## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Phenomenon check |

Next

| | |
|---|---|
| 3 | Communication function inspection of the CAN communication system |

(1) Check that there are no abnormal condition in CAN communication system. (Refer to NW - 30)

Result

| Result | Go to |
|---|---|
| If CAN communication system is normal [No DTC (CAN communication error, ECM communication error, or lost communication) is output] | A |
| If CAN communication system is not normal [DTC (CAN communication error, ECM communication error, or lost communication) is output] | B |

B → Repair the fault according to the troubleshooting procedure for CAN system.

A

| | |
|---|---|
| 4 | Communication function check of the large-scale multiplex communication system for vehicle body [LIN] |

(1) Use SSM4 to check the communication functions of the large-scale multiplex communication system for vehicle body [LIN] to confirm the communication system has no fault. (Refer to NW - 7)
NOTE:
For details of DTC output, refer to the List of DTC. (Refer to NW - 4)

Result

| Result | Go to |
|---|---|
| If the communication system is defective [DTC (LIN communication error, ECM communication error, or lost communication) is output] | A |
| If DTC other than for communication system is output [No diagnostic code output (LIN communication fault, ECM communication fault/communication breakdown)] | B |

B → Go to the corresponding section for DTC output

A

| | |
|---|---|
| 5 | DTC check |

(1) Use SSM4 to check DTC and record the code output if any. (Refer to NW - 7)
(2) Clear diagnostic code. (Refer to NW - 7)
(3) Simulate the conditions indicated by DTC to check whether the same DTC recur.

Result

| Result | Go to |
|---|---|
| If no DTC is output (phenomenon can be confirmed and reproducible) | A |
| If no DTC is output (phenomenon can not be confirmed and not reproducible) | B |
| If DTC is output | C |

B → Go to "How to simulate trouble phenomenon". (Refer to IN - 32)

C → Go to Troubleshooting flowchart of each DTC. (Refer to NW - 4)

A

| | |
|---|---|
| 6 | Troubleshoot the malfunction according to the method below |

(1) ECM terminal arrangement (Refer to NW - 9)

Next

| | |
|---|---|
| 7 | Adjustment, repair, or replacement |

Next

Complete

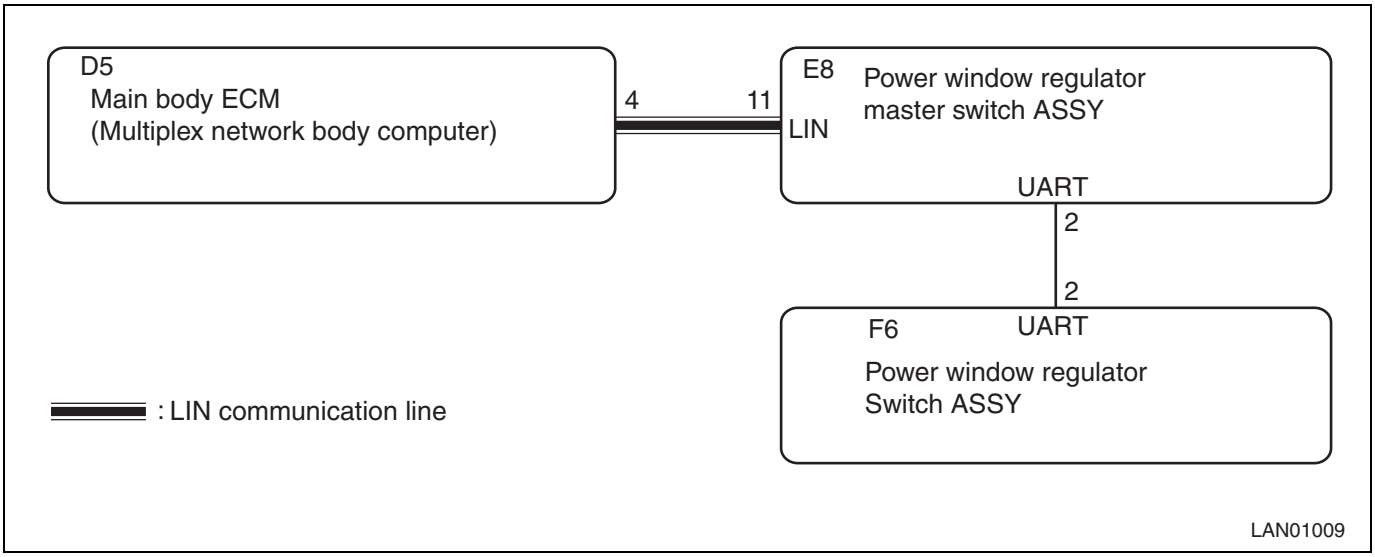
## Checking / clearing diagnostic codes

1. Checking diagnostic codes (reading with SSM4)
   (1) DTC check for the main body ECM (Multiplex network body computer)
      (a) Connect SSM4 to the data link connector with IG OFF.
      (b) Turn IG to ON, and turn on the SSM4.
      (c) Follow the instruction on SSM4 screen. Select [Each System] →[Body Control] →[DTC], and then read DTC.
      NOTE:
      If meaningless DTC is displayed, the main body ECM (Multiplex network body computer) may be defective.
   (2) DTC check for the collation ECM (smart key computer ASSY)
      (a) Connect SSM4 to the data link connector with IG OFF.
      (b) Turn IG to ON, and turn on the SSM4.
      (c) Follow the instruction on SSM4 screen. Select [Each System] →[Keyless Access(Collation ECM)] →[DTC], and then read DTC.
      NOTE:
      - Collation ECM (Smart key computer ASSY) also outputs DTCs for the steering lock ECM (Steering lock actuator ASSY) and ID code box (immobilizer code ECM)*.
      - If meaningless DTC is displayed, the collation ECM (Smart key computer ASSY) may be defective.

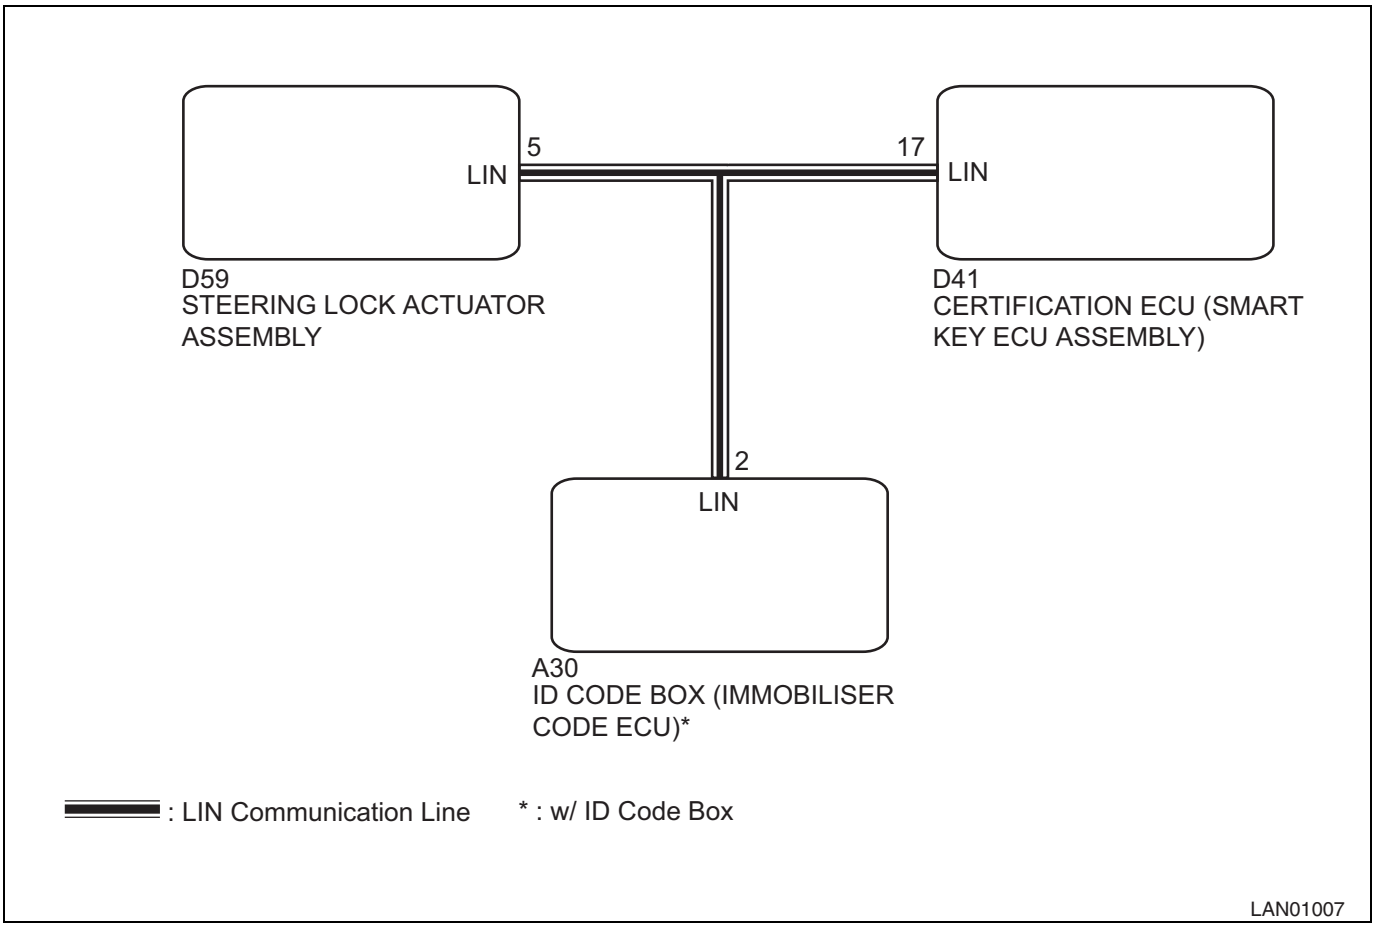
      *: The ID code box is included.
2. Clearing diagnostic code records (Cleared by the SSM4)
   CAUTION:
   To permanently clear DTCs indicating lost connection, "Clear ECM connection history" function must be used.
   (1) Clearing DTC for the main body ECM (Multiplex network body computer)
      (a) Connect SSM4 to the data link connector with IG OFF.
      (b) Turn IG to ON, and turn on the SSM4.
      (c) Follow the instruction on SSM4 screen. Select [Each System] →[Body Control] →[Clear Memory], and then clear DTC.
      CAUTION:
      - If deletion is not possible, retry it after turning the ignition to IG OFF and then on again.
      - Do not use the SSM4 to delete diagnostic codes until the cause of the trouble has been identified.
   (2) Clearing DTC for the collation ECM (Smart key computer ASSY)
      (a) Connect SSM4 to the data link connector with IG OFF.
      (b) Turn IG to ON, and turn on the SSM4.
      (c) Follow the instruction on SSM4 screen. Select [Each System] →[Keyless Access(Collation ECM)] →[Clear Memory], and then clear DTC.
      CAUTION:
      - If deletion is not possible, retry it after turning the ignition to IG OFF and then on again.
      - Do not use the SSM4 to delete diagnostic codes until the cause of the trouble has been identified.

## Circuit figure

1. Door system LIN communication circuit

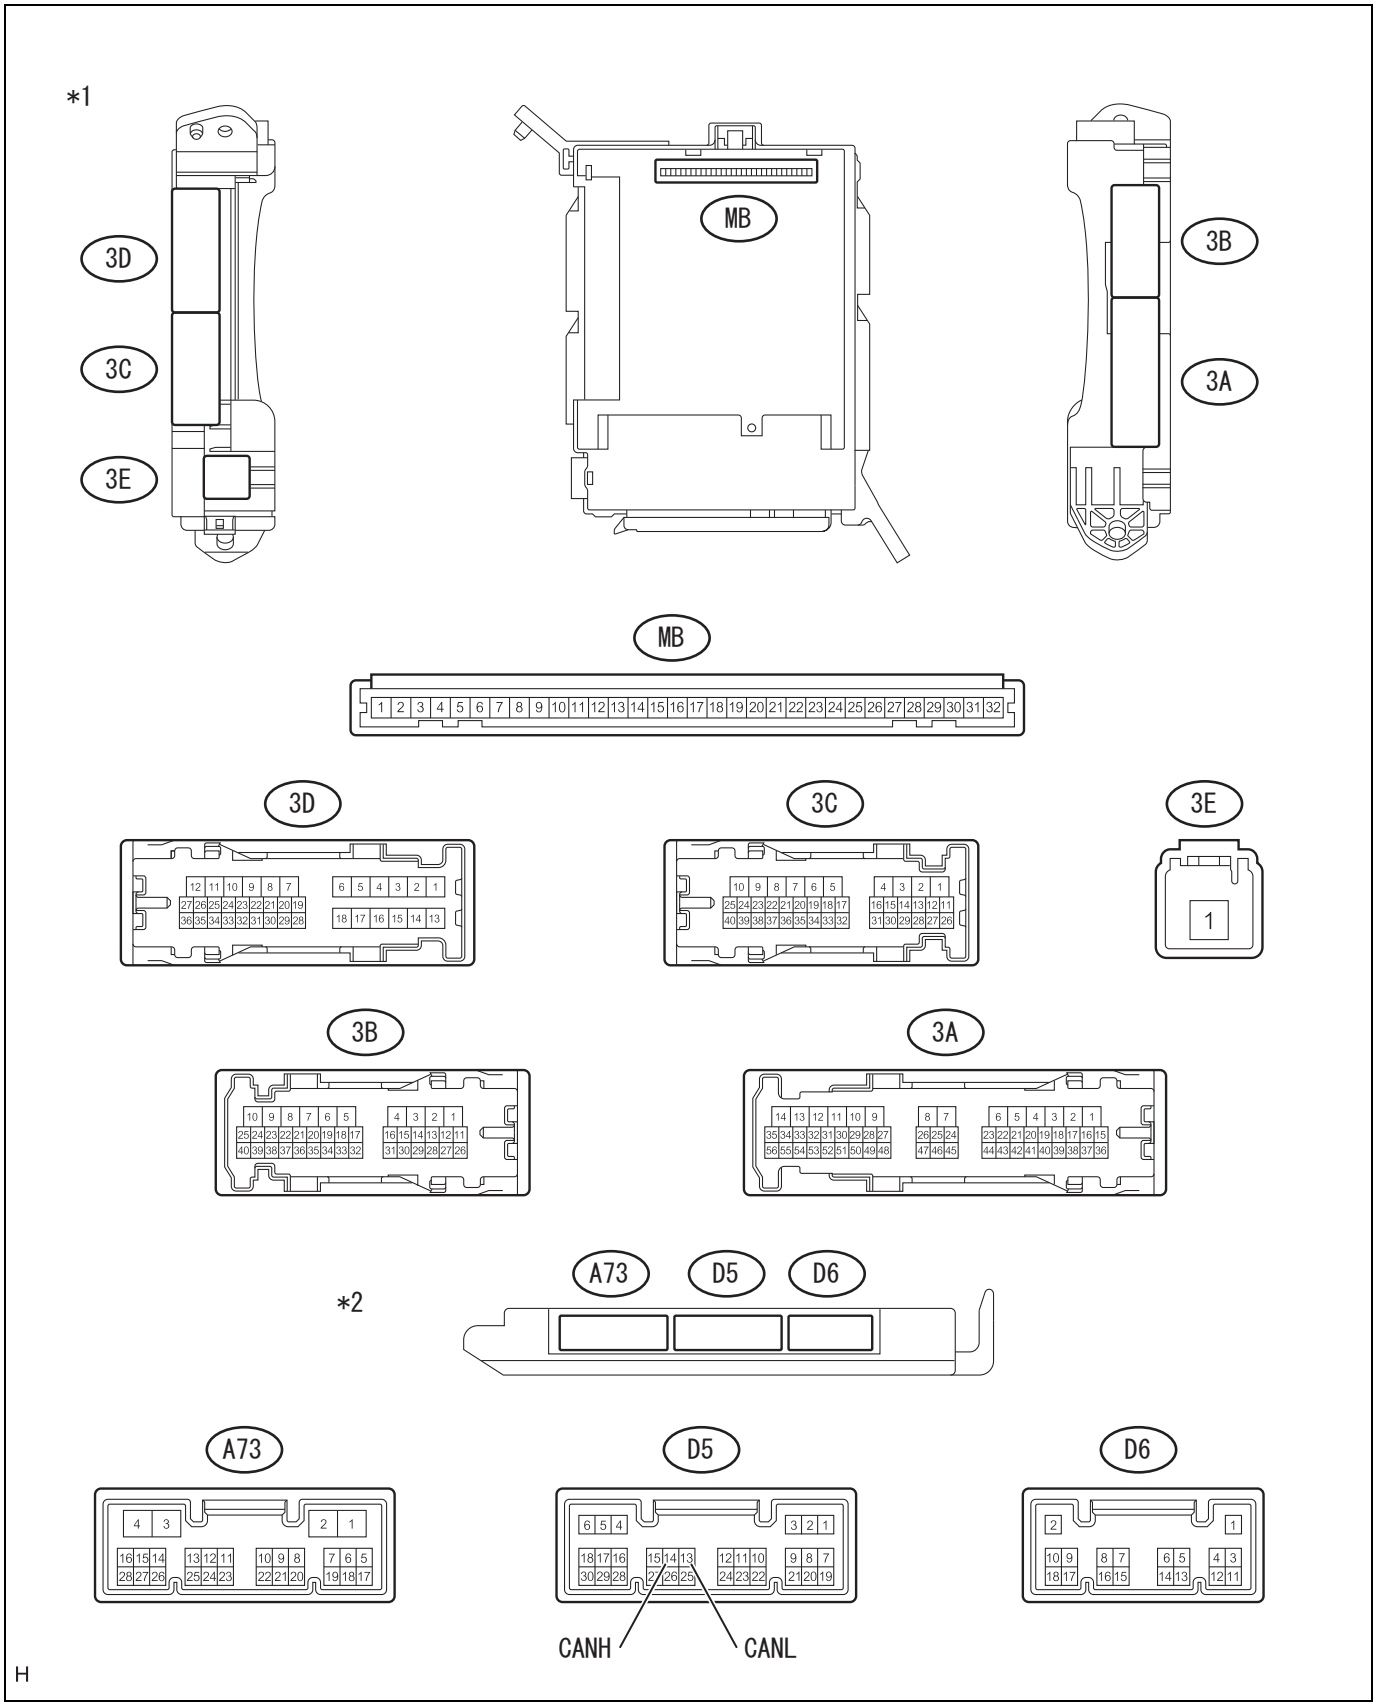


2. Collation system LIN communication circuit (with smart entry and start system)



## ECM terminal arrangement

1. Instrument panel junction block ASSY, Main body ECM (multiplex network body computer)



H

Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM<br>(Multiplex network body computer) |

(1) Check the main body ECM (multiplex network body computer)
(a)Remove the main body ECM (Multiplex network body computer). (Refer to PD - 25)
(b)Measure the voltage and resistance between terminals.

Standard value

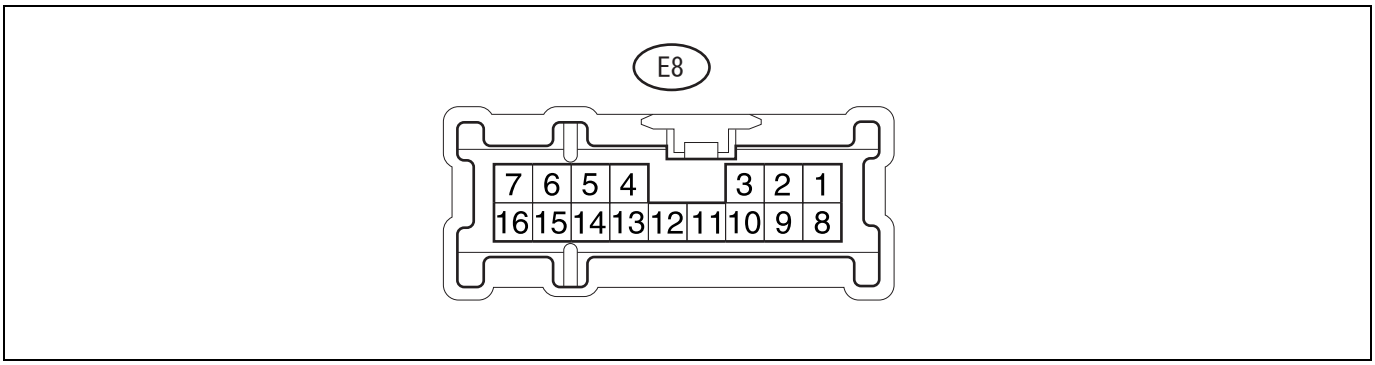
| Terminal No. | Item | Inspection conditions | Standard value |
|---|---|---|---|
| MB-1 - chassis ground | Voltage | Always | 11 to 14V |
| MB-8 - chassis ground | Voltage | IG ON | 11 to 14V |
| MB-11 - chassis ground | Resistance | Always | Less than 1 Ω |
| MB-32 - chassis ground | Voltage | Always | 11 to 14V |

(c) Install the main body ECM (Multiplex network body computer).
(d)Measure the waveform between terminals using an oscilloscope.

Standard value

| Terminal No. | Item | Inspection conditions | Standard value |
|---|---|---|---|
| D5-4 (LIN) - D6-1 (GND) | Waveform | IG ON | Pulse generation |

2. Power window regulator master switch ASSY

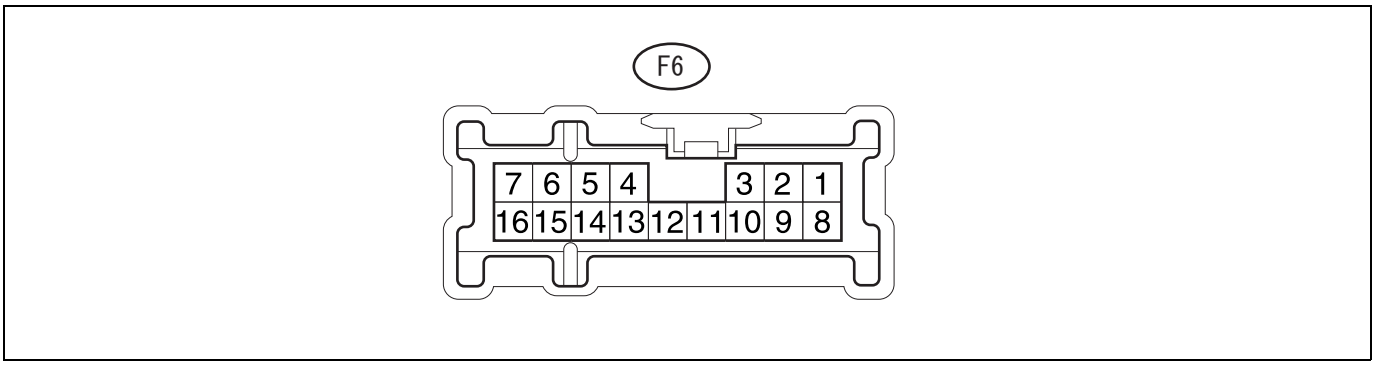


(1) Check the power window regulator master switch ASSY
(a)Disconnect the connector E8 from the power window regulator master switch ASSY.
(b)Measure the voltage and resistance between terminals.

Standard value

| Terminal No. | Item | Inspection conditions | Standard value |
|---|---|---|---|
| E8-5 - chassis ground | Resistance | Always | Less than 1 Ω |
| E8-12 - E8-5 | Voltage | Always | 11 to 14V |

3. Power window regulator switch ASSY

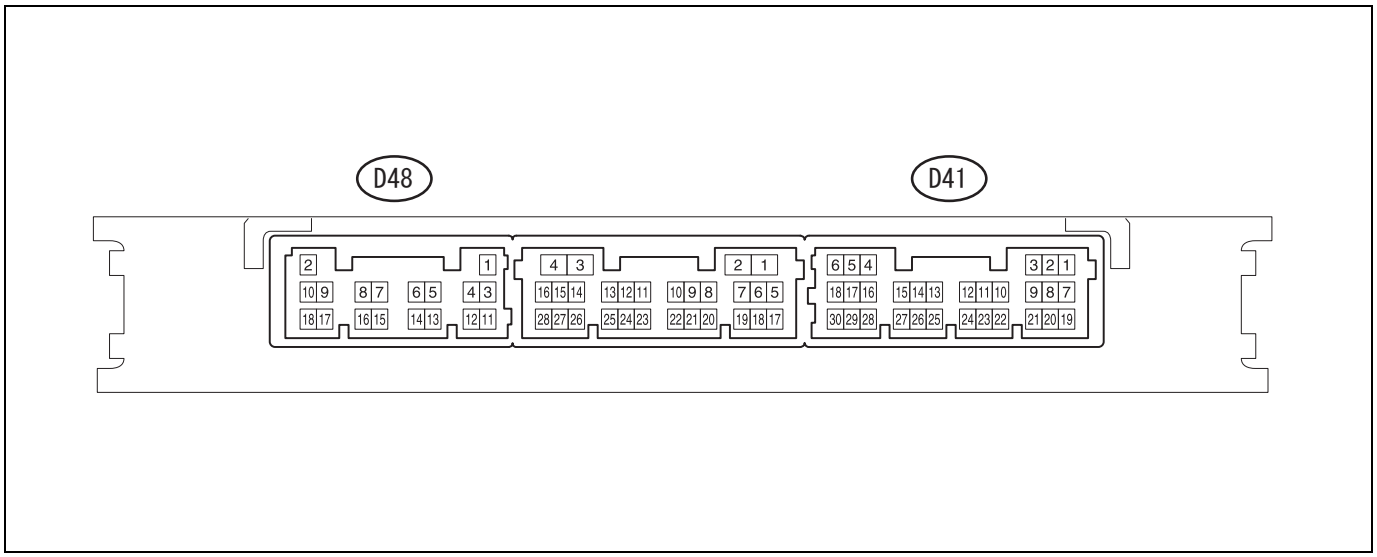


(1) Inspection of the power window regulator switch ASSY
(a)Disconnect the connector F6 of power window regulator switch ASSY.
(b)Measure the voltage and resistance between terminals.

Standard value

| Terminal No. | Item | Inspection conditions | Standard value |
|---|---|---|---|
| F6-5 - Chassis ground | Resistance | Always | Less than 1 Ω |
| F6-12 - F6-5 | Voltage | Always | 11 to 14V |

4. Collation ECM (Smart key computer ASSY) (with smart entry)



(1) Check the collation ECM (Smart key computer ASSY)

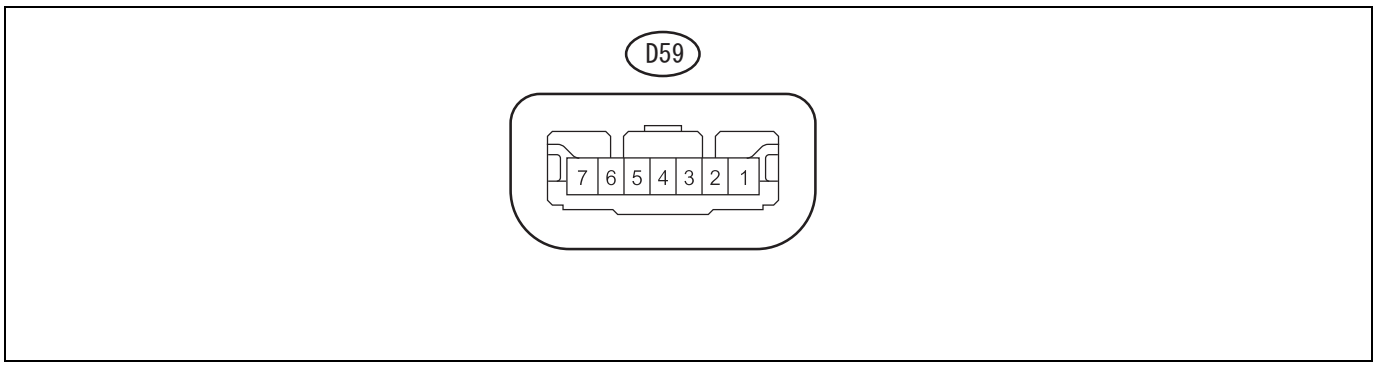
(a)Disconnect the connectors D41 and D48 from the collation ECM (Smart key computer ASSY).

(b)Measure the voltage and resistance between terminals.

Standard value

| Terminal No. | Item | Inspection conditions | Standard value |
|---|---|---|---|
| D41-5 - D48-11 | Voltage | IG ON | 11 to 14V |
| D48-2 - D48-11 | Voltage | Always | 11 to 14V |
| D48-11 - chassis ground | Resistance | Always | Less than 1 Ω |

5. Steering lock actuator ASSY (with smart entry)



(1) Check the steering lock actuator ASSY

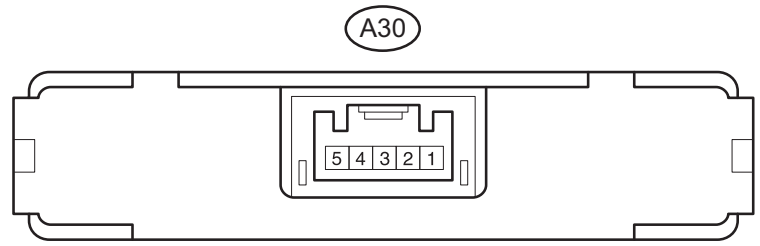
(a)Disconnect the connector D59 from the steering lock actuator ASSY.

(b)Measure the voltage and resistance between terminals.

Standard value

| Terminal No. | Item | Inspection conditions | Standard value |
|---|---|---|---|
| D59-1 - chassis ground | Resistance | Always | Less than 1 Ω |
| D59-6 - D59-1 | Voltage | IG ON | 11 to 14V |
| D59-7 - D59-1 | Voltage | Always | 11 to 14V |

6. ID code box (Immobilizer code ECM) (with ID code box)



LAN01010

(1) Check the ID code box
(a)Disconnect the connector A30 of the ID code box.
(b)Measure the voltage and resistance between terminals.

NW

Standard value

| Terminal No. | Item | Inspection conditions | Standard value |
|---|---|---|---|
| A30-1 - A30-5 | Voltage | Always | 11 to 14V |
| A30-5 - chassis ground | Resistance | Always | Less than 1 Ω |

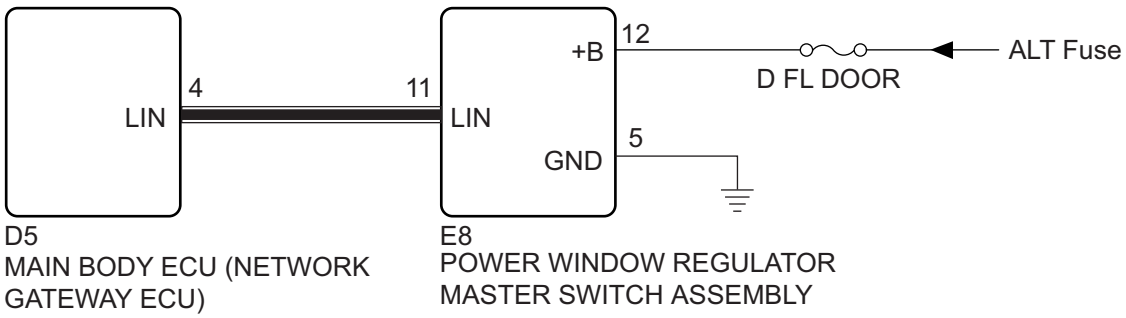
| DTC | B2321 | Lost communication with Driver's P/W ECM |
|---|---|---|

Circuit description

B2321 is output when the communication between the main body ECM (Multiplex network body computer) ←→the power window regulator master switch ASSY is interrupted for 10 seconds or more.

| DTC No. | Detecting conditions | Inspection parts |
|---|---|---|
| B2321 | The periodic transmission from the power windows regulator master switch ASSY is interrupted for 10 seconds or more | • Power window regulator master switch ASSY<br>• Main body ECM (Multiplex network body computer)<br>• Wiring harness or connector |

Circuit figure



Inspection steps

CAUTION:

Before performing troubleshooting, check the fuse for this circuit.

NOTE:
DTC B2325 is output when all ECMs connected to the door system LIN bus cannot communicate with the main body ECM (Multiplex network body computer).

| | |
|---|---|
| 1 | Clearing diagnostic code |

(1) Clear the diagnostic code using the SSM4. (Refer to NW - 7)

Next

| | |
|---|---|
| 2 | DTC check |

(1) Use SSM4 to check DTC output. (Refer to NW - 7)
Result

| Result | Go to |
|---|---|
| DTC B2321 is output | A |

| DTC | B2785 | LIN communication error |
|---|---|---|

Circuit description

The collation ECM (Smart key computer ASSY) monitors the communication with the steering lock actuator ASSY connected to the collation system LIN bus. If the collation ECM (Smart key computer ASSY) detects an error in the communication with the steering lock actuator ASSY connected to the collation system LIN bus, it monitors the communication errors for a certain period of time. When it detects three consecutive errors (in approx. 1 second), DTC B2785 is output.

| DTC No. | Detecting conditions | Faulty part |
|---|---|---|
| B2785 | When the collation ECM (Smart key computer ASSY) detected the collation system LIN bus communication error continuing for 1 second or more | • Collation ECM (Smart key computer ASSY)<br>• Steering lock actuator ASSY<br>• ID code box (Immobilizer code ECM)*<br>• Wiring harness or connector |

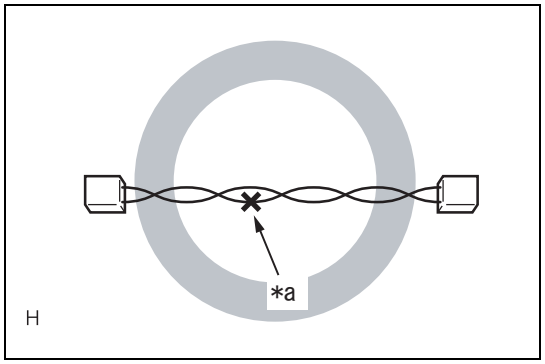
# CAN communication system

## Precautions

1. If DTC related with CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot". (Refer to NW - 30)
2. Caution in handling of SRS airbag system (Refer to RS - 5)
   CAUTION:
   This service operation may affect the SRS airbag. Be sure to follow the precautions for SRS airbag during the operation.

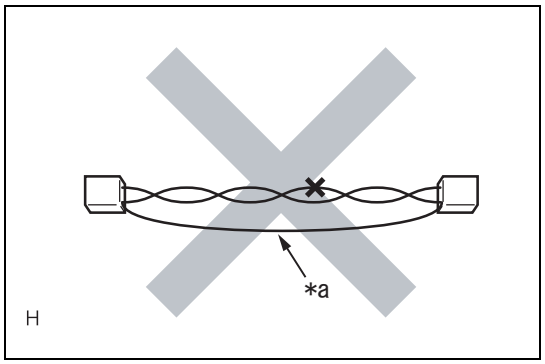


3. Caution during harness repair
   (1) When repairing the wire, connect the wires using soldering and protect it with tape.

Captions in illustration

| | |
|---|---|
| *a | Soldering and protection with tape |

CAUTION:
- Bus lines (communication lines) must be twisted. Be careful not to make clearance between CAN-H and CAN-L.
- Fray at the connector should be within 8 cm.
- Do not change the line length. (CAN-H and CAN-L must have the same length).

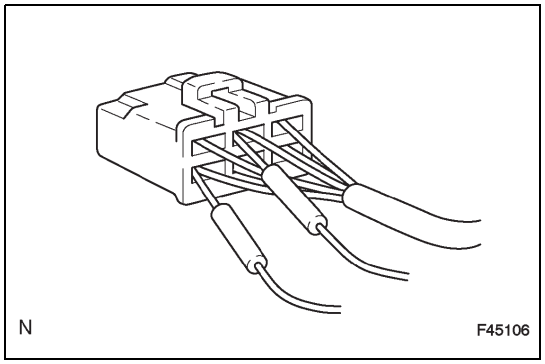


(2) Do not connect a wire to bypass the defective section.

Captions in illustration

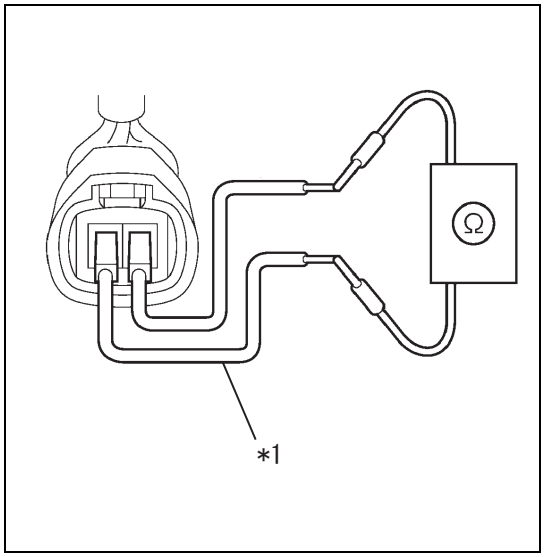
| | |
|---|---|
| *a | Bypass wire connection |

CAUTION:
- If bypassed, the twisted lines will lose their properties.
- Do not bypass using the twisted pair line.



4. How to measure resistance
   (1) When measuring the resistance, insert the probes from the back side of the connector.

NW



(2) If it cannot be inserted from the back side, use a repair wiring harness.

## System description

1. Summary
   (1) CAN (Controller Area Network) is a serial communication network for real time applications. It is an on-vehicle multiplex communication line with high data transmission and error detection function.

   (2) CAN communication uses differential voltage signals from a pair of lines: CAN-H and CAN-L (a base voltage is applied to generate potential difference for communication).
   (3) Many ECMs (sensors) are equipped onto a vehicle and each of them shares information and links with other ECMs (sensors) via CAN communication.
   (4) The main line has two resistors that are necessary for CAN communication.
2. Definitions of terms
   (1) Main line
      (a)Harness between the two termination circuits on the bus (communication line).
   (2) Sub-line
      (a)A line branching from the CAN bus main line to an ECM or sensor.
   (3) Termination circuit
      (a)A circuit, composed of resistor and capacitor, converts the line current to bus voltage. Two termination circuits - one at each end of the main bus line are required.
   (4) CAN J/C
      (a)J/C for CAN communication.
3. Circuit description
   (1) The circuit is configured based on Vbus. (For circuit connection, refer to NW - 65)
   (2) Each termination circuit on CAN bus has a 120 Ωresistor.

## How to troubleshoot

1. Guidelines

CAUTION:

- If DTC of CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot".
- When a connector is not fully connected, it may case CAN communication failure. To avoid such failure, make sure to perform contact pressure test. (Refer to IN - 36)
- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

(1) CAN communication error codes are generated due to errors in the main and sub-lines, ECM in the CAN communication system, sensor internal error, and power supply system error. Since both internal and power supply system errors can occur at the same time, make sure to identify the error source properly.

(2) When the data link connector sub-line or Vbus main line seems to be defective, use an electrical tester to check the data link connector terminals.

CAUTION:

- In checking the data link connector, use SST (diagnosis check wire No. 2), instead of directly connecting the tester probe to the terminal.
- The electrical tester cannot support the open circuit check for the sub-line in each ECM and sensor from data link connector.

(3) In case there was a Vbus communication malfunction, identify the ECM and sensor which had lost communication based on the combination of communication error DTCs.

(4) In case an open circuit is detected, check for a loose or unplugged connection by pushing back the connector case before disconnecting connectors for checking.

(5) After disconnecting the connector, make sure that its terminal and the case have no damage, deformation, or corrosion.

| | |
|---|---|
| 1 | Bring in the car |

NOTE:

- If the ignition can be turned ON, check DTC, illumination status of combination meter waning light, and vehicle operation status immediately. (Example: Air conditioner operation status)
- Since the failsafe function is partially disabled with IG OFF, do not turn the ignition OFF until the checking is complete.
- If the ignition cannot be turned ON, measure the battery voltage. If the voltage is less than 11 V, charge or replace the battery and start the troubleshooting.
- If the battery voltage is normal and the ignition cannot be turned ON, repair defective parts as required before troubleshooting.

Next

| | |
|---|---|
| 2 | Interview and phenomenon check |

NOTE:

- In order to identify the trouble phenomenon correctly and make an appropriate decision, it is important not to introduce any bias into the troubleshooting process. To understand the circumstances of the failure for proper assessment, the interview with the user plays an important role in the troubleshooting.
- Ask the user if any add-on accessory (anti-theft system, monitor, and so on) is or was installed. (if installed, inform the user that it needs to be removed to check the trouble phenomenon accurately)

(1) Information about the status and condition of the vehicle at the time of trouble is helpful in identifying the defective parts.

NOTE:
- What (system, part, meter warning light)
- How (details of the defect)
- When (date and time, frequency, repeatability)
- Conditions (driving condition, operation condition, weather)
- Road type (inner city, suburbs, paved road, unpaved road, highway, etc.)
- Conditions for recovery (how to recover the error. For example, IG OFF)

Check list

| | |
|---|---|
| Phenomenon | • Electric power steering effort is:<br>- Normal<br>- A bit heavy<br>- Assist is not working<br>• Air Conditioner<br>- Was the air conditioner working?<br>- Blower fan is working or not<br>• Multi information display:<br>- Each display is updated or not<br>• Smart function:<br>- Does lock or unlock occur?<br>- Does the illumination come on within the smart detection area?<br>• Other findings related to system operation |
| Meter warning light | • Warning light status, illuminating order<br>- Slip indicator light ON<br>- ABS warning light ON<br>- Check engine warning light ON<br>- Brake warning light ON<br>- Airbag warning light ON<br>- Others<br>• Meter display<br>- Shift indicator<br>- Speedmeter<br>- Tachometer (0 r/min fixed?)<br>- Engine coolant temperature gauge (fixed to COLD lower limit?) |

Next

| | |
|---|---|
| 3 | Basic inspection (CAN diagnostic is not used) |

(1) Check components which may cause CAN communication error. (Refer to NW - 33)

NG → Repair or replace each component.

OK

| | |
|---|---|
| 4 | Checking of communication for initializing. |

(1) Communicate with the all systems by connecting SSM4.

Criteria: The communication for initializing is successful for each system. (NG if the communication for initializing is not successful for any of the systems)

NG → Perform the inspection using "Check sheet of communication for initializing". (Refer to NW - 33)

OK

| 5 | Basic inspection (CAN diagnostic is used) |
|---|---|

(1) Check components which may cause CAN communication error. (Refer to NW - 33)

NG → Repair or replace each component.

OK

NW

| 6 | DTC check |
|---|---|

(1) Start the engine and read all DTCs.
NOTE:
When the engine does not start, perform the diagnosis for the engine start malfunction.
(2) Record all DTCs and freeze frame data.

| Result | Go to |
|---|---|
| DTC U**** is displayed | A |
| DTC U**** is not displayed | B |

B → Go to Step 8

A

| 7 | DTC check |
|---|---|

(1) Perform the inspection using DTC check sheet.
(2) Use SSM4 to read all DTCs.

| Result | Go to |
|---|---|
| DTC U**** is displayed | B |
| DTC U**** is not displayed | A |

B → Go to Step 9

A

| 8 | General diagnostics |
|---|---|

(1) Inspect using the "General Diagnostics Table". (Refer to NW - 162)

OK → LAN system is normal

NG

| 9 | Implementation of diagnosis |
|---|---|

(1) Repair the trouble cause.

(2) Perform the clear memory mode.
(3) Read the DTC.

| Result | Go to |
|---|---|
| DTC is displayed | B |
| DTC is not displayed | A |

B → Repeat Step 9 until DTC is not shown.

A

Complete

## Basic inspection

1. Inspection without using CAN diagnostic
   Before performing diagnostics, confirm the followings which may cause a defect in the body integrated unit.
   (1) Measure the battery voltage and check electrolyte.
   Standard voltage: 12 V or more
   Specific gravity: 1.260 or more
   (2) Check the fuse condition.
   Make sure that the fuse with specified ampere rating is used and it is not blown out.
   (3) Check the connecting condition of harness and harness connector.
   (4) Confirm key illumination does not blink with ignition switch turned ON.
2. Inspection using CAN diagnostic
   Before performing diagnostics, confirm the followings which may cause a defect in the body integrated unit.
   (1) If the body integrated unit has any settings inconsistent with the vehicle equipment.
   (2) If the body integrated unit has any settings inconsistent with the vehicle equipment due to customization.

Procedure

1. Module installation check
   (a) Put "-" mark in the box under the installation check column if the vehicle to be inspected does not have the relevant module.
   (b) Put "-" marks in all blank boxes in the same row that the "-" mark has been placed.
   NOTE:
   Refer to the sample list.
2. SSM communication initialization check
   (a) Put "0" mark in the box under the communication initialization column if the module succeeded in the communication initialization with Select Monitor. If the communication with all of the modules subject to CAN diagnostic fails, go to (c).
   (b) Put "0" marks in all blank boxes in the same row that the "0" mark has been placed.
   (c) If a wiring location column has one or more boxes with "0" mark, the wiring for that location is normal. Put "0" mark in the box directly under the column with circled number. Put " " marks in the blank boxes under the column.
   (d) Perform open circuit check for the wiring locations without "0" mark in ascending order. (only for installed modules)
   (e) If the communication remains disabled after checking all harnesses, inspect the module power supply line.
   (f) If the power supply line is normal, perform the basic diagnosis procedure for the corresponding system.
   (g) If the communication remains disabled after implementing the basic diagnostic program, replace the unit.
   NOTE:
   - Refer to the sample list.
   - For the wiring locations marked with "-", they cannot be inspected using the communication for initialization via Select Monitor.

   Identify the faulty part by using example of missing DTC detection.

3. SSM communication initialization check (impossible to communicate with any module)
   NOTE:
   Perform inspection procedure for the trouble mode indicating that all CAN modules do not communicate. If the communication with any of the modules has been recovered, go to “2. SSM communication initialization check”.
   (a) Check for the short circuit to ground. (Refer to NW - 128)
      If it is normal, go to the next.
   (b) Check for the short circuit to battery. (Refer to NW - 121)
      If it is normal, go to the next.
   (c) Perform the inspection procedure for the resistance of Less than 57 Ω(line-to-line short). (Refer to NW - 113)
      If it is normal, go to the next.
   (d) Check for the open circuit of network diagram No. 7 (data link connector).

## Checking CAN communication circuit

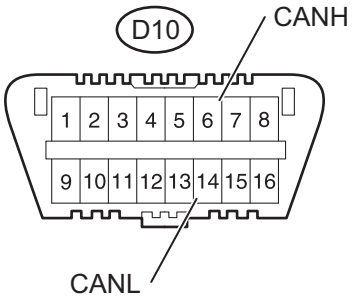
1. Inspection steps

CAUTION:

- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.
- When a connector is not fully connected, it may case CAN communication failure. To avoid such failure, make sure to perform contact pressure test.

| 1 | Bring in the car |
|---|---|

*1



(1) Use the tester to measure the resistance between terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D10-6 - chassis ground | Always | 10Ω or more |
| D10-14 - chassis ground | Always | 10Ω or more |

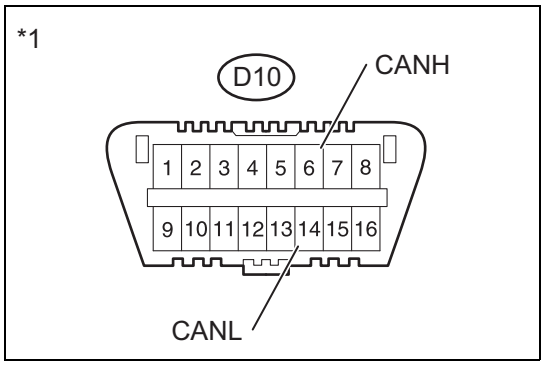
Captions in illustration

| | |
|---|---|
| *1 | Data link connector |

NG → Check for ground short. (Refer to NW - 128)

OK

| 2 | Checking from data link connector |
|---|---|



(1) Use the tester to measure the voltage between terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D10-6 - chassis ground | Always | Less than 5 V |
| D10-14 - chassis ground | Always | Less than 5 V |

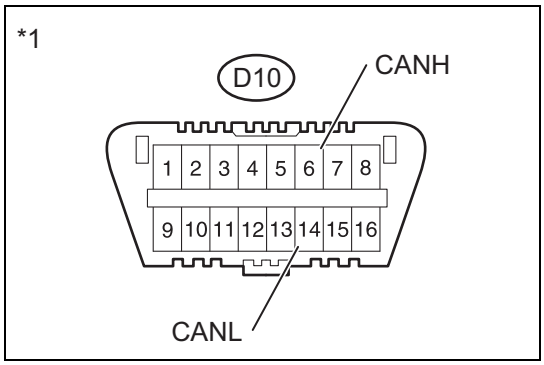
Captions in illustration

| | |
|---|---|
| *1 | Data link connector |

NG → Check for short circuit in the battery (Refer to NW - 121)

OK

| 3 | Checking from data link connector |
|---|---|



(1) Use the tester to measure the resistance between terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D10-6 - D10-14 | Always | 57 to 63 Ω |

Captions in illustration

| | |
|---|---|
| *1 | Data link connector |

Criteria

| Result | Go to |
|---|---|
| OK (57 to 63 Ω) | A |
| NG (exceeding 63 Ω) | B |
| NG (less than 57 Ω) | C |

A → A sub-line may be open. Perform the inspection for the resistance between the sub-lines relevant to the detected DTC. (Refer to 2. list)

B → Perform the inspection for the resistance of more than 63 Ω. (Refer to NW - 108)

C → Perform the inspection for the resistance of Less than 57 Ω. (Refer to NW - 113)

2. List

| Item | Contents | Note |
|---|---|---|
| Check for short to ground | Refer to "Check for short to ground". (Refer to NW - 128) | Shorted to ground in the communication circuit or control module. |
| Check for short to battery | Refer to "Check for short to battery". (Refer to NW - 121) | Shorted to battery power supply system in the communication circuit or control module. |
| Less than 57 Ω | Refer to the inspection for the resistance of less than 57 Ω. (Refer to NW - 113) | CAN-H and CAN-L may be shorted on CAN communication circuit, where the resistance is lower than combined resistance of the terminal resistor. |

| Item | Contents | Note |
|---|---|---|
| Exceeding 63 Ω | Refer to the inspection for the resistance of more than 63 Ω. (Refer to NW - 108) | CAN communication circuit may be open on CAN communication circuit, where the resistance is higher than combined resistance of the terminal resistor. |
| Sub-lines 57-63 Ω(Engine control computer system) | Refer to the inspection for the sub-lines 57-63 Ω(Engine control computer system). (Refer to NW - 90) | The inspection is applied in case of missing or invalid data for the engine control computer. |
| Sub-lines 57-63 Ω(Brake actuator ASSY system) | Refer to the inspection for the sub-lines 57-63 Ω(Brake actuator ASSY system). (Refer to NW - 85) | The inspection is applied in case of missing or invalid data for the brake actuator ASSY. |
| Sub-lines 57-63 Ω(Transmission control computer ASSY system) | Refer to the inspection for the sub-lines 57-63 Ω(Transmission control computer ASSY system). (Refer to NW - 82) | The inspection is applied in case of missing or invalid data for the transmission control computer ASSY. |
| Sub-lines 57-63 Ω(Body integrated unit system) | Refer to the inspection for the sub-lines 57-63 Ω(Body integrated unit system). (Refer to NW - 104) | The inspection is applied in case of missing or invalid data for the body integrated unit. |
| Sub-lines 57-63 Ω(Spiral cable SUB-ASSY system) | Refer to the inspection for the sub-lines 57-63 Ω(Spiral cable SUB-ASSY system). (Refer to NW - 87) | The inspection is applied in case of missing or invalid data for the spiral cable SUB-ASSY. |
| Sub-lines 57-63 Ω(Air conditioner amplifier ASSY system) | Refer to the inspection for the sub-lines 57-63 Ω(A/C control panel system). (Refer to NW - 97) | The inspection is applied in case of missing or invalid data for A/C. |
| Sub-lines 57-63 Ω(Electric power steering computer ASSY system) | Refer to the inspection for the sub-lines 57-63 Ω(Electric power steering computer ASSY system). (Refer to NW - 94) | The inspection is applied in case of missing or invalid data for the electric power steering. |
| Sub-lines 57-63 Ω(Combination meter ASSY system) | Refer to the inspection for the sub-lines 57-63 Ω(Combination meter ASSY system). (Refer to NW - 100) | The inspection is applied in case of missing or invalid data for the meter. |
| Sub-lines 57-63 Ω(Airbag system) | Refer to the inspection for the sub-lines 57-63 Ω(A/B CM system). (Refer to NW - 91) | The inspection is applied in case of missing or invalid data for the airbag. |
| Sub-lines 57-63 Ω(Keyless access system) | Refer to the inspection for the sub-lines 57-63 Ω(Keyless access system). (Refer to NW - 102) | The inspection is applied in case of missing or invalid data for the collation ECM (Smart key computer ASSY). |

NW

## List of diagnostic codes

NOTE:

- SSM4 can be used to display DTC of CAN communication system by ECM.
- For DTCs related to CAN communication system, always start the troubleshooting according to the procedure described in "How to troubleshoot" because the cause cannot be identified only from DTC. (Refer to NW - 30)
- When the procedure described in "DTC check procedure" is followed, DTC will be displayed only if the error condition is still present.

1. Main body ECM (Multiplex network body computer) integrated unit mode (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | [CAN-HS bus off] | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0100 | [CAN-HS ECM no-receive data] | Main body ECM (Multiplex network body computer) remains unable to receive data from the engine control computer. | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0101 | [CAN-HS TCM no-receive data] | Main body ECM (Multiplex network body computer) remains unable to receive data from the transmission control computer ASSY. | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0122 | [CAN-HS VDC no-receive data] | Main body ECM (Multiplex network body computer) remains unable to receive data from the brake actuator ASSY. | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0155 | [CAN-HS meter no-receive data] | Main body ECM (Multiplex network body computer) remains unable to receive data from the combination meter ASSY. | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0164 | [CAN-HS A/C no-receive data] | Main body ECM (Multiplex network body computer) remains unable to receive data from the air conditioner amplifier ASSY. | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0327 | [CAN-HS Collation no-receive data] | Main body ECM (Multiplex network body computer) remains unable to receive data from the collation ECM (Smart key computer ASSY). | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0401 | [CAN-HS EGI data error] | Main body ECM (Multiplex network body computer) detects an error in the data received from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0402 | [CAN-HS TCU data error] | Main body ECM (Multiplex network body computer) detects an error in the data received from the transmission control computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0416 | [CAN-HS VDC data error] | Main body ECM (Multiplex network body computer) detects an error in the data received from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0423 | [CAN-HS meter unit data error] | Main body ECM (Multiplex network body computer) detects an error in the data received from the combination meter ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0424 | [CAN-HS A/C data error] | Main body ECM (Multiplex network body computer) detects an error in the data received from the air conditioner amplifier ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U1201 | [CAN-HS counter abnormal] | Communication is unstable because of high-speed CAN communication error. | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the main body ECM (Multiplex network body computer) power supply is 10 V or more | Wait 15 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

NOTE:

Diagnosis data is transmitted via CAN communication line.

2. Combination meter ASSY/Combination meter (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | - (Bus off) | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the combination meter ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0100 | [Lost Communication With ECM/PCM "A"] | Combination meter ASSY remains unable to receive data from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the combination meter ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0122 | [Lost Communication With Vehicle Dynamics Control Module] | Combination meter ASSY remains unable to receive data from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the combination meter ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0131 | [Lost Communication with Power Steering Control Module] | Combination meter ASSY remains unable to receive data from the power steering computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the combination meter ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0140 | [Lost Communication With Body Control Module] | Combination meter ASSY remains unable to receive data from the main body ECM (Multiplex network body computer) | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the combination meter ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0151 | [Lost Communication With Restraints Control Module] | Combination meter ASSY remains unable to receive data from the airbag sensor ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the combination meter ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

NW

NOTE:

Diagnosis data is transmitted via CAN communication line.

3. Collation ECM (Smart key computer ASSY)/Keyless access system (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | [Control Module Communication Bus "A" Off] | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0100 | [Lost Communication With ECM/PCM "A"] | Collation ECM (Smart key computer ASSY) remains unable to receive data from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0101 | [Lost Communication With TCM] | Collation ECM (Smart key computer ASSY) remains unable to receive data from the transmission control computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0122 | [Lost Communication With Vehicle Dynamics Control Module] | Collation ECM (Smart key computer ASSY) remains unable to receive data from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0140 | [Lost Communication With Body Control Module] | Collation ECM (Smart key computer ASSY) remains unable to receive data from the main body ECM (Multiplex network body computer) | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0155 | [Lost Communication With Instrument Panel Cluster (IPC) Control Module] | Collation ECM (Smart key computer ASSY) remains unable to receive data from the combination meter ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0401 | [Invalid Data Received From ECM/PCM "A"] | Collation ECM (Smart key computer ASSY) detects an error in the data received from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0422 | [Invalid Data Received From Body Control Module] | Collation ECM (Smart key computer ASSY) detects an error in the data received from the main body ECM (Multiplex network body computer) | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the collation ECM (Smart key computer ASSY) power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

* Error is detected with IG ON.

NOTE:

Diagnosis data is transmitted via CAN communication line.

4. Engine control computer/Engine (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | [Control Module Communication Bus "A" Off] | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the engine control computer power supply is 10 V or more | Wait 10 seconds or more after IG ON | Check engine light is ON | Retained until DTC is cleared by the tool |
| U0101 | [Lost Communication With TCM] | Engine control computer remains unable to receive data from the transmission control computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the engine control computer power supply is 10 V or more | Wait 10 seconds or more after IG ON | Check engine light is ON | Retained until DTC is cleared by the tool |
| U0122 | [Lost Communication With Vehicle Dynamics Control Module] | Engine control computer remains unable to receive data from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the engine control computer power supply is 10 V or more | Wait 10 seconds or more after IG ON | Check engine light is ON | Retained until DTC is cleared by the tool |

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0155 | [Lost Communication With Instrument Panel Cluster (IPC) Control Module] | Engine control computer remains unable to receive data from the combination meter ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the engine control computer power supply is 10 V or more | Wait 10 seconds or more after IG ON | Check engine light is ON | Retained until DTC is cleared by the tool |
| U0402 | [Invalid Data Received From TCM] | Engine control computer detects an error in the data transmitted to the transmission control computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the engine control computer power supply is 10 V or more | Wait 10 seconds or more after IG ON | Check engine light is ON | Retained until DTC is cleared by the tool |
| U0416 | [Invalid Data Received From Vehicle Dynamics Control Module] | Engine control computer detects an error in the data received from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the engine control computer power supply is 10 V or more | Wait 10 seconds or more after IG ON | Check engine light is ON | Retained until DTC is cleared by the tool |
| U0423 | [Invalid Data Received From Instrument Panel Cluster Control Module] | Engine control computer detects an error in the data received from the combination meter ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the engine control computer power supply is 10 V or more | Wait 10 seconds or more after IG ON | Check engine light is ON | Retained until DTC is cleared by the tool |

NOTE:

Diagnosis data is transmitted via CAN communication line.

5. Transmission control computer ASSY/Transmission (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | [Control Module Communication Bus "A" Off] | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the transmission control computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0100 | [Lost Communication With ECM/PCM "A"] | Transmission control computer ASSY remains unable to receive data from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the transmission control computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0122 | [Lost Communication With Vehicle Dynamics Control Module] | Transmission control computer ASSY remains unable to receive data from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the transmission control computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0140 | [Lost Communication With Body Control Module] | Transmission control computer ASSY remains unable to receive data from the main body ECM (Multiplex network body computer) | • One or more second after IG ON<br>• The voltage of the transmission control computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0401 | [Invalid Data Received From ECM/PCM "A"] | Transmission control computer ASSY detects an error in the data received from the engine control computer | • One or more second after IG ON<br>• The voltage of the transmission control computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0416 | [Invalid Data Received From Vehicle Dynamics Control Module] | Transmission control computer ASSY detects an error in the data received from the brake actuator ASSY | • One or more second after IG ON<br>• The voltage of the transmission control computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0422 | [Invalid Data Received From Body Control Module] | Transmission control computer ASSY detects an error in the data received from the main body ECM (multiplex network body computer) | • One or more second after IG ON<br>• The voltage of the transmission control computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

NOTE:

Diagnosis data is transmitted via CAN communication line.

6. Brake actuator ASSY/Brake control-ABS/VDC system (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | [Control Module Communication Bus "A" Off] | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the brake actuator ASSY power supply is 10 V or more | Wait 60 seconds or more after IG ON | ABS warning light is ON | Retained until DTC is cleared by the tool |
| U0100 | [Lost Communication With ECM/PCM "A"] | Brake actuator ASSY remains unable to receive data from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the brake actuator ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | ABS warning light is ON | Retained until DTC is cleared by the tool |
| U0101 | [Lost Communication With TCM] | Brake actuator ASSY remains unable to receive data from the transmission control computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the brake actuator ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | ABS warning light is ON | Retained until DTC is cleared by the tool |
| U0126 | [Lost Communication With Steering Angle Sensor Module] | Brake actuator ASSY remains unable to receive data from the steering sensor (Spiral cable SUB-ASSY) | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the brake actuator ASSY power supply is 10 V or more | Wait 60 seconds or more after IG ON | ABS warning light is ON | Retained until DTC is cleared by the tool |

NOTE:

Diagnosis data is transmitted via CAN communication line.

7. Spiral cable SUB-ASSY (with sensor)/- (SSM4 display name)
   NOTE:
   Spiral cable SUB-ASSY (with sensor) is connected to CAN communication line but does not output DTC related with CAN communication.
8. Power steering computer ASSY/Power steering (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0100 | [Lost Communication With ECM/PCM "A"] | Power steering computer ASSY remains unable to receive data from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the power steering computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | EPS warning light is ON | Retained until DTC is cleared by the tool |
| U0122 | [Lost Communication With Vehicle Dynamics Control Module] | Power steering computer ASSY remains unable to receive data from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the power steering computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | EPS warning light is ON | Retained until DTC is cleared by the tool |
| U0416 | [Invalid Data Received From Vehicle Dynamics Control Module] | Power steering computer ASSY detects an error in the data received from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the power steering computer ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | EPS warning light is ON | Retained until DTC is cleared by the tool |

NW

   NOTE:
   Diagnosis data is transmitted via CAN communication line.
9. Air conditioner amplifier ASSY/Air conditioner (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | [Control Module Communication Bus "A" Off] | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0100 | [Lost Communication With ECM/PCM "A"] | Air conditioner amplifier ASSY remains unable to receive data from the engine control computer | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0101 | [Lost Communication With TCM] | Air conditioner amplifier ASSY remains unable to receive data from the transmission control computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0122 | [Lost Communication With Vehicle Dynamics Control Module] | Air conditioner amplifier ASSY remains unable to receive data from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0140 | [Lost Communication With Body Control Module] | Air conditioner amplifier ASSY remains unable to receive data from the main body ECM (Multiplex network body computer) | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0155 | [Lost Communication With Instrument Panel Cluster (IPC) Control Module] | Air conditioner amplifier ASSY remains unable to receive data from the combination meter ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0401 | [Invalid Data Received From ECM/PCM "A"] | Air conditioner amplifier ASSY has been unable to receive data transmitted to the engine control computer for one second or more | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0402 | [Invalid Data Received From TCM] | Air conditioner amplifier ASSY detects an error in the data received from the transmission control computer ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0416 | [Invalid Data Received From Vehicle Dynamics Control Module] | Air conditioner amplifier ASSY detects an error in the data received from the brake actuator ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0422 | [Invalid Data Received From Body Control Module] | Air conditioner amplifier ASSY detects an error in the data received from the main body ECM (Multiplex network body computer) | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |
| U0423 | [Invalid Data Received From Instrument Panel Cluster Control Module] | Air conditioner amplifier ASSY detects an error in the data received from the combination meter ASSY | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the air conditioner amplifier ASSY power supply is 10 V or more | Wait 10 seconds or more after IG ON | - | Retained until DTC is cleared by the tool |

NOTE:

Diagnosis data is transmitted via CAN communication line.

10. Airbag sensor ASSY/Airbag system (SSM4 display name)

| DTC | Diagnostic items (SSM4 display name) | DTC detecting condition | DTC detecting conditions | DTC check procedure | Warning light | Retention of DTC |
|---|---|---|---|---|---|---|
| U0073 | [Control Module Communication Bus "A" Off] | Communication is disabled due to high-speed CAN communication error | When all of the following conditions are met:<br>• One or more second after IG ON<br>• The voltage of the airbag sensor ASSY power supply is 10 V or more | Wait 60 seconds or more after IG ON | Airbag warning light is ON | Retained until DTC is cleared by the tool |

NOTE:

Diagnosis data is transmitted via CAN communication line.

| (A) | Installation check | VDC | Brake actuator ASSY | A/B | Airbag CM |
| (B) | Bus off detection | MET | Combination meter ASSY | A/C | Air conditioner amplifier ASSY |
| (C) | Missing data detection | BIU | Body integrated unit | TCU | Transmission control computer ASSY |
| (D) | Data error detection | KPS | Collation ECM (Smart key computer ASSY) | EPS | Power steering computer ASSY |
| | | STR | Spiral cable SUB-ASSY | ECU | Engine control computer |

Procedure

1. Module installation check
   (a) Put "-" mark in the box under the installation check column if the vehicle to be inspected does not have the relevant module.
   (b) Put "-" marks in all blank boxes in the same row that the "-" mark has been placed.
2. Bus off detection and missing data detection

NOTE:
DTC will not be displayed if CAN diagnostic module has an open harness which causes missing data, etc. (current malfunction). In this case, perform an inspection according to "Check using the check sheet of communication for initializing", and then use the following sheet to confirm that it has changed to a past malfunction.
(a) In the check sheet, put "×" in the box under the DTCs detected by each module.
(b) Identify and repair the faulty part by referring to the example of missing DTC detection. (Refer to the example of missing DTC detection)

3. Data error detection
NOTE:
If the P.B.C code is detected when starting the engine again, perform the diagnosis of the P.B.C code.
If bus off and missing data are present, perform the diagnosis for these problems first.
(a) If more than one module detects DTC for the same module, replace the module being detected.
(b) If only one module detects DTC, replace the module being detected.
(c) If DTC recurs, re-install the module which has been replaced, and replace the module which detected DTC.
(d) If DTC recurs, replace both modules.

NW

11. DTC matrix table
    (1) For the past communication malfunctions of the ECMs and sensors connected to Vbus, the defective part can be identified based on the following matrix tables.
    NOTE:
    - Use the matrix table below to identify the part which has lost communication according to the DTC output by each ECM connected to CAN communication line.
    - For diagnosis of open circuit in sub-line and lost communication, use "Check sheet of communication for initializing". The check sheet enables quick identification of a defective part because if an ECM or sensor is connected to an open sub-line, it will not respond.

| Diagnosis result | | Description | | | |
|---|---|---|---|---|---|

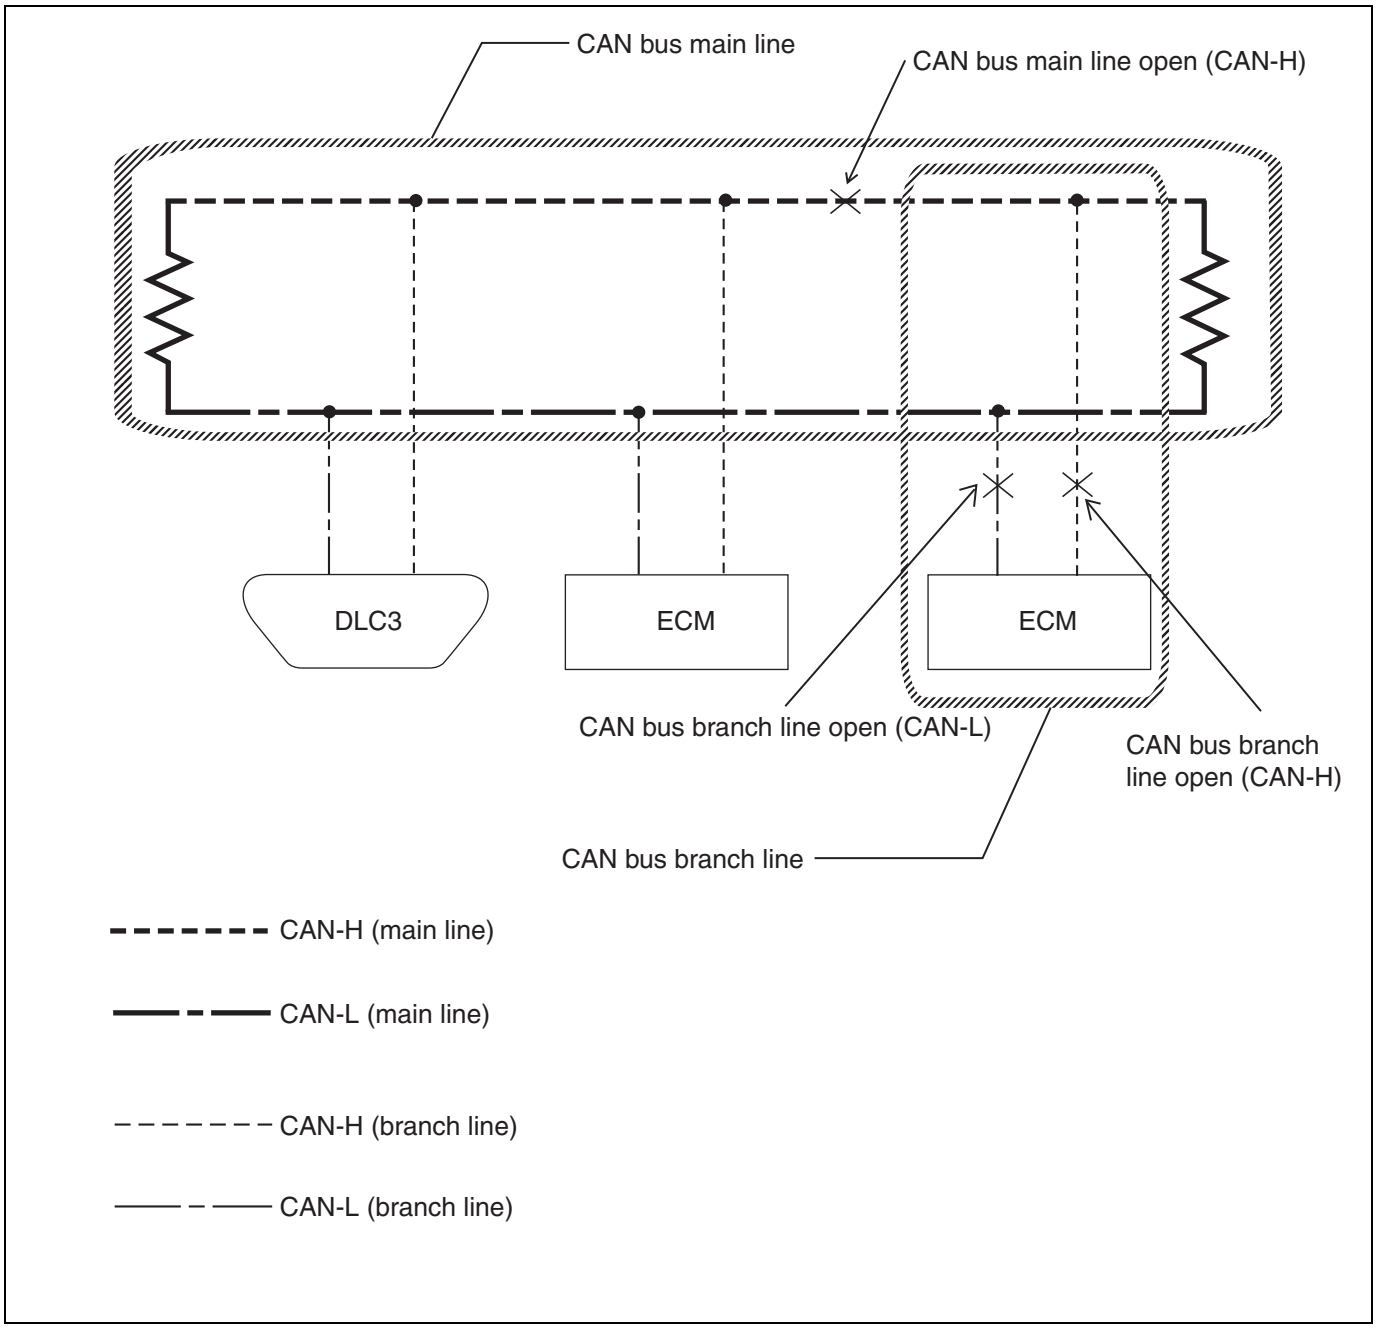
| | U0423 | × | ×*1 |
| | U0424 | × | ×*1 |
| | U1201 | × | ×*1 |

NW

NOTE:

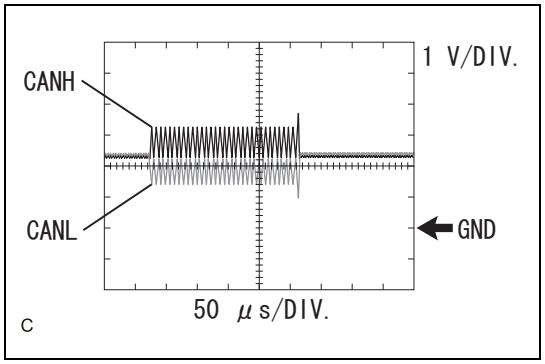
- 0: DTC is output.
- ×: DTC may be output if either end of the sub-line is open
- *1: DTC cannot be output in case of lost communication
- In case of an open circuit in the CAN bus main line, short circuit between CAN bus lines (CAN-H and CAN-L), CAN bus +B short, or CAN bus GND short, many DTCs may be output by most ECMs (or sensors) on CAN bus or several communication error messages may be displayed on SSM4. To solve this problem, start the inspection using "Check sheet of communication for initializing". (Refer to NW - 33)
- In case of either end of the CAN bus sub-line is open, irrelevant DTCs may be output (DTC may not be displayed properly) or communication error messages may be displayed on SSM4.

12. CAN bus waveform

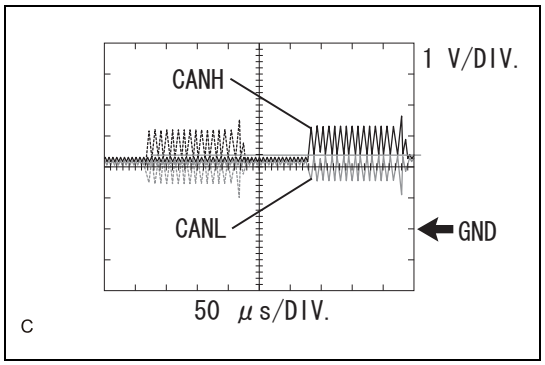


NOTE:

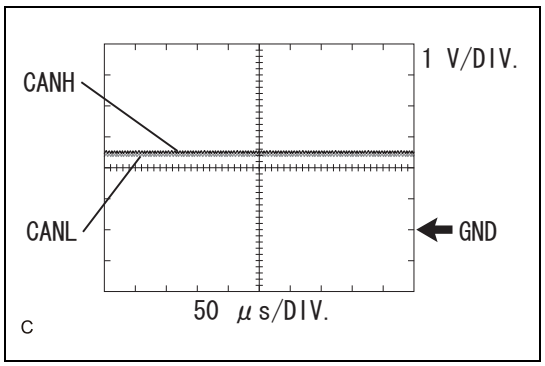
- CAN bus waveform is obtained by measuring signals between CANH-GND terminals and between CANL-GND terminals of the data link connector. (Use as a reference of the diagnostics of CAN communication line)
- If multiple ECMs seem to be defective based on "Bus diagnosis" of SSM4 and DTC, perform resistance inspection on CAN bus (Refer to NW - 44) first. If no abnormal condition is detected, then check the waveform by following the procedure described below.
- If the waveform is similar to none of the three waveforms (Group 1), possible defects include open circuit in CAN bus main line, open circuit on either end of CAN bus sub-line, and CAN bus (CAN-H or CAN-L) shorted to GND (Group 2).
- Check whether the waveform is disturbed when the connector and wiring harness is swayed vertically and horizontally.



(1) CAN bus waveform (Group 1)
(a)Normal waveform

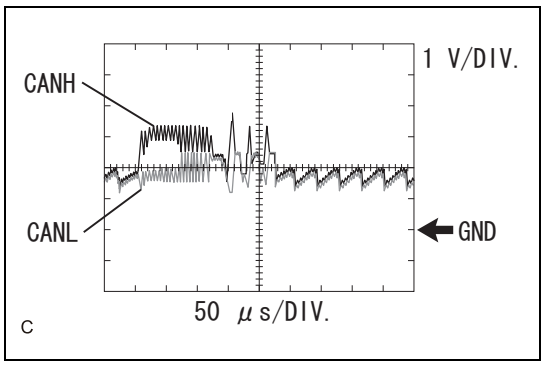


(b)Open circuit in both lines of one of ECM sub-lines (both CAN-H and CAN-L)
NOTE:
- If an ECM or sensor is connected to CAN bus sub-line with open circuit in both lines, the signal will disappear (indicated by dotted line). (the signals from other ECMs and sensors are displayed normally).
- The waveform is similar to the normal waveform. The defective part can be identified by CAN bus check procedure.

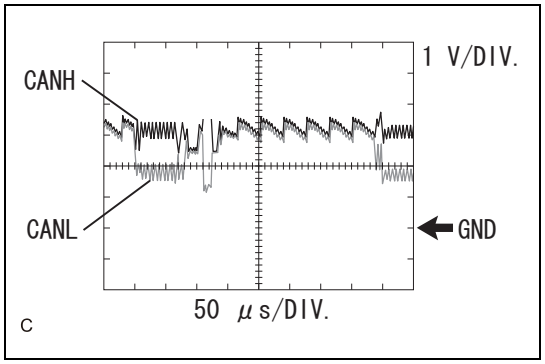


(c)CAN bus short (CAN-H and CAN-L are shorted)
NOTE:
- No waveform is displayed.
- In case of ECM internal error, the waveform will change by removing a ECM. If the waveform does not change, the wiring harness may be defective.

(2) Example: CAN bus waveform (Group 2)
CAUTION:
The actual waveform greatly depends on the location of open or short circuit, and the waveforms is only an examples.



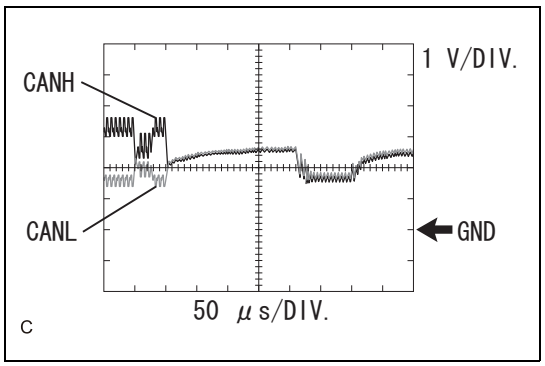
(a)Open circuit on either CAN bus sub-line (CAN-H)
NOTE:
- If an ECM is connected to CAN bus sub-line with an open circuit in either CAN-H or CAN-L, abnormal waveform is output. This defect interferes the signals from other parts, which deforms the waveform of other parts.
- Identify the defective part by performing CAN bus check, based on DTC, or removing each ECM or sensor to observe the waveform change. If ECM or sensor with open circuit in either CAN-H or CAN-L is removed, the waveform will be identical to the one when there is an open circuit in both CAN-H and CAN-L on CAN bus sub-line.



(b)Open circuit on either CAN bus sub-line (CAN-L)

NOTE:

- If an ECM is connected to CAN bus sub-line with an open circuit in either CAN-H or CAN-L, abnormal waveform is output. This defect interferes the signals from other parts, which deforms the waveform of other parts.
- Identify the defective part by performing CAN bus check, based on DTC, or removing each ECM or sensor to observe the waveform change. If ECM or sensor with open circuit in either CAN-H or CAN-L is removed, the waveform will be identical to the one when there is an open circuit in both CAN-H and CAN-L on CAN bus sub-line.

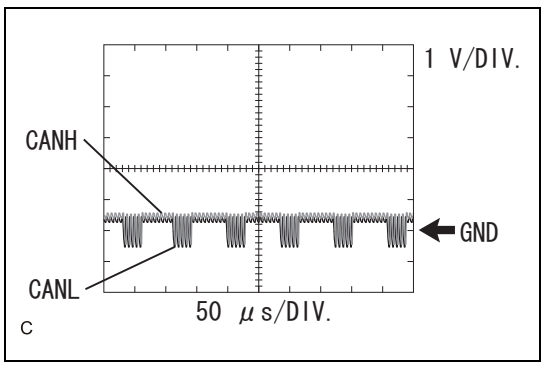


(c)Open circuit in CAN-H on CAN bus main line

NOTE:

- If an ECM or sensor is close to the data link connector in relation to the open circuit, it shows a nearly normal waveform.
- If an ECM or sensor is on the other side of the data link connector, it shows an abnormal waveform.
- An open circuit in CAN bus main line can be identified by measuring the resistance between CAN-H and CAN-L terminals on CAN bus sub-line (wiring harness).

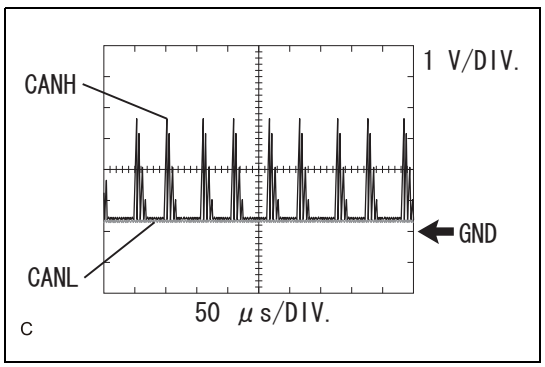
NW



(d)CAN-H shorted to GND (CAN bus line)

NOTE:

In case of ECM internal error, remove an ECM one by one to check whether the waveform changes or not. If it does not change, the wiring harness may be defective.



(e)CAN-L shorted to GND (CAN bus line)

NOTE:

In case of ECM internal error, remove an ECM one by one to check whether the waveform changes or not. If it does not change, the wiring harness may be defective.

NOTE:

The main body ECM (Multiplex network body computer) and the collation ECM (Smart key computer ASSY) are also connected to LIN communication line. (Refer to NW - 8)

## ECM terminal arrangement

CAUTION:

- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the auxiliary battery and wait for another one minute or more.
- After IG OFF, you may need to wait for some time before disconnecting the auxiliary battery terminal. Before starting the troubleshooting, refer to the procedure for disconnecting the auxiliary battery terminals. (Refer to IN - 6)

NOTE:
CAN communication system (ECM and sensor) may contain customized settings due to optional configuration. Before starting the procedure, make sure what type of systems (ECM and sensor) are implemented on the vehicle.

## Failsafe list

1. Failsafe function
   (1) If a failure occurs on any of the bus (communication line) due to short circuit and other reasons, the fail safe function switches the process on the defective bus to a predefined bus to protect against malfunction.
   (2) Behavior of each system in case of lost communication (For details, refer to the description of each system)

| Function | Control master (Main ECM that controls the process) | Relevant ECMs | Behavior in case of lost communication | Notification to driver | Notification method | Diagnostic codes ([ECM which saves DTC]) |
|---|---|---|---|---|---|---|
| Speed display<br>(Display the data on speedmeter based on vehicle speed signal sent by the brake actuator ASSY) | Combination meter ASSY | Brake actuator ASSY | Assume the input signal indicates 0 km/h | Yes | • Display 0 km/h on the speed meter<br>• Stop the driving monitor calculation | U0122<br>[Combination meter ASSY] |
| Odo/trip meter<br>(Receive vehicle speed signal and display the travel distance) | Combination meter ASSY | Brake actuator ASSY | Stop calculation and continue to display the last data until IG-OFF | No | - | U0122<br>[Combination meter ASSY] |
| Tachometer<br>(Receive the engine speed signal and display the data on tachometer) | Combination meter ASSY | Engine control computer | Assume the input signal indicates 0 r/min | Yes | Display 0 r/min on the tachometer | U0100<br>[Combination meter ASSY] |
| Airbag<br>(Turn ON/OFF the airbag warning light) | Combination meter ASSY | Airbag sensor ASSY | Assume the input signal indicates "Active" | Yes | Turn ON the airbag warning light | U0151<br>[Combination meter ASSY] |
| EPS warning<br>(Turn ON/OFF the EPS warning light) | Combination meter ASSY | Power steering computer ASSY | Assume the input signal indicates "Active" | Yes | Turn ON the EPS warning light | U0131<br>[Combination meter ASSY] |

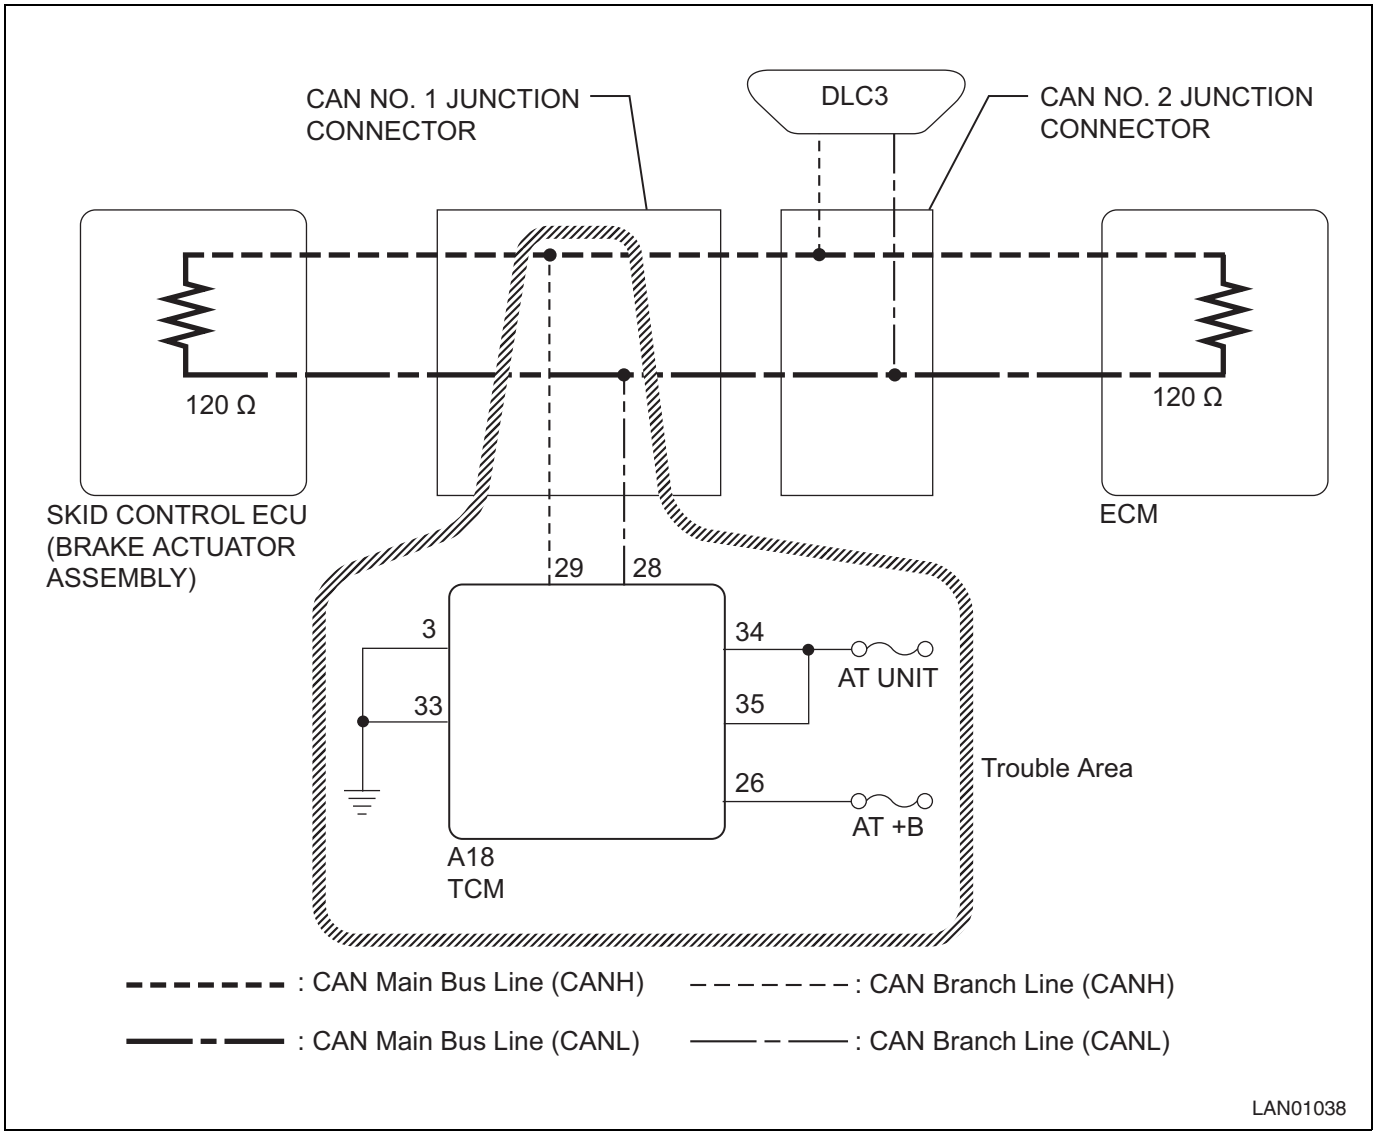
## Sub-lines 57-63 Ω(Transmission control computer ASSY system)

Description of functions

| Diagnostic items | Symptoms | Possible cause |
|---|---|---|
| Sub-lines 57-63 Ω(DTC detected on the transmission control computer ASSY system) | Perform inspection if missing data or data error is detected. The cause of malfunction is not a short to the power supply or ground. | • Transmission control computer ASSY, open circuit in sub-line or connector defect<br>• Transmission control computer ASSY, power supply system defect<br>• Transmission control computer ASSY, internal error |

Circuit figure



Inspection steps

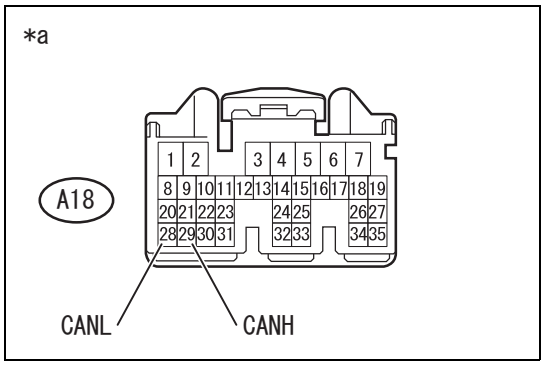
CAUTION:

- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.
- If DTC related with CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot". (Refer to NW - 30)
- When the repair is complete, follow DTC check procedure to confirm the same DTC does not recur.
  DTC check procedure: wait 60 seconds or more after IG ON
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
- Before performing troubleshooting, check the fuse for this circuit.

NOTE:

- Before disconnecting a connector, check for loose or unplugged connection by pushing back the connector case.
- After disconnecting the connector, make sure that its terminal and the case have no damage, deformation, or corrosion.

| 1 | Checking for open circuit in CAN bus sub-line (Sub-line to the transmission control computer ASSY) |
|---|---|



(1) Disconnect the battery ground terminal, and then disconnect the vehicle harness connector A18 from the transmission control computer ASSY.
(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A18-29 - A18-28 | Disconnection of the battery ground terminal | 57 to 63 Ω |

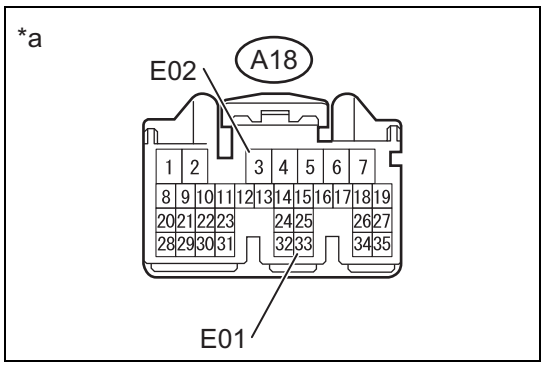
Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Transmission control computer ASSY) |

NG → Repair or replacement of CAN bus sub-line or connector

OK

| 2 | Checking of the wiring harness and connector (Power supply system) |
|---|---|



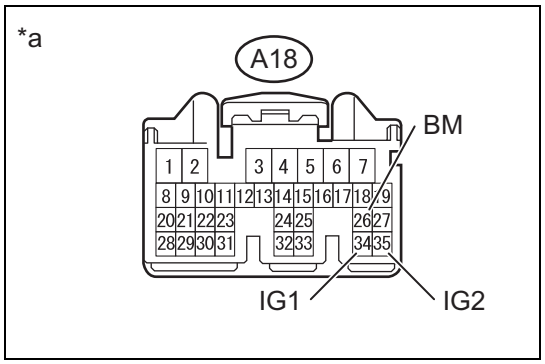
(1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A18-3 - chassis ground | Disconnection of the battery ground terminal | Less than 1 Ω |
| A18-33 - chassis ground | Disconnection of the battery ground terminal | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Transmission control computer ASSY) |



(2) Reconnect the battery ground terminal.
(3) Measure the voltage between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A18-26 - chassis ground | IG OFF | 11 to 14 V |
| A18-34 - chassis ground | IG ON | 11 to 14 V |
| A18-35 - chassis ground | IG ON | 11 to 14 V |

Captions in illustration

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the transmission control computer ASSY (Refer to AT - 322)

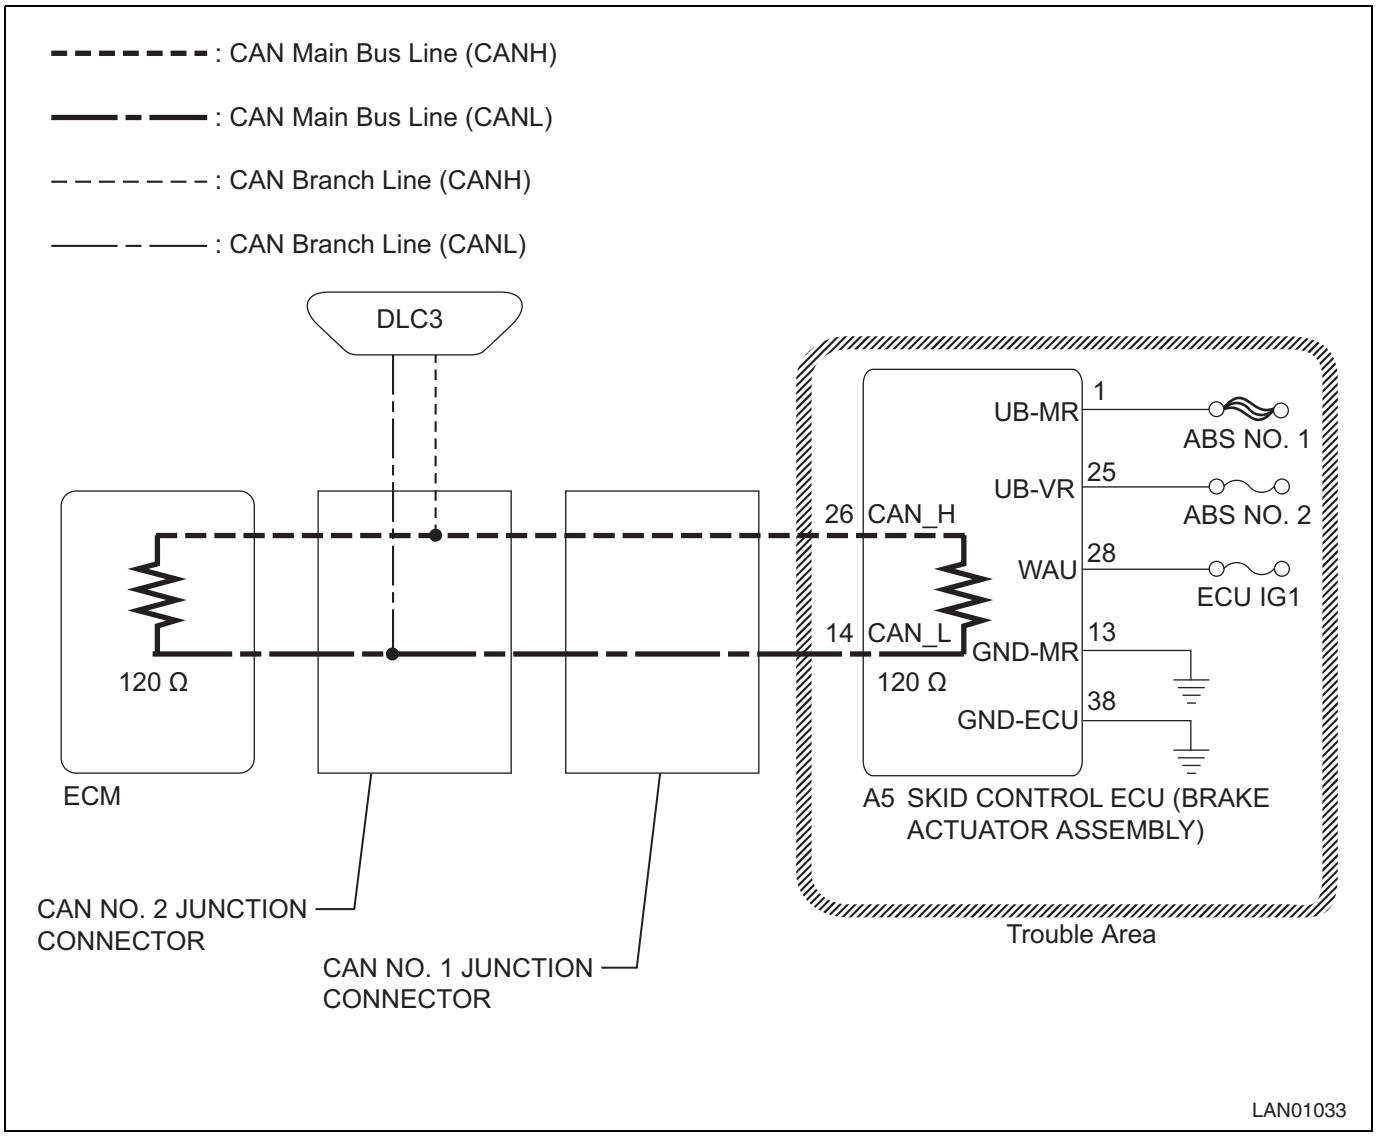
## Sub-lines 57-63 Ω(Brake actuator system)

Description of functions

| Diagnostic items | Symptoms | Possible cause |
|---|---|---|
| Sub-lines 57-63 Ω(DTC detected on VDC system) | Perform inspection if missing data or data error is detected. The cause of malfunction is not a short to the power supply or ground. | • Brake actuator ASSY, open circuit in sub-line or connector defect<br>• Brake actuator ASSY, power supply system defect<br>• Brake actuator ASSY, internal error |

NW

Circuit figure



Inspection steps

CAUTION:

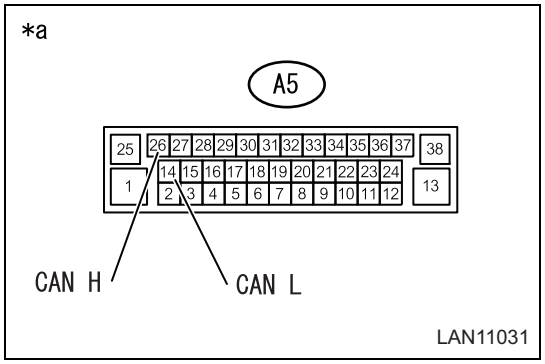
- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.
- If DTC related with CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot". (Refer to NW - 30)
- When the repair is complete, follow DTC check procedure to confirm the same DTC does not recur.
  DTC check procedure: Wait 60 seconds or more after IG ON, then drive the vehicle at 15 km/h or more for at least one second.
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
- Before performing troubleshooting, check the fuse for this circuit.

NOTE:

- Before disconnecting a connector, check for loose or unplugged connection by pushing back the connector case.
- After disconnecting the connector, make sure that its terminal and the case have no damage, deformation, or corrosion.

NW

| 1 | Checking for open circuit in CAN bus main line (Main line to the brake actuator ASSY) |
|---|---|



(1) Disconnect the battery ground terminal, and then disconnect the vehicle harness connector A5 from the brake actuator ASSY.

(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A5-26 - A5-14 | Disconnection of the battery ground terminal | 114 to 126 Ω |

Captions in illustration

| | |
|---|---|

Inspection steps

CAUTION:

- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.
- If DTC related with CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot". (Refer to NW - 30)
- When the repair is complete, follow DTC check procedure to confirm the same DTC does not recur.
  DTC check procedure: wait 10 seconds or more after IG ON
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
- Before performing troubleshooting, check the fuse for this circuit.

NOTE:

- Before disconnecting a connector, check for loose or unplugged connection by pushing back the connector case.
- After disconnecting the connector, make sure that its terminal and the case have no damage, deformation, or corrosion.

## Exceeding 63 Ω

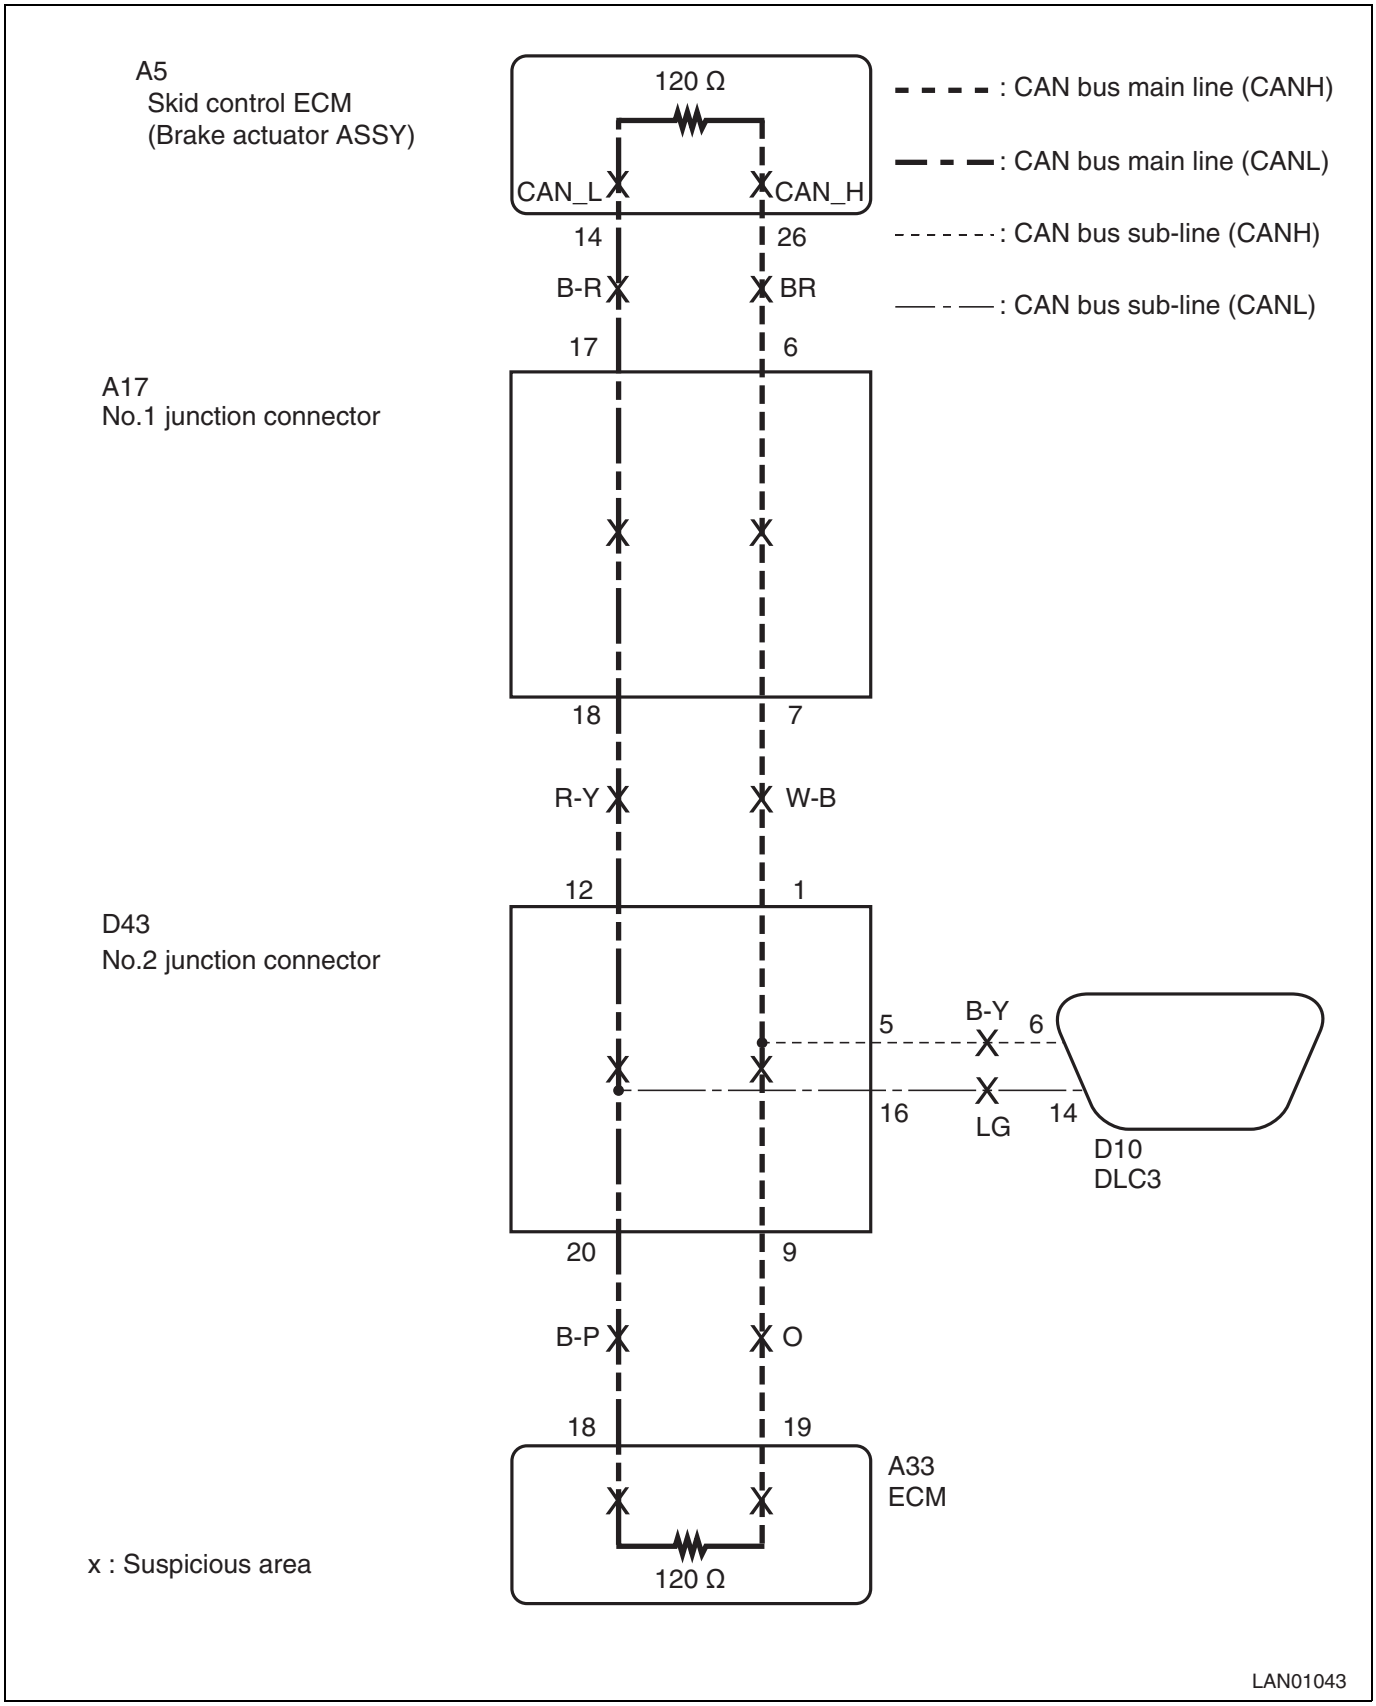
Description of functions

If the resistance between the data link connector 6 (CANH) ←→14 (CANL) is exceeding 63 Ω, CAN bus main line or the sub-line to the data link connector may be open.

| Symptoms | Possible cause |
|---|---|
| Resistance between the data link connectors 6 (CANH) ←→14 (CANL) exceeds 63 Ω | • Open circuit in the sub-line or defective connector in the data link connector<br>• Open circuit in CAN bus main line or connector defect<br>• Wiring harness connector (CAN J/C1)<br>• Wiring harness connector (CAN J/C2)<br>• Engine control computer, internal error<br>• Brake actuator ASSY, internal error |

This malfunction is not caused by CAN bus sub-line or each ECM and sensor connected to CAN bus sub-line.

Circuit figure



Inspection steps

CAUTION:

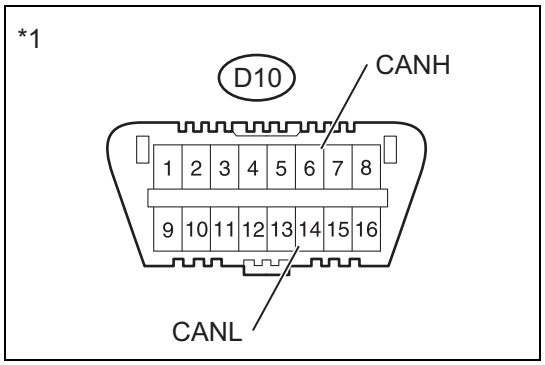
- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.

- If DTC related with CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot". (Refer to NW - 30)
- When the repair is complete, follow DTC check procedure to confirm the same DTC does not recur.
  DTC check procedure: Wait 60 seconds or more after IG ON, then drive the vehicle at 15 km/h or more for at least one second.
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

NOTE:

- Before disconnecting a connector, check for loose or unplugged connection by pushing back the connector case.
- After disconnecting the connector, make sure that its terminal and the case have no damage, deformation, or corrosion.

| 1 | Checking for open circuit in CAN bus sub-line (sub-line to data link connector) |
|---|---|



(1) Disconnect the battery ground terminal.

(2) Use the tester to measure the resistance between terminals.
Resistance

A

Replacement of the wiring harness connector (CAN J/C1)

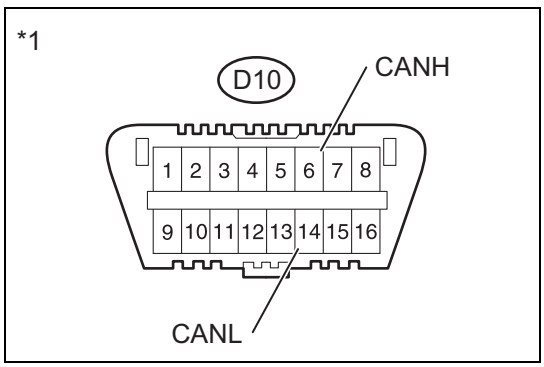
| 5 | Checking for line-to-line short in CAN bus (ECM and sensor line) |
|---|---|

(1) Reconnect all connections to the wiring harness connectors (CAN J/C1 and CAN J/C2).

(2) From the ECM and sensor relevant with line-to-line short circuit, disconnect the connectors with CAN-H and CAN-L terminals. (Refer to NW - 67for ECM terminal arrangement)

NOTE:

In case of more than one line-to-line short circuit, disconnect all connectors including CANH and CANL terminals of the ECM and sensor.



(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D10-6 - D10-14 | Disconnection of the battery ground terminal | 57 to 63 Ω |

Captions in illustration

| | |
|---|---|
| *1 | Data link connector |

NOTE:

- If the resistance is less than 57 Ωwith the ECM and sensor connected (line-to-line short), there may be a ECM internal short.
- If the resistance returns to normal with the ECM and sensor disconnected, there may be an internal short within the ECM and sensor.

- When more than one ECM or sensor is disconnected, reconnect the part one by one to check the resistance. If an ECM or sensor shows an abnormal value, replace it. After that, reconnect all ECMs and sensors to check if the resistance returns to normal.
- If the resistance does not return to normal with the ECM and sensor disconnected, repair or replace the wire harness and the connector in which line-to-line short has been detected.

NG → Repair or replacement of the wiring harness

OK

Replacement of the ECM/sensor

NW

| 6 | Check for line-to-line short in CAN bus termination (Engine control computer) |
|---|---|

(1) Disconnect the vehicle wiring harness connector A33 from the engine control computer.

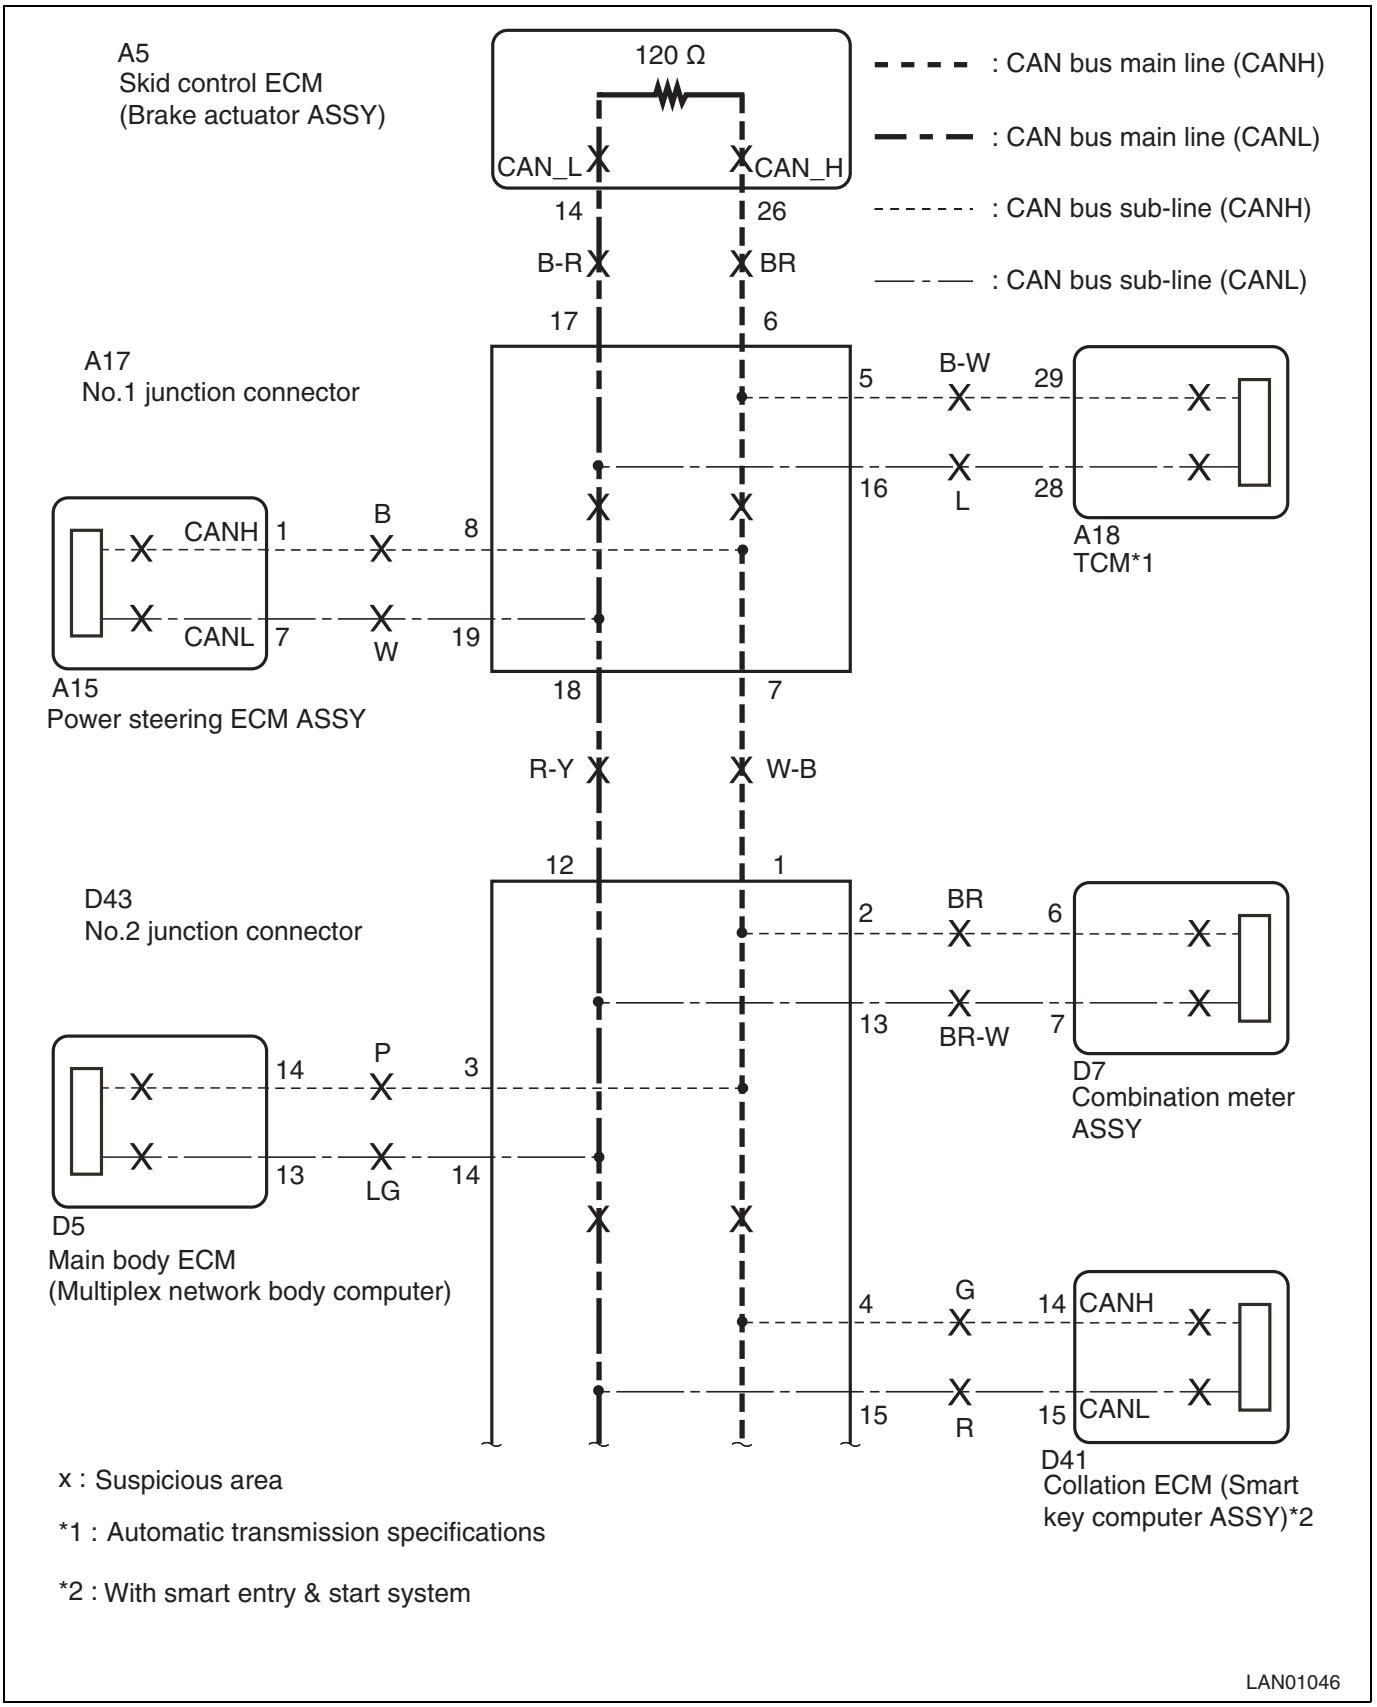
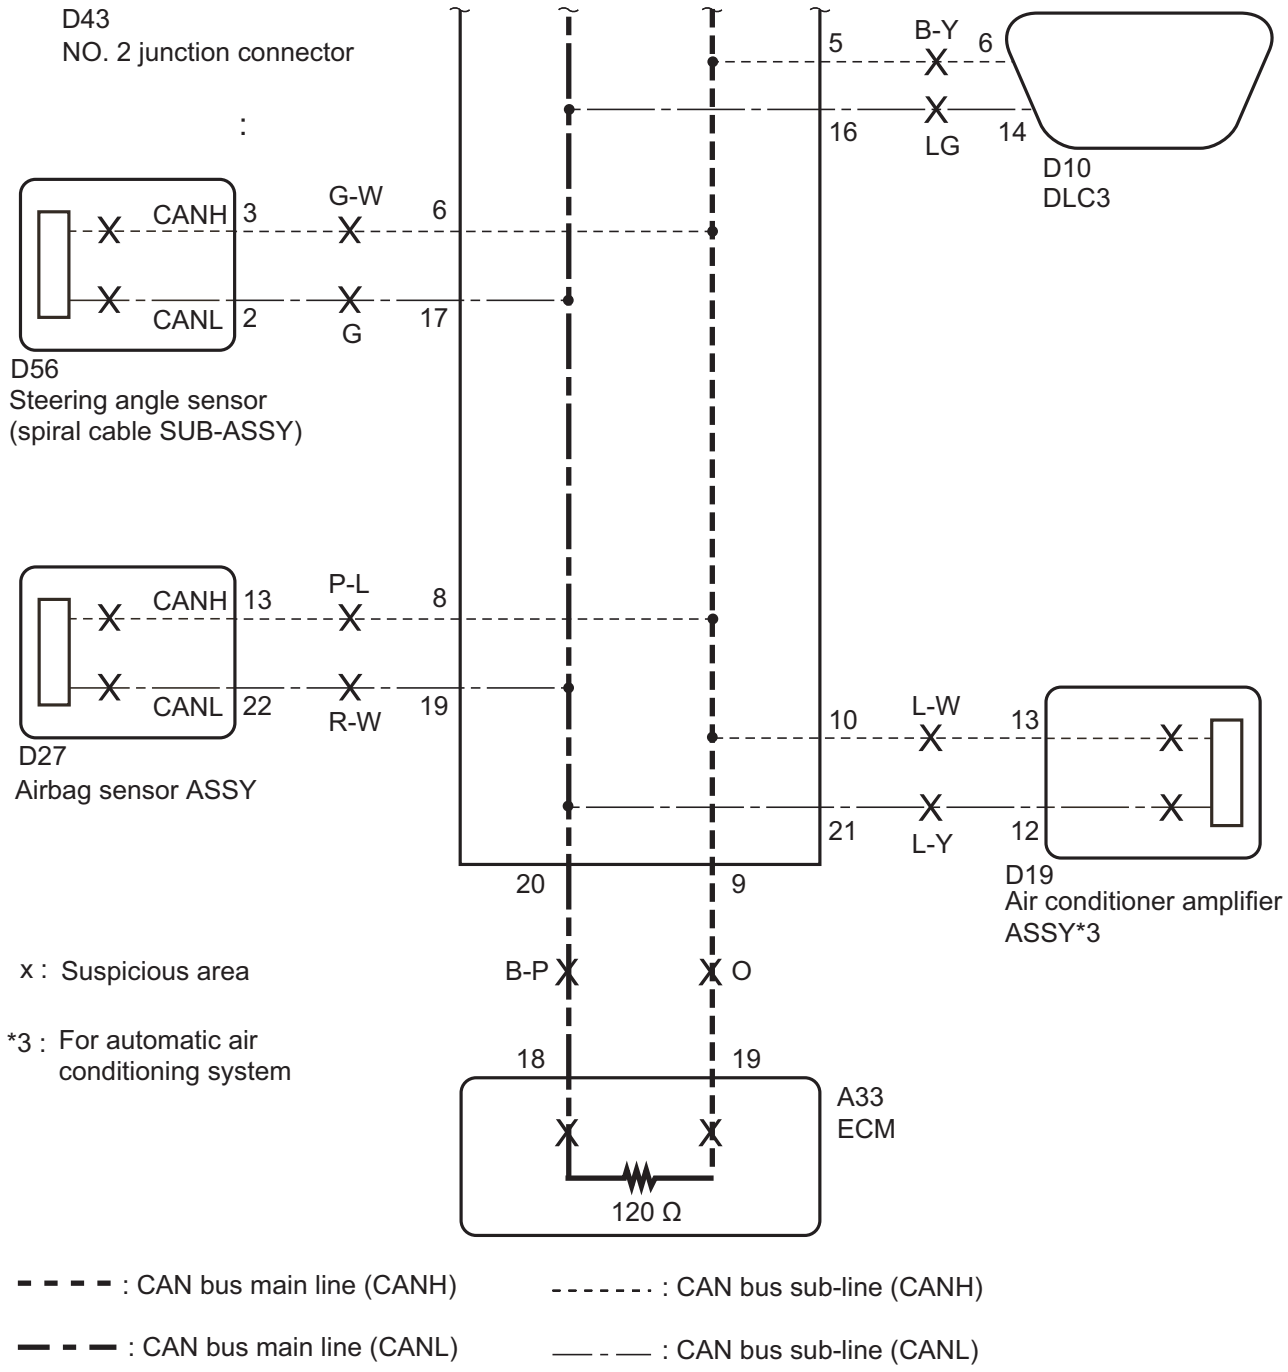
*2: Transmission A/T

*3: For automatic air conditioning system

Circuit figure





Inspection steps

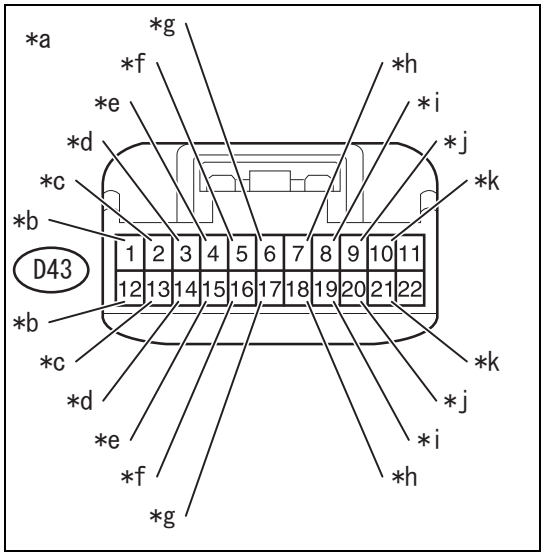
CAUTION:

- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.
- If DTC related with CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot". (Refer to NW - 30)
- When the repair is complete, follow DTC check procedure to confirm the same DTC does not recur.
  DTC check procedure: Wait 60 seconds or more after IG ON, then drive the vehicle at 15 km/h or more for at least one second.
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

NOTE:

- Before disconnecting a connector, check for loose or unplugged connection by pushing back the connector case.
- After disconnecting the connector, make sure that its terminal and the case have no damage, deformation, or corrosion.

| 1 | Checking for CAN bus line short to +B (Wiring harness connector (CAN J/C2)) |
|---|---|



(1) Reconnect the vehicle wiring harness connectors: A5 to the brake actuator ASSY and A33 to the engine control computer.

(2) Disconnect the vehicle harness connector D43 from the wiring harness connector (CAN J/C2).

(3) Measure the resistance between the terminal and +B.

Resistance

| Inspection terminals | Inspection conditions | Standard value | Connecting to |
|---|---|---|---|
| D43-1 - +B | Disconnection of the battery ground terminal | 6 kΩ or more | Wiring harness connector (CAN J/C1) |
| D43-12 - +B | | | |
| D43-2 - +B | Disconnection of the battery ground terminal | 6 kΩ or more | Combination meter ASSY |
| D43-13 - +B | | | |
| D43-3 - +B | Disconnection of the battery ground terminal | 6 kΩ or more | Main body ECM (Multiplex network body computer) |
| D43-14 - +B | | | |
| D43-4 - +B | Disconnection of the battery ground terminal | 6 kΩ or more | Collation ECM (Smart key computer ASSY) |
| D43-15 - +B | | | |

B → Repair or replacement of CAN bus main line or connector (Wiring harness connector (CAN J/C2) - Wiring harness connector (CAN J/C1))

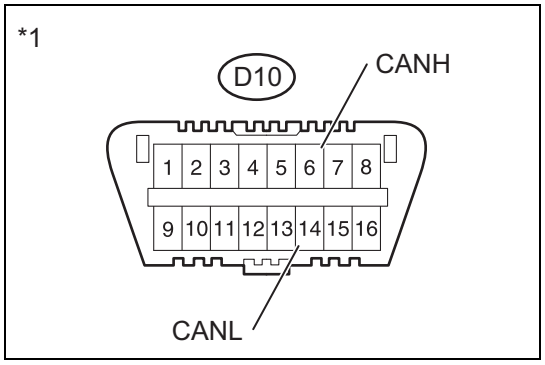
C → Go to Step 4

D → Go to Step 3

A → Replacement of the wiring harness connector (CAN J/C1)

| 3 | Checking for CAN bus short to +B (ECM/sensor) |
|---|---|

(1) Reconnect all connections to the wiring harness connectors (CAN J/C1 and CAN J/C2).
(2) From the ECM and sensor relevant with line-to-line short circuit, disconnect the connectors with CAN-H and CAN-L terminals. (Refer to NW - 67for ECM terminal arrangement)
NOTE:
In case of more than one +B short circuit, disconnect all connectors including CANH and CANL terminals of the ECM and sensor.



(3) Measure the resistance between the terminals.
Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D10-6 - D10-16 | Disconnection of the battery ground terminal | 6 kΩ or more |
| D10-14 - D10-16 | | |

Captions in illustration

| | |
|---|---|
| *1 | Data link connector |

NOTE:
- If the resistance returns to normal with the ECM and sensor disconnected, there may be an internal short within the ECM and sensor.
- When more than one ECM or sensor is disconnected, reconnect the part one by one to check the resistance. If an ECM or sensor

shows an abnormal value, replace it. After that, reconnect all ECMs and sensors to check if the resistance returns to normal.

- If the resistance does not return to normal with the ECM/sensor disconnected, repair or replace the wire harness and connector in which +B short has been detected.

NG → Repair or replacement of the wiring harness

OK

Replacement of the ECM/sensor

| 4 | Checking for +B short in CAN bus termination (Brake actuator ASSY) |
|---|---|

(1) Disconnect the vehicle wiring harness connector A5 of the brake actuator ASSY.
(2) Measure the resistance between the terminal and +B.
Resistance

| Inspection terminals | Inspection conditions | Standard value | Connecting to |
|---|---|---|---|
| A17-6 - +B | Disconnection of the battery ground terminal | 6 kΩ or more | Brake actuator ASSY |
| A17-17 - +B | | | |

NG → Repair or replacement of the wiring harness and the connector in which +B short has been detected

OK

Replacement of the brake actuator ASSY

| 5 | Checking for +B short in CAN bus termination (Engine control computer) |
|---|---|

(1) Disconnect the vehicle wiring harness connector A33 from the engine control computer.
(2) Measure the resistance between the terminal and +B.
Resistance

| Inspection terminals | Inspection conditions | Standard value | Connecting to |
|---|---|---|---|
| D43-9 - +B | Disconnection of the battery ground terminal | 6 kΩ or more | Engine control computer |
| D43-20 - +B | | | |

NG → Repair or replacement of the wiring harness and the connector in which +B short has been detected

OK

Replacement of the engine control computer

## Check for short to ground

Description of functions

Main line or sub-lines may be shorted to ground or shorted to ground within one of the control modules.

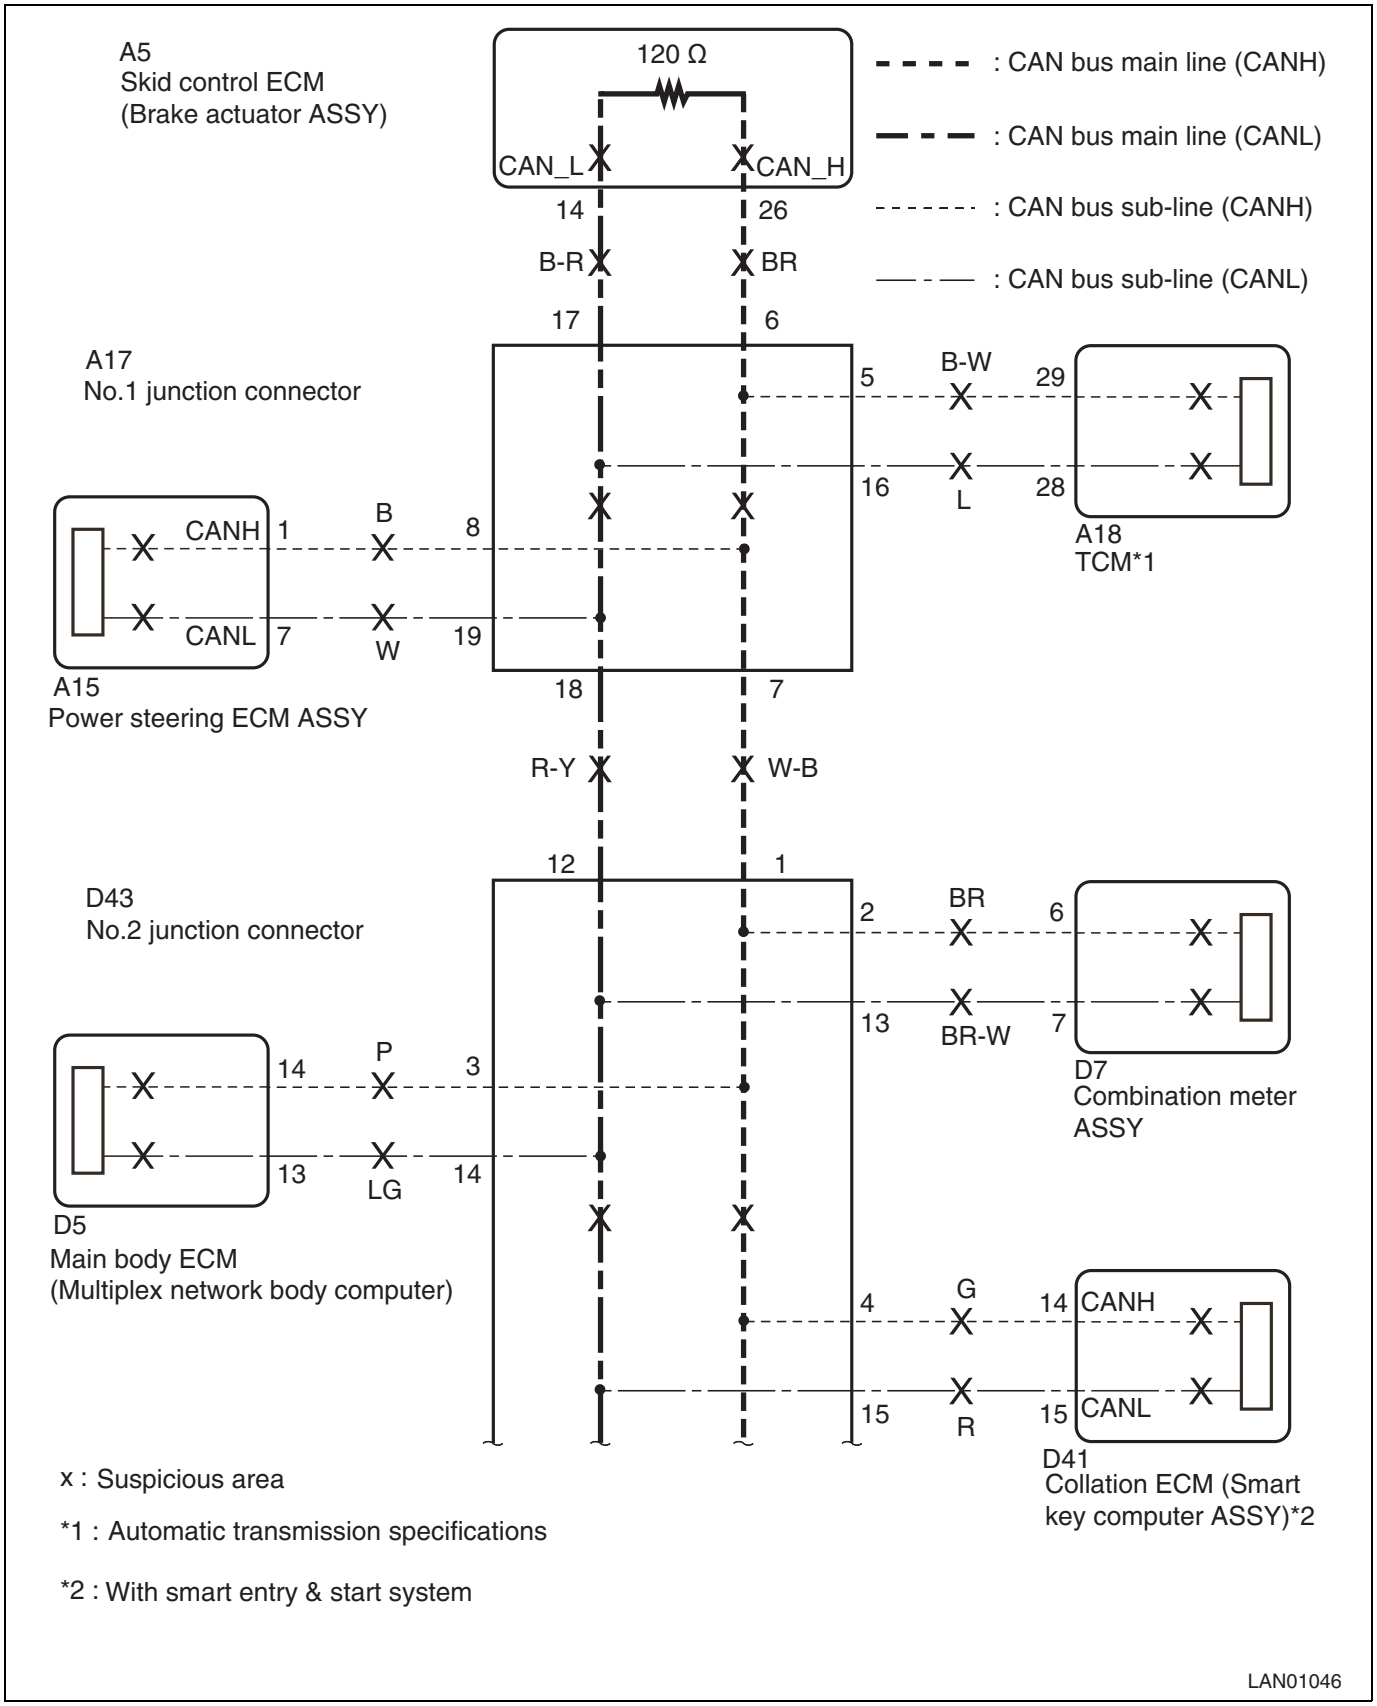
| Symptoms | Possible cause |
|---|---|
| Resistance between the data link connector 6 (CANH), 14 (CANL) ←→chassis ground is 10 Ωor less | • CAN bus main line short to GND<br>• CAN bus sub-line short to GND<br>• Main body ECM (Multiplex network body computer)<br>• Combination meter ASSY<br>• Collation ECM (Smart key computer ASSY) *1<br>• Engine control computer<br>• Transmission control computer ASSY *2<br>• Brake actuator ASSY<br>• Spiral cable SUB-ASSY (with sensor)<br>• Power steering computer ASSY<br>• Air conditioner amplifier ASSY *3<br>• Airbag sensor ASSY<br>• PSP (Accessory bus buffer)<br>• Wiring harness connector (CAN J/C1)<br>• Wiring harness connector (CAN J/C2) |

*1: With smart entry

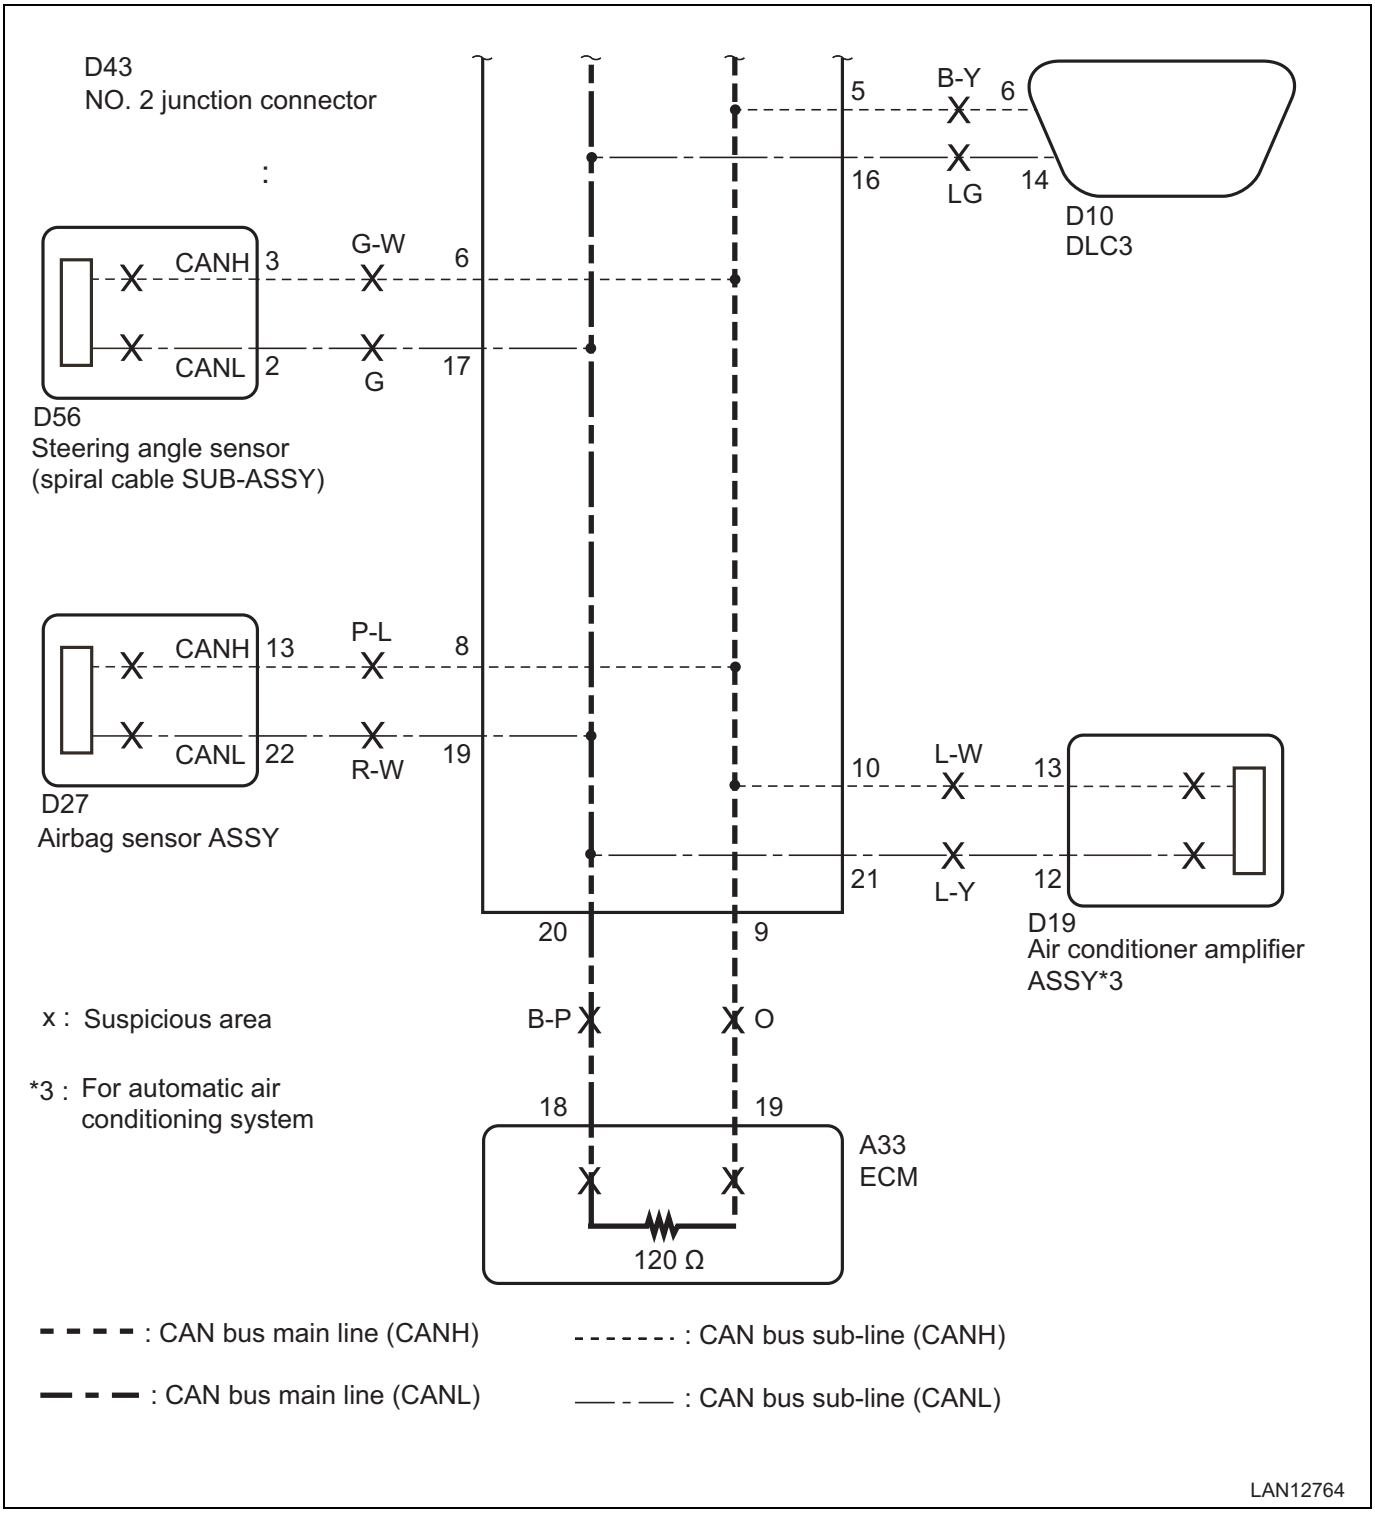
*2: Transmission A/T

*3: For automatic air conditioning system

Circuit figure



NW



Inspection steps

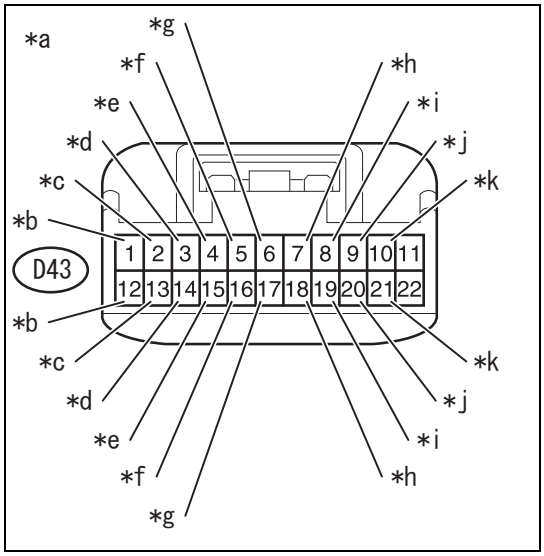
CAUTION:

- Before measuring the resistance of CAN bus, turn the ignition OFF and leave the vehicle as is for at least one minute without operating keys, switches, and doors. Disconnect the battery and wait for another one minute or more.
- If DTC related with CAN communication system is output, always start the troubleshooting according to the procedure described in "How to troubleshoot". (Refer to NW - 30)
- When the repair is complete, follow DTC check procedure to confirm the same DTC does not recur.
  DTC check procedure: Wait 60 seconds or more after IG ON, then drive the vehicle at 15 km/h or more for at least one second.
- After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

NOTE:

- Before disconnecting a connector, check for loose or unplugged connection by pushing back the connector case.
- After disconnecting the connector, make sure that its terminal and the case have no damage, deformation, or corrosion.

| 1 | Checking for CAN bus line short to GND (Wiring harness connector (CAN J/C2)) |
|---|---|



(1) Reconnect the vehicle wiring harness connectors: A5 to the brake actuator ASSY and A33 to the engine control computer.

(2) Disconnect the vehicle harness connector D43 from the wiring harness connector (CAN J/C2).

(3) Measure the resistance between the terminal and GND.

Resistance

| Inspection terminals | Inspection conditions | Standard value | Connecting to |
|---|---|---|---|
| D43-1 - GND | Disconnection of the battery ground terminal | 200 Ωor more | Wiring harness connector (CAN J/C1) |
| D43-12 - GND | | | |
| D43-2 - GND | Disconnection of the battery ground terminal | 200 Ωor more | Combination meter ASSY |
| D43-13 - GND | | | |

|---|---|
| *1 | Data link connector |

NOTE:
- If the resistance returns to normal with the ECM and sensor disconnected, there may be an internal short within the ECM and sensor.
- When more than one ECM or sensor is disconnected, reconnect the part one by one to check the resistance. If an ECM or sensor

shows an abnormal value, replace it. After that, reconnect all ECMs and sensors to check if the resistance returns to normal.

- If the resistance does not return to normal with the ECM/sensor disconnected, repair or replace the wire harness and connector in which GND short has been detected.

NG → Repair or replacement of the wiring harness

OK

Replacement of the ECM/sensor

| 4 | Checking for GND short in CAN bus termination (Brake actuator ASSY) |
|---|---|

NW

(1) Disconnect the vehicle wiring harness connector A5 of the brake actuator ASSY.
(2) Measure the resistance between the terminal and GND.
Resistance

| Inspection terminals | Inspection conditions | Standard value | Connecting to |
|---|---|---|---|
| A17-6 - GND | Disconnection of the battery ground terminal | 200 Ωor more | Brake actuator ASSY |
| A17-17 - GND | | | |

NG → Repair or replacement of the wiring harness and the connector in which GND short has been detected

OK

Replacement of the brake actuator ASSY

| 5 | Checking for GND short in CAN bus termination (Engine control computer) |
|---|---|

(1) Disconnect the vehicle wiring harness connector A33 from the engine control computer.
(2) Measure the resistance between the terminal and GND.
Resistance

| Inspection terminals | Inspection conditions | Standard value | Connecting to |
|---|---|---|---|
| D43-9 - GND | Disconnection of the battery ground terminal | 200 Ωor more | Engine control computer |
| D43-20 - GND | | | |

NG → Repair or replacement of the wiring harness and the connector in which GND short has been detected

OK

Replacement of the engine control computer

| DTC | U1201 | High-speed CAN failure/error counter failure |
|---|---|---|

Circuit description

Communication is unstable because of high-speed CAN communication error.

| DTC No. | Detecting conditions |
|---|---|
| U1201 | Communication is unstable because of high-speed CAN communication error. |

Inspection steps

CAUTION:

Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO > Follow the repair procedure described in "CAN communication circuit check".

YES

| 2 | DTC check |
|---|---|

(1) Start the engine.
(2) Use SSM4 to read DTC detected on CAN system.
Criteria: U0073 is not output

NO > Perform the diagnosis of U0073. (Refer to NW - 136)

YES

| 3 | DTC check |
|---|---|

(1) Use SSM4 to read DTC detected on CAN system.
Criteria: U1201 is output

NO > A temporary communication error may have occurred. Clear the memory.

YES

| 4 | DTC check |
|---|---|

(1) Turn the ignition switch OFF and then ON again.
(2) Use SSM4 to read DTC detected on CAN system.
Criteria: U1201 is output

NO > A temporary communication error may have occurred. Clear the memory.

YES

| 5 | Control module check |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the control modules in the proper sequence.
NOTE:
When disconnecting ECM or brake actuator ASSY, connect the resistance of 120 Ωbetween CAN-Hi and CAN-Lo to substitute a termination resistor.
(3) Turn the ignition switch to ON.
(4) Use SSM4 to read DTC detected on CAN system.
Criteria: U1201 is no longer output

NO → Repeat Step 5 until U1201 is not detected.

YES

Replace the control module which has been removed when no DTC is output.

| DTC | U0073 | Control Module Communication Bus "A" Off |
|---|---|---|

Circuit description
Lost communication due to high-speed CAN communication error.

| DTC No. | Detecting conditions |
|---|---|
| U0073 | Communication is interrupted due to high-speed CAN communication error. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Start the engine.
(2) Use SSM4 to read DTC detected on CAN system.
Criteria: U0073 is output

NO → A temporary communication error may have occurred. Clear the memory.

YES

| 2 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| 3 | DTC check |
|---|---|

(1) Perform the inspection using DTC check sheet.
(2) Use SSM4 to read DTC detected on CAN system.
Criteria: U0073 is output

NO → System is normal.

YES

| 4 | Control module check |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the control modules in the proper sequence.
NOTE:
When disconnecting ECM or brake actuator ASSY, connect the resistance of 120 Ωbetween CAN-Hi and CAN-Lo to substitute a termination resistor.
(3) Turn the ignition switch to ON.
(4) Use SSM4 to read DTC detected on CAN system.
Criteria: U0073 is no longer displayed

NO → Repeat Step 4 until U0073 is not detected.

YES

Replace the control module which has been removed when no DTC is output.

## DTC U0100 Missing data for engine

Circuit description
Data transmission from ECM has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0100 | No data has been received from the engine control computer. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.

Criteria: U0100 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 3 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| 4 | DTC check |
|---|---|

(1) Use SSM4 to read DTC.
Criteria: U0100 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0100 is not detected from more than one module

NO → Replace the ECM.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace the engine control computer.
(2) Use SSM4 to read DTC.
Criteria: U0100 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the engine control computer.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0100 is output

NO → System is normal.

YES

Replace the ECM.

| DTC | U0101 | Lost Communication With TCM |
|---|---|---|

Circuit description

Data transmission from the transmission control computer ASSY has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0101 | No data has been received from the transmission control computer ASSY. |

Inspection steps

CAUTION:

Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.

Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.

Criteria: U0101 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 3 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)

Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| 4 | DTC check |
|---|---|

(1) Use SSM4 to read DTC.

Criteria: U0101 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0101 is not detected from more than one module

NO → Replace the transmission control computer ASSY.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace the transmission control computer ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0101 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the transmission control computer ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0101 is output

NO → System is normal.

YES

Replace the transmission control computer ASSY.

## DTC U0122 Lost Communication With Vehicle Dynamics Control Module

Circuit description
Data transmission from the brake actuator ASSY has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0122 | No data has been received from the brake actuator ASSY. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| | |
|---|---|
| 2 | DTC check |

(1) Check the displayed DTC.
Criteria: U0122 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 3 | Checking CAN communication circuit |

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| | |
|---|---|
| 4 | DTC check |

(1) Use SSM4 to read DTC.
Criteria: U0122 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 5 | DTC check |

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0122 is not detected from more than one module

NO → Replace the brake actuator ASSY.

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the brake actuator ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0122 is output

NO → System is normal.

YES

| | |
|---|---|
| 7 | Replacement of the module |

(1) Reinstall the brake actuator ASSY.
(2) Replace the module that DTC has been detected.

NW

(3) Use SSM4 to read DTC.
Criteria: U0122 is output

NO → System is normal.

YES

Replace the brake actuator ASSY.

| DTC | U0126 | Lost Communication With Steering Angle Sensor Module |
|---|---|---|

Circuit description
Data transmission from the spiral cable SUB-ASSY has been interrupted.

NW

| DTC No. | Detecting conditions |
|---|---|
| U0126 | No data has been received from the spiral cable SUB-ASSY. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0126 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 3 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| 4 | DTC check |
|---|---|

(1) Use SSM4 to read DTC.
Criteria: U0126 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0126 is not detected from the brake actuator ASSY.

NO → Replace the spiral cable SUB-ASSY.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace the spiral cable SUB-ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0126 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the spiral cable SUB-ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0126 is output

NO → System is normal.

YES

Replace the spiral cable SUB-ASSY.

## DTC U0131 Missing data for electric power steering

Circuit description
Data transmission from the power steering computer ASSY has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0131 | No data has been received from the power steering computer ASSY. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| | |
|---|---|
| 2 | DTC check |

(1) Check the displayed DTC.
Criteria: U0131 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 3 | Checking CAN communication circuit |

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| | |
|---|---|
| 4 | DTC check |

(1) Use SSM4 to read DTC.
Criteria: U0131 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 5 | DTC check |

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0131 is not detected from the combination meter ASSY.

NO → Replace the power steering computer ASSY.

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the power steering computer ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0131 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the power steering computer ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0131 is output

NO → System is normal.

YES →

Replace the power steering computer ASSY.

NW

| DTC | U0140 | Missing data for body integrated unit |
|---|---|---|

Circuit description
Data communication from the body integrated unit has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0140 | No data has been received from the body integrated unit. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES →

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0140 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES →

| 3 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| | |
|---|---|
| 4 | DTC check |

(1) Use SSM4 to read DTC.
Criteria: U0140 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 5 | DTC check |

NW

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0140 is not detected from more than one module

NO → Replace the body integrated unit.

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the body integrated unit.
(2) Use SSM4 to read DTC.
Criteria: U0140 is output

NO → System is normal.

YES

| | |
|---|---|
| 7 | Replacement of the module |

(1) Reinstall the body integrated unit.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0140 is output

NO → System is normal.

YES

Replace the body integrated unit.

| DTC | U0151 | Missing data for air bag |
|---|---|---|

Circuit description
Data communication from the airbag CM has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0151 | No data has been received from the airbag CM. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| | |
|---|---|
| 1 | Check DTC |

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| | |
|---|---|
| 2 | DTC check |

(1) Check the displayed DTC.
Criteria: U0151 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 3 | Checking CAN communication circuit |

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| | |
|---|---|
| 4 | DTC check |

(1) Use SSM4 to read DTC.
Criteria: U0151 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 5 | DTC check |

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0151 is not detected from the combination meter ASSY.

NO → Replace the airbag CM.

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the airbag CM.

(2) Use SSM4 to read DTC.
Criteria: U0151 is output

NO > System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the airbag CM.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0151 is output

NO > System is normal.

YES

Replace the airbag CM.

| DTC | U0155 | Lost Communication With Instrument Panel Cluster (IPC) Control Module |
|---|---|---|

Circuit description
Data communication from the combination meter ASSY has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0155 | No data has been received from the combination meter ASSY. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO > Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0155 is output

NO > Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 3 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| 4 | DTC check |
|---|---|

(1) Use SSM4 to read DTC.
Criteria: U0155 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0155 is not detected from more than one module

NO → Replace the combination meter ASSY.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace the combination meter ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0155 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the combination meter ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0155 is output

NO → System is normal.

YES

Replace the combination meter ASSY.

| DTC | U0164 | Missing data for air conditioner |
|---|---|---|

Circuit description

Data transmission from A/C control panel has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0164 | No data has been received from A/C control panel. |

Inspection steps

CAUTION:

Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.

Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.

Criteria: U0164 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 3 | Checking CAN communication circuit |
|---|---|

(1) Check CAN communication circuit. (Refer to NW - 44)

Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| 4 | DTC check |
|---|---|

(1) Use SSM4 to read DTC.

Criteria: U0164 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.

Criteria: U0164 is not detected from the main body ECM.

NO → Replace A/C control panel.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace A/C control panel.
(2) Use SSM4 to read DTC.
Criteria: U0164 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Restore A/C control panel.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0164 is output

NO → System is normal.

YES

Replace A/C control panel.

| DTC | U0327 | Missing data for smart key computer ASSY |
|---|---|---|

Circuit description
Data transmission from the collation ECM (Smart key computer ASSY) has been interrupted.

| DTC No. | Detecting conditions |
|---|---|
| U0327 | No data has been received from the collation ECM (Smart key computer ASSY). |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0327 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 3 | Checking CAN communication circuit |

(1) Check CAN communication circuit. (Refer to NW - 44)
Criteria: No fault is found.

NO → Follow the repair procedure described in "CAN communication circuit check".

YES

| | |
|---|---|
| 4 | DTC check |

(1) Use SSM4 to read DTC.
Criteria: U0327 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 5 | DTC check |

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0327 is not detected from the main body ECM.

NO → Replace the collation ECM (Smart key computer ASSY).

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the collation ECM (Smart key computer ASSY).
NOTE:
Do not register the collation ECM (Smart key computer ASSY).
(2) Use SSM4 to read DTC.
Criteria: U0327 is output

NO → System is normal. (Register the collation ECM (Smart key computer ASSY).)

YES

| | |
|---|---|
| 7 | Replacement of the module |

(1) Reinstall the collation ECM (Smart key computer ASSY).
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0327 is output

NO → System is normal.

YES

Replace the collation ECM (Smart key computer ASSY).

| DTC | U0401 | Data error from engine |
|---|---|---|

Circuit description

An error has been detected in the data from ECM.

| DTC No. | Detecting conditions |
|---|---|
| U0401 | Invalid data has been received from the engine control computer. |

NW

Inspection steps

CAUTION:

Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: No DTC indicating bus off or missing data is output

NO → Perform the diagnosis according to the DTC.

YES

| 3 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0401 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 4 | DTC check |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the engine control computer connector.
(3) Reconnect the disconnected connector and turn the ignition switch ON.
(4) Use SSM4 to read DTC.
Criteria: U0401 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 5 | DTC check |

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0401 is not detected from more than one module

NO → Replace the engine control computer.

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the engine control computer.
(2) Use SSM4 to read DTC.
Criteria: U0401 is output

NO → System is normal.

YES

| | |
|---|---|
| 7 | Replacement of the module |

(1) Reinstall the ECM.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0401 is output

NO → System is normal.

YES

Replace the ECM.

| DTC | U0402 | Data error from transmission |
|---|---|---|

Circuit description
An error has been detected in the data from the transmission control computer ASSY.

| DTC No. | Detecting conditions |
|---|---|
| U0402 | Invalid data has been received from the transmission control computer ASSY. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| | |
|---|---|
| 1 | Check DTC |

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: No DTC indicating bus off or missing data is output

NO → Perform the diagnosis according to the DTC.

YES

| 3 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0402 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 4 | DTC check |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the transmission control computer ASSY connector.
(3) Reconnect the disconnected connector and turn the ignition switch ON.
(4) Use SSM4 to read DTC.
Criteria: U0402 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0402 is not detected from more than one module

NO → Replace the transmission control computer ASSY.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace the transmission control computer ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0402 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the transmission control computer ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0402 is output

NO > System is normal.

YES

Replace the transmission control computer ASSY.

NW

| DTC | U0416 | Data error from VDC |
|---|---|---|

Circuit description
An error has been detected in the data from the brake actuator ASSY.

| DTC No. | Detecting conditions |
|---|---|
| U0416 | Invalid data has been received from the brake actuator ASSY. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO > Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: No DTC indicating bus off or missing data is output

NO > Perform the diagnosis according to the DTC.

YES

| 3 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0416 is output

NO > Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 4 | DTC check |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the brake actuator ASSY connector.
(3) Reconnect the disconnected connector and turn the ignition switch ON.
(4) Use SSM4 to read DTC.
Criteria: U0416 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0416 is not detected from more than one module

NO → Replace the brake actuator ASSY.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace the brake actuator ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0416 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the brake actuator ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0416 is output

NO → System is normal.

YES

Replace the brake actuator ASSY.

| DTC | U0422 | Data error from body integrated unit |
|---|---|---|

Circuit description
An error has been detected in the data from the body integrated unit.

| DTC No. | Detecting conditions |
|---|---|
| U0422 | Invalid data has been received from the body integrated unit. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO > Perform the diagnosis according to the DTC.

NW

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: No DTC indicating bus off or missing data is output

NO > Perform the diagnosis according to the DTC.

YES

| 3 | DTC check |
|---|---|

(1) Check the displayed DTC.
Criteria: U0422 is output

NO > Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 4 | DTC check |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Disconnect the body integrated unit connector.
(3) Reconnect the disconnected connector and turn the ignition switch ON.
(4) Use SSM4 to read DTC.
Criteria: U0422 is output

NO > Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0422 is not detected from more than one module

NO > Replace the body integrated unit.

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the body integrated unit.
(2) Use SSM4 to read DTC.
Criteria: U0422 is output

NO → System is normal.

YES

| | |
|---|---|
| 7 | Replacement of the module |

(1) Reinstall the body integrated unit.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0422 is output

NO → System is normal.

YES

Replace the body integrated unit.

| DTC | U0423 | Data error from meter |
|---|---|---|

Circuit description
An error has been detected in the data from the combination meter ASSY.

| DTC No. | Detecting conditions |
|---|---|
| U0423 | Invalid data has been received from the combination meter ASSY. |

Inspection steps
CAUTION:
Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| | |
|---|---|
| 1 | Check DTC |

(1) Check the displayed DTC.
Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| | |
|---|---|
| 2 | DTC check |

(1) Check the displayed DTC.
Criteria: No DTC indicating bus off or missing data is output

NO → Perform the diagnosis according to the DTC.

YES

| | |
|---|---|
| 3 | DTC check |

(1) Check the displayed DTC.
Criteria: U0423 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 4 | DTC check |

NW

(1) Turn the ignition switch to OFF.
(2) Disconnect the combination meter ASSY connector.
(3) Reconnect the disconnected connector and turn the ignition switch ON.
(4) Use SSM4 to read DTC.
Criteria: U0423 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| | |
|---|---|
| 5 | DTC check |

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0423 is not detected from more than one module

NO → Replace the combination meter ASSY.

YES

| | |
|---|---|
| 6 | Replacement of the module |

(1) Replace the combination meter ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0423 is output

NO → System is normal.

YES

| | |
|---|---|
| 7 | Replacement of the module |

(1) Reinstall the combination meter ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0423 is output

NO → System is normal.

YES

Replace the combination meter ASSY.

| DTC | U0424 | Data error from air conditioner |
|---|---|---|

Circuit description

An error has been detected in the data from the air conditioner amplifier ASSY.

| DTC No. | Detecting conditions |
|---|---|
| U0424 | Invalid data has been received from the air conditioner amplifier ASSY. |

Inspection steps

CAUTION:

Perform all of steps to Step 9 in "How to troubleshoot" before performing this steps. (Refer to NW - 30)

| 1 | Check DTC |
|---|---|

(1) Check the displayed DTC.

Criteria: DTCs other than U**** are not output

NO → Perform the diagnosis according to the DTC.

YES

| 2 | DTC check |
|---|---|

(1) Check the displayed DTC.

Criteria: No DTC indicating bus off or missing data is output

NO → Perform the diagnosis according to the DTC.

YES

| 3 | DTC check |
|---|---|

(1) Check the displayed DTC.

Criteria: U0424 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 4 | DTC check |
|---|---|

(1) Turn the ignition switch to OFF.

(2) Disconnect the air conditioner amplifier ASSY connector.

(3) Reconnect the disconnected connector and turn the ignition switch ON.

(4) Use SSM4 to read DTC.

Criteria: U0424 is output

NO → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

YES

| 5 | DTC check |
|---|---|

(1) Use SSM4 to read DTCs of all the systems.
Criteria: U0424 is not detected from the main body ECM.

NO → Replace the air conditioner amplifier ASSY.

YES

| 6 | Replacement of the module |
|---|---|

(1) Replace the air conditioner amplifier ASSY.
(2) Use SSM4 to read DTC.
Criteria: U0424 is output

NO → System is normal.

YES

| 7 | Replacement of the module |
|---|---|

(1) Reinstall the air conditioner amplifier ASSY.
(2) Replace the module that DTC has been detected.
(3) Use SSM4 to read DTC.
Criteria: U0424 is output

NO → System is normal.

YES

Replace the air conditioner amplifier ASSY.

## General diagnostic table

1. Inspection

| Item | Operation | Status | | Note |
|---|---|---|---|---|
| | | YES | NO | |
| Speedometer | Displayed vehicle speed is faster or slower than the actual speed. | Data from the brake actuator ASSY may have been lost. | System is normal. | Also, check vehicle speed pulse circuit. |
| Fuel gauge | Fuel is present, but the fuel level is lower than the actual level. | Communication error may have occurred. | System is normal. | Also, check the fuel gauge. |
| Fuel level warning light | Fuel is present, but the light illuminates. | Communication error may have occurred. | System is normal. | Also, check the fuel gauge. |
| Engine coolant temperature light | Engine coolant temperature light blinks in red and blue alternately. | Communication error may have occurred. | System is normal. | Check the engine coolant light system. |
| VDC indicator | Illuminating. | Communication error may have occurred. | System is normal. | Check if VDC is not operating. |
| VDC OFF indicator | Illuminating. | Communication error may have occurred. | System is normal. | Check that VDC is not OFF. |

| Item | Operation | Status | | Note |
|---|---|---|---|---|
| | | YES | NO | |
| Brake warning light | Illuminating. | Brake fluid may be low or communication error may have occurred. | System is normal. | Check the brake system. |
| Shift position | Not displayed. | Communication error may have occurred. | System is normal. | Also, check AT system. |
| AT temperature light | Blinking. | Communication error may have occurred. | System is normal. | Also, check AT system. |
| Door indicator | Does not go on, or does not go off with the doors closed. | Communication error may have occurred. | System is normal. | Also, check the door switch. |
| Clearance indicator | Not illuminating. | Communication error may have occurred. | System is normal. | Also, check the combination switch. |
| High beam indicator | Not illuminating. | Communication error may have occurred. | System is normal. | Also, check the combination switch. |
| Front fog indicator | Not illuminating. | Communication error may have occurred. | System is normal. | Also, check the combination switch. |
| Illumination | Illuminating at the maximum brightness. | Communication error may have occurred. | System is normal. | Also, check the illumination switch. |

SL-02220

## Description of functions

1. Description of power door lock control system
   (1) The power door lock control system locks and unlocks all doors. The main body ECM (multiplex network body computer) detects lock and unlock signals from the door control switches. Then, the main body ECM (multiplex network body computer) sends a lock or unlock signal to each door lock motor in response to the input.
2. Functions of the main parts

| Components | Function |
|---|---|
| Power window regulator master switch ASSY<br>• Door control switch | The door control switch in the master switch locks and unlocks all doors. |
| Power window regulator switch ASSY<br>• Door control switch *1 | The passenger's door control switch locks and unlocks all doors. |
| Door courtesy light ASSY | • It is provided for each door.<br>• It detects the door state (open, close) and outputs the data to the main body ECM (multiplex network body computer).<br>• It illuminates while the door is open and turns off while the door is closed. |
| Front door lock ASSY LH | • An integrated motor locks and unlocks the door.<br>• The integrated key lock/unlock switch (linked by key) detects the key operation state and outputs the signal to the main body ECM (multiplex network body computer).<br>• The integrated unlock detection switch (locked or unlocked) detects the door state and outputs the signal to the main body ECM (multiplex network body computer). This switch turns OFF when the door is locked or turns ON when the door is unlocked. |
| Front door lock ASSY RH | • An integrated motor locks and unlocks the door.<br>• The integrated unlock detection switch (locked or unlocked) detects the door state and outputs the signal to the main body ECM (multiplex network body computer). This switch turns OFF when the door is locked or turns ON when the door is unlocked. *2 |
| Trunk lock ASSY | • An integrated motor releases the door latch.<br>• The integrated courtesy switch (open or closed) detects the trunk state and outputs the signal to the main body ECM (multiplex network body computer).<br>• This switch turns ON when the trunk is open and turns OFF when it is closed. |

*1: With passenger's door control switch
*2: For vehicles with entry & start system

3. System functions
   (1) This system is controlled by the main body ECM (multiplex network body computer). The main body ECM (multiplex network body computer) outputs signals to the door lock motors. The power door lock control system provides the following functions.

| Function | Procedures |
|---|---|
| Manual lock & unlock function | This function allows the user to lock and unlock all doors by activating the door control switches. |
| Key link lock&unlock function *1 | This function is linked with the mechanical key cylinders and locks or unlocks all doors when a lock or unlock operation is performed. |
| Lockout prevention function | If a key remains in the vehicle *2 or it is left inserted in the ignition key cylinder *3, the doors are not locked even when a door lock operation is performed. |
| Manual unlock prevention function | Under the following conditions, any door unlock operation with a door control switch is prevented.<br>• The doors are locked by key link operation *1, wireless key operation *3, or entry operation while all doors are closed. |
| Key link 2 step unlock function *1, *4 | Turning the key cylinder once unlocks the driver's door only. Turning it twice unlocks all the doors. |

*1: With key link switch
*2: For vehicles with entry & start system
*3: Without entry & start system
*4: Because this function is set to OFF in the vehicle initial state, it should be set by the customize function.

## HOW TO PROCEED WITH TROUBLESHOOTING

NOTE:

- Use the following procedures to troubleshoot the power door lock control system.
- *: Use the SSM4.

| | |
|---|---|
| 1 | VEHICLE BROUGHT TO WORKSHOP |

NEXT

| | |
|---|---|
| 2 | INSPECT BATTERY VOLTAGE |

Standard voltage: 11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

| | |
|---|---|
| 3 | PROBLEM SYMPTOMS TABLE |

(1) Refer to Problem Symptoms Table (See page DL - 9).

Result

| Result | Proceed to |

END

## Operation check

1. Check the power door lock operation.
   CAUTION:
   The following operation check is based on the vehicle initial state that is not customized yet.
   (1) Inspect the basic functions.
      (a)Check that all doors are locked when the lock side of the door control switch is pressed.

(b) Check that all doors are unlocked when the unlock side of the door control switch is pressed.
(c) Check that all doors are locked when the driver's door key cylinder is turned to the lock side using a key.
(d) Check that all doors are unlocked when the driver's door key cylinder is turned to the unlock side using a key.

(2) Checking lockout prevention function (with entry & start system)
CAUTION:
To prevent the electronic key from being left inside the vehicle inadvertently, perform the following checks with the driver side window opened.
(a) Place an electronic key inside the vehicle.
(b) With the driver's door opened, set the driver's door lock knob or door control switch to the lock state and close the driver's door. Check that all doors are unlocked.

(3) Checking lockout prevention function (without entry & start system)
CAUTION:
To prevent the key from being left inside the vehicle inadvertently, perform the following checks with the driver side window opened.
(a) Turn the ignition switch to ON or ACC.
(b) Check that all doors are unlocked immediately when door control switch (for manual operation) is operated to the lock side with the driver's door opened.

(4) Checking security function of door lock control system
(a) Open the driver's door window before closing all doors so that the door control switches can be operated even from outside. (Step 1)
(b) Starting from the step 1, lock the driver's door using a key from outside. Next, check that the doors are not unlocked when the unlock side of the door control switch (for manual operation) is operated from outside.
(c) (With double locking system) Starting from the step 1, lock the drivers door by wireless key operation or entry lock operation *1 from outside. Next, check that the doors are not unlocked when the unlock side of the door control switch (for manual operation) is operated from outside.
*1: For vehicles with entry & start system
NOTE:
Check that the security function of the door lock control system is cancelled under the following conditions.
- Turn the ignition switch to ON.
- The driver's door is unlocked using an actual key.
- After the door lock knob is unlocked manually, the unlock side of the door control switch (for manual operation) is pressed.
- The door is unlocked by wireless operation.
- The door is unlocked by entry operation.

DL

## Symptom table

NOTE:
- Use the following table to identify the cause of the symptom. If multiple areas are listed as the causes, they are indicated in the [Faulty part] column according to the order of probability of causing the symptom. Check the possible causal areas in the list order and confirm each symptom. Replace faulty parts as necessary.
- Before inspecting the areas listed in "Possible cause" below, check the fuses and the relays related to this system.

Power door lock control system

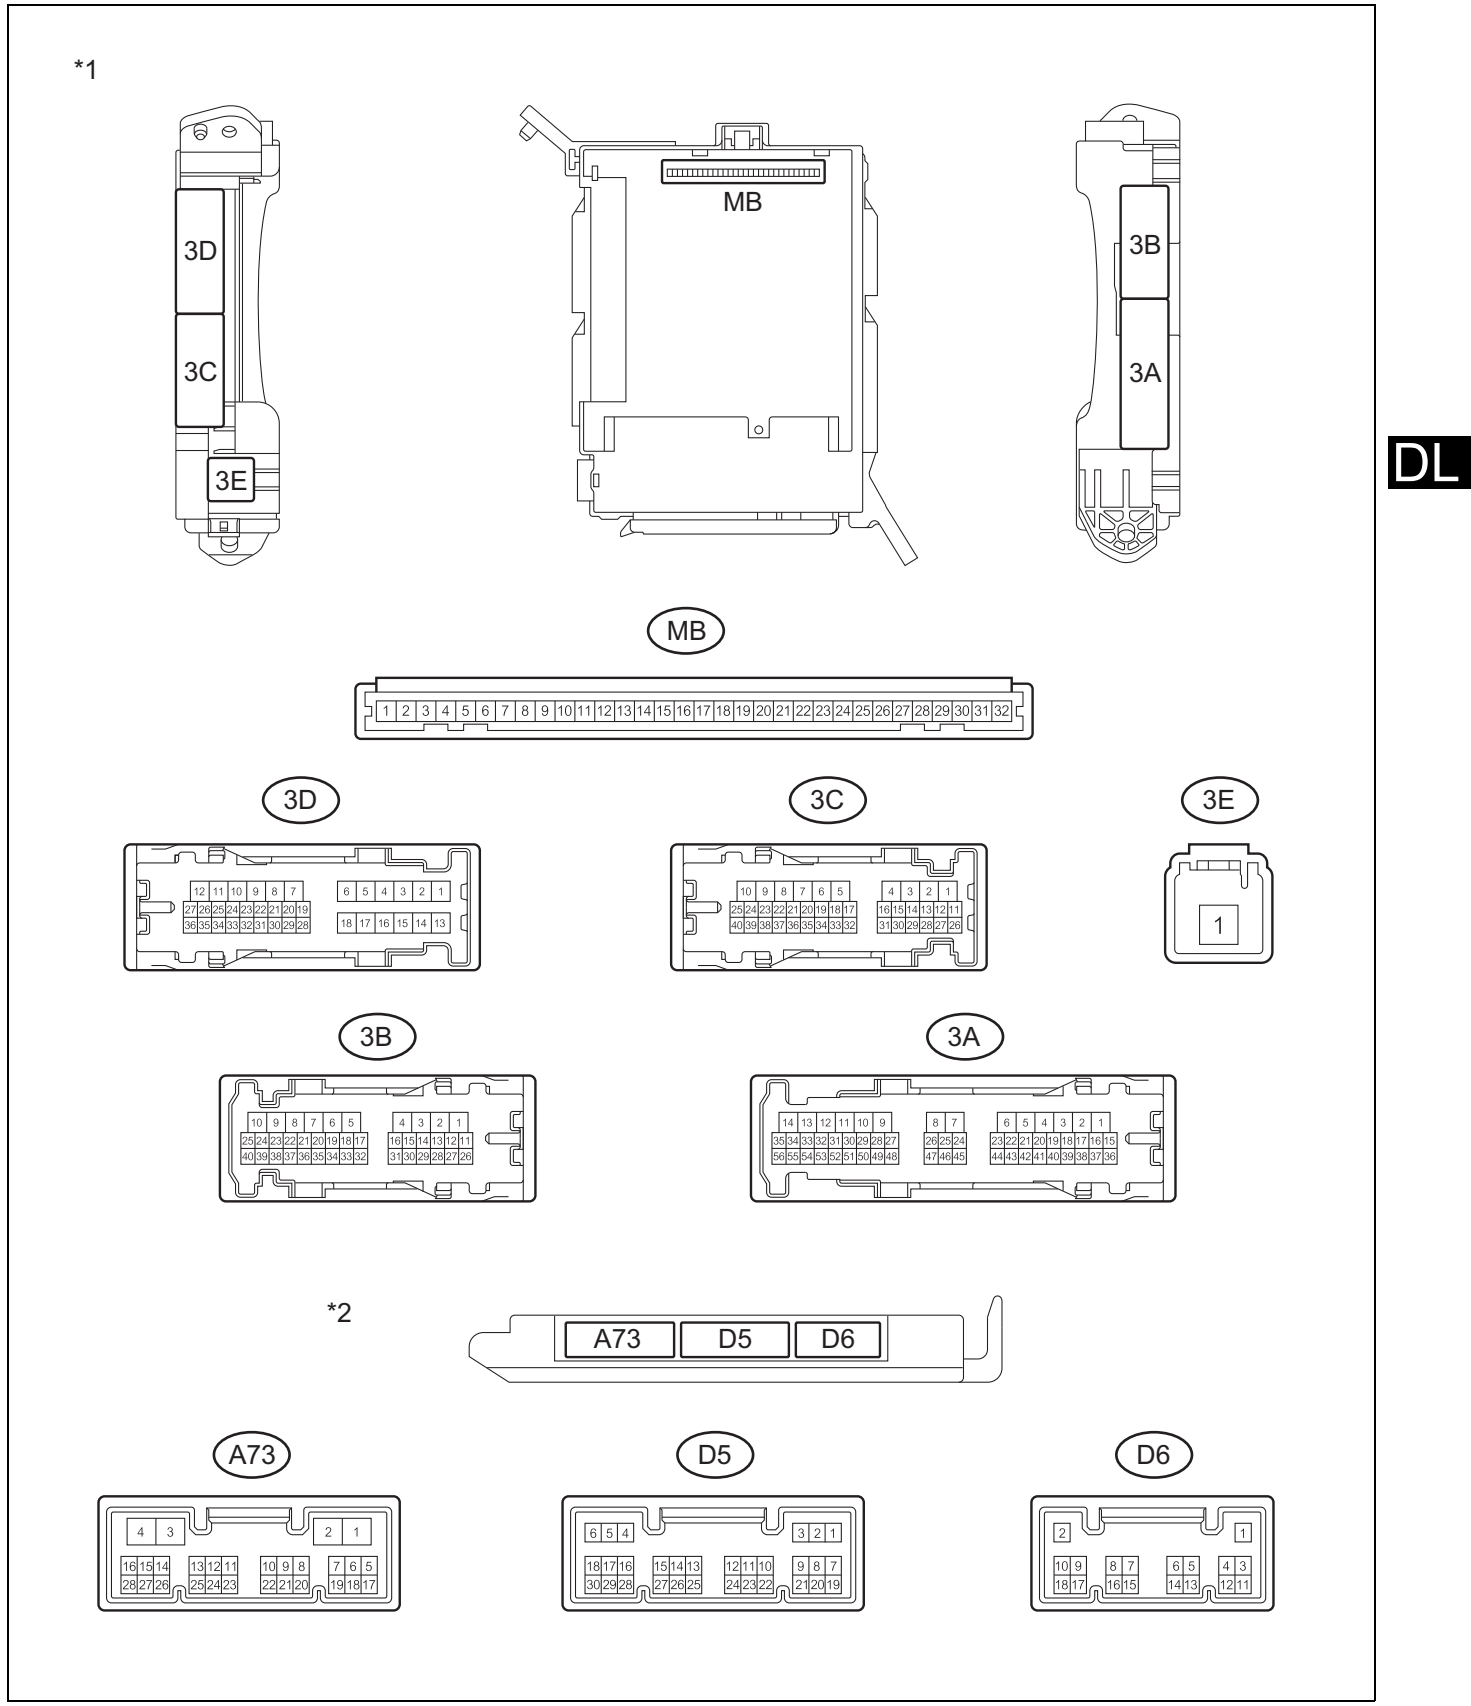
| Symptoms | Faulty part | Reference pages |
|---|---|---|
| All door lock/unlock function does not operate | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |
| All door lock/unlock function does not operate with master switch or door key cylinders | Power window regulator master switch ASSY | DL - 13 |
| | Wiring harness or connector | - |
| | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |
| Only all door lock/unlock function does not operate | Front door lock ASSY (for driver's door) | - |
| | Wiring harness or connector | - |
| | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |

| Symptoms | Faulty part | Reference pages |
|---|---|---|
| Only passenger's door lock/unlock function does not operate | Front door lock ASSY (for front passenger's door) | - |
| | Wiring harness or connector | - |
| | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |
| Unlock operation continues after door is unlocked*1 | Front door lock ASSY (for driver's door) | - |
| | Front door lock ASSY (for front passenger's door) | - |
| | Wiring harness or connector | - |
| | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |

NOTE:
*1: When the door unlock detection switch detects the lock position signal immediately after the door unlock operation, the door unlock operation is performed three times.

## ECM terminal arrangement

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY AND MAIN BODY ECU (MULTIPLEX NETWORK BODY ECU)



DL

Text in Illustration

| | | | |
|---|---|---|---|
| *1 | Instrument Panel Junction Block Assembly | *2 | Main Body ECU (Multiplex Network Body ECU) |

(1) Remove the main body ECU (multiplex network body ECU) from the instrument panel junction block assembly.
(2) Disconnect the D5, D6 and A73 main body ECU (multiplex network body ECU) connectors.
(3) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

| Terminal No. | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| MB-1 - Body ground | Battery power supply | Always | 11 to 14 V |
| MB-8 - Body ground | Ignition switch power supply | Ignition switch ON | 11 to 14 V |
| | | Ignition switch off | Below 1 V |
| MB-9 - Body ground | ACC power supply | Ignition switch ACC | 11 to 14 V |
| | | Ignition switch off | Below 1 V |
| MB-11 - Body ground | Ground | Always | Below 1 Ω |
| MB-32 - Body ground | Battery power supply | Always | 11 to 14 V |
| D5-22 - Body ground | Unlock warning switch input | No key in ignition key cylinder (off) | Below 1 V |
| | | Key inserted ignition key cylinder (on) | 11 to 14 V |
| D6-1 - Body ground | Ground | Always | Below 1 Ω |
| A73-4 - Body ground | Ground | Always | Below 1 Ω |

DL

(4) Reconnect the D5, D6 and A73 main body ECU (multiplex network body ECU) connectors.
(5) Install the main body ECU (multiplex network body ECU) to the instrument panel junction block assembly.
(6) Measure the voltage and resistance, check for pulse according to the valve(s) in the table below.

| Terminal No. | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| 3A-28 - Body ground | Driver side door courtesy light switch input | Driver side door open | Below 1 V |
| | | Driver side door closed | Pulse generation |
| 3B-13 - Body ground | Passenger side door courtesy light switch input | Passenger side door open | Below 1 V |
| | | Passenger side door closed | Pulse generation |
| 3B-2 - Body ground | Door lock motor lock drive output (for driver side) | Door control switch not pushed | Below 1 V |
| | | Lock side of door control switch pushed | 11 to 14 V |
| 3B-3 - Body ground | Door lock motor lock drive output (for passenger side) | Door control switch not pushed | Below 1 V |
| | | Lock side of door control switch pushed | 11 to 14 V |
| 3B-1 - Body ground | Door lock motor unlock drive output (for driver side) | Door control switch not pushed | Below 1 V |
| | | Lock side of door control switch pushed | 11 to 14 V |
| 3B-4 - Body ground | Door lock motor unlock drive output (for passenger side) | Door control switch not pushed | Below 1 V |
| | | Lock side of door control switch pushed | 11 to 14 V |
| 3D-26 - Body ground | Luggage compartment door courtesy light switch input | Door control switch not pushed | Below 1 V |
| | | Lock side of door control switch pushed | 11 to 14 V |

## Data monitor / active test

1. Data monitor

CAUTION:
The values indicated for the normal conditions are informative values. Do not depend on reference value only when judging if the part is faulty.
NOTE:
By using the SSM4 and reading the data monitor, you can read the statuses and values for switches, sensors, actuators, and other items without removing parts. This inspection is very useful because it allows an operator to read any intermittent conditions or signals without disturbing parts or wiring. Diagnostic time can be saved by reading the data monitor information at the initial stage of the troubleshooting.

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [D Door Courtesy] | Driver's door courtesy light switch signal / ON or OFF | ON: Driver's door is open.<br>OFF: Driver's door is closed | - |
| [Door Lock SW-Lock] | Door control switch (power window regulator master switch ASSY or power window regulator switch ASSY *1) lock signal / OFF or ON | OFF: Lock side of door control switch (power window regulator master switch ASSY or power window regulator switch ASSY *1) is not pressed<br>ON: Lock side of door control switch (power window regulator master switch ASSY or power window regulator switch ASSY *1) is pressed | - |
| [Door Lock SW-Unlock] | Door control switch (power window regulator master switch ASSY or power window regulator switch ASSY *1) unlock signal / OFF or ON | OFF: Unlock side of door control switch (power window regulator master switch ASSY or power window regulator switch ASSY *1) is not pressed<br>ON: Unlock side of door control switch (power window regulator master switch ASSY or power window regulator switch ASSY *1) is pressed | - |
| [P Door Courtesy] | Passenger's door courtesy light switch signal / ON or OFF | ON: The passenger's door is open.<br>OFF: The passenger's door is closed. | - |
| [Luggage Courtesy SW] | Trunk courtesy switch signal / OFF or ON | OFF: The trunk is closed.<br>ON: The trunk is open. | - |
| [Ignition] | Ignition switch state / OFF or ON | OFF: IG SW OFF<br>ON: IG SW ON | - |
| [ACC SW] | Ignition switch state / OFF or ON | OFF: IG SW OFF<br>ON: Ignition switch ON (ACC) | - |
| [Key Unlock Warning SW] | Unlock warning switch signal / OFF or ON | OFF: Key is not inserted in ignition key cylinder<br>ON: Key is inserted in ignition key cylinder | - |

*1: With passenger's door control switch

2. Active test

NOTE:

By performing active tests with SSM4, you can operate relays, VSV, actuators and other devices without removing any parts. This functional inspection method is very useful because it helps check state-related signals and identify the faulty part without removing any parts and wiring. By performing active tests at an initial phase of troubleshooting, you can save time for diagnosis. The data monitor information can be displayed during active test.

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Active Test]
(5) Follow the SSM4 on-screen instructions to perform an active test.

Main body

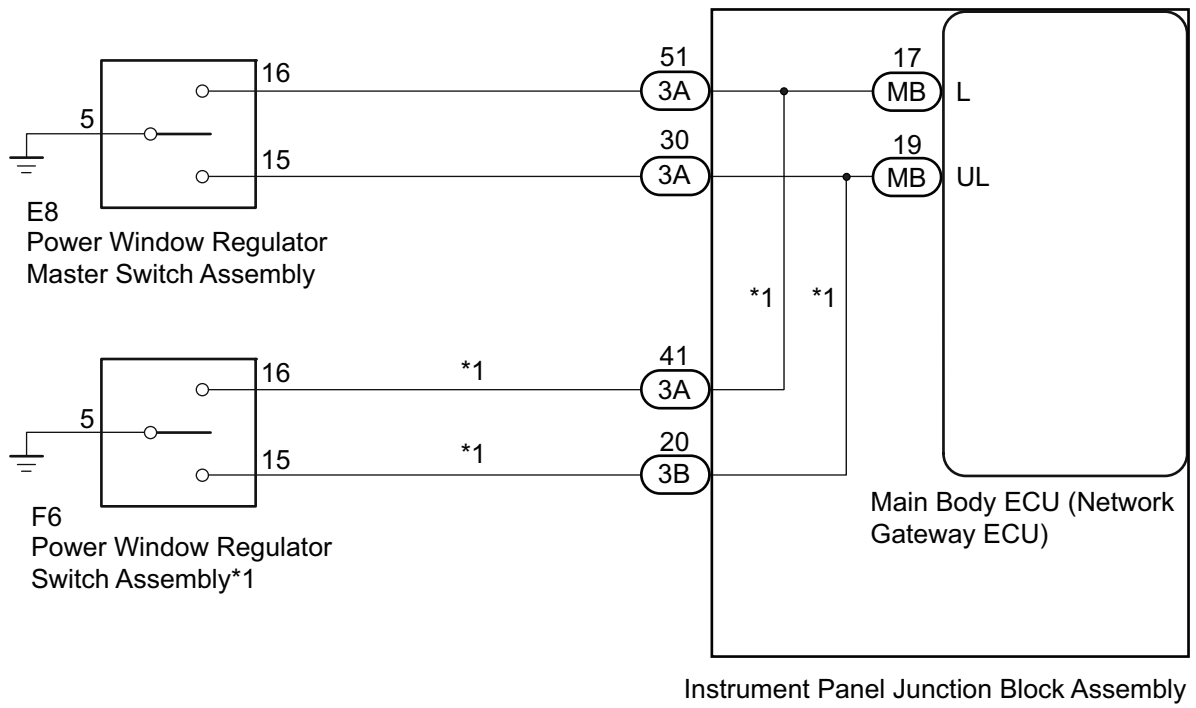
| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Door Lock] | Door lock motor | OFF / Unlock/ Lock | - |
| [D-Door Unlock] | Driver's door lock motor | OFF/ON | - |
| [Trunk and Back-Door Open] | Back door lock motor | OFF/ON | - |

## All door lock / unlock function does not operate with door control switches or door key cylinders

Circuit description

The main body ECM (multiplex network body computer) detects signals from the door control switches and driver's door key cylinder switch, and actuates the door lock motor of each door.

Circuit figure



*1: w/ Passenger Side Door Control Switch

SL-02025

Inspection steps

| | |
|---|---|
| 1 | Door lock operation check |

(1) Proceed to a next step according to the symptoms listed in the table below.

Result

| Result | Go to |
|---|---|
| Doors can not be locked via the power window regulator master switch ASSY | A |
| Doors can not be locked via the power window regulator master switch ASSY *1 | B |

*1: With passenger's side door control switch

B → Go to Step 6.

A

| 2 | Reading values with SSM4 (door lock SW - lock & door lock SW - unlock) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the data monitor.

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Door Lock SW-Lock] | Door control switch (power window regulator master switch ASSY) lock signal / OFF or ON | OFF: Lock side of door control switch (power window regulator master switch ASSY) is not pressed<br>ON: Lock side of door control switch (power window regulator master switch ASSY) is pressed | - |
| [Door Lock SW-Unlock] | Door control switch (power window regulator master switch ASSY) unlock signal / OFF or ON | OFF: Unlock side of door control switch (power window regulator master switch ASSY) is not pressed<br>ON: Unlock side of door control switch (power window regulator master switch ASSY) is pressed | - |

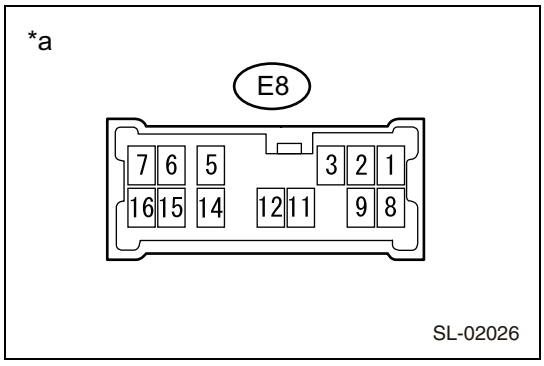
Criteria: While the switch is operating, SSM4 displays the contents as indicated in the table

NG → Go to Step 3.

OK →

| Replacement of the main body ECM (multiplex network body ECM) |
|---|

| 3 | Inspect the power window regulator master switch ASSY |
|---|---|



(1) Remove the power window regulator master switch ASSY
(2) Measure the resistance according to the following table.
Standard resistance

| Tester connection | Switch conditions | Specified condition |
|---|---|---|
| E8-16 - E8-5 | Lock switch is pressed | 1 Ωor less |
| | off | 10 kΩ or more |
| E8-15 - E8-5 | Unlock switch is pressed | 1 Ωor less |
| | off | 10 kΩ or more |

| | |
|---|---|
| *a | Connector not connected<br>(Power window regulator master switch ASSY (door control switch)) |

NG → Replacement of power window regulator master switch ASSY

OK

| | |
|---|---|
| 4 | Inspect the wiring harnesses and connectors (power window regulator master switch - junction block and chassis ground) |

(1) Remove the 3A connector of the instrument panel junction block ASSY.
(2) Remove the E8 power window regulator master switch ASSY (door control switch) connector.
(3) Measure the resistance according to the following table.

Standard resistance

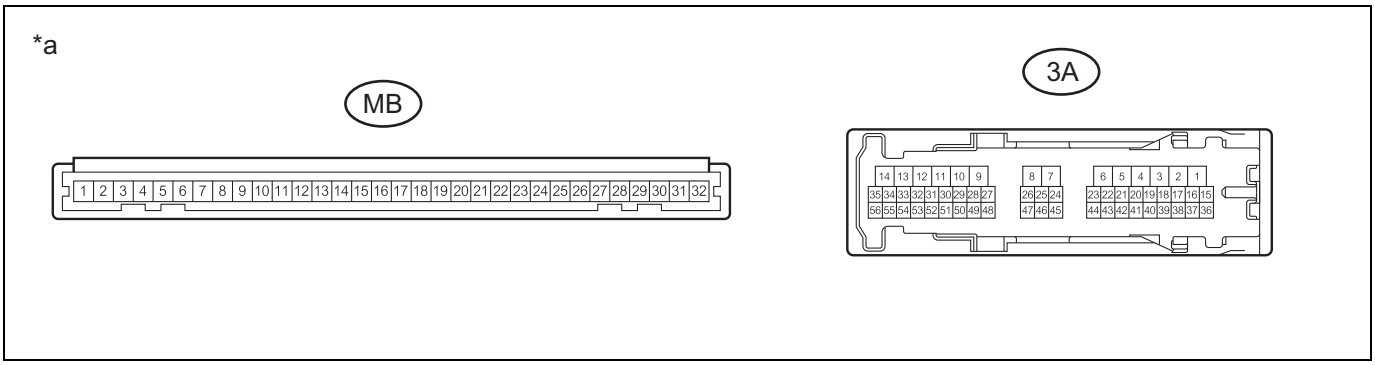
| Tester connection | Conditions | Specified condition |
|---|---|---|
| 3A-51 - E8-16 | Always | 1 Ωor less |
| 3A-30 - E8-15 | Always | 1 Ωor less |
| E8-5 - chassis ground | Always | 1 Ωor less |
| 3A-51 or E8-16 - chassis ground | Always | 10 kΩ or more |
| 3A-30 or E8-15 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| | |
|---|---|
| 5 | Inspect the instrument panel junction block ASSY unit. |

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

(3) Measure the resistance according to the following table.

Standard resistance

| Tester connection | Conditions | Specified condition |
|---|---|---|
| MB-17 - 3A-51 | Always | 1 Ωor less |
| MB-19 - 3A-30 | Always | 1 Ωor less |

NG → Replacement of the instrument panel junction block ASSY

OK

Replacement of the main body ECM (multiplex network body ECM)

| 6 | Reading values with SSM4 (door lock SW - lock & door lock SW - unlock) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the data monitor.

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Door Lock SW-Lock] | Door control switch (power window regulator switch ASSY) lock signal / OFF or ON | OFF: Lock side of door control switch (power window regulator switch ASSY) is not pressed<br>OFF: Lock side of door control switch (power window regulator switch ASSY) is pressed | - |
| [Door Lock SW-Unlock] | Door control switch (power window regulator switch ASSY) unlock signal / OFF or ON | OFF: Unlock side of door control switch (power window regulator switch ASSY) is not pressed<br>OFF: Unlock side of door control switch (power window regulator switch ASSY) is pressed | - |

Criteria: While the switch is operating, SSM4 displays the contents as indicated in the table.

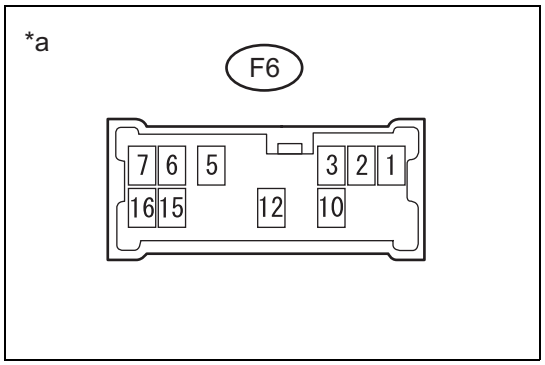
NG → Go to Step 7.

OK

Replacement of the main body ECM (multiplex network body ECM)

DL

| 7 | Inspect the power window switch |
|---|---|



(1) Remove the power window regulator switch ASSY.
(2) Measure the resistance according to the following table.
Standard resistance

| Tester connection | Switch conditions | Specified condition |
|---|---|---|
| F6-16 - F6-5 | Lock switch is pressed | 1 Ωor less |
| | off | 10 kΩ or more |
| F6-15 - F6-5 | Unlock switch is pressed | 1 Ωor less |
| | off | 10 kΩ or more |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Power window regulator master switch ASSY (door control switch)) |

NG → Replace the power window switch

OK

| 8 | Inspect the wiring harnesses and connectors (power window switch - junction block and chassis ground) |
|---|---|

(1) Remove the 3A and 3B instrument panel junction block ASSY connectors.
(2) Remove the F6 power window regulator switch ASSY connector.
(3) Measure the resistance according to the following table.
Standard resistance

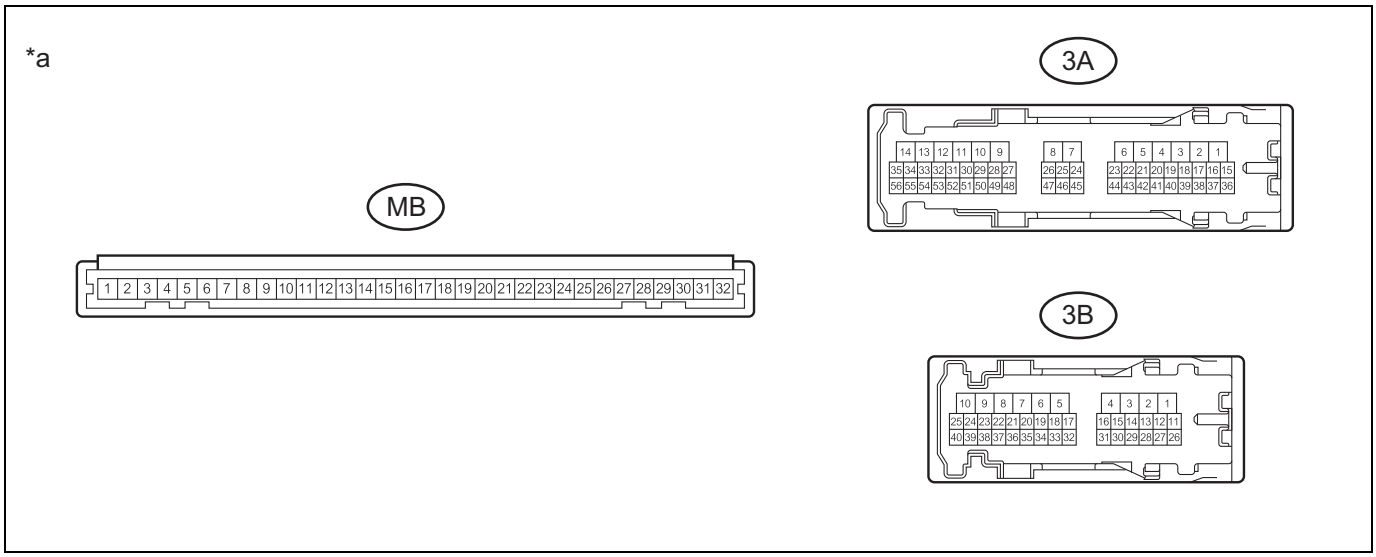
| Tester connection | Conditions | Specified condition |
|---|---|---|
| 3A-41 - F6-16 | Always | 1 Ωor less |
| 3B-20 - F6-15 | Always | 1 Ωor less |
| F6-5 - Chassis ground | Always | 1 Ωor less |
| 3A-41 or F6-16 - chassis ground | Always | 10 kΩ or more |
| 3B-20 or F6-15 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 9 | Inspect the instrument panel junction block ASSY unit. |
|---|---|

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

(3) Measure the resistance according to the following table.

Standard resistance

| Tester connection | Conditions | Specified condition |
|---|---|---|
| MB-17 - 3A-41 | Always | 1 Ωor less |
| MB-19 - 3B-20 | Always | 1 Ωor less |

NG → Replacement of instrument panel junction block ASSY

OK →

Replacement of the main body ECM (multiplex network body ECM)

# Wireless door lock control system (with entry & start system)

## Precautions

1. Precautions for each function
   (1) Precautions for electrical key transmitter SUB-ASSY
   The electrical key transmitter SUB-ASSY is a delicate device.
   Observe the following precautions in handling the electrical key transmitter SUB-ASSY:
   (a)Do not drop or hit the electrical key transmitter SUB-ASSY.
   (b)Do not leave the electrical key transmitter SUB-ASSY in high-temperature locations for a prolonged period of time.
   (c)Do not wash the electrical key transmitter SUB-ASSY in an ultrasound bath.
   (d)Keep the electrical key transmitter SUB-ASSY away from magnets and magnetized objects.
   (e)Do not apply a sticker or the like on the electrical key transmitter SUB-ASSY.

List of communication line

| ECM transmission (transmitter) | ECM reception (receiver) | Signal | Line |
|---|---|---|---|
| Collation ECM (smart key computer ASSY) | Main body ECM (multiplex network body ECM) | Wireless door lock signal | CAN |
| Main body ECM (multiplex network body ECM) | Combination meter ASSY | Hazard warning signal | CAN |

## Description of functions

1. Wireless door lock control system
   (1) The wireless door lock control system can be used to lock and unlock all doors from a distant position. This system is controlled by transmitting radio wave signals from the electrical key transmitter SUB-ASSY to the door control receiver.

The collation ECM (smart key ECM ASSY) activates the door lock control function after the ID code authentication process.

2. Functions of the main parts

| Components | Function |
|---|---|
| Electrical key transmitter SUB-ASSY | It is fitted with the lock, unlock, trunk open and panic switches. It transmits low power radio wave signals (recognition code and function code) to the door control receiver. The indicator light (LED) illuminates during transmission. |
| Door control receiver | It receives low power radio wave signals from the electrical key transmitter SUB-ASSY and transmits them to the collation ECM (smart key ECM ASSY). |
| • Front door courtesy light switch LH/RH<br>• Trunk courtesy light switch | • It illuminates while the door is open and turns off while the door is closed.<br>• It detects the door state (open, close) and outputs the data to the main body ECM (multiplex network body computer). |
| • Front door lock ASSY LH/RH | • An integrated motor locks and unlocks the door.<br>• It transmits the door lock position of each door to the main body ECM (multiplex network body computer). |
| Collation ECM (smart key computer ASSY) | It transmits wireless door lock control signals in response to the code data of the door control receiver or the signals from each ECM. |

*: With panic alarm control function

3. System functions

(1) The electrical key transmitter SUB-ASSY is fitted with the lock and unlock switches. By operating these switches, the driver can operate each function. The wireless door lock control system has the following functions.

NOTE:

The initial setting status of the following functions are set to ON. Some of these functions are customizable (refer to DL -29).

| Function | Operation |
|---|---|
| All door lock function | When the lock switch is pressed, all doors are locked. |
| Driver's door unlock function | When the unlock switch is pressed, only the driver's door is unlocked. |
| All door unlock function (unlock 2 operation) | The driver's door is unlocked and then all other doors are unlocked when the unlock switch is pressed once more within 3 seconds after it is pressed once. |
| Trunk open function | When the trunk open switch of the electrical key transmitter SUB-ASSY module set SUB-ASSY is held down for 1.6 seconds or more, the trunk opens. |
| Answer-back function (hazard warning light) | It reports the completion of operation by flashing the hazard warning light once when the door is locked, or twice when the door is unlocked. |
| Answer-back function (wireless door lock buzzer) | It reports the completion of operation by sounding the wireless lock buzzer once when the door is locked or twice when the door is unlocked. |
| Panic alarm function | When the panic switch of the electrical key transmitter SUB-ASSY is held down for 0.8 seconds or more, the following alarms are activated.<br>• Vehicle horn sounds.<br>• Headlight, hazard warning light and tail light flash.<br>• Room light illuminates (when room light door switch is ON).<br>The panic alarms can be cancelled by pressing any (desired) switch of the electrical key transmitter SUB-ASSY during the alarm activation. |
| Door open warning function | When the lock switch is pressed while a door is open or not closed properly, the buzzer sounds continuously for 5 seconds. The buzzer stops sounding when all doors are closed or the unlock switch is pressed. |
| Auto lock function | If no door is opened within 60 seconds after the doors are unlocked using the wireless door lock control, all doors are locked automatically. |
| Illumination function | When the unlock switch is pressed with all doors locked, the room light illuminates simultaneously with the unlock operation. |
| Self diagnosis function | In the following conditions, the system transfers to the self diagnosis mode.<br>• When the door control receiver receives normal radio wave signals from the electrical key transmitter SUB-ASSY while the system is in the self diagnosis mode, the room lamp blinks in a pattern corresponding to each switch. |
| Transmitter identification code registration function | 7 transmitter identification codes can be registered (written and saved) in the EEPROM integrated in the collation ECM (smart key ECM ASSY). |

## How to troubleshoot

NOTE:

- The troubleshooting procedure for the wireless door lock control system assumes that the power door lock control system is functioning normally. Before performing the troubleshooting procedure for the wireless door lock control system, confirm that the power door lock control system is functioning normally.
- Using the following procedures, perform the wireless door lock control system troubleshooting.
- *: Use the SSM4.

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Check the battery voltage. |

Standard voltage: 11 to 14V

If the voltage is 11 V or less, charge or replace the battery before proceeding to a next step.

Next

| | |
|---|---|
| 3 | Checking DTC* |

(1) Check for any DTC and perform inspections if any code is output (refer to DL - 34)
(2) Clear the diagnostic code.
(3) Recheck each DTC. Based on DTC output in the above steps, simulate the symptom indicated by that DTC so that the same CAN communication system DTC or wireless door lock control system DTC output can be obtained.

Result

| Result | Go to |
|---|---|
| No DTC is output | A |
| CAN communication system DTC is output | B |
| Wireless door lock control system DTC is output | C |

B → Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30).

C → Proceed to "List of diagnostic codes." (Refer to DL - 36)

A

| | |
|---|---|
| 4 | Symptom table |

(1) Refer to symptom table (Refer to DL - 30)

Complete

## Operation check

1. Take into account the following points when checking.
   (1) Wireless door lock/unlock function:
   The wireless door lock control function operates only when the following three conditions are met.
   (a) The engine switch is off.
   (b) All doors are closed.
   (c) Power door lock system is operating normally.
   NOTE:
   The unlock function operates even when a door is open.
   (2) The operation range of wireless door lock control function varies depending on the situation.
   (a) The operation area varies depending on the user and how the electrical key transmitter SUB-ASSY is held.
   (b) In some areas, the remote control function may work only in a part of the operation range. This is because the operation range is reduced due to the vehicle shape or surrounding environment.
   (c) Because the electrical key transmitter SUB-ASSY uses an extremely low power radio wave, the operation range may be limited or the remote control may not function if a strong radio wave or noises are present in the same frequency band as the electrical key transmitter SUB-ASSY.
   (d) If the battery charge level of the electrical key transmitter SUB-ASSY is low, the operation range is reduced and the remote control may not function.
   NOTE:
   If the electrical key transmitter SUB-ASSY is left under direct sunlight for a long time (for example, left on the meter panel), the battery charge level may decrease or other troubles may occur.
2. Inspecting wireless door lock control function
   NOTE:
   • The switches outlined in this text are those for transmitting signals. The switches are integrated in the electrical key transmitter SUB-ASSY.
   • All the functions listed below must be inspected in relation to the remote control operation range.
   (1) Confirm that the vehicle is set in an environment where the wireless control function can operate.
   (2) Inspect the basic functions.
   (a) Check that the transmitter LED illuminates three times or more when the lock switch of the electrical key transmitter SUB-ASSY is held down for 5 seconds or more.

NOTE:

If LED does not illuminate three times or more even when the switch is held down, it is possible that the battery charge level is low.

(b) Check that all doors are locked when the lock switch is pressed.

(c) Check that all doors are unlocked when the unlock switch is pressed.

(3) Check the chattering prevention function.

(a) Check that the relevant operation takes place only once without being repeated while the switch is held down. Check that the relevant operation takes place when the switch is pressed at 1 second intervals.

(4) Check the auto lock function.

(a) Press the unlock switch to unlock all doors. Check that all doors are automatically locked if no door is opened and all doors are not locked within 60 seconds.

(b) Press the unlock switch to unlock all doors. Check that the auto lock function does not operate if any door is opened or all doors are locked within 60 seconds.

(c) Press the unlock switch to unlock all doors. Check that the auto lock function does not operate if all doors are locked manually (for example, by key link operation or by pressing the lock switch) within 60 seconds.

(5) Check the switch operation false recognition prevention function.

(a) Check that all doors are not locked and unlocked by any switch operation with a transmitter not registered but are locked and unlocked by switch operations with a registered transmitter.

(6) Check the door open warning function.

(a) Check that the wireless door lock buzzer sounds continuously for 5 seconds when the lock switch is pressed while a door is open or not closed properly.

(7) Check the answer-back function (hazard warning lights flashing).

(a) Check that the hazard warning light blinks once and all doors are locked simultaneously when the lock switch is pressed.

(b) Check that the hazard warning light blinks twice and all doors are unlocked simultaneously when the unlock switch is pressed.

(8) Check the answer-back (wireless door lock buzzer) function*.

(a) Check that the buzzer sounds once and all doors are locked simultaneously when the lock switch is pressed.

(b) Check that the buzzer sounds twice and the driver's door is unlocked simultaneously when the unlock switch is pressed.

(c) When the trunk is opened by wireless operation, the wireless door lock buzzer sounds.

(9) Check the panic alarm control function*.

(a) Check that the horn sounds for 60 seconds, the headlight and tail light flash, and the room light illuminates (if the light switch is set to the door position) when the panic switch is held down for 0.8 seconds or more. Check that the horn stops and the lights stop flashing when any switch of the transmitter is pressed.

(10) Check the entry illumination function.

(a) Check that the map light illuminates (if the light switch is set to the door position) and all doors are unlocked when the unlock switch is pressed with all doors locked.

## customize function

1. Customization of wireless door lock control system (with entry & start system)

(1) Notes on customization via SSM4

CAUTION:

- When a customer requests a function change, check if the function is customizable.
- Before customization, record the current settings.
- Before performing the troubleshooting procedure for a function, check that the function is set to the initial settings.

NOTE:

Some items may not be displayed depending on the destination and equipment.

(a) Connect the SSM4 to the DLC3.

(b) Turn the engine switch (IG) to ON.

(c) Turn on the SSM4.

(d) Input the following menus: [Body Control] →[Customize]

(e) Referring to the table below, perform settings.

Wireless door lock

| Display name | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Keyless Control] | Yes | Settings for the function that allows you to select to lock the door via operation of the electrical key transmitter SUB-ASSY (Electronic key) | Yes or NO | Main body ECM (multiplex network body ECM) |
| [Wireless Buzzer Resp] | ON | Wireless door lock buzzer response | OFF or ON | |
| [Hazard Answer Back] | ON | When the wireless lock switch of the transmitter is pressed, all hazard warning lights are illuminated simultaneously. All hazard warning lights illuminate twice when the unlock switch is pressed. | OFF or ON | |
| [Open Door Warning] | ON | The buzzer sounds when the lock is pressed while any door is open. | OFF or ON | |
| [Keyless Select unlock] | Yes | Settings for the function where all doors are unlocked when the electrical key transmitter SUB-ASSY (Electronic key) is operated twice | Yes or NO | |
| [Panic Alarm Function] | ON | Function to activate the anti-theft system when the panic switch of electrical key transmitter SUB-ASSY is held down for 0.8 seconds or more. | OFF or ON | |
| [Wireless Auto Lock] | ON | This function turns ON or OFF the wireless auto lock function. | OFF or ON | |
| [Auto Lock Time] | 60 seconds | This function controls the time from unlocking all doors until the activation of auto lock function. | 30 seconds, 60 seconds, 120 seconds | |
| [Keyless Trunk Unlock] | Long press(short) | Settings for the method of operation when opening the trunk with the electrical key transmitter SUBASSY (Electronic key) | single press/2 times ON/Long press(short)/ Long press(long) | |
| [Wireless Buzzer Volume] | Level 5 | Wireless door lock buzzer volume | Level 7, Level 6, Level 5,Level 4, Level 3, Level 2, Level 1, or Level 0 | |

DL

## Symptom table

NOTE:

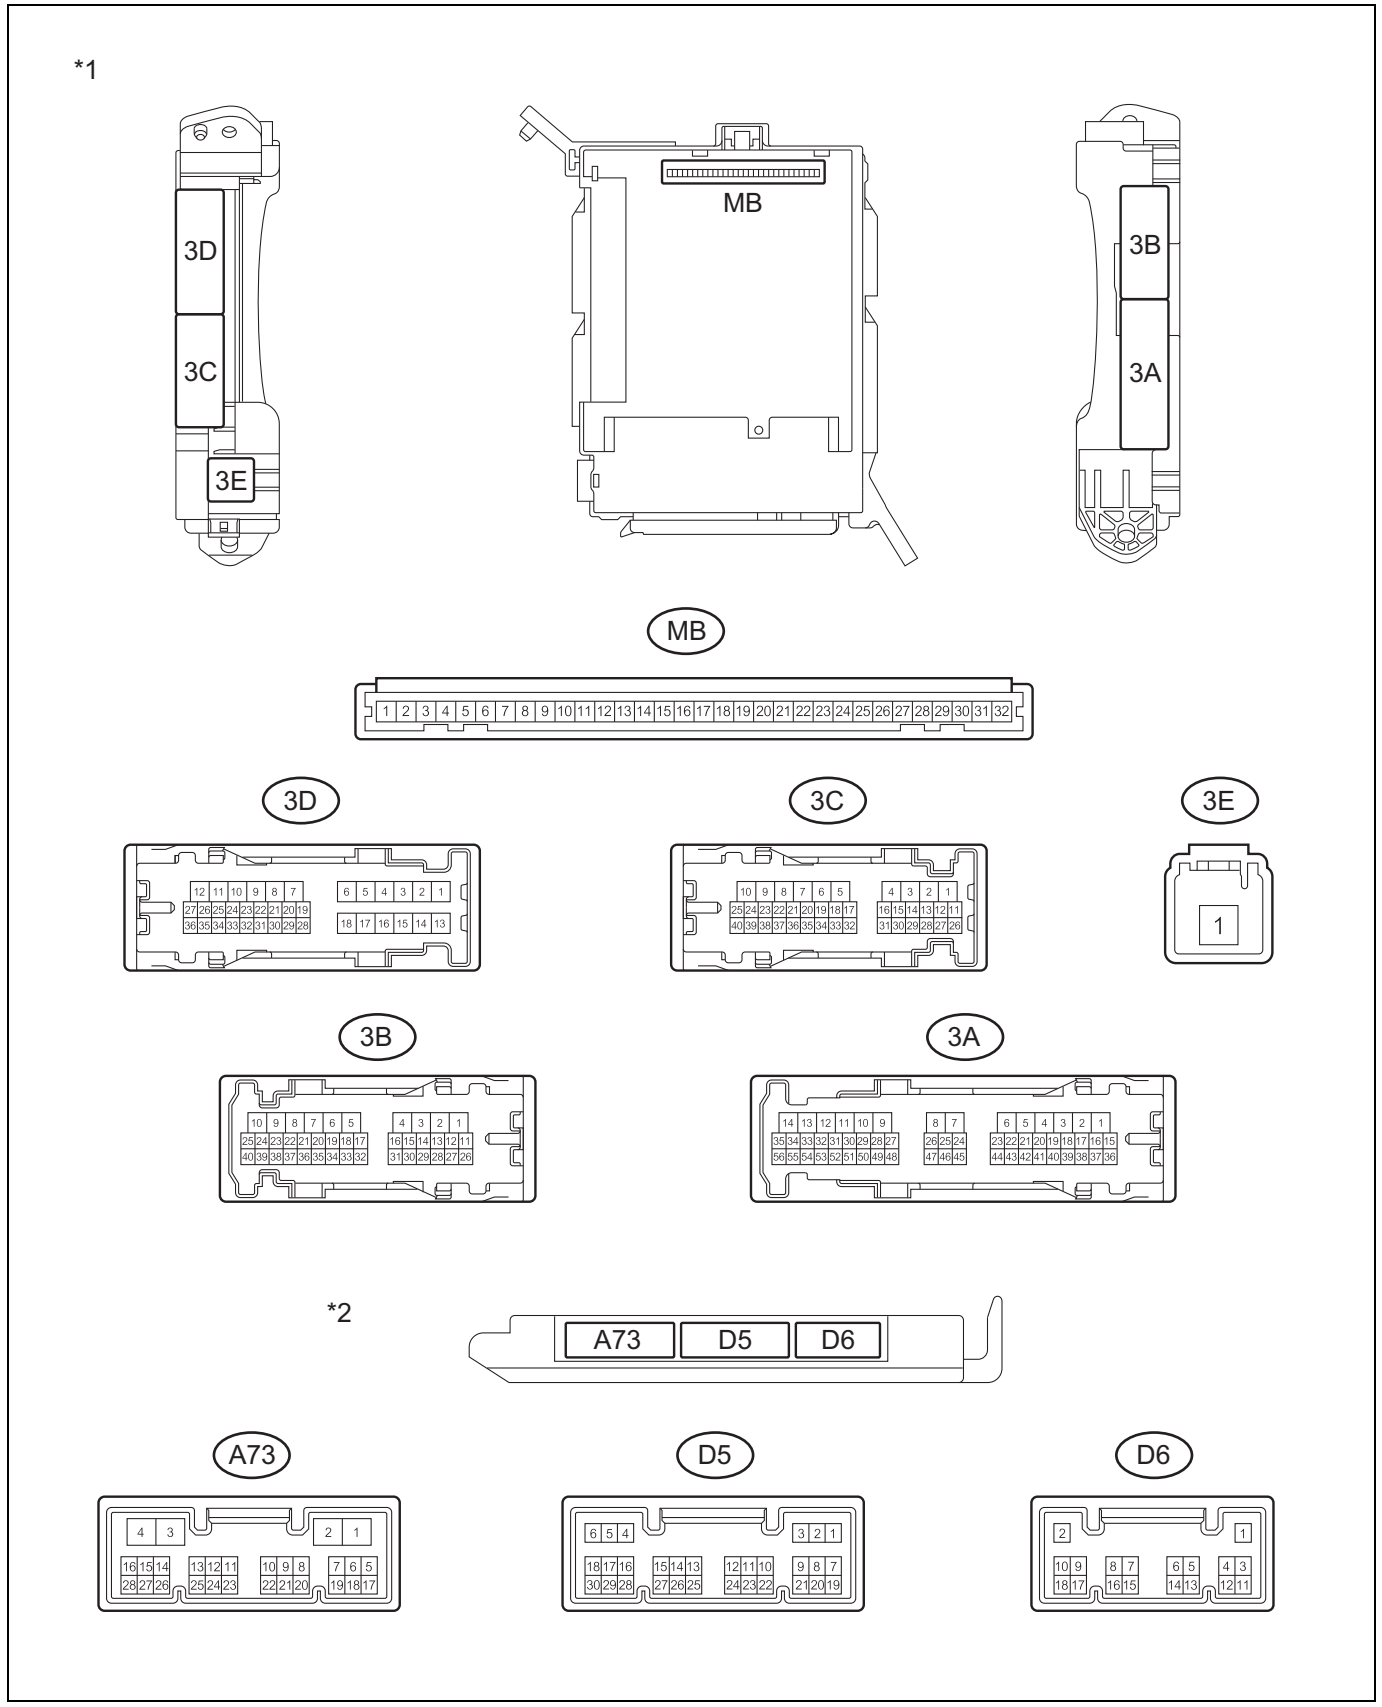
- Use the following table to identify the cause of the symptom. If multiple areas are listed as the causes, they are indicated in the [Faulty part] column according to the order of probability of causing the symptom. Check the possible causal areas in the list order and confirm each symptom. Replace faulty parts as necessary.
- Before inspecting the areas listed in "Possible cause" below, check the fuses and the relays related to this system.

Wireless door lock control system

| Symptoms | Faulty part | Reference pages |
|---|---|---|
| Wireless control function and entry function do not operate | Refer to "All door entry lock and unlock function and wireless function do not operate" | - |
| Wireless function does not operate, but entry function operates | Replace electrical key transmitter SUB-ASSY | - |
| No answer-back | Refer to "No answer-back" | DL - 38 |
| Only auto lock function does not operate properly | Perform operation check | DL - 28 |
| | Lighting system (door courtesy light switch circuit) | - |
| | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |
| Only illumination entry function does not operate | Perform operation check | DL - 28 |
| | Lighting system | - |
| | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |
| Only door open warning function does not operate | Perform operation check | DL - 28 |
| | Lighting system (door courtesy light switch circuit) | - |
| | Main body ECM (multiplex network body ECM) | - |
| | Instrument panel junction block ASSY | - |

## ECM terminal arrangement

1. Check the instrument panel junction block ASSY and main body ECM (multiplex network body ECM).



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (multiplex network body ECM) |

(1) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.

(2) Disconnect the main body ECM (multiplex network body computer) connectors D6 and A73.
(3) Measure the resistance and voltage based on the following table.

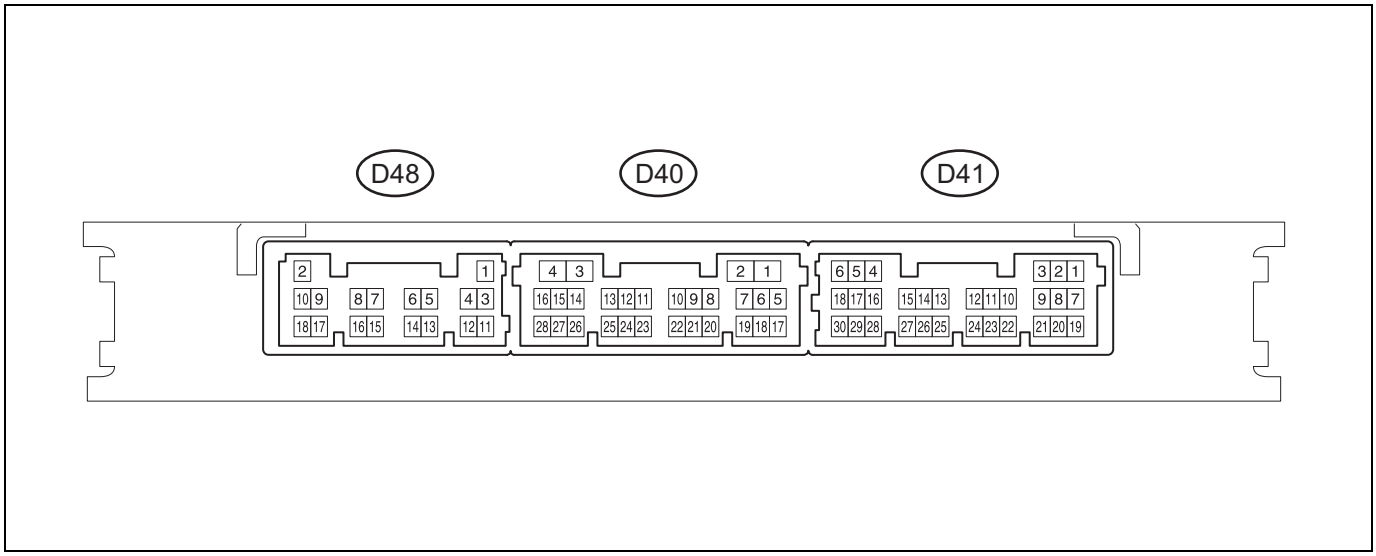
| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| MB-11 - chassis ground | Ground | Always | 1 Ωor less |
| MB-1 - chassis ground | Battery power supply | Always | 11 to 14V |
| MB-32 - chassis ground | Battery power supply | Always | 11 to 14V |
| MB-8 - chassis ground | Engine switch power supply | Engine switch ON | 11 to 14V |
| | | Engine switch OFF | 1 V or less |
| MB-9 - Chassis ground | ACC power supply | Engine switch ACC | 11 to 14V |
| | | Engine switch OFF | 1 V or less |
| D6-1 - Chassis ground | Ground | Always | 1 Ωor less |
| A73-4 - chassis ground | Ground | Always | 1 Ωor less |

(4) Connect the main body ECM (multiplex network body computer) connectors D6 and A73.
(5) Install the main body ECM (multiplex network body ECM) to the instrument panel junction block ASSY.
(6) Measure the voltages and pulses according to the values indicated in the table below.

DL

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| 3A-28 - chassis ground | Driver's side courtesy light switch | Driver's door is open. | 1 V or less |
| | | Driver's door is closed | Pulse generation |
| 3B-13 - chassis ground | Passenger's side courtesy light switch | The passenger's door is open. | 1 V or less |
| | | The passenger's door is closed. | Pulse generation |
| 3D-26 - chassis ground | Trunk courtesy light switch | The trunk is open. | 1 V or less |
| | | The trunk is closed. | 11 to 14V |
| 3B-2 - chassis ground | Door lock motor lock drive output | Door control switch is not pressed | 1 V or less |
| | | Lock side of door control switch is not pressed | 11 to 14V |
| 3B-3 - chassis ground | Door lock motor lock drive output | Door control switch is not pressed | 1 V or less |
| | | Lock side of door control switch is not pressed | 11 to 14V |
| 3B-6 - chassis ground | Door lock motor lock drive output (trunk) | The trunk open button on the electrical key transmitter SUB-ASSY is not pressed. | 11 to 14V |
| | | The trunk open button on the electrical key transmitter SUB-ASSY is pressed. | 1 V or less |
| 3B-1 - Chassis ground | Door lock motor unlock drive output | Door control switch is not pressed | 1 V or less |
| | | Unlock side of door control switch is not pressed | 11 to 14V |
| 3B-4 - chassis ground | Door lock motor unlock drive output | Door control switch is not pressed | 1 V or less |
| | | Unlock side of door control switch is not pressed | 11 to 14V |
| D6-11 - chassis ground | Driver's door unlock detection switch input | Driver's door is locked. | 1 V or less |
| | | Engine switch is OFF, all doors are closed, and driver's door is locked | Pulse generation |
| D6-12 - chassis ground | Passenger's door unlock detection switch input | Passenger's door is unlocked | 1 V or less |
| | | Engine switch OFF, all doors closed, and passenger's door locked | Pulse generation |

2. Check the collation ECM (smart key computer ASSY).



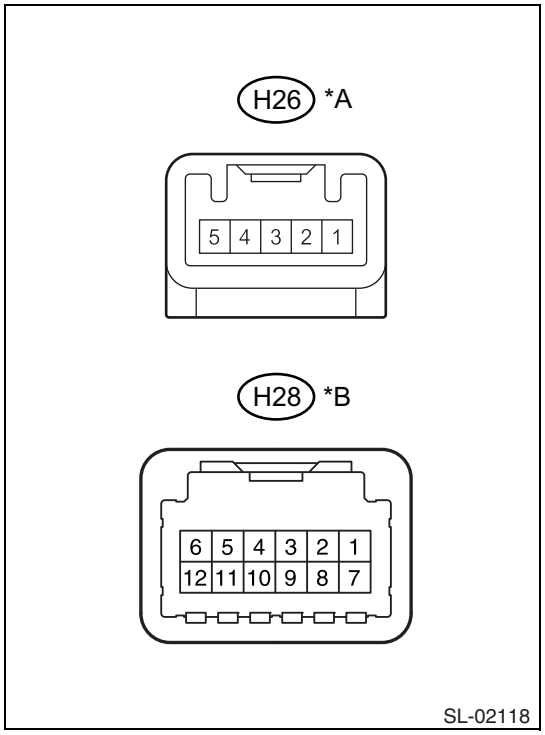
(1) Remove the D48 connector of the collation ECM (smart key ECM ASSY).
(2) Measure the voltage and resistance according to the following table.
NOTE:
Measure the wire harness side values with the connector disconnected.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| D48-2 - D48-11 | +B power supply | Always | 11 to 14V |
| D48-11 - Chassis ground | Ground | Always | 1 Ωor less |

If you cannot get the specified result, there could be a problem in the wiring harnesses.
(3) Reconnect the D48 connector of the collation ECM (smart key ECM ASSY).
(4) Measure the voltage according to the following table.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| D41-5 - D48-11 | IG power supply | Engine switch OFF →ON (IG) | 1V or less →11 to 14V |
| D40-5 - D48-11 | Entry door control receiver power source | Engine switch OFF, all doors closed, electrical key transmitter SUB-ASSY switch not pressed →Electrical key transmitter SUB-ASSY switch is pressed | 1V or less →4.5 to 5.5V |
| D40-17 - D48-11 | Entry door control receiver data input signal | Engine switch OFF, all doors closed, electrical key transmitter SUB-ASSY switch not pressed →Electrical key transmitter SUB-ASSY switch is pressed | 11 to 14 V pulse generates at equal intervals |
| D40-19 - D48-11 | Entry door control receiver radio wave signal present | All doors locked, all doors closed, electrical key switch ON | 11 to 14 V →2V or less |

DL



3. Inspect the door control receiver.
   (1) Disconnect the door control receiver connector H26 or H28.
   (2) Measure the resistance according to the following table.

Captions in illustration

| | |
|---|---|
| *A | w/o Tire Pressure Warning System |
| *B | w/ Tire Pressure Warning System |

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| H26-1 - Chassis ground *1<br>H28-12 - Chassis ground *2 | Ground | Always | 1 Ωor less |

*1: w/o Tire Pressure Warning System
*2: w/ Tire Pressure Warning System

   (3) Reconnect the H26 or H28 door control receiver connector.
   (4) Measure the voltage according to the following table.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| H26-2 - H26-1*1<br>H28-6 - H28-12*2 | Entry door control receiver radio wave signal present | All doors locked, all doors closed, electrical key switch ON | 11 to 14 V →2 V or less |
| H26-5 - H26-1*1<br>H28-9 - H28-12*2 | Entry door control receiver data input signal | Engine switch OFF | 11 to 14 V pulse generates at equal intervals |
| H26-4 - H26-1*1<br>H28-10 - H28-12*2 | Entry door control receiver power source | Engine switch OFF, all doors closed, electrical key transmitter SUB-ASSY switch not pressed →Electrical key transmitter SUB-ASSY switch is pressed | 1 V or less →4.5 to 5.5 V |

*1: w/o Tire Pressure Warning System
*2: w/ Tire Pressure Warning System

## Checking / clearing diagnostic codes

1. Check DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch (IG) to ON.
   (3) Turn on the SSM4.
   (4) Input the following menus: [Body Control] →[DTC]
   (5) Check the DTC.
2. Clear the DTC.
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch (IG) to ON.
   (3) Turn on the SSM4.
   (4) Input the following menus: [Body Control] →[Clear Memory]
   (5) Clear DTC according to the following instructions displayed on the SSM4 screen.

## Data monitor / active test

1. Read data list

CAUTION:

The values indicated under the normal conditions in the table below are informative values. Do not depend on reference value only when judging if the part is faulty.

NOTE:

By using the SSM4 and reading the data monitor, you can read the statuses and values for switches, sensors, actuators, and other items without removing parts. This inspection is very useful because it allows an operator to read any intermittent conditions or signals without disturbing parts or wiring. Diagnostic time can be saved by reading the data monitor information at the initial stage of the troubleshooting.

(1) Connect the SSM4 to the DLC3.
(2) Turn the engine switch (IG) to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Data monitor] or [Keyless Access(Collation ECM)] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the data monitor.

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [D Door Courtesy] | Driver's door courtesy light switch signal / ON or OFF | ON: Driver's door is open.<br>OFF: Driver's door is closed | - |
| [D Door Lock Pos] | Driver's door unlock detection switch signal/Lock or Unlock | [Lock]: The driver's door is locked.<br>[Unlock]: The driver's door is unlocked. | - |
| [P Door Courtesy] | Passenger's door courtesy light switch signal / ON or OFF | ON: The passenger's door is open.<br>OFF: The passenger's door is closed. | - |
| [P Door Lock Pos] | Passenger's door unlock detection switch signal/Lock or Unlock | [Lock]: The passenger's door is locked.<br>[Unlock]: The passenger's door is unlocked. | - |
| [Luggage Courtesy SW] | Trunk courtesy switch signal / OFF or ON | OFF: The trunk is closed.<br>ON: Trunk is open | - |
| [Ignition] | Engine switch IG signal / ON or OFF | ON: Engine switch is ON (IG)<br>OFF: Engine switch OFF | - |
| [ACC SW] | Engine switch ACC signal / ON or OFF | ON: The engine switch is on (ACC).<br>OFF: Engine switch OFF | - |
| [Incorrect ROL code] | Status of different rolling code / NO or YES | No: Key rolling code matches vehicle<br>Yes: Key rolling code does not match vehicle | - |
| [Incorrect ID code] | Status of different ID code / NO or YES | No: Key ID code matches vehicle<br>Yes: Key ID code does not match vehicle | - |

2. Implementation of active test

NOTE:

By performing active tests with SSM4, you can operate relays, VSV, actuators and other devices without removing any parts. This functional inspection method is very useful because it helps check state-related signals and identify the faulty part without removing any parts and wiring. By performing active tests at an initial phase of troubleshooting, you can save time for diagnosis. The data monitor information can be displayed during active test.

(1) Connect the SSM4 to the DLC3.
(2) Turn the engine switch (IG) to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Active Test]
(5) Based on the SSM4 display contents, perform active tests.

Main body

| Item Name | Tested parts | Control range | Remarks |
|---|---|---|---|
| [Door Lock] | Operate door lock motor [Lock]/[Unlock] | OFF/Unlock/Lock | - |
| [Trunk and Back-Door Open] | Trunk lock motor | OFF/ON | - |
| [Wireless Buzzer] | Wireless door lock buzzer | OFF/ON | - |

## List of diagnostic codes

NOTE:

- If a DTC is displayed during DTC check, inspect the problem point represented by that code. For details on the code, refer to "Reference page" in the DTC chart.
- Before performing a troubleshooting indicated in the table below, inspect the fuses and relays.

Wireless door lock control system

| Diagnostic codes | Diagnostic items | Faulty part | Reference pages |
|---|---|---|---|
| B1242 | [Wireless Door Lock Tuner Circuit] | Door control receiver wiring harness or connector Collation ECM (smart key computer ASSY) | DL - 36 |

## DTC B1242 Malfunctions in wireless tuner system

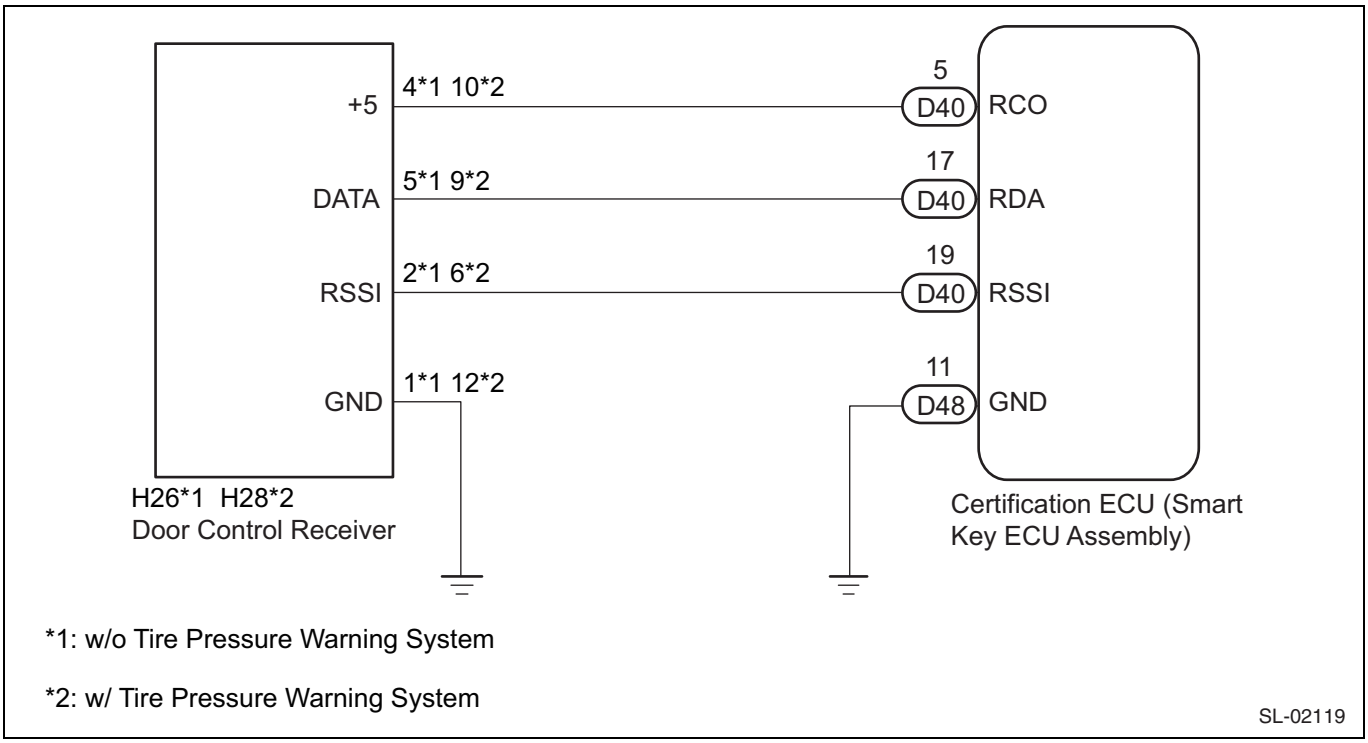
Circuit description

The door control receiver is used to receive radio wave signals related to the entry function of the entry & start system. The collation ECM (smart key ECM ASSY) decodes the requested entry & start system operation by identifying the key code based on the radio wave signal received via the door control receiver. The door control receiver receives signals from the electrical key transmitter SUB-ASSY and transmits them to the main body ECM via the collation ECM (smart key ECM ASSY). Then, collation ECM (smart key ECM ASSY) transmits a command corresponding to the requested operation to each ECM. (Example: If a door lock operation is requested, the collation ECM (smart key ECM ASSY) transmits the door lock command to the main body ECM. )

DL

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1242 | When the IGN is OFF and the RC0 (5V) output from ECM is OFF, short RDA or RSSI to a ground | • Door control receiver<br>• Wiring harness or connector<br>• Collation ECM (smart key computer ASSY) |

Circuit figure

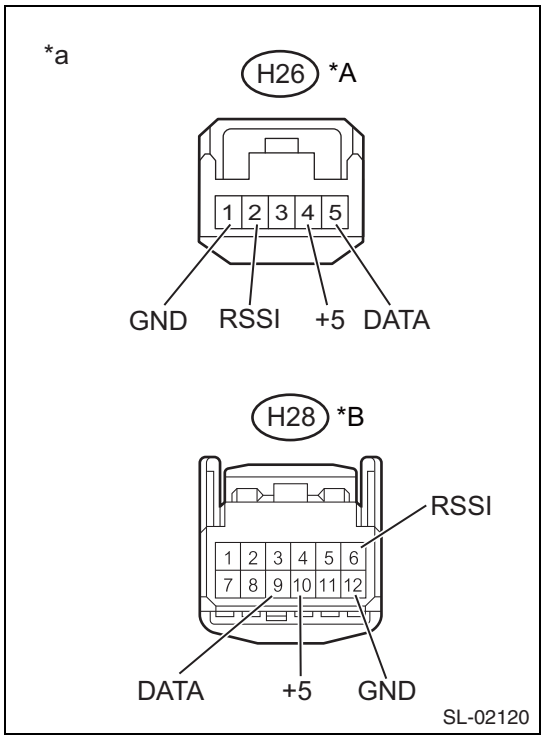


Inspection steps

CAUTION:

- The entry & start system uses multiplex communication. Before performing a troubleshooting, perform checks in the “How to troubleshoot” and check that no communication error is present. (Refer to DL - 27)
- Before replacing the collation ECM (smart key ECM ASSY), refer to the entry & start system (entry function).
- When inspecting or replacing the door control receiver or wiring harness, do not change the position or length of the wiring harness. A wiring harness too close to the door control receiver may affect the entry and wireless functions.

| 1 | Unit inspection of the collation ECM (smart key ECM ASSY) |
|---|---|



(1) Disconnect the door control receiver connector H26 or H28.
(2) Measure the resistance and voltage based on the following table.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H26-1 - Chassis ground *1<br>H28-12 - Chassis ground *2 | Always | 1 Ωor less |

*1: w/o Tire Pressure Warning System
*2: w/ Tire Pressure Warning System

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H26-4 - H26-1 *1<br>H28-10 - H28-12*2 | Always | 1 V or less →4.5 to 5.5 V (pulse generation) |
| H26-2 - H26-1 *1<br>H28-6 - H28-12*2 | Always | 11 to 14V |
| H26-5 - H26-1 *1<br>H28-9 - H28-12*2 | Always | 11 to 14V |

*1: w/o Tire Pressure Warning System
*2: w/ Tire Pressure Warning System

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Door control receiver) |
| *A | w/o Tire Pressure Warning System |
| *B | w/ Tire Pressure Warning System |

NG → Go to Step 2.

OK →

Door control receiver replacement (Refer to DL - 111)

| 2 | Inspect wiring harness and connector (door control receiver collation ECM (smart key ECM)) |
|---|---|

(1) Remove the D40 and the D48 connectors of the collation ECM (smart key ECM ASSY).
(2) Measure the resistance according to the following table.
Resistance

| Inspection terminals | Conditions | Standard value |
|---|---|---|
| D40-19 - H26-2*1<br>D40-19 - H28-6*2 | Always | 1 Ωor less |
| D40-17 - H26-5*1<br>D40-17 - H28-9*2 | Always | 1 Ωor less |
| D40-5 - H26-4*1<br>D40-5 - H28-10*2 | Always | 1 Ωor less |
| D48-11 - Chassis ground | Always | 1 Ωor less |

*1: w/o Tire Pressure Warning System
*2: w/ Tire Pressure Warning System

NG → Repair or replacement of wiring harness or connector

OK

Replace the collation ECM (smart key computer ASSY)

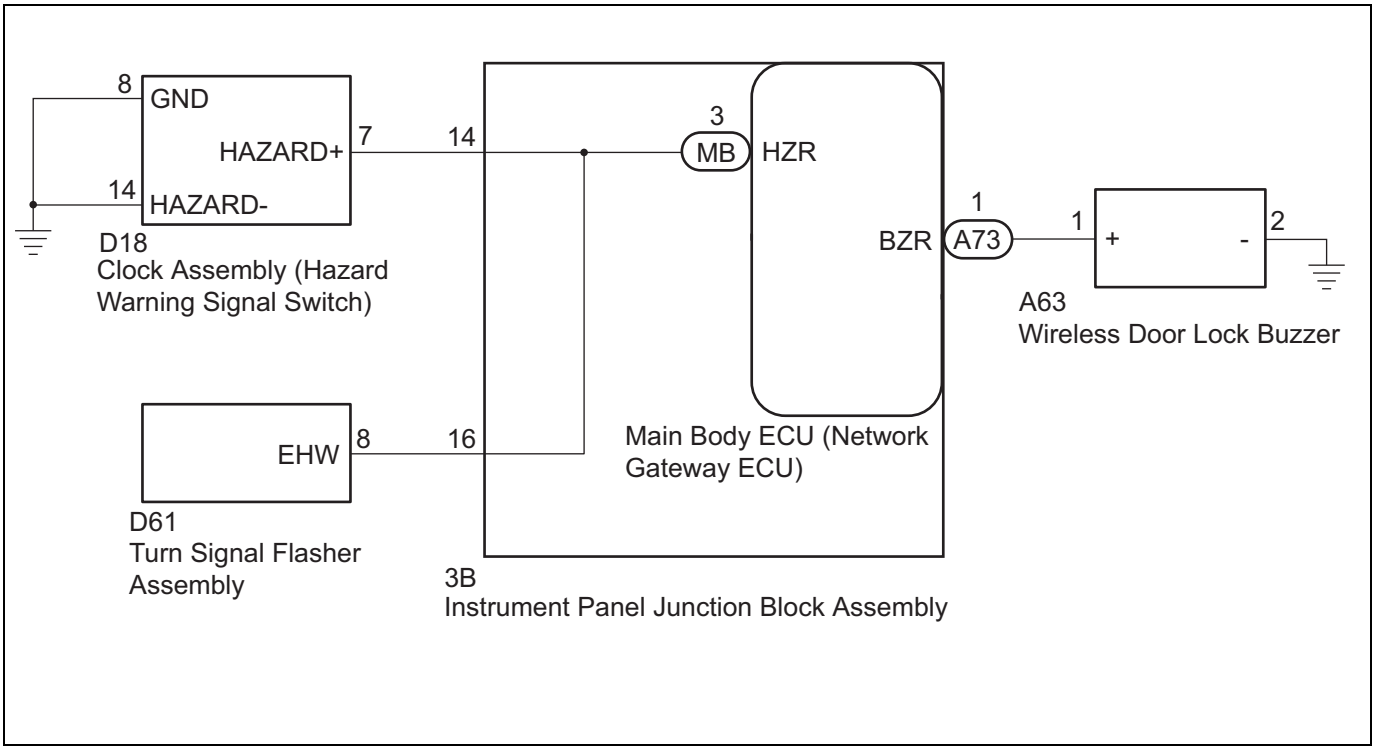
## Answer-back function does not work (hazard + buzzer)

Circuit description

In some cases, the hazard warning light and/or the wireless door lock buzzer answer-back function * may not operate even though the wireless door lock control function is normal. In such a case, there may be a fault in the hazard warning light and the wireless door lock buzzer signal output of the main body ECM (multiplex network body ECM).

*: With wireless door lock buzzer answer-back function

Circuit figure



Inspection steps

CAUTION:

The wireless door lock control system uses CAN communication system. First, check that no fault is present in the CAN communication system. Refer to "How to troubleshoot".

| | |
|---|---|
| 1 | Reading values with SSM4 (answer-back function) |

(1) Connect the SSM4 to the DLC3.
(2) Turn the engine switch (IG) to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Customize]
(5) Referring to the table below, perform settings.

| Display | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Hazard Answer Back] | ON | When a door is locked by wireless operation, the hazard warning lights flash once.<br>When a door is unlocked by wireless operation, the hazard warning lights flash twice. | OFF or ON | Main body ECM (multiplex network body ECM) |

| 5 | Using SSM4, perform an active test (wireless door lock buzzer). |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the engine switch (IG) to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Active Test]
(5) Based on the contents of the SSM4 display, read the data monitor.

Main body

| Tester display | Tested parts | Control range | Remarks |
|---|---|---|---|
| [Wireless Buzzer] | Wireless door lock buzzer | OFF/ON | - |

Result

| Result | Go to |
|---|---|
| Wireless door lock buzzer do not turn ON/OFF. | A |
| Wireless door lock buzzer turns ON/OFF. | B |

NG → Replacement of the main body ECM (multiplex network body ECM)

OK

| | |
|---|---|
| 6 | Inspecting wiring harness and connector (wireless door lock buzzer - main body ECM (multiplex network)) |

(1) Disconnect the wireless door lock buzzer connector A63 and main body ECM (multiplex network body computer) connector A73.
(2) Measure the resistance according to the following table.

Resistance

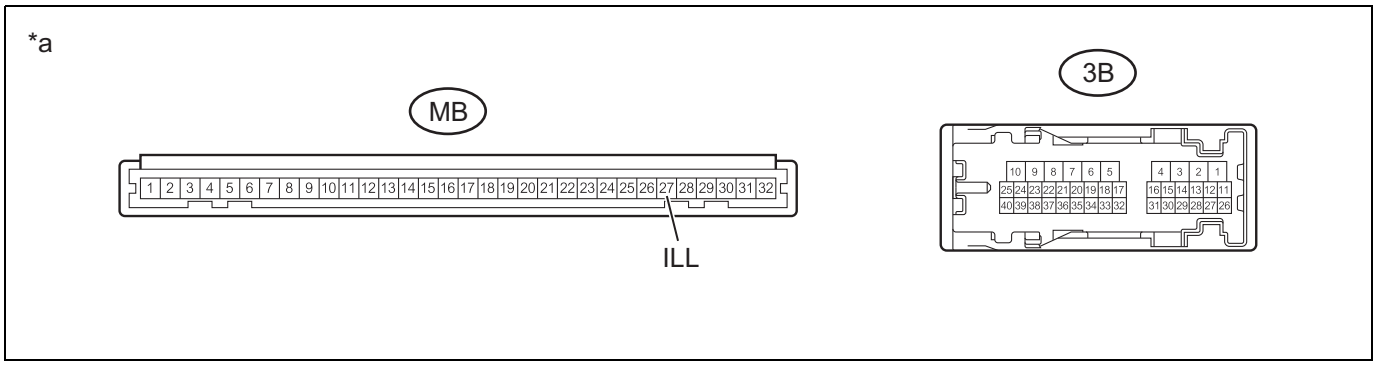
| Inspection terminals | Conditions | Standard value |
|---|---|---|
| A63-1 - A73-1 | Always | 1 Ωor less |
| A63-2 - Chassis ground | Always | 1 Ωor less |
| A63-1 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| | |
|---|---|
| 7 | Inspect the meter panel junction block ASSY. |

(1) Remove the instrument panel junction block ASSY.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| MB-3 - 3B-14 | Always | 1 Ωor less |
| MB-3 - 3B-16 | Always | 1 Ωor less |

NG → Replacement of instrument panel junction block ASSY

OK

| | |
|---|---|
| 8 | Replacing wireless door lock buzzer |

(1) Temporarily replace the wireless door lock buzzer with a new one.

DL

Next

| 9 | Checking wireless door lock buzzer operation |
|---|---|

## Description of functions

1. Details of wireless door control system
   (1) This system locks and unlocks doors by remote control. The wireless control system has the following functions.
   - The door control receiver execute code collation and the main body ECM (multiplex network body computer) operates the door lock control. For the communication, a serial data link is provided between the receiver and the main body ECM (multiplex network body ECM).
   - A key integrated transmitter with the following four switches is used: door lock switch, door unlock switch, trunk open switch, panic switch.

2. Functions of the main parts

| Components | Function |
|---|---|
| Door control transmitter | • It is fitted with the lock, unlock, trunk open and panic switches.<br>• It transmits low power radio wave signals (recognition code and function code) to the door control receiver. |
| Door control receiver | It receives low power radio wave signals from the door control transmitter and transmits them to the main body ECM (multiplex network body computer). |
| • Front door courtesy light switch LH/RH<br>• Trunk courtesy light switch | • It illuminates while the door is open and turns off while the door is closed.<br>• It detects a door state signal (open or close) and outputs the data to the main body ECM (multiplex network body computer). |
| • Front door lock ASSY LH<br>• Front door lock ASSY RH | An integrated motor locks and unlocks the door. |
| Main body ECM (multiplex network body ECM) | It transmits wireless door lock control signals in response to the code data of the door control receiver or the signals from each ECM. |

3. System functions

(1) The door control transmitter has the lock switch and unlock switch. By operating these switches, the driver can operate each function. The wireless door lock control system has the following functions.

NOTE:

The initial setting status of the following functions are set to ON. Some of these functions are customizable.

| Function | Procedures |
|---|---|
| All door lock function | When the lock switch is pressed, all doors are locked. |
| All door unlock function (unlock 2 operation) | The driver's door is unlocked and then all other doors are unlocked when the unlock switch is pressed once more within 3 seconds after it is pressed once. |
| Trunk open function | When the trunk open switch of the door control transmitter module set SUB ASSY is held down for 1.6 seconds or more, the trunk opens. |
| Answer-back function (hazard warning light) | It reports the completion of operation by flashing the hazard warning light once when the door is locked, or twice when the door is unlocked. |
| Answer-back function (wireless door lock buzzer) | It reports the completion of operation by sounding the wireless lock buzzer once when the door is locked or twice when the door is unlocked. |
| Panic alarm function | When the panic switch of the door control transmitter is held down for 0.8 seconds or more, the following alarms are activated.<br>• Vehicle horn sounds.<br>• Headlight, hazard warning light and tail light flash.<br>• Room light illuminates (when room light door switch is ON).<br>The panic alarms can be cancelled by pressing any (desired) switch of the door control transmitter during the alarm activation. |
| Vehicle position detection function | The vehicle position detection function is a convenient function that notifies the user of the vehicle position by sounding the vehicle horn and flashing the hazard warning light in response to a transmitter operation. |
| Door open warning function | When the lock switch is pressed while a door is open or not closed properly, the buzzer sounds continuously for 5 seconds. The buzzer stops sounding when all doors are closed or the unlock switch is pressed. |
| Auto lock function | If no door is opened within 60 seconds after the doors are unlocked using the wireless transmitter, all doors are locked automatically. |
| Illumination function | When the unlock switch is pressed with all doors locked, the room light illuminates simultaneously with the unlock operation. |
| Self diagnosis function | In the following conditions, the system transfers to the self diagnosis mode.<br>• When the door control receiver receives normal radio wave signals from the door control transmitter while the system is in the self diagnosis mode, the room light blinks in a pattern corresponding to each switch. |
| Transmitter identification code registration function | 6 transmitter identification codes can be registered (written and saved) in the EEPROM integrated in the door control receiver. |

4. Transmitter identification code registration function

(1) The following table indicates the 3 ID registration function modes that allow 6 different types of codes to be registered. The codes are registered electronically in EEPROM inside the door control receiver (saved after written).

| Mode | Function |
|---|---|
| Keyless ID additional registration | Adds a newly received code while maintaining the previously registered codes. This mode is used to add a new transmitter. If the number of registered codes exceeds 6, the oldest one of the existing registered codes is erased. |

| Mode | Function |
|---|---|
| Keyless ID rewrite | Erase the existing registered codes and registers new input codes only. |
| Readout the number of keyless ID registration | Checks how many codes are registered. When adding a new code, you can check how many codes are already saved using this mode. |

5. Conditions for disabling wireless functions
   (1) The lock function does not operate if either of the following conditions is met.
   - Any door is open.
   - Key is inserted in ignition key cylinder.

   (2) The unlock function does not operate if the following condition is met.
   - Key is inserted in ignition key cylinder.

## How to troubleshoot

NOTE:

- The troubleshooting procedure for the wireless door lock control system assumes that the power door lock control system is functioning normally. Before performing the troubleshooting procedure for the wireless door lock control system, confirm that the power door lock control system is functioning normally.
- Using the following procedures, perform the wireless door lock control system troubleshooting.
- *: Use the SSM4.

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Check battery voltage |

(1) Inspect the battery voltage.
Standard voltage: 11 to 14V
If the voltage is 11 V or less, charge or replace the battery before proceeding to a next step.

Next

## Operation check

1. Functions and operation status
   (1) The wireless door lock control function operates only when the following four conditions are met.
      (a)Key is not inserted in ignition key cylinder.
      (b)Power door lock system is operating normally.
      (c)Function is not disabled by customization.
      (d)All doors are closed. (Excluding unlock)
      NOTE:
      The unlock function operates even when a door is open.
   (2) The operation range varies depending on the situation.
      (a)The operation area varies depending on the user, how the transmitter is held, and the position.
      (b)In some places, the operation area is reduced due to the vehicle shape or surrounding environment.
      (c)The low power radio wave signals of the transmitter may be affected by surrounding noises or other strong radio waves. The operation area of the transmitter may be shortened or the transmitter may not work.
      (d)If the battery charge lowers, the operation area may be reduced or the transmitter may not function.
      NOTE:
      If the transmitter is left under direct sunlight for a long time, for example, being left on the meter panel, the battery charge level may decrease or other troubles may occur.
2. Inspecting wireless door lock control function
   NOTE:
   • The switches indicated below transmit signals. They are integrated in the door control transmitter.
   • Pay attention to the operation area of the transmitter during inspection.
   (1) Check that the vehicle wireless function is in an operable state. (Refer above)
   (2) Inspect the basic functions.
      (a)Check that all doors are locked when the lock switch is pressed.

(b) Check that the driver's door is unlocked when the unlock switch is pressed once and all other doors are unlocked when the switch is pressed once more within 3 seconds.
(c) Check that the trunk opens when the trunk open switch is held down for 1.6 seconds or more.

(3) Check the chattering prevention function.
(a) Check that the relevant operation takes place once only when the switch is pressed. Check that the relevant operation takes place once only, not consecutively, when the switch is pressed. Check that the relevant operation takes place once whenever the switch is pressed at 1 second intervals.

(4) Check the auto lock function.
(a) Check that all doors are automatically locked if no door is opened or locked within 60 seconds after all doors are unlocked by pressing the unlock switch.

(5) Check the switch operation false recognition prevention function.
(a) Check that doors are not locked by a lock switch when the key is set in the ignition cylinder. The above does not apply if the system is in the recognition code registration mode.

(6) Check the door open warning function.
(a) Check that the wireless door lock buzzer sounds continuously for 5 seconds when the lock switch is pressed while a door is open or not closed properly.

(7) Check the answer-back function (hazard warning lights flashing).
(a) Check that the hazard warning light flashes once and all doors are locked when the lock switch is pressed.
(b) Check that the hazard warning light flashes twice and the doors are unlocked when the unlock switch is pressed.

(8) Check the answer-back (wireless door lock buzzer) function.
(a) Check that the buzzer sounds once and all doors are locked simultaneously when the lock switch is pressed.
(b) Check that the buzzer sounds twice and the driver's door is unlocked simultaneously when the unlock switch is pressed.

(9) Check the panic alarm control function.
(a) Check that the horn sounds for 60 seconds, the headlight and tail light flash, and the room light illuminates (if the light switch is set to the door position) when the panic switch is held down for 0.8 seconds or more. Check that the horn stops and the lights stop flashing when any switch of the transmitter is pressed.

(10) Check the vehicle position sensor function.
(a) If the following conditions are met three times within 5 seconds, the vehicle position sensor function sounds the horn once and flashes the hazard warning light three times.
- IG SW OFF
- Key is inserted in ignition key cylinder.
- All doors and trunk are closed.
- All doors are locked.
- Door control transmitter lock switch is pressed.

(11) Check the entry illumination function.
(a) Check that the map light illuminates (if the light switch is set to the door position) and the doors are unlocked when the unlock switch is pressed with all doors locked.

## customize function

1. Customization of wireless door lock control system

(1) Customization via SSM4

CAUTION:
- When a customer requests a function change, check if the function is customizable.
- Before starting customization, record the current settings.
- Before performing the troubleshooting procedure for a function, check that the function is set to the initial settings.

NOTE:

Some items may not be displayed depending on the destination and equipment.

(a) Connect the SSM4 to the DLC3.
(b) Turn IG SW to ON.
(c) Turn on the SSM4.
(d) Enter the following menu. [Body Control] →[Customize]
(e) Referring to the table below, perform settings.

Wireless door lock

| Display | Initial setting | Function | Setting | Controller ECM |
|---|---|---|---|---|
| [Keyless Control] | Yes | Settings for the function that allows you to select to lock the door via operation of the electrical key transmitter SUB-ASSY (Electronic key) | Yes or No | Main body ECM (multiplex network body ECM) |
| [Wireless Buzzer Resp] | ON | Wireless door lock buzzer response | OFF or ON | Main body ECM (multiplex network body ECM) |
| [Hazard Answer Back] | ON | When the wireless lock switch of the transmitter is pressed, all hazard warning lights are illuminated simultaneously. All hazard warning lights illuminate twice when the unlock switch is pressed. | OFF or ON | Main body ECM (multiplex network body ECM) |
| [Open Door Warning] | ON | The buzzer sounds when the lock is pressed while any door is open. | OFF or ON | Main body ECM (multiplex network body ECM) |
| [Keyless Select unlock] | Yes | Settings for the function where all doors are unlocked when the electrical key transmitter SUB-ASSY (Electronic key) is operated twice | Yes or No | Main body ECM (multiplex network body ECM) |
| [Panic Alarm Function] | ON | Function to activate the anti-theft system when the panic switch of door control transmitter module set SUB-ASSY is held down for 0.8 seconds or more. | OFF or ON | Main body ECM (multiplex network body ECM) |
| [Wireless Auto Lock] | ON | This function turns ON or OFF the wireless auto lock function. | OFF or ON | Main body ECM (multiplex network body ECM) |
| [Auto Lock Time] | 60 seconds | Time from unlock to relock using wireless door lock function | 30 seconds, 60 seconds, 120 seconds | Main body ECM (multiplex network body ECM) |
| [Keyless Trunk Unlock] | Long press(short) | Settings for the method of operation when opening the trunk with the electrical key transmitter SUBASSY (Electronic key) | single press/2 times ON/Long press(short)/ Long press(long) | Main body ECM (multiplex network body ECM) |
| [Wireless Buzzer Volume] | Level 5 | Wireless door lock buzzer volume | Level 7, Level 6, Level 5,Level 4, Level 3, Level 2, Level 1, or Level 0 | Main body ECM (multiplex network body ECM) |

DL

## Symptom table

NOTE:

- Use the following table to identify the cause of the symptom. If multiple areas are listed as the causes, they are indicated in the [Faulty part] column according to the order of probability of causing the symptom. Check the possible causal areas in the list order and confirm each symptom. Replace faulty parts as necessary.
- Before inspecting the areas listed in "Possible cause" below, check the fuses and the relays related to this system.

Wireless door lock control

| Symptoms | Faulty part | Reference pages |
|---|---|---|
| Only wireless control function does not work | Proceed to "Only wireless control function does not work" | DL - 63 |

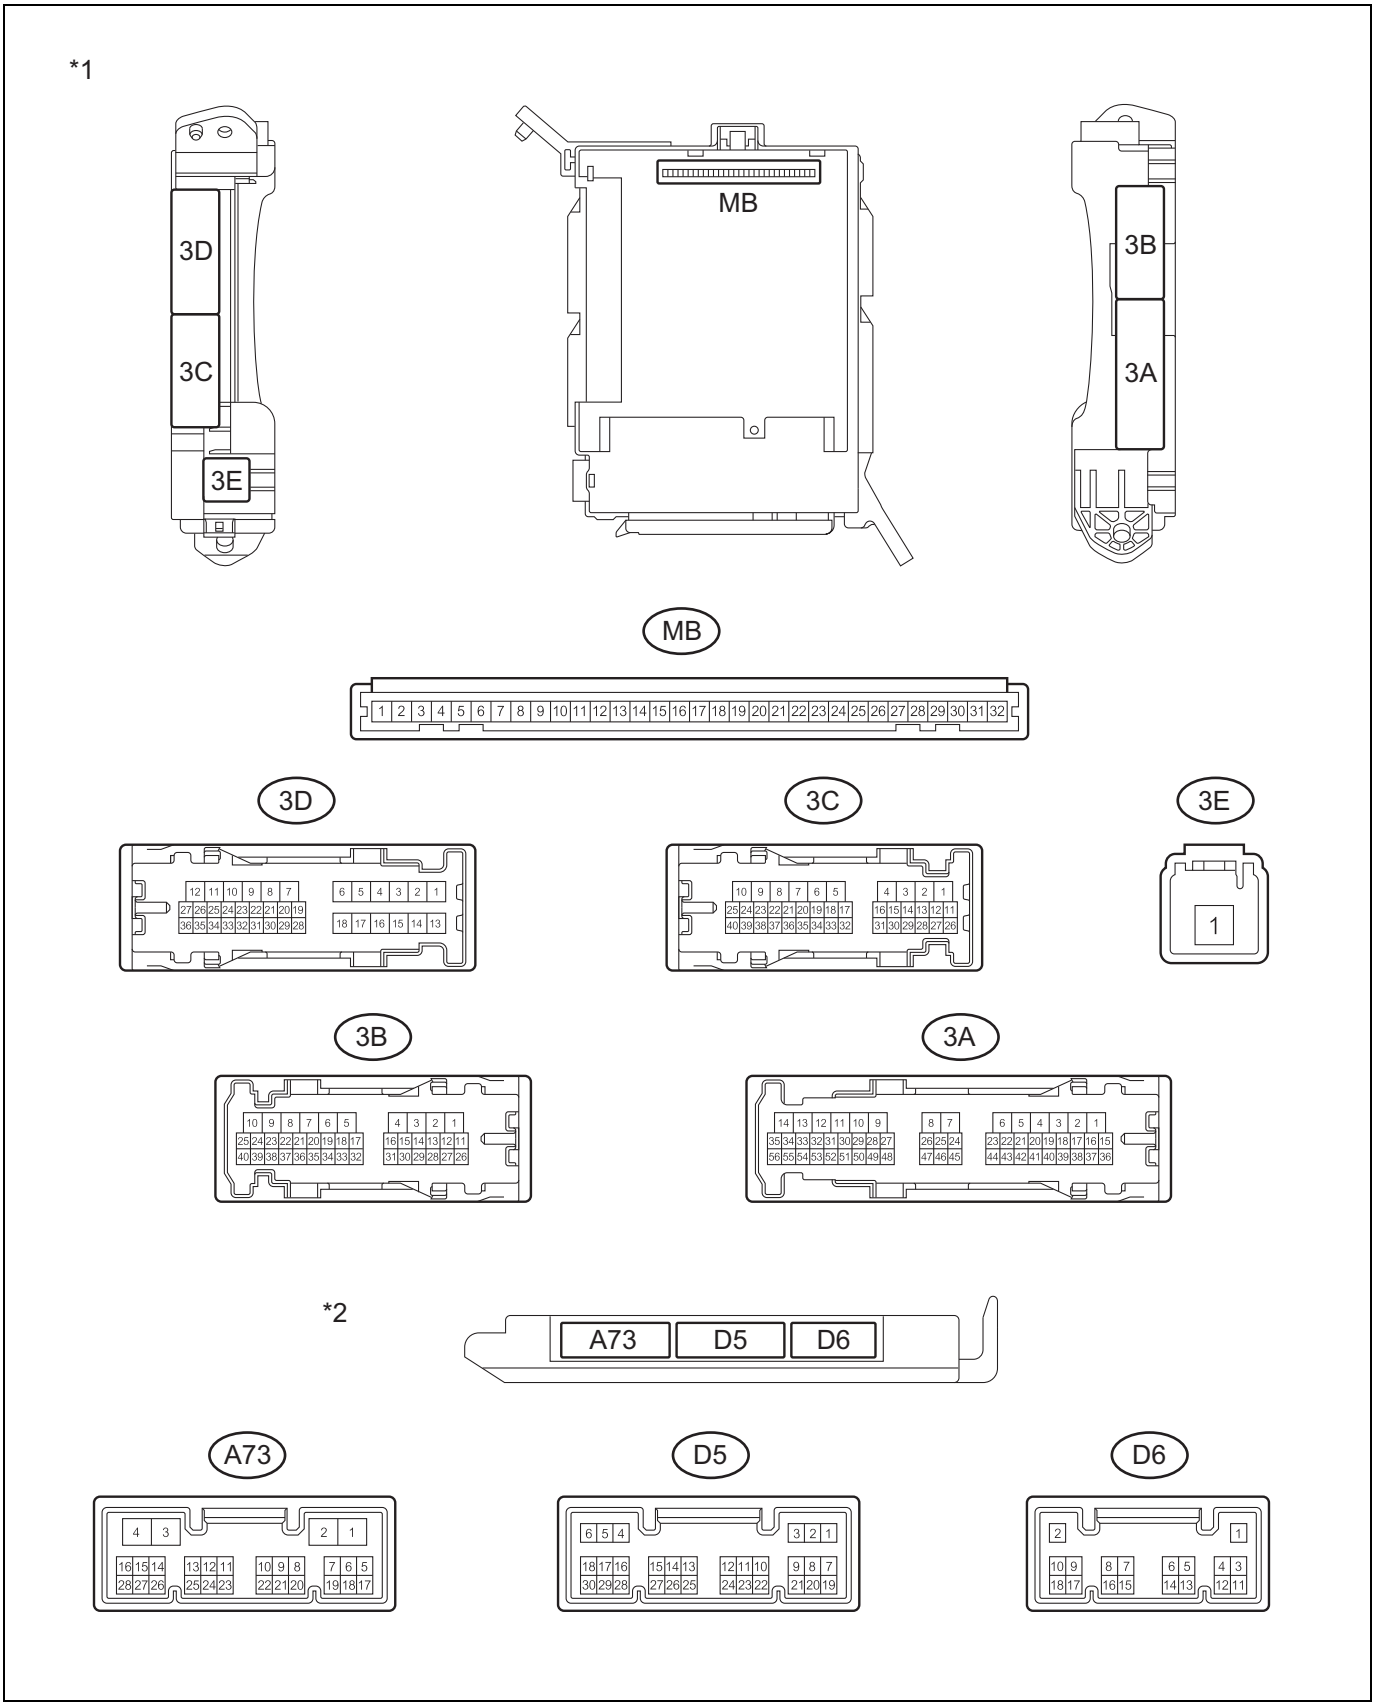
## ECM terminal arrangement

1. Check the instrument panel junction block ASSY and main body ECM (multiplex network body ECM).



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (multiplex network body ECM) |

(1) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.

(2) Disconnect the connectors D5, D6, and A73 of the main body ECM (multiplex network body ECM).
(3) Measure the resistance and voltage at the terminals between the wiring harness side connector and a chassis ground.

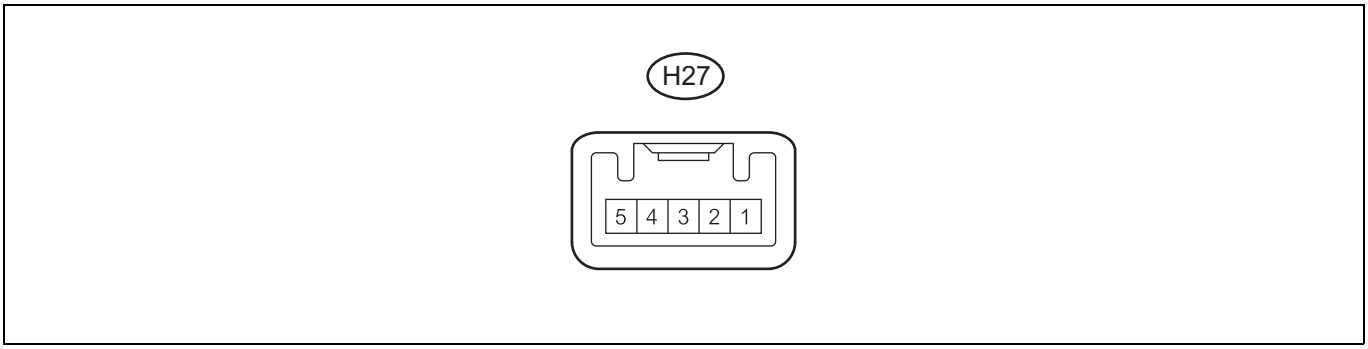
| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| MB-1 - chassis ground | Battery power supply | Always | 11 to 14V |
| MB-8 - chassis ground | IG SW power supply | IG SW ON | 11 to 14V |
| | | IG SW OFF | 1 V or less |
| MB-9 - Chassis ground | ACC power supply | IG SW ACC | 11 to 14V |
| | | IG SW OFF | 1 V or less |
| MB-11 - chassis ground | Ground | Always | 1 Ωor less |
| MB-32 - chassis ground | Battery power supply | Always | 11 to 14V |
| D5-22 - chassis ground | Unlock warning switch input | Key is not inserted in ignition key cylinder (OFF) | 1 V or less |
| | | Key is inserted to the ignition key cylinder (ON). | 11 to 14V |
| D6-1 - Chassis ground | Ground | Always | 1 Ωor less |
| A73-4 - chassis ground | Ground | Always | 1 Ωor less |

(4) Reconnect the connector D5, D6, and A73 of the main body ECM (multiplex network body ECM).
(5) Install the main body ECM (multiplex network body ECM) to the instrument panel junction block ASSY.
(6) Measure the voltages and resistances according to the values indicated in the table below.

DL

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| 3A-28 - chassis ground | Driver's side courtesy light switch | Driver's door is open. | 1 V or less |
| | | Driver's door is closed | Pulse generation |
| 3B-13 - chassis ground | Passenger's side courtesy light switch | The passenger's door is open. | 1 V or less |
| | | The passenger's door is closed. | Pulse generation |
| 3D-26 - chassis ground | Trunk courtesy light switch | The trunk is open. | 1 V or less |
| | | The trunk is closed. | 11 to 14V |
| 3B-2 - chassis ground | Door lock motor lock drive output (driver's side) | Door control switch is not pressed | 1 V or less |
| | | Lock side of door control switch is not pressed | 11 to 14V |
| 3B-3 - chassis ground | Door lock motor lock drive output (passenger's side) | Door control switch is not pressed | 1 V or less |
| | | Lock side of door control switch is not pressed | 11 to 14V |
| 3D-11 - chassis ground | Door lock motor unlock drive output (driver's side) | Door control switch is not pressed | 1 V or less |
| | | Unlock side of door control switch is not pressed | 11 to 14V |
| 3B-4 - chassis ground | Door lock motor unlock drive output (passenger's side) | Door control switch is not pressed | 1 V or less |
| | | Unlock side of door control switch is not pressed | 11 to 14V |
| A73-1 - chassis ground | Wireless door lock buzzer signal | Wireless door lock buzzer OFF | 1 V or less |
| | | Wireless door lock buzzer ON | Pulse generation |
| D6-6 - chassis ground | Output signals to door control receiver | Key is inserted in ignition key cylinder →Key is removed from ignition key cylinder | 11 to 14 V →Pulse generation →11 to 14 V |
| D6-7 - Chassis ground | Input signals from door control receiver | Ignition switch is OFF, all doors are closed, no transmitter switch is pressed | 11 to 14V |
| | | Ignition switch is OFF, all doors are closed, transmitter switch is pressed | Pulse generation |

2. CHECK DOOR CONTROL RECEIVER (without TPMS)



(1) Disconnect the H27 door control receiver connector.
(2) Measure the resistance and voltage according to the value(s) in the table below.

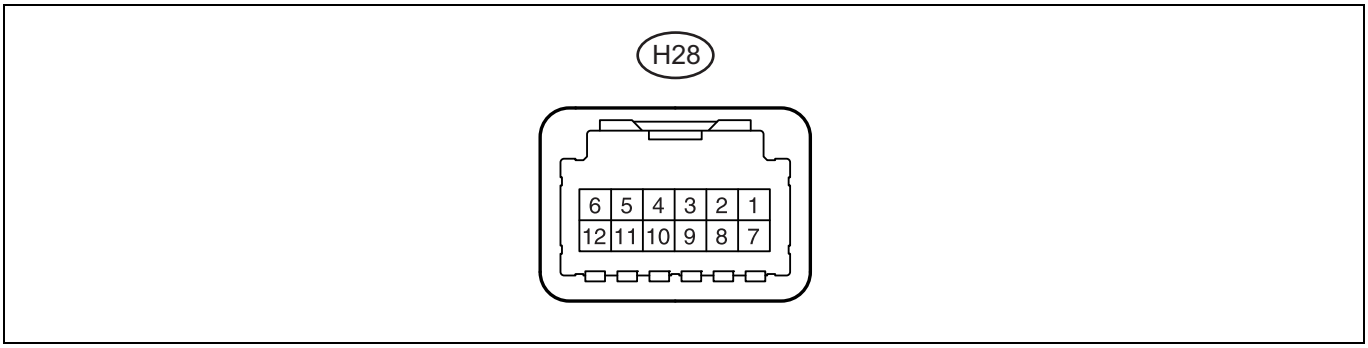
| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| H27-5 - Body ground | Battery power supply | Always | 11 to 14 V |
| H27-1 - Body ground | Ground | Always | Below 1Ω |

DL

(3) Reconnect the H27 door control receiver connector.
(4) Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| H27-3 - Body ground | Signal input from main body ECU (multiplex network body ECU) | Key inserted in ignition key cylinder →Key pulled out of ignition key cylinder | 11 to 14 V →Pulse generation →11 to 14 V |
| H27-2 - Body ground | Signal output to main body ECU (multiplex network body ECU) | Ignition switch off, all doors closed and door control transmitter switch not pressed | 11 to 14 V |
| | | Ignition switch off, all doors closed and door control transmitter switch pressed | Pulse generation |

3. Inspect the door control receiver (with TPMS).



(1) Disconnect the door control receiver connector H28.
(2) Measure the resistance and voltage based on the following table.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| H28-1 - Chassis ground | IG SW power supply | IG SW ON | 11 to 14V |
| | | IG SW OFF | 1 V or less |
| H28-7 - chassis ground | Battery power supply | Always | 11 to 14V |
| H28-12 - chassis ground | Ground | Always | 1 Ωor less |

(3) Reconnect the door control receiver connector H28.
(4) Measure the voltage according to the following table.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| H28-5 - chassis ground | Input signals from main body ECM (multiplex network body computer) | Key is inserted in ignition key cylinder →Key is removed from ignition key cylinder | 11 to 14 V →Pulse generation →11 to 14 V |

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| H28-4 - chassis ground | Output signals to main body ECM (multiplex network body computer) | Ignition switch is OFF, all doors are closed, no door control transmitter switch is pressed | 11 to 14V |
| | | Ignition switch is OFF, all doors are closed, door control transmitter switch is pressed | Pulse generation |

## Checking / clearing diagnostic codes

1. DTC check
   (1) Check DTC
      (a)Connect the SSM4 to the DLC3.
      (b)Turn IG SW to ON.
      (c)Turn on the SSM4.
      (d)Enter the following menu. [Body Control] →[DTC]
      (e)Check the DTC.
   (2) Clear DTC
      (a)Connect the SSM4 to the DLC3.
      (b)Turn IG SW to ON.
      (c)Turn on the SSM4.
      (d)Input the following menus: [Body Control] →[Clear Memory]
      (e)Clear DTC according to the following instructions displayed on the SSM4 screen.

## Data monitor / active test

1. Read data list
   CAUTION:
   The values indicated under the normal conditions in the table below are informative values. Do not depend on reference value only when judging if the part is faulty.
   NOTE:
   By using the SSM4 for reading the data list, it is able to read the values and the status of the switches, sensors, or actuators without removing these parts. This inspection is very useful because it allows an operator to read any intermittent conditions or signals without disturbing parts or wiring. Diagnostic time can be saved by reading the data monitor information at the initial stage of the troubleshooting.
   (1) Connect the SSM4 to the DLC3.
   (2) Turn IG SW to ON.
   (3) Turn on the SSM4.
   (4) Enter the following menu. [Body Control] →[Data monitor]
   (5) Using SSM4, read the data list according to the screen displays.

Main body ECM

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [D Door Courtesy] | Driver's door courtesy light switch signal / ON or OFF | ON: Driver's door is open<br>OFF: Driver's door is closed | - |
| [P Door Courtesy] | Passenger's door courtesy light switch signal / ON or OFF | ON: Passenger's door is open<br>OFF: Passenger's door is closed | - |

| [Keyless Trunk Unlock] | single press / 2times ON / Long press (short) / Long press (long) | Customized setting display | - |
| [Wireless Buzzer Volume] | Wireless door lock buzzer vol/ Level7, Level6, Level5, Level4, Level3, Level2, Level1, or Level0 | Customized setting display | - |

2. Implementation of active test

NOTE:

If SSM4 is used when performing active test, the relay, VSV, actuator etc. can be operated without removing parts. This functional inspection method is very useful because it helps check state-related signals and identify the faulty part without removing any parts and wiring. By performing active tests at an initial phase of troubleshooting, you can save time for diagnosis. The data monitor information can be displayed during active test.

(1) Connect the SSM4 to the DLC3.
(2) Turn IG SW to ON.
(3) Turn on the SSM4.
(4) Enter the following menu. [Body Control] →[Active Test]
(5) Follow the SSM4 on-screen instructions to perform an active test.

Main body

| Tester display | Tested parts | Control range | Notes for diagnosis |
|---|---|---|---|
| [Door Lock] | Door lock motor | [Lock]/[Unlock] | - |
| [D-Door Unlock] | Driver's door lock motor | OFF/ON | - |
| [Trunk and Back-Door Open] | Trunk lock motor | OFF/ON | - |
| [Illuminated Entry System] | Room light (room light switch is set to door position and all doors are closed) | OFF/ON | - |
| [Keyless Buzzer Output] | Wireless door lock buzzer | OFF/ON | - |

## List of diagnostic codes

| Diagnostic codes | Detection item | Faulty part | Reference pages |
|---|---|---|---|
| B1242 | [Wireless Door Lock Tuner Circuit] | Wiring harness or connector<br>Door control receiver Main body ECM (multiplex network body ECM) | DL - 58 |

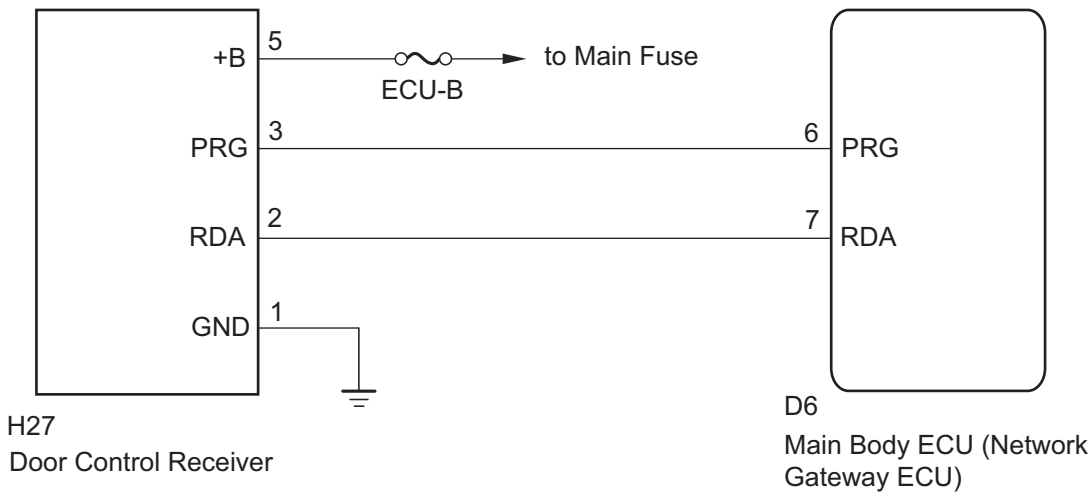
## DTC B1242 Malfunctions in wireless tuner system (without TPMS)

Circuit description

The door control receiver receives signals from the door control transmitter and transmits them to the main body ECM (network gateway computer) by solid line. The main body ECM (network gateway computer) transmits the door lock and unlock signals to each door lock actuator to control them.

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1242 | If, after the main body ECM (network gateway computer) outputs a PRG signal in the self diagnosis mode, the corresponding RDA signal cannot be received within 1 second | • Door control receiver<br>• Main body ECM (network gateway computer)<br>• Wiring harness or connector |

Circuit figure



Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Inspection of wiring harness and connector (Door control receiver - Main body ECM (network gateway computer)) |

(1) Disconnect the door control receiver connector H27.
(2) Disconnect the connector D6 for the main body ECM (network gateway computer).
(3) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-2 (RDA) - D6-7 (RDA) | Always | Less than 1 Ω |
| H27-3 (PRG) - D6-6 (PRG) | Always | Less than 1 Ω |

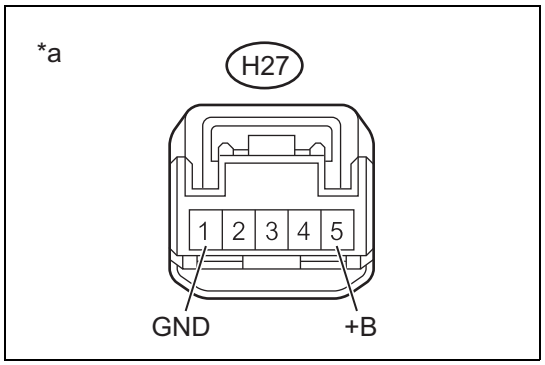
Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-2 (RDA) - Chassis ground | Always | 10 kΩ or more |
| H27-3 (PRG) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 2 | Door control receiver inspection (power, GND) |
|---|---|



(1) Measure the voltage and resistance between terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-5 (+B) - Chassis ground | Always | 11 to 14 V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-1 (GND) - Chassis ground | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Door control receiver connector) |

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Replacement with normal door control receiver |
|---|---|

(1) Replace with a new or normal door control receiver. (Refer to DL - 111)

Next

| 4 | Identification code registration |
|---|---|

(1) Register the identification code to the door control receiver. (Refer to DL - 97)

Next

| 5 | Clear diagnostic code |
|---|---|

(1) Clear the diagnostic code using the SSM4. (Refer to DL - 57)

Next

| 6 | Do a DTC check again. |
|---|---|

(1) Check DTC using SSM4. (Refer to DL - 57)
Criteria: B1242 is not output

NG → Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

OK

Complete (door control receiver trouble)

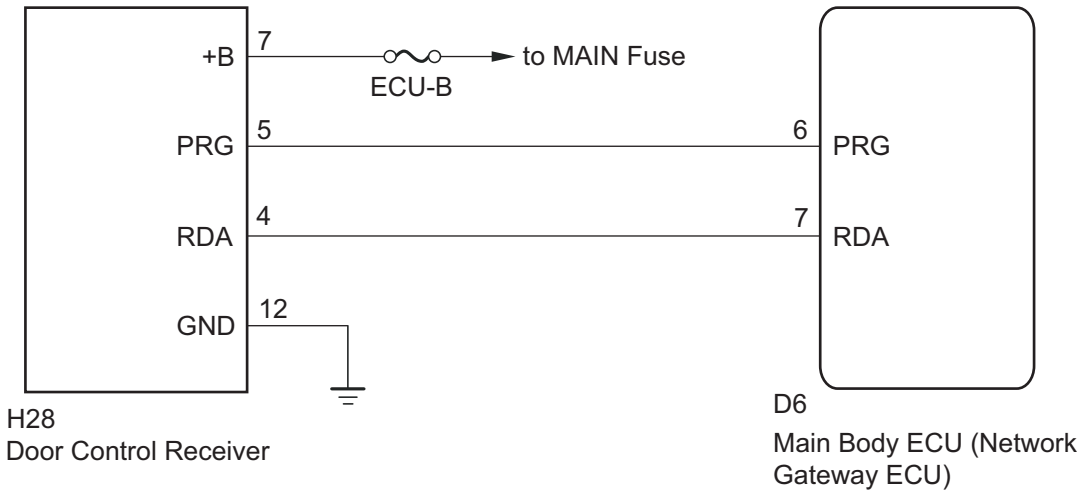
| DTC | B1242 | Malfunctions in wireless tuner system (with TPMS) |
|---|---|---|

Circuit description

The door control receiver receives signals from the transmitter and transmits them to the main body ECM (multiplex network body computer).

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1242 | In the diagnosis mode, the applicable RDA signal can not be received during the period of 1 second in which the PRG signal is output from the main body ECM (multiplex network body computer). | • Wiring harness or connector<br>• Door control receiver<br>• Main body ECM (multiplex network body ECM) |

Circuit figure



DL

Inspection steps

CAUTION:

Before performing the following inspection steps, check the fuses related to this system.

| 1 | Inspecting wiring harness and connector (main body ECM - door control receiver) |
|---|---|

(1) Disconnect the main body ECM (multiplex network body computer) connector D6.

(2) Disconnect the door control receiver connector H28.

(3) Measure the resistance according to the following table.

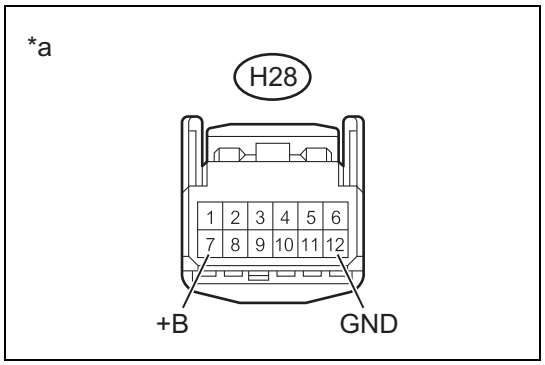
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D6-6 - H28-5 | Always | 1 Ωor less |
| D6-7 - H28-4 | Always | 1 Ωor less |
| D6-6 - Chassis ground | Always | 10 kΩ or more |
| D6-7 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 2 | Inspect door control receiver (power, GND) |
|---|---|



(1) Measure the voltage and resistance according to the following table.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H28-7 - chassis ground | Always | 11 to 14V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H28-12 - chassis ground | Always | 1 Ωor less |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (To door control receiver) |

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Replacing the door control receiver |
|---|---|

(1) Temporarily replace the door control receiver with a new or normally functioning one. (Refer to DL - 111)

Next

| 4 | Register the recognition code |
|---|---|

(1) Execute the registration procedure. (Refer to DL - 97)
NOTE:
If a new or normally functioning door control receiver is available, connect it and check if the wireless door lock function is normal or DTC is output. If the substitute receiver functions properly, replace the original door control receiver.

Next

| 5 | Clear diagnostic code |
|---|---|

(1) Clear the diagnostic code. (Refer to DL - 57)

Next

| 6 | DTC check |
|---|---|

(1) Check each DTC. (Refer to DL - 57)
Criteria: DTC is not output.

NOTE:
Reconnect and assemble the sensors and connectors to restore the vehicle before rechecking DTC.

NG → Replacement of Main body ECM

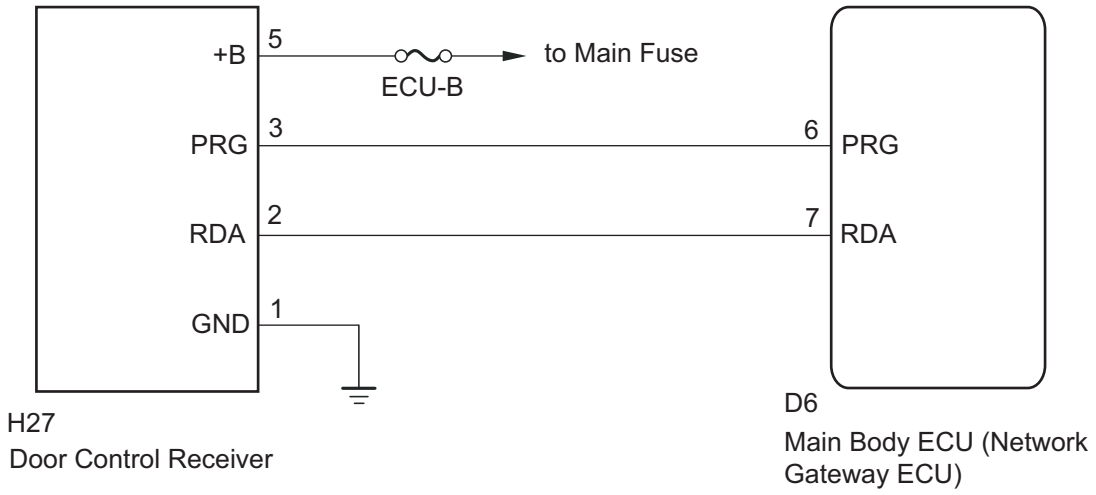
OK

Complete (door control receiver trouble)

## Only wireless function does not work (without TPMS)

Circuit description
The door control receiver receives signals from the door control transmitter and transmits them to the main body ECM (network gateway computer) by UART communication. The main body ECM (network gateway computer) transmits the door lock and unlock signals to each door lock actuator to control them.

Circuit figure



Inspection steps
CAUTION:
Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Electric door lock system inspection |

(1) Check if the door lock performs a lock ←→unlock operation when operating the door control switch of the power window regulator master switch ASSY.

Result

| Result | Go to |
|---|---|
| If door lock operates properly | A |

| Result | Go to |
|---|---|
| If door lock does not operate properly | B |

B → To "Electric door lock system (Symptom table)" (Refer to DL - 9)

A

| 2 | Key warning sound check |
|---|---|

(1) Check to ensure that the key warning buzzer properly operates. (Refer to DL - 86)

Result

| Result | Go to |
|---|---|
| If key warning buzzer properly operates | A |
| If key warning buzzer does not operate properly | B |

NOTE:
Check if the unlock warning switch circuit is normal.

B → To "Key warning system (Symptom table)" (Refer to DL - 86)

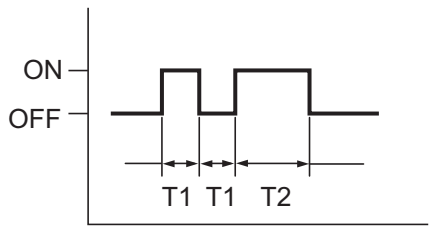
A

| 3 | Transfer to self diagnosis mode |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Turn the ignition switch to ON.
(4) Use SSM4 to select [Each System Check] →[Body Control] →[Active Test].
NOTE:
- If a completion request is issued from SSM4, the system shifts to the normal mode.
- During the self diagnosis mode, no lock and unlock operations take place.

(5) Check that the system has transferred to the wireless diagnosis mode by monitoring the response output of room light illumination.
NOTE:
Check with the room light switch set to the "DOOR" position.

Interior Light Output:



T1: 0.25 seconds

T2: 0.5 seconds

Next

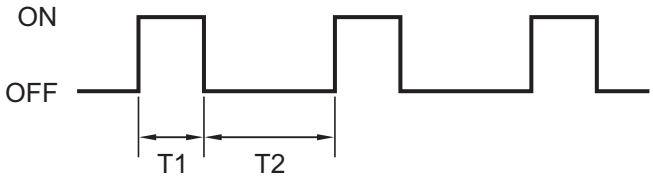
| | |
|---|---|
| 4 | Check by self diagnosis mode |

(1) Check the diagnosis output when holding down the door control transmitter switch continuously.
NOTE:
Check the diagnosis output by the room light output.

Interior Light and Wireless Door Lock Buzzer*1 Output:

Normal Wave

(LOCK / UNLOCK / TRUNK OPEN / PANIC*2 Switch):



T1: 0.25 seconds (Interior Light)

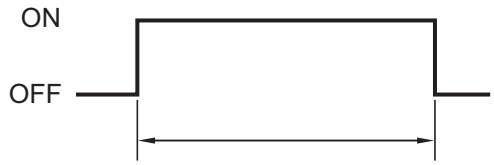
0.125 seconds (Wireless Door Lock Buzzer)*1

T2: 0.5 seconds (Interior Light)

0.25 seconds (Wireless Door Lock Buzzer)*1

*1: w/ Wireless Door Lock Buzzer Answer-back Function

Unmatching Recognition Code:



Wave is being received

| |
|---|
| Replacement of the main body ECM (network gateway computer) (Refer to PD - 25) |

| 5 | Identification code registration |
|---|---|

(1) Check that the registration rewrite mode or addition mode can be entered and a code can be registered. (For identification code registration, refer to DL - 97)

NG → Replacement of door control transmitter module set (Refer to DL - 96)

OK

Complete (Perform function check)

DL

| 6 | Check by self diagnosis mode |
|---|---|

(1) Check if the diagnosis result of unmatched identification code is output when continuously holding down the switch of a new or normal door control transmitter for a vehicle of the same model.

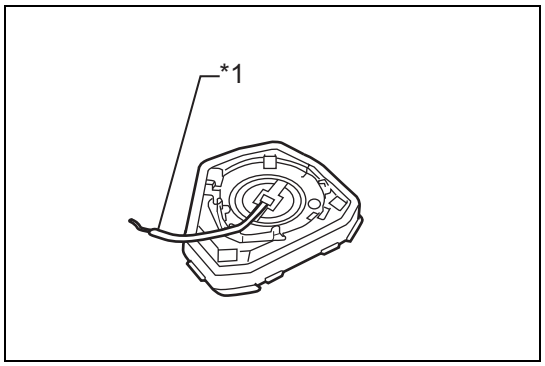
Result

| Result | Go to |
|---|---|
| Output | A |
| Not output | B |

B → Go to Step 10.

A

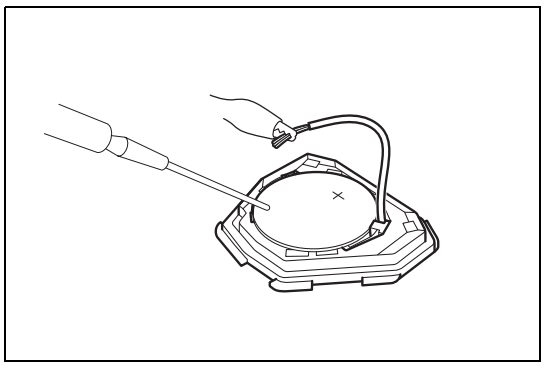
| 7 | Check of transmitter battery voltage |
|---|---|



(1) Remove the battery from the inoperative door control transmitter and attach a lead wire (0.6 mm or less including insulator) to the negative terminal using an adhesive tape.
NOTE:
Do not wind the lead wire around the terminal, pinch it, or solder it. The terminal may be deformed or damaged, and the battery may no longer fit into the transmitter.

Captions in illustration

| | |
|---|---|
| *1 | Lead wire |



(2) While ensuring that the lead wire is pulled out from the position shown in the figure, check the voltage of the transmitter battery that has been removed.
NOTE:
When measuring the battery voltage, identify the lowest voltage while operating either the lock or unlock switch of the door control transmitter.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Transmitter battery positive - Transmitter battery negative | Always | 2.5 to 3.2 V |

NG → Go to Step 8.

OK

Replacement of door control transmitter module set (Refer to DL - 96)

**8** Transmitter battery replacement

Replace the transmitter battery with a new part. (Refer to DL - 94)

Next

**9** Check by self diagnosis mode

(1) Check the diagnosis output when holding down the door control transmitter switch continuously.

Result

| Result | Go to |
|---|---|
| Normal radio wave is received | A |
| Unmatching identification code or no diagnosis result | B |

B → Replacement of door control transmitter module set (Refer to DL - 96)

A

Complete (transmitter battery trouble)

**10** Radio wave environment check

(1) Bring the door control transmitter close to the door control receiver. Check the operation by performing wireless operations. (For the door control receiver position, refer to DL - 43)
NOTE:
The door control receiver located close to the door control receiver is less susceptible to external radio waves. Therefore, you can check if the symptom is caused by external radio waves.

Result

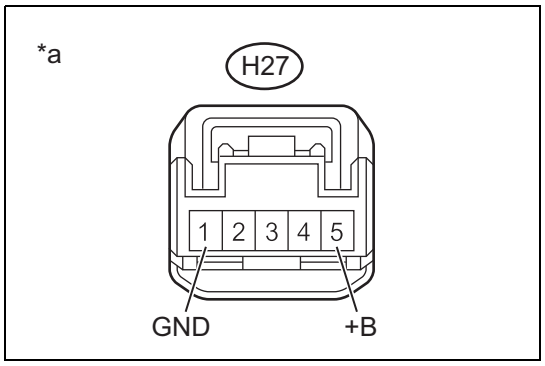
| Result | Go to |
|---|---|
| If wireless function does not operate properly | A |
| If wireless function operates properly | B |

NOTE:
If the operation is found normal by the check result, it is possible that the symptom is caused by external radio waves and the output reduction of the door control transmitter. (If the system does not operate only in a particular place or time zone, it is possible that the symptom is caused by external radio waves.) In addition, because there is possibility that the system is affected by external radio waves from dealer installed parts, remove such parts if any before checking the operation.

B → Influence by external radio wave (inside/outside vehicle)

A

| 11 | Door control receiver inspection (power, GND) |
|---|---|



(1) Disconnect the door control receiver connector H27.
(2) Measure the voltage and resistance between terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-5 (+B) - Chassis ground | Always | 11 to 14 V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-1 (GND) - Chassis ground | Always | Less than 1 Ω |

NG → Door control receiver replacement (Refer to DL - 111)

OK

| | |
|---|---|
| 13 | Inspection of wiring harness and connector (Door control receiver - Main body ECM (network gateway computer)) |

(1) Disconnect the connector D6 for the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-2 (RDA) - D6-7 (RDA) | Always | Less than 1 Ω |
| H27-3 (PRG) - D6-6 (PRG) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H27-2 (RDA) - Chassis ground | Always | 10 kΩ or more |
| H27-3 (PRG) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| | |
|---|---|
| 14 | Replacement with normal door control receiver |

(1) Replace with a new or normal door control receiver. (Refer to DL - 111)

Next

| | |
|---|---|
| 15 | Identification code registration |

(1) Check that the registration rewrite mode or addition mode can be entered and a code can be registered. (For identification code registration, refer to DL - 97)

NG → Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

OK

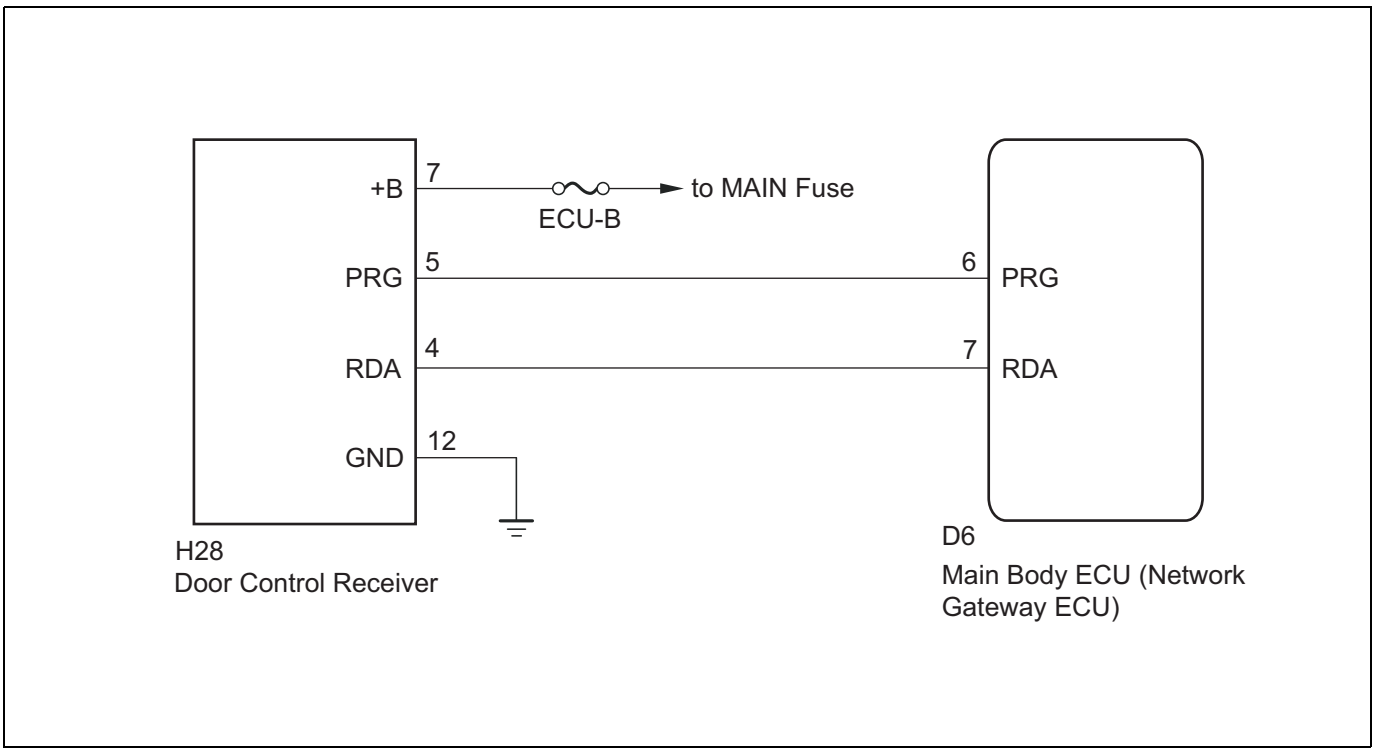
Complete (door control receiver trouble)

## Only wireless function does not work (with TPMS)

Circuit description

The door control receiver receives signals from the transmitter and transmits them to the main body ECM (multiplex network body computer). The main body ECM (multiplex network body computer) controls all doors by transmitting lock and unlock signals to each door.

Circuit figure



DL

Inspection steps

CAUTION:

Before performing the following inspection steps, check the fuses related to this system.

| | |
|---|---|
| 1 | Check the power door lock operation. |

(1) Check if the locked door is unlocked when operating the door control switch of the power window regulator master switch ASSY. (Refer to DL - 7)

Criteria: Locked door is unlocked

NG → Refer to the power door lock control system (refer to DL - 7)

OK

| | |
|---|---|
| 2 | Inspection of key warning system |

(1) Check that the key warning buzzer operates properly. (Refer to DL - 85)

Criteria: The key warning buzzer operates properly

NG → To key warning system (Refer to DL - 85)

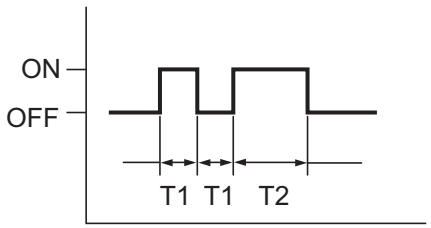
OK

| | |
|---|---|
| 3 | Transfer to self diagnosis mode |

(1) Transfer to the self diagnosis mode by operating the ignition key cylinder.
   (a) Insert the key in the ignition key cylinder and remove it.
   (b) Insert the key in the ignition key cylinder within 5 seconds after removing it, and turn the ignition switch from ON to OFF once. (End at OFF)
   (c) Within 30 seconds after turning the ignition switch to OFF, perform the following step nine times: Turn ignition switch to ON, then OFF. (End at OFF)
   (d) Enter the following menus: Body / Main Body / Utility / Wireless Door Lock Diagnosis Mode
   CAUTION:
   If the transfer to self diagnosis mode fails, the system returns to the normal mode.
   NOTE:
   After finishing the above operation, turn the ignition switch to ON. The self diagnosis mode ends.

(2) Confirm that the system has transferred to the self diagnosis mode by checking the room light output pattern.

Interior Light Output:

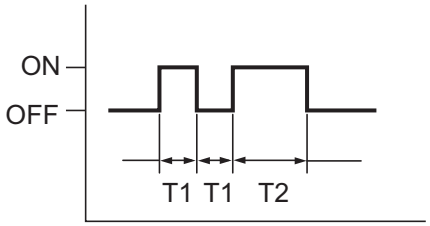


T1: 0.25 seconds

T2: 0.5 seconds

DL

Wireless Door Lock Buzzer Output:



T1: 0.125 seconds

T2: 0.5 seconds

(3) Confirm that the system has transferred to the self diagnosis mode by checking the wireless door lock buzzer output pattern.

Criteria: The blinking pattern is the same as the illustration to the left

DL

Next

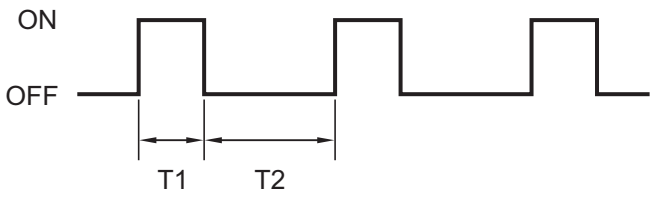
| 4 | Check in self diagnosis mode |
|---|---|

(1) Check the diagnosis output when a switch of the door control transmitter module set SUB-ASSY is pressed. The diagnosis output can be checked by the room light and wireless door lock buzzer pattern.

Interior Light and Wireless Door Lock Buzzer Output:

Normal Wave

(LOCK / UNLOCK / TRUNK OPEN / PANIC Switch):



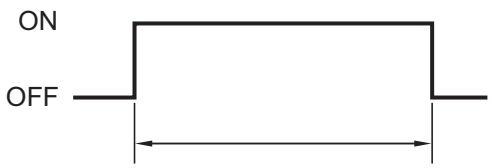
T1: 0.25 seconds (Interior Light)

0.125 seconds (Wireless Door Lock Buzzer)

T2: 0.5 seconds (Interior Light)

0.25 seconds (Wireless Door Lock Buzzer)

Unmatching Recognition Code:



Wave is being received

No Diagnostic Output:

SL-02279

Result

| Result | Go to |
|---|---|
| The normal patterns (light blinking pattern and buzzer sounding pattern) are output. | A |
| Nonconforming recognition code is output. | B |
| No diagnosis output | C |

B → Go to Step 5.

C → Go to Step 6.

A

Replacement of the main body ECM (multiplex network body ECM)

| 5 | Register the recognition code |
|---|---|

(1) Confirm that the system can transfer to the rewrite mode or addition mode and a recognition code can be registered.
Criteria: Recognition code can be registered

NG → Replace the transmitter SUB ASSY module set door control

OK

Complete

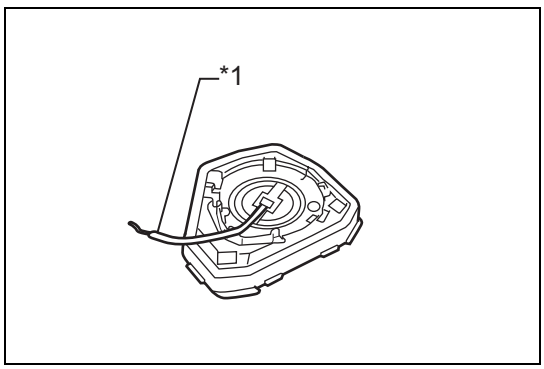
| 6 | Checking response of door control receiver |
|---|---|

(1) Procure a door control transmitter from another vehicle.
(2) Press and hold the door control transmitter switch.
(3) Confirm that a nonconforming recognition code is output.
Criteria: Nonconforming recognition code is output.

NG → Go to Step 10.

OK

| 7 | Performing unit inspection of transmitter battery (voltage) |
|---|---|



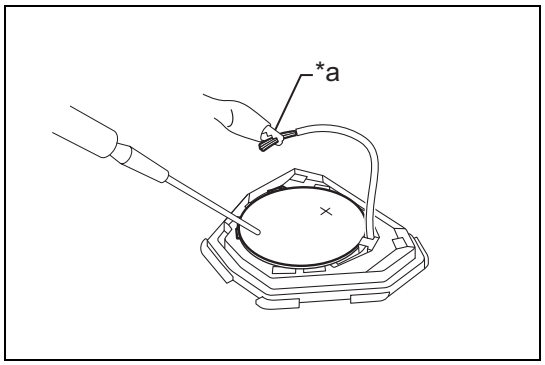
(1) Remove the battery from the inoperative door control transmitter module. Attach a lead wire (0.6 mm {0.0236 in} or less including insulator) to the negative terminal using an adhesive tape.
CAUTION:
Do not wind the lead wire around the terminal. Instead, put it into a gap on the terminal or solder it. If you wind the lead wire around the terminal, the terminal may be deformed or damaged, and the battery may no longer fit into the transmitter.

Captions in illustration

| | |
|---|---|
| *1 | Lead wire |

(2) Carefully pull the lead wire out from the position shown in the figure, and insert the previously removed transmitter battery.

CAUTION:
When replacing the transmitter battery, it is necessary to remove any static electricity charged in your body before starting the work. A recommendable method for preventing damage to the door control transmitter is to touch the vehicle body.



(3) Measure the voltage according to the following table.
NOTE:
When measuring the battery voltage, press any of the transmitter switches.

Voltage

| Tester connection | Switch conditions | Specified condition |
|---|---|---|
| Battery (+) - Battery (-) | Always | 2.5 to 3.2V |

Captions in illustration

| | |
|---|---|
| *a | GND |

NG → Go to Step 8.

OK

Replace the transmitter SUB ASSY module set door control (Refer to DL - 96)

| 8 | Replacing transmitter battery |
|---|---|

Replace the transmitter battery. (Refer to DL - 94)

Next

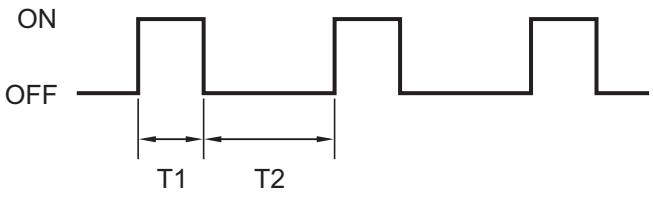
| 9 | Check in self diagnosis mode |
|---|---|

(1) Check the diagnosis output when a switch of the door control transmitter module set SUB-ASSY is pressed. The diagnosis output can be checked by the room light blinking pattern and wireless door lock buzzer pattern.

Interior Light and Wireless Door Lock Buzzer Output:

Normal Wave

(LOCK / UNLOCK / TRUNK OPEN / PANIC Switch):



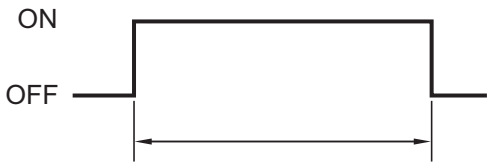
T1: 0.25 seconds (Interior Light)

0.125 seconds (Wireless Door Lock Buzzer)

T2: 0.5 seconds (Interior Light)

0.25 seconds (Wireless Door Lock Buzzer)

Unmatching Recognition Code:



Wave is being received

No Diagnostic Output:

SL-02279

Result

| Result | Go to |
|---|---|
| The normal patterns (light blinking pattern and buzzer sounding pattern) are output. | A |
| Nonconforming recognition code is output. | B |
| No diagnosis output | |

B → Replace the transmitter SUB ASSY module set door control

A

Complete (transmitter battery trouble)

| 10 | Checking radio wave environment |
|---|---|

(1) Bring the door control transmitter close to the door control receiver and check the wireless operations.

Result

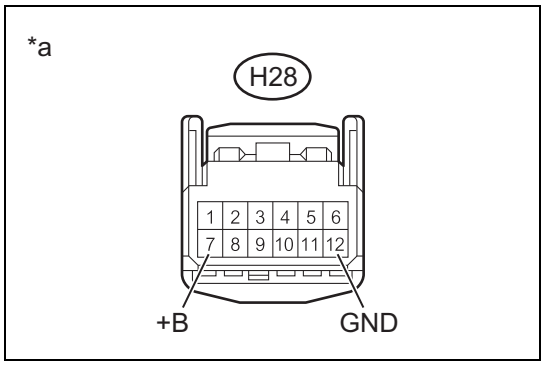
| Result | Go to |
|---|---|
| If wireless function does not operate properly | A |
| If wireless function operates properly | B |

NOTE:
- When the transmitter is brought close to the door control receiver, the possibility of radio disturbance is lowered. This offers an opportunity to determine if the symptom is caused by radio disturbance.
- If the symptom occurs only in a particular place or time zone, it is possible that the symptom is caused by radio disturbance. In addition, installing an additional component to the vehicle makes the vehicle more susceptible to interference from external radio waves. If such components are found, remove them, and then proceed to check the operation.

B → Interference from external radio waves

A

| 11 | Inspecting door control receiver (power, ground) |
|---|---|



(1) Disconnect the door control receiver connector H28.
(2) Measure the resistance and voltage based on the following table.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H28-7 - chassis ground | Always | 11 to 14V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H28-12 - chassis ground | Always | 1 Ωor less |

| 14 | Replacing the door control receiver |

(1) Temporarily replace the door control receiver with a new or normally functioning one. (Refer to DL - 111)

Next

| | |
|---|---|
| 15 | Register the recognition code |

(1) Execute the registration procedure. (Refer to DL - 97)

Next

| | |
|---|---|
| 16 | Inspecting door control receiver (operation) |

(1) Check that doors are locked and unlocked using the lock and unlock switches of the transmitter.
Criteria: Doors can be locked and unlocked by transmitter.

NG → Replace the main body ECM (multiplex network body ECM)

OK

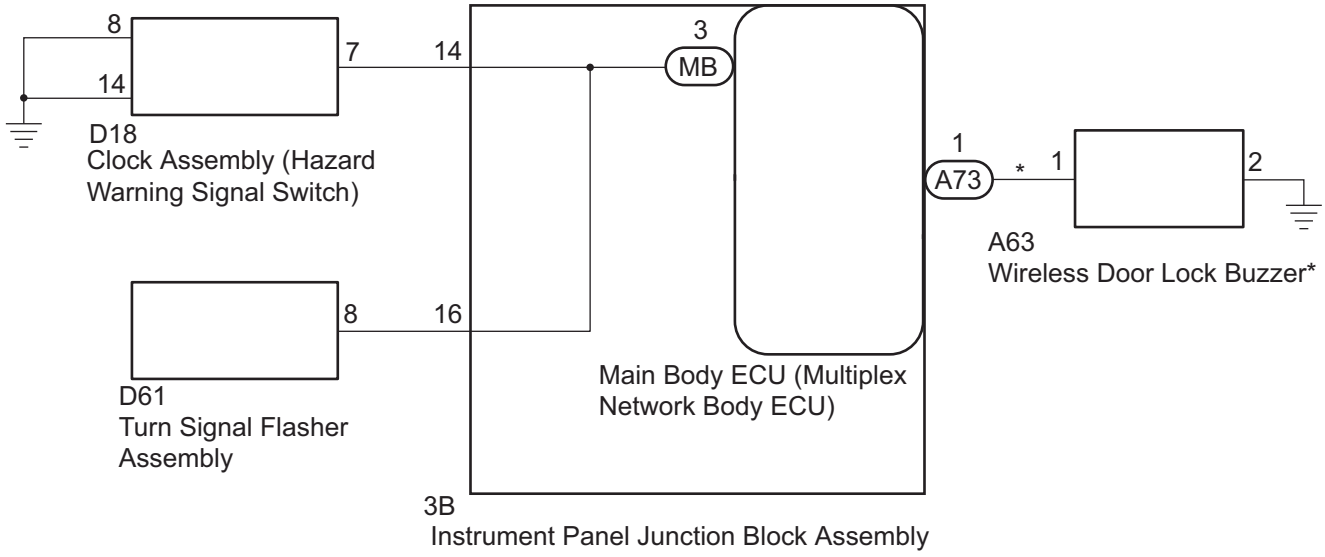
Complete (door control receiver trouble)

## Answer-back function does not work

Circuit description

In some cases, the hazard warning light and/or the wireless door lock buzzer answer-back function * may not operate even though the wireless door lock control function is normal. In such a case, there may be a fault in the hazard warning light and the wireless door lock buzzer signal output of the main body ECM (multiplex network body ECM).

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Reading values with SSM4 (answer-back operation) |

(1) Connect the SSM4 to the DLC3.
(2) Turn IG SW to ON.
(3) Turn on the SSM4.
(4) Enter the following menu. [Body Control] →[Customize]
(5) Referring to the table below, perform settings.

| Display | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Hazard Answer Back] | ON | When a door is locked by wireless operation, the hazard warning lights flash once. When a door is unlocked by wireless operation, the hazard warning lights flash twice. | OFF or ON | Main body ECM (multiplex network body ECM) |
| [Wireless Buzzer Resp] | ON | Wireless door lock buzzer response | OFF or ON | Main body ECM (multiplex network body ECM) |
| [Wireless Buzzer Volume] | Level 5 | Wireless door lock buzzer volume | Level 7, Level 6, Level 5, Level 4, Level 3, Level 2, Level 1, or Level 0 | Main body ECM (multiplex network body ECM) |

| Wireless door lock buzzer turns ON/OFF. | B |

B → Replacement of the main body ECM (multiplex network body ECM)

A

**5** Inspecting wiring harness and connector (wireless door lock buzzer - main body ECM)

(1) Disconnect the wireless door lock buzzer connector A63.
(2) Disconnect the connector A73 of the main body ECM (multiplex network body ECM).
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A63-1 - A73-1 | Always | 1 Ωor less |
| A63-2 - Chassis ground | Always | 1 Ωor less |
| A63-1 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

**6** Replacing wireless door lock buzzer

(1) Temporarily replace the wireless door lock buzzer with a new one. (Refer to DL - 96)

Next

**7** Checking wireless door lock buzzer operation

(1) Check the wireless answer-back function operation.
Criteria: The wireless answer-back function operates properly

NG → Replacement of the main body ECM (multiplex network body ECM)

OK

Complete (Wireless door lock buzzer is faulty)

**8** Hazard warning light operation

(1) Check that the hazard warning light blinks when the hazard warning switch is pressed.
Criteria: Hazard warning light signal is normal

NG → Refer to the lighting system (Symptom table)

OK

Replacement of the main body ECM (multiplex network body ECM)

# Key warning system

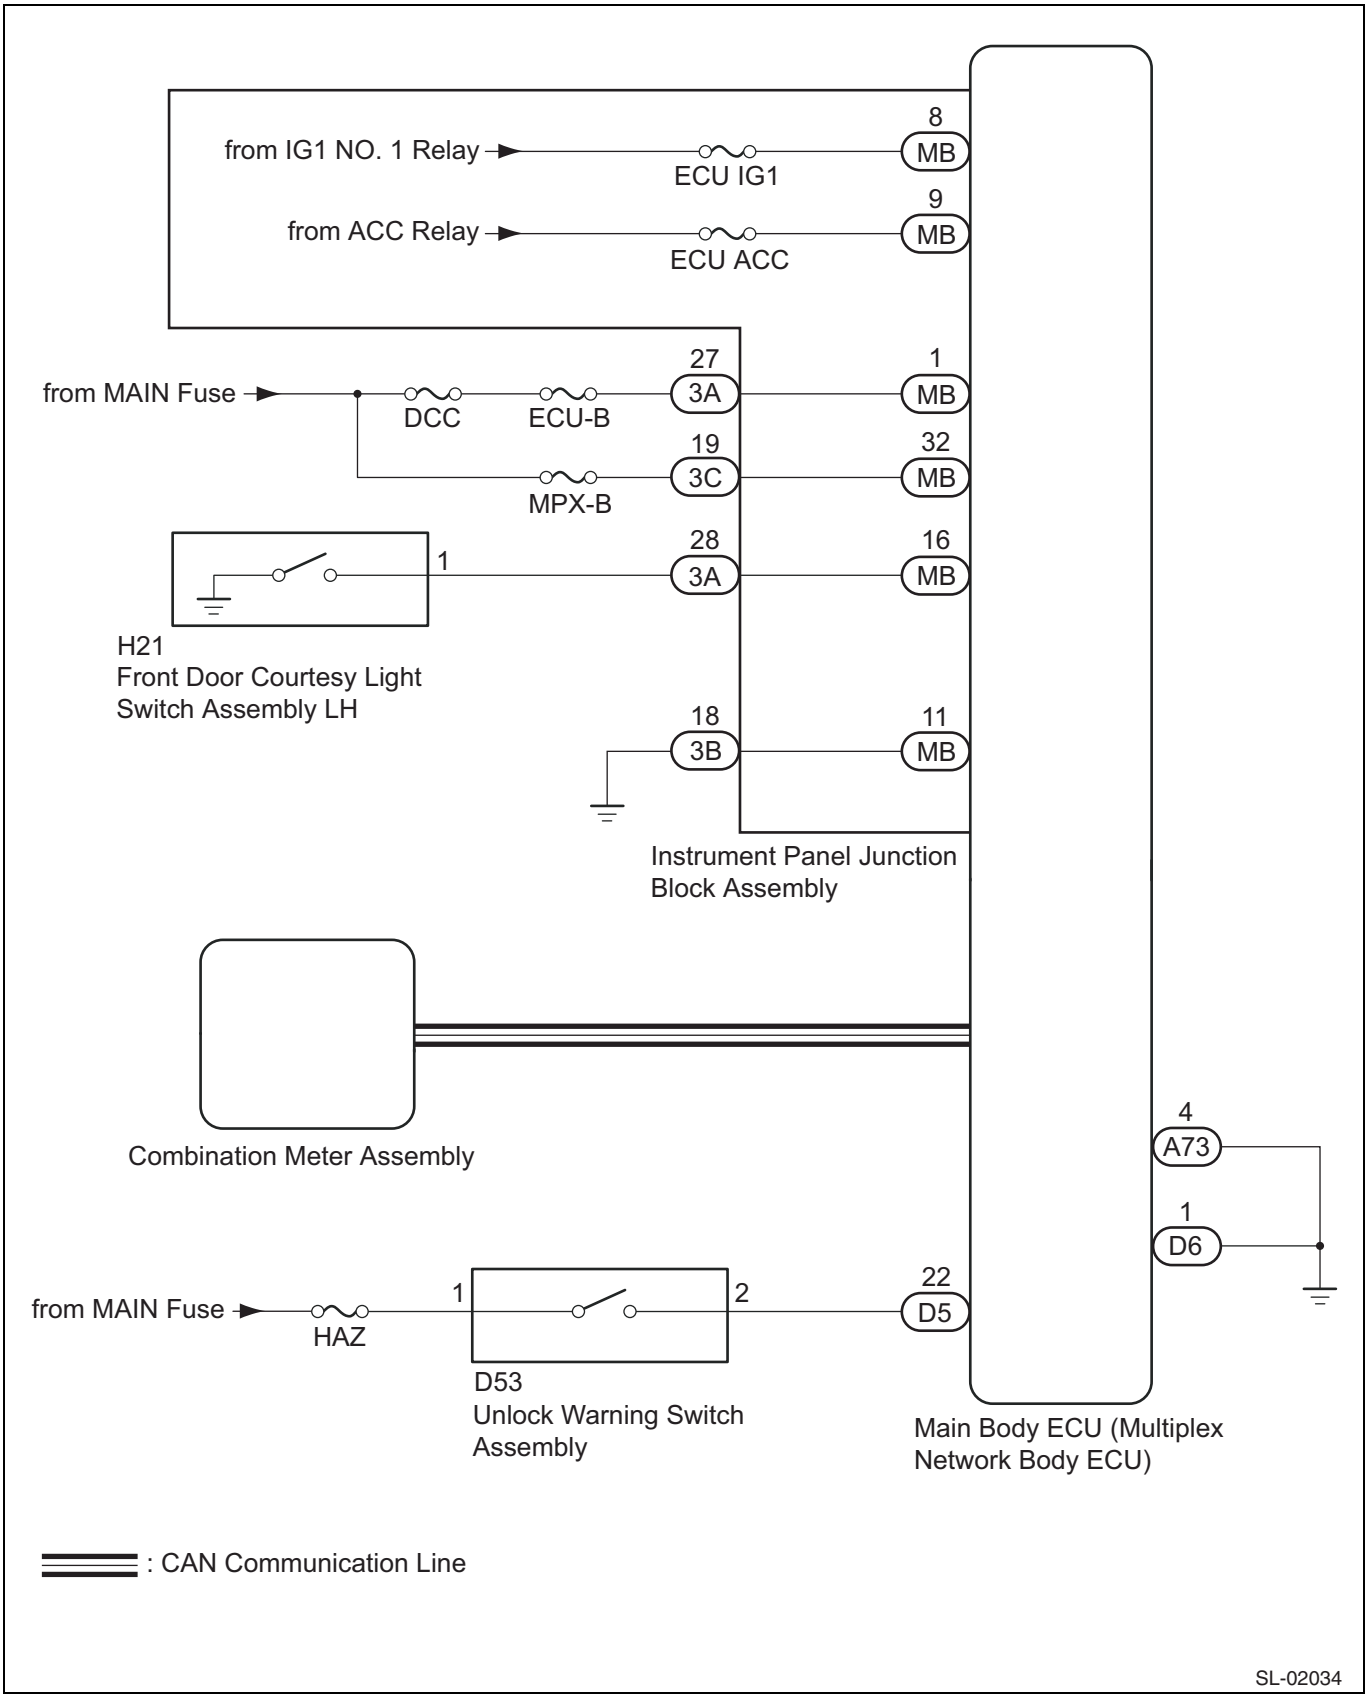
## SYSTEM DIAGRAM



## Description of functions

1. Details of key warning system
   (1) If the driver's door is opened with the ignition key at ACC or lock position, the key warning buzzer sounds to alert the driver to the key left inserted.

