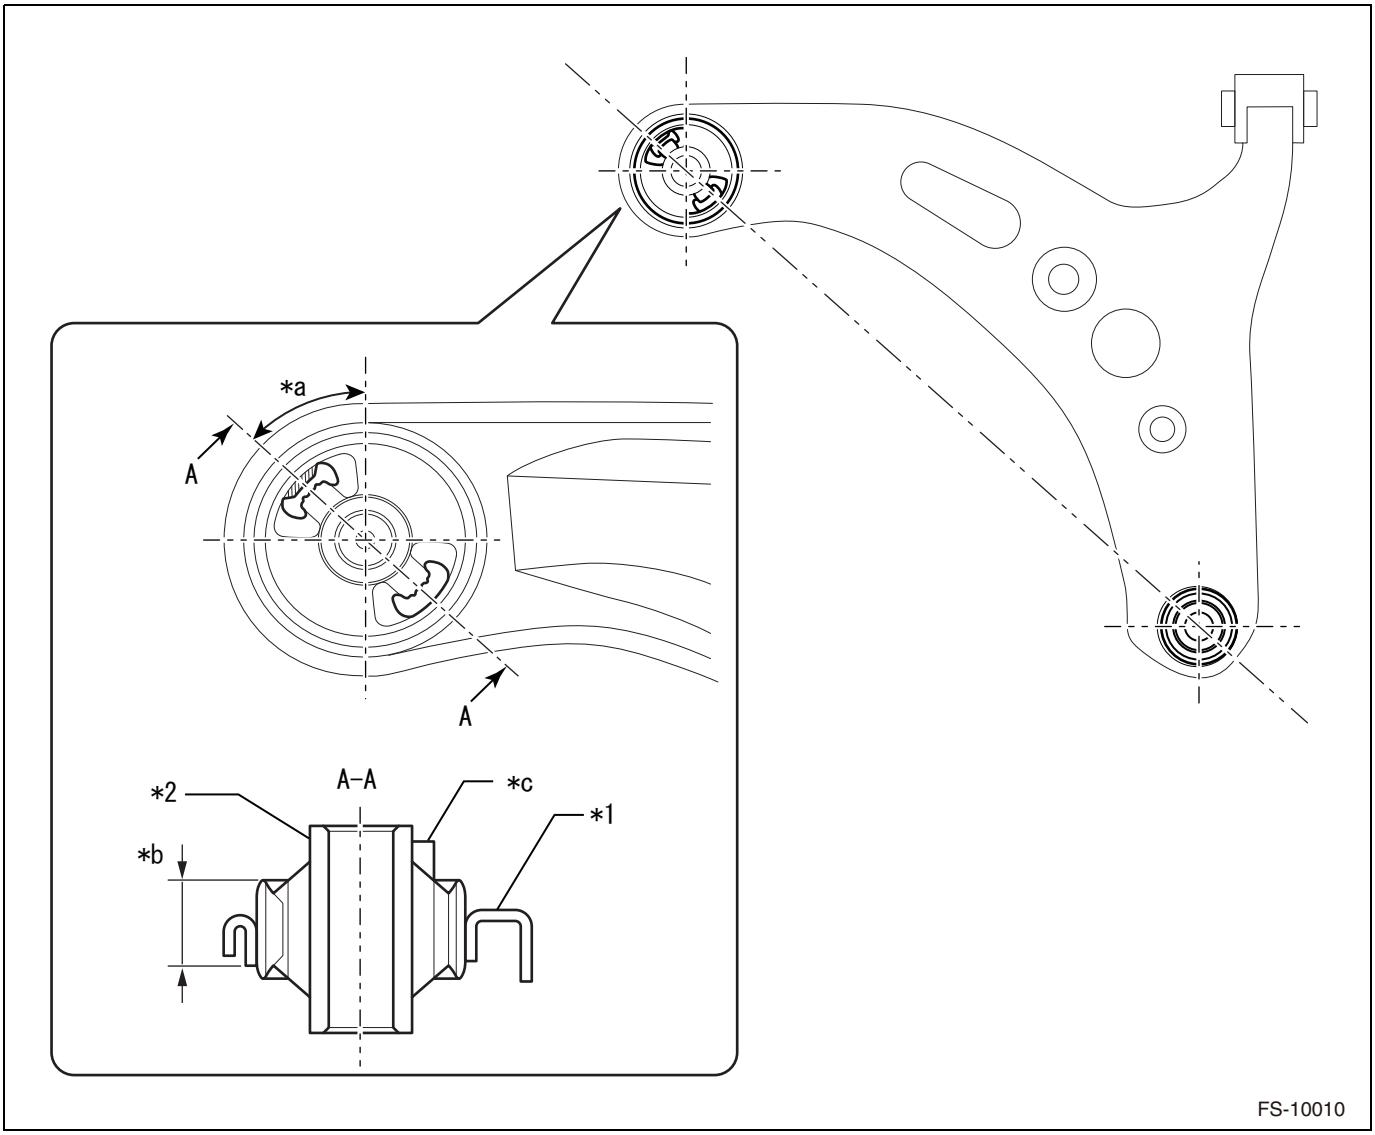


1. Inspection of front suspension lower arm ASSY LH
   (1) Rotation inspection of ball joint
      (a) Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
      (b) If there is play, replace the front suspension lower arm ASSY LH.
      (c) Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
      (d) If there is play, replace the front axle hub.
      (e) Place the nut on the stud of the lower arm.
      (f) Vibrate and turn the stud.
      Criteria: There is no abnormal interference or play during vibration and turning.
      (g) If there is abnormal interference or play during vibration and turning, replace the front suspension lower arm ASSY LH.
   (2) Dust cover inspection
      (a) Check the dust cover for cracks or grease leakage.
      (b) If there are cracks or grease leakage on the dust cover, replace the front suspension lower arm ASSY LH.

## Assembly

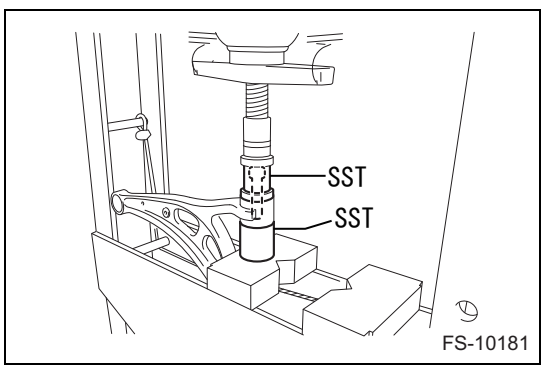


1. Installation of front lower arm bushing No. 1 LH
   (1) Using the SST, install the front lower arm bushing No. 1 LH in the front suspension lower arm ASSY LH so that the dimensions are within the range shown in the figure.
   SST 20299AG000, 20299AG010



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Front suspension lower arm ASSY LH | *2 | Front lower arm bushing No. 1 LH |
| *a | 44 to 50° | *b | 25.0 to 26.0 mm {0.984 to 1.024 in} |
| *c | Rubber protrusion | — | — |



2. Installation of front lower arm bushing No. 2 LH
   (1) Using the SST, install the front lower arm bushing No. 2 LH in the front suspension lower arm ASSY LH.
   SST 927680000

## Installation

NOTE:

- The following procedure is for LH side.
- Service the RH side in the same procedure as the LH side.

1. Installation of front suspension lower arm bolt
   (1) Using the SST, install a new front suspension lower arm bolt.
   SST 20299AG020
   Standard value:T=110N·m {1122kgf·cm} {81.1ft·lbf}
2. Temporary tightening of front suspension lower arm ASSY LH
   (1) Temporarily tighten the part using the bolt and a new nut.
   CAUTION:
   Insert the bolt from the front of the vehicle.
3. Installation of steering knuckle LH
   With a nut, install the front suspension lower arm ASSY LH to the steering knuckle LH.
   Standard value:T=51N·m {520kgf·cm} {37.6ft·lbf}
4. Installation of tie-rod end SUB-ASSY LH (Refer to AD - 15)
5. Installation of lower arm support plate
   (1) Using a new bolt and nut, install the lower arm support plate.
   Standard value:T=110N·m {1122kgf·cm} {81.1ft·lbf}
6. Installation of stabilizer link ASSY LH (Refer to FP - 24)
7. Installation of front tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
8. Stabilization of vehicle (Refer to FP - 13)
9. Final tightening of front suspension lower arm ASSY LH
   (1) Fully tighten the bolts and nuts.
   Standard value:T=85N·m {867kgf·cm} {62.7ft·lbf}
10. Installation of undercover COMPL T/M (Refer to IE - 46)
11. Installation of undercover front AL (Refer to IE - 46)
12. Inspection and adjustment of front wheel alignment (Refer to AL - 2)
13. Initialization of head light leveling computer (refer to LE - 38)
14. Headlight beam adjustment (Refer to LE - 51)
15. VDC sensor mid point setting (Refer to BC - 15)

# Front stabilizer bar

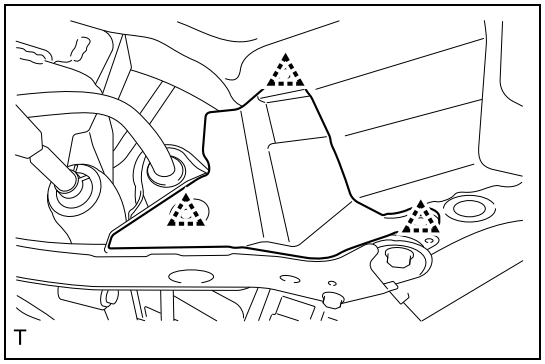
## Removal

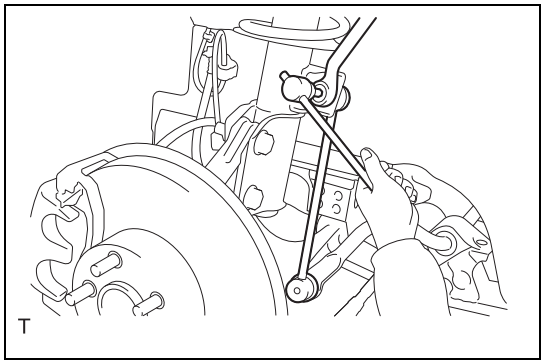
1. Removal of front tire
2. Removal of undercover front AL (Refer to IE - 39)
3. Removal of undercover COMPL T/M (Refer to IE - 40)
4. Removal of under cover rear LH (Refer to EM - 83)

5. Removal of undercover front side rear LH

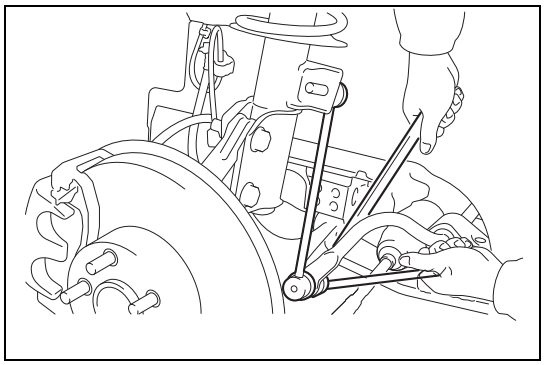


(1) Remove the three clips and remove the undercover front side rear.

6. Removal of undercover front side rear RH
NOTE:
Remove the part in the same manner as LH side.



7. Removal of front stabilizer link ASSY LH
(1) Secure the stud bolt and remove the nut.
(2) Remove the front stabilizer link ASSY LH from the front shock absorber w/ coil spring.

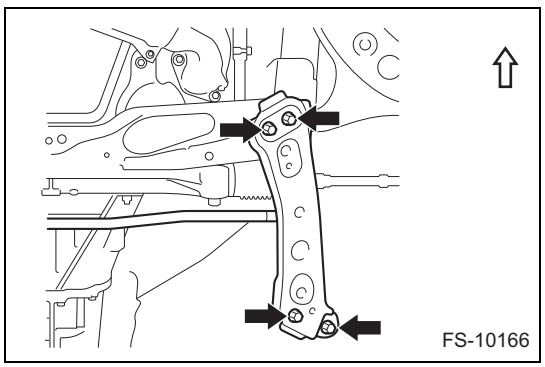


(3) Secure the stud bolt and remove the nut.
(4) Remove the front stabilizer link ASSY LH from the stabilizer bar FR.

FP

8. Removal of front stabilizer link ASSY RH
NOTE:
Service the RH side in the same procedure as the LH side.

9. Removal of flexible draw stiffener ASSY (tS model) (Refer to FP - 32)



10. Removal of sub frame COMPL LH
(1) Remove the four bolts, and remove the sub frame COMPL LH with the stabilizer bar FR.

Captions in illustration

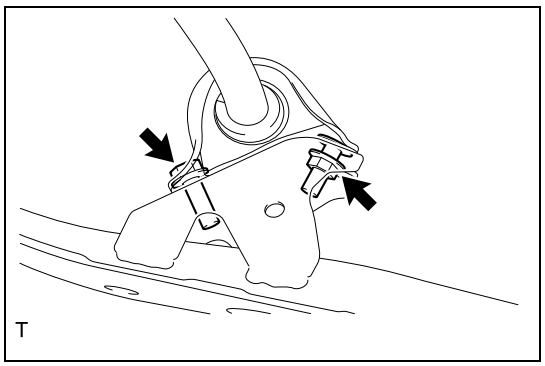
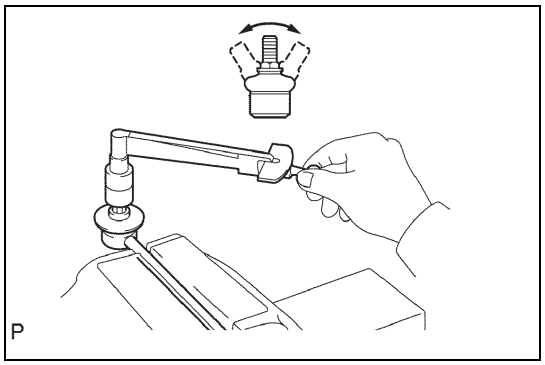
11. Removal of sub frame COMPL RH
    NOTE:
    Service the RH side in the same procedure as the LH side.



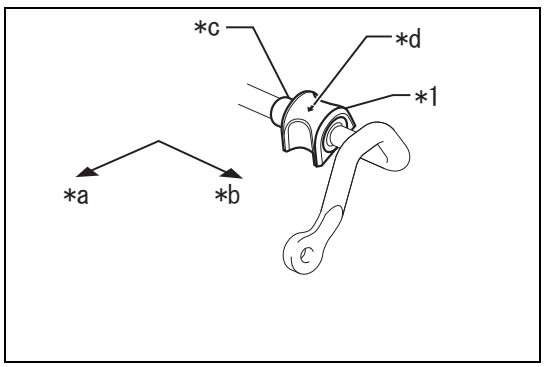
12. Removal of front stabilizer bracket No. 2 LH
    (1) Remove the bolt and nut, and remove the front stabilizer bracket No. 2 LH.
13. Removal of front stabilizer bracket No. 2 RH
    NOTE:
    Service the RH side in the same procedure as the LH side.
14. Removal of stabilizer bar FR
    (1) Remove the stabilizer bar FR.
15. Removal of front stabilizer bar bushing No. 1 (installed on LH side)
    (1) Remove the front stabilizer bar bushing No. 1 (installed on LH side) from the stabilizer bar FR.
16. Removal of front stabilizer bar bushing No. 1 (installed on RH side)
    NOTE:
    Service the RH side in the same procedure as the LH side.

## Inspection



1. Inspection of front stabilizer link ASSY LH
   (1) Inspection of ball joint
      (a) Using aluminum plate, secure the front stabilizer link ASSY LH in a vise.
      (b) Install the mounting nut on the stud of the front stabilizer link ASSY LH.
      (c) Vibrate and turn the stud.
         Criteria: There is no abnormal interference or play during vibration and turning.
      (d) If there is abnormal interference or play during vibration and turning, replace the front stabilizer link ASSY LH.
   (2) Dust cover inspection
      (a) Check the dust cover for cracks or grease leakage.
      (b) If there are cracks or grease leakage on the dust cover, replace the front stabilizer link ASSY LH.

## Installation



1. Installation of front stabilizer bar bushing No. 1 (installed on LH side)
   (1) Install the front stabilizer bar bushing No. 1 on the outer side of the vehicle than the ring section of the stabilizer bar FR.
      CAUTION:
      Install the front stabilizer bar bushing No. 1 with the arrow mark facing the front of the vehicle.

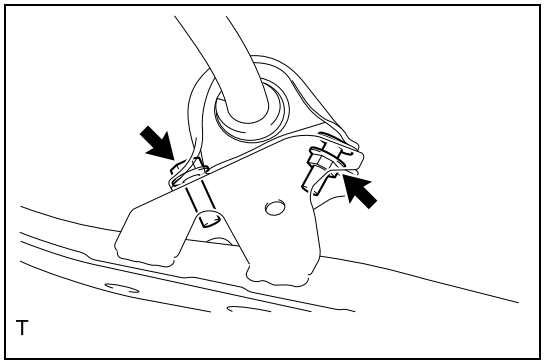
2. Installation of front stabilizer bar bushing No. 1 (installed on RH side)
   NOTE:
   Service the RH side in the same procedure as the LH side.



3. Installation of front stabilizer bracket No. 2 LH
   (1) Using the bolt and nut, install the front stabilizer bracket No. 2 LH on the sub frame COMPL LH.
   Standard value:Bolt
   T=75N·m {765kgf·cm} {55.3ft·lbf}
   Nut
   T=25N·m {255kgf·cm} {18.4ft·lbf}
4. Installation of front stabilizer bracket No. 2 RH
   NOTE:
   Service the RH side in the same procedure as the LH side.
5. Installation of sub frame COMPL LH
   (1) Using four new bolts, install the stabilizer bar FR with the sub frame COMPL LH.
   Standard value:T=60N·m {612kgf·cm} {44.3ft·lbf}
6. Installation of sub frame COMPL RH
   NOTE:
   Service the RH side in the same procedure as the LH side.
7. Installation of flexible draw stiffener ASSY (tS model) (Refer to FP - 33)
8. Installation of front stabilizer link ASSY LH
   (1) Secure the stud bolt, and install the front stabilizer link ASSY LH to the stabilizer bar FR with a new nut.
   Standard value:T=46N·m {469kgf·cm} {33.9ft·lbf}
   (2) Secure the stud bolt, and install the front stabilizer link ASSY LH to the front shock absorber w/ coil spring with a new nut.
   Standard value:T=46N·m {469kgf·cm} {33.9ft·lbf}
9. Installation of front stabilizer link ASSY RH
   NOTE:
   Service the RH side in the same procedure as the LH side.
10. Installation of undercover front side rear LH
    (1) Install the undercover front side rear LH with the three clips.
11. Installation of undercover front side rear RH
    NOTE:
    Service the RH side in the same procedure as the LH side.
12. Installation of under cover rear LH (Refer to EM - 111)
13. Installation of undercover COMPL T/M (Refer to IE - 46)
14. Installation of undercover front AL (Refer to IE - 46)
15. Installation of front tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
16. Stabilization of vehicle (Refer to FP - 13)
17. Inspection of front tires in straight-ahead position
18. Inspection and adjustment of front wheel alignment (Refer to AL - 2)

FP

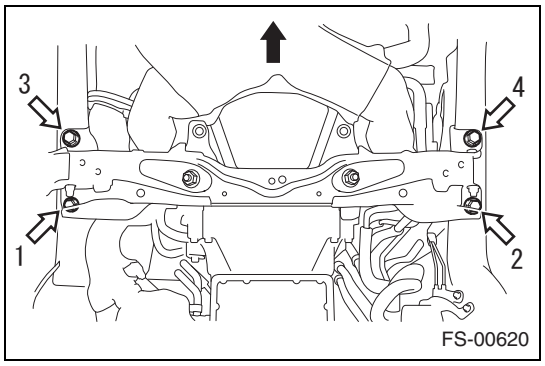
## Installation



1. Installation of front crossmember SUB-ASSY
   (1) Install four new bolts in the order shown in the figure to temporarily install the front crossmember SUB-ASSY.

Captions in illustration

| | |
|---|---|
| ➡ | Front of vehicle |
| ⇨ | Bolt |

   (2) Temporarily attach two new nuts to the front crossmember SUB-ASSY.
   (3) Fully tighten the four bolts.
   Standard value:T=95N·m {969kgf·cm} {70.1 ft·lbf}
   (4) Fully tighten the two nuts.
   Standard value:T=60N·m {612kgf·cm} {44.3ft·lbf}

2. Adjustment of shift lever position (automatic transmission)
   CAUTION:
   If the mounting bolts of the front crossmember SUB-ASSY have become even slightly loose, check the adjustment of the shift lever. (Refer to AT - 208)
3. Installation of steering gear ASSY (Refer to SL - 14)
4. Installation of sub frame COMPL LH (Refer to FP - 24)
5. Installation of sub frame COMPL RH
   NOTE:
   Service the RH side in the same procedure as the LH side.
6. Installation of flexible draw stiffener ASSY (tS model) (Refer to FP - 33)
7. Installation of front stabilizer link ASSY LH (Refer to FP - 24)
8. Installation of front stabilizer link ASSY RH
   NOTE:
   Service the RH side in the same procedure as the LH side.
9. Installation of front suspension lower arm ASSY LH (Refer to FP - 18)
10. Installation of front suspension lower arm ASSY RH
    NOTE:
    Service the RH side in the same procedure as the LH side.
11. Installation of undercover front side rear LH
    (1) Install the undercover front side rear LH with the three clips.
12. Installation of undercover front side rear RH
    NOTE:
    Service the RH side in the same procedure as the LH side.
13. Installation of under cover rear LH (Refer to EM - 111)
14. Installation of under cover COMPL T/M (Refer to IE - 46)
15. Installation of undercover front AL (Refer to IE - 46)
16. Removal of engine hanger (Refer to EM - 87)
17. Inspection and adjustment of front wheel alignment (Refer to AL - 2)
18. Initialization of head light leveling computer (refer to LE - 38)

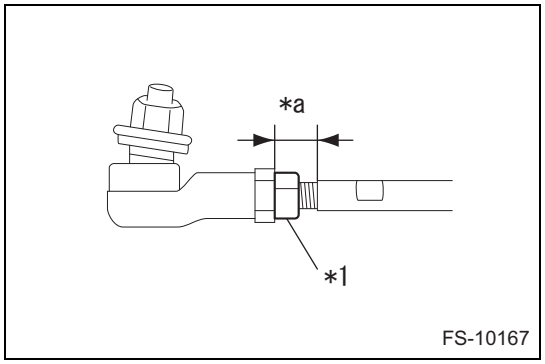
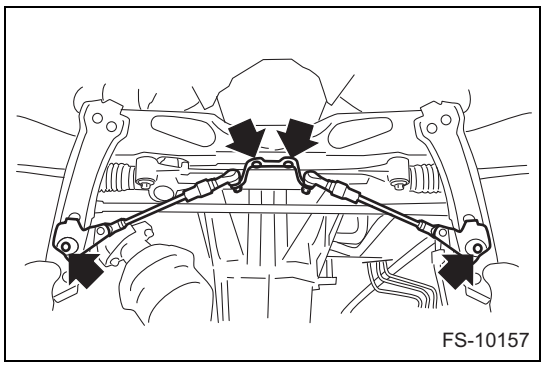
3. Removal of flexible draw stiffener ASSY



(1) Loosen the lock nut, rotate the rod so that the rod enters into the housing body, and adjust the threaded part to the dimension shown in the figure.

Captions in illustration

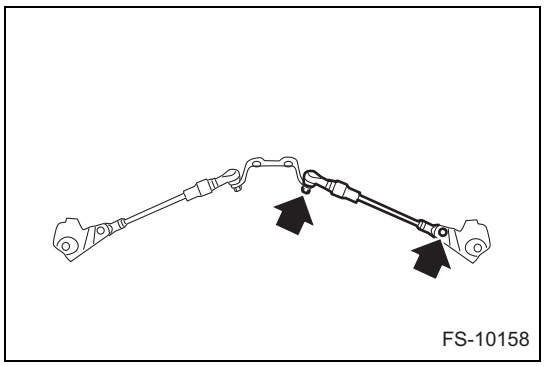
| | |
|---|---|
| *1 | Lock nut |
| *a | 14±1.0mm {0.5512±0.0394in} |



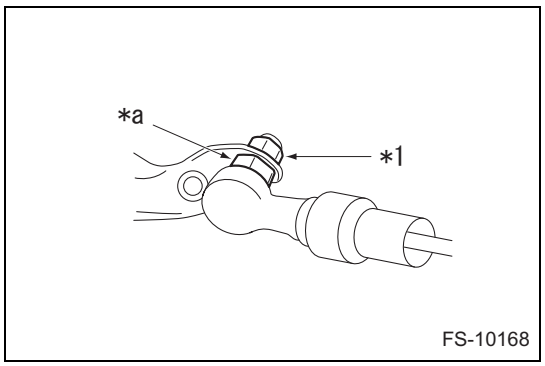
(2) Remove the bolts and then remove the flexible draw stiffener ASSY.

## Disassembly

1. Removal of flexible draw stiffener LH



(1) Remove the nuts and then remove the flexible draw stiffener LH.
CAUTION:
Be careful not to damage the boot portion of the ball joint. When the boot portion is damaged, replace the flexible draw stiffener LH with a new part.



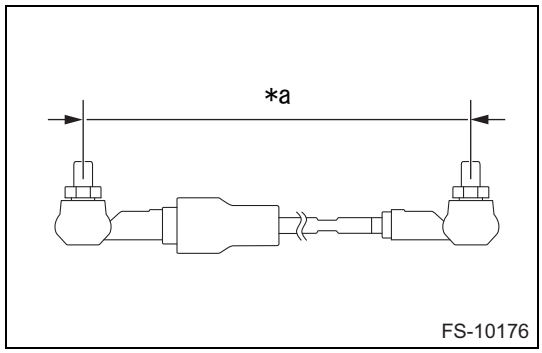
Captions in illustration

| | |
|---|---|
| *1 | Nut |
| *a | Hold |

2. Removal of flexible draw stiffener RH
NOTE:
Perform the same removal procedures for the RH side.

## Assembly

1. Adjustment of flexible draw stiffener total-length
   (1) Rotate the rod, and adjust the distance between the ball studs to the dimension shown in the figure.



Captions in illustration

| | |
|---|---|
| *a | 293±1.0 mm {11.5354±0.0394 in} |

2. Assembly of flexible draw stiffener LH
   (1) Prepare a new nut, and install the flexible draw stiffener.
   CAUTION:
   When installing a new flexible draw stiffener, do not remove the βpin until the new flexible draw stiffener is installed on the vehicle body. Always remove the βpin after installing the flexible draw stiffener on the vehicle body.
   Standard value:T=20N·m {204kgf·cm} {14.8 ft·lbf}

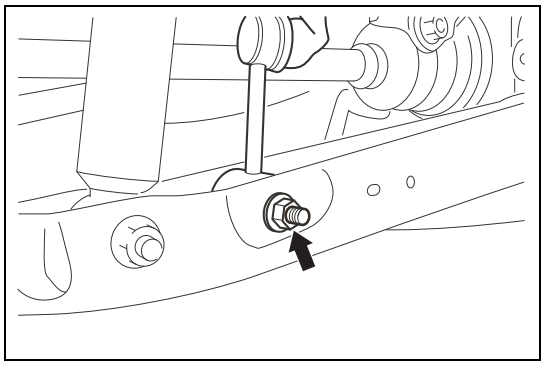
## Removal

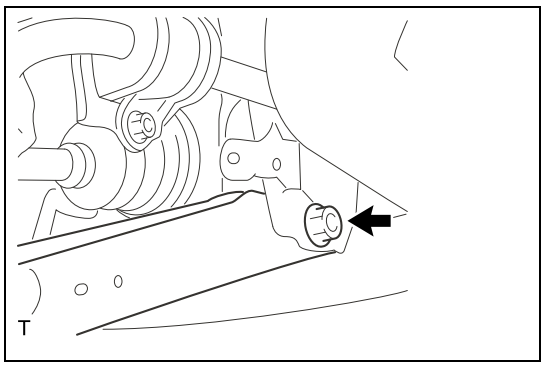
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Removal of the trunk floor mat
2. Removal of the rear floor finish plate (Refer to LE - 61)
3. Removal of the trunk trim cover INN LH (Refer to LE - 62)
4. Removal of rear tire
5. Removal of height control sensor RR LH (Refer to LE - 83)



6. Disconnection of rear stabilizer link SUB-ASSY (installed on LH side)
   (1) Remove the bolt and nut, and disconnect the rear stabilizer link SUB-ASSY from the rear suspension arm ASSY No. 2 LH.

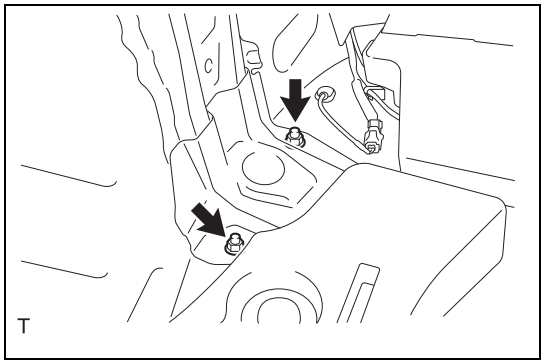


7. Disconnection of rear suspension arm ASSY No. 2 LH
   (1) Loosen the mounting nut of the rear suspension arm ASSY No. 2 LH and the rear suspension member SUB-ASSY.
   CAUTION:
   Loosen, but do not remove the nut.

   (2) Remove the bolt and nut, and disconnect the rear shock absorber w/ coil spring LH from the rear suspension arm ASSY No. 2 LH.

   (3) Remove the bolt and nut, and disconnect the rear axle carrier LH from the rear suspension arm ASSY No. 2 LH.

RP

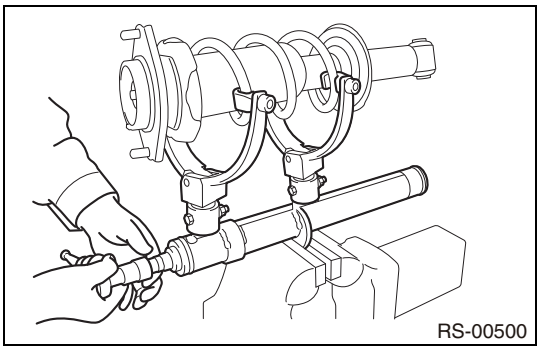


8. Removal of rear shock absorber w/ coil spring LH
   (1) Remove the two nuts, and remove the rear shock absorber w/ coil spring LH from the vehicle.
   CAUTION:
   Hold the rear shock absorber w/ coil spring LH to prevent it from falling.

## Disassembly

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.



1. Removal of rear support to rear shock absorber nut LH
   (1) Secure a spring compressor in a vise.
   (2) Place the hooks of the spring compressor arms across the diameter of the coil spring RR LH.
   WARNING:
   - Make sure that the upper and lower hooks of the spring compressor are placed as far from each other as possible on the coil spring RR LH.
   - Make sure that the claws of the hooks are securely in place.

   (3) Using the spring compressor, compress the coil spring RR LH.
   WARNING:
   - If the coil spring RR LH becomes curved like a bow during the compression process, stop the procedure immediately, and remove and reconnect the spring compressor.
   - Do not compress to the point where parts of the coil spring touch each other.
   - Do not use an impact wrench.

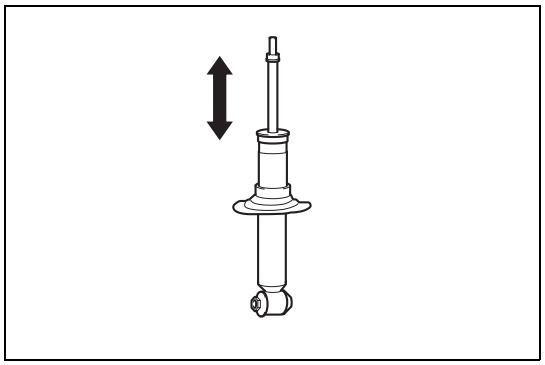
   (4) After making sure that the coil spring RR LH is free, place the SST on the rear support to rear shock absorber nut LH. Secure the piston rod of the rear shock absorber ASSY using a deep socket hexagon, and remove the rear support to rear shock absorber nut LH.
   WARNING:
   Do not remove the rear support to rear shock absorber nut LH without the coil spring RR LH being free.
   CAUTION:
   - Be careful not to damage or deform the threaded portion.
   - Fully insert the deep socket hexagon.

   SST 20399FG000

2. Removal of rear suspension support ASSY LH
   (1) Remove the rear suspension support ASSY LH from the shock absorber ASSY RR LH.
3. Removal of rear spring insulator LH
   (1) Remove the rear spring insulator LH from the rear suspension support ASSY LH.
4. Removal of coil spring RR LH
   (1) After removing the coil spring RR LH from the shock absorber ASSY RR LH, release the spring compressor and remove the coil spring RR LH.
   CAUTION:
   Do not use an impact wrench.
5. Removal of rear shock absorber dust cover LH
   (1) Remove the rear shock absorber dust cover LH from the shock absorber ASSY RR LH.

6. Removal of rear spring bumper No. 1 LH
   (1) Remove the rear spring bumper No. 1 LH from the shock absorber ASSY RR LH.

## Inspection



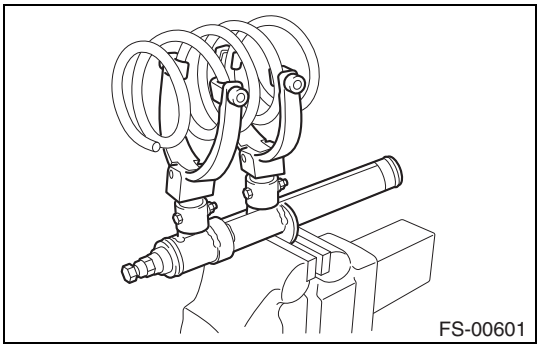
1. Inspection of shock absorber ASSY RR LH
   (1) Operation inspection of shock absorber ASSY RR LH
      (a) Inspect the shock absorber ASSY RR LH by compressing it.
         Criteria: When it is compressed at a certain speed, the heaviness of each stroke is consistent, and it does not make any abnormal movement or sound. Also, when it extends, it returns to its original length at a consistent speed.

## Assembly

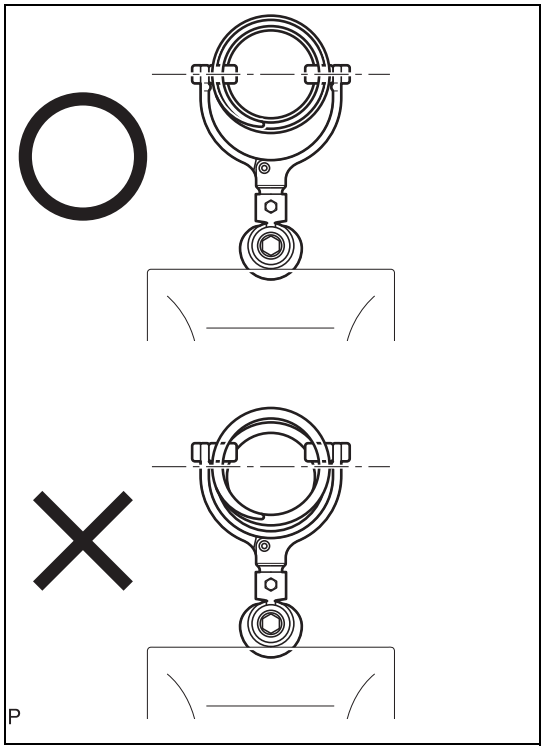
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Installation of rear spring bumper No. 1 LH
   (1) Install the rear spring bumper No. 1 LH on the shock absorber ASSY RR LH.
2. Installation of rear shock absorber dust cover LH
   (1) Install the rear shock absorber dust cover LH on the shock absorber ASSY RR.

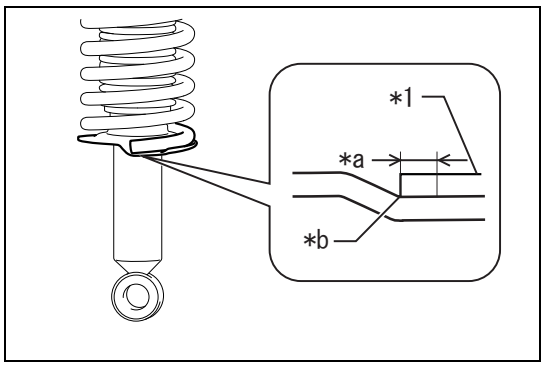


3. Installation of coil spring RR LH
   (1) Secure a spring compressor in a vise.



(2) Place the hooks of the spring compressor across the diameter of the coil spring RR LH.
WARNING:
- Make sure that the upper and lower hooks of the spring compressor are placed as far from each other as possible on the coil spring RR LH.
- Make sure that the claws of the hooks are securely in place.

(3) Using the spring compressor, compress the coil spring RR LH.
WARNING:
- If the coil spring RR LH becomes curved like a bow during the compression process, stop the procedure immediately, and remove and reconnect the spring compressor.
- Do not compress to the point where parts of the coil spring touch each other.
- Do not use an impact wrench.

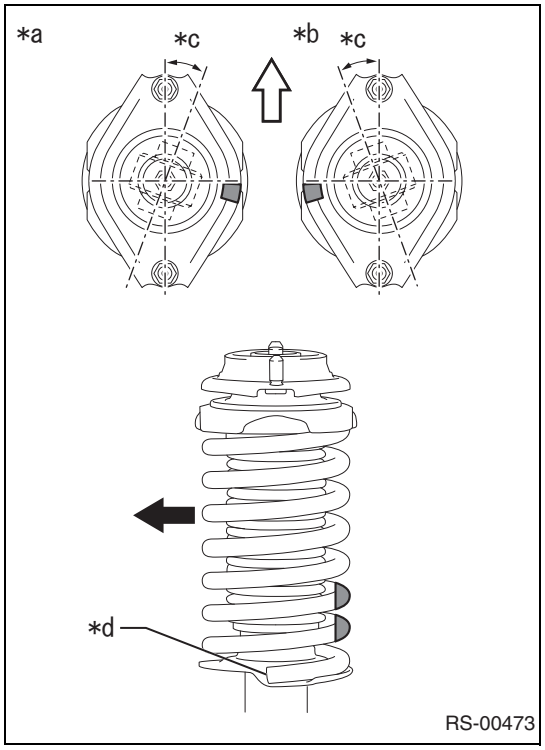


(4) Set the coil spring RR LH so that the end surface of the spring seats well in the stopper section of the lower spring seat.

Captions in illustration

| | |
|---|---|
| *1 | Coil spring RR LH |
| *a | 0 to 10mm {0 to 0.394in} |
| *b | Stopper section of spring seat |

4. Installation of rear spring insulator LH
   (1) Install the rear spring insulator LH on the coil spring RR LH.
5. Installation of rear suspension support ASSY LH
   (1) Install the rear suspension support ASSY LH on the shock absorber ASSY RR LH.



6. Installation of rear support to rear shock absorber nut LH
   (1) Temporarily tighten the new rear support to rear shock absorber nut LH.

Captions in illustration

| | |
|---|---|
| *a | LH side |
| *b | RH side |
| *c | 10±5° |
| *d | End section of coil spring RR LH |
| ➡ | Vehicle outside |
| ⇨ | Front of vehicle |

   (2) Adjust the rear suspension support ASSY LH so that the position of the stud is as shown in the figure.
   CAUTION:
   Adjust the coil spring RR LH and RH with the end section facing the rear of the vehicle on the LH side and the front of the vehicle on the RH side.
   (3) Remove the spring compressor from the coil spring RR LH.
   CAUTION:
   - Do not use an impact wrench.
   - While checking the position of the rear suspension support ASSY LH, remove the spring compressor.

   (4) Set the SST on the rear support to rear shock absorber nut LH. Secure the piston rod of the rear shock absorber ASSY using a deep socket hexagon, and fully tighten the rear support to rear shock absorber nut LH with a crow foot wrench.

Captions in illustration

| | |
|---|---|
| *1 | Crowfoot wrench |

   SST 20399FG000
   Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}
   CAUTION:
   - When extending the overall tool length by combining a torque wrench with the crow foot wrench during tightening, tightening to the point where the value on the torque wrench reaches the specified tightening torque will cause the actual tightening torque to be excessive. (Refer to IN - 6)
   - Be careful not to damage or deform the threaded portion.
   - Fully insert the deep socket hexagon.

RP

## Installation

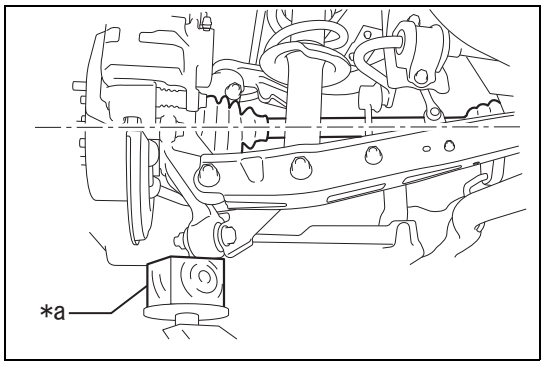
NOTE:
- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Installation of rear shock absorber w/ coil spring LH
   (1) Insert the rear shock absorber w/ coil spring LH into the vehicle.
   (2) Using two new nuts, install the rear shock absorber w/ coil spring LH.
   Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}
2. Temporary tightening of rear suspension arm ASSY No. 2 LH
   (1) Replace the mounting nut of the rear suspension arm ASSY No. 2 LH and the rear suspension member ASSY with a new nut and temporarily tighten it.
   (2) Install the rear suspension arm ASSY No. 2 LH to the axle carrier, and temporarily tighten it with the bolt and a new nut.

CAUTION:
Insert the bolt from the front of the vehicle.

(3) Install the rear shock absorber w/ coil spring LH to the rear suspension arm ASSY No. 2 LH, and temporarily tighten it with the bolt and a new nut.
NOTE:
The bolt may be inserted from either side.

3. Temporary tightening of rear stabilizer link SUB-ASSY (installed on LH side)
   (1) Install the rear stabilizer link SUB-ASSY to the rear suspension arm ASSY No. 2 LH, and temporarily tighten it with the bolt and a new nut.



4. Stabilization of vehicle
   (1) Jack up the axle carrier by placing a wooden block between them, and apply a load to the suspension so that the rear drive shaft ASSY LH becomes level.

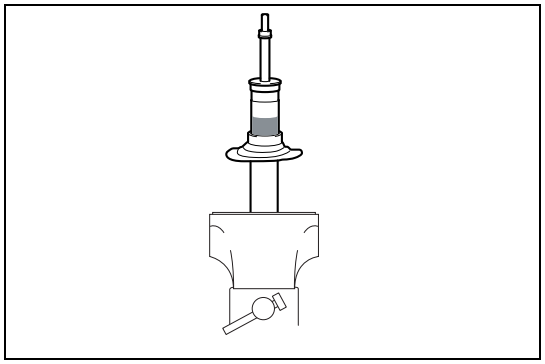
Captions in illustration

| | |
|---|---|
| *a | Wooden block |

5. Final tightening of rear suspension arm ASSY No. 2 LH
   (1) Fully tighten the mounting nut of the rear suspension arm ASSY No. 2 LH and the rear axle carrier LH.
   Standard value:T=80N·m {816kgf·cm} {59.0ft·lbf}
   (2) Fully tighten the mounting nut of the rear shock absorber w/ coil spring LH and the rear suspension arm ASSY No. 2 LH.
   Standard value:T=80N·m {816kgf·cm} {59.0ft·lbf}
   (3) Fully tighten the mounting nut of the rear suspension arm ASSY No. 2 LH and the rear suspension member ASSY.
   Standard value:T=80N·m {816kgf·cm} {59.0ft·lbf}
6. Final tightening of rear stabilizer link SUB-ASSY (installed on LH side)
   (1) Fully tighten the mounting nut of the rear stabilizer link SUB-ASSY and the rear suspension arm ASSY No. 2 LH.
   Standard value:T=38N·m {388kgf·cm} {28.0ft·lbf}
7. Installation of height control sensor RR LH (Refer to LE - 83)
8. Installation of rear tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
9. Installation of the trunk trim cover INN LH (Refer to LE - 63)
10. Installation of the rear floor finish plate (Refer to LE - 63)
11. Installation of the trunk floor mat
12. Inspection and adjustment of rear wheel alignment (Refer to AL - 7)
13. Initialization of head light leveling computer (refer to LE - 38)
14. Headlight beam adjustment (Refer to LE - 51)
15. VDC sensor mid point setting (Refer to BC - 15)

## Disposal

1. Disposal of shock absorber ASSY RR LH
   (1) Secure the shock absorber ASSY RR LH in a vertical position.
   (2) Press down on the piston rod with hands by approximately 60 mm {2.362 in}.



(3) Using a saw, etc., slowly make a hole in the section shown in the figure to purge the gas.

Captions in illustration

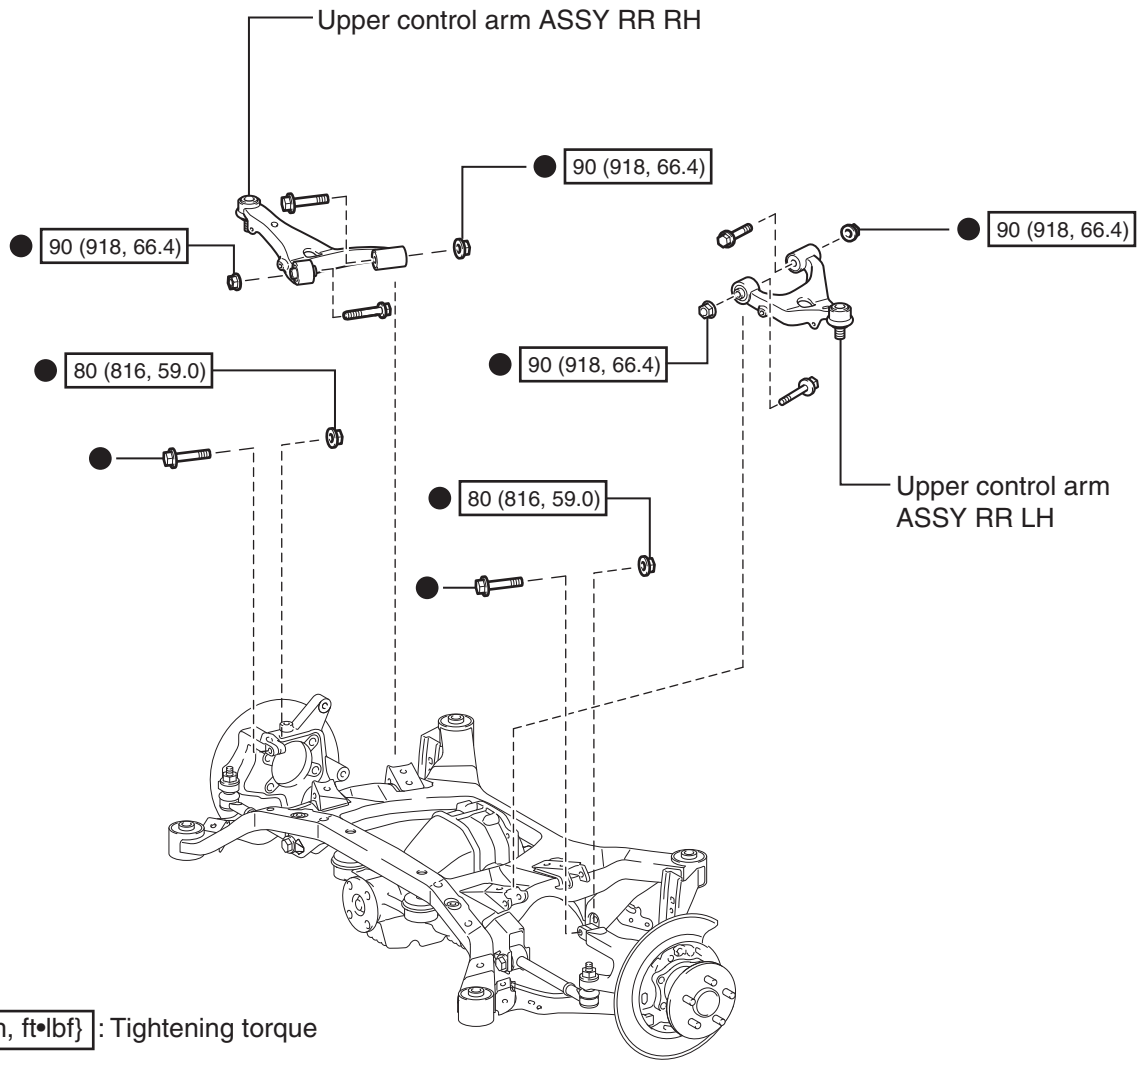
| | |
|---|---|
| | Range to be bored |

CAUTION:
- Wear protective eye wear.
- Since the gas pressure may spray metal chips, perform the procedure by covering the saw with a piece of cloth, etc.

NOTE:
Gas to be released is colorless, odorless, and harmless.

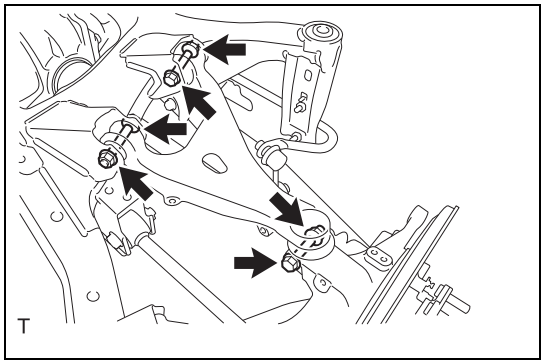
# Rear upper arm

## Exploded view



## Removal

1. Removal of rear suspension member SUB-ASSY (Refer to RP - 33)



2. Removal of upper control arm ASSY RR LH
   (1) Remove the three bolts and three nuts, and remove the upper control arm ASSY RR LH.

3. Removal of upper control arm ASSY RR RH
   NOTE:
   Service the RH side in the same procedure as the LH side.

## Inspection

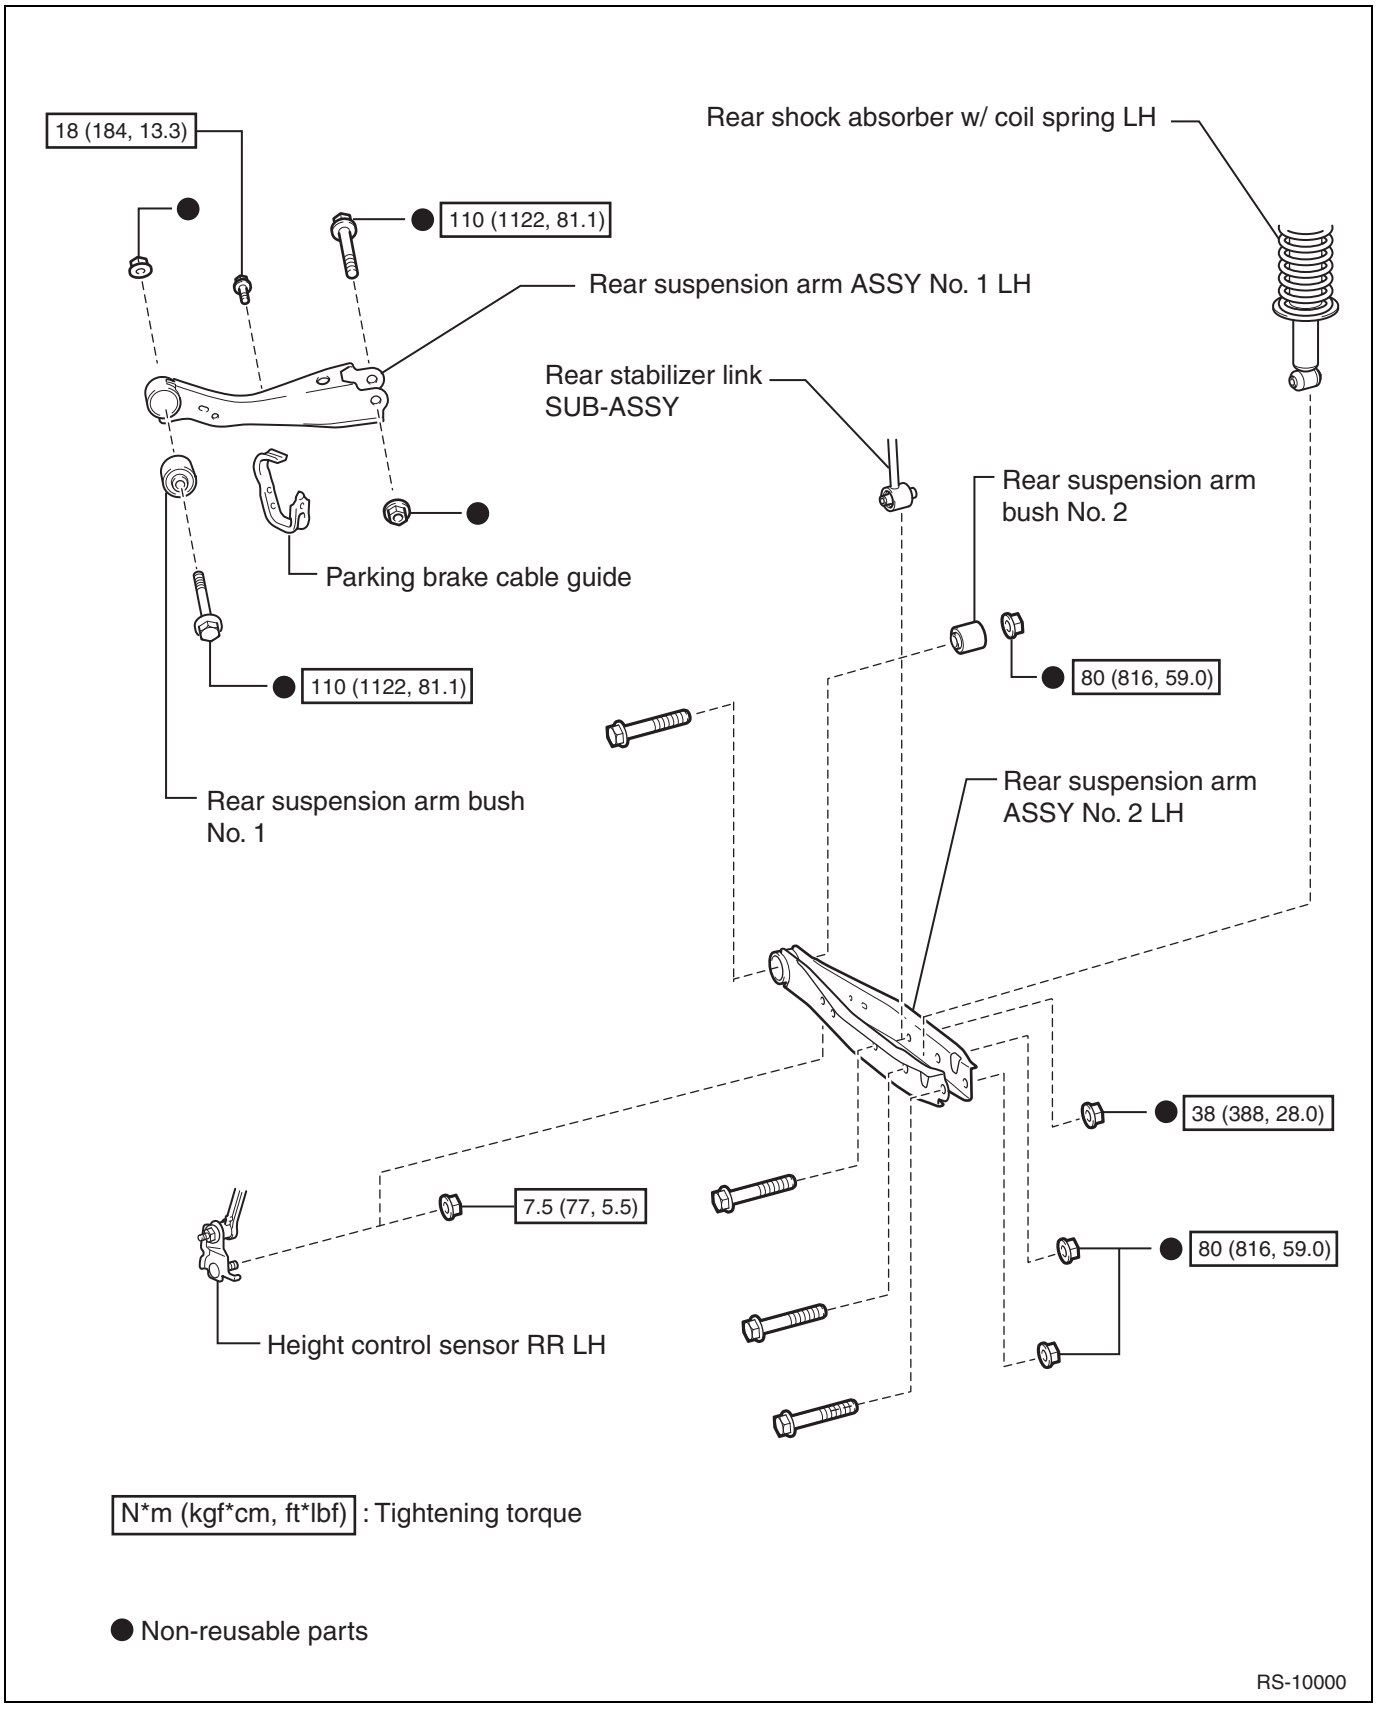
1. Inspection of upper control arm ASSY RR LH
   (1) Inspection of ball joint
      (a)Vibrate and turn the stud.
         Criteria: There is no abnormal interference or play during vibration and turning.
      (b)If there is abnormal interference or play during vibration and turning, replace the upper control arm ASSY RR LH.
   (2) Dust cover inspection
      (a)Check the dust cover for cracks or grease leakage.
      (b)If there are cracks or grease leakage on the dust cover, replace the upper control arm ASSY RR LH.

## Installation

1. Temporary tightening of upper control arm ASSY RR LH
   (1) Install the upper control arm ASSY RR LH to the rear suspension member SUB-ASSY, and temporarily tighten it with the two bolts and two new nuts.
      CAUTION:
      - Insert the front bolt from the rear of the vehicle.
      - Insert the rear bolt from the front of the vehicle.
   (2) Insert the stud of the upper control arm ASSY RR LH to the rear axle carrier LH, and temporarily tighten it with a new bolt and nut.
      CAUTION:
      Insert the bolt from the front of the vehicle.
2. Temporary tightening of upper control arm ASSY RR RH
   NOTE:
   Service the RH side in the same procedure as the LH side.
3. Installation of rear suspension member SUB-ASSY (Refer to RP - 37)
4. Stabilization of vehicle (Refer to RP - 11)
5. Final tightening of upper control arm ASSY RR LH
   (1) Fully tighten the mounting nut and bolt of the upper control arm ASSY RR LH and the rear axle carrier LH.
      Standard value:T=80N·m {816kgf·cm} {59.0ft·lbf}
   (2) Fully tighten the two mounting nuts and two bolts of the upper control arm ASSY RR LH and the rear suspension member SUB-ASSY.
      Standard value:T=90N·m {918kgf·cm} {66.4ft·lbf}
6. Final tightening of upper control arm ASSY RR RH
   NOTE:
   Service the RH side in the same procedure as the LH side.

# Rear lower arm

## Exploded view



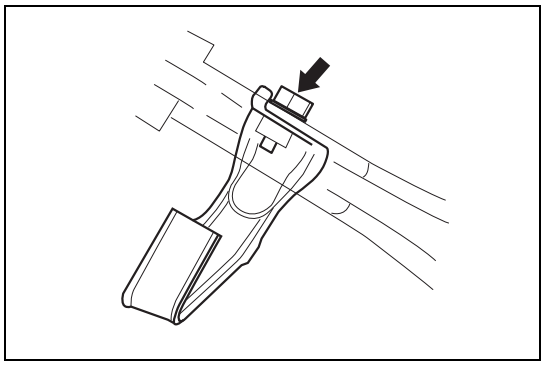
RP

## Removal

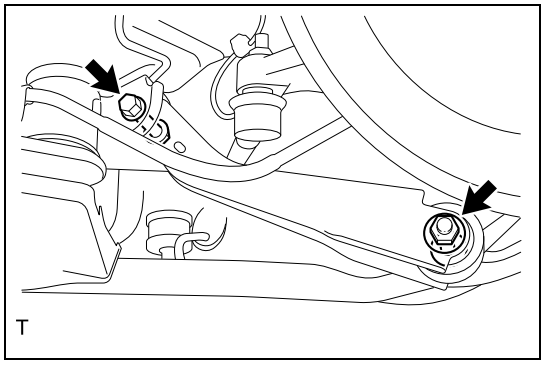
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Removal of rear tire

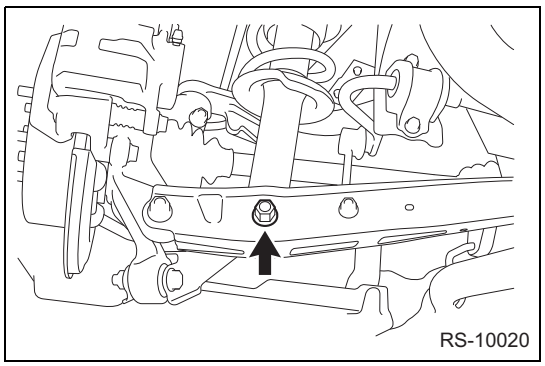


2. Removal of parking brake cable guide
   (1) Remove the bolt, and remove the parking brake cable guide.

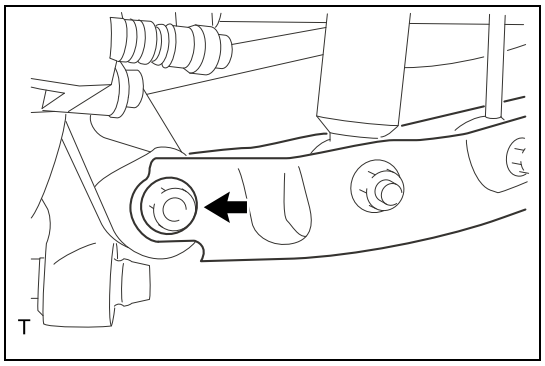


3. Removal of rear suspension arm ASSY No. 1 LH
   (1) Remove the two bolts and two nuts, and remove the rear suspension arm ASSY No. 1 LH.

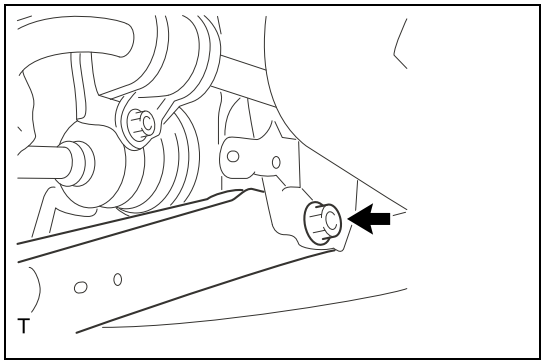
4. Removal of height control sensor RR LH (Refer to LE - 83)
5. Disconnection of rear stabilizer link SUB-ASSY (installed on LH side) (Refer to RP - 6)



6. Disconnection of rear shock absorber w/ coil spring LH
   (1) Remove the bolt and nut, and disconnect the rear shock absorber w/ coil spring LH from the rear suspension arm ASSY No. 2 LH.



7. Removal of rear suspension arm ASSY No. 2 LH
   (1) Remove the bolt and nut, and disconnect the rear axle carrier LH from the rear suspension arm ASSY No. 2 LH.

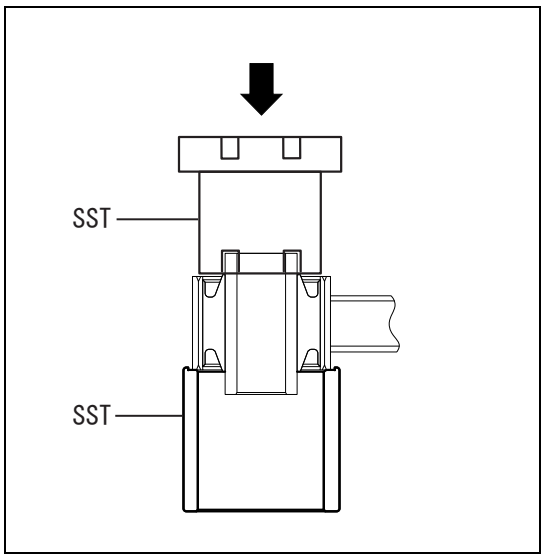


(2) Remove the bolt and nut, and remove the rear suspension arm ASSY No. 2 LH from the rear suspension member SUB-ASSY.

## Disassembly

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.



1. Removal of rear suspension arm bushing No. 1
   (1) Using the SSTs and a press, remove the rear suspension arm bushing No. 1 from the rear suspension arm ASSY No. 1 LH.
   SST 20099PA010, 20099FG000

## Installation

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

RP

1. Temporary tightening of rear suspension arm ASSY No. 2 LH
   (1) Using the bolt and a new nut, temporarily tighten the rear suspension arm ASSY No. 2 LH to the axle carrier.
   CAUTION:
   Insert the bolt from the front of the vehicle.
   (2) Using the bolt and a new nut, temporarily tighten the rear suspension arm ASSY No. 2 LH to the rear suspension member.
   CAUTION:
   Insert the bolt from the front of the vehicle.
2. Temporary tightening of rear shock absorber w/ coil spring LH
   (1) Using the bolt and a new nut, temporarily tighten the rear suspension arm ASSY No. 2 LH to the rear shock absorber w/ coil spring LH.
   NOTE:
   The bolt may be inserted from either side.
3. Installation of rear stabilizer link SUB-ASSY (installed on LH side) (Refer to RP - 11)
4. Installation of height control sensor RR LH (Refer to LE - 83)

5. Temporary tightening of rear suspension arm ASSY No. 1 LH
   (1) Using a new bolt and nut, temporarily tighten the rear suspension arm ASSY No. 1 LH to the axle carrier.
   CAUTION:
   Insert the bolt from the inner side of the vehicle.
   (2) Using a new bolt and nut, temporarily tighten the rear suspension arm ASSY No. 1 LH to the rear suspension member.
   CAUTION:
   Insert the bolt from the outer side of the vehicle.
6. Stabilization of vehicle (Refer to RP - 11)
7. Final tightening of rear suspension arm ASSY No. 2 LH (Refer to RP - 11)
8. Final tightening of rear suspension arm ASSY No. 1 LH
   (1) Using the two bolts and two nuts, fully tighten the rear suspension arm ASSY No. 1 LH.
   CAUTION:
   Secure the nut and turn the bolt.
   Standard value:T=110N·m {1122kgf·cm} {81.1ft·lbf}
9. Installation of parking brake cable guide
   (1) Using the bolt, install the parking brake cable guide.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
10. Installation of rear tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
11. Inspection and adjustment of rear wheel alignment (Refer to AL - 7)
12. Initialization of head light leveling computer (refer to LE - 38)
13. Headlight beam adjustment (Refer to LE - 51)
14. VDC sensor mid point setting (Refer to BC - 15)

# Toe control link

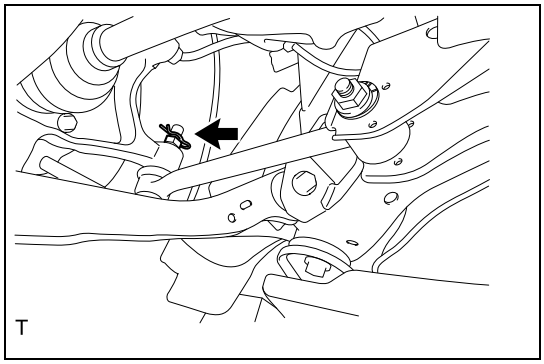
RP

## Removal

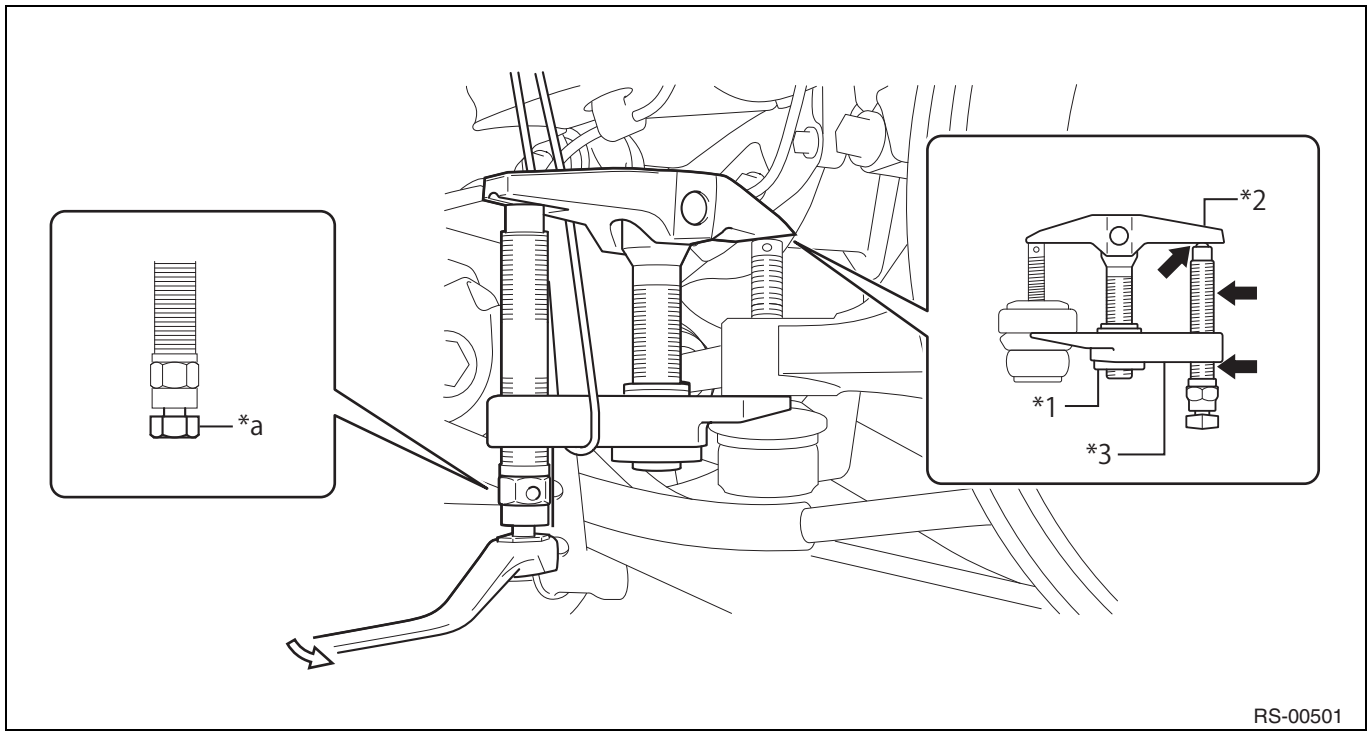
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Removal of rear tire
2. Removal of rear suspension arm ASSY No. 1 LH (Refer to RP - 16)



3. Removal of toe control link SUB-ASSY LH
   (1) Remove the snap pin.
   (2) Remove the nut on the axle carrier side.
   (3) Using a tie-rod ball joint puller, disconnect the toe control link SUB-ASSY LH from the rear axle carrier LH.

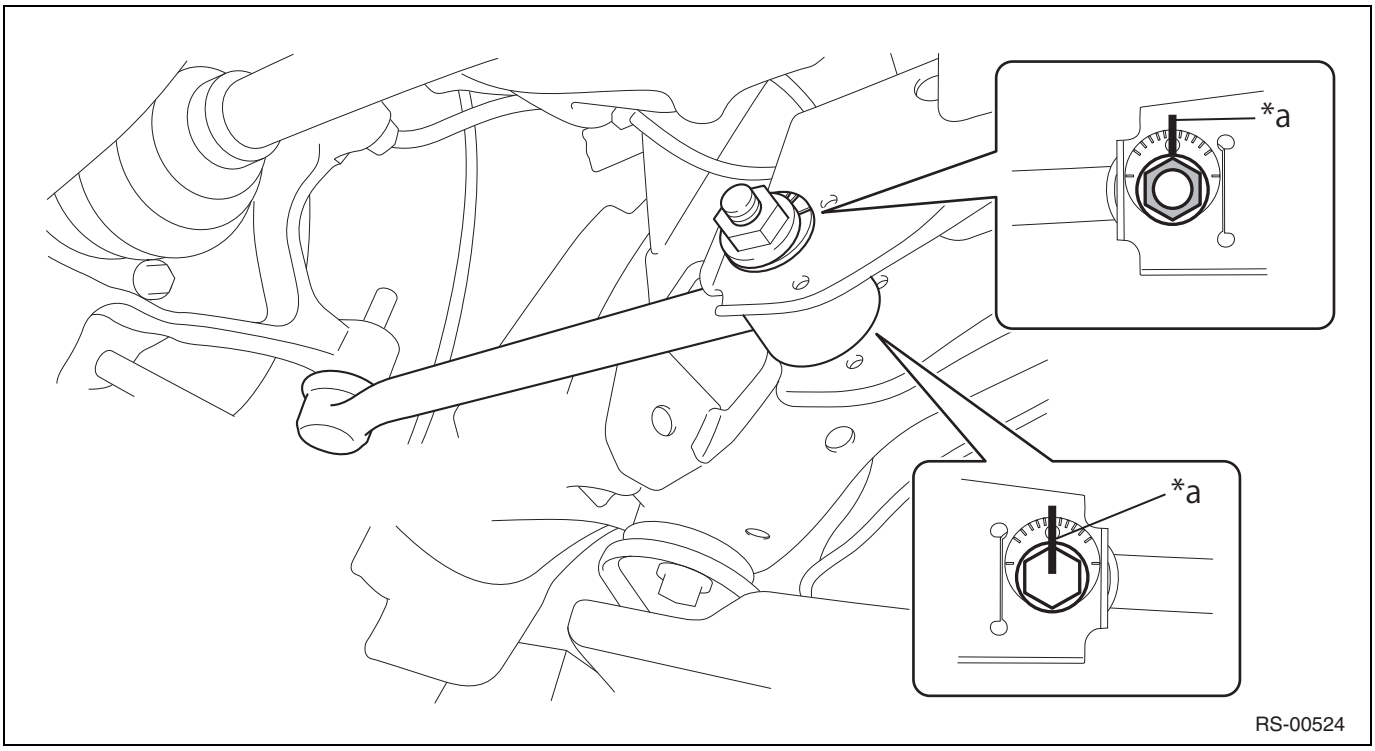


Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Nut | *2 | Body |
| *3 | Claw | | |
| *a | Place the wrench here. | | |
| ➡ | Application area for lubricant | ⇨ | Direction of rotation |

WARNING:
Before starting the work, apply lubricant on the bolt thread and tip of the tie-rod ball joint puller.
CAUTION:
- To prevent damage of the dust cover portion of the toe control link SUB-ASSY, install the tie-rod ball joint puller by adjusting the nut in the center so that the body and the claw become parallel to each other.
- To prevent the tie-rod ball joint puller from falling, be sure to tie its string to the vehicle tightly.
- Do not damage the dust cover portion of the toe control link SUB-ASSY.
- Do not damage the toe control link SUB-ASSY.
- Do not damage the parking brake plate SUB-ASSY.
- Do not damage the rear axle carrier.

(4) Mark an alignment mark on the toe adjust plate No. 2 and the rear suspension member SUB-ASSY.

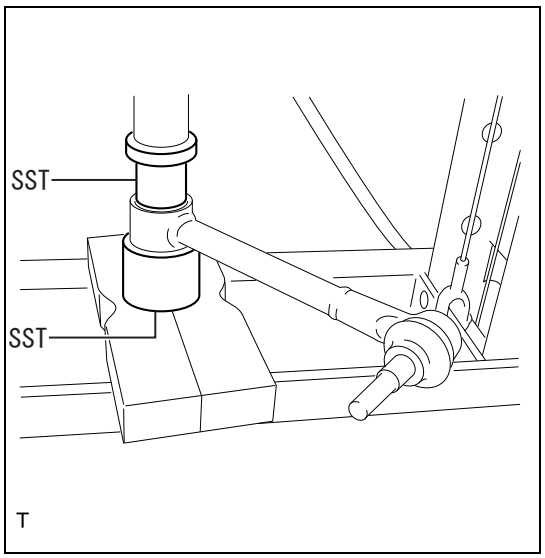


(5) Remove the nut, toe adjust cam, and toe adjust plate No. 2, and remove the toe control link SUB-ASSY LH.

Captions in illustration

| | | | |
|---|---|---|---|
| *a | Alignment marks | - | - |

## Disassembly

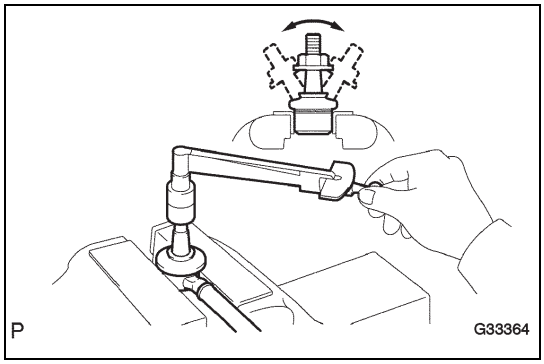


1. Removal of toe control link bushing LH
   (1) Using the SST, remove the toe control link bushing LH from the toe control link SUB-ASSY LH.
   SST 20099AE000

RP

## Inspection

1. Inspection of toe control link SUB-ASSY LH
   (1) Inspection of ball joint
   (a)Install the mounting nut on the stud of the toe control link SUB-ASSY LH.

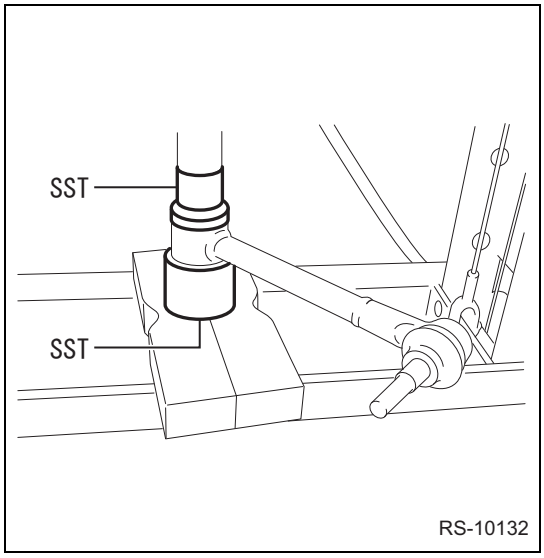


(b)Vibrate and turn the stud.
Criteria: There is no abnormal interference or play during vibration and turning.

(c)If there is abnormal interference or play during vibration and turning, replace the toe control link SUB-ASSY LH.

(2) Dust cover inspection
(a)Check the dust cover for cracks or grease leakage.
(b)If there are cracks or grease leakage on the dust cover, replace the toe control link SUB-ASSY LH.

## Assembly



1. Installation of toe control link bushing LH
(1) Using the SST, install the toe control link bushing LH into the toe control link SUB-ASSY LH.
SST 20099AE000

## Installation

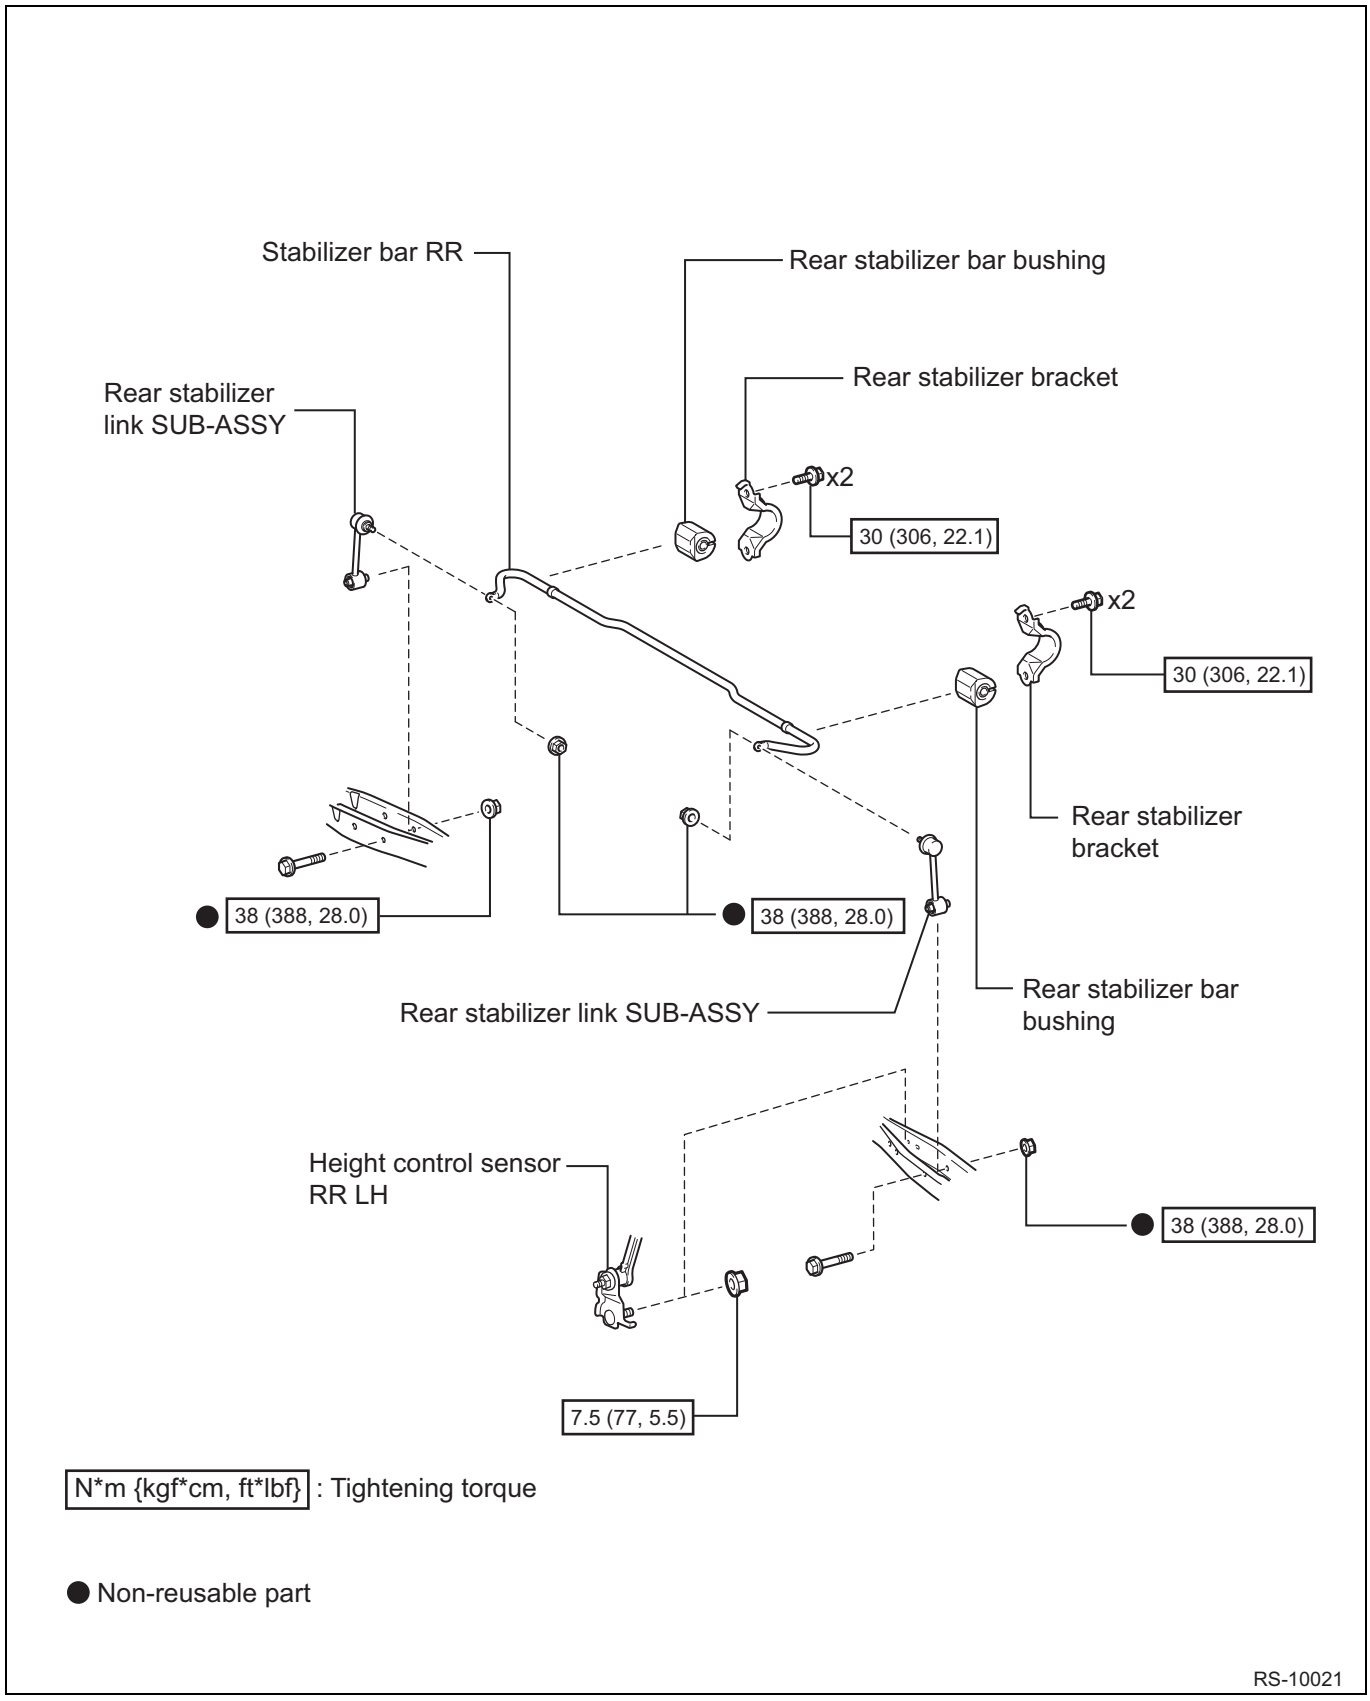
NOTE:
- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Temporary tightening of toe control link SUB-ASSY LH
(1) After inserting the toe adjust cam from the front of the vehicle, install the toe control link SUB-ASSY LH and temporarily tighten it with the toe adjust plate No. 2 using a new nut.
CAUTION:
Align the alignment marks of the rear suspension member SUB-ASSY and the toe adjust plate No. 2.
(2) Install the toe control link to the axle carrier, and tighten it with the nut.
Standard value:T=60N·m {612kgf·cm} {44.3ft·lbf}
(3) Install a new snap pin.
2. Temporary tightening of rear suspension arm ASSY No. 1 LH (Refer to RP - 19)
3. Stabilization of vehicle (Refer to RP - 11)
4. Final tightening of toe control link SUB-ASSY LH
(1) Fully tighten the nut on the side of the rear suspension member SUB-ASSY.
Standard value:T=100N·m {1020kgf·cm} {73.8ft·lbf}
CAUTION:
Make sure that the alignment marks of the rear suspension member SUB-ASSY and the toe adjust plate No. 2 are aligned.
5. Final tightening of rear suspension arm ASSY No. 1 LH (Refer to RP - 19)

6. Installation of rear tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
7. Inspection and adjustment of rear wheel alignment (Refer to AL - 7)
8. Initialization of head light leveling computer (refer to LE - 38)
9. Headlight beam adjustment (Refer to LE - 51)
10. VDC sensor mid point setting (Refer to BC - 15)

# Rear stabilizer bar

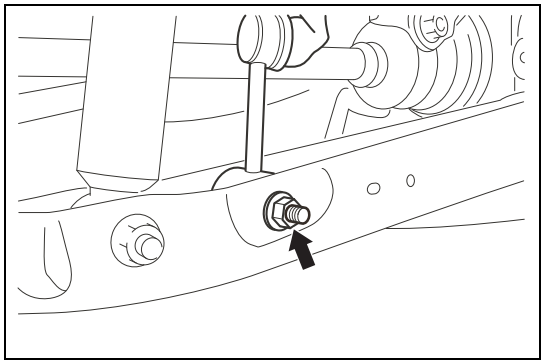
## Exploded view



## Removal

1. Removal of rear tire

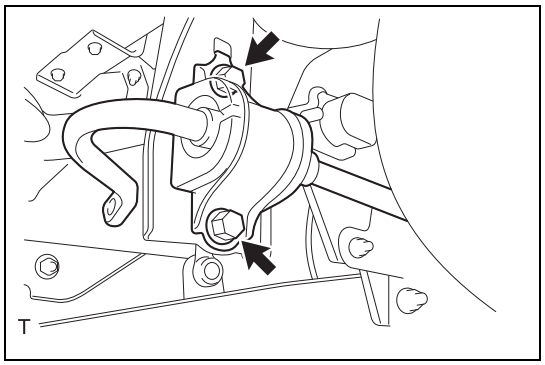
2. Removal of height control sensor RR LH (Refer to LE - 83)



3. Removal of rear stabilizer link SUB-ASSY (installed on LH side)
   (1) Remove the bolt and nut, and disconnect the rear stabilizer link SUB-ASSY from the rear suspension arm ASSY No. 2 LH.

   (2) Secure the stud bolt and remove the nut. Then remove the rear stabilizer link SUB-ASSY from the stabilizer bar RR.

4. Removal of rear stabilizer link SUB-ASSY (installed on RH side)
   NOTE:
   Service the RH side in the same procedure as the LH side.



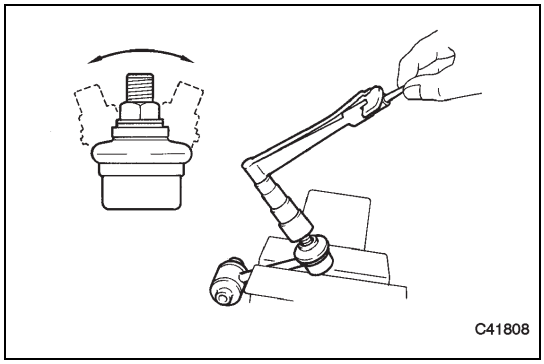
5. Removal of rear stabilizer bracket (installed on LH side)
   (1) Remove the two bolts, and remove the rear stabilizer bracket.

RP

6. Removal of rear stabilizer bracket (installed on RH side)
   NOTE:
   Service the RH side in the same procedure as the LH side.
7. Removal of stabilizer bar RR
   (1) Remove the stabilizer bar RR with the rear stabilizer bar bushing.
8. Removal of rear stabilizer bar bushing (installed on LH side)
   (1) Remove the rear stabilizer bar bushing from the stabilizer bar RR.
9. Removal of rear stabilizer bar bushing (installed on RH side)
   NOTE:
   Service the RH side in the same procedure as the LH side.

## Inspection

1. Inspection of rear stabilizer link SUB-ASSY
   (1) Inspection of ball joint
      (a)Install the mounting nut on the stud of the rear stabilizer link SUB-ASSY.

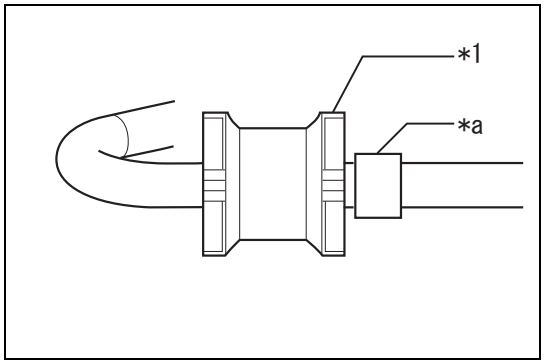


(b) Vibrate and turn the stud.
Criteria: There is no abnormal interference or play during vibration and turning.

(c) If there is abnormal interference or play during vibration and turning, replace the rear stabilizer link SUB-ASSY.

(2) Dust cover inspection
(a) Check the dust cover for cracks or grease leakage.
(b) If there are cracks or grease leakage on the dust cover, replace the rear stabilizer link SUB-ASSY.

## Installation

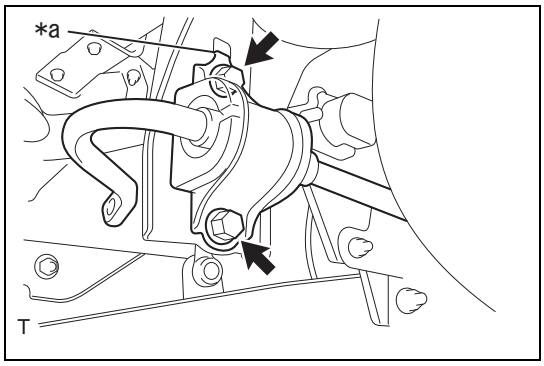


1. Installation of rear stabilizer bar bushing
(1) Install the rear stabilizer bar bushing on the outer side of the vehicle than the ring section of the stabilizer bar RR.

Captions in illustration

| | |
|---|---|
| *1 | Rear stabilizer bar bushing |
| *a | Ring section |

2. Installation of stabilizer bar RR
(1) Install the stabilizer bar RR to the rear suspension member SUB-ASSY.



3. Installation of rear stabilizer bracket (installed on LH side)
(1) Using the two bolts, install the rear stabilizer bracket.
CAUTION:
Install so that the claw section of the rear stabilizer bracket faces the top of the vehicle.

Captions in illustration

| | |
|---|---|
| *a | Claw section |

Standard value: T=30N·m {306kgf·cm} {22.1ft·lbf}

4. Installation of rear stabilizer bracket (installed on RH side)
NOTE:
Service the RH side in the same procedure as the LH side.

5. Installation of rear stabilizer link SUB-ASSY (installed on LH side)
(1) Install the rear stabilizer link SUB-ASSY to the stabilizer bar RR.
(2) Secure the stud bolt and tighten the nut.
Standard value: T=38N·m {388kgf·cm} {28.0ft·lbf}
(3) Using the bolt and a new nut, temporarily tighten the rear stabilizer link SUB-ASSY to the rear suspension arm ASSY No. 2 LH.

6. Installation of rear stabilizer link SUB-ASSY (installed on RH side)
NOTE:
Service the RH side in the same procedure as the LH side.

7. Final tightening of rear stabilizer link SUB-ASSY (installed on LH side)
   (1) Using the bolt and nut, fully tighten the rear stabilizer link SUB-ASSY to the rear suspension arm ASSY No. 2 LH.
   Standard value:T=38N·m {388kgf·cm} {28.0ft·lbf}
8. Final tightening of rear stabilizer link SUB-ASSY (installed on RH side)
   NOTE:
   Service the RH side in the same procedure as the LH side.
9. Installation of height control sensor RR LH (Refer to LE - 83)
10. Installation of rear tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
11. Initialization of head light leveling computer (refer to LE - 38)
12. Headlight beam adjustment (Refer to LE - 51)

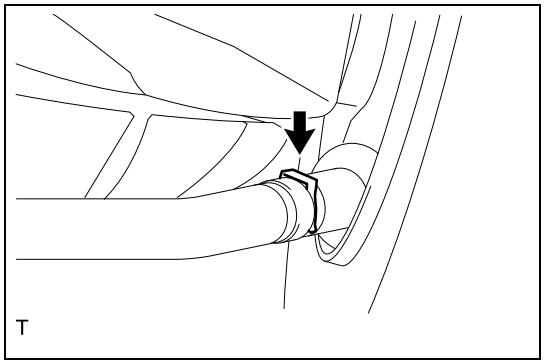
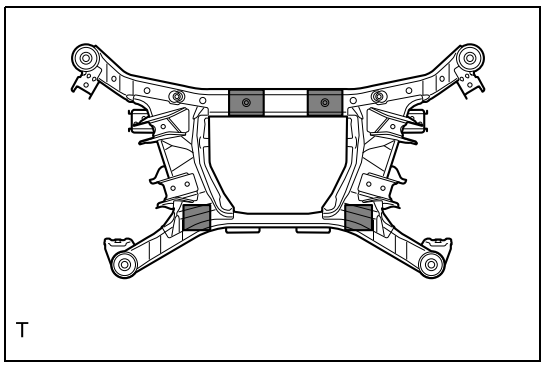
4. Removal of exhaust pipe ASSY CTR (Refer to IE - 41)
5. Removal of fuel tank protector (Refer to FU - 68)



6. Disconnection of parking brake cable ASSY No.3
   (1) Remove the clamp, and then remove the parking brake cable ASSY No.3.

   (2) Remove the bolt, and disconnect the parking brake cable ASSY No. 3 from the rear front support LH.

7. Disconnection of parking brake cable ASSY No.2
   NOTE:
   Perform the same procedure as the LH side.
8. Removal of parking brake cable guide (installed on LH side) (Refer to RP - 16)
9. Removal of parking brake cable guide (installed on RH side)
   NOTE:
   Perform the same procedure as the LH side.
10. Disconnection of rear shock absorber w/coil spring LH (Refer to RP - 16)
11. Disconnection of rear shock absorber w/ coil spring RH
    NOTE:
    Perform the same procedure as the LH side.



12. Removal of rear suspension member SUB-ASSY
    (1) Set a height adjustable attachment, plate lift attachment, etc. on a universal engine lifter, and support the rear suspension member SUB-ASSY.
    CAUTION:
    - Using the height adjustable attachment, plate lift attachment, etc., set the rear suspension member SUB-ASSY so that it becomes level.
    - Securely support the rear suspension member SUB-ASSY since it is heavy.

Captions in illustration

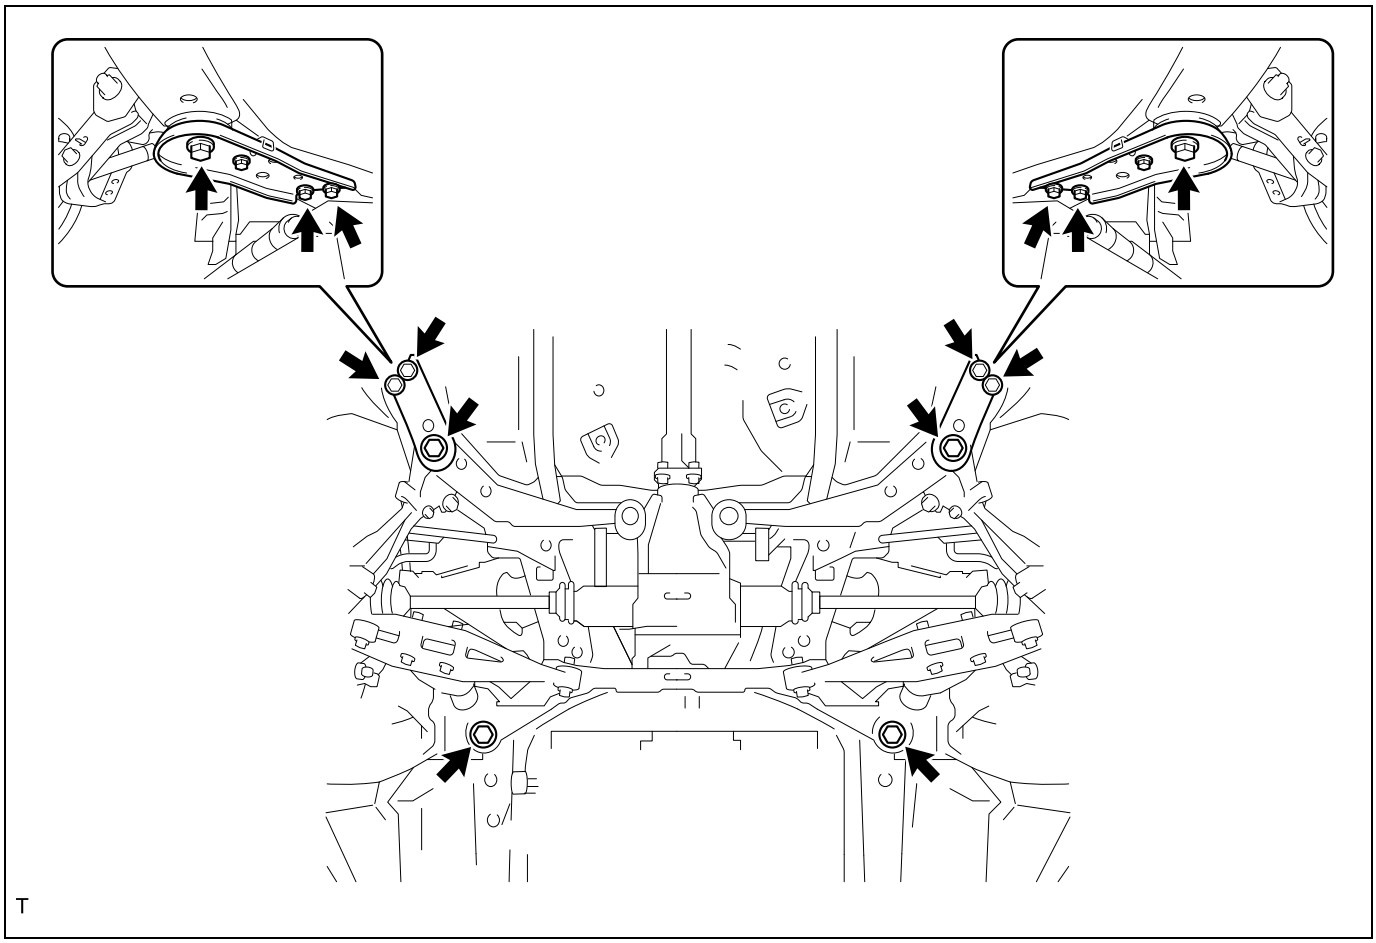
|---|---|
| ■ | Setting position of height adjustable attachment |

    (2) Remove the eight bolts, and remove the rear suspension member SUB-ASSY with the front support rear LH, front support rear RH, rear support upper, and rear support lower.
    (3) Gradually lower the universal engine lifter, and remove the rear suspension member SUB-ASSY.

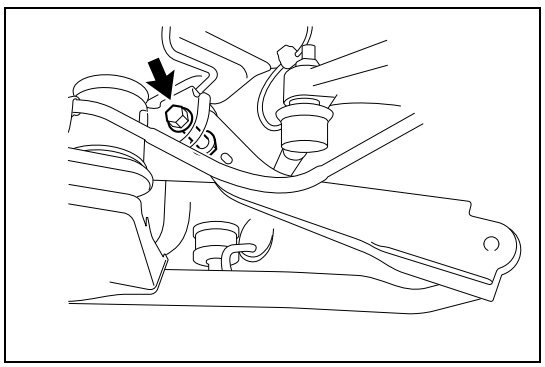
RP



T

CAUTION:
To prevent the rear suspension member SUB-ASSY from tilting greatly or falling, a few operators must support the part when performing the procedure.

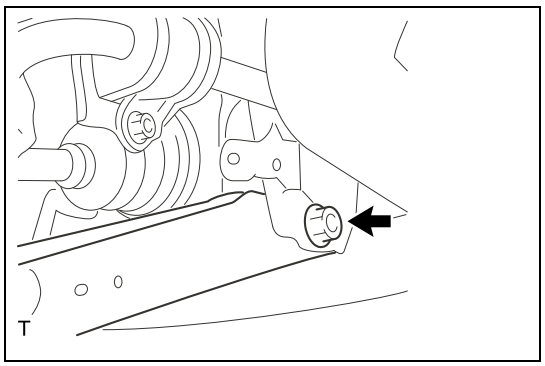
13. Removal of differential carrier ASSY RR (Refer to AD - 40)
14. Removal of rear drive shaft ASSY LH (Refer to DP - 5)
15. Removal of rear drive shaft ASSY RH
    NOTE:
    Perform the same procedure as the LH side.
16. Removal of rear axle carrier LH (Refer to AD - 24)
17. Removal of rear axle carrier RH
    NOTE:
    Perform the same procedure as the LH side.
18. Removal of stabilizer bar RR (Refer to RP - 25)



19. Removal of rear suspension arm ASSY No. 1 LH
    (1) Remove the bolt and nut, and remove the rear suspension arm ASSY No. 1 LH.

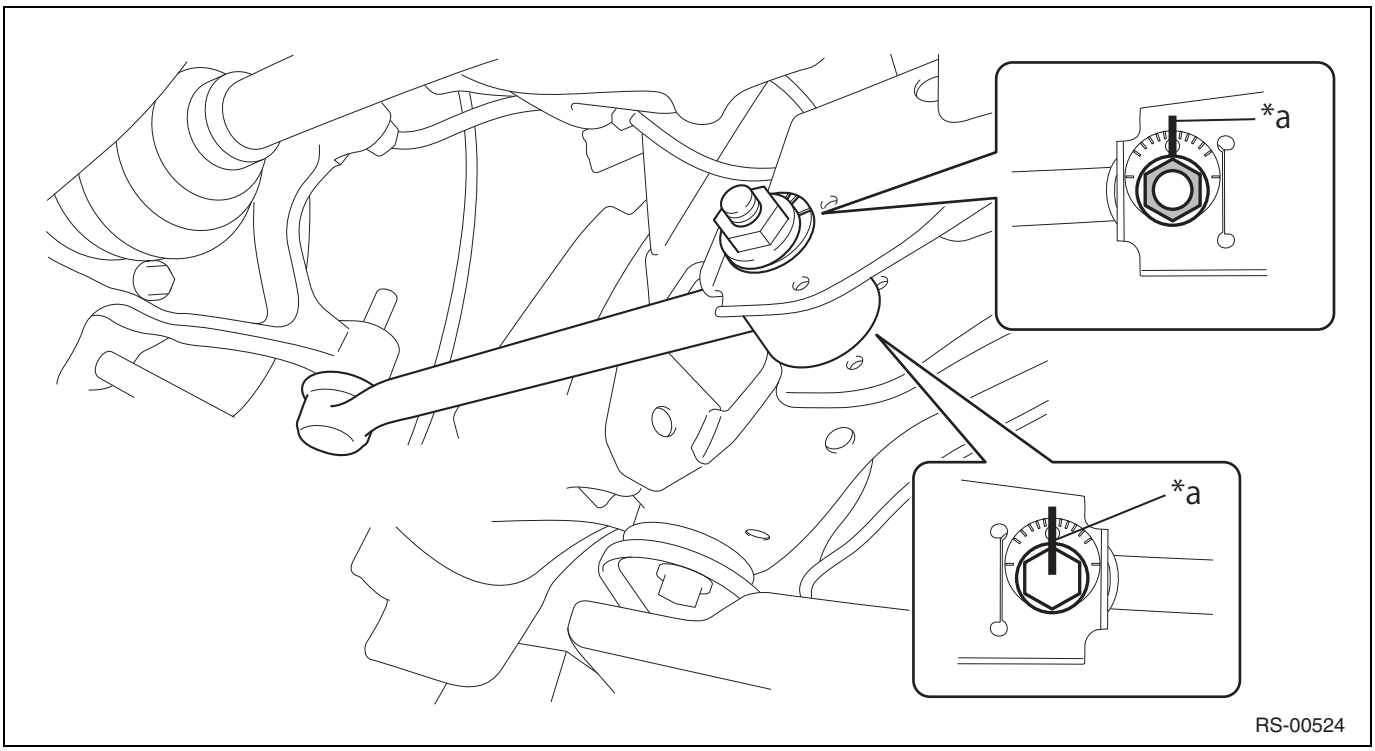
RP

20. Removal of rear suspension arm ASSY No. 1 RH
    NOTE:
    Perform the same procedure as the LH side.



21. Removal of rear suspension arm ASSY No. 2 LH
    (1) Remove the bolt and nut, and remove the rear suspension arm ASSY No. 2 LH from the rear suspension member SUB-ASSY.

22. Removal of rear suspension arm ASSY No. 2 RH
    NOTE:
    Perform the same procedure as the LH side.
23. Removal of toe control link SUB-ASSY LH
    (1) Mark an alignment mark on the toe adjust plate No. 2 and the rear suspension member.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Alignment marks | - | - |

    (2) Remove the nut, toe adjust cam, and toe adjust plate No. 2, and remove the toe control link SUB-ASSY LH.
24. Removal of toe control link SUB-ASSY RH
    NOTE:
    Perform the same procedure as the LH side.
25. Removal of upper control arm ASSY RR LH (Refer to RP - 13)
26. Removal of upper control arm ASSY RR RH
    NOTE:
    Perform the same procedure as the LH side.
27. Removal of rear differential mount cushion No. 1 (Refer to AD - 73)
28. Removal of rear differential mount cushion No. 2 (Refer to AD - 73)

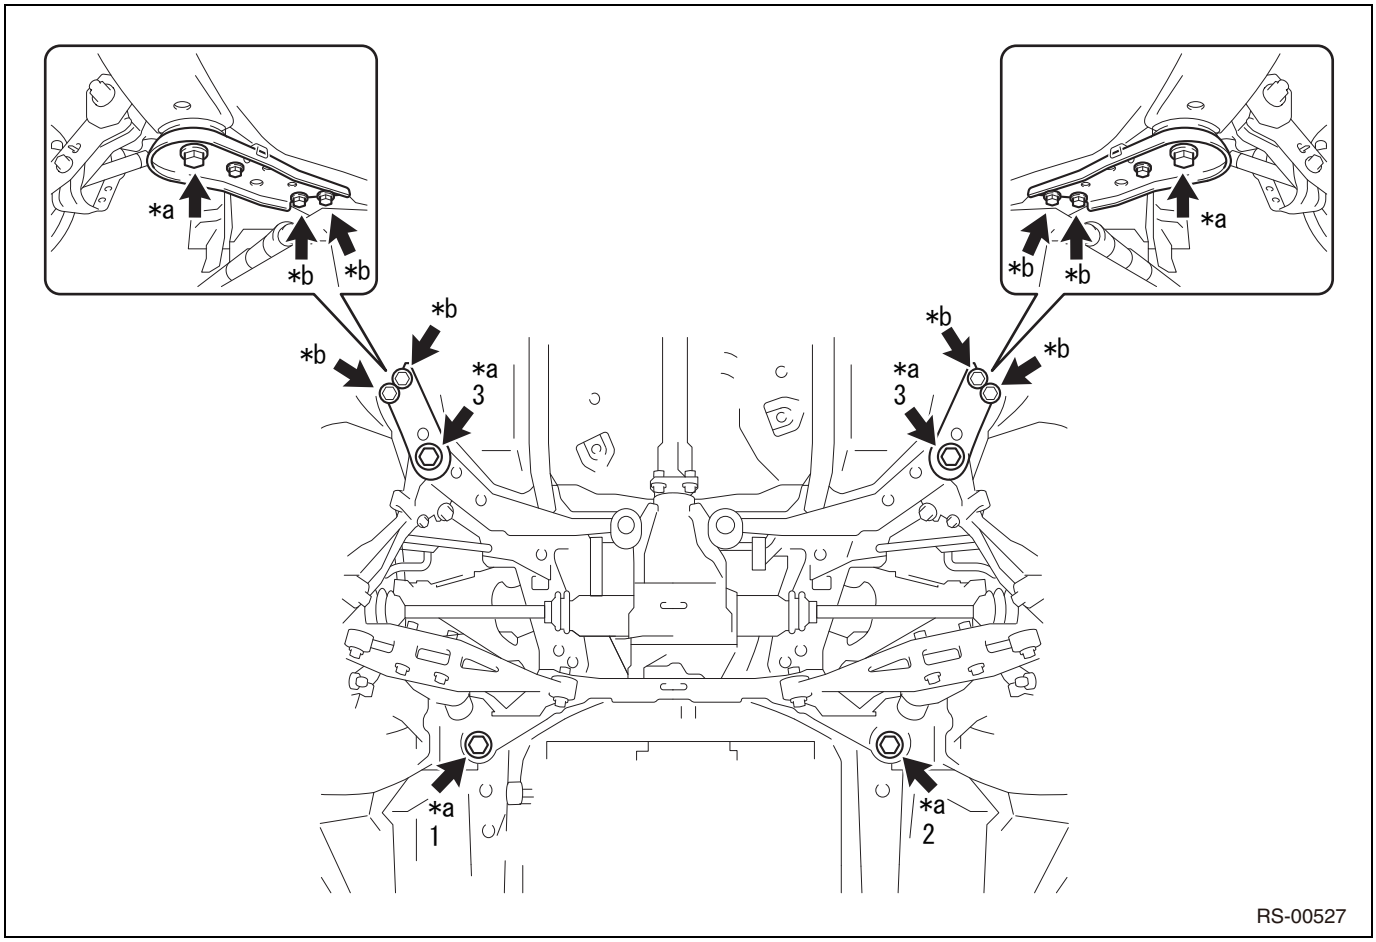
RP

## Installation

1. Installation of rear differential mount cushion No. 1 (Refer to AD - 75)
2. Installation of rear differential mount cushion No. 2 (Refer to AD - 74)
3. Temporary tightening of upper control arm ASSY RR LH (Refer to RP - 14)
4. Temporary tightening of upper control arm ASSY RR RH
   NOTE:
   Perform the same procedure as the LH side.
5. Temporary tightening of toe control link SUB-ASSY LH
   (1) After inserting the toe adjust cam from the front of the vehicle, install the toe control link SUB-ASSY LH and temporarily tighten it with the toe adjust plate No. 2 using a new nut.
   CAUTION:
   Align the alignment marks of the rear suspension member SUB-ASSY and the toe adjust plate No. 2.
6. Temporary tightening of toe control link SUB-ASSY RH
   NOTE:
   Perform the same procedure as the LH side.
7. Temporary tightening of rear suspension arm ASSY No. 2 LH
   (1) Using the bolt and a new nut, temporarily tighten the rear suspension arm ASSY No. 2 LH to the rear suspension member SUB-ASSY.
   CAUTION:
   Insert the bolt from the front of the vehicle.
8. Temporary tightening of rear suspension arm ASSY No. 2 RH
   NOTE:
   Perform the same procedure as the LH side.
9. Temporary tightening of rear suspension arm ASSY No. 1 LH
   (1) Using a new bolt and nut, temporarily tighten the rear suspension arm ASSY No. 1 LH to the rear suspension member SUB-ASSY.
   CAUTION:
   Insert the bolt from the outer side of the vehicle.
10. Temporary tightening of rear suspension arm ASSY No. 1 RH
    NOTE:
    Perform the same procedure as the LH side.
11. Final tightening of upper control arm ASSY RR LH (Refer to RP - 14)
12. Final tightening of upper control arm ASSY RR RH
    NOTE:
    Perform the same procedure as the LH side.
13. Final tightening of toe control link SUB-ASSY LH (Refer to RP - 23)
14. Final tightening of toe control link SUB-ASSY RH
    NOTE:
    Perform the same procedure as the LH side.
15. Final tightening of rear suspension arm ASSY No. 2 LH
    (1) Fully tighten the mounting nut of the rear shock absorber w/ coil spring LH and the rear suspension arm ASSY No. 2 LH.
    Standard value:T=80N·m {816kgf·cm} {59.0ft·lbf}
    (2) Fully tighten the nut of the rear suspension arm ASSY No. 2 LH and the rear suspension member SUB-ASSY.
    Standard value:T=80N·m {816kgf·cm} {59.0ft·lbf}
16. Final tightening of rear suspension arm ASSY No. 2 RH
    NOTE:
    Perform the same procedure as the LH side.
17. Final tightening of rear suspension arm ASSY No. 1 LH
    (1) Using the bolt and nut, fully tighten the rear suspension arm ASSY No. 1 LH.
    Standard value:T=110N·m {1122kgf·cm} {81.1ft·lbf}
    CAUTION:
    Secure the nut and turn the bolt.

18. Final tightening of rear suspension arm ASSY No. 1 RH
    NOTE:
    Perform the same procedure as the LH side.
19. Installation of differential carrier ASSY RR (Refer to AD - 70)
20. Installation of rear drive shaft ASSY LH (Refer to DP - 11)
21. Installation of rear drive shaft ASSY RH
    NOTE:
    Perform the same procedure as the LH side.
22. Installation of rear axle carrier LH (Refer to AD - 28)
23. Installation of rear axle carrier RH
    NOTE:
    Perform the same procedure as the LH side.
24. Installation of rear suspension member SUB-ASSY
    (1) Set a height adjustable attachment, plate lift attachment, etc. on a universal engine lifter, and support the rear suspension member SUB-ASSY.
    CAUTION:
    - Using the height adjustable attachment, plate lift attachment, etc., set the rear suspension member SUB-ASSY so that it becomes level.
    - Securely support the rear suspension member SUB-ASSY since it is heavy.

    (2) Gradually raise the universal engine lifter until there is no space between the rear suspension member SUB-ASSY and the vehicle.
    CAUTION:
    To prevent the rear suspension member SUB-ASSY from tilting greatly or falling, a few operators must support the part when performing the procedure.
    (3) While supporting the rear suspension member SUB-ASSY with a high transmission jack, install the rear suspension member SUB-ASSY with the front support rear LH, front support rear RH, rear support upper, and rear support lower using four new bolts (bolt A) and four bolts (bolt B).
    CAUTION:
    After temporarily tightening the bolts A in the numerical order shown in the figure, fully tighten them.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Bolt A (new) | *b | Bolt B |

Standard value:Bolt A

T=145N·m {1479kgf·cm} {106.9ft·lbf}

Bolt B

T=70N·m {714kgf·cm} {51.6ft·lbf}

25. Temporary tightening of rear shock absorber w/ coil spring LH
    (1) Using the bolt and a new nut, temporarily tighten the rear suspension arm ASSY No. 2 LH to the rear shock absorber w/ coil spring LH.
    NOTE:
    The bolt may be inserted from either side.
26. Temporary tightening of rear shock absorber w/ coil spring RH
    NOTE:
    Perform the same procedure as the LH side.
27. Installation of stabilizer bar RR (Refer to RP - 27)
28. Installation of parking brake cable guide (installed on LH side)
    (1) Using the bolt, install the parking brake cable guide.
    Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
29. Installation of parking brake cable guide (installed on RH side)
    NOTE:
    Perform the same procedure as the LH side.
30. Installation of parking brake cable ASSY No.3
    (1) Using the clamp, install the parking brake cable ASSY No.3 to the rear axle carrier.
    (2) Using the bolt, install the parking brake cable ASSY No.3 to the rear front support member LH.
    Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}

31. Installation of parking brake cable ASSY No.2
    NOTE:
    Perform the same procedure as the LH side.
32. Installation of fuel tank protector (Refer to FU - 71)
33. Installation of propeller shaft with center bearing ASSY (Refer to DP - 16)
34. Installation of exhaust pipe ASSY CTR (Refer to IE - 46)
35. Installation of height control sensor RR LH (Refer to LE - 83)
36. Final tightening of rear stabilizer link SUB-ASSY (installed on LH side)
37. Final tightening of rear stabilizer link SUB-ASSY (installed on RH side)
38. Installation of rear tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
39. Inspection and adjustment of rear wheel alignment (Refer to AL - 7)
40. Initialization of head light leveling computer (refer to LE - 38)
41. Headlight beam adjustment (Refer to LE - 51)
42. VDC sensor mid point setting (Refer to BC - 15)

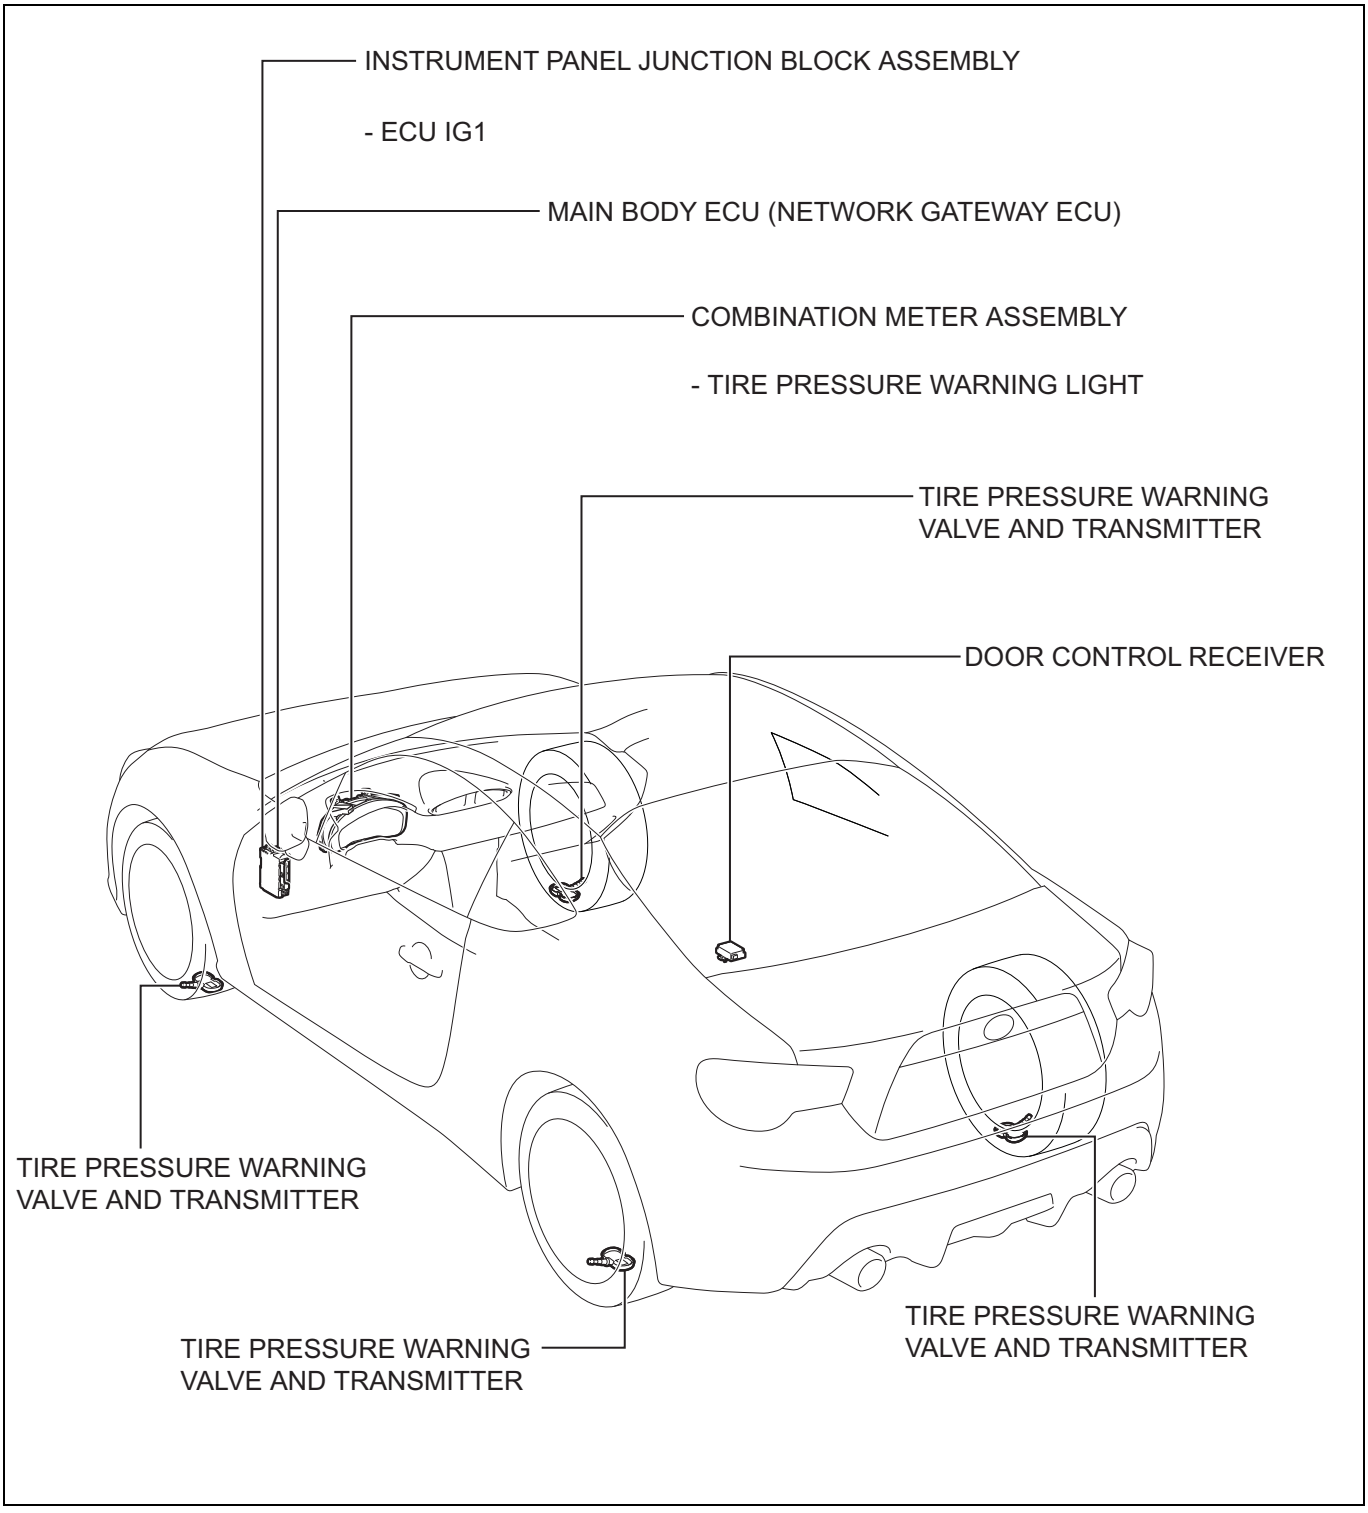
# Tire pressure warning system

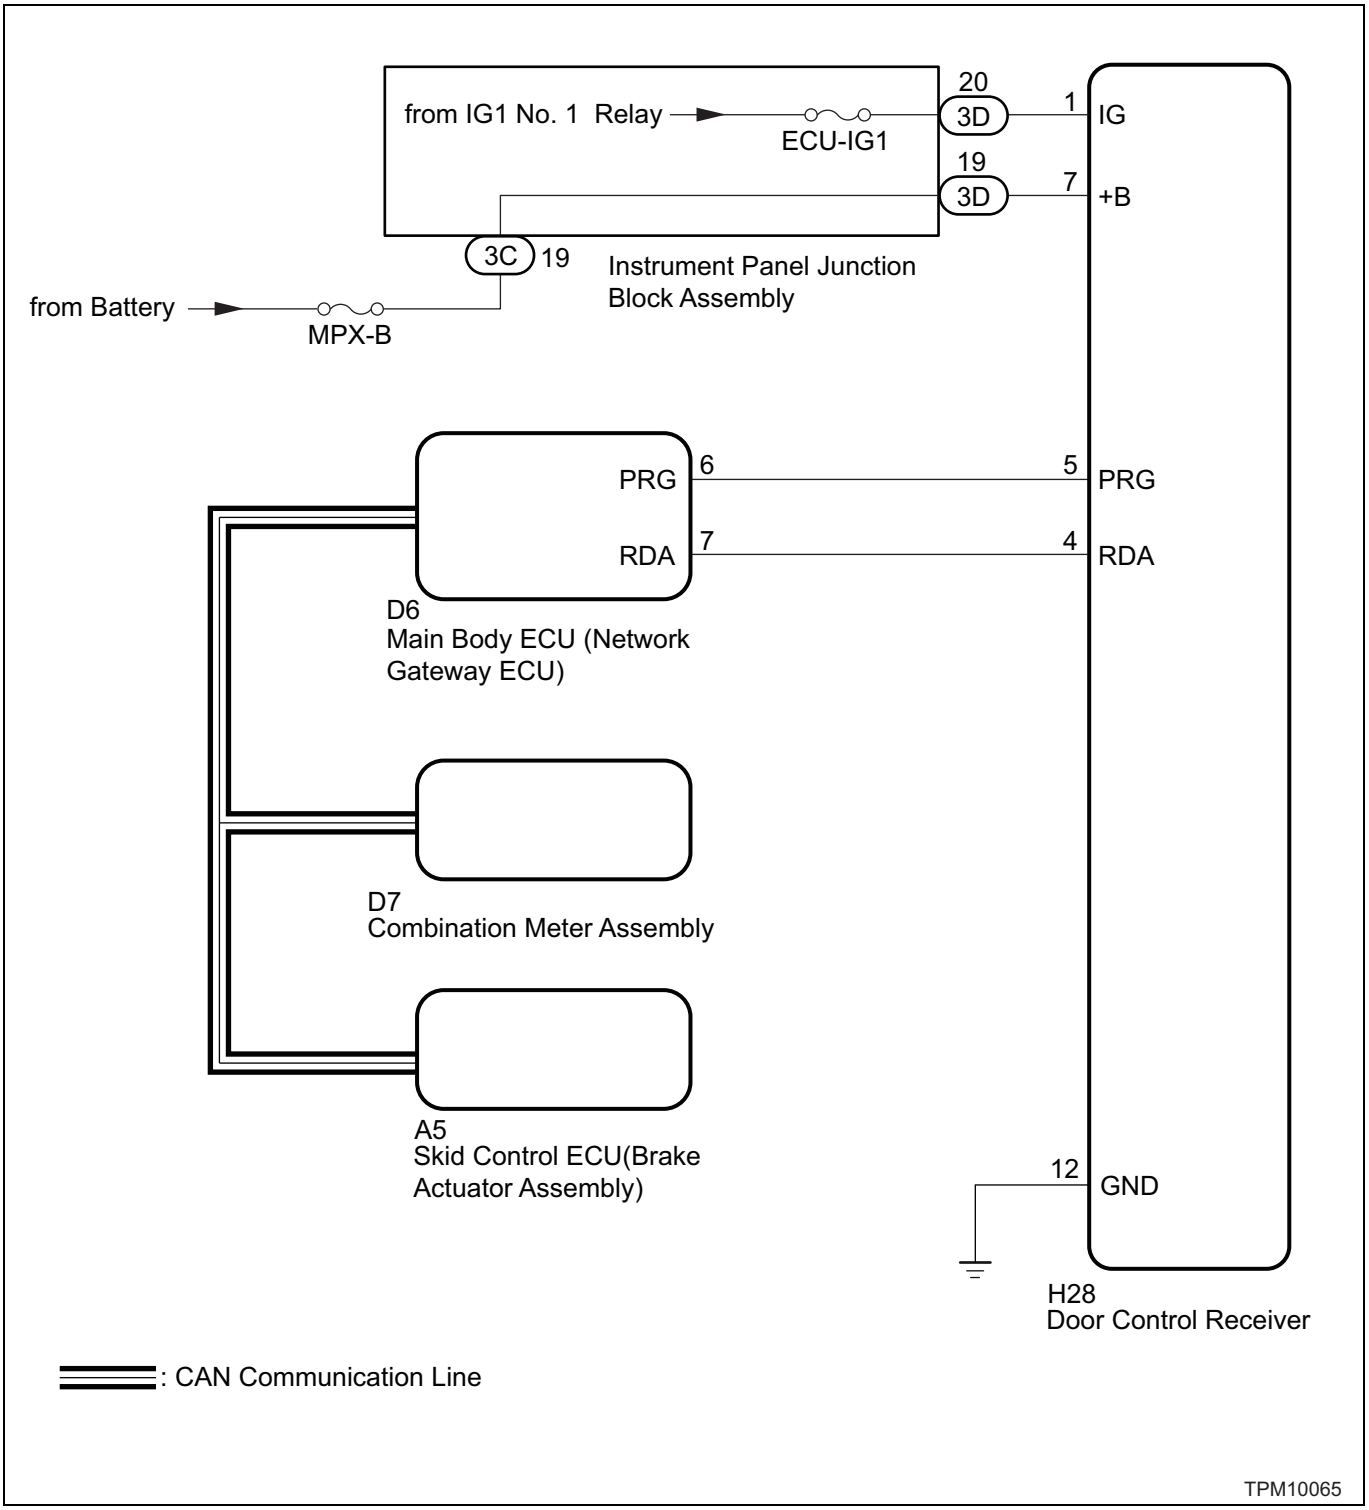
## Precautions

1. Tire pressure warning system precautions
   (1) Periodical adjustment is necessary because the tire pressure decreases as time passes.
   (2) In winter, the tire pressure decreases due to a decrease in ambient temperature (every 10°C decrease in ambient temperature, the tire pressure decreases 10 kPa {0.1 kgf/cm$^2$, 1.5 psi}). Tire pressure warning light may illuminate if the tire pressure is not adjusted properly. If the temperature change in a day is large, increase the pressure to fit the low temperature condition. Doing so will decrease the unnecessary work.
   (3) Depending on the tire type, the system may not operate properly even though the genuine wheels are used.
   (4) During tire removal/installation, be careful not to damage the tire pressure warning valve/transmitter by the interference between tire pressure warning valve/transmitter and tire bead.
   (5) Before detaching tire bead or removing the tire from wheel, be careful not to damage the tire pressure warning valve/transmitter by dropping the tire pressure warning valve/transmitter to inside the tire.
   (6) When installing the tire pressure warning valve/transmitter, be sure to use the new grommet, washer, nut in order to seal tightly.
   (7) If any one of the tire pressure warning valve/transmitter is replaced, it is necessary to register the ID code of respective tire pressure warning valve/transmitter to the tire pressure warning ECM/receiver. If the tire pressure warning valve/transmitter is replaced, it is necessary to re-register the ID code of all tire pressure warning valve/transmitter. Before starting the ID code registration, record the current ID code.
   (8) Do not use non-genuine cap. Use of non-genuine cap may cause adhering to the tire pressure warning valve/transmitter.
   (9) The system may not operate properly in the following conditions. (If the normal condition returns, operation comes back.)
      (a) If not all of the tire pressure warning valve/transmitter registered to the tire pressure warning ECM/receiver are installed on the tire & wheel.
      (b) If the ID codes of all tire pressure warning valve/transmitter are not registered to the tire pressure warning ECM/receiver.
      (c) If tire pressure is excessively high (absolute pressure: 480 kPa {4.9 kgf/cm$^2$, 70 psi} or more, relative pressure: 380 kPa {3.9 kgf/cm$^2$, 55 psi} or more)
      (d) If the tire pressure warning valve/transmitter battery is deteriorated.
   (10) The system may not operate properly in the following conditions. (If the normal condition returns, operation comes back.)
      (a) If the electronic device with close frequency band is used.
      (b) If the radio device or other system with close frequency band is working inside the vehicle.
      (c) If the window film with effect of blocking radio wave is used.
      (d) If the snow or ice is adhering especially near the wheel or wheel housing.
      (e) If the non-genuine wheel is used.
      (f) If the tire chain is used.