## How to troubleshoot

NOTE:

- Using the following procedures, perform the key warning system troubleshooting.
- *: Use the SSM4.

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Check battery voltage |

(1) Inspect the battery voltage.
Standard voltage: 11 to 14V
NOTE:
If the voltage is 11 V or less, charge or replace the battery before proceeding to a next step.

Next

| | |

Complete

## Operation check

1. Function inspection
   (1) Check that the key warning buzzer sounds.
   (a)Insert a key in the ignition key cylinder with the driver's door closed and turn the key to the lock position or ACC.
   (b)Check that the buzzer sounds periodically when the driver's door is opened.
   (2) Check that the key warning buzzer stops sounding.
   (a)Check that the buzzer stops sounding if the following operations are performed while the buzzer is sounding:
   - Driver's door is closed. (Front door courtesy light switch is OFF)
   - Turn IG SW to ON.
   - Remove the key from the ignition key cylinder.

## customize function

1. Customization of key warning system
   (1) Customization via SSM4
   CAUTION:
   - When a customer requests a function change, check if the function is customizable.
   - Before starting customization, record the current settings.
   - Before performing the troubleshooting procedure for a function, check that the function is set to the initial settings.

   NOTE:
   The items below are customizable.
   (a)Connect the SSM4 to the DLC3.
   (b)Turn IG SW to ON.
   (c)Turn on the SSM4.
   (d)Enter the following menu. [Body Control] →[Customize]
   (e)Referring to the table below, perform settings.

Warning

| Display name | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Key Remind Sound] | Normal | Function to change the cycle of the key warning buzzer. | Normal, slow, fast | Combination meter ASSY |

## Symptom table

NOTE:

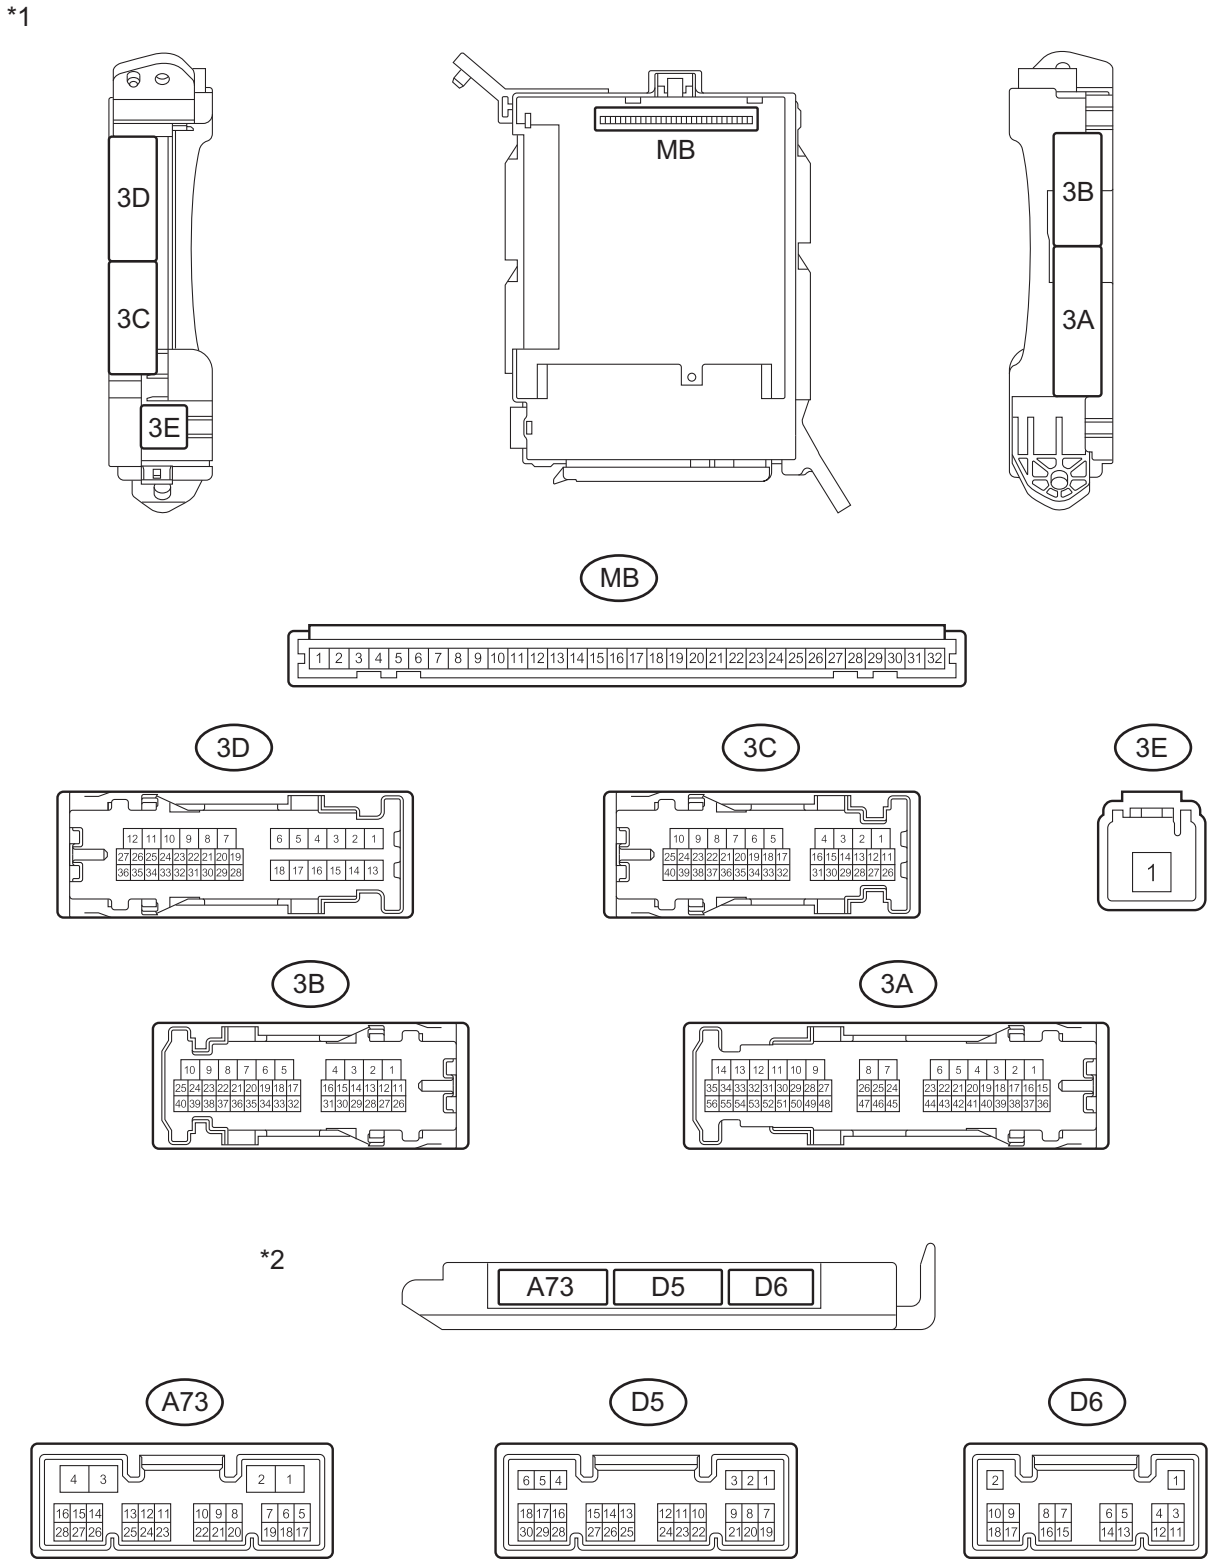
- Use the following table to identify the cause of the symptom. If multiple areas are listed as the causes, they are indicated in the [Faulty part] column according to the order of probability of causing the symptom. Check the possible causal areas in the list order and confirm each symptom. Replace faulty parts as necessary.
- Before inspecting the areas listed in "Possible cause" below, check the fuses and the relays related to this system.

Key warning system

| Symptoms | Faulty part | Reference pages |
|---|---|---|
| Key reminder buzzer does not sound | Proceed to "Key reminder buzzer does not sound" | DL - 89 |

## ECM terminal arrangement

1. Check the instrument panel junction block ASSY and the main body ECM (multiplex network body ECM).



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (multiplex network body ECM) |

(1) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.

(2) Disconnect the connectors D5, D6, and A73 of the main body ECM (multiplex network body ECM).
(3) Measure the voltage and resistance according to the following table.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| MB-1 - chassis ground | Battery power supply | Always | 11 to 14 V |
| MB-8 - chassis ground | IG SW power supply | IG SW ON | 11 to 14 V |
| | | IG SW OFF | 1 V or less |
| MB-9 - chassis ground | ACC power supply | IG SW ACC | 11 to 14 V |
| | | IG SW OFF | 1 V or less |
| MB-11 - chassis ground | Ground | Always | 1 Ωor less |
| MB-32 - chassis ground | Battery power supply | Always | 11 to 14 V |
| D5-22 - chassis ground | Unlock warning switch input | Key is not inserted in ignition key cylinder (OFF) | 1 V or less |
| | | Key is inserted to the ignition key cylinder (ON). | 11 to 14 V |
| D6-1 - Chassis ground | Ground | Always | 1 Ωor less |
| A73-4 - chassis ground | Ground | Always | 1 Ωor less |

DL

(4) Reconnect the connector D5, D6, and A73 of the main body ECM (multiplex network body ECM).
(5) Install the main body ECM (multiplex network body ECM) to the instrument panel junction block ASSY.
(6) Measure the voltages and pulses according to the values indicated in the table below.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| 3A-28 - chassis ground | Driver's side courtesy light switch | Driver's door is open. | 1 V or less |
| | | Driver's door is closed | Pulse generation |

## Data monitor / active test

1. Read data list

CAUTION:
The values indicated under the normal conditions in the table below are informative values. Do not depend on reference value only when judging if the part is faulty.
NOTE:
By using the SSM4 for reading the data list, it is able to read the values and the status of the switches, sensors, or actuators without removing these parts. This inspection is very useful because it allows an operator to read any intermittent conditions or signals without disturbing parts or wiring. Diagnostic time can be saved by reading the data monitor information at the initial stage of the troubleshooting.

(1) Turn IG SW to OFF.
(2) Connect the SSM4 to the DLC3.
(3) Turn IG SW to ON.
(4) Turn on the SSM4.
(5) Enter the following menu. [Body Control] →[Data monitor]
(6) Using SSM4, read the data list according to the screen displays.

Main body

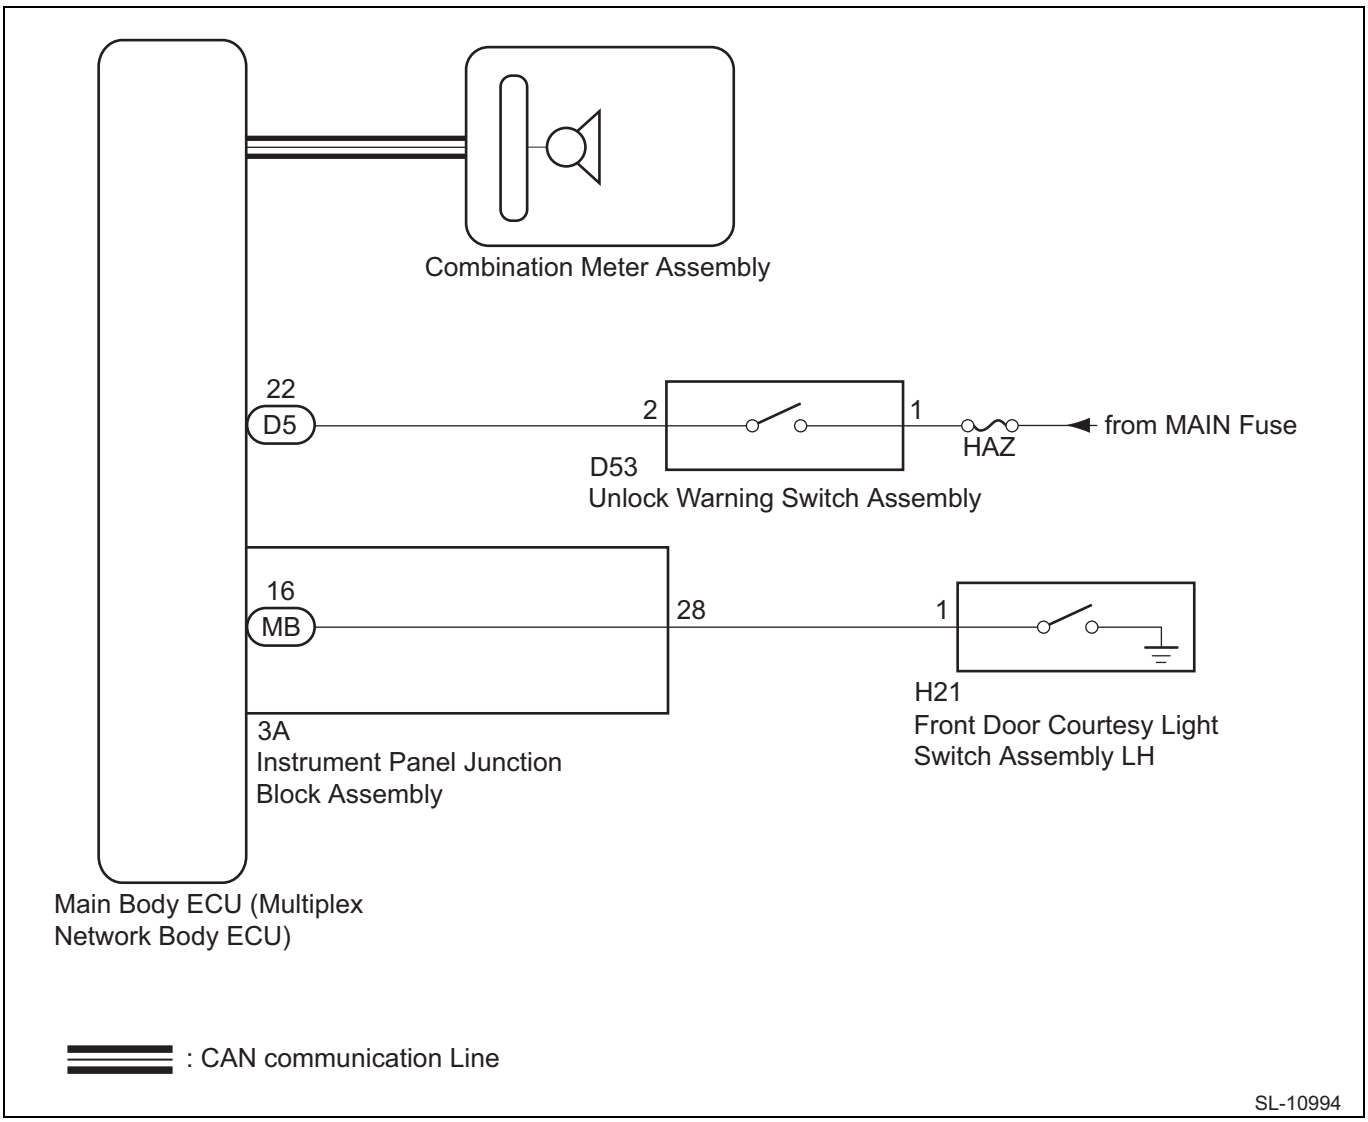
| Item Name | Description/display range | Normal condition | Remarks |
|---|---|---|---|
| [Ignition] | Ignition switch signal / ON or OFF | OFF:IG SW OFF<br>ON:IG SW ON | - |
| [ACC SW] | Ignition switch ACC signal / ON or OFF | OFF:IG SW OFF<br>ON:IG SW ACC | - |
| [Key Unlock Warning SW] | Unlock warning switch / OFF or ON | OFF: Ignition key is not inserted<br>ON: Ignition key is inserted | - |
| [D Door Courtesy] | Driver's door courtesy light switch signal / ON or OFF | ON: Driver's door is open<br>OFF: Driver's door is closed | - |

## Key reminder buzzer does not sound

Description of functions

If the driver's door is opened while the ignition switch is set at the lock position or ACC, the key reminder warning buzzer sounds. When the main body ECM (multiplex network body computer) transmits a key switch signal and driver's courtesy light switch signal to the combination meter ASSY, the key reminder warning buzzer operates.

Circuit figure



Inspection steps

NOTE:

Because the key warning system includes functions that use CAN communication, first check if any problem is present in the CAN communication function according to "How to troubleshoot". Next, perform the following troubleshooting procedure.

| | |
|---|---|
| 1 | Reading values with SSM4 (front door courtesy light switch) |

(1) Connect the SSM4 to the DLC3.
(2) Turn IG SW to ON.
(3) Turn on the SSM4.
(4) Enter the following menu. [Body Control] →[Data monitor]
(5) Using SSM4, read the data list according to the screen displays.

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [D Door Courtesy] | Driver's door courtesy light switch signal / ON or OFF | ON: Driver's door is open<br>OFF: Driver's door is closed | - |

Criteria: When the unlock warning switch is operated, the display is changed as indicated in the table

NG → To Lighting system (Door courtesy light switch circuit) (Refer to LI - 25)

OK

| 2 | Reading values with SSM4 (key unlock warning switch) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn IG SW to ON.
(3) Turn on the SSM4.
(4) Enter the following menu. [Body Control] →[Data monitor]
(5) Using SSM4, read the data list according to the screen displays.

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Key Unlock Warning SW] | Unlock warning switch signal / OFF or ON | OFF: Ignition key is not inserted<br>ON: Ignition key is inserted | - |

Criteria: When the unlock warning switch is operated, the display is changed as indicated in the table.

NG → Go to Step 4.

OK

| 3 | Inspecting combination meter ASSY (buzzer operation) |
|---|---|

(1) Remove the key from the key cylinder, turn the light control switch for headlight dimmer switch ASSY to the tail position, and open the driver's door.
Criteria: The light warning buzzer sounds
NOTE:
The key warning system sounds the buzzer integrated in the combination meter and activates the lockout prevention function. This buzzer is also used for the light warning system. Therefore, check that the combination meter buzzer operates to alert the user to the light left illuminated.

NG → Replace the combination meter ASSY

OK

Replacement of the main body ECM (multiplex network body ECM)

| 4 | Inspecting unlock warning switch ASSY |
|---|---|

(1) Remove the unlock warning switch ASSY. (Refer to DL - 98)

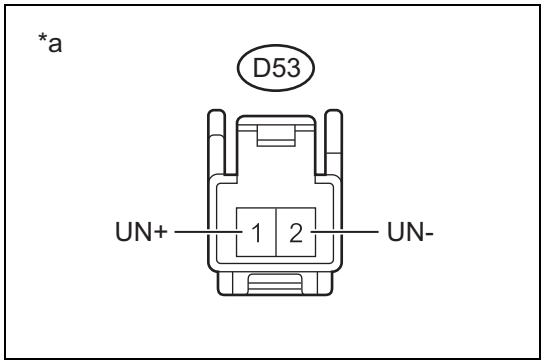
(2) Inspect the unlock warning switch ASSY. (Refer to DL - 99)

NG → Replace the unlock warning switch ASSY (Refer to DL - 98)

OK

| 5 | Inspecting wiring harness and connector (main body ECM - unlock warning switch) |
|---|---|

(1) Disconnect the unlock warning switch ASSY connector D53.
(2) Disconnect the main body ECM (multiplex network body ECM) connector D5.



(3) Measure the voltage and resistance according to the following table.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D53-1 - Chassis ground | Always | 11 to 14V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D53-2 - D5-22 | Always | 1 Ωor less |
| D53-2 - Chassis ground | Always | 10 kΩ or more |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (To unlock warning switch ASSY) |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (multiplex network body ECM)

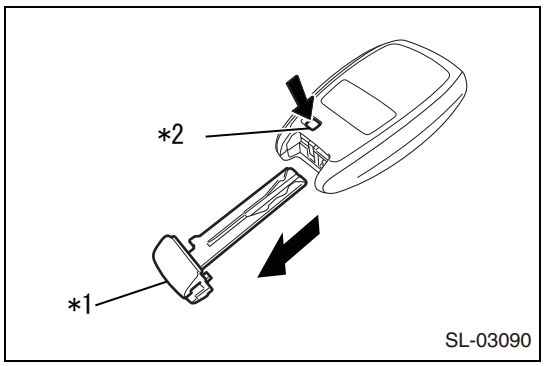
# Transmitter battery (with smart entry)

## Replacement

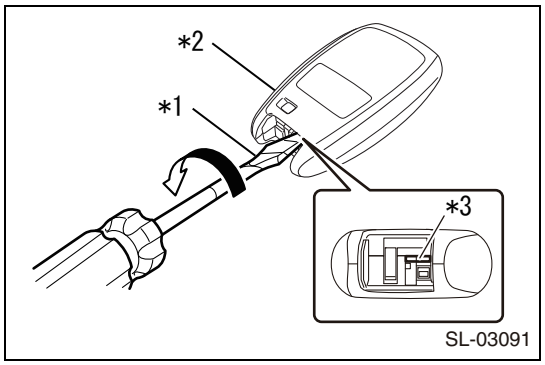


SL-03090

1. Removal of transmitter battery
   (1) Push the release button and remove the emergency key.

Captions in illustration

| | |
|---|---|
| *1 | Emergency key |
| *2 | Release button |



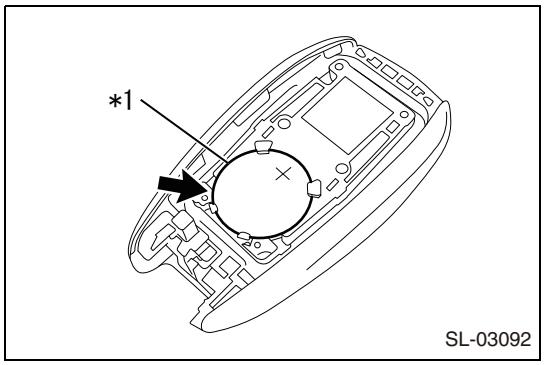
SL-03091

(2) Using a flat tip screwdriver wrapped with protective tape, remove the transmitter cover.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | Transmitter cover |
| *3 | Slit |

CAUTION:
Do not pry the cover excessively.



SL-03092

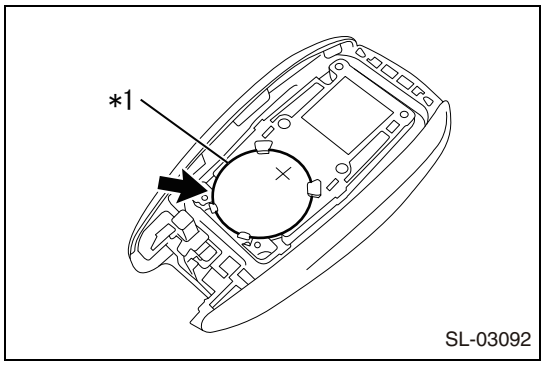
(3) Using a flat tip screwdriver wrapped with protective tape, remove the transmitter battery (lithium battery).

Captions in illustration

| | |
|---|---|
| *1 | Transmitter battery (lithium battery) |

CAUTION:
- Do not press the terminal by a finger.
- If you pry the transmitter battery (lithium battery) excessively, the terminal is deformed.
- Before replacing the transmitter battery (lithium battery), touch the vehicle body to discharge static electricity carried on your body so that the electronic key is not damaged by static electricity.

2. Installation of transmitter battery
   (1) Install the transmitter battery (lithium battery) as shown in the figure.



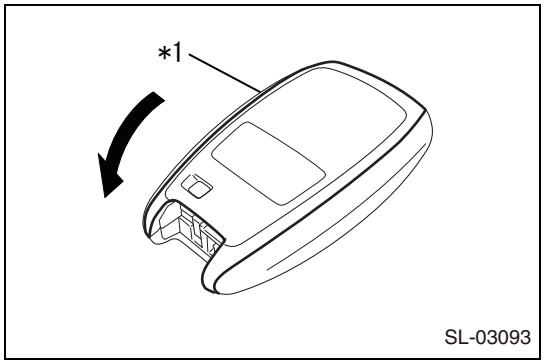
SL-03092

Captions in illustration

| | |
|---|---|
| *1 | Transmitter battery (lithium battery) |

CAUTION:
- Face the positive side of the battery upward.
- Do not deform the terminal.
- Before replacing the transmitter battery,touch the vehicle body to discharge static electricity carried on your body so that the electronic key is not damaged by static electricity.

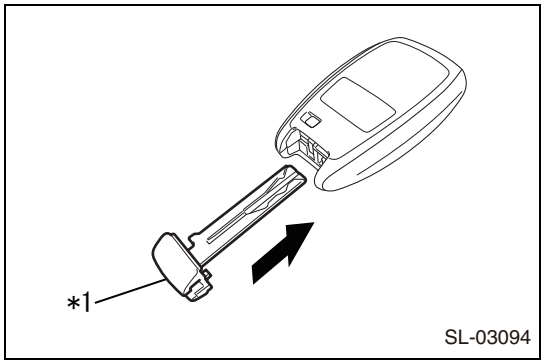
NOTE:
- If the terminal is contaminated, wipe it away with a soft cloth before installing the battery.
- Check that the terminal is not damaged and there is no foreign matters inside.



(2) Install the transmitter cover.

Captions in illustration

| | |
|---|---|
| *1 | Transmitter cover |



(3) Insert the emergency key.

Captions in illustration

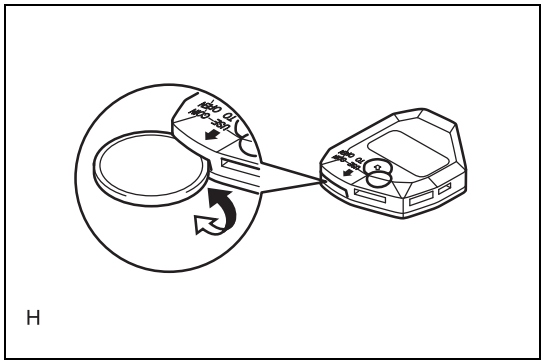
| | |
|---|---|
| *1 | Emergency key |

(4) After finishing assembly, check that LED illuminates when any switch is pressed.

# Transmitter battery (without smart entry)

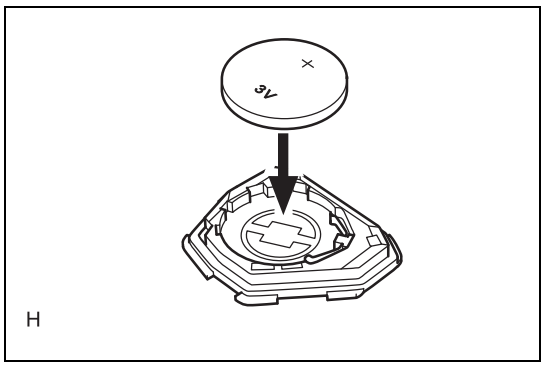
## Replacement

1. Removal of transmitter housing cover (Refer to DL - 96)
2. Removal of door control transmitter module set (Refer to DL - 96)



3. Removal of transmitter battery
   (1) Remove the cover using a coin or equivalent tool.

   (2) Remove the battery (lithium battery).
   CAUTION:
   - Do not press the terminal by a finger.
   - If you pry the battery (lithium battery) excessively, the terminal is deformed.
   - Before replacing the transmitter battery,touch the vehicle body to discharge static electricity carried on your body so that the electronic key is not damaged by static electricity.



4. Installation of transmitter battery
   (1) Install the battery (lithium battery).
   CAUTION:
   - Face the positive side of the battery upward.
   - Do not deform the terminal.
   - Before replacing the transmitter battery,touch the vehicle body to discharge static electricity carried on your body so that the electronic key is not damaged by static electricity.

   NOTE:
   - If the terminal is contaminated, wipe it away with a soft cloth before installing the battery.
   - Check that the terminal is not damaged and there is no foreign matters inside.

   (2) Install the cover.
   CAUTION:
   If the cover claws are not engaged securely, it causes poor contact between the battery (lithium battery) and the terminals.

5. Installation of door control transmitter module set (Refer to DL - 96)
6. Installation of transmitter housing cover (Refer to DL - 96)

# Door control transmitter (without smart entry)

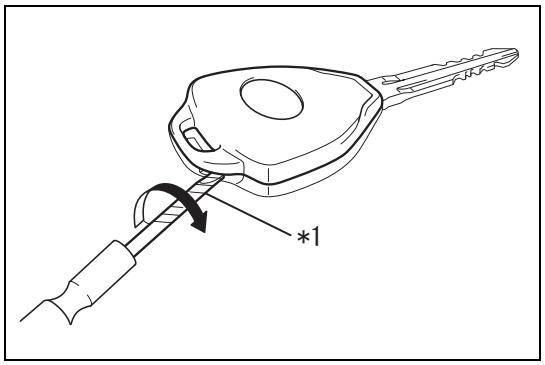
## Removal

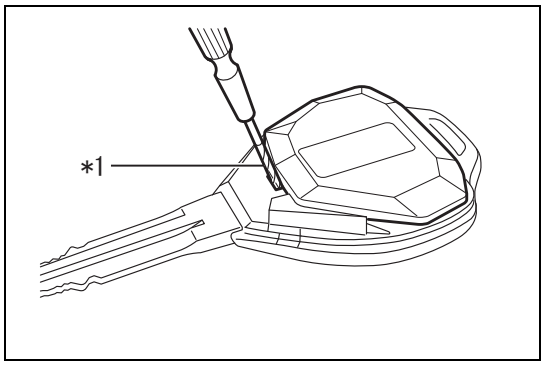


1. Removal of transmitter housing cover
   (1) Using a flat tip screwdriver wrapped with protective tape, remove the transmitter housing cover.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

CAUTION:
Do not pry the cover excessively.



2. Removal of door control transmitter module set
   (1) Remove the door control transmitter module set from the transmitter housing case.

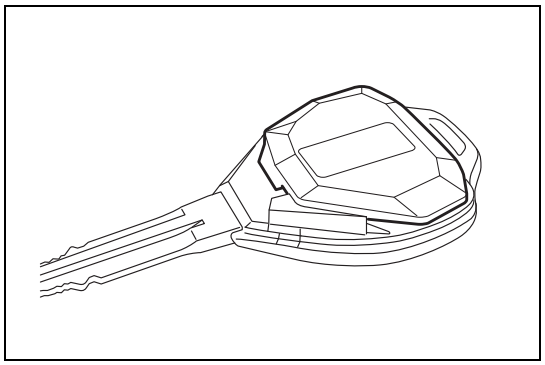
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

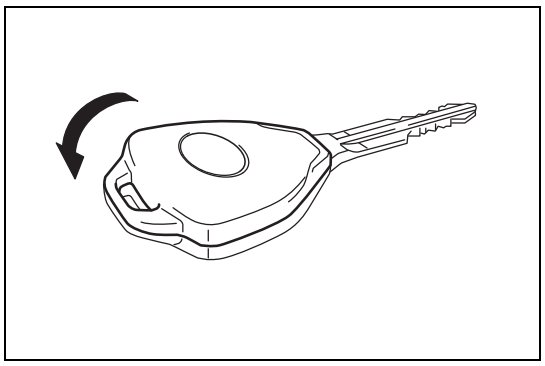
3. Removal of door control transmitter gasket
   (1) Remove the door control transmitter gasket
4. Removal of transmitter battery (Refer to DL - 94)

## Installation

1. Installation of transmitter battery (Refer to DL - 94)
2. Installation of door transmitter gasket
   (1) Install the door control transmitter gasket.



3. Installation of door control transmitter module set
   (1) Install the door control transmitter module set to the transmitter housing case.



4. Installation of transmitter housing cover
   (1) Install the transmitter housing cover to the transmitter housing case.
   (2) Check that the main body LED illuminates when any of the remote control switches is pressed.

## Registration settings

1. Keyless Transmitter ID registration

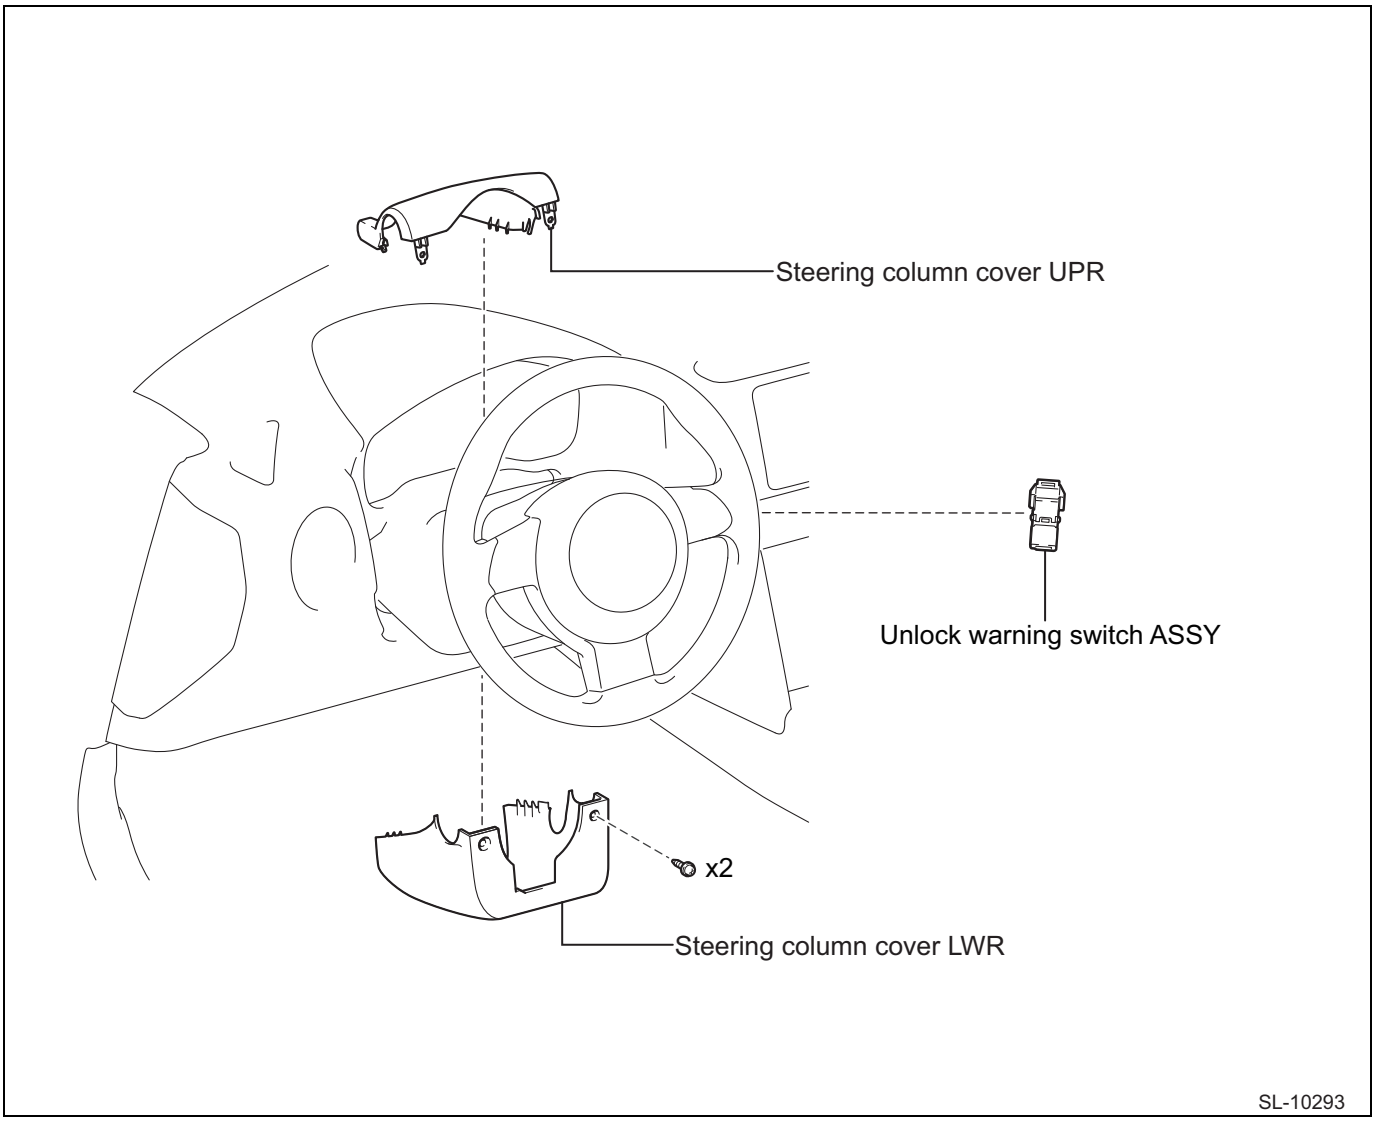
   NOTE:

   - The keyless ID Additional Registration is a mode to register new keyless remote transmitters additionally while keeping the existing registered codes. It is used to add a keyless remote transmitter. If the number of registered codes exceeds 6, the first registered code is erased.
   - The Keyless ID Rewrite is a mode to register only new keyless remote transmitters after first erasing all the existing registered codes. It is used to replace the remaining keyless remote transmitter codes and keep only the one currently inserted in the ignition.
   - The readout The Number of Keyless ID Registration is a mode to confirm how many keyless remote transmitters are registered. It is used to check the number of registered codes before additional registration.

   (1) Turn the ignition switch to ON with the key that includes the remote which you would like to register.
   (2) Turn SSM4 on.
   (3) Enter following menus: [Inspection BRZ]/[Each System Check]/[Keyless Unit Mode]/[Work Support]/[Keyless ID registration]
   (4) Keyless ID registration.
      (a) After selecting the [Keyless ID addition registration] or [Keyless ID renewal], press the lock and unlock switches of the keyless remote transmitter simultaneously. (For 1 second)
      (b) Again, press any of the transmitter switches within 3 seconds after. (For 1 second)
         Audible tone indicates complete. (When registration is complete, the external buzzer will sound twice)
         NOTE:
         Up to 6 keyless IDs can be registered.
   (5) End of registration mode (The mode ends if any of the following is satisfied)
      (a) Completion request is issued from SSM4.
      (b) SSM4 connection is shut off.
      (c) No code has been entered for 30 seconds or more in registration mode.
   (6) After the registration operation, perform the following.
      (a) Confirm the correct operation of all keyless remote transmitters. (Does not apply to keyless access and start)
         CAUTION:
         If wireless operation does not work, repeat the keyless ID registration.

# Unlock warning switch ASSY

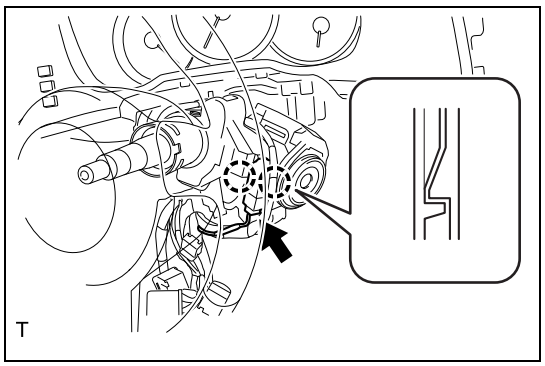
## Exploded view



DL

## Removal

1. Removal of the steering column cover LWR (Refer to WW - 22)
2. Removal of the steering column cover UPR (Refer to WW - 23)



3. Removal of unlock warning switch ASSY
   (1) Disconnect the connector.
   (2) Release the two claws and remove the unlock warning switch ASSY.

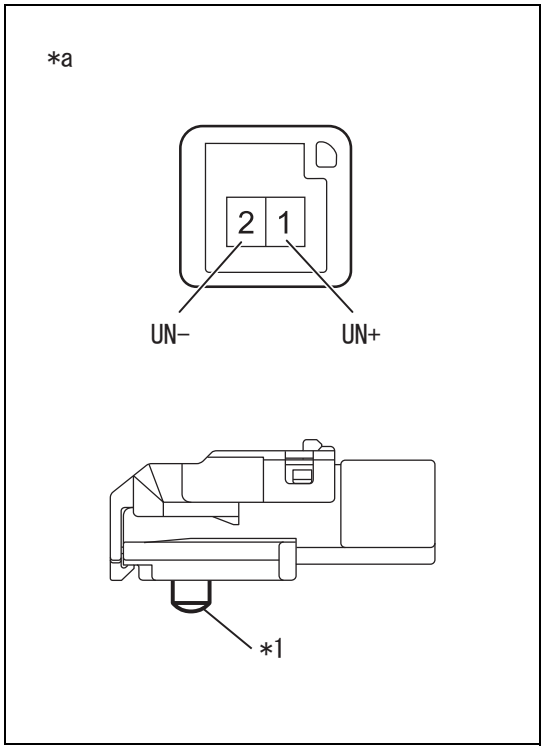
## Installation

1. Installation of unlock warning switch ASSY
   (1) Engage the two claws and install the unlock warning switch ASSY.

(2) Connect the connector.

2. Installation of the steering column cover UPR (Refer to WW - 23)
3. Installation of the steering column cover LWR (Refer to WW - 23)

## Unit inspection



1. Inspection of unlock warning switch ASSY
   (1) Resistance check
      (a)Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1(UN+) - 2(UN-) | When pin is pressed in | Less than 1 Ω |
| 1(UN+) - 2(UN-) | When pin is not pressed in | 10 kΩ or more |

DL

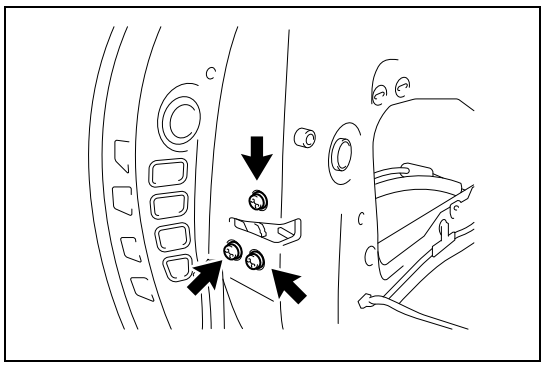
## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH side.

1. Disconnection of the battery ground terminal (Refer to IN - 6)

2. Removal of the door armrest cover LH (Refer to DH - 32)
3. Removal of the front door trim board SUB-ASSY LH (Refer to DH - 32)
4. Removal of the front door service hole cover LH (Refer to DH - 36)
5. Removal of the front door glass SUB-ASSY LH (Refer to DH - 36)
6. Removal of the front door frame SUB-ASSY RR LWR LH (Refer to DH - 37)
7. Removal of the front door outside handle cover W/ lock cylinder ASSY (driver's door) (Refer to DH - 39)



8. Removal of the front door lock ASSY LH (with motor)
   (1) Remove the 3 bolts.
   (2) Slide down the front door lock ASSY LH (with motor) and remove the front door lock ASSY LH (with motor) from the front door lock open rod LH.

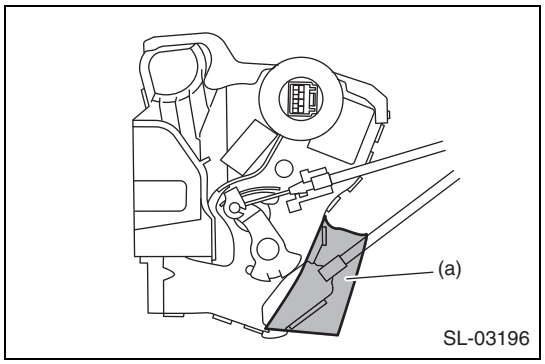
DL

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH side.

1. Applying of body grease
   (1) Apply body grease to the sliding surface of the front door lock ASSY LH (with motor).



2. Installation of the front door lock ASSY LH (with motor)
   CAUTION:
   - Make sure that no grease or dust adheres to the door lock wire harness seal of the connector.
   - Check that the waterproof tape (a) is applied properly. Even a small gap between part and tape may result in ingress of water, causing an inoperative condition.

   (1) Install the front door lock ASSY LH (with motor) using three new bolts.
   Standard value:T=6.5N·m {66kgf·cm} {4.8ft·lbf}

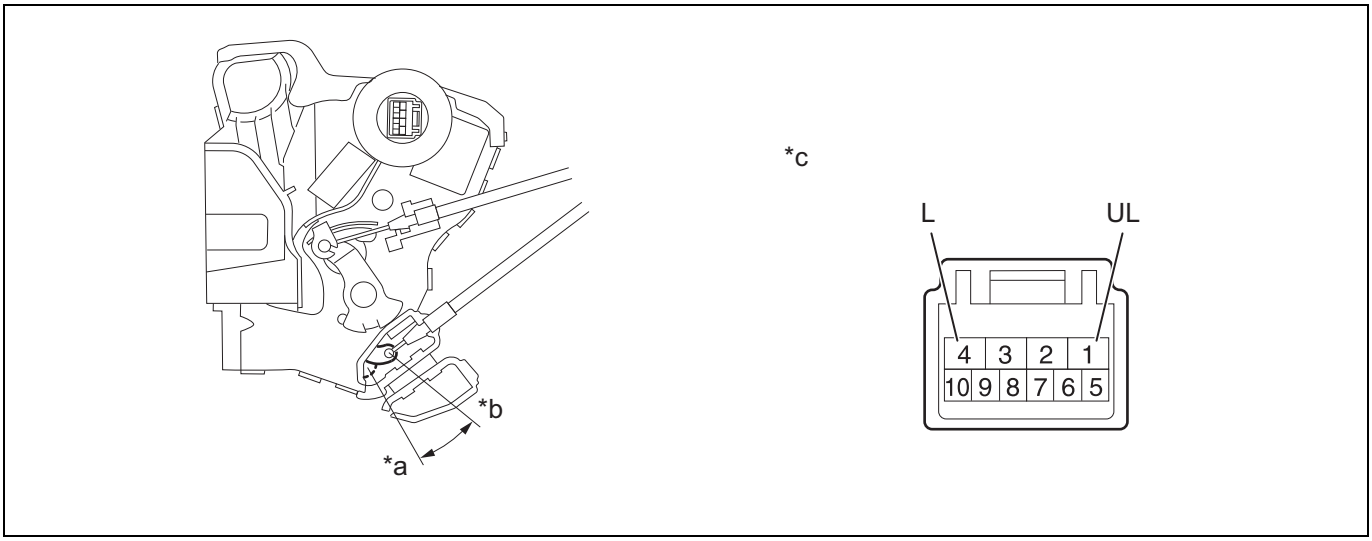
3. Installation of the front door outside handle cover W/ lock cylinder ASSY (driver's door) (Refer to DH - 46)
4. Installation of the front door frame SUB-ASSY RR LWR LH (Refer to DH - 48)
5. Installation of the front door glass SUB-ASSY LH (Refer to DH - 48)
6. Adjustment of the front door glass SUB-ASSY LH (Refer to DH - 49)
7. Installation of the front door service hole cover LH (Refer to DH - 49)
8. Installation of the front door trim board SUB-ASSY LH (Refer to DH - 52)
9. Installation of the door armrest cover LH (Refer to DH - 54)
10. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
11. Settings when removing/installing battery terminals (Refer to IN - 10)

## Unit inspection

1. Inspection of front door lock ASSY LH (with motor)
   (1) Operation check of door lock
      (a)Check the door lock operation when battery voltage is applied to each terminal of the connector.

Criteria

| Battery connection | Door lock operation |
|---|---|
| Battery positive →4(L)<br>Battery negative →1(UL) | LOCK |
| Battery positive →1(UL)<br>Battery negative →4(L) | UNLOCK |



Captions in illustration

| | |

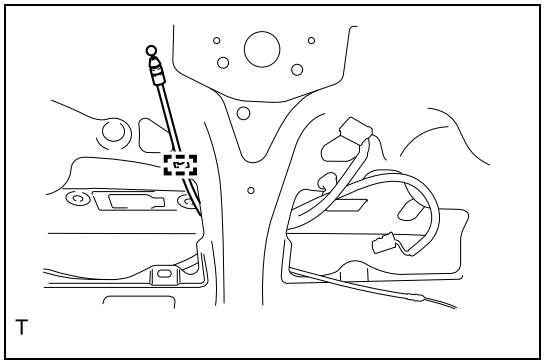
To prevent water entry, replace the KEY lock trunk gasket with a new one once it is removed.

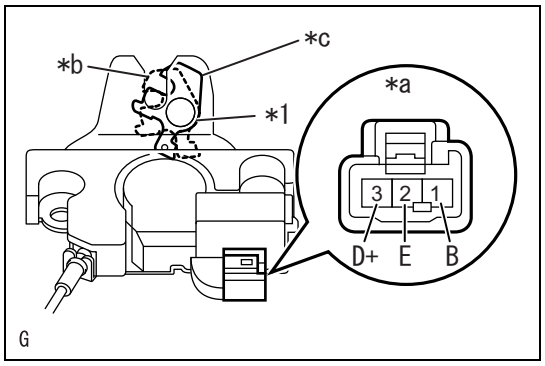


5. Removal of cable ASSY trunk
   (1) Release the clamp and remove the cable ASSY trunk.

## Installation

1. Installation of cable ASSY trunk
   (1) Engage the clamp and install the cable ASSY trunk.
2. Installation of KEY lock trunk gasket
   (1) Install a new KEY lock trunk gasket.
   CAUTION:
   To prevent water entry, replace the KEY lock trunk gasket with a new one once it is removed.
3. Applying of body grease
   (1) Apply body grease to the sliding surface of the KEY lock trunk.
4. Installation of KEY lock trunk
   (1) Connect the cable ASSY trunk.
   (2) Using 2 nuts, install the KEY lock trunk.
   Standard value:T=4.5N·m {46kgf·cm} {3.3ft·lbf}
5. Installation of trunk lock ASSY
   (1) Using two bolts, install the trunk lock ASSY to the trunk panel.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Connect the cable ASSY trunk to the trunk lock ASSY.
   (3) Engage the claw and close the cover.
   (4) Connect the connector.
6. Installation of the trunk cover (Refer to DH - 62)

## Unit inspection



1. Inspection of trunk lock ASSY
   (1) Operation check of trunk lock ASSY
      (a)Set the latch of the trunk lock ASSY to the lock position.
      (b)Check the motor operation when battery voltage is applied between the terminals of the connector.

Criteria

| Battery connection | Door lock operation |
|---|---|
| Battery positive →1 (B)<br>Battery ground →2 (E) | Lock →Open |

   (2) Inspection of trunk lock ASSY courtesy switch
      (a)Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Tester positive →2(E)<br>Tester negative →3(D+) | Locked | 10 kΩ or more |
| | Open | Less than 1 Ω |

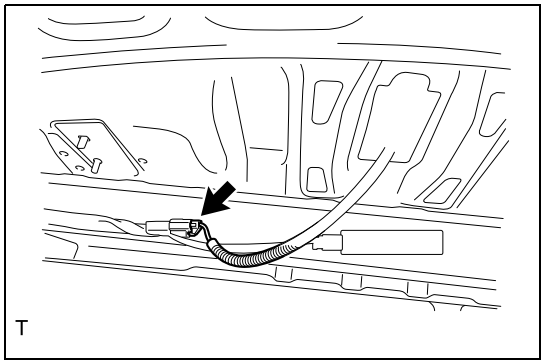
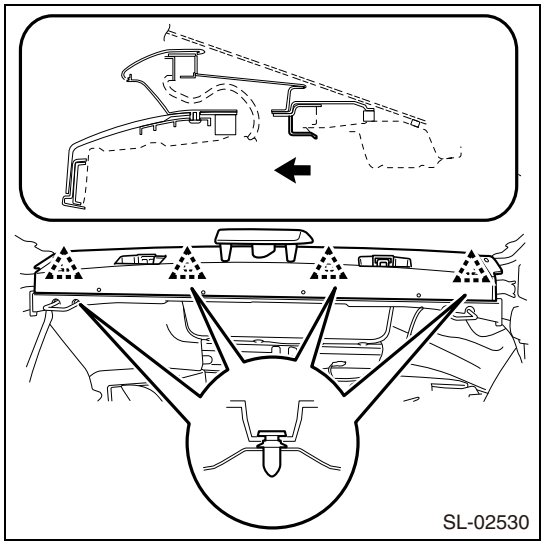
## Removal

1. Removal of separate type rear seat cushion ASSY RH (Refer to SE - 31)
2. Removal of separate type rear seat cushion ASSY LH
   NOTE:
   Remove the part in the same manner as RH side.
3. Removal of the front door scuff plate RH (Refer to IT - 48)
4. Removal of front door scuff plate LH
   NOTE:
   Remove the part in the same manner as RH side.
5. Removal of front door opening trim weather strip RH (Refer to IT - 48)
6. Removal of front door opening trim weather strip LH
   NOTE:
   Remove the part in the same manner as RH side.
7. Disconnection of trunk trim cover INN RH (Refer to IT - 49)
8. Disconnection of trunk trim cover INN LH
   NOTE:
   Disconnect in the same manner as RH side.
9. Removal of quarter lower trim RH (Refer to IT - 49)
10. Removal of quarter lower trim LH
    NOTE:
    Remove the part in the same manner as RH side.
11. Removal of quarter trim lid RH (Refer to IT - 49)
12. Removal of quarter trim lid SUB-ASSY LH
    NOTE:
    Remove the part in the same manner as RH side.
13. Removal of the rear window side garnish RH (Refer to IT - 50)
14. Removal of the rear window side garnish LH
    NOTE:
    Remove the part in the same manner as RH side.

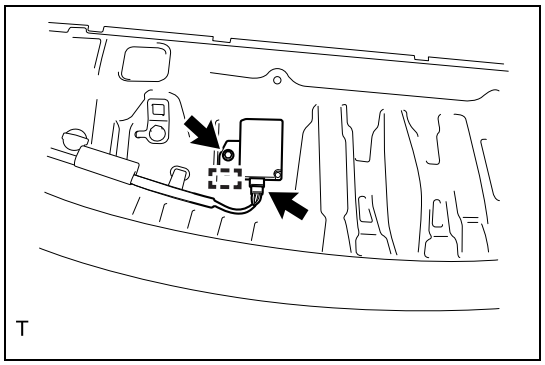


15. Removal of package tray trim panel ASSY
    (1) Disconnect the connector.

    (2) Remove the 4 clips.



(3) Release the four clips and remove the package tray trim panel ASSY and center stop light ASSY as a single unit by pulling them toward you.



16. Removal of door control receiver
    (1) Disconnect the connector.
    (2) Remove the bolt.
    (3) Remove the guide and remove the door control receiver.
    CAUTION:
    Do not drop or apply strong impact to the door control receiver.

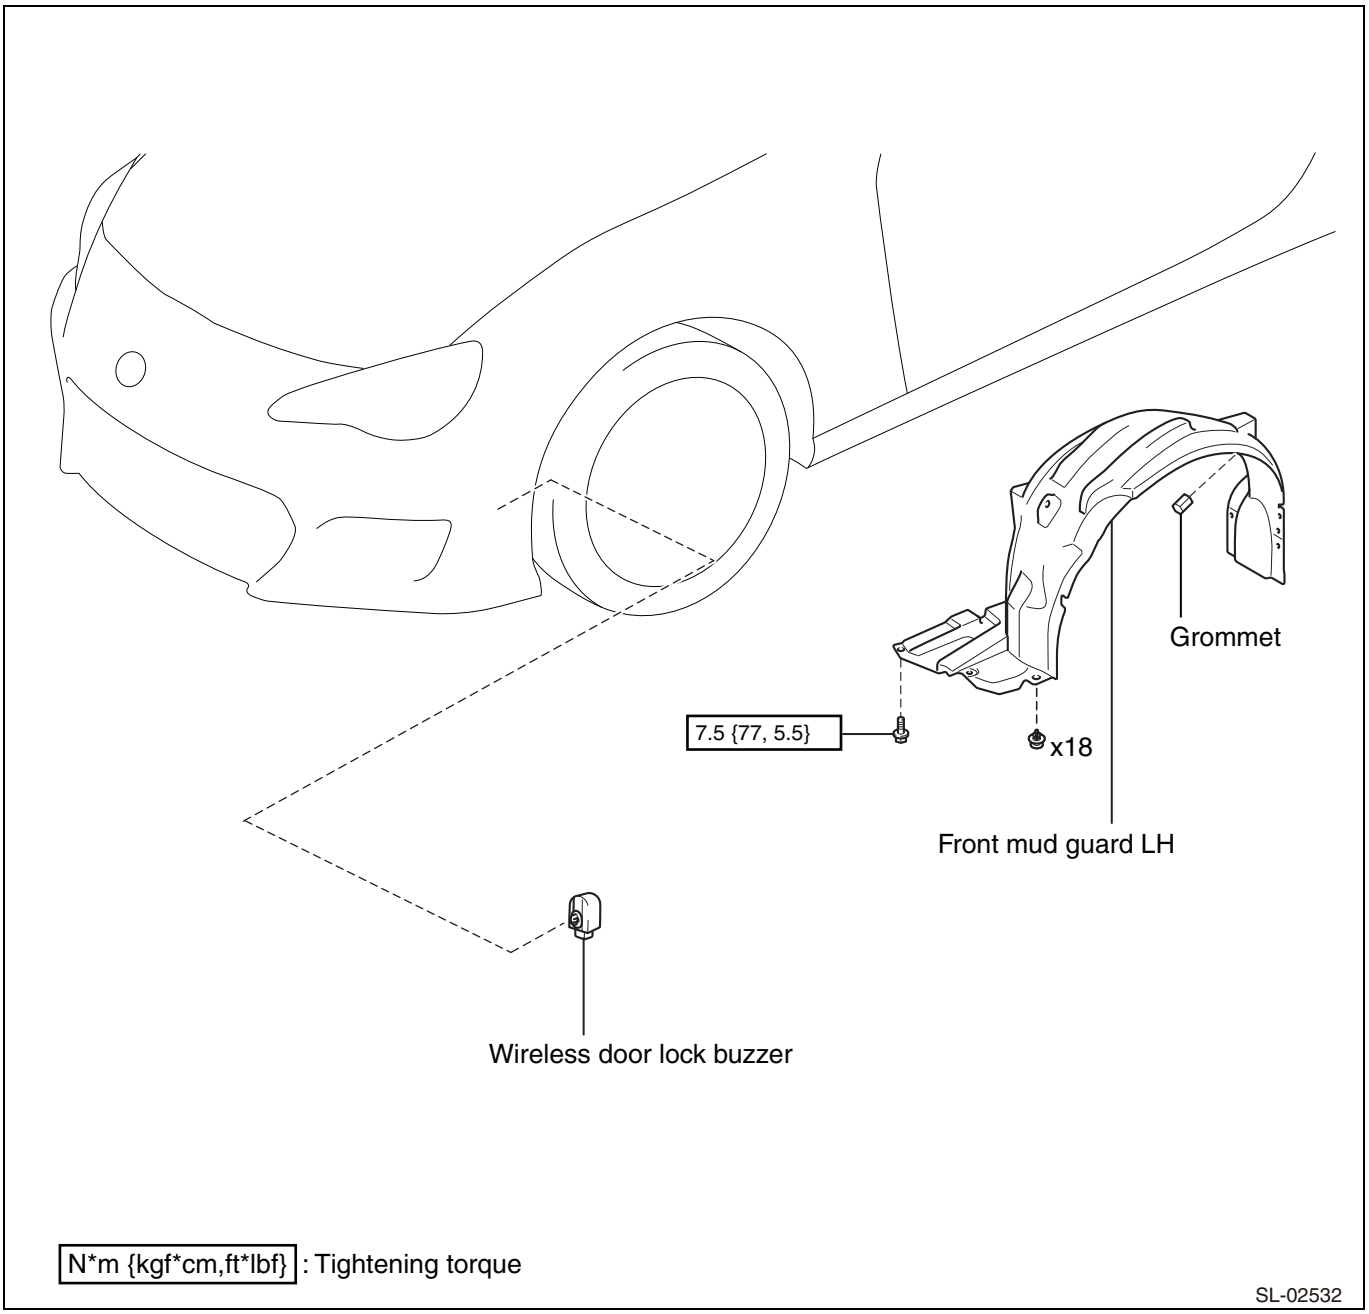
## Installation

1. Installation of door control receiver.
    (1) Insert the guide.
    (2) Install the door control receiver using bolts.
    Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}
    (3) Connect the connector.
    CAUTION:
    - Do not use a door control receiver that has been dropped or exposed to strong impact.
    - When a wiring harness comes close to the door control receiver, the wireless performance of smart entry & start system may decrease. So, when replacing or inspecting the door control receiver and the wiring harness, do not change the route and length of the wiring harness.
2. Installation of package tray trim panel ASSY
    (1) Hook tabs to the panel and engage the four clips to install the package tray trim panel ASSY and center stop light ASSY as a single unit.
    (2) Install the 4 clips.
    (3) Connect the connector.
3. Installation of the rear window side garnish RH (Refer to IT - 57)
4. Installation of rear window side garnish LH
    NOTE:
    Install the part in the same manner as RH side.
5. Installation of the quarter trim lid RH (Refer to IT - 57)
6. Installation of quarter trim lid SUB-ASSY LH
    NOTE:
    Install the part in the same manner as RH side.
7. Installation of the quarter lower trim RH (Refer to IT - 57)

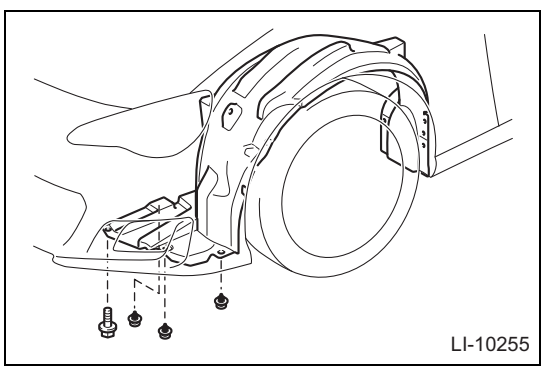
8. Installation of quarter lower trim LH
   NOTE:
   Install the part in the same manner as RH side.
9. Installation of trunk trim cover INN RH (Refer to IT - 58)
10. Installation of the trunk trim cover INN LH
    NOTE:
    Install the part in the same manner as RH side.
11. Installation of the front door opening trim weather strip RH (Refer to IT - 58)
12. Installation of front door opening trim weather strip LH
    NOTE:
    Install the part in the same manner as RH side.
13. Installation of the front door scuff plate RH (Refer to IT - 58)
14. Installation of front door scuff plate LH
    NOTE:
    Install the part in the same manner as RH side.
15. Installation of separate type rear seat cushion ASSY RH (Refer to SE - 39)
16. Installation of separate type rear seat cushion ASSY LH
    NOTE:
    Install the part in the same manner as RH side.

# Wireless door lock buzzer

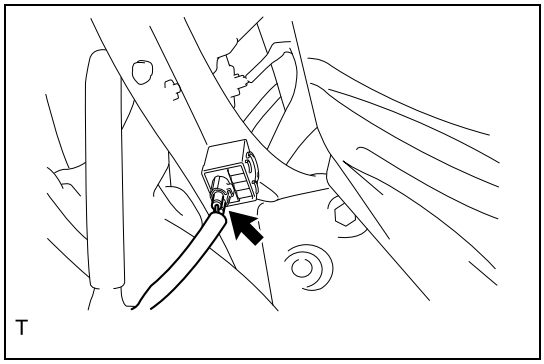
## Exploded view



## Removal



1. Turn over the front mud guard LH.
   (1) Remove the bolt.
   (2) Using a clip remover, remove the 3 clips and turn over the front mud guard LH.



2. Removal of wireless door lock buzzer
   (1) Disconnect the connector.

   (2) Release the clamp and remove the wireless door lock buzzer.

## Installation

1. Installation of wireless door lock buzzer
   (1) Engage the clamp and install the wireless door lock buzzer.
   (2) Connect the connector.
2. Installation of the front mud guard LH
   (1) Using 3 clips, install the front mud guard LH.
   (2) Install the bolt.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

# Entry & start system (entry function)

## Precautions

1. Notes on replacing the ECM
   CAUTION:
   When replacing the collation ECM (smart key ECM ASSY), it is also necessary to prepare all the electrical key transmitter SUB-ASSYs.
   (1) When you replace the ID code box (immobilizer code ECM)*, collation ECM (smart key ECM ASSY), steering lock actuator ASSY (steering lock ECM), the ECM, or the electrical key transmitter SUB-ASSY, refer to the "Registration manual for immobilizer".
   *: The ID code box is included.
   (2) If you replace the collation ECM (smart key ECM ASSY), the registered steering lock position will not match the one registered in the steering lock actuator ASSY (steering lock ECM). Due to this, you might not be able to start the engine. To avoid this, you need to perform the following steps after replacing the collation ECM (smart key ECM ASSY):
   (a)Move the shift lever in position P*.
   *: for automatic transmission
   (b) With the power mode in IG OFF, open and then close a door, and start the engine.
2. Notes for registration
   (1) When replacing any of the following parts, refer to the "Registration manual for immobilizer".
   (a)ID code box (immobilizer code ECM)*
   (b)Collation ECM (smart key ECM ASSY)
   (c)Steering lock actuator ASSY (steering lock ECM)
   (d)Electrical key transmitter SUB-ASSY
   *: The ID code box is included.
3. Notes on removing the cable from the battery ground terminal
   (1) If you disconnect the battery cable and then reconnect it afterwards, the entry unlock function might not work. In this case, the entry unlock function returns by performing the wireless door lock and unlock.
4. Notes on the vehicle battery and the battery integrated into the electrical key transmitter SUB-ASSY
   (1) While doors are locked, radio waves are transmitted from the vehicle, which means that power is constantly supplied from the battery. If the vehicle is left in this state for a prolonged period of time, the battery can become completely drained. If the vehicle is not to be used for a long time, the battery must be disconnected, or the entry & start system (entry function) must be cancelled.
   NOTE:
   To cancel the entry & start system (entry function), refer to the steps described below.
   (Refer to TD - 37)
   (2) If the doors are locked and the electrical key transmitter SUB-ASSY is located within the detection area of the electrical key antenna, there is regular communication between the electrical key transmitter SUB-ASSY and the vehicle, causing battery output. If the vehicle is not in use, the electrical key transmitter SUB-ASSY must be kept outside a 2 m (6.56 feet) radius of the vehicle.
5. Notes on the electrical key transmitter SUB-ASSY
   NOTE:
   Figures concerning the electrical key transmitter SUB-ASSY are given in "Parts location".
   (Refer to TD - 8)
   (1) The electrical key transmitter SUB-ASSY is a delicate device. Observe the following precautions in handling the electrical key transmitter SUB-ASSY:
   (a)Do not subject the electrical key transmitter SUB-ASSY to strong impact.
   (b)Do not leave the electrical key transmitter SUB-ASSY in high-temperature locations for a prolonged period of time.
   (c)Do not wash the electrical key transmitter SUB-ASSY in an ultrasound bath.
   (d)Do not use the electrical key transmitter SUB-ASSY with a magnetized key ring.
   (e)Do not place the electrical key transmitter SUB-ASSY near devices emitting low-frequency electromagnetic waves, such as a digital audio player, induction cooking equipment, or a magnetic medical device.
   (f) Do not apply a sticker or the like on the electrical key transmitter SUB-ASSY.
6. Notes on inspecting the entry & start system (entry function)
   (1) General notes on the entry & start system (entry function)

TD

(a)Always carry the electrical key transmitter SUB-ASSY with you.

(2) Under the conditions described below, the key detection area might become smaller, or the electrical key transmitter SUB-ASSY might not be detected properly. These problems arise when the reception of electromagnetic waves used for key detection becomes weak.
(a)The battery is drained.
(b)There is a facility that produces strong radio waves nearby, such as a TV tower, a power plant, a TV station, or a gas station.
(c)The electrical key transmitter SUB-ASSY is carried along with a wireless communication device, such as a transceiver, a cell phone, a cordless telephone, a digital audio player, or a portable game system.
(d)The electrical key transmitter SUB-ASSY is located under a metal object such as a coin or a special type of a card, or is in contact with such an object.
(e)A metal film is applied over the rear glass of the vehicle.
(f) A radio wave type keyless entry system is being used nearby.
(g)A vehicle using an electrical key transmitter SUB-ASSY is located nearby.
(h)The electrical key transmitter SUB-ASSY is located near a device producing high voltage or electrical noise.
(i) The electrical key transmitter SUB-ASSY is near an electronic device, such as a charger.

(3) The operating range of the entry & start system (entry function):
(a)Due to the design of the body, there are certain places where the system might not work properly.
(b)Even when the electrical key transmitter SUB-ASSY is located within the key detection area outside the vehicle, it might not be detected properly if it is used near the window, the outer door handle, or the center of the bumper.
(c)Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the package tray trim, or on the floor.
(d)If held improperly, the electrical key transmitter SUB-ASSY may not work properly.

(4) If using a pacemaker, it may affect the pacemaker. If this might be the case, the instruction manual supplied with the pacemaker must be consulted carefully.
(a)The entry & start system (entry function) does not work under the following circumstances:
1. The entry & start system (entry function) is being cancelled.
2. Electrical key transmitter SUB-ASSY
The battery is drained (the LED on the electrical key transmitter SUB-ASSY does not blink when the switch is pressed).

7. Notes on the entry unlock function

(1) When you perform an entry unlock operation, make sure to touch the unlock sensor located on the back side of the front door outer handle ASSY.

(2) Touching the unlock sensor located on the back side of the front door outer handle ASSY wearing a glove or the like could result in slow system response.

(3) After performing an entry unlock operation, confirm that the door has been unlocked and open it by pulling the front door outer handle ASSY.

(4) If you approach the vehicle too quickly or pull the front door outer handle ASSY too quickly, you might fail to open the door. In this case, return the front door outer handle ASSY to its original position, then pull it again. The door will then open. (If the system could not detect the unlock operation, it will automatically repeat the unlock operation 4 times.)

(5) If you move the electrical key transmitter SUB-ASSY to the front door outer handle ASSY too quickly, you might fail to unlock the door by the entry unlock function.

(6) While the electrical key transmitter SUB-ASSY is located within the detection area outside the vehicle, a door can be unlocked by anyone (even those who do not hold the electrical key transmitter SUB-ASSY) who grabs the front door outer handle ASSY. Note that the unlock operation works only on a door for which a code match is detected. (While the electrical key transmitter SUB-ASSY is located within the detection area outside the driver's door, grabbing the driver's side front door outside handle ASSY unlocks the door, but grabbing the passenger's side front door outside handle ASSY does not unlock the door.)

(7) If you do not open the door after unlocking it, the door will be automatically locked in approximately 30 seconds.*
NOTE:
*: If the door is automatically locked after an elapse of a certain period of time from the entry unlock operation performed with the electrical key transmitter SUB-ASSY located near the vehicle, the electrical key transmitter SUB-ASSY will be detected as being inside the vehicle. As a result, the lockout protection function kicks in to unlock the door.

(8) If a large amount of water is sprinkled over the front door outer handle ASSY during car wash, heavy rain, or the like when the electrical key transmitter SUB-ASSY is located inside the detection area outside the vehicle, the sensor or the entry unlock function might become activated. If, however, a door is not opened within 30 seconds, it will be locked automatically.*

NOTE:

*: If the door is automatically locked after an elapse of a certain period of time from the entry unlock operation performed with the electrical key transmitter SUB-ASSY located near the vehicle, the electrical key transmitter SUB-ASSY will be detected as being inside the vehicle. As a result, the key lock-in prevention function kicks in to unlock the door.

(9) If the electrical key transmitter SUB-ASSY is carried along with an electrical key transmitter SUB-ASSY of another vehicle supporting an entry & start system, it might take longer than usual to unlock a door by an entry unlock operation.

8. Notes on the entry lock function

(1) If you touch the front door outer handle ASSY too quickly during an entry lock operation, you might fail to lock the door.

(2) If the electrical key transmitter SUB-ASSY is brought near the vehicle (near the window or the front door outer handle ASSY), the entry lock function might not work. In addition, the anti-lockout alarm might go off, disabling the entry unlock operation. If this is the case, move the electrical key transmitter SUB-ASSY away from the vehicle (the window or the front door outer handle ASSY) and perform an entry lock operation.

(3) If you carry the electrical key transmitter SUB-ASSY and if you attempt to lock any door while it is open (not properly closed), a warning will be activated to remind you that the door is open.

(4) If the electrical key transmitter SUB-ASSY is placed on the instrument panel, inside the glove compartment, or on the floor, the anti-lockout alarm (which reminds you that the electrical key transmitter SUB-ASSY is left inside the vehicle) might not go off. In this case, you can end up locking the door with the electrical key transmitter SUB-ASSY left inside the vehicle. Make sure to always carry the electrical key transmitter SUB-ASSY with you.

(5) After locking a door using an entry lock or wireless lock operation, you have to wait approximately 3 seconds before you can perform an entry unlock operation.

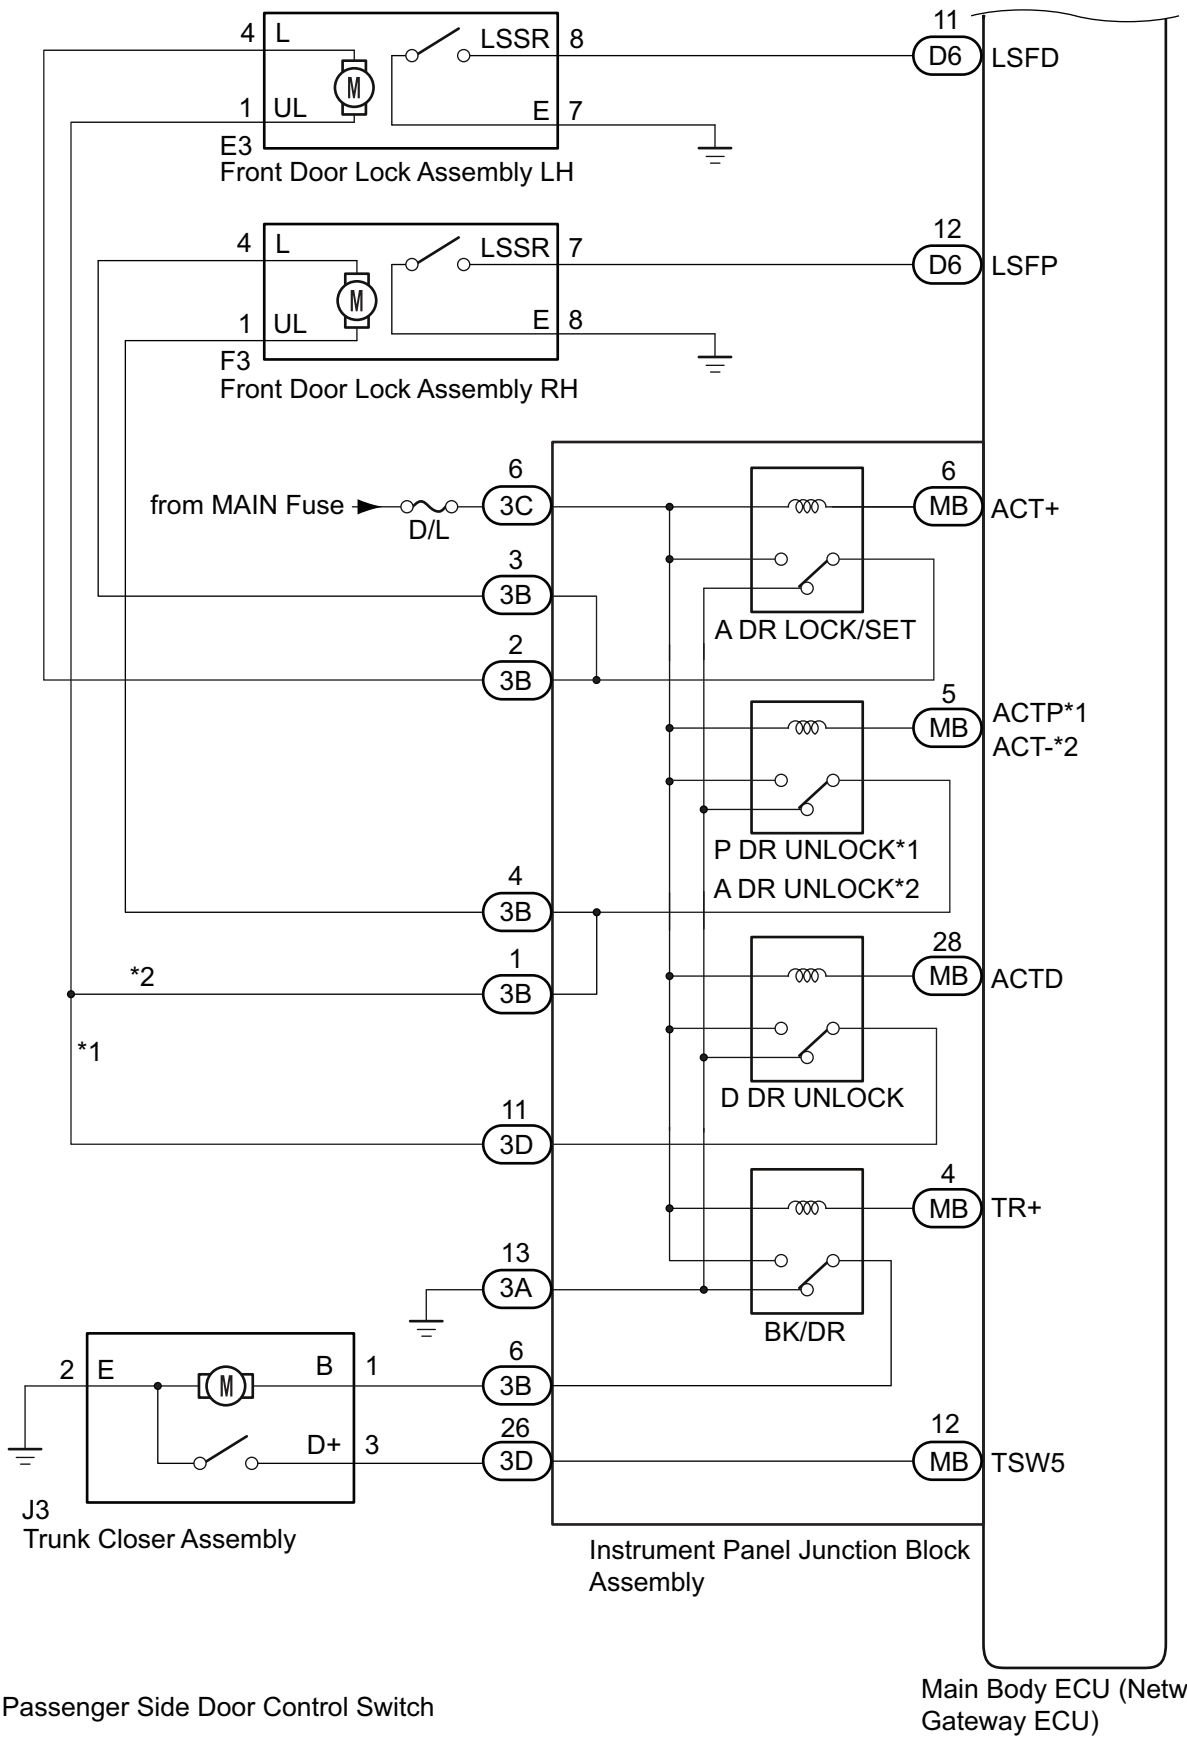
SL-02051



*1: w/ Passenger Side Door Control Switch

*2: w/o Passenger Side Door Control Switch

SL-02139

TD

| Parts | Function |
|---|---|
| Front door outer handle ASSY LH/RH | Upon reception of a request signal transmitted from the collation ECM (smart key ECM ASSY) via the electrical key antenna, the front door outer handle ASSY LH/RH creates a detection area outside the vehicle. When replacing the collation ECM (smart key ECM ASSY), it is also necessary to replace all the electrical key transmitter SUB-ASSYs. The front door outer handle ASSY LH/RH transmits a door lock sensor operation signal to the collation ECM (smart key ECM ASSY) (entry lock function).<br>The front door outer handle ASSY LH/RH detects the operation performed on itself via the touch sensor, and transmits a signal to the collation ECM (smart key ECM ASSY) (entry unlock function). |
| Indoor electrical key antenna ASSY no. 1 (front floor), indoor electrical key antenna ASSY no. 2 (rear floor) | Receive request signals from the collation ECM (smart key ECM ASSY), and form the vehicle interior detection area. |
| Indoor electrical key antenna ASSY No. 3 (trunk) | Upon reception of a request signal transmitted from the collation ECM (smart key ECM ASSY), the indoor electrical key antenna ASSY no. 3 (trunk) creates a detection area inside the trunk. |
| Electrical key antenna (trunk exterior) | Upon reception of a request signal transmitted from the collation ECM (smart key ECM ASSY), the electrical key antenna (trunk exterior) creates a detection area outside the trunk. |
| Trunk opening switch ASSY | The trunk door opening switch ASSY transmits a switch operation signal to the collation ECM (smart key ECM ASSY). |
| Door control receiver | The door control receiver receives an entry & start system code / wireless code transmitted from the electrical key transmitter SUB ASSY and then transmits it to the collation ECM (smart key ECM ASSY). |
| Wireless door lock buzzer | This warning buzzer is activated by the collation ECM (smart key ECM ASSY). |
| Electrical key transmitter SUB-ASSY | Sends the ID code when it receives a request signal. |
| Collation ECM (smart key ECM ASSY) | The collation ECM (smart key ECM ASSY) transmits a request code to each electrical key antenna. It identifies and checks the ID code transmitted from the electrical key transmitter SUB ASSY and then transmits a signal to an appropriate ECM according to the function operated.<br>When an ignition operation is performed, the collation ECM (smart key ECM ASSY) exchanges encrypted codes with the steering lock ECM (steering lock actuator ASSY).* 1<br>When an ignition operation is performed, the collation ECM (smart key ECM ASSY) exchanges encrypted codes with the ID code box (immobilizer code ECM).* 2 |

*1: Without ID code box

*2: With ID code box

## Description of functions

1. Description of functions

   The following terminology is used: "Operation" refers to the user operation performed via the entry & start system. "Expected vehicle behavior" refers to how a typical existing vehicle reacts in response to a specific operation. "Possible cause/diagnosis" points to a possible cause of failure and a diagnostic clue when the vehicle does not respond as expected.

   (1) Example: Operation no.

| Operation | - |
|---|---|
| Expected vehicle behavior | - |
| Waveform or output value | - |

| Possible cause | Diagnosis |
|---|---|
| - | - |

2. Basic notes

   (1) You can check DTCs and an ECM data list for the entry & start system by using the SSM4. [Starter Request Signal] (an item under [Data monitor]) indicates the engine start request signal output.

   (2) To check DTCs, follow the steps shown below. If DTCs are displayed, diagnose them first.

   (a) Connect the SSM4 to the DLC3.

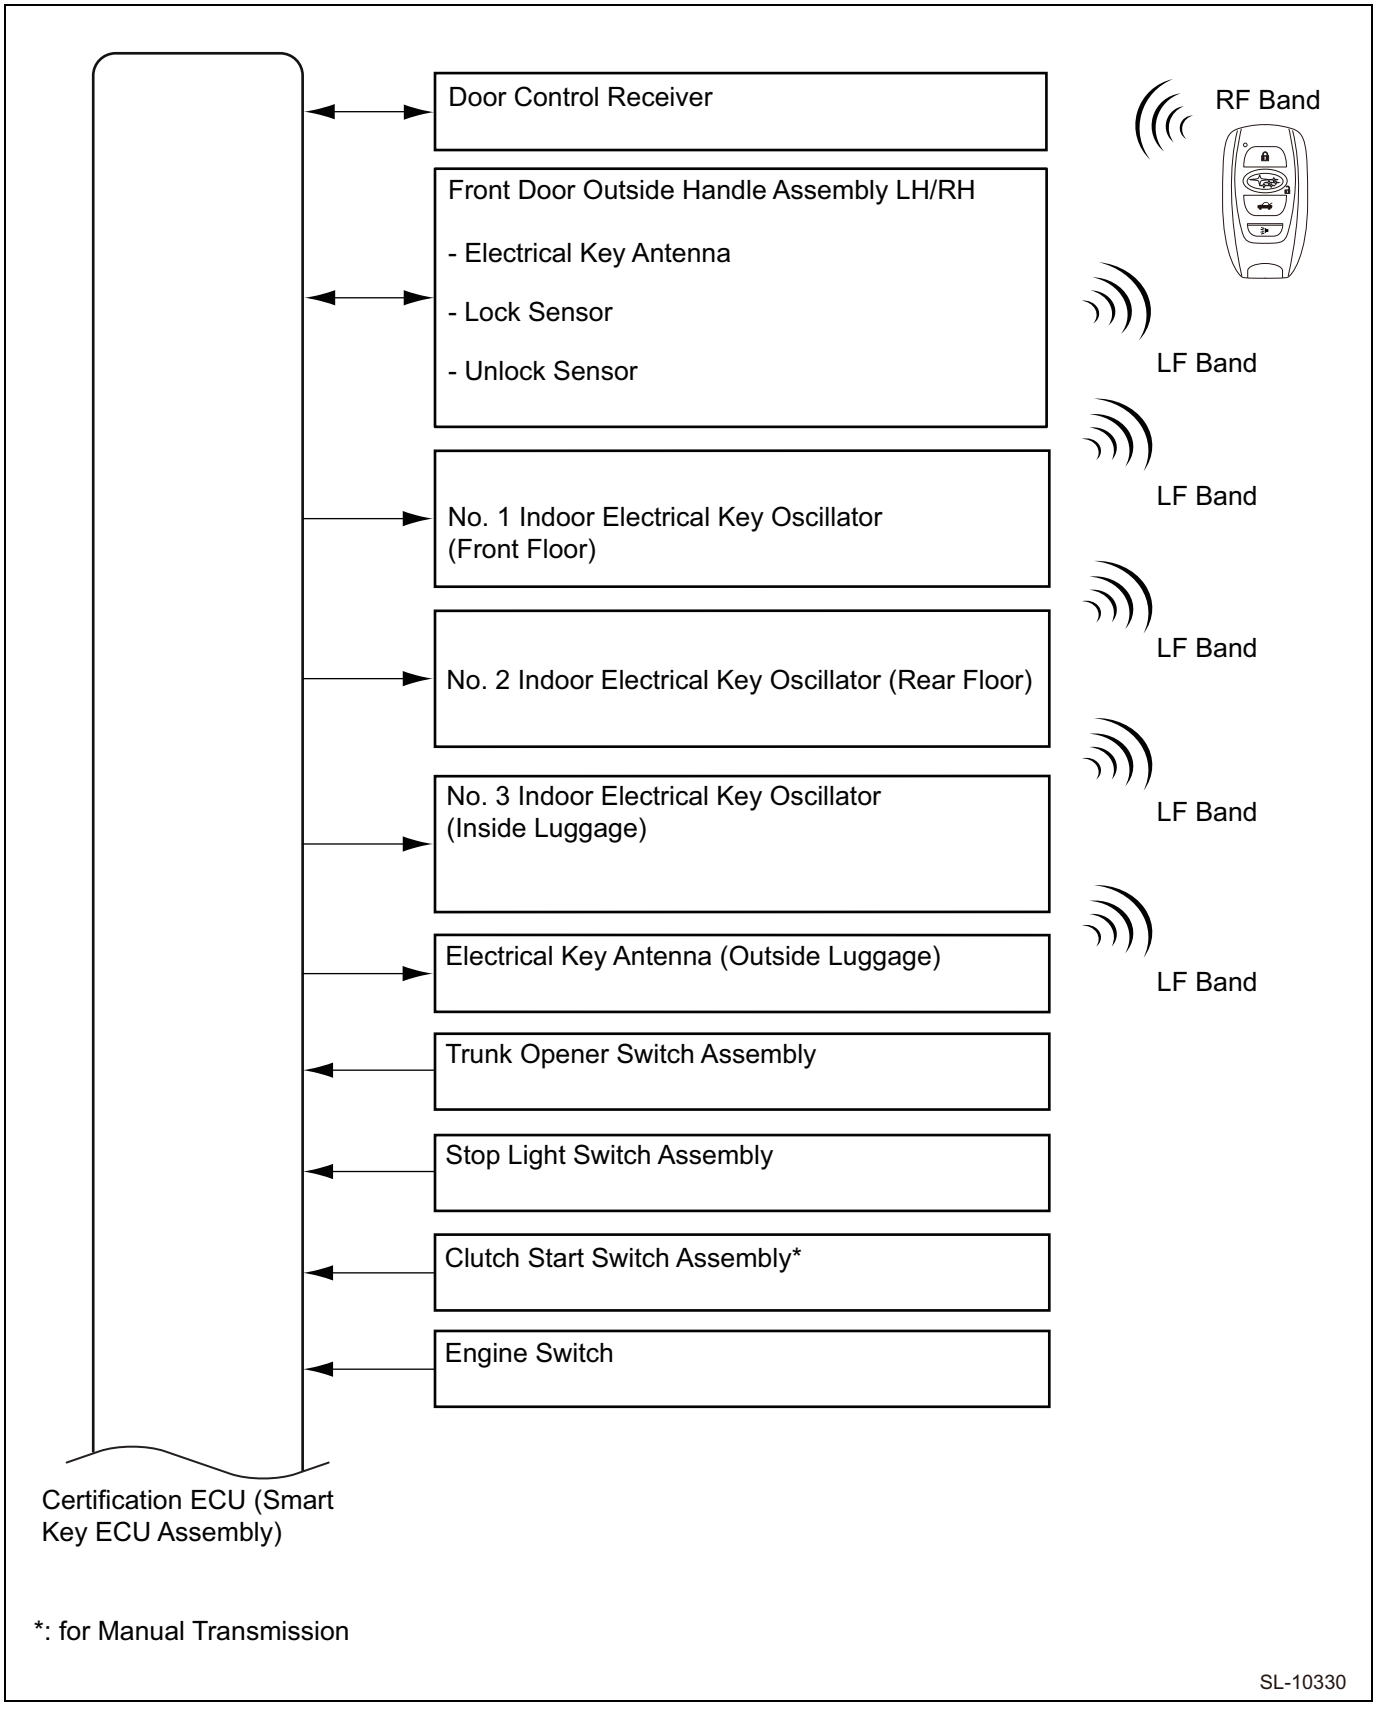
   (b) Turn the ignition switch to ON.

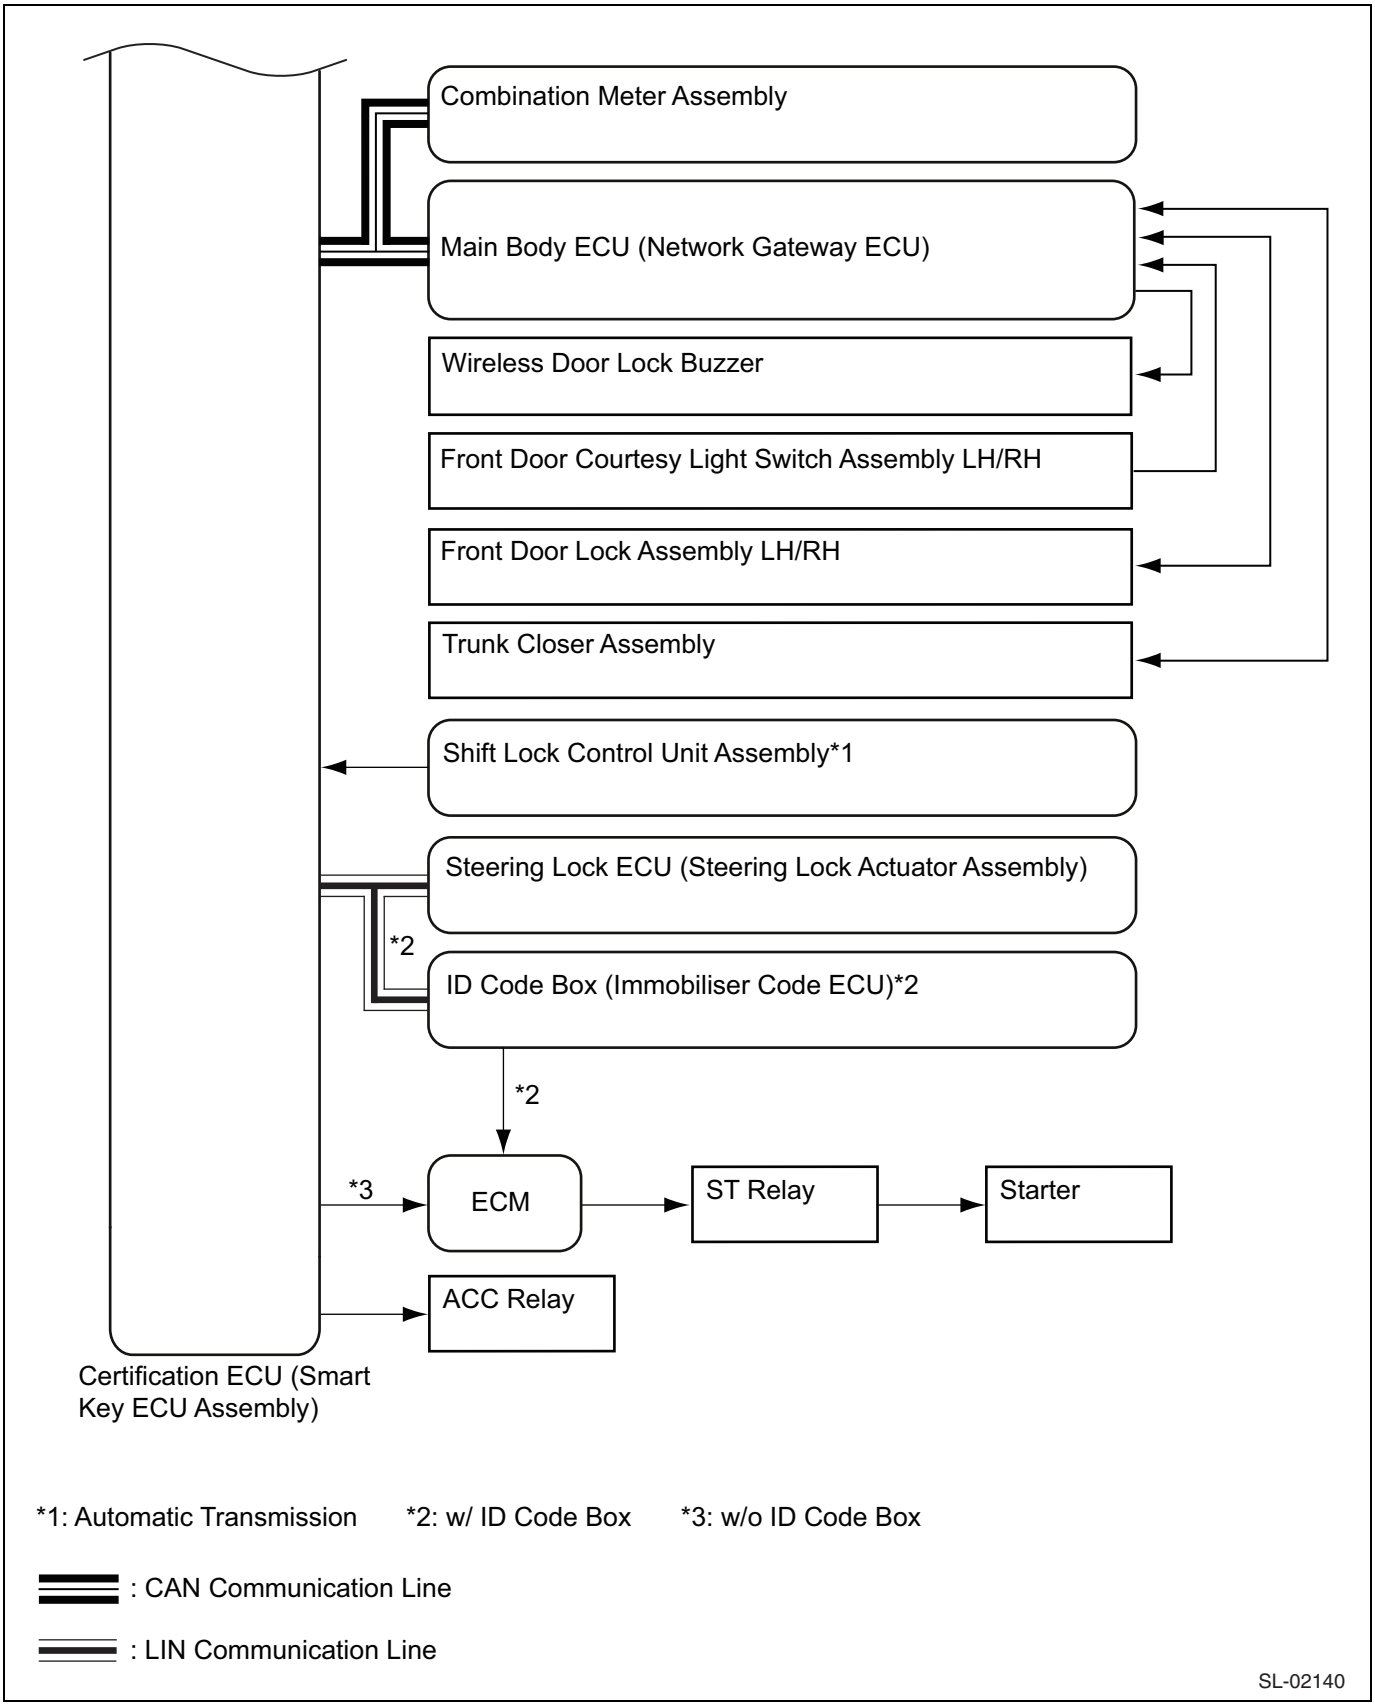
   (c) Enter the following menus: [Each System] →[Keyless Access(Collation ECM)] →[DTC]

   (d) Enter the following menus: [Each System] →[Engine Control System] →[DTC]

(3) If the selection made in the customize setting for the entry & start system has been cancelled, cancel the entry cancel setting (refer to TD - 37).

3. System diagram





4. Diagnostic procedure based on user operation
   (1) Operation 1

| | |
|---|---|
| Operation | Change the power mode to IG OFF, lock all doors, and stand 3 m or more away from the vehicle carrying the electrical key transmitter SUB-ASSY with you.<br>NOTE:<br>An LF band request signal is output every 0.25 seconds, which prompts each electrical key antenna (exterior antenna) to create a detection area. Each front door outer handle ASSY (electrical key antenna) creates an approximately 0.7 m wide detection area. |
| Waveform or output value | Pulse generation (D41-12 (CLG1) - D48-11 (GND)*) |

NOTE:

*: (Refer to TD - 40)

(2) Operation 2

| | |
|---|---|
| Operation | Carrying the electrical key transmitter SUB-ASSY with you, stand 0.7 m away from the driver's door.<br>NOTE:<br>If the electrical key transmitter SUB-ASSY is inside the detection area, and if the key ID transmitted to the electrical key transmitter SUB-ASSY matches that stored in the collation ECM (smart key ECM ASSY), the system enters unlock standby mode. If you touch the unlock sensor with your hand when the system is in unlock standby mode, the door unlocks. Signal transmission: Collation ECM (smart key ECM ASSY) →front door handle ASSY (electrical key antenna) →electrical key transmitter SUB-ASSY →door control receiver →collation ECM (smart key ECM ASSY) →body ECM |
| Expected vehicle behavior | The LED on the electrical key transmitter SUB-ASSY blinks. If the LED does not blink, one of the parts listed in the table below might be faulty. |
| Waveform or output value | • Pulse generation (D41-12 (CLG1) - D48-11 (GND)*)<br>• Pulse generation (D40-17 (RDA) - D48-11 (GND)*)<br>• Pulse generation (D40-19 (RSSI) - D48-11 (GND)*) |

TD

NOTE:

*: (Refer to TD - 40)

| Possible cause | Diagnosis |
|---|---|
| Electrical key transmitter SUB-ASSY | • The key ID code transmitted by the electrical key transmitter SUB-ASSY does not match the one stored in the collation ECM (smart key ECM ASSY). Check the operation using another electrical key transmitter SUB-ASSY.<br>• If the LED on the electrical key transmitter SUB-ASSY does not blink in the 0.7 m (2.3 feet) wide area beside the driver's door, perform the following:<br>– Check the operation by pressing the lock/unlock button on the electrical key transmitter SUB-ASSY. If the door can lock/unlock, it means that a detection area has not been created. If this is the case, the problem is located in parts other than the electrical key transmitter SUB-ASSY or the door control receiver.<br>• If the electrical key transmitter SUB-ASSY is faulty, you can neither start the engine nor change the power mode to ACC ON or IG ON. Normally, if you move the shift lever in P*1 and press the engine switch using the electrical key transmitter SUB-ASSY from the driver's seat without depressing the brake pedal*1 or the clutch pedal*2, the smart key indicator on the combination meter ASSY blinks green. If the door does not open, use the mechanical key integrated into the electrical key transmitter SUB-ASSY to open the door.<br>– *1: With automatic transmission<br>– *2: With manual transmission<br>NOTE:<br>Before replacing the electrical key transmitter SUB-ASSY, check if the transmitter battery is not drained. |
| The transmitter battery is drained. | • Hold down the lock switch on the electrical key transmitter SUB-ASSY for 5 seconds and check how many times the LED blinks. If the LED does not blink, or blinks only once or twice, the transmitter battery might be drained. If the LED does not blink at all, the electrical key transmitter SUB-ASSY might be faulty.<br>• If the transmitter battery voltage drops to 2.1 V or less before the electrical key transmitter SUB-ASSY starts transmitting a signal, [Yes] is displayed for [Key Low Battery] (an item under [Data monitor]).<br>• If the transmitter battery voltage drops to 2.0 or less, you cannot perform any operation.<br>NOTE:<br>In low temperature environment, output from the electrical key transmitter SUB-ASSY decreases.<br>• If the transmitter battery is drained, you can neither start the engine nor change the power mode to ACC ON or IG ON. To forcibly start the engine under this condition, place the electrical key transmitter SUB-ASSY over the engine switch.<br>• Identify the type of the transmitter battery and check if it is installed properly. |
| External radio waves | • If a problem occurs only in certain places or at certain times, it is likely the effect of radio wave interference.<br>• If the electrical key transmitter SUB-ASSY is faulty, it is probably due to the following reasons: the transmitter battery is drained; an electrical key transmitter SUB-ASSY of another vehicle is used, or; the electrical key transmitter SUB-ASSY is exposed to external radio waves. [Yes] may be displayed on the following items for [Data monitor]. [Unmatched Vehicle-ID], [No Response], [Unmatch Code or Form], or [ID Code Difference (Resp) |
| Collation ECM (smart key ECM ASSY) | - |

| Possible cause | Diagnosis |
|---|---|
| Front door outer handle ASSY | A detection area is not properly created outside the vehicle.<br>• If the electrical key transmitter SUB-ASSY does not blink when it is located 0.7 m away from the driver's side front door outer handle ASSY but blinks when it is located 0.7 m away from the passenger's side front door outer handle ASSY, the driver's side front door outer handle ASSY might be faulty.<br>• Even when a detection area is not properly created outside the vehicle, you can start the engine by turning the engine switch ON (ACC).<br>• By using the SSM4, you can check if a detection area has been created outside the vehicle. (Refer to TD - 31)<br>• Even when a detection area is not properly created outside the vehicle, you can unlock a door by pressing the unlock button on the electrical key transmitter SUB-ASSY. |
| Door control receiver | • If the door control receiver is faulty, you cannot lock and unlock the doors by a touch sensor operation.<br>• If the door control receiver is faulty, you cannot lock and unlock the doors by a wireless unlock operation.<br>• If the door control receiver is faulty, you can neither start the engine nor change the power mode to IG ON or ACC ON unless you perform an emergency operation.<br>• By using the SSM4, you can check if a detection area has been created outside the vehicle. (Refer to TD - 31) |
| The vehicle battery is discharged. | You can check if the vehicle battery is discharged by operating the horn. |
| Other | • If the entry function has been cancelled using the customize function, a detection area will not be created. Therefore, the LED on the electrical key transmitter SUB-ASSY does not blink even when you move the electrical key transmitter SUB-ASSY towards the front door outer handle ASSY.<br>• When the entry & start system is enabled, leaving the electrical key transmitter SUB-ASSY in a detection area created outside a vehicle door could cause the transmitter battery to become discharged. Therefore, if the electrical key transmitter SUB-ASSY is left in this state for 10 minutes or longer, the entry & start system automatically disables the detection area outside the vehicle where the electrical key transmitter SUB-ASSY is located.<br>• If you inadvertently leave the electrical key transmitter SUB-ASSY inside the vehicle, and then use another electrical key transmitter SUB-ASSY to lock a door, the LED on the second electrical key transmitter SUB-ASSY does not blink even when you move it toward the passenger's side front door outer handle ASSY. |

TD

(3) Operation 3

| | |
|---|---|
| Operation | Carrying the electrical key transmitter SUB-ASSY with you, and making sure that it is inside the detection area created outside the vehicle, touch the unlock sensor on the driver's door. |
| Expected vehicle behavior | As the door unlocks, you get an answer-back. If this does not happen, one of the parts listed in the table below might be faulty. |
| Waveform or output value | • Pulse generation (D41-12 (CLG1) - D48-11 (GND)*)<br>• Tester conditions: Body ECM, instrument panel junction block ASSY* |

NOTE:
*: (Refer to TD - 40)

| Possible cause | Diagnosis |
|---|---|
| Same failure locations as those shown under Operation 2, for cases in which the LED on the electrical key transmitter SUB-ASSY does not blink | - |
| Front door outer handle ASSY (unlock sensor) | • If you can unlock the door by touching the passenger's side unlock sensor carrying the electrical key transmitter SUB-ASSY with you, the driver's side unlock sensor might be faulty.<br>• In normal operation, if you touch the unlock sensor, [ON] is displayed for [D-Door Touch Sensor] (an item under [Data monitor]). |
| Door lock/unlock function | If you cannot lock/unlock a door by operating the door control switch inside the vehicle, the door lock function might be faulty. |

(4) Operation 4

| | |
|---|---|
| Operation | Get on the vehicle carrying the electrical key transmitter SUB-ASSY with you, close the door, move the shift lever in P*1, and then press the engine switch once without depressing the brake pedal*1 or the clutch pedal*2. |

| | |
|---|---|
| Expected vehicle behavior | • The smart indicator inside the combination meter ASSY blinks green (blinks slowly), and the engine status changes to ACC ON.<br>• The steering wheel unlocks.<br>If the smart key indicator does not blink, one of the parts listed in the table below might be faulty.<br>NOTE:<br>If you press the engine switch, the indoor electrical key antenna creates a key detection area inside the vehicle to detect the electrical key transmitter SUB-ASSY inside the vehicle. After receiving a request signal, the electrical key transmitter SUB-ASSY transmits an ID code, and the LED on the electrical key transmitter SUB-ASSY blinks for a short period of time. After the engine switch is pressed, if the key ID transmitted by the electrical key transmitter SUB-ASSY matches the one stored in the collation ECM (smart key ECM ASSY), the ACC relay becomes ON, and the smart key indicator on the combination meter ASSY blinks green (blinks slowly). When the power mode changes, the L code and S code*3 check process completes. The steering wheel is then unlocked, and the immobilizer is disabled. The [Immobiliser] status in [Data monitor] is changed from [Set] to [Unset]. Signal transmission: Collation ECM (smart key ECM ASSY) →indoor electrical key antenna →electrical key transmitter SUB-ASSY →door control receiver →collation ECM (smart key ECM ASSY)<br>NOTE:<br>A detection area is created inside the vehicle under the following conditions:<br>• A door is open.<br>• During approximately 30 seconds following the opening/closing of a door<br>• The brake pedal is depressed.<br>• During approximately 30 seconds following the depressing of the brake pedal<br>• Immediately after the engine switch is pressed |
| Waveform or output value | • Pulse generation (D40-17 (RDA) - D48-11 (GND)*)<br>• Pulse generation (D41-3 (CLG5) - D48-11 (GND)*)<br>• Pulse generation (D59-3 (SLR+) - D59-1 (GND)*) |

TD

*1: With automatic transmission

*2: for manual transmission

*3: With ID code box

NOTE:

*: (Refer to TD - 40)

| Possible cause | Diagnosis |
|---|---|
| Collation ECM (smart key ECM ASSY) | - |
| External radio waves | • If the failure occurs in certain locations or during certain periods of time, it may be due to interference from external radio waves.<br>• If interference from external radio waves is suspected inside the vehicle, remove all connectors from the devices that are not part of the standard equipment, or disconnect or remove electrical devices, to check for the presence of noise. |
| Indoor electrical key antenna ASSY that creates a detection area inside the vehicle | • If a detection area is not properly created inside the vehicle you can neither start the engine nor change the power mode to ACC ON or IG ON. In the event of an emergency, however, you can forcibly start the engine by placing the electrical key transmitter SUB-ASSY over the engine switch.<br>• Using the SSM4, activate keyless access system check to forcibly create a detection area inside the vehicle. Then, place the electrical key transmitter SUB-ASSY inside the detection area. Short beeps sound. (Refer to TD - 31) |
| Engine switch | In normal operation, if you press the engine switch, [ON] is displayed for [Start Switch1] and [Start Switch2] (items under [Data monitor]). |
| ID code box (immobilizer code ECM) *1 | [OK] must be displayed for [S Code Check] (an item under [Data monitor]). If [OK] is displayed for [S Code Check], it means that the collation ECM (smart key ECM ASSY) code matches the ID code box (immobilizer code ECM) code. |
| Neutral start switch ASSY *2 | In normal operation, if you move the shift lever in P, [ON] is displayed for [Neutral SW/Clutch SW] (an item under [Data monitor]). |
| Steering lock ECM (steering lock actuator ASSY) | • If [OK] is displayed for [L Code Check] (an item under [Data monitor]) when the power mode is ACC ON, power is supplied to the steering motor for approximately 10 seconds. The ECM then sends an unlock signal to the steering motor. At this moment, the result for [Unlock Request Receive] (an item under [Data monitor]) temporarily changes from [NG] to [OK]. As the steering wheel unlocks, the ECM receives the unlock signal from the steering motor, and the result displayed for [Steering Unlock] (an item under [Data monitor]) changes from [Unset] to [Set].<br>• With ID code box<br>– In order for the steering wheel to be unlocked, [OK] must be displayed for [L Code Check] under [Data monitor]. This means that the ID code stored in the steering lock ECM (steering lock actuator ASSY) and [S Code Check] (ID code box (immobilizer code ECM)) must match the collation ECM (smart key ECM ASSY) and the ID code box (immobilizer code ECM).<br>• Without ID code box<br>– In order for the steering wheel to be unlocked, [OK] must be displayed for [L Code Check] under [Data monitor]. This means that the ID code stored in the steering lock ECM (steering lock actuator ASSY) must match the one stored in the collation ECM (smart key ECM ASSY). |

*1: The ID code box is included.

*2: With automatic transmission

NOTE:
The electrical key transmitter SUB-ASSY, the transmitter battery, and the vehicle battery should already have been inspected during the previous operation procedure. If not, inspect them now.

(5) Operation 5

| | |
|---|---|
| Operation | Carrying the electrical key transmitter SUB-ASSY with you, move the shift lever in P*1 and depress the brake pedal*1 or the clutch pedal*2. |
| Expected vehicle behavior | The smart key indicator on the combination meter ASSY lights up green. If the smart key indicator does not light up, one of the parts listed in the table below might be faulty. |

*1: With automatic transmission
*2: for manual transmission

| Possible cause | Diagnosis |
|---|---|
| Stop light switch ASSY*1 | If the brake pedal is depressed, [ON] is displayed for [Stop Light Switch 1] (an item under [Data monitor]). |
| Clutch start switch ASSY*2 | If the clutch pedal is depressed, [ON] is displayed for [Neutral SW/Clutch SW] (an item under [Data monitor]). |
| Collation ECM (smart key ECM ASSY) | Start the ECM terminal arrangement. (Refer to TD - 40) |

*1: With automatic transmission
*2: for manual transmission

TD

(6) Operation 6

| | |
|---|---|
| Operation | Get on the vehicle carrying the electrical key transmitter SUB-ASSY with you, move the shift lever in P*1, depress and hold down the brake pedal*1 or the clutch pedal*2, and then press the engine switch. |
| Expected vehicle behavior | The engine starts. If the engine does not start, one of the parts listed in the table below might be faulty.<br>NOTE:<br>If you press the engine switch with the steering wheel unlocked, a starter drive request signal is output from the starter drive request output terminal of the collation ECM (smart key ECM ASSY). 12 V is then supplied to the starter relay via the starter relay terminal of the ECM. |

*1: With automatic transmission
*2: for manual transmission

| Possible cause | Diagnosis |
|---|---|
| Steering lock system | In normal operation, when the steering wheel is unlocked, [ON] is displayed for [Steering Unlock Switch] (an item under [Data monitor]). |
| Collation ECM (smart key ECM ASSY) | [Starter Request Signal] (an item under [Data monitor]) indicates the engine start request signal output. When [ON] is displayed for this item, it means that the collation ECM (smart key ECM ASSY) is outputting an engine start request signal to the ECM. |
| ECM | [Starter SW] (an item under [Data monitor]) indicates the starter drive command. If [ON] is displayed for this item, 12V is output from the starter relay terminal, which is then applied to the starter relay. |
| Starter relay | [Starter Signal] (an item under [Data monitor]) indicates the electrical potential of the starter relay terminal of the ECM. It tells you whether or not voltage is actually applied to the starter relay. |
| Starter | - |
| The vehicle battery is discharged. | You can check if the vehicle battery is discharged by simply sounding the horn. |

(7) Operation 7

| | |
|---|---|
| Operation | Press the engine switch. |
| Expected vehicle behavior | The vehicle turns to IG OFF and the engine stops. |

(8) Operation 8

| | |
|---|---|
| Operation | Open a door. |
| Expected vehicle behavior | The steering wheel locks. If this does not happen, one of the parts listed in the table below might be faulty. |

| Possible cause | Diagnosis |
|---|---|
| Steering lock system | - |
| Door courtesy light switch ASSY | If any one of the doors opens, [OFF] is displayed for [D Door Courtesy SW] (an item under [Data monitor]). |

(9) Operation 9

| | |
|---|---|
| Operation | Carrying the electrical key transmitter SUB-ASSY with you, touch the lock sensor on the driver's door outer handle. |
| Expected vehicle behavior | As the door locks, you get an answer-back. |

5. Vehicle battery conservation function
   (1) When the entry & start system (entry function) is enabled, the vehicle performs a key detection operation every 0.25 seconds. If the vehicle is left in this state for a prolonged period of time, the battery can become completely drained. The following mechanisms are provided to help reduce battery drainage:
      (a) If the engine is not started for 5 or more days, periodic signal transmission from the electrical key antenna stops. In this event, you can unlock a door by touching the unlock sensor on front door outer handle ASSY.
      (b) If the engine is not started for 14 or more days, the lock/unlock sensor of the passenger's side front door outer handle ASSY is disabled. In this event, you need to use the unlock sensor on the driver's side front door outer handle ASSY to unlock a door.
      (c) If the electrical key transmitter SUB-ASSY is left inside the detection area created outside the vehicle for 10 minutes or more, the exterior electrical key antenna that is detecting the presence of the electrical key transmitter SUB-ASSY is deactivated.
   (2) To restore the entry & start system, perform the following:
      (a) Lock and then unlock the door by touching the lock/unlock sensor on the driver's side front door outer handle ASSY holding the key.
      (b) Once this operation is performed, all doors can be opened and closed.
      (c) Lock and then unlock all doors using a wireless operation.
6. Warning function
   (1) Alarm that goes off when you attempt to get off the vehicle with the shift lever in a position other than P (power deactivation notification) (applicable to automatic transmission only)
      (a) Situation A: An attempt to get off the vehicle was detected (the driver's door opens when the shift lever is in a position other than P).

| Item | Contents |
|---|---|
| Purpose of the warning | • To prevent the vehicle from suddenly moving forward<br>• To prevent the vehicle from being stolen<br>• To prevent the vehicle from moving (to prevent the vehicle from starting moving down a slope or an inclined plane without a driver inside the vehicle) |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The power mode is ACC ON or IG ON.<br>• The shift lever is moved to P.<br>• Driver's door is open.<br>• The vehicle is stopped. |
| Description | • The combination meter ASSY buzzer gives a continuous beeping sound. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • The power mode is IG OFF.<br>• The shift lever is moved to P.<br>• Driver's door is closed<br>• The vehicle is running. |

      (b) Situation B: Under situation A, the driver gets off the vehicle carrying the electrical key transmitter SUB-ASSY, closes the driver's door, and attempts to walk away from the vehicle.

| Item | Contents |
|---|---|
| Purpose of the warning | • To prevent the vehicle from suddenly moving forward<br>• To prevent the vehicle from being stolen<br>• To prevent the vehicle from moving (to prevent the vehicle from starting moving down a slope or an inclined plane without a driver inside the vehicle) |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The power mode is ACC ON or IG ON.<br>• The shift lever is in a position other than P.<br>• The driver's door is opened and then closed.<br>• The electrical key transmitter SUB-ASSY is not inside the vehicle (a matching code is not detected inside the vehicle).<br>• The vehicle is stopped. |
| Description | • The combination meter ASSY buzzer gives a continuous beeping sound.<br>• The smart key indicator blinks yellow.<br>• The wireless buzzer gives a continuous beeping sound. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • The power mode changes to IG OFF.<br>• The shift lever is moved to P.<br>• The electrical key transmitter SUB-ASSY is detected inside the vehicle (a matching code is detected inside the vehicle).<br>• The vehicle is running. |

(2) Alarm that goes on when you attempt to get off the vehicle with the shift lever in P (without turning off the power) (key reminder warning)

*: for automatic transmission

(a) Situation A: An attempt is made to open the driver's door and get off the vehicle with the steering wheel unlocked.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent the vehicle from being stolen |
| Warning activation conditions (When all of the conditions for either condition 1 or condition 2 are met) | Condition 1:<br>• ACC ON<br>• Driver's door is open.<br>Condition 2 (1 second):<br>• The power mode is IG OFF.<br>• Driver's door is open.<br>• The steering wheel is unlocked. |
| Description | • The combination meter ASSY buzzer gives a continuous beeping sound. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • The power mode changes to IG ON.<br>• Driver's door is closed<br>• The power mode is IG OFF and the steering wheel is locked. |

TD

(b) Situation B: Under Condition 1 of Situation A, the driver gets off the vehicle carrying the electrical key transmitter SUB-ASSY, closes the driver's door, and attempts to walk away from the vehicle.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent the vehicle from being stolen |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The power mode is ACC ON or IG ON.<br>• The shift lever is in P.<br>• The driver's door is opened and then closed.<br>• The electrical key transmitter SUB-ASSY is not inside the vehicle (a matching code is not detected inside the vehicle).<br>• The vehicle is stopped. |
| Description | • The combination meter ASSY buzzer beeps 1 time.<br>• The wireless buzzer makes 3 short beeping sounds.<br>• The smart key indicator on the combination meter ASSY blinks orange. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • The engine switch is off.<br>• The electrical key transmitter SUB-ASSY is detected inside the vehicle (a matching code is detected inside the vehicle). |

(c) Situation C: Under the situation in which the conditions of Situation B are met, the driver closes the door and performs an entry lock operation.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent the vehicle from being stolen |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The power mode is ACC ON or IG ON.<br>• The shift lever is in P.<br>• The electrical key transmitter SUB-ASSY is not inside the vehicle (a matching code is not detected inside the vehicle).<br>• The electrical key transmitter SUB-ASSY is detected outside the vehicle (a matching code is detected outside the vehicle).<br>• An entry lock operation is performed.<br>• The vehicle is stopped. |
| Description | • The combination meter ASSY buzzer beeps once.<br>• The wireless buzzer gives a continuous beeping sound.<br>• The smart key indicator blinks orange. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 5 seconds elapses after the start of warning (only the buzzer stops).<br>• The power mode is IG OFF.<br>• The shift lever is in a position other than P.<br>• The vehicle is running.<br>• The electrical key transmitter SUB-ASSY is detected inside the vehicle (a matching code is detected inside the vehicle).<br>• Open one of the doors.<br>• Close one of the doors. |

(3) Warning provided when a fellow passenger brings the electrical key transmitter SUB-ASSY outside the vehicle

(a) A door other than the driver's door opens, and a fellow passenger attempts to get off the vehicle carrying the key.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent any situation that might make it impossible to restart the engine |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The power mode is ACC ON or IG ON.<br>• A door other than the driver's door is opened and then closed.<br>• The vehicle is stopped.<br>• The electrical key transmitter SUB-ASSY is not inside the vehicle (a matching code is not detected inside the vehicle). |
| Description | • The combination meter ASSY buzzer beeps once.<br>• The wireless buzzer makes 3 short beeping sounds.<br>• The smart warning light on the combination meter ASSY blinks orange. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • The engine switch is off.<br>• The electrical key transmitter SUB-ASSY is detected inside the vehicle (a matching code is detected inside the vehicle). |

(4) Warning provided when the key is not inside the detection area

(a)An attempt is made to change the power mode to IG ON or ACC ON, or to start the engine when the key is not detected inside the vehicle.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent user confusion |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The engine immobilizer is enabled.<br>• The engine switch is touched when the electrical key transmitter SUB-ASSY is not inside the vehicle, or when the key battery is drained (a matching code is not detected inside the vehicle). |
| Description | • The combination meter ASSY buzzer beeps once.<br>• The smart warning light on the combination meter ASSY blinks orange. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 15 seconds elapses after the start of warning.<br>• With the entry function is cancelled, the electrical key transmitter SUB-ASSY comes into contact with the engine switch when the electrical key transmitter SUB-ASSY is not inside the vehicle or when the key battery is drained (a matching code is detected inside the vehicle). |

TD

(5) No key in vehicle alarm signal

(a)The driver starts the vehicle without the key inside the vehicle.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent any situation that might make it impossible to restart the engine |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • IG ON<br>• A fellow passenger moves the key outside the vehicle warning detection area.<br>• The vehicle is running.<br>• The electrical key transmitter SUB-ASSY is not inside the vehicle (a matching code is not detected inside the vehicle). |
| Description | • The combination meter ASSY buzzer beeps for 7 seconds.<br>• The smart key indicator on the combination meter ASSY blinks orange. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • The power mode is IG OFF.<br>• The electrical key transmitter SUB-ASSY is detected inside the vehicle (a matching code is detected inside the vehicle). |

(6) Anti-lockout warning

(a)An entry lock operation is performed with the key left inside the vehicle.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent the vehicle from being stolen |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The power mode is IG OFF.<br>• All doors are closed.<br>• The electrical key transmitter SUB-ASSY is inside the vehicle (a matching code is detected inside the vehicle).<br>• The lock sensor is touched (without a door lock operation).<br>• The vehicle is stopped. |
| Description | • The wireless buzzer gives a continuous beeping sound. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 5 seconds elapses after the start of warning.<br>• The power mode is ACC ON or IG ON.<br>• One of the doors is open.<br>• A lock operation is performed. (Other than smart door lock) |

(7) Door open reminder warning

(a)An entry lock operation is performed when there is a door that is not properly closed.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent the vehicle from being stolen |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • The power mode is IG OFF.<br>• One of the doors (except the one with the touch sensor that the user is currently touching) is open.<br>• The lock sensor is touched, or the lock switch on the electrical key transmitter SUB-ASSY is pressed.<br>• The electrical key transmitter SUB-ASSY is detected inside the vehicle (a matching code is detected outside the vehicle). |
| Description | • The wireless buzzer gives a continuous beeping sound. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 5 seconds elapses after the start of warning.<br>• The power mode is ACC ON or IG ON.<br>• All doors are closed.<br>• A wireless unlock operation is performed.<br>• An entry unlock operation is performed. |

(8) Lockout protection function

(a)An attempt is made to lock a door with the electrical key transmitter SUB-ASSY left inside the vehicle.

| Item | Contents |
|---|---|
| Purpose of the warning | To prevent the vehicle from being stolen |
| Warning activation conditions (The warning is activated when all of these conditions are met). | • A keyless lock operation*1 is performed.<br>• The electrical key transmitter SUB-ASSY is inside the vehicle (a matching code is detected inside the vehicle).<br>• The vehicle is stopped. |
| Description | • The combination meter ASSY buzzer beeps once.<br>• The wireless buzzer gives a continuous beeping sound. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 5 seconds elapses after the start of warning.<br>• The power mode is changed.<br>• One of the doors is open.<br>• A lock operation is performed.<br>• The vehicle is running. |

*1: A keyless lock operation refers to the process of locking an open door by operating the door lock knob and then closing the door while pulling the front door outer handle ASSY.

(9) Key battery low warning

(a)The vehicle is running with the transmitter battery almost drained.

| Item | Contents |
|---|---|
| Purpose of the warning | • Convenient function<br>• To prevent any situation that might make it impossible to restart the engine |
| Warning activation conditions (When all of the conditions for either condition 1 or condition 2 are met) | Condition 1:<br>• The vehicle stops after 20 minutes or longer in the IG ON state.<br>• The transmitter battery is almost drained.<br>• The electrical key transmitter SUB-ASSY is inside the vehicle (a matching code is detected inside the vehicle).<br>• The vehicle is stopped.<br>Condition 2:<br>• The engine is started in a cold state.<br>• The transmitter battery is almost drained.<br>• The electrical key transmitter SUB-ASSY is inside the vehicle (a matching code is detected inside the vehicle).<br>• The vehicle is stopped.<br>• A key low battery warning log is present.* |
| Description | • The combination meter ASSY buzzer beeps once.<br>• The smart warning light on the combination meter ASSY blinks orange. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 15 seconds elapses after the start of warning.<br>• The vehicle is running. |

* The "key low battery warning" is logged when the power mode changes to IG OFF after 20 minutes or longer in the IG ON state.

(10) Warning provided when the steering wheel is not unlocked

- The steering wheel does not unlock.

- The shift lever is moved to a position other than P before the steering wheel is unlocked (applicable to automatic transmission only).

| Item | Contents |
|---|---|
| Purpose of the warning | Convenient function |
| Warning activation conditions | The steering wheel does not unlock. |
| Description | • The combination meter ASSY buzzer beeps once.<br>• The smart key indicator on the combination meter ASSY blinks green. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 15 seconds elapses after the start of warning.<br>• The steering wheel is unlocked. |

(11) Entry & start system error warning

(a) After a problem in the clutch switch or problem that can cause a failure in the steering lock ECM is detected, either a failure in the IG drive circuit or a vehicle speed information error is detected.

| Item | Contents |
|---|---|
| Purpose of the warning | A failure is detected. |
| Warning activation conditions (The warning is deactivated when any one of these conditions is met). | • IG OFF, driver's door closed →door opened, clutch switch ON for 300 seconds or more (MT vehicles)<br>• Steering lock actuator ASSY (steering lock ECM) failure<br>• Collation ECM (smart key ECM ASSY) failure<br>• Steering lock/unlock position switch failure<br>• An IG relay output circuit error is detected.<br>• A vehicle speed error is detected.<br>• The loss of vehicle speed signal communication is detected. |
| Description | • The combination meter ASSY buzzer beeps once.<br>• The smart key indicator on the combination meter ASSY blinks orange. |
| Warning deactivation conditions (The warning is deactivated when any one of these conditions is met). | • 15 seconds elapses after the start of warning.<br>• Normal state is resumed. |

(12) Immobilizer check completion report

(a) The electrical key transmitter SUB-ASSY comes into contact with the engine switch when the battery of the electrical key transmitter SUB-ASSY is drained, when the entry function is cancelled, or when interference from interference waves.

| Item | Contents |
|---|---|
| Purpose of the warning | Convenient function |
| Warning activation conditions | • The key comes into contact with the engine switch when the key battery is drained or when the entry function is cancelled (a matching code is detected inside the vehicle). |
| Description | • The combination meter ASSY buzzer makes a short beeping sound. |

## HOW TO PROCEED WITH TROUBLESHOOTING

NOTE:

- Use these procedures to troubleshoot the entry and start system (for entry function).
- *: Use the SSM4.

| | |
|---|---|
| 1 | VEHICLE BROUGHT TO WORKSHOP |

NEXT

| | |
|---|---|
| 2 | CUSTOMER PROBLEM ANALYSIS |

NOTE:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to

make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.

- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points for problem analysis:

| | |
|---|---|
| What? | Vehicle model, system name |
| When? | Date, time, occurrence frequency. Does it occur recently or for a long time? |
| Where? | Does it occur at specified place? |
| Under what conditions? | Unlock/lock the door, engine switch on (IG), engine start. |
| How did it happen? | Problem symptoms* |

– *: Be sure to ask the customer in detail about the following points concerning the vehicle operating conditions, environment and problem, and then check for DTCs.
  (1) If the entry lock/unlock function does not operate for all doors.
  (2) If the entry lock function does not operate.
  (3) If the entry unlock function does not operate.
  (4) If both the entry lock and unlock functions do not operate.
  (5) If the wireless lock and unlock functions do not operate.
  (6) If there is no power even when the engine switch is pressed [does not turn on (ACC)].
  (7) If the engine does not start with the entry ignition function.
  (8) If the outside warning buzzers do not sound.
  (9) Did you try to engine start by put the electrical key direct on the engine switch and press the engine switch on (IG).
  (10)If the interior warning buzzers do not sound.
  (11)If the steering lock does not unlock.
  (12)Any other details concerning the problem.

– If it is supposed that electric wave interference is likely, be sure to ask the customer in detail about the following points concerning the vehicle operating conditions, environment and problem.
  (1) Specific locations where the system does not operate (such as near TV towers, large video displays, wireless garage door opener systems, wireless security cameras, home security systems, etc.).
  (2) Specific times when the system does not operate: Whether or not symptoms occurred immediately after purchase or only recently. Whether or not the symptoms occurred when the key was even right by the vehicle (electrical key antenna).
  (3) If the system does not operate only when near specific vehicles (there may be an effect from electric waves from the wireless systems of other vehicles).
  (4) If the system operates intermittently.
  (5) If the key is bundled together with other items.
  (6) If the key is carried together with other electronic devices, such as cell phones, personal computers, portable music players, other electrical keys, etc. (keep the key at least 0.1m {0.33 ft.} away from such items).
  (7) Where the key is being kept when not in use: Whether or not the key being placed within 1m {3.28 ft.} of items such as TVs, DVD recorders, induction cookers, rice cookers, dishwashers, modems, cell phones, personal computers, microwave ovens, desk or floor lamps, cordless telephones, etc.

(8) If there are electronic devices that transmit electric waves placed in the vehicle.
(9) When the key battery was last replaced (when the battery is low). The key battery can be checked roughly using the "Key Low Battery" item in the [Data monitor] (See page TD - 53).
(10) If the customer installed any optional components (theft deterrent devices, wireless fog lights, etc.) to the vehicle.

NEXT

| 3 | INSPECT BATTERY VOLTAGE |
|---|---|

Standard voltage: 11 to 14V
(1) If the voltage is below 11V, recharge or replace the battery before proceeding.
NOTE:
A simple method to determine whether the battery is depleted is to operate the horn

NEXT

| 4 | VSC System Inspection |
|---|---|

(1) Use the SSM4 to check if the VSC system is functioning normally.
NOTE:
- If the certification ECU (smart key ECU assembly) mistakenly receives a vehicle speed signal, communication between the vehicle and the SSM4 fails.
- Be sure to check "Vehicle Speed" displayed on the [Data monitor] to make sure that the vehicle speed is not abnormal.

Result

| Result | Proceed to |
|---|---|
| No vehicle speed signal is mistakenly received. | A |
| A vehicle speed signal is mistakenly received. | B |

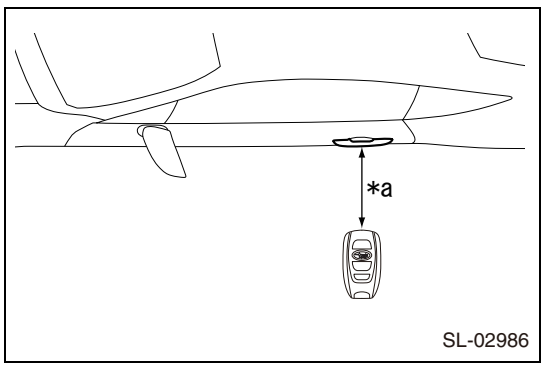
END

## Operation check

1. Entry & start system (entry function) operation
CAUTION:
Make sure that the entry & start system (entry function) is not disabled before proceeding with this inspection procedure.
(1) Check the entry unlock function (driver's door and the passenger's door).
(a) Lock all doors by a wireless lock operation, and holding the electrical key transmitter in your hand, touch the unlock sensor integrated into the back side of driver's side the front door outer handle ASSY. Check that driver's door is unlocked.
NOTE:
To perform a wireless lock operation, stand close to the front door outer handle ASSY and press the lock switch on the electrical key transmitter.



(b) Inspect the entry lock detection area. Lock all the doors. Holding the electrical key transmitter at the same level as the front door outer handle ASSY (approximately 0.8 m {2.62 feet} above ground), stand approximately 0.7 m (2.30 feet) away from the vehicle, as shown in the figure. Check if the LED (red) on the electrical key transmitter SUB-ASSY blinks.

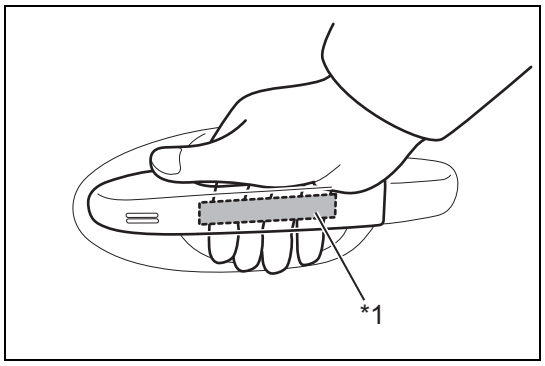
Captions in illustration

| | |
|---|---|
| *a | 0.7 - 1m |

(c) With the system in unlock standby mode, hold the front door outer handle ASSY and check that all doors are unlocked.

NOTE:

- If the electrical key transmitter SUB-ASSY is inside the detection area, and if the key ID code transmitted from the key matches the one stored in the collation ECM (smart key ECM ASSY), the system enters unlock standby mode.
- If the electrical key transmitter SUB-ASSY is within 0.2 m (0.66 feet) of the front door outer handle ASSY, communication might not be possible.
- Use the same procedure to inspect the front passenger's door. Check that all doors are unlocked when you touch the passenger's side unlock touch sensor.



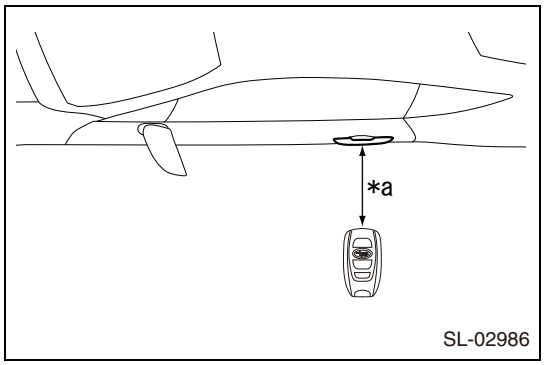
(d) Check the unlock response sensitivity. With the system in unlock standby mode, touch the part indicated in the figure and check that the door is unlocked.
CAUTION:
If you touch the sensor too quickly or too slowly, the sensor fails to respond and the door does not unlock.

Captions in illustration

| | |
|---|---|
| *1 | Unlock sensor (back side of the handle) |

TD

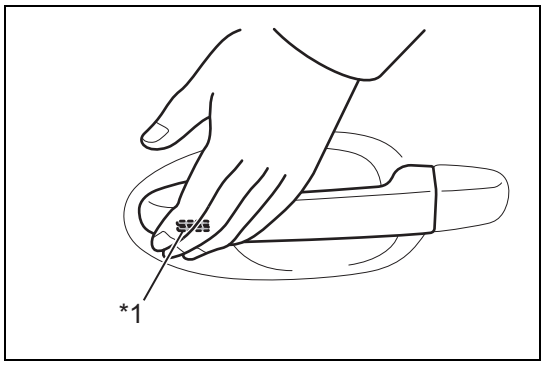
(2) Check the entry lock function (driver's door and the passenger's door).
CAUTION:
If you perform a door lock operation when the electrical key transmitter SUB-ASSY is located inside the vehicle but outside the detection area (on the instrument panel, in the glove compartment, or on the floor), the key lock-in prevention function does not kick in, which means that you will end up locking the door with the electrical key transmitter SUB-ASSY left inside the vehicle.



(a) With all doors closed and unlocked, hold the electrical key transmitter SUB-ASSY in your hand and touch the lock sensor on the driver's side front door outer handle ASSY. Check that all doors are locked.

Captions in illustration

| | |
|---|---|
| *a | Approx. 0.3 m |



(b) Inspect the entry lock operating range. Standing approximately 0.3 m (0.98 feet) away from the vehicle, position the electrical key transmitter SUB-ASSY approximately 0.1 m (0.33 feet) below the door glass (or approximately 0.8 m (2.62 feet) above ground), as shown in the figure. Touch the lock sensor and check that all doors are locked.

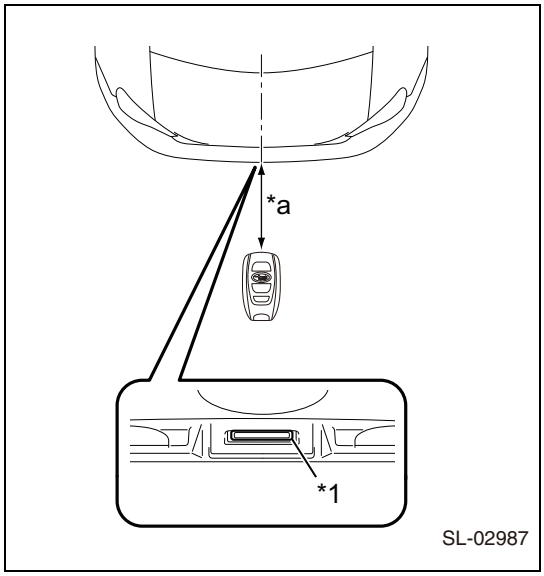
Captions in illustration

| | |
|---|---|
| *1 | Lock sensor |

NOTE:

- If touching the lock sensor does not lock the doors, press the lock sensor with your palm.
- If the electrical key transmitter SUB-ASSY is within 0.2 m (0.66 feet) of the front door outer handle ASSY, communication might not be possible. Furthermore, if you touch the lock sensor with the same hand holding the electrical key transmitter SUB-ASSY, you might fail to lock doors.
- If the key lock-in prevention buzzer beeps, radio waves from the indoor electrical key antenna might be leaking outside of the vehicle.

- Use the same procedure to inspect the passenger's door.



(3) Inspect the entry trunk open function.

(a) With the trunk closed, operate the unlock switch on the trunk opening switch ASSY. Check that the trunk opens.

Captions in illustration

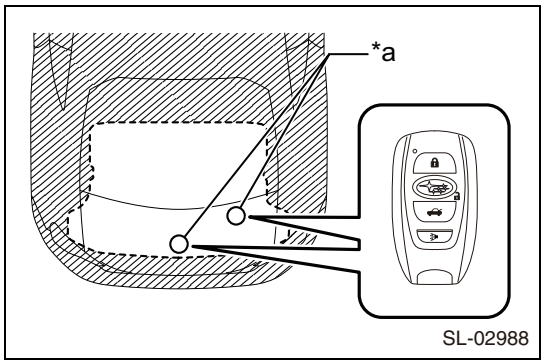
| | |
|---|---|
| *1 | Unlock switch |
| *a | Approx. 0.7m |

(b) Inspect the entry trunk unlock operating range. Stand approximately 0.7 m away from the rear end of the vehicle, holding the electrical key transmitter SUB-ASSY at the same level as the trunk opening switch ASSY, as shown in the figure above. Press the trunk opening switch ASSY and check that the trunk opens.

TD

(4) Check the lockout protection function (in the trunk).

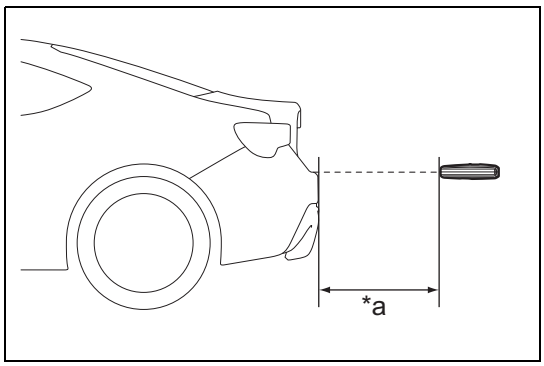
(a) Lock all doors and place the electrical key transmitter SUB-ASSY inside the trunk. Check if 1) the wireless buzzer beeps (for approximately 5 seconds) as you close the trunk, and 2) the trunk door opens as you press the trunk opening switch ASSY.



(b) Check the detection area for the lockout protection function. Make sure that the electrical key transmitter SUB-ASSY is facing in the direction shown in the figure. Place the electrical key transmitter SUB-ASSY in either of the 2 positions shown in the figure and check that 1) the key wireless buzzer beeps (for approximately 5 seconds) if you close the trunk, and 2) the trunk opens if you press the trunk opening switch ASSY.

Captions in illustration

| | |
|---|---|
| *a | Inspection point |



(c) Inspect the lockout protection detection area and the door control receiver for a radio wave leakage. Hold the electrical key transmitter SUB-ASSY at the same level as the trunk, positioning it at the center of the rear end of the vehicle. Make sure that the electrical key transmitter SUB-ASSY is positioned correctly and facing in the direction shown in the figure.

Captions in illustration

| | |
|---|---|
| *a | 0.1 m or more (0.328 feet or more) |

NOTE:

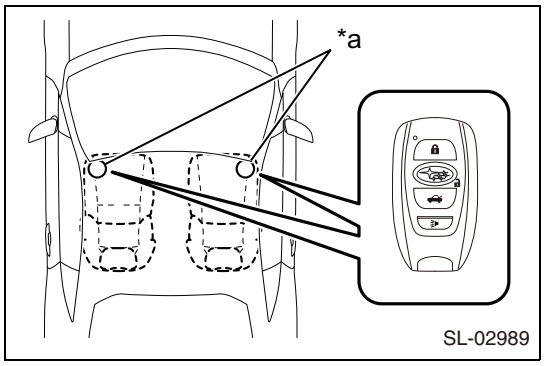
- If the electrical key transmitter SUB-ASSY is 0.1 m (0.328 feet) or more away from the rear bumper, the wireless buzzer does not go off.
- If the warning buzzer beeps, radio waves might be leaking from the indoor electrical key antenna no. 3 (antenna located inside the trunk).

(5) Check the push button start function (applicable to automatic transmission only).

(a) With the engine switch turned off, move the shift lever in P. Holding the electrical key transmitter SUB-ASSY in your hand, depress the brake pedal. Check that the key indicator on the combination meter ASSY lights in green. If the key indicator light of the combination meter ASSY lights up green, press the engine switch, and check that the engine starts.

(b) Without depressing the brake pedal, change the power mode to IG OFF. Press the electrical key transmitter SUB-ASSY and check that the power mode changes as follows: OFF →ON (ACC) →ON (IG) →OFF. If the shift lever is in a position other than P when the engine switch is ON (IG), however, the power mode does not change to OFF but changes to ON (ACC).

(c) Turn off the engine and press the engine switch. Check if the power mode changes to OFF (the engine stops and all electrical systems turn off). If, however, the vehicle is stopped with the shift lever in a position other than P, the power mode does not change to OFF and changes to the ON (ACC) state even if you press the engine switch. In this case, move the shift lever back into P, press the engine switch, and check that the power mode changes to OFF. After the power turns OFF, open the door and check that the steering lock operates.



(d) Inspect the operation range of the entry ignition (front floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY of the front seat in the direction shown in the figure, and check that the engine starts.

Captions in illustration

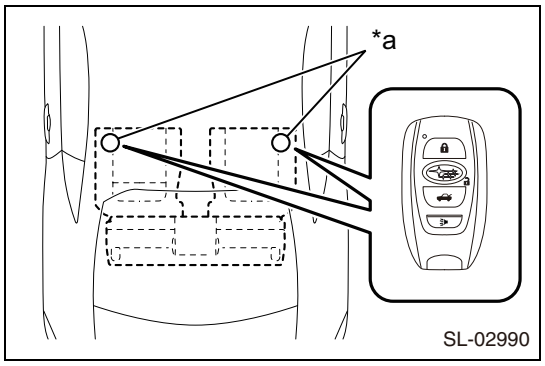
| | |
|---|---|
| *a | Inspection point |

CAUTION:

- Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.
- If the electrical key transmitter SUB-ASSY is within 0.2 m {0.66 feet} from the shift lever, communication may be impossible.
- If the electrical key transmitter SUB-ASSY is on the instrument panel or inside the glove compartment, the engine control system might not be activated.

NOTE:

Perform the inspection from both of these inspection points.



(e) Inspect the push button start operating range (rear floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY, and check that the engine starts.

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

CAUTION:

Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.

NOTE:

Perform the inspection from both of these inspection points.

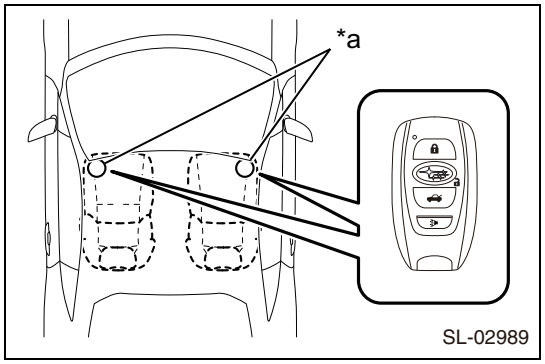
(6) Check the push button start function (applicable to manual transmission only).

(a) With the engine switch turned off and holding the electrical key transmitter SUB-ASSY in your hand, depress the clutch pedal. Check if the entry key indicator on the combination meter ASSY lights in green. If the key indicator light of the combination meter ASSY lights up green, press the engine switch, and check that the engine starts.

(b) Without depressing the clutch pedal, change the power mode to IG OFF. Press the electrical key transmitter SUB-ASSY and check that the power mode changes as follows: OFF →ON (ACC) →ON (IG) →OFF.

(c) Turn off the engine and press the engine switch. Check if the power mode changes to OFF (the engine stops and all electrical systems turn off). Open the door and check that the steering lock operates.

TD



(d) Inspect the push button start operating range (front floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY of the front seat in the direction shown in the figure, and check that the engine starts.

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

CAUTION:

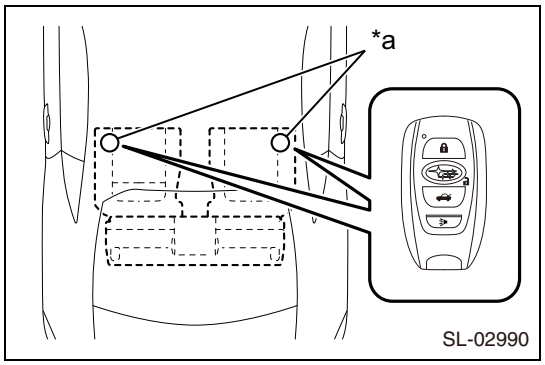
- Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.
- If the electrical key transmitter SUB-ASSY is within 0.2 m {0.66 feet} from the shift lever, communication may be impossible.
- If the electrical key transmitter SUB-ASSY is on the instrument panel or inside the glove compartment, the engine control system might not be activated.

NOTE:

Perform the inspection from both of these inspection points.

CAUTION:

If the electrical key transmitter SUB-ASSY is on the instrument panel or inside the glove compartment, the engine control system might not be activated.



(e) Inspect the push button start operating range (rear floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY, and check that the engine starts.

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

CAUTION:

Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.

NOTE:

Perform the inspection from both of these inspection points.

(7) Check the lockout protection function (interior check).

CAUTION:

To prevent the key from being locked in the vehicle, perform this inspection procedure with a door glass open.

(a) Turn the ignition switch to OFF.

(b) Place the electrical key transmitter SUB-ASSY on the front or rear seat.

(c) Close all doors but make sure to leave the doors unlocked.

(d) Touch the lock sensor on the front door and check that the door does not lock, and that the lockout protection buzzer (exterior buzzer) sounds for approximately 5 seconds.

(8) Check the entry cancel function.

(a) Cancel the entry & start system and check that all functions of the entry & start system (entry function) are disabled.

NOTE:

- To cancel the entry & start system (entry function), refer to the procedure described below. (Refer to TD - 37)
- Even if you cancel the entry & start system, you can lock/unlock doors by a wireless operation. You can also operate the entry & start system by placing the electrical key transmitter SUB-ASSY over the engine switch.

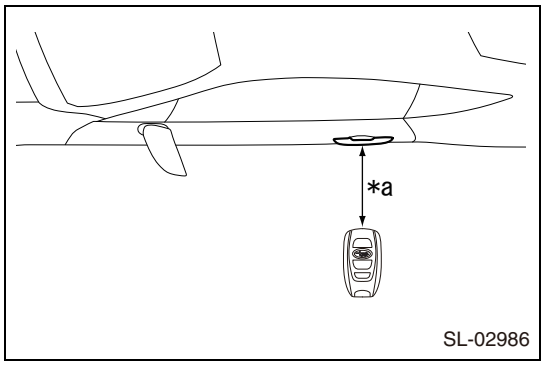
(b) Enable the key cancel function (entry cancel function) and check that all functions of the entry & start system are disabled.

(9) Check the answer-back function (blinking of the hazard warning light and the sounding of the buzzer*).

| Entry operation | Wireless buzzer | Hazard warning light |
|---|---|---|
| Entry door lock | Beeps 1 time | Blinks 1 time |
| Entry door unlock | Beeps 2 times | Blinks 2 times |
| Entry trunk open | Beeps 1 time | No blinking |

2. [Keyless access system check]
CAUTION:
Perform this check procedure with the vehicle stopped.
NOTE:
In [Keyless access system check], you can check if the electrical key transmitter SUB-ASSY is properly detected by a specific electrical key antenna or is properly functioning in a specific detection area by sounding the wireless buzzer.
(1) Enter the following menu items: [Keyless access system check] →[Keyless Access (Collation ECM)] →[Work Support] →[Function Check Sequence] →[Keyless access system check].
(2) Refer to the table below and inspect an appropriate item.

| Tester display | Check item |
|---|---|
| [Driver's External Transmitter + Interior Tuner] *1 | Front door outer handle ASSY (electrical key antenna) (driver's side antenna) |
| [Passenger's External Transmitter + Interior Tuner] *2 | Front door outer handle ASSY (electrical key antenna) (front passenger's side antenna) |
| [Fr Interior Transmitter + Interior Tuner] *3 | Indoor electrical key antenna ASSY no. 1 (front floor) |
| [Rr Interior transmitter + Indoor tuner] *4 | Indoor electrical key antenna ASSY no. 2 (rear floor) |
| [Out of trunk transmitter + room tuner] *5 | Electrical key antenna (trunk exterior) |
| [Trunk Internal Transmitter + Interior Tuner] *6 | Indoor electrical key antenna ASSY No. 3 (trunk) |
| [Immobilizer amplifier transmission] *7 | Amplifier (engine switch) |

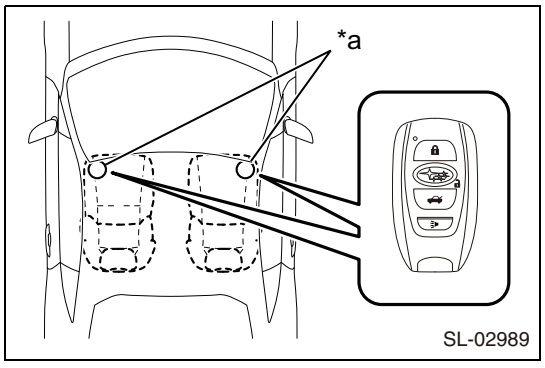


(3) Move the electrical key transmitter SUB-ASSY toward a specific electrical key antenna, and check that the wireless door buzzer beeps.
(a)*1: Front door outer handle ASSY (driver's side electrical key antenna)

Captions in illustration

| | |
|---|---|
| *a | Approx. 0.7m |

NOTE:
- As shown in the figure, hold the electrical key transmitter SUB-ASSY at the same level as the front door outer handle ASSY (approximately 0.8 m above ground).
- *2: Inspect the passenger's door as well using the same procedure.

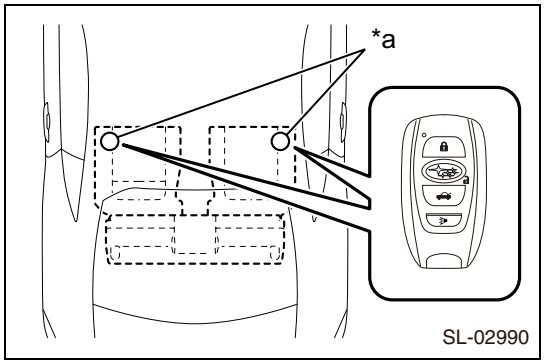


(4) *3: Indoor electrical key antenna ASSY no. 1 (front floor)

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

NOTE:
Place the electrical key transmitter SUB-ASSY on the driver's side or passenger's side front seat cushion.

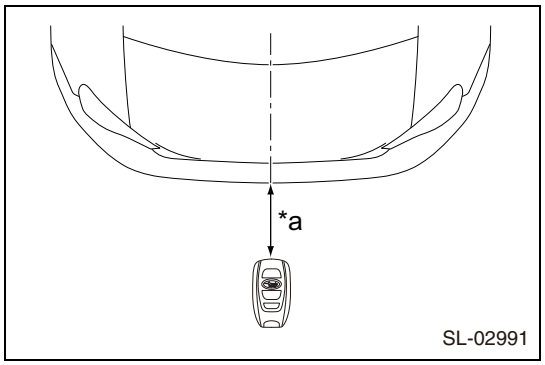


(5) *4: Indoor electrical key antenna No. 2 (rear floor)

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

NOTE:
Place the electrical key transmitter SUB-ASSY on the rear seat.



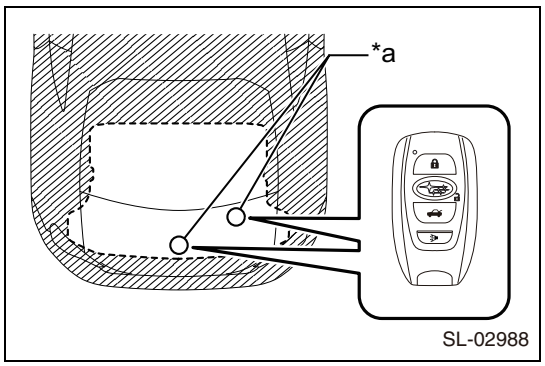
(6) *5: Electrical key antenna (trunk exterior)

Captions in illustration

| | |
|---|---|
| *a | Approx. 0.7m |

NOTE:
Hold the electrical key transmitter SUB-ASSY at the same level as the upper surface of the rear bumper, positioning it at the center of the rear end of the vehicle, as shown in the figure.

TD

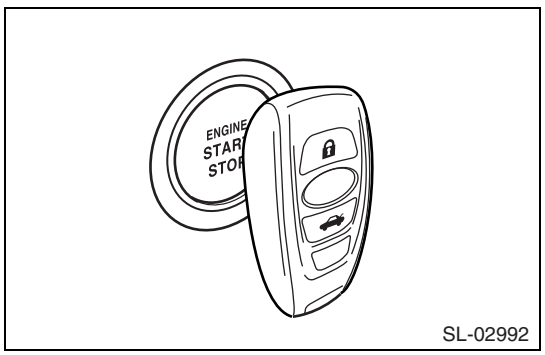


(7) *6: Indoor electrical key antenna No. 3 (in the trunk)

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

NOTE:
Place the electrical key transmitter SUB-ASSY inside the trunk. Even when the electrical key transmitter SUB-ASSY is placed inside the trunk, the buzzer does not necessarily go off.



(8) *7: Amplifier (engine switch)
NOTE:
Hold the electrical key transmitter SUB-ASSY near the engine switch, with its switch side facing yourself.

## CUSTOMIZE PARAMETERS

1. CUSTOMIZE ENTRY AND START SYSTEM (for Entry Function)
   NOTE:
   The following items can be customized.
   CAUTION:
   - When the customer requests a change in a function, first make sure that the function can be customized.
   - Record the current settings before customizing.

   (1) CUSTOMIZE ENTRY AND START SYSTEM (for Entry Function)
   (a)Customizing with the SSM4

(b)Connect the SSM4 to the DLC3.
(c)Turn the engine switch on (IG).
(d)Turn the SSM4 on.
(e)Enter the following menus: [Keyless Access(Collation ECM)] →[Customize]
(f) Select the setting by referring to the table below.

Entry & Start

| Display | Default | Content | Setting | Relevant ECU |
|---|---|---|---|---|
| [Ignition Available Area] | All | Function that sets the area that the key must be in before the engine switch can be operated. | Front or All | Certification ECU (smart key ECU assembly) |
| [Parking Wait Time] | 2.5s | Function that sets the period of time (lock confirmation time) that the door is prevented from being unlocked by operating the front door outside handle assembly after an entry lock operation is performed. | 0.5s, 1.5s, 2.5s or 5s | Certification ECU (smart key ECU assembly) |
| [Trunk Open Mode] | ON | Function that opens the trunk when the driver has the electrical key transmitter sub-assembly and presses the trunk opening switch assembly. | OFF or ON | Certification ECU (smart key ECU assembly) |
| [Smart Cancel] | OFF | Function that enables or disables the entry and start system. | OFF or ON | Certification ECU (smart key ECU assembly) |
| [Smart door unlock mode] | Driver | Function that chooses the doors to be operated by entry unlock operation. | All or Driver | Certification ECU (smart key ECU assembly) |
| [Touch Activation Over Threshold] | Active | The function that limits the consecutive entry lock operation to only 2 times can be changed between Active and Not Active. When in Not Active mode, there is no limit for the number of times that the consecutive entry lock operation can be performed. | Active or Not Active | Certification ECU (smart key ECU assembly) |

Warning

| Display | Default | Content | Setting | Relevant ECU |
|---|---|---|---|---|
| [Key Low Battery Warning] | ON | Enables or disables the sounding of the buzzer when the key battery is low and the engine switch is turned off after being on (IG) for 20 minutes or more. | OFF or ON | Certification ECU (smart key ECU assembly) |
| [Key Left in Vehicle Buzzer] | ON | Function to warn when left the electrical key transmitter sub-assembly in the vehicle. | OFF or ON | Certification ECU (smart key ECU assembly) |
| [IG ON Key Out Warning] | ON | Enables or disables the lock sensor function that sets off the alarm if the lock sensor is touched when the shift lever is in P (transmission A/T) and the power is ON. | OFF or ON | Certification ECU (smart key ECU assembly) |

(2) Entry cancel function (manual operation)
NOTE:
While the entry and start system is canceled, it is possible to lock and unlock the doors with the wireless operation, and the start system can be operated by holding the key against the engine switch.
(a)The following functions are disabled when the entry and start system is canceled.
1. Entry unlock/lock functions
2. Entry ignition function
3. Key lock-in prevention function
4. Entry back door open/lock function
5. Entry warning functions

(b)Canceling the system operation:
1. Make sure the following conditions are met:
   – The engine switch is off.
   – The driver side door is closed.
   – The driver side door is unlocked.
2. Press the unlock switch of the electrical key transmitter sub-assembly.
3. Open the driver side door within 5 seconds of completing the step above (driver side door: closed at beginning of step→opened).

4. With the driver side door open, press the unlock switch of the electrical key transmitter sub-assembly 2 times within 5 seconds of completing the step above.
   CAUTION:
   If the driver side door is closed before or while pressing the unlock switch, the entry cancel setting mode will end.
5. Close and open the driver side door twice within 30 seconds of completing the above step (driver side door: open at beginning of step →closed →opened →closed →opened).
6. With the driver side door open, press the unlock switch of the electrical key transmitter sub-assembly 2 times within 30 seconds of completing the step above.
   CAUTION:
   If the driver side door is closed before or while pressing the unlock switch, the entry cancel setting mode will end.
7. Close and open the driver side door within 30 seconds of completing the step above (driver side door: open at beginning of step→ closed →opened).
8. Close the driver side door within 5 seconds of completing the above step.
9. Check that the wireless buzzer sounds twice (short beeps) to confirm that the entry and start system has been canceled.

(c) Perform the following procedure to restore the entry and start system to the active state from the canceled state.

1. Perform the procedures to cancel the entry and start system again.

(d) Check that the wireless buzzer sounds once (short beep) to confirm that the entry and start system has been restored to the active state.

NOTE:

- The system changes between the canceled state and the active state each time the procedure to cancel the system is performed.
- The buzzer sounds twice when the system changes from the active state to the canceled state, and sounds once when the system changes from the canceled state to the active state.

TD

## PROBLEM SYMPTOMS TABLE

NOTE:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Entry and Start System (for Entry Function)

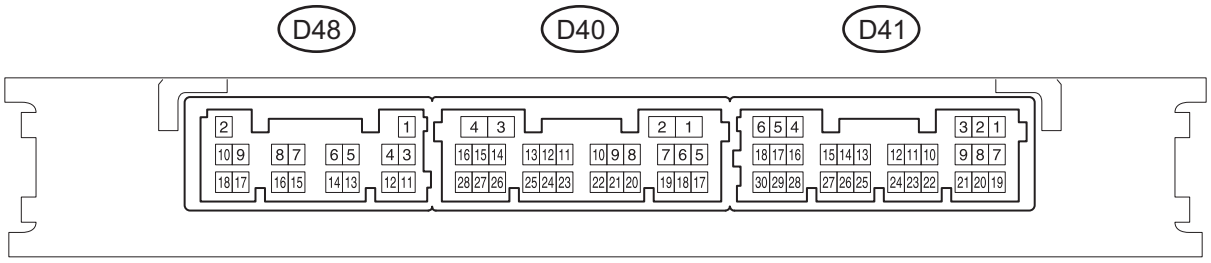
| Symptom | Suspected Area | See page |
|---|---|---|
| Wireless Door Lock Buzzer does not Sound | Wireless door lock buzzer | TD - 82 |
| | Wire harness or connector | - |
| | Main body ECU (multiplex network body ECU) | - |
| | Instrument panel junction block assembly | - |
| | Certification ECU (smart key ECU assembly) | - |
| All Door Entry Lock/Unlock Functions and Wireless Functions do not Operate | Power door lock control system | TD - 84 |
| | Electrical key transmitter sub-assembly | - |
| | Transmitter battery | - |
| | Wire harness or connector | - |
| | Door control receiver | - |
| | Certification ECU (smart key ECU assembly) | - |
| All Door Entry Lock/Unlock Functions do not Operate, but Wireless Functions Operate | Electrical key transmitter sub-assembly | TD - 92 |
| | Certification ECU (smart key ECU assembly) | - |
| Driver Side Door Entry Unlock Function does not Operate | Power door lock control system | TD - 97 |
| | Front door outside handle assembly (for driver side) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Front Passenger Side Door Entry Unlock Function does not Operate | Power door lock control system | TD - 101 |
| | Front door outside handle assembly (for front passenger side) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |

| Symptom | Suspected Area | See page |
|---|---|---|
| Driver Side Door Entry Lock and Unlock Function does not Operate | Power door lock control system | TD - 104 |
| | Front door outside handle assembly (for driver side) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Front Passenger Side Door Entry Lock and Unlock Function does not Operate | Power door lock control system | TD - 108 |
| | Front door outside handle assembly (for front passenger side) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Driver Side Door Entry Lock Function does not Operate | Power door lock control system | TD - 111 |
| | Front door outside handle assembly (for driver side) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Front Passenger Side Door Entry Lock Function does not Operate | Power door lock control system | TD - 115 |
| | Front door outside handle assembly (for front passenger side) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Room Oscillator does not Recognize Key | No. 1 indoor electrical key antenna assembly (front floor) | TD - 118 |
| | No. 2 indoor electrical key antenna assembly (rear floor) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Trunk Entry Unlock Function does not Operate when Key is Outside Trunk Compartment | Power door lock control system | TD - 125 |
| | Electrical key antenna (outside trunk) | - |
| | Trunk opening switch assembly | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Key Trunk Lock-in Prevention Function does not Operate | Power door lock control system | TD - 131 |
| | Electrical key antenna (outside trunk) | - |
| | Certification ECU (smart key ECU assembly) | - |
| | Wire harness or connector | - |
| Entry Interior Alarm does not Sound | Meter/gauge system | TD - 135 |
| | Certification ECU (smart key ECU assembly) | - |

TD

## ECM terminal arrangement

1. 1. Check the collation ECM (smart key ECM ASSY).



(1) Disconnect the D41 and D48 collation ECM (smart key ECM ASSY) connectors.

(2) Measure the voltage and resistance according to the following table.

NOTE:
Remove the connectors and measure the voltage and resistance of the wiring harness side.

| Inspection terminals | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D48-2 (+B) - D48-11(GND) | Input | +B power supply | Always | 9.5 - 16V | - |
| D48-11 (GND) - chassis ground | - | Ground | Always | 1 Ωor less | - |

If you cannot obtain the specified result, you have to suspect a defect in the wiring harness side. Otherwise, you have to remove the fuse.

(3) Reconnect the D41 and the D48 connectors of the collation ECM (smart key ECM ASSY).

(4) Measure the voltage according to the following table.
NOTE:
- Ensure that the entry cancel function (one of the customize setting available for the entry & start system) is not enabled. (Refer to TD - 37)
- Check the customize setting available for the entry & start system as well as the "ignition available area". (Refer to TD - 37)

| Inspection terminals | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D41-5 (IG2) - D48-11 (GND) | Input | IG power supply | Engine switch OFF →ON (IG) | 1 V or less →11 - 14 V | IG |
| D41-12 (CLG1) - D48-11 (GND) | Output | Output to the driver's side electrical key antenna (the collation ECM (smart key ECM ASSY) sends a request signal (challenge) to the door electrical key antenna to create a detection area). | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>5. The electrical key transmitter SUB-ASSY is inside the detection area*1.<br>6. All doors are locked by a wireless operation. | Pulse generation (Refer to waveform 1) | [Overhead + Driver Side] ([Keyless access system check]) |
| | | | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. All doors are locked by a wireless operation. | Pulse generation (Refer to waveform 2) | [Overhead + Passenger Side] ([Keyless access system check]) |
| D41-10 (CG2B) - D48-11 (GND) | Output | Output to the passenger's door electrical key antenna (terminals located on a component opposite from the CLG2 output terminal) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>5. All doors are locked by a wireless operation. | Pulse generation (Refer to waveform 2) | [Overhead + Passenger Side] ([Keyless access system check]) |
| D41-3 (CLG5) - D48-11 (GND) | Output | Output to the indoor electrical key antenna ASSY no. 1 (front floor) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. A door is open.<br>4. A door is closed.<br>5. Within 30 seconds | Pulse generation (Refer to waveform 3) | [Overhead + Front Room] ([Keyless access system check]) |
| D41-2 (CG5B) - D48-11 (GND) | Output | Output to the indoor electrical key antenna ASSY no. 1 (front floor) (terminals located on a component opposite from the CLG5 output terminal) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>3. A door is open.<br>4. A door is closed.<br>5. Within 30 seconds | Pulse generation (Refer to waveform 3) | [Overhead + Front Room] ([Keyless access system check]) |
| D41-20 (TSW1) - D48-11 (GND) | Input | Driver's door lock sensor signal input (a signal is sent from the door lock sensor on the front door outer handle ASSY to the collation ECM (smart key ECM ASSY). The collation ECM (smart key ECM ASSY) sends out a 12 V pulse waveform from the terminal TSW every 40 milliseconds. Once the door lock sensor is touched, the pulse is shorted to the ground. | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. Driver's door lock sensor, not touched →touched | Pulse generation (Refer to waveform 4) | [D-Door Trigger Switch] |

TD

| Inspection terminals | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D41-8 (TSW2) - D48-11 (GND) | Input | Passenger's door lock sensor signal input (a signal is sent from the door lock sensor on the front door outer handle ASSY to the collation ECM (smart key ECM ASSY). The collation ECM (smart key ECM ASSY) sends out a 12 V pulse waveform from the terminal TSW every 40 milliseconds. Once the door lock sensor is touched, the pulse is shorted to the ground. | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. Passenger's door lock sensor, not touched →touched | Pulse generation (Refer to waveform 4) | [P-Door Trigger Switch] |
| D41-22 (SEN1) - D48-11 (GND) | Input | Driver's door unlock sensor signal input (if you touch the touch sensor when the system is in unlock standby mode, the door electrical key antenna sends a touch sensor input signal (detection signal) to the collation ECM (smart key ECM ASSY)). | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are locked.<br>4. The electrical key transmitter SUB-ASSY is not in the appropriate range from the vehicle.<br>5. Driver's door unlock sensor, not touched →touched | Pulse generation (Refer to waveform 4) | [D-Door Touch Sensor] |
| D41-23 (SEN2) - D48-11 (GND) | Input | Passenger's door unlock sensor signal input (if you touch the touch sensor when the system is in unlock standby mode, the door electrical key antenna sends a touch sensor input signal (detection signal) to the collation ECM (smart key ECM ASSY)). | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are locked.<br>4. The electrical key transmitter SUB-ASSY is not in the appropriate range from the vehicle.<br>5. Passenger's door unlock sensor, not touched →touched | Pulse generation (Refer to waveform 4) | [P-Door Touch Sensor] |
| D40-27 (TSW5) - D48-11 (GND) | Input | Trunk opening switch signal input | Trunk opening switch ASSY, OFF →ON | Pulse generation (Refer to waveform 4) | [Tr/B-Door Unlock SW] |
| D40-11 (CLG6) - D48-11 (GND) | Output | Output to the indoor electrical key antenna ASSY no. 2 (rear floor) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>3. A door is open.<br>4. A door is closed.<br>5. Within 30 seconds | Pulse generation (Refer to waveform 3) | [Overhead + Rear Room] ([Keyless access system check]) |
| D40-10 (CG6B) - D48-11 (GND) | Output | Output to the indoor electrical key antenna ASSY no. 2 (rear floor) (terminals located on a component opposite from the CLG6 output terminal). | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>3. A door is open.<br>4. A door is closed.<br>5. Within 30 seconds | Pulse generation (Refer to waveform 3) | [Overhead + Rear Room] ([Keyless access system check]) |
| D40-9 (CLG7) - D48-11 (GND) | Output | Output to the indoor electrical key antenna ASSY no. 3 (antenna located inside the trunk) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>3. A door is open.<br>4. A door is closed.<br>5. Within 30 seconds | Pulse generation (Refer to waveform 3) | [Overhead + Trunk] ([Keyless access system check]) |

| Inspection terminals | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D40-8 (CG7B) - D48-11 (GND) | Output | Output to the indoor electrical key antenna ASSY no. 3 (antenna located inside the trunk) (terminals located on a component opposite from the CLG7 output terminal) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>3. A door is open.<br>4. A door is closed.<br>5. Within 30 seconds | Pulse generation (Refer to waveform 3) | [Overhead + Trunk] ([Keyless access system check]) |
| D41-19 (POS1) - D48-11 (GND) | Output | Driver's door unlock sensor power (12 v (the voltage drops once the engine switch is turned ON (IG))). | Engine switch OFF →ON (IG) | 9 - 14 V →2 V or less | - |
| D41-21 (POS2) to D48-11 (GND) | Output | Passenger's door unlock sensor power (12 v (the voltage drops once the engine switch is turned ON (IG))). | Engine switch OFF →ON (IG) | 9 - 14 V →2 V or less | - |
| D40-5 (RCO) - D48-11 (GND) | Output | Output to the door control receiver (power for the door control receiver. When the receiver initiates operation, the collation ECM (smart key ECM ASSY) outputs 5 V). | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. The electrical key transmitter SUB-ASSY is outside the detection area*2.<br>4. Lock/unlock button on the electrical key transmitter SUB-ASSY, not pressed →pressed | Pulse generation (Refer to waveform 5) | - |
| D40-17 (RDA) - D48-11 (GND) | Input | The door control receiver checks the data transmitted from the electrical key transmitter SUB-ASSY. The door control receiver then transmits the data to the ECM and intermittently shorts the 12 V signal sent from the collation ECM (smart key ECM ASSY) to the ground. | Description:<br>1. The engine switch is OFF.<br>2. All doors are locked.<br>3. The electrical key transmitter SUB-ASSY is outside the detection area*2 and inside the indoor wireless function operating range*3.<br>4. Lock/unlock button on the electrical key transmitter SUB-ASSY, not pressed →pressed | Pulse generation (Refer to waveform 6) | - |
| D40-19 (RSSI) - D48-11 (GND) | Input | Communication channel switching circuit | Description:<br>1. The engine switch is OFF.<br>2. All doors are locked.<br>3. The electrical key transmitter SUB-ASSY is outside the detection area*2 and inside the indoor wireless function operating range*3.<br>4. Lock/unlock button on the electrical key transmitter SUB-ASSY, not pressed →pressed | Pulse generation (Refer to waveform 7) | |
| D40-2 (CLG8) - D48-11 (GND) | Output | Output to the electrical key antenna (trunk exterior antenna) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. Trunk opening switch ASSY, OFF →ON | Pulse generation (Refer to waveform 8) | [Overhead + Trunk] ([Keyless access system check]) |
| D40-1 (CG8B) - D48-11 (GND) | Output | Output to the electrical key antenna (trunk exterior antenna) (terminals located on a component opposite from the CLG8 output terminal) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. Trunk opening switch ASSY, OFF →ON | Pulse generation (Refer to waveform 8) | [Overhead + Trunk] ([Keyless access system check]) |

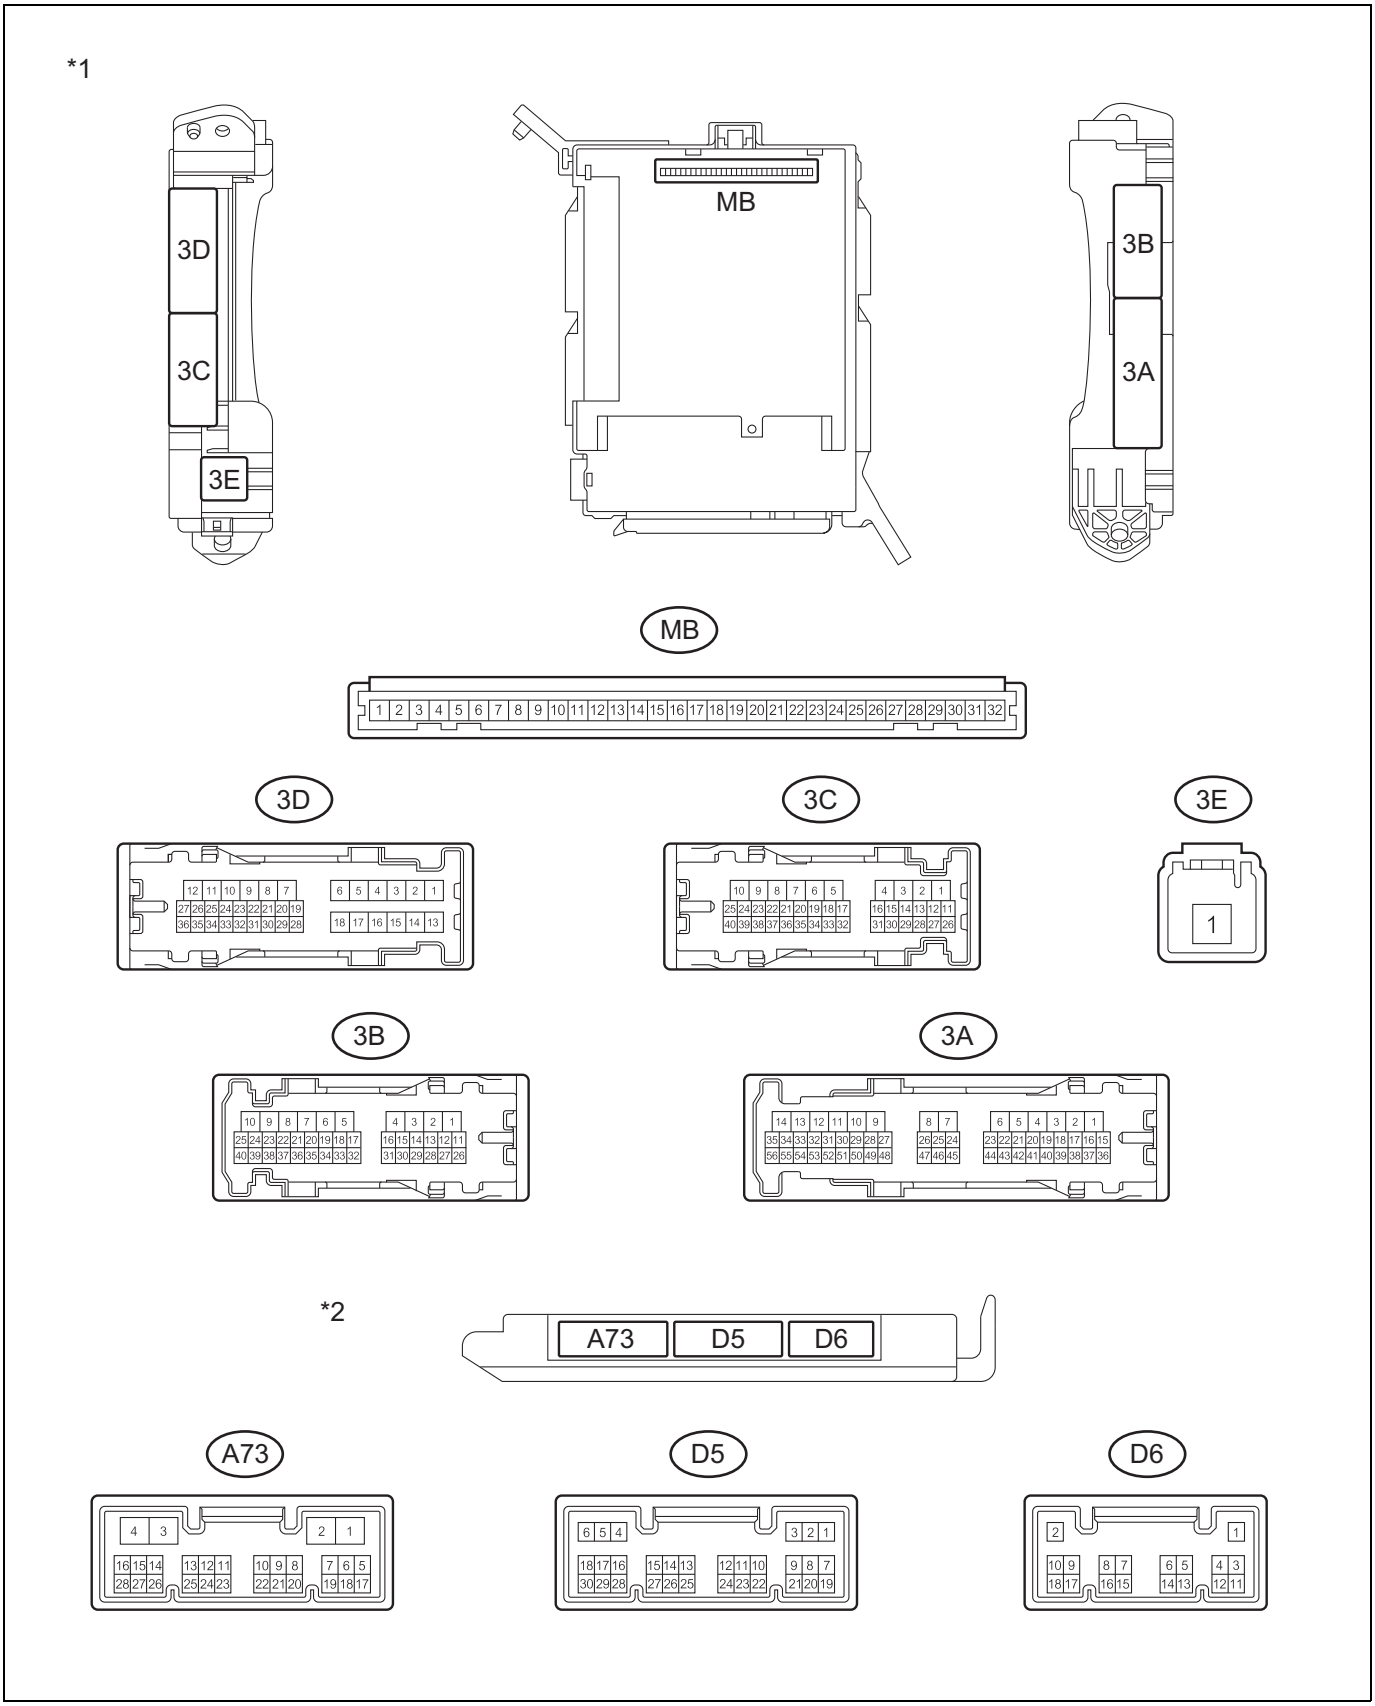
2. Check the instrument panel junction block ASSY and the main body ECM (multiplex network body ECM).



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (multiplex network body ECM) |

(1) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.
(2) Measure the voltage and resistance according to the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| MB-1 - chassis ground | Input | Battery power supply | Always | 11 - 14 V | - |
| MB-8 - chassis ground | Input | Engine switch power supply | Engine switch is ON (IG) | 11 - 14 V | [Ignition] |
| | | | The engine switch is OFF. | 1 V or less | |
| MB-9 - Chassis ground | Input | ACC power supply | The engine switch is on (ACC). | 11 - 14 V | [ACC SW] |
| | | | The engine switch is OFF. | 1 V or less | |
| MB-11 - chassis ground | Input | Ground | Always | 1 Ωor less | - |
| MB-32 - Chassis ground | Input | Battery power supply | Always | 11 - 14 V | - |
| D6-1 - Chassis ground | - | Ground | Always | 1 Ωor less | - |
| A73-4 - Chassis ground | - | Ground | Always | 1 Ωor less | - |

If you cannot get the specified result, there could be a problem in the wiring harnesses.

(3) Install the main body ECM (multiplex network body ECM) to the instrument panel junction block ASSY. (Refer to PD - 25)

(4) Refer to the value shown in table below and measure the voltage and waveform.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| 3A-28 - chassis ground | Input | Driver's side courtesy light switch | Driver's door is open. | 1 V or less | [D Door Courtesy SW] |
| | | | Driver's door is closed | Pulse generation | |
| 3B-13 - chassis ground | Input | Passenger's side courtesy light switch | The passenger's door is open. | 1 V or less | [Door Courtesy SW] |
| | | | The passenger's door is closed. | Pulse generation | |
| 3D-26 - chassis ground | Input | Trunk courtesy light switch | The trunk is open. | 1 V or less | [Luggage Courtesy SW] |
| | | | Change the power mode to IG OFF, close the door, and close the trunk. | 11 - 14 V | |
| 3B-2 - chassis ground | Output | Door lock motor lock drive output (driver's side) | The driver's side control switch is not pressed, and the driver's door key cylinder is in the neutral position*1. | 1 V or less | - |
| | | | The driver's door control switch is pushed to the lock position, or the driver's door key cylinder is in the lock position*1. | 11 - 14 V | |
| 3B-3 - chassis ground | Output | Door lock motor lock drive output (passenger's side) | The driver's side control switch is not pressed, and the driver's door key cylinder is in the neutral position*1. | 1 V or less | - |
| | | | The driver's door control switch is pushed to the lock position, or the driver's door key cylinder is in the lock position*1. | 11 - 14 V | |
| 3B-6 - chassis ground | Output | Door lock motor lock drive output (trunk) | The trunk open button on the electrical key transmitter SUB-ASSY is not pressed. | 1 V or less | The trunk is open. |
| | | | The trunk open button on the electrical key transmitter SUB-ASSY is pressed. | 11 - 14 V | |
| 3B-1 - chassis ground | Output | Door lock motor unlock drive output (driver's side) | The driver's side control switch is not pressed, and the driver's door key cylinder is in the neutral position*. | 1 V or less | - |
| | | | The driver's door control switch is pushed to the unlock position, or the driver's door key cylinder is in the unlock position*. | 11 - 14 V | |

## DIAGNOSIS SYSTEM

1. CHECK DLC3
   (1) Check the DLC3.
2. INSPECT BATTERY VOLTAGE
   (1) Measure the battery voltage.
   Standard voltage: 11 to 14V
   If the voltage is below 11V, recharge or replace the battery.

## DTC CHECK / CLEAR

1. CHECK DTC
   (1) Connect the SSM4 to the DLC3.

(2) Turn the engine switch on (IG).
(3) Turn the SSM4 on.
(4) Enter the following menus: [Keyless Access(Collation ECM)] →[DTC]
(5) Check for DTCs.

2. CLEAR DTC
(1) Connect the SSM4 to the DLC3.
(2) Turn the engine switch on (IG).
(3) Turn the SSM4 on.
(4) Enter the following menus: [Keyless Access(Collation ECM)] →[DTC] →[Clear Memory]
(5) Clear the DTCs.

## Data monitor / active test

1. Data monitor

CAUTION:
In the following table, the value listed in the normal condition is a reference value. Do not depend on reference value only when judging if the part is faulty.
NOTE:
By using the SSM4 and reading [Data monitor], you can read the statuses and values for switches, sensors, actuators, and other items without removing parts. Because the non-intrusive inspection allows you to read the intermittent statuses or signals without interfering with parts or lines, it is very convenient. Diagnostic time can be saved by reading the [Data monitor] information at the initial stage of the troubleshooting.

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menus: [Keyless Access(Collation ECM)] →[Data monitor], or [Body Control] →[Data monitor], or [Brake Control System] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

TD

Circuit description

The collation ECM (smart key ECM ASSY) generates a request signal and transmits it to the front door outer handle ASSY (driver's side electrical key antenna) every 250 ms. In order for the collation ECM (smart key ECM ASSY) to detect the approach of the key towards the vehicle, a signal requesting a response from the key must be transmitted every 250 ms to an approximately 1 m (3.28 feet) wide area beside the driver's door.

The DTC B27A1 is output by the collation ECM (smart key ECM ASSY) when an open circuit is detected between the collation ECM (smart key ECM ASSY) and the front door outer handle ASSY (driver's side electrical key antenna) (that is, between terminals CLG1 and ANT1, or between terminals CG1B and ANT2).

| Diagnostic codes | Detecting conditions | Faulty part | Diagnostic code output check operation |
|---|---|---|---|
| B27A1 | An open circuit is detected between the collation ECM (smart key ECM ASSY) and the front door outer handle ASSY (CLG1-ANT1, CG1B-ANT2) by a failure detection circuit inside the collation ECM (smart key ECM ASSY) (1 trip detection logic*1). | • Wiring harness or connector<br>• Front door outer handle ASSY (driver's side exterior antenna)<br>• Collation ECM (smart key ECM ASSY) | Always*2 |

*1: Output only when a failure is noted.
*2: Only when the vehicle is stopped.

Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Refer to "Entry & start system (entry function)" before proceeding to replace the collation ECM (smart key ECM ASSY). (Refer to TD - 5)
- After the repair work is complete, perform the "DTC output check operation" to confirm that the DTC is not output again.
- An antenna coil is present between the ANT1 and ANT2 terminals of the front door outer handle ASSY (driver's door)

| | |
|---|---|
| 1 | Check if the connectors are connected. |

(1) Turn the engine switch OFF.

(2) Check if the connectors are properly connected to the collation ECM (smart key ECM ASSY) and the front door outer handle ASSY.

Criteria: The connectors are properly connected.

NG → Connect the connectors properly.

OK

| | |
|---|---|
| 2 | Check the harnesses and connectors (front door outer handle ASSY - collation ECM (smart key ECM ASSY)). |

(1) Disconnect the D41 and D48 collation ECM (smart key ECM ASSY) connectors.
(2) Disconnect the E1 front door outer handle ASSY connector.
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D41-12 (CLG1) - E1-6 (ANT1) | Always | 1 Ωor less |
| D41-13 (CG1B) - E1-3 (ANT2) | Always | 1 Ωor less |
| D48-11 (GND) - Chassis ground | Always | 1 Ωor less |
| D41-12 (CLG1) - chassis ground | Always | 10 kΩ or more |
| D41-13 (CG1B) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

OK

| 4 | Replacement of the indoor electrical key antenna ASSY no. 3 (trunk interior antenna) |
|---|---|

(1) Temporarily replace the indoor electrical key antenna ASSY no. 3 (trunk interior antenna) with a new one or one that functions normally. (Refer to TD - 335)

Next

| 5 | Do a DTC check again. |
|---|---|

(1) Clear the diagnostic code. (Refer to TD - 52)
(2) Recheck the diagnostic code. (Refer to TD - 52)
Criteria: B27A7 is not output.

NG → Replacement of the collation ECM (smart key computer ASSY)

OK

END (indoor electrical key antenna ASSY no. 3 (trunk interior antenna) malfunction)

| DTC | B27A8 | Trunk/rear gate external antenna output stage open |
|---|---|---|

Circuit description

The collation ECM (smart key ECM ASSY) generates a request signal and transmits it to the electrical key antenna ASSY (trunk exterior antenna). In order for the collation ECM (smart key ECM ASSY) to detect the approach of the electrical key transmitter SUB-ASSY towards the vehicle, the request signal received must be transmitted to an approximately 1.0 m (3.28 feet) wide area beside the trunk. The DTC B27A8 is saved by the collation ECM (smart key ECM ASSY) when an open circuit is detected between the collation ECM (smart key ECM ASSY) and the electrical key antenna (trunk exterior antenna) (that is, between terminals CLG8 and ANT1, or between terminals CG8B and ANT2).

| Diagnostic codes | Detecting conditions | Faulty part | Diagnostic code output check operation |
|---|---|---|---|
| B27A8 | An open circuit is detected in the circuit located between the collation ECM (smart key ECM ASSY) and electrical key antenna ASSY (trunk exterior antenna). (CLG8 - ANTE8, CG8B -ANT2) (1 trip detection logic*1). | • Wiring harness or connector<br>• Electrical key antenna (trunk exterior)<br>• Collation ECM (smart key ECM ASSY) | Always*2 |

Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- After the repair work is complete, perform the "DTC output check operation" to confirm that the DTC is not output again.
- An antenna coil is present between the ANTE8 and ANT2 terminals of the electrical key antenna ASSY (trunk exterior antenna).

| | |
|---|---|
| 1 | Check if the connectors are connected. |

(1) Turn the engine switch OFF.

(2) Check if the connectors are properly connected to the collation ECM (smart key ECM ASSY) and the electrical key antenna (trunk exterior antenna).

Criteria: The connectors are properly connected.

NG → Connect the connectors properly.

OK

| 2 | Check the harnesses and connectors (collation ECM (smart key ECM ASSY) - electrical key antenna (trunk exterior antenna)). |
|---|---|

(1) Disconnect the D40 and D48 collation ECM (smart key ECM ASSY) connectors.

(2) Disconnect the H3 electrical key antenna (trunk exterior antenna) connector.

(3) Measure the resistance according to the following table.

Resistance

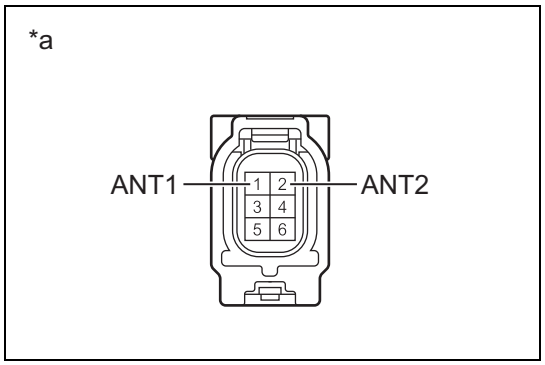
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D40-2 (CLG8) - H3-1 (ANTE8) | Always | 1 Ωor less |
| D40-1 (CG8B) - H3-2 (ANT2) | Always | 1 Ωor less |
| D48-11 (GND) - Chassis ground | Always | 1 Ωor less |
| D40-2 (CLG8) - chassis ground | Always | 10 kΩ or more |
| D40-1 (CG8B) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

| 3 | Inspect the electrical key antenna (trunk exterior antenna) unit. |
|---|---|

(1) Remove the electrical key antenna (trunk exterior antenna). (Refer to TD - 336)



(2) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 (ANTE8) - 2 (ANT2) | Always | 1 Ωor less |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Electrical key antenna (trunk exterior antenna)) |

NG → Replace the electrical key antenna (trunk exterior antenna).

OK

| | |
|---|---|
| 4 | Replacement of the collation ECM (smart key computer ASSY) |

(1) Temporarily replace the collation ECM (smart key ECM ASSY) with a new one or one that functions normally.

Next

| | |
|---|---|
| 5 | DTC check |

(1) Clear the diagnostic code. (Refer to TD - 52)
(2) Recheck the diagnostic code. (Refer to TD - 52)
Criteria: B27A8 is not output again.

NG → Replace the electrical key antenna (trunk exterior antenna).

OK

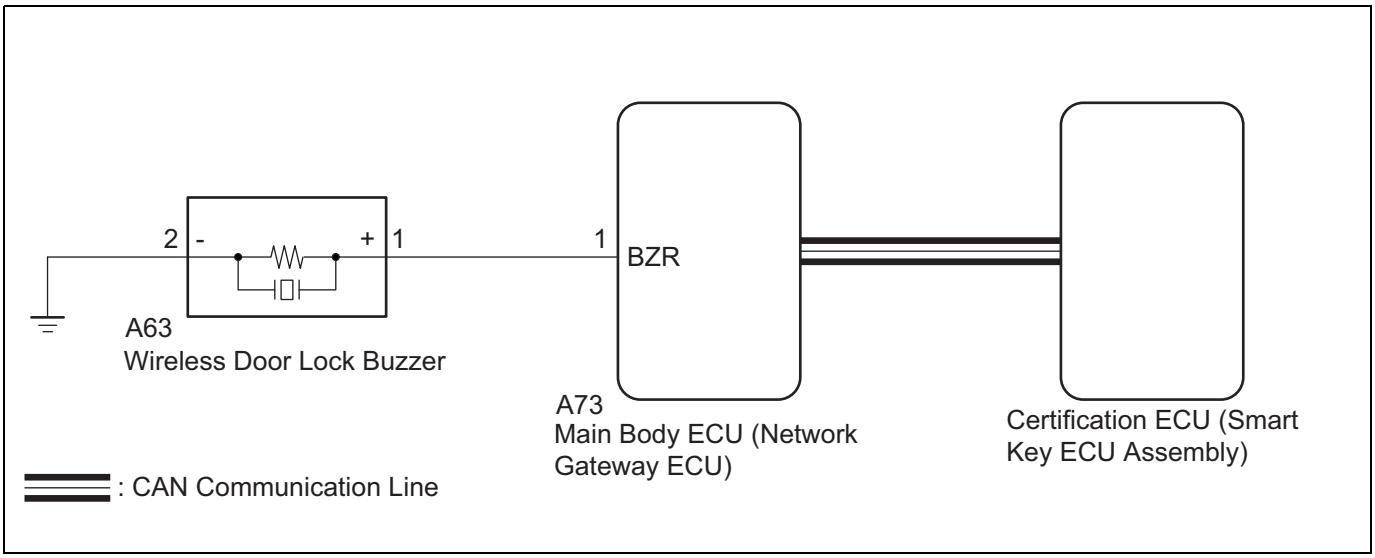
END (collation ECM (smart key ECM ASSY) malfunction)

## The exterior alarm and answer-back buzzer of the smart entry system do not go off

Circuit description

The entry & start system uses the wireless door lock buzzer to provide various exterior warnings. When the specific conditions for each waning are met, the collation ECM (smart key ECM ASSY) transmits a buzzer signal to the main body ECM via the CAN communication. The main body ECM then transmits the signal to the wireless door lock buzzer to sound the buzzer.

Circuit figure



Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)

| | |
|---|---|
| 1 | Using SSM4, perform an [Active Test] (wireless buzzer). |

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menus: [Body Control] →[Active Test]
(5) Based on the SSM4 display contents, perform an [Active Test].

Main body

| Tester display | Tested parts | Control range | Notes for diagnosis |
|---|---|---|---|
| [Keyless Buzzer Output] | Wireless door lock buzzer | OFF/ON | - |

Criteria: The wireless door lock buzzer beeps.

NG → Go to Step 2.

OK

Replacement of the collation ECM (smart key computer ASSY)

| | |
|---|---|
| 2 | Inspect the wireless door lock buzzer unit. |

(1) Remove the wireless door lock buzzer. (Refer to DL - 114)
(2) Inspect the wireless door lock buzzer unit.

NG → Replace the wireless door lock buzzer.

OK

| | |
|---|---|
| 3 | Check the harnesses and connectors (main body ECM - wireless door lock buzzer and chassis ground). |

(1) Disconnect the A63 wireless door lock buzzer connector.
(2) Disconnect the A73 main body ECM (multiplex network body ECM) connector.
(3) Measure the resistance according to the following table.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A63-1 - A73-1 | Always | 1 Ωor less |
| A63-2 - Chassis ground | Always | 1 Ωor less |
| A63-1 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

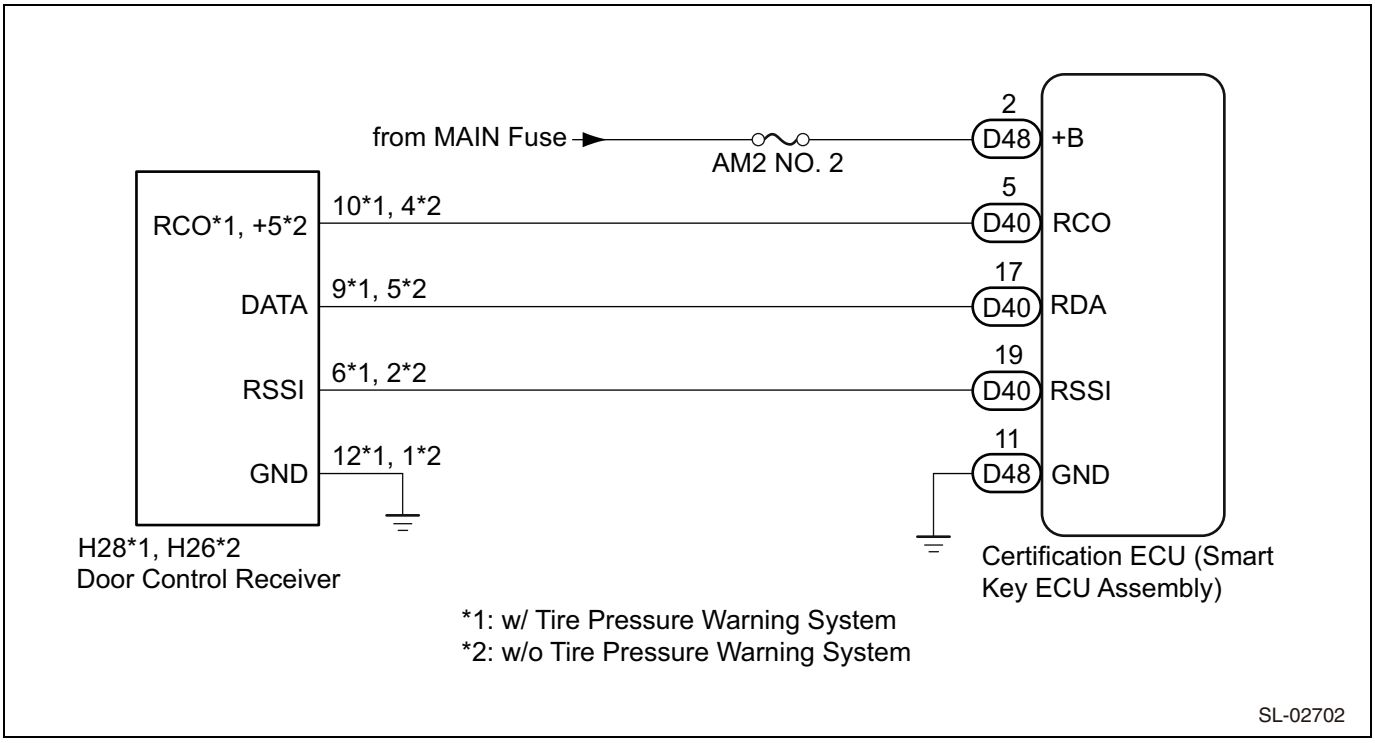
Replace the main body ECM (multiplex network body ECM).

## Neither smart lock nor smart unlock operation works on any of the doors (wireless function does not work either)

Circuit description

If neither the entry door lock/unlock function nor the wireless door lock/unlock function works, it might be due to interference from external radio waves, or due to a defect in the key or a signal circuit located between the door control receiver and the collation ECM (smart key ECM ASSY). The signal circuit is shared by the entry function and the wireless door lock function.

Circuit figure



Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- Check if the electrical key transmitter SUB-ASSY is inside the vehicle.
- Before proceeding with the inspection procedure, check that the DTC B1242 (wireless door lock control) is not output. (Refer to TD - 52)
- Before performing the following inspection steps, check the fuses related to this system.
- Even if you want to check the entry lock operation several times, the setting does not allow you to perform the lock operation more than twice in a row. To perform the entry lock operation more than twice, you have to unlock a door once (you may use any type of unlock operation). This limitation applies only to the entry lock operation. A wireless lock or other types of lock operations can be performed any number of times without any limitations.
- After the repair work is complete, perform the "DTC output check operation" to confirm that the DTC is not output again.
- The door control receiver is supplied 5 volts of power from the collation ECM.

| | |
|---|---|
| 1 | Check the battery voltage. |

(1) Measure the voltage of the vehicle battery.

Standard voltage: 11 to 14V

NOTE:
You can check if the vehicle battery is discharged by operating the horn. If the voltage is 11V or less, charge or replace the vehicle battery before performing the operation.

Next

| 2 | DTC check |
|---|---|

(1) Using the mechanical key integrated into the electrical key transmitter SUB-ASSY, open the driver's door.
(2) Connect the SSM4 and check the DTC. (Refer to TD - 52)
Criteria: No DTC is output

NG → Go to "List of diagnostic codes" (refer to TD - 59).

OK

| 3 | Check the power door lock control system. |
|---|---|

(1) Operate the door control switch on the driver's side power window regulator master switch ASSY, and check if the door locks or unlocks properly according to the switch operation you have performed.
Criteria: The door lock operation is performed properly.

NG → Go to "Power door lock control system".

OK

| 4 | Check the electrical key transmitter SUB-ASSY. |
|---|---|

(1) Check if an electrical key transmitter SUB-ASSY registered to another vehicle is present.

Result

| Result | Go to |
|---|---|
| An electrical key transmitter SUB-ASSY registered to another vehicle is not present. | A |
| An electrical key transmitter SUB-ASSY registered to another vehicle is present. | B |

B → Go to Step 6.

A

| 5 | Register a new electrical key transmitter SUB-ASSY. |
|---|---|

(1) Register a new electrical key transmitter SUB-ASSY. (Refer to the "Registration manual for immobilizer")

Next

| 6 | Check the entry door lock operation. |
|---|---|

(1) Using another electrical key transmitter SUB-ASSY registered to the vehicle, check if an entry lock/unlock operation can be performed 2 or more times in a row.
Criteria: The entry lock/unlock operation can be performed properly.

NG → Go to Step 9.

OK

| 7 | Check the transmitter battery. |
|---|---|

(1) Check the transmitter battery level of the first electrical key transmitter SUB-ASSY checked.
(a) Hold down the lock switch on the transmitter for 5 seconds and check how many times the LED on the transmitter blinks.

TD

Result

| Result | Go to |
|---|---|
| The LED on the transmitter does not light up while the switch is held down. | A |
| The LED on the transmitter blinks 3 times while the switch is held down. | B |
| The LED on the transmitter blinks twice but not for the third time. | C |

NOTE:
- While in use, the electrical key transmitter SUB-ASSY transmits voltage information to the collation ECM (smart key ECM ASSY). If the voltage is 2.4 V or less, the collation ECM (smart key ECM ASSY) displays [Yes] for [Key Low Battery] (an item under [Data monitor]). (Refer to TD - 53)
- To start the engine when the transmitter battery is drained, depress the brake pedal, hold down the engine switch, and place the electrical key transmitter SUB-ASSY over the engine switch.

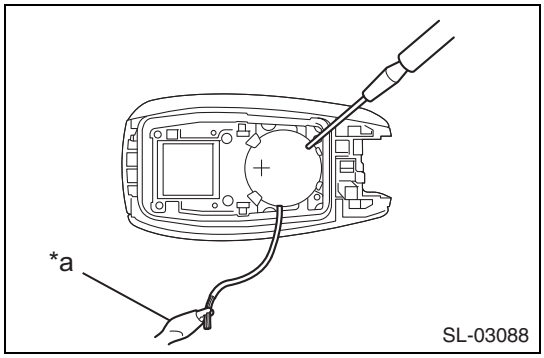
B → Replacement of the electrical key transmitter SUB-ASSY

C → Replace the transmitter battery.

A

| 8 | Inspect the transmitter battery unit (voltage). |
|---|---|

(1) Remove the transmitter battery from the faulty electrical key transmitter SUB-ASSY. (Refer to DL - 92)
(2) Using tape or the like, attach the lead wire (0.60 mm or less in diameter, including the wire sheath) to the negative terminal.
CAUTION:
Do not twist the lead wire around the terminal, tuck it into the terminal, or solder it to the terminal. If the terminal is deformed or damaged, the transmitter battery cannot be properly installed.
(3) Carefully pull the lead wire, and insert the previously removed transmitter battery.



(4) Measure the voltage of the transmitter battery.

Captions in illustration

| | |
|---|---|
| *a | GND |

NOTE:

- Measure the transmitter battery voltage by bringing the electrical key transmitter SUB-ASSY inside the lock entry operating range while operating the lock sensor on the door handle.
- Perform this measurement when the key is at the room temperature.
- During signal transmission, the key transmits voltage information to the collation ECM (smart key ECM ASSY). If the voltage is 2.4 V or less, [Yes] is displayed for [Key Low Battery] (an item under [Data monitor]). (Refer to TD - 53)

Voltage

| Inspection terminals | Switch conditions | Specified condition |
|---|---|---|
| Transmitter battery positive terminal (+) - transmitter battery negative terminal (-) | Change the power mode to IG OFF, close all doors, and touch the lock sensor. | 2.5 - 3.2V |

TD

NG → Replace the transmitter battery.

OK

Replacement of the electrical key transmitter SUB-ASSY

| | |
|---|---|
| 9 | Checking the waveform environment |

(1) Move the electrical key transmitter SUB-ASSY towards the door control receiver and check that the wireless and entry functions work properly.

NOTE:

- Try moving the electrical key transmitter SUB-ASSY closer to the door control receiver, so that it is less likely to be affected by interference from external radio waves. In this way, you can identify if the problem is caused by external radio waves or not.
- If this inspection reveals that the problem occurs in certain locations or during certain periods of time, the problem is likely due to interference from external radio waves. In addition, installing an additional component to the vehicle makes the vehicle more susceptible to interference from external radio waves. If such components are found, remove them, and then proceed to check the operation.
- Being close to a broadcast antenna, a large video display, a wireless garage door opener system, a wireless security camera, or a home security system makes the vehicle susceptible to interference from external radio waves. If this is the case, move the vehicle to another location to check if the problem improves.
- If a tool for checking radio waves such as a signal-strength meter is available, take measurements in the LF band (which is used by the vehicle antenna to create a detection area) and the RF band (which

is used by the electrical key transmitter SUB-ASSY for signal transmission) in the vicinity of the vehicle to check where the radio waves might be present.

Criteria: Both the wireless and entry functions work properly.

NG → Go to Step 10.

OK

Interference from external radio waves

| 10 | Read numerical values using the SSM4 [ACC SW], [Ignition]. |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menus: [Body Control] →[Active Test]
(5) Based on the SSM4 display contents, read the [Active Test].

TD

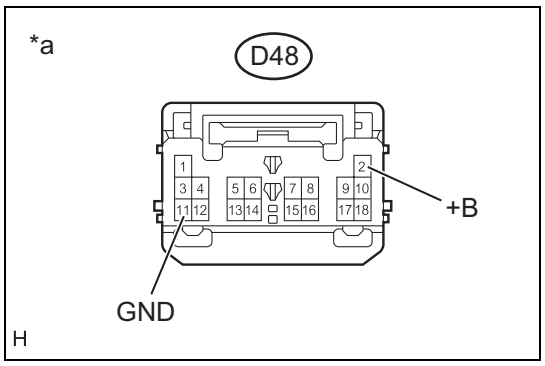
Main body

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [ACC SW] | The engine switch is ON (ACC)/OFF or ON. | OFF: The engine switch is OFF.<br>ON: The engine switch is on (ACC). | - |
| [Ignition] | The engine switch is ON (IG)/ [OFF] or [ON] | OFF: The engine switch is OFF.<br>ON: Engine switch is ON (IG) | - |

NG → Refer to the troubleshooting procedure for the main body ECM (refer to TD - 27).

OK

| 11 | Check the harnesses and connectors (collation ECM (smart key ECM ASSY) - battery and chassis ground). |
|---|---|



(1) Disconnect the D48 collation ECM (smart key ECM ASSY) connector.
(2) Measure the resistance according to the following table.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D48-11 (GND) - Chassis ground | Always | 1 Ωor less |

(3) Measure the voltage according to the following table.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D48-2 (+B) - chassis ground | Always | 11 - 14 V |

Next

TD

| | |
|---|---|
| 17 | Check the wireless door lock control system. |

(1) Check that the wireless door lock function operates properly. (Refer to DL - 28)
Criteria: The wireless door lock function operates properly.

NG → Replace the main body ECM (multiplex network body ECM).

OK

END (collation ECM (smart key ECM ASSY) detected)

## Neither smart lock nor smart unlock operation works from any of the doors (but the wireless function works)

Circuit description

When doors can be locked or unlocked using the wireless function, it means that the door control receiver and the collation ECM (smart key ECM ASSY) are communicating normally. If the entry function does not work, it may be due to one of the following: 1) the entry cancel function is enabled by customization; 2) the entry & start system communication between the electrical key transmitter SUB-ASSY and the vehicle is faulty, or; 3) electrical interference is present.

Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- After the repair work is complete, perform the "DTC output check operation" to confirm that the DTC is not output again.
- Check if the electrical key transmitter SUB-ASSY is inside the vehicle.
- Even if you want to check the entry lock operation several times, the setting does not allow you to perform the lock operation more than twice in a row. To perform the entry lock operation more than twice, you have to unlock a door once (you may use any type of unlock operation). This limitation applies only to the entry lock operation. A wireless lock or other types of lock operations can be performed any number of times without any limitations.

| 1 | Check the power door lock operation. |
|---|---|

(1) Operate the door control switch on the power window regulator master switch ASSY, and check if the door locks or unlocks properly according to the switch operation you have performed. (Refer to DL - 8)
Criteria: The door lock operation is performed properly.

NG → Go to "Power door lock control system" ("Symptom table").

OK

| 2 | Read numerical values using the SSM4 ([Auto Entry Cancel SW]). |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menus: [Keyless Access(Collation ECM)] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

TD

Entry & Start

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Smart Cancel] | Entry cancel function setting/ [OFF] or [ON] | Mode status indication<br>OFF: Entry & start system is not cancelled.<br>ON: Entry & start system is cancelled. | The entry cancel function is disabled by default. If the customer wishes to cancel the entry & start system function (lock/unlock doors holding the key, etc.), you can disable this function by using the customize function (refer to TD - 37). |

Result

| Result | Go to |
|---|---|
| The cancel setting for the entry function is disabled. | A |
| The cancel setting for the entry function is enabled. | B |

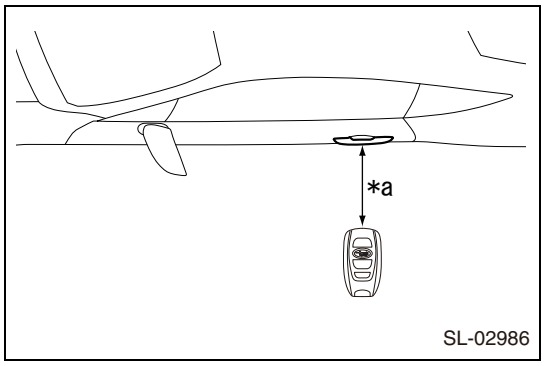
B → Disable the entry key cancel function. (Refer to TD - 37)

A

| 3 | Checking radio wave environment |
|---|---|

(1) Move the electrical key transmitter SUB-ASSY according to the instructions provided below to inspect the operation. (Refer to TD - 31)
NOTE:
- Try moving the electrical key transmitter SUB-ASSY closer to the door outer handle ASSY or the electrical key antenna, so that it is less likely to be affected by interference from external radio waves. In this way, you can identify if the problem is caused by external radio waves or not.
- Although the wireless function and the entry function transmits the same radio wave, the wave logic differs between the two. Due to

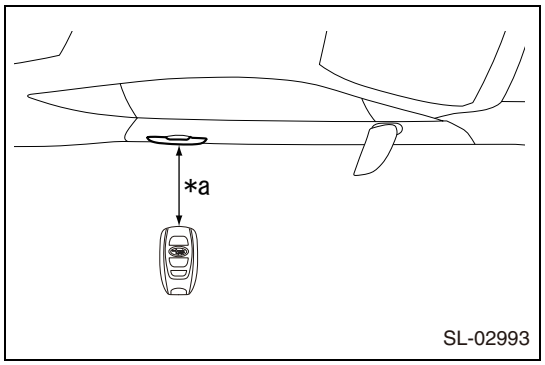
this, only one of the two functions may be affected by interference from external radio waves, while the other remains unaffected.



(2) Move the electrical key transmitter SUB-ASSY towards the driver's door outer handle ASSY and check how the entry lock and unlock operations work on the driver's door.
CAUTION:
If the key is within 0.2 m of the door outer handle ASSY, communication is not possible.

Captions in illustration

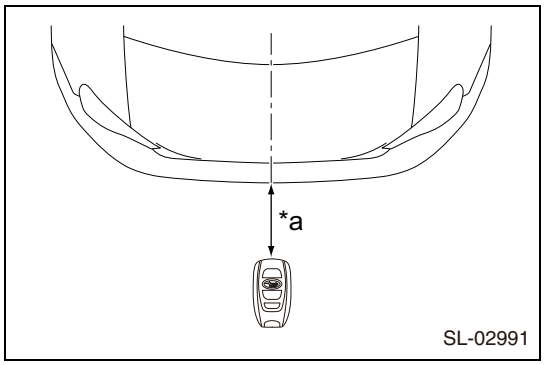
| | |
|---|---|
| *a | Approx. 0.3 m |



(3) Move the electrical key transmitter SUB-ASSY towards the passenger's door outer handle ASSY and check how the entry lock and unlock operations work on the passenger's door.
CAUTION:
If the key is within 0.2 m of the door outer handle ASSY, communication is not possible.

Captions in illustration

| | |
|---|---|
| *a | Approx. 0.3 m |



(4) Move the electrical key transmitter SUB-ASSY toward the electrical key antenna (trunk exterior antenna) and check the entry trunk open function.
CAUTION:
If the key is within 0.2m (0.656 feet) of the rear bumper, communication is not possible.

Captions in illustration

| | |
|---|---|
| *a | Approx. 0.3 m |

NOTE:

- If this inspection reveals that the problem occurs in certain locations or during certain periods of time, the problem is likely due to interference from external radio waves. In addition, installing an additional component to the vehicle makes the vehicle more susceptible to interference from external radio waves. If such components are found, remove them, and then proceed to check the operation.
- If interference from external radio waves is suspected, inquire the customer if the problem occurs in certain locations.
- Move the vehicle to another location and perform the following procedure to check if the problem improves.
- If a tool for checking radio waves such as a signal-strength meter is available, take measurements in the LF band (which is used by the vehicle antenna to create a detection area) and the RF band (which is used by the electrical key transmitter SUB-ASSY for signal transmission) in the vicinity of the vehicle to check where the radio waves might be present.

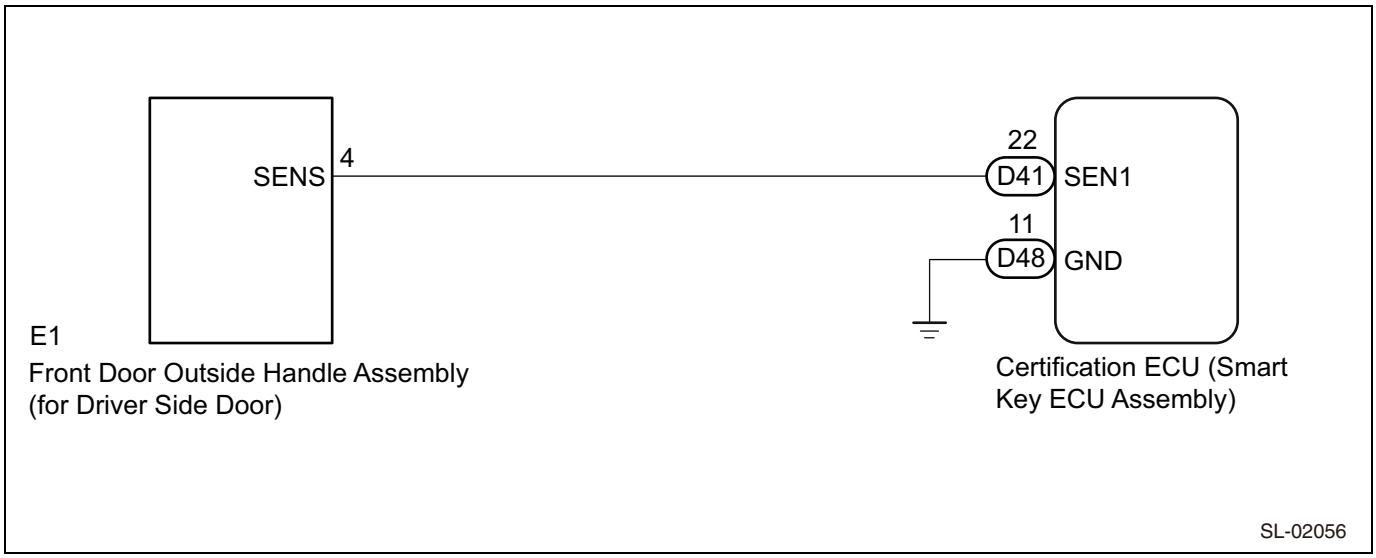
## Smart unlock operation does not work from the driver's door (but smart lock operation works)

Circuit description

If the driver's door unlock function does not work but the entry lock function works properly, the communication between the vehicle and the electrical key transmitter SUB-ASSY is normal. In this case, the problem might be caused by a defect in the unlock sensor circuit between the collation ECM (smart key ECM ASSY) and the front door outer handle ASSY (driver's side electrical key antenna).

Circuit figure



Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Refer to "How to troubleshoot" (entry function). Inspect the communication function by referring to TD - 27. Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- Check if the electrical key transmitter SUB-ASSY is inside the vehicle.
- After the repair work is complete, perform the "DTC output check operation" to confirm that the DTC is not output again.
- Even if you want to check the entry lock operation several times, the setting does not allow you to perform the lock operation more than twice in a row. To perform the entry lock operation more than twice, you have to unlock a door once (you may use any type of unlock operation). This limitation applies only to the entry lock operation. A wireless lock or other types of lock operations can be performed any number of times without any limitations.

| 1 | Check the power door lock operation. |
|---|---|

(1) Operate the door control switch on the power window regulator master switch ASSY, and check if the door locks or unlocks properly according to the switch operation you have performed. (Refer to DL - 8)

Criteria: The door lock operation is performed properly.

NG → Go to "Power door lock control system" ("Symptom table").

OK

| 2 | Read numerical values using the SSM4. |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Main body

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [D Door Lock Pos] | Driver's door unlock detection switch signal/Lock or Unlock | [Lock]: The driver's door is locked.<br>[Unlock]: The driver's door is unlocked. | - |

Criteria: On the SSM4 display, [LOCK] or [UNLOCK] is displayed as described in the table above.

NG → Go to "Light system" (door unlock detection switch circuit).

OK

| 3 | Read numerical values using the SSM4. |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Keyless Access(Collation ECM)] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Entry & Start

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |

Replacement of the collation ECM (smart key computer ASSY)

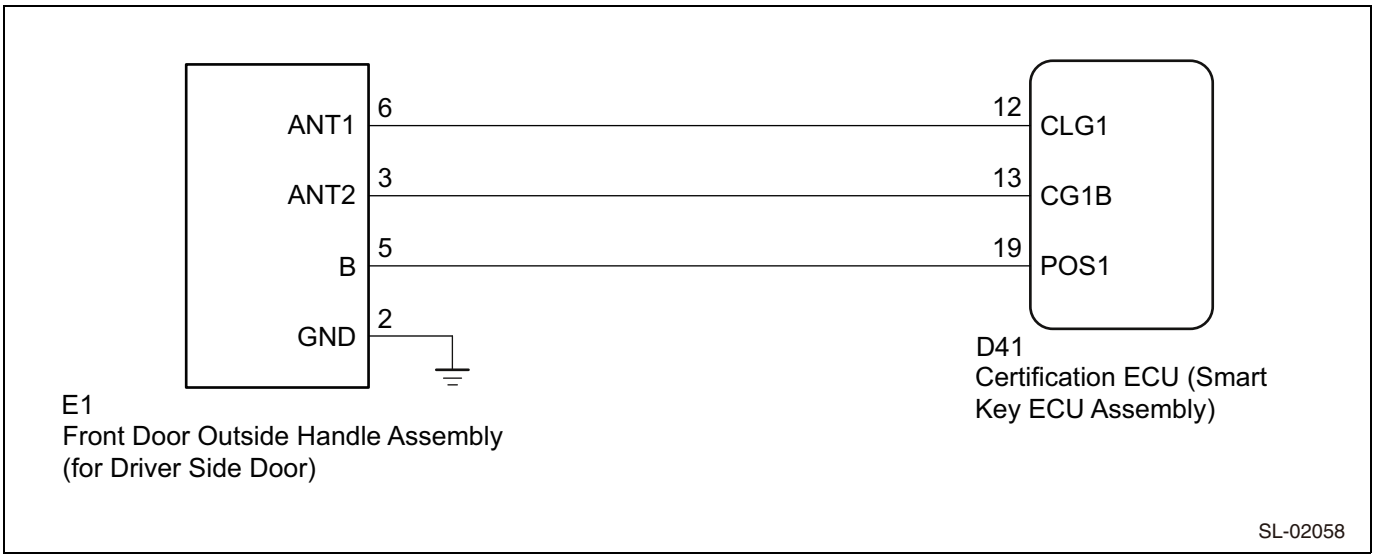
## Neither smart lock nor smart unlock operation works on the driver's door

Circuit description

If only the entry lock/unlock function does not work on the driver's door, it means that a request code might not be transmitted from the driver's door, or that the front door outer handle ASSY (driver's side) (touch sensor) might be faulty. If the entry function works properly on other doors, the electrical key transmitter SUB-ASSY and the door control receiver are functioning properly. It can therefore be assumed that something is wrong with the transmission of a request code (communication between the collation ECM (smart key ECM ASSY) and the front door outer handle ASSY (driver's door) (driver's door electrical key antenna)), or that interference from external radio waves is present.

Circuit figure



Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- Check if the electrical key transmitter SUB-ASSY is inside the vehicle.
- Make sure that another electrical key transmitter SUB-ASSY (electronic key) is not placed inside the vehicle.
- Even if you want to check the entry lock operation several times, the setting does not allow you to perform the lock operation more than twice in a row. To perform the entry lock operation more than twice, you have to unlock a door once (you may use any type of unlock operation). This limitation applies only to the entry lock operation. A wireless lock or other types of lock operations can be performed any number of times without any limitations.

| 1 | Check the power door lock operation. |
|---|---|

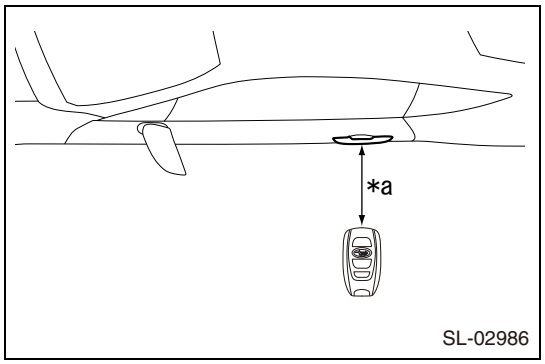
(1) Operate the door control switch on the power window regulator master switch ASSY, and check if the door locks or unlocks properly according to the switch operation you have performed. (Refer to DL - 8)

Criteria: The door lock operation is performed properly.

NG → Go to "Power door lock control system" ("Symptom table").

OK

| 2 | Checking the waveform environment |
|---|---|



(1) Move the electrical key transmitter SUB-ASSY towards the front door outer handle ASSY and check how the entry lock and unlock operations work on the driver's door.

Captions in illustration

| | |
|---|---|
| *a | Approx. 0.3 m |

CAUTION:

If the key is within 0.2m of the door outer handle ASSY, communication is not possible.

NOTE:

- Try moving the electrical key transmitter SUB-ASSY closer to the front door outer handle ASSY, so that it is less likely to be affected by interference from external radio waves. In this way, you can identify if the problem is caused by external radio waves or not.
- If the function works properly, it is highly likely that the problem is caused by interference from external radio waves. In addition, installing an additional component to the vehicle makes the vehicle more susceptible to interference from external radio waves. If such components are found, remove them, and then proceed to check the operation.

Criteria: The entry function works properly.

(5) Based on the contents of the SSM4 display, read the [Data monitor].

Entry & Start

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [D seat lock person sensor] | Front door outer handle ASSY (driver's side) (lock sensor)/ [OFF] or [ON] | [OFF]: The front door outer handle ASSY (driver's side) (lock sensor) is not touched.<br>[ON]: The front door outer handle ASSY (driver's side) (lock sensor) is touched. | • This item displays whether the lock sensor is ON or OFF (even when the sensor is properly touched [ON] is displayed only momentarily).<br>• This item is displayed under [Data monitor]. When the entry lock function does not work, use this item to check if the unlock sensor is faulty. |

Criteria: On the SSM4 display, [ON] or [OFF] is displayed as described in the table above.

NG → Go to Step 3.

OK

TD

Replacement of the collation ECM (smart key computer ASSY)

| | |
|---|---|
| 3 | Check the harnesses and connectors (collation ECM (smart key ECM ASSY) - front door outer handle ASSY). |

(1) Disconnect the D41 and D48 collation ECM (smart key ECM ASSY) connectors.
(2) Disconnect the E1 front door outer handle ASSY connector.
(3) Measure the resistance according to the following table.

Resistance

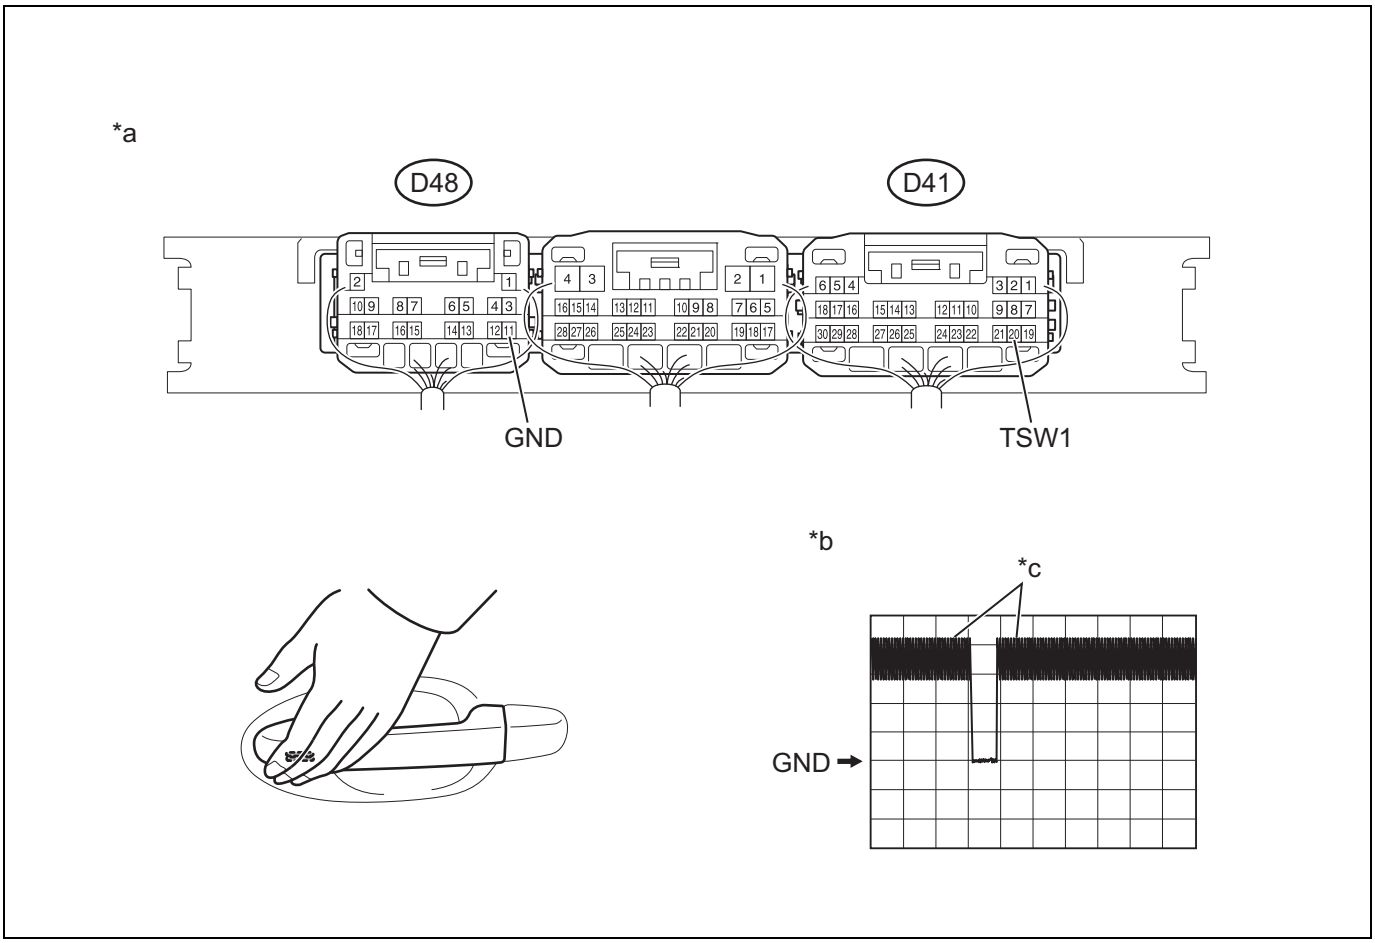
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D41-20 (TSW1) - E1-1 (TRG+) | Always | 1 Ωor less |
| D48-11 (GND) - Chassis ground | Always | 1 Ωor less |
| D41-20 (TSW1) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

| | |
|---|---|
| 4 | Inspect the front door outer handle ASSY (driver's door) unit. |

(1) Reconnect the D41 and the D48 connectors of the collation ECM (smart key ECM ASSY).
(2) Reconnect the E1 front door outer handle ASSY (driver's door) connector.
(3) Using an oscilloscope, check the waveform.



TD

| *a | Connector connected (Collation ECM (smart key ECM ASSY)) | *b | Waveform |
| *c | The driver's side lock sensor is touched. | - | - |

Criteria

| Inspection terminals | Switch conditions | Tool setting | Specified condition |
|---|---|---|---|
| D41-20 (TSW1) - D48-11 (GND) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. Driver's door lock sensor, not touched →touched | 2 V/DIV., 500 ms/DIV. | Pulse generation (Refer to the waveform) |

NG → Replace the front door outer handle ASSY (driver's door).

OK

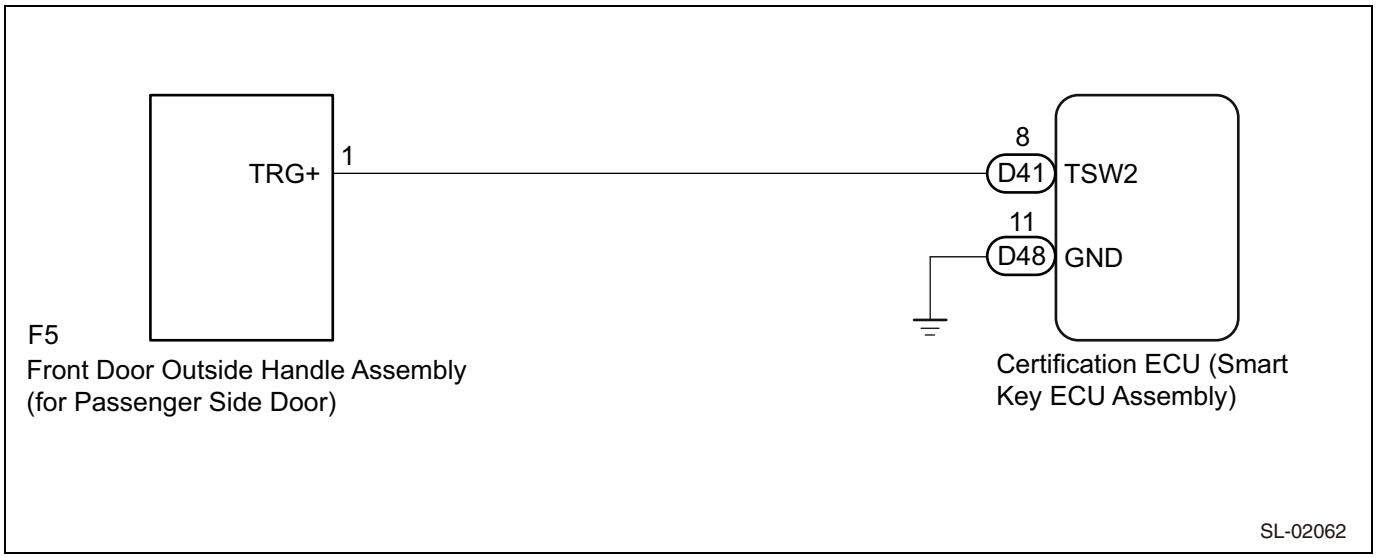
Replacement of the collation ECM (smart key computer ASSY)

## Smart lock operation does not work on the passenger's door (but smart unlock operation works)

Circuit description

If the passenger's door lock function does not work but the entry unlock function works properly, the communication between the vehicle and the electrical key transmitter SUB-ASSY is normal. In this case, the problem might be caused by a defect in the lock sensor circuit between the collation ECM (smart key ECM ASSY) and the front door outer handle ASSY (driver's side electrical key antenna).

Circuit figure



Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- Check if the electrical key transmitter SUB-ASSY is inside the vehicle.
- Even if you want to check the entry lock operation several times, the setting does not allow you to perform the lock operation more than twice in a row. To perform the entry lock operation more than twice, you have to unlock a door once (you may use any type of unlock operation). This limitation applies only to the entry lock operation. A wireless lock or other types of lock operations can be performed any number of times without any limitations.

| | |
|---|---|
| 1 | Check the power door lock operation. |

(1) Operate the door control switch on the master switch ASSY, and check if the door locks or unlocks properly according to the switch operation you have performed.

Criteria: The door lock operation is performed properly.

NG → Go to "Power door lock control system" ("Symptom table").

OK

| | |
|---|---|
| 2 | Read numerical values using the SSM4. |

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.

(4) Input the following menus: [Keyless Access(Collation ECM)] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Entry & Start

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [P seat lock person sensor] | Front door outer handle ASSY (passenger's side) (lock sensor)/[OFF] or [ON] | [OFF]: The front door outer handle ASSY (passenger's side) (lock sensor) is not touched.<br>[ON]: The front door outer handle ASSY (passenger's side) (lock sensor) is touched. | • This item displays whether the lock sensor is ON or OFF (even when the sensor is properly touched [ON] is displayed only momentarily).<br>• This item is displayed under [Data monitor]. When the entry lock function does not work, use this item to check if the unlock sensor is faulty. |

Criteria: On the SSM4 display, [ON] or [OFF] is displayed as described in the table above.

NG → Go to Step 3.

OK

Replacement of the collation ECM (smart key computer ASSY)

| | |
|---|---|
| 3 | Check the harnesses and connectors (collation ECM (smart key ECM ASSY) - front door outer handle ASSY). |

(1) Disconnect the D41 and D48 collation ECM (smart key ECM ASSY) connectors.
(2) Remove the F5 front door outer handle ASSY (driver's door) connector.
(3) Measure the resistance according to the following table.

Resistance

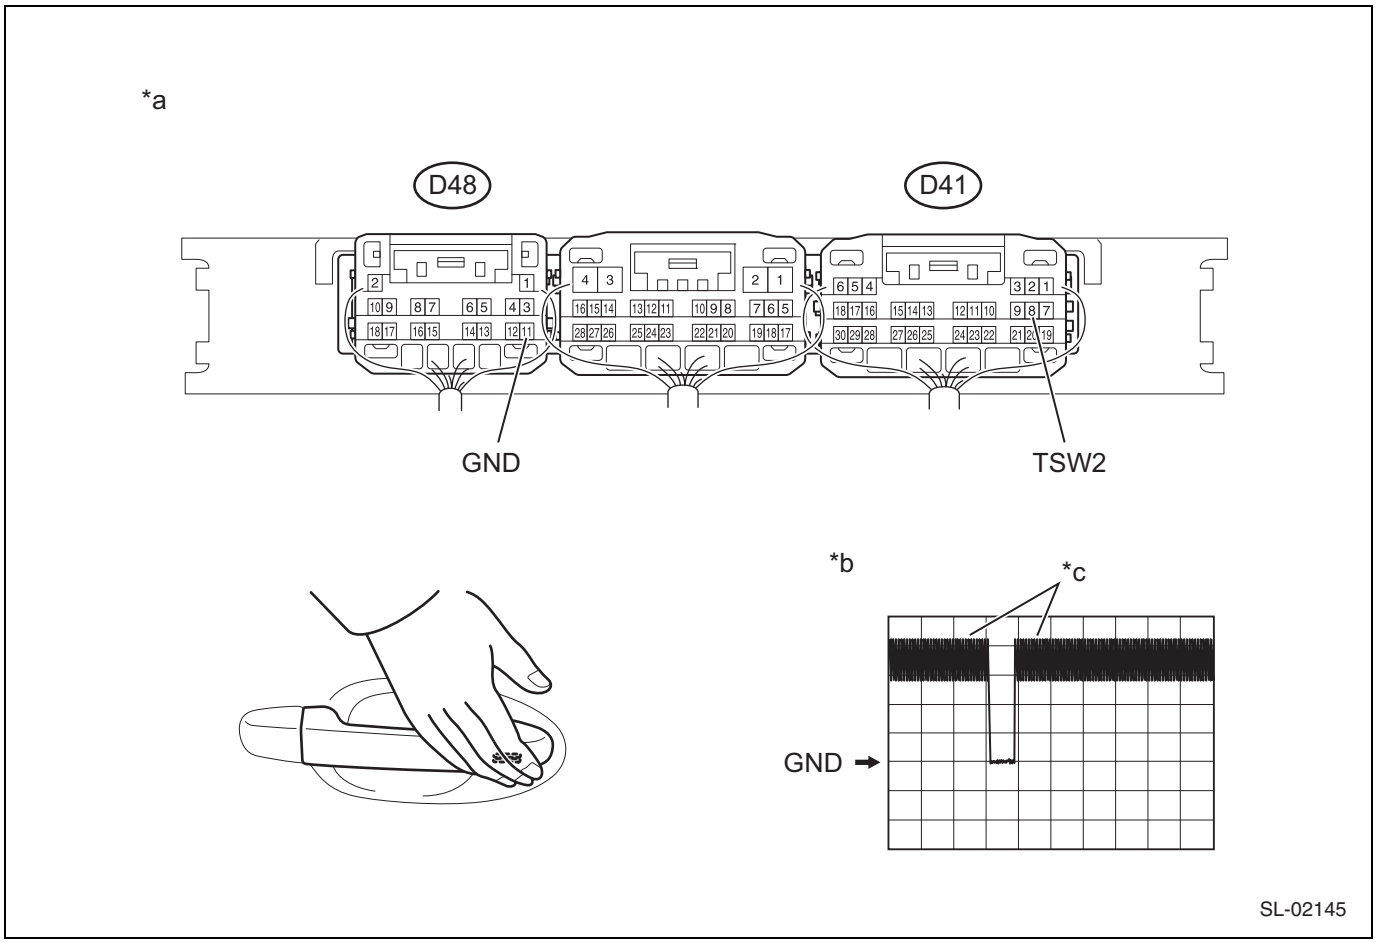
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D41-8 (TSW2) - F5-1 (TRG+) | Always | 1 Ωor less |
| D48-11 (GND) - Chassis ground | Always | 1 Ωor less |
| D41-8 (TSW2) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

| | |
|---|---|
| 4 | Inspect the front door outer handle ASSY (passenger's door) unit. |

(1) Reconnect the D41 and the D48 connectors of the collation ECM (smart key ECM ASSY).
(2) Reconnect the F5 front door outer handle ASSY (driver's door) connector.
(3) Using an oscilloscope, check the waveform.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector connected (Collation ECM (smart key ECM ASSY)) | *b | Waveform |
| *c | The passenger's door lock sensor is touched. | - | - |

Criteria

| Inspection terminals | Switch conditions | Tool setting | Specified condition |
|---|---|---|---|
| D41-8 (TSW2) - D48-11 (GND) | Procedure:<br>1. The engine switch is OFF.<br>2. The electrical key transmitter SUB-ASSY is outside the vehicle.<br>3. All doors are closed.<br>4. Passenger's door lock sensor, not touched →touched | 2 V/DIV., 500 ms/DIV. | Pulse generation (Refer to the waveform) |

NG → Replace the front door outer handle ASSY (passenger's door).

OK

Replacement of the collation ECM (smart key computer ASSY)

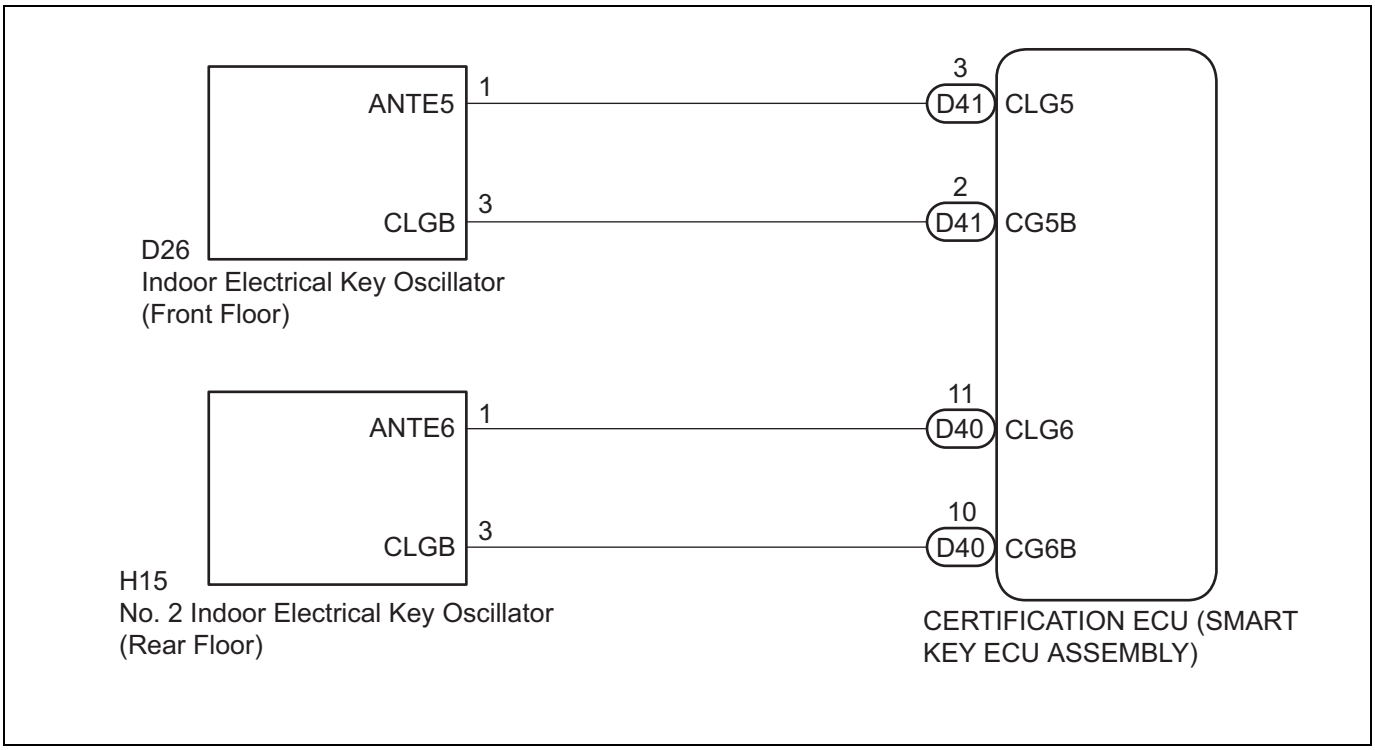
## Interior collation is NG

Circuit description

If the code check operation cannot be performed inside the vehicle, communication between the vehicle (indoor electrical key antenna ASSY (front floor or rear floor)) and the electrical key transmitter SUB-ASSY might be faulty, or the collation ECM (smart key ECM ASSY) might be faulty. When the electrical key transmitter SUB-ASSY is located inside the vehicle, the key ID code transmitted from the electrical key transmitter SUB-ASSY is matched against the one stored in the collation ECM (smart key ECM ASSY). If this operation cannot be performed or if the code does not match, the engine switch does not turn ON (IG) and the engine cannot be started.

If the electrical key transmitter SUB-ASSY is located inside the vehicle with doors unlocked, the collation ECM (smart key ECM ASSY) sends out radio waves to detect the electrical key transmitter SUB-ASSY, and the indoor electrical key antenna ASSY becomes enabled. If the presence of the electrical key transmitter SUB-ASSY inside the detection area is confirmed, the collation ECM (smart key ECM ASSY) responds to the key ID code. This information is received by the door control receiver, which is then sent to the collation ECM (smart key ECM ASSY).

Circuit figure



Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- An antenna coil is present between the 2 terminals of the indoor electrical key antenna ASSY.

NOTE:

Ensure that the entry cancel function (one of the customize setting available for the entry & start system) is not enabled. (Refer to TD - 37)

| | |
|---|---|
| 1 | Check the entry & start system (entry function). |

(1) Check if the entry lock/unlock function works properly. (Refer to TD - 31)

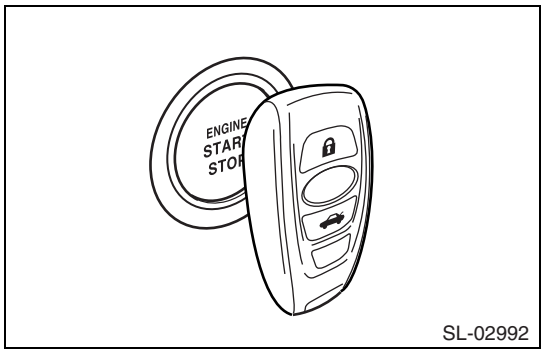
Criteria: The entry lock/unlock function works properly.

NG → Go to "Symptom table" (entry & start system (entry function)) (refer to TD - 84).

OK

| 2 | Check the entry & start system (start function). |
|---|---|

(1) Remove the battery from the electrical key transmitter SUB-ASSY. (Refer to DL - 92)



SL-02992

(2) Depress the brake pedal *1 or the clutch pedal *2, hold the electrical key transmitter SUB-ASSY near the engine switch, with its switch facing yourself.
*1: With automatic transmission
*2: With manual transmission

(3) Turn to IG ON, and check if the engine starts when you operate the engine switch.
NOTE:
- If the presence of the electrical key transmitter SUB-ASSY inside the detection area cannot be confirmed, remove the transmitter battery from the electrical key transmitter SUB-ASSY and then place the electrical key transmitter SUB-ASSY over the engine switch to check if the engine starts.
- If the engine does not start during this inspection procedure, the collation ECM (smart key ECM ASSY), steering lock actuator ASSY (steering lock ECM), or the ID code box*1 might be faulty.

*1: With ID code box

Criteria: The engine starts.

NG → Go to "Entry & start system" (start function) (refer to TD - 146).

OK

| 3 | Checking the waveform environment |
|---|---|

(1) Insert the transmitter battery into the electrical key transmitter SUB-ASSY. (Refer to DL - 92)

(2) Move the electrical key transmitter SUB-ASSY toward the indoor electrical key antenna ASSY no. 1 (front floor) and check if the engine starts.
CAUTION:
If the key is within 0.2 m (0.656 feet) of the indoor electrical key antenna ASSY no. 1 (front floor), communication may not be possible.

(3) Move the electrical key transmitter SUB-ASSY toward the indoor electrical key antenna ASSY no. 2 (rear floor) and check if the engine starts.
If a setting other than [All] is specified for [Ignition Available Area] by customization, the engine does not start. Before proceeding with this inspection procedure, check that [All] is selected for this item. (Refer to TD - 37)
CAUTION:
If the key is within 0.2 m (.0.656 feet) of the indoor electrical key antenna ASSY no. 2 (rear floor), communication is not possible.

NOTE:

- Try moving the electrical key transmitter SUB-ASSY closer to the door control receiver, so that it is less exposed to external radio waves. In this way, you can identify if the problem is caused by external radio waves or not.
- If the failure occurs in certain locations or during certain periods of time, it may be due to interference from external radio waves. In addition, the vehicle can also be affected by external radio waves generated by components installed by a dealer. If such components are found, remove them before inspecting the vehicle.
- Being close to a broadcast antenna, a large video display, a wireless garage door opener system, a wireless security camera, or a home security system makes the vehicle susceptible to interference from external radio waves. If this is the case, move the vehicle to another location to check if the problem improves.
- If a tool for checking radio waves such as a signal-strength meter is available, take measurements in the LF band (which is used by the vehicle antenna to create a detection area) and the RF band (which is used by the electrical key transmitter SUB-ASSY for signal transmission) in the vicinity of the vehicle to check where the radio waves might be present.

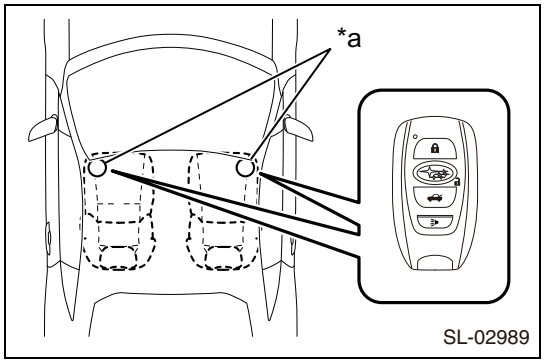
Criteria: The engine starts.

NG → Go to Step 4.

OK

Interference from external radio waves

| 4 | Perform the keyless access system check. |
|---|---|



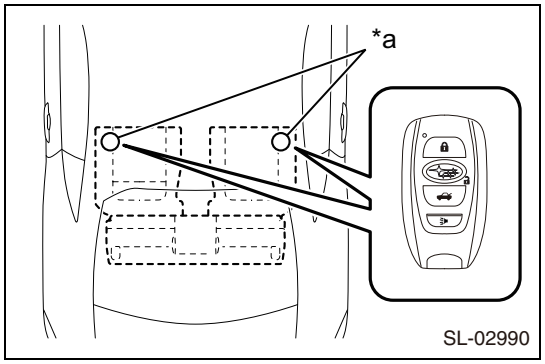
(1) Perform keyless access system check for the following antennas. (Refer to TD - 31)

(a) Check the indoor electrical key antenna ASSY no. 1 (front floor):

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

Check if the wireless door lock buzzer beeps when the electrical key transmitter SUB-ASSY is located at the inspection points.



(2) Check the indoor electrical key antenna ASSY no. 2 (rear floor).

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

Check if the wireless door lock buzzer beeps when the electrical key transmitter SUB-ASSY is located at the inspection points.

NOTE:

- If the buzzer beeps, it means that the indoor transmitter is functioning properly.
- You can identify which indoor electrical key antenna ASSY (front floor or rear floor) is functioning properly by checking if the buzzer beeps when the key is near the respective antennas.

- If the buzzer does not go off when the key is near the indoor electrical key antenna ASSY, the circuit inside the collation ECM (smart key ECM ASSY) might be faulty.

Result

| Result | Go to |
|---|---|
| Front side operation failure | A |
| Rear floor operation failure | B |
| Front and rear operation check results are OK. | C |

B → Go to Step 9.

C → Replacement of the collation ECM (smart key computer ASSY)

A

| | |
|---|---|
| 5 | Check the harnesses and connectors (collation ECM (smart key ECM ASSY) - indoor electrical key antenna no. 1 (front floor)). |

(1) Disconnect the D41 collation ECM (smart key ECM ASSY) connector.
(2) Disconnect the D26 indoor electrical key antenna ASSY no. 1 (front floor) connector.
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D41-3 (CLG5) - D26-1 (ANTE5) | Always | 1 Ωor less |
| D41-2 (CG5B) - D26-3 (CLGB) | Always | 1 Ωor less |
| D41-3 (CLG5) - chassis ground | Always | 10 kΩ or more |
| D41-2 (CG5B) - chassis ground | Always | 10 kΩ or more |

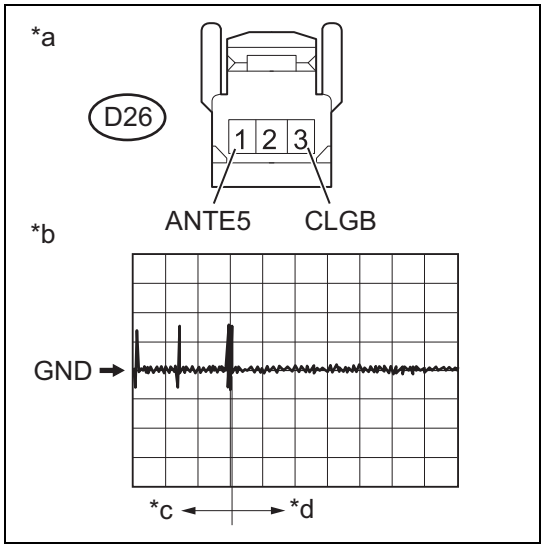
NG → Repair or replace the harnesses or connectors.

OK

| | |
|---|---|
| 6 | Inspect the collation ECM (smart key ECM ASSY) (output to the electrical key antenna ASSY no. 1 (front floor)). |

(1) Reconnect the D41 connector of the collation ECM (smart key ECM ASSY).

TD



(2) Using an oscilloscope, check the waveform.

Criteria

| Inspection terminals | Conditions | Tool setting | Specified condition |
|---|---|---|---|
| D26-1 (ANTE5) - D26-3 (CLGB) | Procedure:<br>1. The engine switch is OFF.<br>2. A door is open.<br>3. A door is closed.<br>4. 30 seconds elapses.<br>5. The electrical key transmitter SUB-ASSY is not inside the vehicle. | 2 V/DIV., 500 ms/DIV. | Pulse generation (Refer to the waveform) |

Next

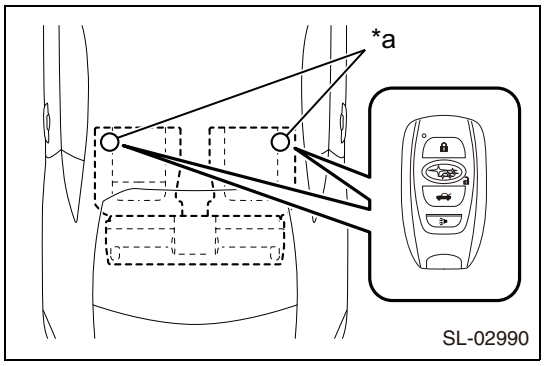
| 12 | Perform the keyless access system check. |
|---|---|



(1) Perform keyless access system check for the following antennas. (Refer to TD - 31)
(a) Check the indoor electrical key antenna ASSY no. 2 (rear floor).

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

Check if the wireless door lock buzzer beeps when the electrical key transmitter SUB-ASSY is located at the inspection points.
Criteria: The wireless door lock buzzer beeps.

NG → Replacement of the collation ECM (smart key computer ASSY)

OK

END (indoor electrical key antenna ASSY no. 2 malfunction)

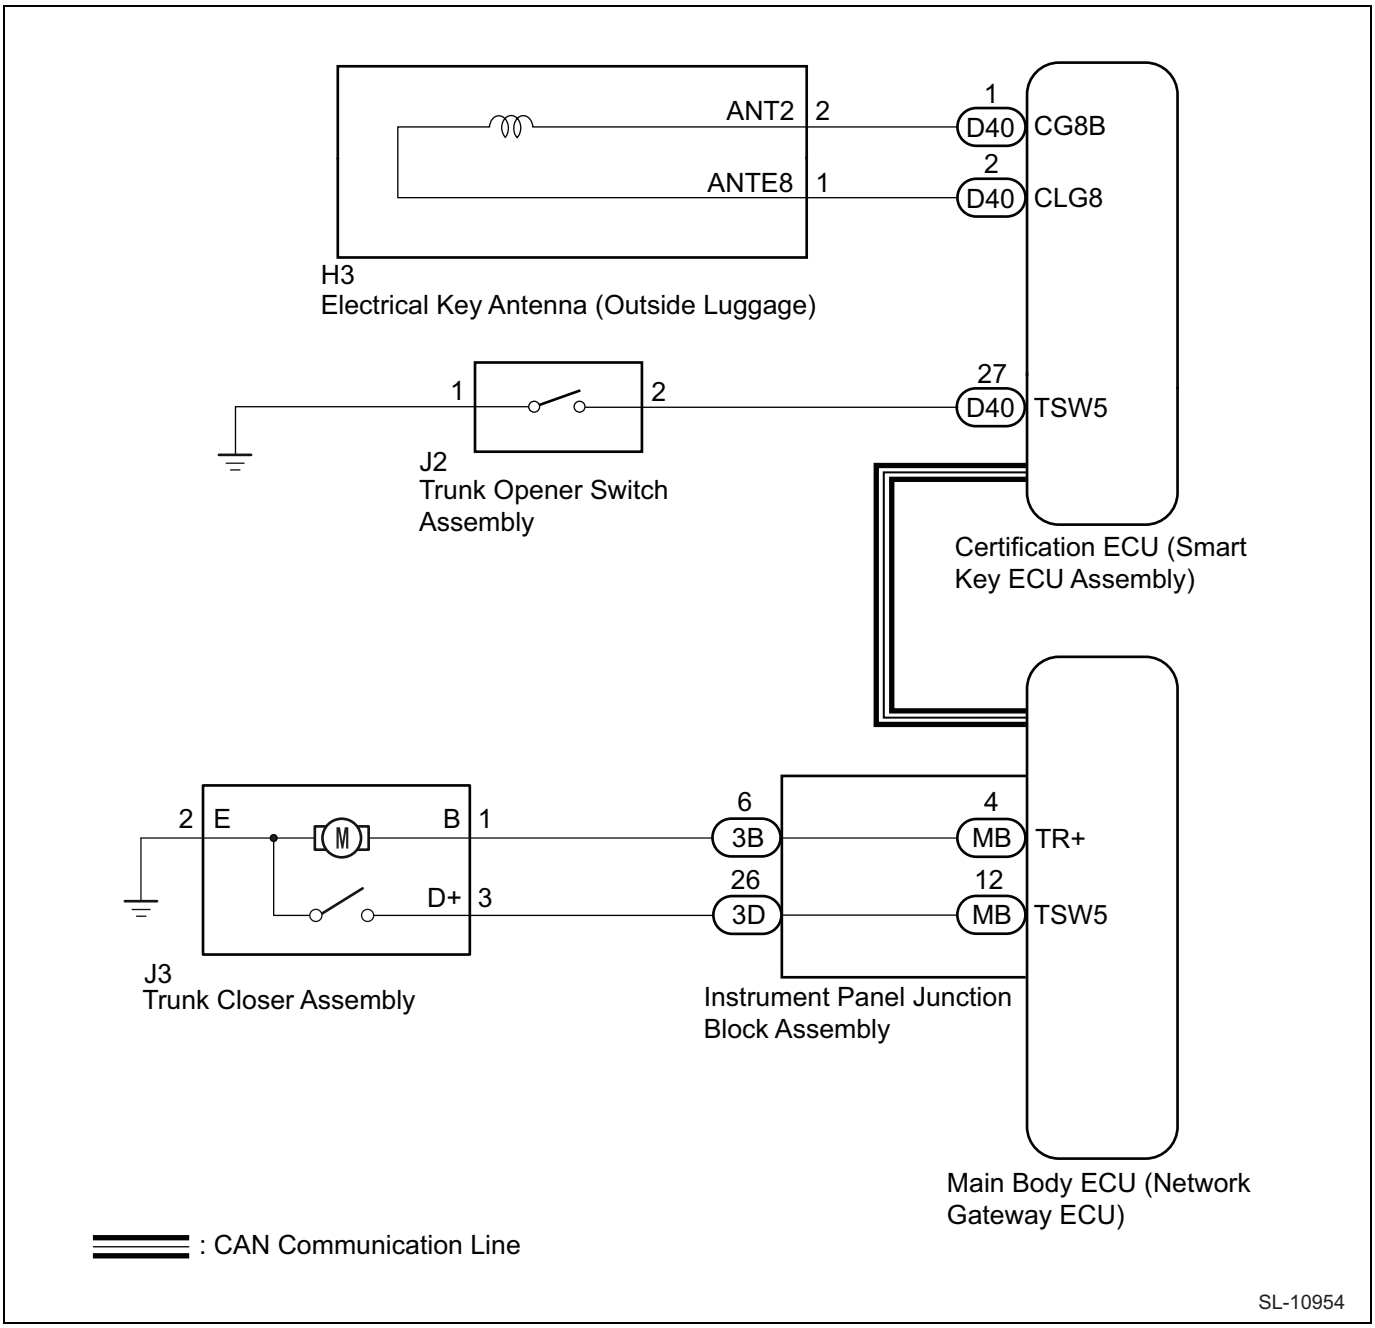
TD

## Smart trunk open operation does not work (when the transmitter is located outside trunk)

Circuit description

If the trunk entry unlock function does not work, a request code might not be transmitted from the trunk. If the entry function works properly on other doors, the electrical key transmitter SUB-ASSY and the door control receiver are functioning properly. It can therefore be assumed that something is wrong with the transmission of a request code (communication between the collation ECM (smart key ECM ASSY) and the electrical key antenna (trunk exterior antenna)), that the switch located outside the trunk is faulty, or that interference from external radio waves is present.

Circuit figure



Inspection steps

CAUTION:

- Some functions of the smart entry & start system (entry function) use the CAN communication system and the LIN communication system. Inspect the communication function first by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the smart entry & start system (entry function).
- Check if the electrical key transmitter SUB-ASSY is inside the vehicle.
- Before proceeding with the inspection procedure, check that the DTC B1242 (wireless door lock control) is not output. (Refer to TD - 52)
- Refer to the notes provided under "Smart entry & start system (entry function)" before proceeding to replace the collation ECM (smart key ECM ASSY). (Refer to TD - 5)
- After the repair work is complete, perform the "DTC output check operation" to confirm that the diagnostic code is not output again.

| | |
|---|---|
| 1 | Read numerical values using the SSM4. |

(1) Connect the SSM4 to the DLC3.

(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menu items: [Keyless Access(Collation ECM)] →[Customize]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Entry & Start

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Trunk Open Mode] | Trunk opening switch ASSY/ [OFF] or [ON] | Customization status is displayed. | - |

Result

| Result | Go to |
|---|---|
| The entry trunk open mode is ON. | A |
| The entry trunk open mode is OFF. | B |

B → Specify the customize setting (go to "customize function") (refer to TD - 37).

A

TD

| 2 | Read numerical values using the SSM4. |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menu items: [Keyless Access(Collation ECM)] →[Customize]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Entry & Start

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Trunk lid/ Rear gate unlock SW] | Trunk opening switch ASSY/ [OFF] or [ON] | ON: The trunk opening switch ASSY is pressed.<br>OFF: The trunk door opening switch ASSY is not pressed. | - |

Criteria: The monitor changes as you operate the trunk opening switch ASSY.

NG → Go to Step 8.

OK

| 3 | Using SSM4, perform an [Active Test]. |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Active Test]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Main body

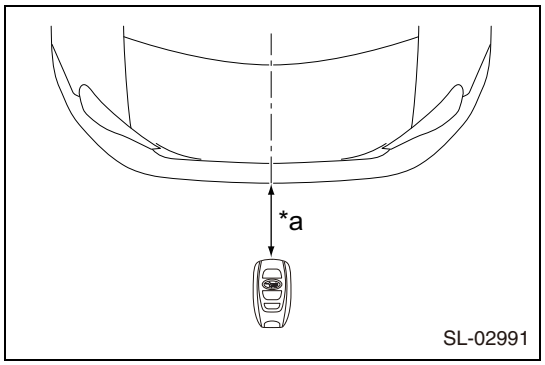
| Tester display | Tested parts | Control range | Notes for diagnosis |
|---|---|---|---|
| [Trunk and Back-Door Open] | Operate the trunk lock motor. | ON/OFF | - |

Criteria: The trunk opens.

NG → Go to Step 10.

OK

| 4 | Checking the waveform environment |
|---|---|



(1) Move the electrical key transmitter SUB-ASSY toward the electrical key antenna (trunk exterior antenna) and check the entry trunk open function.

Captions in illustration

| | |
|---|---|
| *a | Approx. 0.3 m |

CAUTION:
If the electrical key transmitter SUB-ASSY is within 0.2m of the rear bumper, communication is not possible.
NOTE:

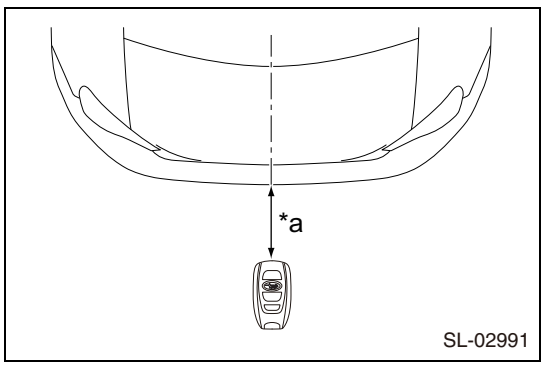
- Press the switch located outside the trunk opener, holding the electrical key transmitter SUB-ASSY approximately 1 m above ground and approximately 0.3 m away from the vehicle, as shown in the figure.
- Try moving the electrical key transmitter SUB-ASSY closer to the electrical key antenna (trunk exterior antenna), so that it is less likely to be affected by interference from external radio waves. In this way, you can identify if the problem is caused by external radio waves or not.
- If the operation check reveals a normal result, it is highly likely that the problem is caused by the effect of electromagnetic interference. In addition, installing an additional component to the vehicle makes the vehicle more susceptible to interference from external radio waves. If such components are found, remove them, and then proceed to check the operation.
  Criteria: The entry function works properly.

NG → Go to Step 5.

OK

Interference from external radio waves

| 5 | Perform the keyless access system check. |
|---|---|



(1) Perform keyless access system check for the following antennas. (Refer to TD - 31)
  (a) Check the indoor electrical key antenna ASSY no. 2 (rear floor).

Captions in illustration

| | |
|---|---|
| *a | 0.7 - 1.0m |

(2) Hold the electrical key transmitter SUB-ASSY at the same level as the upper surface of the rear bumper, positioning it at the center of the rear end of the vehicle. Check if the wireless door lock buzzer beeps.
NOTE:

- Hold the electrical key transmitter SUB-ASSY at the same level as the upper surface of the rear bumper, positioning it at the center of the rear end of the vehicle (0.7 - 1.0 m (2.30 - 3.28 feet)). Check

that the electrical key transmitter SUB-ASSY is facing in the same direction as shown in the figure.

- If the buzzer beeps, it means that the transmitter located outside the trunk is functioning properly.

  Criteria: The wireless door lock buzzer beeps.

NG → Go to Step 6.

OK

Replacement of the collation ECM (smart key computer ASSY)

| 6 | Check the harnesses and connectors (collation ECM - electrical key antenna). |
|---|---|

(1) Disconnect the D40 collation ECM (smart key ECM ASSY) connector.
(2) Disconnect the H3 electrical key antenna (trunk exterior antenna) connector.
(3) Measure the resistance according to the following table.

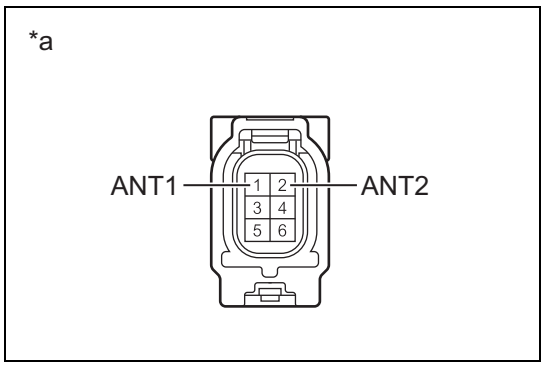
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D40-1 (CG8B) - H3-2 (ANTE2) | Always | 1 Ωor less |
| D40-2 (CLG8) - H3-1 (ANTE1) | Always | 1 Ωor less |
| D40-1 (CG8B) - chassis ground | Always | 10 kΩ or more |
| D40-2 (CLG8) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

| 7 | Inspect the electrical key antenna (trunk exterior antenna) unit. |
|---|---|



(1) Remove the electrical key antenna (trunk exterior antenna).
(2) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 (ANTE8) - 2 (ANT2) | Always | 1 Ωor less |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Electrical key antenna (trunk exterior antenna)) |

NG → Replace the electrical key antenna (trunk exterior antenna).

OK

Replacement of the collation ECM (smart key computer ASSY)

| 8 | Inspect the trunk opening switch ASSY unit. |
|---|---|

(1) Remove the trunk opening switch ASSY. (Refer to DH - 68)
(2) Inspect the trunk opening switch ASSY. (Refer to DH - 69)

NG → Replacement of the trunk opening switch ASSY

OK

| 9 | Check the harnesses and connectors (collation ECM - trunk opening switch ASSY). |
|---|---|

(1) Disconnect the D40 collation ECM (smart key ECM ASSY) connector.
(2) Remove the J2 trunk opening switch ASSY connector.
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D40-27 (TSW5) - J2-2 | Always | 1 Ωor less |
| J2-1 - chassis ground | Always | 1 Ωor less |
| D40-27 (TSW5) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

Replacement of the collation ECM (smart key computer ASSY)

| 10 | Inspect the trunk lock ASSY unit. |
|---|---|

(1) Remove the trunk lock ASSY. (Refer to DL - 105)
(2) Inspect the trunk lock ASSY. (Refer to DL - 108)

NG → Replacement of the trunk lock ASSY

OK

| 11 | Check the harnesses and connectors (trunk lock - instrument panel junction block). |
|---|---|

(1) Disconnect the 3B and 3D instrument panel junction block ASSY connectors.
(2) Disconnect the J3 trunk lock ASSY connector.
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-6 - J3-1 | Always | 1 Ωor less |
| 3D-26 -J3-3 | Always | 1 Ωor less |
| J3-2 - chassis ground | Always | 1 Ωor less |
| 3B-6 - chassis ground | Always | 10 kΩ or more |
| 3D-26 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

| 12 | Inspect the instrument panel junction block ASSY unit. |
|---|---|

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Conditions | Specified condition |
|---|---|---|
| 3B-6 - MB-4 | Always | 1 Ωor less |
| 3D-26 - MB-12 | Always | 1 Ωor less |

NG → Replacement of the instrument panel junction block ASSY

OK

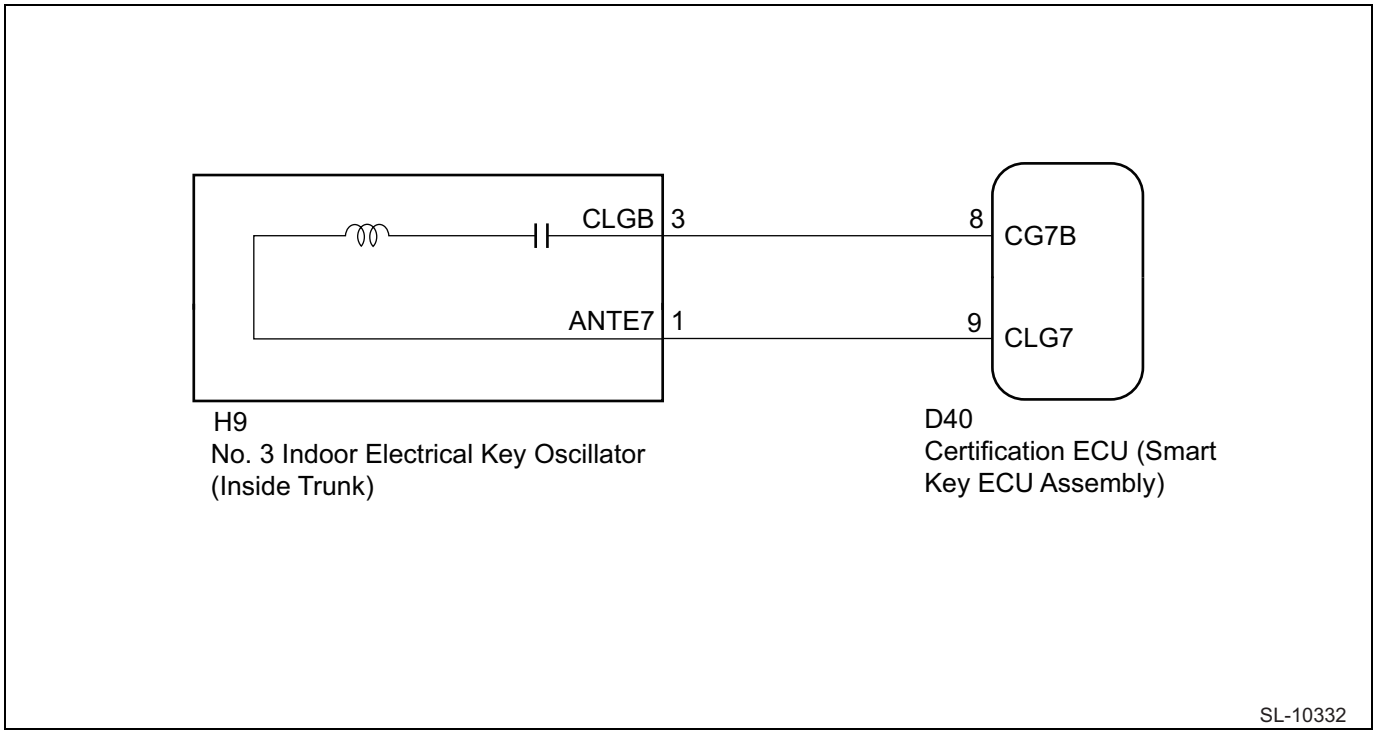
Replace the main body ECM (multiplex network body ECM).

## The smart key lockout protection function for the trunk does not work (trunk does not open)

Circuit description

If the entry trunk compartment lock-in prevention function does not work, communication between the indoor electrical key antenna ASSY no. 3 (trunk interior antenna) and the electrical key transmitter SUB-ASSY might be faulty, interference from external radio waves might be present, or the collation ECM (smart key ECM ASSY) might be faulty.

Circuit figure



Inspection steps

CAUTION:

- Some functions of the smart entry & start system (entry function) use the CAN communication system and the LIN communication system. Inspect the communication function first by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the smart entry & start system (entry function).
- Check if the electrical key transmitter SUB-ASSY is inside the vehicle.
- Before proceeding with the inspection procedure, check that the DTC B1242 (wireless door lock control) is not output. (Refer to TD - 52)
- Refer to the notes provided under "Smart entry & start system (entry function)" before proceeding to replace the collation ECM (smart key ECM ASSY). (Refer to TD - 5)
- After the repair work is complete, perform the "DTC output check operation" to confirm that the diagnostic code is not output again.

| 1 | Check the entry function (entry trunk open function). |
|---|---|

(1) Check if the entry trunk open function works properly. (Refer to TD - 31)

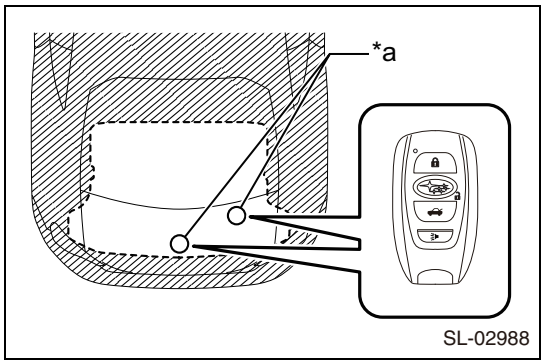
Result

| Result | Go to |
|---|---|
| The entry trunk open function works properly. | A |
| The entry trunk open function does not work properly. | B |

B → Proceed to check other problems ("Symptom table") (refer to TD - 39).

A

| 2 | Checking the waveform environment |
|---|---|



(1) Move the electrical key transmitter SUB-ASSY toward the indoor electrical key antenna ASSY no. 3 (trunk interior antenna) and check if the entry trunk compartment lock-in prevention function works.

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

CAUTION:

If the electrical key transmitter SUB-ASSY is within 0.2 m (0.656 feet) of the indoor electrical key antenna ASSY no. 3 (rear floor), communication is not possible.

NOTE:

- Try moving the electrical key transmitter SUB-ASSY closer to the indoor electrical key antenna ASSY no. 3 (trunk interior antenna), so that it is less likely to be affected by interference from external radio waves. In this way, you can identify if the problem is caused by electromagnetic interference.
- If the operation check reveals a normal result, it is highly likely that the problem is caused by the effect of electromagnetic interference. In addition, installing an additional component to the vehicle makes the vehicle more susceptible to interference from external radio waves. If such components are found, remove them, and then proceed to check the operation.

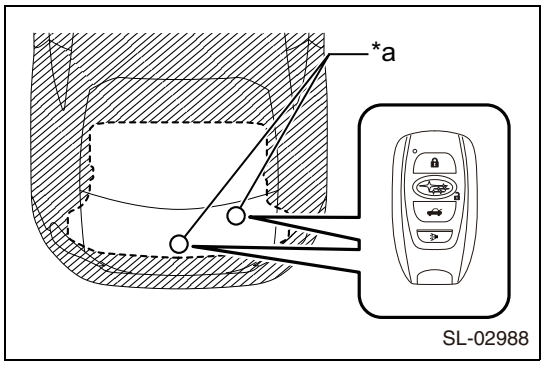
  Criteria: The entry function works properly.

NG → Go to Step 3.

OK

Interference from external radio waves

| 3 | Perform the keyless access system check. |
|---|---|



(1) Perform keyless access system check for the following antennas. (Refer to TD - 31)

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

(2) Check if the wireless door lock buzzer beeps when the electrical key transmitter SUB-ASSY is located in the trunk.

NOTE:

- Place the key in the trunk.
- If the buzzer beeps, it means that the indoor electrical key antenna ASSY no. 3 (located inside the trunk) is functioning properly.

Criteria: The wireless door lock buzzer beeps.

NG → Go to Step 4.

OK

Replacement of the collation ECM (smart key computer ASSY)

| 4 | Check the harnesses and connectors (collation ECM - indoor electrical key antenna no. 3). |
|---|---|

(1) Disconnect the D40 collation ECM (smart key ECM ASSY) connector.
(2) Disconnect the H9 indoor electrical key antenna ASSY no. 3 (trunk interior antenna) connector.
(3) Measure the resistance according to the following table.

Resistance

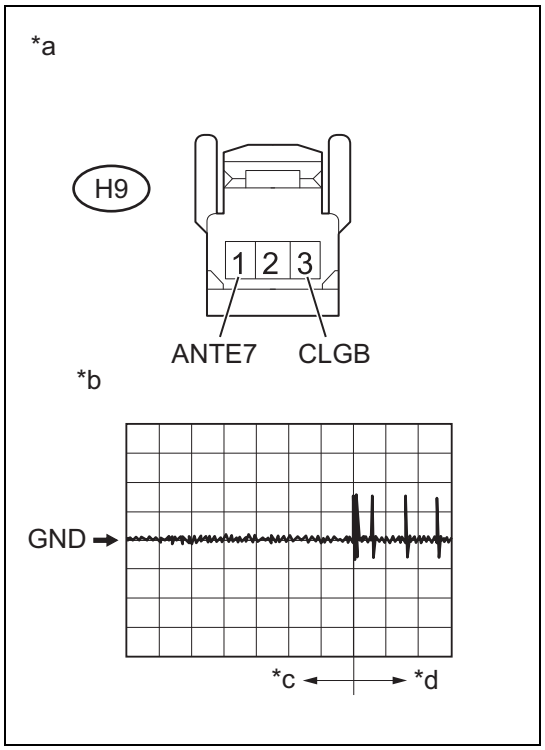
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D40-9 (CLG7) - H9-1 (ANTE7) | Always | 1 Ωor less |
| D40-8 (CG7B) - H9-3 (CLGB) | Always | 1 Ωor less |
| D40-9 (CLG7) - chassis ground | Always | 10 kΩ or more |
| D40-8 (CG7B) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

TD

| 5 | Check the collation ECM (smart key ECM ASSY). |
|---|---|



(1) Connect the D40 collation ECM (smart key ECM ASSY) connector.
(2) Disconnect the H9 indoor electrical key antenna ASSY no. 3 (trunk interior antenna) connector.
(3) Measure the voltage according to the following table.

Criteria

| Inspection terminals | Switch conditions | Tool setting | Specified condition |
|---|---|---|---|
| H9-1 (ANTE7) - H9-3 (CLGB) | Procedure:<br>1.The engine switch is OFF.<br>2.The electrical key transmitter SUB-ASSY is not inside the vehicle.<br>3.All doors are closed.<br>4.Driver's door lock sensor, not touched →touched | 2 V/DIV., 500 ms/DIV. | Pulse generation (Refer to the waveform) |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Indoor electrical key antenna ASSY no. 3 (trunk interior antenna)) |
| *b | Waveform |
| *c | The driver's side lock sensor is not touched. |
| *d | The driver's side lock sensor is touched. |

NG → Replacement of the collation ECM (smart key computer ASSY)

OK

| 6 | Replacement of the indoor electrical key antenna ASSY no. 3 (trunk interior antenna) |
|---|---|

(1) Replace the indoor electrical key antenna ASSY no. 3 (trunk interior antenna). (Refer to TD - 335)

Next

| 7 | Check the indoor electrical key antenna ASSY no. 3 (trunk interior antenna). |
|---|---|

(1) Check if the entry trunk lock-in prevention function works properly.
Criteria: The trunk lock-in prevention function works properly.

NG → Replacement of the collation ECM (smart key computer ASSY)

OK

END (indoor electrical key antenna ASSY no. 3 malfunction)

## The internal alarm of the smart entry system does not go off

Circuit description

The entry & start system (entry function) provides various indoor warnings by setting off a buzzer via the combination meter ASSY. When the specific conditions for each waning are met, the collation ECM (smart key ECM ASSY) sends a buzzer drive request signal to the combination meter ASSY via the CAN communication to beep the buzzer.

Inspection steps

CAUTION:

- Some functions of the entry & start system (entry function) use the LIN communication system and the CAN communication system. Inspect the communication function by referring to "How to troubleshoot" (refer to TD - 27). Confirm that the communication system is functioning properly before proceeding to repair the entry & start system (entry function).
- Refer to "Entry & start system (entry function)" before proceeding to replace the collation ECM (smart key ECM ASSY). (Refer to TD - 5)

TD

| | |
|---|---|
| 1 | Check the entry door lock operation. |

(1) Check if the entry function works properly. (Refer to TD - 31)

Criteria: The entry function works properly.

NG → Go to "Symptom table" (refer to TD - 39).

OK

Go to "Meter & gauge system" ("Symptom table").

# Entry & start system (start function)

| Parts | Procedures |
|---|---|
| Engine switch | • Turns on the power and starts the engine.<br>• Includes a built-in transponder key amplifier so that you can start the engine in cases when, due to the battery being drained or radio wave interference, the key doesn't operate properly. |

| Parts | Procedures |
|---|---|
| Collation ECM (smart key ECM ASSY) | • Performs key verification.<br>• Controls the electrical key antenna (vehicle exterior), the electrical key antenna (vehicle interior), and the door lock / unlock sensor.<br>• Receives the trunk open signal from the trunk opening switch ASSY, and outputs a signal to the main body ECM through the CAN communication system.<br>• Outputs the entry door lock / unlock command.<br>• Outputs the lock / unlock command signal to the steering lock actuator ASSY.<br>• Outputs the immobilizer set / unset command.<br>• Controls the security indicator light.<br>• Controls the entry key indicator light of the combination meter ASSY.<br>• Drives the ACC and IG relay, and switches the power source mode.<br>• Forms the entry detection area. |
| ID code box (immobilizer code ECM) *1 | • Receives commands from the collation ECM (smart key ECM ASSY), and outputs the immobilizer set / unset commands to the ECM.<br>• Records the confirmation code. |
| ECM | When starting the engine, outputs the signal notifying that the engine started the collation ECM (smart key ECM ASSY).<br>• Drives the starter relay, and starts the engine. |
| Steering lock actuator ASSY (steering lock ECM) | • Receives command signals from the collation ECM (smart key ECM ASSY) and activates the steering lock actuator ASSY.<br>• Records the confirmation code. |
| Combination meter ASSY | • Based on the command signals sent from the collation ECM (smart key ECM ASSY), operates various warnings (sounding buzzers on the combination meter).<br>• Informs the customer if any problem is found in the entry & start system. |
| Brake actuator ASSY (skid control ECM) | Outputs the vehicle speed signal to the collation ECM (smart key ECM ASSY). |
| IG, ACC relay | Following the control of the collation ECM (smart key ECM ASSY), switches between On / Off, and supplies power to each system. |
| Stop light switch ASSY *2 | Detects if the brake pedal is being depressed (switch on), and outputs a signal to the collation ECM (smart key ECM ASSY). |
| Clutch starter switch ASSY *3 | Detects if the clutch pedal is being depressed (switch on), and outputs a signal to the collation ECM (smart key ECM ASSY). |
| Neutral start switch ASSY *2 | Outputs the shift position to the collation ECM (smart key ECM ASSY). |
| Transmission control ECM *2 | Outputs the transmission control ECM signal to the collation ECM (smart key ECM ASSY). |
| No. 1 vehicle interior electrical key antenna ASSY (front floor) No. 2 vehicle interior electrical key antenna ASSY (rear floor) | Receive request signals from the collation ECM (smart key ECM ASSY), and form the vehicle interior detection area. |
| Door control receiver | Receives the entry & start system code / wireless code sent from the key, and sends that to the collation ECM (smart key ECM ASSY). |
| Electrical key transmitter | Sends the ID code when it receives a request signal. |

*1: With ID code box

*2: With automatic transmission

*3: for manual transmission

## Description of functions

1. Notes for registration
   (1) When replacing any of the following parts, refer to the "Registration manual for immobilizer".
   CAUTION:
   • When replacing the collation ECM (smart key ECM ASSY), it is also necessary to prepare all the registered electrical key transmitter SUB-ASSYs.
   • It is not possible to use a registered electrical key transmitter SUB-ASSY or ECM in a different vehicle.
   (a)ID code box (immobilizer code ECM) *1
   (b)Collation ECM (smart key ECM ASSY)
   (c)ECM
   (d)Steering lock actuator ASSY (steering lock ECM)
   (e)Electrical key transmitter SUB-ASSY

*: The ID code box is included.

2. System functions

The push button start functions are described below:

| Function | Procedures |
|---|---|
| Ignition function | When the electrical key transmitter SUB-ASSY is confirmed to be in the vehicle interior, and the engine switch and brake pedal *1 or clutch pedal *2 are operated, the ignition function changes the power or starts the engine. |
| Vehicle battery power saving function | When not using the vehicle for long periods of time, this function extends the interval for the periodic sending of request signals or stops the sending of request signals, and saves the vehicle's battery power.<br>• If 5 days pass without a response from the electrical key transmitter SUB-ASSY, the periodic sending of signals is stopped.<br>• If 14 days pass without a response from the electrical key transmitter SUB-ASSY, the lock / unlock sensors of all the door outside handle ASSYs except for the driver side door are disabled.<br>If 10 minutes or more pass with the electrical key transmitter SUB-ASSY inside the detection area, the entry & start system will automatically disable the vehicle exterior detection area where the electrical key transmitter SUB-ASSY is. |
| Electrical key transmitter SUB-ASSY battery power saving function | If you press the switch on the electrical key transmitter SUB-ASSY, this function stops the sending of signals approx. 20 seconds later, and saves the power consumed by the electrical key transmitter SUB-ASSY. |
| Entry cancel function | Cancels the entry & start system when certain operations are performed. |
| Immobilizer function | Because the engine is only started by the registered electrical key transmitter SUB-ASSY, this prevents unauthorized people from starting the engine. |
| Automatic power OFF function | With automatic transmission<br>If the vehicle is left for 20 minutes or more with the shift lever in P and ACC ON, the power automatically turns off. If the vehicle is left for 60 minutes or more with the shift lever in P and IG ON (with the engine not started, or the vehicle stopped), the power automatically turns off.<br>With manual transmission<br>If the vehicle is left for 20 minutes or more with ACC ON, the power automatically turns off. If the vehicle is left for 60 minutes or more with IG ON (with the engine not started, or the vehicle stopped), the power automatically turns off. |

*1: With automatic transmission

*2: With manual transmission

CAUTION:

- Depending on the shape of the vehicle body, there may be certain places where the electrical key transmitter SUB-ASSY doesn't operate.
- Even if the electrical key transmitter SUB-ASSY is within the vehicle exterior key detection area, if the electrical key transmitter SUB-ASSY is near a window, a door handle, or the center of the rear bumper, it may not be detected properly.
- Even when the electrical key transmitter SUB-ASSY is within the vehicle interior key detection area, if the transmitter SUB-ASSY is near the instrument panel, the accessory box of the instrument panel, inside or near the front cup holder, in the glove compartment, or on the floor, it may not be detected properly.
- If held improperly, the electrical key transmitter SUB-ASSY may not work properly.
- In the following conditions, the range of the detection area may become smaller, or the key may not be detected properly:
  - The battery of the electrical key transmitter SUB-ASSY is drained.
  - There is a facility that produces strong radio waves nearby, such as a TV tower, a power plant, a TV station, or a gas station.
  - Even when the electrical key transmitter SUB-ASSY is within the vehicle interior key detection area, if the transmitter SUB-ASSY is near the instrument panel, the accessory box of the instrument panel, inside or near the front cup holder, in the glove compartment, or on the floor, it may not be detected properly.
  - The electrical key transmitter SUB-ASSY is covered by or touching a metal product.
  - A radio wave type keyless entry system is being used nearby.
  - The electrical key transmitter SUB-ASSY is near a high-voltage device or a device that produces electrical noise.
  - There is an electric device, such as a charger, near the electrical key transmitter SUB-ASSY.

(1) The request signal from the collation ECM (smart key ECM ASSY) is sent via each electrical key antenna (vehicle exterior), and forms the detection area. The detection area formed by each electrical key antenna (vehicle exterior) is 0.7 m from the door handle and the rear bumper (electrical key antenna (trunk exterior)).

(2) When the vehicle is parked (with the power off and the door locked *), the detection area of each electrical key antenna (vehicle exterior) is formed by emitting a periodic request signal every 0.25 seconds to detect the electrical key transmitter SUB-ASSY. Also, with the door locked and touching the lock sensor, the request signal is emitted, and by forming the detection area on the vehicle exterior, the electrical key transmitter SUB-ASSY is detected.

NOTE:

*: The entry & start system controls each door individually. If you lock a door with the door lock switch or the wireless remote control function, even if all doors are not locked, a detection area is formed around the locked door.

(3) The detection area of the electrical key antenna (trunk exterior) is formed when you press the trunk opening switch ASSY.

(4) The vehicle interior detection area is formed and the electrical key transmitter SUB-ASSY is detected in any of the following conditions: 1) a door is opened or closed, 2) the brake pedal *1 or the clutch pedal *2 is depressed, 3) the engine switch is operating, 4) the conditions required for a warning are met, 5) operation of the entry door lock is performed.

*1: With automatic transmission

*2: With manual transmission

(5) The settings of the vehicle interior detection area for when the engine in turned on can be customized with the customize function. (Refer to TD - 155)

## HOW TO PROCEED WITH TROUBLESHOOTING

NOTE:

- Use the following procedure to troubleshoot the entry and start system (for start function).
- *: Use the SSM4.

TD

| | |
|---|---|
| 1 | VEHICLE BROUGHT TO WORKSHOP |

NEXT

| | |
|---|---|
| 2 | CUSTOMER PROBLEM ANALYSIS CHECK |

NOTE:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points for problem analysis:

| | |
|---|---|
| What | Vehicle model, system name |
| When | Date, time, occurrence frequency |
| Where | Road conditions |
| Under what conditions? | Running conditions, driving conditions, weather conditions |
| How did it happen? | Problem symptoms* |

– *: Be sure to ask the customer in detail about the following points concerning the vehicle operating conditions, environment and problem, and then check for DTCs.

(1) If the entry lock/unlock function does not operate for all doors.

(2) If the entry lock function does not operate.

(3) If the entry unlock function does not operate.

(4) If both the entry lock and unlock functions do not operate.

(5) If the wireless lock and unlock functions do not operate.

(6) If there is no power even when the engine switch is pressed [does not turn on (ACC)].

(7) If the engine does not start with the entry ignition function.

(8) If the outside warning buzzers do not sound.

(9) If the customer attempted to start the engine by touching the electrical key to the engine switch and pressing the engine switch.
(10)If the interior warning buzzers do not sound.
(11)If the steering does not unlock.
(12)Any other details concerning the problem.

– If it is thought that wave interference is likely, be sure to ask the customer in detail about the following points concerning the vehicle operating conditions, environment and problem.
(1) Specific locations where the system does not operate (such as near TV towers, large video displays, wireless garage door opener systems, wireless security cameras, home security systems, etc.).
(2) Specific times when the system does not operate:
Whether or not symptoms occurred immediately after purchase or only recently. Whether or not the symptoms occurred even when the key was near the vehicle (electrical key antenna).
(3) If the system does not operate only when near specific vehicles (there may be an effect from electric waves from the wireless systems of other vehicles).
(4) If the system operates intermittently.
(5) If the key is bundled together with other items.
(6) If the key is carried together with other electronic devices, such as cell phones, personal computers, portable music players, other electrical keys, etc. (keep the key at least 0.1m {0.33ft.} away from such items).
(7) Where the key is being kept when not in use:
Whether or not the key being placed within 1m {3.28ft.} of items such as TVs, DVD recorders, induction cookers, rice cookers, dishwashers, modems, cell phones, personal computers, microwave ovens, desk or floor lamps, cordless telephones, etc.
(8) If there are electronic devices that transmit electric waves placed in the vehicle.
(9) When the key battery was last replaced (when the battery is low): The key battery can be checked using the "Key Low Battery" item in the [Data monitor] (See page TD - 53).
(10)If the customer installed any optional components (theft deterrent devices, wireless fog lights, etc.) to the vehicle.

NEXT

| 3 | INSPECT BASIC OPERATION |
|---|---|

(1) Inspect battery voltage.
Standard voltage: 11 to 14V
CAUTION:
If the voltage is below 11V, recharge or replace the battery before proceeding.
(2) Check for blown fuses, open or shorted wire harnesses, improperly connected connectors and other problems in areas that can be visually inspected.

NEXT

| 4 | Communication inspection of the CAN communication system |

END

TD

## Function inspection

1. Operation explanation
   (1) Entry ignition function (with automatic transmission):
      (a) If the electrical key transmitter SUB-ASSY is in the vehicle interior detection area and the brake pedal is depressed, you can press the engine switch and start the engine.
      (b) If the electrical key transmitter SUB-ASSY is in the vehicle interior detection area and the brake pedal is not depressed, you can press the engine switch to change the power mode. The power mode changes each time you press the engine switch, in the following order: OFF →ACC ON→ IG ON →OFF.
      (c) In IG OFF, after you enter the vehicle interior carrying the electrical key transmitter SUB-ASSY, if you press the engine switch without depressing the brake pedal, the power mode switches to ACC, and the entry key indicator light in the combination meter ASSY blinks green.
      (d) With the engine switch turned off, after you enter the vehicle interior holding the electrical key transmitter SUB-ASSY in your hand, and with the shift lever put in P, if you depress the brake pedal, the entry key indicator light in the combination meter ASSY will light up green.
      (e) If you press the engine switch when the entry key indicator light of the combination meter ASSY is lit up green, the engine will start.
   (2) Changing the power mode when the electrical key transmitter SUB-ASSY doesn't operate properly due to radio wave interference or the battery of the electrical key transmitter SUB-ASSY being drained (for automatic transmission):
      (a) Use the integrated mechanical key to unlock the door, hold the electrical key transmitter SUB-ASSY, and enter the vehicle interior.
      (b) Depress the brake pedal and hold the ornament side of the electrical key transmitter SUB-ASSY up to the engine switch.
      (c) The buzzer sounds and the vehicle turns to IG ON.
         NOTE:
         If the entry cancel function has been customized, the power mode changes to on (ACC).
   (3) Starting the engine when the electrical key transmitter SUB-ASSY doesn't operate properly due to radio wave interference or the battery of the electrical key transmitter SUB-ASSY being drained (for automatic transmission):
      (a) Use the integrated mechanical key to unlock the door, hold the electrical key transmitter SUB-ASSY, and enter the vehicle interior.
      (b) Depress the brake pedal, move the shift lever in P, and hold the ornament side of the electrical key transmitter SUB-ASSY up to the engine switch.
      (c) The buzzer sounds and the vehicle turns to IG ON. When the entry key indicator light of the combination meter ASSY lights up green, press the engine switch while pressing the brake pedal, and start the engine.
         NOTE:
         If the entry cancel function has been customized, the power mode changes to on (ACC).
   (4) Entry ignition function (with manual transmission):
      (a) If the electrical key transmitter SUB-ASSY is in the vehicle interior detection area and the clutch pedal is depressed, you can press the engine switch and start the engine.
      (b) If the electrical key transmitter SUB-ASSY is in the vehicle interior detection area and the clutch pedal is not depressed, you can press the engine switch to change the power mode. The power mode changes each time you press the engine switch, in the following order: OFF →ACC ON→ IG ON →OFF.
      (c) In IG OFF, after you enter the vehicle interior carrying the electrical key transmitter SUB-ASSY, if you press the engine switch without depressing the clutch pedal, the power mode switches to ACC, and the entry key indicator light in the combination meter ASSY blinks green.
      (d) In IG OFF, after you enter the vehicle interior carrying the electrical key transmitter SUB-ASSY, if you depress the clutch pedal, the entry key indicator light in the combination meter ASSY will light up green.
      (e) If you press the engine switch when the entry key indicator light of the combination meter ASSY is lit up green, the engine will start.
   (5) Changing the power mode when the electrical key transmitter SUB-ASSY doesn't operate properly due to radio wave interference or the battery of the electrical key transmitter SUB-ASSY being drained (for manual transmission):
      (a) Use the integrated mechanical key to unlock the door, hold the electrical key transmitter SUB-ASSY, and enter the vehicle interior.
      (b) Depress the clutch pedal and hold the ornament side of the electrical key transmitter SUB-ASSY up to the engine switch.

(c) The buzzer sounds and the vehicle turns to IG ON.

NOTE:

If the entry cancel function has been customized, the power mode changes to ACC.

(6) Starting the engine when the electrical key transmitter SUB-ASSY doesn't operate properly due to radio wave interference or the battery of the electrical key transmitter SUB-ASSY being drained (for manual transmission):

(a) Use the integrated mechanical key to unlock the door, hold the electrical key transmitter SUB-ASSY, and enter the vehicle interior.

(b) Depress the clutch pedal and hold the ornament side of the electrical key transmitter SUB-ASSY up to the engine switch.

(c) The buzzer sounds and the vehicle turns to IG ON.

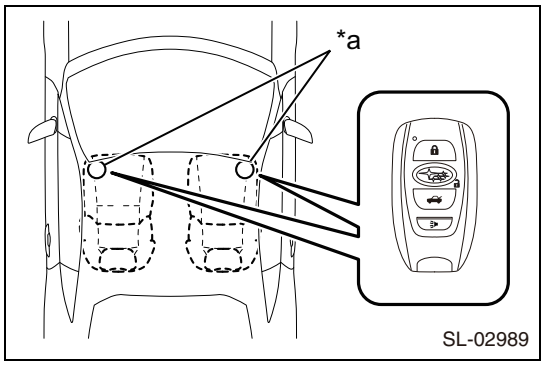
2. Function inspection for the entry ignition

(1) Inspect the entry ignition function (only for automatic transmission).

(a) In IG OFF, with the shift lever in P, while carrying the electrical key transmitter SUB-ASSY, depress the brake pedal, and check that the entry key indicator light of the combination meter ASSY lights up green. If the entry key indicator light of the combination meter ASSY lights up green, press the engine switch, and check that the engine starts.

(b) Without depressing the brake pedal, after putting the vehicle in IG OFF, press the electrical key transmitter SUB-ASSY, and check that the power mode changes in the following way: OFF →ACC ON →IG ON →OFF. However, in IG ON, if the shift lever is in a position other than P, the power mode will not turn OFF but will turn to ACC ON.

(c) Turn off the vehicle's engine, press the engine switch, and check that it turns to IG OFF (the engine stops, and all electrical systems turn off). However, with the vehicle stopped, if the shift lever is in a position other than P, even if you press the engine switch, the power mode will not turn OFF but will turn to ACC ON. In this case, move the shift lever back into P, press the engine switch, and check that the power mode changes to OFF. After the power turns OFF, open the door and check that the steering lock operates.



(d) Inspect the operation range of the entry ignition (front floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY of the front seat in the direction shown in the figure, and check that the engine starts.

Captions in illustration

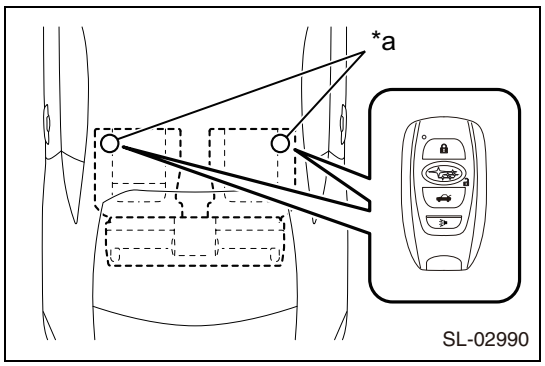
| | |
|---|---|
| *a | Inspection point |

CAUTION:

- Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.
- If the electrical key transmitter SUB-ASSY is within 0.2 m {0.66 feet} from the shift lever, communication may be impossible.
- If the electrical key transmitter SUB-ASSY is on the instrument panel or inside the glove compartment, the engine control system may not start.

NOTE:

Perform the inspection from both of these inspection points.



(e) Inspect the operation range of the entry ignition (rear floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY, and check that the engine starts.

Captions in illustration

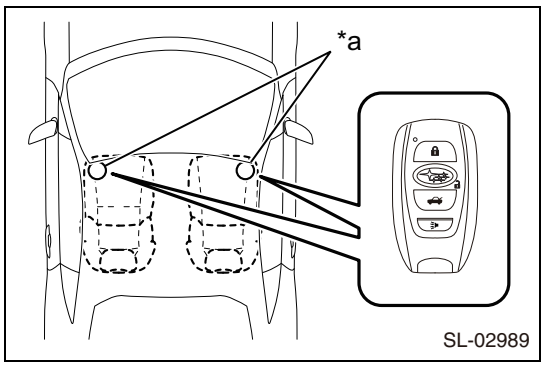
| | |
|---|---|
| *a | Inspection point |

CAUTION:

Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.

NOTE:
Perform the inspection from both of these inspection points.

(2) Check the entry ignition function (only for manual transmission).
(a) In IG OFF, while carrying the electrical key transmitter SUB-ASSY, depress the clutch pedal, and check that the entry key indicator light of the combination meter ASSY lights up green. If the entry key indicator light of the combination meter ASSY lights up green, press the engine switch, and check that the engine starts.
(b) Without depressing the clutch pedal, after turning IG OFF, press the electrical key transmitter SUB-ASSY, and check that the power mode changes in the following order: OFF →ACC ON →IG ON →OFF
(c) Turn off the vehicle's engine, press the engine switch, and check that it turns to IG OFF (the engine stops, and all electrical systems turn off). Open the door and check that the steering lock operates.



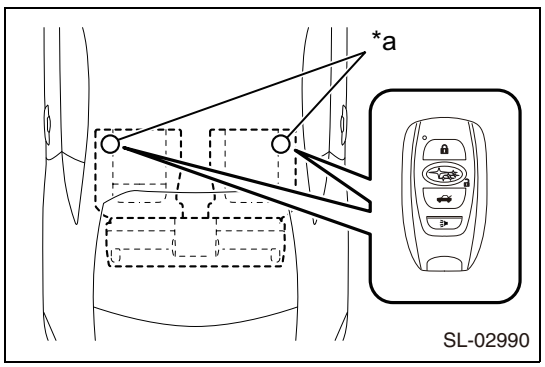
(d) Inspect the operation range of the entry ignition (front floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY of the front seat in the direction shown in the figure, and check that the engine starts.

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

CAUTION:
- Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.
- If the electrical key transmitter SUB-ASSY is within 0.2 m {0.66 feet} from the shift lever, communication may be impossible.
- If the electrical key transmitter SUB-ASSY is on the instrument panel or inside the glove compartment, the engine control system may not start.

NOTE:
Perform the inspection from both of these inspection points.
CAUTION:
If the electrical key transmitter SUB-ASSY is on the instrument panel or inside the glove compartment, the engine control system may not start.



(e) Inspect the operation range of the entry ignition (rear floor). In one of the inspection points, place the electrical key transmitter SUB-ASSY, and check that the engine starts.

Captions in illustration

| | |
|---|---|
| *a | Inspection point |

CAUTION:
Even when the electrical key transmitter SUB-ASSY is located within the key detection area inside the vehicle, it might not be detected properly if it is located on the instrument panel, inside the accessory box of the instrument panel, inside or near the front cup holder, inside the glove compartment, on the rear shelf, or on the floor.
NOTE:
Perform the inspection from both of these inspection points.

3. Check the power mode change function
(1) Check the engine switch.
(a) With automatic transmission: check that the power mode changes based on the following table.

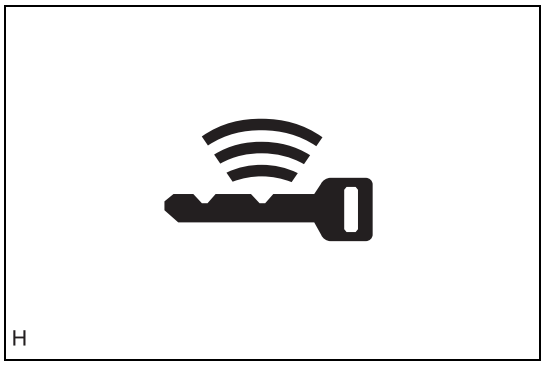
| Shift position | Brake pedal | Power mode when the engine switch is pressed |
|---|---|---|
| P | Don't step on | Off →On (ACC) →On (IG) →off |
| P | Don't step on | Engine operation →off |
| P | Don't step on | On (ACC) *1 →off |

| Shift position | Brake pedal | Power mode when the engine switch is pressed |
|---|---|---|
| P | Step on | Off →The engine starts. |
| P | Step on | On (ACC) →The engine starts. |
| P | Step on | On (IG) →The engine starts. |
| P | Step on | Engine operation →off |
| P | Step on | On (ACC) *1 →off |
| N | Don't step on | Off →On (ACC) →On (IG) (After the power mode changed to On [IG], each time you press the engine switch, the power mode switches between On [IG] and On [ACC].) |
| N | Don't step on | Engine operating →On (ACC) |
| N | Step on | Off →The engine starts. *2 |
| N | Step on | On (ACC) →The engine starts. *2 |
| N | Step on | On (IG) →The engine starts. *2 |
| N | Step on | Engine operating →On (ACC) |
| The shift lever is not in P or in N. | Don't step on | Off →On (ACC) →On (IG) (After the power mode changed to On [IG], each time you press the engine switch, the power mode switches between On [IG] and On [ACC].) |
| The shift lever is not in P or in N. | Don't step on | Engine operating →On (ACC) |
| The shift lever is not in P or in N. | Step on | Off →On (IG) |
| The shift lever is not in P or in N. | Step on | On (ACC) →On (IG) |
| The shift lever is not in P or in N. | Step on | Engine operating →On (ACC) |

NOTE:
- *1: This status is applicable only when the power mode is turned from ON (IG) to ON (ACC).
- *2: Only in cases when the steering lock was unlocked.

(2) With manual transmission:
Check that the power mode changes based on the following table.

| Clutch pedal | Power mode when the engine switch is pressed |
|---|---|
| Don't step on | Off →On (ACC) →On (IG) →off |
| Don't step on | Engine operation →off |
| Step on | Off →The engine starts. |
| Step on | On (ACC) →The engine starts. |
| Step on | On (IG) →The engine starts. |
| Step on | Engine operation →off |



4. Check the display for the power mode change
(1) Check the entry key indicator.

Indicator unit inspection

| Engine switch | Indicator |
|---|---|
| Off<br>(Excluding conditions where the engine could start) | Off |
| On (ACC)<br>(Excluding conditions where the engine could start*) | Blinking green |
| On (IG)<br>(Excluding conditions where the engine could start*) | Blinking green |
| Conditions where the engine could start and shift P | Lit up green |
| After the engine starts | Off |

NOTE:
*: Excluding conditions where the engine could start, as following:

With automatic transmission

| The engine starts if the engine switch is pressed in the following conditions. |
|---|

| | |
|---|---|
| Condition 1 | All conditions are met:<br>• The power mode switched from on (IG) to on (ACC).<br>• Key confirmation* or the engine immobilizer is unset (the engine switch is on (ACC) or on (IG)).<br>• The shift lever is in N (steering lock is unlocked).<br>• The stop light switch is on. |
| Condition 2 | All conditions are met:<br>• The power mode is not switched from on (IG) to on (ACC).<br>• Key confirmation* or the engine immobilizer is unset (the engine switch is on (ACC) or on (IG)).<br>• The shift lever is in P or in N.<br>• The stop light switch is on. |

With manual transmission

| The engine starts if the engine switch is pressed when the following conditions are met. | |
|---|---|
| Condition 1 | All conditions are met:<br>• Key confirmation* or the engine switch is on (ACC) or on (IG).<br>• The clutch start switch is on. |

TD

*: When the electrical key transmitter SUB-ASSY is in the vehicle interior, the ID code sent as a result of the communication between the electrical key transmitter SUB-ASSY and the collation ECM (smart key ECM ASSY) and the ID code calculated by the collation ECM (smart key ECM ASSY) are compared. If these ID codes match, the vehicle recognizes that the electrical key transmitter SUB-ASSY is in the vehicle interior.

(a)List of indicator conditions

| Indicator | Vehicle status |
|---|---|
| Off | Any condition is met:<br>1. The engine is turning.<br>2. With the engine switch off, the vehicle is in a state where even if the engine switch is pressed, the engine won't start. |
| Lit up green | All the following conditions are met, the vehicle is in a state where if the engine switch is pressed, the engine will start.<br>The electrical key transmitter SUB-ASSY is in the vehicle interior, the stop light switch ASSY *1 or the clutch start switch ASSY *2 is on, and the shift lever is in P *1. |
| Blinking green<br>(Blinking slowly) | With the engine switch in on (ACC) or on (IG), the vehicle is in a state where even if the engine switch is pressed, the engine won't start. |
| Blinking green<br>(Blinking quickly) | If the power is on, or the engine is started, the steering wheel is unlocked (steering lock is stuck).<br>When the steering wheel is unlocked, the indicator begins blinking.<br>When 30 seconds have passed since the blinking began, if the power is on, or if the engine was started again, the indicator stops blinking. |
| Blinking yellow | A defect is found in the steering lock ECM.<br>If it is determined that there is a defect in the steering lock ECM or in the collation ECM (smart key ECM ASSY), the indicator begins blinking.<br>If the ECM returns to its normal status, or if 15 seconds have passed since the blinking started, the indicator stops blinking. |

*1: With automatic transmission

*2: With manual transmission

NOTE:

If the shift lever is in the N position, the engine can start only when the steering wheel is unlocked. (With automatic transmission)

# CUSTOMIZE PARAMETERS

1. CUSTOMIZE ENTRY AND START SYSTEM (for Start Function)

(1) Customizing with the SSM4

CAUTION:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current setting before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

NOTE:

The items in the table below can be customized.

(a) Connect the SSM4 to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the SSM4 on.

(d) Enter the following menus: [Keyless Access(Collation ECM)] →[Customize]

(e) Select the setting by referring to the table below.

Entry & Start

| Display | Default | Content | Setting | Relevant ECU |
|---|---|---|---|---|
| [Ignition Available Area] | All | Function that sets the area that the key must be in before the engine switch can be operated. | Front or All | Certification ECU (smart key ECU assembly) |
| [Smart Cancel] | OFF | Function that enables or disables the entry and start system. | OFF or ON | Certification ECU (smart key ECU assembly) |

Warning

| Display | Default | Content | Setting | Relevant ECU |
|---|---|---|---|---|
| [Key Low Battery Warning] | ON | Function that enables or disables the sounding of the buzzer when the key battery is low and the engine switch is turned off after being on (IG) for 20 minutes or more. | OFF or ON | Certification ECU (smart key ECU assembly) |

(2) Entry cancel function (manual operation)

NOTE:

While the entry and start system is canceled, it is possible to lock and unlock the doors with the wireless operation, and the start system can be operated by holding the key against the engine switch.

(a) The following functions are disabled when the entry and start system is canceled.

1. Entry unlock/lock functions
2. Entry ignition function
3. Key lock-in prevention function
4. Entry back door open/lock function
5. Entry warning functions

(b) Canceling the system operation:

1. Make sure the following conditions are met:
   - The engine switch is off.
   - The driver side door is closed.
   - The driver side door is unlocked.
2. Press the unlock switch of the electrical key transmitter sub-assembly.
3. Open the driver side door within 5 seconds of completing the step above (driver side door: closed at beginning of step →opened).
4. With the driver side door open, press the unlock switch of the electrical key transmitter sub-assembly 2 times within 5 seconds of completing the step above.

   CAUTION:

   If the driver side door is closed before or while pressing the unlock switch, the entry cancel setting mode will end.
5. Close and open the driver side door twice within 30 seconds of completing the above step (driver side door: open at beginning of step →closed →opened →closed →opened).
6. With the driver side door open, press the unlock switch of the electrical key transmitter sub-assembly 2 times within 30 seconds of completing the step above.

   CAUTION:

   If the driver side door is closed before or while pressing the unlock switch, the entry cancel setting mode will end.
7. Close and open the driver side door within 30 seconds of completing the step above (driver side door: open at beginning of step →closed →opened).

8. Close the driver side door within 5 seconds of completing the above step.
9. Check that the wireless buzzer sounds twice (short beeps) to confirm that the entry and start system has been canceled.

(c) Perform the following procedure to restore the entry and start system to the active state from the canceled state.

1. Perform the procedures to cancel the entry and start system again.
2. Check that the wireless buzzer sounds once (short beep) to confirm that the entry and start system has been restored to the active state.

   NOTE:

   - The system changes between the canceled state and the active state each time the procedure to cancel the system is performed.
   - The buzzer sounds twice when the system changes from the active state to the canceled state, and sounds once when the system changes from the canceled state to the active state.

## PROBLEM SYMPTOMS TABLE

NOTE:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table.
  Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to the system before inspecting the suspected areas below.

TD

Entry & Start

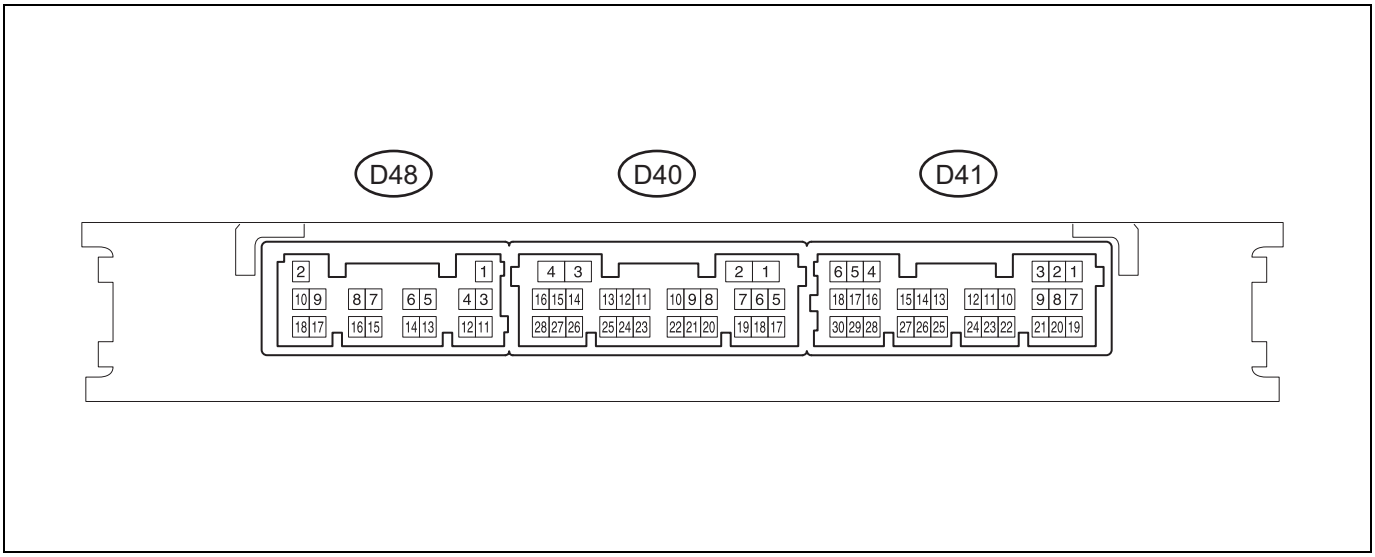
| Symptom | Suspected Area | See page |
|---|---|---|
| Engine does not start | Refer to "Engine does not Start" | TD - 204 |
| Power Source Mode does not Change to ON (IG and ACC) | Refer to "Power Source Mode does not Change to ON (IG and ACC)" | TD - 219 |
| Power Source Mode does not Change to ON (IG) | Refer to "Power Source Mode does not Change to ON (IG)" | TD - 227 |
| Power Source Mode does not Change to ON (ACC) | Refer to "Power Source Mode does not Change to ON (ACC)" | TD - 231 |

## ECM terminal arrangement

NOTE:

- Regarding the collation ECM (smart key ECM ASSY) (entry function related), refer to the following. (Refer to TD - 40)
- Regarding the ID code box (immobilizer code ECM), refer to the following. (Refer to TD - 241)
- Regarding the steering lock actuator ASSY (steering lock ECM), refer to the following. (Refer to SR - 9)

1. Check the collation ECM (smart key ECM ASSY).



(1) Remove the D41 and the D48 connectors of the collation ECM (smart key ECM ASSY).

(2) Measure the voltage and resistance according to the following table.

| Terminal No. (Terminal symbol) | Input/Output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D41-4 (ACCD) - chassis ground | Output | ACC signal | 20°C (68°F) | 81.49 to 118.98 Ω | [ACC relay monitor] |

| Terminal No. (Terminal symbol) | Input/Output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D41-6 (IG1D) - chassis ground | Output | IG1 signal | 20°C (68°F) | 40.74 to 54.49 Ω | [IG1 relay monitor (outside)] |
| D41-25 (P) - D48- 11 (GND)*1 | Input | Shift lever P position signal | The shift lever is in the P position →the shift lever is not in the P position | 40 kΩ or more →200 Ωor less | [Shift P Signal] |
| D41-26 (SLP) - D48-11 (GND) | Input | Steering lock bar position signal | Always | 10 kΩ or more | [Steering unlock SW] |
| D41-27 (SPD) - chassis ground | Input | Vehicle speed signal | Always | 30 kΩ or more | [Vehicle Speed] |
| D41-28 (SSW1) - chassis ground | Input | SSW1 contact signal | The engine switch is being pushed →the engine switch is not being pushed | 1 Ωor less →10 kΩ or more | [Start switch1] |
| D41-30 (SSW2) - chassis ground | Input | SSW2 contact signal (Back-up for SSW1, and works in the same way as SSW1)<br>NOTE:<br>Backup of SSW1. Works in the same way as SSW1. | The engine switch is being pushed →the engine switch is not being pushed | 1 Ωor less →10 kΩ or more | [Start switch2] |
| D48-11 (GND) - Chassis ground | - | Ground | Always | 1 Ωor less | - |
| D48-5 (N-SW) - chassis ground *1 | Input | Neutral switch signal | Shift position P or N →Other than P or N | 1V or less →9 V or more | [Neutral SW/Clutch SW] |
| D48-10 (CLUT) - chassis ground *2 | Input | Clutch switch signal | Except for when the engine in cranking, perform the following operations: remove your foot from the clutch pedal →depress the clutch pedal | 1V or less →9 V or more | [Neutral SW/Clutch SW] |
| D48-9 (IG2D) - chassis ground | Output | IG2 signal | 20°C (68°F) | 74.15 to 460.88 Ω | [IG2 relay monitor (outside)] |
| D48-2 (+B) - chassis ground | Input | +B power supply | Always | 11 to 14 V | - |
| D48-17 (TACH) - chassis ground | Input | Engine speed signal | Always | 10 kΩ or more | [Engine conditions] |
| D48-18 (STP1) - chassis ground *1 | Input | Stop light switch signal | Remove your foot from the brake pedal →depress the brake pedal | 1V or more →9V or less | [Stop Light Switch 1] |

*1: With automatic transmission

*2: Manual transmission

If you cannot get the specified result, there could be a problem in the wiring harnesses.

(3) Reconnect the D41 and the D48 connectors of the collation ECM (smart key ECM ASSY).

(4) Refer to the table below and measure the voltage and check for a pulse.

| Terminal No. (Terminal symbol) | Input/Output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D41-25 (P) - D48-11 (GND) *1 | Input | Shift lever P position signal | The shift lever is in the P position →the shift lever is not in the P position | 1.5V or more →9V or less | [Shift P Signal] |
| D41-4 (ACCD) - D48-11 (GND) | Output | ACC signal | Engine switch off →Engine switch on (ACC) | 1V or less →8.5V or more | [ACC relay monitor] |

TD

| Terminal No. (Terminal symbol) | Input/Output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| D41-6 (IG1D) - D48-11 (GND) | Output | IG1 signal | Engine switch on (ACC) →Engine switch on (IG) | 1V or less →9 V or more | [IG1 relay monitor (outside)] |
| D41-26 (SLP) - D48-11 (GND) | Input | Steering lock bar position signal | Steering wheel lock →Steering wheel unlock *3 | 11 to 14 V →1.2 V or less | [Steering unlock SW] |
| D41-27 (SPD) - D48-11 (GND) | Input | Vehicle speed signal | The engine switch on (IG), the vehicle running at approx. 5 km/h {3 MPH} | Pulse generation (Refer to waveform 1) | [Vehicle Speed] |
| D41-28 (SSW1) - D48-11 (GND) | Input | Engine switch signal | The engine switch is not being pushed →the engine switch is being pushed | 9 V or more →1 V or less | [Start switch1] |
| D41-29 (SLR+) - D48-11 (GND) | Output | Steering lock motor drive command (motor drive permission signal sent from the collation ECM (smart key ECM ASSY)) | Steering lock motor is operated →steering lock motor does not operate →steering lock motor operates *4 | Pulse generation (Refer to waveform 2) | - |
| D41-30 (SSW2) - D48-11 (GND) | Input | SSW2 contact signal NOTE: Backup of SSW1. Works in the same way as SSW1. | The engine switch is not being pushed →the engine switch is being pushed | 9 V or more →1 V or less | [Start switch2] |
| D48-7 (STSW) - D48-11 (GND) | Output | Starter request signal | Depress the brake pedal *1 or the clutch pedal *2 and press the engine switch (starter on)→ After approx. 1 second, the engine switch is released (starter off) | 2V or less →9 V or more | Starter request signal |
| D48-5 (N-SW) - chassis ground *1 | Input | Neutral switch signal | Shift position P or N →Other than P or N | 1V or less →9 V or more | [Neutral SW/Clutch SW] |
| D48-10 (CLUT) - chassis ground *2 | Input | Clutch switch signal | Except for when the engine in cranking, perform the following operations: remove your foot from the clutch pedal →depress the clutch pedal | 1V or less →9 V or more | [Neutral SW/Clutch SW] |
| D40-28 (ACCR) - D48-11 (GND) | Input | ACC Relay Cut Signal | Depress the brake pedal *1 or the clutch pedal *2 and press the engine switch (starter on)→ After approx. 1 second, the engine switch is released (starter off) | 2V or less →9 V or more | ACC Relay Cut Signal |
| D48-17 (TACH) - D48-11 (GND) | Input | Clutch shift position sensor signal | Idle revolutions after the engine is warmed up | Pulse generation (Refer to waveform 3) | [Engine conditions] |
| D48-9 (IG2D) - D48-11 (GND) | Output | IG2 signal | Engine switch on (ACC) →Engine switch on (IG) | 1V or less →9 V or more | [IG2 relay monitor (outside)] |
| D48-18 (STP1) - D48-11 (GND)*1 | Input | Stop light switch signal | Remove your foot from the brake pedal →depress the brake pedal | 1V or less →9 V or more | [Stop Light Switch 1] |

*1: With automatic transmission

*2: With manual transmission

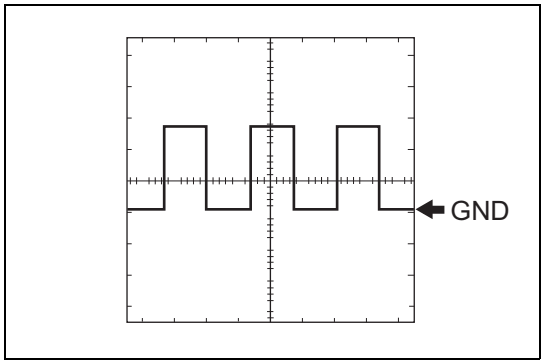
NOTE:

- *3: When the shift lever is in P (with automatic transmission), if a door is opened or closed with the engine switch off, the steering is locked. If the key is in the vehicle interior and the engine switch is on (ACC) or on (IG), the steering is unlocked.
- *4: If the following conditions are met, the steering lock motor operates and door opens.
  - The shift lever is in P (for automatic transmission).
  - Holding the electrical key transmitter SUB-ASSY, turn the engine switch on (IG), and after unlocking the steering, turn the engine switch off.

(5) Using an oscilloscope, check the ECM waveform.

CAUTION:

The oscilloscope waveform shown in the figure is an example for reference. The noise and chattering are not shown in the figure.

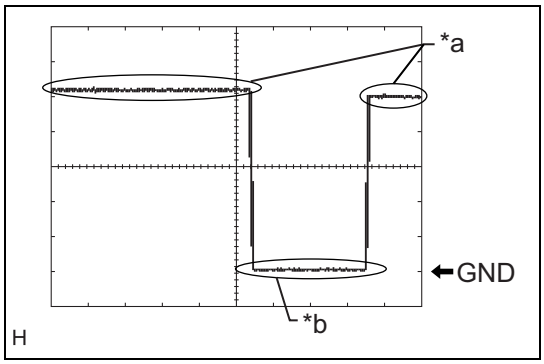


(a)Waveform 1 (reference)

| Item | Contents |
|---|---|
| Tester connection | D41-27 (SPD) - D48-11 (GND) |
| Tool setting | 5 V / DIV., 100 ms. / DIV. |
| Conditions | The engine switch on (IG), the vehicle running at approx. 5 km/h {3 MPH} |

NOTE:

The faster the vehicle speed, the shorter the wavelength becomes.



(b)Waveform 2 (reference)

| Item | Contents |
|---|---|
| Tester connection | D41-29 (SLR+) - D48-11 (GND) |
| Tool setting | 2V/DIV., 200ms./DIV. |
| Conditions | Steering lock motor is operated →steering lock motor does not operate →steering lock motor operates *1 |

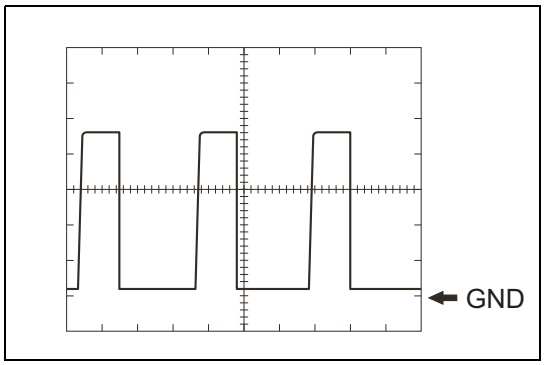
Captions in illustration

| | |
|---|---|
| *a | The steering lock motor does not operate. |
| *b | The steering lock motor is operating. |

NOTE:

*1: If all the following conditions are met, the steering lock motor operates when a door is opened.

- The shift lever is in P. *
  - *: for automatic transmission
- When you turn the engine switch on (IG) holding the electrical key transmitter SUB-ASSY, the handle is unlocked.
- The engine switch is off.



(c)Waveform 3 (reference)

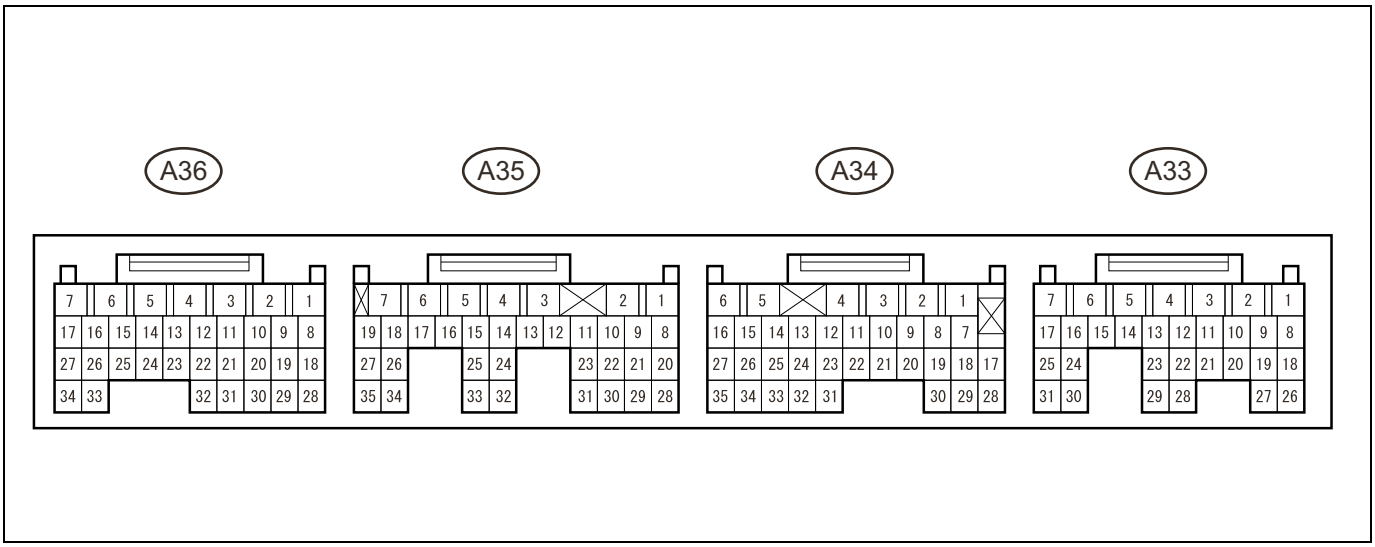
| Item | Contents |
|---|---|
| Tester connection | D48-17 (TACH) - D48-11 (GND) |
| Tool setting | 2 V / DIV., 2 ms. / DIV. |
| Conditions | Idle revolutions after the engine is warmed up |

NOTE:

The faster the engine speed, the shorter the wavelength becomes.

TD

2. CHECK ECM



(1) Refer to the table below and measure the resistance and the voltage and check for a pulse.

TD

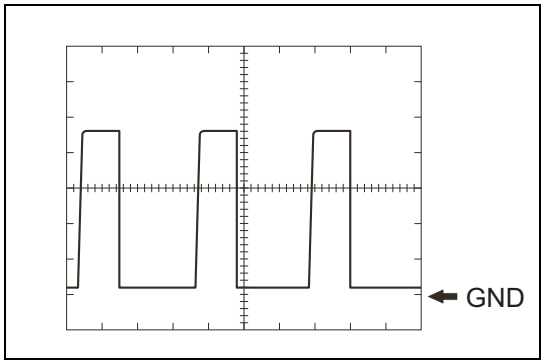
| Terminal No. (Terminal symbol) | Input/Output | Terminal description | Conditions | Specified condition | Related [Data monitor] item |
|---|---|---|---|---|---|
| A36-4 (GNDEG1) - chassis ground | - | Ground | Always | 1 Ωor less | - |
| A33-14 (STSW2) - A36-4 (GNDEG1) | Input | Starter switch signal | Engine switch is ON (IG) | 1 V or less | [Starter control] |
| | | | Cranking | 6 to 13V | |
| A33-16 (NEUT) - A36-4 (GNDEG1) | Input | Neutral switch signal | The engine switch is on (IG), the shift lever is not in P or N. | 10 to 13V | - |
| | | | The engine switch is on (IG), the shift lever is in P or N. | 1 V or less | |
| A33-17 (START) - A36-4 (GNDEG1) | Input | Starter request signal | Engine switch is ON (IG) | 1 V or less | - |
| | | | Cranking | 6V or more | |
| A35-15 (TACHO) - A36-4 (GNDEG1) | Output | Engine speed signal | Idle revolutions after the engine is warmed up | Pulse generation (Refer to waveform 1) | Engine speed |
| A35-26 (STRLY) - A36-4 (GNDEG1) | Output | Starter relay signal | Engine switch is ON (IG) | 11 to 14 V →1V or less | [Starter signal] |
| | | | Cranking | 1 V or less | |
| A35-32 (ACCR) - A36-4 (GNDEG1) | Output | ACC Relay Cut Signal | Engine switch is ON (IG) | 10 to 13V | - |
| | | | Cranking | 1 V or less | |
| A35-34 (STCTRLY) - A36-4 (GNDEG1) | Output | Starter relay cut signal | Engine switch is ON (IG) | 10 to 13V | [Starter cut relay] |
| | | | Cranking | 1 V or less | |

If you cannot get the specified result, there could be a problem in the ECM.

(2) Inspect using an oscilloscope.

CAUTION:

The waveform shown in the figure is an example for reference. The noise and chattering are not shown in the figure.



(a)Waveform 3 (reference)

| Item | Contents |
|---|---|
| Tester connection | A35-15 (TACHO) - A36-4 (GNDEG1) |
| Tool setting | 2 V / DIV., 2 ms. / DIV. |
| Conditions | Idle revolutions after the engine is warmed up |

NOTE:
The faster the engine speed, the shorter the wavelength becomes.

## DIAGNOSIS SYSTEM

1. Description of functions
   (1) Entry and start system (for start function) data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the SSM4 to check for malfunctions and perform repairs.
2. Check DLC3
   (1) Check DLC3.
3. INSPECT BATTERY VOLTAGE
   (1) If the voltage is below 11V, recharge or replace the battery before proceeding.

Standard voltage: 11 to 14V

## DTC CHECK / CLEAR

CAUTION:
If the SSM4 is connected to the vehicle with the engine switch off, the information stored in entry and start system related ECMs (the certification ECM and main body ECM) cannot be read. However, entry and start system DTCs and [Data monitor] information can be confirmed even if the engine switch is off using the method below:

1. CHECK DTC (POWER SOURCE CONTROL)
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch on (IG).
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Keyless Access(Power Supply ECM)] →[DTC]
   (5) Check for DTCs.
   NOTE:
   Refer to the SSM4 operator's manual for further details.
2. CHECK DTC (ENTRY AND START)
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch on (IG).
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Keyless Access(Collation ECM)] →[DTC]
   (5) Check for DTCs.
   NOTE:
   Refer to the SSM4 operator's manual for further details.
3. CHECK DTC (ENGINE AND ECT)
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch on (IG).
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Engine Control System] →[DTC]
   (5) Check for DTCs.
   NOTE:
   Refer to the SSM4 operator's manual for further details.
4. CLEAR DTC (POWER SOURCE CONTROL)
   (1) Connect the SSM4 to the DLC3.

(2) Turn the engine switch on (IG).
(3) Turn the SSM4 on.
(4) Enter the following menus: [Keyless Access(Power Supply ECM)] →[DTC] →[Clear Memory]
(5) Clear the DTCs by following the directions on the SSM4 display.
NOTE:
Refer to the SSM4 operator's manual for further details.

5. CLEAR DTC (ENTRY AND START)
(1) Connect the SSM4 to the DLC3.
(2) Turn the engine switch on (IG).
(3) Turn the SSM4 on.
(4) Enter the following menus: [Keyless Access(Collation ECM)] →[DTC] →[Clear Memory]
(5) Clear the DTCs by following the directions on the SSM4 display.
NOTE:
Refer to the SSM4 operator's manual for further details.

6. CLEAR DTC (ENGINE AND ECT)
(1) Connect the SSM4 to the DLC3.
(2) Turn the engine switch on (IG).
(3) Turn the SSM4 on.
(4) Enter the following menus: [Engine Control System] →[DTC] →[Clear Memory]
(5) Clear the DTCs by following the directions on the SSM4 display.
NOTE:
Refer to the SSM4 operator's manual for further details.

## Data monitor / active test

1. Data monitor
NOTE:
By using the SSM4 and reading [Data monitor], you can read the statuses and values for switches, sensors, actuators, and other items without removing parts. Because the non-intrusive inspection allows you to read the intermittent statuses or signals without interfering with parts or lines, it is very convenient. Diagnostic time can be saved by reading the [Data monitor] information at the initial stage of the troubleshooting.
CAUTION:
The normal values written in the chart below are for reference. Do not depend on reference value only when judging if the part is faulty.
(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menus: [Keyless Access(Collation ECM)] →[Data monitor], or [Body Control] →[Data monitor], or [Brake Control System] →[ABS/VDC System] →[Data monitor], or [Engine Control System] →[Data monitor]

SSM screen: [Each System] →[Keyless Access(Power Supply ECM)] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Shift P signal] *1 | Shift position is P<br>Display range: ON/OFF | ON: The shift is in the P position<br>OFF: The shift is not in the P position | Use this item to find out if the shift switch (P) is faulty. |
| [Steering unlock SW] | This item indicates the steering unlock sensor signal output from the steering lock actuator.<br>Display range: ON/OFF | ON: Steering unlock<br>OFF: Steering lock | • In IG OFF and with the shift in the P position (transmission A/T), open (or close) one of the doors to lock the steering.<br>• Change the power status to ACC ON or IG ON with the electrical key transmitter SUB-ASSY (electronic key) in the vehicle to unlock the steering.<br>• The engine cannot be started when the steering unlock signal is OFF. |

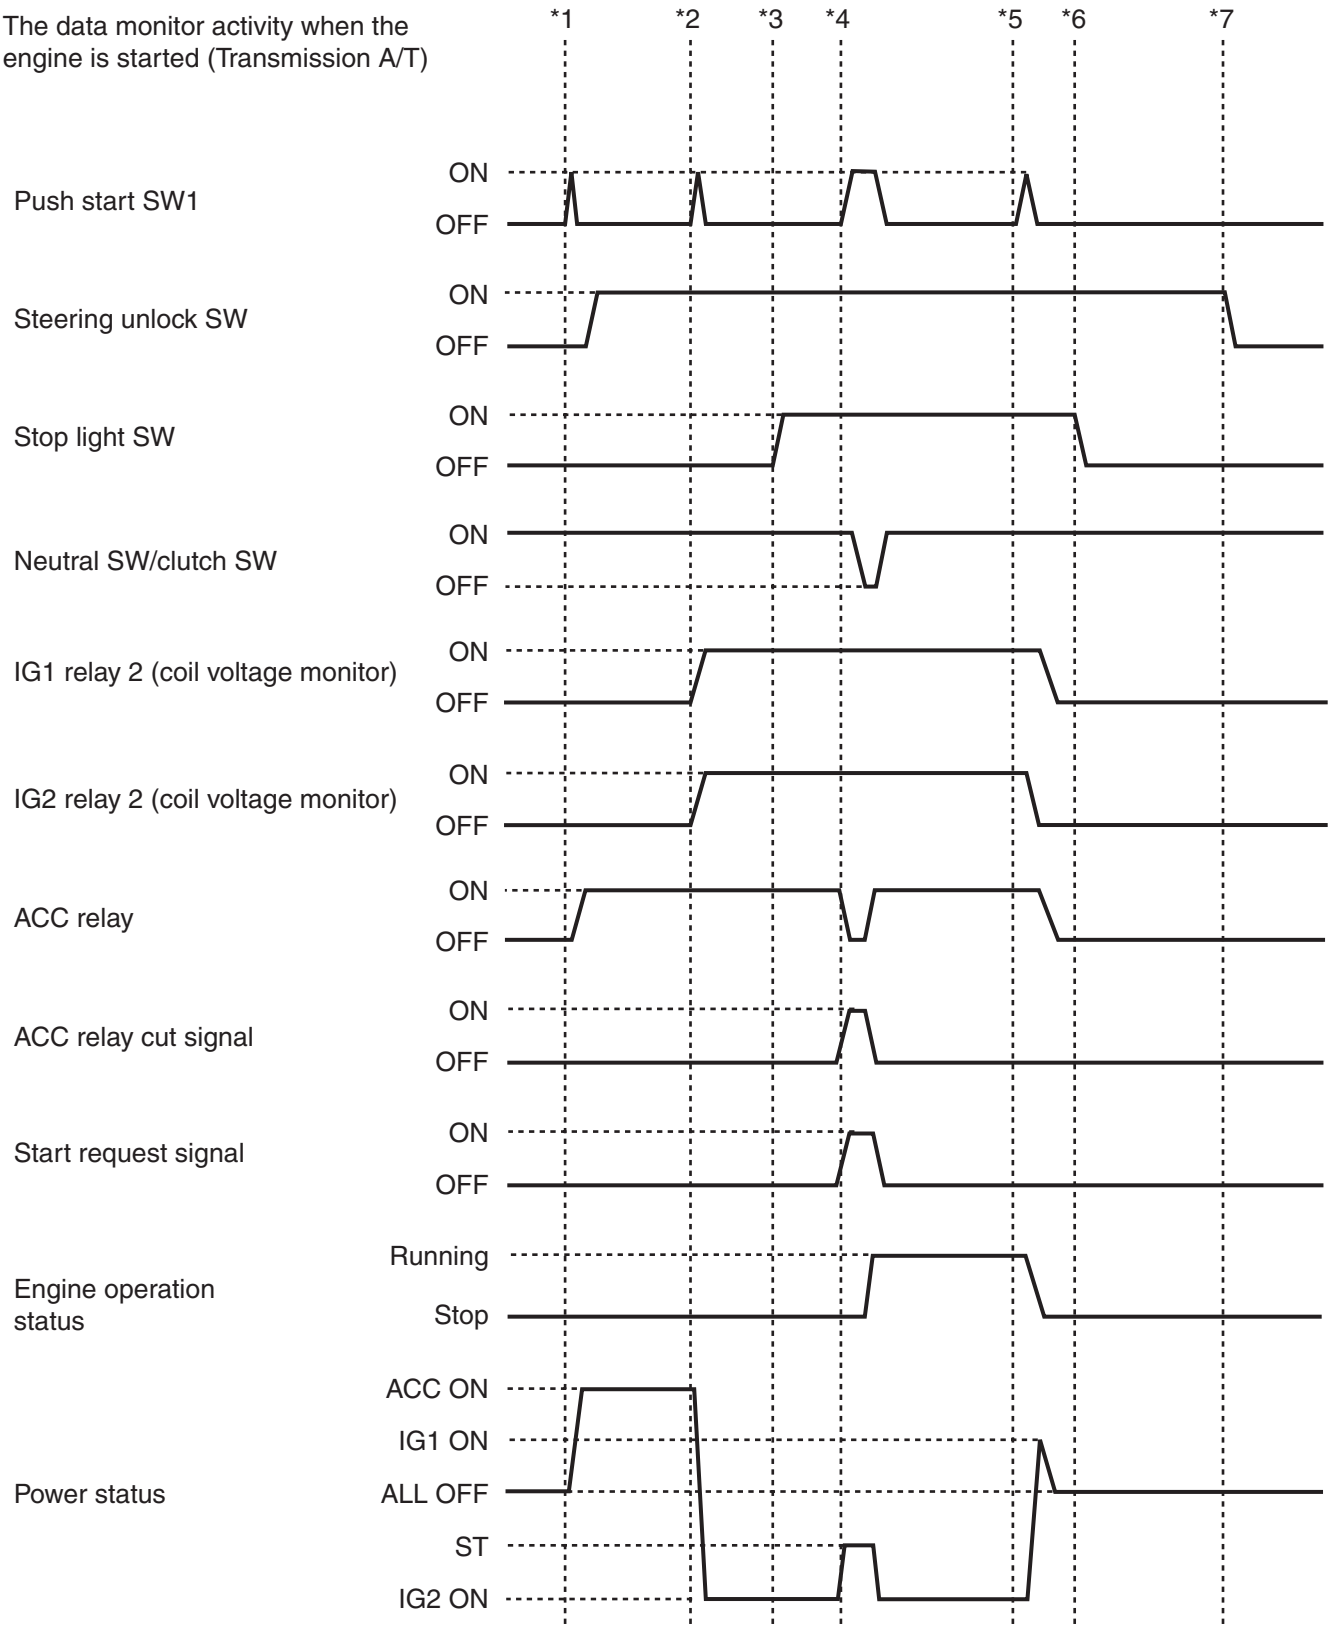
| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Stop Light Switch 1] | Brake pedal status<br>Display range: ON/OFF | ON: Brake pedal is depressed.<br>OFF: Brake pedal is released. | • Use this item to find out if the stop light switch is faulty.<br>• If the engine cannot be started due to a malfunction in the stop light switch signal, "OFF" is displayed.<br>• In case of a malfunction, you can start the engine by holding down the push button start switch. |
| [System SW1] | Push button start switch 1 status<br>Display range: ON/OFF | ON: Push button start switch is pressed<br>OFF: Push button start switch is released. | • This item may not be displayed if the push button start switch is pressed too quickly.<br>• Use this item to find out if the push button start switch input signal is faulty. |
| [System SW2] | Push button start switch 2 status<br>Display range: ON/OFF | ON: Push button start switch is pressed<br>OFF: Push button start switch is released. | • Back-up for push button start switch 1. However, when operating by holding down the push button start switch, if both push button start switch 1 and push button start switch 2 are not functioning properly, the control will not operate.<br>• This switch operates in the same way as push button start switch 1. |
| [Neutral SW/Clutch SW (AT model)] | Shift position (P, N) status<br>Display range: ON/OFF | ON: The shift is in the P or N position<br>OFF: The shift is not in the P or N position | • Use this item to find out if the neutral start switch is faulty.<br>• If the engine cannot be started due to a malfunction in the neutral start switch, "OFF" is displayed. |
| [Neutral SW/Clutch SW (MT model)] | Clutch pedal status<br>Display range: ON/OFF | ON: Clutch pedal is depressed.<br>OFF: Clutch pedal is released. | • Use this item to find out if the clutch start switch is faulty.<br>• If the engine cannot be started due to a malfunction in the clutch start switch, "OFF" is displayed. |
| [IG1 relay monitor (outside)] | Coil voltage monitor status for the IG1 relay<br>Display range: ON/OFF | ON: IG ON<br>OFF: IG OFF | • Use this item to find out if the IG1 relay is faulty.<br>• When in ACC ON, "OFF" is displayed. |
| [IG1 relay monitor (inside)] | Drive output monitor status for the IG1 relay<br>Display range: ON/OFF | ON: IG ON<br>OFF: IG OFF | • Use this item to find out if the IG1 relay is faulty.<br>• When in ACC ON, "OFF" is displayed. |
| [IG2 relay monitor (outside)] | Coil voltage monitor status for the IG2 relay<br>Display range: ON/OFF | ON: IG ON<br>OFF: IG OFF | • Use this item to find out if the IG2 relay is faulty.<br>• When in ACC ON, "OFF" is displayed. |
| [IG2 relay monitor (inside)] | Drive output monitor status for the IG2 relay<br>Display range: ON/OFF | ON: IG ON<br>OFF: IG OFF | • Use this item to find out if the IG2 relay is faulty.<br>• When in ACC ON, "OFF" is displayed. |
| [Starter request signal monitor] | Engine start request signal status<br>Display range: ON/OFF | ON: With the shift in the P position, depressing the brake, press and hold the push button start switch (transmission A/T)<br>ON: Depressing the clutch pedal, press and hold the push button start switch (transmission M/T)<br>OFF: After approx. 1 second, release the push button start switch | • If the engine cannot be started due to a malfunction in the start request signal, "OFF" is displayed.<br>• If you press the push button start switch for a short time, the time "ON" is displayed will be very short. Therefore, you must press and hold it for a while. |
| [ACC relay monitor] | ACC relay drive status<br>Display range: ON/OFF | ON: ACC ON<br>OFF: ACC OFF | • When in IG ON, "ON" is displayed.<br>• When the engine is cranking, "OFF" is displayed. |
| [ACC Relay Cut Signal] | ACC relay cut signal input status<br>Display range: ON/OFF | ON: When cranking<br>OFF: Not cranking | - |

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Engine Speed] | Engine status<br>Display range: [Stopped] / [rotating] | [Rotating]: While engine is running<br>[Stopped]: The engine is stopped | - |
| [Vehicle speed signal] | Vehicle running/stopped status<br>Display range: [Stopped status] / [Drive status] | [Drive status]: The vehicle is running (at 5 km/h or faster)<br>[Stopped status]: The vehicle is stopped | - |
| [Power supply status] | Power status<br>Display range: [All OFF status]/ [ACC relay ON status] / [IG1 relay ON status] / [IG2 relay ON status] / [ST status] | [All OFF]: ACC OFF and IG OFF<br>ACC ON: ACC ON<br>IG1 ON: IG ON<br>IG2 ON: IG ON<br>ST: Start request signal transmitting | Because "IG1 ON" and "IG2 ON" are displayed almost simultaneously, you may not be able to see the "IG1 ON" indication. (Because "IG1 ON" is displayed for a short time.) |
| [Powertrain Type] | Vehicle identification status<br>Display range: [Cnv-MT] / [Cnv-AT] | [Cnv-AT]: A conventional A/T vehicle (A/T vehicle not equipped with HV)<br>[Cnv-MT]: A conventional M/T vehicle | - |
| [IG1 outside circuit abnormal] | Malfunction in the coil-side circuit for the IG1 relay<br>Display range: Yes/No | Yes: Circuit not functioning properly<br>No: Circuit functioning properly | • Use this item to find out if the IG1 relay is faulty.<br>• If the engine cannot be started due to a malfunction in the IG1 relay, "OFF" is displayed. |
| [IG2 outside circuit abnormal] | Malfunction in the coil-side circuit for the IG2 relay<br>Display range: Yes/No | [Yes]: Circuit not functioning properly<br>[No]: Circuit functioning properly | • Use this item to find out if the IG2 relay is faulty.<br>• If the engine cannot be started due to a malfunction in the IG2 relay, "OFF" is displayed. |
| [Start-stop SW fault] | This item detects a mismatch between the push button start switch 1 signal and the push button start switch 2 signal.<br>Display range: Yes/No | [Yes]: Switches not functioning properly (mismatch between the signals of push button start switches 1 and 2)<br>[No]: Switches functioning properly | You can start the engine even when the result is [Yes]. However, you cannot use the "emergency IG OFF when running" or "emergency engine start when the brake is faulty" functions that are operated by pressing and holding the push button start switch. |
| [Park Signal Mismatch] | Shift position (P) signal malfunction<br>Display range: Yes/No | [Yes]: Signals not functioning properly (mismatch between the CAN communication and direct signal statuses)<br>[No]: Signals functioning properly | You can switch to OFF even when the result is [Yes]. (vehicle will not be left ACC ON or IG ON.) |
| [Steering lock unlock wait time-out] | Malfunction in the steering lock / unlock function<br>Display range: Yes/No | [Yes]: Lock/unlock not functioning properly (Example: the lock bar gets stuck)<br>[No]: Lock/Unlock functioning properly | If the engine cannot be started due to a malfunction in the steering lock/ unlock, "[Yes]" is displayed. |
| [Key collation wait time-out] | Key collation malfunction<br>Display range: Yes/No | [Yes]: Collation not functioning properly (A collation malfunction is detected when the ID code sent from the electronic key and the ID code recorded in the Collation ECM do not match.)<br>[No]: Collation functioning properly | If the engine cannot be started due to a key collation malfunction, [Yes] is displayed. |
| [Shift N signal*1] | Shift in position N<br>Display range: ON/OFF | ON: The shift is in the N position<br>OFF: The shift is not in the N position | Use this item to find out if the shift switch (N) is faulty. |

*1: Transmission A/T

2. Use the SSM4 and [Data monitor] to determine functionality and narrow down the defective part.
   NOTE:
   Enter the vehicle while carrying the electrical key transmitter SUB-ASSY (Electronic key), set the ignition to IG OFF and put the shifter in the P position, and perform the following operations to check each [Data monitor] activity.

The data monitor activity when the engine is started (Transmission A/T)



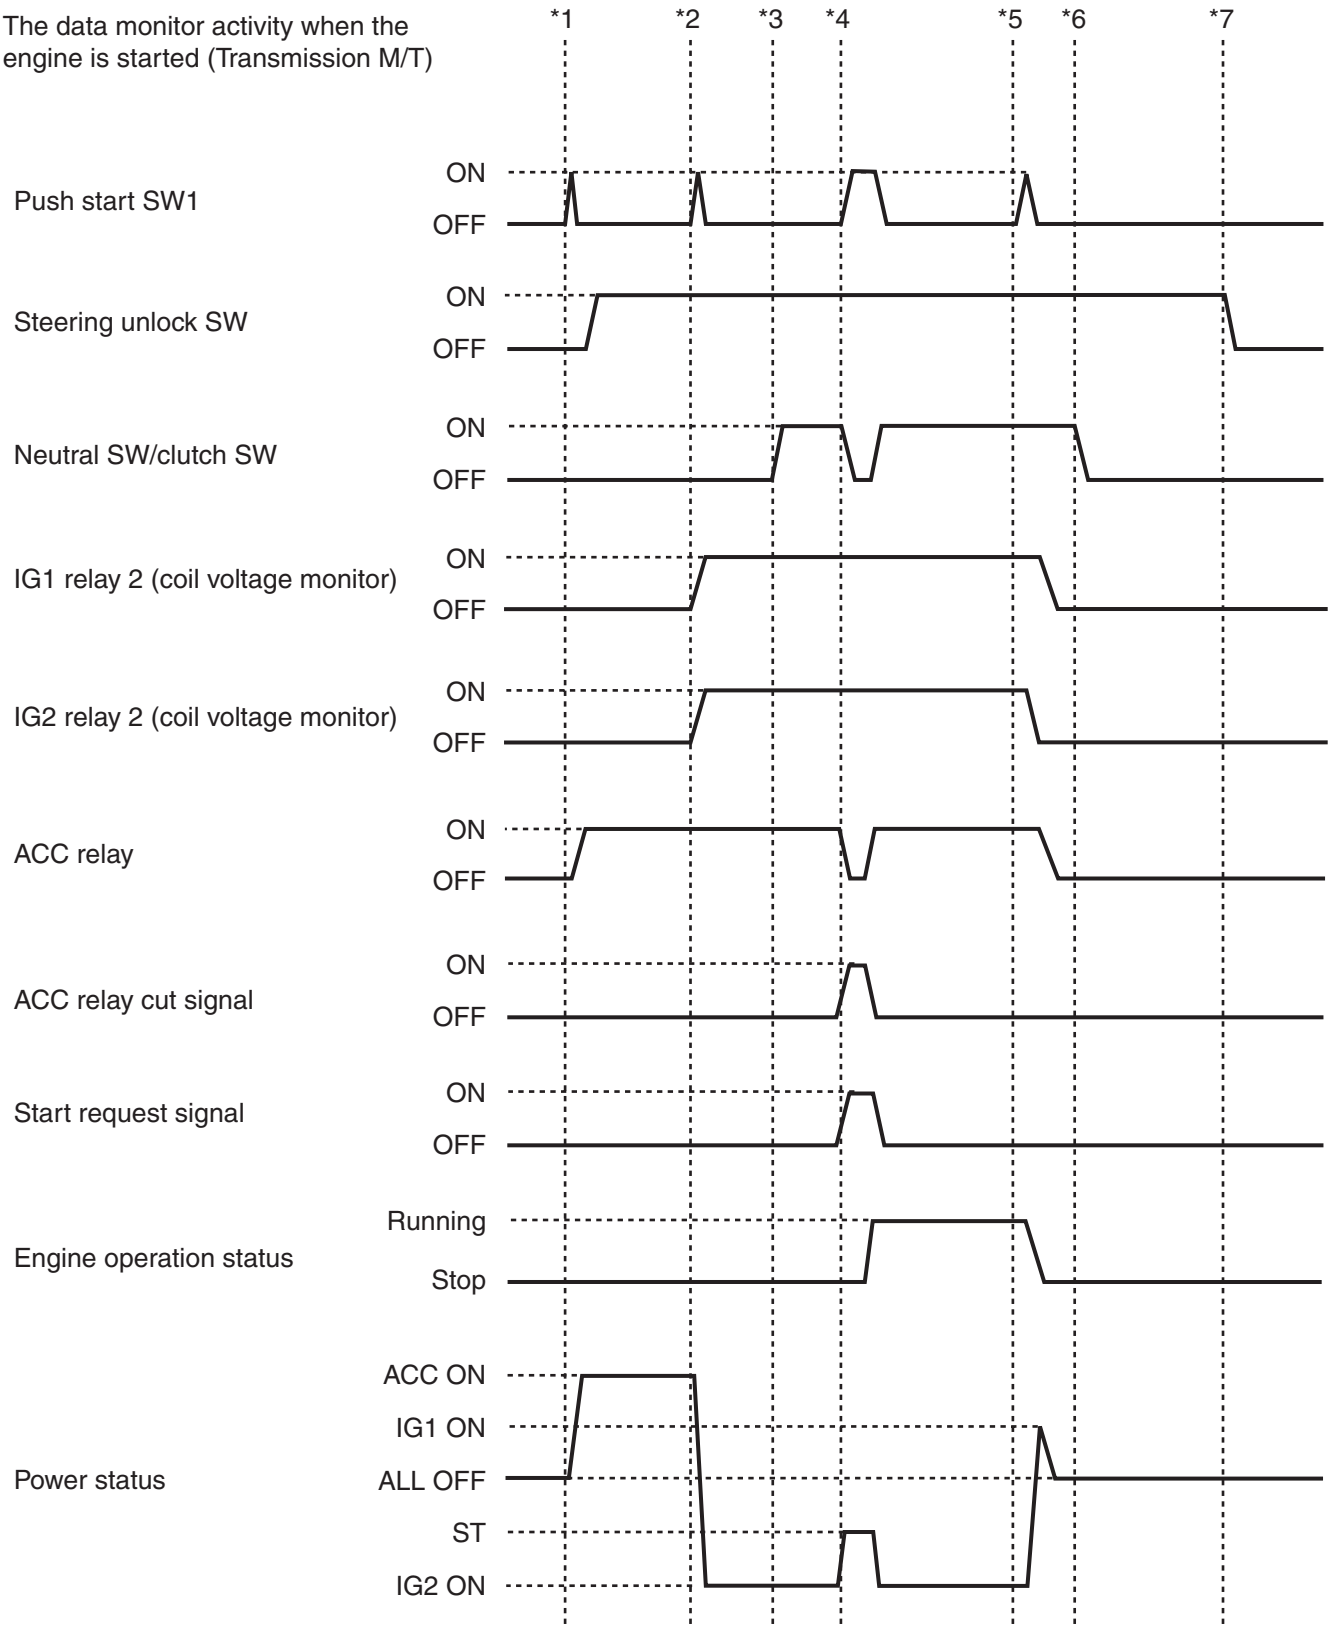
*1: Press the push button start switch without depressing the brake pedal, and check that the power status changes to ACC ON.

*2: Press the push button start switch without depressing the brake pedal, and check that the power status changes to IG ON.

*3: Depress the brake pedal. (Stop light switch ON)

*4: Press the push button start switch while depressing the brake pedal, and check that the engine starts.
*5: Press the push button start switch while depressing the brake pedal, and check that the power status changes to IG OFF.
*6: Release the brake pedal.
*7: Open a door.
NOTE:
Enter the vehicle while carrying the electrical key transmitter SUB-ASSY (Electronic key), set the ignition to IG OFF and perform the following operations to check each [Data monitor] activity.

The data monitor activity when the engine is started (Transmission M/T)



*1: Press the push button start switch without depressing the clutch pedal, and check that the power status changes to ACC ON.

*2: Press the push button start switch without depressing the clutch pedal, and check that the power status changes to IG ON.

*3: Depress the clutch pedal. (Clutch start switch ON)

*4: Press the push button start switch while depressing the clutch pedal, and check that the engine starts.
*5: Press the push button start switch while depressing the clutch pedal, and check that the power status changes to IG OFF.
*6: Release the clutch pedal.
*7: Open a door.

SSM screen: [Each System] →[Keyless Access(Collation ECM)] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Ignition] | This item indicates the IG power input status of the smart key ECM ASSY (collation ECM).<br>Display range: ON/OFF | ON: IG ON<br>OFF: IG OFF | When it is in the ACC ON state, "OFF" is displayed. |
| [Immobilizer] | This item indicates the engine immobilizer system status, as determined by the smart key ECM ASSY (collation ECM).<br>Display range: Unset / Set | Unset: The engine immobilizer is unset (engine start permitted) (ACC ON or further)<br>Set: The engine immobilizer is set (engine start prohibited) (IG OFF) | When [Set] is displayed for this item, you cannot start the engine.<br>NOTE:<br>• The security indicator light blinks when [Set] is displayed for this item.<br>• The security indicator light is associated with the set/unset status of the immobilizer, but not with the lock/unlock status of the steering wheel. |
| [Sleep possible status] | This item indicates the sleep enabled status of the steering lock ECM.<br>Display range: [Sleep-mode possible] / [Sleep-mode not possible] | Sleep permitted: Sleep possible status<br>No: Sleep not permitted | - |
| [Wake-up transmission status] | This item indicates the transmission status of the wake-up signal for the steering lock ECM.<br>Display range: Yes/No | Yes: Wake-up signal transmission<br>No: No wake-up signal transmission | - |
| [Lock confirmation] | This item indicates the lock confirmation status of the steering lock actuator ASSY (steering lock ECM).<br>Display range: Set/Unset | Set: Lock confirmed<br>Unset: Lock not confirmed | The steering is not locked when ”Unset” is displayed. |
| [Unlock confirmation] | This item indicates the unlock confirmation status of the steering lock actuator ASSY (steering lock ECM).<br>Display range: Set/Unset | [Set]: Unlock confirmed<br>[UnSet]: Unlock not confirmed | The steering is not unlocked when "Unset" is displayed. (The engine cannot be started.) |
| [Engine start] | This item indicates the status of the engine start permission signal, which is decided by the steering actuator ASSY (steering lock ECM) and sent to the smart key computer (collation ECM).<br>Display range: OK/NG | OK: Engine start permitted<br>NG: Engine start prohibited | • If "OK" is displayed for this item, the smart key ECM ASSY (collation ECM) receives the unlock confirmation signal from the steering lock actuator ASSY (steering lock ECM) and enables fuel injection and the engine to start.<br>• When [NG] is displayed for this item, you cannot start the engine. |
| [Sensor abnormal (past)] | This item indicates a history of malfunctions in the position sensor inside the steering lock actuator ASSY (steering lock ECM).<br>Display range: [NG(Past)] / [OK] | Abnormal: There is an error history. (Both the lock and unlock sensors inside the steering lock actuator ASSY (steering lock ECM) were ON at the same time. Normally, these sensors are not ON at the same time.)<br>OK: There is no error history for the lock and unlock sensors inside the steering lock actuator ASSY (steering lock ECM). | If [NG(Past)] is displayed for this item, the problem might be caused by a malfunction of the position sensor inside the steering lock actuator ASSY or a mechanical failure. |
| [Motor power supply short-circuit abnormal (past)] | This item indicates a history of malfunctions (circuit shorts) in the signal transmitted from the smart key ECM ASSY (collation ECM) to the steering lock actuator ASSY (steering lock ECM).<br>Display range: [NG(Past)] / [OK] | [NG(Past)]: Motor power supply short circuit history present<br>[OK]: No motor power supply short circuit history | This item displays the history when a circuit malfunction occurs between the smart key ECM ASSY (collation ECM) and the steering lock actuator ASSY (steering lock ECM). |

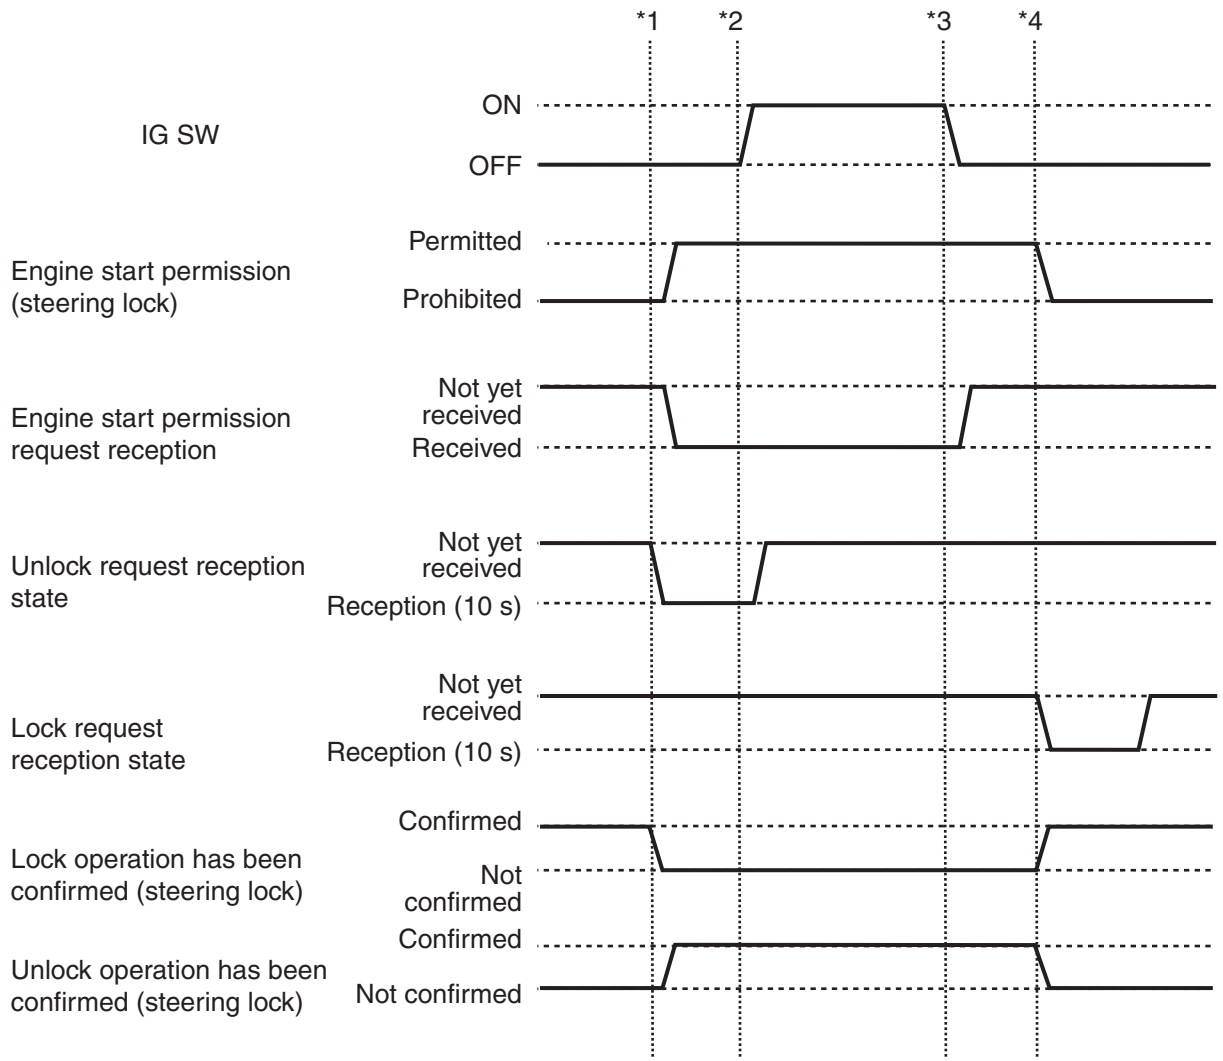
| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Motor driver short-circuit abnormal (past)] | This item indicates a history of malfunctions (circuit shorts) in the motor drive circuit inside the steering lock actuator ASSY (steering lock ECM). (The diagnostic code B2781 is output) Display range: [NG(Past)] / [OK] | [NG(Past)]: Motor driver short circuit history present [OK]: No motor driver short circuit history present | This item indicates the malfunctions in the steering lock motor drive circuit inside the steering lock actuator ASSY (steering lock ECM). |
| [Steering lock lock/unlock command reception history] | This item indicates the unlock request signal reception history. Display range: [Unrec] / [Rec] | [Rec]: Unlock request signal reception history present [Unrec]: No unlock request signal reception history | - |
| [Lock Bar Stuck Error] | This item indicates a history of times when the steering lock bar was driven to the unlock position for a certain period of time but the steering wheel could not be properly unlocked. Display range: Yes/No | Yes: There is a history of lock bar engagement. No: No history of the lock bar being stuck | - |
| [Push start abnormal] | This item indicates a history of push start malfunctions caused by the steering lock actuator ASSY (steering lock ECM). Display range: [NG(Past)] / [OK] | [NG(Past)]: Push button start malfunction history present [OK]: No push button start malfunction history | - |
| [EEPROM access abnormal] | This item indicates the steering lock ECM status. Display range: [NG(Past)] / [OK] | [Abnormal]: Steering lock ECM malfunction [Normal]: Steering lock ECM normal | - |
| [Engine start permission request reception status] | This item indicates the reception status of the engine start permission signal, which is decided by the steering lock actuator ASSY (steering lock ECM) and sent to the smart key ECM ASSY (collation ECM). Display range: NG/OK | NG: When it is not yet received OK: When it has already been received | • If [OK] is displayed, the smart key ECM ASSY (collation ECM) has received the unlock confirmation signal from the steering lock actuator ASSY (steering lock ECM) and the engine injection and ignition have been permitted. • If [NG] is displayed for this item, the engine cannot be started. |
| [L Code Check] | This item indicates the result of collation between the smart key ECM ASSY (collation ECM) and the steering lock actuator ASSY (steering lock ECM). Display range: [NG(Past)] / [OK] | [Abnormal]: Collation results abnormal [Normal]: Collation results normal | • The L code is not registered for the smart key ECM ASSY (collation ECM) or the steering lock actuator ASSY (steering lock ECM). • The steering cannot be locked. • The steering cannot be unlocked. (The engine cannot be started.) |
| [Steering lock unlock request reception status] | This item indicates the unlock request signal reception status. Display range: NG/OK (10 s) | [NG(Past)]: IG ON, ACC ON or engine start operation not performed OK: Within 10 seconds after IG ON, ACC ON or engine start operation | • If the unlock request signal is not received, the engine cannot be started. • If the steering unlock conditions are met but [OK(10s)] is not displayed, the smart key ECM ASSY (collation ECM) might have a malfunction. |
| [Steering lock lock request reception status] | This item indicates the lock request signal reception status. Display range: OK (10s)/NG | OK: When a lock request is received within 10 seconds after any one of the doors is opened while the shifter is in the P position (Transmission A/T) and the vehicle ignition is turned to IG OFF. [NG(Past)]: Other than above | If the steering lock conditions are met but [OK(10s)] is not displayed, the smart key ECM ASSY (collation ECM) might have a malfunction. |
| [L Code Check(Past)] | This item indicates the history of the results of collation between the smart key ECM ASSY (collation ECM) and the steering lock actuator ASSY (steering lock ECM). Display range: [NG(Past)] / [OK] | [NG(Past)]: There is an error history of collation results [OK]: There is no error history of collation results | - |
| [S Code Check] | This item indicates the collation result between the smart key ECM ASSY and the ID code box. Display range: [NG(Past)] / [OK] | [Abnormal]: Collation not functioning properly [Normal]: Collation functioning properly | • The S code is not registered for the smart key ECM ASSY or the ID code box. • The engine cannot be started. |

TD

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [S Code Check(Past)] | This item indicates the collation result history between the smart key ECM ASSY and the ID code box. Display range: [NG(Past)] / [OK] | [NG(Past)]: There is an error history of collation results<br>[OK]: There is no error history of collation results | - |

NOTE:
Enter the vehicle while carrying the electrical key transmitter SUB-ASSY (Electronic key), set the ignition to IG OFF and put the shifter in the P position (Transmission A/T), and perform the following operations to check each [Data monitor] activity.

The data monitor activity when the steering is locked/unlocked



*1: Press the push button start switch without depressing the brake pedal (transmission A/T) or the clutch pedal (transmission M/T). Check that the power status switches to ACC ON.

*2: Press the push start switch without depressing the brake pedal (transmission A/T) or the clutch pedal (transmission M/T). Check that the power status switches to IG ON.

*3: Press the push button start switch and check that the power status switches to IG OFF.

*4: Open a door. (The steering wheel is now locked).

SSM screen: [Each System] →[Engine Control System] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Engine Speed] | Indicates the engine speed<br>Display range: 0 to 16383.75 r/min | Varies depending on the engine speed | - |
| [Starter Switch] | Starter drive request<br>Display range: ON/OFF | ON: The starter drive request is output.<br>OFF: The starter drive request is not output. | If there is a malfunction, the engine cannot be cranked. |
| [Starter cut relay] | This item indicates the starter cut relay status.<br>Display range: ON/OFF | ON: The starter cut relay is ON<br>OFF: The starter cut relay is OFF | "ON" is displayed when the engine cannot be cranked. |
| [Shift SW Status (P Range)] *1 | This item indicates the neutral start switch status.<br>Display range: ON/OFF | ON: The shift is in the P position<br>OFF: The shift is not in the P position | If there is a malfunction, the engine cannot be cranked. |
| [Shift SW Status (N Range)] *1 | This item indicates the neutral start switch status.<br>Display range: ON/OFF | ON: The shift is in the N position<br>OFF: The shift is not in the N position | If there is a malfunction, the engine cannot be cranked. |

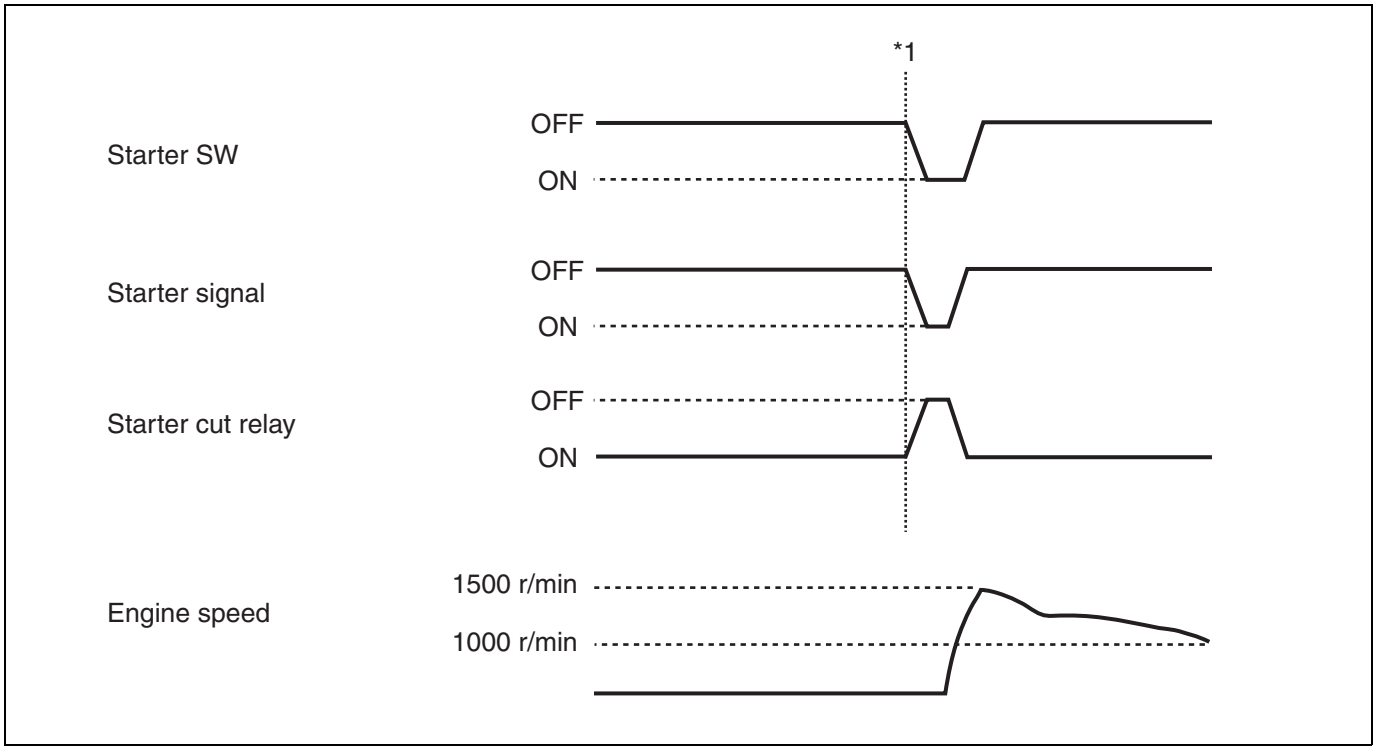
| [Ignition Switch] | This item indicates the IG2 status.<br>Display range: ON/OFF | ON: IG2 relay is ON<br>OFF: IG2 relay is OFF | - |

TD

*1: Automatic transmission

NOTE:

Perform the following operations to check the result for each [Data monitor] item.



*1:

Transmission A/T: With the power status in IG ON and the shift in position P, depress the brake pedal and press the push button start switch. Check that the engine starts.

Transmission M/T: With the power status in IG ON, depress the clutch pedal and press the push button start switch. Check that the engine starts.

SSM screen: [Each System] →[Brake Control System] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Wheel speed] | This item indicates the vehicle speed.<br>Display range: 0.0 to 326.4 [km/h] | 0.0 to 326.4 [km/h]<br>(Approximately the same as the actual vehicle speed) | - |

3. Active test
   (1) Turn the ignition switch to OFF.
   (2) Connect the SSM4 to the DLC3.
   (3) Turn the ignition switch to ON and select [Each System] →[Keyless Access(Power Supply ECM)] →[Active Test] to display the [Active Test] list.
   (4) Conduct an [Active Test] and determine functionality and narrow down the defective part.

SSM screen: [Each System] →[Keyless Access(Collation ECM)] →[Active Test]

| Item name | Part to be forcibly driven | Drive | Remarks |
|---|---|---|---|
| [Steering lock power supply] | Smart key computer ASSY (collation ECM) | Supply/stop | When in IG ON |
| [STSW] | Smart key computer ASSY (collation ECM) | Supply/stop | Perform cranking in order to turn the starter switch ON. Be very careful regarding the service operation. When forcibly driving this item, implement it with the ignition ON. |
| [IG2] | Smart key computer ASSY (collation ECM) | Supply/stop | Turn the ignition power (relay upstream battery side) ON. If you forcibly drive this item, there may be failure codes registered for the engine, transmission, and the VDC unit. In that case, you must clear the failure codes. |
| [IG1] | Smart key computer ASSY (collation ECM) | Supply/stop | Turn the ignition power (relay upstream alternator side) ON. If you forcibly drive this item, there may be failure codes registered for the engine, transmission, and the VDC unit. In that case, you must clear the failure codes. |
| [ACC] | Smart key computer ASSY (collation ECM) | Supply/stop | Turn the ACC power ON. |

SSM screen: [Each System] →[Keyless Access(Collation ECM)] →[Active Test]

| Item name | Part to be forcibly driven | Drive | Remarks |
|---|---|---|---|
| [Power/Engine SW Light] | Push button start switch illumination | Output/stop | Push button start switch illumination OFF (15 seconds or more since ON→OFF) and in ACC ON, IG ON, or the engine is turning. |

## DIAGNOSTIC TROUBLE CODE CHART

| DTC Code | Detection Item | DTC Output Confirmation Operation | See page |
|---|---|---|---|
| B2271 | [IGN fuse blown-out or IGN circuit failure] | Turn the engine switch on (IG). | TD - 174 |
| B2274 | [ACC circuit abnormal] | Wait 10 seconds after turning the engine switch on (ACC) or on (IG), and then wait another 10 seconds after turning the engine switch off. | TD - 177 |
| B2275 | [STSW circuit abnormal] | Start the engine. | TD - 181 |
| B2276 | [ACCR signal abnormal] | Start the engine. | TD - 183 |
| B2277 | [Submerging circuit abnormal] | Submerging circuit monitor result = ON | TD - 185 |
| B2282 | [Vehicle speed signal abnormal] | Drive the vehicle for 20 seconds at a vehicle speed of 25 km/h (16MPH) or more, and then drive the vehicle at a vehicle speed of less than 5 km/h {3MPH} for 20 seconds. | TD - 186 |

| DTC Code | Detection Item | DTC Output Confirmation Operation | See page |
|---|---|---|---|
| B2283 | [Vehicle speed sensor abnormal detection] | In IG ON, any of the following conditions is established.<br>• Direct connection vehicle speed pulse showing 50 km/h or more continues for 10 seconds, then the CAN and direct connection speed pulses both turn to 0 km/h within 1 second.<br>• In an AT vehicle, CAN and the direct connection show 0 km/h, the engine speed (according to the direct connection) is 2000 r/min or more, the shift lever is not in P or N, and ACCR is not in LOW level for 300 seconds.<br>• In an MT vehicle, CAN and the direct connection show 0 km/h, the engine speed (according to the direct connection) is 2000 r/min or more, the N position for the shift lever is OFF, the clutch switch is OFF, and ACCR is in the LOW level for 300 seconds. | TD - 186 |
| B2284 | [Brake Signal (Cable-Information does not match to BEAN-Information)] | Connect the cable to the negative (-) battery terminal, release the brake pedal and wait 20 seconds or more. Then depress the brake pedal for 20 seconds or more. | TD - 191 |
| B2285 | [Steering lock position signal abnormal] | Disconnect the cable from the negative (-) battery terminal, wait 30 seconds and then reconnect the cable to the negative (-) battery terminal. Wait 40 seconds or more with the engine switch off (with the steering wheel locked), then turn the engine switch on (ACC) (with the steering wheel unlocked) and wait 40 seconds or more. | TD - 194 |
| B2286 | [Run able Signal (Cable-Information does not match to BEAN-Information)] | Disconnect the cable from the negative (-) battery terminal, wait 30 seconds and reconnect the cable to the negative (-) battery terminal.<br>Wait 20 seconds or more with the engine switch off, then start the engine and maintain an engine speed of 1000 r/min or more for 20 seconds or more after starting the engine. | TD - 198 |

| DTC | B2271 | IGN fuse blown or IGN circuit fault |
|---|---|---|

Circuit description

This DTC is output when a problem is detected in the IG1 drive circuit, the IG2 drive circuit, or the IG hold circuit in the collation ECM (smart key ECM ASSY).

NOTE:

If you remove and then reconnect the battery cable, the power returns to the mode it was before you removed the cable.

| DTC No. | DTC detection status | Faulty part | DTC Output Confirmation Operation |
|---|---|---|---|
| B2271 | Meet any of the conditions (1-trip detection logic*1):<br>• There is a problem in the IG1 or IG2 drive of the collation ECM (smart key ECM ASSY).<br>• There is a problem in the 1G hold circuit of the collation ECM (smart key ECM ASSY). | • AM2 No. 2 fuse<br>• Collation ECM (smart key ECM ASSY)<br>• Wiring harness or connector | Turn the ignition switch to ON.<br>NOTE:<br>To turn the engine switch to on (IG), hold the key, move the shift lever into P or N *2, remove your foot from the brake pedal *2 or the clutch *3, and press the engine switch 2 times. |

TD

*1: The code is output only when the problem is found and the engine switch is on (IG).

*2: With automatic transmission

*3: With manual transmission

NOTE:

- The IG1 and IG2 drive circuits drive the IG1 and IG2 relays.
- Even if the collation ECM (smart key ECM ASSY) performs an inaccurate operation, if the IG1 drive circuit and the IG2 drive circuit are on, the IG hold circuit will hold the engine switch in an on (IG) status.

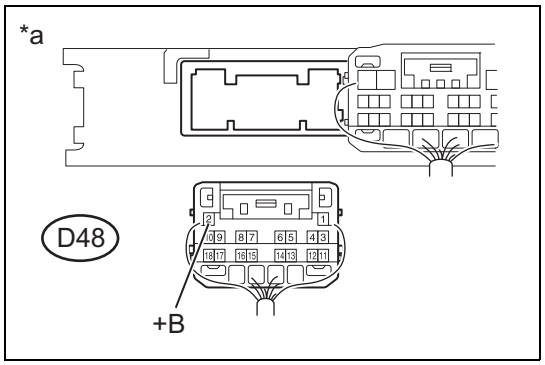
Inspection steps

CAUTION:

- The entry & start system has functions that use the CAN communication. Before performing troubleshooting, perform the inspection in "How to troubleshoot", and check that there are no communication problems. (Refer to TD - 146)
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- After repair, perform the [DTC output confirmation operation], and check that the DTC is not output again.
- Before performing the following inspection steps, check the fuses related to this system.

| 1 | Checking the harnesses and connectors (power supply) |
|---|---|



(1) Remove the D48 connector of the collation ECM (smart key ECM ASSY).
(2) Measure the voltage according to the following table.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D48-2 (+B) - chassis ground | Always | 9.5 to 16V |

Captions in illustration

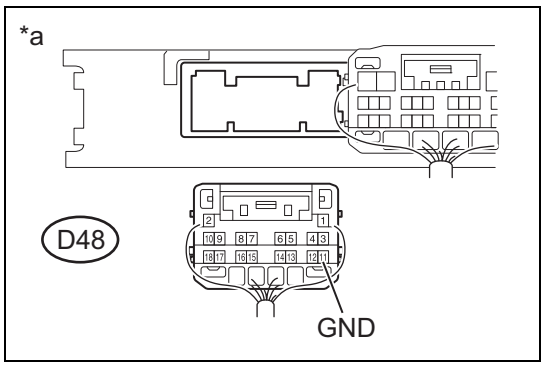
| | |
|---|---|
| *a | Rear side of the wiring harness connector (See "collation ECM (smart key ECM ASSY)") |

NG → Repair or replacement of the harnesses or connectors of the circuits that connect to the power source

TD

OK

| 2 | Checking the harnesses and connectors (grounding) |
|---|---|



(1) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D48-11 (GND) - Chassis ground | Always | 1 Ωor less |

Captions in illustration

| | |
|---|---|
| *a | Rear side of the wiring harness connector (See "collation ECM (smart key ECM ASSY)") |

NG → Repair or replacement of the harnesses or connectors

OK

| 3 | Unit inspection of the collation ECM (smart key ECM ASSY) |
|---|---|

(1) Reconnect the D48 connector of the collation ECM (smart key ECM ASSY).

*a

- After repair, perform the [DTC output confirmation operation], and check that the DTC is not output again.
- Before performing the following inspection steps, check the fuses related to this system.

| 1 | Reading the values using the SSM4 (vehicle speed) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menus: [Brake Control System] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

ABS/VSC/TRC

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Wheel speed] | Vehicle speed / hour: 0 km/h {0 MPH}, maximum speed: 255 km/h {158MPH} | Almost the same speed as the actual vehicle speed (speedometer tester) | - |

Criteria: [Data monitor] is almost the same as the actual vehicle speed.

NG → VSC system (How to troubleshoot) (Refer to ME - 19)

OK

| 2 | Reading the values using the SSM4 (vehicle speed signal) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.

(3) Turn on the SSM4.
(4) Input the following menus: [Keyless Access(Power Supply ECM)] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Power source control

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Vehicle speed signal] | Vehicle in running or stopped status / [stopped] or [rotating] | [Rotating] Vehicle is running at a speed of 5 km/h {3 MPH} or faster.<br>Stop: The vehicle is stopped. | - |

Criteria: Based on the vehicle speed, [Stop] (the vehicle is stopped) or [Driving] (the vehicle is running) is displayed on the screen.

NG → Go to Step 3.

OK

Proceed to the "vehicle stability control system" ("How to troubleshoot")

TD

| | |
|---|---|
| 3 | Checking the harnesses and connectors (power supply) (Refer to TD - 176) |

NG → Repair or replacement of the harnesses or connectors of the circuits that connect to the power source

OK

| | |
|---|---|
| 4 | Checking the harnesses and connectors (grounding) (Refer to TD - 176) |

NG → Repair or replacement of the harnesses or connectors

OK

| | |
|---|---|
| 5 | Checking the harnesses and connectors (collation ECM - combination meter ASSY) |

(1) Remove the D41 connector of the collation ECM (smart key ECM ASSY).
(2) Disconnect the connector A5 of the brake actuator ASSY (skid control ECM).
(3) Measure the resistance according to the following table.

Resistance

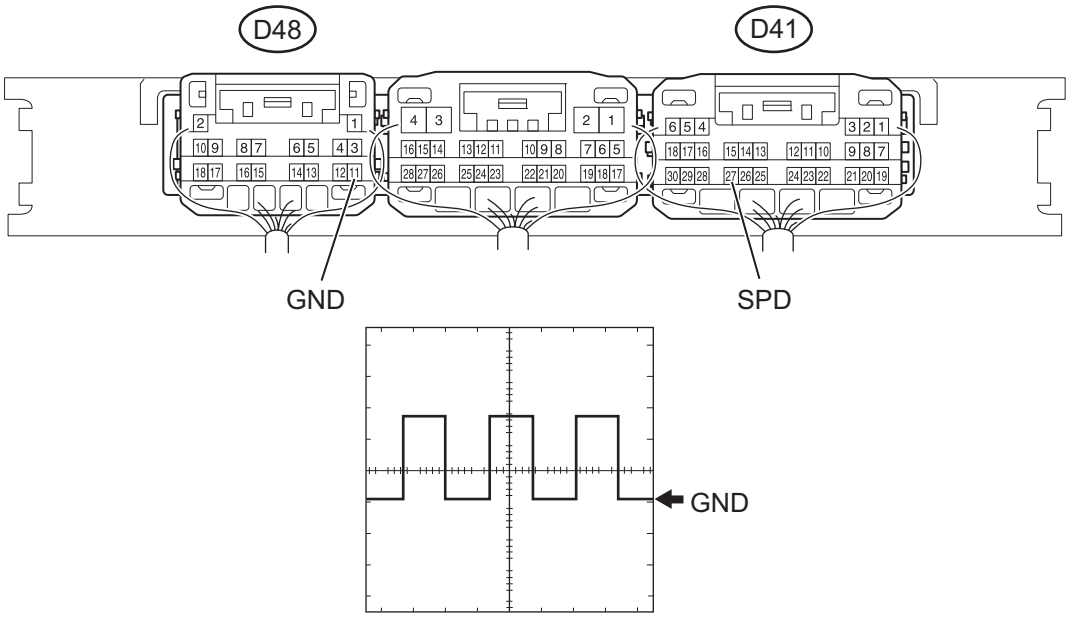
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D41-27 (SPD) - A5-2 (SPD) | Always | 1 Ωor less |
| D41-27 (SPD) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of the harnesses or connectors

OK

| 6 | Unit inspection of the collation ECM (smart key ECM ASSY) |
|---|---|

*a



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector connected<br>(Collation ECM (smart key ECM ASSY)) | - | - |

(1) Reconnect the connector A5 of the brake actuator ASSY (skid control ECM).
(2) Reconnect the D41 connector of the collation ECM (smart key ECM ASSY).
(3) Using an oscilloscope, check the waveform of the vehicle speed input signal sent from the combination meter of the collation ECM (smart key ECM ASSY) terminal.
    (a) Refer to the table below and check the signal waveform.

| Item | Contents |
|---|---|
| Tester connection | D41-27 (SPD) - D48-11 (GND) |
| Tool setting | 5 V / DIV., 100 ms. / DIV. |
| Conditions | The engine switch on (IG), the vehicle running at approx. 5 km/h {3 MPH} |

Criteria: The waveform resembles the waveform shown in the figure.

NOTE:
If the system is functioning properly, 4 pulses are generated for each wheel revolution. The faster the vehicle speed, the shorter the width shown in the figure (A) becomes.

NG → Proceed to the "vehicle stability control system" ("How to troubleshoot")

OK

Replacement of the collation ECM (smart key ECM ASSY)

| DTC | B2284 | Brake Signal (Cable-Information does not match to BEAN-Information) |
|---|---|---|

Circuit description

The collation ECM (smart key ECM ASSY) receives brake signal information from 2 sources. It receives signals from the stop light ASSY via the direct line, and receives signals from the ECM via CAN communication. If the information sent from these 2 sources are different, this DTC is output.

NOTE:

If you remove and then reconnect the battery cable, the power returns to the mode it was before you removed the cable.

| DTC No. | DTC detection status | Faulty part | DTC Output Confirmation Operation |
|---|---|---|---|
| B2284 | The brake signal information via the direct line and the brake signal information sent from the ECM via CAN communication do not match (1-trip detection logic*). | • AM2 No. 2 fuse<br>• Stop fuse<br>• Collation ECM (smart key ECM ASSY)<br>• EFI system<br>• Wiring harness or connector | Connect the cable to the battery ground terminal (-), and after 20 seconds or more since turning the brake off, turn it on again and wait 20 seconds or more. |

*: The code is output only when the problem is found and the engine switch is on (IG).

Vehicle status and failsafe function when a problem is detected

| Vehicle status when a problem is detected | Failsafe function when a problem is detected |
|---|---|
| If the electrical key transmitter SUB-ASSY is in the vehicle interior, even if you perform engine start operations, the engine will not start (the entry key indicator on the combination meter ASSY will not light up green). However, if you press engine switch for a certain period of time after the power mode is turned on (ACC), you can start the engine.<br>• If a problem is found in the direct line [ON], even if the brake is off, you can press the engine switch and start the engine.<br>• If a problem is found in the direct line [OFF], even if the brake is on, you cannot press the engine switch and start the engine. | - |

Inspection steps

CAUTION:

- The entry & start system has functions that use the CAN communication. Before performing troubleshooting, perform the inspection in "How to troubleshoot", and check that there are no communication problems. (Refer to TD - 146)
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- After repair, perform the [DTC output confirmation operation], and check that the DTC is not output again.
- Before performing the following inspection steps, check the fuses related to this system.

| 1 | Reading the values using the SSM4 (stop light switch ASSY) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Keyless Access(Power Supply ECM)] →[Data monitor]
(5) Based on the contents of the SSM4 display, read the [Data monitor].

Power source control

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Stop Light Switch 1] | Brake pedal status / [OFF] or [ON] | OFF: The brake pedal is not being depressed.<br>ON: The brake pedal is being depressed. | • Using this item, determine if there is any problem with the stop light switch.<br>• When this item is [OFF], the engine will not start.<br>• If there is a problem caused by this item, if you press the engine switch for a certain amount of time, you can start the engine. |

Criteria: "ON" (depressing the brake pedal) and "OFF" (your foot removed from the brake pedal) are displayed on the screen.

Replacement of the collation ECM (smart key ECM ASSY)

| DTC | B2285 | Steering lock position signal abnormal |
|---|---|---|

Circuit description

This DTC is output when the steering lock position signal sent from the lock actuator ASSY (steering lock ECM) via the direct line and the steering lock position signal sent via the LIN communication do not match.

NOTE:

If you remove and then reconnect the battery cable, the power returns to the mode it was before you removed the cable.

| DTC No. | DTC detection status | Faulty part | DTC Output Confirmation Operation |
|---|---|---|---|
| B2285 | The steering lock position signal sent by the steering lock ECM via the direct line and the steering lock position signal sent via the LIN communication (1-trip detection logic*) do not match. | • AM2 No. 2 fuse<br>• Steering lock actuator ASSY (steering lock ECM)<br>• Collation ECM (smart key ECM ASSY)<br>• Wiring harness or connector | Remove the cable from the battery ground terminal (-), and after waiting 30 seconds, reconnect the cable to the battery ground terminal (-). Turn off the engine, wait 40 seconds (the steering is locked), turn the engine switch on (ACC) (the steering is unlocked), and wait 40 seconds or more. |

*: The code is output only when the problem is found and the engine switch is on (IG).

Inspection steps

CAUTION:

- After repair, perform the [DTC output confirmation operation], and check that the DTC is not output again.

| 1 | DTC check |
|---|---|

(1) Record the output DTC. (Refer to TD - 161)

Next

Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30)

## The engine does not start

Circuit description

With the electrical key transmitter SUB-ASSY in the vehicle interior, press the engine switch. The collation ECM (smart key ECM ASSY) receives the signal and the power mode changes. With the shift lever in P *1 or N *1, if you depress the brake pedal *1 or the clutch pedal *2 and press the engine switch, you can start the engine.

*1: With automatic transmission

*2: With manual transmission

NOTE:

- Only if the steering lock is unlocked, even if the shift lever is in the N position, you can start the engine. *
- In IG ON, if the shift lever is in a position other than P, if you press the engine switch, the power changes to ACC ON. After that, if you move the shift lever to P and press the engine switch while depressing the brake pedal, the power changes to IG OFF. *
- If you remove and then reconnect the battery cable, the power returns to the mode it was before you removed the cable.

*: for automatic transmission

Refer to the circuit figure. (Refer to TD - 139)

Inspection steps

CAUTION:

- Before performing troubleshooting that uses CAN communication of the entry & start system, perform the inspection in "How to troubleshoot", and check that there are no problems in the communication system. (Refer to TD - 146)
- Before replacing the collation ECM (smart key ECM ASSY), the steering lock actuator ASSY (steering lock ECM), or the ID code box (immobilizer code ECM), refer to "entry & start system (entry function)". (Refer to TD - 5)
- If the entry & start system has been disabled by the entry & start system customize settings, enable it before performing troubleshooting. (Refer to TD - 155)
- When replacing the steering lock actuator ASSY (steering lock ECM), before starting the engine, turn the steering wheel left and right, and check that the steering has been unlocked. If for some reason the steering is locked, turn the ignition switch to OFF, open and close a door, press the engine switch and unlock the steering wheel. By doing so, you can prevent starting the engine with the steering still locked.
- After finishing repair, check that the problem doesn't occur again.
- Before performing the following inspection steps, check the fuses related to this system.

NOTE:

With the engine stopped, if you repeatedly depress the brake pedal, the brake booster pressure is released. This increases the force on the brake pedal necessary to make the stop light turn on.*

*: for automatic transmission

| | |
|---|---|
| 1 | Checking the battery |

(1) Measure the battery voltage.

Voltage: 11 to 14V

NOTE:

- You can check if the vehicle battery is discharged by operating the horn.
- If the battery voltage is 11 V or less, it is necessary to charge or replace the battery.

OK

| 2 | Checking the DTC (all) |
|---|---|

(1) Using the SSM4, check the DTC output for all systems.
Criteria: No DTC is output

NG → Proceed to "List of diagnostic codes". (Refer to TD - 172)

OK

| 3 | Checking the waveform environment |
|---|---|

(1) If a problem occurs only in certain places or at certain times, it is likely the effect of radio wave interference.
NOTE:
You can check if the problem is due to radio wave interference or not by holding the electrical key transmitter ASSY up to the door control receiver (RF band).

Next

| 4 | Checking the engine switch status |
|---|---|

(1) Enter the vehicle interior holding the electrical key transmitter SUB-ASSY.
(2) Move the shift lever in the P position.*
*: for automatic transmission
(3) Depressing the brake pedal *1 or the clutch pedal *2, press the engine switch, and check that the power mode changes.
*1: With automatic transmission
*2: With manual transmission

Result

| 7 | Checking the combination meter ASSY (entry key indicator light) |
|---|---|

(1) While carrying the electrical key transmitter SUB-ASSY, enter the vehicle interior, move the shift lever in P *1, and while depressing the brake pedal *1 or the clutch pedal *2, check if the entry key indicator light of the combination meter ASSY changes.
*1: With automatic transmission
*2: With manual transmission
Criteria: The entry key indicator light lights up green.
NOTE:
When performing the above procedure, if the entry key indicator of the combination meter ASSY lights up green, P, N, the brake pedal *1, and the clutch pedal *2 are operating properly.
*1: With automatic transmission
*2: With manual transmission

## The power does not turn on (does not change to both ACC ON or IG ON)

Circuit description

If any of the following operations are performed, the collation ECM (smart key ECM ASSY) receives a signal and changes the power mode.

- When the electrical key transmitter SUB-ASSY is in the vehicle interior, press the engine switch.
- When the transmitter battery of the electrical key transmitter SUB-ASSY is drained, depress the brake pedal *1 or the clutch pedal *2, and hold the electrical transmitter SUB-ASSY up to the engine switch.
- If the entry cancel function has been customized, while depressing the brake pedal *1 or the clutch pedal *2, hold the electrical key transmitter SUB-ASSY up to the engine switch.

*1: With automatic transmission

*2: Manual transmission

NOTE:

If you remove and then reconnect the battery cable, the power returns to the power mode it was before you removed the cable.

Inspection steps

CAUTION:

- Before performing troubleshooting that uses CAN communication of the entry & start system, perform the inspection in "How to troubleshoot", and check that there are no problems in the communication system. (Refer to TD - 146)
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- Check that no DTC is output. If any DTC is output, proceed to "List of diagnostic codes". (Refer to TD - 172)
- If the entry & start system has been disabled by the entry & start system customize settings, enable it before performing troubleshooting. (Refer to TD - 155)
- After finishing repair, check that the problem doesn't occur again.
- Before performing the following inspection steps, check the fuses related to this system.

| 1 | Checking the wireless door lock control system (operation) |
|---|---|

(1) Check that the wireless door lock function operates properly. (Refer to DL - 28)

Criteria: The wireless door and lock function operates properly.

NG → See "Entry & Start system" (The entry lock / unlock function and wireless function for all doors do not function) (Refer to TD - 84)

OK

| 2 | Checking the harnesses and connectors (power supply) (Refer to TD - 176) |
|---|---|

NG → Repair or replacement of the harnesses or connectors of the circuits that connect to the power source

OK

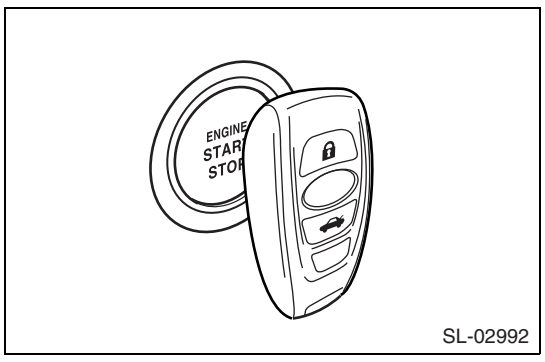
| 3 | Checking the harnesses and connectors (GND) (Refer to TD - 176) |
|---|---|

NG → Repair or replacement of the harnesses or connectors

OK

| 4 | Checking the entry & start system |
|---|---|

(1) Remove the battery from the electrical key transmitter SUB-ASSY. (Refer to DL - 92)



SL-02992

(2) Depress the brake pedal *1 or the clutch pedal *2, and touch the logo side of the electrical key transmitter SUB-ASSY to the engine switch.
*1: With automatic transmission
*2: With manual transmission

(3) When you touch the logo side of the electrical key transmitter SUB-ASSY to the engine switch, check if the power mode changes.

Criteria: The power mode changes.

NOTE:

If the power mode does not change, there is a problem in the cabin confirmation function.

OK

**15** Checking the harnesses and connectors (collation ECM (smart key ECM ASSY) - engine switch)

(1) Remove the D41 connector of the collation ECM (smart key ECM ASSY).
(2) Remove the D25 connector of the engine switch.
(3) Measure the resistance according to the following table.

Resistance

| Tester display | Inspection conditions | Standard value |
|---|---|---|
| D41-28 (SSW1) - D25-5 (SS1) | Always | 1 Ωor less |
| D41-30 (SSW2) - D25-1 (SS2) | Always | 1 Ωor less |
| D41-28 (SSW1) - chassis ground | Always | 10 kΩ or more |
| D41-30 (SSW2) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of the harnesses or connectors

OK

Replacement of the collation ECM (smart key computer ASSY)

## The power does not turn ON (power status changes to ACC ON but not to IG ON)

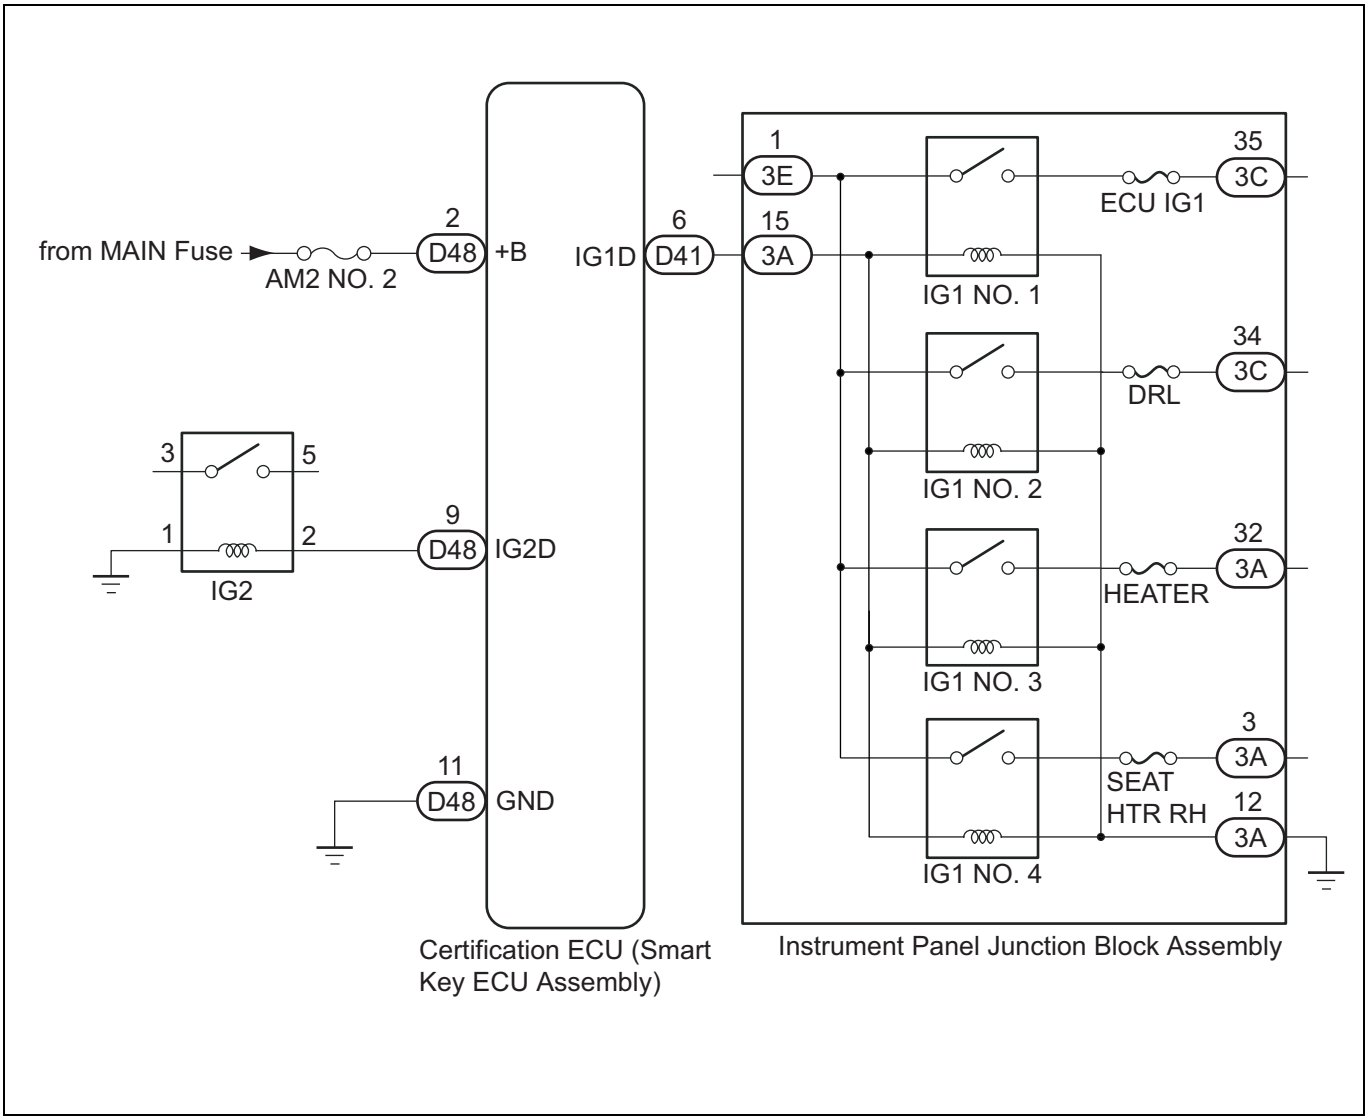
Circuit description

With the electrical key transmitter SUB-ASSY in the vehicle interior, press the engine switch. The collation ECM (smart key ECM ASSY) receives the signal and the power mode changes.

NOTE:

If you remove and then reconnect the battery cable, the power returns to the mode it was before you removed the cable.

Circuit figure



TD

Inspection steps

CAUTION:

- The entry & start system uses the CAN communication. Before performing troubleshooting, perform the inspection in "How to troubleshoot", and check that there are no communication problems. (Refer to TD - 146)
- Before replacing the collation ECM (smart key ECM ASSY), refer to "entry & start system (entry function)". (Refer to TD - 5)
- Check that no DTC is output. If any DTC is output, proceed to "List of diagnostic codes". (Refer to TD - 172)
- If the entry & start system has been disabled by the entry & start system customize settings, enable it before performing troubleshooting. (Refer to TD - 155)
- Before performing the following inspection steps, check the fuses related to this system.
- After finishing repair, check that the problem doesn't occur again.

| | |
|---|---|
| 1 | Checking the harnesses and connectors (collation ECM (smart key ECM ASSY) - IG2 relay) |

(1) Remove the D48 connector of the collation ECM (smart key ECM ASSY).
(2) Remove the IG2 relay from the engine compartment relay block.
(3) Measure the resistance according to the following table.

Resistance

| Tester display | Inspection conditions | Standard value |
|---|---|---|
| D48-9 (IG2D) - IG2 relay terminal 2 | Always | 1 Ωor less |
| IG2 relay terminal 1 - chassis ground | Always | 1 Ωor less |

NG → Repair or replacement of the harnesses or connectors

OK

| 2 | Unit inspection of the IG2 relay |
|---|---|

(1) Inspect the IG2 relay unit.

NG → Replacement of the IG2 relay

OK

| 3 | Checking the harnesses and connectors (collation ECM - instrument panel junction block ASSY) |
|---|---|

(1) Remove the D41 connector of the collation ECM (smart key ECM ASSY).
(2) Remove the 3A connector of the instrument panel junction block ASSY.
(3) Measure the resistance according to the following table.

Resistance

| Tester display | Inspection conditions | Standard value |
|---|---|---|
| D41-6 (IG1D) - 3A-15 | Always | 1 Ωor less |
| 3A-12 - chassis ground | Always | 1 Ωor less |

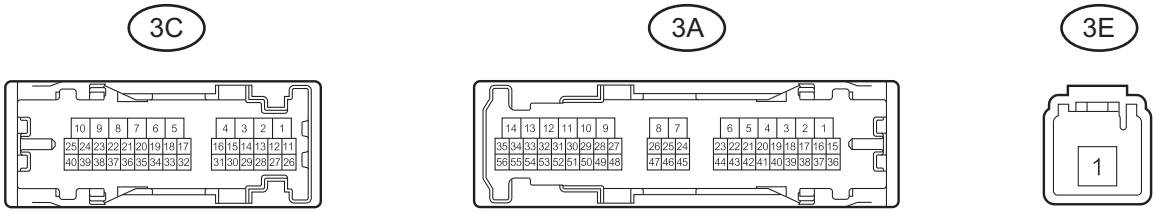
NG → Repair or replacement of the harnesses or connectors

OK

| 4 | Unit inspection of the instrument panel junction block ASSY (IG1 NO. 1, IG1 NO. 2, IG1 NO. 3, IG1 NO. 4 relay) |
|---|---|

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.
(3) Measure the resistance according to the following table.

*a



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|

# Engine immobilizer system (with entry & start system)

## Precautions

1. Notes for registration
   (1) When replacing any of the following parts, refer to the "Registration manual for immobilizer".
   CAUTION:
   - When replacing the collation ECM (smart key ECM ASSY), it is also necessary to prepare all the registered electrical key transmitter SUB-ASSYs.
   - It is not possible to use a registered electrical key transmitter SUB-ASSY or ECM in a different vehicle.

   (a) Collation ECM (smart key ECM ASSY)
   (b) ID code box (immobilizer code ECM)*
   (c) Steering lock actuator ASSY (steering lock ECM)
   (d) ECM
   (e) Electrical key transmitter SUB-ASSY

*: The ID code box is included.

2. Precautions for battery
   (1) Immediately after the battery cable disconnection and re-connection, the entry unlock function may not operate. In this case, the entry unlock function returns by performing the wireless door lock and unlock.
   (2) After battery cable disconnection and re-connection, the engine may not start immediately when trying to start. In this case, turn of the engine switch. On 2nd try, the engine can start normally.
   (3) The vehicle records the power supply mode continuously. If you remove and then reconnect the battery cable, the power returns to the mode it was before you removed the cable. Always turn off the engine switch, before disconnecting the battery cable.
   CAUTION:
   With the battery run-out condition, if you do not know the power supply mode before cable disconnection, be very careful when re-connecting the battery cable.

Functions of the main parts

| Parts | Function |
|---|---|
| Collation ECM (smart key ECM ASSY) | • This identifies and confirms the ID code from the door control receiver and sends the signal to the steering lock actuator ASSY (steering lock ECM) according to the operation function.<br>• This performs the code communication of ID code box (immobilizer code ECM) and steering lock actuator ASSY (steering lock ECM) during engine starting. * 1<br>• This performs the code communication with the steering lock actuator ASSY (steering lock ECM) during engine starting. * 2 |
| Engine switch | • This sends the engine switch operation signal to the collation ECM (smart key ECM ASSY).<br>• This sends the ID code to the collation ECM (smart key ECM ASSY) after receiving ID code from the key, when the transmitter battery is run-out, using the built-in transporter key amplifier (smart key ECM ASSY). |
| ID code box (immobilizer code ECM)*1 | This sends the immobilizer set/not set command to the ECM after receiving it from the collation ECM (smart key ECM ASSY) via LIN communication. |
| ECM | This starts the engine after receiving the immobilizer not set command from the ID box (immobilizer code ECM)*1 or the collation ECM (smart key ECM ASSY)*2 or after receiving the engine start request signal from the collation ECM (smart key ECM ASSY). |
| Steering lock actuator ASSY (steering lock ECM) | This unlocks the steering lock after receiving the steering lock/unlock signal from the collation ECM (smart key ECM ASSY) or ID code box (immobilizer code ECM). * 1<br>This unlocks the steering lock after receiving the steering lock/unlock signal from the collation ECM (smart key ECM ASSY). * 2 |

*1: With ID code box
*2: Without ID code box

## Description of functions

1. Description of engine immobilizer system
   (1) The engine immobilizer system judges the EFI system starting capability, based on the key ID code and the code already registered to the vehicle. The engine immobilizer system compares the ID code registered in vehicle collation ECM (smart key ECM ASSY) with the transponder chip ID code built in the electrical key transmitter SUB-ASSY. If these ID codes do not match, the engine immobilizer system operates and EFI system can not be started. The collation ECM (smart key ECM ASSY) controls the communication with the EFI system, steering lock actuator ASSY (steering lock ECM), ID code box (immobilizer code ECM)*. If ID codes of the transponder chip and ECM (smart key ECM ASSY) match, the collation ECM (smart key ECM ASSY) permits the EFI system starting.

*: The ID code box is included.

2. System functions
   (1) Push button start function
      (a)When the driver (or passenger) enters inside the vehicle while holding the electrical key transmitter SUB-ASSY, and depresses the brake pedal*1 or clutch pedal*2, the collation ECM (smart key ECM ASSY) recognizes that the brake pedal*1 or clutch pedal*2 is depressed, and sends the electrical key transmitter SUB-ASSY collation request signal to the inside vehicle electrical key antenna. When the request signal is received, the inside vehicle electrical key antenna sends other signal to detect whether the electrical key transmitter SUB-ASSY is inside the vehicle. When the electrical key transmitter SUB-ASSY receives this request signal, it returns the ID code including the response code. The ID code sent from the electrical key transmitter SUB-ASSY is sent to the collation ECM (smart key ECM ASSY) via the door control receiver. When the ID code is received, the collation ECM (smart key ECM ASSY) analyzes the code. If the collation result is normal, the entry key indicator light in the combination meter ASSY illuminates in green. When the indicator lights up green and the driver pushes the engine switch, the collation ECM (smart key ECM ASSY) recognizes the engine start signal, and turns on the ACC relay and IG1 relay and IG2 relay respectively. At this time, it recognizes that the power supply mode of the collation ECM (smart key ECM ASSY) has been changed, and sends the electrical power to the steering lock actuator. Then, (via the ID code box (immobilizer code ECM))*3 the steering lock actuator ASSY (steering lock ECM) recognizes that the collation ECM (smart key ECM ASSY) is the suitable ECM and drives the steering actuator motor until the steering lock unlocks. When the steering lock is unlocked, the steering lock actuator ASSY (steering lock ECM) transmits an unlock completion signal to the collation ECM (smart key ECM ASSY). If there is an ID code box, when this signal is received, the collation ECM (smart key ECM ASSY) sends the immobilizer not set command signal to the ID code box (immobilizer code ECM). When this signal is received, the ID code box (immobilizer code ECM) sends the immobilizer not set command signal to the EFI system after confirming that the collation ECM (smart key ECM ASSY) is the suitable ECM. If there is no ID code box, when this signal is received, the collation ECM sends the immobilizer not set command signal to the EFI system.

*1: With automatic transmission
*2: With manual transmission
*3: With ID code box
*4: Without ID code box

## HOW TO PROCEED WITH TROUBLESHOOTING

NOTE:

- Use these procedures to troubleshoot the engine immobiliser system.
- *: Use the SSM4.

| | |
|---|---|
| 1 | VEHICLE BROUGHT TO WORKSHOP |

NEXT

| | |
|---|---|
| 2 | INSPECT BATTERY VOLTAGE |

Standard voltage: 11 to 14V

If the voltage is below 11V, recharge or replace the battery before proceeding.
NOTE:
A simple method to determine whether the battery is depleted is to operate the horn.

NEXT

| | |
|---|---|
| 3 | TURN ENGINE SWITCH ON (IG) |

NEXT

| | |
|---|---|
| 4 | Communication function inspection of the CAN communication system |

(1) Check CAN communication system. (Refer to NW - 30)
Result

| Result | Proceed to |
|---|---|
| Functioning properly | A |
| Not functioning properly | B |

B → Go to "CAN communication system (How to troubleshoot)" (Refer to NW - 30).

A

| | |
|---|---|
| 5 | Communication function inspection of large-scale multiplex communication system for vehicle body [LIN] |

(1) Perform a function check of the large-scale multiplex communication system for vehicle body [LIN] to see that no abnormal condition is present in the communication system. (Refer to NW - 5)
Result

| Result | Proceed to |
|---|---|
| Functioning properly | A |
| Not functioning properly | B |

B → To Large-scale multiplex communication system for vehicle body [LIN] (How to troubleshoot) (Refer to NW - 5)

A

| | |
|---|---|
| 6 | CHECK FOR DTC (ENTRY AND START SYSTEM)* |

(1) Check for DTCs and make a note of any codes that are output.
(2) Clear the DTCs. (See page TD - 250)
(3) Recheck for DTCs. Based on the DTCs output above, try to duplicate the engine immobiliser system DTC or steering lock system DTC by simulating the symptoms indicated by the DTCs.
Result

| Result | Proceed to |
|---|---|
| DTC is not output | A |

| Result | Proceed to |
|---|---|
| Steering lock system DTC is output (DTC B2781, B2782 or B2788) | B |
| Engine immobiliser system DTC is output (except DTC B2781, B2782 and B2788) | C |

B → Go to "steering lock system (List of diagnostic codes)" (Refer to SR - 4)

C → GO TO DIAGNOSTIC TROUBLE CODE CHART (See page TD - 255)

A

| 7 | CHECK FOR DTC (ECD SYSTEM OR EFI SYSTEM)* |
|---|---|

(1) Clear the DTCs. (Refer to TD - 250)
(2) Check for DTCs. (Refer to TD - 250)
NOTE:
The DTCs for the engine immobiliser system are specified above. If other codes are output, check the DTC chart for the EFI system.

Result

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| Engine immobiliser system DTC is output (DTC B2799, B279A or B279C) | B |
| EFI system DTC is output) | C |

## PROBLEM SYMPTOMS TABLE

NOTE:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.
- If the problem only occurs in certain locations or at certain times of day, check for wave interference.
- If the vehicle components are added, check for wave interference from the added components.

Engine Immobiliser System

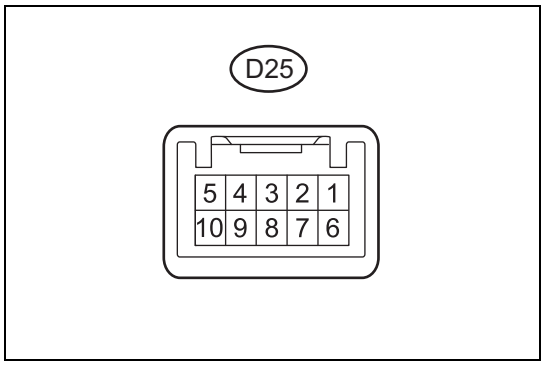
| Symptom | Suspected Area | See page |
|---|---|---|
| Engine cannot be started*1 | Certification ECU (smart key ECU assembly) | - |
| Engine cannot be started*2 | ID code box (immobiliser code ECU)*1 | TD - 248 |
| | ECM | TD - 248 |
| | EFI system | TD - 248 |
| Power source mode cannot be changed*2 | Engine switch | TD - 248 |
| | Certification ECU (smart key ECU assembly) | TD - 248 |
| Steering lock lock/unlock not possible*3 | Steering lock actuator assembly (steering lock ECU) | TD - 248 |

*1: w/ ID Code Box

*2: Refer to Problem Symptoms Table for Entry and Start System (for Start Function) (Refer to TD - 156)

*3: Refer to Problem Symptoms Table for Steering Lock System (Refer to SR - 4)

## ECM terminal arrangement



1. Check the engine switch.
   (1) Measure the resistance and voltage based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D25-6 (AGND) - Chassis ground | - | Transponder key amplifier GND-output short | Always | 1 Ωor less | - |
| D25-7 (TXCT) - D25-6 (AGND) | Input | Clock signal | When IG OFF, and the brake pedal*1 or clutch pedal*2 is depressed, and after 30 seconds or more have passed after the driver opens and closes the door. | 1 V or less | - |
| D25-8 (CODE) - D25-6 (AGND) | Input/output | Dual directional data communication | When IG OFF, and the brake pedal*1 or clutch pedal*2 is depressed, and after 30 seconds or more have passed after the driver opens and closes the door. | 1 V or less | - |
| D25-10 (VC5) - D25-6 (AGND) | Input | Transponder key amplifier power supply | When IG OFF, and the brake pedal*1 or clutch pedal*2 is depressed, and after 30 seconds or more have passed after the driver opens and closes the door. | 1 V or less | - |

*1: With automatic transmission

*2: With manual transmission

(2) Confirm the pulse based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D25-7 (TXCT) - D25-6 (AGND) | Input | Clock signal | IG is turned OFF, the key is brought outside the vehicle, and within 30 seconds after the engine switch is pushed. | Pulse generation (Refer to waveform 1) | • BCC fault<br>• Abnormal condition<br>• Different encryption code<br>• Different serial code<br>NOTE:<br>If the immobilizer key code collation communication is not operated correctly, the fault may be displayed in one or several items listed in the [Data monitor] described above. |
| D25-8 (CODE) - D25-6 (AGND) | Output | Dual directional data communication | IG is turned to OFF, the key is held above the engine switch, and the engine switch is pushed*. | Pulse generation (Refer to waveform 2) | |
| D25-10 (VC5) - D25-6 (AGND) | Input | Transponder key amplifier power supply | IG is turned OFF, the key is brought outside the vehicle, and within 30 seconds after the engine switch is pushed. | Pulse generation (Refer to waveform 3) | |

NOTE:
*: Before performing this inspection, remove the transmitter battery.

(3) Inspect using an oscilloscope.
CAUTION:
The waveform shown in the figure is an example for reference. The noise and chattering are not shown in the figure.

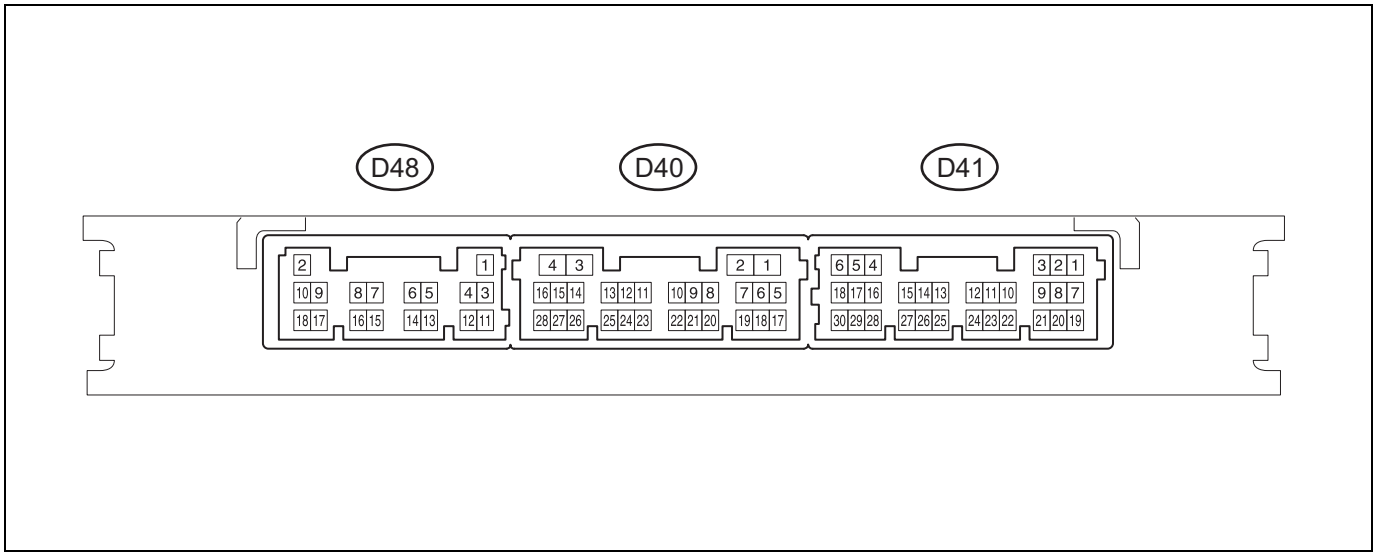
2. Check the collation ECM (smart key ECM ASSY).



(1) Disconnect the D48 collation ECM (smart key ECM ASSY) connector.
(2) Measure the resistance and voltage based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D48-2 (+B) - D48- 11 (GND) | Input | +B power supply | Always | 11 to 14 V | - |
| D48-11 (GND) - Chassis ground | - | Ground | Always | 1 Ωor less | - |

(3) Reconnect the D48 connector of the collation ECM (smart key ECM ASSY).
(4) Measure the resistance and voltage based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D41-5 (IG2) - D48-11 (GND) | Input | Engine switch power supply | Engine switch OFF →ON (IG) | 1V or less →11 to 14V | [Ignition] |
| D41-9 (TXCT) - D41-24 (AGND) | Output | Clock signal | When IG OFF, and the brake pedal*1 or clutch pedal*2 is depressed, and after 30 seconds or more have passed after the driver opens and closes the door. | 1 V or less | • BCC fault<br>• Abnormal condition<br>• Different encryption code<br>• Different serial code |
| D41-7 (CODE) - D41-24 (AGND) | Input | Signal input from transponder key amplifier power | When IG OFF, and the brake pedal*1 or clutch pedal*2 is depressed, and after 30 seconds or more have passed after the driver opens and closes the door. | 1 V or less | |
| D41-1 (VC5) - D41-24 (AGND) | Output | Transponder key amplifier power supply | When IG OFF, and the brake pedal*1 or clutch pedal*2 is depressed, and after 30 seconds or more have passed after the driver opens and closes the door. | 1 V or less | |
| D41-24 (AGND) - chassis ground | - | Transponder key amplifier GND-output short | Always | 1 Ωor less | |

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D48-13 (EFIO) -D48-11 (GND)*3 | Input/output | EFI communication signal (from collation ECM (smart key ECM ASSY) to ECM) | IG ON | 11 to 14V | • B1571<br>• B1572<br>• Engine start request<br>• EFI code reception |

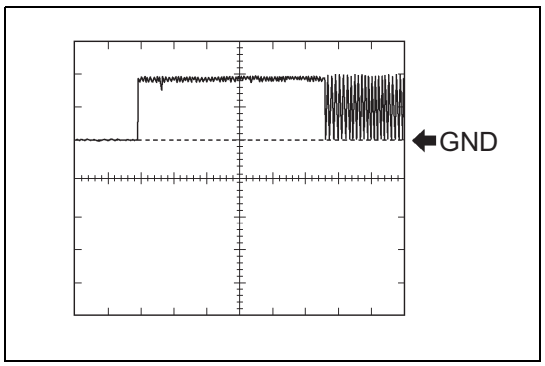
*1: With automatic transmission
*2: With manual transmission
*3: Without ID code box

(5) Confirm the pulse based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D41-9 (TXCT) - D41-24 (AGND) | Output | Clock signal | IG is turned OFF, the key is brought outside the vehicle, and within 30 seconds after the engine switch is pushed. | Pulse generation (Refer to waveform 1) | • BCC fault<br>• Abnormal condition<br>• Different encryption code<br>• Different serial code |
| D41-7 (CODE) - D41-24 (AGND) | Input | Signal input from transponder key amplifier power | IG is turned to OFF, the key is held above the engine switch, and the engine switch is pushed*1. | Pulse generation (Refer to waveform 2) | |
| D41-1 (VC5) - D41-24 (AGND) | Output | Transponder key amplifier power supply | IG is turned OFF, the key is brought outside the vehicle, and within 30 seconds after the engine switch is pushed. | Pulse generation (Refer to waveform 3) | |
| D48-13 (EFIO) -D48-11 (GND)*2 | Input/output | EFI communication signal (from collation ECM (smart key ECM ASSY) to ECM) | Engine switch OFF →ON (IG) | Pulse generation (Refer to waveform 4) | • B1571<br>• B1572<br>• Engine start request<br>• EFI code reception |

*1: Before performing this inspection, remove the transmitter battery.
*2: Without ID code box

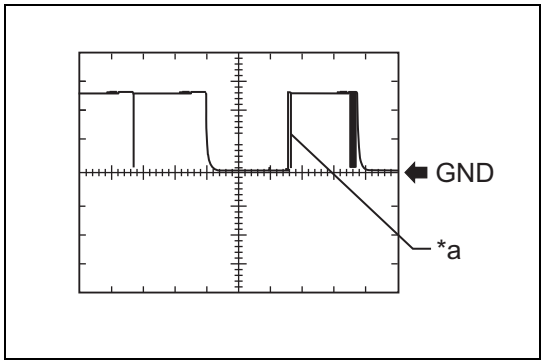
(6) Inspect using an oscilloscope.
CAUTION:
The waveform shown in the figure is an example for reference. The noise and chattering are not shown in the figure.



(a)Waveform 1 (reference)

Measuring conditions

| Item | Contents |
|---|---|
| Tester connection | D41-9 (TXCT) - D41-24 (AGND) |
| Tool setting | 2V/DIV., 200ms./DIV. |
| Conditions | IG is turned OFF, the key is brought outside the vehicle, and within 30 seconds after the engine switch is pushed. |



(b)Waveform 2 (reference)

Captions in illustration

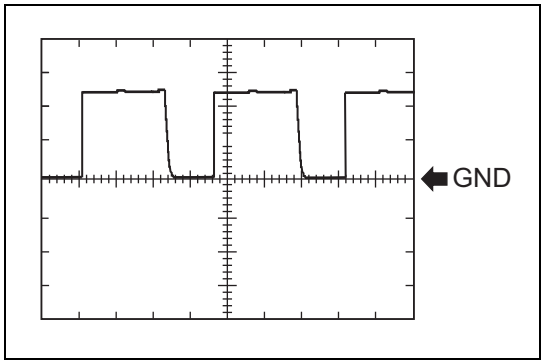
| Item | Contents |
|---|---|
| Tester connection | D41-7 (CODE) - D41-24 (AGND) |
| Tool setting | 2V/DIV., 200ms./DIV. |
| Conditions | IG is turned to OFF, the key is held above the engine switch, and the engine switch is pushed*. |

NOTE:

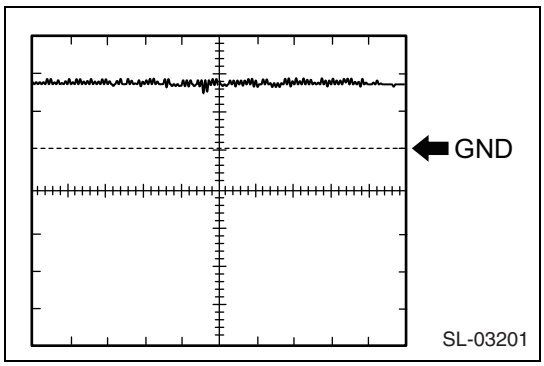
*: Before performing this inspection, remove the transmitter battery.



(c)Waveform 3 (reference)

Measuring conditions

| Item | Contents |
|---|---|
| Tester connection | D41-1 (VC5) - D41-24 (AGND) |
| Tool setting | 2V/DIV., 200ms./DIV. |
| Conditions | IG is turned OFF, the key is brought outside the vehicle, and within 30 seconds after the engine switch is pushed. |

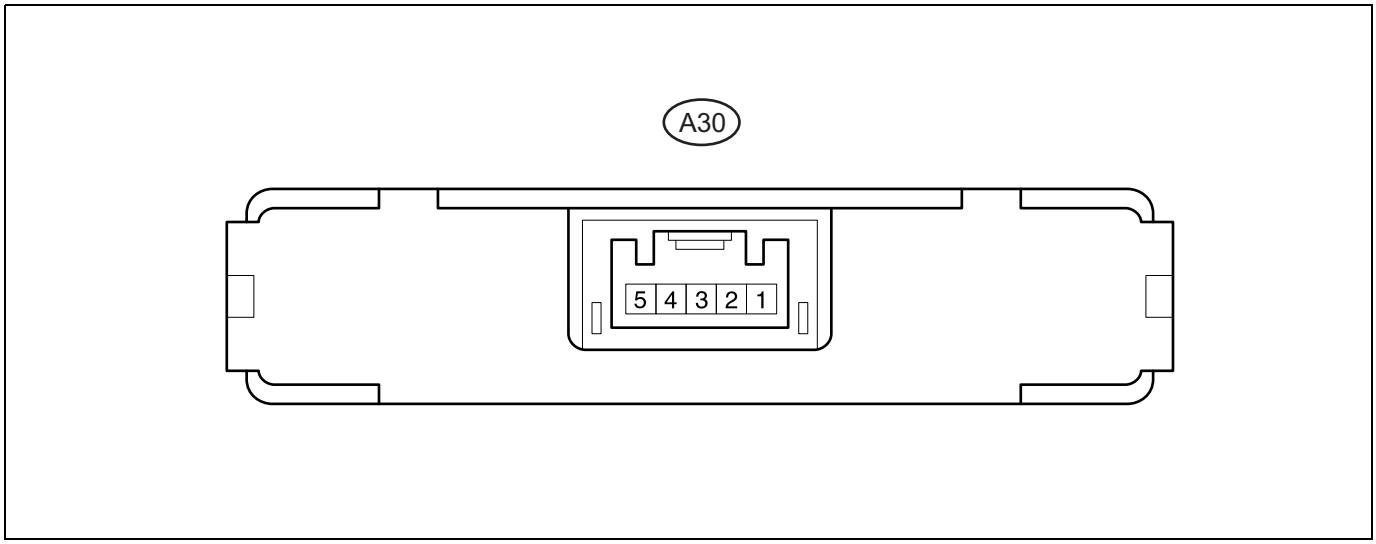


(d)Waveform 4 (reference)

Measuring conditions

| Item | Contents |
|---|---|
| Tester connection | D48-13 (EFIO) - D48-11 (GND) |
| Tool setting | 5 V / DIV., 100 ms. / DIV. |
| Conditions | Within 3 seconds after engine start, or within 3 seconds from engine switch ON (IG) after battery cable disconnection and reconnection |

3. Confirm the ID code box (immobilizer code ECM) (with ID code box).



(1) Disconnect the connector A30 of the ID code box (immobilizer code ECM).

(2) Measure the resistance and voltage based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| A30-1 (+B) - A30- 5 (GND) | Input | +B power supply | Always | 11 to 14V | - |
| A30-5 (GND) - Chassis ground | - | Ground | Always | 1 Ωor less | - |

If the specified result is not obtained, there may be the defect in the wire harness side.

(3) Reconnect the connector A30 of the ID code box (immobilizer code ECM).

(4) Refer to the table below and measure the voltage and check for a pulse.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| A30-4 (IMO1) - A30-5 (GND) | Input/output | EFI communication signal (from ID code box (immobilizer code ECM) to ECM) | IG OFF | 11 to 14V | • B1571<br>• B1572<br>• Engine start request<br>• EFI code reception |
| | | EFI communication signal (from ID code box (immobilizer code ECM) to ECM) | IG OFF →IG ON | Pulse generation (Refer to waveform 1) | |

(5) Inspect using an oscilloscope.

CAUTION:

The waveform shown in the figure is an example for reference. The noise and chattering are not shown in the figure.

TD

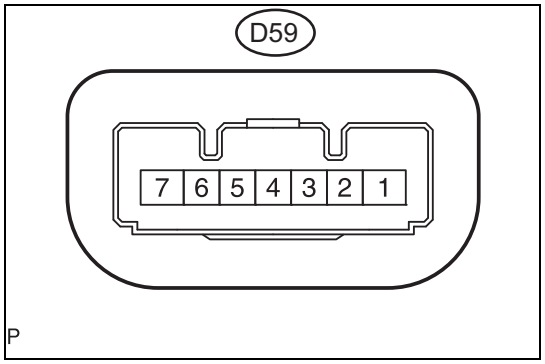
Measuring conditions

| Item | Contents |
|---|---|
| Tester connection | A30-4 (IMO1) - A30-5 (GND) |
| Tool setting | 5 V / DIV., 100 ms. / DIV. |
| Conditions | IG OFF →IG ON |



4. Confirm the steering lock actuator ASSY (steering lock ECM).

(1) Refer to the table below and measure the resistance and the voltage and check for a pulse.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D59-1 (GND) - Chassis ground | - | Ground | Always | 1 Ωor less | - |

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| D59-3 (SLR+) - Chassis ground | Input | Motor drive command signal sent from the steering lock motor drive command signal (collation ECM (smart key ECM ASSY) | After establishing the necessary conditions, the steering lock motor operates when any one of the doors opens.<br>• Shift lever positioned in P*1 or N*2<br>• The key is held in hand and engine switch is ON (IG), and steering lock is unlocked beforehand.<br>• If the above conditions are met turn off the engine switch. | Pulse generation (Refer to waveform 1) | • Power supply short<br>• Unlock request reception<br>• Lock request reception |
| D59-4 (SLR) - Chassis ground | Output | Steering lock bar position signal (output signal from steering unlock sensor) | Steering lock →unlock *3 | 11 to 14 V →1.2 V or less | • Push button start error<br>• Sensor value |
| D59-6 (IGN1) - Chassis ground | Input | Power supply mode signal (IG2 power supply input for all steering lock actuator ASSY) | Engine switch OFF →ON (IG) | 1V or less →11 to 14V | • B2788<br>• IG |
| D59-7 (B) - Chassis ground | Input | Power supply | Always | 11 to 14V | B2788 |

*1: With automatic transmission

*2: With manual transmission

NOTE:

- *3: With shift lever positioned in P (for automatic transmission), if any one of the doors opens, the steering is locked and IG is turned OFF. With ACC ON, the steering is unlocked.

(2) Inspect using an oscilloscope.

CAUTION:

The waveform shown in the figure is an example for reference. The noise and chattering are not shown in the figure.

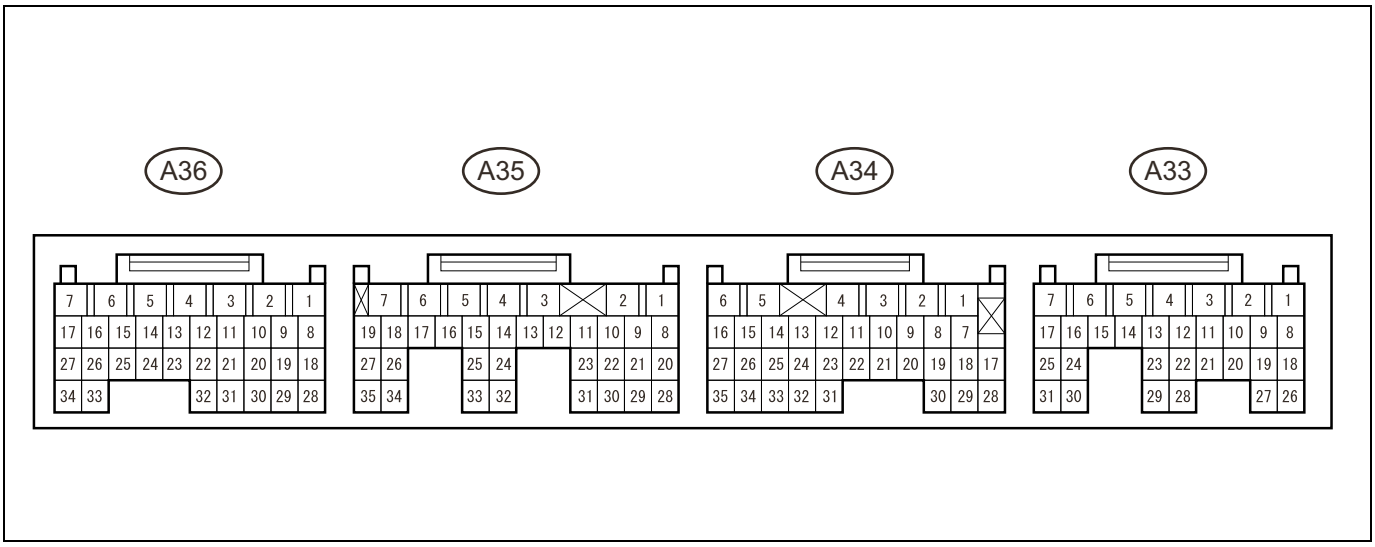
Measuring conditions

| Item | Contents |
|---|---|
| Tester connection | D59-3 (SLR+) - D59-1 (GND) |
| Tool setting | 2V/DIV., 200ms./DIV. |
| Conditions | If both conditions are met, the steering motor operates and door opens:<br>• Shift lever positioned in P*<br>• The key is held in hand and engine switch is ON (IG), and steering lock is unlocked beforehand.<br>• If the above conditions are met turn off the engine switch. |

*1: With automatic transmission

5. CHECK ECM



(1) Refer to the table below and measure the resistance and the voltage and check for a pulse.

TD

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition | Related [Data monitor] item / DTC |
|---|---|---|---|---|---|
| A36-4 (GNDEG1) - Chassis ground | - | Ground | Always | 1 Ωor less | - |
| A33-2 (BATT) - A36-4 (GNDEG1) | Input | +B power supply | Always | 11 to 14 V | - |
| A33-1 (VBEC2) - A36-4 (GNDEG1) | Input | +B power supply | IG ON | 11 to 14 V | - |
| A34-6 (VBEC1) - A36-4 (GNDEG1) | Input | +B power supply | IG ON | 11 to 14 V | - |
| A35-25 (IMO1) - A36-4 (GNDEG1) | Input | ID code box (immobilizer code ECM) *1 or the collation ECM (smart key ECM ASSY) communication ID code box (immobilizer code ECM) communication input | IG OFF | 11 to 14 V | - |
| | | | IG ON | Pulse generation (Refer to waveform 1) | - |

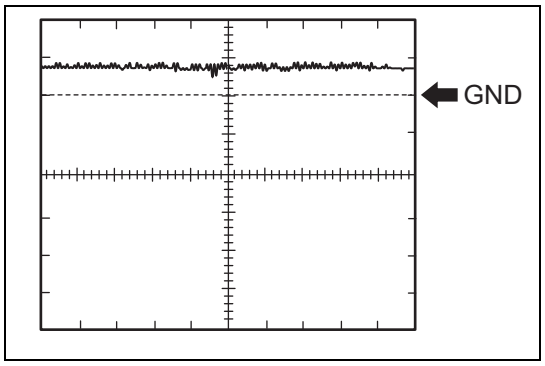
*1: With ID code box

If you cannot get the specified result, there could be a problem in the ECM.

(2) Inspect using an oscilloscope.

CAUTION:

The waveform shown in the figure is an example for reference. The noise and chattering are not shown in the figure.



(a)Waveform 1 (reference)

Measuring conditions

| Item | Contents |
|---|---|
| Tester connection | A30-4 (IMO1) - A30-5 (GND) |
| Tool setting | 2V/DIV., 500ms./DIV. |
| Conditions | IG OFF →IG ON |

## Diagnosis system

1. Description of functions

(1) The collation ECM (smart key ECM ASSY) and ECM controls the vehicle engine immobilizer system function. The engine immobilizer system data and the list of diagnostic codes are read from vehicle data link connector 3 (DLC3).

In some cases, the engine immobilizer system may have defect even though the security indicator light does not illuminate.

If there may be a defect in the system, confirm the defects by using the SSM4 and repair them.

2. Check the DLC3.
   (1) Check the DLC3.
3. Check the battery voltage.
   (1) Measure the battery voltage.
   Voltage: 11 to 14 V
   If the voltage is 11 V or less, charge the battery or replace it.
4. Symptom that occurred in starting function

| TROUBLE SYMPTOM | Part name | Trouble contents of each part | Expected DTC | Related [Data monitor] |
|---|---|---|---|---|
| Engine can not start *1 | Collation ECM (smart key ECM ASSY) | Open or short circuit in ECM | • B278A<br>• B1571<br>• B1572<br>• B1577 | • IG<br>• #Codes<br>• Immobilizer when IG=ON<br>• Immobilizer<br>• Master key<br>• Sub key<br>• BCC fault<br>• Abnormal condition<br>• Different encryption code<br>• Different serial code<br>• Frame error<br>• Response<br>• Wireless starter communication ID<br>• Wireless C code<br>• ID box sleep status<br>• ID box starting status<br>• Engine start request<br>• S code check<br>• L code check<br>• Unlock request reception<br>• Lock request reception<br>• S code check (past)<br>• L code check (past)<br>• EFI/EGI code reception<br>• EFI communication |

| | EFI system | ECM is not compatible with the engine immobilizer system that is installed. | • B1571<br>• B1572 | EFI/EGI code reception |
| Power supply mode does not change *1 | Engine switch | Open or short circuit in switch | B278A | • IG<br>• Unlock request reception<br>• Lock request reception |
| | Collation ECM (smart key ECM ASSY) | Open or short circuit in ECM | • B2271<br>• B2274 | • IG<br>• Immobilizer when IG=ON<br>• Immobilizer |

TD

| TROUBLE SYMPTOM | Part name | Trouble contents of each part | Expected DTC | Related [Data monitor] |
|---|---|---|---|---|
| The steering lock can not lock/ unlock * 2. | Steering lock ECM (steering lock actuator ASSY) | • Open or short circuit in ECM<br>• Actuator stuck | • B2781<br>• B2782<br>• B2788 | • Unlock request reception<br>• Lock request reception |

*1: Refer to the symptom list of the entry & start system (start function).
*2: Refer to the symptom list of the steering lock system.
*3: With ID code box

## DTC CHECK / CLEAR

1. CHECK FOR IMMOBILISER DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch on (IG).
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Keyless Access(Collation ECM)] →[DTC]
   (5) Check for DTCs.
2. CHECK FOR ECM DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch on (IG).
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Engine Control System] →[DTC]
   (5) Check for DTCs.
3. CLEAR IMMOBILISER DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch on (IG).
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Keyless Access(Collation ECM)] →[DTC] →[Clear Memory]
   (5) Clear the DTCs.
4. CLEAR ECM DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the engine switch on (IG).
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Engine Control System] →[DTC] →[Clear Memory]
   (5) Clear the DTCs.

## Data monitor / active test

1. [Data monitor]
   CAUTION:
   In the following table, the value listed in the normal condition is a reference value. Do not depend on reference value only when judging if the part is faulty.
   NOTE:
   By using the SSM4 and reading [Data monitor], you can read the statuses and values for switches, sensors, actuators, and other items without removing parts. Because the non-intrusive inspection allows you to read the intermittent statuses or signals without interfering with parts or lines, it is very convenient. Diagnostic time can be saved by reading the [Data monitor] information at the initial stage of the troubleshooting.
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn on the SSM4.
   (4) Enter the following menus: [Keyless Access(Collation ECM)] →[Data monitor]
   (5) Based on the contents of the SSM4 display, read the [Data monitor].

Entry & Start

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Ignition] | Engine switch condition / OFF or ON | OFF: IG OFF<br>ON: Engine switch is ON (IG) | Using this [Data monitor] item, identify the cause when all entry & start system/wireless functions do not operate. |

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [IG = ON, immobilizer set condition established] | Engine immobilizer system condition when the power supply mode is ON (IG) / Unset or Set | Unset: It is not set when the engine immobilizer system is engine switch ON (IG). Or the engine immobilizer system releases the setting for 40 times after setting.<br>Set: When the engine immobilizer system is set (driver's door opens/closes with engine switch ON (IG)). | - |
| [Immobilizer] | The engine immobilizer system condition is judged by the collation ECM (smart key ECM ASSY) / Unset or Set | Set: Engine immobilizer set (engine start prohibited) (engine switch OFF)<br>Unset: Engine immobilizer unset (engine start permitted) [engine switch ON (ACC) or (IG)] | When [Setup] is displayed, the engine start function is prohibited. |
| [Master Key] | Whether the master key ID code matches with the ID code registered in the collation ECM (smart key ECM ASSY) / Does not match, or match | Does not match: The master key ID code does not match with the ID code registered in the collation ECM (smart key ECM ASSY).<br>Match: The master key ID code matches with the ID code registered in the collation ECM (smart key ECM ASSY). | • Always [Match] is displayed.<br>• Without the diagnosis function |
| [Sub Key] | Whether the sub key ID code matches with the ID code registered in the collation ECM (smart key ECM ASSY) / Does not match, or match | Match: The sub key ID code matches with the ID code registered in the collation ECM (smart key ECM ASSY).<br>Does not match: The sub key ID code does not match with the ID code registered in the collation ECM (smart key ECM ASSY). | • Always [Match] is displayed.<br>• Without the diagnosis function |
| [BCC Malfunction] | Transponder chip BCC signal condition * 1 / OK or NG | OK: BCC signal normal<br>NG: BCC signal fault (fault in the code calculation function for key / collation ECM (smart key ECM ASSY)) | The following may be the cause:<br>• Communication error caused by the noise entering from outside (LF).<br>• Defect in the electrical key transmitter SUB-ASSY or the collation ECM (smart key computer ASSY) |
| [Abnormal Status] | Transponder chip condition signal * 1 / OK or NG | OK: Transponder chip condition signal normal<br>NG: Transponder chip condition signal fault (fault in the code calculation function for key / collation ECM (smart key ECM ASSY)) | The following may be the cause:<br>• Communication error caused by the noise entering from outside (LF).<br>• Defect in the electrical key transmitter SUB-ASSY or the collation ECM (smart key computer ASSY) |
| [Incorrect Encryption] | Code condition between the transponder chip and collation ECM (smart key ECM ASSY) * 1 / OK or NG | OK: Code of the transponder chip and collation ECM (smart key ECM ASSY) matches.<br>NG: Code of the transponder chip and collation ECM (smart key ECM ASSY) does not match. | The following may be the cause:<br>• The electrical key transmitter SUB-ASSY of another vehicle is used.<br>• Defect in the electrical key transmitter SUB-ASSY or the collation ECM (smart key computer ASSY) |
| [Incorrect Serial No.] | Vehicle serial No. * 1 / OK or NG | OK: Signal from the transponder chip and the vehicle serial No. outputs to the collation ECM (smart key ECM ASSY) matches.<br>NG: Signal from the transponder chip and the vehicle serial No. outputs to the collation ECM (smart key ECM ASSY) does not match. | The following may be the cause:<br>• The electrical key transmitter SUB-ASSY of another vehicle is used.<br>• Defect in the electrical key transmitter SUB-ASSY or the collation ECM (smart key computer ASSY) |
| [Frame error] | The data condition sent from the electrical key transmitter SUB-ASSY / OK or NG | OK: No problems in the data sent from the electrical key transmitter SUB-ASSY<br>NG: Problems in the data sent from the electrical key transmitter SUB-ASSY | • Always [OK] is displayed.<br>• Without the diagnosis function |

TD

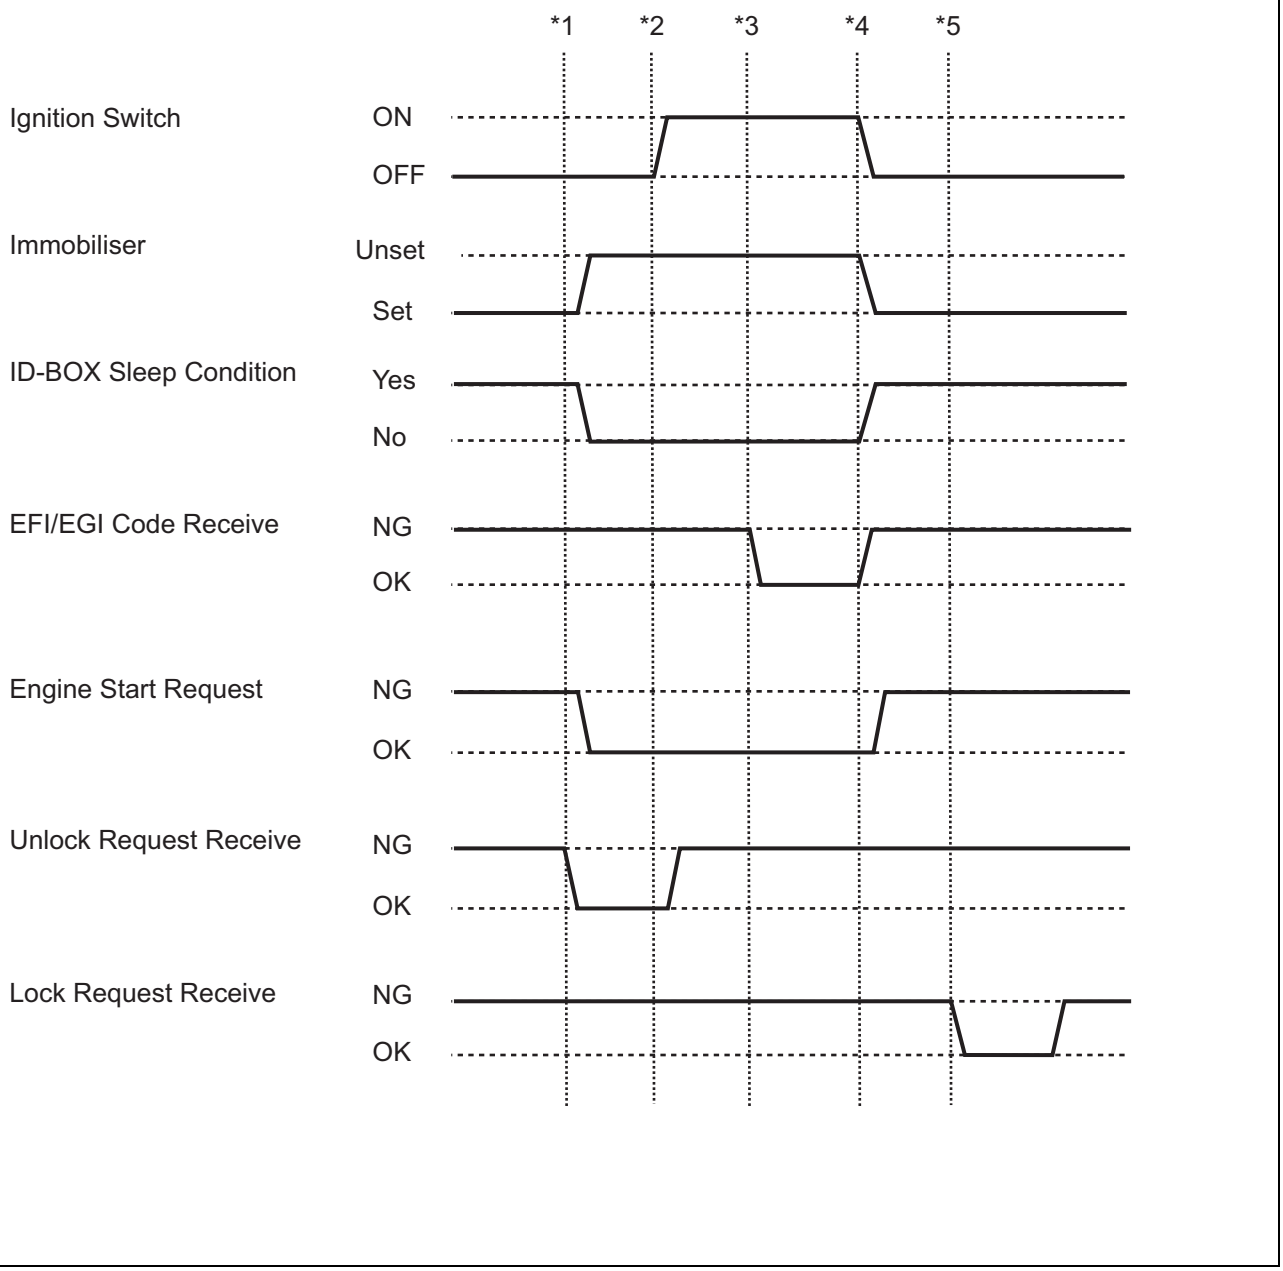
| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Sleep possible status] | ID code box (immobilizer code ECM) is in sleep mode condition / No or Yes | No: ID code box (immobilizer code ECM) does not enter to the sleep mode.<br>Yes: ID code box (immobilizer code ECM) enters to the sleep mode. | - |
| [Wake-up transmission status] | ID code box (immobilizer code ECM) condition *3 / No or Yes | No: ID code box (immobilizer code ECM) does not send the wake-up signal.<br>Yes: ID code box (immobilizer code ECM) sends the wake-up signal. | - |
| [EFI/EGI code reception status] | The request for engine start permission sent from the collation ECM (smart key ECM ASSY) to the ID code box (immobilizer code ECM)* 3 / OK or NG | OK: The engine start permission request signal that the ID code box (immobilizer code ECM)*9, or collation ECM (smart key ECM ASSY)*10 receives from the collation ECM (smart key ECM ASSY)<br>NG: The ID code box (immobilizer code ECM)*9, or collation ECM (smart key ECM ASSY)*10 does not receive the engine start permission request signal. | If [OK] is not displayed, the ECM cannot release the immobilizer setting. |
| [S Code Check] *9 | S code check result * 4 / OK or NG | OK: S code check result is normal.<br>NG: S code check result is abnormal. | The following may be the cause:<br>• The registration setting is not performed for the collation ECM (smart key ECM ASSY) or ID code box (immobilizer code ECM).<br>• There are defects in the collation ECM (smart key ECM ASSY) or ID code box (immobilizer code ECM). |
| [L Code Check] | L code check result * 5 / OK or NG | OK: L code check result is normal.<br>NG: L code check result is abnormal. | The following may be the cause:<br>• The registration setting is not performed for the collation ECM (smart key ECM ASSY) or lock actuator ASSY (steering lock ECM).<br>• There are defects in the collation ECM (smart key ECM ASSY) or steering lock actuator (steering lock ECM). |
| [Steering lock unlock request reception status] | Steering unlock command condition from the collation ECM (smart key ECM ASSY) * 6 / OK or NG | OK: The collation ECM (smart key ECM ASSY) sends the steering unlock command (within 10 seconds after engine switch is ON (ACC) or ON (IG), or within 10 seconds after engine starting operation)<br>NG: The collation ECM (smart key ECM ASSY) does not send the steering unlock command (engine switch does not turn ON (ACC) or ON (IG), or engine starting operation cannot be performed) | Even when the steering lock is unlocked, if the [OK] is not displayed, the collation ECM (smart key ECM ASSY) may be defective. |
| [Steering lock lock request reception status] | Steering lock command condition from the collation ECM (smart key ECM ASSY) * 7 / OK or NG | OK: The collation ECM (smart key ECM ASSY) sends the steering unlock command (within 10 seconds after the door opens/closes when the engine switch is OFF with the shift lever in P* 11).<br>NG: The collation ECM (smart key ECM ASSY) does not send the steering unlock command (the door does not open/close when the engine switch is OFF with the shift lever in P* 11) | Even when the steering lock condition is met, if the [OK] is not displayed, the collation ECM (smart key ECM ASSY) may be defective. |

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [S Code Check(Past)] | S code check result (past) / OK or NG (past) | OK: Confirmation operation finished (past).<br>NG (past): Confirmation operation has not finished (past). | - |
| [L Code Check(Past)] | L code check result (past) / OK or NG (past) | OK: Confirmation operation finished (past).<br>NG (past): Confirmation operation has not finished (past). | - |
| [Engine Start Request] | Recognition information that is sent to the ID code box (immobilizer code ECM) from ECM, when the ECM receives the engine start permission signal from the ID code box (immobilizer code ECM)*8. / OK or NG | OK: The ID code box (immobilizer code ECM)*9, or collation ECM (smart key ECM ASSY)*10 receives the signal sent from ECM in order to release the engine immobilizer setting.<br>NG: The ID code box (immobilizer code ECM)*9, or collation ECM (smart key ECM ASSY)*10 does not receive the signal sent from ECM in order to release the engine immobilizer setting. | - |
| [EFI/EGI Communication] | Communication status to release the immobilizer setting between the collation ECM (smart key ECM ASSY) and ECM / NG or OK | NG: Communication to release the immobilizer setting between the collation ECM (smart key ECM ASSY) and ECM does not start.<br>OK: Communication to release the immobilizer setting between the collation ECM (smart key ECM ASSY) and ECM starts. | Even when the condition to release the immobilizer setting is met, if the [NG] is displayed in the items and [OK] is displayed in the items in the engine start request, ECM may be defective. If the engine cannot be started, use this [Data monitor] while the troubleshooting is performed. |

NOTE:

- *1: This indicates that there is a problem in the communication type between the electrical key transmitter SUB-ASSY and the collation ECM (smart key ECM ASSY). Possible fault causes include the external radio waves, or the faulty electrical key transmitter SUB-ASSY, or collation ECM (smart key ECM ASSY), use of other vehicle electrical key transmitter SUB-ASSY.
- *2: This indicates that the wake-up signal communication is possible. ([Yes] indicates that the LIN communication signal is sent to start the confirmation operation.) If the steering lock motor operates normally and IGE ON signal is received (steering lock work request), or the communication occurs between the ID code box (immobilizer code ECM)*9, or collation ECM (smart key ECM ASSY)*10 and ECM, the displayed item is changed to [Yes].
- *3: This indicates that the engine start permission request signal (EGST) output sent from ECM (smart key ECM ASSY) is received by the ID code box (immobilizer code ECM)*9 or the collation ECM (smart key ECM ASSY)*10.
- *4: This indicates the collation results of the collation code for the collation ECM (smart key ECM ASSY) and ID code box (immobilizer code ECM) collation code.
- *5: This indicates the collation results of the collation code for the steering lock actuator ASSY (steering lock ECM) and the ID code box (immobilizer code ECM) *9 or collation ECM (smart key ECM ASSY)*10.
  - When the steering lock actuator ASSY (steering lock ECM) receives the unlock request from the collation ECM (smart key ECM ASSY), the confirmation operation for ID code box (immobilizer code ECM) L code is performed. When the L code is matched, the steering lock actuator ASSY (steering lock ECM) unlocks the steering. But when the S code check result is not matched, the steering lock does not unlock.
- *6: The collation ECM (smart key ECM ASSY) outputs the steering lock/unlock request for 10 seconds after the engine switch is ON (ACC) or ON (IG) or the engine start operation has been performed.
- *7: The collation ECM (smart key ECM ASSY) outputs the steering lock request for 10 seconds after the engine switch is OFF, or after the door is opened with the shift lever positioned in P*11.
- *8: This indicates that the ID code box (immobilizer code ECM)*9, or collation ECM (smart key ECM ASSY)*10 receives the confirmation information from the ECM. The display changes to [OK] if the ECM can send the information.
  - *9: With ID code box
  - *10: Without ID code box
  - *11: With automatic transmission

(a)Refer to the items in following [Data monitor] for the actual vehicle data.



NOTE:
With the IG OFF and the shift lever in P*6, perform the following operation to confirm the power supply mode.
*1: Without depressing the brake pedal*6 or clutch pedal*7, push the engine switch to confirm the power supply mode is turned ON (ACC).
*2: Without depressing the brake pedal*6 or clutch pedal*7, push the engine switch to confirm the power supply mode is turned ON (IG).
*3: Depress the brake pedal*6 or clutch pedal*7 (stop light switch*6 or clutch start switch*7 is turned ON).
*4: Push the engine switch to confirm the power supply mode turns to ON.
*5: Open the door (the steering lock operation starts when the door opens).
*6: With automatic transmission
*7: With manual transmission

2. [Active Test]
NOTE:
By performing an [Active Test] with SSM4, you can operate relays, VSV, actuators and other devices without removing any parts. This type of non-intrusive function inspection is very useful because the intermittent operation is possible without inter-

ference with parts or wiring. By performing an [Active Test] at an initial phase of troubleshooting, you can save time for diagnosis. [Data monitor] information can be displayed during [Active Test].

(1) Connect the SSM4 to the DLC3.
(2) Turn IG SW to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Active Test]
(5) Based on the SSM4 display contents, perform an [Active Test].

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|

*: The ID code box is included.

| | |
|---|---|
| 1 | Reading of SSM4 data |

(1) Use the SSM4 to perform the data monitor for the collation ECM (smart key ECM ASSY). (Refer to TD - 250)

(2) Turn to IG ON, and without opening or closing a door, check the following data.

[SSM4 screen: [Each System] →[Keyless Access(Collation ECM)] →[Data monitor]]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Immobilizer] | This item indicates the engine immobilizer system status, as determined by the collation ECM (smart key ECM ASSY).<br>Display range: Unset / Set | [Unset]: The engine immobilizer is unset (engine start permitted) (ACC ON or further)<br>[Set]: The engine immobilizer is set (engine start prohibited) (IG OFF) | When [Set] is displayed for this item, you cannot start the engine.<br>• The security indicator light blinks when [Set] is displayed for this item.<br>• The security indicator light is interlocked with the [Set]/[Unset] status of the immobilizer, but not with the [Lock]/[Unlock] status of the steering wheel. |
| [Engine start] | This item indicates the engine start permission of the collation ECM (smart key ECM ASSY).<br>Display range: [OK] / [NG] | [OK]: The collation ECM (smart key ECM ASSY) allows the engine to start.<br>[NG]: The collation ECM (smart key ECM ASSY) prohibits the engine from starting. | - |
| [Unlock confirmation] | This item indicates the unlock confirmation status of the steering lock actuator ASSY (steering lock ECM).<br>Display range: Set/Unset | [Set]: The unlock is set<br>[UnSet]: The unlock is not set | When [Unset] is displayed, the steering cannot be unlocked and the engine cannot start. |

Criteria: [Immobilizer] displays [Unset], [Engine start] displays [OK], and [Unlock confirmation] displays [Set].

NG → To "Smart entry & start system (start system) (engine will not start)" (Refer to TD - 204)

OK

| 2 | Reading of SSM4 data |
|---|---|

(1) Use the SSM4 to perform the data monitor for the collation ECM (smart key ECM ASSY). (Refer to TD - 250)

(2) While depressing the brake pedal for AT vehicles or the clutch pedal for MT vehicles, press and hold the push engine switch, then check the following data.

[SSM4 screen: [Each System] →[Keyless Access(Collation ECM)] →[Data monitor]]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [EFI/EGI code reception status] | The engine control computer receives engine start permission from the ID code box (immobilizer code ECM)*1 or the collation ECM (smart key ECM ASSY)*2, and returns collation information to the ID code box (immobilizer code ECM)*1 or the collation ECM (smart key ECM ASSY)*2. This item indicates that the ID code box (immobilizer code ECM)*1 or the collation ECM (smart key ECM ASSY)*2 cannot receive that information. Display range: NG/OK | [NG]: The ID code box (immobilizer code ECM)*1 or collation ECM (smart key ECM ASSY)*2 does not receive the signal for releasing the immobilizer from the engine control computer. [OK]: The ID code box (immobilizer code ECM)*1 or collation ECM (smart key ECM ASSY)*2 receives the signal for releasing the immobilizer from the engine control computer. | - |

*1: With ID code box

*2: Without ID code box

Criteria: [OK] Is displayed if the EGI code is received.*

NOTE:

Even when [OK] is displayed, it changes to [NG] after about 10 seconds. When rechecking it, turn the ignition OFF before rechecking it.

NG → Repair or replacement of the harnesses between the ID code box (immobilizer ECM)*1 or the collation ECM (smart key ECM ASSY)*2 and the ECU

OK

**3** Check the vehicle condition.

(1) Check the vehicle condition.

| Result | Go to |
|---|---|
| With ID code box | A |
| Without ID code box | B |

B → Go to Step 7.

A

**4** Checking the harnesses and connectors

(1) Disconnect the connector A30 of the ID code box (immobilizer code ECM).

(2) Disconnect the A35 ECM connector.

(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A30-4 (IMO1) - A35-25 (IMO1) | Always | 1 Ωor less |

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A30-4 (IMO1) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

**5** Replacement of the ECM

(1) Replace the ECM with a new one temporarily.

Next

**6** ECU communication ID registration

(1) Register the ECM communication ID. (Refer to the "Registration manual for immobilizer")
(2) Check if the engine can be started.
Criteria: The engine can start.

NG → Replace the ID code box (immobilizer code ECM).

OK

END (faulty ECM)

**7** Checking the harnesses and connectors

(1) Disconnect the D48 collation ECM (smart key ECM ASSY) connector.
(2) Disconnect the A35 ECM connector.
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D48-13 (EFIO) - A35-25 (IMO1) | Always | 1 Ωor less |
| D48-13 (EFIO) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replace the harnesses or connectors.

OK

**8** Replacement of the ECM

(1) Replace the ECM with new one temporarily.

Next

| 9 | ECU communication ID registration |
|---|---|

(1) Register the ECM communication ID. (Refer to the "Registration manual for immobilizer")
(2) Check if the engine can be started.
Criteria: The engine can start.

NG → Replacement of the collation ECM (smart key computer ASSY)

OK

END (faulty ECM)

## DTC B1576 EGI unit EEPROM

TD

Circuit description

OK

Complete

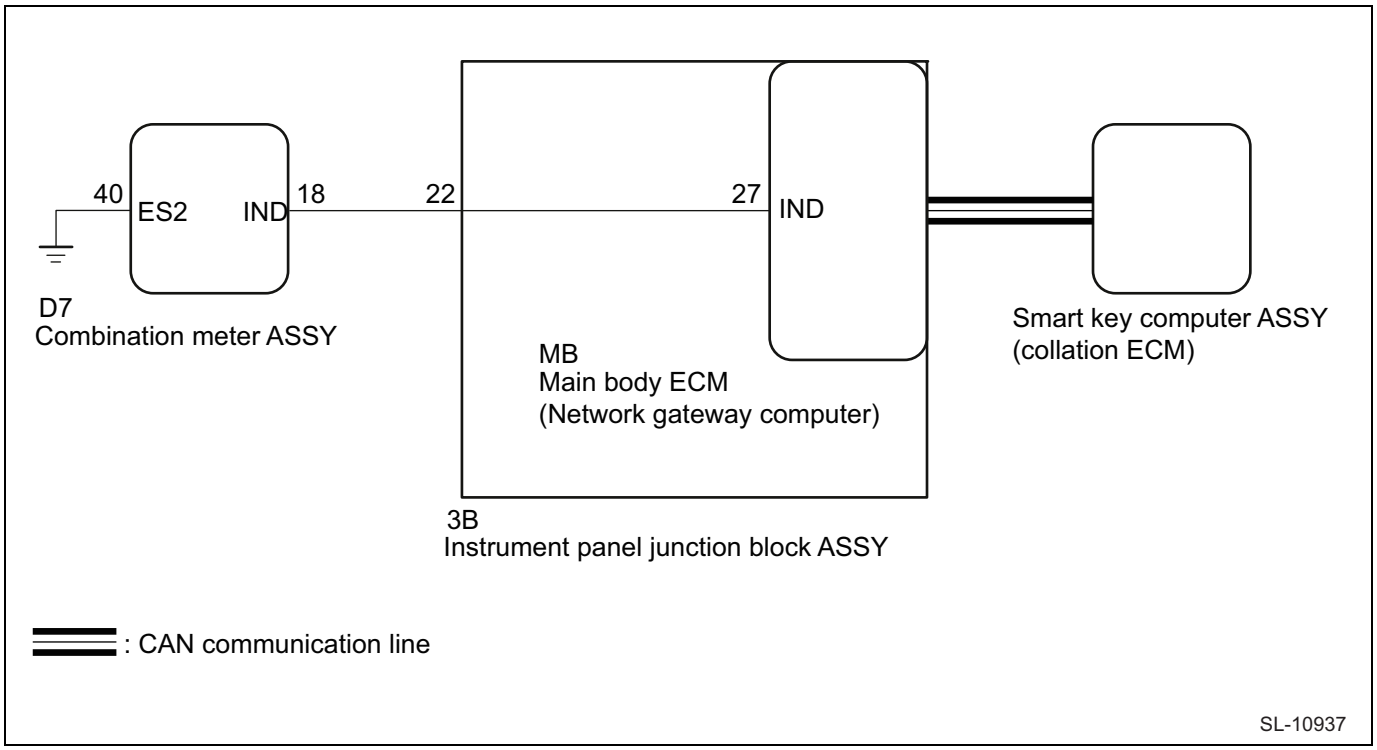
## Security indicator does not blink

Circuit description

When the immobilizer function is set (power OFF), the smart key ECM ASSY (collation ECM) sends the security indicator light drive signal to the main body ECM (network gateway computer) via CAN communication, and the main body ECM (network gateway computer) makes the security indicator light in the combination meter ASSY blink.

Circuit figure



Inspection steps

CAUTION:

- When replacing the smart key ECM ASSY (collation ECM), check the precautions (refer to TD - 233), and refer to the "Registration manual for immobilizer".
- Check the fuses before performing the diagnosis.

| 1 | DTC check |
|---|---|

(1) Check DTC using SSM4. (Refer to TD - 250)

Criteria: Diagnostic code is not output.

NG → Go to "List of diagnostic codes" (Refer to TD - 255)

OK

| 2 | Implementation of the SSM4 active test (security indicator) |
|---|---|

(1) Use the SSM4 to perform the active test, and check that the security indicator light lights up. (Refer to TD - 250)

[SSM4 screen: [Each System] →[Body Control] →[Active Test]]

| Item | Drive | Remarks |
|---|---|---|
| [Security Indicator] | Output/stop | When carrying the electrical key transmitter SUB-ASSY and in IG ON |

Criteria: The security indicator light lights up / turns off.

NG → Go to Step 3.

OK

Replacement of the main body ECM (Network gateway computer)

| 3 | Reading of SSM4 data (immobilizer evaluation) |
|---|---|

(1) Turn the ignition switch to OFF.

(2) Using the SSM4, follow the screen display and read the data monitor. (Refer to TD - 250)

[SSM4 screen: [Each System] →[Keyless Access(Collation ECM)] →[Data monitor]]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Immobilizer] | This item indicates the engine immobilizer system status, as determined by the collation ECM (smart key ECM ASSY). Display range: Unset / Set | [Unset]: The engine immobilizer is unset (engine start permitted) (ACC ON or further) [Set]: The engine immobilizer is set (engine start prohibited) (IG OFF) | When [Set] is displayed for this item, you cannot start the engine. • The security indicator light blinks when [Set] is displayed for this item. • The security indicator light is interlocked with the [Set]/[Unset] status of the immobilizer, but not with the [Lock]/[Unlock] status of the steering wheel. |

Criteria: [Set] is displayed.

NG → Replacement of the smart key ECM ASSY (collation ECM)

OK

| 4 | Inspection of the wiring harnesses and the connectors (instrument panel junction block ASSY - combination meter ASSY) |
|---|---|

(1) Disconnect the connector 3B of the instrument panel junction block ASSY.
(2) Disconnect connector D7 of the combination meter ASSY.
(3) Measure the resistance and voltage between terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-22 - D7-18 (ILL+) | Always | Less than 1 Ω |
| 3B-18 - chassis ground | Always | Less than 1 Ω |
| 3B-22 or D7-18 (ILL+) - chassis ground | Always | 10 kΩ or more |

Voltage

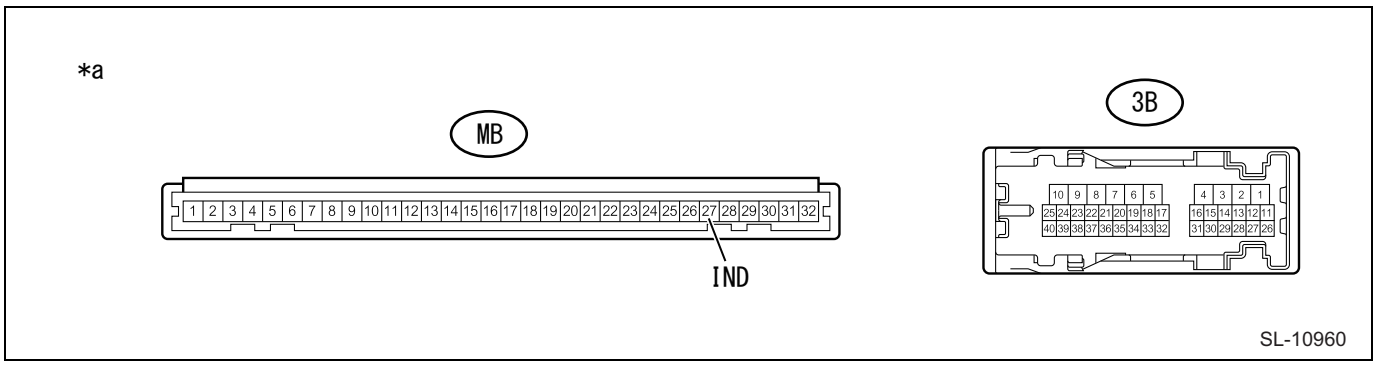
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D7 - 1 | Always | 10 V or more |

NG → Repair or replacement of wiring harness or connector

OK

| 5 | Unit inspection of the instrument panel junction block ASSY. |
|---|---|

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.



Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| MB-27 (IND) - 3B-22 | Always | Less than 1 Ω |
| MB-11 (GND) - 3B-18 | Always | Less than 1 Ω |

Captions in illustration

## Description of functions

1. Description of the engine immobilizer system
   (1) The engine immobilizer system records the key ID in the main body ECM (multiplex network body computer). If the key ID and the code recorded in the main body ECM do not match, the engine immobilizer system prohibits the engine from starting.
2. Functions of the main parts

| Components | Summary |
|---|---|
| Main body ECM (Network gateway computer) | This checks if the key ID received from the transponder key amplifier matches the registered key ID. Concurrently, it communicates with the combination meter ASSY*1 or the transponder ECM*2 and checks that the key ID (meter ID) recorded in the combination meter ASSY*1 or transponder ECM*2 matches the ID (meter ID) recorded in the main body ECM. Based on the request from the engine control computer, it encrypts each collation result and registered ID (engine ID), and sends them to the engine control computer. |
| Combination meter ASSY*1 | Based on the request from the main body ECM (network gateway computer), it encrypts the registered ID, and sends it to the main body ECM (network gateway computer). |
| Transponder key ECM ASSY*2 | Based on the request from the main body ECM (network gateway computer), it encrypts the registered ID, and sends it to the main body ECM (network gateway computer). |
| Transponder key amplifier | This receives the key ID from the antenna coil, and outputs the key ID, which was amplified by the amplifier, to the main body ECM (network gateway computer). |
| Engine control computer | When the engine starts, this communicates with the main body ECM (network gateway computer), and receives the key ID, the meter ID collation result, and the encrypted ID (engine ID) of the main body ECM (network gateway computer). If any of them do not match, it stops (prohibits) the engine from starting. |
| Unlock warning switch ASSY | This detects a key inserted in the key cylinder and outputs the result to the main body ECM (network gateway computer). |

*1: With a transponder ECM
*2: Without a transponder ECM

3. System functions
   (1) When the main body ECM (network gateway computer) detects that the unlock warning switch ASSY is ON, it powers the transponder key amplifier and generates a magnetic field around the antenna coil. The transponder chip inside the key grip outputs a key ID signal by the electromotive force generated by the magnetic field. The transponder key amplifier receives the key ID code signal, amplifies it by an amplifier, and sends it to the main body ECM (network gateway computer).
   The main body ECM (network gateway computer) checks if the key ID received from the transponder key amplifier matches the registered key ID. Concurrently, the main body ECM (network gateway computer) communicates with the

combination meter ASSY*1 or the transponder ECM*2 and checks that the ID (meter ID) recorded in the combination meter ASSY*1 or transponder ECM*2 matches the ID (meter ID) recorded in the main body ECM (network gateway computer).
When starting the engine, the engine control computer communicates with the main body ECM (network gateway computer), and checks the collation result between the key and the combination meter ASSY*1 or the transponder ECM*2. Also, it checks if the ID (engine ID) recorded in the main body ECM (network gateway computer) matches, and if any does not match, it stops the engine from starting.
*1: With a transponder ECM
*2: Without a transponder ECM

## HOW TO PROCEED WITH TROUBLESHOOTING

NOTE:
- Use these procedures to troubleshoot the engine immobiliser system.
- *: Use the SSM4.

| 1 | VEHICLE BROUGHT TO WORKSHOP |
|---|---|

NEXT

| 2 | INSPECT BATTERY VOLTAGE |
|---|---|

Standard voltage: 11 to 14V
If the voltage is below 11V, recharge or replace the battery before proceeding.
NOTE:
A simple method to determine whether the battery is depleted is to operate the horn.

NEXT

| 3 | CAN communication system check |
|---|---|

(1) Check CAN communication system. (Refer to NW - 30)
Result

| Result | Proceed to |
|---|---|
| Functioning properly | A |
| Not functioning properly | B |

B → GO TO CAN COMMUNICATION SYSTEM (Refer to NW - 30)

END

## PROBLEM SYMPTOMS TABLE

NOTE:

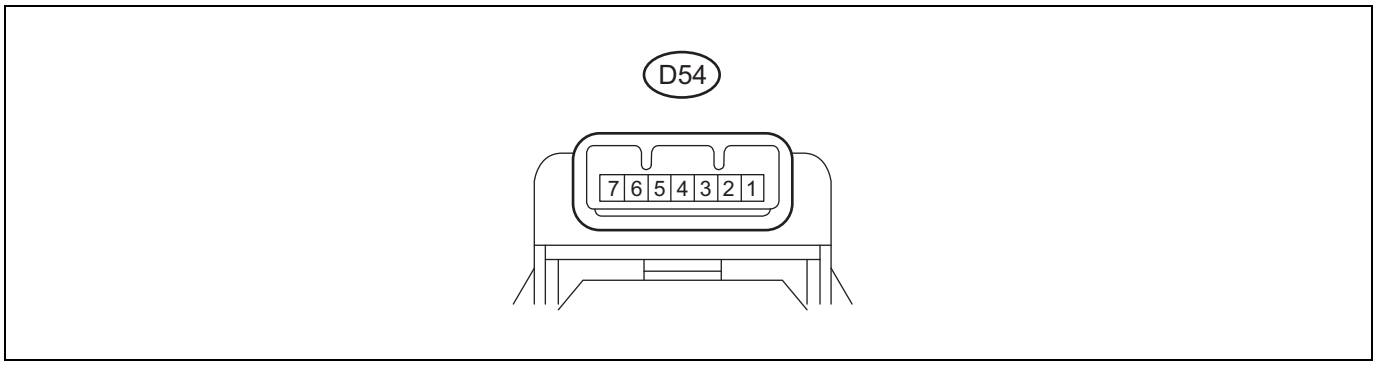
- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Engine Immobiliser System

| Symptom | Suspected Area | See page |
|---|---|---|
| Security indicator light does not blink | Proceed to "Security Indicator Light does not Blink" | TD - 310 |

## ECM terminal arrangement

1. Check the transponder key amplifier.



(1) Disconnect the D54 transponder key amplifier connector.

(2) Refer to the table below and measure the resistance and the voltage and check for a pulse.

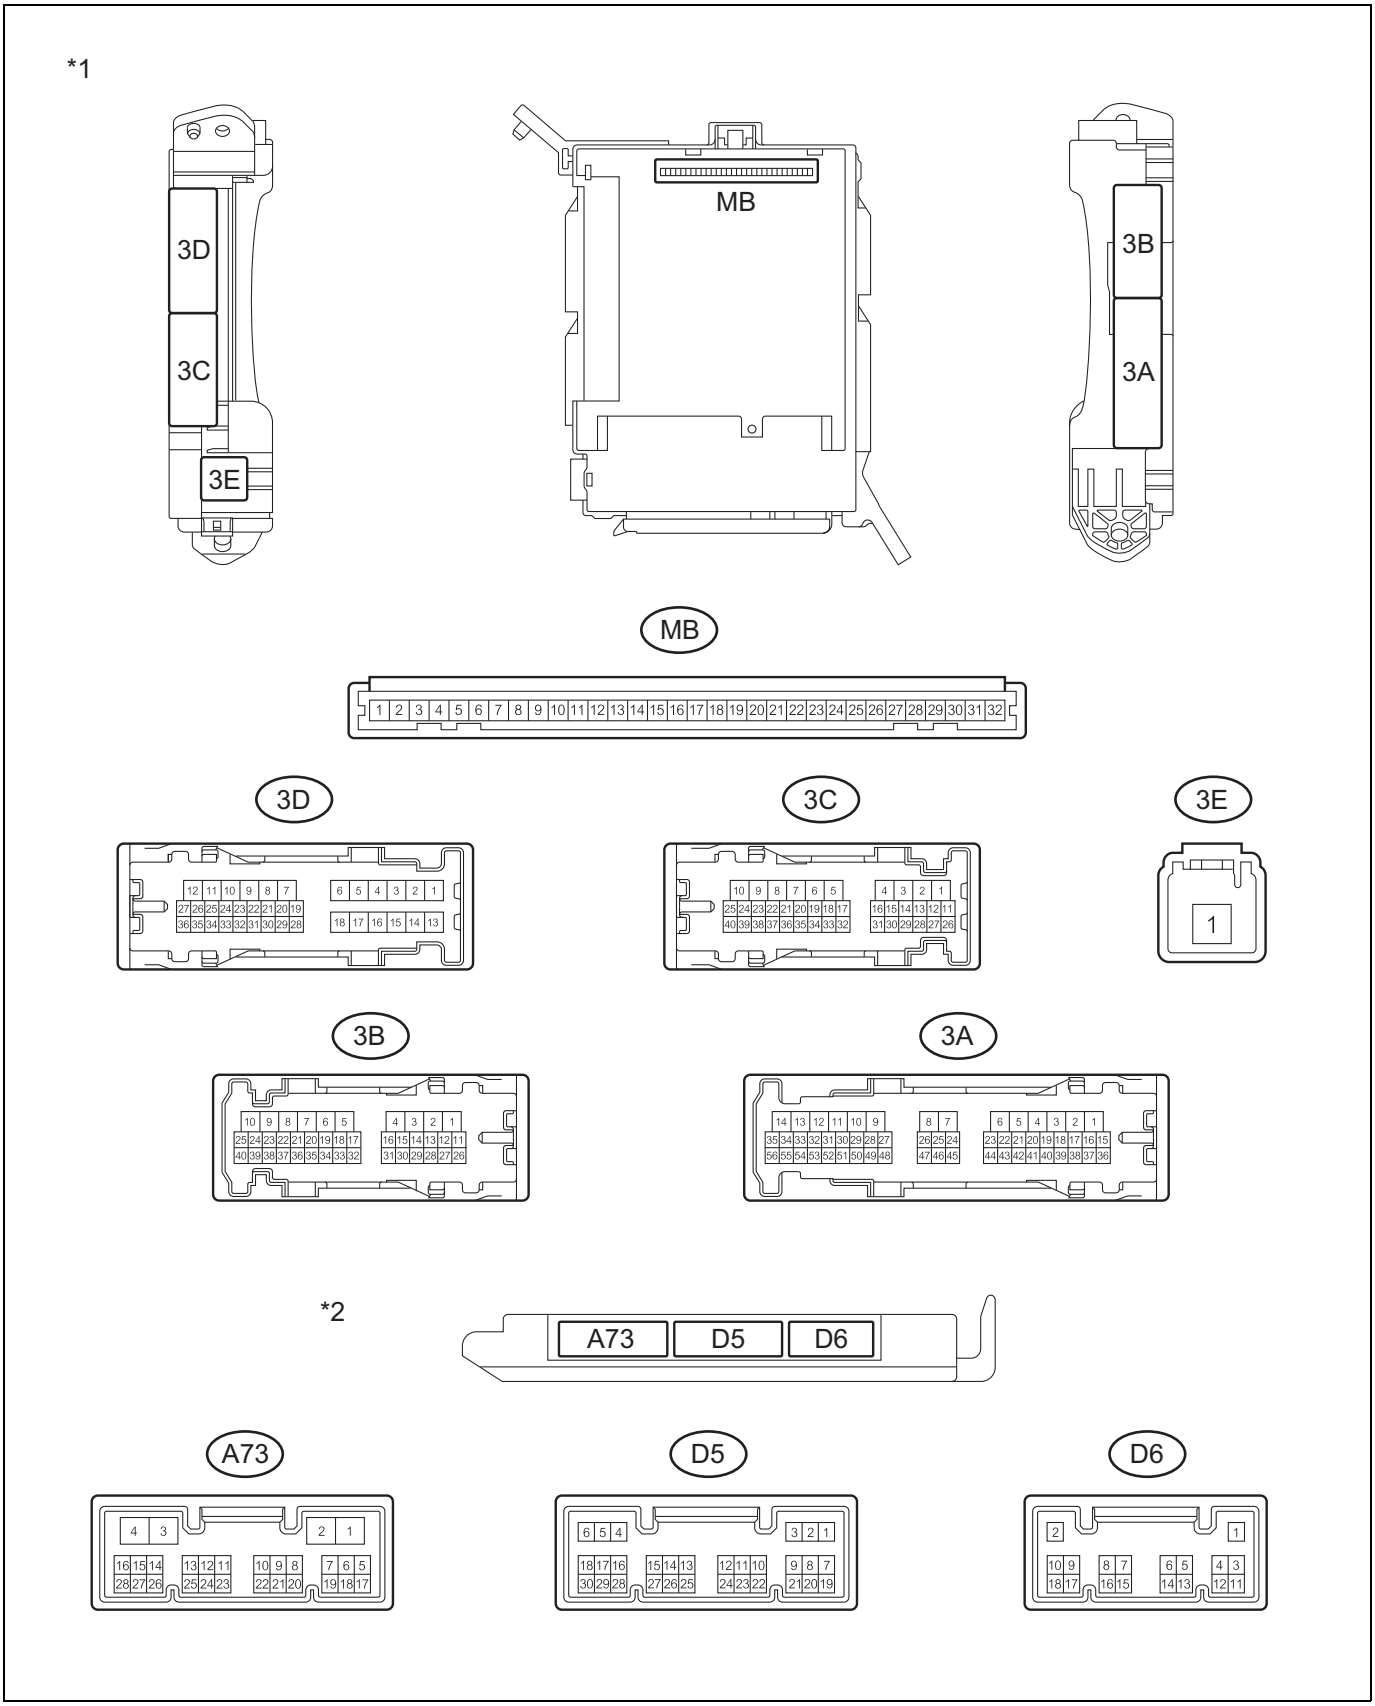
| Terminal No. (symbol) | Input/output | Wiring color | Terminal description | Conditions | Specified condition |
|---|---|---|---|---|---|
| D54-7 (AGND) - Chassis ground | - | GR - Chassis ground | Ground | Always | 1 Ωor less |

(3) Reconnect the D54 transponder key amplifier connector.

(4) Refer to the table below and measure the voltage and check for a pulse.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition |
|---|---|---|---|---|
| D54-1 (VC5) - D54-7 (AGND) | Input | Transponder key amplifier power supply | Key is not inserted to the ignition key cylinder. | 1 V or less |
| | | | Key is inserted to the ignition key cylinder. | 4.5 to 5.5V |
| D54-4 (CODE) - D54-7 (AGND) | Output | Key code data revision signal | Key is not inserted to the ignition key cylinder. | 1 V or less |
| | | | Key is inserted to the ignition key cylinder. | Pulse generation |
| D54-5 (TXCT) - D54-7 (AGND) | Output | Key code output signal | Key is not inserted to the ignition key cylinder. | 1 V or less |
| | | | Key is inserted to the ignition key cylinder. | Pulse generation |

2. Check the main body ECM (multiplex network body ECM).



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (multiplex network body ECM) |

(1) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.
(2) Disconnect the connectors D5, D6, and A73 of the main body ECM (multiplex network body ECM).

(3) Measure the resistance and voltage based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition |
|---|---|---|---|---|
| MB-1 - chassis ground | Input | Battery power supply | Always | 11 to 14 V |
| MB-8 - chassis ground | Input | IG SW power supply | IG SW ON | 11 to 14 V |
| | | | IG SW Off | 1 V or less |
| MB-9 - chassis ground | Input | ACC power supply | IG SW ACC | 11 to 14 V |
| | | | IG SW Off | 1 V or less |
| MB-11 - chassis ground | - | Ground | Always | 1 Ωor less |
| MB-32 - chassis ground | Input | Battery power supply | Always | 11 to 14 V |
| D5-22 - chassis ground | Input | Unlock warning switch input | Key is not inserted to the ignition key cylinder (OFF). | 1 V or less |
| | | | Key is inserted to the ignition key cylinder (ON). | 11 to 14 V |
| D6-1 - Chassis ground | - | Ground | Always | 1 Ωor less |
| A73-4 - chassis ground | - | Ground | Always | 1 Ωor less |

(4) Reconnect the connector D5, D6, and A73 of the main body ECM (multiplex network body ECM).

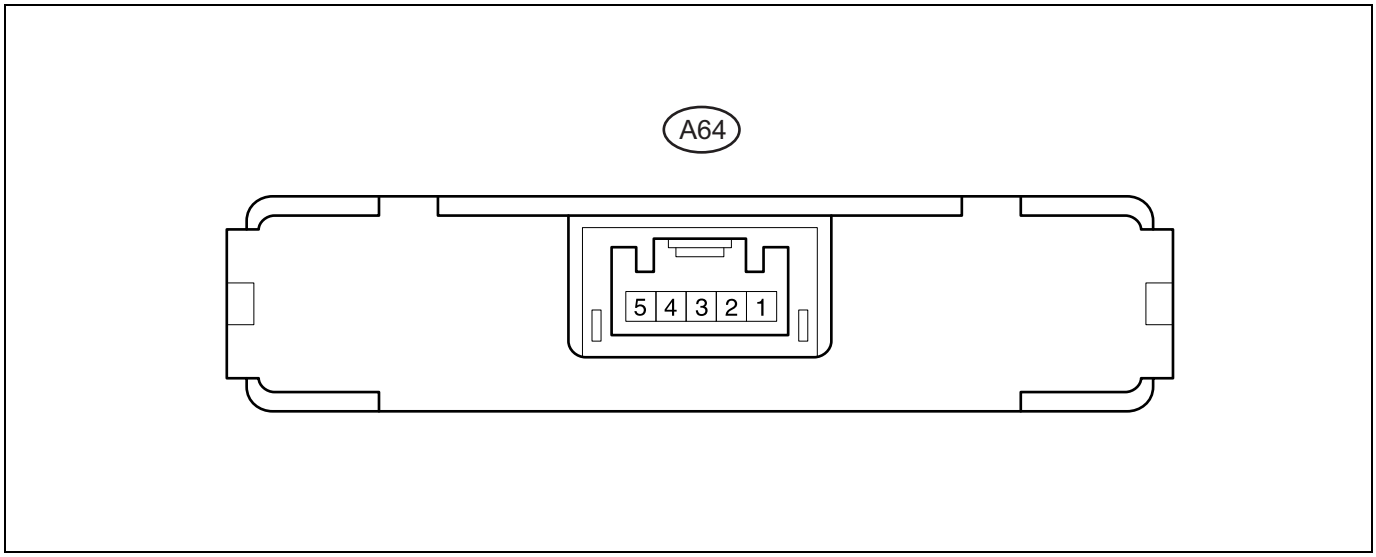
(5) Install the main body ECM (multiplex network body ECM) to the instrument panel junction block ASSY.

(6) Refer to the table below and measure the resistance and the voltage and check for a pulse.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition |
|---|---|---|---|---|
| A73-5 - chassis ground | Output | Key code data revision signal | Key is not inserted to the ignition key cylinder. | 1 V or less |
| | | | Key is inserted to the ignition key cylinder. | Pulse generation |
| A73-9 - chassis ground | Input/output | EFI communication | IG SW Off | 1 V or less |
| | | | IG SW ON | Pulse generation |
| A73-8 - chassis ground | Output | Transponder key amplifier power supply | Key is not inserted to the ignition key cylinder. | 1 V or less |
| | | | Key is inserted to the ignition key cylinder. | 4.5 to 5.5V |
| A73-15 - chassis ground | Input | Key code output signal | Key is not inserted to the ignition key cylinder. | 1 V or less |
| | | | Key is inserted to the ignition key cylinder. | Pulse generation |
| A73-16 - chassis ground | - | Transponder key amplifier GND-output short | Always | 1 Ωor less |
| A73-17 - chassis ground | Input/output | Transponder key ECM communication | IG SW Off | 1 V or less |
| | | | IG SW ON | Pulse generation |

*: with transponder key ECM ASSY

3. Check the transponder key ECM ASSY.



(1) Disconnect the D64 transponder ECM ASSY connector.

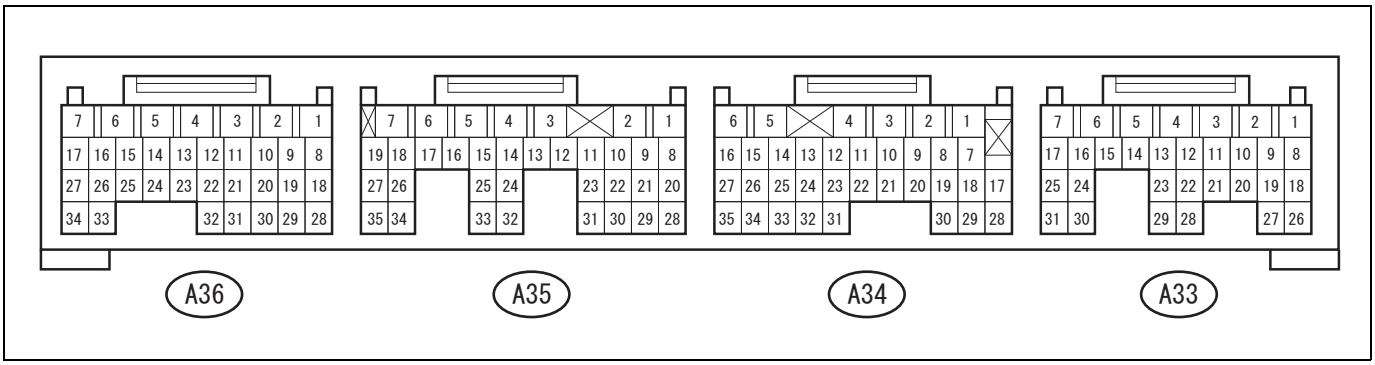
(2) Measure the resistance and voltage based on the following table.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition |
|---|---|---|---|---|
| A64-1 (+B) - Chassis ground | Input | Battery power supply | Always | 11 to 14 V |
| A64-5 (GND) - Chassis ground | - | Ground | Always | 1 Ωor less |

(3) Reconnect the D64 transponder ECM ASSY connector.
(4) Refer to the table below and measure the voltage and check for a pulse.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition |
|---|---|---|---|---|
| A64-3 (UART) - A64-5 (GND) | Input/output | Main body ECM communication | IG SW Off | 1 V or less |
| | | | IG SW ON | Pulse generation |

4. CHECK ECM



(1) Refer to the table below and measure the resistance and the voltage and check for a pulse.

| Terminal No. (symbol) | Input/output | Terminal description | Conditions | Specified condition |
|---|---|---|---|---|
| A33-1 (VBEC2) - A36-4 (GNDEG1) | Input | Battery power supply | IG SW Off | 1 V or less |
| | | | IG SW ON | 11 to 14 V |
| A33-2 (BATT) - A36-4 (GNDEG1) | Input | Battery power supply | Always | 11 to 14 V |
| A34-6 (VBEC1) - A36-4 (GNDEG1) | Input | Battery power supply | IG SW Off | 1 V or less |
| | | | IG SW ON | 11 to 14 V |
| A35-25 (IMO1) - A36-4 (GNDEG1) | Input/output | Main body ECM communication | IG SW Off | 1 V or less |
| | | | IG SW ON | Pulse generation |
| A36-4 (GNDEG1) - chassis ground | - | Ground | Always | 1 Ωor less |

## DTC CHECK / CLEAR

1. CHECK FOR MAIN BODY ECM (MULTIPLEX NETWORK BODY ECM) DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Body Control] →[DTC]
   (5) Check for DTCs.
2. CHECK FOR ECM DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Engine Control System] →[DTC]
   (5) Check for DTCs.
3. CLEAR MAIN BODY ECM (MULTIPLEX NETWORK BODY ECM) DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Body Control] →[Clear Memory]
   (5) Clear the DTCs.
4. CLEAR ECM DTC
   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Engine Control System] →[DTC]
   (5) Clear the DTCs.

## Data monitor / active test

1. Data monitor

NOTE:

Using the SSM4 to read the [Data monitor] allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the [Data monitor] information early in troubleshooting is one way to save diagnostic time.

CAUTION:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the SSM4 on.
(4) Enter the following menus: [Body Control] →[Data monitor]
(5) Enter the following menus: [Engine Control System] →[Data monitor]
(6) Read the [Data monitor] according to the display on the SSM4.

Main Body

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| [Ignition] | Ignition switch ON signal / OFF or ON | OFF: Ignition switch ACC or off<br>ON: Ignition switch ON | - |
| [ACC SW] | Ignition switch ACC signal / OFF or ON | OFF: Ignition switch ACC or off<br>ON: Ignition switch ON | - |
| [Key Unlock Warning SW] | Unlock warning switch signal / OFF or ON | OFF: No key in ignition key cylinder<br>ON: Key inserted in ignition key cylinder | - |
| [BATT voltage (control)] | Battery power supply voltage / 10 to 15V | 11 to 14V | - |
| [BATT voltage (BACKUP)] | Battery power supply backup voltage / 10 to 15V | 11 to 14V | - |
| [Ignition Power Supply Voltage] | Ignition switch power supply voltage / 10 to 15V | 11 to 14V | - |
| [ACC voltage] | ACC switch power supply voltage / 10 to 15V | 11 to 14V | - |
| [Immobilizer lamp output] | Security indicator light status / OFF or ON | OFF: Security indicator light OFF<br>ON: Security indicator light blinks | - |
| [Immobilizer power Supply] | Main body ECU (multiplex network body ECU) engine immobiliser system power supply output status / OFF or ON | OFF: Engine immobiliser unset<br>ON: Engine immobiliser set | - |

Engine and ECT

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| [Immobilizer Fuel Cut] | Status of immobiliser fuel cut / ON or OFF | - | - |
| [Immobilizer Fuel Cut History] | Status of immobiliser fuel cut history / ON or OFF | - | - |

2. Active test

NOTE:

Using the SSM4 to perform [Active Test] allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing [Active Test] early in troubleshooting is one way to save diagnostic time. [Data monitor] information can be displayed while performing [Active Test].

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the SSM4 on.
(4) Enter the following menus: [Body Control] →[Active Test]
(5) According to the display on the SSM4, perform the [Active Test].

Main Body

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| [Security Indicator] | Security indicator light | ON/OFF | - |

## DIAGNOSTIC TROUBLE CODE CHART

Main Body ECU (Multiplex Network Body ECU)

| DTC Code | Detection Item | See page |
|---|---|---|
| B1401 | [M collation NG] | TD - 284 |
| B1402 | [Immobilizer Key collation NG] | TD - 285 |

| B1578 | [Meter Failure] | TD - 307 |

TD

## DTC B1401 M collation NG

Circuit description

The main body ECM (multiplex network body ECM) memorizes this code if the reference code does not match between the main body ECM (multiplex network body ECM) and the combination meter ASSY.

| DTC NO. | DTC detecting condition | Faulty part |
|---|---|---|
| B1401 | Reference codes are incompatible between main body ECM (multiplex network body ECM) and combination meter ASSY. | Combination meter ASSY |

Inspection steps

CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the combination meter ASSY, refer to the REGISTRATION MANUAL FOR IMMOBILIZER.

| 1 | DTC check |
|---|---|

(1) Check the DTC. (Refer to TD - 282)

Criteria: DTC B1407 or B1408 is not output.

NG → Go to "List of diagnostic codes" (Refer to TD - 284)

OK

| 2 | Registration of ECM ID codes (combination meter ASSY - main body ECM) |
|---|---|

(1) Register ECM ID codes. (Refer to the "Registration manual for immobilizer")
Criteria: You can register ECM ID codes.

NG → Go to Step 3.

OK

Complete

| 3 | DTC check |
|---|---|

(1) Check the DTC. (Refer to TD - 282)
Criteria: DTC B1407 or B1408 is not output.

NG → Go to "List of diagnostic codes" (Refer to TD - 284)

OK

Replacement of combination meter ASSY

## DTC B1402 Immobilizer Key collation NG

Circuit description

The main body ECM (multiplex network body ECM) outputs this code if an unauthorized key (key not registered in main body ECM (multiplex network body ECM)) is inserted in the ignition key cylinder.

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1402 | When unauthorized key (key not registered in main body ECM (multiplex network body ECM)) is inserted in ignition key cylinder | • Key<br>• Main body ECM (multiplex network body ECM) |

Inspection steps

CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the main body ECM (multiplex network body ECM), refer to the REGISTRATION MANUAL FOR IMMOBILIZER.

| 1 | DTC check |
|---|---|

(1) Check the DTC. (Refer to TD - 282)
Criteria: DTC B1410 or B1411 is not output.

NG → Go to "List of diagnostic codes" (Refer to TD - 284)

OK

| 2 | Key registration |
|---|---|

(1) Register the key. (Refer to the "Registration manual for immobilizer")
Criteria: Key ID can be registered.

NG → Go to Step 3.

OK

Complete

| 3 | Key registration |
|---|---|

(1) Register the key ID by using the key not registered. (Refer to the "Registration manual for immobilizer")
Criteria: Key ID can be registered.

NG → Replace the main body ECM (multiplex network body ECM).

OK

Complete

| DTC | B1405 | SCU collation NG |
|---|---|---|

Circuit description
The main body ECM (multiplex network body ECM) outputs this code if the reference code does not match between the main body ECM (multiplex network body ECM) and the transponder key ECM ASSY.

| DTC NO. | DTC detecting condition | Faulty part |
|---|---|---|
| B1405 | The reference code of main body ECM (multiplex network body ECM) and the reference code sent from the transponder key ECM ASSY do not match. | Transponder key ECM ASSY |

Inspection steps
CAUTION:
- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the transponder key ECM ASSY, refer to the REGISTRATION MANUAL FOR IMMOBILIZER.

| 1 | DTC check |
|---|---|

(1) Check the DTC. (Refer to TD - 282)
Criteria: DTC B1406 or B1409 is not output.

NG → Go to "List of diagnostic codes" (Refer to TD - 284)

OK

| 2 | Registration of ECM IDs (transponder key ECM ASSY - main body ECM) |
|---|---|

(1) Check the ECM ID registration. (Refer to the "Registration manual for immobilizer")
Criteria: You can register ECM IDs.

NG → Go to Step 3.

OK ↓

Complete

| 3 | DTC check |
|---|---|

(1) Check the DTC. (Refer to TD - 282)
Criteria: DTC B1406 or B1409 is not output.

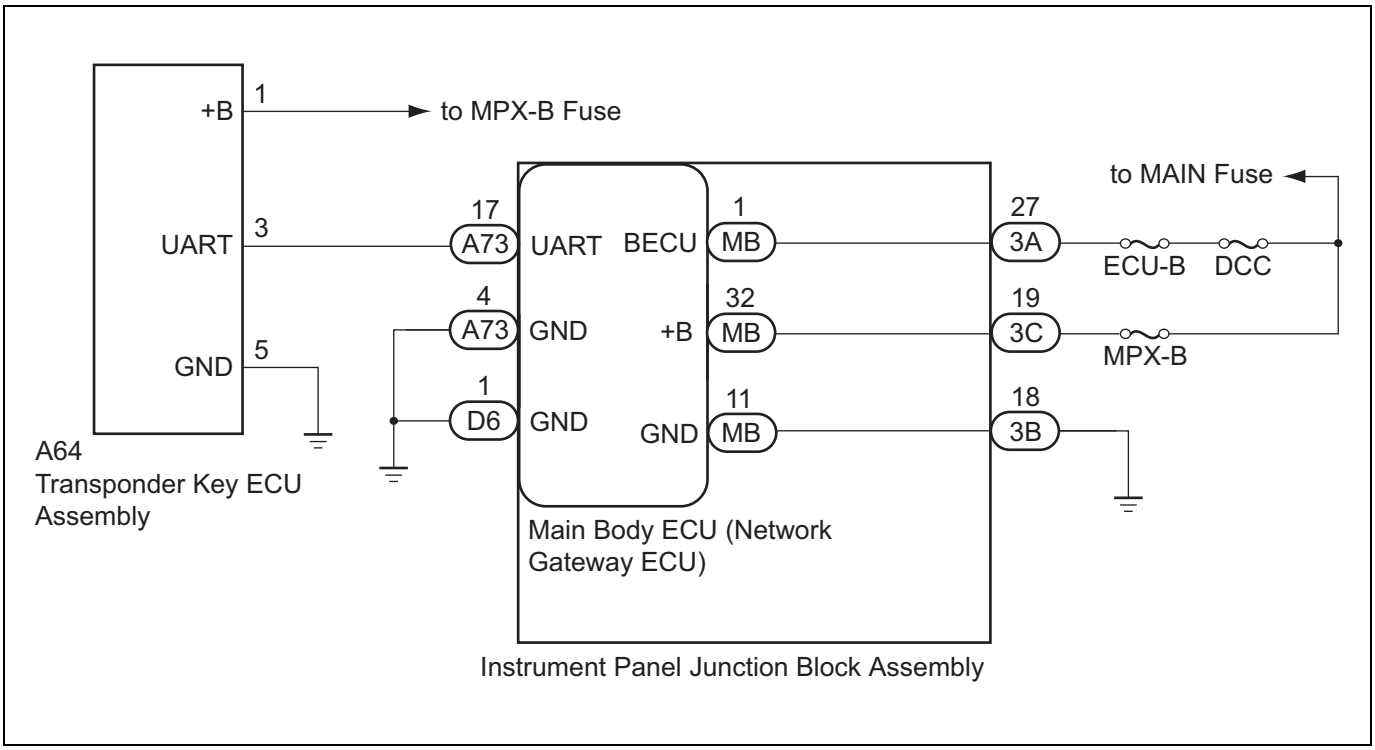
Circuit figure



TD

Inspection steps

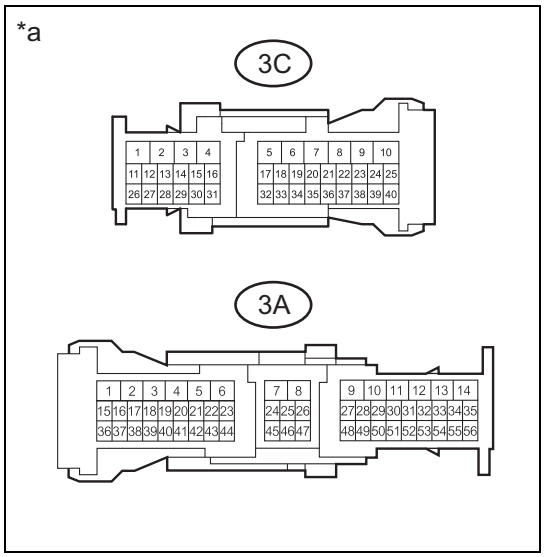
CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the main body ECM (multiplex network body ECM), the transponder key, or the transponder key ECM ASSY, refer to the "Registration manual for immobilizer".
- Before performing the following inspection steps, check the fuses related to this system.

| | |
|---|---|
| 1 | Check the harness and connector (instrument panel junction block - battery, body, ground). |

(1) Disconnect the connector A73 and D6 of the main body ECM (multiplex network body ECM).

(2) Disconnect the connector 3A, 3B, and 3C of instrument panel junction block ASSY.



(3) Measure the voltage according to the following table.

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) |

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-27 - chassis ground | Always | 11 to 14V |
| 3C-19 - Chassis ground | Always | 11 to 14V |

(4) Measure the resistance according to the following table.

Resistance

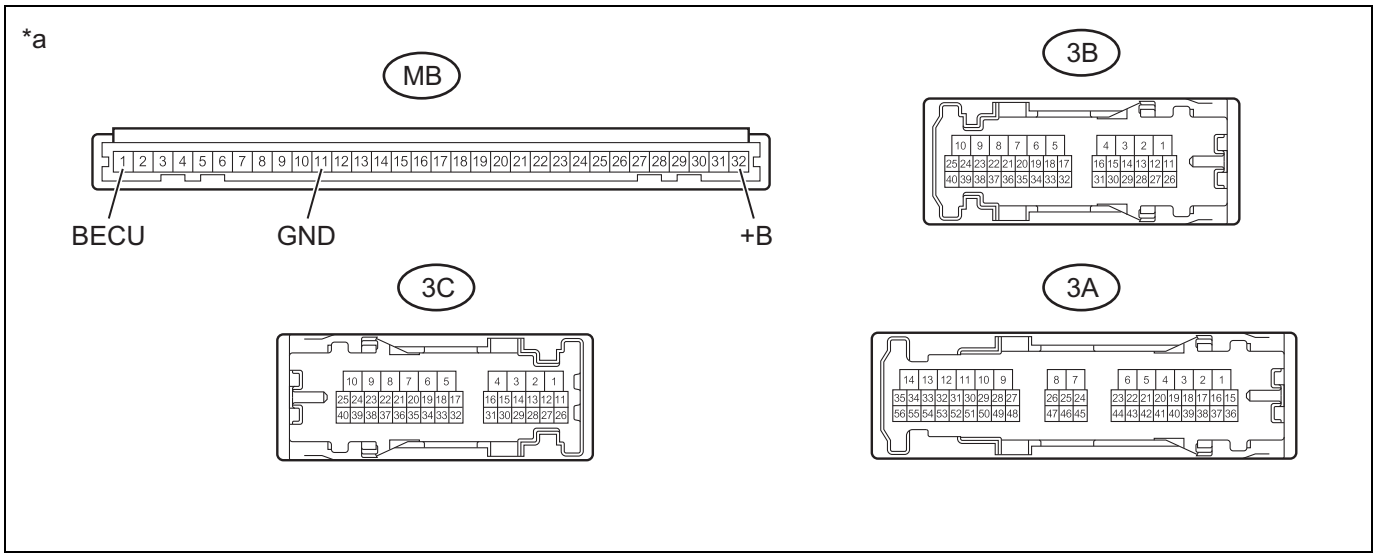
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-18 - chassis ground | Always | 1 Ωor less |
| A73-4 - chassis ground | Always | 1 Ωor less |
| D6-1 - Chassis ground | Always | 1 Ωor less |

NG → Repair or replacement of the harnesses or connectors

OK

| 2 | Unit inspection of instrument panel junction block ASSY |
|---|---|

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.
(3) Measure the resistance according to the following table.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| MB-1 - 3A-27 | Always | 1 Ωor less |
| MB-32 - 3C-19 | Always | 1 Ωor less |
| MB-11 - 3B-18 | Always | 1 Ωor less |

NG → Replacement of the instrument panel junction block ASSY

OK

| 3 | Check the harness and connector (transponder key ECM ASSY - battery, body, ground). |
|---|---|

(1) Disconnect the D64 transponder ECM ASSY connector.
(2) Measure the voltage according to the following table.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A64-1 (+B) - Chassis ground | Always | 11 to 14V |

(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A64-5 (GND) - Chassis ground | Always | 1 Ωor less |

NG → Repair or replacement of the harnesses or connectors

OK

| 4 | Check the harness and connector (main body ECM - transponder key ECM ASSY). |
|---|---|

TD

(1) Measure the voltage and resistance according to the following table.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A73-17 - chassis ground | Always | 1 V or less |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A73-17 - A64-3 (UART) | Always | 1 Ωor less |
| A73-17 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of the harnesses or connectors

OK

| 5 | Replace transponder key ECM ASSY. |
|---|---|

(1) Temporarily replace the transponder key ECM with new one or one that is functioning properly. (Refer to the "Registration manual for immobilizer")

CAUTION:

Do not perform registration.

Next

| 6 | DTC check |
|---|---|

(1) Check the DTC. (Refer to TD - 282)

Criteria: DTC B1409 is not output.

NG → Return the transponder key ECM ASSY to its original position, and replace the main body ECM (multiplex network body ECM)

OK

END (faulty transponder key ECM ASSY)

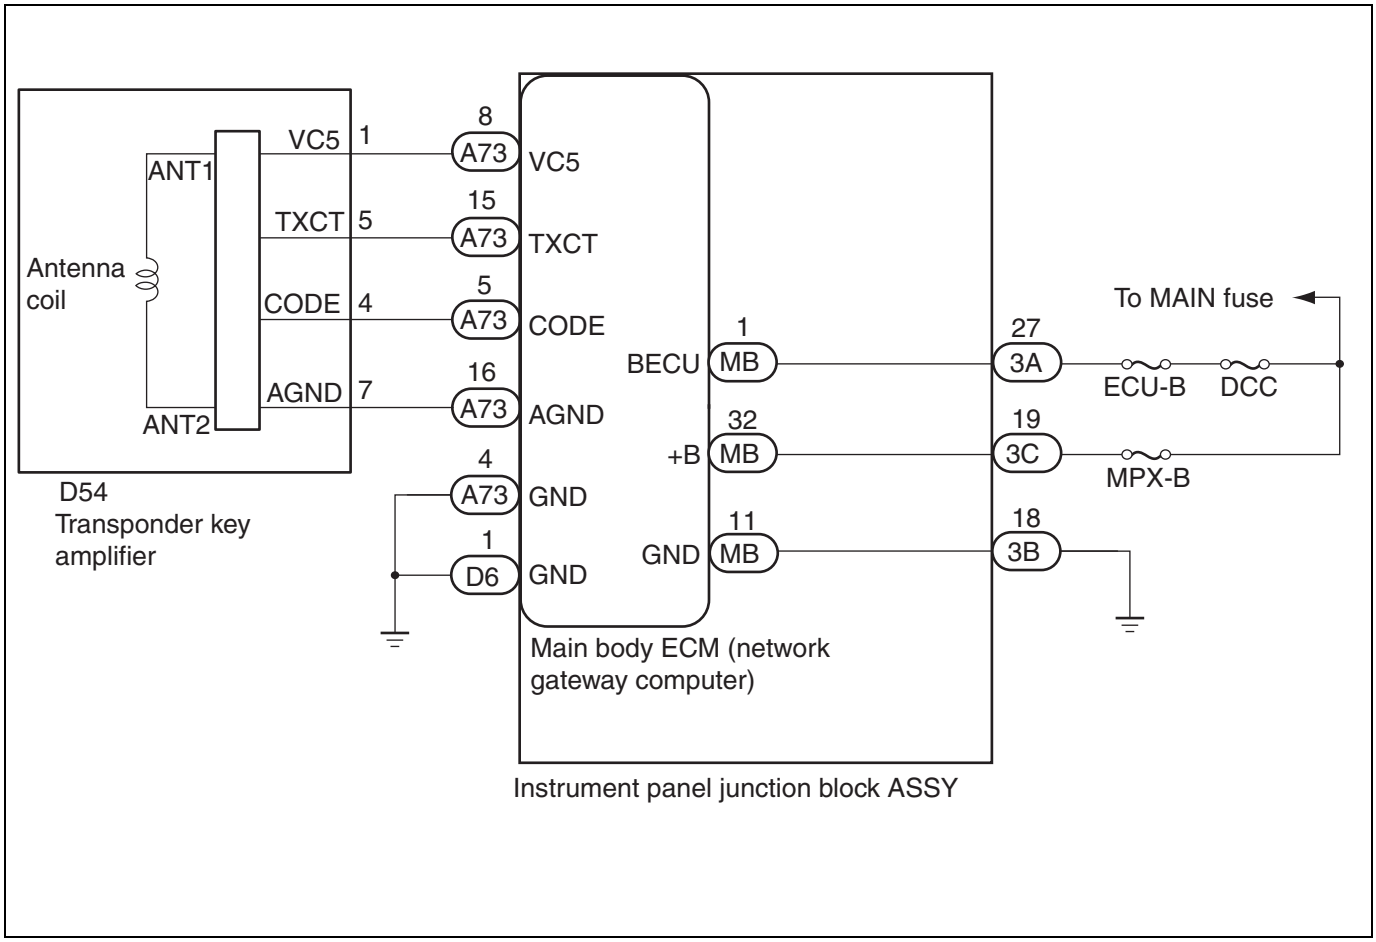
| DTC | B1410 | Transponder communication error |
|---|---|---|

Circuit description

The main body ECM (network gateway computer) outputs this code if a communication error is detected between the key and the main body ECM (network gateway computer) or if the key for another vehicle is inserted in the ignition key cylinder.

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1410 | Communication error between the key and the main body ECM (network gateway computer) | • Key<br>• Transponder key amplifier<br>• Instrument panel junction block ASSY<br>• Main body ECM (Network gateway computer)<br>• Wiring harness or connector |

Circuit figure



Inspection steps

CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the main body ECM (multiplex network body ECM), refer to the "Registration manual for immobilizer".
- Before performing the troubleshooting, check the fuse of this circuit.

| 1 | DTC check |
|---|---|

(1) Insert the registered key into the ignition key cylinder.
(2) Using the SSM4, check if the diagnostic code is output for all keys registered with the vehicle.

Result

| Result | Go to |
|---|---|
| Diagnostic code B1410 is output for all keys. | A |
| There is a key which does not output diagnostic code B1410. | B |

B → Replace the key that does not output B1410.

A

TD

| 2 | Inspection of the wire harnesses and connectors (power supply, GND) |
|---|---|

(1) Disconnect connectors A73 and D6 for the main body ECM (network gateway computer).
(2) Disconnect connectors 3A, 3B, and 3C for the instrument panel junction block ASSY.
(3) Measure the voltage and resistance between terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-27 - chassis ground | Always | 11 to 14 V |
| 3C-19 - Chassis ground | Always | 11 to 14 V |

Resistance

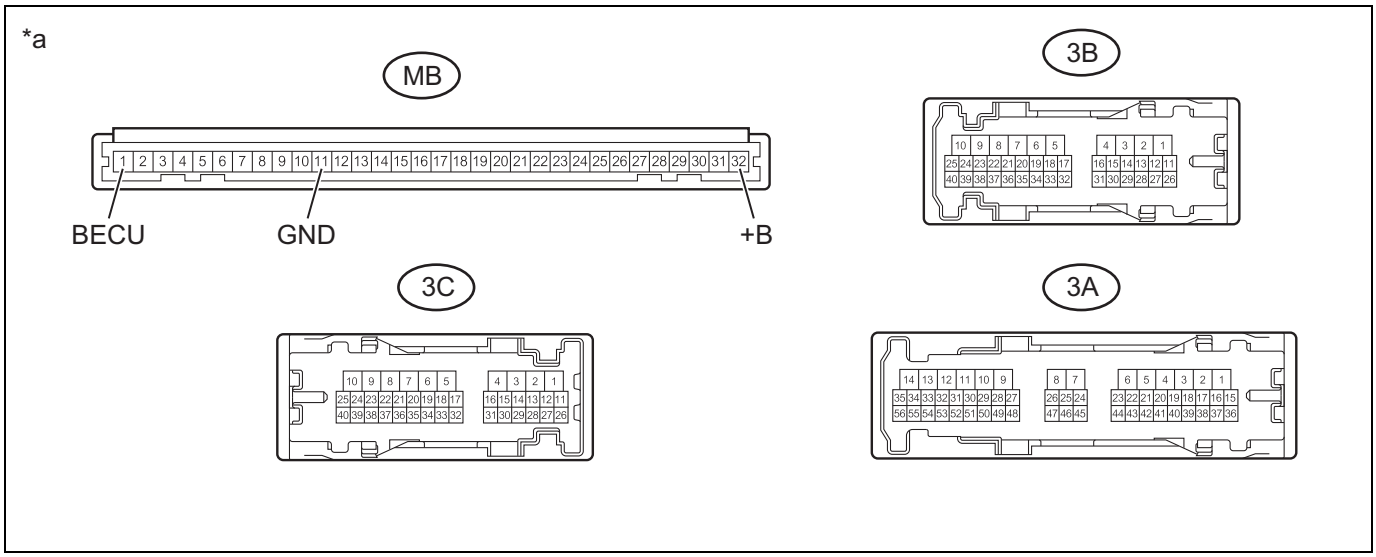
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-18 - chassis ground | Always | Less than 1 Ω |
| A73-4 (GND) - chassis ground | Always | Less than 1 Ω |
| D6-1 (GND) - chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Unit inspection of the instrument panel junction block ASSY. |
|---|---|

(1) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.
(2) Measure the resistance between the terminals.



Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| MB-1 (BECU) - 3A-27 | Always | Less than 1 Ω |
| MB-32 (+B) - 3C-19 | Always | Less than 1 Ω |
| MB-11 (GND) - 3B-18 | Always | Less than 1 Ω |

TD

Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

NG → Replacement of the instrument panel junction block ASSY

OK

| 4 | Inspection of the transponder key amplifier (power supply circuit) |
|---|---|

(1) Install the main body ECM (network gateway computer) on the instrument panel junction block ASSY.
(2) Connect connectors 3A, 3B, and 3C for the instrument panel junction block ASSY.
(3) Disconnect the connector D54 of the transponder key amplifier.
(4) Measure the voltage between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D54-1 (VC5) - Chassis ground | Approximately 200 ms have passed after key is inserted in ignition key cylinder | 4.5 to 5.5 V |

Result

| Result | Go to |
|---|---|
| NG | A |
| OK | B |

B → Go to Step 6.

A

| | |
|---|---|
| 5 | Inspection of wiring harness and connector (Transponder key amplifier - Main body ECM (network gateway computer)) |

(1) Disconnect the A73 connector of the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D54-1 (VC5) - A73-8 (VC5) | Always | Less than 1 Ω |
| D54-1 (VC5) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

TD

OK

Replacement of the main body ECM (Network gateway computer)

| | |
|---|---|
| 6 | Inspection of the wiring harness and the connector (transponder key amplifier - chassis ground) |

(1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D54-7 (AGND) - Chassis ground | Always | Less than 1 Ω |

Result

| Result | Go to |
|---|---|
| NG | A |
| OK | B |

B → Go to Step 8.

A

| | |
|---|---|
| 7 | Inspection of wiring harness and connector (Transponder key amplifier - Main body ECM (network gateway computer)) |

(1) Disconnect the A73 connector of the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D54-7 (AGND) - A73-16 (AGND) | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (Network gateway computer)

| | |
|---|---|
| 8 | Inspection of wiring harness and connector (Transponder key amplifier - Main body ECM (network gateway computer)) |

(1) Disconnect the A73 connector of the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D54-5 (TXCT) - A73-15 (TXCT) | Always | Less than 1 Ω |
| D54-4 (CODE) - A73-5 (CODE) | Always | Less than 1 Ω |
| D54-5 (TXCT) - Chassis ground | Always | 10 kΩ or more |
| D54-4 (CODE) - Chassis ground | Always | 10 kΩ or more |

NG > Repair or replacement of wiring harness or connector

OK

| | |
|---|---|
| 9 | Replacement of the transponder key amplifier |

(1) Replace with a new or normal transponder key amplifier.

Next

| | |
|---|---|
| 10 | DTC check |

(1) Insert the key into the ignition key cylinder, and then turn to IG OFF or ACC ON.
(2) Check DTC using SSM4.
Criteria: DTC B1410 is not output

NG > Go to Step 11.

OK

Complete (Faulty transponder key amplifier)

| | |
|---|---|
| 11 | DTC check |

(1) Replace the key that outputs diagnostic code B1410, and perform registration. (Refer to the "Registration manual for immobilizer")
(2) Check DTC using SSM4.
Criteria: DTC B1410 is not output

NG > Replacement of the main body ECM (network gateway computer) (Refer to PD - 23)

TD

OK

Complete (Faulty key)

| DTC | B1411 | Immobilizer antenna communication failure |
|---|---|---|

Circuit description

The main body ECM (network gateway computer) outputs this code if a fault is detected in the antenna coil inside the transponder key amplifier.

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1411 | Faulty antenna coil inside transponder key amplifier | • Transponder key amplifier<br>• Main body ECM (Network gateway computer) |

Inspection steps

CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the main body ECM (network gateway computer), refer to the "Registration manual for immobilizer".

TD

| 1 | DTC check |
|---|---|

(1) Remove the key from the ignition key cylinder.
(2) Insert the key into the ignition key cylinder, and then turn the ignition switch to ON.
(3) Check DTC using SSM4.
Criteria: DTC B1411 is not output

NG → Go to Step 2.

OK

Complete

| 2 | Replacement of the transponder key amplifier |
|---|---|

(1) Replace with a new or normal transponder key amplifier.

Next

| 3 | DTC check |
|---|---|

(1) Insert the key into the ignition key cylinder, and then turn the ignition switch to ON.
(2) Check DTC using SSM4.
Criteria: DTC B1411 is not output

NG → Replacement of the main body ECM (Network gateway computer)

OK

Complete (Faulty transponder key amplifier)

| DTC | B1570 | Antenna |
|---|---|---|

Circuit description

The main body ECM (multiplex network body ECM) outputs this code if a fault is detected in the antenna coil inside the transponder key amplifier.

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1570 | Faulty antenna coil inside transponder key amplifier | • Transponder key amplifier<br>• Main body ECM (multiplex network body ECM) |

Inspection steps

CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting. (Refer to TD - 277)
- When replacing the main body ECM (multiplex network body ECM), refer to the REGISTRATION MANUAL FOR IMMOBILIZER.

TD

| 1 | DTC check |
|---|---|

(1) Remove the key from the ignition key cylinder.
(2) Insert the key into the ignition key cylinder, and then turn the ignition switch to ON.
(3) Check DTC using SSM4. (Refer to TD - 282)
Criteria: DTC B1570 is not output

NG → Go to Step 2.

OK

Complete

| 2 | Replace the transponder key amplifier. |
|---|---|

(1) Replace with a new or normal transponder key amplifier. (Refer toTD - 337)

Next

| 3 | DTC check |
|---|---|

(1) Insert the key into the ignition key cylinder, and then turn the ignition switch to ON.
(2) Check DTC using SSM4. (Refer to TD - 282)
Criteria: DTC B1570 is not output

NG → Replacement of main body ECM (multiplex network body ECM) (Refer to PD - 23)

OK

Complete (Faulty transponder key amplifier)

| DTC | B1571 | Mismatching identification code (immobilizer collation mismatched) |
|---|---|---|

Circuit description

The ECM outputs this code if the reference code between main body ECM (multiplex network body ECM) and the ECM does not match.

| DTC NO. | DTC detecting condition | Inspection parts |
|---|---|---|
| B1571 | Reference codes are incompatible between main body ECM (multiplex network body ECM) and ECM. | • ECM<br>• Main body ECM (multiplex network body ECM) |

TD

Inspection steps

CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the main body ECM (multiplex network body ECM) or ECM, refer to the REGISTRATION MANUAL FOR IMMOBILIZER.

| 1 | Check the number of registered key. |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Enter the following menus: [Body Control] →[Data monitor] →[Number of registered ID]
(5) Check the number of registered key.

Result

| Result | Go to |
|---|---|
| Number of registered keys is 0 | A |
| Number of registered keys is 1 or more. | B |

B → Go to Step 3.

A

| 2 | Key registration |
|---|---|

(1) Register the key. (Refer to the "Registration manual for immobilizer")
Criteria: Key ID can be registered.

NG → Go to Step 4.

OK

Complete

| 3 | Registration of ECM ID codes (ECM - main body ECM (multiplex network body ECM)) |
|---|---|

(1) Register ECM ID codes. (Refer to the "Registration manual for immobilizer")
Criteria: You can register ECM ID codes.

NG → Go to Step 4.

OK

Complete

| 4 | DTC check |
|---|---|

(1) Check the DTC. (Refer to TD - 282)
Result

| Result | Go to |
|---|---|
| DTC B1571 is not output. | A |
| DTC other than B1571 is output. | B |

B → Go to "List of diagnostic codes" (Refer to TD - 284)

A

| 5 | Replacement of the ECM |
|---|---|

(1) Temporarily replace the ECM with new one or one that is functioning properly.

Next

| 6 | Registration of ECM ID codes (ECM - main body ECM (multiplex network body ECM)) |
|---|---|

(1) Register ECM ID codes. (Refer to the "Registration manual for immobilizer")
Criteria: You can register ECM ID codes.

TD

Inspection steps

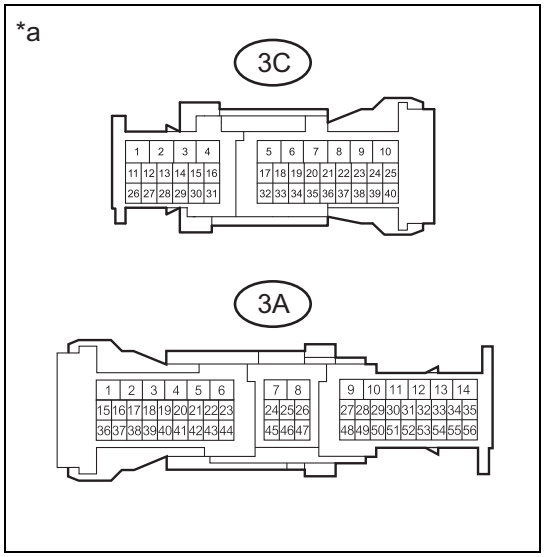
CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the main body ECM (multiplex network body ECM) or ECM, refer to the REGISTRATION MANUAL FOR IMMOBILIZER.
- Before performing the following inspection steps, check the fuses related to this system.

| | |
|---|---|
| 1 | Check the harness and connector (battery, body, GND-output short). |

(1) Disconnect the connector A73 and D6 of the main body ECM (multiplex network body ECM).

(2) Disconnect the connector 3A, 3B, and 3C of instrument panel junction block ASSY.



(3) Measure the voltage according to the following table.

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) |

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-27 - chassis ground | Always | 11 to 14 V |
| 3C-19 - Chassis ground | Always | 11 to 14 V |

(4) Measure the resistance according to the following table.

Resistance

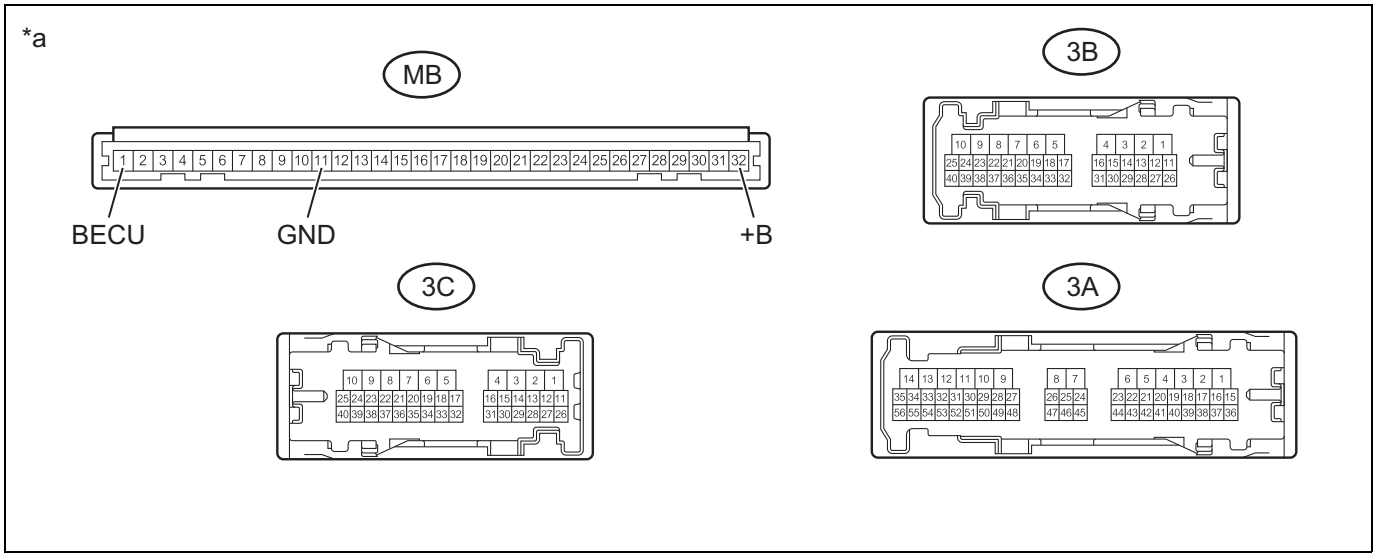
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-18 - chassis ground | Always | 1 Ωor less |
| A73-4 - chassis ground | Always | 1 Ωor less |
| D6-1 - Chassis ground | Always | 1 Ωor less |

NG → Repair or replacement of the harnesses or connectors

OK

| | |
|---|---|
| 2 | Inspect the instrument panel junction block ASSY unit. |

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.
(3) Measure the resistance according to the following table.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| MB-32 - 3C-19 | Always | 1 Ωor less |
| MB-11 - 3B-18 | Always | 1 Ωor less |

NG → Replacement of the instrument panel junction block ASSY

OK

| 3 | Check the harness and connector (main body ECM (multiplex network body ECM) - ECM). |
|---|---|

(1) Disconnect the connector A73 of the main body ECM (multiplex network body ECM).
(2) Disconnect the A35 and A36 ECM connector.
(3) Measure the voltage and resistance according to the following table.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A73-9 - chassis ground | Always | 1 V or less |
| A35-25 (IMO1) - Chassis ground | Always | 1 V or less |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A73-9 - A35-25 (IMO1) | Always | 1 Ωor less |
| A36-4 (GNDEG1) - chassis ground | Always | 1 Ωor less |
| A73-9 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of the harnesses or connectors

OK

| 4 | Replacement of the ECM |
|---|---|

(1) Temporarily replace the ECM with new one or one that is functioning properly.
(2) Register the ECM communication ID (Refer to the REGISTRATION MANUAL FOR IMMOBILIZER).

Next

| 5 | DTC check |
|---|---|

(1) Turn IG to ON and wait for 5 seconds.
(2) Check the DTC. (Refer to TD - 282)
Criteria: DTC B1572 is not output.

NG → Replacement of main body ECM (multiplex network body ECM)

OK

END (faulty ECM)

| DTC | B1576 | EGI unit EEPROM |

| A73-9 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of the harnesses or connectors

OK

| | |
|---|---|
| 5 | Replacement of the ECM |

(1) Temporarily replace the ECM with new one or one that is functioning properly.
(2) Register the ECM communication ID. (Refer to the "Registration manual for immobilizer")

Next

| | |
|---|---|
| 6 | DTC check |

(1) Check the DTC. (Refer to TD - 282)
Criteria: The diagnostic code B1578 is not output.

NG → Replacement of main body ECM (multiplex network body ECM)

OK

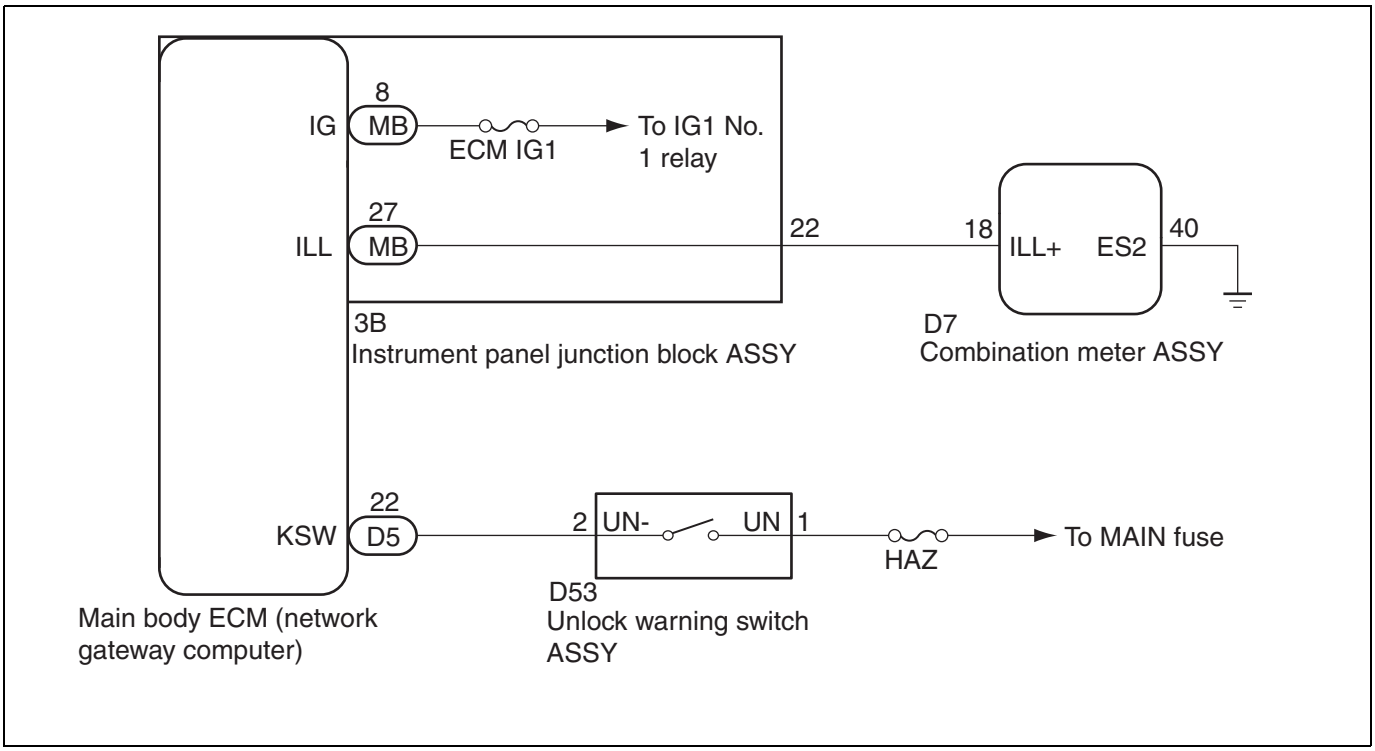
Complete

## Security indicator does not blink

Circuit description

When the immobilizer function is set, the main body ECM (network gateway computer) makes the security indicator light in the combination meter ASSY blink.

Circuit figure



Inspection steps

CAUTION:

- The engine immobilizer system uses the CAN communication system. First, following the “How to troubleshoot”, check that no malfunction is present in the communication system before proceeding with troubleshooting.
- When replacing the combination meter ASSY and the main body ECM (multiplex network body ECM), refer to the "Registration manual for immobilizer".

| 1 | DTC check |
|---|---|

(1) Check DTC using SSM4. (Refer to TD - 282)

Criteria: Diagnostic code is not output.

NG → Go to "List of diagnostic codes" (Refer to TD - 284)

OK

| 2 | Implementation of the SSM4 active test (security indicator) |
|---|---|

(1) Use the SSM4 to perform the active test, and check that the security indicator light lights up. (Refer to TD - 283)

[SSM4 screen: [Each System] →[Body Control] →[Active Test]]

| Item | Drive |
|---|---|
| [Security Indicator] | Output/stop |

Criteria: The security indicator light lights up / turns off.

NG → Go to Step 6.

OK

| 3 | Reading SSM4 data (IG SW, key unlock warning SW) |
|---|---|

(1) Using the SSM4, follow the screen display and read the data monitor. (Refer to TD - 283)

[SSM4 screen: [Each System] →[Body Control] →[Data monitor]]

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Ignition] | The ignition switch status is displayed.<br>Display range: [ON]/[OFF] | [ON]: IG ON<br>[OFF]: IG OFF | - |
| [Key Unlock Warning SW] | Status of the unlock warning switch<br>Display range: [ON]/[OFF] | [ON]: The key is in the ignition key cylinder.<br>[OFF]: The key is not in the ignition key cylinder. | - |

Criteria: The data monitor value is normal.

Result

| Result | Go to |
|---|---|
| OK | A |
| NG (The data monitor item "Ignition" is an error.) | B |
| NG (The data monitor item "Key Unlock Warning SW" is an error.) | C |

C → Go to Step 4.

A

Replacement of the main body ECM (network gateway computer) (Refer to PD - 23)

| 4 | Unit inspection of the unlock warning switch ASSY |
|---|---|

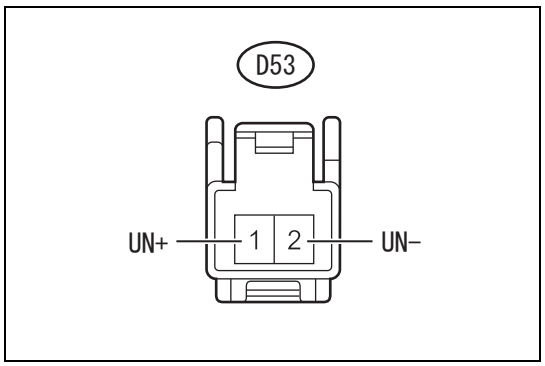
(1) Remove the unlock warning switch ASSY. (Refer to DL - 98)
(2) Perform the unit inspection of the unlock warning switch ASSY. (Refer to DL - 99)

NG → Replacement of the unlock warning switch ASSY (Refer to DL - 98)

OK

TD

| 5 | Inspection of the wire harnesses and connectors (unlock warning switch ASSY - main body ECM (network gateway computer)) |
|---|---|



(1) Disconnect connector D5 of the main body ECM (network gateway computer).
(2) Measure the voltage and resistance between terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D53-1 (UN+) - Chassis ground | Always | 11 to 14 V |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D53-2 (UN-) - D5-22 (KSW) | Always | Less than 1 Ω |
| D53-2 (UN-) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (network gateway computer) (Refer to PD - 23)

| 6 | Inspection of the wiring harnesses and the connectors (instrument panel junction block ASSY - combination meter ASSY) |
|---|---|

(1) Disconnect the connector 3B of the instrument panel junction block ASSY.
(2) Disconnect connector D7 of the combination meter ASSY.
(3) Measure the resistance between the terminals.

Resistance

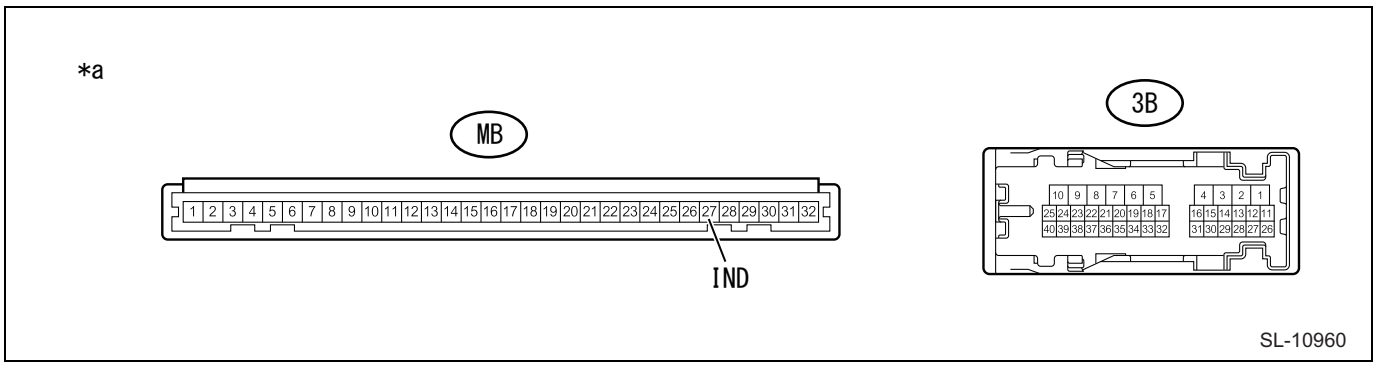
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-22 - D7-18 (ILL+) | Always | Less than 1 Ω |
| D7-40 (ES2) - Chassis ground | Always | Less than 1 Ω |
| 3B-22 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 7 | Unit inspection of the instrument panel junction block ASSY. |
|---|---|

(1) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.
(2) Measure the resistance between the terminals.



Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| MB-27 (IND) - 3B-22 | Always | Less than 1 Ω |

Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

NG → Replacement of the instrument panel junction block ASSY

OK

| 8 | Replacement of combination meter ASSY |
|---|---|

(1) Replace with a new or normal combination meter ASSY. (Refer to ME - 63)
(2) When the immobilizer is set, check that the security indicator light flashes.
Criteria: The security indicator light flashes

NG → Replacement of the main body ECM (network gateway computer) (Refer to PD - 23)

OK

Complete (Faulty combination meter ASSY)

# Auto alarm system

## Description of functions

1. Summary of anti-theft system
   - Anti-theft system can be set by the wireless door lock or entry door lock operation.
   - When someone tries to forcibly unlock a door, or when any door or the trunk is opened while the system is activated, an alarm function operates.
   - While the alarm is activated, vehicle interior light illuminates and the hazard warning light blinks. At the same time, vehicle horn operates in order to prevent invasion or theft and alert the neighbors of the intrusion.
   - The alarm can be deactivated by unlocking the door with a transmitter.
   - Anti-theft system has an active arming mode. There are 4 levels in this mode: Disarmed state, Arming preparation state, Armed state, and Alarm sounding state.

   (1) Disarmed state:
      - The anti-theft system is not activated.

   (2) Arming preparation state:
      - Time till the system enters into Armed state.
      - The anti-theft system is not activated.

   (3) Armed state:
      - The anti-theft system is activated.

   (4) Alarm sounding state:
      - The alarm function is activated.

      Alarm operating time: Approx. 60 seconds

Alarm type and operating time

| | | |
|---|---|---|
| Alarm type | Hazard warning light | Blink |
| | Vehicle interior light | ON |
| | Vehicle horn | Operate (in approx. 0.4 second intervals) |
| Alarm operating time | Approx. 60 seconds | |

2. Functions of the main parts

| Conditions | Item |
|---|---|
| Security indicator light | Inform the driver of the status of anti-theft system. |
| Hazard warning light | Blinks when any invasion or theft by the unknown is detected. |
| Vehicle interior light | Lit when any invasion or theft by the unknown is detected. |
| Low pitch horn<br>High pitch horn | Operates when any invasion or theft by the unknown is detected. |
| Door courtesy light switch | Detects door status (open/close). |
| Door lock position switch | Detects door status (lock/unlock). |
| Trunk courtesy switch | Detects trunk status (open/close). |
| Collation ECM (smart key ECM ASSY) | Receives wireless door lock/unlock signal. |

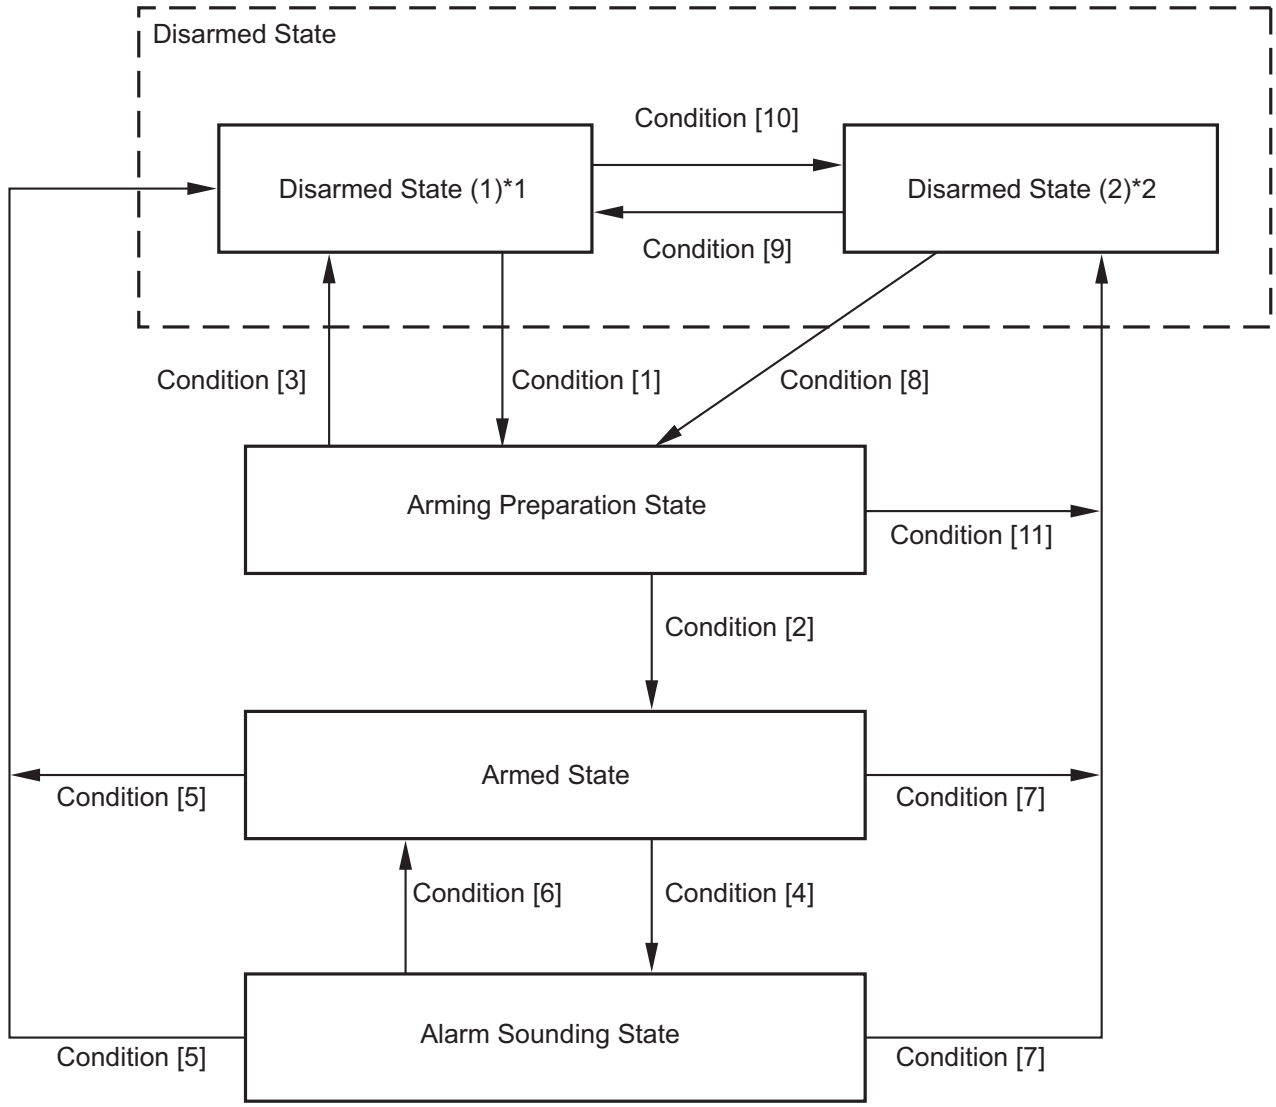
3. Arming mode

   NOTE:

   In an arming mode, alarm control will start immediately after the wireless lock or entry lock operation is performed.

   (1) Arming mode:

      (a)The system works as shown in the figure, when the situation matches at least one of the following items.



*1: Disarmed state 1 is the normal disarmed state

*2: Disarmed state 2 is set from either the disarmed state 1, arming preparation state, armed state or alarm sounding state

| Conditions | Item |
|---|---|
| Condition (1) | All conditions are met:<br>• IG OFF, ACC OFF, or the remote control engine start is operating.<br>• All doors are closed.<br>• The trunk is closed.<br>• All doors are locked by wireless or entry lock operation.<br>• When a door is open, all doors are locked and then all doors are closed. |
| Condition (2) | • Approx. 30 seconds have passed. |

| Conditions | Item |
|---|---|
| Condition (3) | Any of the following conditions must be satisfied:<br>• All doors are unlocked by wireless or entry lock operation.<br>• Any of the door is unlocked.<br>• A door is open.<br>• Push engine start OFF→ON<br>• IG ON and the remote control engine start is stopping.<br>• ACC ON and the remote control engine start is stopping.<br>• Battery is reconnected. |
| Condition (4) | Any of the following conditions must be satisfied:<br>• The closed trunk is opened.<br>• Any of the door is opened while all doors were closed.<br>• Any of the door is unlocked while all doors were locked.<br>• The remote control engine start is stopping and the push start SW is not pressed for 5 seconds or more, and then the vehicle is turned to IG ON.<br>• Battery is reconnected. (Other than when the remote control engine start is operating) |
| Condition (5) | Any of the following conditions must be satisfied:<br>• Engine speed reaches 550 r/min or more, and this condition is kept for two seconds or more.<br>• All doors are unlocked by wireless or entry lock operation.<br>• Vehicle is turned to ACC ON or IG ON by the push start SW. |
| Condition (6) | Approx. after 60 seconds, the alarm stops, and the system returns to Armed state. |
| Condition (7) | The trunk is opened by wireless or entry trunk open operation. |
| Condition (8) | The open trunk is closed. |
| Condition (9) | Any of the following conditions must be satisfied:<br>• Any of the door is unlocked while all doors were locked.<br>• A door is open.<br>• Press the engine switch.<br>• ACC ON or IG ON (Remote control engine start is stopping)<br>• All doors are unlocked by wireless or entry lock operation.<br>• Battery is reconnected. |
| Condition (10) | Any of the following conditions must be satisfied:<br>• IG OFF and ACC OFF or the remote control engine start is operating.<br>• When all doors are closed but the trunk is open, all doors are locked by wireless or entry lock operation.<br>• When a door is open and unlocked, all doors are locked and then all doors are closed. |
| Condition (11) | Any of the following conditions must be satisfied:<br>• The trunk is closed.<br>• The trunk is opened by wireless or entry trunk open operation. |

TD

4. Security Indicator light output
   (1) Main body ECM (multiplex network body ECM) outputs signals based on the status of anti-theft system in order to turn on the security indicator light. However, the actual lighting status of the security indicator light may differ from output signals of main body ECM (multiplex network body ECM).

Output

| Status of anti-theft system | Security indicator light |
|---|---|
| | Actual blinking state |
| Disarmed state (1), (2) | Blink |
| Arming preparation state | ON |
| Armed state | Blink |
| Alarm sounding state | ON |

Blinking cycle

| Time | Security indicator light |
|---|---|
| 0.125 seconds | ON |
| 1.875 seconds | Off |

## How to troubleshoot

NOTE:

- Use the following procedure to troubleshoot the theft deterrent system.
- Using the SSM4.
- The troubleshooting procedures for the theft deterrent system are based on the premise that the door lock control system, wireless door lock control system, lighting system, horn system, engine immobiliser system and entry and start system are operating normally. Check these systems first before troubleshooting the theft deterrent system.

## customize function

1. CUSTOMIZE THEFT DETERRENT SYSTEM

NOTE:

The following items can be customized.

CAUTION:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

(1) Customizing with the SSM4

(a) Connect the SSM4 to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the SSM4 on.

(d) Enter the following menus: [Body Control] →[Customize]

(e) Select the setting by referring to the table below.

Security

| Display | Default | Content | Setting | Relevant ECU |
|---|---|---|---|---|
| [Security System] | No | This function operates the theft deterrent system | ON or OFF | Main Body ECU (Multiplex Network Body ECU) |

(2) Theft deterrent system cancel function (manual operation)

(a) Performing theft deterrent system cancellation setting allows the theft deterrent system to be stopped.

(b) Configuring theft deterrent system cancellation setting.

1. Set the vehicle in the following state. Disarm the theft deterrent system.
2. After setting the vehicle in the above state, perform the following operations.
3. Close and lock all doors and turn the ignition switch to ON.
4. When the above operations are complete, push down and hold the unlock switch on the door control switch, open the driver side door and hold it for 10 seconds.
5. When the above operations are complete, the horn sounds twice and "AL oF" appears on the multi-display in the combination meter assembly, informing the operator that theft deterrent system cancellation setting is complete.

(c) Returning the theft deterrent system from canceled to normal mode.

1. Perform theft deterrent system cancellation setting again.
2. When the above operations are complete, the horn sounds once and "AL on" appears on the multi-display in the combination meter assembly, informing the operator that normal mode setting has been resumed.

NOTE:

- Each time the cancellation is performed manually, the state changes between canceled and active alternately.
- When changing from active to canceled state, the horn sounds twice and "AL OF" appears on the multi-display in the combination meter assembly, and when changing from canceled to active state, the horn sounds once and "AL ON" appears on the multi-display in the combination meter assembly, in order to inform the operator of the alarm status.

## Symptom table

NOTE:

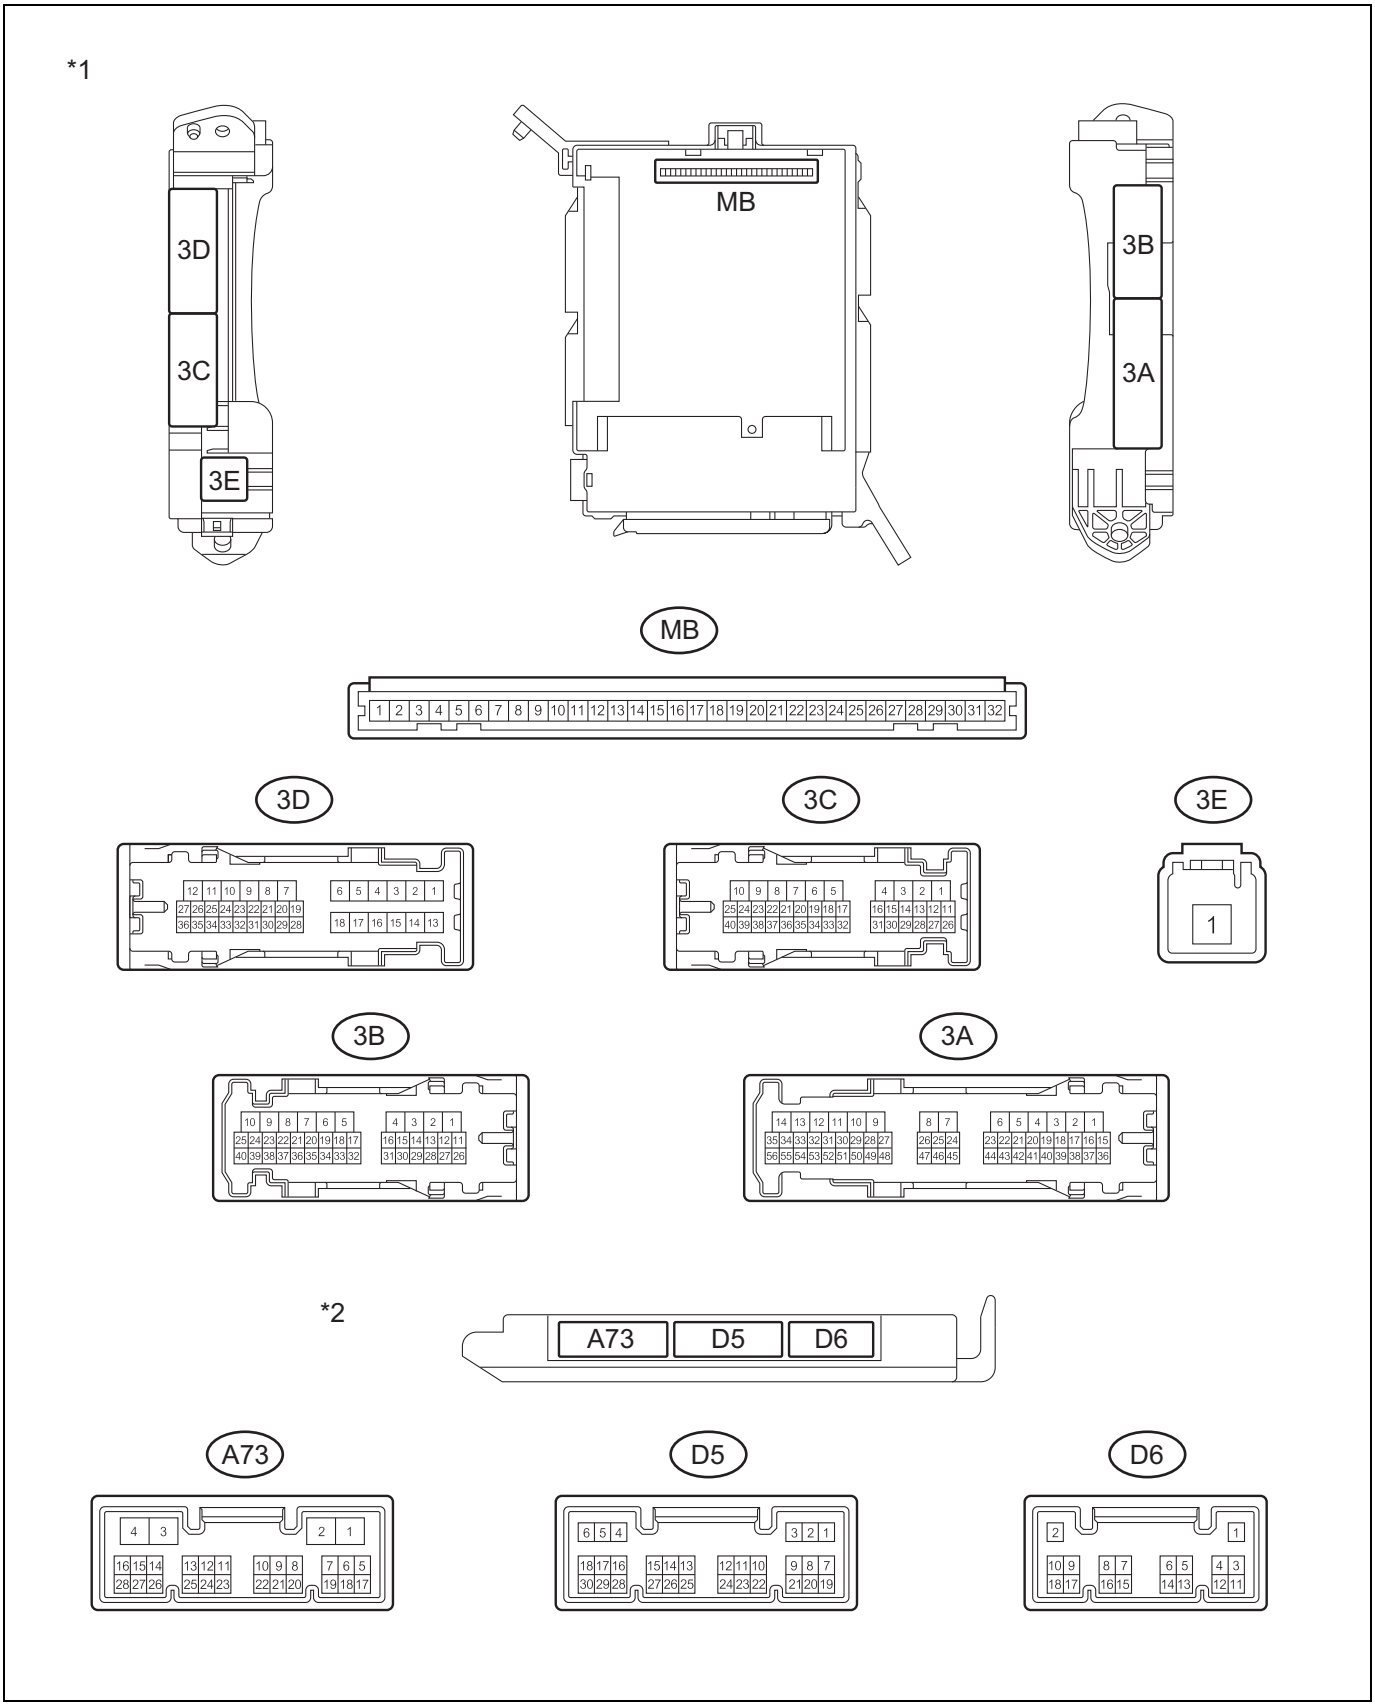
- Use the following table to identify the cause of the symptom. If multiple items are listed as causes, they are listed in the [Possible causes] column in descending order of probability. Check each symptom by inspecting the possible causes in the order listed in the table. Replace the parts as required.
- Check fuse and relay before inspecting the possible causes listed in the following table.

Anti-theft system

| Symptoms | Possible cause | Reference |
|---|---|---|
| The anti-theft system cannot be set. | Refer to "Security indicator light does not flash" | TD - 269 |
| | Refer to "ECM power supply circuit" | TD - 330 |
| | Door courtesy switch circuit | |
| | Refer to "Trunk courtesy switch circuit" | |
| | Front door lock ASSY LH/RH | |
| | Trunk lock ASSY | |
| | Collation ECM (smart key ECM ASSY) | - |
| | If the trouble is not solved even after checking the above items and confirming all parts are operating normally, replace the main body ECM (multiplex network body ECM). | - |
| Security indicator light does not flash while the anti-theft system is set. | Refer to "Security indicator light does not flash" | TD - 269 |
| Alarm sounding state cannot be cancelled even after starting the engine. | Entry & start system (start function) | TD - 146 |
| | Collation ECM (smart key ECM ASSY) | - |
| | If the trouble is not solved even after checking the above items and confirming all parts are operating normally, replace the main body ECM (multiplex network body ECM). | - |
| The anti-theft system can be set even though the door is open. | Door courtesy switch circuit | |
| | Trunk courtesy switch circuit | |
| | If the trouble is not solved even after checking the above items and confirming all parts are operating normally, replace the main body ECM (multiplex network body ECM). | - |
| Vehicle horn does not operate while the anti-theft system is activated. | Refer to "Horn circuit" | TD - 328 |
| Hazard warning light does not flash while the anti-theft system is activated. | Wiring harness or connector | - |
| | Combination meter ASSY | - |
| | If the trouble is not solved even after checking the above items and confirming all parts are operating normally, replace the main body ECM (multiplex network body ECM). | - |
| Hazard warning light flashes while the anti-theft system is not activated. | Wiring harness or connector | - |
| | Combination meter ASSY | - |
| | If the trouble is not solved even after checking the above items and confirming all parts are operating normally, replace the main body ECM (multiplex network body ECM). | - |
| Vehicle interior light does not illuminate while the anti-theft system is activated. | Vehicle interior light circuit | |
| | If the trouble is not solved even after checking the above items and confirming all parts are operating normally, replace the main body ECM (multiplex network body ECM). | - |
| Vehicle interior light illuminates while the anti-theft system is not activated. | Vehicle interior light circuit | |
| | If the trouble is not solved even after checking the above items and confirming all parts are operating normally, replace the main body ECM (multiplex network body ECM). | - |

## ECM terminal arrangement

1. Inspection of instrument panel junction block ASSY and main body ECM (multiplex network body ECM)



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (multiplex network body ECM) |

(1) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.

(2) Measure the voltage and resistance according to the following table.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| MB-1 - chassis ground | Battery power supply | Always | 11 to 14V |
| MB-8 - Chassis ground | Engine switch power supply | Engine switch is ON (IG) | 11 to 14V |
| | | The engine switch is OFF. | 1 V or less |
| MB-9 - Chassis ground | ACC power supply | ACC | 11 to 14V |
| | | The engine switch is OFF. | 1 V or less |
| MB-11 - chassis ground | Ground | Always | 1V or less |
| MB-32 - chassis ground | Battery power supply | Always | 11 to 14V |
| D6-1 - Chassis ground | Ground | Always | 1 Ωor less |
| A73-4 - chassis ground | Ground | Always | 1 Ωor less |

If you cannot get the specified result, there could be a problem in the wiring harnesses.

(3) Install the main body ECM (multiplex network body ECM) on the instrument panel junction block ASSY.

(4) Refer to the value shown in table below and measure the voltage and waveform.

| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| 3A-28 - chassis ground | Driver's side courtesy light switch | Driver's door is open. | 1 V or less |
| | | Driver's door is closed | Pulse generation |
| 3B-13 - chassis ground | Passenger's side courtesy light switch | The passenger's door is open. | 1 V or less |
| | | The passenger's door is closed. | Pulse generation |
| 3B-22 - chassis ground | Security indicator light signal | Security indicator light illuminates (only for 30 (5) seconds in Alarm sounding state (flashes when the system is in Armed state)) | 3 to 10V |
| 3D-26 - chassis ground | Trunk courtesy light switch | The trunk is open. | 1 V or less |
| | | Change the power mode to IG OFF, close the door, and close the trunk. | 11 to 14V |
| 3D-31 - chassis ground | Vehicle horn signal | Vehicle horn operates (Anti-theft system is in Alarm sounding state) | Pulse generation |
| | | Vehicle horn does not operate (Anti-theft system is in Alarm sounding state) | 11 to 14V |
| 3B-2 - chassis ground | Door lock motor lock drive output (driver's side) | Driver's door control switch is not pressed | 1 V or less |
| | | Driver's door control switch is not pressed to lock side | 11 to 14V |
| 3B-3 - chassis ground | Door lock motor lock drive output (passenger's side) | Driver's door control switch is not pressed | 1 V or less |
| | | Driver's door control switch is not pressed to lock side | 11 to 14V |
| 3B-1 - chassis ground | Door lock motor unlock drive output (driver's side) | Driver's door control switch is not pressed | 1 V or less |
| | | Driver's door control switch is not pressed to unlock side | 11 to 14V |
| 3B-4 - chassis ground | Door lock motor unlock drive output (passenger's side) | Driver's door control switch is not pressed | 1 V or less |
| | | Driver's door control switch is not pressed to unlock side | 11 to 14V |
| D6-11 - chassis ground | Driver's door unlock detection switch input | Driver's door is locked. | 1 V or less |
| | | Change the power mode to IG OFF, close all doors, and lock the driver's door. | Pulse generation |
| D6-12 - chassis ground | Passenger's door unlock detection switch input | Passenger's door is unlocked | 1 V or less |
| | | Change the power mode to IG OFF, close all doors, and lock the passenger's door. | Pulse generation |

## DIAGNOSIS SYSTEM

1. Description of functions
   (1) The ECU stores trouble codes if vehicle malfunctions occur.
   (2) The diagnostic system allows for reading of the trouble codes from the DLC3.
   (3) Use the SSM4 to check and solve the problem.
2. CHECK DLC3
   (1) Check the DLC3.

## Data monitor / active test

1. Data monitor

   NOTE:

   By using the SSM4 and reading [Data monitor], you can read the statuses and values for switches, sensors, actuators, and other items without removing parts. Because the non-intrusive inspection allows you to read the intermittent statuses or signals without interfering with parts or lines, it is very convenient. Diagnostic time can be saved by reading the [Data monitor] information at the initial stage of the troubleshooting.

   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn on the SSM4.
   (4) Enter the following menus: [Body Control] →[Data monitor]

Main body

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Security System] | Anti-theft system / OFF or ON | Customization status is displayed. | - |
| [D Door Courtesy] | Front RH door courtesy light switch signal / OFF or ON | OFF: Driver's door is closed<br>ON: Driver's door is open. | - |
| [D Door Lock Pos] | Front RH door lock position switch signal / OFF or ON | OFF: The driver's door is locked.<br>ON: Driver's door is locked. | - |
| [P Door Courtesy] | Front LH door courtesy light switch signal / OFF or ON | OFF: The passenger's door is closed.<br>ON: The passenger's door is open. | - |
| [P Door Lock Pos] | Front LH door lock position switch signal / OFF or ON | OFF: Passenger's door is locked<br>ON: Passenger's door is unlocked | - |
| [Luggage Courtesy SW] | Trunk courtesy switch / OFF or ON | OFF: The trunk is closed.<br>ON: The trunk is open. | - |
| [Ignition] | Engine switch condition / OFF or ON | OFF: IG OFF<br>ON: IG ON | - |
| [ACC SW] | Engine switch condition / OFF or ON | OFF: IG OFF<br>ON: ACC ON | - |

2. Active test

   NOTE:

   By performing an [Active Test] with SSM4, you can operate relays, VSV, actuators and other devices without removing any parts. This non-intrusive inspection is very useful because intermittent operation is possible without disturbing any parts or wiring. By performing an [Active Test] at an initial phase of troubleshooting, you can save time for diagnosis. [Data monitor] can be displayed during [Active Test].

   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn on the SSM4.
   (4) Enter the following menus: [Body Control] →[Active Test]
   (5) Based on the SSM4 display contents, perform an [Active Test].

Main body

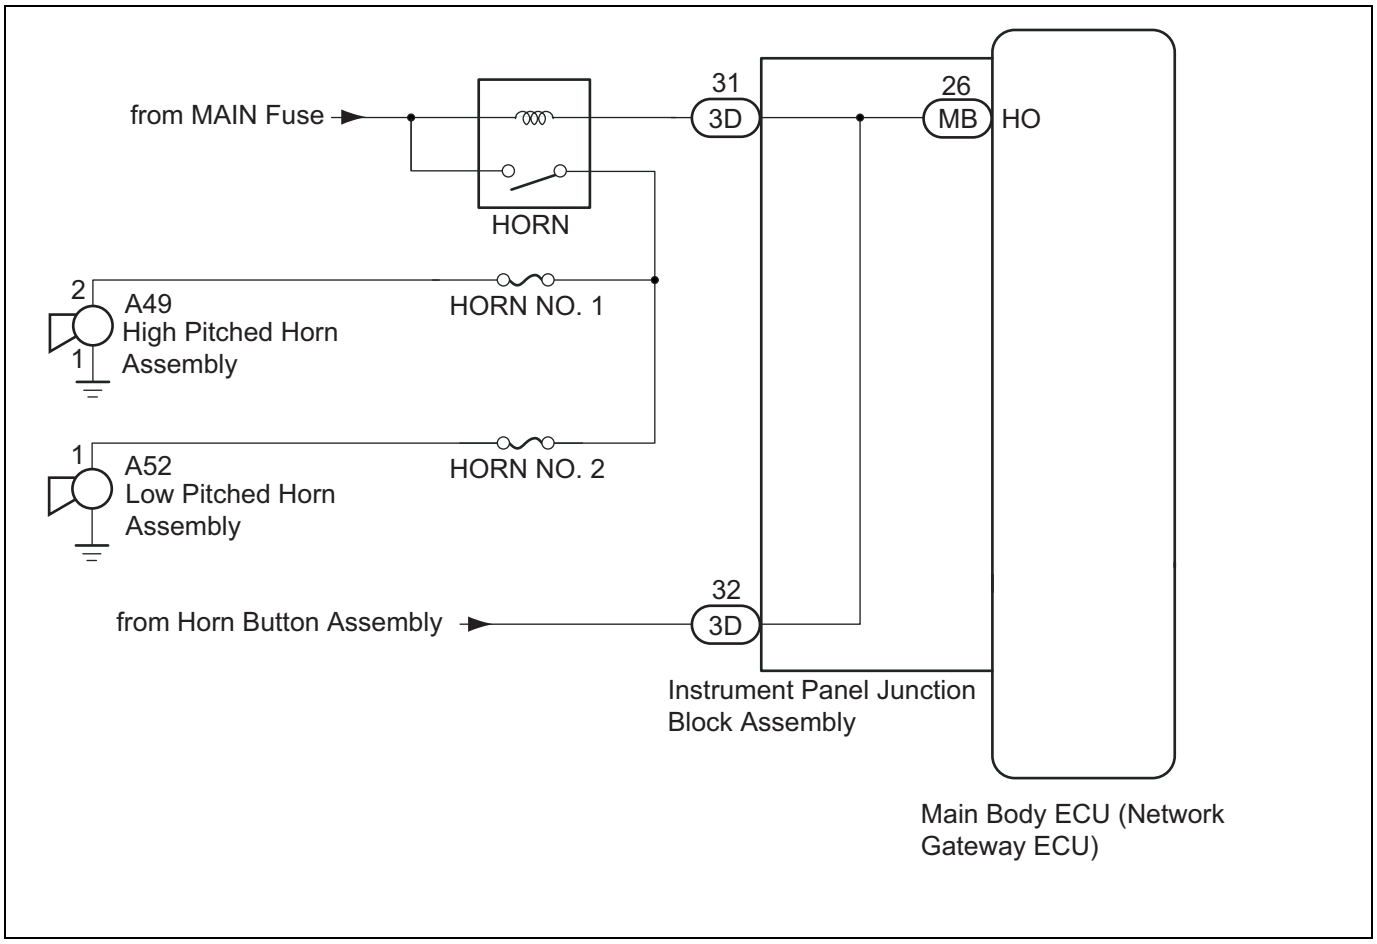
| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Security Indicator] | Security indicator light | ON/OFF | - |
| [Horn Output] | Vehicle horn | ON/OFF | - |

## Horn circuit

Circuit description

When the status of anti-theft system changes from Armed state to Alarm sounding state, the main body ECM (multiplex network body ECM) outputs the signal in order to operate the horn in 0.4 second intervals.

Circuit figure



Inspection steps

CAUTION:

Before performing the following inspection steps, check the fuses related to this system.

| | |
|---|---|
| 1 | Unit inspection of horn |

(1) Press the horn switch and check if the vehicle horn operates.

Result

| Result | Go to |
|---|---|
| Vehicle horn operates | A |
| Vehicle horn does not operate | B |

B → To Horn system

A

| | |
|---|---|
| 2 | Using SSM4, perform an [Active Test]. |

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn on the SSM4.
(4) Input the following menus: [Body Control] →[Active Test]
(5) Based on the SSM4 display contents, perform an [Active Test].

Main Body

| Tester display | Tested parts | Control range | Notes for diagnosis |
|---|---|---|---|
| [Vehicle Horn] | Vehicle Horns | ON/OFF | - |

Criteria: Vehicle horn operates and stops properly via SSM4.

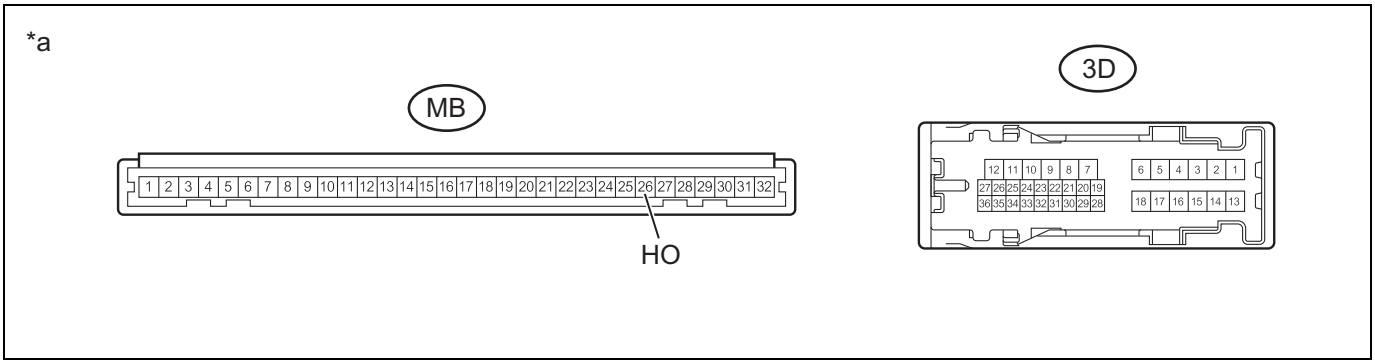
NG → Go to Step 3.

OK

Replacement of main body ECM (multiplex network body ECM)

| 3 | Unit inspection of the instrument panel junction block ASSY. |
|---|---|

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.
(3) Measure the resistance according to the following table.



Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| MB-26 - 3D-31 | Always | 1 Ωor less |
| MB-26 - 3D-32 | Always | 1 Ωor less |

Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

NG → Replacement of the instrument panel junction block ASSY

OK

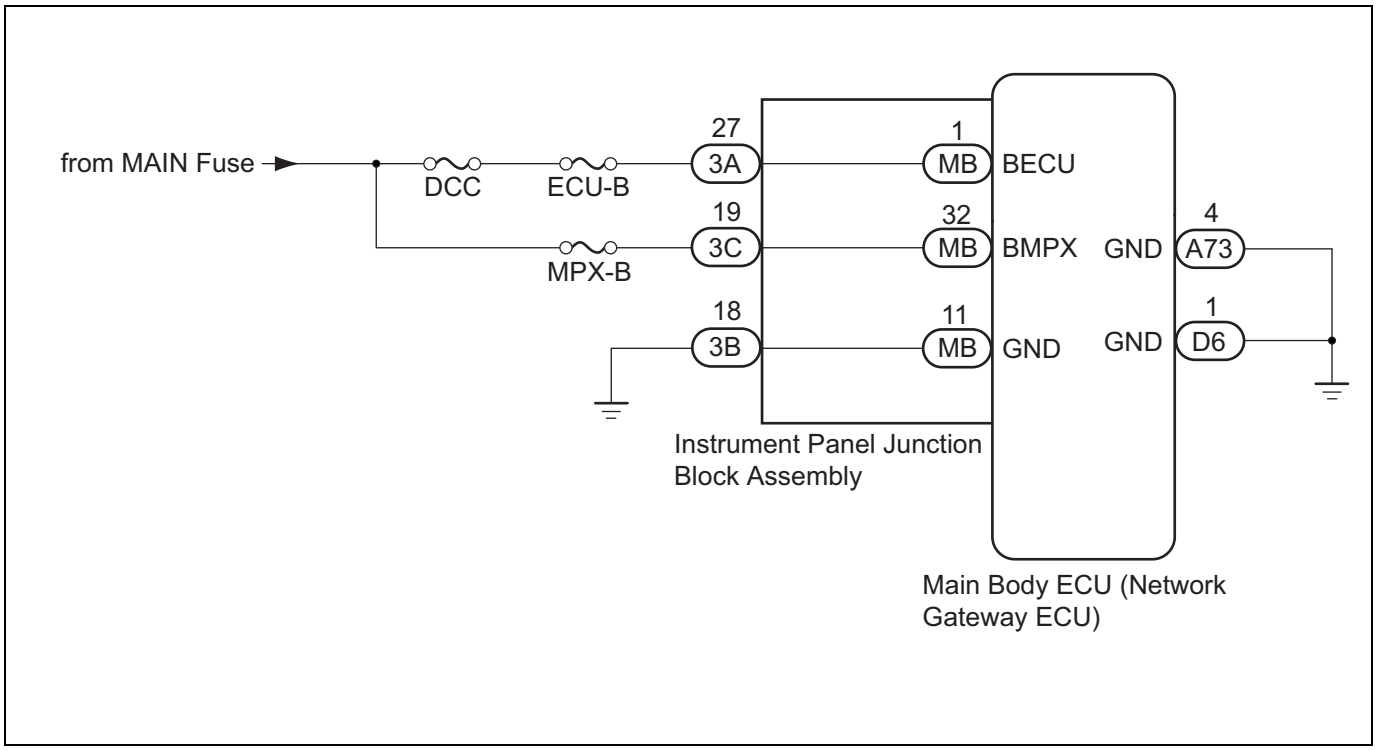
Replacement of main body ECM (multiplex network body ECM)

## ECM power supply circuit

Circuit description

This circuit is for supplying the power required to operate the main body ECM (multiplex network body ECM).

Circuit figure



TD

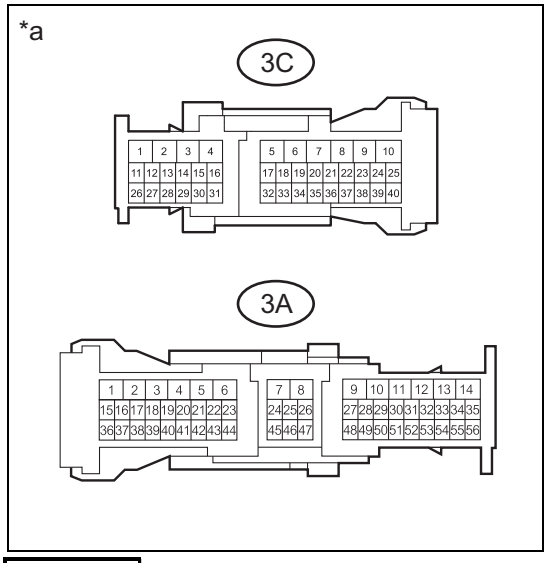
Inspection steps

CAUTION:

Before performing the following inspection steps, check the fuses related to this system.

| 1 | Confirming harness and connector (Battery - instrument panel junction block ASSY) |
|---|---|

(1) Disconnect instrument panel junction block ASSY connectors 3A and 3C.



(2) Measure the voltage according to the following table.

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) |

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-27 - chassis ground | Always | 11 to 14 V |
| 3C-19 - Chassis ground | Always | 11 to 14 V |

NG → Repair or replace the harnesses or connectors.

OK

| 2 | Confirming harness and connector (Instrument panel junction block - Chassis ground) |
|---|---|

(1) Disconnect instrument panel junction block ASSY connector 3B.

(2) Disconnect main body ECM (multiplex network body ECM) connectors A73 and D6.
(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-18 - chassis ground | Always | 1 Ωor less |
| A73-4 - chassis ground | Always | 1 Ωor less |
| D6-1 - Chassis ground | Always | 1 Ωor less |

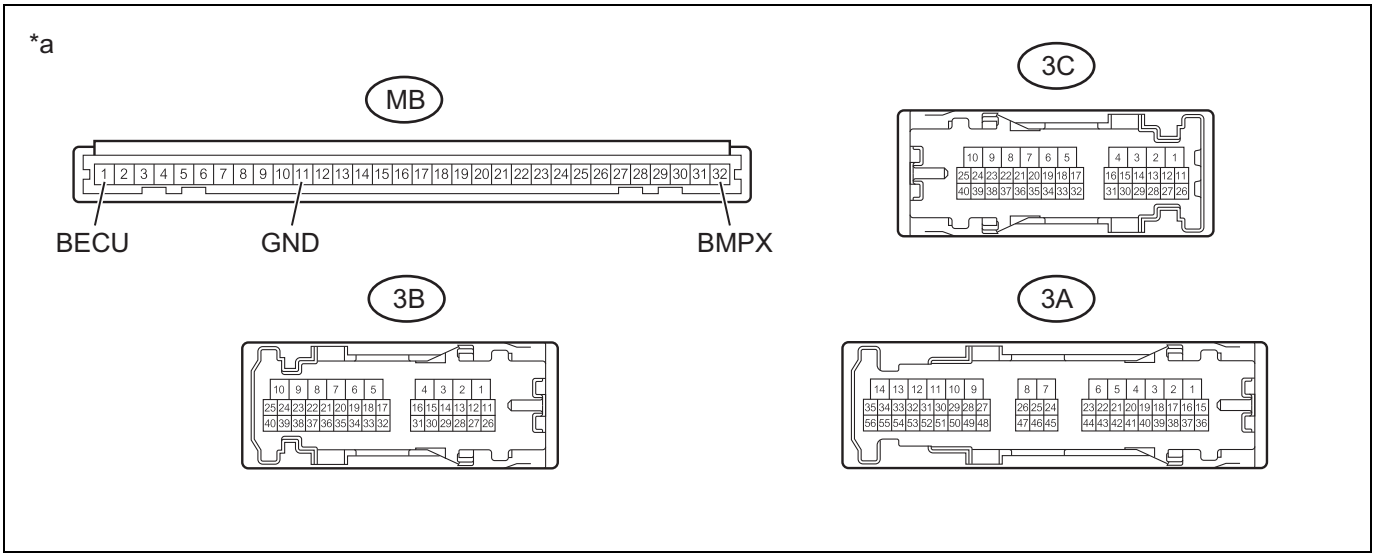
NG → Repair or replace the harnesses or connectors.

OK

| 3 | Unit inspection of instrument panel junction block ASSY |
|---|---|

TD

(1) Remove the instrument panel junction block ASSY.
(2) Remove the main body ECM (multiplex network body ECM) from the instrument panel junction block ASSY.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

(3) Measure the resistance according to the following table.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-27 - MB-1 | Always | 1 Ωor less |
| 3C-19 - MB-32 | Always | 1 Ωor less |
| 3B-18 - MB-11 | Always | 1 Ωor less |

NG → Replacement of the instrument panel junction block ASSY

OK

# Lighting system

## Function inspection

1. Before troubleshooting
   (1) Basic inspection
      (a)Measure the battery voltage.
         Voltage: 11 to 14V (when the engine is stopped)
   (2) Inspect for blown light bulbs and fuses, wiring harnesses open circuit, short circuits, and poor contact of connectors, in places where you can inspect visually.
2. Illuminated entry system control operation check A
   CAUTION:
   Perform the check with the initial settings of the customize function.
   NOTE:
   The following lights will illuminate with the illuminated entry system (Perform the check with the mode change switch of the map light ASSY set to the DOOR mode):
   - Map light ASSY
   - Push button start switch (text illumination) *1
   - Transponder key amplifier (key cylinder light) *2

   *1: When there is a smart entry & start system
   *2: When there is no smart entry & start system
   (1) Check that the lights illuminate in the following conditions:
      (a)Open one of the doors.
   (2) Check that the light illuminates for 15 seconds and then goes off in one of the following conditions:
      (a)Enter the ID collation area for the smart key. * 1
      (b)Perform the unlock operation (wireless unlock, smart unlock, and unlock with key interlock).
      (c)When any doors are open with IG OFF, close all the doors.
      (d)With all the doors closed, turn the ignition from IG ON →IG OFF.
         *1: When there is a smart entry & start system
   (3) Check that the lights go off in one of the following conditions:
      (a)Exit the ID collation area for the smart key, then wait for 3 seconds or more. * 1
      (b)Close and lock all the doors with IG OFF.
      (c)With all the doors closed, turn the ignition to ACC ON or IG ON.
      (d)When the lights illuminate with IG OFF, turn the ignition to ACC ON or start the engine.
         *1: When there is a smart entry & start system
3. Battery saver inspection
   (1) When one of the doors is not fully closed with IG OFF, check that the lights that illuminated with the illuminated entry system go off after approx. 20 minutes.
      NOTE:
      If the operating conditions for the light control are met, the battery saver control will be cancelled.

## customize function

1. Customization of the lighting system (interior)
   (1) Customization using the SSM4

(a)Connect the SSM4 to the DLC3 and turn the ignition to IG ON.

(b)According to the screen of SSM4, select [Each System] →[Body Control] →[Customize] for customizing.

| Display name | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Lighting Time] | 15 seconds | Set the function to automatically turn off the interior light after all the doors are shut, when the interior light is set to the DOOR mode. | 15/7.5/30 seconds | Main body ECM (multiplex network body computer) |
| [I/L when ACC OFF] | [ON] | Set the function to automatically turn on the interior light by turning the ignition from ACC ON →OFF, when the interior light is set to the DOOR mode. | [ON]/[OFF] | |
| [I/L ON W/Door Key Unlock] | [ON] | Set the function to automatically turn on the interior light in accordance with the door unlock operation with the smart key or the mechanical key, when the interior light is set to the DOOR mode. | [ON]/[OFF] | |
| [Room Light when Approached] | [ON] | Set the function to turn on the interior light when the driver approaches the vehicle carrying the smart key. | [ON]/[OFF] | |
| [Interior Light Control] | [ON] | Set the function to turn on the interior light by a timer. | [ON]/[OFF] | |

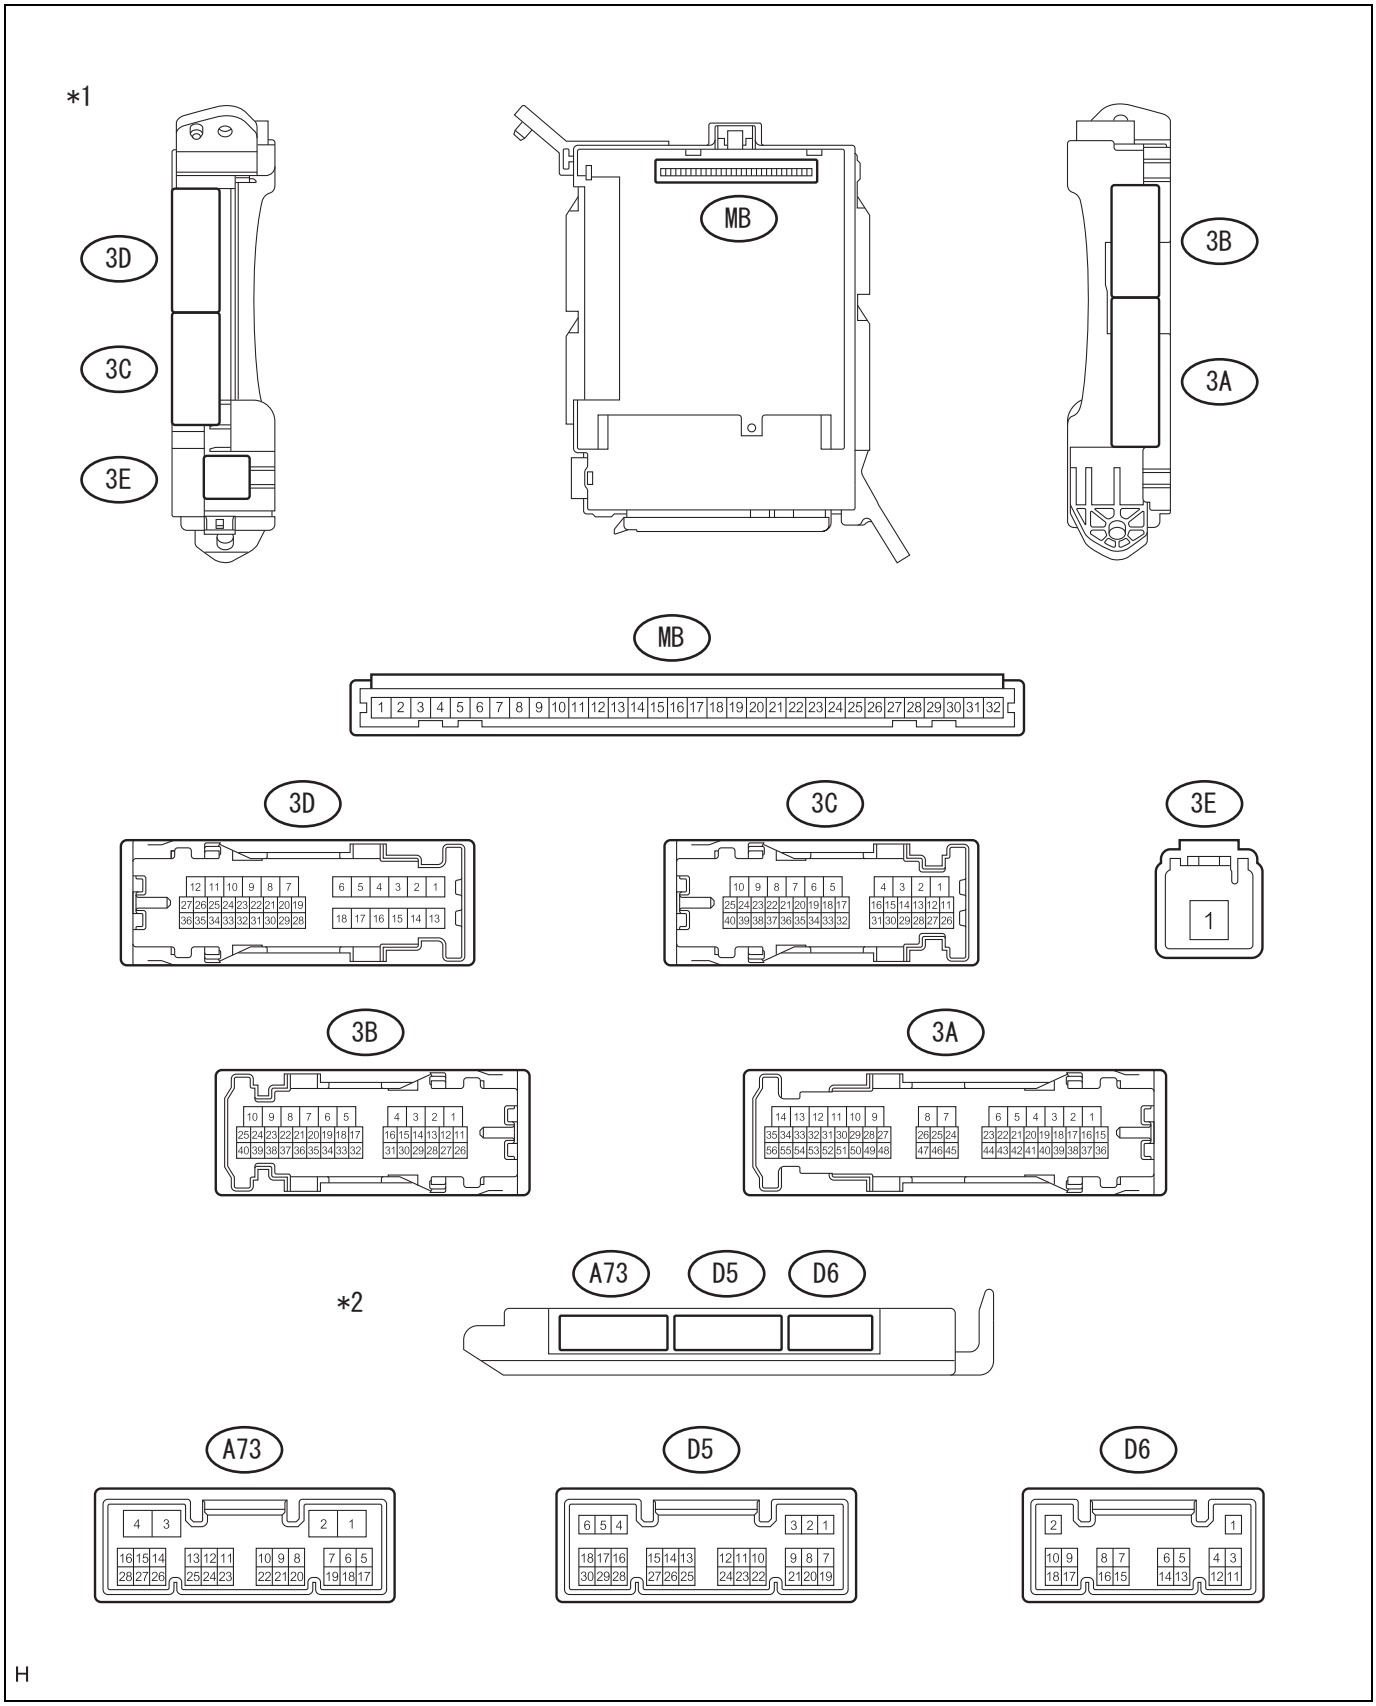
## ECM terminal arrangement

1. Main body ECM (multiplex network body computer)



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (multiplex network body computer) |

(1) Inspection of the main body ECM (multiplex network body computer) and the instrument panel junction block ASSY

(a)Disconnect the connector of the main body ECM (multiplex network body computer).

(b)Measure the voltage between the connector terminals on the vehicle wiring harness side.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D5-22 (ACC) ←→chassis ground *1 | ACC ON | 11 to 14V |

*1: With smart entry & start system

NOTE:

If it is out of the standard value, it can be judged as malfunction of the vehicle.

(c)Disconnect the connector of the instrument panel junction block ASSY.

(d)Measure the voltage and resistance between the connector terminals on the vehicle wiring harness side.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 3A-12 ←→chassis ground | Always | Less than 1 Ω |
| 3A-13 ←→chassis ground | Always | Less than 1 Ω |
| 3A-15 ←→chassis ground | IG ON | 11 to 14V |
| 3A-20 ←→chassis ground | ACC ON | 11 to 14V |
| 3A-27 ←→chassis ground | Always | 11 to 14V |
| 3C-19 ←→chassis ground | Always | 11 to 14V |
| 3E-1 ←→chassis ground | Always | 11 to 14V |
| A73-4 (GND) ←→chassis ground | Always | Less than 1 Ω |
| D6-1 (GND) ←→chassis ground | Always | Less than 1 Ω |

LI

NOTE:

If it is out of the standard value, it can be judged as malfunction of the vehicle.

(e)Connect the connectors of the main body ECM (multiplex network body computer) and the instrument panel junction block ASSY.

(f) Measure the voltage or waveform between the connector terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 3B-13 ←→chassis ground | With driver's door closed →opened | 11 to 14V →Less than 1V |
| 3A-28 ←→chassis ground | With passenger's door closed →opened | 11 to 14V →Less than 1V |
| 3D-26 ←→chassis ground | With trunk closed →opened | 11 to 14V →Less than 1V |
| D5-5 (FLCL) ←→chassis ground | Driver's side courtesy light ON →OFF | 11 to 14V →Less than 1V |
| D5-6 (FRCL) ←→chassis ground | Passenger's side courtesy light ON →OFF | 11 to 14V →Less than 1V |
| D5-7 (DOMR) ←→chassis ground | Map light ASSY OFF →ON | Less than 1 V →11 to 14 V |
| D5-28 (ILL) ←→chassis ground *2 | Transponder key amplifier (key cylinder light) ON →OFF | 11 to 14V Less than 1V |
| D6-11 (LSFD) ←→chassis ground *1 | Driver's side door locked →unlocked | Pulse generation →less than 1 V |
| D6-12 (LSFP) ←→chassis ground *1 | Passenger's side door locked →unlocked | Pulse generation →less than 1 V |

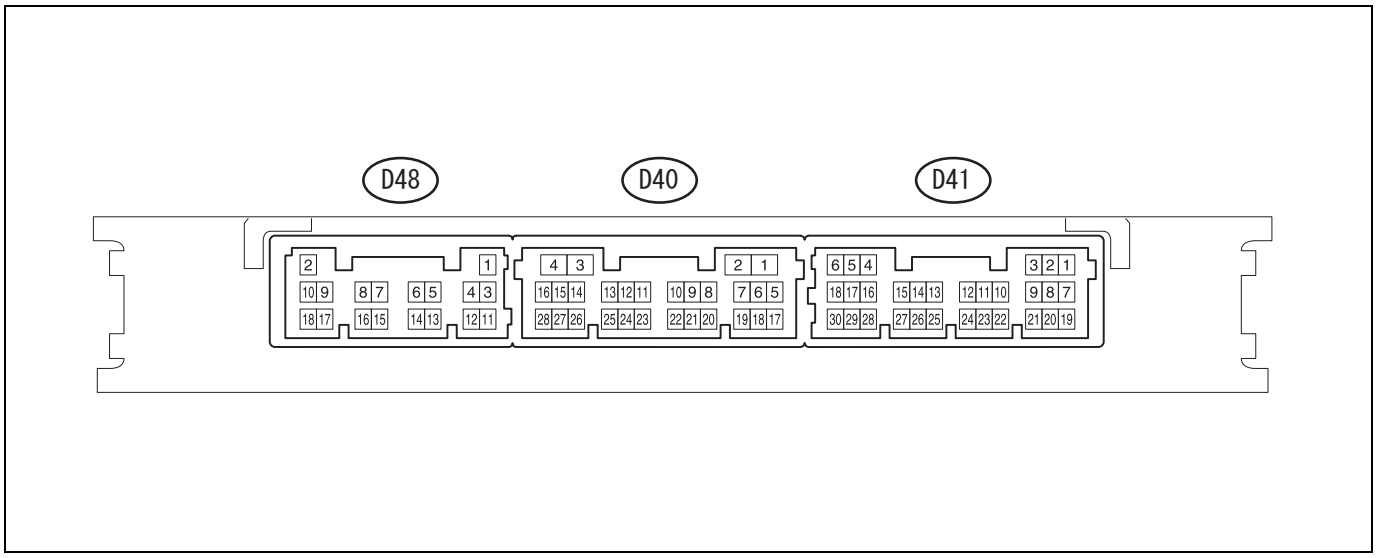
*1: With smart entry & start system

*2: Without smart entry & start system

NOTE:

If the measured value is not within the range of the standard value, it can be determined that the main body ECM (multiplex network body computer) has a fault.

2. Smart key computer ASSY (collation ECM)



(1) Inspection of the smart key computer ASSY (collation ECM)

(a) Disconnect the connector D48 of the smart key computer ASSY (collation ECM).

(b) Measure the voltage and resistance between the connector terminals of the smart key computer ASSY (collation ECM) on the vehicle side.

Standard value

| Terminal No. (Terminal symbol) | Input/Output | Item | Inspection conditions | Standard value |
|---|---|---|---|---|
| D48-2 (+B)←→D48-11 | Input | Voltage | Always | 11 to 14V |
| D48-11 (GND) ←→chassis ground | - | Resistance | Always | Less than 1 Ω |

NOTE:

If it is out of the standard value, it can be judged as malfunction of the vehicle.

(c) Connect the connector D48 of the smart key computer ASSY (collation ECM).

(d) Measure the voltage between the connector terminals.

Standard value

| Terminal No. (Terminal symbol) | Input/Output | Item | Inspection conditions | Standard value |
|---|---|---|---|---|
| D41-16 (SWIL)←→D41-24 (AGND) | Output | Voltage | Push button start switch ON →OFF | 11 to 14V →Less than 1V |
| D41-5 (IG2) ←→Chassis ground | Input | Voltage | IG ON | 11 to 14V |

NOTE:

If the measured value is not within the range of the standard value, it can be determined that the smart key computer ASSY (collation ECM) has a fault.

## Data monitor / active test

1. Inspection with SSM4 (data monitor)

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data.

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |

LI

2. Inspection with SSM4 (active test)

(1) Using SSM4, display the [Active Test] screen according to the screen and perform check.

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [Illuminated Entry System]* | The lights controlled by the illuminated entry system are turned on | OFF/ON |
| [D-Door Courtesy Lamp] | The driver's side courtesy light ASSY is turned on | OFF/ON |
| [P-Door Courtesy Lamp] | The passenger's side courtesy light ASSY is turned on | OFF/ON |
| [Key illumi. Lamp] | The key cylinder light is turned on | OFF/ON |

NOTE:

*: Perform the inspection with the changing switch of the map light ASSY set to the DOOR mode.

SSM4 screen: [Each System] →[Body Control] →[Active Test]

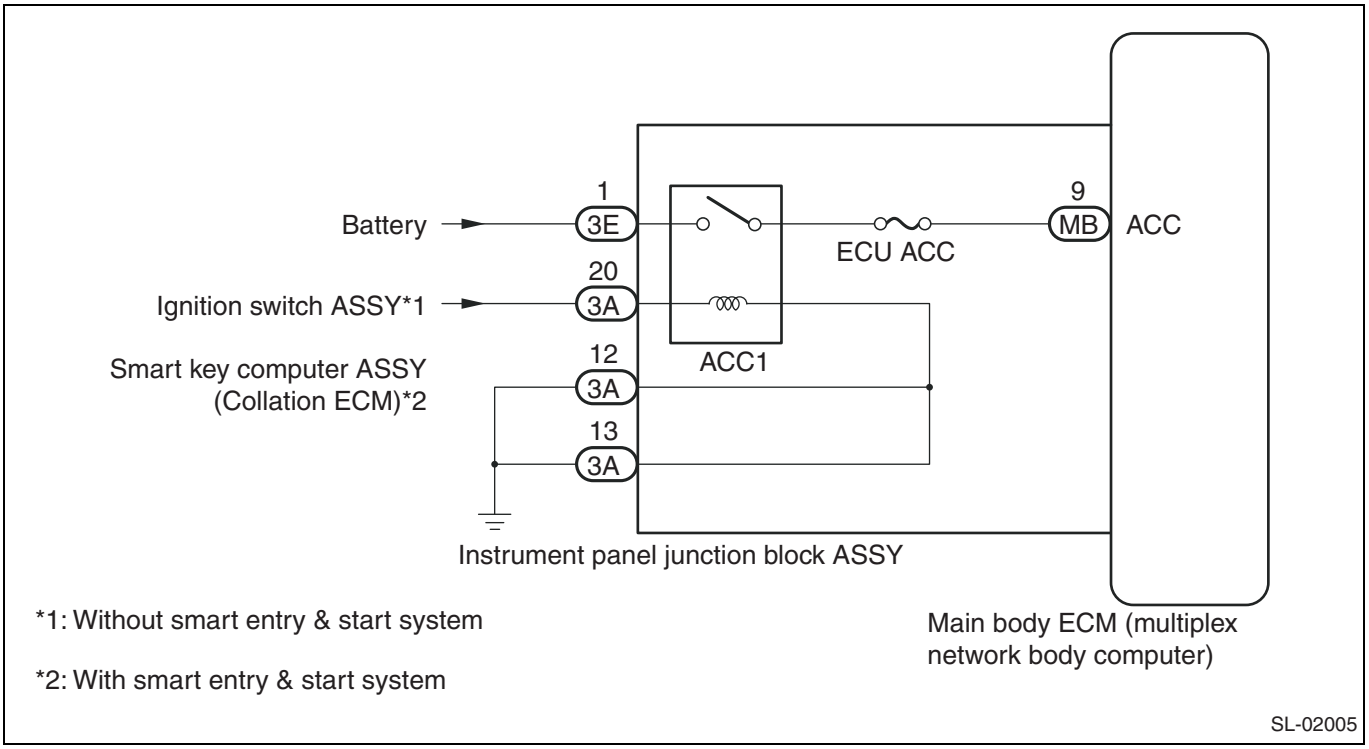
| Item name | Item description | Drive |
|---|---|---|
| [Key illumi. Lamp] | Turn on the text illumination of the push button start switch. | Stop/output |

## ACC signal circuit

Circuit description

The main body ECM (multiplex network body computer) is detecting the ACC signal.

Circuit figure



Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Reading the current data of the SSM4 (ACC SW) |

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to LI - 17)

Criteria: The normal value on the data monitor is displayed properly.

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [ACC SW] | Status of the ACC signal<br>Display range: OFF-ON | OFF: ACC OFF<br>ON: The power mode is ACC ON or IG ON. | This item will be displayed as [ON] in the IG ON status. |

NG → Go to Step 2.

OK

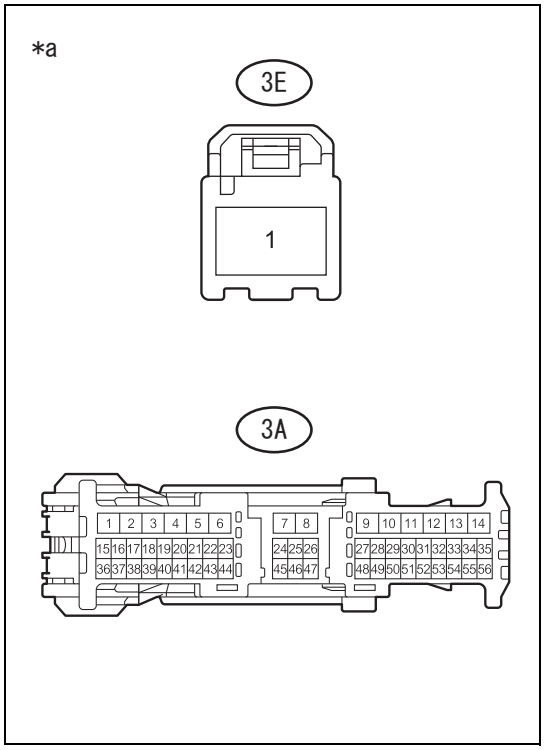
See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| | |
|---|---|
| 2 | Inspection of the wiring harness and the connector (ACC1 relay power supply) |

NOTE:

For inspection procedures and precautions, refer to IN - 36.

(1) Disconnect the connectors 3A and 3E of the instrument panel junction block ASSY.



(2) Measure the voltage between the connector terminals on the vehicle wiring harness side.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3E-1 - chassis ground | Always | 11 to 14V |
| 3A-20 - chassis ground | ACC ON | 11 to 14V |

(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-12 - chassis ground | Always | Less than 1 Ω |
| 3A-13 - chassis ground | Always | Less than 1 Ω |

Result

| Result | Go to |
|---|---|
| OK (smart entry & start system not equipped) | A |
| OK (smart entry & start system equipped) | B |
| NG | C |

Captions in illustration

| | |
|---|---|

B → Go to Step 4.

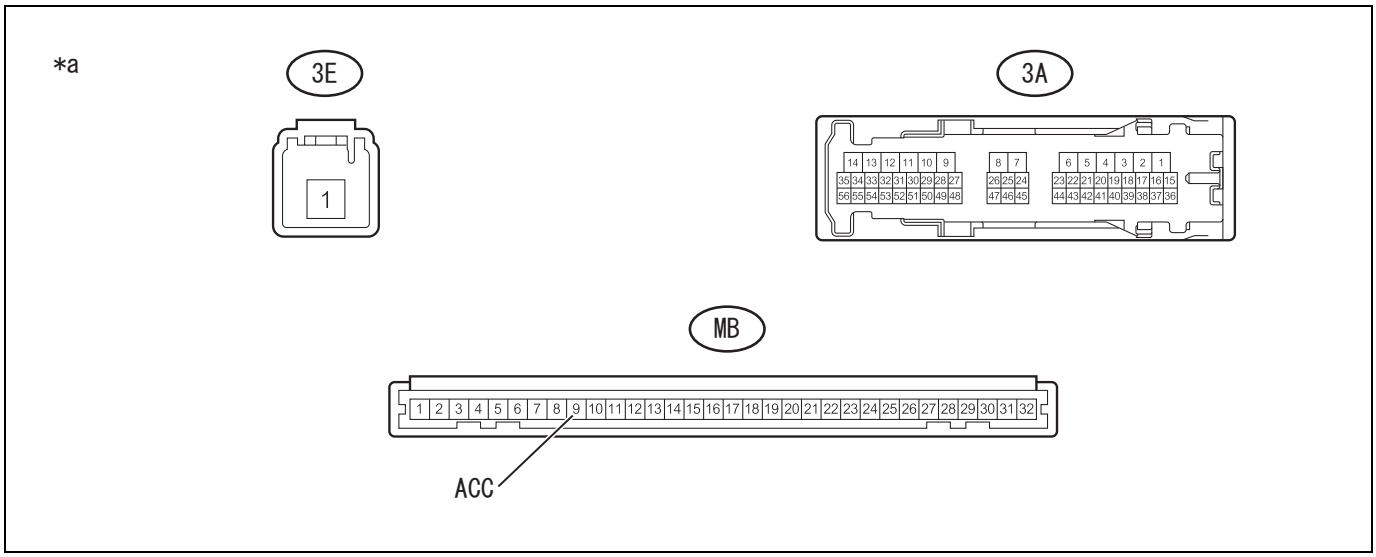
C → Repair or replacement of wiring harness or connector

A

| 3 | Inspection of the instrument panel junction block ASSY (ACC1 relay inspection) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.

(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)
(2) Remove the main body ECM (multiplex network body computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3E-1 - MB-9 (ACC) | Always | 10 kΩ or more |
| 3E-1 - MB-9 (ACC) | Connect the battery's positive terminal to the 3A-20 terminal, and the ground terminal to the 3A-12 or the 3A-13 terminal. | Less than 1 Ω |

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

| | |
|---|---|
| 4 | Inspection of the instrument panel junction block ASSY (ACC1 relay inspection) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.

(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)
(2) Remove the main body ECM (multiplex network body computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.

| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

LI

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3E-1 - MB-9 (ACC) | Always | 10 kΩ or more |
| 3E-1 - 3B-28 | Always | 10 kΩ or more |
| 3E-1 - MB-9 (ACC) | Connect the battery's positive terminal to the 3A-20 terminal, and the ground terminal to the 3A-12 or the 3A-13 terminal. | Less than 1 Ω |
| 3E-1 - 3B-28 | Connect the battery's positive terminal to the 3A-20 terminal, and the ground terminal to the 3A-12 or the 3A-13 terminal. | Less than 1 Ω |

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

| | |
|---|---|
| 5 | Inspection of the wiring harness and the connector (instrument panel junction block ASSY - main body ECM (multiplex network body computer)) |

NOTE:

For inspection procedures and precautions, refer to IN - 36.

(1) Measure the resistance between the connector terminals on the vehicle wiring harness side.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-28 - D5-22 (ACC) | Always | Less than 1 Ω |

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3B-28 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

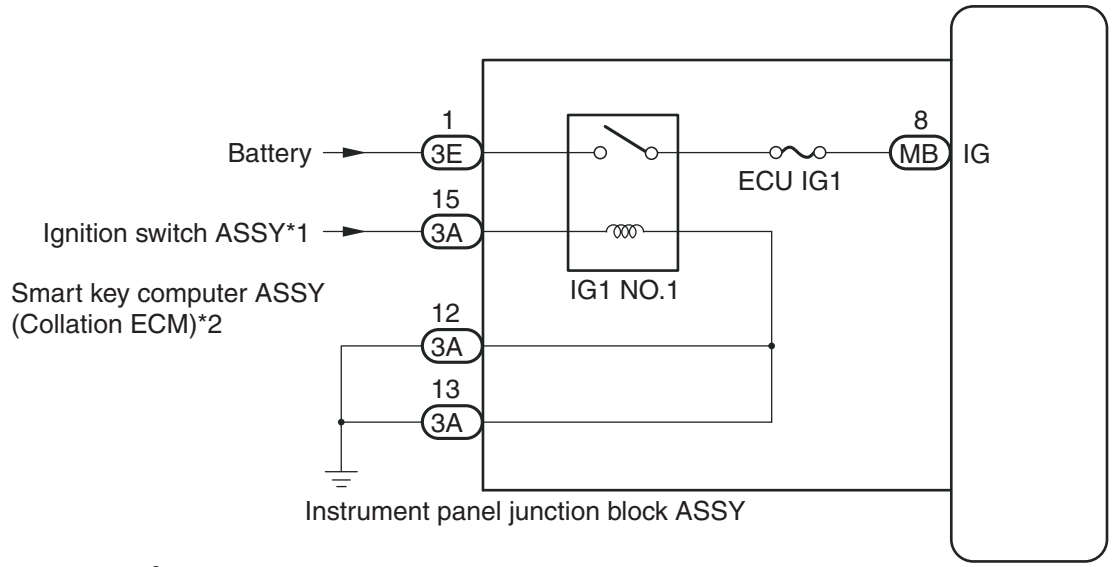
Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

## IG signal circuit

Circuit description

The main body ECM (multiplex network body computer) is detecting the IG signal.

Circuit figure



*1: Without smart entry & start system

*2: With smart entry & start system

Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Reading the current data of the SSM4 (IG SW) |

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to LI - 17)

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Ignition] | Status of the IG signal<br>Display range: OFF-ON | OFF: IG OFF<br>ON: IG ON | This item will be displayed as [OFF] in the ACC ON status. |

Criteria: The normal value on the data monitor is displayed properly.

NG → Go to Step 2.

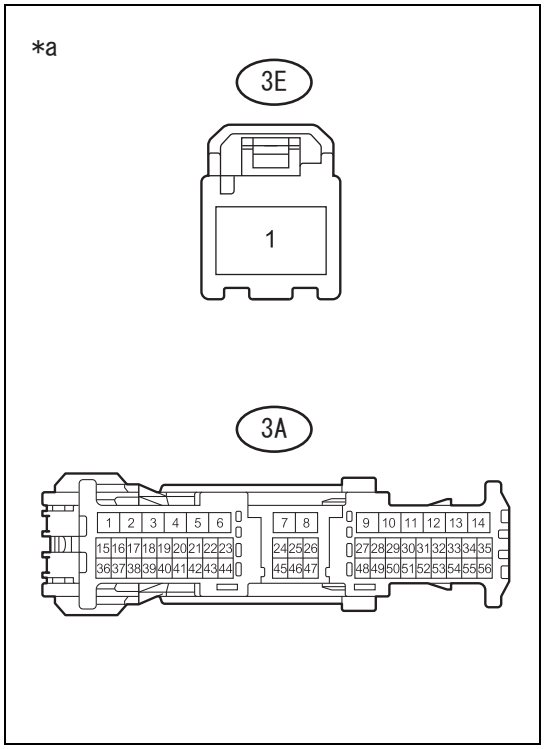
OK

See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| 2 | Inspection of the wiring harness and the connector (IG1 NO.1 relay power supply) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.

(1) Disconnect the connectors 3A and 3E of the instrument panel junction block ASSY.



(2) Measure the voltage between the connector terminals on the vehicle wiring harness side.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3E-1 - chassis ground | Always | 11 to 14V |
| 3A-15 - chassis ground | IG ON | 11 to 14V |

(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-12 - chassis ground | Always | Less than 1 Ω |
| 3A-13 - chassis ground | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (instrument panel junction block ASSY connector) |

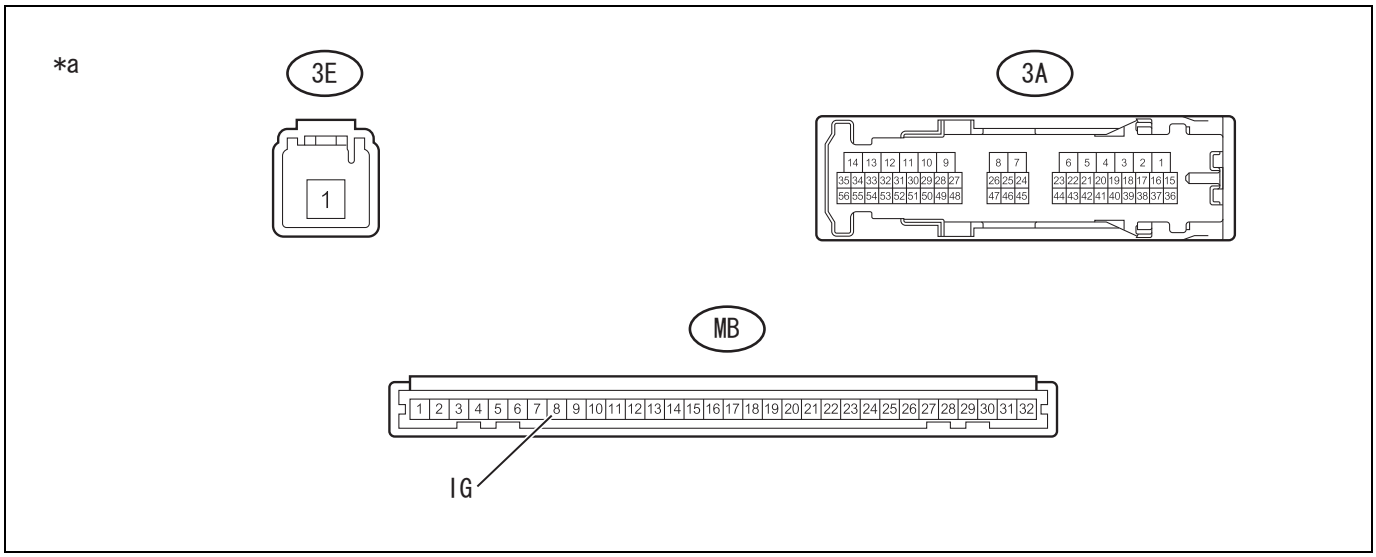
NG → Repair or replacement of wiring harness or connector

OK

| 3 | Inspection of the instrument panel junction block ASSY (IG1 NO.1 relay inspection) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.

(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)
(2) Remove the main body ECM (multiplex network body computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3E-1 - MB-8 (IG) | Always | 10 kΩ or more |
| 3E-1 - MB-8 (IG) | Connect the battery's positive terminal to the 3A-15 terminal, and the ground terminal to the 3A-12 or the 3A-13 terminal. | Less than 1 Ω |

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

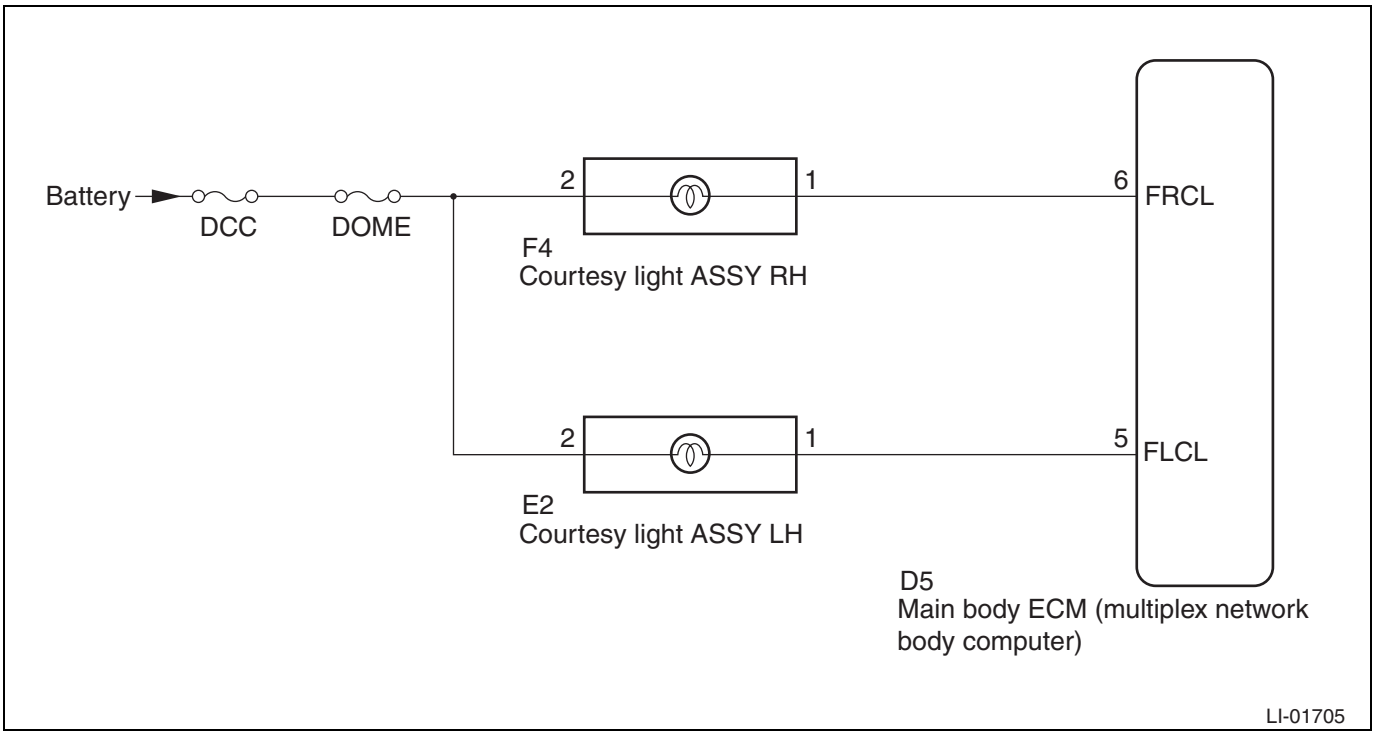
Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

## Door courtesy light circuit

Circuit description

The courtesy light ASSY is controlled to illuminate by the main body ECM (multiplex network body computer).

Circuit figure



LI

Inspection steps

NOTE:

Before performing the troubleshooting, check the fuses and the lights of this circuit.

| | |
|---|---|
| 1 | Implementation of SSM4 active test |

(1) Using SSM4, display the [Active Test] screen according to the screen and check the computer data. (Refer to LI - 17)

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [D-Door Courtesy Lamp] | The driver's side courtesy light is turned on | OFF/ON |
| [P-Door Courtesy Lamp] | The passenger's side courtesy light is turned on | OFF/ON |

Criteria: The driver's and passenger's side courtesy lights are turned on

Result

| Result | Go to |
|---|---|
| All items show the normal status. | A |
| [D-Door Courtesy Lamp] shows an abnormal status. | B |
| [P-Door Courtesy Lamp] shows an abnormal status. | C |

B → Go to Step 2.

C → Go to Step 5.

A

See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| 2 | Inspection of the wiring harness and the connector (courtesy light ASSY LH - battery) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector E2 of the courtesy light ASSY LH.
(2) Measure the voltage of the vehicle wiring harness connector.
Voltage

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E2-2 - chassis ground | Always | 11 to 14 V |

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Unit inspection of the courtesy light ASSY LH |
|---|---|

(1) Remove the courtesy light ASSY LH. (Refer to LI - 54)
(2) Perform the unit inspection of the courtesy light ASSY LH. (Refer to LI - 56)
Criteria: The courtesy light ASSY LH illuminates.

NG → Replacement of the courtesy light ASSY LH (Refer to LI - 54)

OK

| 4 | Inspection of the wiring harness and the connector (main body ECM (multiplex network body computer) - courtesy light ASSY LH) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector D5 of the main body ECM (multiplex network body computer).
(2) Disconnect the connector E2 of the courtesy light ASSY LH.
(3) Measure the resistance of the vehicle wiring harness connector.
Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D5-5 (FLCL) - E2-1 | Always | Less than 1 Ω |
| E2-1 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

| 5 | Inspection of the wiring harness and the connector (courtesy light ASSY RH - battery) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector F4 of the courtesy light ASSY RH.
(2) Measure the voltage of the vehicle wiring harness connector.
Voltage

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| F4-2 - Chassis ground | Always | 11 to 14 V |

NG → Repair or replacement of wiring harness or connector

OK

| 6 | Unit inspection of the courtesy light ASSY RH |
|---|---|

LI

(1) Remove the courtesy light ASSY RH. (Refer to LI - 54)
(2) Perform the unit inspection of the courtesy light ASSY RH. (Refer to LI - 56)
Criteria: The courtesy light ASSY RH illuminates.

NG → Replacement of the courtesy light ASSY RH (Refer to LI - 54)

OK

| 7 | Inspection of the wiring harness and the connector (main body ECM (multiplex network body computer) - courtesy light ASSY RH) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector D5 of the main body ECM (multiplex network body computer).
(2) Disconnect the connector F4 of the courtesy light ASSY RH.
(3) Measure the resistance of the vehicle wiring harness connector.
Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D5-6 (FRCL) - F4-1 | Always | Less than 1 Ω |
| F4-1 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

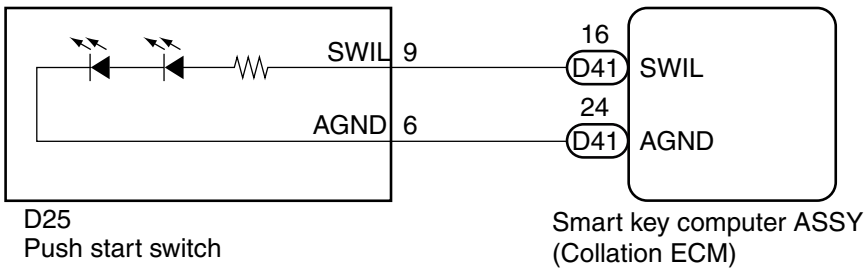
Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

## Engine switch illumination circuit

Circuit description

The text illumination of the push button start switch is controlled by the smart key computer ASSY (collation ECM).

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Implementation of SSM4 active test (push button start switch) |

(1) Using SSM4, display the [Active Test] screen according to the screen and check the computer data. (Refer to LI - 17)

SSM4 screen: [Each System] →[Keyless Access(Collation ECM)] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [Key illumi. Lamp] | Turn on the text illumination of the push button start switch. | Stop/output |

Criteria: The active test can be performed properly.

NG → Go to Step 2.

OK

See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| | |
|---|---|
| 2 | Unit inspection of the push button start switch |

(1) Remove the push button start switch. (Refer to ST - 43)

(2) Perform the unit inspection of the push button start switch. (Refer to ST - 44)

Criteria: The text illumination turns on.

NG → Replacement of the push button start switch (Refer to ST - 43)

OK

| | |
|---|---|
| 3 | Inspection of the wiring harness and the connector (push button start switch - smart key computer ASSY (collation ECM) and chassis ground) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector D25 of the push button start switch.
(2) Disconnect the connector D41 of the smart key computer ASSY (collation ECM).
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D41-16 (SWIL) - D25-9 (SWIL) | Always | Less than 1 Ω |
| D41-24 (AGND) - D25-6 (AGND) | Always | Less than 1 Ω |
| D41-16 (SWIL) - chassis ground | Always | 10 kΩ or more |
| D41-24 (AGND) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

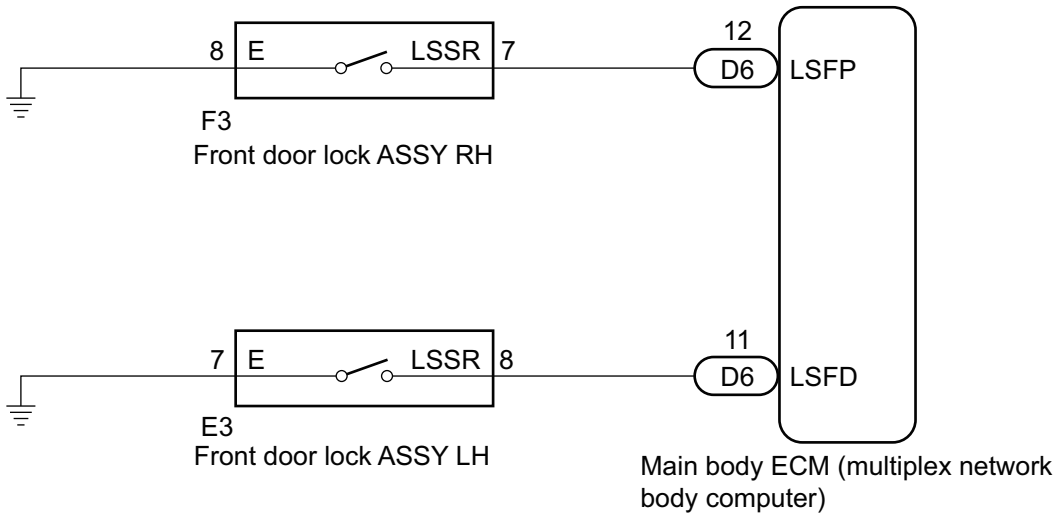
OK

Replacement of the smart key computer ASSY (collation ECM)

## Door unlock detection switch circuit

Circuit description
The main body ECM (multiplex network body computer) is receiving the door lock position switch signal from each door.

Circuit figure



LI-10604

Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data monitor (door lock position switch) |

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to LI - 17)

Criteria: The normal value on the data monitor is displayed properly.

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [D Door Lock Pos] | Lock/unlock status of the driver's side door<br>Display range: [Lock]-[Unlock] | [Lock]: When the driver's side door is locked.<br>[Unlock]: When the driver's side door is unlocked. | - |
| [P Door Lock Pos] | Lock/unlock status of the passenger's side door<br>Display range: [Lock]-[Unlock] | [Lock]: When the passenger's side door is locked<br>[Unlock]: When the passenger's side door is unlocked | - |

Result

| Result | Go to |
|---|---|
| OK | A |
| NG (The door lock position switch of the driver's side door does not operate.) | B |
| NG (The door lock position switch of the passenger's side door does not operate.) | C |

| | |
|---|---|
| B | Go to Step 2. |
| C | Go to Step 4. |

A

See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| | |
|---|---|
| 2 | Unit inspection of the front door lock ASSY RH |

(1) Remove the front door lock ASSY RH. (Refer to DL - 101)
(2) Perform the unit inspection of the front door lock ASSY RH. (Refer to DL - 102)
Criteria: The inspection result shows the normal status.

NG → Replacement of the front door lock ASSY RH (Refer to DL - 101)

OK

| | |
|---|---|
| 3 | Inspection of the wiring harness and the connector (front door lock ASSY RH - main body ECM (multiplex network body computer) and chassis ground) |

LI

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector F3 of the front door lock ASSY RH.
(2) Disconnect the connector D6 of the main body ECM (multiplex network body computer).
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D6-12 (LSFP) - F3-7 (LSSR) | Always | Less than 1 Ω |
| F3-8 (E) - chassis ground | Always | Less than 1 Ω |
| F3-7 (LSSR) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

| | |
|---|---|
| 4 | Unit inspection of the front door lock ASSY LH |

(1) Remove the front door lock ASSY LH. (Refer to DL - 101)
(2) Perform the unit inspection of the front door lock ASSY LH. (Refer to DL - 102)
Criteria: The inspection result shows the normal status.

NG → Replacement of the front door lock ASSY LH (Refer to DL - 101)

OK

| | |
|---|---|
| 5 | Inspection of the wiring harness and the connector (front door lock ASSY LH - main body ECM (multiplex network body computer) and chassis ground) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector E3 of the front door lock ASSY LH.
(2) Disconnect the connector D6 of the main body ECM (multiplex network body computer).
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D6-11 (LSFD) - E3-8 (LSSR) | Always | Less than 1 Ω |
| E3-7 (E) - chassis ground | Always | Less than 1 Ω |
| E3-8 (LSSR) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

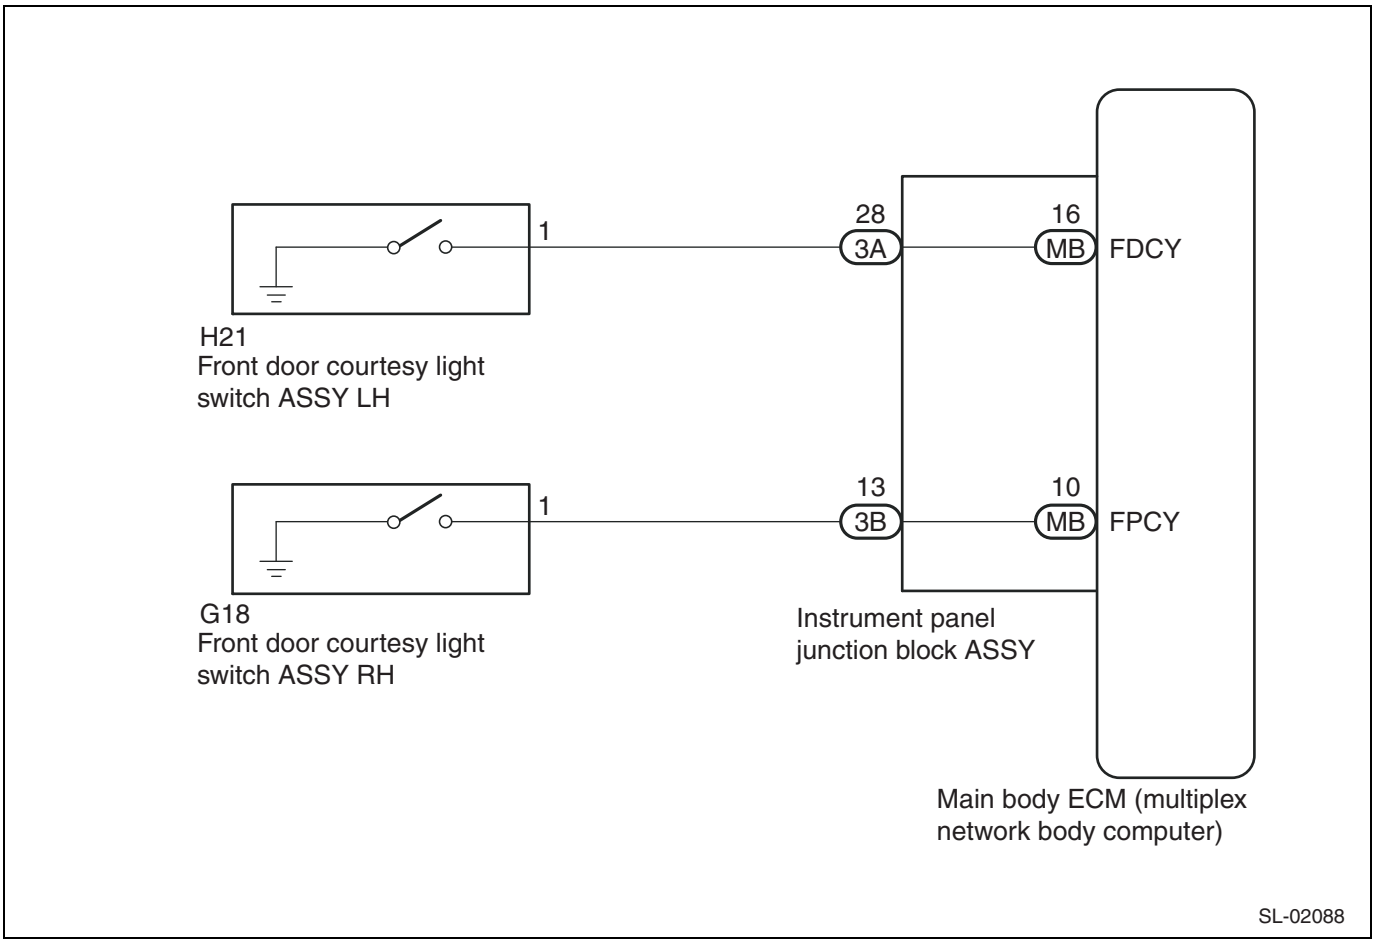
OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

## Front door courtesy light switch circuit

Circuit description
The main body ECM (multiplex network body computer) is detecting the front door courtesy light switch signal.

Circuit figure



LI

Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data monitor (courtesy light switch) |

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to LI - 17)

Criteria: The normal value on the data monitor is displayed properly.

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [D Door Courtesy] | Status of the front door courtesy light switch ASSY LH<br>Display range: [Close]-[Open] | [Close]: Close the driver's door.<br>[Open]: Open the driver's door. | - |
| [P Door Courtesy] | Status of the front door courtesy light switch ASSY RH<br>Display range: [Close]-[Open] | Closed: Close the passenger's door.<br>Open: Open the passenger's door. | - |

Result

| Result | Go to |
|---|---|
| OK | A |
| NG (The courtesy light switch of the driver's side door does not operate.) | B |

| Result | Go to |
|---|---|
| NG (The courtesy light switch of the passenger's side door does not operate.) | C |

B → Go to Step 2.

C → Go to Step 5.

A

See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| 2 | Unit inspection of the front door courtesy light switch ASSY RH |
|---|---|

(1) Remove the front door courtesy light switch ASSY RH. (Refer to LI - 59)
(2) Perform the unit inspection of the front door courtesy light switch ASSY RH. (Refer to LI - 60)
Criteria: The inspection result shows the normal status.