## Parts location



## System diagram



NOTE:

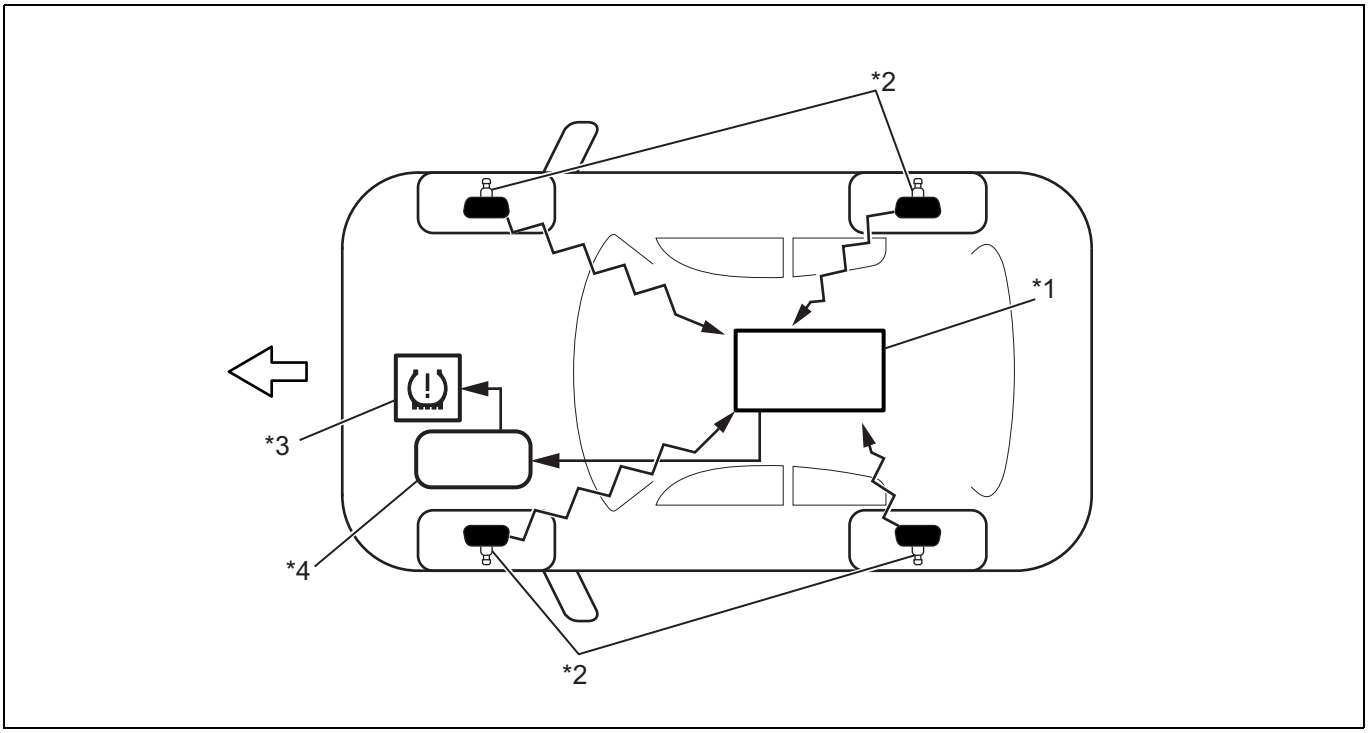
Each tire pressure warning valve/transmitter sends information of ID, temperature and tire pressure to the tire pressure warning ECM/receiver.

| ECM transmission (transmitter) | ECM receive | Signal | Communication method |
|---|---|---|---|
| Skid control ECM (brake actuator ASSY) | Main body ECM (multiplex network body ECM) | Vehicle speed signal | CAN communication line |
| Main body ECM (multiplex network body ECM) | Combination meter ASSY | Tire pressure warning light signal | CAN communication line |

TM

## Description of functions

1. System description
   (1) The tire pressure warning system sends warnings to the driver by illuminating the tire pressure warning light when the tire pressure decreases below threshold.
   (2) As the following illustration shows, the tire pressure warning ECM/receiver receives the information of tire pressure, temperature, ID code, sent from the tire pressure warning valve/transmitter. It detects the low tire pressure based on this information.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Tire pressure warning ECM/receiver | *2 | Tire pressure warning valve/transmitter |
| *3 | Combination meter ASSY - tire pressure warning light | *4 | Main body ECM (multiplex network body ECM) |

2. Summary of ID registration
   (1) If the tire pressure warning valve/transmitter is replaced, it is necessary to register the ID code of respective tire pressure warning valve/transmitter to the tire pressure warning ECM/receiver.
   (2) If any one of the tire pressure warning valve/transmitter is replaced, it is necessary to register the ID code of respective tire pressure warning valve/transmitter to the tire pressure warning ECM/receiver. If the tire pressure warning valve/transmitter is replaced, it is necessary to re-register the ID code of all tire pressure warning valve/transmitter. Before starting the ID code registration, record the current ID code.
3. Function of major component

| Parts | Function |
|---|---|
| Tire pressure warning ECM/receiver | • Receives the information from the tire pressure warning valve/transmitter to monitor the tire pressure.<br>• Outputs the various signals to the meter when the tire pressure warning ECM/receiver detects the low tire pressure, system malfunction and transition to initialization.<br>• Use the signal strength change from the tire pressure warning valve/transmitter as judgement criteria when the tire pressure warning ECM/receiver detects the defects in vehicle speed signal. It is judged that the vehicle is driven when ECM detects the signal strength change from the tire pressure warning valve/transmitter. |
| Tire pressure warning valve/transmitter | Measures the tire pressure and temperature, and send the measured value and ID code to the tire pressure warning ECM/receiver. |
| Combination meter ASSY | Sends the tire pressure warning light signal to the tire pressure warning ECM/receiver. |
| Tire pressure warning light | • Illuminates after 1 minute blinking and sends warning to the driver based on the signal from the tire pressure warning ECM/receiver.<br>• 2 digits diagnostic code (DTC) is displayed. |
| Main body ECM (multiplex network body ECM) | • Main body ECM (multiplex network body computer) and tire pressure warning ECM/receiver communicates via direct wiring.<br>• Main body ECM (multiplex network body computer) is connected to the combination meter ASSY via CAN communication line. |

## How to troubleshoot

NOTE:

- Use the following procedure to troubleshoot the tire pressure warning system.
- Make sure that the wireless door lock control system diagnosis mode has been finished before performing the following procedure.

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Interview and phenomenon check |

(1) Interview the customer using the check list for interview to understand the problems.

NOTE:

It is important to collect many useful information from the customer in order to perform the quick service.

Next

| | |
|---|---|
| 3 | Adjust the tire pressure. |

(1) Turn the ignition switch to OFF.
(2) Adjust tire pressures to the standard value. (Refer to TM - 2)
(3) Connect the SSM4 to the DLC3.
(4) Turn the ignition switch to ON.
(5) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]
(6) Read the value of the Tire Pressure.
(7) Check data list. (Refer to TM - 14)

NOTE:

- It may need several minutes until the updated tire pressure data is displayed.
- If the tire pressure warning light illuminates because of the low tire pressure, after adjustment of the tire pressure, the tire pressure warning light goes off when the data from all tire pressure warning valve/transmitter are received by the tire pressure warning ECM/ receiver.

Result

| Condition | Go to |
|---|---|
| The tire pressure warning light remains ON. | A |
| The tire pressure warning light goes OFF. | B |

B → Go to Step 10.

A

| | |
|---|---|
| 4 | Check CAN communication system. |

(1) Check CAN communication system.

Result

| Result | Go to |
|---|---|
| Functioning properly | A |
| Not functioning properly | B |

B → Go to CAN communication system.

A

| | |
|---|---|
| 5 | Check DTC |

(1) Check diagnostic codes. (Refer to TM - 13)

Result

| Result | Go to |
|---|---|
| Diagnostic codes are output. | A |
| Diagnostic codes are not output. | B |

B → Go to Step 7.

A

| | |
|---|---|
| 6 | Diagnostic code chart |

(1) Refer to list of diagnostic codes. (Refer to TM - 17)

Next

Go to Step 9.

| | |
|---|---|
| 7 | Symptom table |

(1) Refer to symptom table. (Refer to TM - 11)

Next

| | |
|---|---|
| 8 | Circuit inspection |

(1) Refer to the electric circuit inspection procedure. (Refer to IN - 27)

Next

| | |
|---|---|
| 9 | Repair or replace. |

(1) Repair or replace the part according to the diagnostic code.

Next

| | |
|---|---|
| 10 | Confirmation test |

(1) Confirm the ECM data list to confirm the tire pressure is received properly. (Refer to TM - 14)

Next

Complete

## Check List for Interview

### Tire Pressure Monitoring Checklist for Interview

Inspector:

| | | | |
|---|---|---|---|
| Name | | Registration No. | |
| | | First registration | |
| | | Frame No. | |
| Year/month/date of vehicle bring-in | ／ ／ | Odometer reading | |
| Date when trouble occurred | ／ ／ | | |
| Frequency of occurrence | ☐ Continuous ☐ Intermittent ( times/day) | | |
| Weather | ☐ Fine ☐ Cloudy ☐ Rainy ☐ Other ( ) | | |
| Outside temperature | °C (°F) | | |
| Trouble symptom | | | |

TPM00108

TM

## Registration settings

1. Before registration

   CAUTION:

   Transmitter ID is written in the tire pressure warning valve/transmitter. It is impossible to read the transmitter ID after tire is installed to the wheel. Because of this, be sure to record the transmitter ID before tire installation.

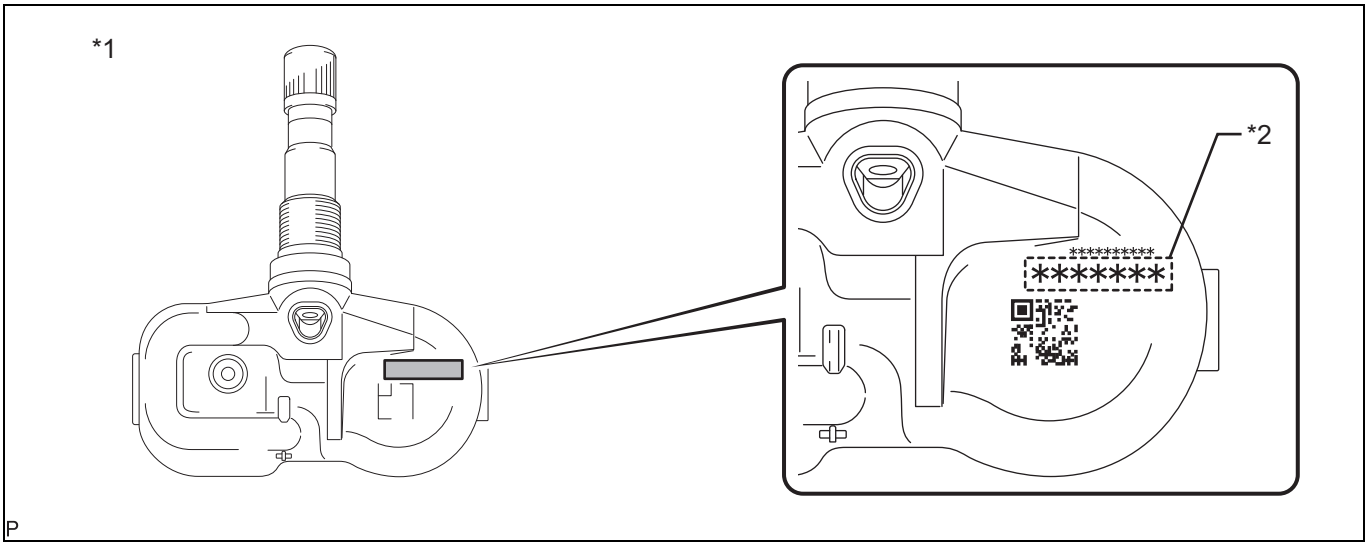
   (1) When replacing the tire pressure warning ECM/receiver:

   (a)Check the registered ID of transmitter that is recorded in the former ECM using SSM4, and record it.

   (b)If the recorded transmitter ID is not read out because of a part failure in the tire pressure warning valve/transmitter etc., remove the tire from wheel and check the ID in the tire pressure warning valve/transmitter.

   (2) When replacing the tire pressure warning valve/transmitter:

   (a)Record the 7 digits number (transmitter ID) in the tire pressure warning valve/transmitter.



P

Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Tire pressure warning valve/transmitter | *2 | Transmitter ID (7 digits number) |

2. Register the transmitter ID.

   NOTE:

   - If the registration has finished, all ID registered previously are cleared.
   - If the registration of the tire pressure warning valve/transmitter ID is not finished within 300 seconds, the registration will be cancelled.

   (1) Adjust all tire pressures to the specified pressure. (Refer to TM - 2)

   (2) Turn the ignition switch to OFF.

   (3) Connect the SSM4 to the DLC3.

   (4) Turn the IG and SSM4 to ON.

   (5) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Work Support] / [Transmitter ID regist]

   (6) Perform the procedure displayed in the SSM4.

TM

3. Confirmation of transmitter ID registration

   CAUTION:

   - It takes several minutes in order to update the tire pressure data. If the data is not displayed, perform troubleshooting according to the procedures from diagnostic code C2121 to C2124. (Refer to TM - 23)
   - If the ID is not registered, and 3 minutes or more passes, diagnostic code C2171 is recorded in the tire pressure warning ECM/receiver.
   - If the normal tire pressure is displayed, ID registration has been finished properly.
   - If the normal tire pressure is not displayed after several minutes, ID is wrong or system is malfunctioning.
   - After registration of all ID, diagnostic code C2126 is registered in the tire pressure warning ECM/receiver, and the tire pressure warning light illuminates after 1 minute blinking. If the data is sent to the tire pressure warning ECM/receiver from all tire pressure warning valve/transmitter registered to the tire pressure warning ECM/receiver, diagnostic code C2126 is cleared and the tire pressure warning light goes off.

   (1) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]

   (2) Read the value of the Tire Pressure.

   (3) Confirm that data of all transmitters are displayed in SSM4 display screen.

## Symptom table

NOTE:

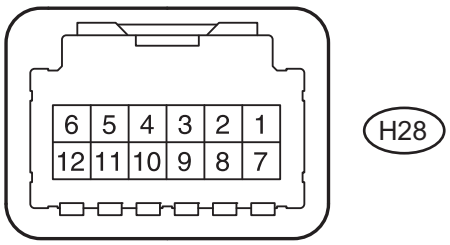
- Determine the cause of symptom using the following table. If the several areas are listed as a cause, the cause is listed in the column of the <suspected area> in the order of high possibility that becomes symptom cause. Confirm each symptom by checking the suspected area in the order of the list. If necessary, replace part.
- Before checking the following suspected area, check the fuse and relay relating this system.

Tire pressure warning system

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Tire pressure is dropping but the tire pressure warning light does not illuminate. | Data list confirmation (ID tire pressure) | TM - 14 |
| | ID code confirmation (registration) | TM - 10 |
| Tire pressure warning light illuminates (goes off during initial check) | Tire pressure warning light circuit | TM - 44 |
| Tire pressure warning light illuminates (illuminates during initial check) | Data list confirmation (ID tire pressure) | TM - 14 |
| | Adjust the tire pressure. | - |
| | ID code confirmation (registration) | TM - 10 |

## ECM terminal arrangement

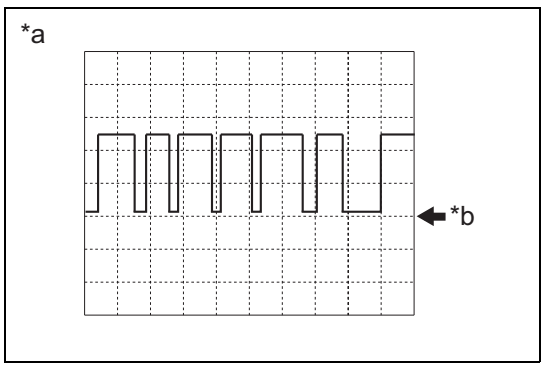
1. Check tire pressure warning ECM/receiver.
   NOTE:
   Check from the back side of the connector, with the connector connected.



P

(1) Measure the voltage and resistance according to the following table. If it is out of standard value, it is possible that the ECM is faulty.

| Terminal No. (terminal symbol) | Terminal description | Condition | Specific condition |
|---|---|---|---|
| H28-1 (IG) - H28-12 (GND) | IG power supply | IG SW ON | 11 to 14 V |
| H28-4 (RDA) - H28-12 (GND) | Output signal | IG SW ON | Pulse generation (refer to waveform 1) |
| H28-5 (PRG) - H28-12 (GND) | Input signal | IG SW ON | Pulse generation (refer to waveform 1) |
| H28-7 (+B) - H28-12 (GND) | Power supply | Always | 11 to 14 V |
| H28-12 (GND) - chassis ground | Ground | Always | 1 Ωor less |



(2) Check the waveform 1 using oscilloscope.

Captions in illustration

| | |
|---|---|
| *a | Note |
| *b | GND |

Waveform 1

| Item | Contents |
|---|---|
| Terminals | H28-4 (RDA) - H28-12 (GND)<br>H28-5 (PRG) - H28-12 (GND) |
| Equipment setting | 5 V/DIV, 50 µs./DIV. |
| Inspection conditions | IG SW ON |

NOTE:
Waveform shown in the figure is for reference. If the waveform changing HIGH and LOW alternately is shown, it is judged that the tire pressure warning ECM/receiver is normal (HIGH indicates the voltage between IG power supply voltage and the voltage that is

TM

2.2 V lower than A, and LOW indicates the voltage between 0 and 1.2V).

## Diagnosis system

1. Check warning light.
   CAUTION:
   - If the malfunction occurs in the tire pressure warning system, the tire pressure warning light blinks at 0.5 seconds interval, and illuminates after 1 minute.
   - If the malfunction returns to normal, the tire pressure warning light goes off.
   - If the tire pressure warning light illuminates, check the tire pressure immediately and adjust to the recommended pressure.
   - After IG is ON, the tire pressure warning light illuminates for 3 seconds and then goes off. If the tire pressure warning light does not illuminate for 3 seconds, perform the troubleshooting of the tire pressure warning light circuit. (Refer to TM - 44)

   (1) Turn the ignition switch to ON.

   (2) Confirm that the tire pressure warning light illuminates for 3 seconds.

Captions in illustration

| | |
|---|---|
| *1 | Tire pressure warning light |

2. Precautions when the tire pressure warning light illuminates
   (1) Check the tire pressure if the tire pressure warning light does not illuminate after IG ON or if the warning light illuminates during driving. If the tire pressure warning light illuminates within several hours after tire pressure adjustment, air is leaking little by little from the tire.
   (2) The system may not operate properly in the following conditions. (If the normal condition returns, operation comes back.)
      (a) If not all of the tire pressure warning valve/transmitter registered to the tire pressure warning ECM/receiver are installed on the tire & wheel.
      (b) If the ID codes of all tire pressure warning valve/transmitter are not registered to the tire pressure warning ECM/receiver.
      (c) If tire pressure is excessively high (absolute pressure: 480 kPa {4.9 kgf/cm$^2$, 70 psi} or more, relative pressure: 380 kPa {3.9 kgf/cm$^2$, 55 psi} or more)
      (d) If the tire pressure warning valve/transmitter battery is deteriorated.
   (3) The system may not operate properly in the following conditions. (If the normal condition returns, operation comes back.)
      (a) If the electronic device with close frequency band is used.
      (b) If the radio device or other system with close frequency band is working inside the vehicle.
      (c) If the window film with effect of blocking radio wave is used.
      (d) If the snow or ice is adhering especially near the wheel or wheel housing.
      (e) If the non-genuine wheel is used.
      (f) If the tire chain is used.

3. Tire pressure warning light indication chart
   NOTE:
   The following table indicates the illumination condition of tire pressure warning light and the system condition after IG ON.

| | Immediately after IG ON | Always | | | | | |
|---|---|---|---|---|---|---|---|
| | | Tire pressure warning light condition | | | | | |
| | Illuminates for 3 seconds | Light OFF | Light ON | Blink *1 | Blink *2 | Blink *3 | Blink *4 |
| Normal | 0 | 0 | - | - | - | - | - |
| When tire pressure is low | 0 | - | 0 | - | - | - | - |
| During system malfunction | 0 | - | - | 0 | - | - | - |

| | Immediately after IG ON | Always | | | | | |
|---|---|---|---|---|---|---|---|
| | | Tire pressure warning light condition | | | | | |
| | Illuminates for 3 seconds | Light OFF | Light ON | Blink *1 | Blink *2 | Blink *3 | Blink *4 |
| When shifting to the test mode | 0 | - | - | - | 0 | - | - |
| When poor contact in ECM connector occurs | - | - | - | 0 | - | - | - |

*1: Blinks for 1 minute at 0.5 seconds interval and then illuminates

|---|---|---|---|
| *a | ON | *b | OFF |
| *c | 0.125 seconds | - | - |

4. Diagnostic codes
   (1) The diagnostic code is recorded in the tire pressure warning ECM/receiver, and output by means of the tire pressure warning light blinking, or SSM4. (Refer to TM - 13)
5. Failsafe function
   (1) If the system malfunction occurs, the tire pressure warning light blinks for 1 minute and then illuminates to warn the driver the system malfunction.
   (2) The result of the diagnostic code is recorded in the tire pressure warning ECM/receiver.

## Checking / clearing diagnostic codes

1. Check tire pressure warning ECM/receiver.
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition switch to ON.
   (4) Turn on the SSM4.
   (5) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [DTC]
   (6) Read diagnostic codes.

2. Checking diagnostic codes (for main body ECM (multiplex network body ECM))
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition switch to ON.
   (4) Turn on the SSM4.
   (5) Enter the following menu. [Each System] / [Body Control] / [DTC]
   (6) Read diagnostic codes.
3. Clearing diagnostic codes (for the tire pressure warning ECM/receiver)
   NOTE:
   Clear diagnostic codes after resolving the problems.
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition switch to ON.
   (4) Turn on the SSM4.
   (5) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [DTC] / [Clear Memory]
   (6) Clear diagnostic codes according to the prompt shown in SSM4 display.
4. Clearing diagnostic codes (for main body ECM (multiplex network body ECM))
   NOTE:
   Clear diagnostic codes after resolving the problems.
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition switch to ON.
   (4) Turn on the SSM4.
   (5) Enter the following menu. [Each System] / [Body Control] / [DTC] / [Clear Memory]
   (6) Clear diagnostic codes according to the prompt shown in SSM4 display.

## Data monitor / active test

1. Data monitor
   NOTE:
   By using the SSM4 for reading the data list, it is able to read the values and the status of the switches, sensors, or actuators without removing these parts. The un-invading type check is very useful because it can read an intermittent condition or a signal, without interference with parts or wiring. Diagnostic time can be saved by reading the ECM data monitor information at the initial stage of the troubleshooting.
   CAUTION:
   In the following table, the value listed in the "normal condition" is a reference value. Do not depend too much on reference value when judging if the part is faulty.
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition switch to ON.
   (4) Turn on the SSM4.
   (5) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]
   (6) Read a data list according to SSM4 display.

TM

Tire pressure monitoring

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Check Mode] | Tire pressure warning system mode/ Normal operation mode or test | Normal operation mode: normal mode<br>Test: test mode | - |

| [Number of Diag.Code(0-255)] | Number of diagnostic code, record/ minutes: 0, Maximum: 255 | Minimum: 0, Maximum: - | - |

*1: Displayed only when ID No. is not registered.

*2: It takes several minutes until the data is displayed. If the data is not displayed, perform troubleshooting according to the procedures from diagnostic code C2121 to C2124. (Refer to TM - 23)

*3: This item is displayed in SSM4, but it is not used in this vehicle.

2. Active test

NOTE:

If SSM4 is used when performing active test, the relay, VSV, actuator etc. can be operated without removing parts. This functional inspection method is very useful because this can confirm the signal related to the condition or can find the malfunction

part without removing the parts or wiring. Performing the active test in the first stage of the troubleshooting, the diagnosis time can be shortened. The information for ECM data monitor can be displayed during active test.

(1) Turn the ignition switch to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Turn the ignition switch to ON.
(4) Turn on the SSM4.
(5) Enter the following menu. [Each System] / [Combination Meter] / [Active Test] / [Lamp check]
(6) Check the operation by referring to the following table.

Combination meter

| Tester display | Test part | Control range | Notes for diagnosis |
|---|---|---|---|
| [TPMS warning] | Tire pressure warning light | Tire pressure warning light OFF or ON | Confirm the vehicle is parked, and engine is idling. |

## List of diagnostic codes

NOTE:

If diagnostic codes are displayed while checking the DTC, check the circuit indicated by that code. For details concerning each code, refer to "Diagnostic codes" in the list for diagnostic codes.

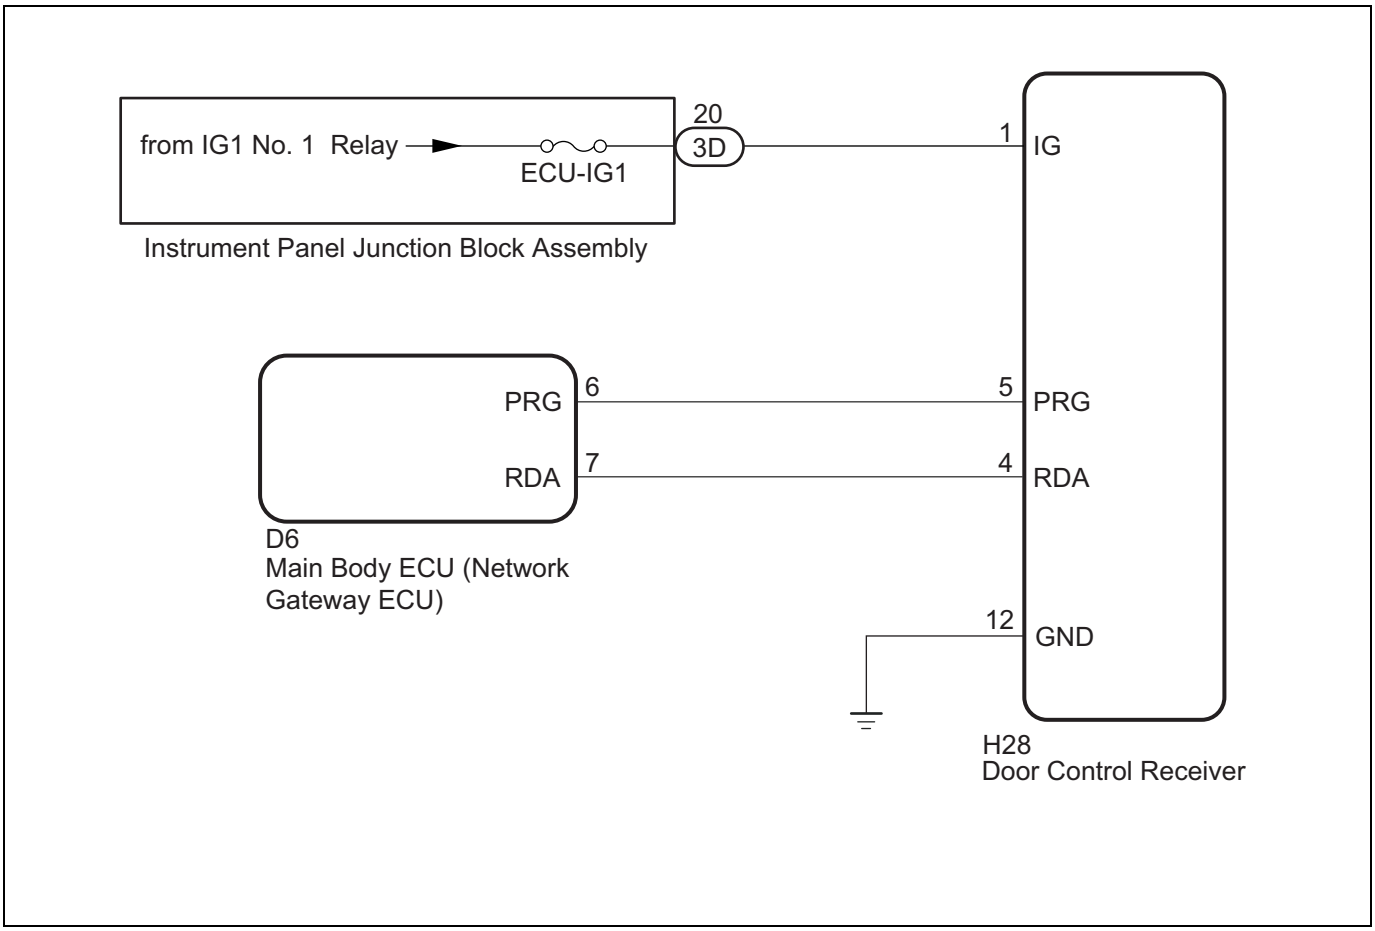
## DTC B1247 Tire pressure ECU communication suspension

Circuit description

Main body ECM (multiplex network body computer) and tire pressure warning ECM/receiver communicates via direct wiring.

| DTC No. | DTC detecting condition | Faulty part |
|---|---|---|
| B1247 | When the suitable RDA signal is not received within 10 seconds after PRG signal is sent from the main body ECM (multiplex network body computer) | • Tire pressure warning ECM/receiver<br>• Wiring harness or connector<br>• Main body ECM (multiplex network body ECM) |

Circuit figure



Inspection steps

CAUTION:

- If the tire pressure warning ECM/receiver is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.
- If the tire pressure warning ECM is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

NOTE:

Before performing the following inspection steps, check the fuses related to this system.

TM

| | |
|---|---|
| 1 | Check wire harness and connector (main body ECM (multiplex network body ECM) - tire pressure warning ECM/receiver). |

(1) Disconnect the tire pressure warning ECM/receiver H28 connector and the main body ECM (multiplex network body ECM) D6 connector.

(2) Measure the resistance according to the following table.

Normal resistance

| Tester connection | Condition | Specific condition |
|---|---|---|
| H28-4 (RDA) - D6-7 | Always | 1 Ωor less |
| H28-5 (RPG) - D6-6 | Always | 1 Ωor less |
| D6-7 - chassis ground | Always | 10 k Ωor more |
| D6-6 - chassis ground | Always | 10 k Ωor more |

NG → Repair or replacement of wiring harness or connector

OK

| 2 | Check harness and connector (power supply of tire pressure warning ECM/receiver). |
|---|---|

(1) Measure the resistance according to the following table.
Normal resistance

| Tester connection | Condition | Specific condition |
|---|---|---|
| H28-12 (GND) - chassis ground | Always | 1 Ωor less |

(2) Measure the voltage according to the following table.
Standard voltage

| Tester connection | Condition | Specific condition |
|---|---|---|
| H28-1 (IG) - chassis ground | Always | 11 to 14 V |

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Replace tire pressure warning ECM/receiver. |
|---|---|

(1) Replace the tire pressure warning ECM/receiver.

Next

| 4 | Check diagnostic code output (B1247). |
|---|---|

(1) Clear diagnostic codes. (Refer to TM - 13)
(2) Turn the ignition switch to OFF.
(3) Turn the ignition switch to ON.
(4) Check diagnostic codes. (Refer to TM - 13)
Criteria: DTC B1247 is not output.

NG → Replace the main body ECM (multiplex network body ECM).

OK

Complete

|---|---|---|

Circuit description

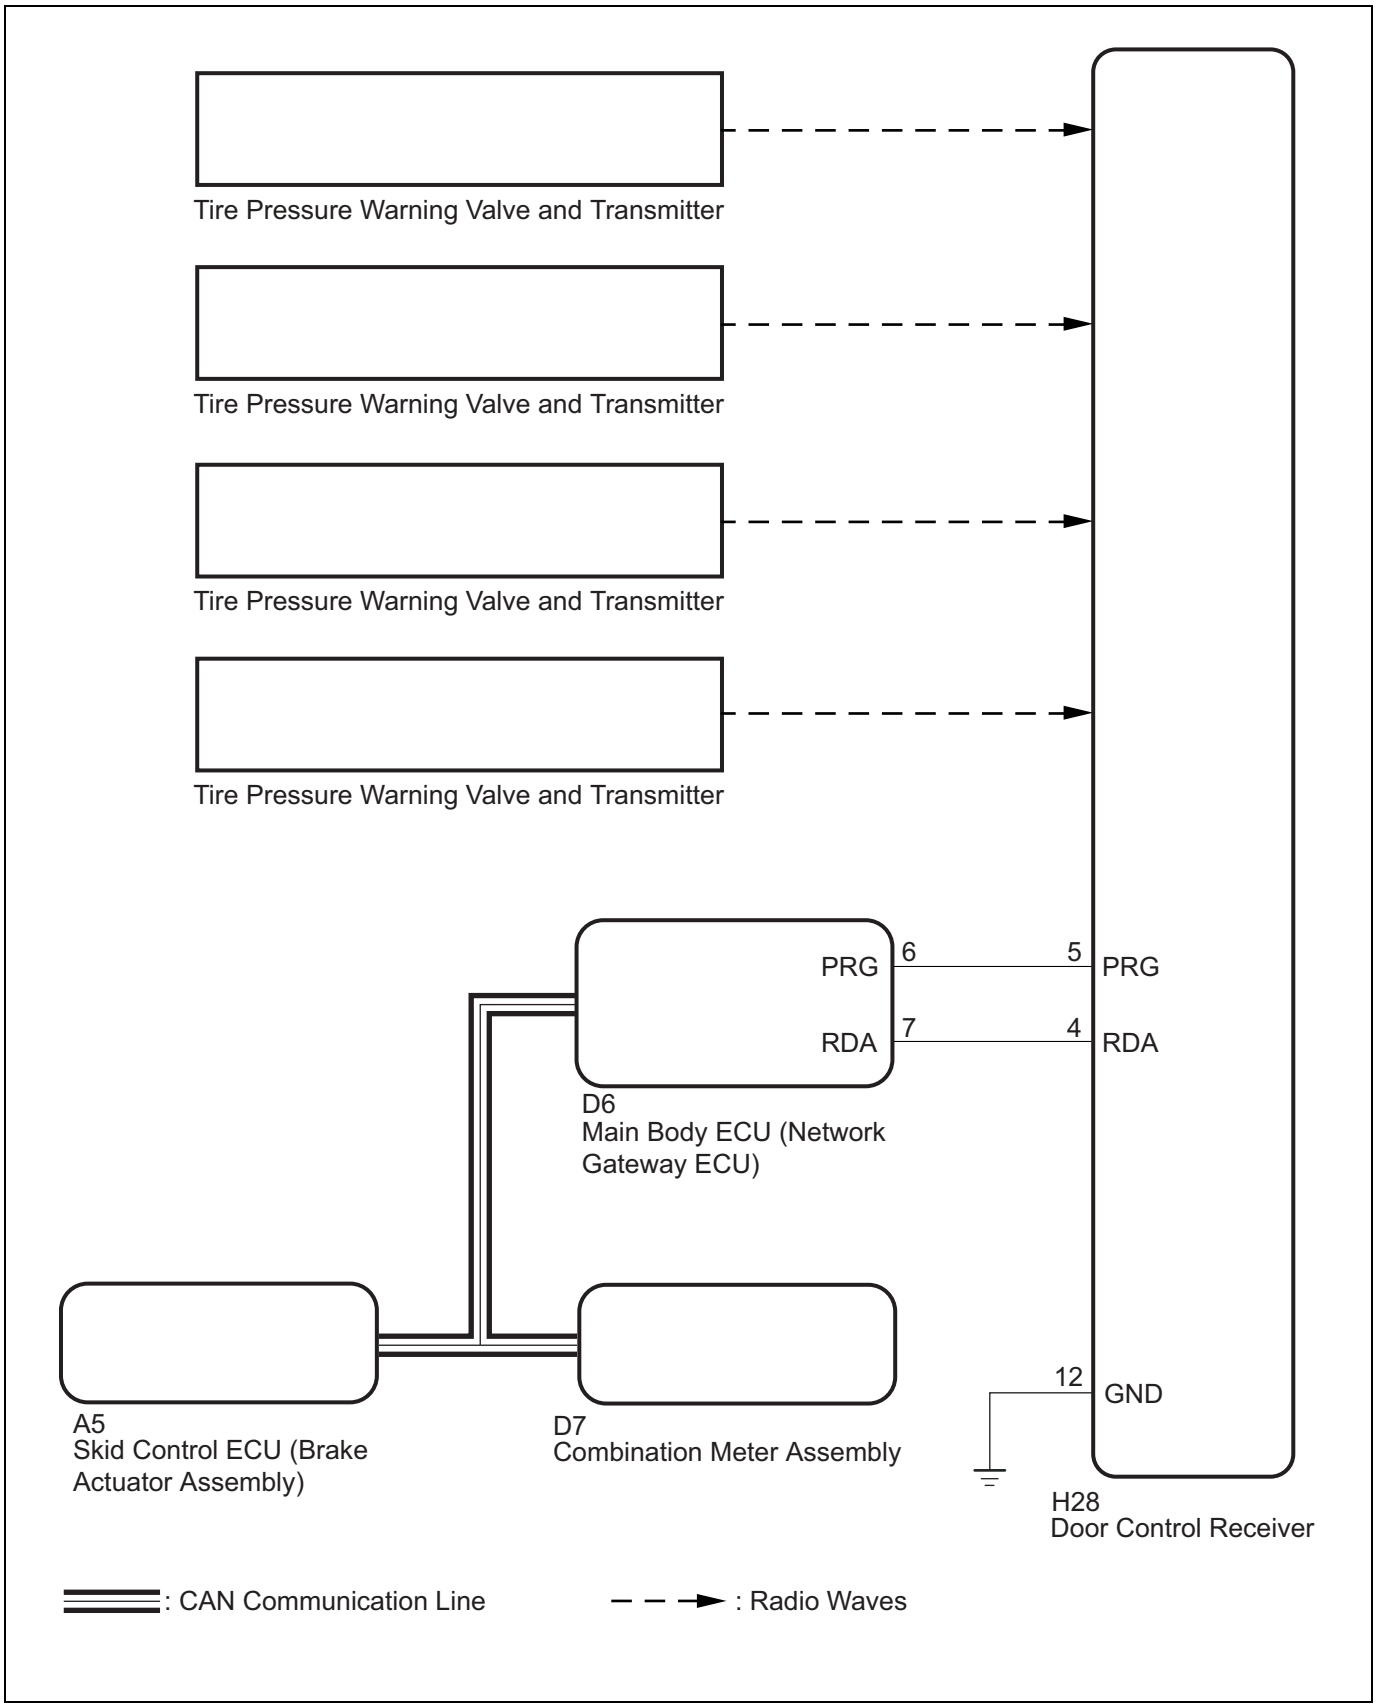
The tire pressure warning valve/transmitter installed on the tire & wheel measures the tire pressure. The measured value is sent to the tire pressure warning ECM/receiver as the form of radio wave. Tire pressure warning ECM/receiver compares the measured air pressure with the threshold of air pressure. If the measured value of the air pressure is less than threshold, the tire pressure warning light in the combination meter illuminates. If diagnostic codes are output, the tire pressure warning valve/transmitter of the tire pressure warning system is in stop condition temporarily. In this case, decrease the tire pressure rapidly to make the tire pressure warning valve/transmitter output the signal to the tire pressure warning ECM/receiver. This cancels the stop condition and clears diagnostic codes.

| DTC No. | DTC detecting condition | Faulty part |
|---|---|---|
| C2111<br>C2112<br>C2113<br>C2114 | When tire pressure warning valve/transmitter does not send signal | • Tire pressure warning valve/transmitter<br>• Tire pressure warning ECM/receiver |

NOTE:

Faulty tire pressure warning valve/transmitter can not be identified by output of diagnostic codes. Perform this procedure to identify the faulty part.

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Compulsorily send the transmitter ID of all the wheels. |

(1) Adjust tire pressures to the specified pressure.
(2) Turn the ignition switch to OFF.
(3) Connect the SSM4 to the DLC3.
(4) Turn the ignition switch to ON.
(5) Turn on the SSM4.
(6) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]
(7) Check the value by referring to the following table.

Tire pressure monitoring

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ID1 tire pressure] | ID1 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID2 tire pressure] | ID2 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID3 tire pressure] | ID3 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID4 tire pressure] | ID4 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |

*: It takes several minutes until the data is displayed. If the data is not displayed, perform troubleshooting according to the procedures from diagnostic code C2121 to C2124. (Refer to TM - 23)

(8) Deflate air pressure in each tire at least 40 kPa {0.4 kgf/cm$^2$, 5.8 psi} within 30 seconds.

(a) Confirm that the air pressure of each tire displayed in SSM4 has been changed.

Criteria: The air pressure of each tire displayed in SSM4 has been changed to tire pressure value.

CAUTION:

- It may take approximately 2 to 3 minutes for updating the tire pressure data.
- If the "Transmitter tire pressure" data does not change, rotate the tire by 90° to 270° and re-confirm. Then decrease the tire pressure rapidly and re-confirm data.

(b) Adjust the tire pressure to the specified pressure after confirming that all tire pressure data in SSM4 are updated.

NOTE:

If the tire pressure data displayed in SSM4 has not been updated after re-confirmation, check to find the other problems. (Refer to TM - 23)

NG → Go to the transmitter/receiver check procedure. (refer to TM - 23)

OK

TM

Circuit description

The tire pressure warning valve/transmitter installed on the tire & wheel measures the tire pressure. The measured value is sent to the tire pressure warning ECM/receiver as the form of radio wave. Tire pressure warning ECM/receiver compares the measured air pressure with the threshold of air pressure. If the measured value of the air pressure is less than threshold, the tire pressure warning light in the combination meter illuminates.

The tire pressure warning valve/transmitter sends a radio wave continuously to the tire pressure warning ECM/receiver. In the following situation, diagnostic codes may be output because the tire pressure warning ECM/receiver cannot receive the signal from the tire pressure warning valve/transmitter.

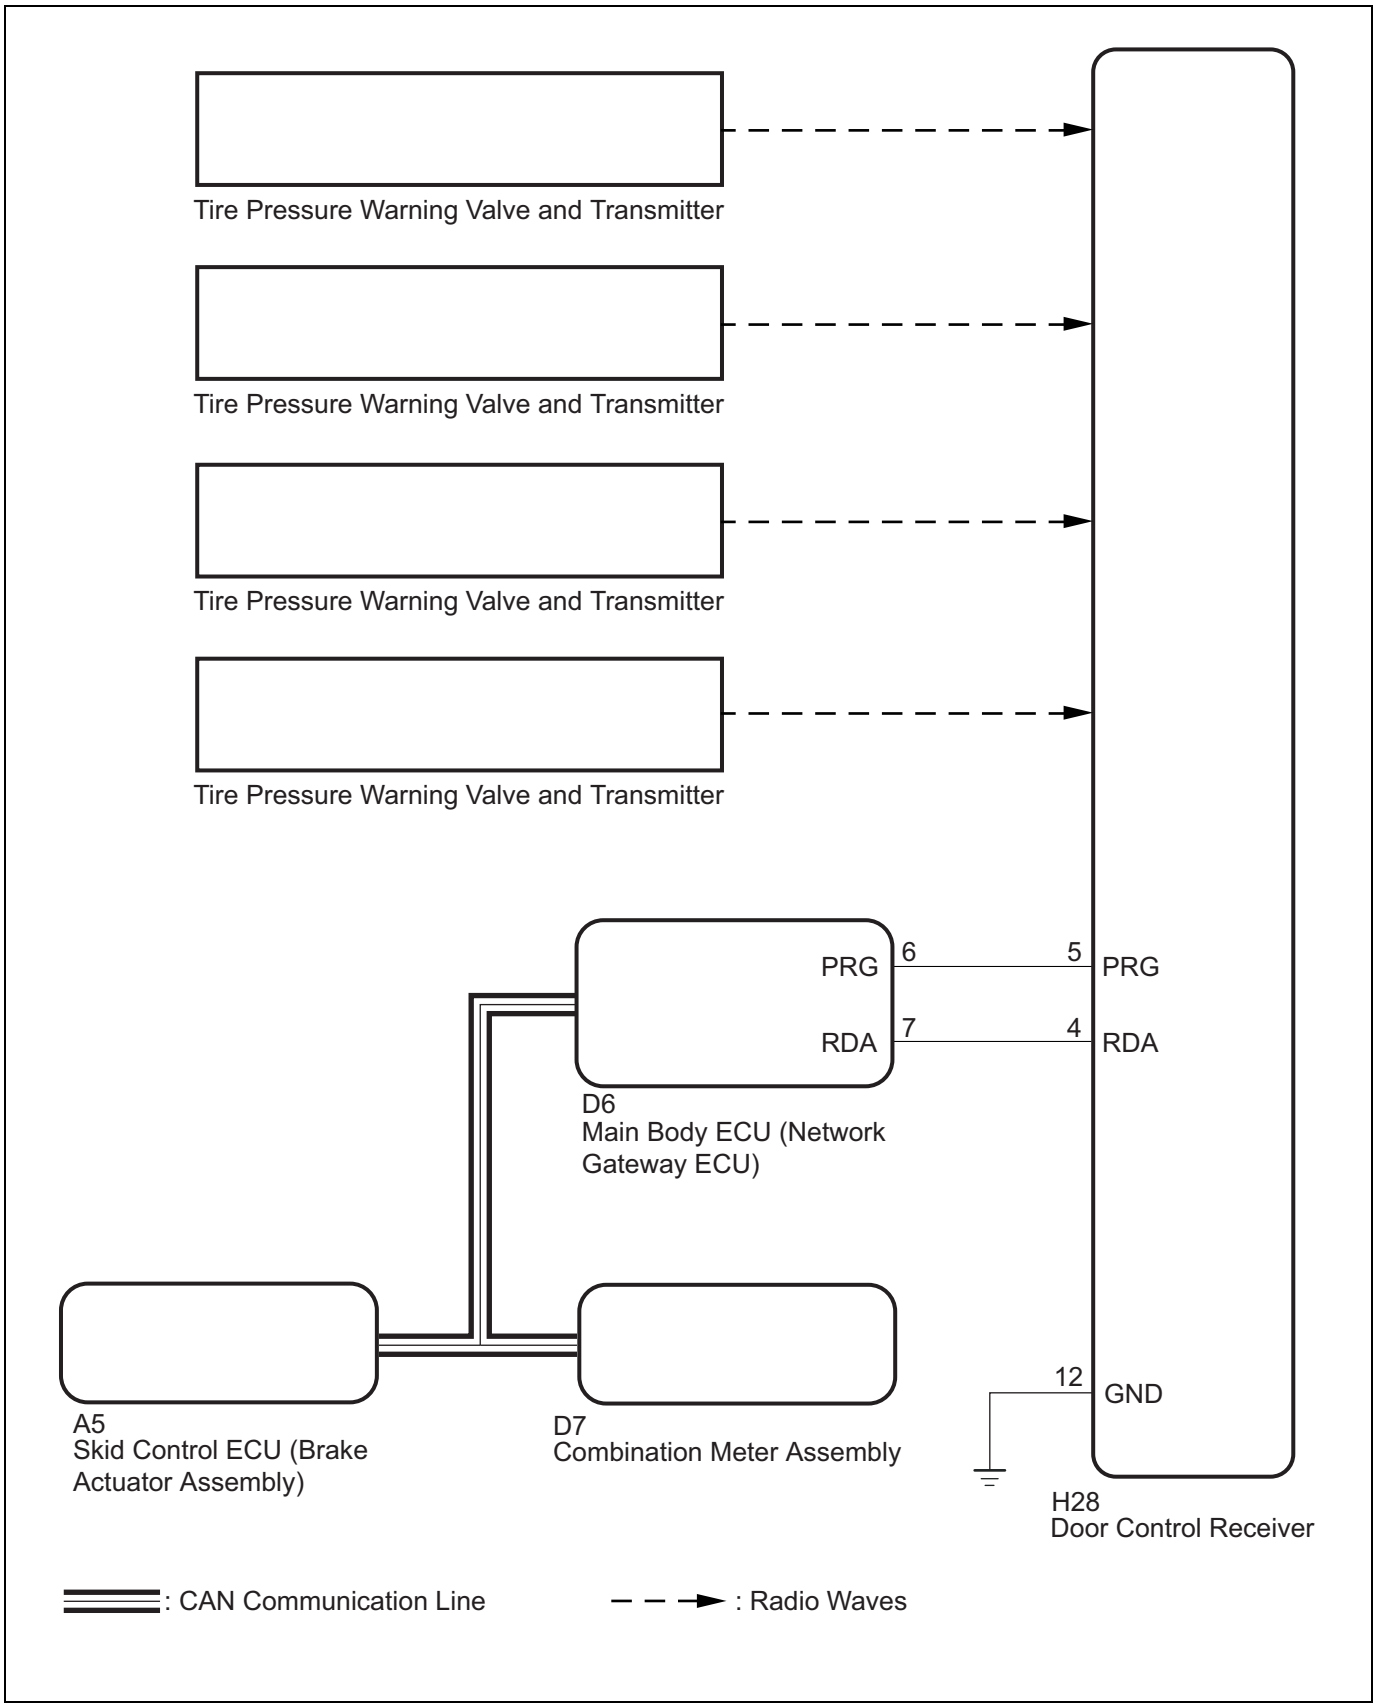
- There are devices or facilities that use the radio wave with close frequency band, near the vehicle.
- There are devices that use the radio wave with close frequency band, inside the vehicle.
- The tire pressure warning valve/transmitter ID that is registered is wrong.
- The wheel (with a tire) from other vehicles is attached.

NOTE:
These diagnostic codes are detected when the tire pressure warning ECM/receiver can not receive the radio wave from the tire pressure warning valve/transmitter and for 20 minutes or longer while the vehicle speed is 37 km/h {23 MPH} or more.
To clear DTC from C2121 to C2124, use SSM4. To clear DTC from C2181 to C2184, the tire pressure warning valve/transmitter needs to send the compulsory signal, or the test mode side operation is necessary. DTC from C2181 to C2184 are output only during test mode.

| DTC No. | DTC detecting condition | Faulty part |
|---|---|---|
| C2121<br>C2122<br>C2123<br>C2124 | Following conditions are applied:<br>1. When all following conditions are applied:<br>– When the tire pressure warning valve/transmitter does not enter stop mode.<br>– When the transmitter ID is not received from the tire pressure warning valve/transmitter.<br>– When the vehicle speed is 37 km/h {23 MPH} or more for 20 minutes or more, or when the vehicle speed signal is not received.<br>2. When both conditions are applied:<br>– When the tire pressure warning valve/transmitter does not enter stop mode.<br>– When the transmitter ID is not received from the tire pressure warning valve/transmitter for 20 minutes or more. | • Tire pressure warning valve/transmitter<br>• Tire pressure warning ECM/receiver |
| C2181<br>C2182<br>C2183<br>C2184 | Perform the test mode. | • Tire pressure warning valve/transmitter<br>• Tire pressure warning ECM/receiver |

CAUTION:
DTC C2179 has also been set at the same time when DTC from C2121 to C2124 have been set. In this case, first troubleshoot the DTC from C2121 to C2124, and then C2179.
NOTE:
Faulty tire pressure warning valve/transmitter can not be identified by output of diagnostic codes. Perform this procedure to identify the faulty part.

Circuit figure



Inspection steps

CAUTION:

- If the tire pressure warning ECM is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.

- If the tire pressure warning ECM/valve/transmitter is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

| 1 | Check frequency receive condition. |
|---|---|

(1) Check whether the vehicle is parked at the area of the following conditions.
  (a) There are devices or facilities that use the radio wave with close frequency band, near the vehicle.
  NOTE:
  The tire pressure warning light illuminates only in a certain specific area, when the vehicle is parking at the area described above.
  (b) There are devices that use the radio wave with close frequency band, inside the vehicle.
  Criteria: There are not devices or facilities that use the radio wave with close frequency band, near the vehicle.
  NOTE:
  The radio wave may be interfered with by the surrounding environment or the devices that the user attached.

NG → Check that user installed such device.

OK

| 2 | Identify transmitter corresponding to DTC. |
|---|---|

(1) Adjust tire pressures to the specified pressure.
(2) Turn the ignition switch to OFF.
(3) Connect the SSM4 to the DLC3.
(4) Turn the ignition switch to ON.
(5) Turn on the SSM4.
(6) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]
(7) Check the value by referring to the following table.

Tire pressure monitoring

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ID1 tire pressure] | ID1 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID2 tire pressure] | ID2 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ID3 tire pressure] | ID3 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID4 tire pressure] | ID4 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |

*: It takes several minutes until the data is displayed.

(8) Deflate air pressure in each tire at least 40 kPa {0.4 kgf/cm$^2$, 5.8 psi} within 30 seconds.

(9) Confirm data list.

CAUTION:

- It may take approximately 2 to 3 minutes for updating the tire pressure data.
- If the "Transmitter tire pressure" data does not change, rotate the tire by 90° to 270° and re-confirm. Then decrease the tire pressure rapidly and re-confirm data.
- Record the transmitter ID of "ID tire pressure" data corresponding to each tire.

(10) Once the "ID tire pressure" data of the tire (from ID1 to ID4) is updated, repeat these steps one by one. Identify transmitter corresponding to DTC.

Replace tire pressure warning ECM/receiver.

| DTC | C2126 | Transmitter ID Check |
|---|---|---|

Circuit description

After registration of the tire pressure warning valve/transmitter ID is finished, the tire pressure warning ECM/receiver detects diagnostic code C2126 and blinks the tire pressure warning light for 1 minute, and then illuminates it.

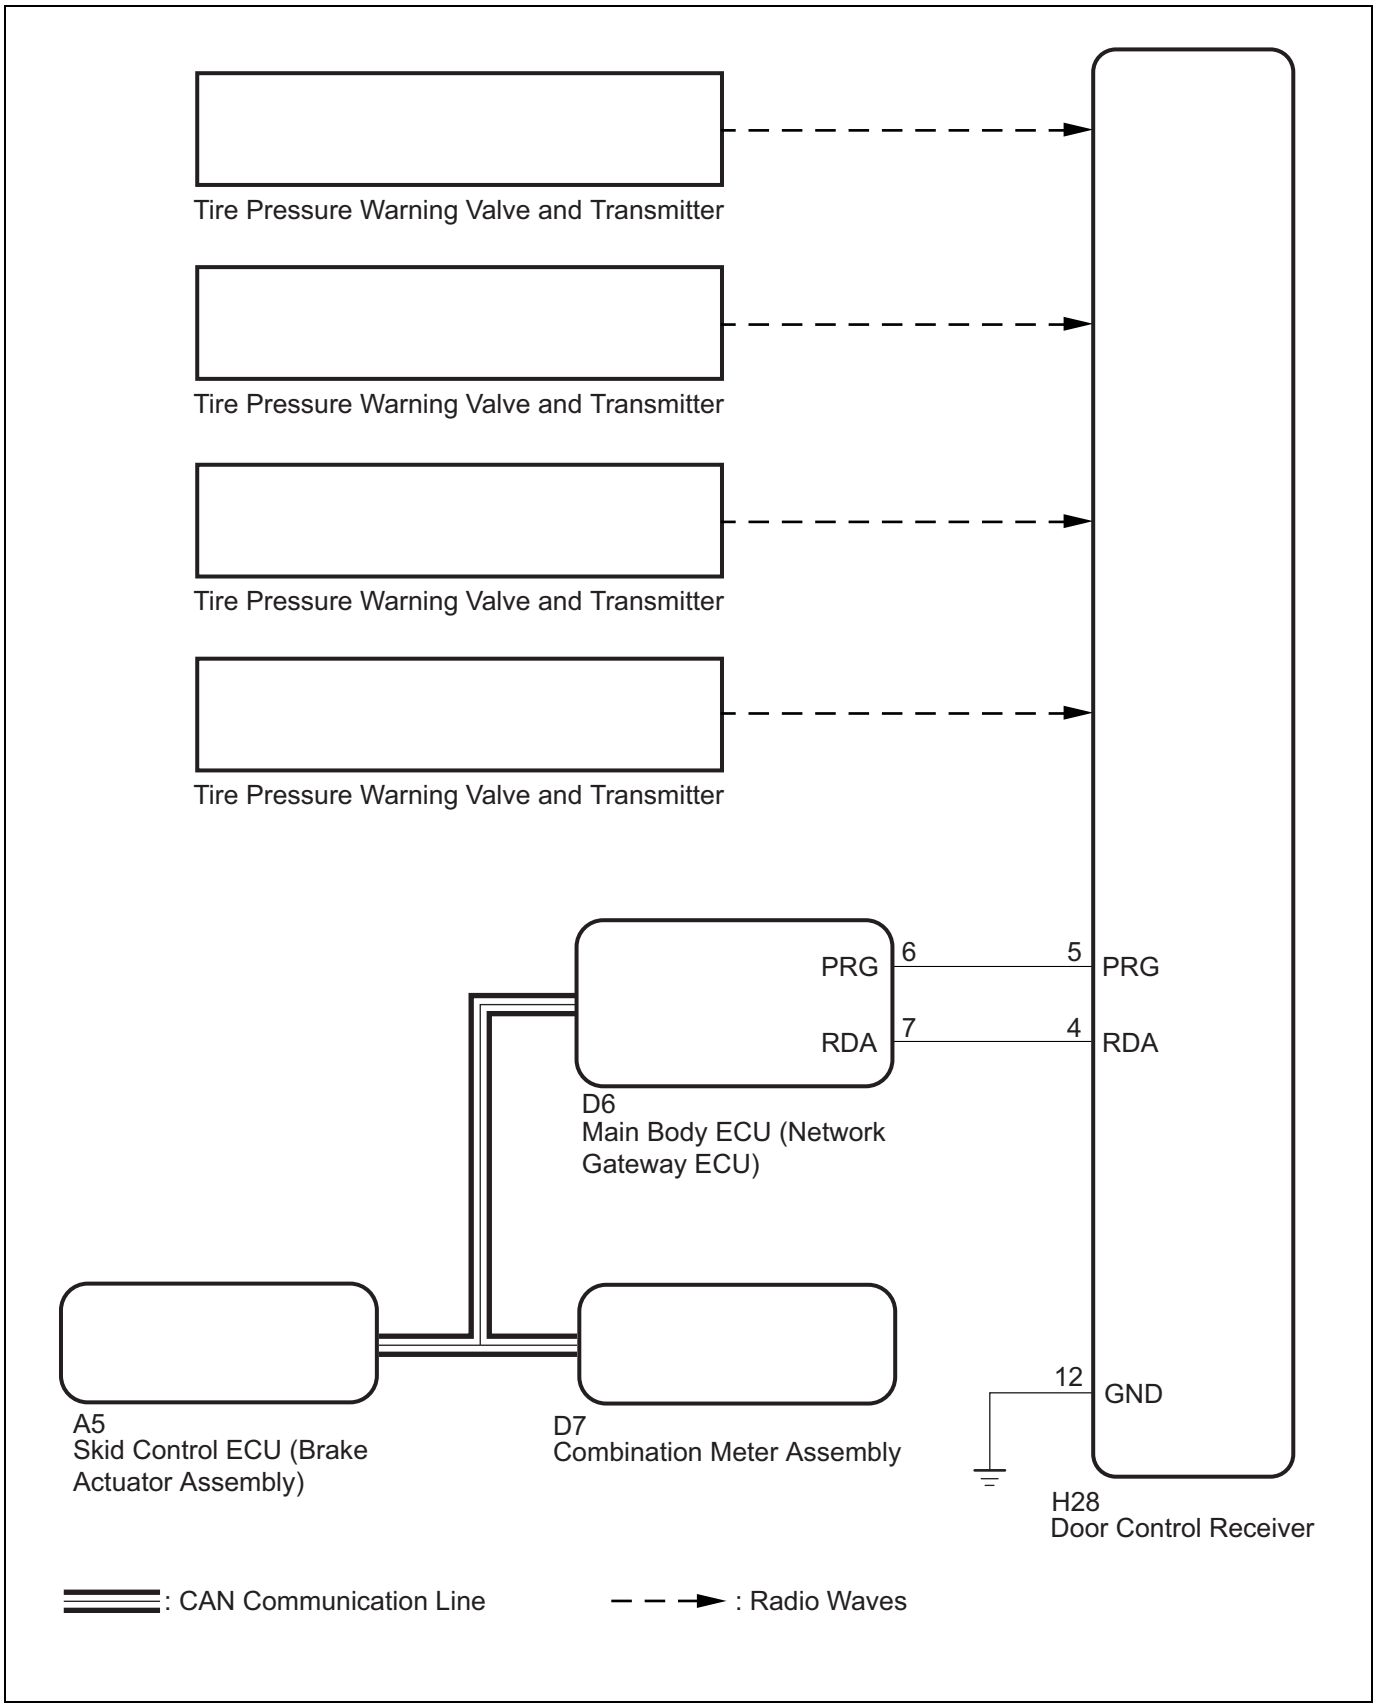
When the tire pressure warning ECM/receiver receives the data from all tire pressure warning valve/transmitter which ID has been registered to, it judges as normal, and then turn off the tire pressure warning light.

| DTC No. | DTC detecting condition | Faulty part |
|---|---|---|
| C2126 | After ID registration, when the radio wave is not received from the transmitter whose ID is stored in the ECM | • ID that is registered is wrong<br>• Tire pressure warning valve/transmitter<br>• Tire pressure warning ECM/receiver |

NOTE:

Diagnostic code C2126 is output to prevent delivery to the user of the vehicle with the wrong ID registration. After ID registration of the tire pressure warning valve/transmitter has been finished, the wrong ID registration may be the cause when the tire pressure warning light does not go off after a while.

Circuit figure



Inspection steps

CAUTION:

- If the tire pressure warning ECM is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.

- If the tire pressure warning ECM/valve/transmitter is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

|---|---|---|

Circuit description

The tire pressure warning valve/transmitter installed on the tire & wheel measures the tire pressure. The measured value is sent to the tire pressure warning ECM/receiver as the form of radio wave. Tire pressure warning ECM/receiver compares the measured air pressure with the threshold of air pressure. If the measured value of the air pressure is less than threshold, the tire pressure warning light in the combination meter illuminates. These diagnostic codes are output, when the malfunction occurred in the inner circuit of the tire pressure warning valve/transmitter.

| DTC No. | DTC detecting condition | Faulty part |
|---|---|---|
| C2141<br>C2142<br>C2143<br>C2144 | When the malfunction of inner circuit is received consecutively 3 times, the tire pressure warning valve/transmitter is judged as faulty and diagnostic codes are output.<br>This type of malfunction occurs when the pressure falls out of -50 to 380 kPa {-0.5 to 3.9 kgf/cm$^2$, -7 to 55 psi} range and the tire internal temperature falls out of -40 to 120°C {-40 to 248°F} range. Or the error occurs at the tire pressure warning valve/transmitter, and near it. | • Tire pressure warning valve/transmitter<br>• Tire pressure warning ECM/receiver |

NOTE:

Faulty tire pressure warning valve/transmitter can not be identified by output of diagnostic codes. Perform this procedure to identify the faulty part.

Inspection steps

CAUTION:

- If the tire pressure warning ECM is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.
- If the tire pressure warning ECM/valve/transmitter is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

TM

| 1 | Identify transmitter corresponding to DTC. |
|---|---|

(1) Adjust tire pressures to the specified pressure.
(2) Turn the ignition switch to OFF.
(3) Connect the SSM4 to the DLC3.
(4) Turn the ignition switch to ON.
(5) Turn on the SSM4.
(6) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]
(7) Display the "ID tire pressure" data of each wheel using the SSM4.
(8) Within 30 seconds, decrease the air pressure from each tire by 40 kPa {0.4 kg/cm2, 5.8 psi} or more. If the "ID tire pressure" displayed in SSM4 (from ID1 to ID4) is not updated, the cause of the trouble of the tire pressure warning valve/transmitter corresponding to non-updated "ID tire pressure" data is found in output diagnostic codes.

NOTE:
- Decrease the tire pressure of each tire repeatedly to identify the tire pressure warning valve/transmitter that is faulty.
- Record the "ID tire pressure" data (from ID1 to ID4) corresponding to each tire.

Tire pressure monitoring

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ID1 tire pressure] | ID1 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID2 tire pressure] | ID2 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |

| [ID4 tire pressure] | ID4 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |

*: It takes several minutes until the data is displayed. If the data is not displayed, perform troubleshooting according to the procedures from diagnostic code C2121 to C2124. (Refer to TM - 23)

(9) Confirm data list.

Result

| Result | Malfunction type |
|---|---|
| One of the "ID tire pressure" data (from ID1 to ID4) is updated. | Normal |
| "ID tire pressure" data is not changed. | Transmitter corresponding to diagnostic codes |

CAUTION:
- It may take approximately 2 to 3 minutes for updating the tire pressure data.
- If the "Transmitter tire pressure" data does not change, rotate the tire by 90° to 270° and re-confirm. Then decrease the tire pressure rapidly and re-confirm data.
- Record the position of the transmitter ID and the transmitter at normal condition.

(10) If the "Transmitter tire pressure" data is changed, perform the above procedure repeatedly for each wheel, and identify the tire pressure warning valve/transmitter corresponding to the diagnostic code.

(11) If the "Transmitter tire pressure" data (from ID1 to ID4) of 4 wheels are changed, identify the faulty wheel by output diagnostic codes and recorded transmitter ID.

Next

| 2 | Replace tire pressure warning valve/transmitter. |
|---|---|

(1) Replace the identified tire pressure warning valve/transmitter with new one.

NOTE:
- Be sure to record the transmitter ID before installing the new tire pressure warning valve/transmitter.
- Use SSM4 to check and record the ID of the tire pressure warning valve/transmitter not to be replaced.

Next

| 3 | Register the transmitter ID. |
|---|---|

(1) Register all wheel transmitter ID. (Refer to TM - 10)

Next

| 4 | Confirm tire pressure (data list). |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Turn the ignition switch to ON.
(4) Turn on the SSM4.
(5) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]
(6) Check the value by referring to the following table.

TM

Tire pressure monitoring

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ID1 tire pressure] | ID1 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ID2 tire pressure] | ID2 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID3 tire pressure] | ID3 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |
| [ID4 tire pressure] | ID4 tire pressure/<br>Minimum: absolute pressure / 50 kPa {0.5 kgf/cm$^2$, 7 psi}, relative pressure / -50 kPa {-0.5 kgf/cm$^2$, -7 psi}<br>Maximum: absolute pressure / 480 kPa {4.9 kgf/cm$^2$, 70 psi}, relative pressure / 380 kPa {3.9 kgf/cm$^2$, 55 psi} | Actual tire pressure | If 50 kPa {0.5 kgf/cm$^2$, 7 psi} is shown as the absolute pressure, or -50 kPa {-0.5 kgf/cm$^2$, -7 psi} is shown as a relative pressure, data is not received. * |

*: It takes several minutes until the data is displayed.

NOTE:

If the "Transmitter tire pressure" data does not change, rotate the tire by 90° to 270° and re-confirm. Then decrease the tire pressure rapidly and re-confirm data.

Result

| Result | Proceed to |
|---|---|
| The tire pressure data is not displayed. | A |
| The tire pressures data matches with the specified value. | B |

B → Complete

A → Replace tire pressure warning ECM/receiver.

TM

| DTC | C2171 | Transmitter ID not Registered |
|---|---|---|

Circuit description

The ID of the tire pressure warning valve/transmitter installed on each wheel is registered in the tire pressure warning ECM/receiver.

If the ECM detects the ID code that is not registered, diagnostic code is recorded.

| DTC No. | DTC detecting condition | Faulty part |
|---|---|---|
| C2171 | When the transmitter ID code is not registered (while the ID code is not registered, 3 minutes or more have passed) | Tire pressure warning ECM/receiver |

Inspection steps

CAUTION:

- If the tire pressure warning ECM is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.
- If the tire pressure warning ECM/valve/transmitter is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

| 1 | Confirm condition for registration (registered ID code). |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Turn the ignition switch to ON.
(4) Turn on the SSM4.
(5) Enter the following menu. [Each System] / [Tire Pressure Monitor] / [Data monitor]
(6) Check the value by referring to the following table.

Tire pressure monitoring

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ID1 registration code] | Registered ID1 code/ Minimum: 0, Maximum: FFFFFFF* | Displays the registered ID No. of transmitter ID1 | - |
| [ID2 registration code] | Registered ID2 code/ Minimum: 0, Maximum: FFFFFFF* | Displays the registered ID No. of transmitter ID2 | - |
| [ID3 registration code] | Registered ID3 code/ Minimum: 0, Maximum: FFFFFFF* | Displays the registered ID No. of transmitter ID3 | - |
| [ID4 registration code] | Registered ID4 code/ Minimum: 0, Maximum: FFFFFFF* | Displays the registered ID No. of transmitter ID4 | - |

*: Displayed only when ID No. is not registered.
Criteria: The transmitter ID code that has been registered in SSM4 is displayed.

NG → Go to Step 2.

OK

| Replace tire pressure warning ECM/receiver. |

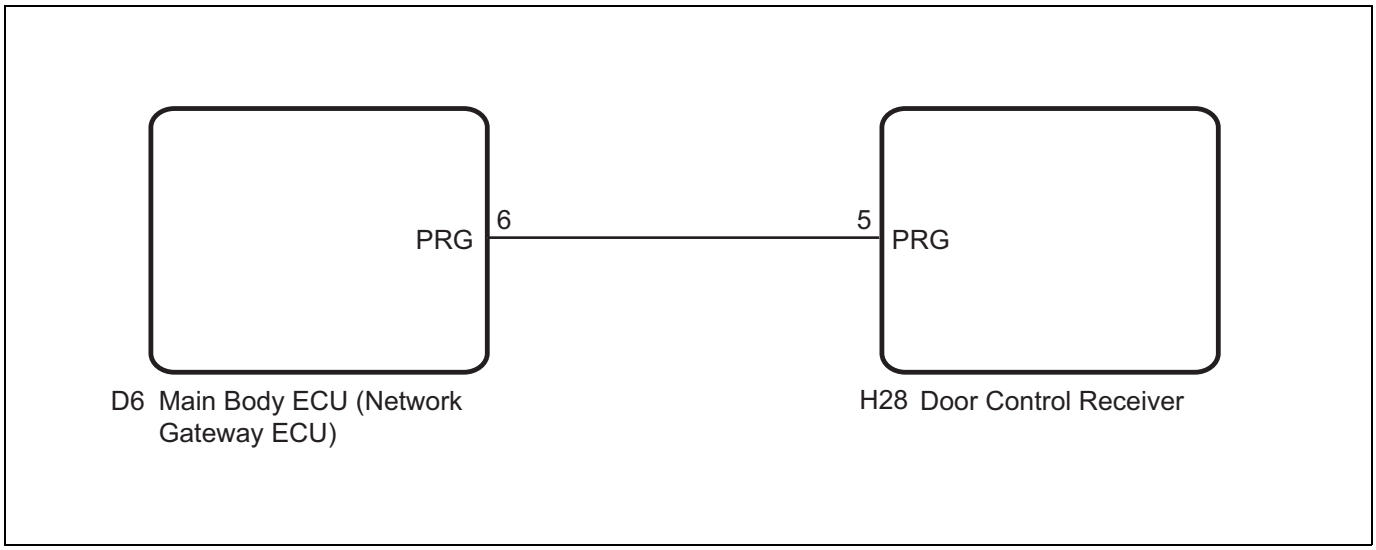
Circuit figure



Inspection steps

CAUTION:

- If the tire pressure warning ECM/receiver is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.
- If the tire pressure warning ECM is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

| | |
|---|---|
| 1 | Check wire harness and connector (tire pressure warning ECM/receiver - main body ECM (multiplex network body ECM)). |

(1) Disconnect the tire pressure warning ECM/receiver H28 connector and the main body ECM (multiplex network body ECM) D6 connector.
(2) Measure the resistance according to the following table.

Normal resistance

| Tester connection | Condition | Specific condition |
|---|---|---|
| H28-5 (PRG) - D6-6 | Always | 1 Ωor less |
| H28-5 (PRG) - chassis ground | Always | 10 k Ωor more |

NG → Repair or replacement of wiring harness or connector

OK

| | |
|---|---|
| 2 | Replace tire pressure warning ECM/receiver. |

(1) Replace the tire pressure warning ECM/receiver.

Next

| | |
|---|---|
| 3 | Check diagnostic codes output. |

(1) Clear diagnostic codes. (Refer to TM - 13)
(2) Turn the ignition switch to OFF.
(3) Turn the ignition switch to ON.

(4) Check diagnostic codes. (Refer to TM - 13)
Criteria: DTC C2179 is not output.

NG → Replace the main body ECM (multiplex network body ECM).

OK

Complete

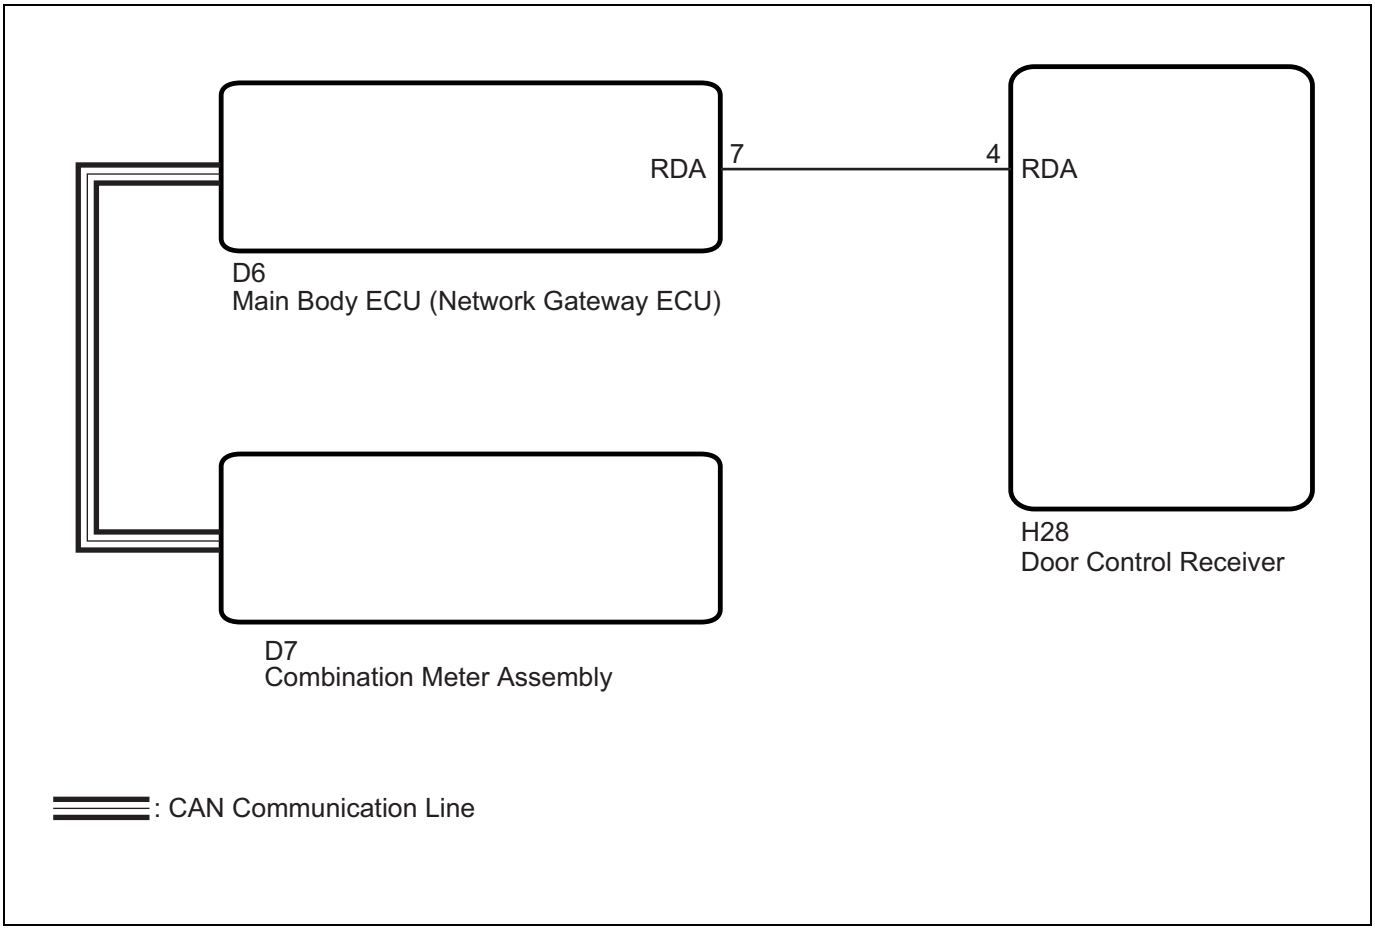
## Tire pressure warning light circuit

Circuit description

If the tire pressure warning ECM/receiver detects a malfunction, the tire pressure warning light illuminates after 1 minute blinking. At the same time, the tire pressure warning system stops. At this time, the tire pressure warning ECM/receiver records diagnostic codes. By connecting the TC terminal and CG terminal of DLC3, the tire pressure warning light blinks and diagnostic codes are output.

The tire pressure warning ECM/receiver sends the tire pressure warning light ON signal to the main body ECM (multiplex network body computer)via direct wiring. Main body ECM (multiplex network body computer) sends the signal to the combination meter ASSY via CAN communication line.

Circuit figure



Inspection steps

CAUTION:

- If the tire pressure warning ECM is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.

- If the tire pressure warning ECM/valve/transmitter is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

| 1 | Checking diagnostic codes (CAN communication system). |
|---|---|

(1) Check DTC display in the CAN communication system. (Refer to NW - 30)

Result

| Result | Proceed to |
|---|---|
| Diagnostic codes are not output. | A |
| Diagnostic codes are output. | B |

B → Go to CAN communication system.

A

| 2 | Check diagnostic code output (B1247). |
|---|---|

(1) Clear diagnostic codes. (Refer to TM - 13)
(2) Turn the ignition switch to OFF.
(3) Turn the ignition switch to ON.
(4) Check diagnostic codes. (Refer to TM - 13)
Criteria: DTC B1247 is not output.

NG → Go to diagnostic code B1247 (refer to TM - 17)

OK

| 3 | Check tire pressure warning light operation (active test). |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Turn the ignition switch to ON.
(4) Turn on the SSM4.
(5) Enter the following menu. [Each System] / [Combination Meter] / [Active Test] / [Lamp check]
(6) Using the SSM4, check the tire pressure warning light condition.

TM

Combination meter

| Tester display | Measured item/Range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [TPMS warning] | Tire pressure warning light | Tire pressure warning light OFF or ON | Confirm the vehicle is parked, and engine is idling. |

Criteria: The tire pressure warning light changes between ON and OFF according to the SSM4 operation.

B → Go to meter & gauge system.

A

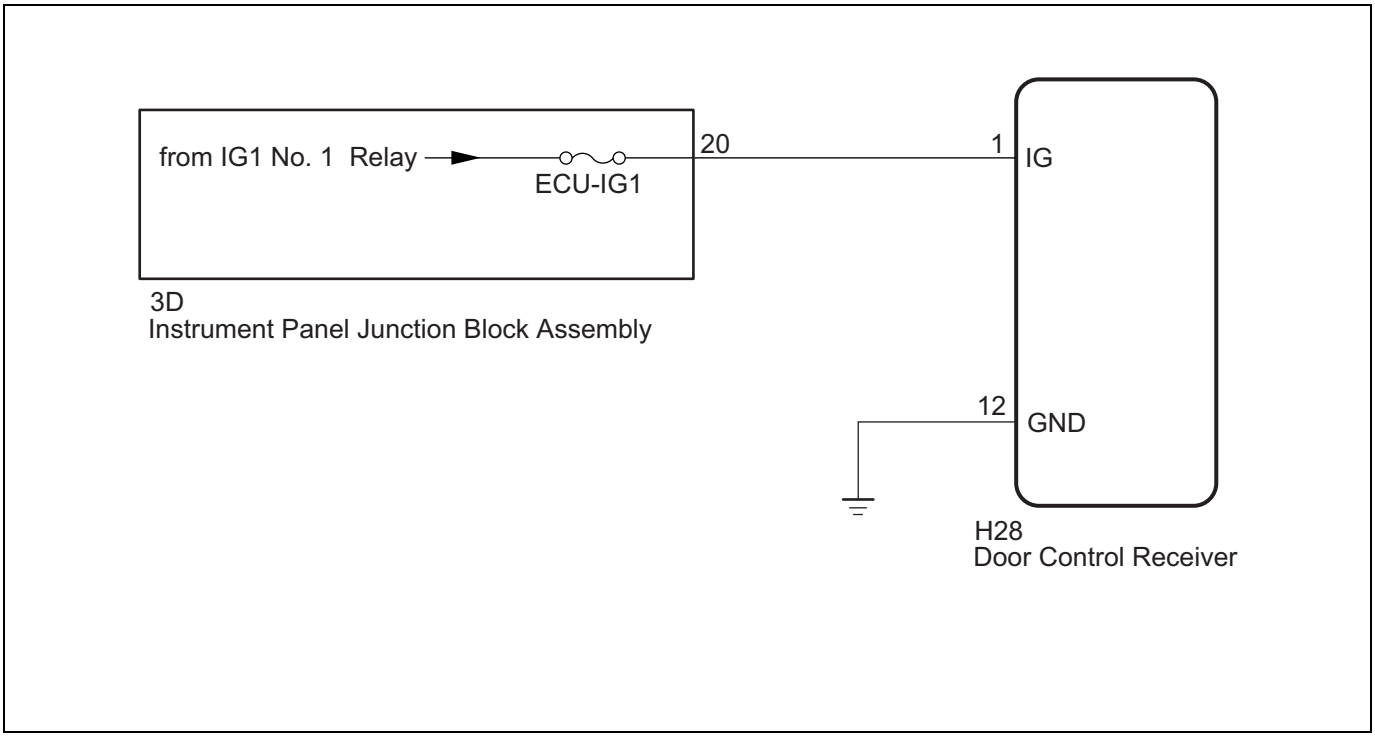
Replace tire pressure warning ECM/receiver.

## ECM power supply circuit

Circuit description

This is the power supply for the tire pressure warning ECM/receiver.

Circuit figure



Inspection steps

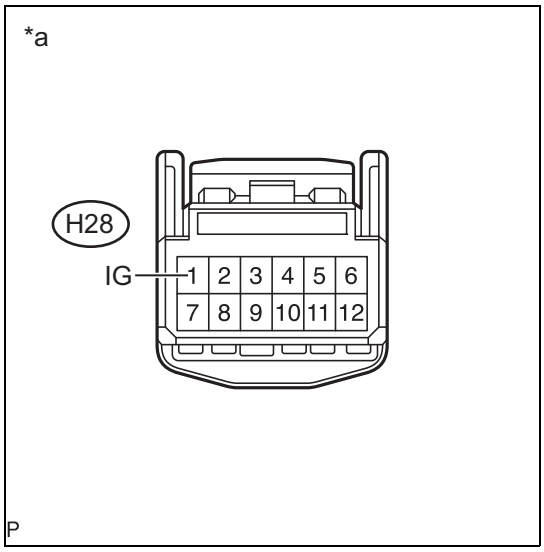
CAUTION:

- If the tire pressure warning ECM/receiver is replaced, record all ID of the tire pressure warning valve/transmitter using SSM4 in advance.
- If the tire pressure warning ECM is replaced, be sure to register the transmitter ID to the tire pressure warning ECM. (Refer to TM - 10)
- If the tire pressure warning ECM/receiver is replaced, register the recognition code after work (refer to TM - 10) and register the transmitter ID.

NOTE:

Before performing the following inspection steps, check the fuses related to this system.

| 1 | Check harness and connector (ECM - battery - chassis ground). |
|---|---|



(1) Disconnect the H28 ECM connector.
(2) Measure the voltage according to the following table.
Standard voltage

| Tester connection | Condition | Specific condition |
|---|---|---|
| H28-1 (IG) - chassis ground | IG SW ON | 11 to 14 V |
| | IG SW OFF | 1V or less |

(3) Measure the resistance according to the following table.
Normal resistance

| Tester connection | Condition | Specific condition |
|---|---|---|
| H28-12 (GND) - chassis ground | Always | 1 Ωor less |

Captions in illustration

| | |
|---|---|
| *a | Vehicle wire harness connector front side (tire pressure warning ECM/receiver) |

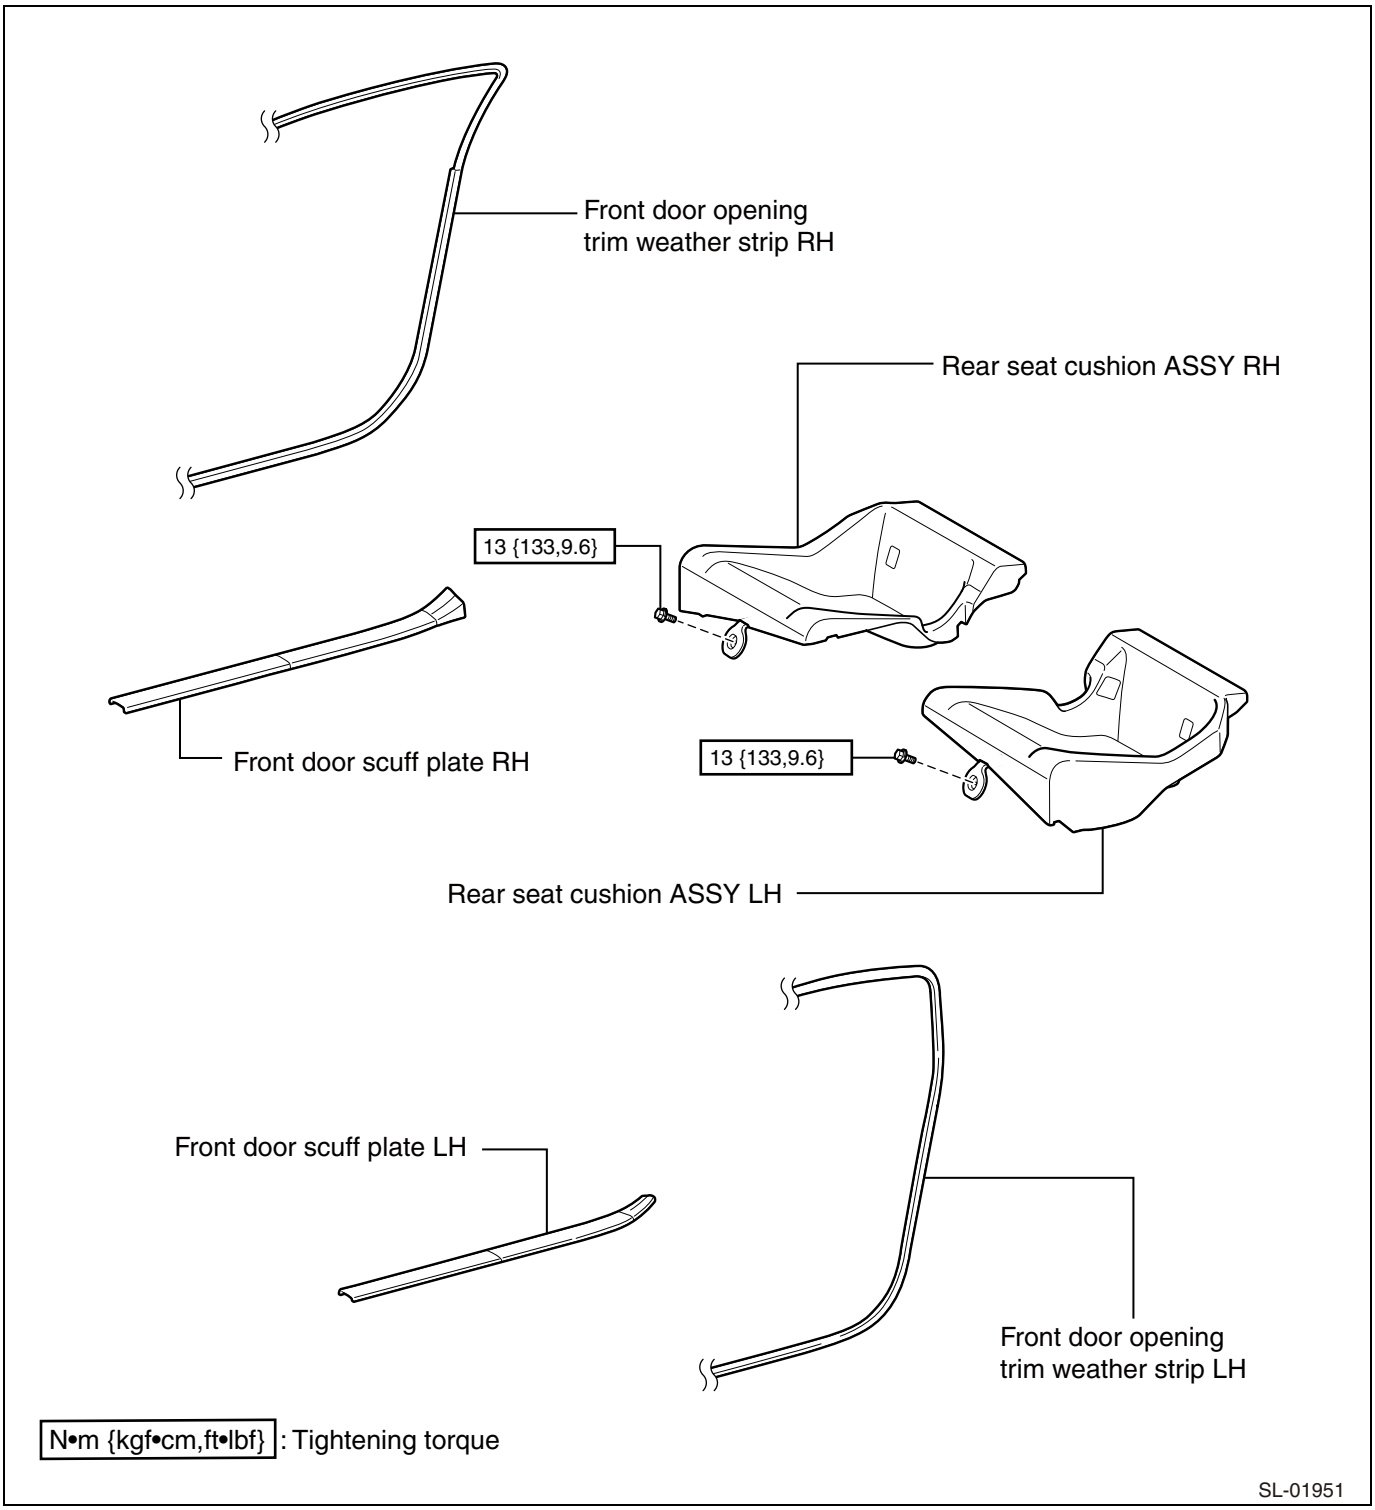
NG → Repair or replacement of wiring harness or connector

OK

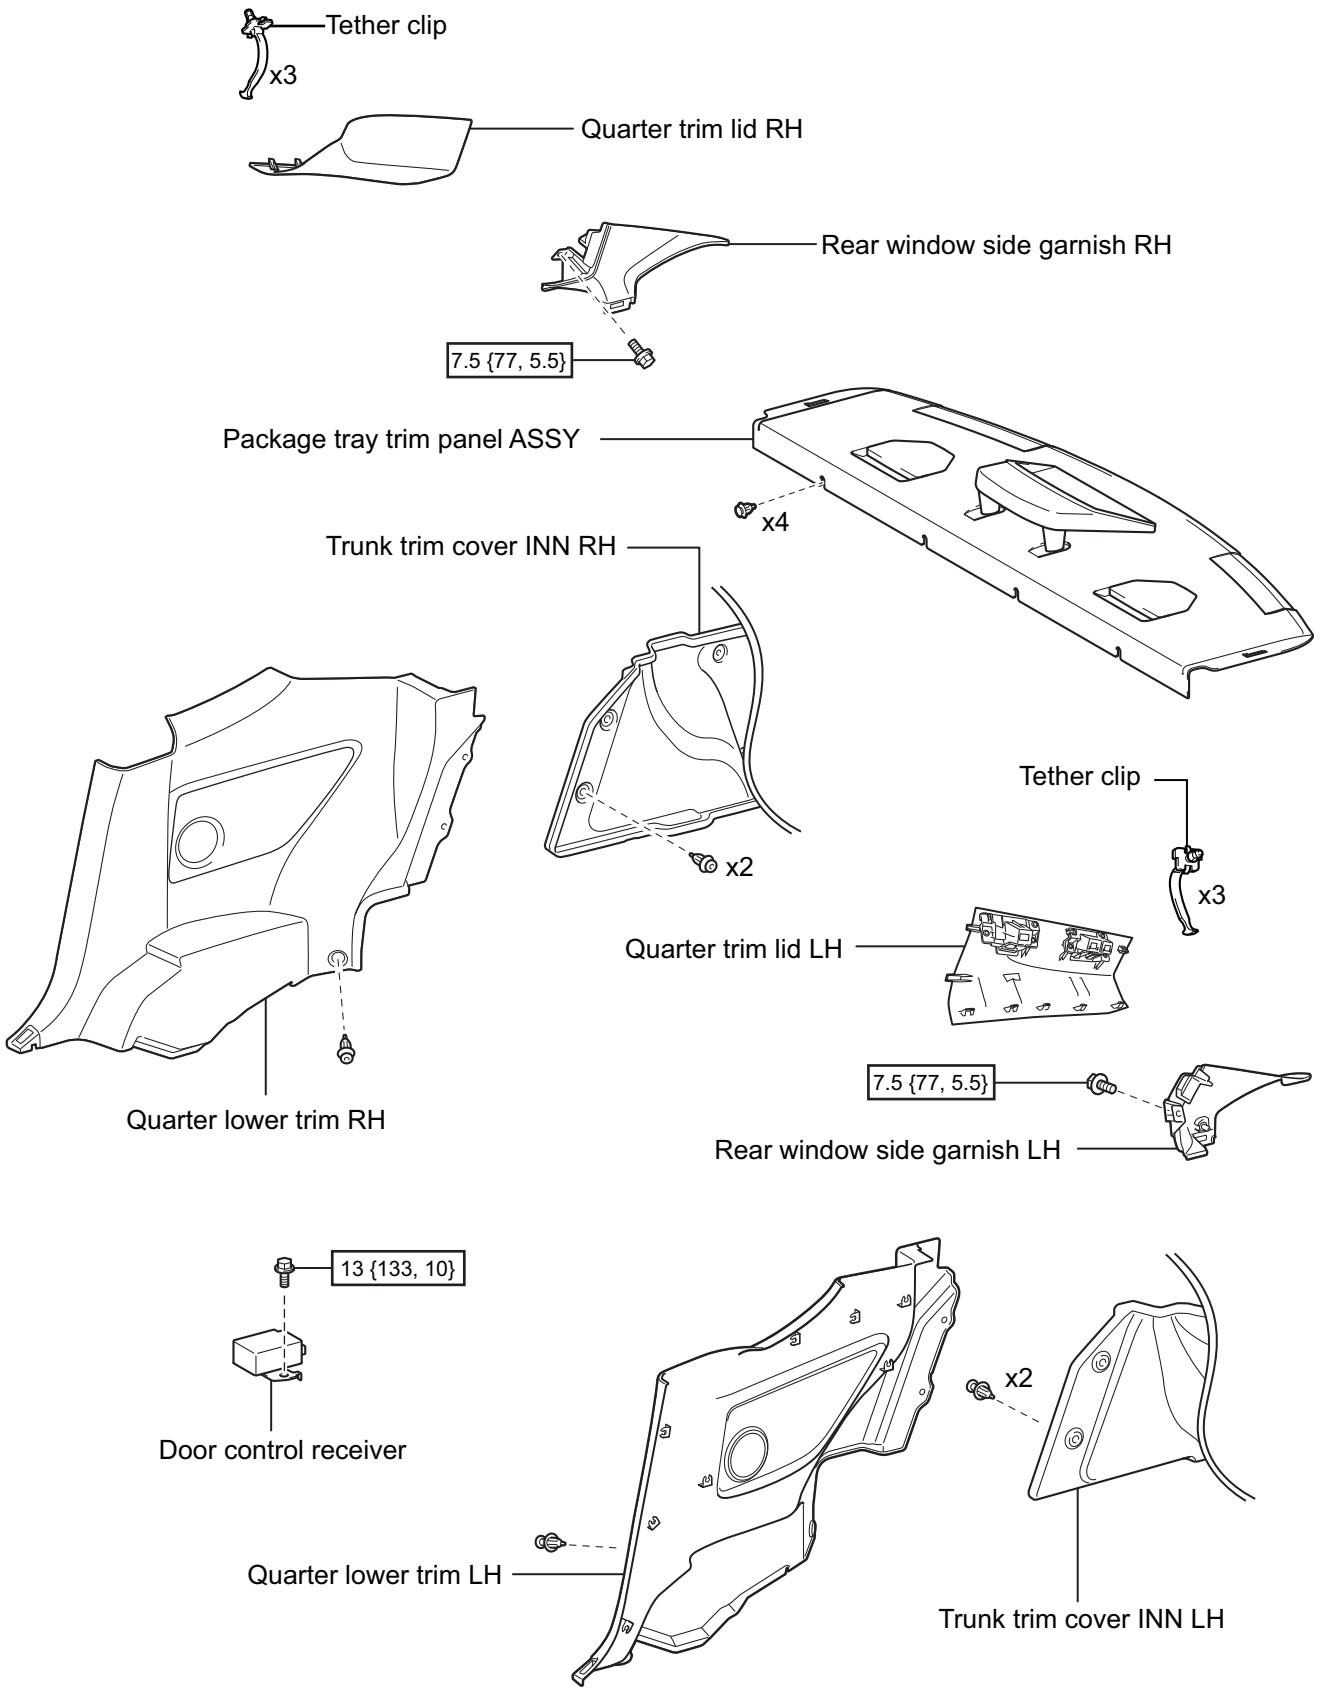
Replace tire pressure warning ECM/receiver.

# TIRE PRESSURE WARNING RECEIVER

## COMPONENTS



TM



N*m {kgf*cm, ft*lbf}: Tightening torque

EI-10379

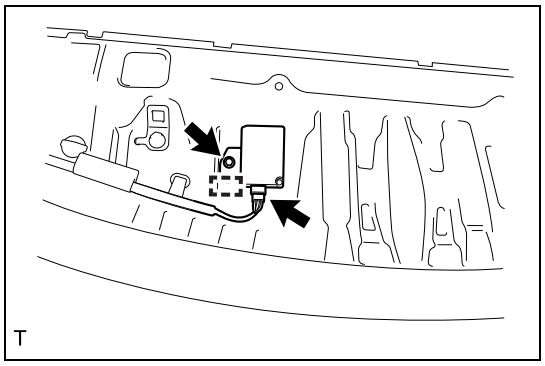
TM

## REMOVAL

NOTE:

The tire pressure warning receiver is integrated in the door control receiver.

1. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY LH (See page SE - 31)
2. REMOVE SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY RH
   NOTE:
   Use the same procedure described for the LH side.
3. REMOVE FRONT DOOR SCUFF PLATE LH (See page IT - 48)
4. REMOVE FRONT DOOR SCUFF PLATE RH
   NOTE:
   Use the same procedure described for the LH side.
5. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IT - 48)
6. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH
   NOTE:
   Use the same procedure described for the LH side.
7. SEPARATE TRUNK TRIM COVER INN LH (See page IT - 49)
8. SEPARATE TRUNK TRIM COVER INN RH
   NOTE:
   Use the same procedure described for the LH side.
9. REMOVE QUARTER LOWER TRIM LH (See page IT - 49)
10. REMOVE QUARTER LOWER TRIM RH
    NOTE:
    Use the same procedure described for the LH side.
11. REMOVE QUARTER TRIM LID SUB-ASSEMBLY LH (See page IT - 49)
12. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH
    NOTE:
    Use the same procedure described for the LH side.
13. REMOVE REAR WINDOW SIDE GARNISH LH (See page IT - 50)
14. REMOVE REAR WINDOW SIDE GARNISH RH
    NOTE:
    Use the same procedure described for the LH side.
15. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page DL - 111)



16. REMOVE DOOR CONTROL RECEIVER
    (1) Disconnect the connector.
    (2) Remove the bolt.
    (3) Disengage the guide and remove the door control receiver.
    CAUTION:
    - Do not drop the door control receiver or apply impact on it.
    - When replacing or inspecting the door control receiver, do not change the wiring route or the length of the harness around the receiver.

TM

## INSTALLATION

NOTE:

The tire pressure warning receiver is integrated in the door control receiver.

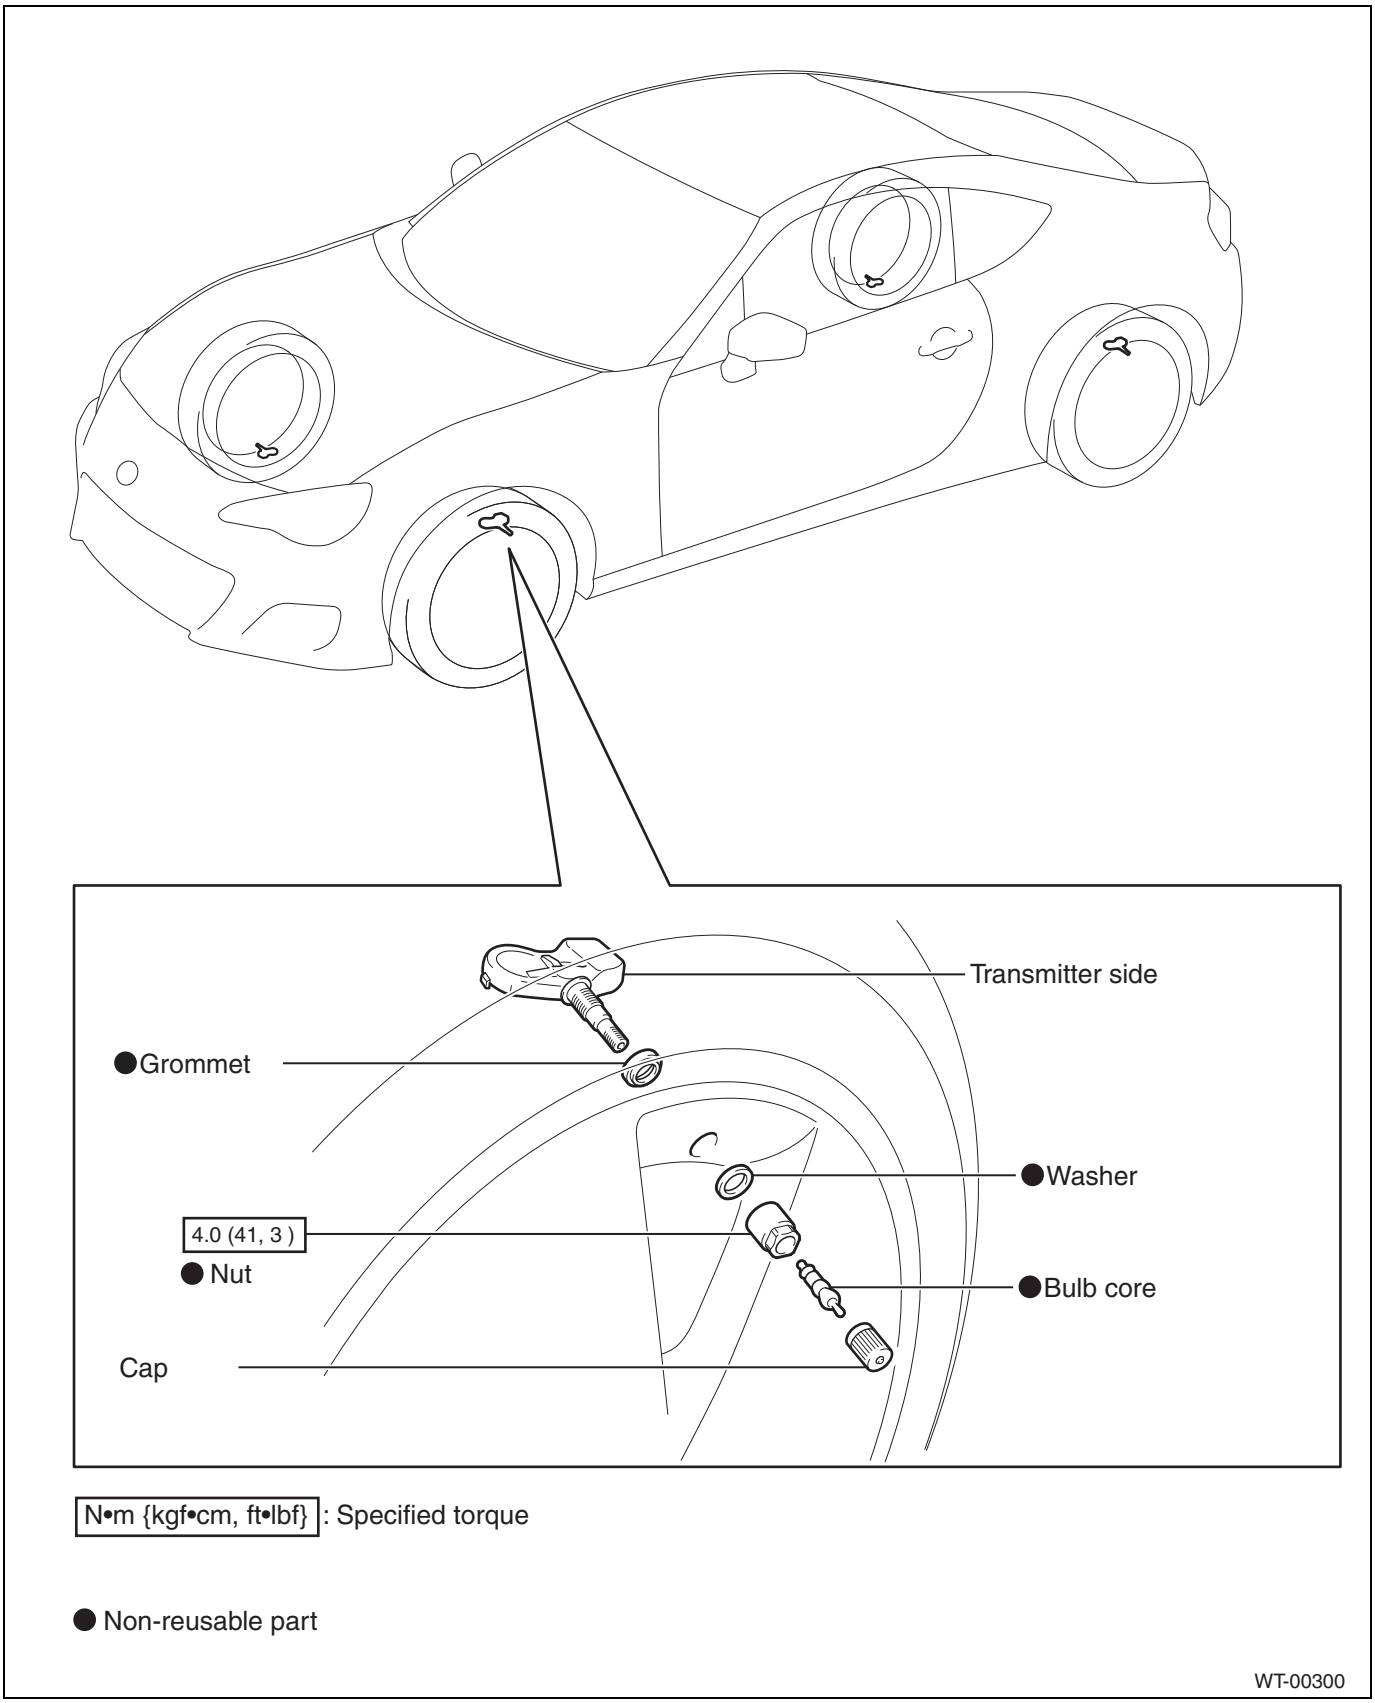
1. INSTALL DOOR CONTROL RECEIVER
   CAUTION:
   - Do not drop the door control receiver or apply impact on it.
   - When replacing or inspecting the door control receiver, do not change the wiring route or the length of the harness around the receiver.
   (1) Engage the guide and install the door control receiver.

(2) Install the bolt.
Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}
(3) Connect the connector.

2. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page DL - 112)
3. INSTALL REAR WINDOW SIDE GARNISH LH (See page IT - 57)
4. INSTALL REAR WINDOW SIDE GARNISH RH
NOTE:
Use the same procedure described for the LH side.
5. INSTALL QUARTER TRIM LID SUB-ASSEMBLY LH (See page IT - 57)
6. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH
NOTE:
Use the same procedure described for the LH side.
7. INSTALL QUARTER LOWER TRIM LH (See page IT - 57)
8. INSTALL QUARTER LOWER TRIM RH
NOTE:
Use the same procedure described for the LH side.
9. CONNECT TRUNK TRIM COVER INN LH (See page IT - 58)
10. CONNECT TRUNK TRIM COVER INN RH
NOTE:
Use the same procedure described for the LH side.
11. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IT-IT - 58)
12. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH
NOTE:
Use the same procedure described for the LH side.
13. INSTALL FRONT DOOR SCUFF PLATE LH (See page IT - 58)
14. INSTALL FRONT DOOR SCUFF PLATE RH
NOTE:
Use the same procedure described for the LH side.
15. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY LH (See page SE - 39)
16. INSTALL SEPARATE TYPE REAR SEAT CUSHION ASSEMBLY RH
NOTE:
Use the same procedure described for the LH side.

# TIRE PRESSURE WARNING VALVE

## COMPONENTS



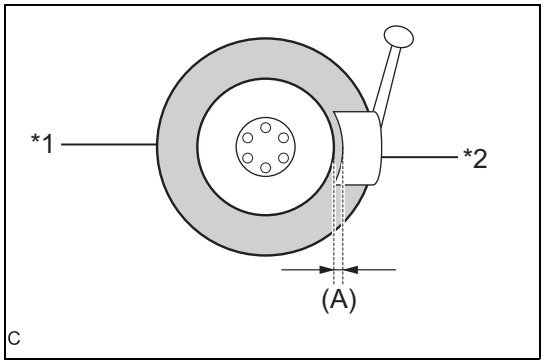
N•m {kgf•cm, ft•lbf} : Specified torque

● Non-reusable part

WT-00300

## REMOVAL

1. REMOVE FRONT WHEEL
2. REMOVE REAR WHEEL
3. REMOVE TIRE PRESSURE WARNING VALVE AND TRANSMITTER
   (1) Remove the cap and valve core to release the air from the tire.
   NOTE:
   Keep the removed cap.
   (2) After ensuring that a sufficient amount of air has been released, remove the nut and washer used to secure the tire pressure warning valve and transmitter. Drop the tire pressure warning valve and transmitter with the grommet into the tire.



NOTE:
The grommet may remain attached to the rim.

   (3) After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead using the shoe of a tire remover.

Text in Illustration

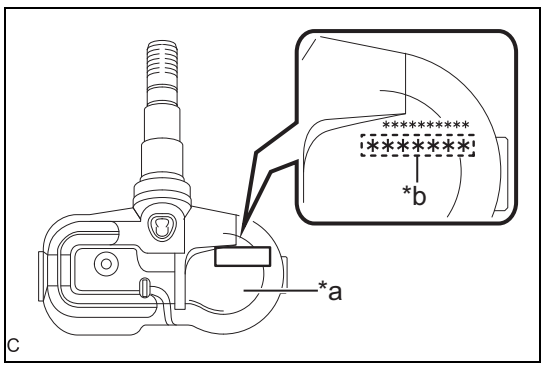
| | |
|---|---|
| *1 | Tire |
| *2 | Shoe |

CAUTION:
- Be careful not to damage the tire pressure warning valve and transmitter due to interference between the valve and the tire bead.
- Set the tire remover shoe as shown in the illustration.
  Width(A): 10 to 20 mm{0.394 to 0.787 in.}

   (4) Separate the upper bead.
   (5) Take out the tire pressure warning valve and transmitter with the grommet from the tire and separate the lower bead.
   (6) Remove the grommet from the tire pressure warning valve and transmitter.

## INSTALLATION

CAUTION:
- Always use a new grommet, washer, nut and valve core when installing the tire pressure warning valve and transmitter.
- Make sure not to damage the urethane covered backside of the tire pressure warning valve and transmitter (the surface opposite to the side with the ID code) with anything sharp.
- If installing a new tire pressure warning valve and transmitter, write down the ID number before installation.
- Check that there is no oil, water or lubricant around the rim hole, tire pressure warning valve and transmitter, washer and nut. Failing to do so may result in improper installation.
- Use only a specified cap. If an unspecified cap is used, it may seize to the tire pressure warning valve and transmitter.



1. INSTALL TIRE PRESSURE WARNING VALVE AND TRANSMITTER
   (1) Install a new grommet to the tire pressure warning valve and transmitter.
   (2) Insert the tire pressure warning valve and transmitter into the valve installation hole from the inside of the rim so that the printed surface can be seen.

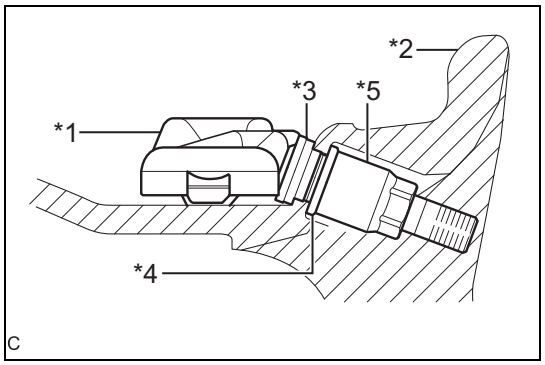
Text in Illustration

| | |
|---|---|
| *a | Printed Surface |
| *b | 7-digit Number Transmitter ID |

CAUTION:
- Check that there is no visible deformation, damage, or other abnormalities on the tire pressure warning valve and transmitter.

TM

- Check that there is no foreign matter on the grommet and around the rim hole.
- If the tire pressure warning valve and transmitter is installed upside down, it may be damaged or fail to transmit signals when driving at high speeds.



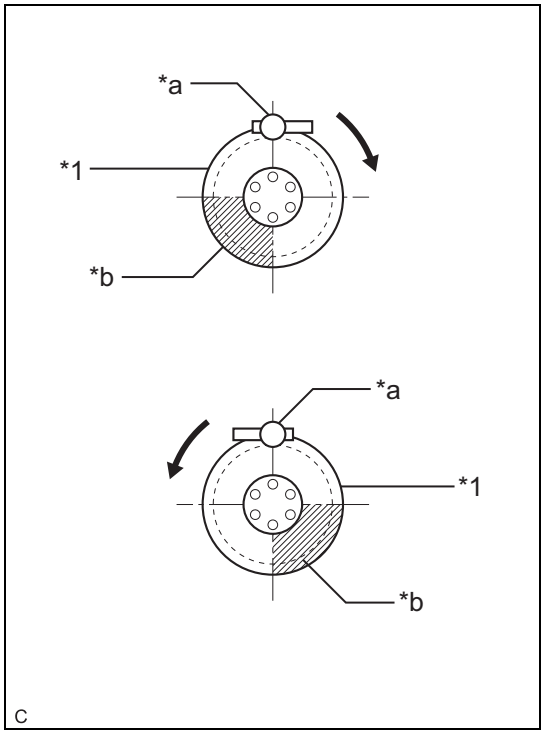
(3) From the outside of the rim, install a new washer onto the tire pressure warning valve and transmitter, and tighten a new nut.

Text in Illustration

| | |
|---|---|
| *1 | Tire Pressure Warning Valve and Transmitter |
| *2 | Rim |
| *3 | Grommet |
| *4 | Washer |
| *5 | Nut |

Standard value:T=4.0N·m {41kgf·cm} {3.0ft·lbf}

CAUTION:
- After blowing air in, check the tightening torque again.
- Check that there is no foreign matter on the washer and nut.



(4) Set the wheel onto the mounting machine and install the lower bead. Position the main body of the tire pressure warning valve and transmitter in the shaded area shown in the illustration.

Text in Illustration

| | |
|---|---|
| *1 | Rim |
| *a | Mount Tool of the Mounting Machine |
| *b | Area for Tire Pressure Warning Valve and Transmitter |
| ➡ | Rim Rotating Direction |

CAUTION:
- If the tire pressure warning valve and transmitter is positioned outside this area, it will interfere with the tire bead and may be damaged.
- If the use of lubricant is required when installing the bead, do not apply lubricant directly to the tire pressure warning valve and transmitter.

(5) Install the upper bead.

CAUTION:
Make sure that the tire bead and tool do not interfere with the main body of the tire pressure warning valve and transmitter and that it is not clamped by the bead.

(6) Install the new valve core.

(7) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque.

Standard value:T=4.0N·m {41kgf·cm} {3.0ft·lbf}

CAUTION:
No further tightening is required once the nut is tightened to the specified torque.

(8) Check for air leaks with soapy water. If there is air leakage, push the valve core 2 or 3 times to remove any dirt attached to the valve core. If air continues to leak, replace the grommet, washer and nut.

(9) Install the cap.

2. INSTALL FRONT WHEEL
Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

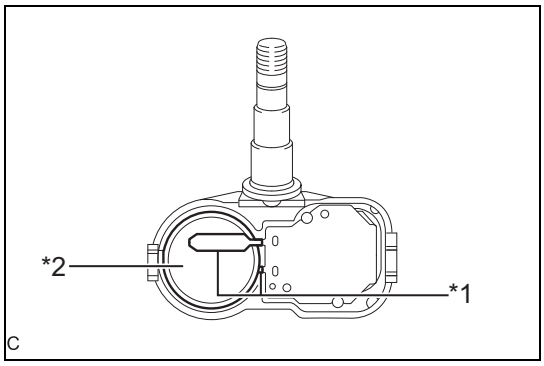
3. INSTALL REAR WHEEL
Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

4. INSPECT TIRES (refer to TW - 2).
5. REGISTER TRANSMITTER ID (refer to TM - 10).
6. REGISTER TRANSMITTER ID (refer to TM - 10).
7. INSPECT TIRE PRESSURE WARNING SYSTEM (refer to TM - 12).

## DISPOSAL

CAUTION:

The tire pressure warning valve and transmitter is powered by a lithium battery. When disposing of the tire pressure warning valve and transmitter, remove the battery and dispose of it correctly.



1. DISPOSE OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER
   (1) Cut the 2 terminals that connect the battery to the base board to remove the battery.

Text in Illustration

| | |
|---|---|
| *1 | Terminal |
| *2 | Lithium Battery |

NOTE:

The battery and base board are covered with urethane.

Inspection. . . . . TW-4

# Wheel and tire system

## Inspection

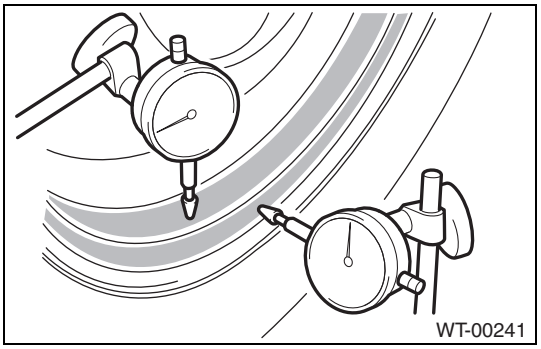
1. Tire inspection
   (1) Check the tires for wear. Replace the tires if wear exceeds service limits.
   (2) Check the tire air pressure.

Cold air pressure

| Tire size | Air pressure (front tire) (kPa {kgf/cm$^2$, psi}) | Air pressure (rear tire) (kPa {kgf/cm$^2$, psi}) |
|---|---|---|
| 215/45R17 87W | 240 {2.4, 35} | 240 {2.4, 35} |
| 215/40R18 85Y | 240 {2.4, 35} | 240 {2.4, 35} |

Temporary tire

| Tire size | Air pressure (front tire) (kPa {kgf/cm$^2$, psi}) | Air pressure (rear tire) (kPa {kgf/cm$^2$, psi}) |
|---|---|---|
| T135/80D 16 101M | 420 {4.2, 60} | No |
| T145/70D 17 106M | 420 {4.2, 60} | No |

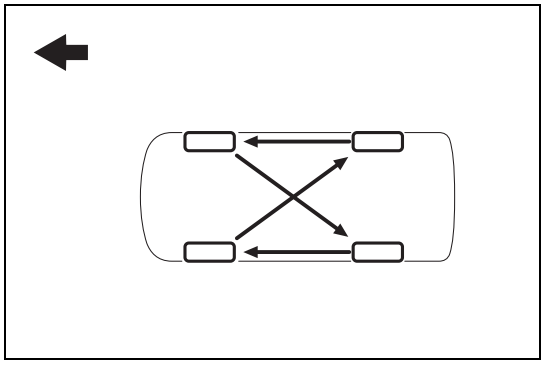


(3) Using a dial gauge, slowly rotate the wheel to check rim "runout".
- Aluminum wheel

| Axial runout limit | Radial runout limit |
|---|---|
| 1.0mm (0.039in) | |

- Steel wheel

| Axial runout limit | Radial runout limit |
|---|---|
| 1.5 mm (0.059 in) | |



2. Tire rotation
   (1) Perform tire rotation as shown in the figure.

Captions in illustration

| | |
|---|---|
| ➡ | Front of vehicle |

3. Wheel balance inspection
   (1) Inspect the wheel balance (off-the-car balance) and adjust as necessary.
   Unbalance after inspection: 10 g {0.35 oz} or less
   (2) If symptoms such as tire vibration occur even after performing off-the-car balance adjustment, perform on-the-car adjustment as necessary.
4. Axial play inspection of front axle hub bearing (Refer to AD - 11)
5. Runout inspection of front axle hub bearing (Refer to AD - 11)
6. Axial play inspection of rear axle hub bearing (Refer to AD - 22)
7. Runout inspection and adjustment of rear axle hub bearing (Refer to AD - 23)

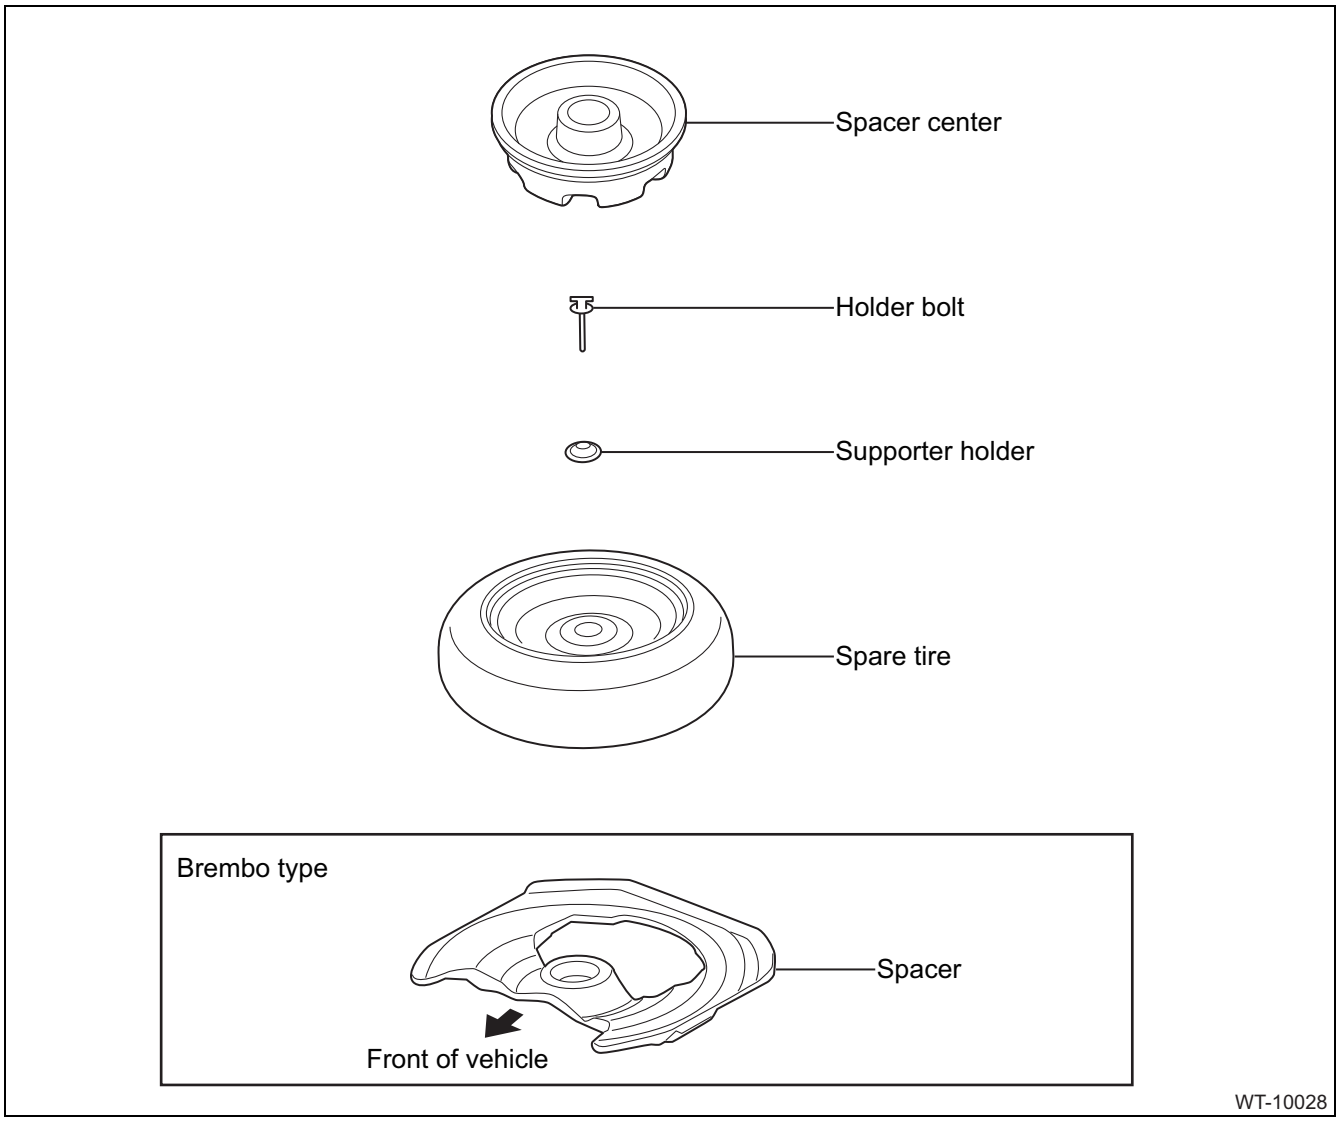
## Exploded view



## Note

"T-type" or "Temporary" tire for temporary use is equipped as a temporary tire.

CAUTION:

- The "T-type" or "Temporary" tire is only for temporary use. Replace with a standard equipment sized tire as soon as possible.
- Do not use standard sized tire chains for "T-type" or "Temporary" tires. Because tire size is small, tire chains can not be installed properly and will damage the vehicle and tires if they are detached while driving.
- Do not drive at a speed greater than 80 km/h (50 MPH).
- Drive the vehicle as slowly as possible and avoid bumps on the road.

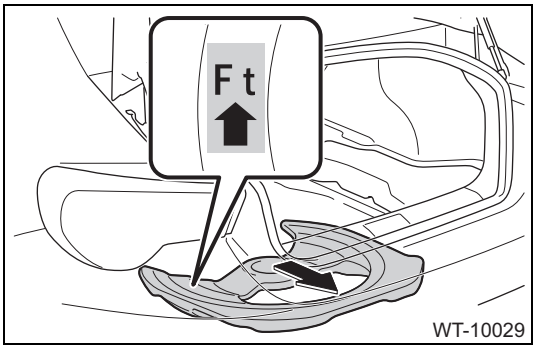
TW

## Replacement

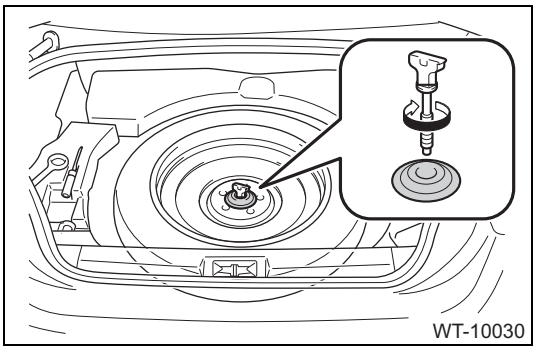
When placing T145/70 D17 temporary tire back to the spare tire storage, make sure to install the spacer.

CAUTION:

- Install the spacer with "FT↑" mark facing the front of the vehicle and the rear end coming in contact with the vehicle.



- When securing T145/70 D17 temporary tire, install the supporter holder as shown in the figure.



## Inspection

Refer to "Inspection" in "Wheel and tire system" for inspection of the "T-type" or "Temporary" tire.

# Brake control

# Vehicle stability control system

## Precautions

1. Cautions for troubleshooting
   (1) For malfunctions caused by a poor connection of terminals or parts, try reconnecting the relevant connector or parts. In some cases, this may temporarily or completely solve the problem.
   (2) To locate the malfunctioning part, check the operational status, including the diagnostic code output and freeze frame data output at the time the malfunction occurred and record them before disconnecting each connector or removing/attaching the relevant parts Also, if a circuit open error code for instantaneous interruption monitoring is output, monitor instantaneous interruption before disconnecting connectors. (Refer to BC - 20)
   (3) Considering a possibility that system other than the brake control system is affecting the malfunction, check diagnostic codes for other systems.
2. Precautions for handling and procedures
   (1) Unless otherwise specified for the check procedures, make sure that IG is OFF before removing or attaching actuators and sensors.
   (2) When the actuators and sensors have been removed or installed, perform a test mode check and diagnostic code output check to make sure that the normal display is output after all parts have been installed.
   (3) Vehicle stability control-related parts adjustment may become faulty after removal or installation. Do not remove or install them unless necessary.
   (4) When performing work related to Vehicle stability control, follow the instructions in this manual and make sure to perform all preparation work and confirm completion of the work.
3. Failsafe function
   (1) If an error occurred in a part of ABS/TRC/Vehicle stability control/brake assist system, relevant warning light and indicator light illuminate. At the same time, ABS, TRC, Vehicle stability control, and brake assist system stop the operations.
   NOTE:
   EBD control continues as long as possible even when ABS control stops. If EBD control stops, the brake warning light illuminates.
4. Precautions for diagnostic codes
   (1) As for some of the diagnostic codes, the warnings cannot be cleared only by repairing faulty parts.
   (2) To clear the warning, diagnostic codes must be cleared or the procedures below must be followed.

Warning clearance procedures

| Diagnostic codes | Procedures |
|---|---|
| C1464<br>C1465<br>C1466<br>C1467<br>C146C | 1. Replacement with new one or repair<br>2. IG ON<br>3. Drive (20 km/h or more for 30 seconds) →ABS warning light goes OFF |
| C1246 | 1. Replacement with new one or repair<br>2. Stop the vehicle for 5 seconds or longer with IG turned ON and lightly depress the brake pedal several times.<br>3. Strongly depress the brake pedal 3 times for 3 seconds while driving at the speed of 50 km/h or more →ABS warning light goes OFF |

CAUTION:
- Be careful to drive and stop the vehicle while the warning is being issued because the system does not have a fail-safe function.
- Currently issued diagnostic codes are stored in memory again.

5. Precautions for CAN communication
   (1) Data communication in skid control computer (brake actuator ASSY) uses CAN communication. If CAN communication line has a problem, a diagnostic code of communication line error is output.
   (2) If a CAN communication error code is output, repair the cause of fault in the communication line and troubleshoot the Vehicle stability control system under normal data communication conditions.
   (3) The length and route of each CAN communication line is specified. Therefore they cannot be fixed or repaired using bypass wire harness for a temporal fix or repair.

## Function inspection

1. Initial check of brake system indicator light
   (1) Turn the ignition switch to ON.
   (2) Check that the ABS warning light, the brake warning light, the TRC OFF indicator light, the vehicle stability control OFF indicator light, the TRACK indicator light and the slip indicator light illuminate and that they go off in approx. 3 seconds.
   NOTE:
   When any one of the lights does not illuminate, check the combination meter ASSY.
2. Brake actuator operation check
   (1) Preparation for inspection
   (a)Connect SSM4 to DLC3 with IG turned OFF, and start the engine.
   (b)Turn SSM4 ON, and select [Brake Control System] →[Work Support] →[Function Check Sequence].

| C146E | [Valve Relay] | 0 | BC - 60 |
| C1472 | [Lateral G Sensor abnormal] | 0 | BC - 27 |
| C1474 | [Longitudinal G Sensor abnormal] | 0 | BC - 27 |
| C1492 | [Clutch Switch OFF Malfunction] | 0 | BC - 62 |
| C1493 | [Clutch Switch ON Malfunction] | 0 | BC - 62 |
| C1494 | [Reverse Switch OFF Stuck] | 0 | BC - 64 |
| C1495 | [Reverse Switch ON Stuck] | 0 | BC - 64 |
| U0073 | [Control Module Communication Bus "A" Off] | 0 | BC - 66 |
| U0100 | [Lost Communication With ECM/PCM "A"] | 0 | BC - 66 |
| U0101 | [Lost Communication With TCM] | 0 | BC - 66 |
| U0126 | [Lost Communication With Steering Angle Sensor Module] | 0 | BC - 66 |
| U0140 | [Lost Communication With Body Control Module] | 0 | BC - 66 |

## Symptom table

1. Symptom table

   (1) If normal diagnostic codes are output, but a malfunction occurs, follow the table below and check the relevant circuit for each symptom.

   NOTE:

   Refer to the flow chart for maintenance parts.

Symptom table for VSC system

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| ABS warning light remains ON | Refer to the flow chart "ABS warning light remains ON". | BC - 67 |
| The ABS warning light does not illuminate | Refer to the flow chart "The ABS warning light does not illuminate". | BC - 70 |
| Brake warning light remains ON | Refer to the flow chart "brake warning light remains ON". | BC - 71 |
| The brake warning light does not illuminate | Refer to the flow chart "The brake warning light does not illuminate". | BC - 75 |
| TRC OFF indicator light remains ON | Refer to the flow chart "TRC OFF indicator light remains ON". | BC - 76 |
| TRC OFF indicator light does not illuminate | Refer to the flow chart "TRC OFF indicator light does not illuminate". | BC - 76 |

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Hill start assist ON indicator light remains ON | Refer to the flow chart “Hill start assist ON indicator light remains ON”. | BC - 79 |
| Hill start assist ON indicator light does not illuminate | Refer to the flow chart “Hill start assist ON indicator light does not illuminate”. | BC - 79 |
| Vehicle stability control OFF indicator light remains ON | Refer to the flow chart "Vehicle stability control OFF indicator light remains ON". | BC - 82 |
| Vehicle stability control OFF indicator light does not illuminate | Refer to the flow chart "Vehicle stability control OFF indicator light does not illuminate". | BC - 82 |
| TRACK indicator light remains ON | Refer to the flow chart “TRACK indicator light remains ON”. | BC - 85 |
| TRACK indicator light does not illuminate | Refer to the flow chart “TRACK indicator light does not illuminate”. | BC - 85 |
| Slip indicator light remains ON | Refer to the flow chart "Slip indicator light remains ON". | BC - 88 |
| The slip indicator light does not illuminate | Refer to the flow chart "Slip indicator light does not illuminate". | BC - 90 |

## Description of functions

1. Anti-lock brake system (ABS)
   (1) Helps prevent wheel lock when the brakes are applied quickly or on a slippery road surface.
2. Electronic brake distribution control (EBD)
   (1) The EBD control uses the ABS to control distribution of brake force to front and rear wheels depending on driving conditions. Also, the system controls application of braking force to right and left wheels to stabilize vehicle motion while cornering.
3. Brake assist (BA)
   (1) The main purpose of brake assist is to provide additional braking force for a driver who cannot depress the brake pedal hard when hard braking is needed. With this assist, braking performance of the vehicle is assured.
4. Traction control (TRC)
   (1) Controls slipping of driving wheels when the driver depress the accelerator pedal too far to starts or accelerates the vehicle on a slippery surface.
5. Vehicle stability control
   (1) Controls vehicle skidding sideways when vehicle is apt to understeer or oversteer excessively while cornering.
6. Parts function

| Parts | | Function |
|---|---|---|
| Brake actuator ASSY | Skid control ECM | Based on signals from sensors and switches, identifies driving conditions and sends brake control signal to the brake actuator ASSY. |
| | Master cylinder pressure sensor | Detects master cylinder pressure. |
| | Pump motor | Activates the pump in the brake actuator ASSY. |
| | Solenoid valve | • The hydraulic circuit has two master cylinder cut solenoid valves, two intake solenoid valves, four retaining solenoid valves, and four relief solenoid valves.<br>• To control a hydraulic pressure applied to the wheel cylinder, switches the hydraulic circuits based on the signal from the skid control during operation of the brake control system. |
| | Yaw rate and acceleration sensors | • The yaw rate sensor detects the vehicle yaw rate.<br>• The acceleration sensor detects longitudinal acceleration and lateral acceleration of the vehicle. |
| Skid control ECM | ABS motor relay | Provides power supply to the pump motor. |
| | ABS solenoid relay | Provides power supply to the solenoid valve. |
| Speed sensor | | Detects four wheels and speed of each wheel. |
| Console switch ASSY | Vehicle stability control OFF switch | Normal mode, TRC OFF mode, or Vehicle stability control OFF mode is selectable. |
| | TRACK switch | Either normal mode or TRACK mode is selectable. |
| Stop light switch ASSY | | Detects the brake pedal signal issued when the pedal is depressed. |
| Main body ECM (multiplex network body ECM) | | Sends parking brake switch signal to the skid control ECM. |

| Parts | Function |
|---|---|
| Parking brake switch ASSY | Detect the condition of the parking brake pedal. |
| ECM | • Sends signals including the accelerator pedal opening angle signal and the engine speed signal to the skid control ECM.<br>• Controls the engine output based on the signal received from the skid control ECM. |
| TCM | Sends gear position signal to the skid control ECM. |
| Steering angle sensor | Detects the steering direction of a steering wheel and the steering wheel angle. |

| Parts | | Function |
|---|---|---|
| Combination meter ASSY | ABS warning light | When the skid control ECM detects an ABS malfunction, it illuminates to let the driver know the malfunction occurrence. |
| | Brake warning light | • When the skid control ECM detects an EBD malfunction or a brake system malfunction, it illuminates to let the driver know the malfunction occurrence.<br>• When the brake fluid level is low, it illuminates to let the driver know the condition.<br>• When the parking brake is operated, it illuminates to let the driver know the operation. |
| | TRC OFF indicator light | When the TRC OFF mode is selected, it illuminates to let the driver know the selection. |
| | Vehicle stability control OFF indicator light V | When the Vehicle stability control OFF mode or Vehicle stability control SPORT mode is selected, it illuminates to inform the driver of the selection. |
| | TRACK indicator light | When the TRACK mode is selected, it illuminates to inform the driver of the selection. |
| | Slip indicator light | • When TRC control or Vehicle stability control is taking place, it flashes to inform the driver that the control is active.<br>• When the skid control ECM detects a TRC malfunction and/or a Vehicle stability control malfunction, it illuminates to inform the driver of the malfunction occurrence. |

## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Interview and phenomenon check |

Next

| | |
|---|---|
| 3 | Battery voltage check |

(1) Check the battery voltage.
Voltage: 11 to 14V
NOTE:
If the battery voltage is less than 11 V, recharge or replace the battery before starting the diagnostic procedures.

Next

BC

| | |
|---|---|
| 4 | Diagnostic code and freeze frame data check (Refer to BC - 13) |

(1) Check and record the diagnostic code and the freeze frame data.
(2) Clear the diagnostic code and the freeze frame data.
(3) Diagnostic code list recheck
  (a) Based on the recorded diagnostic code and the freeze frame data, reproduce the malfunction and check the diagnosis code again.
  NOTE:
  - When a diagnostic code is output, refer to “List of diagnostic codes (BC - 6)”.
  - If an error code for CAN communication system is output, first troubleshoot CAN communication and repair it. (Refer to BC - 66)
  - If SSM4 cannot communicate with skid control computer (brake actuator ASSY), check CAN communication. (Refer to NW - 30)
  - If there is no respond from the skid control computer (brake actuator ASSY), check the power and voltage input circuit for the skid control computer (brake actuator ASSY). (Refer to BC - 34)

Result

| Result | Go to |

## Checking / clearing diagnostic codes

1. Diagnostic code output check
   (1) Diagnostic code reading by SSM4
      (a)Turn the ignition switch to OFF and connect the SSM4 to the DLC3.
      (b)Turn IG ON and follow SSM4's display to read the diagnostic code.
         CAUTION:
         If there is an error, clear the diagnostic code memory after repairing.
2. Clear the diagnostic code and the freeze frame data.
   (1) Diagnostic code clearance by SSM4
      (a)Turn the ignition switch to OFF and connect the SSM4 to the DLC3.
      (b)Turn IG ON and follow SSM4's display to clear the diagnostic code.

## Freeze frame data

1. Check freeze frame data output
   (1) Using SSM4, you can check the vehicle (sensor) conditions when an abnormal diagnostic code is stored in memory.
2. Freeze frame data check when a diagnostic code is stored in memory
   (1) If a diagnostic code is output, the freeze frame data at the time of error code occurrence is stored in memory.
   (2) When the freeze frame data at the time of diagnostic code occurrence is stored in memory, the data will not be updated or cleared until the memory data is cleared (until the diagnostic code is cleared).
   (3) It saves and displays the record, which is up to 31 times of turning IG OFF →ON since the error code has been stored in memory.
      NOTE:
      The number of turning IG ON exceeds 31, "31" is displayed.
   (4) Freeze frame data check when a diagnostic error code is stored in memory
      (a)Connect the SSM4 to the DLC3 and turn the ignition to IG ON.
      (b)Display the error code on the diagnostic code confirmation screen. (Refer to BC - 13)

List of freeze frame data

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| Stop light switch | Indicates the stop light switch's status.<br>Display range: OFF/ON | OFF: Brake pedal, released<br>ON: Brake pedal, depressed | - |
| Gear position information* | Indicates the gear position of the transmission.<br>Display range: Unknown/Lo/2nd/3rd/4th/5th/6th/P, N/R | Indicates the gear position (speed) of the transmission. | - |
| System in operation | Indicates operation status of each system.<br>Display range: ABS / VSC / TRC / HBA | - | Indicates operation status of each system. |
| Yaw rate sensor | Indicates yaw rate.<br>Display range: -128 to 127°/s | When stopping: 0°/s<br>When making right turn: -128 to 0°/s<br>When making left turn: 0 to 127°/s | - |
| Lateral G sensor | Indicates lateral G.<br>Display range: -25.10 to 24.90m/s$^2$ | When turning: Varies in proportion to the generated G. | - |
| Longitudinal G sensor | Indicates longitudinal G.<br>Display range: -25.10 to 24.90m/s$^2$ | While accelerating: Varies in proportion to the generated G. | - |
| Wheel speed FR | Indicates the front right wheel speed.<br>Display range: 0.0 to 326.4km/h | When stopping: 0km/h<br>While driving at a stable speed: No significant fluctuation | - |
| Wheel speed FL | Indicates the front left wheel speed.<br>Display range: 0.0 to 326.4km/h | When stopping: 0km/h<br>While driving at a stable speed: No large changes. | - |

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| Wheel speed RR | Indicates the rear right wheel speed.<br>Display range: 0.0 to 326.4km/h | When stopping: 0km/h<br>While driving at a stable speed: No large changes. | - |

*: Transmission A/T

## Failsafe list

1. Fail safe operation
   NOTE:
   - If there is a malfunction in the sensor signal or the actuator system, the skid control ECM prohibits the power supply to the brake actuator ASSY.
   - In response to the signal received from the skid control ECM, the brake actuator turns the solenoid off. Under this condition, the vehicle operates in the same way as those vehicles without ABS, TRC, and Vehicle stability control systems.
   - The EBD control continues to function in a range where the control is possible, although ABS control is prohibited. When the EBD control becomes impossible, the brake warning light illuminates and the driver is warned of the condition.
   - When a malfunction occurs in the Vehicle stability control system components before the Vehicle stability control takes place, the Vehicle stability control will be prohibited. When a malfunction occurs in the system components while the Vehicle stability control is active, the system will be disabled.
   - When its steady control becomes impossible, the warning light illuminates and the driver is warned of the cancellation of system control. (Refer to BC-24)

ABS, EBD, and BA systems

| Item | Operation |
|---|---|
| ABS system malfunction | ABS, BA, TRC, and Vehicle stability control are prohibited. |
| BA system malfunction | ABS, BA, TRC, and Vehicle stability control are prohibited. |
| EBD system malfunction | ABS, EBD, BA, TRC, and Vehicle stability control are prohibited. |

BC

TRC and Vehicle stability control system

| Item | Operation |
|---|---|
| Malfunction of engine control system (TRC and Vehicle stability control system) | Before control takes place: Disables the control. Control ON: Control with brake only |
| Malfunction of automatic transmission control system (TRC and Vehicle stability control system) | Disables the control. |
| Malfunction of brake control system (Vehicle stability control system) | Disables the control. |
| Brake control system malfunction (TRC system) | Before control takes place: Disables the control. Control ON: The control is disabled. |

## Work support

1. VSC(VDC) Centering Mode

   CAUTION:

   - When the skid control computer (brake actuator ASSY) or the brake actuator ECM has been replaced, make sure to perform VDC sensor midpoint setting.
   - Make sure to perform [VSC(VDC) Centering Mode] on a level surface (grade of 1 % or less). While centering, do not shake the vehicle or open/close a door.

   NOTE:

   When performing [VSC(VDC) Centering Mode], make sure to set zero point of yaw rate sensor & G sensor (brake actuator ASSY is integrated) and steering sensor.

   (1) Turn the ignition switch to OFF.
   (2) Shift into neutral and apply the parking brake.
   (3) Connect the SSM4 to the DLC3.
   (4) Turn the ignition switch to ON.
   (5) Set the steering wheel in a straight position.
   (6) On the SSM4 screen, select [Brake Control System] →[Work Support] →[VSC(VDC) Centering Mode].
   (7) Following the SSM4 screen, perform [VSC(VDC) Centering Mode].

2. Changing modes

   - When it is necessary to temporarily stop the control while operating the vehicle on a device such as free rollers, enter into the check mode. While in the check mode, DTCs listed in the list may be stored.
   - If any DTCs are stored, clear the DTCs using SSM4. After turning IG OFF→ON, the conditions are normal if speed sensor related DTCs are not stored.

Code list

| Code no.<br>[SAE] | Content of diagnosis |
|---|---|

Captions in illustration

| | | | |
|---|---|---|---|
| *a | Front side of vehicle wiring harness connector<br>(Skid control computer (brake actuator ASSY)- connector) | - | - |

(1) Disconnect the connector from the skid control computer (brake actuator ASSY).
(2) Check the voltage and resistance between chassis ground and each terminal of the connector on the wiring harness side of the skid control computer (brake actuator ASSY).

Criteria

| Terminal No. (terminal symbol) | Terminal description | Measuring condition | Standard value |
|---|---|---|---|
| A5-1 (+BM) ←→chassis ground | Motor relay drive power supply | Always | 11 to 14V |
| A5-12 (CSW1) ←→chassis ground | Vehicle stability control OFF switch input | Press and hold Vehicle stability control OFF switch. | Less than 1 Ω |
| | | Release Vehicle stability control OFF. | 10 k Ωor more |
| A5-13 (GND2) ←→chassis ground | Actuator pump motor GND | Always | Less than 1 Ω |
| A5-25 (+BS) ←→chassis ground | Solenoid relay drive power supply | Always | 11 to 14V |
| A5-9 (CSW2) ←→chassis ground | TRACK switch input | Press and hold TRACK switch. | Less than 1 Ω |
| | | Release TRACK switch. | 10 kΩ or more |
| A5-28 (IG1) ←→chassis ground | IG power supply (ECM power supply) input | IG ON | 11 to 14V |
| A5-30 (STP) ←→chassis ground | Stop light switch input | Brake pedal, depressed | 8 to 14V |
| | | Brake pedal, released | Less than 1.5 V |
| A5-38 (GND1) ←→chassis ground | Skid control computer GND | Always | Less than 1 Ω |

## Data monitor

1. Data monitor list
(1) Turn the ignition switch to OFF and connect the SSM4 to the DLC3.
(2) With IG ON, follow the SSM4 on-screen instructions to check the data monitor.
CAUTION:
Factors including slight margins of error in measurement, differences in measurement environments, and vehicle's time-dependent change may significantly affect the computer data values. Thus it is difficult for the computer data to show reliable standard values (judgment values). Therefore, even if the value is within the standard range, an error may occur.

SSM4 screen: [Brake Control System] →[Data monitor]

| DTC | C1201 | EGI error |
|---|---|---|

Description of functions

When an EFI system error is input, this code will be output to illuminate the slip indicator light. (Vehicle stability control system is normal.)

Under the EFI system error, TRC and Vehicle stability controls are prohibited for fail safe.

| Diagnostic codes | DTC detecting conditions | Faulty part |
|---|---|---|
| C1201 | When receiving engine error signal while driving. | Engine control computer |

Inspection steps

| 1 | Diagnostic code check (EFI system) |
|---|---|

(1) Using SSM4, check the diagnostic code of EFI system. (Refer to ES - 28)

Result

| Result | Go to |

| DTC | C1469 | FL solenoid valve system |
| DTC | C146A | RR solenoid valve system |
| DTC | C146B | RL solenoid valve system |

Description of functions

Each solenoid adjusts the pressure applied to each wheel cylinder to control the vehicle.

While an abnormal diagnostic code is being output, the fail safe function turns OFF the solenoid relay forcibly. Therefore the solenoid will not be turned ON.

The solenoid relay and the solenoid are integrated into the brake actuator ASSY.

A

Malfunction reproduction test (Refer to IN - 32)

| DTC | C1231 | Steering angle sensor malfunction |
|---|---|---|

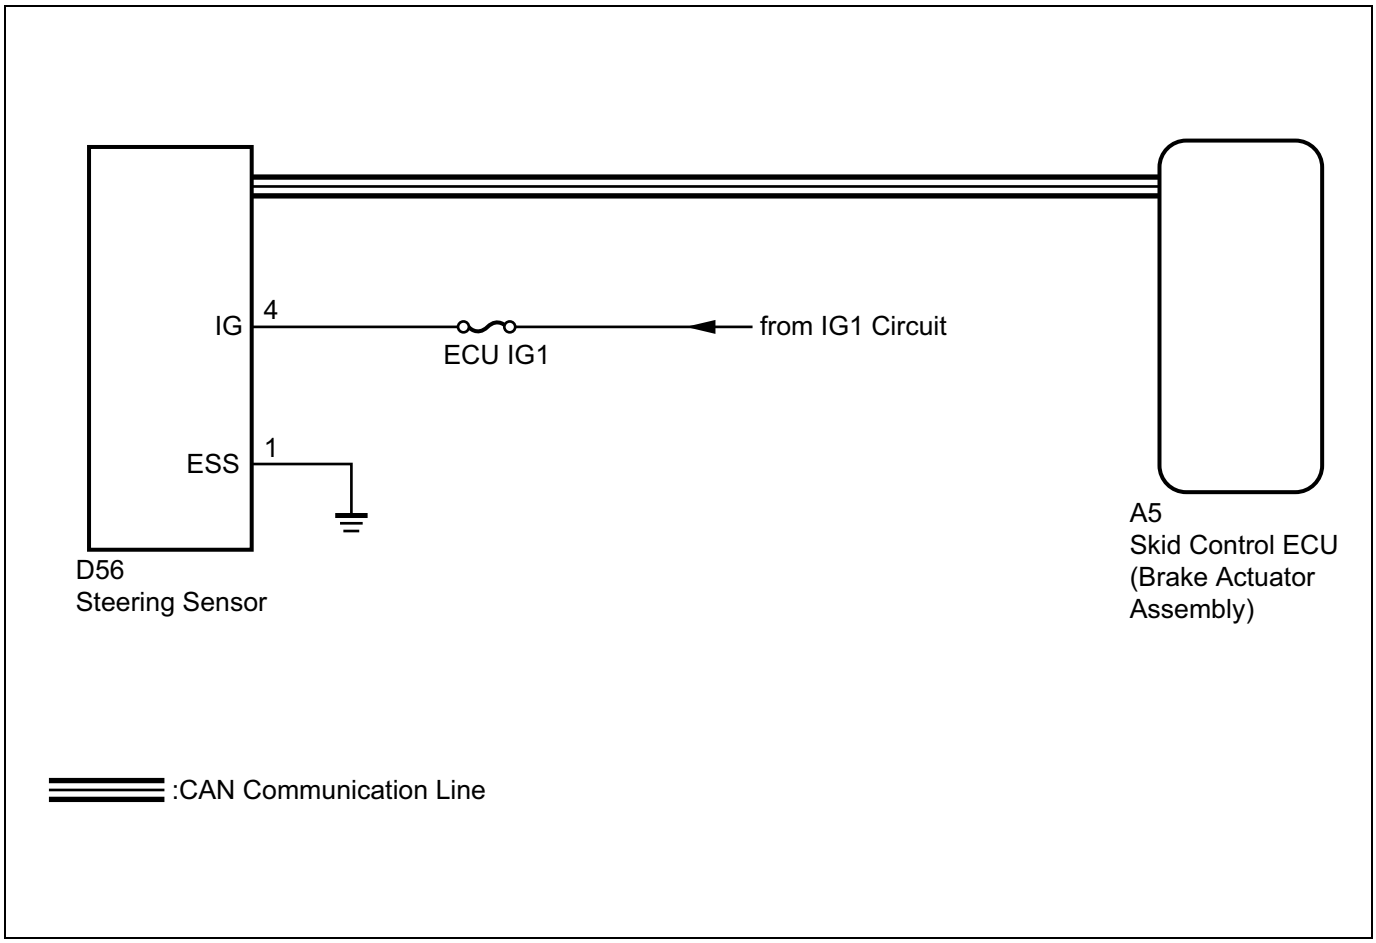
Description of functions

The skid control computer (brake actuator ASSY) inputs the steering sensor signal through CAN communication.

If there is a trouble in the communication line connected to the steering sensor, the diagnostic code "U0126 (Lost Communication With Steering Angle Sensor Module)" is output.

| Diagnostic codes | DTC detecting conditions | Faulty part |
|---|---|---|
| C1231 | When the voltage at +BS terminal is between 9.6 to 16.5 V, a steering sensor error signal is received. | • ECM IG1 fuse<br>• Wiring harness or connector<br>• Steering sensor |

Circuit figure



Inspection steps

CAUTION:

- When the steering sensor has been replaced, make sure to perform [VSC(VDC) Centering Mode]. (Refer to BC - 15)
- Before performing troubleshooting, check the fuse for this circuit.

| | |
|---|---|
| 1 | Check the diagnosis codes |

(1) Clear the diagnostic code. (Refer to BC - 13)
(2) Turn the ignition switch to OFF.
(3) Turn IG ON again and check that no diagnostic code for CAN communication error is output. (Refer to BC - 13)
(4) Driving at 35 km/h or more and operating the steering wheel, make sure that no diagnostic code for speed sensor error and yaw rate sensor error is output. (Refer to BC - 13)

Result

| Result | Go to |
|---|---|
| None of CAN communication error code, speed sensor error code, or yaw rate sensor error code is output. | A |
| CAN communication error code is output. | B |
| Speed sensor error code or yaw rate sensor error code is output | C |

NOTE:
- When there is a trouble in the speed sensor or the yaw rate sensor, even if the steering sensor is normal, abnormal value may be issued.
- If both speed sensor error code and yaw rate sensor error code are output at the same time, repair them and then check the steering sensor.

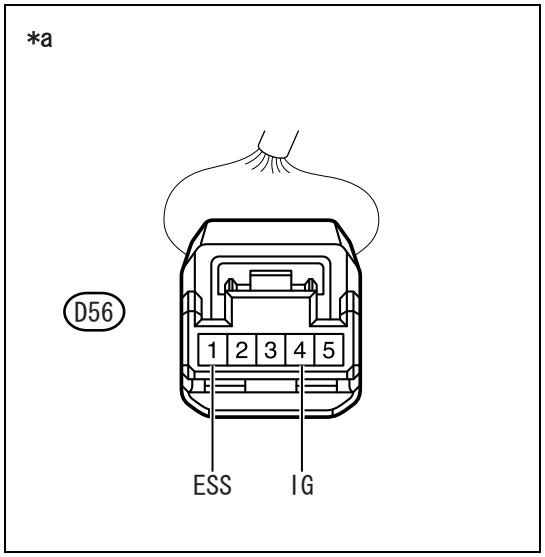
B → Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30)

C → Progress to the appropriate diagnosis code (Refer to BC - 6)

A

| 2 | Check wiring harness and connector (steering sensor power supply) |
|---|---|

(1) Check the steering sensor connector for poor engagement or disconnection.
Criteria: No trouble
(2) Disconnect the connector D56 for the steering sensor.
(3) Check the case and terminal of the connector for deformation and/or corrosion.
Criteria: No deformation or corrosion.



(4) Check the voltage and resistance between terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D56-4(IG) - chassis ground | IG ON | 11 to 14V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D56-1(ESS) - chassis ground | Always | Less than 1 Ω |

A

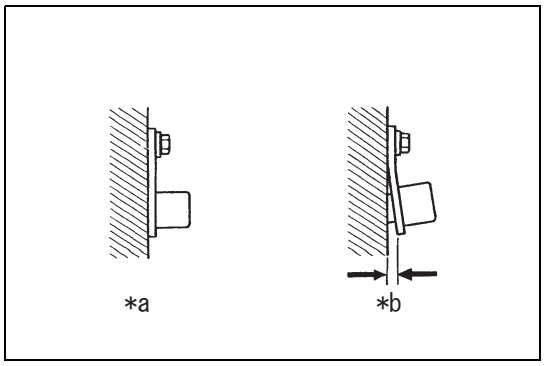
Malfunction reproduction test (Refer to IN - 32)

| 4 | Speed sensor installation condition check |
|---|---|



(1) Check installation condition of the speed sensor.
Criteria: Properly installed.

Captions in illustration

| | |
|---|---|
| *a | Normal |
| *b | Malfunction |

NG → Properly install the speed sensor or replace it.

OK

| 5 | Speed sensor check |
|---|---|

(1) Remove the speed sensor from the relevant wheel and check it for foreign matter adhesion or damage at the tip. (Refer to BC - 101)
Criteria: There is no foreign particles or damage.
CAUTION:
If there is no damage in the speed sensor through this check, do not replace the speed sensor.

NG → Clean or replace the speed sensor.

BC

OK

| 6 | Check wiring harness and connector (speed sensor brake actuator ASSY) |
|---|---|

(1) Check the connector of the skid control computer (brake actuator ASSY) for a trouble such as poor engagement or disconnection.
Criteria: No trouble
(2) Turn IG OFF and disconnect the connector A5 from the skid control computer (brake actuator ASSY).
(3) Disconnect the connector, A12 or A42 of the front speed sensor.
(4) Check the case and terminal of the connector for deformation and/or corrosion.
Criteria: No deformation or corrosion.
(5) Measure the resistance between the terminals.

Resistance

RH

| Inspection terminals | Inspection conditions | Standard value |

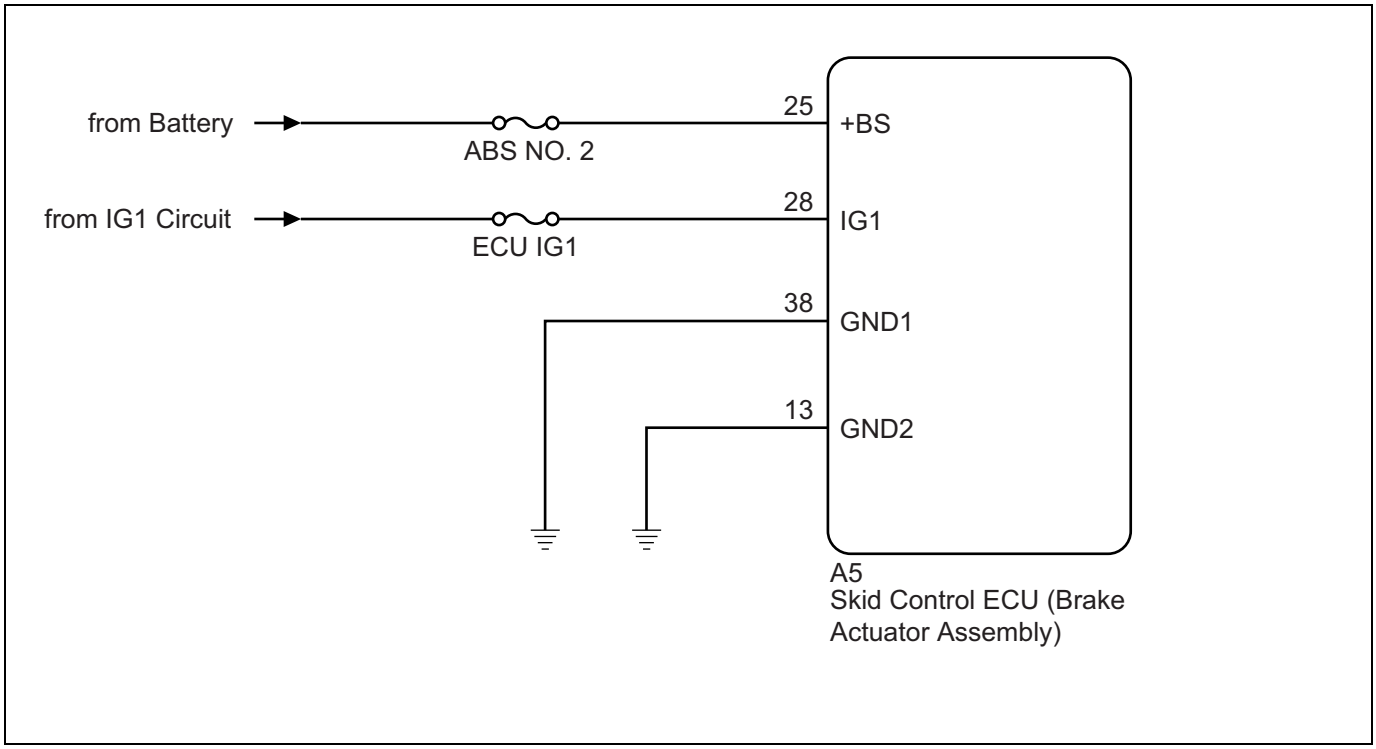
| DTC | C1241 | Power supply voltage error |
|---|---|---|

Description of functions
If there is a malfunction in the power supply circuit, the skid control computer (brake actuator ASSY) outputs a diagnostic code and prohibits the operation by fail safe function.
If the voltage to the +BS terminal is not within the range of DTC detecting conditions due to a malfunctioning power supply or charging circuit (including battery and alternator circuits), this code will be stored in memory.
When the voltage to the +BS terminal returns to normal, this diagnostic code will be cleared.

| Diagnostic codes | DTC detecting conditions | Faulty part |
|---|---|---|
| C1241 | • The voltage applied to the +BS terminal continues 9.6V or less for 1 second or more, at the vehicle speed of 6 km/h or more.<br>• The voltage applied to the +BS terminal continues 6.9 V or less for 1 second or more, at the vehicle speed of 6 km/h or more.<br>• When the voltage of the +BS terminal is 9.6 V or more at the vehicle speed of 15 km/h or more and the skid control computer (brake actuator ASSY) starts the solenoid, the voltage of the solenoid relay has dropped significantly. | • ABS No.2 fuse<br>• ECM IG1 fuse<br>• Battery<br>• Charging system<br>• Wiring harness or connector<br>• Skid control computer (brake actuator ASSY) |

Circuit figure



Inspection steps

CAUTION:

Replacement of skid control computer (brake actuator ASSY) (Refer to BC - 93)

| DTC | C1249 | BLS malfunction |
|---|---|---|

BC

Description of functions

The skid control computer (brake actuator ASSY) inputs the stop light switch signal to input the brake operation conditions.
When the skid control computer (brake actuator ASSY) judges one of the followings, this diagnostic code will be stored in memory.

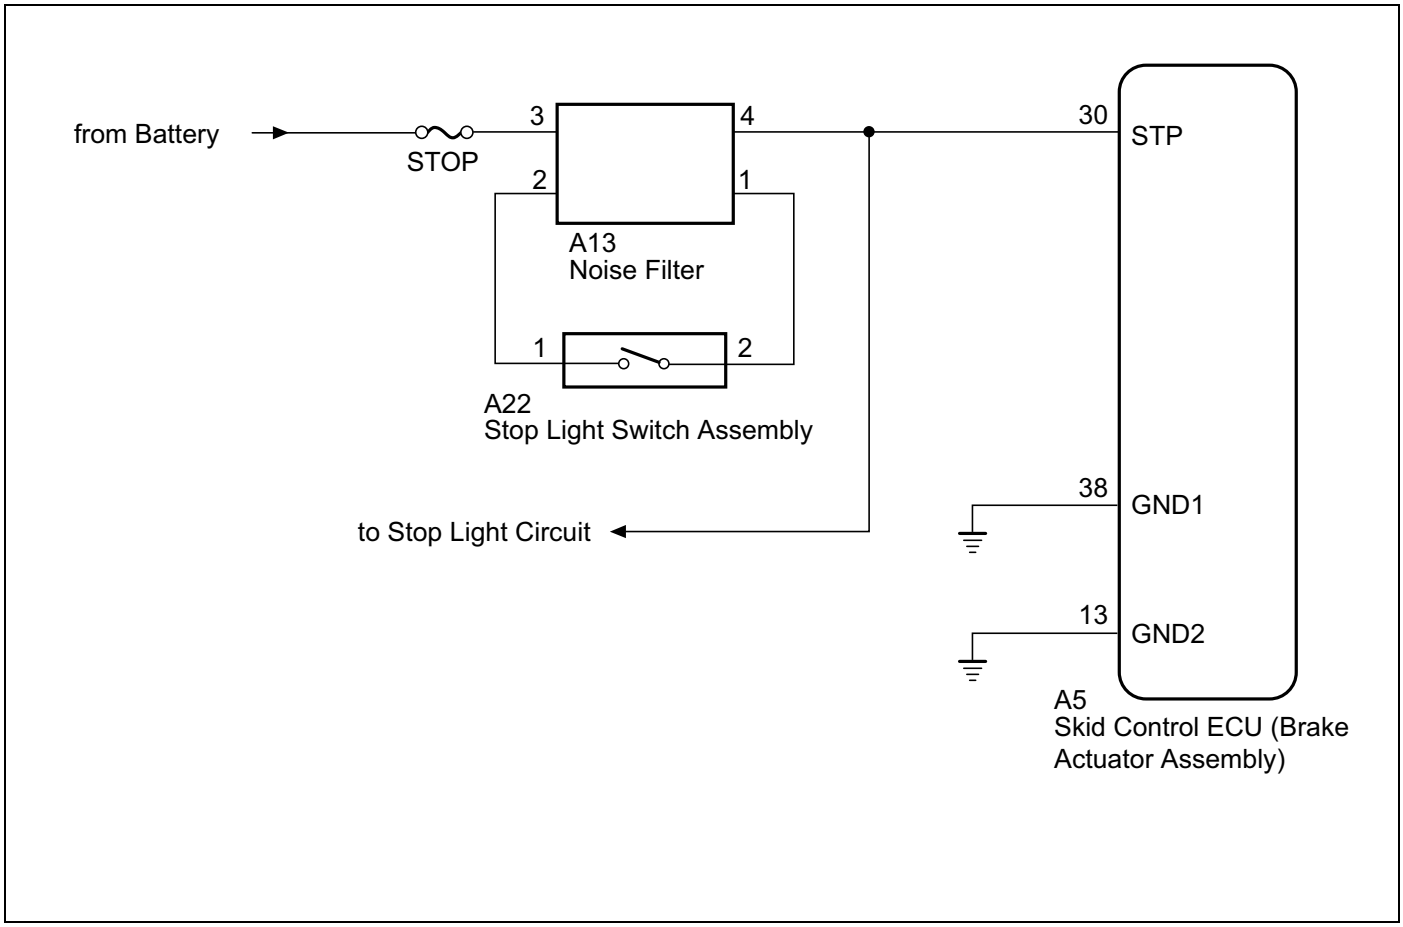
- Stop light switch ON/OFF, stuck
- Accelerator pedal and brake pedal, depressed simultaneously (*)

NOTE:

*: If the accelerator pedal and the brake pedal are depressed simultaneously, the skid control computer (brake actuator ASSY) judges that the stop light switch is stuck to ON and the diagnostic code may be stored in memory. However, this is not a malfunction.

| Diagnostic codes | DTC detecting conditions | Faulty part |
|---|---|---|
| C1249 | • The accelerator pedal has been ON and the brake has been ON for 60 seconds at the vehicle speed of 10 km/h or more.<br>• When the pressure inside the master cylinder increases with the stop light switch OFF. | • STOP fuse<br>• Stop light switch ASSY<br>• Noise filter<br>• Wiring harness and connector<br>• Skid control computer (brake actuator ASSY) |

Circuit figure



Inspection steps

CAUTION:

- When the brake actuator ECM has been replaced, make sure to perform [VSC(VDC) Centering Mode]. (Refer to BC - 15)
- Before performing troubleshooting, check the fuse for this circuit.

| | |
|---|---|
| 1 | Interview |

(1) Interview the customer if the accelerator pedal and the brake pedal have been depressed simultaneously while driving and braking.

Criteria: The acceleration pedal and the brake pedal were not depressed simultaneously.

NOTE:

- If the accelerator pedal and the brake pedal are depressed simultaneously, the skid control computer (brake actuator ASSY) judges that the stop light switch is stuck to ON and the diagnostic code may be stored in memory.
- If the accelerator pedal and the brake pedal have been depressed simultaneously, it is not a malfunction. Clear the diagnostic code.

| DTC | C1330 | FR wheel speed sensor system open circuit/excessive input |
| DTC | C1331 | FL wheel speed sensor system open circuit/excessive input |
| DTC | C1464 | FR wheel speed sensor signal |
| DTC | C1465 | FL wheel speed sensor signal |

Description of functions

The speed sensor detects the wheel speed and sends the signal to the skid control computer (brake actuator ASSY). These signals are used for ABS control.

The speed sensor detects magnetic field changes in the magnetic rotor, where the N and S poles are evenly allocated in a circumferential direction, and generates a vehicle speed pulse.

With this vehicle speed pulse, the skid control computer (brake actuator ASSY) detects each wheel's speed.

NOTE:

The following voltage outputs are the values when the vehicle harness connectors are connected to the skid control computer (brake actuator ASSY) and the speed sensor.

| DTC | C1332 | Rear Right ABS Sensor Circuit Open or Shorted Battery |
| DTC | C1333 | RL wheel speed sensor system open circuit/excessive input |
| DTC | C1466 | RR wheel speed sensor signal |
| DTC | C1467 | RL wheel speed sensor signal |

Description of functions

The speed sensor detects the wheel speed and sends the signal to the skid control computer. These signals are used for ABS control.

The speed sensor detects magnetic field changes in the magnetic rotor, where the N and S poles are evenly allocated in a circumferential direction, and generates a vehicle speed pulse.

With this vehicle speed pulse, the skid control computer detects the speed for each wheel.

NOTE:

The following voltage outputs are the values when the vehicle harness connectors are connected to the skid control computer (brake actuator ASSY) and the speed sensor.

## ABS warning light remains ON

Description of functions

The skid control ECM is connected to the combination meter ASSY through the CAN communication.

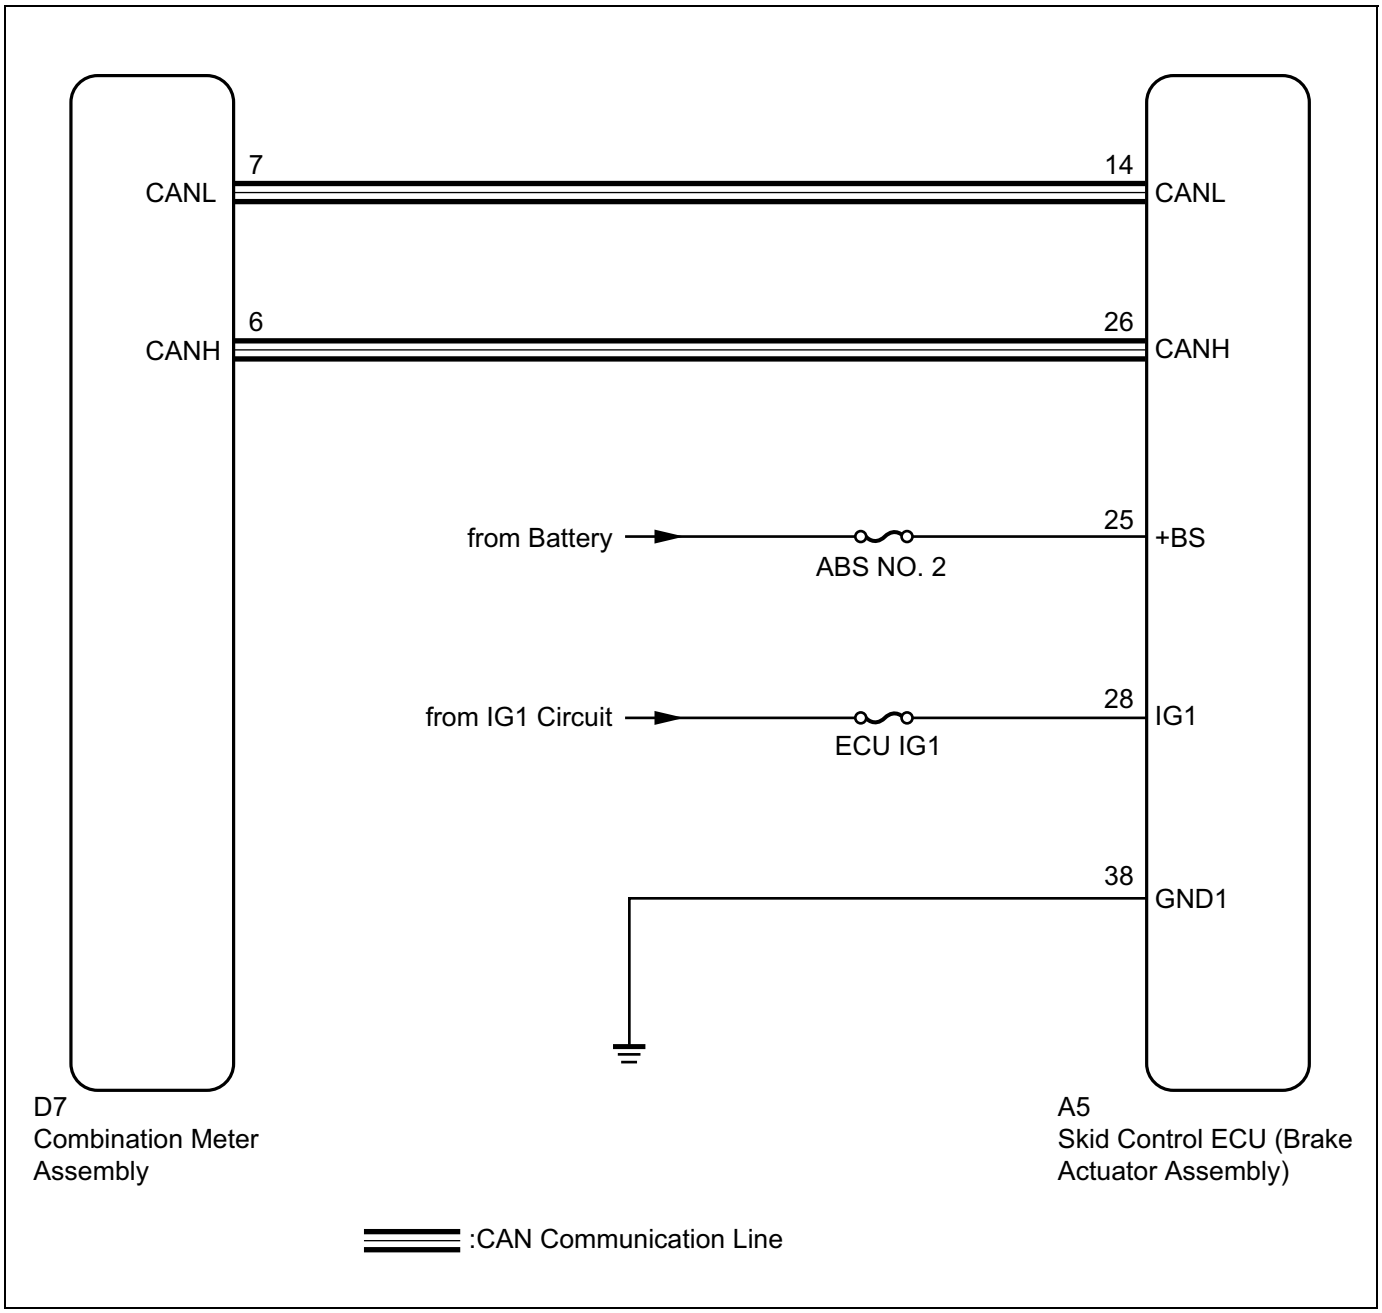
When one of the following conditions is detected, the ABS warning light illuminates.

- The skid control ECM connector is disconnected from the skid control ECM.
- The skid control ECM has trouble in its internal circuit.
- Wiring harness between the combination meter ASSY and the skid control ECM are open.
- ABS control system is defective.

NOTE:

When the skid control ECM has trouble, in some cases the SSM4 may not be useful.

Circuit figure



Inspection steps

CAUTION:

- When the skid control computer (brake actuator ASSY) has been replaced, make sure to perform [VSC(VDC) Centering Mode]. (Refer to BC - 15)
- Before performing troubleshooting, check the fuse for this circuit.

| | |
|---|---|
| 1 | Inspection of connection for each part |

(1) Lightly shake the connectors and the wiring harness of the skid control computer (brake actuator ASSY) up/down/left/right, and check the illumination status for the ABS warning light.

Criteria: The ABS warning light status does not change.

NG → Repair or replacement of wiring harness or connector

OK

Replacement of brake actuator ASSY

## Brake warning light remains ON

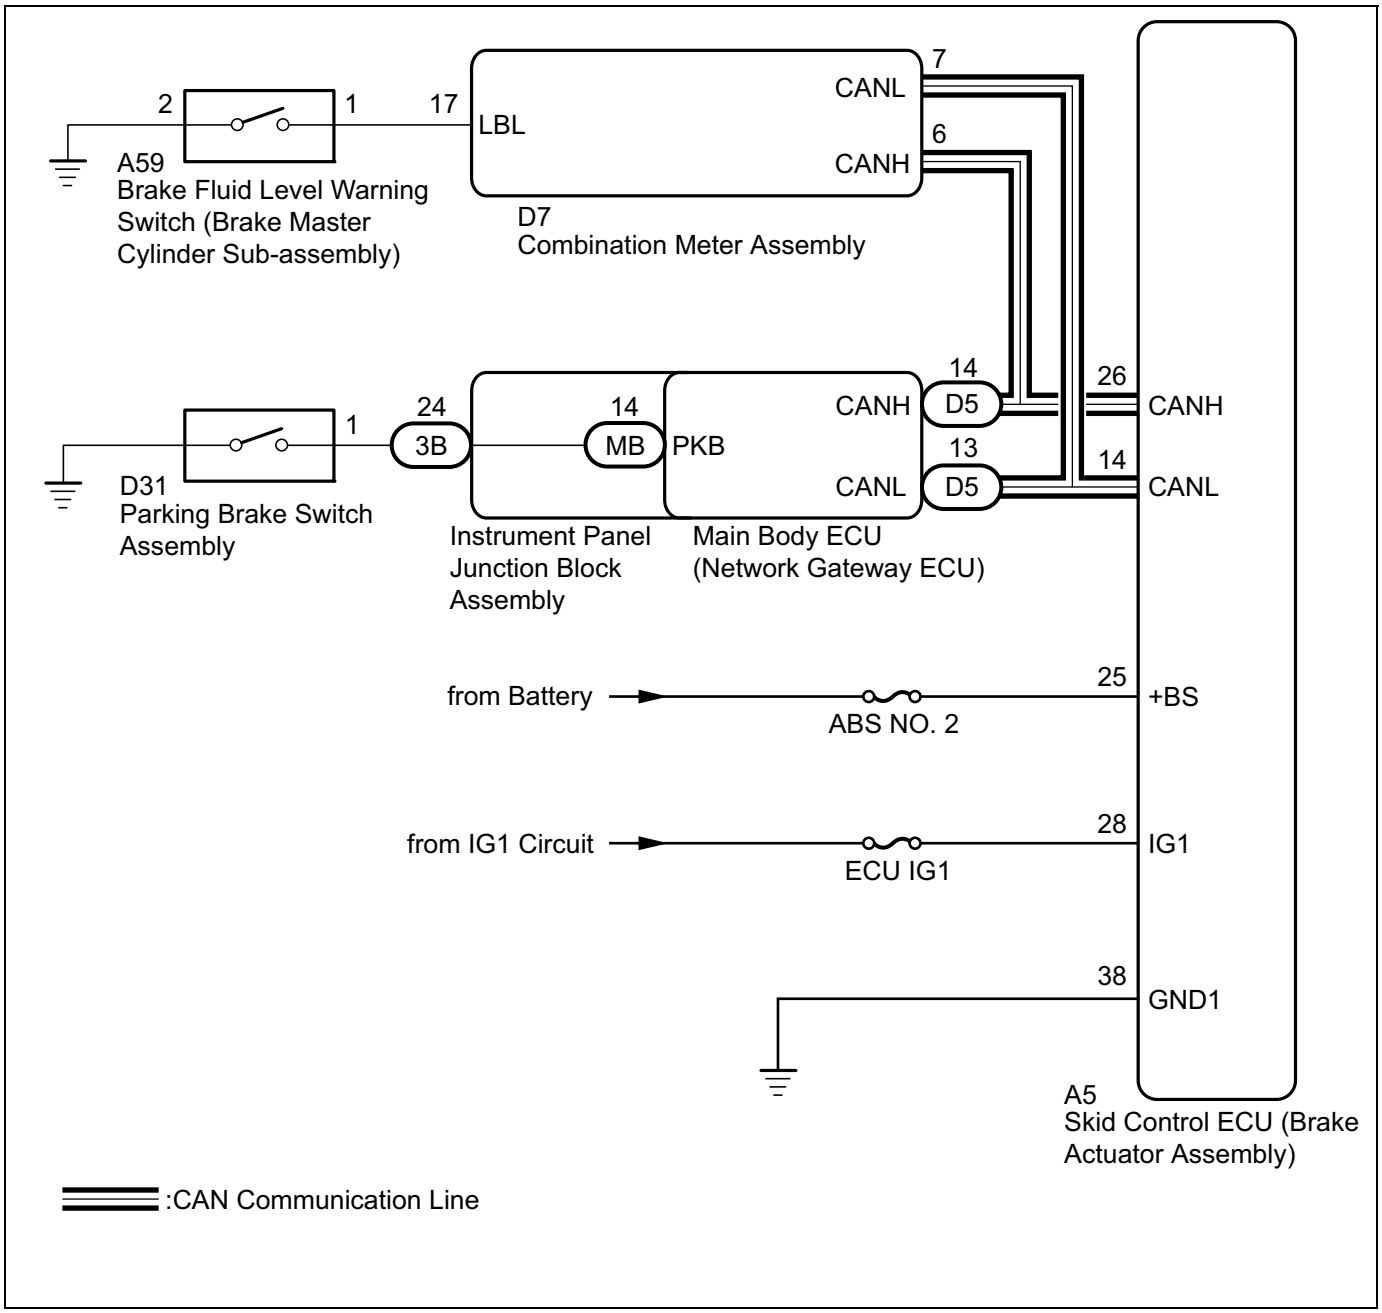
Description of functions

The skid control ECM is connected to the combination meter ASSY through the CAN communication.

When one of the following conditions is detected, the brake warning light illuminates.

- The skid control ECM connector is disconnected from the skid control ECM.
- The brake fluid level is insufficient.
- The parking brake is being applied.
- EBD control is not allowed.

Circuit figure



Inspection steps

CAUTION:

- When the skid control computer (brake actuator ASSY) has been replaced, make sure to perform [VSC(VDC) Centering Mode]. (Refer to BC - 15)
- Before performing troubleshooting, check the fuse for this circuit.

| | |
|---|---|
| 1 | Preliminary inspection |

(1) Make sure that the following conditions for turning off the brake warning light are met.
  (a) The ABS warning light is OFF.
  (b) The brake fluid is sufficient in the brake master cylinder reservoir.
  (c) The parking brake is completely released.

Next

| 2 | Inspection of connection for each part |
|---|---|

(1) Lightly shake the connectors and the wiring harness at eat part up/down/left/right, to check the illumination status for the brake warning light.

Criteria: The brake warning light status does not change.

NOTE:

If the warning light illumination status changes when shaking the connectors and the wires of the skid control computer (brake actuator ASSY), check the terminals for poor connections.

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Diagnostic code check (CAN communication system) |
|---|---|

(1) Check CAN communication system. (Refer to NW - 30)

Result

| Result | Go to |
|---|---|
| No output | A |
| Output exists | B |

B → Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30)

A

| 4 | Check wiring harness and connector (+BS, IG1, GND1, GND2 terminals) |
|---|---|

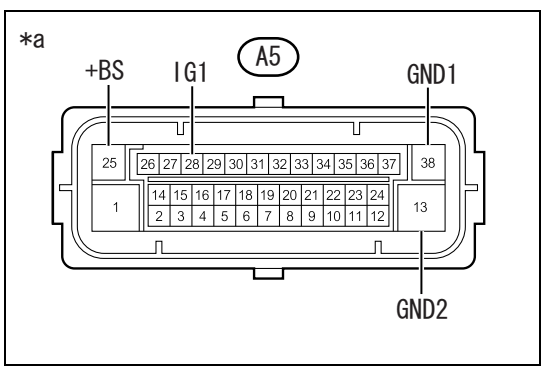
(1) Check the connector of the skid control computer (brake actuator ASSY) for a trouble such as poor engagement or disconnection.

Criteria: No trouble

(2) Turn IG OFF and disconnect the connector A5 from the skid control computer (brake actuator ASSY).

(3) Check the case and terminal of the connector for deformation and/or corrosion.

Criteria: No deformation or corrosion.



(4) Check the voltage and resistance between terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A5-25(+BS) - chassis ground | Always | 11 to 14V |
| A5-28(IG1) - chassis ground | IG ON | 11 to 14V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A5-38(GND1) - chassis ground | Always | Less than 1 Ω |

BC

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A5-13(GND2) - chassis ground | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Skid control computer (brake actuator ASSY)- connector) |

NOTE:
If there is a malfunction in GND1 and GND2 terminals, check the ground point for looseness.

NG → Repair or replacement of wiring harness or connector

OK

**5** Parking brake switch ASSY check

(1) Check the parking brake switch ASSY. (Refer to PB - 27)

NG → Replacement of parking brake switch ASSY (Refer to PB - 26)

OK

**6** Check wiring harness and connector (Main body ECM (network gateway computer) - parking brake switch ASSY)

(1) Turn IG OFF and disconnect the connector (3B) for the main body ECM (network gateway computer).
(2) Disconnect the connector, D31 for the parking brake switch ASSY.
(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-24 - D31-1 | Always | Less than 1 Ω |
| 3B-24 - chassis ground | Always | 10 k Ωor more |

NG → Repair or replacement of wiring harness or connector

OK

BC

**7** Brake master cylinder SUB-ASSY check (fluid level warning switch)

(1) With the brake fluid at a specified level, disconnect the connector (A59) for the fluid level warning switch (brake master cylinder reservoir SUB-ASSY), and check the brake warning light status.

Result

| Result | Go to |
|---|---|
| The brake warning light does not go off. | A |
| The brake warning light goes off. | B |

NOTE:
If the warning light goes off, the fluid level warning switch (brake master cylinder reservoir SUB-ASSY) is internally shorted.

B → Replacement of brake master cylinder SUB-ASSY (Refer to BR - 24)

A

| | |
|---|---|
| 8 | Check wiring harness and connector (fluid level warning switch - combination meter ASSY and chassis ground) |

(1) Turn the ignition switch to OFF, and then disconnect the connector (D7) for the combination meter ASSY.
(2) Measure the resistance between the terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A59-1 - D7-17(LBL) | Always | Less than 1 Ω |
| A59-1 - chassis ground | Always | 10 k Ωor more |
| A59-2 - chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

To meter & gauge system (How to troubleshoot) (Refer to ME - 19)

## The brake warning light does not illuminate

Description of functions
The skid control ECM is connected to the combination meter ASSY through the CAN communication.

Inspection steps
CAUTION:
When the skid control ECM (brake actuator ASSY) has been replaced, make sure to perform [VSC(VDC) Centering Mode]. (Refer to BC - 19)

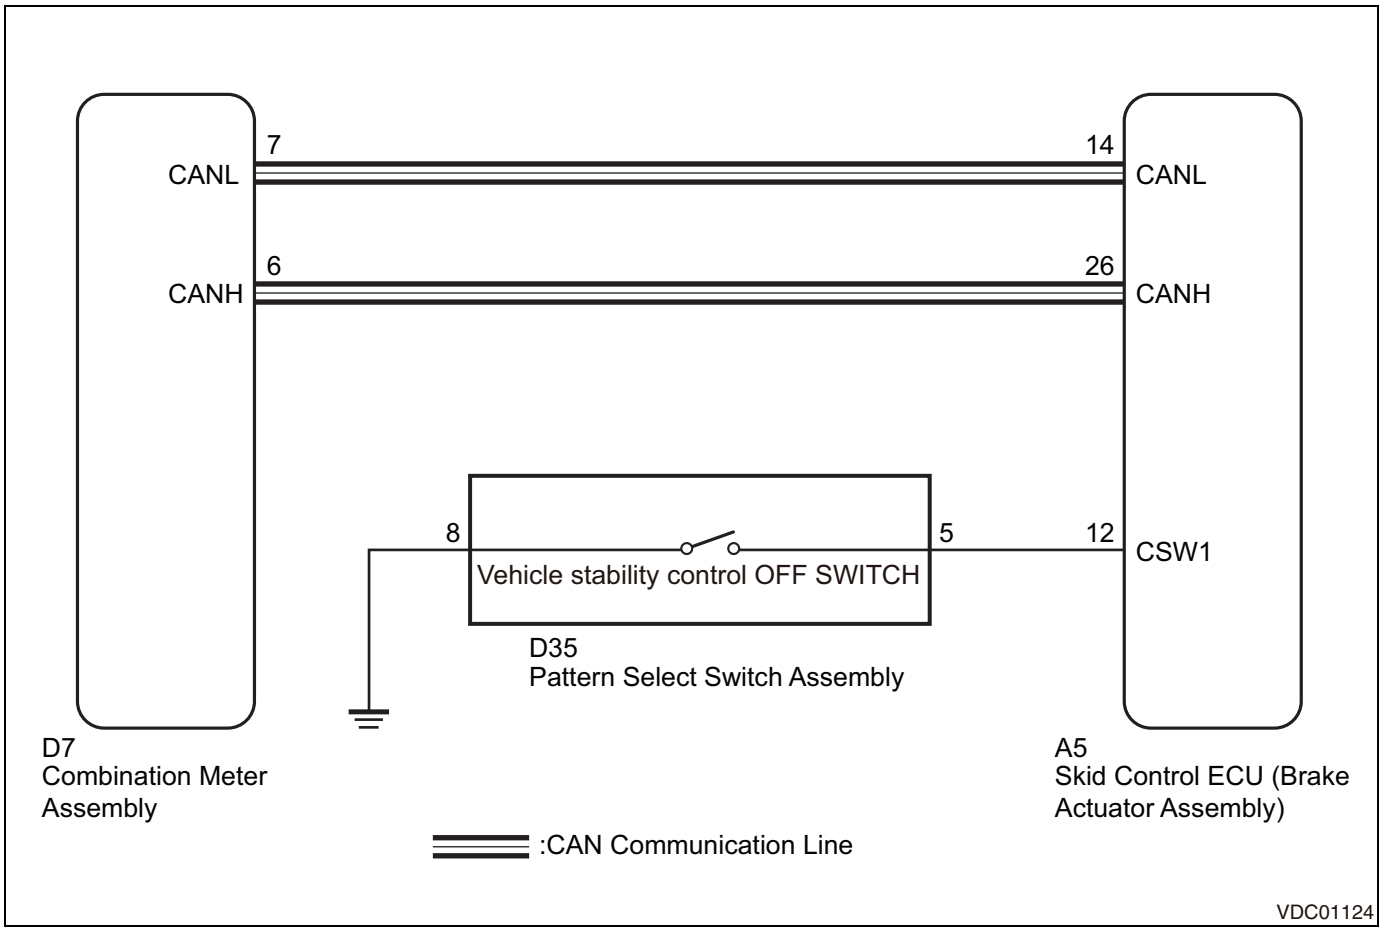
## TRC OFF indicator light remains ON / TRC OFF indicator light does not illuminate

Description of functions

The skid control ECM is connected to the combination meter ASSY through the CAN communication. When the Vehicle stability control OFF switch is pressed, TRC is turned to OFF. When this switch is kept pressed, TRC and Vehicle stability control are turned to OFF. When TRC switches to OFF, the TRC OFF indicator light illuminates.

Wiring diagram



Inspection steps

CAUTION:

When the skid control ECM (brake actuator ASSY) has been replaced, make sure to perform [VSC(VDC) Centering Mode]. (Refer to BC - 15)

| | |
|---|---|
| 1 | Diagnostic code check (CAN communication system) |

(1) Check CAN communication system. (Refer to NW - 30)

## Hill start assist ON indicator light remains ON / Hill start assist ON indicator light does not illuminate

Description of functions
The skid control ECM is connected to the combination meter ASSY through the CAN communication.
The default setting of the hill start assist function is OFF. This function is switched between ON and OFF by operating as follows. (The following is an example of switching from OFF to ON)

1. Park the vehicle on level and firm ground so that it becomes stable.
2. Make sure that the parking brake is securely applied.
3. Turn the ignition switch to LOCK (OFF).
4. Start the engine and make sure that the ABS warning light and VDC warning light are off.
5. Press and hold the vehicle stability control OFF switch. (Press and hold this switch until the vehicle stability control OFF indicator light illuminates and goes off (approx. 30 seconds).)
6. After the indicator light goes off, release the switch within 5 seconds.
7. Press the vehicle stability control OFF switch again within 2 seconds after releasing it.

8. Turn the ignition switch to LOCK (OFF). When the engine is restarted, the hill start assist indicator light illuminates and the hill start assist function is turned ON.
   NOTE:
   When the hill start assist function is turned from ON to OFF, the hill start assist indicator light remains ON after engine startup described in 4. After operation in 7, the hill start assist indicator light goes off first and is then turned on again. After operation in 8, the function is turned OFF.

|---|---|
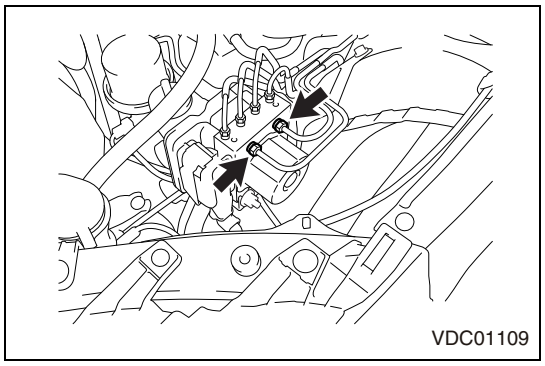
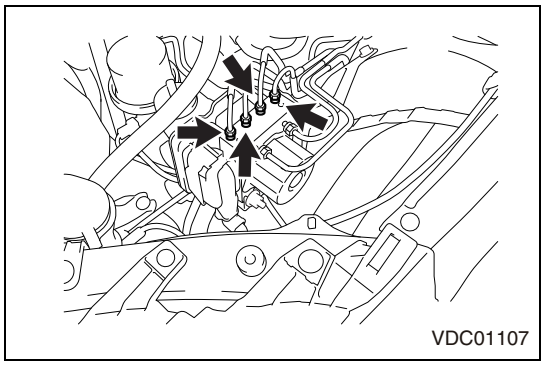
| *a | Rotate it. |

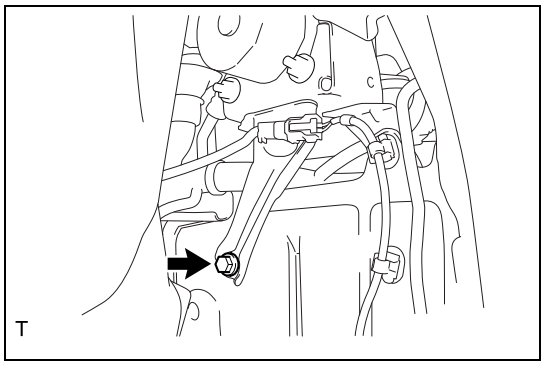
(6) Disconnect the vehicle wiring harness connector from the brake actuator ASSY.



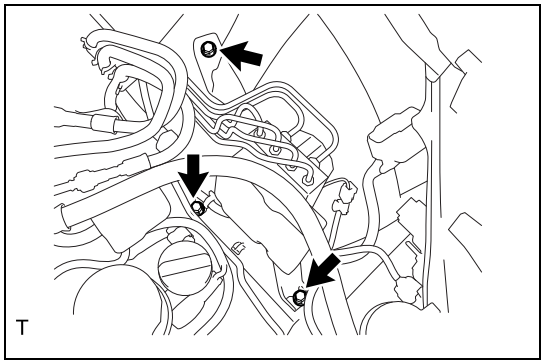
(7) Using a flare-nut wrench, disconnect 2 brake tubes.
CAUTION:
Protect the connector surface from contact with brake fluid.



(8) Using a flare-nut wrench, disconnect 4 brake tubes.
CAUTION:
Protect the connector surface from contact with brake fluid.

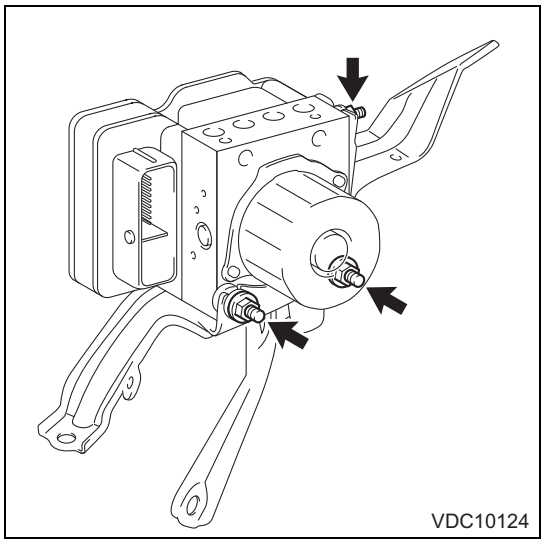


(9) Remove the bolt from the brake actuator ASSY W/bracket.

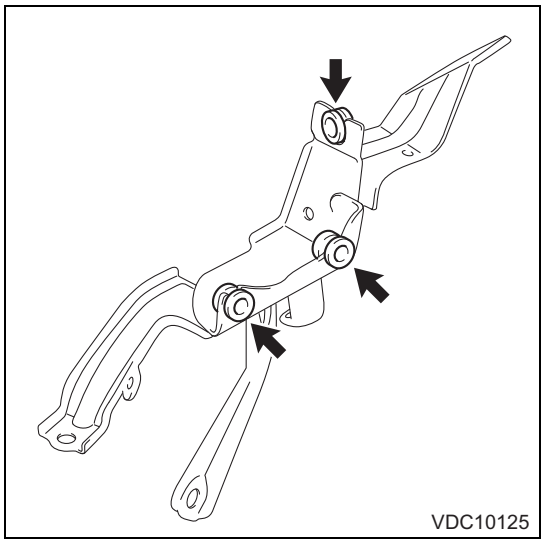


(10) Remove 3 bolts from the brake actuator ASSY W/bracket.
(11) Remove the brake actuator ASSY W/bracket from the body.
CAUTION:
Do not bend or damage the brake tubes.

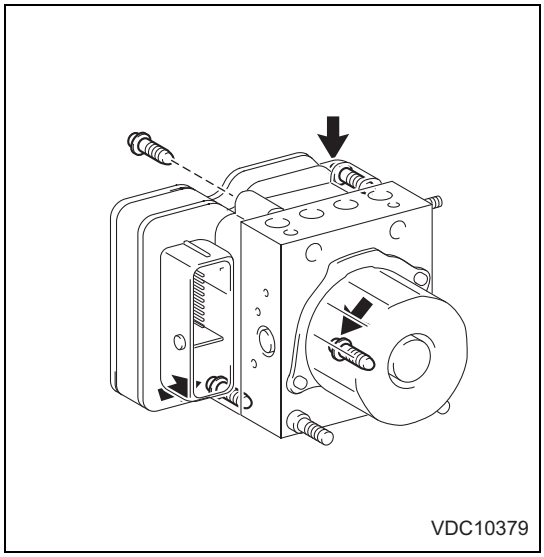
## Disassembly



1. Removal of brake actuator bracket ASSY
   (1) Remove 3 nuts and washers and then remove the brake actuator bracket ASSY from the brake actuator ASSY.



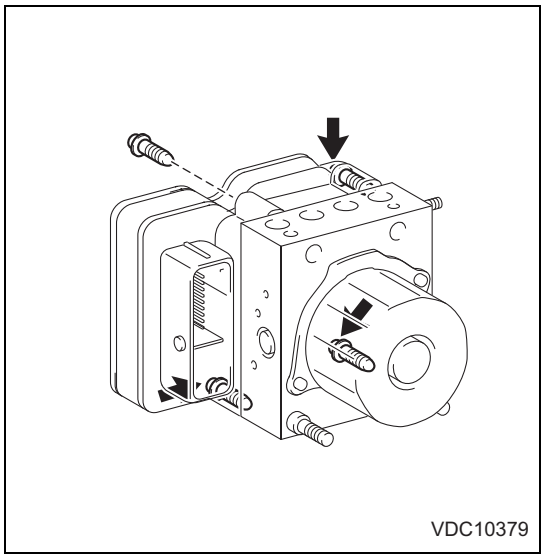
2. Removal of brake actuator bolt cushion
   (1) Remove 3 brake actuator bolt cushions from the brake actuator bracket ASSY.



VDC10379

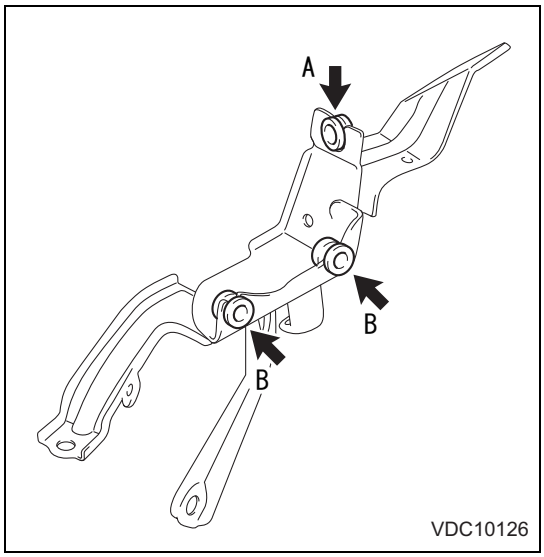
3. Removal of brake actuator ECM
   (1) Remove the torque screw.
   (2) Remove the brake actuator ECM from the brake actuator ASSY.

## Assembly



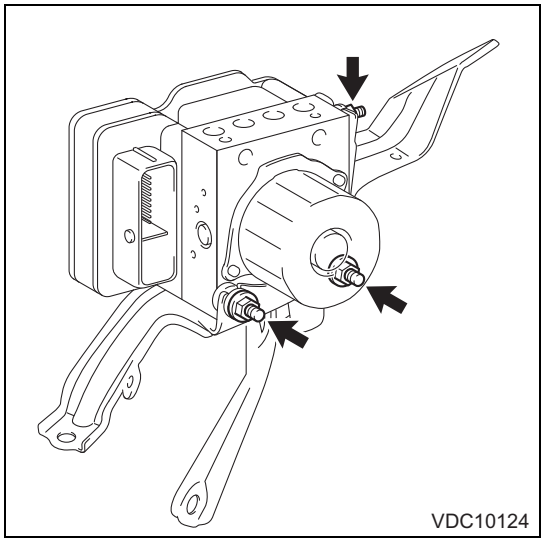
VDC10379

1. Installation of brake actuator ECM
   (1) Using 4 new torque screws, install the brake actuator ECM to the brake actuator ASSY.
   Standard value:T=1.5N·m {15kgf·cm} {1.1 ft·lbf}



VDC10126

2. Installation of brake actuator bolt cushion
   (1) Install 3 new brake actuator bolt cushions (A and B) to the actuator ASSY.

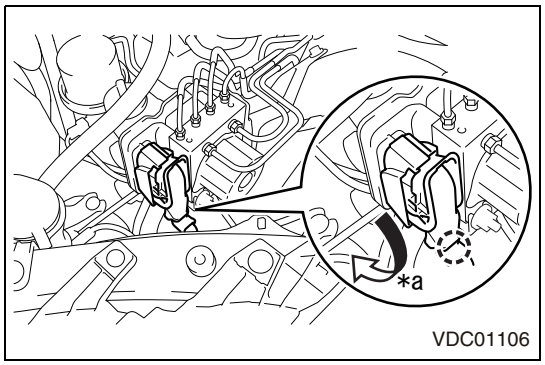


VDC10124

3. Installation of brake actuator bracket ASSY
   (1) With 3 new nuts and 3 new washers, install the brake actuator bracket ASSY to the brake actuator ASSY.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   CAUTION:
   New brake actuator ASSY is filled with brake fluid. Therefore, do not remove the hole plug until the brake tube is connected.

## Installation

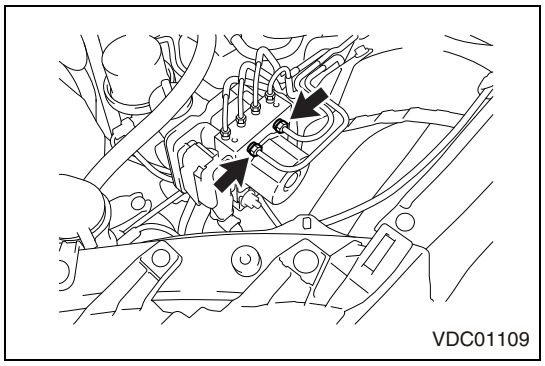
1. Installation of brake actuator ASSY W/bracket
   (1) With 4 bolts, install the brake actuator ASSY W/bracket to the body.
   CAUTION:
   Do not bend or damage the brake tubes.
   Standard value:T=33N·m {338kgf·cm} {24.3ft·lbf}
   (2) Connect the vehicle wiring harness to the brake actuator ASSY.



VDC01106

   (3) Rotate the lock lever for the vehicle wiring harness downward, and engage the claw of the vehicle wiring harness connector to lock it.
   CAUTION:
   - Before connecting the vehicle wiring harness, make sure there is no foreign matter is on the connector surface.
   - After connecting the vehicle wiring harness, make sure that the lock lever is securely locked.

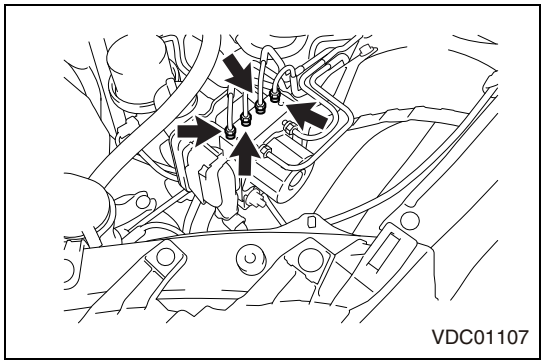
| | |
|---|---|
| *a | Rotate it. |



VDC01109

   (4) Using a flare-nut wrench, connect 2 brake tubes to the brake actuator ASSY.
   Standard value:T=19N·m {194kgf·cm} {14.0ft·lbf}

BC



VDC01107

(5) Using a flare-nut wrench, connect 4 brake tubes to the brake actuator ASSY.
Standard value:T=15N·m {155kgf·cm} {11.1ft·lbf}

(6) Attach the clamp to the wiring harness of the speed sensor FR LH.
(7) Install the cooler pipe to the clamp.
(8) Attach 2 harness clamps.

2. Brake fluid refill (Refer to BR - 8)
3. Air bleeding of brake system (Refer to BR - 8)
4. Brake fluid leak check
5. Brake fluid level check (Refer to BR - 12)
6. Installation of front mud guard LH (Refer to WW - 28)
7. Installation of front tire LH
Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
8. VDC sensor mid point setting (Refer to BC - 15)

# Front speed sensor

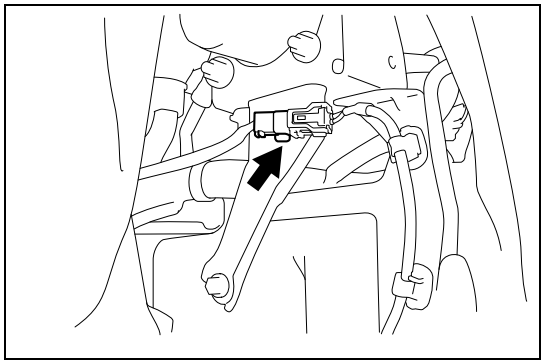
## Removal

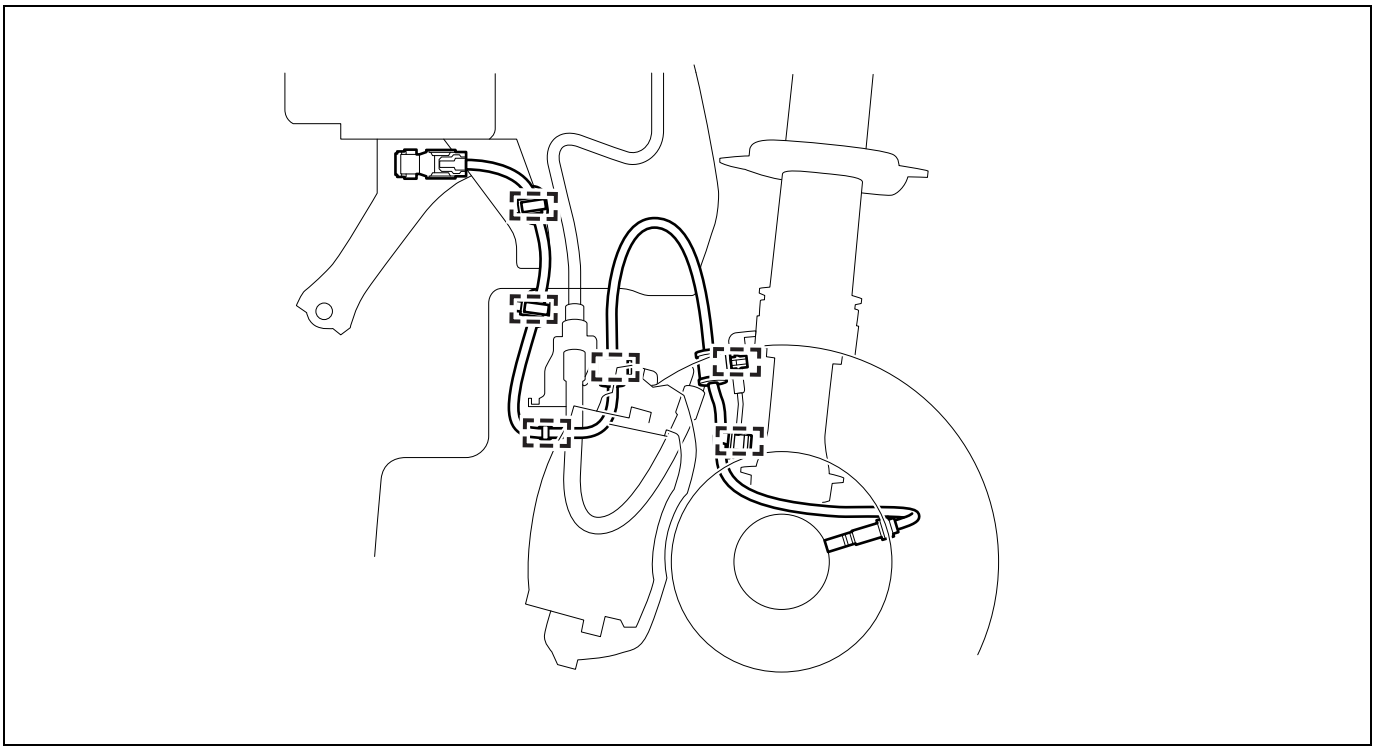
NOTE:

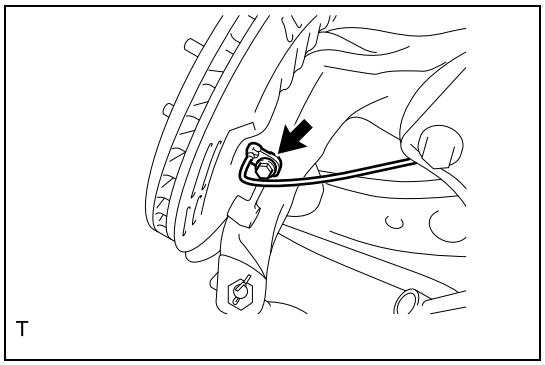
The following procedure is for LH side. Perform the same procedures both for the LH side and RH side, unless otherwise specified.

1. Removal of front tire
2. Removal of front mud guard LH (Refer to WW - 26)



3. Removal of speed sensor FR LH
   (1) Disconnect the connector.
   (2) Disconnect 6 clamps.





(3) Remove the bolt and the speed sensor FR LH.
CAUTION:
Do not let foreign matter stick to the installation part and the tip of the speed sensor FR LH.

BC

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures both for the LH side and RH side, unless otherwise specified.

1. Installation of speed sensor FR LH
   (1) Install the speed sensor FR LH with bolt.
   CAUTION:
   Do not let foreign matter stick to the installation part and the tip of the speed sensor FR LH.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Attach 6 clamps.

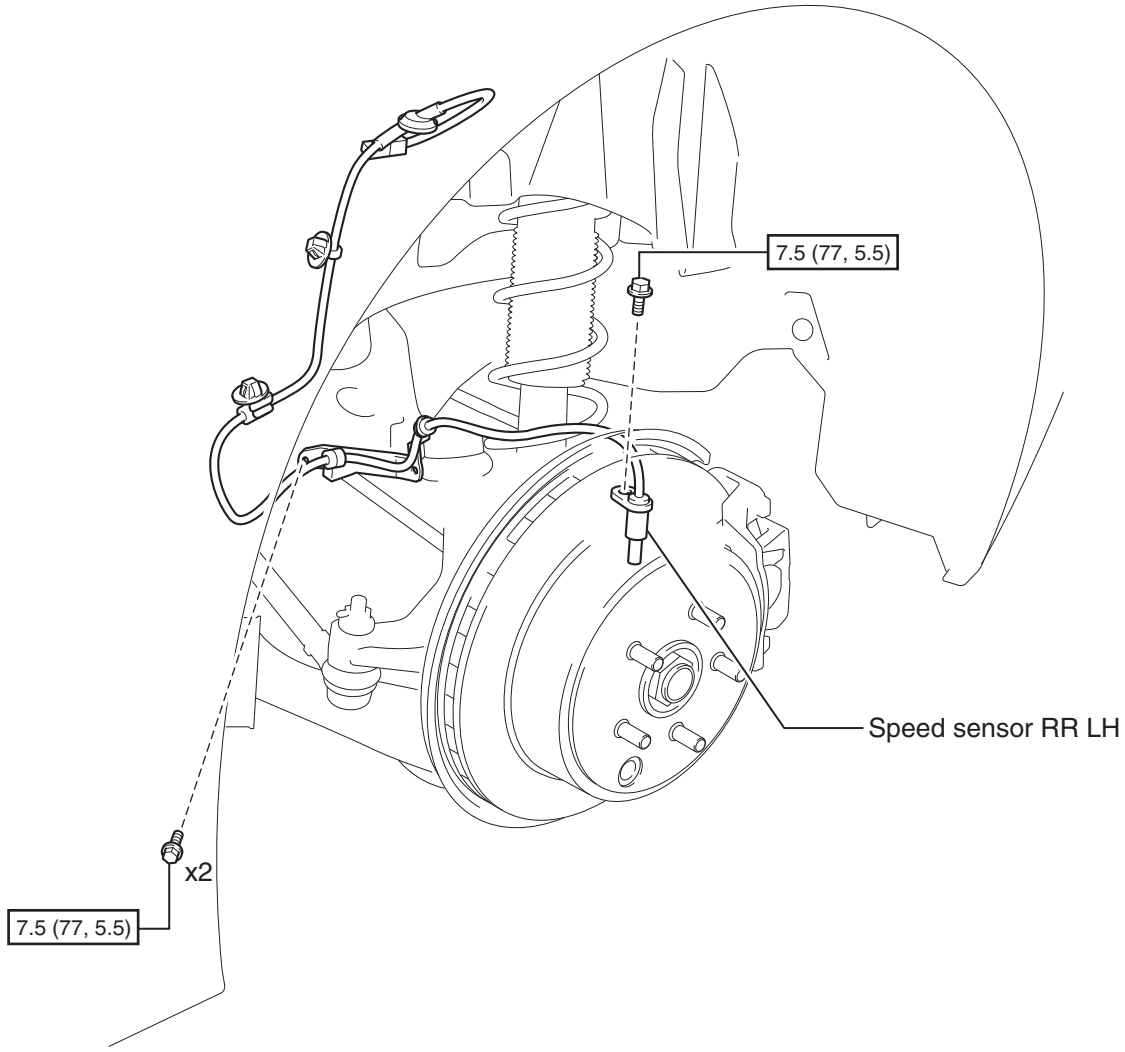
CAUTION:
Do not attach the speed sensor FR LH with the sensor twisted.

(3) Connect the connector for the speed sensor FR LH.

2. Installation of front mud guard LH (Refer to WW - 28)
3. Installation of front tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

# Rear speed sensor

## Exploded view



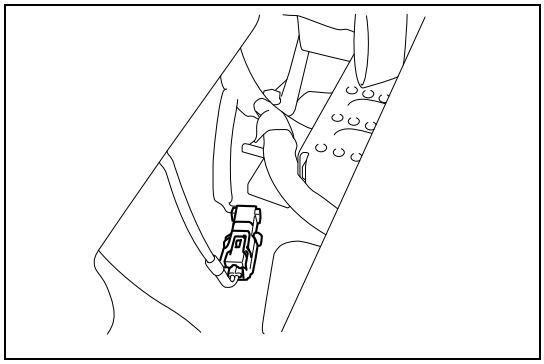
BC

## Removal

NOTE:

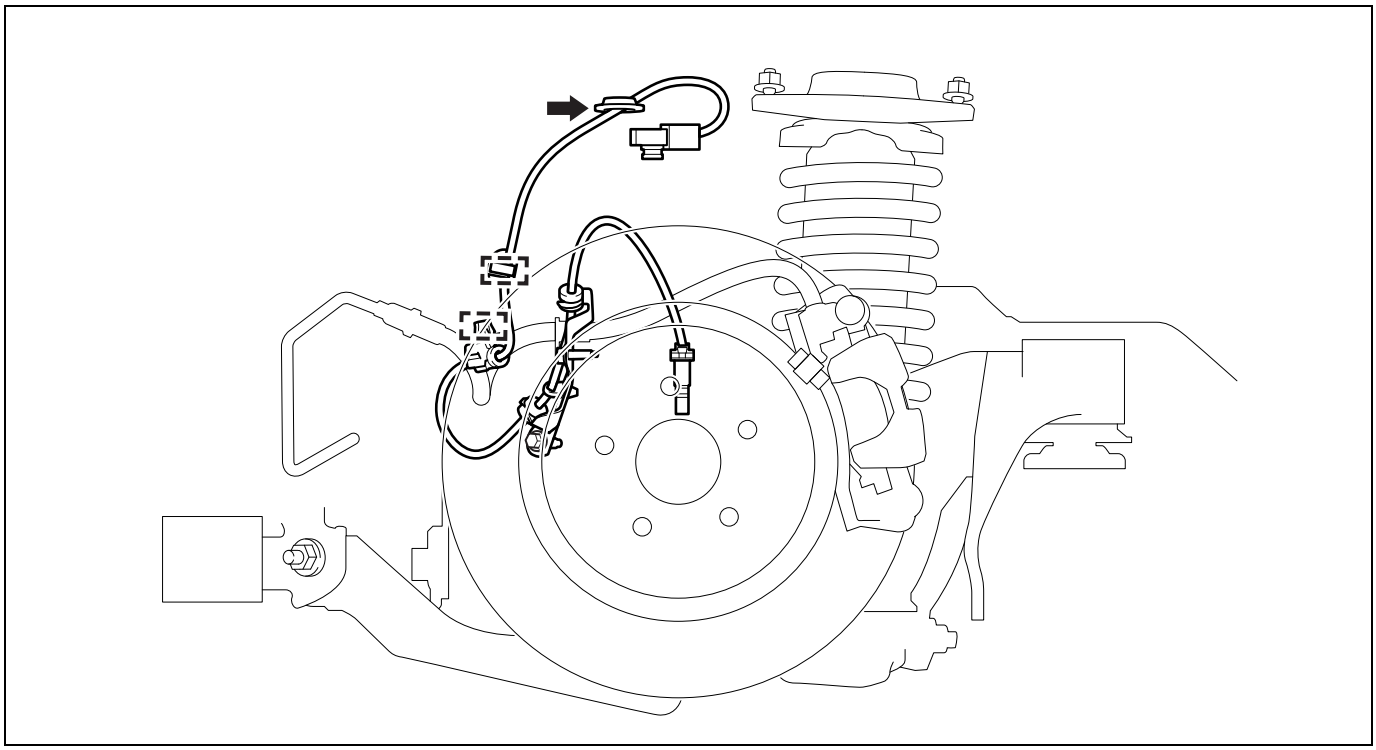
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Removal of rear tire
2. Removal of speed sensor RR LH
   (1) Remove the trunk floor mat.

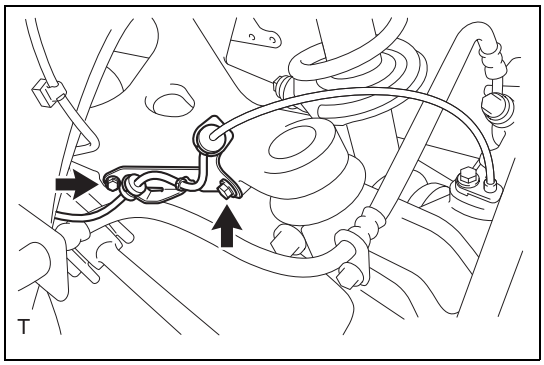


(2) Disconnect the speed sensor RR LH connectors in the vehicle.

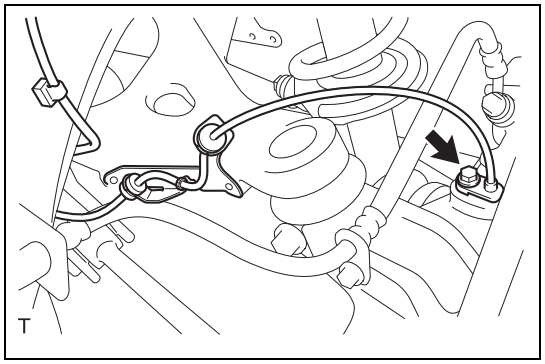
(3) Disconnect the grommet and 2 harness clamps from the rear wheel housing.



| | | | |
|---|---|---|---|
| ➡ | Grommet | - | - |



(4) Remove 2 bolts from the bracket.



(5) Remove the bolts and the speed sensor RR LH.
CAUTION:
Do not let foreign matter stick to the installation part and the tip of the speed sensor RR LH.

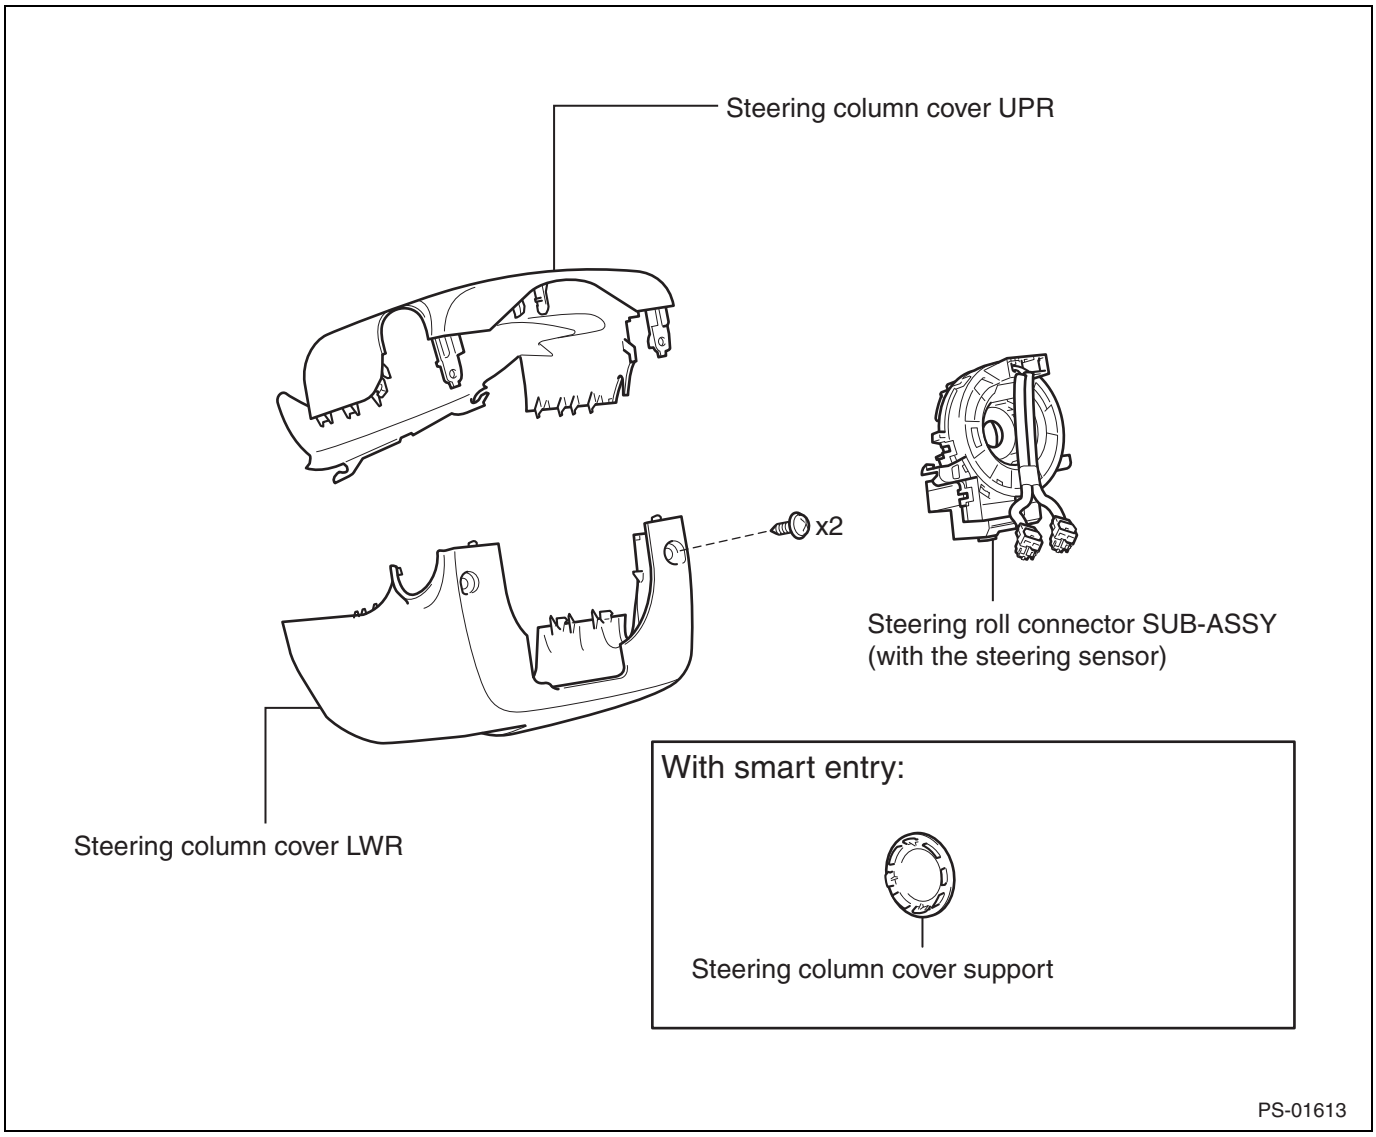
## Installation

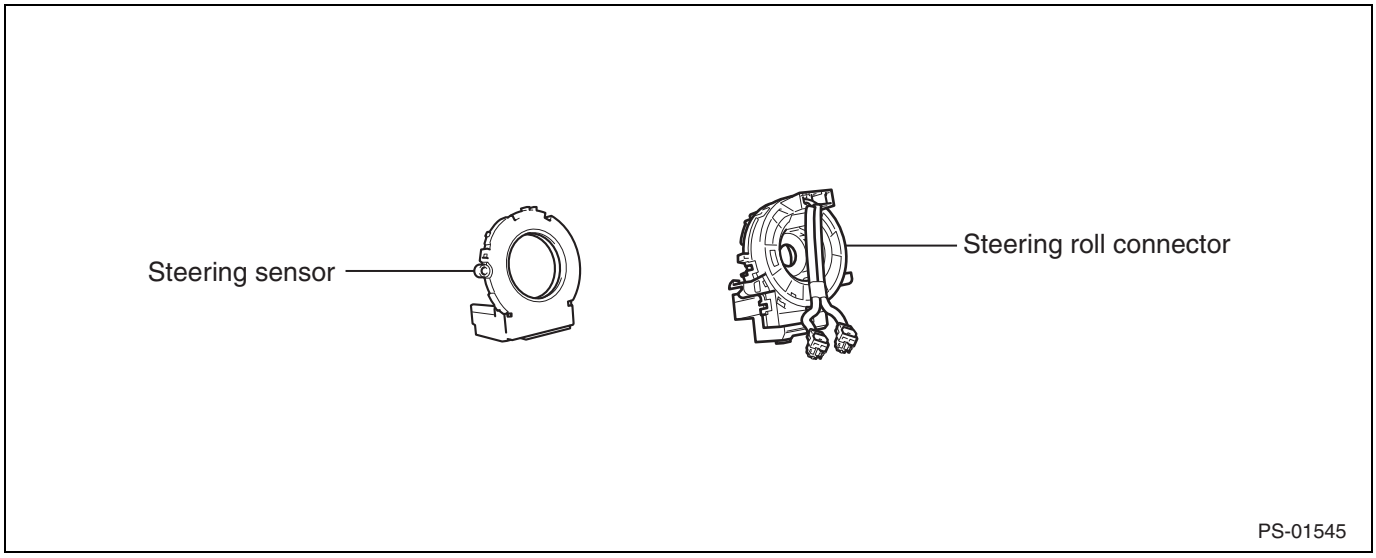
NOTE:
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Installation of speed sensor RR LH
   (1) Install the speed sensor RR LH with 3 bolts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   CAUTION:
   Do not let foreign matter stick to the installation part and the tip of the speed sensor RR LH.
   (2) Attach 2 harness clamps.
   CAUTION:
   Do not attach the harness clamps and the harness bracket with the speed sensor RR LH wire twisted.
   (3) Pull the grommet from inside the vehicle and secure it.
   CAUTION:
   - Do not pull the wiring harness of the speed sensor RR LH.
   - Do not secure the drilled grommet obliquely.
   (4) Connect the connector.
   (5) Install the trunk floor mat.
2. Installation of rear tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

# Steering sensor

## Exploded view





BC

## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always check the precautions for the SRS airbag system. (Refer to RS - 5)

1. Confirmation of front tires in the straight-ahead position
2. Precautions

   CAUTION:

   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
3. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work.

   WARNING:

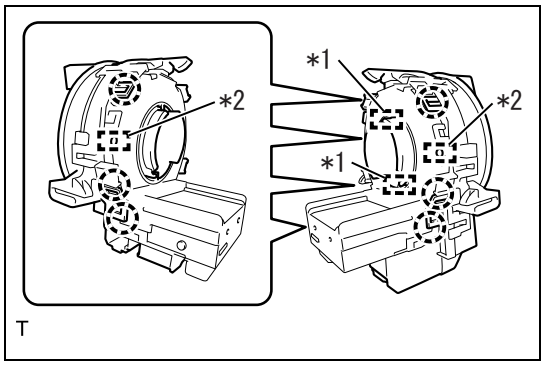
   The air bag and the pretensioner system have a back up power supply. If you start working within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.

   CAUTION:

   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
4. Removal of the driver's airbag module ASSY (Refer to RS - 246)
5. Removal of steering wheel (Refer to SR - 67)
6. Removal of steering column cover support (with smart entry)
   (1) Release 4 claws and remove the steering column cover support.
7. Removal of the steering column cover LWR (Refer to SR - 54)
8. Removal of the steering column cover UPR (Refer to SR - 55)
9. Removal of steering roll connector SUB-ASSY (with steering sensor) (Refer to RS - 251)
10. Removal of steering sensor

    CAUTION:

    - Only when repairing the steering roll connector or the steering sensor, remove it.
    - Do not rotate the center part of the steering sensor because the centering point of the steering sensor may be shifted.



T

(1) Release 6 claws and 2 pins, and then remove the steering sensor from the steering roll connector.

CAUTION:

- Do not damage the guide.
- Do not damage the claws of the steering sensor.

Captions in illustration

| | |
|---|---|
| *1 | Guide |
| *2 | Pin |

## Installation

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always check the precautions for the SRS airbag system. (Refer to RS - 5)

1. Installation of steering sensor
   (1) Apply grease to the protruding part of the inner periphery of the steering sensor.
   (2) Align 2 pins and 2 guides.
   (3) Engage 6 claws, and then attach the steering sensor to the steering roll connector.

   CAUTION:

   Do not rotate the steering sensor until the steering sensor is attached to the spiral cable.
2. Installation of steering roll connector SUB-ASSY (with steering sensor) (Refer to RS - 252)
3. Installation of the steering column cover UPR (Refer to SR - 63)
4. Installation of the steering column cover LWR (Refer to SR - 63)
5. Installation of steering column cover support (with smart entry)

6. Confirmation of front tires in the straight-ahead position
7. Steering roll connector centering (Refer to RS - 252)
8. Installation of steering wheel (Refer to SR - 69)
9. Installation of the driver's airbag module ASSY (Refer to RS - 248)
10. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
11. Settings when removing/installing battery terminals (Refer to IN - 10)
12. VDC sensor mid point setting (Refer to BC - 15)
13. Inspection of airbag warning light (Refer to RS - 53)

# VSC (VDC) OFF switch

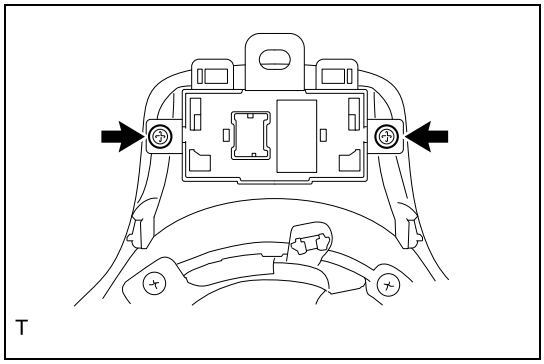
## Removal

1. Removal of shift lever knob (transmission M/T) (Refer to IT - 36)
2. Removal of shifting hole cover SUB-ASSY (transmission M/T) (Refer to IT - 36)
3. Removal of shift lever knob (transmission A/T) (Refer to IT - 35)
4. Removal of shifting hole cover SUB-ASSY (transmission A/T) (Refer to IT - 35)
5. Removal of console switch ASSY
   (1) Disconnect the connector.
   (2) Disconnect the connector clamp. (Transmission A/T)

BC



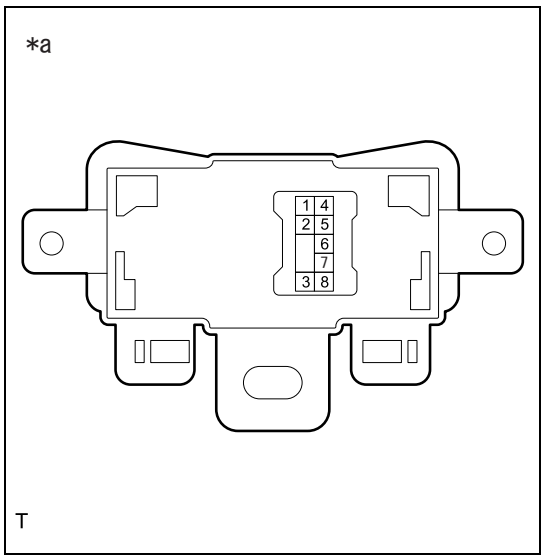
T

(3) Remove 2 screws and remove the console switch ASSY from the shifting hole cover SUB-ASSY.

## Installation

1. Installation of console switch ASSY
   (1) With 2 screws, install the console switch ASSY to the shifting hole cover SUB-ASSY.
   (2) Install the connector clamp. (Transmission A/T)
   (3) Connect the connector.
2. Installation of shifting hole cover SUB-ASSY (transmission M/T) (Refer to IT - 39)
3. Installation of shift lever knob (transmission M/T) (Refer to IT - 39)
4. Installation of shifting hole cover SUB-ASSY (transmission A/T) (Refer to IT - 39)
5. Installation of shift lever knob (transmission A/T) (Refer to IT - 39)

## Unit inspection



1. Console switch ASSY check
   (1) Check that the VSC (VDC) OFF switch is not sticking.
      (a)Check the resistance between the VSC (VDC) OFF switch terminals.

Criteria

| Inspection terminals | Inspection conditions | Criteria |
|---|---|---|
| 5 - 8 | When the switch is not being operated | 10 k Ωor more |
| | When the switch is being operated. | Less than 1 Ω |

   (2) Check that the TRACK mode switch is not sticking.
      (a)Check the continuity between the TRACK mode switch terminals.

Criteria

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 8 | When the switch is not being operated | 10 k Ωor more |
| | When the switch is being operated. | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (VSC (VDC) OFF switch) |

   (3) Check the illumination operation.
      (a)Check the illumination operation when battery voltage is applied between connector terminals.

Criteria

| Battery connection | Standard value |
|---|---|
| Battery positive →2<br>Battery negative →3 | Illumination comes ON. |

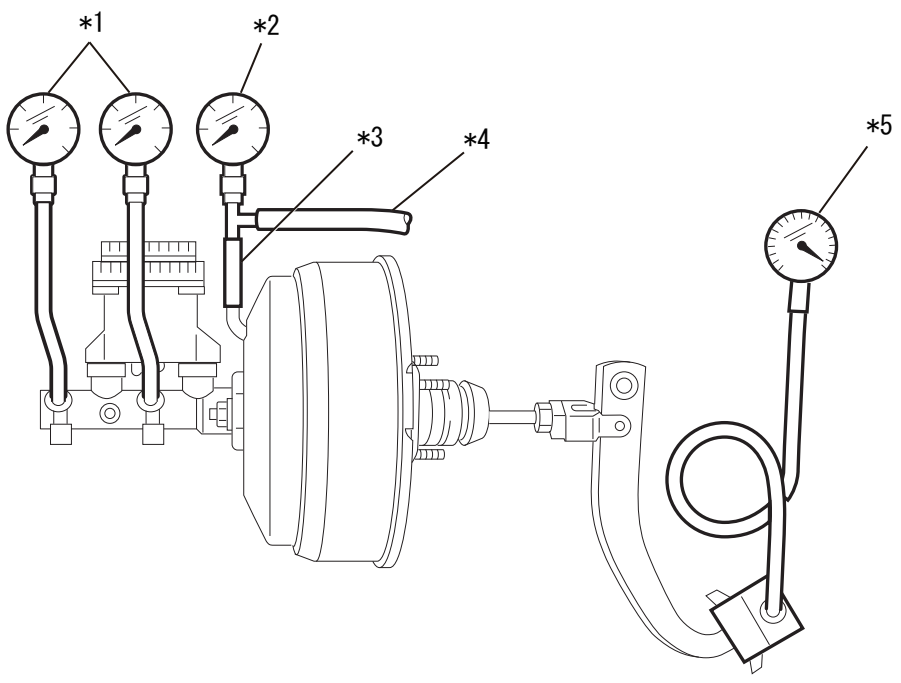
# Brake system

## Precautions

1. The speed sensor FR and RR are easily affected by magnetism. Use extra caution when working with magnets.
2. Replace each part correctly. Otherwise it may impair the brake system, leading to dangerous driving conditions. Use the same part or the equivalent for replacement.
3. When servicing the brake system, keep the parts and their surroundings clean.
4. If the vehicle is equipped with a device including a radio, refer to the precautions in "General" section.

## Function inspection

1. Brake booster simple check
   (1) Function inspection of brake booster air-tightness
      (a)Start the engine, let it idle for 1 to 2 minutes, and then stop it.
      (b)Depress the brake pedal several times with an ordinary force, and check the height change of the brake pedal.
         Criteria: The brake pedal height goes up each time the pedal is depressed (The intervals between the first and second time, and the second and third time are 5 seconds or more).
   (2) Brake booster operation check
      (a)Depress the brake pedal several times in the same force with the engine turned OFF, and check that there is no height change in the brake pedal.
      (b)With the brake pedal depressed, start the engine and check the height change of the brake pedal.
         Criteria: When the engine is started with the brake pedal depressed, the brake pedal travels a little farther.
   (3) Function inspection of brake booster load air tightness
      (a)With the engine running, press and hold the brake pedal and stop the engine for 30 seconds to check the height change of the brake pedal.
         Criteria: No height change in the pedal
2. Function inspection of brake booster
   (1) Preparation for inspection



BR-01102

Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Pressure gauge | *2 | Vacuum gauge |
| *3 | Adapter hose | *4 | Vacuum hose |
| *5 | Pedal force gauge | | |

   (2) Function inspection of air tightness

(a)Start the engine and then stop the engine at the vacuum pressure of 66.7 kPa {500 mmHg} {19.69 inHg} to check the vacuum pressure change.
Criteria: Vacuum pressure does not drop for 15 seconds.

(3) Function inspection of load air tightness
(a)Start the engine and depress the brake pedal at a pedal force of 196 N {20 kgf} {44.1l bf}. Then stop the engine at the vacuum pressure of 66.7 kPa {500 mmHg} to check the vacuum pressure change.
Criteria: Vacuum pressure drops to within 3.3 kPa{25 mmHg} {0.97 inHg} for 15 seconds.

(4) Non-boosting action check
(a)Stop the engine and depress the brake pedal several times to check the fluid pressure in each pedal force under conditions without vacuum pressure.

Standard value

| Pedal force [N{kgf, lbf}] | Fluid pressure [MPa{kgf/cm$^2$, psi}] |
|---|---|
| 147{15, 33.1} | 0.56 {5.7, 8.12} |
| 294 {33, 66.1} | 1.64 {16.7, 23.8} |

(5) Boosting action check
(a)Start the engine and increase the vacuum pressure up to 66.7 kPa{500 mmHg} in the brake booster, and then check the fluid pressure in each pedal force.

Standard value

| Pedal force [N{kgf, lbf}] | Fluid pressure [MPa{kgf/cm$^2$, psi}] |
|---|---|
| 147{15, 33.1} | 105 {1075, 1522.5} |
| 294 {33, 66.1} | 112 {1146, 1624.0} |

NOTE:
If the brake booster ASSY is faulty, check the check valve. If there is no problem with the check valve, replace the brake booster ASSY.

(6) Remove the pressure gauge, pedal force gauge, and vacuum gauge.
(7) Install the vacuum hose to the brake booster ASSY.
(8) Air bleeding of brake system (Refer to BR - 8)

## Symptom table

Brake system

| Symptoms | Inspection items | Reference pages | |

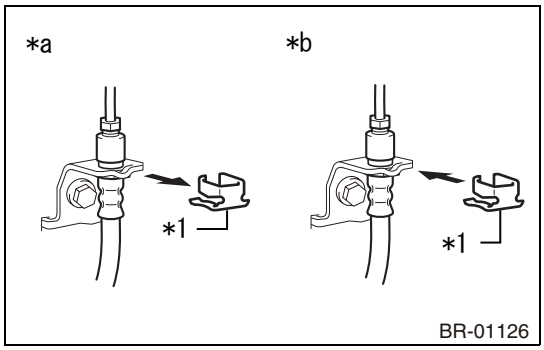
# Brake line

## Precautions

1. This part is critical to safety. If brake fluid leakage is found, be sure to disassemble the parts, and replace the faulty parts with new ones if any.
2. When removing each component of the brake, protect it with cover to prevent foreign matter such as dirt or dust from entering the connecting part
3. Do not damage or deform the brake tube during removal/installation of the parts.
4. When installing the grommet to the body, make sure that the brake tube is positioned in the center of the grommet.
5. When installing the brake tube and the flexible hose, make sure that they are not twisted or bent.
6. If the connecting part of the flexible hose does not fit the bracket groove, twist the flexible hose at the minimum angle needed to insert.
7. Do not reuse the flexible hose mounting clip.
8. Make sure that the flexible hose is free from lubricants such as absorber oil and grease.
9. When installing the brake tube to the resin clamp, make sure to attach the brake tube to the clamp securely without the brake tube wiggling or snagging.
10. When installing the brake tube and the flexible hose, make sure that they do not interfere with other parts.
11. Do not let brake fluid come into contact with the painted surface of the body. Wipe the surface off quickly and clean it with water if contaminated.



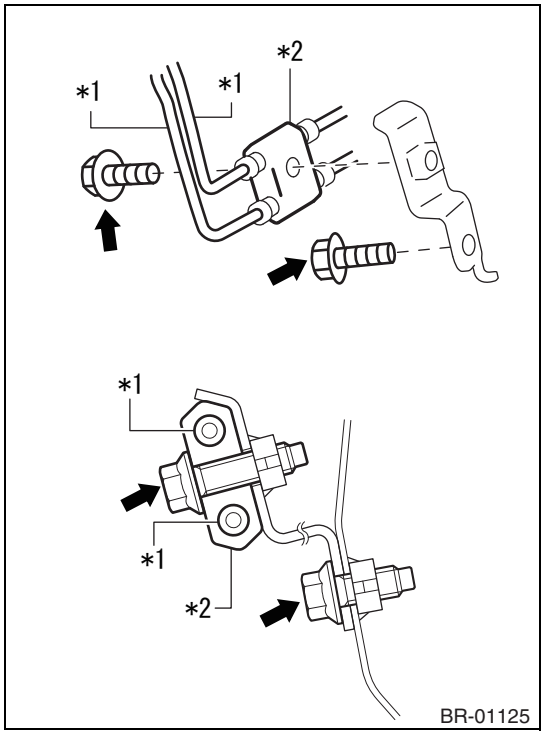
12. Disconnection and connection of flexible hose and brake tube
    (1) Using a spanner, secure the flexible hose. Then using a flare-nut wrench, disconnect the brake tube without deforming it.

Captions in illustration

| | |
|---|---|
| *1 | Clip |
| *a | When disconnecting |
| *b | When connecting |

    (2) Connect the flexible hose and the brake tube temporarily.
    (3) With a new clip, secure the flexible hose. At this time, attach the clip completely.
    (4) Being careful not to deform the brake tube, tighten the brake tube securely with a flare-nut wrench.
    Standard value:T=15N·m {153kgf·cm} {11.1ft·lbf}

13. Connection of brake tube and way
    (1) Connect the way and the brake tube temporarily.



(2) Holding the way to prevent the brake tube from deforming, connect the brake tube with a flare-nut wrench.
Standard value:T=15N·m {153kgf·cm} {11.1ft·lbf}

Captions in illustration

| | |
|---|---|
| *1 | Brake tube |
| *2 | Way |

(3) Holding the way to prevent the brake tube from deforming, connect the way to the body with bolts.
Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}

BR-10019

# Brake fluid

## Refill

1. Refill of brake fluid

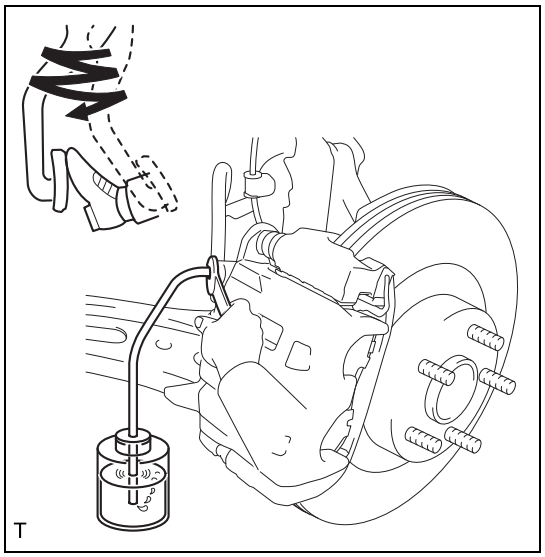
   CAUTION:

   Do not let brake fluid come into contact with the painted surface. If it happens, wash it out immediately.