NG → Replacement of the front door courtesy light switch ASSY RH (Refer to LI - 59)

OK

| 3 | Inspection of the wiring harness and the connector (front door courtesy light ASSY RH - instrument panel junction block ASSY) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector G18 of the front door courtesy light switch ASSY RH.
(2) Disconnect the connector 3B of the instrument panel junction block ASSY.
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| G18-1 - 3B-13 | Always | Less than 1 Ω |
| G18-1 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

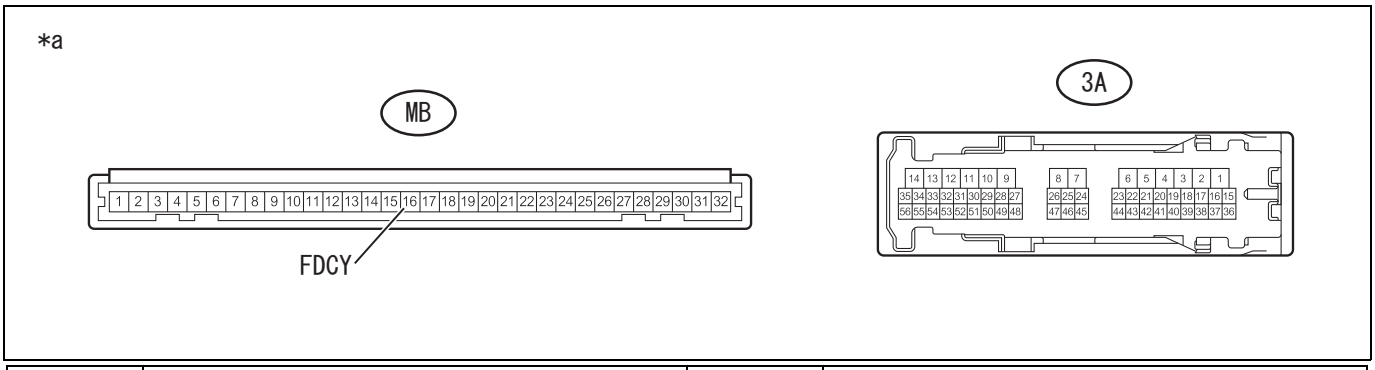
OK

| 4 | Inspection of the instrument panel junction block ASSY. |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)

LI

(2) Measure the resistance between the terminals.
(3) Remove the main body ECM (multiplex network body computer) from the instrument panel junction block ASSY.



| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

Resistance

|---|---|---|
| 3B-13 - MB-10 (FPCY) | Always | Less than 1 Ω |

LI

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

| | |
|---|---|
| 5 | Unit inspection of the front door courtesy light switch ASSY LH |

(1) Remove the front door courtesy light switch ASSY LH. (Refer to LI - 59)
(2) Perform the unit inspection of the front door courtesy light switch ASSY LH. (Refer to LI - 60)
Criteria: The inspection result shows the normal status.

NG → Replacement of the front door courtesy light switch ASSY LH (Refer to LI - 59)

OK

| | |
|---|---|
| 6 | Inspection of the wiring harness and the connector (front door courtesy light switch ASSY LH - instrument panel junction block ASSY) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector H21 of the front door courtesy light switch ASSY LH.
(2) Disconnect the connector 3A of the instrument panel junction block ASSY.
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.

Resistance

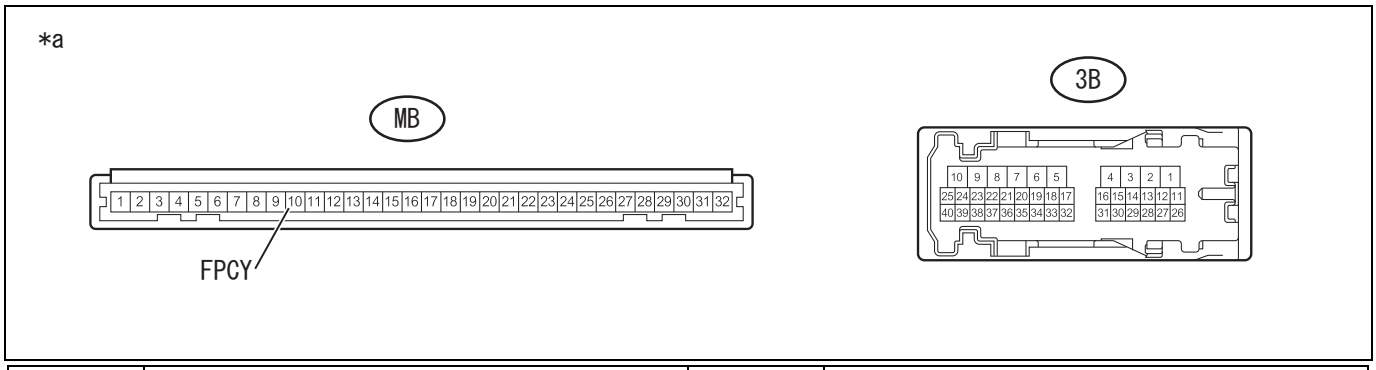
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| H21-1 - 3A-28 | Always | Less than 1 Ω |
| H21-1 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 7 | Inspection of the instrument panel junction block ASSY. |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)
(2) Remove the main body ECM (multiplex network body computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.



| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-28 - MB-16 (FDCY) | Always | Less than 1 Ω |

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

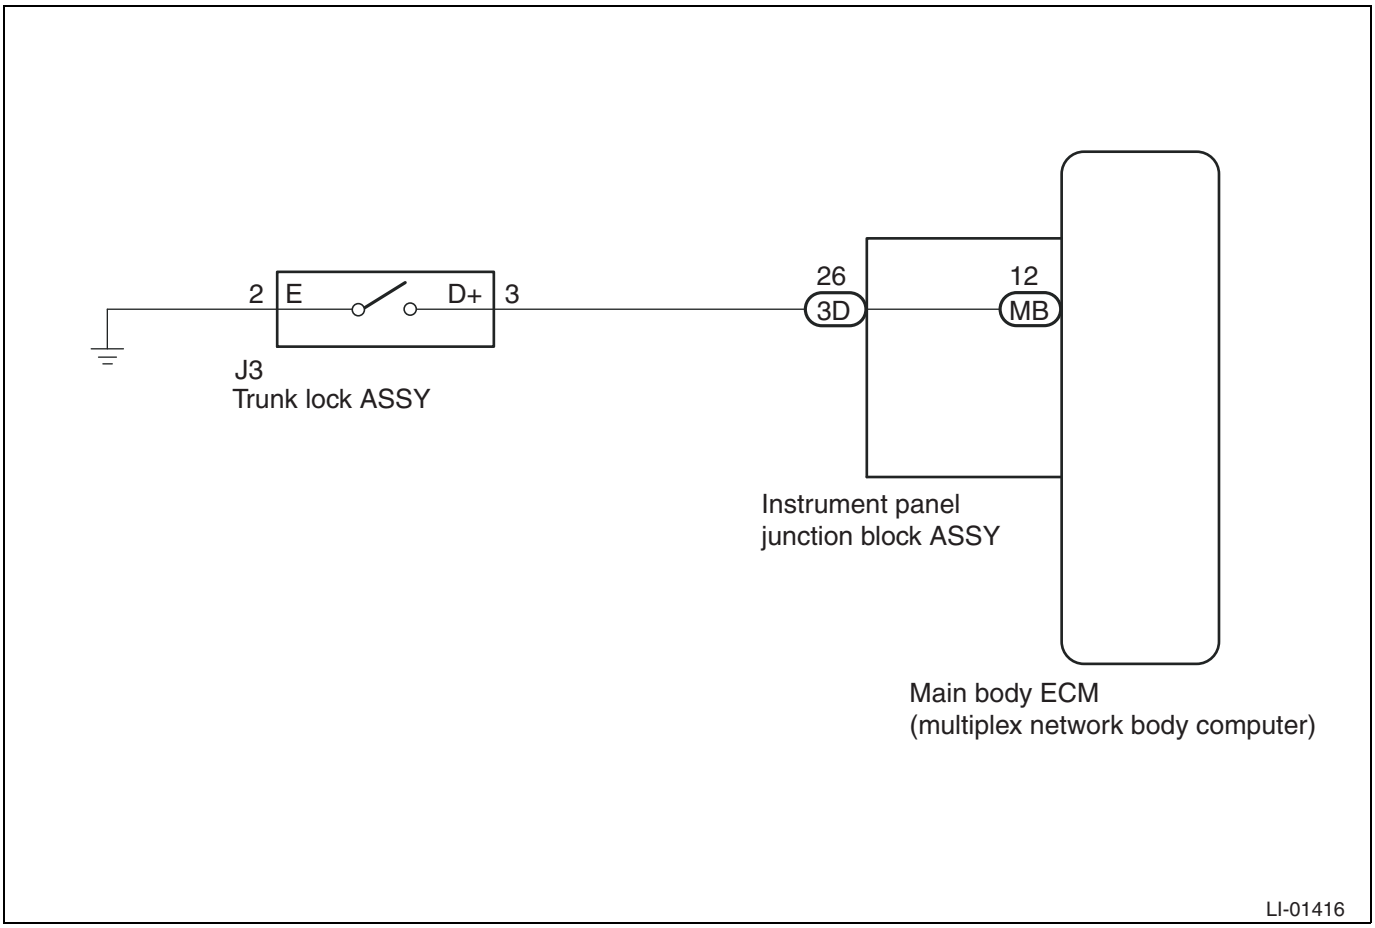
OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

## Trunk courtesy light switch circuit

Circuit description
The main body ECM (multiplex network body computer) is detecting the courtesy switch signal of the trunk lock ASSY.

Circuit figure



LI

Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data monitor |

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to LI - 17)

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Luggage Courtesy SW] | Status of the trunk lock ASSY<br>Display range: [Close]-[Open] | Closed: The trunk door is closed.<br>Open: The trunk door is open. | - |

Criteria: The normal value on the data monitor is displayed properly.

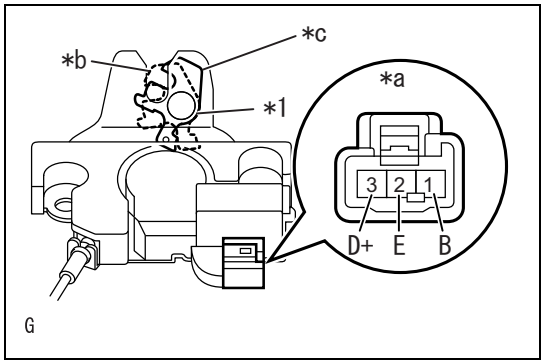
NG → Go to Step 2.

OK

See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| | |
|---|---|
| 2 | Inspection of the trunk lock ASSY |

(1) Remove the trunk lock ASSY. (Refer to DL - 105)



(2) Check the resistance between the connector terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3 (D+) - 2 (E) | Open | Less than 1 Ω |
| 3 (D+) - 2 (E) | Locked | 10 kΩ or more |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (trunk lock ASSY) |
| *b | Locked |
| *c | Open |

NG → Replacement of the trunk lock ASSY (Refer to DL - 105)

OK

| 3 | Inspection of the wiring harness and the connector (trunk lock ASSY - instrument panel junction block ASSY and chassis ground) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector 3D of the instrument panel junction block ASSY.
(2) Disconnect the connector J3 of the trunk lock ASSY.
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| J3-3 (D+) - 3D-26 | Always | Less than 1 Ω |
| J3-3 (D+) - chassis ground | Always | 10 kΩ or more |
| J3-2 (E) - chassis ground | Always | Less than 1 Ω |

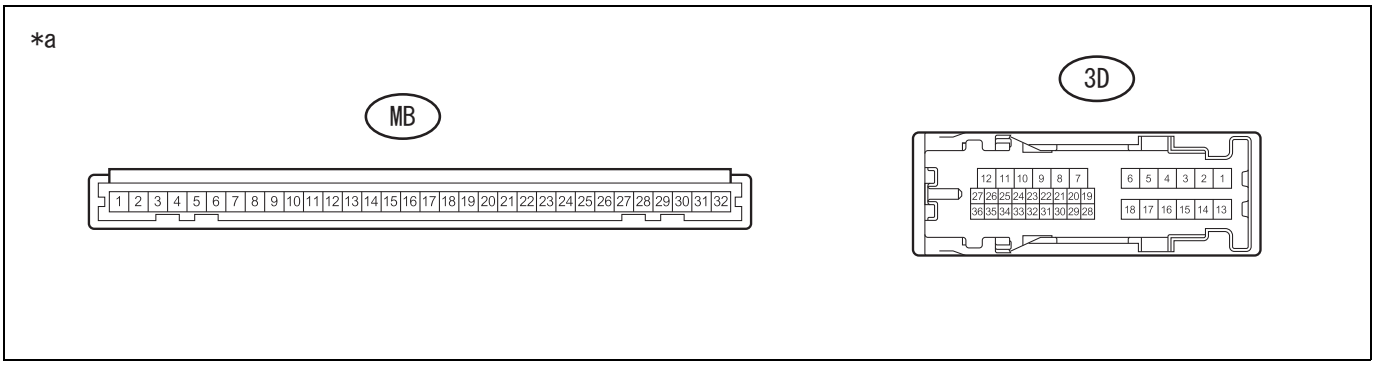
NG → Repair or replacement of wiring harness or connector

OK

| 4 | Inspection of the instrument panel junction block ASSY. |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)
(2) Remove the main body ECM (multiplex network body computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.

LI



Captions in illustration

| 3D-26 - MB-12 | Always | Less than 1 Ω |

LI

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

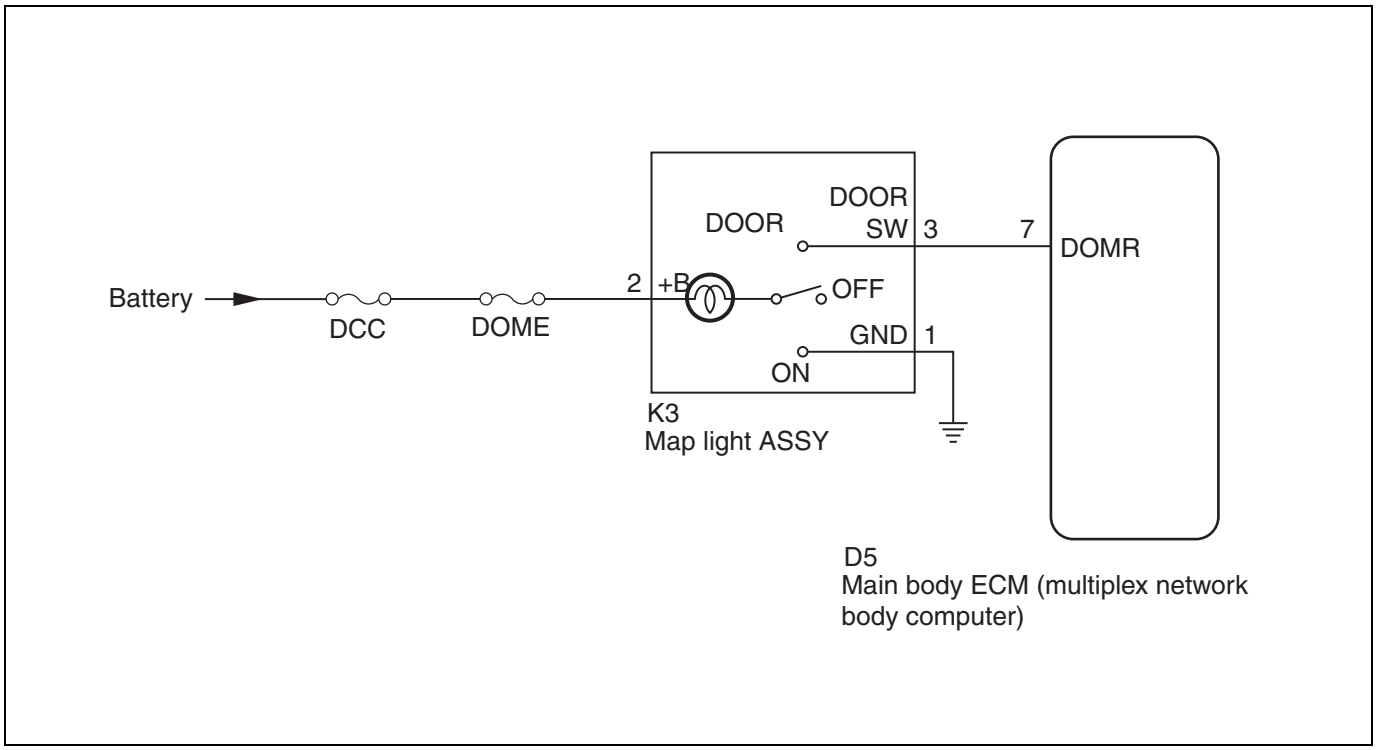
Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

## Interior illumination circuit

Circuit description

The main body ECM (multiplex network body computer) controls the map light ASSY to illuminate.

Circuit figure



LI

Inspection steps

CAUTION:

Before performing the troubleshooting, check the bulbs and the fuses of this circuit.

| 1 | Implementation of SSM4 active test (map light) |
|---|---|

(1) Using SSM4, perform an [Active Test] by following the display. (Refer to LI - 17)

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [Illuminated Entry System] | The lights controlled by the illuminated entry system are turned on | OFF/ON |

Criteria: The work support can be performed properly.

NOTE:

Perform the inspection with the change switch of the map light ASSY set to the DOOR mode.

NG → Go to Step 2.

OK

Go to related circuit inspection listed in symptom table (Refer to LI - 7).

| 2 | Unit inspection of the map light ASSY |
|---|---|

(1) Remove the map light ASSY. (Refer to LI - 48)

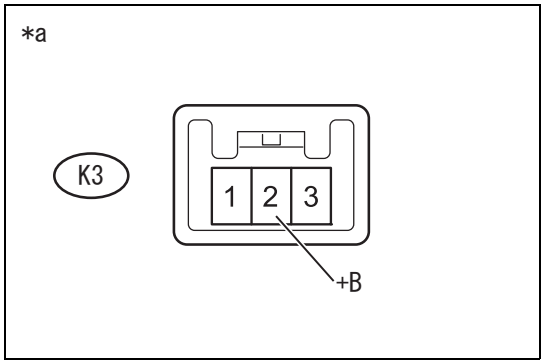
(2) Perform the unit inspection of the map light ASSY. (Refer to LI - 50)

NG → Replacement of the map light ASSY (Refer to LI - 48)

OK

| | |
|---|---|
| 3 | Inspection of the wiring harness and the connector (map light ASSY - battery) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector K3 of the map light ASSY.



(2) Measure the voltage between the connector terminals on the vehicle wiring harness side.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| K3-2 (+B) - chassis ground | Always | 11 to 14V |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (map light ASSY connector) |

NG → Repair or replacement of wiring harness or connector

LI

OK

| | |
|---|---|
| 4 | Inspection of the wiring harness and the connector (map light ASSY - main body ECM (multiplex network body computer)) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector K3 of the map light ASSY.
(2) Disconnect the connector D5 of the main body ECM (multiplex network body computer).
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| K3-3 (DOOR SW) - D5-7 (DOMR) | Always | Less than 1 Ω |
| D5-7 (DOMR) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

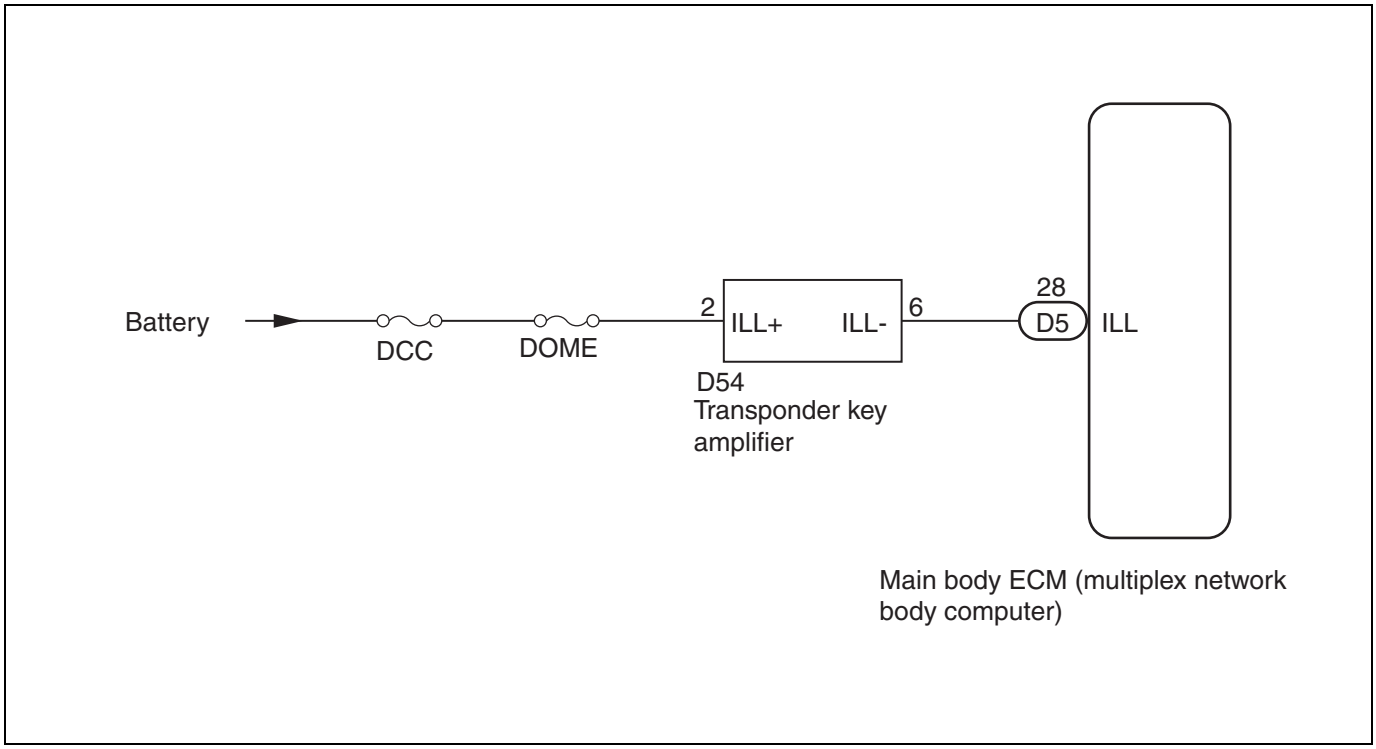
OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

## Ignition key cylinder light circuit

Circuit description
The main body ECM (multiplex network body computer) controls the transponder key amplifier (key cylinder light) to illuminate.

Circuit figure



LI

Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuses and the lights of this circuit.

| | |
|---|---|
| 1 | Implementation of SSM4 active test |

(1) Using SSM4, display the [Active Test] screen according to the screen and check the computer data. (Refer to LI - 17)

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [Key illumi. Lamp] | Turn on the key cylinder light | ON/OFF |

Criteria: The work support can be performed properly.

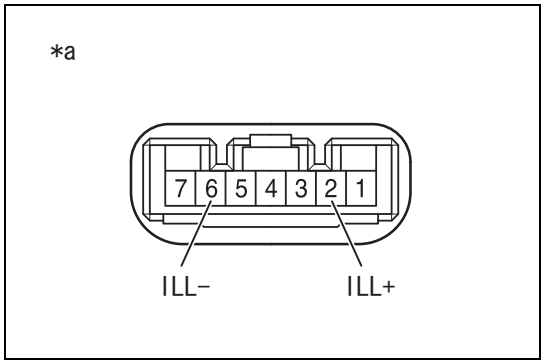
NG → Go to Step 2.

OK

See the next circuit for inspection shown on the symptom table. (Refer to LI - 7)

| | |
|---|---|
| 2 | Unit inspection of the transponder key amplifier |

(1) Remove the transponder key amplifier. (Refer to TD - 337)



(2) Check that the transponder key amplifier light illuminates.
  (a) Inspect if the light turns on when battery voltage is applied to each connector terminal.

Criteria

| Battery connection | Criteria |
|---|---|
| Battery positive terminal →2 (ILL+)<br>Battery ground terminal →6 (ILL-) | Light turns on. |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(transponder key amplifier) |

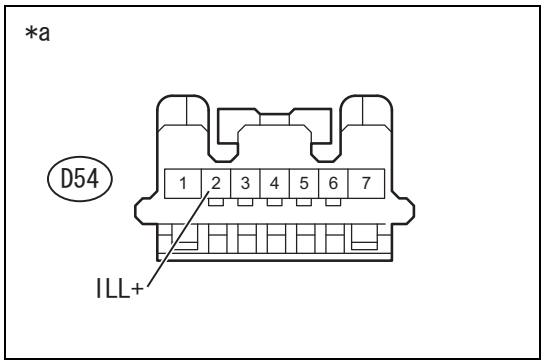
NG → Replacement of the transponder key amplifier (Refer to TD - 337)

OK

| 3 | Inspection of the wiring harness and the connector (transponder key amplifier - battery) |
|---|---|

LI

NOTE:
For inspection procedures and precautions, refer to IN - 36.



(1) Disconnect the connector D54 of the transponder key amplifier.
(2) Measure the voltage between the connector terminals on the vehicle wiring harness side.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D54-2 (ILL+) - chassis ground | Always | 11 to 14 V |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector<br>(transponder key amplifier connector) |

NG → Repair or replacement of wiring harness or connector

OK

| 4 | Inspection of the wiring harness and the connector (transponder key amplifier - main body ECM (multiplex network body computer)) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector D54 of the transponder key amplifier.
(2) Disconnect the connector D5 of the main body ECM (multiplex network body computer).
(3) Measure the resistance between the connector terminals on the vehicle wiring harness side.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D54-6 (ILL-) - D5-28 (ILL) | Always | Less than 1 Ω |
| D5-28 (ILL) - chassis ground | Always | 10 kΩ or more |

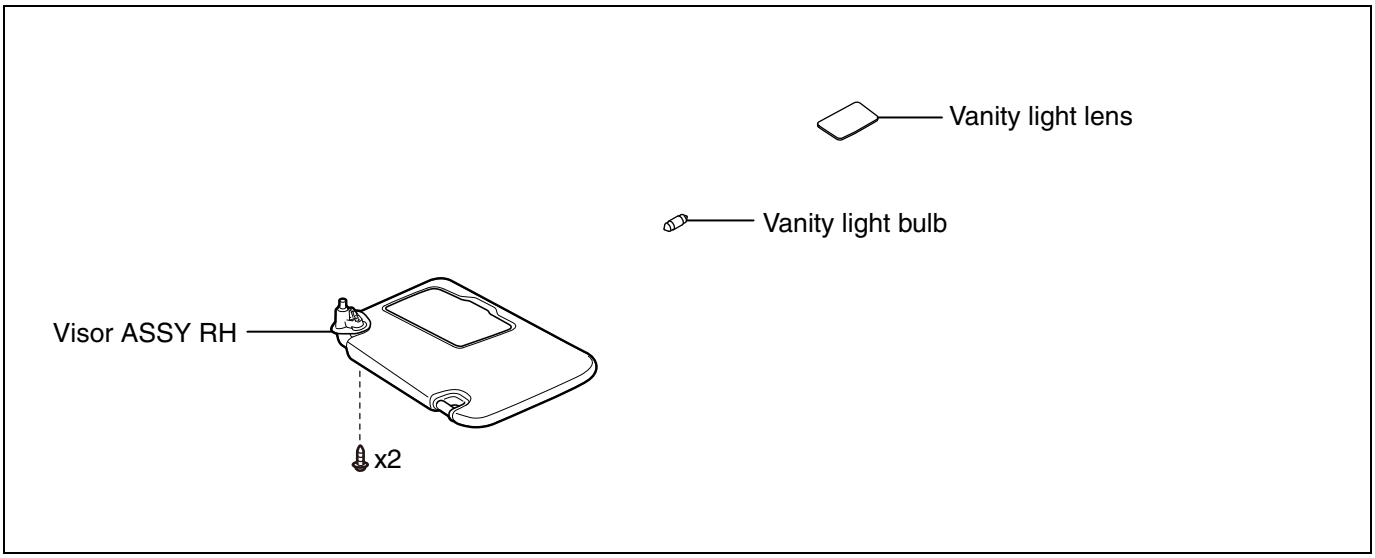
NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (multiplex network body computer) (Refer to PD - 25)

# Vanity light

## Exploded view

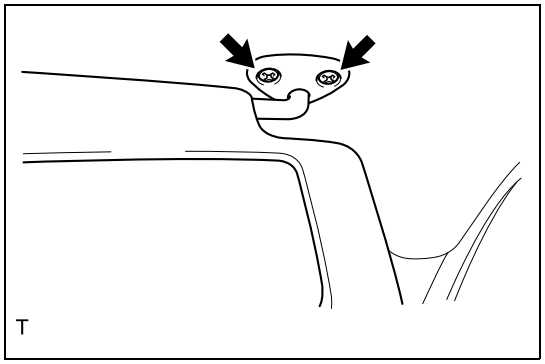


LI

## Removal

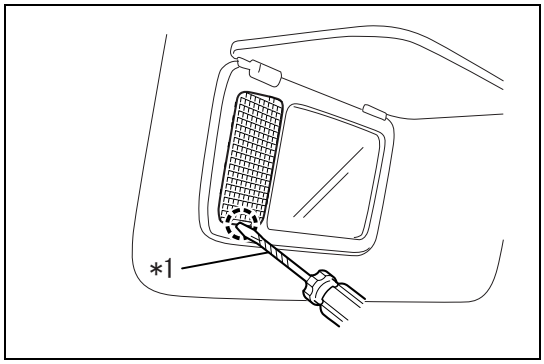
NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.



1. Removal of visor ASSY RH
   (1) Remove the 2 screws.
   (2) Disconnect the visor ASSY RH from the hook.

   (3) Disconnect the connector and remove the visor ASSY RH.



2. Removal of the vanity light lens
   (1) Release the claws by using a flat tip screwdriver wrapped with protective tape, and remove the vanity light lens.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

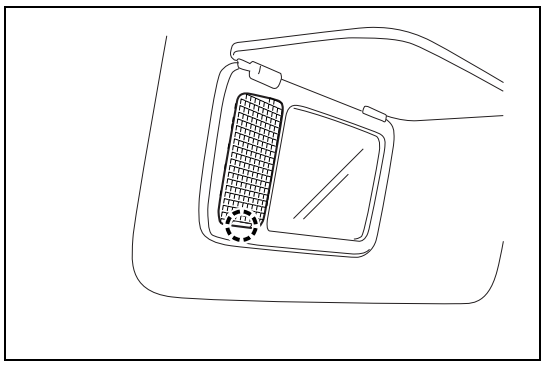
3. Removal of the vanity light bulb
   (1) Remove the vanity light bulb from the visor ASSY RH.

## Installation

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

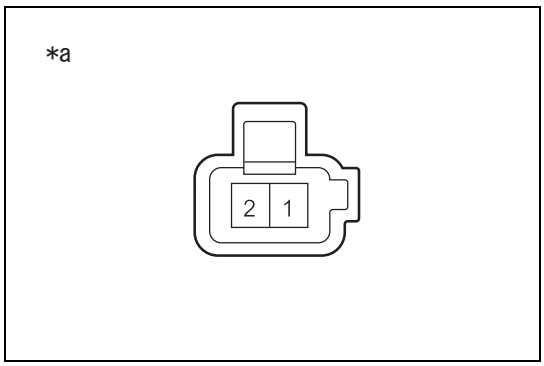
1. Installation of the vanity light bulb
   (1) Install the vanity light bulb to the visor ASSY RH.



2. Installation of the vanity light lens
   (1) Engage the claws and install the vanity light lens.

3. Installation of visor ASSY RH
   (1) Connect the connector.
   (2) Place the visor ASSY RH on the hook.
   (3) With the 2 screws, install the visor ASSY RH.

## Unit inspection



1. Inspection of the visor ASSY RH
   (1) Measure the resistance between the connector terminals when the visor ASSY RH (vanity light switch) is operated.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | Mirror cover closed | 10 kΩ or more |
| 1 - 2 | Mirror cover opened | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (visor ASSY RH) |

# Personal map light

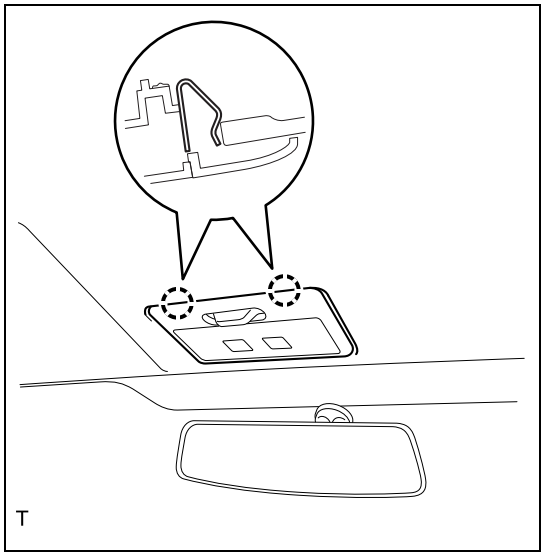
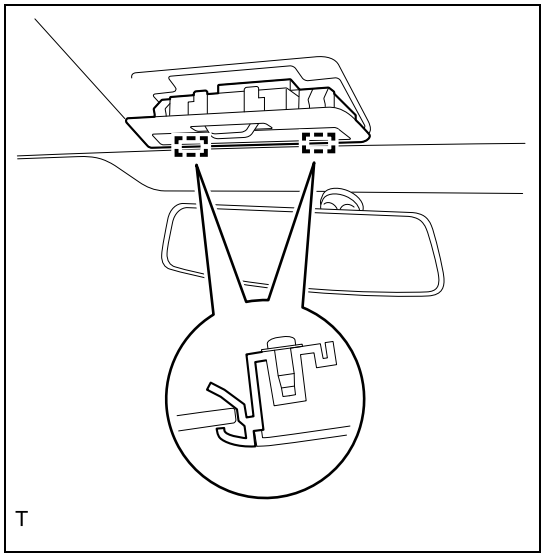
T

## Removal

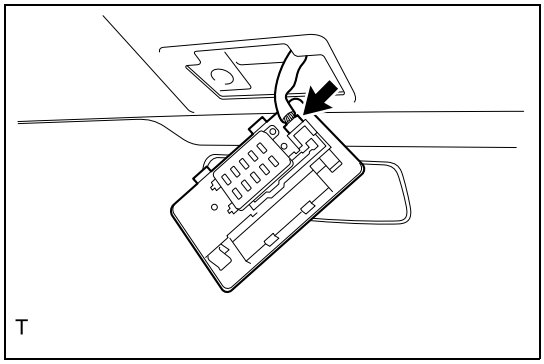


T

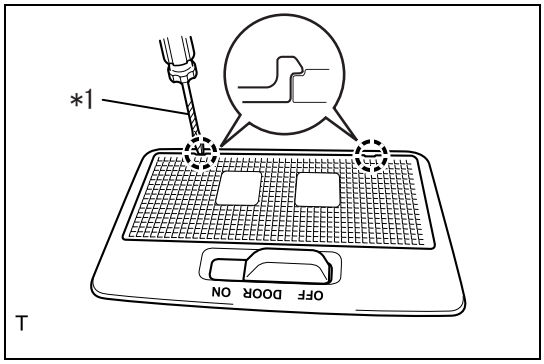
1. Removal of the map light ASSY
   (1) Release the 2 tabs.



(2) Release two guides and disconnect the map light ASSY.



(3) Disconnect the connector and remove the map light ASSY.



2. Removal of the map light lens NO.1
   (1) Release two claws by using a fine flat tip screwdriver wrapped with protective tape, and remove the map light lens NO.1.

Captions in illustration

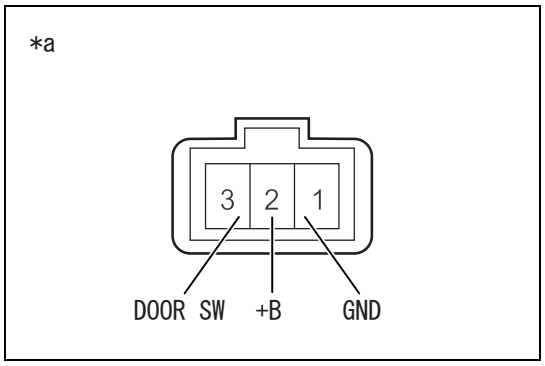
| | |
|---|---|
| *1 | Protective tape |

3. Removal of the map light bulb
   (1) Remove the map light bulb.

## Installation

1. Installation of the map light bulb
   (1) Install the map light bulb.
2. Installation of the map light lens NO.1
   (1) Engage two claws and install the map light lens NO.1.
3. Installation of the map light ASSY
   (1) Connect the connector.
   (2) Insert two guides.
   (3) Engage two claws and install the map light ASSY.

## Unit inspection



1. Inspection of the map light ASSY
   (1) Illumination condition check for the map light
      (a) Check the illumination condition of the map light when battery voltage is applied between the connector terminals.

Criteria

| Battery connection | Inspection conditions | Criteria |
|---|---|---|
| Battery positive terminal →2(+B)<br>Battery ground terminal →1(GND) | Map light switch ON | The map light illuminates. |
| Battery positive terminal →2(+B)<br>Battery ground terminal →3(DOOR SW) | Map light switch DOOR | The map light illuminates. |

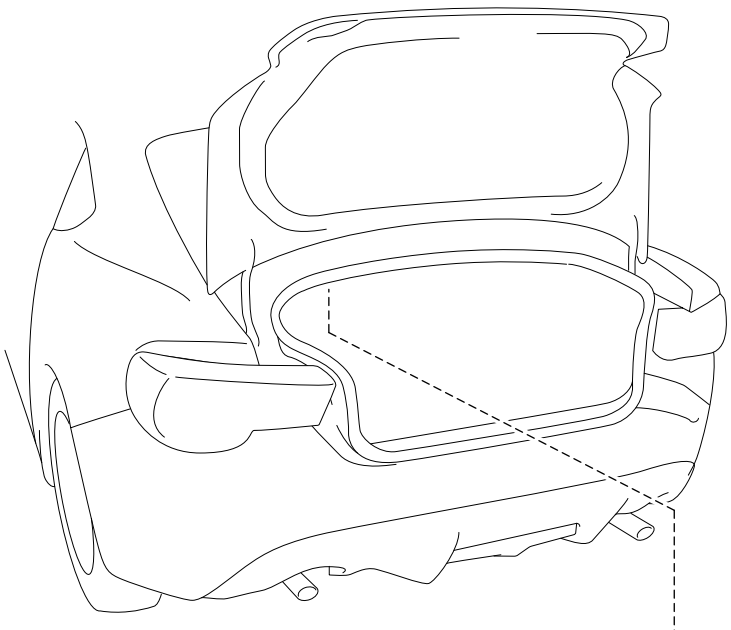
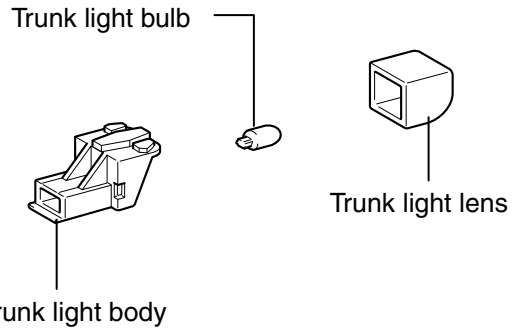
# Trunk room light

## Exploded view

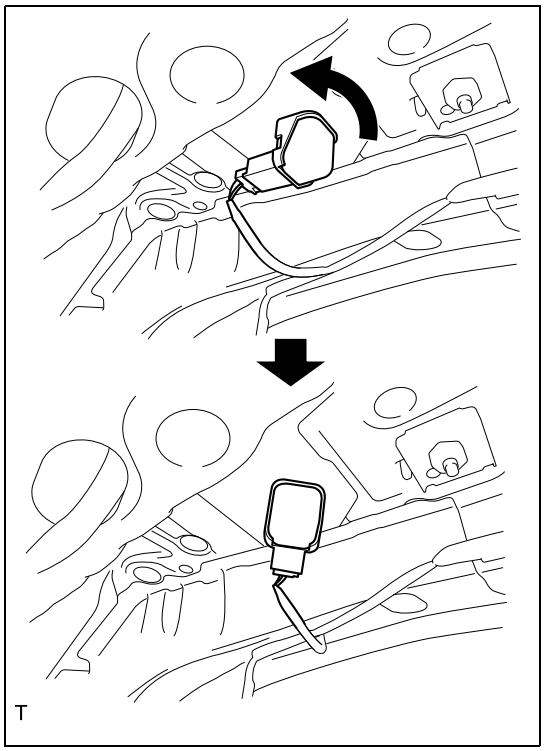


Trunk light ASSY NO.1



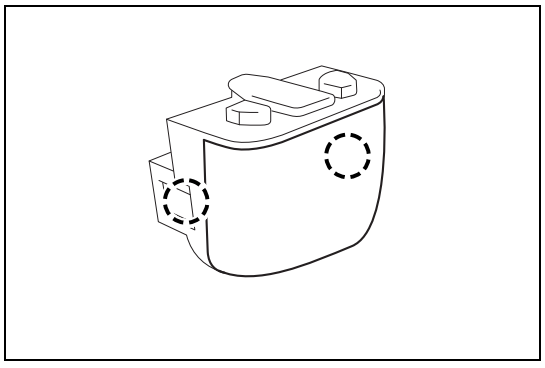
LI-01589

## Removal

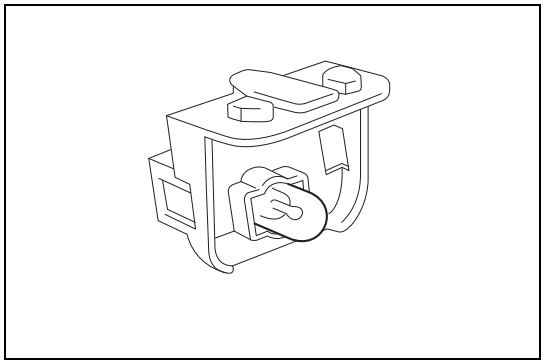


1. Removal of the trunk light ASSY NO.1
   (1) Rotate the trunk light ASSY NO.1 as shown in the figure, and disconnect the trunk light ASSY NO.1 from the vehicle.

   (2) Disconnect the connector and remove the trunk light ASSY NO.1.



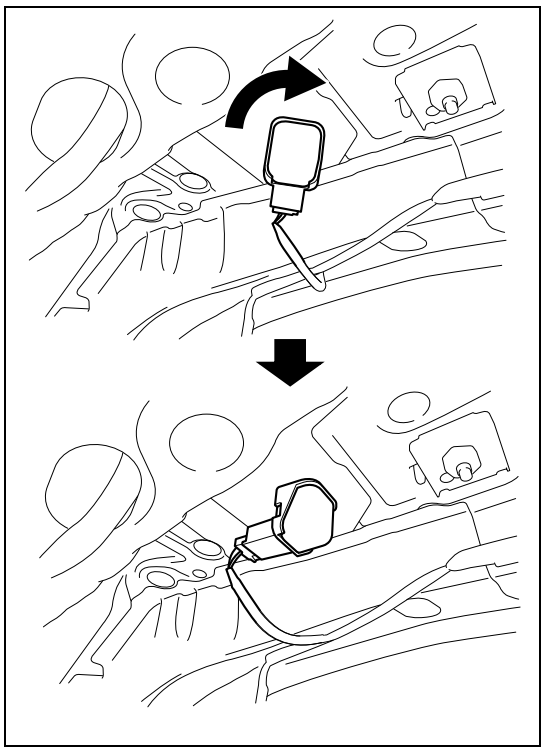
2. Removal of the trunk light lens
   (1) Release two claws and remove the trunk light lens.



3. Removal of the trunk bulb
   (1) Remove the trunk light valve.

## Installation

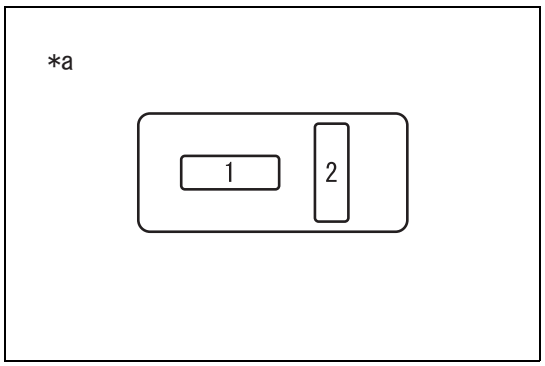
1. Installation of the trunk light bulb
   (1) Install the trunk light valve.
2. Installation of the trunk light lens
   (1) Engage two claws and install the trunk light lens.



3. Installation of the trunk light ASSY NO.1
   (1) Connect the connector.
   (2) Rotate the trunk light ASSY NO.1 as shown in the figure, and install the trunk light ASSY NO.1.

LI

## Unit inspection



1. Inspection of the trunk light ASSY NO.1
   (1) Check the illumination condition when battery voltage is applied between the connector terminals.

Criteria

| Inspection terminals | Inspection conditions | Criteria |
|---|---|---|
| 1 - 2 | Battery positive →1<br>Battery ground →2 | Light turns on. |

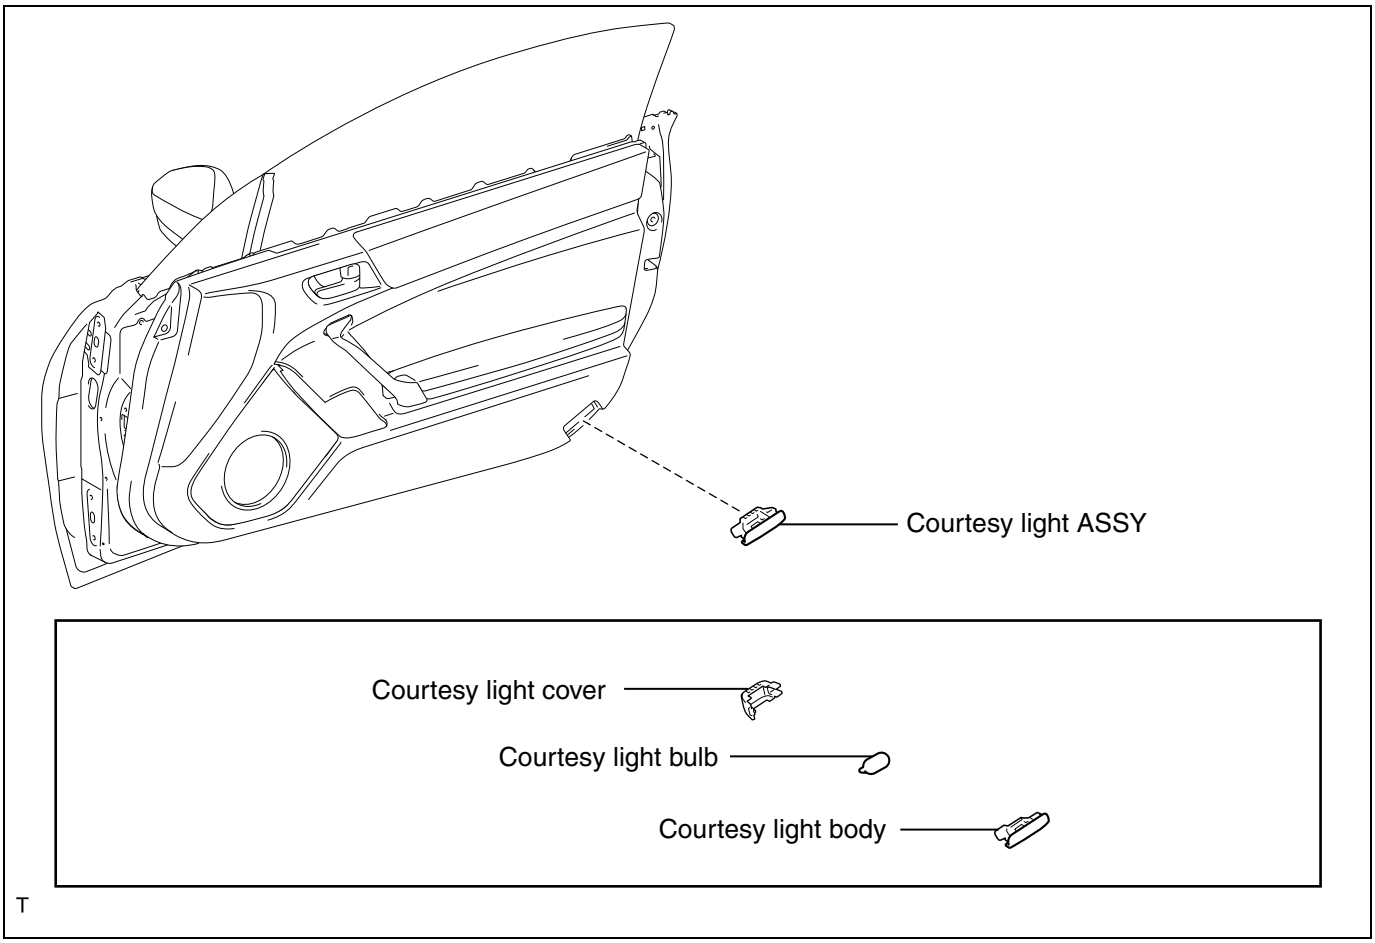
Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(trunk light ASSY NO.1) |

NOTE:
Perform the inspection using a properly functioning bulb.

# Door courtesy light (installed to the front side)

## Exploded view

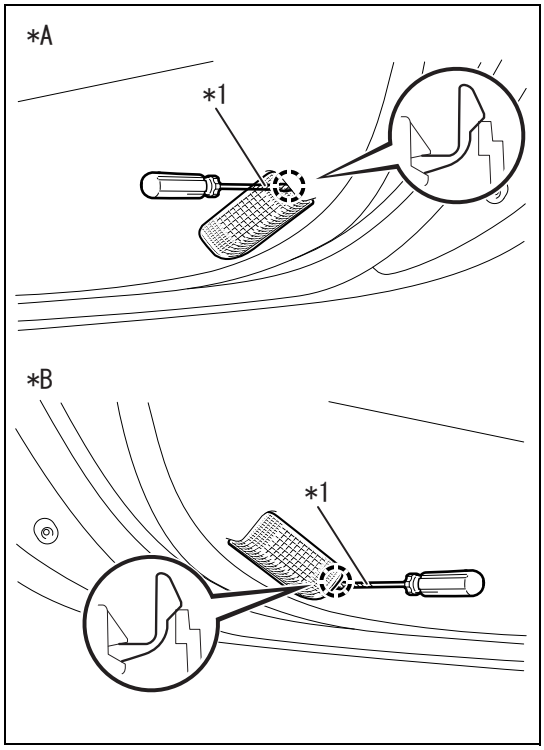


T

## Removal

NOTE:

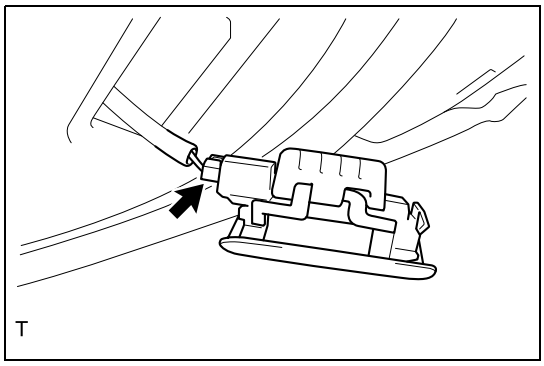
The procedures described below are for the RH side. Perform the same procedures for the LH side.



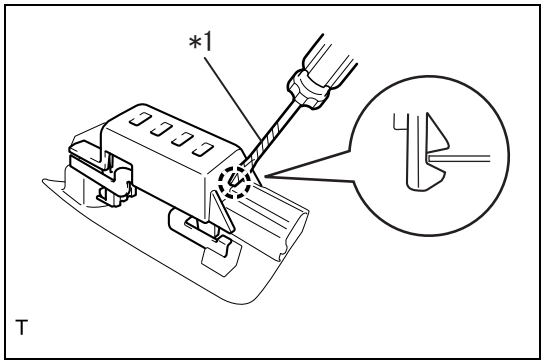
1. Removal of the courtesy light ASSY
   (1) Using a flat head screw driver wrapped in protective tape, release the tab.

Captions in illustration

| | |
|---|---|
| *A | Installation location on the passenger's side |
| *B | Installation location on the driver's side |
| *1 | Protective tape |



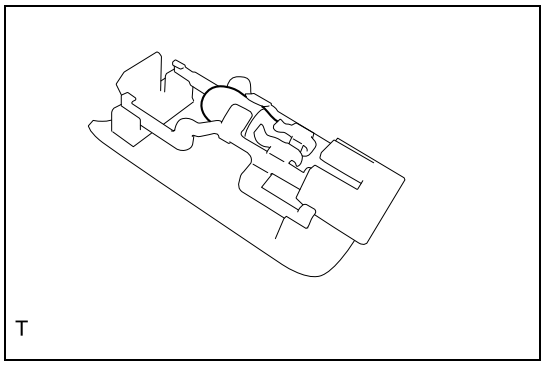
(2) Disconnect the connector and remove the courtesy light ASSY.



2. Removal of the courtesy light bulb
   (1) Release the claws by using a flat tip screwdriver wrapped with protective tape, and remove the courtesy light cover.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |



(2) Remove the courtesy light bulb.

## Installation

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Installation of the courtesy light bulb
   (1) Install the courtesy light bulb.
   (2) Engage the claws and install the courtesy light cover.
2. Installation of the courtesy light ASSY
   (1) Connect the connector.

   (2) Engage the claws and install the courtesy light ASSY.

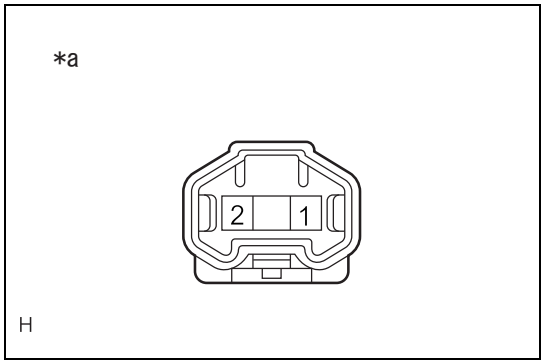
Captions in illustration

| | |
|---|---|
| *A | Installation location on the passenger's side |
| *B | Installation location on the driver's side |

## Unit inspection

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.



1. Inspection of the courtesy light ASSY
   (1) Light inspection
      (a) Inspect if the light turns on when battery voltage is applied to each connector terminal.

Criteria

| Inspection terminals | Battery connection | Criteria |
|---|---|---|
| 1 - 2 | Battery positive →1<br>Battery ground →2 | Light turns on. |

Captions in illustration

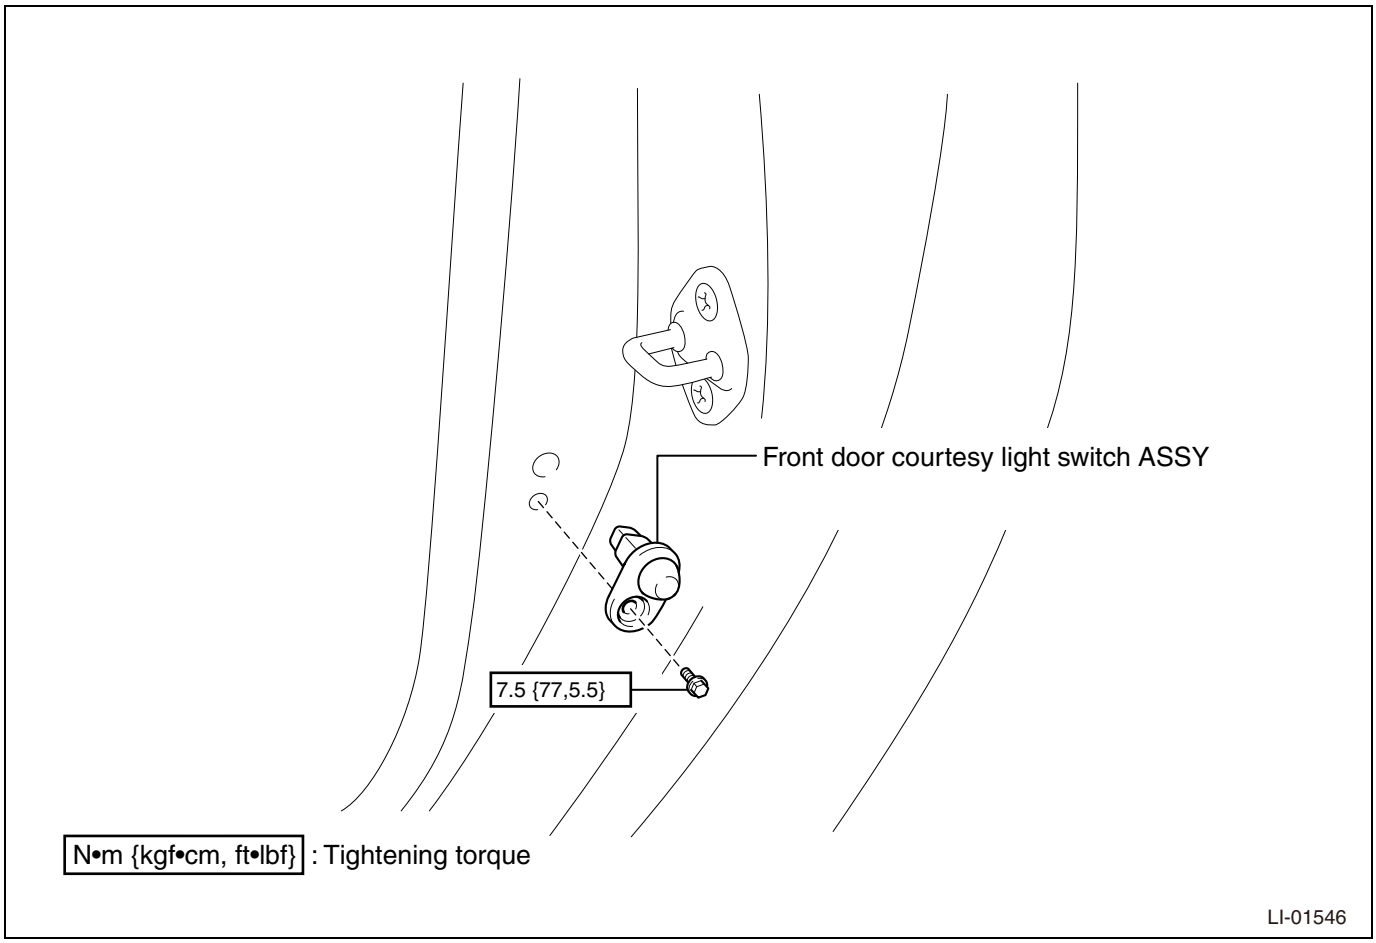
# Front door courtesy switch

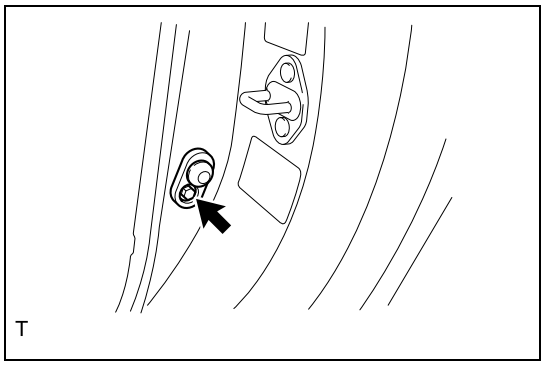
## Exploded view



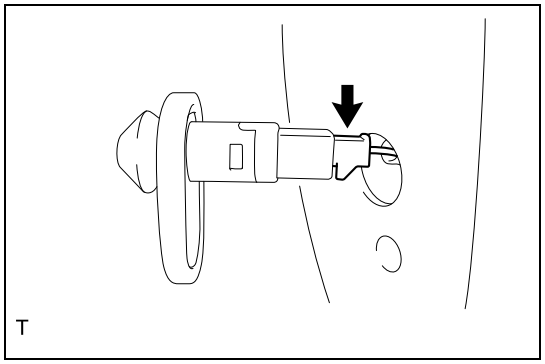
## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH side.



1. Removal of the front door courtesy light switch ASSY
   (1) Remove the bolt.



(2) Disconnect the connector and remove the front door courtesy light switch ASSY.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH side.

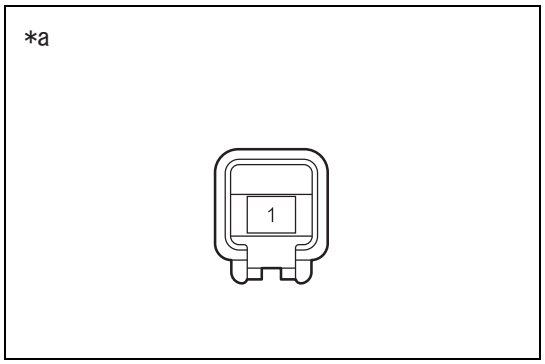
1. Installation of the front door courtesy light switch ASSY
   (1) Connect the connector.
   (2) Install the front door courtesy light switch ASSY with the bolt.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

LI

## Unit inspection

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH side.



1. Inspection of the front door courtesy light switch ASSY
   (1) Measure the resistance when the shaft of the front door courtesy light switch ASSY is operated.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - Chassis ground | When the shaft is not pushed in | Less than 1 Ω |
| 1 - Chassis ground | When the shaft is pushed in | 10 kΩ or more |

# Meter & gauge system

## Function inspection

1. LED check
   (1) Inspection of LED light
      (a)Check that the indicators and the warning lights turn on for the following periods of time when turning IG from OFF to ON.

Criteria

| Indicator/warning light | Lighting specifications |
|---|---|
| A/T OIL TEMP*2*3, fuel, charge | Turns on for approximately 2 seconds upon IG OFF →ON |
| Auto leveling *1, driver's seat belt, brake, TRC OFF, VSC OFF | Turns on for approximately 3 seconds upon IG OFF →ON |
| Airbag | Turns on for approximately 6 seconds upon IG OFF →ON |
| VSC, ABS, oil pressure, check engine, P/S | Turns on upon IG OFF →ON |

*1: Headlight discharge type
*2: Automatic transmission system
*2: Normal meter only For TFT meter, check if the display lights up or not.
NOTE:
- The lighting request is issued by the corresponding ECM.
- Check the brake warning light after releasing the parking brake.

   (2) Inspection of seat belt warning indicator
      (a)With IG ON, insert the tongue plate of the driver's seat belt into the buckle, and check that the seat belt warning indicator turns from ON to OFF.

Criteria

| Indicator/warning light | Ignition switch operation | Lighting specifications |
|---|---|---|
| Seat belt warning | IG OFF →ON | • Blinking →Insert tongue plate →Turns off<br>• Off →Remove tongue plate →Blinking |

2. Speed meter check
   (1) Operation inspection
      (a)Using a speed meter tester, check the speed meter reading error and the odometer operation.

Standard value

Km/h display

| Standard speed reading by tester [km/h] | Allowable range of meter reading [km/h] |
|---|---|
| 20 | 19.3 to 22.7 |
| 40 | 39.1 to 42.9 |
| 60 | 58.8 to 63.2 |
| 80 | 78.8 to 83.2 |
| 100 | 98.8 to 103.2 |
| 120 | 118.8 to 123.2 |
| 140 | 138.8 to 143.2 |
| 160 | 158.8 to 163.2 |
| 180 | 178.8 to 183.2 |
| 200 | 198.8 to 203.2 |
| 220 | 218.8 to 223.2 |
| 240 | 238.8 to 243.2 |

MPH display

| Standard speed reading by tester [km/h] | Allowable range of meter reading [MPH] |
|---|---|
| 20 | 19.4 to 21.8 |
| 40 | 39.3 to 41.9 |
| 60 | 59.3 to 61.9 |
| 80 | 79.3 to 81.9 |
| 100 | 99.3 to 101.9 |
| 120 | 119.3 to 121.9 |
| 140 | 139.3 to 141.9 |

CAUTION:
Adjust the tire pressure in advance. Inappropriate tire pressure increases reading error.

(b) Check the fluctuation range of the pointer.
Standard value: 0.3° or less

3. Tachometer check
(1) Operation inspection
(a) Start the engine.
(b) Use a revolution indicator to check the reading error of the tachometer.

Standard value

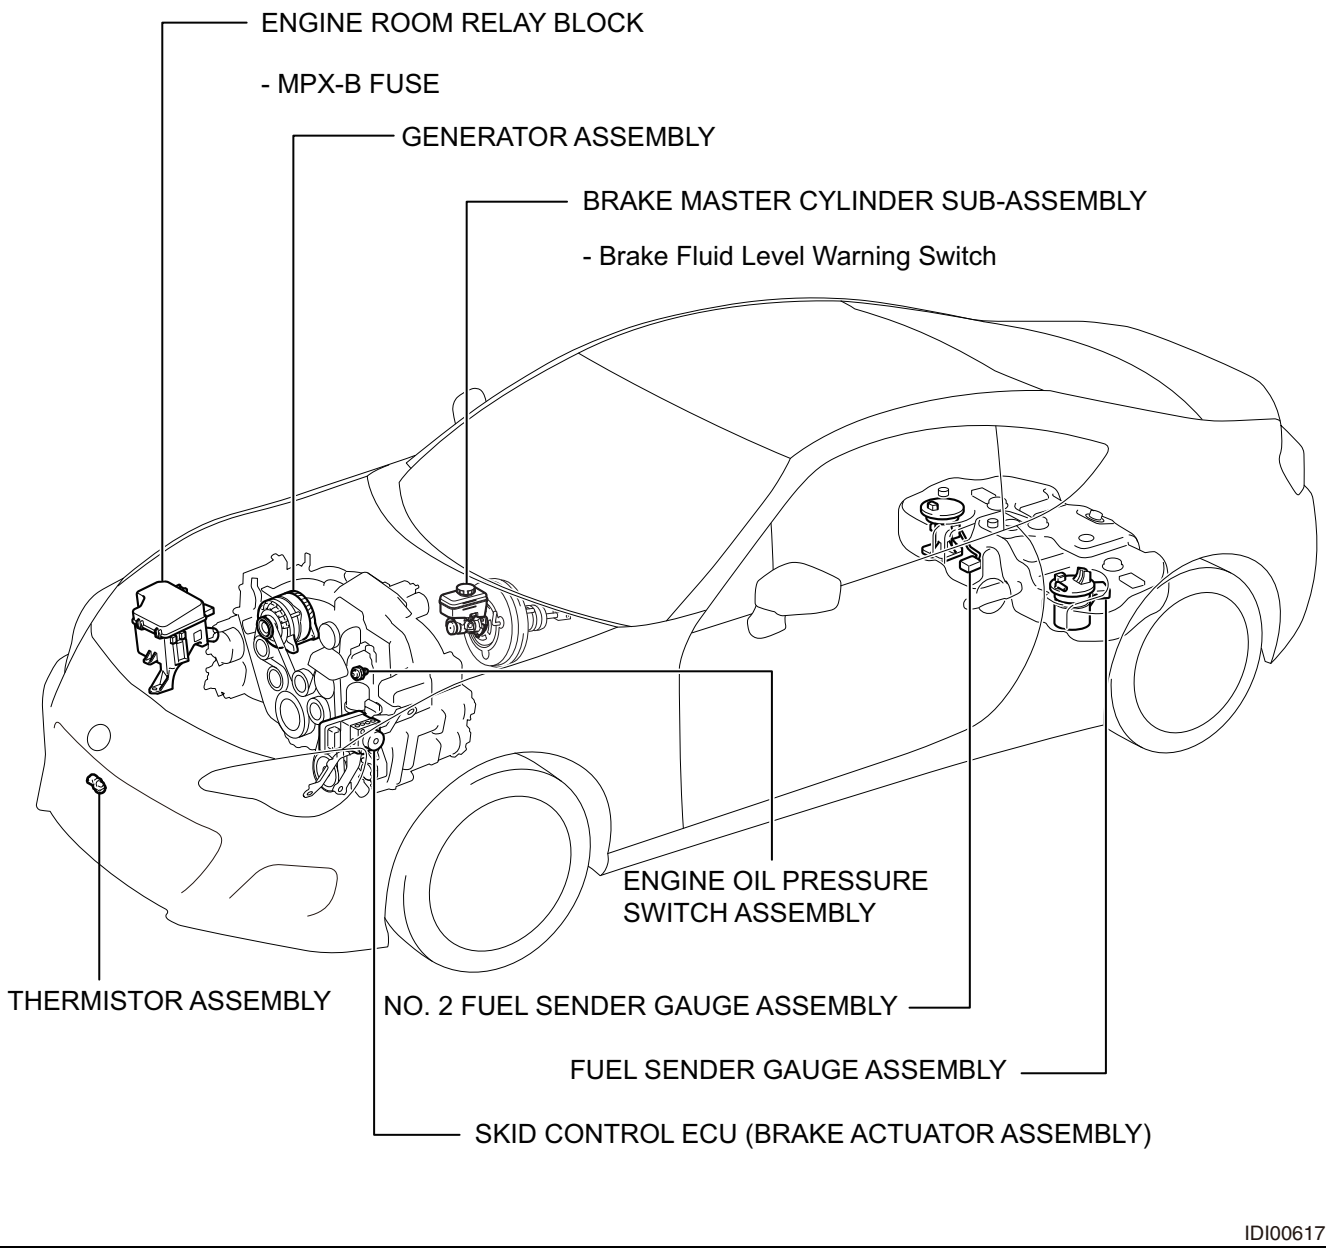
| Revolution indicator reading [r/min] | Allowable range of meter reading [r/min] |
|---|---|
| 1000 | 933 to 1067 |
| 2000 | 1923 to 2077 |
| 3000 | 2913 to 3088 |
| 4000 | 3913 to 4088 |
| 5000 | 4913 to 5088 |
| 6000 | 5913 to 6088 |
| 7000 | 6913 to 7088 |
| 8000 | 7913 to 8088 |

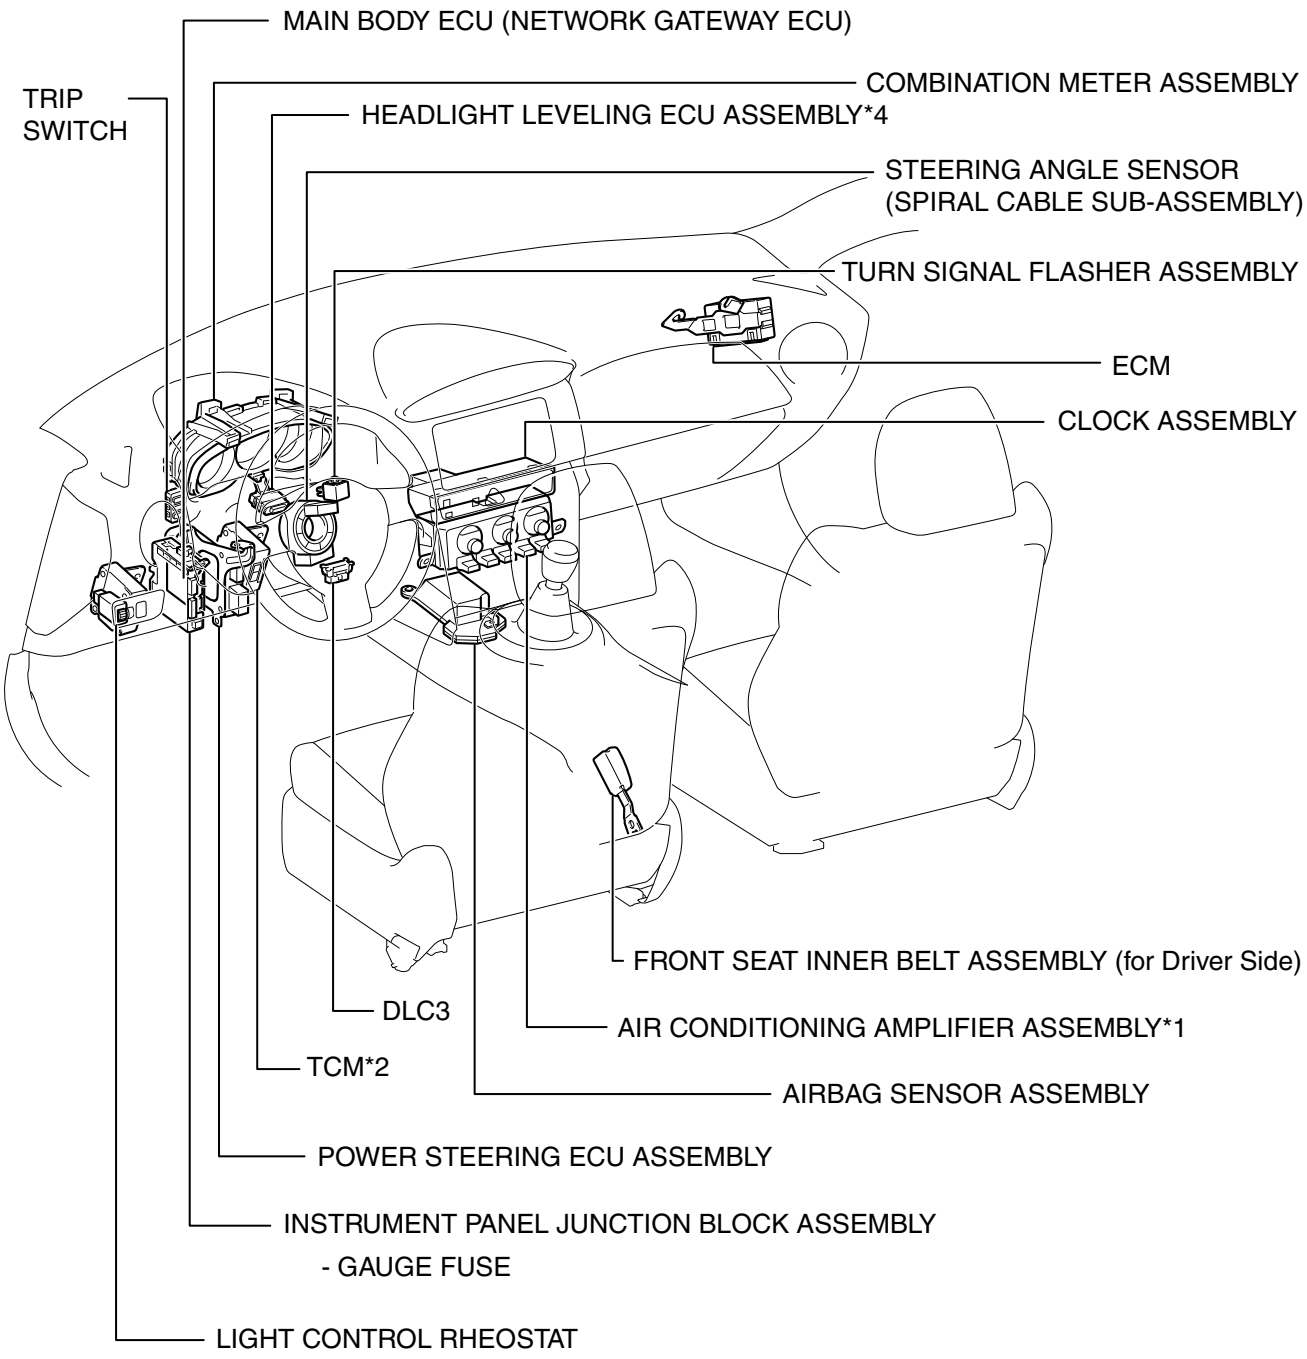
CAUTION:
Do not increase the engine speed beyond the allowable limit. (Keep the engine speed below the red zone displayed on the meter.)

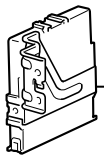
(c) Check the fluctuation range of the pointer.
Standard value: 0.3 °or less

4. Inspection of oil pressure warning
SST 09843-18040
(1) Operation inspection
(a) Disconnect the connector of the engine oil pressure switch ASSY.
(b) Start the engine.
(c) Using SST (diagnosis check wire No.2), check the state of the oil pressure warning indicator when the vehicle wiring harness connector terminal is short-circuited to the chassis ground.
Criteria: Engine oil pressure warning indicator turns on.

Parts location







REFER TO THE “REGISTRATION MANUAL FOR IMMOBILIZER” FOR ATTACHMENT POSITION.
CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)*3

*1: for Automatic Air Conditioning System
*2: for Automatic Transmission System
*3: w/ Entry and Start System
*4: for HID Headlight

IDI00618

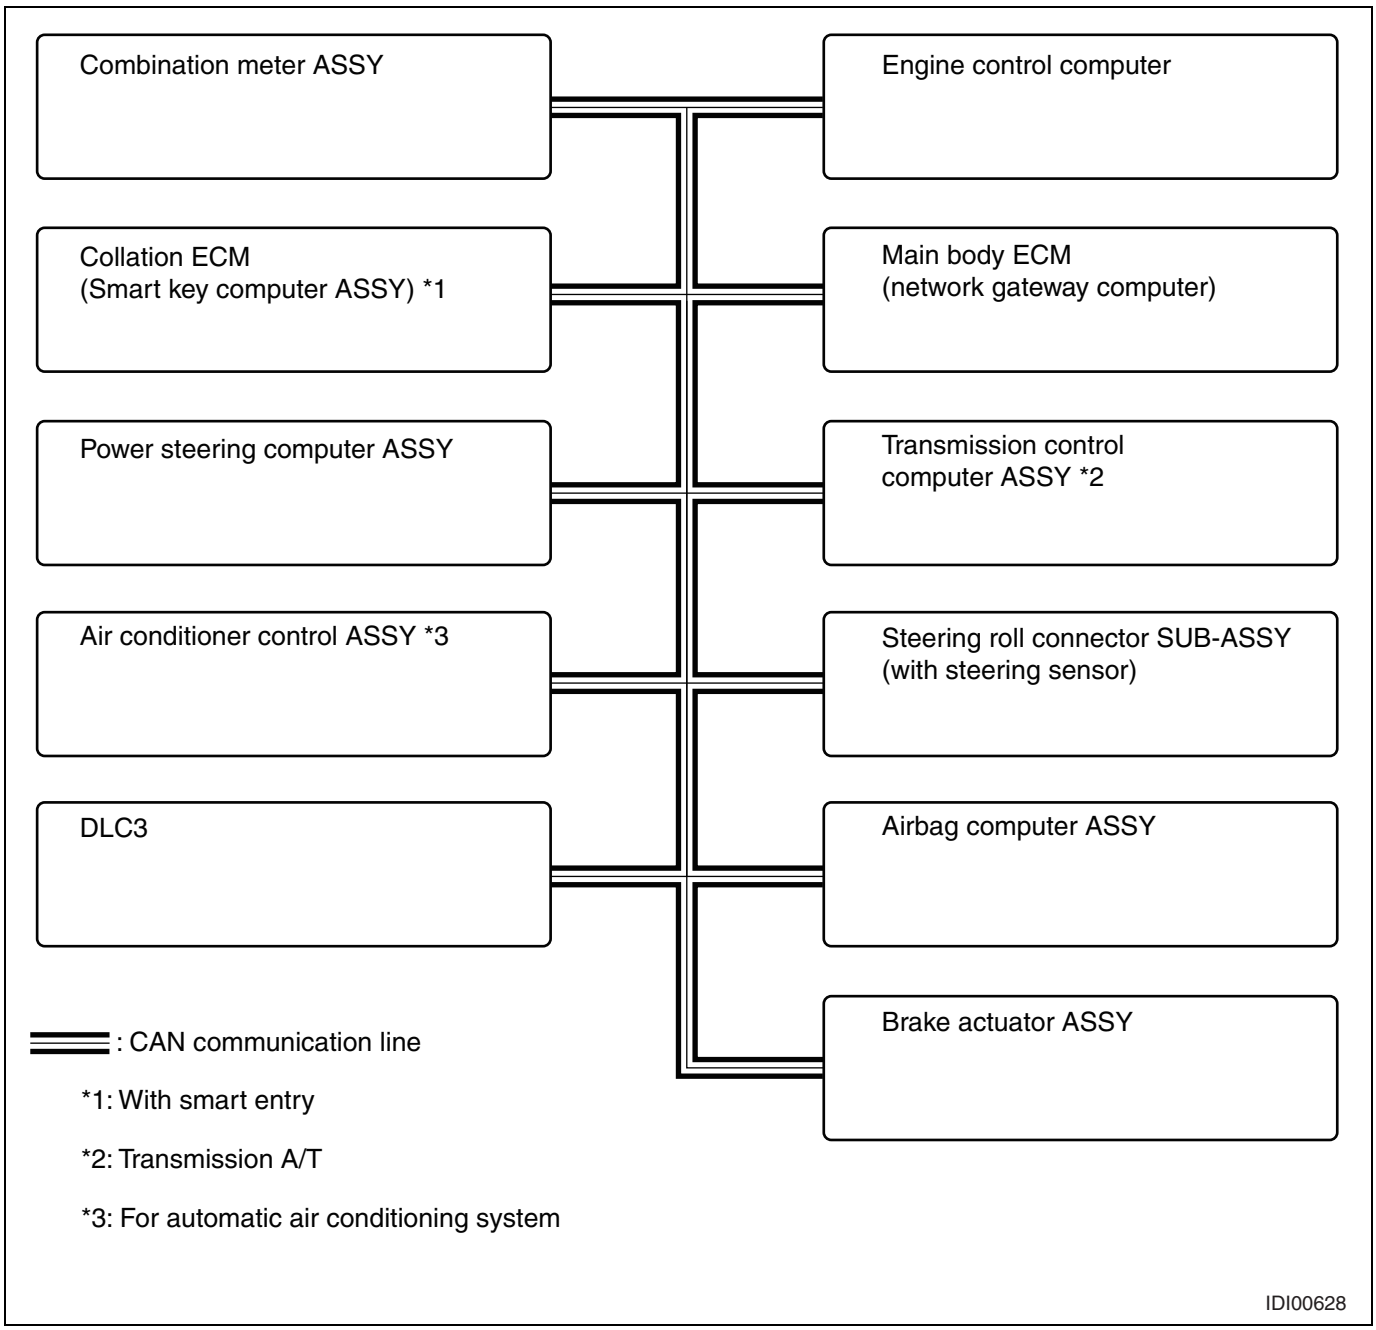
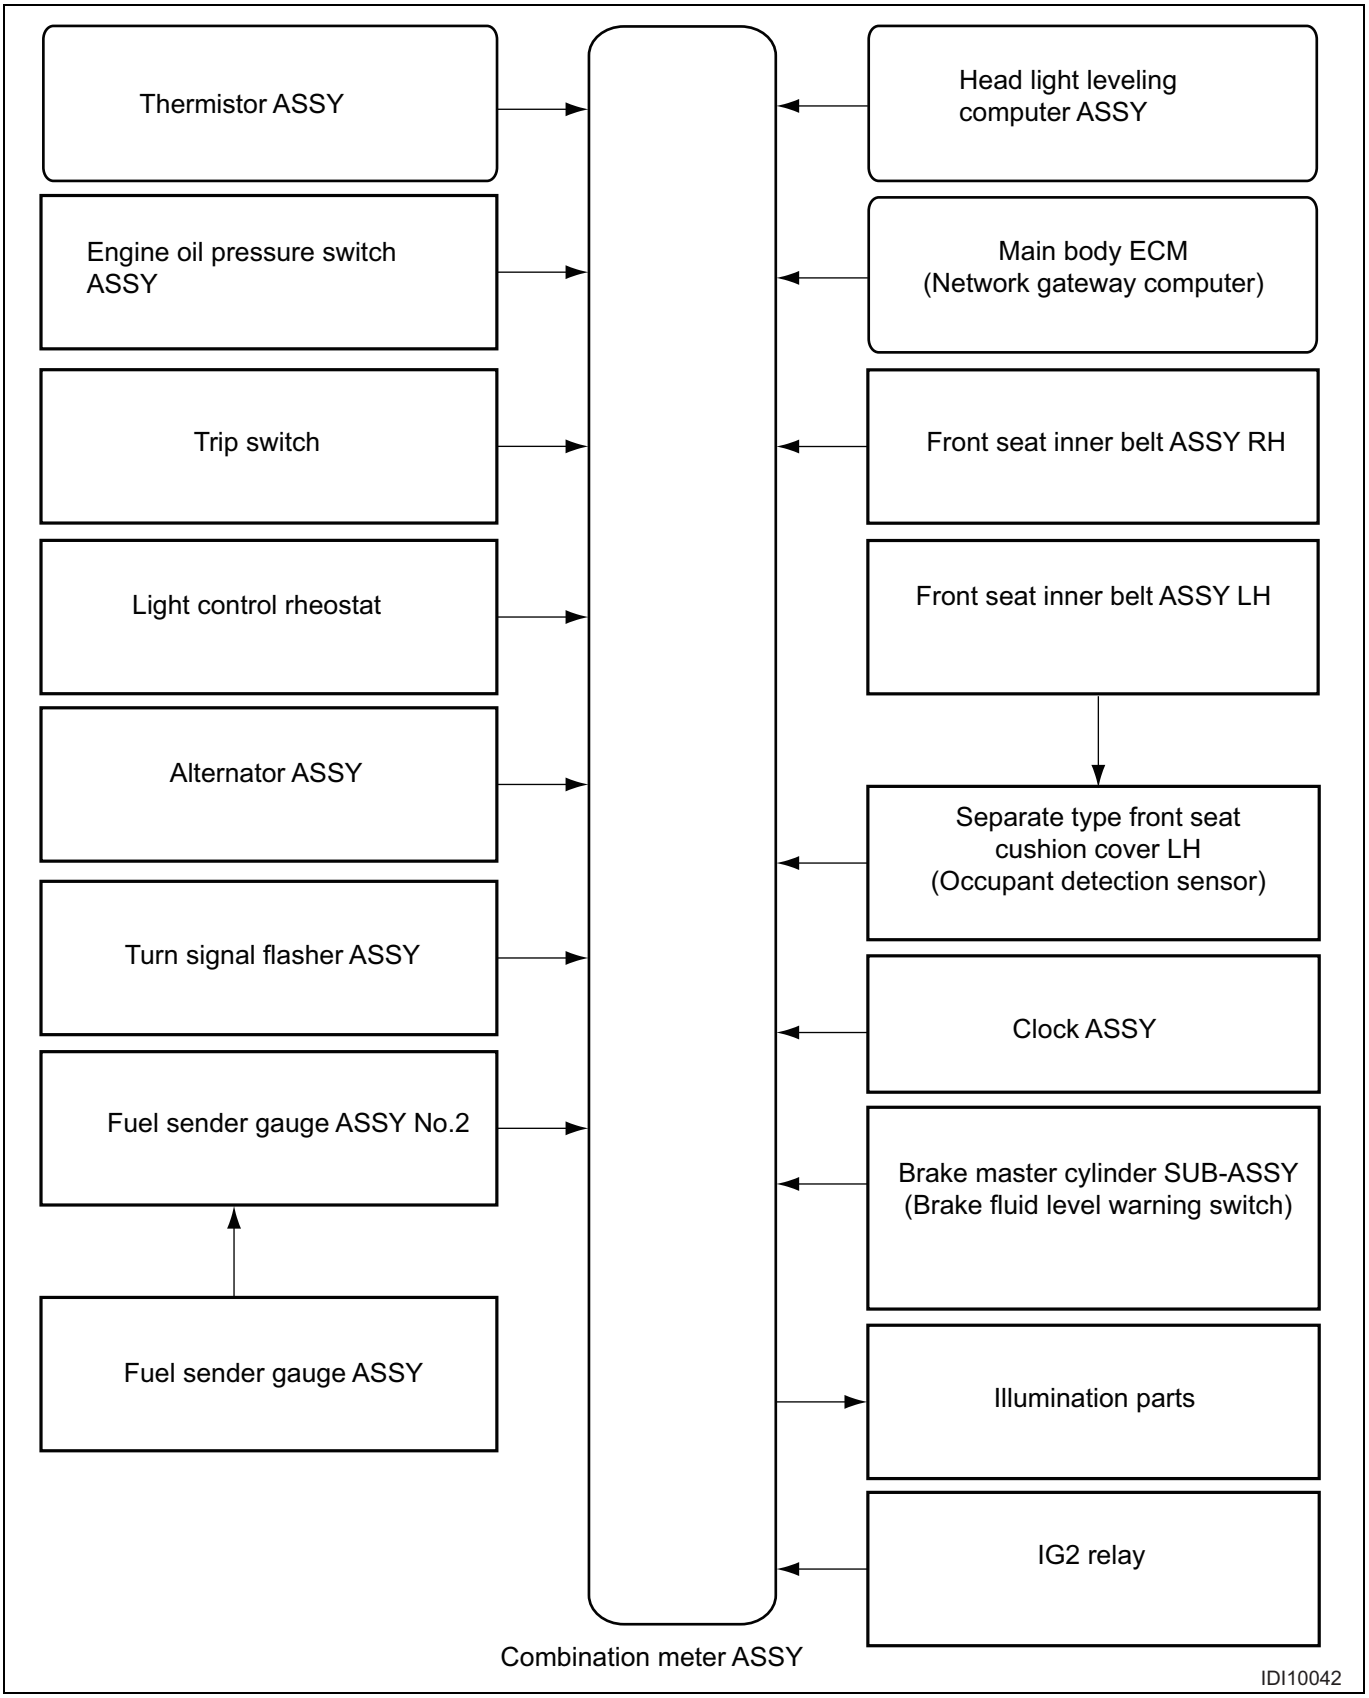
2. Drive signal
   (1) Various signals are input and output via CAN communication or direct wires in order to drive the indicator lights, warning lights, buzzers, and drive monitor in the combination meter ASSY.





Thermistor ASSY
Engine oil pressure switch ASSY
Trip switch
Light control rheostat
Alternator ASSY
Turn signal flasher ASSY
Fuel sender gauge ASSY No.2
Fuel sender gauge ASSY
Head light leveling computer ASSY
Main body ECM (Network gateway computer)
Front seat inner belt ASSY RH
Front seat inner belt ASSY LH
Separate type front seat cushion cover LH (Occupant detection sensor)
Clock ASSY
Brake master cylinder SUB-ASSY (Brake fluid level warning switch)
Illumination parts
IG2 relay
Combination meter ASSY

## Checking / clearing diagnostic codes

1. Checking diagnostic code by SSM4
   (1) Using SSM4, select [Each System] →[Combination Meter] →[DTC] according to the screen instructions and check diagnostic code.
2. Clearing recorded diagnostic codes by SSM4
   (1) Using SSM4, select [Each System] →[Combination Meter] →[Clear Memory] according to the screen display and clear diagnostic code.

## customize function

1. Customization of meter & gauge system
   (1) Customization using the SSM4
      (a)With the ignition turned to IG OFF, connect the SSM4 to the DLC3.
      (b)Turn IG to ON, and turn on the SSM4.
      (c)From the SSM4 screen, select [Customize] →[Warning] and perform the customization settings.

| Display name | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Key Remind Sound] | 1200 ms | Setting of the warning cycle when the driver's door is opened while IG OFF or ACC ON | 600 ms/900 ms/1200 ms | Meter ECM |
| [Taillight warning buzzer] | [ON] | Setting of the function that sounds a buzzer when the driver's door is opened while IG OFF and tail SW ON | [ON]/[OFF] | Meter ECM |

      (d)From the SSM4 screen, select [Customize] →[Meter] and perform the customization settings.

ME

| Display name | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Outside temperature indication] | 0°C | Function of adjusting the difference from actual measurement by increasing/decreasing the displayed temperature (Temperature correction is only possible in increments of 1°C) | +3°/+2°C/+1°C/0°C/-1°C/-2°C/-3°C | Meter ECM |

|---|---|---|

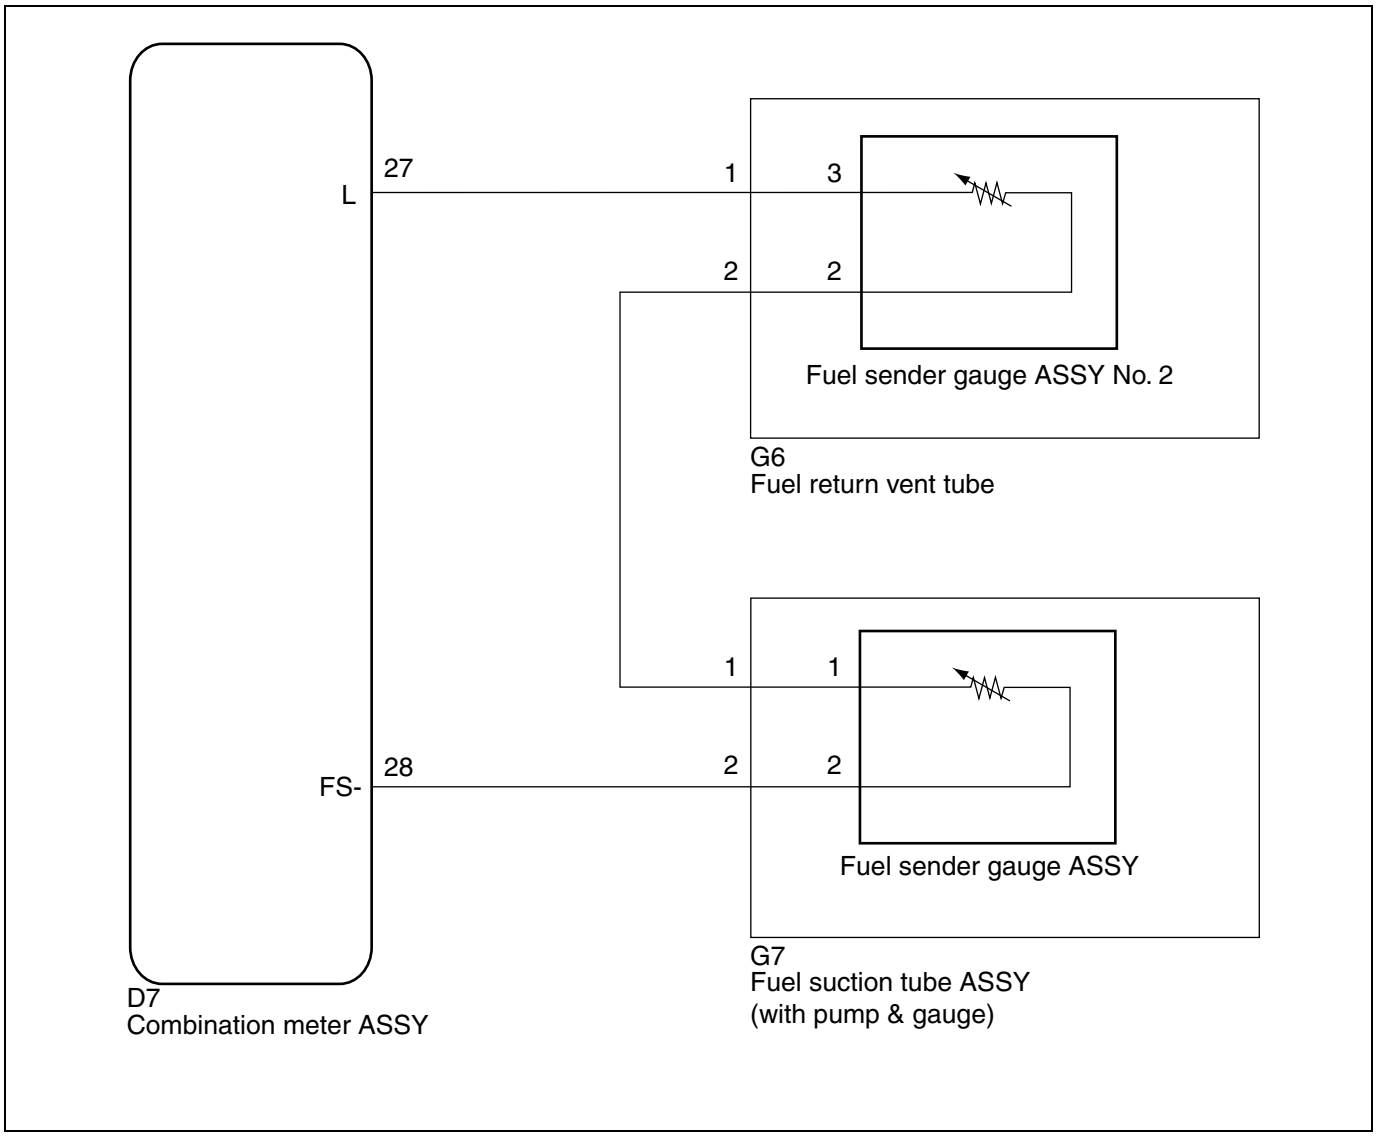
Description of functions

The combination meter ASSY receives signals from the fuel sender gauge and drives the fuel receiver gauge. If the fuel sender gauge signals are found continuously abnormal for approximately 10 seconds, diagnostic code is output.

| Diagnostic codes | 1.Detecting conditions<br>2.Abnormal condition | Faulty part |
|---|---|---|
| B1500 | 1. 10 seconds or more has passed after the engine started, and the IG voltage is 10.5 V or more<br>2. Fuel sender gauge malfunction | • Combination meter ASSY<br>• Fuel sender gauge ASSY<br>• Fuel sender gauge ASSY NO.2<br>• Fuel suction tube ASSY (with pump and gauge)<br>• Fuel return vent tube<br>• Wiring harness or connector |

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data |

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to ME - 27)

SSM4 screen: [Each System] →[Combination Meter] →[Data monitor]

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Fuel Input] [Fuel Input] | Input value of fuel sender Display range: 0 to 127.5 [L] | Fuel level is displayed | If it is abnormal, the fuel sender gauge may be faulty |

Criteria: Data monitor value is almost equal to the value on the fuel receiver gauge.

NG → Go to Step 2.

OK

Replacement of the combination meter ASSY (Refer to ME - 63)

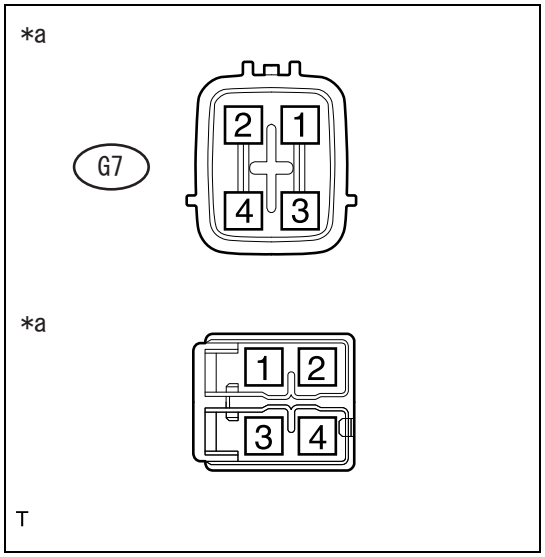
| 2 | Unit inspection of the fuel sender gauge ASSY |
|---|---|

(1) Remove the fuel sender gauge ASSY. (Refer to FU - 75)
(2) Perform the unit inspection of the fuel sender gauge ASSY. (Refer to FU - 79)

NG → Replacement of the fuel sender gauge ASSY (refer to FU - 75)

OK

| 3 | Unit inspection of the fuel suction tube ASSY (with pump and gauge) |
|---|---|



(1) Resistance check
  (a) Remove the fuel suction tube ASSY (with pump and gauge).
  (b) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| G7-2 - 2 | Always | Less than 1 Ω |
| G7-1 - 1 | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Fuel suction tube ASSY (with pump and gauge)) |

NG → Replacement of the fuel suction tube ASSY (with pump and gauge) (Refer to FU - 75)

OK

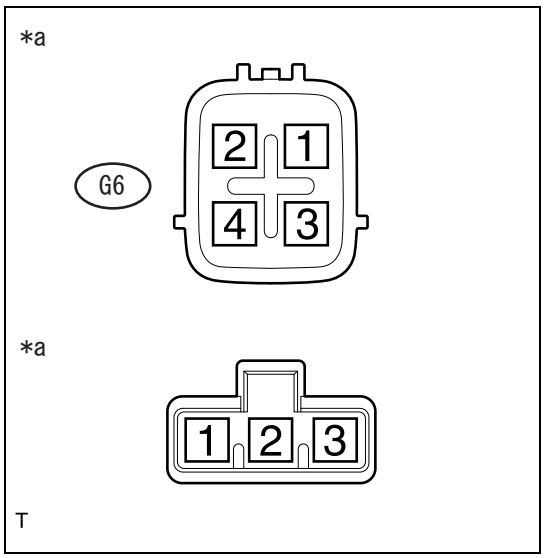
| 4 | Unit inspection of the fuel sender gauge ASSY NO.2 |
|---|---|

(1) Remove the fuel sender gauge ASSY NO.2. (Refer to FU - 75)
(2) Perform the unit inspection of the fuel sender gauge ASSY NO.2. (Refer to FU - 79)

NG → Replacement of the fuel sender gauge ASSY NO.2 (refer to FU - 75)

OK

| 5 | Unit inspection of the fuel return vent tube |
|---|---|



(1) Resistance check
  (a) Remove the fuel return vent tube.
  (b) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| G6-1 - 3 | Always | Less than 1 Ω |
| G6-2 - 2 | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Fuel return vent tube) |

NG → Replacement of the fuel return vent tube (refer to FU - 75)

OK

| 6 | Inspection of the wiring harness and connector (Combination meter ASSY - Fuel suction tube ASSY (with pump and gauge)) |
|---|---|

(1) Disconnect the connector D7 of the combination meter ASSY and the connector G7 of the fuel suction tube ASSY (with pump and gauge).
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D7-28 (FS-) - G7-2 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D7-28 (FS-) - Chassis ground | Always | 10 kΩ or more |
| G7-2 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 7 | Inspection of the wiring harness and connector (Fuel suction tube ASSY (with pump and gauge) - Fuel return vent tube) |
|---|---|

(1) Disconnect the connector G7 of the fuel suction tube ASSY (with pump and gauge) and the connector G6 of the fuel return vent tube.

ME

(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| G7-1 - G6-2 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| G7-1 - Chassis ground | Always | 10 kΩ or more |
| G6-2 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

8 Inspection of the wiring harness and connector (Combination meter ASSY - Fuel return vent tube)

(1) Disconnect the connector D7 of the combination meter ASSY and the connector G6 of the fuel return vent tube.

(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D7-27 (L) - G6-1 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D7-27 (L) - Chassis ground | Always | 10 kΩ or more |
| G6-1 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the combination meter ASSY (Refer to ME - 63)

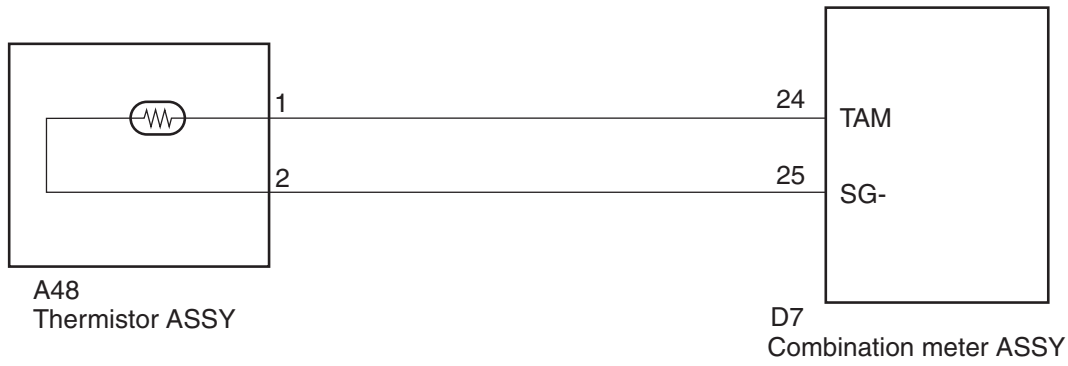
## DTC B1509 Ambient air temperature sensor open detection

Circuit description

The thermistor ASSY is installed at the front of the condenser. It is used to detect the ambient air temperature, to display the ambient air temperature on the multi display of the combination meter ASSY, and to control “AUTO” of the heater & air conditioner. The resistance of the thermistor ASSY varies along with change of the ambient air temperature. When the ambient air temperature is low, the resistance is high. In contrast, when the ambient air temperature is high, the resistance is small. The combination meter ASSY gives voltage output (5 V) to the thermistor ASSY, and reads variation of voltage along with resistance change of the thermistor ASSY.

| DTC NO. | 1.Detecting conditions<br>2.Abnormal condition | Inspection parts |
|---|---|---|
| B1509 | 1. 10 seconds or more has passed after the engine started, and the IG voltage is 10.5 V or more<br>2. Open or short circuit in the thermistor ASSY circuit | • Thermistor ASSY<br>• Wire harness and connector<br>• Combination meter ASSY |

Circuit figure



ME

Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data (ambient temperature input value) |

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to ME - 27)

Criteria

SSM4 screen: [Each System] →[Combination Meter] →[Data monitor]

| Item name<br>[Item symbol] | Description of item/display item | Normal value | Remarks |
|---|---|---|---|
| [Ambient Temperature]<br>[Ambi Temp] | Ambient air temperature is displayed.<br>Display range: -40 to 87.5°C {-40 to 189.5°F} | • In open circuit: (-40°C (-40°F)) is displayed.<br>• In short-circuit: (87.5°C (189.5°F)) is displayed. | Thermistor ASSY system |

Result

| Result | Go to |
|---|---|
| The same value as the ambient temperature sensor is displayed (during the inspection according to the list of diagnostic codes) | A |
| The same value as the ambient temperature sensor is displayed (during the inspection according to the symptom table) | B |
| The displayed value is not the same as the ambient temperature sensor | C |

| | |
|---|---|
| B | Perform the circuit test shown on the symptom table. (Refer to AC - 15) |

C → Go to Step 3.

A

| 2 | Checking diagnostic codes |
|---|---|

(1) Clear the diagnostic code using the SSM4. (Refer to ME - 22)
(2) Using SSM4, check the diagnostic code again. (Refer to ME - 22)
Criteria: No DTC output

NG → Replacement of the combination meter ASSY (Refer to ME - 63)

OK

Complete

| 3 | Unit inspection of thermistor ASSY |
|---|---|

(1) Remove the thermistor ASSY. (Refer to AC - 153)
(2) Inspect the individual thermistor ASSY. (Refer to AC - 154)

NG → Replacement of thermistor ASSY (Refer to AC - 153)

OK

| 4 | Inspection of wire harness and connector (thermistor ASSY - combination meter ASSY) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect connector D7 of the combination meter ASSY.
(2) Measure the resistance between the terminals. (For terminal arrangement, refer to ME - 26.)

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A48-1 - D7-24(TAM) | Always | Less than 1 Ω |
| A48-2 - D7-25(SG-) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A48-1 - Chassis ground | Always | 10 kΩ or more |
| A48-2 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the combination meter ASSY (Refer to ME - 63)

| DTC | U0073 | CAN Communication Error |

Inspection steps

| 1 | Reading the diagnostic code |
|---|---|

(1) Using SSM4, check the output diagnostic code.
NOTE:
- When the diagnostic code of abnormal CAN communication system is output, refer to "How to troubleshoot" of the CAN communication system.
- If diagnostic codes for CAN communication error and other errors are output simultaneously, restore the CAN communication system to the normal state and then troubleshoot other systems.

Next

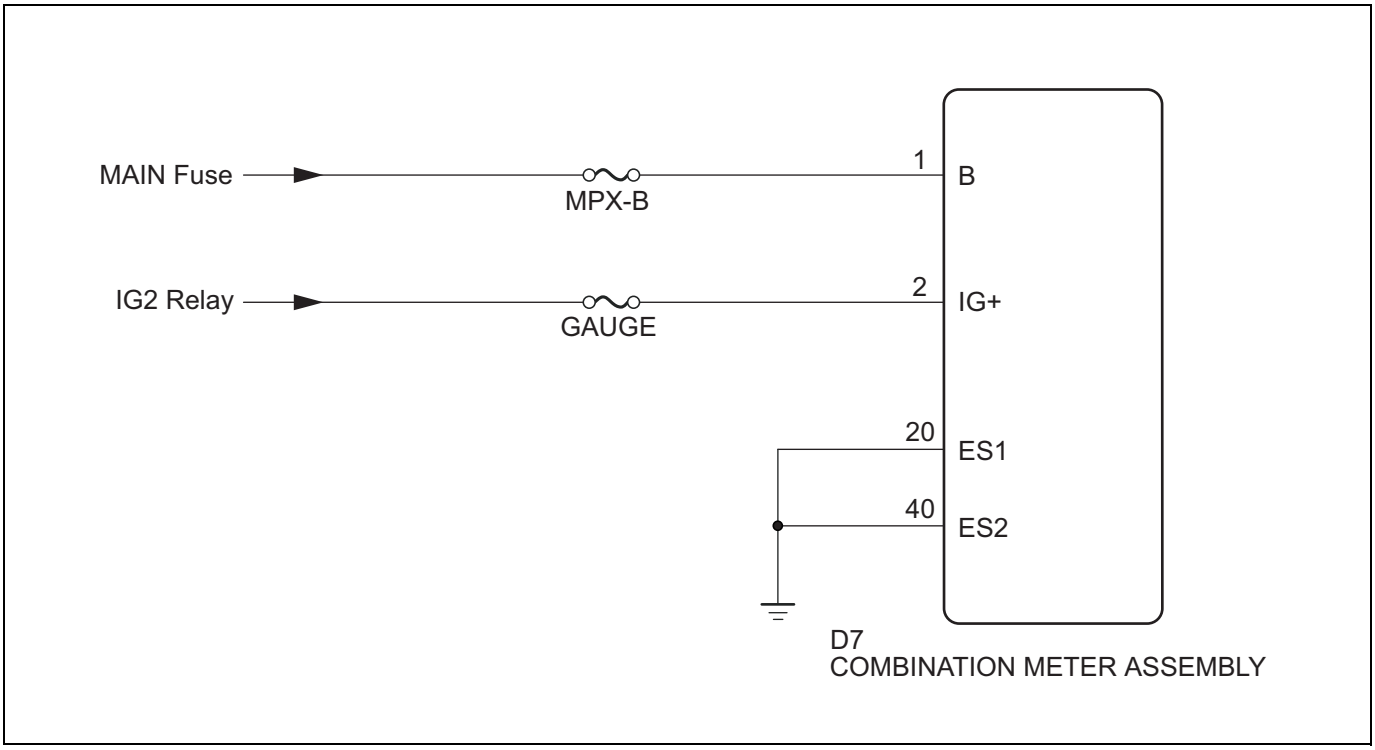
To CAN communication system (Refer to NW - 30)

## Entire combination meter does not operate

DESCRIPTION

This circuit is the power source circuit for the combination meter assembly.

WIRING DIAGRAM



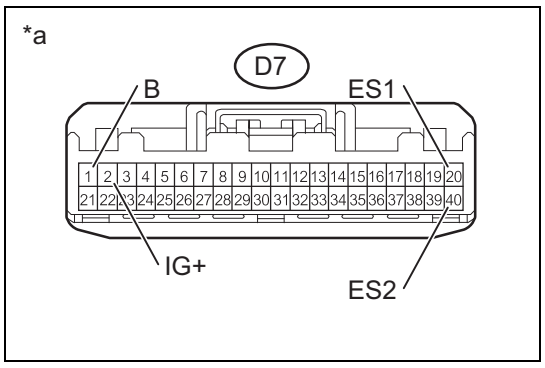
ME

INSPECTION PROCEDURE

CAUTION:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

| | |
|---|---|
| 1 | CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - BATTERY AND BODY GROUND) |



(1) Disconnect the D7 combination meter assembly connector.

(2) Measure the voltage according to the value(s) in the table below.

Standard Voltage

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| D7-1 (B) - Body ground | Always | 11 to 14 V |
| D7-2 (IG+) - Body ground | Ignition switch ON | 11 to 14 V |

(3) Measure the resistance according to the value in the table below.

Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| D7-20 (ES1) - Body ground | Always | Below 1 Ω |
| D7-40 (ES2) - Body ground | Always | Below 1 Ω |

Text in Illustration

| | |
|---|---|
| *a | Front view of wire harness connector (to Combination Meter Assembly) |

(4) Reconnect the D7 combination meter assembly connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE COMBINATION METER ASSEMBLY (See page ME - 62)

## Speed meter malfunction

Description of functions

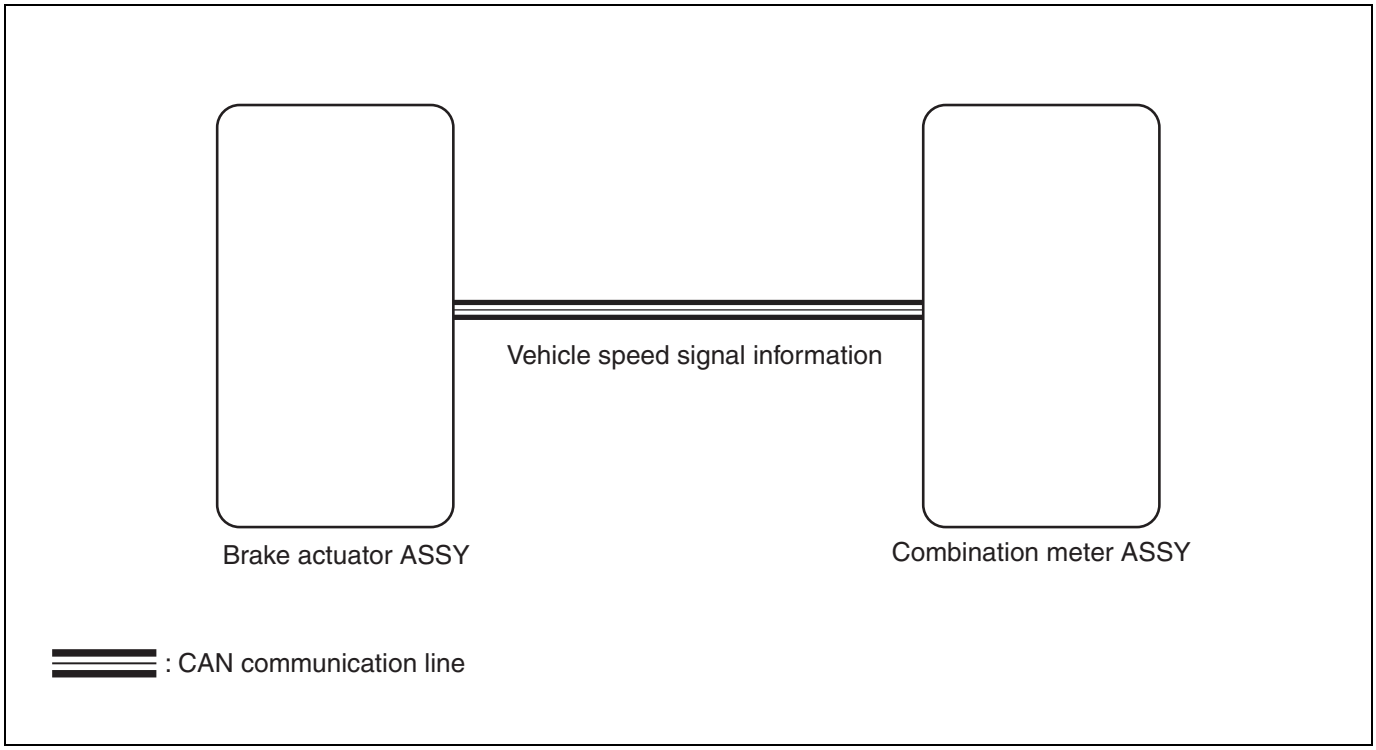
The combination meter ASSY receives vehicle speed signals from the brake actuator ASSY via CAN communication. The combination meter ASSY displays the vehicle speed based on the received vehicle speed signals.

NOTE:

Even when the speed meter is normal, slight difference may be present between the reading value and the actual vehicle speed. There are two possible causes for this difference. One is an external cause resulting from the tire size, tire pressure, and tire wear. The other is an internal factor resulting from the allowable range of the reading. Therefore, before troubleshooting, you must first check if these causes are related to the error. The tire size, pressure, and wear (external causes) are checked visually. (Refer to AL - 2) The allowable range of reading (internal cause) is checked using a speed meter tester. (Refer to ME - 3)

ME

Circuit figure



Inspection steps

CAUTION:

If the check result of vehicle speed reading is outside the allowable range, perform an inspection using a speed meter tester. (Refer to ME - 3)

| 1 | Reading diagnostic codes |

## Fuel receiver gauge malfunction

Description of functions

The combination meter ASSY uses the fuel sender gauge ASSY to detect the fuel level in the fuel tank. The fuel sender gauge ASSY has a variable resistor that changes its resistance depending on the fuel level. The fuel sender gauge ASSY receives voltage from the combination meter ASSY and adjusts its voltage based on the resistance that changes according to the fuel level in the fuel tank. The combination meter ASSY detects the voltage between the variable resistor and the resistor inside the combination meter ASSY, and drives the fuel receiver gauge.

Replacement of the combination meter ASSY (Refer to ME - 63)

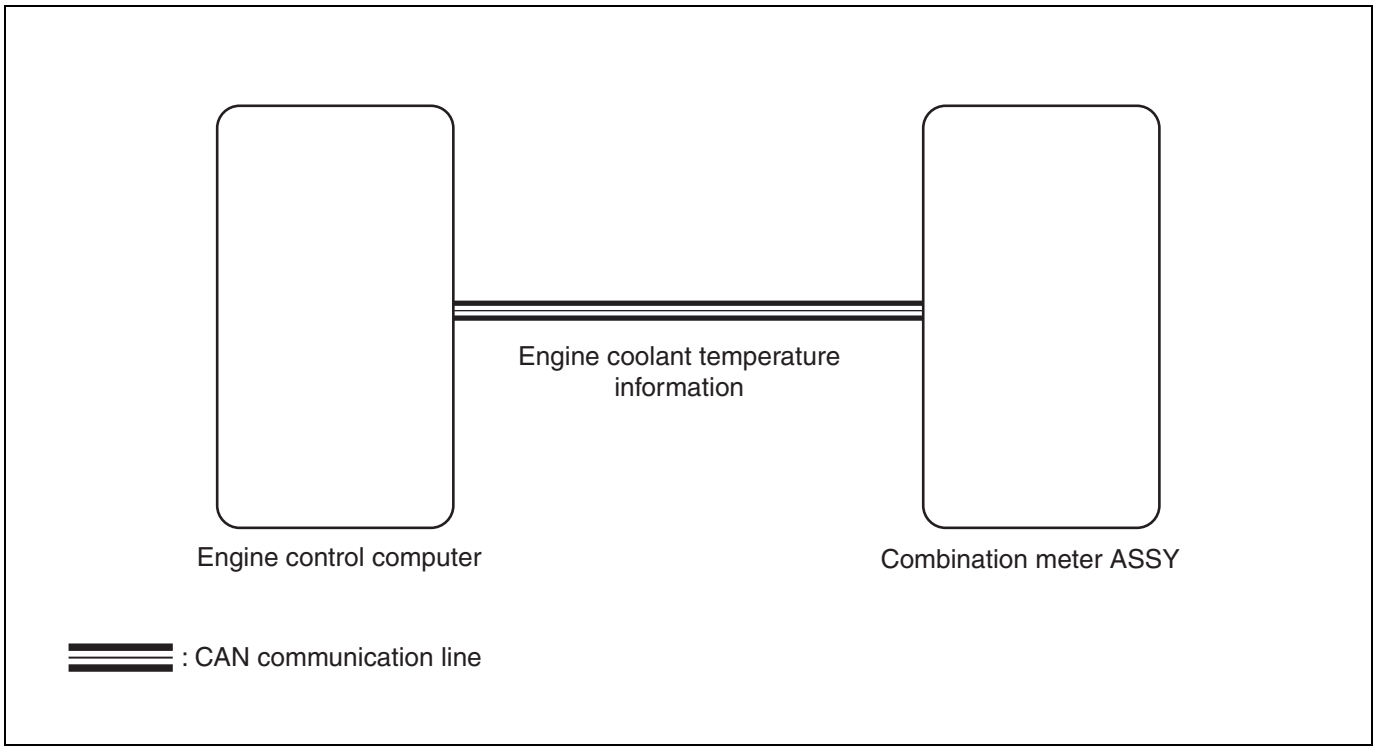
## Water temperature receiver gauge malfunction

ME

Description of functions

The combination meter ASSY receives engine coolant temperature signals from the engine control computer via CAN communication. The combination meter ASSY drives the water temperature gauge based on the engine coolant temperature signals it receives.

Circuit figure



Inspection steps

CAUTION:

Before performing inspections according to this flow chart, check that no abnormal condition is present in the engine. (Refer to ES - 19)

| 1 | Reading diagnostic codes |
|---|---|

(1) Using SSM4, check if any diagnostic code related to CAN communication system is output. (Refer to ME - 22)

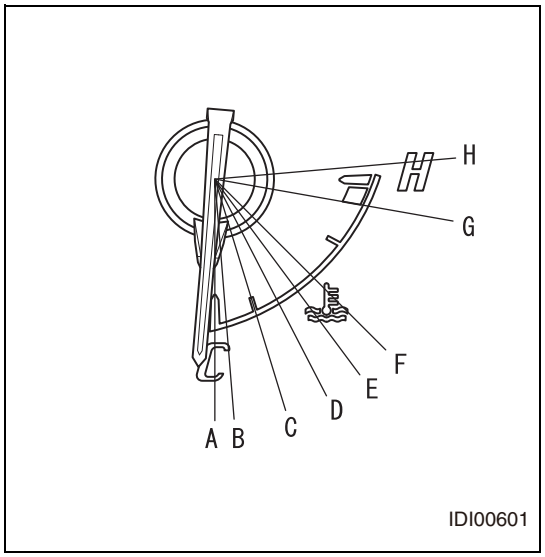
Result

| Result | Go to |
|---|---|
| Diagnostic code is not output | A |
| Diagnostic code is output | B |

B → To CAN communication system (Refer to NW - 30)

A

| 2 | Implementation of SSM4 active test |
|---|---|



(1) Using SSM4, display the [Active Test] screen according to the screen and perform check. (Refer to ME - 27)
NOTE:
For TFT meter, go to STEP3.

SSM4 screen: [Each System] →[Combination Meter] →[Active Test]

| Item name | Contents of testing | Check item |
|---|---|---|
| [Water thermometer] | Coolant temperature indication change-over | • 127°C {261°F} [Display H]<br>• 120°C {248°F} [Display G]<br>• 110°C {230°F} [Display F]<br>• Intermediate stable range [Display E]<br>• 80°C {176°F} [Display D]<br>• 70°C {158°F} [Display C]<br>• 60°C {140°F} [Display B]<br>• 50°C {122°F} [Display A] |

Criteria: Each value specified by [Active Test] can be displayed smoothly

NOTE:
For TFT meter, go to STEP3.

NG → Replacement of the combination meter ASSY (Refer to ME - 63)

OK

| 3 | Reading of SSM4 data (engine coolant temperature) |
|---|---|

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to ME - 27)

SSM4 screen: [Each System] →[Combination Meter] →[Data monitor]

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Coolant Temp.] [Coolant Temp] | Engine coolant temperature input Display range: 0 to 127.5°C {0 to 261.5°F} | Equivalent to ambient temperature: When engine is cold When fully warmed up: 80 to 100°C {176 to 212°F} | If it is abnormal, the coolant temperature signal system may be faulty |

Criteria: The normal value of [Data monitor] is almost equal to the value of the water temperature receiver gauge.

NG → Replacement of the combination meter ASSY (Refer to ME - 63)

OK

| 4 | Reading the diagnostic code (EFI system) |
|---|---|

(1) Using SSM4, check if any diagnostic code related to the EFI system is output. (Refer to ES - 28)

Result

| Result | Go to |
|---|---|
| Diagnostic code is not output | A |
| Diagnostic code is output | B |

B → To EFI system (Refer to ES - 19)

A

| 5 | Reading of SSM4 data (engine coolant temperature) |
|---|---|

(1) On the SSM4, navigate to the [Data monitor] display, and check the computer data. (Refer to ES - 43)

ME

SSM4 screen: [Each System] →[Engine Control System] →[Data monitor]

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Coolant Temp] [Coolant Temp] | Indicates the engine coolant temperature Display range: -40 to 215°C {-40 to 419°F} | 75 to 100°C {167 to 212°F} After warming-up | • Engine coolant temperature after warm-up is 75 to 100°C • After the engine is stopped and left unattended for a long time, the engine coolant temperature, intake air temperature and ambient temperature will be almost the same • If the engine coolant temperature reads -40°C or 215°C, an open or short circuit may be present in the sensor system |

Criteria: The normal value of [Data monitor] is almost equal to the value of the water temperature receiver gauge.

NG → To EFI system (Refer to ES - 19)

OK

6 Replacement of combination meter ASSY

(1) Replace with a new or normally functioning combination meter ASSY (refer to ME - 63) and check the operation of the water temperature receiver gauge.

Result

| Result | Go to |
|---|---|
| Operates normally | A |
| Operates abnormally | B |

B → Replacement of the engine control computer (Refer to ES - 674)

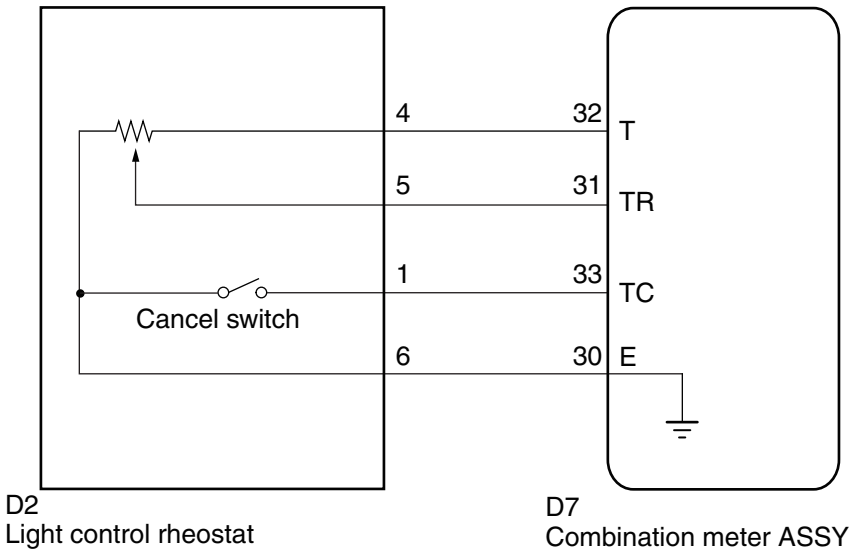
## Illumination level does not change when operating the light control rheostat

Description of functions

When the knob of light control rheostat is turned up or down, the illumination intensity of the combination meter ASSY changes.

Circuit figure



IDI00732

ME

Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data |

(1) Using the SSM4, follow the screen display to bring up and check the [Data monitor].

SSM4 screen: [Each System] →[Combination Meter] →[Data monitor]

| Item name [Symbol] | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Tail Cancel SW] [Tail Cancel SW] | Tail cancel switch state Display range: OFF to ON | ON: Tail cancel switch ON OFF: Tail cancel switch OFF | If it is abnormal, the tail cancel switch may be faulty |
| [Rheostat value] [Rheostat] | Rheostat input value Display range: 0 to 255 | Light control rheostat switch Dark (0) to Bright (255) | If it is abnormal, the light control rheostat switch may be faulty |

Criteria: The normal value is displayed properly.

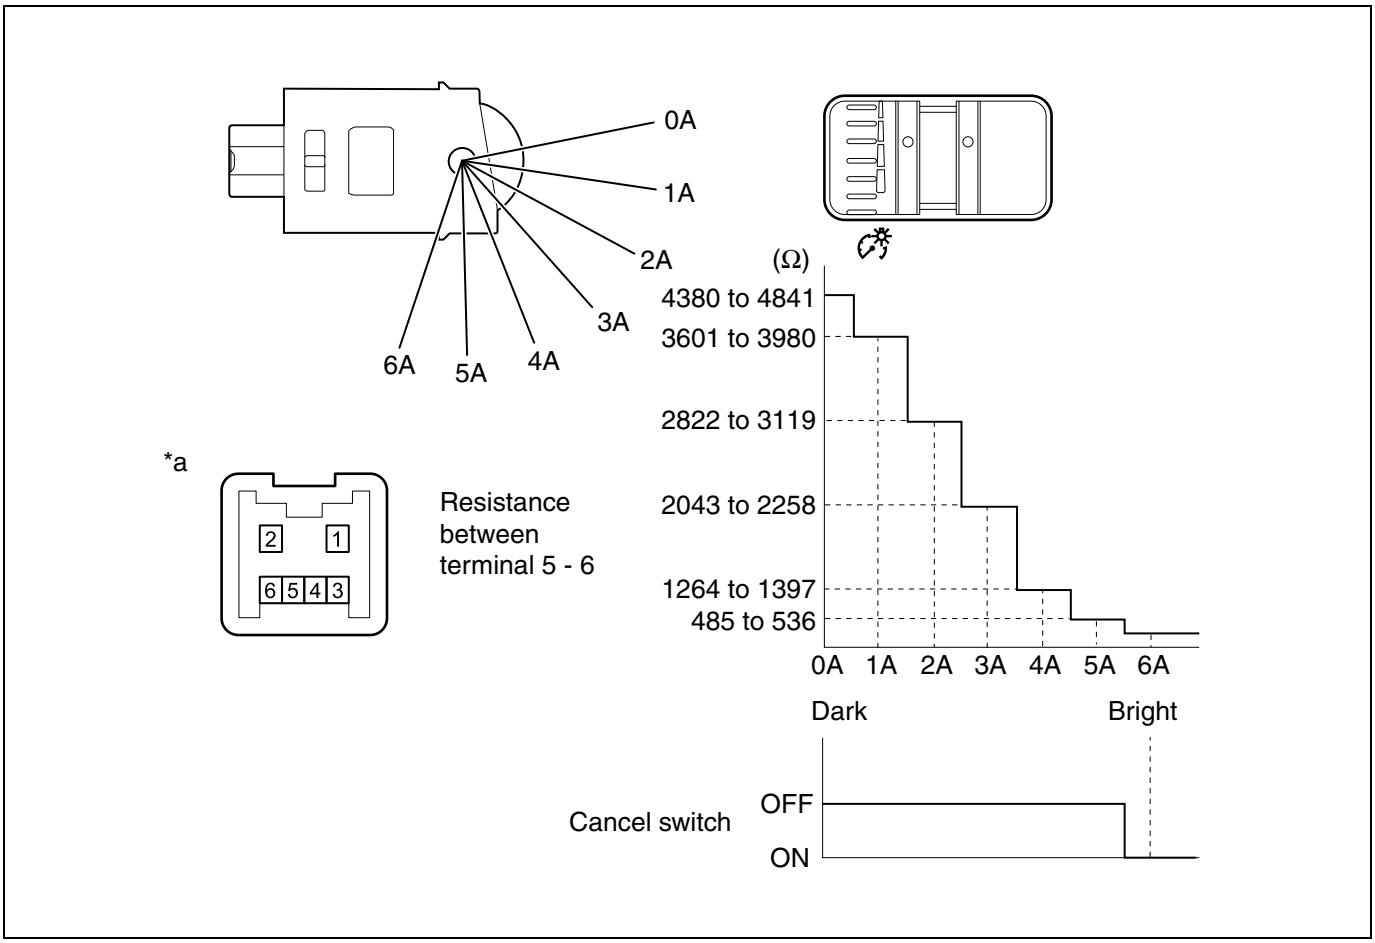
NG → Go to Step 2.

OK

Replacement of the combination meter ASSY (Refer to ME - 63)

| | |
|---|---|
| 2 | Unit inspection of the light control rheostat |

(1) Remove the light control rheostat. (Refer to ME - 68)



Captions in illustration

| | |
|---|---|
| *a | Connector not connected (Light control rheostat) |

(2) Operate the switch and measure the resistance between terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 6 | Tail cancel switch OFF →ON | 10 kΩ or more →Less than 1 Ω |
| 4 - 6 | Always | 4475 to 4946 Ωor more |
| 5 - 6 | Light control rheostat upper fully open →Light control rheostat lower fully open | 485 to 536 Ω→4380 to 4841 Ωor more |

NG → Replacement of the light control rheostat (Refer to ME - 68)

OK

| | |
|---|---|
| 3 | Inspection of the wiring harness and connector (Combination meter ASSY - Light control rheostat) |

(1) Disconnect connector D7 of the combination meter ASSY.
(2) Measure the resistance between the terminals.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D7-30 (E) - D2-6 | Always | Less than 1 Ω |
| D7-31 (TR) - D2-5 | Always | Less than 1 Ω |
| D7-32 (T) - D2-4 | Always | Less than 1 Ω |
| D7-33 (TC) - D2-1 | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the combination meter ASSY (Refer to ME - 63)

## Can not switch ODO / TRIP meter display, or can not reset TRIP meter

Circuit figure

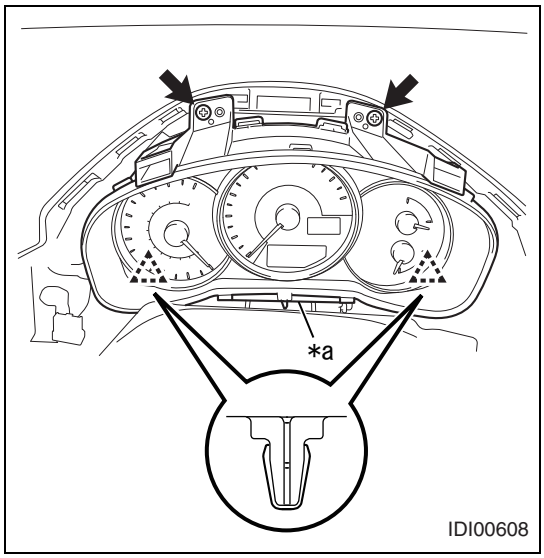
## Removal

NOTE:

The procedures described below are for the normal meter. Operate the TFT meter performing the same procedures as the normal meter.

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the instrument panel ornament (Refer to IT - 22)
3. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
4. Removal of the meter hood SUB-ASSY (Refer to IT - 24)
5. Removal of the instrument panel meter ornament UPR (Refer to IT - 24)



6. Removal of the combination meter ASSY
   (1) Remove the 2 screws.
   (2) Pull the hook at the bottom of the combination meter ASSY to release two clips and pull it out toward the rear.

Captions in illustration

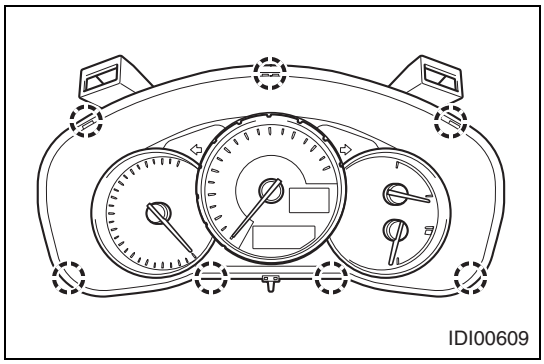
| | |
|---|---|
| *a | Hook |

   (3) Disconnect the connector and remove the combination meter ASSY.

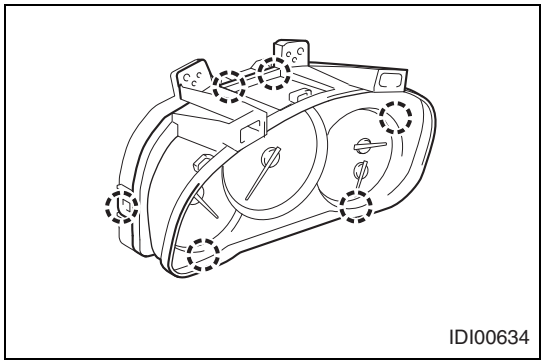
## Disassembly

NOTE:

The procedures described below are for the normal meter. Operate the TFT meter performing the same procedures as the normal meter.



1. Removal of the combination meter glass
   (1) Release seven claws and remove the combination meter glass.
   CAUTION:
   When removing the combination meter glass, do not touch the pointers.

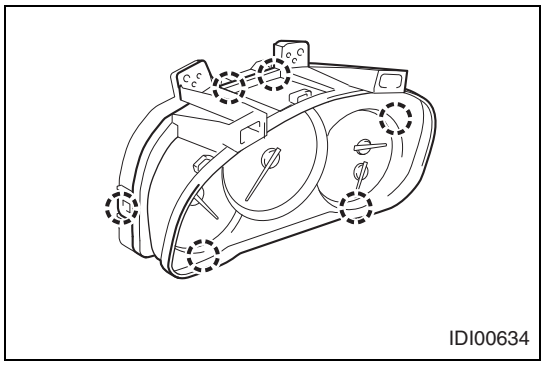


IDI00634

2. Removal of the combination meter cover
   (1) Release six claws and remove the combination meter cover.
   CAUTION:
   When removing the combination meter cover, do not touch the pointers.

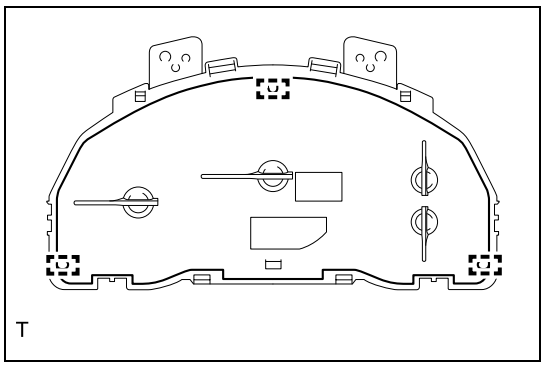
## Assembly

NOTE:
The procedures described below are for the normal meter. Operate the TFT meter performing the same procedures as the normal meter.



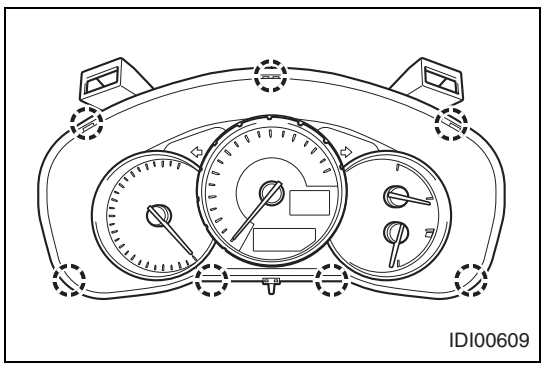
IDI00634

1. Installation of the combination meter cover
   (1) Engage six claws and install the combination meter cover.



T

CAUTION:
When installing the combination meter cover, make sure that each dial is secured to the positioners.



IDI00609

2. Installation of the combination meter glass
   (1) Engage seven claws and install the combination meter glass.

## Installation

NOTE:
The procedures described below are for the normal meter. Operate the TFT meter performing the same procedures as the normal meter.

1. Installation of the combination meter ASSY
   (1) Connect the connector.
   (2) Engage two clips and install the combination meter ASSY.
   (3) Install the 2 screws.
2. Installation of the instrument panel meter ornament UPR (Refer to IT - 29)
3. Installation of the meter hood SUB-ASSY (Refer to IT - 29)
4. Installation of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
5. Installation of the instrument panel ornament (Refer to IT - 29)
6. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
7. Settings when removing/installing battery terminals (Refer to IN - 10)

# Clock ASSY

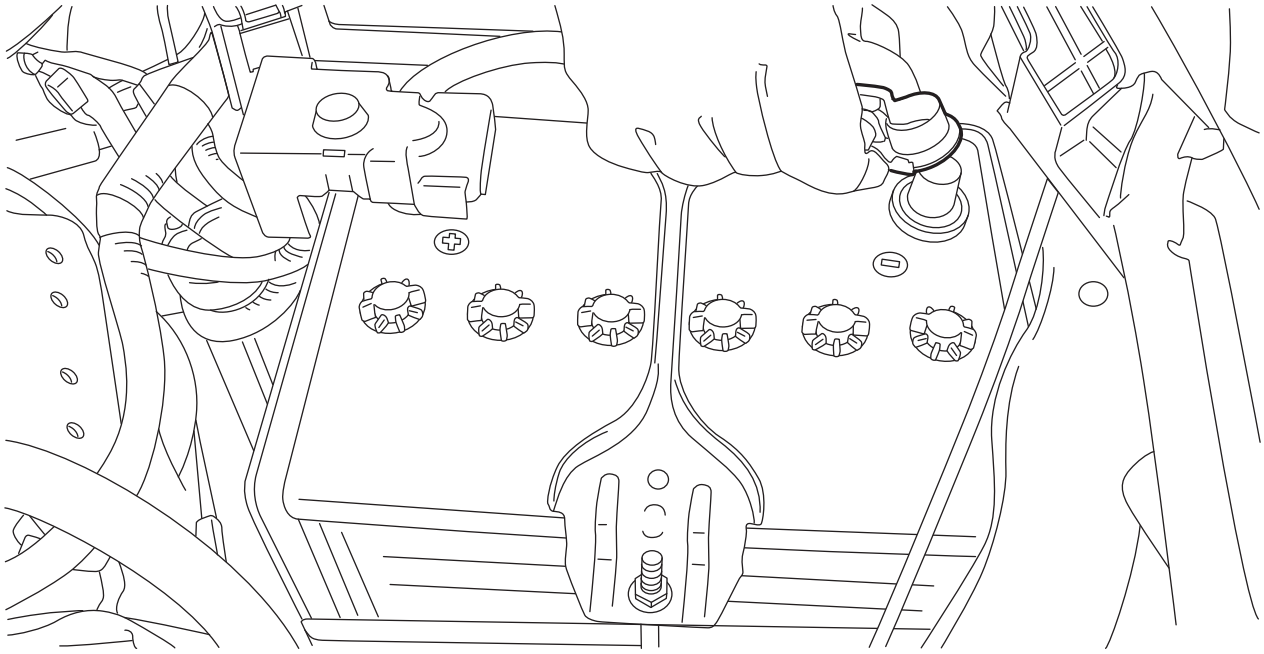
# SRS airbag system

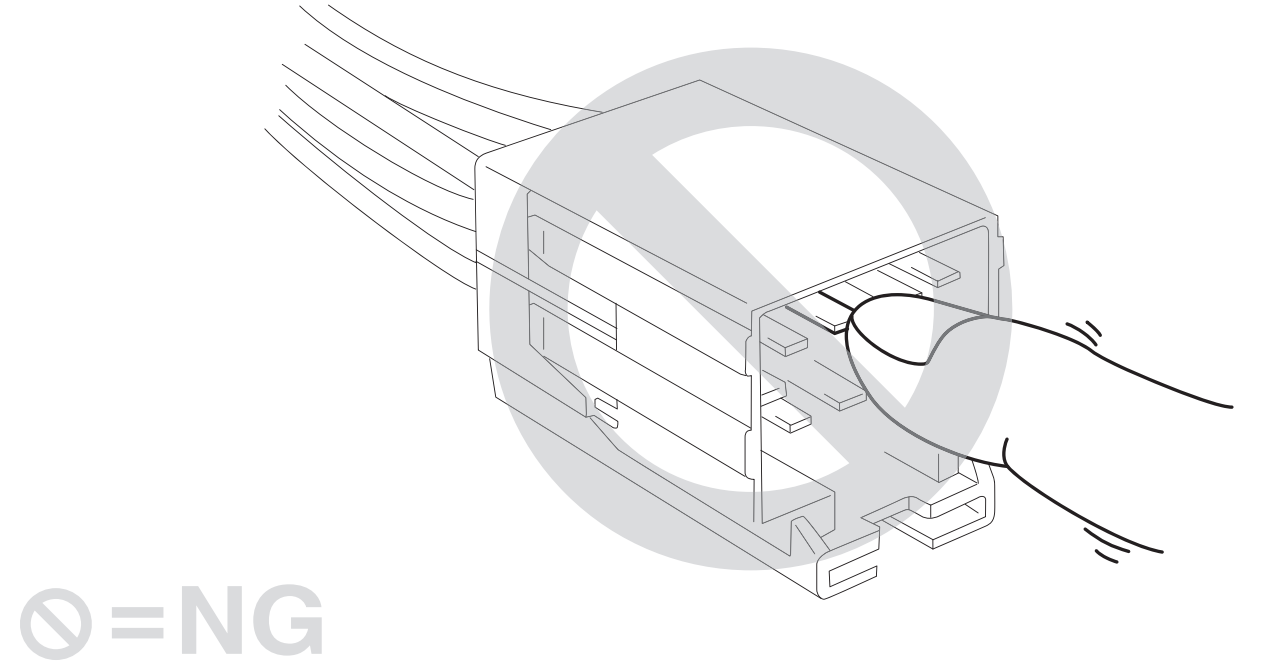
## Precautions

1. Before starting all works
   (1) The airbag system is fitted with a backup power supply. After disconnecting the battery ground terminal, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.



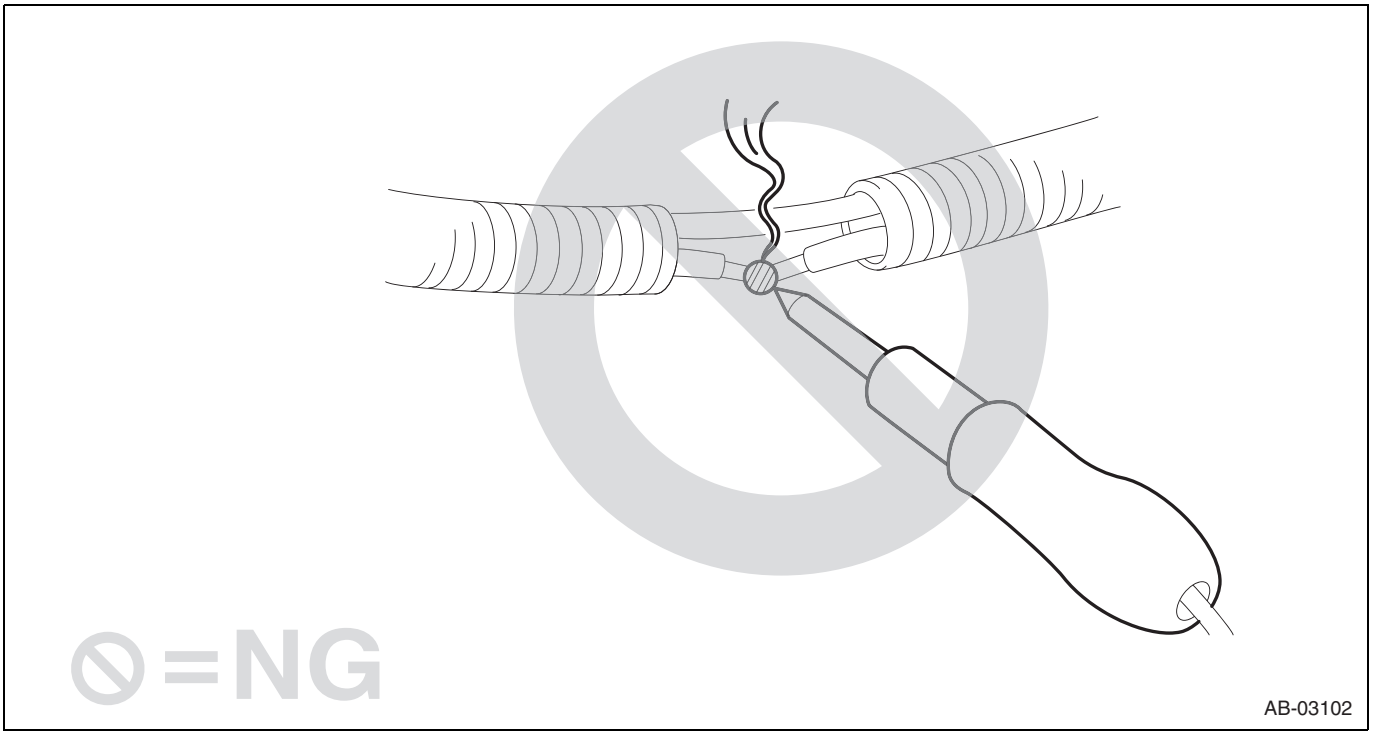
AB-03100

   (2) When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait for 60 seconds or more before starting work.
   (3) If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
   (4) Do not let water or oil adhere to the connector terminals. Also, do not touch the connector terminals directly.



AB-03101

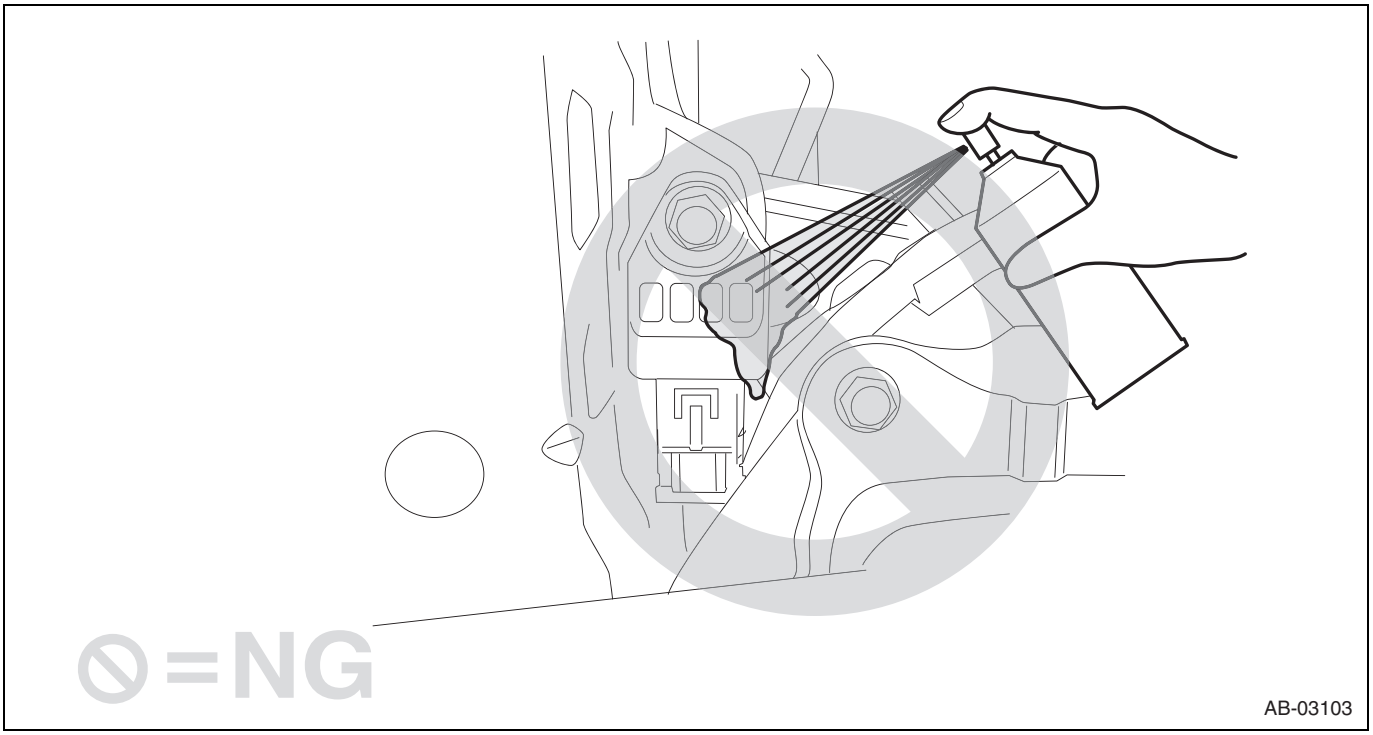
(5) If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.



(6) When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and radiator panel side, remove the front sub sensors and wiring harness of airbag system.

RS

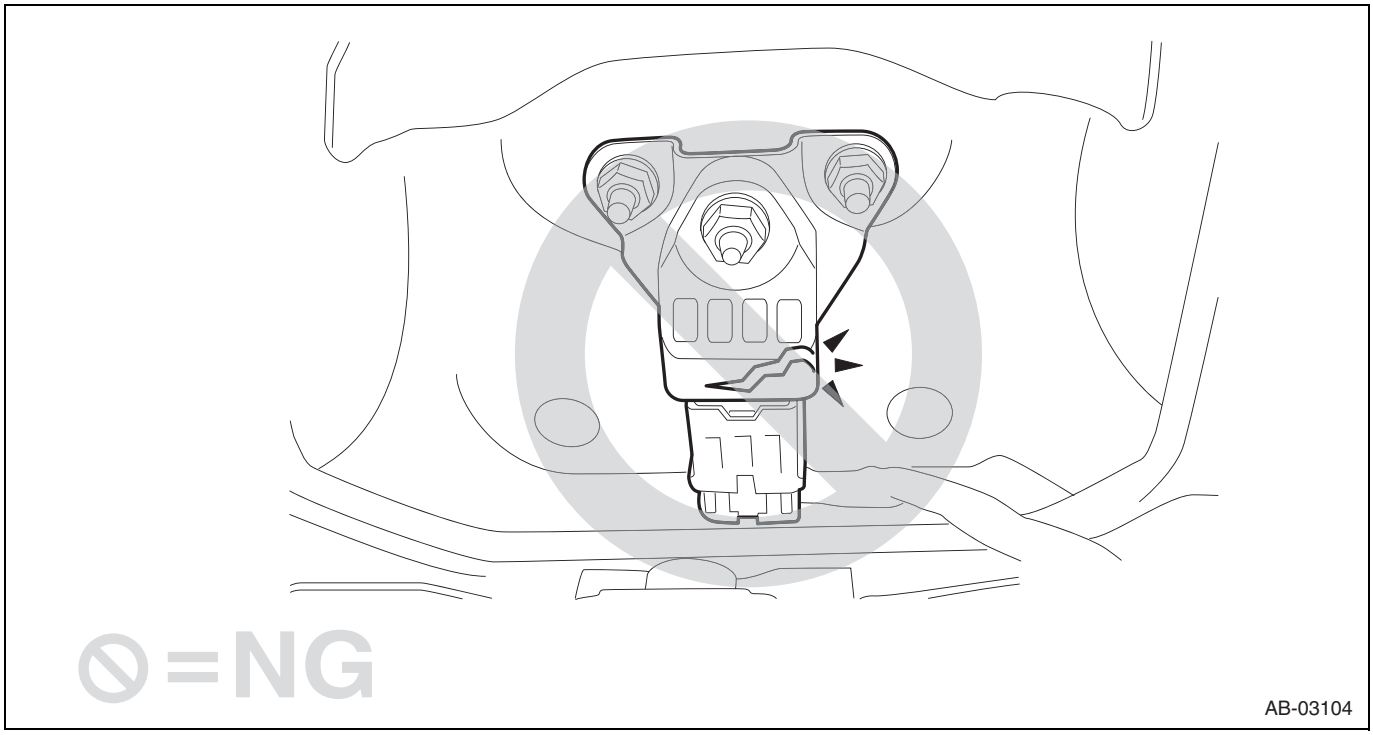
(7) When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar and front and rear doors, remove the side airbag sensors, curtain airbag sensor, satellite safing sensor, front door impact sensor and wiring harness of the airbag system.



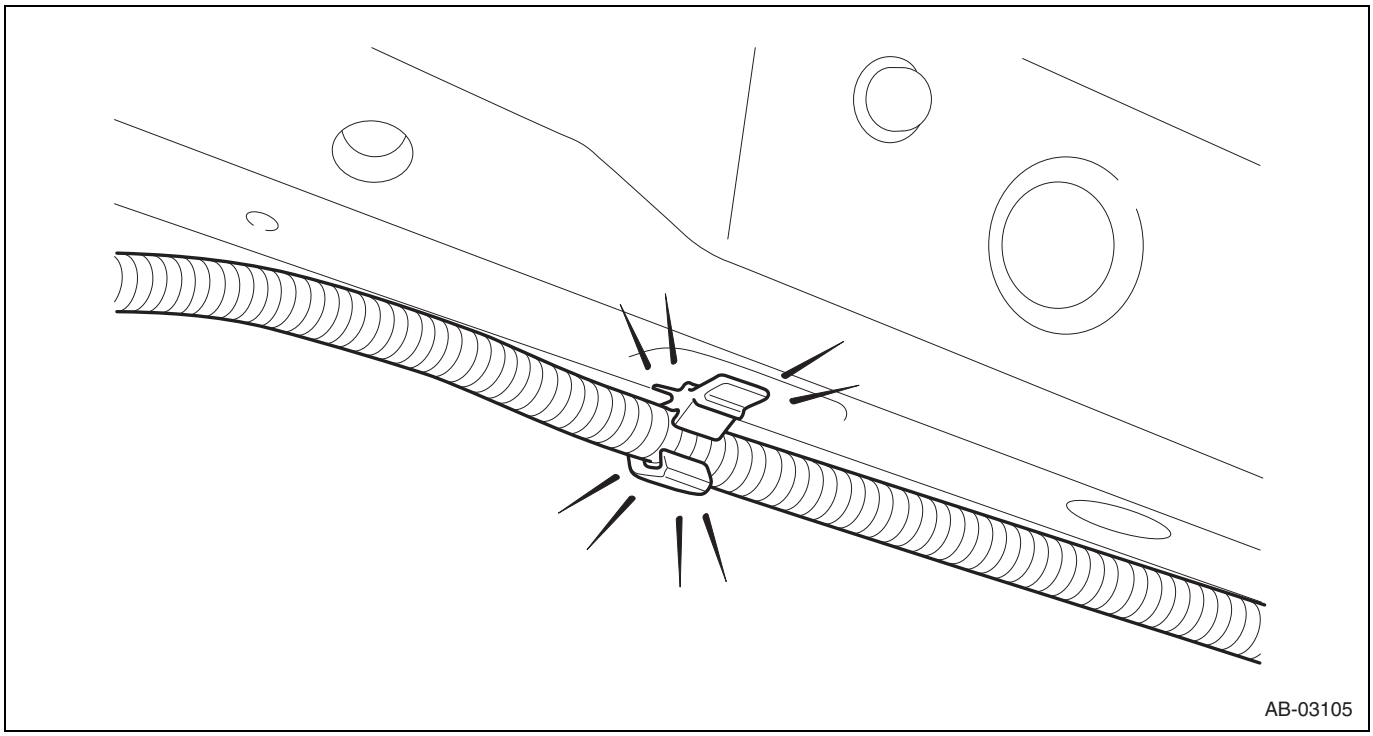
(8) When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

2. Before starting parts replacement

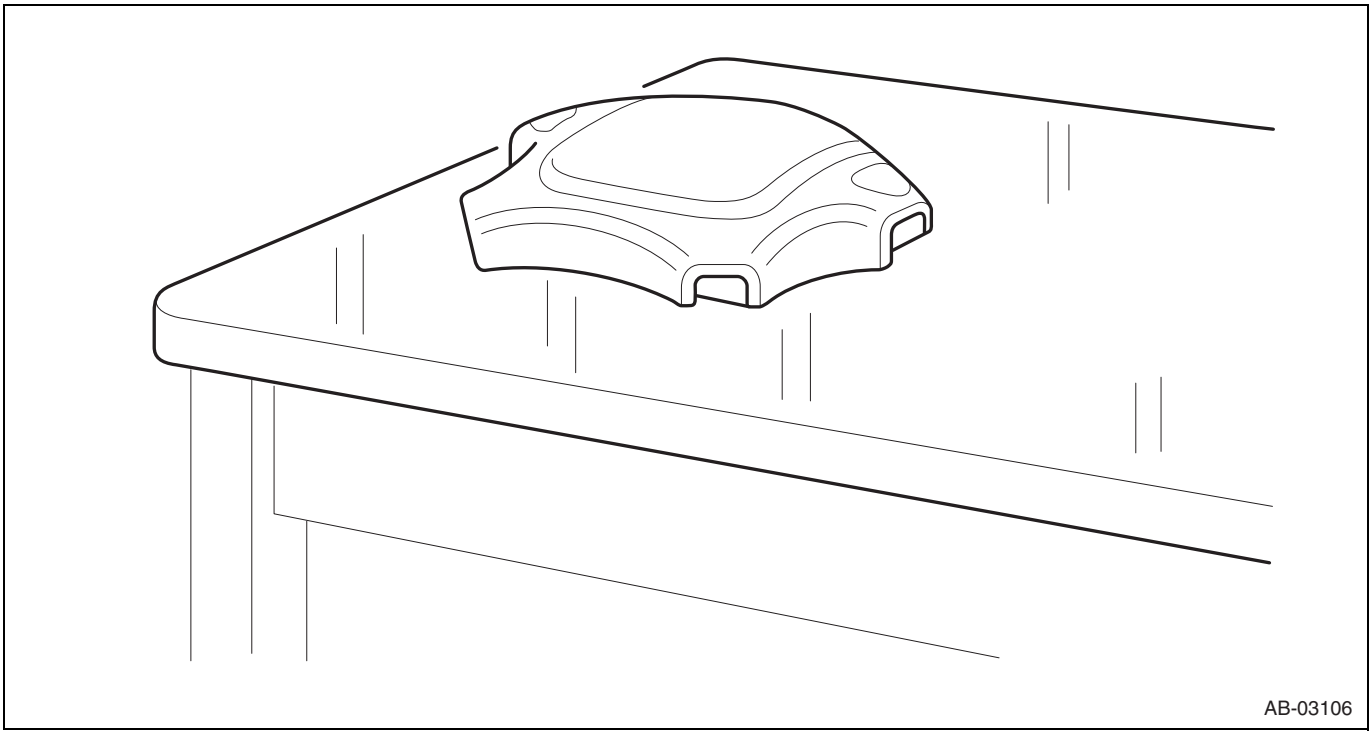
(1) If airbag sensors, airbag module, airbag control module, pretensioners, harnesses, or the cover - if satellite safing is deformed or damaged, replace with new parts.



(2) Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

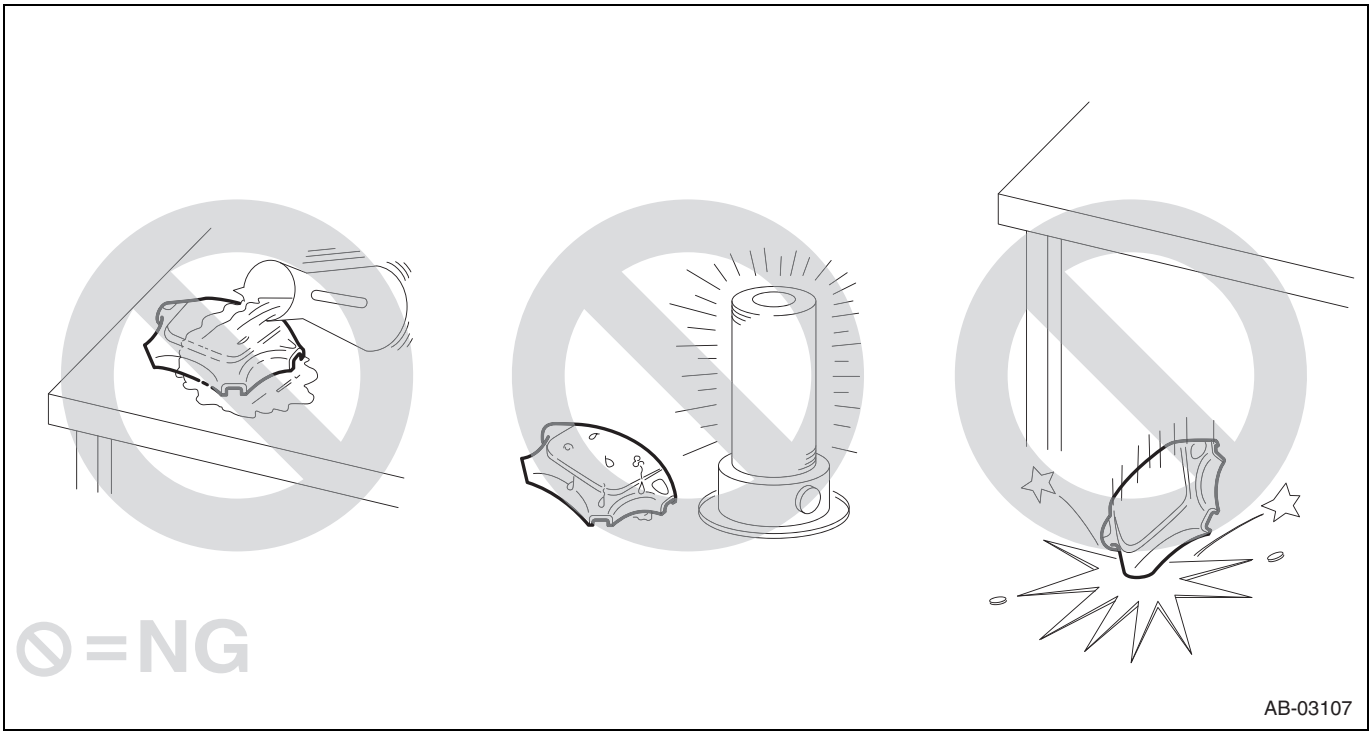


(3) Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
(4) Never reuse any activated airbag module and pretensioner.
(5) Do not discard undeployed airbag or pretensioner.
(6) When airbag control module, front sub sensor, side airbag sensor, curtain airbag sensor, satellite safing sensor and front door impact sensor are removed, do not reuse the bolts and nuts of them. Always replace with the specified new bolt and nut.
(7) When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.
(8) After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.



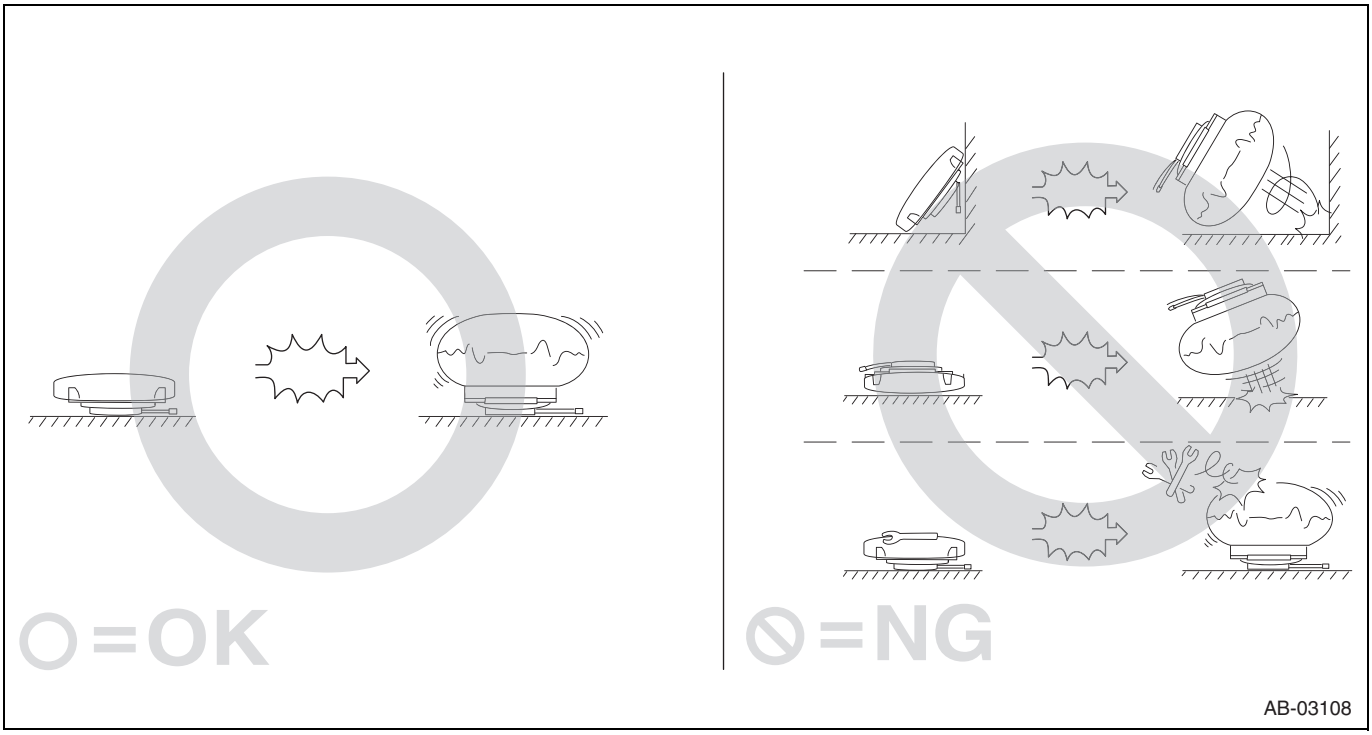
(9) Do not drop any airbag component, store them under high temperature of 85°C (185°F) or more, or let water, oil or grease get on them; the internal parts may be damaged or the reliability may be greatly lowered.

RS

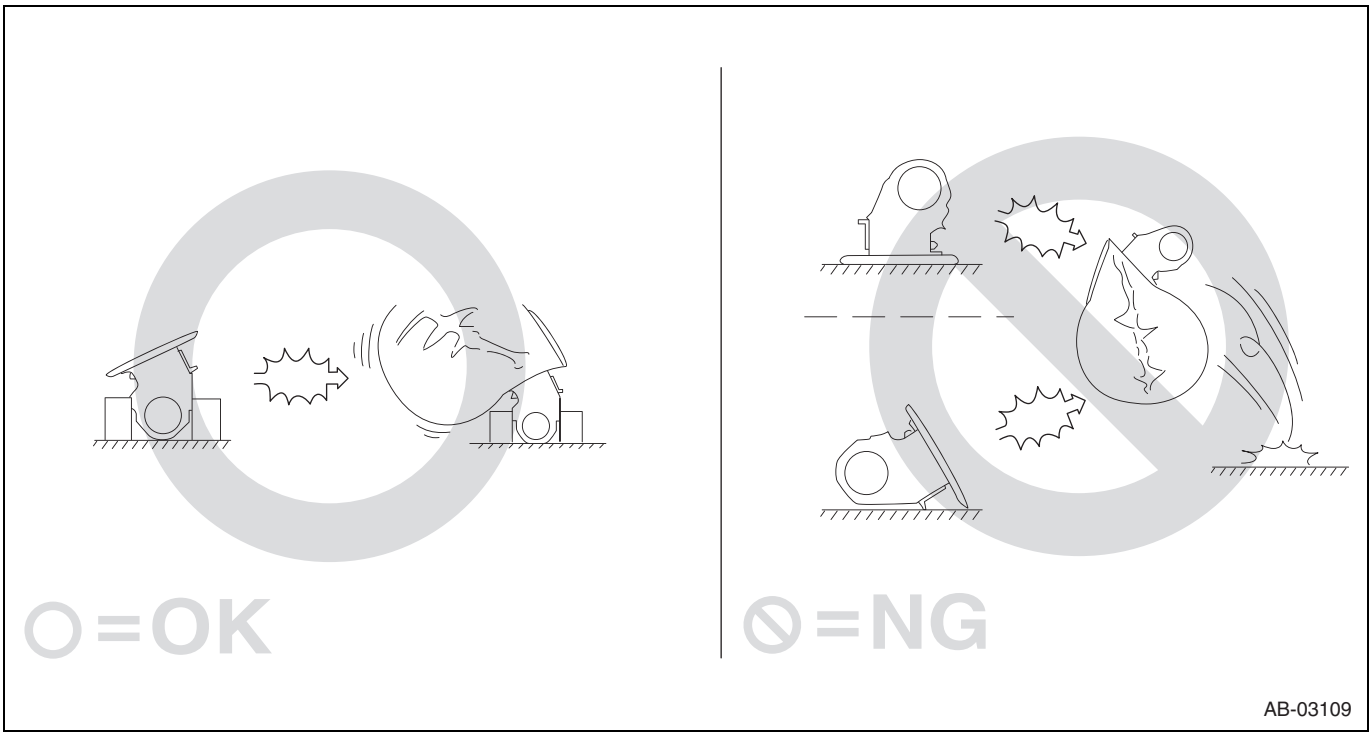


(10) When storing a removed airbag module, do not place it with the pad side facing downward. Do not place any objects on the airbag module. Do not pile up the airbag module. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.

(11) Driver side air bag module

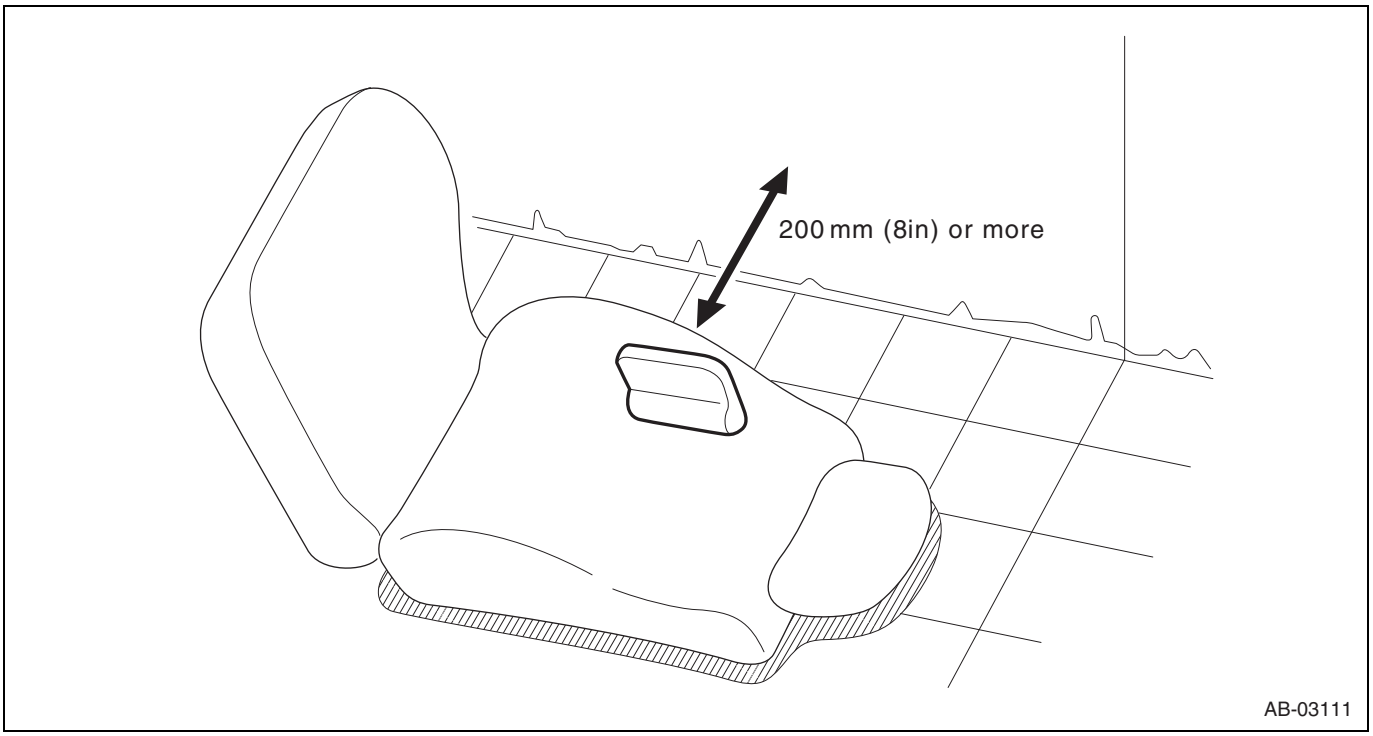


(12) Passenger's airbag module and side airbag module

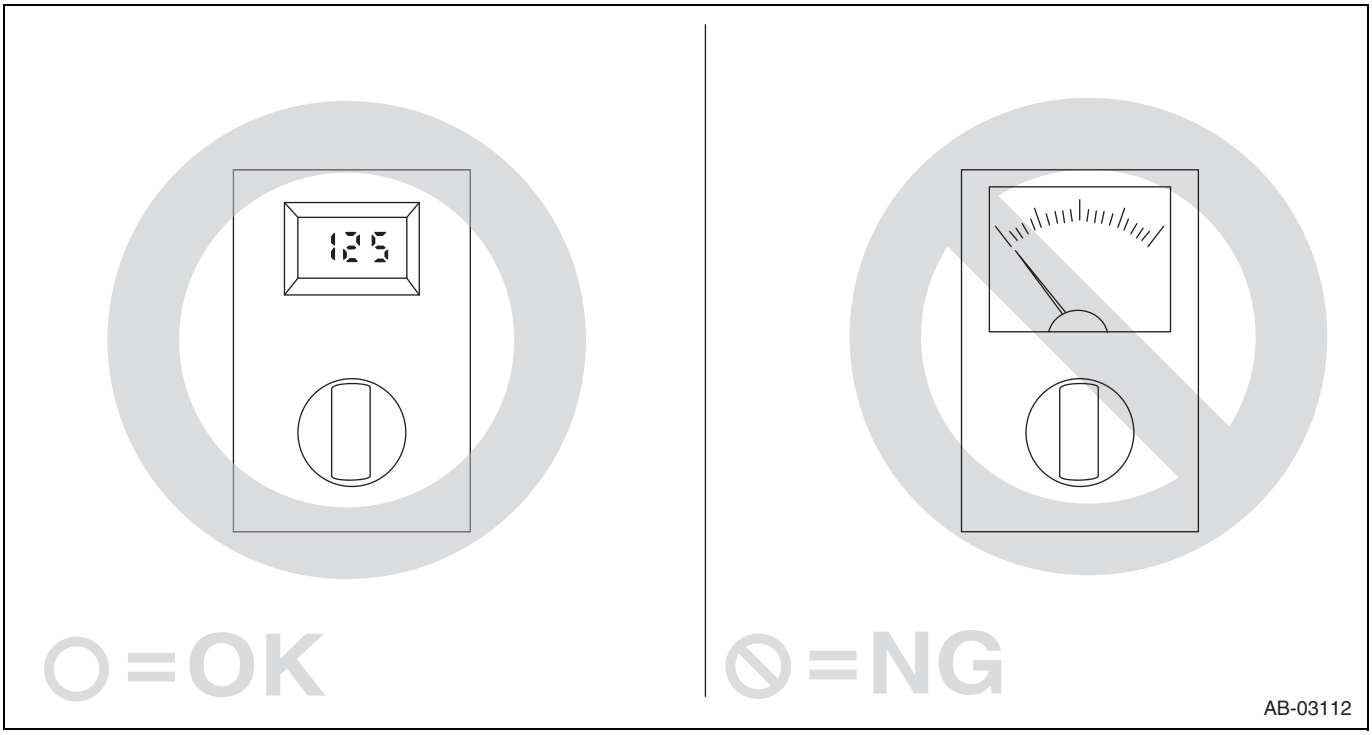


(13) Do not disassemble driver's airbag module, passenger's airbag module, side airbag module, curtain airbag module or pretensioner.

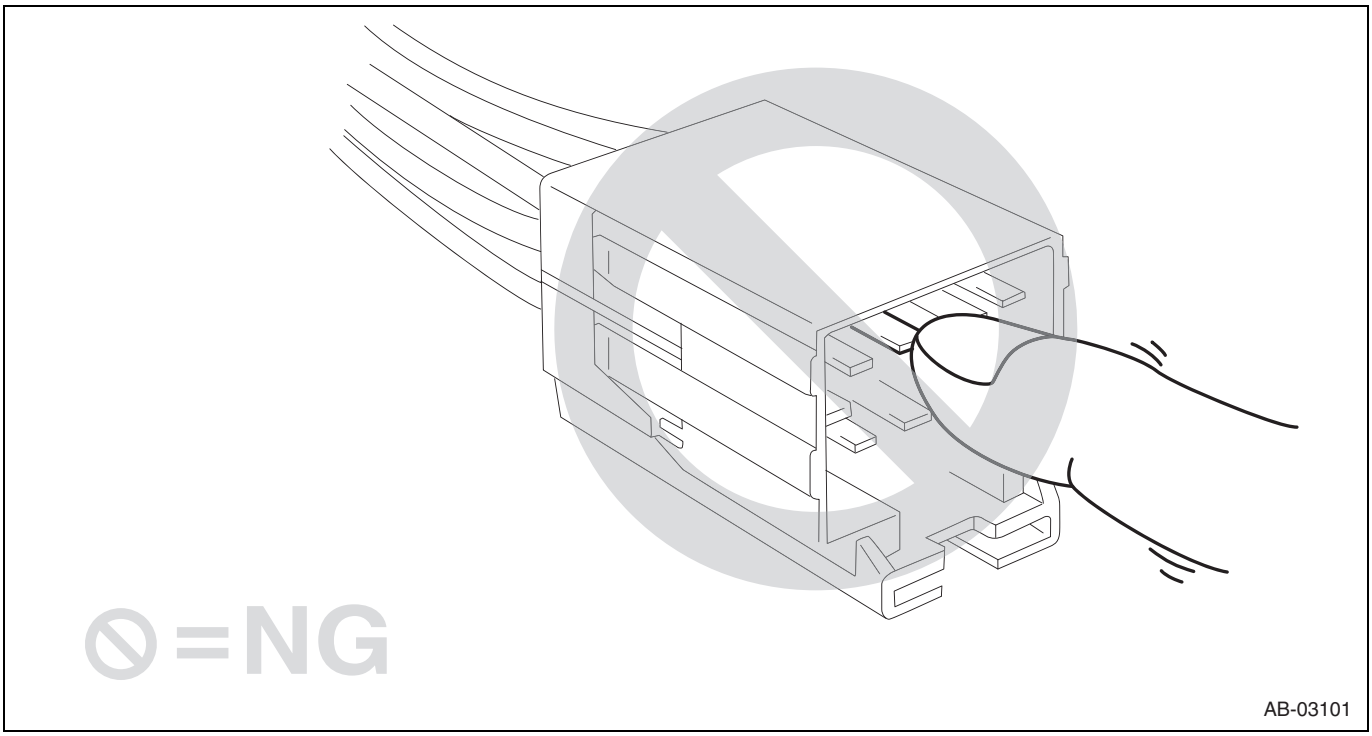
(14) The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.



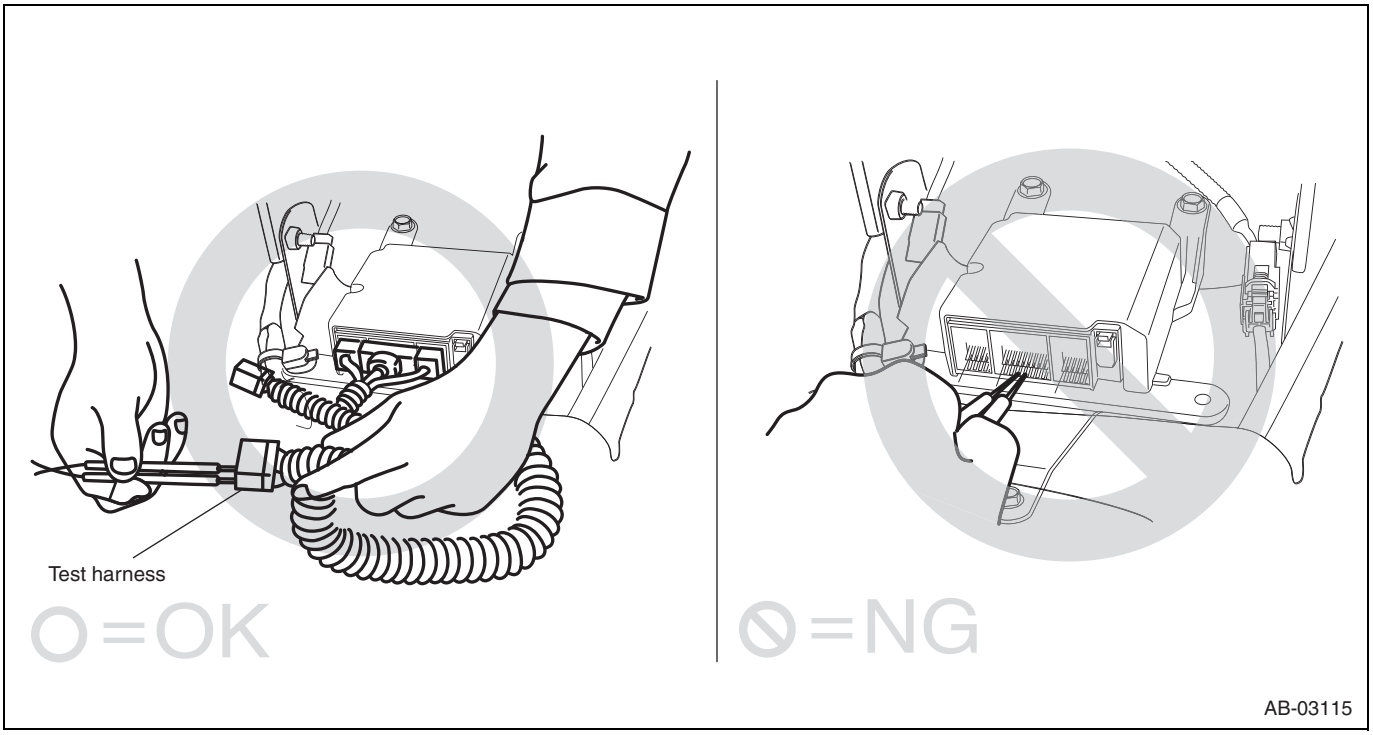
3. Before starting troubleshooting
   (1) Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.
   (2) When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a low current inside tester.



(3) Do not let water or oil adhere to the connector terminals. Also, do not touch the connector terminals directly.

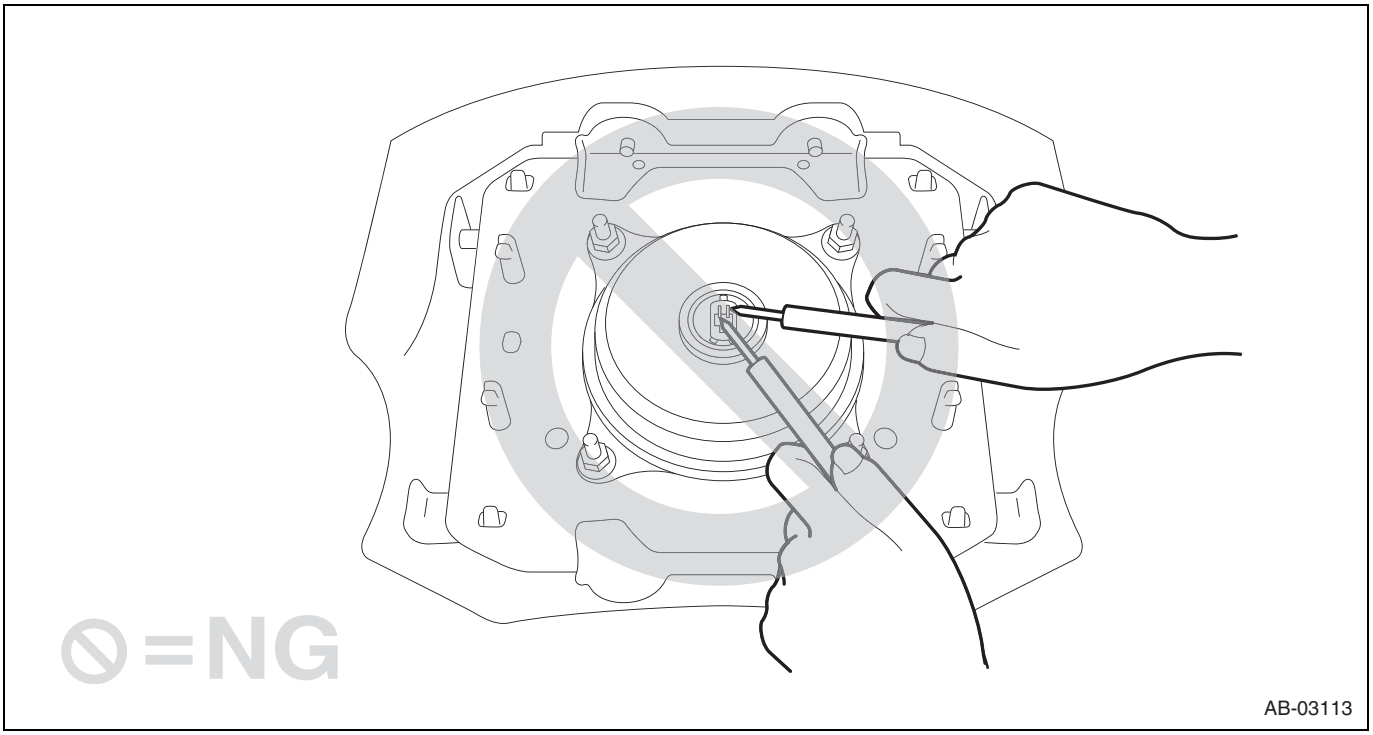


(4) When checking, use a test harness. Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

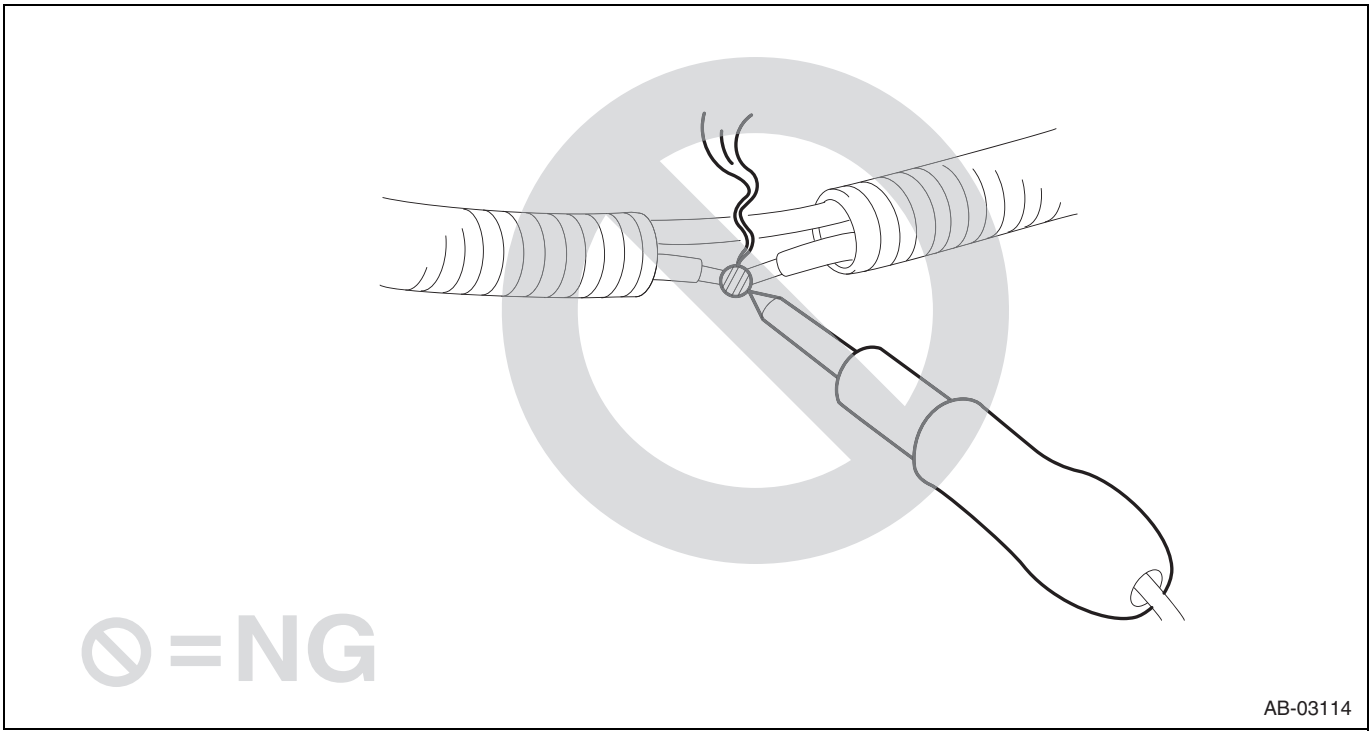


(5) Do not check continuity of the driver's airbag module, passenger's airbag module, side airbag module, curtain airbag module or pretensioner.

RS



(6) If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.



4. Checking with a probe
   (1) Insert the probe into the harness hole, and contact it with the terminal.

   (2) Do not insert the probe forcibly.
   (3) Be careful not to contact the part between the terminal and harness with the tip of probe. (It will make harness come off easily from connector.)

## Inspection

1. Measure the battery voltage and check the battery fluid.
   Standard voltage: 12V
   Specific gravity: 1.260 or more

## Preparation tool

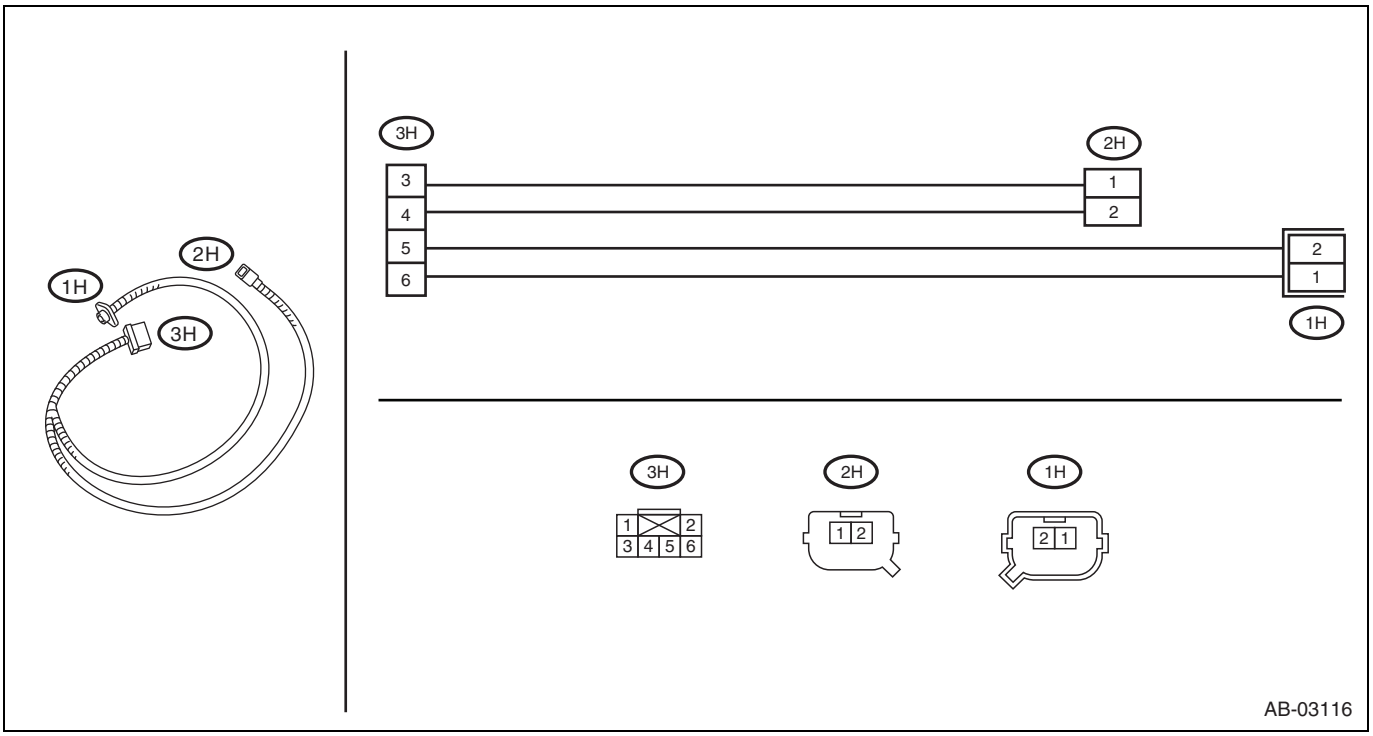
CAUTION:
When measuring the voltage, resistance, etc. of the airbag system components, be sure to use the specified test harness.

1. Subaru Select Monitor

| Shape | Tool number | Remarks |
|---|---|---|
| STSSM4 | — | Used for diagnosing electrical system failure. |

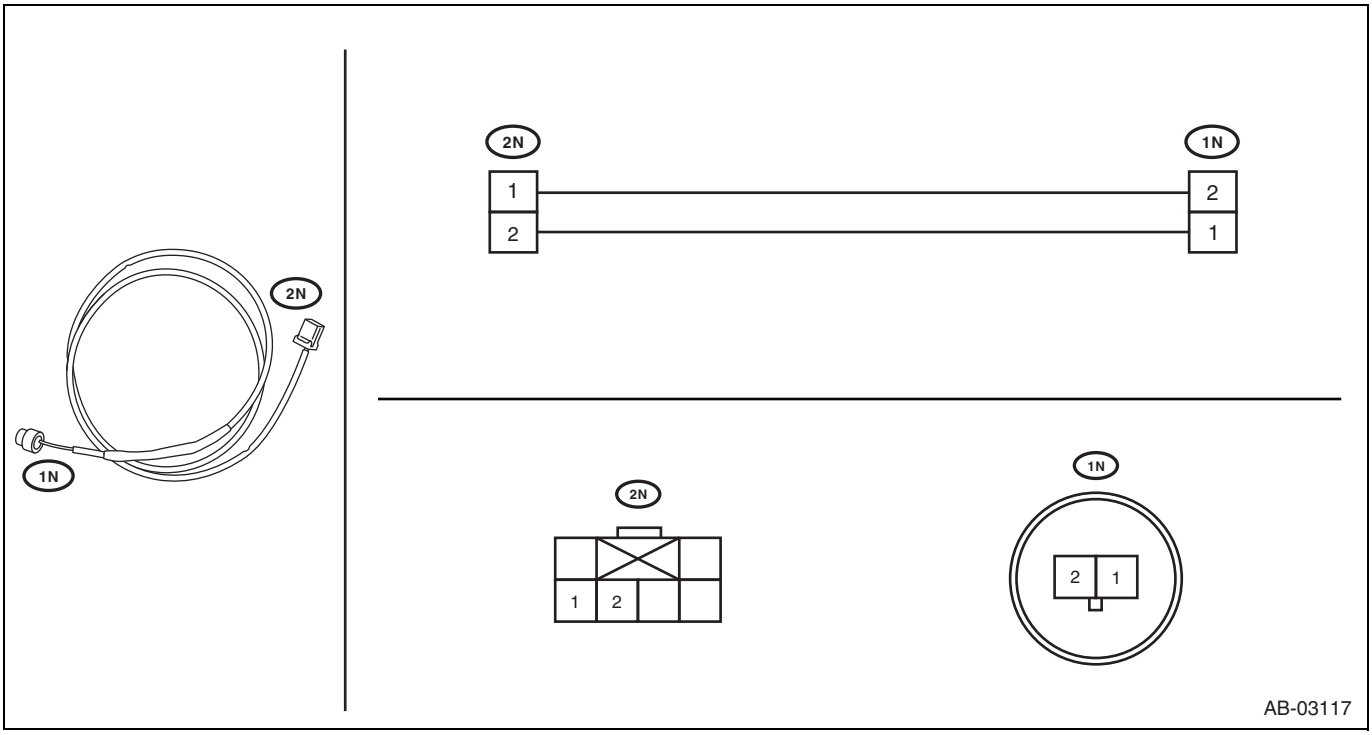
2. Test harness H

| Tool number | Remarks |
|---|---|
| 98299FA030 | Used when measuring voltage and resistance of front sub sensor and front door impact sensor. |



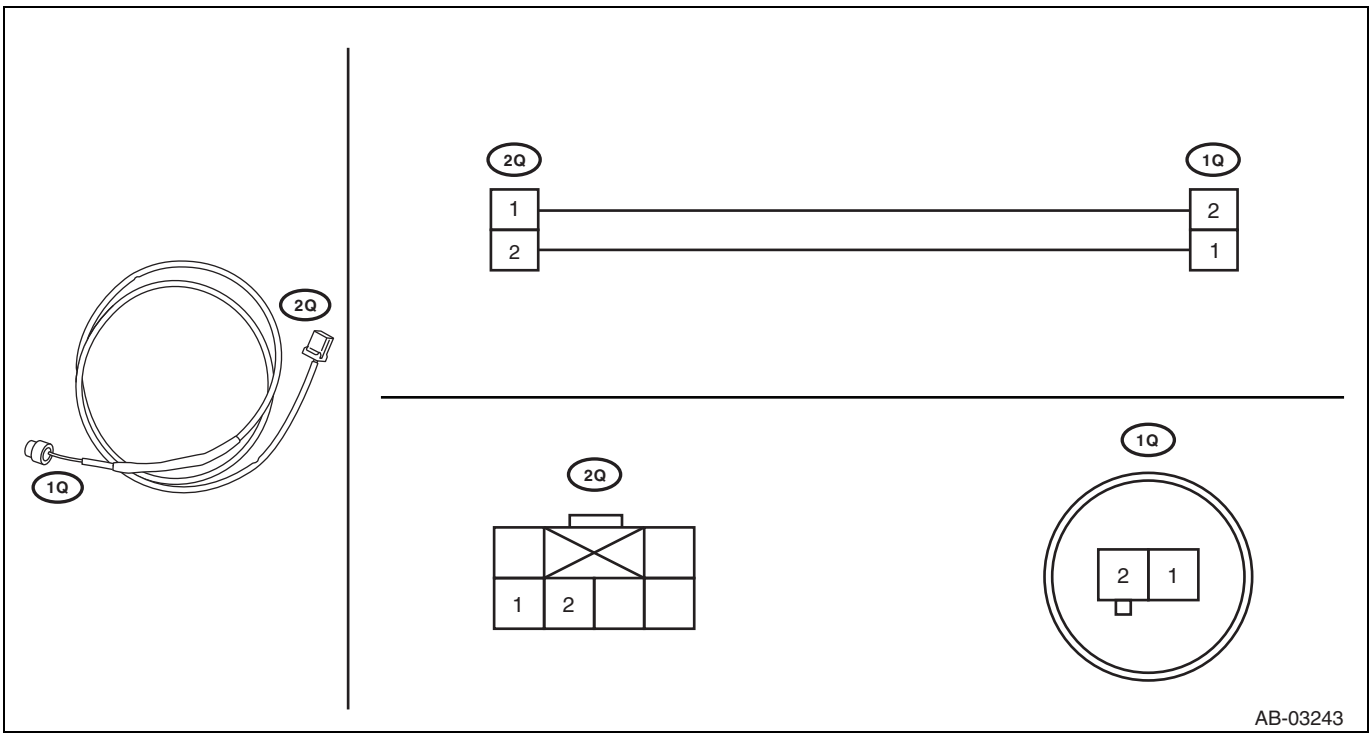
3. Test harness N

| Tool number | Remarks |
|---|---|
| 98299SA000 | Used when measuring voltage and resistance of seat belt pretensioner and curtain airbag module. |



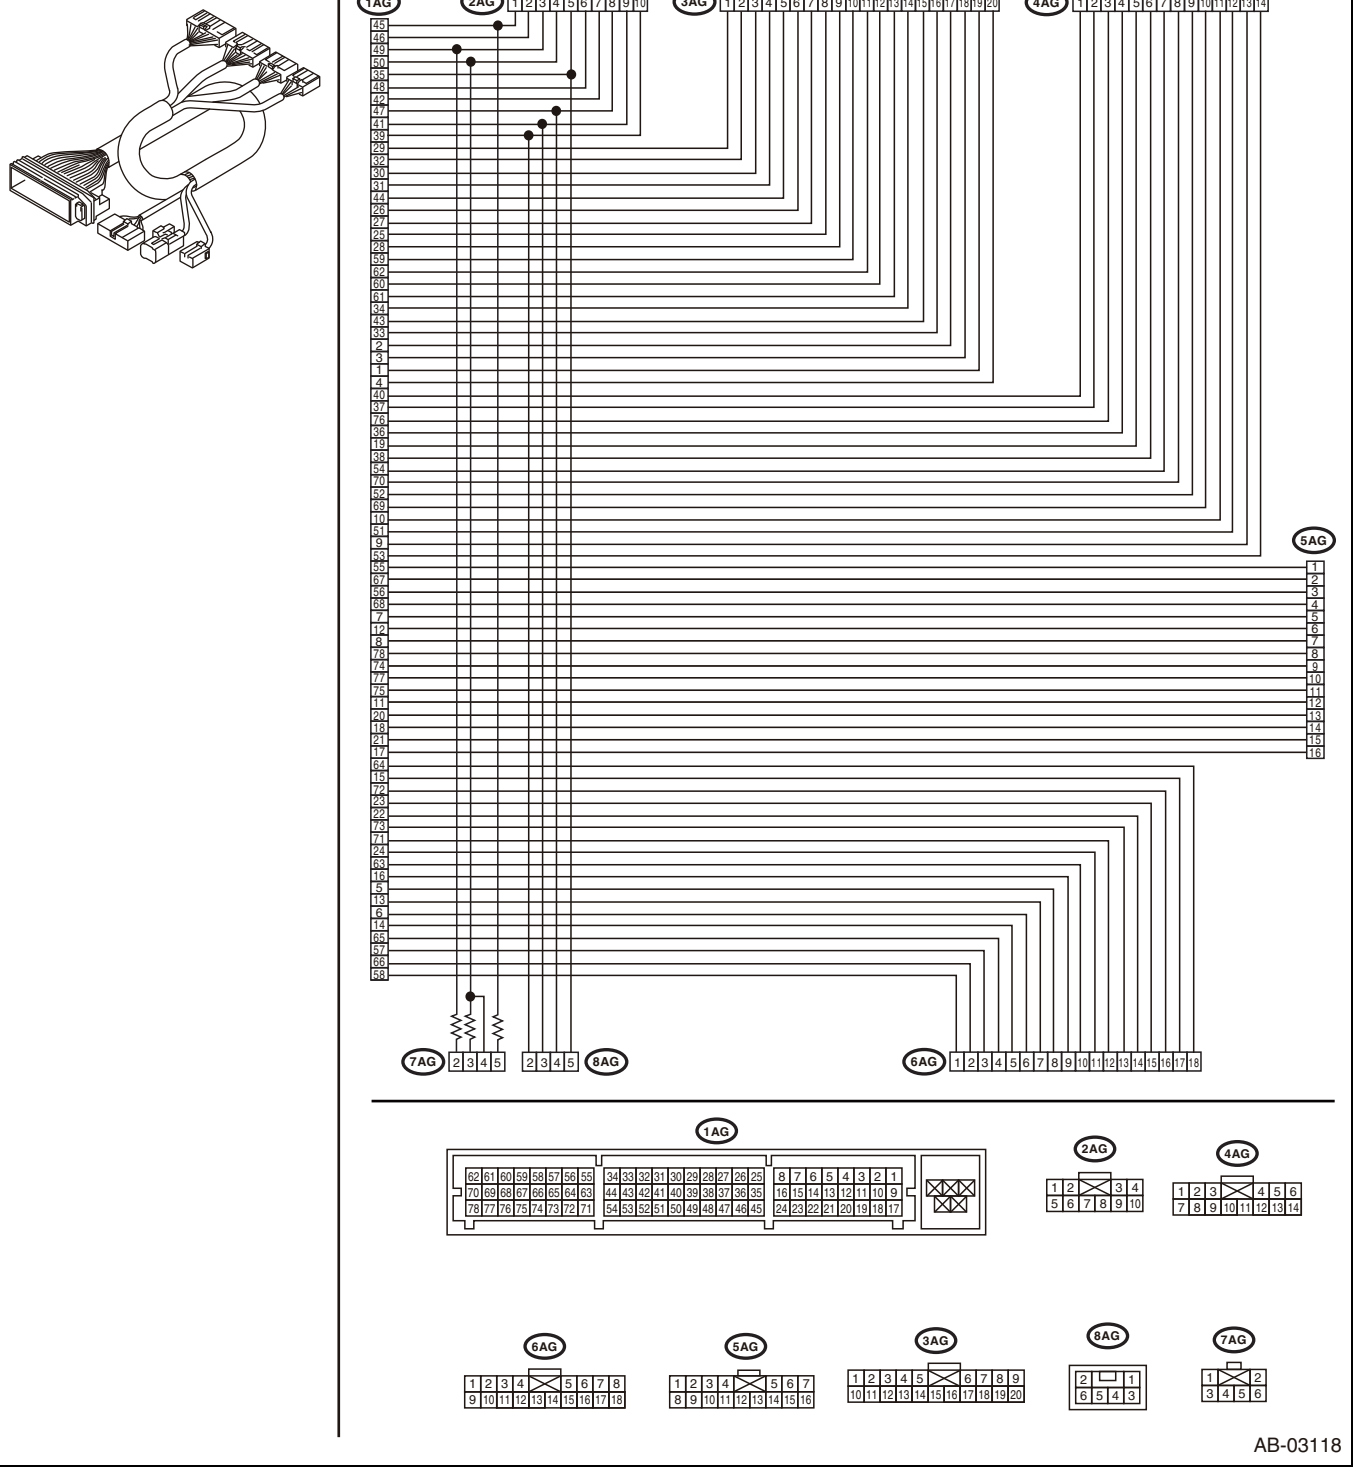
4. Test harness Q

| Tool number | Remarks |
|---|---|
| 98299SA040 | Used when measuring voltage and resistance of driver's airbag module. |



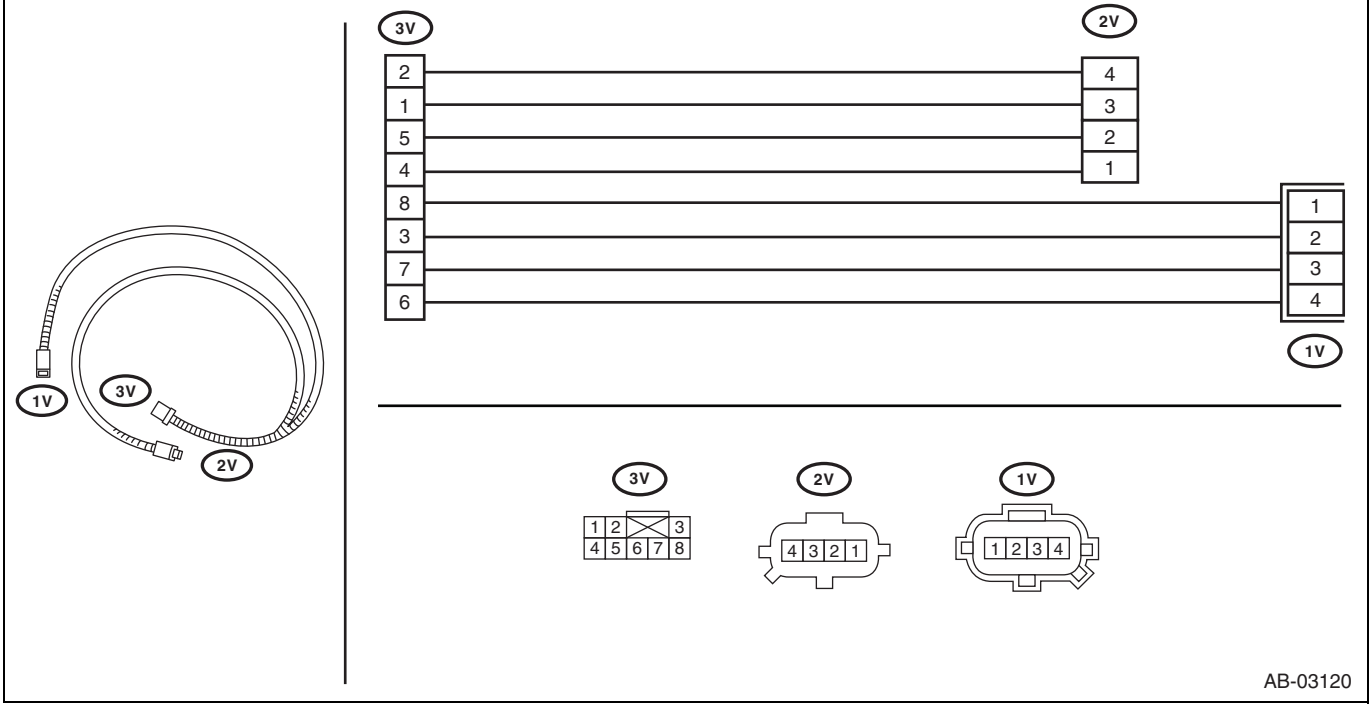
5. Test harness AG

| Tool number | Remarks |
|---|---|
| 98299AG070 | Used when measuring voltage and resistance of airbag control module. |



6. Test harness V

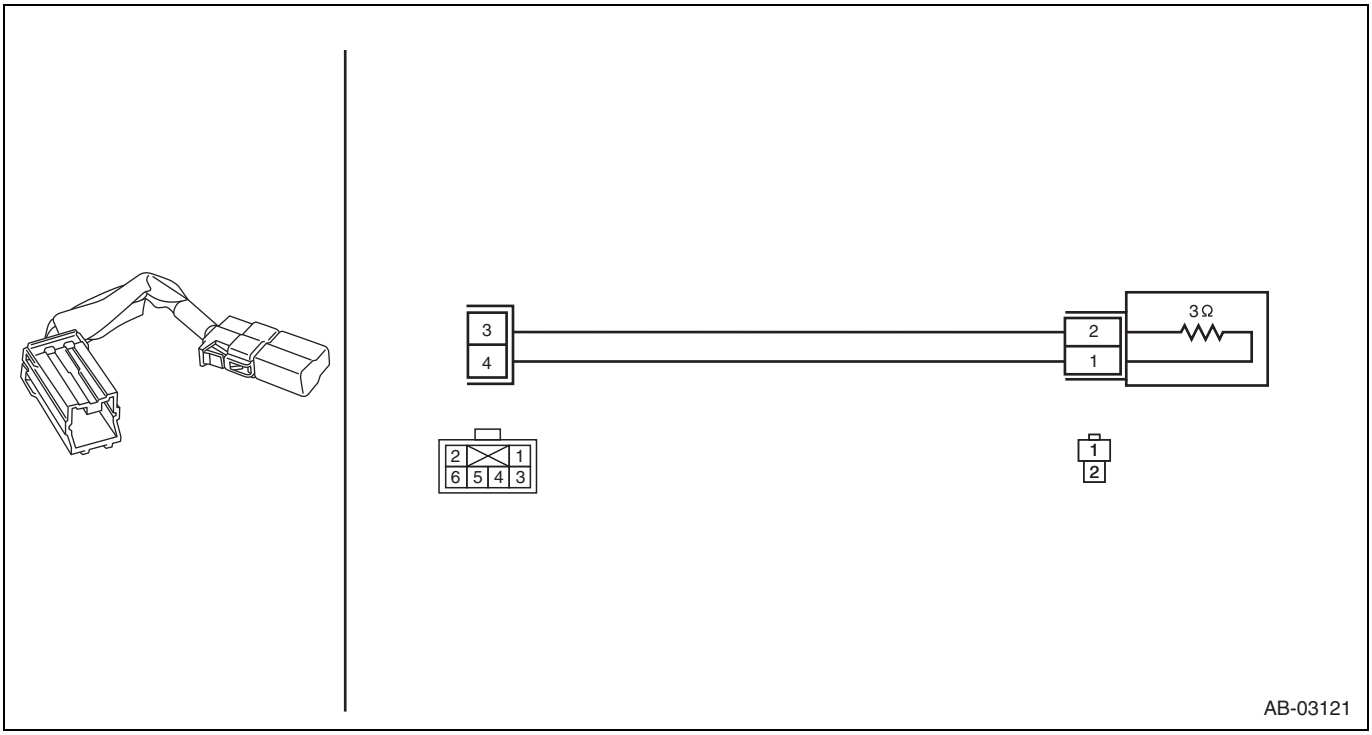
| Tool number | Remarks |
|---|---|
| 98299AG010 | Used when measuring voltage and resistance of side airbag sensor and curtain airbag sensor. |



7. Airbag resistor

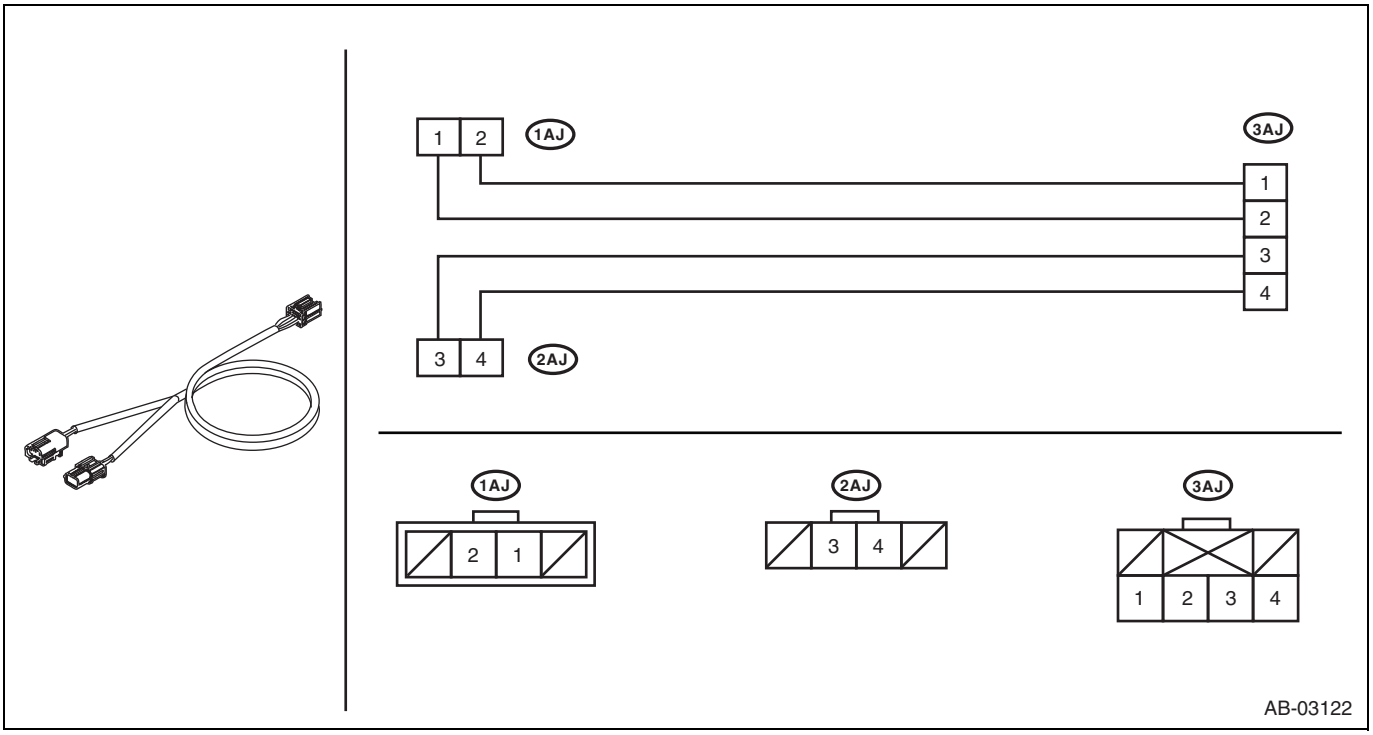
| Tool number | Remarks |
|---|---|
| 98299PA040 | Used in replacement of airbag module for which resistance is same as airbag module. |

RS



8. Test harness AJ

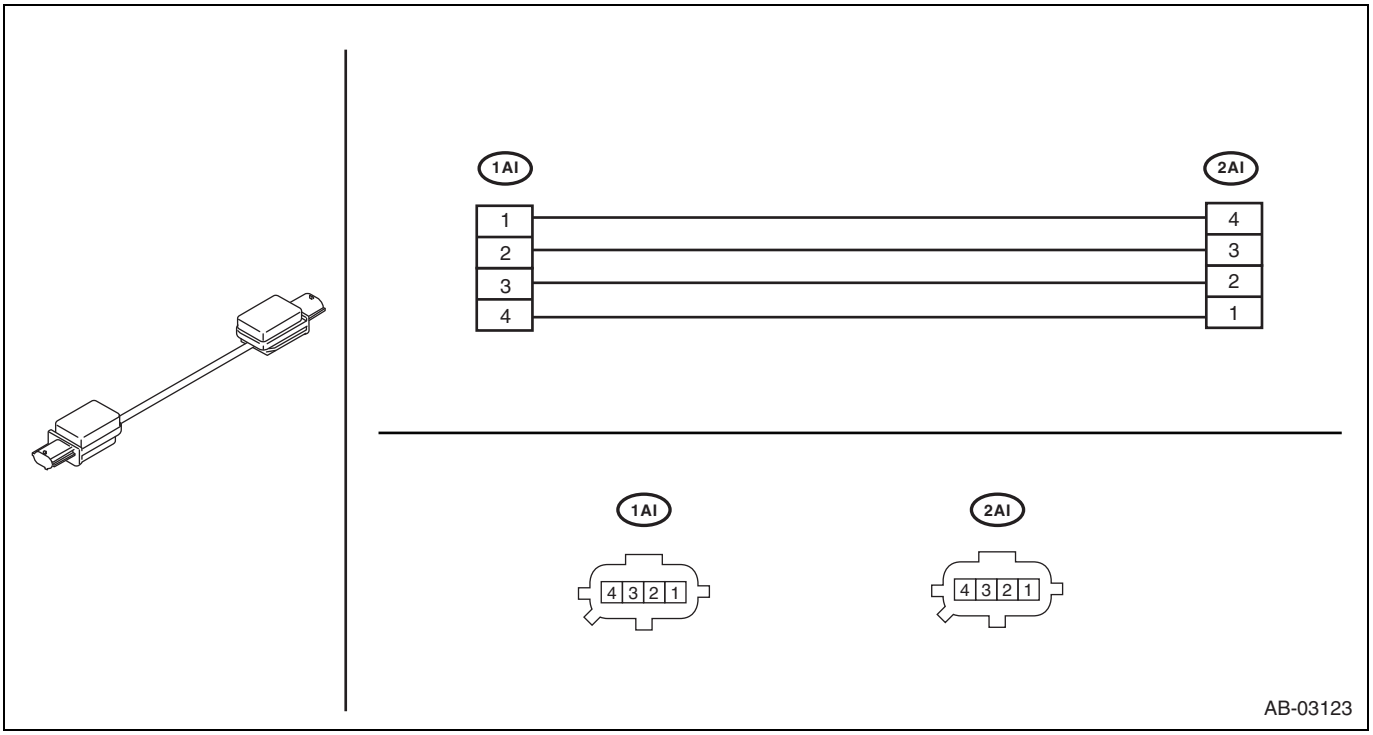
| Tool number | Remarks |
|---|---|
| 98299FG000 | Used when measuring power supply and resistance of side airbag harness. |



9. Test harness AI

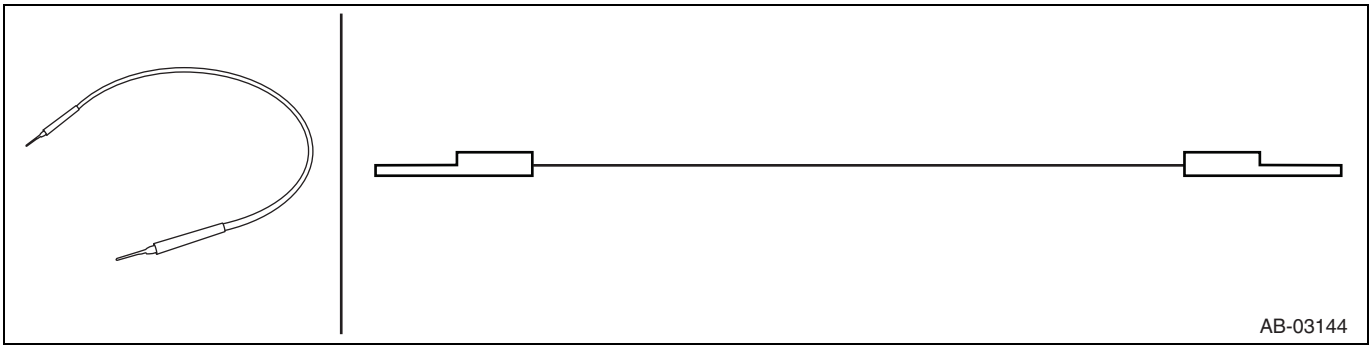
| Tool number | Remarks |
|---|---|
| 98299AG090 | • Used for diagnoses of side airbag sensor and curtain airbag sensor.<br>• Used together with test harness V. |

RS



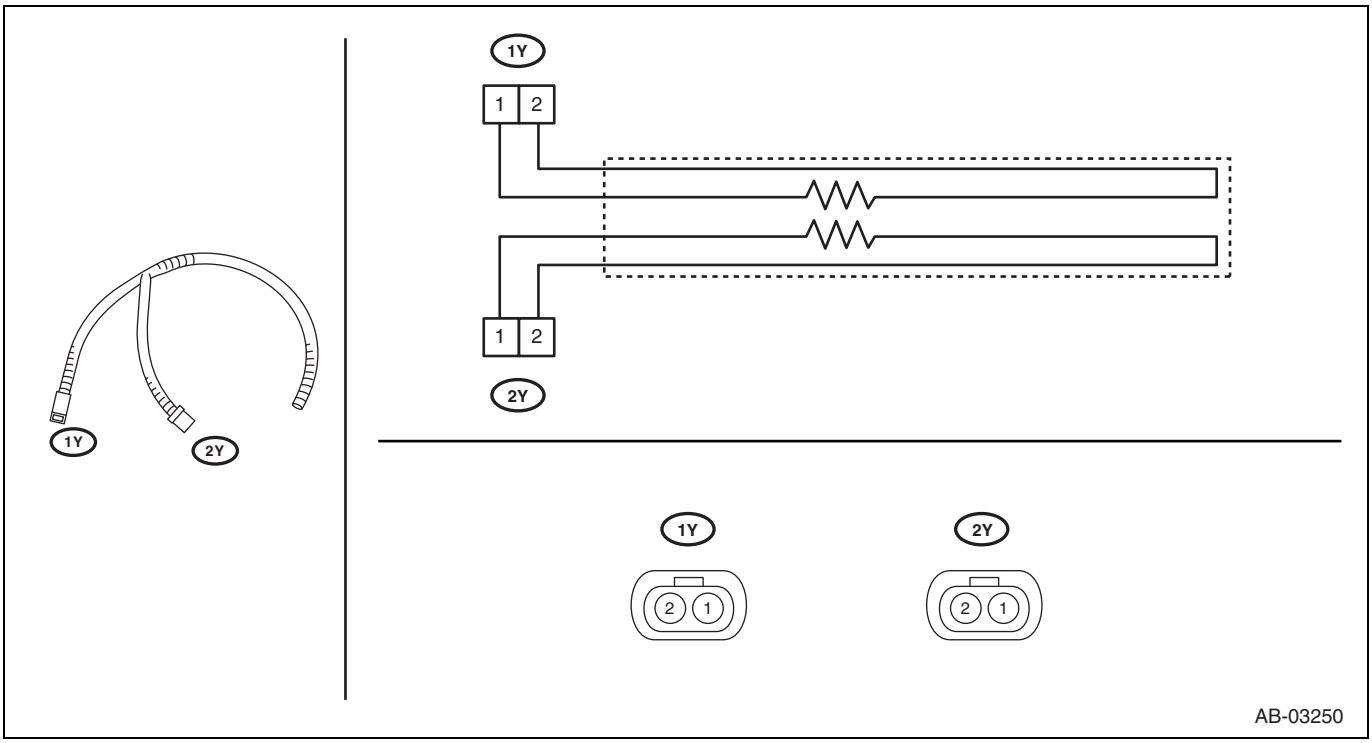
10. Test harness AT

| Tool number | Remarks |
|---|---|
| 98299CA0020 | Used when measuring power supply and resistance of side airbag harness. |



11. Test harness Y

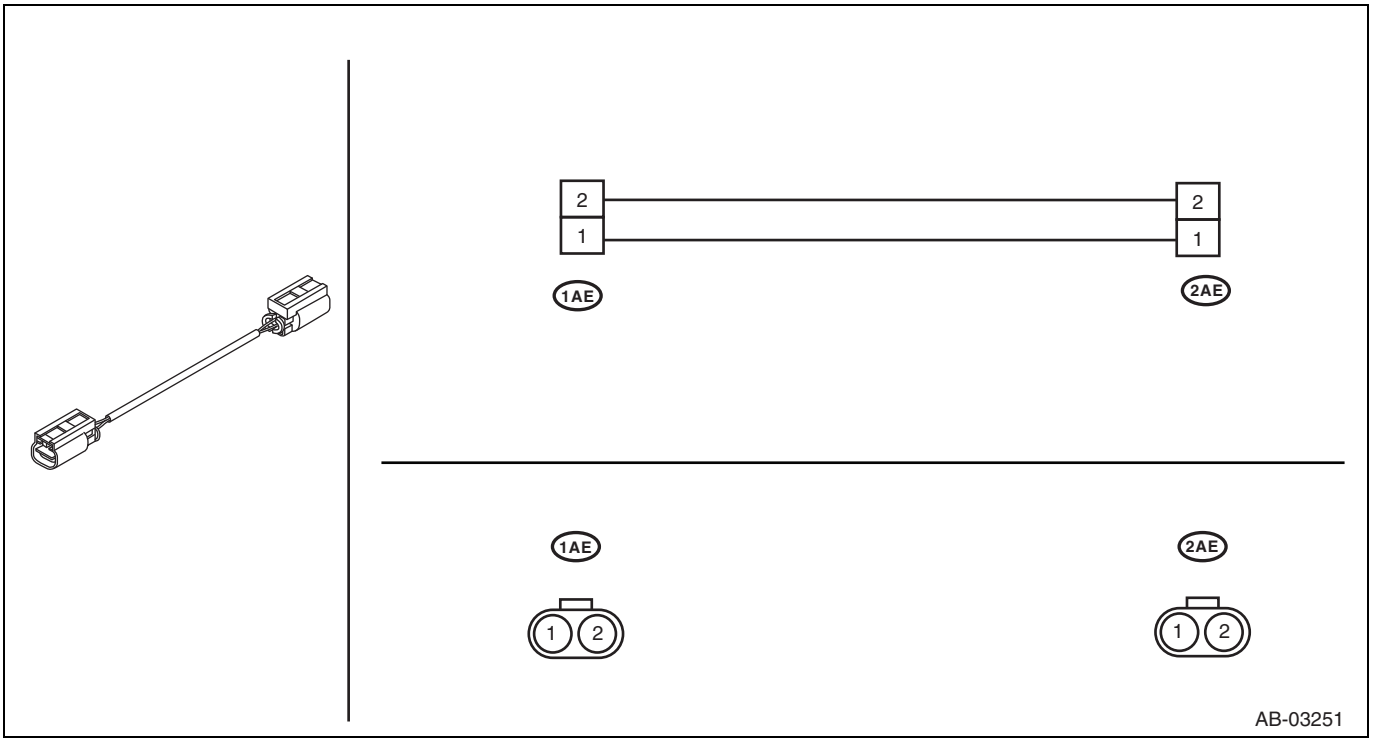
| Tool number | Remarks |
|---|---|
| 98299AG040 | Used for diagnosing the seat belt buckle switch failure. |



12. Test harness AE

| Tool number | Remarks |
|---|---|
| 98299XA030 | Adapter harness for test harness Y Used for diagnosing the seat belt buckle switch failure. |

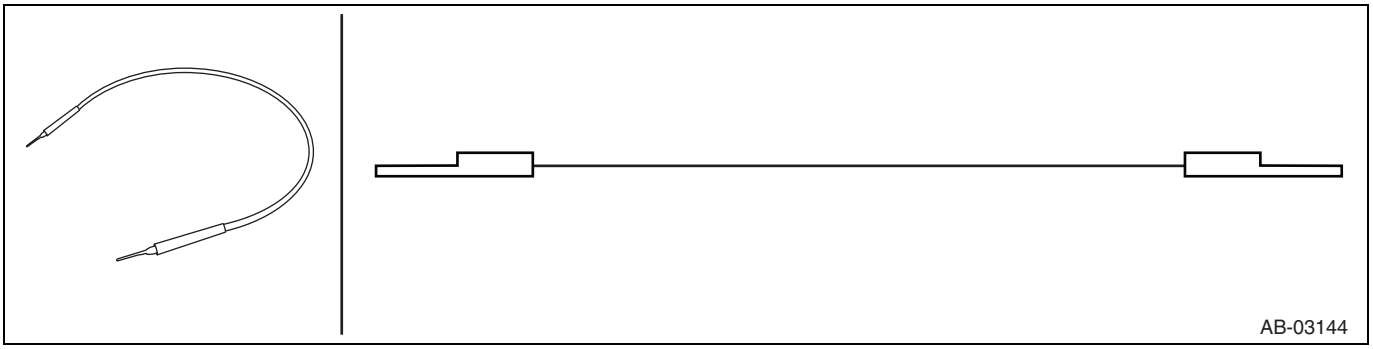
RS



13. Test harness AS

| Tool number | Remarks |
|---|---|
| 98299CA010 | Used when measuring voltage and resistance of the occupant detection system. |

RS



14. Test harness adapter D

| Shape | Tool number | Remarks |
|---|---|---|
|  AB-03187 | 98299SA011 | • Used for operation process of driver's airbag module.<br>• Used for operation process of curtain airbag module.<br>• Used for operation process of pretensioner.<br>• Used together with airbag deployment tool. (98299PA030)<br>• Before reuse, replace the repair connector (98299FJ010). |

15. Test harness adapter F

| Shape | Tool number | Remarks |
|---|---|---|
|  AB-03189 | 98299SA050 | • Used for operation process of pretensioner.<br>• Used together with airbag deployment tool. (98299PA030)<br>• Before reuse, replace the repair connector (98299FJ012). |

16. Test harness adapter AM

| Shape | Tool number | Remarks |
|---|---|---|
|  AB-03186 | 98299FJ000 | • Used for operation process of passenger's airbag module.<br>• Used together with airbag deployment tool. (98299PA030) |

17. Test harness adapter AR

| Shape | Tool number | Remarks |
|---|---|---|
|  AB-03186 | 98299CA000 | • Used for operation process of side airbag module.<br>• Used together with airbag deployment tool. (98299PA030) |

18. Airbag deployment tool

| Shape | Tool number | Remarks |
|---|---|---|
| AB-03185 | 98299PA030 | • Used for operation process of airbag module and pretensioner.<br>• Used together with each test harness adapter. |

19. Test harness adapter AN

| Shape | Tool number | Remarks |
|---|---|---|
|  AB-03188 | 98299FJ010 | Repair kit for replacing the melted connector of test harness adapter D. |

20. Test harness adapter AO

| Shape | Tool number | Remarks |
|---|---|---|
|  AB-03188 | 98299FJ020 | Repair kit for replacing the melted connector of test harness adapter F. |

21. General tool

| Tool name | Remarks |
|---|---|
| Circuit tester | Used for measuring resistance, voltage and current. |
| Probe | Used when measuring voltage and resistance of passenger's airbag module. |
| Oscilloscope | Used when measuring sensor. |

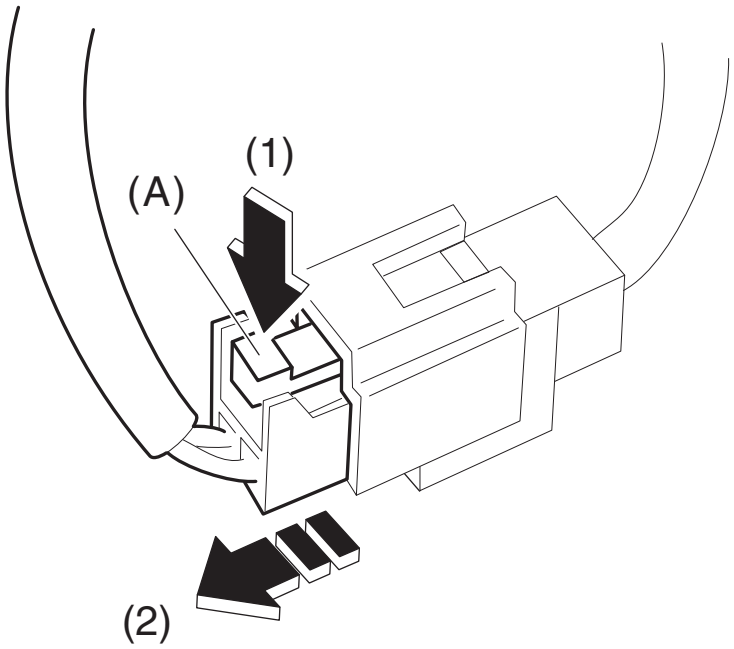
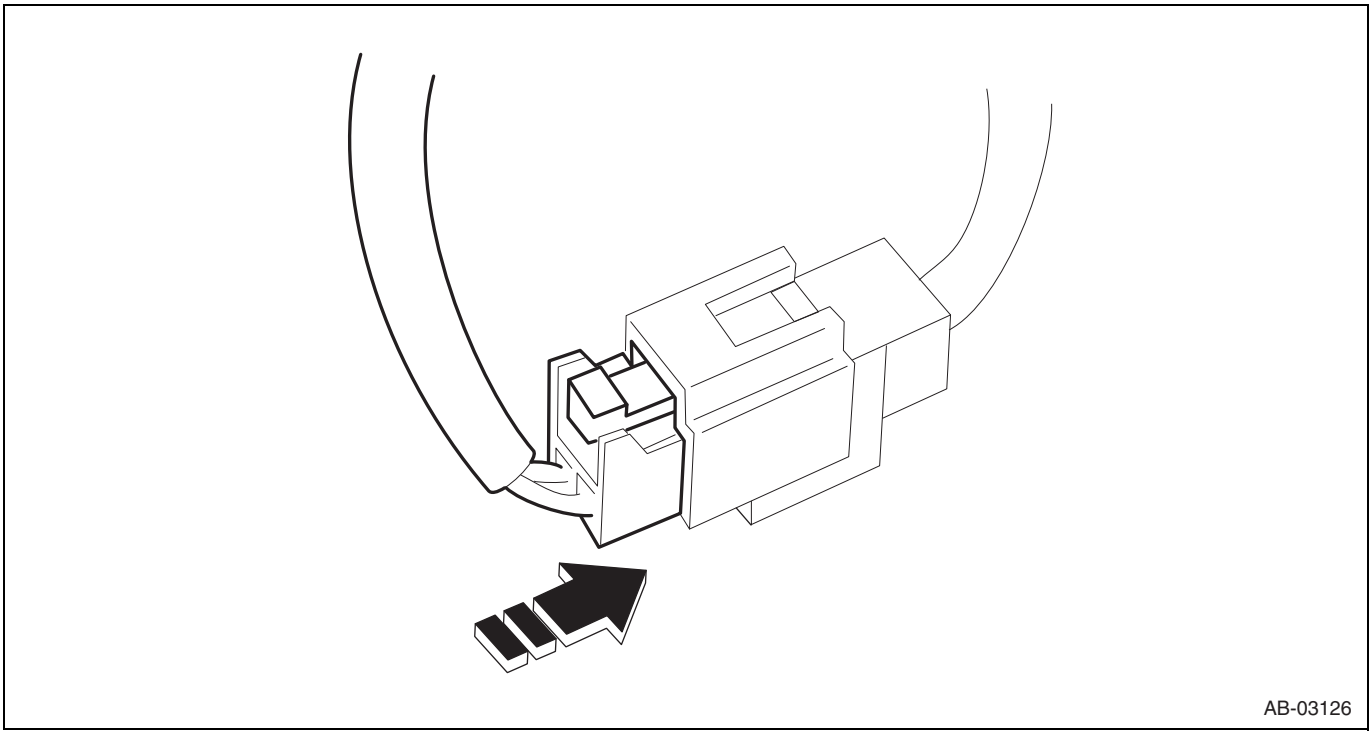
## Airbag connector

1. How to disconnect the power supply
   CAUTION:
   When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
   (1) Push the lock (A).
   (2) While holding down the lock (A), disconnect the connector.

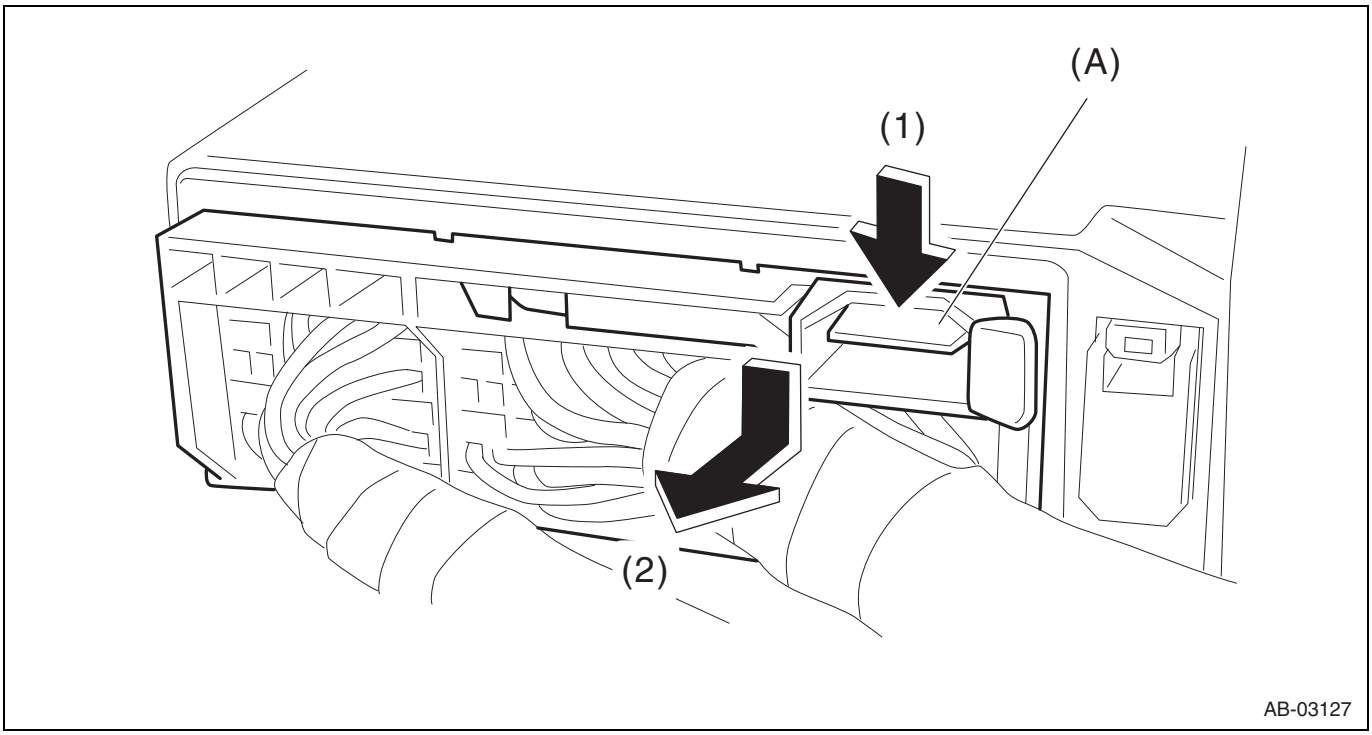


AB-03125

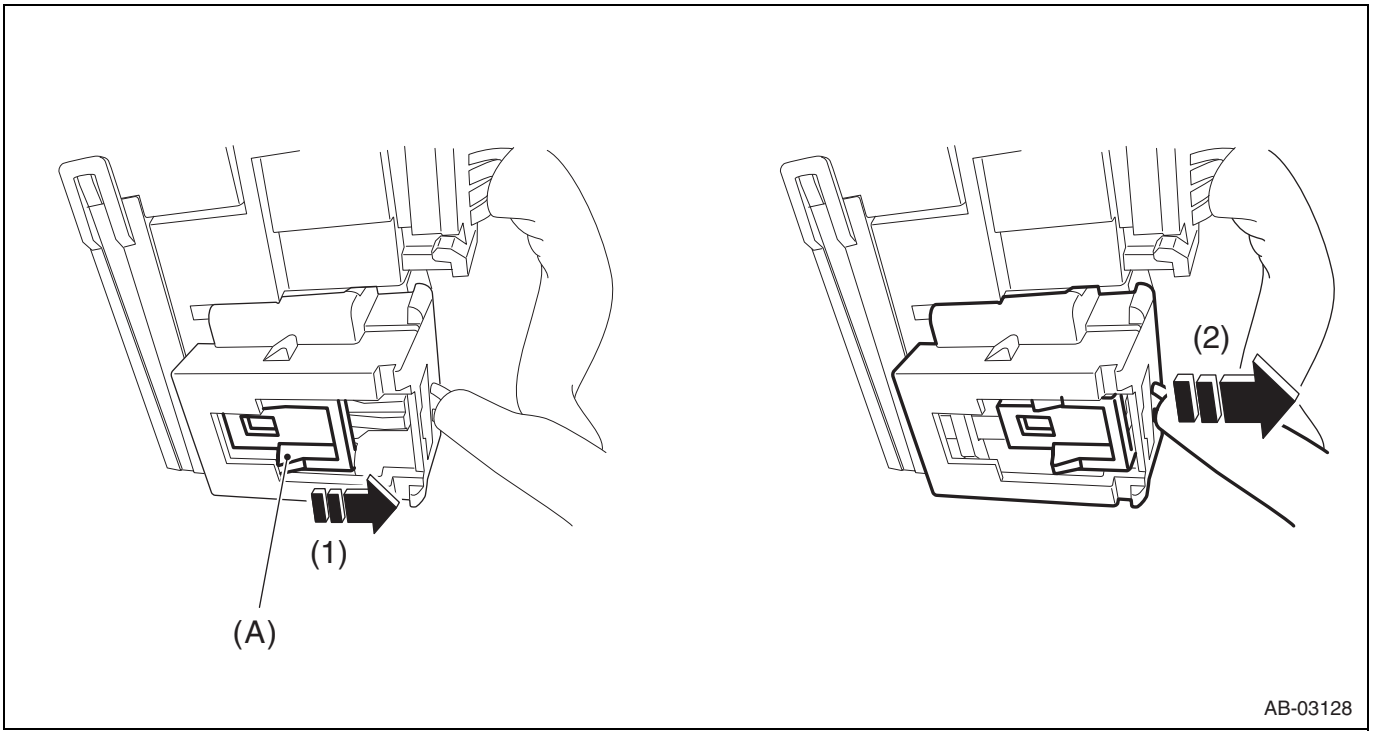
2. How to connect the power supply
   CAUTION:
   Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
   (1) Holding the connector, push it in securely until a clicking sound is heard.



3. How to disconnect the airbag control module
   (1) Push the lock lever plate (A).
   (2) While holding down the lock lever plate (A), pull the lever toward you.

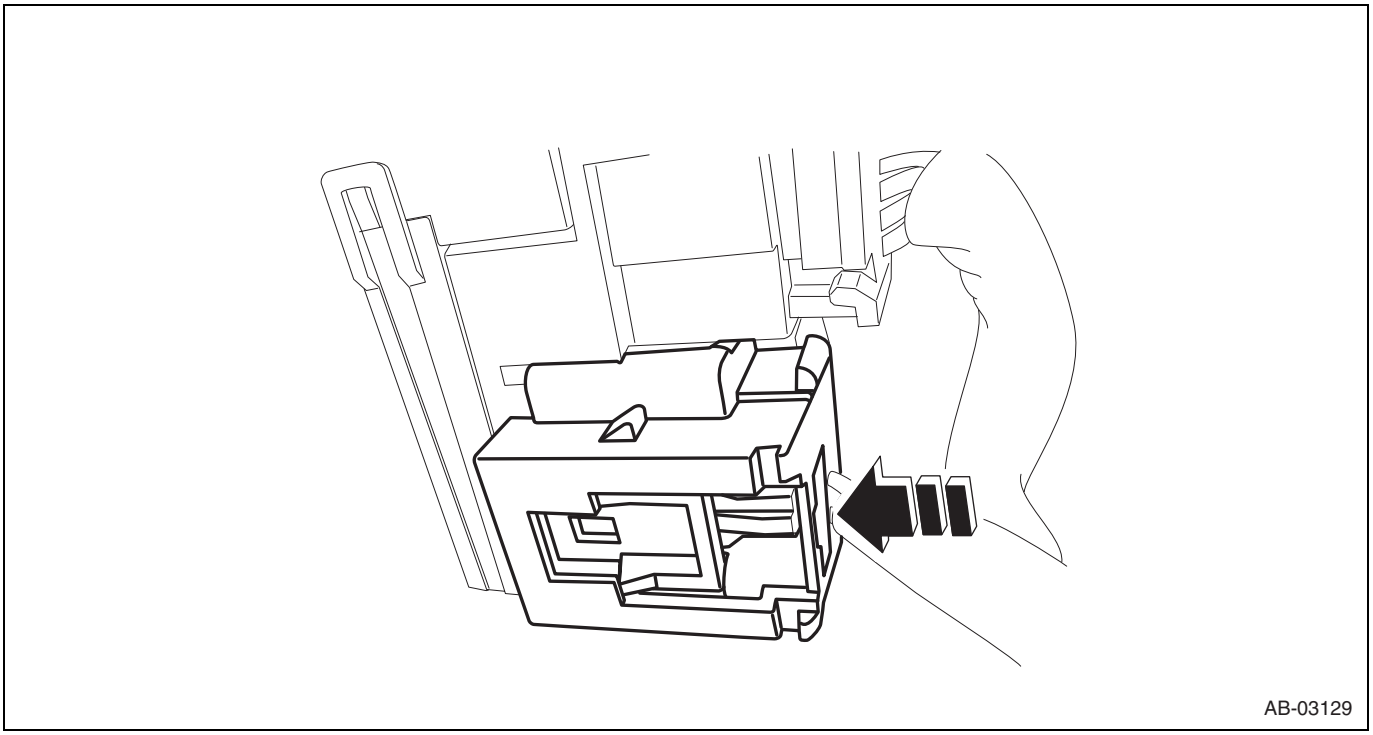


4. How to connect the airbag control module
   CAUTION:
   Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
   (1) Insert the connector and push the lock lever in securely.
5. How to disconnect the driver's airbag module (roll connector)
   CAUTION:
   When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
   (1) Pull the slide lock (A) in the direction of arrow.
   (2) With the slide lock pulled, disconnect the connector.

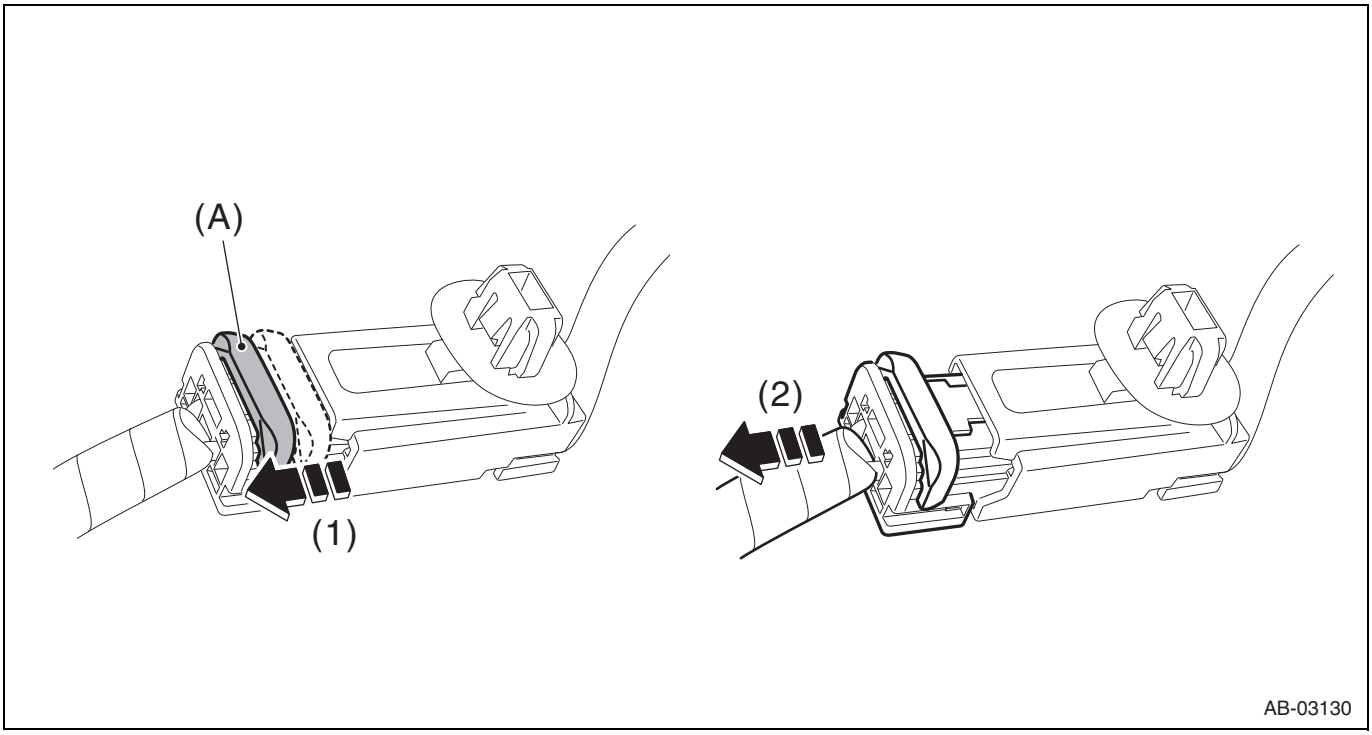


6. How to connect the driver's airbag module (roll connector)
   CAUTION:
   Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
   (1) Holding the connector, push it in securely until a clicking sound is heard.

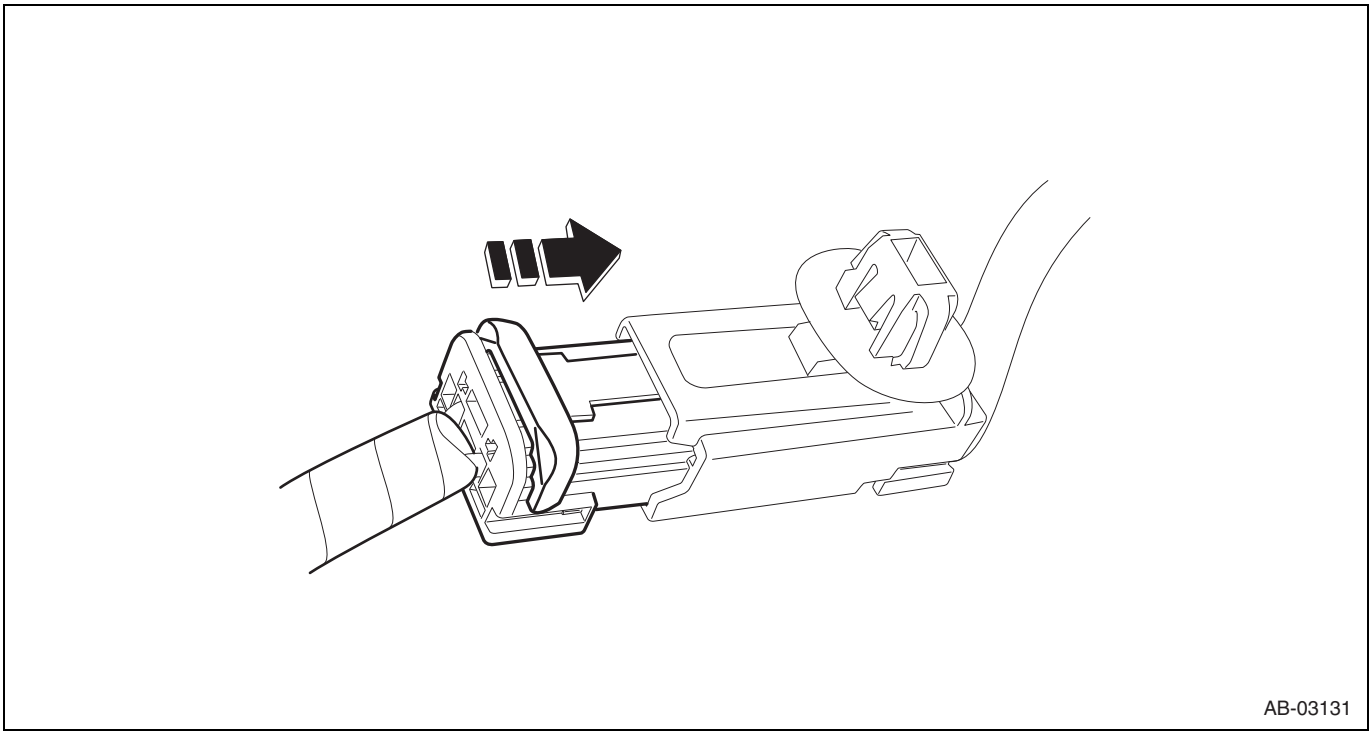
RS



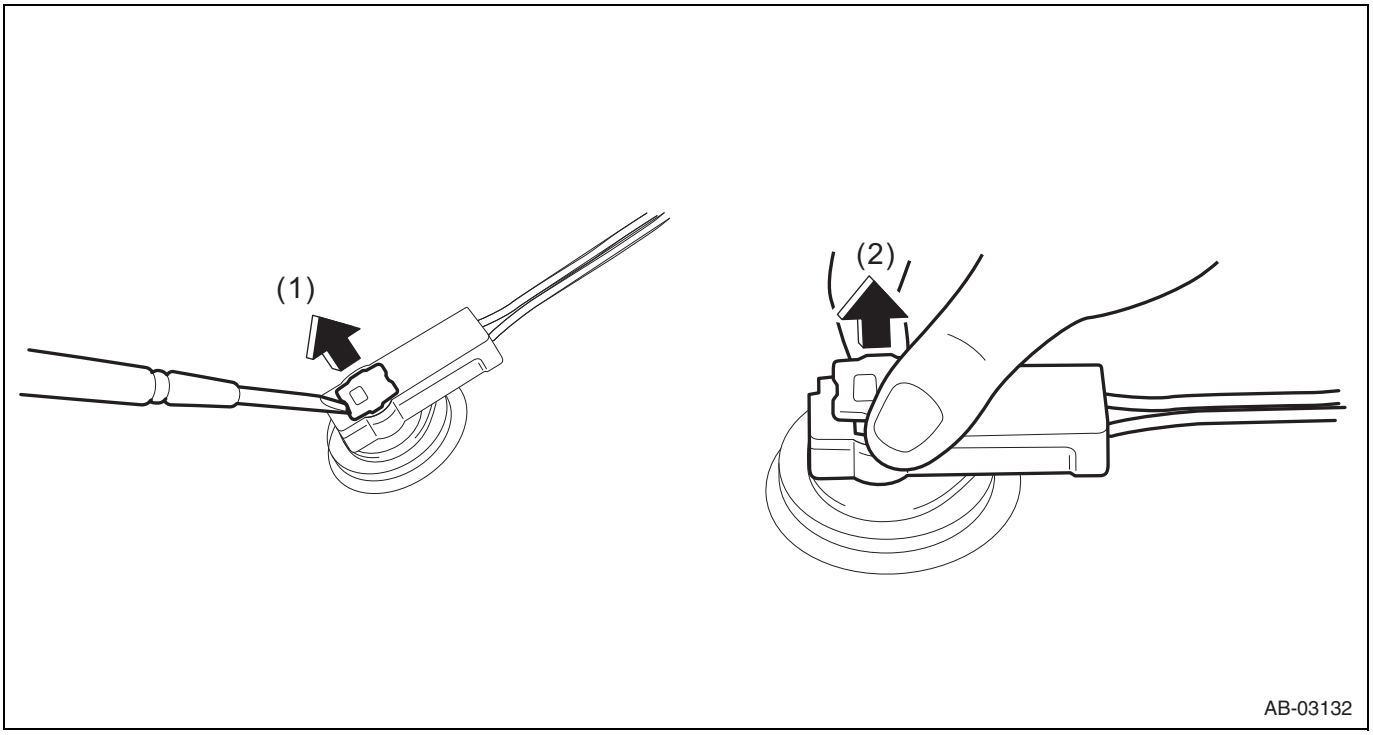
7. How to disconnect the passenger's airbag module
   CAUTION:
   When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
   (1) Pull the slide lock (A) in the direction of arrow.
   (2) With the slide lock pulled, disconnect the connector.



8. How to connect the passenger's airbag module
   CAUTION:
   Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
   (1) Holding the connector, push it in securely until a clicking sound is heard.

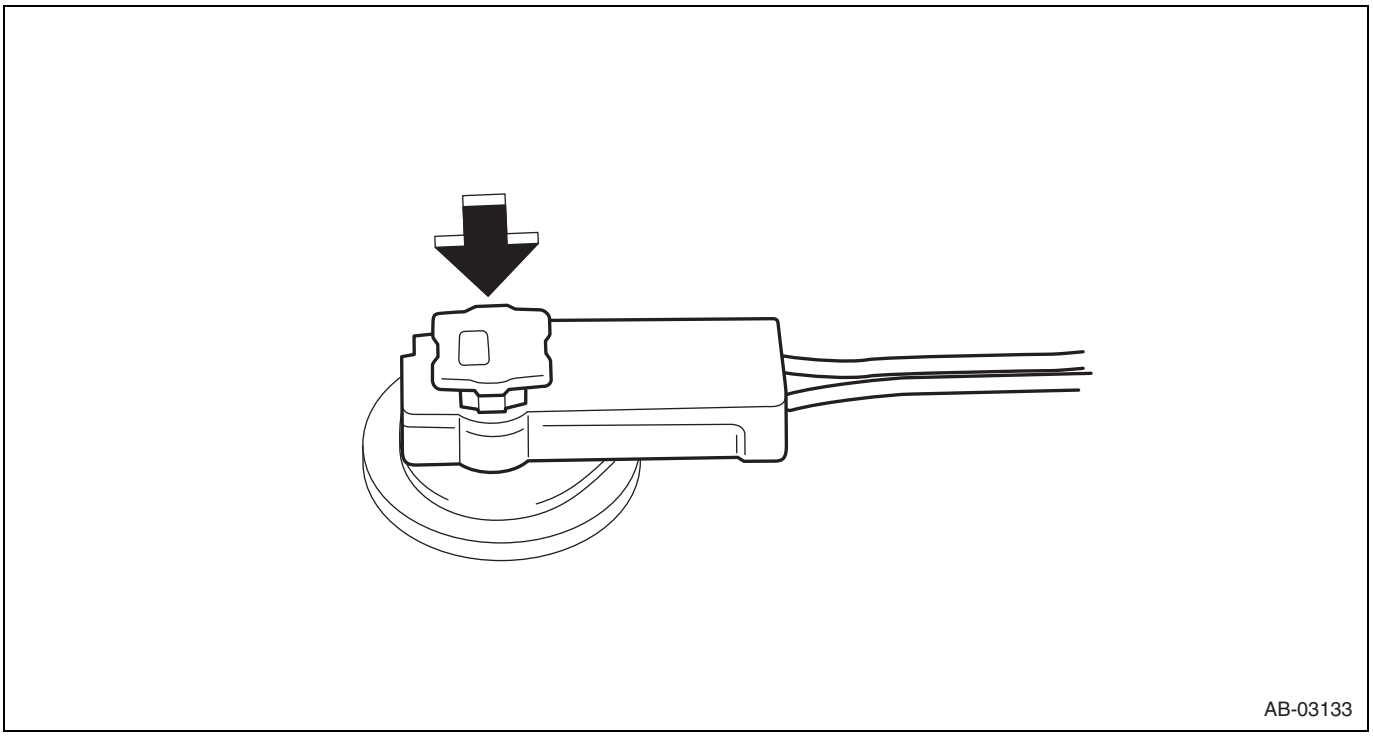


9. How to disconnect the driver's airbag module, the curtain airbag module and the pretensioner
   (1) Using a flat tip screwdriver, pry the push lock upward to unlock.
   (2) Pull the connector to disconnect from the airbag module ASSY or the retractor ASSY.

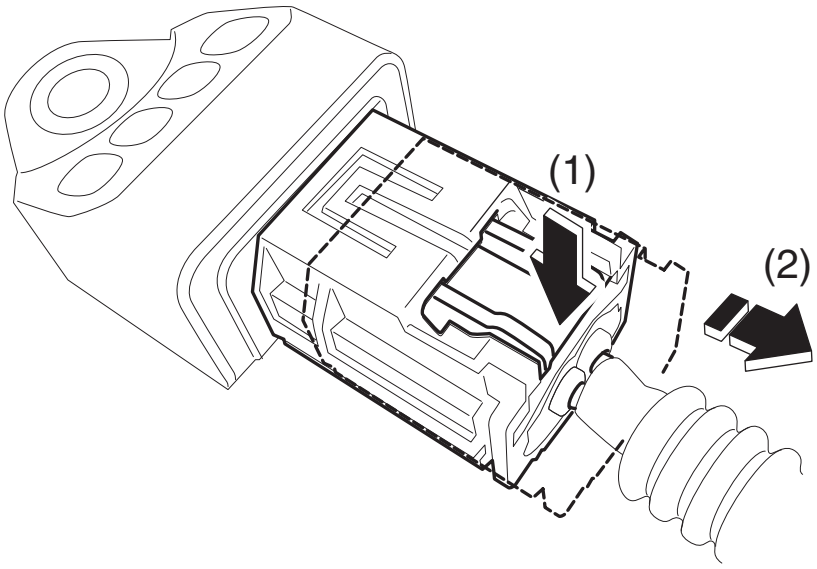


10. How to connect the driver's airbag module, the curtain airbag module and the pretensioner
    CAUTION:
    - Be sure to insert the connector in until it is locked.
    - Press in the push lock securely. Then pull it gently to make sure that it is locked.

    (1) Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.



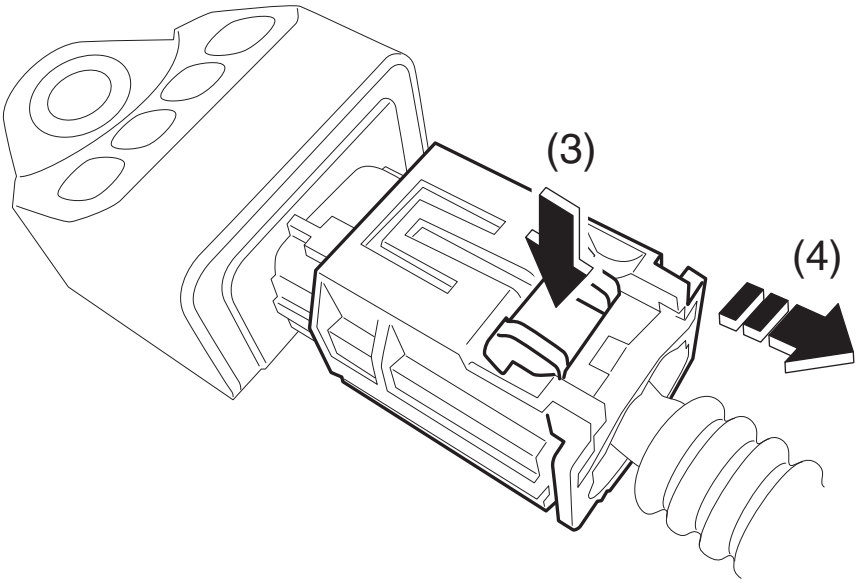
11. How to disconnect the front sub sensor
    CAUTION:
    When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
    (1) Push the lock arm.
    (2) Holding outer part, pull it one step in the direction of arrow.



AB-03134

(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.



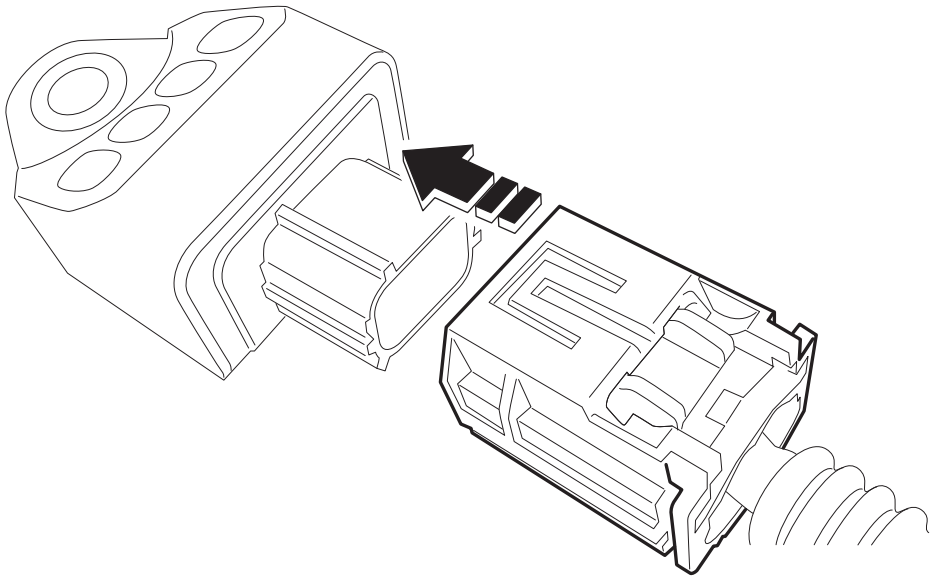
AB-03135

12. How to connect the front sub sensor

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

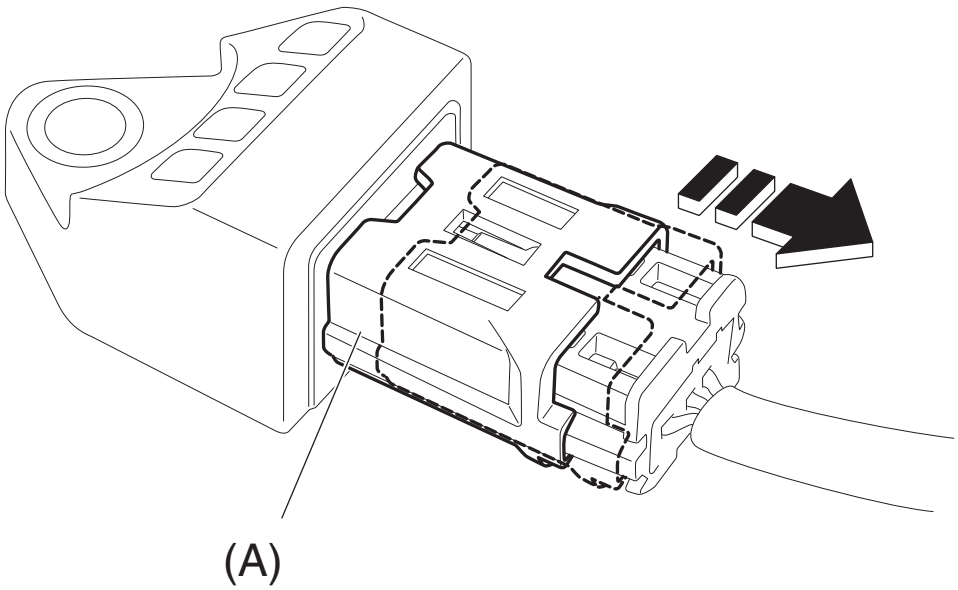
(1) Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.



AB-03136

13. How to disconnect the front door impact sensor and the satellite safing sensor
    CAUTION:
    When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
    (1) Holding outer part (A), pull it in the direction of arrow.

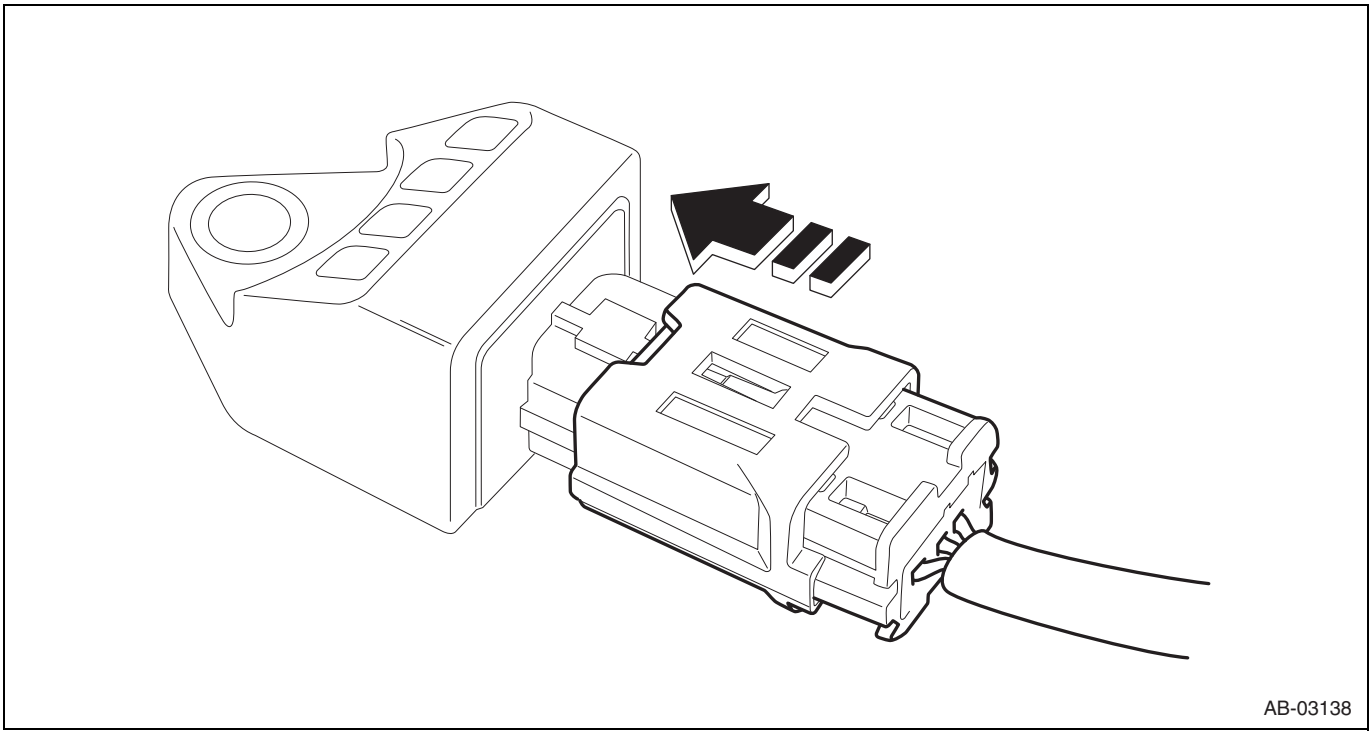
RS



AB-03137

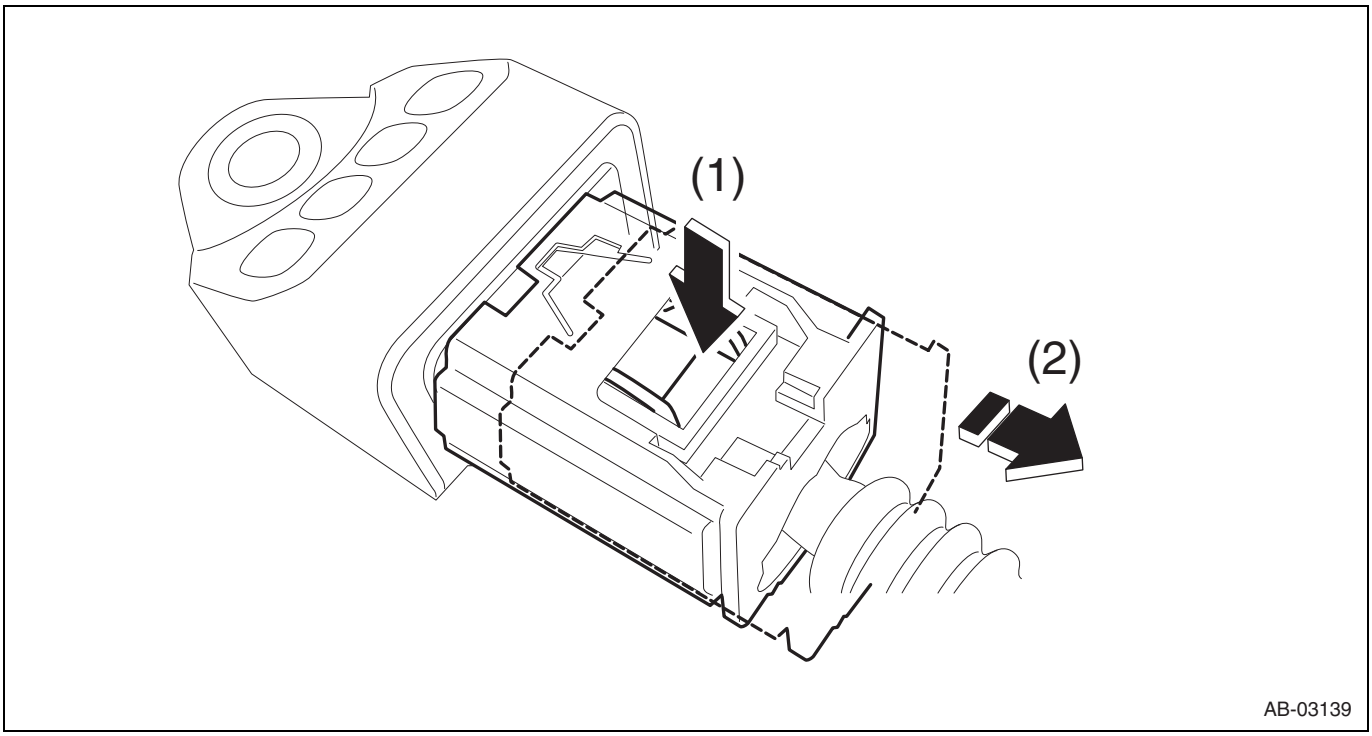
14. How to connect the front door impact sensor and the satellite safing sensor
    CAUTION:
    - Outer side (A) moves back, and so do not touch the outer part.
    - Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

    (1) Holding the connector, push it in securely until a clicking sound is heard.



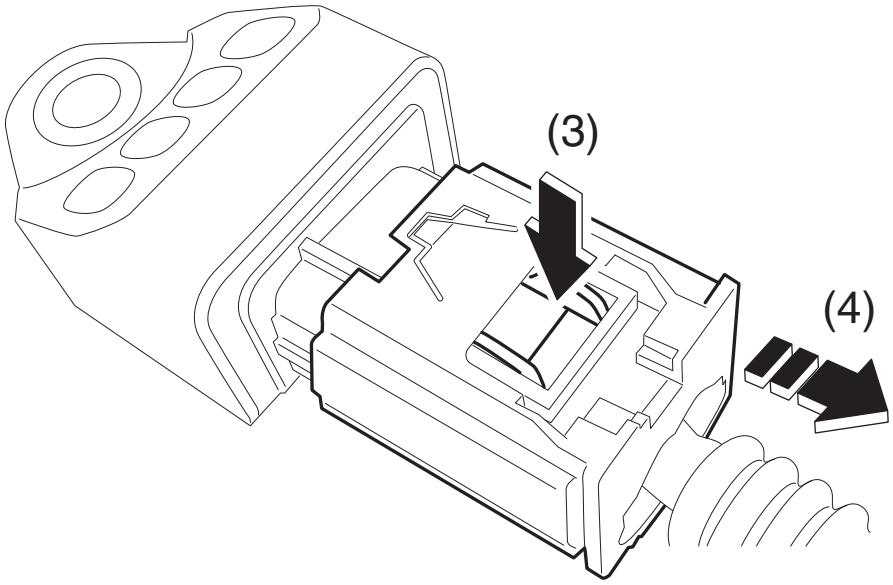
AB-03138

15. How to disconnect the side airbag sensor and the curtain airbag sensor
    CAUTION:
    When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
    (1) Push the lock arm.
    (2) Holding outer part, pull it one step in the direction of arrow.



AB-03139

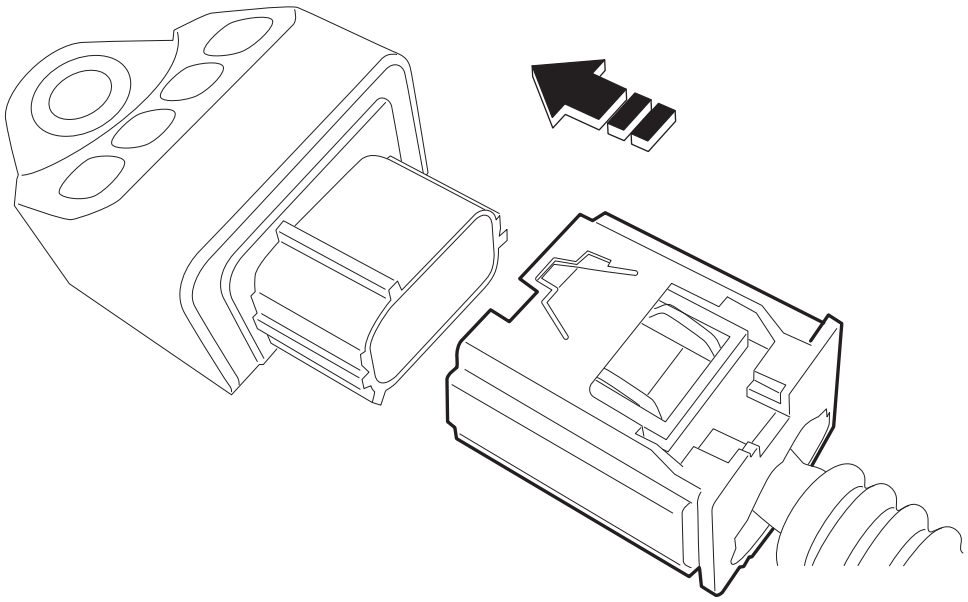
    (3) Push the lock arm again.
    (4) Holding outer part, pull it in the direction of arrow to disconnect the connector.



AB-03140

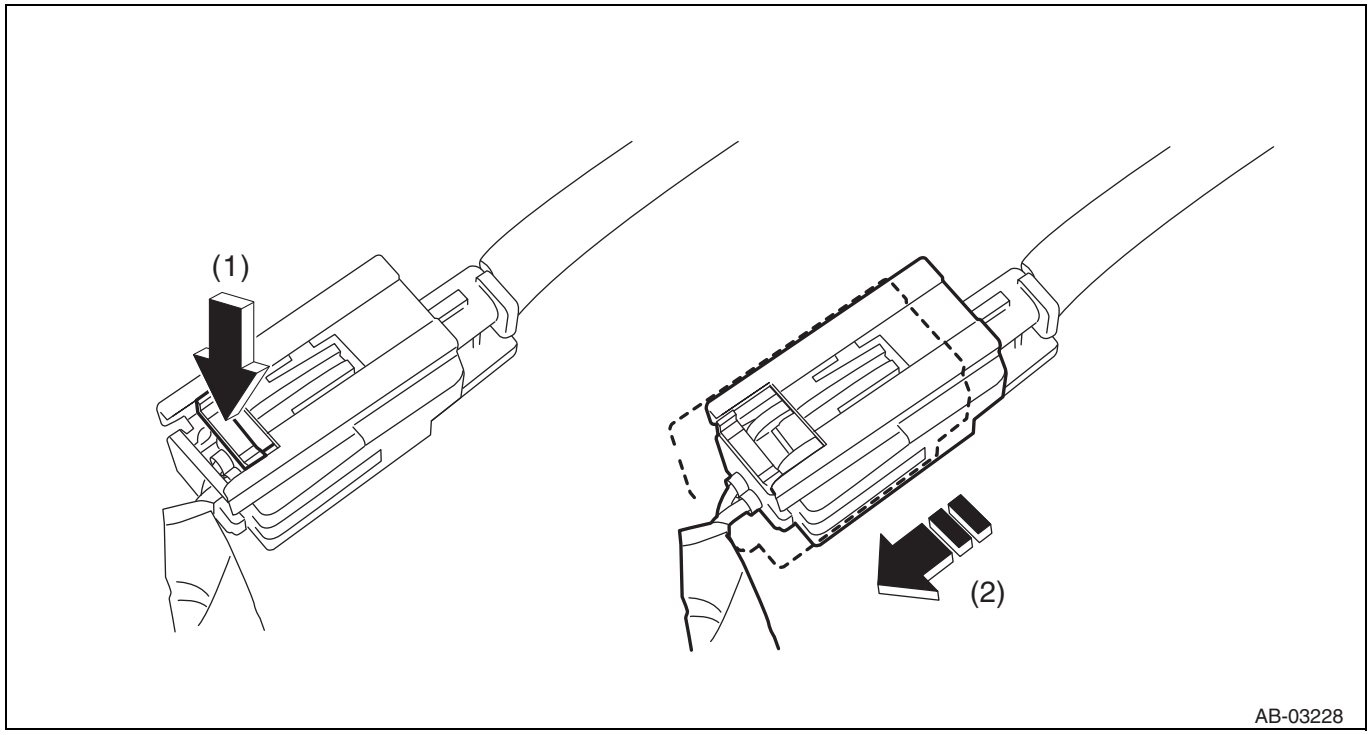
16. How to connect the side airbag sensor and the curtain airbag sensor
    CAUTION:
    Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
    (1) Holding the connector, push it in securely until a clicking sound is heard.

RS



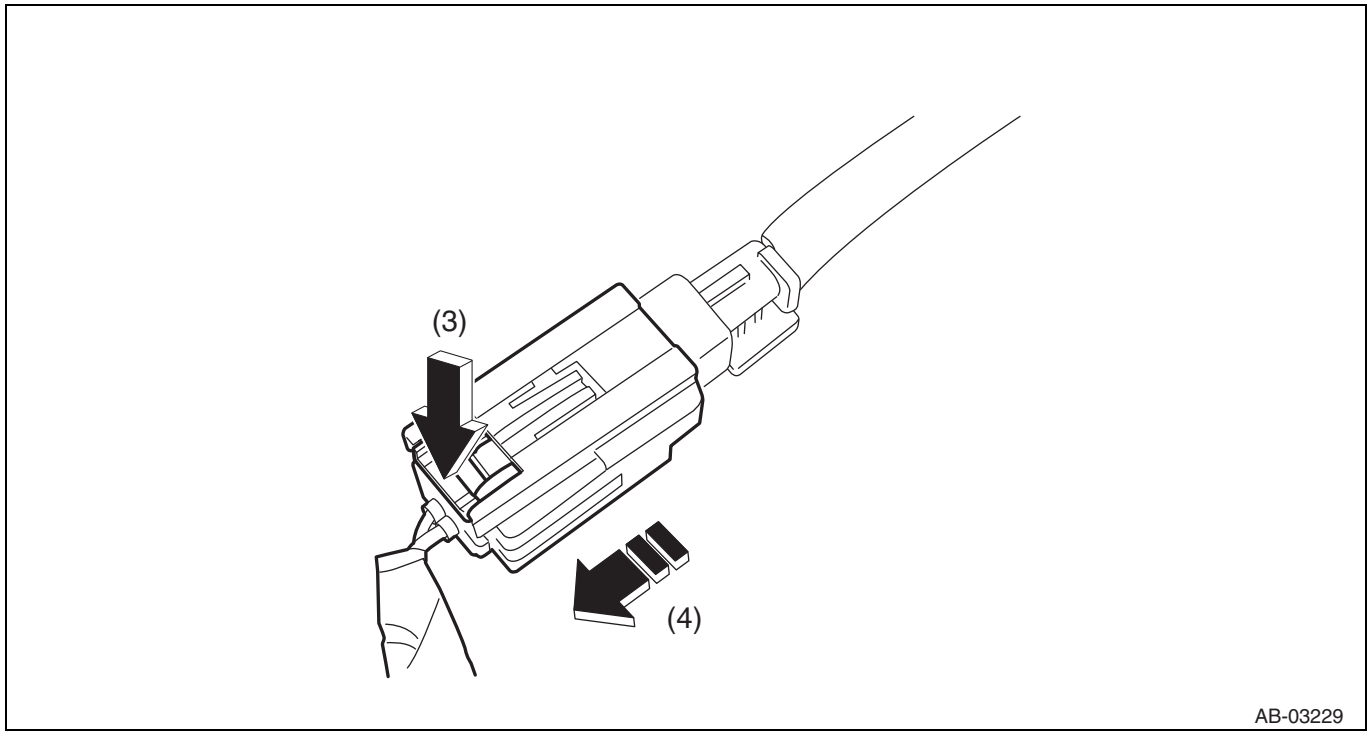
AB-03141

17. How to disconnect the side airbag module
    CAUTION:
    When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
    (1) Push the lock arm.
    (2) Holding outer part, pull it one step in the direction of arrow.



(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

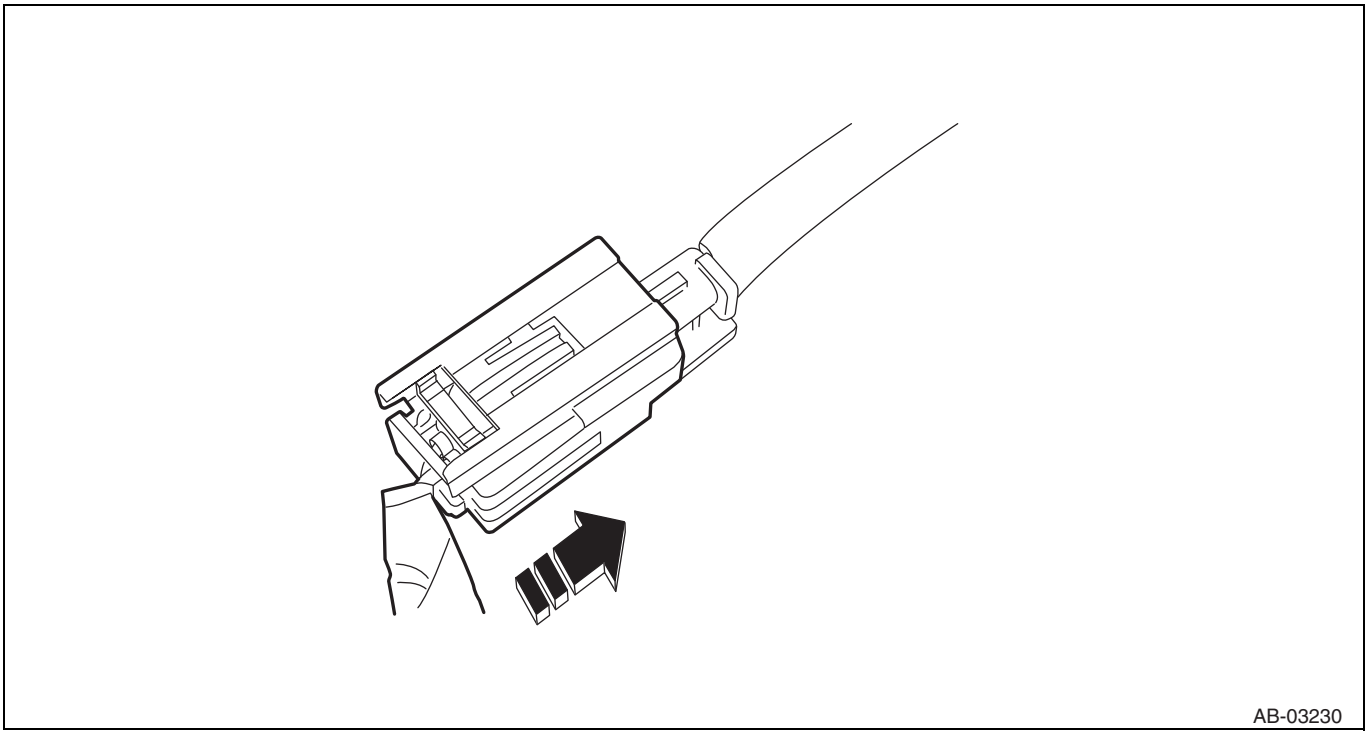


18. How to connect the side airbag module

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

(1) Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.



## Inspection items after a collision

1. Inspection

   If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

   (1) Driver's airbag module ASSY

   (a)In case of a frontal collision (driver's airbag module ASSY activated), replace the following parts with new ones.

   1. Replace the following parts with new parts.
      - Airbag control module
      - Driver side air bag module
      - Passenger's airbag module (if activated)
      - Side airbag module (if activated)
      - Curtain airbag module (RH and LH/if activated)
      - Seat belt pretensioner (RH and LH)
      - Front sub sensor (RH and LH)
      - Instrument panel ASSY (because it is integrated with passenger's airbag module) (if the passenger's airbag module has been activated)
      - Steering wheel
      - Column ASSY - steering
      - Roll connector
      - Pad ASSY - front seat backrest (if the side airbag has been activated)
      - Frame ASSY - front seat cushion (if the side air bag has been activated)
      - Frame ASSY - front seat backrest (if the side airbag has been activated)
      - Cover COMPL - front seat backrest (if the side airbag has been activated)
      - Trim panel - roof ASSY (if the curtain airbag has been activated)
      - Trim panel for each pillar (if the curtain airbag has been activated)
   2. Visually inspect the following items, and replace a damaged part, if any, with a new one.
      - Universal joint ASSY - steering
      - Steering gear box
      - Beam COMPL - steering
      - Body side harness and connector connected to the replaced part
   3. Inspect the following items, and replace a faulty part, if any, with a new one.
      - Power steering control module (Refer to PA - 3for the inspection method.)

   (b)In case of a frontal collision (driver's airbag module not activated)

Visually inspect the following items, and replace a damaged or cracked part, if any, with a new one.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver side air bag module
- Passenger's airbag module
- Seat belt pretensioner (RH and LH)
- Front sub sensor (RH and LH)
- Instrument panel ASSY (because it is integrated with passenger's airbag module)
- Steering wheel
- Column ASSY - steering

(c) In case of no frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

(2) Passenger's airbag module

(a) In case of a frontal collision (passenger's airbag module activated)

1. Replace the following parts with new parts.
   - Airbag control module
   - Driver side air bag module
   - Passenger's airbag module
   - Side airbag module (if activated)
   - Curtain airbag module (RH and LH/if activated)
   - Seat belt pretensioner (RH and LH)
   - Front sub sensor (RH and LH)
   - Instrument panel ASSY (because it is integrated with passenger's airbag module)
   - Steering wheel
   - Column ASSY - steering
   - Roll connector
   - Pad ASSY - front seat backrest (if the side airbag has been activated)
   - Frame ASSY - front seat cushion (if the side air bag has been activated)
   - Frame ASSY - front seat backrest (if the side airbag has been activated)
   - Cover COMPL - front seat backrest (if the side airbag has been activated)
   - Trim panel - roof ASSY (if the curtain airbag has been activated)
   - Trim panel for each pillar (if the curtain airbag has been activated)
2. Visually inspect the following items, and replace a damaged part, if any, with a new one.
   - Universal joint ASSY - steering
   - Steering gear box
   - Beam COMPL - steering
   - Body side harness and connector connected to the replaced part
3. Inspect the following items, and replace a faulty part, if any, with a new one.
   - Power steering control module (Refer to PA - 3for the inspection method.)

(b) In case of a frontal collision (passenger's airbag module not activated)

Visually inspect the following items, and replace a damaged or cracked part, if any, with a new one.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver side air bag module
- Passenger's airbag module
- Seat belt pretensioner (RH and LH)
- Front sub sensor (RH and LH)
- Instrument panel ASSY (because it is integrated with passenger's airbag module)
- Steering wheel
- Column ASSY - steering

(c) In case of no frontal collision

Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

(3) Side airbag module

(a) In case of a side collision (side airbag module activated)

1. Replace the following parts with new parts.
   - Airbag control module
   - Satellite safing sensor

RS

– Front door impact sensor
– Seat belt pretensioner (impact side/if activated)
– Side airbag module (impact side)
– Side airbag sensor (impact side)
– Curtain airbag module (impact side)
– Curtain airbag sensor (impact side)
– Pad ASSY - front seat backrest (impact side)
– Frame ASSY - front seat cushion (impact side)
– Frame ASSY - front backrest (impact side)
– Cover COMPL - front backrest (impact side)
– Trim panel - roof ASSY (impact side)
– Trim panel for each pillar (impact side)

2. Visually inspect the following items, and replace a damaged part (impact side), if any, with a new one.
– Headrest ASSY
– Bushing - lock headrest
– Slide rail ASSY - OUT
– Slide rail ASSY - INN
– Cover - hinge front seat
– Knob - lifter
– Lever - reclining
– Side airbag harness and connector on body side

(b) In case of a side collision (side airbag module not activated)

Visually inspect the following items, and replace a damaged or cracked part, if any, with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Pad ASSY - front seat backrest
- Frame ASSY - front backrest
- Cover COMPL - front backrest
- Satellite safing sensor
- Front door impact sensor
- Side airbag module
- Side airbag sensor
- Curtain airbag module
- Curtain airbag sensor

(c) In case of no side collision

Visually inspect the airbag modules for contamination and replace any faulty part with a new one.

(4) Curtain airbag module

(a) In case of a side collision or overturn (curtain airbag module activated)

1. Replace the following parts with new parts.
– Airbag control module
– Satellite safing sensor
– Side airbag module (impact side)
– Curtain airbag module (impact side)
– Seat belt pretensioner (if activated)
– Front door impact sensor (impact side)
– Side airbag sensor (impact side)
– Curtain airbag sensor (impact side)
– Pad ASSY - front seat backrest (impact side)
– Frame ASSY - front seat cushion (impact side)
– Frame ASSY - front backrest (impact side)
– Cover COMPL - front backrest (impact side)
– Trim panel - roof ASSY (impact side)
– Trim panel for each pillar (impact side)

2. Visually inspect the following items, and replace a damaged part (impact side), if any, with a new one.
– Assist rail - front and rear
– Bracket - assist rail front and rear

– Body side harness and connector connected to the replaced part

(b) In case of a side collision (curtain airbag module not activated)

Visually inspect the following items, and replace a damaged or cracked part (impact side), if any, with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Trim panel - roof ASSY
- Trim panel for each pillar
- Curtain airbag module
- Satellite safing sensor
- Front door impact sensor
- Side airbag sensor
- Curtain airbag sensor

(c) In case of no side collision

Visually inspect the airbag cover for damage or contamination and replace any faulty part with a new one.

(5) Airbag control module

Check the following items and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module has been activated.
- Knee airbag module has been activated.
- Passenger's airbag module has been activated.
- Side airbag module has been activated.
- Curtain airbag module has been activated.
- Seat belt pretensioner has been activated.

(6) Front sub sensor

If the front section of the vehicle is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module or passenger's airbag module has been activated.

(7) Front door impact sensor, satellite safing sensor, side airbag sensor & curtain airbag sensor

- Front door impact sensor, side airbag sensor, satellite safing sensor, sensor cover and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag module or curtain airbag module has been activated. (operating side)

(8) Roll connector

Check the following items, and replace the damaged parts such as cracks, deformation, etc. with new parts.

- Combination switch
- Steering roll connector

(9) Check of steering system

Check the steering wheel, column ASSY - steering, universal joint ASSY - steering and steering gear box for the following items. If there is anything out of standard value, replace it with a new part because it may be damaged.

- Check the column ASSY - steering for the following items.
  — Steering wheel and the column ASSY - steering for mounting conditions, deformation, damage and looseness of front and rear, upward and downward directions.
  — Column ASSY - steering for looseness of front and rear, upward and downward directions and mounting conditions to the vehicle body (After a collision, absorbing part of the column ASSY - steering may have been operated).
  — Column ASSY - steering for damage of the connector and harness, and inspection of the power steering control unit
- Check the universal joint ASSY - steering for looseness and folding load.
- Check the steering gear box for the following items.
  — Rack for sliding resistance and looseness
  — Input shat for looseness
  — Gear box for rotational resistance

RS

(10) Passenger's seat

CAUTION:

If any of the following applies, replace the pad ASSY - front seat cushion and frame ASSY - front cushion as a unit. Do not disassemble.

– Frame ASSY - front cushion or pad ASSY - front seat cushion is cracked or deformed.
– The sensor mat of the occupant detection system or occupant detection control module and mounting bracket of the control module are damaged, cracked or deformed.
– Harness and/or connector is cracked, deformed or broken. Harness wire is exposed.

(a) Check the following items and replace the damaged parts with new parts.

- Body or bracket of the seat belt inner - front is scratched, cracked or deformed.
- Frame ASSY - front backrest is cracked or deformed.
- Headrest ASSY has deformation or play.
- If the cover - front cushion and the cover COMPL - front backrest is damaged or frayed, replace the cover with a new part.
- If the cover - front cushion and seat heater are replaced, replace the hanging-in wire of the cover with a new one.

(b) Check if the occupant detection system is working normally after removing or replacing the passenger's seat cover COMPL - front seat.

(c) Check if the passenger's seat belt buckle switch is working normally using the Subaru Select Monitor.

(11) Other parts to check

Check for the following parts, and replace the damaged parts with new parts.

(a) Check the following parts provided with a direct type connector for damage, and also check each harness for pinch and connector damage. Replace the main harness as a unit if damage is found.

- Driver side air bag module
- Curtain airbag module
- Pretensioner

(b) Check the seat cushion, backrest, slide rail and headrest for installation condition and looseness.

(c) If any break or fray is found in the cover COMPL - front backrest of the driver's seat or passenger's seat, the side airbag system may not operate properly. In this case, replace the cover COMPL - front backrest with a new part.

RS

## Data monitor

Data list

Check the operation status of each sensor when the malfunction of the air bag system occurs or when replacing it.

1. Turn the ignition switch to OFF.
2. Connect the SSM4 to the DLC3.
3. Turn the ignition switch to ON.
4. Turn on the SSM4.
5. Select the following menu items: [Airbag] / [Data monitor]
   Support data is shown in the following table.

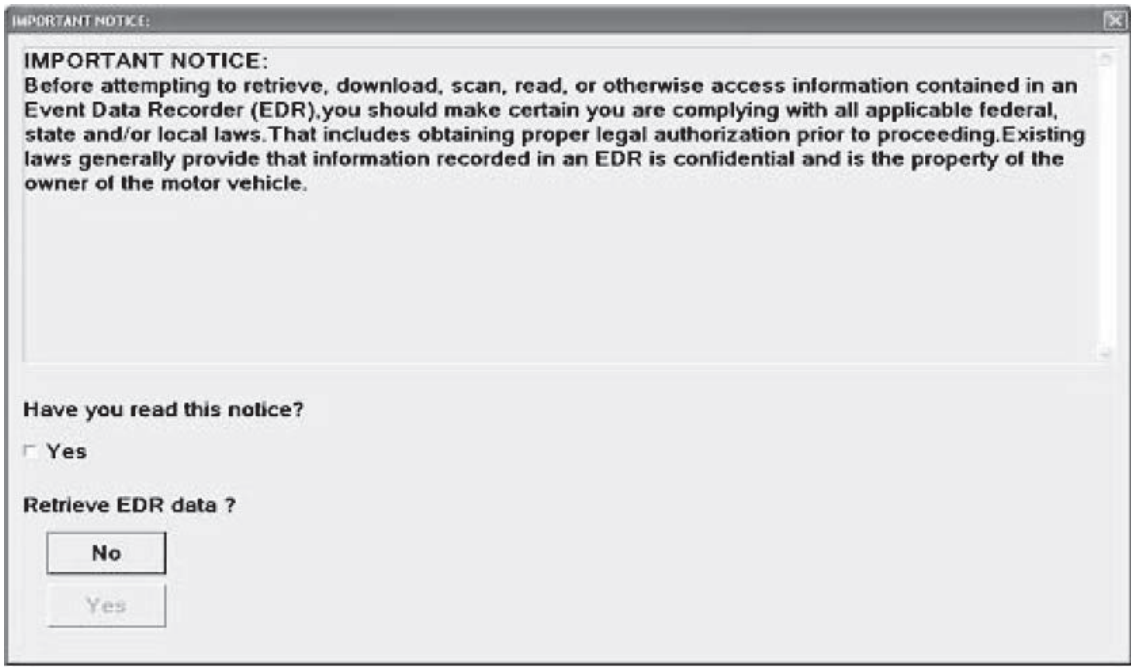
| Item | Contents | Reference |
|---|---|---|
| Collective operation result | Collective operation result | - |
| Airbag ECU part number | Last 5 digits of ECM part number | - |
| B Pillar Sensor RH | Last 5 digits of sensor part number (ID) | - |
| B Pillar Sensor LH | Last 5 digits of sensor part number (ID) | - |
| C Pillar Sensor RH | Last 5 digits of sensor part number (ID) | - |
| C Pillar Sensor LH | Last 5 digits of sensor part number (ID) | - |
| RH electronic front sensor ID | Last 5 digits of sensor part number (ID) | - |
| LH electronic front sensor ID | Last 5 digits of sensor part number (ID) | - |
| RH Door sensor ID | Last 5 digits of sensor part number (ID) | - |

| Item | Contents | Reference |
|---|---|---|
| LH Door sensor ID | Last 5 digits of sensor part number (ID) | - |
| Passenger Classification | Occupant detection status | • No passenger (seats not occupied)<br>• CRS<br>• Occupied<br>• Defined state of malfunction<br>• Undefined |
| Status of RH buckle switch | Status of RH buckle switch | • When not buckled<br>• When buckled<br>• When indefinite or undefined |
| Identification Information on DTC display type. | Identification Information on DTC display type. | LR side type |
| Collision sensing signal | Output condition of collision detection signal | None |
| Rear floor sensor ID | Last 5 digits of sensor part number (ID) | - |
| Memory version | Information on the memory version | - |
| ECU Sensitivity | ECM sensitivity ID output | - |
| Passenger's airbag operation status | Passenger's airbag operation status | • ON<br>• OFF |
| Illumination duration of warning light | Illumination duration of warning light | - |
| ECU ROM ID | ECU ROM ID | - |
| Total number of DTCs | Total number of DTCs | - |
| Trip counter | Time stamp information | - |
| Original counter identification information | Time stamp information | - |
| Time counter | Time stamp information | - |

NOTE:
For detailed operation procedures, refer to "PC application help".

## Event record data display

1. Operation
   (1) On the [Main Menu] display, select [Each System].
   (2) On the [Select System] display, select [Airbag].
   (3) On the [Airbag] menu display, select [Event Record Data]. Then, the [IMPORTANT NOTICE] display will appear.
   (4) Confirm the contents of the [IMPORTANT NOTICE] display, click on Yes for the checkbox.
   (5) If it is not illegal, click the "Yes" button to display the EDR data.



AB-03249

(6) Select the item to confirm from the event record data display.
(7) Select the record data to confirm.
(8) The selected record data will be displayed. If no data is recorded, [Event Record Data is not recorded] will be displayed.
(9) Select [Quit] to return to the event record data display.

RS

## List of diagnostic codes

| DTC | Item | Diagnosis contents | Reference pages |
|---|---|---|---|
| U0073 | Control Module Communication Bus "A" Off | There is an error in the CAN communication. | RS - 54 |
| B1000 | Airbag ECM Malfunction | Airbag control module is faulty. | RS - 54 |
| B11E0 | Roll Firing Output | Curtain airbag module (LH/RH) and seat belt pretensioner (LH/RH) are activated. | RS - 54 |
| B11F0 | Disposal Process Complete | Collective operations for each airbag and pretensioner has been processed. | RS - 55 |
| B11F1 | Front Airbag: Firing output | Front airbag module and seat belt pretensioner (LH/RH) are activated. | RS - 55 |
| B11F6 | Side/Curtain Airbag: Firing output | • Side airbag module and curtain airbag module are activated.<br>• Curtain airbag module is activated. | RS - 56 |
| B1610 | Front Sub Sensor RH Failure | Front sub sensor RH is faulty. | RS - 56 |
| B1612 | Front Sub Sensor RH Lost Communication | • Harness RH between airbag control module and front sub sensor is open or shorted.<br>• Front sub sensor RH is faulty.<br>• Airbag control module is faulty. | RS - 56 |
| B1613 | Front Sub Sensor RH Initialization Error | | RS - 56 |
| B1615 | Front Sub Sensor LH Failure | Front sub sensor LH is faulty. | RS - 59 |
| B1617 | Front Sub Sensor LH Lost Communication | • Harness LH between airbag control module and front sub sensor is open or shorted.<br>• Front sub sensor LH is faulty.<br>• Airbag control module is faulty. | RS - 59 |
| B1618 | Front Sub Sensor LH Initialization Error | | RS - 59 |
| B16F1 | Passenger's seat belt warning failure | • Passenger's seat belt warning failure.<br>• Airbag control module is faulty.<br>• Airbag main harness circuit is open, shorted, or shorted to ground. | RS - 65 |
| B16F2 | Front Sub Sensor RH Recognition Error | • Front sensor RH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 67 |
| B16F3 | Front Sub Sensor LH Recognition Error | • Front sensor LH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 68 |
| B1620 | Side Airbag Sensor RH Failure | Side airbag sensor RH is faulty. | RS - 68 |

| DTC | Item | Diagnosis contents | Reference pages |
|---|---|---|---|
| B1622 | Side Airbag Sensor RH Lost Communication | • Harness RH between airbag control module and side airbag sensor is open or shorted.<br>• Side airbag sensor RH is faulty.<br>• Airbag control module is faulty. | RS - 69 |
| B1623 | Side Airbag Sensor RH Initialization Error | | RS - 69 |
| B1625 | Side Airbag Sensor LH Failure | Side airbag sensor LH is faulty. | RS - 72 |
| B1627 | Side Airbag Sensor LH Lost Communication | • Harness LH between airbag control module and side airbag sensor is open or shorted.<br>• Side airbag sensor LH is faulty.<br>• Airbag control module is faulty. | RS - 72 |
| B1628 | Side Airbag Sensor LH Initialization Error | | RS - 72 |
| B1630 | Curtain Airbag Sensor RH Failure | Curtain airbag sensor RH is faulty. | RS - 76 |
| B1632 | Curtain Airbag Sensor RH Lost Communication | • Harness RH between airbag control module and curtain airbag sensor is open or shorted.<br>• Side airbag sensor RH is faulty.<br>• Curtain airbag sensor RH is faulty.<br>• Airbag control module is faulty. | RS - 76 |
| B1633 | Curtain Airbag Sensor RH Initialization Error | | RS - 76 |
| B1635 | Curtain Airbag Sensor LH Failure | Curtain airbag sensor LH is faulty. | RS - 80 |
| B1637 | Curtain Airbag Sensor LH Lost Communication | • Harness LH between airbag control module and curtain airbag sensor is open or shorted.<br>• Side airbag sensor LH is faulty.<br>• Curtain airbag sensor LH is faulty.<br>• Airbag control module is faulty. | RS - 80 |
| B1638 | Curtain Airbag Sensor LH Initialization Error | | RS - 80 |
| B16F4 | Side Airbag Sensor RH Recognition Error | • Side airbag sensor RH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 84 |
| B16F5 | Side Airbag Sensor LH Recognition Error | • Side airbag sensor LH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 84 |
| B16F6 | Curtain Airbag Sensor RH Recognition Error | • Curtain airbag sensor RH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 85 |
| B16F7 | Curtain Airbag Sensor LH Recognition Error | • Curtain airbag sensor LH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 85 |
| B1642 | Side Satellite Sensor Bus RH Lost Communication | • Harness RH between airbag control module and front door impact sensor is open or shorted.<br>• Side airbag sensor RH is faulty.<br>• Curtain airbag sensor RH is faulty.<br>• Airbag control module is faulty. | RS - 86 |
| B1647 | Side Satellite Sensor Bus LH Lost Communication | • Harness LH between airbag control module and front door impact sensor is open or shorted.<br>• Side airbag sensor LH is faulty.<br>• Curtain airbag sensor LH is faulty.<br>• Airbag control module is faulty. | RS - 93 |
| B1650 | Occupant classification system malfunction | • Occupant detection sensor is faulty.<br>• Occupant detection control module is faulty.<br>• Occupant detection harness is faulty.<br>• Rear airbag harness RH is faulty.<br>• A/B MAIN fuse (15 A) is blown. | |
| B1655 | Front Buckle Switch RH Failure | • The buckle switch RH circuit is open, shorted, or short-circuited to ground.<br>• Occupant detection system is faulty.<br>• Occupant detection harness is faulty. | |
| B1660 | Passenger's Airbag indicator failure | • Passenger's airbag indicator is faulty.<br>• Airbag control module is faulty.<br>• Airbag main harness circuit is open, shorted, or shorted to ground.<br>• Body harness is shorted. | RS - 100 |
| B1675 | Satellite Safing Sensor Failure | Satellite safing sensor is faulty. | RS - 104 |
| B1678 | Lost Communication With Satellite Safing Sensor | • Harness between airbag control module and satellite safing sensor is open or shorted.<br>• Satellite safing sensor is faulty.<br>• Airbag control module is faulty. | RS - 105 |
| B1679 | Satellite Safing Sensor Initialization Incomplete | | RS - 105 |
| B16F8 | Satellite Safing Sensor Recognition Error | • Satellite safing sensor is installed incorrectly.<br>• Airbag control module is faulty. | RS - 108 |
| B16F9 | Door Sensor RH Recognition Error | • Door sensor RH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 108 |
| B1690 | Door Sensor RH Failure | Door sensor RH is faulty. | RS - 109 |

| DTC | Item | Diagnosis contents | Reference pages |
|---|---|---|---|
| B1692 | Lost Communication With Door Sensor RH | • Harness between airbag control module and door sensor RH is open or shorted. | RS - 109 |
| B1693 | Door Sensor RH Initialization Incomplete | • Side airbag sensor RH is faulty.<br>• Curtain airbag sensor RH is faulty.<br>• Door sensor RH is faulty.<br>• Airbag control module is faulty. | RS - 109 |
| B16FA | Door Sensor LH Recognition Error | • Door sensor LH is installed incorrectly.<br>• Airbag control module is faulty. | RS - 113 |
| B1695 | Door sensor LH failure | Door sensor LH is faulty. | RS - 114 |
| B1697 | Lost Communication With Door Sensor LH | • Harness between airbag control module and door sensor LH is open or shorted. | RS - 114 |
| B1698 | Door Sensor LH Initialization Incomplete | • Side airbag sensor LH is faulty.<br>• Curtain airbag sensor LH is faulty.<br>• Door sensor LH is faulty.<br>• Airbag control module is faulty. | RS - 114 |
| B161A | Lost Communication with Front Satellite Sensor Bus | • Harness between airbag control module and front sub sensor is open or shorted.<br>• Front sub sensor is faulty.<br>• Airbag control module is faulty. | RS - 62 |
| B1800 | Short in Driver's Airbag | • Airbag main harness circuit is shorted.<br>• Airbag module harness (driver's side) circuit is shorted.<br>• Roll connector circuit is shorted.<br>• Driver's airbag module is faulty.<br>• Airbag control module is faulty. | RS - 119 |

## Subaru Select Monitor

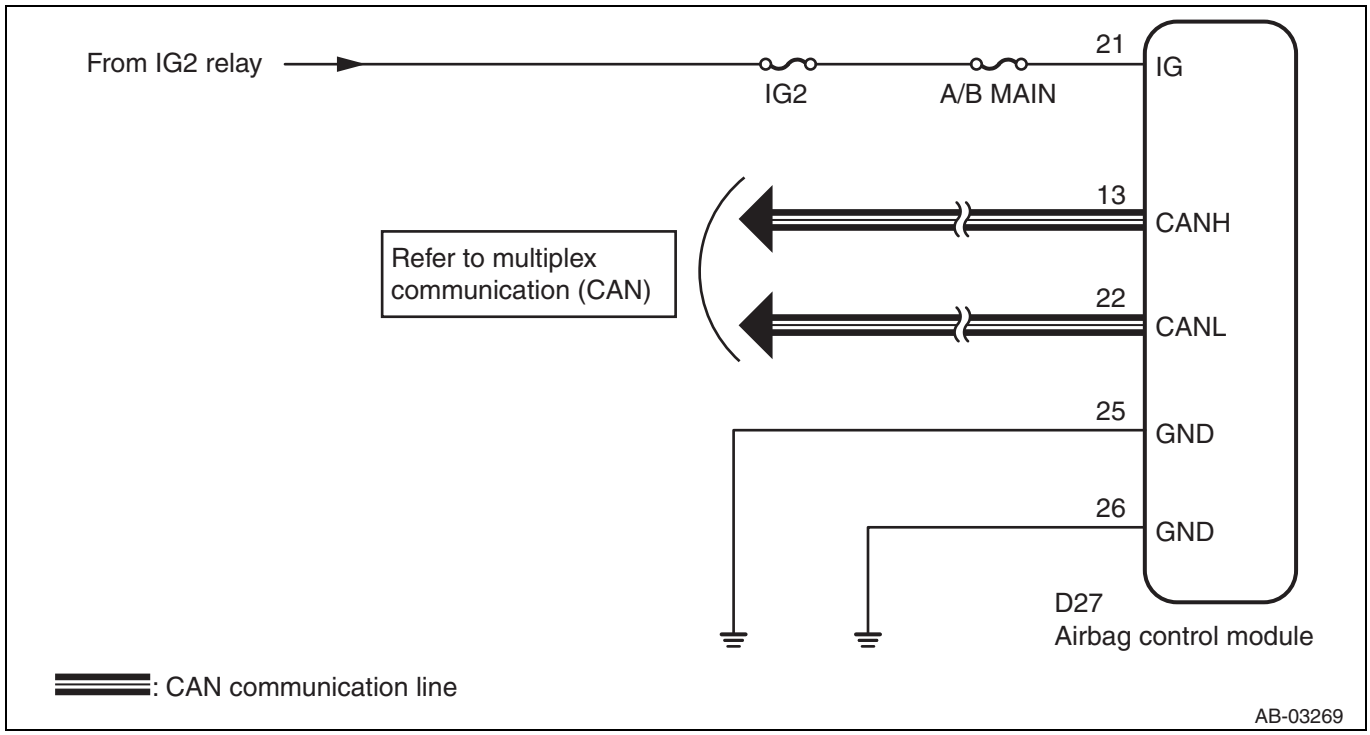
Operation

For detailed operation procedures, refer to "PC application help".

## Communication for initializing is not possible

Perform inspection when communication between the airbag control module and the Subaru Select Monitor is not possible

Circuit figure



Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

RS

| | |
|---|---|
| 1 | Check of ignition switch |

(1) Check the ignition switch
Criteria: Ignition switch ON

NG → Turn the ignition switch to ON and use the Subaru Select Monitor to select the airbag mode.

OK

| | |
|---|---|
| 2 | Battery check |

(1) Turn the ignition switch to OFF.
(2) Measure the battery voltage.
Criteria: The voltage is 11 V or more

NG → Charge or replace the battery.

OK

| | |
|---|---|
| 3 | Check of battery terminal |

(1) Check the battery terminal.
Criteria: No fault is found.

NG → Replace or tighten the battery terminal.

OK

| 4 | Communication check of Subaru Select Monitor |
|---|---|

(1) Turn the ignition switch to ON.
(2) Use the Subaru Select Monitor to check that it communicates with other systems properly.
Criteria: Communication with other systems is performed properly.

NG → Go to Step 5.

OK

| 5 | Check of Subaru Select Monitor |
|---|---|

(1) Check that the Subaru Select Monitor is powered on.
Criteria: No fault is found.

NG → Go to Step 6.

OK

| 6 | Fuse check |
|---|---|

Criteria: No fault is present in the data link connector fuse OBD (7.5 A) and ECM IG2 (10 A)

NG → Replace the fuse. When the fuse is blown again, check the power circuit.

OK

Repair the harness between the battery and the data link connector.

| 7 | Check of airbag control module connector |
|---|---|

(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Check that the airbag control module connector (D27, G19, H32) is securely connected.
Criteria: No fault is found.

NG → Reconnect the airbag control module connector.

OK

| 8 | Communication check of Subaru Select Monitor |
|---|---|

(1) Disconnect the airbag control module connector.
(2) Connect the battery ground terminal.
(3) Turn the ignition switch to ON.
(4) Check that communication with other systems is performed properly.
Criteria: Communication with other systems is performed properly.

NG → Go to Step 9.

OK

Replace the airbag control module.

| 9 | Fuse check |
|---|---|

Criteria: No fault is present in the A/B MAIN fuse (15 A)

NG → Replace the fuse. When the fuse is blown again, check the power circuit.

OK

| 10 | Check of airbag control module connector |
|---|---|

(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Check that the airbag control module connector (D27, G19, H32) is securely connected.
Criteria: No fault is found.

NG → Reconnect the airbag control module connector.

OK

| 11 | CAN communication check |
|---|---|

(1) Check CAN communication system. (Refer to NW - 30)
Criteria: No fault is found.

NG → Repair it according to the check by the CAN communication system.

OK

| 12 | Check of power circuit |
|---|---|

(1) Disconnect the connector (D27, G19, H32) from the airbag control module.
(2) Connect the connector (1AG) in the test harness AG to the connector (D27, G19, H32).
(3) Turn the ignition switch to ON.
(4) Measure the voltage between the connector (2AG) in the test harness AG and the chassis ground.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (2AG) No. 1 (+) - chassis ground (-) | Always | 10 V or more |

RS

NG → Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.

OK

| 13 | Check of resistance between airbag control module and chassis ground |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Measure the resistance between the connector (2AG) in the test harness AG and the chassis ground.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (2AG) No. 4 - chassis ground: | Always | Less than 10 Ω |
| (2AG) No. 3 - chassis ground: | Always | Less than 10 Ω |

NG → Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.

OK

RS

| 14 | Check of connector connection failure |
|---|---|

(1) Check for poor contact of the control module power supply, the ground line, and the data link connector.
Criteria: No fault is found.

NG → Repair the connector. (Regarding the airbag system connector, be sure to replace the connector with the harness, not repair.)

OK

Replace the airbag control module.

## Check list for interview

| | | | |
|---|---|---|---|
| Customer's name | | Inspector's name | |
| Vehicle bringing date | / / | Registration No. | |
| Odometer readout | km<br>miles | Frame number | |
| Trouble occurrence date | / / | Registration year | / / |
| Weather | • Clear<br>• Cloudy<br>• Rainy<br>• Snowy<br>• Other: | | |
| Temperature | °C ( °F) | | |

| | |
|---|---|
| Road condition | • Flat road<br>• Uphill<br>• Downhill<br>• Unpaved road<br>• Other: |
| Vehicle operation | • Start<br>• Idling<br>• Driving<br>·Constant speed<br>·Accelerating<br>·Decelerating<br>·Turning<br>·Other: |
| Details of trouble | |
| Behavior of the airbag warning light | • Normal (When turning the ignition switch to ON, the light illuminates for approx. 6 seconds, then goes off.)<br>• The light is stuck on.<br>• The light does not illuminate. |
| DTC output | Normal code<br>DTC: (code: ) |

## Checking / clearing diagnostic codes

1. Reading diagnostic codes with the SSM4
   (1) Connect the SSM4 to data link connector.
   (2) Turn the ignition switch to ON.
   (3) Select the following menu items using the SSM4. : [Each System] / [Airbag] / [DTC]

NOTE:

For details on the DTCs, refer to "List of diagnostic codes".

2. Clearing diagnostic codes with the SSM4
   (1) Connect the SSM4 to data link connector.
   (2) Turn the ignition switch to ON.
   (3) Select the following menu items using the SSM4. : [Each System] / [Airbag] / [Clear Memory]

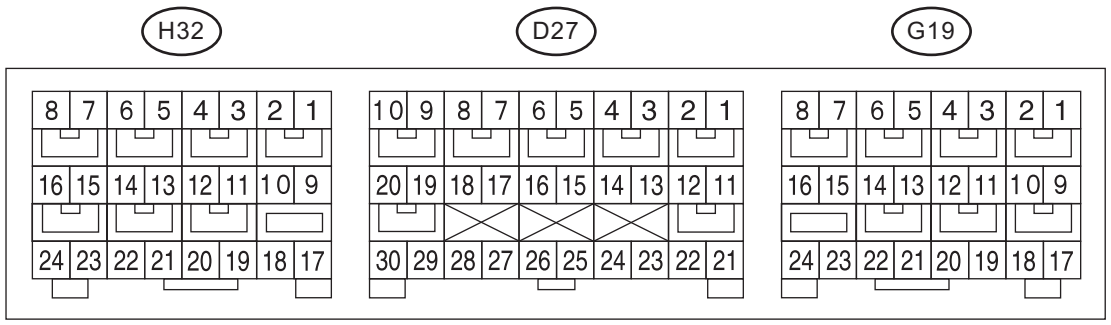
NOTE:

After repairing the airbag system, clear the failure codes recorded in the airbag control module.

3. Check mode
   Refer to the trouble situation on the interview check list to reproduce the same situation.

## ECM terminal arrangement

1. Airbag ECM terminal arrangement



AB-10203

- Terminal numbers in airbag control module connector are shown in the figure.
- The airbag warning light illuminates when the connector is removed from the airbag control module.

| Item | | Terminal No. |
|---|---|---|
| Ignition power supply | Dedicated fuse | D27 - 21 |
| Passenger's airbag module - 1st step | + | D27 - 4 |
| | - | D27 - 3 |
| Passenger's airbag module - 2nd step | + | D27 - 1 |
| | - | D27 - 2 |
| Driver's airbag module - 1st step | + | D27 - 5 |
| | - | D27 - 6 |
| Driver's airbag module - 2nd step | + | D27 - 8 |
| | - | D27 - 7 |
| CAN-H | | D27 - 13 |
| CAN-L | | D27 - 22 |
| Front sub sensor LH | + | D27 - 30 |
| | - | D27 - 28 |
| Front sub sensor RH | + | D27 - 29 |
| | - | D27 - 27 |
| Ground line (GND) | | D27 - 25 |
| | | D27 - 26 |
| Passenger's airbag OFF indicator | | D27 - 17 |
| Passenger's airbag ON indicator | | D27 - 23 |
| Passenger's seat belt warning | | D27 - 15 |
| Side airbag sensor LH Curtain airbag sensor LH Front door impact sensor LH | + | H32 - 24 |
| | - | H32 - 23 |
| Side airbag module LH | + | H32 - 1 |
| | - | H32 - 2 |
| Curtain airbag module LH | + | H32 - 4 |
| | - | H32 - 3 |
| Seat belt pretensioner LH | + | H32 - 5 |
| | - | H32 - 6 |
| Satellite safing sensor | + | H32 - 20 |
| | - | H32 - 19 |
| Seat belt pretensioner RH | + | G19 - 4 |
| | - | G19 - 3 |
| Side airbag sensor RH Curtain airbag sensor RH Front door impact sensor RH | + | G19 - 17 |
| | - | G19 - 18 |
| Side airbag module RH | + | G19 - 8 |
| | - | G19 - 7 |
| Curtain airbag module RH | + | G19 - 5 |
| | - | G19 - 6 |
| Occupant detection control module | + | G19 - 16 |
| | - | G19 - 24 |

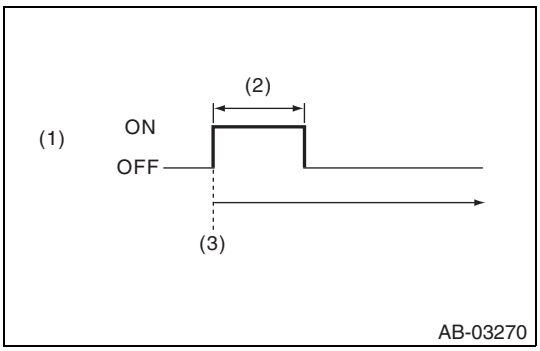
RS

## Wiring diagram

Refer to wiring diagram.

## Airbag warning light illumination pattern

1. Inspection



(1) Turn the ignition switch to ON. Confirm that the airbag warning light turns on and remains on for approx. 6 seconds, and then turns off even though the switch is still set to ON.

Captions in illustration

| | |
|---|---|
| *1 | Airbag warning light |
| *2 | For Approx. 6 seconds |
| *3 | Ignition switch ON |

## Airbag warning light remains ON / Airbag warning light remains OFF

Faulty part

- Airbag warning light is faulty.
- Circuit between airbag control module and combination meter is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connector connection is improper.
- Connection of airbag control module connector (D27, G19, H32) is improper.

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

RS

| | |
|---|---|
| 1 | CAN communication system check |

(1) Check CAN communication system. (Refer to NW - 30)
Criteria: No fault is found.

NG → Repair it according to the diagnosis by the CAN communication system.

OK

| | |
|---|---|
| 2 | Connector check |

(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Check the connection status of airbag CM connector.
Criteria: No fault is found.

NG → Repair the connector.

OK

| | |
|---|---|
| 3 | Combination meter check |

(1) Check the combination meter.
Criteria: No fault is found.

NG → Repair or replace the combination meter.

OK

Replace the airbag CM.

| DTC | U0073 | Control Module Communication Bus "A" off |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| U0073 | An error occurs in the CAN line. | CAN communication system |

Inspection steps
Check CAN communication system. (Refer to NW - 30)

| DTC | B1000 | Airbag ECM Malfunction |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1000 | Airbag control module is faulty. | Airbag control module |

RS

Inspection steps
CAUTION:
Before performing the diagnosis, refer to the precautions. (Refer to NW - 30)

| 1 | DTC check |
|---|---|

(1) Read the DTC.
Criteria: B1000 is output.