   (1) Remove the reservoir filler cap.

   (2) Fill the brake master cylinder reservoir ASSY with brake fluid up to the MAX level.

## Replacement



1. Replacement of brake fluid

   CAUTION:

   - Do not let brake fluid come into contact with the painted surface of the vehicle. If spilled, wash it off with water and wipe clean quickly.
   - Do not reuse drained brake fluid. When refilling, always use new brake fluid.
   - To prevent deterioration of brake fluid performance, do not mix different grades of brake fluid (even if they are same brand).
   - Do not allow dirt or dust to enter the brake master cylinder reservoir ASSY.

   NOTE:

   - During work, refill brake fluid frequently to prevent the brake master cylinder reservoir ASSY from becoming empty, which prevents air entry.
   - When operating the brake pedal, depress it slowly to full stroke.
   - Work in pairs to work safely and easily.
   - The necessary amount of brake fluid is approx. 500 mL (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.

   (1) Lift up the vehicle.

   (2) Remove the wheels (front and rear, both sides).

   (3) Drain brake fluid from the brake master cylinder reservoir ASSY.

   (4) Refill the brake master cylinder reservoir ASSY with the recommended brake fluid, and then perform the same procedure as the brake line air bleeding on each brake caliper. (Refer to BR - 8)
   Recommended brake fluid: FMVSS No. 116 DOT3 or DOT4

   NOTE:

   Repeat depressing the brake pedal to full stroke slowly until the new brake fluid flows out of the transparent plastic tube. (For the new brake fluid from the brake master cylinder SUB-ASSY to flow out of the bleeder screw, the pedal operation is required twenty times or more for each brake caliper.)

2. Brake fluid level check (Refer to BR - 12)

## Air bleeding

1. Precautions for handling·procedures

   CAUTION:

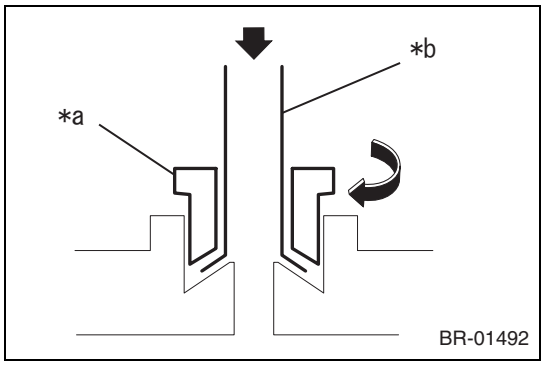
   - Do not let brake fluid come into contact with the painted surface of the vehicle. If spilled, wash it off with water and wipe clean quickly.
   - Do not reuse drained brake fluid. When refilling, always use new brake fluid.
   - To prevent deterioration of brake fluid performance, do not mix different grades of brake fluid (even if they are same brand).
   - Do not allow dirt or dust to enter the brake master cylinder SUB-ASSY.
   - Work in pairs to work safely and easily.
   - During work, refill brake fluid frequently to over the MIN level to prevent the brake master cylinder reservoir ASSY from becoming empty, which prevents air entry.

   NOTE:

   For procedures of air bleeding in each part, refer to the following.

- Brake master cylinder SUB-ASSY: Refer to BR - 9.
- Brake line: Refer to BR - 10.
- Brake actuator ASSY: Refer to BR - 11.
- Caliper body ASSY: Refer to BR - 12.

2. Air bleeding of master cylinder
   NOTE:
   - When the brake master cylinder SUB-ASSY has been replaced, or the brake master cylinder reservoir ASSY is empty, bleed air from the brake master cylinder ASSY.
   - When air bleeding of the brake master cylinder SUB-ASSY is not necessary, omit the following procedure and bleed air from the brake line. (Refer to BR - 10)



(1) While pushing the brake tube against the brake master cylinder SUB-ASSY, press it until the tip of the flare-nut comes into contact with the back surface of the brake tube flare, and then tighten it.
CAUTION:
Be careful not to damage the inner wall of the brake tube flare.
Standard value:T=19 N·m {194 kgf·cm} {14 ft-lb}

| | |
|---|---|
| *a | Flare-nut |
| *b | Brake pipe |

(2) Fill the brake master cylinder reservoir ASSY of the brake master cylinder SUB-ASSY with brake fluid.
NOTE:
- Fill the brake fluid up to the MAX level.
- During work, refill brake fluid frequently to over the MIN level to prevent the brake master cylinder reservoir ASSY from becoming empty, which prevents air entry.

(3) Install a transparent plastic tube to the bleeder screw of the right front caliper body ASSY, and install the other end of the tube to a recovery container.
(4) Loosen the bleeder screw, and then slowly depress the brake pedal and hold it.
(5) Tighten the bleeder screw, and then release the brake pedal quickly.
(6) Repeat the steps (4) to (5) until no air bubbles are seen in the brake fluid in the plastic tube.
NOTE:
- Repeat the steps six or seven times to get rid of air bubbles.
- For the brembo type, perform in the order of inner →outer.

(7) Install a transparent plastic tube to the bleeder screw of the left front caliper body ASSY, and install the other end of the tube to a brake fluid recovery container.
(8) Repeat the steps (4) to (5) until no air bubbles are seen in the brake fluid in the plastic tube.
NOTE:
- Repeat the steps seven or eight times to get rid of air bubbles.
- For the brembo type, perform in the order of inner →outer.
- By performing steps up to here, air in the front brake piping passage and the front caliper is bled.
  Then perform the following procedure to bleed air which entered the rear brake piping passage and the rear caliper from the brake actuator ASSY.

(9) Install a transparent plastic tube to the bleeder screw of the left rear caliper body ASSY, and install the other end of the tube to a brake fluid recovery container.
(10) Loosen the bleeder screw and repeat depressing the brake pedal to full stroke slowly. Then tighten the bleeder screw repeatedly until no air bubbles are seen in the brake fluid in the plastic tube.
NOTE:
- For the brembo type, perform in the order of inner →outer.
- By repeating the steps fifteen times or more, the air which entered the rear brake piping passage from the brake actuator ASSY reaches to the bleeder screw of the left rear caliper body ASSY, and then is drained.

(11) Install a transparent plastic tube to the bleeder screw of the right rear caliper body ASSY, and install the other end of the tube to a brake fluid recovery container.
(12) Perform the step (10).

NOTE:
- For the brembo type, perform in the order of inner →outer.
- By repeating the steps ten times or more, the air which entered the rear brake piping passage from the brake actuator ASSY reaches to the bleeder screw of the right rear caliper body ASSY, and then is drained.
- By performing steps up to here, air which entered the rear brake piping passage and the rear caliper body ASSY from the brake actuator ASSY is bled.

  Finally, perform the following procedure to bleed air which may remain in brake fluid stagnation areas.

(13) Install a transparent plastic tube to the bleeder screw of the right front caliper body ASSY, and install the other end of the tube to a brake fluid recovery container.

(14) Repeat depressing the brake pedal hard and quickly five or six times, and then hold the pedal depressed.

(15) Loosen the bleeder screw to drain brake fluid. When the brake pedal reaches the full stroke position, tighten the bleeder screw quickly, and then release the brake pedal.

(16) Repeat the steps (14) to (15) until no air bubbles are seen in the transparent plastic tube.

NOTE:
Repeat the steps four or five times.

(17) Repeat the steps (14) to (16) on each caliper body ASSY.

NOTE:
- Perform air bleeding in order of the front RH→front LH→rear LH→rear RH.
- For the brembo type, perform air bleeding in inner →outer in the order of front RH →front LH →rear LH →rear RH.

(18) Tighten each bleeder screw to the specified torque.

(a) Normal type

Standard value: T=8 N·m {82 kgf·cm} {5.9 ft-lb}

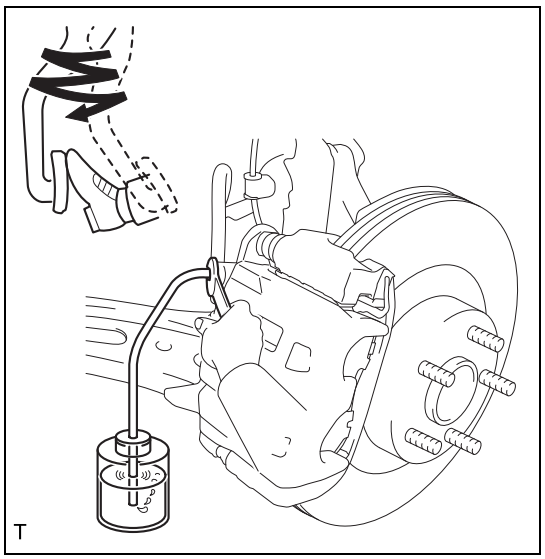
(b) Brembo type

Standard value: T=20 N·m {203 kgf·cm} {14.8 ft-lb}

(19) Install the cap bleeder to each bleeder screw.

CAUTION:
Remaining brake fluid inside and outside of the bleeder screw may cause misleading of damage to the painted surface and fluid leakage. Therefore, make sure to wipe off the brake fluid well after tightening.

3. Air bleeding of brake line



(1) When the brake master cylinder SUB-ASSY has been replaced, or the brake master cylinder reservoir ASSY is empty, bleed air from the brake master cylinder SUB-ASSY before bleeding air from the brake line. (Refer to BR - 9)

(2) Fill the brake master cylinder reservoir ASSY of the brake master cylinder SUB-ASSY with brake fluid.

NOTE:
During work, refill brake fluid frequently to prevent the brake master cylinder reservoir ASSY from becoming empty, which prevents air entry.

(3) Install one end of a transparent plastic tube to the bleeder screw, and then install the other end of the tube to a brake fluid recovery container.

(4) Loosen the bleeder screw and depress the brake pedal to full stroke. Repeat it until no air bubbles are seen in the brake fluid in the transparent plastic tube.

NOTE:
Repeat the depressing operation fifteen times or more for the front caliper body ASSY and twenty times or more for the rear caliper body ASSY to get rid of air bubbles.

(5) Repeat the steps (2) to (4) on each caliper body ASSY.
NOTE:
- Perform air bleeding in order of the front RH→front LH→rear LH→rear RH.
- For the brembo type, perform air bleeding in inner →outer in the order of front RH →front LH →rear LH →rear RH.

(6) Tighten the loosened bleeder screw and repeat depressing the brake pedal hard and quickly five or six times, and then hold the pedal depressed.

(7) Loosen the bleeder screw and drain the brake fluid. When the brake pedal reaches the full stroke position, tighten the bleeder screw quickly, and then release the brake pedal.

(8) Repeat the steps (6) to (7) until no air bubbles are seen in the transparent plastic tube.

(9) Repeat the steps (6) to (8) on each brake caliper.
NOTE:
- Perform air bleeding in order of the front RH→front LH→rear LH→rear RH.
- For the brembo type, perform air bleeding in inner →outer in the order of front RH →front LH →rear LH →rear RH.

(10) Perform function inspection of both systems ABS and VSC.
CAUTION:
- If the entry of air into the pressure control part in the brake actuator ASSY may occur, perform the steps (11) to (16).
- In the regular air bleeding, do not activate the function inspection of the brake actuator ASSY (The function inspection may cause air in the regular air bleeding passage to move into the pressure control part).

NOTE:
- The regular air bleeding cannot bleed air which entered the pressure control part in the brake actuator ASSY.
- If the entry of air into the pressure control part in the brake actuator ASSY may occur (such as the case when the VSC or ABS was accidentally activated while air existed in the regular air bleeding passage), perform function inspection of both systems ABS and VSC.

(11) Perform the ABS function inspection. (Refer to BC - 4)
CAUTION:
Always perform the ABS function inspection first.

(12) Perform the air bleeding (3) to (4) on the bleeder screw of each caliper body ASSY.
NOTE:
- Perform air bleeding in order of the front RH→front LH→rear LH→rear RH.
- For the brembo type, perform air bleeding in inner →outer in the order of front RH →front LH →rear LH →rear RH.
- The necessary number of the full stroke depressing operation is approx. six times.

(13) Perform the VSC function inspection. (Refer to BC - 4)

(14) Perform the air bleeding (3) to (4) on the bleeder screw of each caliper body ASSY.

(15) Repeat the steps (11) to (14) three times.

(16) If the air is not bled completely in step (15), repeat the steps (11) to (14) until all the air is bled.

(17) Fill the brake master cylinder reservoir ASSY with brake fluid up to the MAX level.

(18) Tighten each bleeder screw to the specified torque.
(a) Normal type
Standard value: T=8 N·m {82 kgf·cm} {5.9 ft-lb}
(b) Brembo type
Standard value: T=20 N·m {203 kgf·cm} {14.8 ft-lb}

(19) Install the cap bleeder to each bleeder screw.
CAUTION:
Remaining brake fluid inside and outside of the bleeder screw may cause misleading of damage to the painted surface and fluid leakage. Therefore, make sure to wipe off the brake fluid well after tightening.

(20) Check the flare-nut part or the entire brake system for brake fluid leakage.

(21) Perform the road test to confirm the brake works correctly.

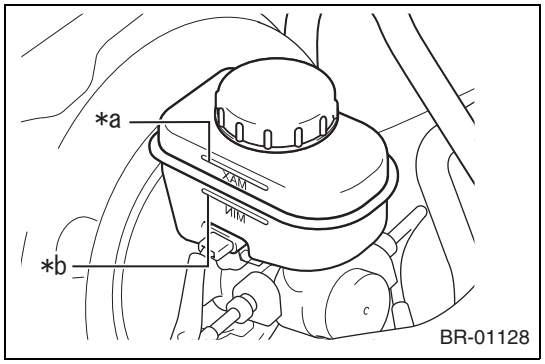
4. Air bleeding of brake actuator

(1) Bleed air from the brake line. (Refer to BR - 10)
NOTE:
If the entry of air into the pressure control part in the brake actuator ASSY may occur, perform function inspection of both systems ABS and VSC. (Refer to the steps for the brake line (10) to (16).)

5. Air bleeding of caliper body ASSY
   (1) Bleed air from the brake line. (Refer to BR - 10)
6. Brake fluid leak check
7. Brake fluid level check (Refer to BR - 12)

## On-vehicle inspection

1. Precautions for handling·procedures
   CAUTION:
   - Do not let brake fluid come into contact with the painted surface of the vehicle. If spilled, wash it off with water and wipe clean quickly.
   - Do not reuse drained brake fluid. When refilling, always use new brake fluid.
   - To prevent deterioration of brake fluid performance, do not mix different grades of brake fluid (even if they are same brand).
   - Do not allow dirt or dust to enter the reservoir tank.
   - If a syringe, etc. is used for adjusting the fluid level, make sure that it has not been used for mineral oil, water, or deteriorated brake fluid. It causes deterioration of sealing parts and brake fluid, and fluid leakage and poor brake performance.



2. Brake fluid level check

Captions in illustration

| | |
|---|---|
| *a | MAX level |
| *b | MIN level |

(1) Check the fluid for discoloration.
(2) Check that the brake fluid level is between MIN and MAX.
(3) When the brake fluid level is close to MIN, check that there is no leakage from the brake tube or the flexible hose, and then confirm that the brake fluid level was lowered because of the worn brake pad.
(4) If the inspection reveals that the fluid is discolored significantly or inadequate for the specified amount, refill or change the brake fluid with new one.

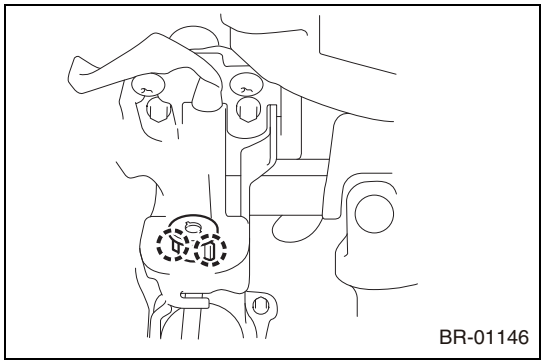
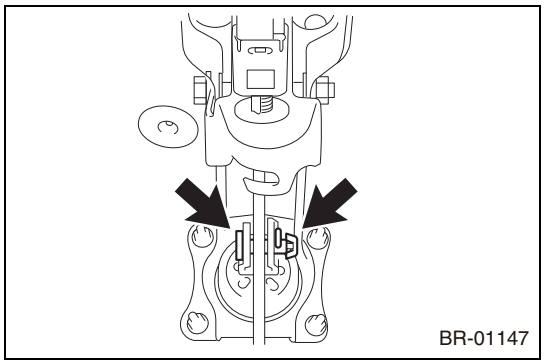
## Removal

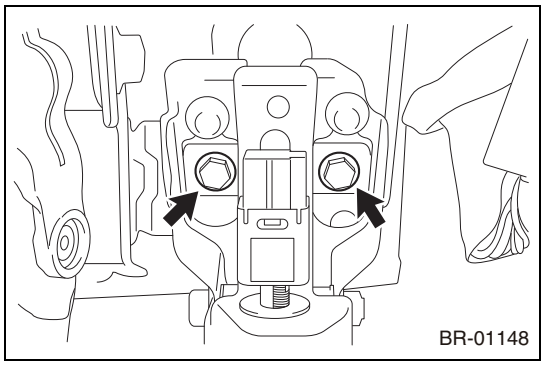
1. Removal of instrument side panel LH (Refer to IT - 24)
2. Removal of instrument panel under cover SUB-ASSY No.1 (Refer to ME - 68)
3. Removal of stop light switch ASSY (Refer to LE - 78)



4. Removal of stop light switch mounting adjuster
   (1) Release 2 claws and remove the stop light switch mounting adjuster.



5. Removal of push rod pin
   (1) Remove the clips and the push rod pin.



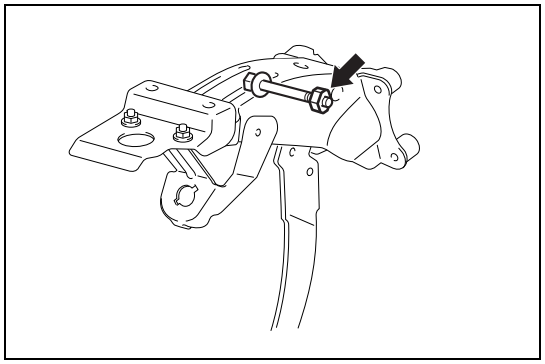
6. Removal of brake pedal support ASSY.
   (1) Remove 2 bolts.

   (2) Remove 4 nuts and then the brake pedal support ASSY.

## Disassembly

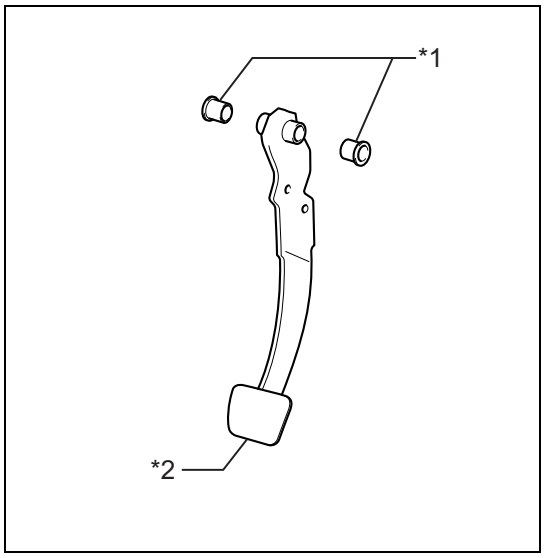
1. Removal of brake pedal stopper.
   (1) Remove the brake pedal stopper from the brake pedal.

BR



2. Removal of brake pedal
   (1) Remove the bolt and nut from the brake pedal support ASSY.
   NOTE:
   Hold the bolt and rotate the nut.
   (2) Remove the brake pedal return spring.
   (3) Remove the brake pedal shaft collar.
   (4) Remove 2 brake pedal shaft bushings.

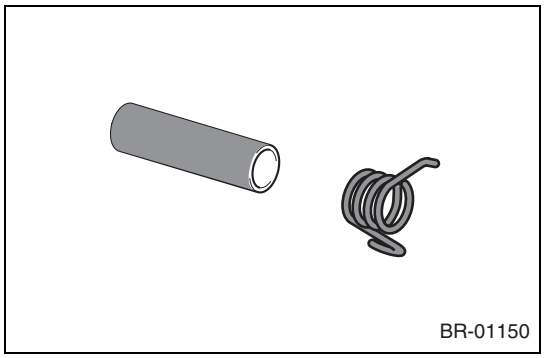
## Assembly



1. Installation of brake pedal bushings
   (1) Install the brake pedal bushings to the brake pedal.

Captions in illustration

| | |
|---|---|
| *1 | Brake pedal bushings |
| *2 | Brake pedal |

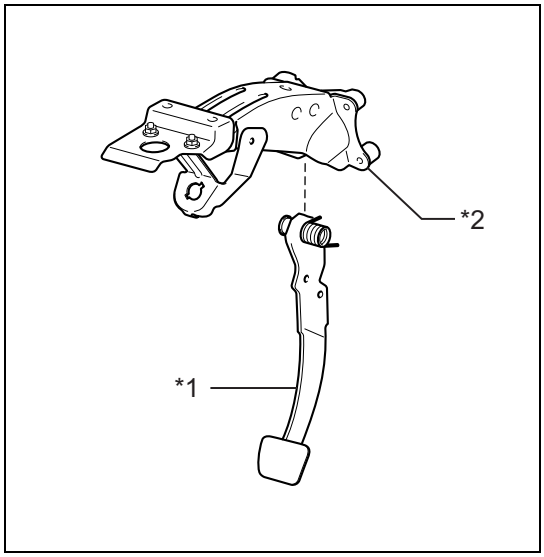


2. Installation of brake pedal
   (1) Apply NIGTIGHT LYW No.2 or equivalent to the sides of brake pedal shaft collar and the brake pedal return spring.

Captions in illustration

| | |
|---|---|
| | NIGTIGHT LYW No.2 or equivalent |

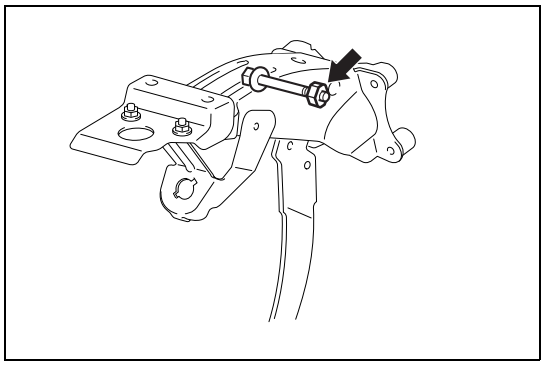
   (2) Install the brake pedal return spring and the brake pedal shaft collar to the brake pedal.



(3) Install the brake pedal to the brake pedal support ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Brake pedal |
| *2 | Brake pedal support ASSY |

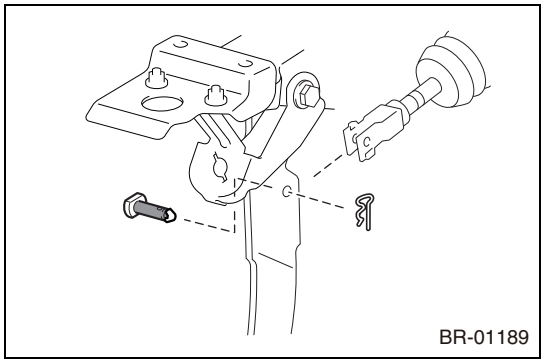


(4) Install the brake pedal to the brake pedal support ASSY with bolt and nut.
NOTE:
Secure the bolt and tighten the nut.
Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}

3. Installation of brake pedal stopper
   (1) Install the brake pedal stopper to the brake pedal.

## Installation

1. Installation of brake pedal support ASSY
   (1) Temporarily install the brake pedal support ASSY with 2 bolts and 4 nuts.
   (2) Tighten 4 nuts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
   (3) Tighten 2 bolts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}

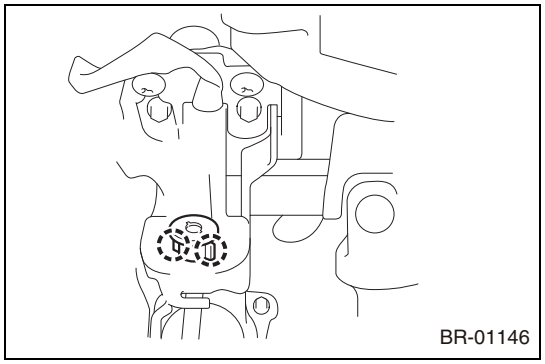


2. Installation of push rod pin
   (1) Apply NIGTIGHT LYW No. 2 or equivalent to the periphery of the push rod pin.

Captions in illustration

| | |
|---|---|
| | NIGTIGHT LYW No.2 or equivalent |

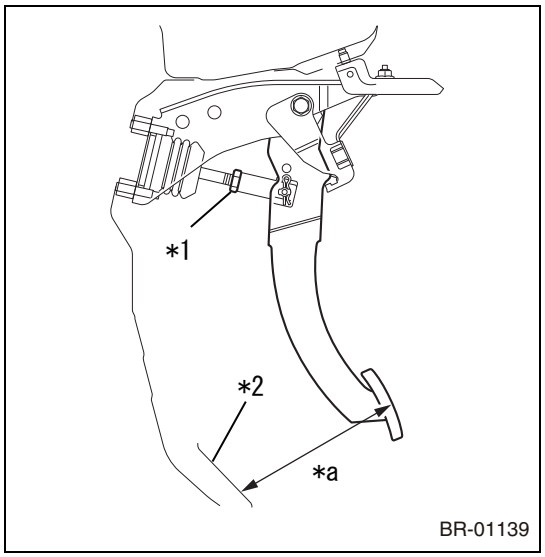
(2) Insert a new push rod pin from the left side of the vehicle, and connect the push rod clevis to the brake pedal ASSY with a new clip.



BR-01146

3. Installation of stop light switch mounting adjuster
   (1) Engage 2 claws, and install the stop light switch mounting adjuster.
4. Brake pedal height check ·adjustment (Refer to BR - 18)
5. Brake pedal free play check (Refer to BR - 19)
6. Brake pedal clearance check (Refer to BR - 19)
7. Installation of stop light switch ASSY (Refer to LE - 79)
8. Installation of instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
9. Installation of instrument side panel LH (Refer to IT - 29)

## Adjustment



BR-01139

1. Brake pedal height check/adjustment
   (1) Brake pedal height check

Captions in illustration

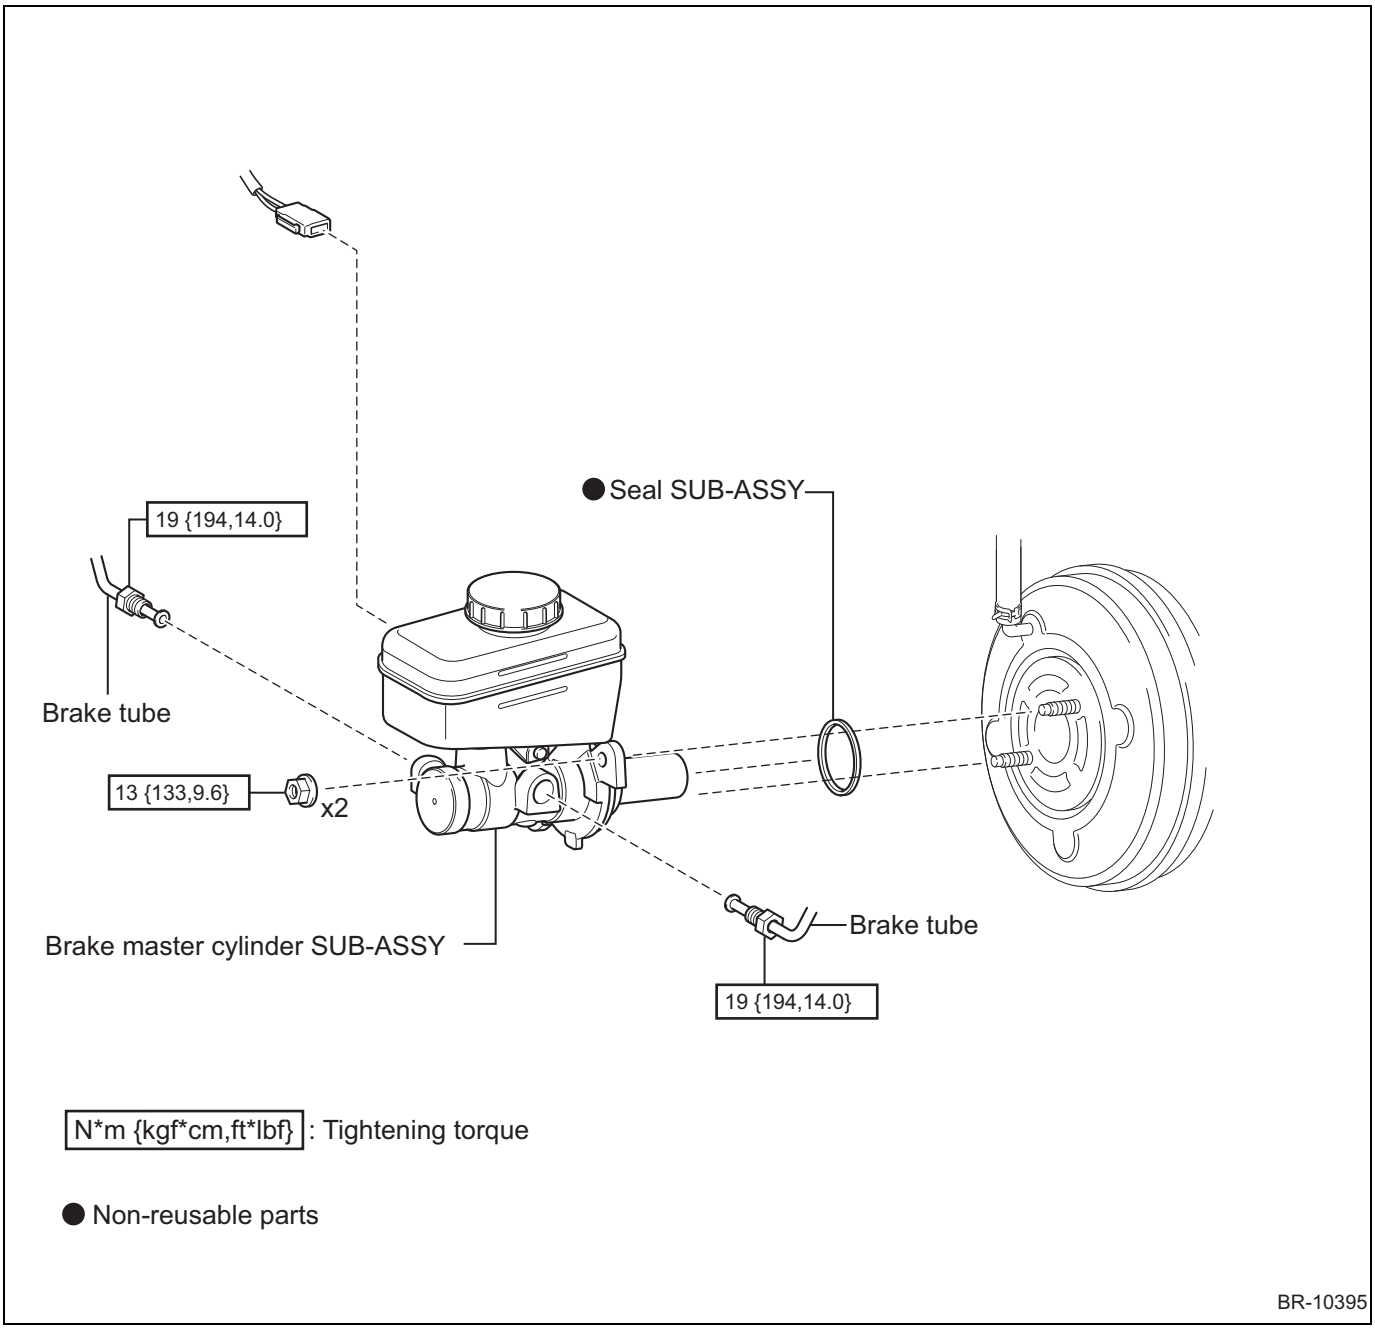
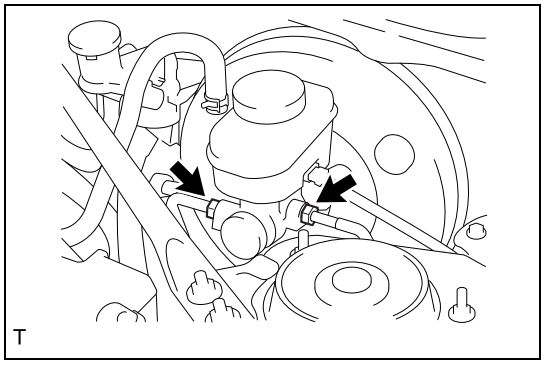
# Brake master cylinder ASSY

## Exploded view

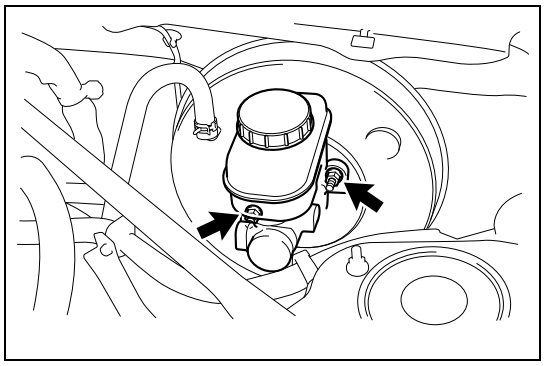


## Removal

1. Removal of front tire LH
2. Draining of brake fluid
   CAUTION:
   Do not let brake fluid come into contact with the painted surface. If it happens, wash it out immediately.
3. Removal of front upper suspension-to-cowl brace SUB-ASSY LH (Refer to FP - 4)
4. Removal of brake master cylinder SUB-ASSY
   (1) Operate the brake pedal more than several times and release the vacuum pressure from the brake booster.
   (2) Disconnect the brake fluid level warning switch connector from the reservoir.



(3) Using a flare-nut wrench, disconnect 2 brake tubes from the master cylinder SUB-ASSY.



(4) Remove 2 nuts, and disconnect the brake master cylinder SUB-ASSY.
CAUTION:
- The piston comes off from the brake master cylinder SUB-ASSY easily. Therefore, do not hold or pull out the piston. If the piston comes off the brake master cylinder SUB-ASSY, do not reuse it but replace the brake master cylinder SUB-ASSY with new one, because the brake master cylinder SUB-ASSY may malfunction
- Do not give a shock to the piston of the brake master cylinder SUB-ASSY, fix it with a vise, or scratch it.
- Remove the brake master cylinder SUB-ASSY after operating the brake pedal several times and releasing the vacuum pressure from the brake booster.
- Do not tilt the brake master cylinder SUB-ASSY's piston side below a horizontal position.
- Be careful not to allow foreign matter to stick to the piston of the brake master cylinder SUB-ASSY. If a foreign matter sticks to the piston, remove the foreign matter with a cloth and apply rubber grease all around the outer surface of the piston (sliding part).
- Do not use undesignated oil.

5. Removal of seal SUB-ASSY
   (1) Remove the seal sub ASSY.

## Installation

1. Installation of seal SUB-ASSY
   (1) Install a new seal SUB-ASSY.
2. Installation of brake master cylinder SUB-ASSY
   (1) Install the brake master cylinder SUB-ASSY with 2 nuts.
   Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}
   (2) Using a union nut wrench 12, connect 2 brake tubes to the brake master cylinder SUB-ASSY.
   Standard value:T=19N·m {194kgf·cm} {14.0ft·lbf}
   (3) Connect the brake fluid level warning switch connector.
3. Brake fluid refill (Refer to BR - 8)
4. Air bleeding of brake master cylinder SUB-ASSY (Refer to BR - 9)
5. Air bleeding of brake system (Refer to BR - 10)
6. Brake fluid leak check
7. Brake fluid level check (Refer to BR - 12)
8. Installation of front upper suspension-to-cowl brace SUB-ASSY RH (Refer to FP - 5)
9. Installation of front tire LH
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

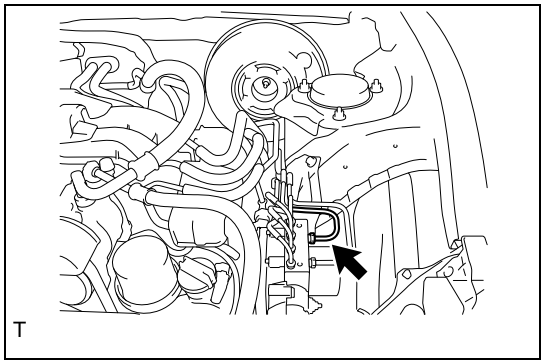
## Removal

1. Removal of instrument side panel LH (Refer to IT - 24)
2. Removal of instrument panel under cover SUB-ASSY No.1
3. Removal of transmission control computer ASSY (Refer to AT - 323)
4. Removal of brake master cylinder SUB-ASSY (Refer to BR - 24)
5. Disconnection of vacuum hose
   (1) Slide the clip and disconnect the vacuum hose from the brake booster ASSY.



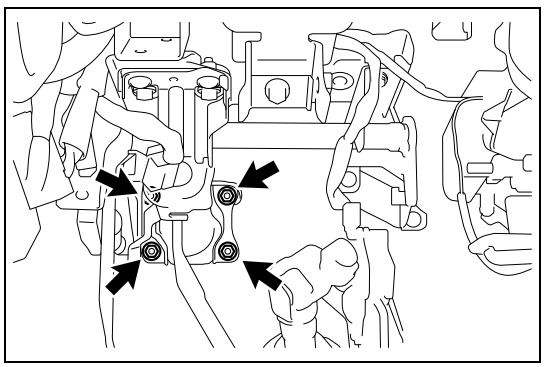
6. Removal of the brake tube front No. 1
   (1) Using a flare-nut wrench, disconnect the brake tube front No. 1 from the brake actuator.

   (2) Release 2 clips and remove the brake tube front No. 1.

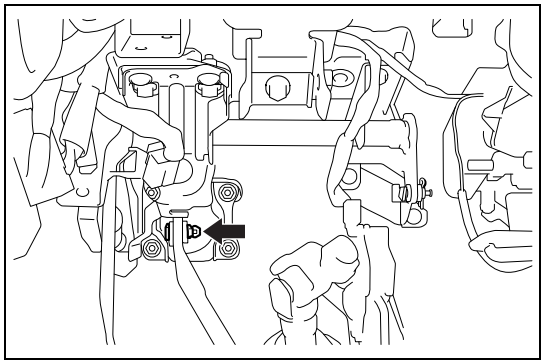
7. Removal of the brake tube front No. 2

   (1) Using a flare-nut wrench, disconnect the brake tube front No. 2 from the brake actuator.

   (2) Release 2 clips and remove the brake tube front No. 2.



8. Removal of brake booster ASSY
   (1) Remove 4 nuts.



(2) Remove the push rod clevis.
(3) Remove the brake booster ASSY.

## Installation

1. Installation of brake booster ASSY
   (1) Temporarily attach the push rod clevis with a lock nut.

   (2) Measure the length between the vacuum booster assembly mounting surface and clevis pin hole.
   Standard value (A): 155.2 mm {6.11 in}
   NOTE:
   If it is not within the specification, loosen the lock nut, rotate the vacuum booster operating rod to perform adjustment.
   (3) Tighten the lock nut securely.
   Standard value:T=19N·m {194kgf·cm} {14.0ft·lbf}
   (4) Install the brake booster ASSY with 4 nuts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
2. Installation of brake tube front No. 2
   (1) Engage 2 clips, and install the brake tube front No. 2.
   (2) Using a flare-nut wrench, connect the brake tube front No. 2 to the brake actuator.
   Standard value:T=19N·m {194kgf·cm} {14.0ft·lbf}
   CAUTION:
   - Do not bend or damage the brake tubes.
   - When installing the brake tube, make sure that they are not twisted or bent.
   - Do not let foreign matter including dirt and dust enter the brake tube.
3. Installation of brake tube front No. 1
   (1) Engage 2 clips, and install the brake tube front No. 1.
   (2) Using a flare-nut wrench, connect the brake tube front No. 1 to the brake actuator.
   CAUTION:
   - Do not bend or damage the brake tubes.
   - When installing the brake tube, make sure that they are not twisted or bent.
   - Do not let foreign matter including dirt and dust enter the brake tube.

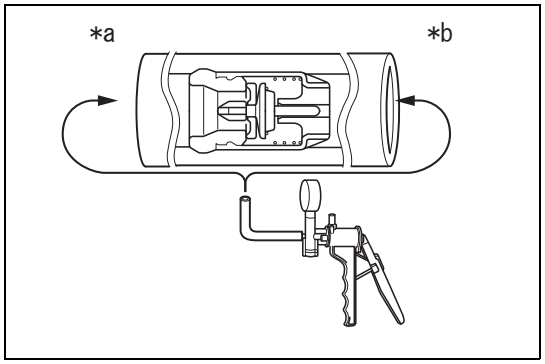
BR

4. Installation of vacuum hose
   (1) Attach the vacuum hose with the clamp.
5. Installation of push rod pin (Refer to BR - 17)
6. Installation of transmission control ASSY (Refer to AT - 323)
7. Installation of instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
8. Installation of instrument side panel LH (Refer to IT - 29)
9. Brake fluid refill (Refer to BR - 8)
10. Air bleeding of brake master cylinder SUB-ASSY (Refer to BR - 9)
11. Air bleeding of brake system (Refer to BR - 10)

12. Brake fluid leak check
13. Brake fluid level check (Refer to BR - 12)
14. Brake pedal height check ·adjustment (Refer to BR - 18)
15. Brake pedal free play check (Refer to BR - 19)
16. Brake pedal clearance check (Refer to BR - 19)

## Unit inspection

1. Brake vacuum check valve ASSY check
   (1) Slide 2 clamps to remove the vacuum hose ASSY.

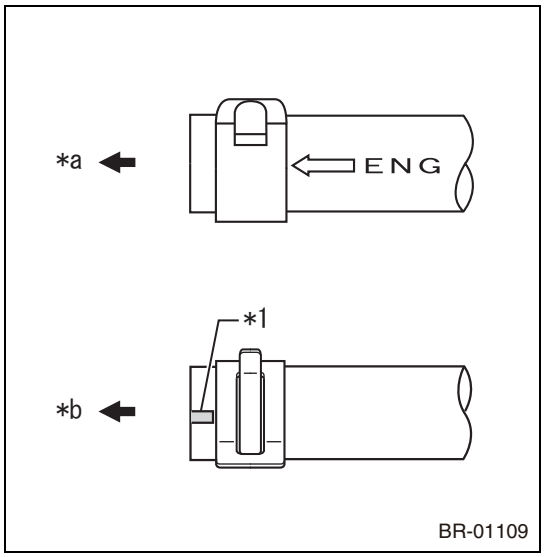


(2) Using vacuum gauge, check that there is a ventilation from the brake booster ASSY to the engine side. Also, check that there is no ventilation from the engine side to the brake booster ASSY side.

Captions in illustration

| | |
|---|---|
| *a | Booster side |
| *b | Engine side |

NOTE:
If it is faulty, replace the vacuum hose ASSY.



(3) Face the engine stamp to the engine side as shown in the figure, and then install it to the engine side.

Captions in illustration

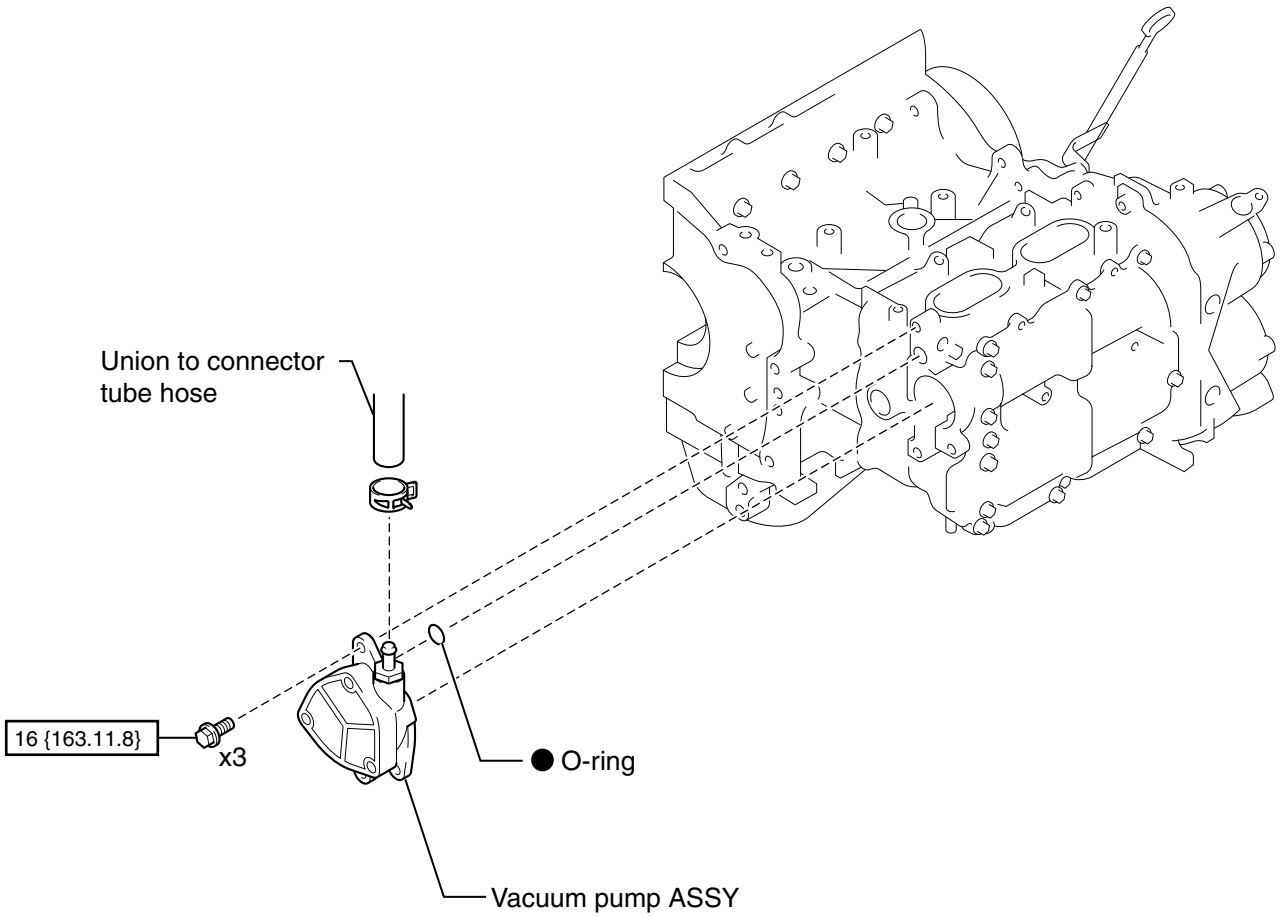
| | |
|---|---|
| *1 | Paint |
| *a | Engine side |
| *b | Booster side |

(4) Face the paint to the front side of the vehicle and install it to the brake booster side.
NOTE:
If the paint is worn off, check the ventilation and connect them so that there is a ventilation from the brake booster side to the engine side.

(5) Install the vacuum hose with 2 clamps.

# Vacuum pump ASSY

## Exploded view

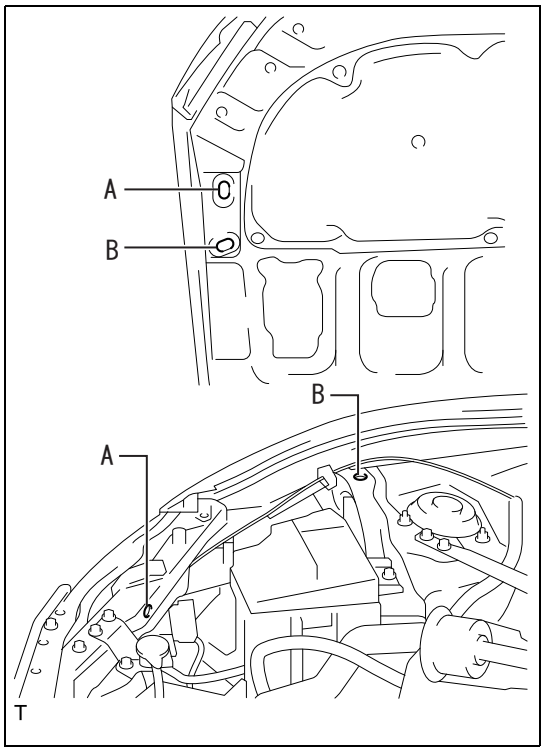


N•m {kgf•cm, ft•lbf} : Tightening torque

● Non-reusable parts

BR-01140

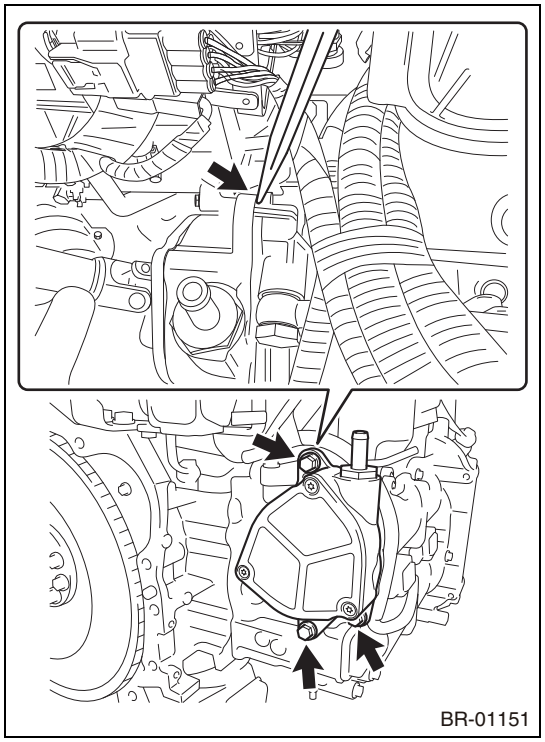
## Removal



1. Disconnection of the union to connector tube hose
   (1) Change the front hood stay position from A to B, and fully open the front hood.

   (2) Slide the clamp and disconnect the union to connector tube hose from the vacuum pump ASSY.

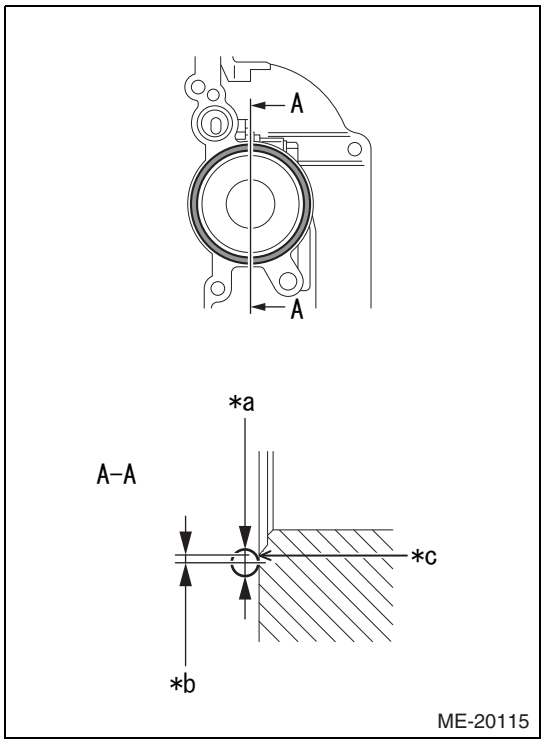
2. Removal of front upper suspension-to-cowl brace SUB-ASSY RH (Refer to FP - 4)



3. Removal of vacuum pump ASSY
   (1) Remove 3 bolts.
   (2) Using a flat tip screwdriver or an equivalent to the position shown in the figure, pry the vacuum pump ASSY to remove it.

   (3) Remove the O-ring.
   (4) Remove the liquid gasket from the vacuum pump ASSY and the engine unit.

## Installation



1. Installation of vacuum pump ASSY (transmission A/T)
   (1) As shown in the figure, apply the seal gasket 1217G to the cam carrier RH.

Captions in illustration

| | |
|---|---|
| *a | Liquid gasket diameter: 2.0-4.0 mm |
| *b | Within 1.0 mm |
| *c | Groove end |

CAUTION:
- Clean and degrease the installation surface.
- Install within 5 min. after applying liquid gasket.

   (2) Install a new O-ring.

   (3) Align the groove on the vacuum pump ASSY and the claw on the intake camshaft RH.

Captions in illustration

| | |
|---|---|
| *a | Groove on the vacuum pump ASSY |
| *b | Claw of the intake camshaft (RH) |

CAUTION:
Be careful not to let the O-ring catch.

   (4) Install the vacuum pump ASSY with 3 bolts.
   Standard value:T=16N·m {163kgf·cm} {11.8ft·lbf}

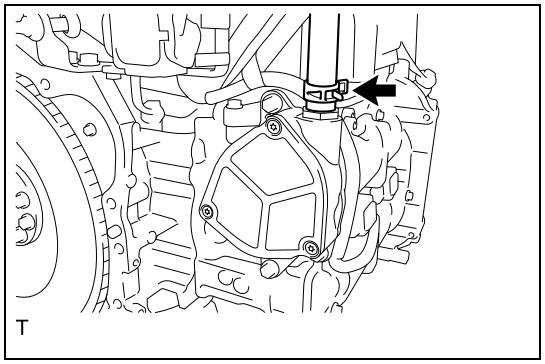
2. Installation of union to connector tube hose
   (1) Install the union to connector tube hose with a clamp.
3. Installation of front upper suspension-to-cowl brace SUB-ASSY RH (Refer to FP - 5)

## On-vehicle inspection

NOTE:

Maintenance of the vacuum pump ASSY is scheduled to be done in every 200,000 km (125,000 mile) of drive. Disassemble and check the vacuum pump ASSY in every 200,000 km (125,000 mile) of drive. If necessary, replace the parts. Check the following items.

- Function inspection of vacuum pump ASSY
- Component check



1. Function inspection of vacuum pump ASSY
   (1) Slide the clip and disconnect the union to connector tube hose from the vacuum pump ASSY.
   (2) Connect the vacuum gauge hose to the vacuum pump ASSY.
   (3) Use the vacuum gauge in the portable brake tester.
   (4) Plug the hose on the other side of the vacuum gauge with the hose plug No.2.
   (5) Start the engine and warm up for 2 minutes or more.

   (6) Check the vacuum pressure of the vacuum pump ASSY when the engine is running at idle speed.
   NOTE:
   Read the value after 25 seconds have passed from starting the measurement.

Captions in illustration

| | |
|---|---|
| *1 | Vacuum gauge |

   Limit: 93 kPa {698 mmHg, 13.5 psi}
   (7) If the value is below the limit, replace the vacuum pump ASSY. (Refer to BR - 33)
   NOTE:
   - Maintenance of the vacuum pump ASSY is scheduled to be done in every 200,000 km (125,000 mile) of drive. Check the vacuum pump ASSY in every 200,000 km (125,000 mile) of drive. If necessary, replace the parts. (Refer to BR - 33)
   - After replacing the vacuum pump ASSY, perform function inspection of the vacuum pump ASSY.
   (8) Remove the vacuum gauge.
   (9) Connect the union to connector tube hose to the vacuum pump ASSY with a clip.

## Removal (normal type)

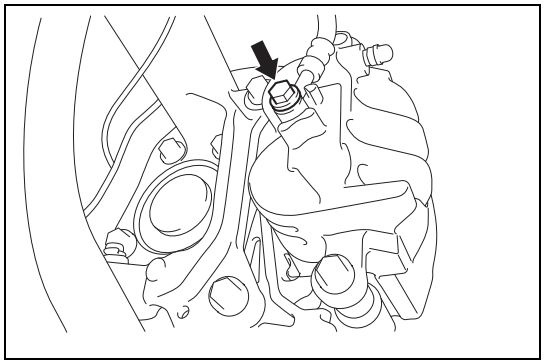
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

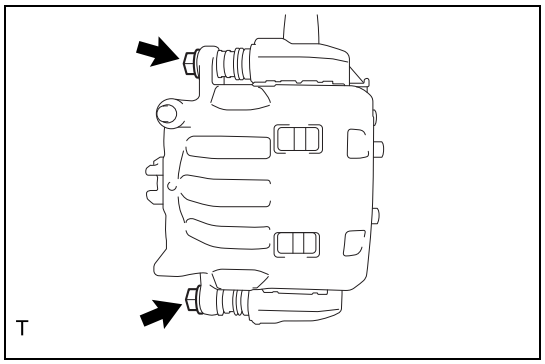
1. Removal of front tire
2. Draining of brake fluid

   CAUTION:

   Do not let brake fluid come into contact with the painted surface. If it happens, wash it out immediately.

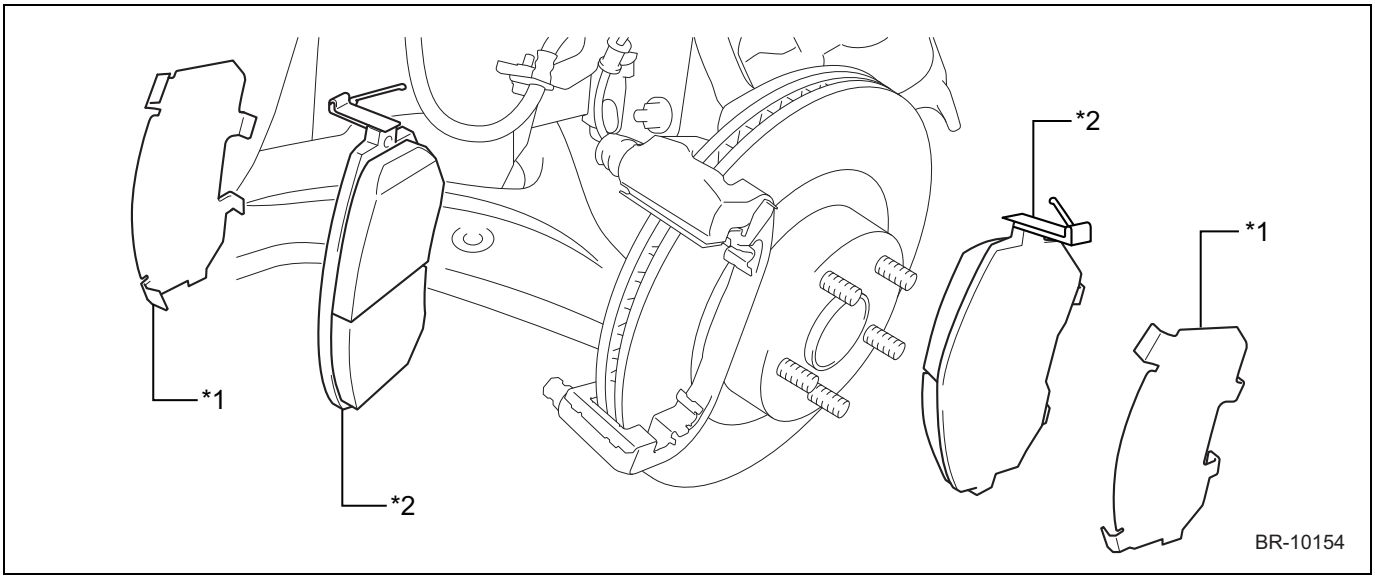


3. Disconnection of front flexible hose No.1
   (1) Remove a union bolt and 2 gaskets to disconnect the front flexible hose No.1 from the front disk brake cylinder ASSY LH.



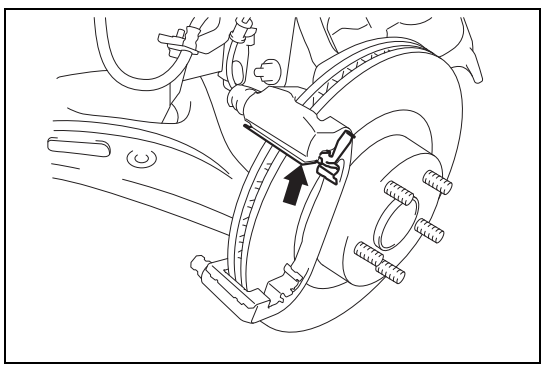
4. Removal of front disc brake cylinder ASSY LH
   (1) Remove 2 bolts and then remove the front disc brake cylinder ASSY LH.

5. Removal of front disc brake pad
   (1) Remove the disc brake pad from the front disc brake cylinder mounting LH.
   (2) Remove the shim from each pad.



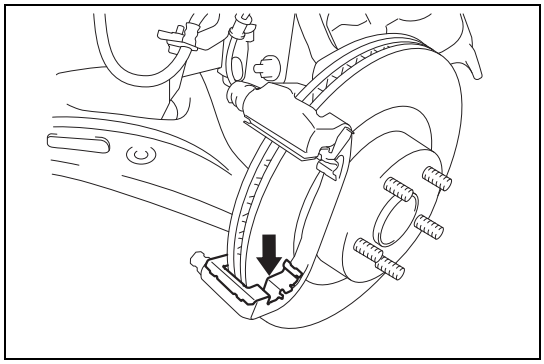
Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Shim | *2 | Disc brake pad |

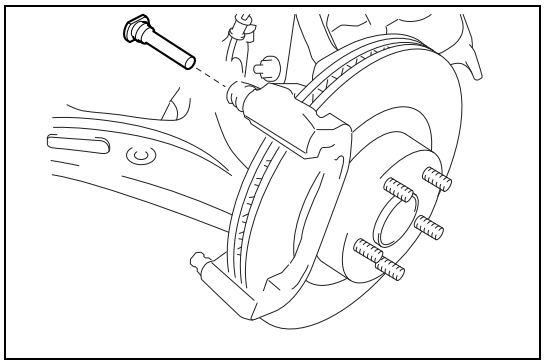


6. Removal of spring (L)
   (1) Remove the spring (L) from the front disc brake cylinder mounting LH.

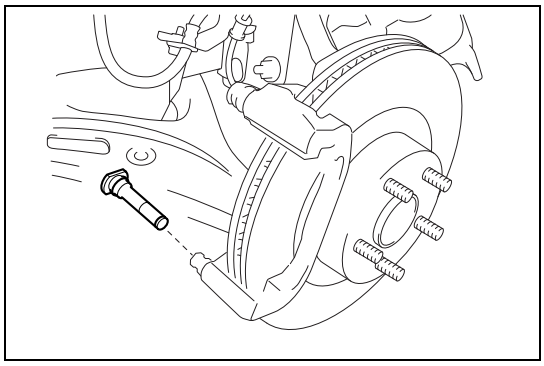
FB



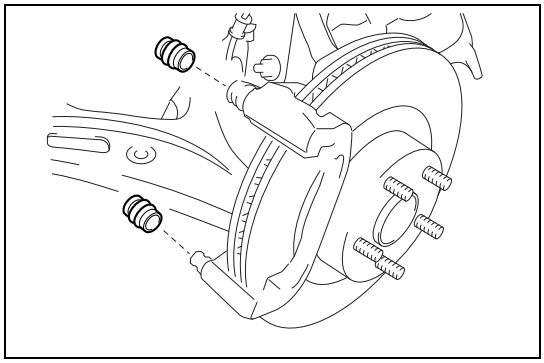
7. Removal of spring (pad)
   (1) Remove the spring (pad) from the front disc brake cylinder mounting LH.



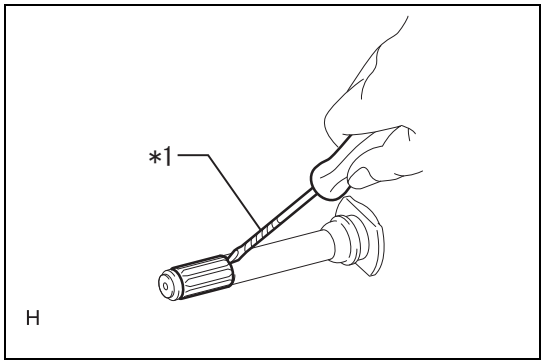
8. Removal of front disc brake cylinder slide pin
   (1) Remove the front disc brake cylinder slide pin from the front disc brake cylinder mounting LH.



9. Removal of front disc brake cylinder slide pin No.2
   (1) Remove the front disc brake cylinder slide pin No.2 from the front disc brake cylinder mounting LH.



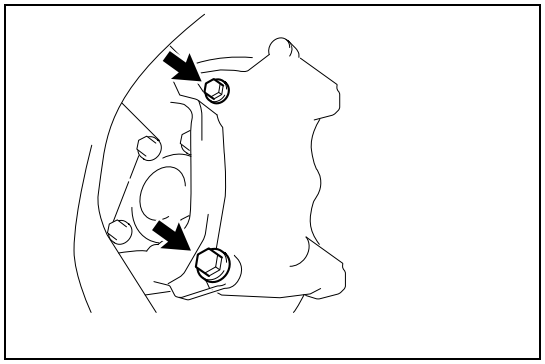
10. Removal of boot (pin)
    (1) Remove the boot (pin) from the front disc brake cylinder mounting LH.



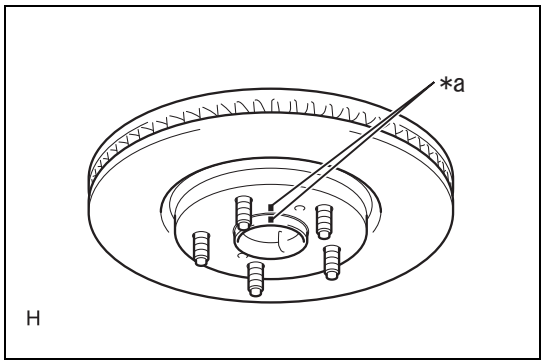
11. Removal of bushing
    (1) Using a thin flat tip screwdriver wrapped with a protective tape, remove the bushing from the pin (B).

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |



12. Removal of front disc brake cylinder mounting LH
    (1) Remove 2 bolts and then the front disc brake cylinder mounting LH.



13. Removal of front disc
    (1) Put alignment marks on the front disc and front axle hub. (It is not necessary when replacing the disc).

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

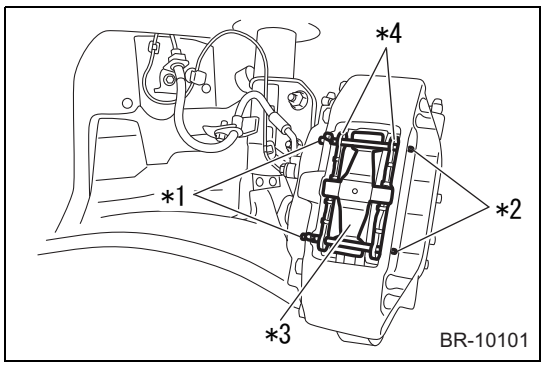
    (2) Remove the front disc.

## Removal (brembo type)

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

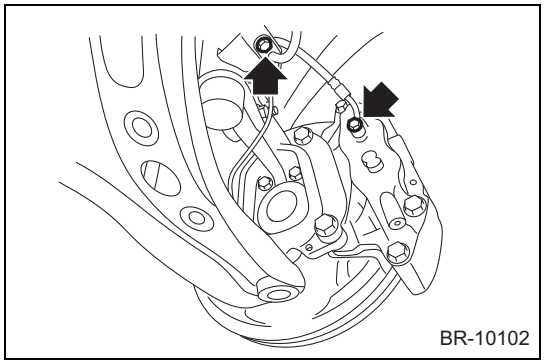
1. Removal of front tire
2. Draining of brake fluid
   CAUTION:
   Do not let brake fluid come into contact with the painted surface. If it happens, wash it out immediately.



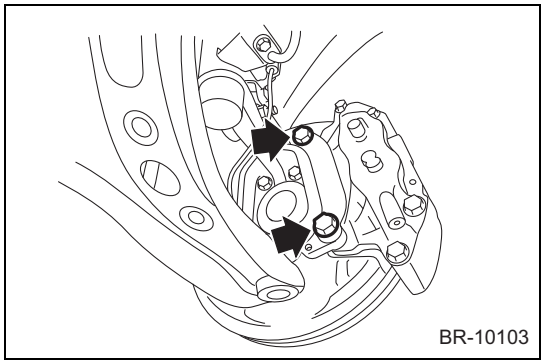
3. Removal of pad disc brake front
   (1) Remove the clip slide pin, and remove the pin disc brake and cross spring.
   (2) While pushing back the piston using a wrench, remove the pad disc brake front.

Captions in illustration

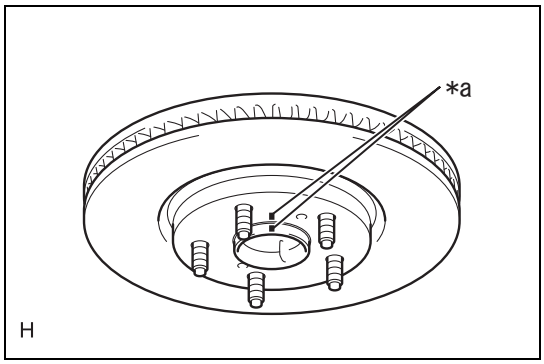
| | |
|---|---|
| *1 | Clip slide pin |
| *2 | Pin disc brake |
| *3 | Cross spring |
| *4 | Pad disc brake |



4. Disconnection of front flexible hose No.1
   (1) Remove the union bolt and 2 gaskets, and then remove the front flexible hose No. 1 from the caliper body ASSY.



5. Removal of caliper body ASSY
   (1) Remove the 2 bolts, and remove the caliper body ASSY and tie bar.
   NOTE:
   If it is hard to be removed, use the SST.
   SST 09961-01270



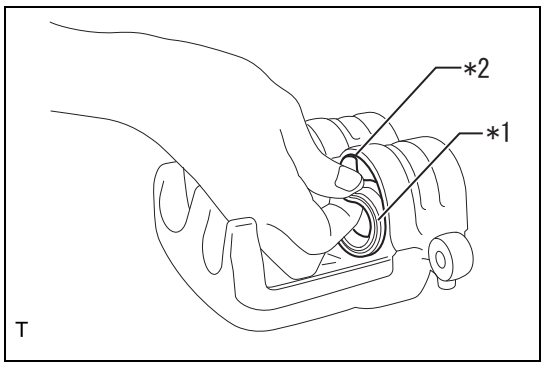
6. Removal of disc rotor
   (1) Put alignment marks on the disc rotor and front axle hub. (It is not necessary when replacing the disc).

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

   (2) Remove the disc rotor.

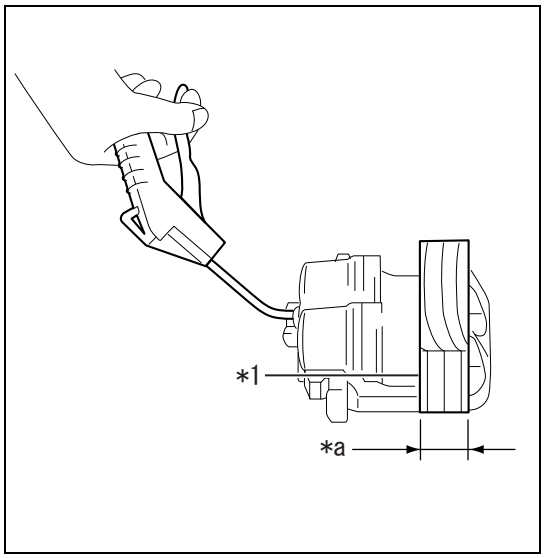
## Disassembly (normal type)



1. Removal of cylinder boot
   (1) Remove 2 cylinder boots.
   CAUTION:
   To prevent the front disc brake piston from being scratched, always remove the boot with hands without using a tool like a screwdriver.

Captions in illustration

| | |
|---|---|
| *1 | Cylinder boot |
| *2 | Front disc brake piston |

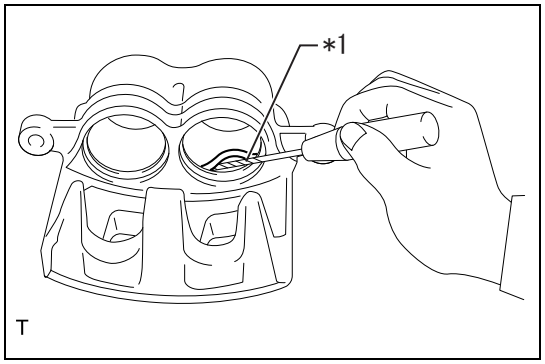


2. Removal of front disc brake piston
   (1) Put a wooden block between the pistons of the cylinder ASSY to prevent the pistons from popping out.

Captions in illustration

| | |
|---|---|
| *1 | Wooden block |
| *a | 30mm {1.181in} |

   (2) Using an air gun, gradually blow air into the applicable part to remove the 2 front disc brake pistons from the cylinder.
   WARNING:
   Be careful not to pinch your fingers.
   CAUTION:
   Be careful not to spill brake fluid.
   NOTE:
   Replace the front disc brake cylinder ASSY, if the front disc brake piston is damaged.
   (3) Remove the wooden block.



3. Removal of piston seal
   (1) Using a thin flat tip screwdriver, remove 2 piston seals from the cylinder ASSY.
   NOTE:
   Wrap the tip of the thin flat tip screwdriver with a protective tape.

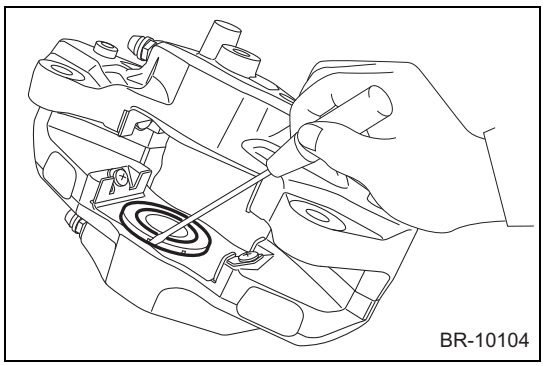
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

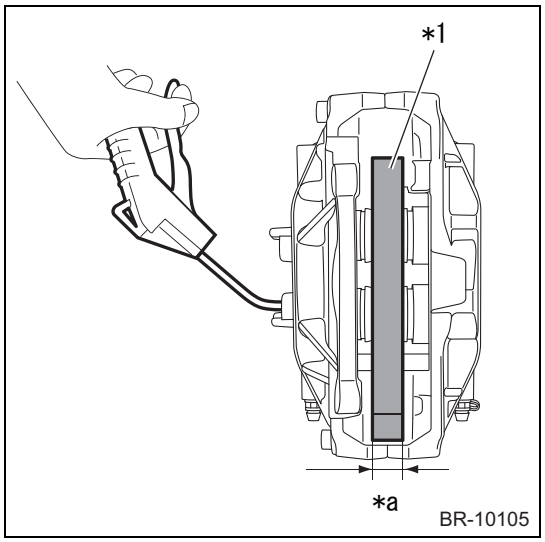
   CAUTION:
   Do not damage inside the cylinder and the seal groove.

4. Removal of cap bleeder
   (1) Remove the cap bleeder from the bleeder screw.
5. Removal of bleeder screw
   (1) Remove the bleeder screw.

## Disassembly (brembo type)



1. Removal of piston boot
   (1) Remove the four piston boots.

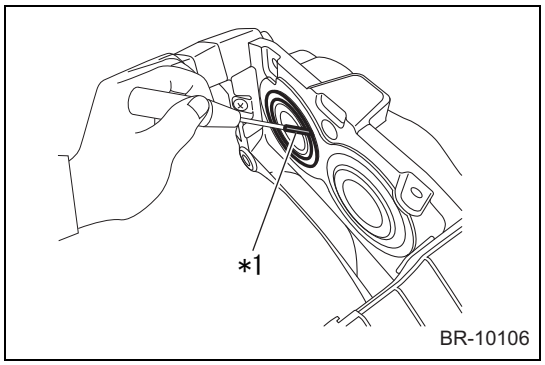


2. Removal of piston disc brake
   (1) Put a wooden block between the pistons of the caliper body to prevent the pistons from popping out.

Captions in illustration

| | |
|---|---|
| *1 | Wooden block |
| *a | 30mm {1.181in} |

   (2) Using an air gun, gradually blow air into the applicable part to remove the 4 piston disc brake from the cylinder.
   WARNING:
   Be careful not to pinch your fingers.
   CAUTION:
   Be careful not to spill brake fluid.
   NOTE:
   When the piston disc brake is damaged, replace the caliper body.
   (3) Remove the wooden block.



3. Removal of piston seal
   (1) Using a thin flat tip screwdriver, remove the 4 piston seals from the caliper body.
   NOTE:
   Wrap the tip of the thin flat tip screwdriver with a protective tape.

Captions in illustration

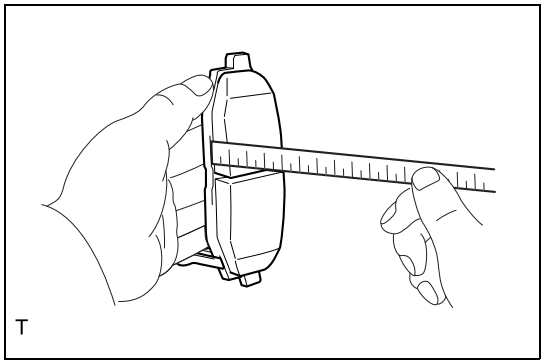
| | |
|---|---|
| *1 | Protective tape |

   CAUTION:
   Do not damage inside the cylinder and the seal groove.

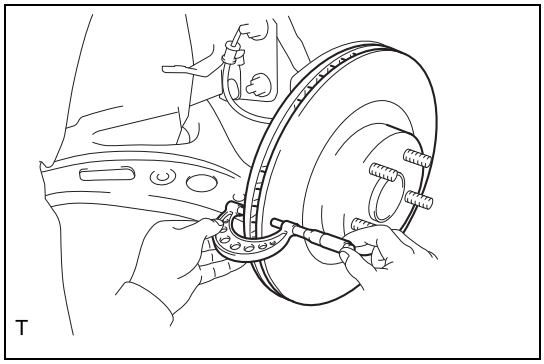
4. Removal of cap bleeder
   (1) Remove the cap bleeder from the bleeder screw.
5. Removal of bleeder screw
   (1) Remove the bleeder screw.

## Inspection

1. Disc brake piston and cylinder check
   (1) Check that there is no damage on the side of the disc brake piston and the cylinder wall.



2. Disc brake pad thickness check
   - Normal type
     Limit: 1.5mm {0.059in}
     Reference value: : 11.0mm {0.433in} (New)
   - Brembo type
     Limit: 1.2mm{0.047in}
     Reference value: 8.9mm {0.350in}



3. Front disc thickness check
   - Normal type
     Limit: 22.0mm {0.866in}
     Reference value: : 24.0mm {0.945in} (New)
   - Brembo type
     Limit: 28 mm {1.102 in}
     Reference value: 30mm {1.181in}

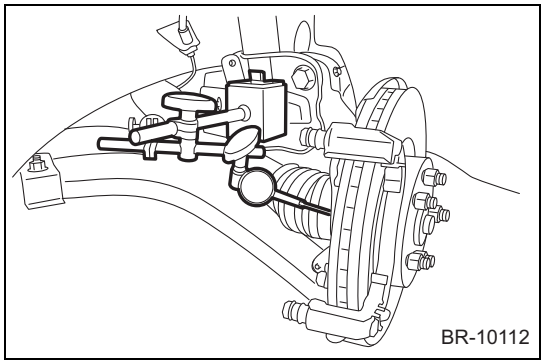
4. Disc runout check
   (1) Before checking the disc runout, check the hub & bearing ASSY play (Refer to AD - 11) and runout (Refer to AD - 11).
   (2) Install the front disc to the axle hub and secure it with 5 hub nuts.
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

   (3) Using a dial gauge, set at 10 mm {0.394 in} inside from the disc outer periphery to check the front side runout.
   - Normal type
     Limit: 0.05mm {0.002in}
   - Brembo type
     Limit: 0.075mm{0.003in}

Captions in illustration

| | |
|---|---|
| *1 | Dial gauge |

CAUTION:
- Do not bring the magnetized part of the dial gauge close to the axle hub or speed sensor.
- Install the dial gauge to the shock absorber.
- When the runout exceeds the limit, change the disc and axle positions to minimize the runout and install them. If the runout still exceeds the limit even after changing the positions, replace the disc with a new one.



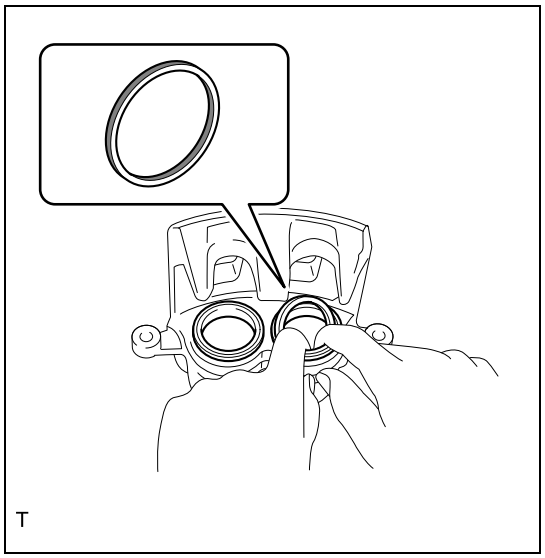
(4) Set the dial gauge at 10 mm {0.394 in} inside from the disc rotor outer periphery, and rotate the disc rotor to check the back side runout.
- Normal type
  Limit: 0.05mm {0.002in}
- Brembo type
  Limit: 0.075mm{0.003in}

NOTE:
<Example of magnet stand and dial gauge installation>

(5) If the disc rotor runout exceeds service limit, grind the disc rotor.
(6) Check the disc rotor thickness after grinding. (Refer to FB - 11)

## Assembly (normal type)

1. Temporary tightening of bleeder screw
   (1) Temporarily tighten the bleeder screw to the caliper body.
2. Installation of cap bleeder
   (1) Install the cap bleeder to the bleeder screw.

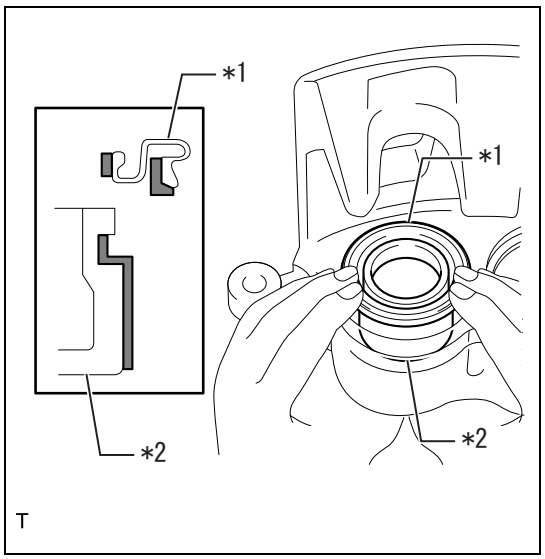


3. Installation of piston seal
   (1) Apply rubber grease all around 2 new piston seals.

Captions in illustration

| | |
|---|---|
| ▭ | Rubber grease (RENOLIT rubber grease JP) or equivalent |

(2) Securely install 2 piston seals to the disc brake cylinder grooves.



4. Installation of front disc brake piston
   (1) Apply rubber grease to a new cylinder boot.

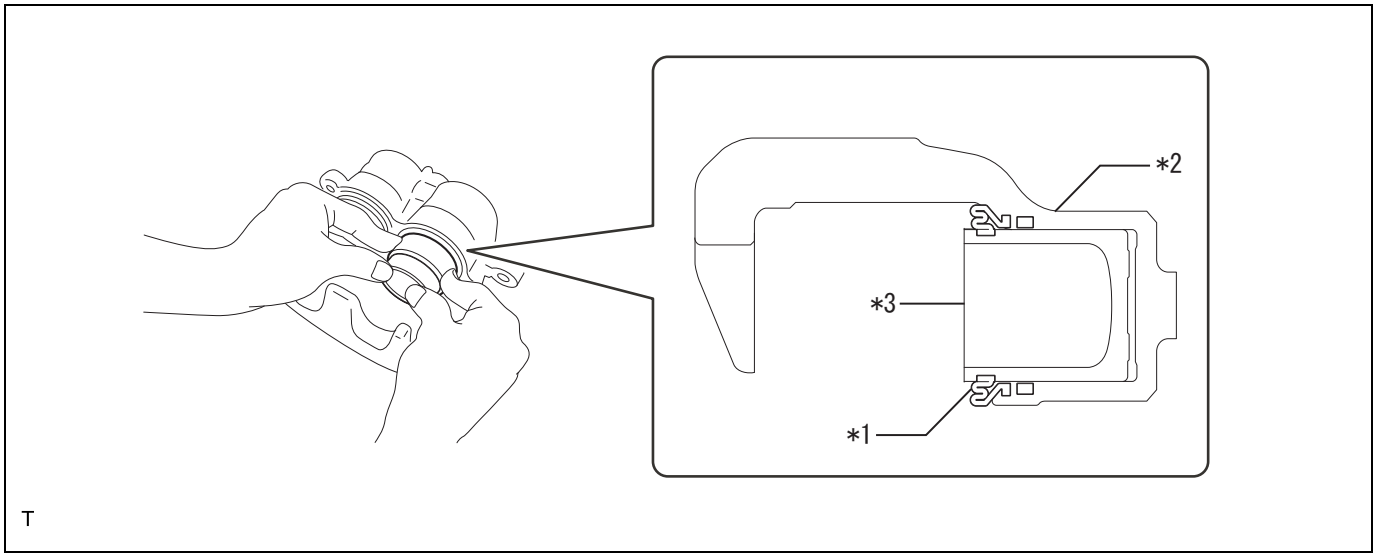
Captions in illustration

| | |
|---|---|
| *1 | Cylinder boot |
| *2 | Front disc brake piston |
| ▭ | Rubber grease (RENOLIT rubber grease JP) or equivalent |

(2) Securely install the cylinder boot to the front disc brake piston groove.
(3) Apply a thin coat of rubber grease to the outer peripheries of 2 front disc brake pistons, and install them to the front disc brake cylinder ASSY LH.
CAUTION:
Do not push the front disc brake piston in with excessive force.

5. Installation of cylinder boot
   (1) Securely install the cylinder boot to the front disc brake cylinder ASSY LH groove.

FB

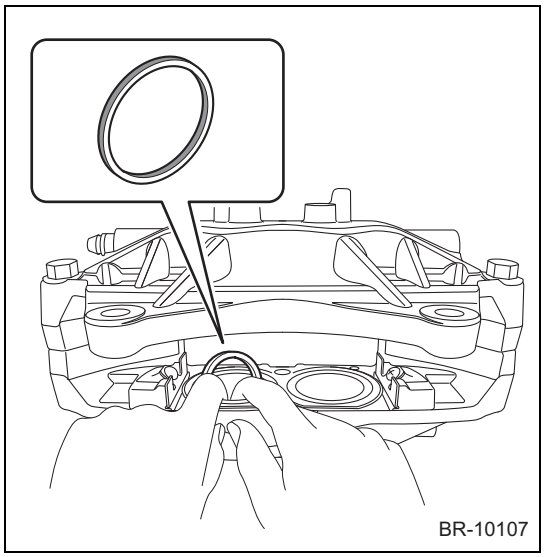


Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Cylinder boot | *2 | Front disc brake cylinder ASSY LH |
| *3 | Front disc brake piston | - | - |

## Assembly (brembo type)

1. Temporary tightening of bleeder screw
   (1) Temporarily tighten the bleeder screw to the caliper body.
2. Installation of cap bleeder
   (1) Install the cap bleeder to the bleeder screw.

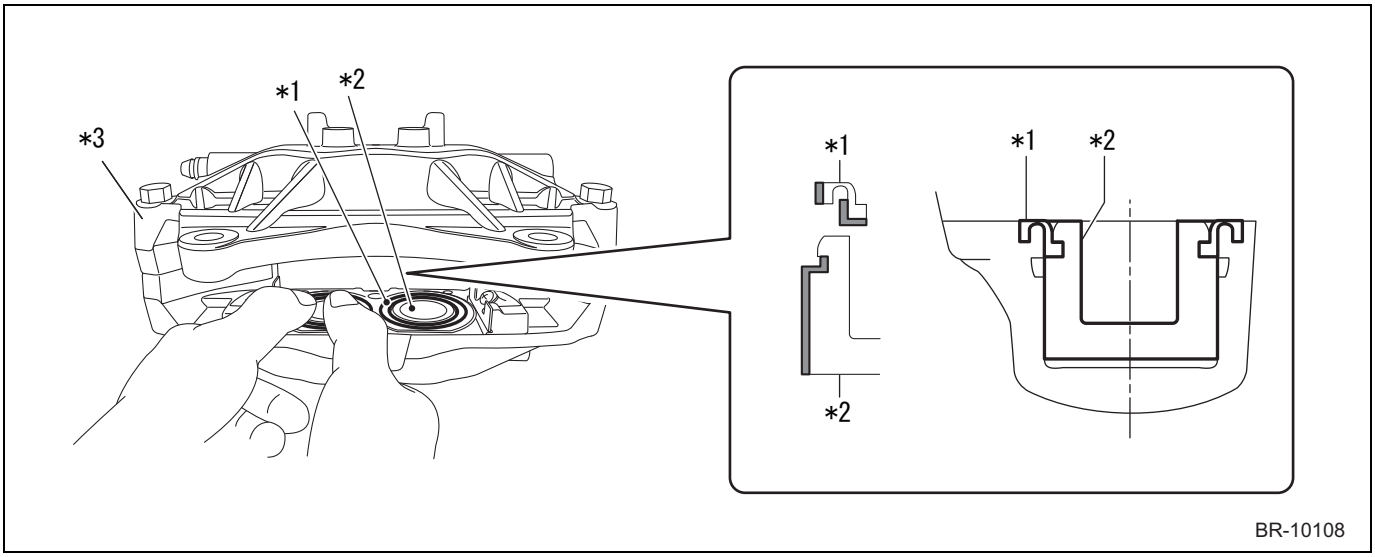


3. Installation of piston seal
   (1) Apply rubber grease all around 2 new piston seals.

Captions in illustration

| | |
|---|---|
| | Rubber grease (RENOLIT rubber grease JP) or equivalent |

   (2) Securely install 4 piston seals to the caliper body grooves.
4. Installation of piston-disc brake
   (1) Apply rubber grease to a new piston boot.
   (2) Securely install the piston boot to the piston disc brake grooves.
   (3) Apply a thin coat of rubber grease to the outer periphery of the 4 piston disc brake, and install to the caliper body.
   CAUTION:
   Do not push the piston-disc brake in with excessive force.
   (4) Securely install the piston boot to the caliper body grooves.



Captions in illustration

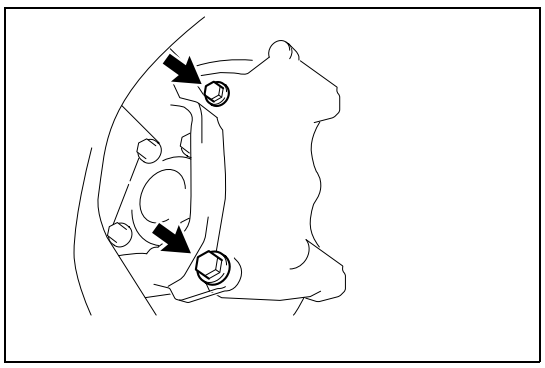
| | | | |
|---|---|---|---|
| *1 | Piston boot | *2 | Piston disc brake |
| *3 | Caliper body | | Rubber grease (RENOLIT rubber grease JP) or equivalent |

## Installation (normal type)

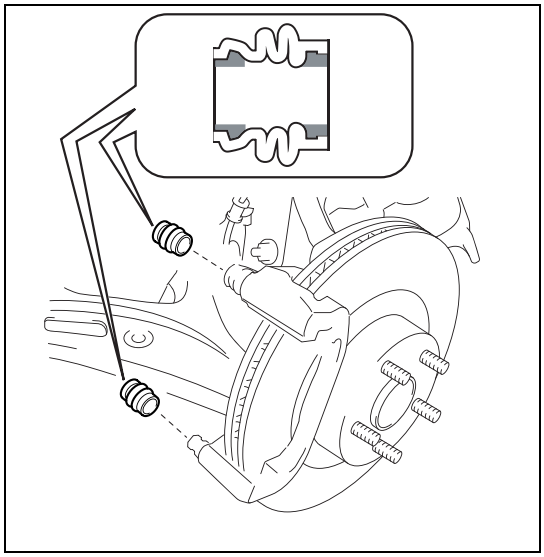
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Installation of front disc
   (1) When removing/installing the front disc
      (a)Aligning the mark which you put at the time of removal, install the front disc to the axle hub.
   (2) When replacing the front disc
      (a)Check the disc runout (Refer to FB - 11) and install the front disc to the axle hub.
   (3) Temporarily tighten the hub nut to secure the front disc to the axle hub.



2. Installation of front disc brake cylinder mounting LH
   (1) Install the front disc brake cylinder mounting LH with 2 new bolts.
      Standard value:Width across flat 17 mm {0.6693 in}
      T=80N·m {816kgf·cm} {59.0ft·lbf}
      Width across flat 19 mm {0.748 in}
      T=135N·m {1377kgf·cm} {99.6ft·lbf}



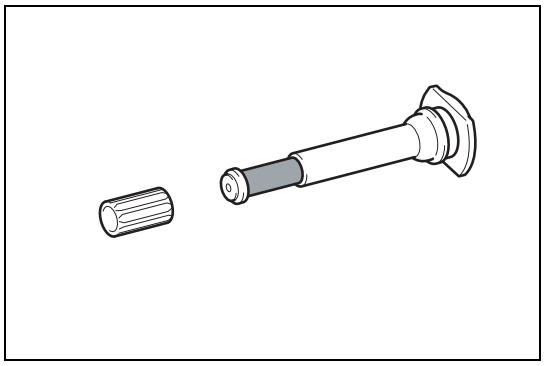
3. Installation of boots (pins)
   (1) Apply rubber grease all around the engaging parts of new 2 boots (pins).

Captions in illustration

| | |
|---|---|
| | Rubber grease (NIGLUBE RX-2) or equivalent |

NOTE:
Apply 1.5±2.0g of rubber grease (NIGLUBE RX-2) per 1 front disc brake bushing dust boot.

   (2) Install 2 front disc brake bushing dust boots to the front disc brake cylinder mounting LH.

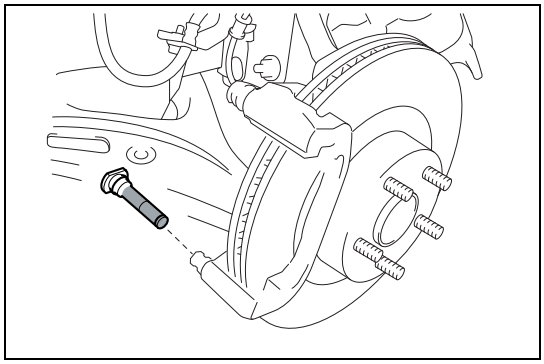


4. Installation of bushing
   (1) Apply a thin coat of rubber grease all around the contacting surface of the new bushing and the front disc brake cylinder slide pin No.2.

Captions in illustration

| | |
|---|---|
| | Rubber grease (NIGLUBE RX-2) or equivalent |

   (2) Install the bushing to the front disc brake cylinder slide pin No.2.

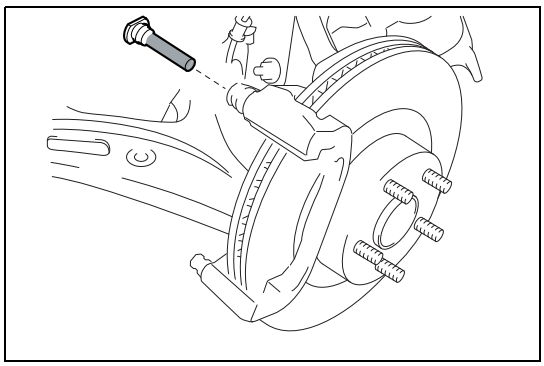


5. Installation of front disc brake cylinder slide pin No.2

Captions in illustration

| | |
|---|---|
| | Rubber grease (NIGLUBE RX-2) or equivalent |

   (1) Apply a thin coat of rubber grease all around the engaging part and the sliding part of the front disc brake cylinder slide pin No.2.
   (2) Install the front disc brake cylinder slide pin No.2 to the carrier.

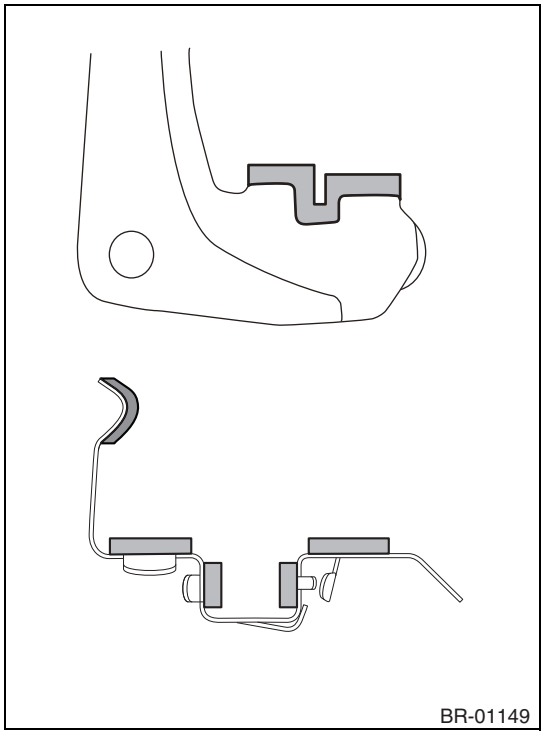


6. Installation of front disc brake cylinder slide pin

Captions in illustration

| | |
|---|---|
| | Rubber grease (NIGLUBE RX-2) or equivalent |

   (1) Apply a thin coat of rubber grease all around the engaging part and the sliding part of the front disc brake cylinder slide pin.
   (2) Install the front disc brake cylinder slide pin to the carrier.

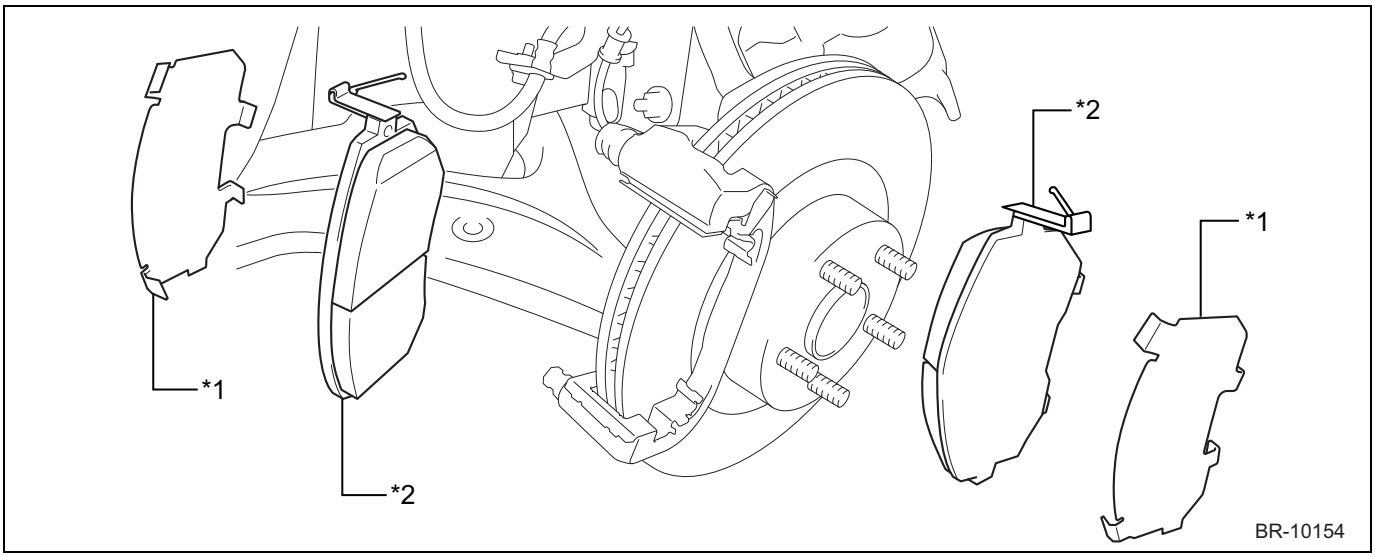


7. Installation of spring (L)
   (1) Apply a thin coat of MP grease No.2 or equivalent to the part where the disc brake pad kit FR for the spring (L) contacts.
   (2) Install the spring (L) to the front disc brake cylinder mounting LH.

Captions in illustration

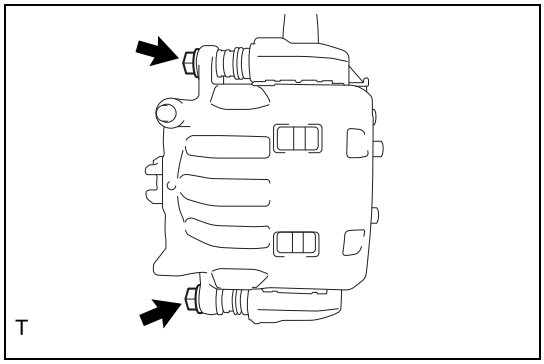
| | |
|---|---|
| | MP grease No.2 or equivalent |

8. Installation of spring (pad)
   NOTE:
   Service the spring (pad) in the same procedures for the spring (L).
9. Installation of front disc brake pad
   (1) Install the front disc brake pad to the shim.
   (2) Install the disc brake pad to the carrier.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Shim | *2 | Disc brake pad |



10. Installation of front disc brake cylinder ASSY LH
    (1) Install the front disc brake cylinder ASSY LH to the carrier with 2 bolts.
    Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}

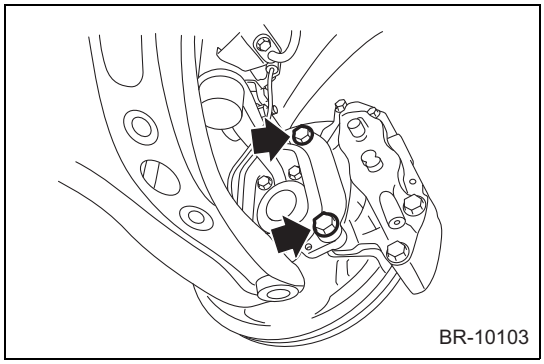
11. Connection of front flexible hose No.1
    (1) Using a new union bolt, connect the front flexible hose No.1 to the disc brake cylinder ASSY via 2 new gaskets.
    Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}
12. Brake fluid refill (Refer to BR - 8)
13. Air bleeding of brake system (Refer to BR - 8)
14. Brake fluid leak check
15. Brake fluid level check (Refer to BR - 12)
16. Installation of front tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

## Installation (brembo type)

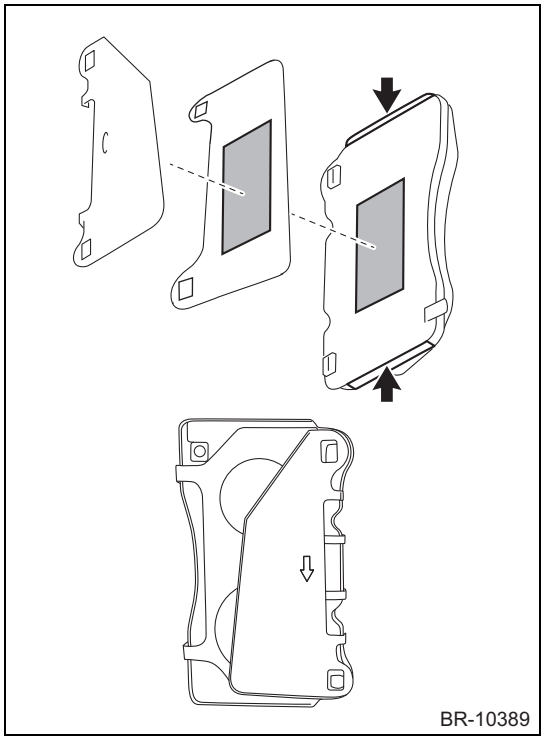
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Installation of disc rotor
    (1) When removing/installing disc rotor
        (a)Aligning the mark which you put at the time of removal, install the disc rotor to the axle hub.
    (2) When replacing the front disc
        (a)Check the disc runout (Refer to FB - 11) and install the disc rotor to the axle hub.
    (3) Temporarily tighten the hub nut to secure the disc rotor to the axle hub.



2. Installation of caliper body ASSY
    (1) Install the caliper body ASSY and tie bar with 2 bolts.
    CAUTION:
    When installing the caliper body ASSY and tie bar, temporarily tighten with 2 bolts as far as it can be turned by hand, and then tighten to the specified torque.
    NOTE:
    If it is hard to tighten, use the SST.
    SST 09661-01270
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}



3. Installation of pad disc brake front
   (1) Apply a thin coat of grease to the side surface of pad disc brake front, both surfaces of shim disc brake front inner and shim installation surface of pad disc brake front.

Captions in illustration

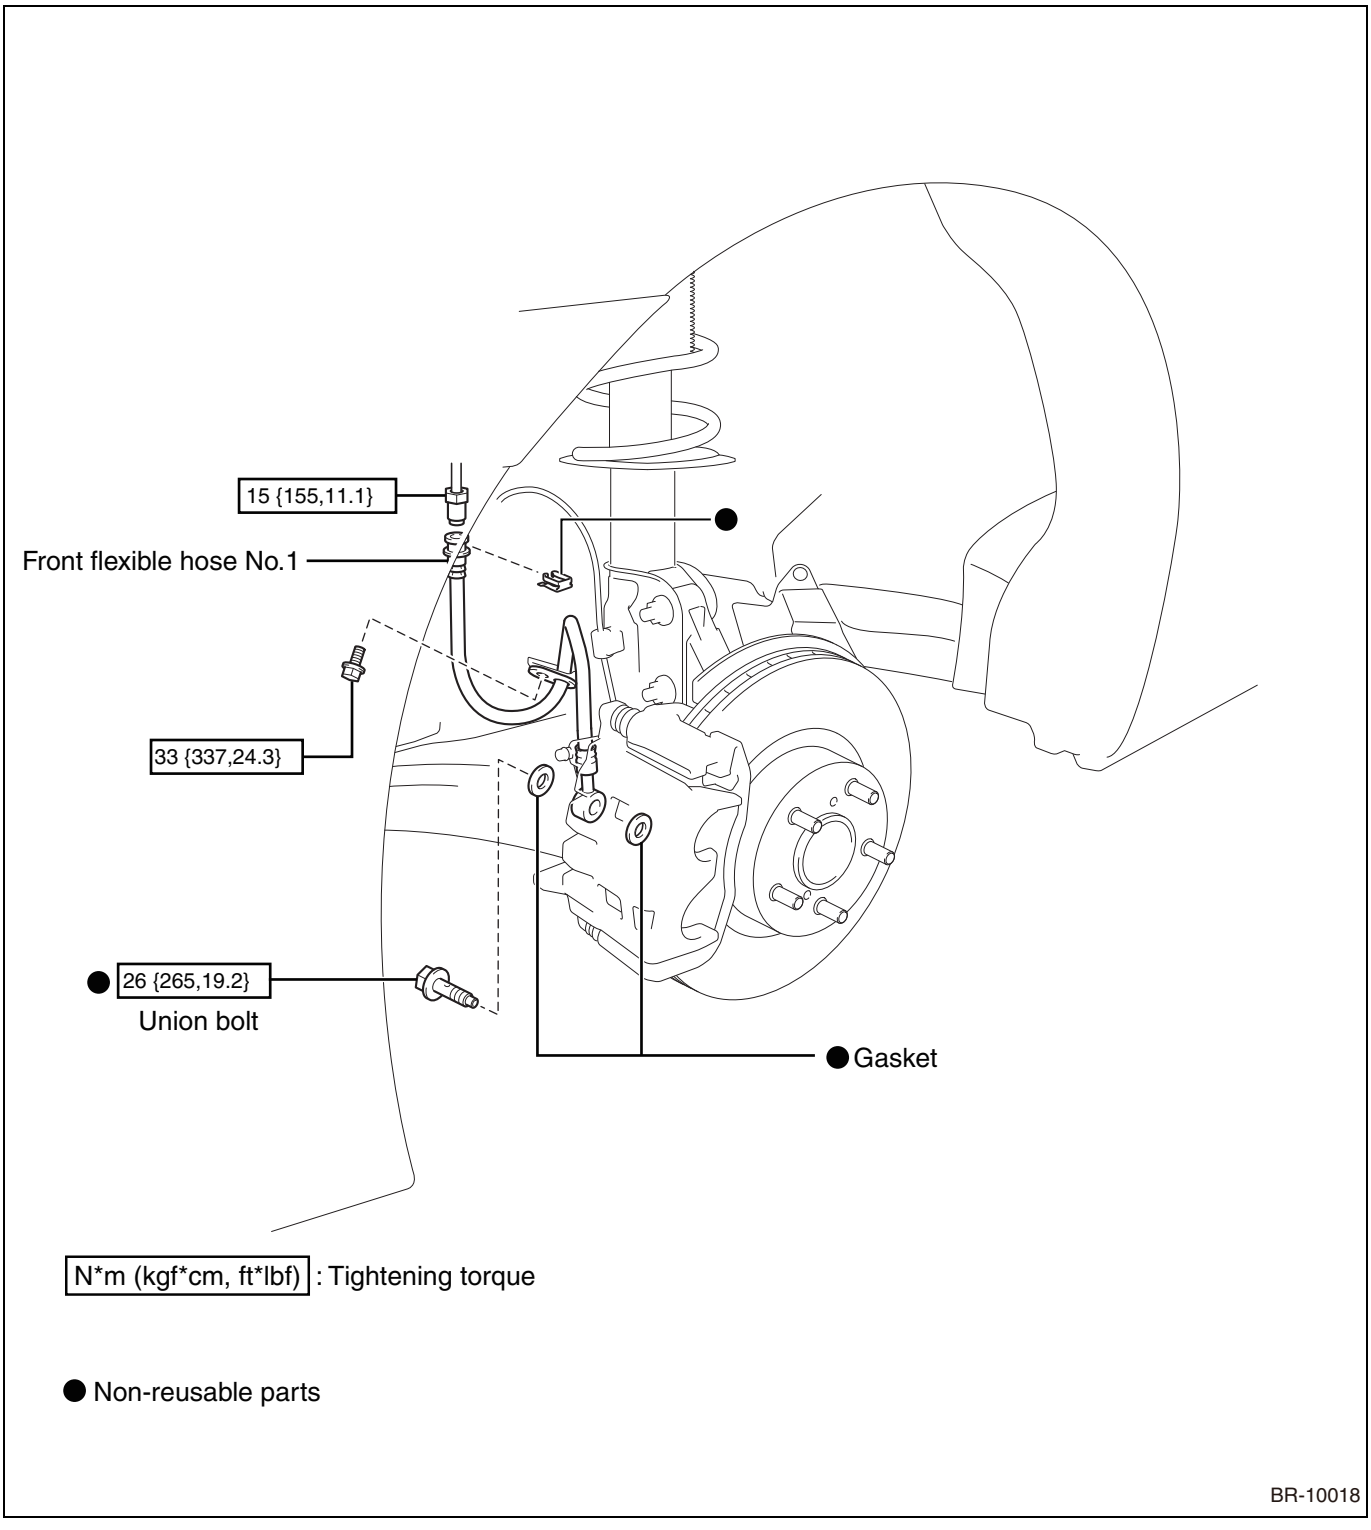
| | |
|---|---|
| ▭ | Disc brake grease II or equivalent |
| ➡ | MP grease No.2 or equivalent |

   (2) Install the pad disc brake front.
   NOTE:
   Install so that the arrow faces downward.
   (3) Install the cross spring, pin disc brake and clip slide pin.

4. Connection of front flexible hose No.1
   (1) Using a new union bolt, connect the front flexible hose No. 1 to the caliper body ASSY via 2 new gaskets.
   Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}
5. Brake fluid refill (Refer to BR - 8)
6. Air bleeding of brake system (Refer to BR - 8)
7. Brake fluid leak check
8. Brake fluid level check (Refer to BR - 12)
9. Installation of front tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

# Front brake flexible hose

## Exploded view



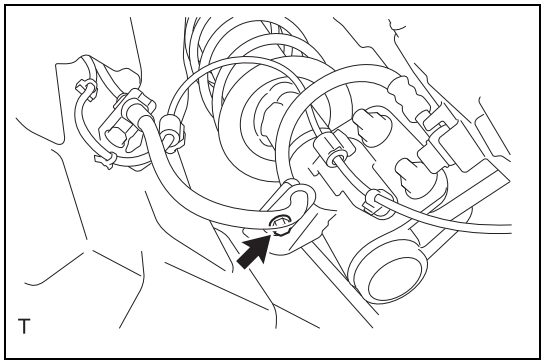
## Removal

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.
- The procedures described below are for the normal type. For the brembo type, perform the same procedures as the normal type.

1. Removal of front tire

2. Draining of brake fluid
   CAUTION:
   Do not let brake fluid come into contact with the painted surface. If it happens, wash it out immediately.



3. Removal of front flexible hose No.1
   (1) Remove the bolt and disconnect the front flexible hose No.1 from the front shock absorber ASSY.

   (2) Remove the union bolt and 2 gaskets, and then remove the front flexible hose No.1.

   (3) Secure the flexible hose No.1 with a spanner, and disconnect the brake tube using a flare-nut wrench.
   CAUTION:
   - Do not bend or damage the brake tubes.
   - Do not let foreign matter including dirt and dust enter the connection part of the brake tube.

   (4) Remove the clip.
   (5) Remove the front flexible hose No.1.

## Installation

NOTE:
- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.
- The procedures described below are for the normal type. For the brembo type, perform the same procedures as the normal type.

1. Installation of front flexible hose No.1
   (1) With a new clip, install the front flexible hose No.1.
   CAUTION:
   Securely attach the clip as far as it will go.
   (2) Secure the flexible hose No.1 with a spanner, and connect the brake tube to the front flexible hose No.1 using a flare-nut wrench.
   Standard value:T=15N·m {155kgf·cm} {11.1ft·lbf}
   CAUTION:
   - Do not bend or damage the brake tubes.
   - Do not let foreign matter including dirt and dust enter the connection part of the brake tube.
   (3) With a bolt, install the front flexible hose No.1 to the front shock absorber ASSY.

Standard value:T=33N·m {337kgf·cm} {24.3ft·lbf}

(4) Using a new union bolt, install the front flexible hose No.1 to the disc brake cylinder ASSY via 2 new gaskets.
Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}

2. Brake fluid refill (Refer to BR - 8)
3. Air bleeding of brake system (Refer to BR - 8)
4. Brake fluid leak check
5. Brake fluid level check (Refer to BR - 12)
6. Installation of front tire
Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

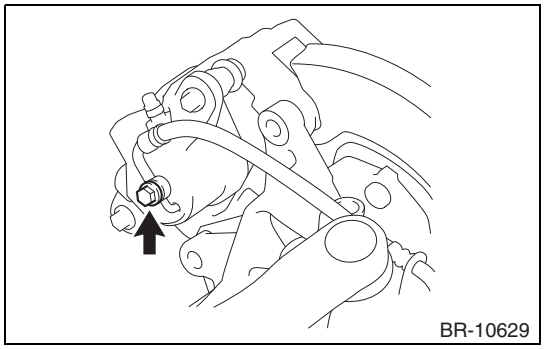
## Removal (normal type)

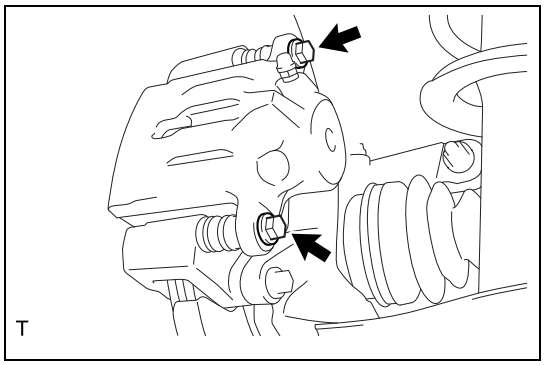
NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

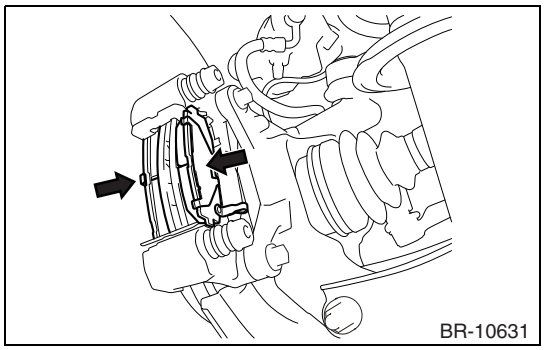
1. Removal of rear tire
2. Draining of brake fluid
   CAUTION:
   Do not let brake fluid come into contact with the painted surface. If it happens, wash it out immediately.



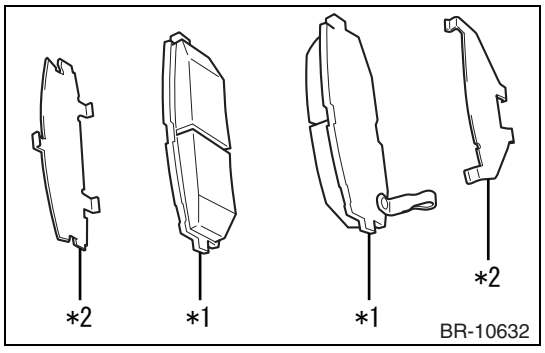
3. Disconnection of rear left flexible hose
   (1) Remove the union bolt and 2 gaskets to disconnect the rear left flexible hose from the disk brake cylinder ASSY RR LH.



4. Removal of disc brake cylinder ASSY RR LH
   (1) Remove 2 bolts and then the disc brake cylinder ASSY RR LH.



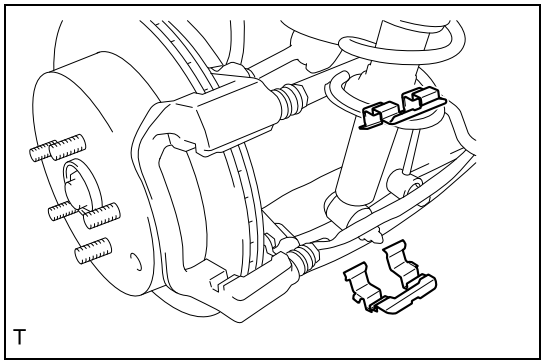
5. Removal of disc brake pad kit RR
   (1) Remove the disc brake pad kit RR from the rear disc brake cylinder mounting LH.



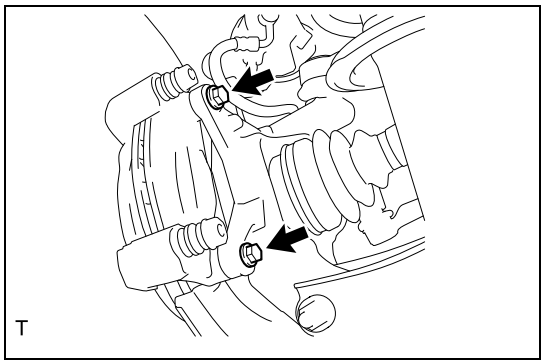
6. Removal of rear disc brake anti squeal shim kit
   (1) Remove the rear disc brake anti-squeal shim kit from the disc brake pad kit RR.

Captions in illustration

| | |
|---|---|
| *1 | Disc brake pad kit RR |
| *2 | Rear disc brake anti squeal shim kit |

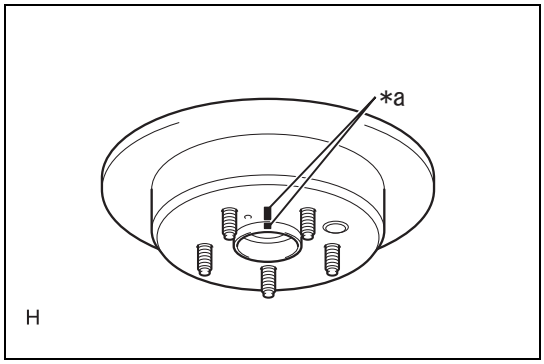


7. Removal of pad clip
   (1) Remove the pad clip.



8. Removal of rear disc brake cylinder mounting LH
   (1) Remove 2 bolts and then the rear disc brake cylinder mounting LH.

9. Removal of parking brake shoe adjusting hole plug
   Remove the parking brake shoe adjusting hole plug from the rear disc.



10. Removal of rear disc
    (1) Put alignment marks on the rear disc and rear axle hub. (This is not required when replacing the rear disc.)

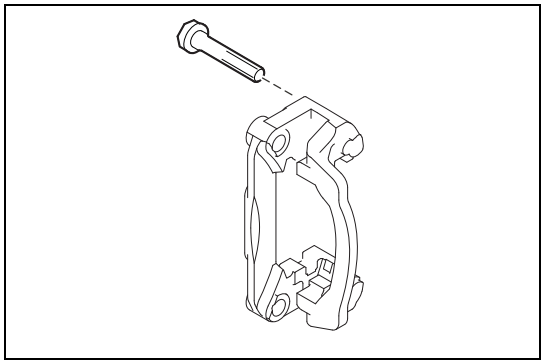
Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

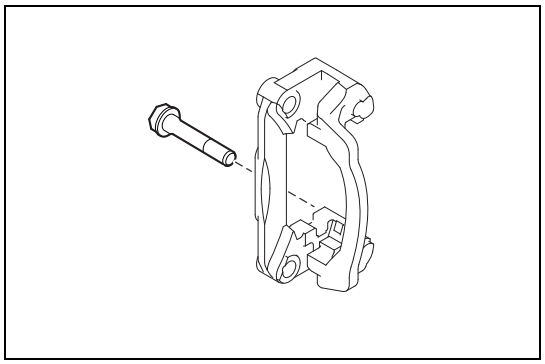
    (2) Release the parking brake and remove the rear disc.
    NOTE:
    If it is difficult to remove the rear disc, insert a flat head screwdriver from the rear disc service hole and rotate the adjusting screw to contract the parking brake shoe.

Captions in illustration

| | |
|---|---|
| *a | Extend |
| *b | Contract |

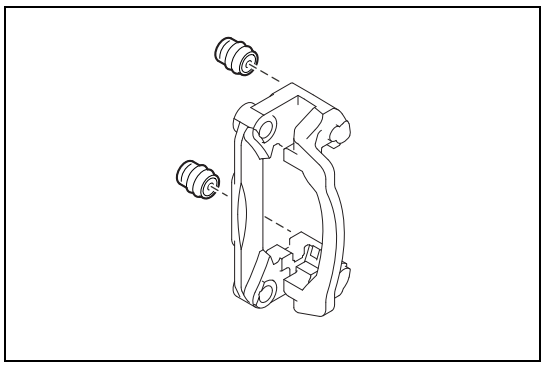


11. Removal of slide pin
    (1) Remove the slide pin from the rear disc brake cylinder mounting LH.



12. Removal of slide lock pin
    (1) Remove the slide lock pin from the rear disc brake cylinder mounting LH.

    (2) Remove the bushing from the slide lock pin.



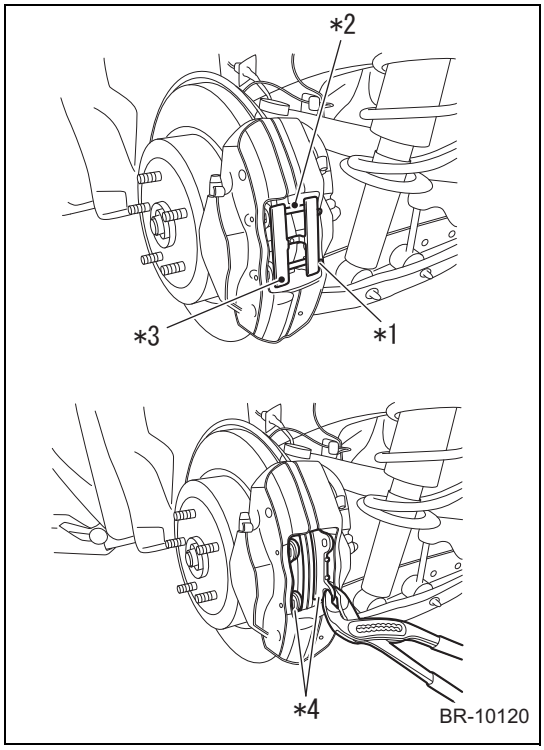
13. Removal of rear disc brake bushing dust boot
    (1) Remove 2 rear disc brake bushing dust boots from the rear disc brake cylinder mounting LH.

## Removal (brembo type)

NOTE:

- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.

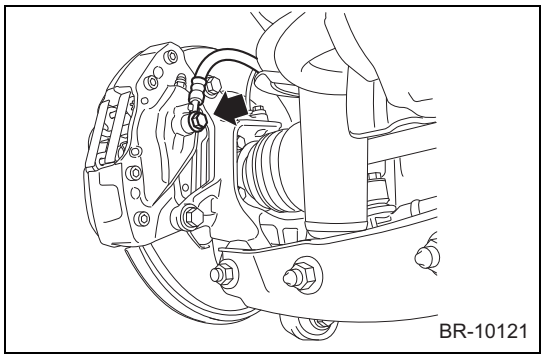
1. Removal of rear tire
2. Draining of brake fluid
   CAUTION:
   Do not let brake fluid come into contact with the painted surface. If it happens, wash it out immediately.



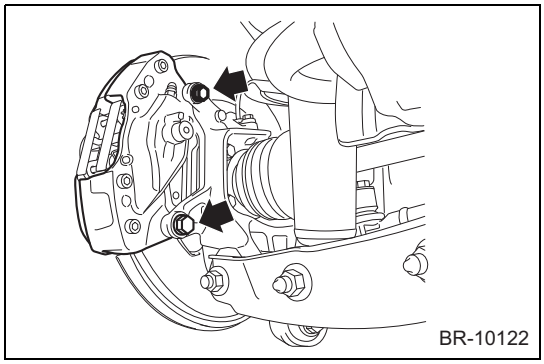
3. Removal of pad disc brake rear
   (1) Remove the clip slide pin, and remove the pin disc brake and cross spring.
   (2) While pushing back the piston using a wrench, remove the pad disc brake rear.

Captions in illustration

| | |
|---|---|
| *1 | Clip slide pin |
| *2 | Pin disc brake |
| *3 | Cross spring |
| *4 | Pad disc brake |

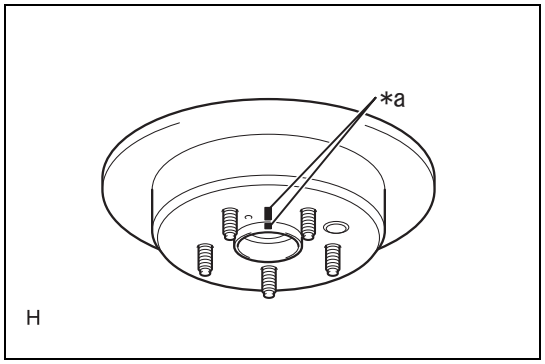


4. Disconnection of rear left flexible hose
   (1) Remove the union bolt and 2 gaskets, and then remove the rear left flexible hose from the caliper body ASSY.



5. Removal of disc brake ASSY
   (1) Remove the 2 bolts, and remove the caliper body ASSY.

6. Removal of parking brake shoe adjusting hole plug
   Remove the parking brake shoe adjusting hole plug from the disc rotor.



7. Removal of disc rotor
   (1) Put alignment marks on the disc rotor and rear axle hub. (It is not necessary when replacing the disc rotor).

Captions in illustration

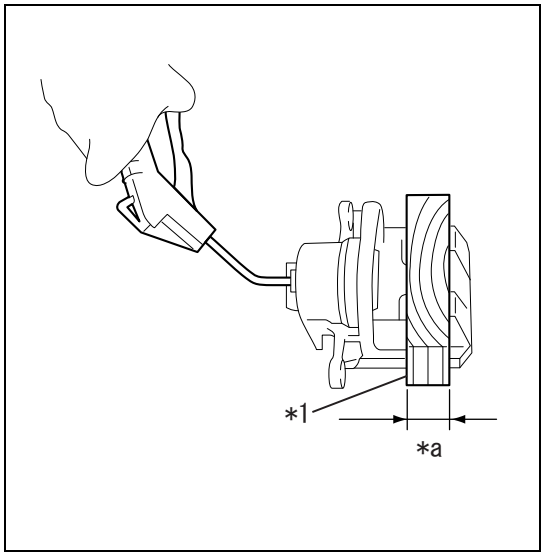
| | |
|---|---|
| *a | Alignment marks |

   (2) Release the parking brake and remove the disc rotor.
   NOTE:
   If it is difficult to remove the disc rotor, insert a flat head screwdriver from the disc rotor service hole and rotate the adjusting screw to contract the parking brake shoe.

Captions in illustration

| | |
|---|---|
| *a | Extend |
| *b | Contract |

## Disassembly (normal type)

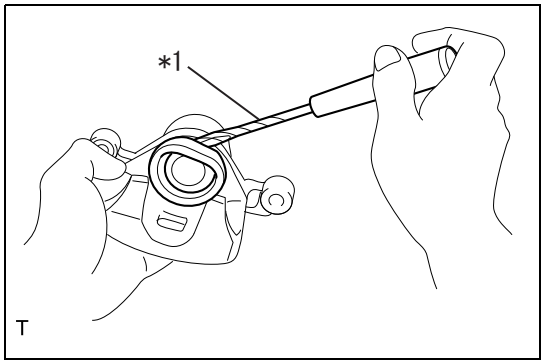


1. Removal of rear disc brake piston
   (1) Put a wooden block between the rear disc brake piston and the disc brake cylinder to prevent the rear disc brake piston from being damaged.

Captions in illustration

| | |
|---|---|
| *1 | Wooden block |
| *a | 30mm {1.181in} |

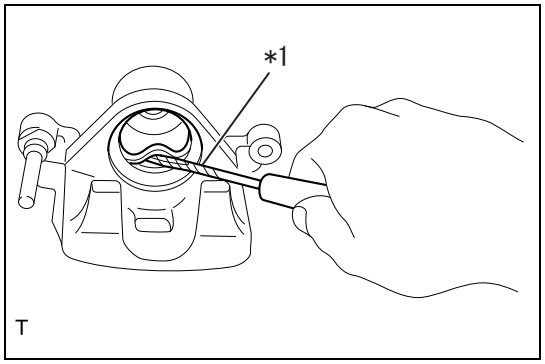
   (2) Using an air gun, gradually blow air into the applicable part to remove the rear disc brake piston.
   WARNING:
   Be careful not to pinch your fingers.
   CAUTION:
   Be careful not to spill brake fluid.



2. Removal of cylinder boot
   (1) Using a thin flat tip screwdriver, remove the cylinder boot from the disc brake cylinder.
   NOTE:
   Wrap the tip of the screwdriver with a protective tape.
   CAUTION:
   Do not damage the cylinder wall and the piston seal groove.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |



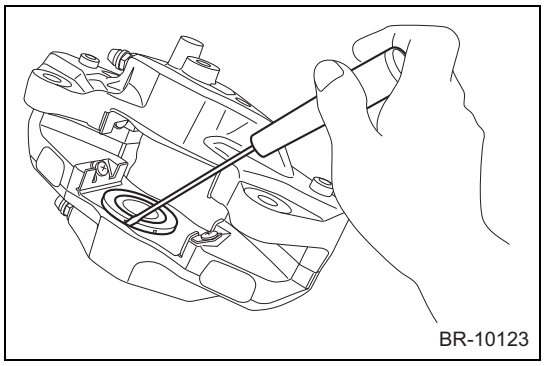
3. Removal of piston seal
   (1) Using a thin flat tip screwdriver, remove the piston seal.
   NOTE:
   Wrap the tip of the screwdriver with a protective tape.
   CAUTION:
   Do not damage the cylinder wall and the piston seal groove.

Captions in illustration

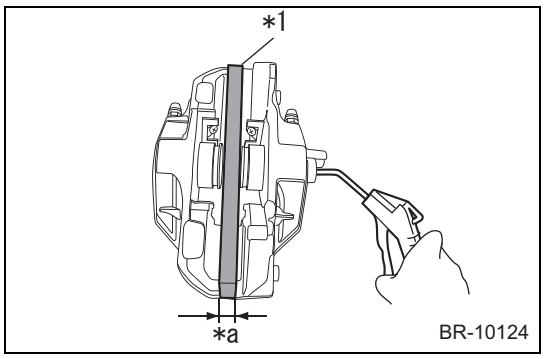
| | |
|---|---|
| *1 | Protective tape |

4. Removal of cap bleeder
   (1) Remove the cap bleeder from the bleeder screw.
5. Removal of bleeder screw
   (1) Remove the bleeder screw.

## Disassembly (brembo type)



1. Removal of piston boot
   (1) Remove the 2 piston boots.

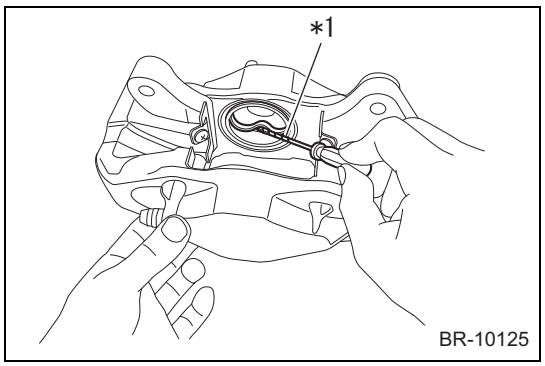


2. Removal of piston disc brake
   (1) Put a wooden block between the piston disc brake and the caliper body to prevent the piston disc brake from being damaged.

Captions in illustration

| | |
|---|---|
| *1 | Wooden block |
| *a | 20mm{0.79in} |

   (2) Using an air gun, gradually blow air into the applicable part to remove the piston disc brake.
   WARNING:
   Be careful not to pinch your fingers.
   CAUTION:
   Be careful not to spill brake fluid.



3. Removal of piston seal
   (1) Using a thin flat tip screwdriver, remove the piston seal.
   NOTE:
   Wrap the tip of the screwdriver with a protective tape.
   CAUTION:
   Do not damage the cylinder wall and the piston seal groove.

Captions in illustration

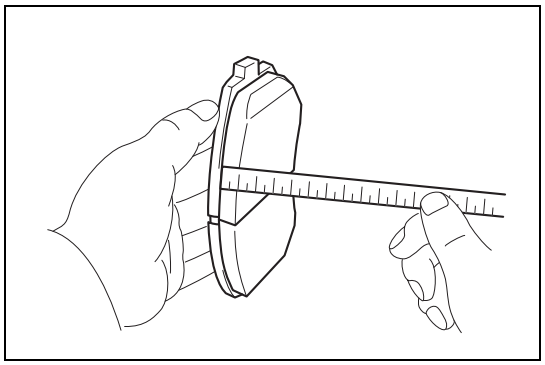
| | |
|---|---|
| *1 | Protective tape |

4. Removal of cap bleeder
   (1) Remove the cap bleeder from the bleeder screw.

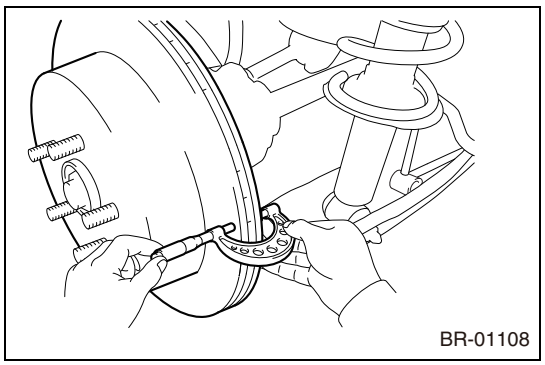
5. Removal of bleeder screw
   (1) Remove the bleeder screw.

## Inspection

1. Disc brake piston and cylinder check
   (1) Check that there is no damage on the side of the disc brake piston and on the disc brake cylinder wall.



2. Disc brake pad thickness check
   - Normal type
     Limit: 1.5mm{0.059in}
     Reference value: 11.0 mm {0.433 in} (New)
   - Brembo type
     Limit: 1.55 mm {0.061 in}
     Reference value: 9.0mm{0.354in}



3. Disc thickness check
   - Normal type
     Limit: 16.0 mm {0.630 in}
     Reference value: 18.0mm {0.709in} (New)
   - Brembo type
     Limit: 18.0 mm {0.709 in}
     Reference value: 20.0mm {0.787in}

4. Disc runout check
   (1) Before checking the rear disc runout, check the rear axle hub bearing play (Refer to AD - 22) and runout (Refer to AD - 23).
   (2) Secure the rear disc with 5 hub nuts.
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

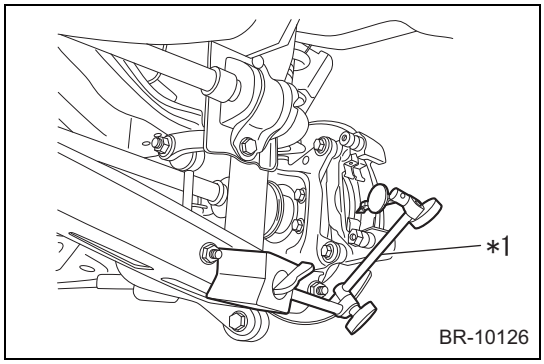
   (3) Using a dial gauge, set at 10 mm {0.394 in} inside from the rear disc outer periphery to check the front side runout.

Captions in illustration

| | |
|---|---|
| *1 | Dial gauge |

   - Normal type
     Limit: 0.05mm{0.002in}
   - Brembo type
     Limit: 0.07 mm {0.003 in}

   CAUTION:
   When the runout exceeds the limit, change the positions of the rear disc and rear axle hub to minimize the runout before installation. If the runout still exceeds the limit even after changing the rear disc and the rear axle hub positions, replace the rear disc with new one.



(4) Set the dial gauge at 10 mm {0.39 in} inside from the disc rotor outer periphery, and rotate the disc rotor to check the back side runout.

Captions in illustration

| | |
|---|---|
| *1 | Dial gauge |

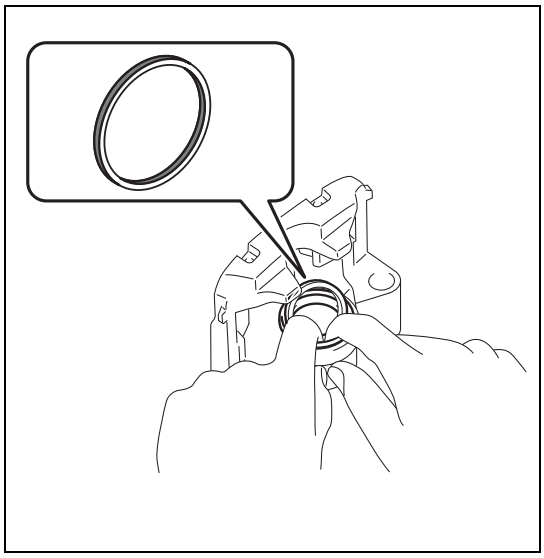
- Normal type
  Limit: 0.05mm{0.002in}
- Brembo type
  Limit: 0.07 mm {0.003 in}

NOTE:
<Example of magnet stand and dial gauge installation>

(5) If the disc rotor runout exceeds service limit, grind the disc rotor.
(6) Check the disc rotor thickness after grinding. (Refer to RB - 12)

## Assembly (normal type)

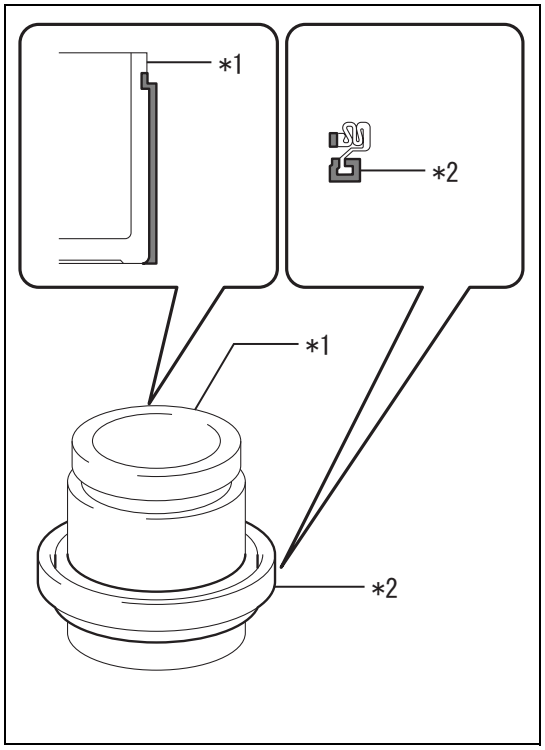
1. Temporary tightening of bleeder screw
   (1) Temporarily tighten the bleeder screw to the disc brake cylinder ASSY RR LH.
2. Installation of cap bleeder
   (1) Install the cap bleeder to the bleeder screw.



3. Installation of piston seal
   (1) Apply rubber grease to a new piston seal and install it in the disc brake cylinder groove.

Captions in illustration

| | |
|---|---|
| | Rubber grease (RENOLIT rubber grease JP) or equivalent |

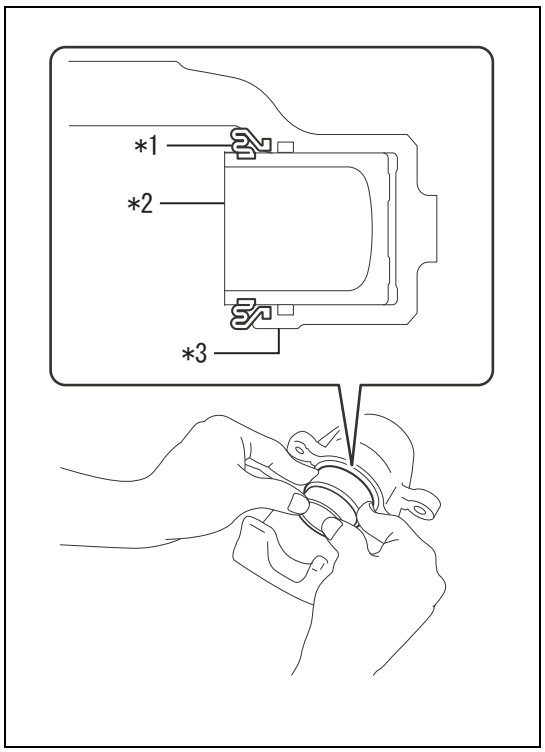


4. Installation of cylinder boot
   (1) Apply a thin coat of rubber grease to the outer periphery of the disc brake piston.

Captions in illustration

| | |
|---|---|
| *1 | Piston |
| *2 | Cylinder boot |
| | Rubber grease (RENOLIT rubber grease JP) or equivalent |

   (2) Apply rubber grease to a new cylinder boot and install it to the bottom of the disc brake piston as shown in the figure.



5. Installation of rear disc brake piston
   (1) Attach the seal portion of the cylinder boot to the disc brake cylinder groove.

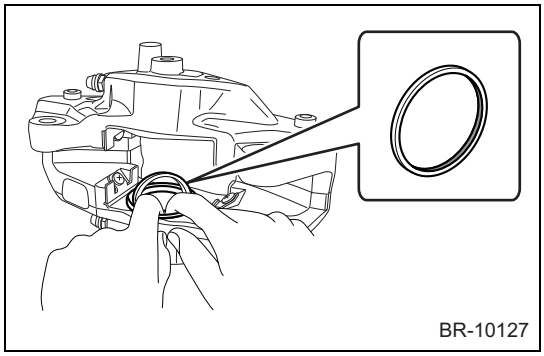
Captions in illustration

| | |
|---|---|
| *1 | Cylinder boot |
| *2 | Piston |
| *3 | Cylinder |

   CAUTION:
   Make sure that the seal portion of the cylinder boot is securely attached.
   (2) Push in the piston by hand, and attach the seal portion of the boot to the piston groove.
   CAUTION:
   Make sure that the seal portion of the cylinder boot is securely attached.

## Assembly (brembo type)

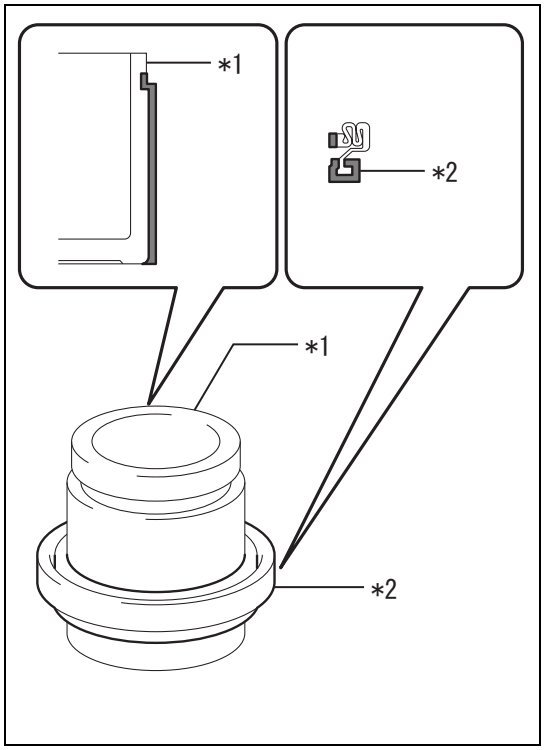
1. Temporary tightening of bleeder screw
   (1) Temporarily tighten the bleeder screw to the caliper body.
2. Installation of cap bleeder
   (1) Install the cap bleeder to the bleeder screw.



3. Installation of piston seal
   (1) Apply rubber grease to a new piston seal and install it in the caliper body groove.

Captions in illustration

| | |
|---|---|
| ▭ | Rubber grease (RENOLIT rubber grease JP) or equivalent |



4. Installation of piston disc brake
   (1) Apply a thin coat of rubber grease to the outer periphery of the piston disc brake.

Captions in illustration

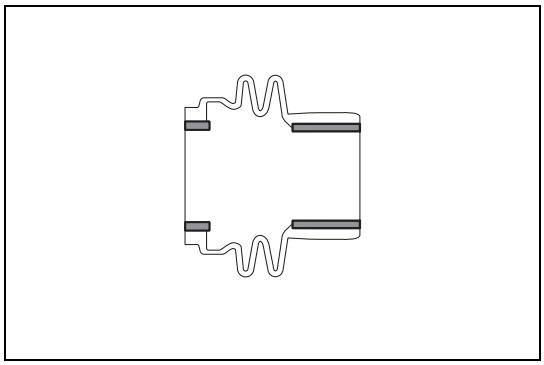
| | |
|---|---|
| *1 | Piston disc brake |
| *2 | Piston boot |
| ▭ | Rubber grease (RENOLIT rubber grease JP) or equivalent |

   (2) Apply rubber grease to a new piston boot and install it to the bottom of the piston disc brake as shown in the figure.
   (3) Install the seal portion of piston boot to the caliper body grooves.
   CAUTION:
   Make sure that the seal portion of the piston boot is securely attached.
   (4) Push in the piston by hand, and attach the seal portion of the boot to the piston groove.
   CAUTION:
   Make sure that the seal portion of the piston boot is securely attached.

## Installation (normal type)

NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

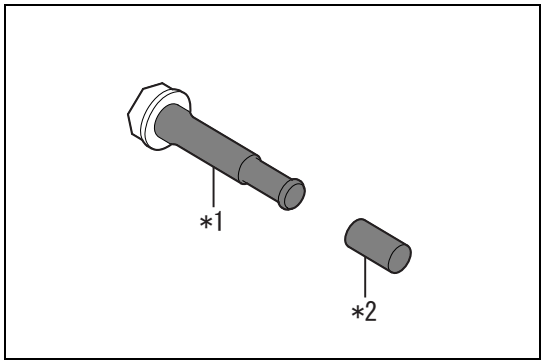


1. Installation of rear disc brake bushing duct boot
   (1) Apply rubber grease inside a new rear disc brake bushing dust boot.

Captions in illustration

| | |
|---|---|
| ▭ | Rubber grease (NIGLUBE RX-2) or equivalent |

   NOTE:
   Apply at least 1.5±0.2g {0.05±0.007} of rubber grease per 1 rear disc brake bushing dust boot.
   (2) Install 2 rear disc brake bushing dust boots to the rear disc brake cylinder mounting LH.

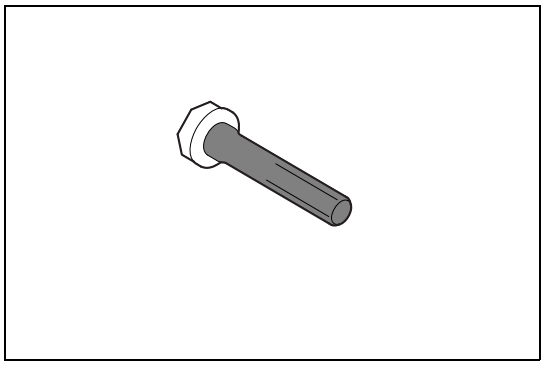


2. Installation of slide lock pin
   (1) Apply rubber grease to the contacting surface of the new bushing and the slide lock pin.

Captions in illustration

| | |
|---|---|
| *1 | Slide lock pin |
| *2 | Bushing |
| | Rubber grease (NIGLUBE RX-2) or equivalent |

   (2) Install the bushing to the slide lock pin.
   (3) Apply rubber grease to the sliding part and the engaging part of the slide lock pin.
   (4) Install the slide lock pin to the rear disc brake cylinder mounting LH.



3. Installation of slide pin
   (1) Apply rubber grease to the engaging part and the sliding part of the slide pin.

Captions in illustration

| | |
|---|---|
| | Rubber grease (NIGLUBE RX-2) or equivalent |

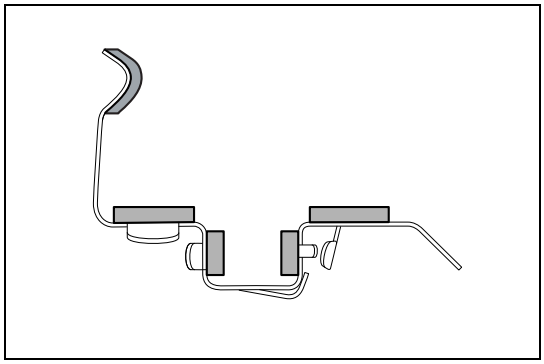
   (2) Install the slide pin to the rear disc brake cylinder mounting LH.

4. Installation of rear disc
   (1) Aligning the mark which you put at the time of removal, install the rear disc to the axle hub.
   NOTE:
   When replacing the rear disc with new one, select the position where the rear disc runout becomes the minimum and install it.
5. Clearance adjustment of disc and lining (Refer to PB - 24)
6. Installation of parking brake shoe adjusting hole plug
   (1) Install the parking brake shoe adjusting hole plug to the rear disc.
7. Installation of rear disc brake cylinder mounting LH
   (1) Install the rear disc brake cylinder mounting LH with 2 new bolts.
   Standard value:Width across flat 14 mm {0.5512 in}
   T=66N·m {673kgf·cm} {48.7ft·lbf}
   Width across flat 17 mm {0.6693 in}
   T=110N·m {1122kgf·cm} {81.1 ft·lbf}

   (2) Apply a thin coat of MP grease No.2 or equivalent to the contacting part of the rear disc brake cylinder mounting LH and the pad clip.

Captions in illustration

| | |
|---|---|
| | MP grease No.2 or equivalent |

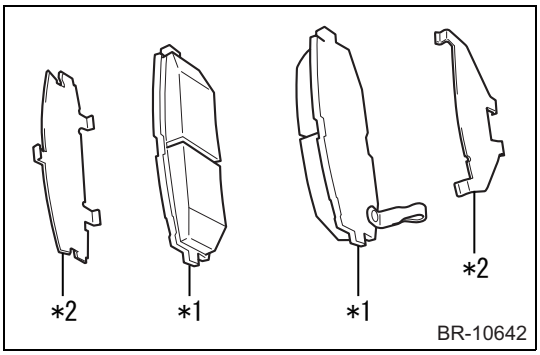


8. Installation of pad clip
   (1) Apply a thin coat of MP grease No.2 or equivalent to the part where the disc brake pad kit RR of the pad clip contacts.

Captions in illustration

| | |
|---|---|
| | MP grease No.2 or equivalent |

   (2) Install the pad clip to the rear disc brake cylinder mounting LH.



9. Installation of rear disc brake anti-squeal shim kit
   (1) Install the rear disc brake anti-squeal shim kit to the disc brake pad kit RR.

Captions in illustration

| | |
|---|---|
| *1 | Disc brake pad kit RR |
| *2 | Rear disc brake anti-squeal shim kit |

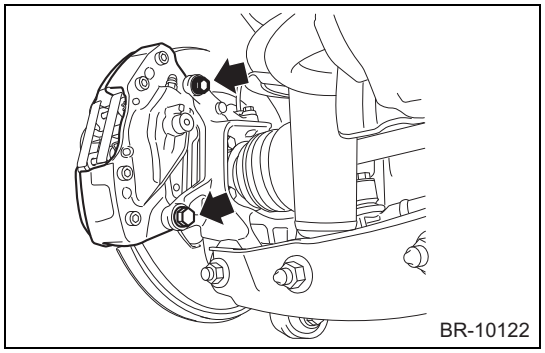
10. Installation of disc brake pad kit RR
    (1) Install the disc brake pad kit RR to the rear disc brake cylinder mounting LH.
11. Installation of disc brake cylinder ASSY RR LH
    (1) Install the disc brake cylinder ASSY RR LH to the rear disc brake cylinder mounting LH with 2 bolts.
    Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}
12. Connection of rear left flexible hose
    (1) Using a new union bolt, connect the rear left flexible hose via 2 new gaskets.
    Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}
13. Brake fluid refill (Refer to BR - 8)
14. Air bleeding of brake system (Refer to BR - 8)
15. Brake fluid leak check
16. Brake fluid level check (Refer to BR - 12)
17. Installation of rear tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

## Installation (brembo type)

NOTE:

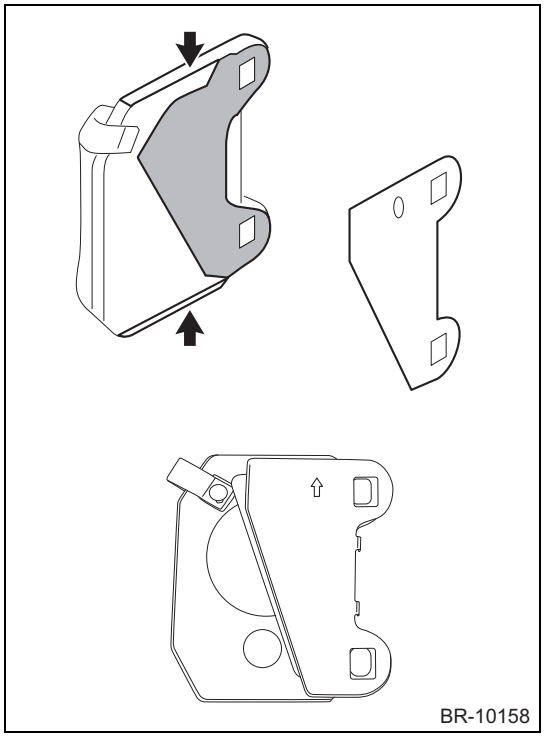
- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.

1. Installation of disc rotor
   (1) Aligning the mark which you put at the time of removal, install the disc rotor to the axle hub.
   NOTE:
   When replacing the disc rotor with a new one, select the position where the disc rotor runout becomes the minimum and install it.
2. Clearance adjustment of disc and lining (Refer to PB - 24)
3. Installation of parking brake shoe adjusting hole plug
   (1) Install the parking brake shoe adjusting hole plug to the disc rotor.



BR-10122

4. Installation of caliper body ASSY
   (1) Install the caliper body ASSY with 2 bolts.
   Standard value:T=73N·m {744kgf·cm} {53.8ft·lbf}



BR-10158

5. Installation of pad disc brake rear
   (1) Apply a thin coat of grease to the side surface of pad disc brake rear and shim installation surface of pad disc brake rear.

Captions in illustration

| | |
|---|---|
| ▭ | Disc brake grease II or equivalent |
| ➡ | MP grease No.2 or equivalent |

   (2) Install the pad disc brake rear.
   NOTE:
   Install so that the arrow faces upward.
   (3) Install the cross spring, pin disc brake and clip slide pin.

6. Connection of rear left flexible hose
   (1) Using a new union bolt, connect the rear left flexible hose via 2 new gaskets.
   Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}
7. Brake fluid refill (Refer to BR - 8)
8. Air bleeding of brake system (Refer to BR - 8)
9. Brake fluid leak check
10. Brake fluid level check (Refer to BR - 12)
11. Installation of rear tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

# Rear brake flexible hose

## Removal

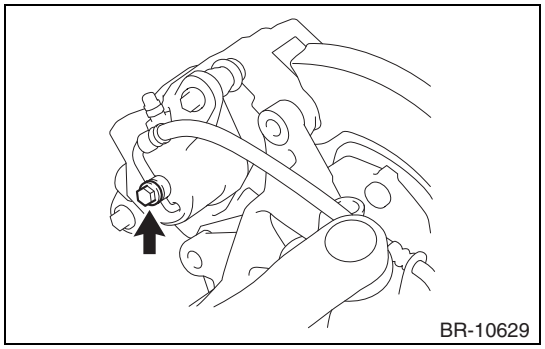
NOTE:

- The following procedure is for LH side.
- Service the LH side and the RH side using the same procedure.
- The procedures described below are for the normal type. For the brembo type, perform the same procedures as the normal type.

1. Removal of rear tire

RB

2. Draining of brake fluid (Refer to RB - 6)



3. Removal of rear left flexible hose
   (1) Remove the union bolt and 2 gaskets to disconnect the rear left flexible hose from the disk brake cylinder ASSY RR LH.

   (2) Remove the bolt and disconnect the rear left flexible hose from the rear carrier LH.

   (3) Secure the rear left flexible hose with a spanner, and disconnect the brake tube using a flare-nut wrench.
   CAUTION:
   - Do not bend or damage the brake tubes.
   - Do not let foreign matter including dirt and dust enter the connection part of the brake tube.

   (4) Remove the clip.
   (5) Remove the rear left flexible hose.

## Installation

NOTE:
- The following procedure is for LH side.
- Perform the same procedures for the RH and LH side.
- The procedures described below are for the normal type. For the brembo type, perform the same procedures as the normal type.

1. Installation of rear left flexible hose
   (1) With a new clip, install the rear left flexible hose.
   CAUTION:
   Securely attach the clip as far as it will go.
   (2) Secure the rear left flexible hose with a spanner, and connect the brake tube to the rear left flexible hose using a flare-nut wrench.
   Standard value:T=15N·m {155kgf·cm} {11.1ft·lbf}
   CAUTION:
   - Do not bend or damage the brake tubes.
   - Do not let foreign matter including dirt and dust enter the connection part of the brake tube.

   (3) With a bolt, connect the rear left flexible hose to the rear carrier LH.
   Standard value:T=33N·m {337kgf·cm} {17.7ft·lbf}
   (4) Using a new union bolt, install the rear left flexible hose to the disc brake cylinder ASSY RR LH via two new gaskets.

Standard value:T=26N·m {265kgf·cm} {19.2ft·lbf}

2. Brake fluid refill (Refer to BR - 8)
3. Air bleeding of brake system (Refer to BR - 8)
4. Brake fluid leak check
5. Brake fluid level check (Refer to BR - 12)
6. Installation of rear tire
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

# Parking brake system

## Adjustment

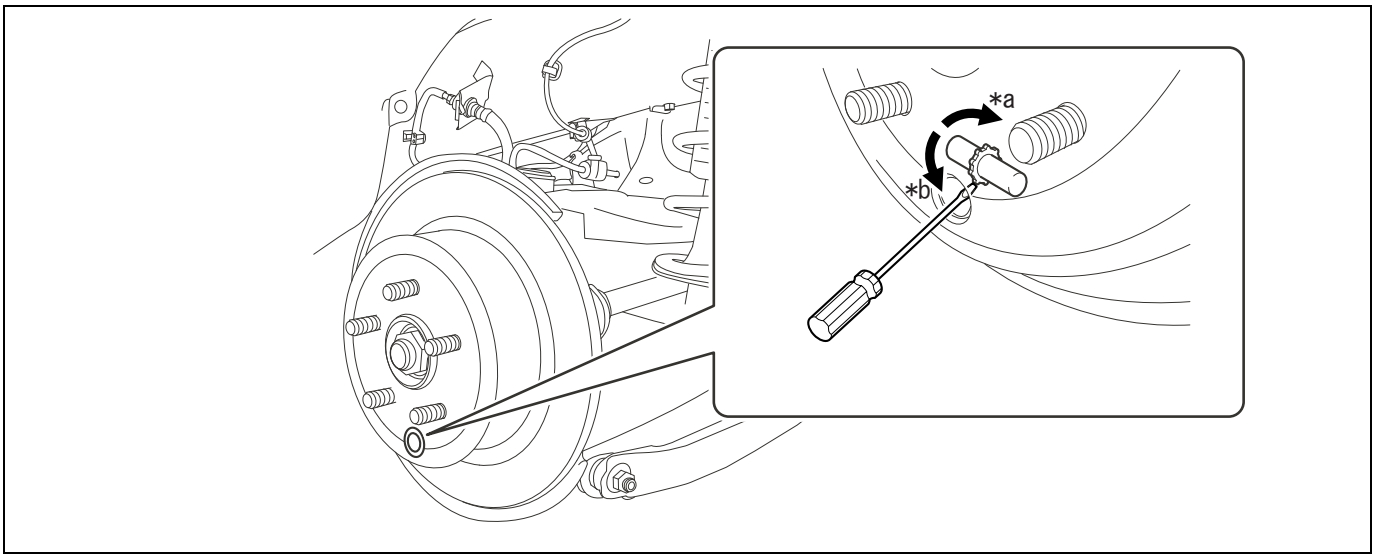
1. Parking brake lever stroke check
   (1) Strongly pull the parking brake lever once.
   (2) Release the parking brake lever.
   (3) While slowly pulling the parking brake lever, count the number of notches.
   Standard value: 7 - 8 notches [Operation force of 200 N{20 kgf/45.0 lbf}]
   NOTE:
   If it is not within the specified value, adjust the parking brake lever stroke.
2. Adjustment of parking brake
   (1) Remove the console cover. (Refer to IT - 37)
   (2) Release the parking brake.

   (3) Loosen the adjusting nut.

Captions in illustration

| | |
|---|---|
| *1 | Adjusting nut |

   (4) Remove the rear tire.
   (5) Temporarily tighten the rear wheel nut.
   (6) Remove the service hole plug of the rear disc. Turn the rear disc until the service hole is aligned to the adjusting screw.
   (7) Using a flat tip screwdriver, turn the adjusting screw in the extension direction until the parking brake shoe is in close contact with the disc.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Extend | *b | Contract |

   (8) Turn the adjusting screw in the retract direction until the rear disc rotates lightly.
   NOTE:
   Standard number of notches to return: 10
   (9) Check for brake drag.
   (10) Install the service hole plug to the rear disc.
   (11) After operating the parking brake lever 3 to 4 times, turn the adjusting nut until the lever stroke is at the specified value.

Standard value: 7 - 8 notches [Operation force of 200 N{20 kgf/45.0 lbf}]

(12) Tighten the adjusting nut.

(13) After operating the parking brake lever 3 to 4 times, make sure that the lever stroke is within the specified value.
Standard value: 7 - 8 notches [Operation force of 200 N{20 kgf/45.0 lbf}]

(14) Check for brake drag.

(15) Remove the rear wheel nut.

(16) Install the rear tires.
Standard value: T=120N·m {1224kgf·cm} {88.5 ft·lbf}

(17) Install the console cover. (Refer to IT - 38)

3. Brake warning light check
   (1) Check that the brake warning light illuminates when the parking brake lever is operated.
   Criteria: Make sure that the brake warning light illuminates without fail when the parking brake lever is pulled to the first notch.

## Symptom table

Determine the problem by referring to the table below. Check each part in order, and replace the applicable parts if necessary.

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Brake drag | Parking brake lever stroke (improper adjustment) | PB - 2 |
| | Parking brake cable front (sticking) | PB - 9 |
| | Parking brake cable rear (sticking) | PB - 9 |
| | Parking brake shoe clearance (improper adjustment) | PB - 24 |
| | Parking brake shoe (crack or deformation) | PB - 16 |
| | Tension spring (faulty) | PB - 16 |

PB-10002

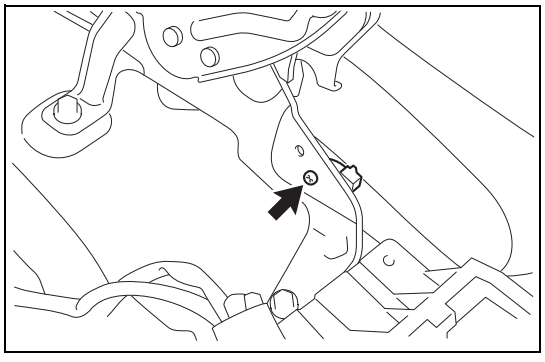
## Removal

1. Removal of console box ASSY (Refer to IT - 37)
2. Removal of parking brake cable ASSY No.1
   (1) Release the parking brake.

   (2) Remove the adjusting nut.

   (3) Disconnect the parking brake cable ASSY No.2 and No.3 from the parking brake cable ASSY No.1.
   (4) Remove the parking brake cable ASSY No.1 from the parking brake lever.
3. Removal of parking brake lever ASSY
   (1) Disconnect the connector for the parking brake switch ASSY.

   (2) Remove 3 bolts and then the parking brake lever ASSY.



4. Removal of parking brake switch ASSY
   (1) Remove the screw and then the parking brake switch ASSY.

PB

## Installation

1. Installation of parking brake switch ASSY
   (1) Install the parking brake switch ASSY with a screw.
   Standard value:T=1.5N·m {15kgf·cm} {1.1 ft·lbf}
2. Installation of parking lever ASSY
   (1) Install the parking brake lever ASSY with 3 bolts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
   (2) Connect the connector for the parking brake switch ASSY.
3. Installation of parking brake cable ASSY No.1
   (1) Attach the parking brake cable ASSY No.1 to the parking brake lever and then secure it with an adjusting nut temporarily.
   (2) Connect the parking brake cable No.2 and No.3 to the parking brake cable ASSY No.1.
4. Parking brake lever stroke check (Refer to PB - 2)
5. Adjustment of parking brake lever stroke (Refer to PB - 2)
6. Installation of console box ASSY (Refer to IT - 38)

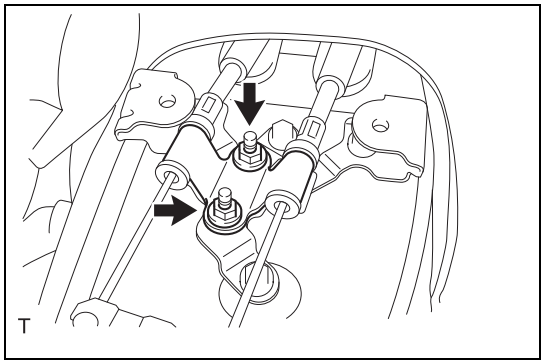
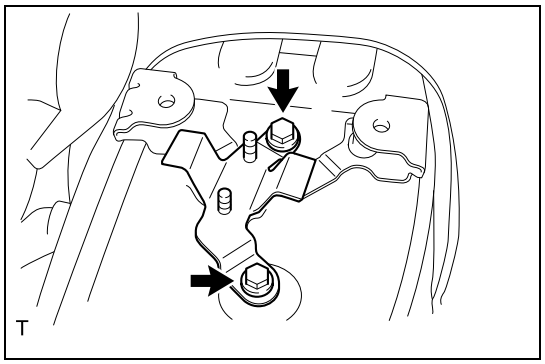
## Removal

1. Removal of console box ASSY (Refer to IT - 33)
2. Removal of parking brake cable ASSY No.1 (Refer to PB - 5)
3. Disconnection of parking brake ASSY (Refer to PB - 16)

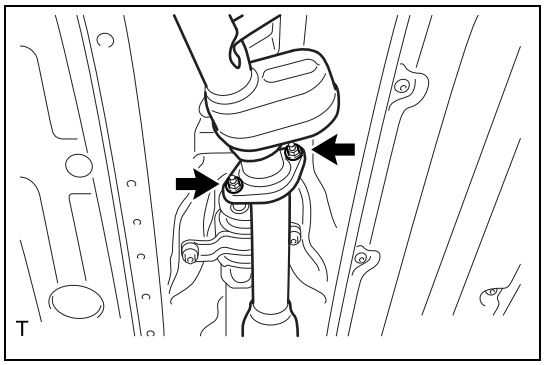


4. Removal of clamp (H/B)
   (1) Remove 2 nuts and then the clamp (H/B).



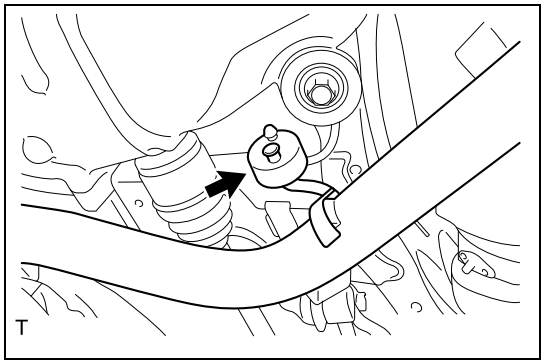
5. Removal of casing lower bracket
   (1) Remove 2 bolts, and then remove the casing lower bracket.

6. Removal of fuel tank protector (Refer to FU - 68)



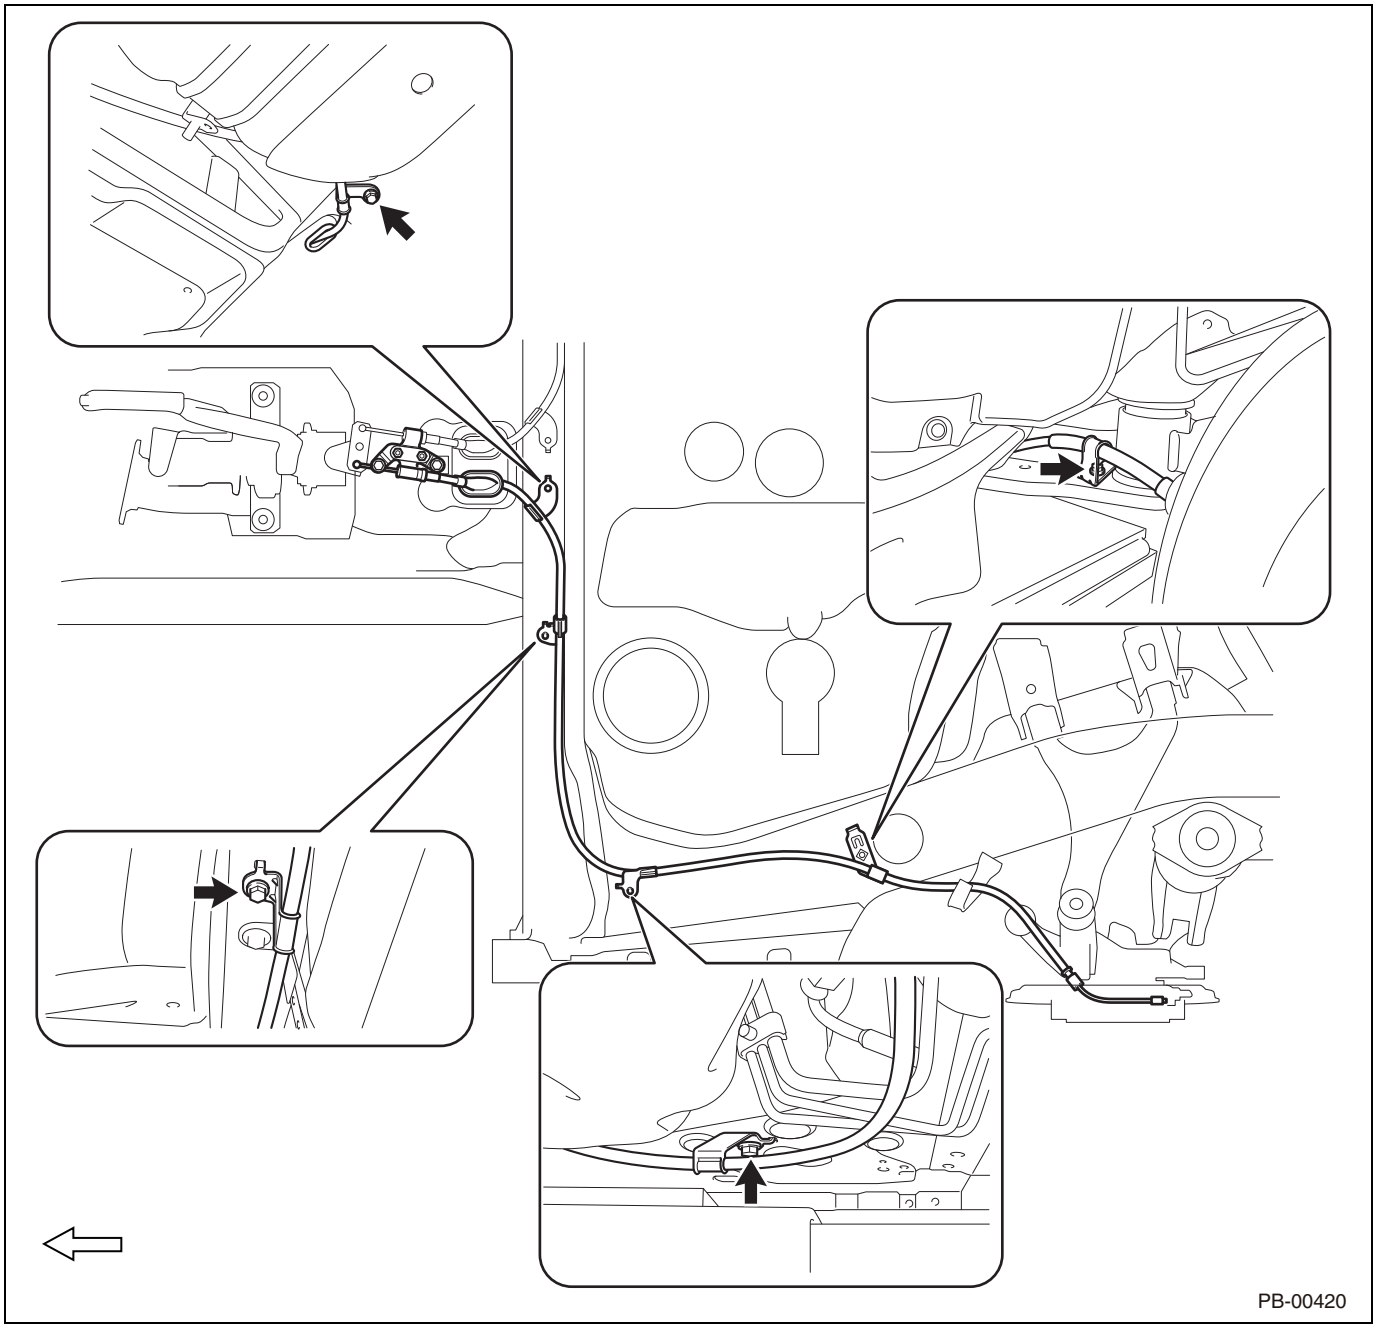
7. Removal of exhaust pipe ASSY CTR
   (1) Remove the two nuts, two bolts and two compression springs to remove the exhaust pipe ASSY CTR.

   (2) Remove the two nuts and two bolts to remove the exhaust tail pipe ASSY.



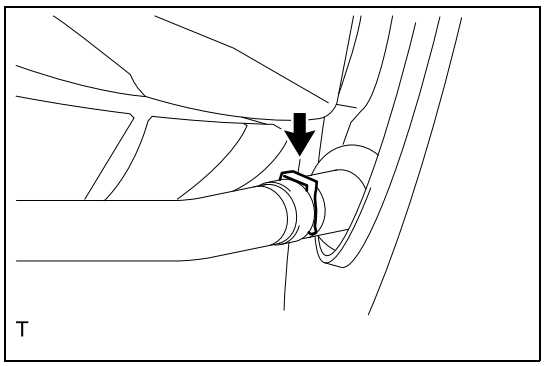
(3) Remove the cushion rubber, and remove the exhaust pipe ASSY CTR.
(4) Remove the gasket.

8. Removal of propeller shaft center bearing ASSY (Refer to DP - 14)
9. Removal of parking brake cable ASSY No.3
   (1) Remove 4 bolts and then disconnect the parking brake cable ASSY No.3 from the body.



Captions in illustration

| | | | |
|---|---|---|---|
| ➡ | Bolt | ⇨ | Front of vehicle |



(2) Remove the clamp, and then remove the parking brake cable ASSY No. 3.

10. Removal of parking brake cable ASSY No.2
    NOTE:
    Perform the same procedures for the parking brake cable ASSY No.3.

## Installation

1. Installation of parking brake cable ASSY No.3
   (1) Push the parking brake cable ASSY No.3 into the backing plate, and then install it with the clamp.
   (2) Install the parking brake cable ASSY No.3 to the body with 4 bolts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
2. Installation of parking brake cable ASSY No.2
   NOTE:
   Perform the same procedures for the parking brake cable ASSY No.3.
3. Installation of propeller shaft center bearing ASSY (Refer to DP - 16)
4. Installation of exhaust pipe ASSY CTR
   (1) Install the exhaust pipe ASSY CTR with the cushion rubber.
   (2) With 2 bolts and 2 new nuts, install the exhaust pipe ASSY CTR to the exhaust tail pipe ASSY via a new gasket.
   Standard value:T=48N·m {490kgf·cm} {35.4ft·lbf}
   (3) With 2 bolts, 2 nuts, and 2 compression springs, install the exhaust pipe ASSY CTR to the exhaust pipe ASSY FR via a new gasket.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
5. Installation of fuel tank protector (Refer to FU - 71)
6. Installation of casing lower bracket
   (1) Install the casing lower bracket to the body with 2 bolts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
7. Installation of clamp (H/B)
   (1) Install the clamp (H/B) to the casing lower bracket to the body with 2 nuts.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
8. Installation of parking brake cable ASSY No.1 (Refer to PB - 6)

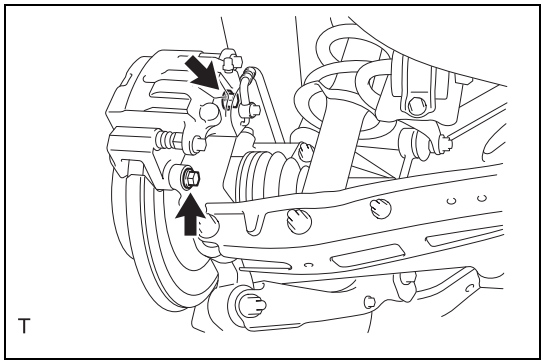
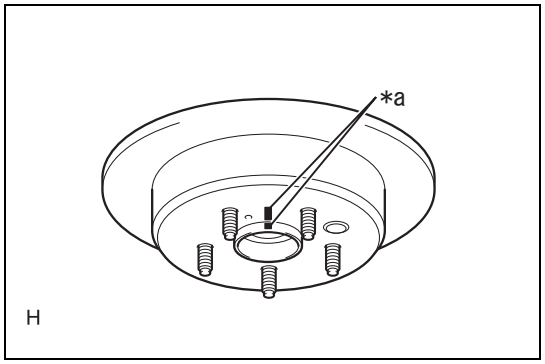
PB-00417

## Disassembly

1. Removal of rear tire



2. Disconnection of rear disc brake caliper ASSY LH
   (1) Remove 2 bolts and then disconnect the rear disc brake caliper from the rear axle carrier.
   CAUTION:
   Hang the brake caliper, using a wire or equivalent.

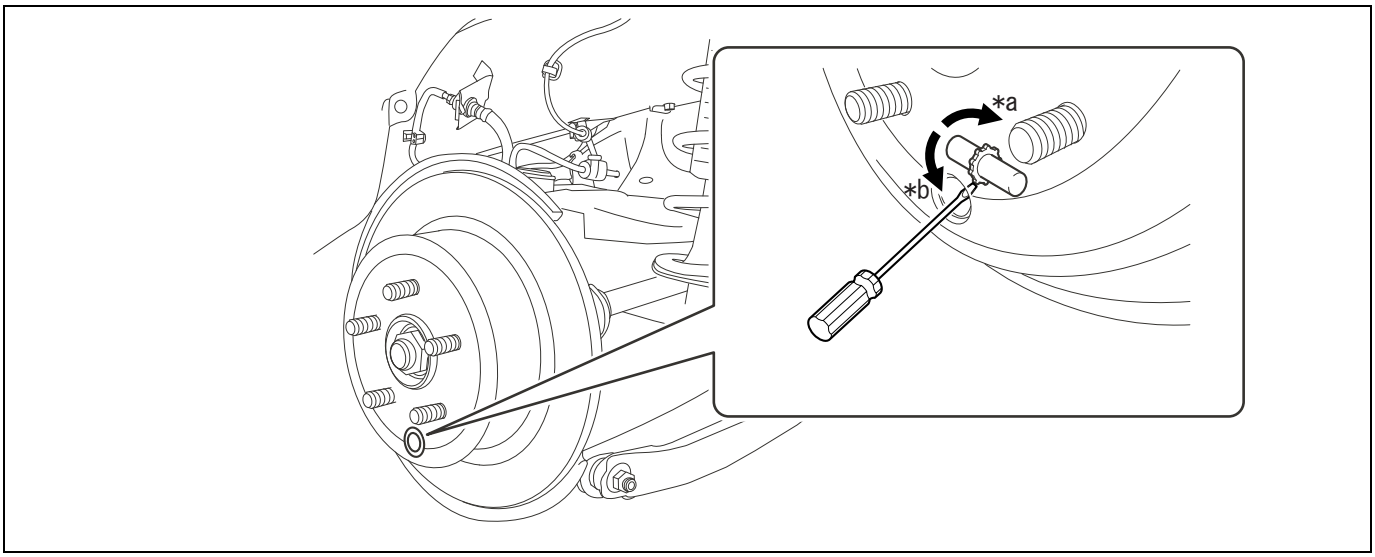


3. Removal of rear disc
   (1) Put alignment marks on the rear disc and the axle hub.

Captions in illustration

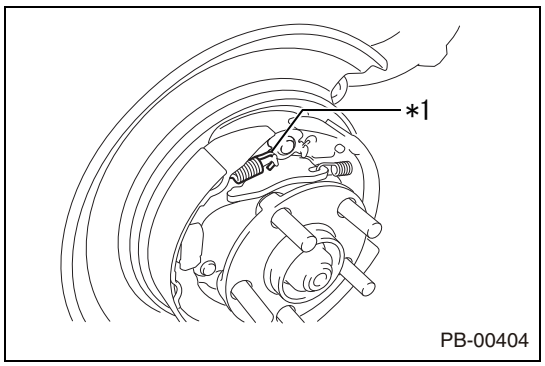
| | |
|---|---|
| *a | Alignment marks |

   (2) Release the parking brake and remove the rear disc.
   NOTE:
   If it is difficult to remove the rear disc, insert a flat head screwdriver from the rear disc service hole and rotate the adjusting screw to contract the parking brake shoe.



Captions in illustration

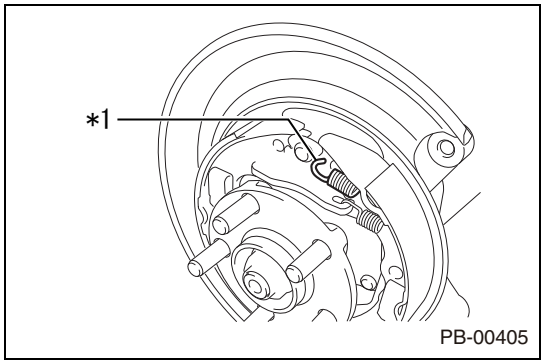
| | | | |
|---|---|---|---|
| *a | Extend | *b | Contract |



4. Removal of parking brake shoe return tension spring No.2 (installed to the front side)
   (1) Remove the parking brake shoe return tension spring No.2 (installed to the front side).

Captions in illustration

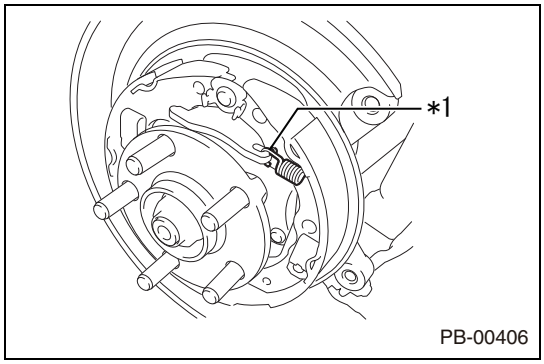
| | |
|---|---|
| *1 | Parking brake she return tension spring No.2 |



5. Removal of parking brake shoe return tension spring No.2 (installed to the rear side)
   (1) Remove the parking brake shoe return tension spring No.2 (installed to the front side).

Captions in illustration

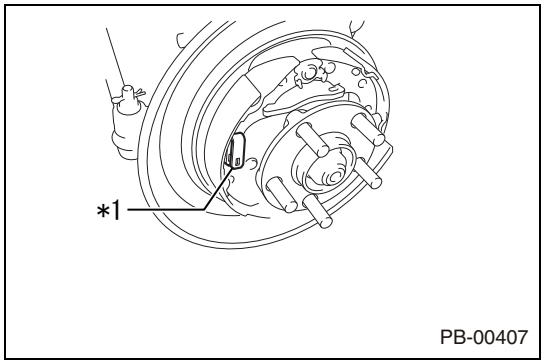
| | |
|---|---|
| *1 | Parking brake she return tension spring No.2 |



6. Removal of parking brake shoe strut compression spring
   (1) Remove the parking brake shoe strut compression spring.

Captions in illustration

| | |
|---|---|
| *1 | Parking brake shoe strut compression spring |

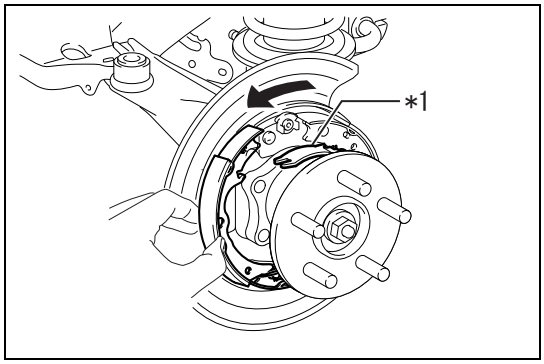


7. Removal of parking brake shoe hold-down compression spring (installed to the front side)
   (1) Remove the parking brake shoe hold-down compression spring (installed to the front side).

Captions in illustration

| | |
|---|---|
| *1 | Parking brake shoe hold-down compression spring |

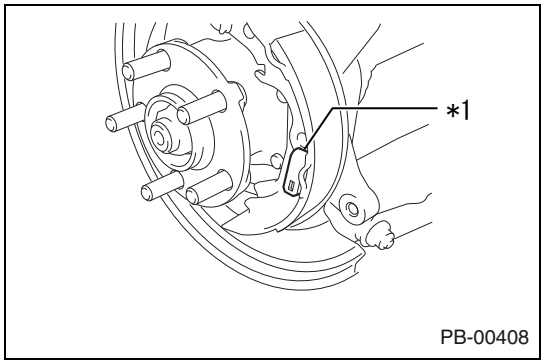
8. Removal of parking brake shoe hold-down spring pin (installed to the front side)
   (1) Remove the tension pin (installed to the front side).



9. Removal of parking brake shoe strut LH
   (1) Spread the parking brake shoe kit outward with hands and remove the parking brake shoe strut LH.

Captions in illustration

| | |
|---|---|
| *1 | Parking brake shoe strut LH |

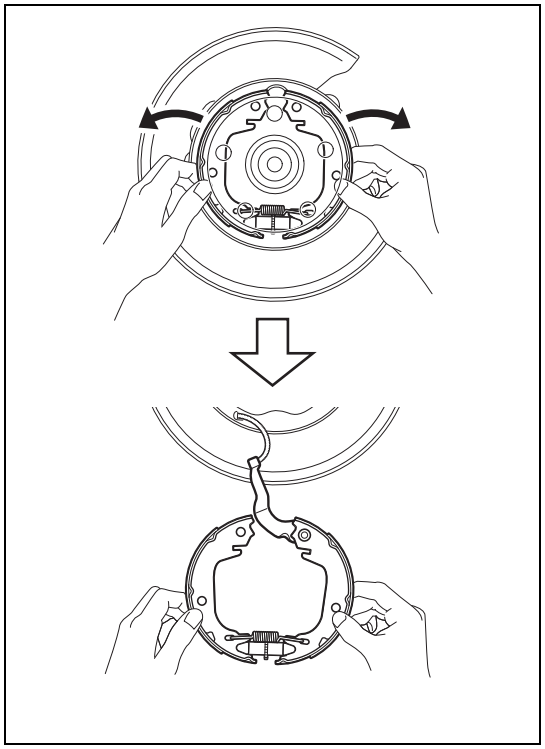


10. Removal of parking brake shoe hold-down compression spring (installed to the rear side)
    (1) Remove the parking brake shoe hold-down compression spring (installed to the rear side).

Captions in illustration

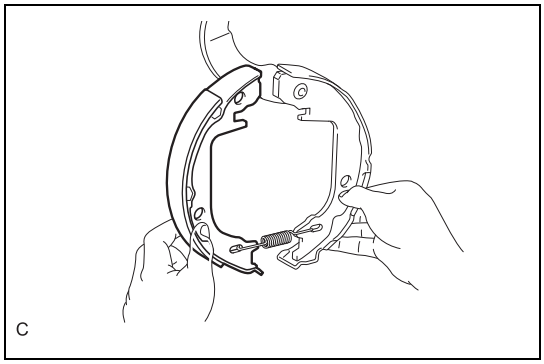
| | |
|---|---|
| *1 | Parking brake shoe hold-down compression spring |

11. Removal of parking brake shoe hold-down spring pin (installed to the rear side)
    NOTE:
    Service the parking brake shoe hold-down spring pin (installed to the rear side) using the same procedures for the parking brake shoe hold-down spring pin (installed to the front side).

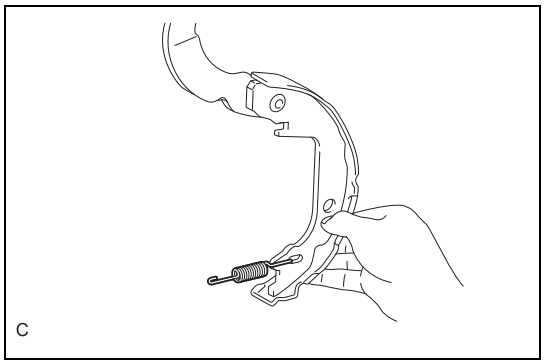


12. Removal of parking brake shoe adjusting screw set LH
    (1) Spread the parking brake shoe kit outward by hand and pull it out from the lower side of the vehicle.

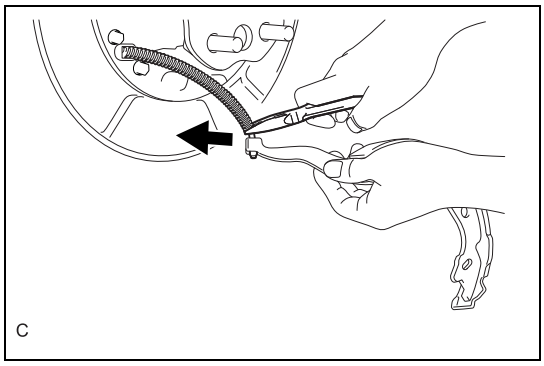
    (2) Remove the parking brake shoe adjusting screw set LH from the parking brake shoe kit.



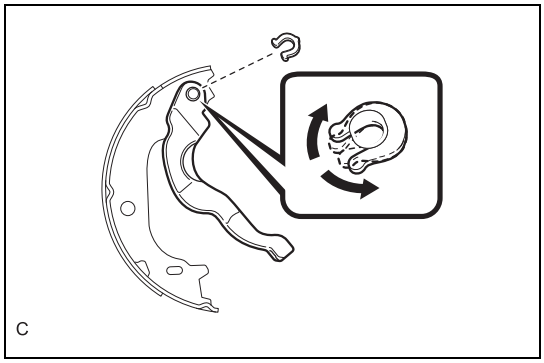
13. Removal of parking brake shoe kit
    (1) Remove the parking brake shoe kit from the parking brake shoe return tension spring No.3.



14. Removal of parking brake shoe return tension spring No.3.
    (1) Remove the parking brake shoe return tension spring No.3 from the parking brake shoe kit.



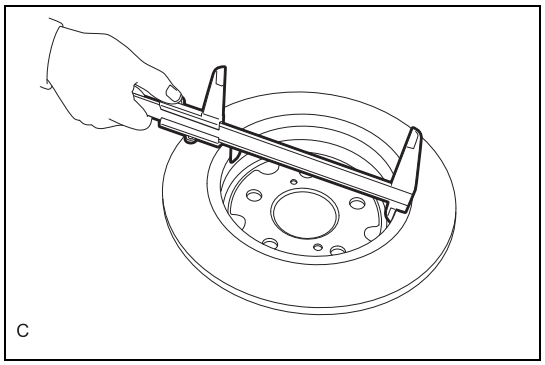
15. Disconnection of parking brake shoe lever LH
    (1) Disconnect the parking brake shoe lever LH.



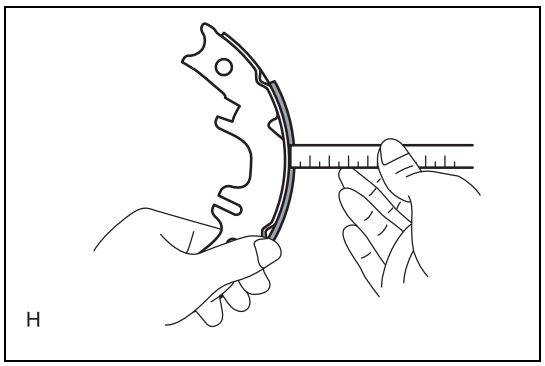
16. Removal of parking brake shoe C type washer
    (1) As shown in the figure, spread the parking brake shoe C type washer and remove it from the parking brake shoe kit.

17. Removal of parking brake shoe wave washer
    (1) Remove the parking brake shoe wave washer.
18. Removal of parking brake shoe pin
    (1) Remove the parking brake shoe pin.

## Inspection

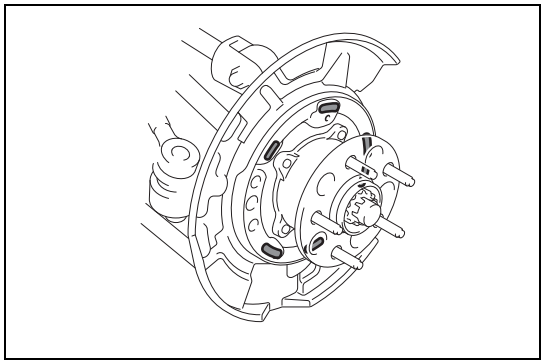


1. Rear disc inner diameter check
   (1) Using a caliper, check the inner diameter of the disc.
   Limit: 191.0mm {7.52 in}
   Reference value: : 190.0mm {7.48 in} (New)



2. Parking brake shoe lining thickness check
   Limit: 1.5mm {0.059in}
   Reference value: : 3.5 mm {0.138 in} (New)
   CAUTION:
   Replace the right and left parts as a set. (for preventing the unequal distribution of the braking force)

## Assembly

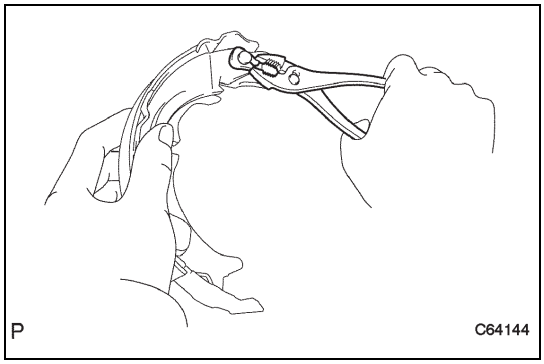


1. Applying grease to backing plate
   (1) Apply a thin coat of brake grease to the contacting part of the backing plate shoe.

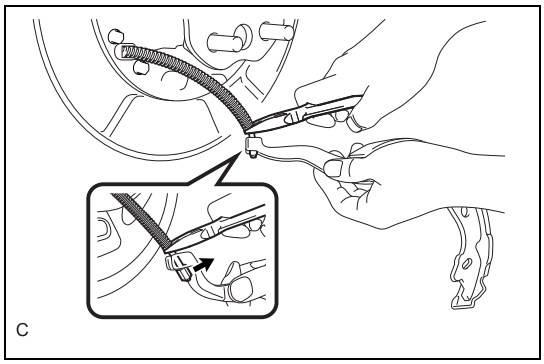
Captions in illustration

| | |
|---|---|
| ▭ | Brake grease (Molykote 44MA) |

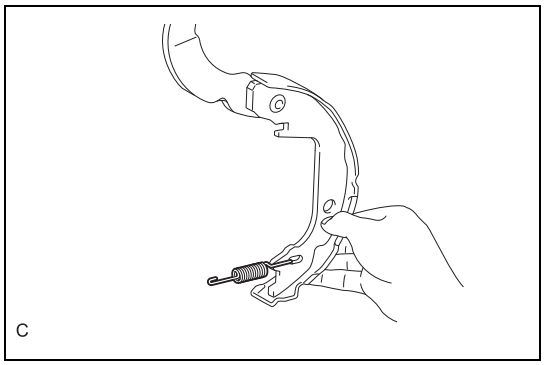
2. Installation of parking brake shoe pin
   (1) Install the parking brake shoe pin to the parking brake shoe kit.
3. Installation of parking brake shoe lever LH
   (1) Apply a thin coat of non-melting lubrication to the contacting part of the parking brake shoe lever LH and the parking brake shoe pin.
   (2) Install the parking brake shoe lever LH to the parking brake shoe kit.
4. Installation of parking brake shoe wave washer
   (1) Install the parking brake shoe wave washer.
5. Installation of parking brake shoe C type washer
   (1) Install a new parking brake shoe C type washer.



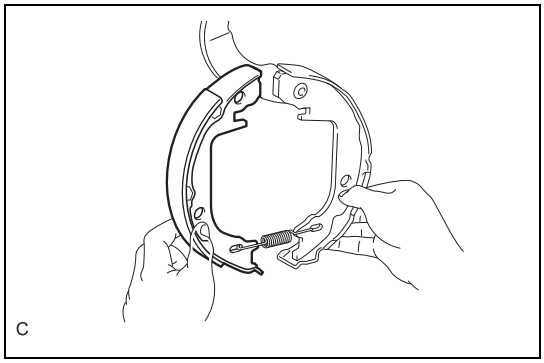
(2) Using a pliers, crimp the parking brake shoe C type washer.



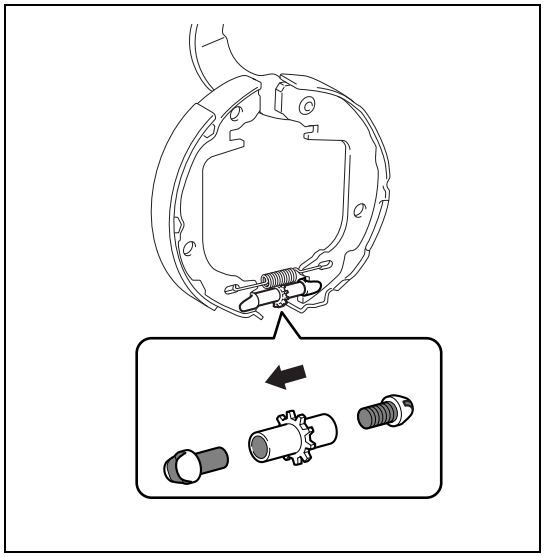
6. Installation of parking brake cable ASSY No.3
   (1) Using a pair of needle nose pliers, install the parking brake cable ASSY No.3 to the parking brake shoe lever LH.



7. Installation of parking brake shoe return tension spring No.3.
   (1) Install the parking brake shoe return tension spring No.3 to the parking brake shoe kit.



8. Installation of parking brake shoe kit (installed to the front side)
   (1) Install the parking brake shoe kit to the parking brake shoe return tension spring No.3.



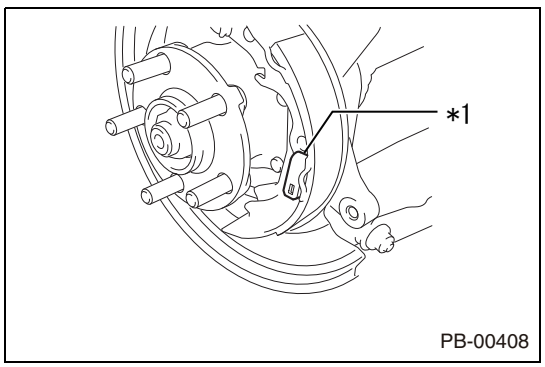
9. Installation of parking brake shoe adjusting screw set LH
   (1) Apply disc brake grease to the threaded portion of the parking brake shoe adjusting screw set LH and the piece-attaching part.
   (2) Install the parking brake shoe adjusting screw set LH to the parking brake shoe kit.
   CAUTION:
   The direction of parking brake shoe adjusting screw set is different for RH and LH. Be careful not to install them in the wrong direction.

Captions in illustration

| | |
|---|---|
| ▭ | Disc brake grease (Molykote 44MA) |
| ➡ | Front of the vehicle (LH side)<br>Rear of the vehicle (RH side) |

   (3) Spread the parking brake shoe kit outward by hand and align it to the backing plate.

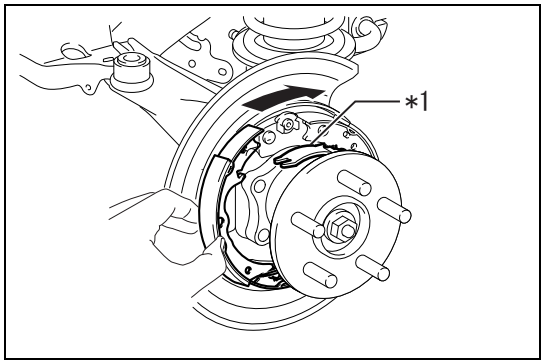
10. Installation of parking brake shoe hold-down spring pin (installed to the rear side)
   (1) Install the parking brake shoe hold-down spring pin (installed to the rear side) to the backing plate.



11. Installation of parking brake shoe hold-down compression spring (installed to the rear side)
   (1) Install the parking brake shoe hold-down compression spring (installed to the rear side).

Captions in illustration

| | |
|---|---|
| *1 | Parking brake shoe hold-down compression spring |



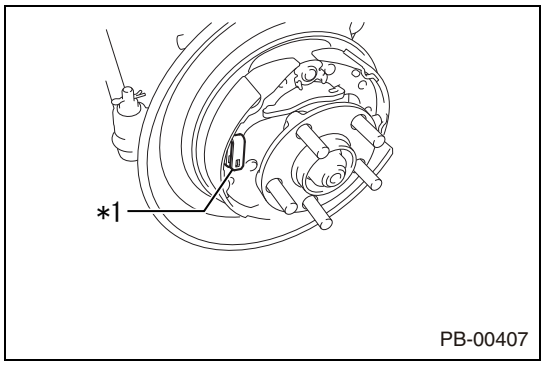
12. Installation of parking brake shoe strut LH
    (1) Spread the parking brake shoe kit outward by hand and install the parking brake shoe strut LH.

Captions in illustration

| | |
|---|---|
| *1 | Parking brake shoe strut LH |

    (2) Install the parking brake shoe kit to the specified position.

13. Installation of parking brake shoe hold-down spring pin (installed to the front side)
    (1) Install the parking brake shoe hold-down spring pin (installed to the front side) to the backing plate.

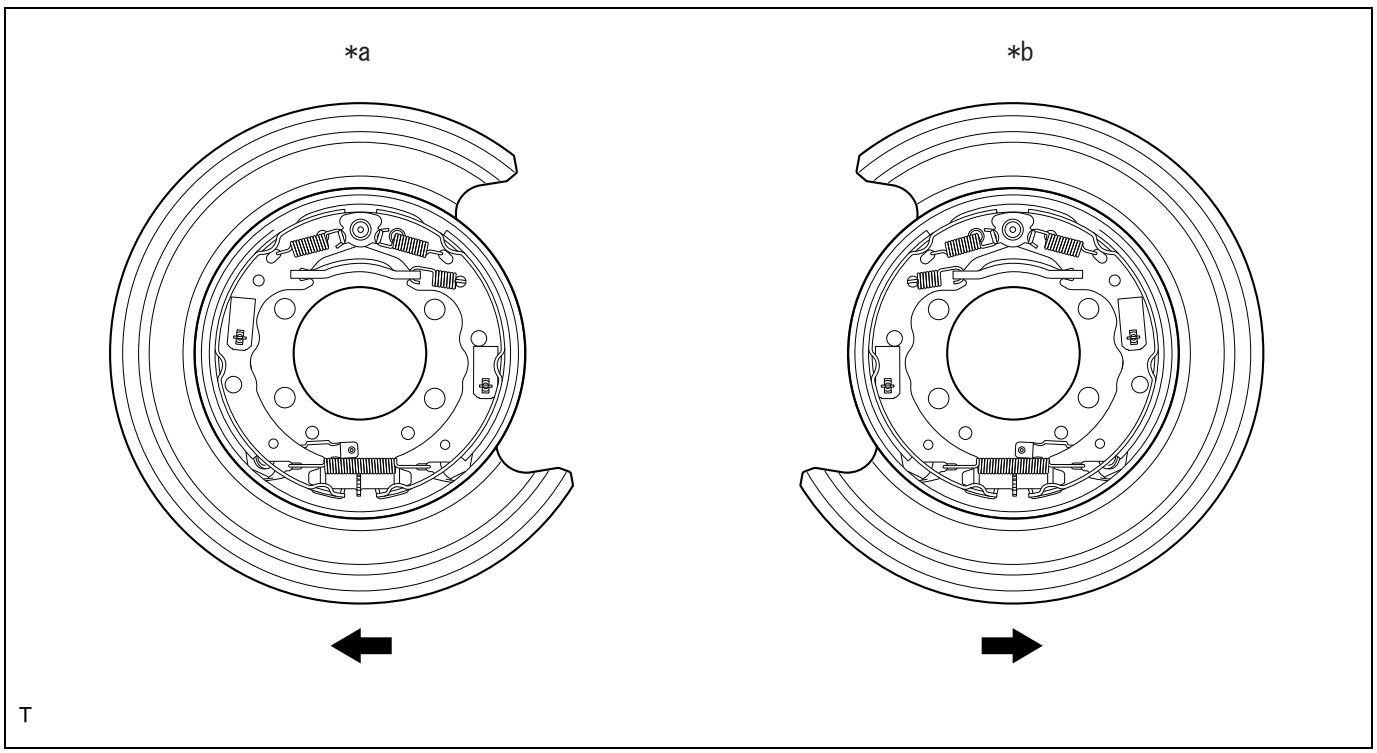


14. Installation of parking brake shoe hold-down compression spring (installed to the front side)
    (1) Install the parking brake shoe hold-down compression spring (installed to the rear side).

Captions in illustration

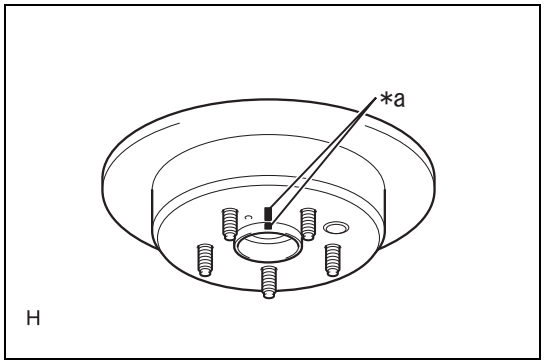
| | |
|---|---|
| *1 | Parking brake shoe hold-down compression spring |

15. Installation of parking brake shoe strut compression spring
    (1) Install the parking brake shoe strut compression spring to the parking brake shoe strut LH.
16. Installation of parking brake shoe return tension spring No.2 (installed to the rear side)
    (1) Install the parking brake shoe return tension spring No.2 (installed to the rear side).
17. Installation of parking brake shoe return tension spring No.2 (installed to the front side)
    (1) Install the parking brake shoe return tension spring No.2 (installed to the front side).
18. Parking brake installation check
    (1) Make sure that each part is installed correctly.



Captions in illustration

| *a | LH side | *b | RH side |
|---|---|---|---|
| ➡ | Front of vehicle | - | - |



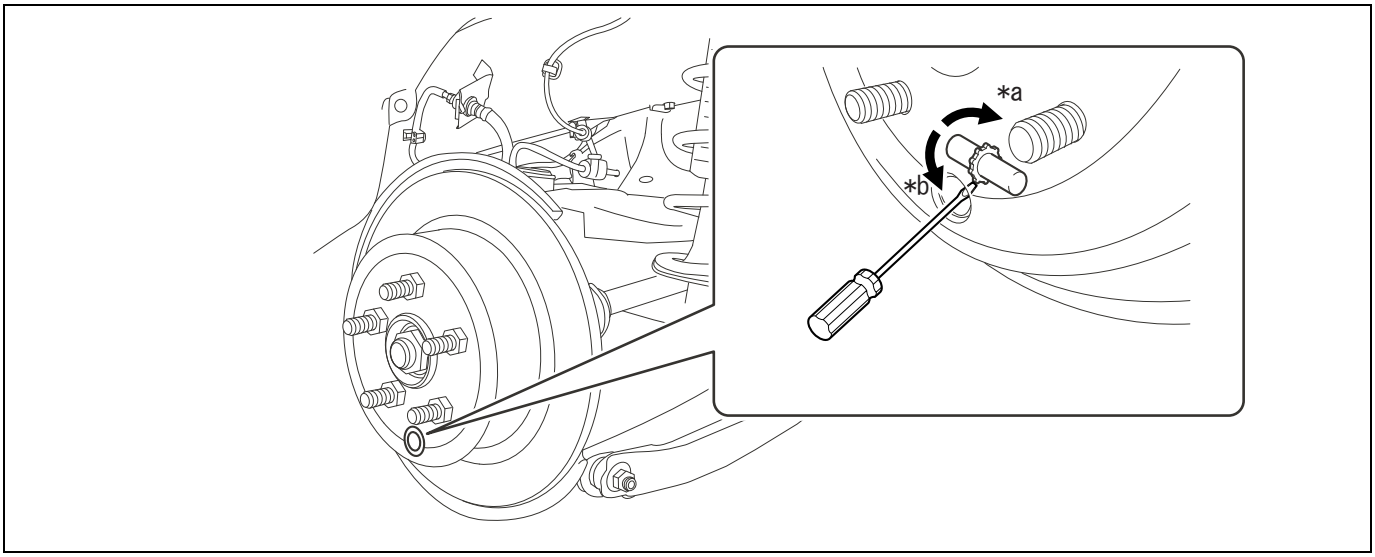
19. Installation of rear disc
    (1) Align the marks on the rear disc and the axle hub, and install the rear disc.

Captions in illustration

| *a | Alignment marks |
|---|---|

NOTE:
If the rear disc has been replaced with new one, this procedure is not required.

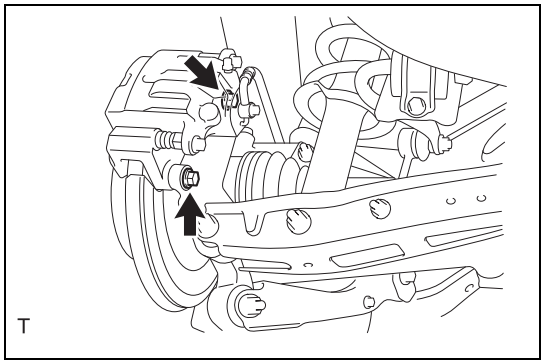
20. Clearance adjustment of disc and lining
    (1) Using a hub nut, secure the rear disc.
    (2) Remove the service hole plug of the rear disc, and turn the rear disc until the service hole is aligned to the adjusting screw.
    (3) Using a flat tip screwdriver, turn the adjusting screw in the extension direction until the parking brake shoe is in close contact with the disc.



Captions in illustration

| *a | Extend | *b | Contract |
|---|---|---|---|

    (4) Turn the adjusting screw in the contraction direction until the rear disc rotates lightly.
    NOTE:
    Standard number of notches to return: 10
    (5) Check for brake drag.
    (6) Remove the hub nut.

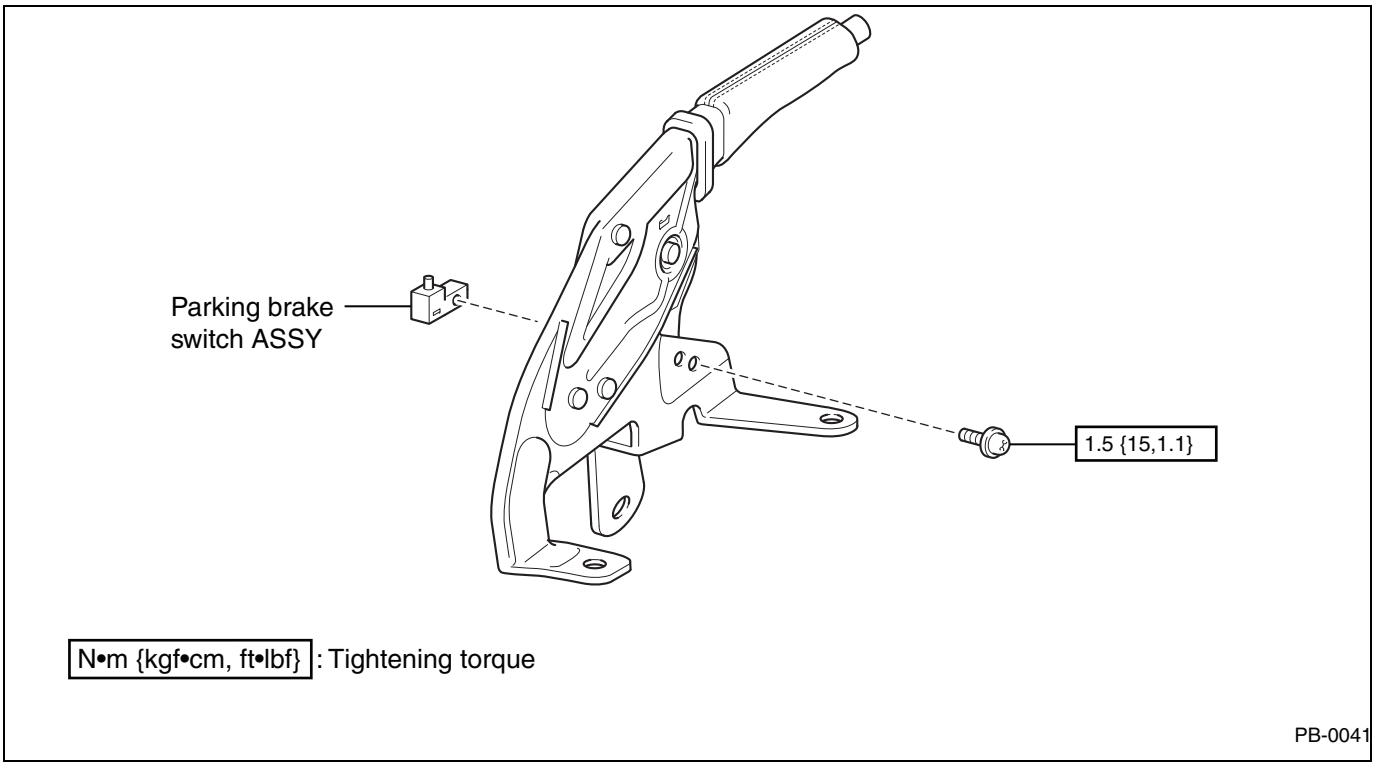


21. Connection of rear disc brake caliper ASSY LH
    (1) Using 2 new bolts, install the rear disc brake caliper ASSY LH.
    Standard value:Width across flat 14 mm {0.55 in}
    T=66N·m {673kgf·cm} {48.7ft·lbf}
    Width across flat 17 mm {0.67 in}
    T=110N·m {1122kgf·cm} {81.1 ft·lbf}
    CAUTION:
    - Do not twist the flexible hose.
    - Make sure that there is no foreign matter or damage on the threaded portion.

22. Connection of rear disc brake caliper ASSY LH (brembo type)
    (1) Using 2 new bolts, install the rear disc brake caliper ASSY LH.
    Standard value:T=73N·m {744kgf·cm} {53.8ft·lbf}
    CAUTION:
    - Do not twist the flexible hose.
    - Make sure that there is no foreign matter or damage on the threaded portion.
23. Parking brake lever stroke check (Refer to PB - 2)
24. Adjustment of parking brake (Refer to PB - 2)
25. Installation of rear tire
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

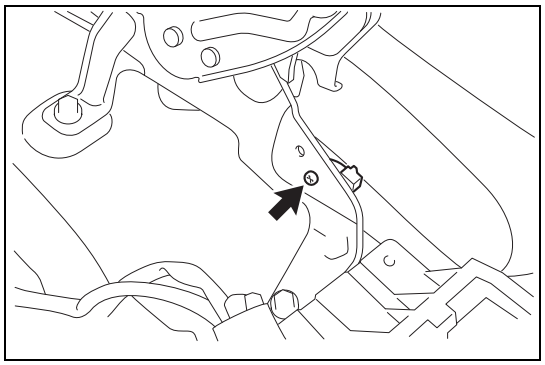
# Parking brake switch ASSY

## Exploded view



## Removal

1. Removal of console box ASSY (Refer to IT - 33)
2. Removal of parking brake switch ASSY
   (1) Disconnect the connector.

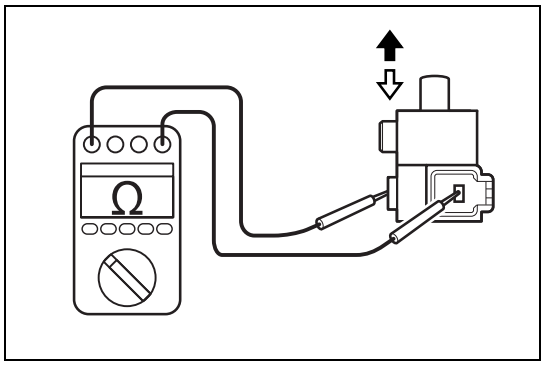


(2) Remove the screw and parking brake switch ASSY from the parking brake lever ASSY.

## Installation

1. Installation of parking brake switch ASSY
   (1) Install the parking brake switch ASSY to the parking brake lever ASSY with screw.
   Standard value:T=1.5N·m {15kgf·cm} {1.1 ft·lbf}
   (2) Connect the connector.
2. Installation of console box ASSY (Refer to IT - 38)

## Unit inspection



1. Parking brake switch ASSY check
   (1) Measure the resistance between the parking brake switch ASSY and the chassis ground.

Captions in illustration

| | |
|---|---|
| ➡ | ON |
| ⇨ | OFF |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1(+) - chassis ground | When shaft is free (ON) | Less than 1 Ω |
| | When shaft is pressed in (OFF) | 10 k Ωor more |

## Precautions

1. Correct handling and precautions for operation
   (1) Handling of electrical parts
      (a) Do not apply any impact to any electrical parts such as the power steering computer ASSY. Be sure to replace with a new part if strong impact is applied (such as hitting or dropping the part).
      (b) Do not expose electric parts to extreme temperatures or high humidity.
      (c) Do not touch the connector terminals as they may become deformed, or damaged due to static electricity discharge.
   (2) Handling of the power steering computer ASSY
      (a) Be sure to use new replacement parts when replacing the power steering computer ASSY.
         CAUTION:
         Do not install any power steering computer ASSY that is designed to be used with other vehicles (such as demonstration models).
      (b) Always perform a steering zero point calibration after replacing the power steering computer ASSY. (Refer to PA - 12)
   (3) Precautions when connecting or disconnecting connectors
      (a) Before you disconnect any connectors related to the power steering system, turn the ignition to IG ON and set the steering to the straight-ahead position. Turn the ignition to IG OFF and disconnect the connector after disconnecting the battery ground terminal.
      (b) Before you connect any connectors related to the power steering system, confirm that the ignition is turned to IG OFF, connect the connector and turn the ignition to IG ON while the steering is in the straight-ahead position.
         CAUTION:
         Do not turn the ignition to IG ON if the steering is not in the straight-ahead position.
      (c) If the above procedures are not carried out, the steering neutral (zero point) position can shift and you may experience a difference in the steering effort required for the left and right directions. Please perform a zero point calibration if you notice any difference in the steering effort for the left and right directions. (Refer to PA - 12)
2. Precautions for CAN communication
   (1) CAN communication is used for sending and receiving information from each computer, sending warning signals to the combination meter ASSY, and communication with the DLC3. A communication error code is output if there is a problem with the CAN communication line.
   (2) If a CAN communication error code is output, repair the malfunction causing the communication line error and perform power steering system troubleshooting under a normal data communication state.
   (3) For precautions when repairing the CAN communication system, please refer to NW - 25.

## Function inspection

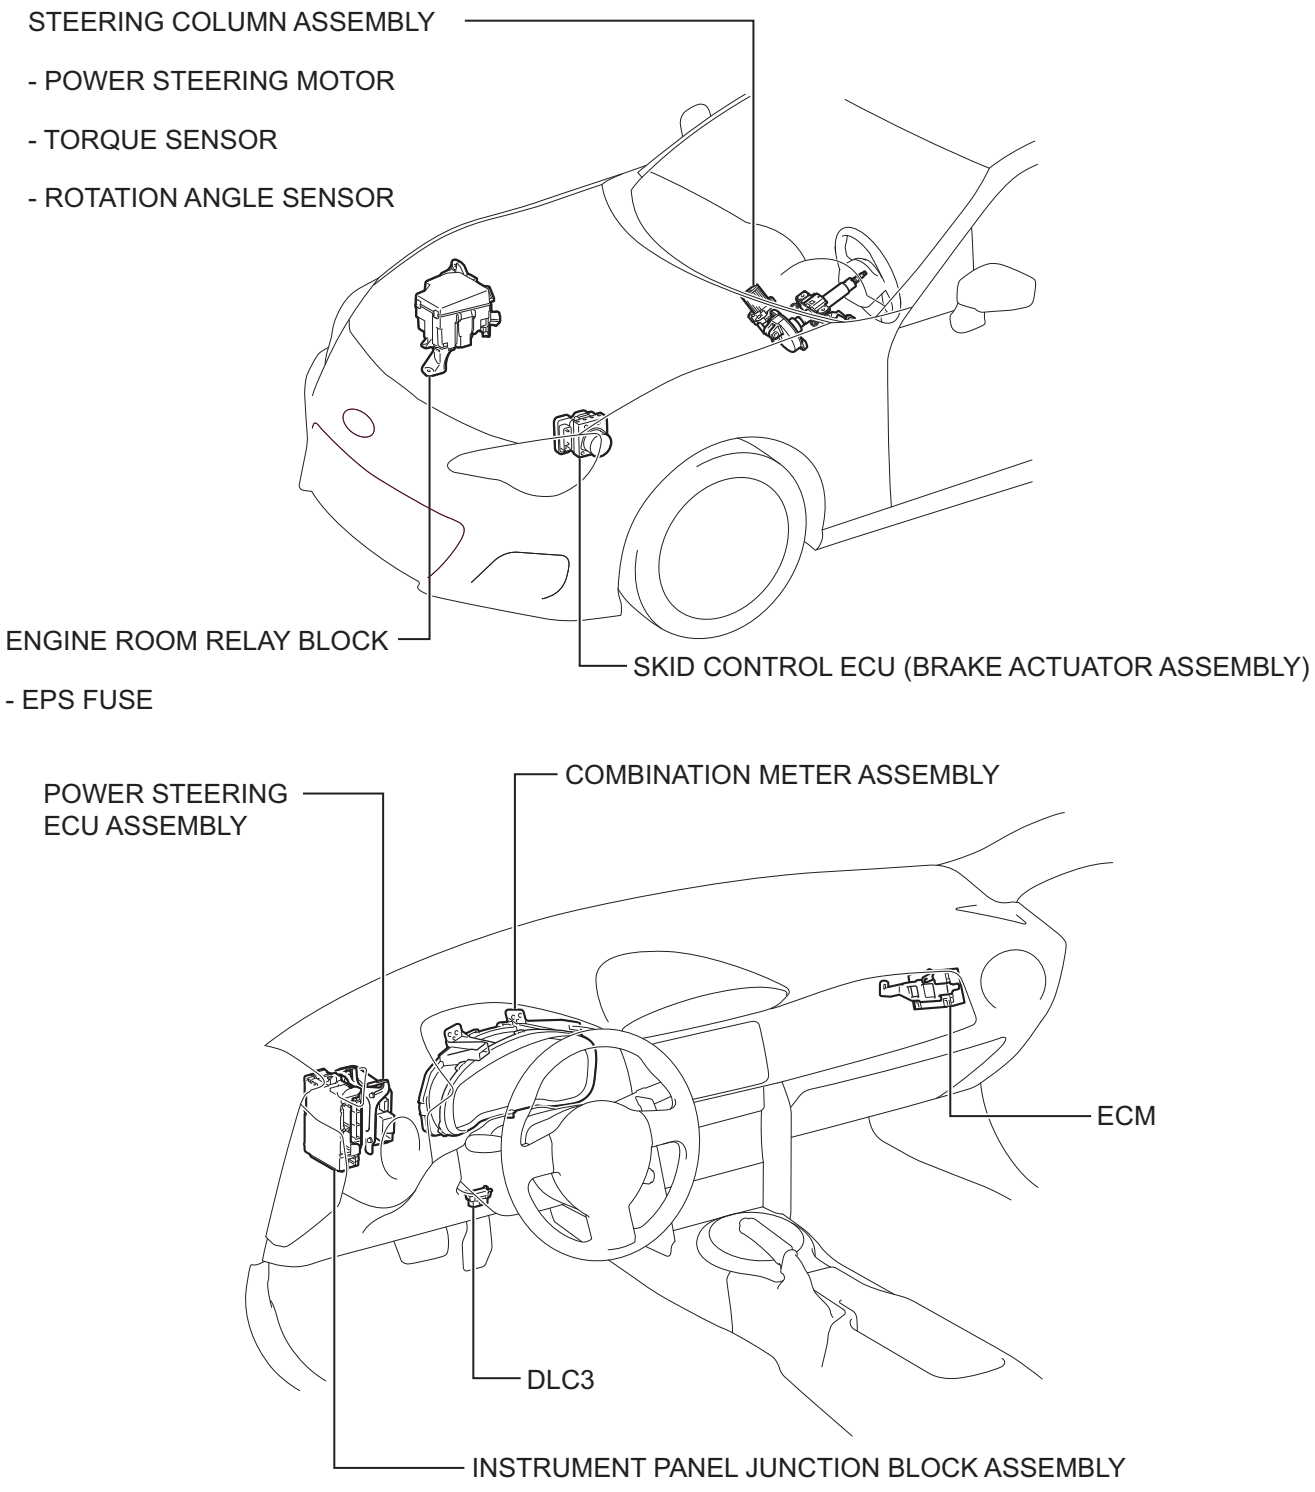
1. Dry steering torque check
   WARNING:
   As this maintenance procedure may have an effect on the SRS airbag system, be sure to check the SRS airbag system precautions before commencing work. (Refer to RS - 5)
   (1) Park the vehicle on a level paved surface, and set the steering wheel to the straight-ahead position.
   (2) Disconnect the battery ground terminal.
      CAUTION:
      After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
   (3) Remove the driver's airbag module. (Refer to RS - 246)
   (4) Connect the negative terminal of the battery.
   (5) Check that the steering wheel set nut is not loose.
      Standard value: T=39N·m {398kgf·cm} {28.8ft-lbf}
   (6) Start the engine and place the vehicle in a state where the power steering can operate.
   (7) Check the torque while turning the steering wheel a quarter turn to the right from the straight-ahead position.
      Standard value: T=6.0N·m {61kgf·cm} {4.4 ft-lbf} or less
   (8) Check the torque in the same manner while turning to the left.
   (9) Set the steering wheel to the straight-ahead position.
   (10) Disconnect the battery ground terminal.

CAUTION:
After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

(11) Install the driver's airbag module. (Refer to RS - 248)

(12) Connect the negative terminal of the battery.

## Parts location



## List of diagnostic codes

Power steering system

| Diagnostic codes | Diagnostic items | Light on | Normal return condition | Reference pages |
|---|---|---|---|---|
| C1511 | [Torque sensor 1 abnormal] | *1 | Once again, IG ON | PA - 17 |
| C1512 | [Torque sensor 2 abnormal] | *1 | Once again, IG ON | PA - 17 |

| C1581 | [Assist map not written] | *1 | After normal operation is determined | PA - 32 |
| C1582 | [Assist Map Number Mismatch] | *2 | After normal operation is determined | PA - 33 |
| C1583 | [Assist MAP Selection Error] | *2 | Delete diagnosis code | PA - 34 |
| U0100 | [Lost Communication With ECM/PCM "A"] | *1 | After normal operation is determined | PA - 35 |
| U0122 | [Lost Communication With Vehicle Dynamics Control Module] | *1 | After normal operation is determined | PA - 35 |
| U0416 | [Invalid Data Received From VDC] | *1 | Once again, IG ON | PA - 35 |

*1: Turns on.

*2: Does not turn on.

# Symptom table

## Power steering system

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Steering operation is heavy | Front tires (improperly inflated, uneven wear) | TW - 2 |
| | Front wheel alignment (improper) | AL - 2 |
| | Front suspension (lower ball joint) | FP - 17 |
| | Steering link ASSY | SL - 10 |
| | Torque sensor (integrated into the steering column ASSY) | - |
| | Power steering motor (integrated into the steering column ASSY) | - |
| | Battery and power supply system | - |
| | Speed sensor system | - |
| | Skid control computer (brake actuator ASSY) | BC - 9 |
| | Power steering computer ASSY power supply voltage and internal relay | - |
| | Power steering computer ASSY | PA - 40 |
| | The presence of continued operation under high load or dry steering | - |
| Steering force required is different in the left and right directions or it is uneven. | Torque sensor zero point calibration or rotation angle sensor output calibration are incomplete. | PA - 12 |
| | Front tires (improperly inflated, uneven wear) | TW - 2 |
| | Front wheel alignment (improper) | AL - 2 |
| | Front suspension (lower ball joint) | FP - 17 |
| | Steering link ASSY | SL - 10 |
| | Torque sensor (integrated into the steering column ASSY) | - |
| | Steering column ASSY | SR - 54 |
| | Power steering motor (integrated into the steering column ASSY) | - |
| | Power steering computer ASSY | PA - 40 |
| While driving, steering operation does not change depending on the speed, or the steering wheel does not return smoothly. | Front suspension (lower ball joint) | FP - 17 |
| | Speed sensor system | - |
| | Skid control computer (brake actuator ASSY) | BC - 9 |
| | Torque sensor (integrated into the steering column ASSY) | - |
| | Power steering motor (integrated into the steering column ASSY) | - |
| | Steering link ASSY | SL - 10 |
| | Power steering computer ASSY | PA - 40 |
| | CAN communication system | NW - 30 |
| There is a thumping noise during power steering operation, when the steering wheel returns to the neutral position | Front suspension (lower ball joint) | FP - 17 |
| | Steering intermediate shaft | - |
| | Steering link ASSY | SL - 10 |
| There is a rubbing sound when the steering wheel is turned during slow driving | Power steering motor (integrated into the steering column ASSY) | - |
| | Steering link ASSY | SL - 10 |
| | Steering column ASSY | SR - 54 |
| | Rubbing of the steering intermediate shaft ASSY No.2 dust seal | SR - 54 |
| | Steering sensor (spiral cable SUB-ASSY) | - |
| | Rubbing of the steering wheel ASSY and the column cover | SR - 67 |
| | Power steering computer ASSY | PA - 40 |
| An abnormal high-pitched squeaking sound occurs when the steering wheel is slowly turned when the vehicle is stopped | Steering link ASSY | SL - 10 |
| | Power steering motor (integrated into the steering column ASSY) | - |
| | Steering wheel installation condition | SR - 69 |
| The steering wheel vibrates (accompanied with a noise) during dry steering | Steering link ASSY | SL - 10 |
| | Power steering motor (integrated into the steering column ASSY) | - |
| | Steering column ASSY | SR - 54 |
| | Steering wheel installation condition | SR - 69 |
| P/S warning light remains ON | Battery and power supply system | - |
| | Refer to the flow chart | PA - 35 |

## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Interview and phenomenon check |

Next

| | |
|---|---|
| 3 | Battery voltage check |

(1) Check for loose battery terminals and damage.
(2) Check the battery voltage.
(3) Refer to parts location drawings and circuit figures and inspect any parts that can be checked visually such as blown fuses in the system, wiring harness open circuit, short circuits, or poor connector contacts.
NOTE:
If the battery voltage is less than 11 V, please recharge or replace the battery before commencing the diagnostic procedure.
(4) Use the SSM4 to check the [Battery Voltage Lo Record]. (Refer to PA - 15)

Next

| | |
|---|---|
| 4 | Check of diagnosis codes and freeze frame data |

(1) Check of diagnosis codes and freeze frame data
(a) Record diagnosis codes and freeze frame data. (Refer to PA - 10)
(2) Deletion of diagnosis codes and freeze frame data (Refer to PA - 10)
(3) Diagnosis codes recheck (Refer to PA - 10)
(a) Based on the recorded diagnosis codes and freeze frame data, recreate the trouble phenomenon and recheck for the presence of the diagnosis code output.
NOTE:
- If an error code for CAN communication system is output, first troubleshoot CAN communication and repair it. (Refer to NW - 30)
- If communication with the power steering computer ASSY cannot be established by the SSM4, check the CAN communication between the DLC3 and the power steering computer ASSY, as well as the power steering computer ASSY IG circuit.

Result

| Result | Go to |
|---|---|
| Diagnosis code normal | A |
| Error code output | B |
| Diagnosis code normal, unable to check or recreate the phenomenon | C |

B → Refer to "List of diagnostic codes (PA - 6)" and perform troubleshooting for each code. Then go to step 7.

C → Go to "Malfunction simulation (IN - 32)".

A

| | |
|---|---|
| 5 | Symptom table (Refer to PA - 7) |

Result

| Result | Go to |
|---|---|
| Not applicable to the symptom table. | A |
| Applicable to the symptom table. | B |

B → Perform troubleshooting for each applicable symptom and progress to step 7.

A

| | |
|---|---|
| 6 | Based on the trouble phenomenon, use the following methods to perform troubleshooting |

(1) Data monitor (Refer to PA - 15)
(2) ECM terminal arrangement (Refer to PA - 14)

Next

| | |
|---|---|
| 7 | Adjustment, repair, or replacement |

Next

| | |
|---|---|
| 8 | Confirmation test |

Next

PA

## Checking / clearing diagnostic codes

1. Reading the diagnosis codes
   (1) Turn the ignition switch to OFF.

(2) Connect the SSM4 to the DLC3 connector.
(3) Turn the ignition switch to ON.
(4) Follow the SSM4 display screen to read the diagnosis codes.
CAUTION:
If an error is detected, recheck diagnosis codes after the issue is resolved and confirm that no error code is output.

2. Deletion of recorded diagnosis codes
(1) Turn the ignition switch to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Turn the ignition switch to ON.
(4) Follow the SSM4 display screen to delete the diagnosis codes.

## Freeze frame data

1. Freeze frame data
NOTE:
- If an error diagnosis code is output, the freeze frame data at the time of the generation of the error code is recorded.
- When an error diagnosis code is generated and the freeze frame data is recorded, data is not updated or deleted until the recorded data itself is deleted (diagnosis code deletion).

(1) Turn the ignition switch to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Display the error code on the diagnostic code confirmation screen. (Refer to PA - 10)
(4) Check the freeze frame data.

List of freeze frame data

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| Vehicle speed | Indicates the vehicle speed input from the skid control computer.<br>Display range: 0.0 to 300.0km/h | 0km/h: When stopped | - |
| | | No significant fluctuation: When driving at a constant speed | - |
| Engine speed | Indicates the engine speed.<br>Display range: 0 to 12800rpm | No substantial fluctuations present: Engine speed is constant | - |
| Motor current | Indicates the current flowing to the motor.<br>Display range: -327.68 to 327.67A | Changes in proportion to the steering force: During engine start, steering operation | Left turn (+)<br>Right turn (-) |
| Motor current (requirement) | Indicates the requirement for the current flowing to the motor.<br>Display range: -327.68 to 327.67A | Changes in proportion to the steering force: During engine start, steering operation | Left turn (+)<br>Right turn (-) |
| Steering angular speed | Indicates the angular speed of steering operation.<br>Display range: -32768 to 32767deg/s | Changes in proportion to the steering speed: During engine start, steering operation | Left turn (+)<br>Right turn (-) |
| Thermistor temperature | Indicates the ECM board temperature.<br>Display range: -50.0 to 150.0°C | - | - |
| PIG power supply voltage | Indicates the power supply voltage to drive the motor.<br>Display range: 0.0000 to 20.1531V | 9 to 16V: Always | - |
| IG power supply voltage | Indicates the ECM power supply state.<br>Display range: 0.0000 to 20.1531V | 9 to 16V: IG ON | - |
| Steering torque | Indicates the steering torque.<br>Display range: -7.00 to 7.00Nm | Changes in proportion to the steering force: During engine start, steering operation | Left turn (+)<br>Right turn (-) |
| Motor rotation angle | Indicates the motor rotation angle.<br>Display range: 0.000 to 360.000deg | Varies between 0 and 360 deg: During engine start, steering operation | - |
| Motor current (Command Value 2) | Indicates the requirement for the current flowing to the motor.<br>Display range: -327.68 to 327.67A | Changes in proportion to the steering force: During engine start, steering operation | - |
| Boost voltage after the coil. | Indicates the boost voltage after the coil.<br>Display range: 0.000 to 98.000V | Approx. 27V: During engine start, steering non-operation | - |
| | | Varies within 16 - 35 V: During engine start, steering operation | - |
| Motor power supply voltage | Indicates the motor power supply voltage.<br>Display range: 0.000 to 98.000V | Approx. 27 V: During engine start, steering non-operation | - |
| | | Varies within 4 - 35 V: During engine start, steering operation | - |

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| Motor terminal voltage (U phase) | Indicates the motor U terminal voltage.<br>Display range: 0.000 to 98.000V | Varies within 4 - 35 V: During engine start, steering operation | - |
| Motor terminal voltage (V phase) | Indicates the motor V terminal voltage.<br>Display range: 0.000 to 98.000V | Varies within 4 - 35 V: During engine start, steering operation | - |
| Motor terminal voltage (W phase) | Indicates the motor W terminal voltage.<br>Display range: 0.000 to 98.000V | Varies within 4 - 35 V: During engine start, steering operation | - |
| Torque sensor 1 output | Indicates the torque sensor 1 output.<br>Display range: 0.0000 to 5.0000V | 2.3 to 2.7V: During engine start, no steering load (neutral position) | - |
| | | 2.3 to 3.8V: During engine start, steering to the right | - |
| | | 1.2 to 2.7V: During engine start, steering to the left | - |
| Torque sensor 2 output | Indicates the torque sensor 2 output.<br>Display range: 0.0000 to 5.0000V | 2.3 to 2.7V: During engine start, no steering load (neutral position) | - |
| | | 1.2 to 2.7V: During engine start, steering to the right | - |
| | | 2.3 to 3.8V: During engine start, steering to the left | - |
| Torque sensor 1 (zero point value) | Indicates the torque sensor 1 output value at the zero point.<br>Display range: 0.0000 to 5.0000V | - | - |
| Torque sensor 2 (zero point value) | Indicates the torque sensor 2 output value at the zero point.<br>Display range: 0.0000 to 5.0000V | - | - |

## Work support

1. Steering zero point calibration

   CAUTION:

   - Always perform a steering zero point calibration after replacing the steering column ASSY or power steering computer ASSY, or when there is a difference between the right and left steering force.
   - When C1516 (torque sensor zero point calibration not finished) is recorded, please delete the diagnosis code as torque sensor zero point calibration is unable to be performed in this case. (Refer to PA - 10)
   - When C1526 (Resolver calibration not finished) is recorded, please delete the diagnosis code as rotation angle sensor output calibration is unable to be performed in this case. (Refer to PA - 10)

   NOTE:

   For steering zero point calibration, delete the sensor calibration value and perform torque sensor zero point calibration and rotation angle sensor output calibration.

   (1) Items to be checked before calibration.

   (a) Use the SSM4 to check the [Ignition Power Supply Voltage] with the [Data monitor]. (Refer to PA - 15)

   Voltage: 10 V or more

   CAUTION:

   As calibration cannot be performed if the IG power supply voltage is less than 9 V, please recharge or replace the battery before commencing calibration if this value is not within the specified range.

   (2) Steering zero point calibration

   (a) Set the steering and front tires to the straight-ahead position.

   (b) Connect the SSM4 to the DLC3.

   (c) Turn the ignition switch to ON.

   (d) Select [Work Support] →[Steering sensor revision] on the SSM4 display screen.

   (e) Follow the SSM4 display screen to carry out the steering 0 point adjustment.

   CAUTION:

   - Do not touch the steering during the torque sensor zero point calibration.
   - Do not do any fast steering operation during the rotation angle sensor output calibration.

   (f) Check the diagnosis codes. (Refer to PA - 10)

   CAUTION:

   - When performing steering zero point calibration, please confirm that the diagnosis codes are normal after the procedure is complete.
   - If C1515, C1516, C1525, C1526, or C1534 are output, follow the procedure to perform troubleshooting for each diagnosis code. (Refer to PA - 6)

2. Operations related to assist map

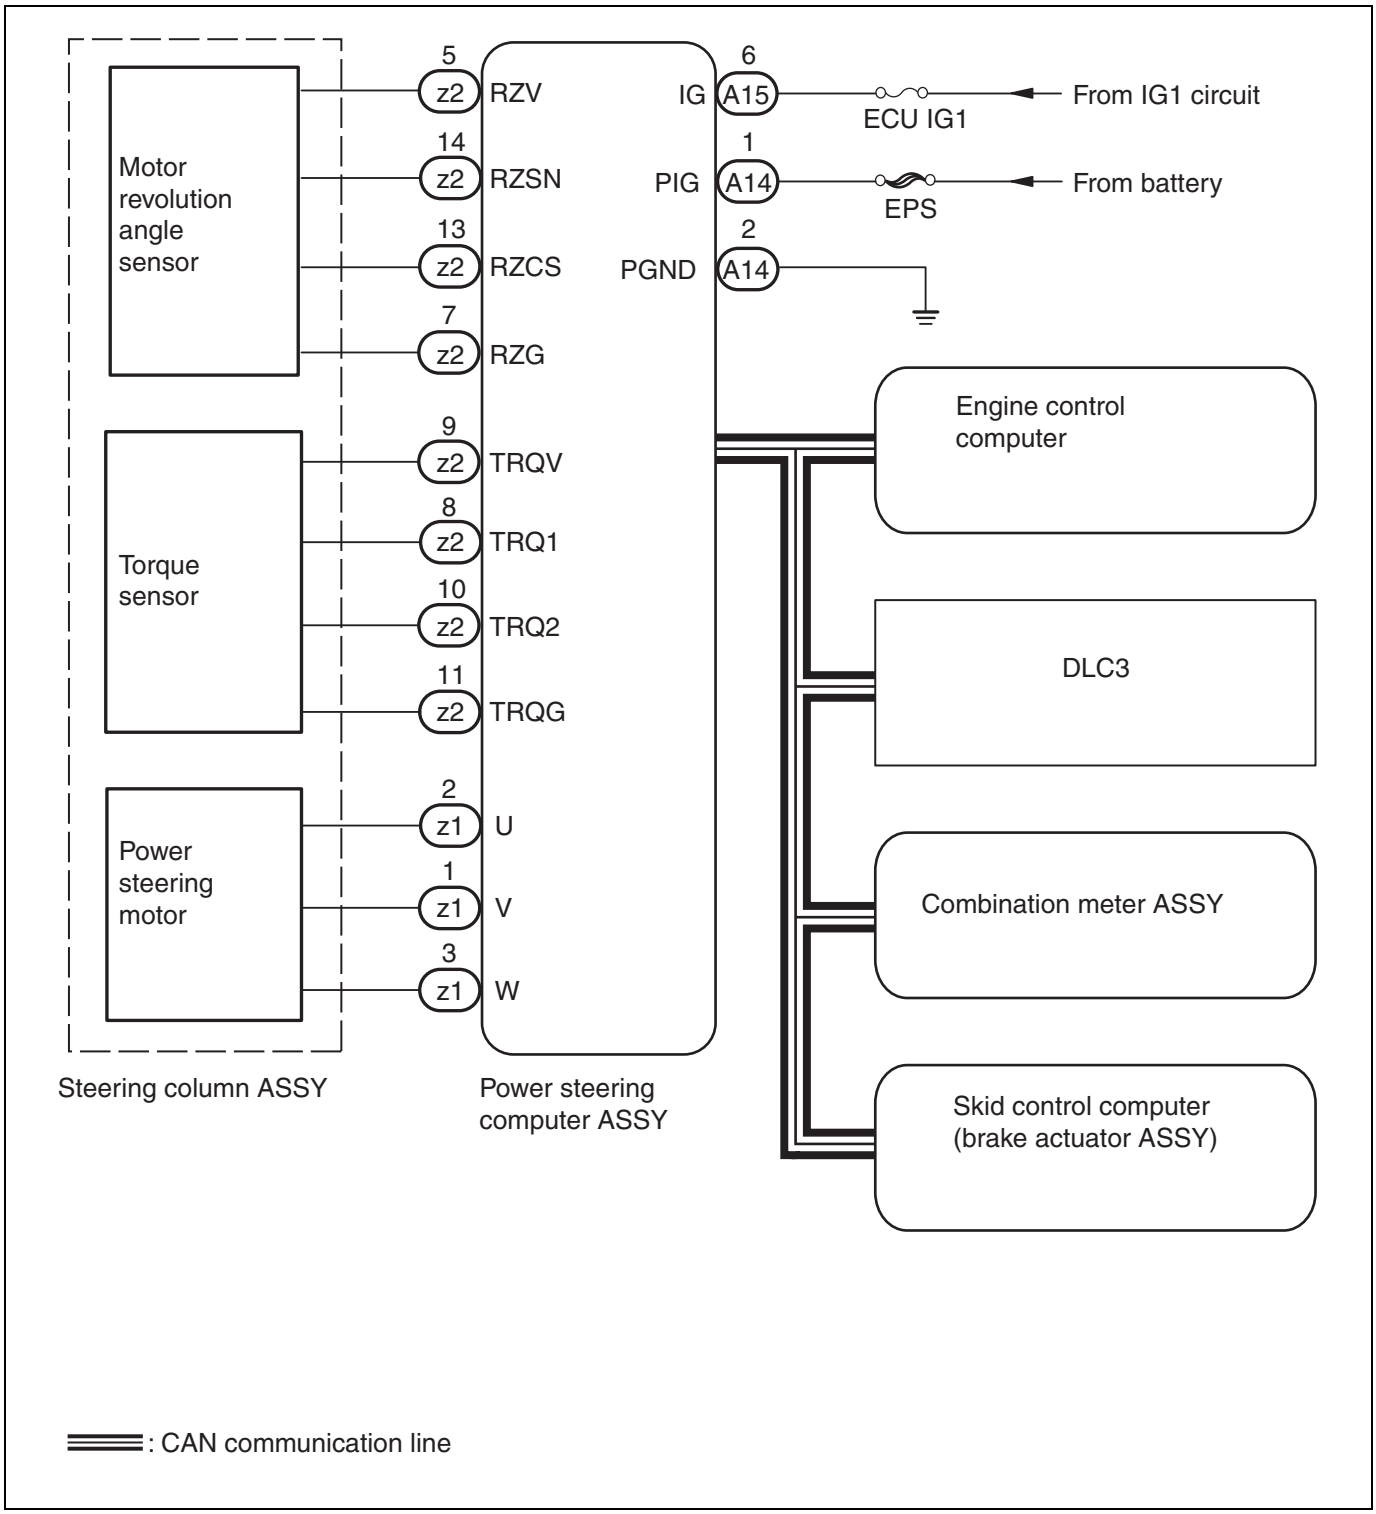
   (1) Confirmation of assist map

   (a) Connect the SSM4 to the DLC3.

(b)Turn the ignition switch to ON.
(c)Select [Work Support] →[related Assist Map Selection] →[Assist Map Confirmation] on the SSM4 display screen.

(2) Removal of assist map
(a)Connect the SSM4 to the DLC3.
(b)Turn the ignition switch to ON.
(c)Select [Work Support] →[related Assist Map Selection] →[Assist Map Clear] on the SSM4 display screen.

## Circuit figure

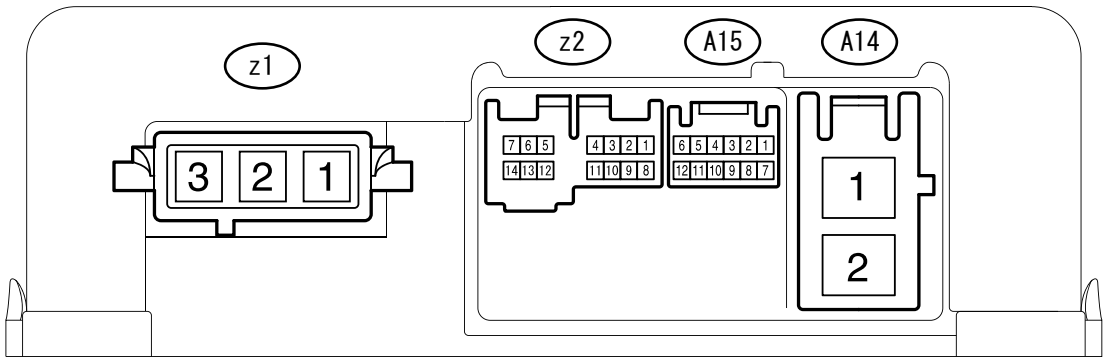


PA

## ECM terminal arrangement

1. Inspection of the power steering computer ASSY
   (1) Check the voltage or resistance between each terminal, as well as between the chassis ground and each terminal.
   CAUTION:
   This check is performed from the back side of the connector, with the connector hooked up to the computer.

*a



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Power steering computer ASSY) | - | - |

Criteria

| Terminal No. (Symbol) | Terminal description | Condition | Special conditions |
|---|---|---|---|
| z1-1 (V) [*] | V phase motor output | - | - |
| z1-2 (U) [*] | U phase motor output | - | - |
| z1-3 (W) [*] | W phase motor output | - | - |
| A14-1 (PIG) - A14-2 (PGND) | Motor power supply | Always | 9 to 16 V |
| A14-2 (PGND) - Chassis ground | Power supply ground | Always | 1 Ωor less |
| A15-6 (IG) - A14-2 (PGND) | IG power supply | IG SW ON | 9 to 16 V |
| z2-5 (RZV) - A14-2 (PGND) | Rotation angle sensor excitation output signal | During engine start, steering operation | 0.68 to 4.42 V |
| z2-7 (RZG) - A14-2 (PGND) | Rotation angle sensor excitation circuit GND | Always | 1 Ωor less |
| z2-13 (RZCS) - A14-2 (PGND) | Rotation angle sensor COS phase input signal | During engine start, steering operation | 0.68 to 4.42 V |
| z2-14 (RZSN) - A14-2 (PGND) | Rotation angle sensor SIN phase input signal | During engine start, steering operation | 0.68 to 4.42 V |
| z2-8(TRQ1) - z2-11(TRQG) | Torque sensor signal 1 | During engine start, no steering load (neutral position) | 2.3 to 2.7 V |
| | | During engine start, steering to the right (When the vehicle is stopped) | 2.3 to 3.8 V |
| | | During engine start, steering to the left (When the vehicle is stopped) | 1.2 to 2.7 V |
| z2-9(TRQV) - z2-11(TRQG) | Torque sensor power supply | IG SW ON | 4.5 to 5.5 V |
| z2-10(TRQ2) - z2-11(TRQG) | Torque sensor signal 2 | During engine start, no steering load (neutral position) | 2.3 to 2.7 V |
| | | During engine start, steering to the right (When the vehicle is stopped) | 1.2 to 2.7 V |
| | | During engine start, steering to the left (When the vehicle is stopped) | 2.3 to 3.8 V |
| z2-11(TRQG) - Chassis ground | Torque sensor ground | Always | 1 Ωor less |

*: As connector z1 is equipped with a lock lever, it is not possible to check each terminal while the connector is hooked up to the power steering computer ASSY.

## Data monitor

1. Data monitor list
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition to IG ON and select [Data monitor] on the SSM4 display screen to check the data monitor.

SSM4 screen: [Power Steering] →[Select Function] →[Data monitor]

## Failsafe list

1. Failsafe list
   (1) When the power steering computer ASSY detects a malfunction, to protect the system it suspends power assist or continues to perform control under special conditions.

| Malfunction type | Fail safe |
|---|---|
| • Torque sensor malfunction<br>• Motor rotation angle sensor malfunction<br>• Power steering motor malfunction<br>• Power steering computer ASSY malfunction (other than the temperature sensor system) | Power assist is suspended. |
| Power steering computer ASSY malfunction (temperature sensor system) | • System overheat protection control is switched to a specification that doesn't use a board temperature sensor, and control is continued.<br>• Control is performed under a limited power assist level. |
| EEPROM error | Control is performed under the default map. |
| • CAN Communication Error<br>• Speed sensor system malfunction<br>• Skid control computer (brake actuator ASSY) communication malfunction | It is fixed to the same characteristics as when travelling at 100 km/h, and power steering control is continued. |
| When ECM internal temperature is high (not a malfunction) | The power assist level is limited, or assist is temporarily suspended. |
| Power supply voltage drop (not a malfunction) | The power assist level is limited, or assist is temporarily suspended. |

NOTE:

- If there is repeated steering wheel operation when the vehicle is stopped or driving slowly, or the steering wheel is kept at its turning angle limit for a long period of time, the power assist level may be reduced in order to prevent the motor or computer from overheating. In this case, the system will return to normal if there is no steering wheel operation for approximately 10 minutes with the engine at idle speed.
- If the battery is not sufficiently charged or there is a temporary drop in voltage, the power assist level may be reduced and the P/S warning light may be turned on. In this case, it will return to a normal state when the battery voltage recovers.
- If the ignition switch is accidentally turned OFF during driving, the power assist level is gradually reduced and then the assist is suspended. This is not a malfunction.