NG → Clear the memory.

OK

Replace the airbag control module.

| DTC | B11E0 | Roll Firing Output |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B11E0 | Curtain airbag module (LH/RH) and seat belt pretensioner (LH/RH) are activated. | • Airbag control module<br>• Curtain airbag module of both sides<br>• Front outer seat belt with pretensioner of both sides |

Inspection steps
Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module
- Curtain airbag module of both sides
- Front outer seat belt with pretensioner of both sides

| DTC | B11F0 | Deployment Disposal Process Complete |
|---|---|---|

Circuit description

Deployment command signal is sent to the airbag control module by the collective operation tool for processing airbag deployment disposal. When the airbag installed in the vehicle is deployed, the corresponding DTC is recorded in the airbag control module. If this DTC is recorded, immediately replace the airbag control module with a new one.

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B11F0 | Airbag control module disposal has been processed. | Airbag control module |

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

| 1 | Check DTC |
|---|---|

(1) Read the DTC.

Criteria: B11F0 is output.

NG → Complete

OK

Replace the airbag control module.

| DTC | B11F1 | Front Airbag: Firing output |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B11F1 | Front airbag module and seat belt pretensioner (LH/RH) are activated. | • Airbag control module<br>• Driver side air bag module<br>• Passenger's airbag module<br>• Front sub sensor of both sides<br>• Front outer seat belt with pretensioner of both sides<br>• Steering roll connector |

Inspection steps

Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module
- Driver side air bag module
- Passenger's airbag module
- Front sub sensor of both sides
- Front outer seat belt with pretensioner of both sides
- Steering roll connector

| DTC | B11F6 | Side/Curtain Airbag: Firing output |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B11F6 | • Side airbag module and curtain airbag module are activated.<br>• Curtain airbag module is activated. | • Airbag control module<br>• Side airbag module (operating side)<br>• Side airbag sensor (operating side)<br>• Curtain airbag module (operating side)<br>• Curtain airbag sensor (operating side)<br>• Satellite safing sensor<br>• Front door impact sensor (operating side) |

Inspection steps

Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module
- Side airbag module (operating side)
- Side airbag sensor (operating side)
- Curtain airbag module (operating side)
- Curtain airbag sensor (operating side)
- Satellite safing sensor
- Front door impact sensor (operating side)

RS

| DTC | B1610 | Front Sub Sensor RH Failure |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1610 | Front sub sensor RH is faulty. | Front sub sensor RH |

Inspection steps

The circuit within the front sub sensor RH is faulty. Replace the front sub sensor RH.

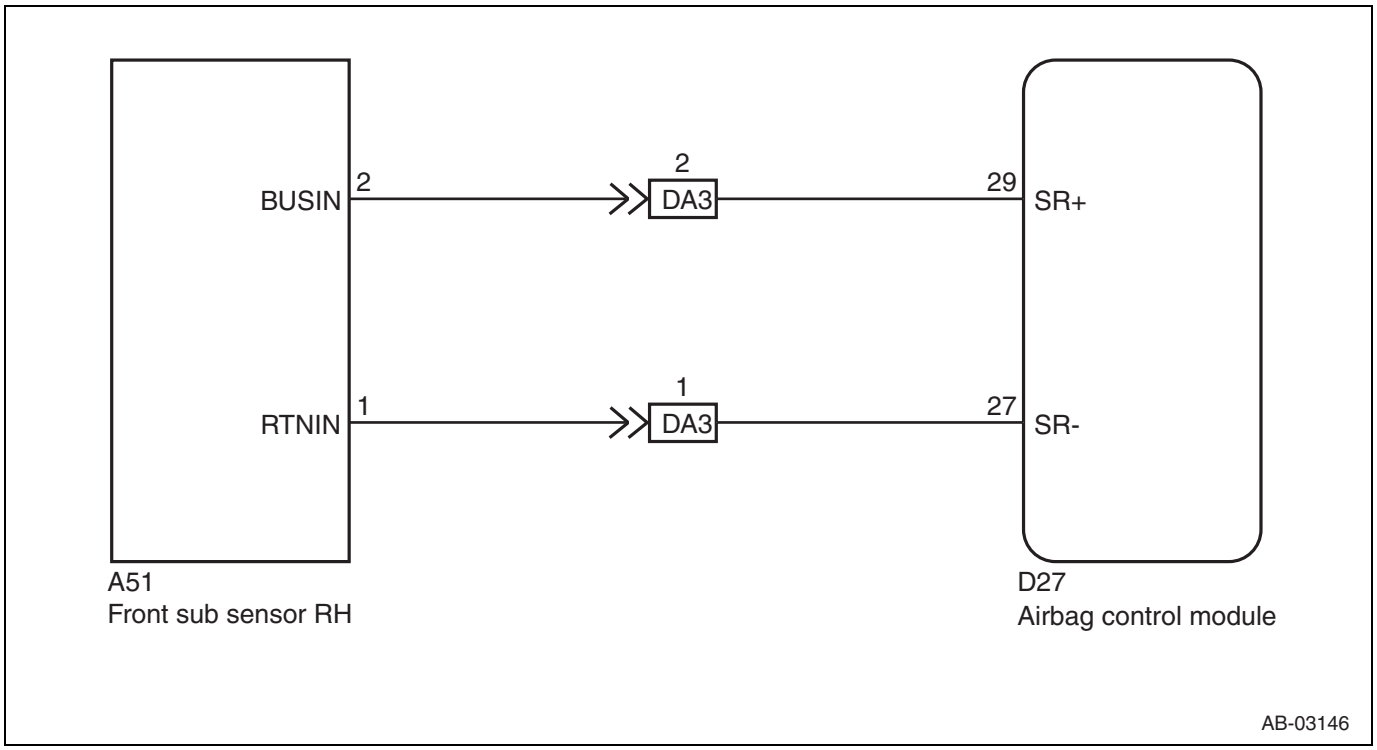
| DTC | B1612 | Front Sub Sensor RH Lost Communication |
|---|---|---|

| DTC | B1613 | Front Sub Sensor RH Initialization Error |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1612<br>B1613 | • Open or short circuit in harness of front sensor bus RH.<br>• Front sub sensor RH is faulty.<br>• Airbag control module is faulty. | • Front sub sensor RH<br>• Airbag control module<br>• Airbag main harness |

Circuit figure



Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

RS

| | |
|---|---|
| 1 | Check poor contact of connectors. |

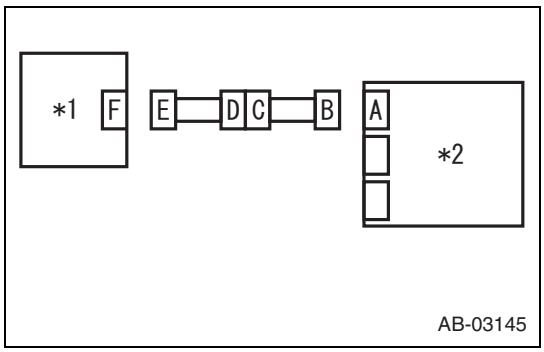
(1) Check for poor contact of the connectors between the airbag control module and the front sub sensor RH.

Criteria: No fault is found.

NG → Replace the airbag main harness along with the body harness.

OK

| | |
|---|---|
| 2 | Check airbag main harness (front sensor bus RH). |



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Remove the column cover and disconnect the connector (D52).
(3) Disconnect the passenger's airbag module connector (D30).
(4) Disconnect the connector (D27, G19, H32) of the airbag control module.
(5) Connect the connector (1AG) in the test harness AG to the connector B.
(6) Connect the connector 1H in the test harness H to the connector E.
(7) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (4AG) No. 14 - (3H) No. 5 | Always | Less than 10 Ω |
| (4AG) No. 12 - (3H) No. 6 | Always | Less than 10 Ω |

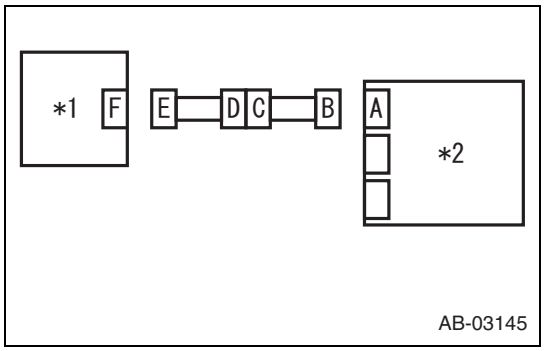
Captions in illustration

| | |
|---|---|
| *1 | Front sub sensor RH |
| *2 | Airbag control module |

NG → Replace the airbag main harness along with the body harness.

OK

| 3 | Check airbag main harness (front sensor bus RH). |
|---|---|



(1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (4AG) No. 12 - chassis ground | Always | 1 MΩ or more |
| (4AG) No. 14 - chassis ground | Always | 1 MΩ or more |
| (4AG) No. 12 - (4AG) No. 14 | Always | 1 MΩ or more |

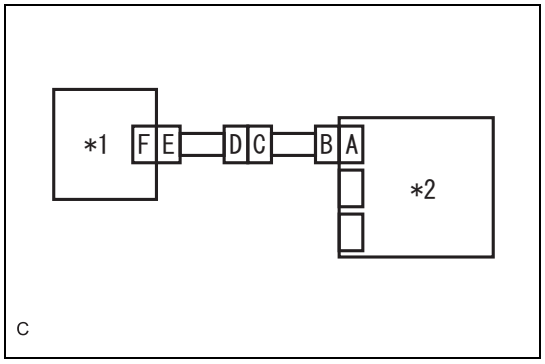
Captions in illustration

| | |
|---|---|
| *1 | Front sub sensor RH |
| *2 | Airbag control module |

NG → Replace the airbag main harness along with the body harness.

OK

| 4 | Check airbag control module. |
|---|---|



(1) Connect all connectors.
(2) Clear the memory.
(3) Perform the reproduction procedure.
(4) Read the DTC. (Current malfunction)
Criteria: DTC B1613 is not displayed.

Captions in illustration

| | |
|---|---|
| *1 | Front sub sensor RH |
| *2 | Airbag control module |

NG → Replace the front sub sensor RH. Replace the airbag control module if it does not operate properly even after replacing the sensor.

OK

| 5 | Check DTC |
|---|---|

Criteria: No other DTC is displayed.

NG → Perform diagnosis for the displayed DTC.

OK

Complete

| DTC | B1615 | Front Sub Sensor LH Failure |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1615 | Front sub sensor LH is faulty. | Front sub sensor LH |

Inspection steps

The circuit within the front sub sensor RH is faulty. Replace the front sub sensor RH.

| DTC | B1617 | Front Sub Sensor LH Lost Communication |
|---|---|---|

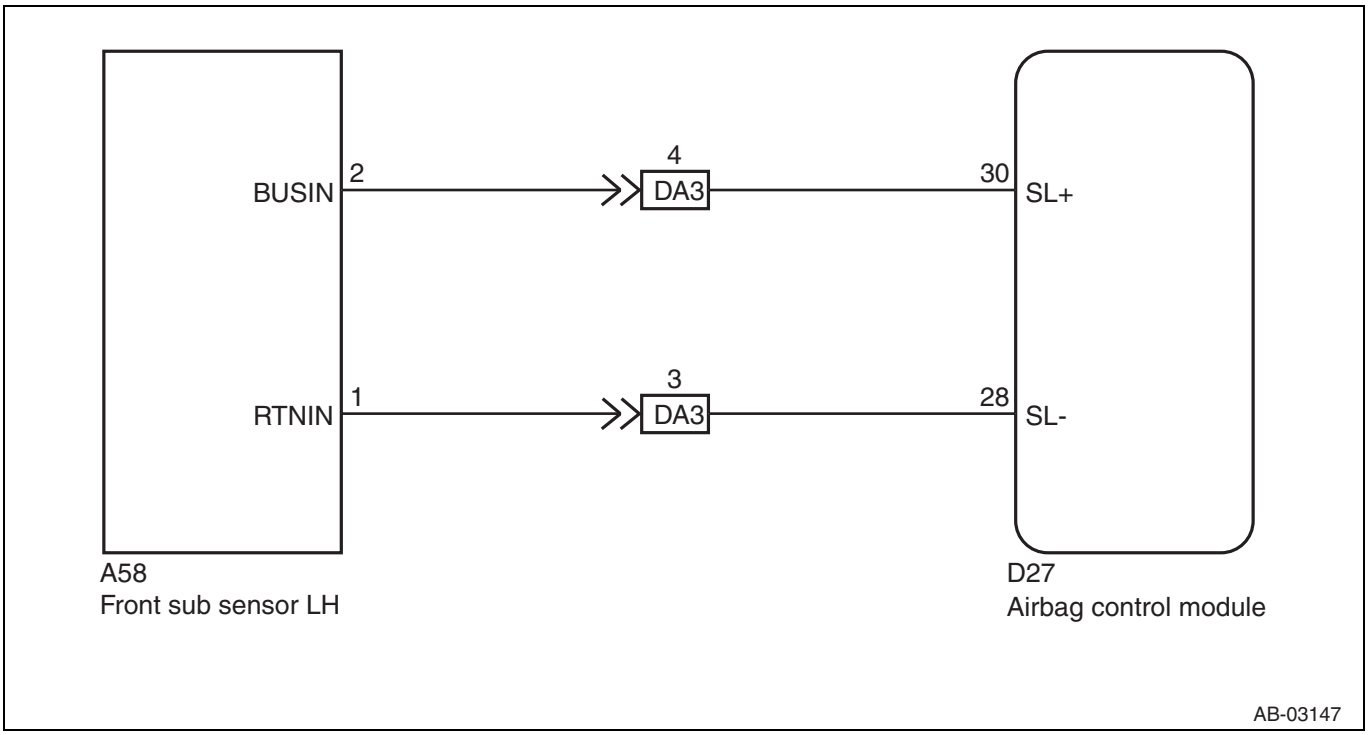
| DTC | B1618 | Front Sub Sensor LH Initialization Error |
|---|---|---|

RS

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1617<br>B1618 | • Open or short circuit in harness of front sensor bus LH.<br>• Front sub sensor LH is faulty.<br>• Airbag control module is faulty. | • Front sub sensor LH<br>• Airbag control module<br>• Airbag main harness |

Circuit figure



Inspection steps

RS

CAUTION:
Before performing the diagnosis, refer to the precautions.

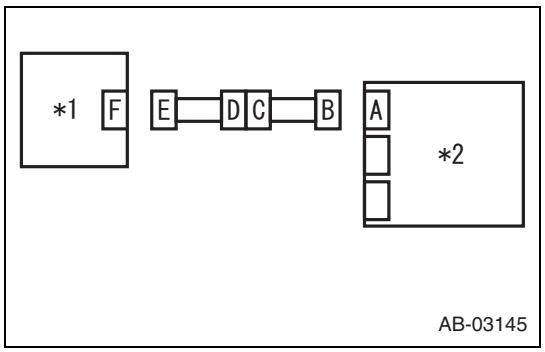
| | |
|---|---|
| 1 | Check poor contact of connectors. |

(1) Check for poor contact of the connectors between the airbag control module and the front sub sensor LH.
Criteria: No fault is found.

NG → Replace the airbag main harness along with the body harness.

OK

| | |
|---|---|
| 2 | Check airbag main harness (front sensor bus LH). |



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Remove the column cover and disconnect the connector (D52).
(3) Disconnect the passenger's airbag module connector (D30).
(4) Disconnect the connector (D27, G19, H32) of the airbag control module.
(5) Connect the connector (1AG) in the test harness AG to the connector B.
(6) Connect the connector 1H in the test harness H to the connector E.
(7) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

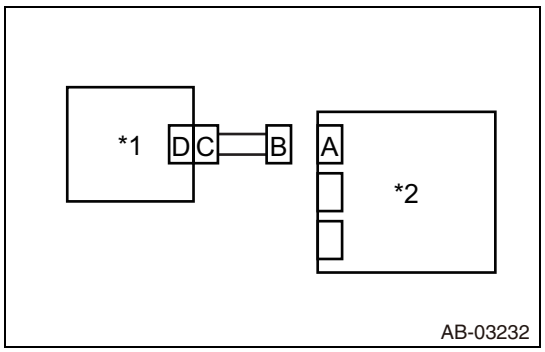
| 1 | Check airbag harness. |
|---|---|

(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the connector (D27, G19, H32) from the airbag control module.
(3) Connect the battery ground terminal and turn the ignition switch to ON.
Criteria: The passenger's seat belt warning light blinks for 6 seconds, then goes off.

NG → Go to Step 4.

OK

| 2 | Check airbag harness. |
|---|---|



AB-03232

(1) Turn the ignition switch to OFF.
(2) Connect the connector (1AG) in the test harness AG to the connector B.
(3) Connect the connectors (7AG) and (8AG) in the test harness AG.
(4) Turn the ignition switch to ON.
Criteria: The passenger's seat belt warning light blinks for 6 seconds, then repeats illuminating and blinking.

Captions in illustration

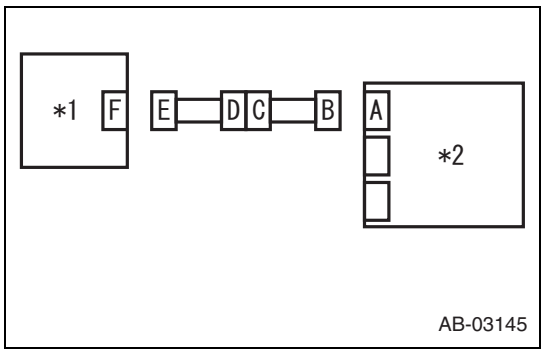
| | |
|---|---|
| *1 | Combination meter ASSY |
| *2 | Airbag control module |

NG → Go to Step 3.

OK

Replace the airbag control module.

| 3 | Check airbag harness. |
|---|---|



AB-03145

(1) Turn the ignition switch to OFF.
(2) Disconnect the connectors (7AG) and (8AG) for the test harness AG in step 2.
(3) Disconnect the connector (D7) from the combination meter.
(4) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (2AG) No. 10 - (D7) No. 38 | Always | Less than 10 Ω |

Captions in illustration

NG → Replace the airbag main harness along with the body harness, or repair the bulkhead harness and the instrument panel harness.

OK

Replacement of the combination meter

| DTC | B16F2 | Front Sub Sensor RH Recognition Error |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B16F2 | • Front sub sensor RH is installed incorrectly.<br>• Airbag control module is faulty. | • Front sub sensor RH<br>• Airbag control module |

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

| 1 | Replace front sub sensor RH. |
|---|---|

(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Replace the front sub sensor RH with a genuine sensor.
(3) Turn the ignition switch to ON.
Criteria: The warning light is turned off.

RS

NG → Replace the airbag control module.

OK

Complete

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

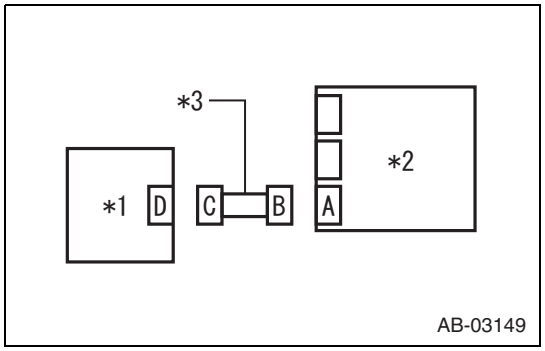
| 1 | Check poor contact of connectors. |
|---|---|

(1) Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.
Criteria: No fault is found.

NG → Replace the airbag rear harness along with the body harness.

OK

| 2 | Check airbag rear harness (between airbag control module and side airbag sensor RH). |
|---|---|



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the connector (G17) from the seat belt pretensioner RH.
(3) Disconnect the connector (G11) from the curtain airbag module RH.
(4) Disconnect the connector (Gc1) of the side airbag module RH.
(5) Disconnect the connector (D27, G19, H32) of the airbag control module.
(6) Connect the connector (1AG) in the test harness AG to the connector B.
(7) Connect the connector 2V in the test harness V to the connector C.
(8) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (5AG) No. 14 - (3V) No. 1 | Always | Less than 10 Ω |
| (5AG) No. 16 - (3V) No. 2 | Always | Less than 10 Ω |

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

| | |
|---|---|
| 1 | Check poor contact of connectors. |

(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.

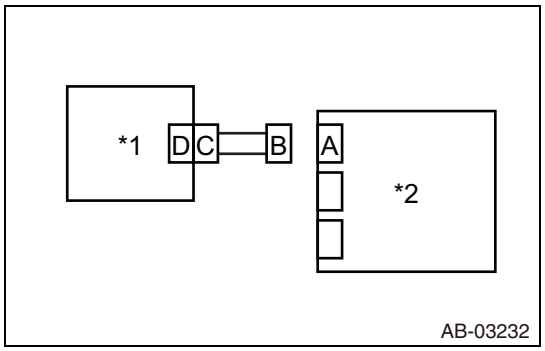
(2) Check whether the connectors between the airbag control module and the airbag indicator are securely connected.

Criteria: No fault is found.

NG → Repair the bulkhead harness. Or replace the airbag main harness along with the body harness.

OK

| 2 | Check airbag main harness. |
|---|---|



(1) Disconnect the connector (D27, G19, H32) from the airbag control module.
(2) Connect the battery ground terminal and turn the ignition switch to ON.
NOTE:
In the normal condition, neither ON nor OFF will illuminate.
Criteria: The passenger's airbag indicator illuminates.

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

| | |
|---|---|
| 1 | Check DTC |

(1) Check for DTC.

Criteria: DTC B1627 and B1628 are not displayed.

NG → Perform diagnosis for the displayed DTC B1627 and B1628.

OK

| | |
|---|---|
| 2 | Check DTC |

(1) Check for DTC.

Criteria: DTC B1637 and B1638 are not displayed.

NG → Perform diagnosis for the displayed DTC B1637 and B1638.

OK

| | |
|---|---|
| 3 | Check poor contact of connectors. |

(1) Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.
Criteria: No fault is found.

NG → Replace the airbag rear harness and the door harness.

OK

| | |
|---|---|
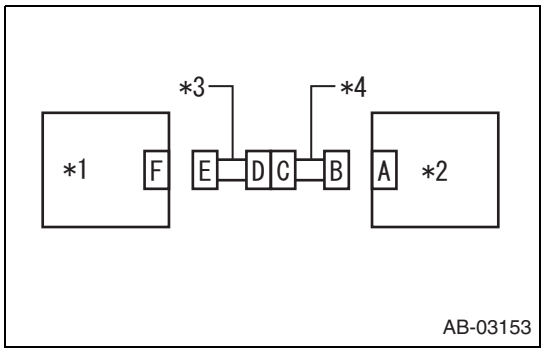
| 4 | Check airbag rear harness and door harness (between curtain airbag sensor LH and door sensor LH). |



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the connector (H22) from the seat belt pretensioner LH.
(3) Disconnect the connector (H30) from the curtain airbag module LH.
(4) Disconnect the connector (Hb1) of the side airbag module LH.
(5) Disconnect the connector (H25) from the curtain airbag sensor LH.
(6) Connect the connector B of the curtain airbag sensor LH and the connector (2V) in the test harness V.
(7) Disconnect the connector (E4) of the front door impact sensor LH.
(8) Connect the connector E of the front door impact sensor LH and the connector (1H) in the test harness H.
(9) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (3V) No. 4 - (3H) No. 5 | Always | Less than 10 Ω |
| (3V) No. 5 - (3H) No. 6 | Always | Less than 10 Ω |

Captions in illustration

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

| 1 | Check poor contact of connectors. |
|---|---|

(1) Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Criteria: No fault is found.

NG → Replace the airbag main harness along with the body harness.

OK

| 2 | Check airbag main harness (passenger's airbag harness). |
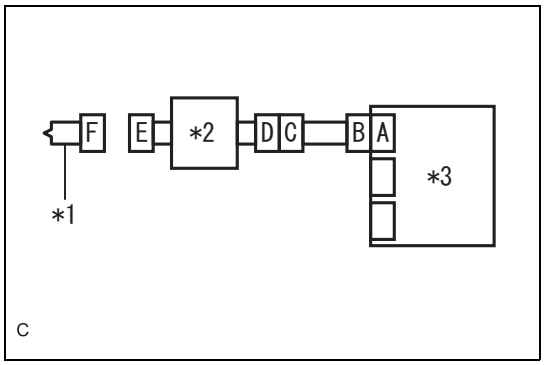
|---|---|



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Remove the column cover and disconnect the connector (D52).
(3) Disconnect the passenger's airbag module connector (D30).
(4) Disconnect the connector (D27, G19, H32) of the airbag control module.
(5) Using a probe, measure the resistance between the terminals.
CAUTION:
When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (D30) No. 1 - chassis ground | Always | 1 MΩ or more |
| (D30) No. 2 - chassis ground | Always | 1 MΩ or more |

RS

CAUTION:
Before performing the diagnosis, refer to the precautions.

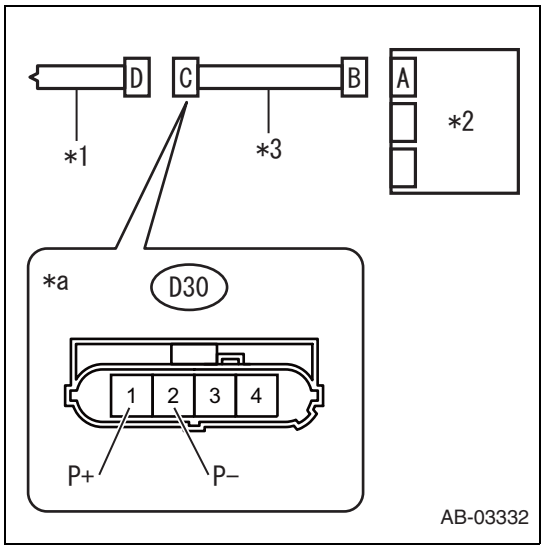
| | |
|---|---|
| 1 | Check poor contact of connectors. |

(1) Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.
Criteria: No fault is found.

NG → Replace the airbag main harness along with the body harness.

OK

| 2 | Check airbag main harness (passenger's airbag harness). |
|---|---|



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Remove the column cover and disconnect the connector (D52).
(3) Disconnect the connector from the passenger's airbag module.
(4) Disconnect the connector B from the airbag control module.
(5) Using a probe, measure the resistance between the terminals.
CAUTION:
When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (D30) No. 3 - chassis ground | Always | 1 MΩ or more |
| (D30) No. 4 - chassis ground | Always | 1 MΩ or more |

Inspection steps

RS

CAUTION:
Before performing the diagnosis, refer to the precautions.

| | |
|---|---|
| 1 | Check poor contact of connectors. |

(1) Check for poor contact of the connectors between the airbag control module and the side airbag module.
Criteria: No fault is found.

NG → Replace the airbag rear harness along with the body harness.

OK

| 2 | Check airbag rear harness (side airbag module harness LH). |
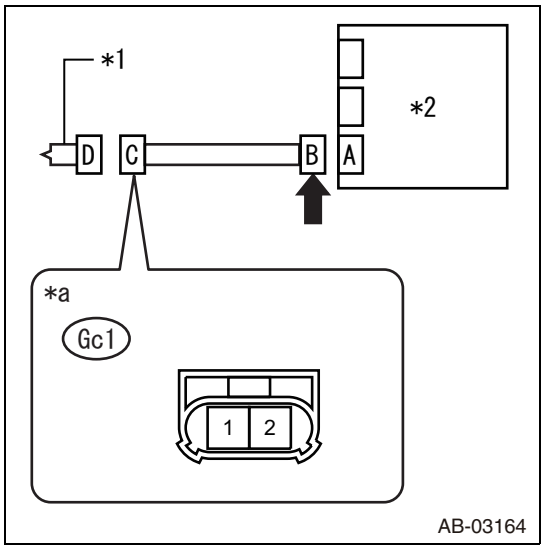
|---|---|



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the connector (Hb1) of the side airbag module LH.
(3) Disconnect the connector (D27, G19, H32) from the airbag control module.
(4) Disconnect the connector (H22) of the seat belt pretensioner LH.
(5) Disconnect the connector (H30) of the curtain airbag module LH.
(6) Using a probe, measure the resistance between the terminals of connector C.
CAUTION:
When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (Hb1) No. 1 - chassis ground | Always | 1 MΩ or more |
| (Hb1) No. 2 - chassis ground | Always | 1 MΩ or more |

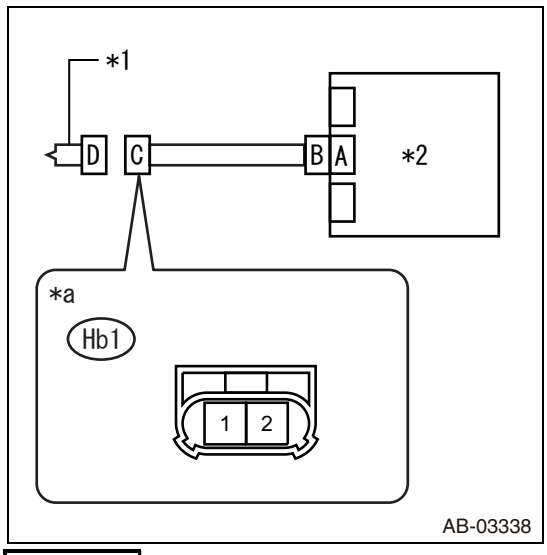
NG → Replace the airbag rear harness along with the body harness.

OK

| 3 | Check airbag control module. |
|---|---|



(1) Connect the connector B to the airbag control module.
(2) Connect the connector (H22) of the seat belt pretensioner LH.
(3) Connect the connector (H30) of the curtain airbag module LH.
(4) Using a test harness AT, short-circuit the terminals 1 and 2 of the connector C.
(5) Connect the battery ground terminal and turn the ignition switch to ON.
(6) Perform the reproduction procedure.
(7) Read the DTC. (Current malfunction)
Criteria: DTC B1827 is not displayed.

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

| | |
|---|---|
| 1 | Check poor contact of connectors. |

(1) Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner.

Criteria: No fault is found.

NG → Replace the airbag rear harness along with the body harness.

OK

| 2 | Check seat belt pretensioner. |
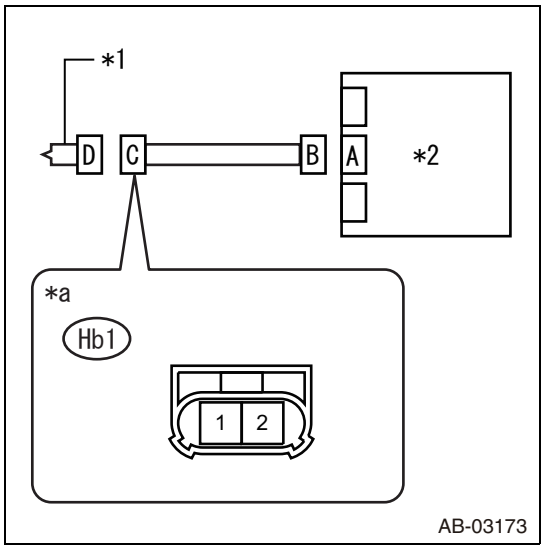
|---|---|



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the connector (G17) from the seat belt pretensioner RH.
(3) Connect the connector (1N) in the test harness N to the connector C.
(4) Connect the airbag resistor to the connector (2N) in the test harness N.
(5) Connect the battery ground terminal and turn the ignition switch to ON.
Criteria: Airbag warning light remains on even after 6 seconds have passed.

# Occupant detection system

## Precautions

1. Precautions for replacing the occupant detection system
   (1) The occupant detection control module and the occupant detection sensor of the occupant detection system (only for the passenger's seat) are fixed to the seat cushion frame. Never remove the occupant detection control module or the occupant detection sensor from the seat cushion frame.
   (2) Do not replace the seat cushion pad by itself. The seat cushion pad & frame ASSY must be replaced as a whole. The seat cushion pad and the cushion frame are adjusted as an assembly at the time of manufacturing. If they are combined with those of other vehicles or assemblies, the occupant detection system may not operate properly.
   (3) When removing the seat cushion cover, be sure to replace the hang wire on the seat cushion side with new one.
   (4) Never connect the battery in reverse polarity. Reverse connection may instantly damage the occupant detection system.
   (5) While the engine is running, do not disconnect the battery cable. A large counter electromotive force will be generated in the generator, and this voltage may damage the electronic parts such as an occupant detection control module.
   (6) Before disconnecting the connectors of the sensors and the control module, make sure to turn the ignition switch to OFF, and wait for 60 seconds or more. Otherwise, it may damage the occupant detection control module.
   (7) All parts related to the occupant detection system are precision parts. Do not to drop these parts.
   CAUTION:
   - Do not use electronic test instrument for the circuit of airbag system wiring harness and connectors.
   - When servicing the occupant detection system, be careful not to damage the wiring harness of airbag system.
   - When repairing the occupant detection system, refer to the precautions for the airbag system.

## Inspection

1. Measure the battery voltage and check the battery fluid.
   Standard voltage: 12V
   Specific gravity: 1.260 or more

RS

## Preparation tool

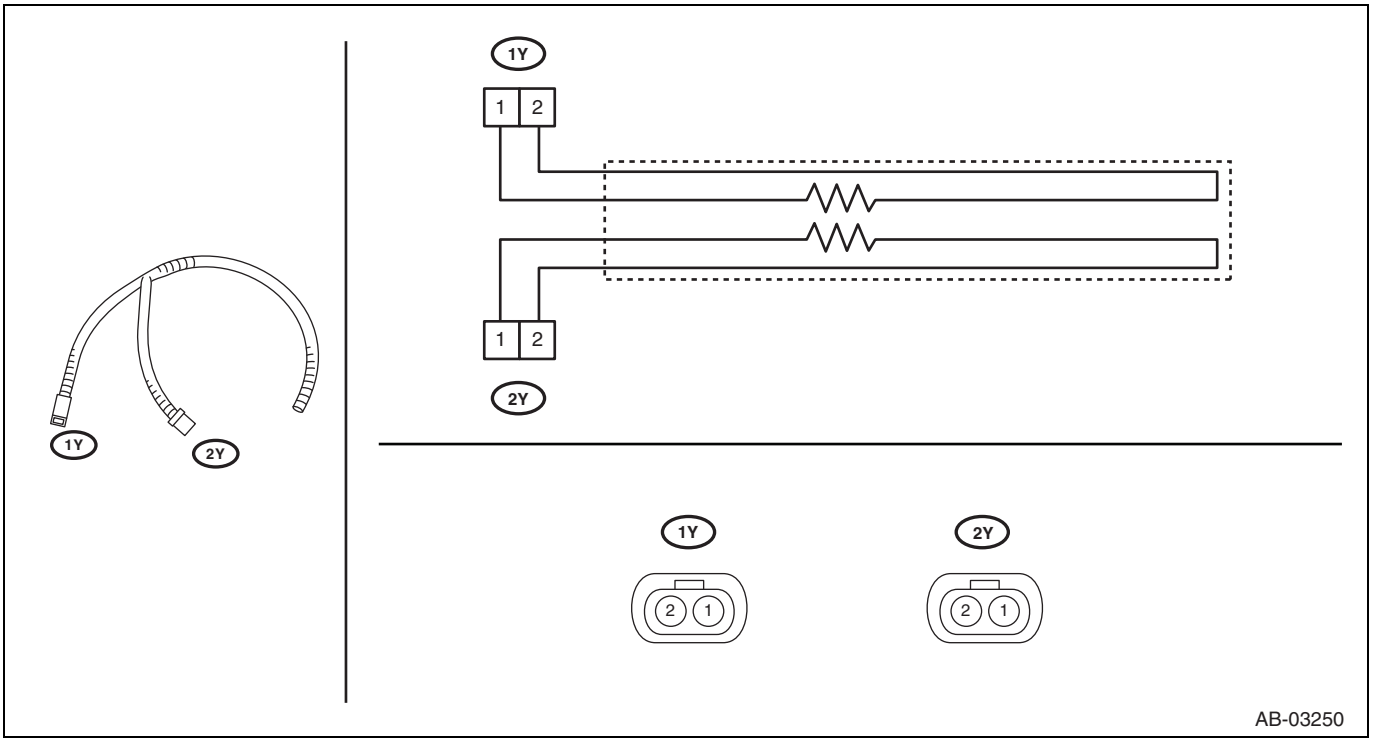
CAUTION:
When measuring the voltage, resistance, etc. of the airbag system components, be sure to use the specified test harness.

1. Subaru Select Monitor

| Shape | Tool number | Remarks |
|---|---|---|
| STSSM4 | — | Used for diagnosing electrical system failure. |

2. Test harness Y

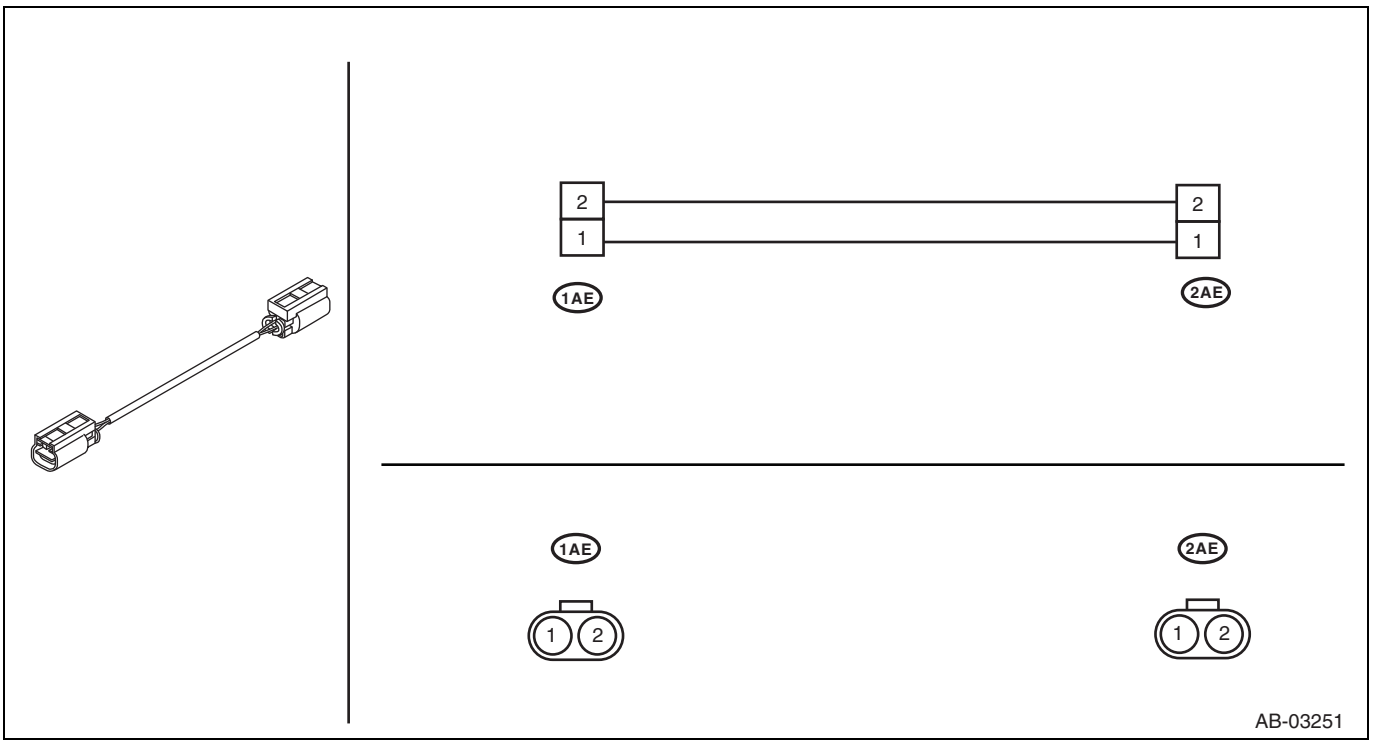
| Tool number | Remarks |
|---|---|
| 98299AG040 | Used for diagnosing the seat belt buckle switch failure. |



3. Test harness AE

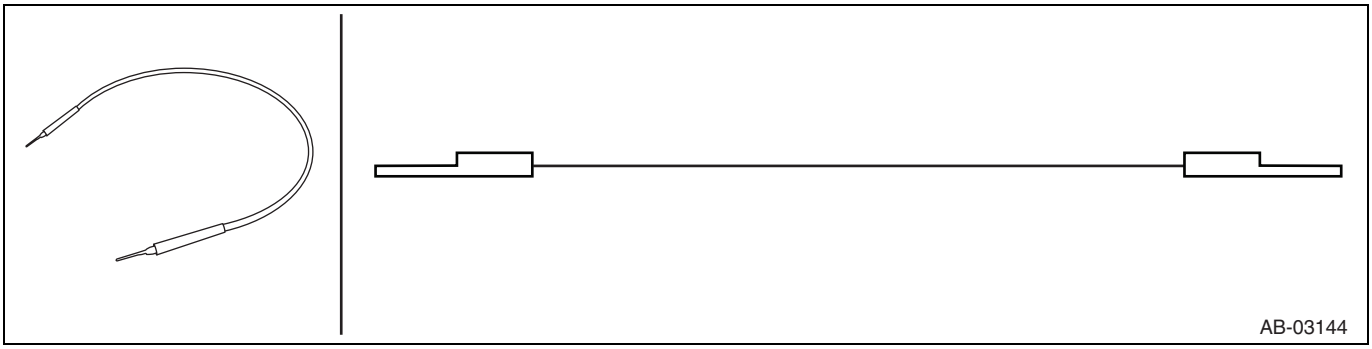
| Tool number | Remarks |
|---|---|
| 98299XA030 | Adapter harness for test harness Y Used for diagnosing the seat belt buckle switch failure. |

RS

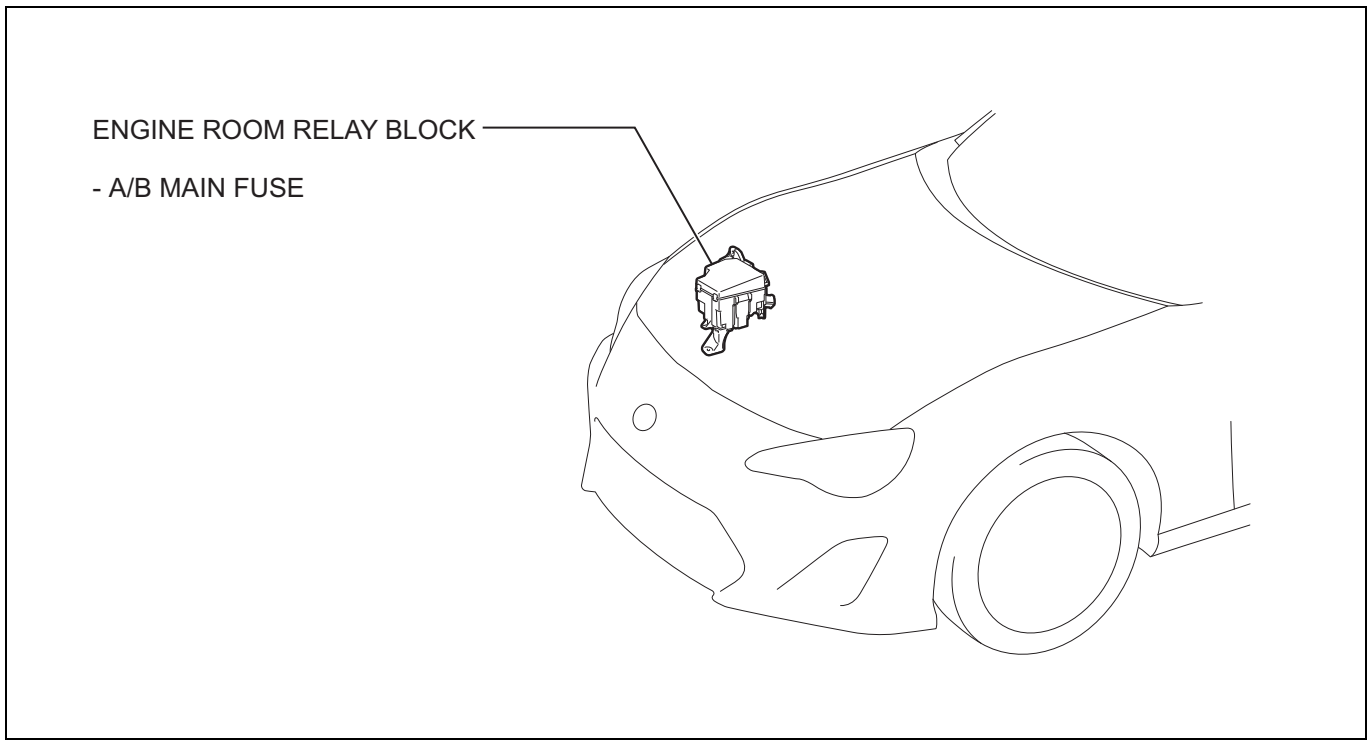


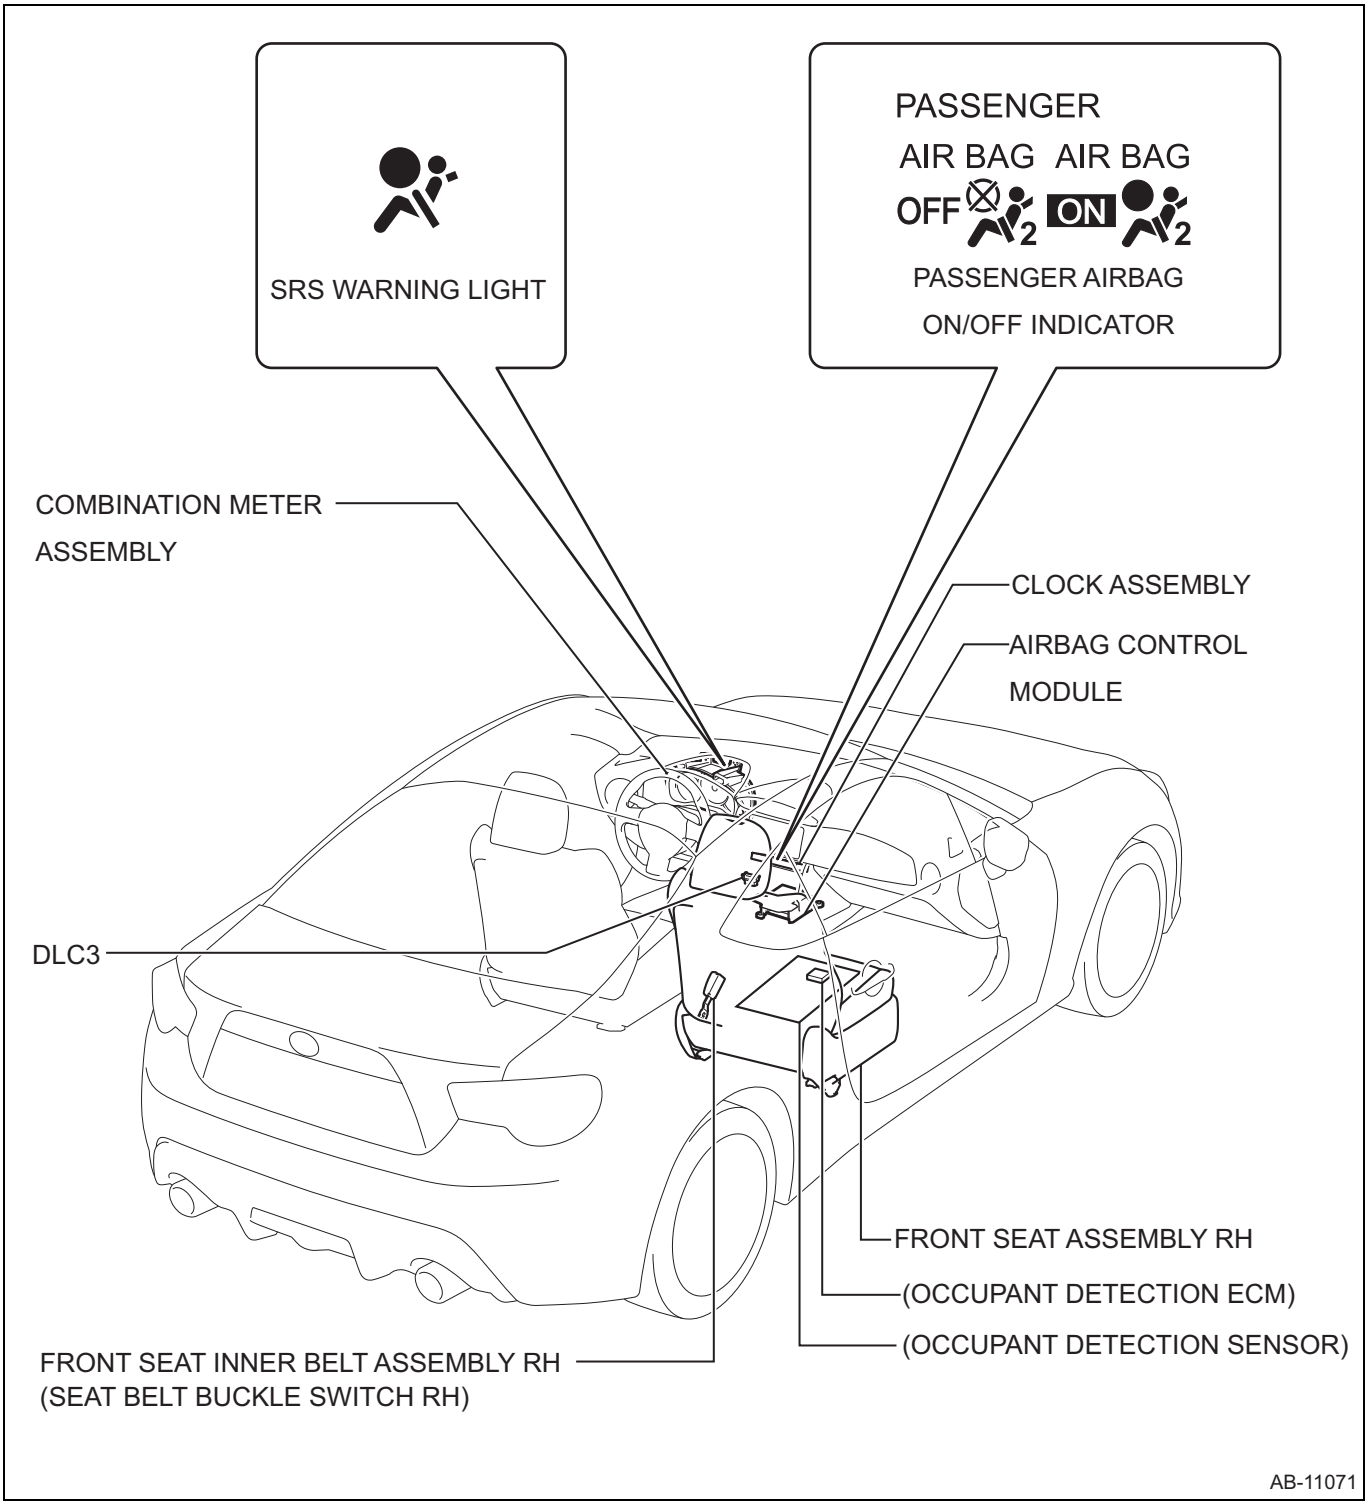
4. Test harness AS

| Tool number | Remarks |
|---|---|
| 98299CA010 | Used when measuring voltage and resistance of the occupant detection system. |



## Parts location

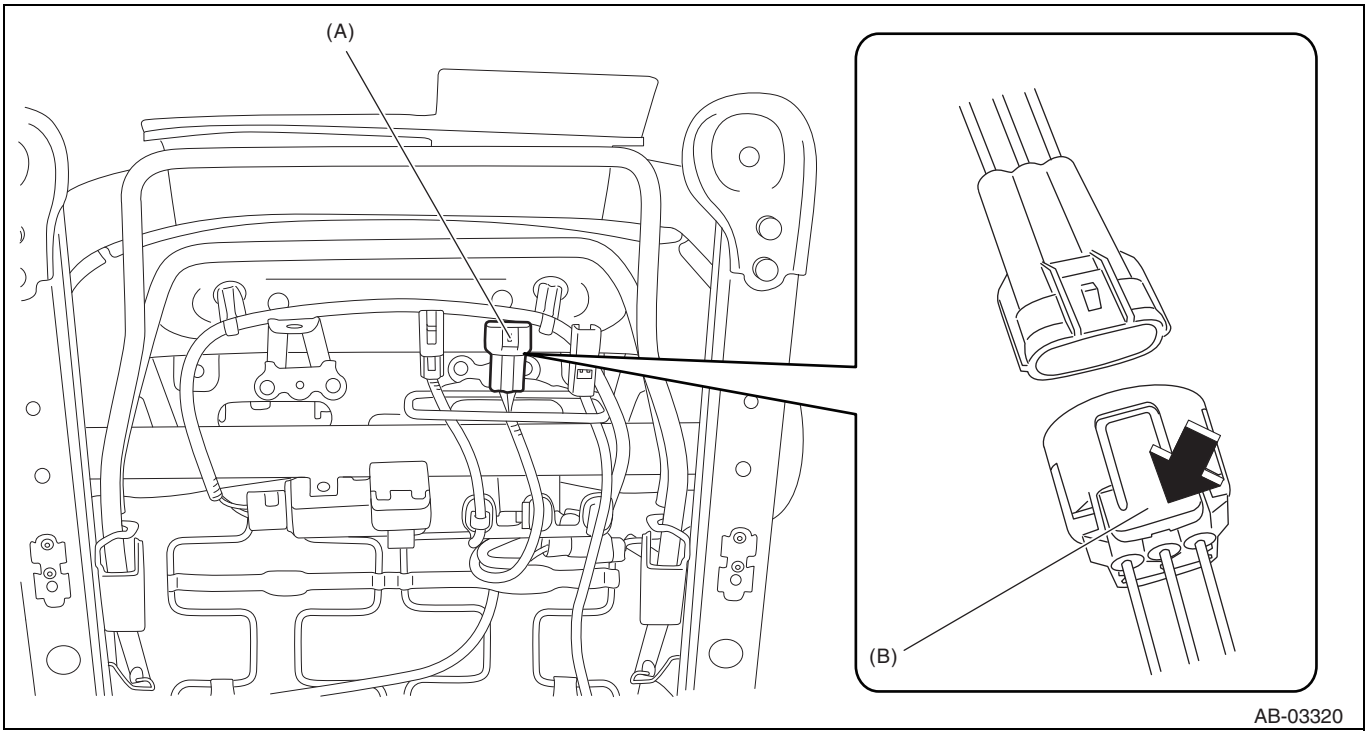




RS

## Airbag connector

1. How to disconnect the occupant detection system between airbag rear harness and seat harness
   CAUTION:
   When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
   (1) Disconnect the connector by pressing the lock arm (B) of the connector connected to connector (A) under the passenger's seat.



2. How to connect the occupant detection system between airbag rear harness and seat harness
   CAUTION:
   Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
   (1) Holding the connector, push it in securely until a clicking sound is heard.
3. Airbag control module
   (1) Refer to "SRS airbag system". (Refer to RS - 24)
4. Buckle switch RH
   (1) Refer to "SRS airbag system". (Refer to RS - 24)

RS

## List of diagnostic codes

## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Interview and phenomenon check |

(1) Phenomenon check

Next

| | |
|---|---|
| 3 | Check the warning light |

(1) Check CAN communication system. (Refer to NW - 30)
Result

| Result | Go to |
|---|---|
| The airbag warning light illuminates. | A |
| The airbag warning light does not illuminate. | B |

B → Perform the diagnosis according to the trouble phenomenon

RS

A

| | |
|---|---|
| 4 | Read the DTC |

(1) Turn the ignition switch to OFF.
(2) Connect the Subaru Select Monitor to data link connector.
(3) Turn the ignition switch to ON and start the Subaru Select Monitor.
(4) Read the DTC.
NOTE:
Check the communication circuit if the communication function of the Subaru Select Monitor does not function normally.
(5) Record all DTCs and failure status information.
Result

| Result | Go to |
|---|---|
| DTC is detected. | A |
| No DTC is detected | B |

B → Perform the inspection by referring to "Fault in the airbag warning light".

A

| | |
|---|---|
| 5 | Perform diagnosis |

(1) Use the list of diagnostic codes to determine the cause of the fault.
(2) Perform inspection according to the diagnostic code.
(3) Repair the cause of trouble.
(4) Delete the diagnostic code.

(5) Execute the check mode.
(6) Confirm that no other DTC is detected.
Result

| Result | Go to |
|---|---|
| DTC is detected. | A |
| No DTC is detected | B |

B → Complete the diagnosis.

A

Perform steps (1) to (5) of Step 5.

### Subaru Select Monitor

Operation
For detailed operation procedures, refer to "PC application help".

## Communication for initializing in airbag system is not working

Perform inspection when communication between the airbag control module and the Subaru Select Monitor is not possible
Detection conditions
Trouble in harness connectors.
Trouble symptom
Communication between airbag control module and the Subaru Select Monitor is not working.
Inspection steps
Refer to "Communication for initializing is not possible" in "SRS airbag system". (Refer to RS - 46)

RS

## Communication for initializing is not possible only in the occupant detection system

NOTE:
The occupant detection system communicates with the Subaru Select Monitor through the airbag control module.
Detection conditions
Trouble in the harness connector between the airbag control module and the occupant detection system
Trouble symptom
Communication between the airbag control module and the occupant detection system is not possible.
Inspection steps
Perform the diagnosis starting from the step 2 of "DTC B1650 Occupant Classification System Malfunction".

### Check list for interview

| | | | |
|---|---|---|---|
| Customer's name | | Inspector's name | |
| Vehicle bringing date | / / | Registration No. | |
| Odometer readout | km<br>miles | Frame number | |
| Trouble occurrence date | / / | Registration year | / / |
| Weather | • Clear<br>• Cloudy<br>• Rainy<br>• Snowy<br>• Other: | | |
| Temperature | °C ( °F) | | |

| | |
|---|---|
| Road condition | • Flat road<br>• Uphill<br>• Downhill<br>• Unpaved road<br>• Other: |
| Vehicle operation | • Start<br>• Idling<br>• Driving<br>·Constant speed<br>·Accelerating<br>·Decelerating<br>·Turning<br>·Other: |
| Details of trouble | |
| Behavior of the airbag warning light | • Normal (When turning the ignition switch to ON, the light illuminates for approx. 6 seconds, then goes off.)<br>• The light is stuck on.<br>• The light does not illuminate. |
| Operation of passenger's airbag ON/ OFF indicator light | • Normal (When turning the ignition switch to ON, the light illuminates for approx. 6 seconds, then goes off for 2 seconds. Then ON (adult) or OFF (child, not seated) illuminates.)<br>• The light is stuck on.<br>• The light does not illuminate. |
| DTC output | Normal code<br>DTC: (code: ) |

## Checking / clearing diagnostic codes

1. Reading diagnostic codes with the SSM4
   (1) Connect the SSM4 to data link connector.
   (2) Turn the ignition switch to ON.
   (3) Select the following menu items using the SSM4. : [Each System] / [Occupant Detection] / [DTC]

NOTE:

For details on the DTCs, refer to "List of diagnostic codes".

2. Clearing diagnostic codes with the SSM4
   (1) Connect the SSM4 to data link connector.
   (2) Turn the ignition switch to ON.
   (3) Select the following menu items using the SSM4. : [Each System] / [Occupant Detection] / [Clear Memory]

NOTE:

After repairing the airbag system and, the occupant detection system, clear the failure codes recorded in the airbag control module and the occupant detection control module.

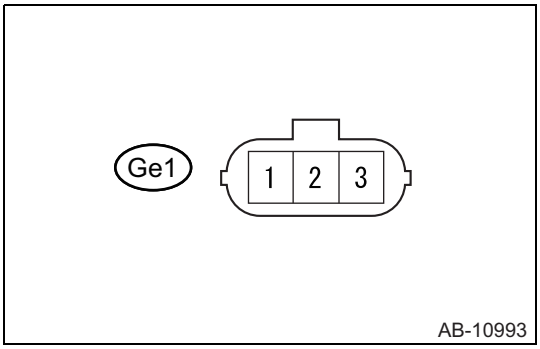
3. Check mode
   Refer to the trouble situation on the interview check list to reproduce the same situation.

## ECM terminal arrangement

CAUTION:

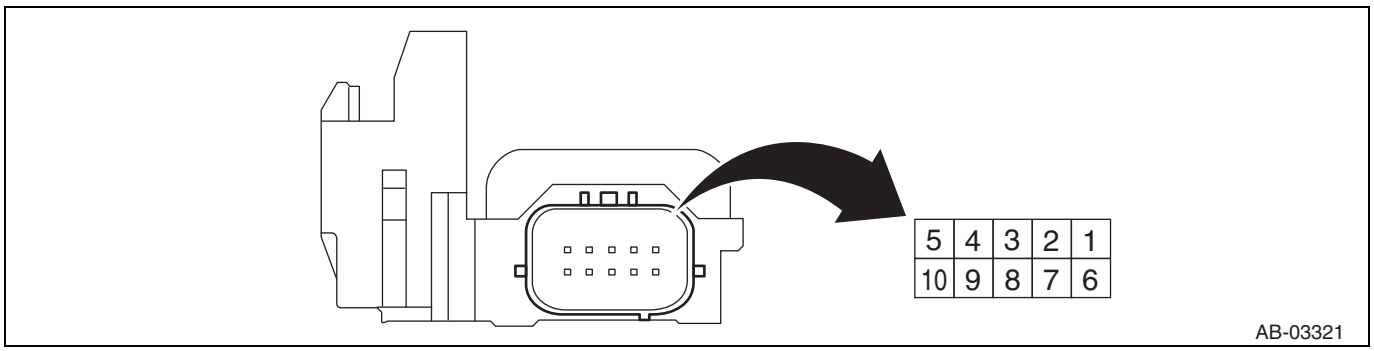
The occupant detection control module, occupant detection sensor and the seat frame are handled as one unit, so never attempt to remove them.

1. Connector between the airbag rear harness and the seat harness.



| Terminal No. (symbol) | Terminal description | Conditions | Specified condition |
|---|---|---|---|
| Ge1-2 - Ge1-3 | Airbag sensor ASSY communication line | IG ON | Pulse generation |
| Ge1-1 - chassis ground | Power supply | IG ON | 11 to 14V |

2. Occupant detection control module



| Terminal No. (symbol) | Terminal description | Input/output value | Reference |
|---|---|---|---|
| 1 | Airbag CM communication (+) | - | Communication line |
| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | Buckle switch (-) | 0V | Switch ground |
| 5 | Not used | - | - |
| 6 | IG power supply | 8 - 16V | IG ON |
| 7 | Not used | - | - |
| 8 | Buckle switch (+) | 0 - IG voltage | IG voltage when SW ON |
| 9 | Airbag CM communication (-) | 0V | GND |
| 10 | Not used | - | - |

## Wiring diagram

Refer to wiring diagram.

## Data monitor

Data list

Check the operation status of each sensor when the malfunction of the seat belt buckle switch occurs or when replacing it.

1. Turn the ignition switch to OFF.
2. Connect the SSM4 to the DLC3.
3. Turn the ignition switch to ON.
4. Turn on the SSM4.
5. Select the following menu items: [Occupant Detection] / [Data monitor]
6. Check the values referring to the list below.

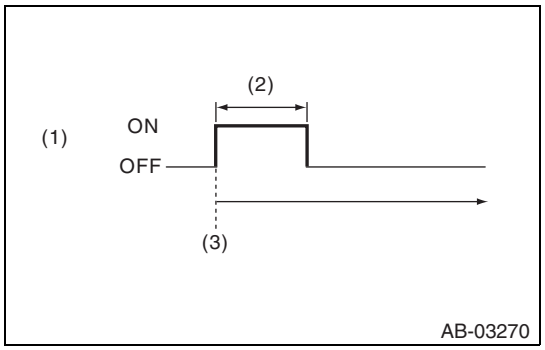
| Item | Contents | Reference |
|---|---|---|
| Trip Count | - | - |

RS

| Item | Contents | Reference |
|---|---|---|
| Counter | - | - |
| Time Count | - | - |
| Buckle SW | OFF/ON | [ON]: When passenger's seat belt is fastened. [OFF]: When passenger's seat belt is not fastened. |
| Passenger Occupant Status | Adult or Child/Empty or Child | [Adult or Child] when the seat is occupied, and when the seat is not occupied or child seat is equipped. "Empty or Child" |
| Passenger Airbag Status | - | - |

## Airbag warning light illumination pattern

1. Inspection



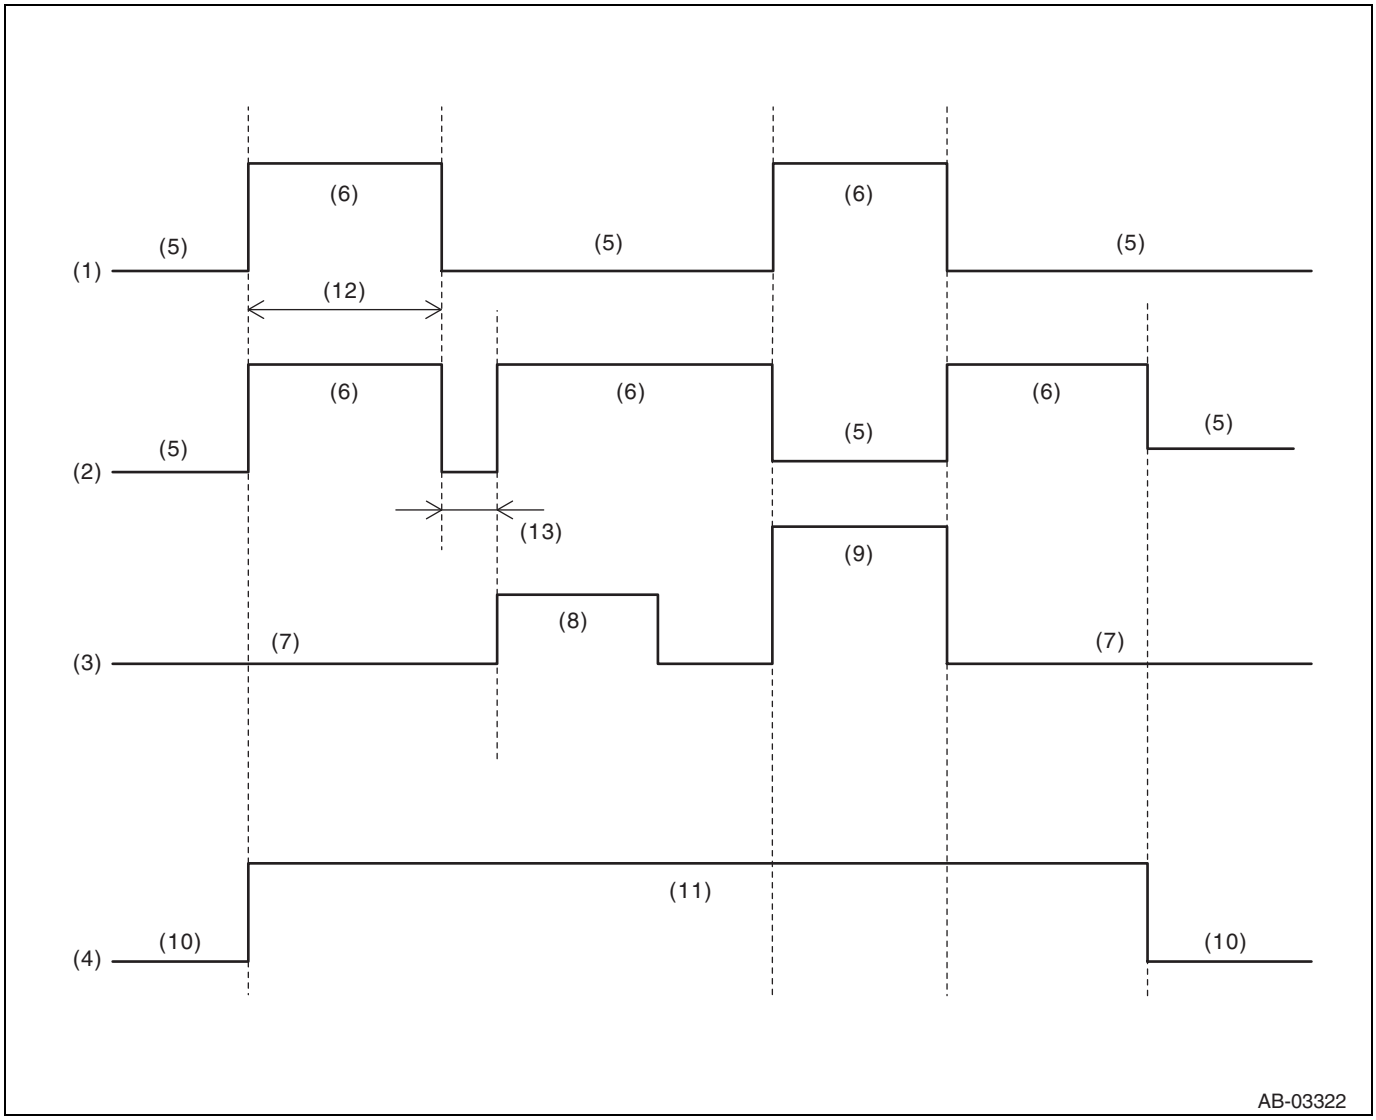
(1) Turn the ignition switch to ON. Confirm that the airbag warning light turns on and remains on for approx. 6 seconds, and then turns off even though the switch is still set to ON.

Captions in illustration

| | |
|---|---|
| *1 | Airbag warning light |
| *2 | For Approx. 6 seconds |
| *3 | Ignition switch ON |

## Illumination pattern for passenger's airbag ON / OFF indicator light

1. Inspection



Captions in illustration

| | | | | | |
|---|---|---|---|---|---|
| (1) | Passenger's airbag ON indicator light | (6) | ON | (10) | OFF |
| (2) | Passenger's airbag OFF indicator light | (7) | Not occupied | (11) | ON |
| (3) | Occupation status of the passenger's seat | (8) | CRS with a child of age 1*1 | (12) | Approx. 6 seconds |
| (4) | Ignition Switch | (9) | Adult*1 | (13) | Approx. 2 seconds |
| (5) | OFF | | | | |

CRS: Child restraint system

*1: [ON] or [OFF] for a children

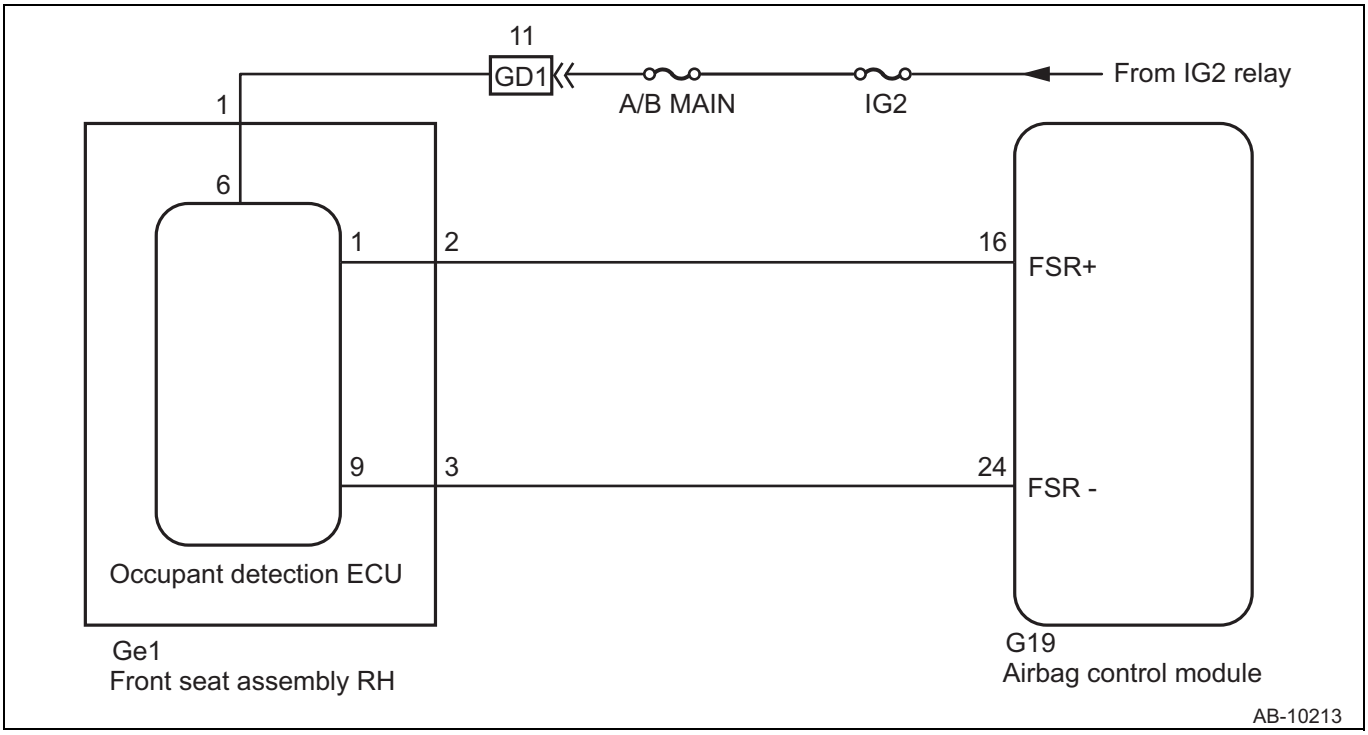
RS

| DTC | B1650 | Occupant classification system malfunction |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1650 | • Airbag control module receives the informative signal for short-circuited line, open circuit signal, short to ground signal, or short to B+ signal in occupant detection system circuit.<br>• Occupant detection system is faulty.<br>• Airbag control module is faulty. | • Occupant detection system<br>• Airbag control module<br>• Airbag rear harness |

Circuit figure



RS

Inspection steps

CAUTION:

Before performing the diagnosis, refer to the precautions.

| 1 | Check DTC |
|---|---|

(1) Read the diagnostic codes in the occupant detection system

Criteria: No other DTC is detected.

NG → Perform diagnosis for the displayed DTC.

OK

| 2 | Check poor contact of connectors. |
|---|---|

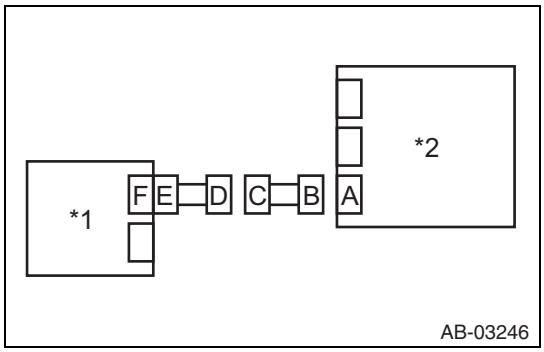
(1) Check for poor contact of the connectors between the occupant detection control module and the airbag control module.

Criteria: No fault is found.

NG → Reconnect the connector. In the case that the fault cannot be corrected, replace the airbag rear harness along with the body harness, or replace the front seat cushion ASSY RH.

OK

| 3 | Check airbag rear harness |
|---|---|



(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the connector (Ge1) under the passenger's seat.
(3) Disconnect the connector (D27, G19, H32) from the airbag control module, and connect the connector (1AG) in the test harness AG.
(4) Measure the resistance between the terminals.
NOTE:
Connect the test harness AS to the connector (Ge1) and touch the test harness with the tester.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (Ge1) No. 2 - (6AG) No. 9 | Always | Less than 10 Ω |
| (Ge1) No. 3 - (6AG) No. 11 | Always | Less than 10 Ω |

Captions in illustration

| | |
|---|---|
| *1 | Occupant detection control module |
| *2 | Airbag control module |

Criteria: DTC B1650 is not displayed.

NG → Replace the airbag rear harness along with the body harness.

OK

| 4 | Check airbag rear harness |
|---|---|

(1) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (6AG) No. 9 - chassis ground | Always | 1 MΩ or more |
| (6AG) No. 11 - chassis ground | Always | 1 MΩ or more |
| (6AG) No. 9 - (6AG) No. 11 | Always | 1 MΩ or more |

NG → Replace the airbag rear harness along with the body harness.

OK

| 5 | Check occupant detection harness |
|---|---|

(1) Turn the ignition switch to ON.

RS

(2) Measure the voltage between the terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (Ge1) No. 1 - chassis ground | IG ON | 10 V or more |

NG → Replace the front seat cushion ASSY RH

OK

Check the battery voltage and the fuses. If there is no fault, replace the airbag rear harness along with the body harness.

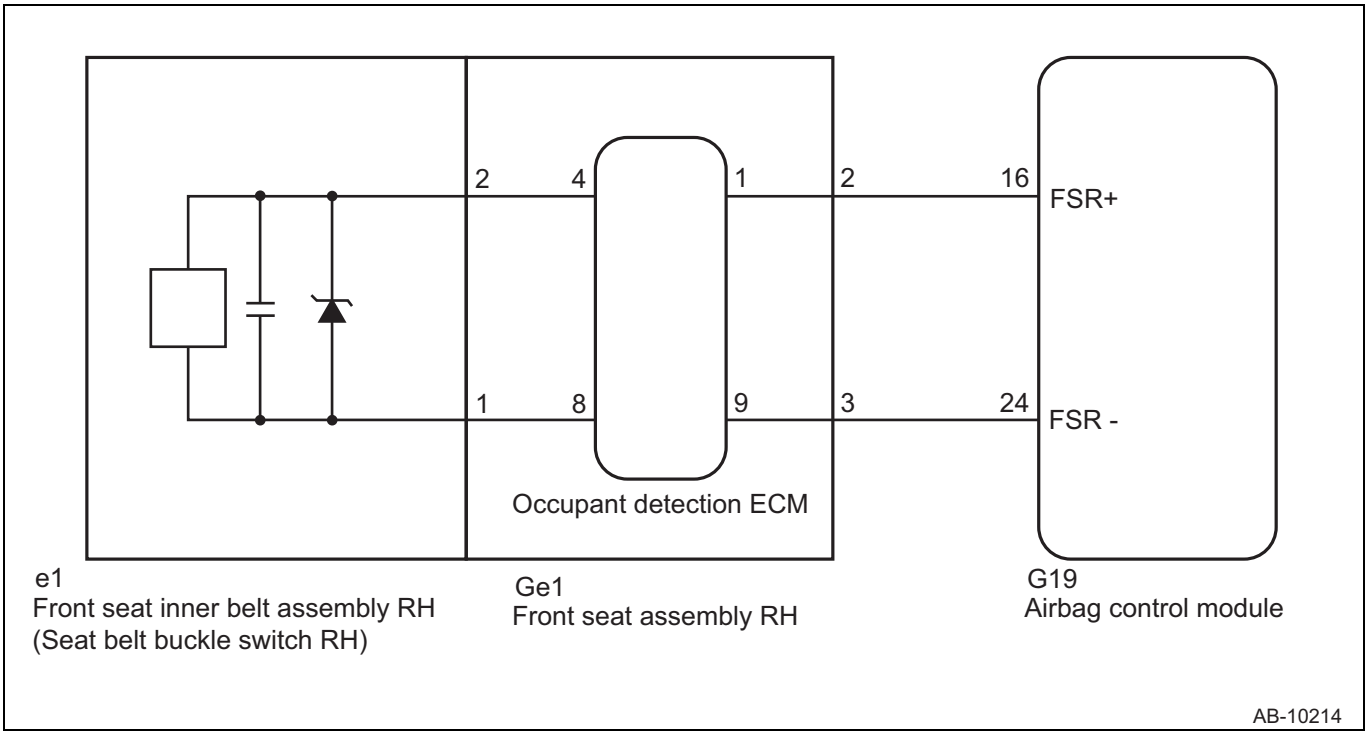
| DTC | B1655 | Front Buckle Switch RH Failure |
|---|---|---|

Circuit description

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1655 | • Airbag control module receives the informative signal for short-circuited line, open circuit signal, short to ground signal, or short to B+ signal in the seat belt buckle switch RH circuit.<br>• Front seat inner belt ASSY RH is faulty.<br>• Occupant detection system is faulty.<br>• Airbag control module is faulty. | • Occupant detection system<br>• Airbag control module<br>• Front seat inner belt ASSY RH (seat belt buckle switch RH) |

RS

Circuit figure



Inspection steps
CAUTION:
Before performing the diagnosis, refer to the precautions.

| 1 | Check DTC |
|---|---|

(1) Read the diagnostic codes in the occupant detection system
Criteria: No other DTC is detected.

NG → Perform diagnosis for the displayed DTC.

OK

| 2 | Check poor contact of connectors. |
|---|---|

(1) Check for poor contact of the connectors between the occupant detection control module and the airbag control module.
Criteria: No fault is found.

NG → Reconnect the connector. In the case that the fault cannot be corrected, replace the airbag rear harness along with the body harness, or replace the front seat cushion ASSY RH.

OK

| 3 | Inspection of the buckle switch |
|---|---|

(1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the buckle switch connector.
(3) Connect the test harness AE and the test harness connector Y to the buckle switch connector (e1).
(4) Connect the battery ground terminal and turn the ignition switch to ON.
Criteria: The airbag warning light illuminates for 6 seconds, then it goes off.

NG → Check the seat harness, and if any fault is found, repair the harness. In the case that the fault cannot be corrected, replace the front seat ASSY RH.

OK

Replace the front seat inner belt ASSY RH (seat belt buckle switch RH).

| DTC | B1760 | Sensor mat abnormal |
|---|---|---|

Circuit description
The occupant detection sensor circuit consists of the occupant detection ECM and the occupant detection sensor.
If any fault is detected in the occupant detection sensor circuit, the diagnostic code B1760 will be recorded.

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1760 | • Occupant detection ECM receives the informative signal for short-circuited line, open circuit signal, short to ground signal, or short to B+ signal in occupant detection sensor circuit.<br>• Occupant detection sensor is faulty.<br>• Occupant detection ECM is faulty. | • Front seat ASSY RH<br>• Front seat cushion ASSY RH |

Inspection steps

| | |
|---|---|
| 1 | Check poor contact of connectors. |

(1) Turn the ignition switch to OFF.
(2) Disconnect the cable from the battery ground terminal.
(3) Check that the connector is securely connected to the occupant detection ECM.
Criteria: The connector is securely connected.
NOTE:
If the connector is found loose, reconnect it, and then proceed to the next inspection.
(4) Disconnect the connector from the occupant detection ECM.
(5) Check that the connector terminal is intact.
Criteria: The terminal is not deformed or damaged.

NG → Replace the front seat cushion ASSY RH

RS

OK

Repair the connector. In case that the fault cannot be corrected, replace the front seat cushion ASSY RH.

## DTC B1761 Sensor mat liquid coating abnormal

Circuit description
DTC B1761 is detected when the occupant detection sensor is wet.

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1761 | • Occupant detection sensor is wet.<br>• Occupant detection sensor is faulty.<br>• Occupant detection ECM is faulty. | • Front seat ASSY RH<br>• Front seat cushion ASSY RH |

Inspection steps

| | |
|---|---|
| 1 | Dry front seat ASSY RH. |

(1) Leave the vehicle with the windows open in a well-ventilated room for 24 hours to dry the seats.

Next

| 2 | Checking diagnostic codes |
|---|---|

(1) Clear the diagnostic code recorded in the occupant detection ECM. (Refer to RS - 234)
(2) Clear the diagnostic code recorded in the airbag sensor ASSY. (Refer to RS - 51)
(3) Turn the ignition switch to OFF.
(4) Turn the ignition switch to ON.
(5) Check whether a diagnostic code is recorded or not. (Refer to RS - 234)
Criteria: The diagnostic code B1761 is not output.
NOTE:
At this point, any diagnostic codes other than B1761 may be output. However, these codes are not related to this check.

NG → Replace the front seat cushion ASSY RH

OK

Complete

| DTC | B1771 | Buckle switch malfunction |
|---|---|---|

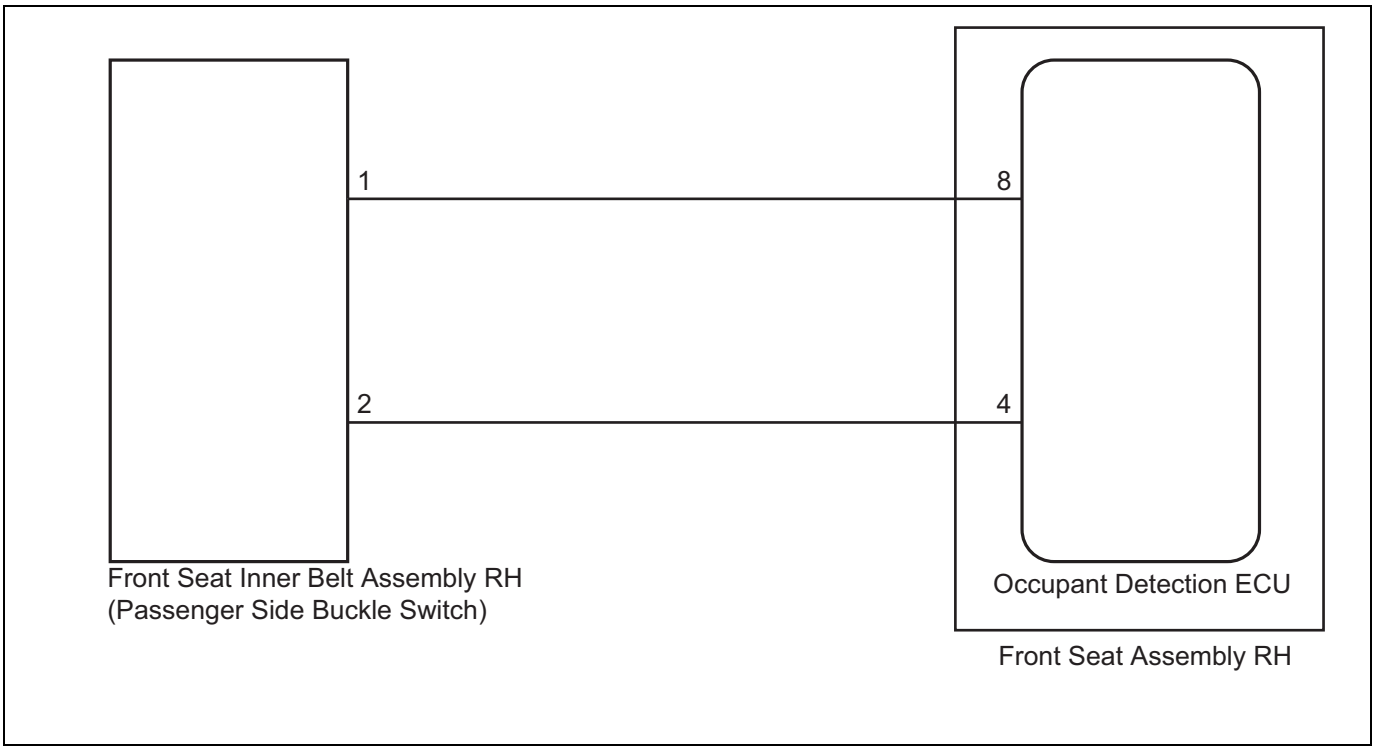
Circuit description
The passenger's seat buckle switch circuit consists of the occupant detection ECM and the front seat inner belt ASSY RH.
If any fault is found in the passenger's seat buckle switch circuit, the diagnostic code B1771 will be recorded.

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1771 | • Occupant detection ECM receives the informative signal for short-circuited line, open circuit signal, short to ground signal, or short to B+ signal in the passenger's seat buckle switch circuit.<br>• Passenger's seat buckle switch is faulty.<br>• Occupant detection ECM is faulty. | • Front seat inner belt ASSY RH (passenger's buckle switch)<br>• Front seat ASSY RH<br>• Front seat cushion ASSY RH |

NOTE:
In case that the diagnostic code B1650 is detected as a result of troubleshooting of the air bag system, check the diagnostic code recorded in the occupant detection ECM. In case that the diagnostic code B1771 is output, perform the troubleshooting procedures for this diagnostic code.

RS

Circuit figure



Inspection steps

RS

Perform the diagnosis starting from the step 2 of "DTC B1655 Front Buckle Switch RH Failure".

| DTC | B1795 | ECM internal circuit fault |
|---|---|---|

Circuit description

If any fault is detected in the occupant detection ECM, the diagnostic code B1795 will be recorded.

| DTC No. | DTC detected item | Faulty part |
|---|---|---|
| B1795 | Occupant detection ECM is faulty. | • Front seat ASSY RH<br>• Front seat cushion ASSY RH |

NOTE:

In case that the diagnostic code B1650 is detected as a result of troubleshooting of the air bag system, check the diagnostic code recorded in the occupant detection ECM. In case that the diagnostic code B1795 is output, perform the troubleshooting procedures for this diagnostic code.

Inspection steps

CAUTION:

After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding.

| | |
|---|---|
| 1 | Replace the front seat cushion ASSY RH |

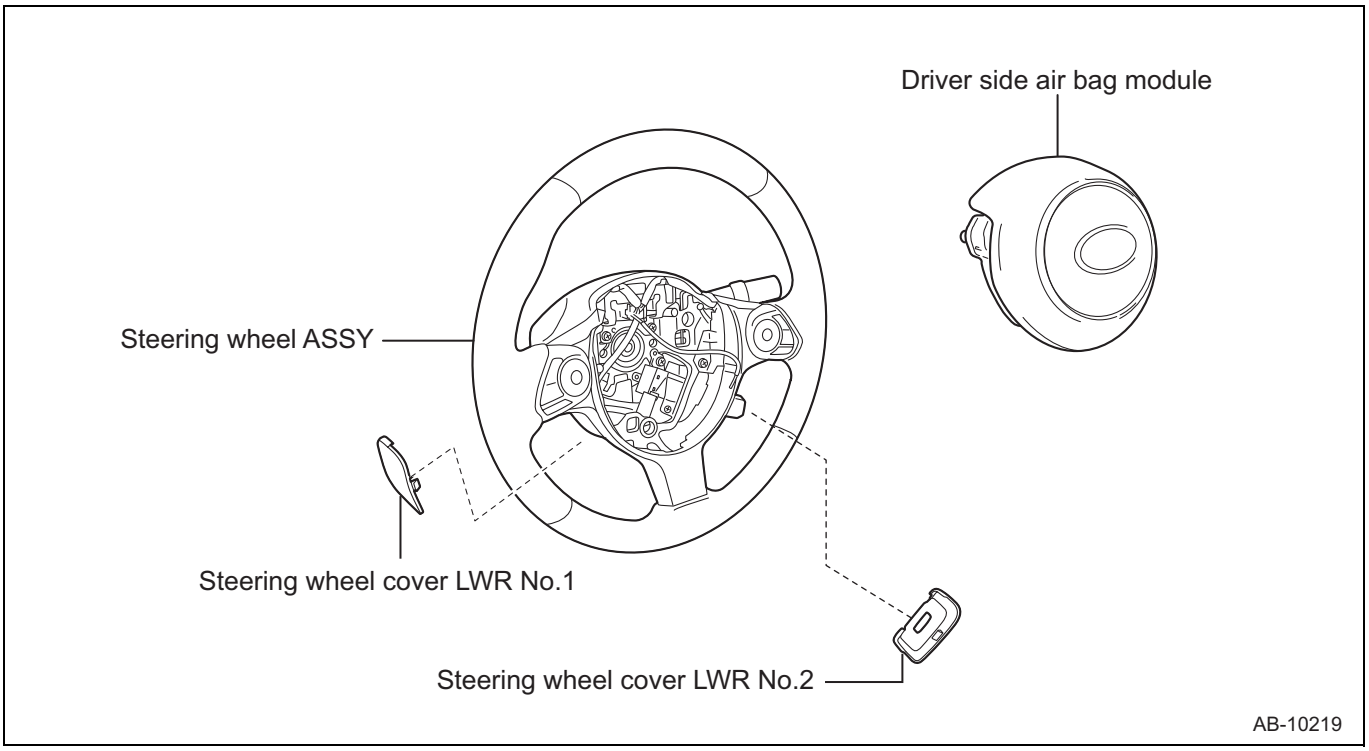
(1) Turn the ignition switch to OFF.
(2) Disconnect the cable from the battery ground terminal.
(3) Replace the front seat inner belt ASSY RH.
(4) Connect the cable to the battery ground terminal.

Next

Complete

# Driver side air bag module

## Exploded view

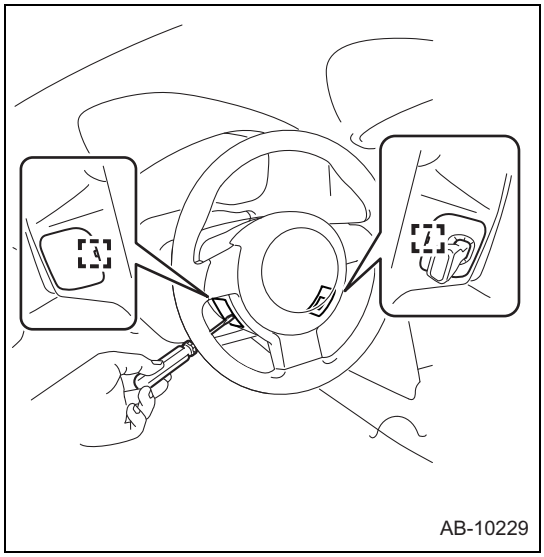


RS

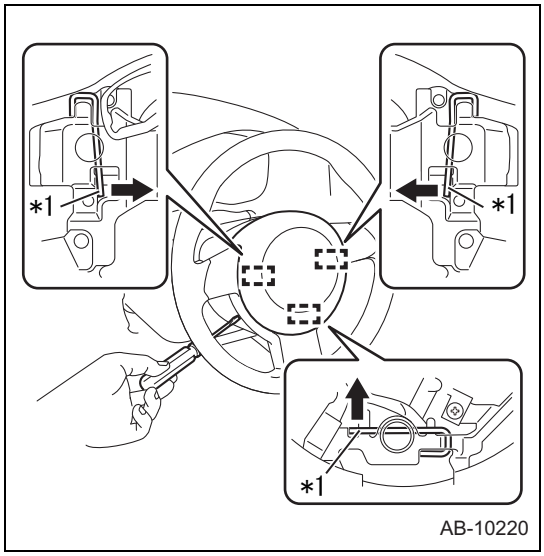
## Removal

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of the driver's airbag module
   WARNING:
   When storing a removed driver's airbag module, even if it is a temporary storage, be sure to place the airbag module with the deploying side facing upward.
   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.
   WARNING:
   After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.



(3) Remove the steering wheel cover LWR No. 1 and No. 2 using a thin flat tip screwdriver wrapped with protective tape.

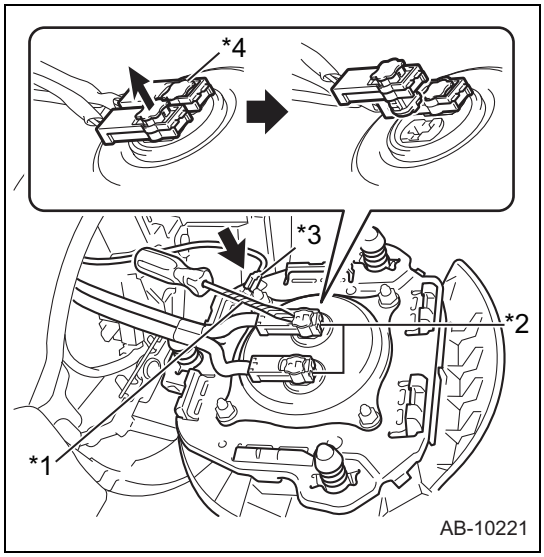


(4) Using a flat tip screwdriver, push 3 torsion springs, then release 3 pins.
CAUTION:
Be careful not to drop the driver's airbag module.

Captions in illustration

| | |
|---|---|
| *1 | Torsion spring |

(5) Pull out the driver's airbag module toward the rear side of the vehicle.
CAUTION:
When pulling out the driver's airbag module, be careful not to pull the wiring.



(6) Disconnect the horn connector.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | Airbag connector |
| *3 | Horn connector |
| *4 | Unlock it. |

(7) Using the fine flat tip screwdriver wrapped with protective tape, pull up the lock of the two airbag connectors to unlock it.

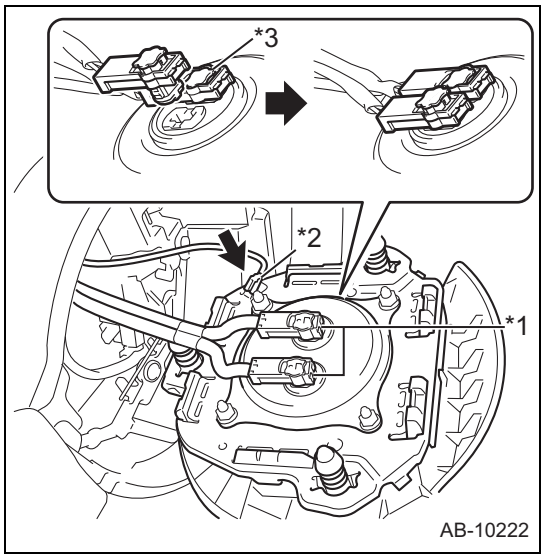
(8) Using the fine flat tip screwdriver wrapped with protective tape, disconnect the airbag connector and remove the driver's airbag module.

## Installation

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)
CAUTION:
Do not allow the harnesses and the connectors to interfere or get tangled with other parts.

1. Installation of the driver's airbag module
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
   - Airbag module is cracked or deformed.
   - Harness and/or connector is cracked, deformed or broken.
   - Harness wire is exposed.
   - The condition of the steering wheel makes the installation of the airbag module difficult.
   - The clearance between the driver's airbag module and the steering wheel is not constant.

   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
   WARNING:
   After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.



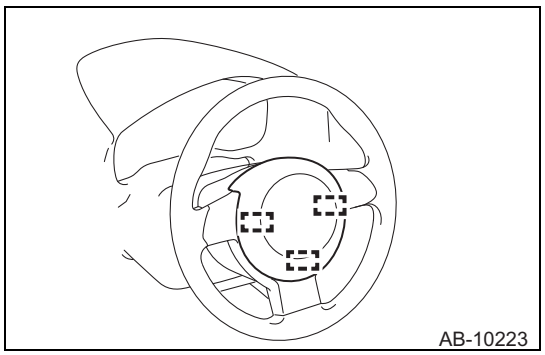
(4) Connect the two airbag connectors to the driver's airbag module.

Captions in illustration

| | |
|---|---|
| *1 | Airbag connector |
| *2 | Horn connector |
| *3 | Push and lock it. |

(5) Push in the lock of the airbag connector.
CAUTION:
Lock it securely.

(6) Connect the horn connector to the driver's airbag module.



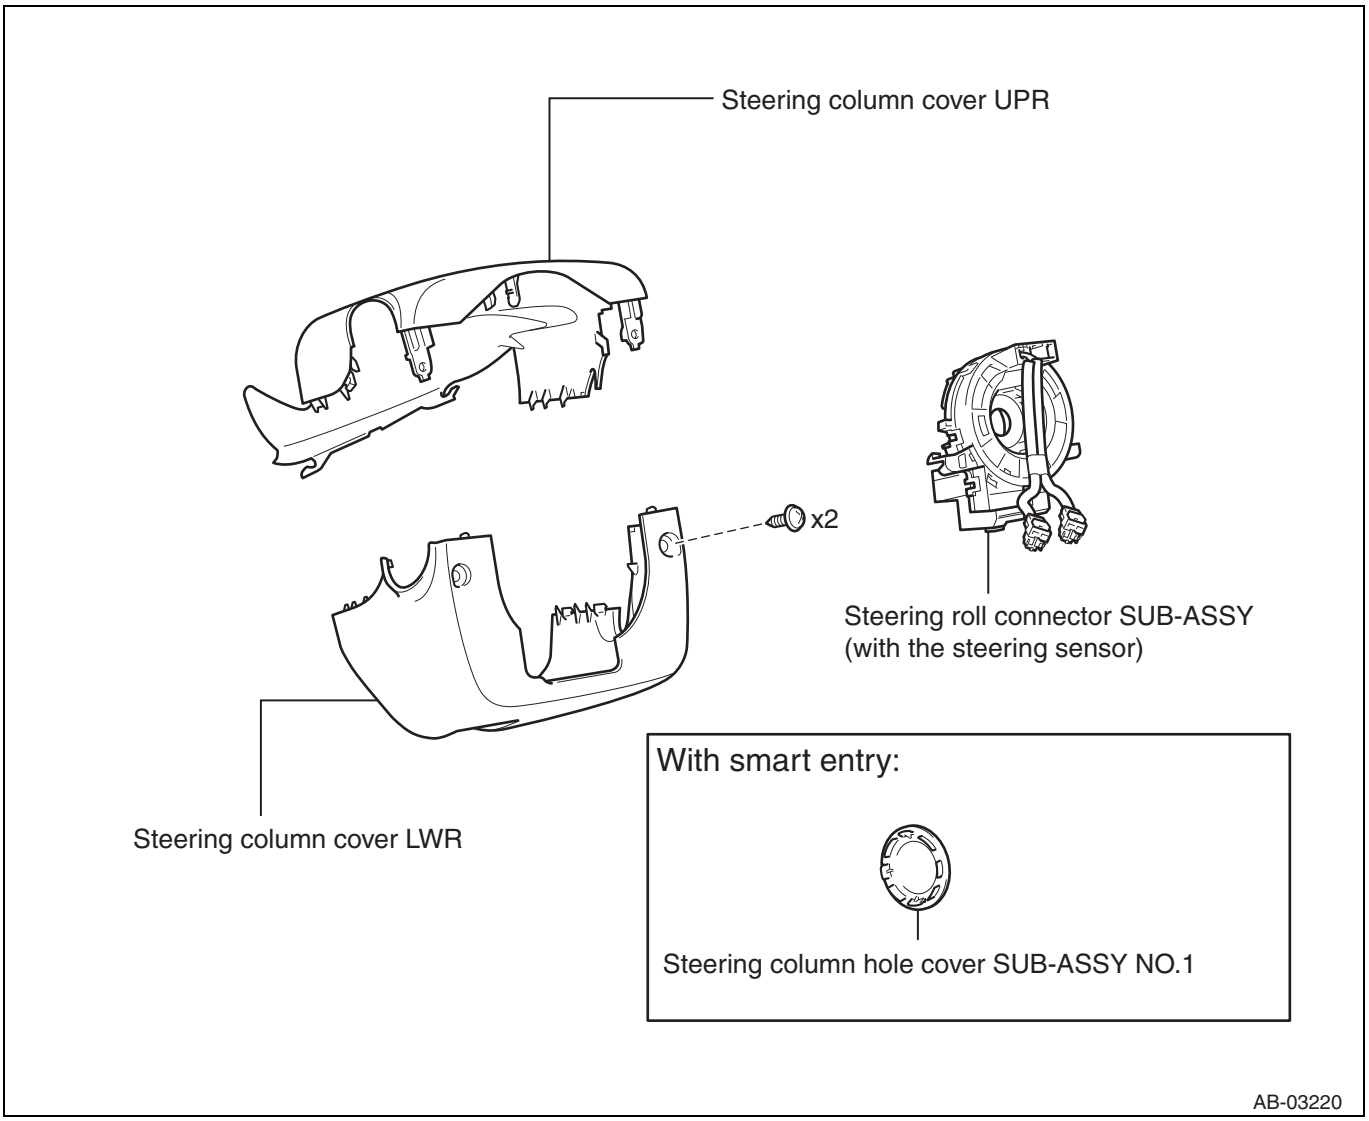
(7) Push in the driver's airbag module and engage 3 pins to install the driver's airbag module to the steering wheel ASSY.
CAUTION:
- Securely insert the pins to the attachment holes of the steering wheel ASSY.
- Check that the driver's airbag module is securely installed.

2. Installation of the steering wheel cover LWR No. 1 and No. 2
3. Connection of the battery ground terminal
Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}

4. Inspection of the driver's airbag module
   (1) Check that the horn sounds.
5. Inspection of airbag warning light (Refer to RS - 53)

# Steering roll connector

## Exploded view



RS

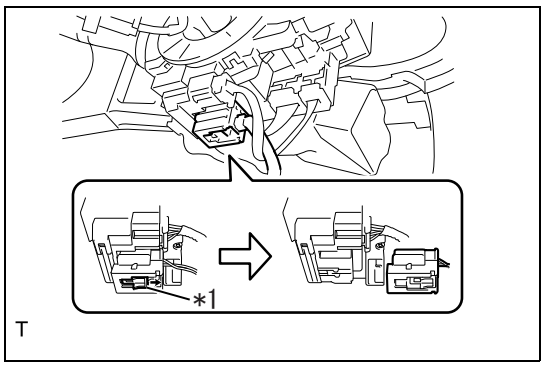
## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

1. Confirmation of front tires in the straight-ahead position
2. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
3. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
4. Removal of the steering wheel ASSY (Refer to SR - 67)
5. Removal of the steering column cover support (with smart entry) (Refer to SR - 54)

6. Removal of the steering column cover LWR (Refer to SR - 54)
7. Removal of the steering column cover UPR (Refer to SR - 55)
8. Removal of the steering roll connector SUB-ASSY (with the steering sensor)
   CAUTION:
   - Do not replace the steering roll connector when the ignition switch is turned to ON and the battery is connected.
   - Do not rotate the steering roll connector when the ignition switch is turned to ON and the battery is connected.
   - When the steering sensor is rotated for its operation check (noise check, diagnosis, etc.), make sure to confirm the vehicle is in the straight-ahead position, then perform the check with the steering wheel installed.

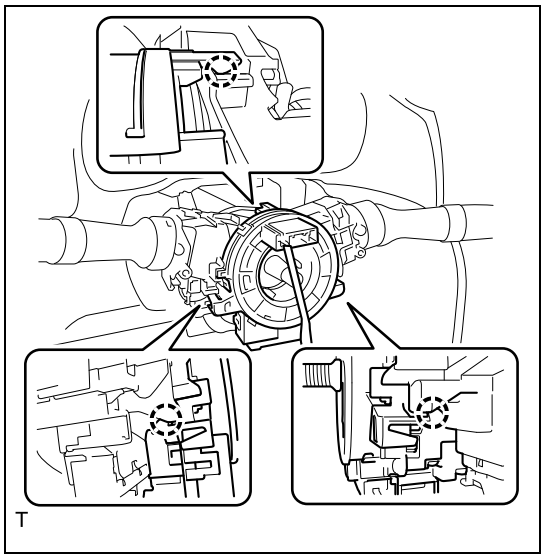


(1) Slide the slider to disconnect the airbag connector from the steering roll connector SUB-ASSY (with the steering sensor).

Captions in illustration

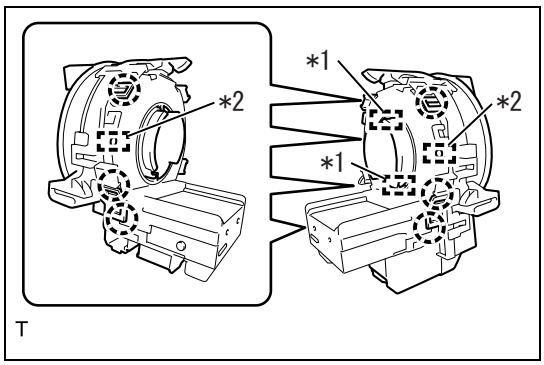
| | |
|---|---|
| *1 | Slider |

(2) Disconnect each connector from the steering roll connector SUB-ASSY (with the steering sensor).



(3) Release 3 claws, and remove the steering roll connector SUB-ASSY (with the steering sensor).

9. Removal of the steering roll connector
   CAUTION:
   - Remove the steering roll connector only when replacing itself or the steering sensor.
   - Do not rotate the center part of the steering sensor, because it may displace the neutral position of the steering sensor.



(1) Release 6 claws and 2 pins, and remove the steering roll connector from the steering sensor.
   CAUTION:
   - Do not damage the guide.
   - Do not damage the claws of the steering sensor.

Captions in illustration

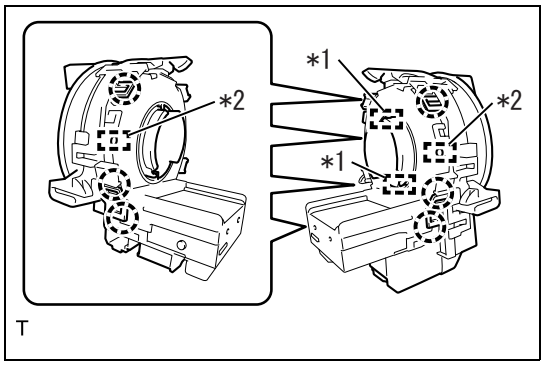
| | |
|---|---|
| *1 | Guide |
| *2 | Pin |

## Inspection

1. Inspection of the steering roll connector SUB-ASSY (with the steering sensor)
   (1) When the following conditions are found, replace the steering roll connector SUB-ASSY (with the steering sensor) with a new one.
   Criteria
   - There are scratches, cracks, or damages in the connector.
   - There are cracked, dented, or chipped parts.
   - When rotating the connector, it does not move smoothly and makes noise.
   - The connector can not be centered.

## Installation

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)



1. Installation of the steering roll connector
   (1) Align 2 pins and 2 guides.

Captions in illustration

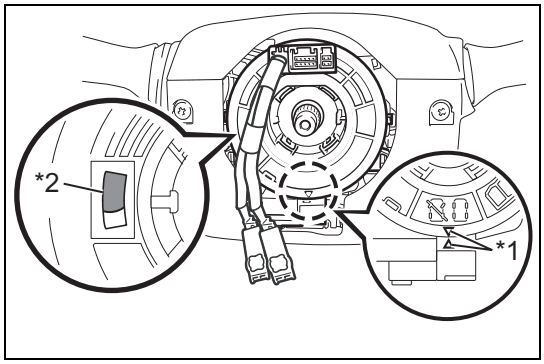
| | |
|---|---|
| *1 | Guide |
| *2 | Pin |

   (2) Engage 6 claws to install the steering roll connector to the steering sensor.
   CAUTION:
   Do not rotate the steering sensor until the steering roll connector is installed to the steering sensor.

RS

2. Installation of the steering roll connector SUB-ASSY (with the steering sensor)
   CAUTION:
   - Do not replace the steering roll connector when the ignition switch is turned to ON and the battery ground terminal is connected.
   - Do not rotate the steering roll connector when the ignition switch is turned to ON and the battery ground terminal is connected.
   - When the steering sensor is rotated for its operation check (noise check, diagnosis, etc.), make sure to confirm the vehicle is in the straight-ahead position, then perform the check with the steering wheel installed.

   NOTE:
   When the steering roll connector SUB-ASSY (with the steering sensor) is to be replaced with a new one, do not pull off the lock pin of the steering roll connector at this point.
   (1) Put the turn signal switch in the neutral position.
   CAUTION:
   Make sure to put the turn signal switch in the neutral position. Otherwise, the pin of this switch may be broken.
   (2) Engage 3 claws to install the steering roll connector SUB-ASSY (with the steering sensor).
   (3) Connect each connector to the steering roll connector SUB-ASSY (with the steering sensor).
3. Installation of the steering column cover UPR (Refer to SR - 63)
4. Installation of the steering column cover LWR (Refer to SR - 63)
5. Installation of the steering column cover support (with smart entry) (Refer to SR - 63)
6. Confirmation of front tires in the straight-ahead position
7. Centering adjustment of the steering roll connector
   CAUTION:
   Do not rotate the steering roll connector when the ignition switch is turned to ON and the battery ground terminal is connected.
   (1) If the steering roll connector SUB-ASSY (with the steering sensor) is replaced with a new one, remove the lock pin of the steering roll connector.
   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
   CAUTION:
   After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.



(4) Confirm that the steering roll connector SUB-ASSY (with the steering sensor) is in its central position.

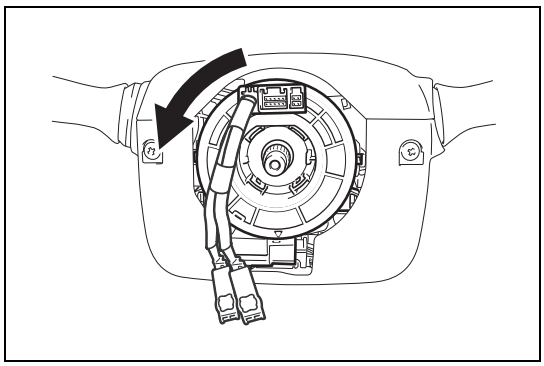
Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |
| *2 | Colored part |

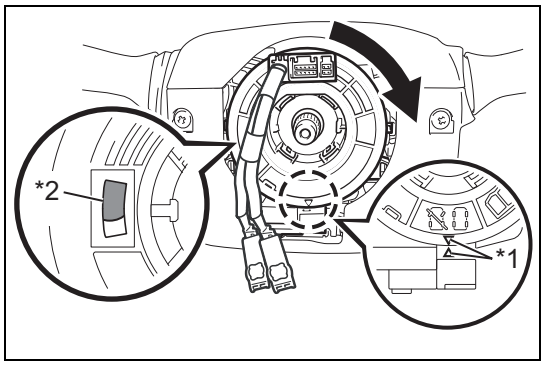
NOTE:
When the steering roll connector SUB-ASSY (with the steering sensor) is in its central position, the alignment marks are aligned and the colored part is visible as shown in the figure.

(5) If the steering roll connector SUB-ASSY (with the steering sensor) is not in its central position, perform the centering adjustment of the steering roll connector SUB-ASSY (with the steering sensor).

CAUTION:
- Do not rotate the steering roll connector SUB-ASSY (with the steering sensor) when the ignition switch is turned to ON and the battery is connected.
- Rotate the steering roll connector SUB-ASSY (with the steering sensor) softly without applying force, to prevent the connector internal wire from being broken.
- Do not rotate the steering roll connector SUB-ASSY (with the steering sensor) holding the connector and the wiring of the airbag.
- Do not rotate the steering roll connector SUB-ASSY (with the steering sensor) to more than the specified number of turns. It may break the roll connector internal wire.



(a)Rotate slowly the steering roll connector SUB-ASSY (with the steering sensor) counterclockwise until it is locked.



(b)Rotate the steering roll connector SUB-ASSY (with the steering sensor) clockwise to 2.5 turns from the lock position, until the alignment marks are aligned and the colored part becomes visible.

Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |
| *2 | Colored part |

NOTE:
- The steering roll connector can be rotated to approximately 5 turns at the maximum.
- If the steering connector can not be centered, it is possible that the connector internal wire is broken. In this case, replace the steering roll connector and the steering sensor with new ones.

8. Installation of the steering wheel ASSY (Refer to SR - 69)
9. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
10. Settings during replacement and removal/installation of the parts (Refer to IN - 10)
11. Inspection of airbag warning light (Refer to RS - 53)

## Unit inspection

1. Inspection of the steering roll connector SUB-ASSY (with the steering sensor)

   CAUTION:
   - Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
   - When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.

   (1) Adjust the roll connector.

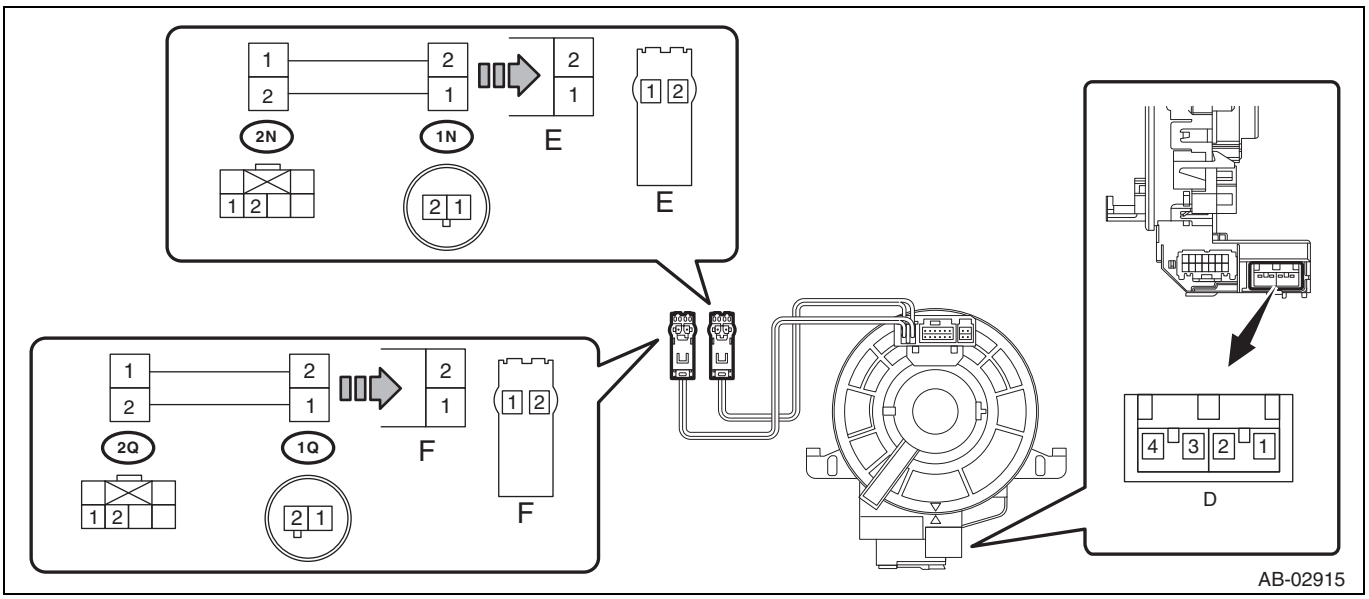
   (2) Set the roll connector to the central position.

   (3) Connect the test harness to the connector E.

   SST 98299SA000 (Test harness N), 98299SA040 (Test harness Q)

   (4) With the following conditions, check the resistance between the test harness connector terminals.
   - Perform the check with the roll connector in the central position (the front wheels are in the straight-ahead position).
   - Rotate the roll connector counterclockwise from the central position (the front wheels are in the straight-ahead position) to an end stop. Then, perform the check while rotating it clockwise to approximately 4.5 turns.

   SST Circuit tester



| Terminal No. | Inspection conditions | Standard value |
|---|---|---|
| (2N) No. 1 - (2N) No. 2 | Always | Less than 1 Ω |
| (2Q) No. 1 - (2Q) No. 2 | Always | Less than 1 Ω |

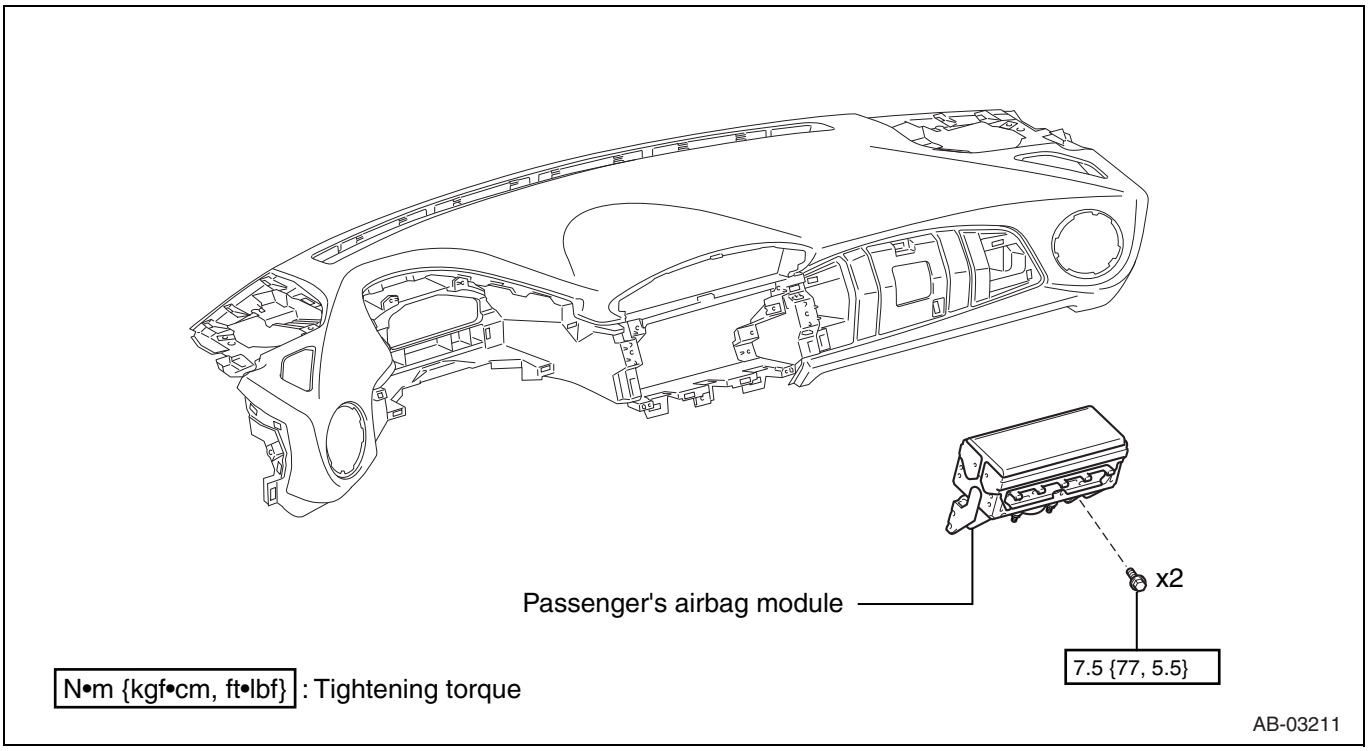
NOTE:

The connector D is designed to short-circuit the terminals D1, D2, D3, and D4 when disconnected.

(5) Replace the roll connector with a new part if the inspection result is not within the standard value.

# Passenger's airbag module

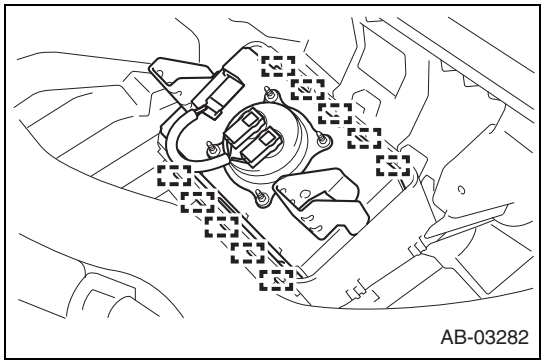
## Exploded view



## Removal

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of the instrument panel SUB-ASSY (Refer to IT - 9)



4. Removal of the passenger's airbag module
   WARNING:
   When storing a removed passenger's airbag module, even if it is a temporary storage, be sure to place the airbag module with the deploying side facing upward.
   (1) Bend the airbag door wall at the front side of the vehicle to release 5 hooks.
   (2) Release 5 hooks on the airbag door wall at the rear side of the vehicle, and remove the passenger's airbag module.

RS

## Installation

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

CAUTION:

Do not allow the harnesses and the connectors to interfere or get tangled with other parts.

1. Installation of the passenger's airbag module
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
      - Passenger's airbag lid (instrument panel surface) is cracked or deformed.
      - Airbag module is cracked or deformed.
      - Harness and/or connector is cracked, deformed or broken.
      - Harness wire is exposed.
      - Mounting bracket is cracked or deformed.

   (2) Engage 5 vehicle rear hooks on the passenger's airbag module, and install it on the vehicle rear side of the airbag door wall.
   (3) Push in the passenger's airbag module, and engage 5 vehicle front hooks with the vehicle front side of the airbag door wall.
2. Installation of the instrument panel SUB-ASSY (Refer to IT - 15)
3. Inspection of airbag warning light (Refer to RS - 53)

## Removal

RS

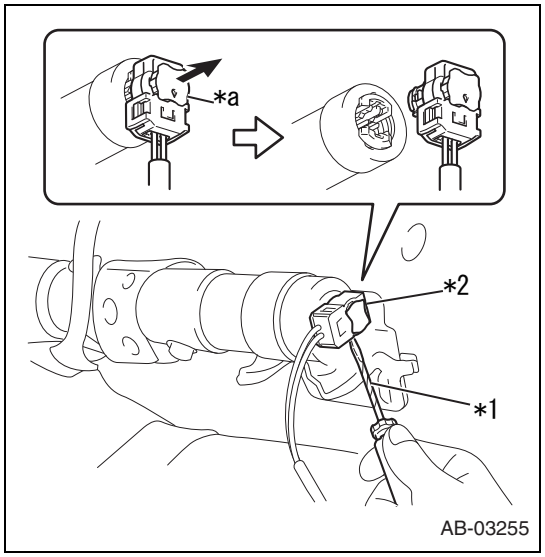
WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of the roof head lining ASSY (Refer to IT - 47)
4. Removal of the curtain airbag module RH
   WARNING:
   When storing a removed curtain airbag module RH, even if it is a temporary storage, be sure to place the airbag module with the deploying side facing upward.
   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.
   WARNING:
   After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.

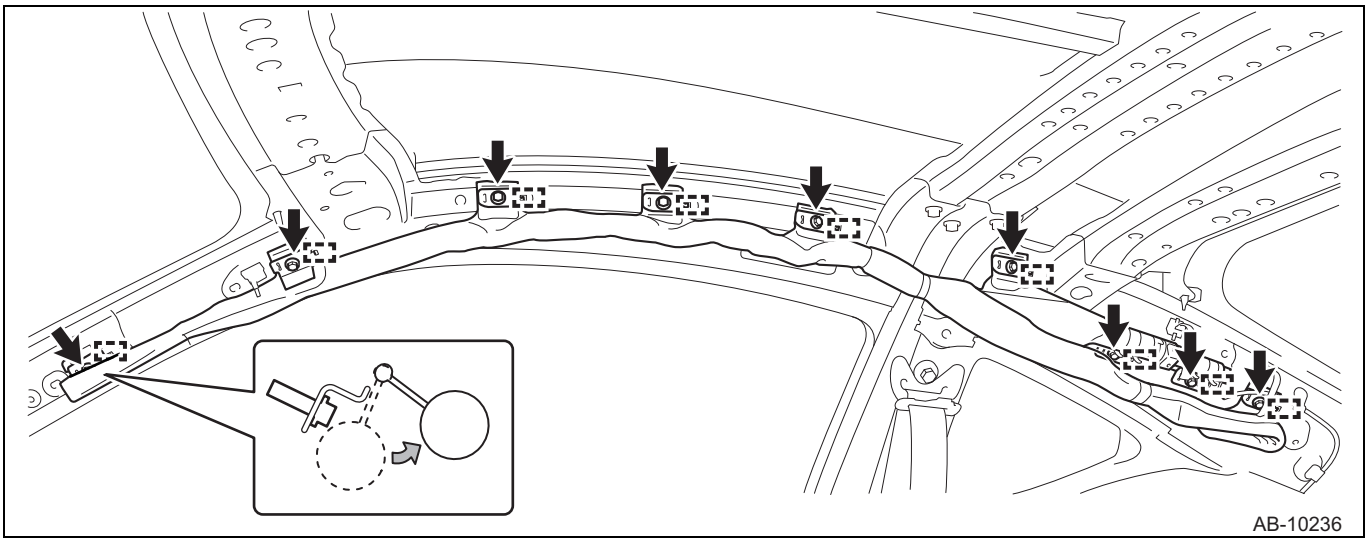


(3) Using a fine flat tip screwdriver wrapped with protective tape, unlock and disconnect the airbag connector.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | Airbag connector |
| *a | Unlock it. |

(4) Remove 9 bolts and 9 guides, and remove the curtain airbag module RH.
NOTE:
When removing the bolts and the guides, start from the front side of the vehicle.



RS

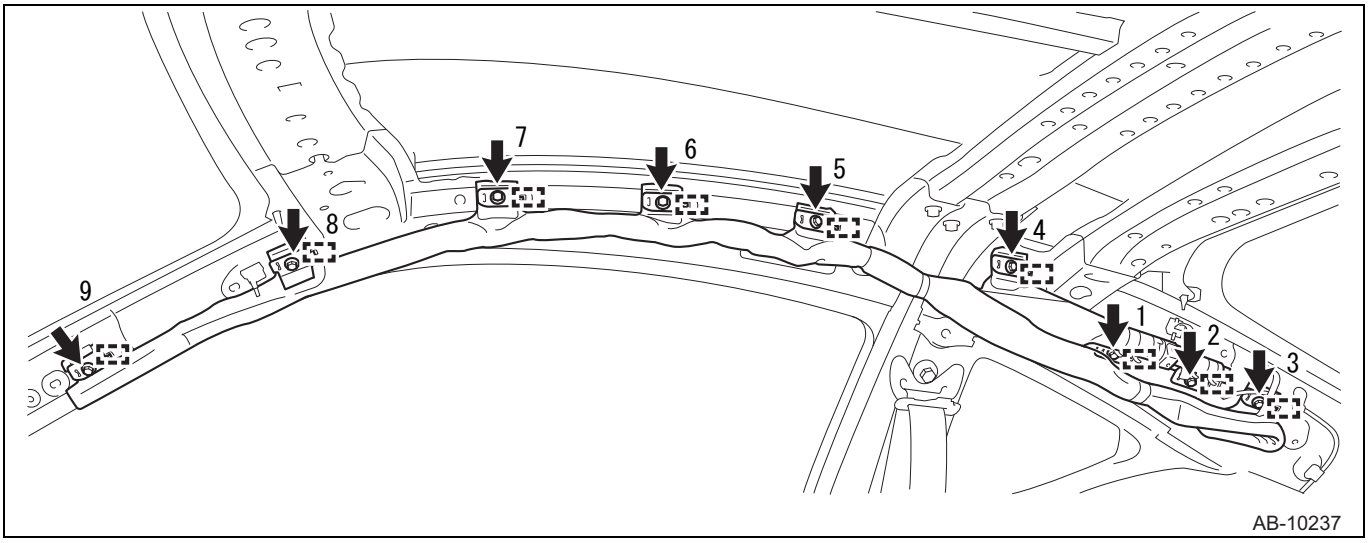
## Installation

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)
CAUTION:
- Do not allow the harnesses and the connectors to interfere or get tangled with other parts.
- When installing the curtain airbag module, install a specified part at specified place.
- Be careful not to damage the curtain airbag module during installation.
- Never open the curtain airbag module before installation. Never reuse the deployed curtain airbag module.
- Make sure that there are no foreign matter on airbag module.

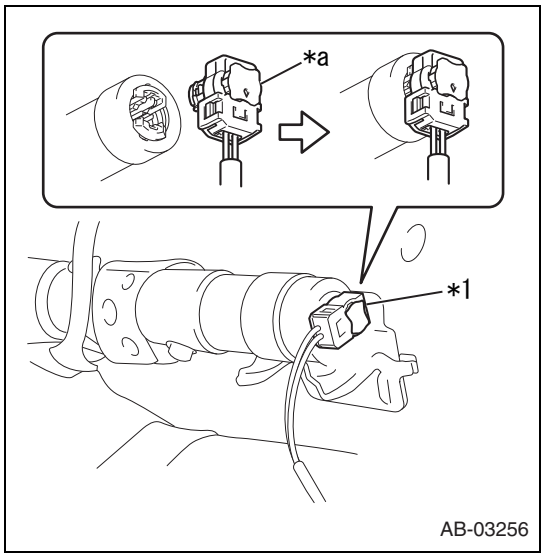
NOTE:
- The procedures described below are for the RH side. Perform the same procedures for the LH side.
- Lift the airbag module and remove the bolt to release the fixed point in the end.

1. Installation of the curtain airbag module RH
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
      - Airbag cover is scratched or torn.
      - Harness and/or connector is cracked, deformed or broken.
      - Harness wire is exposed.
      - Mounting bracket and securing clip are cracked or deformed.

(2) Check that the ignition switch is turned to OFF.
(3) Check that the battery ground terminal is disconnected.
WARNING:
After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
(4) Install the curtain airbag module RH with 9 guides and 9 bolts following the order described in the figure.



Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
CAUTION:
- This work should be performed by more than one personnel to prevent the curtain airbag module RH from being bended.
- When temporally installing the curtain airbag module, be careful not to install it in the improper condition where a part of it is turned (twisted) 360° relative to the normal condition.



(5) Connect the curtain shield airbag connector to the curtain airbag module RH.

Captions in illustration

|---|---|
| *1 | Airbag connector |
| *a | Push and lock it. |

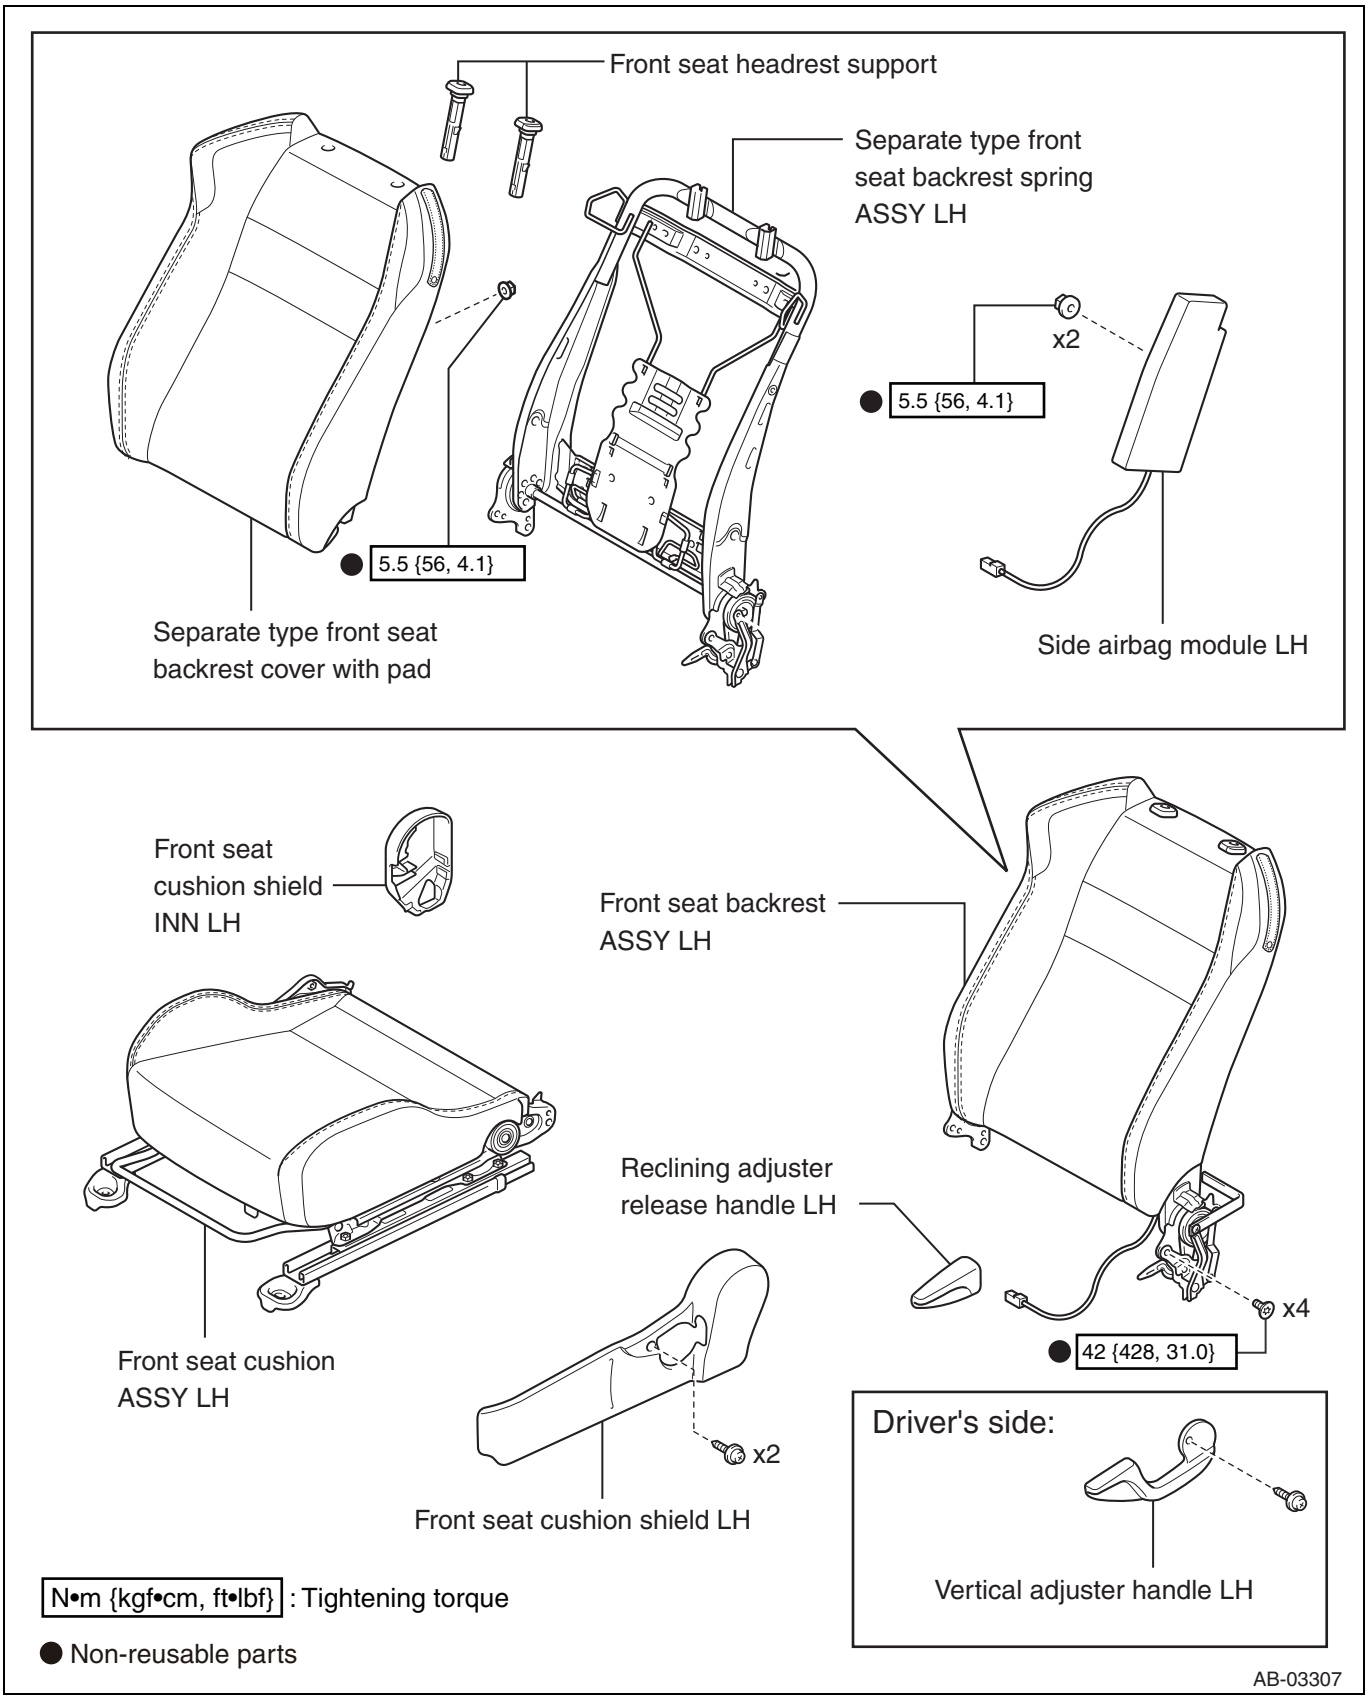
(6) Push in the lock of the airbag connector.
CAUTION:
Lock it securely.

2. Installation of the roof head lining ASSY (Refer to IT - 56)
3. Inspection of airbag warning light (Refer to RS - 53)

RS

# Side airbag module

## Exploded view



## Removal

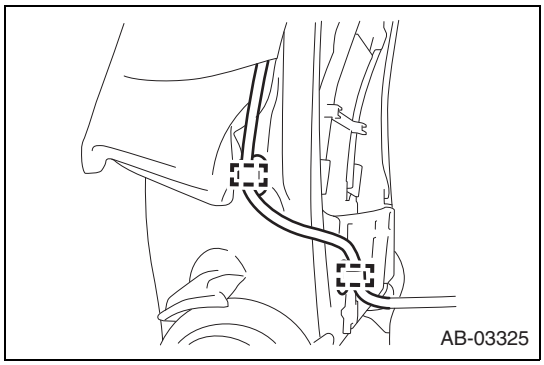
WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

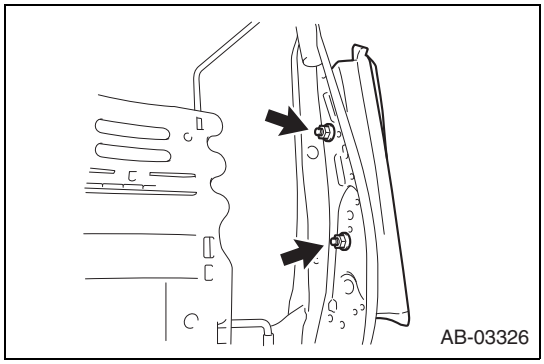
The following procedure is for LH side. Perform the same procedures for the RH side.

1. Precautions
   WARNING:
   Replace the separate type front seat backrest ASSY LH if the side airbag system is activated.
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of the front seat ASSY LH (Refer to SE - 11)
4. Removal of the reclining adjuster release handle LH (Refer to SE - 12)
5. Removal of the vertical adjuster handle LH (driver's side) (Refer to SE - 13)
6. Removal of the front seat cushion shield LH (Refer to SE - 13)
7. Removal of the front seat cushion shield INN LH (Refer to SE - 13)
8. Removal of the separate type front seat backrest ASSY LH (Refer to SE - 14)
9. Removal of the separate type front seat backrest cover with pad (Refer to SE - 15)



AB-03325

10. Removal of the side airbag module LH
    (1) Release the two clamps and disconnect the wiring harness.



AB-03326

(2) Remove 2 nuts and remove the side airbag module LH.
WARNING:
- Do not reuse the removed nuts.
- If the seat frame ASSY is deformed or damaged, replace it with a new one.

## Installation

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

CAUTION:
- Be careful not to stain or damage the separate type front seat backrest cover during assembly. Do not reuse hog rings.
- Secure the hog rings using a hog ring pliers.
- Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.

NOTE:

The following procedure is for LH side. Unless otherwise specified, perform the same procedures for the RH side.

1. Installation of the side airbag module LH
   WARNING:
   - Do not reuse the removed nuts.
   - If the seat frame ASSY is deformed or damaged, replace it with a new one.
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
      - Make sure that there is no foreign matters on the side airbag module.
      - Front seat, airbag module and mounting bracket are damaged or deformed.
      - Harness and/or connector is cracked, deformed or broken.
      - Harness wire is exposed.
   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
      WARNING:
      After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   (4) Install the side airbag module LH with 2 new nuts.
      Standard value:T=5.5N·m {56kgf·cm} {4.1ft·lbf}
   (5) Engage the two clamps to connect the wiring harness.
2. Installation of the separate type front seat backrest cover with pad (Refer to SE - 22)
3. Installation of the separate type front seat backrest ASSY LH
4. Installation of the front seat cushion shield INN LH (Refer to SE - 25)
5. Installation of the front seat cushion shield LH (Refer to SE - 25)
6. Installation of the vertical adjuster handle LH (driver's side) (Refer to SE - 25)
7. Installation of the reclining adjuster release handle LH (Refer to SE - 25)
8. Installation of the front seat ASSY LH (Refer to SE - 25)
9. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
10. Inspection of airbag warning light (Refer to RS - 53)

## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

The following procedure is for LH side. Unless otherwise specified, perform the same procedures for the RH side.

1. Precautions

   CAUTION:

   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

2. Disconnection of the battery ground terminal

   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)

   WARNING:

   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.

   CAUTION:

   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.

3. Removal of the front sub sensor LH
   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the front sub sensor LH itself. Make sure to confirm the auxiliary battery ground terminal is disconnected before starting the work.
   (3) Remove the clip and move the washer tank filler.

   (4) Remove 2 bolts and 2 guides.
   CAUTION:
   - Do not apply strong impact (such as dropping) to the front sub sensor LH.
   - If strong impact is applied to the front sub sensor LH, replace it with a new one.
   - Do not remove the front sub sensor from the bracket. If the front sub sensor is removed from the bracket, replace it with a new one.

   (5) Disconnect the connector from the front sub sensor LH, and remove the front sub sensor LH.

   Do not hold and pull the wiring harness.

RS

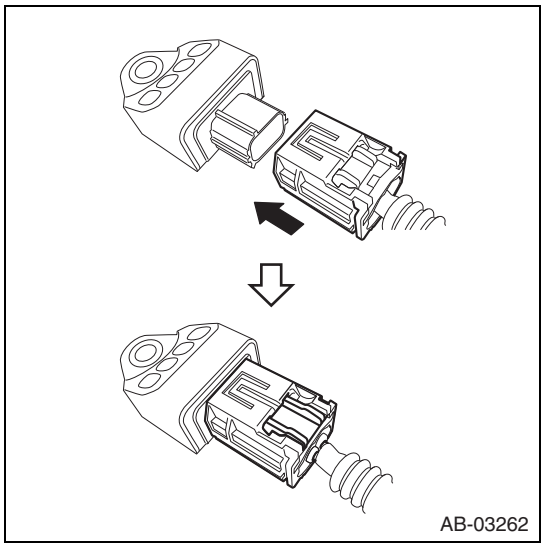
## Installation

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)
CAUTION:
- If the airbag has been activated, replace the front sub sensor with a new one.
- Do not reuse the bolt and nut.
  Always replace with the specified new bolt and nut.

NOTE:
The following procedure is for LH side. Unless otherwise specified, perform the same procedures for the RH side.

1. Installation of the front sub sensor LH
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
      - Front sub sensor and bracket are damaged.
      - Connector is damaged.
   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
   WARNING:
      - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.

- If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the front sub sensor LH itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.



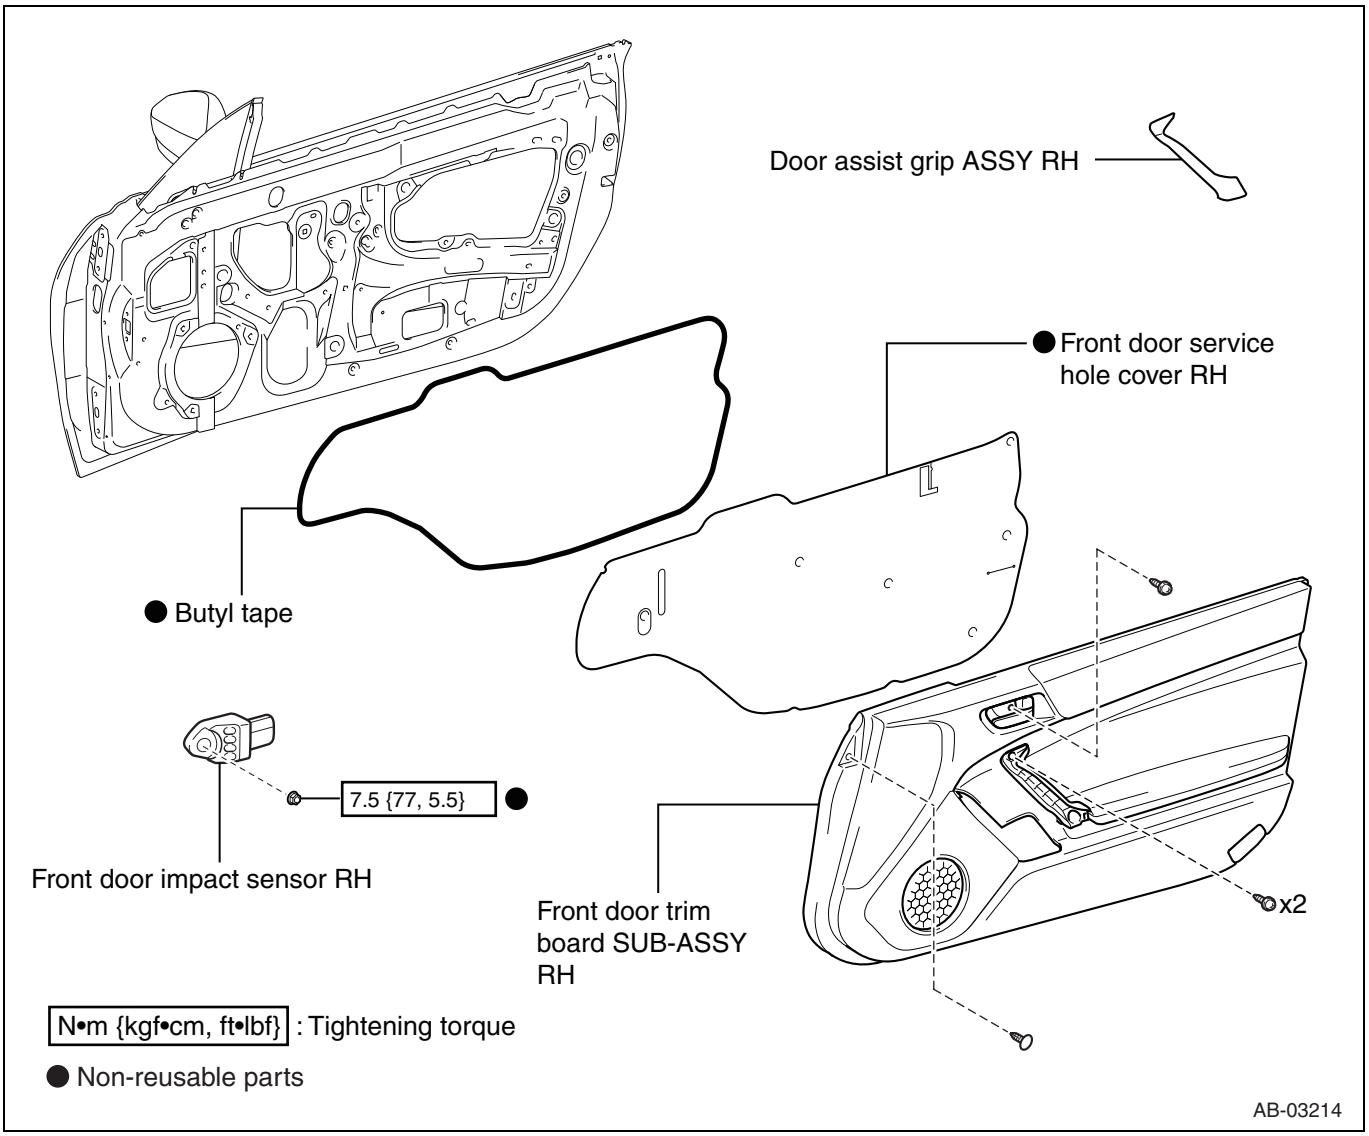
(4) Connect the connector to the front sub sensor LH.
CAUTION:
When engaging the connector, insert it straight taking care not to twist it.

(5) Insert 2 guides and install temporally the front sub sensor LH.
(6) Using 2 bolts, install the front sub sensor LH.
Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}
(7) Check the front sub sensor LH for looseness.
(8) Move the washer tank filler to the original position.

2. Connection of the battery ground terminal
Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
3. Inspection of airbag warning light (Refer to RS - 53)

# Front door impact sensor

## Exploded view



## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Precautions

   CAUTION:

   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

2. Disconnection of the battery ground terminal

   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)

   WARNING:

   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.

   CAUTION:

   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.

3. Removal of the door assist grip ASSY RH (Refer to DH - 32)

4. Removal of the front door trim board SUB-ASSY RH (Refer to DH - 32)
5. Removal of the front door service hole cover RH (Refer to DH - 36)
6. Removal of the front door impact sensor ASSY RH
   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the front door impact sensor ASSY RH itself. Make sure to confirm the auxiliary battery ground terminal is disconnected before starting the work.

   (3) Remove the nut.

Captions in illustration

| | |
|---|---|
| *1 | Push the lock button |
| *2 | While pressing the lock button, pull the outer housing |
| *3 | Push the lock button |
| *4 | While pressing the lock button, pull the outer housing |

CAUTION:
- The pin section (counter rotation part) of the front door impact sensor ASSY RH is easily damaged. When loosening the nut, hold the front door impact sensor ASSY RH by hand.
- Do not apply strong impact (such as dropping) to the front door impact sensor ASSY RH.
- If strong impact is applied to the front door impact sensor ASSY RH, replace it with a new one.

   (4) Slide the outer housing to the direction of the arrow in the figure to disconnect the connector and remove the front door impact sensor ASSY RH.
   CAUTION:
   Do not hold and pull the wiring harness.

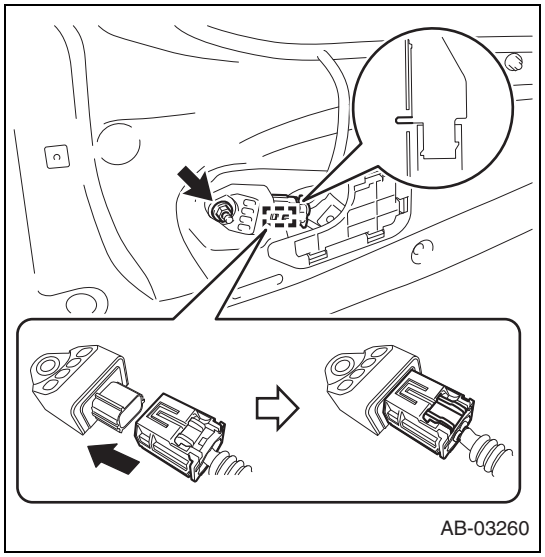
## Installation

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)
CAUTION:
- If the airbag has been activated, replace the front door impact sensor with a new one.
- Do not reuse the bolt and nut.
  Always replace with the specified new bolt and nut.

NOTE:
The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Installation of the front door impact sensor ASSY RH
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
   - Front door impact sensor is damaged.
   - Connector is damaged.

   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the front door impact sensor ASSY RH itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.



AB-03260

(4) Insert the connector to the direction of the arrow in the figure and connect it to the front door impact sensor ASSY RH.
CAUTION:
When engaging the connector, insert it straight taking care not to twist it.
NOTE:
When the connector is connected, it makes a clicking sound.

(5) Insert the pin section (counter rotation part) into the body hole, and install the front door impact sensor ASSY RH with a nut.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
CAUTION:
- Do not reuse the front door impact sensor ASSY RH, if strong impact (such as dropping) is applied to it during the work.
- Set the pin section (counter rotation part) to the body hole securely.
- The pin section (counter rotation part) is easily damaged. When tightening the bolt, hold the front door impact sensor ASSY RH by hand.

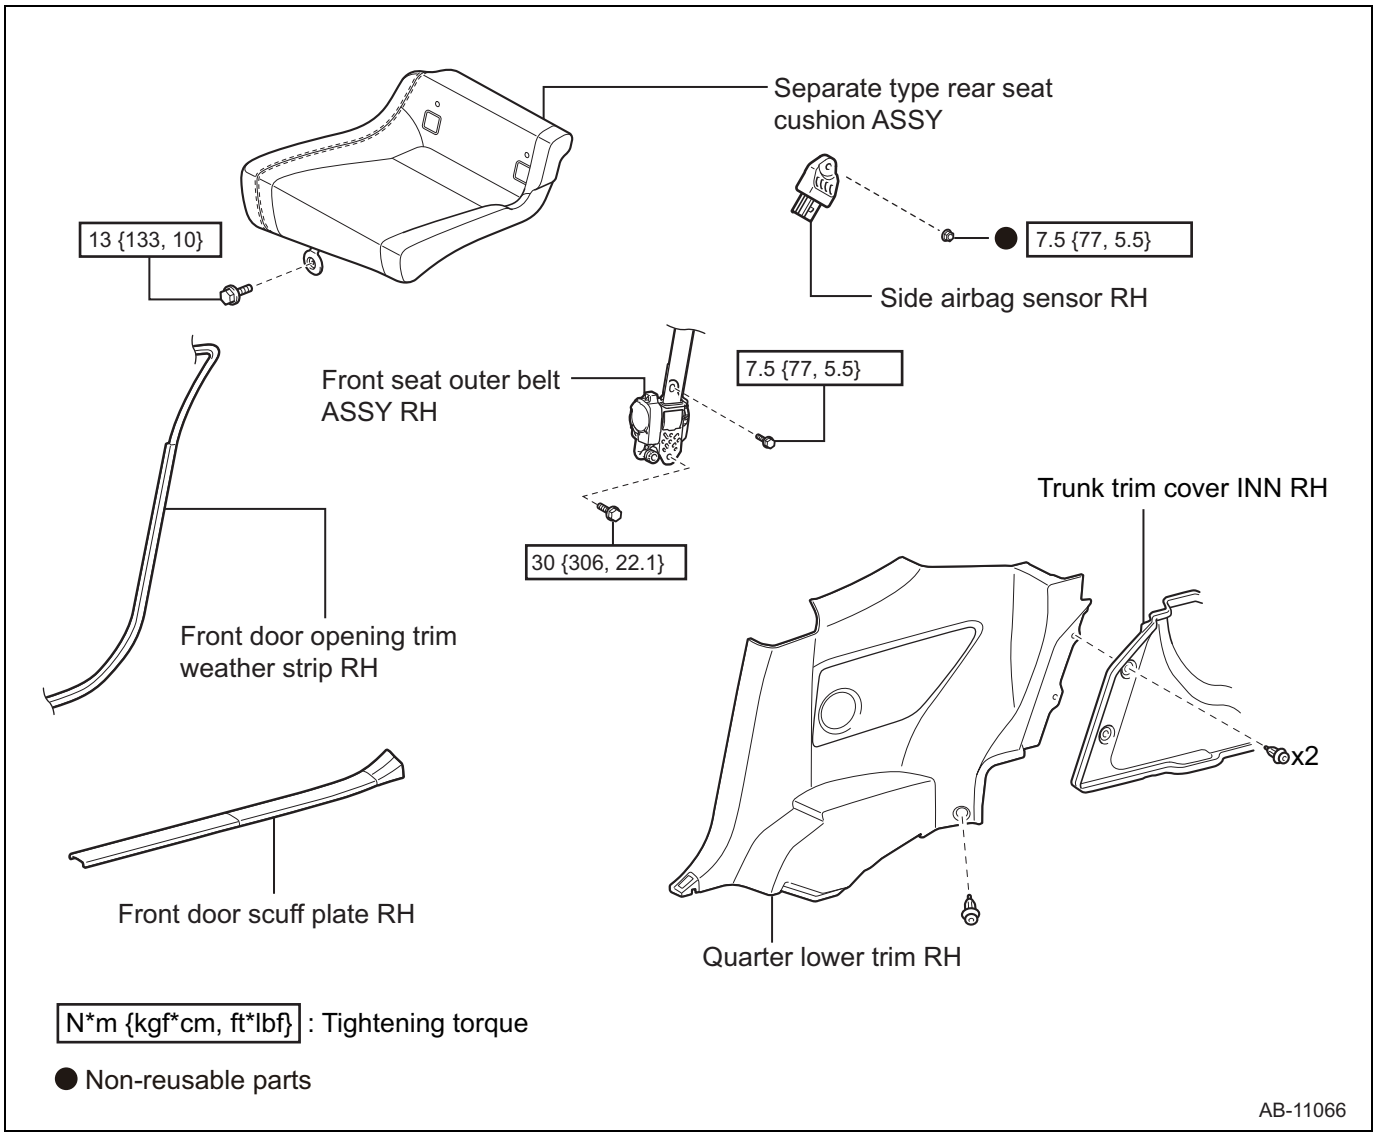
(6) Check the installed front door impact sensor ASSY RH for looseness.

RS

2. Installation of the front door service hole cover RH (Refer to DH - 49)
3. Installation of the front door trim board SUB-ASSY RH (Refer to DH - 52)
4. Installation of the door assist grip ASSY RH (Refer to DH - 54)
5. Connection of the battery ground terminal
Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
6. Inspection of airbag warning light (Refer to RS - 53)

# Side airbag sensor

## Exploded view



## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

The procedures described below are for the RH side. Unless otherwise specified, perform the same procedures for the LH side.

1. Precautions

   CAUTION:

   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

2. Disconnection of the battery ground terminal

   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)

   WARNING:

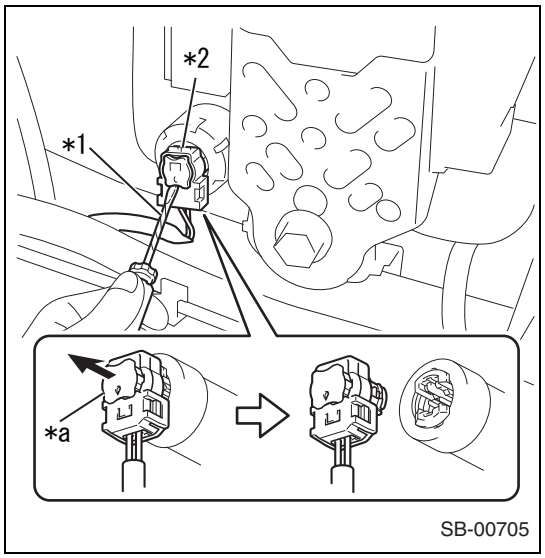
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.

   CAUTION:

   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.

3. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)

4. Removal of the front door scuff plate RH (Refer to IT - 48)
5. Removal of the front door opening trim weather strip RH
   (1) Remove the front door opening trim weather strip RH to the extent that the luggage compartment trim side cover RH can be removed.
6. Removal of quarter lower trim RH (Refer to IT - 49)



7. Removal of the seat belt pretensioner RH
   (1) Using the fine flat tip screwdriver wrapped with protective tape, pull off the lock of the pretensioner connector to unlock it.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | Pretensioner connector |
| *a | Unlock it. |

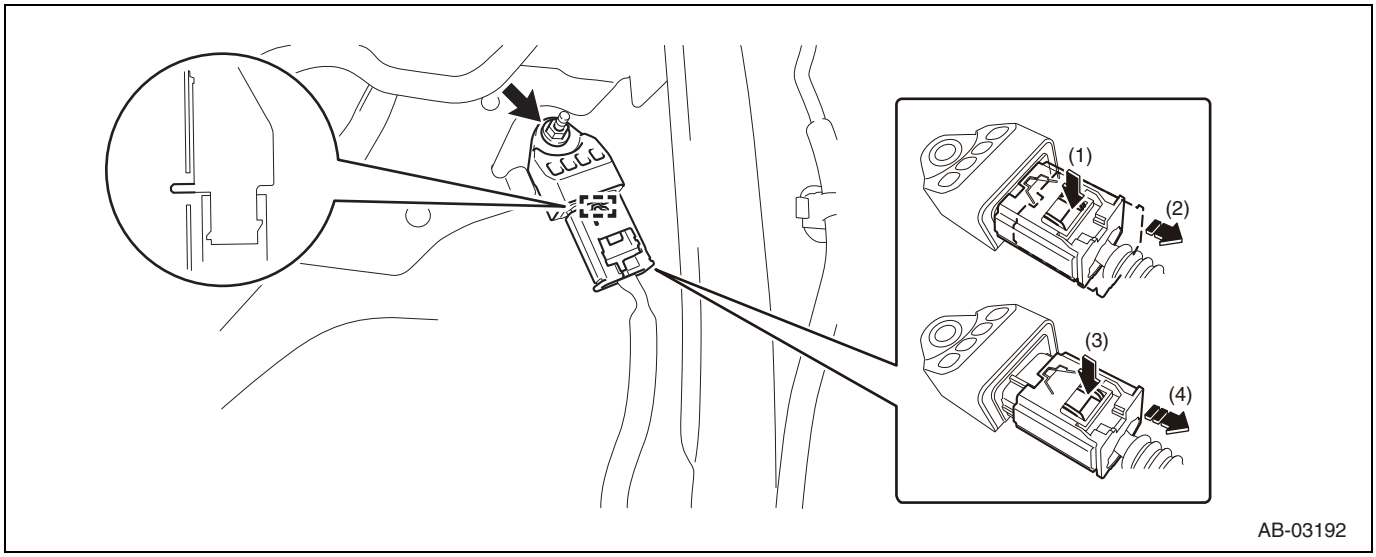
   (2) Using the fine flat tip screwdriver wrapped with protective tape, disconnect the pretensioner connector.

   (3) Remove 2 bolts and guides, and remove the seat belt pretensioner RH.

RS

8. Removal of the side airbag sensor RH
   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the side airbag sensor RH itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.

   (3) Remove the nut and remove the side airbag sensor RH.



CAUTION:
- The pin section (counter rotation part) of the side airbag sensor RH is easily damaged. When loosening the nut, hold the side airbag sensor RH by hand.
- Do not apply strong impact (such as dropping) to the side airbag sensor RH.
- If strong impact is applied to the side airbag sensor RH, replace it with a new one.

## Installation

WARNING:

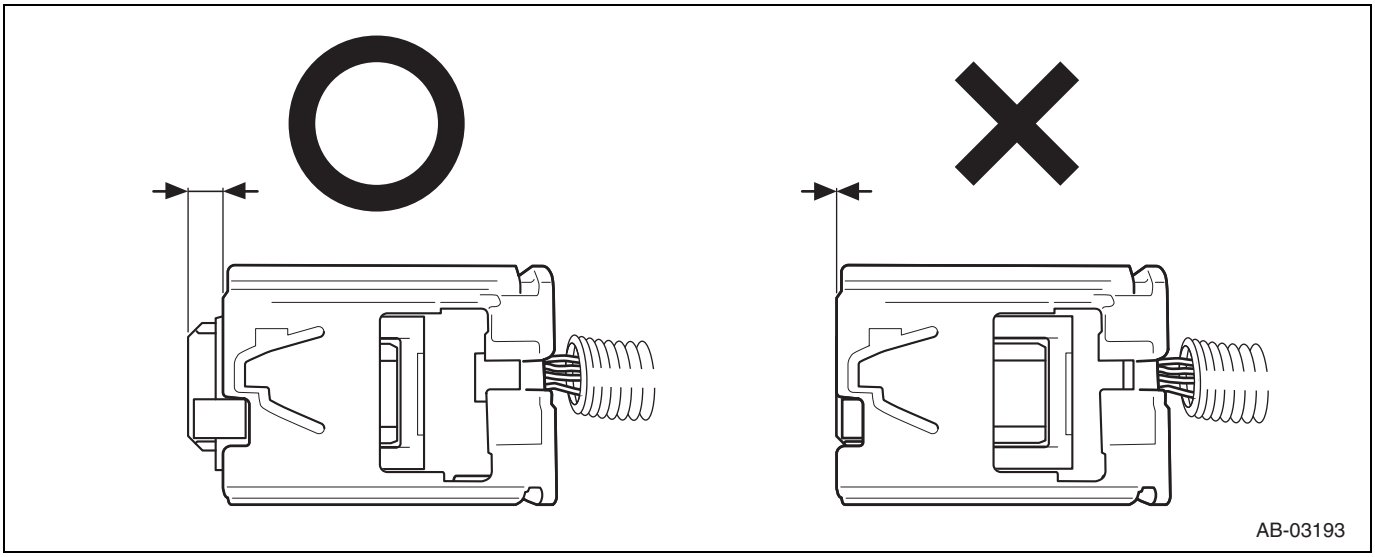
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

CAUTION:
- If the airbag has been activated, replace the side airbag sensor with a new one.
- Do not reuse the bolt and nut.
  Always replace with the specified new bolt and nut.

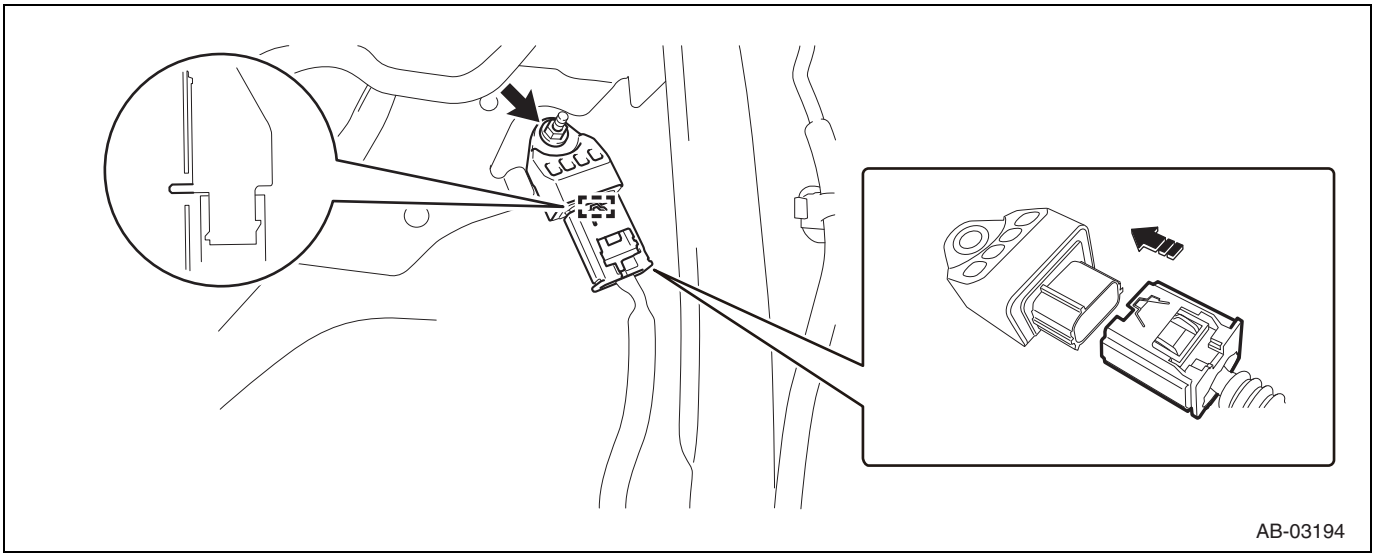
NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Installation of the side airbag sensor RH
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
      - Side airbag sensor is damaged.
      - Connector is damaged.
   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
      WARNING:
      - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
      - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the side airbag sensor RH itself. Make sure to confirm the auxiliary battery ground terminal is disconnected before starting the work.
   (4) Before connecting the connector, confirm that it is in the position shown in the figure.



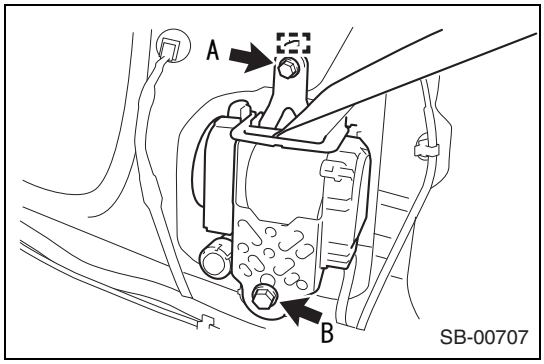
(5) Holding the yellow connector part, insert the connector to the direction of the arrow in the figure and connect it to the side airbag sensor RH.



CAUTION:
When engaging the connector, insert it straight taking care not to twist it.
NOTE:
When the connector is connected, it makes a clicking sound.

(6) Insert the pin section (counter rotation part) into the body hole, and install the side airbag sensor RH with a nut.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
CAUTION:
- Do not reuse the side airbag sensor RH, if strong impact (such as dropping) is applied to it during the work.
- Set the pin section (counter rotation part) to the body hole securely.
- The pin section (counter rotation part) is easily damaged. When tightening the bolt, hold the side airbag sensor RH by hand.

(7) Check the installed side airbag sensor RH for looseness.



2. Installation of the seat belt pretensioner RH
   (1) Insert the guide, and install the retractor part of the seat belt pretensioner RH with 2 bolts.
   Standard value:Bolt A
   T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   Bolt B
   T=30N·m {306kgf·cm} {22.1ft·lbf}

   (2) Connect the pretensioner connector to the seat belt pretensioner RH.

Captions in illustration

| | |
|---|---|
| *a | Lock it. |

   (3) Push in the lock of the pretensioner connector.
   CAUTION:
   Lock it securely.

3. Installation of the quarter lower trim RH (Refer to IT - 57)
4. Installation of the front door opening trim weather strip RH (Refer to IT - 58)
5. Installation of the front door scuff plate RH (Refer to IT - 58)
6. Installation of separate type rear seat cushion ASSY (Refer to SE - 39)

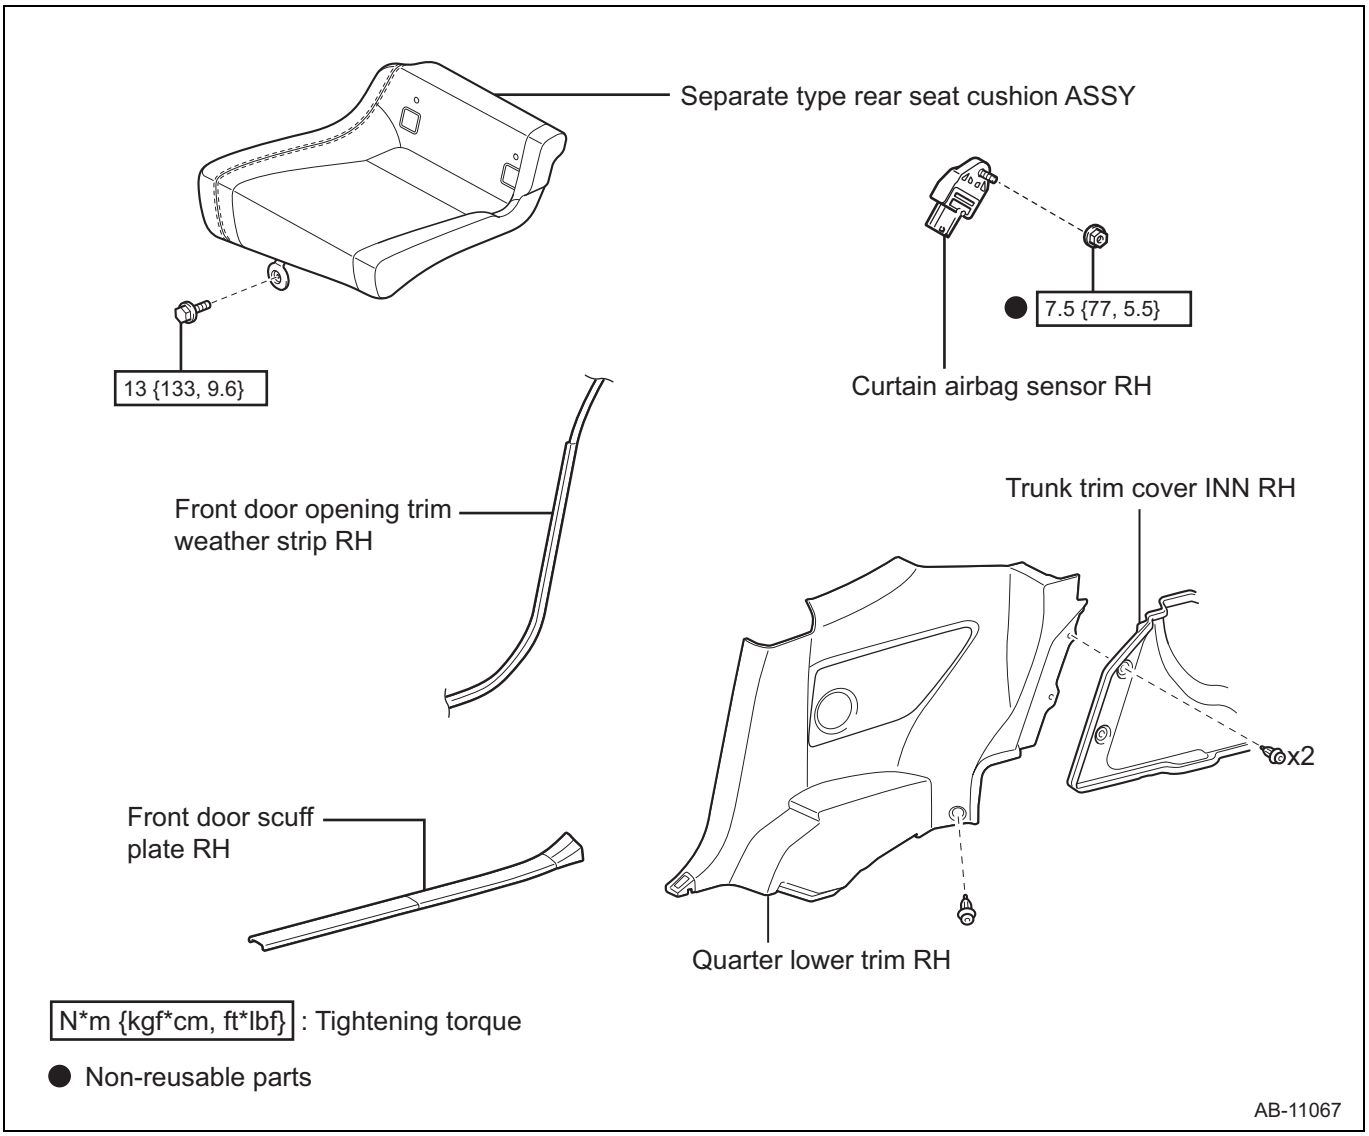
# Curtain airbag sensor

## Exploded view



## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Precautions

   CAUTION:

   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

2. Disconnection of the battery ground terminal

   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)

   WARNING:

   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.

   CAUTION:

   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.

3. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)

4. Removal of the front door scuff plate RH (Refer to IT - 48)
5. Removal of the front door opening trim weather strip RH
   (1) Remove the front door opening trim weather strip RH to the extent that the quarter lower trim RH can be removed.
6. Removal of quarter lower trim RH (Refer to IT - 49)
7. Removal of the curtain airbag sensor RH

   WARNING:

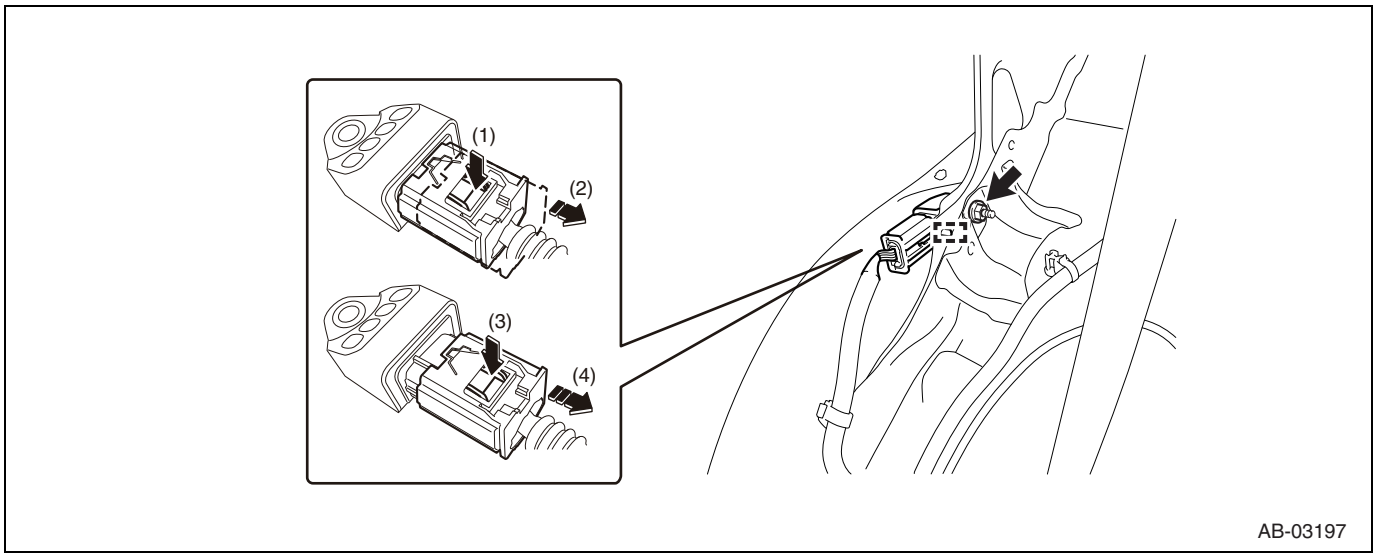
   If the work is performed before disconnecting the battery ground terminal, the airbag may be deployed just by the impact applied to the curtain airbag sensor RH itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.

   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.

   WARNING:

   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the curtain airbag sensor RH itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.

   (3) Remove the nut and remove the curtain airbag sensor RH.



CAUTION:

- The pin section (counter rotation part) of the curtain airbag sensor RH is easily damaged. When loosening the nut, hold the curtain airbag sensor RH by hand.
- Do not apply strong impact (such as dropping) to the curtain airbag sensor RH.
- If strong impact is applied to the curtain airbag sensor RH, replace it with a new one.

## Installation

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

CAUTION:

- If the airbag has been activated, replace the curtain airbag sensor with a new one.
- Do not reuse the bolt and nut.
  Always replace with the specified new bolt and nut.

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

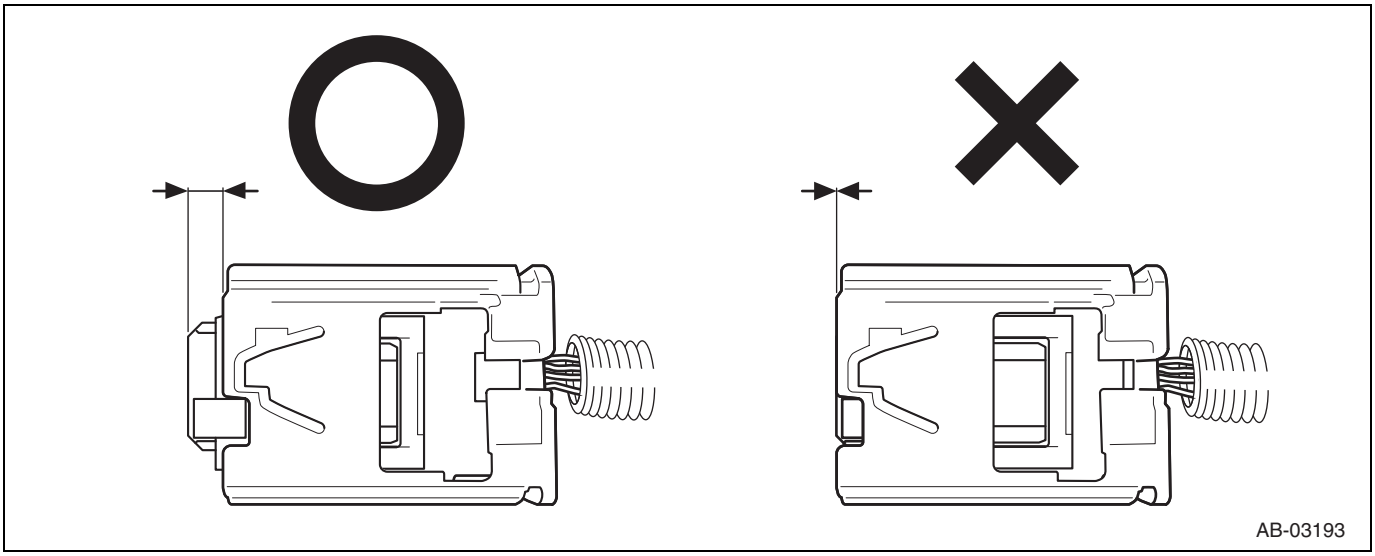
1. Installation of the curtain airbag sensor RH
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
      - Curtain airbag sensor is damaged.
      - Connector is damaged.
   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.

   WARNING:

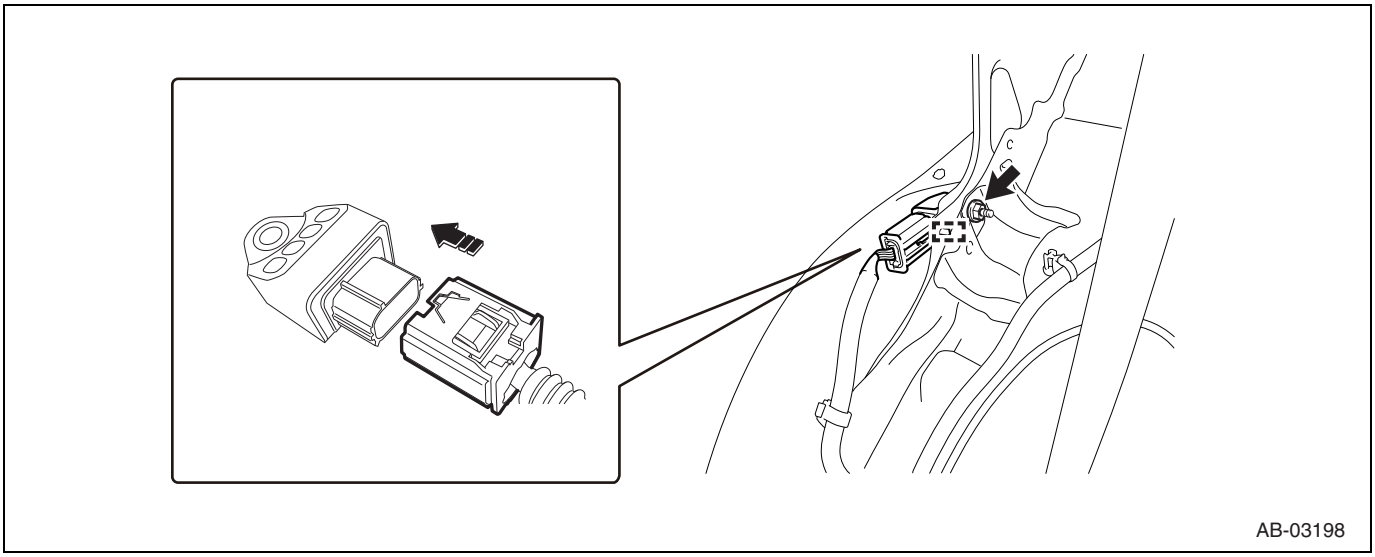
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.

- If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the curtain airbag sensor RH itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.

(4) Before connecting the connector, confirm that it is in the position shown in the figure.



(5) Holding the yellow connector part, insert the connector to the direction of the arrow in the figure and connect it to the curtain airbag sensor RH.



NOTE:
When the connector is connected, it makes a clicking sound.

(6) Insert the pin section (counter rotation part) into the body hole, and install the curtain airbag sensor RH with a nut.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
CAUTION:
- Do not reuse the curtain airbag sensor RH, if strong impact (such as dropping) is applied to it during the work.
- Set the pin section (counter rotation part) to the body hole securely.
- The pin section (counter rotation part) is easily damaged. When tightening the nut, hold the curtain airbag sensor RH by hand.

(7) Shake the curtain airbag sensor RH, and check for looseness.

2. Installation of the quarter lower trim RH (Refer to IT - 57)
3. Installation of the front door opening trim weather strip RH (Refer to IT - 58)
4. Installation of the front door scuff plate RH (Refer to IT - 58)
5. Installation of the separate type rear seat cushion ASSY
6. Connection of the battery ground terminal
Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}

7. Inspection of airbag warning light (Refer to RS - 53)

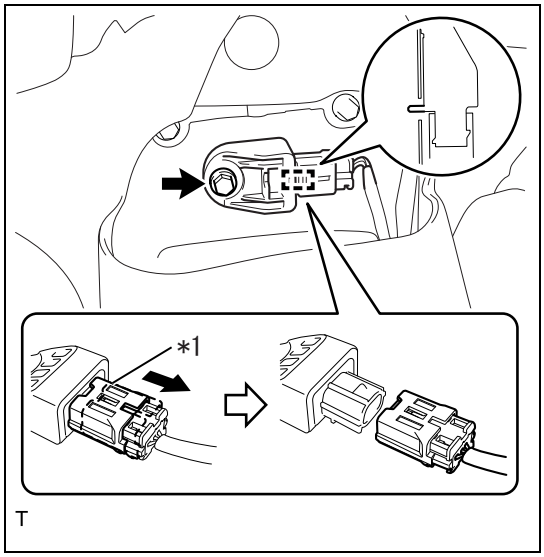
## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of console box ASSY (Refer to IT - 33)
4. Removal of the satellite safing sensor
   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the satellite safing sensor itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.



T

(3) Remove the bolt.
CAUTION:
- The pin section (counter rotation part) of the satellite safing sensor is easily damaged. When loosening the bolt, hold the satellite safing sensor by hand.
- Do not apply strong impact (such as dropping) to the satellite safing sensor.
- If strong impact is applied to the satellite safing sensor, replace it with a new one.

|---|---|
| *1 | Outer housing |

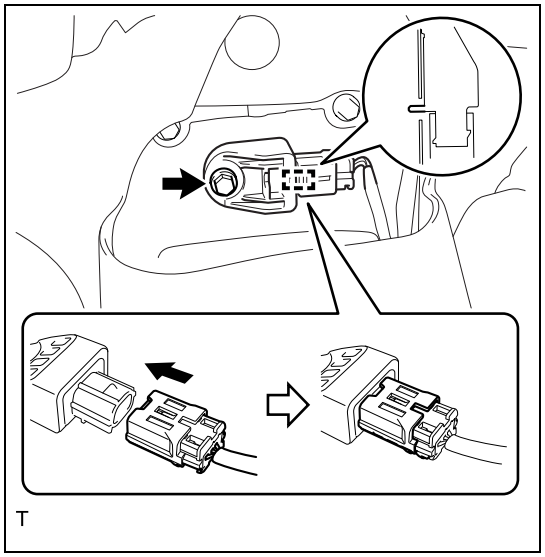
(4) Slide the outer housing to the direction of the arrow in the figure to disconnect the connector and remove the satellite safing sensor.
CAUTION:
Do not hold and pull the wiring harness.

## Installation

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)
CAUTION:
- If the airbag has been activated, replace the satellite safing sensor with a new one.
- Do not reuse the bolt and nut.
  Always replace with the specified new bolt and nut.

1. Installation of the satellite safing sensor
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
   - Satellite safing sensor is damaged.
   - Connector is damaged.

   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the satellite safing sensor itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.



T

(4) Insert the connector to the direction of the arrow in the figure and connect it to the satellite safing sensor.
CAUTION:
When engaging the connector, insert it straight taking care not to twist it.
NOTE:
When the connector is connected, it makes a clicking sound.

(5) Insert the pin section (counter rotation part) into the body hole, and install the satellite safing sensor with a bolt.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
CAUTION:
- Do not reuse the satellite safing sensor, if strong impact (such as dropping) is applied to it during the work.
- Set the pin section (counter rotation part) to the body hole securely.
- The pin section (counter rotation part) is easily damaged. When tightening the bolt, hold the satellite safing sensor by hand.

(6) Check the installed satellite safing sensor for looseness.

2. Installation of console box ASSY (Refer to IT - 38)
3. Connection of the battery ground terminal
Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
4. Inspection of airbag warning light (Refer to RS - 53)

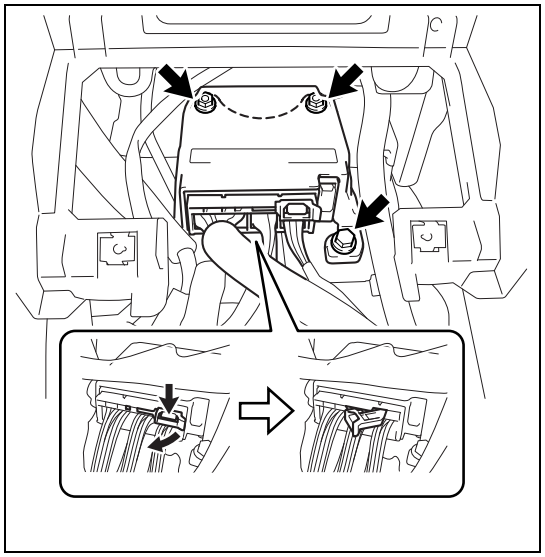
## Removal

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of console box ASSY (Refer to IT - 33)
4. Removal of the air conditioner control ASSY (for automatic air conditioning systems) (Refer to AC - 163)
5. Removal of the air conditioner control ASSY (for manual air conditioning systems) (Refer to AC - 167)
6. Removal of the air conditioner control ASSY (without air conditioner) (Refer to AC - 167)
7. Removal of the airbag control module
   (1) Check that the ignition switch is turned to OFF.
   (2) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the airbag control module itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.



(3) Unlock the connector as shown in the figure, and disconnect the connector from the airbag control module.

(4) Remove 2 bolts and nuts and disconnect the airbag control module.
CAUTION:
- Do not apply strong impact (such as dropping) to the airbag control module.
- If strong impact is applied to the airbag control module, replace it with a new one.
- The airbag control module should be stored in a dry, clean place away from moisture, heat sources, and dust.
- Do not disassemble the airbag control module.

## Installation

WARNING:

RS

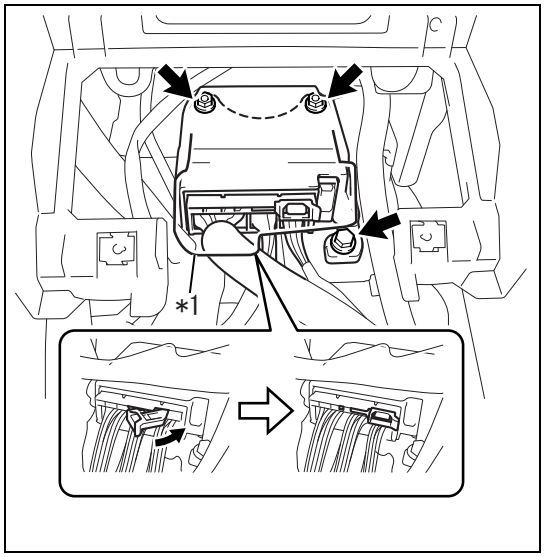
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

CAUTION:

- Do not reuse the bolt and nut.
  Always replace with the specified new bolt and nut.

1. Installation of the airbag control module
   (1) Before installation, inspect the following items and replace any faulty part with a new one.
   - Control module is deformed.
   - Control module seems to have been wet with water.
   - Control module connector is damaged.
   - Control module mounting bracket is damaged.

   (2) Check that the ignition switch is turned to OFF.
   (3) Check that the battery ground terminal is disconnected.
   WARNING:
   - After disconnecting the battery ground terminal, do not start the work before waiting for 60 seconds.
   - If the work is performed before disconnecting the battery ground terminal, the airbag may be activated just by the impact applied to the airbag control module itself. Make sure to confirm the battery ground terminal is disconnected before starting the work.



(4) Install the airbag control module with 2 bolts and nuts.
Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}
CAUTION:
- Do not reuse the airbag control module, if strong impact (such as dropping) is applied to it during the work.
- When the ignition switch is turned to ON for the first time after replacing the airbag control module, make sure that there is no one inside the vehicle.

Captions in illustration

|---|---|
| *1 | Drip-proof sheet |

(5) Connect the connector to the airbag control module as shown in the figure, and lock it securely.
CAUTION:
Check that the drip-proof sheet is not being turned over or caught in.

(6) Check the installed airbag control module for looseness.

2. Installation of the air conditioner control ASSY (for automatic air conditioning systems) (Refer to AC - 164)
3. Installation of the air conditioner control ASSY (for manual air conditioning systems) (Refer to AC - 171)
4. Installation of the air conditioner control ASSY (without air conditioner) (Refer to AC - 171)
5. Installation of console box ASSY (Refer to IT - 38)
6. Connection of the battery ground terminal
Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}

## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH side.

1. Precautions

   WARNING:

   - Before starting the work, read the precautions for the SRS airbag system to make sure to properly perform the work. (Refer to RS - 5)
   - If the side airbag module LH has been activated, replace the following parts with new ones: side airbag module ASSY LH, separate type front seat backrest frame ASSY LH, separate type front seat backrest cover LH, and the separate type front seat backrest pad LH.

   CAUTION:

   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

2. Disconnection of the battery ground terminal

   WARNING:

   - Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work.
   - The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.

   CAUTION:

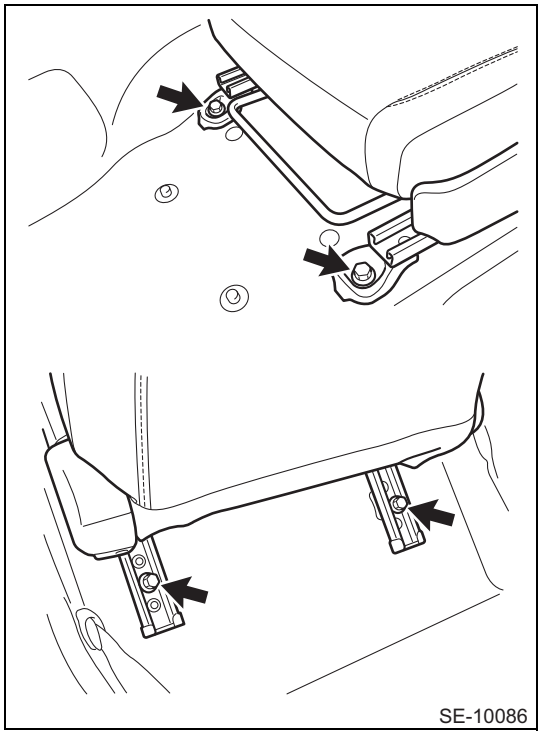
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.

3. Removal of the front seat headrest ASSY
4. Removal of the front seat ASSY LH
   (1) Slide the front seat ASSY LH to the most front position.

   (2) Release the hook and turn over the front seat cushion cover LH.

   (3) Disconnect the connectors and the wiring harness clamp.

SE



(4) Remove 2 bolts on the rear side of the front seat ASSY LH.

(5) Slide the front seat ASSY LH to the most rear position.

(6) Remove 2 bolts on the front side of the front seat ASSY LH.

(7) Remove the front seat ASSY LH.

CAUTION:

- The front seat ASSY LH must be carried out of the vehicle with the front seat headrest ASSY removed, by more than one personnel.
- Be careful not to damage the front seat ASSY LH, the body exterior and interior.

SE

## Disassembly

CAUTION:

(Passenger's seat only)

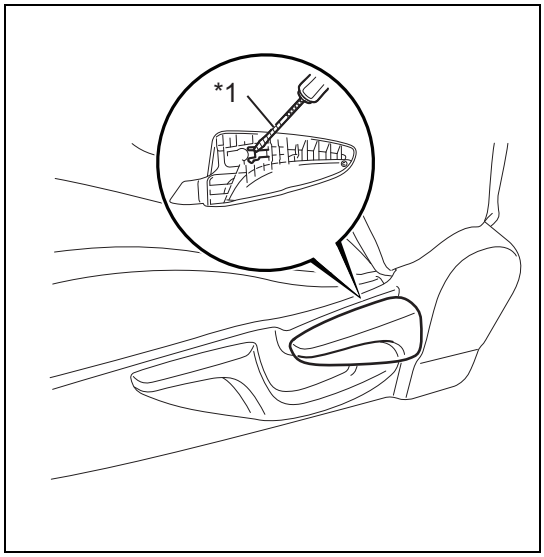
- The occupant detection control module, occupant detection sensor, front seat cushion pad and front seat cushion frame ASSY are assembled as a front cushion & frame ASSY. Therefore, never remove the occupant detection control module or the occupant detection sensor as a single unit.
- Never disconnect the connector of the occupant detection sensor from the occupant detection control module.
- When replacing the front seat cushion cover, be careful not to damage the occupant detection sensor during hog ring installation.
- Check if the occupant detection system is working normally after removing or replacing a front seat cushion cover or replacing the occupant detection system.

NOTE:

The following procedure is for LH side. Unless otherwise specified, perform the work for the RH side referring to the procedures for the LH side.

1. Removal of the reclining adjuster release handle LH

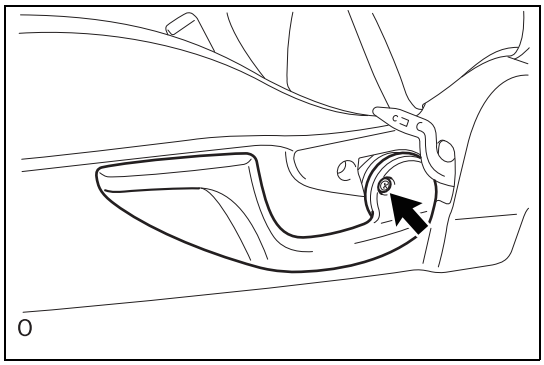
(1) Pull up the reclining adjuster release handle LH.



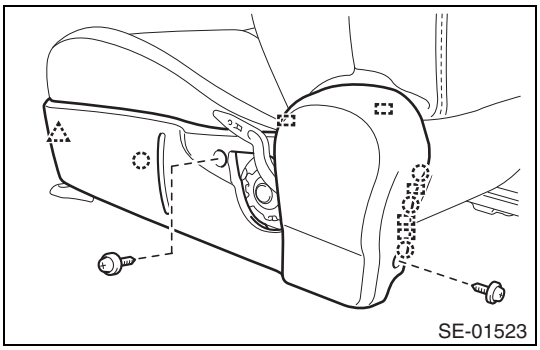
(2) As shown in the figure, release the claw by using the fine flat tip screwdriver wrapped with protective tape, and remove the reclining adjuster release handle LH.

Captions in illustration

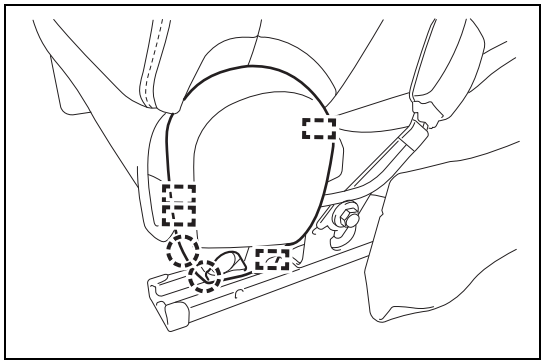
| | |
|---|---|
| *1 | Protective tape |



2. Removal of the vertical adjuster handle LH (driver's side)
   (1) Remove the screw and remove the vertical adjuster handle LH.



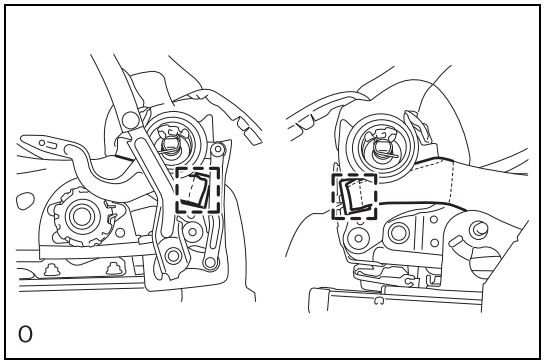
3. Removal of the front seat cushion shield LH
   (1) Remove 2 screws.
   (2) Release 4 claws, 5 guides, and the clip, and remove the front seat cushion shield LH.



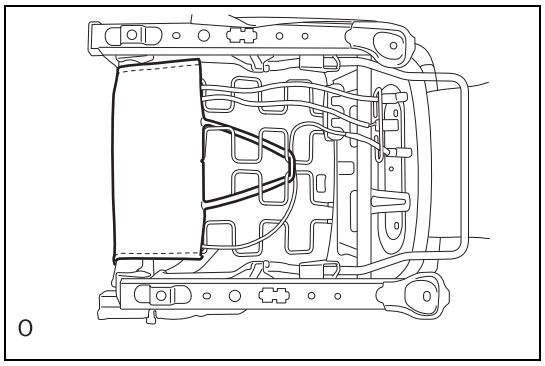
4. Removal of the front seat cushion shield INN LH
   (1) Release 2 claws, 4 guides, and the clip, and remove the front seat cushion shield INN LH.

5. Removal of the front seat inner belt ASSY LH (Refer to SB - 22)

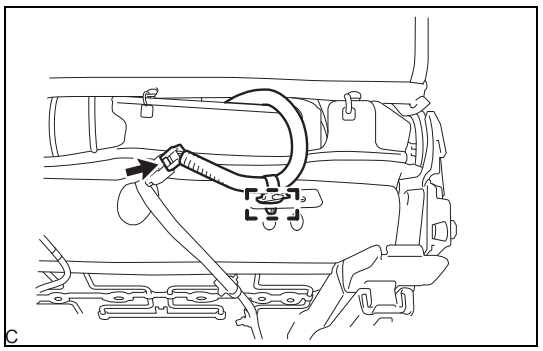
SE



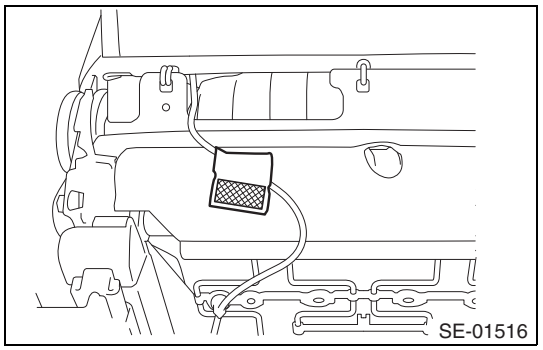
6. Removal of the front seat backrest ASSY LH
   (1) Release 2 hooks.



(2) Remove the rubber band of the separate type front seat backrest cover LH.

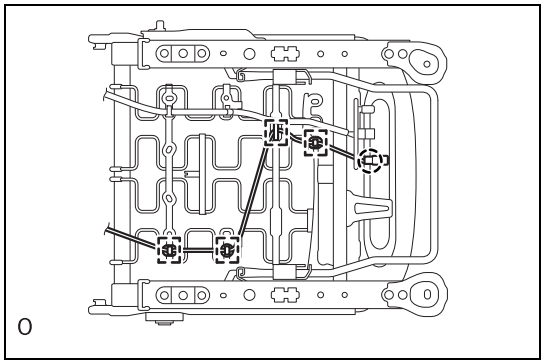


(3) Disconnect the connector and the clamp of the seat heater. (For the model with the seat heater)

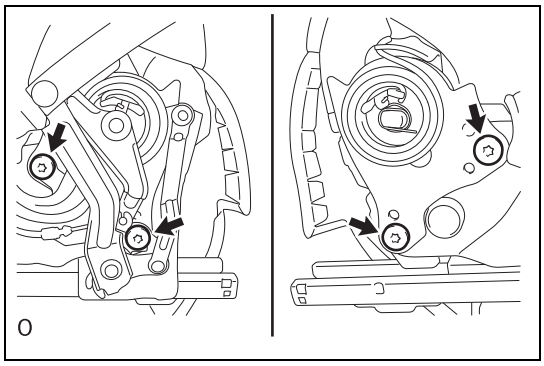


(4) Release the fastener and disconnect the wiring harness of the side airbag module LH.

SE

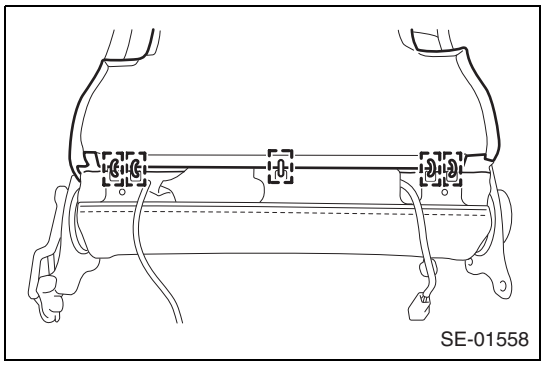


(5) Release the claw and 4 clamps, and disconnect the wiring harness of the side airbag module ASSY LH.



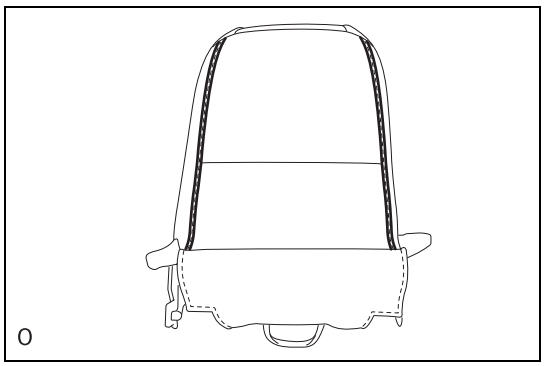
(6) Using the torque socket wrench (T40), remove 4 bolts, and remove the front seat backrest ASSY LH from the front seat cushion ASSY LH.

7. Removal of the separate type front seat backrest cover with pad

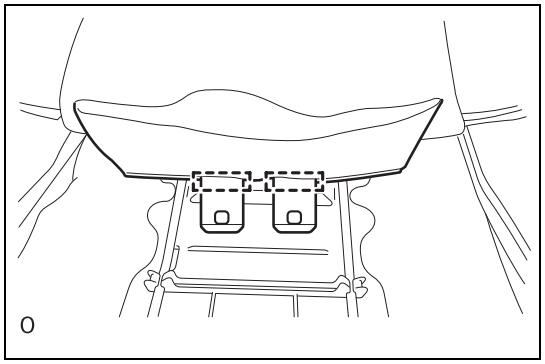


(1) Remove 5 hog rings.

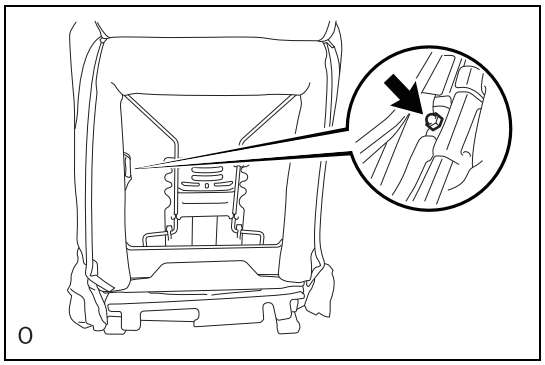
SE



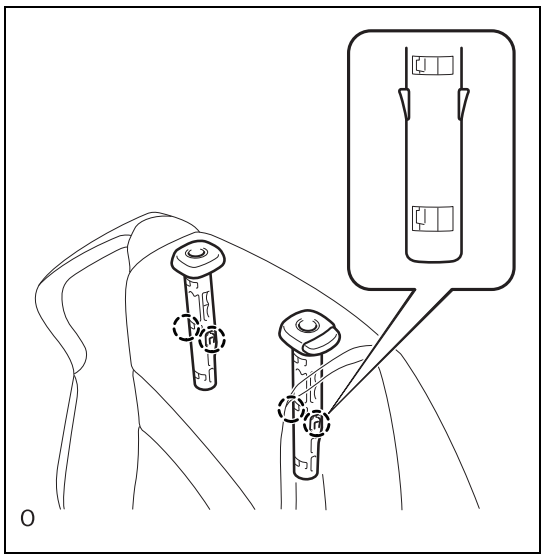
(2) Open 2 fasteners.
(3) Turn over the separate type front seat backrest cover LH.



(4) Release 2 hooks.



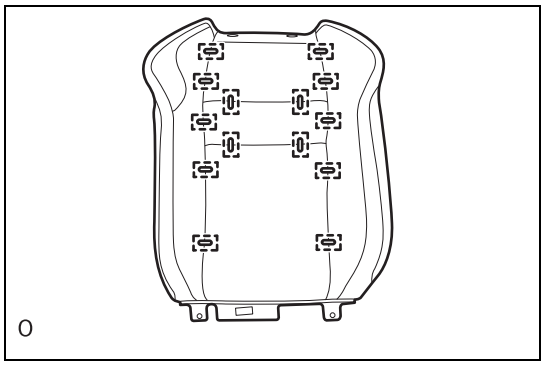
(5) Remove the nut, and disconnect 3 brackets of the separate type front seat backrest cover LH.



(6) Release 4 claws and remove 2 front seat headrest supports.
(7) Remove the separate type front seat backrest cover with pad from the separate type front seat backrest frame ASSY LH.

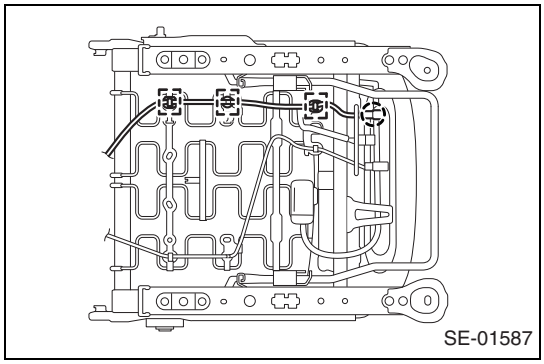
SE

8. Removal of the side airbag module LH (Refer to RS - 261)



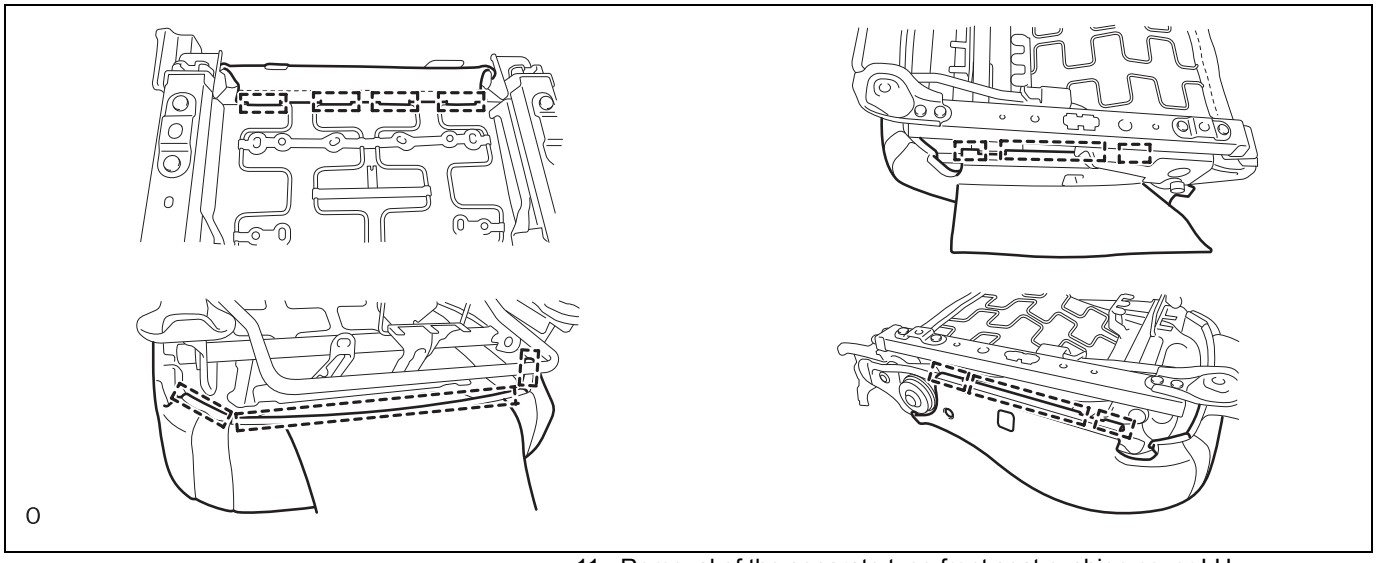
9. Removal of the separate type front seat backrest cover LH
(1) Remove 14 hog rings, and remove the separate type front seat backrest cover LH from the separate type front seat backrest pad LH.

10. Removal of the separate type front seat cushion cover with pad



(1) Release the claw and 3 clamps, and disconnect the wiring harness of the seat heater. (For the model with the seat heater)

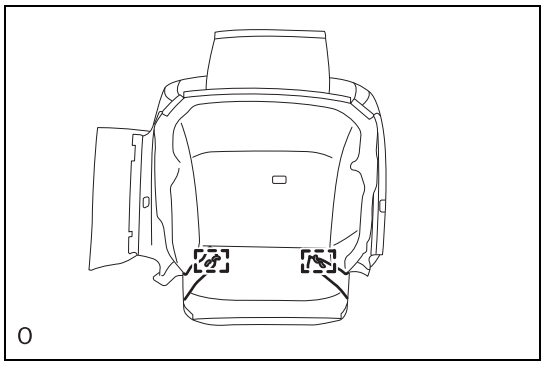
(2) Release the hooks, and remove the separate type front seat cushion cover with pad from the separate type front seat cushion frame ASSY LH. (driver's side)



O

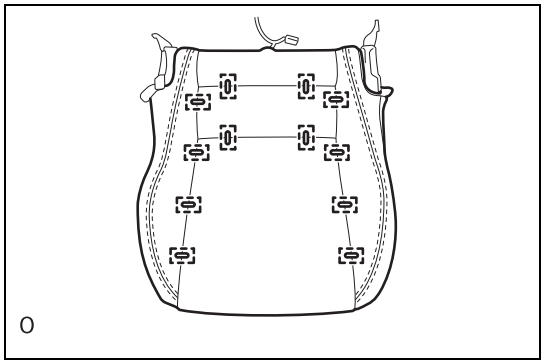
11. Removal of the separate type front seat cushion cover LH

(1) Remove 2 hog rings.



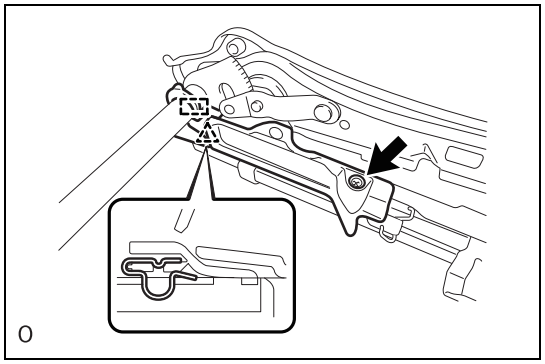
O

(2) Remove 12 hog rings, and remove the separate type front seat cushion cover LH from the separate type front seat cushion pad LH.



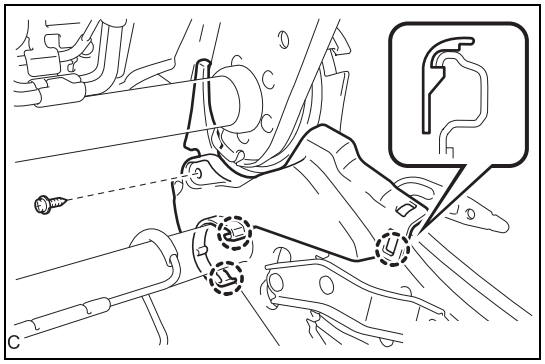
O

SE



12. Removal of the front seat cushion shield LWR LH (driver's side)
    (1) Remove the screw.
    (2) Release the hook.
    (3) Release the clip, and remove the front seat cushion shield LWR LH.

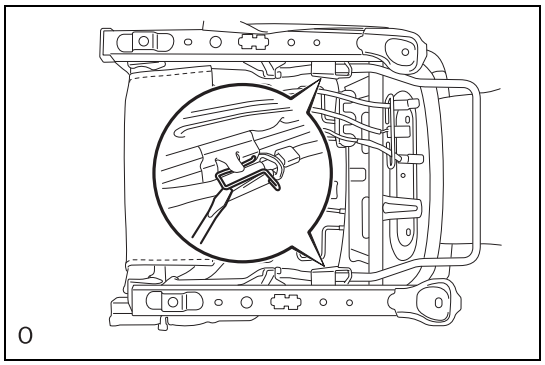
13. Removal of the front seat cushion shield LWR LH (driver's side)
    NOTE:
    Remove the part in the same manner as RH side.



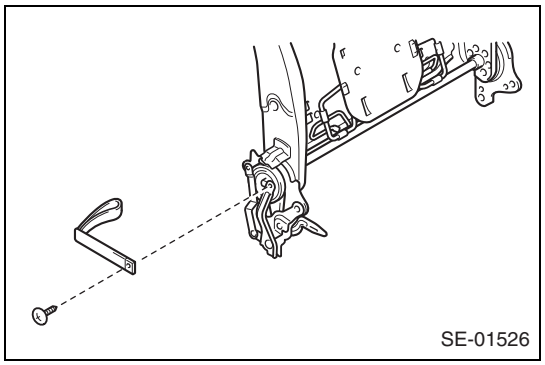
14. Removal of the front seat cushion edge protector LH
    (1) Remove the screw.
    (2) Release 3 claws and remove the front seat cushion edge protector LH.

15. Removal of the front seat cushion edge protector LH
    NOTE:
    Remove the part in the same manner as RH side.

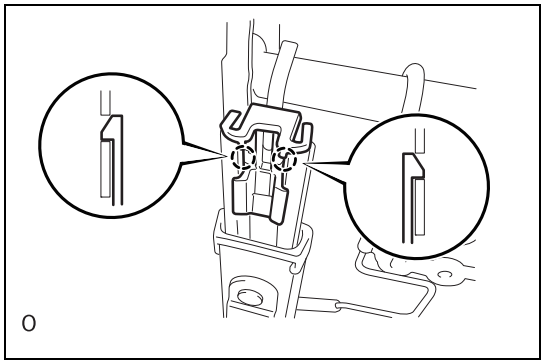
SE



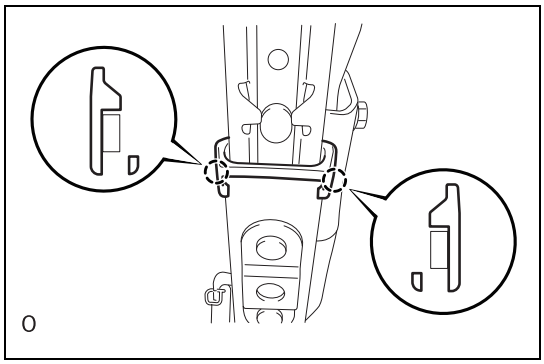
16. Removal of the seat track adjusting handle
    (1) Remove 2 springs with a screwdriver, and remove the seat track adjusting handle from the separate type front seat cushion frame ASSY LH.



17. Removal of the reclining adjuster release band (Passenger's side)
    (1) Remove the screw and remove the reclining adjuster release band.



18. Removal of the seat track cover OUT RH
    (1) Release 2 claws and remove the seat track cover OUT RH.
    NOTE:
    Remove both parts using the same procedures.

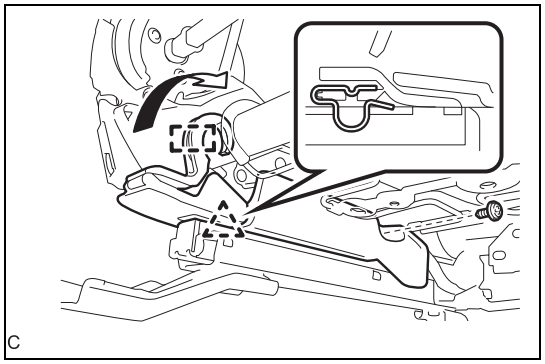


19. Removal of the front seat cushion protector No.1
    (1) Release 2 claws and remove the front seat cushion protector No.1.
    NOTE:
    Remove both parts using the same procedures.

## Assembly

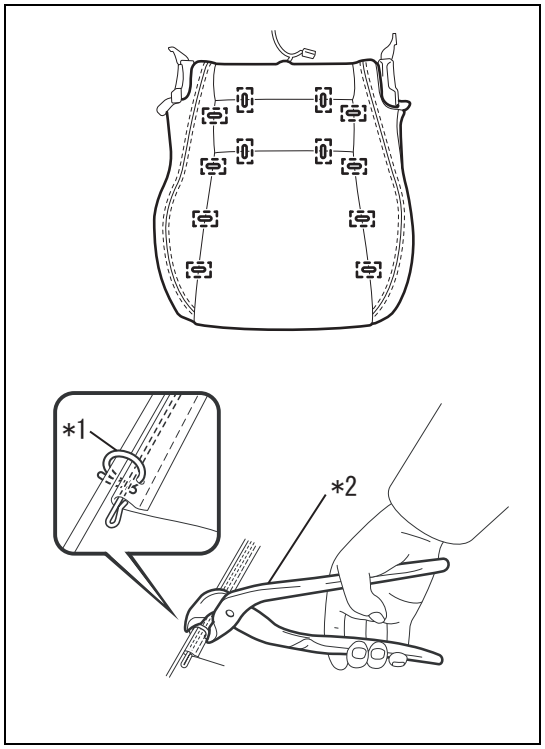
NOTE:
The following procedure is for LH side. Perform the same procedures for the RH side.

1. Installation of the seat track cover OUT LH
   (1) Engage 2 claws and install the seat track cover OUT LH.
   NOTE:
   Install both parts using the same procedures.
2. Installation of the front seat cushion protector No.1
   (1) Engage 2 claws and install the front seat cushion protector No.1.
   NOTE:
   Install both parts using the same procedures.
3. Installation of the reclining adjuster release band
   (1) Remove the screw and install the reclining adjuster release band.
4. Installation of the seat track adjusting handle
   (1) Install the seat track adjusting handle to the separate type front seat cushion frame ASSY RH.
   CAUTION:
   - Install the rear end of the seat track adjusting handle to the upper side of the seat track lever.
   - Securely install 2 springs to the groove of the seat track adjusting handle.
5. Installation of the front seat cushion edge protector RH
   (1) Engage 3 claws and install the front seat cushion edge protector RH of the RH seat.
   (2) Install the screws.
6. Installation of the front seat cushion edge protector LH
   NOTE:
   Install the part in the same manner as RH side.



7. Installation of the front seat cushion shield LWR RH (driver's side)
   (1) Temporally install the front seat cushion shield LWR RH with the clip.
   (2) Engage the hook.
   (3) Install the front seat cushion shield LWR RH with the screw.

8. Installation of the front seat cushion shield LWR LH (driver's side)
   NOTE:
   Install the part in the same manner as RH side.



9. Installation of the separate type front seat cushion cover LH
   (1) Using hog ring pliers and 12 new hog rings, install the separate type front seat cushion cover LH to the separate type front seat cushion pad LH.
   CAUTION:
   - Be careful not to dirty or damage the separate type front seat cushion cover LH.
   - Align the centers of the fabric and the separate type front seat cushion pad LH taking care not to make wrinkles, and attach the hog rings.

   NOTE:
   If the separate type front seat cushion cover LH for replacement is not provided with the retracting wire, reuse the original wire.

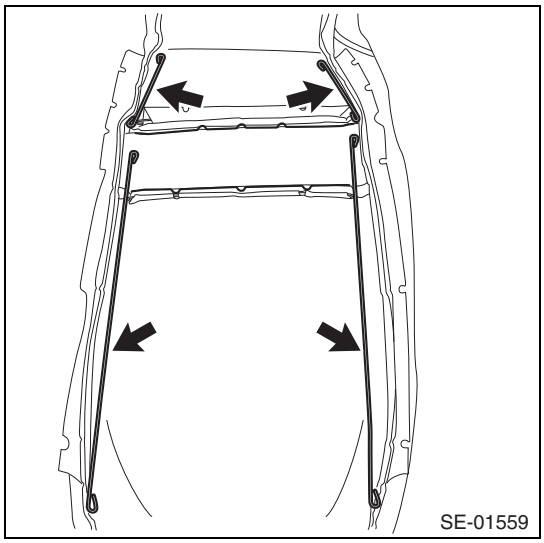
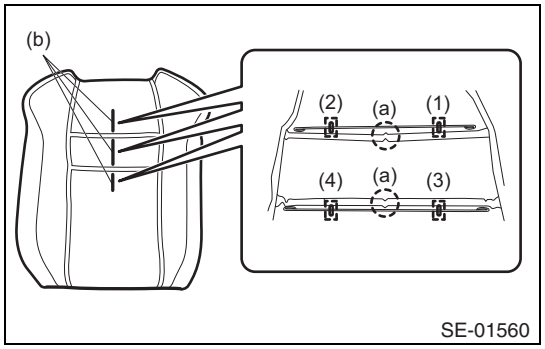
10. Installation of the separate type front seat cushion cover with pad
    (1) Engage the hooks, and install the separate type front seat cushion cover with pad to the separate type front seat cushion frame ASSY LH.
    (2) Engage the claw and 3 clamps, and connect the wiring harness of the seat heater. (For the model with the seat heater)
11. Installation of the separate type front seat backrest cover LH
    CAUTION:
    - If the separate type front seat backrest cover LH is torn or frayed, the side airbag module LH may not be activated properly. In this case, replace the separate type front seat backrest cover LH with a new one.
    - If the separate type front seat backrest cover LH is not installed securely, the side airbag module LH may not be activated properly. Therefore, keep strictly to the following procedures.

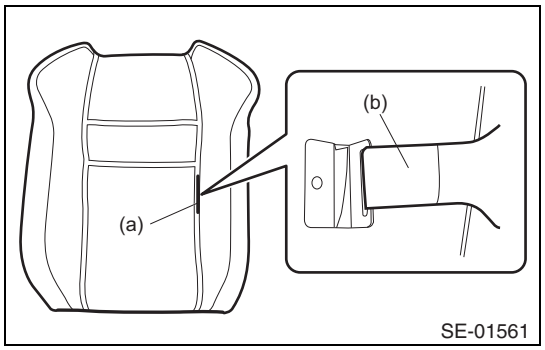


(1) Remove the 4 vertical tension wires that come inserted in the seat backrest cover to facilitate installation.

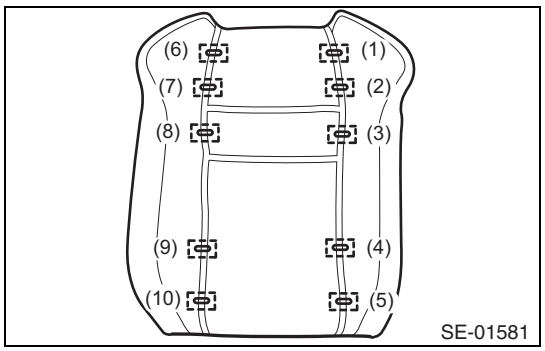
SE



(2) Align the V notches (a) on the seat backrest cover center section with the guidelines (b) on the seat center, and secure with hog rings in order from (1) to (4).



(3) Insert the vertical tension wires into the vertical support sleeve of the seat cover, and pass the woven fabric reinforcement (b) for the side airbag through the pad hole (a).



(4) Secure (1) to (5) with hog rings, and once you have firmly installed the seat cover outer side, secure (6) to (10) with hog rings, and firmly install the seat backrest cover inner side.

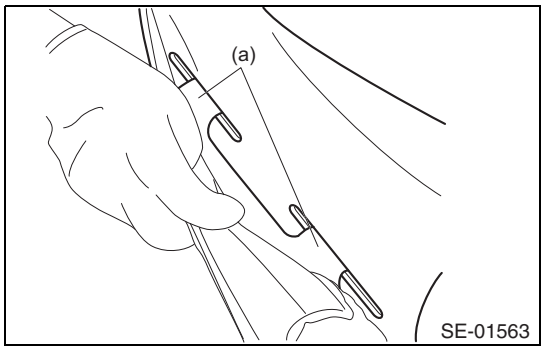
CAUTION:

- Be careful not to dirty or damage the separate type front seat backrest cover RH.
- Align the centers of the fabric and the separate type front seat backrest pad RH, taking care not to make wrinkles, and attach the hog rings.

NOTE:

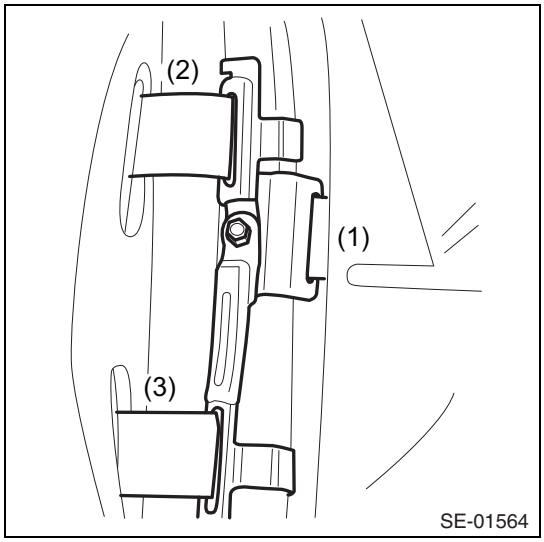
If the separate type front seat backrest cover RH for replacement is not provided with the retracting wire, reuse the original wire.

12. Installation of the side airbag module RH (Refer to RS - 262)
13. Installation of the separate type front seat backrest cover with pad



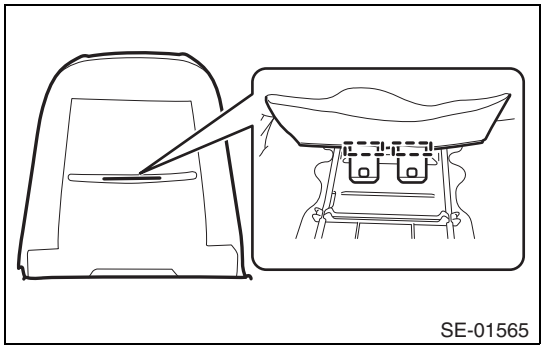
(1) Install the separate type front seat backrest cover with pad on the separate type front seat backrest frame ASSY RH.

(2) Pass the side airbag woven fabric reinforcements (a) through the pad slits.

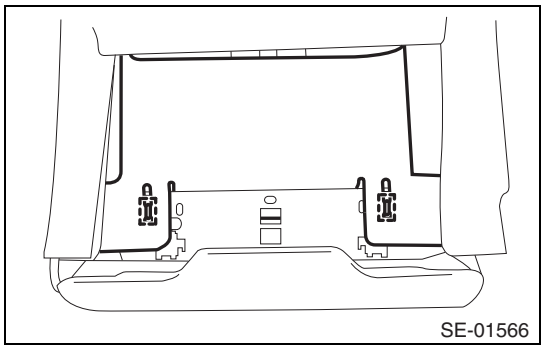


(3) Set the woven fabric reinforcements, in numbered order, on the side frame stud bolt, and tighten them.
Standard value:T=5.5N·m {56kgf·cm} {4.1ft·lbf}
WARNING:
- When installing the brackets, check that the band is not twisted.
- Wrap the side airbag module RH with the band, then install the brackets.
- If the brackets are not installed securely, the side airbag module RH may not be activated properly.

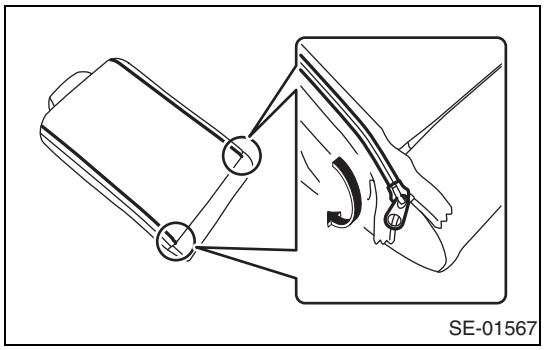
(4) Engage 4 claws and install 2 front seat headrest supports.



(5) Pass the plastic hook on the back of the seat backrest cover through the felt, and insert it into the plastic mat of the frame until it clicks.



(6) Insert the center part of the back felt into the frame interior, and secure the felt to the frame with a hog ring.
CAUTION:
Check thoroughly that the PAD is not caught on the edge of the frame.



(7) Close the fasteners on both sides, and put the fastener terminals on the back of the seat backrest cover.
CAUTION:
- Do not close the fasteners while pressing the slider. This may cause faulty engagement of the fasteners.
- If there is poor engagement, go back to the position where the fasteners are engaged correctly, and close the fasteners again.

NOTE:
If the separate type front seat backrest cover RH for replacement is not provided with the retracting wire, reuse the original wire.

(8) Secure the hog rings in order from (1) to (5).
CAUTION:
- When performing the securing operation using the hog rings on both sides, insert the gap covers under and fasten 2 hog rings together.
- Do not hook the gap covers on the frame.
- When pulling in the PAD lower edge, be careful not to tear the surface leather.

SE

• Be careful not to dirty or damage the separate type front seat backrest cover RH.

NOTE:

If the separate type front seat backrest cover RH for replacement is not provided with the retracting wire, reuse the original wire.

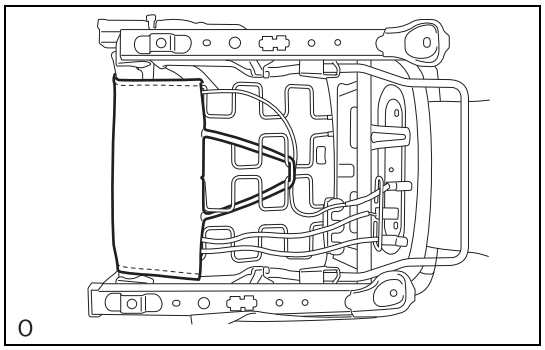
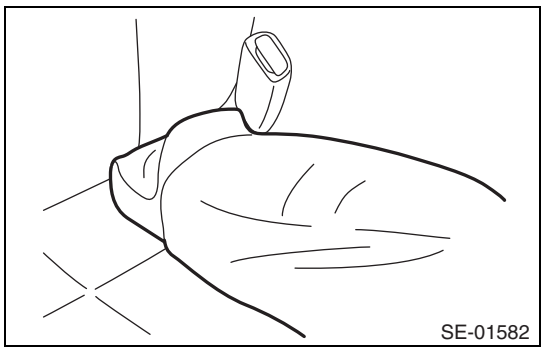
| *a | Cushion cover | *b | Gap cover |
| *c | Seat backrest cover | | |

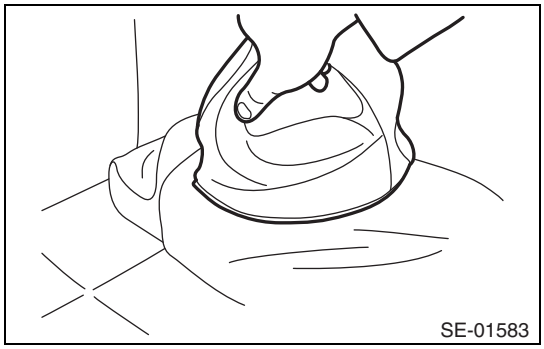


(9) Hook the rubber of the carpet on the spring of the front cushion rear.

14. After assembling the seat cover, if there are any wrinkles, use an iron to finish the seat.



(1) Place a wet towel on the wrinkles.



(2) Use the iron which is warmed to a medium temperature.
CAUTION:
Do not stop moving the iron. Doing so will damage the surface leather.

15. Check if there are any tears or frays in the backrest cover or the seat cushion cover.
NOTE:
For seats with a side airbag, if there is a tear or a fray on the door side of the seat cover, the side airbag may not operate properly. Replace the seat cover with a new one.
16. Installation of the front seat backrest ASSY LH
(1) Using the torque socket wrench (T40) and 4 new bolts, install the front seat backrest ASSY LH to the front seat cushion ASSY LH.
Standard value:T=42N·m {428kgf·cm} {31.0ft·lbf}
(2) Engage the claw and 4 clamps, and connect the wiring harness of the side airbag module.
(3) Secure the wiring harness of the side airbag module with the fastener.
(4) Connect the connector and the clamp of the seat heater. (For the model with the seat heater)
(5) Install the rubber band of the separate type front seat backrest cover LH.
(6) Engage 2 hooks.
17. Installation of the front seat inner belt ASSY LH (driver's side) (Refer to SB - 23)
18. Installation of the front seat inner belt ASSY RH (passenger's side) (Refer to SB - 23)
19. Installation of the front seat cushion shield INN LH
(1) Engage 2 claws and 5 guides, and install the front seat cushion shield INN LH.
20. Installation of the front seat cushion shield LH
(1) Engage 4 claws, 5 guides, and the clip, and install the front seat cushion shield LH.
(2) Install the screws.
21. Installation of the vertical adjuster handle LH (driver's side)
(1) Install the vertical adjuster handle LH with the screw.
22. Installation of the reclining adjuster release handle LH
(1) Engage the claw and install the reclining adjuster release handle LH.

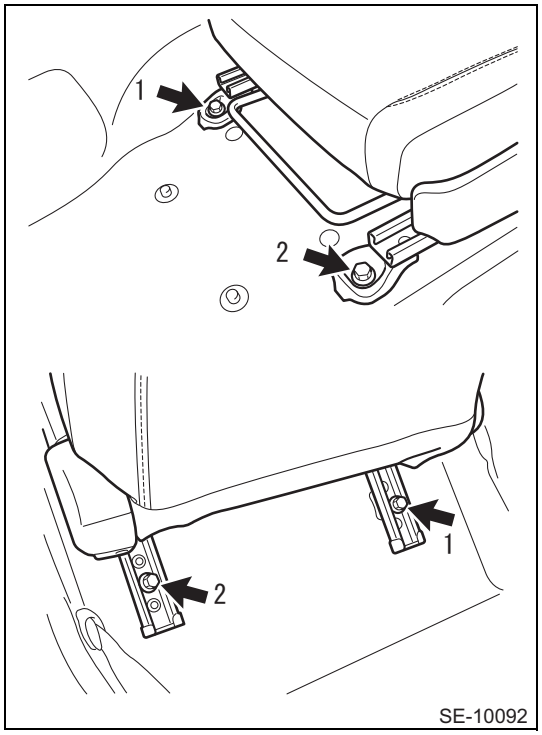
SE

## Installation

NOTE:
The following procedure is for LH side. Unless otherwise specified, perform the same procedures for the RH side.

1. Installation of the front seat ASSY LH
(1) Return the front seat backrest ASSY to the upright position, and lock it.
(2) Carry in the front seat ASSY LH to the vehicle.
CAUTION:
- The front seat ASSY LH must be carried in to the vehicle with the front seat headrest ASSY removed, by more than one personnel.
- Be careful not to damage the front seat ASSY LH, the body exterior and interior.

(3) Connect the connectors and the wiring harness clamp.
(4) Engage the hook and install the front seat cushion cover LH.
(5) Slide the front seat ASSY LH to the most rear position.



(6) Tighten 2 bolts on the front side of the front seat ASSY LH in the order shown in the figure.
Standard value:T=53N·m {540kgf·cm} {39.1ft·lbf}

(7) Slide the front seat ASSY LH to the most front position.

(8) Tighten 2 bolts on the rear side of the front seat ASSY LH in the order shown in the figure.
Standard value:T=53N·m {540kgf·cm} {39.1ft·lbf}

2. Check of the synchronized locking operation of the slide adjusters
   (1) Check that the right and left adjusters are simultaneously locked when the seat slides.
   (2) If the sliders are not synchronized, loosen the bolts securing the seat and adjust them.
3. Installation of the front seat headrest ASSY
4. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
5. Function inspection of the seat belt (Refer to SB - 5)
6. Inspection of airbag warning light (Refer to RS - 53)
7. Settings when removing/installing battery terminals (Refer to IN - 10)

SE

## On-vehicle inspection

1. Inspection of the front seat ASSY
   (1) Turn the ignition switch to ON.
   (2) Check that the indicator light illuminates by turning the seat heater switch ON, and the seat surface of the front seat ASSY is warmed in approx. 5 minutes.

## Removal

1. Precautions

   WARNING:

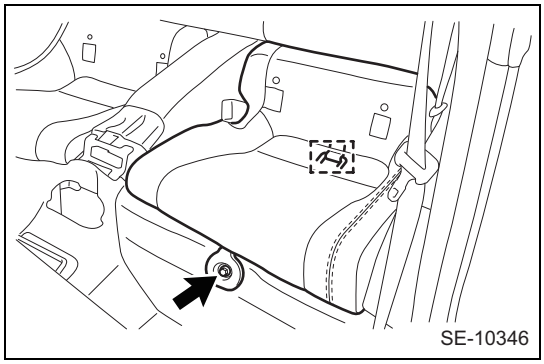
   Before starting the work, read the precautions for the SRS airbag system to make sure to properly perform the work. (Refer to RS - 5)

CAUTION:
After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

2. Disconnection of the battery ground terminal

WARNING:
- Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work.
- The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.

CAUTION:
To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.

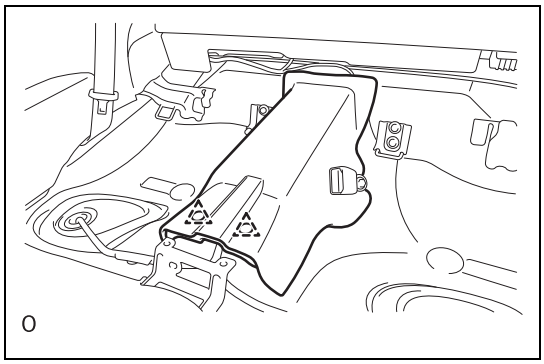


SE-10346

3. Removal of the separate type rear seat cushion ASSY
   (1) Remove the bolt.
   (2) Release the hook and remove the rear seat cushion ASSY LH.
   CAUTION:
   - Be careful not to damage the seat, the body exterior and interior.
   - If you remove the rear seat cushion ASSY without releasing the hook, the rear seat cushion ASSY may be deformed.

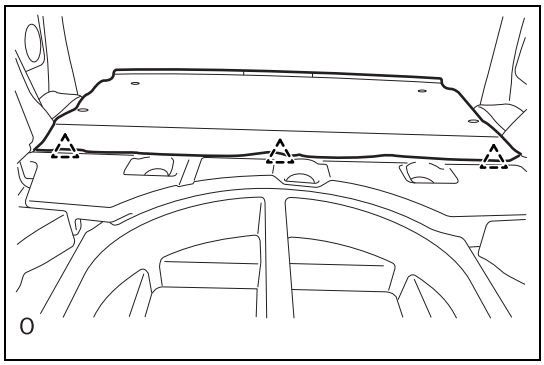
4. Removal of the separate type rear seat cushion ASSY RH

NOTE:
Remove the part in the same manner as LH side.



O

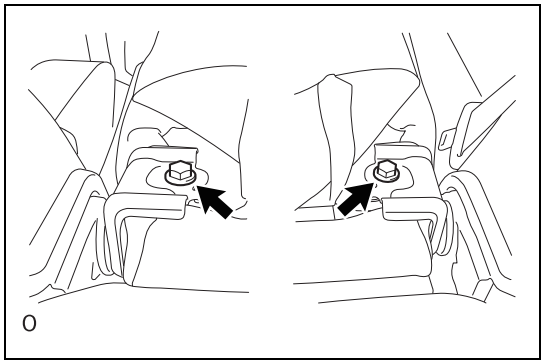
5. Removal of the center console silencer No.1
   (1) Remove 2 clips and remove the center console silencer No.1.



O

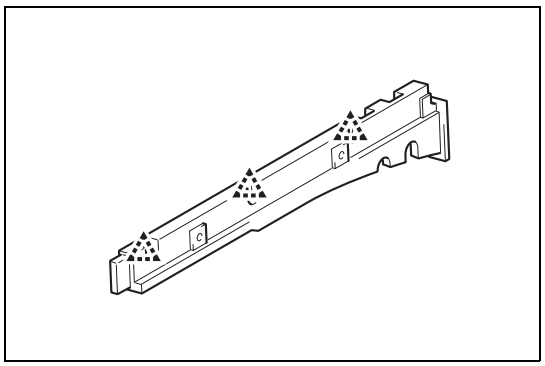
6. Removal of the bench type rear seat backrest ASSY
   (1) Remove 3 clips and turn over the rear seat backrest cover.

SE



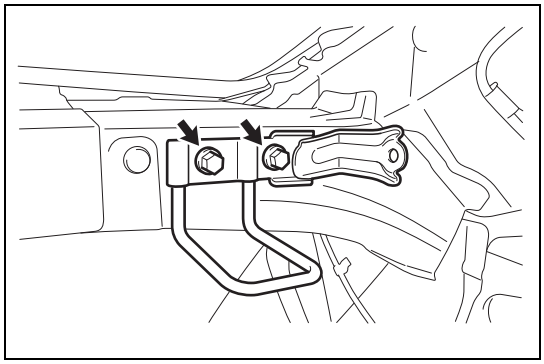
(2) Remove 2 bolts and remove the bench type rear seat backrest ASSY.
CAUTION:
Be careful not to damage the seat, the body exterior and interior.

7. Removal of front door scuff plate LH (Refer to IT - 48)
8. Removal of front door scuff plate RH
NOTE:
Remove the part in the same manner as LH side.
9. Removal of front door opening trim weather strip LH
(1) Remove the front door opening trim weather strip LH to the extent that the quarter lower trim LH can be removed.
10. Removal of the front door opening trim weather strip RH
NOTE:
Remove the part in the same manner as LH side.
11. Disconnection of trunk trim cover INN LH (Refer to IT - 49)
12. Disconnection of trunk trim cover INN RH
NOTE:
Remove the part in the same manner as LH side.
13. Removal of quarter lower trim LH (Refer to IT - 49)
14. Removal of quarter lower trim RH
NOTE:
Remove the part in the same manner as LH side.
15. Removal of the quarter trim lid LH (Refer to IT - 49)
16. Removal of quarter trim lid RH
NOTE:
Remove the part in the same manner as LH side.
17. Removal of the rear window side garnish LH (Refer to IT - 50)
18. Removal of rear window side garnish RH
NOTE:
Remove the part in the same manner as LH side.
19. Removal of package tray trim panel ASSY (Refer to DL - 111)



20. Removal of the rear seat backrest lock striker cover LH
(1) Remove 3 clips and remove the rear seat backrest lock striker cover LH.
21. Removal of the rear seat backrest lock striker cover RH
NOTE:
Remove the part in the same manner as LH side.

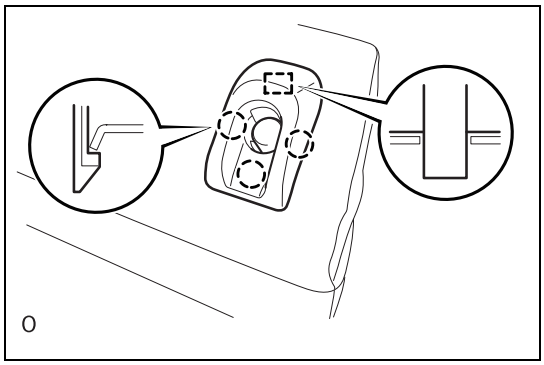
SE



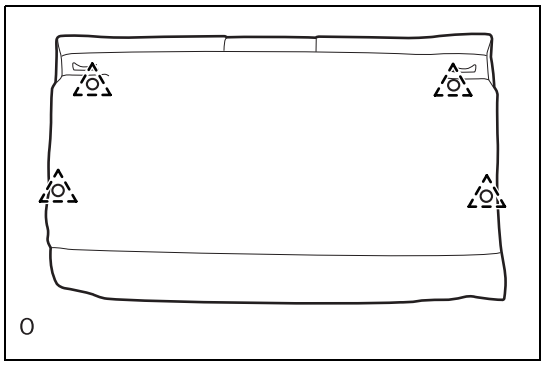
22. Removal of the rear seat backrest lock striker SUB-ASSY LH
    (1) Remove 2 bolts and remove the rear seat backrest lock striker SUB-ASSY LH.

23. Removal of the rear seat backrest lock striker SUB-ASSY RH
    NOTE:
    Remove the part in the same manner as LH side.

## Disassembly



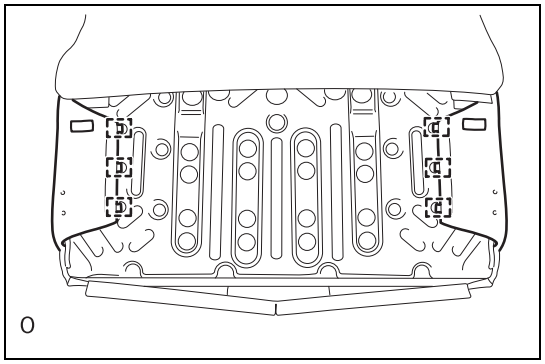
1. Removal of the rear seat backrest lock cover
    (1) Release 3 claws and the guide, and remove the rear seat backrest lock cover.
    NOTE:
    Remove both parts using the same procedures.



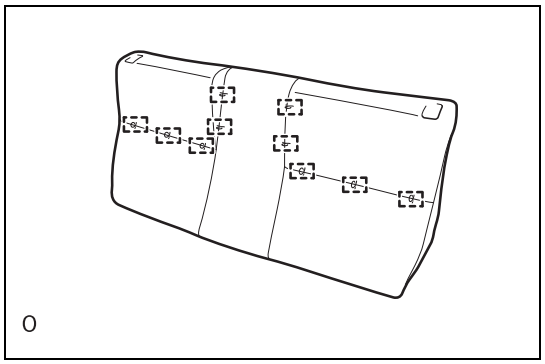
2. Removal of the rear seat backrest cover with pad
    (1) Remove the 4 clips.

    (2) Release the hook and turn over the bench type rear seat backrest cover.

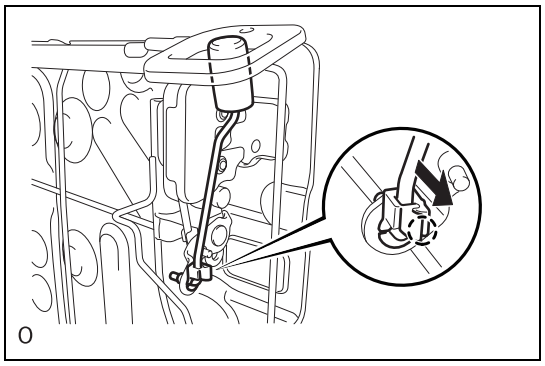
SE



(3) Release 6 hooks and remove the rear seat backrest cover with pad from the rear seat backrest frame.



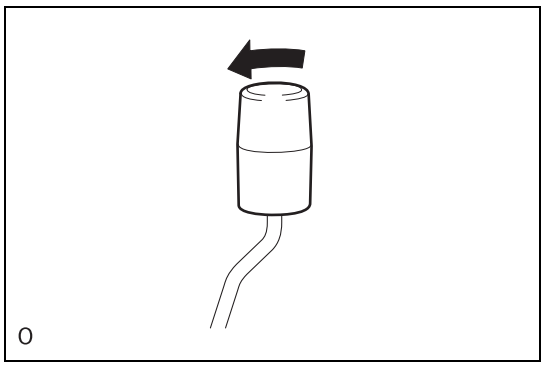
3. Removal of the bench type rear seat backrest cover
   (1) Remove 10 hog rings and remove the bench type rear seat backrest cover from the bench type rear seat backrest pad.



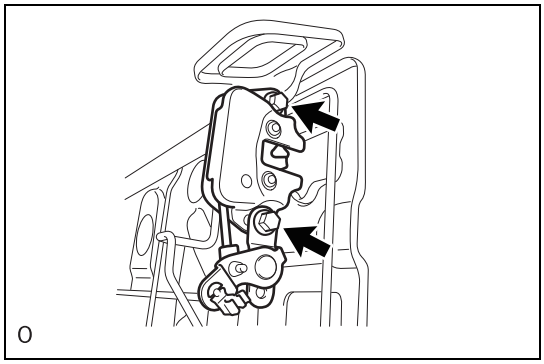
4. Removal of the rear seat backrest lock rod LH
   (1) Release the claw.
   (2) Pull off the rear seat backrest lock rod LH to the direction of the arrow in the figure to remove it from the rear seat backrest lock SUB-ASSY LH.

SE

5. Removal of the rear seat backrest lock rod RH
   NOTE:
   Remove the part in the same manner as LH side.

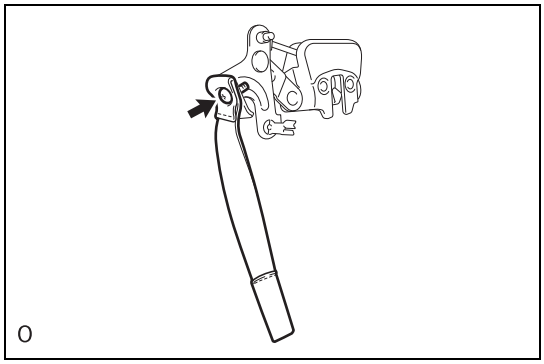


6. Removal of the rear seat backrest lock release button
   (1) Rotate the rear seat backrest lock release button counterclockwise to remove it from the rear seat backrest lock rod LH and RH.

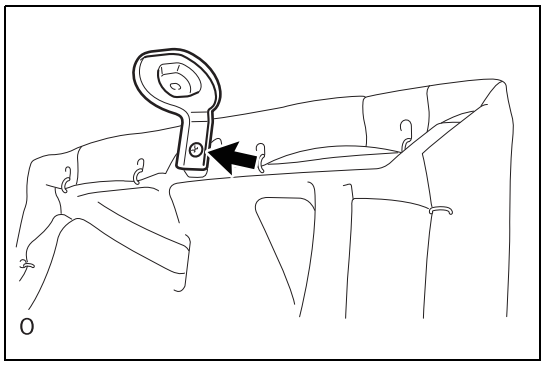


7. Removal of the rear seat backrest lock SUB-ASSY LH
   (1) Remove 2 bolts and remove the rear seat backrest lock SUB-ASSY LH from the rear seat backrest frame.

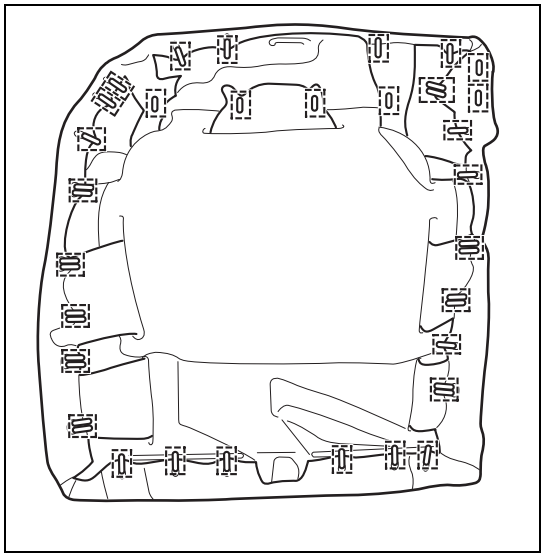
8. Removal of the rear seat backrest lock SUB-ASSY RH
   NOTE:
   Remove the part in the same manner as LH side.



9. Removal of the rear seat backrest lock release band
   (1) Remove the screw, and remove the rear seat backrest lock release band.

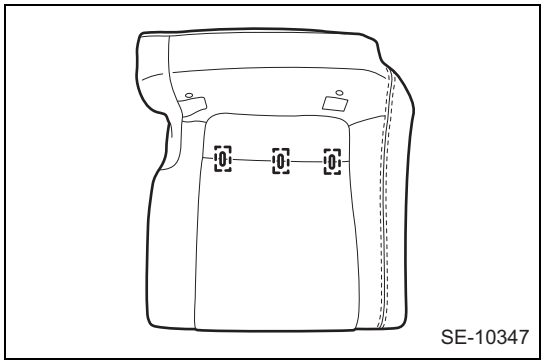


10. Removal of the rear seat cushion bracket
    (1) Remove the screw, and remove the rear seat cushion bracket from the rear seat cushion ASSY LH.
    NOTE:
    Perform the same procedures for the RH side.



11. Removal of the separate type rear seat cushion cover LH
    (1) Remove 40 hog rings.

SE

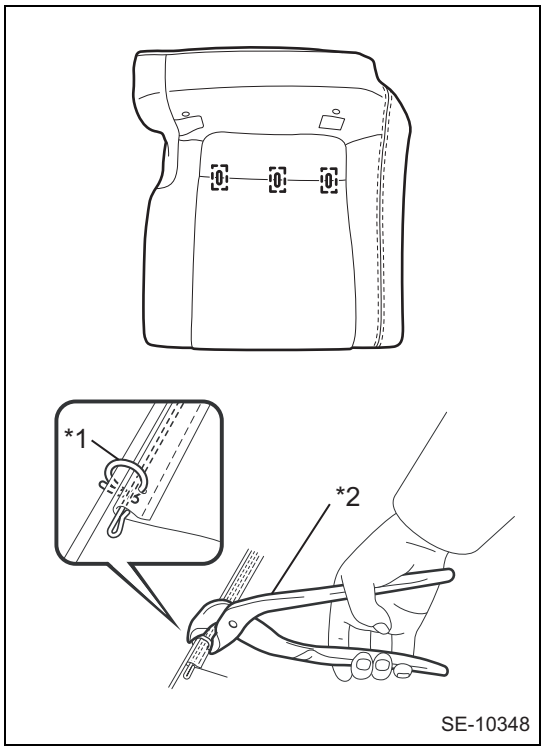


(2) Remove 3 hog rings, and remove the separate type rear seat cushion cover LH from the separate type rear seat cushion pad LH.

12. Removal of the separate type rear seat cushion cover RH
    NOTE:
    Remove the part in the same manner as LH side.

## Assembly

1. Installation of the separate type rear seat cushion cover LH
   (1) Temporally install the separate type rear seat cushion cover LH to the separate type rear seat cushion pad LH.



(2) Using hog ring pliers, attach 3 new hog rings.
    CAUTION:
    - Be careful not to contaminate or damage the separate type rear seat cushion cover LH.
    - Align the centers of the fabric and the separate type rear seat cushion pad LH taking care not to make wrinkles, and attach the hog rings.

    NOTE:
    If the separate type rear seat cushion cover LH for replacement is not provided with the retracting wire, reuse the original wire.

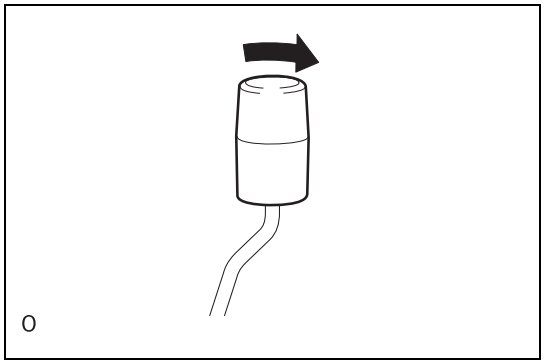
| *1 | New hog ring | *2 | Hog ring pliers |

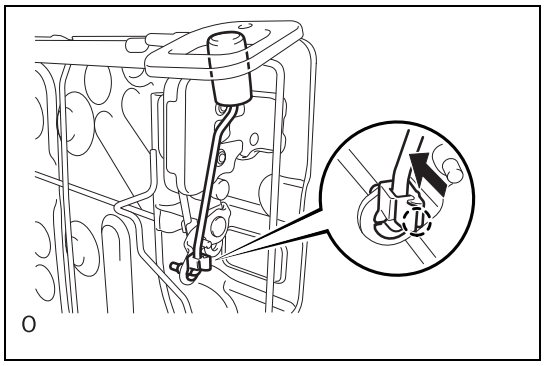
2. Installation of the separate type rear seat cushion cover RH
   NOTE:
   Install the part in the same manner as LH side.
3. Installation of the rear seat cushion bracket
   (1) Install the rear seat cushion bracket to the rear seat cushion ASSY LH with the screw.
   NOTE:
   Perform the same procedures for the RH side.



4. Installation of the rear seat backrest lock release button
   (1) Rotate the rear seat backrest lock release buttons to the direction of the arrow in the figure, and install these 2 buttons to the rear seat backrest lock rod RH and LH respectively.

SE

5. Installation of the rear seat backrest lock SUB-ASSY LH
   (1) Install the rear seat backrest lock SUB-ASSY LH to the rear seat backrest frame with 2 bolts.
   Standard value:T=24.5N·m {250kgf·cm} {18.1ft·lbf}
6. Installation of the rear seat backrest lock SUB-ASSY RH
   NOTE:
   Install the part in the same manner as LH side.



7. Installation of the rear seat backrest lock rod LH
   (1) As shown in the figure, insert the rear seat backrest lock rod LH.
   (2) Engage the claw and install the rear seat backrest lock rod LH.

8. Installation of the rear seat backrest lock rod LH
   NOTE:
   Install the part in the same manner as LH side.
9. Installation of the bench type rear seat backrest cover
   (1) Temporally install the rear seat backrest cover to the bench type rear seat backrest pad.

   (2) Using hog ring pliers and 10 new hog rings, install the bench type rear seat backrest cover to the bench type rear seat backrest pad.
   CAUTION:
   - Be careful not to contaminate or damage the bench type rear seat backrest cover.
   - Align the centers of the fabric and the bench type rear seat backrest pad taking care not to make wrinkles, and attach the hog rings.

   NOTE:
   If the bench type rear seat backrest cover for replacement is not provided with the retracting wire, reuse the original wire.

SE

10. Installation of the rear seat backrest cover with pad
    (1) Temporally install the rear seat backrest cover with pad to the rear seat backrest frame.
    (2) Engage 6 hooks.
    (3) Engage the hook.
    (4) Install the rear seat backrest cover with pad with 4 clips.
11. Installation of the rear seat backrest lock cover
    (1) Engage the guide and 3 claws, and install the rear seat backrest lock cover.
    NOTE:
    Install both parts using the same procedures.

## Installation

1. Installation of the rear seat backrest lock striker SUB-ASSY LH
   (1) Install the rear seat backrest lock striker SUB-ASSY LH with 2 bolts.
2. Installation of the rear seat backrest lock striker SUB-ASSY RH
   NOTE:
   Install the part in the same manner as LH side.
3. Installation of the rear seat backrest lock striker cover LH
   (1) Engage 3 clips and install the rear seat backrest lock striker cover LH.
4. Installation of the rear seat backrest lock striker cover RH
   NOTE:
   Install the part in the same manner as LH side.
5. Installation of package tray trim panel ASSY (Refer to DL - 112)
6. Installation of the rear window side garnish LH (Refer to IT - 57)

7. Installation of rear window side garnish RH
   NOTE:
   Install the part in the same manner as RH side.
8. Installation of the quarter trim lid LH (Refer to IT - 57)
9. Installation of quarter trim lid RH
   NOTE:
   Install the part in the same manner as LH side.
10. Installation of quarter lower trim LH
    (1) Engage the 7 clips and install the quarter lower trim LH.
    (2) Install the 3 clips.
11. Installation of quarter lower trim RH
    NOTE:
    Install the part in the same manner as LH side.
12. Installation of the trunk trim cover INN LH (Refer to IT - 58)
13. Installation of the trunk trim cover INN RH
    NOTE:
    Install the part in the same manner as LH side.
14. Installation of front door scuff plate LH (Refer to IT - 58)
15. Installation of front door scuff plate RH
    NOTE:
    Install the part in the same manner as LH side.
16. Installation of front door opening trim weather strip LH
17. Installation of front door opening trim weather strip RH
18. Installation of the bench type rear seat backrest ASSY
    (1) Carry in the bench type rear seat backrest ASSY to the vehicle.
        CAUTION:
        Be careful not to damage the seat, the body exterior and interior.
    (2) Install the bench type rear seat backrest ASSY with 2 bolts.
        Standard value:T=33N·m {337kgf·cm} {24.3ft·lbf}
    (3) Install the rear seat backrest cover with 3 clips.
19. Installation of the center console silencer No.1
    (1) Install the center console silencer No.1 with 2 clips.
20. Installation of the separate type rear seat cushion ASSY
    (1) Carry in the rear seat ASSY LH to the vehicle.
        CAUTION:
        Be careful not to damage the seat, the body exterior and interior.
    (2) Engage the hook and temporally install the rear seat cushion ASSY LH.
    (3) Install the rear seat cushion ASSY LH with the bolt.
        Standard value:T=13N·m {133kgf·cm} {9.6ft·lbf}
        CAUTION:
        When installing the rear seat cushion ASSY, install it so that the rear seat belt ASSY inner does not face downward.
21. Installation of the separate type rear seat cushion ASSY RH
    NOTE:
    Install the part in the same manner as LH side.

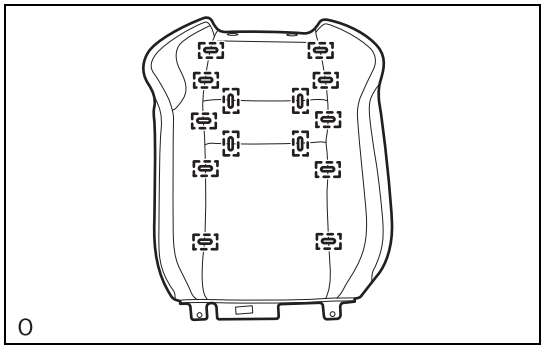
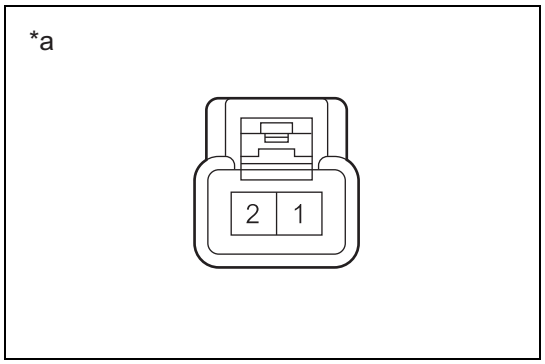
## REMOVAL

1. REMOVE FRONT SEAT ASSEMBLY (Refer to SE - 11)
2. REMOVE RECLINING ADJUSTER RELEASE HANDLE (Refer to SE - 12)
3. REMOVE VERTICAL ADJUSTING HANDLE (for Driver Side) (Refer to SE - 13)
4. REMOVE FRONT SEAT CUSHION SHIELD (Refer to SE - 13)
5. REMOVE FRONT SEAT INNER CUSHION SHIELD (Refer to SE - 13)
6. REMOVE SEPARATE TYPE FRONT SEATBACK ASSEMBLY (Refer to SE - 14)
7. REMOVE SEPARATE TYPE FRONT SEATBACK COVER WITH PAD (Refer to SE - 17)



8. REMOVE SEPARATE TYPE FRONT SEATBACK PAD(FRONT SEATBACK HEATER ASSEMBLY)
   (1) Remove the 14 hog rings and separate type front seatback pad from the separate type front seatback cover

## INSPECTION



1. INSPECT FRONT SEAT BACK HEATER ASSEMBLY LH
   (1) Measure the resistance according to the value(s) in the table below.

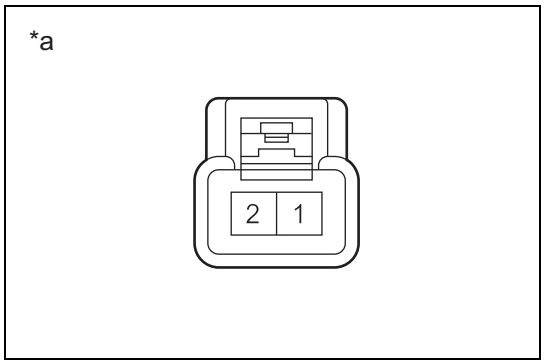
Text in Illustration

| | |
|---|---|
| *a | Component without harness connected<br>(Separate Type Front Seatback Pad LH) |

Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3.26 to 4 Ω |

If the result is not as specified, replace the separate type front seatback pad LH.



2. INSPECT FRONT SEAT BACK HEATER ASSEMBLY RH
   (1) Measure the resistance according to the value(s) in the table below.

Text in Illustration

| | |
|---|---|
| *a | Component without harness connected<br>(Separate Type Front Seatback Pad RH) |

Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3.26 to 4 Ω |

If the result is not as specified, replace the separate type front seatback pad RH.

SE

## INSTALLATION

1. INSTALL SEPARATE TYPE FRONT SEATBACK PAD (FRONT SEATBACK HEATER ASSEMBLY) (Refer to SE - 21)
2. INSTALL SEPARATE TYPE FRONT SEATBACK COVER WITH PAD (Refer to SE - 21)
3. INSTALL SEPARATE TYPE FRONT SEATBACK ASSEMBLY (Refer to SE - 25)
4. INSTALL FRONT SEAT INNER CUSHION SHIELD (Refer to SE - 25)
5. INSTALL FRONT SEAT CUSHION SHIELD (Refer to SE - 25)
6. INSTALL VERTICAL ADJUSTING HANDLE (Refer to SE - 25)
7. INSTALL RECLINING ADJUSTER RELEASE HANDLE (Refer to SE - 25)
8. INSTALL FRONT SEAT ASSEMBLY (Refer to SE - 25)
9. Inspection of airbag warning light (Refer to RS - 53)

| Skid control ECM | Combination meter assembly | Vehicle speed | |

## Description of functions

1. Description of the seat belt warning system
   (1) Driver's seat belt warning light:
   If the driver's seat belt is not fastened with IG ON, the front seat belt warning light in the combination meter ASSY will blink to warn the driver. The combination meter ASSY displays the status of the driver's seat belt and the vehicle speed.
   (2) Passenger's seat belt warning light:

SB

If the passenger's seat belt is not fastened with IG ON and the passenger's seat occupied, the front seat belt warning light in the clock ASSY will blink. The combination meter ASSY detects the status of the passenger's seat belt and whether the passenger's seat is occupied or not.

(3) Seat belt warning buzzer:
Check that the seat belt warning buzzer in the combination meter ASSY sounds at 1.2 second intervals for 6 seconds if the driver's seat belt is not fastened within 1.8 seconds after the ignition switch is turned to ON. If the vehicle speed exceeds 20 km/h with the passenger's seat occupied and the driver's or the passenger's seat belt not fastened, the seat belt warning buzzer in the combination meter ASSY will sound once. If 24 seconds have passed after the buzzer starts sounding, the seat belt warning buzzer in the combination meter ASSY sounds at 1.2 second intervals and continues to sound for 9.6 seconds. After that, it sounds intermittently at 0.4 second intervals for approx. 20 seconds.

2. Functions of the main parts

| Parts | Function |
|---|---|
| Front seat inner belt (driver's buckle switch) | Transmits the status information concerning the driver's seat belt (fastened or unfastened) to the combination meter ASSY. |
| Front seat inner belt (passenger's buckle switch) | Transmits the status information concerning the passenger's seat belt (fastened or unfastened) to the occupant detection ECM. |
| Occupant detection sensor | Transmits the status information concerning the passenger's seat (occupied or not occupied) to the occupant detection ECM. |
| Occupant detection ECM | Sends the passenger's seat belt buckle switch signal and the occupant detection signal to the airbag sensor ASSY. |
| Airbag control module | Sends the passenger's seat belt buckle switch signal to the combination meter ASSY. |
| Driver's seat belt warning light | If the driver's seat belt is not fastened with IG ON, the combination meter will make the seat belt warning light in the combination meter ASSY blink as a reminder. |
| Passenger's seat belt warning light | If the passenger's seat belt is not fastened with IG ON and the passenger's seat occupied, the combination meter will make the seat belt warning light in the tell taillight ASSY blink as a reminder. |
| Seat belt warning buzzer | If the vehicle speed exceeds 20 km/h (12.5 mph) with one of the following conditions met, the buzzer in the combination meter ASSY will sound as a reminder:<br>1. The driver's seat belt is not fastened.<br>2. The passenger's seat is occupied and the passenger's seat belt is not fastened. |
| Skid control ECM | Sends the vehicle speed signal to the combination meter ASSY via CAN communication. |

SB

## HOW TO PROCEED WITH TROUBLESHOOTING

NOTE:

- Use these procedures to troubleshoot the seat belt warning system.
- *: Use a SSM4.

| | |
|---|---|
| 1 | VEHICLE BROUGHT TO WORKSHOP |

NEXT

| | |
|---|---|
| 2 | INSPECT BATTERY VOLTAGE |

Standard voltage: 11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

| 3 | CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM* |
|---|---|

(1) Use the SSM4 to check if the CAN communication system is functioning normally.

Result:

## Operation check

1. Inspection of the driver's seat belt warning light
   (1) Turn the ignition switch to ON.
   (2) Check that the front seat belt warning light in the combination meter ASSY blinks when the driver's seat belt is not fastened.

2. Inspection of the passenger's seat belt warning light
   (1) Turn the ignition switch to ON.
   (2) Check that the passenger's seat belt warning light in the tell taillight ASSY blinks when the passenger's seat belt is not fastened with the passenger's seat occupied.
   (3) With the passenger's seat occupied, insert the seat belt tongue plate in the buckle, and check that the front seat belt warning light in the tell taillight ASSY goes off.
3. Inspection of the seat belt warning buzzer
   NOTE:
   If the buzzer does not sound, the buzzer cancel setting may be turned on. (Refer to SB - 8)
   (1) Lift up the vehicle by using the swing arm lift. (Refer to IN - 6)
   (2) Turn the ignition switch to ON.
   (3) Occupy the driver's seat and the passenger's seat, and unfasten the seat belts of the both seats.
   CAUTION:
   Be careful not to touch the seat backrest while sitting on the seat.
   (4) With the driver's or passenger's seat belt tongue plate not inserted in the buckle, drive the vehicle at approx. 20 km/h or above. In this condition, check that the buzzer in the combination meter ASSY sounds at 1.2 second intervals for 9.6 seconds, and then sounds at 0.4 second intervals for 20 seconds.
   (5) Check that the buzzer stops sounding 30 seconds after it first started to sound.
   (6) After the buzzer stops sounding, turn the ignition switch to OFF, and then restart the engine. Drive the vehicle at approx. 20 km/h or above with the driver's or passenger's seat belt tongue plate not inserted in the buckle, and check that the buzzer sounds again.
   (7) After the buzzer stops sounding, insert the driver's and passenger's seat belt tongue plates in the buckles. Drive the vehicle at approx. 20 km/h or above, unfasten the driver's or passenger's seat belt, and check that the buzzer sounds again.
   (8) After the buzzer stops sounding, change the shift position to R, and then to D. With the seat belt tongue plate not inserted in the buckle, drive the vehicle at approx. 20 km/h or above, and check that the buzzer sounds again.

## CUSTOMIZE PARAMETERS

1. CUSTOMIZE SEAT BELT WARNING SYSTEM
   NOTE:
   The following items can be customized.
   CAUTION:
   - When the customer requests a change in a function, first make sure that the function can be customized.
   - Be sure to make a note of the current settings before customizing.
   - When troubleshooting a function, first make sure that the function is set to the default setting.
   - These buzzers should be ON for safe driving. Perform this procedure only if it is necessary to set the buzzer to OFF (disabled).

   (1) Customizing with the SSM4
      (a) Connect the SSM4 to the DLC3.
      (b) Turn the ignition switch to ON.
      (c) Turn the SSM4 on.
      (d) Enter the following menus: [Each System] / [Combination Meter] / [Customize]
      (e) Select the setting by referring to the table below.

Warning

| Display | Default | Content | Setting | Relevant ECU |
|---|---|---|---|---|
| Driver Side Seatbelt Warning Buzzer | ON | Function to sound the driver seat belt warning buzzer | ON/OFF | Combination meter assembly |
| Front Passenger Side Seatbelt Warning Buzzer | ON | Function to sound the front passenger seat belt warning buzzer | ON/OFF | |

NOTE:
This setting is only valid when the vehicle is driven at 20 km/h (12 mph) or more.

## PROBLEM SYMPTOMS TABLE

NOTE:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

• Inspect the fuses and relays related to this system before inspecting the suspected areas below.

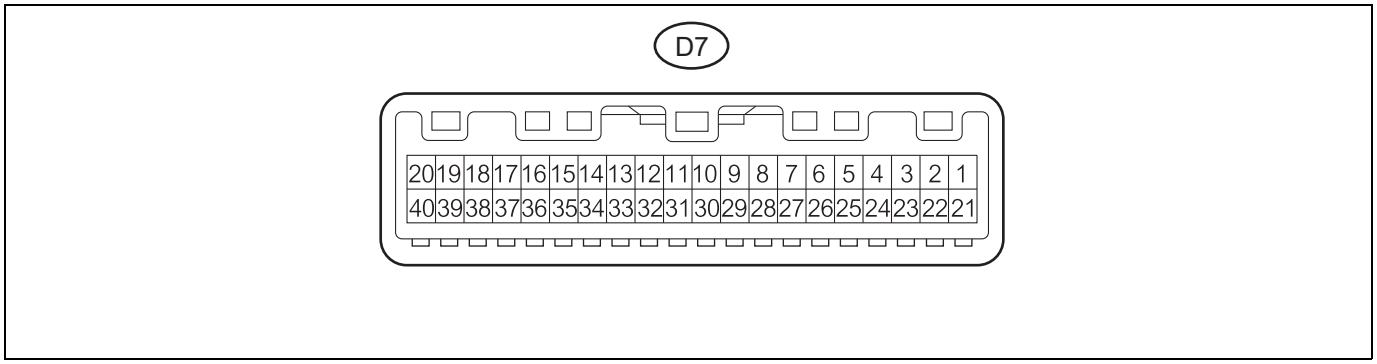
Seat Belt Warning System

| Symptom | Suspected Area | See page |
|---|---|---|
| Driver side seat belt warning light does not operate | Proceed to "Driver Side Seat Belt Warning Light does not Operate" | SB - 11 |
| Front passenger side seat belt warning light malfunction | Airbag system | - |
| | Occupant classification system | - |
| | Proceed to "Front Passenger Side Seat Belt Warning Light Malfunction" | SB - 13 |
| | Front seat inner belt assembly RH | - |
| | Combination meter assembly | - |
| Seat belt warning buzzer does not operate | Meter/Gauge system | - |

## ECM terminal arrangement

1. CHECK COMBINATION METER ASSEMBLY

(1) Disconnect the D7 combination meter assembly connector.



(2) Measure the resistance and voltage according to the value(s) in the table below.

NOTE:

Measure the values on the wire harness side with the connector disconnected.

| Tester Connection | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| D7-1 (+B)- Body ground | R-W - Body ground | Combination meter +B line | Always | 11 to 14 V |
| D7-2 (IG+) - Body ground | W-G - Body ground | Combination meter IG line | Ignition switch ON | 11 to 14 V |
| | | | Ignition switch off | Below 1 V |
| D7-20 (ES1) - Body ground | B-Y - Body ground | Ground | Always | Below 1 Ω |
| D7-37 (DBKL) - Body ground | R-B - Body ground | Driver seat belt signal | Driver seat belt fastened | 10 kΩ or higher |
| | | | Driver seat belt unfastened | Below 1 Ω |
| D7-40 (ES2) - Body ground | B-Y - Body ground | Ground | Always | Below 1 Ω |

If the result is not as specified, there may be a malfunction in the wire harness.

(3) Reconnect the D7 combination meter assembly connector.

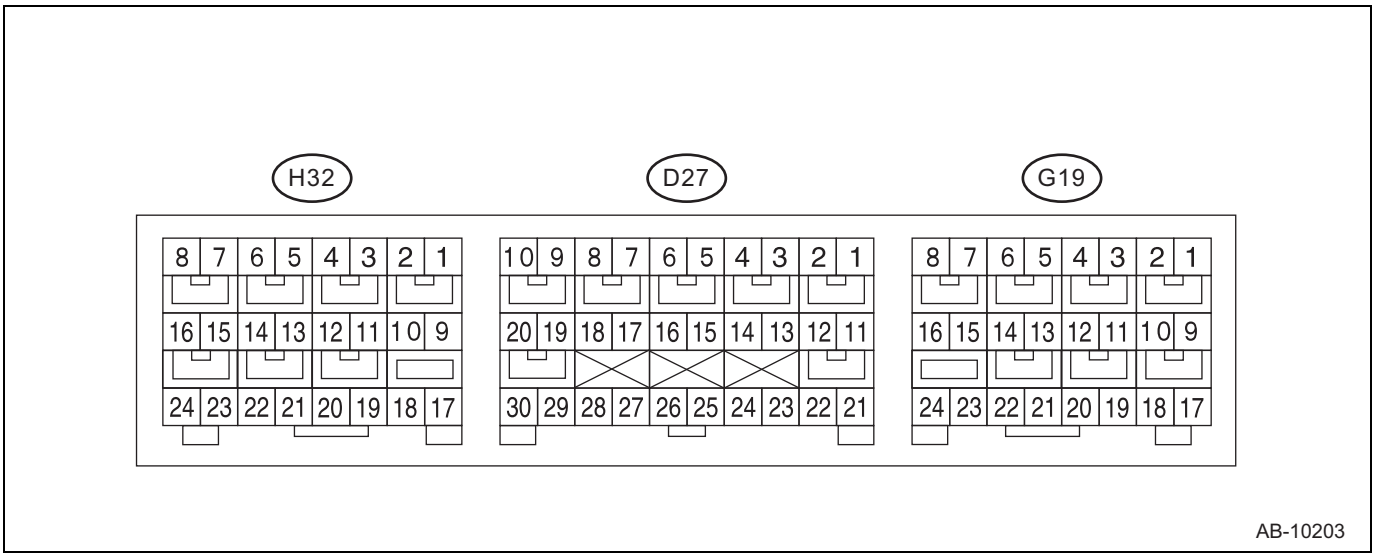
(4) Measure the voltage according to the value(s) in the table below.

| Tester Connection | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| D7-13 (P/SB) - Body ground | BR-R - Body ground | Front passenger seat belt warning signal | Front passenger seat occupied, seat belt fastened | Below 1 V |
| | | | Front passenger seat occupied, seat belt unfastened | 11 to 14 V |

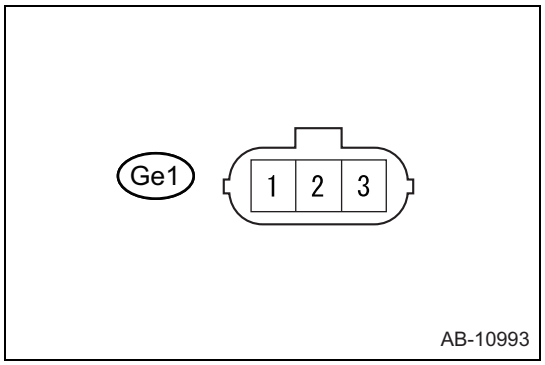
If the result is not as specified, the combination meter assembly may have a malfunction.

SB

2. Check the airbag control module



| Terminal No. | Terminal Symbol | Destination |
|---|---|---|
| G19-16 | FSR+ | Occupant detection ECU |
| G19-24 | FSR- | Occupant detection ECU |



3. CHECK OCCUPANT DETECTION ECU
   (1) Measure the voltage according to the value(s) in the table below.

| Tester Connection | Wiring Color | Terminal Description | Condition | Specification |
|---|---|---|---|---|
| Ge1-1 - Body ground | G - Body ground | Occupant detection ECU IG line | Ignition switch ON | 11 to 14 V |
| Ge1-2 - Ge1-3 | Y-G - Y | Air bag control module communication line | Ignition switch ON | Pulse generation |

If the result is not as specified, the occupant detection ECU may have a malfunction.

## Data monitor / active test

1. DATA LIST

   NOTE:

   Using the SSM4 to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

   CAUTION:

   In the following table, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

   (1) Connect the SSM4 to the DLC3.
   (2) Turn the ignition switch to ON.
   (3) Turn the SSM4 on.
   (4) Enter the following menus: [Each System Check] / [Combination Meter] / [Data monitor], [Each System Check] / [Airbag] / [Data monitor], [Each System Check] / [Occupant Detection] / [Data monitor]

(5) Read the Data List according to the display on the SSM4.

Combination Meter (Combination Meter Assembly)

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| [Driver Side Seatbelt Warning Buzzer] | Driver seat belt warning buzzer/ON or OFF | Customized value displayed | - |
| [P-Seatbelt Warning Buzzer] | Front passenger seat belt warning buzzer/ON or OFF | Customized value displayed | - |

Occupant Detection (Occupant Detection ECU)

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| [Status of Passenger Side Buckle SW] | Front passenger buckle switch/ON or OFF | Unset: Seat belt not fastened<br>Set: Seat belt fastened<br>NG: Data is not determined | - |

Airbag control module

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| [Status of Passenger Side Buckle SW] | Front passenger buckle switch/ON or OFF | Unset: Seat belt not fastened<br>Set: Seat belt fastened<br>NG: Data is not determined | - |

2. ACTIVE TEST

Using the SSM4 to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the SSM4 on.
(4) Enter the following menus: [Each System Check] / [Combination Meter] / [Active Test]
(5) Perform the Active Test according to the display on the SSM4.

Combination Meter (Combination Meter Assembly)

| Tester Display | Test Part | Control Range | Diagnostic Note |
|---|---|---|---|
| [Driver Side Seat Belt] | Seat belt warning light | OFF/ON | - |
| [Front passenger Side Seat Belt] | Seat belt warning light | OFF/ON | - |

SB

## Driver Side Seat Belt Warning Light does not Operate

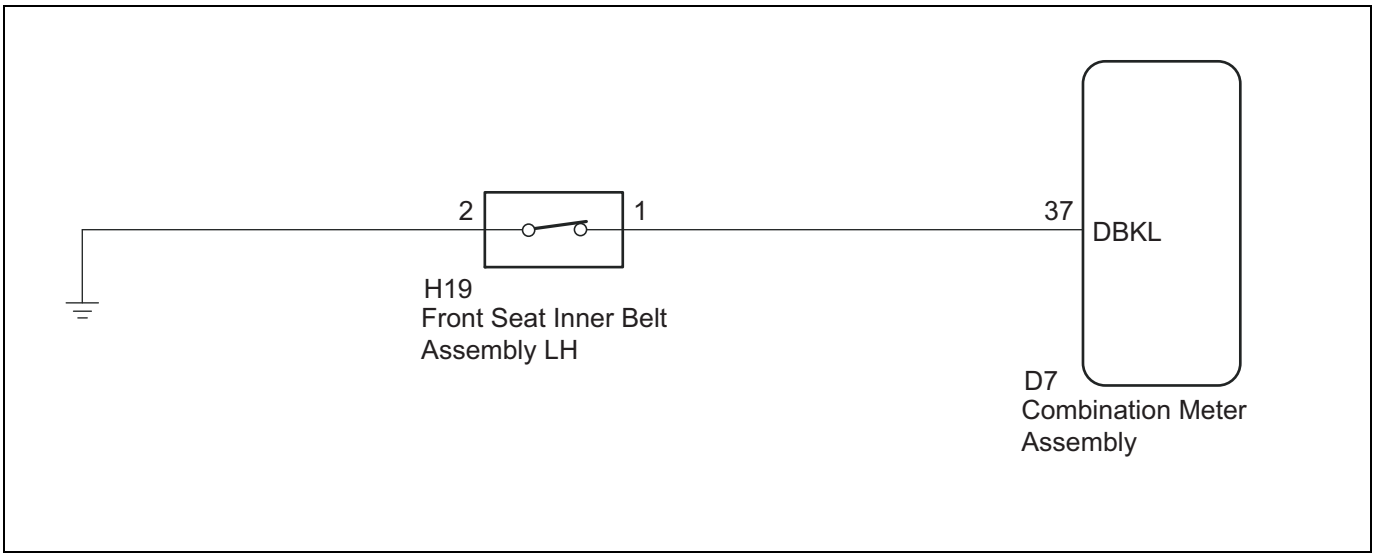
DESCRIPTION

The combination meter assembly illuminates, blinks or turns off the seat belt warning light on the combination meter assembly in accordance with the state of the front seat inner belt assembly LH.

NOTE:

The seat belt warning light on the combination meter assembly is used for both the driver seat and front passenger seat.

WIRING DIAGRAM



INSPECTION PROCEDURE

| | |
|---|---|
| 1 | PERFORM ACTIVE TEST USING SSM4 (DRIVER SIDE SEAT BELT WARNING LIGHT) |

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Turn the SSM4 on.
(4) Enter the following menus: [Each System Check] / [Combination Meter] / [Active Test]
(5) Perform the Active Test according to the display on the SSM4.
OK: Driver side seat belt warning light condition can be switched by Active Test.

SB

Combination Meter

| Tester Display | Test Part | Control Range | Diagnostic Note |
|---|---|---|---|
| [Driver Side Seat Belt] | Driver side seat belt warning light | ON/OFF | - |

NG → REPLACE COMBINATION METER ASSEMBLY

OK

| | |
|---|---|
| 2 | INSPECT FRONT SEAT INNER BELT ASSEMBLY LH |

(1) Inspect the front seat inner belt assembly LH (See page SB - 24).

NG → REPLACE FRONT SEAT INNER BELT ASSEMBLY LH (See page SB - 21)

OK

| | |
|---|---|
| 3 | CHECK HARNESS AND CONNECTOR (FRONT SEAT INNER BELT ASSEMBLY LH - COMBINATION METER ASSEMBLY - BODY GROUND) |

(1) Disconnect the H19 front seat inner belt assembly LH connector.
(2) Disconnect the D7 combination meter assembly connector.
(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| D7-37 (DBKL) - H19-1 | Always | Below 1 Ω |
| H19-1 - Body ground | Always | 10 kΩ or higher |
| H19-2 - Body ground | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

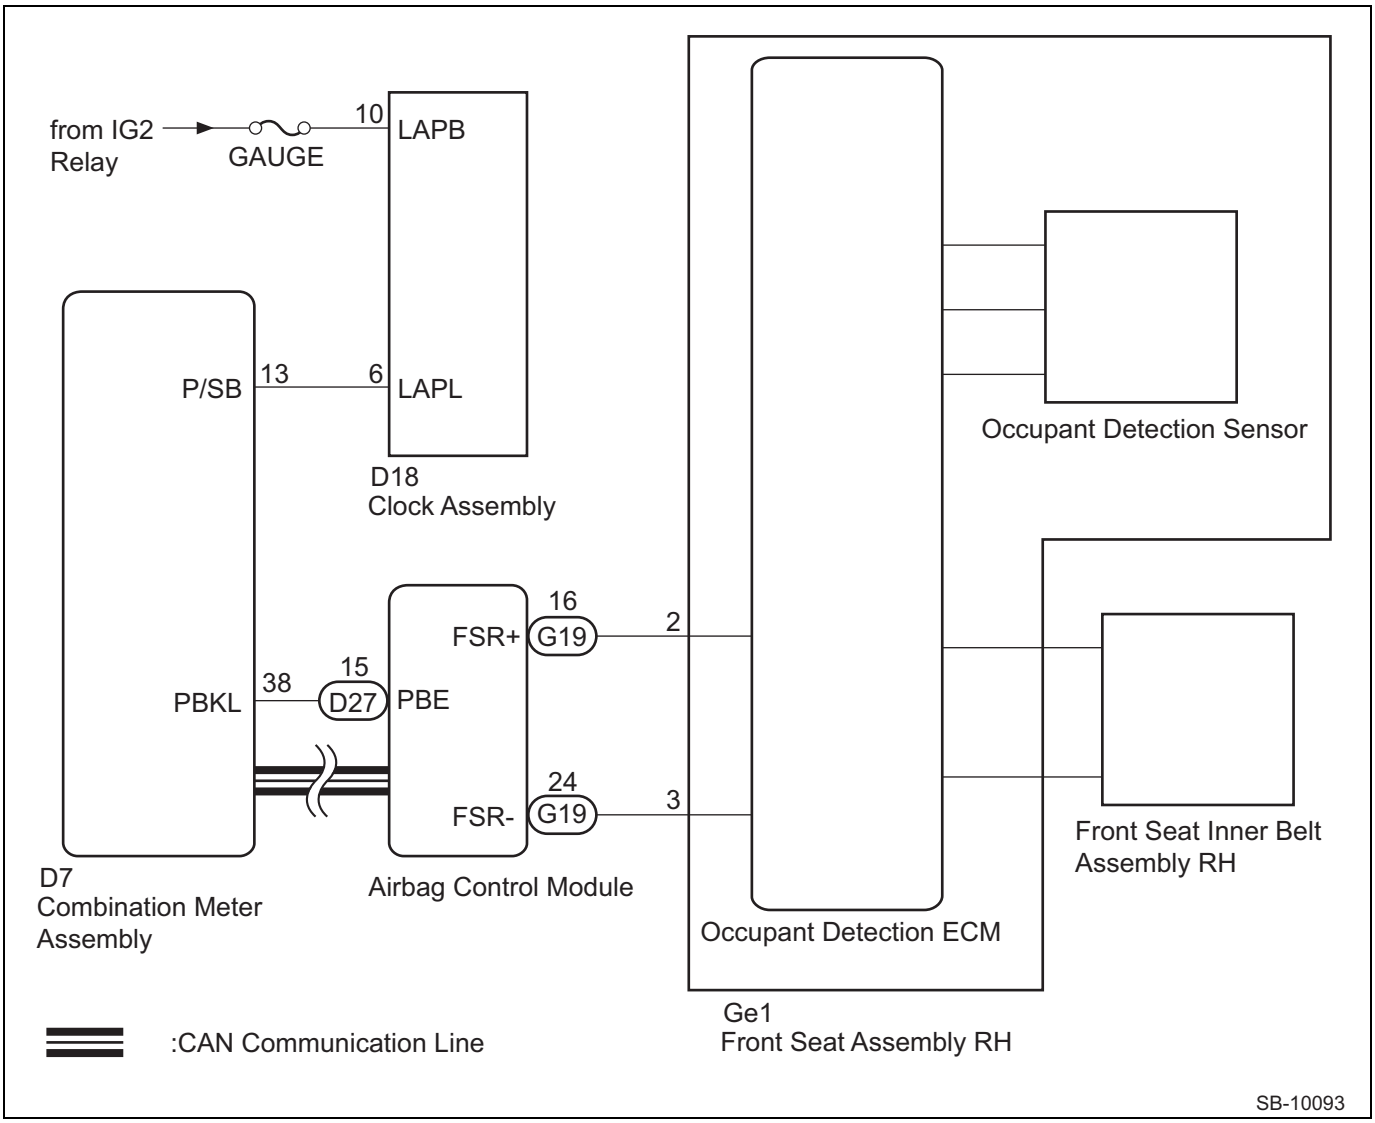
REPLACE COMBINATION METER ASSEMBLY

## Passenger's seat belt warning light is faulty

Circuit description

When the ignition switch is turned ON, the occupant detection ECM transmits the signal which communicates the status of the front seat inner belt ASSY RH and whether the passenger's seat is occupied or not to the airbag control module. The air bag control module transmits this signal to the combination meter ASSY. According to this signal, the tell taillight ASSY turns on or off the seat belt warning light in the combination meter ASSY or makes it blink.

Circuit figure



Inspection steps

CAUTION:

- Before performing the following inspection steps, check the fuses related to this system.
- The seat belt warning system uses the CAN communication system. At first, check that the CAN communication system has no faults. Refer to the procedures described in "How to troubleshoot." (Refer to SB - 6)

NOTE:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Function check |

(1) Occupy the driver's seat and the passenger's seat, and unfasten the seat belts of the both seats.
(2) Turn the ignition switch to ON (engine OFF).
(3) Check that the driver's seat belt warning light in the combination meter and the passenger's seat belt warning light in the clock turn on and the buzzer sounds.
Criteria: The buzzer sounds while the warning lights of the driver's and passenger's seats blink.

| | |
|---|---|
| NG | Go to Step 11. |

OK

| 2 | Function check |
|---|---|

(1) In step 1, wait for the buzzer to stop sounding. (Approx. 6 seconds after it has started sounding.)
(2) Unfasten and fasten the driver's and passenger's seat belts.
(3) Check that the driver's and passenger's seat belt warning lights turn on.
Criteria: Each seat belt warning light turns on ←→goes off according to the operation.

NG → Go to Step 7.

OK

| 3 | Function check |
|---|---|

(1) In step 2, wait for the buzzer to stop sounding. (Approx. 6 seconds after it has started sounding.)
(2) Start the engine and drive the vehicle at 20 km/h (12 mph) or above.
(3) Check that the driver's and passenger's seat belt warning lights turn on and the warning buzzer sounds.
Criteria: The buzzer sounds while the warning lights of the driver's and passenger's seats blink.

NG → Go to Step 13.

OK

SB

| 4 | Harness inspection |
|---|---|

(1) Disconnect the battery ground terminal, and wait for 60 seconds or more.
(2) Disconnect the connectors of the combination meter and the seat belt buckle switch LH.
(3) Check if the harness between the combination meter and the seat belt buckle switch LH is shorted to the battery, open, or shorted to ground.

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (D7) No. 37 - chassis ground | Always | Less than 1 V |
| (D7) No. 37 - (H19(A)) No. 1 | Always | Less than 1 Ω |
| (D7) No. 37 - chassis ground | Always | 1 MΩ or more |

NG → Repair or replacement of the harness

OK

| 5 | Harness inspection |
|---|---|

(1) Measure the resistance between the seat belt buckle switch LH and the chassis ground.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (H19(A)) No. 2 - chassis ground | Always | Less than 10 Ω |

NG → Repair or replacement of the harness

OK

| 6 | Inspection of the seat belt buckle switch LH |
|---|---|

(1) Measure the resistance between the connector terminals of the driver's seat belt switch when the driver's seat belt is unfastened and fastened.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (H19(A)) No. 1 - (H19(A)) No. 2 | When the seat belt is unfastened | 1 MΩ or more |
| (H19(A)) No. 1 - (H19(A)) No. 2 | When the seat belt is fastened | Less than 10 Ω |

NG → Replace the front seat inner belt LH (Refer to SB - 21).

SB

OK

Replace either the body control module or the combination meter. Or replace both of them. There is the possibility of transmission error of the body control module or reception error of the combination meter.

| 7 | Inspection of current data |
|---|---|

(1) Occupy the passenger's seat.
(2) Select [Current Data Display] to display the data for the "passenger's seat belt switch."
(3) Unfasten and fasten the passenger's seat belt, and then read the data for the seat belt switch. (Refer to SB - 10)
Criteria: The display for seat belt switch turns ON ←→OFF according to the operation of the seat belt buckle.

NG → Go to Step 8.

OK

Go to Step 11.

| 8 | Inspection of the airbag system and the occupant detection system |
|---|---|

(1) Perform the inspection following the diagnosis procedures for DTC B1650 of the airbag system. (Refer to RS - 238)
Criteria: No fault is found.

NG → Repair or replace the parts following the procedures for DTC B1650.

OK

| 9 | Inspection of the buckle switch RH |
|---|---|

(1) Perform the inspection following the diagnosis procedures for DTC B1655 of the occupant detection system. (Refer to RS - 240)
Criteria: No fault is found.

NG → Repair or replace the parts following the procedures for DTC B1655.

OK

| 10 | Inspection of the airbag control module and the combination meter |
|---|---|

(1) Perform the inspection for the airbag control module, the occupant detection sensor, and the seat belt buckle switch RH.
Follow the diagnosis procedures for DTC B16F1 of the airbag system to perform the inspection. (Refer to RS - 65)
Criteria: No fault is found.

NG → Repair or replacement of the parts following the procedures for DTC B16F1

OK

Replace the combination meter. (Refer to ME - 63"Removal")

| 11 | Check of the power supply voltage of the clock assembly |
|---|---|

(1) Disconnect the connector of the clock assembly.
(2) Turn the ignition switch to ON.
(3) Measure the voltage between the ignition power supply and the clock assembly.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (D18) No. 10 - chassis ground | Always | 10 V or more |

NG → Check if the harness between the fuse and the clock assembly is open or shorted.

SB

OK

| 12 | Inspection of the grounding circuit of the clock assembly |
|---|---|

(1) Turn the ignition switch to OFF.
(2) Measure the resistance between the clock assembly and the chassis ground.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (D18) No. 8 - chassis ground | Always | Less than 10 Ω |
| (D18) No. 14 - chassis ground | Always | Less than 10 Ω |

NG → Repair or replacement of the harness

OK

| 13 | Inspection of the harness between the clock assembly and the combination meter |
|---|---|

(1) Disconnect the harnesses from the clock assembly and the combination meter.
(2) Measure the resistance between the clock assembly and the combination meter.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| (D18) No. 6 - (D7) No. 13 | Always | Less than 10 Ω |

NG → Repair or replacement of the harness

OK

| 14 | Check of the communication between the clock assembly and the combination meter |
|---|---|

(1) Remove the clock assembly, and install a normally functioning clock assembly (a new clock assembly).
(2) Connect the connectors ((D18) No. 6 - (D7) No. 13) and turn the ignition switch to ON.
Criteria: The clock assembly properly displays the data.

NG → Replacement of the combination meter case ASSY

OK

Replace the clock assembly.

## Exploded view

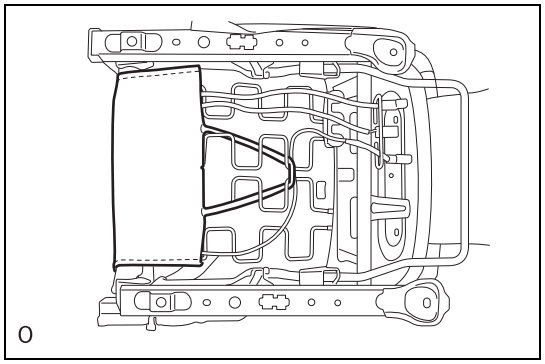
NOTE:
Vehicles with steering wheels on the left are mirrored.

## Removal

1. Precautions for handling the device
   NOTE:
   The following procedure is for LH side. Unless otherwise specified, perform the same procedures for the RH side.
2. Removal of the front seat ASSY LH (Refer to SE - 11)

SB

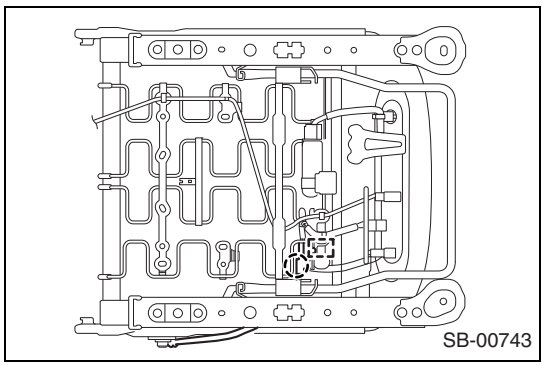
3. Removal of the front seat cushion shield INN LH (driver's side) (Refer to SE - 13)



4. Removal of the front seat inner belt ASSY LH (driver's side)
   (1) Remove the rubber band of the separate type front seat backrest cover LH.

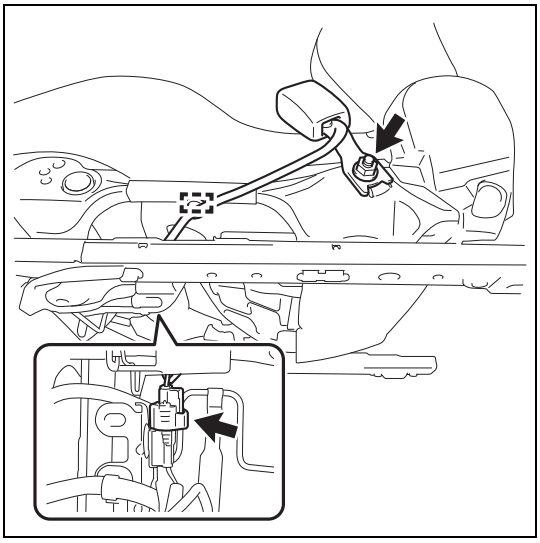
   (2) Release the claw and 3 clamps, and disconnect the wiring harness of the front seat inner belt ASSY LH.

   (3) Release the 2 clamps and disconnect the wiring harness of the front seat inner belt ASSY RH.
   (4) Remove the nut and the washer, and remove the front seat inner belt ASSY RH.



5. Removal of the front seat inner belt ASSY RH (passenger's side)
   (1) Release the clamp.
   (2) Remove the nut and the washer, and remove the front seat inner belt ASSY RH.

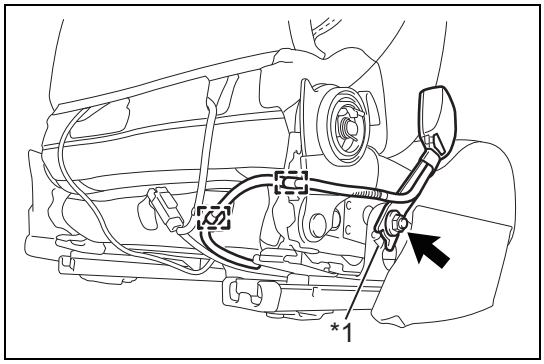
SB



## Installation

NOTE:

The following procedure is for LH side. Perform the work for the RH side referring to the procedures for the LH side.



1. Installation of the front seat inner belt ASSY LH (driver's side)
   (1) Install the front seat inner belt ASSY LH with the nut and the washer.
   Standard value:T=42N·m {428kgf·cm} {31.0ft·lbf}
   CAUTION:
   - Be careful not to allow the front seat inner belt ASSY LH ride over the location.
   - Make sure to put the wave washer when installing the front seat inner belt ASSY.

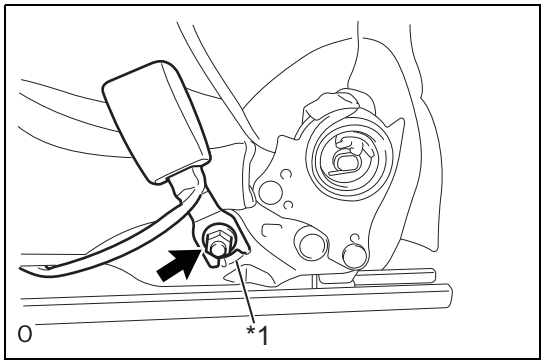
   (2) Engage the claw and 5 clamps, and install the wiring harness of the front seat inner belt ASSY LH.
   (3) Install the rubber band of the separate type front seat backrest cover LH.



2. Installation of the front seat inner belt ASSY RH (passenger's side)
   (1) Install the front seat inner belt ASSY RH with the nut and the washer.
   Standard value:T=42N·m {428kgf·cm} {31.0ft·lbf}
   CAUTION:
   - Be careful not to allow the front seat inner belt ASSY RH ride over the location.
   - Make sure to put the wave washer when installing the front seat inner belt ASSY.

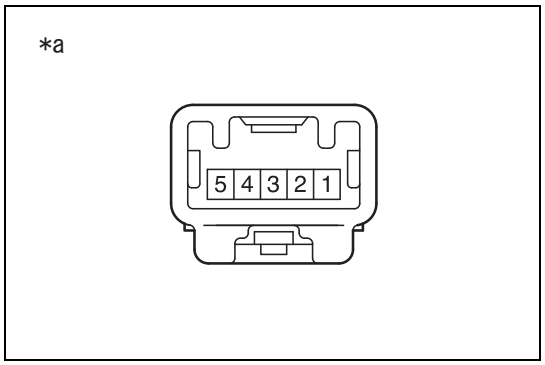
   (2) Engage the claw and the clamp, and install the wiring harness of the front seat inner belt ASSY RH.

3. Installation of the front seat cushion shield INN LH (driver's side) (Refer to SE - 25)
4. Installation of the front seat ASSY LH (Refer to SE - 25)
5. Inspection of airbag warning light (Refer to RS - 53)

SB

## Unit inspection



1. Inspection of the front seat inner belt ASSY RH
   (1) Measure the resistance according to the following chart.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | Tongue plate not inserted to the buckle | Less than 1 Ω |
| | Tongue plate inserted to the buckle | Less than 10 kΩ |

Captions in illustration

| | |

## Removal

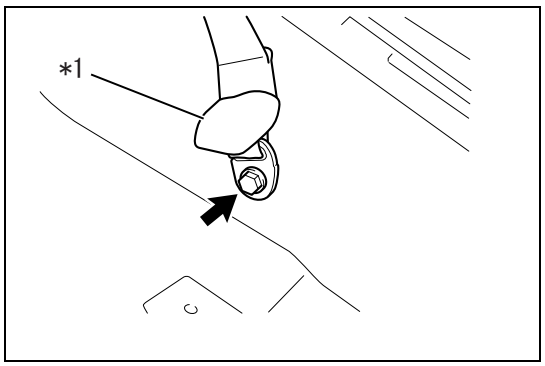
WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Disconnection of the battery ground terminal
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated. (Refer to IN - 6)
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
2. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)
3. Removal of the front door scuff plate RH (Refer to IT - 48)
4. Removal of the front door opening trim weather strip RH
   (1) Remove the front door opening trim weather strip RH to the extent that the quarter lower trim RH and the center pillar garnish RH can be removed.
5. Removal of quarter lower trim RH (Refer to IT - 49)
6. Removal of quarter trim lid RH (Refer to IT - 49)
7. Removal of the rear window side garnish RH (Refer to IT - 50)
8. Removal of the quarter rear trim garnish FR RH (Refer to IT - 51)



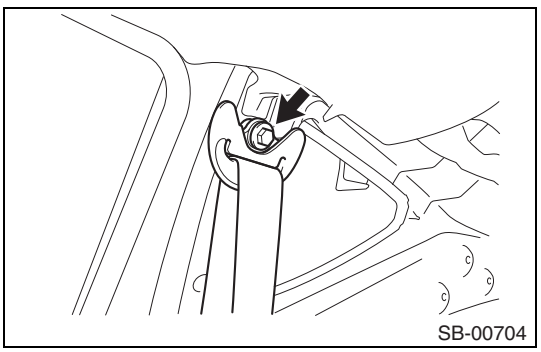
9. Disconnection of front seat outer belt ASSY RH
   (1) Turn over the floor anchor cover.

Captions in illustration

| | |
|---|---|
| *1 | Floor anchor cover |

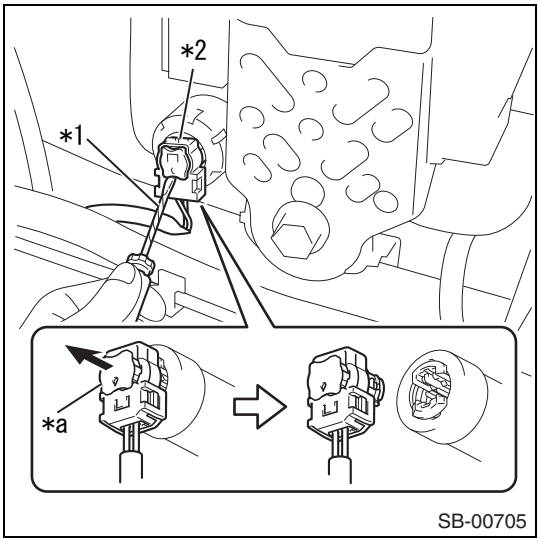
   (2) Loosen the bolt and disconnect the floor anchor part of the front seat outer belt ASSY RH.

10. Removal of the center pillar garnish RH (Refer to IT - 51)



11. Removal of the front seat outer belt ASSY RH
    (1) Loosen the bolt and disconnect the shoulder anchor part of the front seat outer belt ASSY RH.

SB

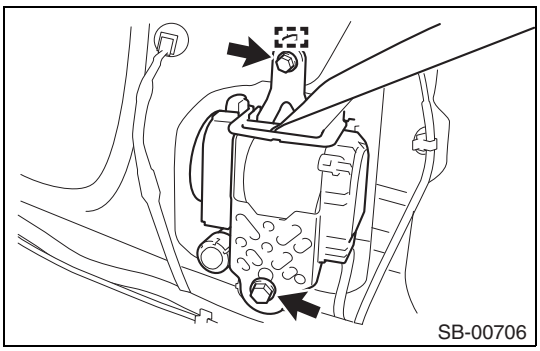


(2) Using the fine flat tip screwdriver wrapped with protective tape, pull off the lock of the pretensioner connector to unlock it.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | Pretensioner connector |
| *a | Unlock it. |

(3) Using the fine flat tip screwdriver wrapped with protective tape, disconnect the pretensioner connector.



(4) Remove 2 bolts and the guide, and remove the front seat outer belt ASSY RH.

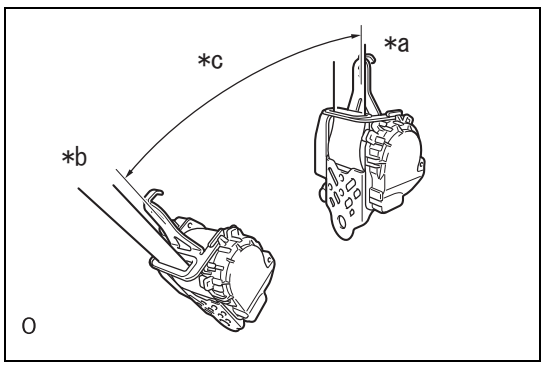
## Installation

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.



1. Installation of the front seat outer belt ASSY RH
   (1) Check of the inclination angle for activating the ELR locking operation
      (a) Slowly move the retractor from the installation position, and check that the belt is not locked when the angle is within 12° in all directions, and that it is always locked when the angle is 27° or larger in all directions.

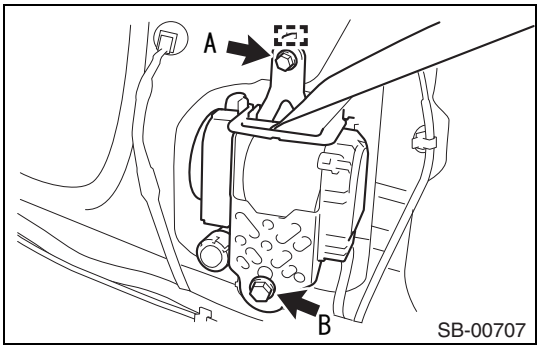
Captions in illustration

| | |
|---|---|
| *a | Unlocked |
| *b | Locked |
| *c | 27° |

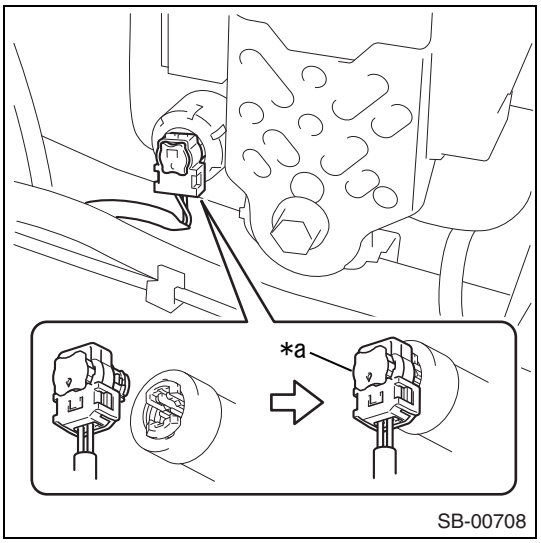
CAUTION:

Do not disassemble the retractor.

SB



(2) Insert the guide, and install the retractor part of the front seat outer belt ASSY RH with 2 bolts.
Standard value:Bolt A
T=7.5N·m {77kgf·cm} {5.5ft·lbf}
Bolt B
T=30N·m {306kgf·cm} {22.1ft·lbf}



(3) Connect the pretensioner connector to the front seat outer belt ASSY RH.

Captions in illustration

| | |
|---|---|
| *a | Push and lock it. |

(4) Push in the lock of the pretensioner connector.
CAUTION:
Lock it securely.

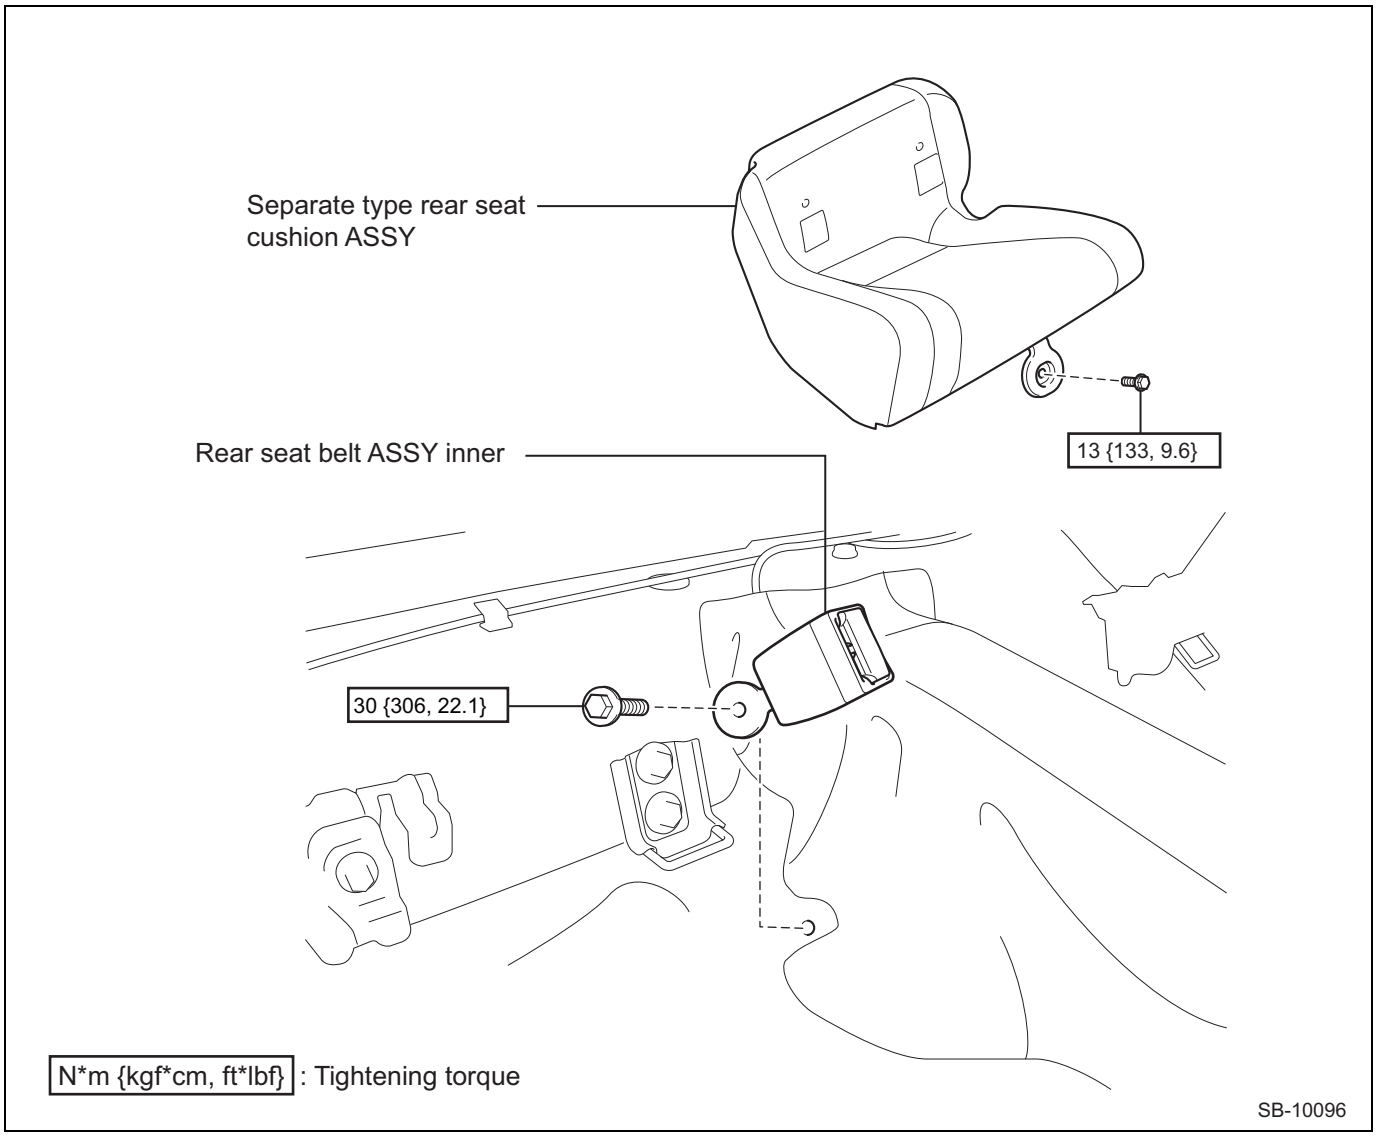
(5) Tighten the bolt to install the shoulder anchor part of the front seat outer belt ASSY RH.
Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}

2. Installation of the center pillar garnish RH (Refer to IT - 57)
3. Connection of front seat outer belt ASSY RH
   (1) Tighten the bolt to install the floor anchor part of the front seat outer belt ASSY RH.
   Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}
   (2) Install the floor anchor cover.
4. Installation of the quarter rear trim garnish FR RH (Refer to IT - 57)
5. Installation of the rear window side garnish RH (Refer to IT - 57)
6. Installation of the quarter trim lid RH (Refer to IT - 57)
7. Installation of the quarter lower trim RH (Refer to IT - 57)
8. Installation of front door opening trim weather strip RH
9. Installation of the front door scuff plate RH (Refer to IT - 58)
10. Installation of separate type rear seat cushion ASSY (Refer to SE - 39)
11. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
12. Function inspection of the seat belt (Refer to SB - 7)
13. Inspection of airbag warning light (Refer to RS - 53)

SB

# Rear seat inner belt ASSY

## Exploded view

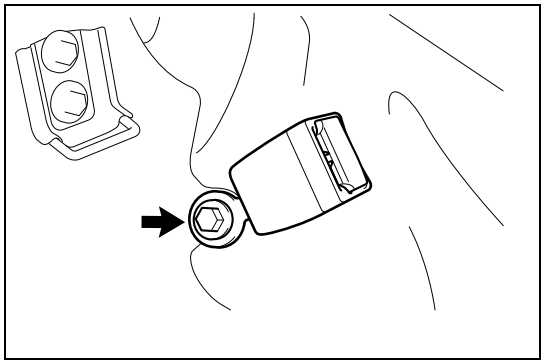


## Removal

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)



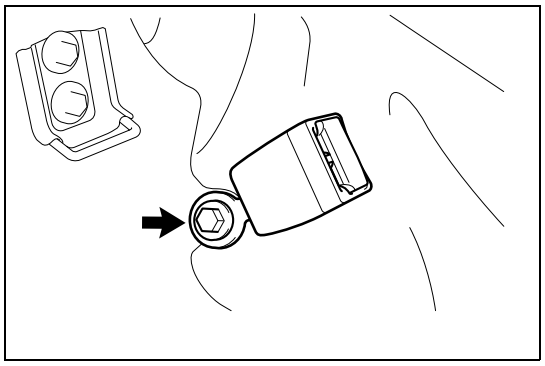
2. Removal of the rear seat belt ASSY inner
   (1) Remove the bolt and remove the rear seat belt ASSY inner.

SB

## Installation

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.



1. Installation of the rear seat belt ASSY inner
   (1) Install the rear seat belt ASSY inner RH with the bolt in the direction shown in the figure.
   Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}

2. Installation of separate type rear seat cushion ASSY (Refer to SE - 39)

# Rear seat outer belt ASSY

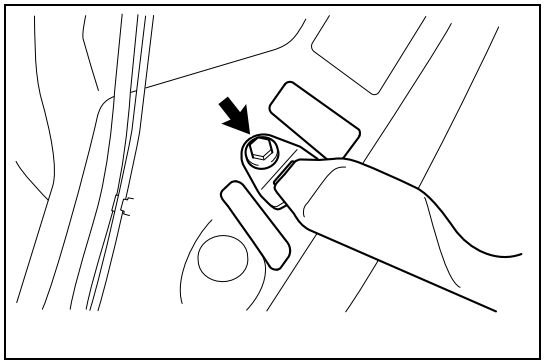
## Removal

NOTE:

The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)
2. Removal of the front door scuff plate RH (Refer to IT - 48)
3. Removal of the front door opening trim weather strip RH
   (1) Remove the front door opening trim weather strip RH to the extent that the quarter lower trim RH can be removed.

4. Removal of quarter lower trim RH (Refer to IT - 49)
5. Removal of quarter trim lid RH (Refer to IT - 49)
6. Removal of the rear window side garnish RH (Refer to IT - 50)



7. Removal of the rear seat 3-point type belt ASSY OUT RH
   (1) Remove the bolt and disconnect the floor anchor part of the rear seat belt ASSY OUT RH.

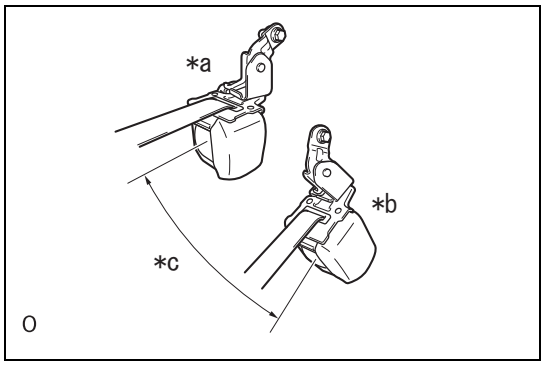
   (2) Remove the bolt A.
   (3) Loosen the bolt B and remove the rear seat belt ASSY OUT RH.