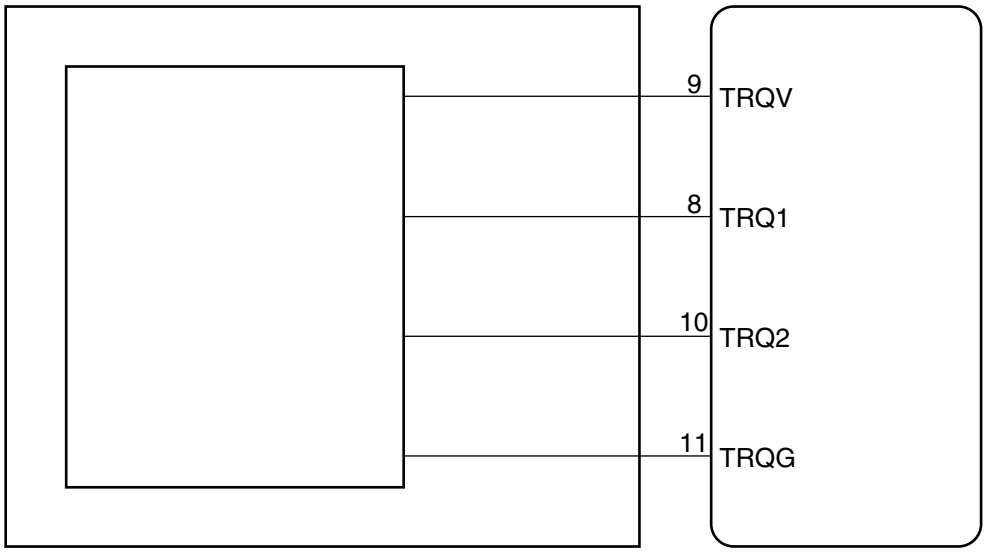
| | | |
|---|---|---|
| DTC | C1511 | Torque sensor 1 abnormal |
| DTC | C1512 | Torque sensor 2 abnormal |
| DTC | C1513 | Torque sensor 3 abnormal |
| DTC | C1514 | Torque Sensor Power Supply Failure |
| DTC | C1517 | Torque sensor hold abnormality |

Description of functions

The power steering computer ASSY uses the input signal received from the torque sensor to detect the steering force. As part of the fail safe function, power assist is suspended when a torque sensor system malfunction is detected.

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1511 | Torque sensor (TRQ1) signal malfunction, or interruption | • Torque sensor (integrated into the steering column ASSY)<br>• Power steering computer ASSY |
| C1512 | Torque sensor (TRQ2) signal malfunction, or interruption | |
| C1513 | When the deviation of torque sensors TRQ1 and TRQ2 falls outside the specified value | |
| C1514 | Torque sensor power supply voltage malfunction | |
| C1517 | Provisional control continues for a long period of time due to a torque sensor system malfunction | |

Circuit figure



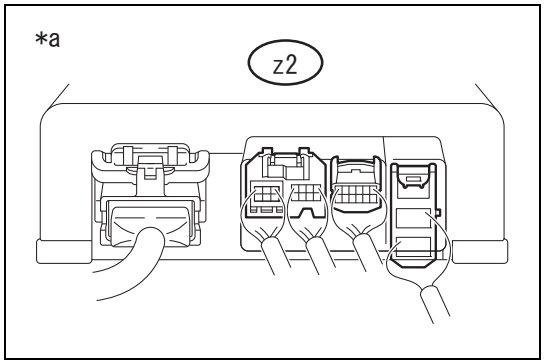
PA

Inspection steps

CAUTION:

Always perform a steering zero point calibration after replacing the steering column ASSY or power steering computer ASSY. (Refer to PA - 12)

| 1 | Connector connection check |
|---|---|



(1) Check the connection state of torque sensor connector z2.

Criteria: The torque sensor connector is properly connected to the power steering computer ASSY.

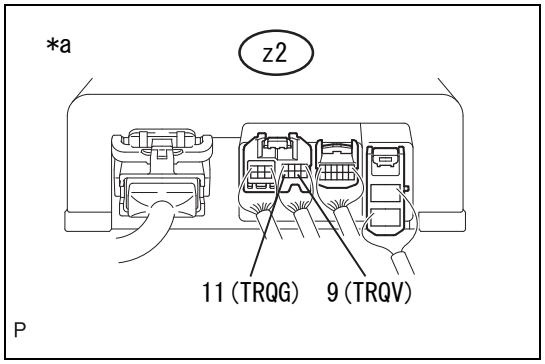
Captions in illustration

| | |
|---|---|
| *a | Connector connected (Power steering computer ASSY) |

NG → Connect it securely.

OK

| 2 | Inspection of the power steering computer ASSY (torque sensor power supply voltage) |
|---|---|



(1) Measure the voltage between each terminal.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| z2-9(TRQV) - z2-11(TRQG) | IG ON | 4.5 to 5.5V |

Captions in illustration

| | |
|---|---|
| *a | Connector connected (Power steering computer ASSY) |

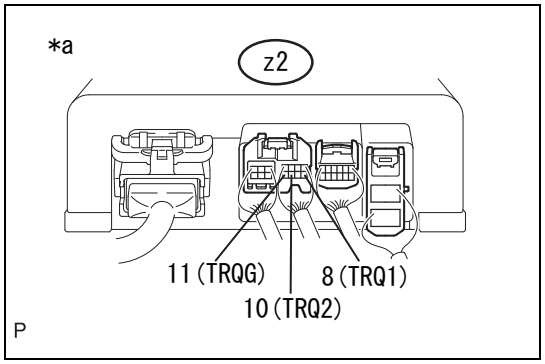
NOTE:

Please write down the measured value if the result is OK.

NG → Replacement of the power steering computer ASSY (Refer to PA - 40)

OK

| 3 | Inspection of the steering column ASSY (torque sensor) |
|---|---|



(1) Measure the voltage between each terminal for each measurement condition.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| z2-8(TRQ1) - z2-11(TRQG) | During engine start, steering neutral position (when under no load) | 2.3 to 2.7V |
| | During engine start, when steering to the right | 2.3 to 3.8V |
| | During engine start, when steering to the left | 1.2 to 2.7V |
| z2-10(TRQ2) - z2-11(TRQG) | During engine start, steering neutral position (when under no load) | 2.3 to 2.7V |
| | During engine start, when steering to the right | 1.2 to 2.7V |
| | During engine start, when steering to the left | 2.3 to 3.8V |

Captions in illustration

| | |
|---|---|
| *a | Connector connected<br>(Power steering computer ASSY) |

(2) Calculate the difference in between the TRQV measured value written down in the previous step, and the sum of the torque sensor 1 (TRQ1) and torque sensor 2 (TRQ2) output values.
Standard value: 0.3 V or less (absolute value)

NG → Replacement of the steering column ASSY (Refer to SR - 54)

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

| DTC | C1515 | Torque Sensor Zero Point Adjustment Undone |
|---|---|---|

| DTC | C1525 | Resolver not corrected |
|---|---|---|

Description of functions

After replacement of the steering column ASSY or power steering computer ASSY, a diagnosis code is output (when the power steering computer ASSY determines that torque sensor zero point calibration or rotation angle sensor output calibration have not been performed).

Calibration cannot be performed when the IG voltage is less than 9V.

| DTC No. | Detecting conditions | Action item |
|---|---|---|
| C1515 | Torque sensor zero point calibration not performed | Perform torque sensor zero point calibration. Operation is normal if a diagnosis code is not output. |
| C1525 | Rotation angle sensor output calibration not performed | Perform rotation angle sensor output calibration. Operation is normal if a diagnosis code is not output. |

Inspection steps
CAUTION:
Always perform a steering zero point calibration after replacing the steering column ASSY or power steering computer ASSY. (Refer to PA - 12)

| 1 | Diagnosis code check |
|---|---|

(1) Use the SSM4 to perform steering 0 point adjustment. (Refer to PA - 12) *1
(2) Use the SSM4 to recheck the diagnosis codes. (Refer to PA - 10) *2
NOTE:
If an error code is output, repeat the procedures (*1 and *2) three times.

Result

| Result | Go to |
|---|---|
| An error code is output, even if steering zero point calibration is performed three times. | A |
| No diagnosis code is output. | B |

B → No malfunction (Returns to normal operation after calibration is complete)

A

| 2 | Replacement of the power steering computer ASSY |

B → Completed

A

Replacement of the steering column ASSY (Refer to SR - 54)

| DTC | C1516 | Torque sensor zero point adjustment incomplete |
|---|---|---|

| DTC | C1526 | Resolver correction not completed |
|---|---|---|

Description of functions

A diagnosis code is output if the power steering computer ASSY determines that torque sensor zero point calibration or rotation angle sensor output calibration have not been completed.

| DTC No. | Detecting conditions | Action item |
|---|---|---|
| C1516 | The torque sensor zero point calibration was not correctly completed due to a problem such as touching the steering mechanism. | Delete the diagnosis code, delete the sensor calibration value, and then perform torque sensor zero point calibration. Operation is normal if a diagnosis code is not output. |
| C1526 | The rotation angle sensor output calibration was not correctly completed. | Delete the diagnosis code, delete the sensor calibration value, and then perform rotation angle sensor output calibration. Operation is normal if a diagnosis code is not output. |

Inspection steps

CAUTION:

Always perform a steering zero point calibration after replacing the steering column ASSY or power steering computer ASSY. (Refer to PA - 12)

| 1 | Diagnosis code check |
|---|---|

(1) Using SSM4, clear the diagnostic code. (Refer to PA - 10) *1
(2) Use the SSM4 to perform steering 0 point adjustment. (Refer to PA - 12) *2
(3) Use the SSM4 to recheck the diagnosis codes. (Refer to PA - 10) *3
NOTE:
If an error code is output, repeat the procedures (*1 - *3) three times.

Result

| Result | Go to |
|---|---|
| An error code is output, even if steering zero point calibration is performed three times. | A |

| DTC | C1532 | ECM Malfunction 2 |
| DTC | C1533 | ECM Malfunction 3 |
| DTC | C1534 | ECM Malfunction 4 |
| DTC | C1554 | Power Supply Relay Failure |

Description of functions
As part of the fail safe function, power assist is suspended while an ECM system error diagnosis code is being output. However, if only C1533, or C1534 are output, rather than suspending power assist, control is continued with a limited assist level.

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1521 | Motor overcurrent malfunction | Power steering computer ASSY |
| C1531 | ECM internal (microcomputer) malfunction | |
| C1532 | ECM internal (circuit) malfunction | |
| C1533 | ECM internal (temperature sensor) malfunction | |
| C1534 | ECM internal (EEPROM) malfunction | |
| C1554 | Power supply relay (integrated in ECM) malfunction | |

Inspection steps
CAUTION:
Always perform a steering zero point calibration after replacing the power steering computer ASSY. (Refer to PA - 12)

| 1 | Diagnosis codes recheck |
|---|---|

(1) Use the SSM4 to recheck the diagnosis codes. (Refer to PA - 10)

Result

| Result | Go to |
|---|---|

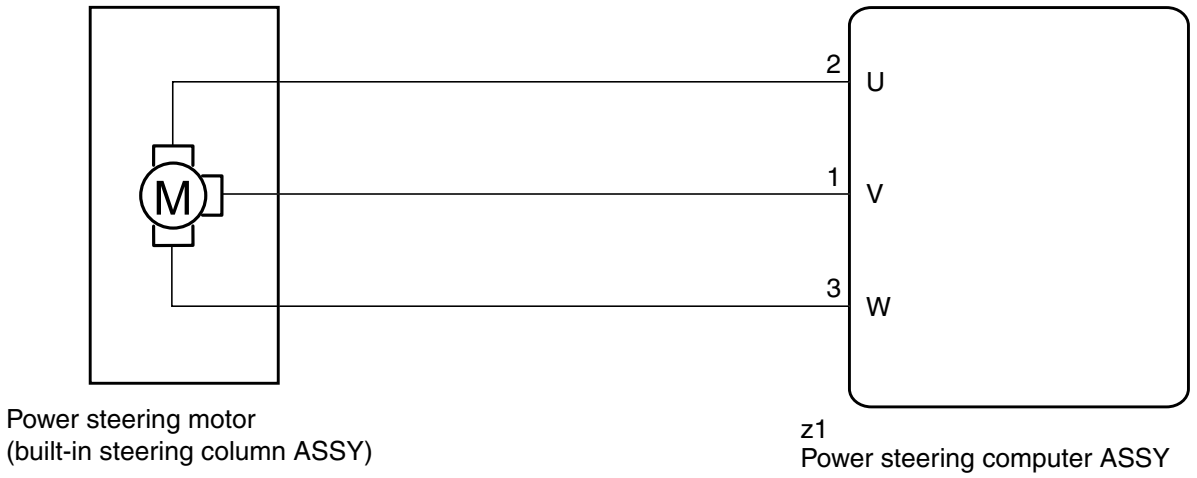
| DTC | C1522 | Motor failure 2 |
| DTC | C1523 | Motor failure 3 |
| DTC | C1524 | Motor failure 4 |
| DTC | C1555 | Motor relay abnormal |

Description of functions

As part of the fail safe function, power assist is suspended or limited when a motor error diagnosis code is being output.

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1522 | Power supply current sensor malfunction | • Power steering motor (integrated into the steering column ASSY)<br>• Power steering computer ASSY |
| C1523 | Excessive motor current deviation (difference between the command and feedback values) | |
| C1524 | Voltage malfunction or open circuit between motor terminals | |
| C1555 | Motor relay (integrated in ECM) malfunction | |

Circuit figure

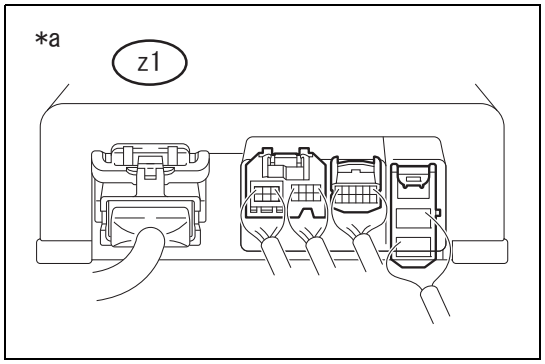


Inspection steps

CAUTION:

Always perform a steering zero point calibration after replacing the steering column ASSY or power steering computer ASSY. (Refer to PA - 12)

| 1 | Connector connection check |
|---|---|



(1) Check the connection state of power steering motor connector z1.

Criteria: The power steering motor connector is properly connected to the power steering computer ASSY.

Captions in illustration

| | |
|---|---|
| *a | Connector connected<br>(Power steering computer ASSY) |

NG → Connect it securely.

OK

| 2 | Reading the SSM4 data (motor terminal voltage (U, V, W phases)) |
|---|---|

(1) Use the SSM4 to check the [Motor Terminal Volt(U, V, W)]. (Refer to PA - 15)

SSM4 screen: [Power Steering] →[Select Function] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Motor Terminal Volt(U)] | Indicates the motor U terminal voltage.<br>Display range: 0.000 to 98.000V | Varies within 4 - 35 V: During engine start, steering operation | - |

PA

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Motor Terminal Volt(V)] | Indicates the motor V terminal voltage. Display range: 0.000 to 98.000V | Varies within 4 - 35 V: During engine start, steering operation | - |
| [Motor Terminal Volt(W)] | Indicates the motor W terminal voltage. Display range: 0.000 to 98.000V | Varies within 4 - 35 V: During engine start, steering operation | - |

Criteria: During engine start and steering operation, this varies within 4 - 35 V.

NG → Replacement of the steering column ASSY (Refer to SR - 54)

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

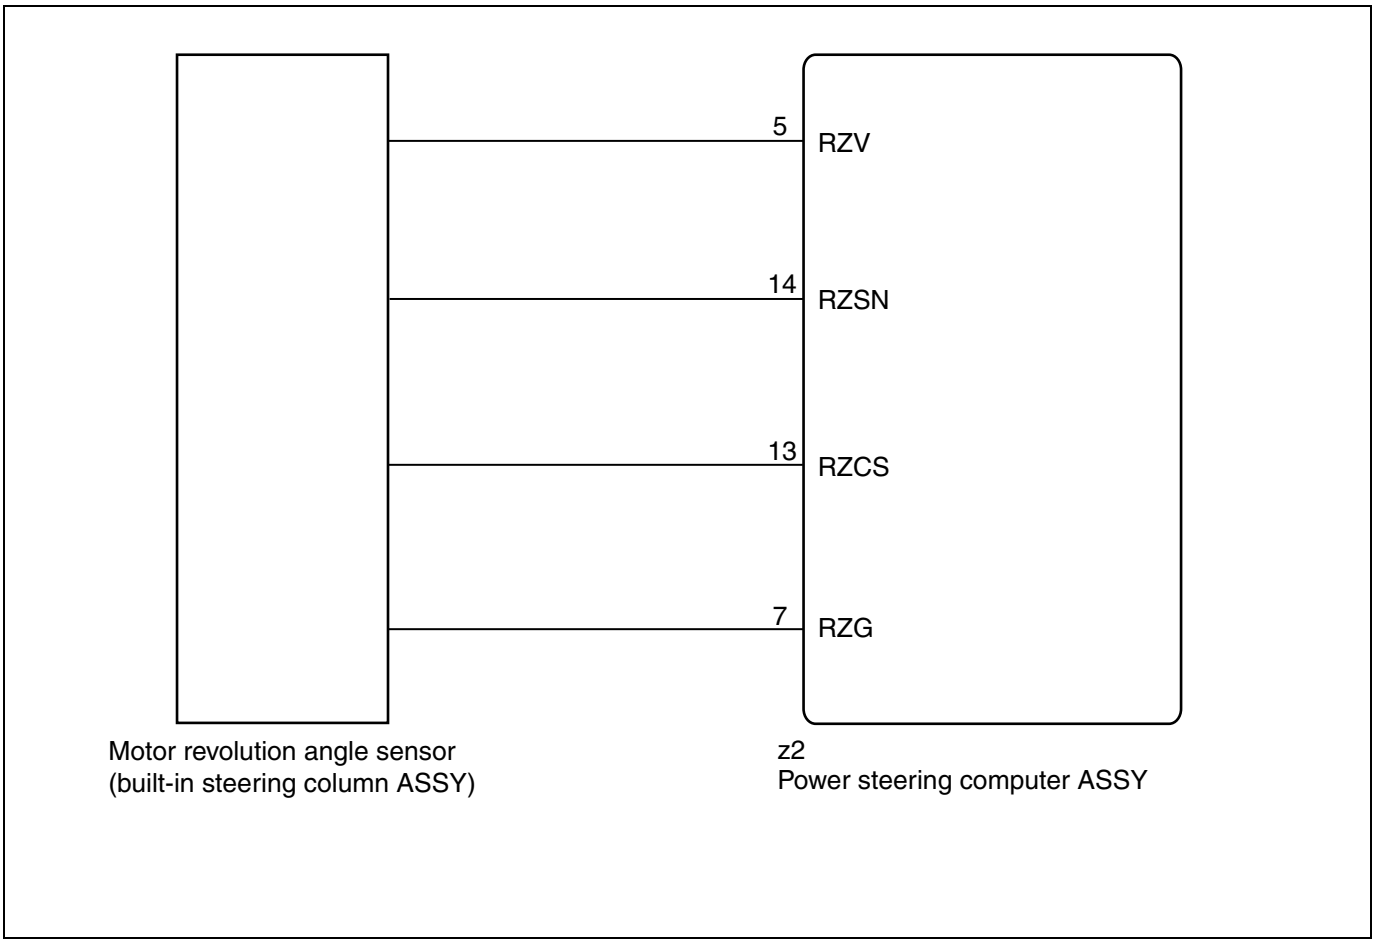
| DTC | C1528 | Motor rotation angle sensor |
|---|---|---|

Description of functions

As part of the fail safe function, power assist is suspended when a motor rotation angle sensor malfunction diagnosis code is being output.

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1528 | Motor rotation angle sensor malfunction | • Motor rotation angle sensor (integrated into the steering column ASSY)<br>• Power steering computer ASSY |

Circuit figure

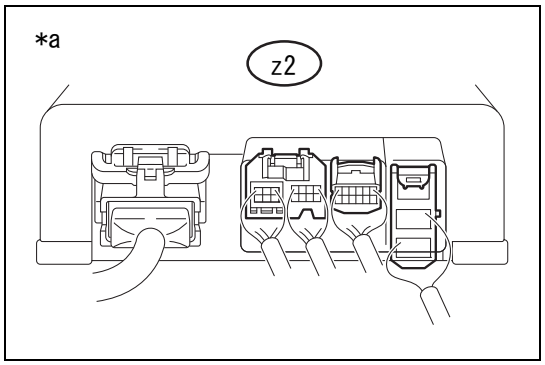


Inspection steps

CAUTION:

Always perform a steering zero point calibration after replacing the steering column ASSY or power steering computer ASSY. (Refer to PA - 12)

| 1 | Connector connection check |
|---|---|



(1) Check the connection state of motor rotation angle sensor connector z2.

Criteria: The motor rotation angle sensor connector is properly connected to the power steering computer ASSY.

Captions in illustration

| | |
|---|---|
| *a | Connector connected<br>(Power steering computer ASSY) |

NG → Connect it securely.

OK

| 2 | Reading SSM4 data (motor rotation angle) |
|---|---|

(1) Use the SSM4 to check the [Motor Rotation Angle]. (Refer to PA - 15)

PA

SSM4 screen: [Power Steering] →[Select Function] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| Motor rotation angle | Indicates the motor rotation angle. Display range: 0.000 to 360.000deg | Varies between 0 and 360 deg: During engine start, steering operation | Check it while lightly shaking the wire harnesses up/down and left/right. |

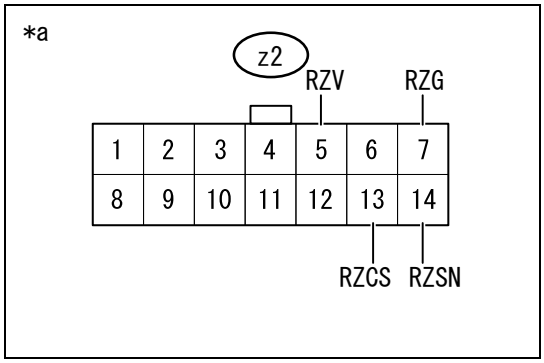
Criteria: During engine start and steering operation, this varies between 0 - 360 deg.

NG → Go to Step 3.

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

| 3 | Inspection of the steering column ASSY (motor rotation angle sensor) |
|---|---|



(1) Disconnect the motor rotation angle sensor connector z2 from the power steering computer ASSY.
(2) Measure the resistance of the steering column ASSY side connector.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| z2-5(RZV) - z2-7(RZG) | Always (23°C) | 27.6 to 41.4Ω |
| z2-14(RZSN) - z2-7(RZG) | Always (23°C) | 75.2 to 112.8Ω |
| z2-13(RZCS) - z2-7(RZG) | Always (23°C) | 73.6 to 110.4Ω |

Replacement of the power steering computer ASSY (Refer to PA - 40)

| DTC | C1541 | Vehicle Speed Signal Failure 1 |
|---|---|---|

Description of functions

The power steering computer ASSY uses CAN communication to input the vehicle speed signal from the skid control computer (brake actuator ASSY).

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1541 | Vehicle speed signal abnormal | • Speed sensor system<br>• Vehicle stability control system<br>• CAN communication system<br>• Power steering computer ASSY |

Inspection steps
CAUTION:
Always perform a steering zero point calibration after replacing the power steering computer ASSY. (Refer to PA - 12)

| | |
|---|---|
| 1 | Diagnosis codes check (CAN communication system) |

(1) Use the SSM4 to check whether diagnosis code U0416 (VDC data error) is not being output. (Refer to PA - 10)
Criteria: U0416 is not output.

NG → Progress to the appropriate diagnosis code (Refer to PA - 35)

OK

| | |
|---|---|
| 2 | Diagnosis codes check (Vehicle stability control system) |

(1) Using the SSM4, check the Vehicle stability control system diagnosis codes. (Refer to PA - 10)
Criteria: No diagnosis code is output.

NG → Go to "Vehicle stability control system (list of diagnostic codes)". (Refer to BC - 6)

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

| DTC | C1551 | Power Supply Voltage Failure |
|---|---|---|

Description of functions
As part of the fail safe function, power assist is suspended or limited when there is a power supply system malfunction.

| DTC No. | Detected item | Inspection parts |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

## DTC C1581 Assist map not written

Description of functions

Assist map writing of the power steering is undone.

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1581 | • In the initial condition when it is delivered<br>• The assist map of the power steering has been cleared. | • CAN communication system<br>• Power steering computer ASSY |

Inspection steps

CAUTION:

- Always perform a steering zero point calibration after replacing the power steering computer ASSY.
- Delete the assist map before performing troubleshooting.

| 1 | Diagnosis codes |
|---|---|

(1) Start the engine.
(2) Use the SSM4 to recheck the diagnosis codes. (Refer to PA - 10)

Result

| Result | Go to |
|---|---|
| Diagnosis codes are output. | A |
| C1581 is not output. | B |

B → Functioning properly (The assist map is written.)

PA

A

| 2 | Diagnosis code check |
|---|---|

(1) Check if C1583 or C1534 is not output.
Criteria: Neither C1583 nor C1534 is output.

NG → Progress to the "output code flow chart". (Refer to PA - 6)

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

NOTE:
After repeating this diagnosis three times, replace the power steering computer ASSY.

## DTC C1582 Assist Map Number Mismatch

Description of functions
The assist map of the power steering does not match the vehicle information.

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1582 | The assist map of the power steering does not match the combination meter. | • Combination meter ASSY<br>• Power steering computer ASSY |

Inspection steps
CAUTION:
- Always perform a steering zero point calibration after replacing the power steering computer ASSY.
- Before performing troubleshooting, check that a genuine combination meter is installed.

| 1 | Assist Map Confirmation |
|---|---|

(1) Use the SSM4 to perform [Assist Map Confirmation]. (Refer to PA - 12)

Result

| Result | Go to |
|---|---|
| The same assist map as the vehicle model is not written. | A |
| The same assist map as the vehicle model is written. | B |

B → Functioning properly (Clear the memory.)

A

| 2 | Reconfirmation of assist map |
|---|---|

(1) Use the SSM4 to confirm that the written-in assist map is consistent with the vehicle information (genuine combination meter).

NG → Perform [Assist Map Clear] (Refer to PA - 12).

OK

| 3 | Diagnosis code check |
|---|---|

(1) Check if C1583 or C1534 is not output.
Criteria: Neither C1583 nor C1534 is output.

NG → Progress to the "output code flow chart". (Refer to PA - 6)

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

## DTC C1583 Assist MAP Selection Error

Description of functions
Assist map automatic selection may have been failed.

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| C1583 | Information cannot be received from the combination meter. | • Combination meter ASSY<br>• CAN communication system |

Inspection steps
CAUTION:
Always perform a steering zero point calibration after replacing the power steering computer ASSY.

| 1 | Diagnosis code check |
|---|---|

(1) Use the SSM4 to confirm that C1581 is not output.
Criteria: C1581 is not output.

NG → Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30) and "Meter & gauge system (How to troubleshoot)" (Refer to ME - 19)

OK

| 2 | Assist Map Confirmation |
|---|---|

(1) Use the SSM4 to confirm that an assist map inconsistent with the vehicle information is not written. (Refer to PA - 12)

NG → Functioning properly (Clear the memory.)

OK

Perform [Assist Map Clear] (Refer to PA - 12).

| DTC | U0100 | Engine data not received |
|---|---|---|

| DTC | U0122 | Lost Communication With Vehicle Dynamics Control Module |
|---|---|---|

| DTC | U0416 | Invalid Data Received From Vehicle Dynamics Control Module |
|---|---|---|

Description of functions

The power steering computer ASSY uses CAN communication to input the signals from the engine control computer and skid control computer (brake actuator ASSY).

| DTC No. | Detected item | Inspection parts |
|---|---|---|
| U0100 | Engine control computer communication malfunction | • CAN communication system<br>• Engine control computer |
| U0122 | Skid control computer (brake actuator ASSY) communication malfunction | • CAN communication system<br>• Skid control computer (brake actuator ASSY) |
| U0416 | Reception of an error signal from the skid control computer (brake actuator ASSY) | |

Inspection steps

| 1 | Reading the diagnosis codes |
|---|---|

(1) Use the SSM4 to check the diagnosis codes. (Refer to PA - 10)

Next

Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30)

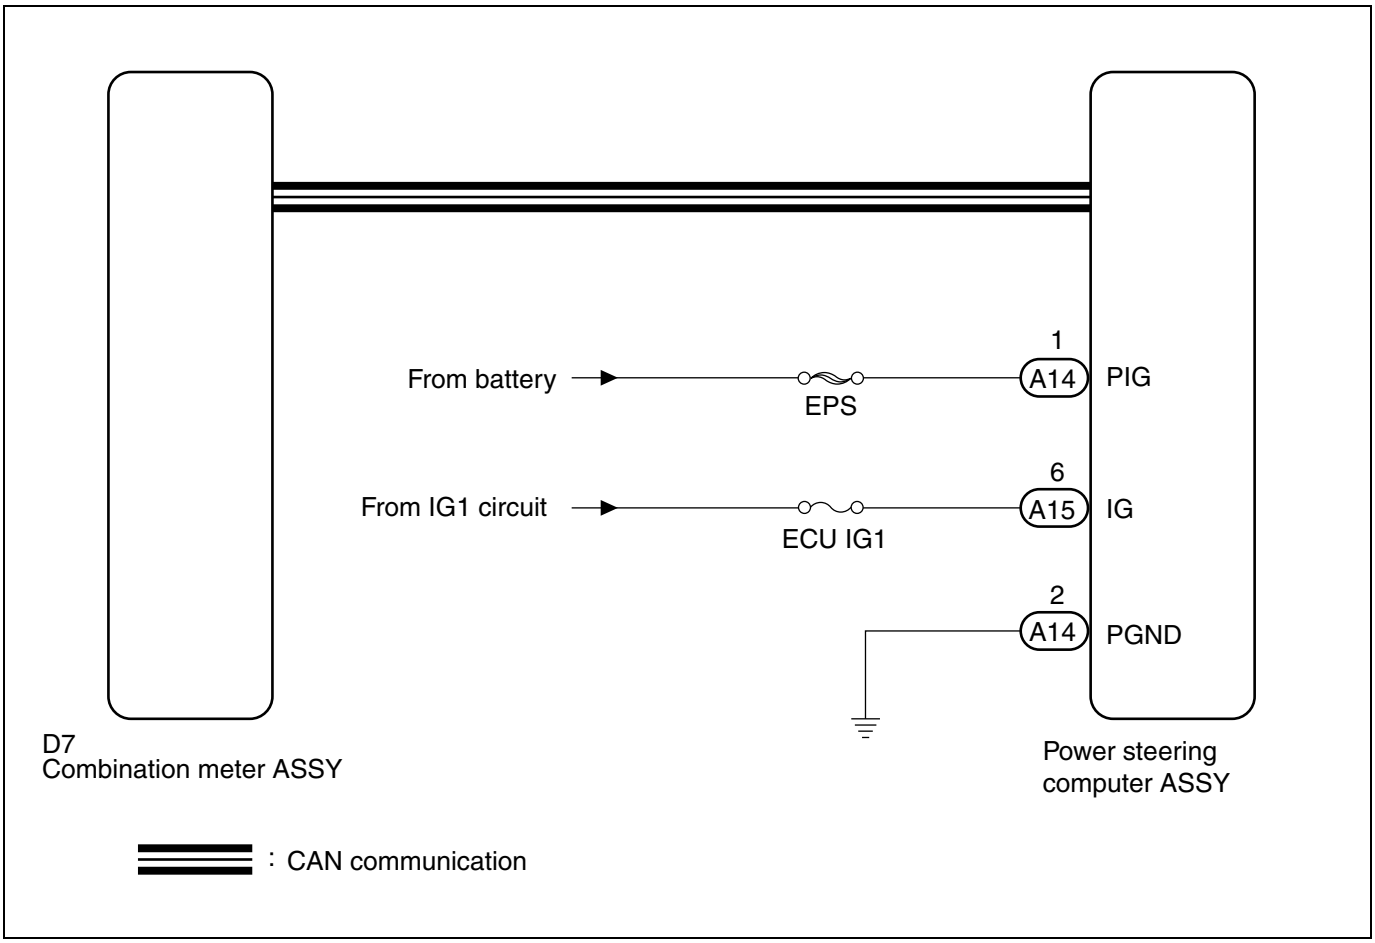
## P / S warning light remains ON

Description of functions

With normal diagnosis code output, troubleshooting is recorded if the P/S warning light remains on.

When the power supply voltage input circuit (IG and PIG) for the power steering computer ASSY is open, the P/S warning light remains on.

Circuit figure



Inspection steps

CAUTION:

Always perform a steering zero point calibration after replacing the power steering computer ASSY. (Refer to PA - 12)

NOTE:

Before performing troubleshooting, check the fuse for this circuit.

| | |
|---|---|
| 1 | Checking connection of each part |

(1) Lightly jiggle the power steering computer ASSY connector and wiring harness in the up/down/left/right directions, and check the state of the P/S warning light.

Criteria: No variation in the P/S warning light illumination state.

NOTE:

If operating properly, the P/S warning light comes on when the ignition is turned to IG ON and goes out after the engine has started.

NG → Repair or replacement of wiring harness or connector

OK

| | |
|---|---|
| 2 | Diagnosis codes check (CAN communication system) |

(1) Use the SSM4 to check the CAN communication system. (Refer to NW - 30)

Criteria: No error code.

PA

NG → Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30)

OK

| 3 | Reading SSM4 data (PIG power supply) |
|---|---|

(1) Use the SSM4 to check the [PIG Power Supply]. (Refer to PA - 15)

SSM4 screen: [Power Steering] →[Select Function] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| PIG power supply | Indicates the power supply voltage to drive the motor.<br>Display range: 0.0000 to 20.1531V | 9 to 16V: Always | - |

Voltage: 9 - 16 V (always)

NG → Go to Step 5.

OK

| 4 | Reading SSM4 data (IG power supply voltage) |
|---|---|

(1) Use the SSM4 to check the [Ignition Power Supply Voltage]. (Refer to PA - 15)

SSM4 screen: [Power Steering] →[Select Function] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Ignition Power Supply Voltage] | Indicates the ECM power supply state.<br>Display range: 0.0000 to 20.1531V | 9 to 16V: IG ON | - |

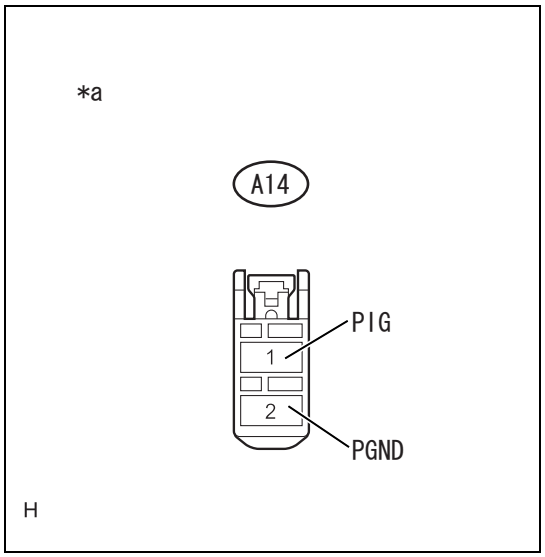
Voltage: 9 - 16 V (When IG ON)

NG → Go to Step 6.

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

| 5 | Inspection of the wiring harness and connector (PIG power supply and ground) |
|---|---|



(1) Disconnect the power steering computer ASSY connector A14.
(2) Measure the voltage and resistance of the connectors on the vehicle harness side.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A14-1(PIG) - Chassis ground | Always | 9 to 16V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A14-2 (PGND) - Chassis ground | Always | Less than 1 Ω |

Captions in illustration

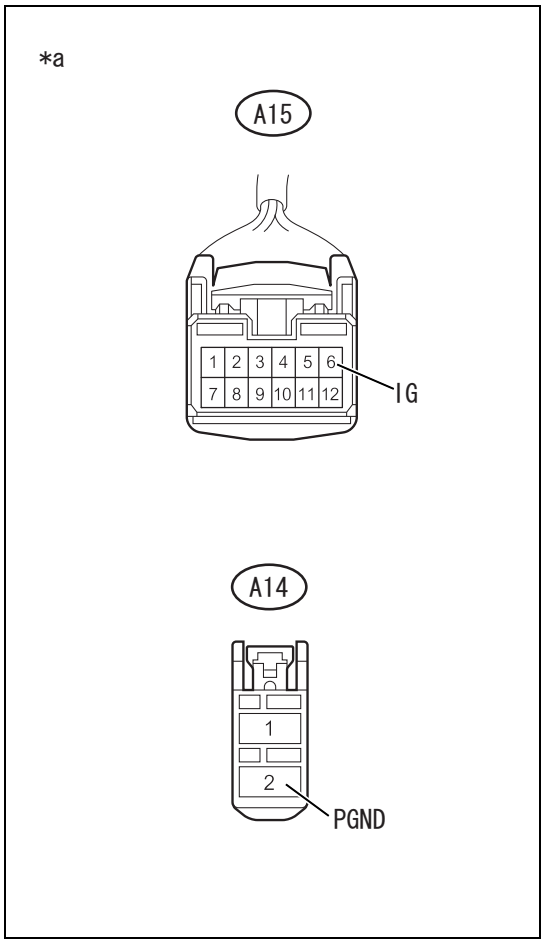
| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Power steering computer ASSY connector) |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

| 6 | Inspection of the wiring harness and connector (IG power supply and ground) |
|---|---|



(1) Disconnect the power steering computer ASSY connectors A14 and A15.
(2) Measure the voltage and resistance of the connectors on the vehicle harness side.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A15-6(IG) - Chassis ground | IG ON | 9 to 16V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A14-2 (PGND) - Chassis ground | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Power steering computer ASSY connector) |

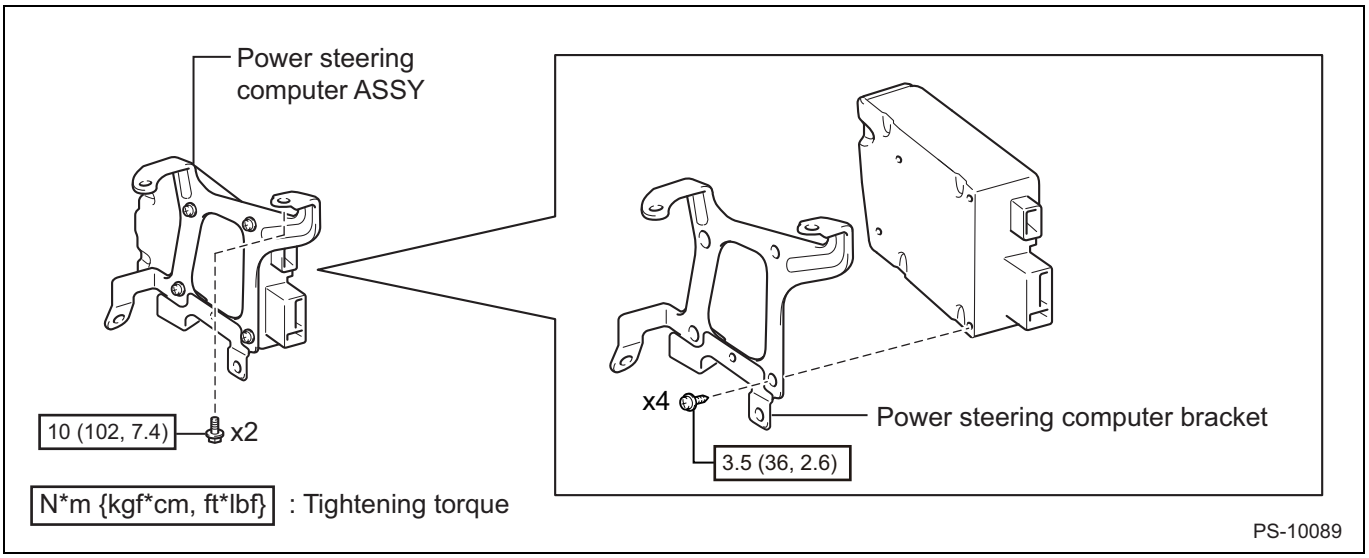
NG → Repair or replacement of wiring harness or connector

OK

Replacement of the power steering computer ASSY (Refer to PA - 40)

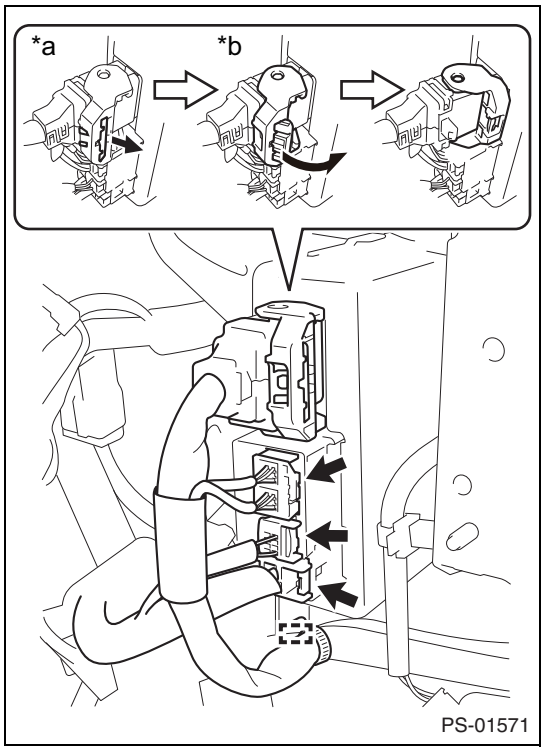
# Power steering computer

## Exploded view



## Removal

1. Correct handling and precautions for operation (Refer to PA - 3)
2. Remove the instrument panel junction block ASSY (Refer to PD - 25)



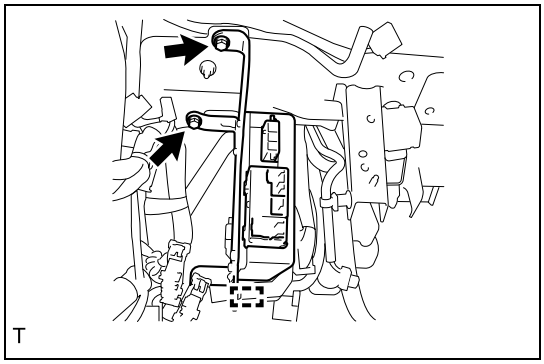
3. Remove the power steering computer ASSY.
   (1) Disconnect the connector from the power steering computer ASSY.

Captions in illustration

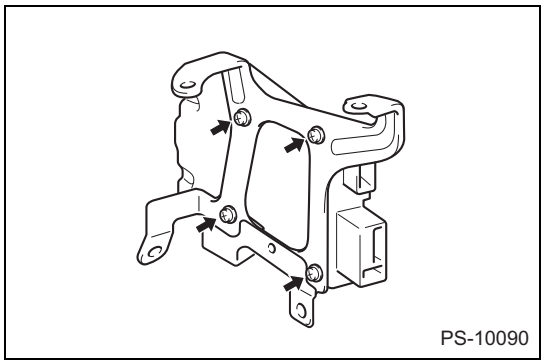
| | |
|---|---|
| *a | Pull out the lock. |
| *b | Fold down the lock lever. |

NOTE:
As shown in the figure, after pulling out the lock for the lock lever, fold down the lock lever and remove the connector.

   (2) Disconnect the wiring harness clamp from the power steering computer bracket.
   (3) Disconnect the three connectors from the power steering computer ASSY.



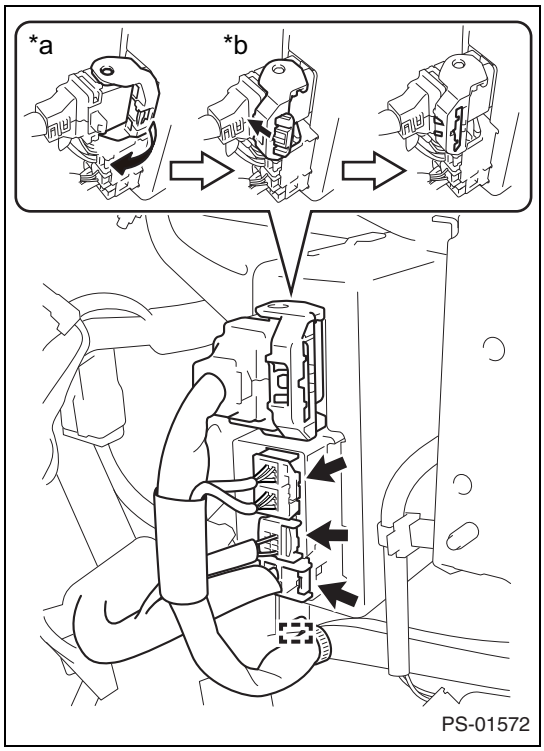
(4) Undo the two bolts, release the clamp, and take off the power steering computer ASSY.



4. Remove the power steering computer bracket.
   (1) Undo the 4 screws and take off the power steering computer bracket.

## Installation

1. Correct handling and precautions for operation (Refer to PA - 3)
2. Power steering computer bracket installation.
   (1) Install the power steering computer bracket in place with the four screws.
   Standard value:T=3.5N·m {36kgf·cm} {2.6ft·lbf}
3. Install the power steering computer ASSY.
   (1) Install the power steering computer ASSY in place with 2 bolts.
   Standard value:T=10N·m {102kgf·cm} {7.4 ft·lbf}
   (2) Connect the three connectors to the power steering computer ASSY.



(3) Ensure that the connectors are securely connected to the power steering computer ASSY.

Captions in illustration

| | |
|---|---|
| *a | Fold down the lock lever. |
| *b | Press in the lock. |

NOTE:
As shown in the figure, fold down the connector lock lever to establish a connection and push in the lock for the lock lever securely.

(4) Install the wiring harness clamp to the power steering computer bracket.

4. Installation of the instrument panel junction block ASSY (Refer to PD - 27)
5. Steering zero point calibration
   (1) Always perform a steering zero point calibration after replacing the power steering computer ASSY. (Refer to PA - 12)

# Steering lock system

## Precautions

1. Precautions when checking diagnosis codes
   (1) As the steering lock actuator ASSY (Steering lock ECM) does not store past diagnostics, when diagnosis codes are output, do not turn the ignition to IG OFF or perform any deletions until diagnosis code checking and recording is completely finished.

2. Precautions when attaching/detaching the battery ground terminal or during a battery voltage drop
   (1) After attaching/detaching the battery ground terminal or when there is a drop in battery voltage, after the battery issue has been resolved you may not be able to release the steering lock or start the engine unless you first open and close the driver's door while the ignition is in the IG OFF state.
3. Precautions when replacing the steering lock actuator ASSY (Steering lock ECM)
   (1) After replacing the steering lock actuator ASSY (Steering lock ECM), before starting the engine be sure to turn the steering mechanism to the left and right to confirm that the steering is not locked. If the steering is locked, perform the lock procedure and unlock it again. This will prevent the engine from being started while the steering lock is on.
4. Precautions when replacing the ECM
   (1) When replacing any of the following parts, please refer to the "Registration manual for immobilizer".
      (a)Smart key computer ASSY (Collation ECM)
      (b)Steering lock actuator ASSY (Steering lock ECM)
      (c) Engine control computer
      (d)Electrical key transmitter SUB-ASSY (Electronic key)
      (e)ID code box (with ID code box)

## Symptom table

NOTE:

- If normal operation is not possible in a specific place or time period, check that it is not being affected by any external electro-magnetic waves.
- If you experience problems after installing equipment such as new parts installed by the dealer, please confirm that that part is not affecting the vehicle by emitting electromagnetic waves.

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| The steering lock does not operate | Refer to the "Steering lock does not operate" symptom-specific flow chart. | SR - 27 |
| The steering lock cannot be released (cannot start the engine) | Refer to the "Steering lock cannot be released (cannot start the engine)" symptom-specific flow chart. | SR - 21 |

## Description of functions

1. Unlock operation conditions
   (1) Unlock operation will be performed when the following conditions are met.
      (a)Key collation is complete.
      (b)The vehicle is set to ACC ON or IGN ON.
      (c)A genuine collation ECM is confirmed.
2. Lock operation conditions.
   (1) Lock operation will be performed when the following conditions are met.
      (a)The vehicle is set to IG OFF and ACC OFF.
      (b)The shifter is in the P position (Transmission A/T).
      (c)A door changes from closed →open, or a door is locked (smart door lock, wireless door lock).
      (d)A genuine collation ECM is confirmed.
3. Indicator display function
   (1) When a malfunction that may cause poor steering lock ECM operation, an IG drive circuit malfunction, or vehicle speed information malfunction is detected, the combination meter ASSY orange indicator light identifies the malfunction by blinking.
4. The steering lock actuator ASSY (Steering lock ECM)
   (1) The steering lock ECM is integrated into the steering column ASSY steering lock actuator ASSY.
   (2) As the steering lock actuator ASSY (Steering lock ECM) is not connected to CAN communication, CAN communication with external parts is performed via the LIN communication-connected smart key computer ASSY (Collation ECM).

## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

| 2 | Interview and phenomenon check |
|---|---|

Next

| 3 | Basic inspection |
|---|---|

(1) Check the battery voltage.
Voltage: 11 to 14 V

NOTE:
- By sounding the horn, it is easy to check whether the battery is flat.
- If the battery voltage is less than 11 V, please recharge or replace it.

(2) Inspect any parts that can be checked visually such as blown fuses, wiring harness open circuit, short circuits, or poor connector contacts.

Next

| 4 | CAN communication system functionality check |
|---|---|

(1) Inspect the CAN communication system. (Refer to NW - 30)

Result

| Result | Go to |
|---|---|
| No diagnosis code output (ECM not connected, CAN communication malfunction, and ECM communication malfunction/interruption). | A |
| Diagnosis code output (ECM not connected, CAN communication malfunction, or ECM communication malfunction/interruption). | B |

B → Progress to "CAN communication system (How to troubleshoot)" (Refer to NW - 30)

A

| 5 | Diagnosis code check |
|---|---|

(1) Use the SSM4 to check and record the diagnosis codes. (Refer to SR - 6)

Result

| Result | Go to |
|---|---|
| No diagnosis code output (Able to check or recreate the trouble phenomenon) | A |
| No diagnosis code output (Unable to check or recreate the trouble phenomenon) | B |
| Diagnosis code output (Steering lock system malfunction) | C |

NOTE:
- When a steering lock system diagnosis code is output, please refer to the list of diagnosis codes (SR - 4).
- The steering lock actuator ASSY (Steering lock ECM) does not store past diagnostics.

B → Conduct a malfunction simulation (Refer to IN - 32)

C → Progress to the "list of diagnostic codes". (Refer to SR - 4)

A

| 6 | Symptom table |
|---|---|

(1) Check whether the trouble phenomenon applies to the items listed in the symptom table. (For the symptom table, please refer to SR - 4.)

SR

Result

| Result | Go to |

| No diagnosis code output. | A |
| Diagnosis code output (Steering lock system malfunction) | B |

B → Go to "List of diagnostic codes" (Refer to SR - 4)

A

| Complete |
|---|

## Checking / clearing diagnostic codes

1. Reading diagnosis codes (Main body ECM (network gateway computer))
   (1) Connect the SSM4 to the DLC3 and turn the ignition to IG ON.
   (2) Through the SSM4 display, select [Each System] →[Keyless Access(Collation ECM)] →[DTC] to check the diagnostic codes.
2. Reading the diagnosis codes (Smart key computer ASSY (collation ECM)).
   (1) Connect the SSM4 to the DLC3 and turn the ignition to IG ON.

(2) Through the SSM4 display, select [Each System] →[Keyless Access(Collation ECM)] →[DTC] to check the diagnostic codes.
CAUTION:
- As the steering lock actuator ASSY (Steering lock ECM) does not store past diagnostics, when diagnosis codes are output, do not turn the ignition to IG OFF or perform any deletions until diagnosis code checking and recording is completely finished.
- As there may be storage of diagnosis codes that were initiated due to trouble with a system other than with the steering lock actuator ASSY (steering lock ECM) system, please also check and record diagnosis codes for other systems.

3. Deletion of recorded diagnosis codes
(1) Connect the SSM4 to the DLC3 and turn the ignition to IG ON.
(2) Select [DTC] →[Clear Memory] and follow the on-screen procedure to delete diagnosis codes.

## Diagnosis system

1. Diagnosis functions
(1) The steering lock actuator ASSY (Steering lock ECM) outputs any self-diagnosis error as a diagnosis code when an error occurs in the system. This code is able to be read with the SSM4.
CAUTION:
- As the steering lock actuator ASSY (Steering lock ECM) does not store past diagnostics, when diagnosis codes are output, do not turn the ignition to IG OFF or perform any deletions until diagnosis code checking and recording is completely finished.
- As there may be storage of diagnosis codes that were initiated due to trouble with a system other than with the steering lock actuator ASSY (steering lock ECM) system, please also check and record diagnosis codes for other systems.

(2) As the steering lock actuator ASSY (Steering lock ECM) is not connected to CAN communication, communication with external parts is performed via the LIN communication-connected smart key computer ASSY (Collation ECM).
(3) The steering lock actuator ASSY (Steering lock ECM) only outputs the current error as a diagnosis code, and does not store past diagnostics.

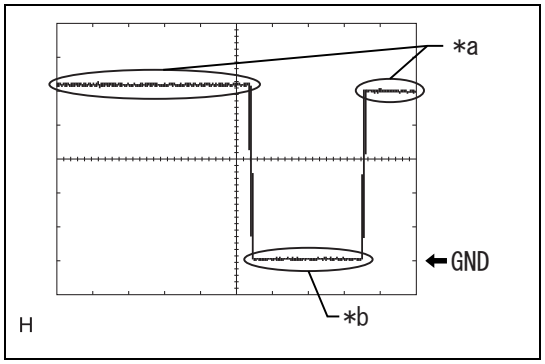
| D59-7 (B) ←→Chassis ground | Input | Power supply | Always | 11 to 14 V | - |

CAUTION:
The steering lock actuator ASSY (Steering lock ECM) is incorporated with one motor and two sensors.
NOTE:

- When performing measurements while the steering lock actuator motor is stopped, measurements can be made without any special operation.
- When performing measurements while the steering lock actuator motor is running, the following operations are necessary.
  - To unlock the steering, bring the electrical key transmitter SUB-ASSY (Electronic key) into the vehicle and turn the ignition to ACC ON or IG ON.
  - To lock the steering, open a door while the vehicle is set to IG OFF & ACC OFF, and the shifter is in the P position (Transmission A/T).



(2) Oscilloscope waveform.

## Data monitor / active test

CAUTION:
As the steering lock actuator ASSY (Steering lock ECM) carries out data communication with the SSM4 via the CAN communication function of the smart key computer ASSY (Collation ECM), it cannot perform normal monitoring if there is a CAN communication or smart key computer ASSY (Collation ECM) malfunction.

1. Data monitor
   NOTE:
   The SSM4 can be used to read the input to the steering lock actuator ASSY (Steering lock ECM), communication, and operating conditions.
   (1) Use the SSM4 and data monitor to determine functionality and narrow down the defective part.

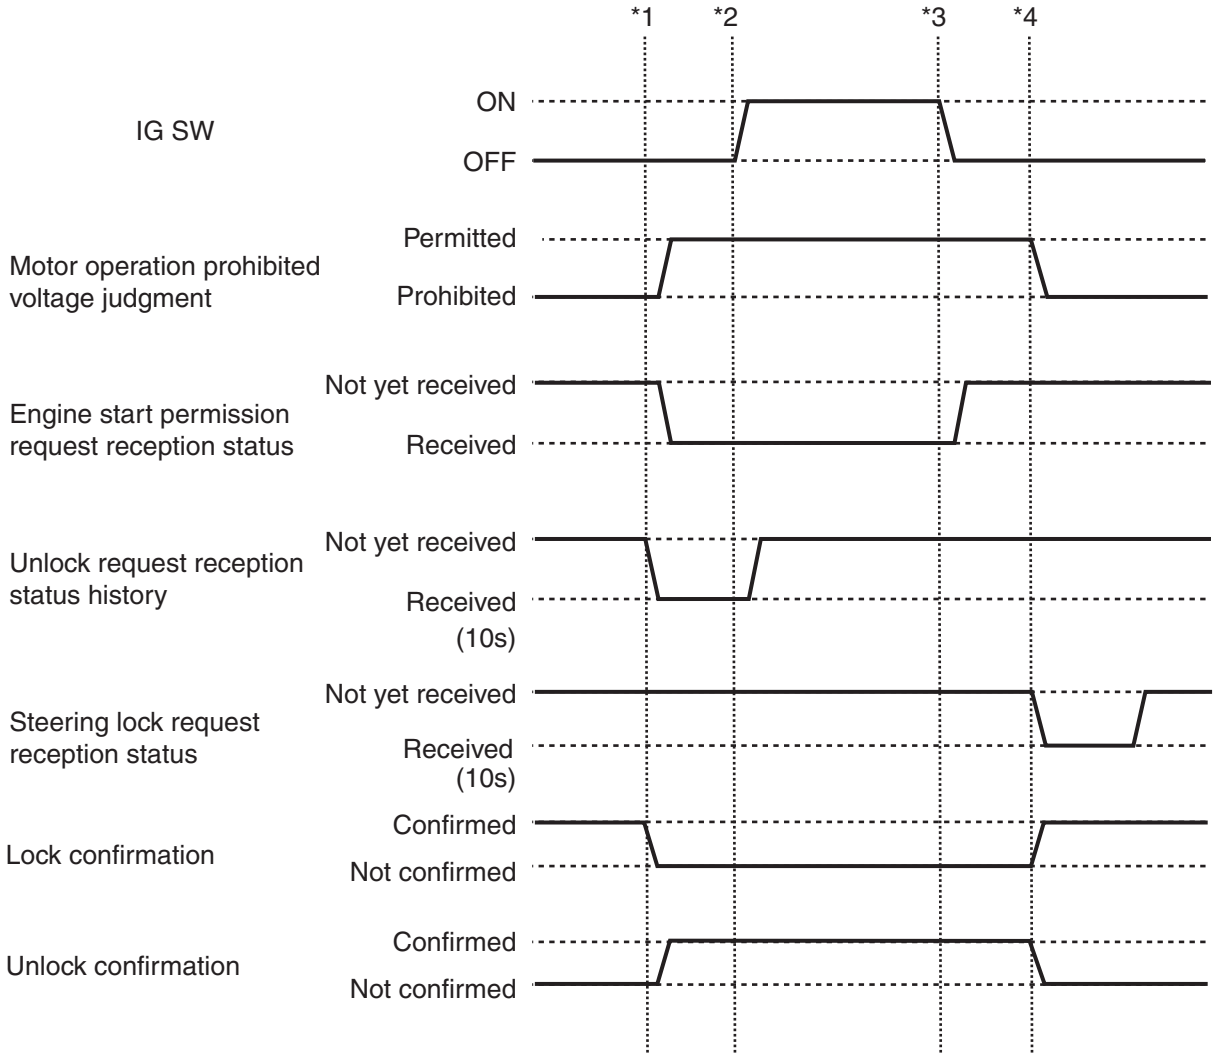
1. When the following conditions are satisfied, the steering lock will be unlocked.
   (a) The vehicle is set to ACC ON or IGN ON.
      (1) When the push button start switch is operated and the vehicle is set to ACC ON or IG ON, the electrical key transmitter SUB-ASSY (Electronic key) and the smart key computer ASSY (Collation ECM) are matched and the steering will be unlocked.
      (2) The electrical key transmitter SUB-ASSY (Electronic key) will be checked if any of the following conditions are met.
      ·The brake pedal (Transmission A/T) or the clutch pedal (Transmission M/T) are depressed and the engine is started.
      ·Within 30 seconds after a door has been opened and closed.
      ·The push button start switch is pressed.
      NOTE:
      • Key collation: When there is a match between the code transmitted by the electrical key transmitter SUB-ASSY (Electronic key) and the code calculated by the smart key computer ASSY (Collation ECM).
      • A genuine collation ECM is confirmed: Checking of the L code issued when the engine is started or the push button start switch is pressed.
      • The steering lock actuator ASSY (Steering lock ECM) uses L codes to check whether the smart key computer ASSY (Collation ECM) is a genuine ECM.

2. If the following conditions are satisfied, the steering will be locked when the smart key computer ASSY (Collation ECM) has been confirmed to be a genuine ECM.
   – The vehicle is stopped
   – No vehicle speed signal abnormal.
   – The vehicle is set to IG OFF and ACC OFF.
   – The shifter is in the P position (Transmission A/T).
   – A door changes from closed →open, or a door is locked (smart door lock, wireless door lock).

NOTE:
The following example, indicates the data monitor activity when the vehicle changes from ACC ON →IG ON →IG OFF while the shifter is in the P position (Transmission A/T) and the brake pedal (Transmission A/T) or the clutch pedal (Transmission M/T) are not depressed.

The data monitor activity when the steering is locked/unlocked



PS-01500

NOTE:
Enter the vehicle while carrying the electrical key transmitter SUB-ASSY (Electronic key), set the ignition to IG OFF and put the shifter in the P position (Transmission A/T), and perform the following operations to check each data monitor activity.

*1: Without depressing the brake pedal (Transmission A/T) or the clutch pedal (Transmission M/T), press the push button start switch and confirm that it changes over to ACC ON.
*2: Without depressing the brake pedal (Transmission A/T) or the clutch pedal (Transmission M/T), press the push button start switch and confirm that it changes over to IG ON.
*3: Press the push button start switch and confirm that it changes over to IG OFF.
*4: Open the door. (Steering lock complete)

Circuit description
The steering lock ECM and steering lock motor are integrated into the steering lock actuator ASSY.
The steering lock actuator ASSY (Steering lock ECM) uses the steering lock motor lock position sensor to detect the lock/unlock position.
The steering lock actuator ASSY (Steering lock ECM) is input with a lock/unlock command signal from the smart key computer ASSY (Collation ECM) and returns a lock operation signal.
As the steering lock actuator ASSY (Steering lock ECM) is not connected to CAN communication, CAN communication with external parts is performed via the LIN communication-connected smart key computer ASSY (Collation ECM).

| DTC | B2782 | Steering lock power supply circuit malfunction (Smart ECM-side malfunction) |
|---|---|---|

Circuit description

The smart key computer ASSY (Collation ECM) has a built-in power supply ECM function.

This diagnosis code is output when it is judged that there is an error in the SLR+ input that is directly input into the steering lock actuator ASSY (Steering lock ECM) from the smart key computer ASSY (Collation ECM).

As the steering lock actuator ASSY (Steering lock ECM) is not connected to CAN communication, CAN communication with external parts is performed via the LIN communication-connected smart key computer ASSY (Collation ECM).

| Diagnostic codes | Detecting conditions | Faulty part | Diagnostic code output check operation |

Inspection steps

CAUTION:

- The steering lock system is equipped with functions that use multiplex communication. Firstly, please follow the directions in “How to troubleshoot” and then perform troubleshooting after confirming that there is no malfunction in the communication system.
- After repair is completed, perform a diagnostic code output confirmation and check that there is no further output of diagnostic codes.
- When replacing the steering lock actuator ASSY (Steering lock ECM) or the smart key computer ASSY (Collation ECM), please check the applicable precautions (Refer to TD - 5), and refer to the "Registration manual for immobilizer".
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

| | |
|---|---|
| 1 | Inspection of the steering lock actuator ASSY (Steering lock ECM) |

(1) Disconnect the steering lock actuator ASSY (Steering lock ECM) connector D59.

(2) Measure the resistance between the terminals.

Resistance

Replacement of the steering lock actuator ASSY (Steering lock ECM) (Refer to SR - 59)

## The steering lock cannot be released (cannot start the engine) (without ID code box)

Circuit description

The steering lock actuator ASSY (Steering lock ECM) drives the motor that inserts the lock bar into the steering column to lock the steering wheel.

There may be cases where the steering lock bar becomes stuck in the steering column lock hole, causing the steering lock to become unable to be released. In this case, in the same manner as for conventional plate key vehicles, the lock bar can be worked out of the hole by performing the engine start operation while rocking the steering wheel.

When replacing the smart key computer ASSY (Collation ECM), there may be cases where the steering cannot be unlocked or the engine cannot be started unless registration and initializing operation is carried out. (Refer to the "Registration manual for immobilizer")

## The steering lock does not operate (with ID code box)

Circuit description

The steering lock actuator ASSY (Steering lock ECM) drives the lock motor that inserts the lock bar into the steering column to lock the steering wheel.

During steering lock operation, there may be cases where the lock bar does not fit into the steering column lock hole, causing the steering to become unable to be locked. In this case, in the same manner as for conventional plate key vehicles, the steering can be locked after slightly turning the steering wheel and changing the steering column lock hole position.

Inspection steps

CAUTION:

- The steering lock system is equipped with functions that use multiplex communication. Firstly, please follow the directions in “How to troubleshoot” and then perform troubleshooting after confirming that there is no malfunction in the communication system.
- After repair is completed, confirm that trouble symptoms do not reoccur.
- Confirm that no diagnostic codes are output. (If diagnostic codes are output, firstly perform a diagnostic code flow chart check.)
- When replacing the smart key computer ASSY (Collation ECM), the steering lock actuator ASSY (Steering lock ECM) or the ID code box (with ID code box), please check the applicable precautions (Refer to TD - 5), and refer to the "Registration manual for immobilizer".
- After replacing the steering lock actuator ASSY (Steering lock ECM), before starting the engine be sure to turn the steering mechanism to the left and right to confirm that the steering is not locked. If the steering is locked, perform the steering lock procedure (open and close any door when the vehicle is in the IG OFF state) and then unlock the steering (press the push button start switch). With the steering being locked, the engine cannot be started.

# Steering system

## Precautions

1. SRS airbag system handling and precautions for operation
   CAUTION:
   As this maintenance procedure may have an effect on the SRS airbag system, be sure to check the SRS airbag system precautions before commencing work. (Refer to RS - 5)
2. Correct handling and precautions for operation
   (1) Handling of the steering computer ASSY
      (a) Do not apply any impact to the steering column ASSY (particularly the motor and torque sensor parts). Be sure to replace with a new part if strong impact is applied (such as hitting or dropping the part).
      (b) Do not pull on the steering column ASSY wiring harness.
      (c) Do not release the tilt lever while the steering column ASSY is removed from the vehicle.
      (d) After replacing the steering column ASSY, perform torque sensor zero point calibration and rotation angle sensor output calibration. (Refer to PA - 12)
   (2) Precautions when connecting or disconnecting connectors
      (a) Before you disconnect any connectors related to the electric power steering system, turn the ignition to IG ON and set the steering to the straight-ahead position. Disconnect the connector after turning the ignition to IG OFF.
      (b) Before you connect any connectors related to the electric power steering system, confirm that the ignition is turned to IG OFF, connect the connector and turn the ignition to IG ON while the steering is in the straight-ahead position.
      CAUTION:
      Do not turn the ignition to IG ON if the steering is not in the straight-ahead position.
   (3) Steering roll connector precautions
      (a) Do not install/remove the steering roll connector SUB-ASSY while the ignition is set to IG ON or the battery ground terminal is connected.
      (b) Do not rotate the steering roll connector SUB-ASSY without the steering wheel ASSY attached while the ignition is set to IG ON and the battery ground terminal is connected.
      (c) When attaching the steering roll connector SUB-ASSY and steering wheel ASSY, be sure to carry out steering roll connector SUB-ASSY centering. (Refer to RS - 252)
      CAUTION:
      If centering is not carried out, the steering roll connector SUB-ASSY may become disconnected upon operation of the steering wheel ASSY.

## On-vehicle inspection

1. Check of steering wheel play
   (1) Start the engine and place the vehicle in a state where power steering can operate.
   (2) Place the vehicle in the straight-ahead position.
   (3) Lightly move the steering wheel ASSY with your fingers to check for play.
      Limit: Within 30 mm {1.18 in}
      NOTE:
      If it exceeds this limit, refer to the symptom table and check each appropriate part. (Refer to SR - 49)

## Symptom table

Steering (mechanical factors) symptom table

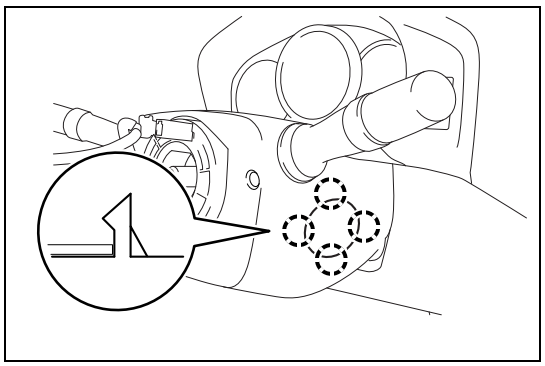
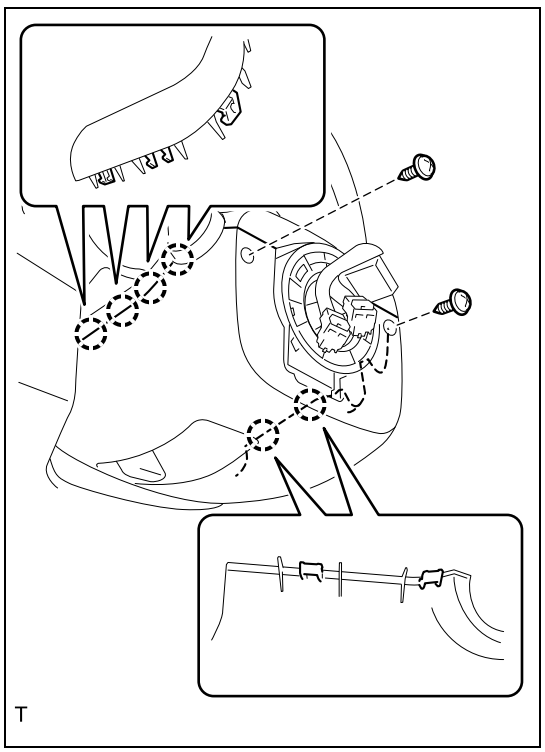
## Removal

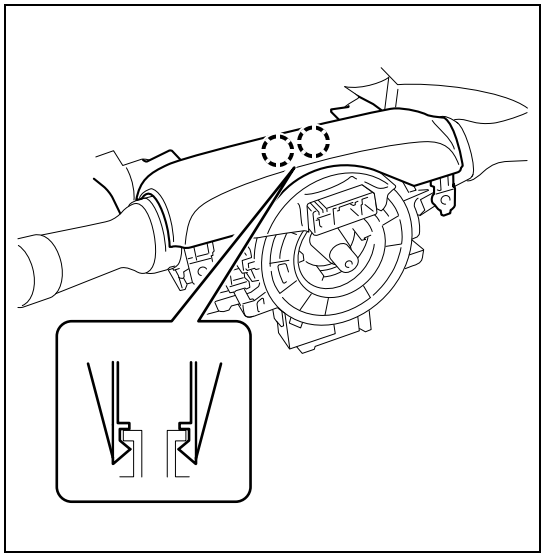
1. Correct handling and precautions for operation (Refer to PA - 3)
2. Confirmation of front tires in the straight-ahead position
3. Disconnect the battery ground terminal.
   WARNING:
   As the airbag and pretensioner system is equipped with a backup power supply, if you start work within 60 seconds of disconnecting the battery ground terminal, the airbag may accidentally deploy.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
4. Removal of the driver's airbag module ASSY (Refer to RS - 246)
5. Removal of the steering wheel ASSY (Refer to SR - 67)
6. Removal of the instrument side panel LH (Refer to IT - 24)
7. Removal of the instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)
8. Removal of the instrument panel ornament (Refer to IT - 22)
9. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
10. Remove the meter hood SUB-ASSY.
11. Remove the instrument panel meter ornament UPR.



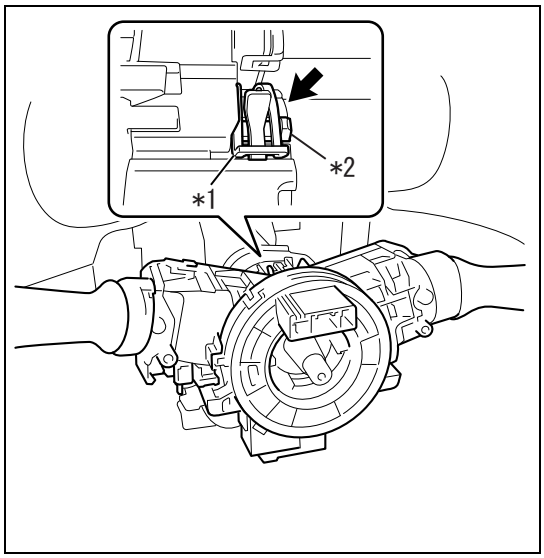
12. Removal of the steering column cover support (with smart entry)
    (1) Unhook the 4 tabs and remove the steering column hole cover SUB-ASSY No.1 (Steering column cover support).



13. Removal of the steering column cover LWR
    (1) Remove the two screws.
    (2) Unhook the six tabs and remove the steering column cover LWR.



14. Removal of the steering column cover UPR
    (1) Unhook the two tabs and remove the steering column cover UPR.



15. Removal of the turn signal switch ASSY W/Steering roll connector
    (1) Disconnect each connector from the turn signal switch ASSY W/ Steering roll connector.
    (2) Use pliers to loosen the clamp.
    (3) When the clamp is loose, use a thin flat tip screwdriver to unhook the tabs and remove the turn signal switch ASSY W/Steering roll connector from the steering column ASSY.

Captions in illustration

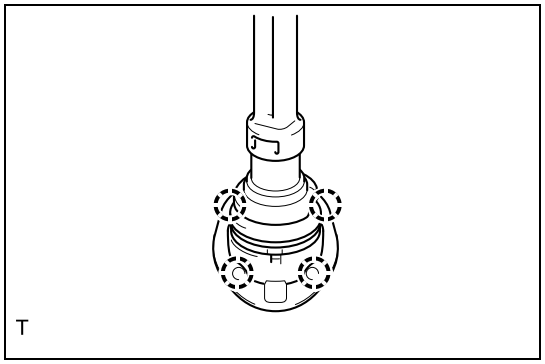
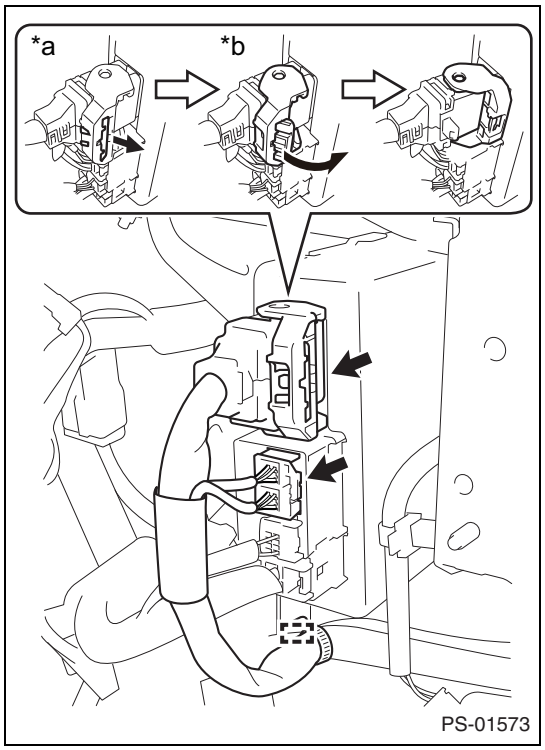
    (4) Undo the bolt and disconnect the steering intermediate shaft ASSY No.2 from the steering gear ASSY.

T



(5) Unhook the four tabs on the vehicle exterior side and remove the steering sliding yoke SUB-ASSY from the vehicle interior side.

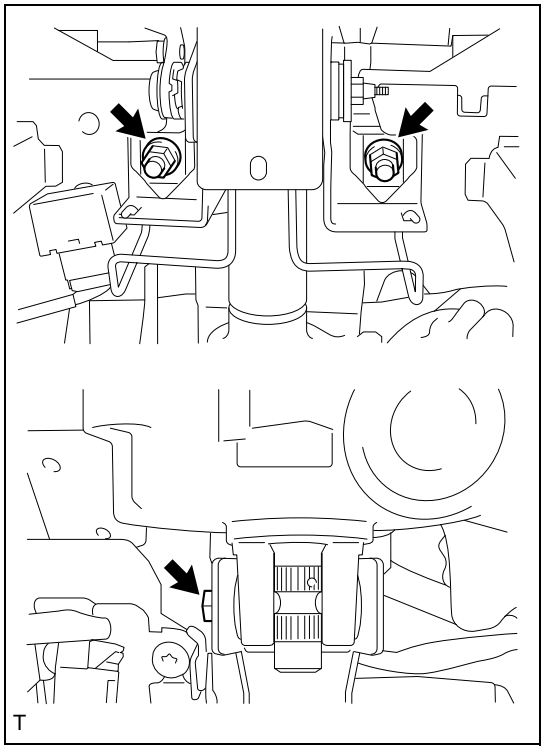


17. Remove the steering column ASSY.
    (1) Disconnect the two connectors from the power steering computer ASSY.
    NOTE:
    As shown in the figure, after pulling out the lock for the lock lever, fold down the lock lever and remove the connector.

Captions in illustration

| | |
|---|---|
| *a | Pull out the lock. |
| *b | Fold down the lock lever. |

    (2) Disconnect the wiring harness clamp from the power steering computer ASSY.

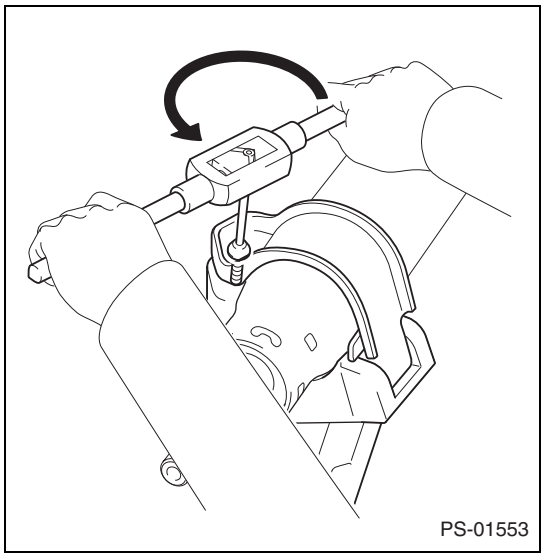


(3) Undo the two nuts and bolts and remove the steering column ASSY from the instrument panel reinforcement ASSY.
NOTE:
When pulling out the bolts, removal becomes easier if you lift up the steering column ASSY motor section and tilt the steering column ASSY.

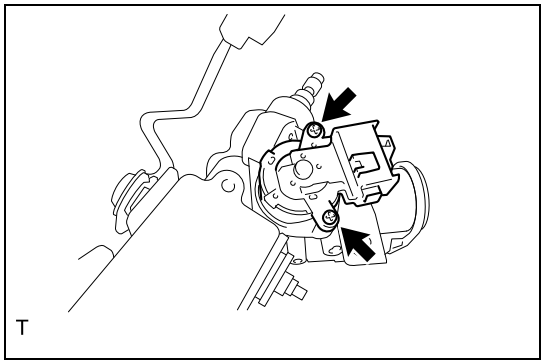
SR

## Disassembly

1. Removal of the steering column upper W/switch bracket ASSY (without smart entry)
   (1) Secure the steering column ASSY in a vise between aluminium plates.
   CAUTION:
   Do not close the vise too strongly.
   (2) Use a drill to make a hole with a reverse tap in the steering lock set bolt head.

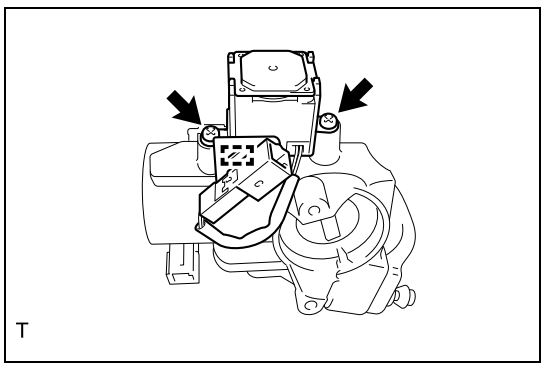


(3) Use the reverse tap to pull out the steering lock set bolt and remove the steering column upper W/switch bracket ASSY.



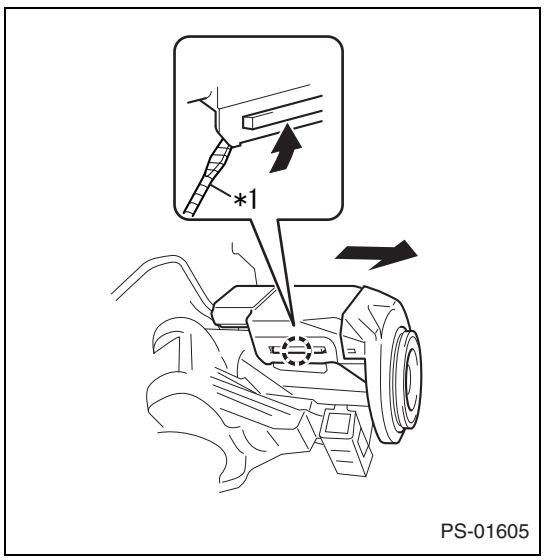
T

2. Removal of the ignition or starter switch ASSY (without smart entry)
   (1) Undo the two screws and remove the ignition or starter switch ASSY from the steering column upper bracket.
   CAUTION:
   - When doing this, please ensure that the ignition or starter switch ASSY is on the top and the steering column upper bracket is on the bottom side.
   - Inspect the condition of the press-fit areas marked by the arrows and replace the steering column upper bracket with a new part if you notice any play or unsteadiness.



T

3. Removal of the key interlock solenoid (without smart entry, Transmission A/T)
   (1) Undo the two screws and remove the key interlock solenoid from the steering column bracket ASSY UPR.
   (2) Release the clamp and disconnect the connector.



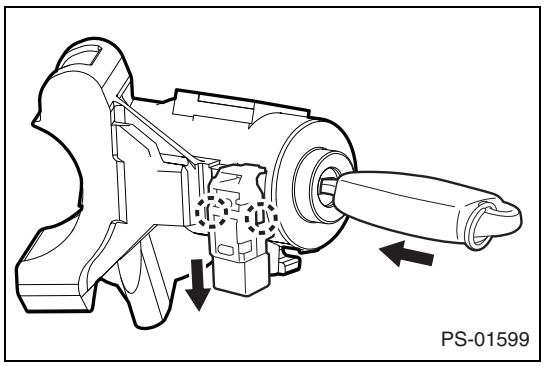
PS-01605

4. Removal of the transponder key amplifier
   (1) Use a thin flat tip screwdriver wrapped with protection tape to unhook the two tabs and remove the transponder key amplifier from the steering column bracket ASSY UPR.

Captions in illustration

| | |
|---|---|
| *1 | Protection tape |

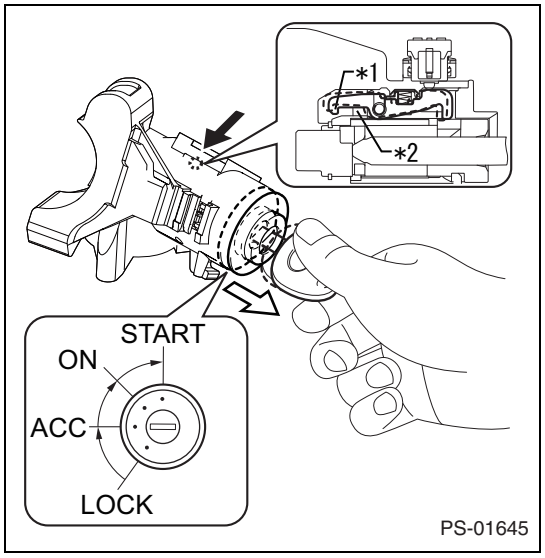
5. Removal of the unlock warning switch ASSY (without smart entry)
   (1) Insert the key.



PS-01599

   (2) Unhook the two tabs and remove the unlock warning switch ASSY.
   NOTE:
   Remove the unlock warning switch ASSY by sliding it in the direction indicated by the arrows in the diagram.

6. Removal of the ignition switch lock cylinder ASSY (without smart entry)
   (1) Turn the ignition switch lock cylinder ASSY to the ACC position.

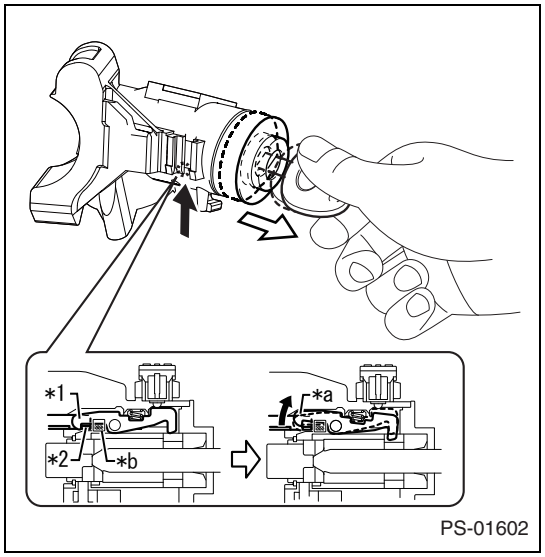


(2) Insert a thin flat tip screwdriver into the hole in the steering column upper bracket, as indicated in the diagram, and pull until the tab on the ignition switch lock cylinder ASSY comes into contact with the steering column upper bracket stopper.

Captions in illustration

| | |
|---|---|
| *1 | Tab |
| *2 | Stopper |
| ➡ | Press |
| ⇨ | Pull out |

CAUTION:
If you don't sufficiently pull until the tab on the ignition switch lock cylinder ASSY comes into contact with the steering column upper bracket stopper, it may interfere with the next process. Please ensure that it is fully in contact with the stopper.

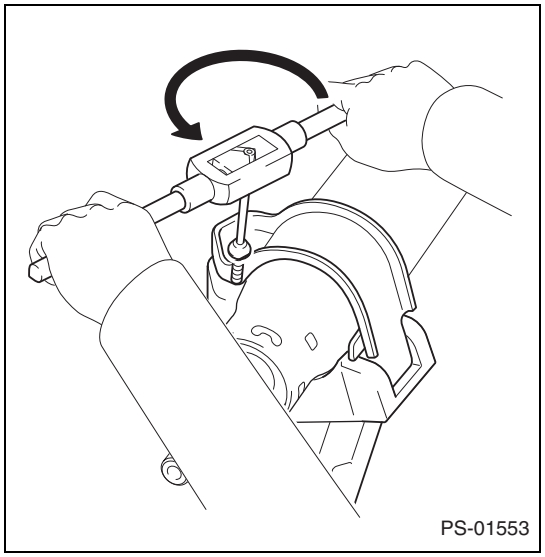


(3) Insert a thin flat tip screwdriver into the hole in the steering column upper bracket, as indicated in the diagram. Pull down the screwdriver in the direction indicated by the arrow in the diagram, and unhook the ignition switch lock cylinder ASSY tabs. Remove the ignition switch lock cylinder ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Tab |
| *2 | Stopper |
| *a | Unhook the tabs |
| *b | Hole for screwdriver |
| ➡ | Pull down |
| ⇨ | Pull out |

7. Removal of the steering lock actuator ASSY (with smart entry)
   (1) Secure the steering column ASSY in a vise between aluminium plates.
   CAUTION:
   Do not close the vise too strongly.
   (2) Use a drill to make a hole with a reverse tap in the steering lock set bolt head.

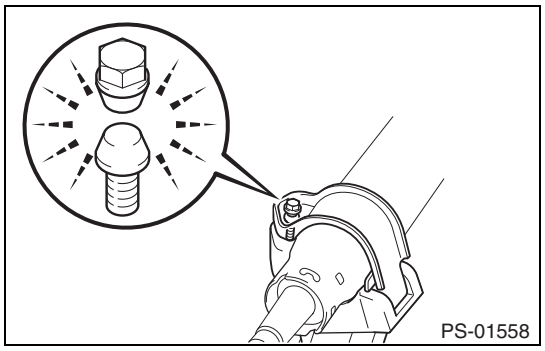


(3) Use the reverse tap to pull out the steering lock set bolt and remove the steering lock actuator ASSY.

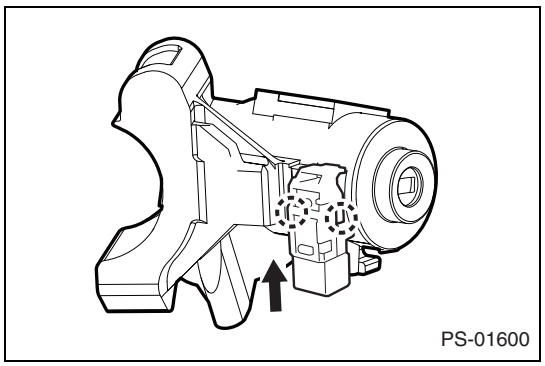
SR

## Assembly

1. Install the steering lock ASSY (With smart entry)
   (1) Secure the steering column ASSY in a vise between aluminium plates.
   CAUTION:
   Do not close the vise too strongly.

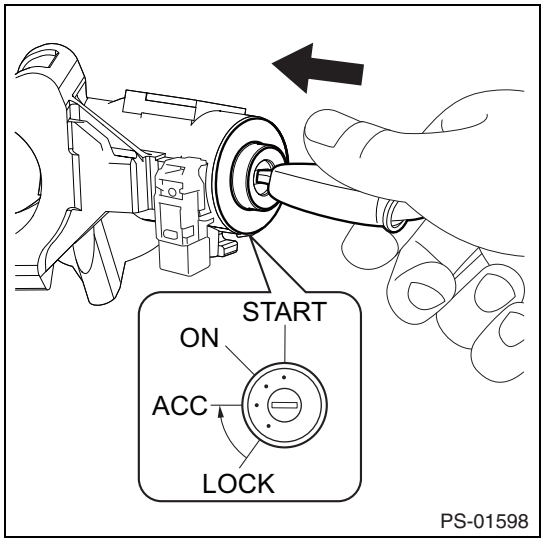


(2) Attach the steering lock actuator ASSY with a new steering lock set bolt and tighten it until the bolt head is wrenched off.



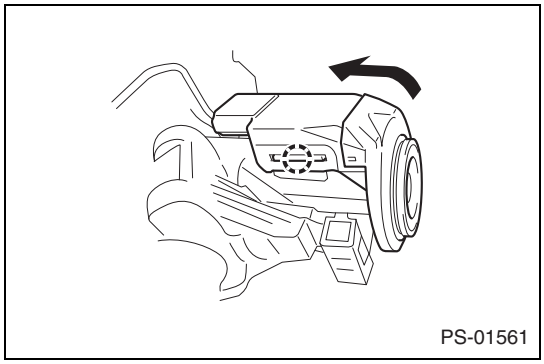
2. Installation of the unlock warning switch ASSY (without smart entry)
   (1) Engage the two tabs and install the unlock warning switch ASSY onto the steering column upper bracket.
   NOTE:
   Install the unlock warning switch ASSY by sliding it in the direction indicated by the arrows in the diagram.

3. Installation of the ignition switch lock cylinder ASSY (without smart entry)
   (1) Line up the ignition switch lock cylinder ASSY in the ACC position.

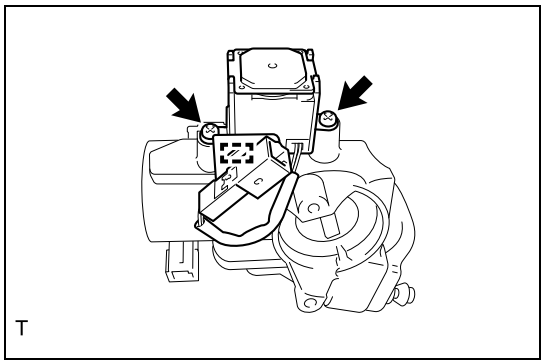


(2) Insert the ignition switch lock cylinder ASSY into the steering column upper bracket.

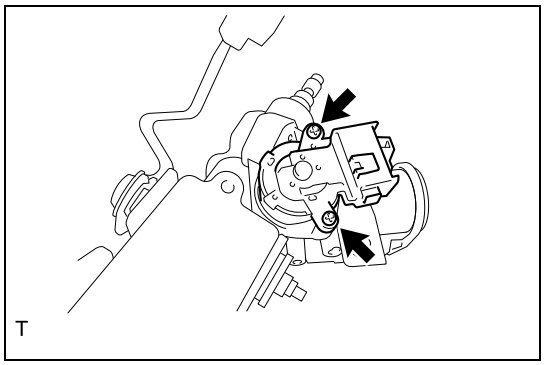
(3) Confirm that the ignition switch lock cylinder ASSY is securely fixed in place.



4. Installation of the transponder key amplifier (without smart entry)
   (1) Engage the two tabs and install the transponder key amplifier onto the steering column upper bracket.



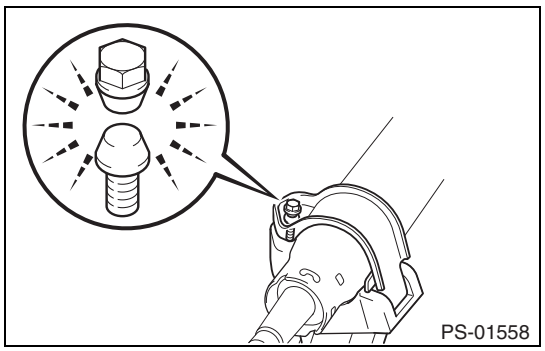
5. Installation of the key interlock solenoid (without smart entry, Transmission A/T)
   (1) Install the key interlock solenoid onto the steering column upper bracket and fasten the two screws.
   (2) Use the clamp to connect the connector.



6. Installation of the ignition or starter switch ASSY (without smart entry)
   (1) Install the ignition or starter switch ASSY onto the steering column upper bracket and fasten the two screws.

7. Inspection of the steering lock mechanism functionality (with smart entry)
   (1) Pull out the key and check that the steering lock mechanism is working.
   (2) Insert the key and check that the steering lock mechanism unlocks when the key is turned to the ACC position.
8. Installation of the steering column upper W/switch bracket ASSY (without smart entry)
   (1) Secure the steering column ASSY in a vise between aluminium plates.

CAUTION:
Do not close the vise too strongly.

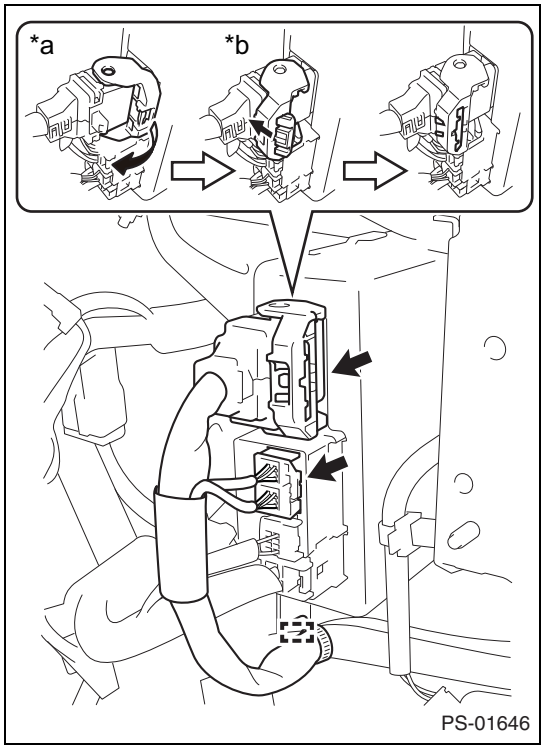


(2) Attach the steering column upper W/switch bracket ASSY with a new steering lock set bolt and tighten it until the bolt head is wrenched off.

SR

## Installation

1. Confirm that the front tires are in the straight-ahead position.
2. Install the steering column ASSY.
   (1) Install the steering column ASSY into the instrument panel reinforcement ASSY with the two nuts and new bolts.
   Standard value:T=40N·m {408kgf·cm} {29.5ft·lbf}
   CAUTION:
   Be careful not to pinch the wiring harness between the body.



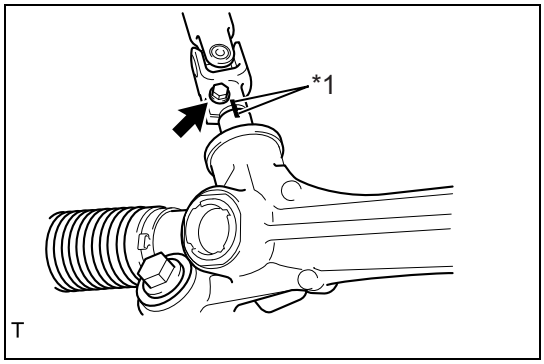
(2) Connect the two connectors to the power steering computer ASSY.

Captions in illustration

| | |
|---|---|
| *a | Fold down the lock lever. |
| *b | Press in the lock. |

(3) Install the wiring harness clamp onto the power steering computer ASSY.

3. Installation of the steering intermediate shaft ASSY No.2
   (1) Pass the steering intermediate shaft ASSY No.2 through the hole in the body from the vehicle interior side.

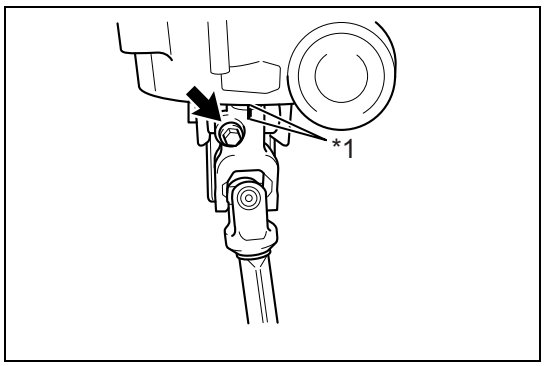


(2) Line up the alignment marks and connect the steering intermediate shaft ASSY No.2 to the steering gear ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |

(3) Attach a new bolt.
Standard value:T=35N·m {357kgf·cm} {26ft·lbf}



(4) Line up the alignment marks and connect the steering intermediate shaft ASSY No.2 to the steering column ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |

(5) Attach a new bolt.
Standard value:T=35N·m {357kgf·cm} {25.8ft·lbf}

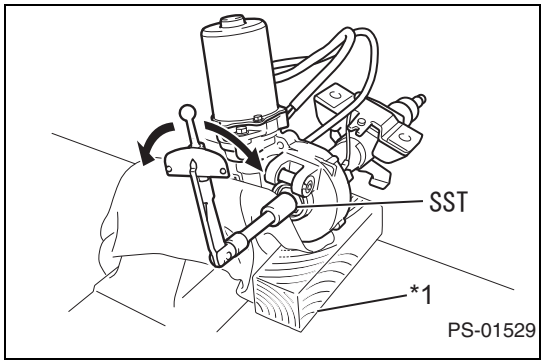
(6) Engage the four tabs and install the dust shield to the vehicle.

4. Installation of the turn signal switch ASSY W/Steering roll connector
   (1) Install the turn signal switch ASSY W/Steering roll connector onto the steering column ASSY when the clamp is loose.
   (2) Engage the tabs on the turn signal switch ASSY W/Steering roll connector with the steering column ASSY and tighten the clamp.
   (3) Connect each connector to the turn signal switch ASSY W/Steering roll connector.
5. Installation of the steering column cover UPR
   (1) Engage the two tabs and install the steering column cover UPR.
6. Installation of the steering column cover LWR
   (1) Engage the six tabs and install the steering column cover LWR.
   (2) Install the two screws into the steering column cover LWR.
7. Installation of the steering column cover support (with smart entry)
   (1) Engage the 4 tabs and install the steering column cover support.
8. Installation of the instrument panel meter ornament UPR (Refer to IT - 29)
9. Installation of the meter hood SUB-ASSY (Refer to IT - 29)
10. Installation of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
11. Installation of the instrument panel ornament (Refer to IT - 29)
12. Steering roll connector centering (Refer to RS - 252)
13. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
14. Installation of the instrument side panel RH (Refer to IT - 29)
15. Installation of the steering wheel ASSY (Refer to SR - 69)
16. Installation of the driver's airbag module ASSY (Refer to RS - 248)
17. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.43ft·lbf}
18. Settings when removing/installing battery terminals (Refer to IN - 6)

19. Settings during parts replacement and installation/removal (Refer to PA - 12)
20. Inspection of airbag warning light (Refer to RS - 53)
21. VDC sensor mid point setting (Refer to BC - 15)

## Unit inspection

SR



1. Inspection of the steering column ASSY
   (1) Preload inspection
      (a)As shown in the diagram, secure the steering column ASSY in a vise between cloth or aluminium plates.

Captions in illustration

| | |
|---|---|
| *1 | Wooden block |

CAUTION:
- Do not close the vise too strongly as it may cause deformation to the steering column ASSY.
- Place a wooden block to prevent the steering column ASSY from falling.

      (b)Use a SST and a torque wrench to measure the rotational torque when rotating it at a constant speed of approximately one turn every four seconds.
      SST 09616-00011
      Standard value:Preload
      T=1.77N·m {18kgf·cm} {1.3 ft·lbf} or less
      CAUTION:
      Make sure that there is no abnormal sticking during rotation.
      If it is not within specification, replace the steering column ASSY with a new part.

   (2) Bushing inspection
      (a)Confirm that the two steering column ASSY bushings are securely installed.
      If you find any bushing that is deformed, damaged, or detached, replace the steering column ASSY with a new part.

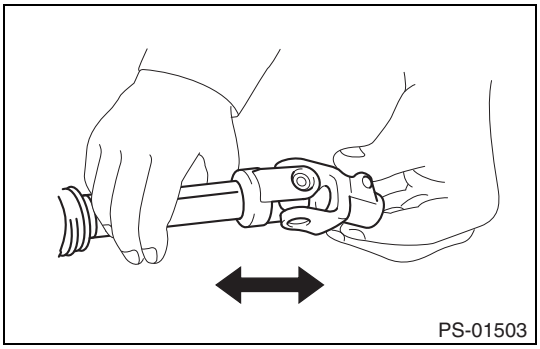
   (3) Capsule inspection.
      (a)Confirm that the two steering column ASSY capsules are securely installed.

Captions in illustration

| | |
|---|---|
| *1 | Capsule |

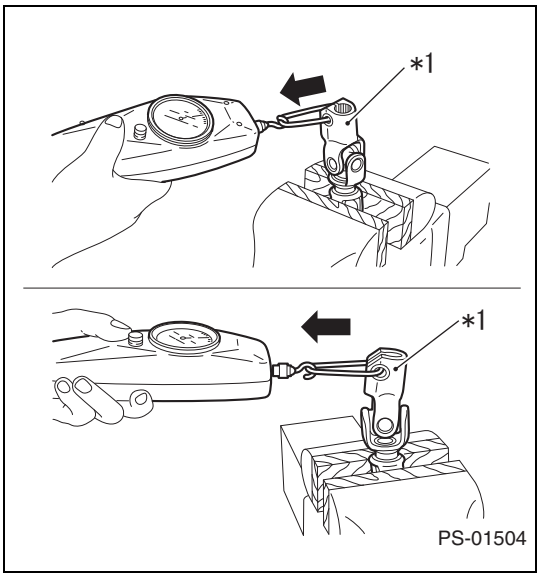
      Criteria: 5 mm {0.20 in} or more
      CAUTION:
- If it does not meet the standard, replace the steering column ASSY with a new part.
- If you find any capsule that is deformed, damaged, or detached, replace the steering column ASSY with a new part.

2. Inspection of the steering intermediate shaft ASSY No.2
   (1) Looseness inspection



(a)Inspect the universal joint area for excessive looseness.
Standard value: 0 mm {0 in}
NOTE:
If it is not within the specified value, replace the steering intermediate shaft ASSY No.2 with a new part.

SR

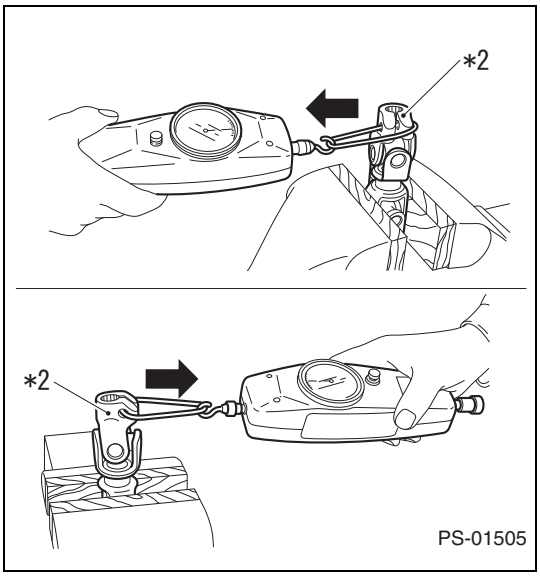


(2) Folding load inspection
(a)Arrange the steering intermediate shaft ASSY No.2 so that the yoke on the rack and pinion power steering gear ASSY side is orientated up, and secure it in a vise between objects such as wooden blocks.
(b)Use a push-pull gauge to measure the folding load in both directions.

Captions in illustration

| | |
|---|---|
| *1 | Yoke on the steering gear ASSY side |

Standard value: T = 6.6 N {0.67 kgf} {1.48 lbf} or less.
NOTE:
If it is not within the specified value, replace the steering intermediate shaft ASSY No.2 with a new part.



(c)Arrange the steering intermediate shaft ASSY No.2 so that the yoke on the steering column ASSY side is orientated up, and secure it in a vise between objects such as wooden blocks.
(d)Use a push-pull gauge to measure the folding load in both directions.

Captions in illustration

| | |
|---|---|
| *2 | Yoke on the steering column ASSY side |

Standard value: T = 6.0N {0.61 kgf} {1.35 lbf} or less.
NOTE:
If it is not within the specified value, replace the steering intermediate shaft ASSY No.2 with a new part.

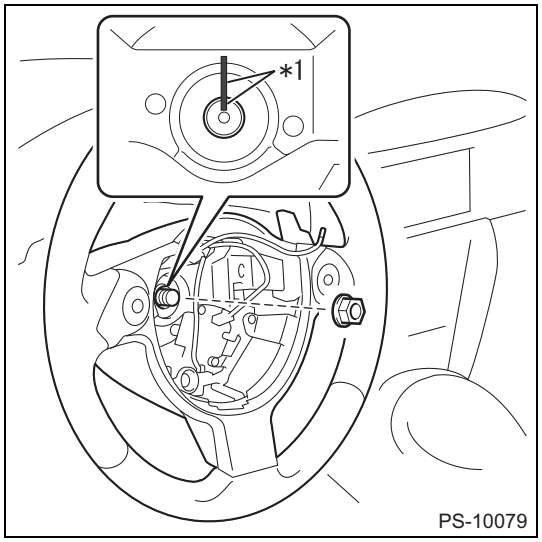
## Removal

1. Correct handling and precautions for operation
   WARNING:
   As this maintenance procedure may have an effect on the SRS airbag system, be sure to check the SRS airbag system precautions before commencing work. (Refer to RS - 5)
2. Confirm that the front tires are in the straight-ahead position.
3. Disconnection of the battery ground terminal
   WARNING:
   As the airbag and pretensioner system is equipped with a backup power supply, if you start work within 60 seconds of disconnecting the battery ground terminal, the airbag may accidentally deploy.
   CAUTION:
   To prevent damage to the moldings, completely wind down both the driver's and passenger's door windows.
4. Removal of the driver's airbag module (Refer to RS - 246)



5. Removal of the steering wheel ASSY
   (1) Undo the nut and place an alignment mark over the steering wheel ASSY and steering column ASSY.

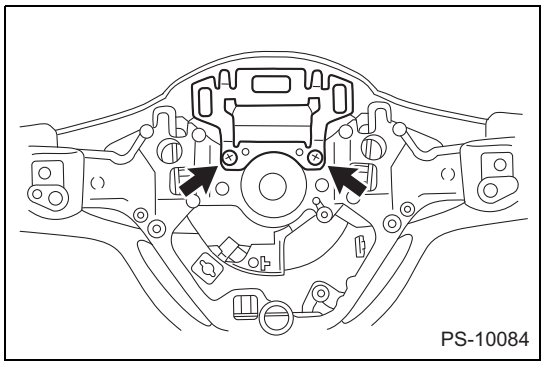
Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |

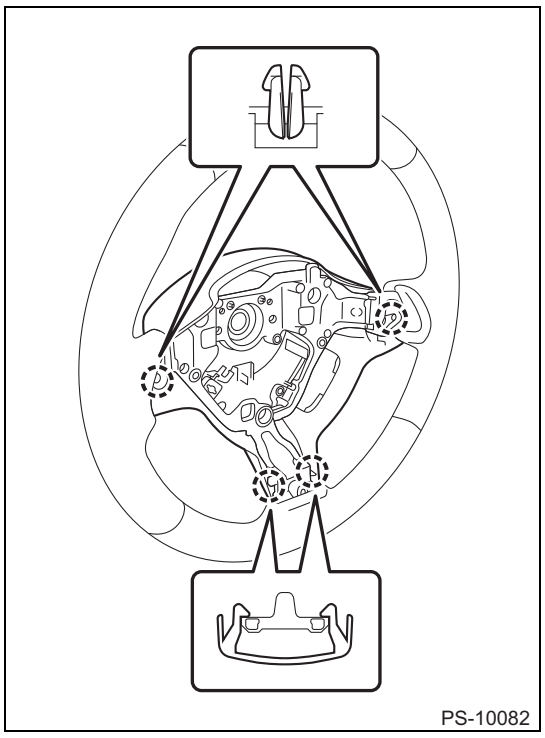
   (2) Disconnect each connector from the steering roll connector.
   (3) Use a steering wheel puller to remove the steering wheel ASSY.

6. Removal of the transmission shift switch (with paddle shifter) (Refer to AT - 212)
7. Removal of the cruise control main switch. (Refer to CC - 28)
8. Removal of steering pad switch (Refer to SR - 70)

## Disassembly

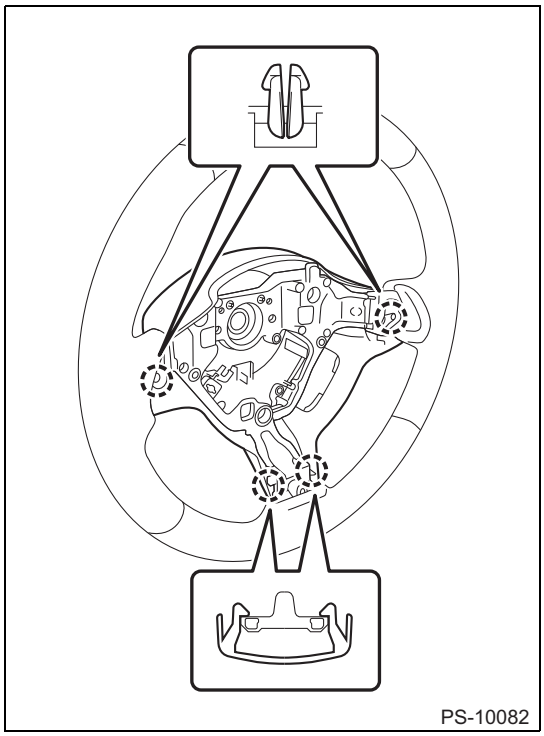


1. Removal of the steering shake damper
   (1) Undo the two screws to remove the steering shake damper from the steering wheel ASSY.

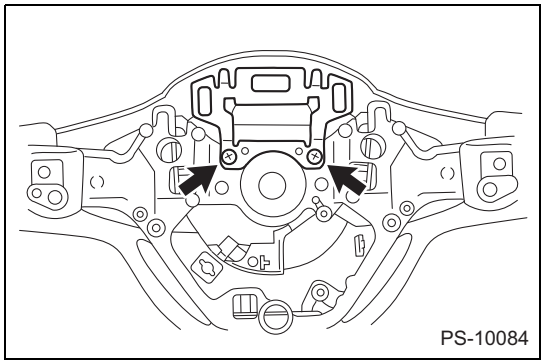


2. Removal of the steering wheel boss cover LWR
   (1) Unhook the four tabs to remove the steering wheel boss cover LWR from the steering wheel ASSY.

## Assembly



1. Installation of the steering wheel boss cover LWR
   (1) Engage the four tabs and install the steering wheel boss cover LWR onto the steering wheel ASSY.



2. Installation of the steering shake damper
   (1) Install the steering shake damper onto the steering wheel ASSY and fasten the two screws.
   Standard value:T=1.75N·m {18kgf·cm} {1.3ft·lbf}

## Installation

1. Confirm that the front tires are in the straight-ahead position.
2. Steering roll connector centering (Refer to RS - 252)
3. Installation of steering pad switch (Refer to SR - 70)
4. Installation of the cruise control main switch (Refer to CC - 29)
5. Installation of the transmission shift switch (with paddle shifter) (Refer to AT - 213)
6. Installation of the steering wheel ASSY
   (1) Line up the alignment marks and install the steering wheel ASSY onto the steering column ASSY.
   (2) Install the nut.
   Standard value:T=39N·m {398kgf·cm} {28.8ft·lbf}
   (3) Connect each connector to the steering roll connector.
7. Installation of the driver's airbag module (Refer to RS - 248)
8. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
9. Confirm the steering wheel ASSY center position.
10. Inspection of airbag warning light (Refer to RS - 53)
11. VDC sensor mid point setting (Refer to BC - 15)

# Steering pad switch

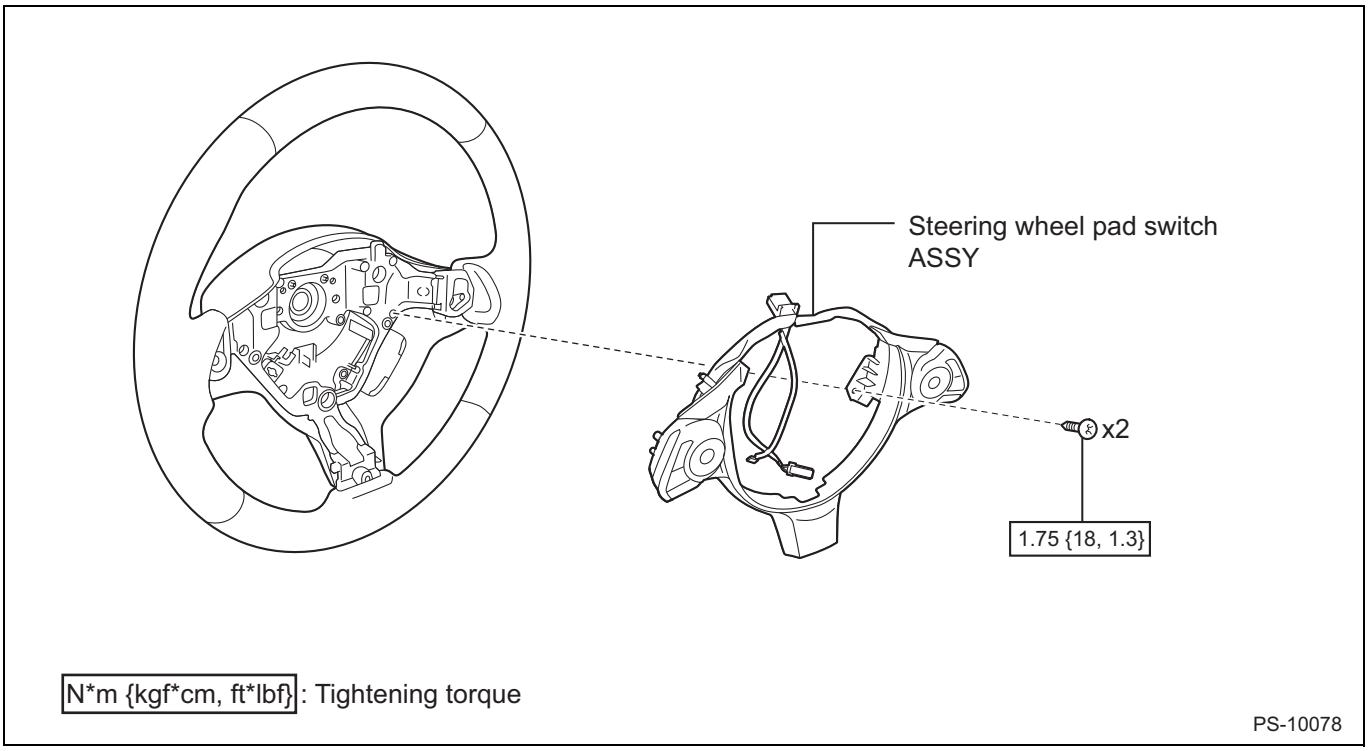
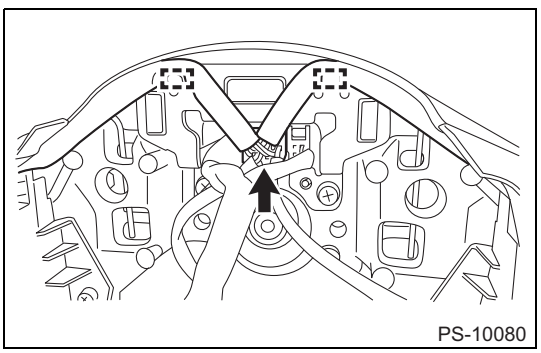
SR



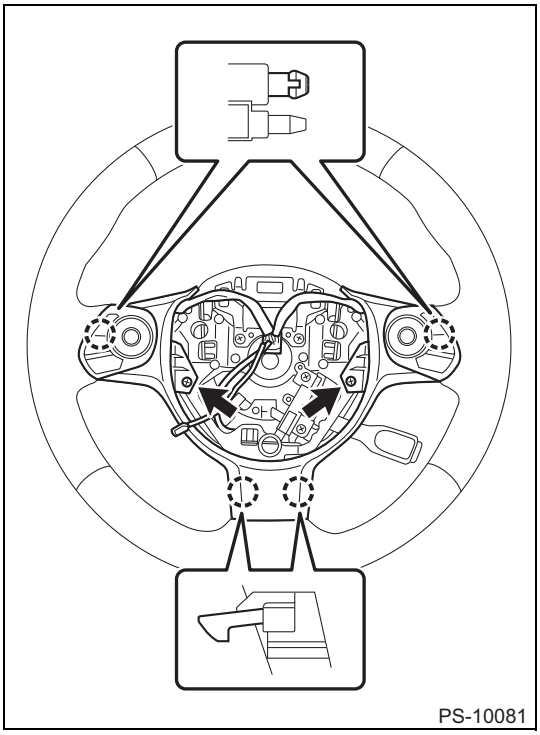
## Removal

1. Handling/working precautions
   WARNING:
   As this maintenance procedure may have an effect on the SRS airbag system, be sure to check the SRS airbag system precautions before commencing work. (Refer to RS - 5)
2. Disconnection of the battery ground terminal
   WARNING:
   As the airbag and pretensioner system is equipped with a backup power supply, if you start work within 60 seconds of disconnecting the battery ground terminal, the airbag may accidentally deploy.
   CAUTION:
   To prevent damage to the moldings, completely wind down both the driver's and passenger's door windows.
3. Removal of the driver's airbag module (Refer to RS - 246)
4. Removal of steering pad switch ASSY



(1) Disconnect the connector from the spiral cable SUB-ASSY.

(2) Release the guide.



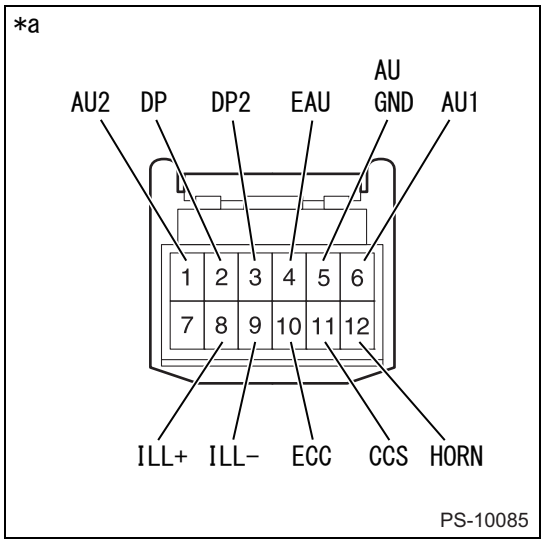
(3) Remove 2 screws.
Standard value:T=1.75N·m {18kgf·cm} {1.3ft·lbf}

(4) Release the 4 tabs and remove the steering pad switch ASSY.

## Installation

1. Installation of steering pad switch ASSY
   (1) Fit in the 4 tabs and install the steering pad switch ASSY.
   (2) Install the two screws.
   (3) Fit in the guide.
   (4) Connect the connector to the spiral cable SUB-ASSY.
2. Installation of the driver's airbag module (Refer to RS - 248)
3. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
4. Inspection of airbag warning light (Refer to RS - 53)

## Unit inspection



1. Inspection of steering pad switch ASSY
   (1) Measurement of the resistance of the steering pad switch ASSY
   (a)Measure the resistance between connector terminals when the steering pad switch ASSY is operated.
   Resistance

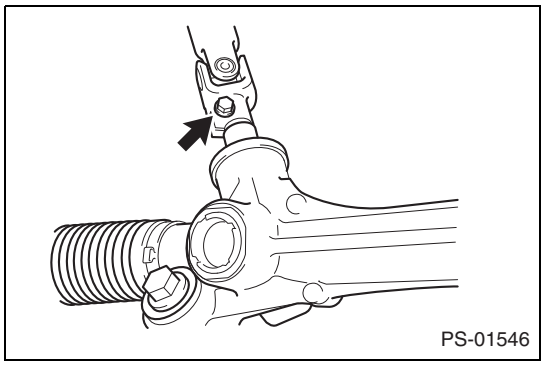
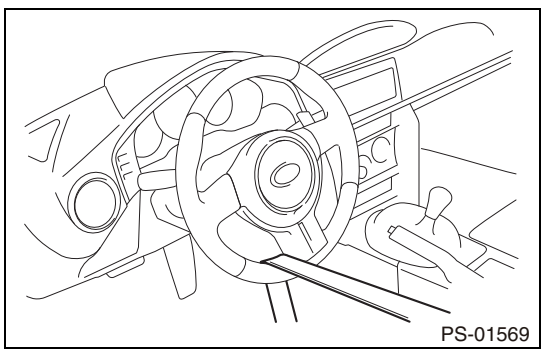
## Removal

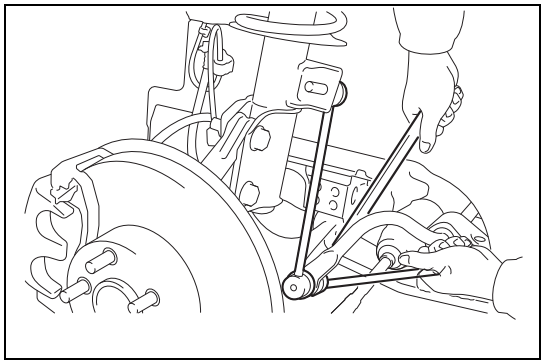
1. Removal of undercover front AL (Refer to IE - 39)
2. Removal of undercover COMPL T/M (Refer to IE - 40)
3. Loosen the steering intermediate shaft ASSY No.2 bolt.
   CAUTION:
   Do not completely remove this bolt at this time.



4. Confirm that the front tires are in the straight-ahead position.



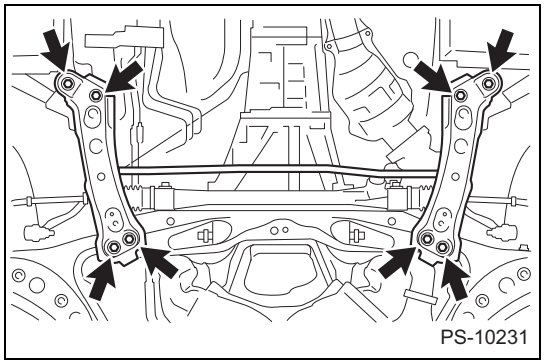
5. Securing the steering wheel ASSY
   (1) To prevent the spiral cable from becoming disconnected, pass the seat belt through the steering wheel ASSY to ensure that it doesn't rotate.
6. Removal of the front tires



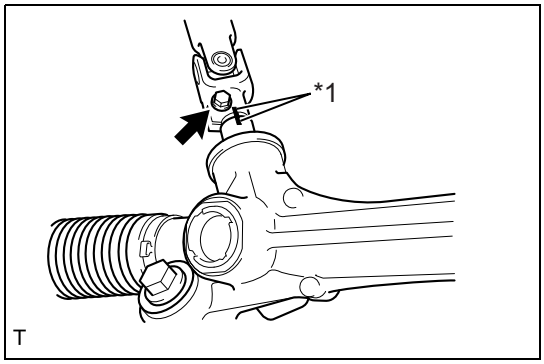
7. Disconnection of the front stabilizer link ASSY LH
   (1) Remove the under cover front side rear LH.
   (2) Secure the stud bolt and remove the nut.
   (3) Disconnect the front stabilizer link ASSY LH from the stabilizer bar FR.

8. Disconnection of the front stabilizer link ASSY RH
   NOTE:
   Service the RH side in the same procedure as the LH side.

9. Removal of flexible draw stiffener ASSY (tS model) (Refer to FP - 32)



10. Removal of the stabilizer bar FR
    (1) Undo the 8 bolts, and remove the stabilizer bar FR as a unit with the subframe COMPL LH and RH from the front suspension cross member.

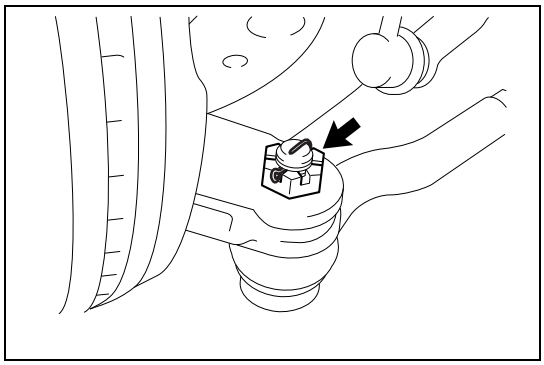


11. Disconnect the steering intermediate shaft ASSY No.2.
    (1) Place an alignment mark across the steering intermediate shaft ASSY No.2 and the steering gear ASSY.

Captions in illustration

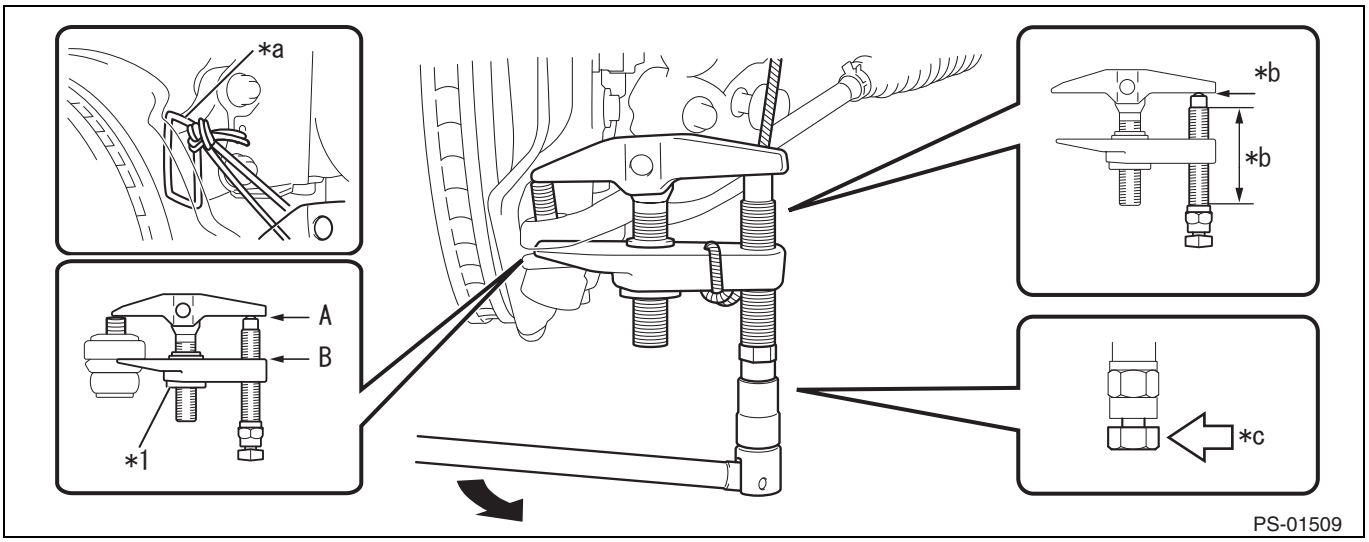
| | |
|---|---|
| *1 | Alignment marks |

    (2) Undo the bolt and disconnect the steering intermediate shaft ASSY No.2 from the steering gear ASSY.



12. Disconnection of the tie-rod end SUB-ASSY LH
    (1) Pull out the cotter pin and remove the castle nut.
    (2) Use a tie-rod ball joint puller to detach the tie-rod end SUB-ASSY LH from the steering knuckle.

SL

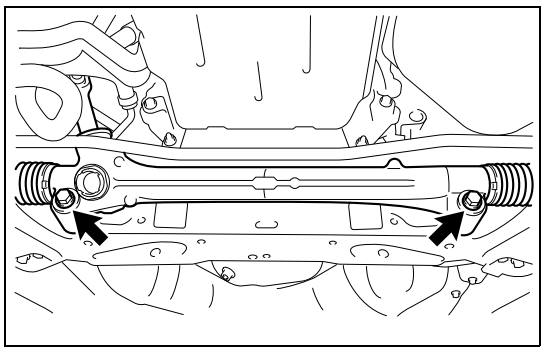


Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Nut | - | - |
| *a | Tie the string to reduce slack. | *b | Lubricant coating area. |
| *c | The wrench is used here. | - | - |

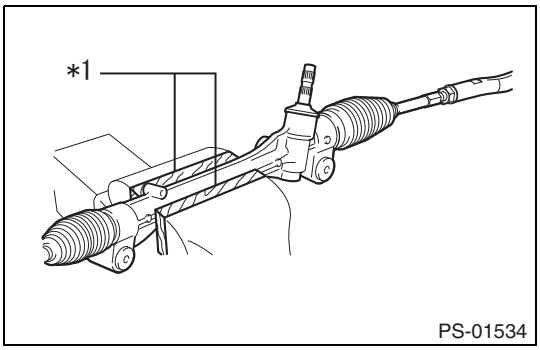
WARNING:
Apply lubricant to the bolt tip and the threaded area of the tie-rod ball joint puller.
CAUTION:
- To prevent the tie-rod ball joint puller from falling off, be sure to tie the string to the steering knuckle so that there is no slack.
- To prevent damage to the dust cover, at the center part nut, attach the tie-rod ball joint puller while ensuring that A and B are parallel.
- Be sure to use the wrench in the position shown in the diagram.
- Be careful not to damage the tie-rod end SUB-ASSY LH ball joint boot.
- Be careful not to damage the steering knuckle.
- Be careful not to damage the disc brake dust cover FR.

13. Disconnection of the tie-rod end SUB-ASSY RH
    NOTE:
    Service the RH side in the same procedure as the LH side.



14. Removal of the steering gear ASSY
    (1) Undo the 2 bolts and remove the steering gear ASSY.

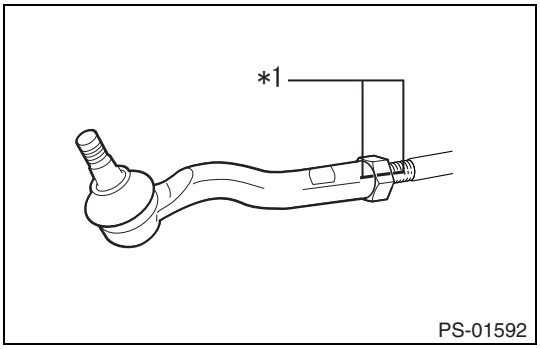
## Disassembly



1. Securing the steering gear ASSY
   (1) Using wooden blocks, secure the steering gear ASSY in a vise.

Captions in illustration

| | |
|---|---|
| *1 | Wooden block |



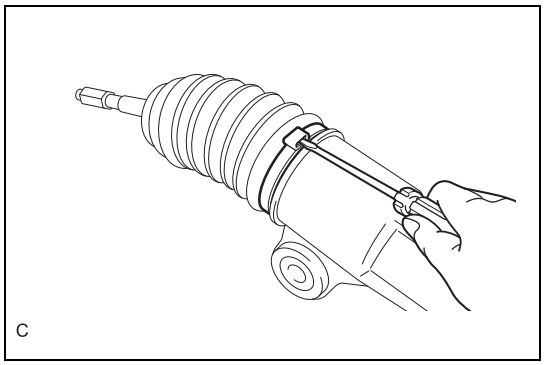
2. Removal of the tie-rod end SUB-ASSY LH
   (1) Place an alignment mark across the tie-rod end SUB-ASSY LH and the tie-rod.

Captions in illustration

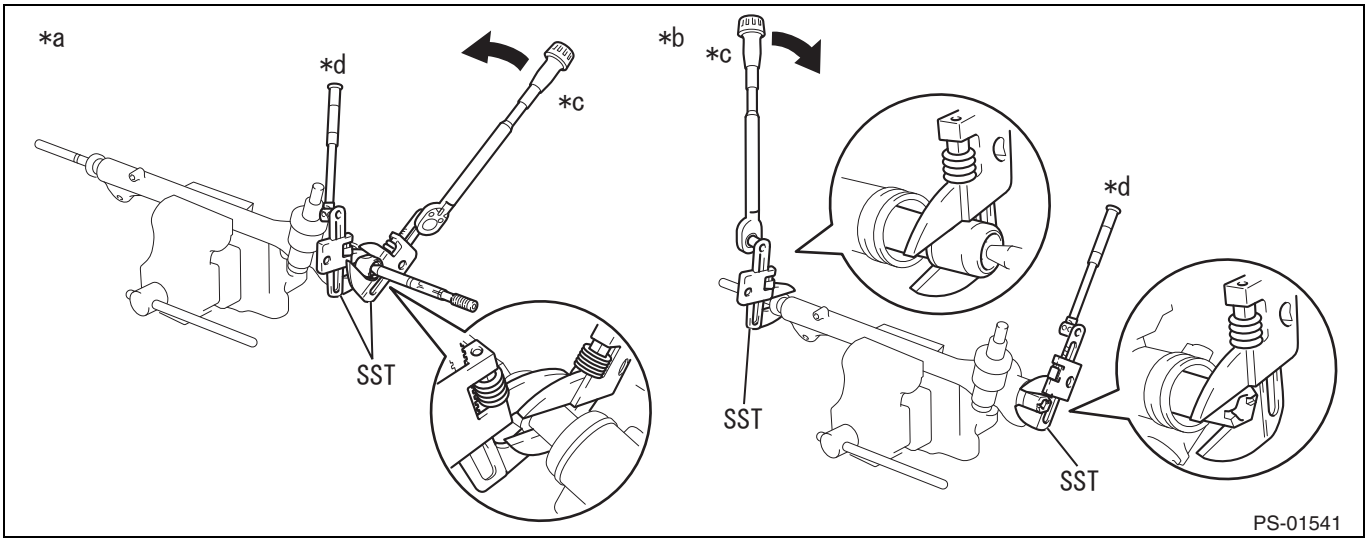
| | |
|---|---|
| *1 | Alignment marks |

   (2) Removal of the tie-rod end SUB-ASSY LH and lock nut

3. Remove the tie-rod end SUB-ASSY RH.
   NOTE:
   Service the RH side in the same procedure as the LH side.
4. Removal of the steering rack boot clip (LH side installation position)
   (1) Use pliers to remove the steering rack boot clip.
5. Removal of the steering rack boot clip (RH side installation position)
   NOTE:
   Service the RH side in the same procedure as the LH side.



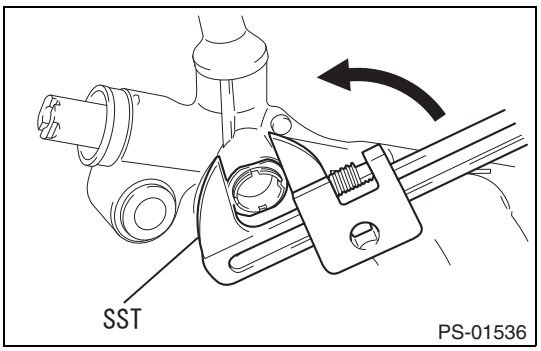
6. Removal of the steering rack boot clamp No.1 (LH side installation position)
   (1) Use a flat tip screwdriver to open up the steering rack boot clamp No.1 crimping.
   CAUTION:
   - Be careful not to damage the steering rack boot No.1.
   - Replace the steering rack boot No.1 with a new part of you find any cracks, damage, or deterioration.
7. Removal of the steering rack boot clamp No.1 (RH side installation position)
   NOTE:
   Service the RH side in the same procedure as the LH side.
8. Removal of the steering rack boot No.1 (LH side installation position)
   (1) Remove the steering rack boot No.1 from the rack housing.
9. Removal of the steering rack boot No.1 (RH side installation position)
   NOTE:
   Service the RH side in the same procedure as the LH side.
10. Remove the tie-rod.
    (1) Use 2 SSTs to remove the tie-rod on the RH side.
    SST 09922-10010
    CAUTION:
    Be sure to only use SSTs in the correct direction.



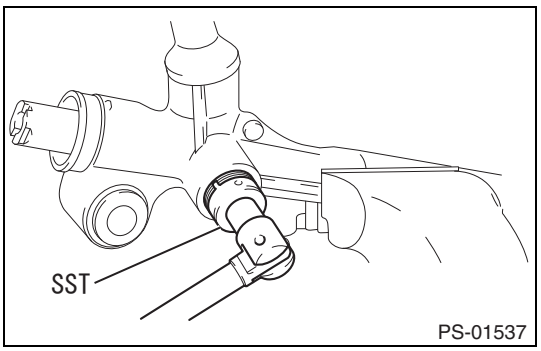
Captions in illustration

| | | | |
|---|---|---|---|
| *a | LH side | *b | RH side |
| *c | Drive | *d | Hold |

(2) Use one SST to secure the steering on the rack RH side. Use the other SST to remove the tie-rod on the LH side.
SST 09922-10010
CAUTION:
Be sure to only use SSTs in the correct direction.



11. Remove the steering rack guide spring.
(1) Use a SST to remove the lock nut.
SST 09922-10010
CAUTION:
Be sure to only use SSTs in the correct direction.



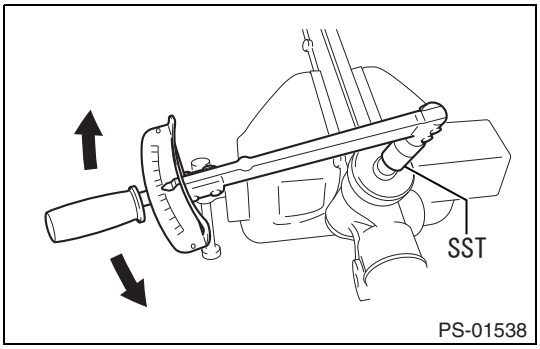
(2) Use a SST to remove the steering rack guide spring cap.
SST 34299CA000
(3) Remove the steering rack guide spring.
NOTE:
As the steering rack guide is a non-disassembly part, the disassembly stops here.

## Inspection

1. Inspect the tie-rod end SUB-ASSY LH.
(1) Secure the tie-rod ASSY LH ball joint part in a vise between aluminium plates.
CAUTION:
Do not close the vise too strongly.
(2) Swing and rotate the ball joint.
Criteria: There is no abnormal sticking or looseness during swing and rotation.
NOTE:
- If the criteria is not satisfied, replace the tie-rod end SUB-ASSY LH with a new part.

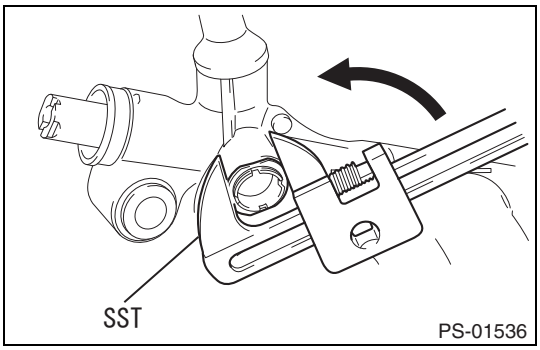
- If you notice any dust seal cracks, damage, or deterioration, replace the tie-rod end SUB-ASSY LH with a new part.

2. Inspect the tie-rod end SUB-ASSY RH.
   NOTE:
   Service the RH side in the same procedure as the LH side.
3. Inspection of the total preload
   (1) To prevent steering rack overstroke, temporarily fit the left and right tie-rods.

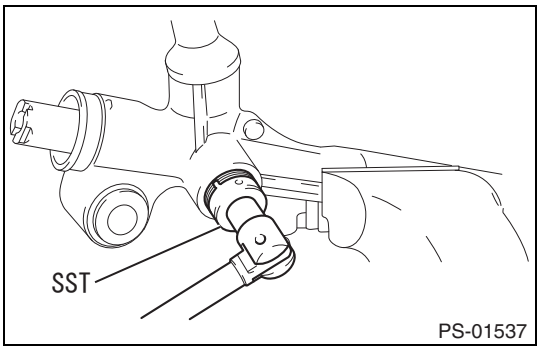


(2) Use a SST to rotate the pinion shaft at a rate of 1 revolution every 3 to 5 seconds, and check steering gear ASSY total preload.
SST 09616-00011
Standard value:T=0.9 - 1.6N·m {9.2 - 16.3kgf·cm} {0.66 - 1.18 ft·lbf} (While rotating)
CAUTION:
- Perform the check at the steering rack neutral position.
- Be careful not to move the steering rack the full stroke.

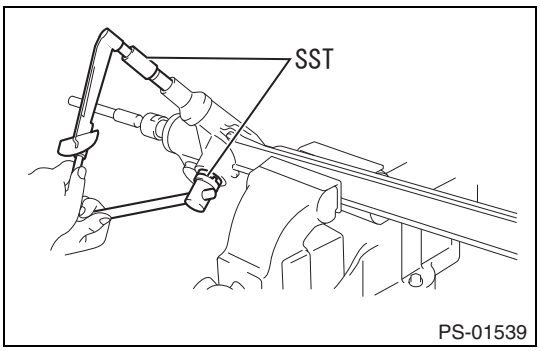
NOTE:
If it is not within the specified value, adjust the total preload.



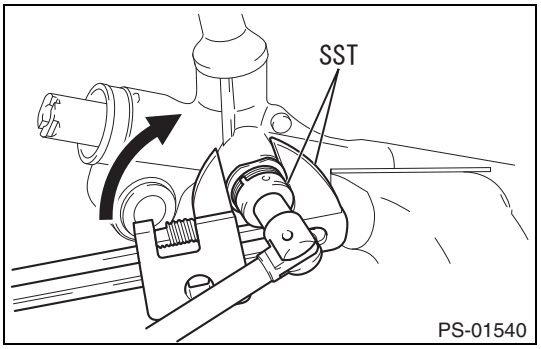
4. Adjustment of the total preload
   (1) Use a SST to remove the lock nut.
   SST 09922-10010
   CAUTION:
   Be sure to only use SSTs in the correct direction.



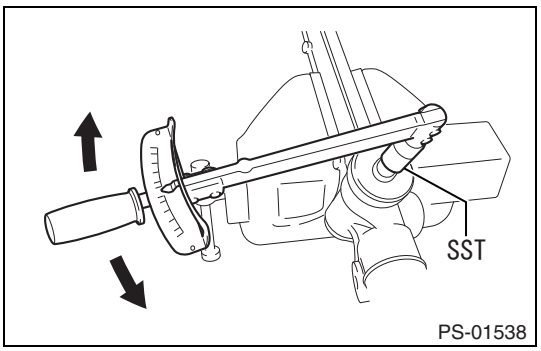
(2) Use a SST to remove the steering rack guide spring cap.
SST 34299CA000
(3) Clean the threaded portion of the steering rack housing and the steering rack guide spring cap, and remove any oil with proper detergent.
(4) Apply Three Bond 1141G, Three Bond 1102 or the equivalent to the threaded portion of the steering rack guide spring cap, and temporarily tighten it.



(5) In order to ensure that the rotational torque of the pinion shaft is at the specified value, tighten the steering rack guide spring cap, using the SST.
SST 09616-00011, 34299CA000
Standard value:T=0.9 - 1.6N·m {9.2 - 16.3kgf·cm} {0.66 - 1.18 ft·lbf} (While rotating)
(6) Clean the threaded portion of the lock nut and remove any oil with proper detergent.
(7) Apply Three Bond 1141G, Three Bond 1102 or the equivalent to the threaded portion of the lock nut.



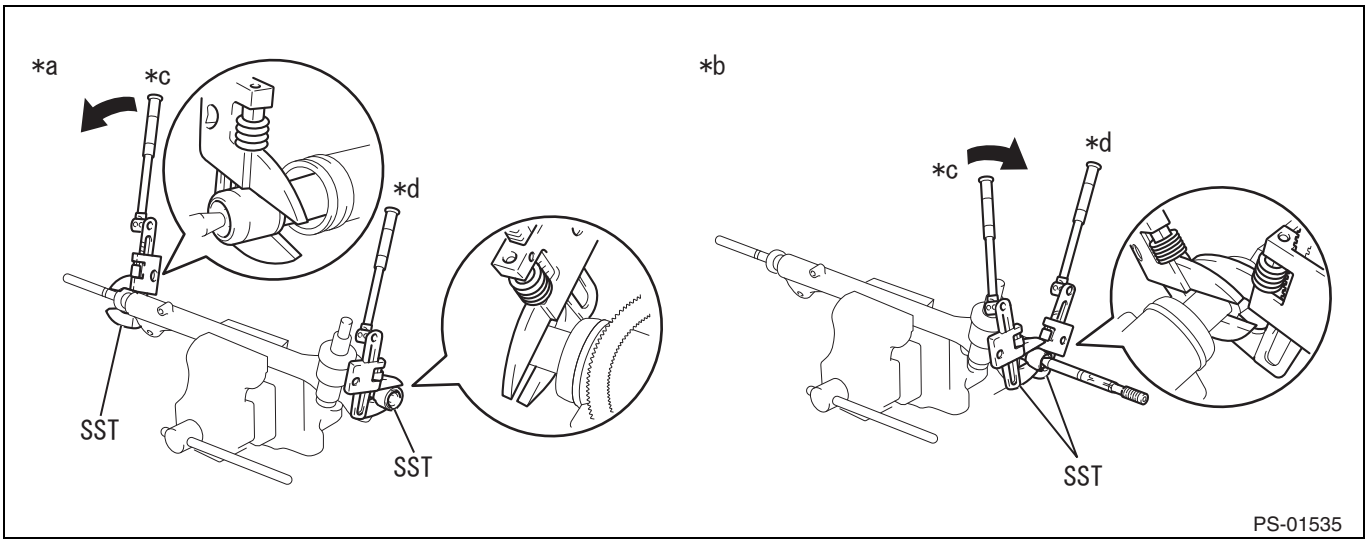
(8) Secure the steering guide spring cap and tighten the lock nut with a SST.
SST 09922-10010, 34299CA000
Standard value:T=60N·m {612kgf·cm} {44.3ft·lbf}
CAUTION:
- When you connect a torque wrench to the SST and tighten it while it is extended the total length, continuing until the torque wrench reading reaches the prescribed value will result in the actual tightening torque being larger than desired. (Refer to IN - 6)
- Be sure to only use SSTs in the correct direction.



(9) Use a SST to rotate the pinion shaft at a rate of 1 revolution every 3 to 5 seconds, and check steering gear ASSY total preload.
SST 09616-00011
Standard value:T=0.9 - 1.6N·m {9.2 - 16.3kgf·cm} {0.66 - 1.18 ft·lbf} (While rotating)
CAUTION:
- Perform the check at the steering rack neutral position.
- Be careful not to move the steering rack the full stroke.
- After the inspection is completed, set it back to the neutral position.

## Assembly

1. Install the steering rack guide spring
   (1) Apply Multemp AC-P grease or the equivalent to the rear surface of the steering rack guide and steering rack guide spring.
   (2) Install the steering rack guide spring onto the steering rack housing.
   (3) Clean the threaded portion of the steering rack housing and the steering rack guide spring cap, and remove any oil with proper detergent.
   (4) Apply Three Bond 1141G, Three Bond 1102 or the equivalent to the threaded portion of the steering rack guide spring cap, and temporarily tighten it.
2. Adjustment of the total preload (Refer to SL - 11)
3. Install the tie-rod
   (1) Use one SST to secure the steering rack on the RH side. Use the other SST to install the tie-rod (LH side).
   SST 09922-10010



Captions in illustration

| | | | |
|---|---|---|---|
| *a | RH side | *b | LH side |
| *c | Drive | *d | Hold |

Standard value:T=103N·m {1050kgf·cm} {76.0ft·lbf}

CAUTION:

- When you connect a torque wrench to the SST and tighten it while it is extended the total length, continuing until the torque wrench reading reaches the prescribed value will result in the actual tightening torque being larger than desired. (Refer to IN - 6)
- Be sure to only use SSTs in the correct direction.
- Firmly secure the steering rack.

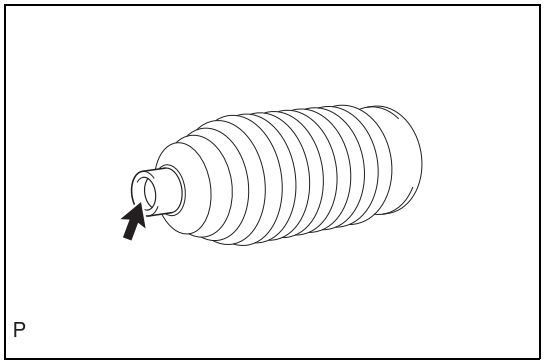
(2) Use 2 SSTs to install the tie-rod (RH side).

SST 09922-10010

Standard value:T=103N·m {1050kgf·cm} {76.0ft·lbf}

CAUTION:

- When you connect a torque wrench to the SST and tighten it while it is extended the total length, continuing until the torque wrench reading reaches the prescribed value will result in the actual tightening torque being larger than desired. (Refer to IN - 6)
- Be sure to only use SSTs in the correct direction.
- Firmly secure the steering rack.



4. Install the steering rack boot No.1 (LH side installation position).
   (1) Apply Toshiba silicon TSM650, Idemitsu Autorex A or the equivalent to the inside of the smaller opening of the steering rack boot No.1.

Captions in illustration

| | |
|---|---|
| ➡ | Toshiba silicone TSM650, Idemitsu Autorex A or equivalent |

   (2) Install the steering rack boot No. 1 into the groove in the rack housing.

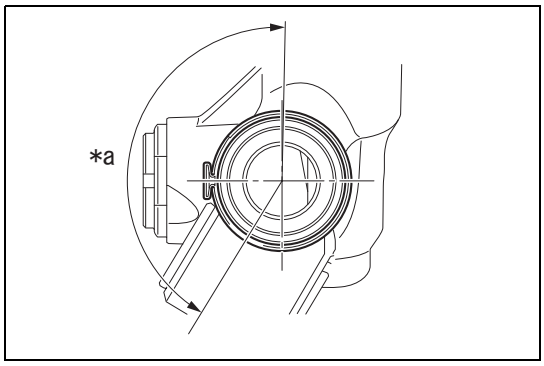
   CAUTION:

   - Be careful not to deform the steering rack boot clamp.
   - Confirm that there are no foreign objects or rust.
   - Replace the steering rack boot No.1 with a new part of you find any cracks, damage, or deterioration.
   - For the steering rack boot NO.1, mount the smaller opening side to the tie rod groove first, and then mount the larger opening side to the rack housing groove.

5. Installation of the steering rack boot No.1 (RH side installation position)

   NOTE:

   Perform the same installation procedure on the RH side as with the LH side.



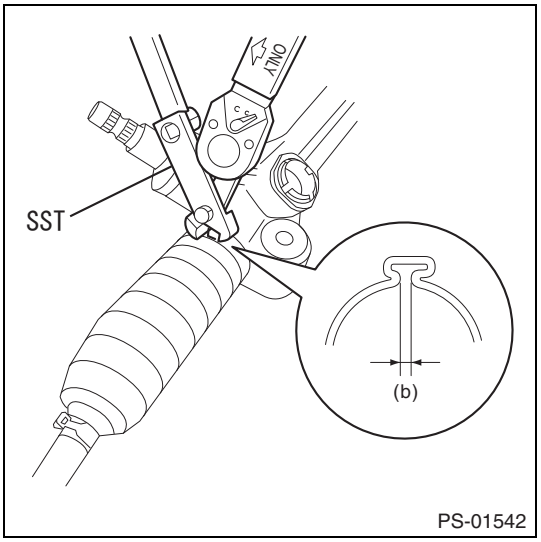
6. Installation of the steering rack boot clamp No.1 (LH side installation position).
   (1) Install a new steering rack boot clamp No.1 onto the area shown in the diagram of steering rack boot No.1.

   CAUTION:

   Be careful not to damage the steering rack boot No.1.

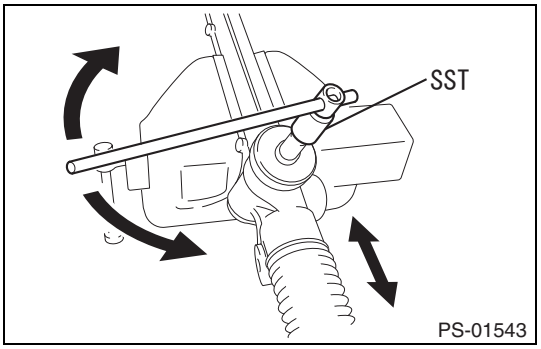
Captions in illustration

| | |
|---|---|
| *a | 150° |

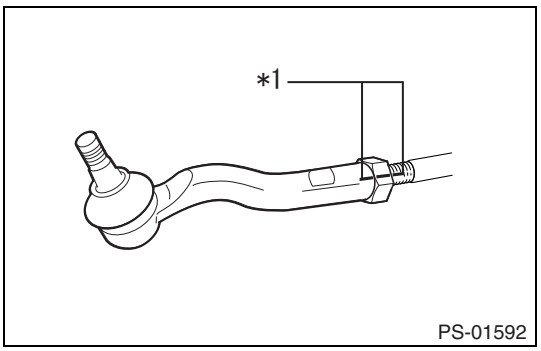


(2) Press and attach a SST onto the rack housing side and crimp it so that the steering rack boot clamp gap is at the specified value.
SST 28099AC000
Standard value: 2.0 mm {0.079 in} or less
CAUTION:
Confirm that the steering rack boot No.1 is not twisted.

7. Install the steering rack boot clamp No.1 (RH side installation position).
NOTE:
Perform the same installation procedure on the RH side as with the LH side.
8. Install the steering rack boot clip (LH side installation position).
(1) Use pliers to install the steering rack boot clip onto the steering rack boot No.1.
9. Install the steering rack boot clip (RH side installation position).
NOTE:
Perform the same installation procedure on the RH side as with the LH side.



10. Inspection of the steering gear ASSY
(1) Use a SST to rotate the pinion and confirm that the steering rack boot expands and contracts smoothly.
SST 09616-00011
CAUTION:
After the inspection is completed, set it back to the neutral position.



11. Installation of the tie-rod end SUB-ASSY LH
(1) Install the lock nut and tie-rod end SUB-ASSY LH up to the alignment mark position, and temporarily tighten the lock nut.

Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |

NOTE:
Perform the final tightening after toe-in adjustment has been completed.
Standard value:Temporary tightening
T=5.0N·m {51kgf·cm} {3.69ft·lbf}
Final tightening
T=85N·m {867kgf·cm} {62.7ft·lbf}

12. Installation of the tie-rod end SUB-ASSY RH
NOTE:
Perform the same installation procedure on the RH side as with the LH side.

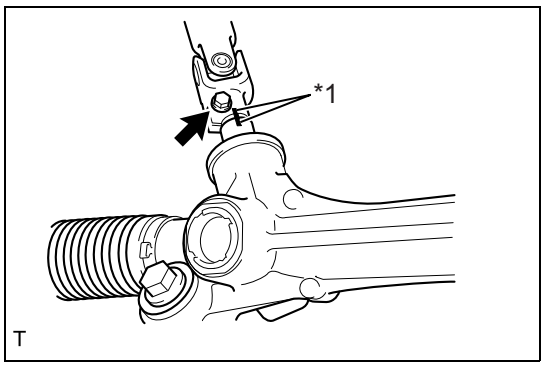
## Installation

1. Installation of the steering gear ASSY
(1) Install the steering gear ASSY onto the front suspension cross member with the 2 bolts.

Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

CAUTION:

Perform this installation after confirming that the stroke is at the central position.



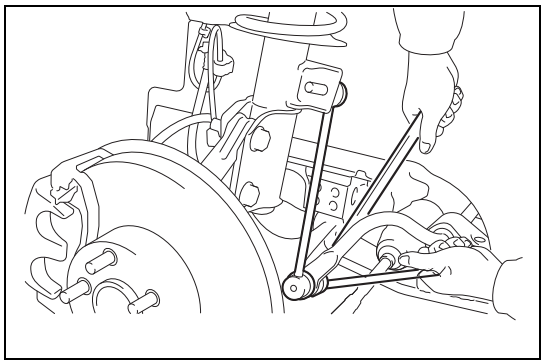
2. Connection of the steering intermediate shaft ASSY No.2
   (1) Line up the alignment marks and connect the steering intermediate shaft ASSY No.2 to the steering gear ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |

   (2) Attach a new bolt.
   Standard value:T=35N·m {357kgf·cm} {25.8ft·lbf}

3. Connection of the tie-rod end SUB-ASSY LH
   (1) Connect the tie-rod end SUB-ASSY LH to the steering knuckle, and attach the castle nut.
   Standard value:T=27N·m {275kgf·cm} {19.9ft·lbf}
   CAUTION:
   After tightening the castle nut, ensure that the cotter pin slot is aligned within 60° in the tightening direction.
   (2) Insert a new cotter pin.
4. Connection of the tie-rod end SUB-ASSY RH
   NOTE:
   Perform the same installation procedure on the RH side as with the LH side.
5. Installation of the stabilizer bar FR.
   (1) Using 8 new bolts, install the stabilizer bar FR as a unit with the subframe COMPL LH and RH to the front suspension cross member.
   Standard value:T=60N·m {612kgf·cm} {44.3ft·lbf}
6. Installation of flexible draw stiffener ASSY (tS model) (Refer to FP - 33)



7. Connection of the front stabilizer link ASSY LH.
   (1) Connect the front stabilizer link ASSY LH to the stabilizer bar FR.
   (2) Secure the stud bolt and fasten new nut.
   Standard value:T=46N·m {469kgf·cm} {33.9ft·lbf}
   (3) Install the under cover front side rear LH.
8. Connection the front stabilizer link ASSY RH.
   NOTE:
   Service the RH side in the same procedure as the LH side.
9. Installation of undercover COMPL T/M (Refer to IE - 46)
10. Installation of front AL (Refer to IE - 46)
11. Installation of the front tires
    Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}
12. Set down the vehicle.
13. Adjust the front wheel alignment (Refer to AL - 2)
14. VDC sensor mid point setting (Refer to BC - 15)
15. Settings during replacement and removal/installation of the parts (Refer to IN - 10)

## Check of radio operation

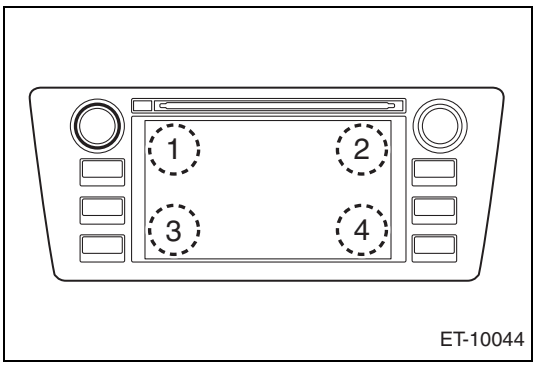
1. SUBARU STARLINK connection ID display
   (1) Turn the ignition switch to ACC.
   (2) Press the HOME button to display the {HOME} screen.
   (3) Touch the {SETTINGS} item to display the {SETTINGS} screen.

(4) Touch the {Settings General} item to display the {Settings General} screen.
(5) Touch the {Version} item of {System Software}.
(6) Check the serial number (8 digits).

2. Displaying of software version
(1) Perform the same procedures as for the SUBARU STARLINK connection ID.
(2) Check the Software Ver.

## Inspection of radio function

1. Connections inspection
(1) Display the diagnostic mode.
(a) Turn the ignition switch to ACC.
(b) Press the VOLUME button to display the audio off screen.



(c) With the audio off, touch the screen in order 1 to 4.
(d) Display the {Line Diag} screen.

NOTE:
You can cancel diagnostic mode by pressing the VOLUME button or turning the ignition switch from OFF to ACC.

(2) Check the connection status by using the {Connectivity Check} item of the {Line Diag} screen.
OK: All connected devices are properly connected.
NG: A device is not connected or there is a fault in the connection status.
NOTE:
Check the external connection terminals (USB and AUX) by connecting a memory or pin jack for checking, and check the connections.
(3) Inspect the connection status of connectors, and if there are no problems found, it is probable that a connected device or the main unit is defective.

2. Inspection of vehicle signals
(1) Display the diagnostic mode in the same manner as when inspecting connections.
(2) Check the connection status by using the {Vehicle Signal Check} item of the {Line Diag} screen.
(a) Illumination inspection
NOTE:
Turn the ignition switch to ON before starting the inspection.
1. Turn the headlight dimmer switch to the parking position.
Check that the light control rheostat does not turn ON at this time.
2. Check that {OK} of the ILL+ item is lit up and the screen goes dark.
OK: Normal
NG: Fault Inspect the signal wire connectors, and if there are no problems found, it is probable that the main unit is defective.

(b) Inspection of the speed sensor
NOTE:
- Check that the area around the vehicle is safe before starting the inspection.
- It is helpful to lift up the vehicle.
- Clear the memory if any diagnostic codes are input into the VDC CM.

1. Drive the vehicle at a speed of 8 km/h (5 mph) or more.
2. Check that {OK} is displayed for the SPD item.
OK: Normal

NG: Speed was less than 8 km/h (5 mph) or the signal line is faulty. Inspect the signal wire connectors, and if there are no problems found, it is probable that the main unit is defective.

(c) Inspection of parking brake signal

1. Pull the parking brake lever.
2. Check that {OK} is displayed for the PKB item.
   OK: Normal
   NG: Fault Inspect the signal wire connectors, and if there are no problems found, it is probable that the main unit is defective.

(d) Inspection of the back sensor

NOTE:

Check that the area behind the vehicle is safe before starting the inspection. Turn the ignition switch to ON.

1. With the parking break lever pulled and the brake pedal depressed, move the select or gearshift lever to reverse.
2. Check that {OK} is displayed for the REV item.
   OK: Normal
   NG: Fault Inspect the signal wire connectors, and if there are no problems found, it is probable that the main unit is defective.

## Inspection of navigation function

1. Connections inspection
   (1) Display the Line Diag mode.
   (a) Turn the ignition switch to ACC.
   (b) While pressing the home button, press the TUNE/SCROLL button twice.
   (c) Display the {Line Diag} screen.
   NOTE:
   You can cancel the Line Diag mode by pressing the home button for 3 seconds or more, or turning the ignition switch OFF →ACC.
   (2) Check the connection status by using the {Connection} item of the {Line Diag} screen.

| Item | Contents | Inspection |
|---|---|---|
| GPS | GPS antenna connection | Check that the display indicates OK. (Model with GPS antenna only) |
| MIC | MIC connection | Check that the map light illuminates, and the display indicates OK. |
| Rr CAM | Rr CAM Video connection | Check that the display indicates OK. |
| USB1.2 | USB connection | Connect the memory for check to the USB terminal (either terminal is OK), and check that "USB1" indicates OK. |
| SXM | SXM connection | Check that the display indicates OK. |

2. Inspection of vehicle signals
   (1) Display Line Diag in the same manner as when inspecting connections.
   (2) Check the connection status by using the {Vehicle Signal Check} item of the {Line Diag} screen.

| Item | Contents | Inspection |
|---|---|---|
| Batt Volt | Battery voltage | Check that the battery voltage is displayed. |
| IG | IGN signal | Check that the display indicates ON. |
| PKB | Parking brake signal | Pull the parking brake lever, and check that the display indicates ON. |
| REV | Reverse signal | Move the select lever or gearshift lever to reverse, and check that the display indicates ON. |
| Bright | Bright signal | Turn the bright switch to ON, and check that the display shows ON. |
| Speed | Speed pulse signal | Enter the vehicle speed, and check that the display indicates ON. |
| ILL+ | Illumination signal | Turn the lighting switch to ON, and check that the display indicates ON. |

3. Check of speaker output and antenna connection
   (1) Display the Line Diag mode in the same manner as when inspecting connections.
   (2) Check the speaker output and the antenna connection by using the {Audio Check} item of the {Line Diag} screen.

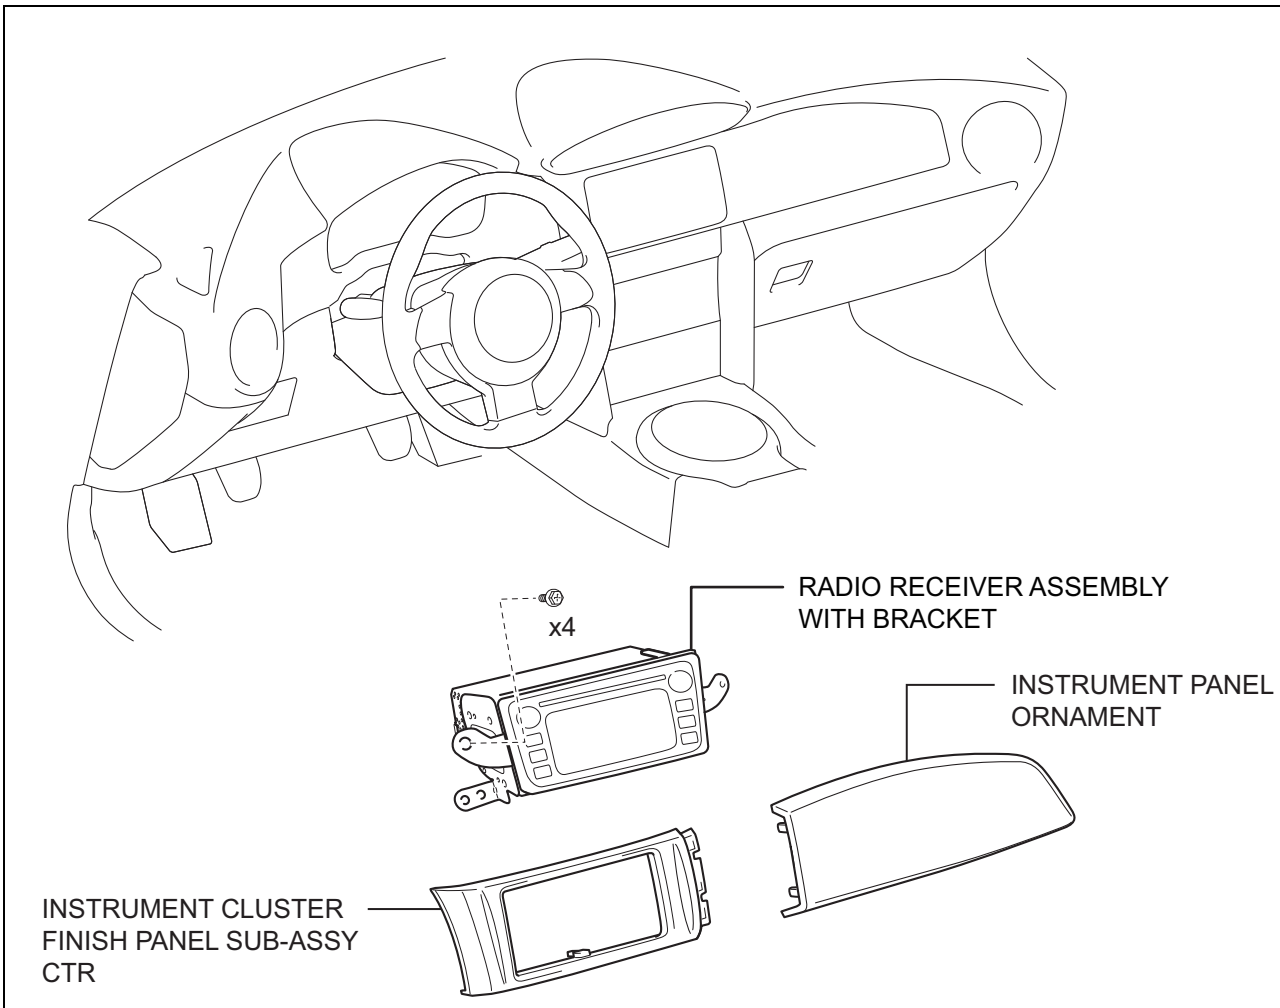
| Item | Contents | Inspection |
|---|---|---|
| MODE | Switching of radio band | Check that the radio band (AM/FM) can be switched. |
| Seek Up/Down | Seek Up/Down operation | Check that the SEEK Up/Down is adjustable. |
| Speaker Check | Speaker check operation | Sounds for 0.5 seconds each in the order of front right →tweeter right →tweeter left →front left →rear left →rear right. |

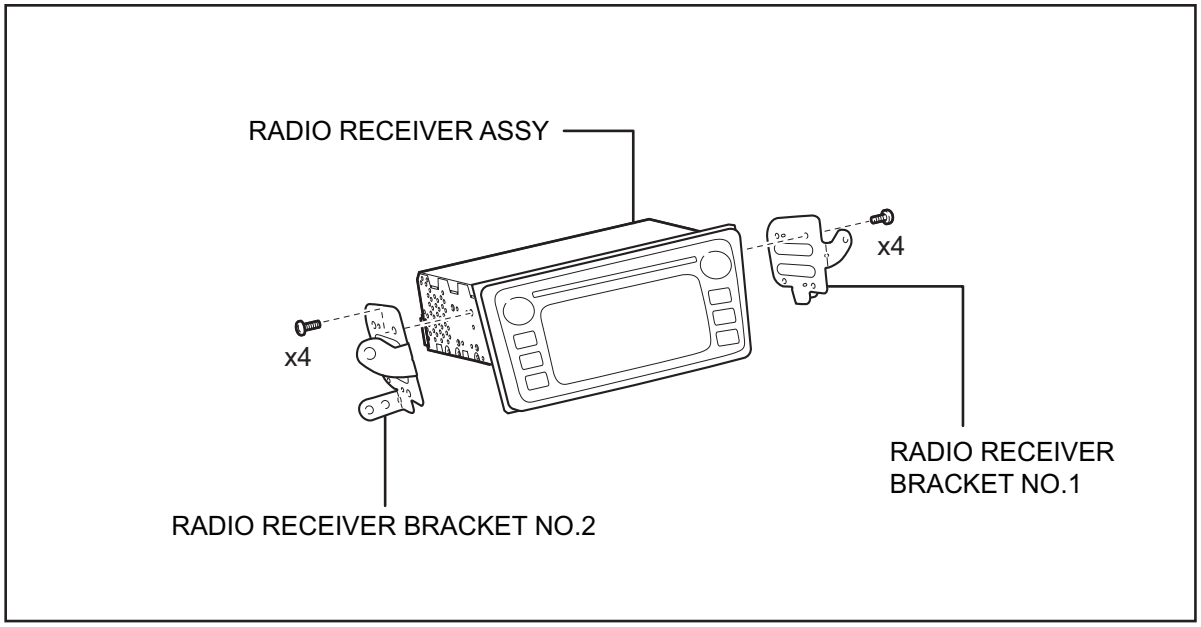
NOTE:
The volume during the speaker check sounds at the maximum.

4. Microphone check
   (1) Display the Line Diag mode in the same manner as when inspecting connections.
   (2) Check that the microphone input level changes according to sounds and voices by using the {Microphone} item of the {Line Diag} screen.

# Radio receiver ASSY

## Parts location



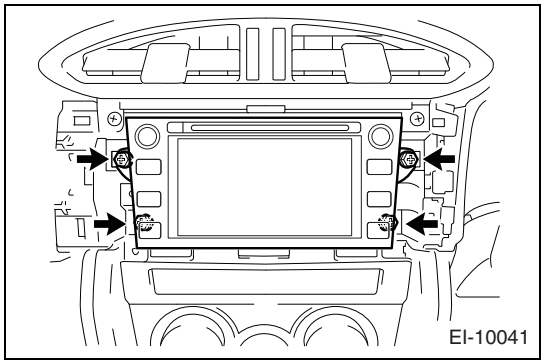


ET-10809

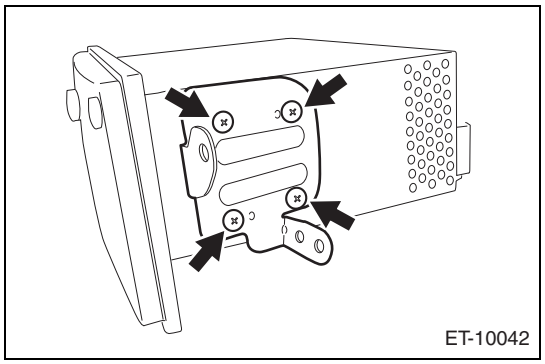
## Removal

1. Disconnection of the battery ground terminal (Refer to IN - 6)

2. Removal of the instrument panel ornament (Refer to IT - 22)
3. Removal of the instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)



4. Removal of the radio receiver ASSY
   (1) Undo the 4 bolts and pull out the radio receiver ASSY toward the rear of the vehicle.
   (2) Disconnect each connector and remove the radio receiver ASSY.



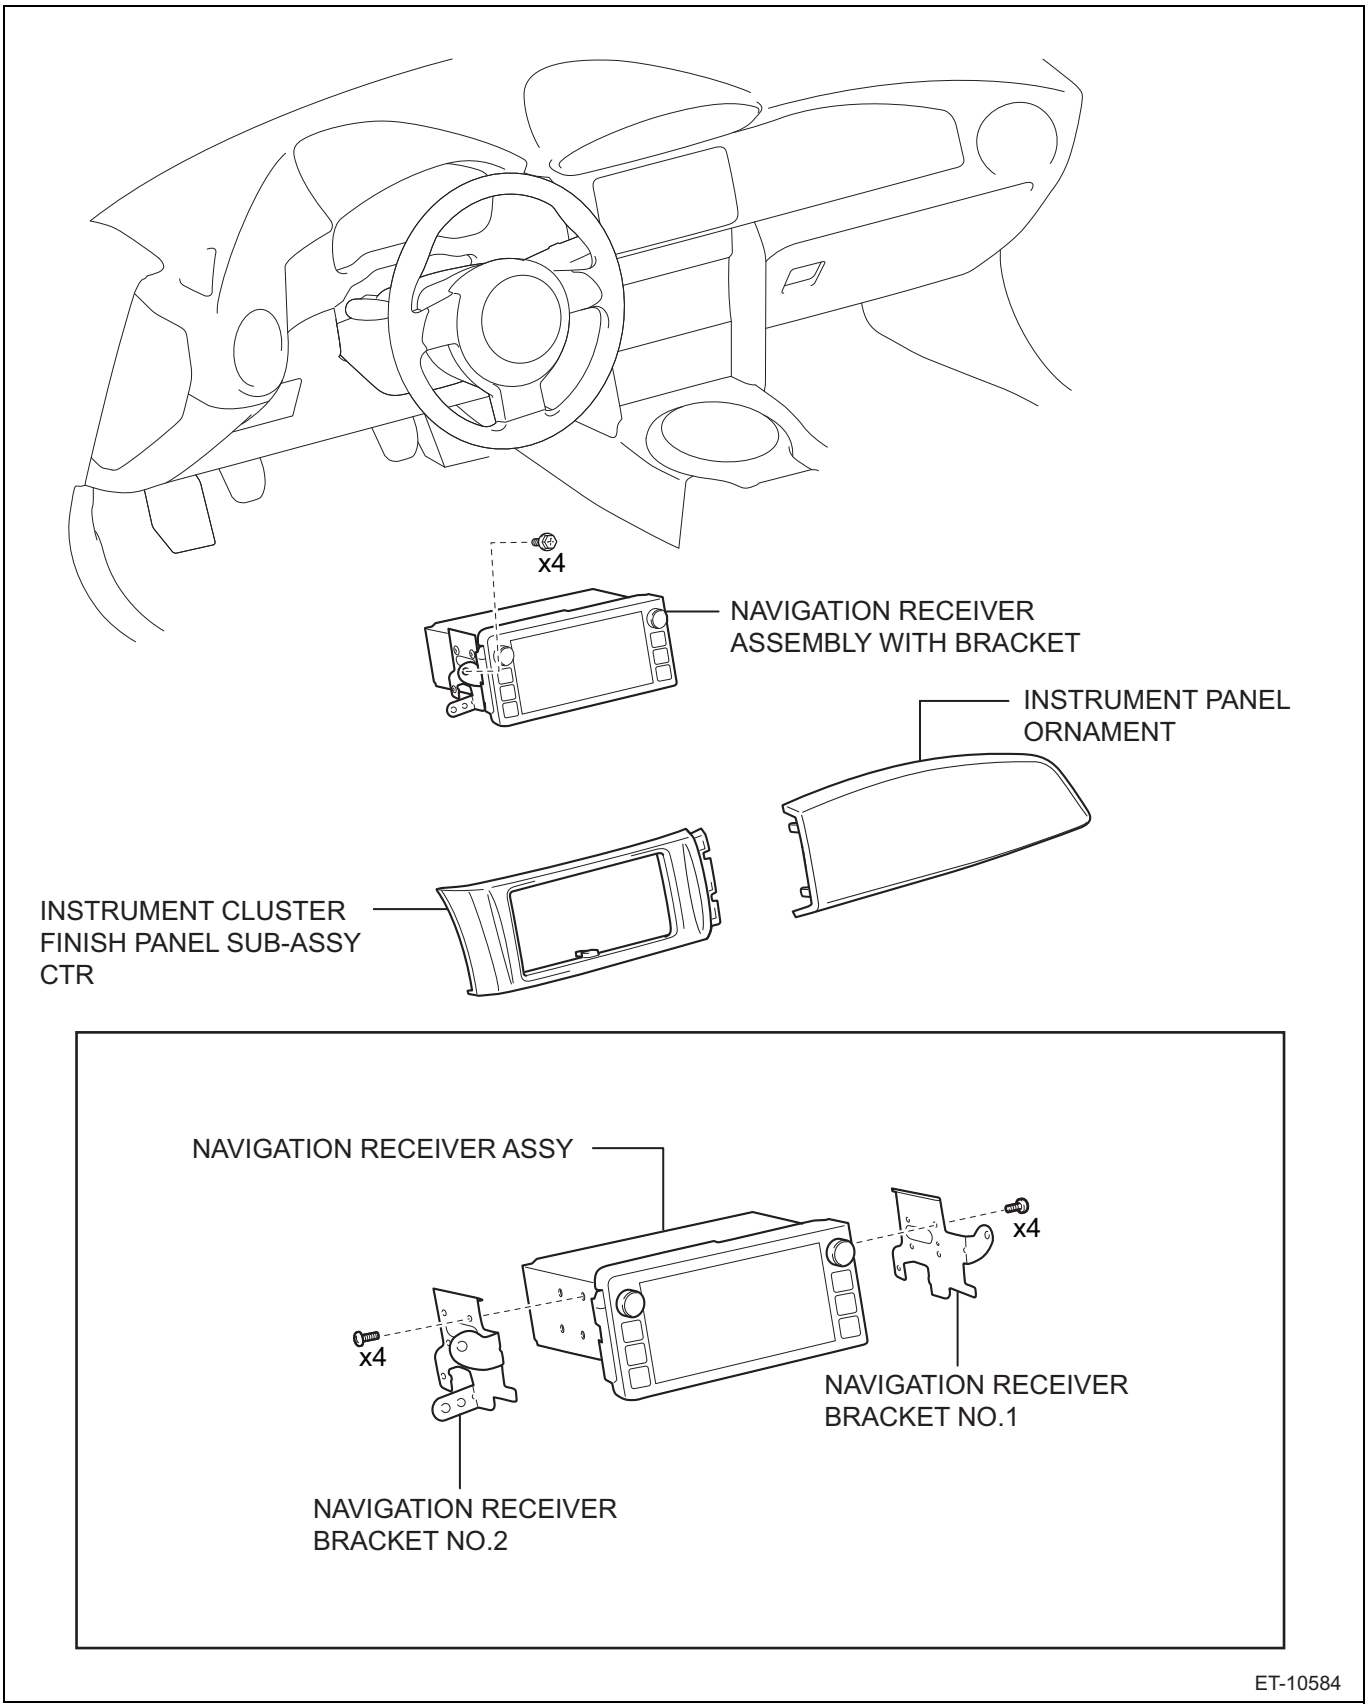
5. Removal of the radio receiver bracket No.1
   (1) Undo the 4 screws and remove the radio receiver bracket No.1 from the radio ASSY.
6. Removal of the radio receiver bracket No.2
   NOTE:
   Perform the same procedure as with the radio receiver bracket No.1.

## Installation

1. Installation of the radio receiver bracket No.1
   (1) Install the radio receiver bracket No.1 onto the radio receiver ASSY and fasten the 4 screws.
2. Installation of the radio receiver bracket No.2
   NOTE:
   Perform the same procedure as with the radio receiver bracket No.1.
3. Installation of the radio receiver ASSY
   (1) Connect each connector.
   (2) Install the radio receiver ASSY in place with the 4 bolts.
4. Installation of the instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
5. Installation of the instrument panel ornament (Refer to IT - 29)
6. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
7. Settings when removing/installing battery terminals (Refer to IN - 10)

# Navigation receiver ASSY

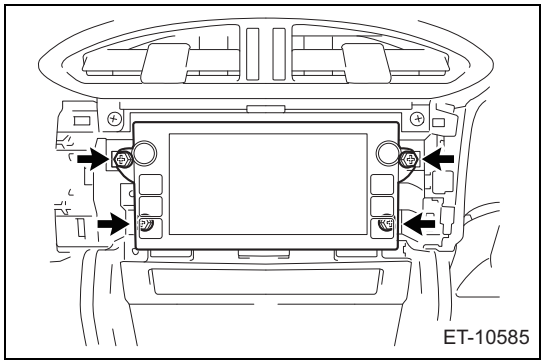
## Parts location



## Removal

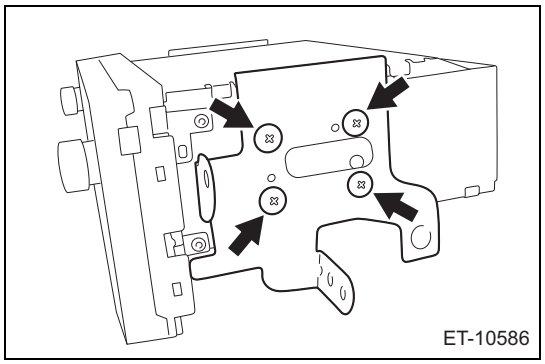
1. Disconnection of the battery ground terminal (Refer to IN - 6)

2. Removal of instrument panel ornament (Refer to IT - 22)
3. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)



4. Removal of navigation receiver ASSY
   (1) Remove the 4 bolts and pull out the navigation receiver ASSY toward the rear of the vehicle.
   (2) Disconnect each connector and remove the navigation receiver ASSY.

5. Removal of AUX unit ASSY (Refer to AV - 35)



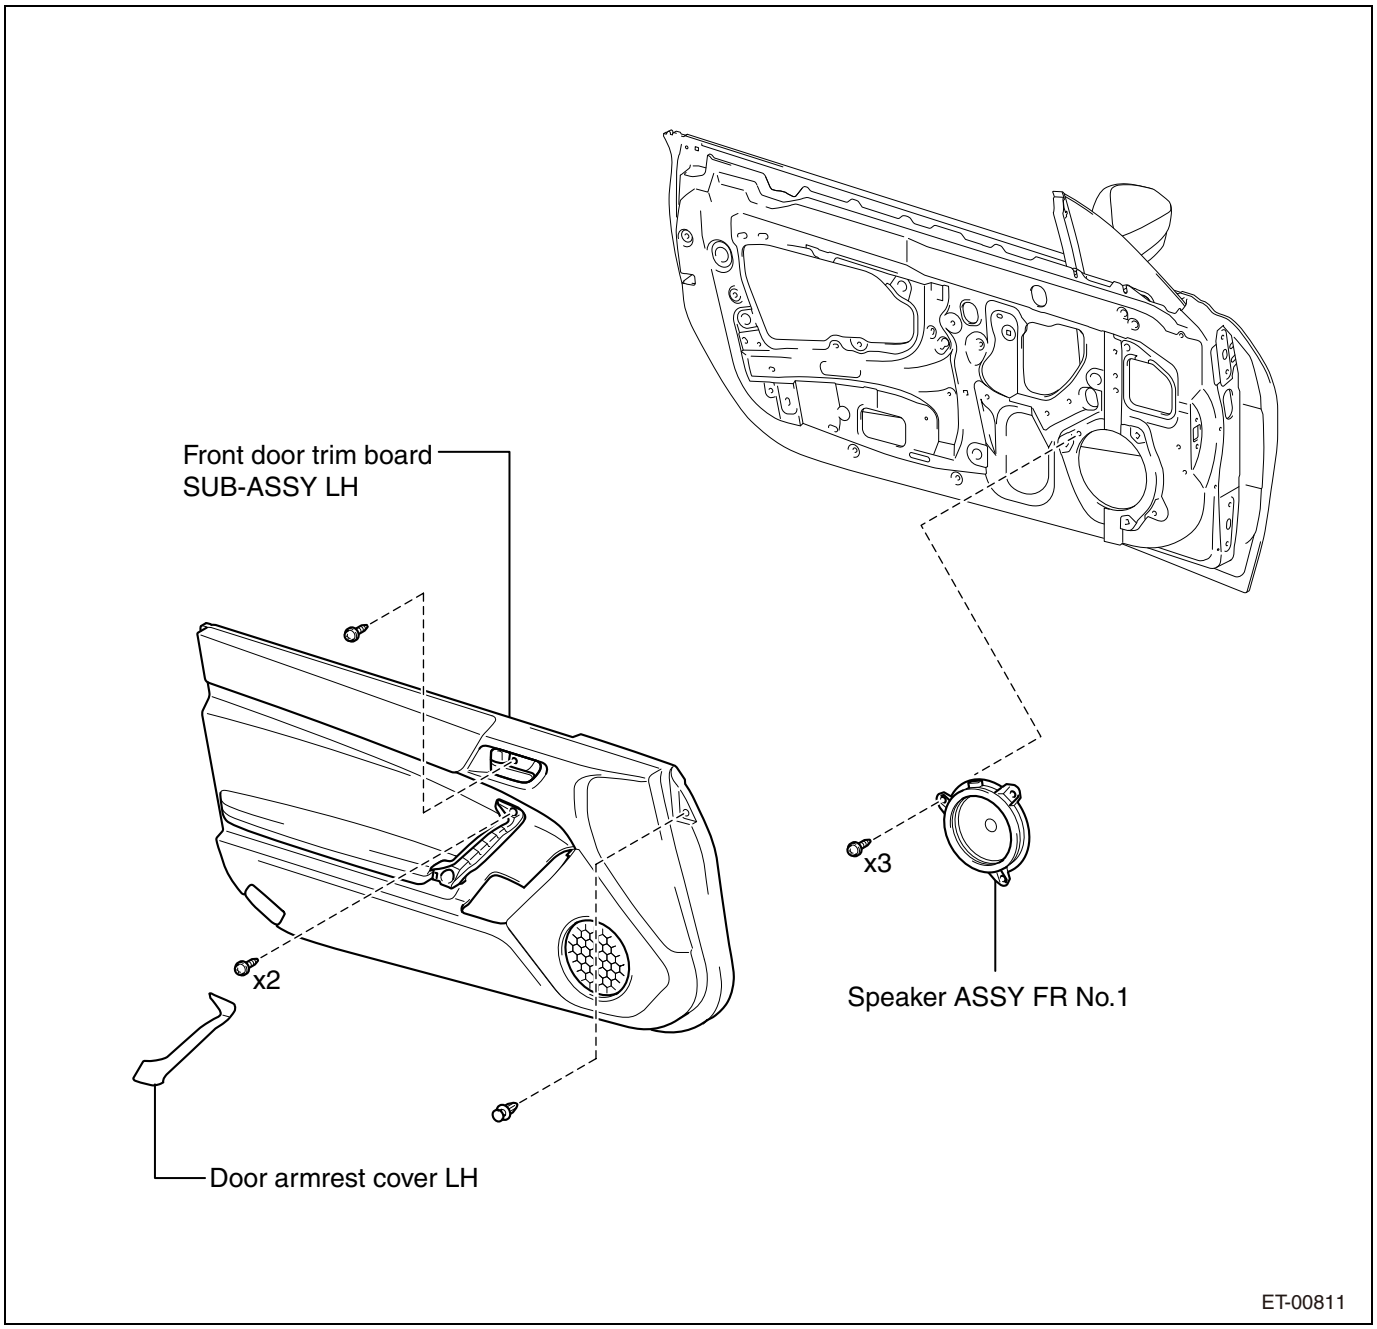
6. Removal of navigation receiver bracket NO.1 ASSY
   (1) Remove the 4 screws, and remove the navigation receiver bracket NO.1 from the navigation receiver ASSY.
7. Removal of navigation receiver bracket NO.2
   NOTE:
   Perform the same procedure as with navigation receiver bracket NO.1.

## Installation

1. Installation of navigation receiver bracket NO.1
   (1) Using the 4 screws, install the navigation receiver bracket NO.1 onto the navigation receiver ASSY.
2. Installation of navigation receiver bracket NO.2
   NOTE:
   Perform the same procedure as with navigation receiver bracket NO.1.
3. Installation of AUX unit ASSY (Refer to AV - 35)
4. Installation of navigation receiver ASSY
   (1) Connect each connector.
   (2) Using the 4 bolts, install the navigation receiver ASSY.
5. Installation of the instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
6. Installation of the instrument panel ornament (Refer to IT - 29)
7. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
8. Settings when removing/installing battery terminals (Refer to IN - 10)

# Front door speaker

## Exploded view

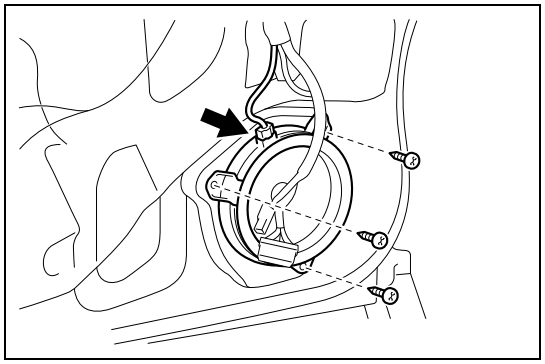


## Removal

NOTE:

The following procedure is for LH side. This same LH side procedure can also be used for the RH side.

1. Removal of the door armrest cover LH (Refer to DH - 32)
2. Removal of the front door trim board SUB-ASSY LH (Refer to DH - 32)



3. Removal of the speaker ASSY FR No.1
   CAUTION:
   Do not touch the body, the edge, and the center cap of the speaker ASSY FR No.1 diaphragm.
   (1) Disconnect the connector.
   (2) Undo the three screws and remove the speaker ASSY FR No.1.

AV

## Installation

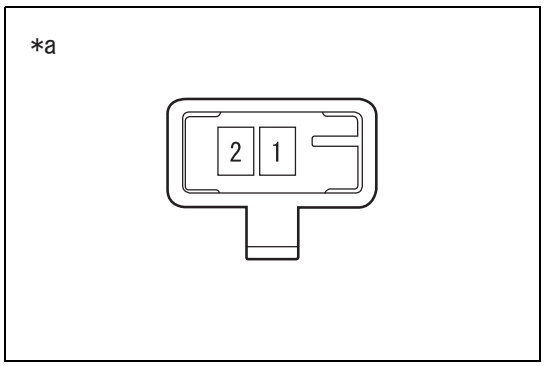
NOTE:

The following procedure is for LH side. This same LH side procedure can also be used for the RH side.

1. Installation of the speaker ASSY FR No.1
   CAUTION:
   Do not touch the body, the edge, and the center cap of the speaker ASSY FR No.1 diaphragm.
   (1) Install the speaker ASSY FR No.1 and fasten the three screws.
   (2) Connect the connector.
2. Installation of the front door trim board SUB-ASSY LH (Refer to DH - 52)
3. Installation of the door armrest cover LH (Refer to DH - 54)

## Unit inspection

1. Inspection of the speaker ASSY FR No.1
   CAUTION:
   Do not touch the body, the edge, and the center cap of the speaker ASSY FR No.1 diaphragm.
   (1) When installing the speaker, always confirm that there are no abnormalities such as looseness or excessive play.
   (2) Check that no foreign objects have entered into the speaker, and that there are no abnormalities such as deformation or tearing of the speaker diaphragm or center cap.



2. Resistance check
   (1) Disconnect the speaker ASSY FR No.1 connector.
   (2) Measure the resistance between connector terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 (+) - 2(-) | Always | 2.6 to 3.2 Ω |

NOTE:
This inspection is carried out without removing the speaker ASSY FR No.1.

Captions in illustration

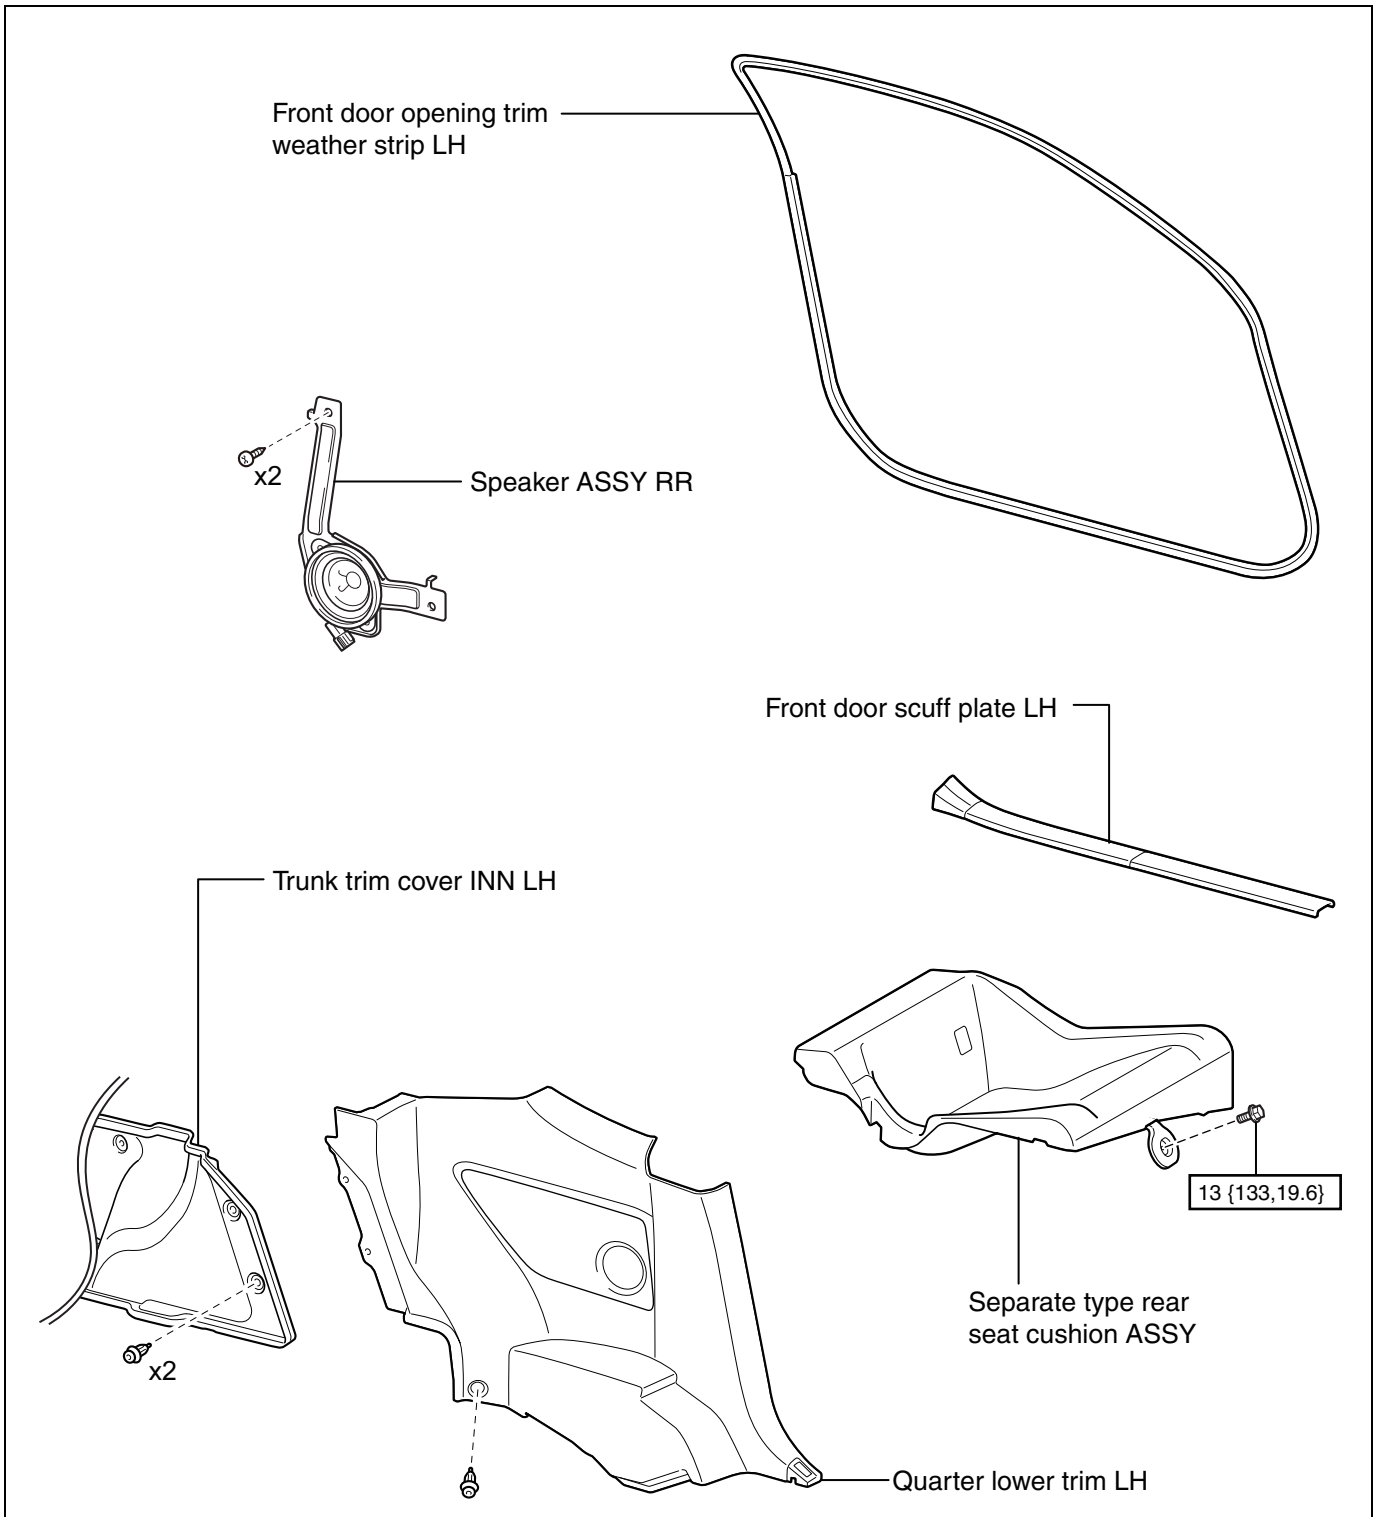
|---|---|
| *a | Connector not connected (Speaker ASSY FR No.1) |

# Quarter trim speaker

## Exploded view



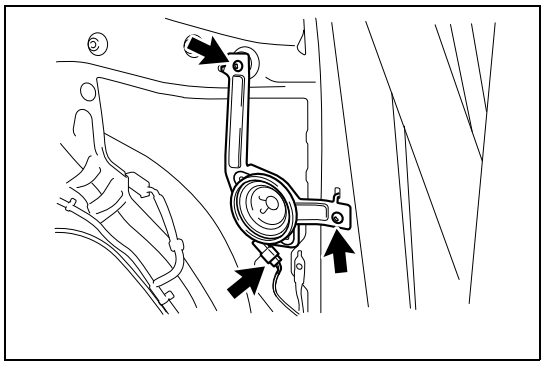
## Removal

NOTE:

The following procedure is for LH side. This same LH side procedure can also be used for the RH side.

1. Disconnection of the front door opening trim weather strip LH (Refer to IT - 48)
2. Removal of front door scuff plate LH (Refer to IT - 48)
3. Removal of the separate-type rear seat cushion ASSY (Refer to SE - 31)
4. Disconnection of trunk trim cover INN LH (Refer to IT - 49)
5. Removal of quarter lower trim LH (Refer to IT - 49)

AV



6. Removal of the speaker ASSY RR
   CAUTION:
   Do not touch the body, the edge, and the center cap of the speaker ASSY RR diaphragm.
   (1) Disconnect the connector.
   (2) Undo the two screws and remove the speaker ASSY RR.

## Installation

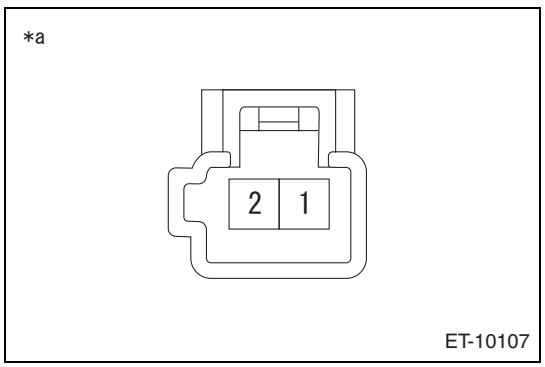
NOTE:

The following procedure is for LH side. This same LH side procedure can also be used for the RH side.

1. Installation of the speaker ASSY RR
   CAUTION:
   Do not touch the body, the edge, and the center cap of the speaker ASSY RR diaphragm.
   (1) Install the speaker ASSY RR and fasten the two screws.
   (2) Connect the connector.
2. Installation of the quarter lower trim LH (Refer to IT - 57)
3. Installation of the trunk trim cover INN LH (Refer to IT - 58)
4. Installation of the separate-type rear seat cushion ASSY (Refer to SE - 39)
5. Installation of front door scuff plate LH (Refer to IT - 58)
6. Installation of the front door opening trim weather strip LH (Refer to IT - 58)

## Unit inspection

1. Inspection of the speaker ASSY RR
   CAUTION:
   Do not touch the body, the edge, and the center cap of the speaker ASSY RR diaphragm.
   (1) When installing the speaker, always confirm that there are no abnormalities such as looseness or excessive play.
   (2) Check that no foreign objects have entered into the speaker, and that there are no abnormalities such as deformation or tearing of the speaker diaphragm or center cap.



2. Resistance check
   (1) Disconnect the speaker ASSY RR connector.
   (2) Measure the resistance between connector terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1(+) - 2(-) | Always | 3.7 to 4.7 Ω |

NOTE:

This inspection is carried out without removing the speaker ASSY RR.

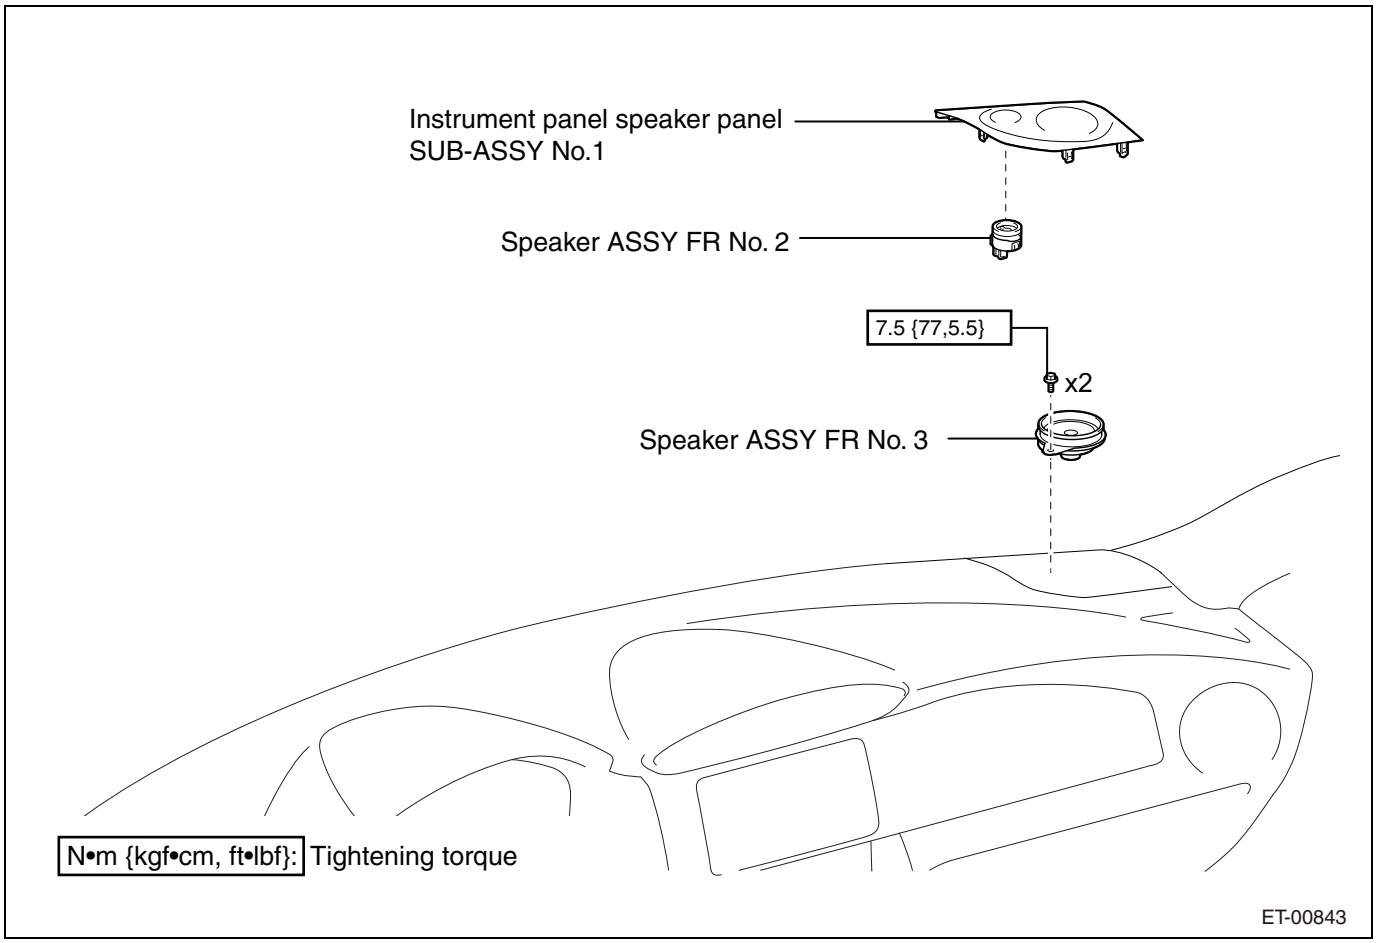
# Instrument panel speaker

## Exploded view

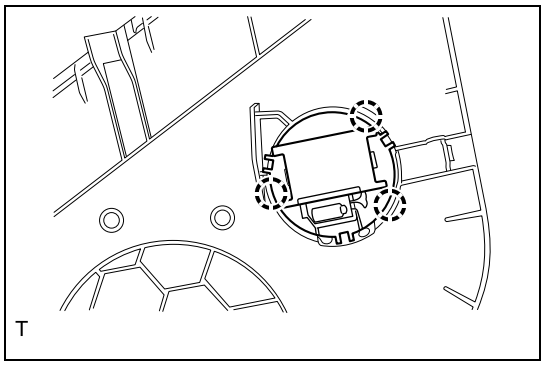


## Removal

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Removal of instrument panel speaker panel SUB-ASSY NO.1 (Refer to IT - 6)

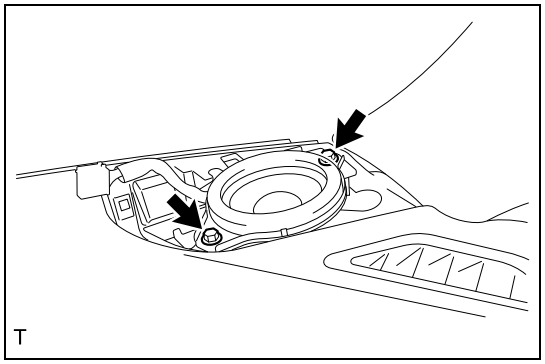


2. Removal of the speaker ASSY FR No.2

   CAUTION:

   Do not touch the diaphragm of speaker ASSY FR No.2.

   (1) Unhook the three tabs and remove the speaker ASSY FR No.2 from the instrument panel speaker panel SUB-ASSY No.1.



3. Remove the speaker ASSY FR No.3.
   CAUTION:
   Do not touch the diaphragm body, edge or center cap parts of speaker ASSY FR No.3.
   (1) Undo the two bolts and remove the speaker ASSY FR No.3.
   (2) Disconnect the connector.

AV

## Installation

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

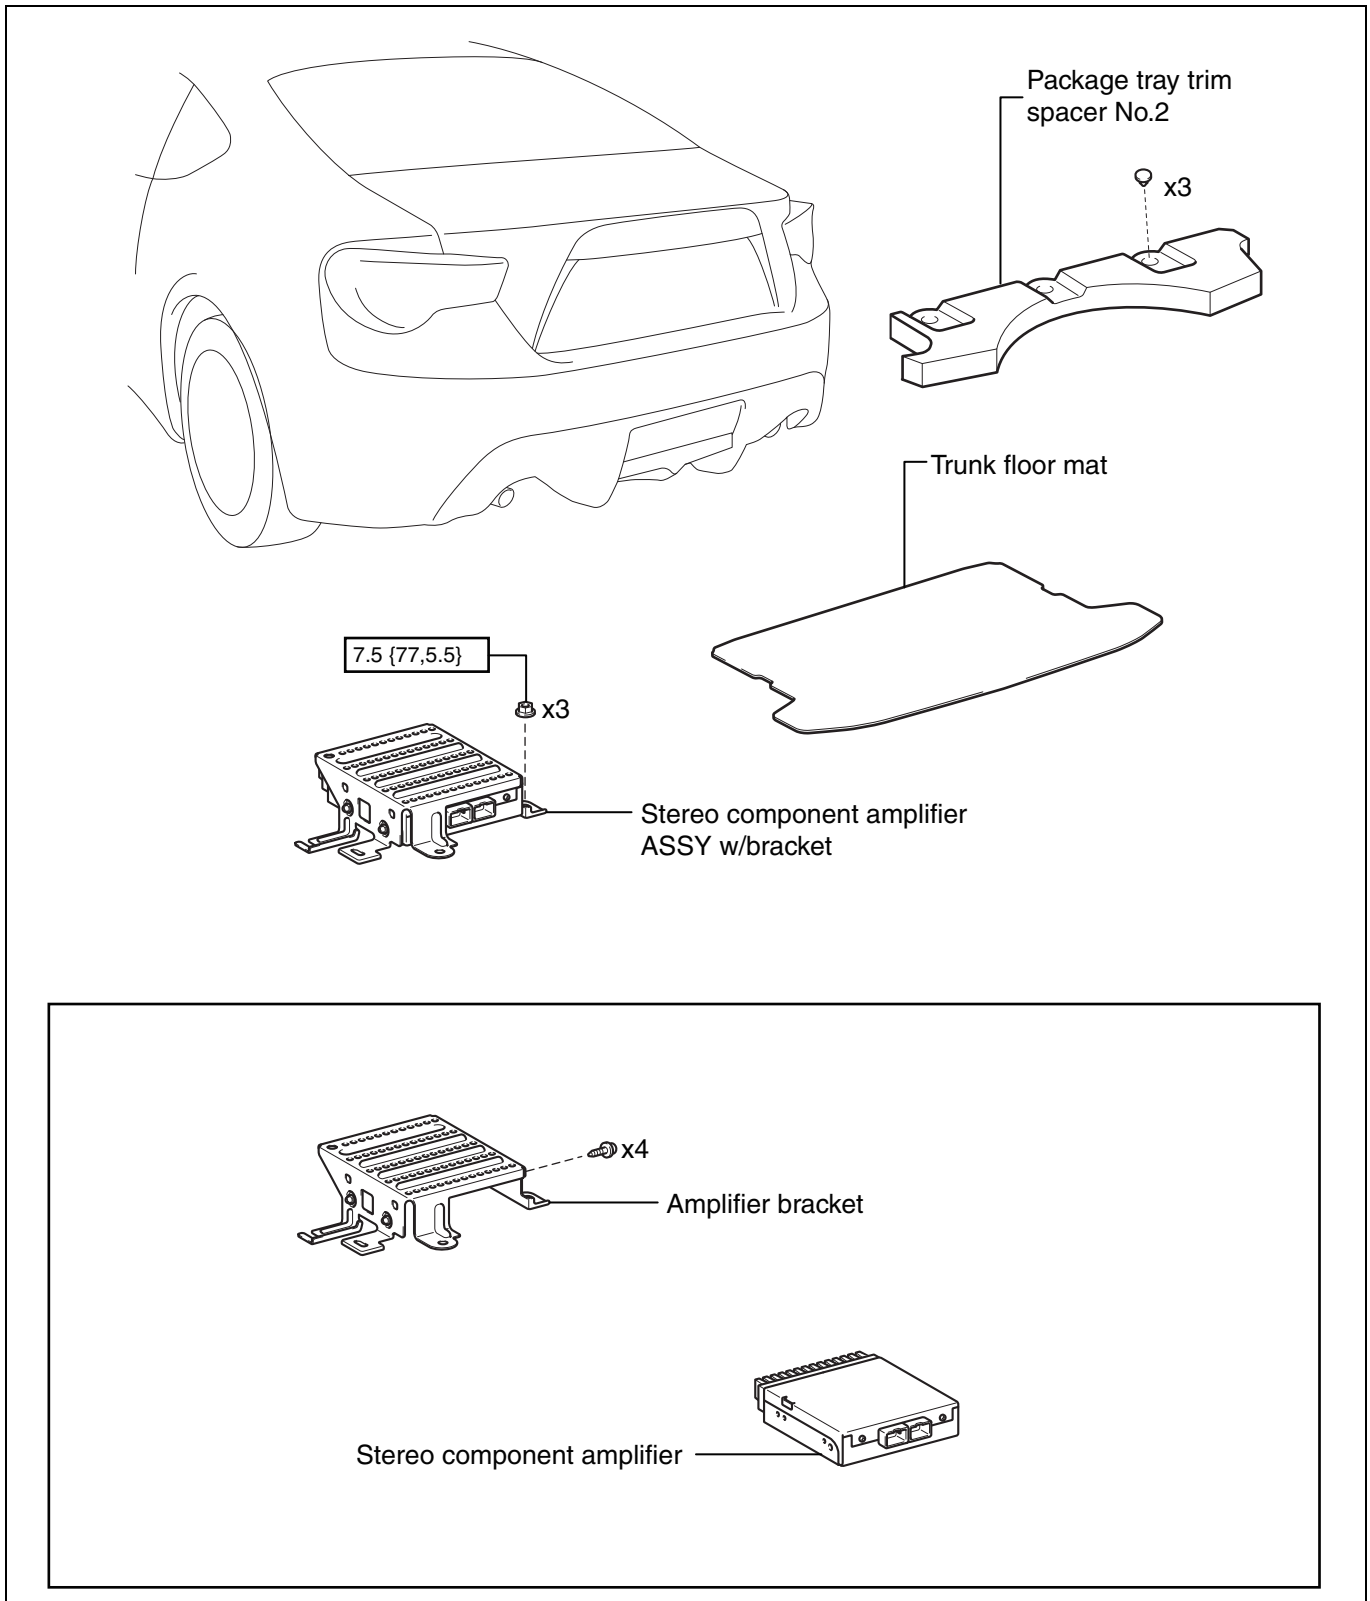
1. Install the speaker ASSY FR No.3.
   CAUTION:
   Do not touch the diaphragm body, edge or center cap parts of speaker ASSY FR No.3.
   (1) Connect the connector.
   (2) Install the speaker ASSY FR No.3 and fasten the two bolts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
2. Installation of the speaker ASSY FR No.2
   CAUTION:
   Do not touch the diaphragm of speaker ASSY FR No.2.
   (1) Engage the three tabs and install the speaker ASSY FR No.2 onto the instrument panel speaker panel SUB-ASSY No.1.
3. Installation of instrument panel speaker panel SUB-ASSY NO.1 (Refer to IT - 17)

## Unit inspection

1. Inspection of the speaker ASSY FR No.2
   CAUTION:
   Do not touch the diaphragm of speaker ASSY FR No.2.
   (1) When installing the speaker, always confirm that there are no abnormalities such as looseness or excessive play.
   (2) Check that no foreign objects have entered into the speaker, and that there are no abnormalities such as deformation or tearing of the speaker diaphragm.
2. Inspect the speaker ASSY FR No.3.
   CAUTION:
   Do not touch the diaphragm body, edge or center cap parts of speaker ASSY FR No.3.
   (1) When installing the speaker, always confirm that there are no abnormalities such as looseness or excessive play.
   (2) Check that no foreign objects have entered into the speaker, and that there are no abnormalities such as deformation or tearing of the speaker diaphragm or center cap.

# Amplifier

## Parts location

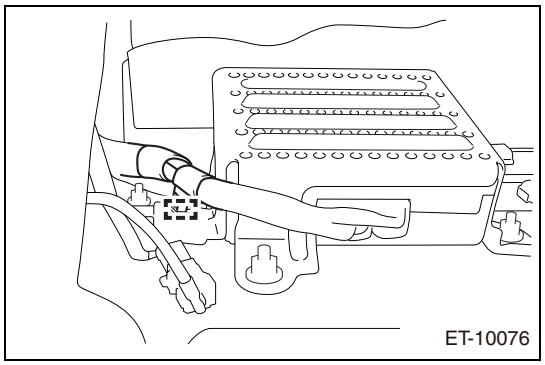


N*m {kgf*cm,ft*lbf} : Tightening torque

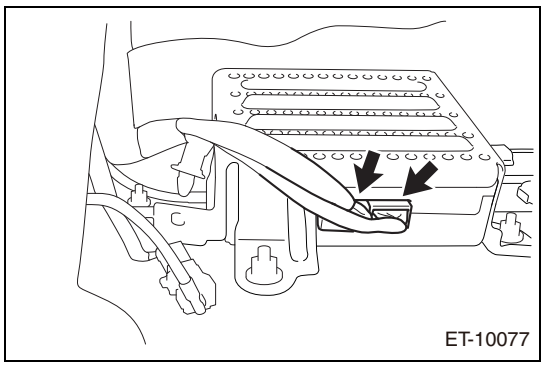
ET-10075

## Removal

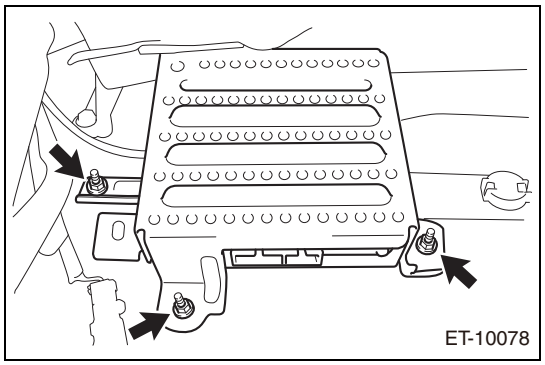
1. Remove the trunk floor mat.
   (1) Remove the trunk floor mat.
2. Removal of package tray trim spacer No.2 (Refer to DH - 79)
3. Remove the amplifier ASSY (with attached bracket).



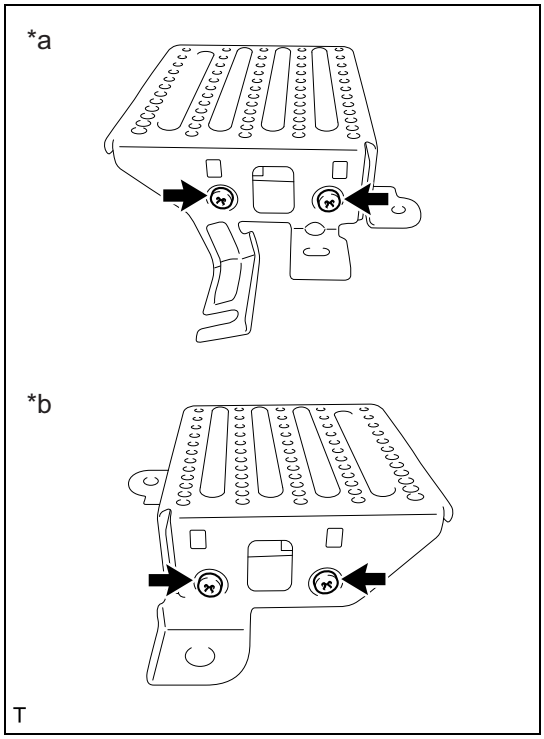
(1) Disconnect the clamps and wiring harness from the stereo component amplifier bracket.



(2) Disconnect the two connectors from the stereo component amplifier.



(3) Undo the three nuts and take off the stereo component amplifier ASSY (with attached bracket).



4. Remove the amplifier bracket.
   (1) Undo the four screws and remove the amplifier bracket.

Captions in illustration

| | |
|---|---|
| *a | LH side |
| *b | RH side |

## Installation

1. Install the amplifier bracket.
   (1) Install the amplifier bracket in place with the four screws.
2. Install the amplifier ASSY (with attached bracket).
   (1) Install the amplifier ASSY (with attached bracket) and fasten the three nuts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Connect the two connectors to the stereo component amplifier ASSY (with attached bracket).
   (3) Fasten the clamp to connect the wiring harness to the amplifier cover.
   (4) Engage the clips and install the rear seat back cover.
3. Install the trunk floor mat.
   (1) Install the trunk floor mat.

# Amplifier antenna

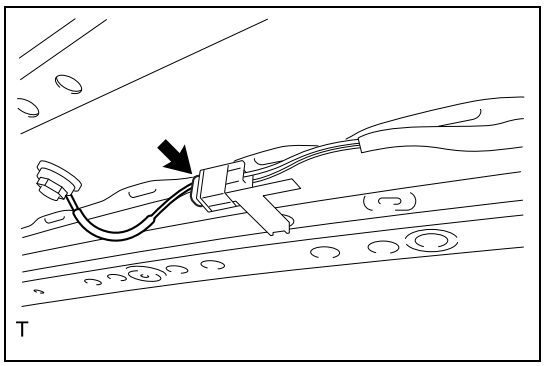
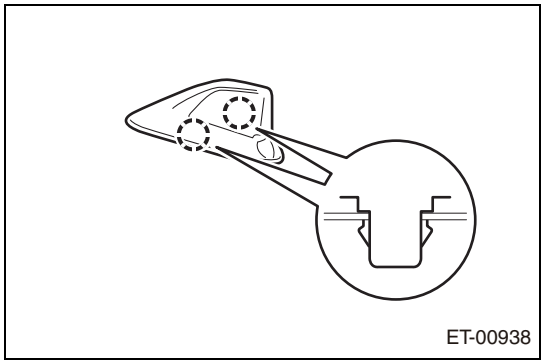
## Removal

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the roof head lining ASSY (Refer to IT - 47)

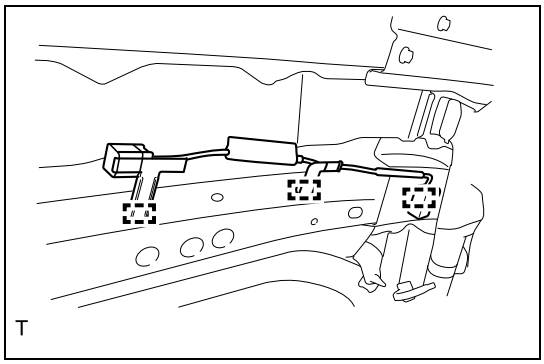


3. Removal of the amplifier antenna ASSY
   (1) Disconnect the connector.

   (2) Remove the antenna nut.



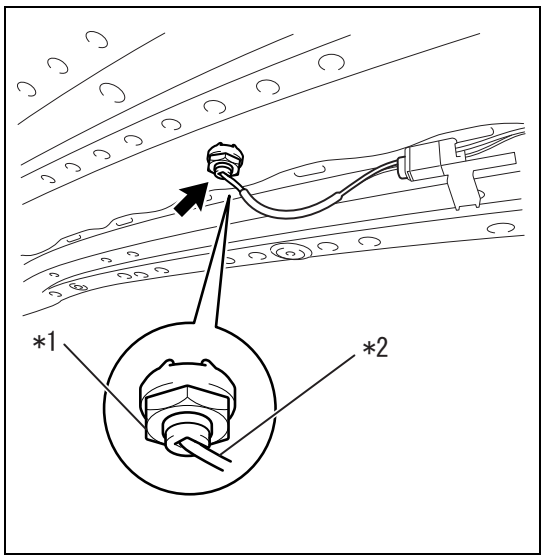
(3) Unhook the two tabs and remove the amplifier antenna ASSY.



4. Removal of the antenna cord SUB-ASSY No.3
   (1) Release the three clamps and remove the antenna cord SUB-ASSY No.3.

## Installation

1. Installation of the antenna cord SUB-ASSY No.3
   (1) Fasten the three clamps and install the antenna cord SUB-ASSY No.3.
2. Installation of the amplifier antenna ASSY
   (1) Attach the two sets of tabs of the amplifier antenna ASSY to the roof.



(2) Move the antenna cord so that it sticks out toward the rear of the vehicle, and attach the antenna nut.

## Removal

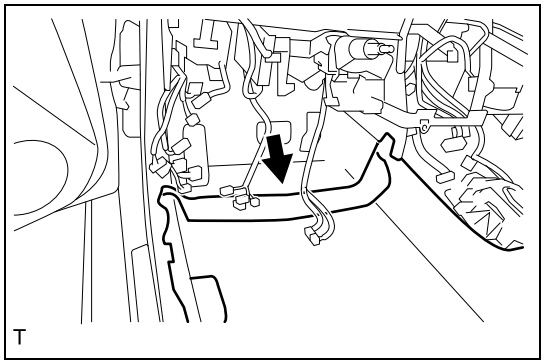
WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always check the precautions for the SRS airbag system. (Refer to RS - 5)

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work.
   WARNING:
   As the airbag and pretensioner system is equipped with a backup power supply, if you start work within 60 seconds of disconnecting the battery ground terminal, the airbag may accidentally deploy.
3. Removal of the instrument panel SUB-ASSY (Refer to IT - 6)
4. Removal of the air conditioner radiator ASSY (Refer to AC - 99)



5. Removal of the antenna cord SUB-ASSY
   (1) Turn over the front end of the driver's seat floor mat.
   (2) Disconnect each connector.

   (3) Release the ten clamps and remove the antenna cord SUB-ASSY.

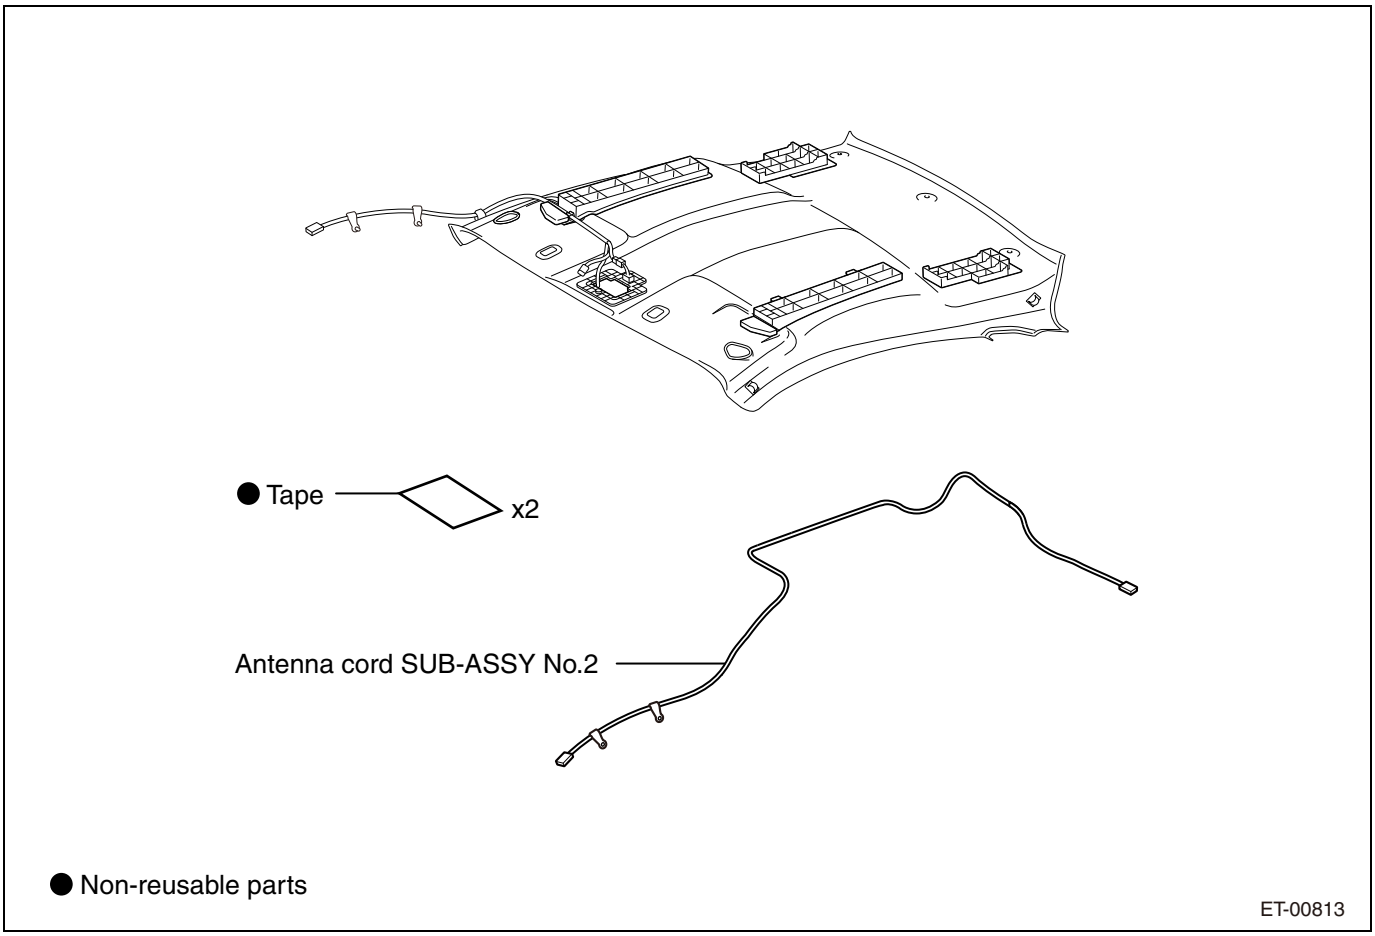
## Installation

1. Installation of the antenna cord SUB-ASSY
   (1) Fasten the ten clamps and install the antenna cord SUB-ASSY.
   (2) Connect each connector.
   (3) Return the floor mat to its original position.
2. Installation of the air conditioner radiator ASSY (Refer to AC - 124)
3. Installation of the instrument panel SUB-ASSY (Refer to IT - 6)
4. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
5. Inspection of airbag warning light (Refer to RS - 53)
6. Settings when removing/installing battery terminals (Refer to IN - 10)

# Antenna cord No. 2

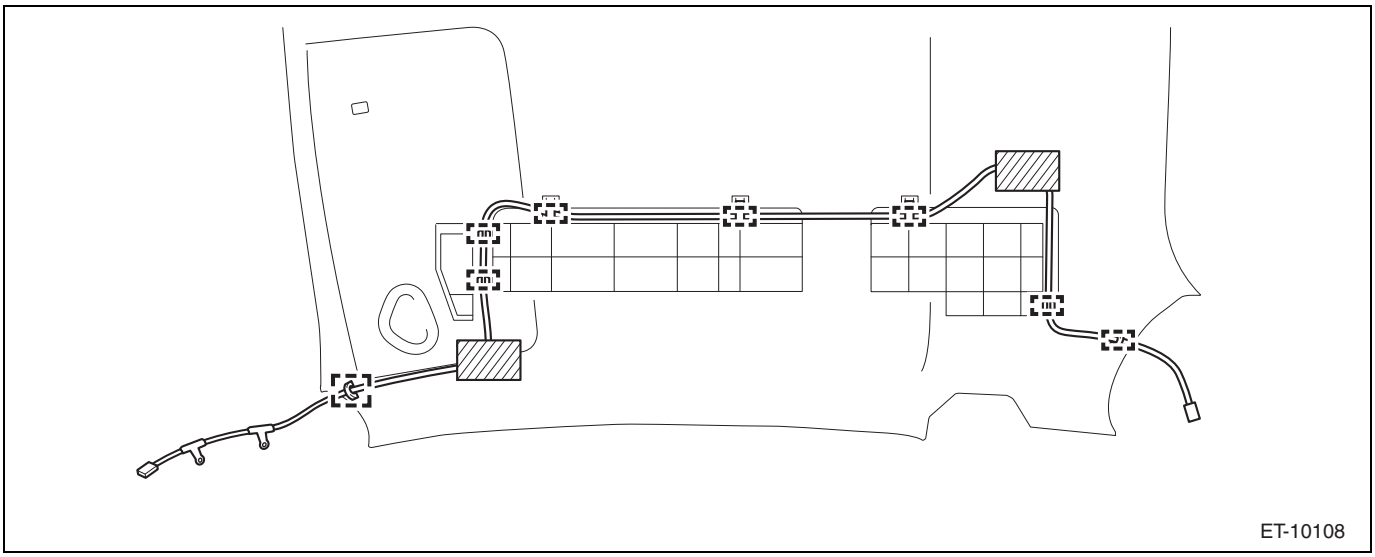
## Exploded view

AV



## Removal

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the roof head lining ASSY (Refer to IT - 47)
3. Removal of the antenna cord SUB-ASSY No.2
   (1) Remove the 2 pieces of fixing tape.



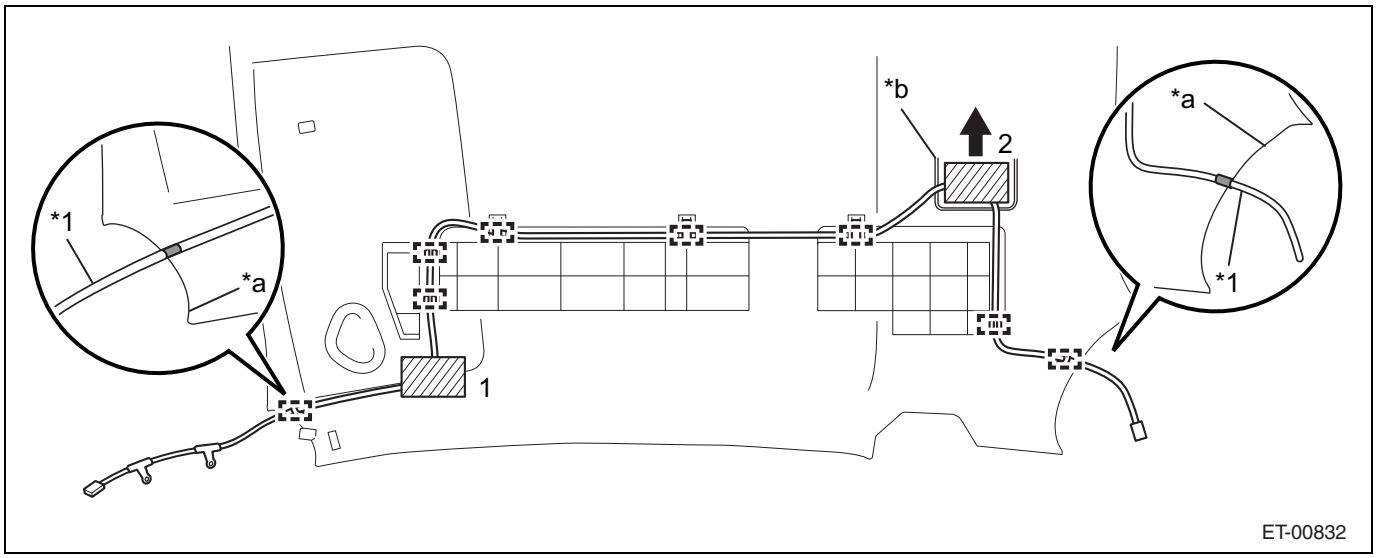
Captions in illustration

| | | | |
|---|---|---|---|
| | Fixing tape (86359SC000/TAPE) | - | - |

(2) Release the eight clamps and remove the antenna cord No.2 from the roof head lining ASSY.

## Installation

1. Installation of the antenna cord SUB-ASSY No.2
   (1) Set the positioning tape areas of the antenna cord SUB-ASSY No.2 so that it matches the diagram, and fasten the 8 clamps.



Captions in illustration

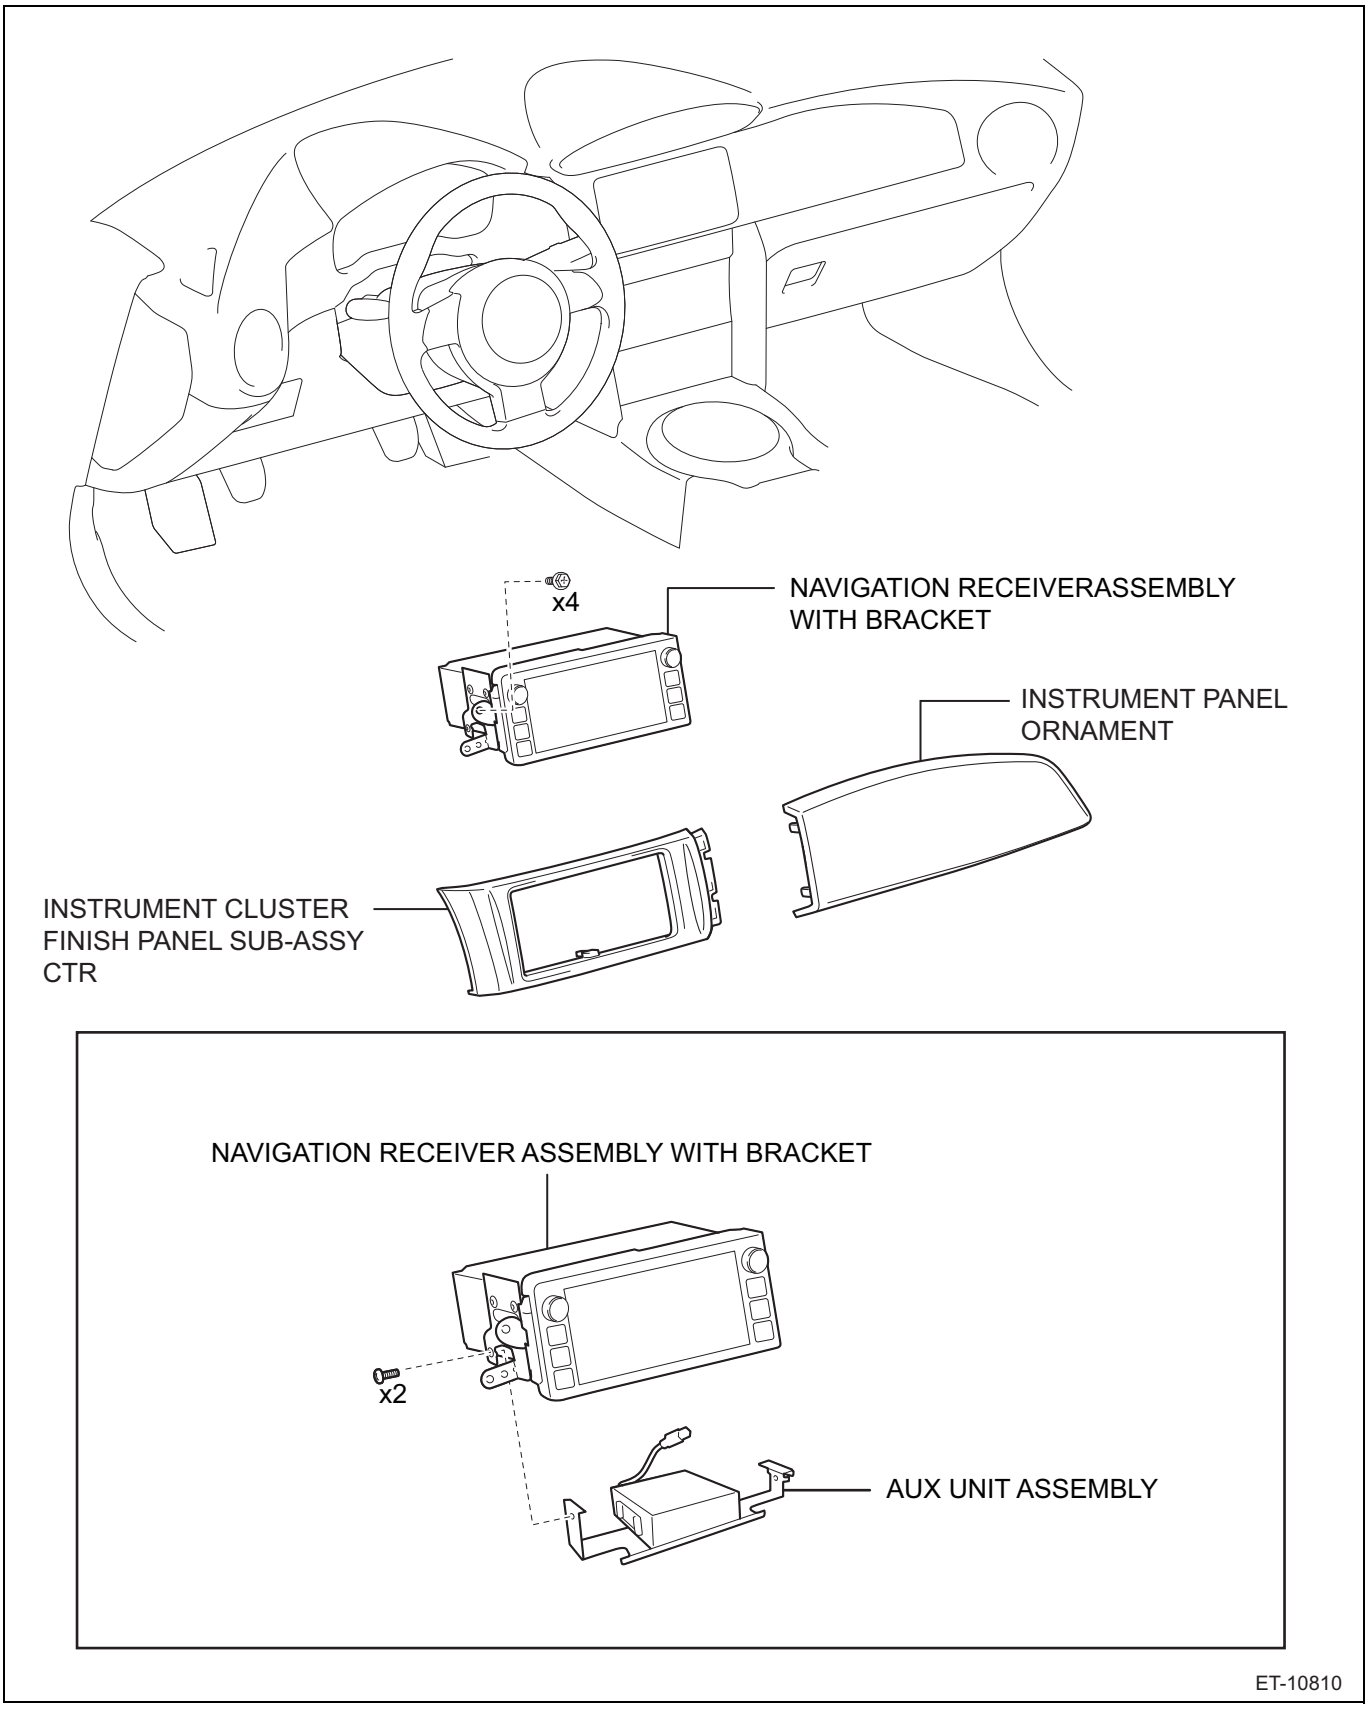
| | | | |
|---|---|---|---|
| *1 | Antenna cord SUB-ASSY No.2 | *b | Marked line |
| *a | Roof head lining ASSY edge | - | - |
| | Fixing tape (86359SC000/TAPE) | | Positioning tape |

(2) Install the antenna cord SUB-ASSY No.2 along the marked line of the roof head lining ASSY using fixing tape.
NOTE:
- Secure the antenna cord SUB-ASSY No.2 in the order indicated in the diagram.
- When using fixing tape, cut it to the desired size. (the size of 50 mm ×80 mm or 2.0 in ×3.2 in is recommended)
- When applying the second piece of fixing tape, pull any slack in the antenna cord SUB-ASSY No.2 in the direction indicated by the arrow in the diagram before securing it in place.

2. Installation of the roof head lining ASSY (Refer to RS - 5)
3. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
4. Settings when removing/installing battery terminals (Refer to IN - 10)
5. Inspection of airbag warning light (Refer to RS - 53)

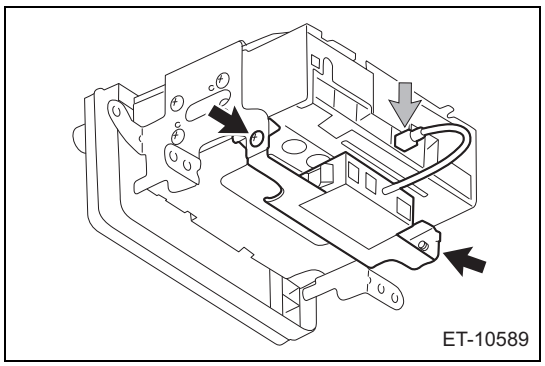
# AUX unit

## Parts location



## Removal

1. Disconnection of battery ground terminal (Refer to IN - 6)
2. Removal of instrument panel ornament (Refer to IT - 22)
3. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
4. Removal of navigation receiver ASSY (Refer to AV - 16)



5. Removal of AUX unit ASSY
   (1) Disconnect the cable.
   (2) Remove the 2 screws, and remove the AUX unit ASSY from the radio receiver bracket or navigation receiver bracket.

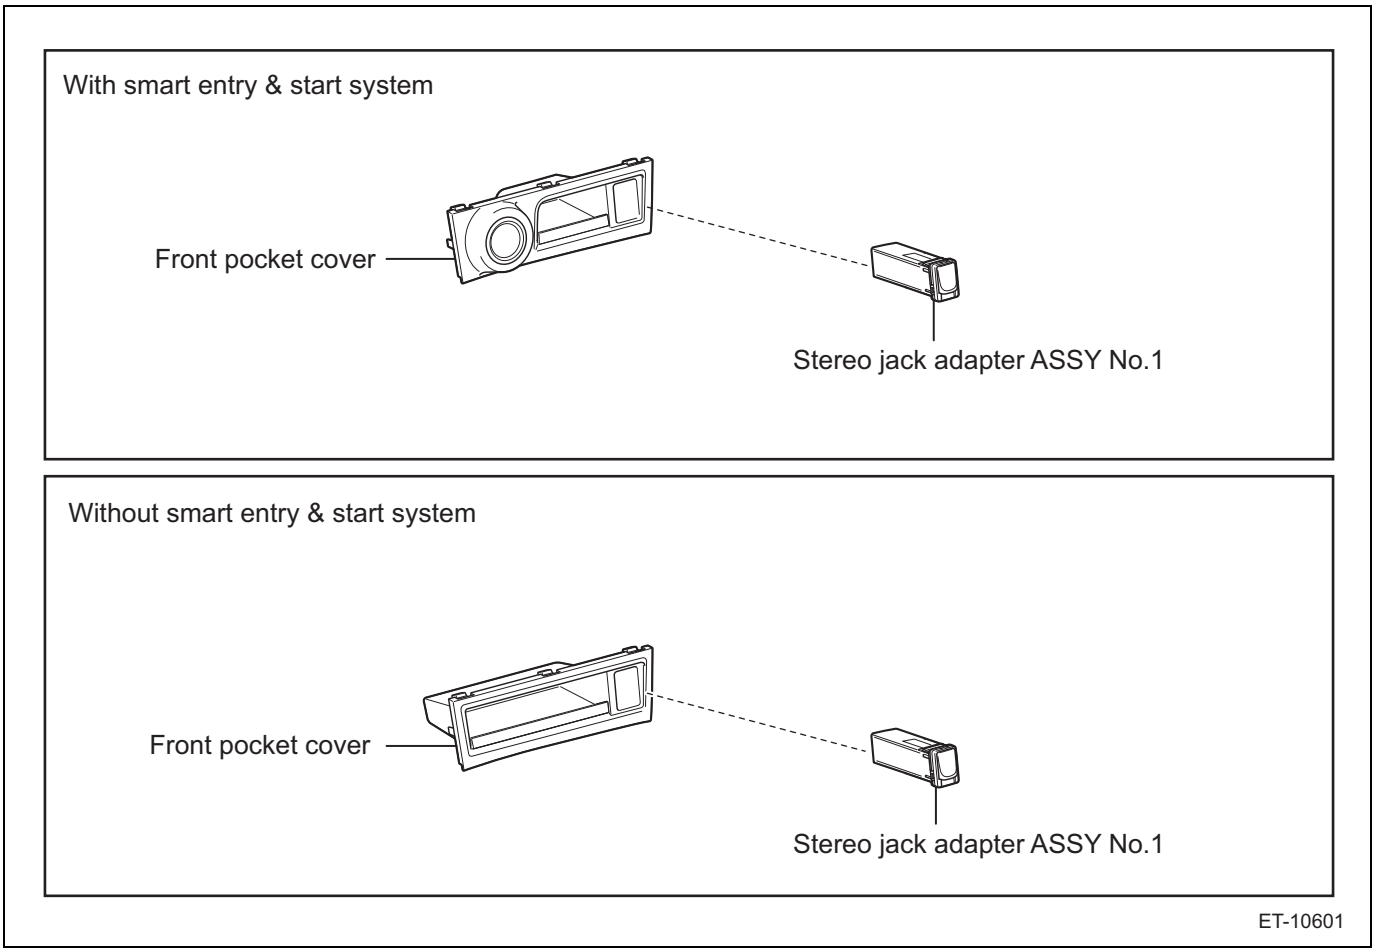
AV

## Installation

1. Installation of AUX unit ASSY
   (1) Using the 2 screws, install the AUX unit ASSY to the radio receiver bracket or navigation receiver bracket.
   (2) Connect the cable.
2. Installation of navigation receiver ASSY
3. Installation of the instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
4. Installation of the instrument panel ornament (Refer to IT - 29)
5. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
6. Settings when removing/installing battery terminals (Refer to IN - 10)

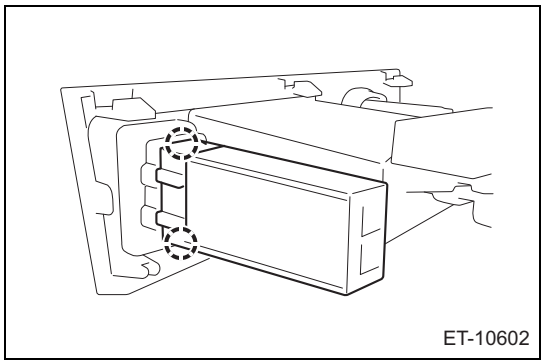
# Stereo jack adapter

## Components



## Removal

1. Removal of the front pocket cover (with entry & start system) (Refer to IT - 33)
2. Removal of the front pocket cover (without entry & start system) (Refer to IT - 34)



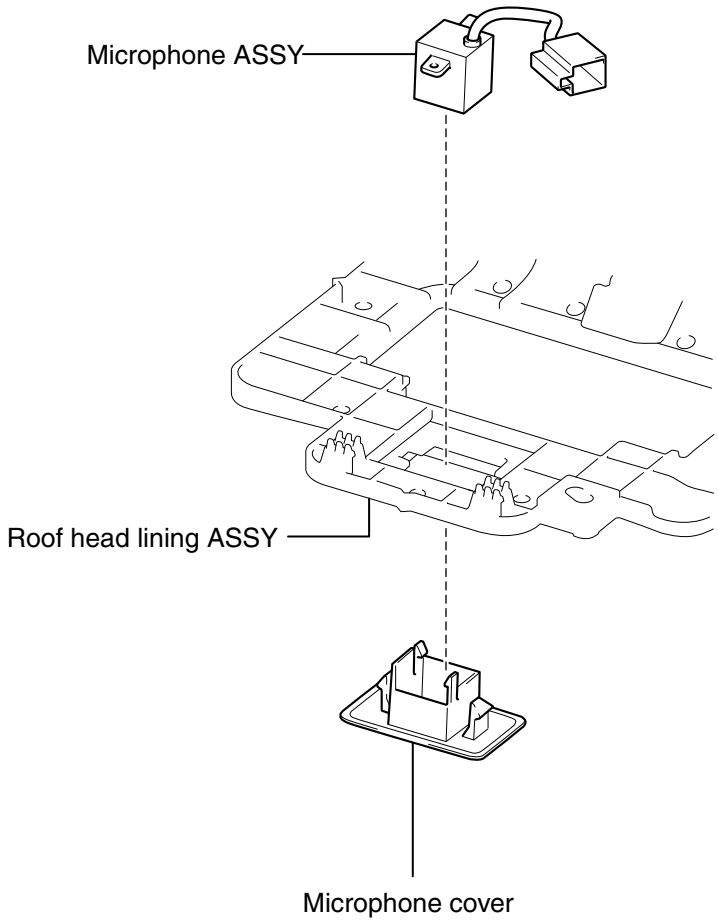
3. Removal of the stereo jack adapter ASSY No.1
   (1) Unhook the two tabs and remove the stereo jack adapter ASSY No.1.

## Installation

1. Installation of the stereo jack adapter ASSY No.1
   (1) Engage the two tabs and install the stereo jack adapter ASSY No.1.
2. Installation of the front pocket cover (with entry & start system) (Refer to IT - 39)
3. Installation of the front pocket cover (without entry & start system) (Refer to IT - 39)

# Microphone

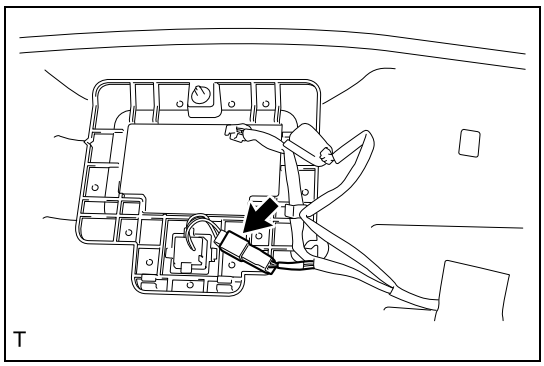
## Components



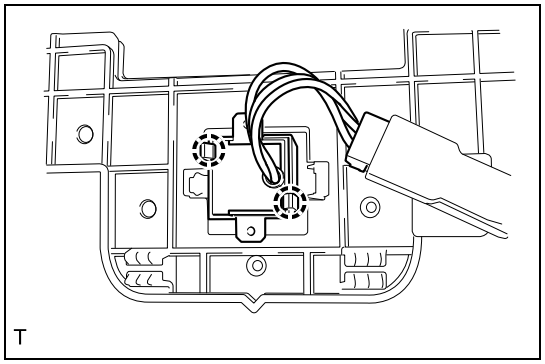
ET-00823

## Removal

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the roof head lining ASSY (Refer to IT - 47)

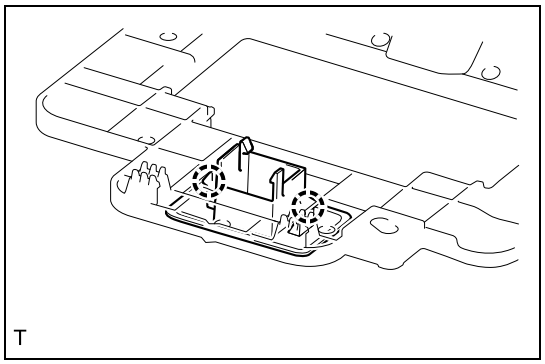


3. Remove the microphone ASSY.
   (1) Disconnect the connector.



(2) Unhook the two tabs and remove the microphone ASSY.