## Installation

NOTE:

SB

The procedures described below are for the RH side. Perform the same procedures for the LH side.

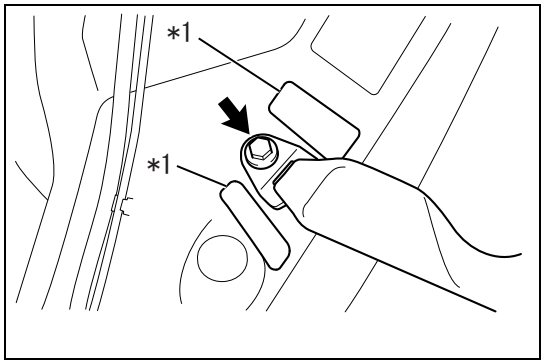


1. Installation of the rear seat 3-point type belt ASSY OUT RH
   (1) Check of the inclination angle for activating the ELR locking operation

Captions in illustration

| | |
|---|---|
| *a | Unlocked |
| *b | Locked |
| *c | 27° |

   (a) Slowly move the retractor from the installation position, and check that the belt is not locked when the angle is within 12° in all directions, and that it is always locked when the angle is 27° or larger in all directions.
   CAUTION:
   Do not disassemble the retractor.
   (2) Tighten the bolt A and temporally install the retractor part of the rear seat belt ASSY OUT RH.
   (3) Install the retractor part of the rear seat belt ASSY OUT RH with the bolt B.
   Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}
   Bolts A, B



(4) Install the floor anchor part of the rear seat belt ASSY OUT RH with the bolt.
Standard value:T=30N·m {306kgf·cm} {22.1ft·lbf}
CAUTION:
- Pay attention to the direction to install the floor anchor part.
- Be careful not to allow the floor anchor part ride over the location.
- Be careful not to twist the rear seat belt ASSY OUT RH.

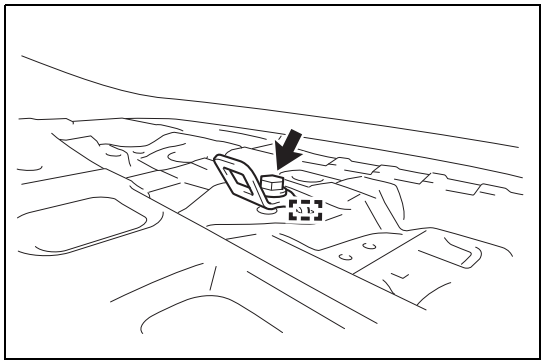
## Removal

1. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)
2. Removal of the separate type rear seat cushion ASSY LH
   NOTE:
   Remove the part in the same manner as RH side.
3. Removal of the bench type rear seat backrest ASSY (Refer to SE - 31)
4. Removal of the front door scuff plate RH (Refer to IT - 48)
5. Removal of front door scuff plate LH
   NOTE:
   Remove the part in the same manner as RH side.
6. Removal of the front door opening trim weather strip RH
   (1) Remove the front door opening trim weather strip RH to the extent that the luggage compartment trim side cover RH can be removed.
7. Removal of front door opening trim weather strip LH
   NOTE:
   Remove the part in the same manner as RH side.
8. Removal of quarter lower trim RH (Refer to IT - 49)
9. Removal of quarter lower trim LH
   NOTE:
   Remove the part in the same manner as RH side.
10. Removal of quarter trim lid RH (Refer to IT - 49)
11. Removal of quarter trim lid LH
    NOTE:
    Remove the part in the same manner as RH side.
12. Removal of the rear window side garnish RH (Refer to IT - 50)
13. Removal of the rear window side garnish LH
    NOTE:
    Remove the part in the same manner as RH side.
14. Removal of package tray trim panel ASSY (Refer to DL - 111)



15. Removal of the child restraint seat tether anchor bracket
    (1) Remove the bolt.
    (2) Remove the guide and remove the child restraint seat tether anchor bracket.
    NOTE:
    Remove both parts using the same procedures.

## Installation

1. Installation of the child restraint seat tether anchor bracket
   (1) Insert the guide and temporally install the child restraint seat tether anchor bracket.
   (2) Install the child restraint seat tether anchor bracket with the bolt.
   Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}
   NOTE:
   Install both parts using the same procedures.
2. Installation of package tray trim panel ASSY (Refer to DL - 112)
3. Installation of the rear window side garnish RH (Refer to IT - 57)

4. Installation of rear window side garnish LH
   NOTE:
   Install the part in the same manner as RH side.
5. Installation of the quarter trim lid RH (Refer to IT - 57)
6. Installation of quarter trim lid LH
   NOTE:
   Install the part in the same manner as RH side.
7. Installation of the quarter lower trim RH (Refer to IT - 58)
8. Installation of quarter lower trim LH
   NOTE:
   Install the part in the same manner as RH side.
9. Installation of front door opening trim weather strip RH
10. Installation of front door opening trim weather strip LH
11. Installation of the front door scuff plate RH (Refer to IT - 58)
12. Installation of front door scuff plate LH
    NOTE:
    Install the part in the same manner as RH side.
13. Installation of the bench type rear seat backrest ASSY (Refer to SE - 39)
14. Installation of separate type rear seat cushion ASSY (Refer to SE - 39)
15. Installation of the separate type rear seat cushion ASSY LH

# Child seat fixing device (ISO-FIX)

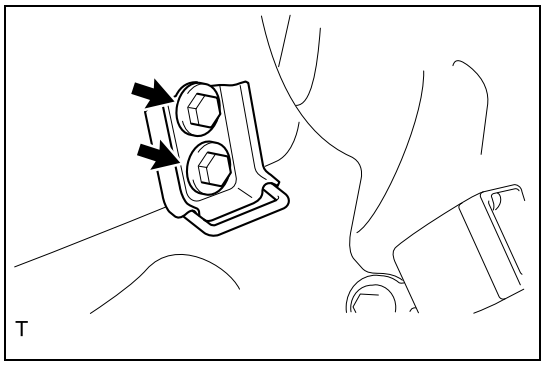
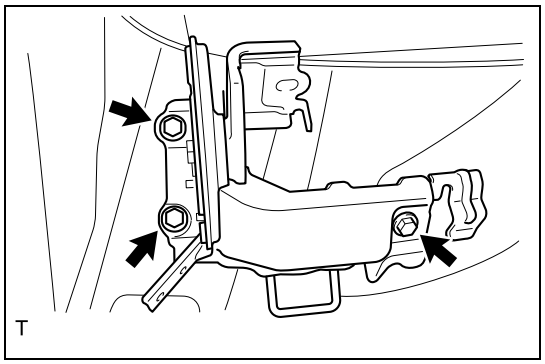
## Removal

1. Precautions for handling the device
   NOTE:
   The procedures described below are for the RH side. Perform the same procedures for the LH side.
2. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)
3. Removal of the bench type rear seat backrest ASSY (Refer to SE - 31)



4. Removal of the child restraint seat anchor bracket RH
   (1) Remove 2 bolts and remove the child restraint seat anchor bracket RH.
5. Removal of the front door scuff plate RH (Refer to IT - 48)
6. Removal of the front door opening trim weather strip RH
   (1) Remove the front door opening trim weather strip RH to the extent that the quarter lower trim RH can be removed.
7. Removal of quarter lower trim RH (Refer to IT - 49)



8. Removal of the rear seat hinge RH
   (1) Remove 3 bolts and remove the rear seat hinge RH.

SB

## Installation

NOTE:
The procedures described below are for the RH side. Perform the same procedures for the LH side.

1. Installation of the rear seat hinge RH
   (1) Install the rear seat hinge RH with 3 bolts.
   Standard value:T=33N·m {337kgf·cm} {24.3ft·lbf}
2. Installation of the quarter lower trim RH (Refer to IT - 58)
3. Installation of the front door opening trim weather strip RH (Refer to IT - 58)
4. Installation of the front door scuff plate RH (Refer to IT - 58)
5. Installation of the child restraint seat anchor bracket RH
   (1) Install the child restraint seat anchor bracket RH with 2 bolts.
   Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}
6. Installation of the bench type rear seat backrest ASSY (Refer to SE - 39)
7. Installation of separate type rear seat cushion ASSY (Refer to SE - 39)

# Heater & air conditioner system (for automatic air conditioning system)

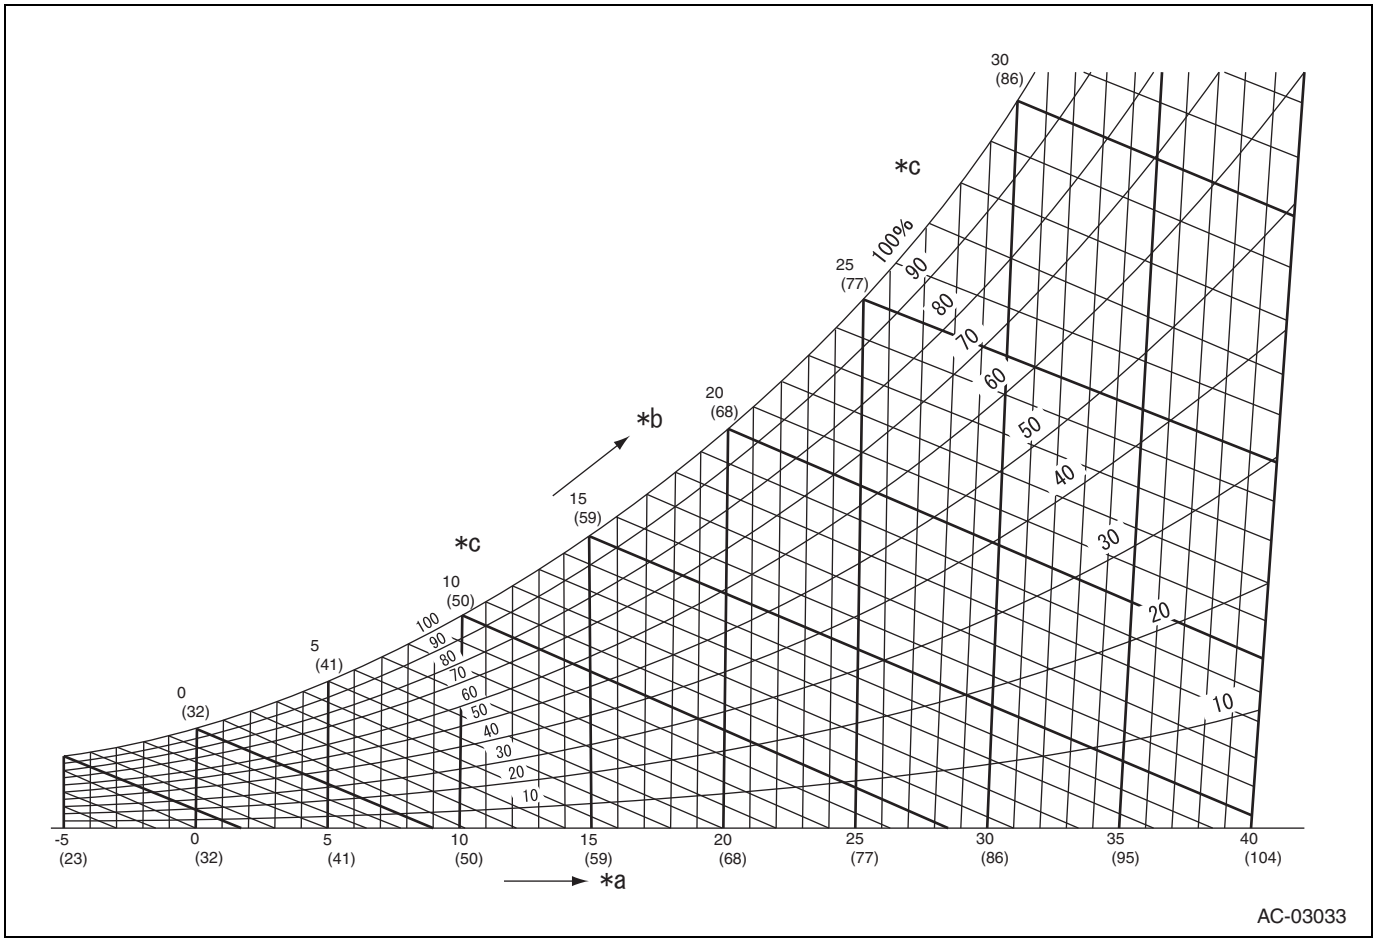
## Function inspection

1. Check of cooling performance
   (1) Install the air conditioner tool set to the vehicle.
   (2) Set the vehicle to the following conditions. [*1]

| Item | Conditions |
|---|---|
| Vehicle body | Vehicle parked condition in shade |
| Door | Full open |
| A/C switch | ON |
| Engine speed | 2000 r/min |
| FRESH/RECIRC damper position | RECIRC position |
| Outlet opening damper position | FACE |
| Setting temperature | LO (MAX COLD) |
| Blower speed | HI |
| Air conditioner inlet opening temperature *2 | 30 to 35°C {86 to 95°F} |
| Condenser pressure (gauge high pressure side) *3 | 1.47 to 1.67 MPaG (15 to 17 kgf/cm$^2$) |

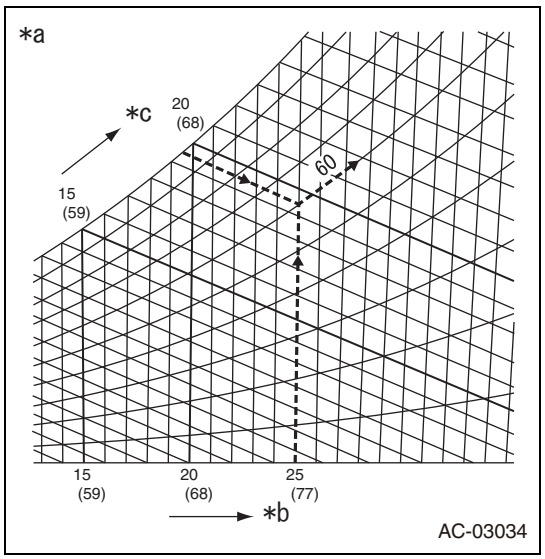
NOTE:
*2···The inlet opening temperature can be judged correctly only in the range from 30 to 35°C {86 to 95°F}. If the temperature is low, postpone the test.
*3···If the condenser pressure (gauge high pressure side) is high, reduce the pressure by watering the condenser. If it is too low, increase the pressure by placing a cover over the condenser.

   (3) Place a wet-and-dry-bulb thermometer (necessary for humidity) at the inlet opening and measure the temperature by inserting the bulb of the dry thermometer at the center of the outlet opening.
   (4) Operate the air conditioner under the conditions in [*1] to make the outlet opening temperature stable. (About 5 to 6 minutes)
   (5) Measure the dry and wet bulb temperatures at the inlet opening and the temperature at the outlet opening.
   (6) Apply the measurement values of the dry/wet bulb temperatures at the inlet opening to the air diagram to obtain the relative humidity.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Dry bulb temperature (°C {°F}) | *b | Wet bulb temperature (°C {°F}) |
| *c | Relative humidity (%) | - | - |



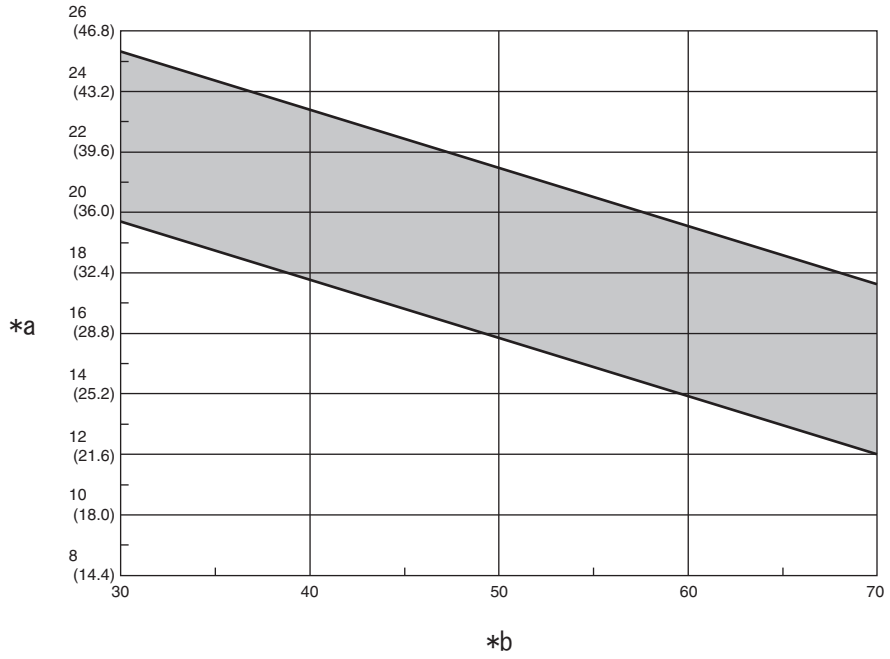
(a)For relative humidity, when the dry bulb temperature of the wet-and-dry-bulb thermometer at the inlet opening is 25°C {77°F} and the wet bulb temperature is 19.5°C {67.1°F}, the intersection of the broken lines in the figure is the relative humidity. In this case, it is 60%.

Captions in illustration

| | |
|---|---|
| *a | Example |
| *b | Dry bulb temperature (°C {°F}) |
| *c | Wet bulb temperature (°C {°F}) |

(7) Check the cooling performance by applying the difference of measured temperatures between the inlet opening and outlet opening and the relative humidity to the standard performance table.

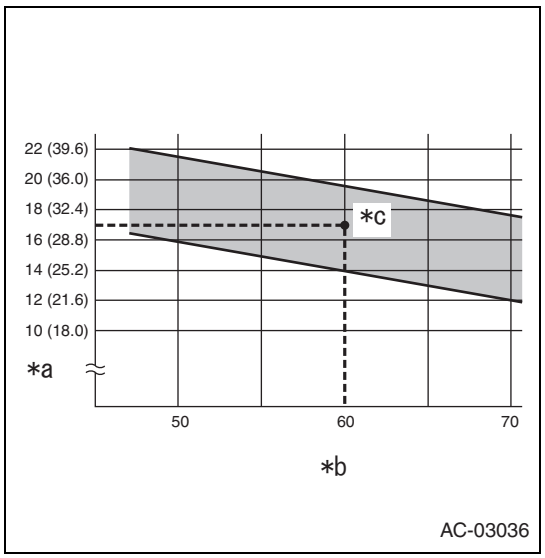
AC



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Difference between inlet opening and outlet opening temperatures (°C {°F}) | *b | Relative humidity (%) |

Criteria: The value must be within the shaded area of the diagram.



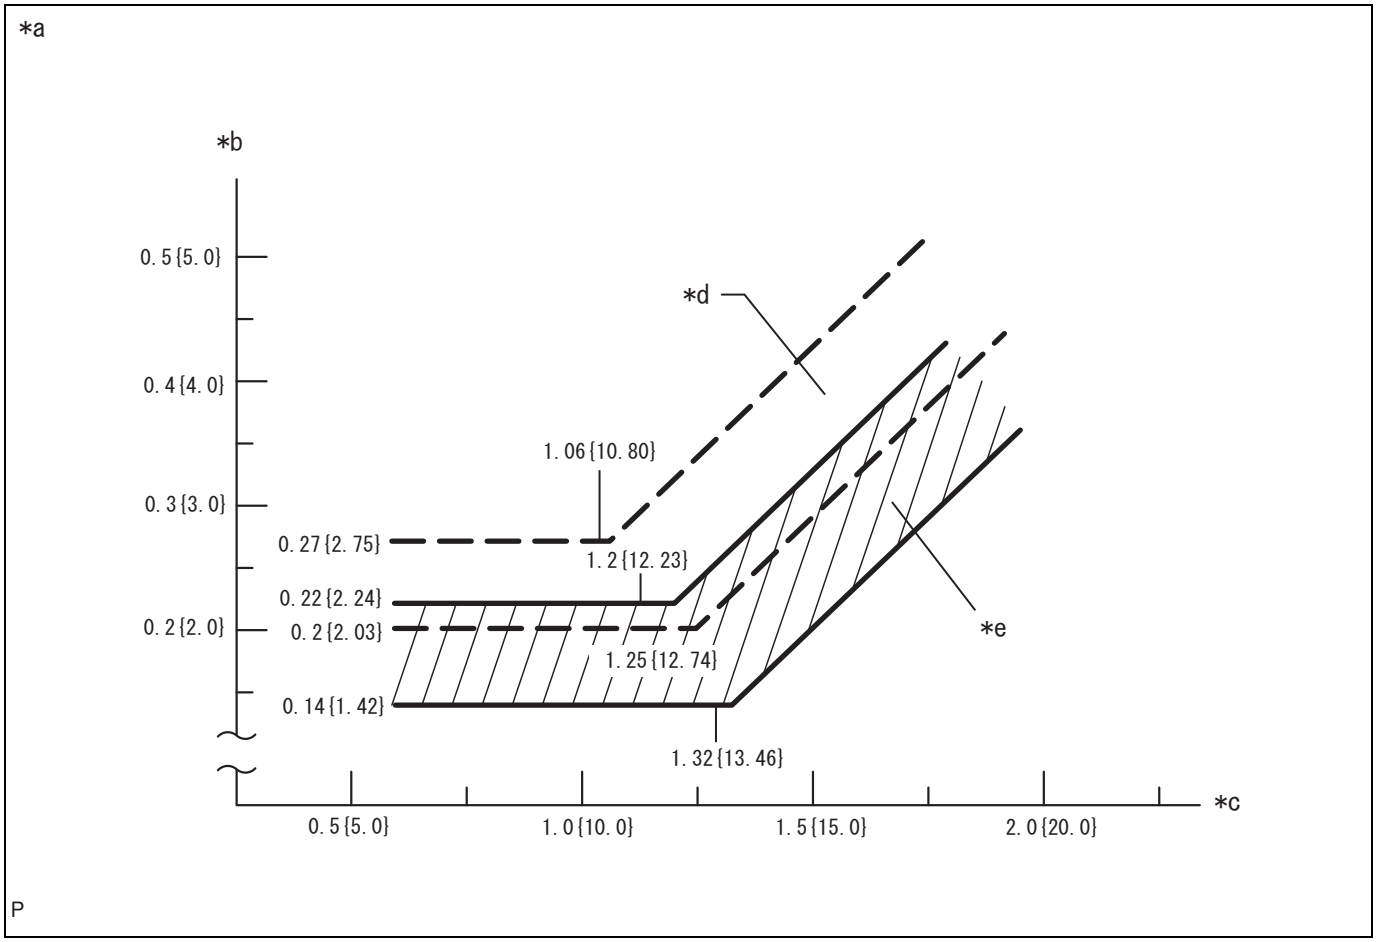
(a) To obtain the cooling performance using the standard performance table, an example when the difference of temperatures between the inlet opening and the outlet opening is 17°C {30.6°F} and the relative humidity is 60% is shown below.

Captions in illustration

| | |
|---|---|
| *a | Difference between inlet opening and outlet opening temperatures (°C {°F}) |
| *b | Relative humidity (%) |
| *c | Intersection |

AC

2. Check of refrigerant gas pressure
   (1) Check of refrigerant gas pressure with gauge



Captions in illustration

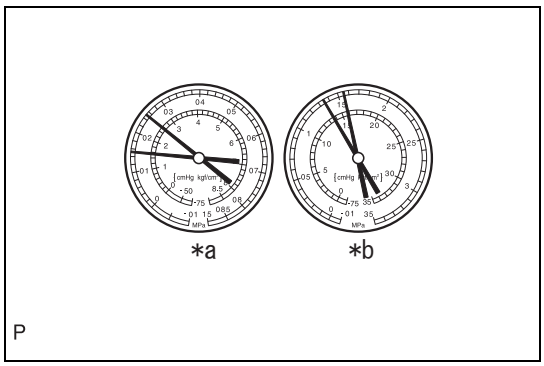
| | | | |
|---|---|---|---|
| *a | Gauge reading reference data | *b | Pressure at low pressure side MPa {kgf/cm$^2$} |
| *c | Pressure at high pressure side MPa {kgf/cm$^2$} | *d | Blower HI range |
| *e | Blower LO range | - | - |

AC

(a)Attach the air conditioner tool set.

(b)Set the vehicle to the following conditions. [*2]

| Item | Conditions |
|---|---|
| Engine | After warming-up |
| Door | Full open |
| A/C switch | ON |
| RECIRC switch | Recirculation |
| Setting temperature | LO |
| Blower speed | HI |
| Air conditioner inlet opening temperature | 30 to 35°C {86 to 95°F} |



(c)Check the gauge value in [*2].

1. At normal condition

Standard value: 0.13 to 0.20 MPa (1.3 to 2.0 kgf/cm$^2$) (Low pressure side)

1.47 to 1.67 MPa (15 to 17 kgf/cm$^2$) (High pressure side)

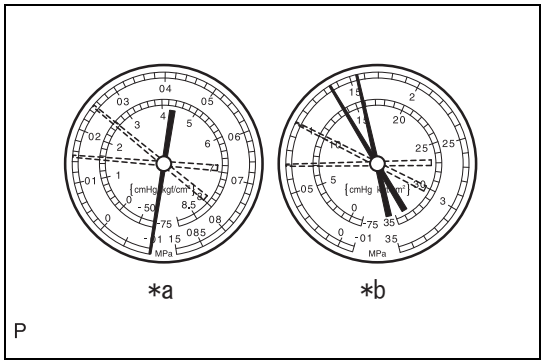
Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:

The illustration indicates the gauge at normal charge level of refrigerant gas.

2. In malfunction



(a) Example: During operation of the air conditioner, the pressure at the low pressure side becomes vacuum or normal.

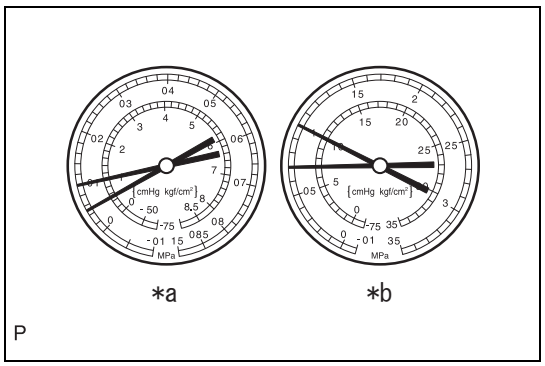
Measurement result

| | |
|---|---|
| Symptoms | It becomes cold or not cold cyclically. |
| Cause | Moisture in the cooling system is frozen at the cooler expansion valve. The refrigerant does not circulate temporarily. After ice is melted, normal operation is recovered. |
| Diagnosis | • The cooler drier is over-saturated.<br>• Moisture of the cooling system is frozen at the expansion valve and it blocks circulation of the refrigerant gas. |
| Corrective action | • Replace the cooler dryer.<br>• Remove moisture in the cycle by repeating air release.<br>• Inject appropriate level of new refrigerant gas. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:
The illustration indicates the gauge condition of moisture inclusion in the cooling system.



(b) Example: Both high and low pressure sides are low.

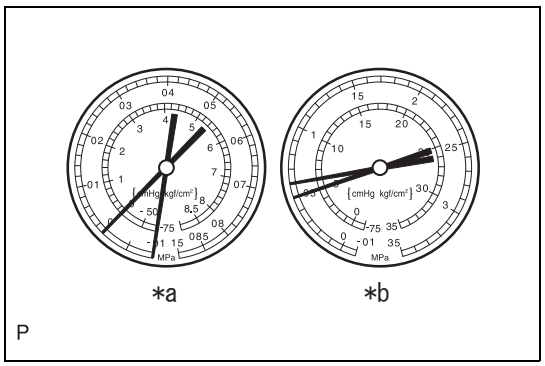
Measurement result

| | |
|---|---|
| Symptoms | • Poor cooling performance<br>• Cooling performance is not sufficient. |
| Cause | A part of the cooling system has gas leak. |
| Diagnosis | • Refrigerant gas is insufficient.<br>• Leak of refrigerant gas |
| Corrective action | • Check for gas leak. Repair it if necessary.<br>• Inject appropriate level of new refrigerant gas.<br>• If the pressure value is close to 0 when connected to the gauge, check for the leak area. After repair, perform vacuuming. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:
The illustration indicates the gauge condition of poor cooling.



(c) Example: The pressures at both low and high pressure sides are low and the pipe connected from the cooler condenser ASSY to the air conditioner unit has condensation.

Measurement result

| | |
|---|---|
| Symptoms | Poor cooling performance |
| Cause | Dust in the cooler condenser core blocks flow of refrigerant. |
| Diagnosis | Clogged cooler condenser core |
| Corrective action | Replace the cooler condenser ASSY. |

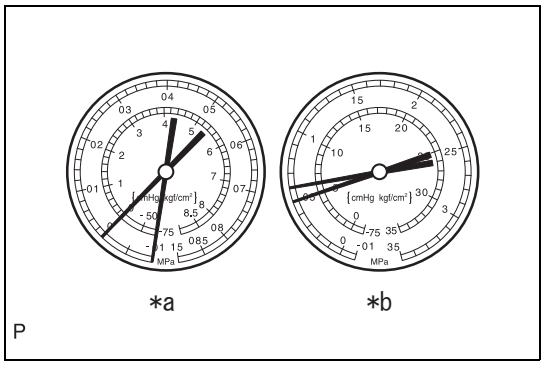
Captions in illustration

| | |
|---|---|
| *a | Low pressure side |

AC

| | |
|---|---|
| *b | High pressure side |

NOTE:
The illustration indicates the gauge condition of poor refrigerant gas performance.



(d) Example: Pressures at both low and high pressure sides are low and the pipe before and after the cooler condenser core and the cooler expansion valve has fogging or condensation.

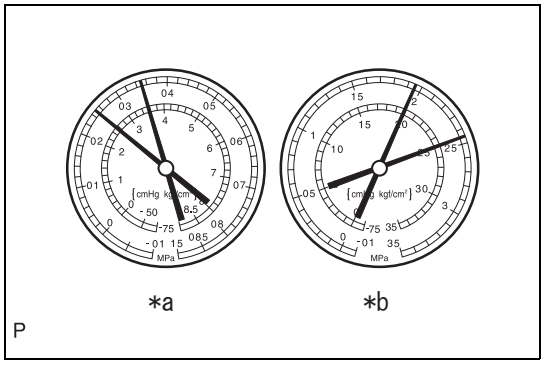
Measurement result

| | |
|---|---|
| Symptoms | Poor cooling (it may work in cases) |
| Cause | • Flow of the refrigerant gas is blocked by moisture or dust of the cooling system.<br>• Flow of the refrigerant gas is blocked by leak of the refrigerant gas from the cooler expansion valve. |
| Diagnosis | Refrigerant gas does not circulate. |
| Corrective action | • Check the cooler expansion valve.<br>• Remove dust in the cooler expansion valve with an air gun.<br>• Replace the cooler condenser ASSY.<br>• After vacuuming, inject new refrigerant gas to the appropriate level.<br>• If leak of the refrigerant gas from the cooler expansion valve is found, replace the cooler expansion valve. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:
The illustration indicates the gauge for no circulation of the refrigerant gas.



(e) Example: Both high and low pressure sides are too high.

Measurement result

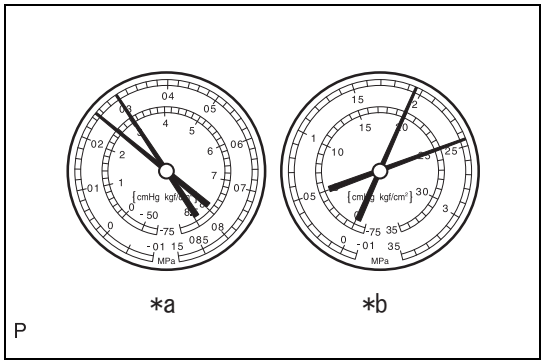
| | |
|---|---|
| Symptoms | Poor cooling performance |
| Cause | • Flow of the refrigerant gas is blocked by moisture or dust of the cooling system.<br>• Flow of the refrigerant gas is blocked by leak of the refrigerant gas from the cooler expansion valve. |
| Diagnosis | • Excessive refrigerant<br>• Cooling of the cooler condenser core is insufficient. |
| Corrective action | • Clean the cooler condenser core fin.<br>• Check operation of the cooling fan.<br>• Check the refrigerant level and inject the refrigerant to the appropriate level. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:
The illustration indicates the gauge condition of excess refrigerant gas or insufficient cooling of the cooler condenser core.

AC



(f) Example: Pressures at both low and high pressure sides are high and the low pressure pipe is too hot to be touched.

Measurement result

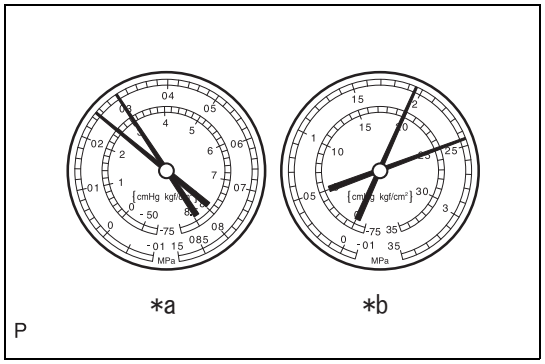
| | |
|---|---|
| Symptoms | Air conditioner does not function. |
| Cause | Air inside the cooling system |
| Diagnosis | • Air is included inside the cooling system.<br>• Insufficient vacuuming |
| Corrective action | • Check if the compressor oil is contaminated or insufficient.<br>• After vacuuming, inject new refrigerant gas. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:

- Caution: The gauge indicates a value when the cooling system is opened without vacuuming for injection of the refrigerant.
- The illustration indicates the gauge condition of air inclusion in the cooling system.



(g) Example: Pressures at both low and high pressure sides are high and the low pressure side has fogging or condensation.

Measurement result

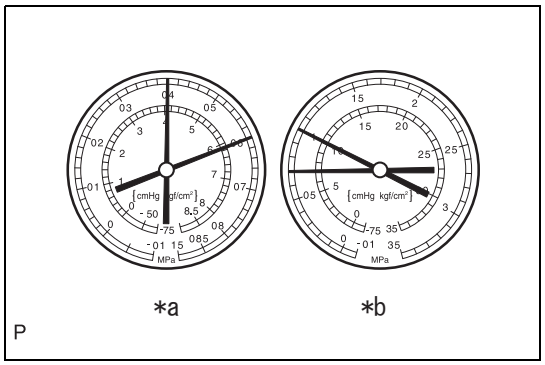
| | |
|---|---|
| Symptoms | Poor cooling performance |
| Cause | Problems on cooler expansion valve |
| Diagnosis | • Excessive refrigerant of low pressure pipe<br>• Excessive opening of cooler expansion valve |
| Corrective action | Replace the cooler expansion valve. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:

The illustration indicates the gauge of improper cooler expansion valve.



(h) Example: Pressure at the low pressure side is high and pressure at the high pressure side is low.

Measurement result

| | |
|---|---|
| Symptoms | Air conditioner does not function. |
| Cause | Compression leak in cooler compressor ASSY |
| Diagnosis | • Poor compression<br>• Leak from valve or damage to sliding part |
| Corrective action | Repair or replace the cooler compressor ASSY. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |

AC

| | |
|---|---|
| *b | High pressure side |

NOTE:
The illustration indicates the gauge of poor compression of the cooler compressor ASSY.

3. Cooler condenser ASSY
   (1) If the cooler condenser ASSY fin is contaminated, clean it with water and dry it with compressor air.
   CAUTION:
   Do not damage the fin of the cooler condenser ASSY.
   (2) If the fin of the cooler condenser ASSY is bent, correct the fin straight with a screwdriver or pliers.
4. Check for refrigerant gas leak
   (1) Using a halogen leak detector, check the pipe joints for leaks.
   (2) If gas leak is found at joints of pipes, check the torque at the joints.

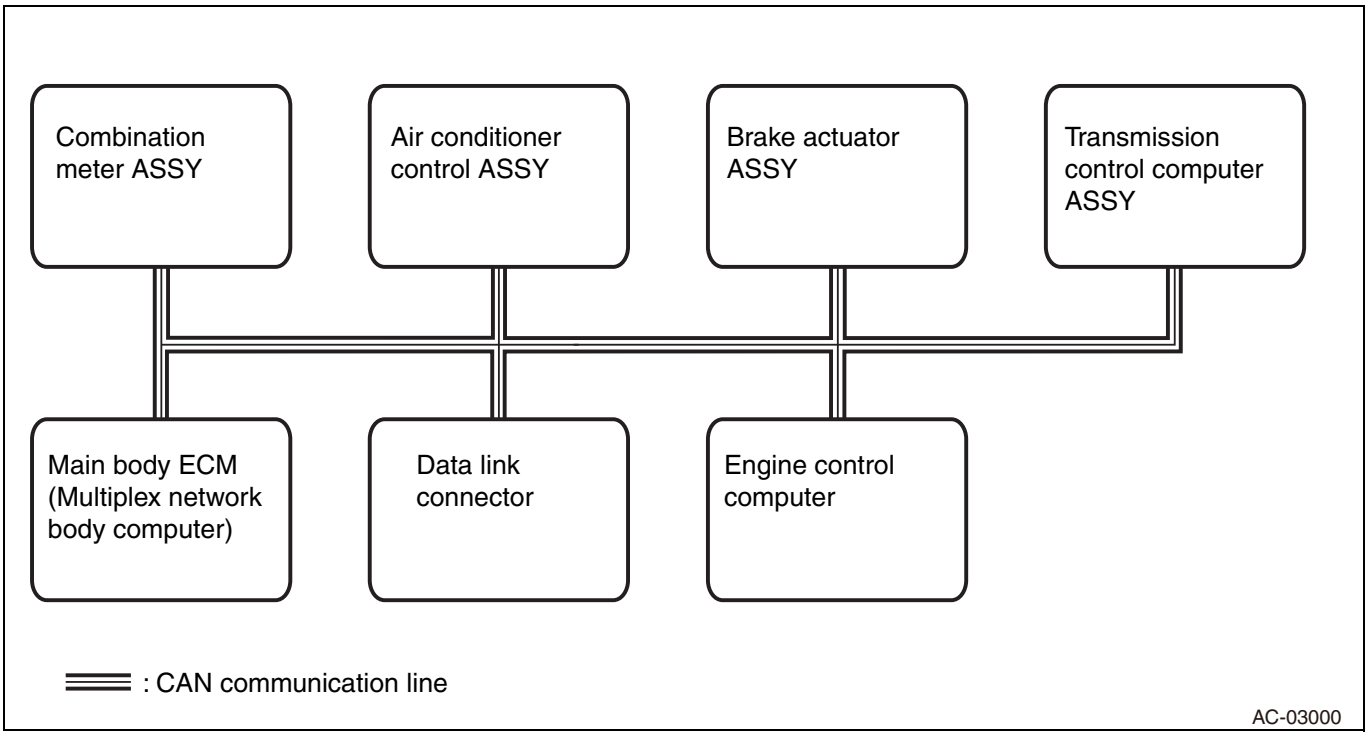
| | Damper servo (FRESH/RECIRC) | AC - 106 |
| Indicator does not illuminate. | Air conditioner control ASSY | AC - 24 |
| | Wire harness and connector | - |
| Diagnostic code is not written (At IG ON, the set mode is erased). | Air conditioner control ASSY | AC - 24 |
| Outlet opening is not changed. | Damper servo (mode change) | AC - 110 |
| | Air conditioner control ASSY | AC - 24 |
| | Wire harness and connector | - |
| Illumination does not turn on, or does not dim. | Air conditioner control ASSY | AC - 24 |
| | Wire harness and connector | - |

## Description of functions

1. Communication system function
   (1) The heater & air conditioner system sends and receives signals with computers and devices through the CAN communication system.



2. Diagnosis function
   (1) Function of diagnosis tool SSM4
   (a)For the heater & air conditioner system, items in the table below can be checked by connecting diagnosis tool SSM4.

| Check details | Contents |
|---|---|
| Diagnostic codes | Diagnostic code can be read or erased. |
| [Current Data Display & Save] | ECM data can be checked, recorded or reproduced. |
| System Operation Check Mode | Actuator can be operated at any time. |

## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

AC

| 2 | Interview and phenomenon check |
|---|---|

(1) Interview and phenomenon check (Refer to AC - 20)

Next

| 3 | Basic inspection |
|---|---|

(1) Measure the battery voltage.
Voltage: 10 to 16 V
(2) According to the parts arrangement drawing and/or circuit figure, check the blown fuse, broken wire harness, short circuit, and/or improper connection that can be inspected visually.

Next

| 4 | Inspection of CAN communication system |
|---|---|

(1) Check CAN communication system. (Refer to NW - 30)
Result

| Result | Go to |
|---|---|
| Functioning properly | A |
| Not functioning properly | B |

B → CAN communication system (To NW - 30)

A

AC

| 5 | Checking of the diagnostic code by SSM4 |
|---|---|

(1) Checking of the diagnostic codes (Refer to AC - 20)
(a) Record the diagnostic codes.
(2) Clear diagnostic code
(3) Do a DTC check again.
(a) Based on the recorded diagnostic codes, reproduce the trouble phenomenon, and check if the diagnostic codes are output again.
NOTE:
When a diagnostic code is output, refer to “List of diagnostic codes” (AC - 14).

Result

| Result | Go to |
|---|---|
| No code, can check and reproduce phenomenon | A |
| Code is output | B |
| No code, can't check and reproduce phenomenon | C |

B → Go to Step 8.

C → Go to "Malfunction simulation (IN - 32)".

A

| 6 | Symptom table |
|---|---|

(1) Symptom table (Refer to AC - 15)

Result

| Result | Go to |
|---|---|
| Not applicable to the symptom table. | A |
| Applicable to the symptom table. | B |

B → Go to Step 8.

A

| 7 | Perform troubleshooting with the method below based on malfunctions. |
|---|---|

(1) Data monitor / active test (Refer to AC - 27)
  (a) [Data monitor] (SSM4)
  (b) [Active Test] (SSM4)
(2) ECM terminal arrangement (Refer to AC - 24)
(3) After inspection of the wire harness and connector, perform the diagnosis check again. (Refer to AC - 20)

## Checking / clearing diagnostic codes

1. Checking diagnostic codes (reading with SSM4)
   (1) With IG OFF, connect SSM4 to DLC3.

(2) Turn the ignition switch to ON.
(3) According to the screen of SSM4, select [Each System] →[Air Conditioner] →[DTC].
(4) Check the diagnostic codes.

2. Clearing diagnostic code records (Cleared by the SSM4)
(1) With IG OFF, connect SSM4 to DLC3.
(2) Turn the ignition switch to ON.
(3) According to the screen of SSM4, select [Each System] →[Air Conditioner] →[Clear Memory].
(4) Select [Deletion] on the screen to clear the data.

## customize function

1. Heater & air conditioner system customizing
(1) Customization using the SSM4
(a)Connect the SSM4 to the DLC3.
(b)Turn the ignition switch to ON.
(c)According to the screen of SSM4, select [Each System] →[Air Conditioner] →[Customize] for customizing.

| Display name | Initial setting value | Contents | Setting | Control ECM |
|---|---|---|---|---|
| [Intake port auto mode] | AUTO | Sets control function which automatically allows Control ASSY to decide the inlet opening when the auto mode is started or allows user to select. | AUTO/User Select | Air conditioner control ASSY |
| [Compressor auto mode] | AUTO | Sets control function which automatically allows Control Assy to decide the A/C compressor operation when the auto mode is started or allows user to select. | AUTO/User Select | Air conditioner control ASSY |
| [Compressor Intake port (PSW, lock) linkage] | With interlock | Sets control function which changes the inlet opening to FRESH when the pressure SW detects a problem or allows user to select. | With interlock/User select | Air conditioner control ASSY |
| [Foot/DEF Automatic Fan Speed increase Function] | Allows increase | Sets control function which automatically increases the air flow when DEF mode is selected by the User or allows user to select. | Allows increase/User Select | Air conditioner control ASSY |
| [FOOT/DEF auto mode] | AUTO | Sets control function which selects FOOT/DEF outlet opening when the auto mode is started or user selects. | AUTO/MANUAL | Air conditioner control ASSY |
| [Setting temperature shift] | Display and actual setting are the same | Sets control function to allow temperature display to vary from the actual setting. | Variance of-3/-2/-1/0/1/2/3 is adjustable | Air conditioner control ASSY |

Circuit description

The cooler thermistor (in-vehicle sensor) is installed on the instrument panel. It is used to detect the passenger compartment temperature and to control “AUTO” of the heater & air conditioner. The resistance of the cooler thermistor (in-vehicle sensor) varies along with change of the passenger compartment temperature. When the passenger compartment temperature is low, the resistance is high. In contrast, when the passenger compartment temperature is high, the resistance is small. The air conditioner control ASSY gives voltage output (5 V) to the cooler thermistor (in-vehicle sensor), and reads variation of voltage along with resistance change of the cooler thermistor (in-vehicle sensor).

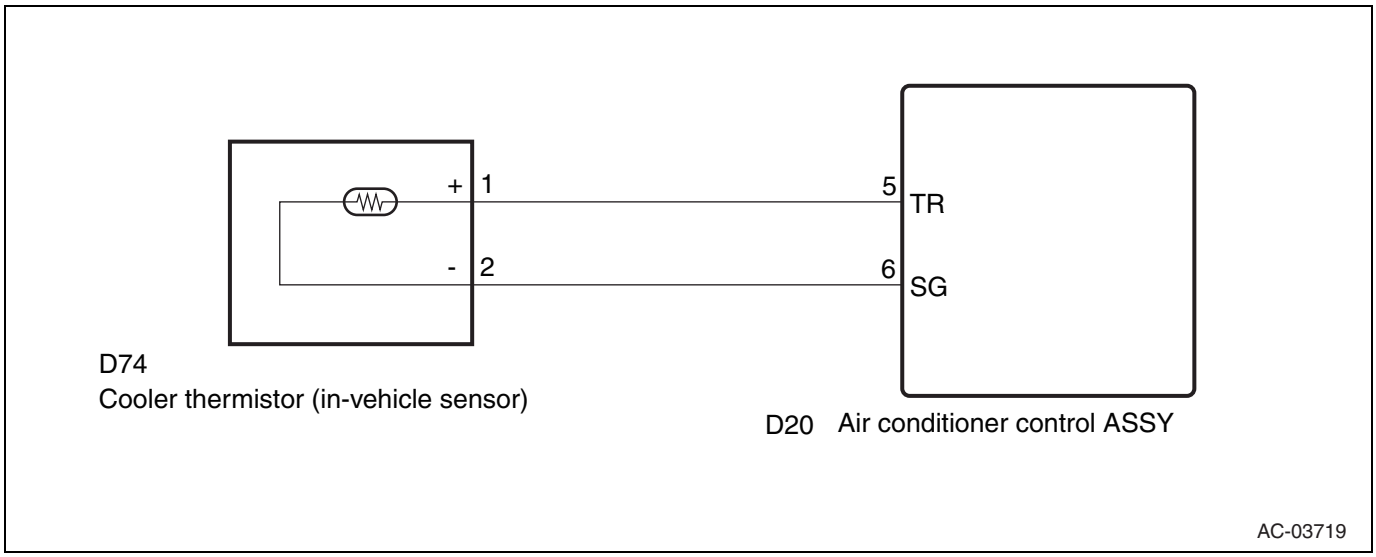
Circuit figure



Inspection steps

CAUTION:

- The heater & air conditioner system uses the CAN communication system. First, perform a “Communication function inspection”, following “How to troubleshoot” and after checking for any malfunction in the communication system, you can proceed with troubleshooting.
- This diagnostic code may be affected by abnormality of the combination meter ASSY. Before inspection, check the diagnostic code of “Meter & gauge system” and make sure that it is normal.

Circuit description
The damper position of air conditioner radiator damper servo SUB-ASSY NO.4 is detected by the air conditioner control ASSY. Based on this, the air conditioner control ASSY rotates the motor (forward or backward) to move the air mix damper at the desired position. This adjusts the air flow in the heater core after the evaporator and controls the outlet temperature.

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect connector D20 of the air conditioner control ASSY.
(2) Disconnect connector A28 of air conditioner radiator damper servo SUB-ASSY NO.4.
(3) Measure the resistance between the terminals.

Resistance (open circuit check):

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A28-1(VZ) - D20-13 (S5) | Always | Less than 1 Ω |
| A28-3(GND) - D20-6 (SG) | Always | Less than 1 Ω |
| A28-5(TP) - D20-3 (TPPa) | Always | Less than 1 Ω |
| A28-6(COOL) - D20-12 (AMCPa) | Always | Less than 1 Ω |
| A28-7(HOT) - D20-11 (AMHPa) | Always | Less than 1 Ω |

Resistance (inspection of short-circuit):

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A28-1 (VZ) - Chassis ground | Always | 10KΩ or more |

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A28-3 (GND) - Chassis ground | Always | 10KΩ or more |
| A28-5 (TP) - Chassis ground | Always | 10KΩ or more |
| A28-6 (COOL) - Chassis ground | Always | 10KΩ or more |
| A28-7 (HOT) - Chassis ground | Always | 10KΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

AC

Complete

| 3 | Inspection of wire harness or connector (air conditioner radiator damper servo SUB-ASSY NO.5 - air conditioner control ASSY) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect connector D20 of the air conditioner control ASSY.
(2) Disconnect connector A24 of air conditioner radiator damper servo SUB-ASSY NO.5.
(3) Measure the resistance between the terminals.
Resistance (open circuit check):

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A24-1(GND) - D20-6 (SG) | Always | Less than 1 Ω |
| A24-3(VZ) - D20-13 (S5) | Always | Less than 1 Ω |
| A24-5(TP) - D20-15 (TPDr) | Always | Less than 1 Ω |
| A24-6 (HOT) - D20-23 (AMHDr) | Always | Less than 1 Ω |
| A24-7 (COOL) - D20-24 (AMCDr) | Always | Less than 1 Ω |

Resistance (inspection of short-circuit):

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A24-1 (GND) - Chassis ground | Always | 10KΩ or more |
| A24-3 (VZ) - Chassis ground | Always | 10KΩ or more |
| A24-5 (TP) - Chassis ground | Always | 10KΩ or more |
| A24-6 (HOT) - Chassis ground | Always | 10KΩ or more |
| A24-7 (COOL) - Chassis ground | Always | 10KΩ or more |

NG → Replace wire harness or connector.

OK

| | |
|---|---|
| 4 | Replacement with a normal air mix damper servo SUB-ASSY |

(1) Replace with new or normal air conditioner radiator damper servo SUB-ASSY NO.5. (Refer to AC - 106)

Next

| | |
|---|---|
| 5 | Checking diagnostic codes |

(1) Clear the diagnostic code using the SSM4. (Refer to AC - 20)
(2) Using SSM4, check the diagnostic code output again. (Refer to AC - 20)
Criteria: No DTC output

NG → Replacement of air conditioner control ASSY (Refer to AC - 163)

OK

Complete (malfunction of air conditioner radiator damper servo SUB-ASSY NO.5)

| DTC | B14A1 | Sunload Sensor Circuit Open |
|---|---|---|

| DTC | B14A2 | Sunload Sensor Circuit Short |
|---|---|---|

Circuit description

The automatic light control sensor is installed on the upper part of the instrument panel. It is used to detect sunload quantity and to control “AUTO” of the heater & air conditioner system. The output current of the automatic light control sensor varies depending on the sunload quantity. When the sunload quantity is increased, the output current is large. In contrast, when the sunload quantity is reduced, the output current is small. The air conditioner control ASSY reads the current which is output from the automatic light control sensor.

| DTC NO. | Detecting conditions<br>1.Diagnosis condition<br>2.Abnormal condition<br>3.Judgment time for abnormality | Inspection parts |

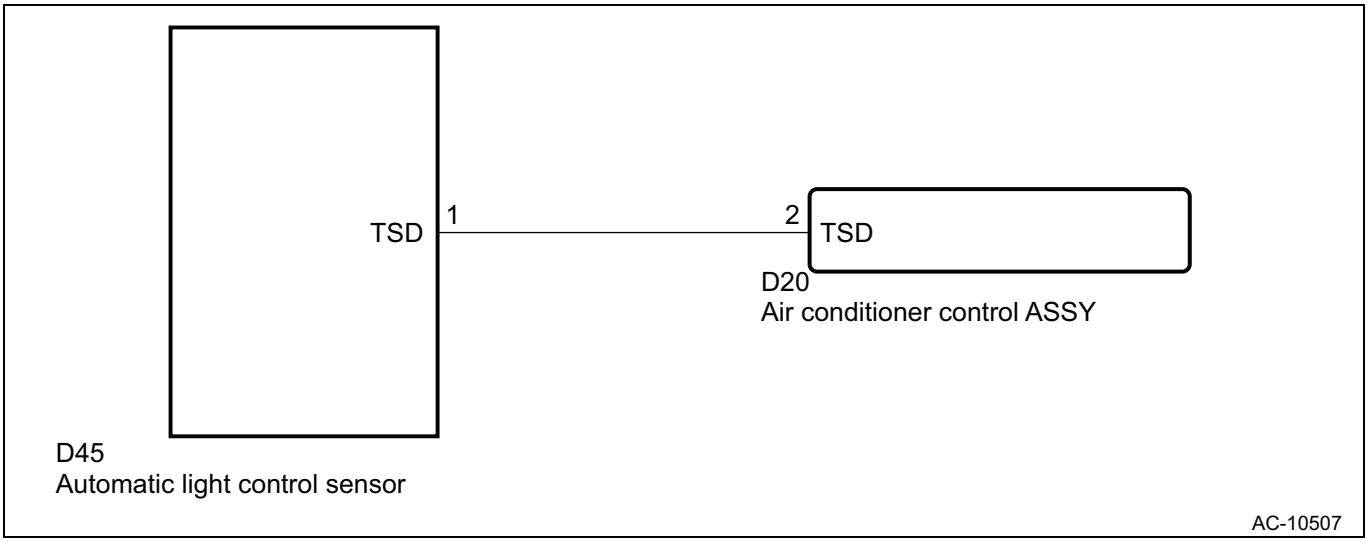
NOTE:
- If diagnostic code B1244 (Light Sensor Circuit) is also output, the automatic light control sensor power may be abnormal.
- When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data (sunload sensor) |

(1) Using the SSM4, follow the screen display and check the [Data monitor].
Criteria: Value according to sunload is displayed.

SSM4 screen: [Each System] →[Air Conditioner] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Quantity of Sun-load] | Light strength at the automatic light control sensor is displayed.<br>Display range: 0 to 4448W/m$^2$ | In the range from 0 to 4448, it is increased for brighter light (the value according to sunload is displayed).<br>• Without sunload: (0) is displayed.<br>• In open/short circuit: Default value (0) is displayed. | With sunload<br>Automatic light control sensor circuit |

NG → Go to Step 3.

OK

| 2 | Checking diagnostic codes |
|---|---|

(1) Clear the diagnostic code using the SSM4. (Refer to AC - 20)
(2) Using SSM4, check the diagnostic code again. (Refer to AC - 20)
Criteria: No DTC output

NG → Replacement of air conditioner control ASSY (Refer to AC - 163)

OK

Complete

| 3 | Inspection of wire harness and connector (automatic light control sensor - air conditioner control ASSY) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect the connector D45 of the automatic light control sensor.
(2) Disconnect connector D20 of the air conditioner control ASSY.
(3) Inspect the resistance between connector terminals at the vehicle wire harness side.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D20-2 (TSD) - D45-1 (TSD) | Always | Less than 1 Ω |

Resistance (short circuit check)

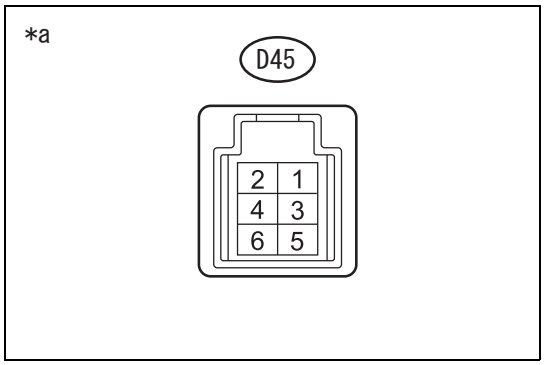
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D20-2 (TSD) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

AC

| 4 | Inspection of the automatic light control sensor |
|---|---|



NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Connect connector D45 of the automatic light control sensor.
(2) Measure the voltage between the terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D45-1 (TSD) - D45-6 (CLTE) | IG ON<br>When sunload light or inspection light is placed close | 0.8 to 4.3V<br>(The voltage varies depending on the light strength.) |
| D45-1 (TSD) - D45-6 (CLTE) | IG ON<br>Condition without direct exposure to light (Cover the sensor with a cloth.) | Less than 0.8V |

NOTE:
If the light is weak, the sensor may not respond. Use an incandescent light to take measurements by emitting light at the distance of about 30 cm.

Inspection steps

| | |
|---|---|
| 1 | Checking diagnostic codes |

(1) Clear the diagnostic code using the SSM4. (Refer to AC - 20)
(2) Using SSM4, check the diagnostic code again. (Refer to AC - 20)
Criteria: Diagnostic code is not output.

NOTE:
- When the diagnostic code of abnormal CAN communication system is output, refer to "How to troubleshoot" of the CAN communication system.
- If the diagnostic code of abnormal CAN communication system and other diagnostic code are output at the same time, perform troubleshooting on other diagnostic code after recovery of abnormal CAN communication.

NG → To CAN communication system (Refer to NW - 30)

OK

Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

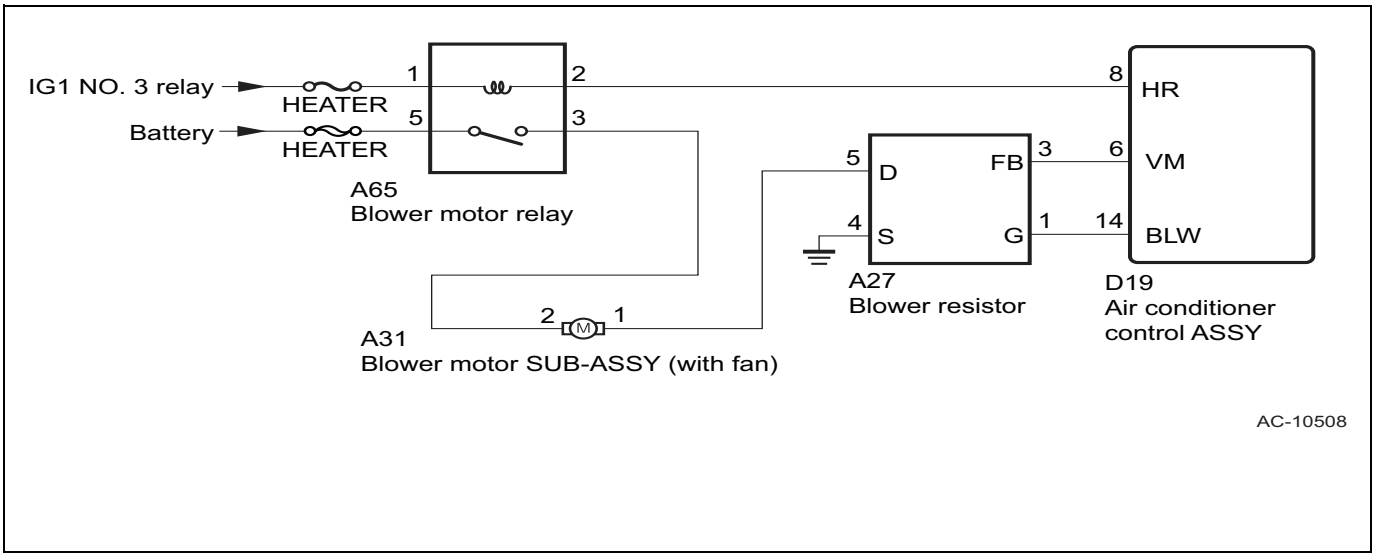
## Blower motor circuit

Circuit description

The blower motor SUB-ASSY (with fan) reads the signal from the air conditioner control ASSY and controls the revolution and speed of the motor.

AC

Circuit figure



Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| 1 | Implementation of SSM4 system operation check mode (blower air flow) |
|---|---|

(1) Connect the SSM4 to the DLC3.
(2) Turn the ignition switch to ON.
(3) Using SSM4, perform an [Active Test] by following the display.

SSM4 screen: [Each System] →[Air Conditioner] →[Active Test]

| Item name | Drive |
|---|---|
| [Blower Fan Level Setting] | Operation of blower motor SUB-ASSY (with fan)<br>Operate in the range from 0 to 31 (Level). |

Result

| Result | Go to |
|---|---|
| Blower motor SUB-ASSY (with fan) operates normally. | A |
| Blower motor SUB-ASSY (with fan) does not operate. | B |
| Although the blower motor SUB-ASSY (with fan) operates normally, the air flow is not changed. | C |

B → Go to Step 2.

C → Go to Step 9.

A

Go to "How to simulate trouble phenomenon" (Refer to AC - 136)

| 2 | Unit inspection of blower motor relay |
|---|---|

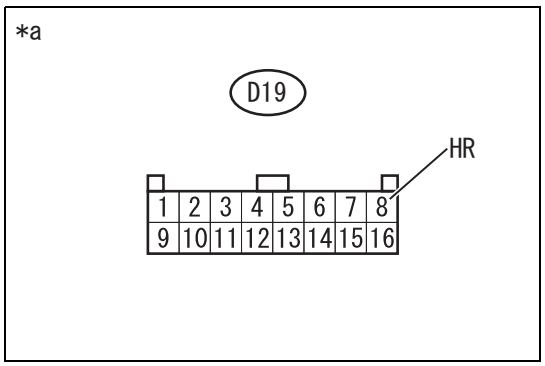
(1) Remove the blower motor relay from the relay block ASSY.
(2) Inspect the individual blower motor relay. (Refer to AC - 174)

NG → Replacement of heater relay

OK

| 3 | Inspection of wire harness and connector (blower motor relay - air conditioner control ASSY) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.



(1) Connect the blower motor relay to the relay block ASSY.
(2) Disconnect connector D19 from the air conditioner control ASSY.
(3) Measure the voltage between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D19-8 (HR) - Chassis ground | Always | 10 to 16V |

OK

| | |
|---|---|
| 5 | Unit inspection of blower motor SUB-ASSY (with fan) |

(1) Inspect the individual blower motor SUB-ASSY (with fan). (Refer to AC - 137)

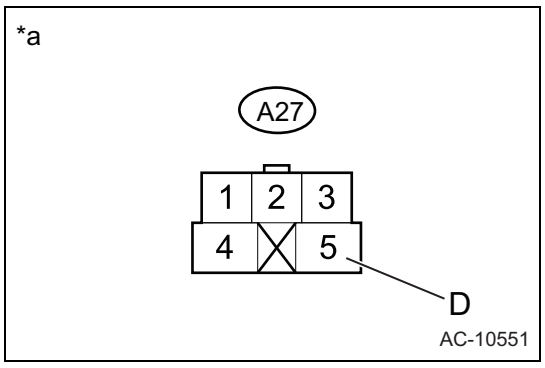
NG → Go to "How to simulate trouble phenomenon" (Refer to AC - 136)

AC

OK

| | |
|---|---|
| 6 | Inspection of wire harness and connector (blower motor SUB-ASSY (with fan) - blower register) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.



(1) Disconnect connector A27 from the blower register.
(2) Measure the voltage between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A27-5 (D) - Chassis ground | IG ON, blower ON | 10 to 16V |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Blower register connector) |

NG → Repair or replacement of wiring harness or connector

OK

| 7 | Inspection of wire harness and connector (blower resistor - chassis ground) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Measure the resistance between the terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A27-4 (S) - Chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

| 8 | Inspection of wire harness and connector (blower register - air conditioner control ASSY) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect connector D19 from the air conditioner control ASSY.
(2) Measure the resistance between the terminals.
Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A27-1(G) - D19-14 (BLW) | Always | Less than 1 Ω |
| A27-3(FB) - D19-6 (VM) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A27-1 (G) - Chassis ground | Always | 10 kΩ or more |
| A27-3 (FB) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 9 | Replacement of blower resistor |
|---|---|

(1) Replace with a new or normal blower resistor. (Refer to AC - 138)

Next

| 10 | Check operation. |
|---|---|

(1) Check if the blower motor SUB-ASSY (with fan) operates normally.
Criteria: The blower motor SUB-ASSY (with fan) operates normally.

NG → Replacement of air conditioner control ASSY (Refer to AC - 163)

AC

OK

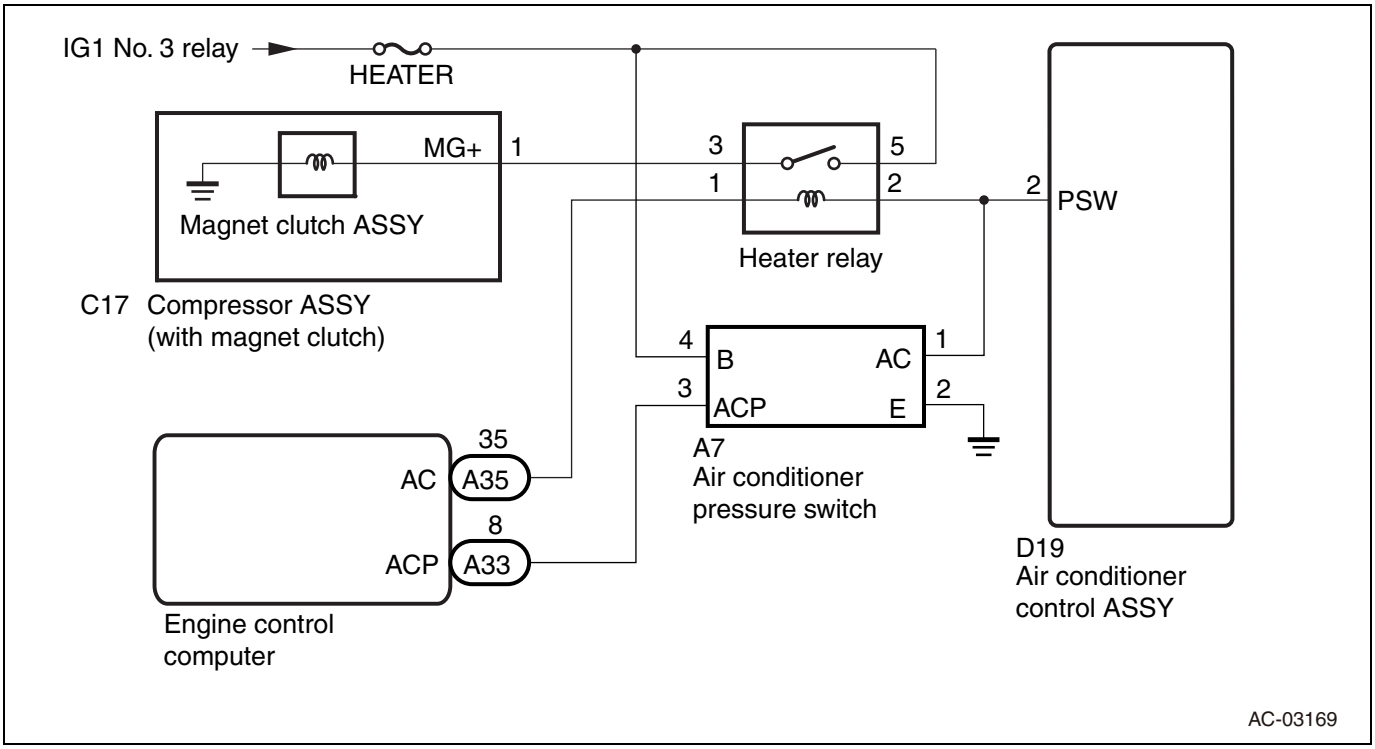
| Complete (malfunction of blower resistor) |
|---|

## Magnet clutch relay circuit

Circuit description

The air conditioner control ASSY transmits the magnet clutch ON instruction to the engine control computer through the CAN communication. The engine control computer operates the magnet clutch relay and turns ON the magnet clutch.

Circuit figure



Inspection steps

CAUTION:

- Before performing the troubleshooting, check the fuse of this circuit.
- This inspection may be affected by abnormality of the engine control computer. Before inspection, check the diagnostic code of "engine" and make sure that it is normal.

| 1 | Reading of SSM4 data (air conditioner signal) |
|---|---|

(1) Using the SSM4, follow the screen display and check the [Data monitor].

Criteria: The display changes according to operation of the air conditioner switch.

SSM4 screen: [Each System] →[Engine Control System] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [A/C Magnetic Clutch Relay] | Air conditioner switch status is displayed.<br>Display: ON - OFF | ON: Air conditioner ON<br>OFF: Air conditioner OFF | The air conditioner signal system may have an error, if any. |

NG → Go to Step 9.

OK

| 2 | Reading of SSM4 data (pressure switch status) |
|---|---|

(1) Using the SSM4, follow the screen display and check the [Data monitor].
Criteria: The display of the pressure switch status is 0 (normal).

SSM4 screen: [Each System] →[Air Conditioner] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [A/C Pressure Switch] | Refrigerant pressure switch status is displayed.<br>Display range: Normal - Abnormal | Refrigerant pressure status is displayed. | The refrigerant quantity may be abnormal, if any. |

NG → Go to Step 10.

OK

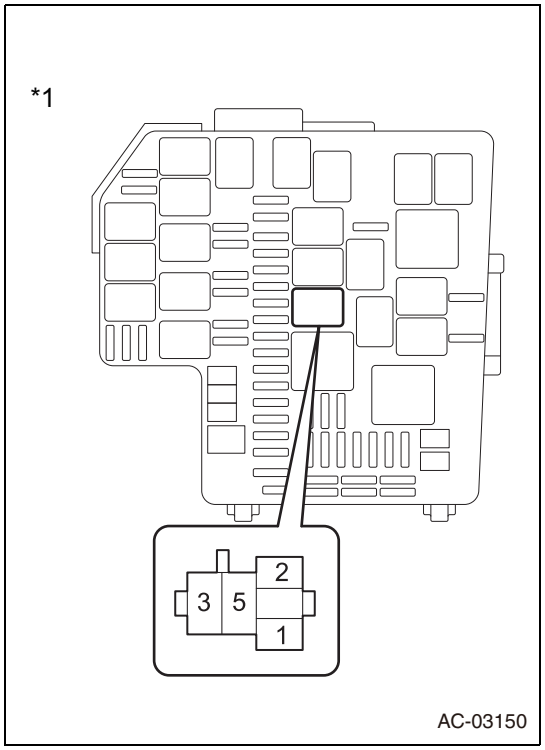
| 3 | Unit inspection of heater relay |
|---|---|

(1) Inspect the individual heater relay. (Refer to AC - 174)

NG → Replacement of heater relay

OK

| 4 | Inspection of wire harness and connector (heater relay - power supply system) |
|---|---|



NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Inspect the voltage between connector terminals at the vehicle wire harness side.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 5 - Chassis ground | IG OFF | Less than 1 V |
| | IG ON | 11 to 14V |

Captions in illustration

| | |
|---|---|
| *1 | Engine compartment relay block |

NG → Repair or replacement of wiring harness or connector

AC

OK

| 5 | Inspection of wire harness and connector (heater relay - air conditioner control ASSY) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Remove the heater relay from the engine compartment relay block.
(2) Disconnect connector D19 from the air conditioner control ASSY.
(3) Inspect the resistance between connector terminals at the vehicle wire harness side.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 2 - D19-2(PSW) | Always | Less than 1 Ω |
| 2 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 6 | Inspection of wire harness and connector (heater relay - engine control computer) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Remove the heater relay from the engine compartment relay block.
(2) Disconnect connector A35 from the engine control computer.
(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - A35-35(AC) | Always | Less than 1 Ω |
| 1 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 7 | Inspection of wire harness and connector (compressor ASSY (with magnet clutch) - power supply system) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Install the heater relay to the engine compartment relay block.
(2) Inspect the voltage between connector terminals at the vehicle wire harness side.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| C17-1 (MG+) - Chassis ground | IG OFF | Less than 1 V |
| | IG ON | 10 to 16V |

NG → Repair or replacement of wiring harness or connector

AC

OK

| 8 | Unit inspection of compressor ASSY (with magnet clutch) |
|---|---|

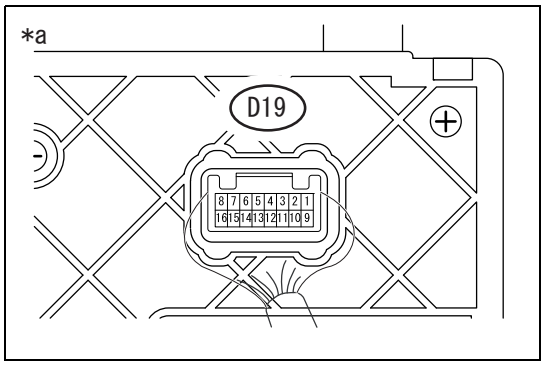
NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect connector C17 of the compressor ASSY (with magnet clutch).
(2) Check the resistance between the connector terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| C17-1 (MG+) - Chassis ground | Always | 10 kΩ or more |

NG → Replacement of compressor ASSY (with magnet clutch) (Refer to AC - 143)

OK

| 9 | Inspection of air conditioner control ASSY |
|---|---|



NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Check the voltage between connector terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D19-2 (PSW) - Chassis ground | IG ON<br>Air conditioner switch OFF | 10 to 16V |
| D19-2 (PSW) - Chassis ground | IG ON<br>Air conditioner switch ON | Less than 1 V |

Captions in illustration

| | |
|---|---|
| *a | Connector connected<br>(Air conditioner control ASSY) |

NG → Replacement of air conditioner control ASSY (Refer to AC - 163)

OK

Replacement of engine control computer

| 10 | Check of refrigerant pressure |
|---|---|

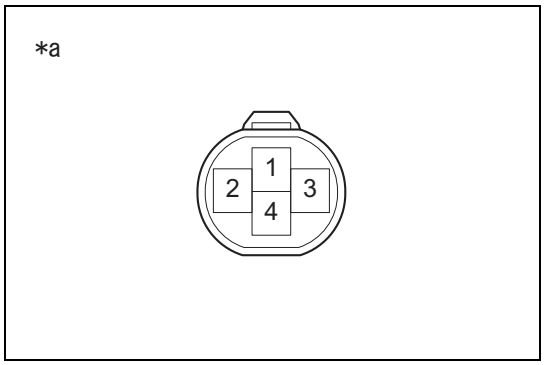
(1) Install the air conditioner tool.
(2) Check the gauge pressure to inspect filling of the refrigerant gas. (Refer to AC - 6)
Criteria: Refrigerant gas is full.

AC

NG → Adjustment of refrigerant level

OK

| 11 | Inspection of wire harness and connector (air conditioner pressure switch - power supply system) |
|---|---|



(1) Disconnect connector A7 from the air conditioner pressure switch.
(2) Check the voltage between connector terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A7-4 (B) - Chassis ground | IG ON | 10 to 16V |

(3) Check the resistance between the connector terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A7-2 (E) - Chassis ground | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Air conditioner pressure switch) |

NG → Repair or replacement of wiring harness or connector

OK

| 12 | Inspection of wire harness and connector (air conditioner pressure switch- chassis ground) |
|---|---|

(1) Check the resistance between the connector terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A7-2 (E) - Chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

| 13 | Inspection of wire harness and connector (air conditioner pressure switch - engine control computer) |
|---|---|

(1) Disconnect connector A33 from the engine control computer.
(2) Check the resistance between the connector terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A7-3(ACP) - A33-8(ACP) | Always | Less than 1 Ω |
| A7-3 (ACP) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

AC

| 14 | Inspection of wire harness and connector (air conditioner pressure switch - heater relay) |
|---|---|

(1) Remove the heater relay from the engine compartment relay block.
(2) Inspect the resistance between connector terminals at the vehicle wire harness side.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A7-1(AC) - 2 | Always | Less than 1 Ω |
| A7-1 (AC) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 15 | Unit inspection of air conditioner pressure switch |
|---|---|

NG → Replacement of air conditioner pressure switch

OK

| 16 | Replacement of engine control computer |
|---|---|

(1) Replace with a new or normal engine control computer. (Refer to ES - 674)

Next

| 17 | Reading of SSM4 data |
|---|---|

(1) Using the SSM4, follow the screen display and check the [Data monitor].
Criteria: The display of the pressure switch status is 0 (normal).

SSM4 screen: [Each System] →[Air Conditioner] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [A/C Pressure Switch] | Refrigerant pressure switch status is displayed.<br>Display range: Normal - Abnormal | Refrigerant pressure status is displayed. | - |

NG → Replacement of air conditioner control ASSY (Refer to AC - 163)

OK

Complete (malfunction of engine control computer)

AC

# Heater & air conditioner system (for manual air conditioning system)

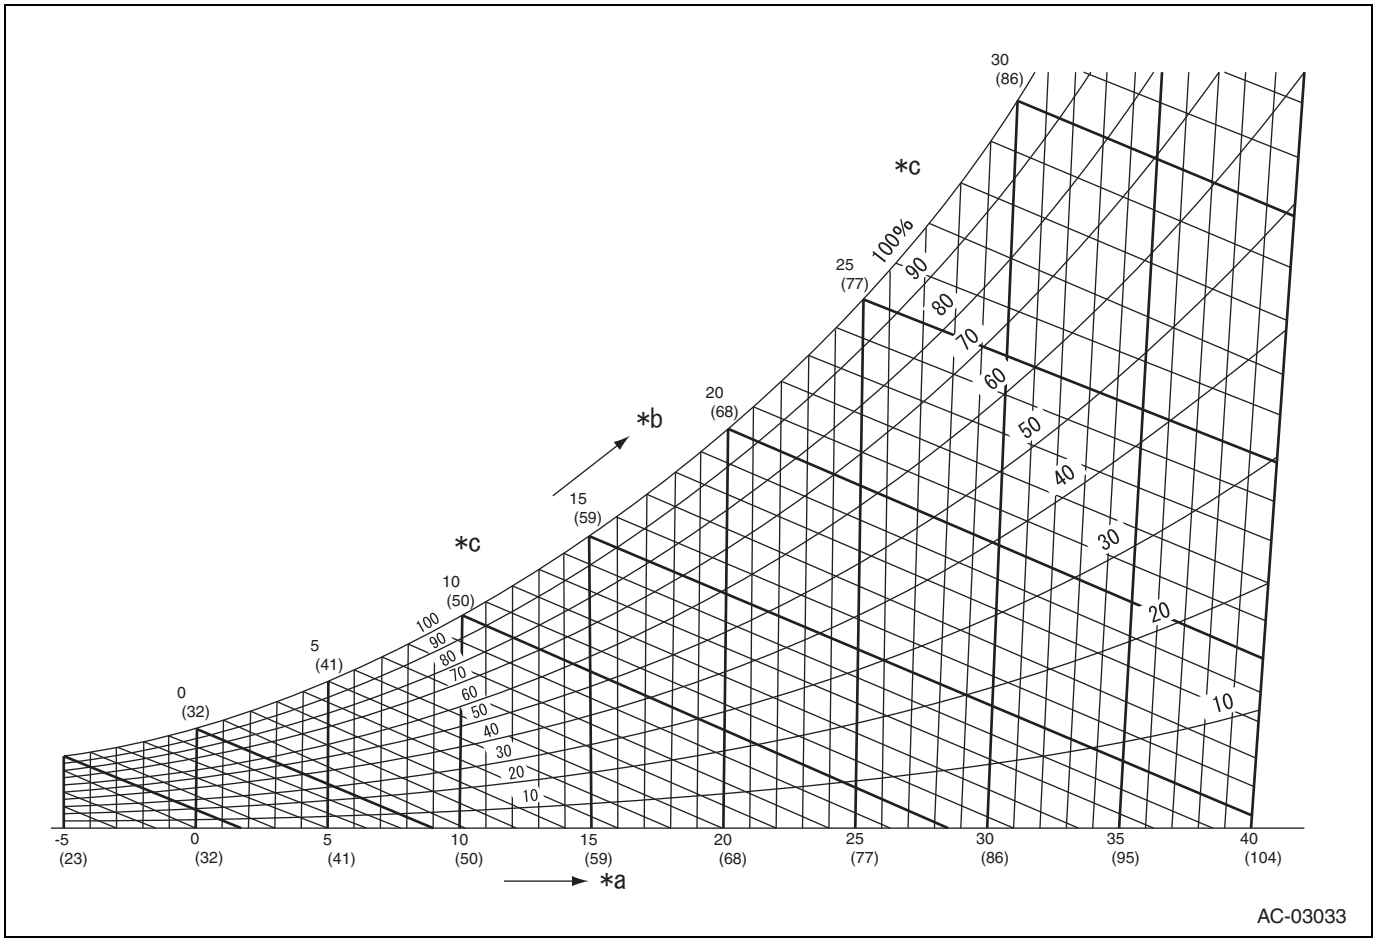
## Function inspection

1. Check of cooling performance
   (1) Install the air conditioner tool set to the vehicle.
   (2) Set the vehicle to the following conditions. [*1]

| Item | Conditions |
|---|---|
| Vehicle body | Vehicle parked condition in shade |
| Door | Full open |
| A/C switch | ON |
| Engine speed | 2000 r/min |
| FRESH/RECIRC damper position | RECIRC position |
| Outlet opening damper position | FACE |
| Setting temperature | LO (MAX COLD) |
| Blower speed | HI |
| Air conditioner inlet opening temperature *2 | 30 to 35°C {86 to 95°F} |
| Condenser pressure (gauge high pressure side) *3 | 1.47 to 1.67 MPa (15 to 17 kgf/cm$^2$) |

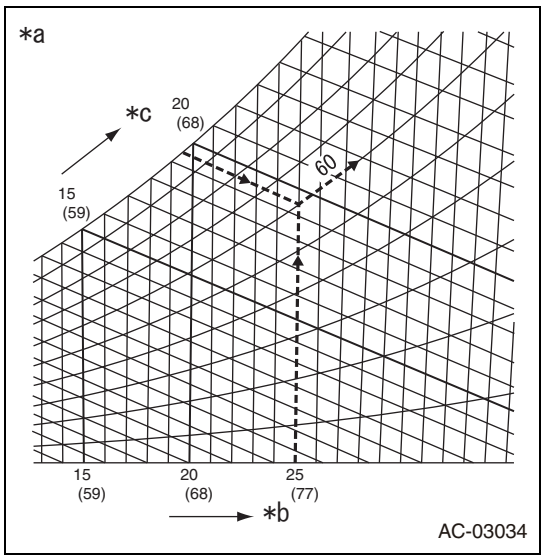
NOTE:
*2···The inlet opening temperature can be judged correctly only in the range from 30 to 35°C {86 to 95°F}. If the temperature is low, postpone the test.
*3···If the condenser pressure (gauge high pressure side) is high, reduce the pressure by watering the condenser. If it is too low, increase the pressure by placing a cover over the condenser.

   (3) Place a wet-and-dry-bulb thermometer (necessary for humidity) at the inlet opening and measure the temperature by inserting the bulb of the dry thermometer at the center of the outlet opening.
   (4) Operate the air conditioner under the conditions in [*1] to make the outlet opening temperature stable. (About 5 to 6 minutes)
   (5) Measure the dry and wet bulb temperatures at the inlet opening and the temperature at the outlet opening.
   (6) Obtain the relative humidity by applying the measurement values of the dry/wet bulb temperatures at the inlet opening to the air diagram.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Dry bulb temperature (°C {°F}) | *b | Wet bulb temperature (°C {°F}) |
| *c | Relative humidity (%) | - | - |

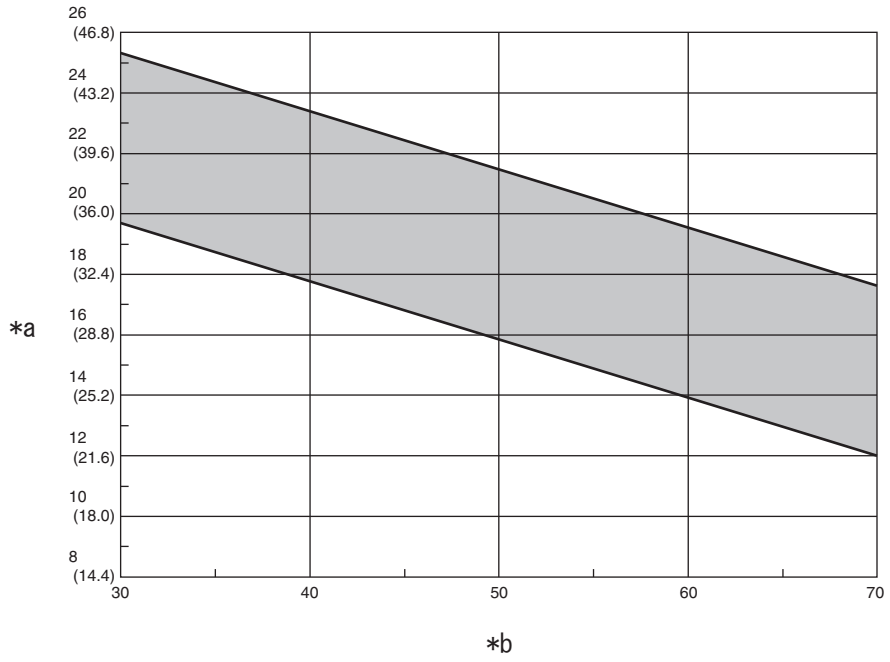


(a)For relative humidity, when the dry bulb temperature of the wet-and-dry-bulb thermometer at the inlet opening is 25°C {77°F} and the wet bulb temperature is 19.5°C {67.1°F}, the intersection of the broken lines in the figure is the relative humidity. In this case, it is 60%.

Captions in illustration

| | |
|---|---|
| *a | Example |
| *b | Dry bulb temperature (°C {°F}) |
| *c | Wet bulb temperature (°C) |

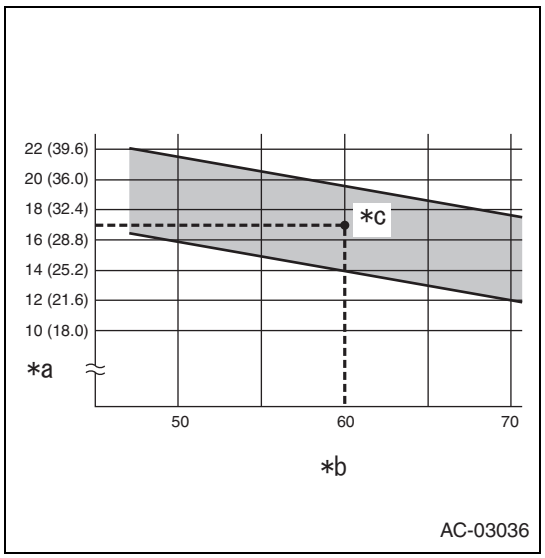
(7) Check the cooling performance by applying the difference of measured temperatures between inlet opening and outlet opening and the relative humidity to the standard performance table.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Difference between inlet opening and outlet opening temperatures (°C {°F}) | *b | Relative humidity (%) |

Criteria: The value must be within the shaded area of the diagram.

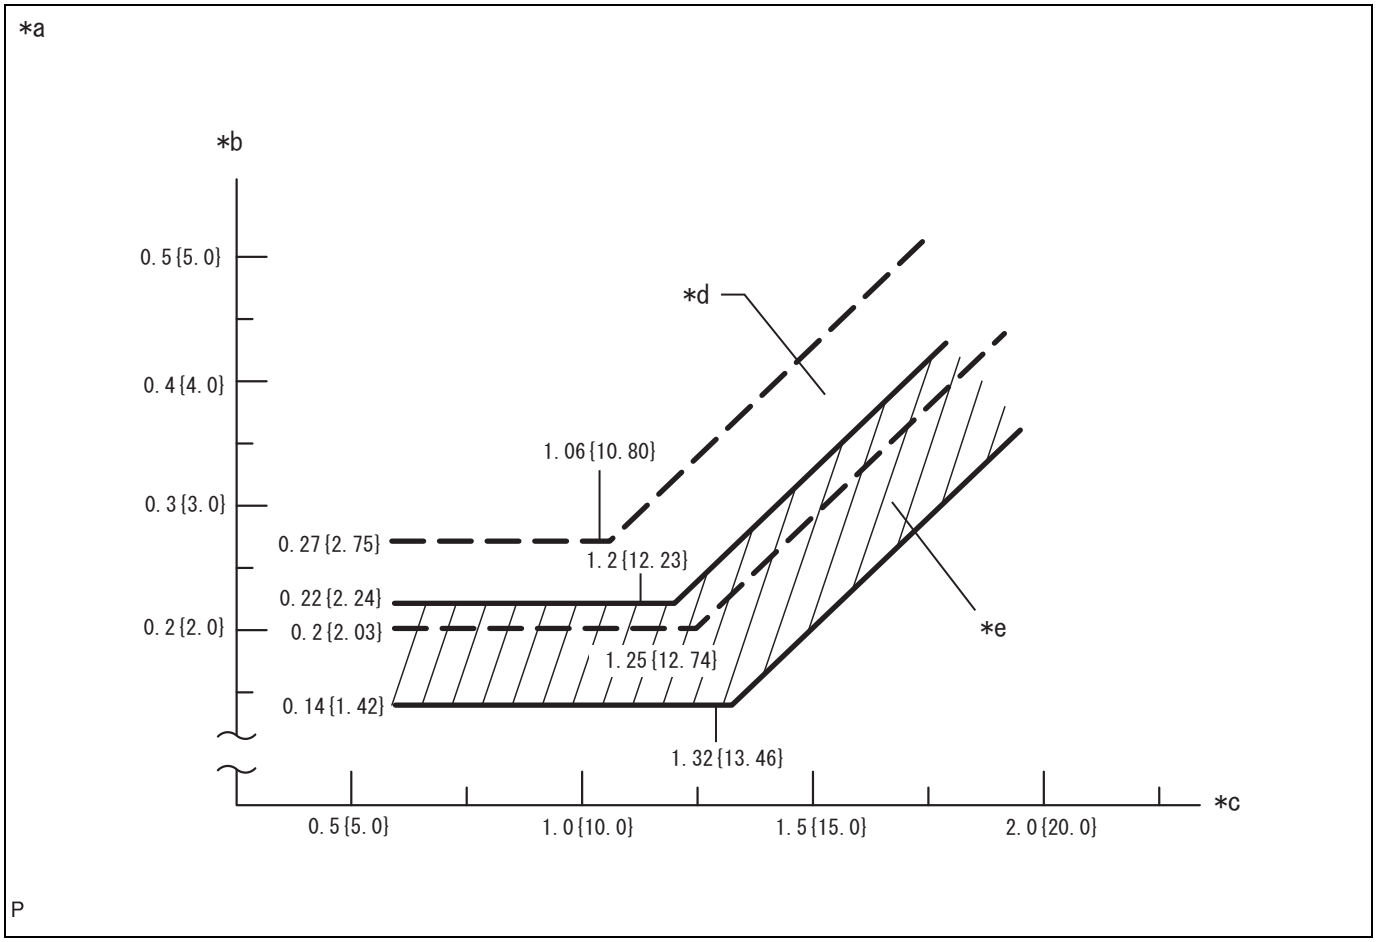


(a) To obtain the cooling performance using the standard performance table, an example when the difference of temperatures between the inlet opening and the outlet opening is 17°C {30.6°F} and the relative humidity is 60% is shown below.

Captions in illustration

| | |
|---|---|
| *a | Difference between inlet opening and outlet opening temperatures (°C {°F}) |
| *b | Relative humidity (%) |
| *c | Intersection |

2. Check of refrigerant gas pressure
   (1) Check of refrigerant gas pressure with gauge



Captions in illustration

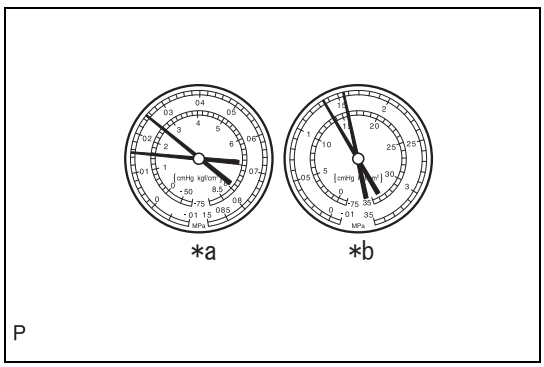
| | | | |
|---|---|---|---|
| *a | Gauge reading reference data | *b | Pressure at low pressure side MPa {kgf/cm$^2$} |
| *c | Pressure at high pressure side MPa {kgf/cm$^2$} | *d | Blower HI range |
| *e | Blower LO range | - | - |

AC

(a)Attach the air conditioner tool set.

(b)Set the vehicle to the following conditions. [*2]

| Item | Conditions |
|---|---|
| Engine | After warming-up |
| Door | Full open |
| A/C | ON |
| Engine speed | 2000 r/min |
| RECIRC switch | RECIRC position |
| Setting temperature display | LO (MAX COLD) |
| Blower speed | HI |
| Air conditioner inlet opening temperature | 30 to 35°C {86 to 95°F} |



(c)Check the gauge value in [*2].

Standard value: 0.13 to 0.20 MPa (1.3 to 2.0 kgf/cm$^2$) (Low pressure side)

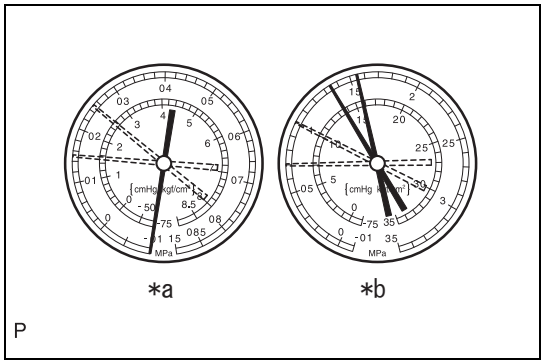
1.47 to 1.67 MPa (15 to 17 kgf/cm$^2$) (High pressure side)

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:

The standard value indicates the normal charge level of refrigerant gas.



(d)Check the gauge value in [*2].

NOTE:

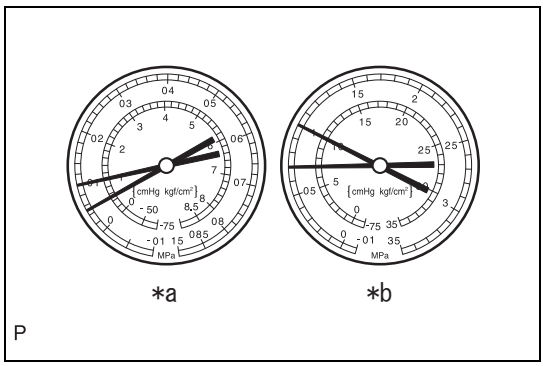
The gauge reading indicates moisture inclusion in the cooling system.

Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| During operation, the pressure at the low pressure side becomes vacuum or normal. | Moisture in the cooling system is frozen at the expansion valve. The refrigerant does not circulate temporarily. After ice is melted, normal operation is recovered. | • The cooler drier is over-saturated.<br>• Moisture of the cooling system is frozen at the expansion valve and it blocks circulation of the refrigerant gas. | 1. Replace the cooler dryer.<br>2. Remove moisture in the cycle by repeating air release.<br>3. Inject appropriate level of new refrigerant gas. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |



(e)Check the gauge value in [*2].

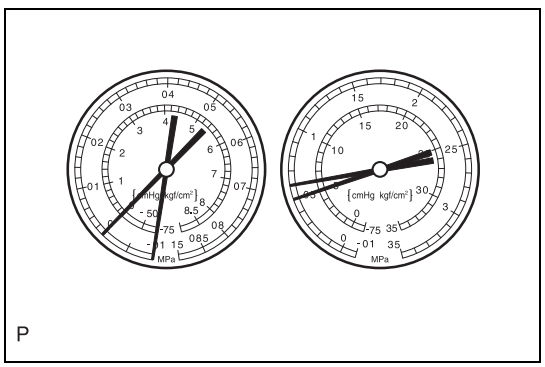
AC

Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| • Both high and low pressure sides are low.<br>• Cooling performance is not sufficient. | A part of the cooling system has gas leak. | • Refrigerant gas is insufficient.<br>• Leak of refrigerant gas | • Check for gas leak. Repair it if necessary.<br>• If the pressure value is close to 0 when connected to the gauge, check for the leak area. After repair, perform vacuuming.<br>• Inject appropriate level of new refrigerant gas. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |



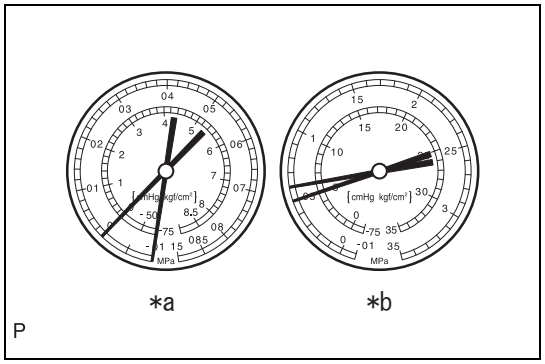
(f) Check the gauge value in [*2].

Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| • Both high and low pressure sides are low.<br>• The pipe connected from the cooler condenser to the A/C unit has frost. | Dust in the cooler condenser core blocks flow of refrigerant. | Clogged cooler condenser core | Replace the cooler condenser ASSY. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |



(g)Check the gauge value in [*2].

NOTE:

The gauge reading indicates no circulation of refrigerant gas.

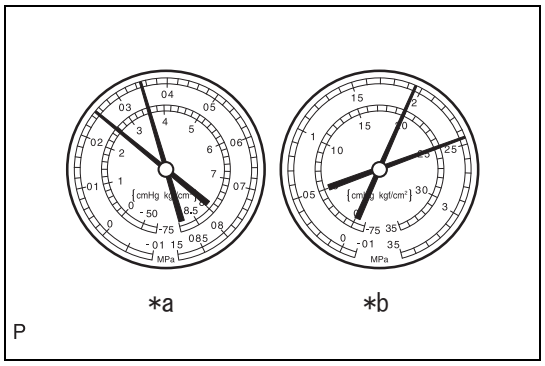
Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| • The pressure at the low pressure side shows vacuum and the pressure at the high pressure side shows very low pressure.<br>• Pipes before and after the cooler condenser core or cooler expansion valve have frost or condensation. | • Flow of the refrigerant gas is blocked by moisture or dust of the cooling system.<br>• Flow of the refrigerant gas is blocked by leak of the refrigerant gas from the cooler expansion valve. | Refrigerant gas does not circulate. | 1. Check the cooler expansion valve.<br>2. Remove dust in the cooler expansion valve with an air gun.<br>3. Replace the cooler condenser core.<br>4. After vacuuming, inject new refrigerant gas to the appropriate level.<br>5. If leak of the refrigerant gas from the cooler expansion valve is found, replace the cooler expansion valve. |

AC

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |



(h)Check the gauge value in [*2].

NOTE:

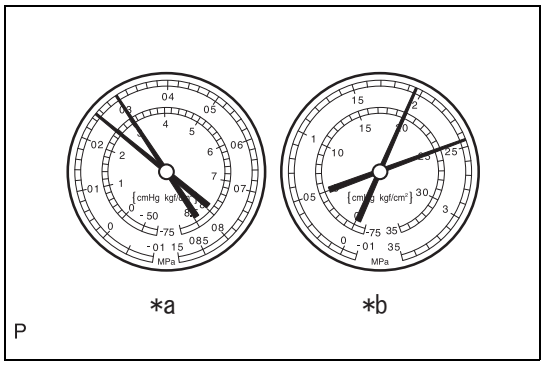
The gauge reading indicates excessive refrigerant gas or insufficient cooling of the cooler condenser core.

Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| Both high and low pressure sides are too high. | • Excessive refrigerant<br>• Cooling of the cooler condenser core is insufficient. | • Excessive refrigerant<br>• Cooling malfunction of cooler condenser core | 1. Clean the cooler condenser core fin.<br>2. Check operation of the condenser fan motor.<br>3. When 1 and 2 are normal, check the refrigerant level and inject the refrigerant to the appropriate level. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |



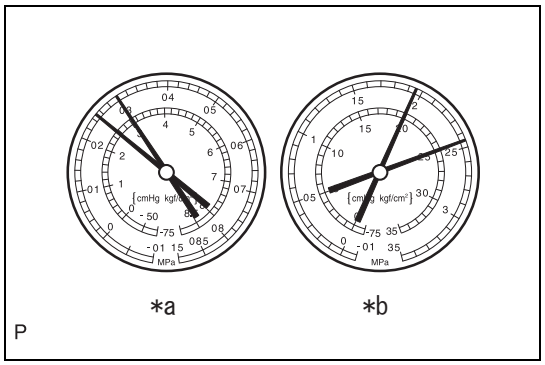
(i) Check the gauge value in [*2].
NOTE:
The gauge reading indicates air inclusion in the refrigerant system.

Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| • Both high and low pressure sides are too high.<br>• The low pressure pipe is too hot to be touched. | Air inside the cooling system | • Air is included inside the cooling system.<br>• Insufficient vacuuming | 1. Check if the compressor oil is contaminated or insufficient.<br>2. After vacuuming, inject new refrigerant gas. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |



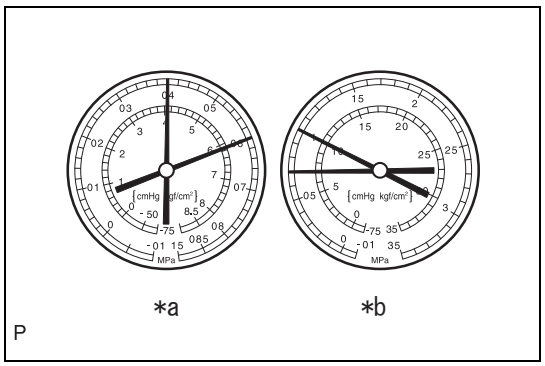
(j) Check the gauge value in [*2].
NOTE:
The gauge reading indicates improper operation of the cooler expansion valve.

Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| • Both high and low pressure sides are too high.<br>• The low pressure side has frost or condensation. | Problems on cooler expansion valve | • Excessive refrigerant of low pressure pipe<br>• Excessive opening of cooler expansion valve | Replace the cooler expansion valve. |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |



(k) Check the gauge value in [*2].
NOTE:
The gauge reading indicates improper compression of the compressor ASSY (with pulley).

AC

Measurement result

| Symptoms | Cause | Diagnosis | Corrective action |
|---|---|---|---|
| • Both high and low pressure sides are too high.<br>• Pressure of the high pressure side is too low. | Leak in compressor ASSY (with pulley) | • Poor compression<br>• Leak from valve or damage to sliding part<br>• Improper operation of pulley limiter or control valve | Repair or replace the compressor ASSY (with pulley). |

Captions in illustration

| | |
|---|---|
| *a | Low pressure side |
| *b | High pressure side |

NOTE:

- The gauge reading indicates improper compression of the compressor ASSY (with pulley).
- When there is no change in the pressure at the low and high pressure side, the compressor ASSY (with pulley) is not discharging and the pulley limiter is activated.

3. Cooler condenser ASSY
   (1) If the cooler condenser ASSY fin is contaminated, clean it with water and dry it with compressor air.
   CAUTION:
   Do not damage the fin of the cooler condenser ASSY.
   (2) If the fin of the cooler condenser ASSY is bent, correct the fin straight with a screwdriver or pliers.
4. Check for refrigerant gas leak
   (1) Using a halogen leak detector, check the pipe joints for leaks.
   (2) If gas leak is found at joints of pipes, check the torque at the joints.

AC

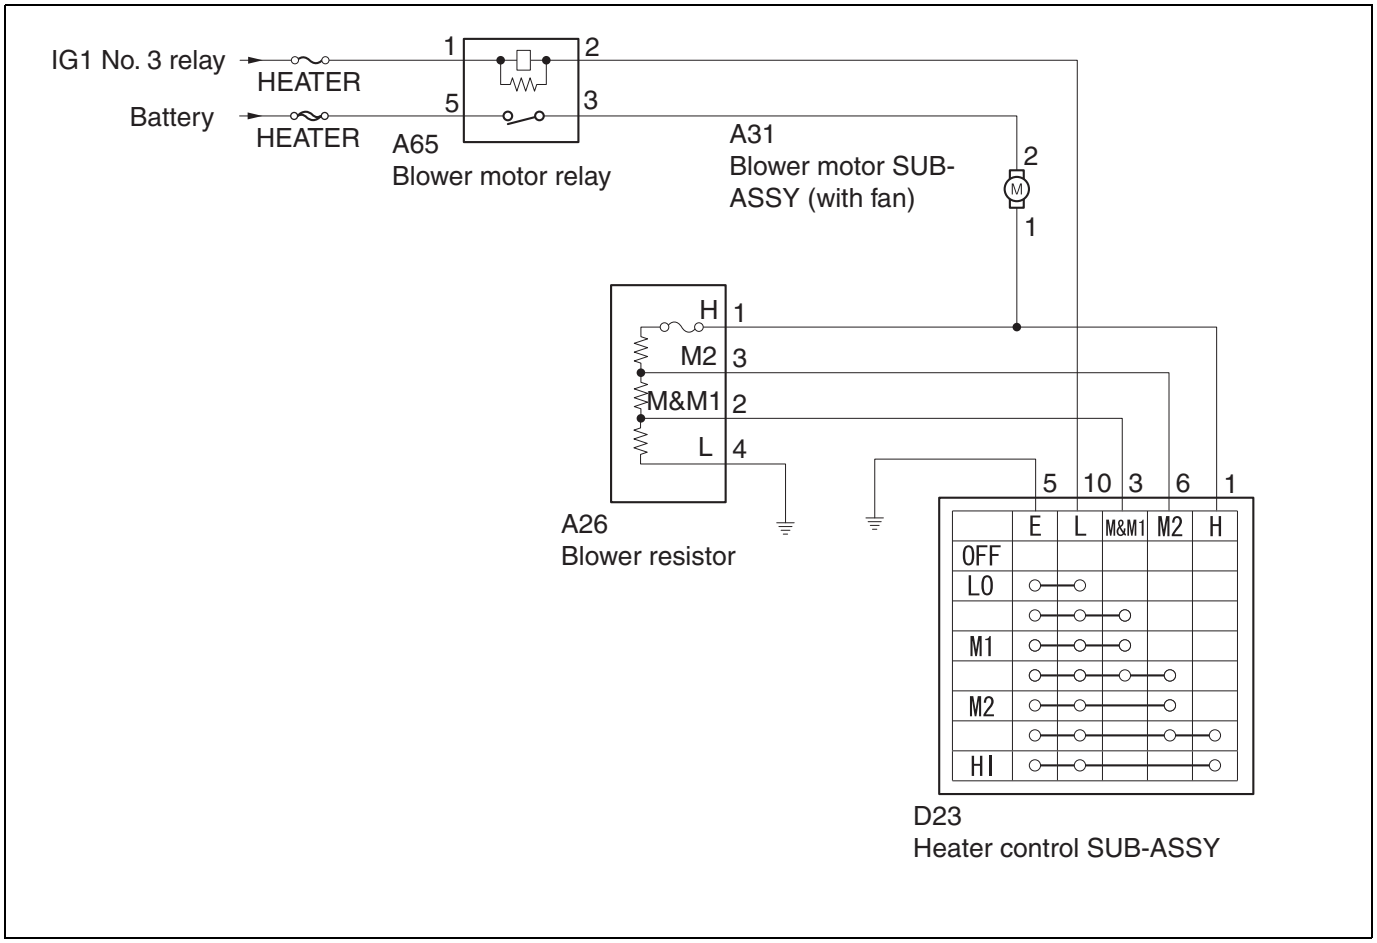
## Blower motor circuit

Circuit description

When the heater control SUB-ASSY is operated from 0 →1 or more, the blower motor relay turns ON. The power is supplied to the blower motor SUB-ASSY (with fan) and it starts rotating. Speed of the blower motor SUB-ASSY (with fan) is controlled by operating the heater control SUB-ASSY and switching the ground - blower register circuits.

Circuit figure



AC

Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Unit inspection of blower motor relay |

(1) Remove the blower motor relay.

(2) Inspect the individual blower motor relay. (Refer to AC - 174)

NG → Replacement of blower motor relay

OK

| | |
|---|---|
| 2 | Unit inspection of blower motor SUB-ASSY (with fan) |

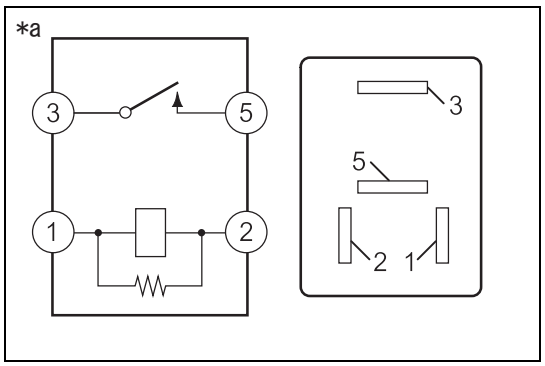
(1) Disconnect connector A31 of the blower motor SUB-ASSY (with fan).

(2) Inspect the individual blower motor SUB-ASSY (with fan). (Refer to AC - 137)

NG → Replacement of blower motor SUB-ASSY (with fan) (Refer to AC - 136)

OK

| 3 | Inspection of wire harness and connector (HEATER fuse - blower motor relay) |
|---|---|



NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Remove the blower motor relay.
(2) Measure the voltage between the terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 5 - Chassis ground | Always | 11 to 14 V |

OK

| | |
|---|---|
| 8 | Inspection of wire harness and connector (heater control SUB-ASSY - blower register) |

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Disconnect connector A26 of the register.
(2) Measure the resistance between the terminals.

AC

Resistance (open circuit)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D23-3(M&M1) - A26-2(M&M1) | Always | Less than 1 Ω |
| D23-6(M2) - A26-3(M2) | Always | Less than 1 Ω |

Resistance (short-circuit)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D23-3(M&M1) - Chassis ground | Always | 10 KΩ or more |
| D23-6 (M2) - Chassis ground | Always | 10 KΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 9 | Inspection of wire harness and connector (blower motor SUB-ASSY (with fan) - blower register) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Measure the resistance between the terminals.
Resistance (open circuit)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A31-1 - A26-1(H) | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

AC

OK

| 10 | Inspection of wire harness and connector (blower register - chassis ground) |
|---|---|

NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Measure the resistance between the terminals.
Resistance (open circuit)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A26-4 (L) - Chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

| 11 | Unit inspection of blower resistor |
|---|---|

(1) Inspect the individual blower register. (Refer to AC - 139)

NG → Replacement of blower register (Refer to AC - 138)

OK

| 12 | Unit inspection of heater control SUB-ASSY (blower switch) |
|---|---|

(1) Inspect the individual heater control SUB-ASSY (blower switch). (Refer to AC - 169)

NG → Replacement of heater control SUB-ASSY (Refer to AC - 169)

OK

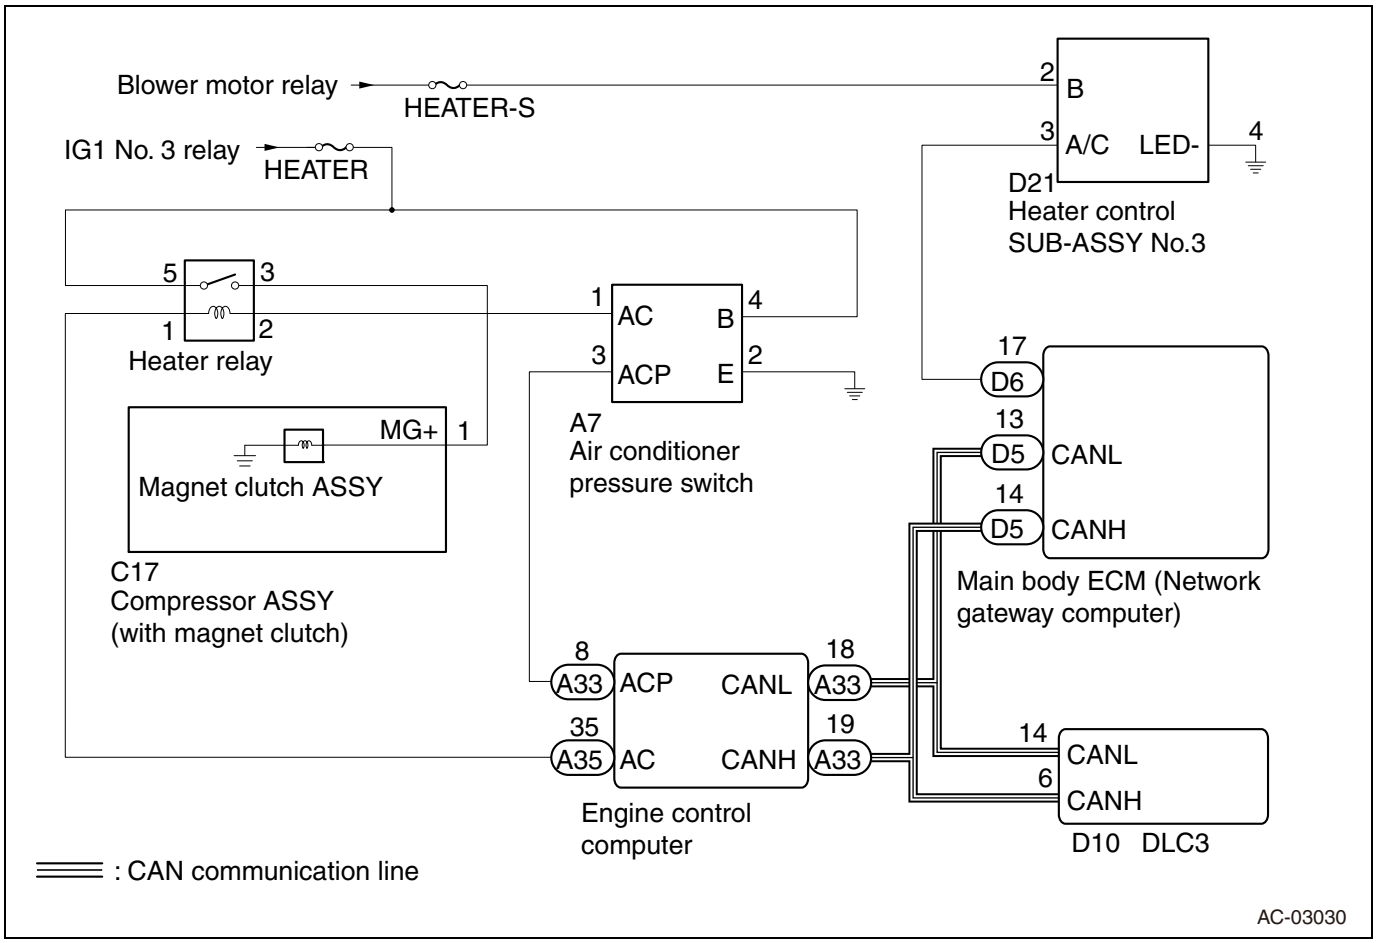
Go to related circuit inspection listed in symptom table (Refer to AC - 15).

## Magnet clutch relay circuit

Circuit description

The main body ECM (network gateway computer) transmits the magnet clutch ON command to the engine control computer through the CAN communication. The engine control computer operates the heater relay and turns ON the magnet clutch.

Circuit figure



Inspection steps

CAUTION:

- Before performing the troubleshooting, check the fuse of this circuit.

- The heater & air conditioner system uses the CAN communication system. First, perform a “Communication function inspection”, following “How to troubleshoot” and after checking for any malfunction in the communication system, you can proceed with troubleshooting.
- This inspection may be affected by abnormality of the engine control computer and the main body ECM (network gateway computer). Before inspection, check the diagnostic codes of “engine” and “main body” to make sure that they are normal.

| 1 | Reading of SSM4 data (air conditioner signal) |
|---|---|

(1) Using the SSM4, follow the screen display and check the [Data monitor].
Criteria: The display changes according to operation of the air conditioner switch.

SSM4 screen: [Each System] →[Engine Control System] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [A/C Switch] | Air conditioner switch status is displayed.<br>Display: ON - OFF | ON: Air conditioner ON<br>OFF: Air conditioner OFF | The air conditioner signal system may have an error, if any. |

Result

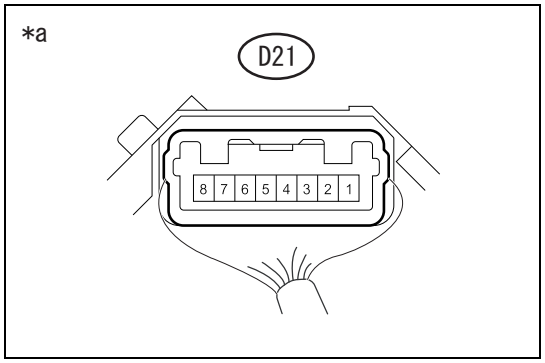
| Result | Go to |
|---|---|
| The display does not change according to operation of the air conditioner switch. | A |
| The display changes according to operation of the air conditioner switch. | B |

B → Go to Step 5.

A

AC

| 2 | Inspection of wire harness and connector (heater control SUB-ASSY NO.3 - power supply system) |
|---|---|



NOTE:
For inspection procedures and precautions, refer to IN - 36.
(1) Inspect the voltage between connector terminals at the vehicle wire harness side.

Voltage

| C17-1 (MG+) - Chassis ground | Always | 10 kΩ or more |

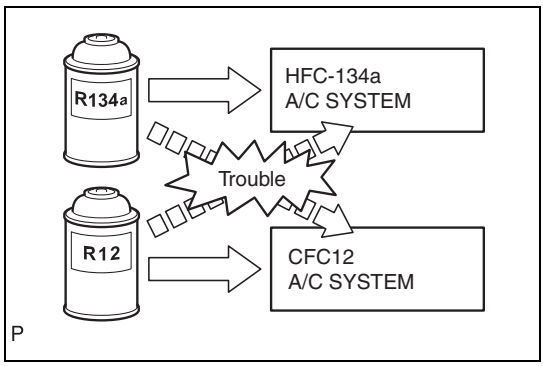
NG → Repair or replacement of wiring harness or connector

OK

Replacement of the engine control computer (Refer to ES - 673)

# Refrigerant HFC-134a [R134a]

## Precautions



1. Precautions for refrigerant HFC-134a (R134a)
   (1) Compatibility
      (a) The components establishing a refrigerant cycle and the compressor oil have no compatibility between the HFC-134a (R134a) system and the conventional R12 system.
   (2) Refrigerant HFC-134a (R134a)
      (a) Be sure to use HFC-134a (R134a) for the refrigerant.
         CAUTION:
         - The gas is not poisonous or hazardous in normal operation. However, when exposed to fire or high temperature conditions (cigarette, kerosene heater, etc.), it may become hazardous gas.
         - Pay attention to sufficient ventilation and do not work at a closed place.

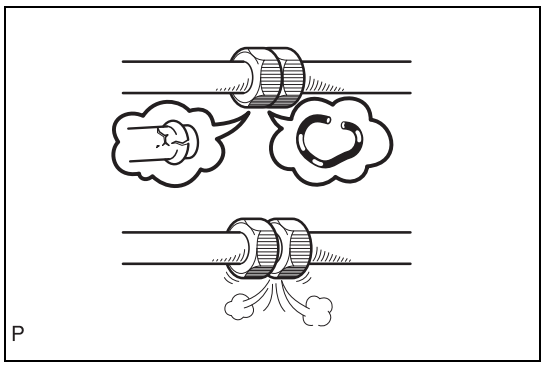
         NOTE:
         The manifold gauge is specially used for HFC-134a (R134a) to prevent incorrect charge.
   (3) Compressor oil
      (a) Be sure to use ND-OIL8 for the compressor oil.
         NOTE:
         If the compressor oil for R12 is used for a HFC-134a (R134a) system, compressor lock due to poor lubrication or leak of the refrigerant gas due to expansion of rubber part may occur. Reversely, if HFC-134a (R134a) compressor oil is used in a R12 system, the durability of the A/C system will be lowered.
      (b) The compressor oil for HFC-134a (R134a) has high hygroscopic property. If A/C parts are removed, seal them with plug, vinyl tape, etc. from the atmosphere immediately.
      (c) The compressor oil for HFC-134a (R134a) may have adverse effect on acrylic resin. Do not spread the oil.

   (4) O-ring
      (a) Be sure to use the O-ring for HFC-134a (R134a).
         NOTE:
         The O-rings for HFC-134a (R134a) and for R12 are different in material and size. Incorrect use may cause the gas leakage.
   (5) Precautions for vacuuming
      (a) For vacuuming, install a solenoid valve adapter on the vacuum pump for R12.
         NOTE:
         If you leave the system as it is after vacuuming without using the solenoid valve adapter, oil (for R12) in the vacuum pump may flow backward, and then into the HFC-134a (R134a) system.
   (6) Check for refrigerant gas leak
      (a) To check for refrigerant gas leak, use an electronic leak detector.
      (b) Check for refrigerant gas leak with IG OFF.
         NOTE:
         - If the check is performed while the engine is running, leak gas is diluted by fan, blower, etc. and it becomes hard to detect a leak.

AC

- If the check is performed while the cooler is on, the refrigerant pressure in the cooler unit is reduced. It inadequately prevents the gas leakage.

2. Precautions for assembly/disassembly
   (1) Action when the refrigerant gas gets into the eyes
      (a) Do not rub eyes with hands or a handkerchief.
      (b) Take treatment from a special eye doctor.
   (2) Precautions for handling of refrigerant gas (service can)
      (a) Do not heat a service can. If a service can is directly heated or put in hot water, the pressure in the can become excessively high, resulting in burst of the can. If it is necessary to heat a service can, use warm water at 40°C or less.
      (b) Do not drop or hit a service can.
      (c) Do not open the high-pressure valve of manifold gauge when the engine is running. If the high pressure valve is opened while the engine is running, reverse flow of the high pressure gas may occur, resulting in burst of the can.
      (d) Do not handle a service can near the face. Be sure to wear protective goggles.



P

   (3) Pipe installation
      (a) Be sure to use a new O-ring.
         NOTE:
         - Be sure to use the O-ring for HFC-134a (R134a).
         - When removing the O-ring, use a soft tool like a toothpick so that a pipe may not be damaged.
      (b) Apply sufficient amount of compressor oil (ND-OIL8) to the O-ring.
      (c) Route the hoses naturally and do not twist or bend them forcibly.
      (d) If foreign matter like lint stays on the O-ring, it may cause leak of the refrigerant gas. Do not use cotton gloves.

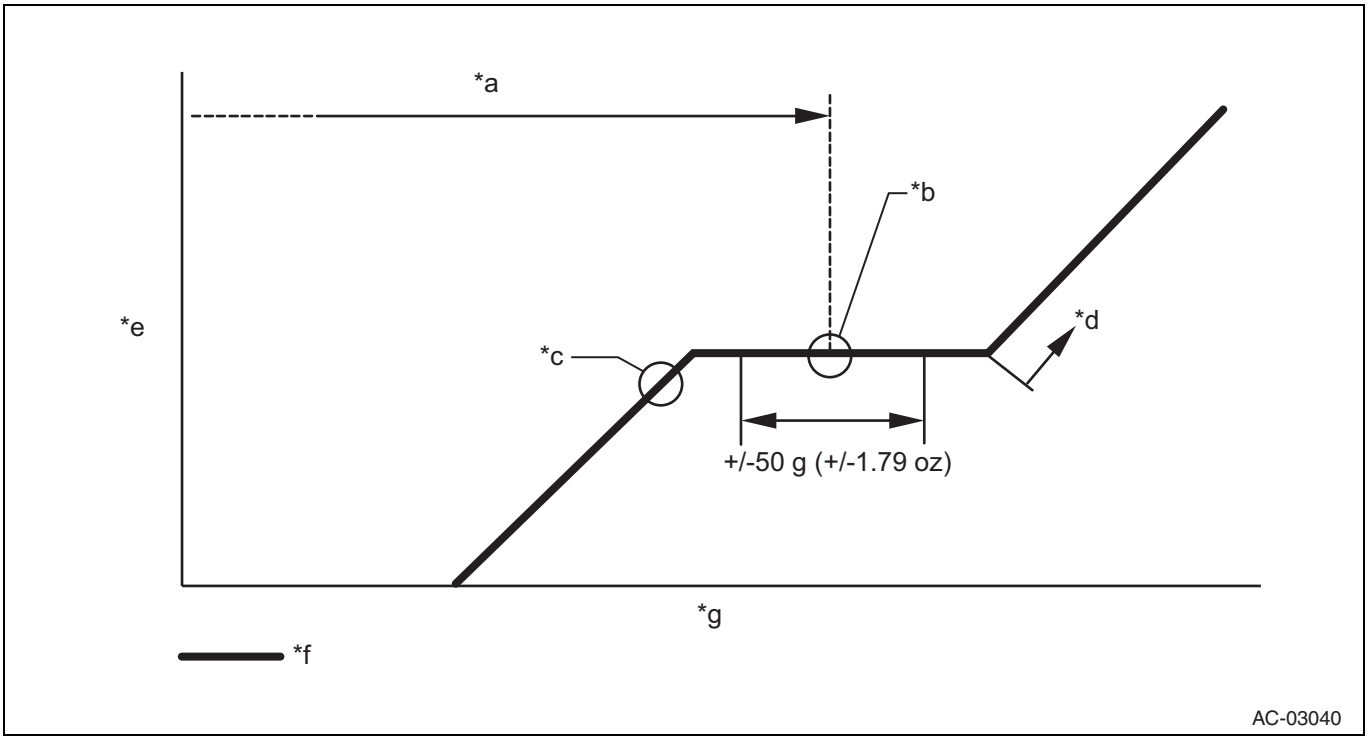
## Adjustment

1. Discharge of refrigerant HFC-134a (R134a)
   (1) Operate the air conditioner under the conditions below.

AC

| Conditions | Contents |
|---|---|
| Engine speed | Idling |
| Operation time | 3 minutes or more |
| A/C switch | ON |
| Blower level | HI |
| Setting temperature | MAX COOL |

      CAUTION:
      If the air conditioner cannot be operated due to lock of the compressor, operation is not required.
   (2) Stop the engine.
   (3) Connect the CFC recovery system,and discharge the refrigerant gas.
      CAUTION:
      When using the CFC recovery system, use it correctly according to the operation manual.
2. Charging refrigerant HFC-134a (R134a)
   (1) Using a vacuum pump, perform vacuuming.
   (2) Charge refrigerant HFC-134a (R134a).
      Standard value
      Refrigerant charge level: 390±50 g {13.76±1.76 oz}
      CAUTION:
      If the cooler compressor is operated without refrigerant, seizure may occur due to poor lubrication. Never operate it before charging of refrigerant.
      NOTE:
      If collected refrigerant gas is reused, the refrigerant gas recovery rate with a CFC recovery system is about 90%. Prepare a service can for refilling in advance.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Charge level | *b | Center of appropriate values |
| *c | Bubble disappearing point | *d | Over-charge |
| *e | Pressure | *f | Sub cool system |
| *g | Refrigerant level | - | - |

3. Engine warm-up
   CAUTION:
   After charging refrigerant, perform break-in operation at 2000 r/min or less for 2 minutes or more.
4. Check for refrigerant gas leak
   (1) After charging refrigerant gas, use an electronic leak detector to check for leak of the refrigerant gas.

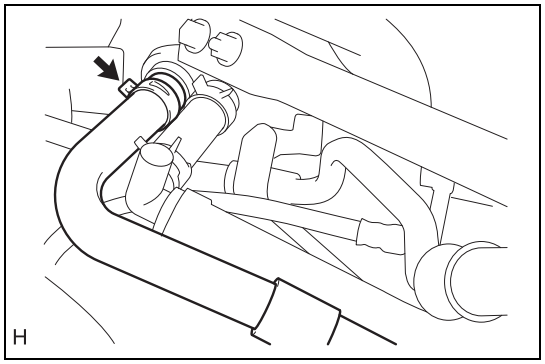
## Removal

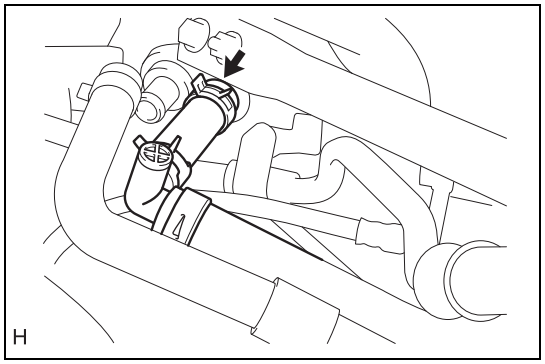
WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

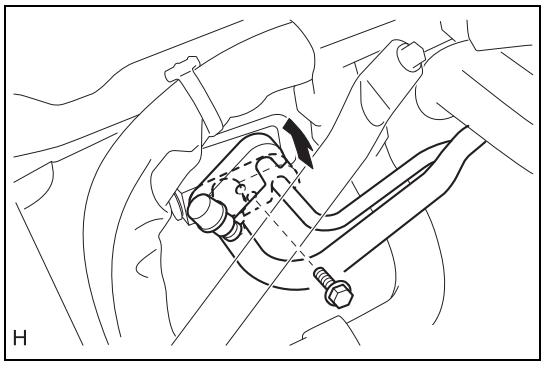
1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Discharge of refrigerant HFC-134a (R134a) (Refer to AC - 90)
3. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work.
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
4. Discharge of coolant (Refer to CO - 16)



5. Disconnection of heater water hose inlet A
   (1) Move the clip and disconnect heater water hose inlet A.
   CAUTION:
   - Do not apply excessive force to heater water hose inlet A.
   - Since leak of the coolant occurs, prepare a tray.
   - The assembly position needs to be recorded. Put a match mark before disconnection.



6. Disconnection of heater water hose outlet A
   (1) Move the clip and disconnect heater water hose outlet A.
   CAUTION:
   - Do not apply excessive force to heater water hose outlet A.
   - Since leak of the coolant occurs, prepare a tray.
   - The assembly position needs to be recorded. Put a match mark before disconnection.



7. Disconnection of suction hose SUB-ASSY
   (1) Remove bolts and turn the hook type connector in the direction of the arrow in the figure.
   (2) Disconnect the suction hose SUB-ASSY.
   (3) Remove the O-ring from the suction hose SUB-ASSY.
   CAUTION:
   Wrap vinyl tape around the fitting areas of the disconnected suction hose SUB-ASSY and the unit to prevent entry of dirt or moisture.

AC

8. Disconnection of air conditioner tube & accessory ASSY
   (1) Disconnect the air conditioner tube & accessory ASSY.
   (2) Remove the O-ring from the air conditioner tube & accessory ASSY.
   CAUTION:
   Wrap vinyl tape around the fitting areas of the disconnected air conditioner tube & accessory ASSY at the unit to prevent entry of dirt or moisture.
9. Removal of instrument panel SUB-ASSY (Refer to IT - 5)
10. Removal of steering column ASSY (Refer to SR - 54)
11. Removal of the front door scuff plate RH (Refer to IT - 48)
12. Removal of front door scuff plate LH (Refer to IT - 48)
13. Removal of the cowl side trim board RH (Refer to IT - 48)
14. Removal of cowl side trim board LH (Refer to IT - 48)
15. Removal of instrument panel reinforcement ASSY
   (1) Driver's side
   (a)Remove the bolts.

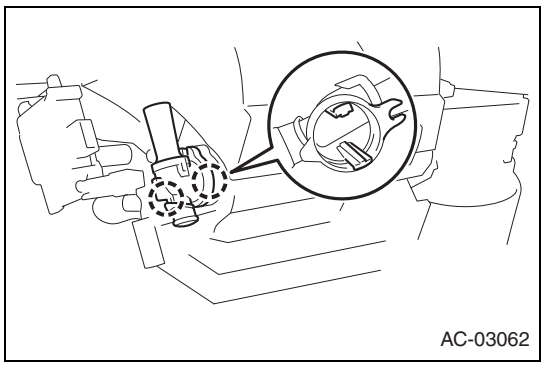
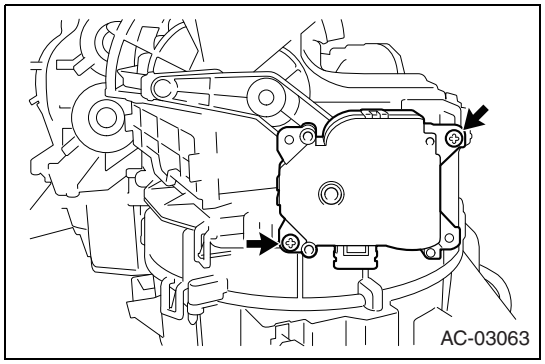
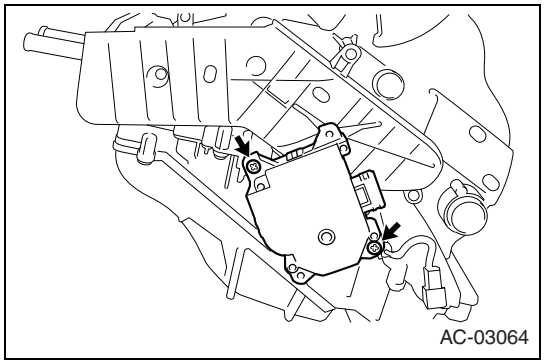
## Disassembly



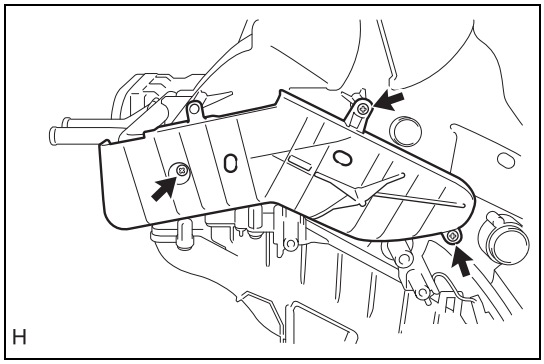
1. Removal of aspirator (for automatic air conditioning system)
   (1) Release the 2 claws and remove the aspirator.



2. Removal of air conditioner radiator damper servo SUB-ASSY NO.1
   (1) Remove the 2 screws and remove the air conditioner radiator damper servo SUB-ASSY NO.1.

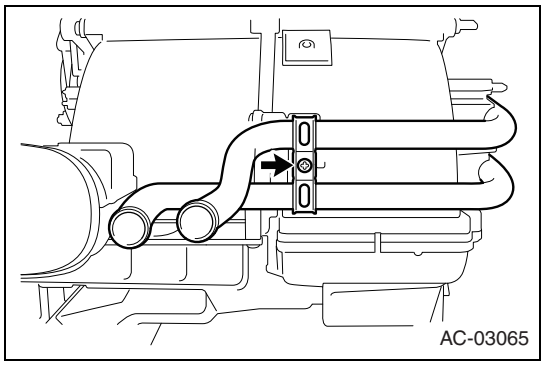


3. Removal of air conditioner radiator damper servo SUB-ASSY NO.5 (for automatic air conditioning system)
   (1) Remove the 2 screws and remove air conditioner radiator damper servo SUB-ASSY NO.5.
   CAUTION:
   When reusing air conditioner radiator damper servo SUB-ASSY NO.5, set the controller position to MAXCOOL on the vehicle before removal and hold it for 30 seconds after setting.



4. Removal of heater cover (for automatic air conditioning system)
   (1) Remove the 3 screws and remove the heater cover.

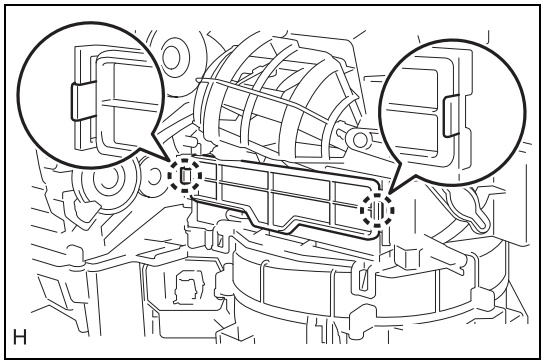
5. Removal of heater cover (for manual air conditioning system)
   NOTE:
   Repeat the same removal steps for the automatic air conditioning system.



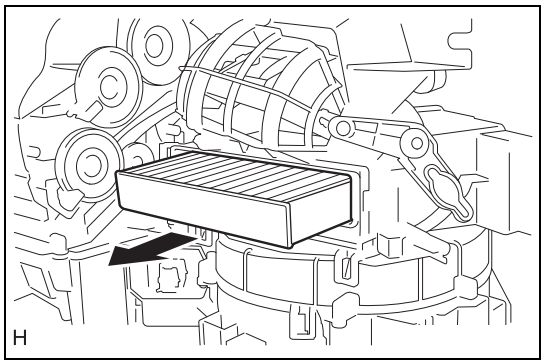
6. Removal of heater radiator unit SUB-ASSY (for automatic air conditioning system)
   (1) Remove the screw and remove the clamp.

   (2) Slide the heater radiator unit SUB-ASSY in the direction of the arrow in the figure to remove it.

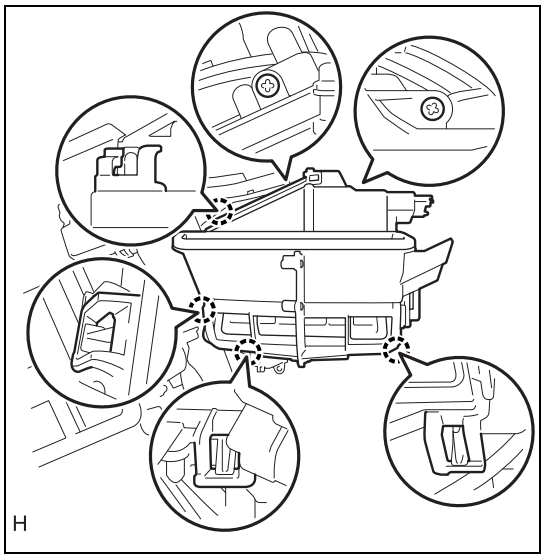
7. Removal of heater radiator unit SUB-ASSY (for manual air conditioning system)
   NOTE:
   Repeat the same removal steps for the automatic air conditioning system.



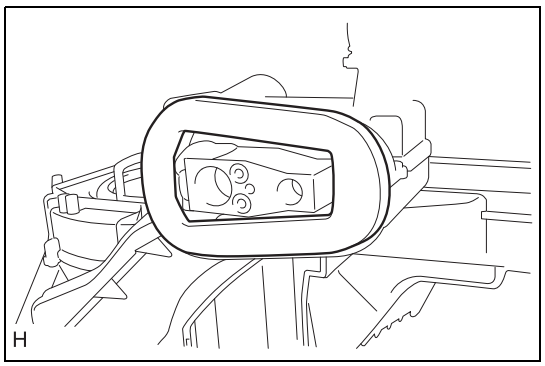
8. Removal of air filter case
   (1) Release the 2 claws and remove the air filter case.



9. Removal of clean air filter
   (1) Slide the clean air filter in the direction of the arrow in the figure to remove it.

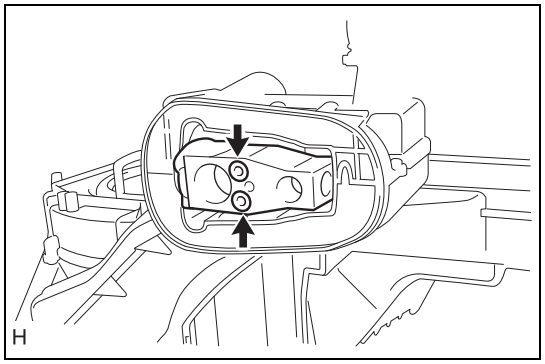


10. Removal of cooling unit case
    (1) Remove the 2 screws.
    (2) Release the 4 claws and remove the cooling unit case.

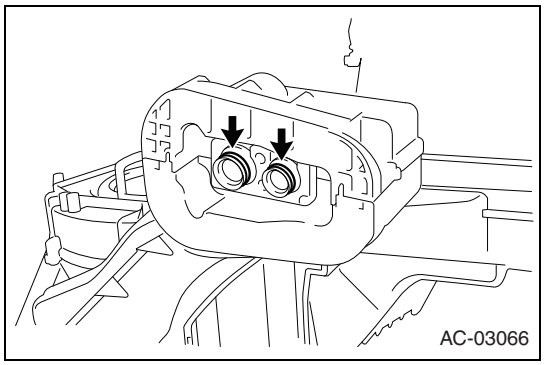


11. Removal of cooler expansion valve (for automatic air conditioning system)
    (1) Remove the gasket.

AC



(2) Using hexagon socket wrench 4, remove the 2 hexagon bolts and the cooler expansion valve.

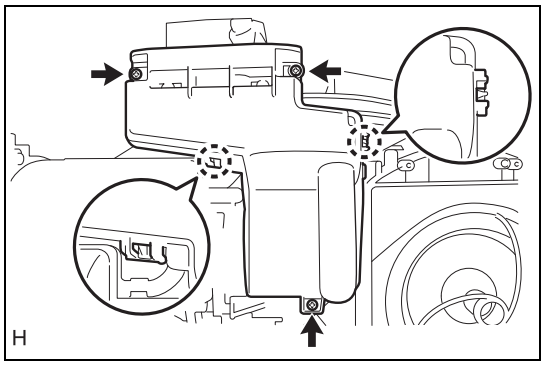


(3) Remove the 2 O-rings from cooler evaporator NO.1.

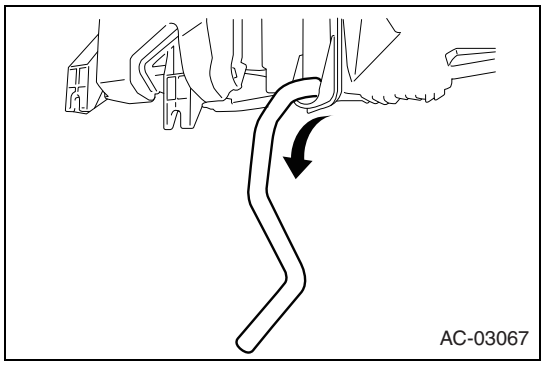
12. Removal of cooler expansion valve (for manual air conditioning system)

NOTE:

Repeat the same removal steps for the automatic air conditioning system.

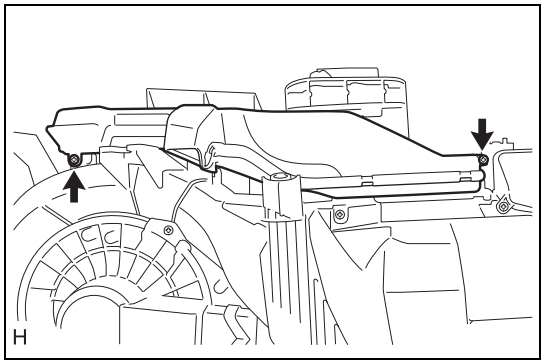


13. Removal of cover
    (1) Remove the 3 screws.
    (2) Release the 2 claws and remove the cover.

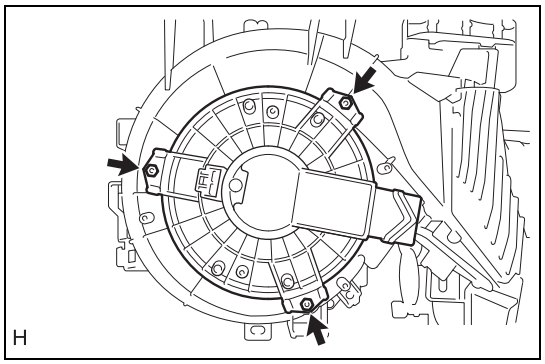


14. Removal of cooler unit drain hose NO.1
    (1) Remove cooler unit drain hose NO.1.

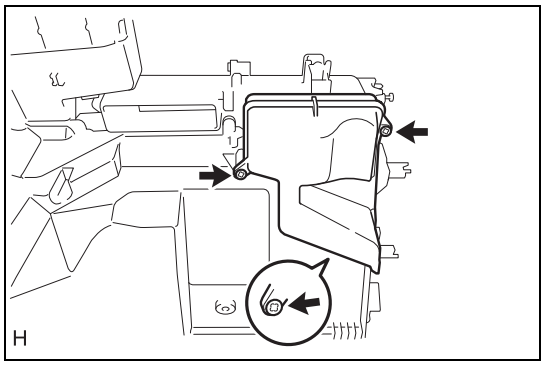
AC



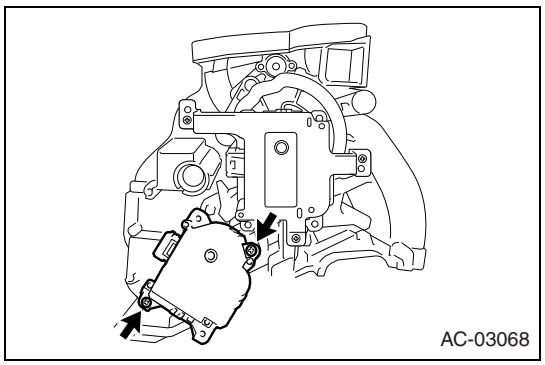
15. Removal of air duct NO.1
    (1) Remove the 2 screws and remove air duct NO.1.



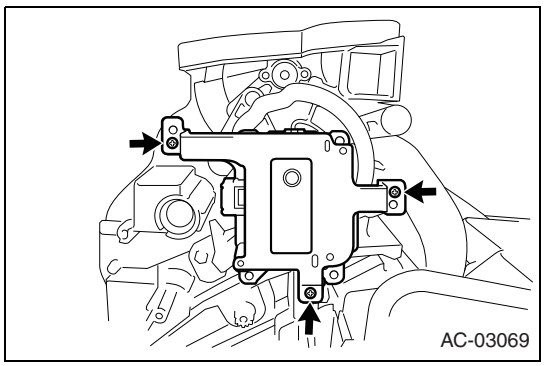
16. Removal of blower motor SUB-ASSY (with fan)
    (1) Remove the 3 screws and remove the blower motor SUB-ASSY (with fan).



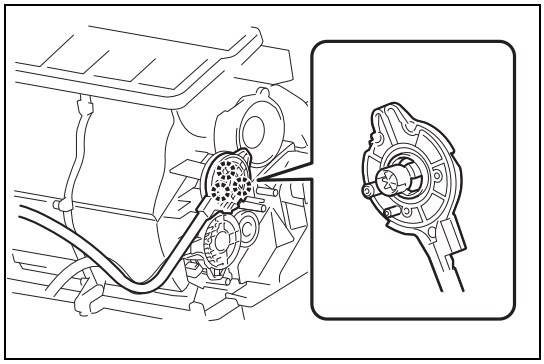
17. Removal of air duct NO.2
    (1) Remove the 3 screws and remove air duct NO.2.



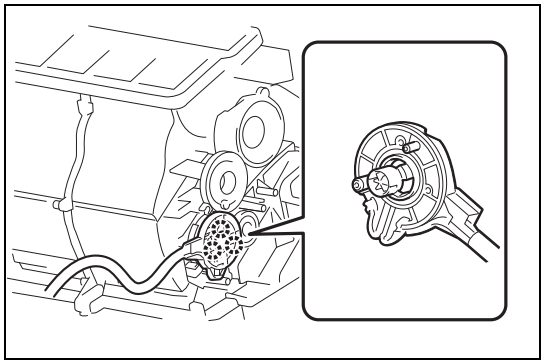
18. Removal of air conditioner radiator damper servo SUB-ASSY NO.4 (for automatic air conditioning system)
    (1) Remove the 2 screws and remove air conditioner radiator damper servo SUB-ASSY NO.4.
    CAUTION:
    When reusing air conditioner radiator damper servo SUB-ASSY NO.4, set the controller position to the servo motor opening angle 32.42 % on the vehicle before removal and hold it for 30 seconds after setting.



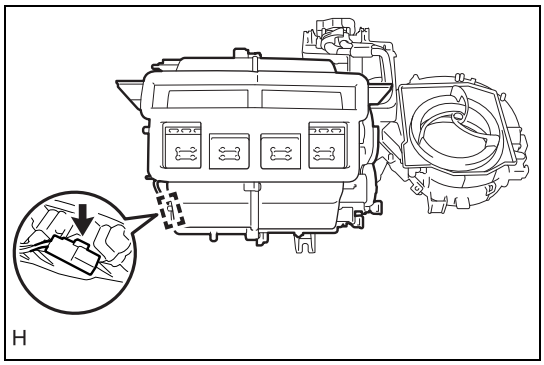
19. Removal of air conditioner radiator damper servo SUB-ASSY NO.3 (for automatic air conditioning system)
    (1) Remove the 3 screws and remove air conditioner radiator damper servo SUB-ASSY NO.3.



20. Removal of air outlet damper control cable SUB-ASSY (for manual air conditioning system)
    (1) Release the 3 claws and remove the air outlet damper control cable SUB-ASSY.
    CAUTION:
    Hold the control cable and remove it slowly so that the drive gear at the unit may not be pulled.



21. Removal of heater control cable SUB-ASSY (for manual air conditioning system)
    (1) Release the 3 claws and remove the heater control cable SUB-ASSY.
    CAUTION:
    Hold the control cable and remove it slowly so that the drive gear at the unit may not be pulled.

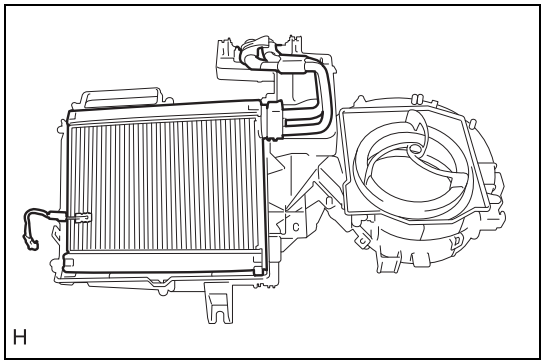


22. Removal of cooling unit case (for automatic air conditioning system)
    (1) Disconnect the clamp.

    (2) Remove the 7 screws.
    (3) Release the 2 claws and remove the cooling unit case.

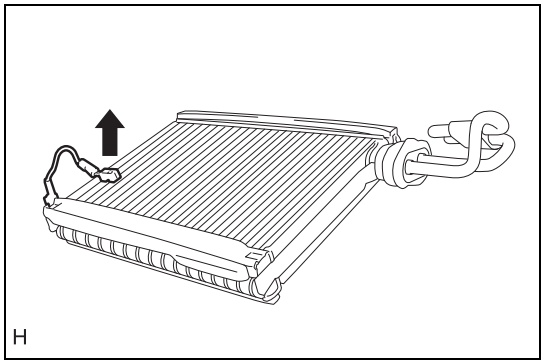
23. Removal of cooling unit case (for manual air conditioning system)
    NOTE:
    Repeat the same removal steps for the automatic air conditioning system.

AC



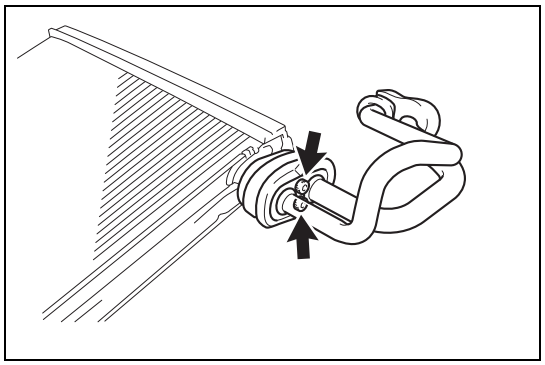
24. Removal of cooler evaporator NO.1 (for automatic air conditioning system)
    (1) Remove cooler evaporator NO.1.

25. Removal of cooler evaporator NO.1 (for manual air conditioning system)
    NOTE:
    Repeat the same removal steps for the automatic air conditioning system.



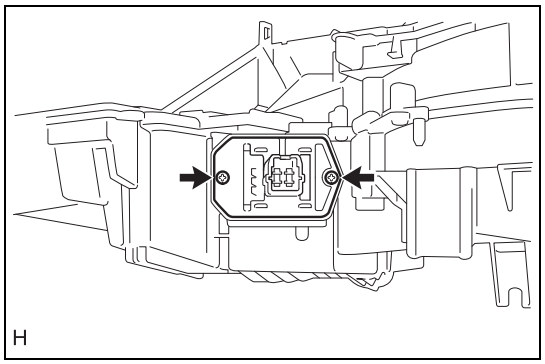
26. Removal of cooler thermistor NO.1 (for automatic air conditioning system)
    (1) Remove the cooler thermistor NO.1.

27. Removal of cooler thermistor NO.1 (for manual air conditioning system)
    NOTE:
    Repeat the same removal steps for the automatic air conditioning system.



28. Removal of air conditioner tube ASSY (for automatic air conditioning system)
    (1) Using hexagon socket wrench 4, remove the 2 hexagon bolts and the air conditioner tube ASSY.

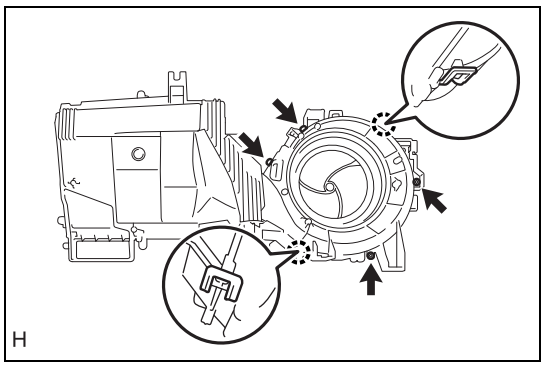
29. Removal of air conditioner tube ASSY (for manual air conditioning system)
    NOTE:
    Repeat the same removal steps for the automatic air conditioning system.



30. Removal of blower motor control (for automatic air conditioning system)
    (1) Remove the 2 screws and remove the blower motor control.

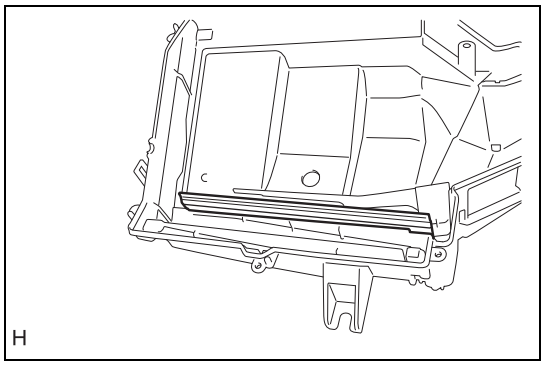
AC

31. Removal of blower register (for manual air conditioning system)
    NOTE:
    Repeat the same removal steps for the blower motor control.



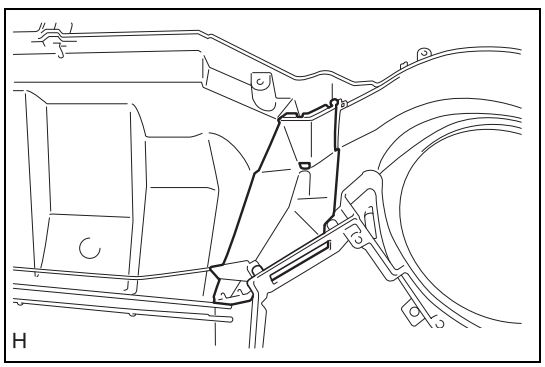
32. Removal of cooler blower case
    (1) Remove the 4 screws and release the 2 claws.

    (2) Remove the cooler blower case from the heater case lower.



33. Removal of cooler unit case gasket (for automatic air conditioning system)
    (1) Remove the cooler unit spacer.

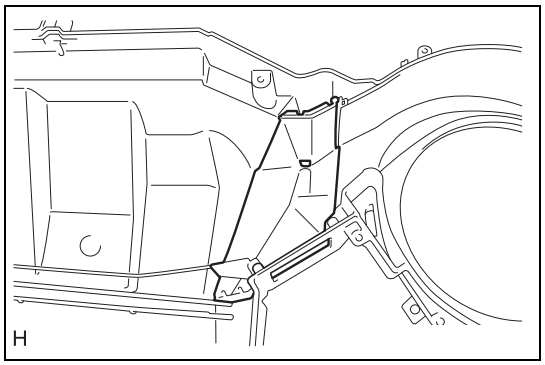
34. Removal of cooler unit case gasket (for manual air conditioning system)
    NOTE:
    Repeat the same removal steps for the automatic air conditioning system.



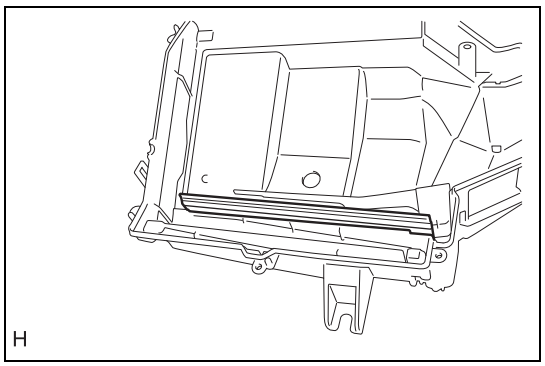
35. Removal of cover plate
    (1) Remove the cover plate.

AC

## Assembly

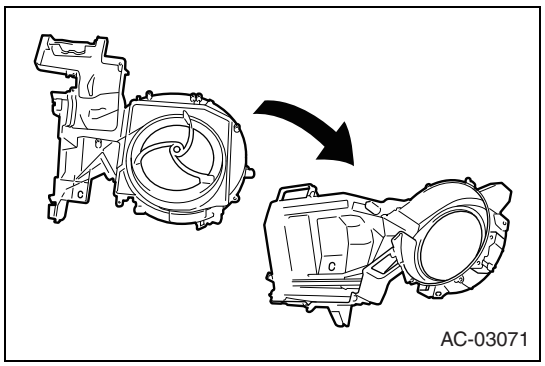


1. Installation of cover plate
   (1) Install the cover plate.



2. Installation of cooler unit case gasket (for automatic air conditioning system)
   (1) Install the cooler unit case gasket.

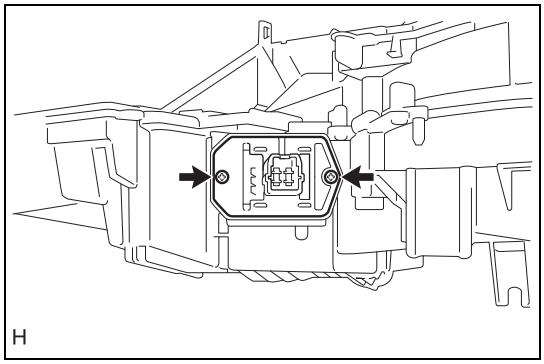
3. Installation of cooler unit case gasket (for manual air conditioning system)
   NOTE:
   Repeat the same installation steps for the automatic air conditioning system.



4. Installation of cooler blower case
   (1) Install the cooler blower case on the heater case lower.

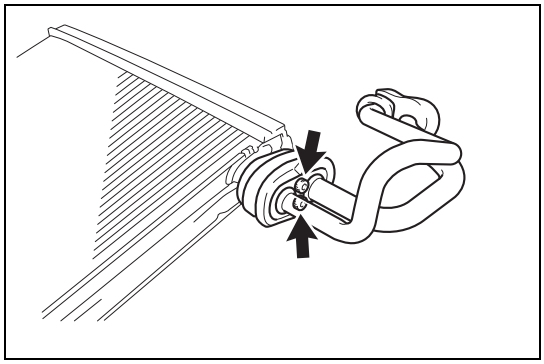
   (2) Fit in the 2 claws.
   (3) Install the blower case ASSY with the 4 screws.

AC



5. Installation of blower motor control (for automatic air conditioning system)
   (1) Install the blower motor control with the 2 screws.

6. Installation of blower register (for manual air conditioning system)
   NOTE:
   Repeat the same installation steps for the blower motor control.

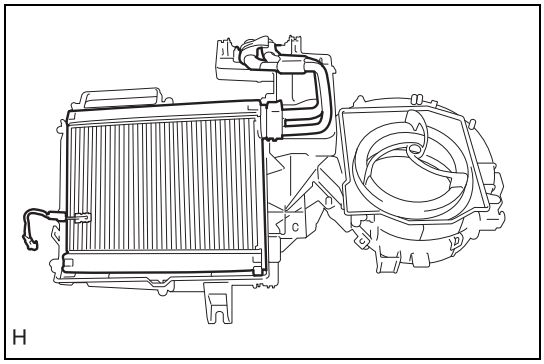


7. Installation of air conditioner tube ASSY (for automatic air conditioning system)
   (1) Using hexagon socket wrench 4, install the air conditioner tube ASSY with the 2 hexagon bolts.
   Standard value:T=3.5N·m {36kgf·cm} {2.6ft·lbf}

8. Installation of air conditioner tube ASSY (for manual air conditioning system)
   NOTE:
   Repeat the same installation steps for the automatic air conditioning system.

9. Installation of cooler thermistor NO.1 (for automatic air conditioning system) (Refer to AC - 159)

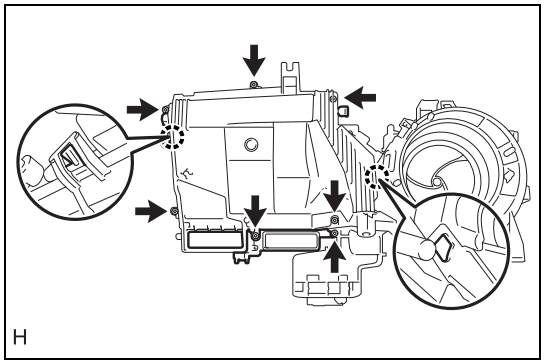
10. Installation of cooler thermistor NO.1 (for manual air conditioning system)
    NOTE:
    Repeat the same installation steps for the automatic air conditioning system.



11. Installation of cooler evaporator NO.1 (for automatic air conditioning system)
    (1) Install the cooler evaporator NO.1.

12. Installation of cooler evaporator NO.1 (for manual air conditioning system)
    NOTE:
    Repeat the same installation steps for the automatic air conditioning system.

AC



13. Installation of cooling unit case (for automatic air conditioning system)
    (1) Fit in the 2 claws.
    (2) Install the cooling unit case with the 7 screws.

    (3) Connect the clamp.

14. Installation of cooling unit case (for manual air conditioning system)
    NOTE:
    Repeat the same installation steps for the automatic air conditioning system.
15. Installation of heater control cable SUB-ASSY (for manual air conditioning system)
    CAUTION:
    - Be careful that dust, dirt, etc. may not stay on grease at the gear during work.
    - Do not hold the gear with cotton gloves.

AC

    (1) Turn the pin at the cable side fully in the direction of the arrow and position the assembly to the gear hole.
    NOTE:
    Set to the position of MAX HOT.

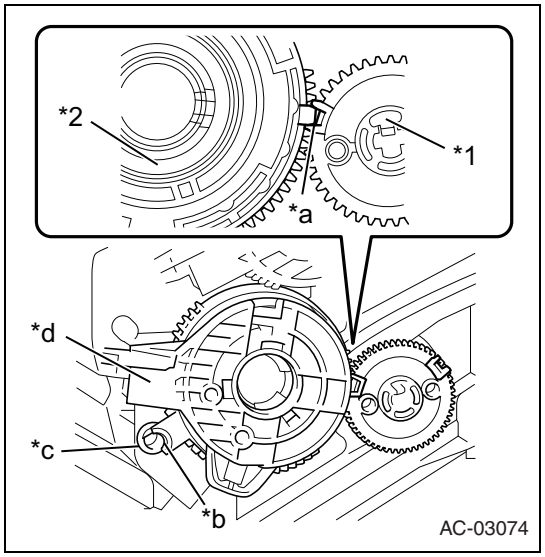
    (2) Hold the drive gear protrusion and turn the assembly to fit in the case cylinder.

Captions in illustration

| | |
|---|---|
| *1 | Drive gear insertion hole |
| *2 | Control cable positioning pin |

    NOTE:
    Temperature control position: MAX HOT

    (3) Insert the positioning pins of the control cable slowly to the end so that they fit the drive gear insertion holes to install the heater control cable SUB-ASSY.



(4) Gear replacement

(a) When replacing the drive gear, pull the plastic part of the control cable slowly for removal.

Captions in illustration

| | |
|---|---|
| *1 | Shaft gear |
| *2 | Drive gear |
| *a | Specified location |
| *b | Drive gear protrusion |
| *c | Case cylinder |
| *d | Plastic part of control cable |

CAUTION:
Do not pull the drive gear together.

(b) Pull the drive gear slowly for removal.

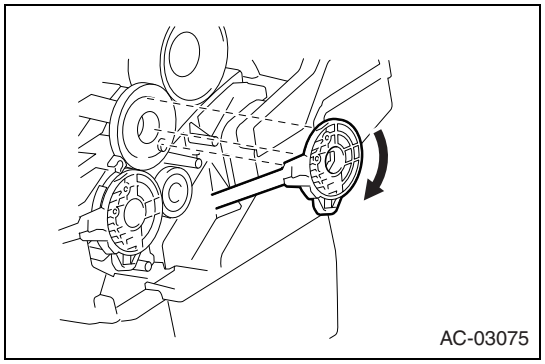
(c) Turn the shaft gear counterclockwise slowly until it stops.

CAUTION:
Be careful that it is not turned excessively.

(d) Align the shaft gear and the drive gear to the reference position, and insert the drive gear into the heater case slowly.

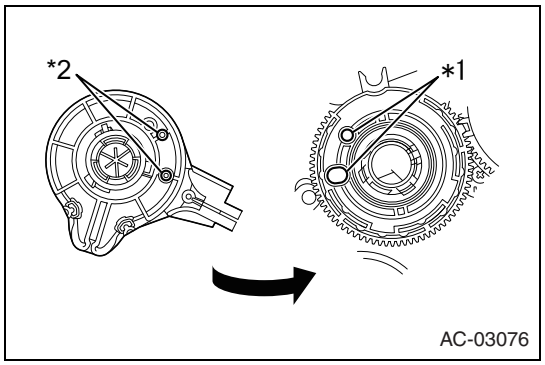
16. Installation of air outlet damper control cable SUB-ASSY (for manual air conditioning system)

CAUTION:
- Be careful that dust, dirt, etc. may not stay on grease at the gear during work.
- Do not hold the gear with cotton gloves.



(1) Turn the pin at the cable side fully in the direction of the arrow and position the assembly to the gear hole.

NOTE:
Set to the position of DEF.



(2) Hold the drive gear protrusion and turn the assembly clockwise until it stops.

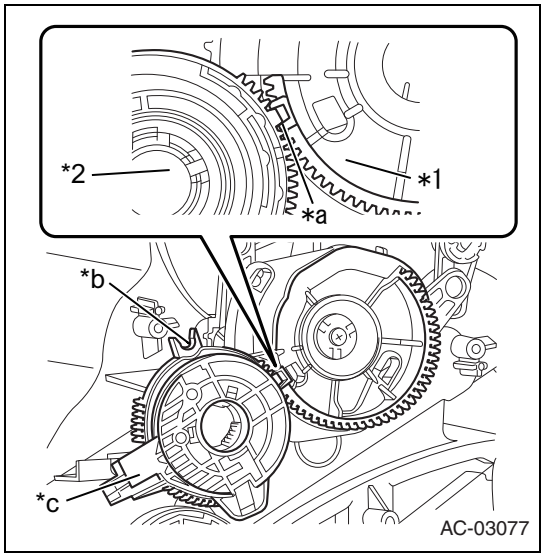
Captions in illustration

| | |
|---|---|
| *1 | Drive gear insertion hole |
| *2 | Control cable positioning pin |

NOTE:
Mode position: DEF

(3) Insert the positioning pins of the control cable slowly to the end so that they fit the drive gear insertion holes to install the air outlet damper control cable SUB-ASSY.

AC



(4) Gear replacement

(a) When replacing the drive gear, pull the plastic part of the control cable slowly for removal.

Captions in illustration

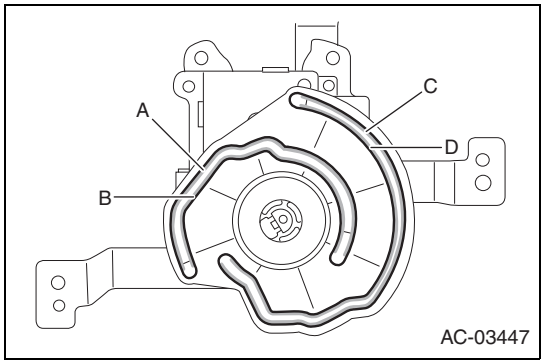
| | |
|---|---|
| *1 | Mode main link |
| *2 | Drive gear |
| *a | Specified location |
| *b | Drive gear protrusion |
| *c | Plastic part of control cable |

CAUTION:
Do not pull the drive gear together.

(b) Pull the drive gear slowly for removal.

(c) Align the mode main link and the drive gear to the reference position, and insert the drive gear into the heater case slowly.

17. Installation of air conditioner radiator damper servo SUB-ASSY NO.3 (for automatic air conditioning system)



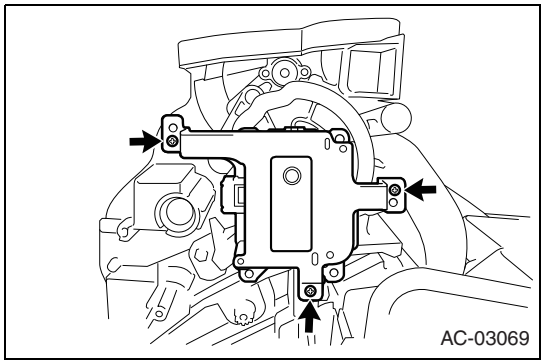
(1) When replacing the air conditioner radiator damper servo SUB-ASSY NO.3 with a new one, apply a thin coat of grease evenly to the working surface A inside the link plate rail with the amount of 5 mm out of the tube (approx. 0.1 g). Similarly, apply a thin coat of grease with the same amount also evenly on the working surface B to D.

Captions in illustration

| | |
|---|---|
| | SUBARU genuine grease (Refer to "Preparation items-Air Conditioner") |

NOTE:
After the installation of air conditioner radiator damper servo SUB-ASSY NO.3, operate it 3 to 5 times to blend the grease.

AC

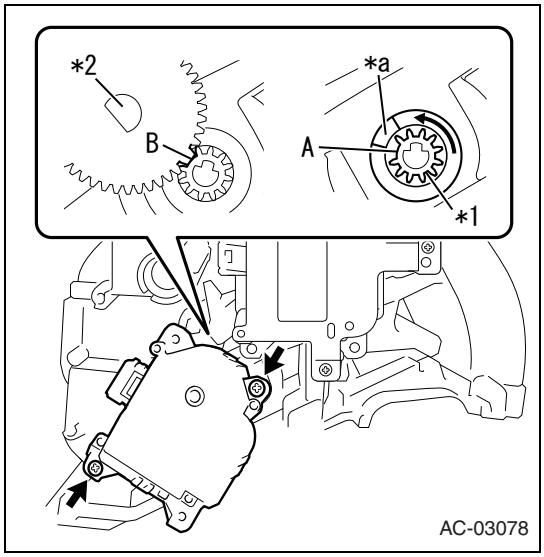


(2) Align the link pin with the main link groove, and install air conditioner radiator damper servo SUB-ASSY NO.3 with the 3 screws.

18. Installation of air conditioner radiator damper servo SUB-ASSY NO.4 (for automatic air conditioning system)

CAUTION:

- Be careful that dust, dirt, etc. may not stay on grease at the gear during work.
- Do not hold the gear with cotton gloves.



(1) Turn the air mix shaft in the direction of the arrow slowly until it stops.

Captions in illustration

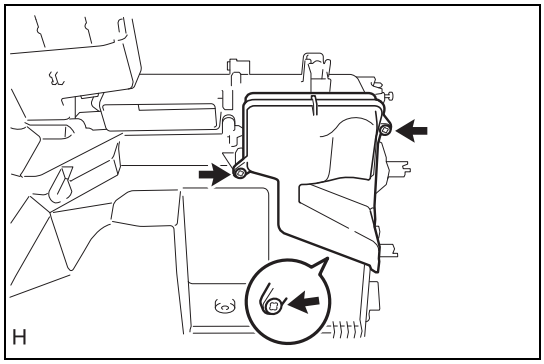
| | |
|---|---|
| *1 | Air mix shaft |
| *2 | Shaft gear |
| *a | Specified location |

CAUTION:
Be careful that it is not turned excessively.

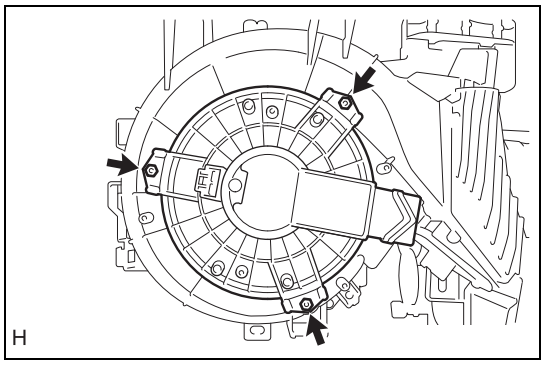
(2) Turn the air mix shaft so that portion A of the air mix shaft is aligned with the reference position of the case.
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(3) Align gear B of air conditioner radiator damper servo SUB-ASSY NO.4 with shaft gear A.
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(4) Align potion A of the air mix shaft and shaft gear B with the reference position, and install air conditioner radiator damper servo SUB-ASSY NO.4 with the 2 screws.

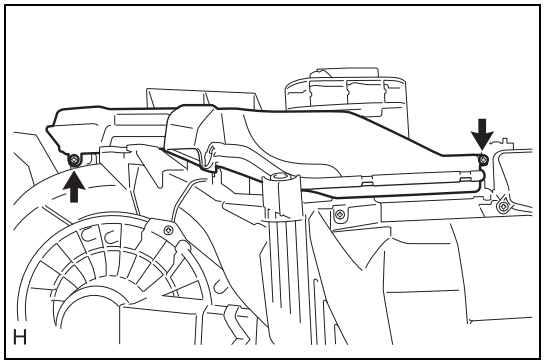


19. Installation of air duct NO.2
(1) Install air duct NO.2 with the 3 screws.

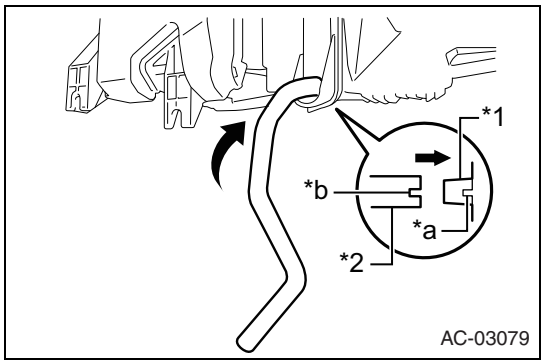


20. Installation of blower motor SUB-ASSY (with fan)
(1) Install the blower motor SUB-ASSY (with fan) with the 3 screws.

AC



21. Installation of air duct NO.1
    (1) Install the air duct NO.1 with the 2 screws.

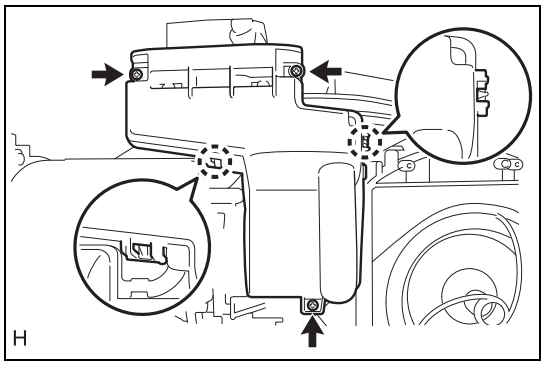


22. Installation of cooler unit drain hose NO.1
    (1) Install the cooler unit drain hose NO.1.

Captions in illustration

| | |
|---|---|
| *1 | Case |
| *2 | Hose |
| *a | Rib |
| *b | Cutout portion |

NOTE:
Align the cutout with the rib of the case.



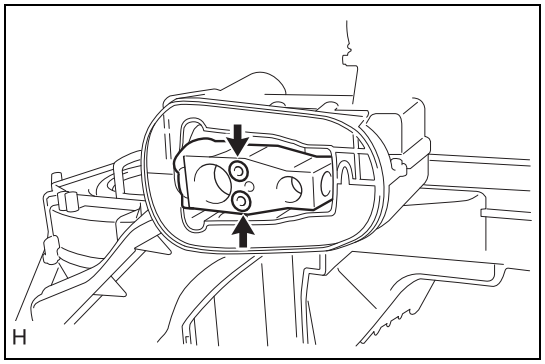
23. Installation of cover
    (1) Fit in the 2 claws.
    (2) Install the cover with the 3 screws.

AC

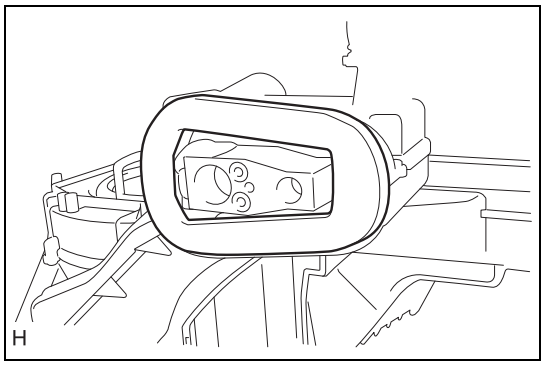
24. Installation of cooler expansion valve (for automatic air conditioning system)
    (1) Apply sufficient amount of compressor oil (ND-OIL8) to two new O-rings and the fitting area of the cooler expansion valve.

    (2) Install the 2 O-rings on cooler evaporator NO.1.
    CAUTION:
    Do not allow the O-ring and the O-ring seal to have deposit of dirt.

    (3) Install a new cooler expansion valve on the cooler evaporator No.1.

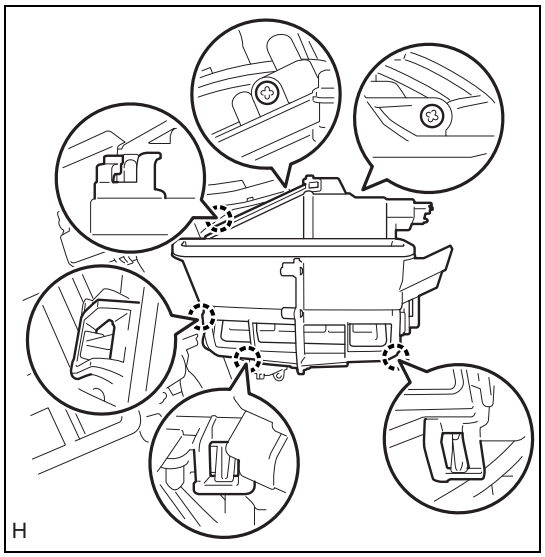


(4) Using hexagon socket wrench 4, install the cooler expansion valve with the 2 new hexagon bolts.
Standard value:T=3.5N·m {36kgf·cm} {2.6ft·lbf}

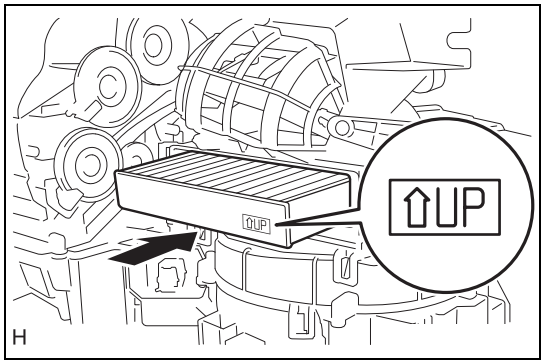


(5) Install a new gasket.

25. Installation of cooler expansion valve (for manual air conditioning system)
NOTE:
Repeat the same installation steps for the automatic air conditioning system.

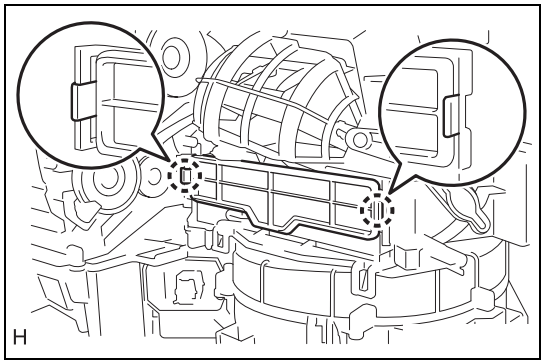


26. Installation of cooling unit case
(1) Fit in the 4 claws.
(2) Install the cooling unit case with the 2 screws.

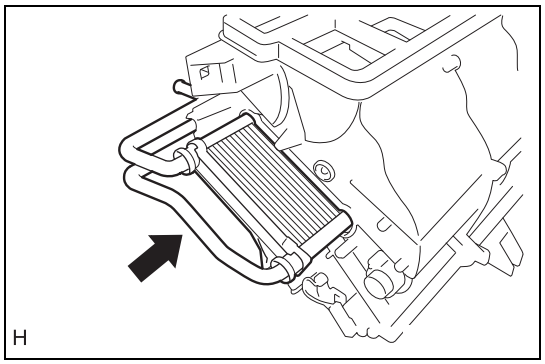


27. Installation of clean air filter
(1) Slide clean air filter in the direction of the arrow in the figure to install it.

AC



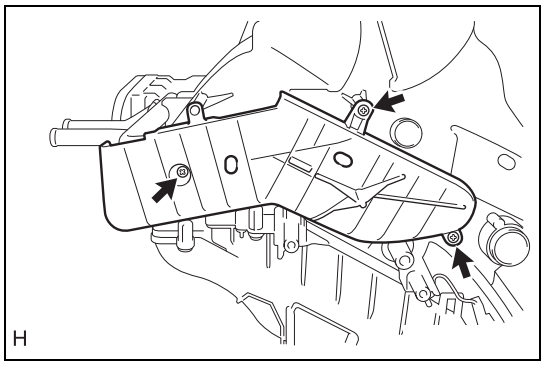
28. Installation of air filter case
    (1) Engage the 2 claws and install the air filter case.



29. Installation of heater radiator unit SUB-ASSY (for automatic air conditioning system)
    (1) Slide the heater radiator unit SUB-ASSY in the direction of the arrow in the figure to install it.

    (2) Install the clamp with the screws.

30. Installation of heater radiator unit SUB-ASSY (for manual air conditioning system)
    NOTE:
    Repeat the same installation steps for the automatic air conditioning system.

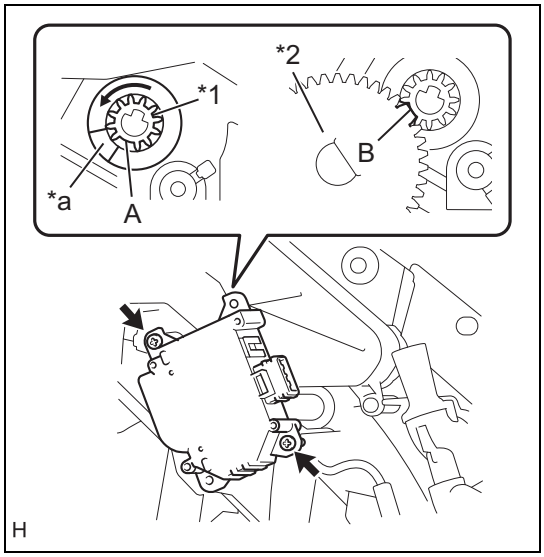


31. Installation of heater cover (for automatic air conditioning system)
    (1) Install the heater cover with the 3 screws.

32. Installation of heater cover (for manual air conditioning system)
    NOTE:
    Repeat the same installation steps for the automatic air conditioning system.

33. Installation of air conditioner radiator damper servo SUB-ASSY NO.5 (for automatic air conditioning system)
    CAUTION:
    - Be careful that dust, dirt, etc. may not stay on grease at the gear during work.
    - Do not hold the gear with cotton gloves.

AC



(1) Turn the air mix shaft in the direction of the arrow slowly until it stops.

Captions in illustration

| | |
|---|---|
| *1 | Air mix shaft |
| *2 | Shaft gear |
| *a | Specified location |

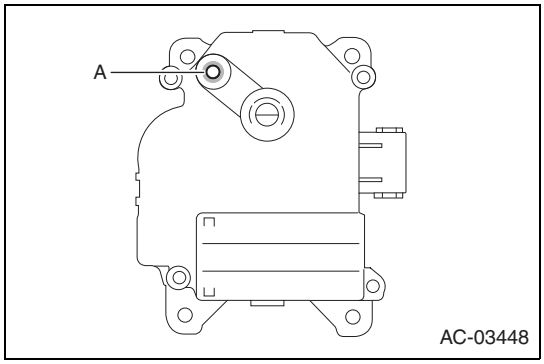
CAUTION:
Be careful that it is not turned excessively.

(2) Turn the air mix shaft so that portion A of the air mix shaft is aligned with the reference position of the case.
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(3) Align gear B of air conditioner radiator damper servo SUB-ASSY NO.5 with shaft gear A.
NOTE:
Air mix door position: Near MAX COOL
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(4) Align portion A of the air mix shaft and shaft gear B with the reference position, and install air conditioner radiator damper servo SUB-ASSY NO.5 with the 2 screws.

34. Installation of air conditioner radiator damper servo SUB-ASSY NO.1

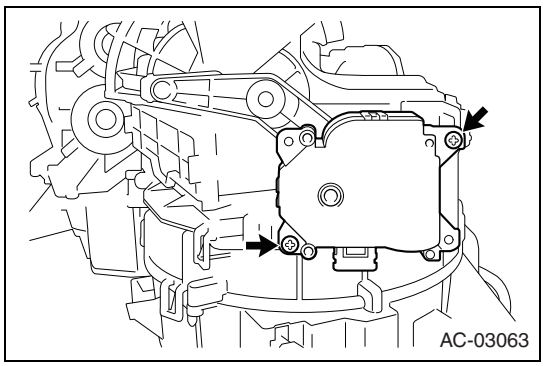


(1) When replacing the air conditioner radiator damper servo SUB-ASSY NO.1 with a new one, apply a thin coat of grease evenly to the side A of the lever pin with the amount of 5 mm out of tube (approx. 0.1 g).

Captions in illustration

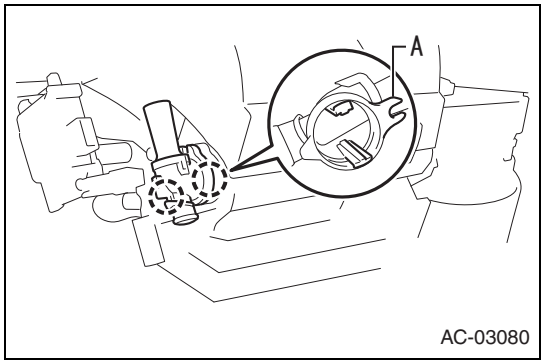
| | |
|---|---|
| | SUBARU genuine grease (Refer to "Preparation items-Air Conditioner") |

NOTE:
After the installation of air conditioner radiator damper servo SUB-ASSY NO.1, operate it 3 to 5 times to blend the grease.



(2) Install air conditioner radiator damper servo SUB-ASSY NO.1 with the 2 screws.

AC



35. Installation of aspirator (for automatic air conditioning system)
    (1) Align the fitting area of the 2 claws and portion A with the pin at the case side, and install the aspirator together with the aspirator pipe.

## Installation

1. Installation of air conditioner unit ASSY (for automatic air conditioning system)
    (1) Install the 3 bolts and 3 nuts.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
    (2) Connect the drain cooler hose.
    (3) Connect the connectors, engage the clamps, and install the air conditioner unit ASSY.
2. Installation of air conditioner unit ASSY (for manual air conditioning system)
    (1) Install the 3 bolts and 3 nuts.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
    (2) Connect the drain cooler hose.
    (3) Connect the connectors, engage the clamps, and install the air conditioner unit ASSY.
3. Installation of instrument panel reinforcement ASSY

AC

| | | | |
|---|---|---|---|
| *1 | Torx bolt | - | - |

(1) Using torx socket wrench T40, install the 4 torx bolts in the order shown in the figure.

Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}

(2) Install the instrument panel reinforcement ASSY with the 5 bolts in the order shown in the figure.
Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}

(3) Connect the connectors and engage the clamps and claws.

4. Installation of the cowl side trim board RH (Refer to IT - 58)
5. Installation of cowl side trim board LH (Refer to IT - 58)
6. Installation of the front door scuff plate RH (Refer to IT - 58)
7. Installation of front door scuff plate LH (Refer to IT - 58)
8. Installation of steering column ASSY (Refer to SR - 62)
9. Installation of instrument panel SUB-ASSY (Refer to IT - 15)
10. Connection of air conditioner tube & accessory ASSY
    (1) Remove the vinyl tape wrapped around the joint of the air conditioner tube & accessory ASSY and the unit.
    (2) Apply sufficient amount of compressor oil (ND-OIL8) to new O-rings and the joint of the air conditioner tube & accessory ASSY.
    (3) Install the O-ring on the air conditioner tube & accessory ASSY.
    CAUTION:
    Do not allow the O-ring and the O-ring seal to have deposit of dirt.
    (4) Connect the air conditioner tube & accessory ASSY to the air conditioner unit ASSY.
11. Connection of suction hose SUB-ASSY
    (1) Remove the vinyl tape wrapped around the joint of the suction hose and the unit.
    (2) Apply sufficient amount of compressor oil (ND-OIL8) to the new O-ring and the joint of the suction hose SUB-ASSY.
    (3) Install the O-ring on the suction hose SUB-ASSY.
    CAUTION:
    Do not allow the O-ring and the O-ring seal to have deposit of dirt.
    (4) Push the shaft of the pipe joint into the seal hole until it is completely engaged.

    (5) Turn the hook type connector to the tightening position and tighten it with bolts.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

12. Connection of heater water hose outlet A
    (1) Install heater water hose outlet A with clips.
    NOTE:
    Install it to the match mark provided at the time of removal.
13. Connection of heater water hose inlet A
    (1) Install heater water hose inlet A with the clips.
    NOTE:
    Install it to the match mark provided at the time of removal.
14. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
15. Recharge of coolant (Refer to CO - 16)
16. Charging refrigerant HFC-134a (R134a) (Refer to AC - 90)
17. Inspection of coolant leak (Refer to CO - 2)
18. Engine warm-up (Refer to AC - 91)
19. Inspection of refrigerant gas leak (Refer to AC - 91)
20. Inspection of airbag warning light (Refer to RS - 53)

21. Settings when removing/installing battery terminals (Refer to IN - 10)

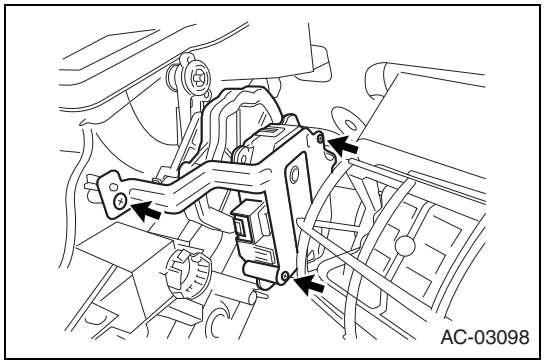
WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work.
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of instrument panel SUB-ASSY (Refer to IT - 5)
4. Removal of steering column ASSY (Refer to SR - 54)
5. Removal of the front door scuff plate RH (Refer to IT - 48)
6. Removal of front door scuff plate LH (Refer to IT - 48)
7. Removal of the cowl side trim board RH (Refer to IT - 48)
8. Removal of cowl side trim board LH (Refer to IT - 48)
9. Removal of instrument panel reinforcement ASSY (Refer to AC - 100)



10. Removal of air conditioner radiator damper servo SUB-ASSY NO.3
    (1) Remove the 3 screws and remove air conditioner radiator damper servo SUB-ASSY NO.3.

## Installation

1. Installation of air conditioner radiator damper servo SUB-ASSY NO.3

    (1) When replacing the air conditioner radiator damper servo SUB-ASSY NO.3 with a new one, apply a thin coat of grease evenly to the working surface A inside the link plate rail with the amount of 5 mm out of the tube (approx. 0.1 g). Similarly, apply a thin coat of grease with the same amount also evenly on the working surface B to D.

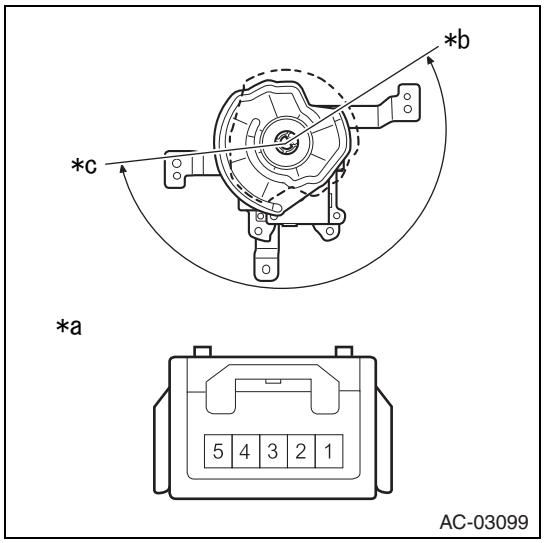
| | SUBARU genuine grease (Refer to "Preparation items-Air Conditioner") |

NOTE:
After the installation of air conditioner radiator damper servo SUB-ASSY NO.3, operate it 3 to 5 times to blend the grease.

    (2) Install air conditioner radiator damper servo SUB-ASSY NO.3 with the 3 screws.
2. Installation of instrument panel reinforcement ASSY (Refer to AC - 124)
3. Installation of the cowl side trim board RH (Refer to IT - 58)
4. Installation of cowl side trim board LH (Refer to IT - 58)
5. Installation of the front door scuff plate RH (Refer to IT - 58)
6. Installation of front door scuff plate LH (Refer to IT - 58)
7. Installation of steering column ASSY (Refer to SR - 62)
8. Installation of instrument panel SUB-ASSY (Refer to IT - 15)
9. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
10. Settings when removing/installing battery terminals (Refer to IN - 10)

## Unit inspection



1. Inspection of air conditioner radiator damper servo SUB-ASSY NO.3
   (1) Operation inspection
      (a)Check the operation when battery voltage is applied between connector terminals of the air conditioner radiator damper servo SUB-ASSY NO.3.

Criteria

| Battery connection | Criteria |
|---|---|
| Battery positive →4<br>Battery ground →5 | DEF position, rotates in the direction of the arrow in the figure. |
| Battery positive →5<br>Battery ground →4 | FACE position, rotates in the direction of the arrow in the figure. |

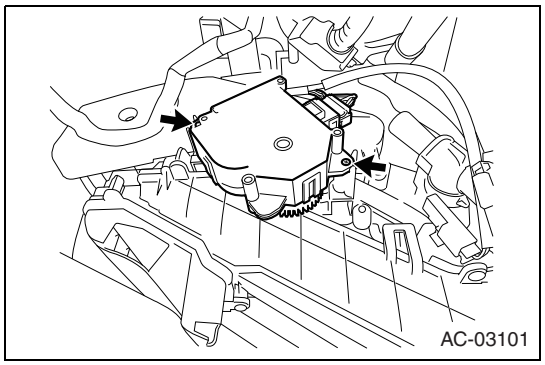
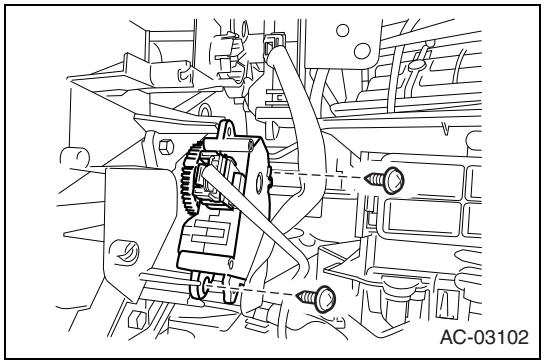
## Removal

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the instrument side panel LH (Refer to IT - 24)
3. Removal of the instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)



4. Removal of air conditioner radiator damper servo SUB-ASSY NO.5 (driver's seat side)
   (1) Disconnect the connector.
   (2) Remove the 2 screws and remove air conditioner radiator damper servo SUB-ASSY NO.5.
   CAUTION:
   When reusing air conditioner radiator damper servo SUB-ASSY NO.5, set the controller position to MAXCOOL on the vehicle before removal and save it for 30 seconds after setting.
5. Removal of console box ASSY (Refer to IT - 33)
6. Removal of the instrument panel ornament (Refer to IT - 22)
7. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
8. Removal of instrument cluster finish panel garnish NO.1 (Refer to IT - 23)
9. Removal of instrument cluster finish panel garnish NO.2 (Refer to IT - 24)
10. Removal of air conditioner control ASSY (Refer to AC - 163)
11. Removal of the instrument side panel RH (Refer to IT - 24)
12. Removal of glove compartment door ASSY (Refer to IT - 25)

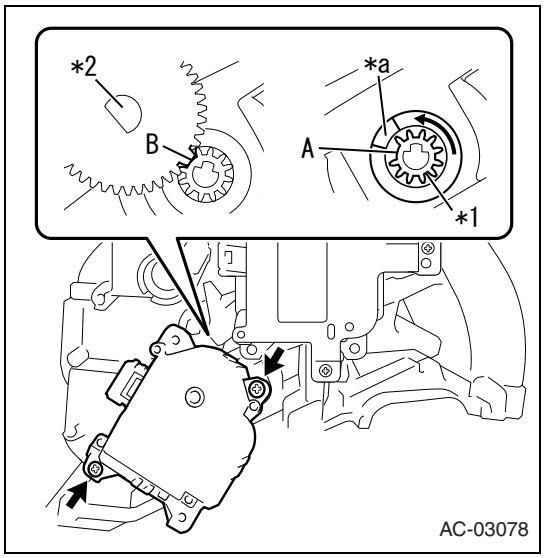
13. Removal of instrument panel SUB-ASSY LWR (Refer to IT - 26)



14. Removal of air conditioner radiator damper servo SUB-ASSY NO.4 (passenger's seat side)
    (1) Disconnect the connector.
    (2) Remove the 2 screws and remove air conditioner radiator damper servo SUB-ASSY NO.4.
    CAUTION:
    When reusing air conditioner radiator damper servo SUB-ASSY NO.4, set the controller position to the servo motor opening angle 32.42 % on the vehicle before removal and hold it for 30 seconds after setting.

## Installation

1. Installation of air conditioner radiator damper servo SUB-ASSY NO.4 (passenger's seat side)
   CAUTION:
   - Be careful that dust, dirt, etc. may not stay on grease at the gear during work.
   - Do not hold the gear with cotton gloves.



(1) Turn the air mix shaft in the direction of the arrow slowly until it stops.

Captions in illustration

| | |
|---|---|
| *1 | Air mix shaft |
| *2 | Shaft gear |
| *a | Specified location |

CAUTION:
Be careful that it is not turned excessively.

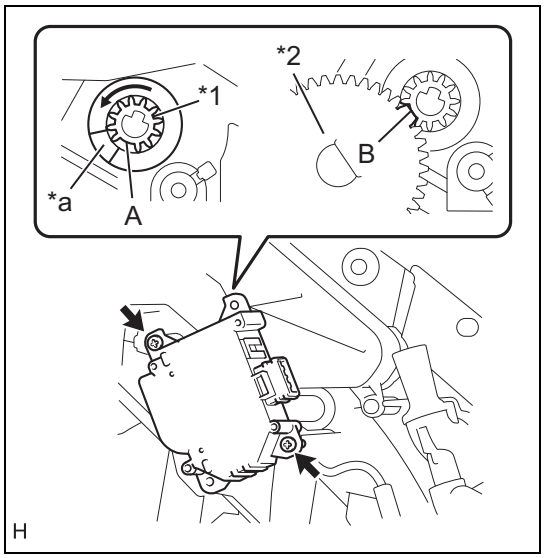
(2) Turn the air mix shaft so that portion A of the air mix shaft is aligned with the reference position of the case.
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(3) Align gear B of air conditioner radiator damper servo SUB-ASSY NO.4 with shaft gear A.
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(4) Align potion A of the air mix shaft and shaft gear B with the reference position, and install air conditioner radiator damper servo SUB-ASSY NO.4 with the 2 screws.

2. Installation of instrument panel SUB-ASSY LWR (Refer to IT - 29)
3. Installation of glove compartment door ASSY (Refer to IT - 29)
4. Installation of the instrument side panel RH (Refer to IT - 29)
5. Installation of air conditioner control ASSY (Refer to AC - 164)
6. Installation of instrument cluster finish panel garnish NO.2 (Refer to IT - 29)
7. Installation of instrument cluster finish panel garnish NO.1 (Refer to IT - 29)
8. Installation of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
9. Installation of the instrument panel ornament (Refer to IT - 29)
10. Installation of console box ASSY (Refer to IT - 38)

11. Installation of air conditioner radiator damper servo SUB-ASSY NO.5 (driver's seat side)
    CAUTION:
    - Be careful that dust, dirt, etc. may not stay on grease at the gear during work.
    - Do not hold the gear with cotton gloves.



(1) Turn the air mix shaft in the direction of the arrow slowly until it stops.

Captions in illustration

| | |
|---|---|
| *1 | Air mix shaft |
| *2 | Shaft gear |
| *a | Specified location |

CAUTION:
Be careful that it is not turned excessively.

(2) Turn the air mix shaft so that portion A of the air mix shaft is aligned with the reference position of the case.
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(3) Align gear B of air conditioner radiator damper servo SUB-ASSY NO.5 with shaft gear A.
CAUTION:
Since the air mix shaft can be turned approx. 360°, be careful for the assembly.

(4) Align portion A of the air mix shaft and shaft gear B with the reference position, and install air conditioner radiator damper servo SUB-ASSY NO.5 with the 2 screws.

12. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
13. Installation of the instrument side panel LH (Refer to IT - 29)
14. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
15. Settings when removing/installing battery terminals (Refer to IN - 10)

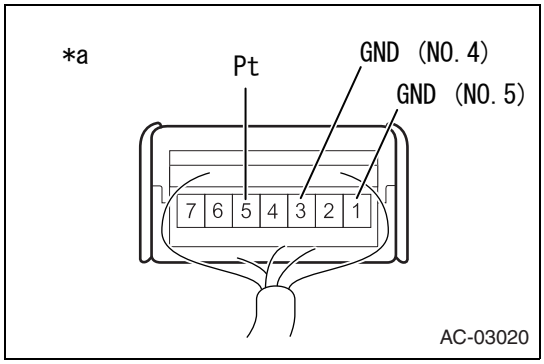
| *e | MAX HOT |

(2) Resistance check

(a)Measure the resistance between connector terminals of air conditioner radiator damper servo SUB-ASSY NO.5 (driver's seat side) and NO.4 (passenger's seat side).

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 3 | Always | 4.2 to 7.8Ω |



(3) Voltage inspection

(a)Connect the harness connector to air conditioner radiator damper servo SUB-ASSY NO.5 (driver's seat side) and NO.4 (passenger's seat side), and measure the voltage between terminals with IG ON.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Battery positive →5<br>Battery ground →1 | HOT (driver's seat side) | Approx. 1.0V |
| | COOL (driver's seat side) | Approx. 4.3V |
| Battery positive →5<br>Battery ground →3 | HOT (passenger's seat side) | Approx. 0.7V |
| | COOL (passenger's seat side) | Approx. 4.0V |

AC

## Removal

1. Discharge of refrigerant HFC-134a (R134a) (Refer to AC - 90)
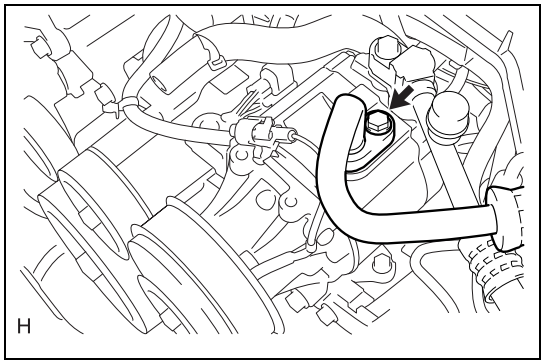
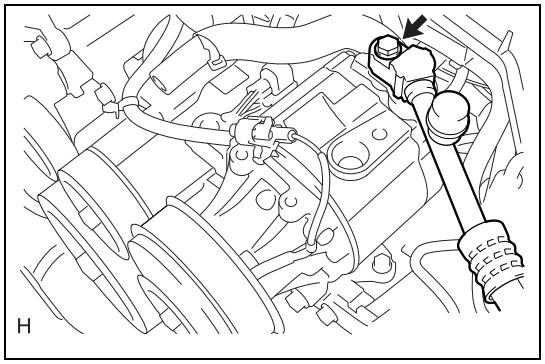
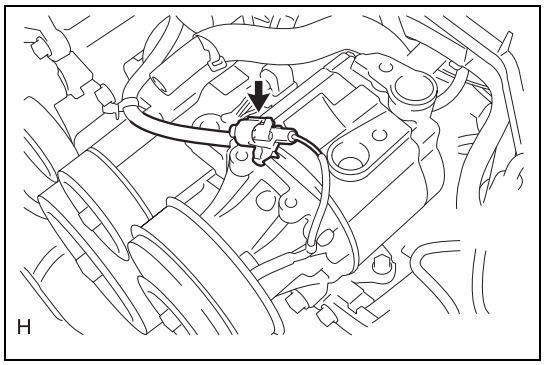
2. Disconnection of the battery ground terminal (Refer to IN - 6)
3. Removal of air cleaner ASSY W/hose (Refer to EM - 75)
4. Removal of alternator cover (Refer to EM - 6)
5. Removal of belt alternator cover (Refer to EM - 7)
6. Removal of fan & alternator V belt (Refer to EM - 7)



7. Disconnection of suction hose SUB-ASSY
   (1) Remove the bolt and disconnect the suction hose SUB-ASSY.
   (2) Remove the O-ring from the suction hose SUB-ASSY.
   CAUTION:
   Wrap vinyl tape around the fitting areas of the disconnected suction hose SUB-ASSY and the compressor ASSY (with magnet clutch) to prevent entry of dirt or moisture.



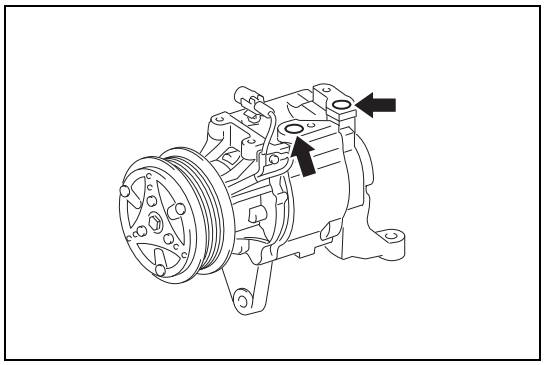
8. Disconnection of cooler refrigerant discharge hose NO.1
   (1) Remove the bolt and disconnect cooler refrigerant discharge hose NO.1.
   (2) Remove the O-ring from discharge hose cooler refrigerant discharge hose NO.1.
   CAUTION:
   Wrap vinyl tape around the fitting areas of disconnected cooler refrigerant discharge hose NO.1 and the compressor ASSY (with magnet clutch) to prevent entry of dirt or moisture.



9. Removal of compressor ASSY (with magnet clutch)
   (1) Disconnect the connector.

   (2) Remove the 3 bolts and remove the compressor ASSY (with magnet clutch).

## Installation



1. Inspection of compressor oil level
   (1) When replacing with a new compressor ASSY (with magnet clutch), release inert gas (helium) gradually from the position shown by the arrow in the figure, and then discharge the oil quantity shown below for installation.
   Standard value: (70 mL of oil in a new compressor ASSY (with magnet clutch)) - (Oil left in the removed compressor ASSY (with magnet clutch)) = (Quantity to be discharged during replacement)
   CAUTION:
   - To check the compressor oil quantity, strictly observe the cautions for installation/removal.
   - The compressor oil remains in the pipe of the vehicle. Therefore, if oil in the new compressor ASSY (with magnet clutch) is not discharged, the oil quantity is increased. It may disturb heat exchange of the refrigerant cycle, resulting in adverse effect such as poor cooling or noise/vibration.
   - If the oil quantity in the removed compressor ASSY (with magnet clutch) is small, check for oil leak.
   - Be sure to use ND-OIL8 for the compressor oil.
2. Installation of compressor ASSY (with magnet clutch)
   (1) Temporarily install the compressor ASSY (with magnet clutch) with the 3 bolts.

   (2) Install the compressor ASSY (with magnet clutch) with the 3 bolts in the order shown in the figure.
   Standard value:T=36N·m {367kgf·cm} {26.6ft·lbf}
   (3) Connect the connector.
3. Connection of cooler refrigerant discharge hose NO.1
   (1) Remove the vinyl tape wrapped around the joint of cooler refrigerant discharge hose NO.1.
   (2) Apply sufficient amount of compressor oil (ND-OIL8) to new O-rings and the fitting area of the compressor ASSY (with magnet clutch).
   (3) Install the O-ring on cooler refrigerant discharge hose NO.1.
   CAUTION:
   Do not allow the O-ring and the O-ring seal to have deposit of dirt.
   (4) Connect cooler refrigerant discharge hose NO.1 to the compressor ASSY (with magnet clutch) with the bolt.
   Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}
4. Connection of suction hose SUB-ASSY
   (1) Remove the vinyl tape wrapped around the joint of the suction hose SUB-ASSY.
   (2) Apply sufficient amount of compressor oil (ND-OIL8) to new O-rings and the fitting area of the compressor ASSY (with magnet clutch).
   (3) Install the O-ring on the suction hose SUB-ASSY.
   CAUTION:
   Do not allow the O-ring and the O-ring seal to have deposit of dirt.
   (4) Connect the suction hose SUB-ASSY to the compressor ASSY (with magnet clutch) with the bolts.
   Standard value:T=10N·m {102kgf·cm} {7.4ft·lbf}
5. Installation of fan & alternator V belt (Refer to EM - 7)
6. Inspection of fan & alternator V belt (Refer to EM - 8)

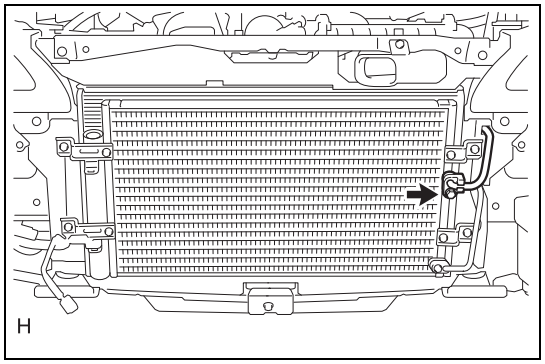
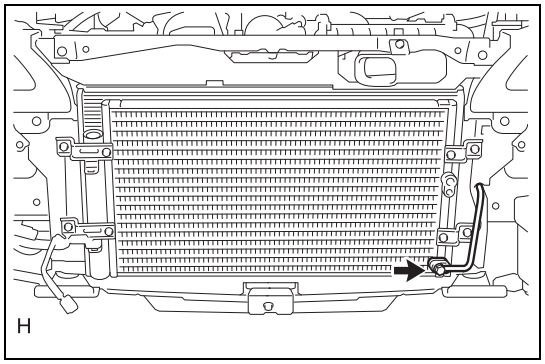
## Removal

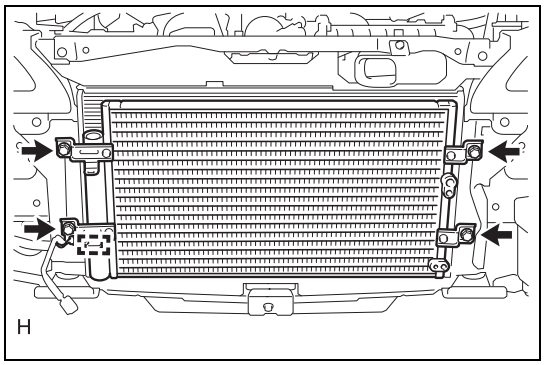
1. Discharge of refrigerant HFC-134a (R134a) (Refer to AC - 90)
2. Disconnection of the battery ground terminal (Refer to IN - 6)
3. Removal of front bumper cover (Refer to ET - 2)



4. Disconnection of cooler refrigerant discharge hose NO.1
   (1) Remove the bolt and disconnect cooler refrigerant discharge hose NO.1.
   (2) Remove the O-ring from cooler refrigerant discharge hose NO.1.
   CAUTION:
   Wrap vinyl tape around the joints of disconnected cooler refrigerant discharge hose NO.1 and the cooler condenser ASSY to prevent entry of dirt or moisture.



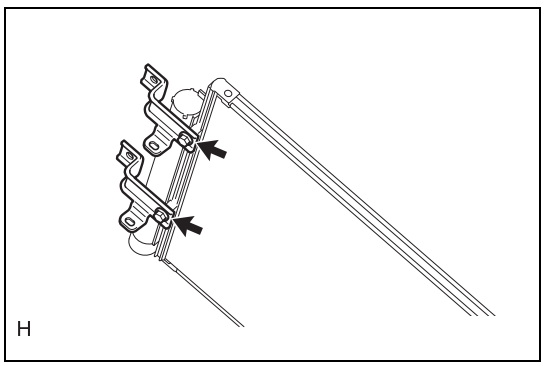
5. Disconnection of air conditioner tube & accessory ASSY
   (1) Remove the bolt and disconnect the air conditioner tube & accessory ASSY.
   (2) Remove the O-ring from the air conditioner tube & accessory ASSY.
   CAUTION:
   Wrap vinyl tape around the joints of the disconnected air conditioner tube & accessory ASSY and the cooler condenser ASSY to prevent entry of dirt or moisture.



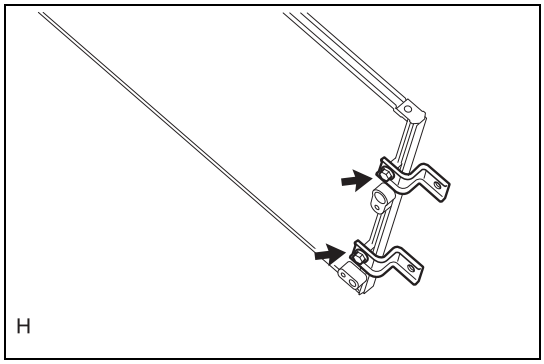
6. Removal of cooler condenser ASSY
   (1) Disconnect the clamp and connector of the ambient sensor.
   (2) Remove the 4 bolts and remove the cooler condenser ASSY from the vehicle.
   CAUTION:
   When removing the cooler condenser ASSY, do not give damage to the cooler condenser ASSY and the radiator ASSY.

AC

## Disassembly

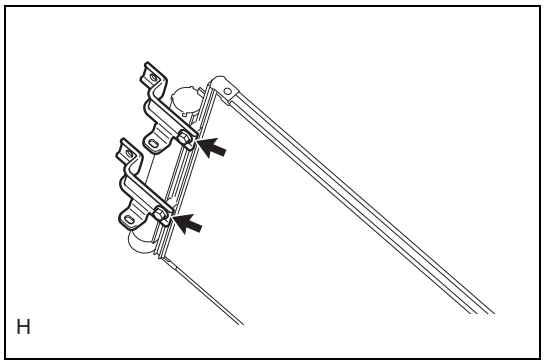


1. Removal of cooler condenser bracket NO.1
   (1) Remove the 2 bolts and remove 2 cooler condenser brackets NO.1.

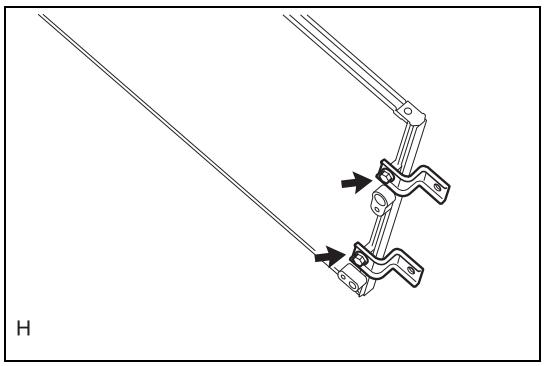


2. Removal of cooler condenser bracket NO.2
   (1) Remove the 2 bolts and remove 2 cooler condenser brackets NO.2.

## Assembly



1. Installation of cooler condenser bracket NO.1
   (1) Install 2 cooler condenser brackets NO.1 with the 2 bolts.
   NOTE:
   Install the brackets in parallel (horizontal).
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}



2. Installation of cooler condenser bracket NO.2
   (1) Install 2 cooler condenser brackets NO.2 with the 2 bolts.
   NOTE:
   Install the brackets in parallel (horizontal).
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}

AC

## Installation

1. Installation of cooler condenser ASSY
   (1) Install the cooler condenser ASSY on the radiator ASSY with the 4 bolts.
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
   CAUTION:
   When installing the cooler condenser ASSY, do not give damage to the cooler condenser ASSY and the radiator ASSY.
   (2) Connect the clamp and connector of the ambient sensor.
2. Connection of air conditioner tube & accessory ASSY
   (1) Remove the vinyl tape wrapped around the joint of the air conditioner tube & accessory ASSY and the cooler condenser ASSY.
   (2) Apply sufficient amount of compressor oil (ND-OIL8) to new O-rings and the joint of the air conditioner tube & accessory ASSY.
   (3) Install the O-ring on the air conditioner tube & accessory ASSY.
   CAUTION:
   Do not allow the O-ring and the O-ring seal to have deposit of dirt.
   (4) Install the air conditioner tube & accessory ASSY on the cooler condenser ASSY with bolts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

3. Connection of cooler refrigerant discharge hose NO.1
   (1) Remove the vinyl tape wrapped around the joint of cooler refrigerant discharge hose NO.1 and the cooler condenser ASSY.
   (2) Apply sufficient amount of compressor oil (ND-OIL8) to the joint of a new O-ring and the discharge hose cooler refrigerant discharge hose NO.1.
   (3) Install the O-ring on cooler refrigerant discharge hose NO.1.
   CAUTION:
   Do not allow the O-ring and the O-ring seal to have deposit of dirt.
   (4) Install cooler refrigerant discharge hose NO.1 on the cooler condenser ASSY with the bolts.
   Standard value:T=7.5N·m {77kgf·cm}
4. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
5. Charging refrigerant HFC-134a (R134a) (Refer to AC - 90)

WARNING:

The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work.
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of air conditioner unit ASSY (for automatic air conditioning system) (Refer to AC - 103)
4. Removal of air conditioner unit ASSY (for manual air conditioning system) (Refer to AC - 105)
5. Removal of aspirator (for automatic air conditioning system) (Refer to AC - 106)
6. Removal of air outlet damper control cable SUB-ASSY (for manual air conditioning system) (Refer toAC - 111)
7. Removal of heater control cable SUB-ASSY (for manual air conditioning system) (Refer to AC - 111)

8. Removal of cooler expansion valve (Refer to AC - 108)
9. Removal of cooling unit case (for automatic air conditioning system) (Refer to AC - 108)

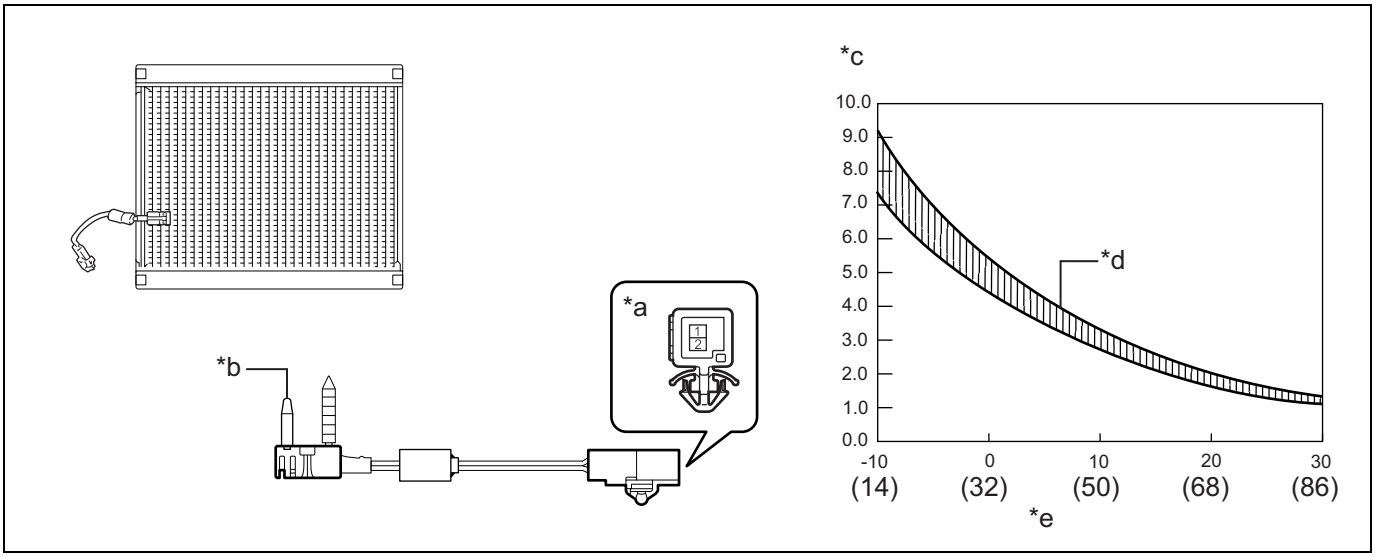
7. Installation of heater control cable SUB-ASSY (for manual air conditioning system) (Refer to AC - 116)
8. Installation of air outlet damper control cable SUB-ASSY (for manual air conditioning system) (Refer to AC - 117)
9. Installation of aspirator (for automatic air conditioning system) (Refer to AC - 124)
10. Installation of air conditioner unit ASSY (for automatic air conditioning system) (Refer to AC - 124)
11. Installation of air conditioner unit ASSY (for manual air conditioning system) (Refer to AC - 124)
12. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
13. Inspection of airbag warning light (Refer to RS - 53)
14. Settings when removing/installing battery terminals (Refer to IN - 10)

AC

## Unit inspection

1. Inspection of cooler thermistor NO.1
   (1) Check the resistance between the connector terminals.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (cooler thermistor NO.1) | *b | Temperature sensor |
| *c | Resistance (kΩ) | *d | Tolerance range |
| *e | Temperature (°C {°F}) | - | - |

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 (+) - 2 (-) | -10°C {14°F} | 7.30 to 9.10 kΩ |
| | -5°C {23°F} | 5.65 to 6.95 kΩ |
| | 0°C {32°F} | 4.40 to 5.35 kΩ |
| | 5°C {41°F} | 3.40 to 4.15 kΩ |
| | 10°C {50°F} | 2.70 to 3.25 kΩ |
| | 15°C {59°F} | 2.14 to 2.58 kΩ |
| | 20°C {68°F} | 1.71 to 2.05 kΩ |
| | 25°C {77°F} | 1.38 to 1.64 kΩ |
| | 30°C {86°F} | 1.11 to 1.32 kΩ |

NOTE:

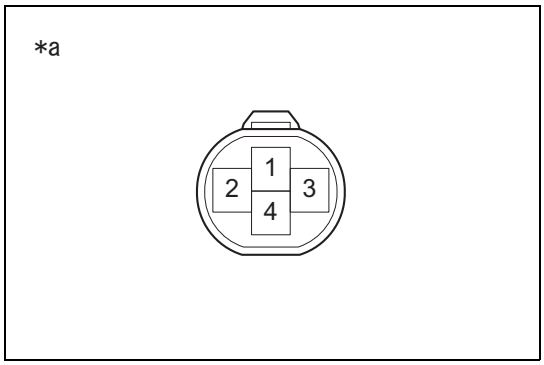
- If you touch the temperature sensor, correct judgment cannot be made due to your body temperature. To inspect cooler thermistor NO.1, hold the connector side.
- Perform inspection after cooler thermistor NO.1 is adapted to the ambient temperature.

AC

# Air conditioner pressure switch

## On-vehicle inspection

1. Inspection of air conditioner pressure switch
   (1) Inspection of vehicle wiring harness
   (a)Disconnect the connector of air conditioner pressure switch.



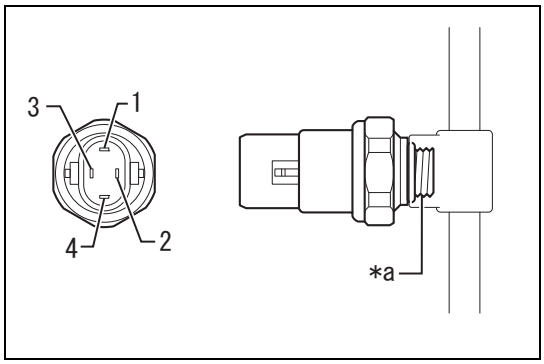
(b)Measure the resistance between connector terminals at the vehicle wire harness side of the air conditioner pressure switch.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 2 (E) - Chassis ground | Always | Less than 1 Ω |
| 2 (E) - 4 (B) | IG ON | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Air conditioner pressure switch) |

(2) Inspection of air conditioner pressure switch
(a)Attach the air conditioner tool set.



(b)Apply the pressure listed in the table below to the sensor, and measure the resistance between terminals.
Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 2 (E) - 3 (ACP) | Release of sensor (Pressure to sensor: 0 kPa) | 10 MΩ or more |
| 2 (E) - 3 (ACP) | Apply the pressure of 1520 kPa {15.50kg/cm2, 220.4 psi} or more to the sensor. | Less than 1 Ω |
| 1 (AC) - 4 (ACP) | Release of sensor (Pressure to sensor: 0 kPa) | 10 MΩ or more |
| 1 (AC) - 4 (ACP) | Apply the pressure of 22.5 kPa {0.23 kg/cm2, 3.26 psi} or more to less than 3140 kPa {32.02 kg/cm2, 455.3 psi} to the sensor. | Less than 1 Ω |
| 1 (AC) - 4 (ACP) | Apply the pressure of 3140 kPa {32.02 kg/cm2, 455.3 psi} or more to the sensor. | 10 MΩ or more |

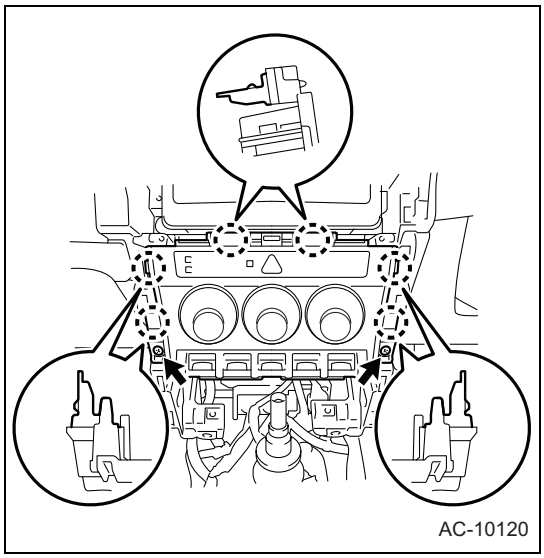
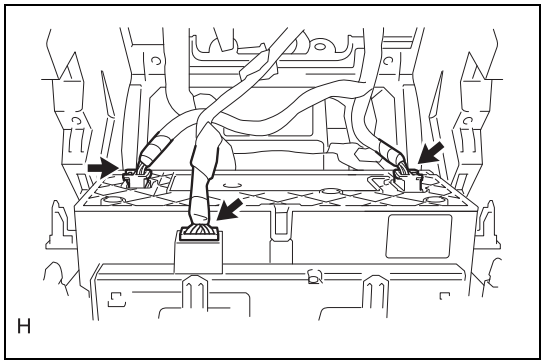
## Removal

1. Removal of console box ASSY (Refer to IT - 33)
2. Removal of the instrument panel ornament (Refer to IT - 22)
3. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
4. Removal of instrument cluster finish panel garnish NO.1 (Refer to IT - 23)
5. Removal of instrument cluster finish panel garnish NO.2 (Refer to IT - 24)



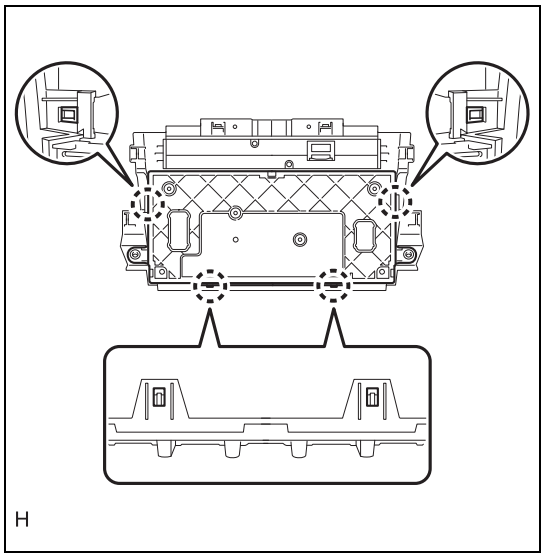
6. Removal of air conditioner control ASSY
   (1) Remove the 2 screws.
   (2) Release the 6 tabs.

AC



(3) Disconnect the connectors, and disconnect the air conditioner control ASSY.

## Disassembly



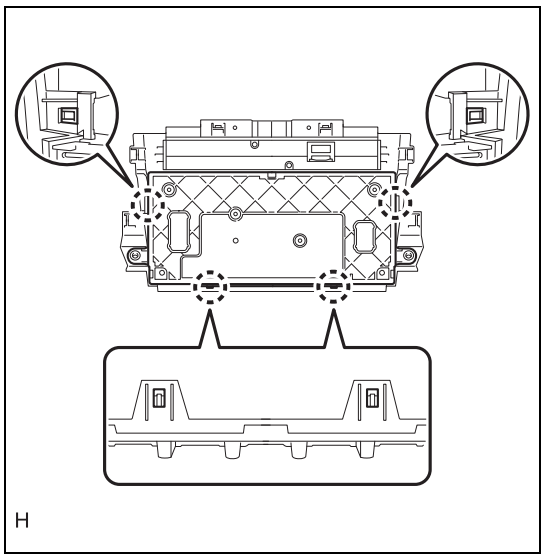
1. Removal of heater control base SUB-ASSY
   (1) Release the 4 claws and remove the heater control base SUB-ASSY.

2. Removal of clock ASSY (Refer to ME - 66)

AC

## Assembly

1. Installation of clock ASSY (Refer to ME - 66)



2. Installation of heater control base SUB-ASSY
   (1) Engage the 4 claws and install the heater control base SUB-ASSY.

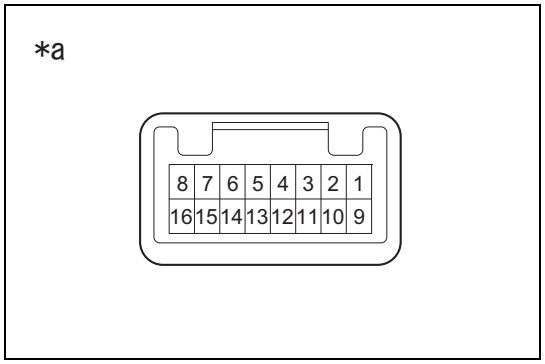
## Installation

1. Installation of air conditioner control ASSY
   (1) Connect each connector.
   (2) Fit in the 6 claws.

(3) Install the air conditioner control ASSY with the 2 screws.

2. Installation of instrument cluster finish panel garnish NO.1 (Refer to IT - 29)
3. Installation of instrument cluster finish panel garnish NO.2 (Refer to IT - 29)
4. Installation of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
5. Installation of the instrument panel ornament (Refer to IT - 29)
6. Installation of console box ASSY (Refer to IT - 38)

## Unit inspection



1. Inspection of air conditioner control ASSY
   (1) Check illumination.
      (a) Check the illumination when battery voltage is applied between the terminals.

Criteria

| Battery connection | Criteria |
|---|---|
| Battery positive →11<br>Battery ground →15 | Illumination ON |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Air conditioner control ASSY) |

AC

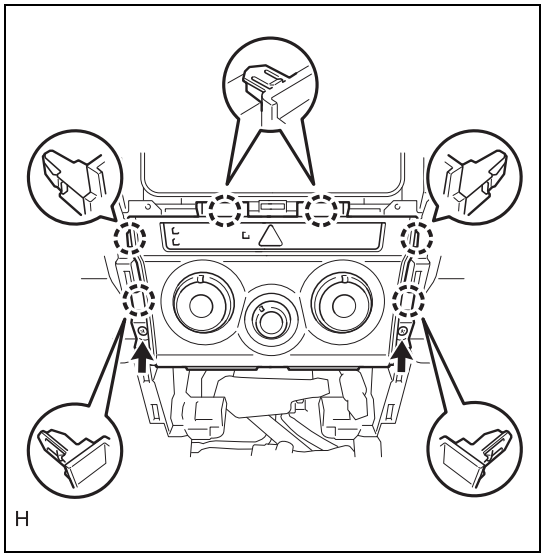
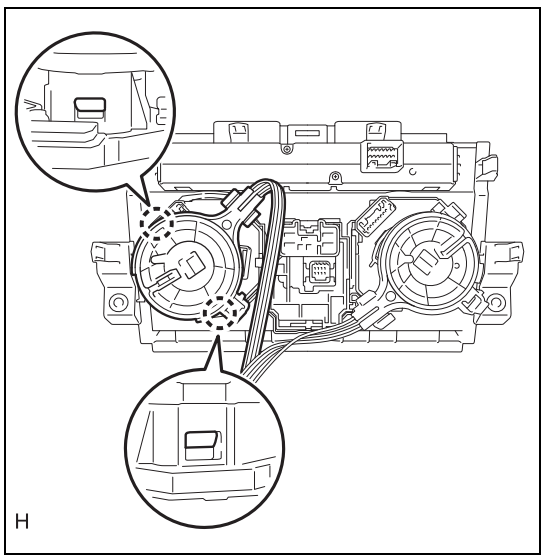
## Removal

1. Removal of console box ASSY (Refer to IT - 33)
2. Removal of the instrument panel ornament (Refer to IT - 22)
3. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
4. Removal of instrument cluster finish panel garnish NO.1 (Refer to IT - 23)
5. Removal of instrument cluster finish panel garnish NO.2 (Refer to IT - 24)



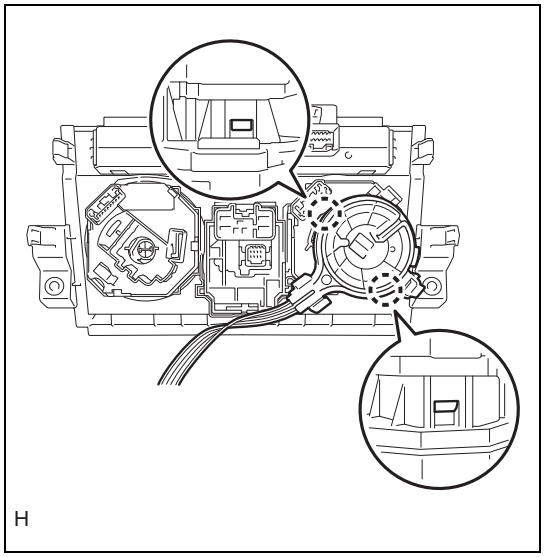
6. Removal of air conditioner control ASSY
   (1) Remove the 2 screws and release the 6 claws.

(2) Disconnect the connectors, and disconnect the air conditioner control ASSY.



(3) Release the 2 claws and disconnect the heater control cable SUB-ASSY. (installed on the RH side)
NOTE:
If the dial position is set to MAX HOT, it can ease replacement work of the air conditioner unit ASSY because positioning can be easily performed when installing the cable.

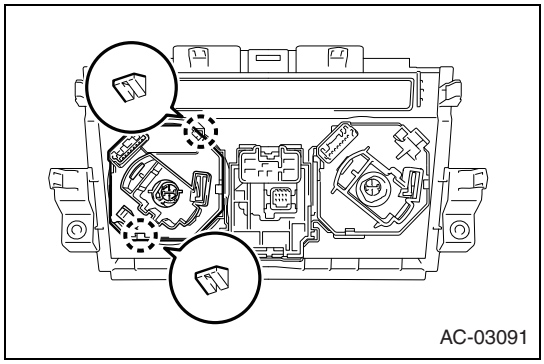
AC



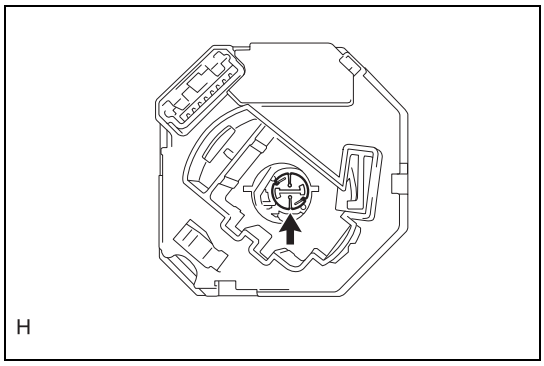
(4) Release the 2 claws, disconnect the heater control cable SUB-ASSY (installed on the LH side) and remove the air conditioner control ASSY.
NOTE:
Setting the dial position to "DEF" facilitates the replacement work of the air conditioner unit ASSY, and thus allows an easy positioning during installation of the cable.

## Disassembly

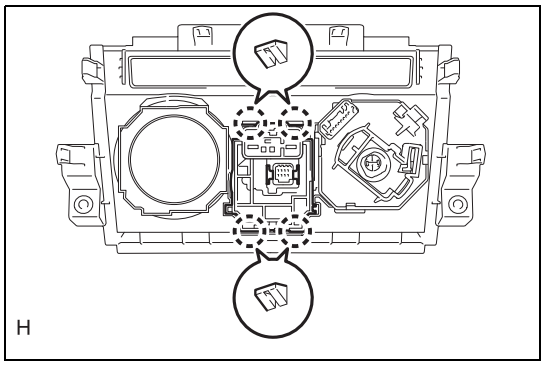
1. Removal of clock ASSY (Refer to ME - 66)



2. Removal of heater control SUB-ASSY NO.3
   (1) Release the 2 claws and remove heater control SUB-ASSY NO.3.

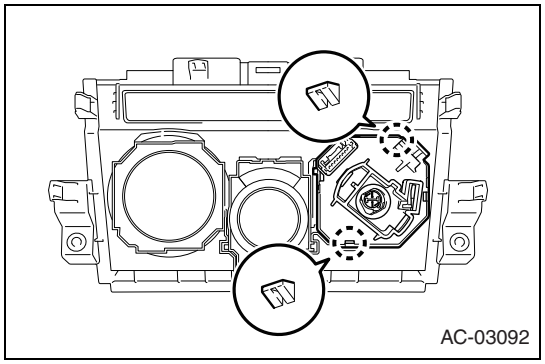


(2) Remove the valve.



3. Removal of heater control SUB-ASSY
   (1) Release the 4 claws and remove the heater control SUB-ASSY.

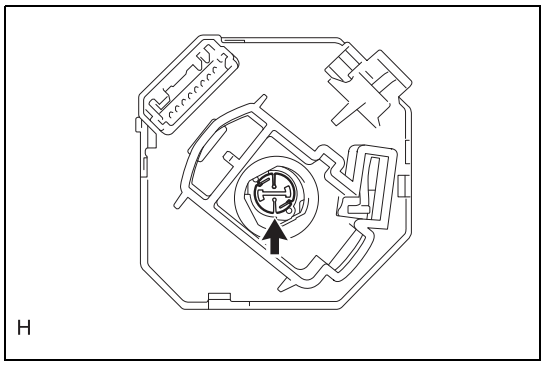
AC



4. Removal of heater control SUB-ASSY NO.1
   (1) Release the 2 claws and remove heater control SUB-ASSY NO.1.

   (2) Remove the valve.

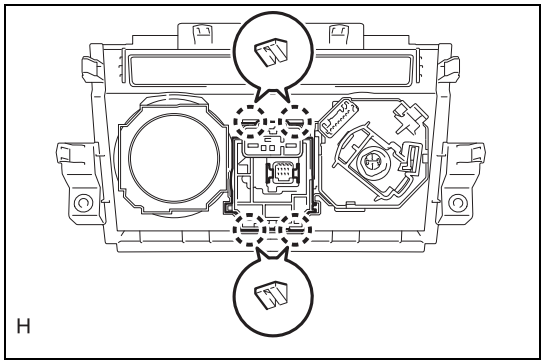
## Assembly



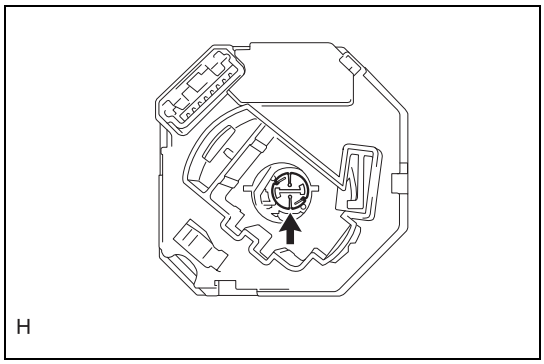
1. Installation of heater control SUB-ASSY NO.1
   (1) Install the valve.

   (2) Engage the 2 claws and install heater control SUB-ASSY NO.1.

AC



2. Installation of heater control SUB-ASSY
   (1) Engage the 4 claws and install the heater control SUB-ASSY.



3. Installation of heater control SUB-ASSY NO.3
   (1) Install the valve.

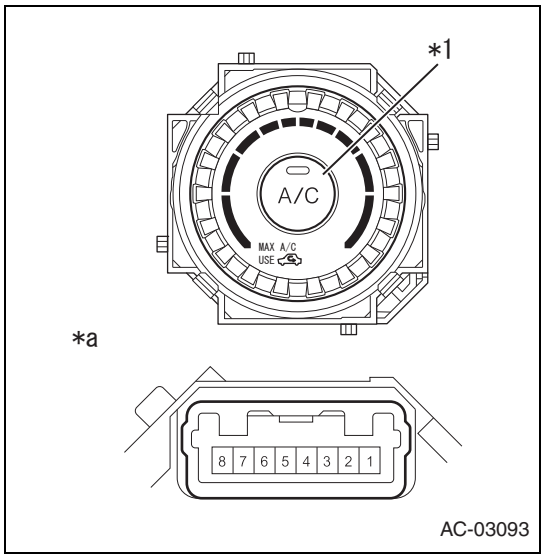
   (2) Engage the 2 claws and install heater control SUB-ASSY NO.3.

4. Installation of clock ASSY (Refer to ME - 66)

## Installation

1. Installation of air conditioner control ASSY
   (1) After positioning with the cable, engage the 2 claws and connect the heater control cable SUB-ASSY. (installed on the RH side)
   (2) After positioning with the cable, engage the 2 claws and connect the heater control cable SUB-ASSY. (Installed on the LH side)
   (3) Connect each connector.
   (4) Install the 2 screws, engage the 6 claws, and install the air conditioner control ASSY.
2. Installation of instrument cluster finish panel garnish NO.1 (Refer to IT - 29)
3. Installation of instrument cluster finish panel garnish NO.2 (Refer to IT - 29)
4. Installation of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
5. Installation of the instrument panel ornament (Refer to IT - 29)
6. Installation of console box ASSY (Refer to IT - 38)

## Unit inspection



1. Inspection of heater control SUB-ASSY NO.3
   (1) Check the resistance between the connector terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 2 - 1 | A/C switch OFF | 10 kΩ or more |
| 2- 4 | A/C switch OFF | 10 kΩ or more |
| 1 - 4 | Always | Less than 1 Ω |
| 2 - 1 | A/C switch ON | Less than 1 Ω |
| 2- 4 | A/C switch ON | Less than 1 Ω |
| 5 - 6 | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *1 | A/C switch |

# Instrument panel UPR

## Precautions

1. Models with the SRS airbag and pretensioner
   (1) This section includes the service operation which may have an influence on the SRS airbag. Before starting the relevant service operations, read the working precautions and notes in the general section of this manual, ensuring the secure operation. (Refer to IN - 6)
2. Precautions during removal and installation
   (1) When releasing clips or claws with a flat tip screwdriver or molding remover, always wrap the tool with protective tape to prevent damage to parts.

## Removal

List of bolts, screws, and nuts

NOTE:

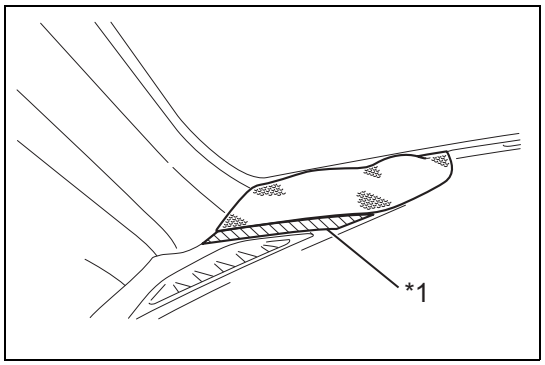
- Bolts, screws, and nuts required for removal or installation of the instrument panel UPR are indicated by symbols in context and figures.

• In the figure, D represents nominal (mm) while L represents bolt length (mm).

| Symbol | Shape | Symbol | Shape | Symbol | Shape |
|---|---|---|---|---|---|
| <A> |  D=11.5 L=16 | <B> |  D=10 L=25 | <C> |  D=10 L=16 |

WARNING:
The following service operations include the works which may affect the SRS airbag system. Before starting work, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

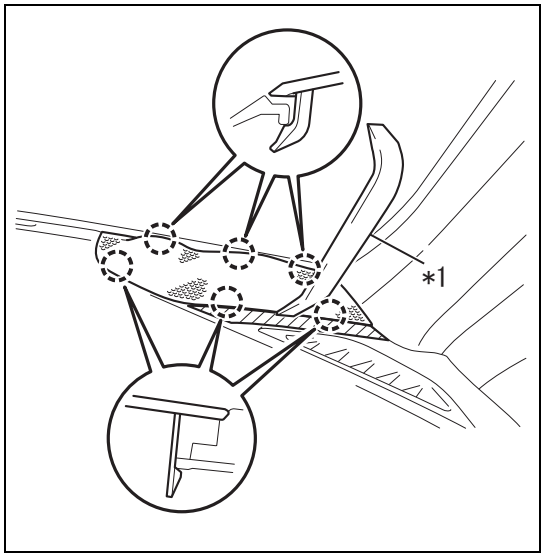
1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal
   (1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and then wait for 60 seconds before starting the work. (Refer to IN - 6)
   WARNING:
   The air bag and pretensioner system are fitted with a backup power supply. If you start the work within 60 seconds after disconnecting the battery ground terminal, the air bag may be activated.
   CAUTION:
   To avoid damage to the molding, be sure to fully open the door glasses on both driver's and passenger's sides.
3. Removal of instrument panel SUB-ASSY LWR (Refer to IT - 21)



4. Removal of instrument panel speaker panel SUB-ASSY NO.1
   (1) Apply protective tape to the location shown in the figure.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |



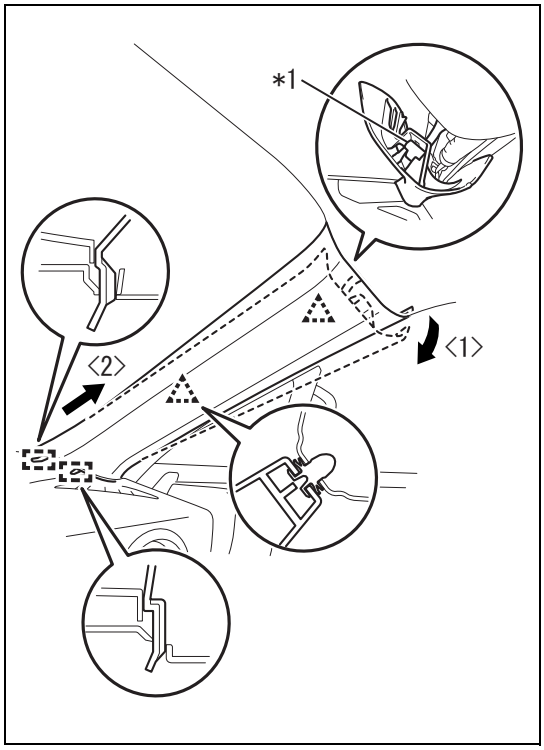
(2) Using a molding remover, release the 6 tabs.

Captions in illustration

| | |
|---|---|
| *1 | Molding remover |

(3) Disconnect the speaker ASSY FR NO.2 connector, and remove the instrument panel speaker panel SUB-ASSY NO.1.

5. Removal of speaker ASSY FR NO.3 (for 8 speakers) (Refer to AV - 22)
6. Removal of instrument panel speaker panel SUB-ASSY NO.2
   NOTE:
   Remove the part in the same manner as RH side.
7. Removal of speaker ASSY FR NO.3
   NOTE:
   Remove the part in the same manner as RH side.



8. Removal of front pillar garnish RH
   (1) Pull the upper side of the front pillar garnish RH in the direction of arrow <1> in the figure, and release the clip and the front pillar garnish clip.

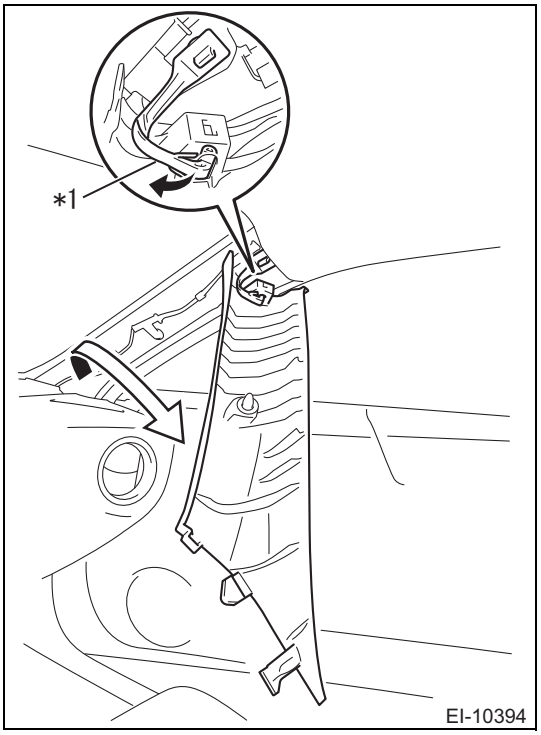
Captions in illustration

| | |
|---|---|
| *1 | Front pillar garnish clip |

NOTE:
Hook the front pillar garnish clip onto the front pillar garnish RH.

(2) Pull it in the direction of arrow <2> in the figure, and release the 2 guides.

IT



(3) Rotate the front pillar garnish RH in the direction of the arrow in the figure.
CAUTION:
When rotating, be careful not to damage the curtain airbag module.

(4) Unhook the end of the front pillar garnish clip and remove the front pillar garnish RH.
CAUTION:
- When unhooking the end of the front pillar garnish clip, do not use any tools.
- Be careful not to damage the front pillar garnish clip.

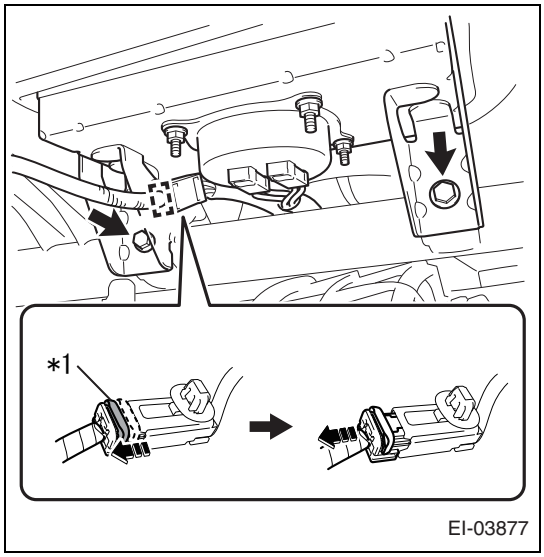
| *3 | Protective cover |

CAUTION:
Immediately after removing the front pillar garnish RH, install the protective cover to the curtain airbag module.

(a)Wrap the air bag with cloth or nylon cloth as shown in the figure and fix both ends of the cloth or nylon cloth with packing tape.

IT

9. Removal of front pillar garnish LH
NOTE:
Remove the part in the same manner as RH side.
10. Removal of combination meter ASSY (Refer to ME - 63)
11. Removal of the instrument panel ornament (Refer to IT - 22)
12. Removal of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
13. Removal of automatic light control sensor (with light control system) (Refer to AC - 155)



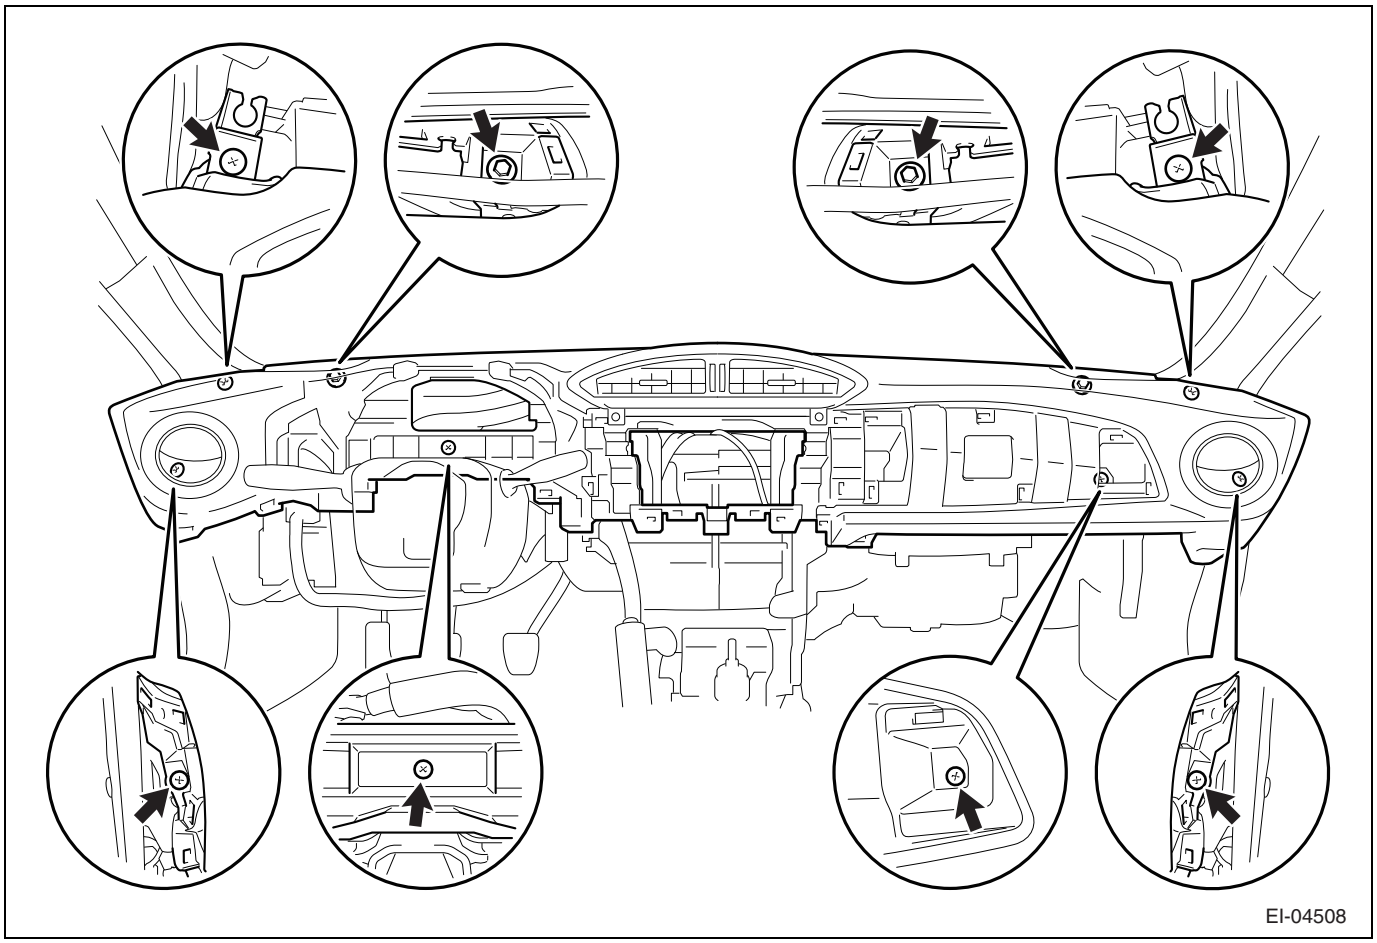
14. Disconnection of passenger airbag module
    (1) Disconnect the clamp.
    (2) Slide the slider and disconnect the passenger airbag connector.

Captions in illustration

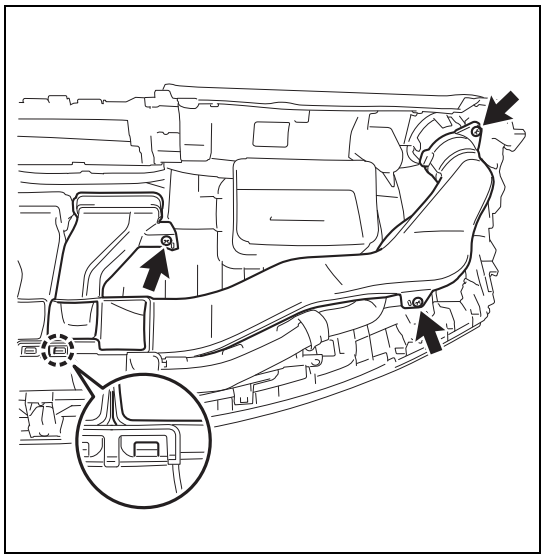
| | |
|---|---|
| *1 | Slider |

    (3) Remove the 2 bolts and disconnect the passenger airbag module.

15. Removal of instrument panel SUB-ASSY
    (1) Remove the 2 bolts and 6 screws and remove the instrument panel SUB-ASSY.

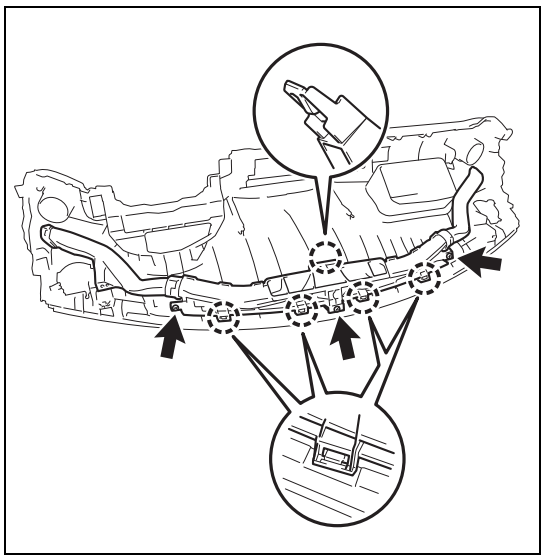


## Disassembly

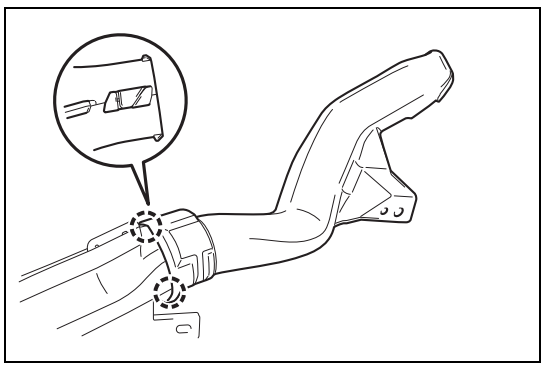


1. Removal of heater-to-resistor duct NO.2
   (1) Remove the 3 screws.
   (2) Release the claw and remove heater-to-resistor duct NO.2.

2. Removal of heater-to-resistor duct NO.1
   NOTE:
   Remove the part in the same manner as RH side.



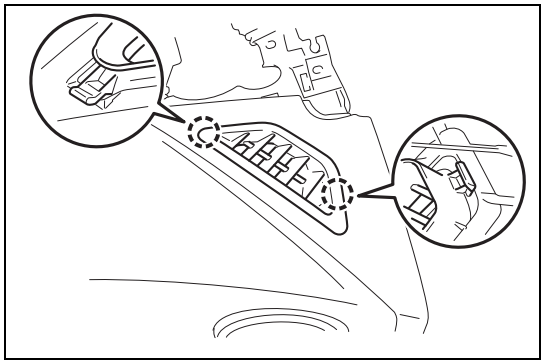
3. Removal of defroster nozzle ASSY
   (1) Remove the 5 screws.
   (2) Release the 5 claws and remove the defroster nozzle ASSY as an assembly with side defroster nozzle ducts NO.1 and NO.2.



4. Removal of side defroster nozzle duct NO.1
   (1) Release the 2 claws and remove side defroster nozzle duct NO.1.

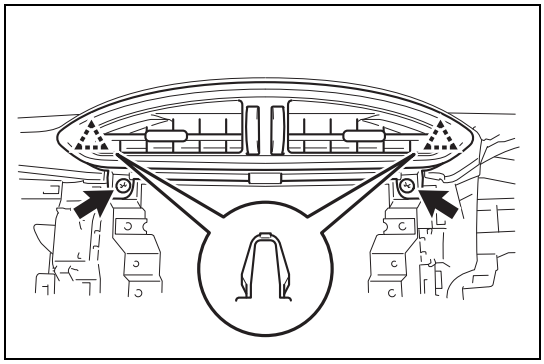
5. Removal of side defroster nozzle duct NO.2
   NOTE:
   Remove the part in the same manner as RH side.

IT

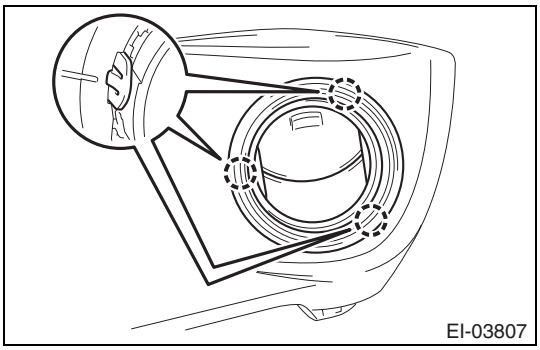


6. Removal of defroster nozzle garnish NO.2
   (1) Release the 2 claws and remove defroster nozzle garnish NO.2.

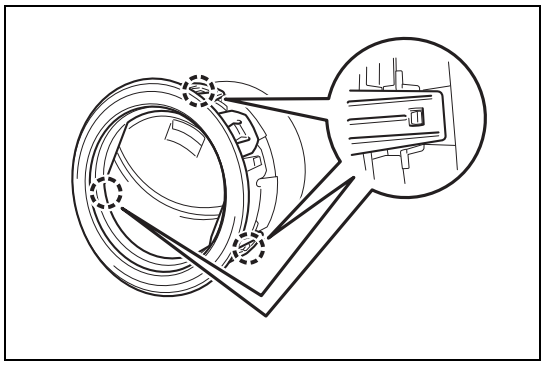
7. Removal of defroster nozzle garnish NO.3
   NOTE:
   Remove the part in the same manner as RH side.



8. Removal of instrument panel resistor ASSY CTR
   (1) Remove the 2 screws.
   (2) Release the 2 clips and remove the instrument panel resistor ASSY CTR.



9. Removal of instrument panel resistor SUB-ASSY NO.1
   (1) Release the 3 claws and remove instrument panel resistor SUB-ASSY NO.1.

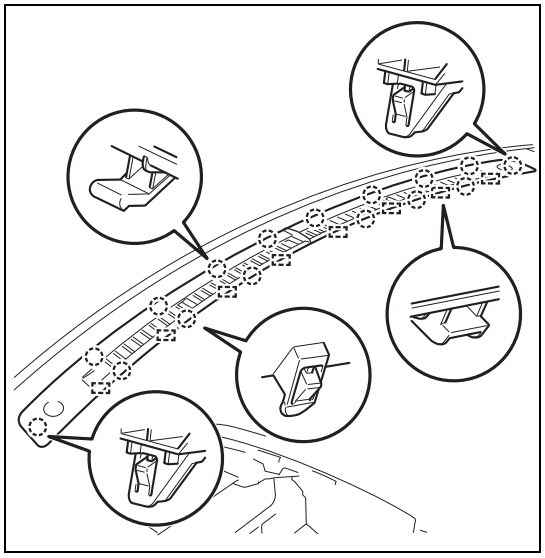


10. Removal of instrument panel resistor bezel (installed on the RH side)
    (1) Release the 3 claws and remove the instrument panel resistor bezel.

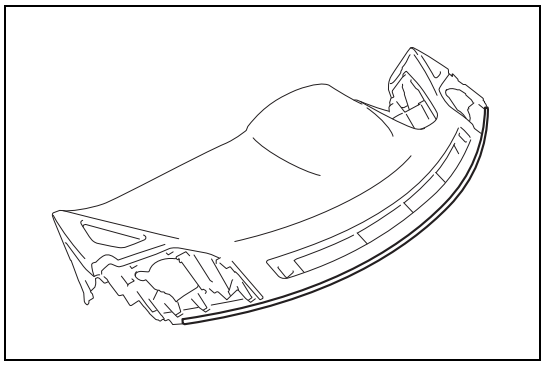
11. Removal of instrument panel resistor SUB-ASSY NO.2
    NOTE:
    Remove the part in the same manner as RH side.

12. Removal of instrument panel resistor bezel (installed on the LH side)
    NOTE:
    Remove the part in the same manner as RH side.

IT

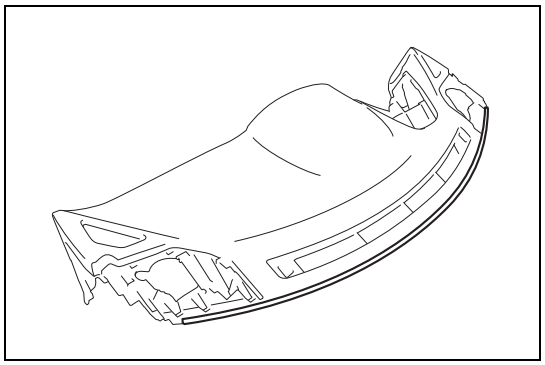


13. Removal of defroster nozzle garnish NO.1
    (1) Release the 16 claws and 8 guides and remove defroster nozzle garnish NO.1.

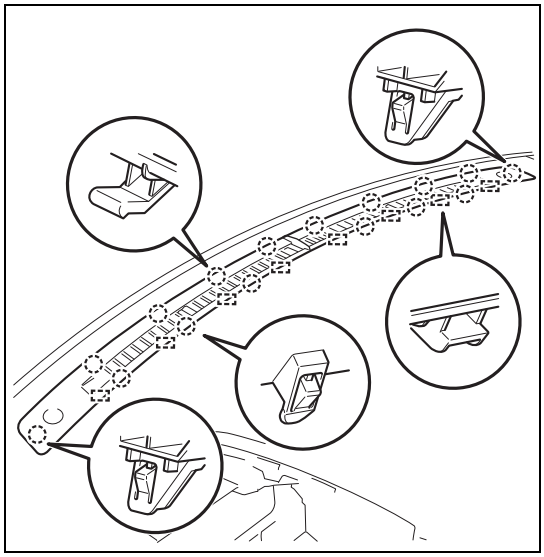


14. Removal of instrument panel cushion
    (1) Remove the instrument panel cushion.
    CAUTION:
    Be sure to replace the instrument panel cushion with a new cushion.

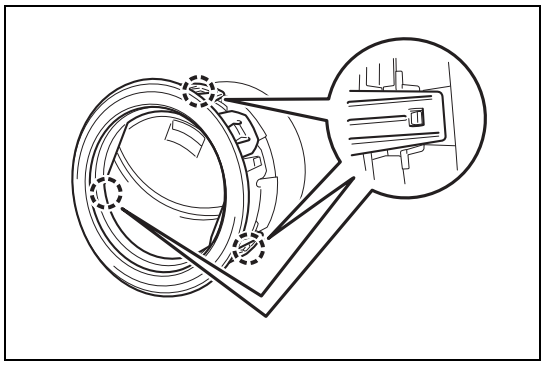
## Assembly



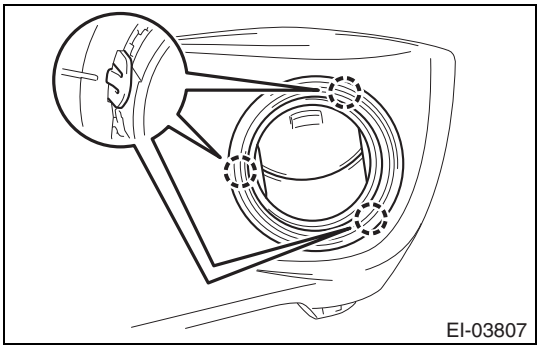
1. Installation of instrument panel cushion
    (1) Install a new instrument panel cushion.



2. Installation of defroster nozzle garnish NO.1
   (1) Engage the 16 claws and 8 guides and install defroster nozzle garnish NO.1.

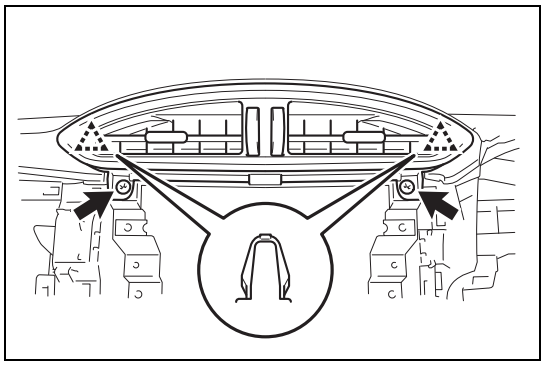


3. Installation of instrument panel resistor bezel (installed on the RH side)
   (1) Engage the 3 claws and install the instrument panel resistor bezel.



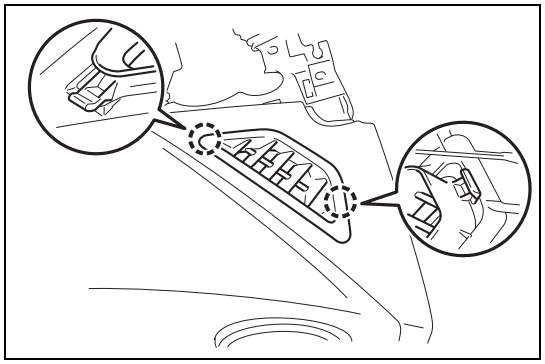
4. Installation of instrument panel resistor SUB-ASSY NO.1
   (1) Engage the 3 claws and install instrument panel resistor SUB-ASSY NO.1.

5. Installation of instrument panel resistor bezel (installed on the LH side)
   NOTE:
   Install the part in the same manner as RH side.
6. Installation of instrument panel resistor SUB-ASSY NO.2
   NOTE:
   Install the part in the same manner as RH side.



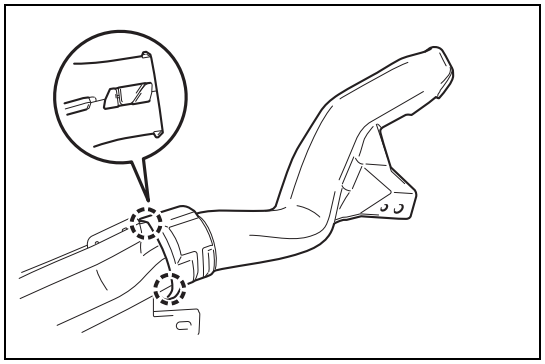
7. Installation of instrument panel resistor ASSY CTR
   (1) Engage the 2 clips and install the instrument panel resistor ASSY CTR
   (2) Install the 2 screws.

IT



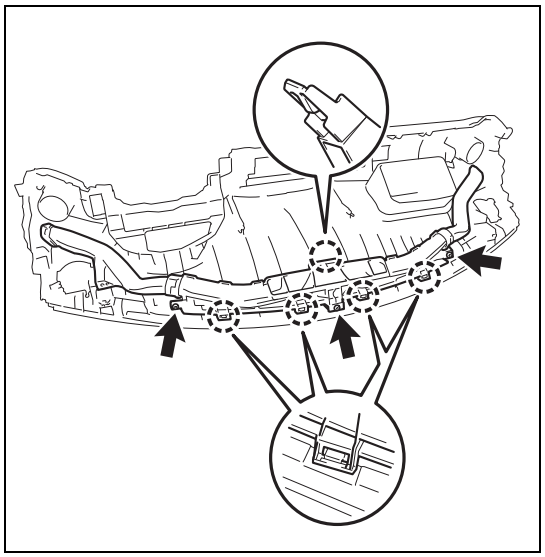
8. Installation of defroster nozzle garnish NO.2
   (1) Engage the 2 claws and install defroster nozzle garnish NO.2.

9. Installation of defroster nozzle garnish NO.3
   NOTE:
   Install the part in the same manner as RH side.

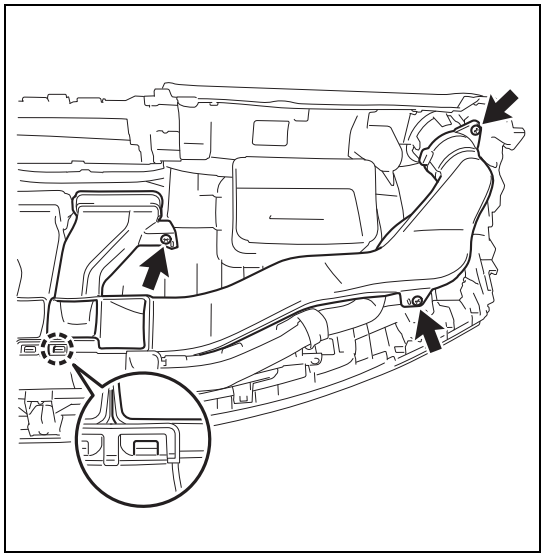


10. Installation of side defroster nozzle duct NO.1
    (1) Engage the 2 claws and install side defroster nozzle duct NO.1.

11. Installation of side defroster nozzle duct NO.2
    NOTE:
    Install the part in the same manner as RH side.



12. Installation of defroster nozzle ASSY
    (1) Fit in the 5 claws.
    (2) With the 5 screws, install the defroster nozzle ASSY as an assembly with side defroster nozzle ducts NO.1 and NO.2.

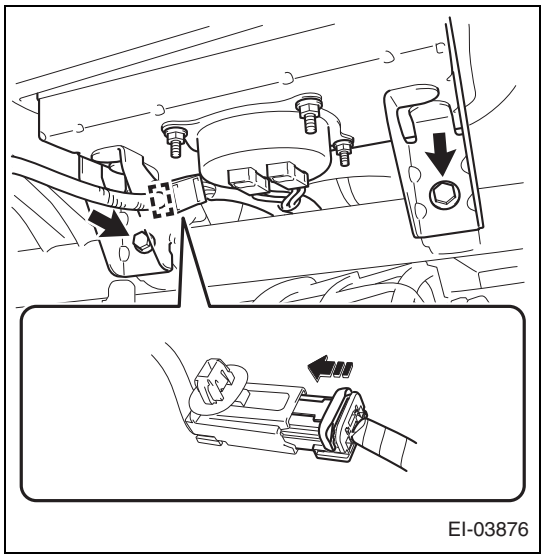


13. Installation of heater-to-resistor duct NO.2
    (1) Engage the claw and install heater-to-resistor duct NO.2.
    (2) Install the 3 screws.

14. Installation of heater-to-resistor duct NO.1
    NOTE:
    Install the part in the same manner as RH side.

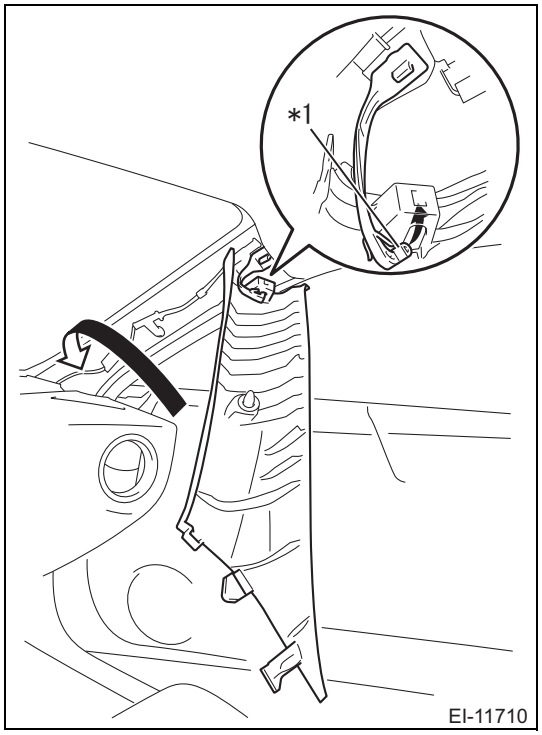
## Installation

1. Installation of instrument panel SUB-ASSY
   (1) With the 2 bolts and 7 screws, install the instrument panel SUB-ASSY.
   Standard value:T=7 N·m {71 kgf·cm} {5.2 ft·lbf}



2. Connection of passenger airbag module
   (1) With the 2 bolts, connect the passenger airbag module.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Connect the passenger airbag connector and clamp.

3. Installation of automatic light control sensor (with light control system) (Refer to AC - 156)
4. Installation of instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
5. Installation of the instrument panel ornament (Refer to IT - 29)
6. Installation of combination meter ASSY (Refer to ME - 65)
7. Installation of front pillar garnish RH
   (1) Remove the protective cover from the curtain airbag module.
   (2) Check that the front pillar garnish clip is not damaged.
   CAUTION:
   If the front pillar garnish clip is damaged, be sure to replace it with a new clip.



(3) As shown in the figure, hook the end of the front pillar garnish clip onto the front pillar garnish RH.

11. Installation of speaker ASSY FR NO.3 (for 8 speakers)
    NOTE:
    Install the part in the same manner as RH side.
12. Installation of instrument panel speaker panel SUB-ASSY NO.2
    NOTE:
    Install the part in the same manner as RH side.
13. Installation of instrument panel SUB-ASSY LWR (Refer to IT - 29)
14. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
15. Settings when removing/installing battery terminals (Refer to IN - 10)
16. Inspection of airbag warning light (Refer to RS - 53)

# Instrument panel LWR

## Precautions

1. Models with the SRS airbag and pretensioner
   (1) This section includes the service operation which may have an influence on the SRS airbag. Before starting the relevant service operations, read the working precautions and notes in the general section of this manual, ensuring the secure operation. (Refer to IN - 6)
2. Precautions during removal and installation
   (1) When releasing clips or claws with a flat tip screwdriver or molding remover, always wrap the tool with protective tape to prevent damage to parts.

## Removal

List of bolts, screws, and nuts

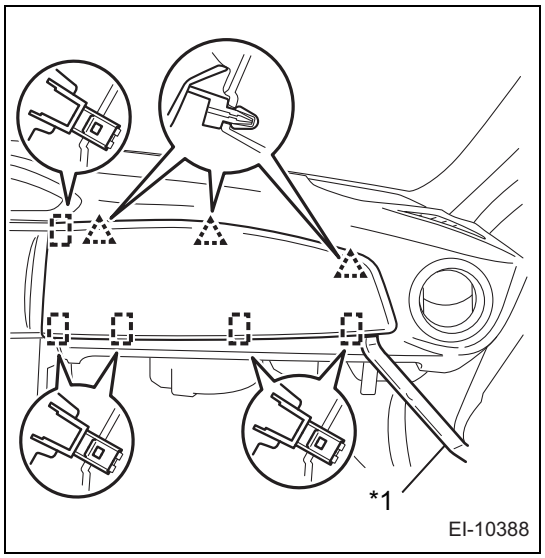
NOTE:

- Bolts, screws, and nuts required for removal or installation of the instrument panel LWR are indicated by symbols in context and figures.
- In the figure, D represents nominal (mm) while L represents bolt length (mm).

IT

| Symbol | Shape | Symbol | Shape |
|---|---|---|---|
| <A> |  D=11.5 L=16 | <B> |  D=10 L=7 |

1. Precautions
   CAUTION:
   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)
2. Disconnection of the battery ground terminal (Refer to BH - 31)
3. Removal of console box ASSY (Refer to IT - 33)



4. Removal of instrument panel ornament
   (1) Release the 8 clips and remove the instrument panel ornament.

Captions in illustration

| | |

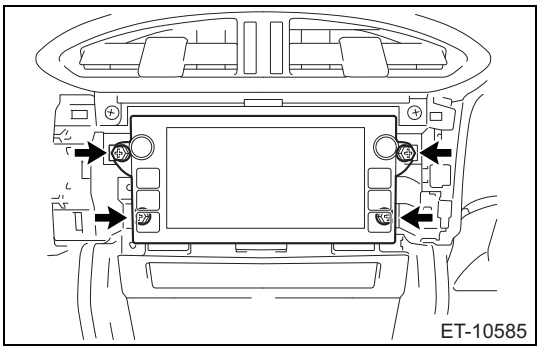
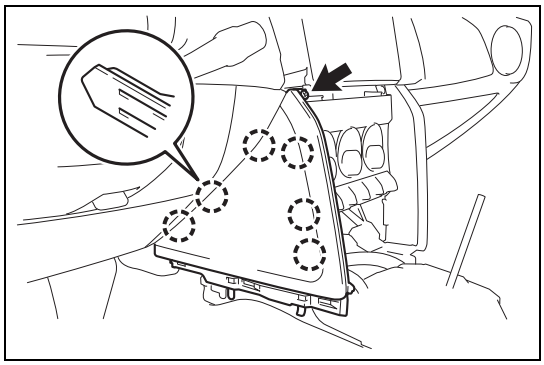
6. REMOVE RADIO&DISPLAY RECEIVER ASSEMBLY WITH BRACKET
   (1) Remove the 4 bolts to remove the radio&display receiver ASSEMBLY with bracket.

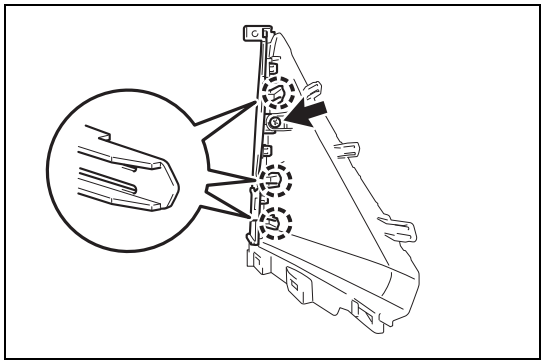


7. REMOVE NAVIGATION SYSTEM WITH BRACKET
   (1) Remove the 4 bolts to remove the navigation system with bracket.



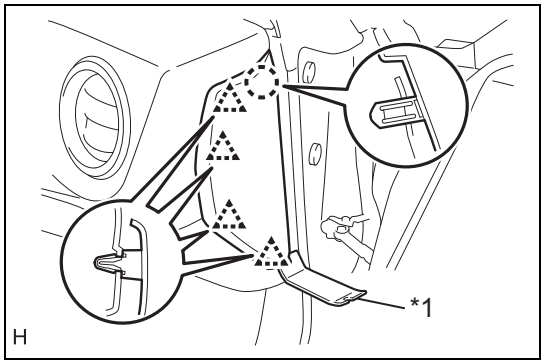
8. Removal of instrument cluster finish panel garnish NO.2
   (1) Remove the screw and release the 6 claws. Pull instrument cluster finish panel garnish NO.2 toward you and remove it.

IT



9. Removal of instrument panel finish panel SUB-ASSY UPR (installed on the LH side)
   (1) Remove the screw.
   (2) Release the 3 claws and remove the instrument panel finish panel SUB-ASSY UPR.

10. Removal of instrument cluster finish panel garnish NO.1
    NOTE:
    Remove the part in the same manner as LH side.
11. Removal of instrument panel finish panel SUB-ASSY UPR (installed on the RH side)
12. Removal of air conditioner control ASSY (for automatic air conditioning system) (Refer to AC - 163)
13. Removal of air conditioner control ASSY (for manual air conditioning system) (Refer to AC - 168)



14. Removal of instrument side panel LH
    (1) Release the 4 clips and the claw with a molding remover, and remove the instrument side panel LH.

Captions in illustration

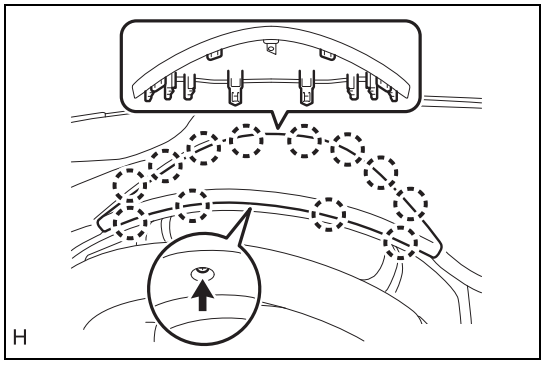
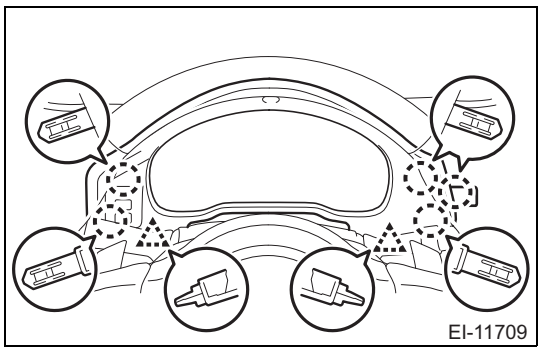
| *1 | Molding remover |

15. Removal of instrument side panel RH
    NOTE:
    Remove the part in the same manner as LH side.

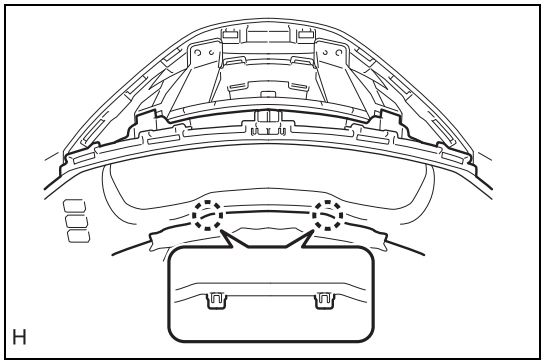


16. Removal of meter hood SUB-ASSY
    (1) Remove the screw.
    (2) Release the 12 claws. Pull the meter hood SUB-ASSY obliquely upward and toward you and remove it.



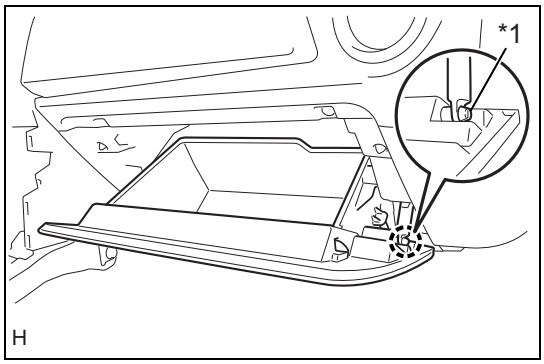
17. Removal of instrument panel meter ornament UPR
    (1) Release the 2 clips and 5 claws.

IT



(2) Release the 2 claws connecting the instrument panel meter ornament UPR to the steering column cover.
(3) Disconnect the connector and remove the instrument panel meter ornament UPR.

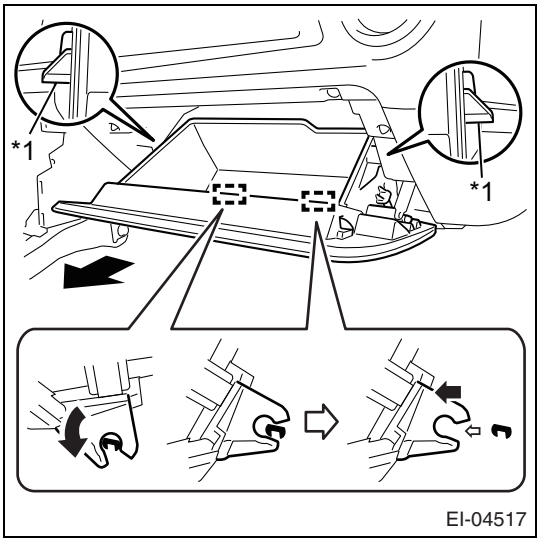
18. Removal of instrument panel under cover SUB-ASSY NO.1 (Refer to ME - 68)



19. Removal of glove compartment door ASSY
(1) Release the claw and disconnect the glove compartment door damper.

Captions in illustration

| | |
|---|---|
| *1 | Glove compartment door damper |

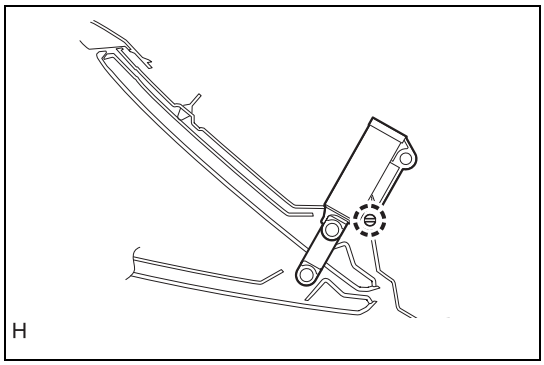


(2) Release the 2 stoppers and pull out the glove compartment door ASSY until it is level.

Captions in illustration

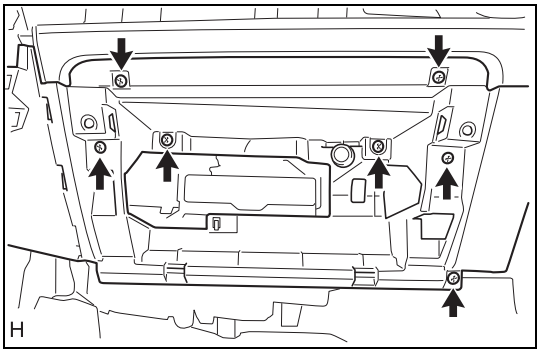
| | |
|---|---|
| *1 | Stopper |

(3) Pull the glove compartment door ASSY horizontally, release the 2 hinges, and remove the glove compartment door ASSY.
CAUTION:
If the glove compartment door ASSY is pulled upward and removed, the hinges may be loosened. Always pull the ASSY horizontally to remove it.



20. Removal of glove compartment door damper
(1) Release the claw and remove the glove compartment door damper.

IT



21. Removal of instrument panel SUB-ASSY LWR
    (1) Remove the 7 screws.

    (2) Remove the 2 screws and nuts.

    (3) Disconnect the aspirator hose. (Automatic air conditioning system model)
    (4) Release the 14 claws, disconnect the connectors and clamps, and remove the instrument panel SUB-ASSY LWR.

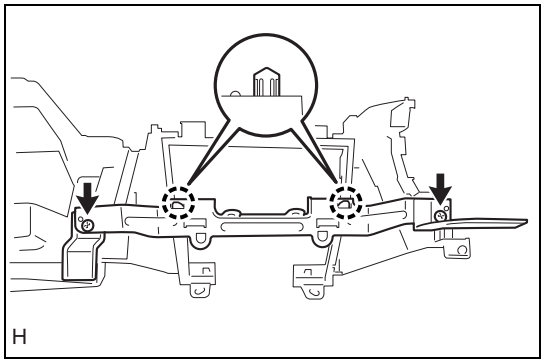
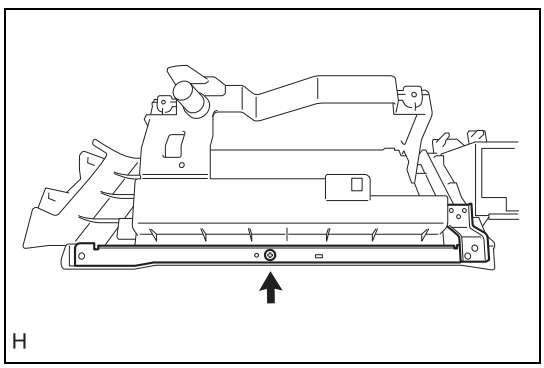
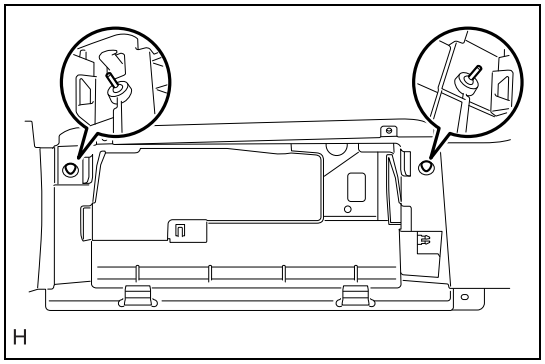
## Disassembly



1. Removal of glove compartment retainer
   (1) Remove the 2 screws, release the 2 claws, and remove the glove compartment retainer.



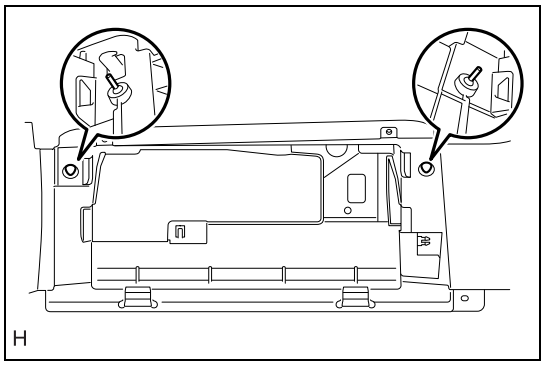
2. Removal of glove compartment door reinforcement
   (1) Remove the screw and remove the glove compartment door reinforcement.



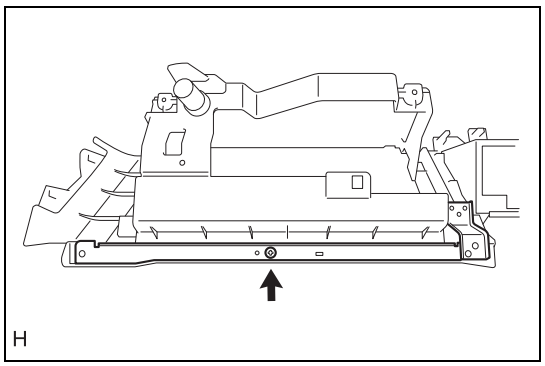
3. Removal of glove compartment cushion
   (1) Remove the 2 glove compartment cushions.
4. Removal of power supply outlet socket ASSY NO.2 (Refer to PI - 3)
5. Removal of clip (Refer to PI - 3)
6. Removal of the aspirator hose and in-vehicle sensor (automatic air conditioning system model) (Refer to AC - 106)

## Assembly

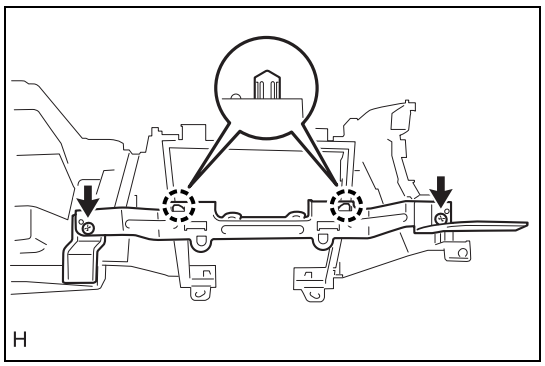
1. Installation of clip (Refer to PI - 3)
2. Installation of power supply outlet socket ASSY NO.2 (Refer to PI - 3)



3. Installation of glove compartment cushion
   (1) Install the 2 glove compartment cushions.



4. Installation of glove compartment door reinforcement
   (1) Install the glove compartment door reinforcement with the screw.



5. Installation of glove compartment retainer
   (1) Install the 2 screws, engage the 2 claws, and install the glove compartment retainer.
6. Installation of aspirator hose and in-vehicle sensor (automatic air conditioning system model) (Refer to AC - 124)

IT

## Installation

1. Installation of instrument panel SUB-ASSY LWR
   (1) Engage the 14 claws and connect the connectors and clamps.
   (2) Connect the aspirator hose. (for automatic air conditioning system)
   (3) Install the 2 screws and nuts.
   (4) With the 7 screws, install the instrument panel SUB-ASSY LWR.
2. Installation of glove compartment door damper
   (1) Engage the claw and install the glove compartment door damper.
3. Installation of glove compartment door ASSY
   (1) Engage the 2 hinges of the glove compartment door ASSY horizontally.
   (2) Engage the 2 stoppers and install the glove compartment door ASSY.
   CAUTION:
   If the stoppers are engaged from above, the hinges may be loosened. Always engage them horizontally.
   (3) Engage the claw and install the glove compartment door damper.
4. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
5. Installation of instrument panel meter ornament UPR
   (1) Connect the connector.
   (2) Engage the 2 claws connecting the instrument panel meter ornament UPR to the steering column cover.
   (3) Engage the 2 clips and 6 claws and install the instrument panel meter ornament UPR.
6. Installation of meter hood SUB-ASSY
   (1) Fit in the 12 claws.
   (2) With the screw, install the meter hood SUB-ASSY.
7. Installation of instrument side panel RH
   (1) Engage the 4 clips and the claw and install the instrument panel side panel RH.
8. Installation of instrument side panel LH
   NOTE:
   Install the part in the same manner as RH side.
9. Installation of air conditioner control ASSY (for automatic air conditioning system) (Refer to AC - 164)
10. Installation of air conditioner control ASSY (for manual air conditioning system) (Refer to AC - 171)
11. Installation of instrument panel finish panel SUB-ASSY UPR (installed on the RH side)
    (1) Fit in the 3 claws.
    (2) With the screw, install the instrument panel finish panel SUB-ASSY UPR.
12. Installation of instrument cluster finish panel garnish NO.1
    (1) Fit in the 6 claws.
    CAUTION:
    If the claws are not correctly inserted, the claws may be damaged.
    (2) With the screw, install the instrument cluster finish panel garnish NO.1.
13. Installation of instrument panel finish panel SUB-ASSY UPR (installed on the LH side)
    NOTE:
    Install the part in the same manner as RH side.
14. Installation of instrument cluster finish panel garnish NO.2
    NOTE:
    Install the part in the same manner as RH side.
15. Installation of the navigation system (with bracket)
    (1) Install the navigation system (with bracket) in place using the four bolts.
16. Installation of instrument cluster finish panel SUB-ASSY CTR
    (1) Engage the 3 clips and 2 claws and install the instrument cluster finish panel SUB-ASSY CTR.
17. Installation of instrument panel ornament
    (1) Engage the 8 clips and install the instrument panel ornament.
18. Installation of console box ASSY (Refer to IT - 38)
19. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}

IT

20. Settings when removing/installing battery terminals (Refer to IN - 10)

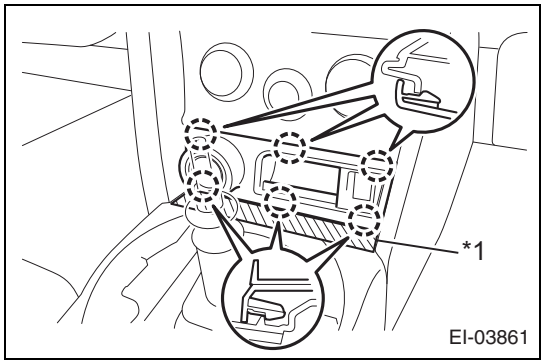
## Removal

1. Removal of console box cover FR (with smart key system)
   (1) Check that the shift lever is in N position.

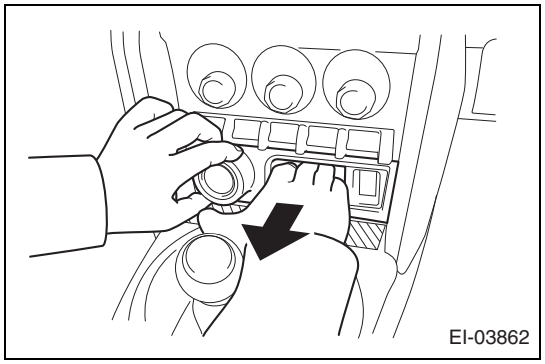
IT



(2) Apply protective tape to the location shown in the figure.

Captions in illustration

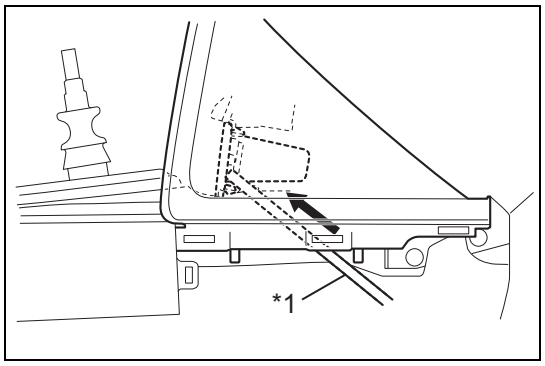
| | |
|---|---|
| *1 | Protective tape |



(3) Release the 6 claws and remove the console box cover FR.

NOTE:

While holding the inside of the pocket and the engine ignition switch, pull out the console box cover FR.



NOTE:

Remove the passenger's side instrument panel finish panel end and remove the console box cover FR, pushing the back of the cover with a stick (tool handle, etc.).

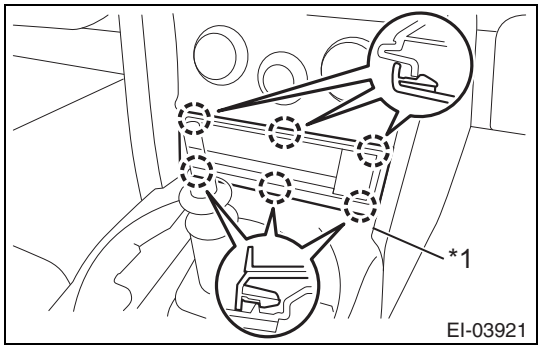
Captions in illustration

| | |
|---|---|
| *1 | Stick |

CAUTION:

Do not push switches or antennas with a stick (tool handle, etc.).

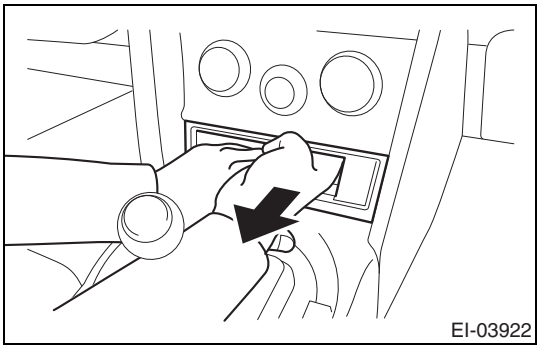
2. Removal of push button start switch (with smart key system) (Refer to ST - 43)
3. Removal of electrical key antenna (with smart key system) (Refer to TD - 333)
4. Removal of console box cover FR (without smart key system)
   (1) Check that the shift lever is in N position.



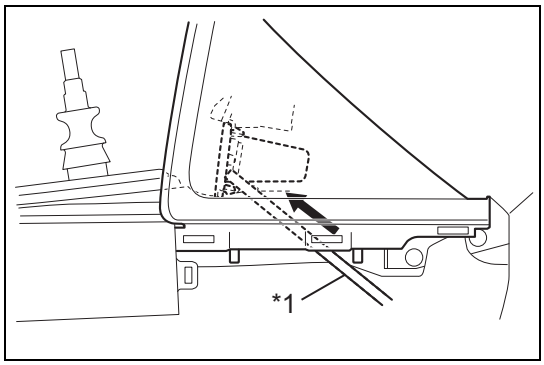
(2) Apply protective tape to the location shown in the figure.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |



(3) Release the 6 claws and remove the console box cover FR.
NOTE:
- While holding the inside of the pocket, pull out the console box cover FR.
- If it is difficult to remove the cover, refer to the procedure with smart key system.



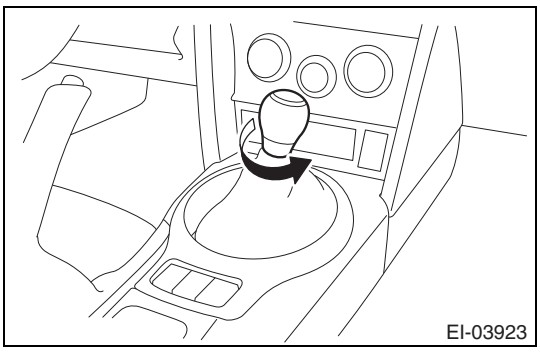
NOTE:
Remove the passenger's side instrument panel finish panel end and remove the console box cover FR, pushing the back of the cover with a stick (tool handle, etc.).

Captions in illustration

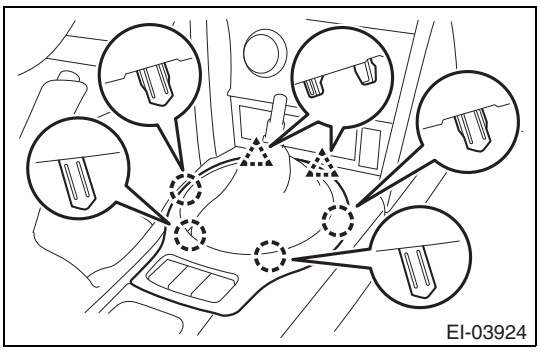
| | |
|---|---|
| *1 | Stick |

CAUTION:
Do not push switches or antennas with a stick (tool handle, etc.).

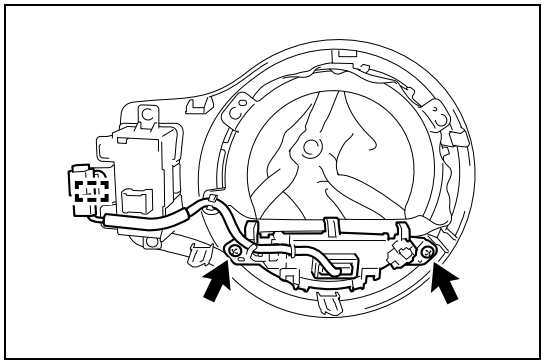
5. Removal of shift lever knob (transmission A/T)
   (1) Press down the shift lever boot to disconnect from the shift lever knob.
   (2) Turn the shift lever knob in the direction of the arrow in the figure and remove it.



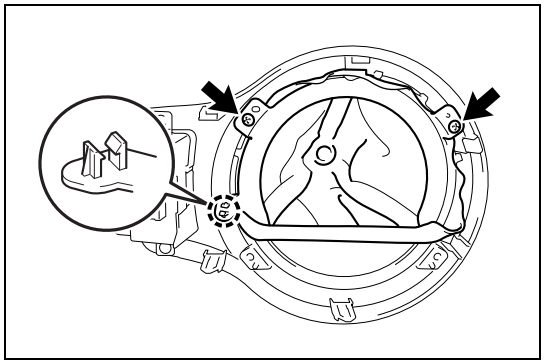
6. Removal of console panel SUB-ASSY UPR (transmission A/T)
   (1) Release the 2 clips and 4 claws.
   (2) Disconnect the connectors and remove the console panel SUB-ASSY UPR.



7. Removal of shift position indicator (transmission A/T)
   (1) Remove the 2 screws, release the clamp, and remove the shift position indicator.

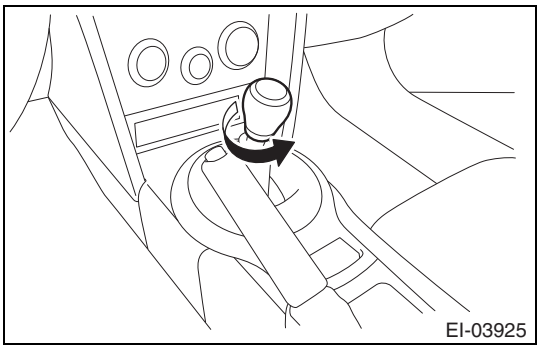


IT

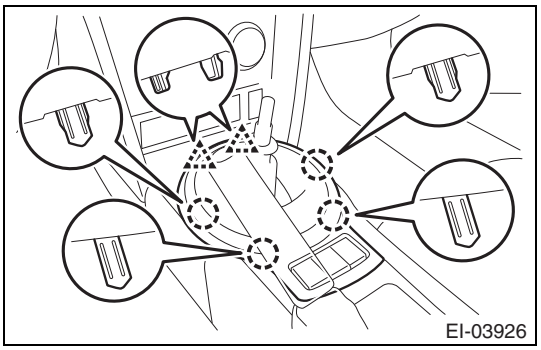


8. Removal of shifting hole cover SUB-ASSY (transmission A/T)
   (1) Remove the 2 screws, release the claw, and remove the shifting hole cover SUB-ASSY.

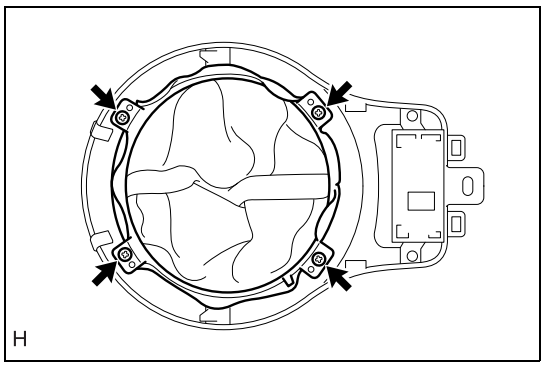
9. Removal of pattern select switch ASSY (transmission A/T) (Refer to BC - 110)



10. Removal of shift lever knob (transmission M/T)
    (1) Turn the shift lever knob in the direction of the arrow in the figure and remove it.

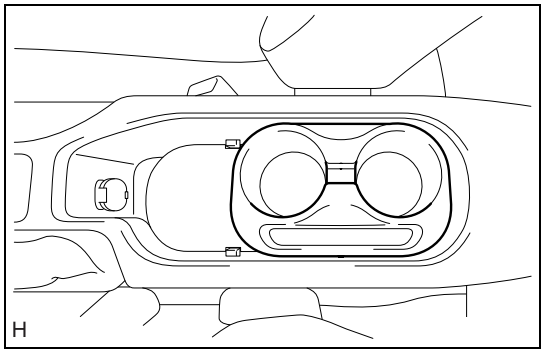


11. Removal of console panel SUB-ASSY UPR (transmission M/T)
    (1) Release the 2 clips and 4 claws.
    (2) Disconnect the connectors and remove the console panel SUB-ASSY UPR.

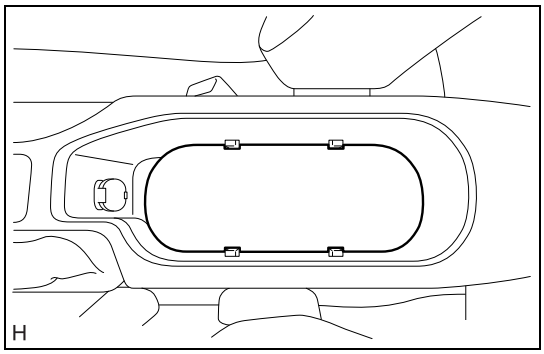


12. Removal of shifting hole cover SUB-ASSY (transmission M/T)
    (1) Remove the 4 screws and remove the shifting hole cover SUB-ASSY.

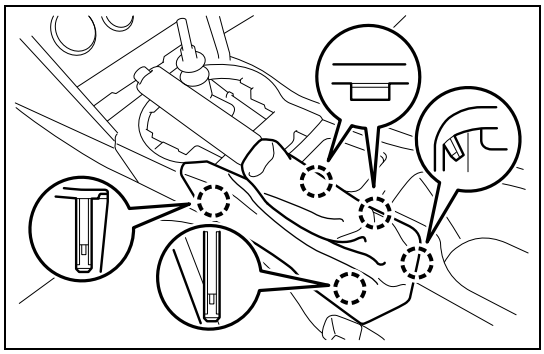
13. Removal of pattern select switch ASSY (transmission M/T) (Refer to BC - 110)



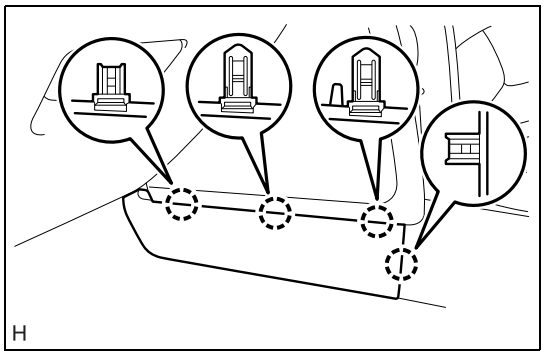
14. Removal of instrument panel cup holder
    (1) Remove the instrument panel cup holder.



15. Removal of cup holder cushion
    (1) Remove the cup holder cushion.

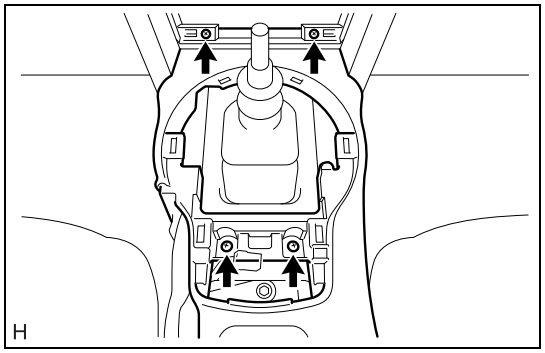


16. Removal of parking brake hole cover
    (1) Release the 5 claws and remove the parking brake hole cover.
    CAUTION:
    If the cover is pulled toward you, the claws may be damaged. Be sure to pull the cover upward and remove it.



17. Removal of instrument panel finish panel end RH
    (1) Release the 4 claws and remove the instrument panel finish panel end RH.

18. Removal of instrument panel finish panel end LH
    NOTE:
    Remove the part in the same manner as RH side.



19. Removal of console box ASSY
    (1) Remove the 4 screws.

    (2) Remove the 2 bolts.
    (3) Disconnect the connectors and remove the console box ASSY.
    WARNING:
    The satellite safing sensor of the airbag system is installed under the rear side of the console box ASSY. Before removing the console box ASSY, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

## Disassembly

1. Removal of power supply outlet socket ASSY NO.1 (Refer to PI - 4)
2. Removal of power supply outlet socket cover NO.2 (Refer to PI - 5)
3. Removal of seat heater switch (with seat heater) (Refer to SE - 40)

## Assembly

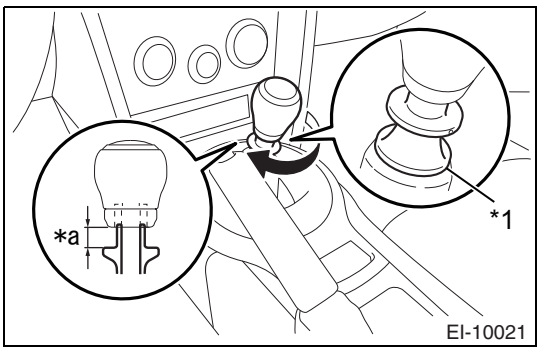
1. Installation of seat heater switch (with seat heater) (Refer to SE - 41)
2. Installation of power supply outlet socket cover NO.2 (Refer to PI - 5)
3. Installation of power supply outlet socket ASSY NO.1 (Refer to PI - 5)

IT

## Installation

1. Installation of console box ASSY
    (1) Connect each connector.
    (2) With the 4 screws and 2 bolts, install the console box ASSY.
    Standard value:Bolt
    T=6.5N·m {66kgf·cm} {4.8ft·lbf}
2. Installation of instrument panel finish panel end RH
    (1) Engage the 4 claws and install the instrument panel finish panel end RH.
3. Installation of instrument panel finish panel end LH
    NOTE:
    Install the part in the same manner as RH side.
4. Installation of parking brake hole cover
    (1) Engage the 5 claws and install the parking brake hole cover.
5. Installation of cup holder cushion
    (1) Install the cup holder cushion.
6. Installation of instrument panel cup holder
    (1) Install the instrument panel cup holder.
7. Installation of pattern select switch ASSY (transmission M/T) (Refer to BC - 111)
8. Installation of shifting hole cover SUB-ASSY (transmission M/T)
    (1) With the 4 screws, install the shifting hole cover SUB-ASSY.

9. Installation of console panel SUB-ASSY UPR (transmission M/T)
   (1) Connect each connector.
   (2) Engage the 2 clips and 4 claws and install the console panel SUB-ASSY UPR.



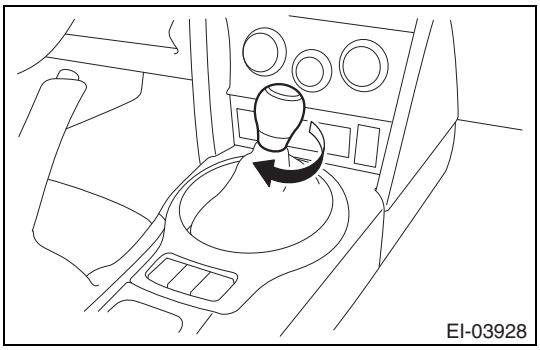
10. Installation of shift lever knob (transmission M/T)
    (1) Turn the shift lever knob in the direction of the arrow in the figure and install it.

Captions in illustration

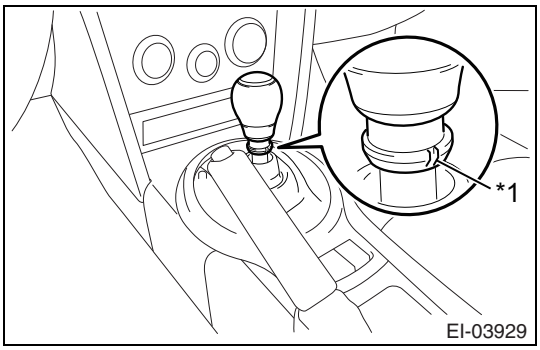
| | |
|---|---|
| *1 | Pull collar |
| *a | Installation position |

CAUTION:
- Install it avoiding the gap between the shift knob and the pull collar becomes 11 mm or less.
- Fasten the shift lever knob securely.
- When pulling the pull collar, check that the gear is shifted into reverse.

11. Installation of pattern select switch ASSY (transmission A/T) (Refer to BC - 111)
12. Installation of shifting hole cover SUB-ASSY (transmission A/T)
    (1) Install the 2 screws, engage the claw, and install the shifting hole cover SUB-ASSY.
13. Installation of shift position indicator (transmission A/T)
    (1) Install the 2 screws, engage the clamp, and install the shift position indicator.
14. Installation of console panel SUB-ASSY UPR (transmission A/T)
    (1) Connect each connector.
    (2) Engage the 2 clips and 4 claws and install the console panel SUB-ASSY UPR.



15. Installation of shift lever knob (transmission A/T)
    (1) Turn the shift lever knob in the direction of the arrow in the figure and install it.
    CAUTION:
    - Fasten the shift lever knob securely.
    - Orient the groove of the shift lever knob to the rear of the vehicle.



Captions in illustration

| | |
|---|---|
| *1 | Groove |

    (2) Pull up the shift lever boot to connect to the shift lever knob.

16. Installation of console box cover FR (without smart key system)
    (1) Engage the 6 claws and install the console box cover FR.
    CAUTION:
    When inserting the console box cover FR, be careful that the clear waterproof cover attached to the airbag control module is not peeled off.
17. Installation of electrical key antenna (with smart key system) (Refer to TD - 333)
18. Installation of push button start switch (with smart key system) (Refer to ST - 43)
19. Installation of console box cover FR (with smart key system)
    (1) Connect each connector.
    (2) Engage the 6 claws and install the console box cover FR.

CAUTION:
When inserting the console box cover FR, be careful that the clear waterproof cover attached to the airbag control module is not peeled off.

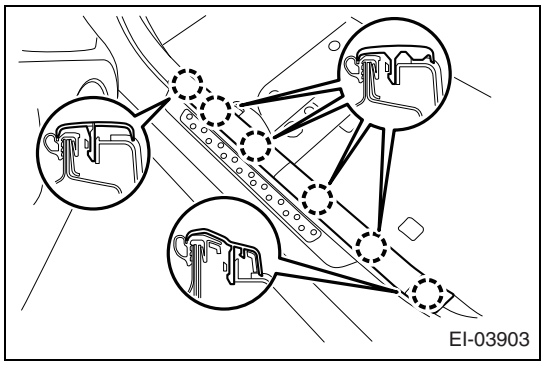
## Removal

1. Precautions

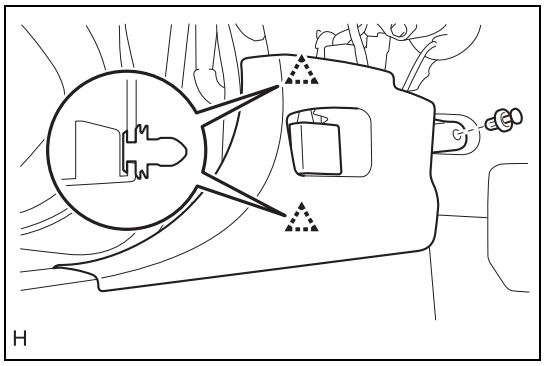
   CAUTION:

   After turning the ignition switch to OFF, you may have to wait for a while before disconnecting the battery terminals. Check appropriate precautions for battery terminal disconnection before proceeding. (Refer to IN - 6)

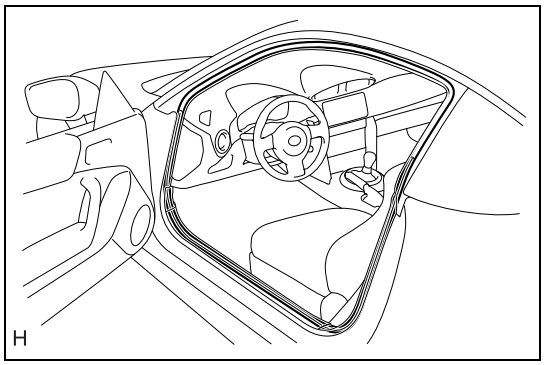
2. Disconnection of the battery ground terminal (Refer to BH - 31)
3. Removal of instrument panel speaker panel SUB-ASSY NO.1 (Refer to IT - 6)
4. Removal of instrument panel speaker panel SUB-ASSY NO.2 (Refer to IT - 7)
5. Removal of front pillar garnish LH (Refer to IT - 7)
6. Removal of front pillar garnish RH
   NOTE:
   Remove the part in the same manner as LH side.



7. Removal of front door scuff plate LH
   (1) Release the 6 claws and remove the front door scuff plate LH.
8. Removal of front door scuff plate RH
   NOTE:
   Remove the part in the same manner as LH side.



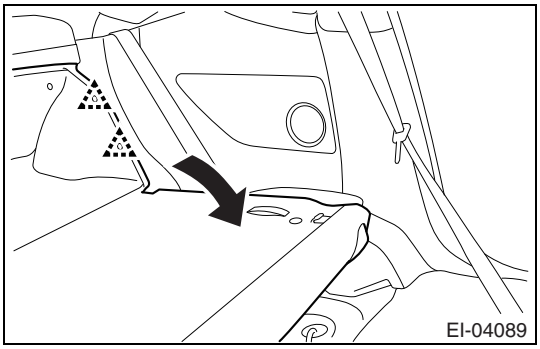
9. Removal of cowl side trim board LH
   (1) Remove the clip.
   (2) Release the 2 clips and remove the cowl side trim board LH.
10. Removal of cowl side trim board RH
    NOTE:
    Remove the part in the same manner as LH side.



11. Removal of front door opening trim weather strip LH
    (1) Remove the front door opening trim weather strip LH.
12. Removal of the front door opening trim weather strip RH
    NOTE:
    Remove the part in the same manner as LH side.
13. Disconnection of front seat outer belt ASSY LH (Refer to SB - 26)
14. Disconnection of front seat outer belt ASSY RH
    NOTE:
    Remove the part in the same manner as RH side.
15. Removal of separate type rear seat cushion ASSY (Refer to SE - 31)

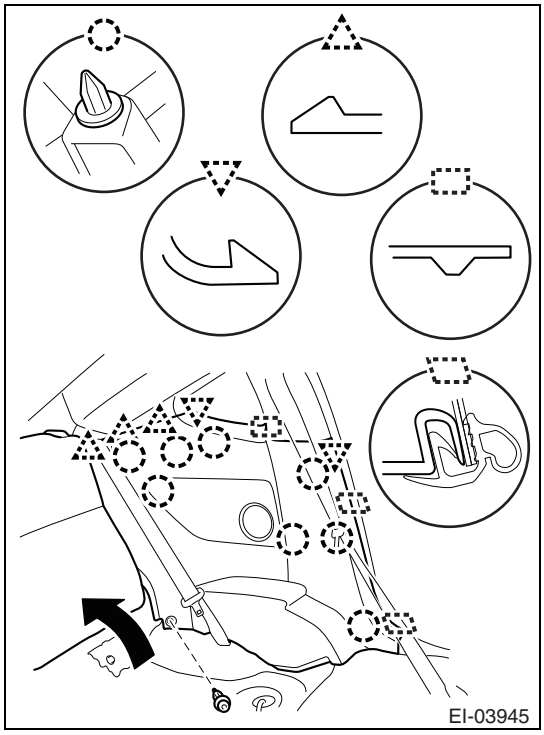
IT

16. Removal of separate type rear seat cushion ASSY LH (Refer to SE - 31)



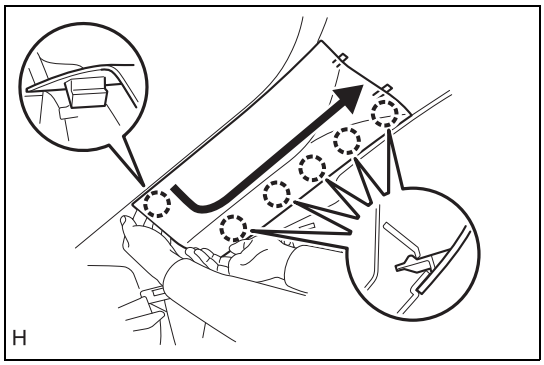
17. Disconnection of trunk trim cover INN LH
    (1) Tilt the rear seat backrest ASSY forward.
    (2) Release the 2 clips and disconnect the trunk trim cover INN LH.

18. Disconnection of trunk trim cover INN RH
    NOTE:
    Repeat the same disconnection steps for the LH side.

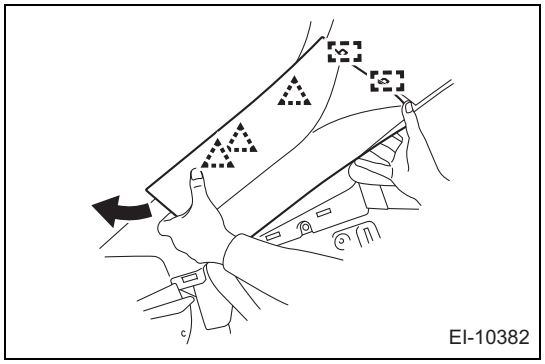


19. Removal of quarter lower trim LH
    (1) Pull up the rear seat backrest ASSY.
    (2) Remove the clip.
    (3) Release the 8 clips and 8 claws, and remove the quarter lower trim LH.
    WARNING:
    The curtain airbag sensor of the airbag system is installed behind the quarter lower trim. Before removing the quarter lower trim, always be sure to confirm the precautions related to the SRS airbag system. (Refer to RS - 5)

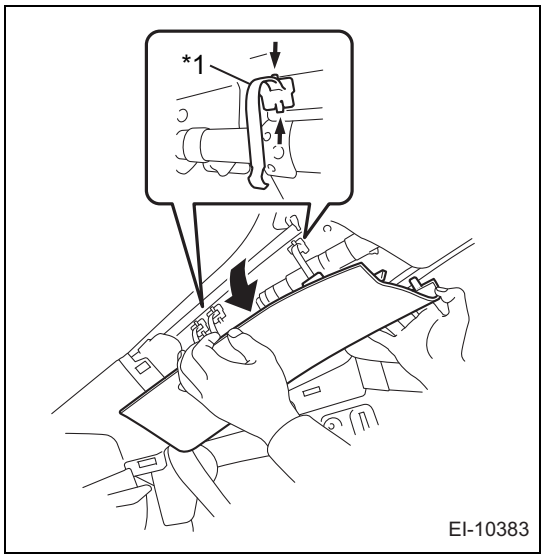
20. Removal of quarter lower trim RH
    NOTE:
    Remove the part in the same manner as LH side.