AV



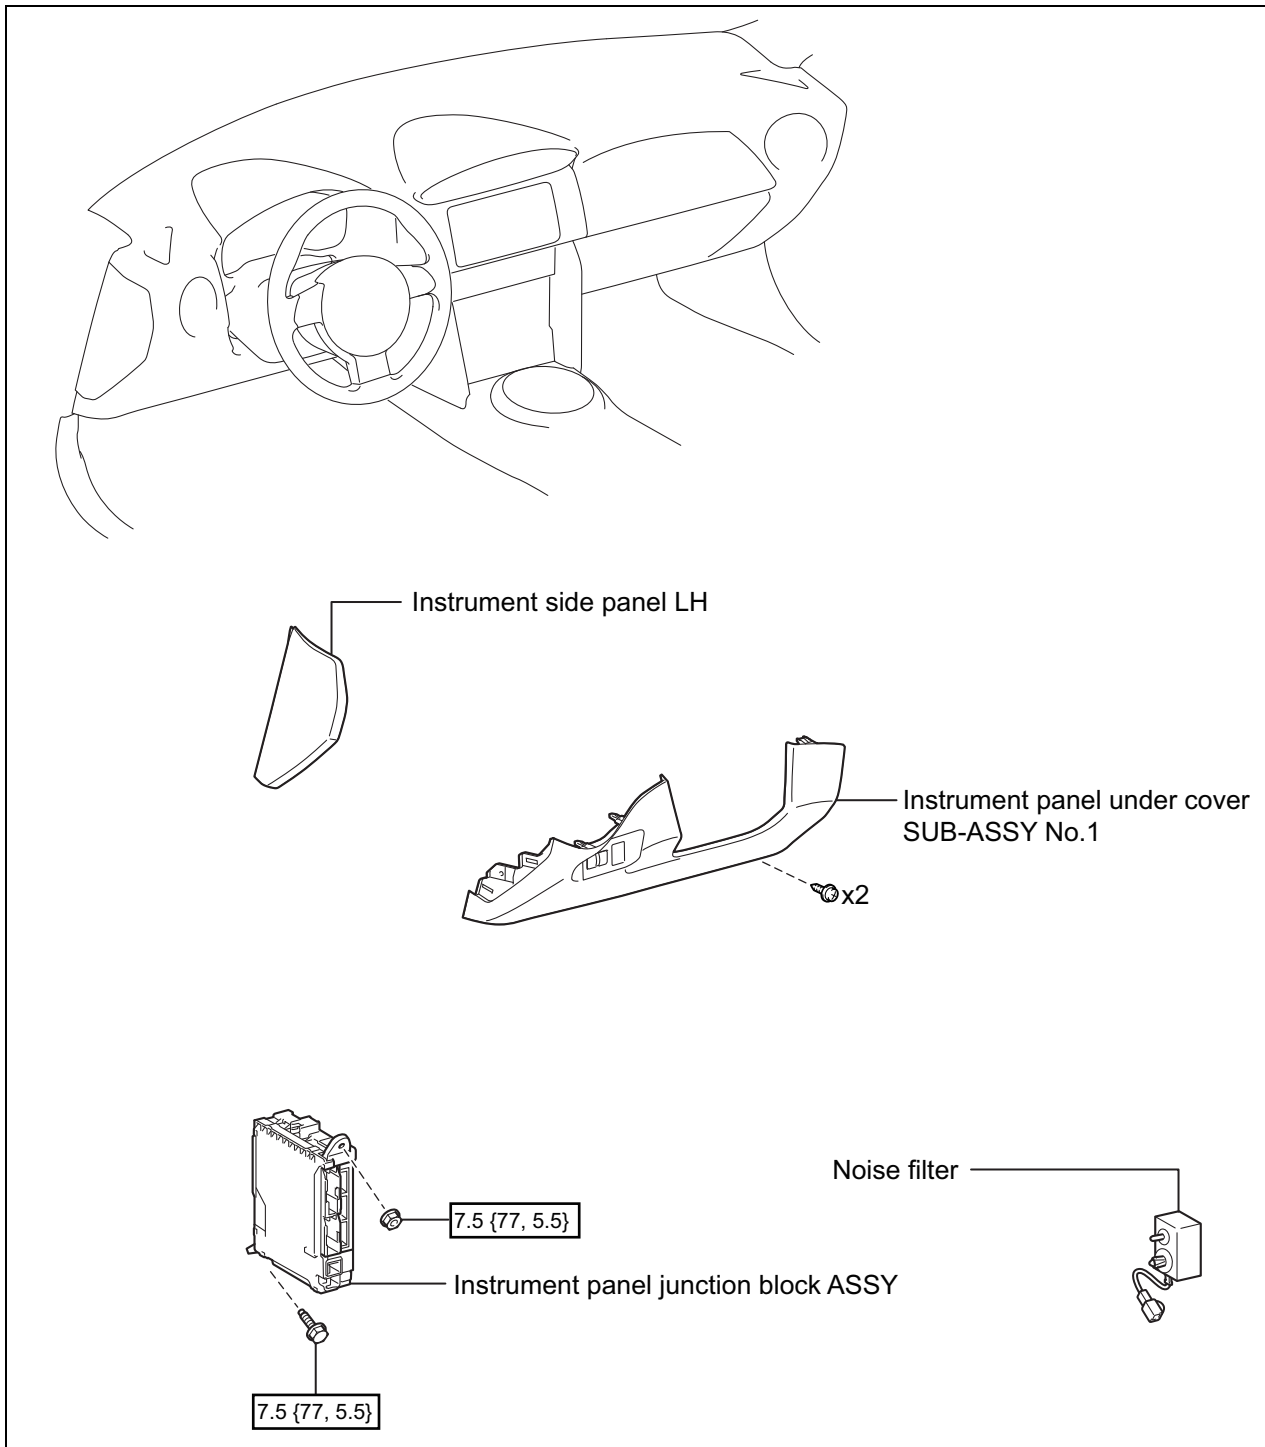
4. Remove the microphone cover.
   (1) Unhook the two tabs and remove the microphone cover.

## Installation

1. Install the microphone cover.
   (1) Engage the two tabs and install the microphone cover.
2. Install the microphone ASSY.
   (1) Engage the two tabs and install the microphone ASSY.
   (2) Connect the connector.
3. Installation of the roof head lining ASSY (Refer to IT - 56)
4. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
5. Settings when removing/installing battery terminals (Refer to IN - 10)

# Noise filter

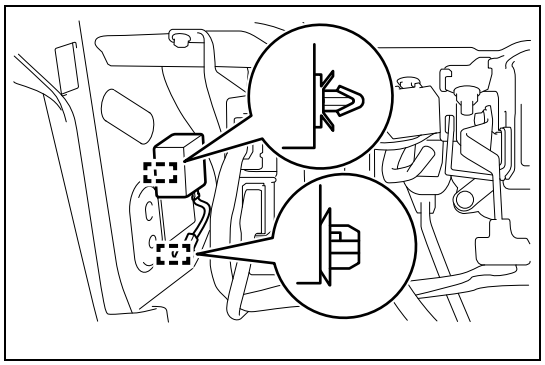
## Exploded view



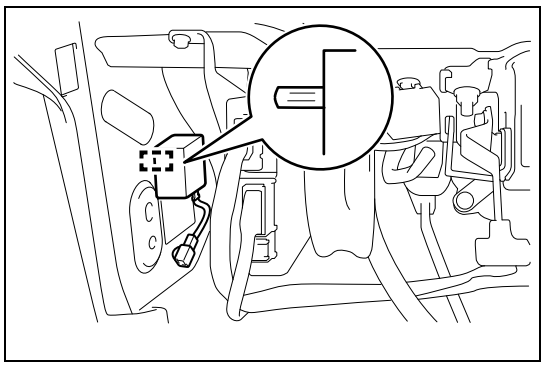
## Removal

1. Disconnection of the battery ground terminal (Refer to IN - 6)

2. Removal of the instrument side panel LH (Refer to IT - 24)
3. Removal of the instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)
4. Removal of the instrument panel junction block ASSY (Refer to PD - 25)
5. Removal of the noise filter
   (1) Disconnect the connector.



(2) Release the two clamps.

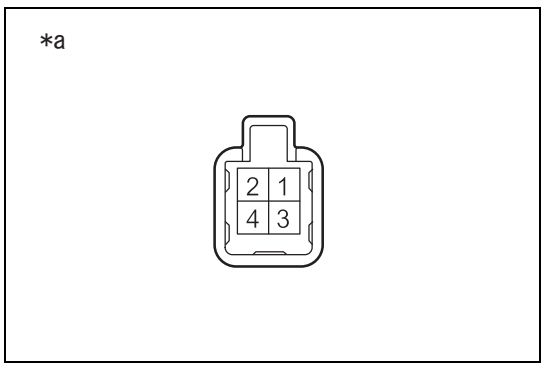


(3) Release the guide and remove the noise filter.

## Installation

1. Installation of the noise filter
   (1) Press in the guide and install the noise filter.
   (2) Fasten the two clamps.
   (3) Connect the connector.
2. Installation of the instrument panel junction block ASSY (Refer to PD - 28)
3. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
4. Installation of the instrument side panel LH (Refer to IT - 29)
5. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
6. Settings when removing/installing battery terminals (Refer to IN - 10)

## Unit inspection



1. Inspection of the noise filter
   (1) Measure the resistance between the terminals.

Resistance

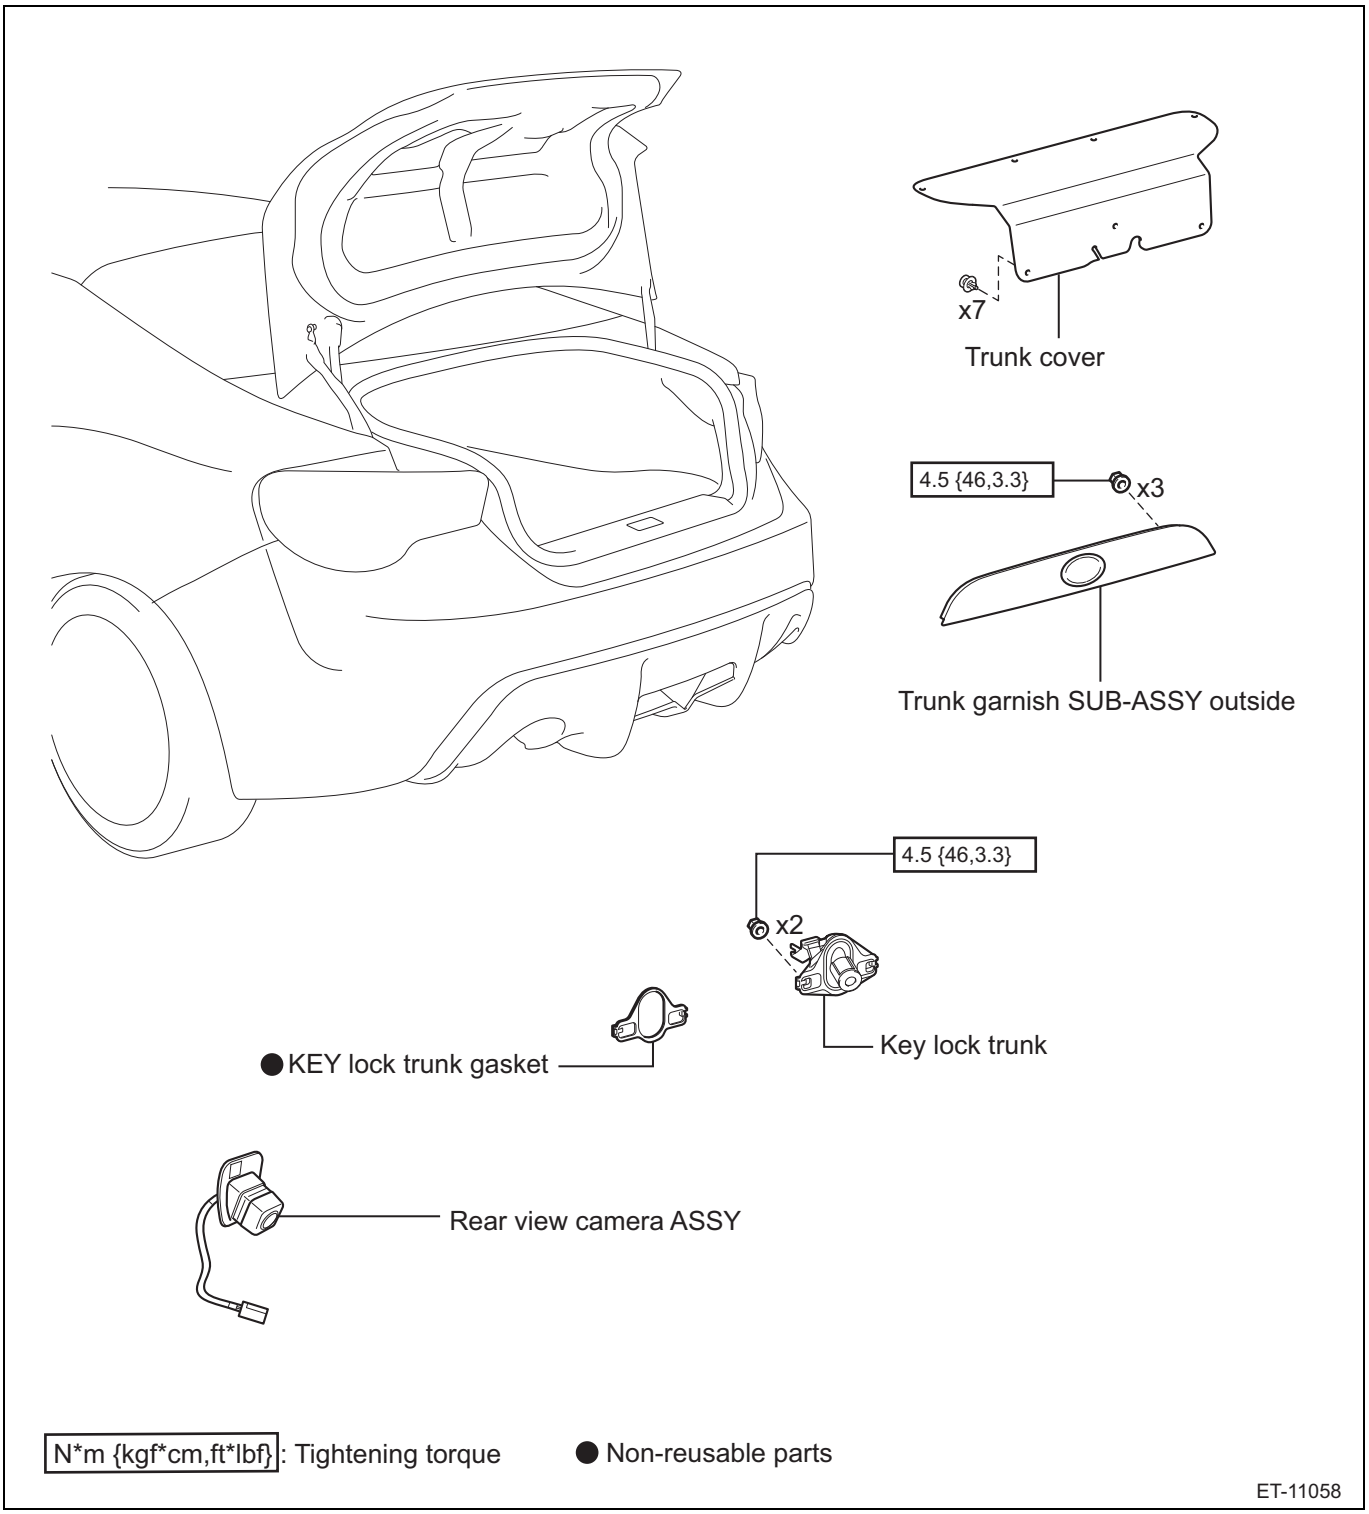
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | Always | 10 kΩ or more |
| 1 - 4 | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Noise filter) |

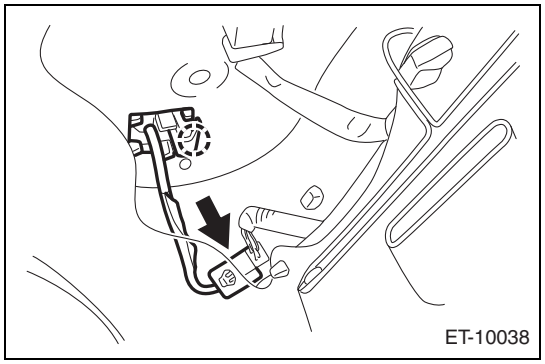
# Rear view camera ASSY

## Exploded view



## Removal

1. Removal of the trunk cover (Refer to DH - 61)
2. Removal of key lock trunk (Refer to DL - 106)
3. Removal of the trunk garnish SUB-ASSY outside (Refer to ET - 41)



4. Removal of the rear view camera ASSY
   (1) Disconnect the rear view camera ASSY connector.
   (2) Disengage the tab and remove the rear view camera ASSY.

AV

## Installation

1. Installation of the rear view camera ASSY
   (1) Engage the tab and install the rear view camera ASSY.
   (2) Reconnect the rear view camera ASSY connector.
2. Installation of the trunk garnish SUB-ASSY outside (Refer to ET - 41)
3. Installation of key lock trunk (Refer to DL - 107)
4. Installation of the trunk cover (Refer to DH - 62)

## Inspection

1. Application of target point marking
   (1) Park the vehicle on a level surface with ample space to work behind the vehicle.

   (2) Apply tape that serves as the target point marking to the floor behind the vehicle.
   NOTE:
   Use tape with a width of approx. 30 to 50 mm (1.18 to 1.97 in) and a bright color as the marking tape.

Captions in illustration

| | |
|---|---|
| *a | Vehicle center |
| *b | Bumper rear edge |
| *c | Target point |

2. Check of marker position
   (1) Check the marker position.
      (a) Pull the parking brake lever.
      (b) With the brake pedal depressed, move the select or gearshift lever to reverse.
      (c) Display the rear-view screen to check the target point position.
   (2) Check applicable items as required.
      (a) The rear-view screen is not displayed.
      Check the connection status of the back sensor and rear view camera.
      • Inspection of radio function (Refer to AV - 10)

- Inspection of navigation function (Refer to AV - 11)

(b) The marker position is misaligned or not displayed.

The rear view camera body or vehicle installation area may be deformed.

Check the rear view camera and vehicle installation area and repair or replace as required.

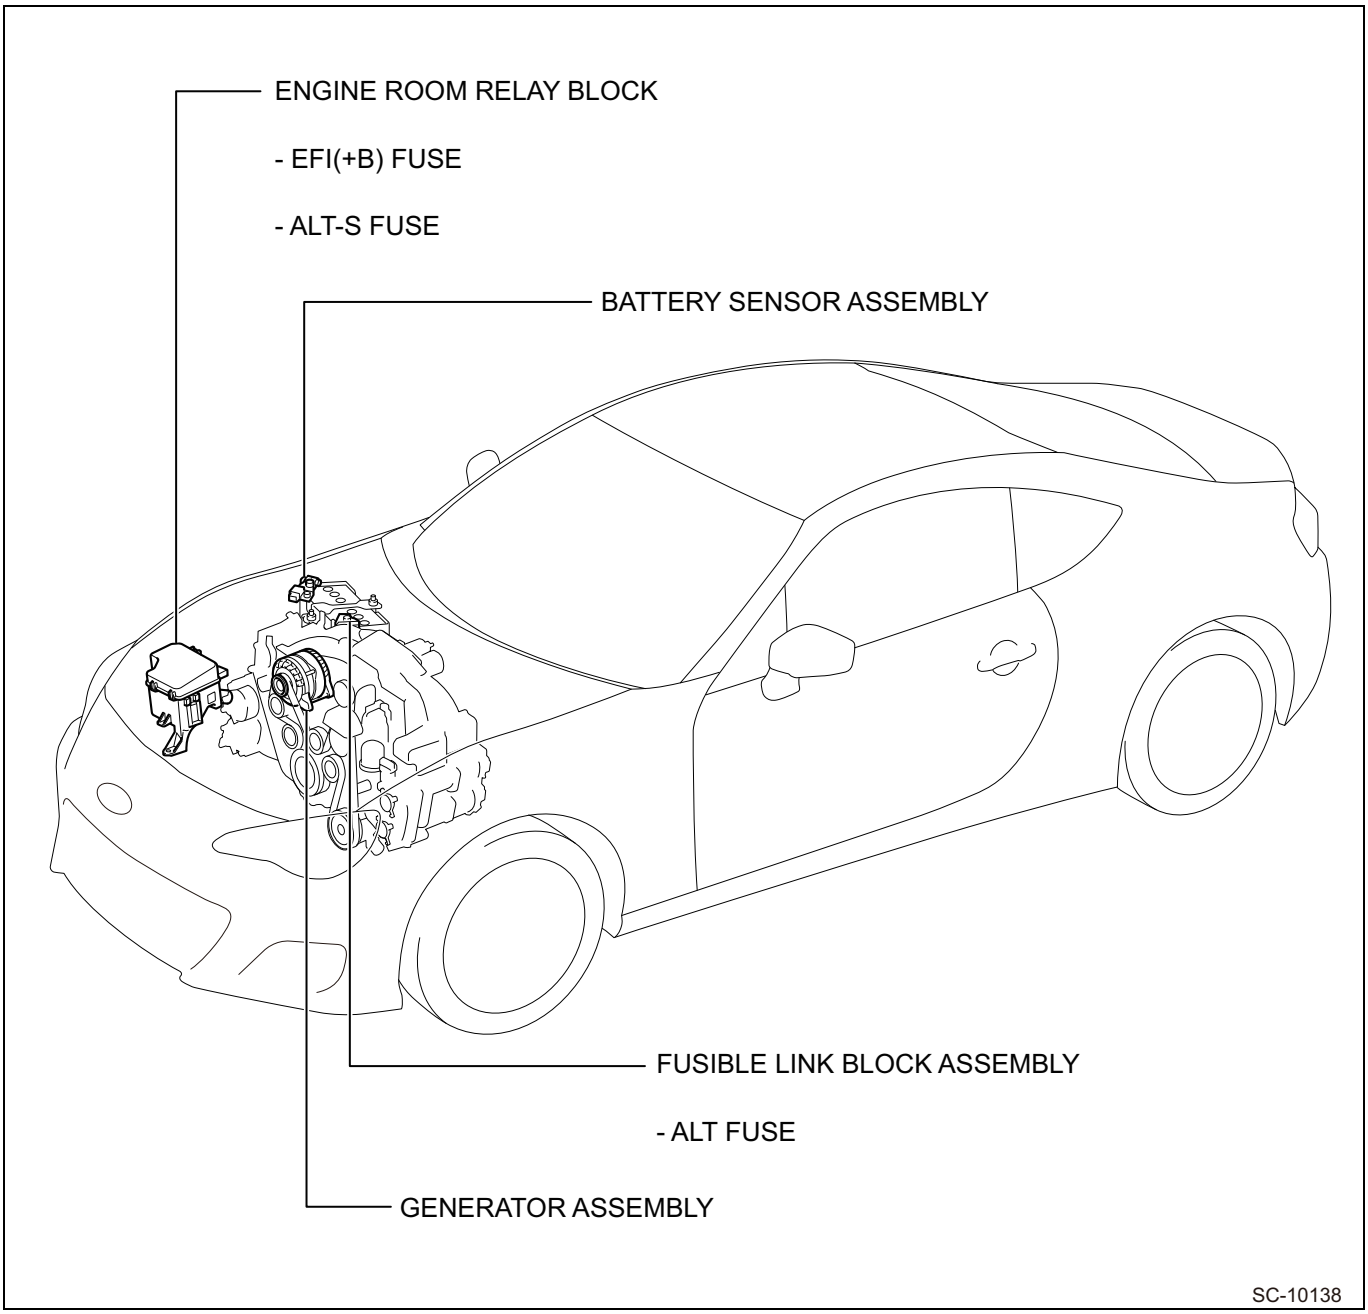
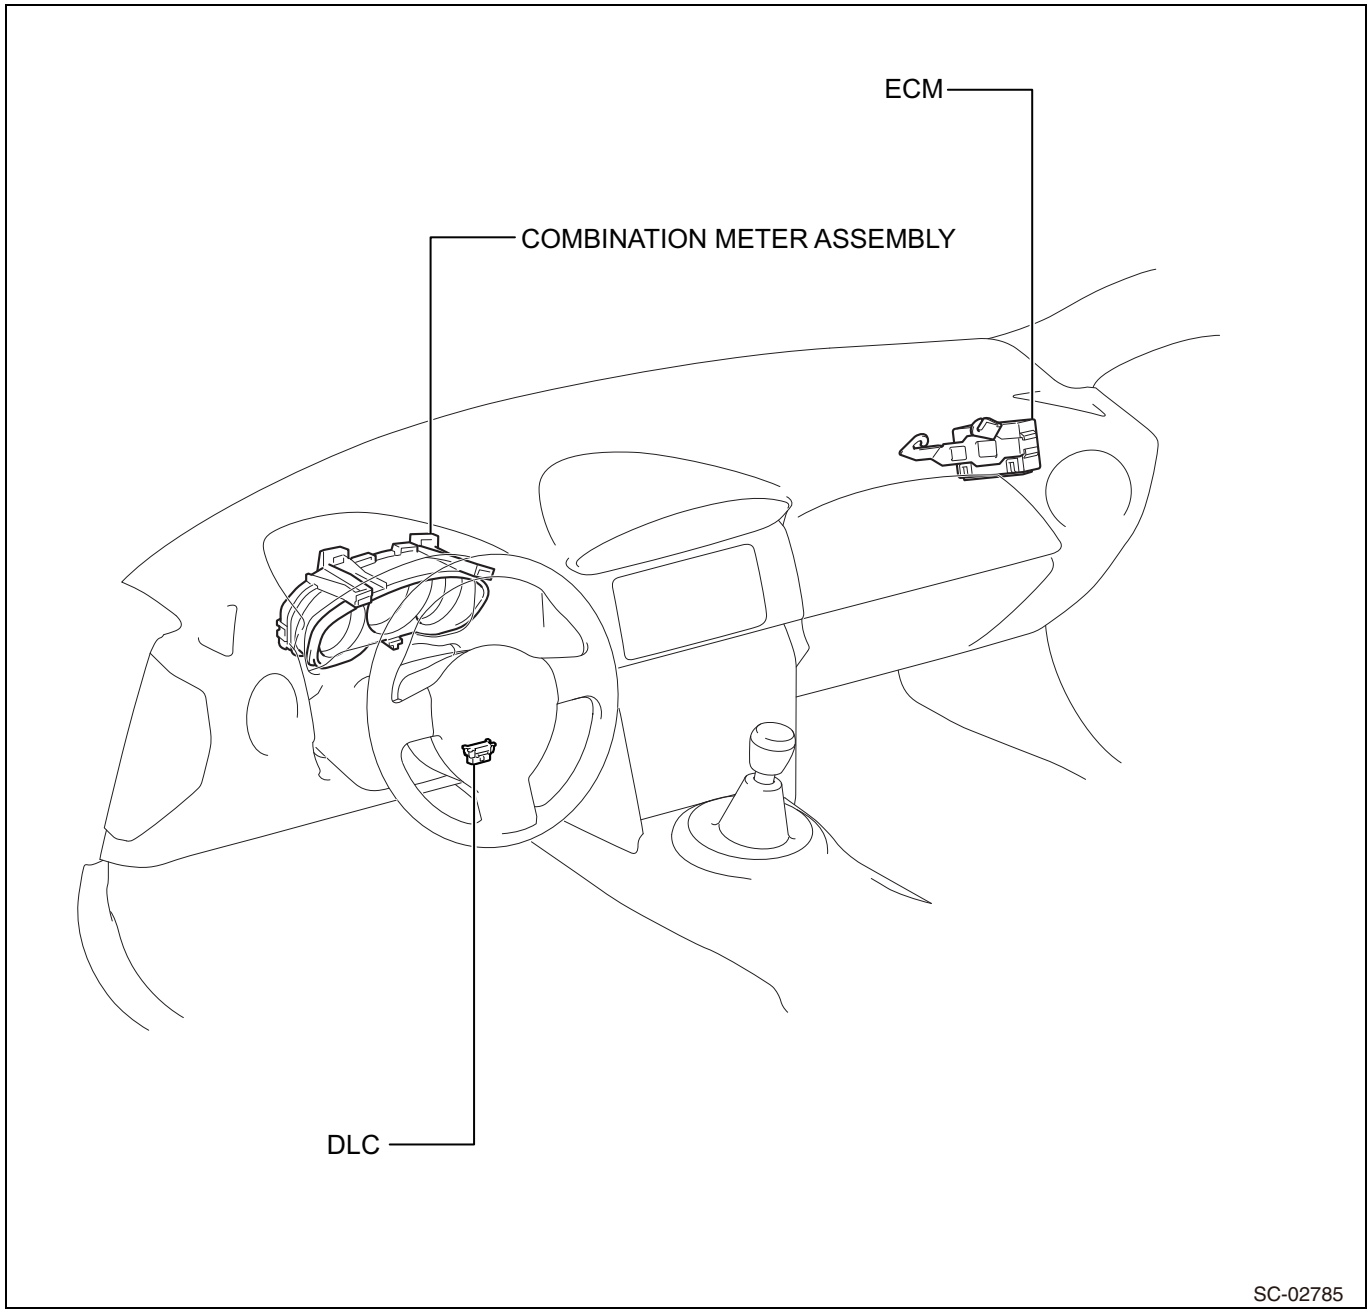
# Charging system (FA20)

## Precautions

1. Never disconnect the battery while the engine is running.
2. Check that the battery cables are correctly connected to the terminals.
3. Do not connect the battery cables during quick charging.

## Parts location



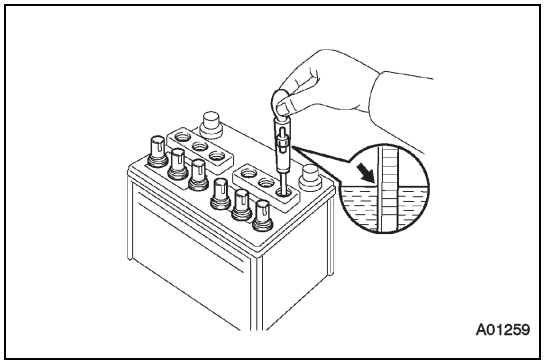


## On-vehicle inspection

CAUTION:

- Never disconnect the battery while the engine is running.
- Check that the battery cables are correctly connected to the terminals.
- Do not connect the battery cables during quick charging.

1. Inspection of the battery fluid level
   (1) Fluid level inspection
      (a)If the level is below LOW, either replace the battery or replenish the level by pouring in distilled water.



2. Checking of the battery specific gravity
   (1) Check the specific gravity of the fluid in each battery cell.
   Standard value: 1.25 - 1.29 (At fluid temperature of 20°C {68°F})
   NOTE:
   If this is less than the standard value, recharge the battery.

BH

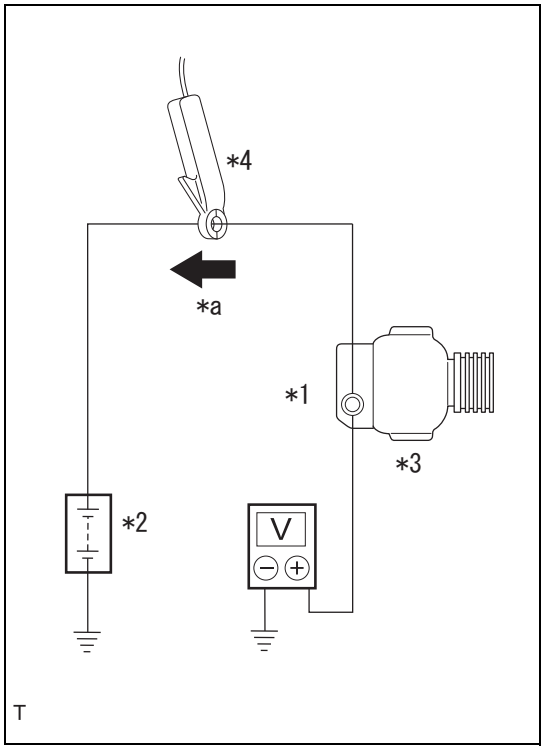
3. Battery voltage check
   (1) In order to remove the surface charge, with the ignition turned to IG OFF, turn the headlight switch to ON for approximately 20 to 30 seconds.
   (2) Turn the headlight switch to OFF.

   (3) Measure the battery voltage between terminals.
   Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Positive battery terminal - Negative battery terminal | Fluid temperature 20°C {68°F} | 12.5 - 12.9 V |

   NOTE:
   If this is less than the standard value, recharge the battery.

4. Inspection of the battery terminals, fusible links, and fuses
   (1) Check that the battery terminals are not loose or corroded.
   (2) Check that there is continuity through the fusible links and fuses.
5. Checking of the fan & alternator V-belt
   NOTE:
   Only perform this inspection if you plan on reusing it. (Refer to EM - 8)
6. Inspection of the alternator wiring harness
   (1) Check that there are no cracks or deterioration in the wiring harness.
7. Checking for strange noises originating from the alternator
   (1) Check that no strange noises come from the alternator during engine starting.
8. Inspection of the charge warning light
   (1) Warm up the engine and turn the ignition to IG OFF.
   (2) Turn all of the electrical device switches to OFF.
   (3) Turn the ignition to IG ON and confirm that the charge warning light illuminates.
   (4) Confirm that this light turns off after starting the engine.
   NOTE:
   If the light does not behave as specified above, perform troubleshooting for the charge warning light circuit.



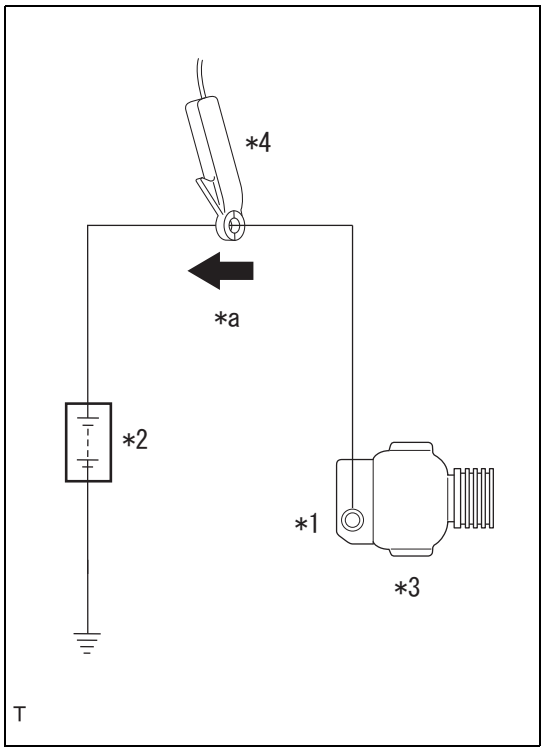
9. No load test
   (1) Inspection of the charging circuit
      (a)When under no load, measure the battery voltage when the engine speed is increased up to 2000 r/min.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| B terminal - Chassis ground | 20 A or less | 11.3 - 15.6 V |

Captions in illustration

| | |
|---|---|
| *1 | B Terminal |
| *2 | Battery |
| *3 | Alternator |
| *4 | AC/DC 400 A probe |
| *a | Current |



10. Load test
   (1) Start under the same conditions as the no load test, turn the headlights to high beam and the heater blower switch to Hi and immediately measure the current when the engine speed reaches 2000 r/min.

Current value

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| B terminal - Positive battery terminal | Always | 30 A or more |

Captions in illustration

| | |
|---|---|
| *1 | B Terminal |
| *2 | Battery |
| *3 | Alternator |
| *4 | AC/DC 400 A probe |
| *a | Current |

NOTE:
If the battery is fully charged even though a current is shown that is at the standard value or less, as the current becomes small, operate other devices such as the wiper motor or the rear window defogger to increase the load and perform the measurement again.

11. Inspection of the charging control system
   (1) Inspection of the wiring harness
      (a)Disconnect the engine control computer connector A33.
      (b)Disconnect the alternator ASSY connector A81.
      (c)Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A33-21 (LIN) - A81-1 (C) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A33-21 (LIN) and A81-1 (C) - other terminals and chassis ground | Always | 10 kΩ or more |

## List of diagnostic codes

Charging control

| Diagnostic codes | Diagnostic items | Charge warning light illumination. | Code recorded | Reference pages |
|---|---|---|---|---|
| P0562 | [System Voltage Low] | 0 | 0 | BH - 12 |

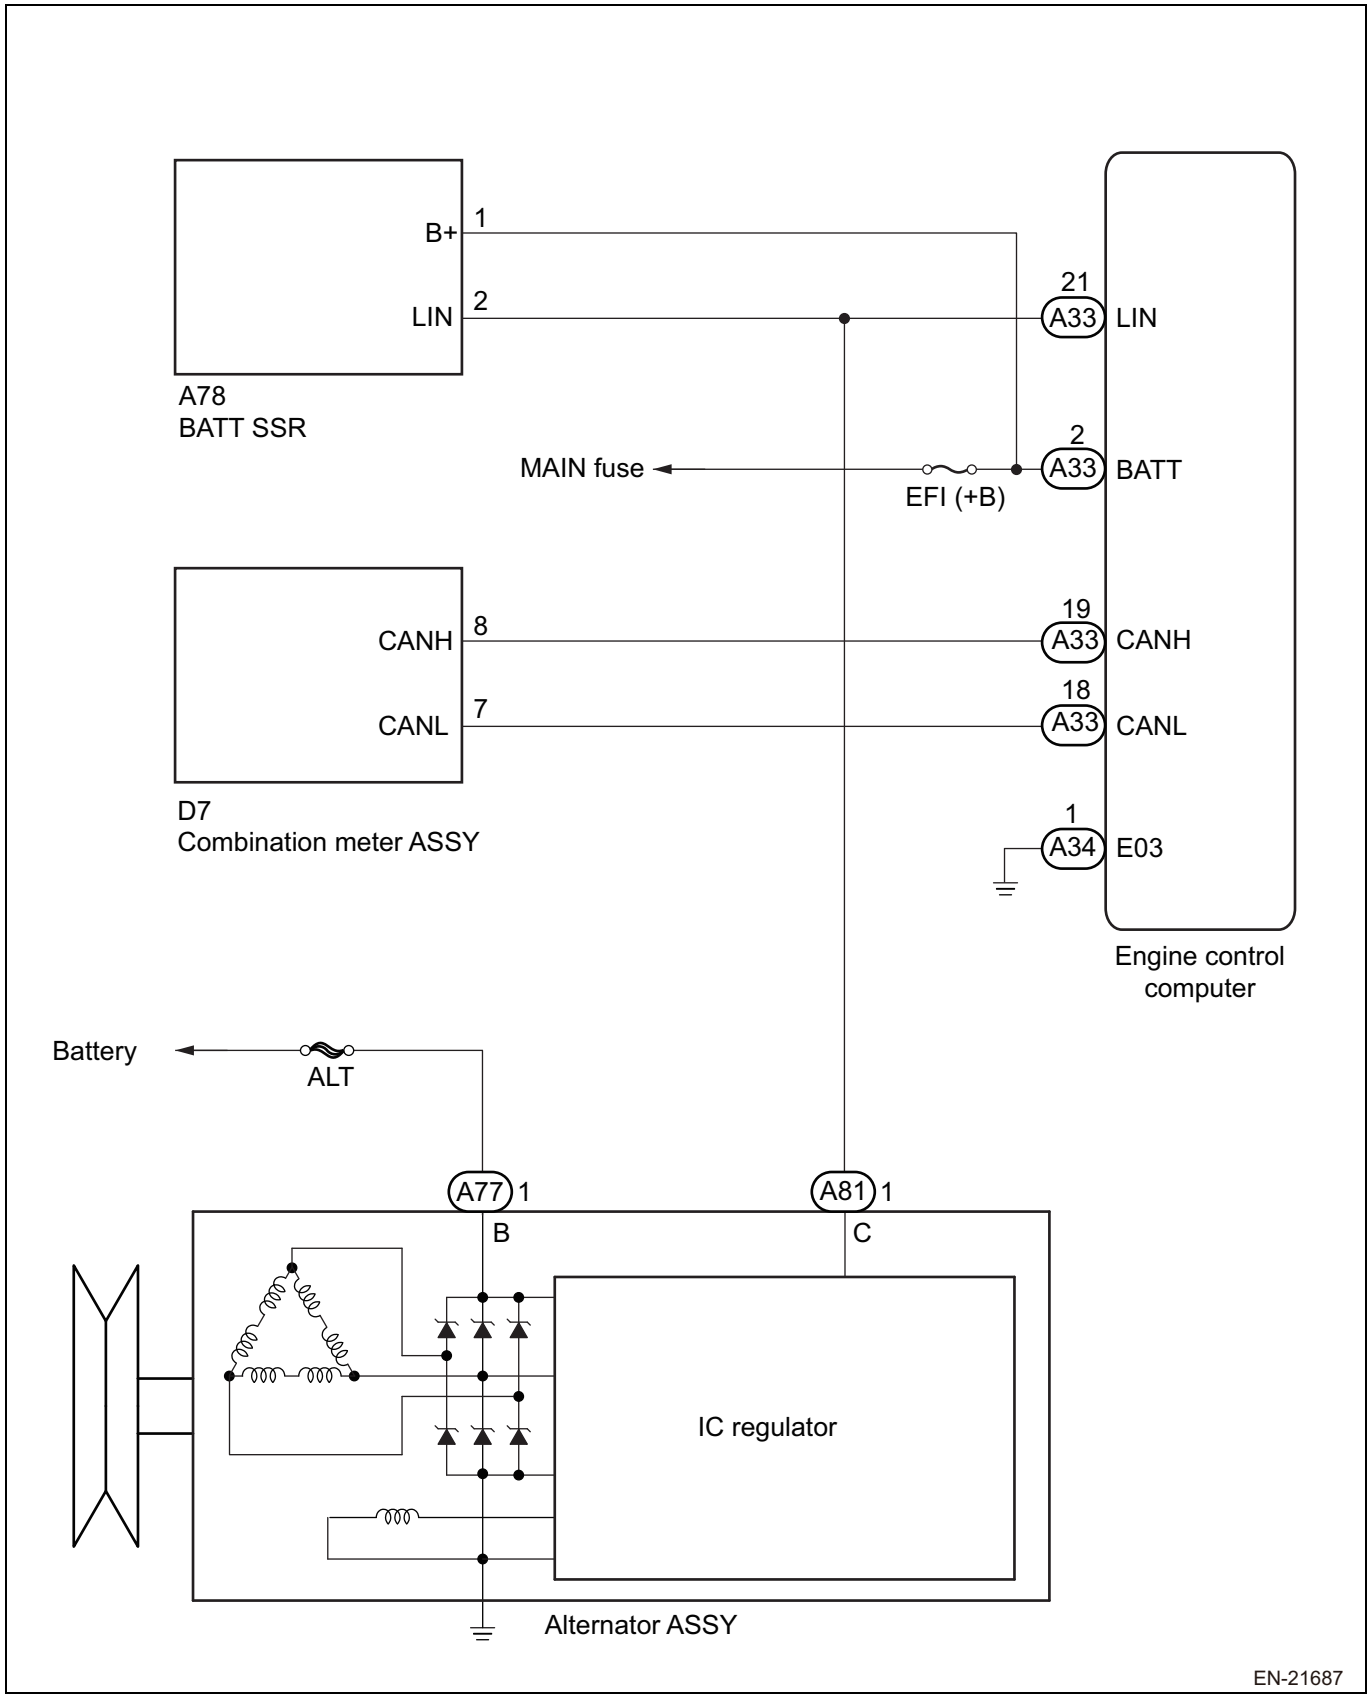
## Checking / clearing diagnostic codes

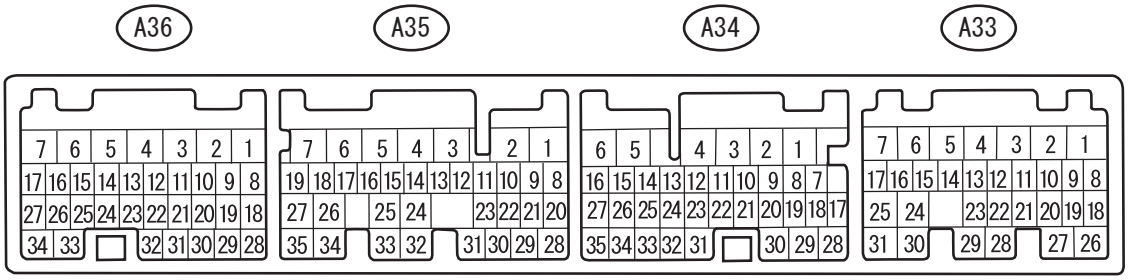
1. Checking diagnostic codes (reading with SSM4)
   (1) With the ignition turned to IG OFF, connect the SSM4 to the DLC3.
   (2) Turn IG to ON, and turn on the SSM4.
   (3) Follow the SSM4 display and select [Inspection of BRZ] →[Each System] →[Engine Control System] →[DTC] to check the diagnostic codes.
2. Clearing diagnostic code records (Cleared by the SSM4)
   (1) With the ignition turned to IG OFF, connect the SSM4 to the DLC3.
   (2) Turn IG to ON, and turn on the SSM4.
   (3) Follow the SSM4 display and select [Inspection of BRZ] →[Each System] →[Engine Control System] →[Clear Memory] to delete the diagnostic codes.
   CAUTION:
   - If deletion is not possible, retry it after turning the ignition to IG OFF and then on again.
   - Do not use the SSM4 to delete diagnostic codes until the cause of the trouble has been identified.

Circuit figure



## ECM terminal arrangement

1. Engine control computer



| Terminal No. (Terminal symbol) | Input Output | Measuring condition | Standard value |
|---|---|---|---|
| A35-22 (VCP2)←→A35-30 (EPA2) | Output | IG ON | 4.5 - 5.5 V |
| A33-11 (IB)←→A35-30 (EPA2) | Input | IG ON | 0.5 - 4.5 V |
| A33-24 (THB)←→A35-30 (EPA2) | Input | IG ON (Battery temperature sensor surrounding temperature of 20 to 50°C {68 to 122°F}) | 1.1 - 2.4 V |
| A34-1 (E03) ←→Chassis ground | Ground | Always (Resistance check) | Less than 1 Ω |
| A33-2 (BATT)←→A34-1 (E03) | Input | Always | 11 to 14 V |
| A35-18 (ALT)←→A34-1 (E03) | Input | Idling | Pulse generation (waveform 1) |

## Data monitor / active test

1. Data monitor
   (1) Use the SSM4 and follow the display to bring up the [Normal sampling] screen in order to inspect the computer data.
   CAUTION:
   Due to slight measurement differences and factors such as differences in the measurement environment or vehicle aged-related variation, the value of the data monitor/active test can be widely varied. It is difficult to obtain a precise standard value (determined value) for this. Therefore, there may be cases where a fault is present, even if it is within the reference value.

SSM4 screen: [Inspection of BRZ] →[Each System] →[Engine Control System] →[Data monitor] →[Normal sampling]

| Item name | Description/display range | Normal value | Remarks (Main inspection items during a malfunction) |
|---|---|---|---|
| [ALT Duty] | Converted value to duty ratio from indication voltage from ECM to alternator | Changes depending on the alternator generation amount | When a malfunction occurs, it may be due to a problem with the charging control system. |
| [Alternator control mode] | • Indicates the alternator generation control mode.<br>• Display range: 0 to 10 | Changes depending on the alternator generation amount | NOTE:<br>During idling: 0 or 5<br>When a malfunction occurs, it may be due to a problem with the charging control system. |
| [Battery Terminal Voltage] | • Voltage between the battery terminals input from the battery sensor<br>• Display range: 0 to 20 V | 12 to 14.6 V: During idling | NOTE:<br>• When in IG ON: 12.7 V<br>• While cranking: 11.4 V<br>• At idling speed: 12 to 14 V<br>When a malfunction occurs, it may be due to a problem with the LIN communication system or battery sensor. |

| Item name | Description/display range | Normal value | Remarks (Main inspection items during a malfunction) |
|---|---|---|---|
| [Battery Charge/Discharge Current] | • Battery charging and discharging current input from the battery sensor<br>• Display range: -2000 to 4292967.2 A | Changes depending on the alternator generation amount | NOTE:<br>• Value is positive: Electric current flows into the battery charging side<br>• Value is negative: Electric current flows into the battery discharging side<br>When a malfunction occurs, it may be due to a problem with the LIN communication system or battery sensor. |
| [Estimated Battery Temperature] | • Battery temperature input from the battery sensor<br>• Display range: -40 to 32727.5°C | Changes depending on the actual temperature | When a malfunction occurs, it may be due to a problem with the LIN communication system or battery sensor. |
| [Remaining Battery Capacity] | • Remaining battery capacity estimated by ECM<br>• Display range: 0 to 100% | Varies depending on the battery condition. | When a malfunction occurs, it may be due to a problem with the charging control system. |
| [Alt Voltage - Non Active Test] | • Indicates the requested voltage when forced driving of the regulator is not being carried out.<br>• Display range: 0 - 80 V | Changes depending on the battery fluid estimated temperature, driving conditions (12.4 to 14.6 V): After engine is started | When a malfunction occurs, it may be due to a problem with the charging control system. |
| [Alt Voltage - Active Test] | • Indicates the requested voltage when forced driving of the regulator is being carried out.<br>• Display range: 0 - 80 V | Value of the request instruction voltage when the active test [Alternator control] is carried out: After engine is started | • Indicates the generation voltage during [Active Test].<br>• When a malfunction occurs, it may be due to a problem with the charging control system. |
| [Alternator Mechanical Error Status] | Displayed when it is determined that there is a mechanical error on the alternator. | 0 | - |
| [Alternator Electrical Output Error Status] | Displayed when it is determined that there is an electrical error on the alternator. | 0 | - |
| [Alternator High Temperature Error Status] | Displayed when it is determined that there is a high temperature error on the alternator. | 0 | - |
| [Alternator Communication Error Status] | Displayed when it is determined that there is a communication error on the alternator. | 0 | - |
| [Regulator Temperature] | • Alternator regulator temperature<br>• Display range: -40 to 980°C | 170°C or less | - |

2. Active test

(1) Using SSM4, display the [Active Test] screen according to the screen and perform the system operation check.

SSM4 screen: [Engine Control System] →[Work Support] →[Active Test]

| Item | Contents | Restrictions |
|---|---|---|
| [Alternator control] | Increases or decreases the alternator generation request voltage.<br>Able to request within the range of 12.8 - 14.3 V. | While engine running |

## Failsafe list

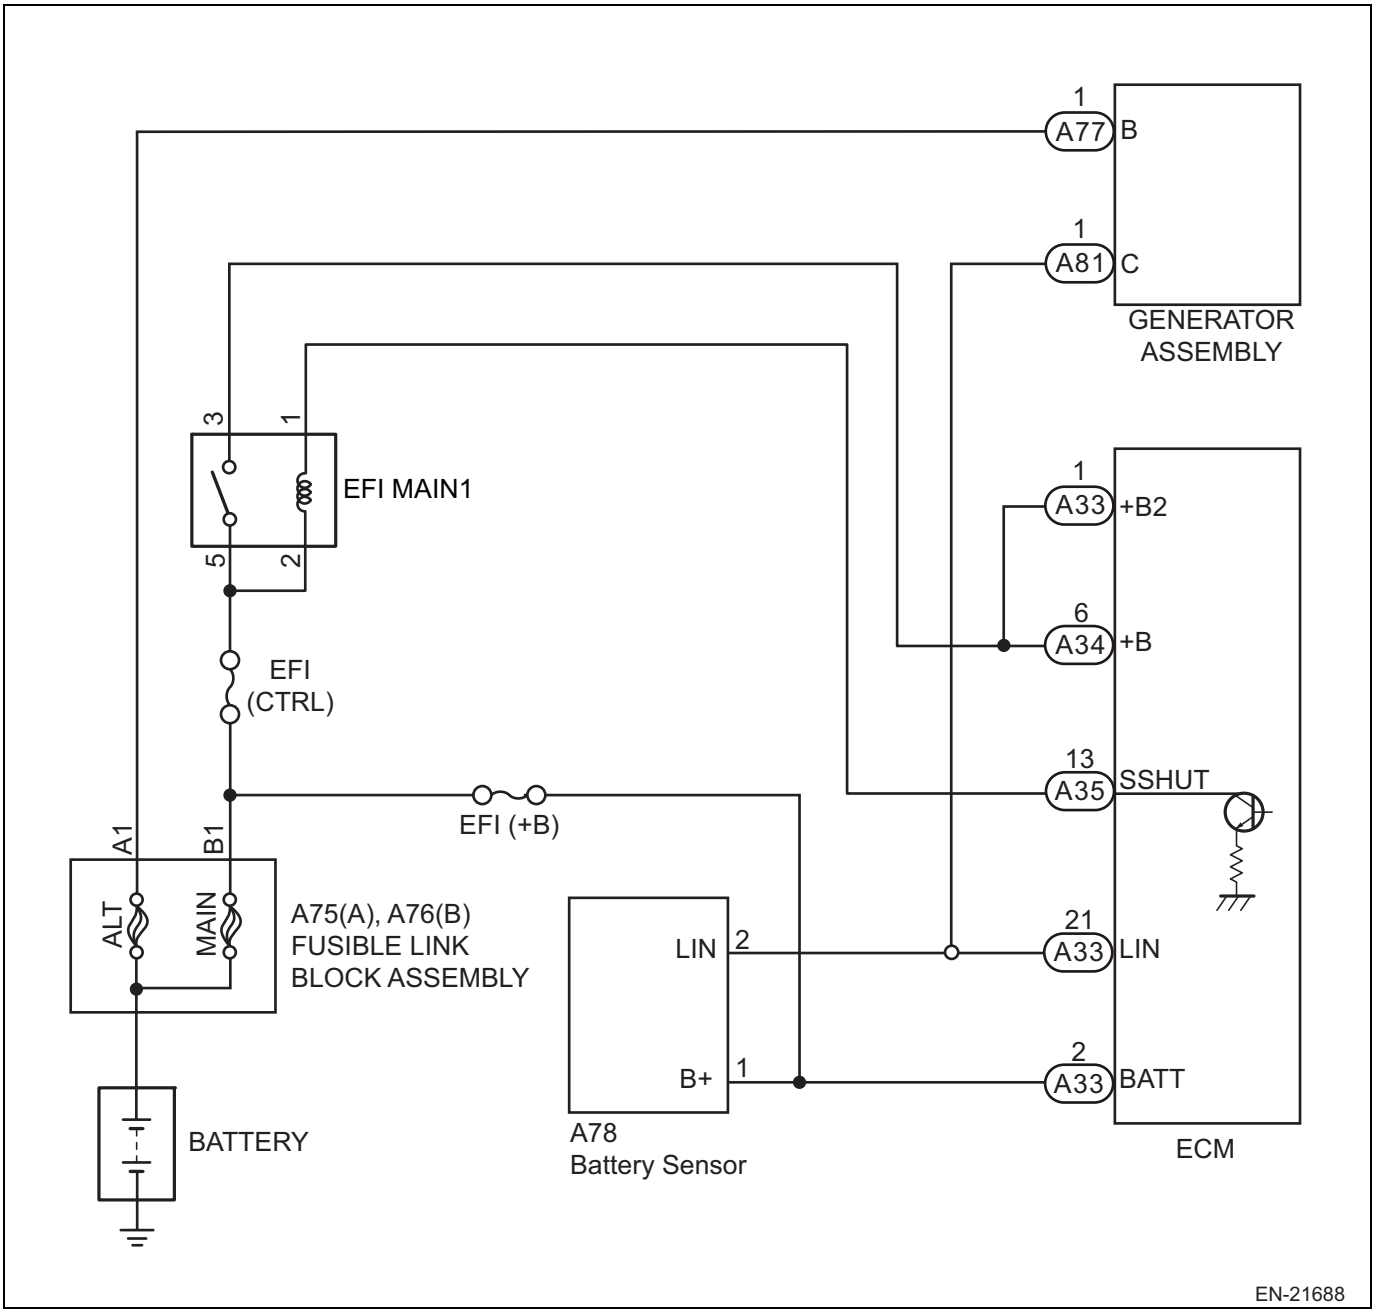
If the following types of codes are recorded to the ECM, it enters fail safe mode.

Charging control

| Diagnostic codes | Fail safe operation | Fail safe mode cancel condition |
|---|---|---|
| P0562<br>P0563<br>P065A<br>P0A3B<br>P1C00<br>U0077<br>U1712<br>U171F | Alternator instructions fixed. | Return to normal conditions. |

| DTC | P0562 | System Voltage Low |
|---|---|---|

Circuit figure



MONITOR STRATEGY

| | |
|---|---|
| Frequency of Operation | Consecutive |
| Duration | 3 seconds |

TYPICAL ENABLING CONDITIONS

| | |
|---|---|
| Engine speed | 1500 RPM or more |
| Alternator generation control final output duty | 50 % or more |

TYPICAL MALFUNCTION THRESHOLDS

| | |
|---|---|
| Battery voltage | Less than 10.8V |

Inspection steps

| | |
|---|---|
| 1 | Alternator inspection |

(1) Start the engine.
(2) Idle the engine after warm-up.
(3) Measure the voltage between the alternator terminal B and chassis ground.

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Alternator terminal B (+) —chassis ground (-) | Always | 10.8V or more |

NG → Repair the alternator. (Refer to BH - 30)

OK

| | |
|---|---|
| 2 | Alternator inspection |

(1) Run the engine at 3,000 rpm.
(2) Measure the voltage between the alternator terminal B and chassis ground.

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Alternator terminal B (+) —chassis ground (-) | Always | 10.8V or more |

NG → Repair the alternator. (Refer to BH - 30)

OK

| | |
|---|---|
| 3 | Check of battery terminal |

(1) Turn the ignition switch to OFF.
(2) Check the installation state of the battery positive and ground terminals.

NG → Tighten the terminal clamp.

OK

| | |
|---|---|
| 4 | Inspection of the engine control computer input voltage |

(1) Idle the engine.
(2) Measure the voltage between the engine control computer connector and chassis ground.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-1 (+B2) —Chassis ground | Always | 10.8V or more |
| A34-6 (+B) —Chassis ground | Always | 10.8V or more |

NG → Repair the harness connectors between the engine control computer connector and battery and the main relay.

OK

| | |
|---|---|
| 5 | Check poor contact of connectors. |

(1) Check the connector between the ECM and alternator and battery for poor connection.

NG → Repair the connector.

OK

| | |
|---|---|
| 6 | Inspection of the engine control computer |

(1) Connect all connectors.
(2) Clear the memory. (Refer to ES - 28)
(3) Read diagnostic codes. (Refer to ES - 28)

Result

| Result | Go to |
|---|---|
| P0562 is output. | A |

A → Replace the alternator. (Refer to BH - 30)

OK

<Note> The circuit returns to normal at this point even if a DTC is detected. Reproduce the faulty condition and perform the diagnosis again. In this case, temporary contact failure of the connector may be present, or the harness may be temporary open or shorted.

  For detailed operation procedures, refer to the operation manual for the general scan tool.

B → The circuit returns to normal at this point even if a DTC is detected. Reproduce the faulty condition and perform the diagnosis again. Clear the memory using the Subaru Select Monitor or a general scan tool.

A

| | |
|---|---|
| 2 | Checking of wiring harness and connector (engine control computer - Battery sensor) |

(1) Turn the ignition switch to OFF.
(2) Disconnect the connector for the engine control computer.
(3) Disconnect the connector for battery sensor.
(4) Measure the resistance between the terminals. (For terminal arrangement, refer to BH - 20.)

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-21(LIN)—A78-2(LIN) | Always | Less than 1 Ω |

NOTE:
- Wiggle the wiring harness and connectors to identify trouble that may not occur constantly for a more accurate check.
- Make sure an excessive tension is not placed on the wiring harness.

NOTE:
In this case, repair the following items.
- Open circuit between the engine control computer connector and battery sensor connector harness
- Poor contact of the intermediate connector

NG → Repair harness and connector.

OK

| 3 | Checking of wiring harness and connector (engine control computer - Battery sensor) |
|---|---|

(1) Measure the resistance between the engine control computer connector and chassis ground. (For terminal arrangement, refer to BH - 20.)

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-21 (LIN) —other terminals and chassis ground | Always | 1 MΩ or more |

NOTE:
- Wiggle the wiring harness and connectors to identify trouble that may not occur constantly for a more accurate check.
- Make sure an excessive tension is not placed on the wiring harness.

NG → Repair ground short circuit in the harness between the engine control computer connector and battery sensor connector.

OK

| 4 | Checking of wiring harness and connector (engine control computer —battery sensor voltage) |
|---|---|

NOTE:
For the inspection procedure and precautions for wiring harnesses and connectors, refer to IN - 36.
(1) Turn the ignition switch to ON.
(2) Measure the voltage between the engine control computer connector and chassis ground.

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-21 (LIN) —other terminals and chassis ground | Always | Less than 1 V |

NOTE:
- Wiggle the wiring harness and connectors to identify trouble that may not occur constantly for a more accurate check.
- Make sure an excessive tension is not placed on the wiring harness.

NG → Repair ground short circuit in the harness between the engine control computer connector and battery sensor connector.

OK

| 5 | Reading diagnostic codes |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Connect the connector for engine control computer.
(3) Connect the battery sensor connector.
(4) Clear the memory using the Subaru Select Monitor or a general scan tool.
(5) Check the diagnostic codes. (Refer to BH - 8)

Result

| Result | Go to |
|---|---|
| U0077 is output. | A |
| U0077 is not output. | B |

NOTE:
- Subaru Select Monitor
  For detailed operation procedures, refer to "Clear memory mode". (Refer to ES - 28)
- General scan tool
  For detailed operation procedures, refer to the operation manual for the general scan tool.

B

The circuit returns to normal at this point even if a DTC is detected. Reproduce the faulty condition and perform the diagnosis again. Clear the memory using the Subaru Select Monitor or a general scan tool.

A

Replacement of the engine control computer (Refer to ES - 674)

| DTC | U1712 | Lost LIN communication with battery "1" monitor module |

  For detailed operation procedures, refer to the operation manual for the general scan tool.

B

The circuit returns to normal at this point even if a DTC is detected. Reproduce the faulty condition and perform the diagnosis again. Clear the memory using the Subaru Select Monitor or a general scan tool.

A

| | |
|---|---|
| 2 | Checking of the engine control computer connector |

(1) Turn the ignition switch to OFF.
(2) Check the connection of the engine control computer connector.

NG

Properly connect the connector for engine control computer.

OK

| | |
|---|---|
| 3 | Checking of the harness between the battery and battery sensor |

(1) Turn the ignition switch to OFF.
(2) Disconnect the ground terminal from the battery sensor.
  For precautions, refer to PD - 20.
(3) Disconnect the connector from the battery sensor. (Refer to PD - 20)
(4) Disconnect the positive terminal from the battery.
(5) Measure the resistance of the harness between the battery positive cable terminal and battery sensor connector.

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Positive cable terminal —A78-2 (LIN) | Always | Less than 1 Ω |

NG → Repair open circuit of the harness between the battery positive cable terminal and battery sensor connector.

OK

| 4 | Checking of harness between the engine control computer and battery sensor connector |
|---|---|

(1) Disconnect the connectors from the engine control computer.
(2) Measure the resistance of the harness between the engine control computer connector and battery sensor connector.

BH

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A78-2(LIN) —A33-21(LIN) | Always | Less than 1 Ω |

NOTE:
- Wiggle the wiring harness and connectors to identify trouble that may not occur constantly for a more accurate check.
- Make sure an excessive tension is not placed on the wiring harness.

NOTE:
In this case, repair the following items.
- Open circuit of the harness between the engine control computer connector and battery sensor connector
- Poor contact of the intermediate connector

NG → Repair harness and connector.

OK

Recheck the connector for poor contact and the harness. If no problem is found, replace the battery sensor.

  For detailed operation procedures, refer to the operation manual for the general scan tool.

B → The circuit returns to normal at this point even if a DTC is detected. Reproduce the faulty condition and perform the diagnosis again. Clear the memory using the Subaru Select Monitor or a general scan tool.

A

| | |
|---|---|
| 2 | Checking of the engine control computer connector |

(1) Turn the ignition switch to OFF.
(2) Check the connection of the engine control computer connector.

NG → Properly connect the connector for engine control computer.

OK

| | |
|---|---|
| 3 | Checking of the alternator terminal B voltage. |

(1) Turn the ignition switch to OFF.
(2) Disconnect the ground terminal from the battery sensor.
For precautions, refer to ES - 36.
(3) Measure the alternator terminal B voltage.

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Alternator terminal B —engine ground | Always | Battery voltage |

NG → Check the harness and fuse of the alternator terminal B.

OK

| | |
|---|---|
| 4 | Checking of harness between the engine control computer and alternator connector |

(1) Disconnect the connectors from the engine control computer.
(2) Disconnect the LIN communication connector from the generator/alternator.
(3) Measure the harness resistance between the engine control computer and alternator LIN communication connector.

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A33-21(LIN) —A81-1(C) | Always | Less than 1 Ω |

NOTE:
- Wiggle the wiring harness and connectors to identify trouble that may not occur constantly for a more accurate check.
- Make sure an excessive tension is not placed on the wiring harness.

NOTE:
In this case, repair the following items.
- Open circuit of the harness between the ECM connector and alternator.
- Poor contact of the intermediate connector

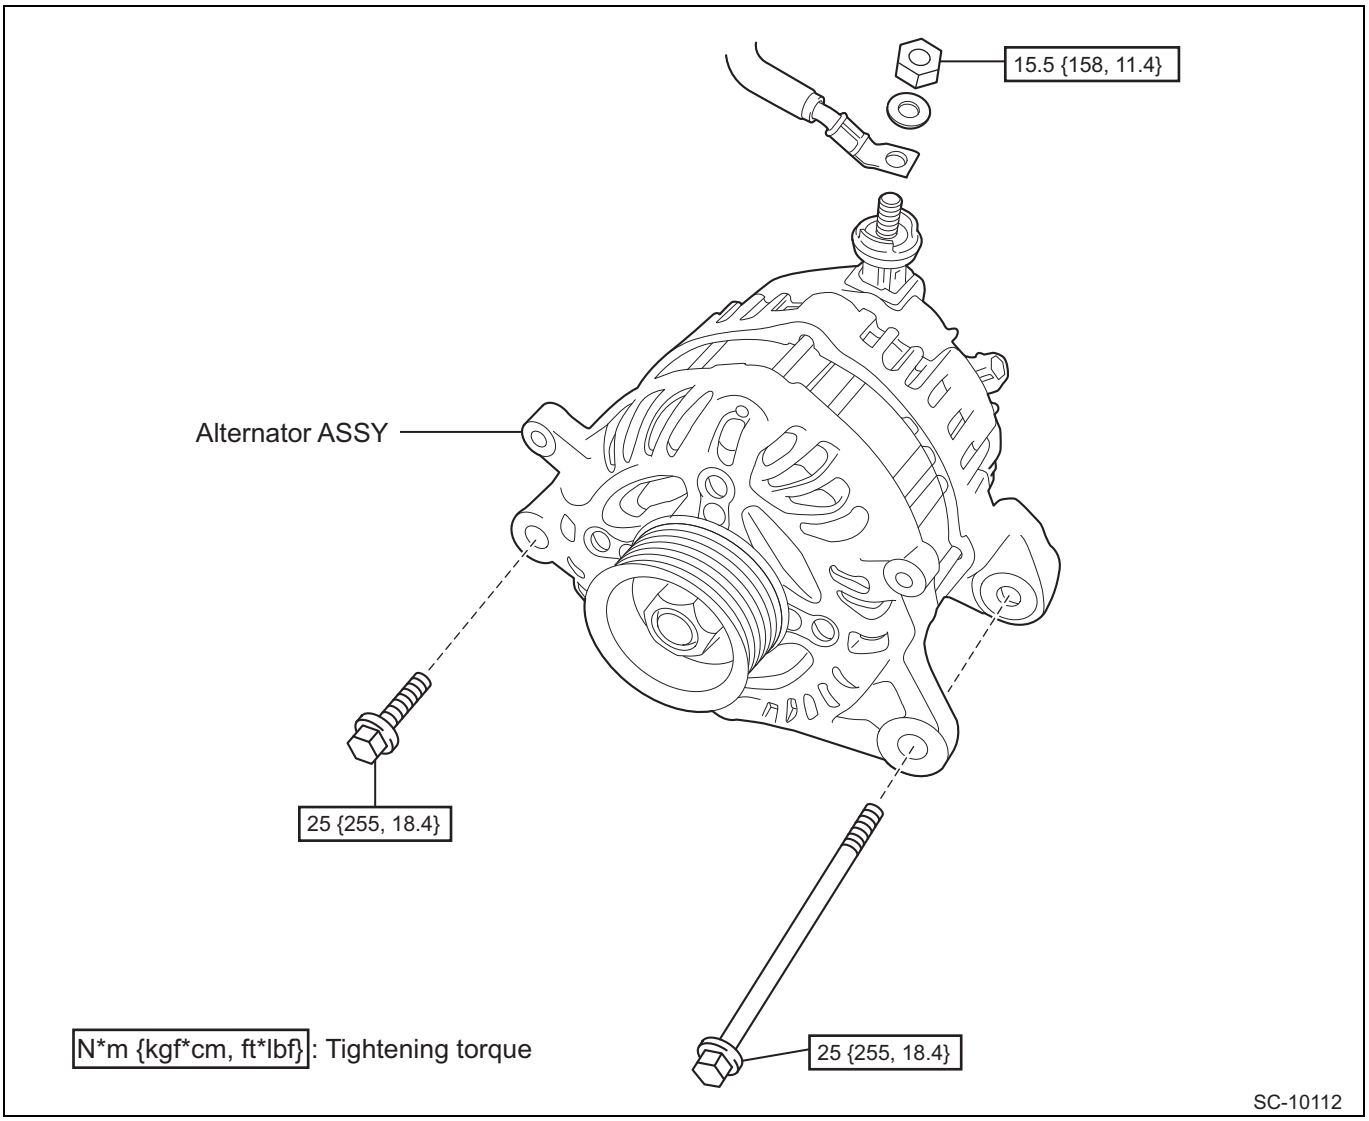
NG → Repair harness and connector.

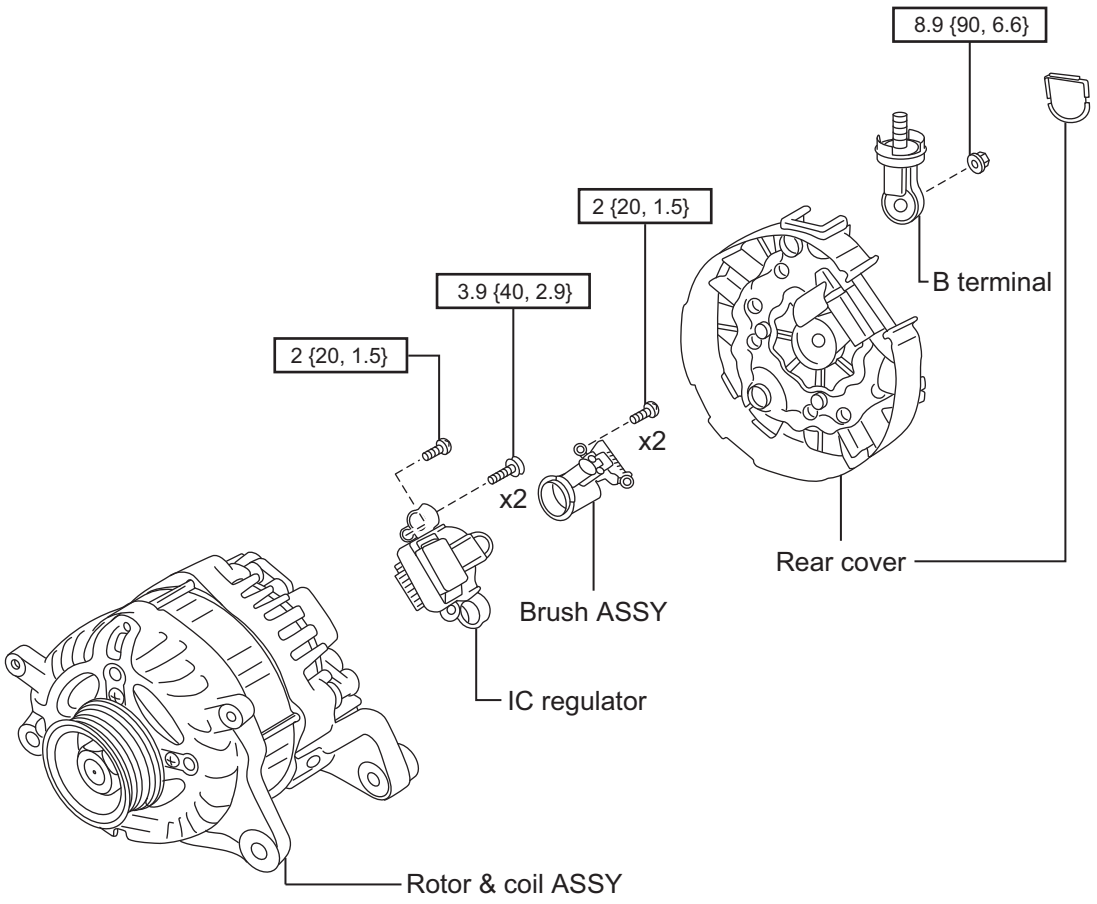
OK

Recheck the connector for poor contact and the harness. If no problem is found, replace the alternator. (Refer to BH - 30)

# Alternator (FA20)

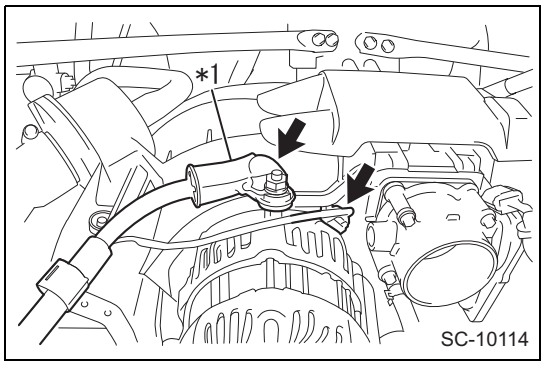
## Exploded view





## Removal

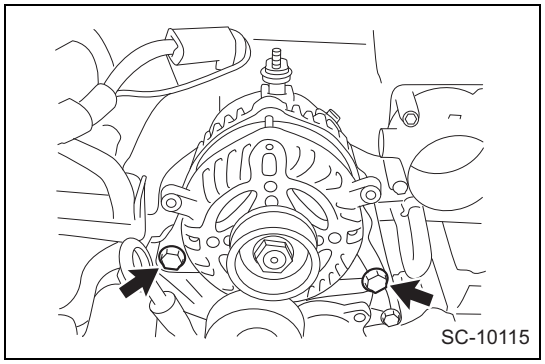
1. Disconnection of the battery ground terminal
   CAUTION:
   The power windows are equipped with an index function that is linked to the opening and closing of the doors and allows the glass to be opened and closed a little. The molding may be damaged when the doors are opened or closed after disconnecting the battery ground terminal with the glass fully closed. Therefore, always disconnect the battery ground terminal with the driver's or passenger's door open (with the glass lowered to a position that allows free door opening and closing).
2. Removal of V-belt (Refer to EM - 5)



3. Removal of the alternator ASSY
   (1) Turn over the terminal cap.
   (2) Undo the nut and disconnect the wiring harness from the B terminal.
   (3) Disconnect the connector.

Captions in illustration

| | |
|---|---|
| *1 | Terminal cap |



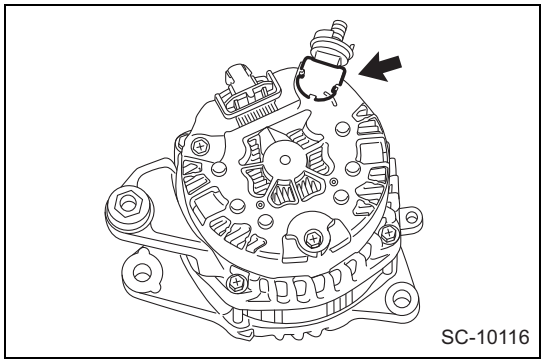
SC-10115

(4) Undo the two bolts and remove the alternator ASSY.

BH

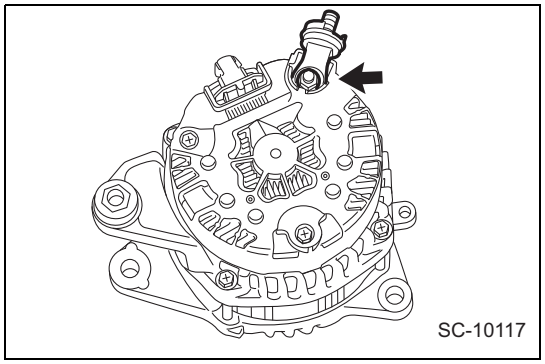
## Disassembly

1. Removal of IC regulator



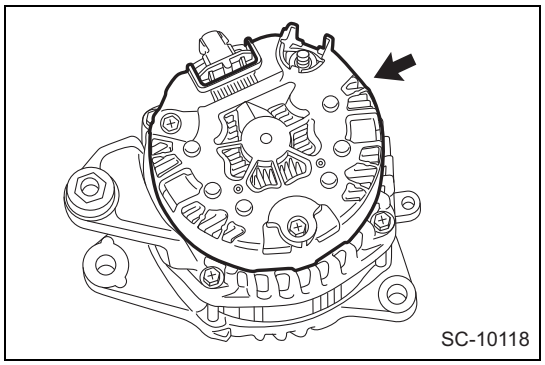
SC-10116

(1) Remove the cover.



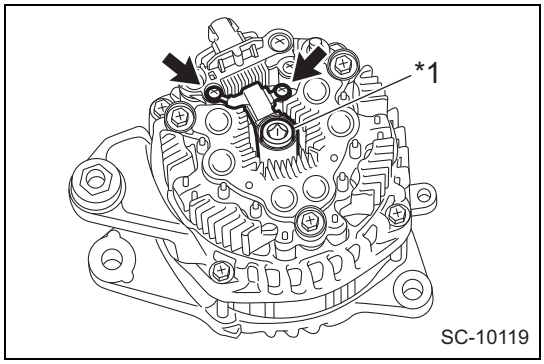
SC-10117

(2) Remove the nut and remove the terminal B.



SC-10118

(3) Remove the rear cover.

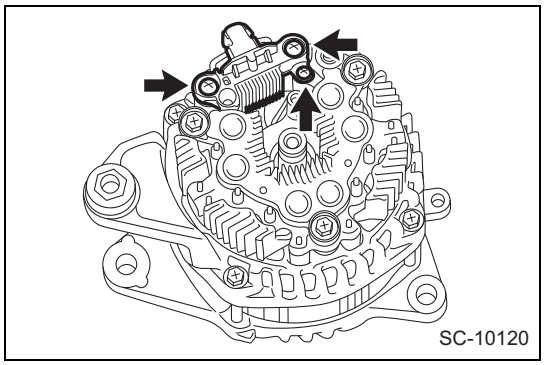


(4) Remove the 2 bolts, and remove the brush ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Socket wrench |

NOTE:
To avid the damage to the slip ring, place an appropriate tool such as a socket wrench of the correct size between the brush and slip ring.

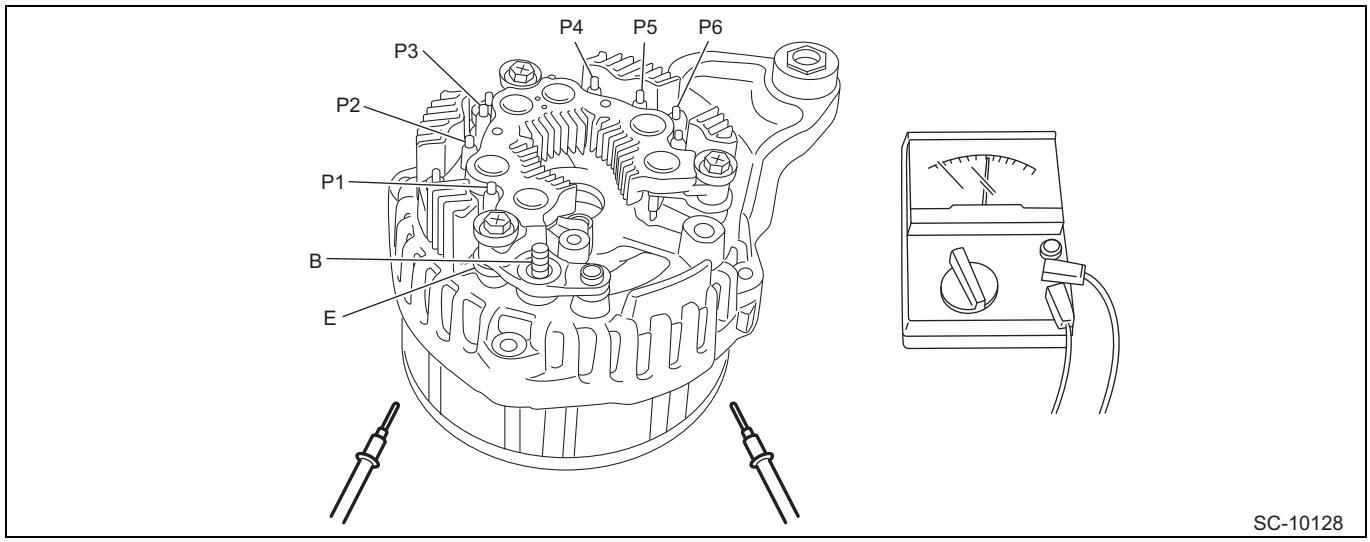


(5) Remove the 3 bolts, and remove the IC regulator.

BH

## Inspection

1. Inspection of light-emitting diode
   (1) Check the continuity between the light-emitting diode lead and terminal E or terminal B. Replace the rectifier if the continuity is not as shown in the table.



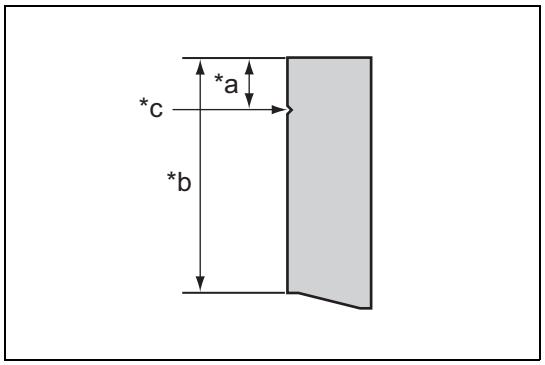
Analog tester

| Tester lead | | Conductor |
|---|---|---|
| - Lead | + Lead | |
| E | P1, P2, P3, P4, P5, P6 | ON |
| B | | None |
| P1, P2, P3, P4, P5, P6 | E | None |
| | B | ON |

Digital tester

| Tester lead | | Conductor |
|---|---|---|
| - Lead | + Lead | |
| E | P1, P2, P3, P4, P5, P6 | None |
| B | | ON |
| P1, P2, P3, P4, P5, P6 | E | ON |
| | B | None |

CAUTION:
Megger testers (used for measuring high voltage) or other equivalent measuring instruments may damage the light-emitting diode. Do not use such instruments for this test.

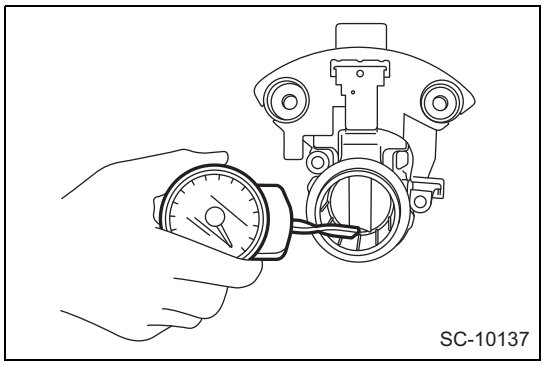


2. Brush check
   (1) Using a vernier caliper, measure the brush length.
   Standard length: 22.5 mm {0.885 in}
   Minimum length: 5.0 mm {0.196 in}

Text in Illustration

| | |
|---|---|
| *a | Minimum length |
| *b | Standard length |
| *c | Mark of minimum length |
| | Brush |

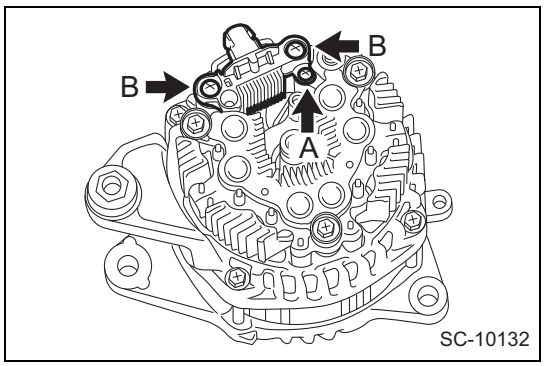
If the brush length is less than the minimum, replace the brush.



(2) Check the brush spring for appropriate pressure. Insert the brush to the brush holder until its tip comes out from the brush holder by 2 mm (0.0787 in.). Then, use the spring pressure indicator to measure the brush spring pressure. Replace the brush spring if the pressure is 1.7 N (173 gf, 6.11 ozf) or less. The pressure of a new spring must be 4.1 - 5.3 N (418 - 540 gf, 14.75 - 19.06 ozf).

## Assembly

1. Installation of IC regulator



(1) Install the IC regulator in place with the 3 bolts.
Standard value:Bolt A
T=2.0N·m {20kgf·cm}
Bolt B
T=3.9N·m {40kgf·cm}

(2) Install the brush ASSY in place with the 2 bolts.
Standard value:T=2.0N·m {20kgf·cm}
CAUTION:
Push the brush into the brush holder while holding the brush with fingers or a socket wrench of the correct size to install the brush ASSY in place.

(3) Install the rear cover.

(4) Install the terminal B with the nut.
Standard value:T=8.9N·m {90kgf·cm}
(5) Install the cover.

## Installation

1. Installation of the alternator ASSY
   (1) Install the alternator ASSY in place with the two bolts.
   Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}
   (2) Connect the connector.
   (3) Connect the wiring harness to the B terminal with a nut.
   Standard value:T=15.5N·m {158kgf·cm} {11.4ft·lbf}
   (4) Install the terminal cap.
2. Installation of V-belt
   (Refer to EM - 7)
3. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}

## Checking / clearing diagnostic codes

1. Checking diagnostic codes (reading with SSM4)
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition to IG ON and use the SSM4 display to select [Each System] →[Body Control] →[DTC] to bring up the DTC check screen.
   (4) Check the diagnostic codes.
2. Clearing diagnostic code records (Cleared by the SSM4)
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition to IG ON and use the SSM4 display to select [Each System] →[Body Control] →[Clear Memory].
   (4) Select [Deletion] to delete the diagnostic codes.
   CAUTION:
   - If deletion is not possible, retry it after turning the ignition to IG OFF and then on again.
   - Do not use the SSM4 to delete diagnostic codes until the cause of the trouble has been identified.

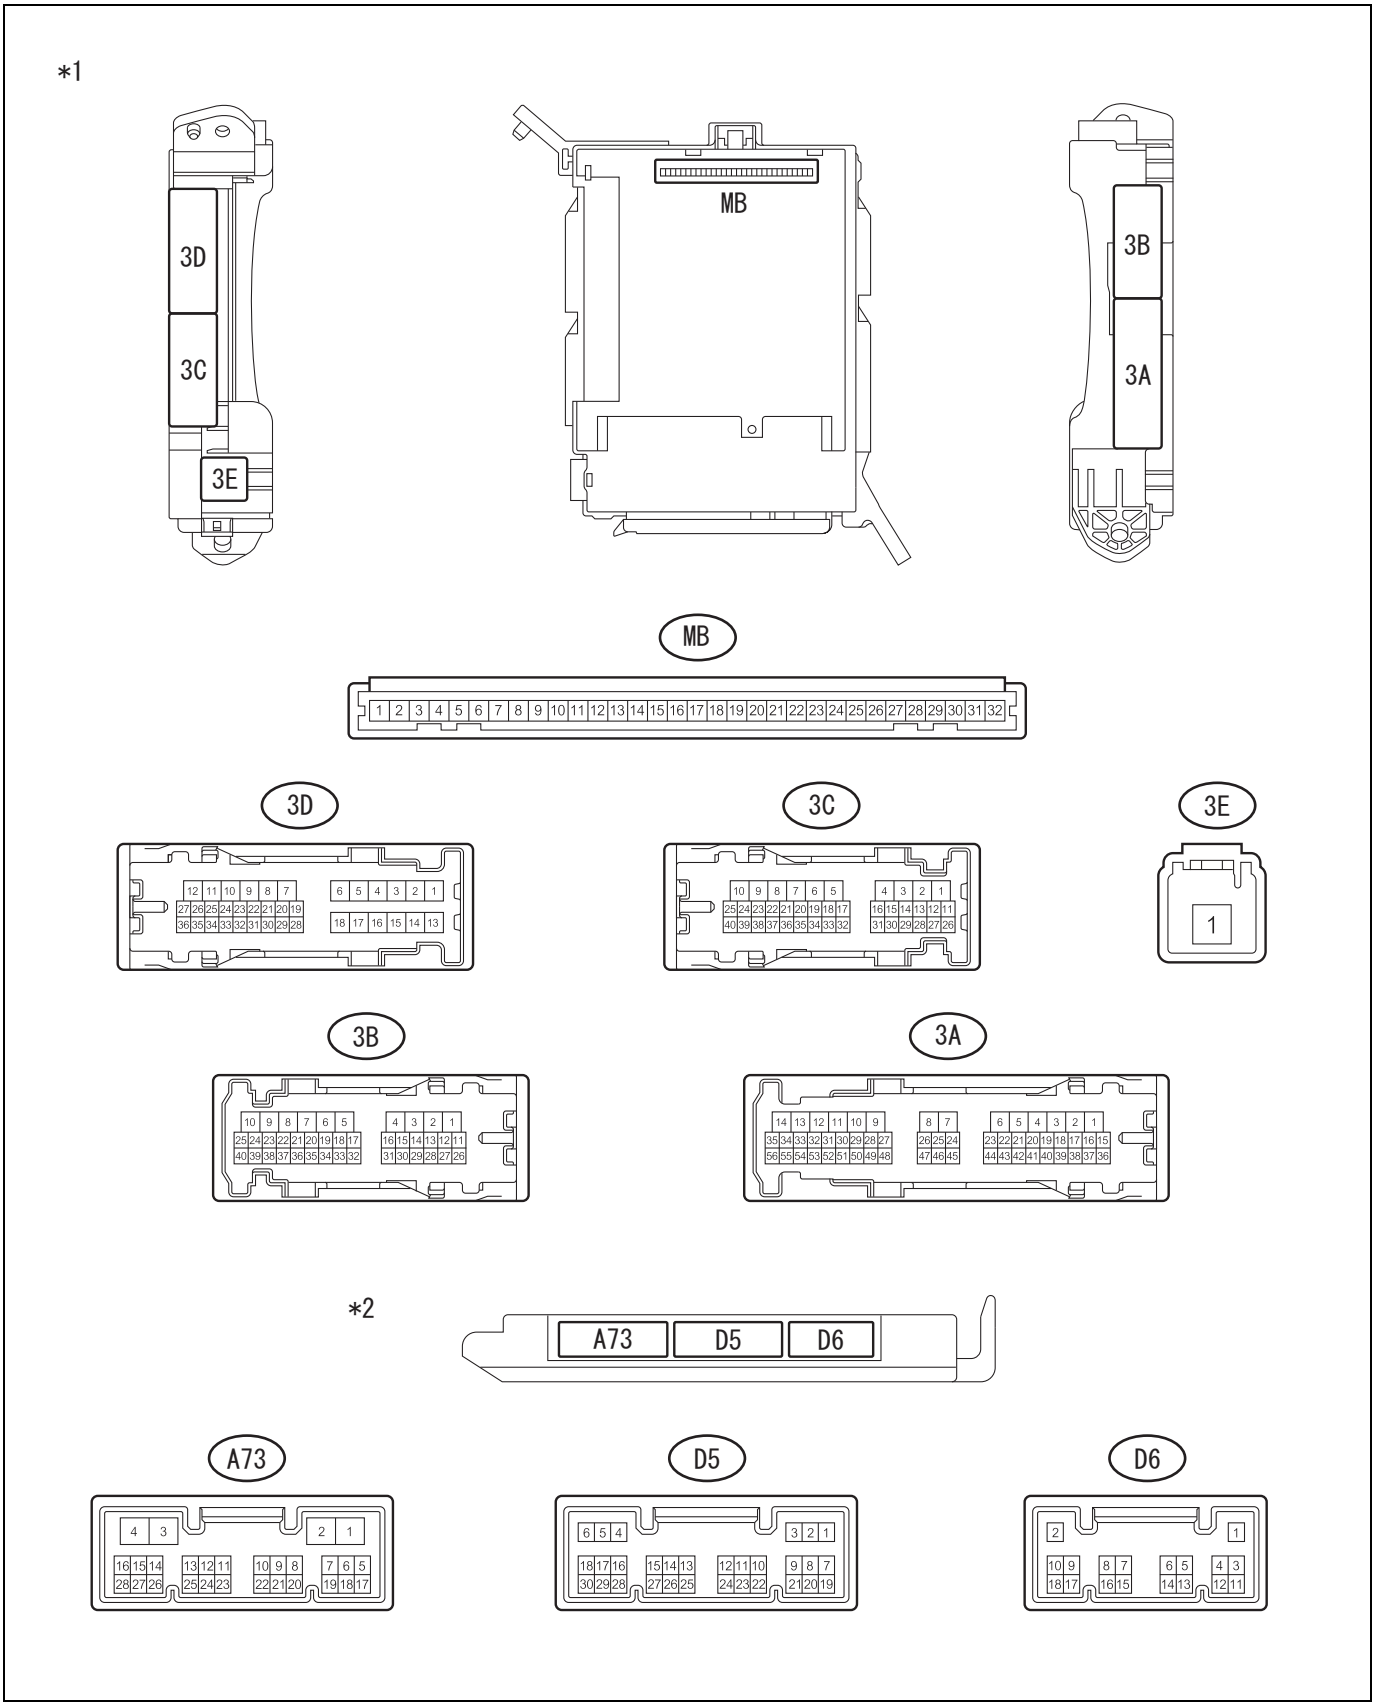
## ECM terminal arrangement

1. Instrument panel junction block ASSY, main body ECM (Network gateway computer).



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (Network gateway computer) |

(1) Measure the voltage and resistance between terminals.

NOTE:
This inspection is performed from the back side of the connector with the connector in a connected state.

| Terminal No. (Terminal code) | Input/Output | Item | Measuring condition | Criteria |
|---|---|---|---|---|
| 3A-15 ←→chassis ground | Input | Voltage | IG ON | 11 to 14V |
| 3A-20 ←→chassis ground | Input | Voltage | IG ON | 11 to 14V |
| 3A-27 ←→chassis ground | Input | Voltage | Always | 11 to 14V |
| 3C-19 ←→chassis ground | Input | Voltage | Always | 11 to 14V |
| 3E-1 ←→chassis ground | Input | Voltage | Always | 11 to 14V |
| 3A-12 ←→chassis ground | - | Resistance | Always | Less than 1 Ω |
| 3A-13 ←→chassis ground | - | Resistance | Always | Less than 1 Ω |
| 3B-18 ←→chassis ground | - | Resistance | Always | Less than 1 Ω |
| D6-1 (GND) ←→chassis ground | - | Resistance | Always | Less than 1 Ω |
| A73-4 (GND) ←→chassis ground | - | Resistance | Always | Less than 1 Ω |

(2) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.
(3) Measure the voltage and resistance between terminals.

| Terminal No. (Terminal code) | Input/Output | Item | Measuring condition | Criteria |
|---|---|---|---|---|
| MB-1 (BECU) ←→chassis ground | Input | Voltage | Always | 11 to 14V |
| MB-8 (IG) ←→chassis ground | Input | Voltage | IG ON | 11 to 14V |
| MB-9 (ACC) ←→chassis ground | Input | Voltage | ACC ON | 11 to 14V |
| MB-32 (BMPX) ←→chassis ground | Input | Voltage | Always | 11 to 14V |
| MB-11 (GND) ←→chassis ground | - | Resistance | Always | Less than 1 Ω |

## Data monitor / active test

1. Data monitor list
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition switch to ON.
   (4) Follow the SSM4 display and select [Each System] →[Body Control] →[Data monitor] to bring up the data monitor item list.
   (5) Use the data monitor to judge whether a component is working or not, and to narrow down the location of trouble.

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks (Main inspection items during a malfunction) |
|---|---|---|---|
| [BATT voltage (control)] | • Shows the BATT (control) voltage.<br>• Display range: 0 to 21.4 V | 11 to 14 V | When a malfunction occurs, it may be due to a problem with battery voltage. |
| [BATT voltage (BACKUP)] | • Shows the BATT voltage backup.<br>• Display range: 0 to 21.4 V | 11 to 14 V | When a malfunction occurs, it may be due to a problem with battery voltage. |
| [Ignition Power Supply Voltage] | • Shows the IG power supply voltage.<br>• Display range: 0 to 21.4 V | 11 to 14 V | When a malfunction occurs, it may be due to a problem with the IG circuit. |
| [ACC voltage] | • Shows the ACC voltage.<br>• Display range: 0 to 21.4 V | 11 to 14 V | When a malfunction occurs, it may be due to a problem with the ACC circuit. |

| DTC | B1010 | Integrated unit system error |
|---|---|---|

Circuit description
B1010 is output if there is a malfunction inside the main body ECM (Network gateway computer).

| Diagnostic codes | Detecting conditions | Faulty part |
|---|---|---|
| B1010 | Main body ECM (Network gateway computer) internal malfunction. | • Main body ECM (Network gateway computer) |

Inspection steps

| | |
|---|---|
| 1 | Clearing diagnostic code |

(1) Clear the diagnostic code using the SSM4. (Refer to PD - 4)

Next

| | |
|---|---|
| 2 | DTC check |

(1) Use the SSM4 to confirm that diagnostic code B1010 is not being output again. (Refer to PD - 4)

Result

| Result | Go to |
|---|---|
| If the diagnostic code is being output again | A |
| If the diagnostic code is not output | B |

B → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

A

Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

## DTC B1011 BATT power supply (control) malfunction

Circuit description

B1011 is output when a BMPX circuit malfunction is detected.

NOTE:

If B1012 is output at the same time, there are some cases where all functions of the main body ECM (Network gateway computer) do not operate.

| Diagnostic codes | Detecting conditions | Faulty part |
|---|---|---|
| B1011 | The BMPX voltage is 8.3 V or less, or 16.7 V or more (BMPX circuit malfunction) | • Main body ECM (Network gateway computer)<br>• Instrument panel junction block ASSY<br>• Wiring harness or connector |

Circuit figure

NG → Repair or replacement of wiring harness or connector

OK

| 4 | Inspection of the wiring harness and connector (ECM ground) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the main body ECM (Network gateway computer) connectors D6 and A73.
(2) Disconnect the instrument panel junction block ASSY connector 3B.
(3) Measure the resistance between the terminals.
Resistance

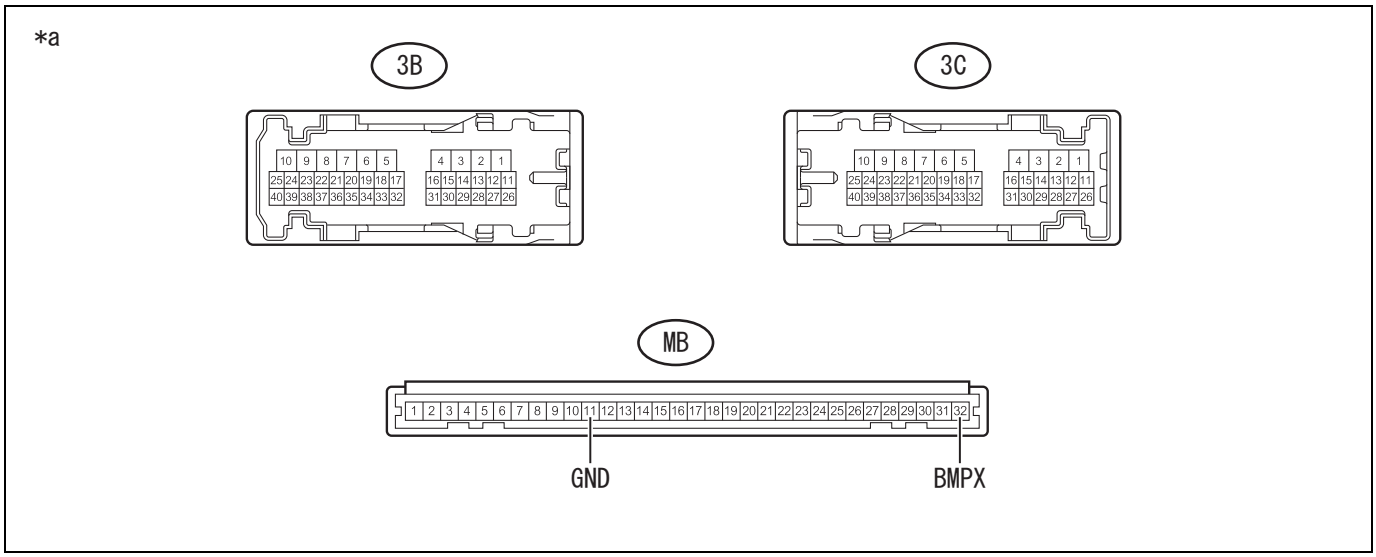
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D6-1 (GND) - Chassis ground | Always | Less than 1 Ω |
| A73-4 (GND) - Chassis ground | Always | Less than 1 Ω |
| 3B-18 - Chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

| 5 | Inspection of the instrument panel junction block ASSY itself |
|---|---|

(1) Remove the instrument panel junction block ASSY. (Refer to PD - 25)
(2) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3C-19 - MB-32 (BMPX) | Always | Less than 1 Ω |
| 3B-18 - MB-11 (GND) | Always | Less than 1 Ω |

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

## DTC B1012 BATT power supply (backup) malfunction

Circuit description

B1012 is output when a BECU circuit malfunction is detected.

NOTE:

If B1011 is output at the same time, there are some cases where all functions of the main body ECM (Network gateway computer) do not operate.

| Diagnostic codes | Detecting conditions | Faulty part |
|---|---|---|
| B1012 | The BECU voltage is 8.3 V or less, or 16.7 V or more (BECU circuit malfunction) | • Main body ECM (Network gateway computer)<br>• Instrument panel junction block ASSY<br>• Wiring harness or connector |

PD

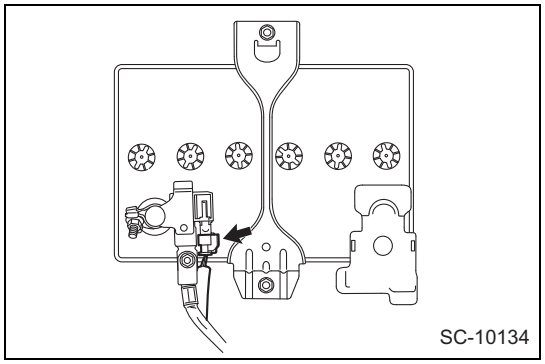
## Removal

1. Precautions
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

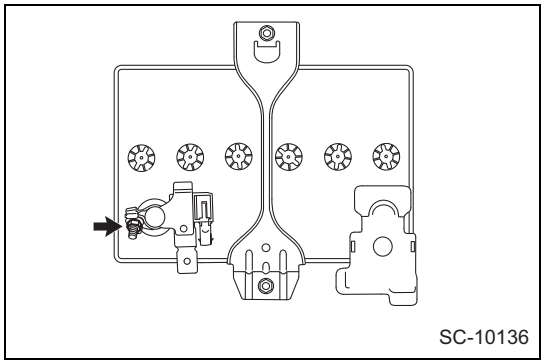


2. Removal of battery sensor ASSY
   (1) Disconnect the connector.

   (2) Undo the nut and disconnect the engine wire from the battery sensor ASSY.
   CAUTION:
   The power windows are equipped with an index function that is linked to the opening and closing of the doors and allows the glass to be opened and closed a little. The molding may be damaged when the doors are opened or closed after disconnecting the battery ground terminal when the glass is completely closed. Therefore, always disconnect the battery ground terminal with the driver's or passenger's seat door open (with the glass lowered to a position that allows free door opening and closing).

Captions in illustration

| | |
|---|---|
| *1 | Engine wire |



SC-10136

(3) Loosen the nut and remove the battery sensor ASSY.

## Installation

1. Installation of battery sensor ASSY
   (1) Install the battery sensor ASSY in place.
   (2) Tighten the nut.
   Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
   (3) Connect the engine wire to the battery sensor ASSY with the nut.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (4) Connect the connector.

## Unit inspection

Check the battery sensor ASSY for deformation, cracks or other damages.

# Main body ECM

## Work support

1. When replacing the main body ECM (Network gateway computer)
   (1) For models without smart entry & start system, prepare all the registered keys.
   (2) Use the SSM4 and carry out the following procedure.
      (a)Connect the SSM4 to the DLC3.
      (b)Turn the ignition switch to ON.
      (c)Turn on the SSM4.
      (d)From the SSM4 display screen, select [Each System] →[Body Control] →[Work Support] →[Replacement of ECU] →[Destination/Reading of function setting] and follow the instruction on the screen.
      NOTE:
      Keep a record of any customize registration content that is displayed during this process.
      (e)If an ECM replacement instruction is displayed, click the [OK] button.
   (3) Replace the main body ECM (Network gateway computer).
      NOTE:
      • If you replace the main body ECM (Network gateway computer) without carrying out the above SSM4 procedure, start again and follow the above procedure.
      • Restart the whole procedure if you happen to make a mistake along the way.
2. After replacing the main body ECM (Network gateway computer)
   (1) Use the SSM4 and carry out the following procedure.
      (a)From the SSM4 display screen, select [Each System] →[Body Control] →[Work Support] →[Replacement of ECU] →[Destination/Reading of function setting] and follow the instruction on the screen.
      NOTE:
      Check that the customize registration content that is displayed during this process is the same as what was recorded earlier.
      (b)If a writing complete message is displayed, click the [OK] button to finish the procedure.
      NOTE:
      Restart the whole procedure if you happen to make a mistake along the way.
   (2) If you wish to correct or modify any customize content, select from [Body Control] to [Customize] in the above procedure to set the registration content.
   (3) For models without smart entry & start system, register the immobilizer.
      NOTE:
      For detailed operations, refer to the "Registration manual for immobilizer."

## Customize function

1. Customization using the SSM4
   (1) The following procedure can be used to check or set customization.
      (a)Connect the SSM4 to the DLC3.
      (b)Turn the ignition switch to ON.
      (c)Turn on the SSM4.
      (d)Enter the following menu.
      [Each System] →[Body Control] →[Customize]
      (e)Customize the settings according to the table below.

List of customization items

| Displayed name | Initial value setting | Contents | Setting |
|---|---|---|---|
| [Head Light auto cut delay] | 30 s | Setting of lighting time for light auto cut function | OFF, 30 s, 60 s or 90 s |
| [Welcome Light Off Delay Time (Approaching)] | 30 s | Setting of lighting time for welcome light function (entering the vehicle) | OFF, 30 s, 60 s or 90 s |
| [Auto Dimmer Cancel Setting] | 3 | Setting of auto dimmer cancel function | 0 (OFF)/stage 1 (least sensitive)/ stage 2 (less sensitive)/stage 3 (standard)/stage 4 (more sensitive)/ stage 5 (very sensitive) |
| [Wiper Link Auto Light Setup] | ON | Switching of auto light function linked to wipers ON/ OFF | ON or OFF |
| [Lane Change Signal Setting] | ON | Switching of lane change signal function ON/OFF | ON or OFF |
| [Auto Light Sensitivity] | ±0% | Auto light control sensor sensitivity (illumination detection) adjustment function settings *1 | -40% / -20% / ±0% / +20% / +40% |

| Displayed name | Initial value setting | Contents | Setting |
|---|---|---|---|
| [DRL Function*2] | ON | ON/OFF of the DRL function | ON or OFF |
| [Rear defogger operation mode] | Normal | Rear defogger operation drive mode settings | Normal *3/Continuous *4 |
| [Lighting Time] | 15 s | Settings so that when the interior lamp is set to "DOOR", the interior lamp automatically turns off after all doors are closed | 15 s/7.5 s/30 s |
| [I/L when ACC OFF] | support | Settings so that when the interior lamp is set to "DOOR", the interior lamp automatically turns on when the vehicle changes from ACC ON →OFF | support/no support |
| [I/L ON W/Door Key Unlock] | support | Set the function to automatically turn on the interior light in accordance with unlocking operation using a smart key or mechanical key, when the interior light is set to the DOOR mode | support/no support |
| [Room Light when Approached] | support | Set the function to turn on the interior light when the driver approaches the vehicle carrying the smart key. | support/no support |
| [Interior Light Control] | support | Settings for the function where the interior lamp turns on by the timer | support/no support |
| [Security System] | no support | Auto alarm system function settings | support/no support |
| [Keyless Control] | Yes | Settings for the function that allows you to select to lock the door via operation of the electrical key transmitter SUB-ASSY (Electronic key) | Yes or NO |
| [Wireless Buzzer Resp] | ON | Wireless door lock buzzer response | OFF or ON |
| [Hazard Answer Back] | ON | When the wireless lock switch of the transmitter is pressed, all hazard warning lights are illuminated simultaneously. All hazard warning lights illuminate twice when the unlock switch is pressed. | OFF or ON |
| [Open Door Warning] | ON | The buzzer sounds when the lock is pressed while any door is open. | OFF or ON |
| [Keyless Select unlock] | Yes | Settings for the function where all doors are unlocked when the electrical key transmitter SUB-ASSY (Electronic key) is operated twice | Yes or NO |
| [Panic Alarm Function] | ON | Function to activate the anti-theft system when the panic switch of the electrical key transmitter SUB-ASSY is held down for 1.5 seconds or more. | OFF or ON |
| [Wireless Auto Lock] | ON | This function turns the wireless auto lock to ON or OFF. | OFF or ON |
| [Auto Lock Time] | 60 seconds | This function controls the time from unlocking all doors until the activation of auto lock function. | 30 s, 60 s, 120 s |
| [Keyless Trunk Unlock] | Long press (short) | Settings for the method of operation when opening the trunk with the electrical key transmitter SUB-ASSY (Electronic key) | single press/2 times ON/Long press(short)/Long press(long) |
| [Wireless Buzzer Volume] | Level 5 | Wireless door lock buzzer volume | Level 7, Level 6, Level 5, Level 4, Level 3, Level 2, Level 1, or Level 0 |

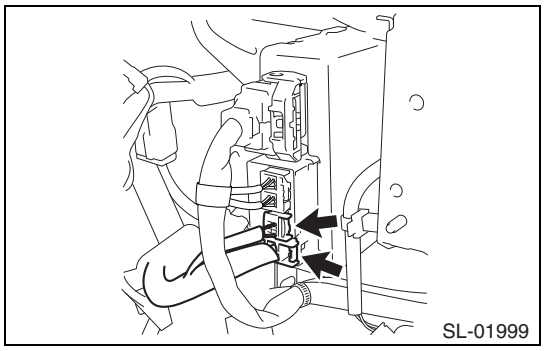
*1: As the setting is higher, the light turn on more easily.
*2: Only displayed in the U.S. model.
*3: Rear defogger operation turns OFF after 15 minutes.
*4: Rear defogger operation repeats on a 2 minutes OFF, 15 minutes ON pattern.
*5: The LED headlight is set on the HID display.
NOTE:
- The above settings are to be matched to particular vehicle equipment specifications.

- Do not change any other settings other than the above items when performing function configuration.
- Confirm that the main body ECM (Network gateway computer) registration content [Factory initial setting] is for the correct market. When it is in factory mode, this means that the settings have not been confirmed.

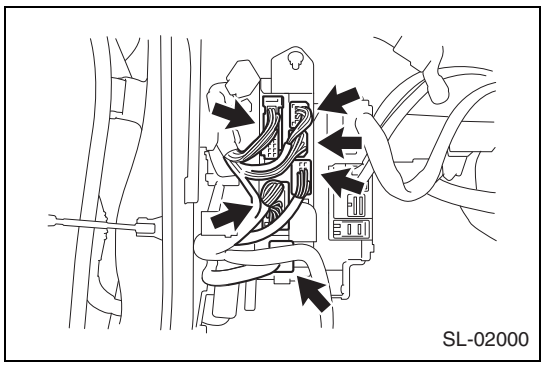
## Removal

1. Precautions
   - Always carry out work support when replacing the main body ECM (Network gateway computer). (Refer to PD - 23)
   - After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding.
2. Disconnection of the battery ground terminal (Refer to IN - 6)
3. Removal of the instrument side panel LH (Refer to IT - 24)
4. Removal of the instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)



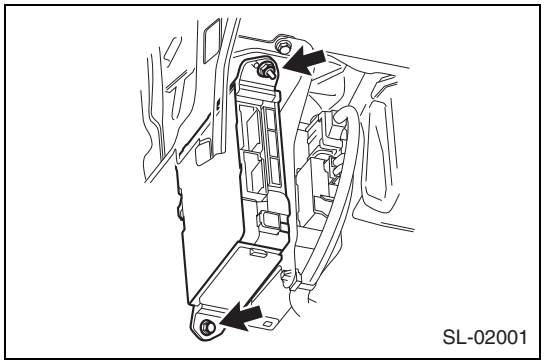
SL-01999

5. Removal of the instrument panel junction block ASSY
   (1) Disconnect the two connectors from the power steering computer ASSY.



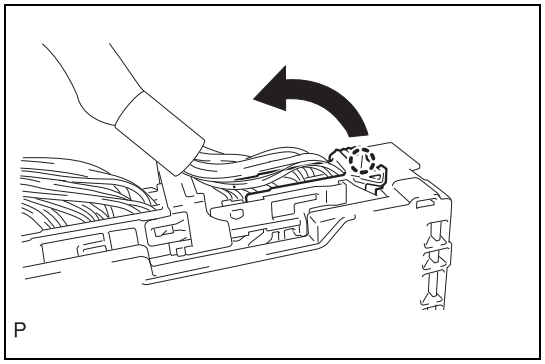
SL-02000

(2) Disconnect the six connectors on the front of the instrument panel junction block ASSY.

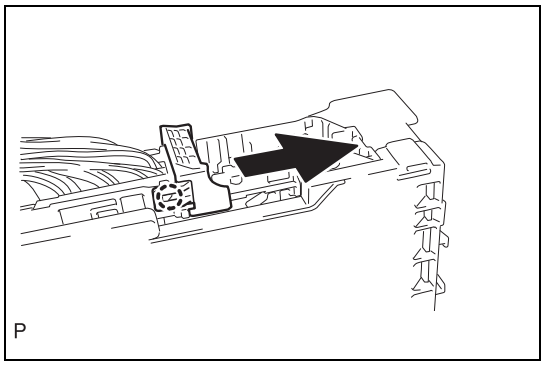


SL-02001

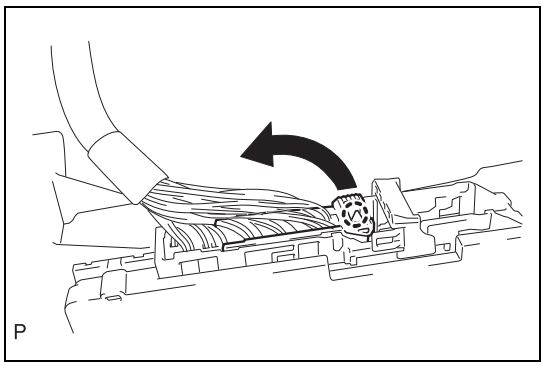
(3) Undo the bolt and nut and detach the instrument panel junction block ASSY.



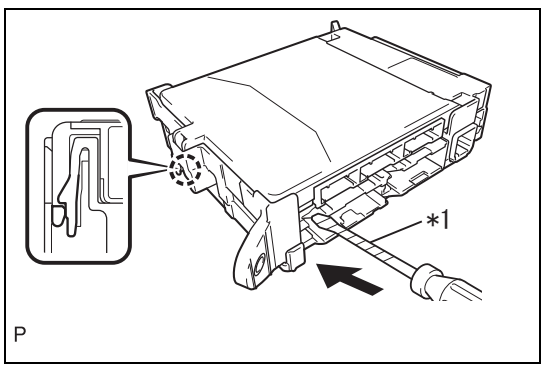
(4) As shown in the diagram, unhook the tabs and disconnect the instrument panel junction block ASSY rear connector.



(5) As shown in the diagram, unhook the tabs and release the connector lock.



(6) As shown in the diagram, unhook the tabs and detach the connector.
(7) Remove the instrument panel junction block ASSY.

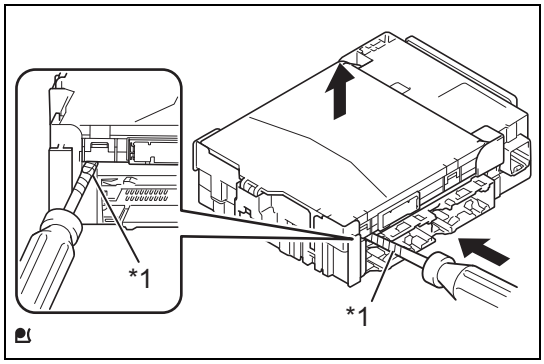


6. Removal of the main body ECM (Network gateway computer)
   (1) Press the instrument panel junction block ASSY tab to release the main body ECM (Network gateway computer) lock.
   (2) Once the lock is released, insert a flat tip screwdriver horizontally that has been wrapped in protective tape between the main body ECM (Network gateway computer) and the instrument panel junction block ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Please use a flat tip screwdriver with a shaft diameter between 5.0 mm {0.197 in} and 6.3 mm {0.248 in}, and a length of 90mm {3.543 in} or more.

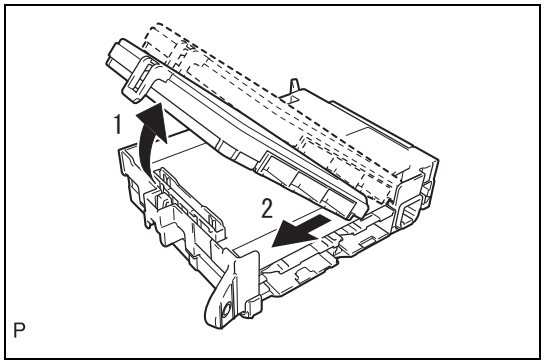


(3) As shown in the diagram, use the inserted flat tip screwdriver to lift up the main body ECM (Network gateway computer) until it is in a position where the connector can be moved.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Do not use the flat tip screwdriver to lift it up with a prying action.

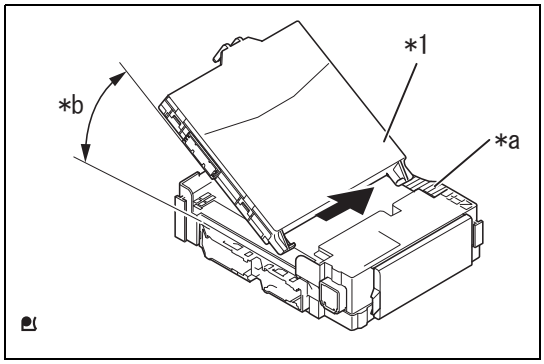


(4) Lift up the main body ECM (Network gateway computer) in the direction of arrow (1) in the diagram and slide it out in the direction of arrow (2).
CAUTION:
Do not touch the ECM connector.

PD

## Installation

1. Precautions
Always carry out work support when replacing the main body ECM (Network gateway computer). (Refer to PD - 23)



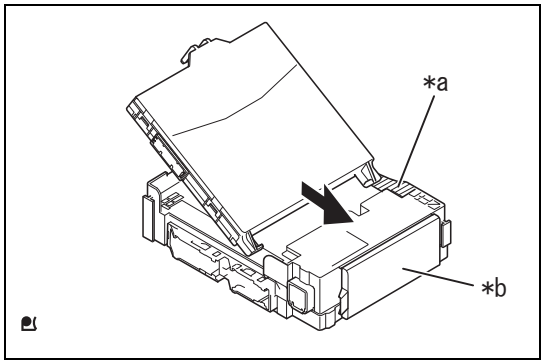
2. Installation of the main body ECM (Network gateway computer)
(1) As shown in the diagram, contact the main body ECM (Network gateway computer) to the instrument panel junction block ASSY housing side wall.

Captions in illustration

| | |
|---|---|
| *1 | Main body ECM (Network gateway computer) |
| *a | Housing side wall |
| *b | 20° or more |

CAUTION:
- Ensure that no foreign objects enter between mating parts.
- Do not touch the main body ECM (Network gateway computer) connector.

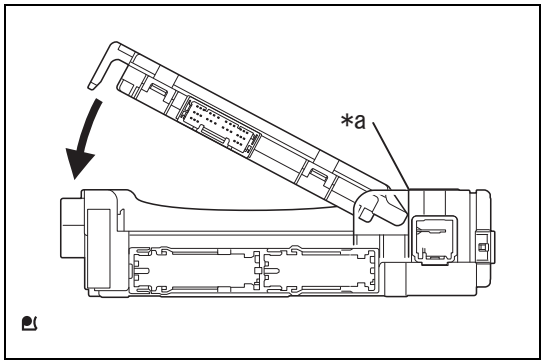
NOTE:
The angle between the instrument panel junction block ASSY and the main body ECM (Network gateway computer) should be 20° or more.



(2) As shown in the diagram, while keeping the main body ECM (Network gateway computer) flush against the instrument panel junction block ASSY housing side wall, slide it in the direction of the junction block fuse and insert it into the 2 guides.

Captions in illustration

| | |
|---|---|
| *a | Housing side wall |
| *b | Fuse |

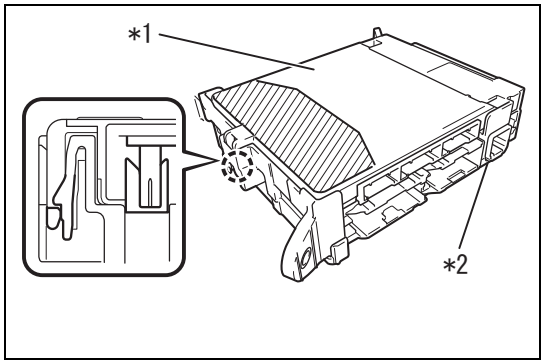


(3) As shown in the diagram, rotate the main body ECM (Network gateway computer) while it is kept in contact with the junction block A face (center of rotation).

Captions in illustration

| | |
|---|---|
| *a | Junction block A face. |

CAUTION:
Do not use excessive force when pressing the side of the main body ECM (Network gateway computer) into the instrument panel junction block ASSY.



(4) Press the push-area until the tab clicks into the lock to install the main body ECM (Network gateway computer).

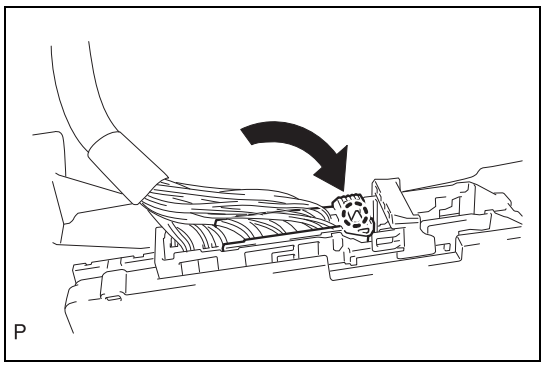
Captions in illustration

| | |
|---|---|
| *1 | Main body ECM (Network gateway computer) |
| *2 | Instrument panel junction block ASSY |
| ▨ | Pushable area |

CAUTION:
- Do not press any place other than the push-area of the main body ECM (Network gateway computer).
- A locking sound should be heard when the main body ECM (Network gateway computer) is pressed in place.
- Do not hit or place heavy weights onto the main body ECM (Network gateway computer) when pressing it in place.

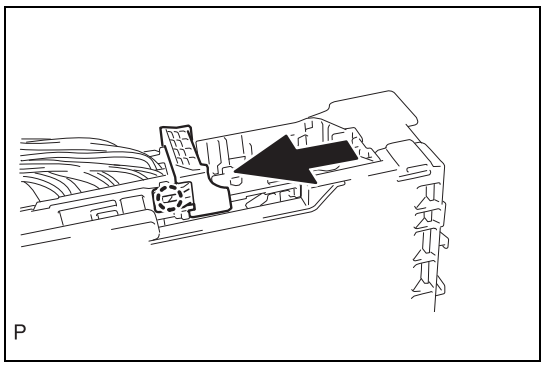
NOTE:
- If you do not hear the locking sound, visually confirm that it is locked in place.
- Confirm that the main body ECM (Network gateway computer) and junction block are at the same height.

3. Installation of the instrument panel junction block ASSY

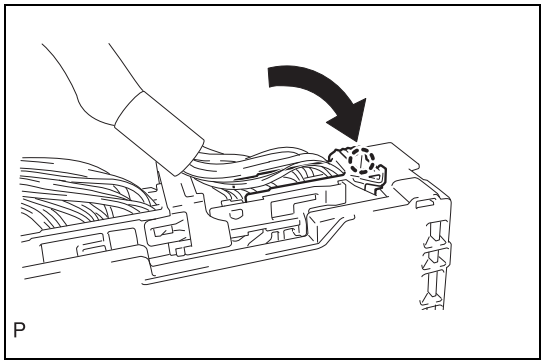


(1) As shown in the diagram, engage the tabs and connect the connector.

CAUTION:
Ensure that the connector is securely attached.



(2) As shown in the diagram, engage the tabs and close the connector lock.



P

(3) As shown in the diagram, engage the tabs and connect the connector.
(4) Install the instrument panel junction block ASSY and fasten the bolt and nut.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
(5) Connect the six connectors on the front of the instrument panel junction block ASSY.
(6) Connect the two connectors to the power steering computer ASSY.

4. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
5. Installation of the instrument side panel LH (Refer to IT - 29)
6. Connection of the battery ground terminal
Standard value:T=6.0N·m {61kgf·cm} {4.4 ft·lbf}
7. Settings when removing/installing battery terminals (Refer to IN - 10)

## Description of functions

1. Function description of large-scale multiplex communication system for vehicle body [LIN]
   (1) Large-scale multiplex communication system for vehicle body [LIN] is used for communication systems between body system components. When communication failure occurs due to an open circuit and other defects in communication line, diagnostic code of the corresponding system is output by the control master ECM. (Communication systems and the connected ECMs are described below).

NOTE:
Each ECM has the failsafe function to ensure the minimum performance and system protection in case of communication failure.