21. Removal of quarter trim lid LH
    (1) According to the direction of the arrow in the figure, release the 6 claws.



(2) Release the 3 clips and 2 guides.
NOTE:
Hook the tether clips onto the quarter trim lid LH.



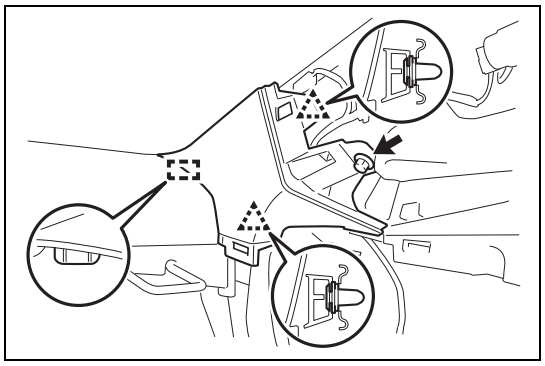
(3) As shown in the figure, push and remove the 3 tether clips in the direction of the arrow and remove the quarter trim lid LH and the 3 tether clips as a unit.

Captions in illustration

| | |
|---|---|
| *1 | Tether clip |

(4) Remove the 3 tether clips from the quarter trim lid LH.
CAUTION:
If it is damaged, be sure to replace the tether clip with a new one.

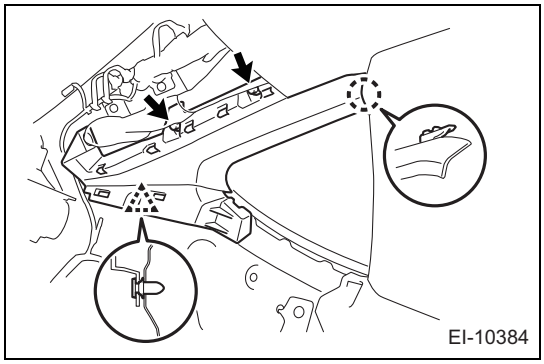
22. Removal of quarter trim lid RH
NOTE:
Remove the part in the same manner as LH side.



23. Removal of the rear window side garnish LH
(1) Remove the bolt.
(2) Release the 2 clips, remove the guide, and remove the rear window side garnish LH.

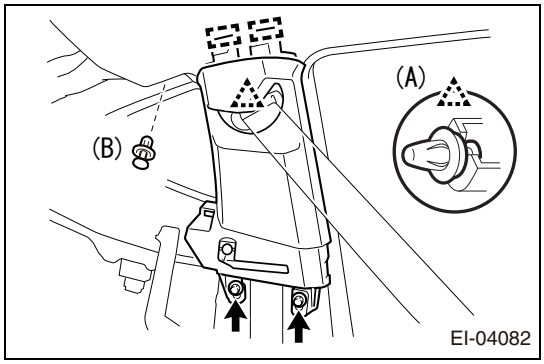
IT

24. Removal of rear window side garnish RH
NOTE:
Remove the part in the same manner as LH side.



25. Removal of quarter rear trim garnish FR LH
    (1) Remove the 2 bolts.
    (2) Release the clip and claw, and remove the quarter rear trim garnish FR LH.

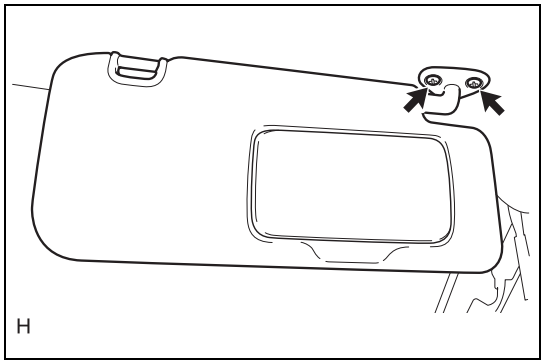
26. Removal of quarter rear trim garnish FR RH
    NOTE:
    Remove the part in the same manner as LH side.



27. Removal of center pillar garnish LH
    (1) Remove the clip (B) and the 2 bolts.
    (2) Release the clip (A) and 2 guides and remove the center pillar garnish LH.
    CAUTION:
    Do not reuse the upper clip (A) of the center pillar garnish RH.
    Once it is removed, the clip looses its affixing capability. Be sure to replace it with a new clip.

28. Removal of center pillar garnish RH
    NOTE:
    Remove the part in the same manner as LH side.

29. Removal of map light ASSY (Refer to LI - 48)

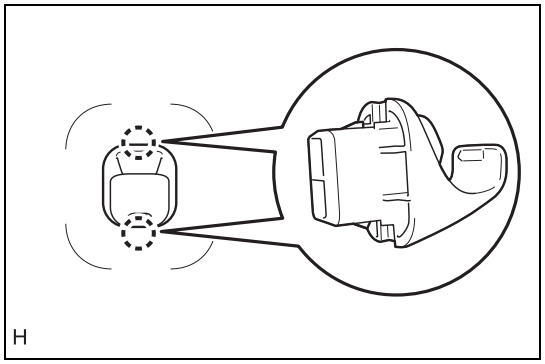


30. Removal of visor ASSY RH
    (1) Remove the 2 screws.

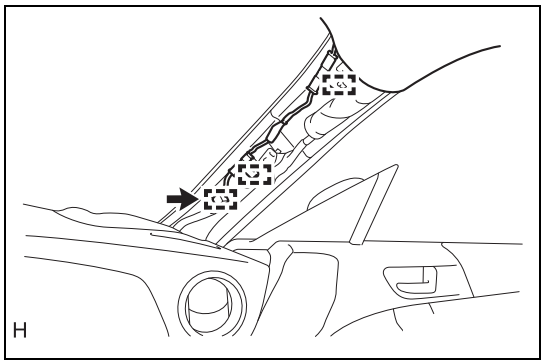
    (2) Disconnect the connector and remove the visor ASSY RH (with vanity light).

31. Removal of visor ASSY LH
    NOTE:
    Remove the part in the same manner as RH side.

IT



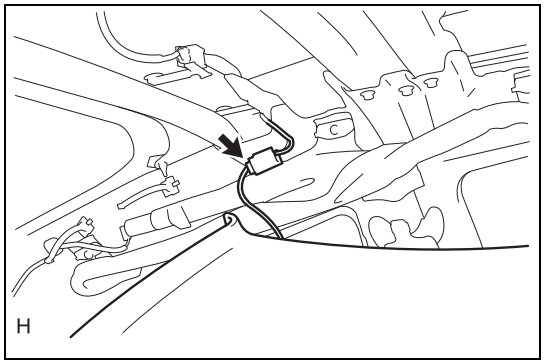
32. Removal of visor holder
    (1) Release the 2 claws and remove the 2 visor holders.



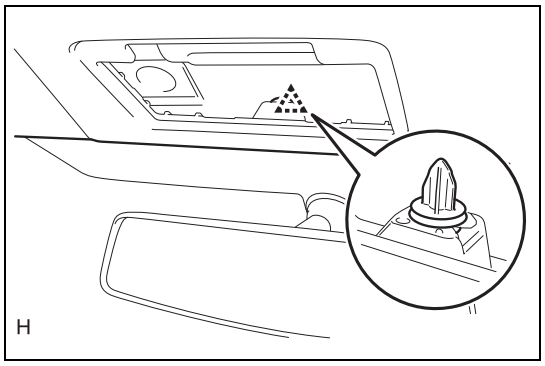
33. Removal of roof head lining ASSY (with vanity light)
    (1) Disconnect the connector of the front pillar RH and the 3 clamps.

    (2) Disconnect the connector and 2 clamps at the front pillar LH.

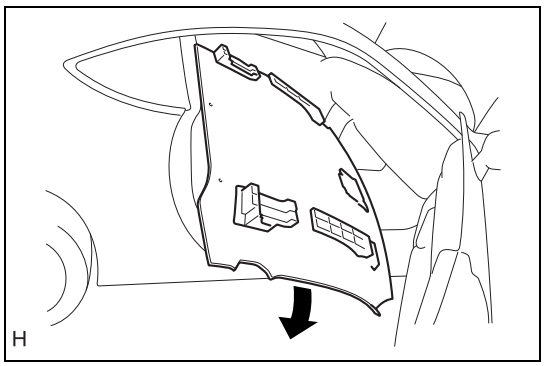
    (3) Remove the 3 clips from the rear of the vehicle.



(4) Disconnect the connector of the feeder cord ASSY.



(5) Release the clip at the front of the vehicle and remove the roof head lining ASSY.



(6) Take out the removed roof head lining ASSY through the passenger's door so that the ASSY does not interfere with the body interior.

CAUTION:

- To prevent distortion of the roof head lining ASSY, take out the ASSY with at least two persons.
- Do not allow the roof head lining to be stuck, resulting in bent or damaged lining.
- Do not damage the roof head lining ASSY and body interior.

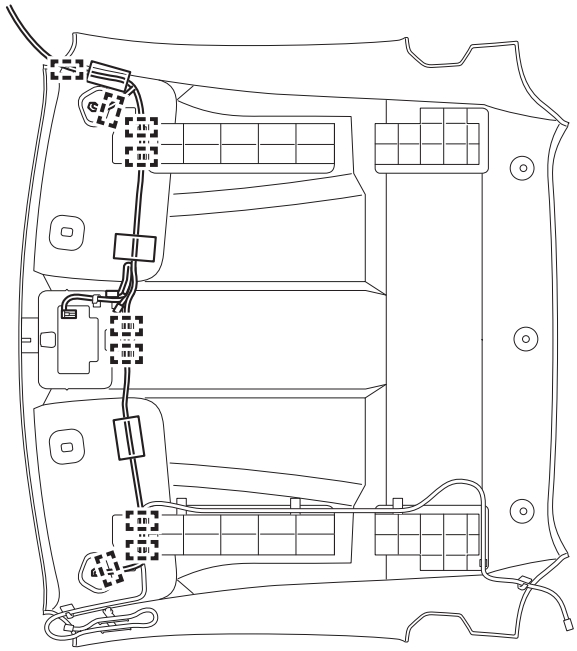
34. Removal of roof head lining ASSY (without vanity light)

NOTE:

Repeat the same removal steps for that with vanity light.

## Disassembly

1. Removal of roof wire NO.1 (with vanity light)
   (1) Remove the fixing tapes.
   (2) Release the 9 guides and remove roof wire NO.1 from the roof head lining ASSY.



EI-11140

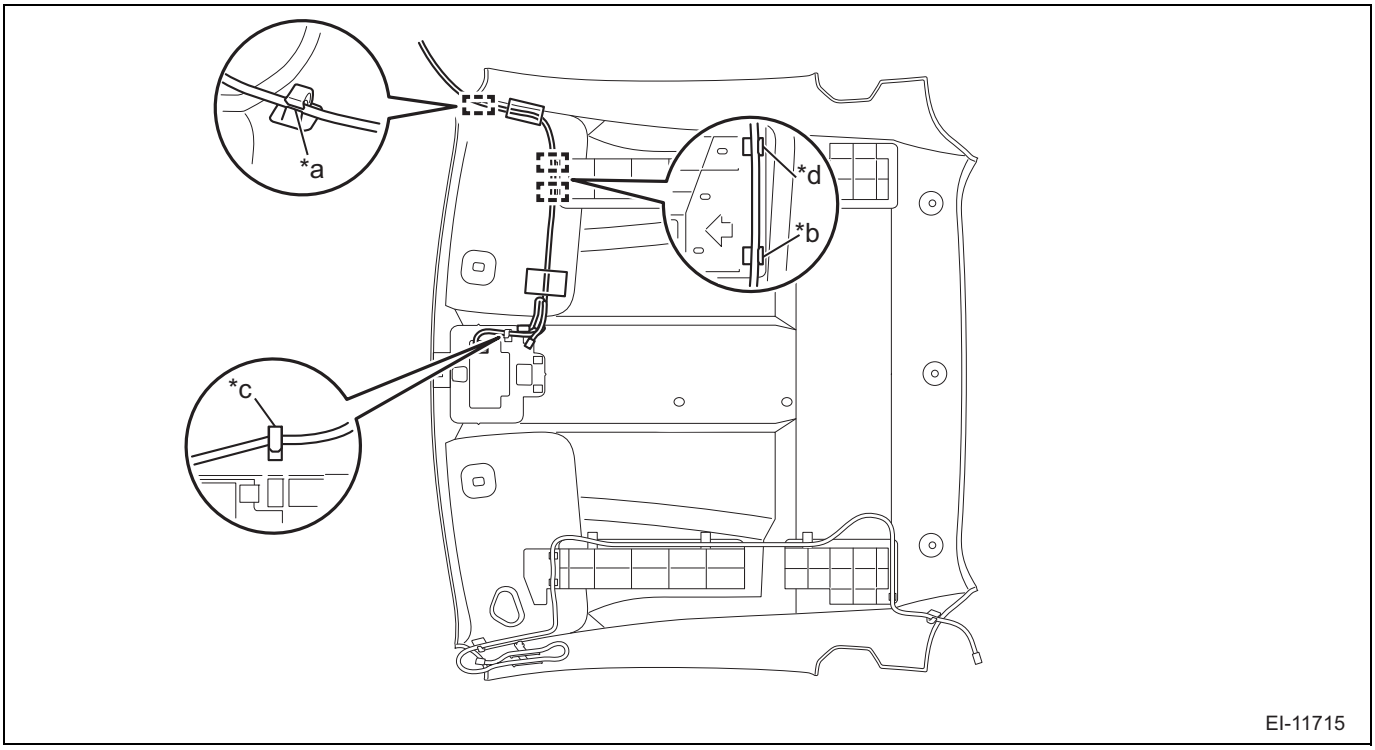
| *c | Align the white tape with the clip to secure it. | *d | Align the white tape with the guide. |
| ▭ | Fixing tape | - | - |

   (2) Attach the fixing tape and install roof wire NO.1.
   NOTE:
   Cut the fixing tape into the necessary size (Recommended: 50 mm ×80 mm, 2.0 in ×3.2 in) for use.
3. Installation of roof wire NO.1 (without vanity light)
   (1) Position roof wire NO.1 as shown in the figure and install the 3 guides.

IT



CAUTION:
Do not allow roof wire NO.1 to be floated or twisted.

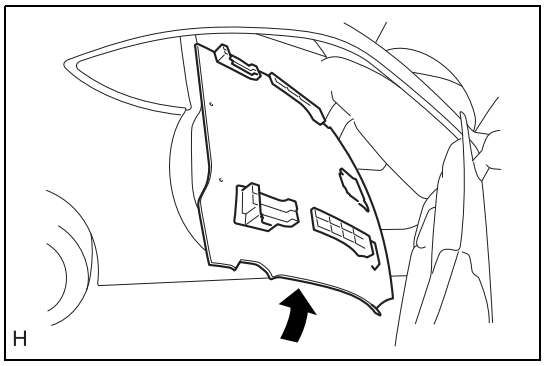
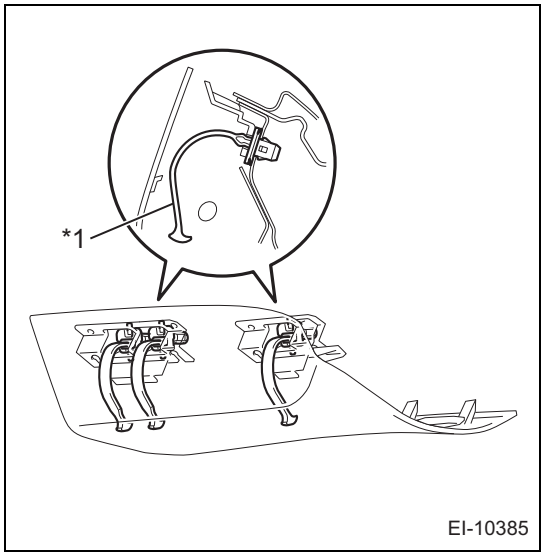
## Installation



1. Installation of roof head lining ASSY (with vanity light)
   (1) Bring the roof head lining ASSY into the vehicle through the passenger's door as shown in the figure so that the ASSY does not interfere with the body interior.
   CAUTION:
   - To prevent distortion of the roof head lining ASSY, bring in the ASSY with at least two persons.
   - Do not allow the roof head lining to be stuck, resulting in bent or damaged lining.
   - Do not damage the roof head lining ASSY and body interior.

   (2) Engage the clip at the front of the vehicle.
   (3) Connect the connector of antenna code SUB-ASSY NO.3.
   (4) Install the 3 clips at the rear of the vehicle.
   (5) Connect the connector of the front pillar RH and the 3 clamps.
   (6) Connect the connector of the front pillar LH and the 2 clamps.
2. Installation of roof head lining ASSY (without vanity light)
   NOTE:
   Repeat the same installation steps for that with vanity light.
3. Installation of visor holder
   (1) Engage the 2 claws and install the 2 visor holders.

4. Installation of visor ASSY RH
   (1) Connect the connector.
   (2) With the 2 screws, install the visor ASSY RH.
5. Installation of visor ASSY LH
   NOTE:
   Install the part in the same manner as RH side.
6. Installation of map light ASSY (Refer to LI - 49)
7. Installation of center pillar garnish LH
   (1) Engage the clip (A) and the 2 guides.
   (2) With the clip (B) and 2 bolts, install the center pillar garnish LH.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   CAUTION:
   Do not reuse the upper clip (A) of the center pillar garnish RH.
   Once it is removed, the clip looses its affixing capability. Be sure to replace it with a new clip.
8. Installation of center pillar garnish RH
   NOTE:
   Install the part in the same manner as LH side.
9. Installation of quarter rear trim garnish FR LH
   (1) Engage the clip and claw.
   (2) With the 2 bolts, install the quarter rear trim garnish FR LH.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
10. Installation of quarter rear trim garnish FR RH
    NOTE:
    Install the part in the same manner as LH side.
11. Installation of rear window side garnish LH
    (1) Engage the 2 clips and insert the guide.
    (2) With the bolt, install the rear window side garnish LH.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
12. Installation of rear window side garnish RH
    NOTE:
    Install the part in the same manner as LH side.



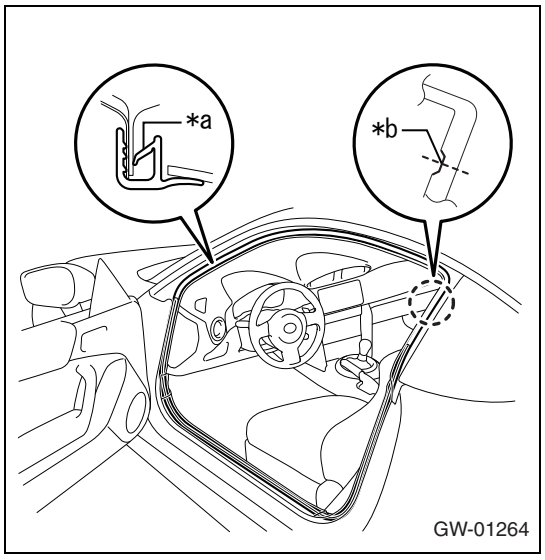
13. Installation of quarter trim lid LH
    (1) Install the 3 tether clips on the quarter trim lid LH.

Captions in illustration

| | |
|---|---|
| *1 | Tether clip |

    CAUTION:
    If it is damaged, be sure to replace the tether clip with a new one.
    (2) Fit in the 3 guides.
    (3) Engage the 3 clips and 6 claws and install the quarter trim lid LH.
14. Installation of quarter trim lid RH
    NOTE:
    Install the part in the same manner as LH side.
15. Installation of quarter lower trim LH
    (1) Engage the 8 clips and 8 claws and install the quarter lower trim LH.
    (2) Install the clip.

16. Installation of quarter lower trim RH
    NOTE:
    Install the part in the same manner as LH side.
17. Installation of the trunk trim cover INN LH
    (1) Tilt the rear seat backrest ASSY forward.
    (2) Install the 2 clips and install the trunk trim cover INN LH.
18. Installation of the trunk trim cover INN RH
    NOTE:
    Install the part in the same manner as LH side.
19. Installation of separate type rear seat cushion ASSY (Refer to SE - 39)
20. Installation of separate type rear seat cushion ASSY RH (Refer to SE - 39)
21. Connection of front seat outer belt ASSY LH (Refer to SB - 28)
22. Connection of front seat outer belt ASSY RH
    NOTE:
    Install the part in the same manner as LH side.
23. Installation of cowl side trim board LH
    (1) Engage the 2 clips and install the cowl side trim board LH.
    (2) Install the clip.
24. Installation of cowl side trim board RH
    NOTE:
    Install the part in the same manner as LH side.
25. Installation of front door scuff plate LH
    (1) Engage the 6 claws and install the front door scuff plate LH.
26. Installation of front door scuff plate RH
    NOTE:
    Install the part in the same manner as LH side.



27. Installation of front door opening trim weather strip LH
    (1) Install the front door opening trim weather strip LH.
    CAUTION:
    After installation, make sure no lifting on any corner.
    NOTE:
    Install the paint marked part on the center of the body flange cut-out. Pushing into the corner makes the installation easy.

Captions in illustration

| | |
|---|---|
| *a | Paint mark |
| *b | Center of the body flange cutout |

28. Installation of front door opening trim weather strip RH
    NOTE:
    Install the part in the same manner as LH side.
29. Installation of front pillar garnish LH (Refer to IT - 15)
30. Installation of front pillar garnish RH
    NOTE:
    Install the part in the same manner as LH side.
31. Installation of instrument panel speaker panel SUB-ASSY NO.1 (Refer to IT - 17)

32. Installation of instrument panel speaker panel SUB-ASSY NO.2
    NOTE:
    Install the part in the same manner as RH side.
33. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
34. Settings when removing/installing battery terminals (Refer to IN - 10)

# Power window system

## Precautions

1. Precautions for Power window system

   CAUTION:

   - Power window system uses large-scale multiplex communication for vehicle body [LIN]. First, perform a “Communication function inspection”, following “How to troubleshoot”, and after checking for any malfunction in the communication system, you can proceed with troubleshooting.
   - When malfunction occurs in the auto-reverse function of the power window system, disable the AUTO operation. Otherwise, accidental pinching may arise. Check that the diagnostic code is not output, then proceed to the troubleshooting.
   - When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
   - After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).

     *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.

     *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)

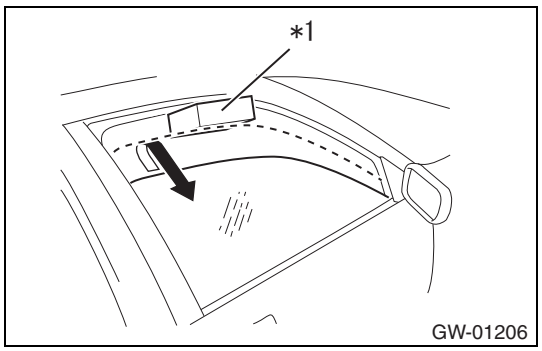
     *3: The failure of the door glass or regulator may prevent full closing of the door glass.
   - Even if the power window system is normal, unexpected operation of the auto-reverse function may occur resulting from the abrupt change of the opening/closing speed of the window. This symptom occurs when the system detects any value out of the learned operation.
     (a) Window opening/closing operation while driving the vehicle on rough roads.
     (b) Window opened/closed operation when door is opened/closed.
     (c) Sudden voltage variation occurs.
   - Never disconnect the battery with IG ON. If the battery is disconnected while IG ON, DTC may not be output properly.

## Function inspection

1. Function inspection of window lock switch
   (1) Turn the ignition switch to ON.
   (2) Verify when the window lock switch of the power window regulator master switch ASSY is pushed, the operation of the passenger's seat power window is disabled.
   (3) Verify when window lock switch is pushed once more, the operation of the passenger's seat power window is enabled.
2. Function inspection of manual operation
   (1) Inspection of basic function (driver's seat)
      (a) Turn the ignition switch to ON.
      (b) Verify when the driver's seat switch on the power window regulator master switch ASSY is operated to UP, the power window (driver's seat door glass) moves up, and when the switch is operated to DOWN, the power window (driver's seat door glass) moves down.
   (2) Inspection of basic function (passenger's seat)
      (a) Turn the ignition switch to ON.
      (b) Verify when the power window regulator switch ASSY is operated to UP, the power window (passenger's seat door glass) moves up, and when the switch is operated to DOWN, the power window (passenger's seat door glass) moves down.
3. Function inspection of AUTO operation
   (1) Inspection of basic function (driver's seat)
      (a) Turn the ignition switch to ON.
      (b) Verify when the driver's seat switch on the power window regulator master switch ASSY is operated to UP in two stages, the driver's seat door glass operates AUTO UP, and driver's seat door glass is fully closed.
      (c) Verify when the driver's seat switch on the power window regulator master switch ASSY is operated to DOWN in two stages, the driver's seat door glass operates AUTO DOWN, and driver's seat door glass is fully open.
      (d) Verify while AUTO DOWN is in operation, when the driver's seat switch on the power window regulator master switch ASSY is operated to UP, the door glass moves up.
      (e) Verify while AUTO UP is in operation, when the driver's seat switch on the power window regulator master switch ASSY is operated to DOWN, the door glass moves down.
   (2) Inspection of basic function (passenger's seat)

(a) Turn the ignition switch to ON.
(b) Verify when the switch on the power window regulator switch ASSY is operated to UP in two stages, the passenger's seat door glass operates AUTO UP, and passenger's seat door glass is fully closed.
(c) Verify when the switch on the power window regulator switch ASSY is operated to DOWN in two stages, the passenger's seat door glass operates AUTO DOWN, and passenger's seat door glass is fully open.
(d) Verify while AUTO DOWN is in operation, when the switch on the power window regulator switch ASSY is operated to UP, the door glass of the passenger's seat moves up.
(e) Verify while AUTO UP is in operation, when the switch on the power window regulator switch ASSY is operated to DOWN, the door glass of the passenger's seat moves down.

4. Function inspection of remote controlled manual operation
   (1) Turn the ignition switch to ON.
   (2) Verify when the remote control switch for the power window regulator master switch ASSY for passenger's seat is operated to UP, the power window (passenger's seat door glass) moves up.
   (3) Verify that when the remote control switch for the passenger seat on the power window regulator master switch ASSY is operated to DOWN, the power window (passenger's seat door glass) moves down.
5. Function inspection of remote controlled automatic operation
   (1) Turn the ignition switch to ON.
      (a) Verify when the remote control switch for passenger's seat on the power window regulator master switch ASSY is operated to UP in two stages, the passenger's seat door glass operates AUTO UP, and passenger's seat door glass is fully closed.
      (b) Verify when the remote control switch for passenger's seat on the power window regulator master switch ASSY is operated to DOWN in two stages, the passenger's seat door glass operates AUTO DOWN, and passenger's seat door glass is fully open.
6. Function inspection of after-key-OFF operation
   (1) After turning IG from ON to OFF, verify that all seat's power windows are operable by the power window regulator master switch ASSY. Also verify that after the driver's or passenger's door is opened, the power window cannot be operated.
   (2) After turning IG from ON to OFF, verify that passenger's seat power window is operable by the power window regulator switch ASSY. Also verify that after the driver's or passenger's door is opened, the power window cannot be operated.
   (3) When approx. 40 seconds have passed after IG was turned from ON to OFF, verify that all power windows cannot be operated. However, if the auto-reverse function is in operation, the operation continues until it is completed. (AUTO operation stops when 40 seconds have elapsed.)



7. Inspection of auto-reverse function
   (1) Basic function inspection
      CAUTION:
      Never use your hand or other part of your body to be pinched for checking the function. Work with great care for accidental pinching.
      NOTE:
      Auto-reverse function is operable with IG ON when AUTO UP or manual UP is in operation.
      (a) Fully open all power windows (door glasses).
      (b) Hold a styrene foam block (approx. 12 cm (4.72 in) thick) or equivalent on the position where it is caught when the door glass is fully closed.

Captions in illustration

| | |
|---|---|
| *1 | Styrene foam block or equivalent |

      (c) When full close operation of the power window (door glass) is activated with AUTO UP or manual UP operation, verify that the window stops at the position where it contacts with styrene foam block or equivalent, comes into DOWN operation, and stops where it moves down approx. 200 mm (8 in).
      NOTE:
      If pinching is detected, it moves down approx. 50 mm (2 in) after stopping, and stops. If opening of the window is less than

approx. 200 mm (8 in), however, it moves down approx. 200 mm (8 in) or 10 seconds and stops.

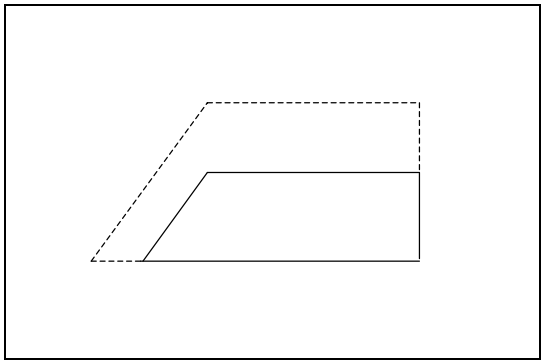
(d)During DOWN operation, make sure that the UP operation cannot be activated by the power window regulator master switch ASSY.

8. Inspection of index function
   (1) Make sure that when the driver's or passenger's door is opened, the window glass of the opened side moves down approx. 10 mm (0.4 in) automatically from fully closed position.
   (2) Make sure that when the driver's or passenger's door is closed, the window glass of the closed side moves up to fully closed position.
   NOTE:
   If the window glass opens over approx. 10 mm (0.4 in) from the fully closed position, no index control is performed. Even if the window glass is open more than approx. 10 mm (0.4 in) because of looseness of the regulator, however, the window moves up automatically.
9. Inspection of power window regulator master switch ASSY (driver's seat)
   (1) Inspection of operation indicator
   (a)Make sure that when performing IG OFF →ON with connector connected, the operation indicator (LED), located on switch part of the power window regulator master switch ASSY, lights up.
10. Inspection of power window regulator switch ASSY (passenger's seat)
   (1) Inspection of operation indicator
   (a)Make sure that when performing IG OFF →ON with connector connected, the operation indicator (LED), located on switch part of the power window regulator switch ASSY, lights up.

## Registration settings

1. Initialization of power window regulator motor
   CAUTION:
   - When replacing the power window regulator motor ASSY with a new one or reusing its motor, the power window regulator motor must be initialized. If the initialization is not performed, AUTO operation, auto-reverse function, and after-key-OFF operation function does not work properly.
   - If the power window regulator motor ASSY is replaced with a new one, DTC B2313 and B2316 are output. After initializing power window (initialization of pulse sensor), erase the diagnostic codes.
   - After replacing the glass and/or weather strip, an AUTO UP operation on the worked glass (door glass) sometimes causes detection of value out of learned operation, then activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) (*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
     *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
     *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
     *3: The failure of the door glass or regulator may prevent full closing of the door glass.
   - If the initialization cannot be completed normally, check the large-scale multiplex communication system for vehicle body [LIN]. (Refer to NW - 5)

   NOTE:
   After battery replacement, no initialization for power window regulator motor is needed because the nonvolatile memory stores the necessary information.
   (1) Initial setting method
   (a)Close the door and turn the ignition switch to ON.

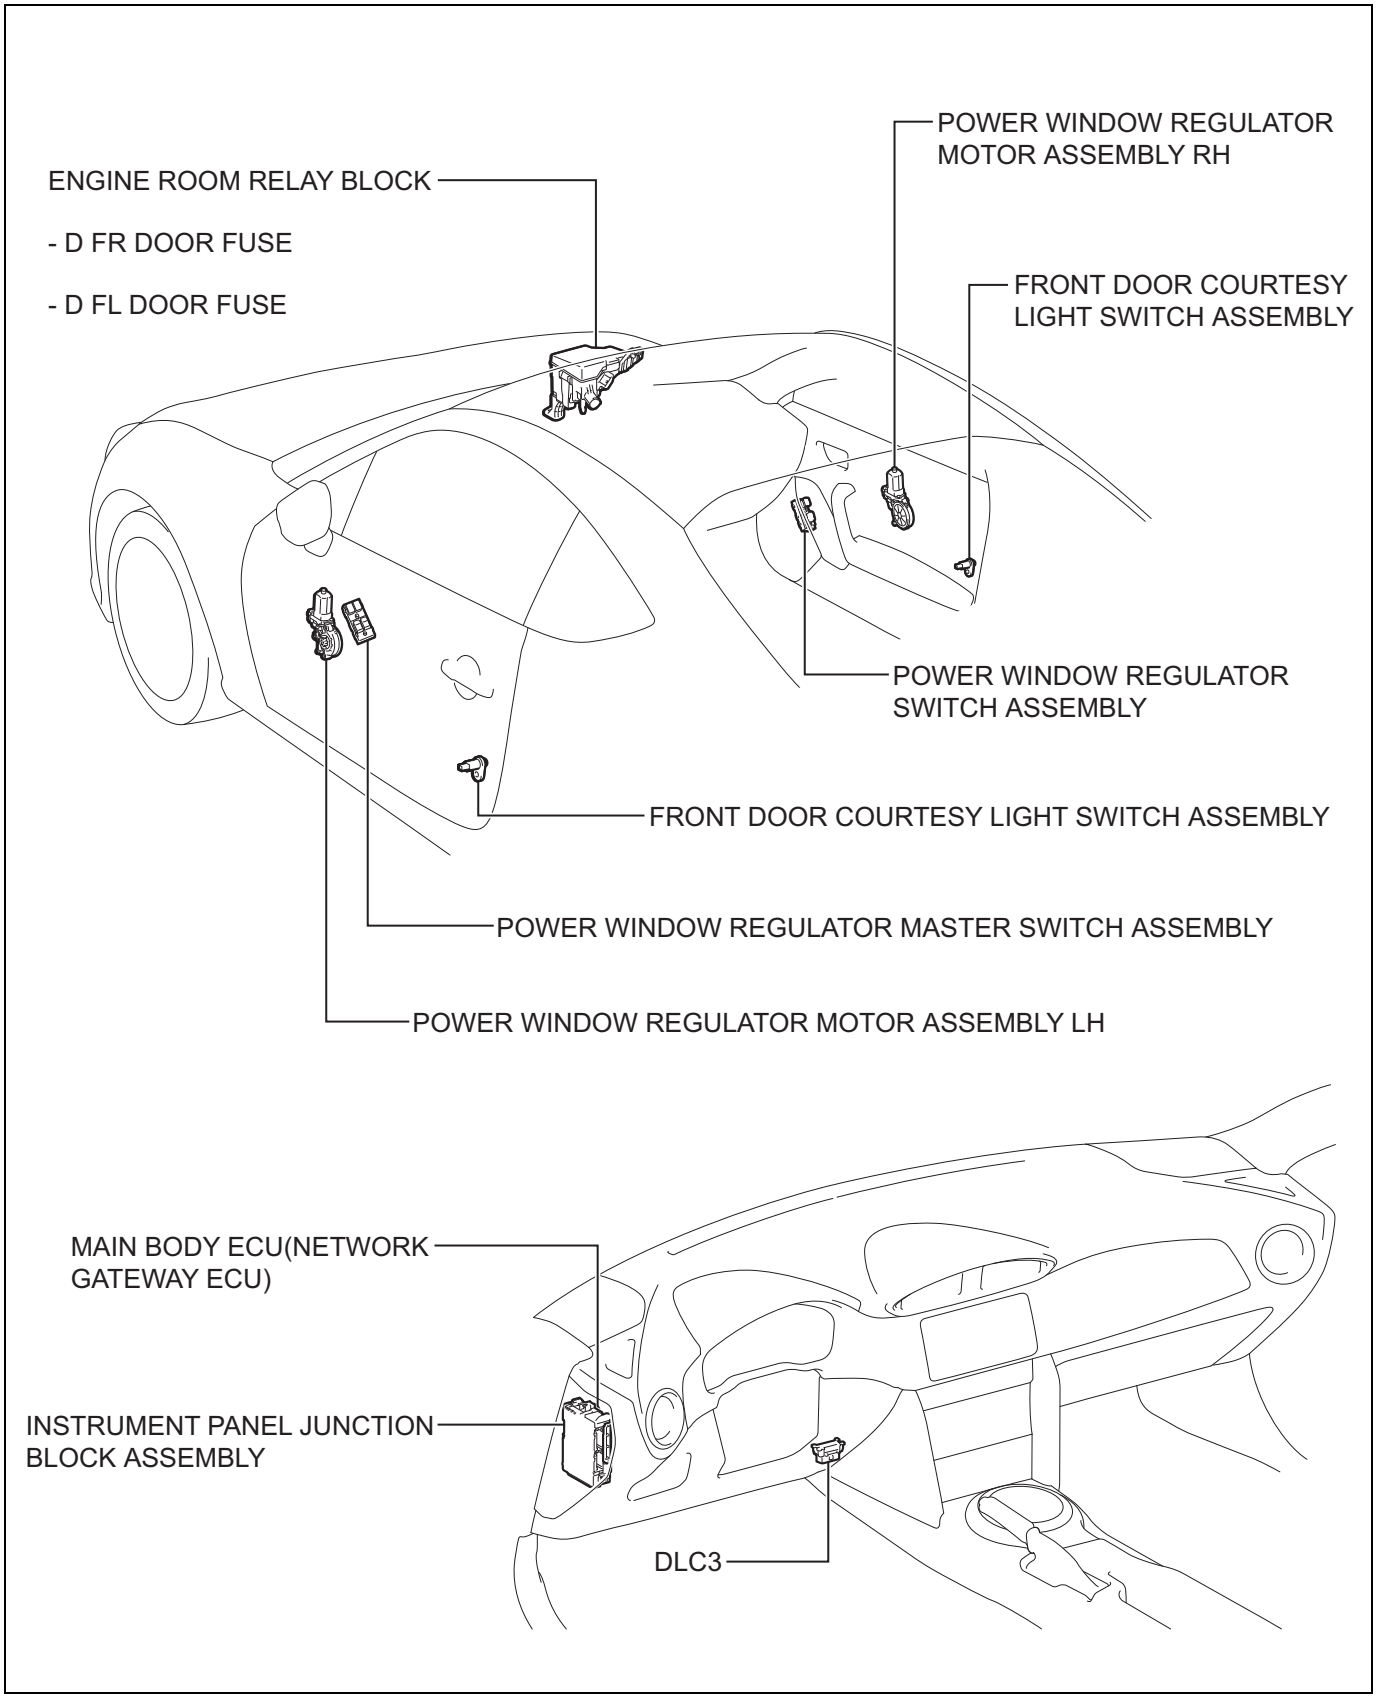


(b)As shown in the figure, move the door glass to middle position.

(c) Operate power window regulator switch (AUTO UP HOLD) and close the door glass completely, and continue the switch operation for 1 second or more. This will reset the position of the door glass, and the initialization is completed.
NOTE:

- The initialization of the passenger's seat is performed with the passenger's side switch.
- Before completion of the initialization, the window of the passenger's seat is not operable through the power window regulator master switch ASSY.
- Until the initialization is complete, AUTO UP, DOWN or reverse operation is disabled.

## Parts location



## List of diagnostic codes

| Diagnostic codes | Diagnostic items | Reference pages |
|---|---|---|
| B2311 | [Driver's seat pulse failure abnormal detection] | WS - 25 |

| Diagnostic codes | Diagnostic items | Reference pages |
|---|---|---|
| B2312 | [Driver's seat SW ON stuck] | WS - 32 |
| B2313 | [Driver's seat glass position, window slide characteristic data not recorded status detection] | WS - 35 |
| B2314 | [Passenger's seat pulse failure abnormal detection] | WS - 25 |
| B2315 | [Passenger's seat SW ON stuck] | WS - 32 |
| B2316 | [Passenger's seat glass position, window slide characteristic data not recorded status detection] | WS - 35 |

## Symptom table

### Manual operation

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Power windows of all seats are inoperable. | Vehicle wiring harness and connector | - |
| | Main body ECM (Network gateway computer) | WS - 14 |
| Cannot operate the window from driver's seat regulator switch | Refer to trouble shooting flowchart "Cannot operate the window from driver's seat regulator switch". | WS - 36 |
| Cannot operate the window from passenger's seat regulator switch | Refer to trouble shooting flowchart "Cannot operate the window from each seat regulator switch". | WS - 39 |

### AUTO operation

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Driver's door glass AUTO UP / DOWN function does not work (manual operation works) | Refer to troubleshooting flowchart "Driver's door glass AUTO UP/ DOWN function does not work (manual operation works)". | WS - 42 |
| Passenger's door glass AUTO UP / DOWN function does not work (manual operation works) | Refer to troubleshooting flowchart "Passenger's door glass AUTO UP/ DOWN function does not work (manual operation works)". | WS - 43 |

### Remote operation

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Cannot remotely control other doors from the master switch (can be operated by switching on the passenger's door). | Function inspection of window lock switch | WS - 3 |
| | Refer to trouble shooting flowchart "Cannot remotely control other doors from the master switch". | WS - 46 |

### Operating condition

| Symptoms | Inspection items | Reference pages |
|---|---|---|
| Door glass does not fully close in AUTO UP operation (auto-reverse function is activated). | Refer to troubleshooting flowchart "Door glass does not fully close in AUTO UP operation (auto-reverse function is activated)". | WS - 45 |
| Door glass does not fully open in AUTO DOWN operation (the glass is left). | Refer to troubleshooting flowchart "Door glass does not fully close in AUTO UP operation (auto-reverse function is activated)". | WS - 45 |
| Even though the conditions are not met, door glass can be operated after key OFF. | Refer to troubleshooting flowchart "Even though the conditions are not met, door glass can be operated after key OFF". | WS - 47 |
| Index function does not operate. (Driver's seat and passenger's seat) | Refer to troubleshooting flowchart "Index function does not operate. (Driver's seat and passenger's seat)". | WS - 49 |

WS

## How to troubleshoot

| | |
|---|---|
| 1 | Bring in the car |

Next

| | |
|---|---|
| 2 | Interview and phenomenon check |

(1) Perform the interview and phenomenon check (Refer to WS - 12)

Next

| | |
|---|---|
| 3 | Basic inspection |

(1) Inspect the battery voltage.

Voltage: 11 to 14 V

(2) According to the parts arrangement drawing and/or circuit figure, check the blown fuse, broken wire harness, short circuit, and/or improper connection that can be inspected visually.

NOTE:

If battery voltage is 11 V or less, recharge or replace the battery before starting the diagnostic program.

Next

| 4 | Communication function inspection of large-scale multiplex communication system for vehicle body [LIN] |
|---|---|

(1) Use SSM4 to check the communication functions of the large-scale multiplex communication system for vehicle body [LIN] to confirm the communication system has no fault. (Refer to NW - 7)

NOTE:

For output diagnostic code, see the list of diagnostic codes

Result

| Result | Go to |
|---|---|
| Communication function of large-scale multiplex communication system for vehicle body [LIN] is normal. [No diagnostic code output (LIN communication fault, ECM communication fault/communication breakdown)] | A |
| Communication function of large-scale multiplex communication system for vehicle body [LIN] has fault. [DTC (LIN communication error, ECM communication error, or lost communication) is output] | B |

B → Go to "Large-scale multiplex communication system for vehicle body [LIN]" (Refer to NW - 4)

A

| 5 | DTC check |
|---|---|

(1) Using SSM4, check that there is no DTC displayed. (Refer to WS - 12)

NOTE:

For output diagnostic code, see the list of diagnostic codes, WS - 7.

Result

| Result | Go to |
|---|---|
| No DTC output | A |
| DTC output B2311 and B2314. | B |
| DTC output B2312 and B2315. | C |
| DTC output B2313 and B2316. | D |

B → Go to the troubleshooting flowchart for DTC B2311 and B2314 (Refer to WS - 25).

C → Go to the troubleshooting flowchart for DTC B2312 and B2315 (Refer to WS - 32).

D → Go to the troubleshooting flowchart for DTC B2313 and B2316 (Refer to WS - 35).

Trouble symptom

- ☐ Power window (each door glass) cannot be operated by each door switch.
  - ☐ Driver's seat
  - ☐ Passenger's seat
- ☐ AUTO UP/DOWN of door glass cannot be operated. (Manual operation possible)
  - ☐ Driver's seat
  - ☐ Passenger's seat
- ☐ Remote operation for each seat through master switch cannot be operated. (can be operated through each seat switch)
- ☐ Can be operated after key OFF, even if operating conditions are not met.
- ☐ Door glass does not close completely in AUTO UP operation. (auto-reverse function operates)
- ☐ Index function does not operate.
- ☐ Others

|---|---|
| Conditions for normal recovery | ☐ When IG ON ☐ When engine starts ☐ When ( ) switch is operated |
| Condition when trouble occurred | ☐ IG OFF → ON ☐ When ( ) switch is operated ☐ Others ( ) |

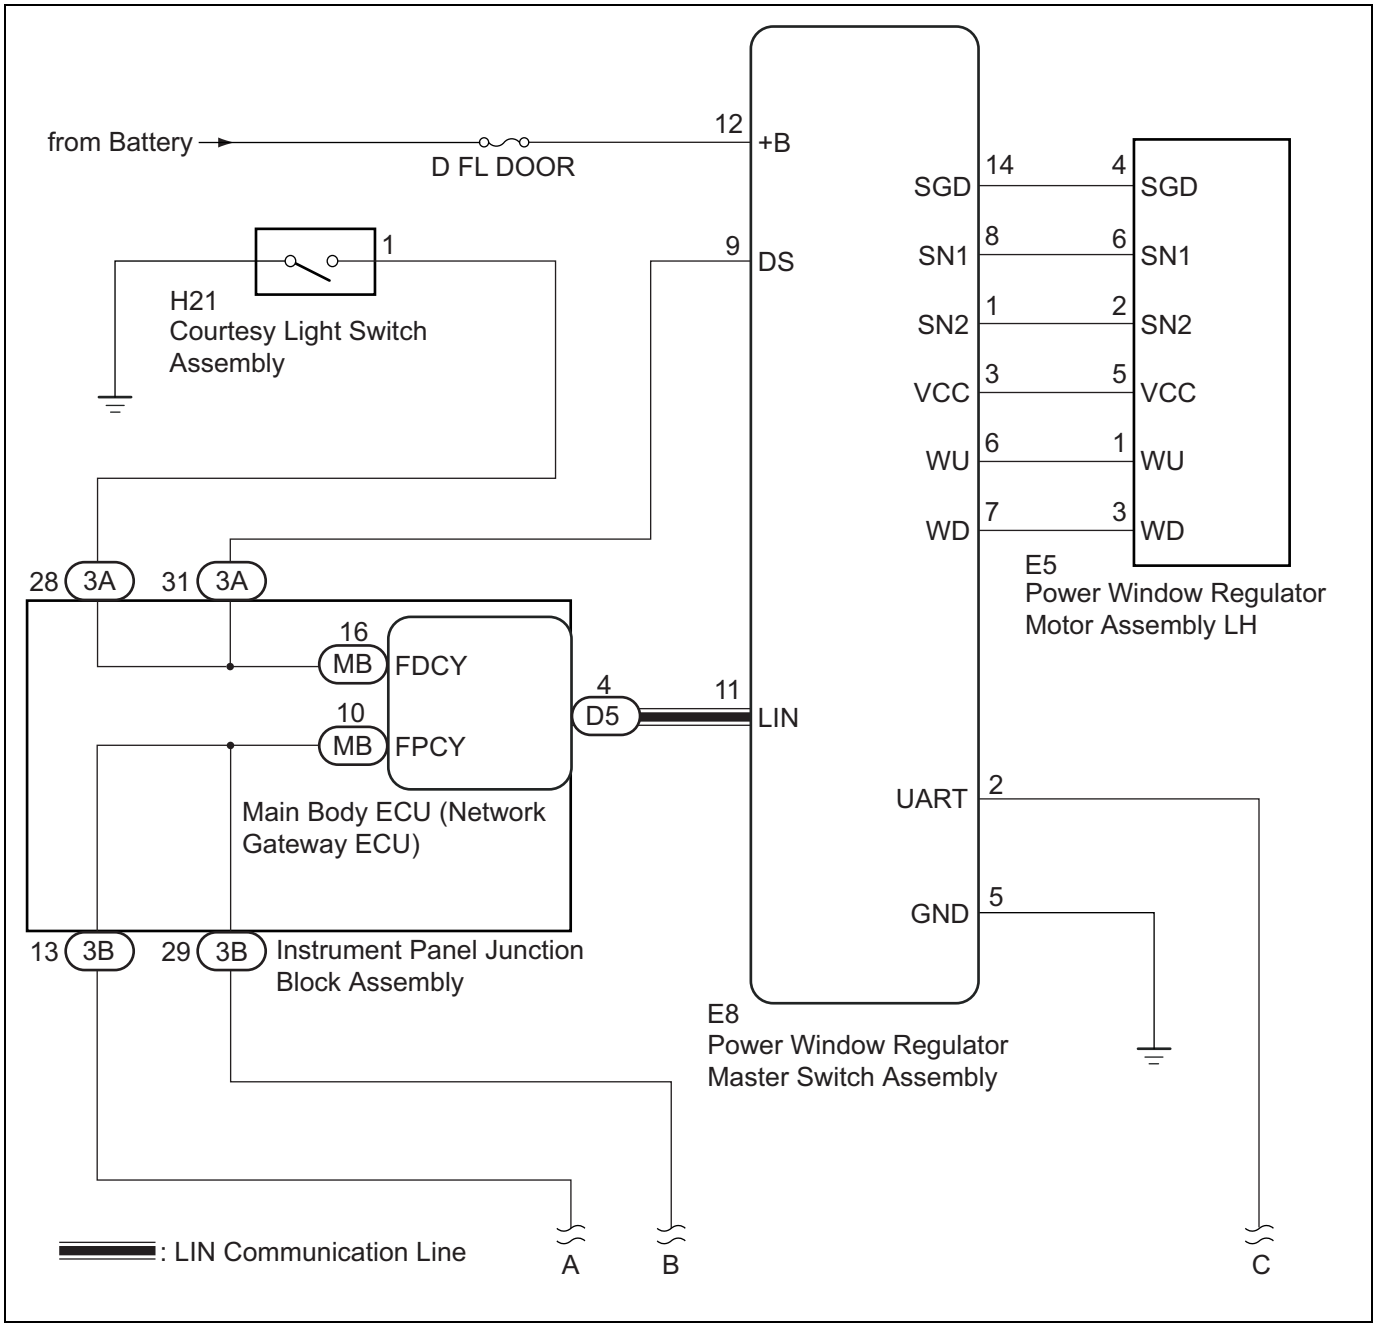
GW-01263

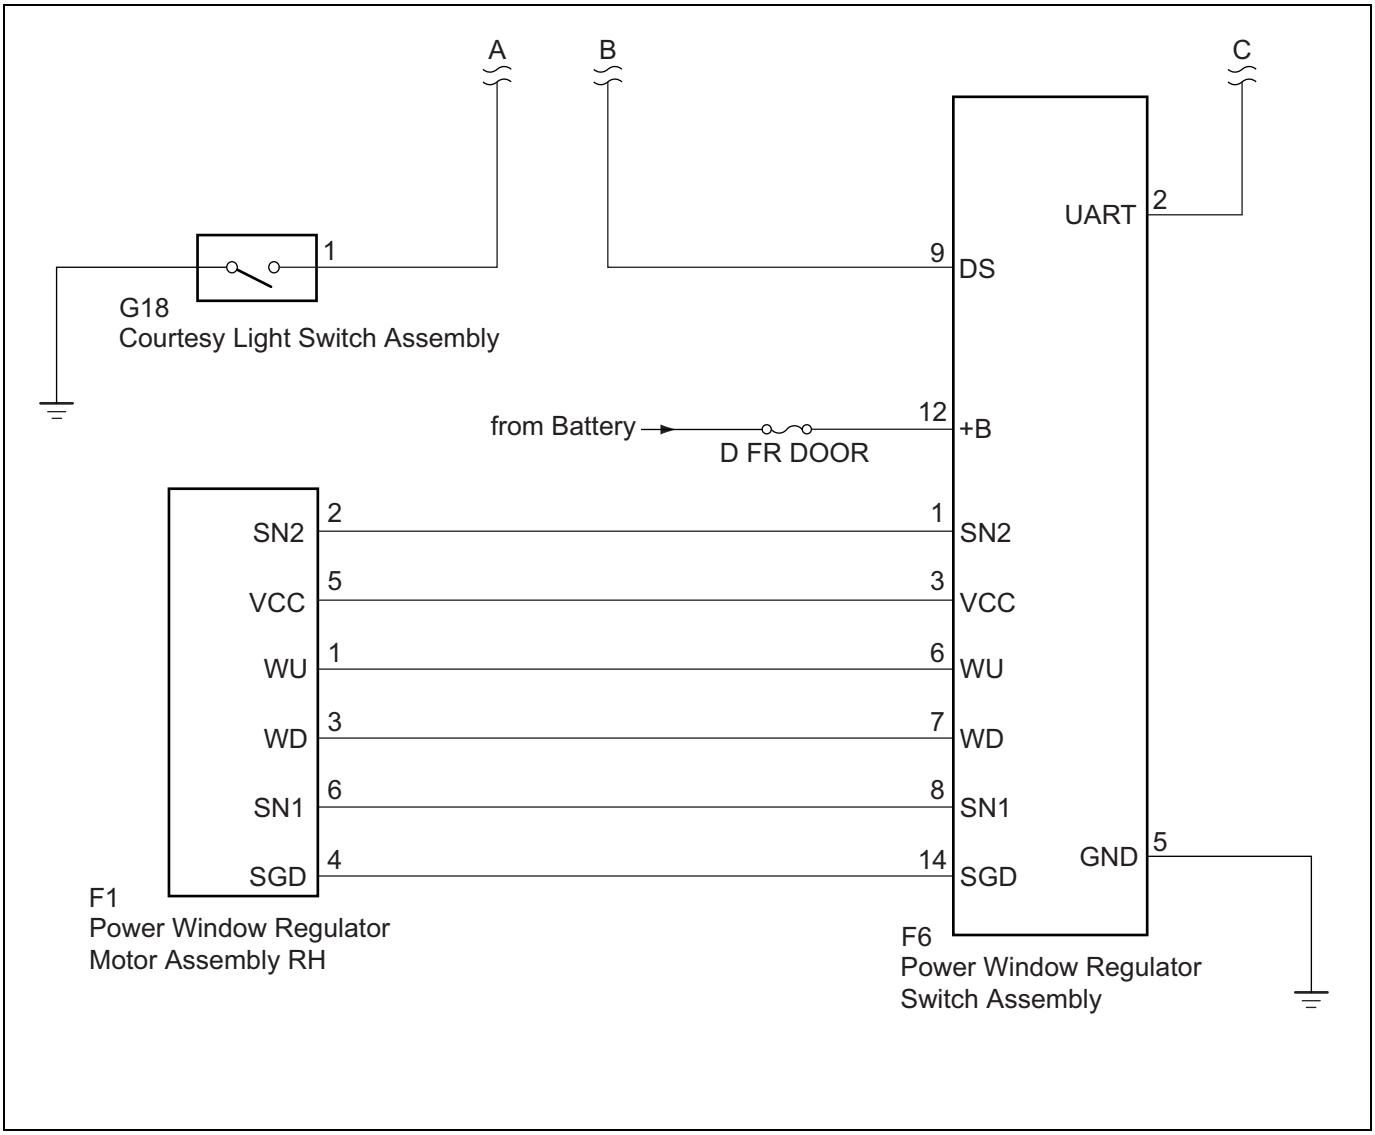
## Checking / clearing diagnostic codes

1. Preparation before inspection
   (1) Turn the ignition switch to OFF.

2. Checking diagnostic codes (reading with SSM4)
   (1) With IG OFF, connect SSM4 to DLC3.
   (2) Turn IG to ON, and turn on the SSM4.
   (3) Follow the SSM4 display and operate, and select [Each System] →[Power Window] →[DTC].
   (4) Check the diagnostic codes.
3. Clearing diagnostic code records (Cleared by the SSM4)
   (1) With IG OFF, connect SSM4 to DLC3.
   (2) Turn IG to ON, and turn on the SSM4.
   (3) Follow the SSM4 display and operate, and select [Each System] →[Power Window] →[Clear Memory] and delete DTC.
   (4) Inspect the diagnosis codes again, and check that the malfunction code was cleared, and that the normal code is displayed.
   CAUTION:
   - If you can't clear it, start over from IG OFF status.
   - Do not use the SSM4 to delete diagnostic codes until the cause of the trouble has been identified.

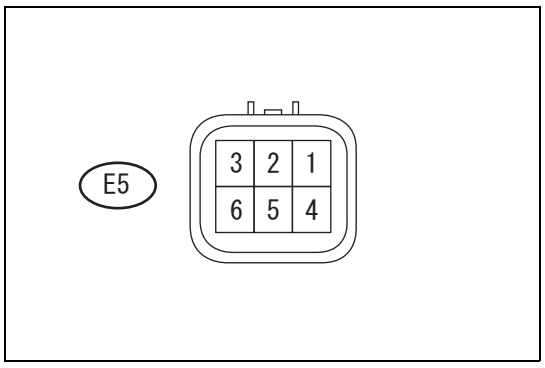
## Circuit figure





## ECM terminal arrangement

WS



1. Power window regulator motor ASSY LH (driver's seat)
   (1) Disconnect the connector E5 of power window regulator motor ASSY LH (driver's seat).
   (2) Measure the resistance and voltage between terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E5-5 (VCC) ←→E5-4 (SGD) | Always | 11 to 14 V |
| E5-4 (SGD) ←→Chassis ground | Always | Less than 1 Ω |

NOTE:
If it is outside the standard values, the vehicle is defective.

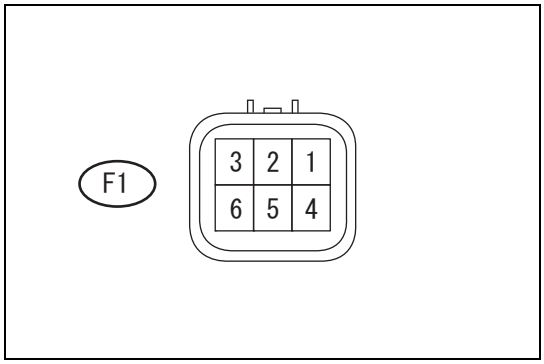
(3) Connect the connector E5 of power window regulator motor ASSY LH (driver's seat).

(4) Measure the voltage between the terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E5-1 (WU) ←→E5-4 (SGD) | IG ON, master switch OFF→UP (manual operation) | 11 to 14 V →Less than 1 V |
| E5-1 (WU) ←→E5-4 (SGD) | IG ON, driver's seat door glass full open→master switch UP (automatic operation)→door glass fully closed | 11 to 14 V→less than 1 V→11 to 14 V |
| E5-3 (WD) ←→E5-4 (SGD) | IG ON, master switch OFF→DOWN (manual operation) | 11 to 14 V →Less than 1 V |
| E5-3 (WD) ←→E5-4 (SGD) | IG ON, driver's seat door glass fully closed→master switch DOWN (automatic operation)→door glass full open | 11 to 14 V→less than 1 V→11 to 14 V |

NOTE:
If it is not within the standard, failure exists in power window regulator motor ASSY LH (driver's seat).



2. Power window regulator motor ASSY RH (passenger's seat)
   (1) Disconnect the connector F1 of power window regulator motor ASSY RH (passenger's seat).
   (2) Measure the resistance and voltage between terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| F1-5 (VCC) ←→F1-4 (SGD) | Always | 11 to 14 V |
| F1-4 (SGD) ←→Chassis ground | Always | Less than 1 Ω |

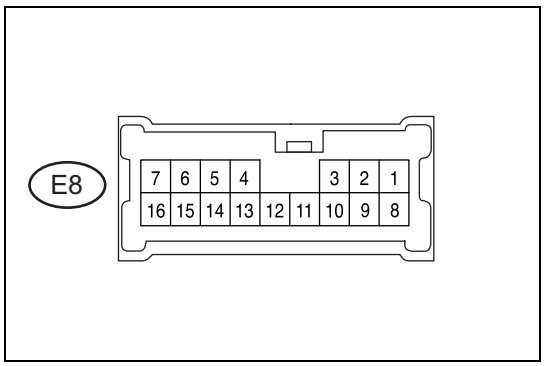
NOTE:
If it is outside the standard values, the vehicle is defective.

(3) Connect the connector F1 of power window regulator motor ASSY RH (passenger's seat).
(4) Measure the voltage between the terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| F1-1 (WU) ←→F1-4 (SGD) | IG ON, regulator switch OFF→UP (manual operation) | 11 to 14 V →Less than 1 V |
| F1-1 (WU) ←→F1-4 (SGD) | IG ON, passenger's seat door glass full open→regulator switch UP (automatic operation)→door glass fully closed | 11 to 14 V→less than 1 V→11 to 14 V |
| F1-3 (WD) ←→F1-4 (SGD) | IG ON, regulator switch OFF→DOWN (manual operation) | 11 to 14 V →Less than 1 V |
| F1-3 (WD) ←→F1-4 (SGD) | IG ON, passenger's seat door glass fully closed→regulator switch DOWN (automatic operation)→door glass full open | 11 to 14 V→less than 1 V→11 to 14 V |

NOTE:
If it is not within the standard, failure exists in power window regulator motor ASSY RH (passenger's seat).



3. Power window regulator master switch ASSY
   (1) Disconnect the connector E8 of power window regulator master switch ASSY.
   (2) Measure the resistance and voltage between terminals.

WS

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E8-12 (+B) ←→E8-5 (GND) | Always | 11 to 14 V |
| E8-5 (GND) ←→chassis ground | Always | Less than 1 Ω |

NOTE:
If it is outside the standard values, the vehicle is defective.

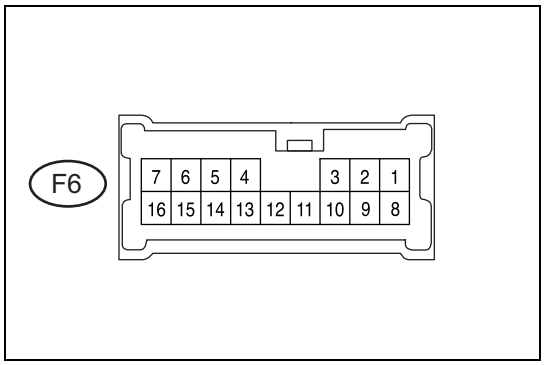
(3) Connect the connector E8 of power window regulator master switch ASSY.

(4) Measure the voltage between the terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E8-6 (WU) ←→E8-5 (GND) | IG ON, master switch OFF→UP (manual operation) | 11 to 14 V →Less than 1 V |
| E8-6 (WU) ←→E8-5 (GND) | IG ON, driver's seat door glass full open→master switch UP (automatic operation)→door glass fully closed | 11 to 14 V→less than 1 V→11 to 14 V |
| E8-7 (WD) ←→E8-5 (GND) | IG ON, master switch OFF→DOWN (manual operation) | 11 to 14 V →Less than 1 V |
| E8-7 (WD) ←→E8-5 (GND) | IG ON, driver's seat door glass fully closed→master switch DOWN (automatic operation)→door glass full open | 11 to 14 V→less than 1 V→11 to 14 V |

NOTE:
If it is not within the standard, failure exists in power window regulator master switch ASSY.



4. Power window regulator switch ASSY

(1) Disconnect the connector F6 of power window regulator switch ASSY.

(2) Measure the resistance and voltage between terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| F6-12 (+B) ←→F6-5 (GND) | Always | 11 to 14 V |
| F6-5 (GND) ←→chassis ground | Always | Less than 1 Ω |

NOTE:
If it is outside the standard values, the vehicle is defective.

(3) Connect the connector F6 of power window regulator switch ASSY.

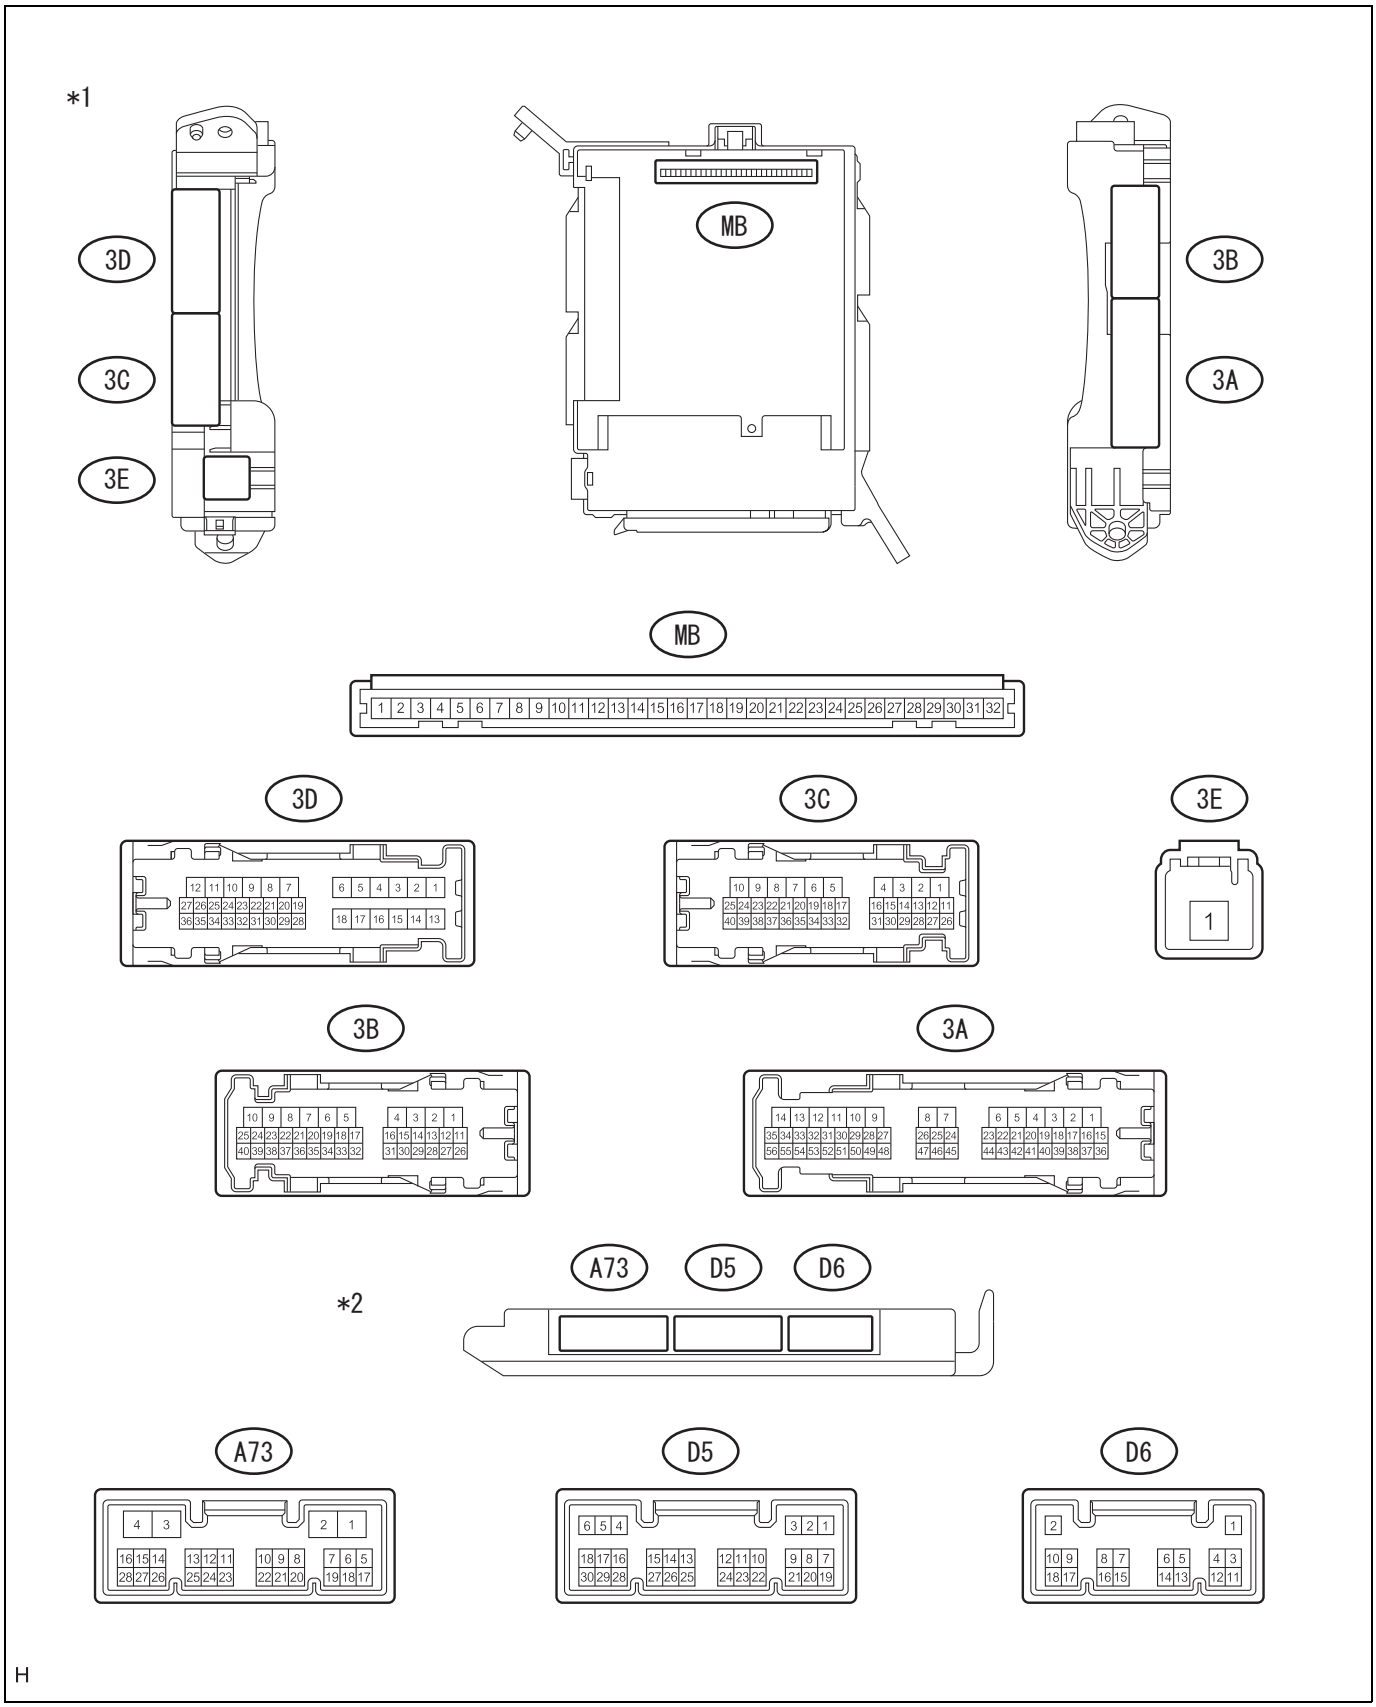
(4) Measure the voltage between the terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| F6-6 (WU) ←→F6-5 (GND) | IG ON, passenger's switch OFF→UP (manual operation) | 11 to 14 V →Less than 1 V |
| F6-6 (WU) ←→F6-5 (GND) | IG ON, passenger's seat door glass full open→passenger's seat switch UP (automatic operation)→door glass fully closed | 11 to 14 V→less than 1 V→11 to 14 V |
| F6-7 (WD) ←→F6-5 (GND) | IG ON, passenger's switch OFF→DOWN (manual operation) | 11 to 14 V →Less than 1 V |
| F6-7 (WD) ←→F6-5 (GND) | IG ON, passenger's seat door glass fully closed→passenger's seat switch DOWN (automatic operation)→door glass full open | 11 to 14 V→less than 1 V→11 to 14 V |

NOTE:
If it is not within the standard, failure exists in power window regulator switch ASSY.

5. Instrument panel junction block ASSY, main body ECM (Network gateway computer)



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (Network gateway computer) |

(1) Inspection of the instrument panel junction block ASSY and the main body ECM (network gateway computer)
(a)Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.

(b)Measure the voltage and resistance between terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| MB-1 (BECU) ←→chassis ground | Always | 11 to 14 V |
| MB-8 (IG) ←→chassis ground | IG OFF →IG ON | Less than 1 V →11 to 14 V |
| MB-9 (ACC) ←→chassis ground | IG OFF →ACC ON | Less than 1 V →11 to 14 V |
| MB-11 (GND) ←→chassis ground | Always | Less than 1 Ω |
| D5-22 (ACC) ←→chassis ground* | IG OFF →ACC ON | Less than 1 V →11 to 14 V |

*: With smart entry & start system

NOTE:

If it is outside the standard values, the vehicle is defective.

(c)Install the main body ECM (network gateway computer) on the instrument panel junction block ASSY.

(d)Measure the voltage between the terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D5-4 ←→chassis ground | IG ON | Pulse generation |
| D5-5 (FRCL) ←→chassis ground | With driver's door closed →opened | 11 to 14 V →Less than 1 V |
| D5-6 (FLCL) ←→chassis ground | With passenger's door closed →opened | 11 to 14 V →Less than 1 V |

NOTE:

If it is outside the standard values, the main body ECM (network gateway computer) is defective.

## Data monitor / active test

1. Inspection with SSM4

(1) Data monitor

(a)Use the SSM4 and data monitor to determine functionality and narrow down the defective part.

SSM4 screen: [Each System] →[Power Window] →[Data monitor]

## Failsafe list

1. Power window fail safe

NOTE:

If any malfunction occurs on the pulse sensor in the power window regulator motor ASSY LH (driver's seat) and the power window regulator motor ASSY RH (passenger's seat), the fail safe function is triggered.

(1) If any malfunction occurs on the pulse sensor for the auto-reverse function trigger, or any irregularity exists on window position or learned value, the following power window operations are prohibited.

Power window regulator master switch ASSY

| Power window operation | Conditions | | |
|---|---|---|---|
| | IG ON | IG OFF<br>Under permission of after-key-OFF operation | IG OFF<br>Under prohibition of after-key-OFF operation |
| Manual UP (operating switch of own seat) | × | × | - |
| Manual DOWN (operating switch of own seat) | 0 | × | - |
| During AUTO UP HOLD (operating switch of own seat) | 0* | × | - |
| AUTO UP (operating switch of own seat) | × | × | - |
| AUTO DOWN (operating switch of own seat) | × | × | - |
| Manual UP (remote operation) | × | × | - |
| Manual DOWN (remote operation) | × | × | - |
| During AUTO UP HOLD (remote operation) | × | × | - |
| AUTO UP (remote operation) | × | × | - |
| AUTO DOWN (remote operation) | × | × | - |

Power window regulator switch ASSY

| Power window operation | Conditions | | |
|---|---|---|---|
| | IG ON | IG OFF<br>Under permission of after-key-OFF operation | IG OFF<br>Under prohibition of after-key-OFF operation |
| Manual UP (operating switch of own seat) | × | × | - |
| Manual DOWN (operating switch of own seat) | 0 | × | - |
| During AUTO UP HOLD (operating switch of own seat) | 0* | × | - |
| AUTO UP (operating switch of own seat) | × | × | - |
| AUTO DOWN (operating switch of own seat) | × | × | - |

NOTE:

0: Operation permitted

×: Operation prohibited

*: Operating manual UP with AUTO UP HOLD (auto-reverse function is not activated)

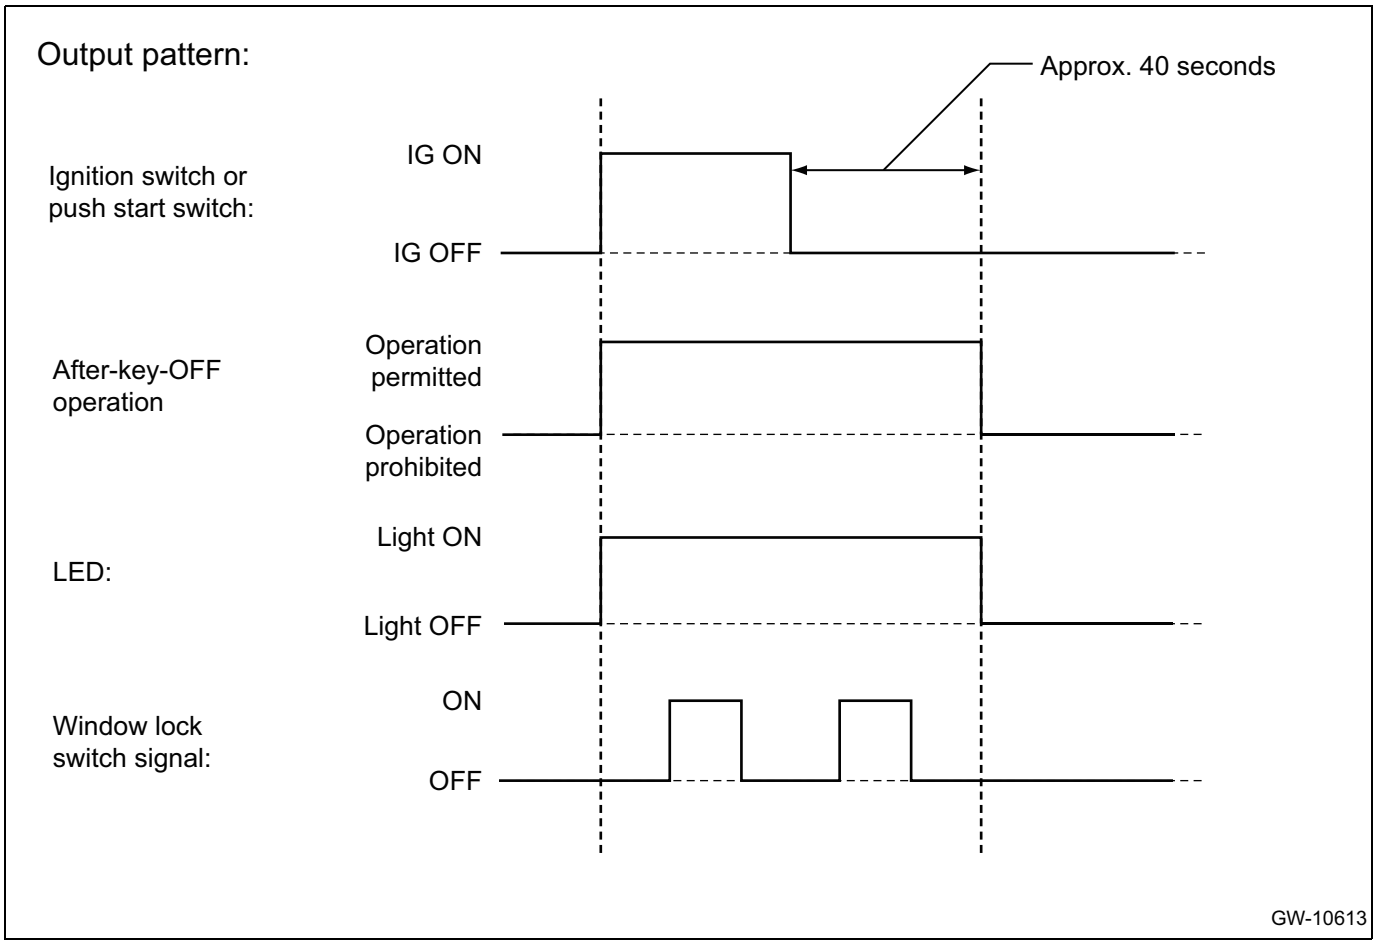
If pulse sensor is normal, fully close the window with manual operation (AUTO UP HOLD), and keep this operation for 1 second or more. This will cancel the fail safe and enable the AUTO operation.

(a)SW knob indicator control

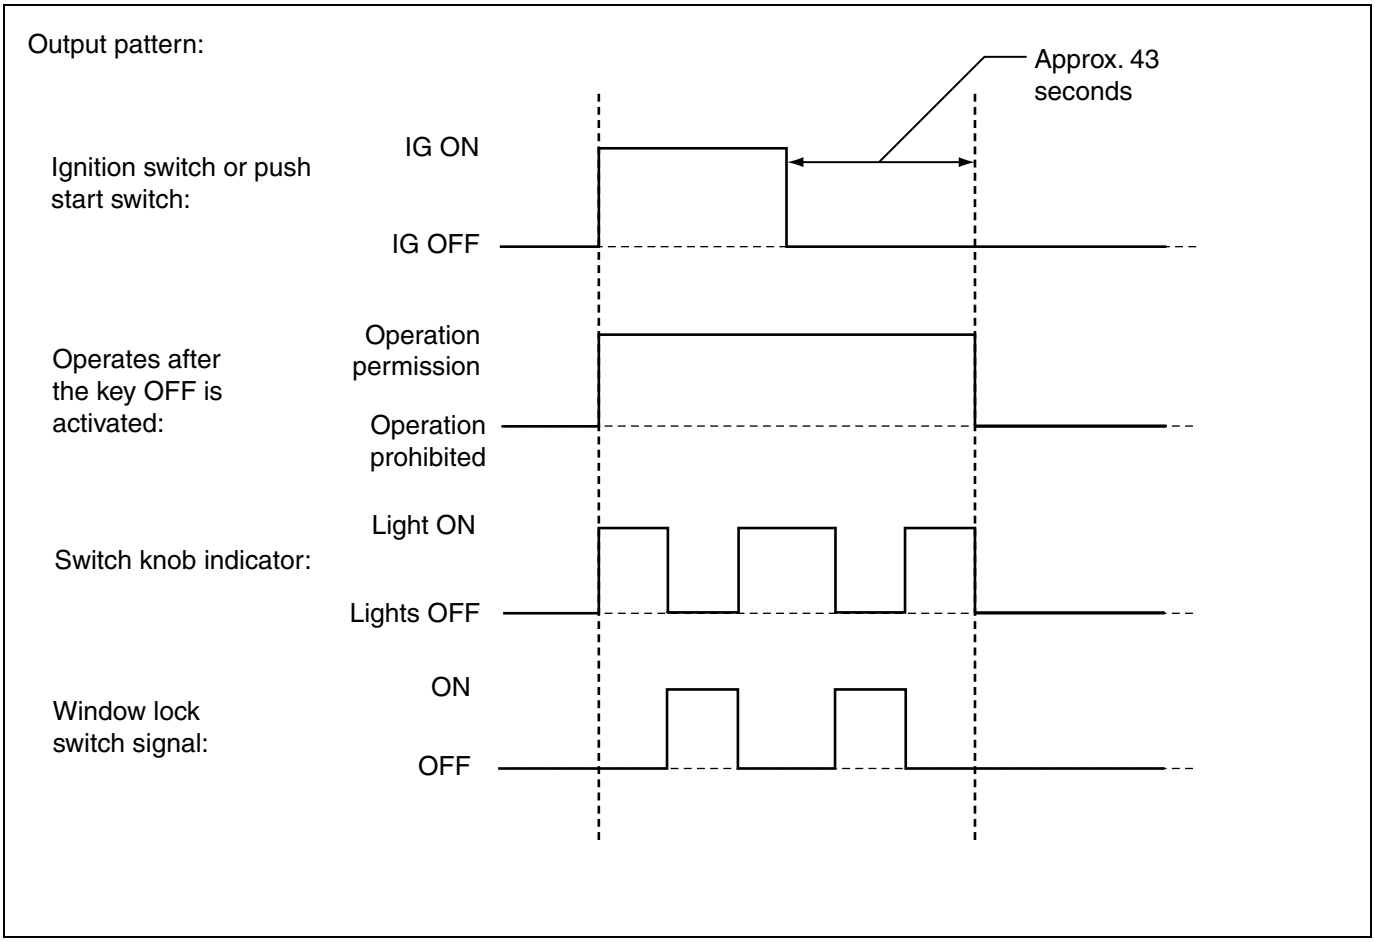
NOTE:

In normal operation (the fail safe is not active), knob indicator illuminates as shown in the diagram.

1. Driver's seat



2. Passenger's seat



(2) Initial failure

NOTE:

If window position or initialization finished status is failed to be read normally from the EEPROM, the following power window operations are prohibited.

Power window regulator master switch ASSY

| Power window operation | Conditions | | |
|---|---|---|---|
| | IG ON | IG OFF<br>Under permission of after-key-OFF operation | IG OFF<br>Under prohibition of after-key-OFF operation |
| Manual UP (operating switch of own seat) | × | × | - |
| Manual DOWN (operating switch of own seat) | 0 | × | - |
| During AUTO UP HOLD (operating switch of own seat) | 0* | × | - |
| AUTO UP (operating switch of own seat) | × | × | - |
| AUTO DOWN (operating switch of own seat) | × | × | - |
| Manual UP (remote operation) | × | × | - |
| Manual DOWN (remote operation) | × | × | - |
| During AUTO UP HOLD (remote operation) | × | × | - |
| AUTO UP (remote operation) | × | × | - |
| AUTO DOWN (remote operation) | × | × | - |

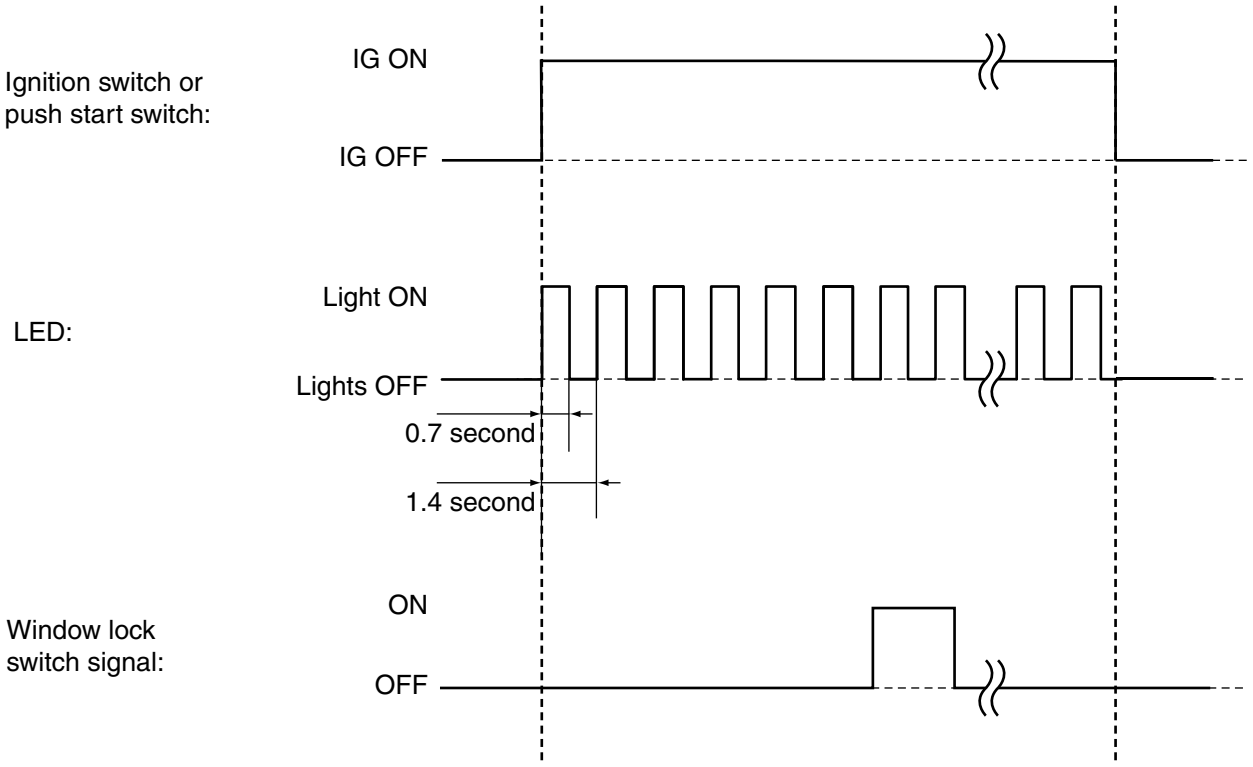
Power window regulator switch ASSY

| Power window operation | Conditions | | |
|---|---|---|---|
| | IG ON | IG OFF<br>Under permission of after-key-OFF operation | IG OFF<br>Under prohibition of after-key-OFF operation |
| Manual UP (operating switch of own seat) | × | × | - |
| Manual DOWN (operating switch of own seat) | 0 | × | - |

| Power window operation | Conditions | | |
|---|---|---|---|
| | IG ON | IG OFF<br>Under permission of after-key-OFF operation | IG OFF<br>Under prohibition of after-key-OFF operation |
| During AUTO UP HOLD (operating switch of own seat) | 0* | × | - |
| AUTO UP (operating switch of own seat) | × | × | - |
| AUTO DOWN (operating switch of own seat) | × | × | - |

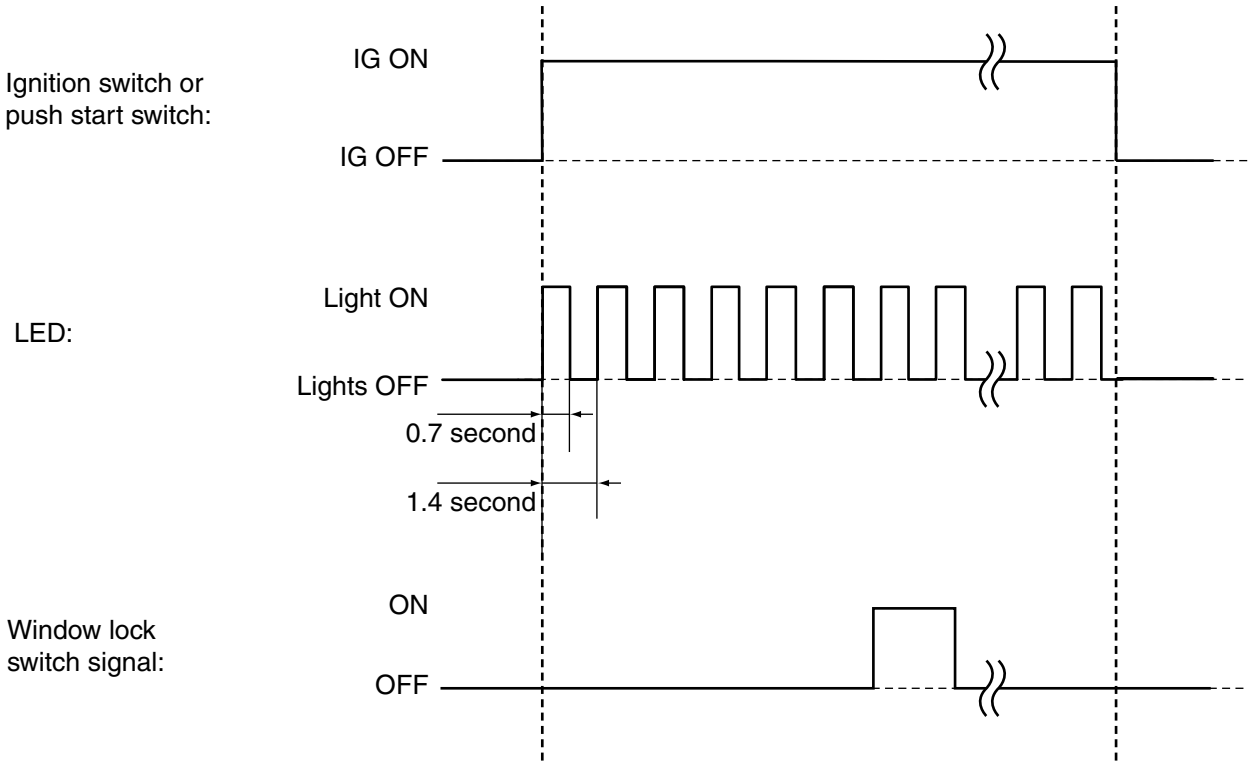
NOTE:
0: Operation permitted
×: Operation prohibited
*: Operating manual UP with AUTO UP HOLD (auto-reverse function is not activated)
(a)SW knob indicator control
NOTE:
During the initialization, if fail safe mode is activated because window position or initialization finished status is failed to be read normally from the EEPROM, SW knob indicator illuminates as shown in the diagram.
1. Driver's seat:

Output pattern:



NOTE:
When LIN communication is failed, the indicator blinks in a pattern of 1.4 seconds ON/1.4 seconds OFF.
When LIN failure and other failure occurs simultaneously, the pattern of 0.7 seconds ON/0.7 seconds OFF is performed.
2. Passenger's seat

Output pattern:



(3) If LIN communication has any abnormality (communication fail), the power window operates as follows.

Power window regulator master switch ASSY

| Power window operation | IG ON |
|---|---|
| Manual UP | 0* |
| Manual DOWN | 0 |
| During AUTO UP HOLD | 0* |
| AUTO UP | 0* |
| AUTO DOWN | 0 |

WS

Power window regulator switch ASSY

| Power window operation | IG ON |
|---|---|
| Manual UP | 0* |
| Manual DOWN | 0 |
| During AUTO UP HOLD | 0* |
| AUTO UP | 0* |
| AUTO DOWN | 0 |

NOTE:
0: Operation permitted
×: Operation prohibited
*: With auto-reverse function enabled
Does not operate remotely.

(4) If LIN communication abnormality and pulse irregularity are detected simultaneously, the power window operates as follows.

Power window regulator master switch ASSY

| Power window operation | Always |
|---|---|
| Manual UP | × |
| Manual DOWN | 0 |
| During AUTO UP HOLD | 0*1 |

| Power window operation | Always |
|---|---|
| AUTO UP | × |
| AUTO DOWN | × |

Power window regulator switch ASSY

| Power window operation | Always |
|---|---|
| Manual UP | × |
| Manual DOWN | 0 |
| During AUTO UP HOLD | 0*1 |
| AUTO UP | × |
| AUTO DOWN | × |

NOTE:
0: Operation permitted
×: Operation prohibited
*1: Operating manual UP with AUTO UP HOLD (auto-reverse function is not activated)
Own seat's SW operation: Because LIN communication is in failure, the status of the IG signal is unknown, therefore UP operation without auto-reverse function control is prohibited.
Remote SW operation: Inoperable because LIN communication is failed.

(5) If LIN communication abnormality and opening direction dead band deviation or LIN communication and initial failure are detected simultaneously, the power window operates as follows.

Power window regulator master switch ASSY

| Power window operation | Always |
|---|---|
| Manual UP | × |
| Manual DOWN | 0 |
| During AUTO UP HOLD | 0*1 |
| AUTO UP | × |
| AUTO DOWN | × |

NOTE:
0: Operation permitted
×: Operation prohibited
*1: Operating manual UP with AUTO UP HOLD (auto-reverse function is not activated)
Remote control switch operation: Inoperable because LIN communication is failed.

|---|---|---|

| DTC | B2314 | Passenger's seat pulse failure abnormal detection |
|---|---|---|

WS

Circuit description
Operating the power window regulator master switch ASSY and the power window regulator switch ASSY drives the power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat). The power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat) have motor function and regulator function.
B2311 or B2314 is generated when any failure is detected inside the power window regulator motor ASSY LH (driver's seat), the power window regulator motor ASSY RH (passenger's seat), the power window regulator master switch ASSY, or power window regulator switch ASSY, as well as when open/short circuit in the wire harness and/or improper connection of connector exists between the power window regulator switch and the power window regulator motor.
CAUTION:
- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- Before performing the troubleshooting, check the fuse of this circuit.

| DTC No. | Detecting conditions | Inspection parts |

Replacement of the power window regulator (passenger's seat) (Refer to WS - 58)

| DTC | B2312 | Driver's seat SW ON stuck |
|---|---|---|

| DTC | B2315 | Passenger's seat SW ON stuck |
|---|---|---|

Circuit description

Operating the power window regulator master switch ASSY and the power window regulator switch ASSY drives the power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat). The power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat) have motor function and regulator function.

B2312 and B2315 is generated when ECM determines that the power window regulator master switch ASSY or power window regulator switch ASSY is stuck continuously.

CAUTION:

- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
  *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
  *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
  *3: The failure of the door glass or regulator may prevent full closing of the door glass.

| DTC No. | Detecting conditions | Inspection parts |
|---|---|---|
| B2312 | Power window regulator master switch ASSY is stuck (When the switch-on status has been detected for approx. 20 seconds.). | Power window regulator master switch ASSY |
| B2315 | Power window regulator switch ASSY is stuck (When the switch-on status has been detected for approx. 20 seconds.). | • Power window regulator master switch ASSY<br>• Power window regulator switch ASSY<br>• Wiring harness or connector |

**2 Reading of SSM4 data**

(1) Using the SSM4, follow the display and read the [Data monitor]. (Refer to WS - 18)
Criteria: The normal value on the [Data monitor] is displayed properly.

SSM4 screen: [Each System] →[Power Window] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Passenger seat AUTO SW state] | Operation signal of switch AUTO for the passenger's seat/ Display range: ON-OFF | ON: AUTO switch is in operation. OFF: Neutral | - |
| [Passenger seat MANUAL UP SW state] | Operation signal of switch UP for the passenger's seat/ Display range: ON-OFF | ON: UP switch is in operation. OFF: Neutral | - |
| [Passenger seat MANUAL DOWN SW state] | Operation signal of switch DOWN for the passenger's seat/ Display range: ON-OFF | ON: DOWN switch is in operation. OFF: Neutral | - |

NG → Replacement of the power window regulator switch ASSY (Refer to WS - 54)

OK →

**3 Inspection of the wire harness and connector (power window regulator master switch ASSY - power window regulator switch ASSY)**

(1) Disconnect the connector E8 of power window regulator master switch ASSY.
(2) Disconnect the connector F6 of power window regulator switch ASSY LH.
(3) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E8-2 (UART) - F6-2 (UART) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E8-2 (UART) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the power window regulator master switch ASSY (Refer to WS - 54)

| DTC | B2313 | Driver's seat glass position, window slide characteristic data not recorded status detection |
|---|---|---|

| DTC | B2316 | Passenger's seat glass position, window slide characteristic data not recorded status detection |
|---|---|---|

Circuit description

Operating the power window regulator master switch ASSY and the power window regulator switch ASSY drives the power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat). The power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat) have motor function and regulator function.

B2313 or B2316 is generated when the power window regulator motor ASSY LH (driver's seat) or the power window regulator motor ASSY RH (passenger's seat) has not been initialized.

| DTC No. | Detecting conditions | Inspection parts |
|---|---|---|
| B2313 | Power window regulator master switch ASSY LH (driver's seat) has not been initialized. | • Power window regulator master switch ASSY LH (driver's seat)<br>• Power window regulator master switch ASSY LH (driver's seat) initialization malfunction |
| B2316 | Power window regulator switch ASSY RH (passenger's seat) has not been initialized. | • Power window regulator switch ASSY RH (passenger's seat)<br>• Power window regulator switch ASSY RH (passenger's seat) initialization malfunction |

Inspection steps

| 1 | DTC check |
|---|---|

(1) Using SSM4 and following the screen, check the diagnostic codes. (Refer to WS - 12)

Criteria: Other DTCs (DTC2311, 2312, 2314, 2315) are not detected.

NG → Perform diagnosis depending on other detected DTCs.

OK

| 2 | Power window system (initialization) |
|---|---|

(1) Perform the initialization of the power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat). (Refer to WS - 5)

Next

| 3 | Clear diagnostic code |
|---|---|

(1) Using SSM4 and following the screen, clear the diagnostic codes. (Refer to WS - 12)

Next

| 4 | DTC check |
|---|---|

(1) Using SSM4 and following the screen, check the diagnostic codes. (Refer to WS - 12)

## Driver's door glass AUTO UP / DOWN function does not work (manual operation works)

Circuit description

If AUTO does not function, the fail safe may be working. Or, not performing the initialization of the power window regulator master switch ASSY LH (driver's seat) after repair also disables AUTO.

CAUTION:

- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
  - *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
  - *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
  - *3: The failure of the door glass or regulator may prevent full closing of the door glass.

NOTE:

If any malfunction occurs on the pulse sensor in the power window regulator motor ASSY LH (driver's seat), the fail safe function is triggered. When fail safe is active, remote operation from the passenger's seat and AUTO operation are disabled. (During AUTO UP HOLD operation, only manual UP and manual DOWN operations are possible).

WS

Inspection steps

## Passenger's door glass AUTO UP / DOWN function does not work (manual operation works)

Circuit description

If AUTO does not function, the fail safe may be working. Or, not performing the initialization of the power window regulator switch ASSY RH (passenger's seat) after repair also disables AUTO.

CAUTION:

- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
  *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
  *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
  *3: The failure of the door glass or regulator may prevent full closing of the door glass.

NOTE:

If any malfunction occurs on the pulse sensor in the power window regulator motor ASSY RH (passenger's seat), the fail safe function is triggered. When fail safe is active, AUTO operation is disabled. (During AUTO UP HOLD operation, only manual UP and manual DOWN operations are possible).

## Door glass does not fully close in AUTO UP operation (auto-reverse function is activated)

Circuit description

If the door glass or power window regulator motor does not operate smoothly, auto-reverse function is activated automatically. Consequently, the AUTO UP function cannot fully close the windows.

CAUTION:

- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
  - *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
  - *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
  - *3: The failure of the door glass or regulator may prevent full closing of the door glass.

Inspection steps

| 1 | Power window system (initialization) |
|---|---|

(1) Initialize the power window regulator motor ASSY LH (driver's seat) and power window regulator motor ASSY RH (passenger's seat), and verify normal operation. (Refer to WS - 5)
Criteria: It operates properly.

NG → Go to Step 2.

OK

Complete (due to failed initialization)

| 2 | Installation of door glass slide resistance (driver's door glass) |
|---|---|

(1) Remove the door glass mounting bolts, and check if the door glass can be lifted with hands smoothly without being caught.
NOTE:
- The door glass is not in abnormal contact with the glass run.
- Glass run has no deformation or foreign matter inside.

NG → Install the glass properly (remove foreign matter which causes installation failure, fix the installation, or reinstall)

OK

Replacement of the power window regulator motor ASSY (driver's or passenger's seat) (Refer to WS - 58)

## Cannot remotely control other doors from the master switch (each door can be operated by its door switch)

Circuit description

Power window regulator master switch ASSY transmits the remote control switch signal of the other seat to the passenger's seat power window regulator switch ASSY (When IG is ON). The passenger's seat power window regulator switch ASSY, which receives the signal, operates according to the remote control switch signal of the other seat.

CAUTION:

- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
  *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
  *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
  *3: The failure of the door glass or regulator may prevent full closing of the door glass.

Inspection steps

| 1 | Inspection of power window regulator master switch ASSY (window lock switch) |
|---|---|

(1) Verify when the window lock switch on the power window regulator master switch ASSY is pushed, the power windows for seats other than driver's will be inoperable.
(2) Verify when window lock switch is pushed once more, power window of each seat other than driver's will be operable.
Criteria: Power window of each seat is operable

NG → Replacement of the power window regulator master switch ASSY (Refer to WS - 52)

OK

| 2 | Reading of SSM4 data |
|---|---|

(1) Using the SSM4, follow the display and read the [Data monitor]. (Refer to WS - 18)
Criteria: The normal value on the [Data monitor] is displayed properly.

SSM4 screen: [Each System] →[Power Window] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Remote SW AUTO SW state] | Operational status of switch AUTO for the passenger's seat/ Display range: ON-OFF | ON: AUTO switch is in operation. OFF: Neutral | - |
| [Remote SW MANUAL UP SW state] | Operational status of switch UP for the passenger's seat/ Display range: ON-OFF | ON: UP switch is in operation. OFF: Neutral | - |
| [Remote SW MANUAL DOWN SW state] | Operational status of switch DOWN for the passenger's seat/ Display range: ON-OFF | ON: DOWN switch is in operation. OFF: Neutral | - |

NG → Replacement of the power window regulator master switch ASSY (Refer to WS - 52)

OK

| | |
|---|---|
| 3 | Inspection of the wire harness and connector (power window regulator master switch ASSY - power window regulator switch ASSY) |

(1) Disconnect the connector E8 of power window regulator master switch ASSY.
(2) Disconnect the connector F6 of power window regulator switch ASSY.
(3) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E8-2 (UART) - F6-2 (UART) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| E8-2 (UART) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the power window regulator switch ASSY LH (Refer to WS - 58)

## Even though the conditions are not met, door glass can be operated after key OFF

Circuit description

After IG ON →OFF, if the driver's or passenger's door has not been opened within approx. 45 seconds, the power window regulator master switch ASSY and the power window regulator switch ASSY can operate own seat's door glass (after-key-OFF operation function). After approx. 45 seconds have passed, or when the driver's or passenger's door is opened, the after-key-OFF operation function will be stopped.

CAUTION:

- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
  *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
  *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
  *3: The failure of the door glass or regulator may prevent full closing of the door glass.

Inspection steps

| | |
|---|---|
| 1 | Verification of after-key-OFF operation |

(1) Check the symptom when power window regulator master switch ASSY is operated.

Result

| Result | Go to |
|---|---|
| When the driver's or passenger's door is opened and closed within approx. 45 seconds after IG OFF, operation is possible. | A |
| When approx. 45 seconds have passed after IG OFF, all door glasses can be operated. | B |
| When approx. 45 seconds have passed after IG OFF, the driver's side door glass can be operated. | B |
| When approx. 45 seconds have passed after IG OFF, the passenger's side door glass can be operated. | C |

(2) Check the symptom when power window regulator switch ASSY is operated.

Result

| Result | Go to |
|---|---|
| When the driver's or passenger's door is opened and closed within approx. 45 seconds after IG OFF, operation is possible. | A |
| When approx. 45 seconds have passed after IG OFF, the passenger's side door glass can be operated. | D |

B → Replacement of the power window regulator master switch ASSY (Refer to WS - 52)

C → Go to Step 4.

D → Go to Step 5.

A

| 2 | Reading of SSM4 data |
|---|---|

(1) Using the SSM4, follow the display and read the [Data monitor]. (Refer to WS - 18)

Criteria: The normal value on the [Data monitor] is displayed properly.

SSM4 screen: [Each System] →[Power Window] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Drivers seat Courtesy SW state] | Status of driver's door courtesy lamp switch/ Display range: ON-OFF | ON: Driver's door is opened. OFF: Driver's door is closed. | - |

NG → Inspection of courtesy lamp switch system (Refer to LI - 25)

OK

| 3 | Operation inspection after IG OFF |
|---|---|

(1) After IG OFF, open and close the door, and then check the operation.

Result

| Result | Go to |
|---|---|
| When the driver's door has been opened and closed after IG OFF, operation is possible. | A |

| Result | Go to |
|---|---|
| When the passenger's door has been opened and closed after IG OFF, operation is possible. | B |

A → Replacement of the power window regulator master switch ASSY (Refer to WS - 52)

B → Go to Step 5.

| 4 | Replacement of the power window regulator master switch ASSY |
|---|---|

(1) Replace with the new or normal power window regulator master switch ASSY, and verify normal operation. (Refer to WS - 58)
Criteria: No fault is found.

NG → Replacement of the power window regulator switch ASSY (Refer to WS - 58)

OK

Complete (power window regulator master switch ASSY is failed)

| 5 | Replacement of the power window regulator switch ASSY |
|---|---|

(1) Replace with the new or normal power window regulator switch ASSY, and verify normal operation. (Refer to WS - 58)
Criteria: No fault is found.

NG → Replacement of the power window regulator master switch ASSY (Refer to WS - 58)

OK

Complete (failed power window regulator switch ASSY)

WS

## Index function does not operate (Driver's seat and passenger's seat)

CAUTION:
- When replacing the power window regulator motor ASSY with a new one or reusing its motor, perform the initialization of the power window system. (Refer to WS - 5)
- After replacing door glass and/or weather strip, AUTO UP operation sometimes activates auto-reverse function. In this case, the door glass is fully closed by performing the procedure in the following order (*3). AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →(*1) →AUTO UP HOLD →(the auto-reverse function (glass reverse operation)) →AUTO UP HOLD (*2).
  *1: If DOWN operation, IG OFF & timer operation OFF, and/or index operation is executed between auto-reverse function and AUTO UP HOLD, return to the beginning of the procedure.
  *2: The upper end position of the glass is relearned by this operation (AUTO UP HOLD). (Refer to WS - 5)
  *3: The failure of the door glass or regulator may prevent full closing of the door glass.

Inspection steps
CAUTION:
Before performing the diagnosis, refer to the precautions.

| 1 | Reading SSM4 data |
|---|---|

(1) Using the SSM4, follow the display and read the [Data monitor]. (Refer to WS - 18)
Criteria: The normal value on the [Data monitor] is displayed properly.

SSM4 screen: [Each System] →[Power Window] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Drivers seat Courtesy SW state] | Status of driver's door courtesy lamp switch/ Display range: ON-OFF | ON: Driver's door is opened. OFF: Driver's door is closed. | - |
| [Passenger seat Courtesy SW state] | Status of passenger's door courtesy lamp switch/ Display range: ON-OFF | ON: Passenger's door is opened. OFF: Passenger's door is closed. | - |

NG → Inspection of courtesy lamp switch system (Refer to LI - 25)

OK

| 2 | Reinitialization of the power window master switch/power window switch |
|---|---|

(1) Reinitialize the power window master switch/power window switch.
Criteria: No fault is found.

NG → Go to Step 3.

OK

Complete

| 3 | Reading SSM4 data |
|---|---|

(1) Using the SSM4, follow the display and read the [Data monitor]. (Refer to WS - 18)
(2) When the glass is in top position and the courtesy SW status changes from OFF to ON, check the window position counter.
Criteria: Pulse fluctuates (approx. 30 pulses).

SSM4 screen: [Each System] →[Power Window] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Drivers seat Courtesy SW state] | Status of driver's door courtesy lamp switch/ Display range: ON-OFF | ON: Driver's door is opened. OFF: Driver's door is closed. | - |
| [Passenger seat Courtesy SW state] | Status of passenger's door courtesy lamp switch/ Display range: ON-OFF | ON: Passenger's door is opened. OFF: Passenger's door is closed. | - |

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Drivers seat window position counter] | Position information of driver's door glass<br>Display range: -100 to 700 | - | - |
| [Passenger seat window position counter] | Position information of passenger's door glass/<br>Display range: -100 to 700 | - | - |

NG → Go to Step 5.

OK

**4** Unit inspection of the power window regulator motor ASSY

(1) Remove the power window regulator motor ASSY. (Refer to WS - 58)
(2) Perform unit inspection of the power window regulator motor ASSY.

NG → Replacement of the power window regulator motor ASSY (If the function does not operate after the replacement, replace the power window master switch)

OK

Replacement of the power window regulator (Refer to WS - 58)

**5** Replacement of the power window regulator switch ASSY

(1) Replace with the new or normal power window regulator master switch ASSY, and verify normal operation. (Refer to WS - 58)

Result

| Item | Go to |
|---|---|
| Motor does not operate. | A |
| Motor operates. | B |

B → Complete

A

**6** Unit inspection of power window regulator motor ASSY

(1) Remove the power window regulator motor ASSY. (Refer to WS - 58)
(2) Perform unit inspection of the power window regulator motor ASSY.

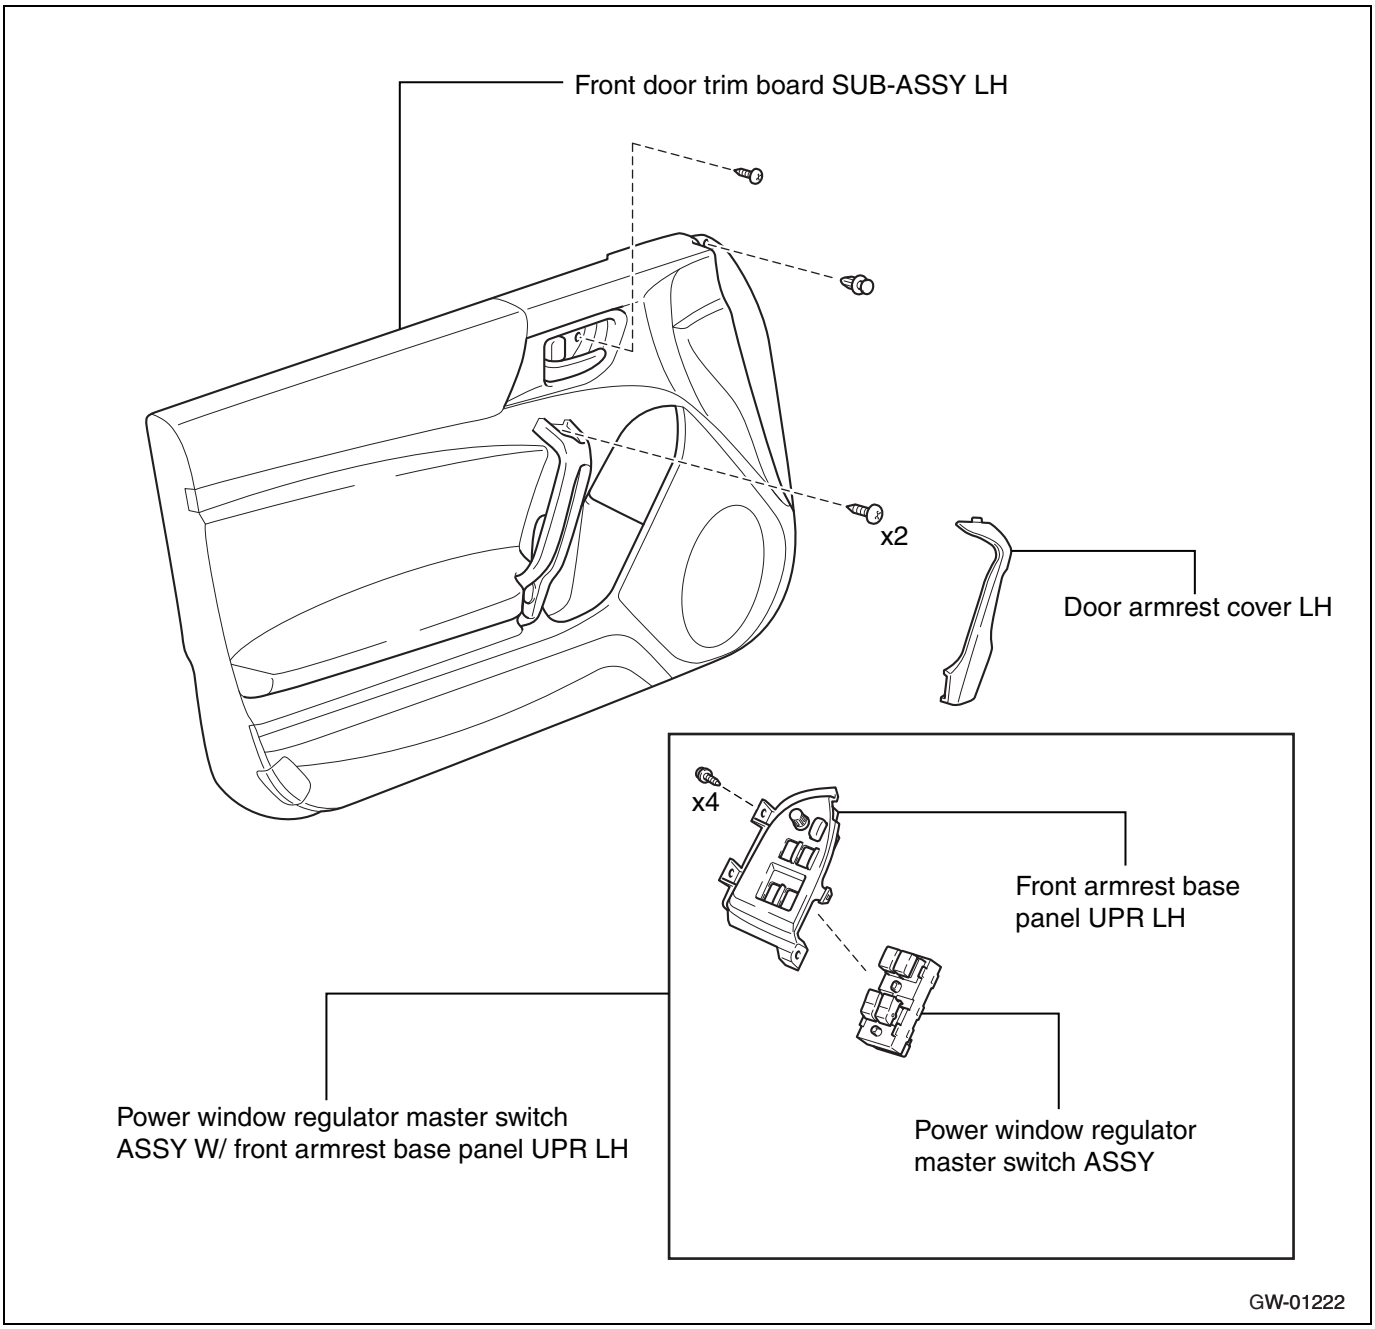
NG → Replacement of the power window regulator motor ASSY

OK

Replacement of the power window regulator (Refer to WS - 58)

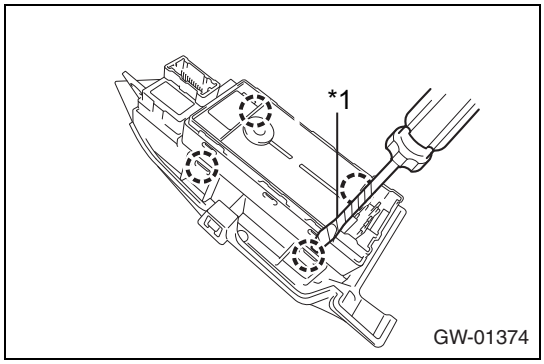
# Power window regulator master switch ASSY

## Exploded view



## Removal

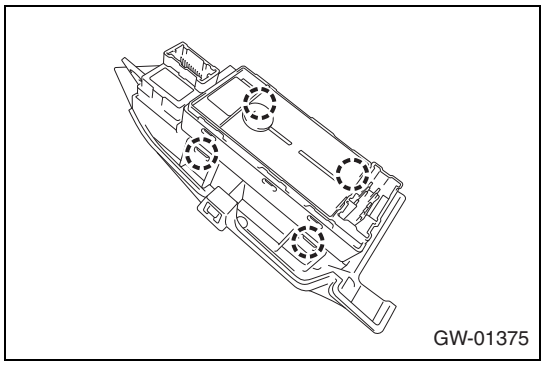
1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the door armrest cover LH (Refer to DH - 32)
3. Removal of the front door trim board SUB-ASSY LH (Refer to DH - 32)
4. Removal of power window regulator master switch ASSY W/front armrest base panel UPR LH (driver's side door) (Refer to DH - 33)



5. Removal of power window regulator master switch ASSY
   (1) Using a flat head screw driver wrapped in protective tape, release the 4 tabs and remove the power window regulator master switch ASSY from the front armrest base panel UPR LH.

| | |
|---|---|
| *1 | Protective tape |

## Installation



1. Installation of power window regulator master switch ASSY
   (1) Engage the 4 claws and install the power window regulator master switch ASSY to the front armrest base panel UPR LH.
2. Installation of the power window regulator master switch ASSY W/ front armrest base panel UPR LH (Refer to DH - 52)
3. Installation of the front door trim board SUB-ASSY LH (Refer to DH - 52)
4. Installation of the door armrest cover LH (Refer to DH - 54)
5. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}

## Removal

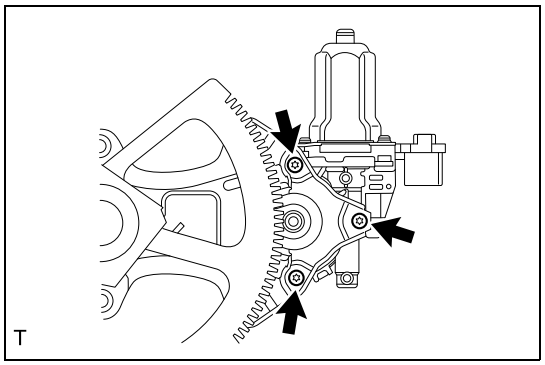
NOTE:

The following procedure is for LH side. Perform the same procedures both for the LH side and RH side, unless otherwise specified.

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the door armrest cover LH (Refer to DH - 32)
3. Removal of the front door trim board SUB-ASSY LH (Refer to DH - 32)
4. Removal of power window regulator master switch ASSY W/front armrest base panel UPR LH (driver's side door) (Refer to DH - 33)
5. Removal of power window regulator switch ASSY W/front armrest base panel UPR RH (passenger's side door) (Refer to DH - 34)
6. Removal of the front door service hole cover LH (Refer to DH - 36)
7. Removal of front door glass SUB-ASSY LH (Refer to DH - 36)
8. Removal of the front door frame SUB-ASSY RR LWR LH (Refer to DH - 37)
9. Removal of front door window regulator W/motor ASSY (Refer to DH - 38)



10. Removal of power window regulator motor ASSY LH
    (1) Using Torx socket wrench T25, remove the 3 Torx screws, and remove the power window regulator motor ASSY LH from the front door window regulator LH.

## Installation

NOTE:

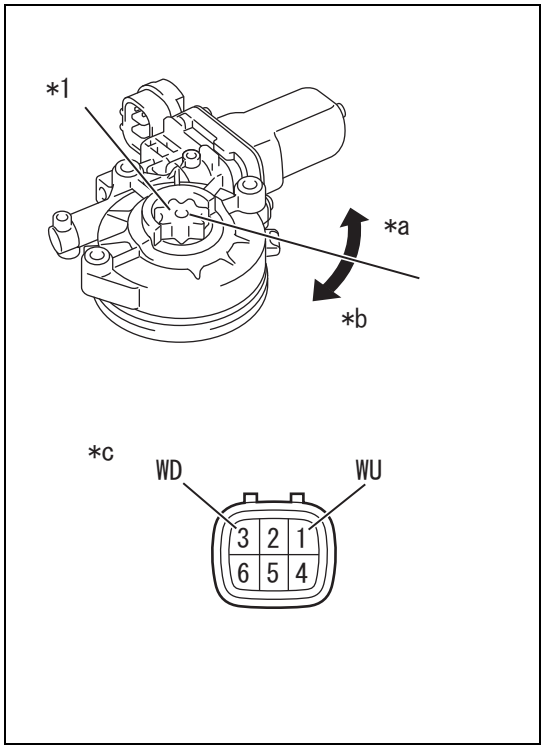
The following procedure is for LH side. Perform the same procedures both for the LH side and RH side, unless otherwise specified.

1. Installation of power window regulator motor ASSY LH
    (1) Using Torx socket wrench T25, with the 3 Torx screws, install the power window regulator motor ASSY LH onto the front door window regulator LH.
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
2. Installation of front door window regulator W/motor ASSY (Refer to DH - 47)
3. Installation of the front door frame SUB-ASSY RR LWR LH (Refer to DH - 48)
4. Installation of front door glass SUB-ASSY LH (Refer to DH - 48)
5. Adjustment of the front door glass SUB-ASSY LH
    (1) Check the installation condition of front door glass. (Refer to DH - 54)
    (2) Check the mounting condition of front door glass. (Refer to DH - 55)
6. Installation of the front door service hole cover LH (Refer to DH - 49)
7. Installation of power window regulator master switch ASSY W/front armrest base panel UPR LH (driver's side door) (Refer to DH - 52)
8. Installation of power window regulator switch ASSY W/front armrest base panel UPR RH (passenger's side door) (Refer to DH - 52)
9. Installation of the front door trim board SUB-ASSY LH (Refer to DH - 52)
10. Installation of the door armrest cover LH (Refer to DH - 54)
11. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
12. Power window registration settings (Refer to WS - 5)

13. Function inspection of the power windows (Refer to WS - 59)

## Unit inspection

1. Inspection of power window regulator motor ASSY LH (driver's side door)
   CAUTION:
   - Apply the voltage to the motor terminals 1 and 3 only. Otherwise, the pulse sensor inside the motor can be damaged.
   - After removing or replacing the power window regulator motor ASSY, perform the initialization of the power window system. (Refer to WS - 5)



(1) Apply battery voltage to each connector terminal of the power window regulator motor ASSY LH and check that the power window regulator motor ASSY LH operates smoothly.

Criteria

| Battery connection | Criteria |
|---|---|
| Battery positive terminal - 3 (WD)<br>Battery ground terminal - 1 (WU) | Rotates on the drive shaft ccw (open). |
| Battery positive terminal - 1 (WU)<br>Battery ground terminal - 3 (WD) | Rotates on the drive shaft cw (close). |

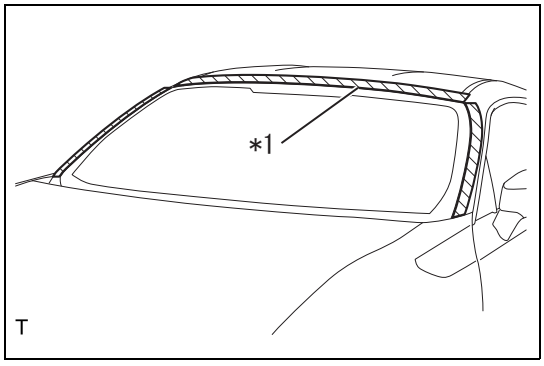
## Removal

1. Precautions for the removal/installation of the windshield glass
   (1) If working with piano wire, remove the front pillar garnish first, mount the protect cover on the curtain shield airbag, then begin the removal/installation of the windshield glass.

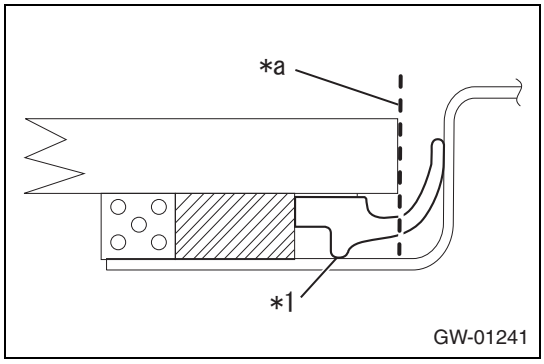
2. Removal of the wiper arm head caps (Refer to WW - 9)
3. Removal of the front wiper arm & blade ASSY LH (Refer to WW - 9)
4. Removal of the front wiper arm & blade ASSY RH (Refer to WW - 9)
5. Removal of front fender to cowl side seal LH (Refer to WW - 10)
6. Removal of the front fender to cowl side seal RH
   NOTE:
   Remove the part in the same manner as LH side.
7. Removal of the cowl ventilator louver (Refer to WW - 10)
8. Removal of roof head lining ASSY
   (1) Partially detach the front side of the roof head lining ASSY in an area required for removing/installing the windshield glass. (Refer to IT - 52)
   CAUTION:
   Be careful not to damage the roof head lining ASSY.
9. Removal of windshield glass
   CAUTION:
   - Work with the windshield knife or piano wire according to cut location and/or condition.
   - Use the suction rubber to keep the windshield glass in place from outside to avoid dropping the windshield glass during operation.
   - Be careful not to damage the windshield glass because the windshield glass stopper is attached on the windshield glass.



(1) Apply protective tape to the body side of the circumference of windshield glass.

Captions in illustration

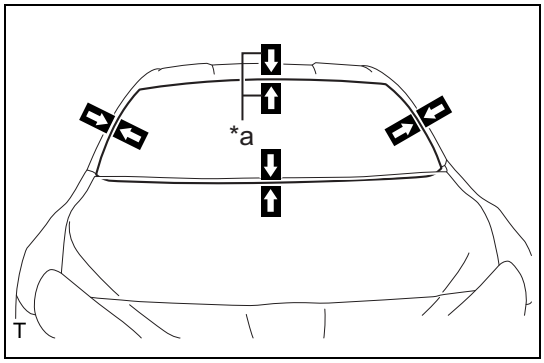
| | |
|---|---|
| *1 | Protective tape |



(2) Using the cutter knife, cut the windshield outside molding.
   CAUTION:
   - Do not damage the windshield glass and the body surface.
   - If the body surface is damaged, remove the windshield glass, and then perform the rust prevention treatment.

Captions in illustration

| | |
|---|---|
| *1 | Windshield outside molding |
| *a | Cut |



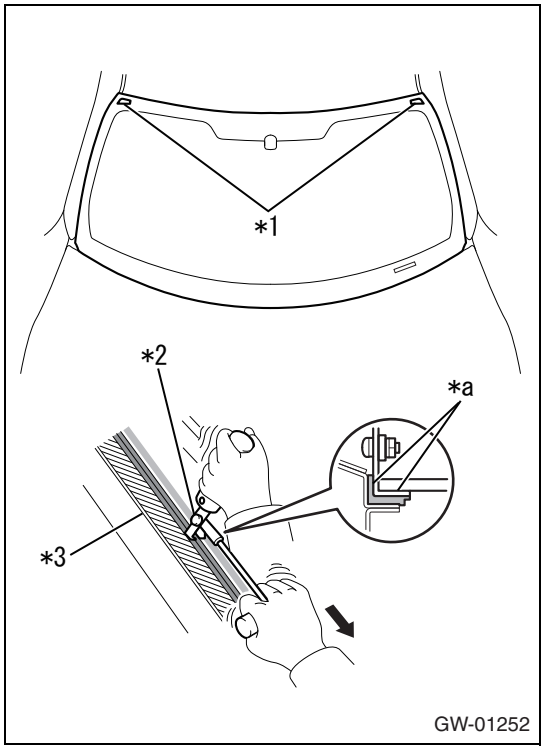
(3) When the windshield glass is reused.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

(a) Apply packing tapes or similar tapes on the windshield glass and body panel, and put alignment marks on them with a pen for reinstallation.

(4) Attach the suction rubber onto the windshield glass.

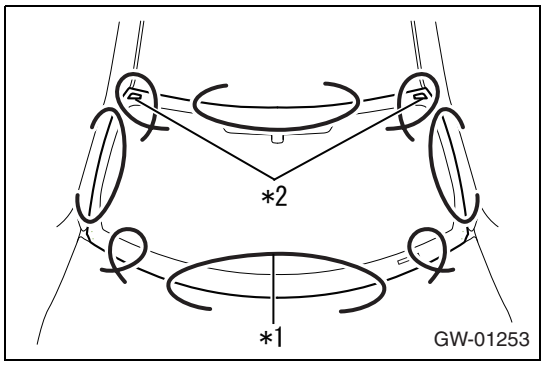


(5) When using the windshield knife
(a) Apply sufficient amount of soapy water to the adhesive section.
(b) Insert the windshield knife into the adhesive section.
(c) Using the windshield knife, insert the blade between the windshield glass and the vehicle body, and move the knife along the edge of the glass to cut adhesive while keeping the blade at right angle with the edge.
CAUTION:
- Never twist the windshield glass knife.
- Do not damage the windshield glass.

NOTE:
Begin from where the windshield glass and the body is most distant.

Captions in illustration

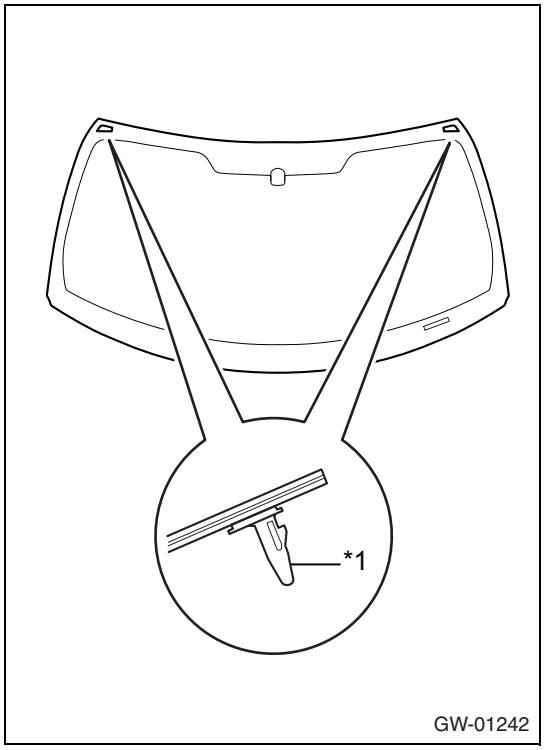
| | |
|---|---|
| *1 | Windshield glass stopper |
| *2 | Windshield knife |
| *3 | Protective tape |
| *a | Align with the glass |



(6) When using piano wire
(a) Using an air drill, make a hole in the adhesive section and pass the piano wire through the hole.
(b) Pass the piano wire (0.6 mm {0.024 in} is recommended) through the point shown in the figure, attach both ends of the wire to wooden boards.
(c) Pull the piano wire both ways and cut the adhesive on the windshield glass.
CAUTION:
- Do not tightly contact the piano wire against the windshield glass edge.
- When working around the curtain shield air bag, do not damage it with the piano wire.
- When working around the instrument panel (safety pad), apply a plastic-made guard plate for preventing any damage by the piano wire.
- Make sure do not cross the piano wires. Otherwise, they can be cut.
- Do not damage the windshield glass.

Captions in illustration

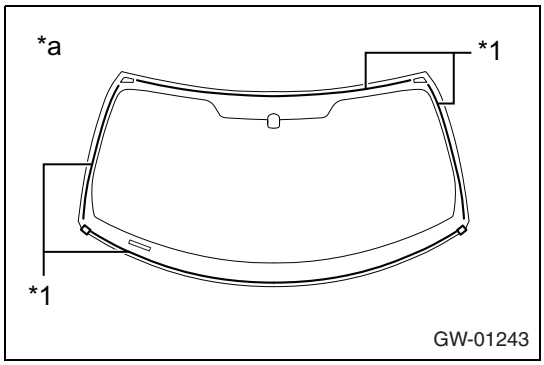
| | |
|---|---|
| *1 | Piano wire |
| *2 | Windshield glass stopper |



(7) Holding the suction rubbers, release the 2 tabs of the windshield glass stopper, then remove the windshield glass.
CAUTION:
- Be careful not to damage the windshield glass because the windshield glass stopper is attached on the windshield glass.
- Be careful not to drop the windshield glass.

Captions in illustration

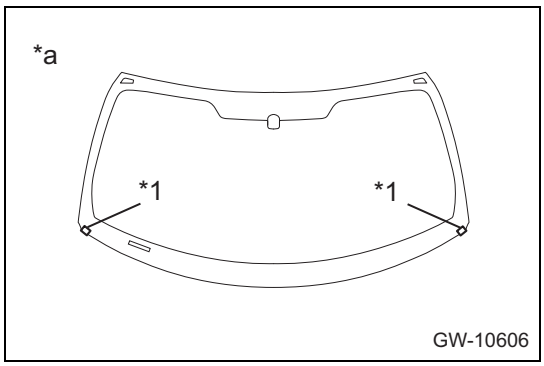
| | |
|---|---|
| *1 | Windshield glass stopper |



10. Removal of window glass adhesive dam
(1) When the windshield glass is reused.
(a)Using the scraper, remove the window glass adhesive dam.
CAUTION:
- Do not damage the windshield glass.
- The window glass adhesive dam must be replaced by a new one.

Captions in illustration

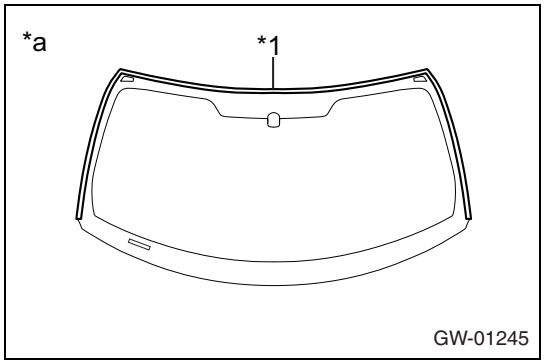
| | |
|---|---|
| *1 | Window glass adhesive dam |
| *a | Backside of the windshield glass |



11. Removal of windshield glass seal
(1) When the windshield glass is reused.
(a)Using the scraper, remove 2 window glass seals.
CAUTION:
- Do not damage the windshield glass.
- Windshield glass seal must be replaced by a new one.

Captions in illustration

| | |
|---|---|
| *1 | Windshield glass seal |
| *a | Backside of the windshield glass |

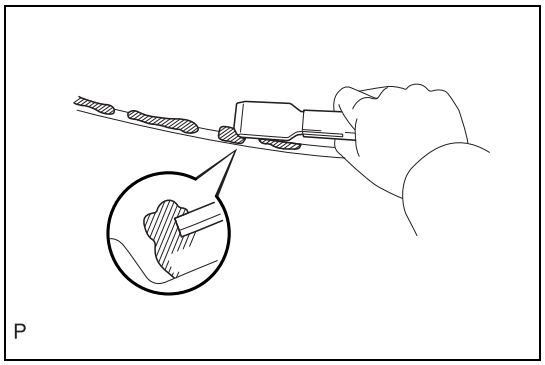


12. Removal of windshield outside molding
(1) When the windshield glass is reused.
(a)Using the scraper, remove the windshield outside molding.
CAUTION:
- Do not damage the windshield glass.
- Windshield outside molding must be replaced by a new one.

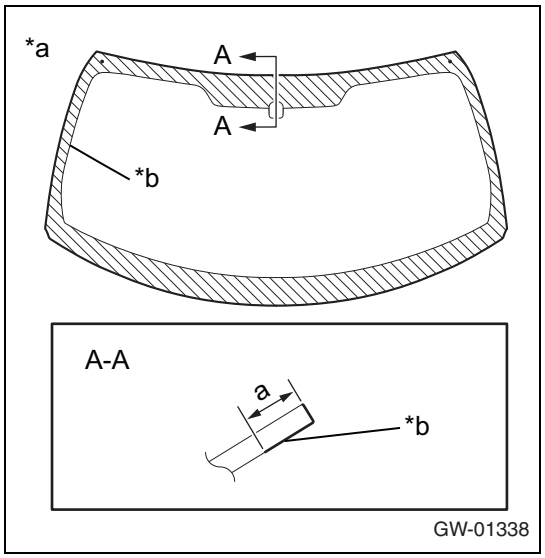
Captions in illustration

| | |
|---|---|
| *1 | Windshield outside molding |
| *a | Backside of the windshield glass |

## Installation



1. Cleaning of windshield glass
   (1) When the windshield glass is reused.
      (a)Using a scraper or similar tool, remove the adhesive and/or double-sided tape remaining on the windshield glass.
      CAUTION:
      Do not damage the windshield glass.
   (2) Using the appropriate cleaner, clean the rim of the windshield glass.
      CAUTION:
      New windshield glass also needs to be cleaned.



2. Installation of windshield outside molding
   (1) Apply primer to the installation area for the windshield outside molding on the windshield glass.
      Primer: 3M N-200, Sunstar #GP402, or equivalent
      CAUTION:
      Apply the primer to the ceramic part only.

Captions in illustration

| | |
|---|---|
| *a | Backside of the windshield glass |
| *b | Primer application area |

Standard value

| Part | Dimension |
|---|---|
| a | 7mm {0.276in} |

   (2) After the primer has been dried, align the windshield outside molding with both side of the windshield glass.

   (3) Using a roller, crimp the windshield outside molding in the direction specified by the arrows in the figure.
      Standard value: 50N/100 mm {5.1 kgf/3.94 in} {11.2 lbf/3.94 in}
      CAUTION:
      Be careful to attach the windshield outside molding firmly so that there is no loose or undulating part.

Captions in illustration

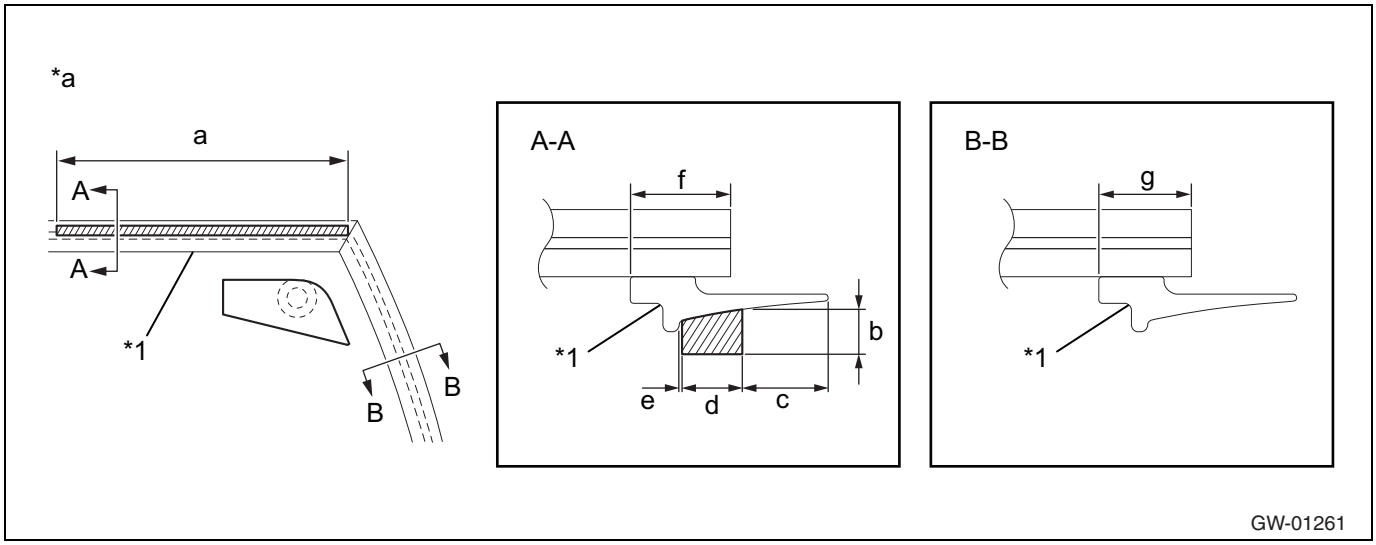
| | |
|---|---|
| *a | Backside of the windshield glass |

   (4) Using a roller, crimp the windshield outside molding in the direction specified by the arrows in the figure.
      Standard value: 50N/100 mm {5.1 kgf/3.94 in} {11.2 lbf/3.94 in}
      CAUTION:
      Be careful to attach the windshield outside molding firmly so that there is no loose or undulating part.

Captions in illustration

| | |
|---|---|
| *a | Backside of the windshield glass |

3. INSTALL UPPER WINDSHIELD GLASS SEAL
   (1) Install the upper windshield glass seal to the windshield outside molding, as shown in the illustration.



Standard Dimension

| Area | Dimension |
|---|---|
| a | 165 mm {6.496 in} |
| b | 3.0 mm {0.118 in} |
| c | 5.7mm {0.224 in} |

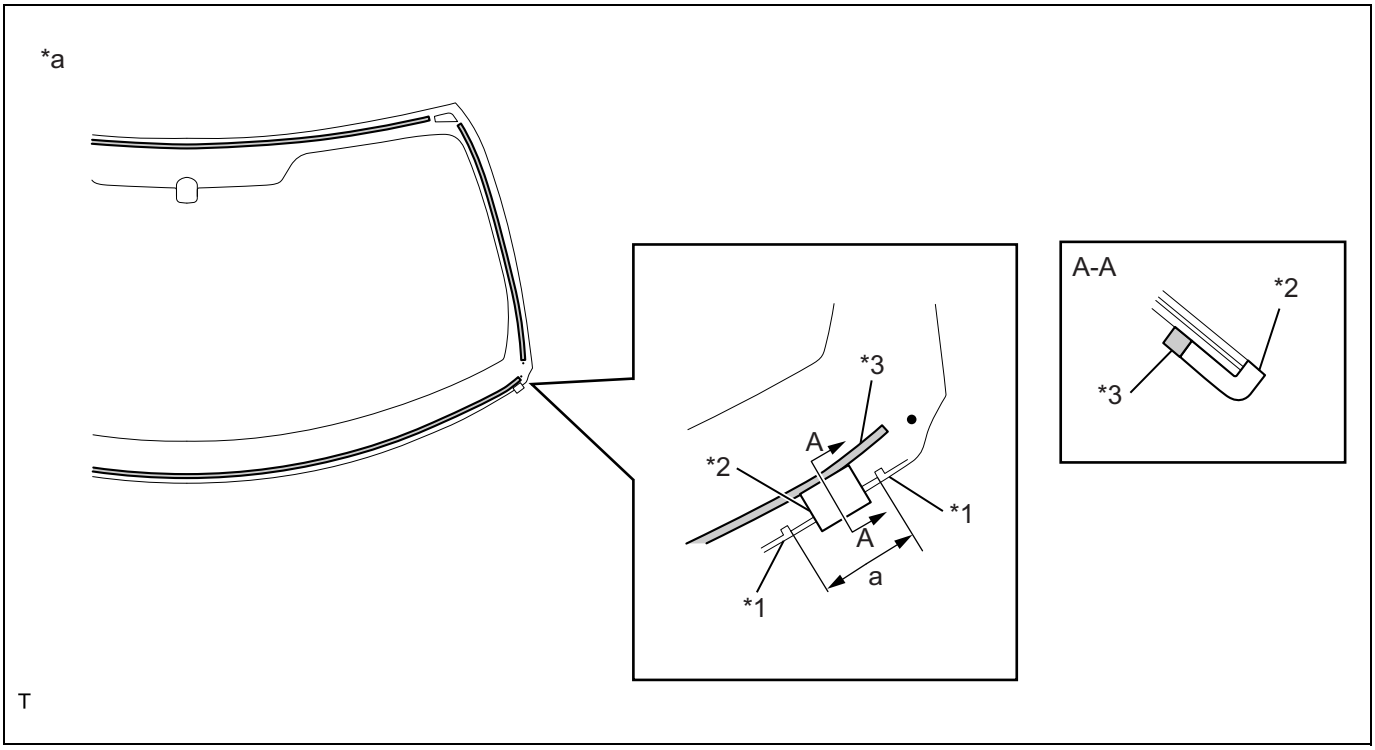
| *1 | Ceramic Notch | *2 | Window Glass Adhesive Dam |
| *a | Back Side | - | - |

NOTE:
Use the same procedure for both the RH and LH sides.

5. INSTALL LOWER WINDSHIELD GLASS SEAL
   (1) Using the appropriate cleaner, clean the installation surface of the windshield glass seal.
   (2) Install the new lower windshield glass seal onto the windshield glass, as shown in the illustration.



Standard Dimension

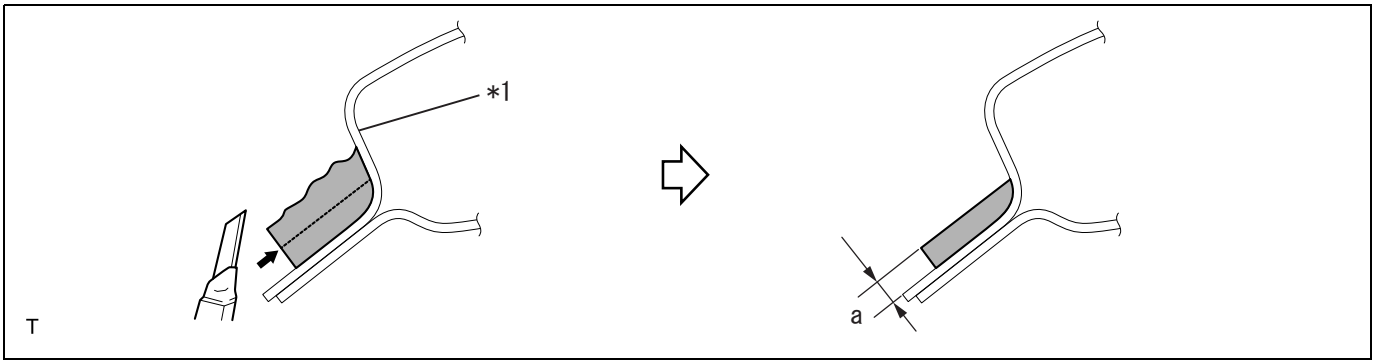
| Area | Dimension |
|---|---|
| a | 28.0 mm {1.102 in} |

Text in Illustration

| | | | |
|---|---|---|---|
| *1 | Ceramic Notch | *2 | Lower Windshield Glass Seal |
| *3 | Window Glass Adhesive Dam | - | - |
| *a | Back Side | - | - |

CAUTION:
Install the window glass seal so that it does not protrude onto the glass surface.
NOTE:
Use the same procedure for both the RH and LH sides.

6. Installation of windshield glass
   (1) Cleaning of mounting surface of the body
   (a)Remove the adhesive layer on the body using cutter knife or similar tool to obtain smooth surface of 2 mm {0.08 in} thick.
   CAUTION:
   - Do not damage the body.
   - Always leave a little amount of adhesive.



Captions in illustration

(c)Apply packing tapes or similar tapes on the windshield glass and body panel, and put alignment marks on them with a pen for reinstallation. (When new glass is used.)

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

CAUTION:

From inside the vehicle, check that windshield glass stoppers and body are engaged.

NOTE:

When windshield glass will be reused, check and correct the position of the alignment marks.

(d)Detach the windshield glass.

(e)Apply primer on the body surface.

Primer: The Dow Automotive U-413 or equivalent

CAUTION:

Do not apply the primer thickly.

(3) Apply primer onto backside of the windshield glass, where indicated in the figure.

Primer: The Dow Automotive U-401, U402 or equivalent

CAUTION:

Do not apply the primer thickly.

(7) Installation of windshield glass

(a) Holding the suction rubbers, position the alignment marks and install the windshield glass.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

CAUTION:

- After body side primer is dried (approx. 10 minutes), attach the windshield glass .
- From inside the vehicle, check that windshield glass stoppers and body are engaged.

(b) Lightly press the front side of the windshield glass to fit tightly.

NOTE:

Pressing force: 98 N {10 kgf} {22.0 lbf} or more

(c) Using protection tapes or similar tapes, hold the windshield glass until the adhesive cures completely.

NOTE:

For minimum drying time or waiting time after the cure of adhesive, consult the instruction or manual of each adhesive supplier.

7. Leak test and repair
   (1) After the adhesive cure, pour water over the vehicle and make sure no water leak inside.
   (2) If any water leak is found, fill the three cement black after the drying.
   (3) Remove the applied protective tape and packing tape.

8. Installation of roof head lining ASSY
   (1) Install the roof head lining ASSY front side (parts). (Refer to IT - 56)
9. Installation of the cowl ventilator louver (Refer to WW - 14)

    NOTE:
    Perform the same procedures as RH side.
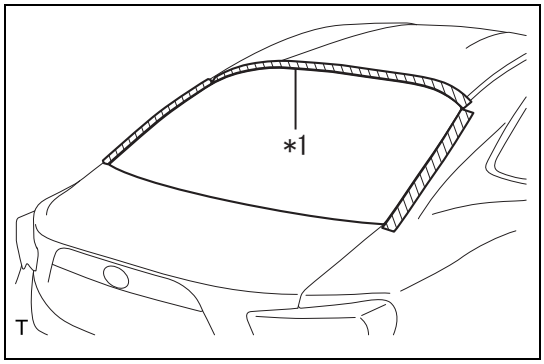
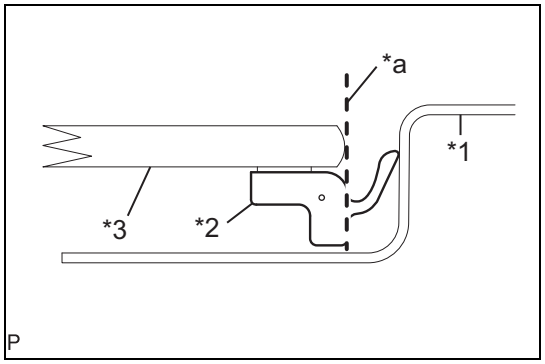
13. Removal of the rear window side garnish RH (Refer to IT - 50)
14. Removal of the rear window side garnish LH
    NOTE:
    Perform the same procedures as RH side.
15. Removal of package tray trim panel ASSY (Refer to DL - 111)
16. Removal of back window glass
    CAUTION:
    - The back window glass stopper is installed on the back window glass. Be careful not to damage the back window glass.
    - Work with the windshield knife or piano wire according to cut location and/or condition.
    - Use the suction rubber to keep back window glass in place from outside to avoid dropping the back window glass during operation.



(1) Apply protective tape to the body side of the circumference of back window glass.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |



(2) Using the cutter knife, cut the back window outside molding UPR No. 1.

CAUTION:

- Do not damage the back window glass and the body surface.
- If the body surface is damaged, remove the back window glass, and then perform the rust prevention treatment.

Captions in illustration

| | |
|---|---|
| *1 | Body |

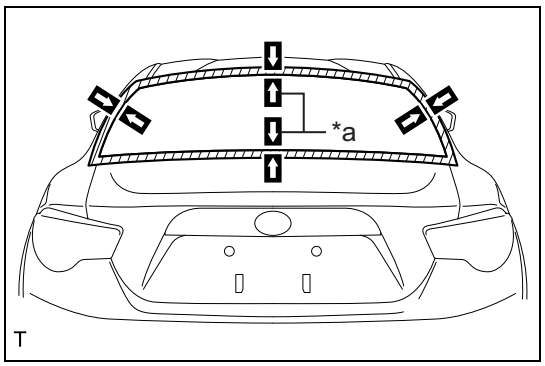
| *3 | Back window glass |
| *a | Cut |

(3) Pull the back window outside molding UPR No. 1 by hand to detach.



(4) When the back window glass is reused.

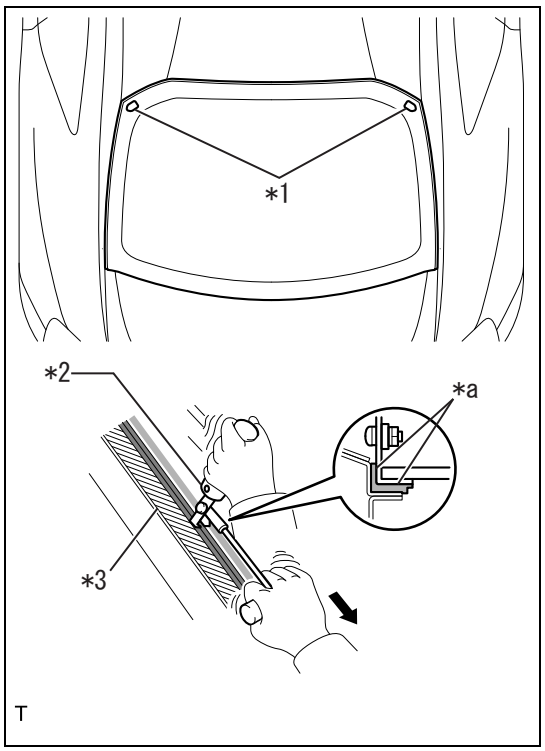
(a) Attach gummed tapes or similar tapes on the back window glass and body panel, and put alignment marks on them with a pen for reinstallation.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

(5) Disconnect the defogger connector.

(6) Attach the suction rubber onto the back window glass.



(7) When using the windshield knife

(a) Apply sufficient amount of soapy water to the adhesive section.

(b) Insert the windshield knife into the adhesive section.

(c) Using the windshield knife, insert the blade between the back window glass and the vehicle body, and move the knife along the edge of the glass to cut adhesive while keeping the blade at right angle with the edge.

CAUTION:

- Never twist the windshield glass knife.
- Do not damage the back window glass.

NOTE:

Begin from where the back window glass and the body is most distant.

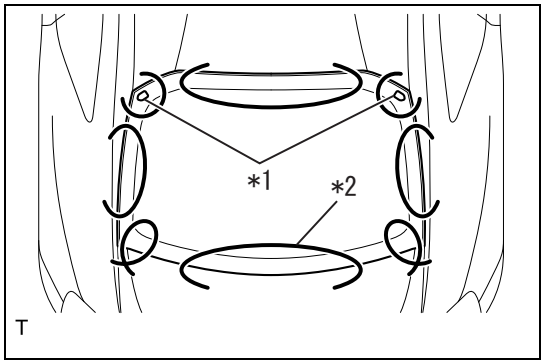
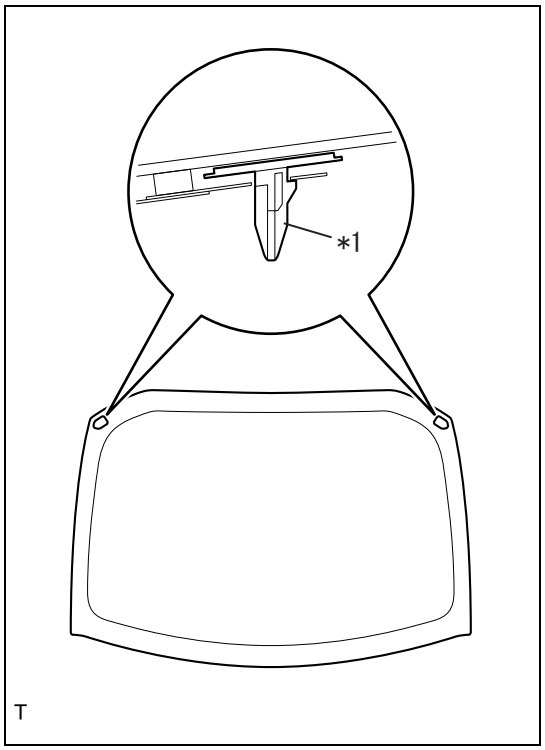
WS



(8) When using piano wire
(a) Using an air drill, make a hole in the adhesive section and pass the piano wire through the hole.
(b) Pass the piano wire (0.6 mm {0.024 in} is recommended) through the point shown in the figure, attach both ends of the wire to wooden boards.
(c) Pull the piano wire both ways and cut the adhesive on the back window glass.
CAUTION:
- Do not tightly contact the piano wire against the back window glass edge.
- When working around the air bag, do not damage it with the piano wire.
- Make sure do not cross the piano wires. Otherwise, they can be cut.

Captions in illustration

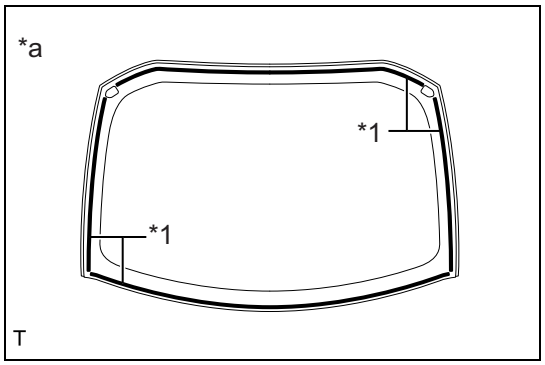
| | |
|---|---|
| *1 | Back window glass stopper |
| *2 | Piano wire |



(9) Hold the suction rubbers, release the 2 tabs of the back window glass stopper, then remove the back window glass.
CAUTION:
- The back window glass stopper is installed in the position shown on the back window glass figure. Be careful not to damage the back window glass.
- Work with the windshield knife or piano wire according to cut location and/or condition.
- Use the suction rubber to keep back window glass in place from outside to avoid dropping the back window glass during operation.

Captions in illustration

| | |
|---|---|
| *1 | Back window glass stopper |



17. Removal of back window glass adhesive dam
(1) When the back window glass is reused.
(a) Using the scraper, remove the back window glass adhesive dam.
CAUTION:
- Do not damage the back window glass.
- The back window glass dam kit must be replaced by a new one.

Captions in illustration

| | |
|---|---|
| *1 | Back window glass adhesive dam |

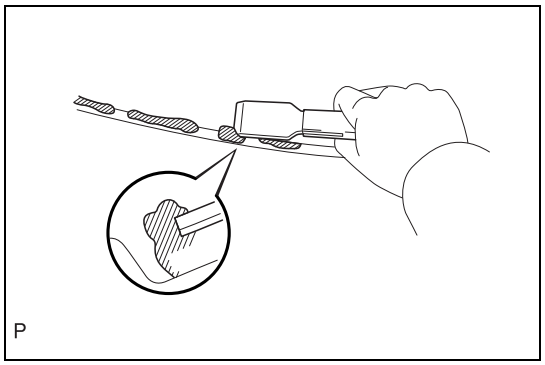
## Installation



1. Cleaning of back window glass
    (1) When the back window glass is reused.
        (a) Using a scraper or similar tool, remove the adhesive and/or back window glass adhesive dam remaining on the back window glass.
        CAUTION:
        Do not damage the back window glass.
    (2) Using the appropriate cleaner, clean the rim of the back window glass.
        CAUTION:
        New back window glass also requires to be cleaned.
    (3) Apply primer to mounting surface on the back window glass for the back window outside molding UPR No 1.
        Primer : 3M N-200, Sunstar #GP402, or equivalent
        CAUTION:
        Do not apply the primer thickly.
    (4) Fit the back window outside molding UPR No. 1 to the both sides of the back window glass.

    (5) Using a roller, crimp the back window outside molding UPR NO.1 in the direction specified by the arrows in the figure.
        CAUTION:
        - Be careful to attach the back window outside molding UPR NO.1 firmly so that there is no loose part.
        - Attach the back window outside molding UPR NO.1 after the primer dried (approx. 10 minutes).

Captions in illustration

| | |
|---|---|
| *a | Backside of the back window glass |

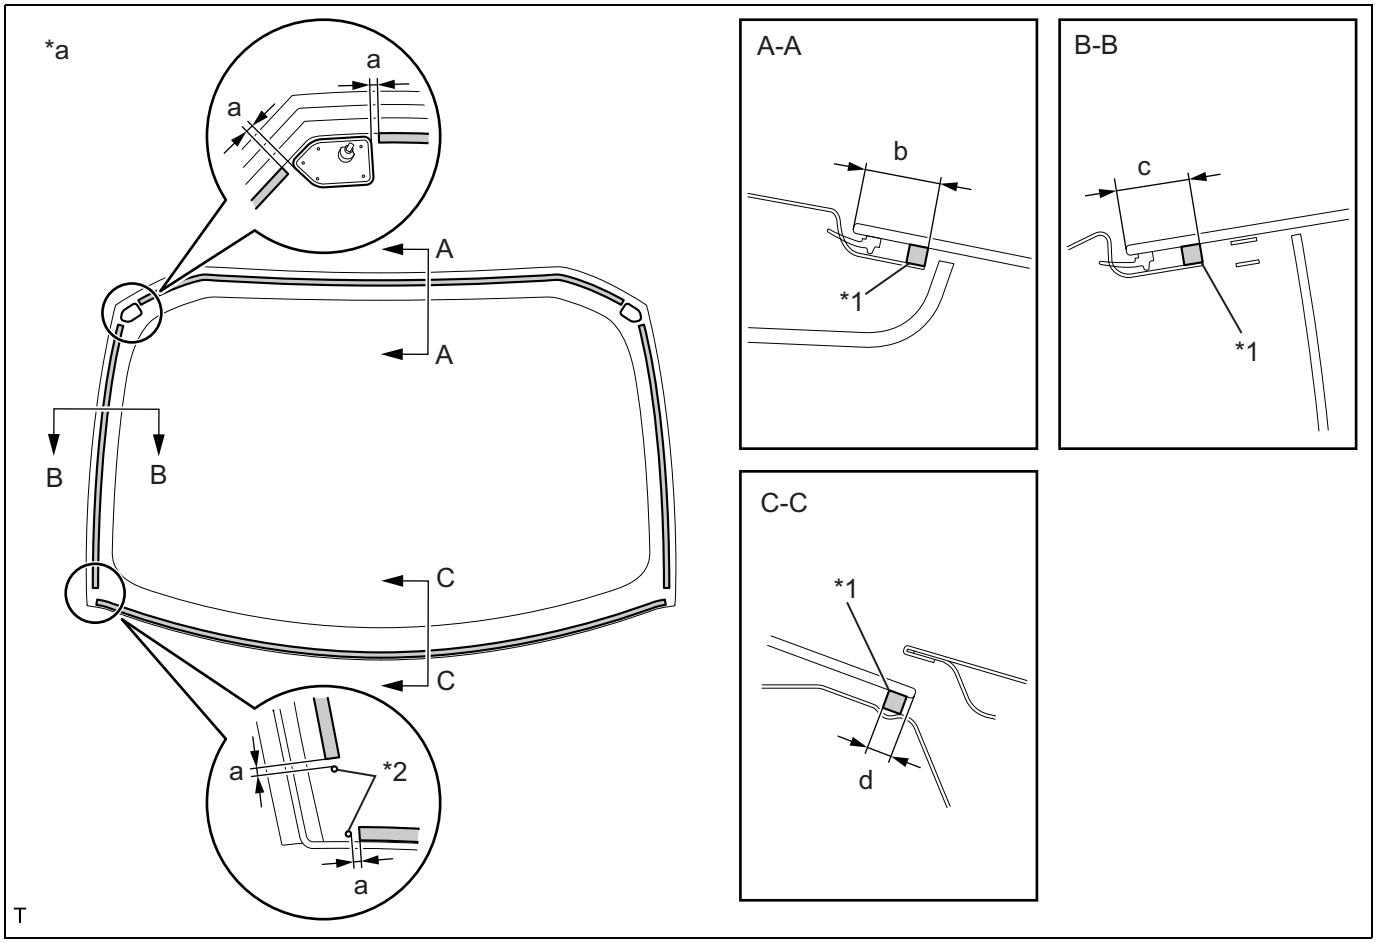
    (6) Using a roller, crimp the back window outside molding UPR NO.1 in the direction specified by the arrows in the figure.
        CAUTION:
        - Be careful to attach the back window outside molding UPR NO.1 firmly so that there is no loose part.
        - Attach the back window outside molding UPR NO.1 after the primer dried (approx. 10 minutes).

Captions in illustration

| | |
|---|---|
| *a | Backside of the back window glass |

2. Installation of back window glass adhesive dam
    (1) Using the appropriate cleaner, clean the installation surface of the back window glass adhesive dam.

(2) Attach new back window glass adhesive dam onto the place of backside of the back window glass where indicated in the figure.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Back window glass adhesive dam | *2 | Ceramic cutout |
| *a | Backside of the back window glass | - | - |

Standard value

| Part | Dimension |

Standard value

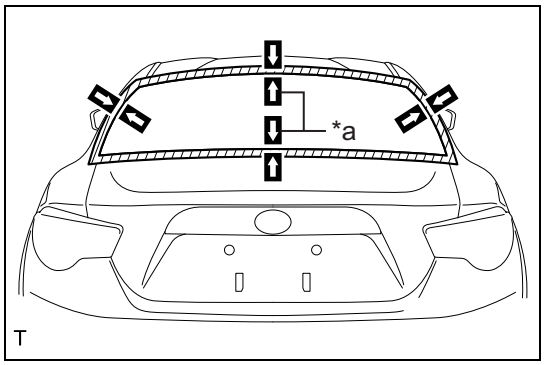
| Part | Dimension |
|---|---|
| a | 2.0 mm {0.079in} |

(b)Using the appropriate cleaner, clean the body installation surface.

(2) Preliminary operation for back window glass installation

(a)Attach the suction rubber onto the back window glass.

(b)Temporarily place the back window glass on the body, and set it so that the upper and side sections for the back window glass become equal in width (consistent clearance between body and back window glass edge).



(c)Attach packing tapes or similar tapes on the back window glass and body panel, and put alignment marks on them with a pen for reinstallation. (When new back window glass is used.)

CAUTION:

From inside the vehicle, check that the back window glass stoppers and the body are engaged.

NOTE:

When back window glass will be reused, check and correct the position of the alignment marks.

    Perform operation following the same procedure as LH side.

# Window defogger system

## Function inspection

1. Operation inspection of rear window defogger
   (1) When the customize function is set to the normal drive mode
      (a) Turn the ignition switch to ON.
      (b) Make sure the indicator light illuminates and the back door glass (window defogger) warms up when the defogger switch is pushed.
      (c) Make sure the indicator light turns off and the window defogger operation stops after approx. 15 minutes.
   (2) When the customize function is set to the continuous drive mode *1
      (a) Turn the ignition switch to ON.
      (b) Make sure the indicator light illuminates and the back door glass (window defogger) warms up when the defogger switch is pushed.
      (c) Make sure that approx. 15-min. operation and 2-min. stop are repeated.

| | ☐ Others ( ) | | |
| Conditions for normal recovery | ☐ When IG ON ☐ When engine starts ☐ When ( ) switch is operated | | |

WS

## customize function

1. Customization of window defogger system
   (1) Customization using the SSM4

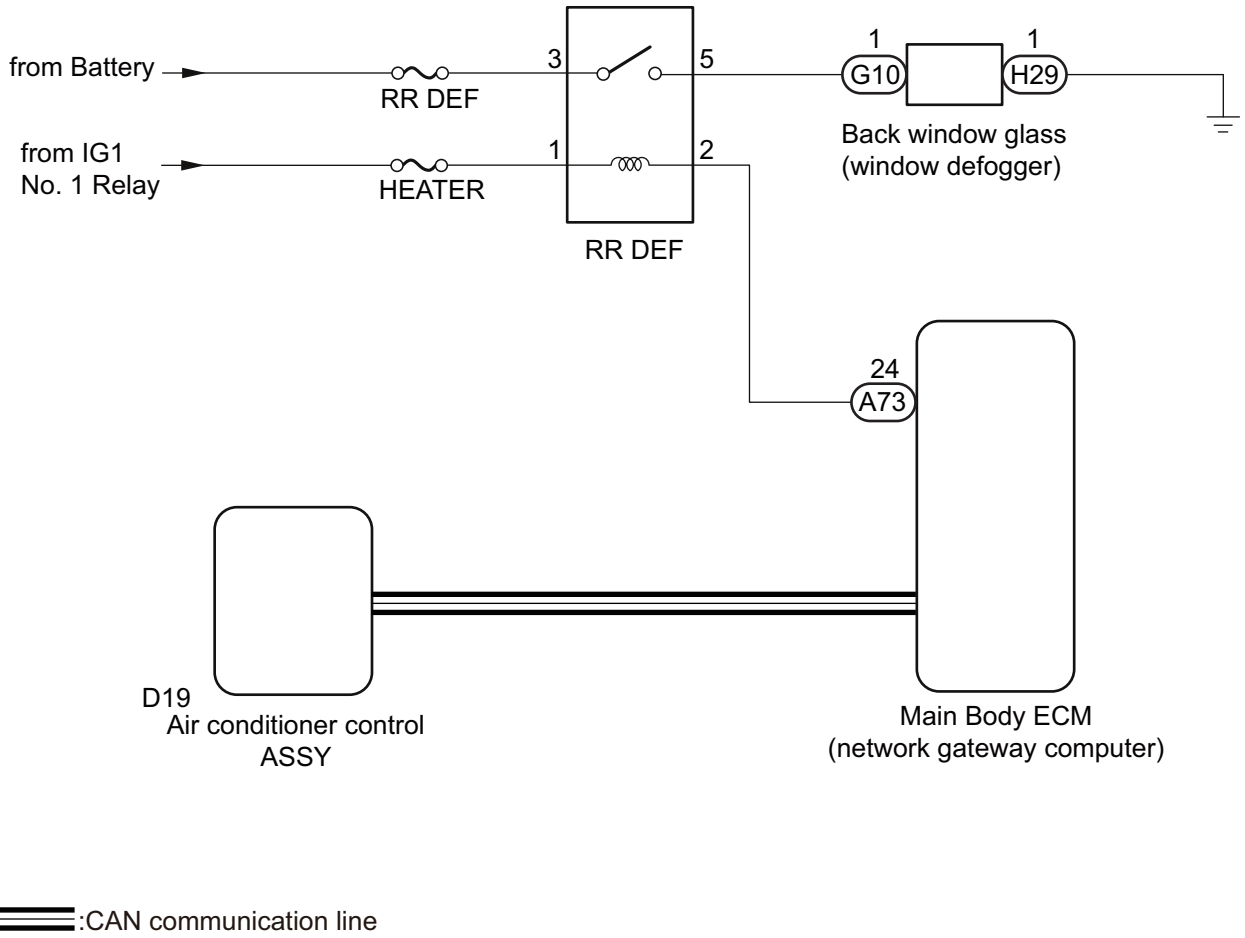
(a)Connect the SSM4 to the DLC3 and turn the ignition to IG ON.
(b)From [Each System] on the SSM4 display screen, select [Body Control] →[Customize] to customize the settings.

| Display name | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Rr Defogger op. mode] | Normal | Rear defogger operation drive mode setting | Normal *1 / Continuous *2 | Main body ECM (Network gateway computer) |

- *1: Rear defogger operation is turned OFF after 15 minutes.
- *2: Rear defogger repeats 15-min. operation and 2-min. stop.

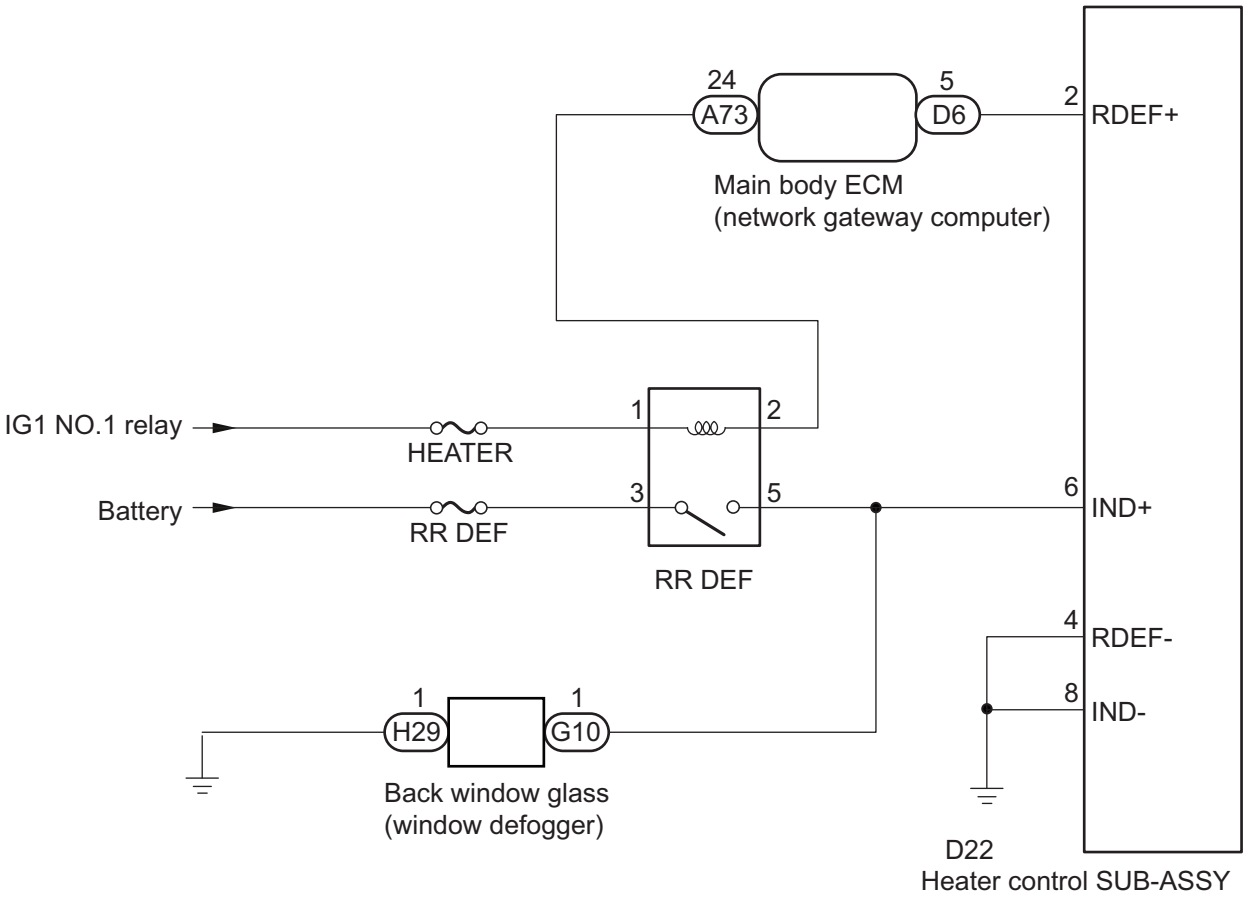
## Circuit figure

For automatic air conditioning system:



WS

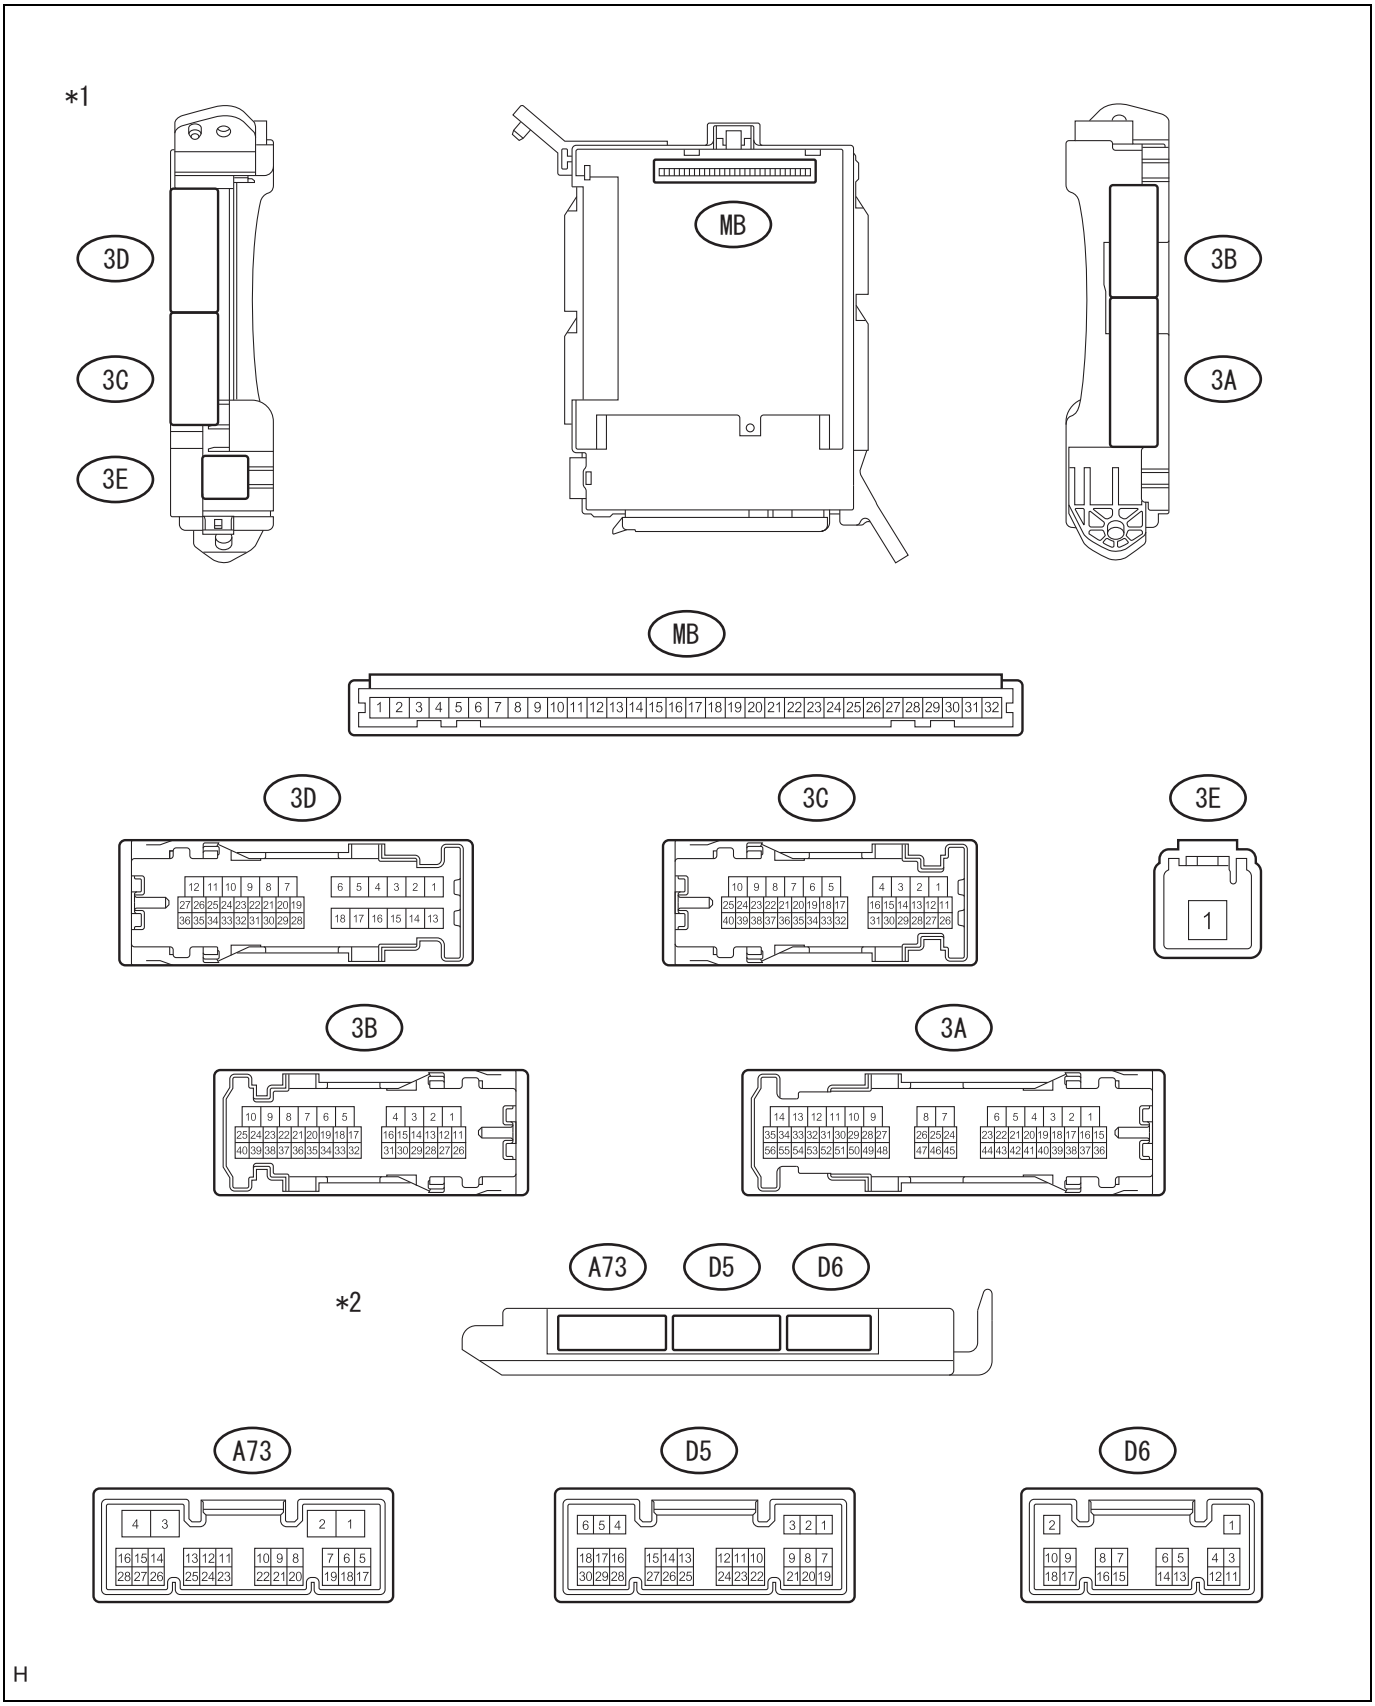
Except for automatic air conditioning



GW-10409

## ECM terminal arrangement

1. Instrument panel junction block ASSY, main body ECM (Network gateway computer)



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (Network gateway computer) |

(1) Inspection of the instrument panel junction block ASSY and the main body ECM (network gateway computer)

(a)Measure the voltage between the terminals.

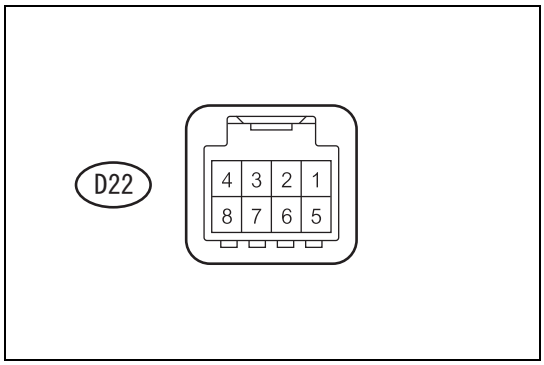
Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A73-24 ←→chassis ground | IG ON | 11 to 14 V |
| D5-22 (ACC) ←→chassis ground* | ACC ON | 11 to 14 V |

*: When there is a smart entry & start system

NOTE:

If it is outside the standard values, the vehicle is defective.



2. Heater control SUB-ASSY (Rear window defogger switch) (except for automatic air conditioning system)
   (1) Disconnect the connector D22 of the heater control SUB-ASSY (Rear window defogger switch).
   (2) Measure the voltage and resistance between terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D22-2 (IND+) ←→D22-4 (RDEF-) | Always | 11 to 14 V |
| D22-4 (RDEF-) ←→chassis ground | Always | Less than 1 Ω |

   (3) Connect the connector D22 of the heater control SUB-ASSY (Rear window defogger switch).
   (4) Measure the voltage between the terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D22-6 (IND+) ←→D22-4 (RDEF-) | IG ON<br>Defogger switch OFF →ON | 11 to 14 V →1 V or less |

## Data monitor / active test

1. Inspection with SSM4
   (1) Data monitor
      (a)Use the SSM4 and [Data monitor] to determine functionality and narrow down the defective part.

WS

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

## Window defogger does not operate

Description of functions

When IG is ON, operating the rear window defogger switch turns on the rear window defogger.

Except for automatic air conditioning system

Rear window defogger control is performed by the main body ECM (network gateway computer). When the switch ON signal is received, RR DEF relay operates for 15 minutes. When the switch OFF signal is received within 15 minutes, operation of DEFOG relay stops.

For automatic air conditioning system

Rear window defogger control is performed by the main body ECM (network gateway computer). When the switch ON signal is transmitted from the air conditioner control ASSY through the CAN communication to the main body ECM (network gateway computer), RR DEF relay operates for 15 minutes. When the switch OFF signal is received within 15 minutes, operation of RR DEF relay stops.

Circuit figure

For automatic air conditioning system:

GW-10409

Inspection steps

WS

WARNING:

- Window defogger system uses CAN communication. First, perform a “Communication function inspection”, following “How to troubleshoot”, and after checking for any malfunction in the communication system, you can proceed with troubleshooting.
- Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Implementation of SSM4 active test (Rr defogger output) |

(1) Using SSM4, perform an [Active Test] by following the display.

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Contents of testing | Constraints |
|---|---|---|
| [Rear defogger] | Rear defogger output ON / OFF | - |

Result

| Result | Go to |
|---|---|
| Window defogger is not activated. | A |
| Window defogger is activated. | B |

B → Perform the circuit test shown on the symptom table. (Refer to WS - 89)

A

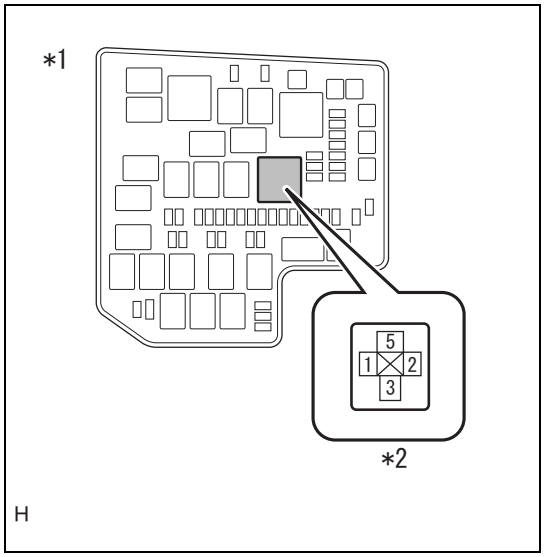
| 2 | Unit inspection of defogger relay (RR DEF relay) |
|---|---|

(1) Perform unit inspection of the defogger relay (RR DEF relay). (Refer to WS - 113)

NG → Replacement of defogger relay (RR DEF relay)

OK

| 3 | Inspection of wire harness and connector (defogger relay - IG 1 No. 1 relay and battery) |
|---|---|



(1) Detach the defogger relay (RR DEF relay) from the engine compartment relay block.
(2) Measure the voltage between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - Chassis ground | IG ON | 11 to 14 V |
| 3 - Chassis ground | Always | 11 to 14 V |

Captions in illustration

| | |
|---|---|
| *1 | Engine compartment relay block |
| *2 | Defogger relay (RR DEF relay) holder |

NG → Repair or replacement of wiring harness or connector

OK

| 4 | Inspection of wire harness and connector (defogger relay - main body ECM (network gateway computer)) |
|---|---|

(1) Detach the defogger relay (RR DEF relay) from the engine compartment relay block.
(2) Disconnect the A73 connector of the main body ECM (network gateway computer).
(3) Measure the resistance between the terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 2 - A73-24 | Always | Less than 1 Ω |
| 2 - Chassis ground | Always | 10 kΩ or more |

Result

| Item | Go to |

| OK (for automatic air conditioning system) | C |

WS

B → Go to Step 5.

C → Go to Step 7.

A

Repair or replacement of wiring harness or connector

| 5 | Inspection of wire harness and connector (main body ECM (network gateway computer) - heater control SUB-ASSY) |
|---|---|

(1) Disconnect the connector D6 for the main body ECM (network gateway computer).
(2) Disconnect the connector D22 of the heater control SUB-ASSY.
(3) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D6-5 - D22-2 (RDEF+) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D6-5 - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 6 | Unit inspection of heater control SUB-ASSY (Rear defogger switch) |
|---|---|

(1) Detach heater control SUB-ASSY (Rear defogger switch) (Refer to AC - 167)
(2) Perform unit inspection of heater control SUB-ASSY (Rear defogger switch) (Refer to AC - 172)

NG → Replacement of rear defogger switch

OK

| 7 | Inspection of wire harness and connector (back window glass - defogger relay and chassis ground) |
|---|---|

(1) Disconnect the connectors G10 and H29 for the back window glass.
(2) Detach the defogger relay (RR DEF relay) from the engine compartment relay block.
(3) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| G10-1 - 5 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| G10-1 - Chassis ground | Always | 10 kΩ or more |
| H29-1 - Chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the back window glass (Refer to WS - 76)

## Removal

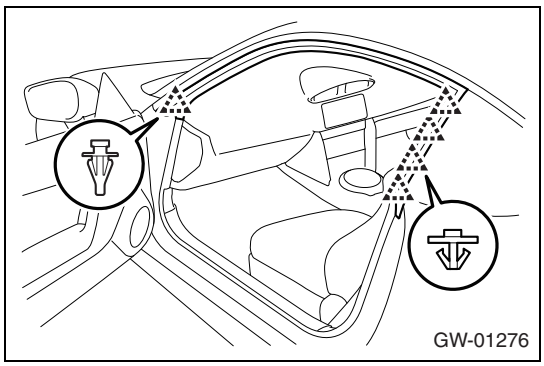
NOTE:

The following procedure is for LH side. Perform the same procedures both for the LH side and RH side, unless otherwise specified.

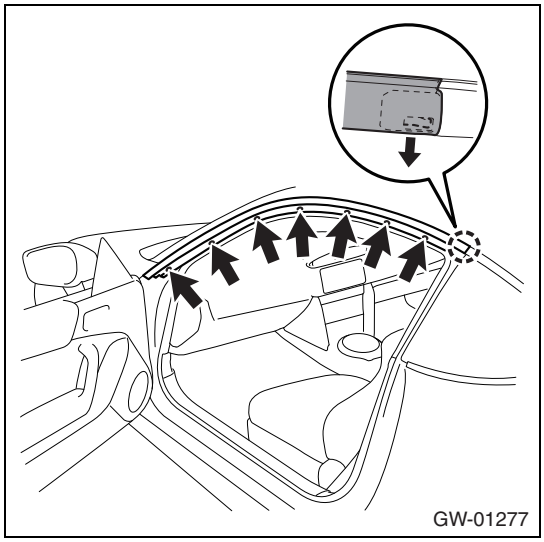
1. Removal of separate type rear seat cushion ASSY LH
   NOTE:
   Perform the same procedures as RH side. (Refer to SE - 31)
2. Disconnection of front seat outer belt ASSY LH
   NOTE:
   Perform the same procedures as RH side. (Refer to SB - 26)
3. Removal of front door scuff plate LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 48)
4. Disconnection of the front door opening trim weather strip LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 48)
5. Removal of the trunk trim cover INN LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 49)
6. Removal of quarter lower trim LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 49)
7. Removal of quarter trim lid LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 50)
8. Removal of the rear window side garnish LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 50)
9. Removal of quarter rear trim garnish FR LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 51)

WS

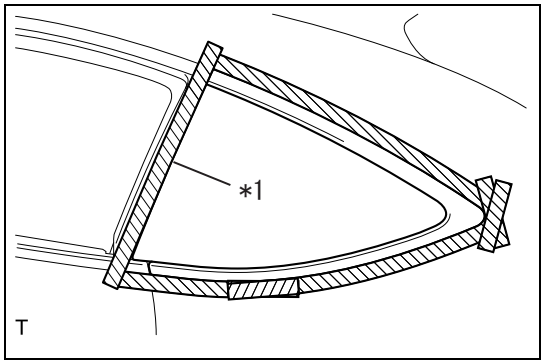
10. Removal of center pillar garnish LH
    NOTE:
    Perform the same procedures as RH side. (Refer to IT - 51)



11. Removal of the weather strip roof side LH
    (1) Release the 5 clips and manually pull the weather strip roof side LH to remove it.
    CAUTION:
    Be sure to replace the weather strip roof side with a new one.



12. Removal of the retainer & molding ASSY LH
    (1) Remove 7 screws.
    (2) Release the tab, and remove the retainer & molding ASSY.
    CAUTION:
    When performing removal or installation, wear protective equipment.



13. Removal of quarter window glass
    (1) Apply protective tape to the body surface of the circumference of quarter window glass.

Captions in illustration

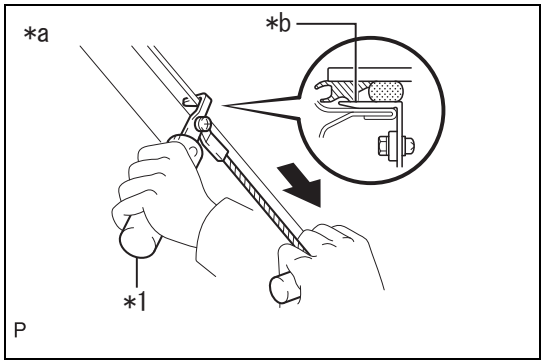
| | |
|---|---|
| *1 | Protective tape |

    (2) When the quarter window glass is reused.
        (a)Apply packing tapes or similar tapes on the quarter window glass and body panel, and put alignment marks on them with a pen for reinstallation.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |

    (3) Attach the suction rubber onto the quarter window glass.

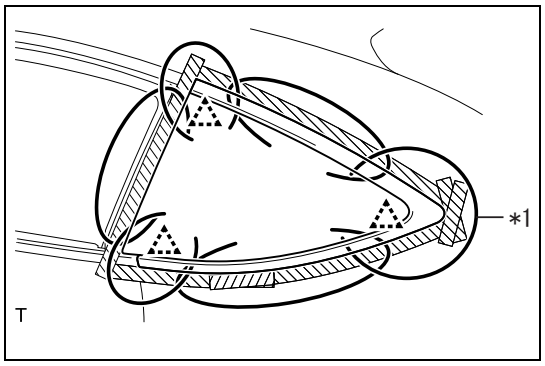


(4) When using the windshield knife
(a) Apply sufficient amount of soapy water to the adhesive section.
(b) Insert the windshield knife into the adhesive section.
(c) Using the windshield knife, insert the blade between the quarter window glass and the vehicle body, and move the knife along the edge of the glass to cut adhesive while keeping the blade at right angle with the edge.
CAUTION:
- Never twist the windshield glass knife.
- Do not damage the quarter window glass.

NOTE:
Begin from where the quarter window glass and the body is most distant.

Captions in illustration

| | |
|---|---|
| *a | Passenger compartment side |
| *b | Align with the body |
| *1 | Windshield knife |

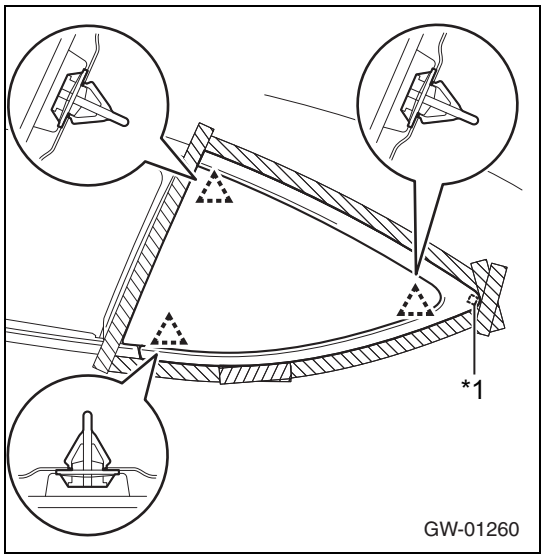


(5) When using piano wire
(a) Pass the piano wire (0.6 mm {0.024 in} is recommended) through the point shown in the figure, attach both ends of the wire to wooden boards.
(b) Pull the wire ends alternately to cut off the adhesive section, leaving the quarter window clip.
CAUTION:
- Do not tightly contact the piano wire against the quarter window glass edge.
- Make sure do not cross the piano wires. Otherwise, they can be cut.

NOTE:
Even when using the piano wire, using the windshield knife is easier to cut on the upper side of the glass.

Captions in illustration

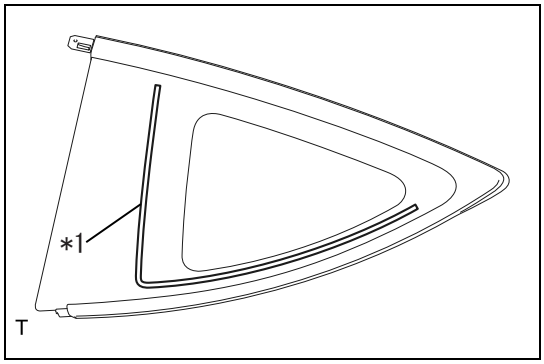
| | |
|---|---|
| *1 | Piano wire |



(6) Holding the suction rubbers, release the 3 tabs of the quarter window clips and remove the double-sided tape, then remove the quarter window glass.
CAUTION:
Be careful not to drop the quarter window glass.

Captions in illustration

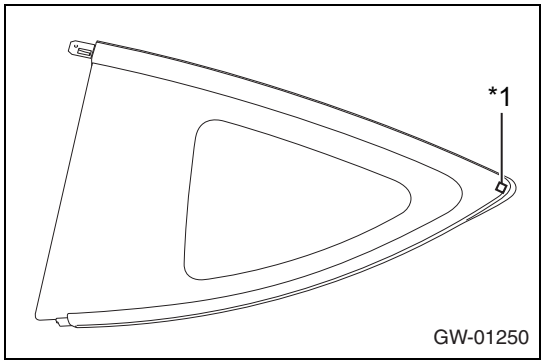
| | |
|---|---|
| *1 | Double-sided tape |



14. Removal of quarter window glass adhesive dam
    (1) When the quarter window glass is reused.
        (a)Using the scraper, remove the quarter window glass adhesive dam.
        CAUTION:
        • Do not damage the quarter window glass.
        • The quarter window glass adhesive dam must be replaced by a new one.

Captions in illustration

| | |
|---|---|
| *1 | Quarter window glass adhesive dam |



15. Removal of the double-sided tape
    (1) When the quarter window glass is reused.
        (a)Remove the double-sided tape from the quarter window glass molding part.

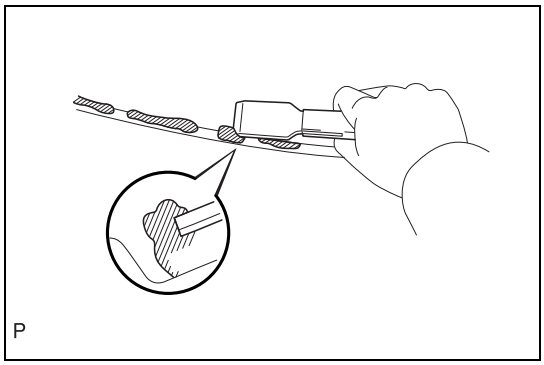
Captions in illustration

| | |
|---|---|
| *1 | Double-sided tape |

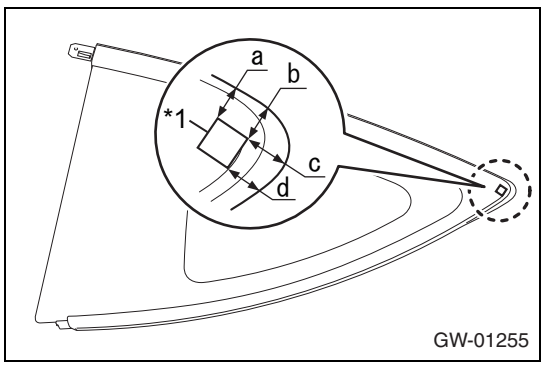
## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures both for the LH side and RH side, unless otherwise specified.



1. Cleaning of quarter window glass
    (1) When the quarter window glass is reused.
        (a)Using a scraper or similar tool, remove the adhesive remaining on the quarter window glass.
        CAUTION:
        Do not damage the quarter window glass.
    (2) Using the appropriate cleaner, clean the rim of the quarter window glass.
        CAUTION:
        New quarter window glass also needs to be cleaned.



2. Application of double-sided tape
    (1) Prepare a piece of double-sided tape (10 mm {0.394 in}×10 mm {0.394in}).
        Double-sided tape : 3M GT7110
    (2) Apply the double-sided tape onto the quarter window glass, where indicated in the figure.

Captions in illustration

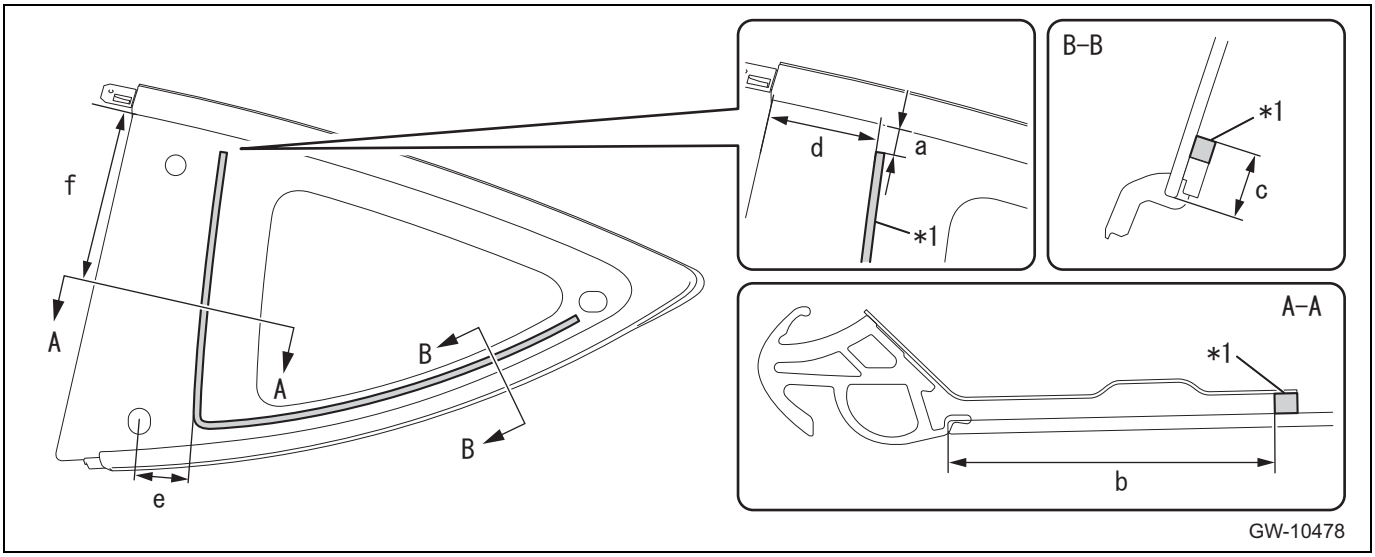
| | |
|---|---|
| *1 | Double-sided tape |

Standard value

| | |
|---|---|
| a | 8.9mm {0.350in} |
| b | 8.8mm {0.346in} |
| c | 9.2mm {0.362in} |
| d | 7.8mm {0.307in} |

3. Installation of quarter window glass adhesive dam
    (1) Using the appropriate cleaner, clean the installation surface of the quarter window glass adhesive dam.

(2) Install the new quarter window glass adhesive dam in the position on the back of the quarter window glass that is indicated in the figure.



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Quarter window glass adhesive dam | - | - |

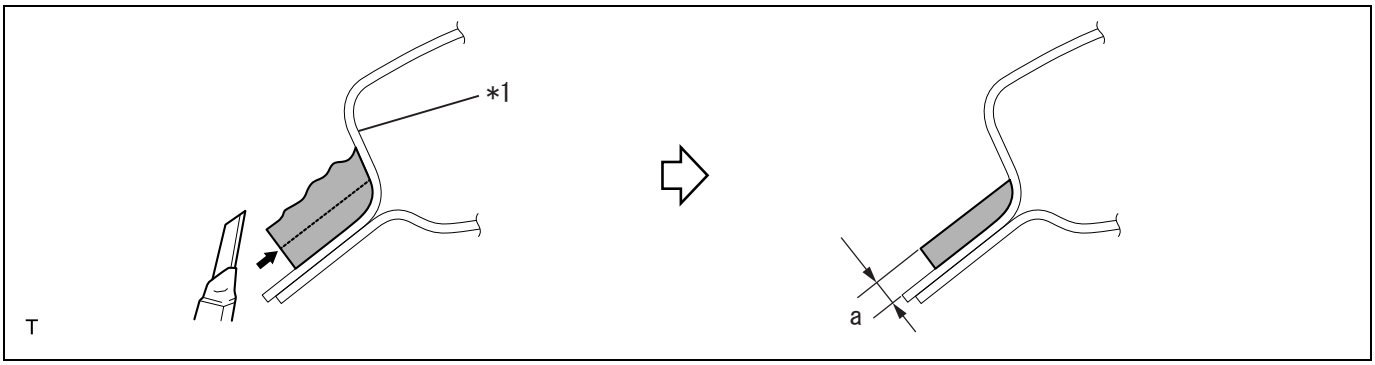
Standard value

| Part | Dimension |
|---|---|
| a | 13.0 mm {0.512in} |
| b | 72.5 mm {2.854in} |
| c | 14.6 mm {0.575in} |
| d | 62.3 mm {2.453in} |
| e | 33.9 mm {1.334in} |
| f | 123.8 mm {4.874in} |

4. Installation of quarter window glass

(1) Cleaning of mounting surface of the body

(a)Remove the adhesive layer on the body using cutter knife or similar tool to obtain smooth surface of 2 mm {0.08 in} thick.



CAUTION:

- Do not damage the body.
- Always leave a little amount of adhesive.

Captions in illustration

Standard value

| Part | Dimension |
|---|---|
| a | 2.0 mm {0.079in} |

(2) Using the appropriate cleaner, clean the installation surface of the body.
(3) Preparation works prior to quarter window glass installation
(a)Attach the suction rubber onto the quarter window glass.
(b)Apply primer on the body surface.
Primer : The Dow Automotive U-413 or equivalent
CAUTION:
Do not apply the primer thickly.
(4) Apply primer onto the quarter window glass where indicated in the figure.
Primer : The Dow Automotive U-401, U-402 or equivalent
CAUTION:
Do not apply the primer thickly.

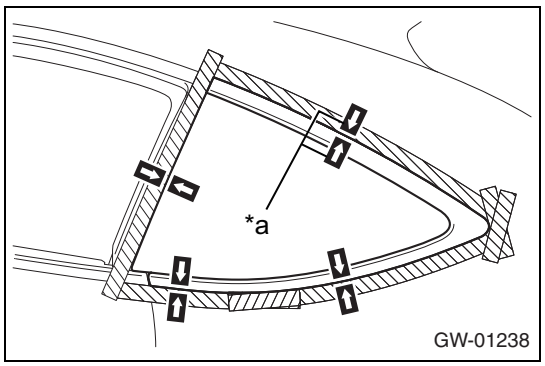
| c | 5.6 mm {0.220in} |
| d | 26.3 mm {1.035in} |
| e | 50.0 mm {1.969in} |

CAUTION:
Apply adhesive after the primer dried (approx. after 10 minutes).

(8) Installation of quarter window glass (when the quarter window glass is reused.)



(a)Holding the suction rubbers, align the alignment marks and install the quarter window glass.
CAUTION:
After body side primer is dried (approx. 10 minutes), attach the quarter window glass.

Captions in illustration

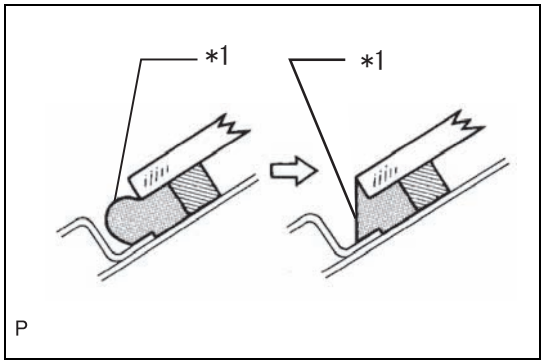
| | |
|---|---|
| *a | Alignment marks |

(b)Lightly press the front side of the quarter window glass to fit tightly.
NOTE:
Pressing force: 98 N {10 kgf} {22.0 lbf} or more

(9) Installation of quarter window glass (when new quarter window glass is used.)

(a)Holding the suction rubbers, engage the 3 clips and install the quarter window glass.
CAUTION:
After body side primer is dried (approx. 10 minutes), attach the quarter window glass.

(b)Lightly press the front side of the quarter window glass to fit tightly.
NOTE:
Pressing force: 98 N {10 kgf} {22.0 lbf} or more



(10) Using a spatula, remove or add adhesive if any excess and/or shortage is found.

Captions in illustration

| | |
|---|---|
| *1 | Adhesive |

(11) Remove excess adhesive before cure.

(12) Using protection tapes or similar tapes, hold the quarter window glass until the adhesive cures completely.

NOTE:

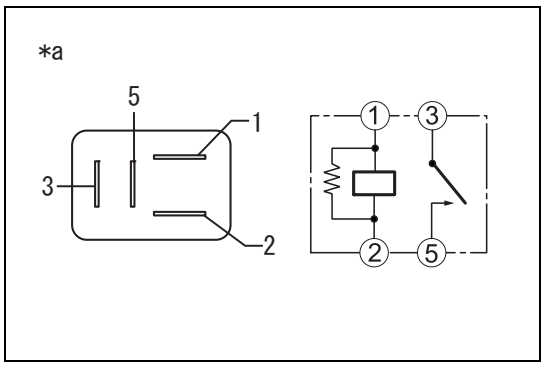
For minimum drying time or waiting time after the cure of adhesive, consult the instruction or manual of each adhesive supplier.

5. Leak test and repair test
   (1) After the adhesive cure, pour water over the vehicle and make sure no water leak inside.
   (2) If any water leak is found, fill the three cement black after the drying.
   (3) Remove the applied protective tape and packing tape.
6. Installation of the retainer & molding ASSY LH
   (1) Fit in the tab.
   (2) Install the retainer & molding ASSY with the 7 screws.
7. Installation of the weather strip roof side LH
   (1) Using the appropriate cleaner, clean the installation surface of the body.
   (2) Engage the 5 clips, insert the upper part of the weather strip roof side in the groove of the retainer & molding ASSY, and affix it with double-sided tape.
8. Installation of center pillar garnish LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 57)
9. Installation of quarter rear trim garnish FR LH
   NOTE:
   Perform the same procedures as RH side. (Refer to IT - 57)
10. Installation of rear window side garnish LH
    NOTE:
    Perform the same procedures as RH side. (Refer to IT - 57)
11. Installation of quarter trim lid LH
    NOTE:
    Perform the same procedures as RH side. (Refer to IT - 57)
12. Installation of quarter lower trim LH
    NOTE:
    Perform the same procedures as RH side. (Refer to IT - 57)
13. Installation of the trunk trim cover INN LH
    NOTE:
    Perform the same procedures as RH side. (Refer to IT - 58)
14. Connection of front door opening trim weather strip LH
    NOTE:
    Perform the same procedures as RH side. (Refer to IT - 58)
15. Installation of front door scuff plate LH
    NOTE:
    Perform the same procedures as RH side. (Refer to IT - 58)

16. Connection of front seat outer belt ASSY LH
    NOTE:
    Perform the same procedures as RH side. (Refer to SB - 28)
17. Installation of separate type rear seat cushion ASSY LH
    NOTE:
    Perform the same procedures as RH side. (Refer to SE - 39)

# Relay

## Unit inspection



1. Inspection of defogger relay
   (1) Measure the resistance between connector terminals as shown below.
   Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3 - 5 | When battery voltage is not applied between terminals 1 - 2. | 10 kΩ or more |
| | When battery voltage is applied between terminals 1 - 2. | Less than 1 Ω |

| | |
|---|---|
| *a | Connector not connected<br>(RR DEF relay) |

## Description of functions

1. Description of the trunk opener system
   (1) The trunk opener is an electric type.
   (2) When it receives the ON signal from the trunk opening switch ASSY, the main body ECM (multiplex network body computer) operates the trunk lock motor.
   (3) The trunk opener system operates in the following ways.

| Opening cancel switch status | Opening switch status | Door lock status | Trunk opener system status |
|---|---|---|---|
| ON (pressed in) | ON (pressed in) | Locked | Does not operate |
| ON (pressed in) | OFF (not pressed in) | Locked | Does not operate |
| ON (pressed in) | ON (pressed in) | Not locked | Does not operate |
| OFF (not pressed in) | ON (pressed in) | Not locked | Operates |

2. Functions of the main parts

| Component | Function |
|---|---|
| Trunk lock cylinder ASSY | Controlled by the main body ECM (multiplex network body computer), it releases the trunk lock. |
| Trunk opening switch ASSY | When the trunk opening switch is pressed in, the opening switch ON signal is sent to the main body ECM (multiplex network body computer). |
| Trunk opening cancel switch ASSY | When the trunk opening cancel switch is pressed in, the opening cancel switch ON signal is sent to the main body ECM (multiplex network body computer). |
| Main body ECM (multiplex network body ECM) | When the trunk opening switch is pressed in, the main body ECM (multiplex network body computer) receives the opening switch ON signal.<br>When the trunk opening cancel switch is pressed in, the main body ECM (multiplex network body computer) receives the opening cancel switch ON signal. |

## Symptom table

NOTE:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Luggage Compartment Door Opener System

| Symptom | See page |

|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (Network gateway computer) |

(a)Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.

(b)Measure the voltage and resistance between terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| MB-1 (BECU) ←→chassis ground | Always | 11 to 14 V |
| MB-8 (IG) ←→chassis ground | IG OFF →IG ON | Less than 1 V →11 to 14 V |
| MB-9 (ACC) ←→chassis ground | ACC OFF →ACC ON | Less than 1 V →11 to 14 V |
| MB-11 (GND) ←→chassis ground | Always | Less than 1 Ω |
| D5-22 (ACC) ←→chassis ground* | ACC OFF →ACC ON | Less than 1 V →11 to 14 V |
| D6-16 (TSW) ←→chassis ground | Trunk opening switch ASSY OFF →ON | 10 kΩ or more →less than 1 Ω |

*: With smart entry & start system

NOTE:

If it is outside the standard values, the vehicle is defective.

(c) Install the main body ECM (network gateway computer) on the instrument panel junction block ASSY.

(d) Measure the voltage between the terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D6-16 (TSW) ←→chassis ground | Trunk opening switch ASSY OFF →ON | Pulse generation →less than 1 V |
| 3B-6 ←→chassis ground | Trunk opening switch ASSY OFF →ON | Less than 1 V →11 to 14 V →less than 1 V |

NOTE:

If it is outside the standard values, the main body ECM (network gateway computer) is defective.

## Data monitor / active test

1. Inspection with SSM4

(1) [Data monitor]

(a) Use the SSM4 and [Data monitor] to determine functionality and narrow down the defective part.

Criteria

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item Name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Trunk/BDoor Open SW] | Trunk opening switch ASSY status<br>Display range: ON - OFF | ON: the switch is pressed in<br>OFF: the switch is not pressed in | - |

(2) [Active Test]

(a) Use the SSM4 to conduct [Active Test] and determine functionality and narrow down the defective part.

Criteria

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item | Drive |
|---|---|
| [Trunk and Back-Door Open] | Open |

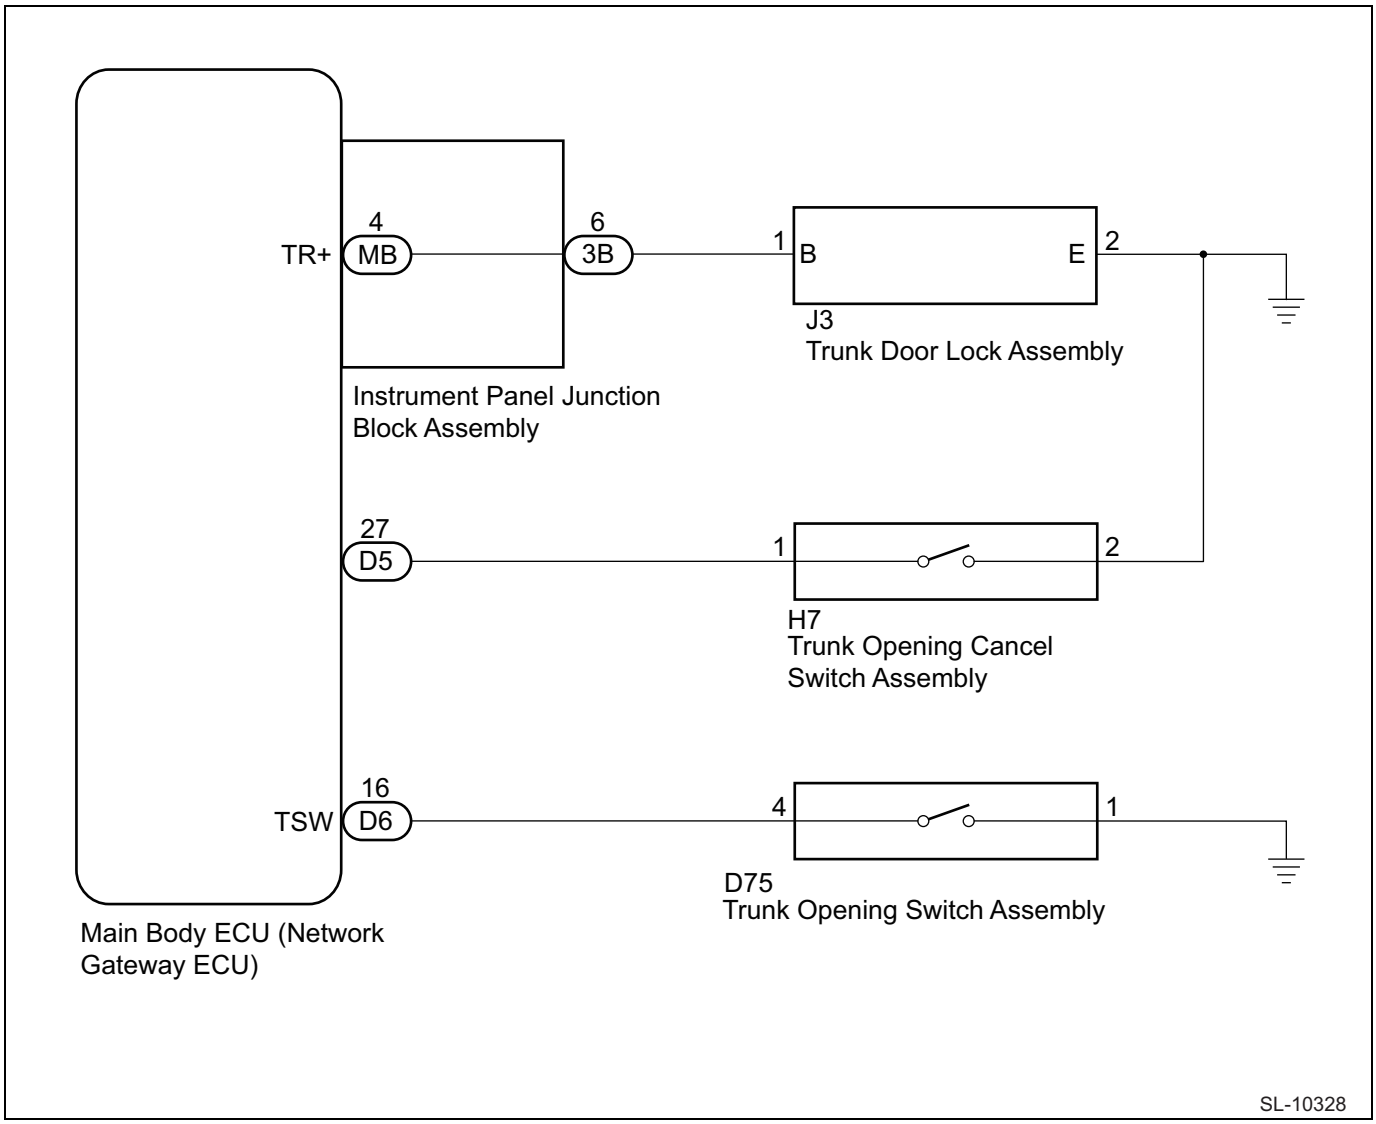
DH

## Trunk opener does not operate

Circuit description

The main body ECM (network gateway computer) receives a switch signal from the trunk opening switch ASSY, then starts the trunk lock ASSY motor and opens the trunk. (For operation conditions, refer to the function inspection DH - 3)

Circuit figure



Inspection steps

CAUTION:

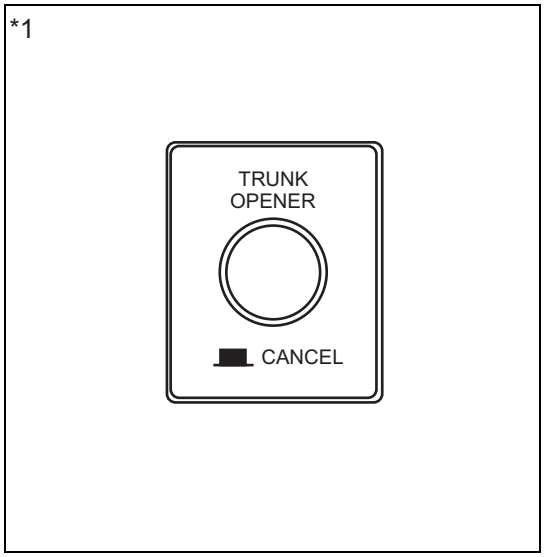
The trunk opener system uses the CAN communication system. First, perform a “Communication function inspection”, following “How to troubleshoot (Refer to DH - 6)”, and after checking for any malfunction in the communication system, you can proceed with troubleshooting.

DH

| | |
|---|---|
| 1 | Trunk opener system check |

(1) When the trunk opening cancel switch ASSY is ON, press trunk opening switch ASSY and confirm that the trunk does not open.

Criteria: The trunk opener system does not operate.



(2) When the trunk opening cancel switch ASSY is OFF, press trunk opening switch ASSY and confirm that the trunk opens.
Criteria: The trunk opener system operates.

Captions in illustration

| | |
|---|---|
| *1 | Trunk opening cancel switch ASSY |

NG → Go to Step 2.

OK

Complete

| 2 | Implementation of SSM4 [Active Test] |
|---|---|

(1) [Active Test]
(a) Using the SSM4 and the [Active Test], check that the trunk can be opened. (Refer to DH - 10)

Criteria
SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item | Drive |
|---|---|
| [Trunk and Back-Door Open] | Open |

NG → Go to Step 8.

OK

DH

| 3 | SSM4 [Data monitor] (Trunk opening switch ASSY) |
|---|---|

(1) [Data monitor]
(a) Using the SSM4, check the data monitor of the main body ECM (network gateway computer). (Refer to DH - 10)

Criteria
SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Trunk and Back-Door Open] | Trunk opening switch signal / [ON-OFF] | [ON]: The trunk opening switch ASSY is pressed in.<br>[OFF]: The trunk opening switch ASSY is not pressed in. | - |

| Tester display | Measurement items / range | Normal condition | Notes for diagnosis |
|---|---|---|---|
| [Trunk main switch] | Trunk opening cancel switch signal / [ON or OFF] | [ON]: The trunk opening cancel switch ASSY is pressed in.<br>[OFF]: The trunk opening cancel switch ASSY is not pressed in. | - |

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (The trunk opening switch ASSY has a malfunction.) | B |
| NG (The trunk opening cancel switch ASSY has a malfunction.) | C |

B → Go to Step 4.

C → Go to Step 6.

A

Replacement of the main body ECM (multiplex network body ECM)

| 4 | Unit inspection of trunk opening switch ASSY |
|---|---|

(1) Remove the trunk opening switch ASSY. (Refer to DH - 68)
(2) Perform the unit inspection of the trunk opening switch ASSY. (Refer to DH - 69)

NG → Replacement of the trunk opening switch ASSY (Refer to DH - 68)

OK

| 5 | Inspection of the wiring harnesses and the connectors (main body ECM - trunk opening switch ASSY) |
|---|---|

(1) Disconnect the main body ECM (network gateway computer) connector D6 and the trunk opening switch ASSY connector D75.
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D6-16 (TSW) - D75-4 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D6-16 (TSW) - chassis ground | Always | 10 kΩ or more |
| D75-1 - chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

Replacement of the main body ECM (multiplex network body ECM) (Refer to PD - 25)

| 6 | Check the trunk opening cancel switch ASSY. |
|---|---|

(1) Remove the trunk opening cancel switch ASSY. (Refer to DH - 72)
(2) Check the trunk opening cancel switch ASSY. (Refer to DH - 74)

NG → Replace the trunk opening cancel switch ASSY (Refer to DH - 72)

OK

| 7 | Inspection of the harnesses and the connectors (Trunk opening cancel switch ASSY - main body ECM) |
|---|---|

(1) Disconnect the D5 of the main body ECM (Multiplex network body computer) connector and H7 trunk opening cancel switch ASSY.
(2) Measure the resistance according to the following table.

Normal resistance (open circuit check)

| Tester connection | Conditions | Specified condition |
|---|---|---|
| D5-27 - H7-1 | Always | 1 Ωor less |

Normal resistance (short circuit inspection)

| Tester connection | Conditions | Specified condition |
|---|---|---|
| D5-27 - chassis ground | Always | 10 kΩ or more |
| H7-2 - chassis ground | Always | 1 Ωor less |

NG → Repair or replacement of the harnesses or connectors (trunk opening cancel switch ASSY - main body ECM)

OK

DH

Replacement of the main body ECM (multiplex network body ECM)

| 8 | Unit inspection for the trunk lock ASSY |
|---|---|

(1) Remove the trunk lock ASSY. (Refer to DL - 105)
(2) Perform the unit inspection of the trunk lock ASSY. (Refer to DL - 108)

NG → Replacement of the trunk lock ASSY (Refer to DL - 105)

OK

| 9 | Inspection of the wiring harnesses and the connectors (instrument panel junction block ASSY - trunk lock ASSY) |
|---|---|

(1) Disconnect the instrument panel junction block ASSY connector (3B) and the trunk lock ASSY connector (J3).
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 3B-6 - J3-1 (B) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 3B-6 - chassis ground | Always | 10 kΩ or more |
| J3-2 (E) - chassis ground | Always | Less than 1 Ω |

NG → Repair or replacement of wiring harness or connector

OK

| 10 | Unit inspection of the instrument panel junction block ASSY. |
|---|---|

(1) Remove the instrument panel junction block ASSY. (Refer to PD - 25)
(2) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.

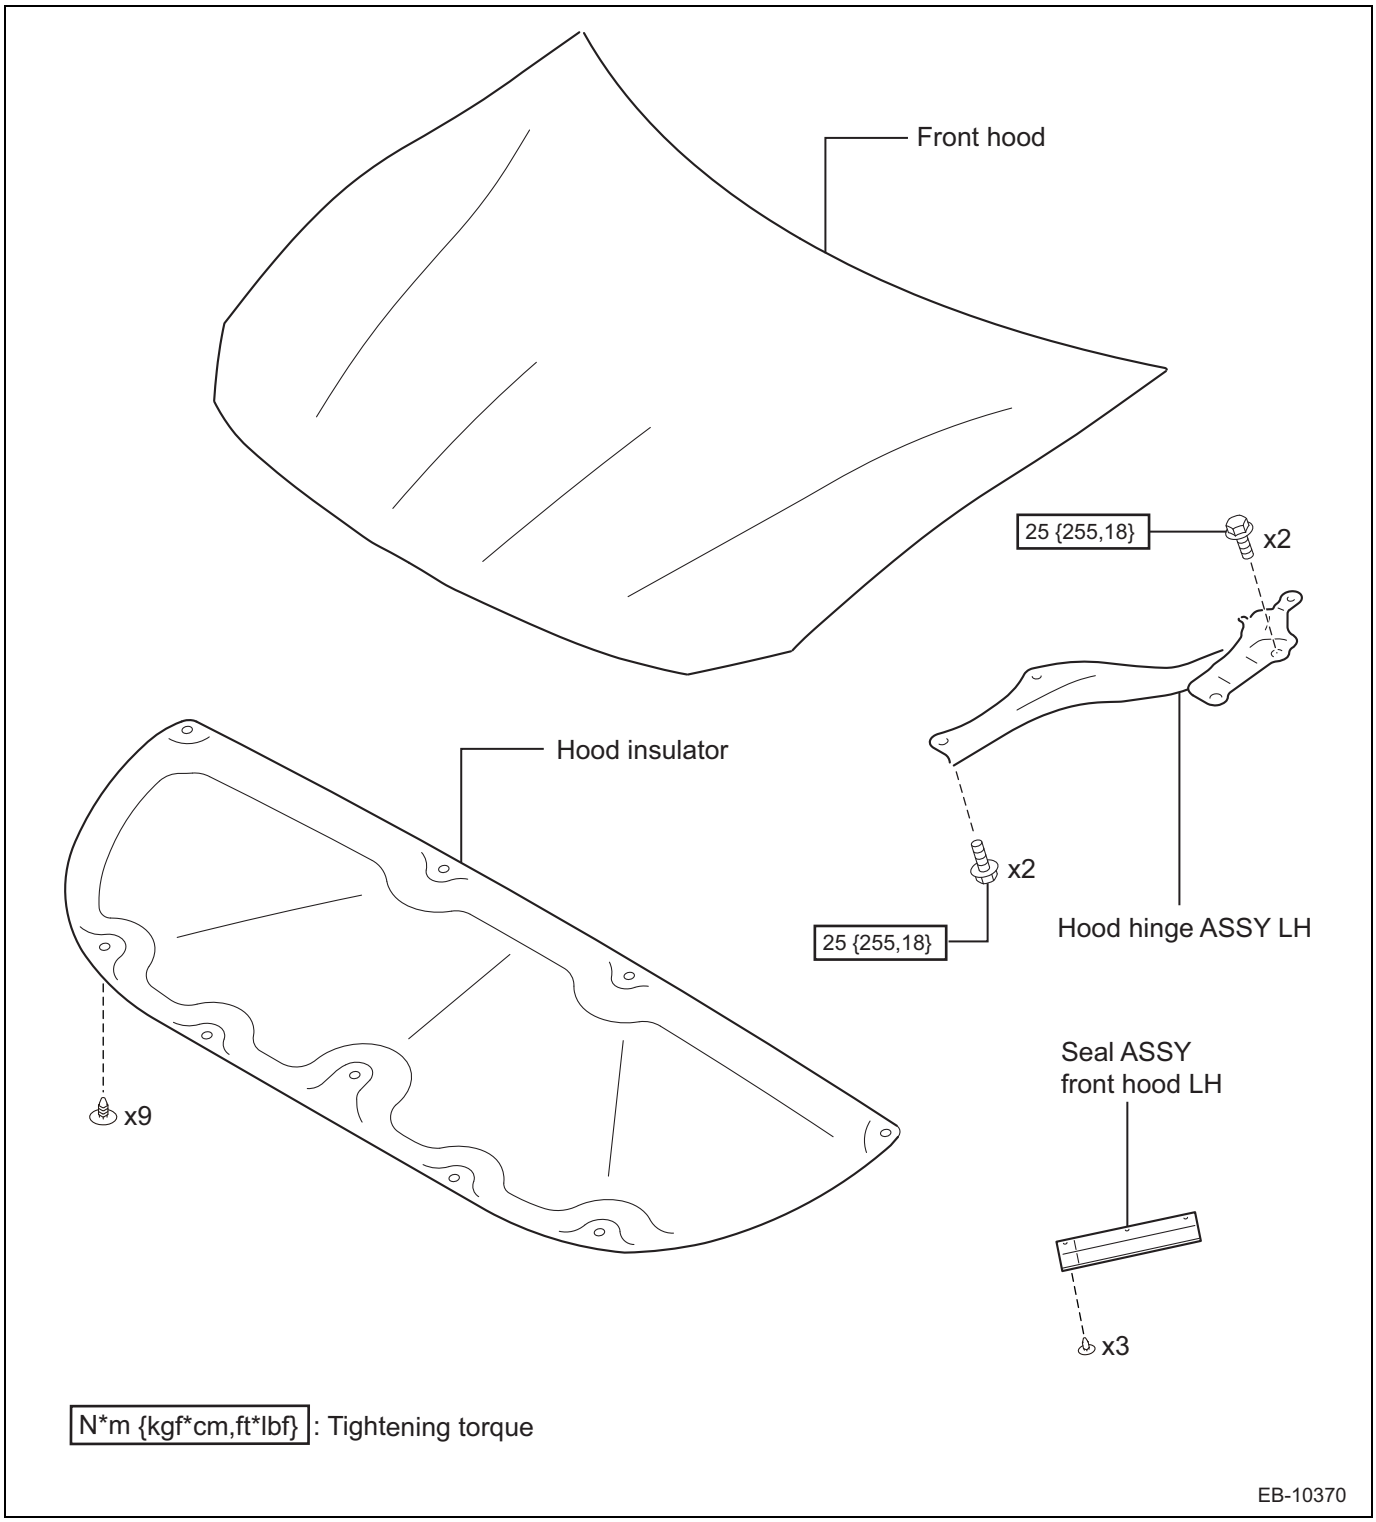
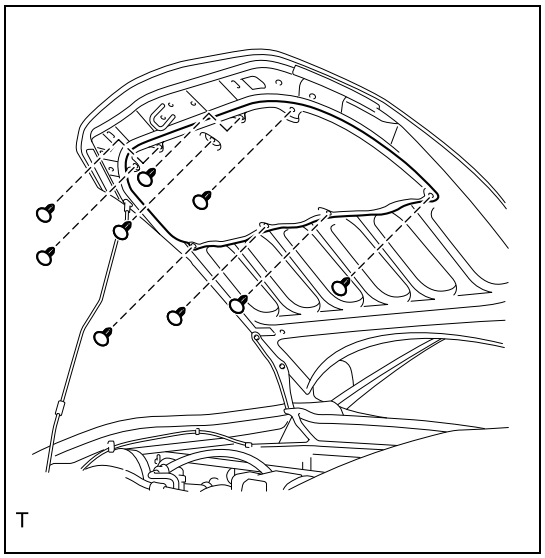
# Front hood

## Exploded view

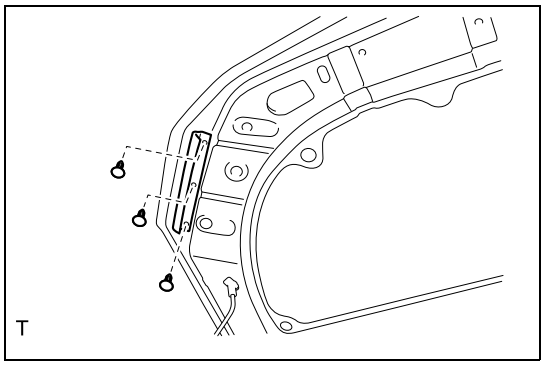


DH

## Disassembly



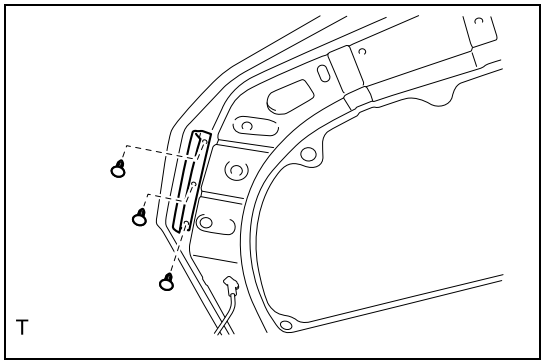
1. Removal of the hood insulator
   (1) Using a clip remover, remove the 9 clips, and remove the hood insulator.



2. Removal of the seal ASSY front hood RH
   (1) Using a clip remover, remove the 3 clips and remove the seal ASSY front hood RH.

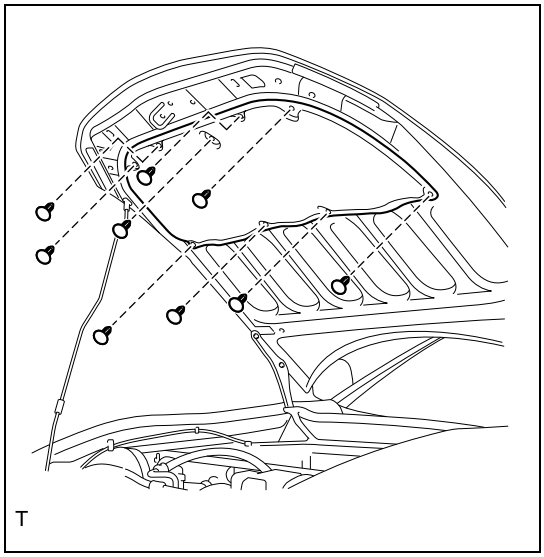
3. Removal of the seal ASSY front hood LH
   (1) Remove the part in the same manner as RH side.

## Assembly



1. Installation of the seal ASSY front hood RH
   (1) Using 3 clips, install the seal ASSY front hood RH.

2. Installation of the seal ASSY front hood LH
   (1) Install the part in the same manner as RH side.

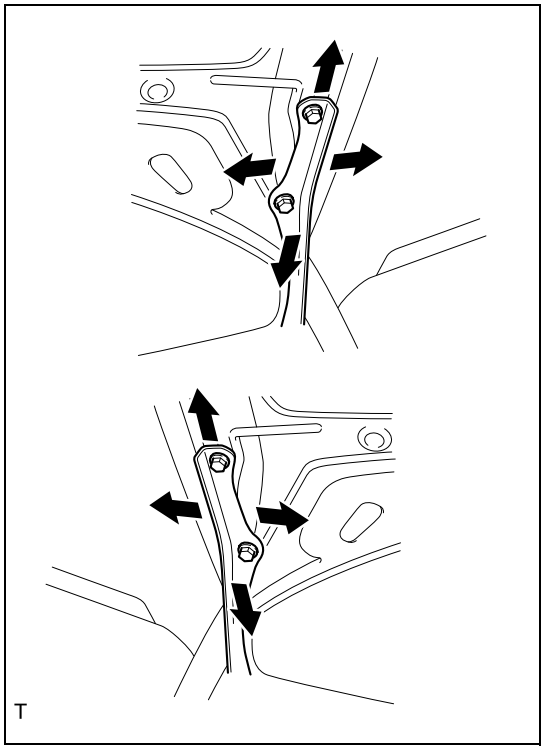


3. Installation of the hood insulator
   (1) Using 9 clips, install the hood insulator.

4. Adjustment of the hood ASSY (hood SUB-ASSY) (Refer to DH - 19)

## Adjustment

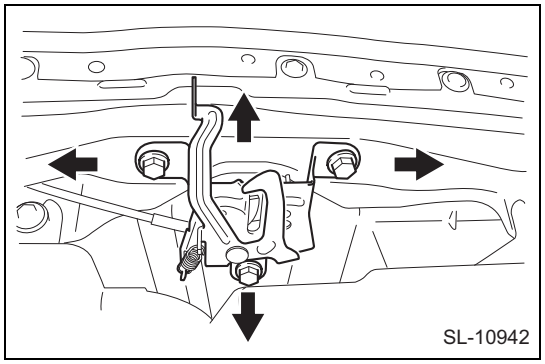
1. Inspection of the hood ASSY (hood SUB-ASSY) (Refer to DH - 20)



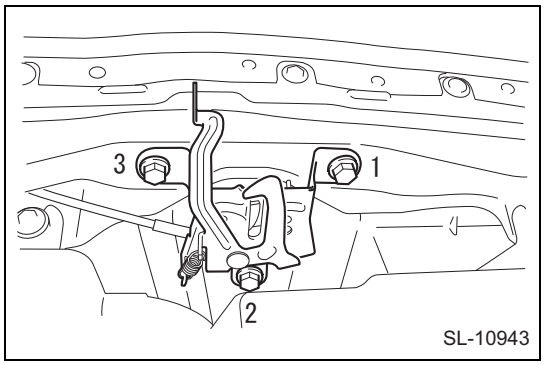
2. Adjustment of the hood ASSY (hood SUB-ASSY)
   (1) Adjustment of the hood horizontal direction
      (a)Loosen the bolts of the hood hinge ASSY to adjust.
         Standard value:T=25N·m {255kgf·cm} {18.4ft·lbf}

   (2) Adjustment of the vertical direction of both sides of the hood's front end
      (a)Turn the 2 cushions to adjust the height.

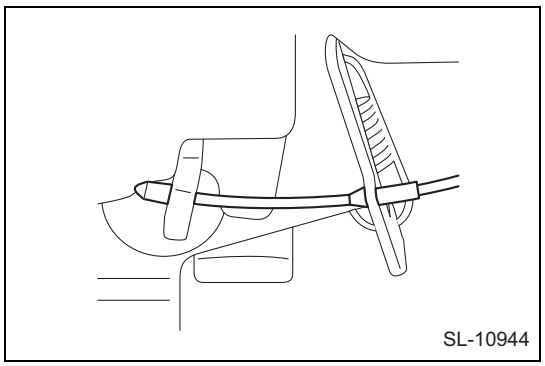
DH



(3) Adjustment of the vertical and left and right directions of the hood's front end.
(a)Loosen the 3 bolts to adjust.



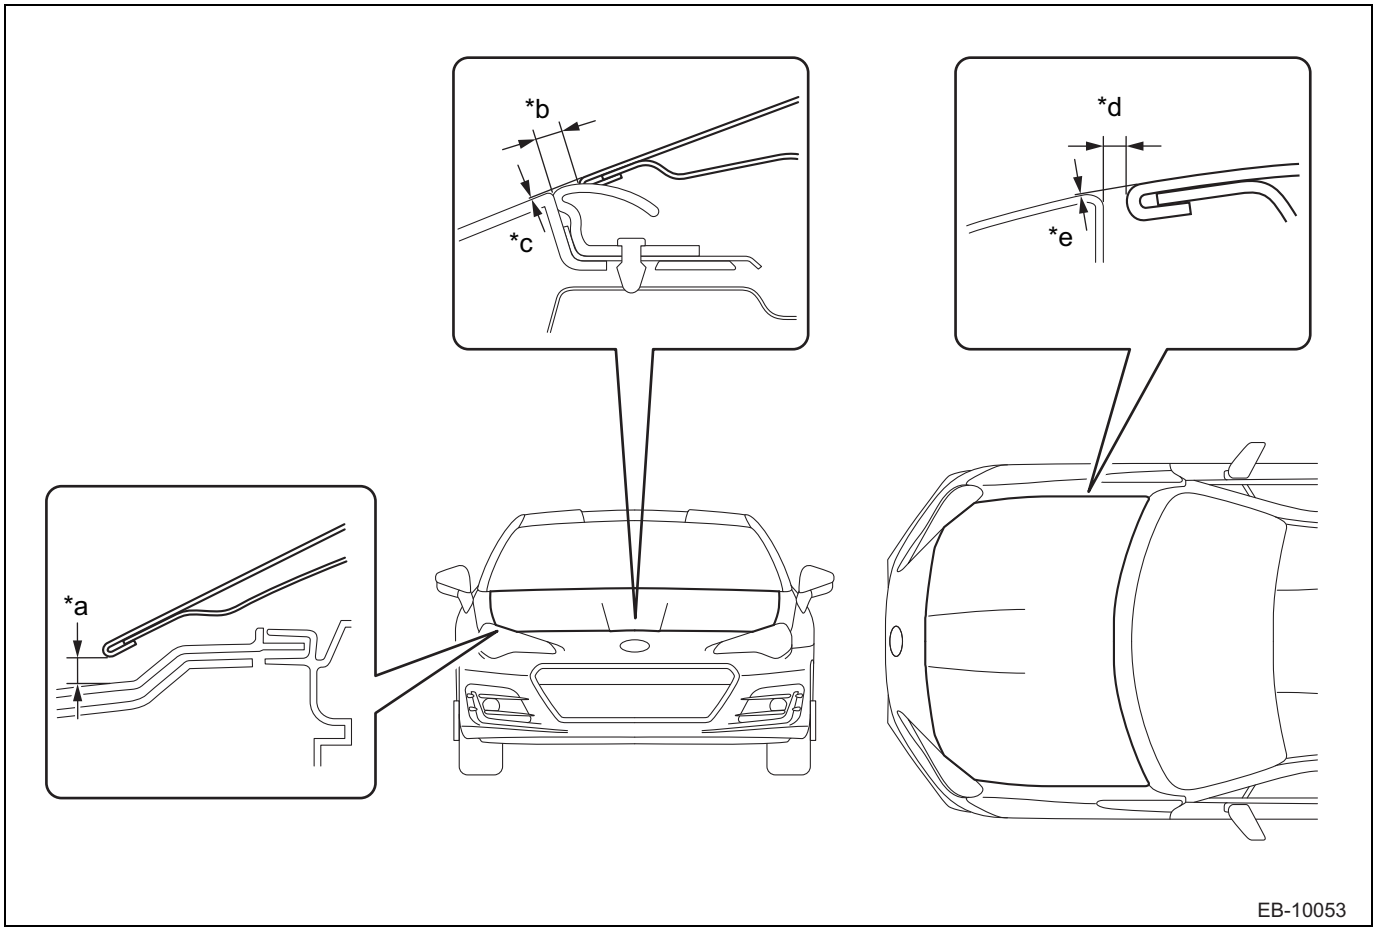
(b)In the order shown in the figure, tighten the 3 bolts.
Standard value:T=33N·m {336kgf·cm} {24.3ft·lbf}



(c)Connect the cable ASSY front hood (hood lock control cable ASSY).

## On-vehicle inspection

1. Inspection of the hood ASSY (hood SUB-ASSY)
   (1) Inspect if each placement dimension is within the reference values.

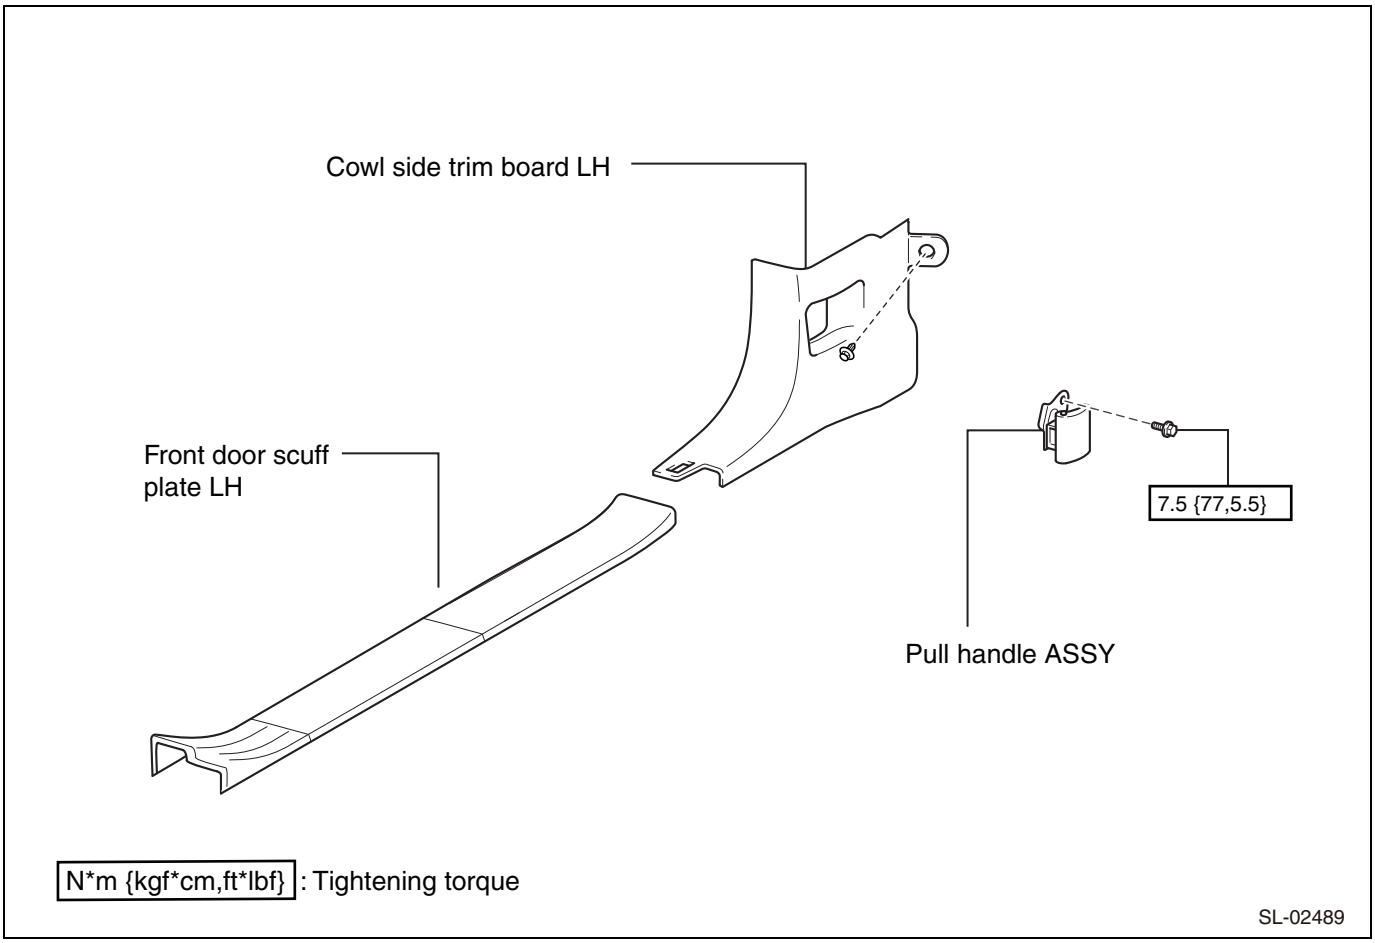


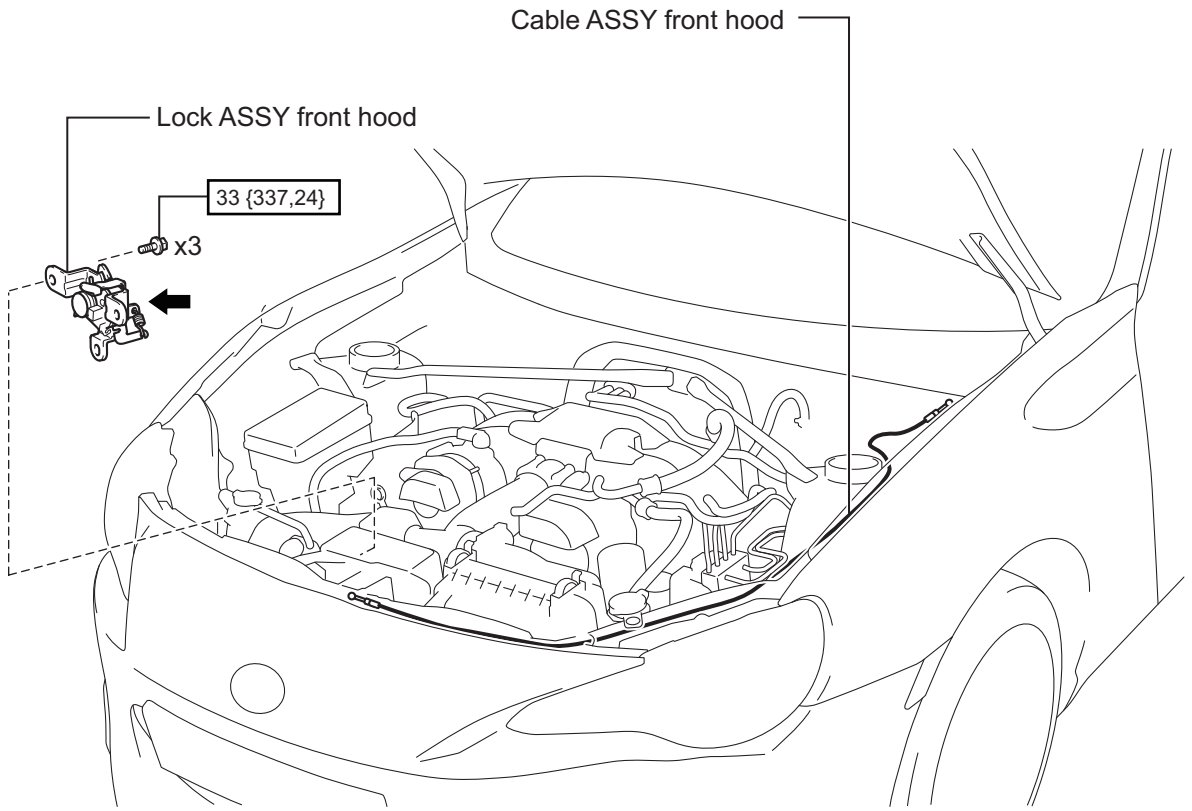
Reference values

| | | | |
|---|---|---|---|
| *a | 5.8 to 9.8 mm {0.2283 to 0.3858 in} | *b | 3.0 to 7.0 mm {0.1181 to 0.2756 in} |
| *c | -2.0 to 2.0 mm {-0.0787 to 0.0787 in} | *d | 2.0 to 5.0 mm {0.0787 to 0.1969 in} |
| *e | -2.0 to 1.0 mm {-0.0787 to 0.0394 in} | - | - |

# Cable ASSY front hood

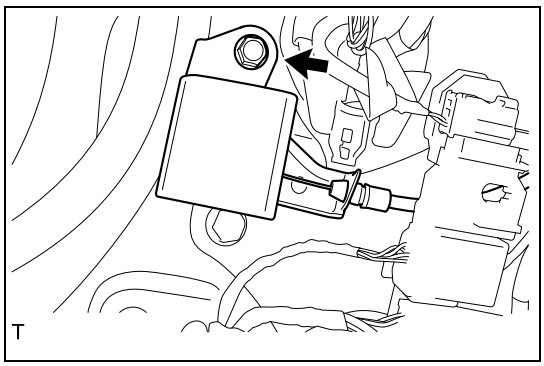
## Exploded view



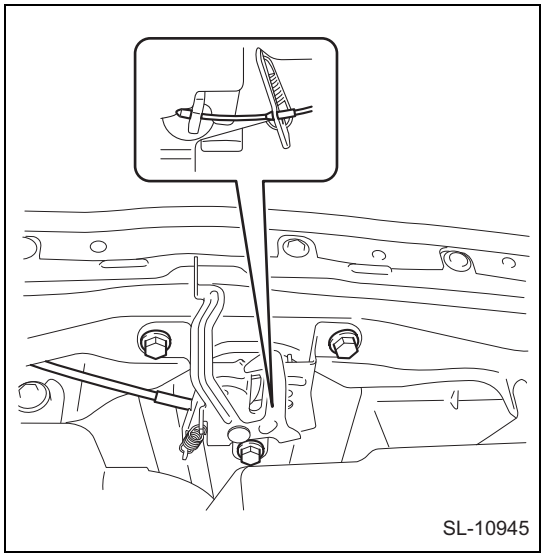


## Removal

1. Removal of front door scuff plate LH (Refer to IT - 48)
2. Removal of cowl side trim board LH (Refer to IT - 48)

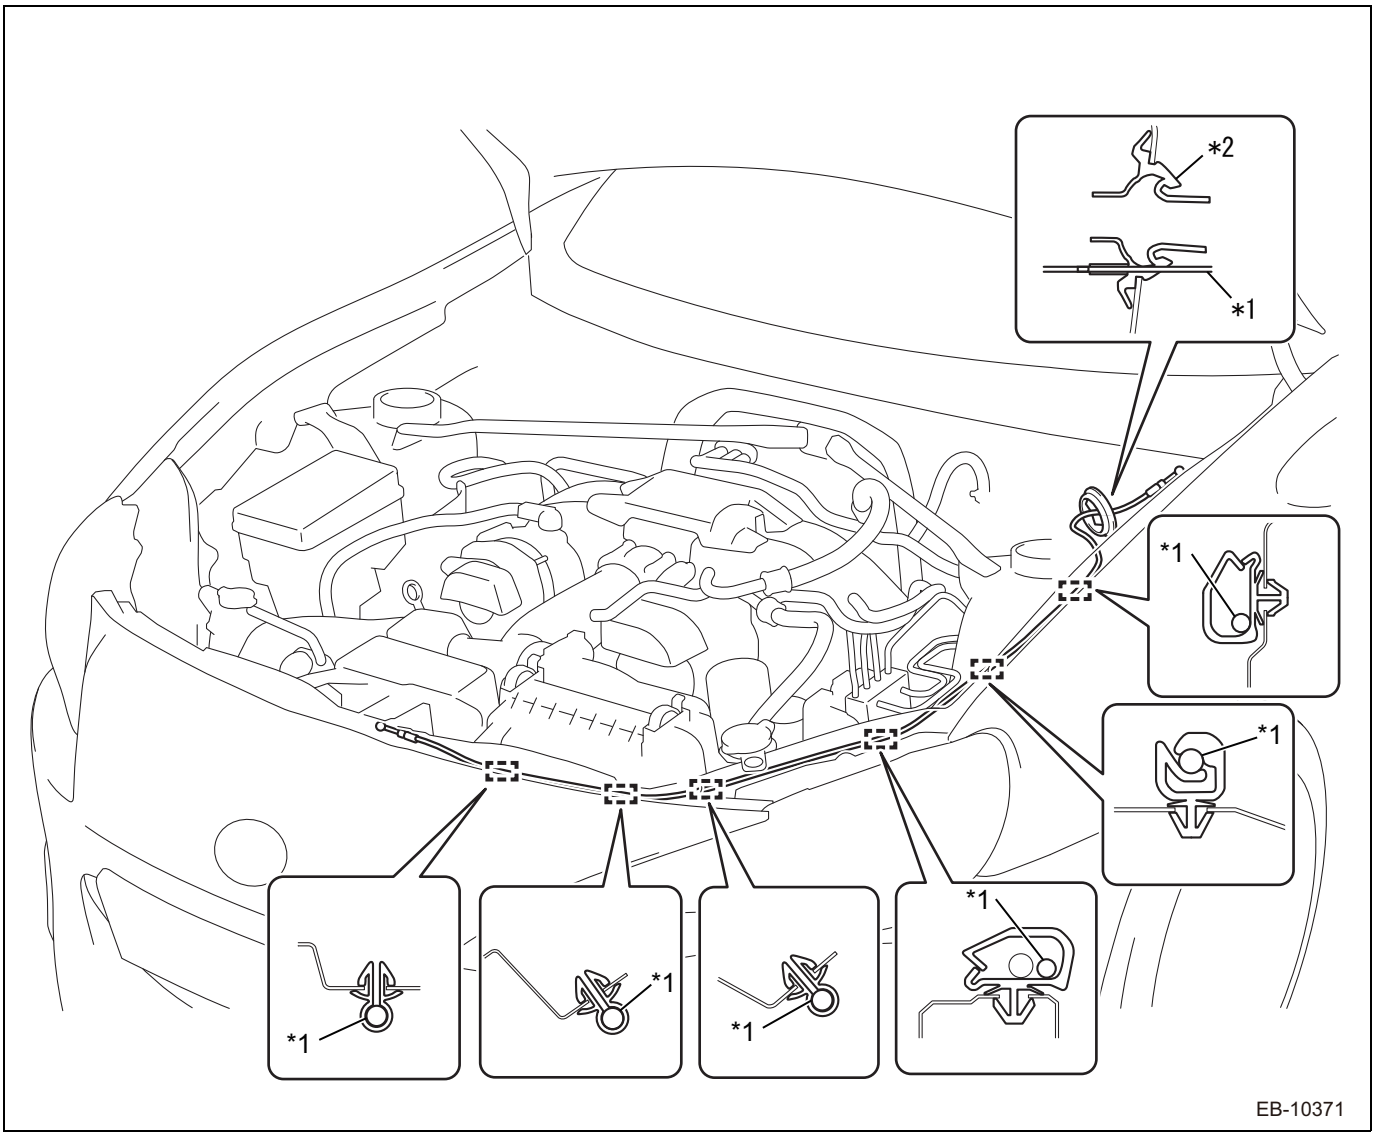


3. Removal of the pull handle ASSY
   (1) Remove the bolt and remove the pull handle ASSY.
   (2) Disconnect the cable ASSY front hood.
4. Removal of the air cleaner case SUB-ASSY (Refer to IE - 15)



5. Removal of the lock ASSY front hood
   (1) Remove the 3 bolts, and remove the hood lock ASSY.
   (2) Disconnect the cable ASSY front hood.

6. Removal of the cable ASSY front hood
   (1) Using a flat tip screwdriver wrapped in protective tape, release each clamp, and remove the cable ASSY front hood.

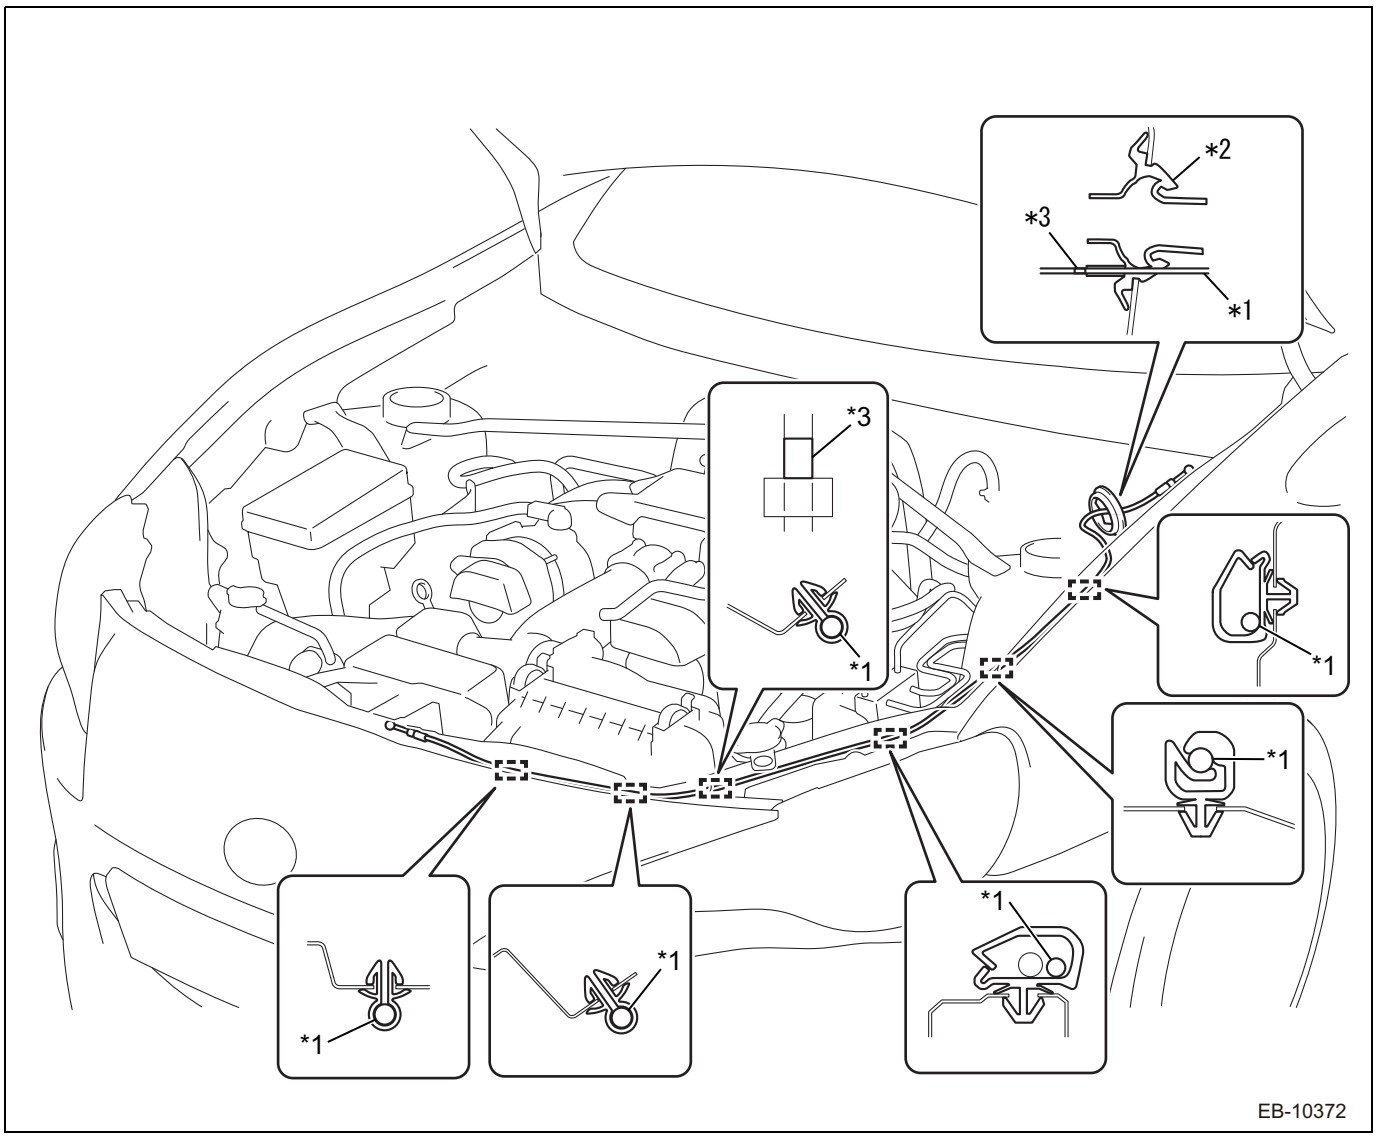


Captions in illustration

| Part | Part name | Part | Part name |
|---|---|---|---|
| *1 | Cable ASSY front hood | *2 | Grommet |

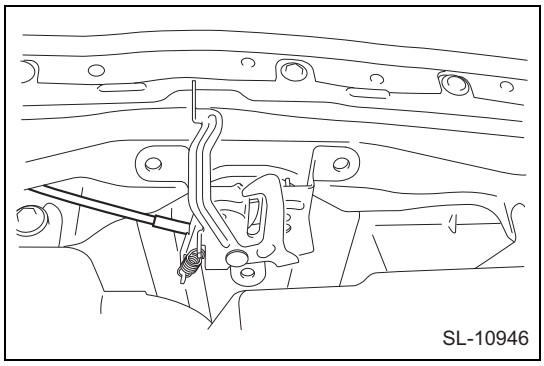
## Installation

1. Installation of the cable ASSY front hood
   (1) Engage each clamp as shown in the figure to install the cable ASSY front hood.



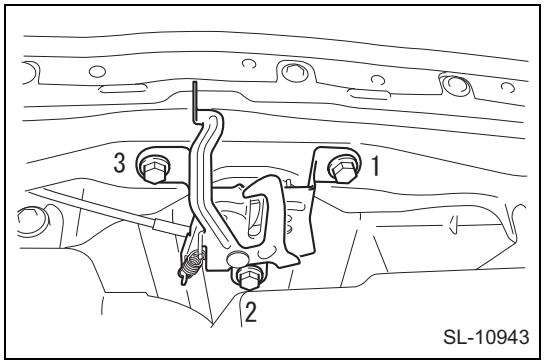
Captions in illustration

| Part | Part name | Part | Part name |
|---|---|---|---|
| *1 | Cable ASSY front hood | *2 | Grommet |
| *3 | Alignment marks | — | — |



2. Installation of the lock ASSY front hood
   (1) Connect the cable ASSY front hood to the hood lock ASSY.

DH



(2) Install the lock ASSY front hood with the 3 bolts in the order shown in the figure.
Standard value:T=33N·m {336kgf·cm} {24.3 ft·lbf}

3. Installation of the air cleaner case SUB-ASSY (Refer to IE - 29)
4. Installation of the pull handle ASSY
   (1) Connect the cable ASSY front hood to the pull handle ASSY.
   (2) Using the bolt, install the pull handle ASSY.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
5. Installation of cowl side trim board LH (Refer to IT - 58)
6. Installation of front door scuff plate LH (Refer to IT - 58)

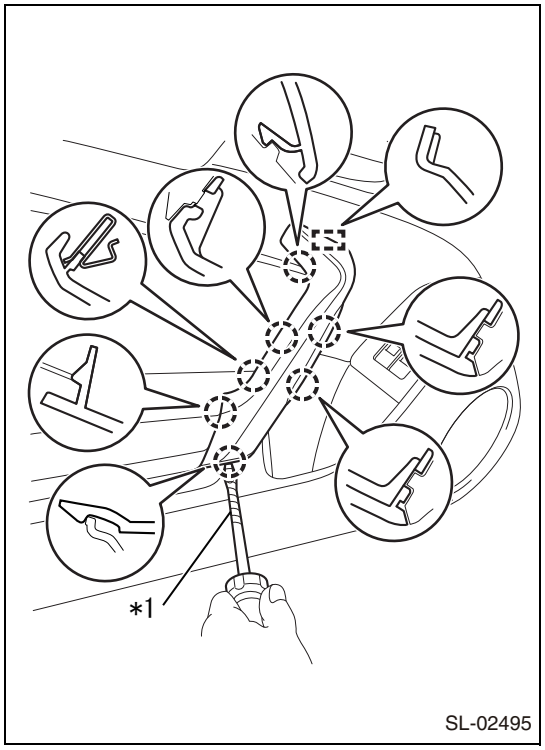
## Disassembly

NOTE:

The following procedure is for LH side. Unless otherwise specified, perform the same procedures for the LH and RH side.

1. Disconnection of the battery ground terminal (Refer to BH - 31)



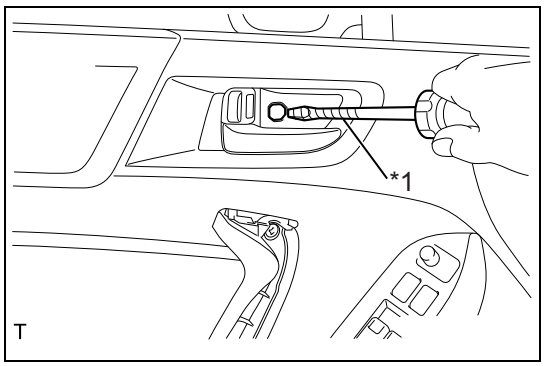
2. Removal of the door armrest cover LH

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

(1) Using a flat tip screwdriver that is wrapped in protective tape, release the 7 tabs.
(2) Release the guide, and remove the door armrest cover LH.

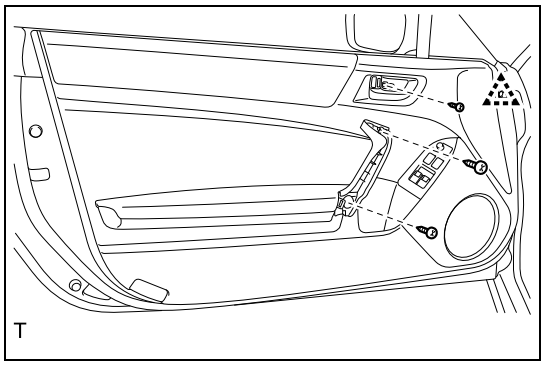
3. Removal of the courtesy light ASSY (if there is a courtesy light) (Refer to LI - 55)



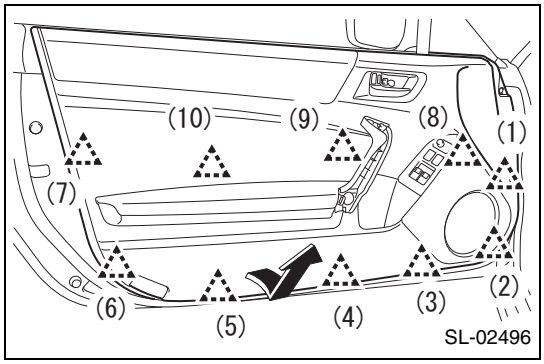
4. Removal of the front door trim board SUB-ASSY LH
(1) Using a flat tip screwdriver that is wrapped in protective tape, open the cap.

Captions in illustration

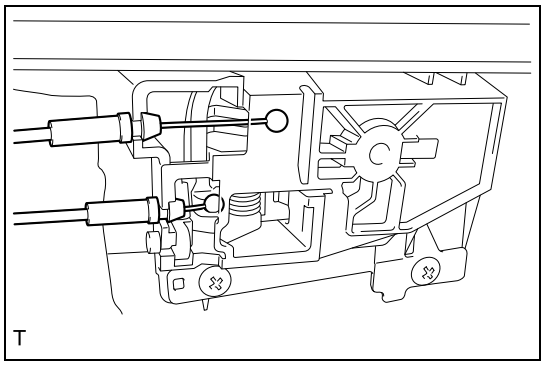
| | |
|---|---|
| *1 | Protective tape |



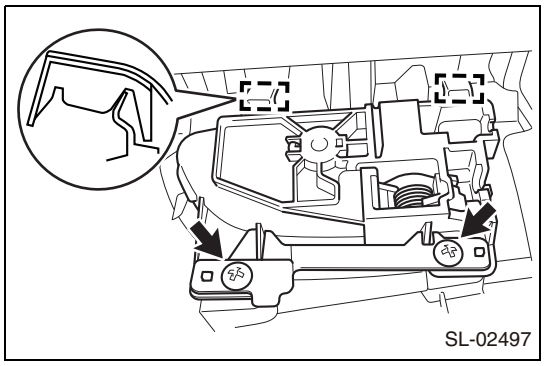
(2) Remove the clip.
(3) Remove the 3 screws.



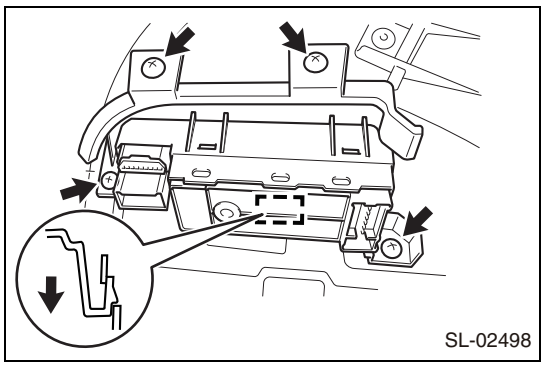
(4) While pulling the front door trim board SUB-ASSY towards, release the 10 clips in the order shown in the figure.
(5) Disconnect each connector.



(6) Disconnect the front door lock remote control cable and the front door inside locking cable from the front door trim board SUB-ASSY LH.

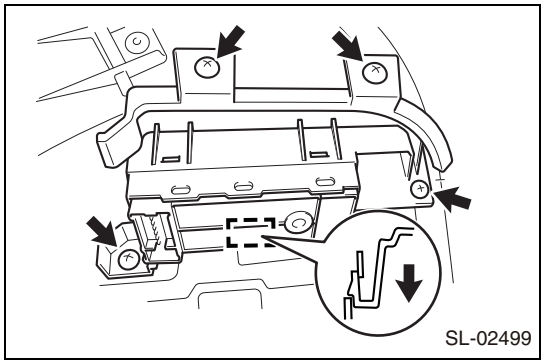


5. Removal of the front door inside handle SUB-ASSY LH
   (1) Remove the 2 screws.
   (2) Release the 2 guides, and remove the front door inside handle SUB-ASSY LH and the plate.



6. Removal of the power window regulator master switch ASSY W/ front armrest base panel UPR LH (driver side door)
   (1) Remove the 4 screws.
   (2) Release the tab, and remove the power window regulator master switch ASSY W/ front door armrest base panel.

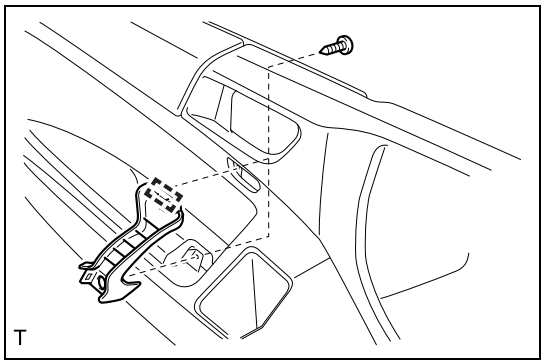
7. Removal of the power window regulator master switch ASSY (driver side door) (Refer to WS - 53)



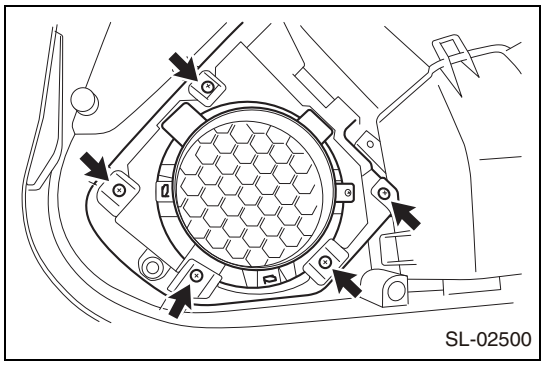
8. Removal of the power window regulator switch ASSY W/ front armrest base panel UPR RH (passenger side door)
   (1) Remove the 4 screws.
   (2) Release the tab, and remove the power window regulator switch ASSY W/ front door armrest base panel.

9. Removal of the power window regulator switch ASSY (passenger side door) (Refer to WS - 55)

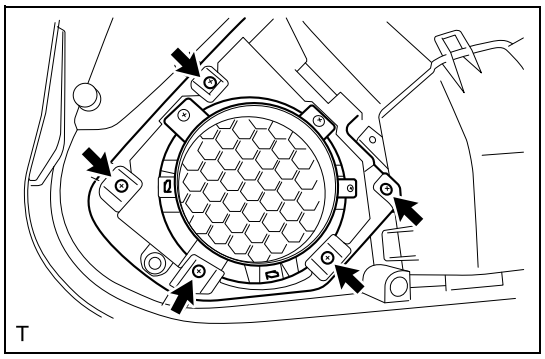
10. Removal of the outer mirror switch ASSY (Refer to MX - 14)



11. Removal of the door assist grip ASSY LH
   (1) Remove the 2 screws.
   (2) Release the guide, and remove the door assist grip ASSY LH.

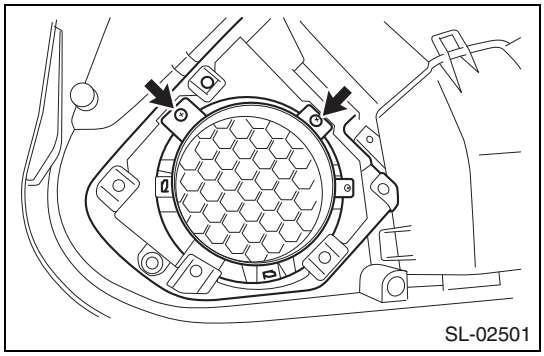


12. Removal of the front door trim pad LWR LH (2-speaker type)
   (1) Remove the 5 screws, and remove the front door trim pad LWR LH.



13. Removal of the front door trim pad LWR LH (6-speaker type)
   (1) Remove the 5 screws, and remove the front door trim pad LWR LH.

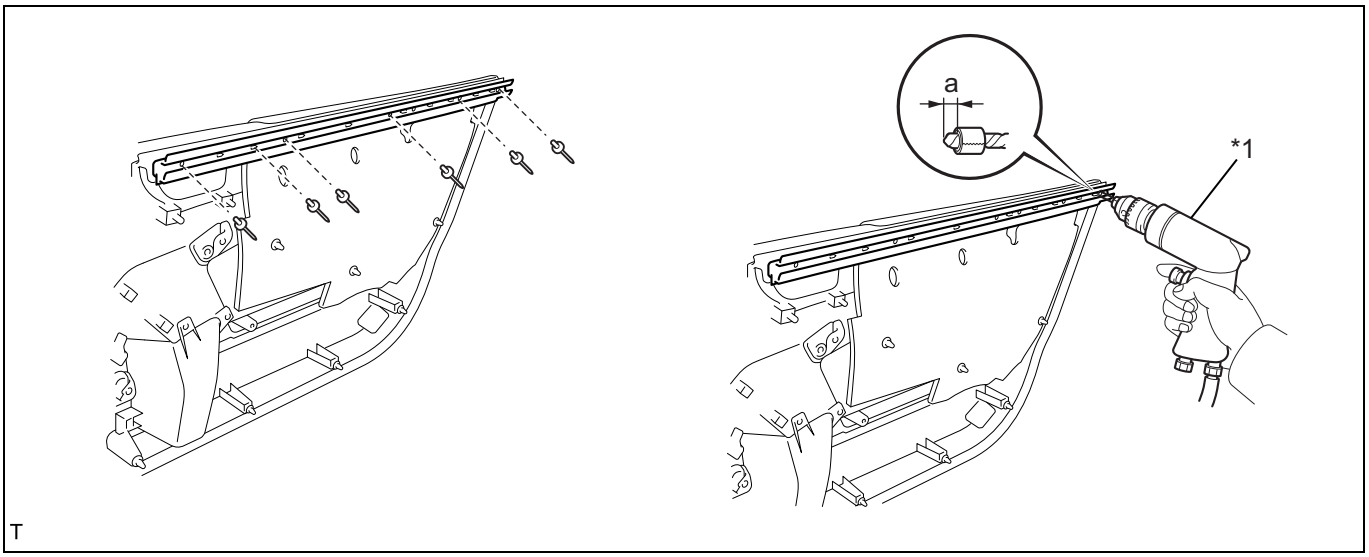
DH



SL-02501

14. Removal of the front door speaker LH (6-speaker type)
    (1) Remove the 2 screws, and remove the front door speaker LH.
    (2) Remove the front door speaker grill LH from the front door speaker LH.

15. Removal of the front door glass weather strip INN LH
    (1) Set the 4 mm {0.1575 in} drill bit in the air drill.
    (2) Wrap tape around the 4 mm {0.1575 in} drill bit about 5 mm {0.1969 in} behind the tip.
        NOTE:
        Wrapping the tape prevents grinding too deep.
    (3) Lightly press the air drill against the rivet, grind the flange portion of the rivet, and remove the 6 rivets.
        CAUTION:
        - If you press the air drill too hard, the rivet will turn together, and will not be cut.
        - If you pry with the air drill while grinding, you may grind the hole where the rivet is installed or may damage the drill bit.
        - Be careful, because the cut rivet will be hot.



T

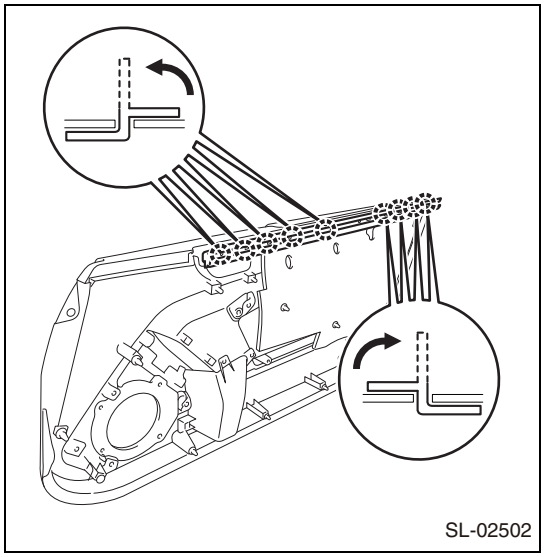
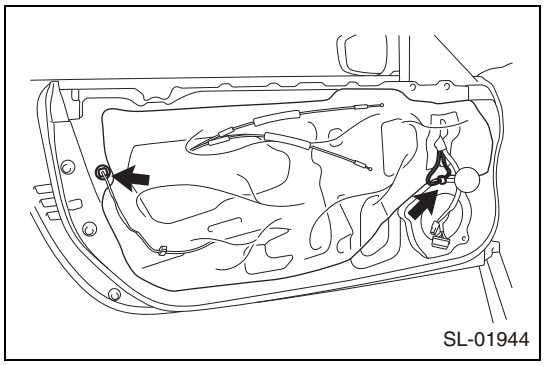
DH



(4) Release the 9 tabs, and remove the front door glass weather strip INN LH.

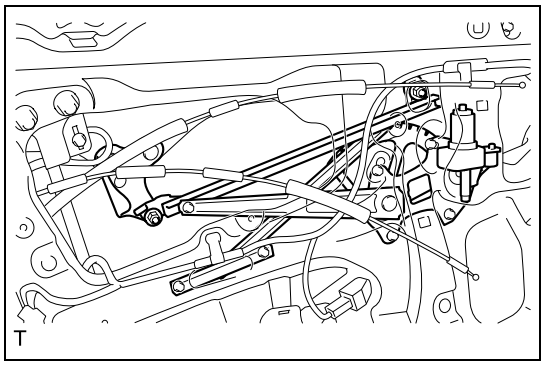
16. Removal of the speaker ASSY FR NO. 1 (if there is a speaker) (Refer to AV - 18)



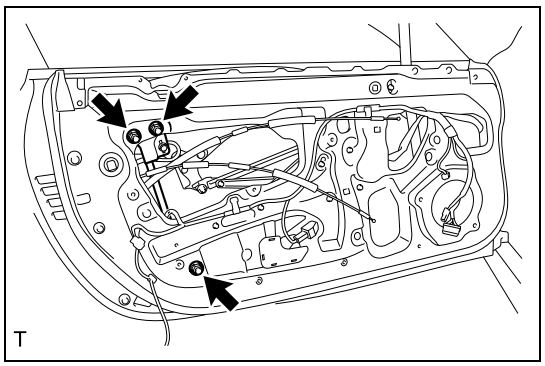
17. Removal of the front door service hole cover LH
    (1) Disconnect the connectors for the front door lock ASSY and the outer rear-view mirror ASSY.
    (2) Remove the front door service hole cover LH.
    CAUTION:
    Remove any butyl tape left on the door panel.

18. Removal of the outer rear-view mirror LH (Refer to MX - 6)

19. Removal of the front door glass weather strip ASSY OUT LH (Refer to ET - 27)

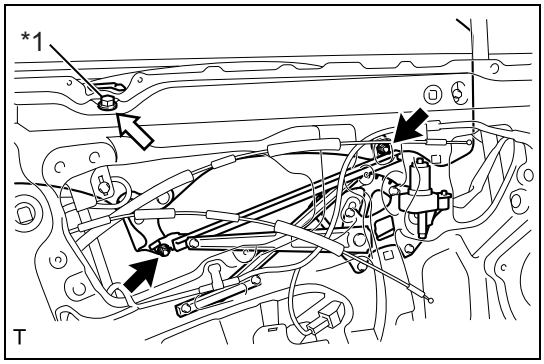


20. Removal of the front door glass SUB-ASSY LH
    (1) Reconnect the battery ground terminal.
    (2) Connect the power window regulator master switch ASSY connector and move the front door glass SUB-ASSY LH until you can see the front door glass SUB-ASSY LH mounting bolt.
    (3) Disconnect the battery ground terminal.
    (4) Disconnect the power window regulator master switch ASSY connector.



(5) Remove the 3 nuts, disconnect the front door frame SUB-ASSY RR LWR LH, and slide the front door frame SUB-ASSY RR LWR LH beyond the mounting section.

DH



(6) Insert a flat tip screwdriver into the slit at the glass bolt tip. While holding it, remove the 2 nuts and disconnect the front glass SUB-ASSY LH.

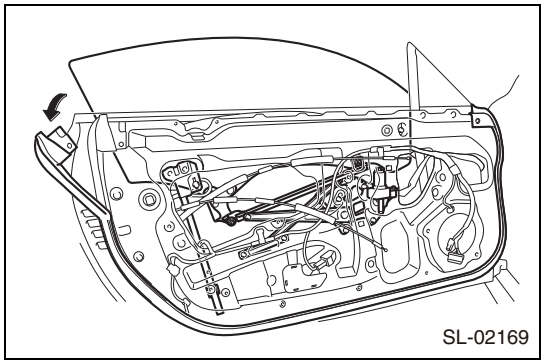
(7) Loosen the front stabilizer mounting bolt.

CAUTION:

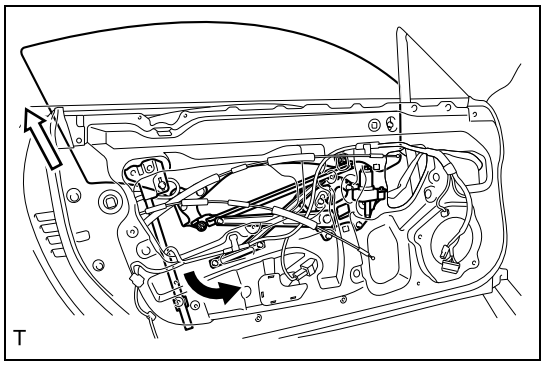
Be sure to hold the front glass SUB-ASSY LH and the front door frame SUB-ASSY RR LWR LH securely so that they don't fall.

Captions in illustration

| | |
|---|---|
| *1 | Front stabilizer mounting bolt |



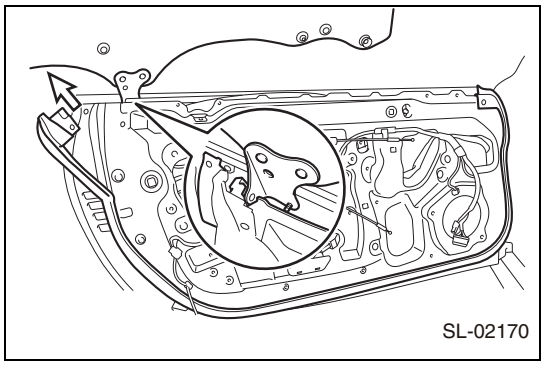
(8) Remove the front door rear cover LH, and turn over the rear end of the front door weather strip so that the front glass SUB-ASSY LH can be removed.



(9) While lifting the front glass SUB-ASSY LH up, let the front door frame SUB-ASSY RR LWR LH slide down, and pull the front glass SUB-ASSY LH out from the front door frame SUB-ASSY RR LWR LH.

CAUTION:

- Be sure to hold the front glass SUB-ASSY LH and the front door frame SUB-ASSY RR LWR LH securely so that they don't fall.
- Do not damage the front door glass.



(10) From the position shown in the figure, remove the front glass SUB-ASSY LH.

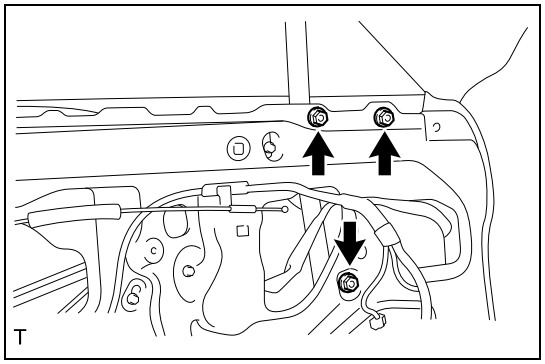
CAUTION:

Do not damage the front door weather strip.

NOTE:

The front glass SUB-ASSY LH cannot be removed from any position other than the one in the figure.

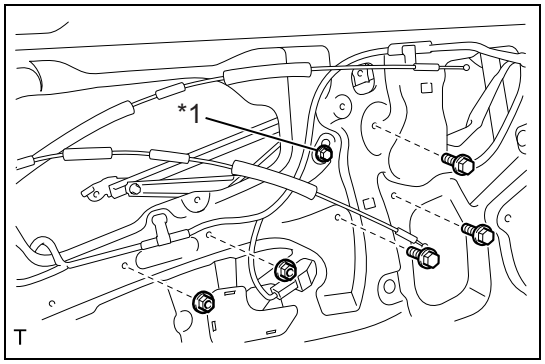
21. Removal of the front door frame SUB-ASSY RR LWR LH.
    (1) Remove the front door frame SUB-ASSY RR LWR LH from the front door frame.
22. Removal of the door glass stabilizer INN
    (1) Remove the bolt and remove the door glass stabilizer INN.



23. Removal of the front door sash
    (1) Remove the 3 nuts.

    (2) In the order shown in the figure, turn the front door sash, and pull it out.
    CAUTION:
    - The mounting bolt of the front door sash will interfere, so be sure to perform this task in the order in the figure.
    - To avoid damaging the glass, hold it securely.

24. Removal of the front door sash stopper
    (1) Remove the nut and remove the front door sash stopper.

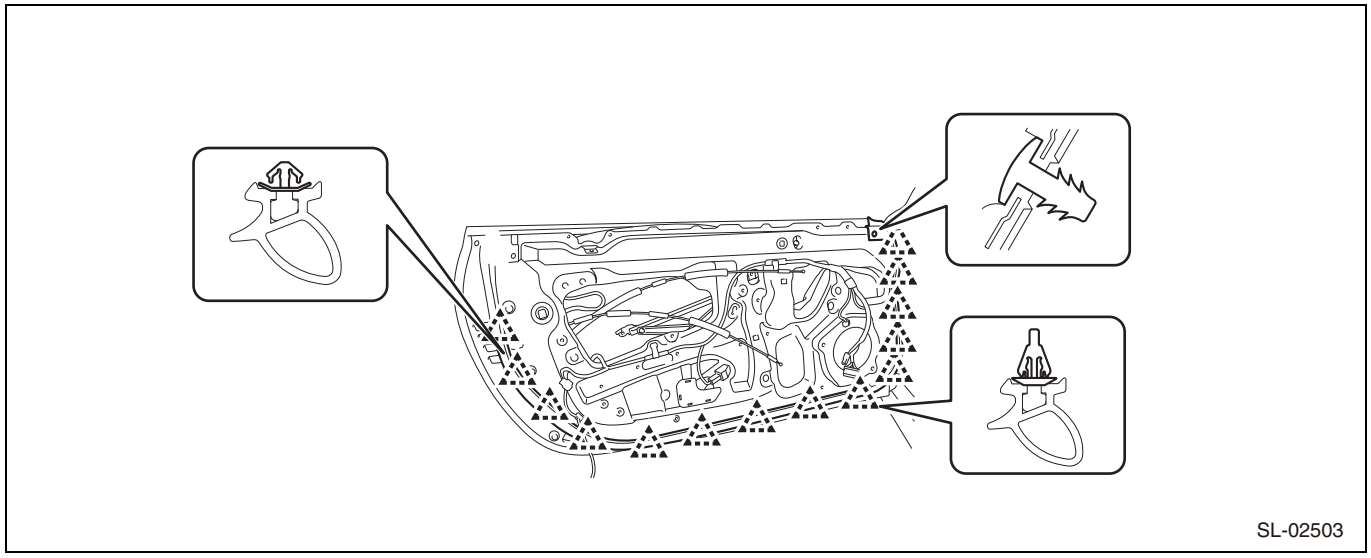


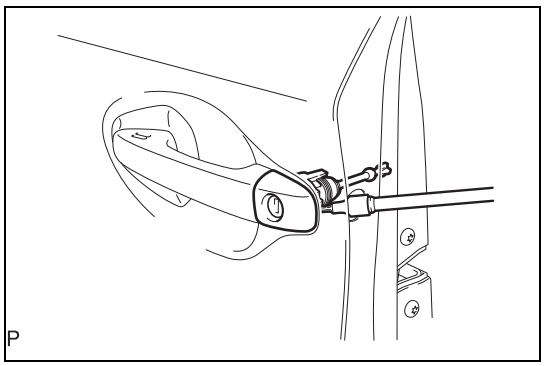
25. Removal of the front door window regulator W/ motor ASSY
    (1) Disconnect the connector.
    (2) Loosen the tack bolt.
    CAUTION:
    If you remove the tack bolt, and the other 3 bolts and 2 nuts are removed, the front door window regulator W/ motor ASSY may fall and be disfigured. Do not remove it.
    (3) Remove the 3 bolts and the 2 nuts.
    (4) Remove the tack bolt and remove the front door window regulator W/ motor ASSY.

Captions in illustration

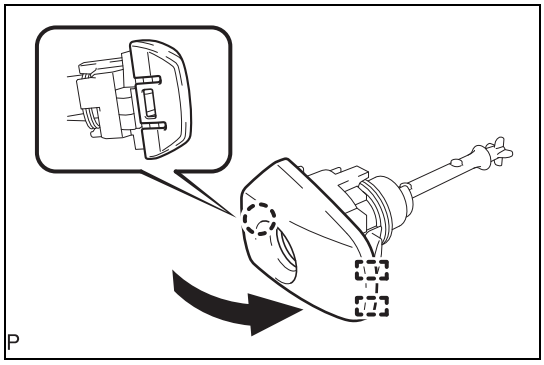
| | |
|---|---|
| *1 | Tack bolt |

26. Removal of the power window regulator motor ASSY LH (Refer to WS - 58)
27. Removal of the front door weather strip LH
    (1) For the remaining front door weather strip LH, using a clip remover, release the 15 clips, and remove the front door weather strip LH.

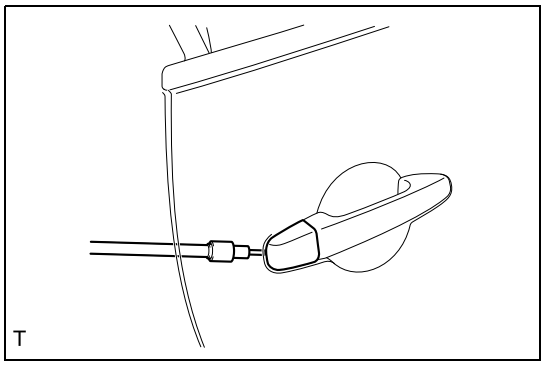




28. Removal of the front door outside handle cover W/ lock cylinder ASSY (driver side door)
    (1) Using a Torx socket wrench, remove the Torx screw, and remove the front door outer handle cover with lock cylinder ASSY LH.



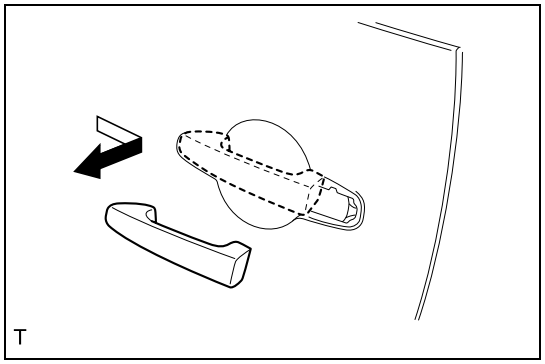
29. Removal of the front door outside handle cover FD (driver side door)
    (1) Using a flat tip screwdriver, release the tab and the 2 guides, and remove the front door outer handle cover FD from the front door lock cylinder ASSY.



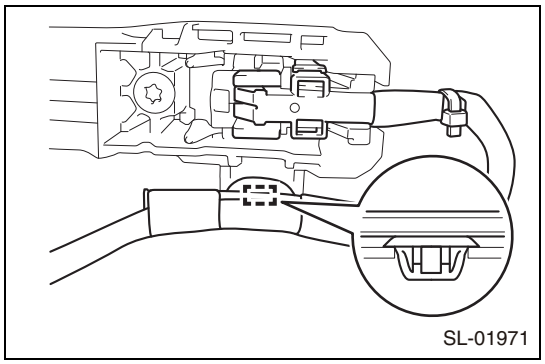
30. Removal of the front door outside handle cover FP (passenger side door)
    (1) Using a Torx socket wrench, remove the Torx screw, and remove the front door outside handle cover FP.

31. Removal of the front door lock ASSY LH (Refer to DL - 102)

DH



32. Removal of the front door outside handle ASSY LH
    (1) Pull the front door outside handle ASSY LH towards the back of the vehicle, and release the front door outside handle frame SUB-ASSY LH.
    (2) Pull the front door outside handle ASSY LH towards you, and remove it from the front door outside handle frame LH.



33. Removal of the front door outside handle ASSY LH (if there is smart entry)
    (1) Use the clip remover to release the clamp.

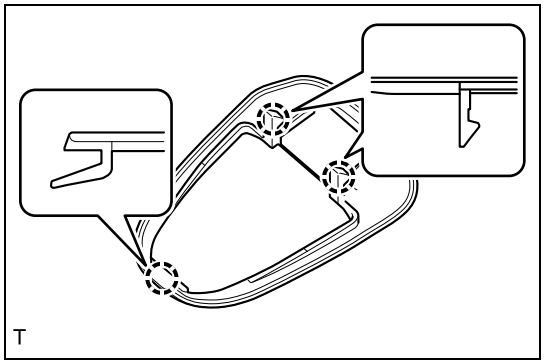
    (2) Using a thin flat tip screwdriver that is wrapped in protective tape, release the 3 tabs and lift the connector cover.

Captions in illustration

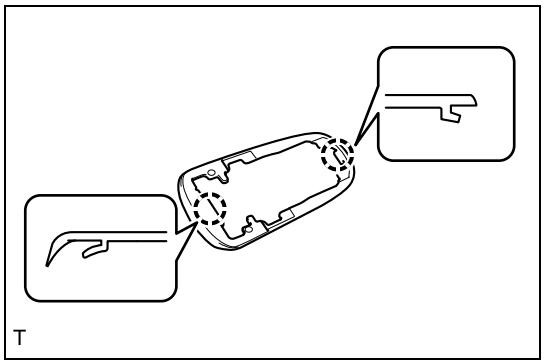
| | |
|---|---|
| *1 | Protective tape |

    (3) Disconnect the connector.

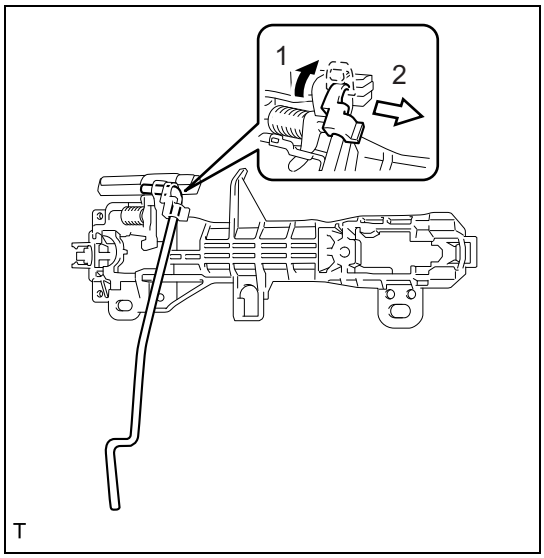
    (4) Pull the front door outside handle ASSY LH towards the back of the vehicle, and release the front door outside handle frame SUB-ASSY LH.
    (5) Pull the front door outside handle ASSY LH towards you, and remove it from the front door outside handle frame SUB-ASSY LH.



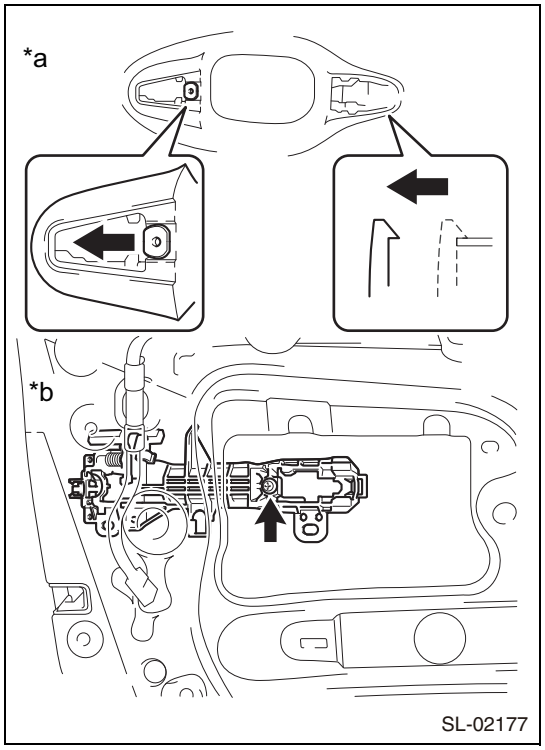
34. Removal of the front door outside handle pad FR
    (1) Release the 3 tabs and remove the front door outside handle pad FR.



35. Removal of the front door outside handle pad RR
    (1) Release the 2 tabs and remove the front door outside handle pad RR.



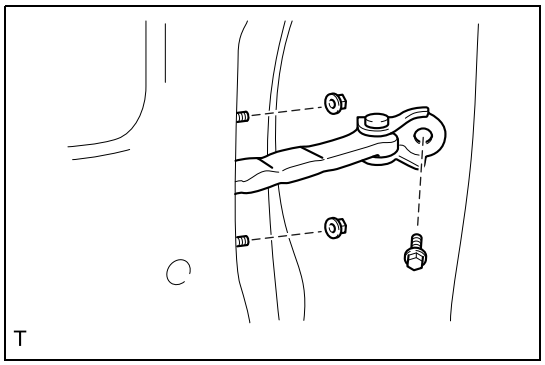
36. Removal of the front door lock open rod LH
    (1) In the order shown in the figure, release the front door outside handle snap, and remove the front door lock open rod LH.



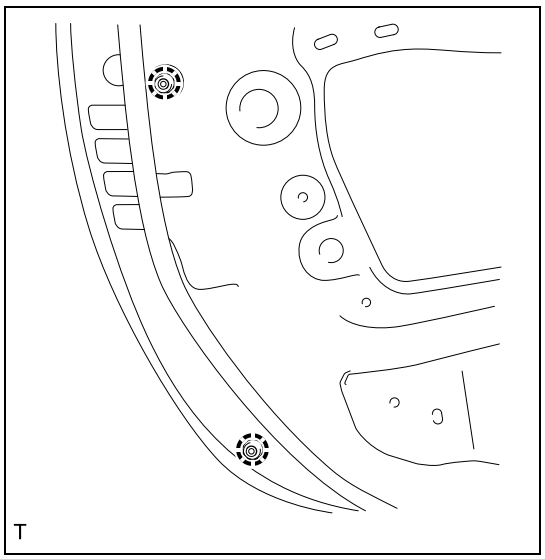
37. Removal of the front door outside handle frame SUB-ASSY LH
    (1) Using a T30 Torx socket wrench, loosen the Torx screw.
    (2) Pull towards the front of the vehicle, release the tab, and remove the front door outside handle frame LH.

Captions in illustration

| | |
|---|---|
| *a | Vehicle exterior |
| *b | Vehicle interior |

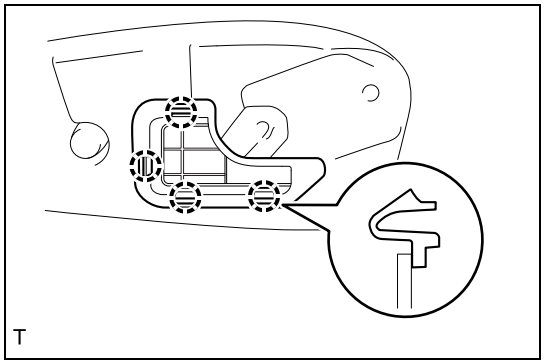


38. Removal of the front door check ASSY
    (1) Remove the bolt and the 2 nuts and remove the front door check ASSY.



39. Removal of the front door panel cushion
    (1) Release the tabs and remove the 2 front door panel cushions.

40. Removal of the side air bag sensor ASSY LH (Refer to RS - 269)



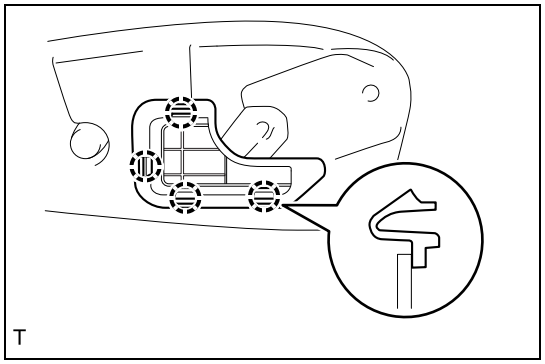
41. Removal of the front door hole cover
    (1) Release the 4 tabs and remove the front door hole cover.

## Assembly

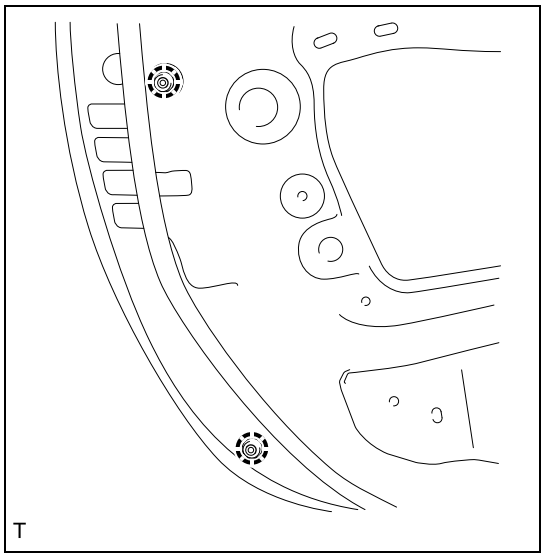
NOTE:

The following procedure is for LH side. Unless otherwise specified, perform the same procedures for the LH and RH side.

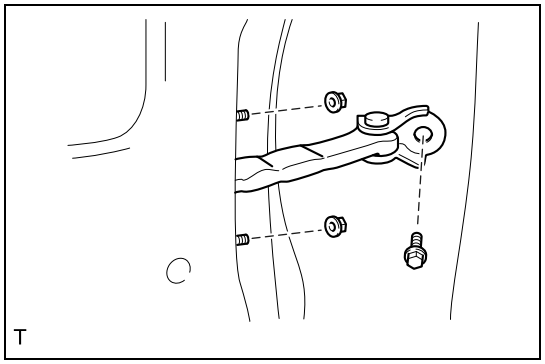
1. Applying of body grease
   (1) Apply body grease to the sliding parts of the front door window regulator, the front door check ASSY LH, the front door outside handle frame SUB-ASSY LH, and the front door lock ASSY LH.



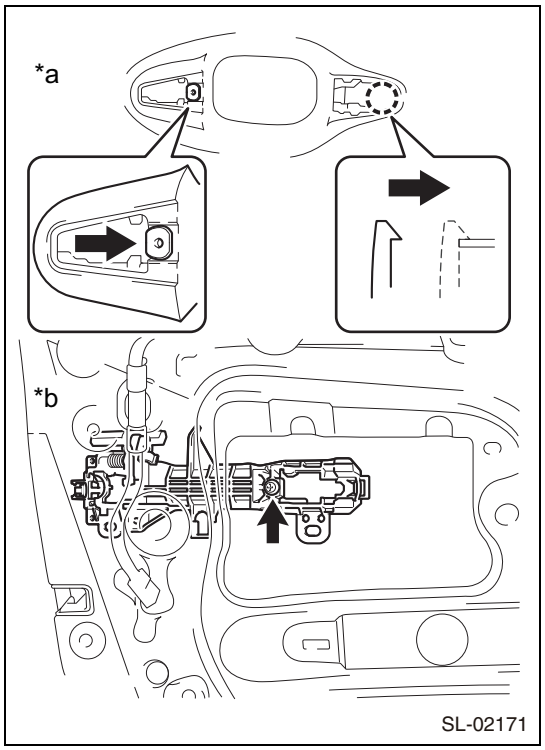
2. Installation of the front door hole cover
   (1) Fit in the 4 tabs and install the front door hole cover.
3. Installation of the side air bag sensor ASSY LH (Refer to RS - 267)



4. Installation of the front door panel cushions
   (1) Fit in the 2 tabs and install the 2 front door panel cushions.



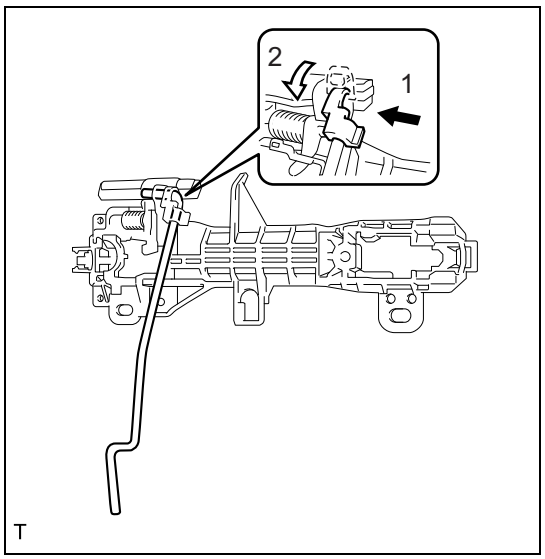
5. Installation of the front door check ASSY
   (1) Using 2 nuts, install the front door check ASSY.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Install the bolt.
   Standard value:T=33N·m {336kgf·cm} {24.3ft·lbf}



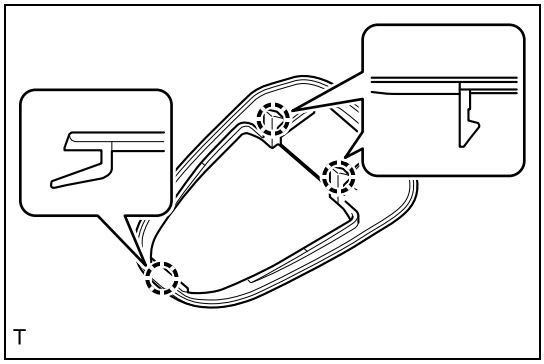
6. Installation of the front door outside handle frame SUB-ASSY LH
   (1) Pull towards the back of the vehicle, fit in the tab, and temporarily install the front door outside handle frame SUB-ASSY LH on the front door panel.
   (2) Using a Torx socket wrench and a Torx screw, install the front door outer handle frame SUB-ASSY LH.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

Captions in illustration

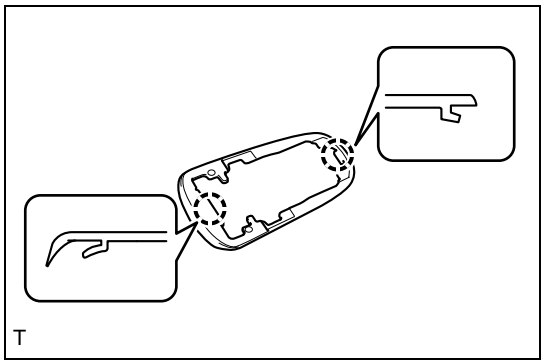
| | |
|---|---|
| *a | Vehicle exterior |
| *b | Vehicle interior |



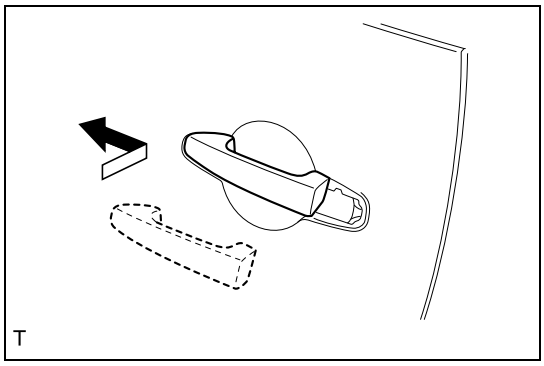
7. Installation of the front door lock open rod LH
   (1) In the order shown in the figure, fit in the front door outside handle snap, and attach the front door lock open rod LH to the front door outside handle frame LH.



8. Installation of the front door outside handle pad FR
   (1) Fit in the 3 tabs and install the front door outside handle pad FR.

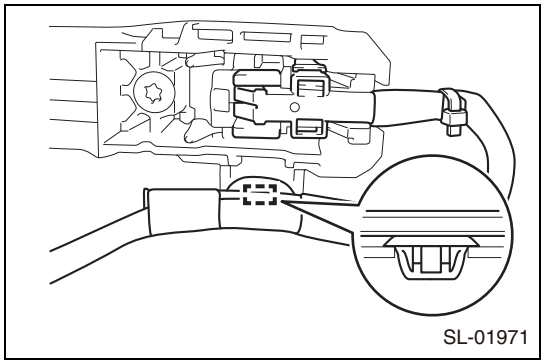


9. Installation of the front door outside handle pad RR
   (1) Fit in the 2 tabs and install the front door outside handle pad RR.

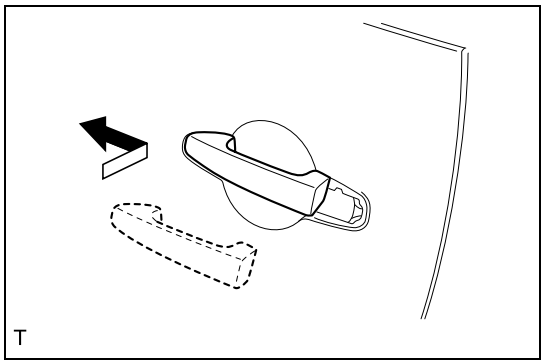


10. Installation of the front door outside handle ASSY LH (if there is smart entry)
    (1) Insert the front end of the front door outside handle ASSY LH into the front door outside handle frame SUB-ASSY LH.
    (2) Insert the rear end of the front door outside handle ASSY LH into the front door outside handle frame SUB-ASSY LH, and install it by sliding it towards the front of the vehicle.

    (3) Connect the connector.
    (4) Fit in the 3 claws.

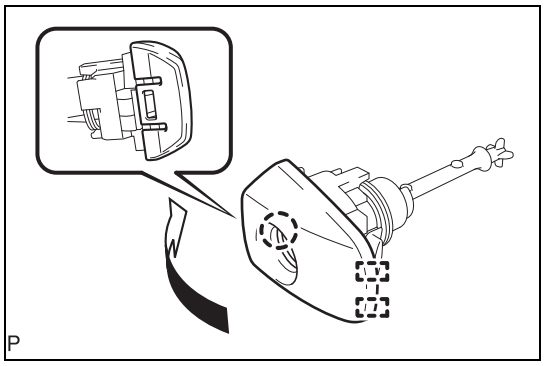


(5) Fit in the clamp.

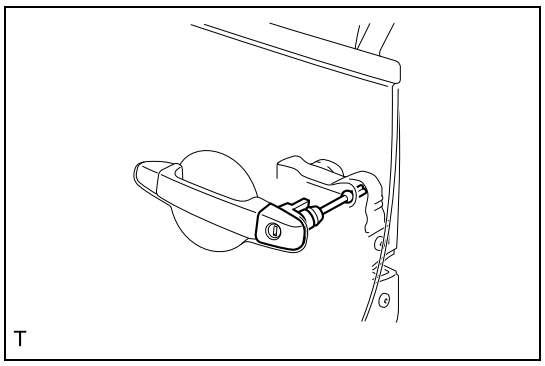


11. Installation of the front door outside handle ASSY LH (if there is no smart entry)
    (1) Insert the front end of the front door outside handle ASSY LH into the front door outside handle frame SUB-ASSY LH.

12. Installation of the front door lock ASSY LH (Refer to DL - 102)

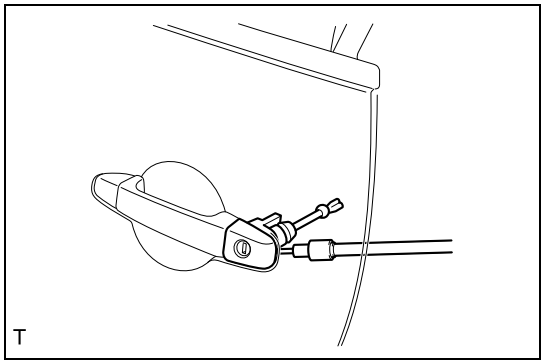


13. Installation of the front door outside handle cover FD (driver side door)
    (1) Fit in the tab and the 2 guides, and install the front door outside handle cover FD on the front door lock cylinder ASSY.

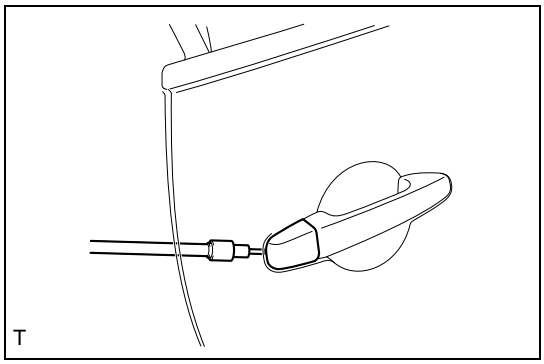


14. Installation of the front door outside handle cover W/ lock cylinder ASSY (driver side door)
    (1) Assemble the front door outside handle cover W/ lock cylinder ASSY.
    NOTE:
    Check that the front door lock cylinder rod is inserted into the front door lock ASSY LH.

DH

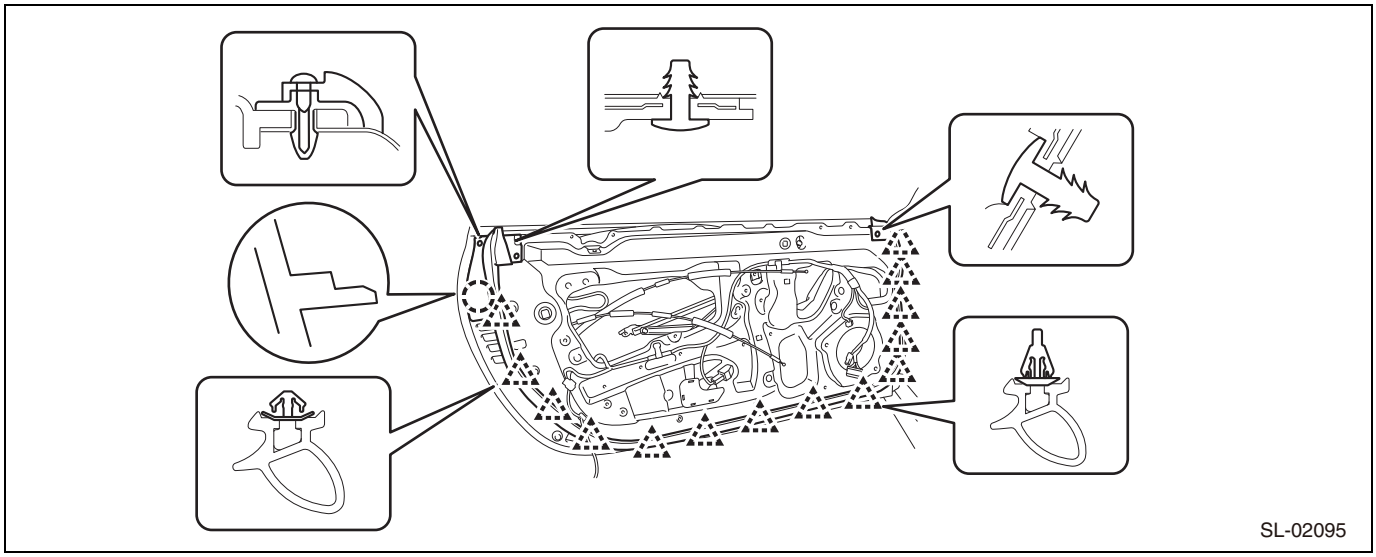


(2) Using a Torx socket wrench and a Torx screw, install the front door outside handle cover W/ lock cylinder ASSY.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

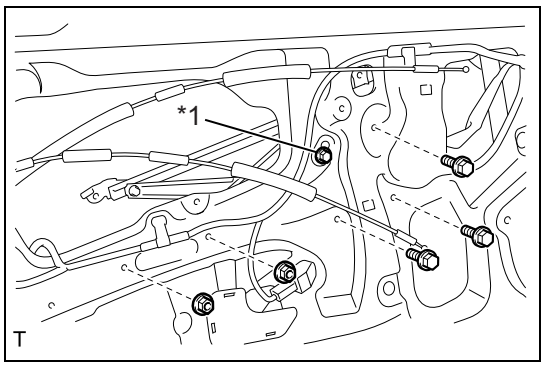


15. Installation of the front door outside handle cover FP (passenger side door)
    (1) Using a Torx socket wrench and a Torx screw, install the front door outside handle cover FP.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

16. Installation of the front door weather strip LH.
    (1) Fit in the 15 clips.
    (2) Install the 3 rear sections after installing the front door glass weather strip ASSY OUT LH.



17. Installation of the power window regulator motor ASSY LH (Refer to WS - 58)



18. Installation of the front door window regulator W/ motor ASSY
    (1) With the tack bolt, temporarily install the front door window regulator W/ motor ASSY on the front door panel.
    (2) With 3 bolts and 2 nuts, install the front door window regulator W/ motor ASSY.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
    (3) Completely tighten the tack bolt.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
    (4) Connect the connector.

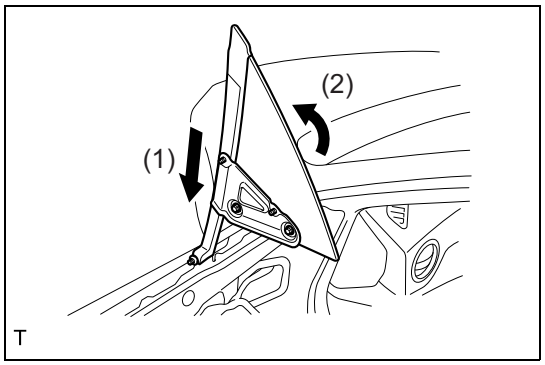
| *1 | Tack bolt |

DH

19. Installation of the front door sash stopper
    (1) Install the front door sash stopper with a bolt.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}



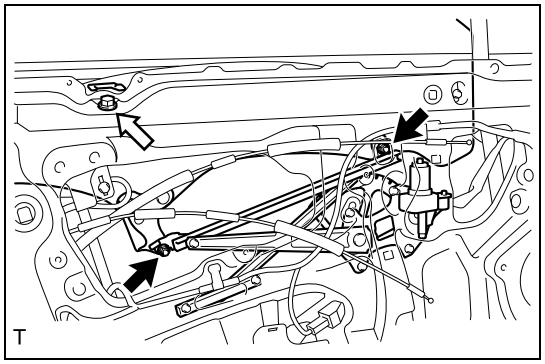
20. Installation of the front door sash
    (1) As in the figure, insert the front door sash into the front door frame at a right angle.
    CAUTION:
    - The mounting bolt of the front door sash will interfere, so be sure to perform this task in the order in the figure.
    - To avoid damaging the front door sash, hold it securely.
    (2) Turn the front door sash 90°.

    (3) Using 3 nuts, install the front door sash.
    Standard value:Nut (A)
    T=14N·m {143kgf·cm} {10.3ft·lbf}
    Standard value:Nut (B)
    T=7.5N·m {77kgf·cm} {5.5ft·lbf}

21. Installation of the front door frame SUB-ASSY RR LWR LH
    (1) Using 3 nuts, install the front door frame SUB-ASSY RR LWR LH.
    Standard value:T=14N·m {143kgf·cm} {10.3ft·lbf}

22. Installation of the front door glass SUB-ASSY LH
    (1) Reconnect the battery ground terminal.
    (2) Connect the power window regulator master switch ASSY connector and move the front door window regulator until you can see where the front door glass SUB-ASSY LH is installed.
    (3) Disconnect the battery ground terminal.
    (4) Disconnect the power window regulator master switch ASSY connector.

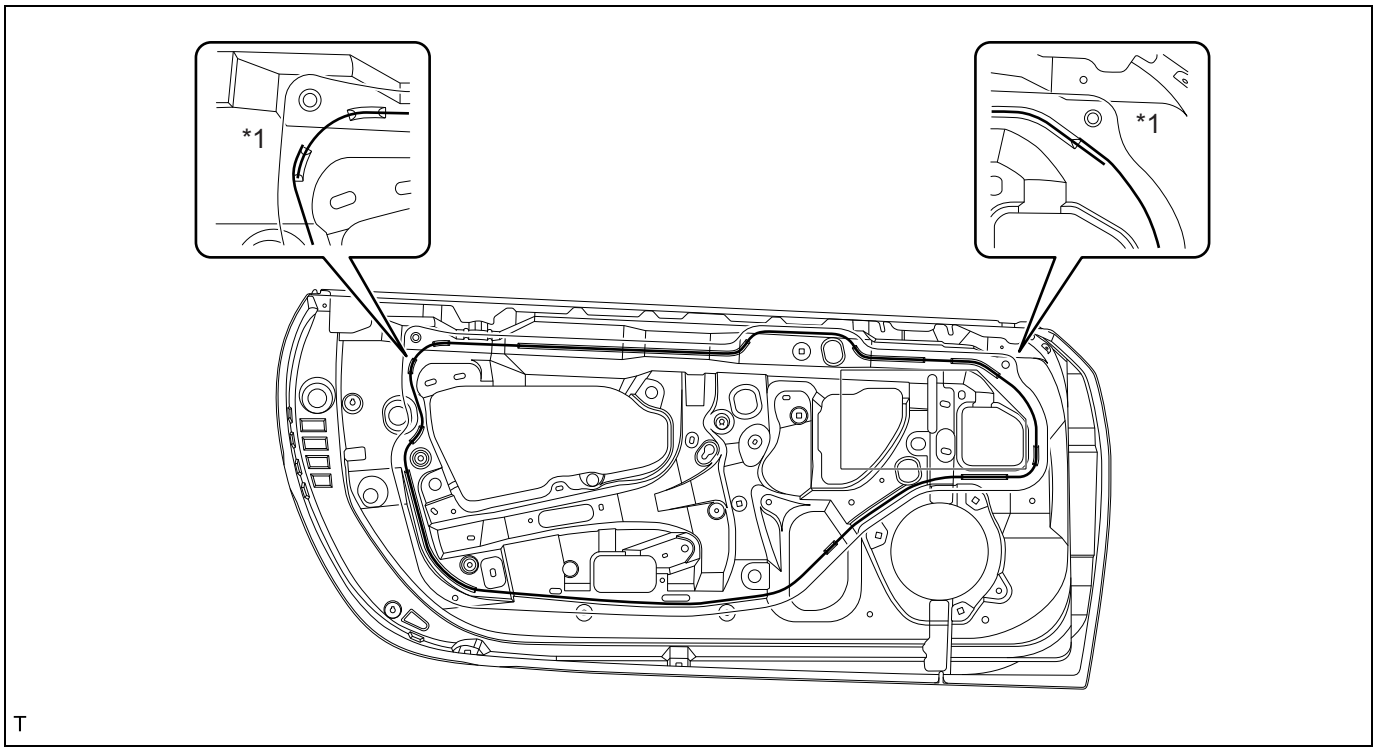
    (5) From the position shown in the figure, insert the front door glass SUB-ASSY LH into the front door frame.
    CAUTION:
    Do not damage the front door weather strip LH.
    NOTE:
    Because the front door glass SUB-ASSY LH cannot be installed in a position other than the one in the figure, perform this task while sliding the front door frame SUB-ASSY RR LWR LH.
    (6) Set the grommet part of the front door glass SUB-ASSY LH into the rail of the front door frame SUB-ASSY RR LWR LH.
    CAUTION:
    - To avoid dropping the front door glass SUB-ASSY LH and the front door frame SUB-ASSY RR LWR LH, hold them securely.
    - Do not damage the front door glass.



T

(7) Using 2 nuts, install the front door glass SUB-ASSY LH.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

23. Installation of the door glass stabilizer INN
    (1) Install the door glass stabilizer INN with a bolt.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
24. Adjustment of the front door glass SUB-ASSY LH
    (1) Inspect the front door glass installation. (Refer to DH - 54)
    (2) Adjust the placement of the front door glass. (Refer to DH - 55)
25. Installation of the front door glass weather strip ASSY OUT LH (Refer to ET - 29)
26. Install the rear end of the front door weather strip LH, and install the front door rear cover LH.
27. Installation of the outer rear-view mirror LH (Refer to MX - 7)
28. Installation of the front door service hole cover LH



T

(1) Apply new butyl tape to the door panel.
CAUTION:
- The butyl tape must overlay for 20 cm {7.874 in} or more.
- The butyl tape must not block the water draining holes in the front door panel.

(2) Put the front door lock remote control cable LH, the rear door inside locking cable LH and every connector through the new front door service hole cover LH.
(3) Align the new front door service hole cover LH with the front door panel standard position, and apply.
CAUTION:
To avoid wrinkles and bubbles, push with enough force when applying the front door service hole cover LH.
(4) Connect each connector.

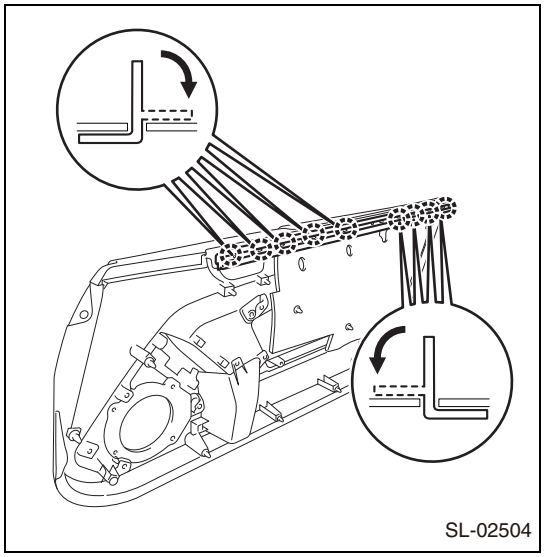
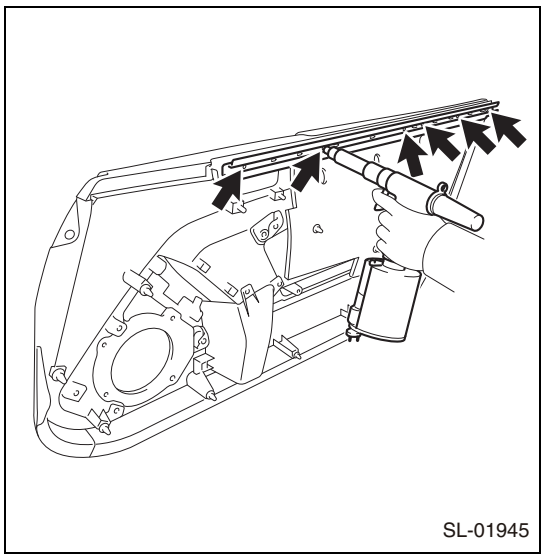
DH

29. Installation of the speaker ASSY FR NO.1 (if there is a speaker) (Refer to AV - 18)



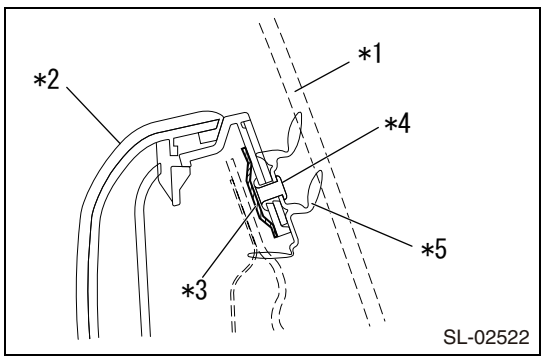
SL-02504

30. Installation of the front door glass weather strip INN LH.
    (1) As in the figure, fit in the 9 tabs and install the new front door glass weather strip INN LH on the front door trim board SUB-ASSY LH.
    (2) Fit in the tab.



SL-01945

    (3) Attach nosepiece No.1 to the air riveter (a product that supports φ3.2 mm {0.13 in}), and insert the mandrel of the new rivet into the nosepiece.
    (4) Once the rivets have been vertically pushed into the installation holes, use the air riveter to install the 6 rivets.
    (5) If you can't cut the shaft, pull again to cut off the shaft, removing the head as well.
        Preparation tool & preparation items: Air riveter (product that supports φ3.2 mm {0.13 in})
        Rivet



SL-02522

    (6) After installing the rivet, cut non-woven tape into a 15 mm×15 mm {0.59 in ×0.59 in} square and apply to the crimped section.
        CAUTION:
        The crimped section of the rivet should be 3 mm {0.12 in} high. It may interfere with the door panel. If the crimping is insufficient, push it down with pliers.
        Preparation items: Non-woven tape: 94029FG000

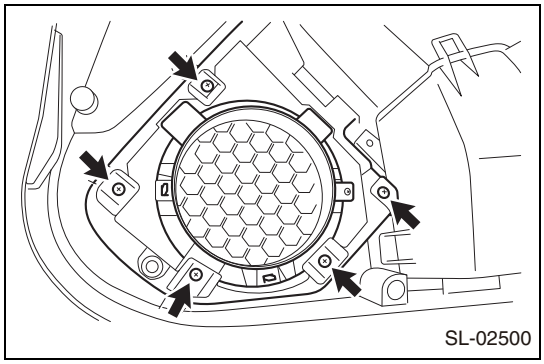
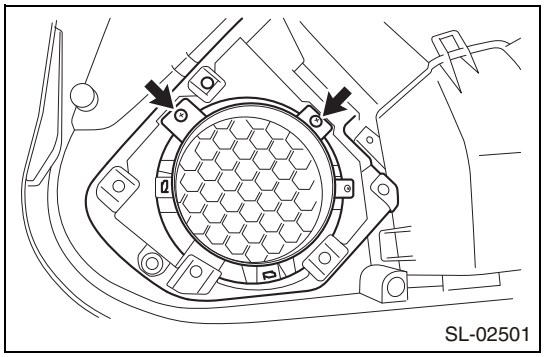
| *1 | Window glass |
| *2 | Door trim |
| *3 | Non-woven tape |
| *4 | Rivet |
| *5 | Weather strip INN |

    (7) After installing the weather strip INN, perform the following inspections.
        - There is no gap between the weather strip INN LH and the front door trim board SUB-ASSY LH.
        - There is no looseness when you lightly pull on the weather strip INN LH.

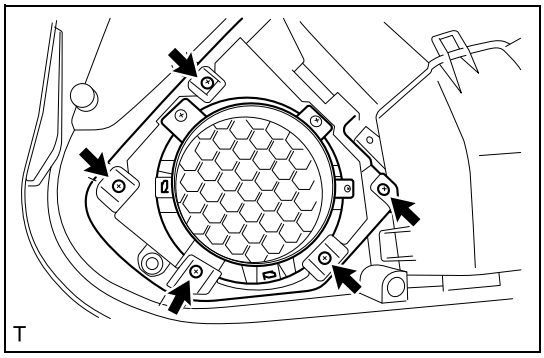
DH



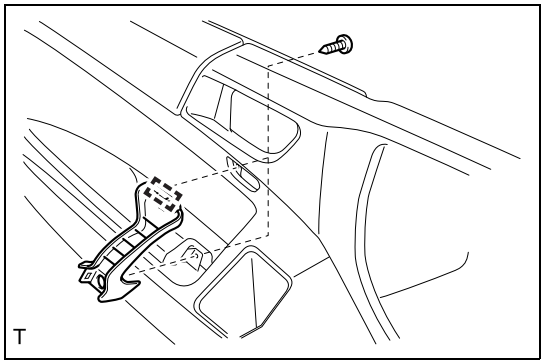
31. Installation of the front door trim pad LWR LH (2-speaker type)
    (1) Using 5 screws, install the front door trim pad LWR LH.



32. Installation of the front door speaker LH (6-speaker type)
    (1) Install the front door speaker grill LH on the front door speaker LH.
    (2) Using 2 screws, install the front door speaker LH.



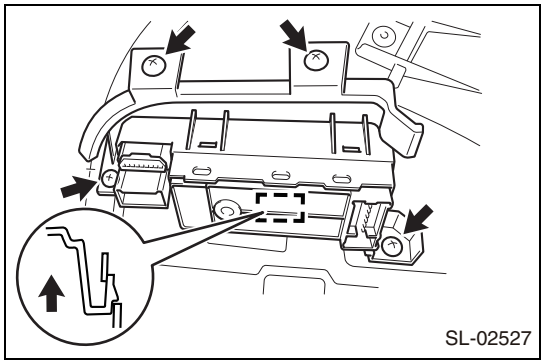
33. Installation of the front door trim pad LWR LH (6-speaker type)
    (1) Using 5 screws, install the front door trim pad LWR LH.



34. Installation of the door assist grip ASSY LH
    (1) Fit in the guide, and with 2 screws, install the door assist grip ASSY LH.

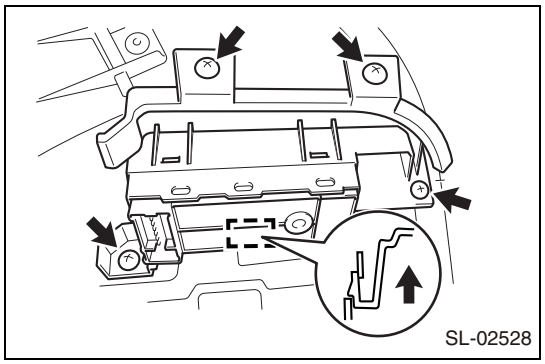
35. Installation of the outer mirror switch ASSY (Refer to MX - 14)

36. Installation of the power window regulator master switch ASSY (driver side door) (Refer to WS - 53)

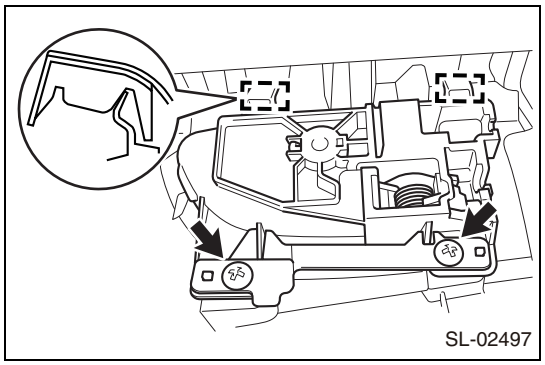


37. Installation of the power window regulator master switch ASSY W/ front armrest base panel UPR LH (driver side door)
    (1) Fit in the tab, and using 4 screws, install the power window regulator master switch ASSY W/ front armrest base panel UPR LH on the front door trim board SUB-ASSY LH.

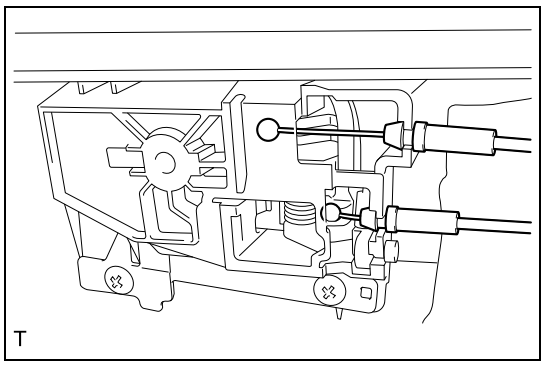
38. Installation of power window regulator switch ASSY (passenger side door) (Refer to WS - 55)



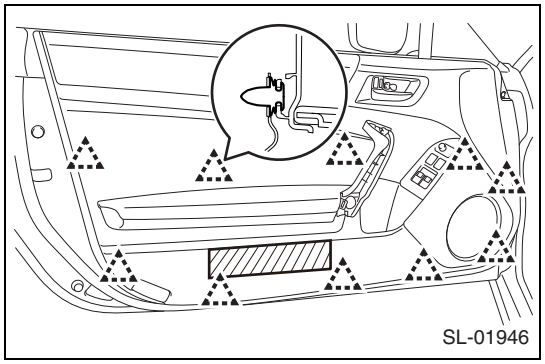
39. Installation of the power window regulator switch ASSY W/ front armrest base panel UPR RH (passenger side door)
    (1) Fit in the tab, and using 4 screws, install the power window regulator switch ASSY W/ front armrest base panel UPR RH on the front door trim board SUB-ASSY RH.



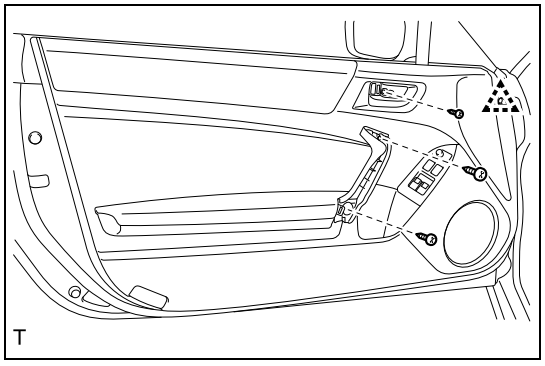
40. Installation of the front door inside handle SUB-ASSY LH
    (1) Fit in the 2 guides.
    (2) Using 2 screws, install the front door inside handle SUB-ASSY LH with the plate on the front door trim board SUB-ASSY LH.



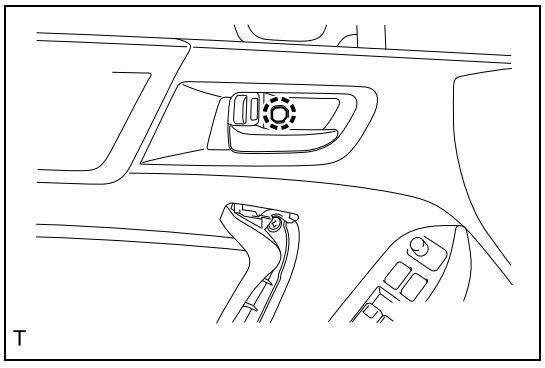
41. Installation of the front door trim board SUB-ASSY LH
    (1) Connect the front door lock remote control cable LH and the front door inside locking cable LH to the door remote ASSY LH.



(2) Connect each connector.
(3) Insert the upper side of the front door trim board SUB-ASSY LH first.
(4) Fit in the 10 clips and install the front door trim board SUB-ASSY LH on the front door panel.
CAUTION:
When installing the front door panel, do not hit the shaded area.

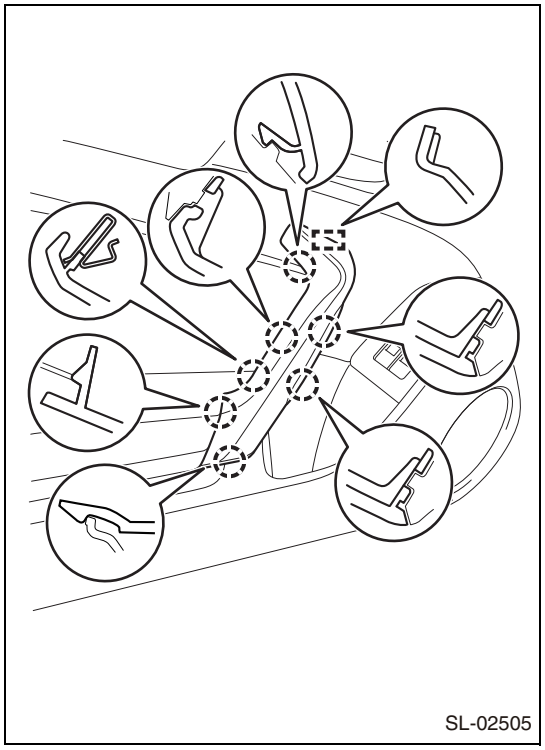


(5) Install the 3 screws and a clip.



(6) Fit in the tab and install the cap.

42. Installation of the courtesy light ASSY (Refer to LI - 56)



43. Installation of the door armrest cover LH
    (1) Fit in the 7 tabs and the guide, and install the door armrest cover LH.

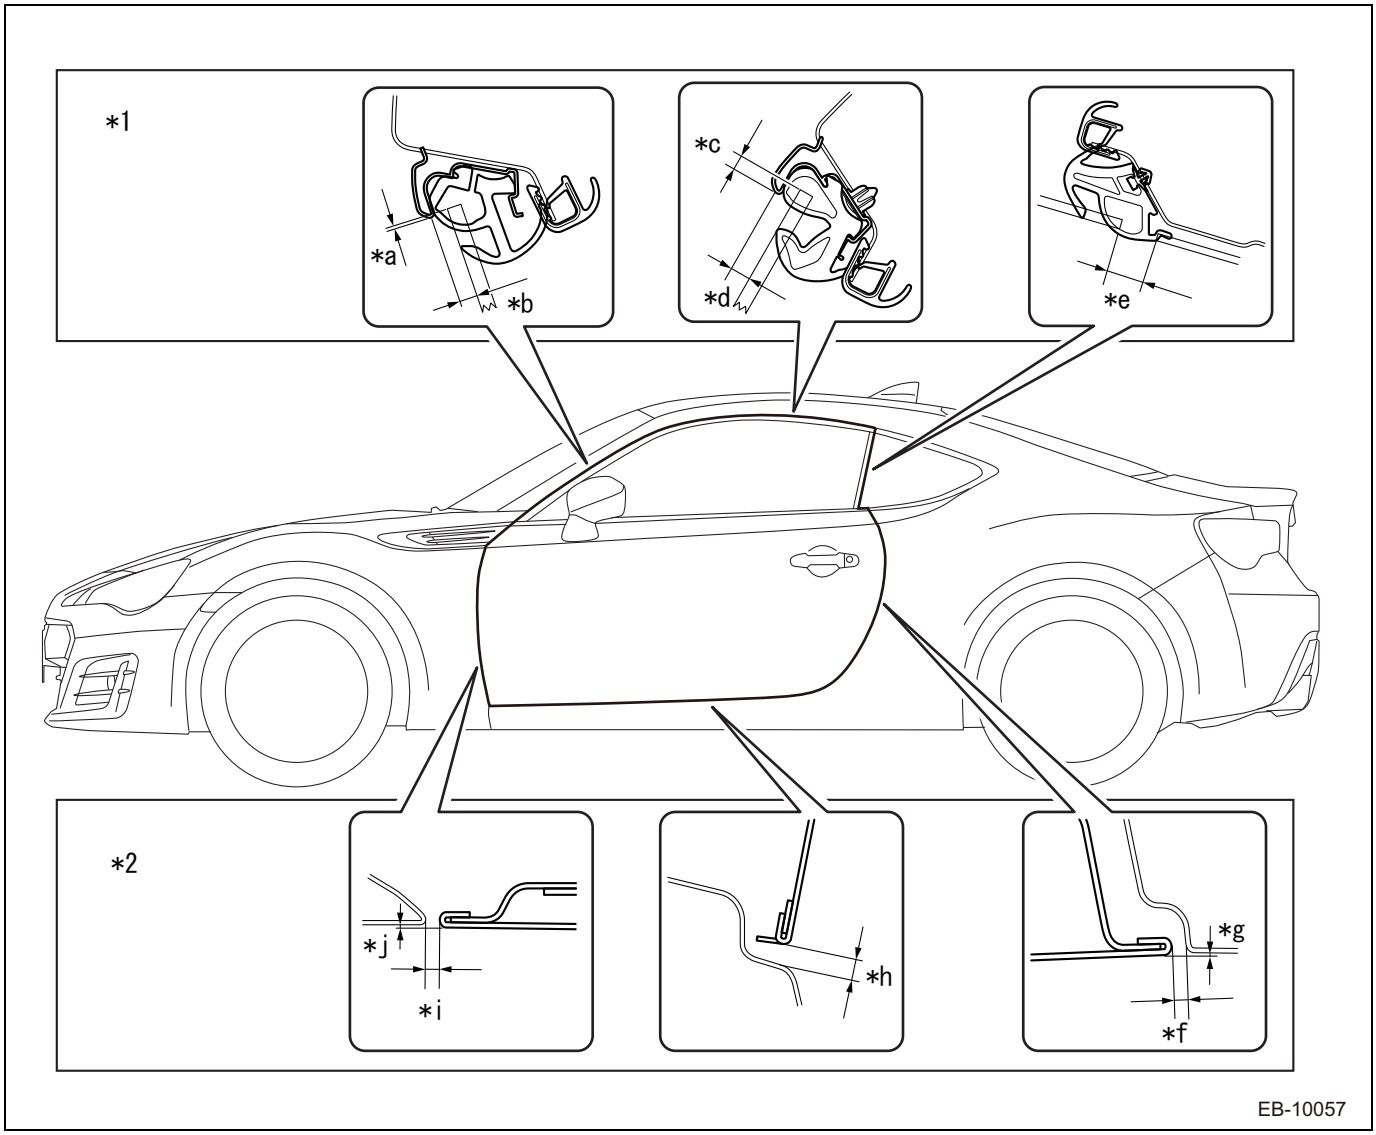
44. Connection of the battery ground terminal
    Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
45. Power window registration settings (Refer to WS - 5)
46. Function inspection of the power windows (Refer to WS - 59)

## Adjustment

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Inspection of the front door LH
    (1) Inspect if each placement dimension is within the reference values.

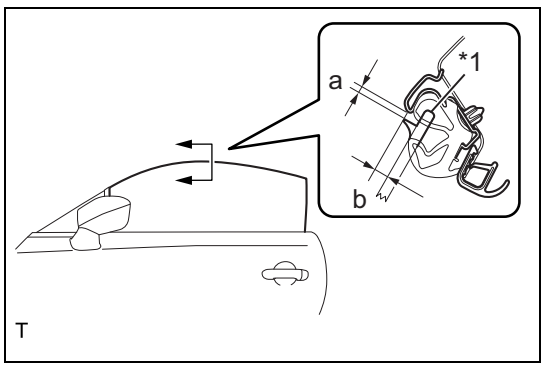


Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Front glass | *2 | Front door |

Reference values

| | | | |
|---|---|---|---|
| *a | -1.0 to 2.0 mm {-0.039 to 0.079 in} | *b | 5.5 to 8.5 mm {0.217 to 0.335 in} |
| *c | 3.5 to 6.5 mm {0.138 to 0.256 in} | *d | 5.2 to 8.2 mm {0.205 to 0.323 in} |
| *e | 13.5 to 16.5 mm {0.5315 to 0.6496 in} | *f | 2.5 to 5.5 mm {0.0984 to 0.2165 in} |
| *g | 0.0 to 1.5 mm {0.0 to 0.0591 in} | *h | 4.8 to 7.8 mm {0.1890 to 0.3071 in} |
| *i | 3.1 to 5.6 mm {0.122 to 0.220 in} | *j | -1.0 to 1.5 mm {-0.0394 to 0.0591 in} |



2. Adjustment of the front door glass
   (1) Insert the SST in the front door glass and measure the placement dimensions.
   SST 61299CA000

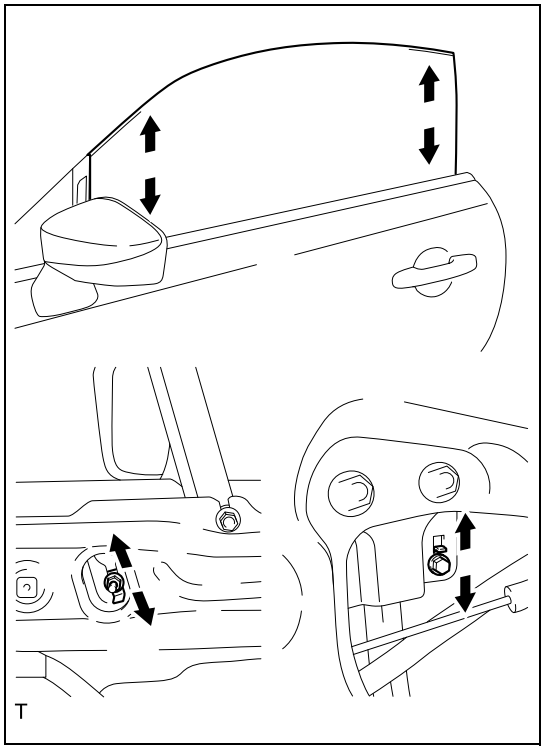
Captions in illustration

| | |
|---|---|
| *1 | SST |

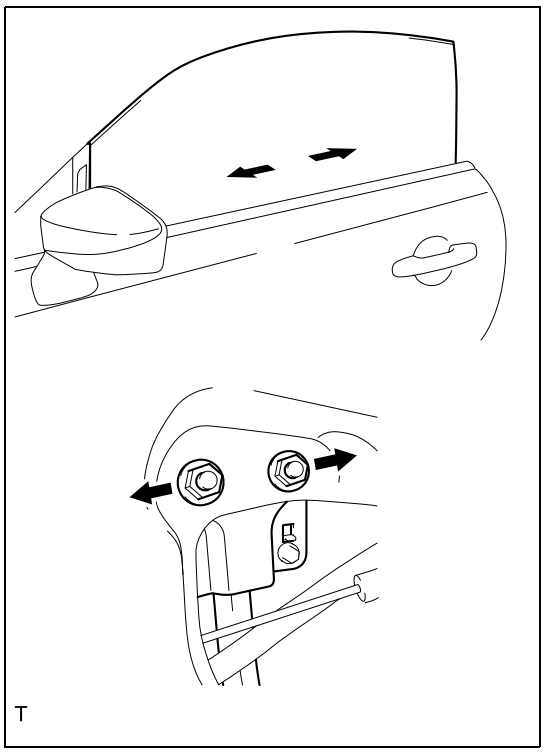
Reference values

| | |
|---|---|
| *a | 3.5 to 6.5 mm {0.138 to 0.256 in} |
| *b | 5.2 to 8.2 mm {0.205 to 0.323 in} |

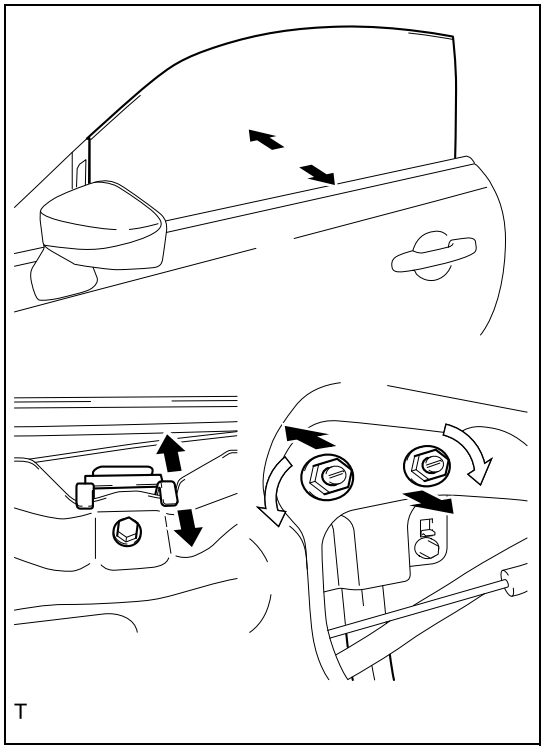
   (2) Adjust the front door glass so that the placement dimensions are within the reference values.



(3) Loosen the nut of the front door sash stopper and the bolt of the front door frame SUB-ASSY RR LWR RH stopper section, and adjust the vertical direction of the front door glass.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

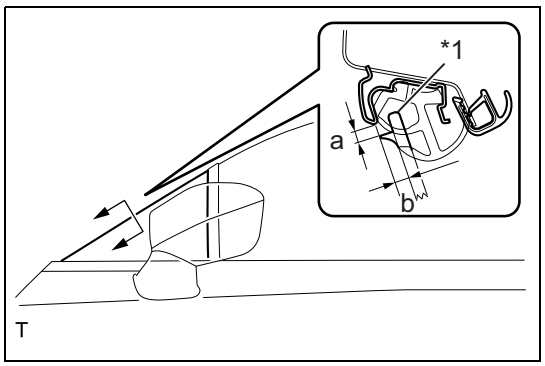


(4) Loosen the 2 nuts of the front door frame SUB-ASSY RR LWR RH, and adjust the forward and backward direction of the front door glass.
Standard value:T=14N·m {143kgf·cm} {10.3ft·lbf}



(5) Loosen the bolt of the door glass stabilizer INN, and adjust the side to side direction of the front door glass.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

(6) Loosen the nut of the front door frame SUB-ASSY RR LWR RH, turn the bolt with a flat tip screwdriver, and adjust the side to side direction of the front door glass.
Standard value:T=14N·m {143kgf·cm} {10.3ft·lbf}



(7) Insert the SST in the side fix window and measure the placement dimensions.
SST 61299CA010

Captions in illustration

| | |
|---|---|

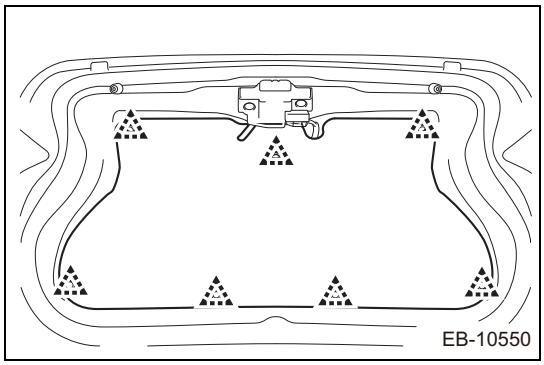
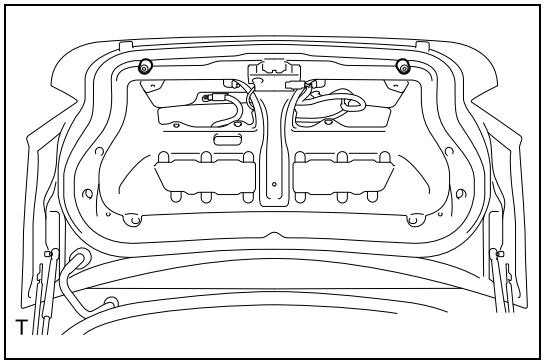
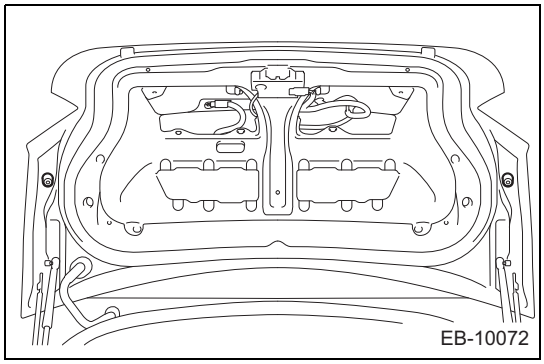
## Disassembly



1. Removal of the trunk cover
   (1) Using a clip remover, remove the 7 clips and remove the trunk cover.



2. Removal of the trunk stoppers
   (1) Release the 2 tabs and remove the 2 trunk stoppers.



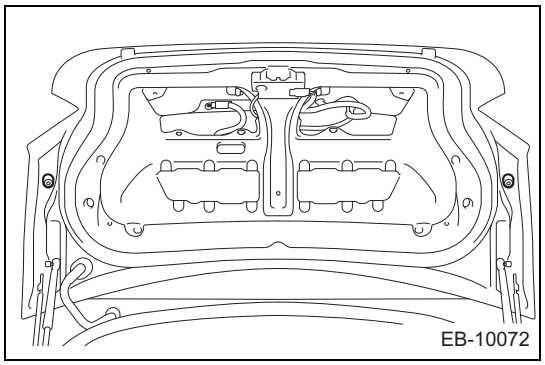
3. Removal of the trunk stopper A (if there is a rear spoiler)
   (1) Release the 2 tabs and remove the 2 trunk stoppers A.

4. Removal of key lock trunk (Refer to DL - 106)
5. Removal of the trunk lock ASSY (Refer to DL - 106)
6. Removal of the cable ASSY trunk (Refer to DL - 107)
7. Removal of the trunk garnish SUB-ASSY outside (Refer to ET - 41)
8. Removal of the trunk opener switch ASSY (Refer to DH - 71)
9. Removal of the rear ornament emblem (installed on the rear) (Refer to ET - 28)
10. Removal of the license plate light ASSY (installed on the LH side) (Refer to LE - 69)
11. Removal of the license plate light ASSY (installed on the RH side)
    NOTE:
    Remove the part in the same manner as LH side.
12. Removal of the rear spoiler (if there is a rear spoiler) (Refer to ET - 24)
13. Removal of the stay ASSY trunk (Refer to DH - 65)

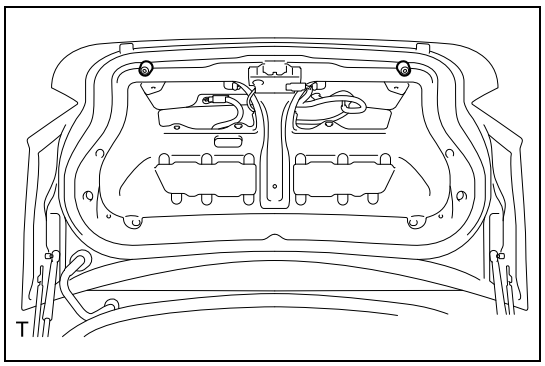
## Assembly

1. Installation of the stay ASSY trunk (Refer to DH - 66)
2. Installation of the rear spoiler (if there is a rear spoiler) (Refer to ET - 25)
3. Installation of the license plate light ASSY (installed on the LH side) (Refer to LE - 69)

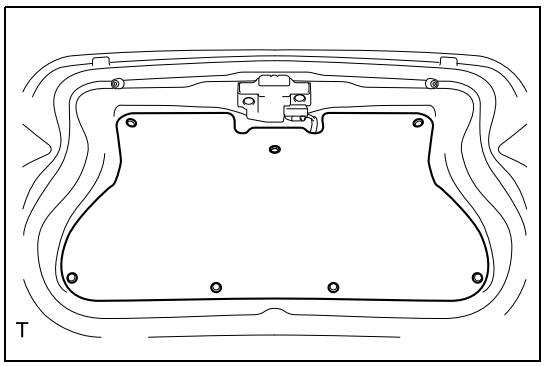
4. Installation of the license plate light ASSY (installed on the RH side)
   NOTE:
   Install the part in the same manner as LH side.
5. Installation of the rear ornament emblem (installed on the rear) (Refer to ET - 29)
6. Installation of the trunk opener switch ASSY (Refer to DH - 71)
7. Installation of the trunk garnish SUB-ASSY outside (Refer to ET - 41)
8. Installation of the cable ASSY trunk (Refer to DL - 107)
9. Installation of the trunk lock ASSY (Refer to DL - 107)
10. Installation of key lock trunk (Refer to DL - 107)



11. Installation of the trunk stopper A (if there is a rear spoiler)
    (1) Fit in the 2 tabs and install the 2 new trunk stoppers A.



12. Installation of the trunk stoppers
    (1) Fit in the 2 tabs and install the 2 new trunk stoppers.

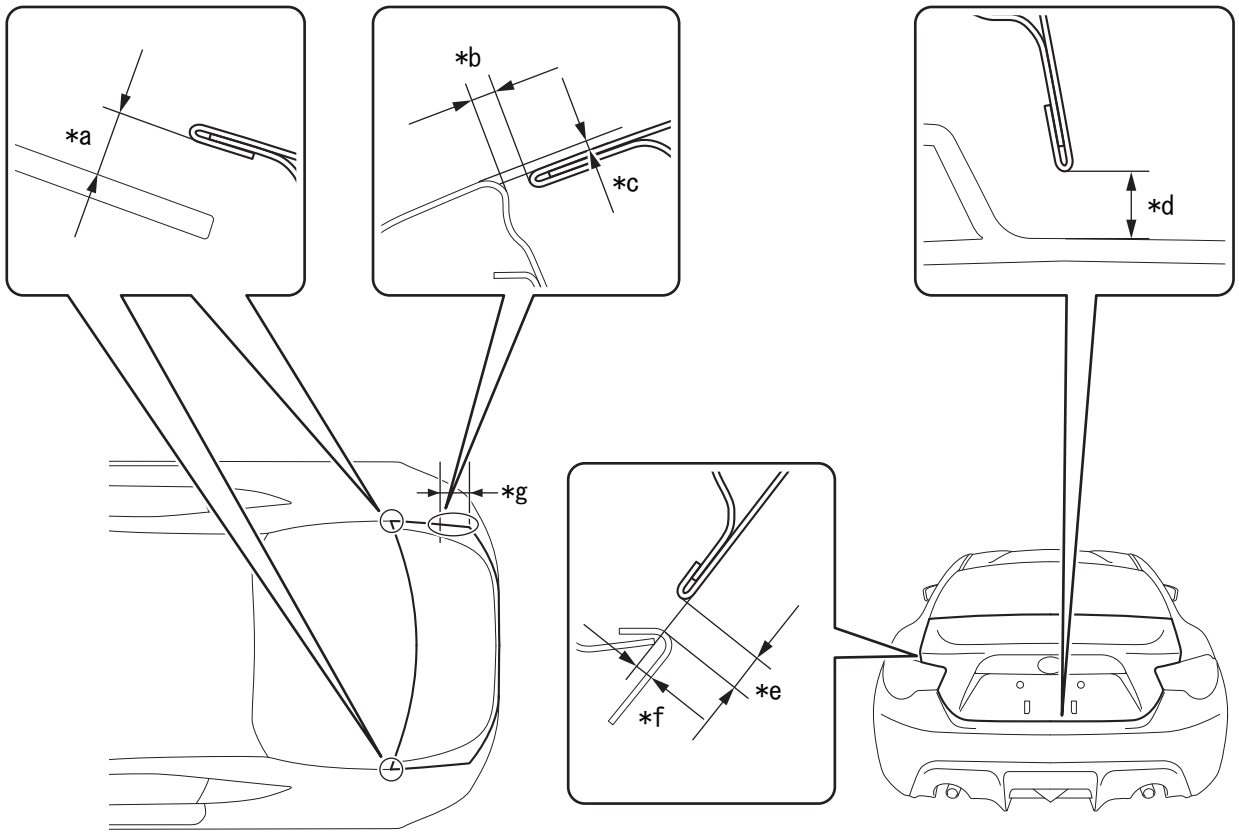


13. Installation of the trunk cover
    (1) Using 7 clips, install the trunk cover.

DH

## Adjustment

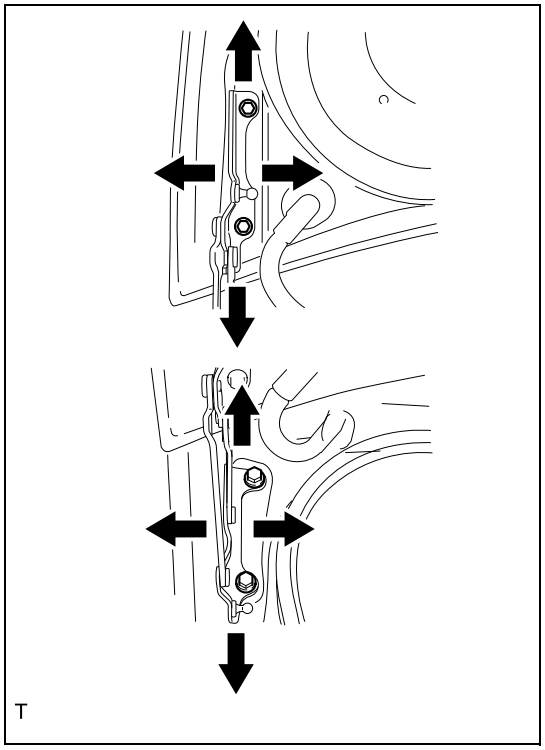
1. Inspection of the hinge ASSY trunk
   (1) Inspect if placement dimensions are within the reference values.



EI-03882

Reference values

| | | | |
|---|---|---|---|
| *a | 7.8 mm {0.3071 in} | *b | 2.0 to 5.0 mm {0.0787 to 0.1969 in} |
| *c | -2.0 to 1.0mm {-0.0787 to 0.0394in} | *d | 5.8 to 10.2 mm {0.2283 to 0.4016 in} |
| *e | 4.3 to 7.3 mm {0.1693 to 0.2874 in} | *f | -2.0 to 1.0 mm {-0.0787 to 0.0394 in} |
| *g | 150 mm {5.906 in} | — | — |

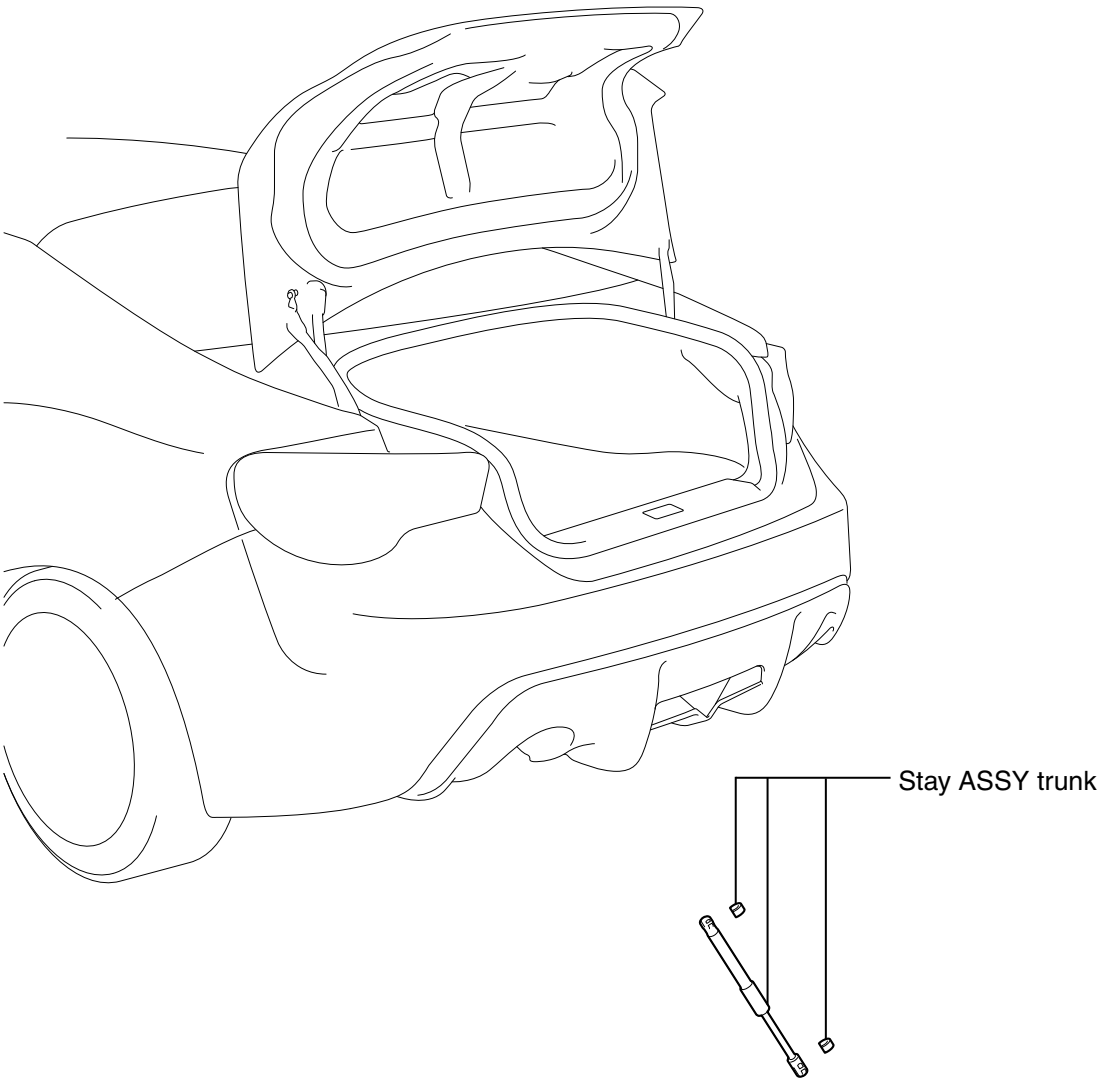


2. Adjustment of the hinge ASSY trunk
   (1) Loosen the bolts before adjusting the door's forward and backward direction, and the side to side direction of the door's front end.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}

   (2) Loosen the bolts before adjusting the side to side direction of the door's rear end and the striker.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

# Stay ASSY trunk

## Exploded view



SL-02079

## Removal

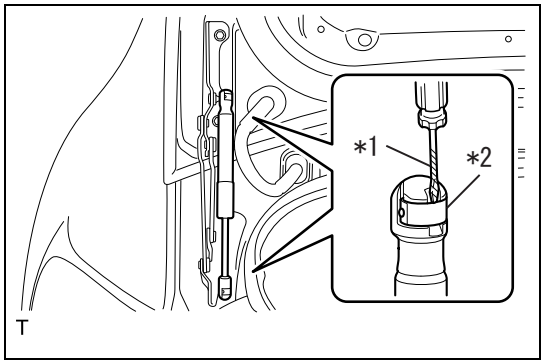
NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Removal of stay ASSY trunk

   CAUTION:

   - During installation or removal, hold the cylinder part. To prevent foreign objects from becoming attached, do not touch the stroking section of the rod.
   - If you are wearing cotton gloves and touch the rod section, the fibers may become attached and cause gas leaks. Do not touch the rod.
   - To avoid disfiguration in the rod, do not put a lateral load on the cylinder.



(1) Using a thin flat tip screwdriver that is wrapped in protective tape, remove the 2 stop rings along the side.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | Stop ring |

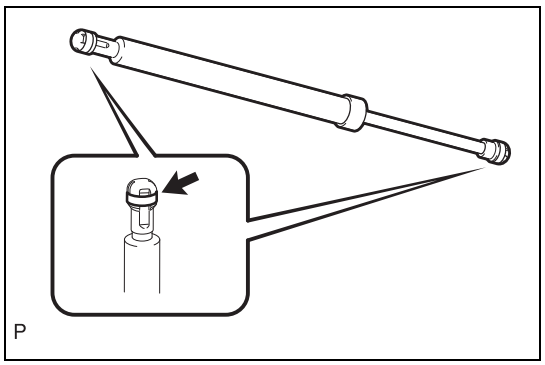
(2) Release the ball joint section and remove the stay ASSY trunk.
CAUTION:
Hold the trunk so that it can't fall, and remove the stay ASSY trunk.

## Installation

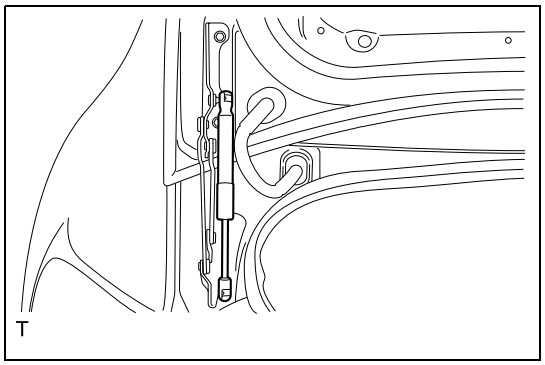
NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Installation of the stay ASSY trunk
CAUTION:
- During installation or removal, hold the cylinder part. To prevent foreign objects from becoming attached, do not touch the stroking section of the rod.
- If you are wearing cotton gloves and touch the rod section, the fibers may become attached and cause gas leaks. Do not touch the rod.
- To avoid disfiguration in the rod, do not put a lateral load on the cylinder.
- Hold the joint section and check the installation condition.



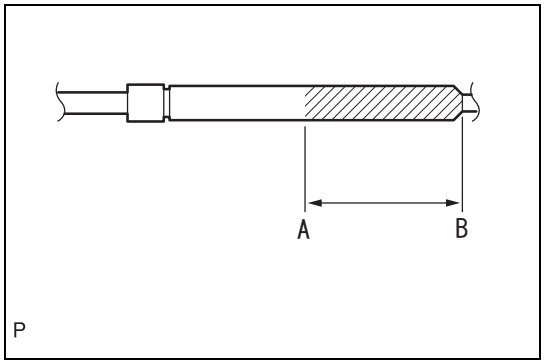
(1) If you are reusing the stay ASSY trunk:
(a)Install the 2 stop rings on the stay ASSY trunk.



(2) Fit the stay ASSY trunk into the ball joint section to install it.
CAUTION:
- Hold the trunk so that it can't fall, and install the stay ASSY trunk.
- Fit the stay ASSY trunk into the ball joint section, and check that it can't come out.

## Disposal

1. Disposal of the stay ASSY trunk
(1) With the piston rod fully extended, secure the stay ASSY trunk in a vice bench.



(2) Using a metal saw, cut between A and B in the figure, and release the gas.

| Range | Length |
|---|---|
| A-B | 80mm {3.15 in} |

CAUTION:
- Wear protective goggles when performing this task.
- The stored gas is colorless, odorless, and harmless. However, the powder from the saw may come flying, so cover it with a cloth.

        NOTE:
        Turn over the floor carpet to a range where you can install and remove the cable ASSY fuel.
    (2) Remove 2 nuts and remove the pull handle ASSY.

    (3) Remove the cable ASSY fuel from the pull handle ASSY.

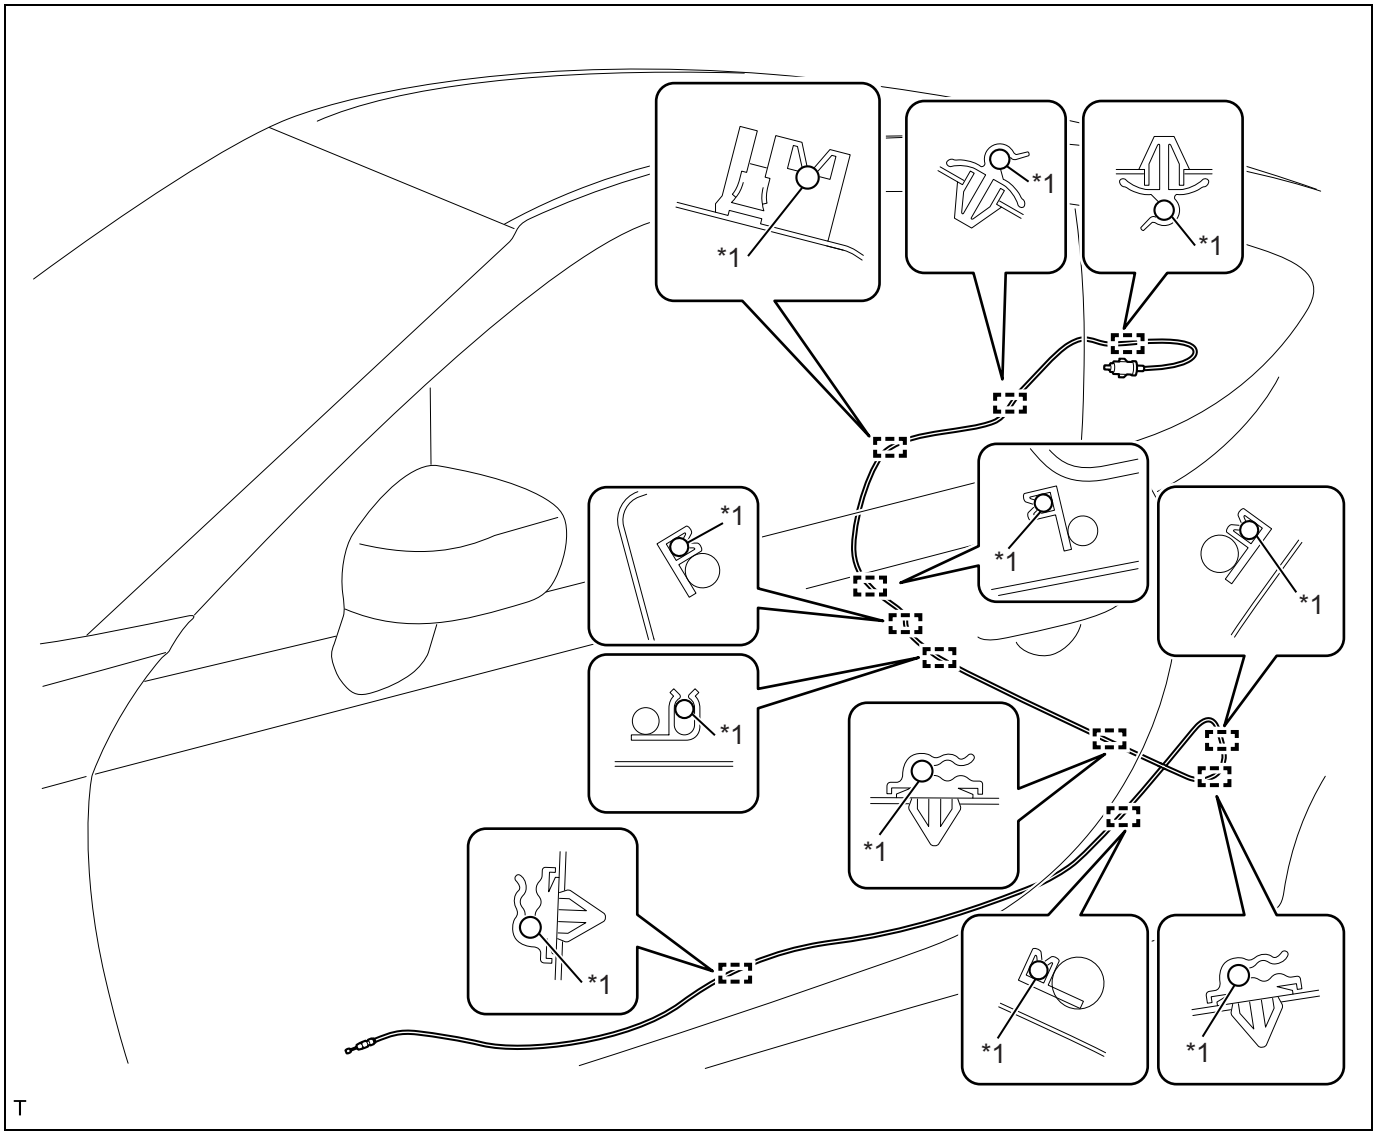
17. Removal of the cable ASSY fuel
    (1) Turn over the floor carpet to a range where you can remove the cable ASSY fuel.

    (2) As in the figure, turn the cable ASSY fuel, align the guide with the cutout on the body side, and pull out the cable ASSY fuel.

Captions in illustration

| | |
|---|---|
| *1 | Cutout |
| *2 | Guide |

    (3) Using a flat head screw driver wrapped in protective tape, release each clamp shown in the figure, and remove the cable ASSY fuel.

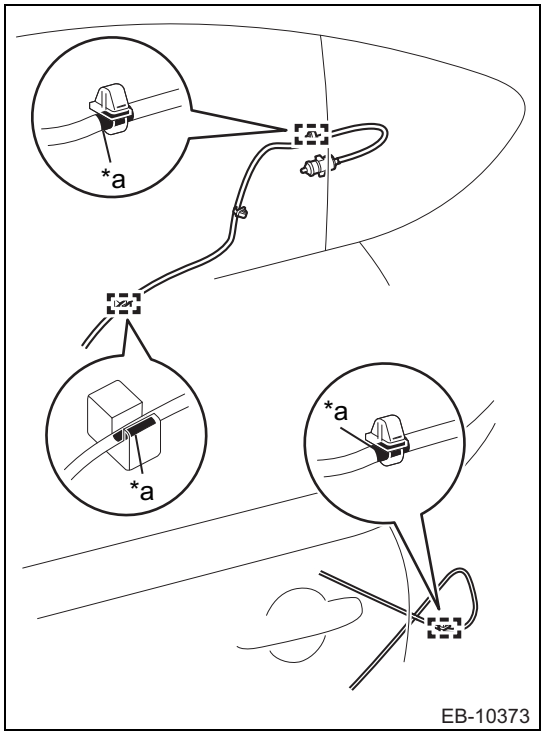


Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Cable ASSY fuel | - | - |

## Installation

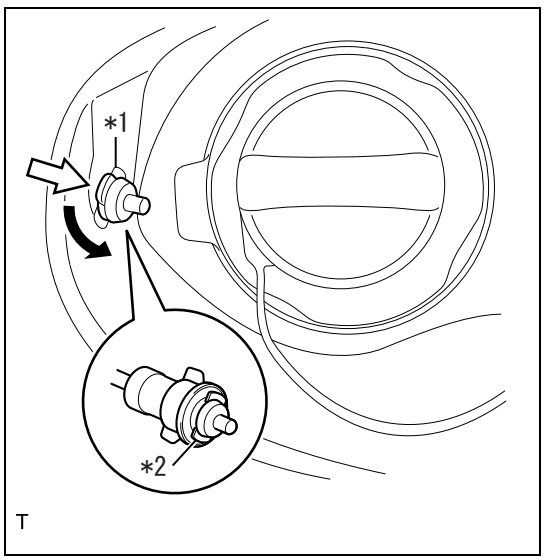
1. Installation of cable ASSY fuel
   (1) Engage the each clamp and install the cable ASSY fuel.



(2) Check that the center of the cable ASSY fuel marking tape matches the center of the clamps in the figure.
CAUTION:
Make sure there are no twists in the cable ASSY fuel.

Captions in illustration

| | |
|---|---|
| *a | Alignment marks |



(3) As in the figure, align the guide of the cable ASSY fuel with the cut-out on the body side, and turn in the direction of the arrow to install the cable ASSY fuel.

DH

2. Installation of the pull handle ASSY
   (1) Install the cable ASSY fuel on the pull handle ASSY.
   (2) Using 2 nuts, install the pull handle ASSY.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (3) Return the floor carpet to its original position.
3. Installation of the cover opener handle
   (1) Slide the cover opener handle towards the rear, and install on the pull handle ASSY.
   (2) Install the cover opener handle with the screw.
   Standard value:T=4.5N·m {46kgf·cm} {3.3ft·lbf}
4. Installation of the package tray trim spacer NO. 2
   (1) Using 3 clips, install the package tray trim spacer NO. 2
5. Installation of the quarter lower trim LH (Refer to IT - 57)
6. Installation of the quarter lower trim RH (Refer to IT - 58)
7. Installation of the trunk trim cover INN RH
   (1) Using 5 clips, install the trunk trim cover INN RH.

8. Installation of the trunk trim cover INN LH (Refer to DH - 73)
9. Installation of the rear floor finish plate (Refer to LE - 63)
10. Installation of the trunk floor mat
11. Installation of the rear seat cushion ASSY RH (Refer to SE - 39)
12. Installation of the rear seat cushion ASSY LH (Refer to SE - 39)
13. Installation of the front seat ASSY LH, RH (Refer to SE - 25)
14. Connection of the front door opening trim weather strip LH, RH (Refer to IT - 58)
15. Installation of the front door scuff plate LH, RH and cowl side trim board LH, RH (Refer to IT - 58)

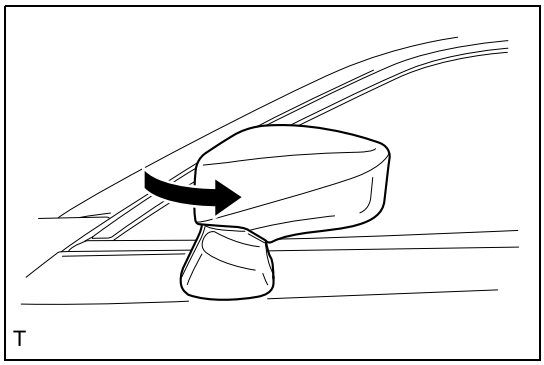
## Removal

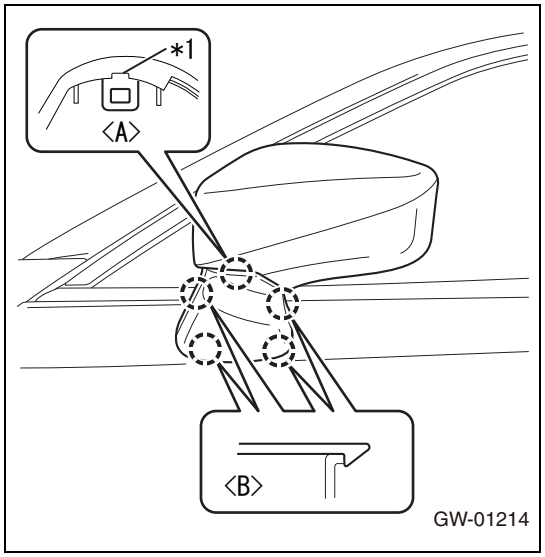
NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Removal of the door armrest cover LH (Refer to DH - 32)
2. Removal of the front door trim board SUB-ASSY LH (Refer to DH - 32)
3. Removal of the front door service hole cover LH (Refer to DH - 36)



4. Removal of the outer mirror cover LWR LH
   (1) Retract the outer rear-view mirror LH.

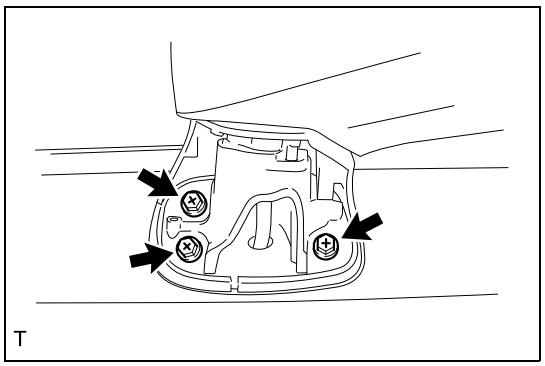


(2) Using a flat tip screwdriver that is wrapped in protective tape, release tab <A> from the slit.
(3) Release the 4 <B> tabs and remove the outer mirror cover LWR LH.

Captions in illustration

| | |
|---|---|
| *1 | Slit |

5. Removal of the outer rear-view mirror LH
   (1) Disconnect the connector.

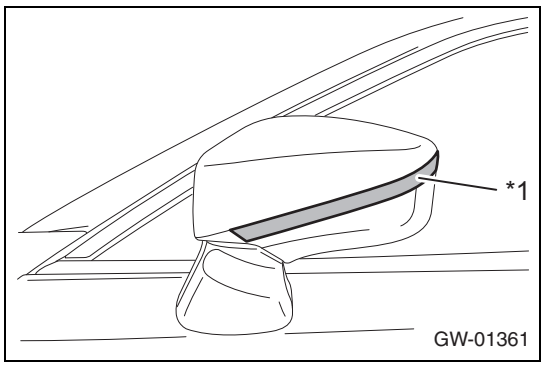


(2) Remove the 3 bolts and remove the outer rear-view mirror LH.

## Disassembly

NOTE:
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

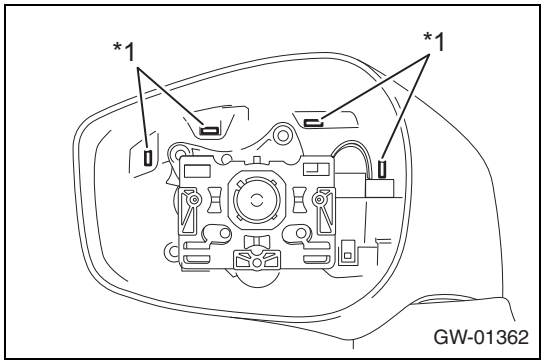
1. Removal of the outer mirror LH (Refer to MX - 10)
2. Removal of the outer mirror cover LH



(1) Apply protective tape to the location shown in the figure.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |



(2) Using a flat tip screwdriver, release the 4 tabs.

Captions in illustration

| | |

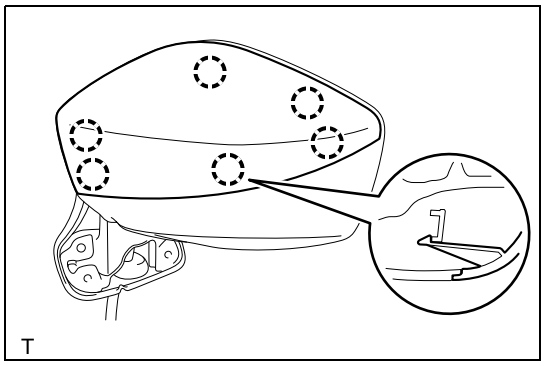
## Assembly

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Installation of the outer mirror LH (Refer to MX - 11)



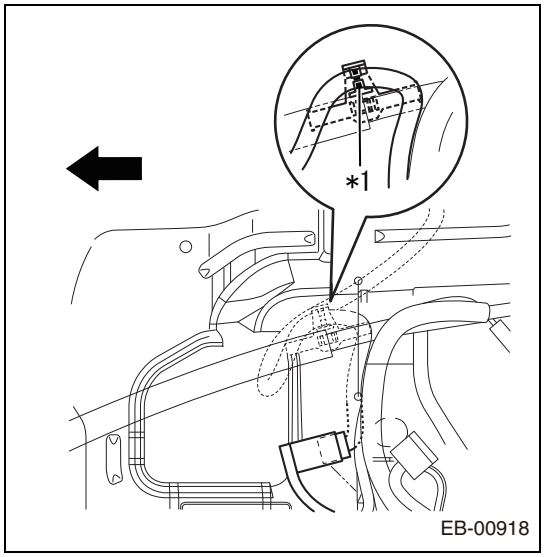
2. Installation of the outer mirror cover LH
   (1) Fit in the 6 tabs and install the outer mirror cover LH.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Installation of the outer rear-view mirror LH
   (1) Retract the outer rear-view mirror LH.
   (2) Using 3 bolts, install the outer rear view mirror LH.
   Standard value:T=7.5N·m {76kgf·cm} {5.5ft·lbf}



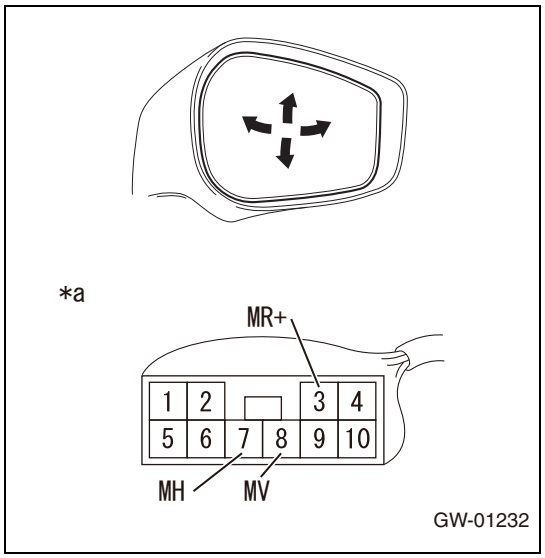
(3) Align the alignment mark of the wiring harness with the harness clip on the body side, and install the wiring harness.

Captions in illustration

| | |
|---|---|
| *1 | Alignment marks |
| ➡ | Front side of the vehicle |

2. Installation of the outer mirror cover LWR LH
   (1) Fit in the 5 tabs and install the outer mirror cover LWR LH.
3. Installation of the front door service hole cover LH (Refer to DH - 49)
4. Installation of the front door trim board SUB-ASSY LH (Refer to DH - 52)
5. Installation of the door armrest cover LH (Refer to DH - 54)

## Unit inspection



1. Inspection of the outer rear-view mirror RH
   (1) Operation inspection for the mirror surface position
      (a) Inspect operation when battery voltage is applied between connector terminals.
      Criteria

| Battery connection | Operation direction |
|---|---|
| Battery positive →3 (MR+)<br>Battery ground →8 (MV) | Upward |
| Battery positive →8 (MV)<br>Battery ground →3 (MR+) | Downward |
| Battery positive →3 (MR+)<br>Battery ground →7 (MH) | Rightward |
| Battery positive →7 (MH)<br>Battery ground →3 (MR+) | Leftward |

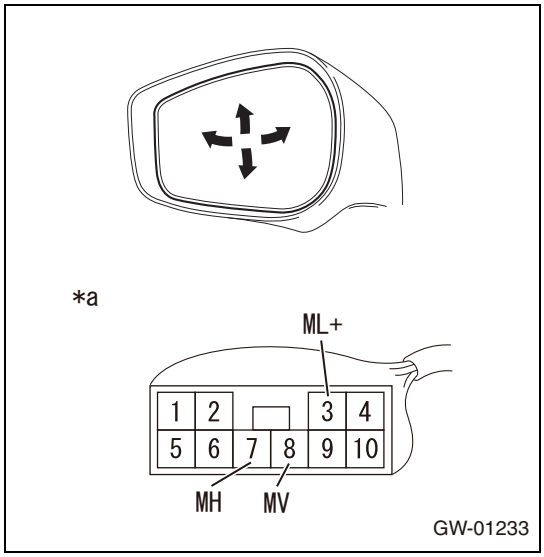
Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Outer rear-view mirror RH) |

   (2) Inspection for the mirror heater (when there is a mirror heater)
      (a) Measure the resistance according to the following chart.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 4 (+) - 10 (-) | 23°C {73°F} | 9.6 to 14.4 Ω |



2. Inspection of the outer rear-view mirror LH
   (1) Operation inspection for the mirror surface position
      (a)Inspect operation when battery voltage is applied between connector terminals.
      Criteria

| Battery connection | Operation direction |
|---|---|
| Battery positive →3 (ML+)<br>Battery ground →8 (MV) | Upward |
| Battery positive →8 (MV)<br>Battery ground →3 (ML+) | Downward |
| Battery positive →3 (ML+)<br>Battery ground →7 (MH) | Rightward |
| Battery positive →7 (MH)<br>Battery ground →3 (ML+) | Leftward |

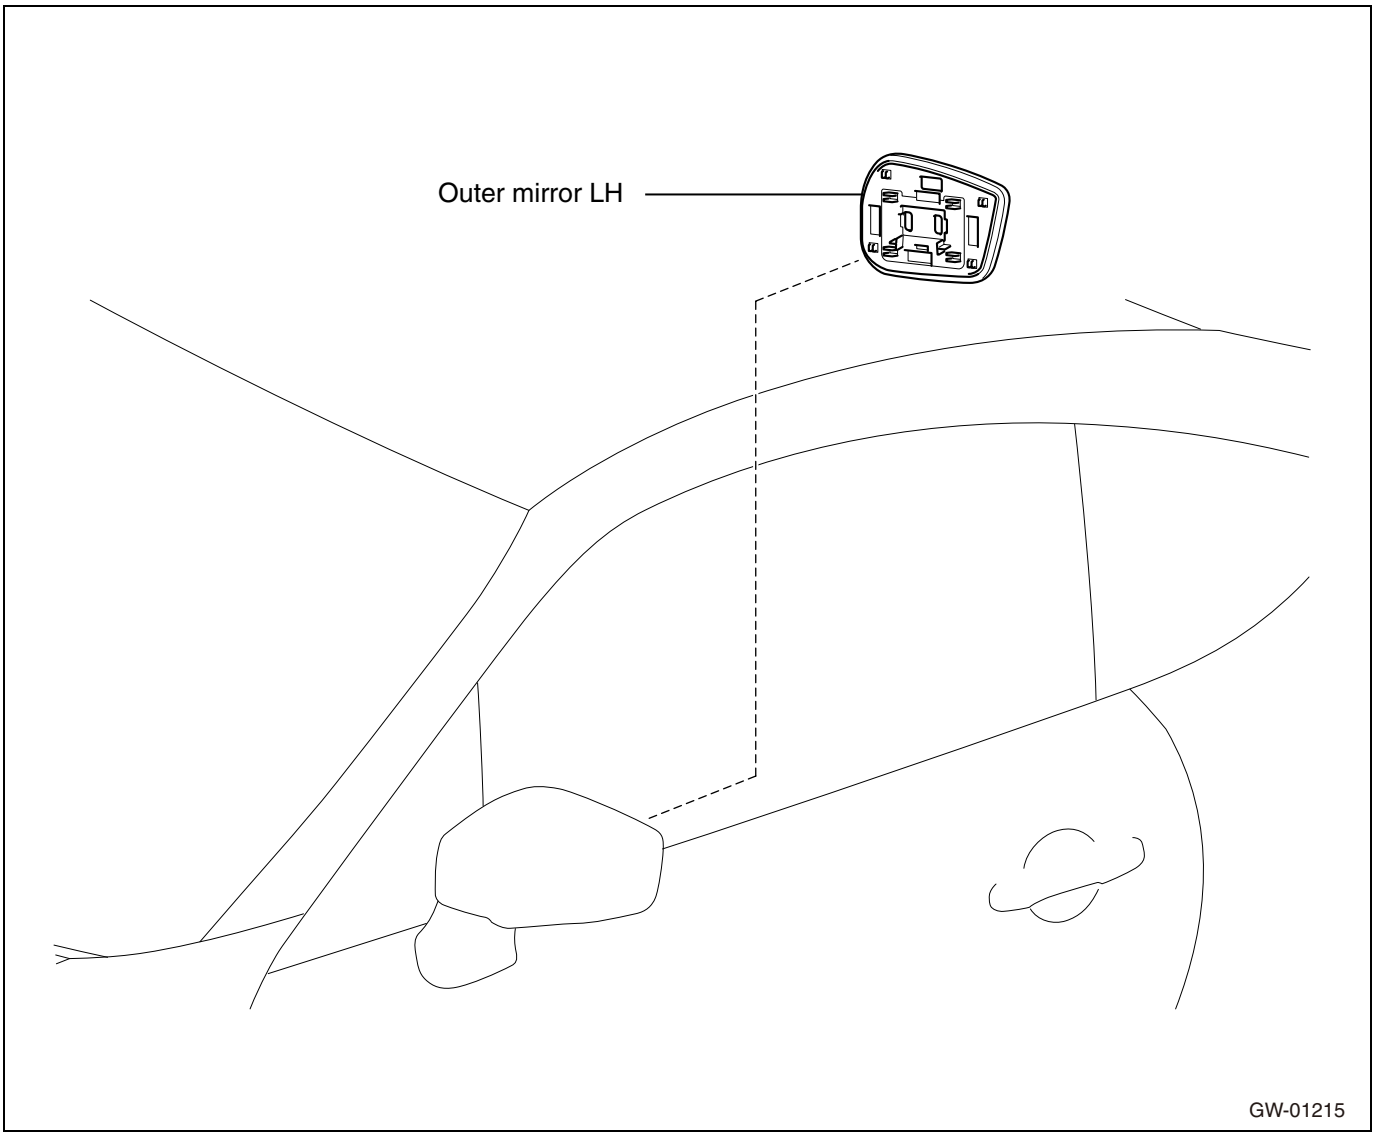
   (2) Inspection for the mirror heater (when there is a mirror heater)
      (a)Measure the resistance according to the following chart.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 4 (+) - 10 (-) | 23°C {73°F} | 9.6 to 14.4 Ω |

# Outer rear-view mirror glass

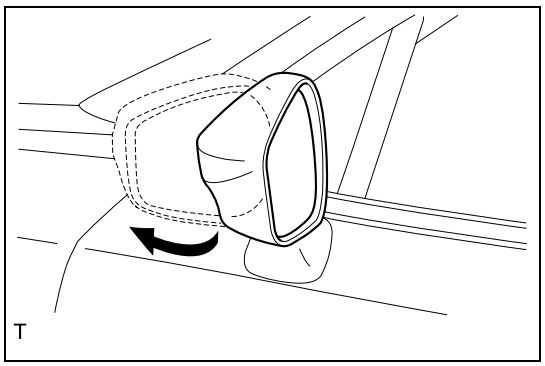
## Exploded view



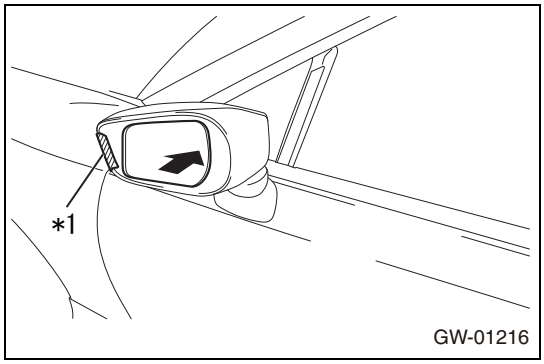
## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.



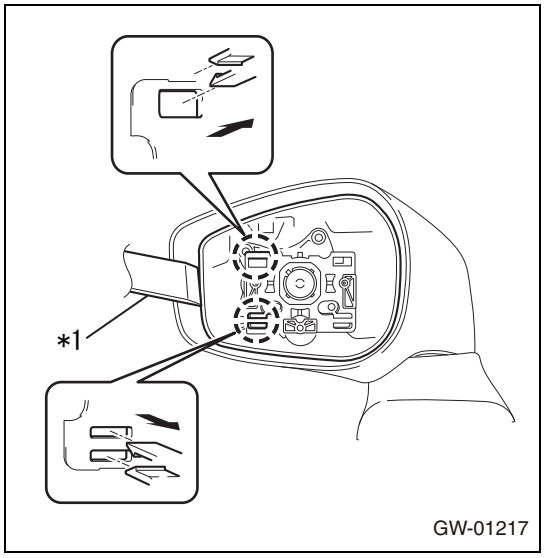
1. Removal of the outer mirror LH
   (1) As shown in the figure, tilt the outer rear-view mirror LH in the forward retracting direction.



(2) Push the inside of the mirror surface and face the mirror surface towards the interior of the vehicle.
(3) Apply protective tape to the location in the figure.

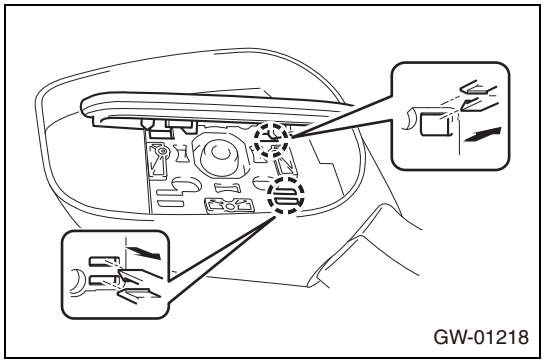
Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

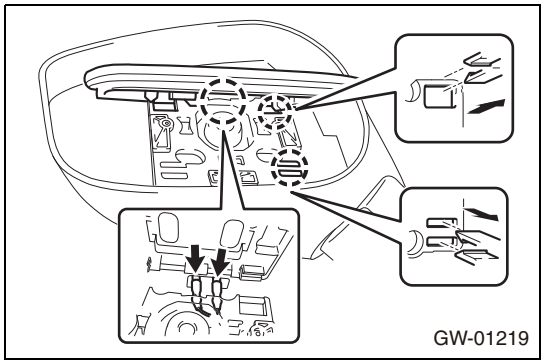


(4) Using a molding remover, release the 2 tabs.
CAUTION:
Be careful not to pull the outer mirror LH with excessive force, as this may disconnect the actuator mechanism or crack the mirror.

| | |
|---|---|
| *1 | Molding remover |



(5) When there is no mirror heater:
(a)Release the 2 tabs and remove the outer mirror LH.



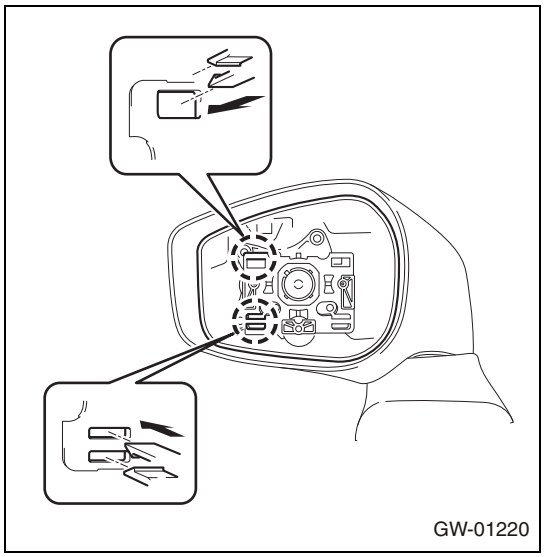
(6) With a mirror heater:
(a)Release the 2 tabs.
(b)Disconnect the 2 connectors and remove the outer mirror LH.

MX

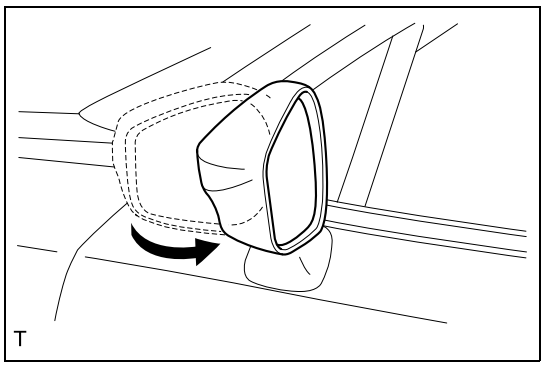
## Installation

NOTE:
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Installation of the outer mirror LH
   (1) When there is no mirror heater:
      (a)Fit in the 2 claws.
   (2) With a mirror heater:
      (a)Connect the 2 connectors.
      (b)Fit in the 2 claws.



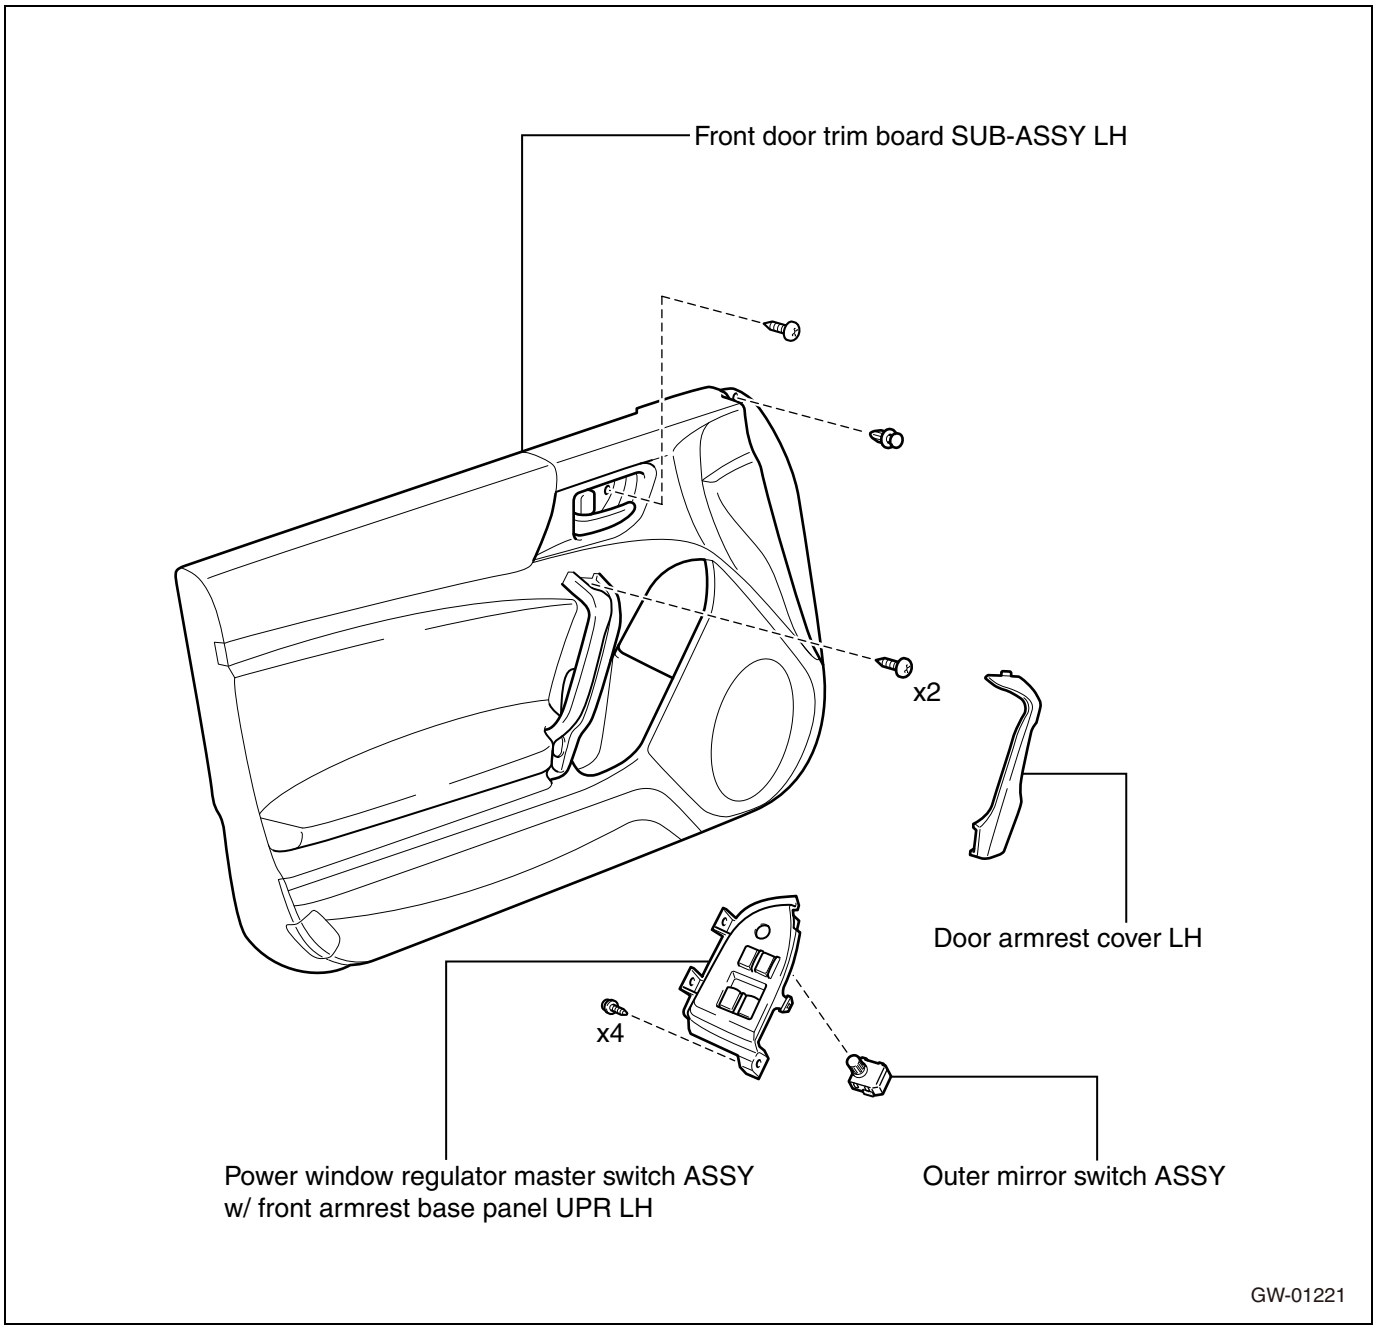
(3) Fit in the 2 tabs and install the outer mirror LH.
CAUTION:
Be careful not to push the outer rear-view mirror glass with excessive force, as this may crack the mirror.



(4) Push the outer rear-view mirror LH in the direction shown in the figure.

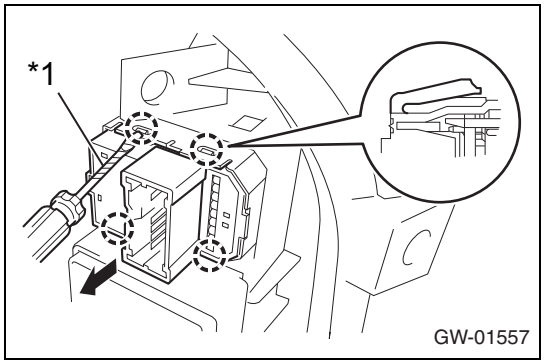
# Outer mirror switch

## Exploded view



## Removal

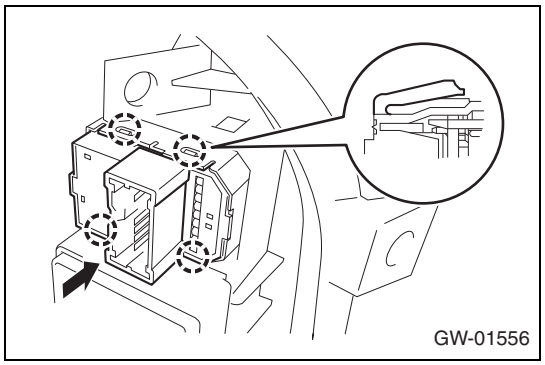
1. Removal of the door armrest cover LH (Refer to DH - 32)
2. Removal of the front door trim board SUB-ASSY LH (Refer to DH - 32)
3. Removal of the power window regulator master switch ASSY W/ front armrest base panel UPR LH (Refer to DH - 33)



4. Removal of the outer mirror switch ASSY
   (1) Using a thin flat tip screwdriver wrapped with protective tape, release the 4 tabs and remove the outer mirror switch ASSY.

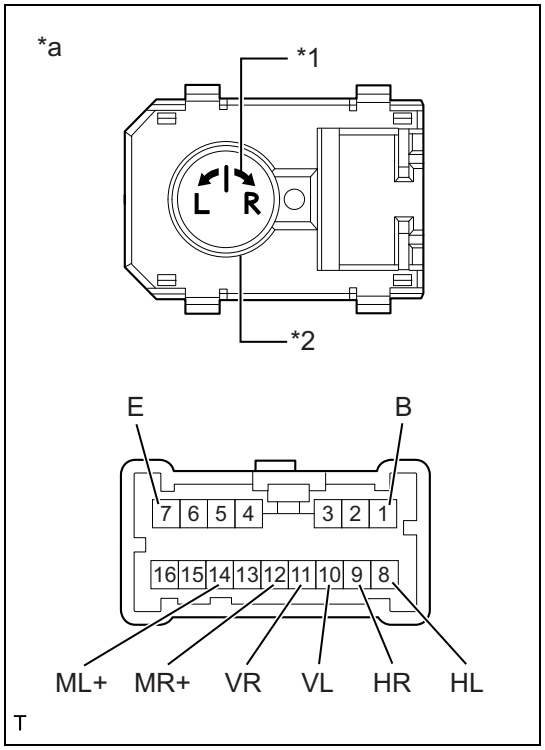
| | |
|---|---|
| *1 | Protective tape |

## Installation



1. Installation of the outer mirror switch ASSY
   (1) Fit in the 4 tabs and install the outer mirror switch ASSY.
2. Installation of the power window regulator master switch ASSY W/ front armrest base panel UPR LH (Refer to DH - 52)
3. Installation of the front door trim board SUB-ASSY LH (Refer to DH - 52)
4. Installation of the door armrest cover LH (Refer to DH - 54)

## Unit inspection



1. Inspection of the outer mirror switch ASSY
   (1) Resistance check
      (a) Measure the resistance between connector terminals when each switch is operated.

Resistance

Positioning switch (Side to side changing switch, left side)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 1 (B) - 14 (ML+)<br>10 (VL) - 7 (E) | Hold down the "Up" switch | Less than 1 Ω |
| 1 (B) - 10 (VL)<br>14 (ML+) - 7 (E) | Hold down the "Down" switch | Less than 1 Ω |
| 1 (B) - 8 (HL)<br>14 (ML+) - 7 (E) | Hold down the "Left" switch | Less than 1 Ω |
| 1 (B) - 14 (ML+)<br>8 (HL) - 7 (E) | Hold down the "Right" switch | Less than 1 Ω |

Resistance

Positioning switch (Side to side changing switch, right side)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 1 (B) - 12 (MR+)<br>11 (VR) - 7 (E) | Hold down the "Up" switch | Less than 1 Ω |
| 1 (B) - 11 (VR)<br>12 (MR+) - 7 (E) | Hold down the "Down" switch | Less than 1 Ω |
| 1 (B) - 9 (HR)<br>12 (MR+) - 7 (E) | Hold down the "Left" switch | Less than 1 Ω |
| 1 (B) - 12 (MR+)<br>9 (HR) - 7 (E) | Hold down the "Right" switch | Less than 1 Ω |

# Wiper & washer system

## Precautions

1. Precautions when handling the washer nozzle
   (1) Using thin flat tip screwdrivers wrapped with protective tape, the washer spray location can be adjusted.
   CAUTION:
   Because it may damage the washer nozzle discharge port and cause the washer liquid not to be sprayed correctly, do not insert a screwdriver into the washer nozzle discharge port.
   (2) If something, such as wax, is clogging the washer nozzle, use a soft plastic brush or something similar to clean it out.

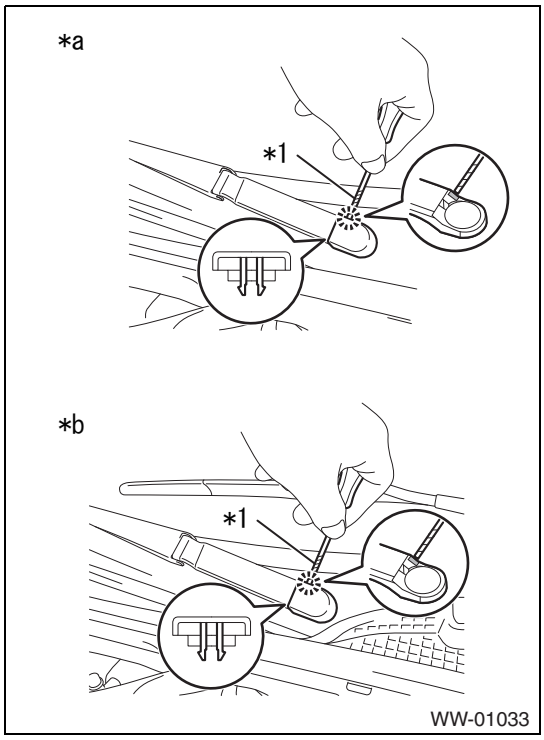
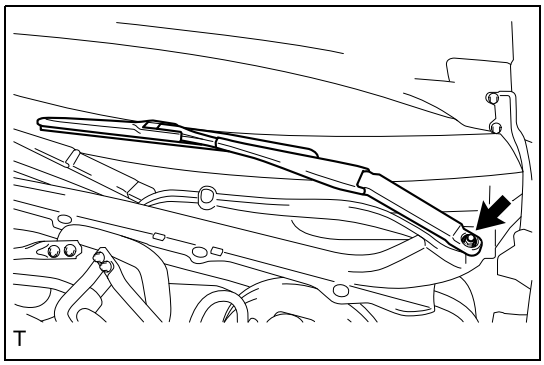
## Removal



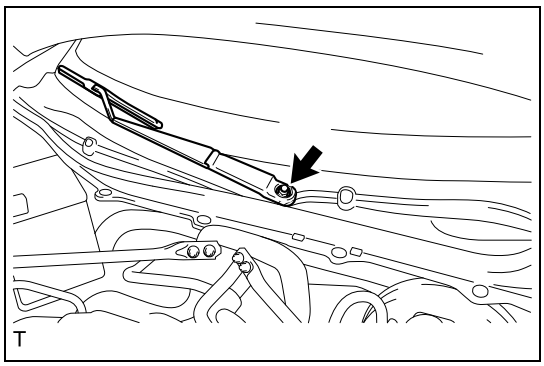
1. Removal of the wiper arm head caps
   (1) Using a thin flat tip screwdriver that is wrapped in protective tape, release the tabs and remove the 2 wiper arm head caps.

Captions in illustration

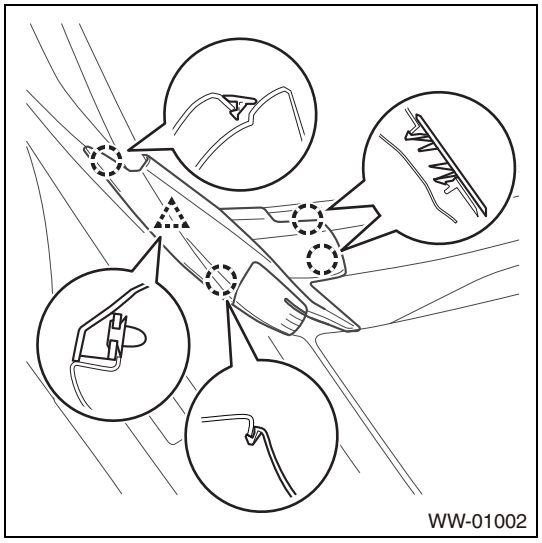
| | |
|---|---|
| *1 | Protective tape |
| *a | LH side |
| *b | RH side |



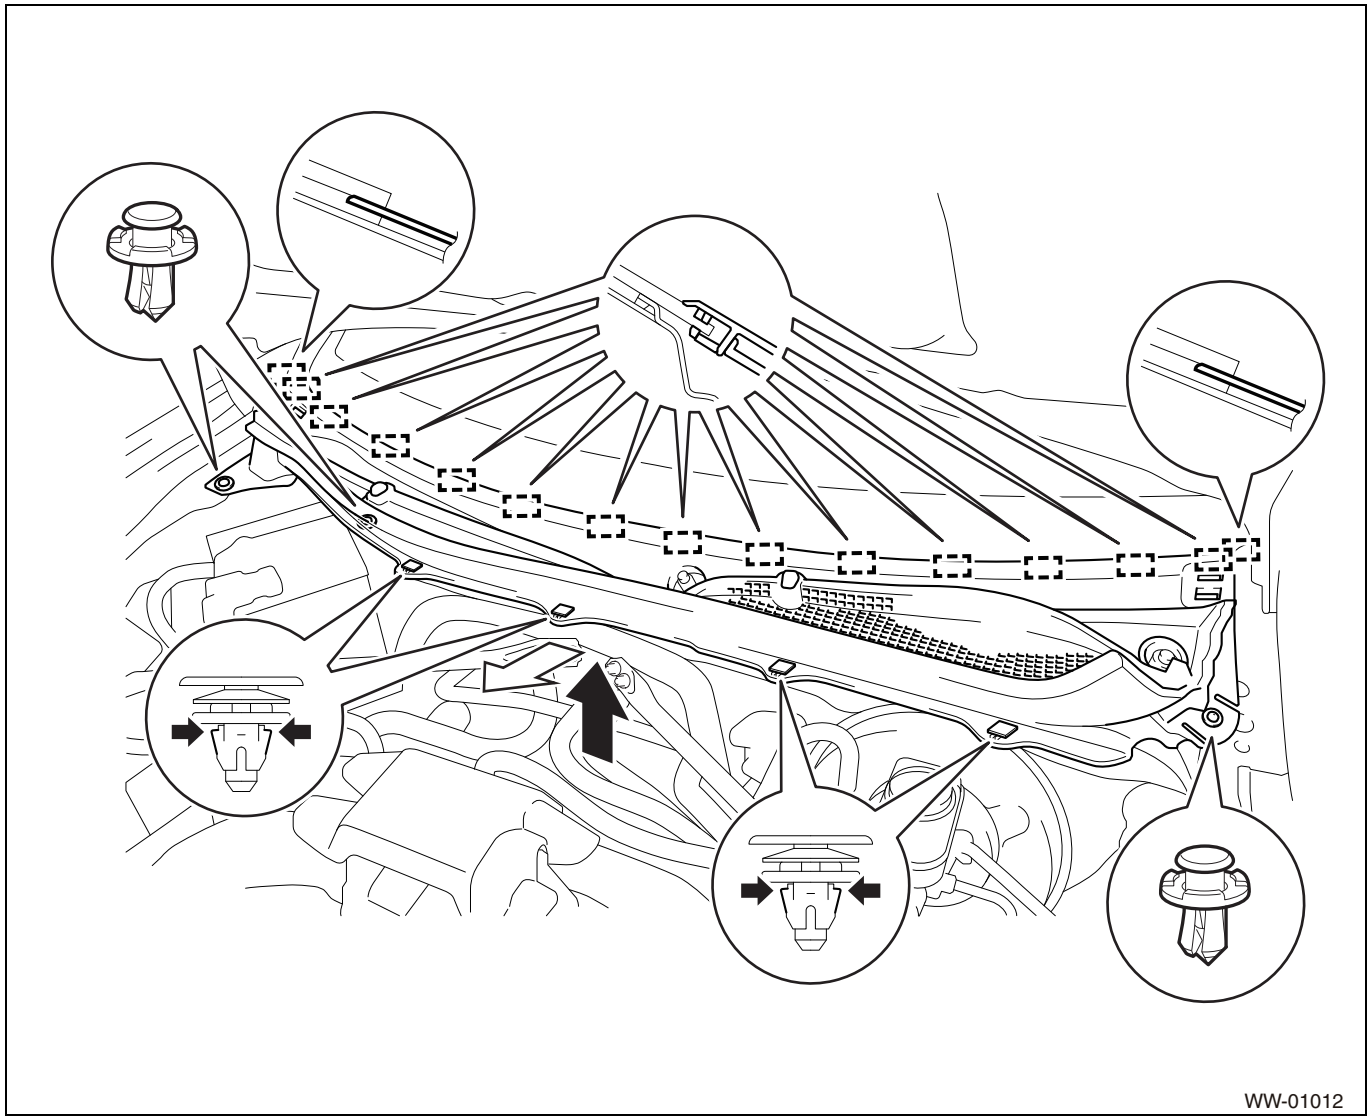
2. Removal of the front wiper arm & blade ASSY LH
   (1) Remove the nut and remove the front wiper arm & blade ASSY LH.



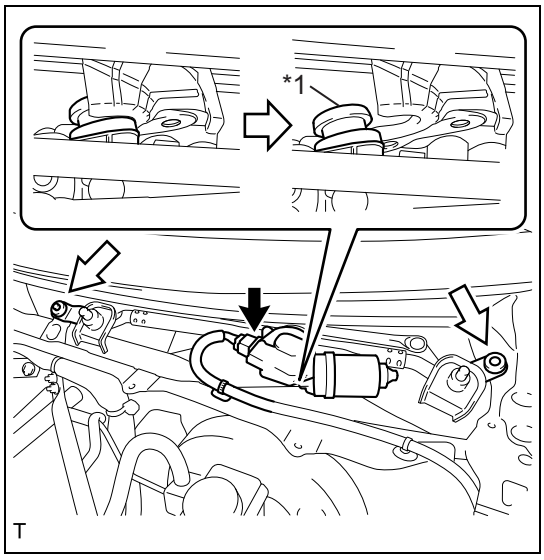
3. Removal of the front wiper arm & blade ASSY RH
   (1) Remove the nut and remove the front wiper arm & blade ASSY RH.



4. Removal of the front fender to cowl side seal RH
   (1) Release the 3 tabs.
   (2) Remove the clip and remove the front fender to cowl side seal RH.
5. Removal of the front fender to cowl side seal LH
   NOTE:
   Perform the same procedures as RH side.
6. Removal of the cowl ventilator louver
   CAUTION:
   Before removing the cowl ventilator louver, use an air blower and a nylon brush to clean the gravel of the front, lower area of the glass.
   (1) Using a clip remover, remove the 3 clips.
   (2) While pressing the tabs, remove the 4 cowl top ventilator louver clips.
      CAUTION:
      Be careful not to pull the cowl top ventilator louver clips with excessive force, as this may damage the clips.



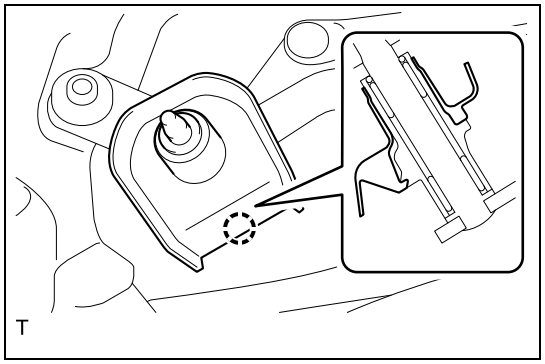
(3) Release the 15 guides as in the figure, and remove the cowl ventilator louver.



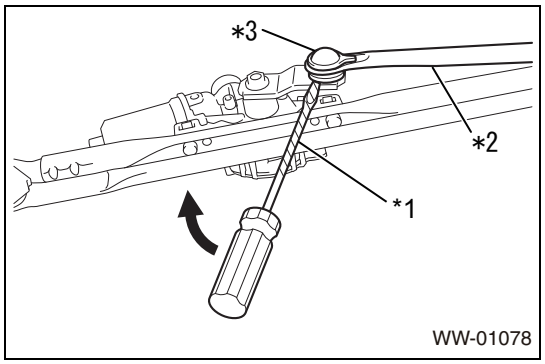
7. Removal of the windshield wiper motor & link ASSY
   (1) Disconnect the front wiper motor connector.
      (a)Remove the 2 bolts.
      (b)As in the figure, release the grommet of the front wiper motor from the body, and remove the windshield wiper motor & link ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Grommet |



8. Removal of the windshield wiper arm covers
   (1) Release the tabs and remove the 2 windshield wiper arm covers.

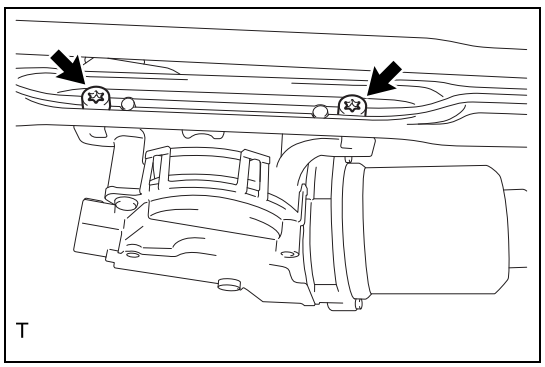


9. Removal of the front wiper crank SUB-ASSY
   (1) Using a flat tip screwdriver that is wrapped in protective tape, as in the figure, disconnect the No. 1 rod from the crank arm pivot of the front wiper crank SUB-ASSY.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | No. 1 rod |
| *3 | Crank arm pivot |

   (2) Remove the nut and remove front wiper crank SUB-ASSY.



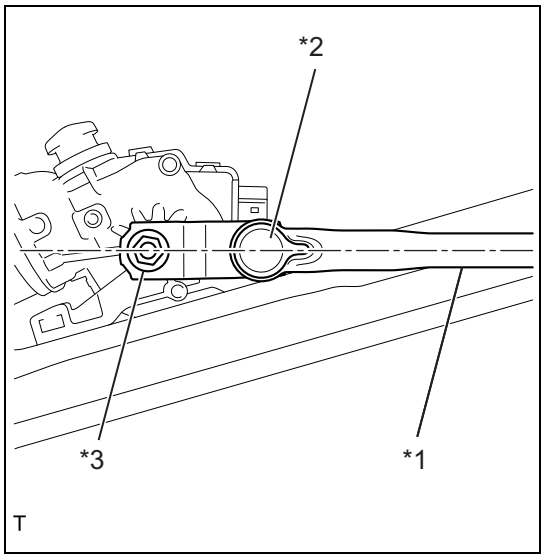
10. Removal of the front wiper motor
    (1) Using a T30 Torx socket wrench, remove the 2 Torx bolts, and remove the front wiper motor from the windshield wiper link ASSY.

WW

## Installation

1. Installation of the front wiper motor
   (1) Using a T30 Torx socket wrench and 2 bolts, install the front wiper motor on the windshield wiper link ASSY.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
2. Installation of the front wiper crank SUB-ASSY
   (1) Connect the front wiper motor connector.
   (2) Turn the ignition switch to ON.
   (3) Activate the wiper switch, and stop the front wiper motor in the automatic stop position.
   (4) Turn the ignition switch to OFF.
   (5) Disconnect the front wiper motor connector.

(6) Using the nut, temporarily install the front wiper crank SUB-ASSY on the front wiper motor.
(7) Temporarily place the No. 1 rod on the crank arm pivot of the front wiper crank SUB-ASSY.

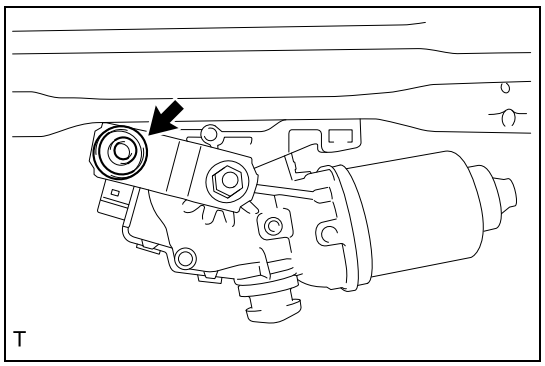


(8) As in the figure, directly align the nut of the front wiper crank SUB-ASSY and the crank arm pivot with the No. 1 rod.

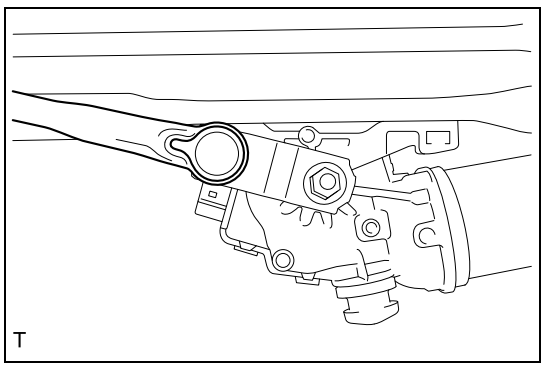
Captions in illustration

| | |
|---|---|
| *1 | No. 1 rod |
| *2 | Crank arm pivot |
| *3 | Nut |

(9) Tighten the nut completely.
Standard value:T=8.5N·m {87kgf·cm} {6.3ft·lbf}

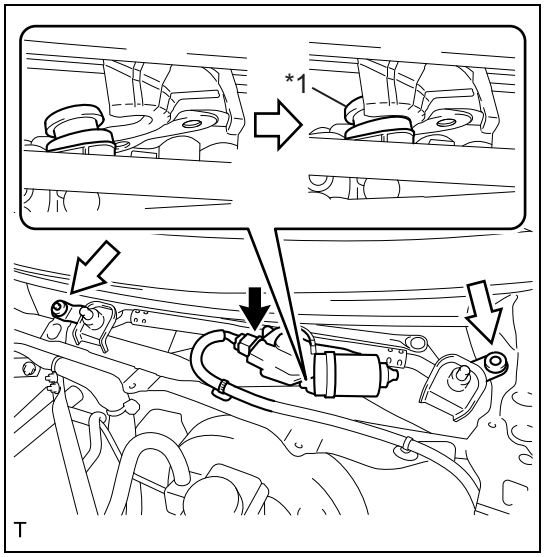


(10) Apply Multemp SA grease or the equivalent to the crank arm pivot of the front wiper crank SUB-ASSY.



(11) Connect the No. 1 rod to the crank arm pivot of the front wiper crank SUB-ASSY.

3. Installation of the windshield wiper arm cover
(1) Fit in the tabs and install the 2 windshield wiper arm covers.

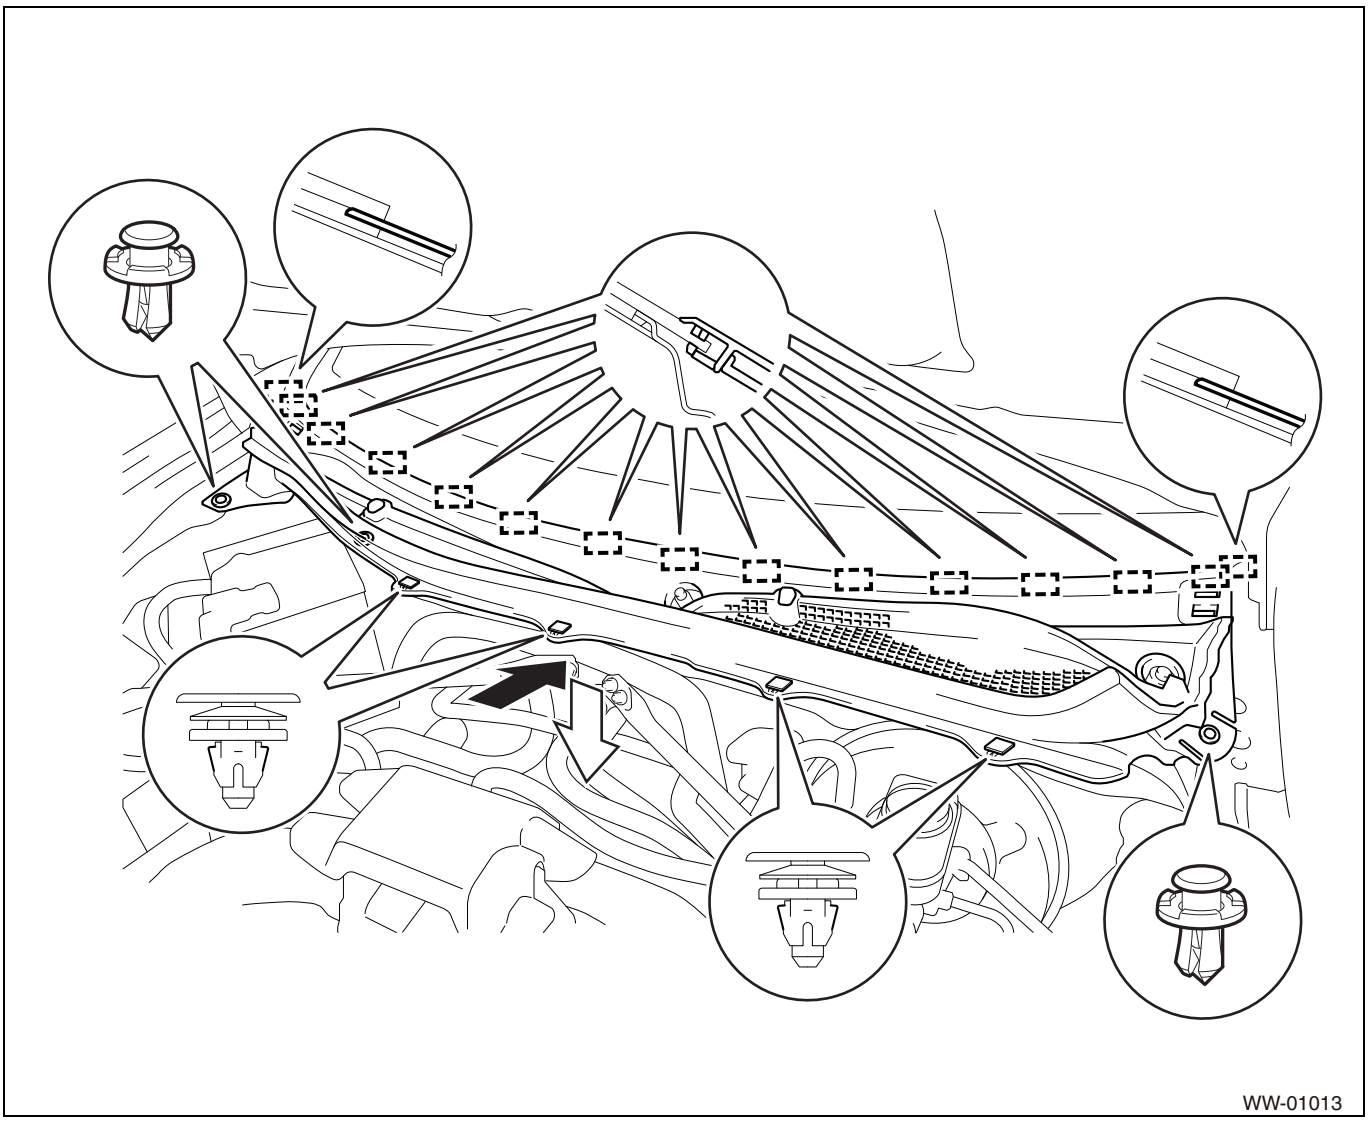


4. Installation of the windshield wiper motor & link ASSY
   (1) As shown in the figure, fit the grommet of the front wiper motor in the body, and assemble the windshield wiper motor & link ASSY.
   (2) Using 2 bolts, install the windshield wiper motor & link ASSY.
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
   (3) Connect the connector.

Captions in illustration

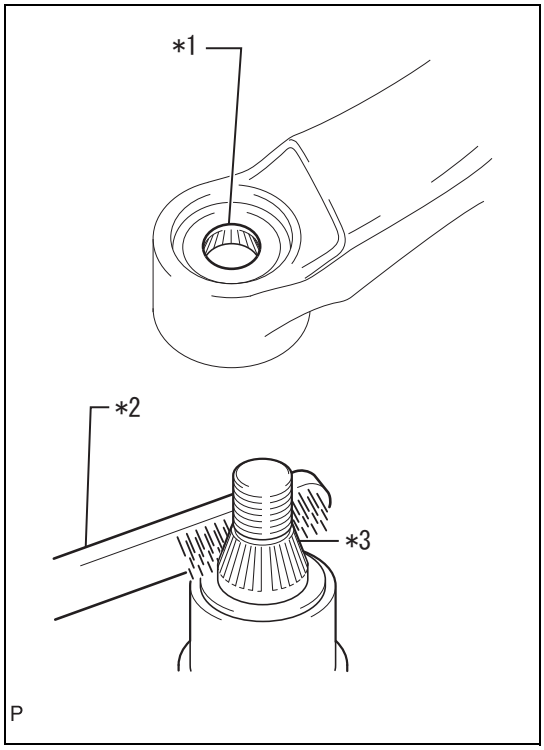
| | |
|---|---|
| *1 | Grommet |

5. Installation of the cowl ventilator louver
   CAUTION:
   Before installing, check that there is no gravel on the installation sections of the windshield glass and the cowl ventilator louver.
   (1) Install in the direction of the arrow in the figure, and fit in the 15 guides.
   (2) Install the 4 cowl top ventilator louver clips on the cowl ventilator louver.
   (3) Using 3 clips, install the cowl ventilator louver.



WW

6. Installation of the front fender to cowl side seal RH
   (1) Fit in the 3 tabs and, using clips, install the front fender to cowl side seal RH.
7. Installation of the front fender to cowl side seal LH
   NOTE:
   Perform the same procedures as RH side.



8. Installation of the front wiper arm & blade ASSY RH
   (1) Stop the front wiper motor in the automatic stop position.
   (2) During re-assembly:
   (a)Use a round file to clean the wiper arm serration section.

Captions in illustration

| | |
|---|---|
| *1 | Wiper arm serration section |
| *2 | Wire brush |
| *3 | Wiper pivot serration section |

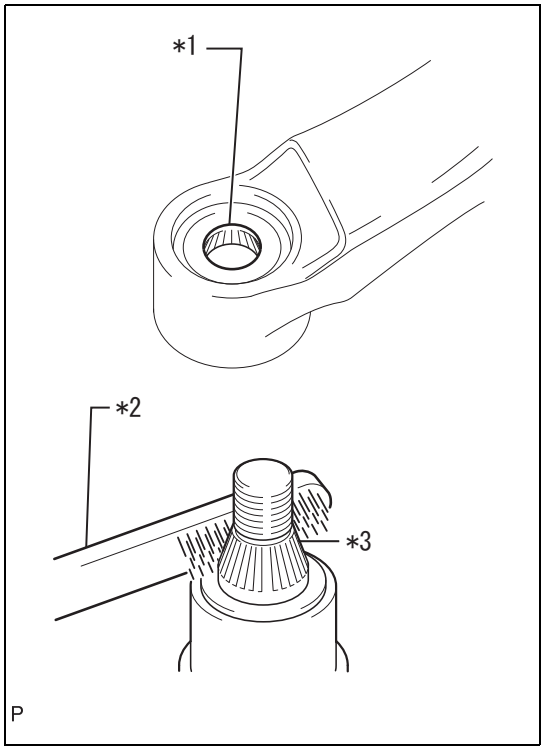
   (3) Using a wire brush, clean the wiper pivot serration section.

   (4) Use a nut to install the front wiper arm & blade ASSY RH so that it matches the position in the figure.
   Standard value:T=22N·m {224kgf·cm} {16.2ft·lbf}
   NOTE:
   While pressing on the arm hinge with your hand, tighten the nut.

Captions in illustration

| | |
|---|---|
| *1 | Ceramic dot |

9. Installation of the front wiper arm & blade ASSY LH

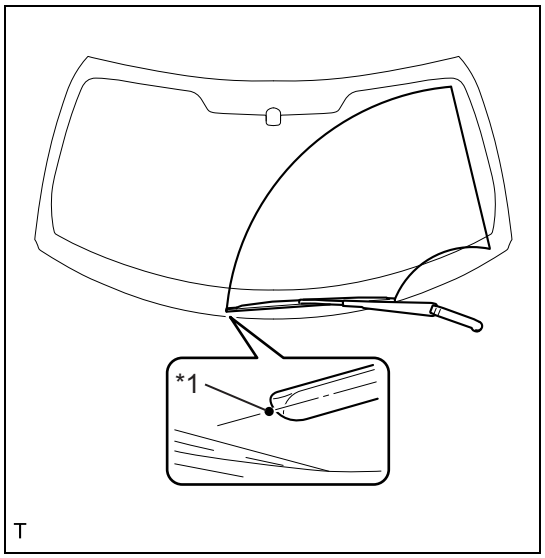


(1) During re-assembly:
(a)Use a round file to clean the wiper arm serration section.

Captions in illustration

| | |
|---|---|
| *1 | Wiper arm serration section |
| *2 | Wire brush |
| *3 | Wiper pivot serration section |

(2) Using a wire brush, clean the wiper pivot serration section.

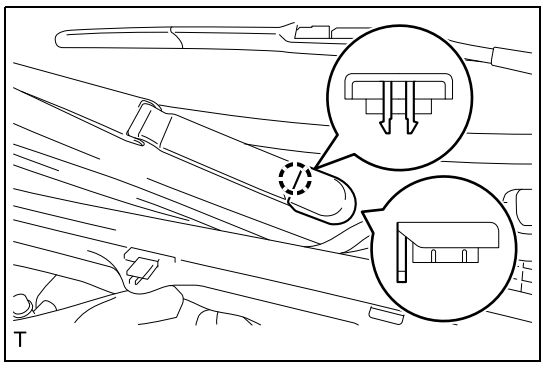


(3) Use a nut to install the front wiper arm & blade ASSY LH so that it matches the position in the figure.
Standard value:T=22N·m {224kgf·cm} {16.2ft·lbf}
NOTE:
While pressing on the arm hinge with your hand, tighten the nut.

Captions in illustration

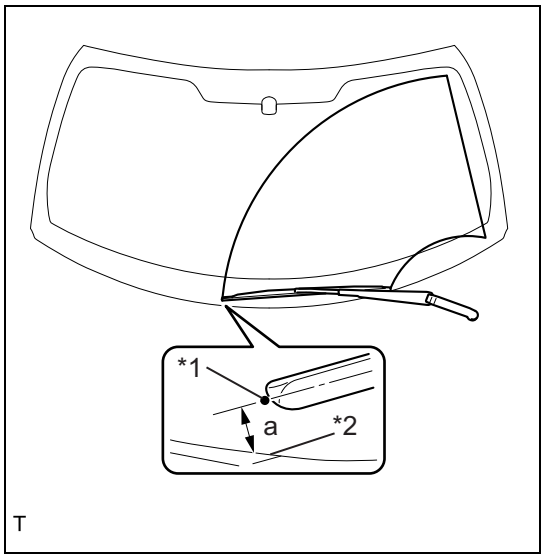
| | |
|---|---|
| *1 | Ceramic dot |

(4) While spraying water or washer fluid on the glass, activate the front wipers, and check that the blades wipe properly and don't interfere with the body.



10. Installation of the wiper arm head caps
(1) Fit in the tabs and install the 2 wiper arm head caps.

## On-vehicle inspection



1. Inspection of the front wiper motor ASSY
   (1) Inspection of the automatic stopping position (LH side)
      (a) Operate the front wiper motor ASSY, and then stop it and check the automatic stopping position of the wiper arm.
      NOTE:
      Lift 2 times after stopping, then inspect.
      Criteria: The wiper arm stops in the position shown in the figure.

Captions in illustration

| | |
|---|---|
| *1 | Ceramic dot |
| *2 | Cowl panel edge |

Standard value

| Measurement place | Standard value |
|---|---|
| a | 35.0mm {1.378in} |

   (2) Inspection of the automatic stopping position (RH side)
      (a) Operate the front wiper motor ASSY, and then stop it and check the automatic stopping position of the wiper arm.
      NOTE:
      Lift 2 times after stopping, then inspect.
      Criteria: The wiper arm stops in the position shown in the figure.

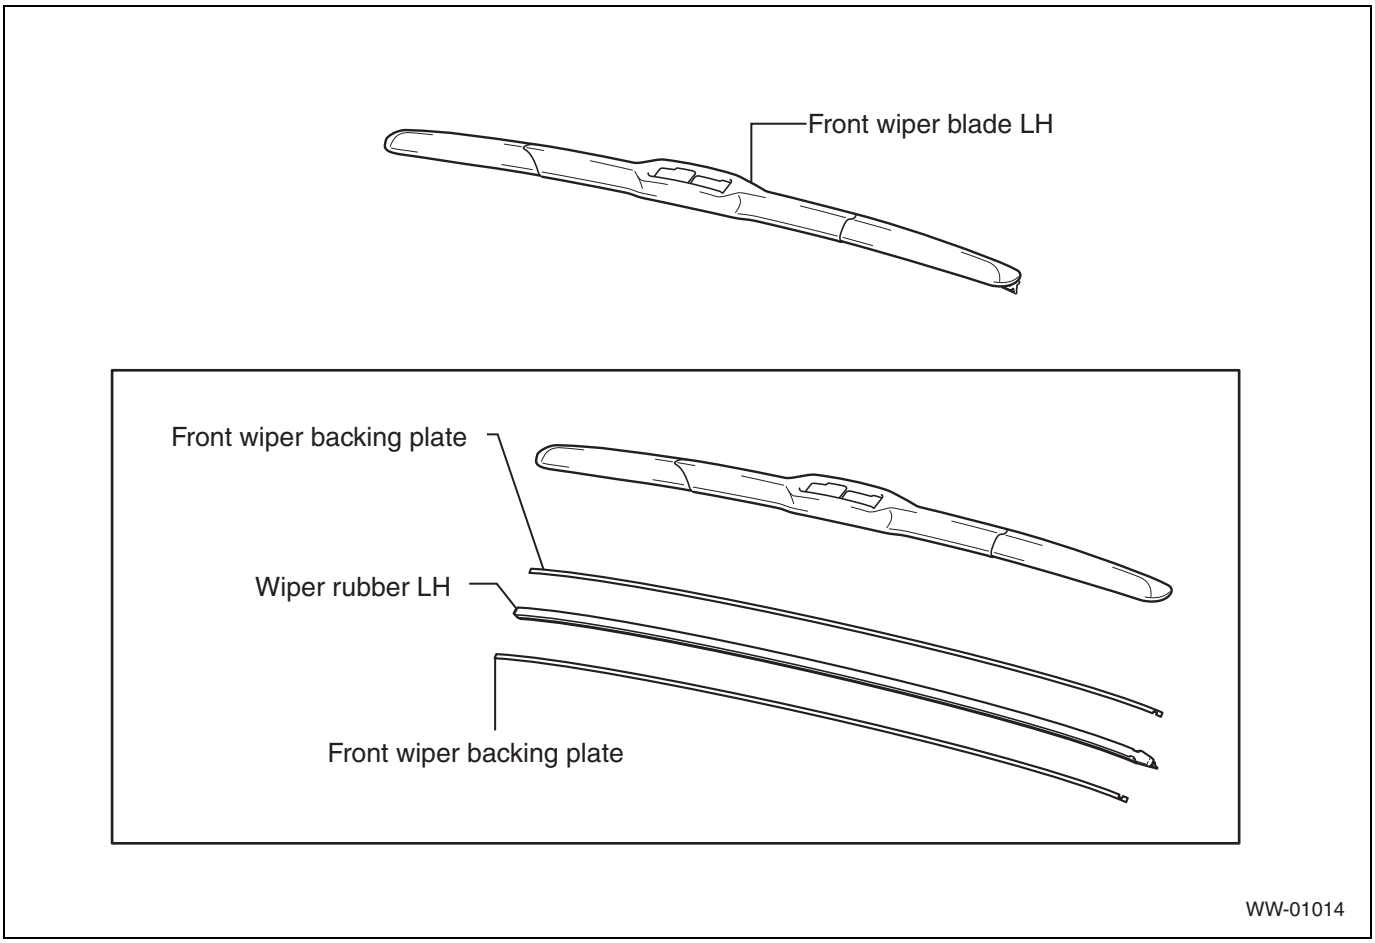
# Front wiper rubber

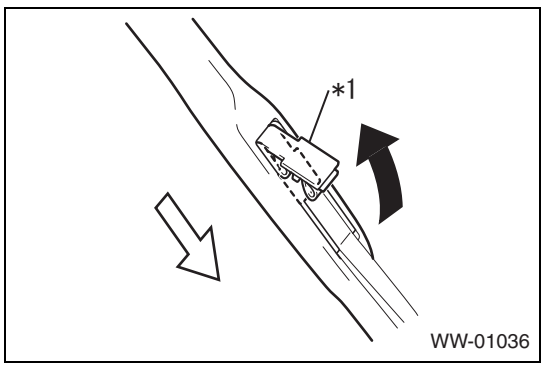
## Exploded view



## Replacement

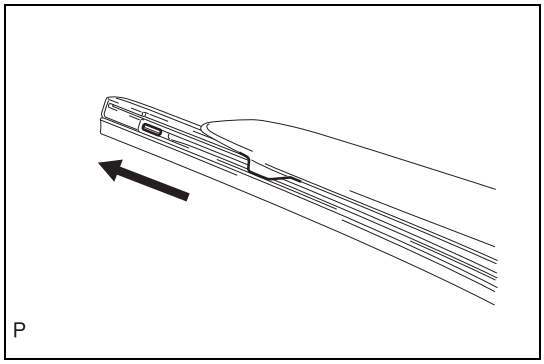
NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.



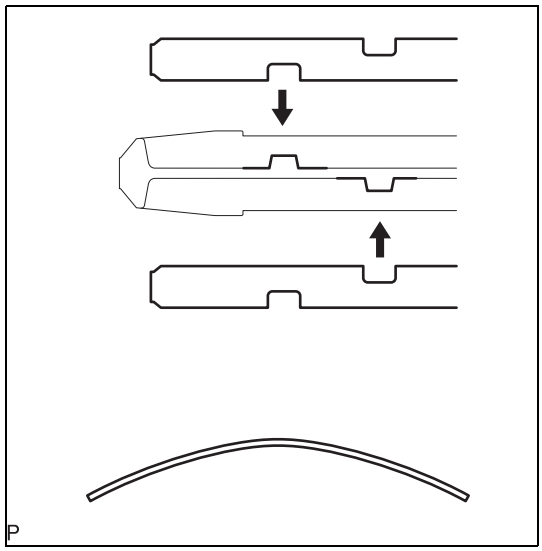
1. Removal of the front wiper blade LH
   (1) Remove the front wiper blade LH holder.
   (2) As in the figure, remove the front wiper blade LH from the front wiper arm LH.
   CAUTION:
   To avoid damaging the windshield glass, place a cloth between the windshield glass and the front wiper arm LH.

| | |
|---|---|
| *1 | Holder |



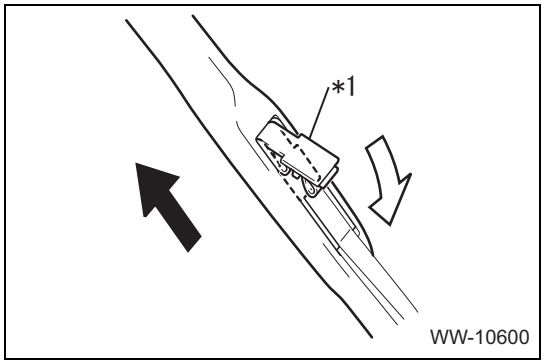
2. Removal of the wiper rubber LH
   (1) Remove the wiper rubber LH as a unit with the front wiper backing plates from the front wiper blade LH.
   NOTE:
   Pull from the head of the wiper rubber LH (the part with a bulge) and remove it.

   (2) Remove the wiper rubber LH from the front wiper backing plates.



3. Installation of the wiper rubber LH
   (1) Install the front wiper backing plates on the wiper rubber LH.
   CAUTION:
   - Align the recesses of the wiper rubber backing plates with the protruding parts of the wiper rubber LH.
   - Put the R direction of the wiper rubber backing plates in the same direction as the R direction of the windshield glass.

   (2) Install the wiper rubber LH as a unit with the front wiper backing plates on the front wiper blade LH.
   CAUTION:
   Push the wiper rubber LH strongly into the blade fitting area, and fit completely into the recess of the wiper rubber edge.
   NOTE:
   Install it on the front wiper blade LH so that the head of the wiper rubber LH (the part with a bulge) faces the arm axle side.

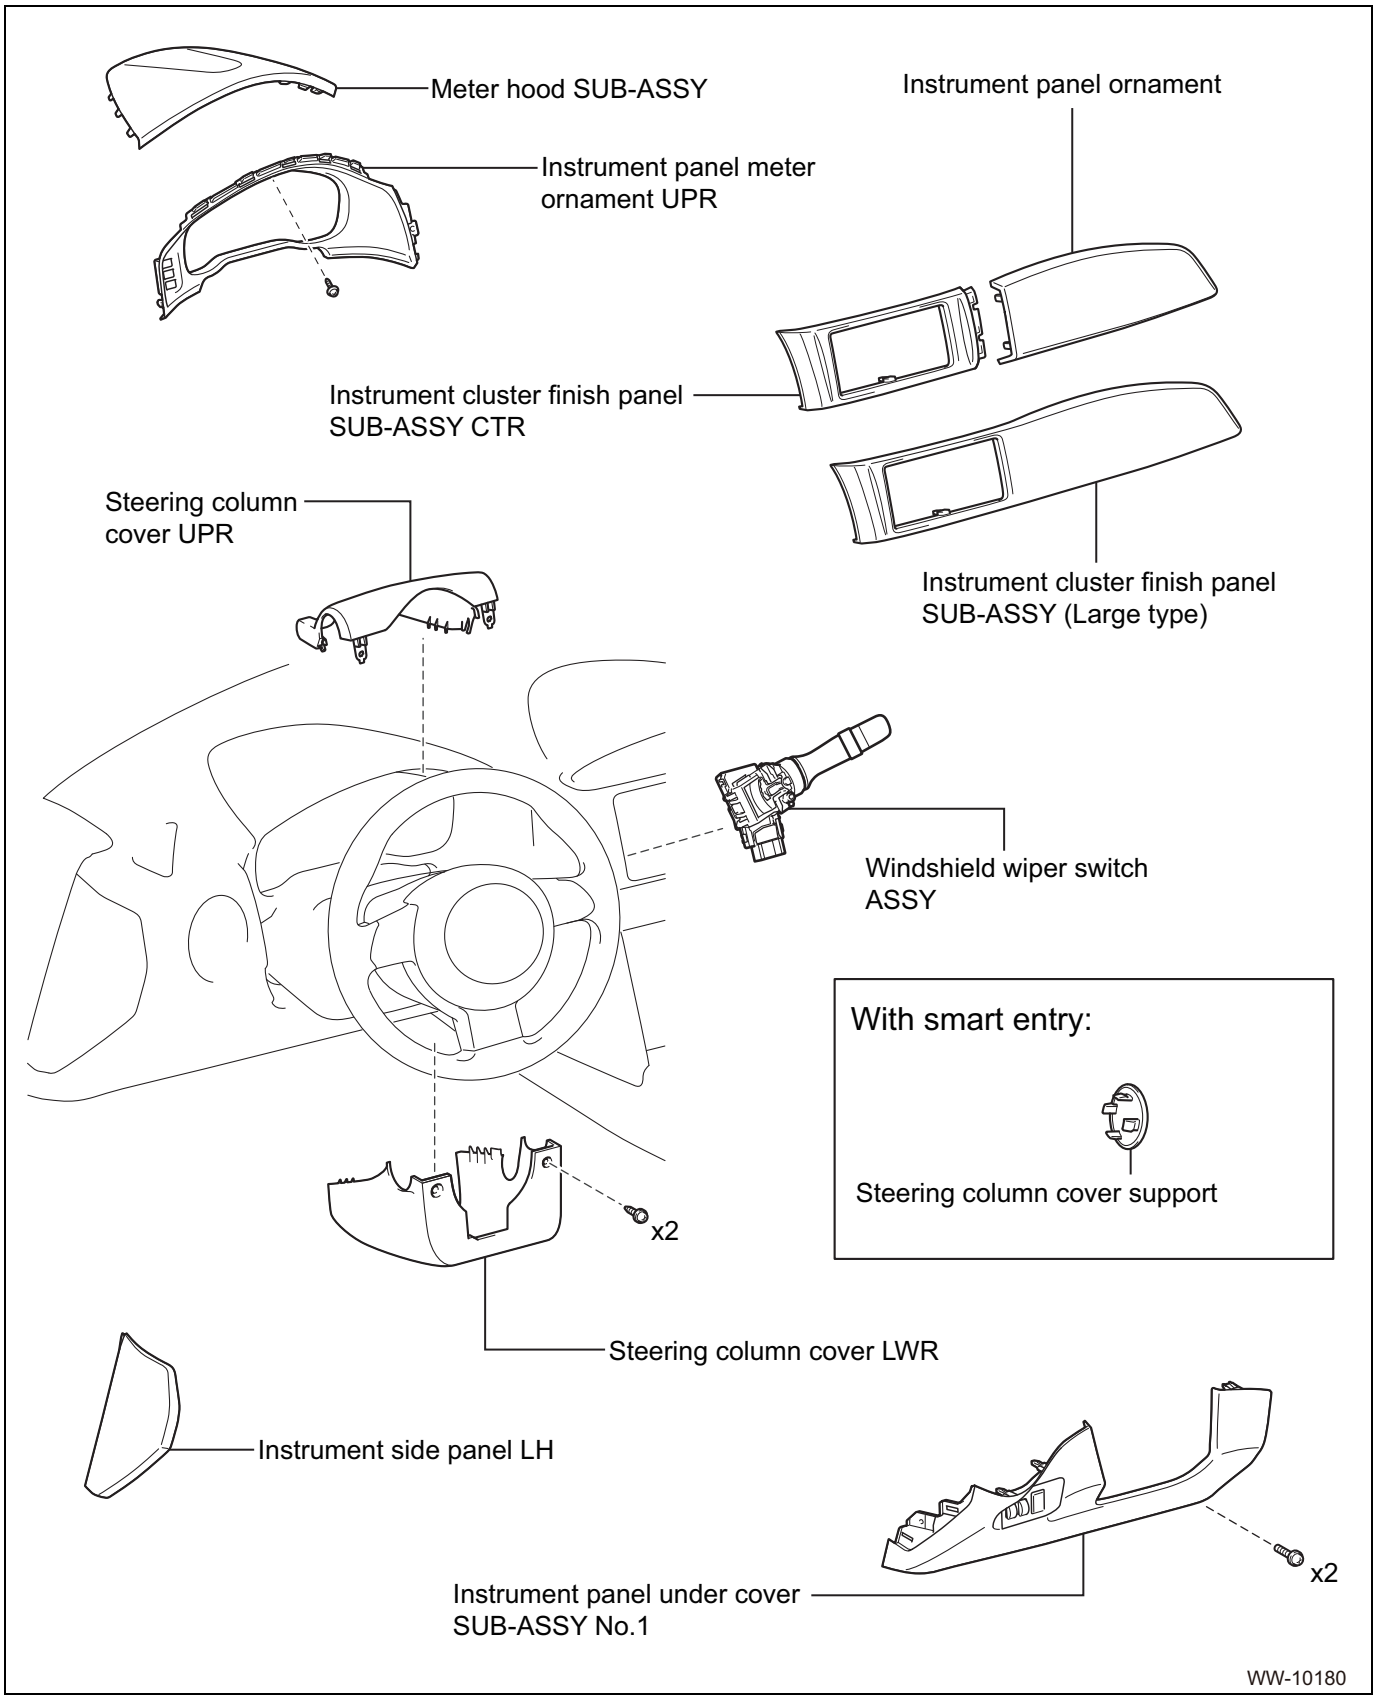


4. Installation of the front wiper blade LH
   (1) As in the figure, install the front wiper blade LH on the front wiper arm LH.
   (2) Install the holder of the front wiper blade LH.

| | |
|---|---|
| *1 | Holder |

# Wiper switch

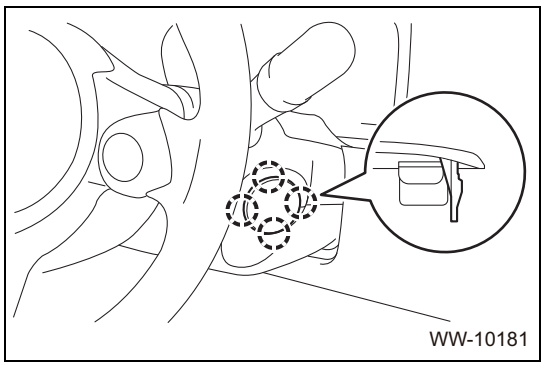
## Exploded view



## Removal

1. Removal of the instrument side panel LH (Refer to IT - 24)

2. Removal of the instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 23)
3. Removal of the meter hood SUB-ASSY (Refer to IT - 24)
4. Removal of the instrument panel meter ornament UPR (Refer to IT - 24)
5. Removal of the instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)

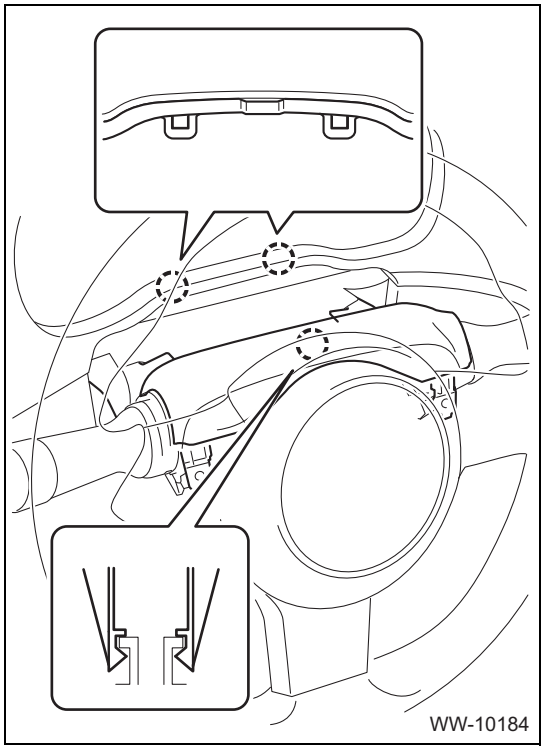


6. Removal of the steering column cover support (when there is smart entry)
   (1) Release the 4 tabs and remove the steering column cover support.

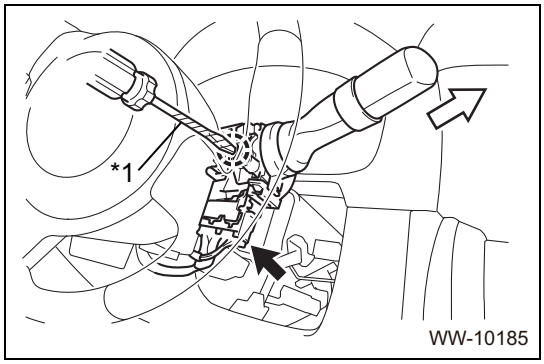
7. Removal of the steering column cover LWR
   (1) Free the tilt lever.

   (2) Turn the steering wheel left and right, and remove the 2 screws.

   (3) Press on the steering column cover LWR from the left and right sides, release the 6 tabs, and remove the steering column cover LWR.



8. Removal of the steering column cover UPR
   (1) Release the tabs and remove the steering column cover UPR.

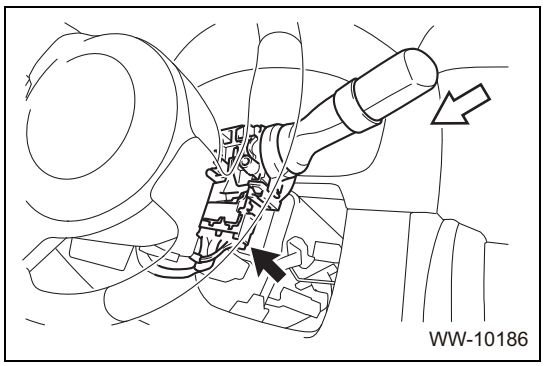


9. Removal of the windshield wiper switch ASSY
   (1) Disconnect each connector.
   (2) Using a flat tip screwdriver that is wrapped in protective tape, release the tab and remove the windshield wiper switch ASSY in the direction of the arrow in the figure.
   CAUTION:
   Pressing strongly may damage the tab.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |

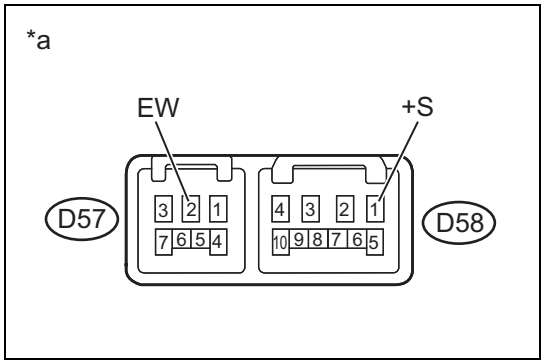
## Installation



1. Installation of the windshield wiper switch ASSY
   (1) Fit in the tab and install the windshield wiper switch ASSY in the direction of the arrow in the figure.
   (2) Connect each connector.
2. Installation of the steering column cover UPR
   (1) Fit in the tabs and install the steering column cover UPR on the steering column ASSY.
3. Installation of the steering column cover LWR
   (1) Fit in the 6 tabs and install the steering column cover LWR.
   (2) Turn the steering wheel left and right, and using 2 screws, secure the steering column cover LWR.
4. Installation of the steering column cover support (when there is smart entry)
   (1) Fit in the 4 tabs and install the steering column cover support.
5. Installation of the instrument panel meter ornament UPR (Refer to IT - 29)
6. Installation of the meter hood SUB-ASSY (Refer to IT - 29)

7. Installation of the instrument cluster finish panel SUB-ASSY CTR (Refer to IT - 29)
8. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
9. Installation of the instrument side panel LH (Refer to IT - 29)

## On-vehicle inspection



1. Inspection of the windshield wiper switch ASSY
   (1) Intermittent operation inspection (front wiper)

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Windshield wiper switch ASSY) |

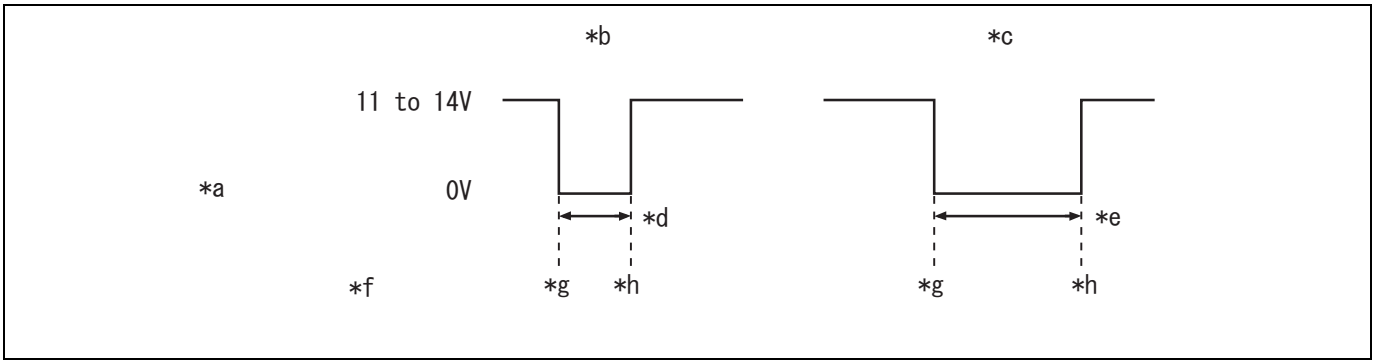
(a) Turn the ignition switch to ON, and turn the windshield wiper switch ASSY to INT.

(b) Inspect the voltage between terminal D58-1 (+S) and terminal D57-2 (EW) when intermittent wiper relay is operated.

NOTE:

Inspect from behind the connectors once they have been connected.

Criteria: Shown in the figure



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Voltage between terminals D58-1 (+S) ←→D57-2 (EW) | *b | FAST |
| *c | SLOW | *d | 1.6±1 second |
| *e | 16±6 seconds | *f | Wiper operation |
| *g | Stop | *h | Start |

(2) Operation inspection (front washer)

(a) Turn the ignition switch to ON, and turn the windshield wiper switch ASSY to OFF.

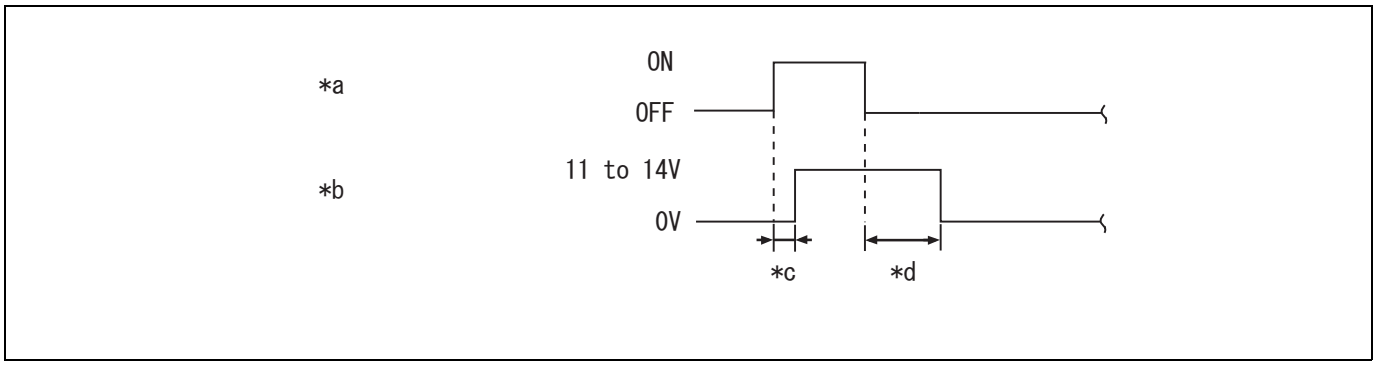
(b) Using a tester, connect the tester's positive terminal to the connector's D57-3 (WF) terminal, and the tester's ground terminal to the D57-2 (EW) terminal, and inspect the voltage between the D57-3 (WF) terminal and the D57-2 (EW) terminal when the washer switch is ON and OFF.

NOTE:

Inspect from behind the connectors once they have been connected.

Criteria: Shown in the figure

WW



Captions in illustration

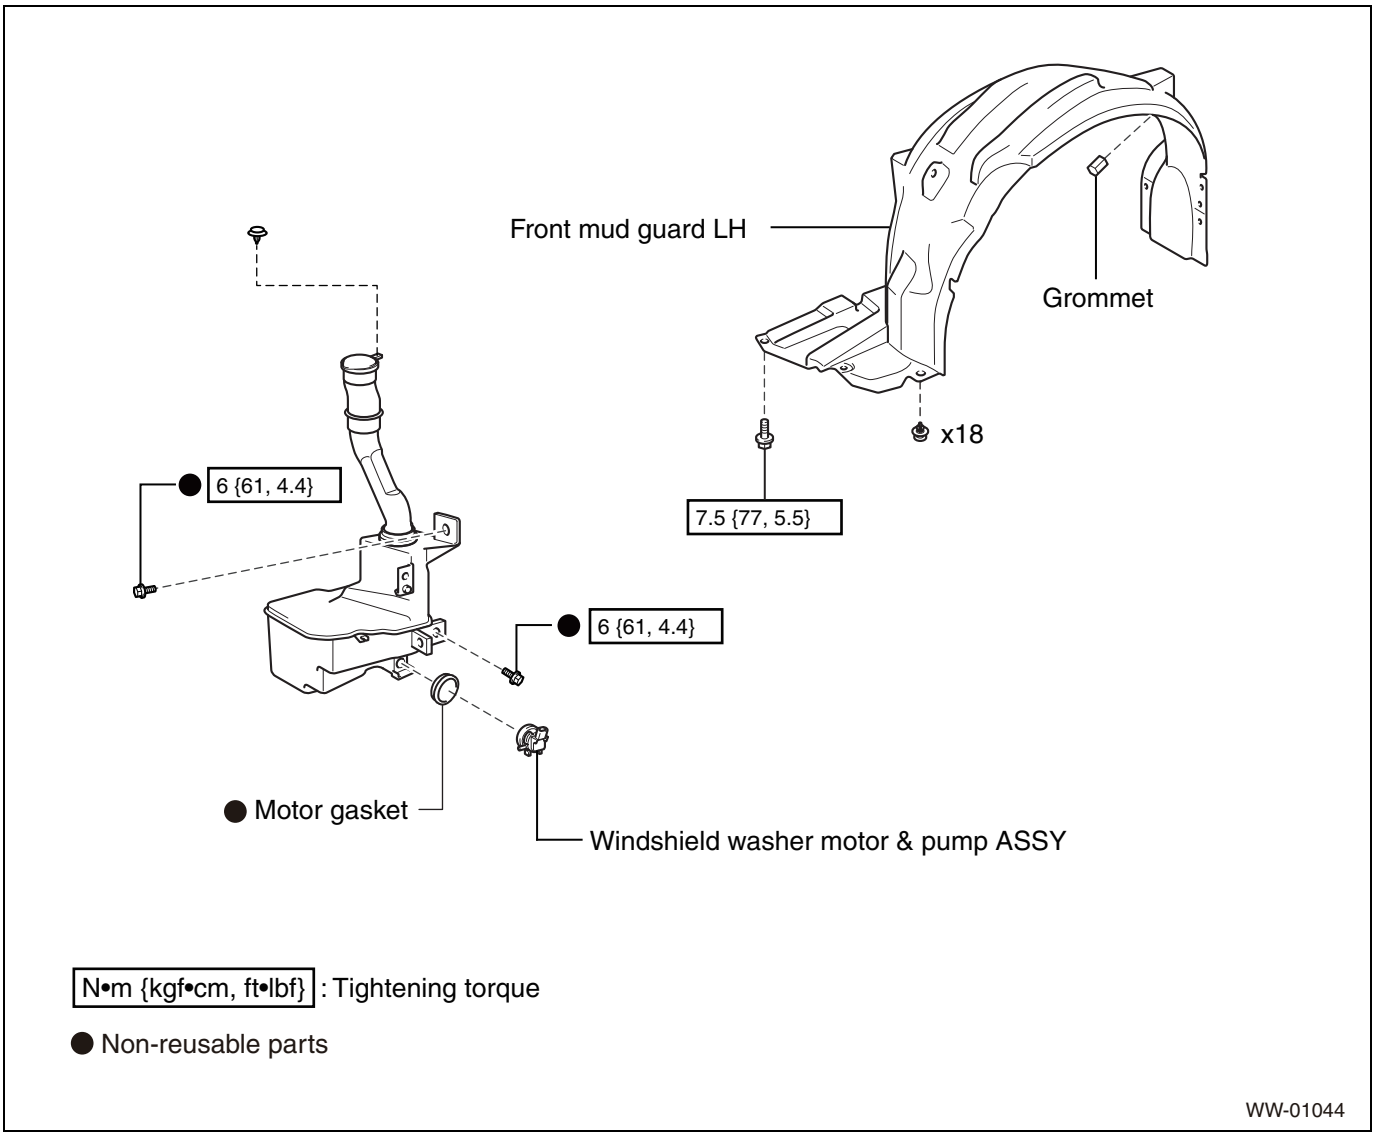
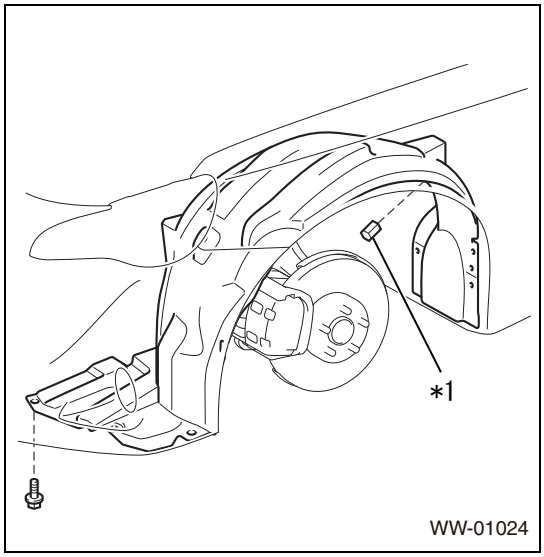
# Washer motor

## Exploded view



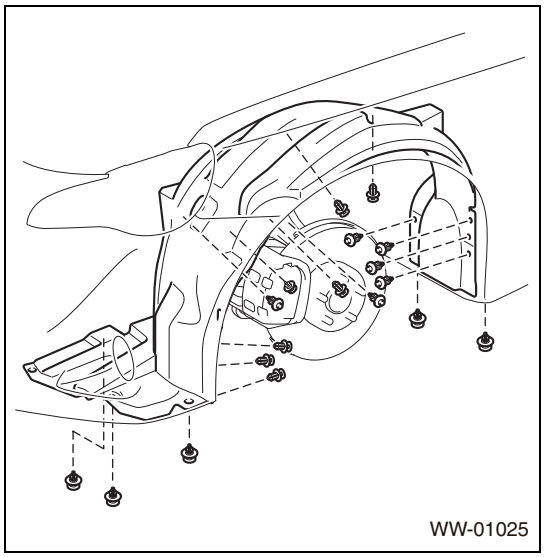
## Removal

1. Removal of the front tire LH
2. Removal of the front mud guard LH
   (1) Remove the bolt.

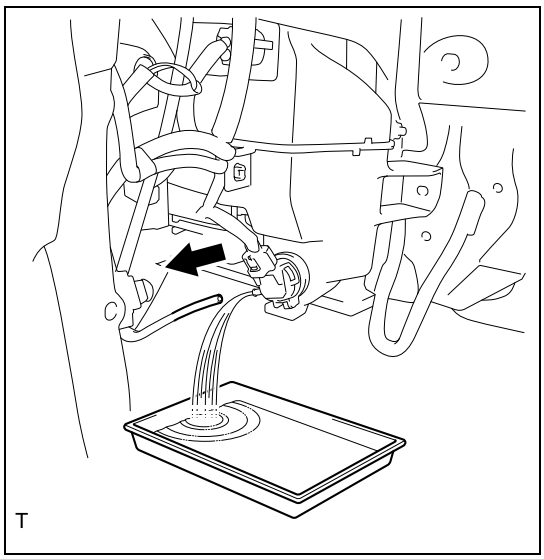


(2) Remove the grommet.

| | |
|---|---|
| *1 | Grommet |

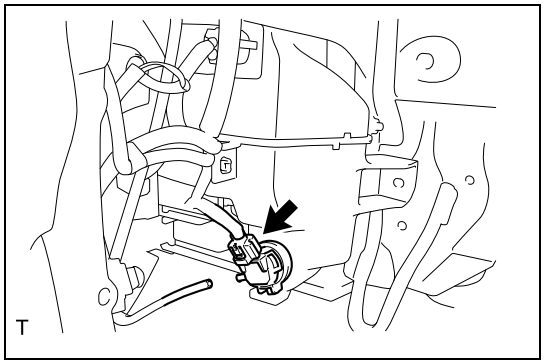


(3) Using a clip remover, remove the 18 clips and remove front mud guard LH.



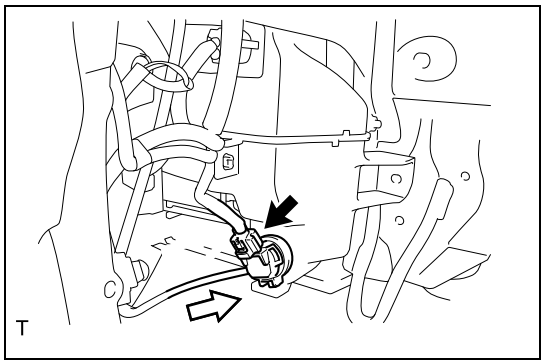
3. Draining of the washer fluid
   (1) Disconnect the washer hose and drain the washer fluid.
   NOTE:
   Prepare a receptacle beforehand.

WW



4. Removal of the windshield washer motor & pump ASSY
   (1) Disconnect the connector.
   (2) Remove the windshield washer motor & pump ASSY.

## Installation

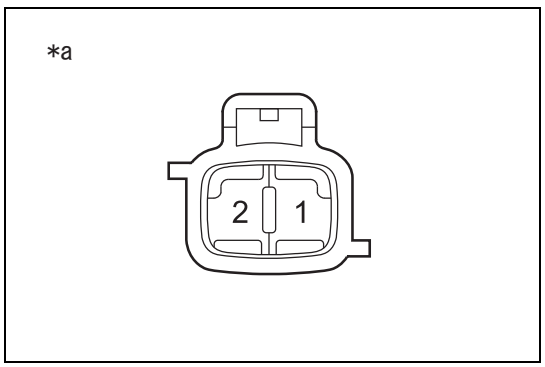


1. Installation of the windshield washer motor & pump ASSY
   (1) Install the windshield washer motor & pump ASSY.
   (2) Connect the connector.
   (3) Connect the washer hose.
2. Refilling washer fluid
   (1) Refill the washer fluid.
3. Installation of the front mud guard LH
   (1) Using 18 clips, install the front mud guard LH.
   (2) Install a new grommet.
   (3) Install the bolt.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
4. Installation of the front tire LH
   Standard value:T=120N·m {1224kgf·cm} {88.5ft·lbf}

## On-vehicle inspection

1. Inspection of the windshield washer motor & pump ASSY
   (1) Operation inspection
      (a)When the windshield washer motor & pump ASSY is installed to the windshield washer tank, pour washer fluid into the windshield washer tank.

WW



(b)Inspect if washer fluid is pumped when battery voltage is applied to each connector terminal.
Criteria

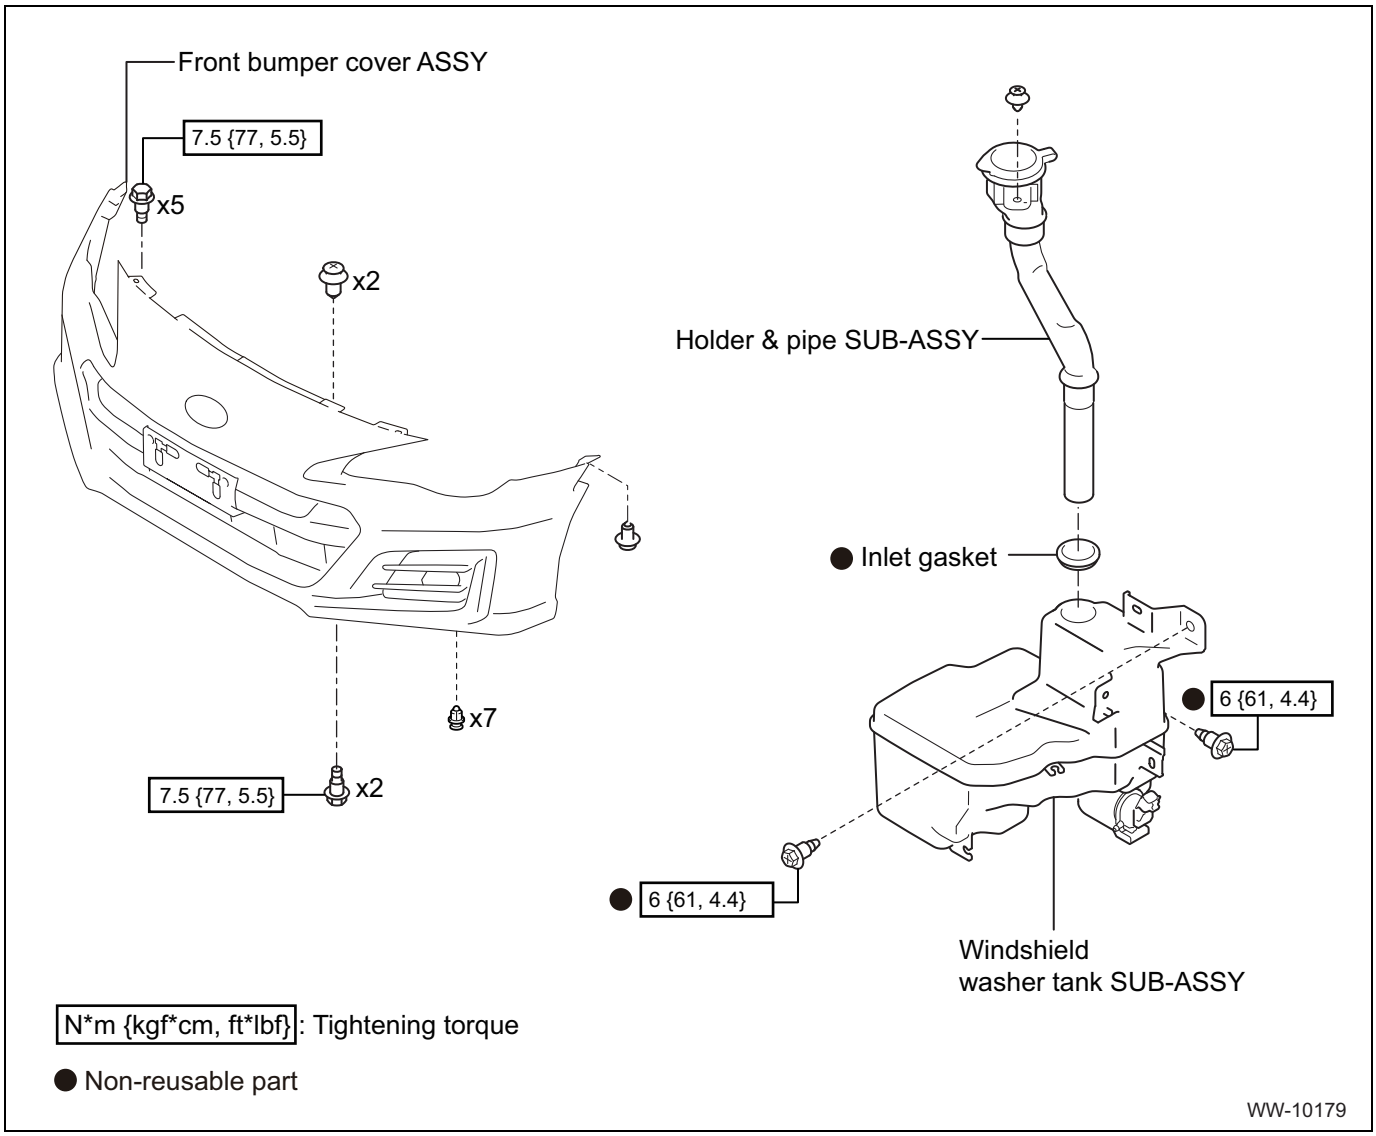
| Battery connection | Criteria |
|---|---|
| Battery positive →1<br>Battery ground →2 | Washer fluid is pumped from the front side. |

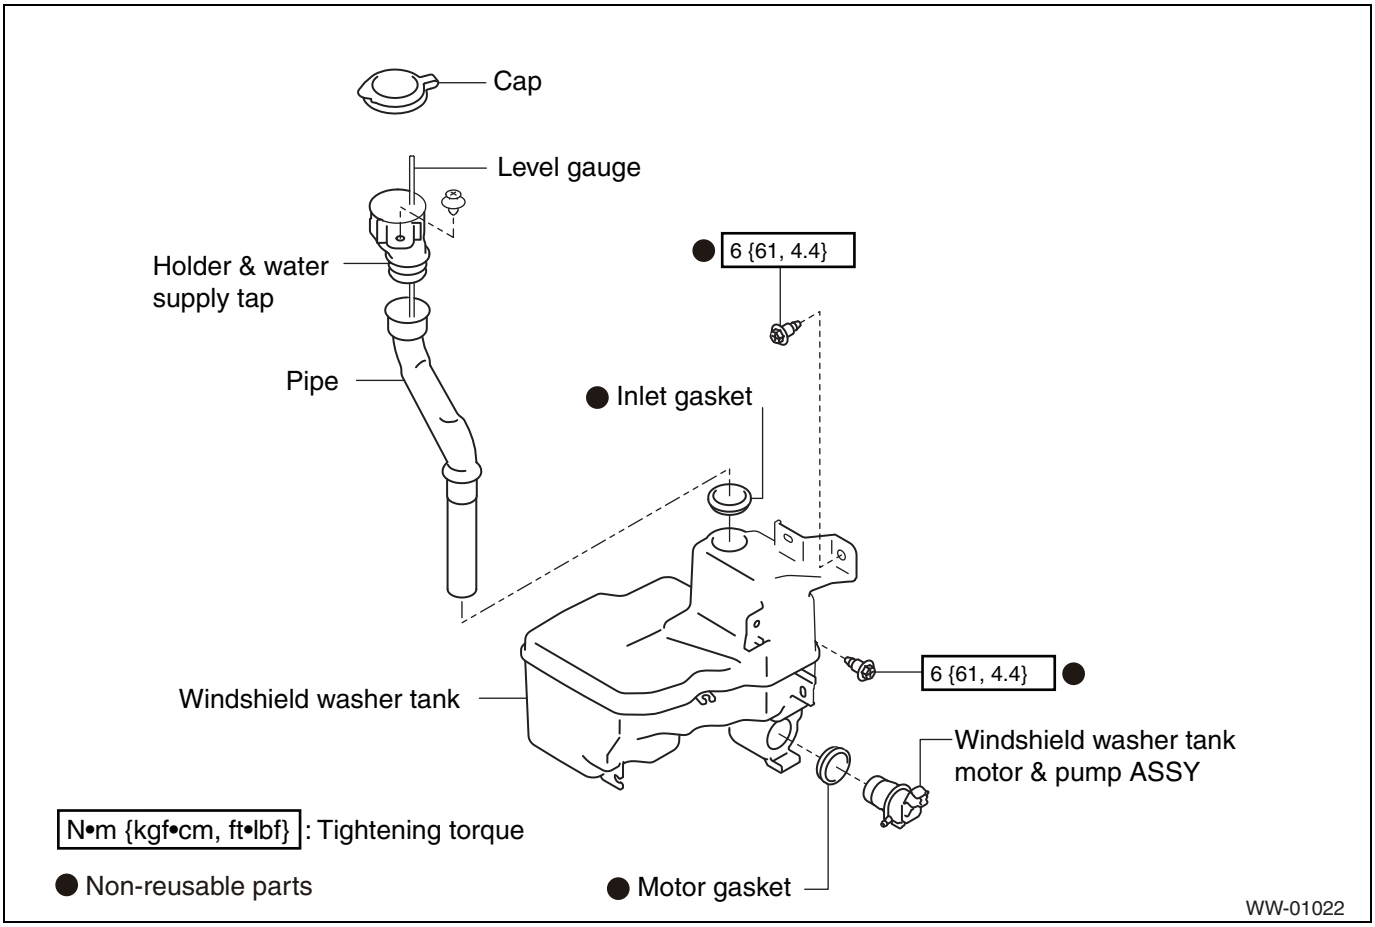
Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Windshield washer motor & pump ASSY) |

# Washer tank

## Exploded view





## Removal

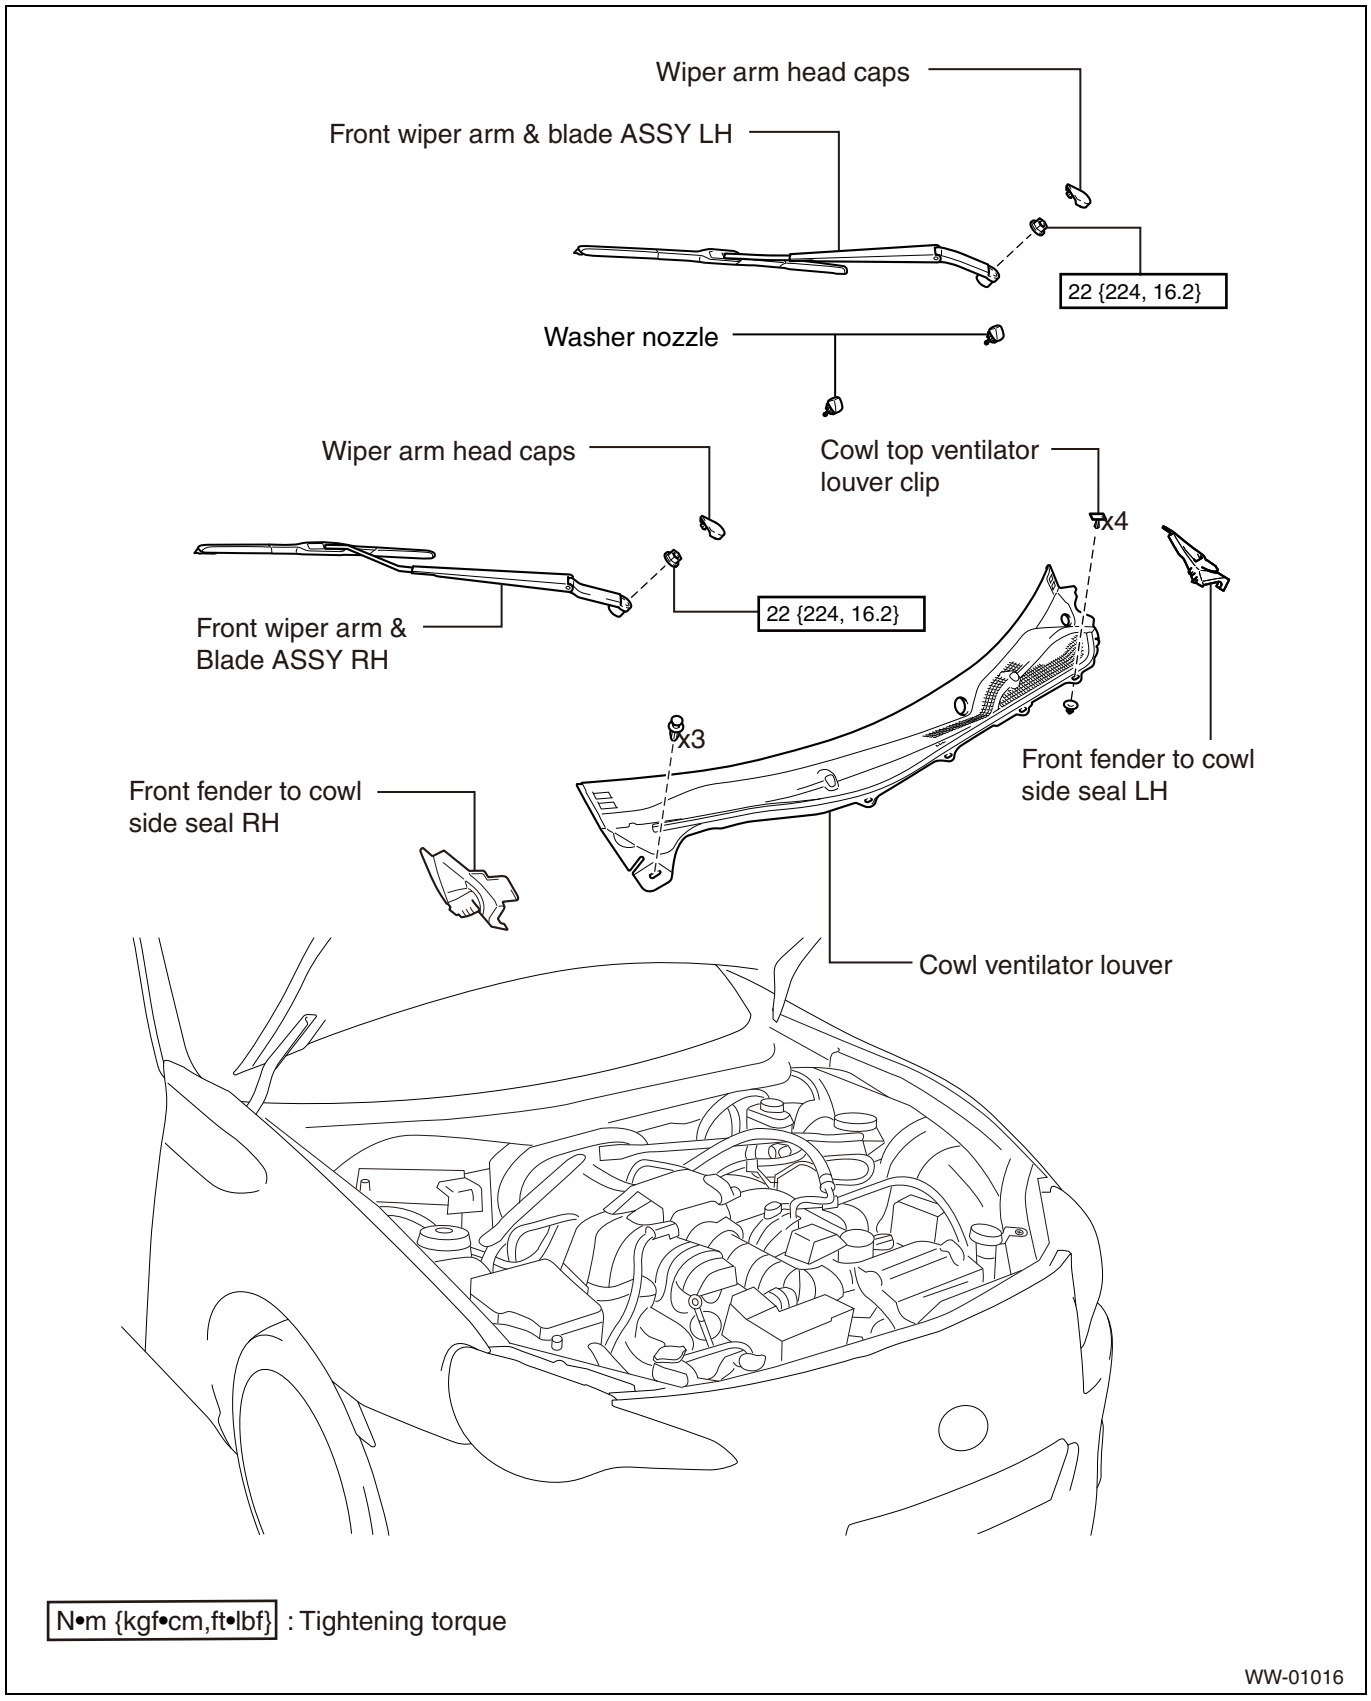
1. Removal of the front bumper cover (Refer to ET - 3)
2. Draining of the washer fluid (Refer to WW - 27)
3. Removal of the windshield washer motor & pump ASSY (Refer to WW - 28)
4. Removal of the windshield washer tank
   (1) Remove the clip.
   (2) Remove the holder & pipe SUB-ASSY from the windshield washer tank.
   (3) Remove the 2 bolts, and remove the windshield washer tank.

## Installation

1. Installation of the windshield washer tank
   (1) Using 2 new bolts, install the windshield washer tank.
   Standard value:T=6N·m {61kgf·cm} {4.4ft·lbf}
   (2) Replace the inlet gasket with a new one, and install the holder & pipe SUB-ASSY.
   (3) Install the clip.
2. Refilling washer fluid (Refer to WW - 28)
3. Installation of the windshield washer motor & pump ASSY (Refer to WW - 28)
4. Installation of the front bumper cover (Refer to ET - 10)

# Washer nozzle

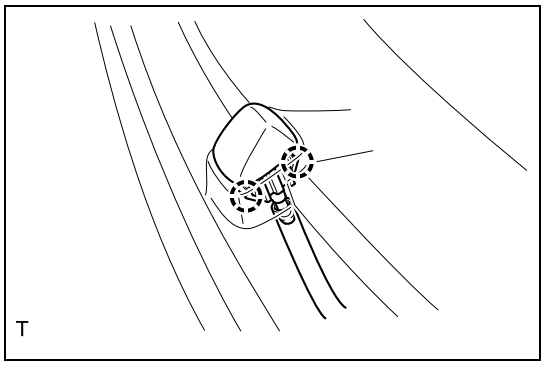
## Exploded view



## Removal

1. Removal of the wiper arm head caps (Refer to WW - 9)

2. Removal of the front wiper arm & blade ASSY LH (Refer to WW - 9)
3. Removal of the front wiper arm & blade ASSY RH (Refer to WW - 9)
4. Removal of the front fender to cowl side seal RH (Refer to WW - 10)
5. Removal of the front fender to cowl side seal LH
   NOTE:
   Perform the same procedures as RH side.
6. Removal of the cowl ventilator louver (Refer to WW - 10)



7. Removal of the washer nozzle
   (1) Release the 2 tabs and remove the washer nozzle.

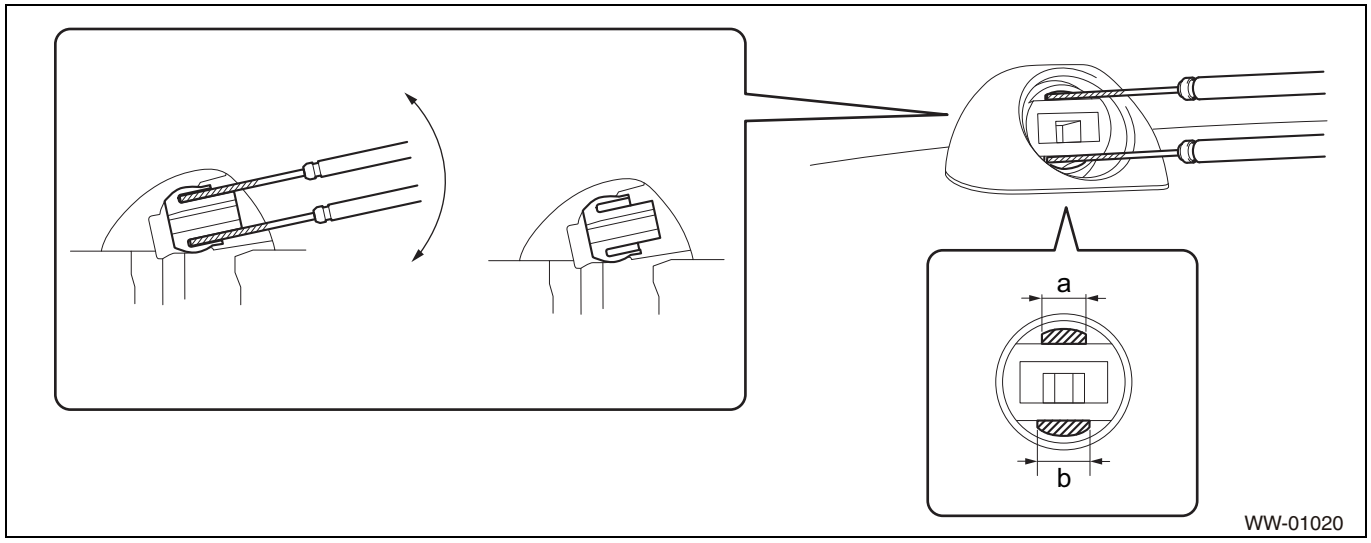
   (2) Disconnect the washer hose from the washer nozzle.

## Installation

1. Installation of the washer nozzle
   (1) Connect the washer nozzle to the washer hose.
   (2) Fit in the 2 tabs and install the washer nozzle.
2. Installation of the cowl ventilator louver (Refer to WW - 14)
3. Installation of the front fender to cowl side seal RH (Refer to WW - 15)
4. Installation of the front fender to cowl side seal LH
   NOTE:
   Perform the same procedures as RH side.
5. Installation of the front wiper arm & blade ASSY RH (Refer to WW - 15)
6. Installation of the front wiper arm & blade ASSY LH (Refer to WW - 16)
7. Installation of the wiper arm head caps (Refer to WW - 16)
8. Washer nozzle inspection (Refer to WW - 33)
9. Washer nozzle adjustment (Refer to WW - 32)

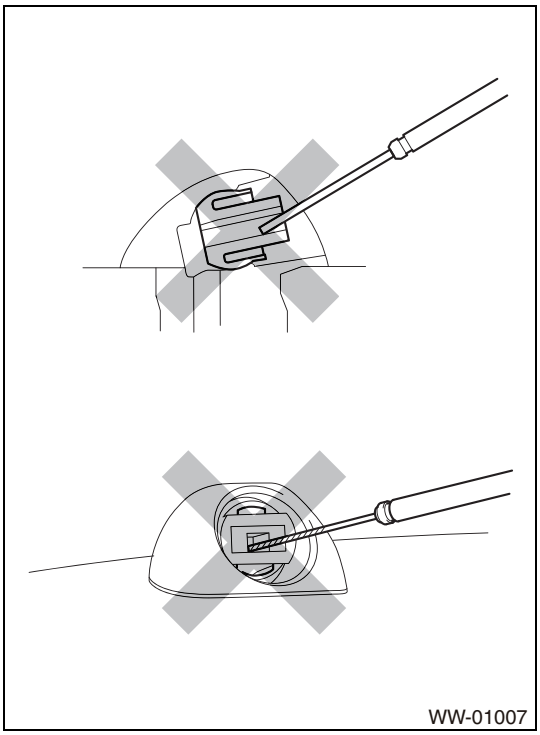
## Adjustment

1. Removal of the washer nozzle (Refer to WW - 31)
2. Washer nozzle adjustment
   (1) Using thin flat head screwdrivers wrapped with protective tape, adjust the nozzle jet of the washer nozzle so that the washer fluid sprays within the standard range.
   NOTE:
   When adjusting the washer nozzle, use the adjustment grooves on the upper and lower sides of the nozzle.



Reference values

| | | | |
|---|---|---|---|
| *a | 2.5mm | *b | 2.8 mm |



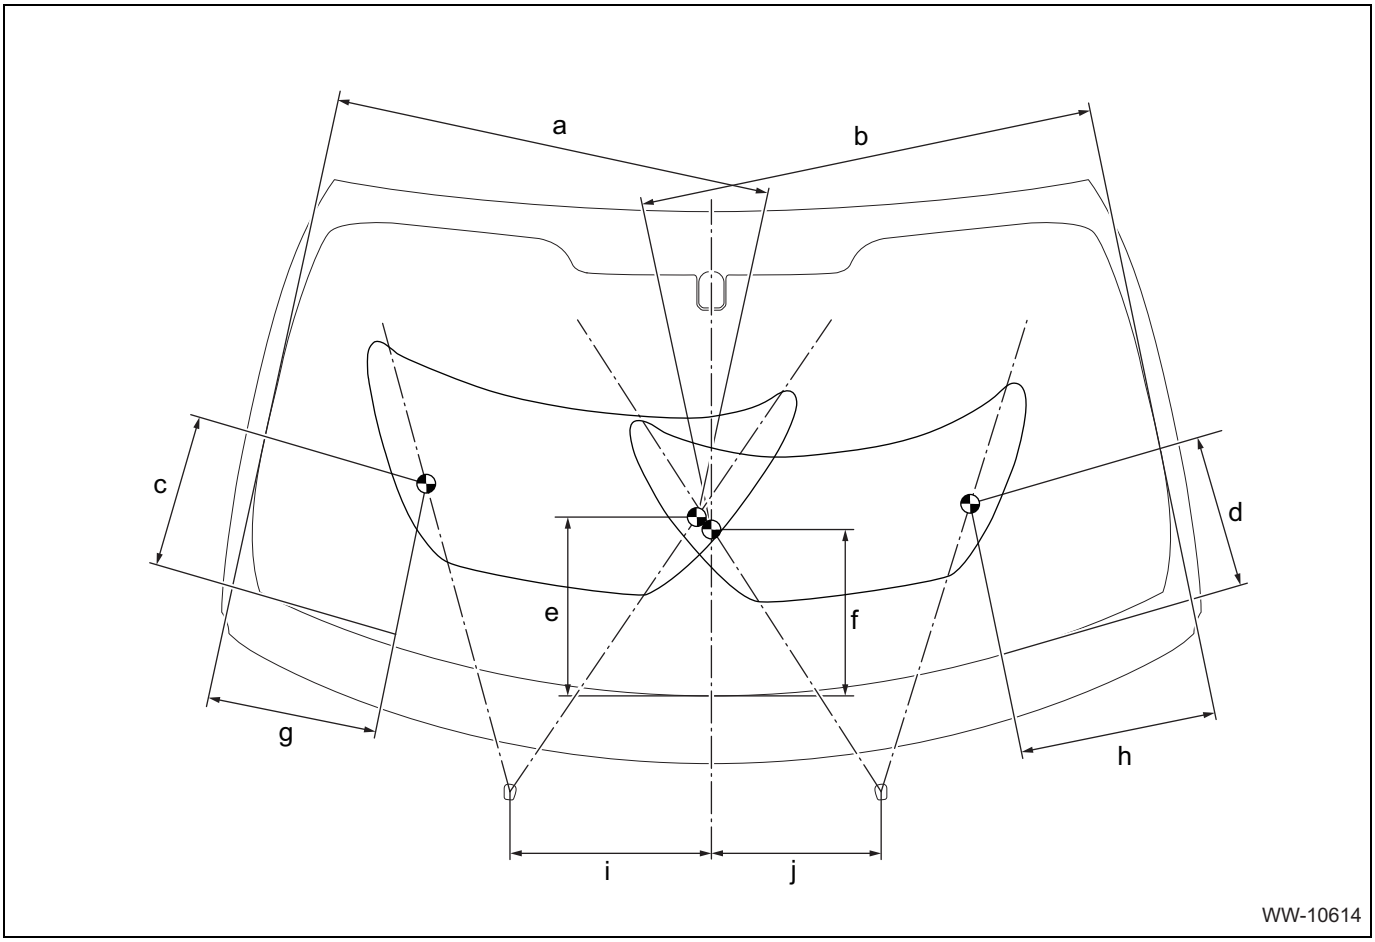
CAUTION:
- Because it may damage the washer nozzle discharge port and cause the washer liquid not to be sprayed correctly, do not insert a screwdriver into the washer nozzle discharge port.
- Do not use a tool which size is larger than the adjustment groove.

3. Installation of the washer nozzle (Refer to WW - 32)

## On-vehicle inspection

1. Washer nozzle inspection
   (1) Turn the ignition switch to ON, and inspect where the washer liquid is sprayed.
   Criteria: Inside the range in the figure

WW



Standard value

| Measurement place | Dimension | Measurement place | Dimension |
|---|---|---|---|
| a | 660 mm {25.984 in} | b | 684 mm {26.929 in} |
| c | 247 mm {9.724 in} | d | 232 mm {9.134 in} |
| e | 268 mm {10.551 in} | f | 250 mm {9.843 in} |
| g | 253 mm {9.961 in} | h | 299 mm {11.772 in} |
| i | 300 mm {11.811 in} | j | 250 mm {9.843 in} |

CAUTION:
If the spray misses the standard area, adjust the washer nozzle.

# Lighting system

## Precautions

1. Precautions for replacing each light's bulb.
   (1) If you leave a bulb out for a long time after removal, debris or dampness may enter the lens. Therefore, replace the bulb after preparing a new bulb.
   (2) Be sure to replace the bulb with one of the same standard and wattage.
   (3) Replacing only one bulb may create a difference in the brightness and color of the light emitted from the left and right side.
   (4) Improper installation in the socket can cause cloudiness or water to enter to the lens, so after replacing the bulb, securely install it.
2. Precautions during headlight beam adjustment
   (1) If using a cover when the headlights are on, do not perform for 3 minutes or more.
   (2) Because the headlight outer lens is made of plastic, performing the adjustment for a long time will cause heat that may cause disfiguration.
3. Precautions when handling head light auto leveling
   (1) The initialization procedure is necessary when removing, installing, or replacing the height control sensor RR LH, when performing a procedure that changes the height of the vehicle, such as replacing the suspension, and when replacing the headlight leveling computer ASSY.
   NOTE:
   Refer to LE - 38for initialization.
   (2) When repairing or replacing the suspension, be sure to do so after removing the height control sensor RR LH.

## Function inspection

1. Before troubleshooting
   (1) Basic inspection
   (a)Inspect the battery voltage.
   Standard value: 11 to 14 V (when IG OFF)
   (2) Inspect for blown light bulbs and fuses, wiring harnesses open circuit, short circuits, and poor contact of connectors, in places where you can inspect visually.
2. Operation inspection of the DRL system
   (1) Start the engine.
   (2) Move the shift lever in a position other than P.
   (3) Release the parking brake.
   (4) Turn the light control switch to the OFF position.
   (5) Check that the DRL lights turn on.
3. Battery saver inspection
   (1) With the ignition key removed from the IG SW, turn the light control switch to TAIL or HEAD, and turn on the headlights.
   (2) With the light control switch in the same position for 20 minutes, check that the headlights and tail lights turn off.

| 3 | Communication function inspection of the CAN communication system |

(1) Check CAN communication system. (Refer to NW - 30)

Result

| Result | Go to |
|---|---|
| Functioning properly | A |
| Not functioning properly | B |

B → To CAN communication system (Refer to NW - 30)

A

| | |
|---|---|
| 4 | DTC check |

NOTE:

Refer to LE - 12.

(1) DTC check
  (a) Record the diagnostic codes.
(2) Clear diagnostic code
(3) Do a DTC check again.
  (a) Based on the recorded diagnostic codes, reproduce the trouble phenomenon, and check if the diagnostic codes are output again.

NOTE:

When the diagnostic codes are output, see the “List of diagnostic codes” (Refer to LE - 7).

Result

| Result | Go to |
|---|---|
| No code, can check and reproduce phenomenon | A |
| No code, can't check and reproduce phenomenon | B |
| Code is output | C |

B → To fault simulation (Refer to IN - 32)

## Checking / clearing diagnostic codes

1. Preparation before inspection
   (1) Turn the ignition switch to OFF.

LE

2. Checking diagnostic codes (reading with SSM4)
   (1) With IG OFF, connect SSM4 to DLC3.
   (2) Turn IG to ON, and turn on the SSM4.
   (3) Operate following the SSM4 display screen. Display [Each System] →[Body Control] screens, and select [DTC].
   (4) Check the diagnostic codes.
3. Clearing diagnostic code records (Cleared by the SSM4)
   (1) With IG OFF, connect SSM4 to DLC3.
   (2) Turn IG to ON, and turn on the SSM4.
   (3) Operate following the SSM4 display screen. Display [Each System] →[Body Control] screens, and select [Clear Memory].
   (4) Inspect the diagnosis codes again, and check that the malfunction code was cleared, and that the normal code is displayed.
   CAUTION:
   - If you can't clear it, start over from IG OFF status.
   - Do not use the SSM4 to delete diagnostic codes until the cause of the trouble has been identified.

## customize function

1. Customize the lighting system (exterior)
   (1) Customization using the SSM4
   (a)Connect the SSM4 to the DLC3 and turn the ignition to IG ON.
   (b)From the SSM4 display screen, select [Each System] →[Body Control] →[Customize] →“each item” to customize the settings.

| Display name | Initial setting | Contents | Setting | Controller ECM |
|---|---|---|---|---|
| [Head Light auto cut delay] | 30 s | Setting of lighting time for light auto cut function | OFF, 30 s, 60 s or 90 s | Main body ECM (multiplex network body computer) |
| [Welcome Light Off Delay Time (Approaching)] | 30 s | Setting of lighting time for welcome light function (entering the vehicle) | OFF, 30 s, 60 s or 90 s | |
| [Auto Dimmer Cancel Setting] | 3 | Setting of auto dimmer cancel function | 0 (OFF)/stage 1 (least sensitive)/stage 2 (less sensitive)/stage 3 (standard)/stage 4 (more sensitive)/stage 5 (very sensitive) | |
| [Wiper Link Auto Light Setup] | ON | Switching of auto light function linked to wipers ON/OFF | ON or OFF | |
| [Lane Change Signal Setting] | ON | Switching of lane change signal function ON/OFF | ON or OFF | |
| [Auto Light Sensitivity] | ±0% | Auto light control sensor sensitivity (illumination detection) adjustment function settings (The higher the set value, the easier the light turns on) | -40% / -20% / ±0% / +20% / +40% | |
| [DRL Function] | ON | ON/OFF of the DRL function | ON or OFF | |

CAUTION:
Items without settings are not displayed in the SSM4 or do not function.

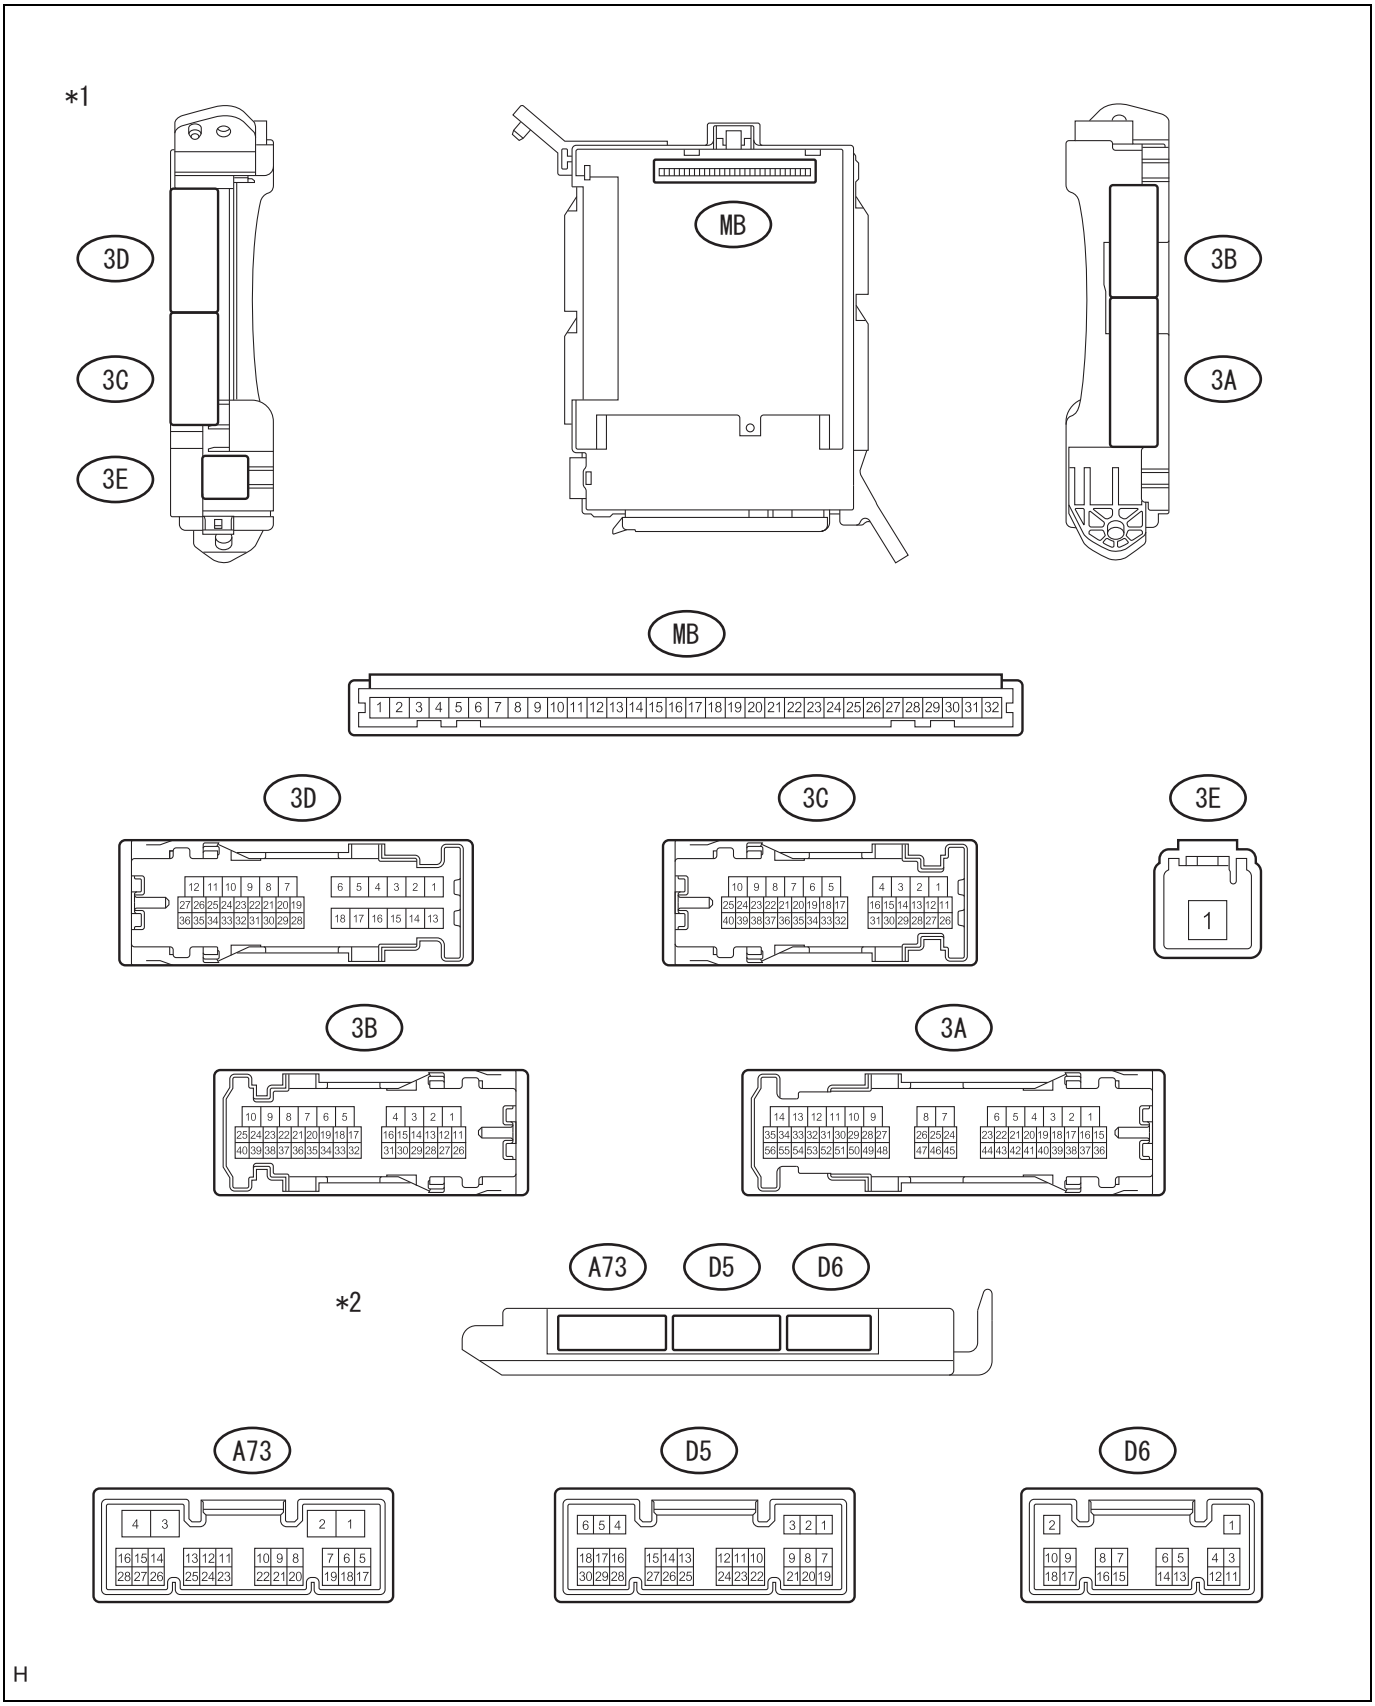
## ECM terminal arrangement

1. Main body ECM (network gateway computer), instrument panel junction block ASSY



Captions in illustration

| | | | |
|---|---|---|---|
| *1 | Instrument panel junction block ASSY | *2 | Main body ECM (Network gateway computer) |

(1) Inspection of the instrument panel junction block ASSY and the main body ECM (network gateway computer)

(a)Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.

(b)Measure the voltage and resistance between terminals.

Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A73-2 (HRLY) ←→Chassis ground | Always | 11 to 14 V |
| A73-4 (GND) ←→Chassis ground | Always | Less than 1 Ω |
| A73-23 ←→Chassis ground | Always | 11 to 14 V |
| MB-30 (FFGO) ←→Chassis ground | When the tail lights are on | 11 to 14 V |
| D6-1 (GND) ←→Chassis ground | Always | Less than 1 Ω |
| 3C-4 ←→Chassis ground | IG ON | 11 to 14 V |
| 3C-7 ←→Chassis ground | Always | 11 to 14 V |
| 3E-1 ←→Chassis ground | Always | 11 to 14 V |

NOTE:

If it is outside the standard values, the vehicle is defective.

(c)Install the main body ECM (network gateway computer) on the instrument panel junction block ASSY.

(d)Measure the resistance between the terminals.

Standard value

| Terminal No. | Inspection conditions | Standard value |
|---|---|---|
| D6-13 (CLTE)* ←→Chassis ground | Always | Less than 1 Ω |

*: When there is auto light control

(e)Measure the voltage between the terminals.

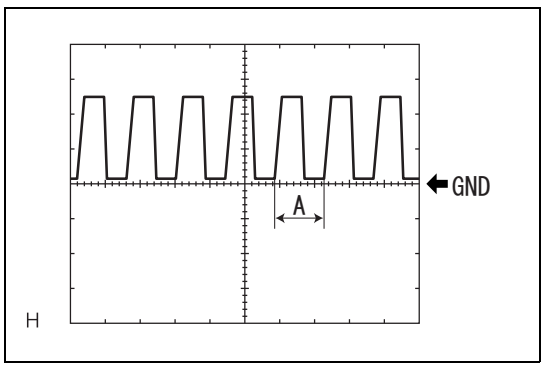
Standard value

| Terminal No. (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A73-11 (DIM) ←→Chassis ground | When in key SW OFF, IG OFF, or ACC OFF, light control switch OFF →HEAD | Less than 1 V →11 to 14 V |
| A73-12 ←→Chassis ground | IG ON, light control switch OFF →HEAD | 11 to 14 V →Less than 1 V |
| D5-2 (HEAD) ←→Chassis ground | Key SW ON, light control switch OFF →HEAD*1 | 11 to 14 V →Less than 1 V |
| | ACC ON, light control switch OFF →HEAD*2 | |
| D5-23 (A)*3 ←→Chassis ground | Light control switch OFF →AUTO | 11 to 14 V →Less than 1 V |
| D5-24 (FFOG) ←→Chassis ground | Front fog light switch OFF →ON | 11 to 14 V →Less than 1 V |
| D5-25 (TAIL) ←→Chassis ground | Light control switch OFF →TAIL | 11 to 14 V →Less than 1 V |
| D6-14 (CLTS)*3 ←→Chassis ground | IG ON, light control switch is AUTO, automatic control sensor is covered by something that doesn't let light through →exposed | Pulse generation (changes according to the light) (waveform 1) |
| D6-15 (CLTB)*3 ←→Chassis ground | IG ON | 11 to 14 V |
| MB-18 (HF) ←→Chassis ground | Headlight dimmer switch (flashing) OFF→ON | 11 to 14 V →Less than 1 V |
| MB-21 (HU) ←→Chassis ground | When the light control switch is set to HEAD, LO beam →HI beam | 11 to 14 V →Less than 1 V |

*1: Without smart entry & start system

*2: With smart entry & start system

*3: With auto light control



(2) Waveform 1

| Item | Contents |
|---|---|
| Inspection terminals | D6-14 ←→Chassis ground |
| Equipment setting | 5V/DIV, 5ms/DIV |
| Inspection conditions | IG ON, light control switch is AUTO, automatic control sensor is covered by something that doesn't let light through →exposed |

*: When there is auto light control

NOTE:

The brighter the area becomes, the shorter the A interval becomes.

LE

## Data monitor / active test

1. Inspection with SSM4
   (1) Data monitor
      (a)Use the SSM4 and data monitor to determine functionality and narrow down the defective part.

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Ignition] | Status of the IG signal<br>Display range: OFF - ON | OFF: IG OFF<br>ON: IG ON | - |

| [Hazard switch input] | Hazard switch status<br>Display range: OFF - ON | OFF: Hazard switch OFF<br>ON: Hazard switch ON | - |

CAUTION:
Items without settings are not displayed in the SSM4 or do not function.

   (2) Active test
      (a)Use the SSM4 to conduct an active test and determine functionality and narrow down the defective part.

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [DRL Relay] | Daytime running lights | ON/OFF |

| Item name | Item description | Drive |
|---|---|---|
| [Taillight Relay] | Turn on the tail lights. | OFF - ON |
| [Headlight Relay] | Turn on the headlight LO beams. | OFF - ON |
| [Head Light Hi] | Turn on the headlight HI beams. | OFF - ON |
| [Front Fog Lamp Output] | Turn on the front fog lights. | OFF - ON |

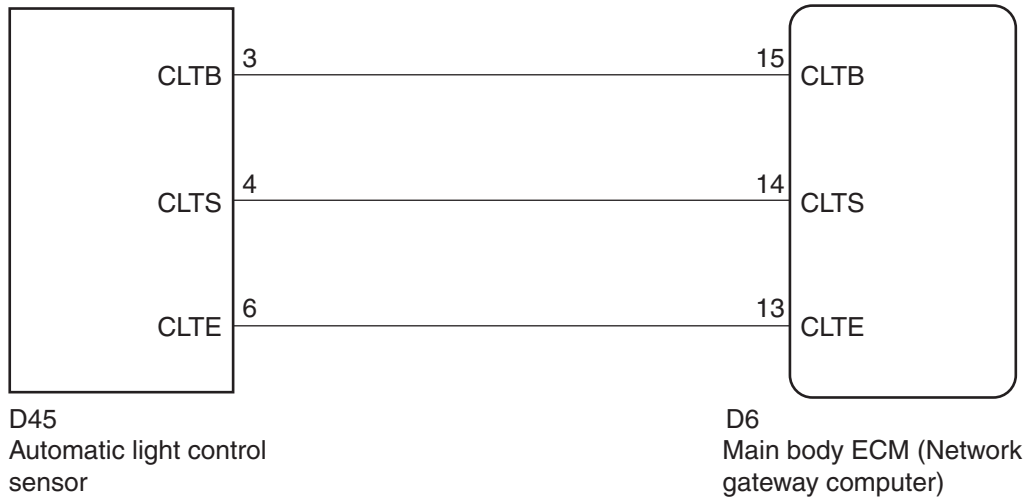
*1: Perform operation confirmation when the tail lights are on.
CAUTION:
Items without settings are not displayed in the SSM4 or do not function.

| DTC | B1244 | Malfunction in the auto light sensor |
|---|---|---|

Circuit description
The automatic light control sensor converts the detected brightness of its surrounding area into an electric signal and outputs that to the main body ECM (network gateway computer). Based on that signal, the main body ECM (network gateway computer) turns the headlights and tail lights on and off.

| DTC NO. | Diagnosis contents | Inspection parts |
|---|---|---|
| B1244 | IG ON, light control switch is AUTO and abnormal light sensor brightness signal input detected | • Automatic light control sensor<br>• Main body ECM (Network gateway computer)<br>• Vehicle wiring harnesses and connectors (sensor input system) |

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data monitor |

(1) Using the SSM4, follow the display and read the data monitor. (Refer to LE - 22)

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Illumination Rate Info] | Automatic light control sensor status<br>Display range: 0 to 65535 | Outputs a number according to the brightness (in units of lx) | - |

Criteria: The normal value on the data monitor is displayed properly.

(2) When the light control switch is set to AUTO, and you cover the automatic control sensor with something that doesn't let light through, then expose it, inspect if the number for the Illumination Rate Info changes within the displayed range.

Result

| Item | Go to |
|---|---|
| Malfunction | A |
| Normal | B |

B → Go to "How to simulate trouble phenomenon" (Refer to IN - 32)

A

| 2 | Inspection of wiring harnesses and connections (main body ECM (multiplex network body computer) - automatic light control sensor) |
|---|---|

(1) Disconnect the connector D6 for the main body ECM (network gateway computer).
(2) Disconnect the connector D45 of the automatic light control sensor.
(3) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D6-13 (CLTE) - D45-6 (CLTE) | Always | Less than 1 Ω |
| D6-14 (CLTS) - D45-4 (CLTS) | Always | Less than 1 Ω |
| D6-15 (CLTB) - D45-3 (CLTB) | Always | Less than 1 Ω |

Resistance (short circuit check)

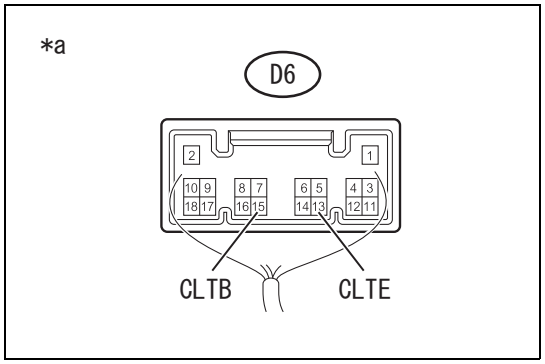
| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D6-13 (CLTE) - chassis ground | Always | 10 kΩ or more |
| D6-14 (CLTS) - chassis ground | Always | 10 kΩ or more |
| D6-15 (CLTB) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 3 | Unit inspection of the main body ECM (network gateway computer) |
|---|---|

(1) Connect the connector D6 of the main body ECM (network gateway computer).



(2) Measure the voltage between the terminals.
CAUTION:
With the connectors connected, perform this inspection from the rear of the connectors.
Voltage

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D6-13 (CLTE) - D6-15 (CLTB) | IG ON | 11 to 14 V |

Captions in illustration

| | |
|---|---|
| *a | Connector connected (Main body ECM (network gateway computer)) |

NG → Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

OK

| 4 | Inspection of the automatic light control sensor |
|---|---|

(1) Perform an on-vehicle inspection of the automatic light control sensor. (Refer to LE - 82)

NG → Replacement of the automatic light control sensor (Refer to LE - 81)

OK

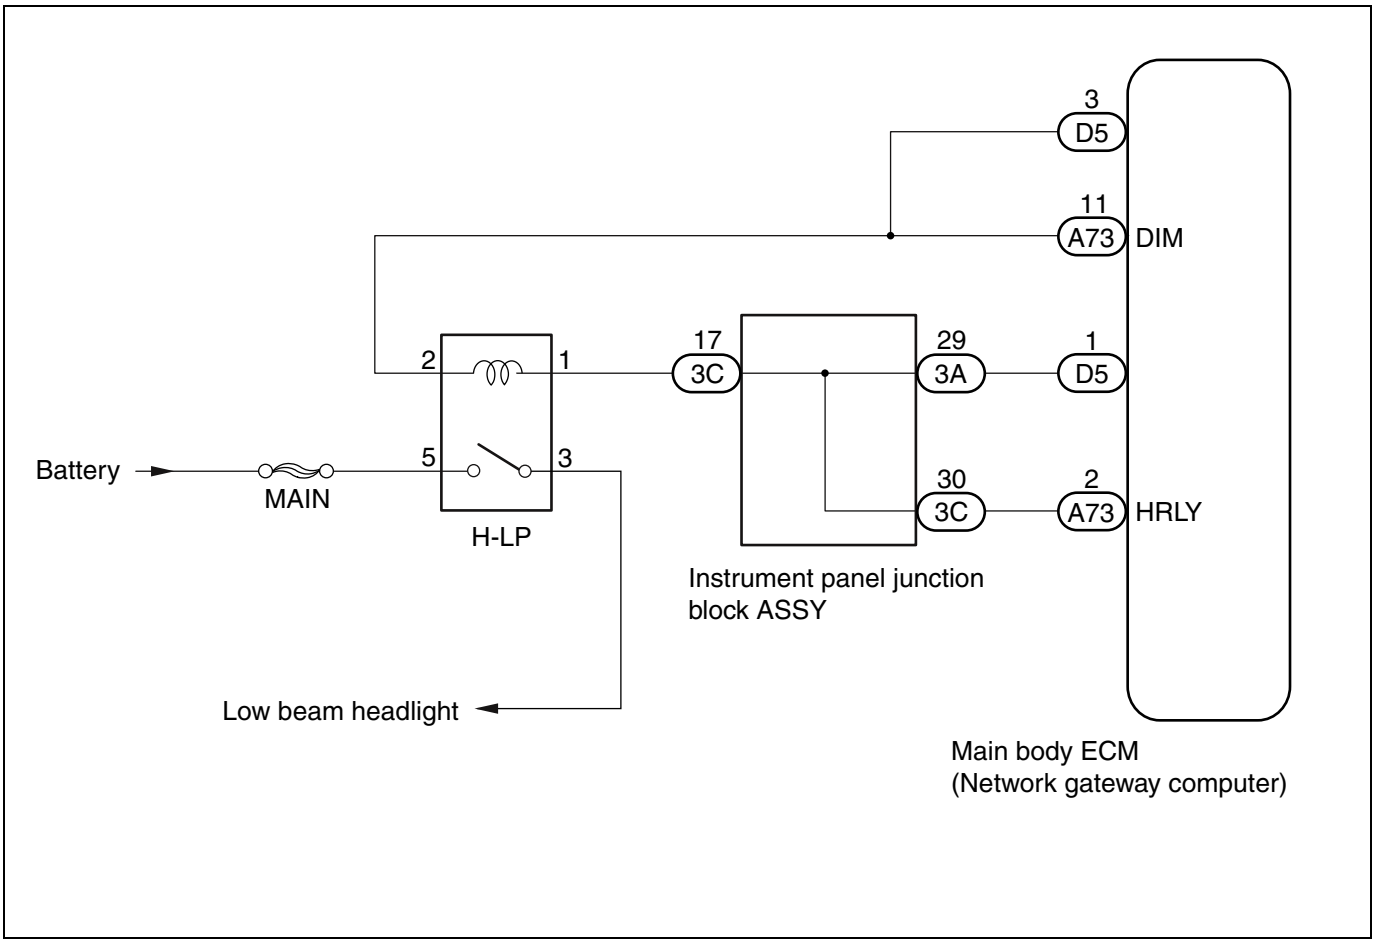
Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

## Low beam headlight circuit

Circuit description

The turning on and off of the low beam headlights is controlled by the main body ECM (network gateway computer).

Circuit figure



Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Implementation of SSM4 active test |

(1) Using SSM4, perform an active test by following the display. (Refer to LE - 22)

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [Headlight Relay] | Turn on the headlight LO beams. | OFF - ON |

Criteria: The active test can be performed properly.

Result: The low beam headlights turn on.

NG → Go to Step 2.

OK →

Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

LE

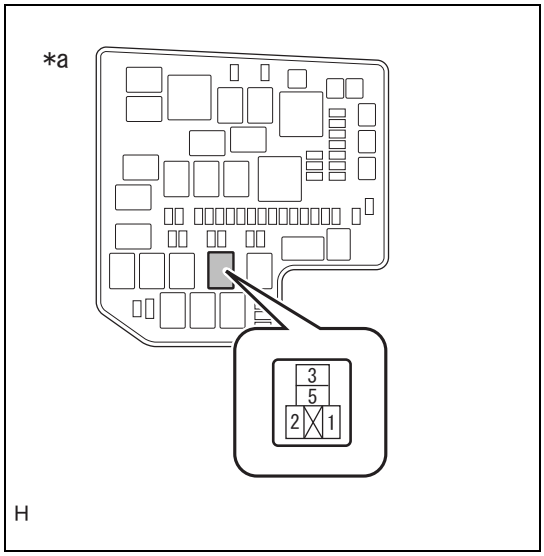
| 2 | Unit inspection for the headlight relay (H-LP relay) |
|---|---|

(1) Remove the H-LP relay from the engine compartment relay block ASSY.
(2) Perform the unit inspection of the H-LP relay. (Refer to LE - 89)

NG → Replacement of the H-LP relay.

OK

| 3 | Inspection of wiring harnesses and connectors (H-LP relay - battery) |
|---|---|



(1) Measure the voltage between the terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Relay connection terminal 5 - chassis ground | Always | 11 to 14 V |

Captions in illustration

| | |
|---|---|
| *a | Engine compartment relay block ASSY (H-LP relay connector) |

NG → Repair or replacement of wiring harness or connector

OK

| 4 | Inspection of wiring harnesses and connectors (H-LP relay - main body ECM (network gateway computer)) |
|---|---|

(1) Disconnect the A73 connector of the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.
Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| Relay connection terminal 2 - A73-11 (DIM) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| A73-11 (DIM) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

LE

| 5 | Inspection of wiring harnesses and connectors (H-LP relay - instrument panel junction block ASSY) |
|---|---|

(1) Disconnect the connector 3C of the instrument panel junction block ASSY.
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Relay connection terminal 1 - 3C-17 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3C-17 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 6 | Inspection of wiring harnesses and connectors (instrument panel junction block ASSY - main body ECM (network gateway computer)) |
|---|---|

(1) Disconnect the connector 3A of the instrument panel junction block ASSY and the connector D5 of the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3A-29 - D5-1 | Always | Less than 1 Ω |
| 3C-30 - A73-2 (HRLY) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| D5-1 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

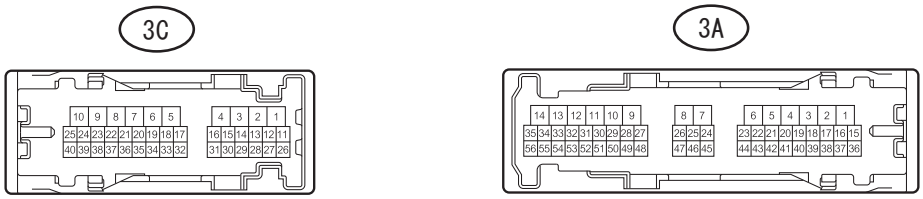
OK

LE

| 7 | Inspection of the instrument panel junction block ASSY. |
|---|---|

(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)
(2) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.
(3) Measure the resistance between the terminals.

*a



Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3C-17 - 3A-29 | Always | Less than 1 Ω |
| 3C-17 - 3C-30 | Always | Less than 1 Ω |

Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected<br>(Instrument panel junction block ASSY) | - | - |

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

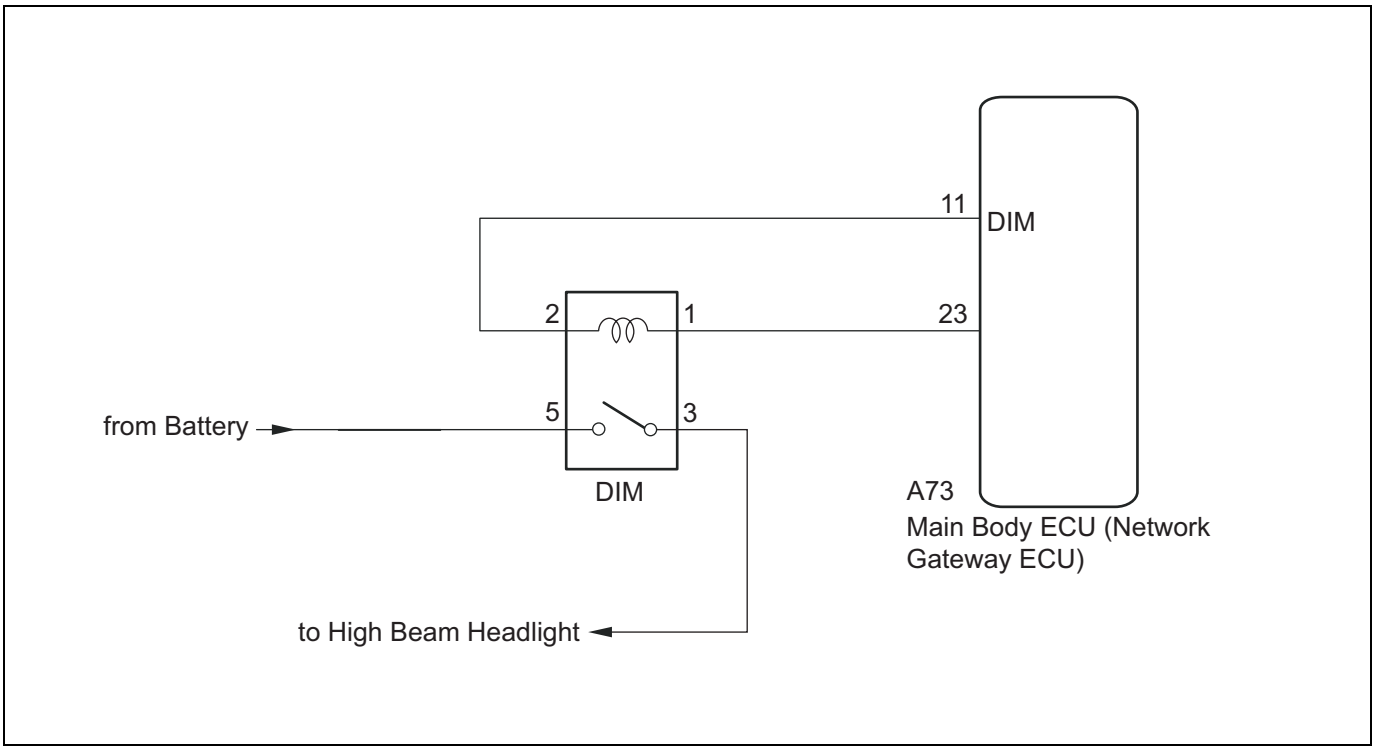
See the next circuit for inspection shown on the symptom table. (Refer to LE - 7)

## High beam headlight circuit

Circuit description

The turning on and off of the high beam headlights is controlled by the main body ECM (network gateway computer).

Circuit figure



Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Implementation of SSM4 active test |

(1) Using SSM4, perform an active test by following the display. (Refer to LE - 22)

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [Head Light Hi] | Turn on the headlight HI beams. | OFF - ON |

Criteria: The active test can be performed properly.

Result: The high beam headlights turn on.

NG → Go to Step 2.

OK

LE

Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

| | |
|---|---|
| 2 | Unit inspection for the headlight dimmer relay (DIM relay) |

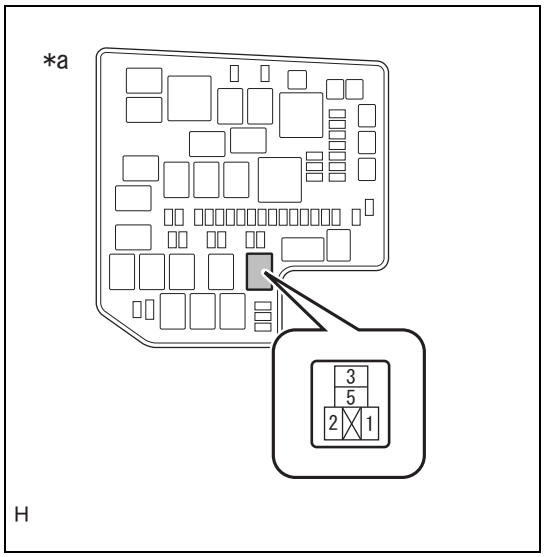
(1) Remove the DIM relay from the engine compartment relay block ASSY.

(2) Perform the unit inspection of the DIM relay. (Refer to LE - 89)

NG → Replacement of the headlight dimmer relay (DIM relay)

OK

| 3 | Inspection of the wiring harnesses and connectors (DIM relay - battery) |
|---|---|



(1) Measure the voltage between the terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| Relay connection terminal 5 - chassis ground | IG OFF | 11 to 14 V |

Captions in illustration

| | |
|---|---|
| *a | Engine compartment relay block ASSY (DIM relay connector) |

NG → Repair or replacement of wiring harness or connector

OK

| 4 | Inspection of wiring harnesses and connectors (DIM relay - main body ECM (network gateway computer)) |
|---|---|

(1) Disconnect the A73 connector of the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.
Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| Relay connection terminal 2 - A73-11 (DIM) | Always | Less than 1 Ω |
| Relay connection terminal 1 - A73-23 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A73-11 (DIM) - chassis ground | Always | 10 kΩ or more |
| A73-23 - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

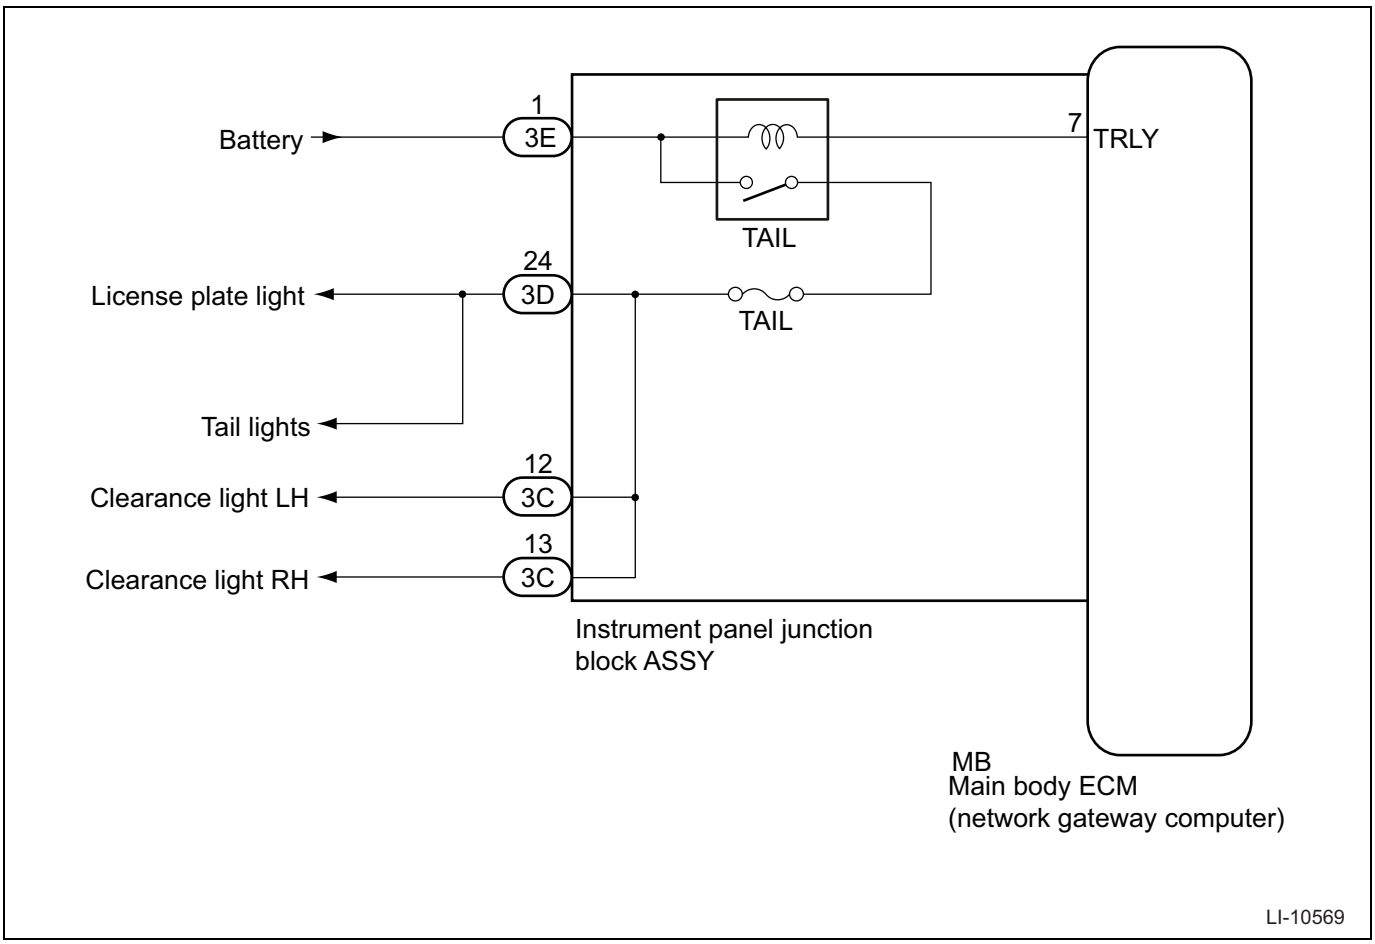
See the next circuit for inspection shown on the symptom table. (Refer to LE - 7)

## Tail light circuit

Circuit description

The turning on and off of the tail lights, the clearance lights, and the license plate light is controlled by the main body ECM (network gateway computer).

Circuit figure



Inspection steps

CAUTION:

Before performing the troubleshooting, check the fuse of this circuit.

| | |
|---|---|
| 1 | Implementation of SSM4 active test |

LE

(1) Using SSM4, perform an active test by following the display. (Refer to LE - 22)

SSM4 screen: [Each System] →[Body Control] →[Active Test]

| Item name | Item description | Drive |
|---|---|---|
| [Taillight Relay] | Turn on the tail lights. | OFF - ON |

Criteria: The active test can be performed properly.

(2) Check that the tail lights, the clearance lights, and the license plate light turn on properly.

Result

| Result | Go to |
|---|---|
| All the tail lights, the clearance lights, and the license plate light don't turn on. | A |

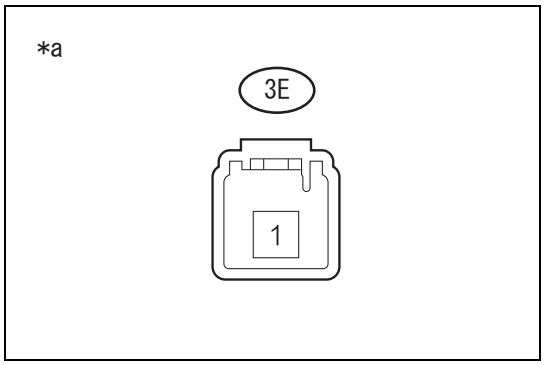
| Result | Go to |
|---|---|
| All the tail lights, the clearance lights, and the license plate light turn on. | B |

B → Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

A

**2** Inspection of the wiring harnesses and connectors (battery - instrument panel junction block ASSY)

(1) Disconnect the connector 3E of the instrument panel junction block ASSY.



(2) Measure the voltage between the terminals.
Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3E-1 - chassis ground | Always | 11 to 14 V |

Captions in illustration

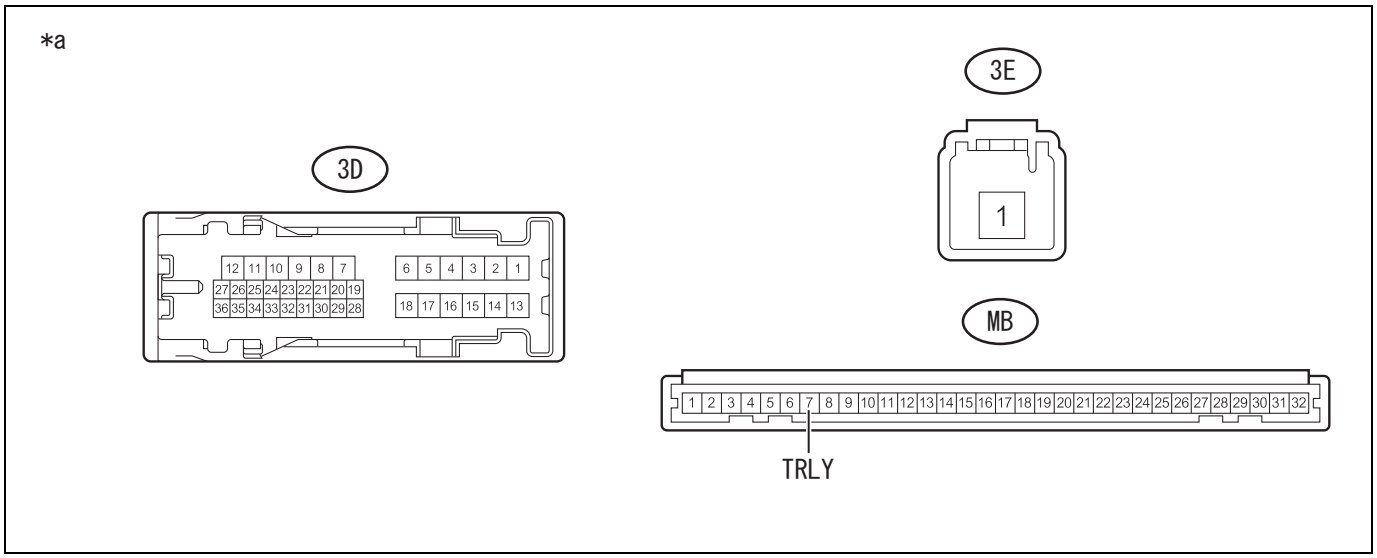
| | |
|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) |

NG → Repair or replacement of wiring harness or connector

OK

**3** Inspection of the instrument panel junction block ASSY.

(1) Remove the instrument panel junction block ASSY from the vehicle. (Refer to PD - 25)
(2) Remove the main body ECM (network gateway computer) from the instrument panel junction block ASSY.



Captions in illustration

| | | | |
|---|---|---|---|
| *a | Connector not connected (Instrument panel junction block ASSY) | - | - |

(3) Measure the resistance between the terminals.

LE

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3E-1 - 3D-24 | Always | 10 kΩ or more |

(4) Measure the voltage between the terminals when battery voltage is applied between the terminals.

Voltage

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3C-12 - Battery negative (-) terminal | Connect a positive (+) lead from the battery 3E-1Connect a negative (-) lead from the battery MB-7 (TRLY) | 11 to 14 V |
| 3C-13 - Battery negative (-) terminal | Connect a positive (+) lead from the battery 3E-1Connect a negative (-) lead from the battery MB-7 (TRLY) | 11 to 14 V |
| 3D-24 - chassis ground | Battery positive →3E-1<br>Battery ground →MB-7 (TRLY) | 11 to 14 V |

NG → Replacement of the instrument panel junction block ASSY (Refer to PD - 25)

OK

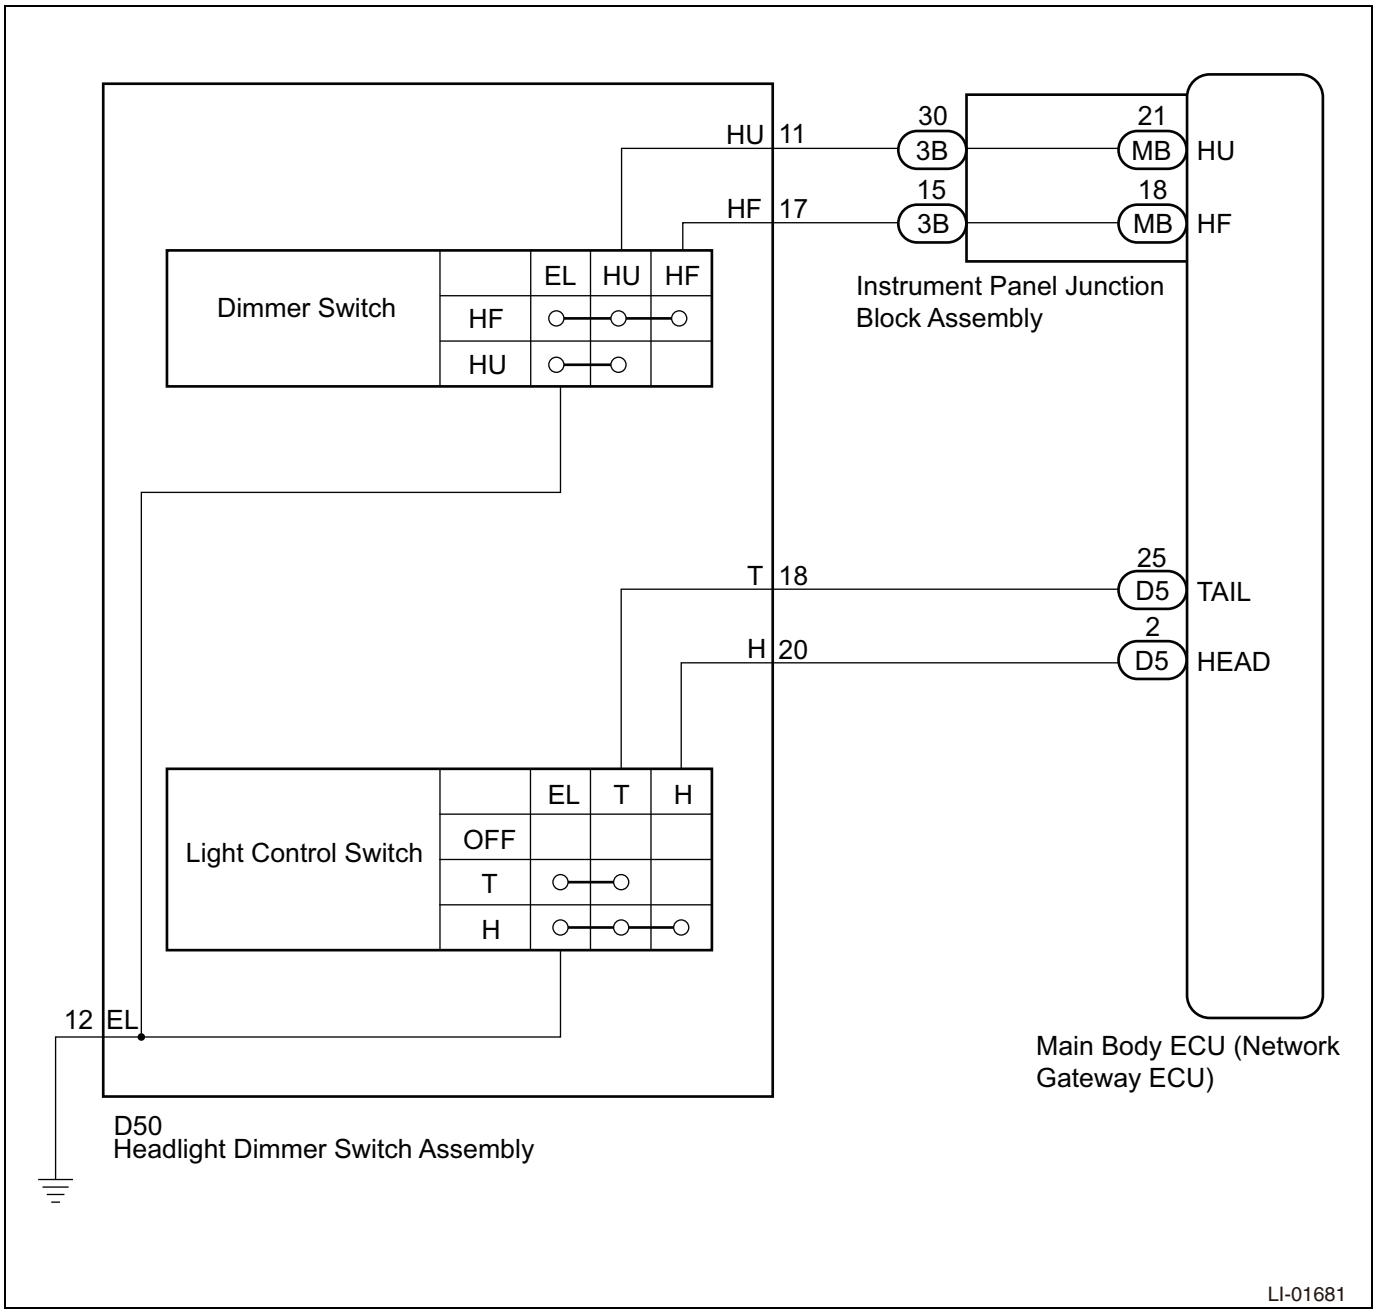
See the next circuit for inspection shown on the symptom table. (Refer to LE - 7)

## Headlight dimmer switch circuit

Circuit description

The main body ECM (network gateway computer) receives the light control switch signal, the dimmer switch signal, and the fog switch signal from the headlight dimmer switch ASSY.

Circuit figure



Inspection steps

| | |
|---|---|
| 1 | Reading of SSM4 data |

LE

(1) Using the SSM4, follow the display and read the data monitor. (Refer to LE - 22)

SSM4 screen: [Each System] →[Body Control] →[Data monitor]

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Dimmer] | Dimmer switch (HI) status<br>Display range: OFF - ON | OFF: Dimmer switch is OFF<br>ON: Dimmer switch is HI | - |
| [Passing Light SW] | Dimmer switch (flashing) status<br>Display range: OFF - ON | OFF: Dimmer switch is OFF<br>ON: Dimmer switch (flashing) is ON | - |
| [Head Light Switch (H)] | Light control switch (HEAD) status<br>Display range: OFF - ON | OFF: Light control switch is OFF<br>ON: Light control switch is HEAD | Check when the vehicle is in IG ON. |

| Item name | Description/display range | Normal value | Remarks |
|---|---|---|---|
| [Tail Light Switch (T)] | Light control switch (TAIL) status<br>Display range: OFF - ON | OFF: Light control switch is OFF<br>ON: Light control switch is TAIL | - |

Criteria: The normal value on the data monitor is displayed properly.

Result

| Item | Go to |
|---|---|
| OK | A |
| NG (Dimmer switch) | B |
| NG (light control switch) | C |

B → Go to Step 2.

C → Go to Step 4.

A

Replacement of the main body ECM (network gateway computer) (Refer to PD - 25)

2 Unit inspection of the headlight dimmer switch ASSY

(1) Remove the headlight dimmer switch ASSY. (Refer to LE - 72)
(2) Perform the unit inspection of the headlight dimmer switch ASSY. (Refer to LE - 74)

NG → Replacement of the headlight dimmer switch ASSY (Refer to LE - 72)

OK

3 Inspection of the wiring harnesses and the connectors (headlight dimmer switch ASSY - instrument panel junction block ASSY)

(1) Disconnect the connector 3B of the instrument panel junction block ASSY.
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D50-17(HF) - 3B-15 | Always | Less than 1 Ω |
| D50-11(HU) - 3B-30 | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D50-17 (HF) - chassis ground | Always | 10 kΩ or more |
| D50-11 (HU) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

See the next circuit for inspection shown on the symptom table. (Refer to LE - 7)

| 4 | Unit inspection of the headlight dimmer switch ASSY |
|---|---|

(1) Remove the headlight dimmer switch ASSY. (Refer to LE - 72)
(2) Perform the unit inspection of the headlight dimmer switch ASSY. (Refer to LE - 74)

NG → Replacement of the headlight dimmer switch ASSY (Refer to LE - 72)

OK

| 5 | Inspection of wiring harnesses and connectors (headlight dimmer switch ASSY - main body ECM (network gateway computer)) |
|---|---|

(1) Disconnect the connector MB and D5 of the main body ECM (network gateway computer).
(2) Measure the resistance between the terminals.

Resistance (open circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D50-20(H) - D5-2 (HEAD) | Always | Less than 1 Ω |
| D50-18(T) - D5-25 (TAIL) | Always | Less than 1 Ω |

Resistance (short circuit check)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D50-20 (H) - chassis ground | Always | 10 kΩ or more |
| D50-18 (T) - chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

See the next circuit for inspection shown on the symptom table. (Refer to LE - 7)

# Auto leveling system

## Precautions

1. Precautions during headlight beam adjustment
   (1) If using a cover when the headlights are on, do not perform for 3 minutes or more.
   (2) Because the headlight outer lens is made of plastic, performing the adjustment for a long time will cause heat that may cause disfiguration.
2. Precautions when handling models with head light auto leveling
   (1) The initialization procedure is necessary when removing, installing, or replacing the height control sensor RR LH, when performing a procedure that changes the height of the vehicle, such as replacing the suspension, and when replacing the headlight leveling computer ASSY.
   NOTE:
   Refer to LE - 38for initialization.
   (2) When repairing or replacing the suspension, be sure to do so after removing the height control sensor RR LH.

## Function inspection

1. Before troubleshooting
   (1) Basic inspection
   (a)Inspect the battery voltage.
   Standard value: 11 to 14 V (when the engine is stopped)
   (2) Inspect for blown fuses, wiring harnesses open circuit, short circuits, and poor contact of connectors, in places where you can inspect visually.
2. Inspection of the headlight auto leveling
   (1) In IG ON, with the light control switch in the HEAD position and the vehicle stopped, change the vehicle posture. Maintain that status for 3 seconds or more, and check that the beams move.
   CAUTION:
   Change the vehicle height slowly.

## Registration settings

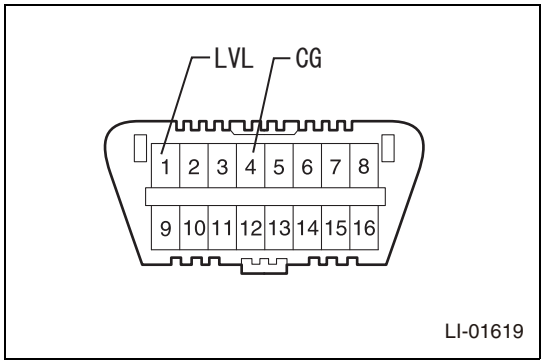
1. Initialization procedure for the headlight leveling computer ASSY
   CAUTION:
   Perform initialization using the following procedure when removing, installing, or replacing the height control sensor RR LH, when performing a procedure that changes the height of the vehicle, such as replacing the suspension, and when replacing the headlight leveling computer ASSY.
   NOTE:
   When initializing the headlight leveling computer ASSY, the amount of fuel shown on the scales of the fuel receiver gauge is broken into 5 levels, and processing is performed based on the amount of fuel at that time.
   (1) Checking the vehicle condition (*1)
   (a)Put the vehicle in the following condition.
   - Remove any loadable luggage from the vehicle. (The spare tire and on-board tools are mounted on the vehicle.)
   - There are no passengers in the vehicle.
   - Turn off the headlights.
   - Vehicle is stopped, and the vehicle height does not change. (Vehicle posture is stable on a level surface.)

   NOTE:
   Initialization cannot be normally performed unless above-mentioned conditions are all satisfied.
   (2) Checking the warning display
   (a)3 seconds after IG OFF →ON, check the warning display of the headlight leveling warning light in the combination meter ASSY.

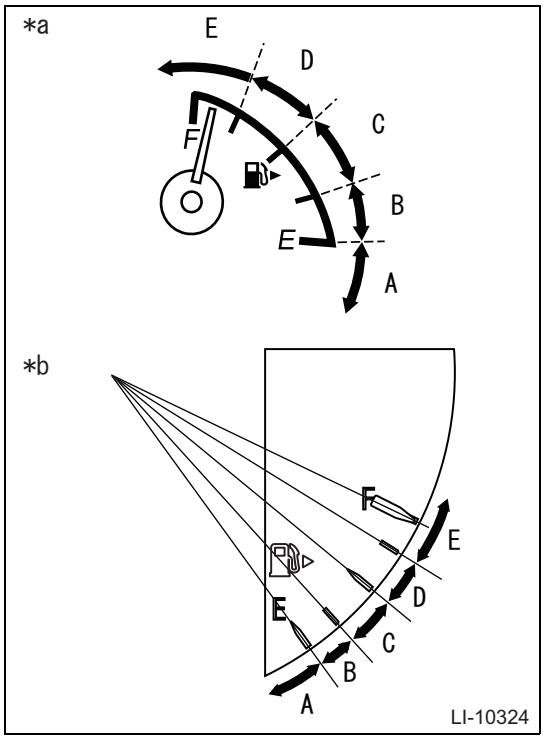
Criteria

| Operation contents | Warning display |
|---|---|
| Replacement (new one) or initialization error of the headlight leveling computer ASSY | Continues blinking 6 times at 2 Hz |
| Replacement or removal/installation of the height control sensor RR LH, or suspension replacement, etc. | OFF |

NOTE:
If it is outside the specification, check the headlight leveling computer ASSY, the height control sensor RR LH, and the wiring harnesses and connectors.



(3) Initialization operation
(a) Turn the ignition switch to ON.
(b) Using the SST, short-circuit 1 (LVL) to 4 (CG) of DLC3.
SST 09843-18040



(c) Based on the position of the indicator of the fuel receiver gauge (amount of remaining fuel), determine the applicable number of times to operate the light control switch using the following chart.
Indicator position

| Remaining amount in the scales | Number of times to operate the light control switch |
|---|---|
| Indicator is in range A | 1 time |
| Indicator is in range B | 2 times |
| Indicator is in range C | 3 times |
| Indicator is in range D | 4 times |
| Indicator is in range E | 5 times |

Captions in illustration

| | |
|---|---|
| *a | Normal meter |
| *b | TFT meter |

(d) After short-circuiting the initialization terminals, turn the light control switch OFF →HEAD →OFF for the number N(*2)of times.
NOTE:
- *2: N is the number of times to operate the light control switch determined based on the position of the indicator of the fuel receiver gauge.
- Start operating the switch within 20 seconds after short-circuiting the initialization terminals.
- Operate the switch approx. at 3-second intervals.

(e) After operating the light control switch, check the warning display 3 seconds later.

Result

| Operation contents | Warning display | Result |
|---|---|---|
| Replacement of the headlight leveling computer ASSY (new) | Blinks 6 times at 2 Hz →Continues blinking N(*3) times at 2 Hz | Initialization completed normally |
| | Continues blinking 6 times at 2 Hz | Initialization error |
| Replacement or removal/installation of the height control sensor RR LH, or suspension replacement, etc. | No blinking →Continues blinking N(*3) times at 2 Hz | Initialization completed normally |
| | Continues blinking 6 times at 2 Hz | Initialization error |

NOTE:
- *3: N is the number of times the light control switch was operated.

- For initialization errors, the headlight leveling warning light in the combination meter ASSY turns on.
- If the number of times the warning light blinks and the number of times the switch was operated are different, initialization was not completed normally.
- If it was not completed normally (initialization error), start over from (*1).

(f) Once the normal completion of the initialization is confirmed, turn the ignition switch to OFF.

NOTE:

Blinking from initialization completing normally continues until IG OFF.

| Equipment setting | 2 V/DIV, 2 ms/DIV |
| Measuring conditions | Drive at 30 km/h |

LE

## Failsafe list

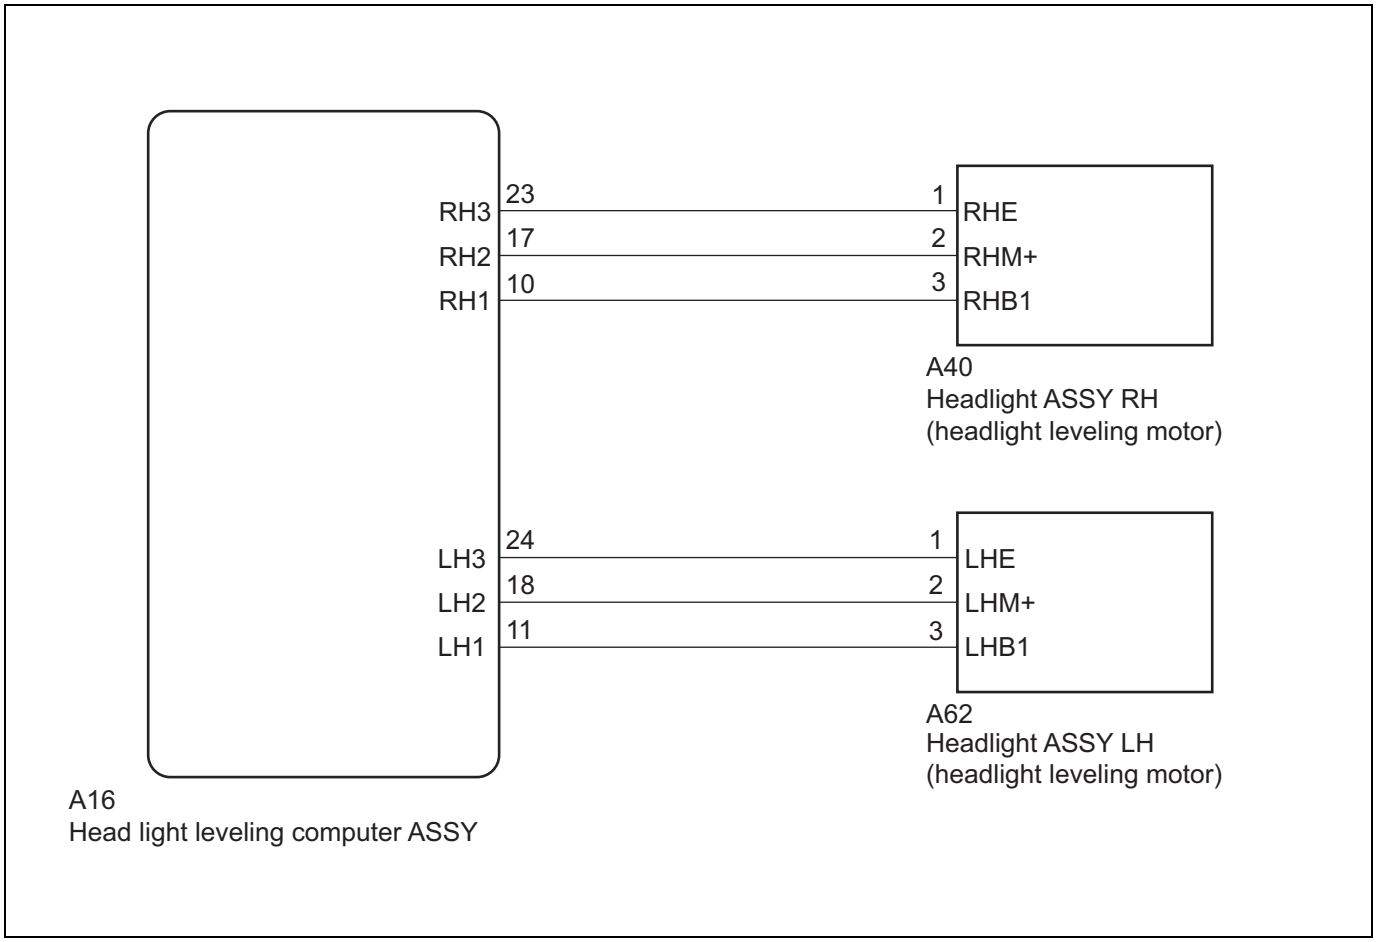
1. Failsafe function
   (1) Headlight leveling computer ASSY

(a)If the following errors are detected, the headlight leveling computer ASSY stops auto leveling control. Also, if an error is detected while the actuator is in motion, the actuator operation is stopped.

| Item | Error detection conditions | Restoring condition | Warning display |
|---|---|---|---|
| Power Supply Voltage Failure | When power supply voltage of 18.1 V or more is detected | When power supply voltage of 17.5 V or less is detected | OFF |
| | When power supply voltage of 9.0 V or less is detected | When power supply voltage of 9.3 V or more is detected | |
| Vehicle height sensor power supply error | When vehicle height sensor power supply voltage of 6.25 V or more is detected | When vehicle height sensor power supply voltage less than 6.25 V is detected | ON |
| | When vehicle height sensor power supply voltage of 4.45 V or less is detected | When vehicle height sensor power supply voltage above 4.45 V is detected | |
| Vehicle height sensor signal error | When vehicle height sensor signal voltage of 4.75 V or more is detected | When vehicle height sensor signal voltage less than 4.75 V is detected | ON |
| | When vehicle height sensor signal voltage of 0.25 V or less is detected | When vehicle height sensor signal voltage above 0.25 V is detected | |
| Vehicle height sensor data error during initialization | When the headlight leveling computer ASSY was initialized with an invalid sensor signal from the vehicle height sensor | When initialization is performed with a valid sensor value from the vehicle height sensor | ON |

## Headlight leveling motor circuit

Circuit figure



Inspection steps

CAUTION:

After replacing the headlight leveling computer ASSY, initialization is required. (Refer to LE - 38)

| | |
|---|---|
| 1 | Inspection of the wiring harnesses and connectors (headlight leveling computer ASSY - headlight ASSY) |

(1) Disconnect the connector A16 of the headlight leveling computer ASSY.
(2) Disconnect the connector A62 of the headlight ASSY LH, or connector A40 of the headlight ASSY RH.
(3) Measure the resistance according to the following chart.

Resistance (open circuit check)

LH side

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A16-11 (LH1) - A62-3 (LHB1) | Always | Less than 1 Ω |
| A16-18 (LH2) - A62-2 (LHM+) | Always | Less than 1 Ω |
| A16-24 (LH3) - A62-1 (LHE) | Always | Less than 1 Ω |

RH side

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A16-10 (RH1) - A40-3 (RHB1) | Always | Less than 1 Ω |
| A16-17 (RH2) - A40-2 (RHM+) | Always | Less than 1 Ω |
| A16-23 (RH3) - A40-1 (RHE) | Always | Less than 1 Ω |

Resistance (short circuit check)

LH side

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A16-11 (LH1) - Chassis ground | Always | 10 kΩ or more |
| A16-18 (LH2) - Chassis ground | Always | 10 kΩ or more |
| A16-24 (LH3) - Chassis ground | Always | 10 kΩ or more |

RH side

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| A16-10 (RH1) - Chassis ground | Always | 10 kΩ or more |
| A16-17 (RH2) - Chassis ground | Always | 10 kΩ or more |
| A16-23 (RH3) - Chassis ground | Always | 10 kΩ or more |

NG → Repair or replacement of wiring harness or connector

OK

| 2 | Replacement of the headlight leveling computer ASSY |
|---|---|

(1) Replace with a new or normal headlight leveling computer ASSY. (Refer to LE - 85)

Next

| 3 | Operation inspection |
|---|---|

(1) Inspect the operation of the headlight leveling motors. (Refer to LE - 4)
Criteria: The headlight leveling motors operate normally.

Result

| Item | Go to |
|---|---|
| Both headlight leveling motors operate. | A |
| The right headlight leveling motor does not operate. | B |
| The left headlight leveling motor does not operate. | C |

B → Replacement of the headlight ASSY RH (Refer to LE - 50)

C → Replacement of the headlight ASSY LH (Refer to LE - 50)

A

Complete (Faulty headlight leveling computer ASSY)

# Headlights

N*m {kgf*cm, ft*lbf}: Tightening torque

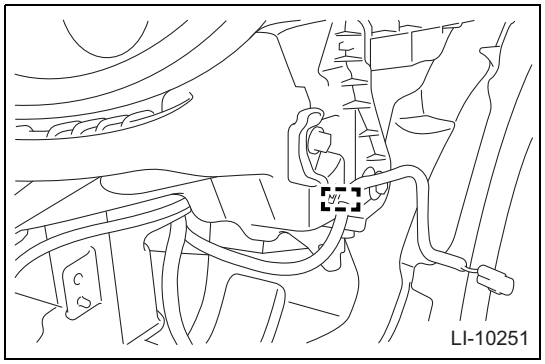
LI-10244

## Removal

NOTE:

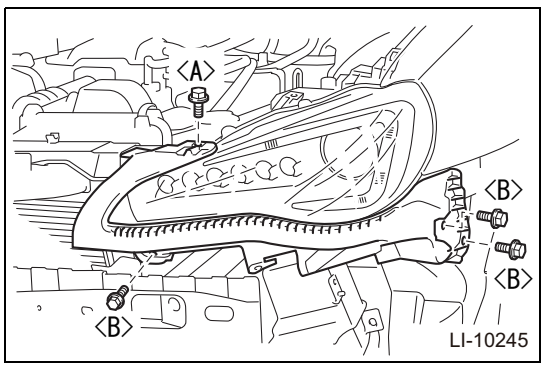
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Disconnection of the battery ground terminal (Refer to IN - 6)
2. Removal of the front bumper cover (Refer to ET - 2)



LI-10251

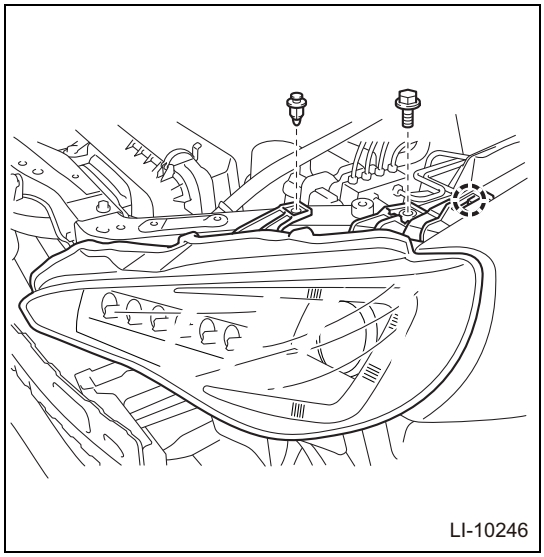
3. Removal of the front bumper side support LH
   (1) Using a clip remover, release the clamp, and disconnect the wiring harnesses.



LI-10245

   (2) Remove bolt <A>.
   (3) Remove the 3 <B> bolts and remove the front bumper side support LH.

LE



4. Removal of the headlight ASSY LH
   (1) Disconnect each connector.
   (2) Using a clip remover, remove the clip.
   (3) Remove the bolt and release the tab, and remove the headlight ASSY LH.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

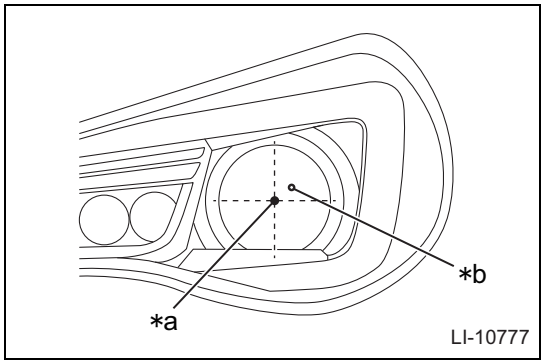
1. Installation of the headlight ASSY LH
   (1) Connect each connector.
   (2) Fit in the tab.
   (3) Install the clip.
   (4) Using the bolt, install the headlight ASSY LH.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
2. Installation of the front bumper side support LH
   (1) Install bolt <A>.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Using the 3 <B> bolts, install the front bumper side support LH.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (3) Engage the clamp to install the wiring harness.
3. Installation of the front bumper cover (Refer to ET - 10)
4. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
5. Settings when removing/installing battery terminals (Refer to IN - 10)
6. Headlight beam adjustment (Refer to LE - 51)

## Adjustment

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

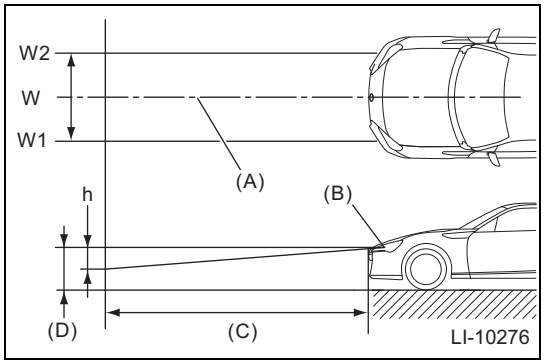
1. Preliminary operations for adjusting the headlight beams
   NOTE:
   Perform the headlight adjustment with the low beams.
   (1) Make sure that the vehicle is parked on a level surface.
   (2) Make sure that no luggage is loaded into the vehicle.
   (3) Fill up the fuel tank.
   (4) Check that there is the specified amount of oil.
   (5) Check that there is the specified amount of coolant.
   (6) Adjust the tire pressure to the specified value. (Refer to TW - 2)
   (7) Shake the car up and down, and let the suspension settle.
   (8) Have 1 person get in the driver's seat.
   (9) Start the engine and charge the battery.



(10) Measure the distance between the light source centers of the low/high beam, and the height of the light source center.

Captions in illustration

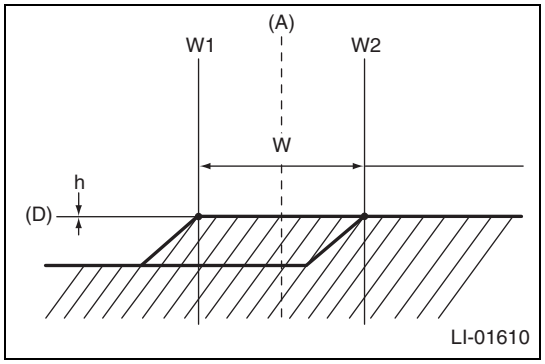
| | |
|---|---|
| *a | Light source center of the low/high beam |
| *b | Not used |



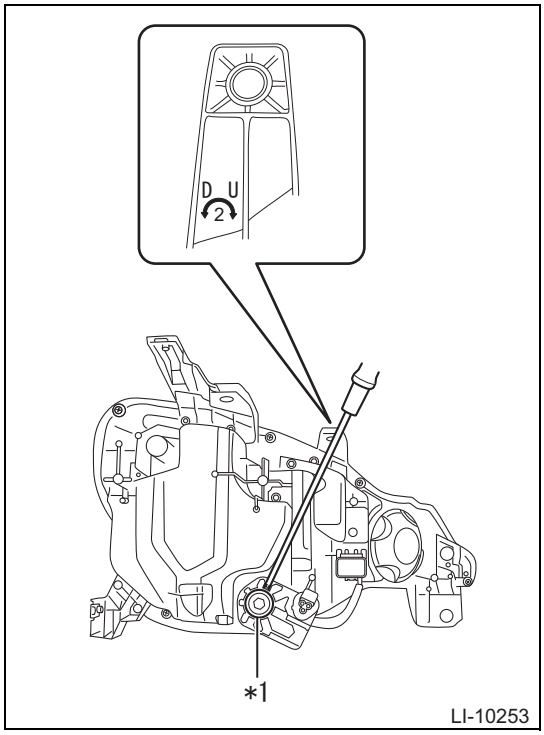
(11) Face the measuring panel to the front of the vehicle.

Captions in illustration

| | |
|---|---|
| (A) | Center of the vehicle |
| (B) | Light source center |
| (C) | 3 m (10 ft) |
| (D) | Height of the center of the headlights |
| W | Area between the center of the headlights =1.342 m (52.83 in) |
| h | Height of the center of the headlights at 3 m (10 ft) |



(12) Turn the headlights on with low beams.



(13) If they vary greatly from the standard line, adjust the beams for the low beams so that the line separating light and darkness matches the position of the standard line.

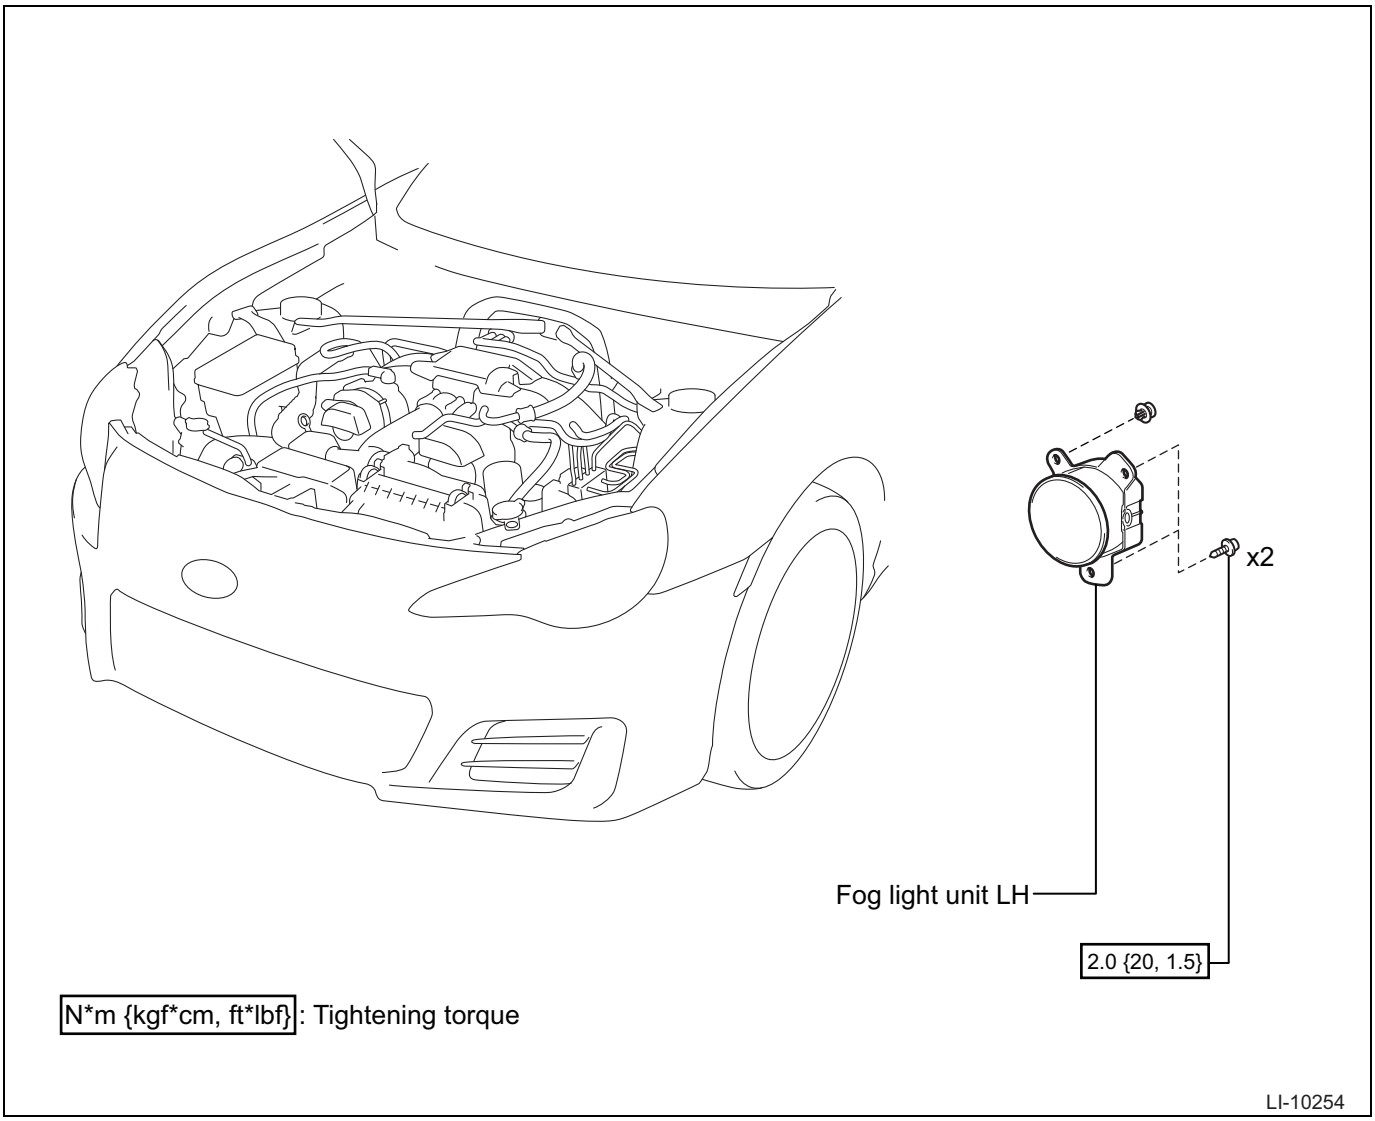
Captions in illustration

| | |
|---|---|
| *1 | Vertical aiming screw |

CAUTION:
The aiming screw is adjusted according to the way it is tightened. (When adjusting in the loosening direction, tighten it again after loosening it.)

# Fog light

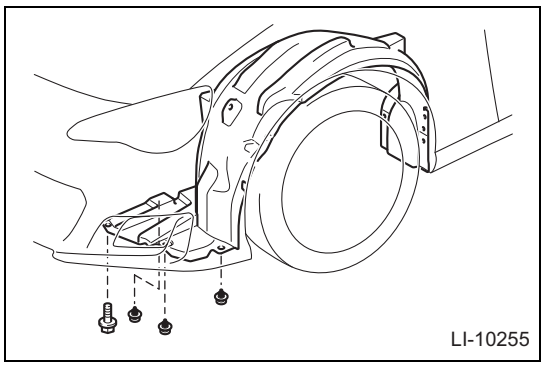
## Exploded view



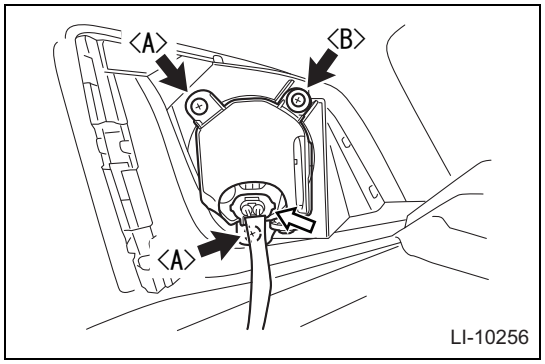
## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.



1. Turn over the front mud guard LH.
   (1) Remove the bolt.
   (2) Using a clip remover, remove the 3 clips and turn over the front mud guard LH.



2. Removal of the fog light unit LH
   (1) Disconnect the connector.
   (2) Remove 2 screws <A>.
   (3) Remove the clip <B>, and remove the fog light unit LH.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

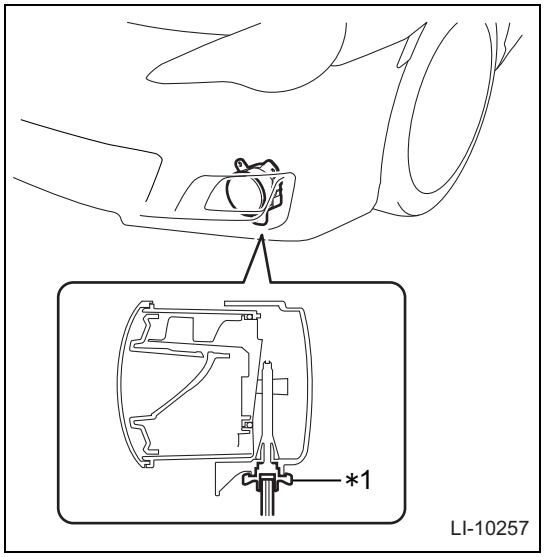
1. Installation of the fog light unit LH
   (1) Install the clip.
   (2) Using 2 screw, install the fog light unit LH.
   Standard value:T=2.0N·m {20kgf·cm} {1.5ft·lbf}
   (3) Connect the connector.
2. Installation of the front mud guard LH
   (1) Using 3 clips, install the front mud guard LH.
   (2) Install the bolt.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
3. Adjusting the fog light beams (Refer to LE - 55)

## Adjustment

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Preliminary operation for adjusting the fog light beams
   (1) Check that the vehicle is parked on a level surface.
   (2) Check that no luggage is loaded on the vehicle.
   (3) Fill up the fuel tank.
   (4) Check that there is the specified amount of oil.
   (5) Check that there is the specified amount of coolant.
   (6) Adjust the tire pressure to the specified value. (Refer to TW - 2)
   (7) Shake the car up and down, and let the suspension settle.
   (8) Have 1 person get in the driver's seat.
   (9) Start the engine and charge the battery.
2. Turn over the front mud guard LH. (Refer to LE - 54)



4. Inspection of the fog light beams
   Criteria: They shine within 40 m (131.2 ft).

3. Adjusting the fog light beams
   (1) Adjust by turning the aiming screw from below the vehicle.

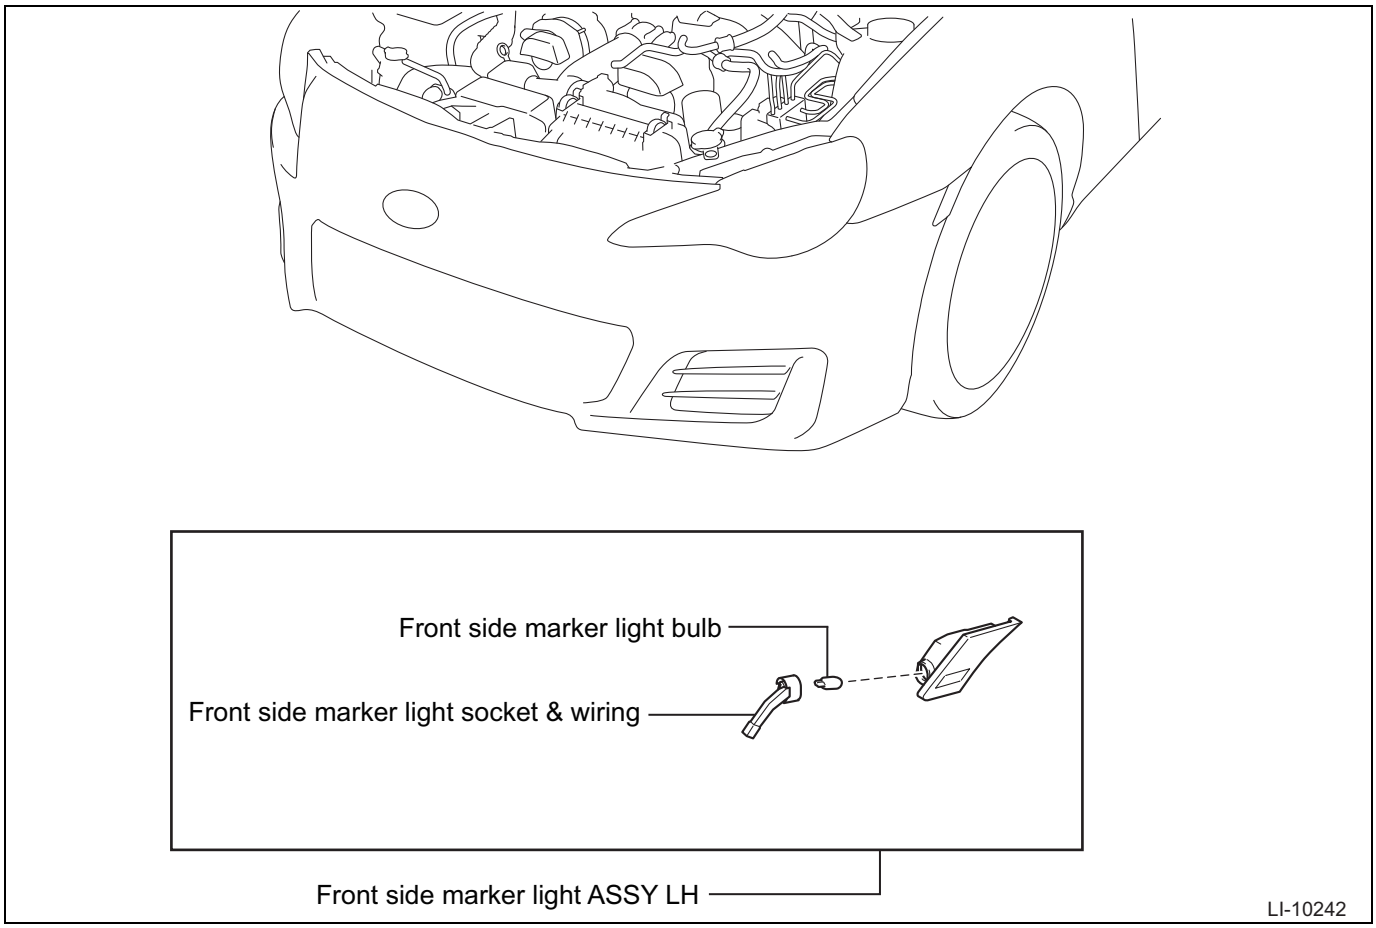
Captions in illustration

| | |
|---|---|
| *1 | Aiming screw |

NOTE:
Tightening the aiming screw makes the fog light face upward, and loosening it makes the fog light face downward.

# Front side marker lights

## Exploded view



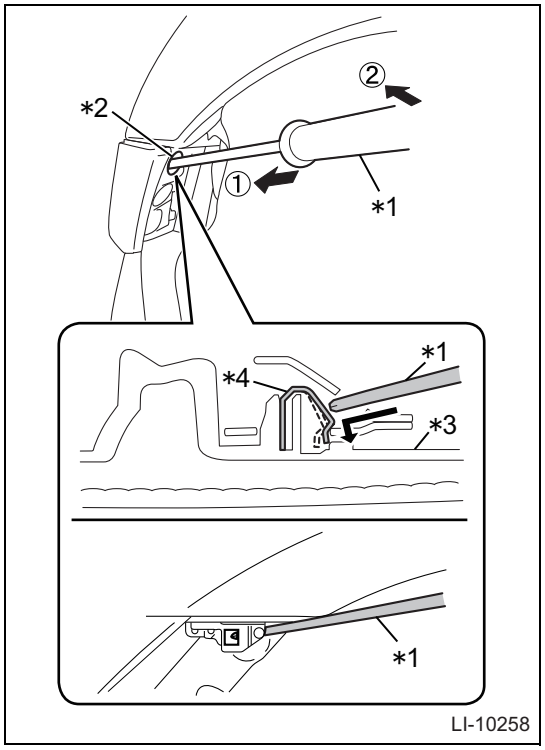
## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Removal of the front side marker light ASSY LH
   (1) Turn the front tires all the way to the right side.

   (2) Remove the clip and turn over the front mud guard.



(3) Using a Phillips screwdriver, while pushing the metal clip of the front side marker light ASSY LH from the service hole in the direction of the arrow in the figure, release the clip.
NOTE:
While firmly pressing the Phillips screw driver in the direction of ?, move it in the direction of ?.

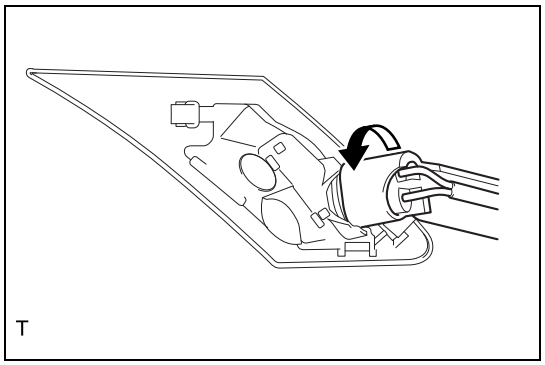
Captions in illustration

| | |
|---|---|
| *1 | Phillips screw driver |
| *2 | Service hole |
| *3 | Front side marker light ASSY LH |
| *4 | Metal clip |

(4) Disconnect the connector and remove the front side marker light ASSY LH.

## Disassembly

NOTE:
The following procedure is for LH side. Perform the same procedures for the RH and LH side.



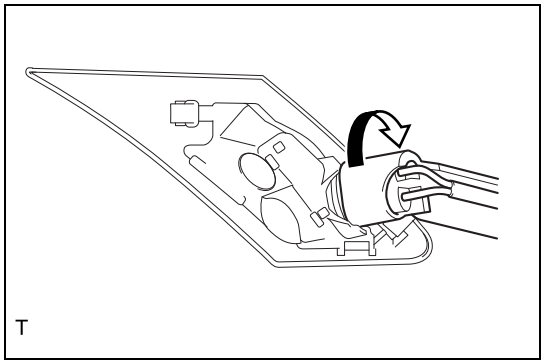
1. Removal of the front side marker light socket & wiring
   (1) Turn in the direction of the arrow in the figure, and remove the front side marker light socket & wiring as a unit with the front side marker light bulb.
2. Removal of the front side marker light bulb
   (1) Remove the front side marker light bulb from the front side marker light socket & wiring.

## Assembly

LE

NOTE:
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Installation of the front side marker light bulb
   (1) Install the front side marker light bulb on the front side marker light socket & wiring.



T

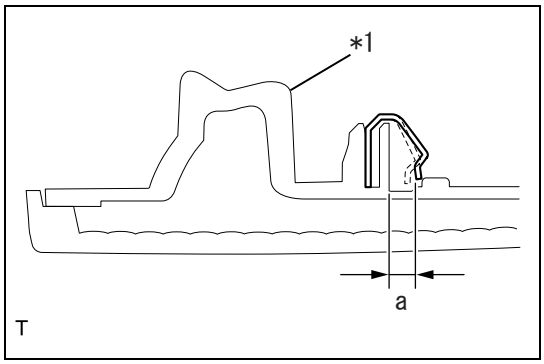
2. Installation of the front side marker light socket & wiring
   (1) Turn in the direction of the arrow in the figure, and install the front side marker light socket & wiring as a unit with the front side marker light bulb.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Installation of the front side marker light ASSY LH
   (1) Connect the connector.
   (2) Fit in the tab and install the front side marker light ASSY LH.



T

   (3) Check in the installation condition.
   NOTE:
   If looseness is found in the front side marker light ASSY LH, adjust the clip.

|---|---|
| *1 | Front side marker light ASSY |

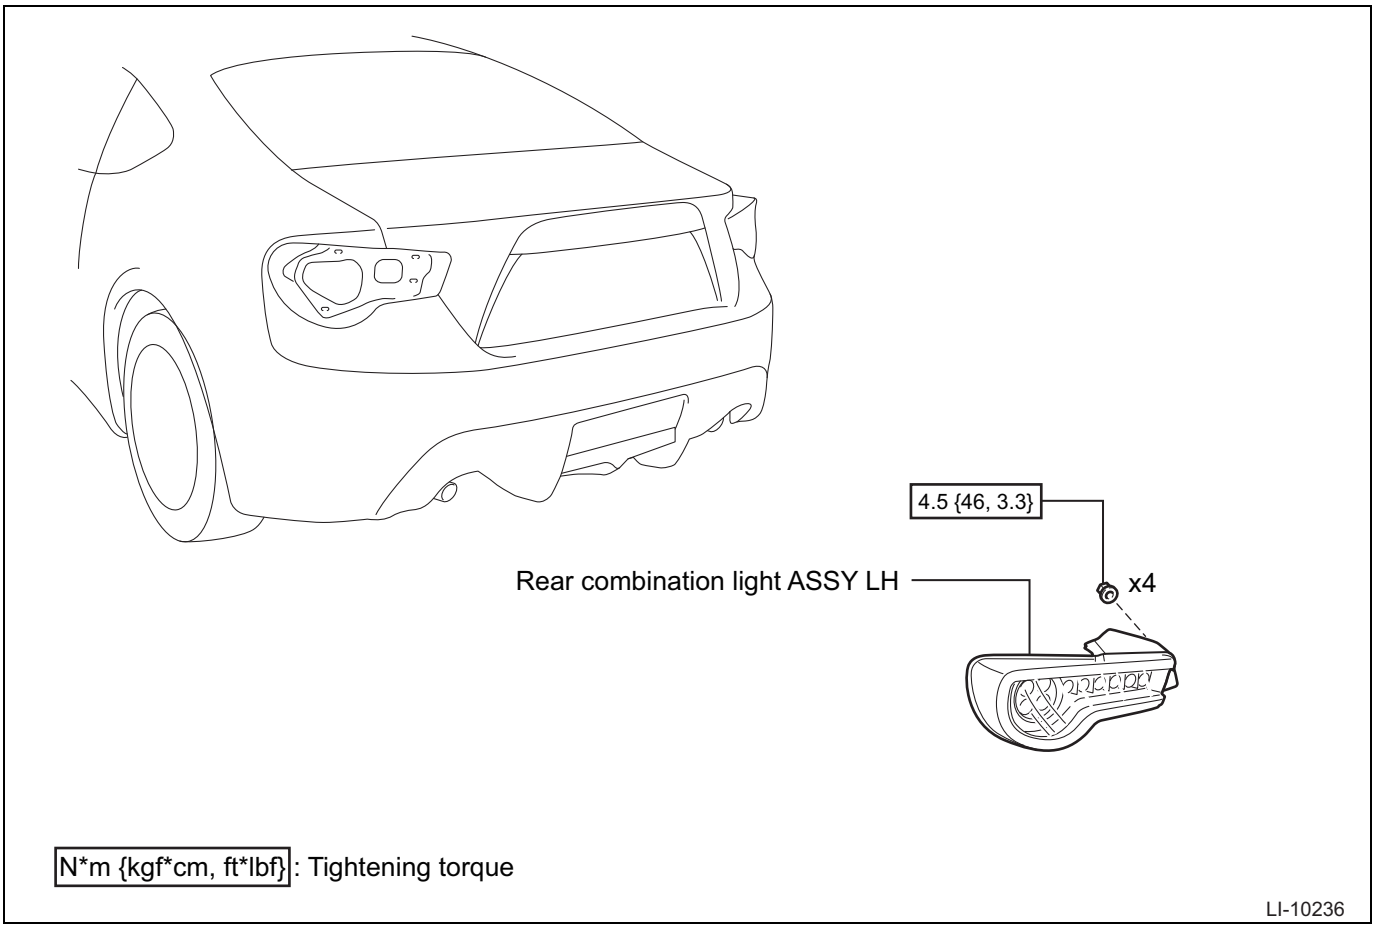
Standard value

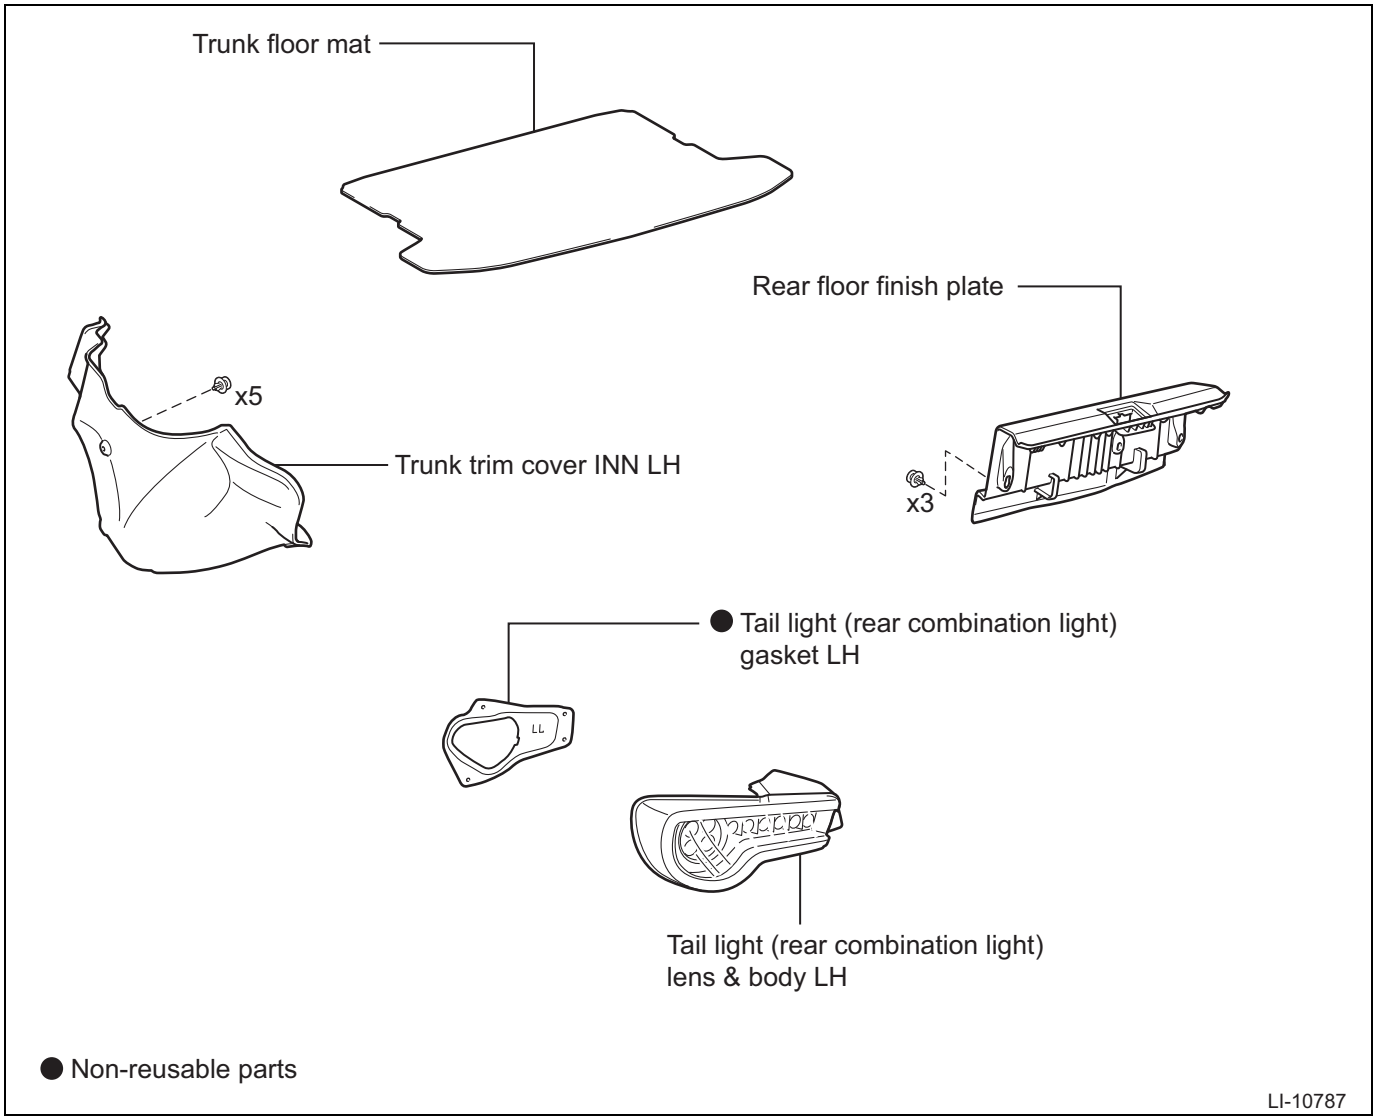
| Part | Standard value |
|---|---|
| a | 3.0 mm {0.118 in} |

   (4) Using the clip, install the front mud guard.

# Rear combination light

## Exploded view



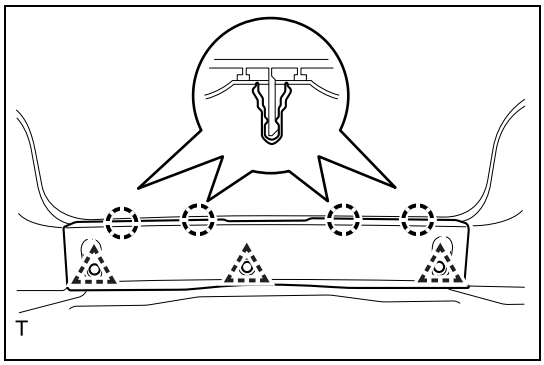


## Removal

NOTE:

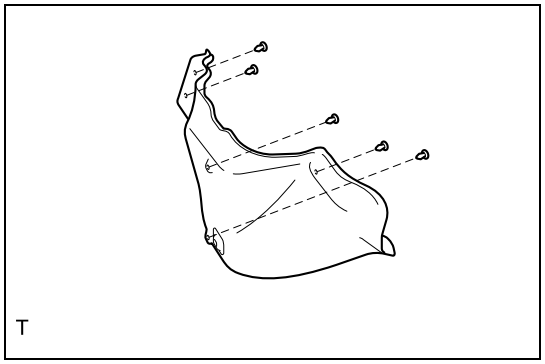
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Removal of the trunk floor mat



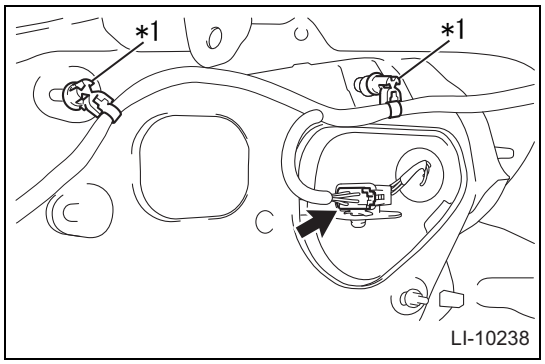
2. Removal of the rear floor finish plate
   (1) Using a clip remover, remove the 3 clips.
   (2) Release the 4 tabs, and remove the rear floor finish plate.

LE



T

3. Removal of the trunk trim cover INN LH
   (1) Using a clip remover, remove the 5 clips and remove the trunk trim cover INN LH.

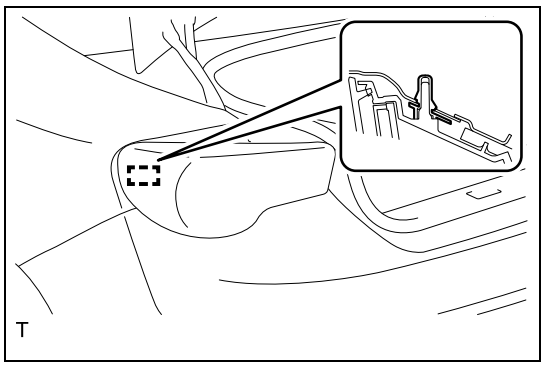


4. Removal of the rear combination light ASSY LH
   (1) Disconnect the connector.

| | |
|---|---|
| *1 | Grommet |

   (2) Remove the 2 grommets, and disconnect the wiring harnesses.

   (3) Remove the 4 nuts.

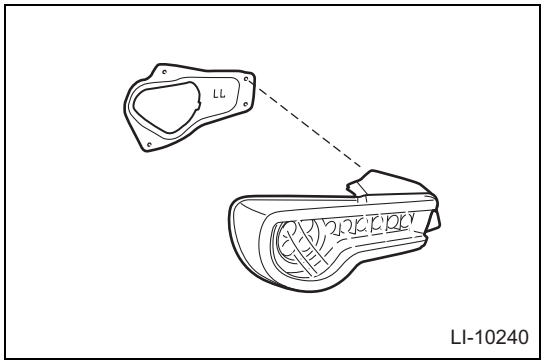


T

   (4) Release the guide, and remove the rear combination light ASSY LH.

## Disassembly

NOTE:
The following procedure is for LH side. Perform the same procedures for the RH and LH side.

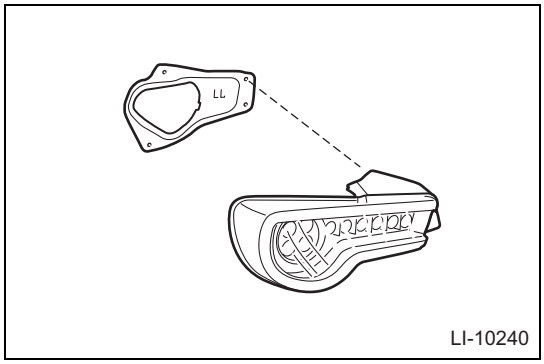


1. Removal of the tail light (rear combination light) gasket LH
   (1) Remove the tail light (rear combination light) gasket LH.
   CAUTION:
   - If the tail light (rear combination light) gasket LH sticks to the body, be sure to remove all of it.
   - Because it may allow water to enter, once you have removed the gasket, be sure to replace it with a new tail light (rear combination light) gasket LH.

## Assembly

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.



1. Installation of the tail light (rear combination light) gasket LH
   (1) Install a new tail light (rear combination light) gasket LH.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

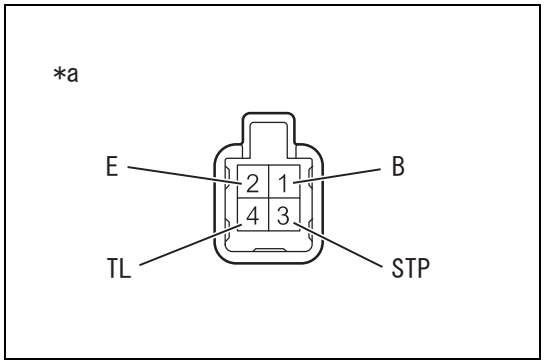
1. Installation of the rear combination light ASSY LH
   (1) Fit in the guide, and temporarily install the rear combination light ASSY LH.

   (2) Tighten the 4 nuts from ?to ?to install the rear combination light ASSY LH.
   NOTE:
   The RH side is mirrored.
   Standard value:T=4.5N·m {46kgf·cm} {3.3ft·lbf}
   (3) Using 2 grommets, install the rear combination light socket & wiring SUB-ASSY LH.
   (4) Connect the connector.
2. Installation of the trunk trim cover INN LH
   (1) Using 5 clips, install the trunk trim cover INN LH.
3. Installation of the rear floor finish plate
   (1) Fit in the 4 tabs, and using 3 clips, install the rear floor finish plate.
4. Installation of the trunk floor mat

## Unit inspection

NOTE:

The following procedure is for LH side. The RH side and the LH side inspections follow the same steps.



1. Inspection of the rear combination light socket & wiring SUB-ASSY LH
   (1) Inspect if the lights turn on when battery voltage is applied between the connector terminals.
   Criteria

| Battery connection | Criteria |
|---|---|
| Battery positive →1 (B)<br>Battery ground →2 (E) | Tail lights, rear side marker lights |
| Battery positive →3 (STP)<br>Battery ground →2 (E) | Stop lights turn on. |
| Battery positive →4 (TL)<br>Battery ground →2 (E) | The turn lights turn on. |

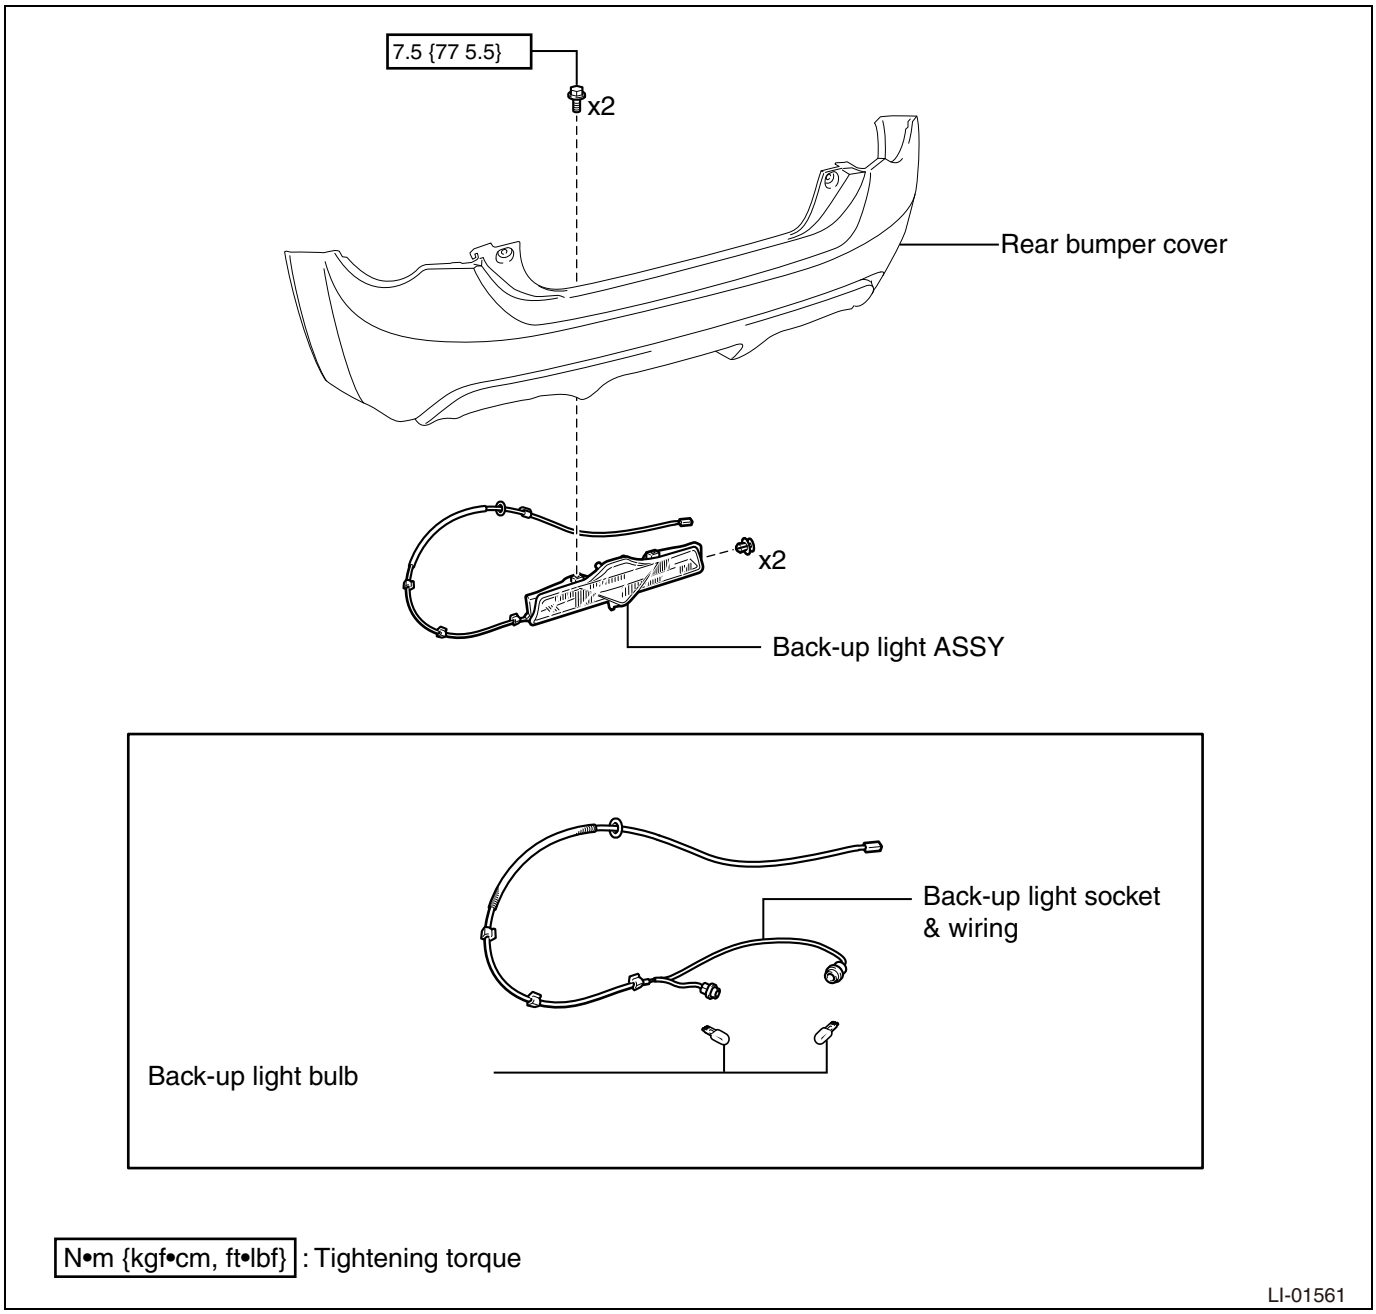
|---|---|
| *a | Connector not connected<br>(Rear combination light socket & wiring SUB-ASSY LH) |

NOTE:
Perform this inspection using new or properly-functioning bulbs.

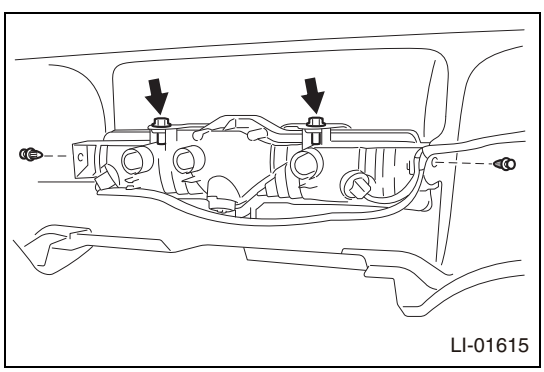
# Back-up light

## Exploded view



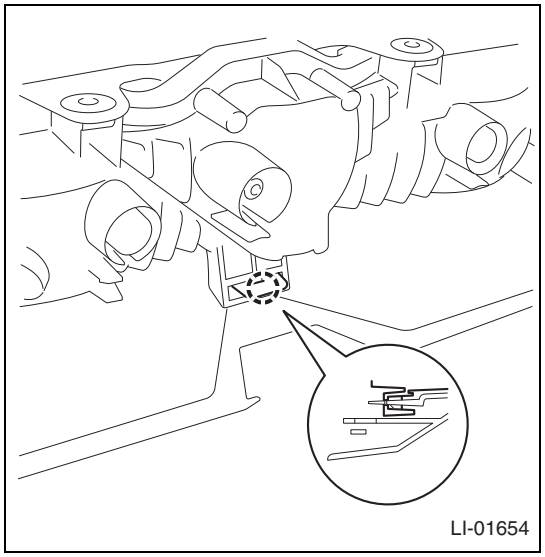
## Removal

1. Removal of the rear bumper cover (Refer to ET - 13)



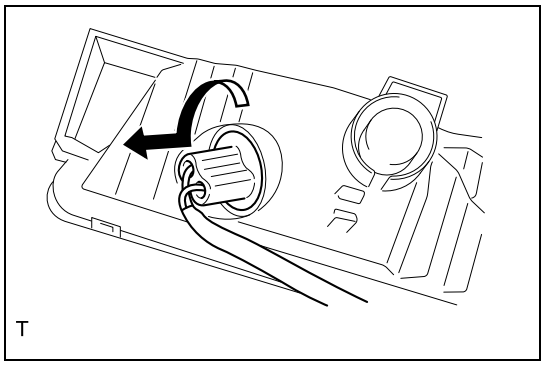
2. Removal of the back-up light ASSY
   (1) Using a clip remover, remove the 2 clips.
   (2) Remove the 2 bolts.

LE

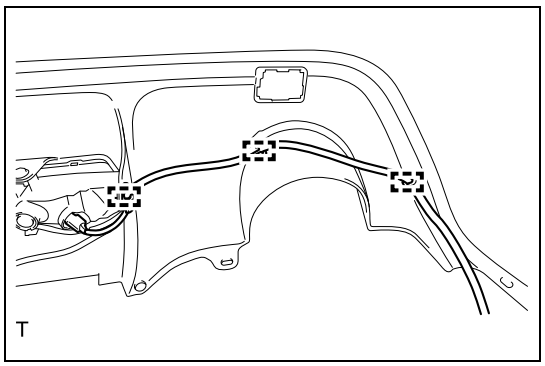


(3) Release the tab, and remove the back-up light ASSY.

## Disassembly

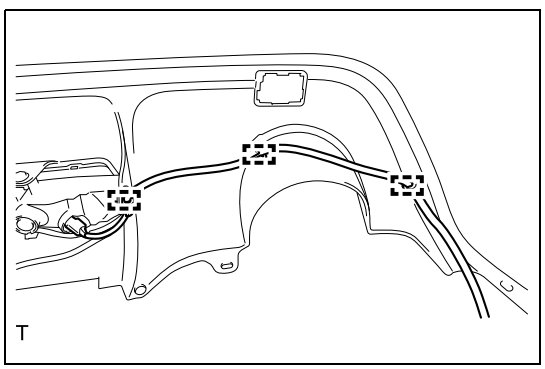


1. Removal of the back-up light bulb
   (1) Turn in the direction of the arrow in the figure, and remove the back-up light bulbs as a unit with the back-up light sockets & wiring.
   (2) Remove the back-up light bulbs from the back-up light sockets & wiring.
   NOTE:
   Remove on the LH side using the same steps as the RH side.



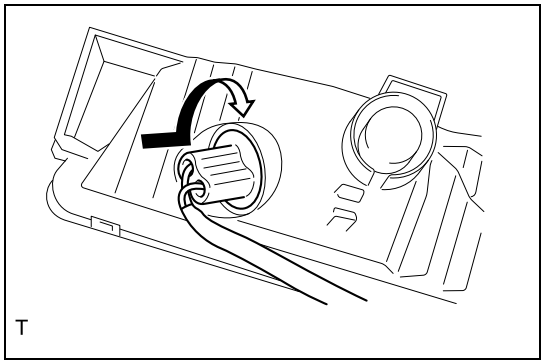
2. Removal of the back-up light sockets & wiring
   (1) Release the 3 clamps in the figure, and remove the back-up light sockets & wiring.

## Assembly



1. Installation of the back-up light sockets & wiring
   (1) Fit in the 3 clamps, and install the back-up light sockets & wiring.

LE

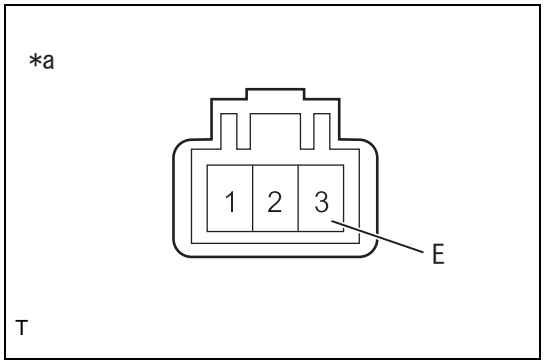


2. Installation of the back-up light bulbs
   (1) Install the back-up light bulbs on the back-up light sockets & wiring.
   (2) Turn in the direction of the arrow in the figure, and install the back-up light bulbs as a unit with the back-up light sockets & wiring.
   NOTE:
   Install on the LH side using the same steps as the RH side.

## Installation

1. Installation of the back-up light ASSY
   (1) Fit in the tab, and install the back-up light ASSY.
   (2) Install the 2 clips.
   (3) Install the 2 bolts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
2. Installation of rear bumper cover (Refer to ET - 21)

## Unit inspection



1. Inspection of the back-up light
   (1) Inspect if the back-up light turns on when battery voltage is applied between the terminals.

Criteria

| Battery connection | Criteria |
|---|---|
| Battery positive →1<br>Battery ground →3 (E) | The back-up light turns on. |

Captions in illustration

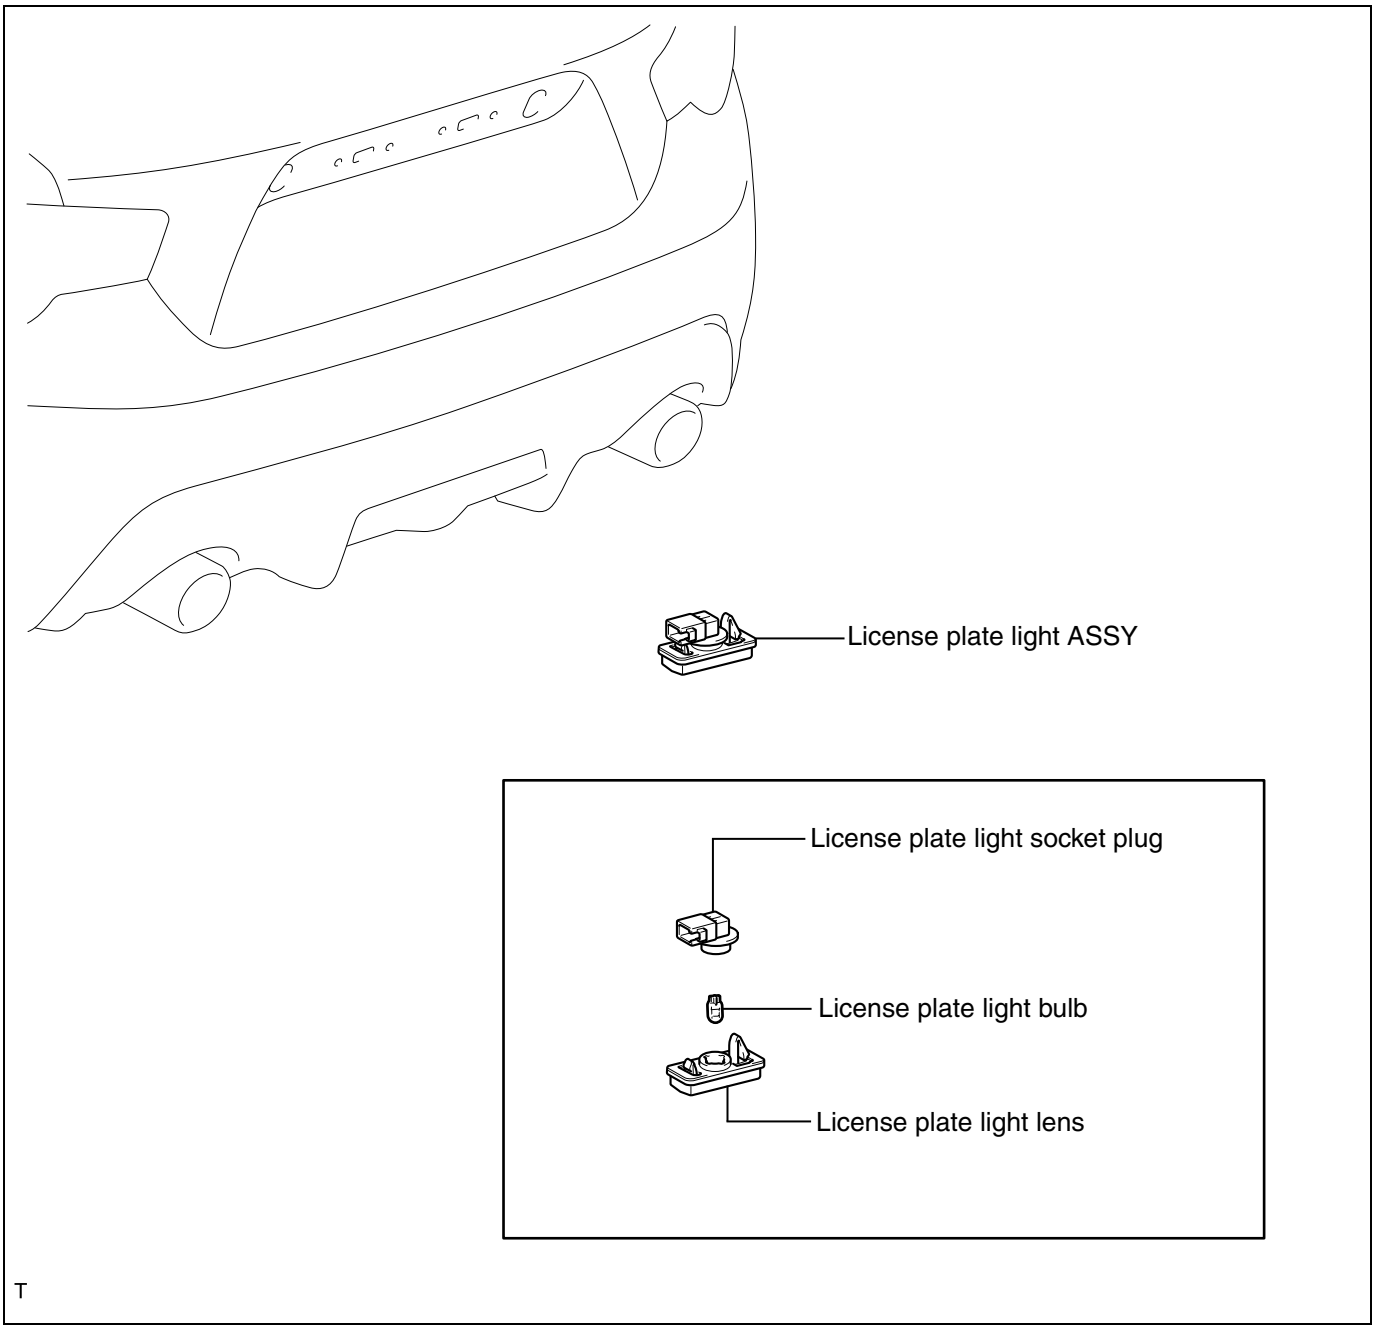
|---|---|
| *a | Connector not connected<br>(Back-up light sockets & wiring) |

NOTE:
Perform this inspection using new or properly-functioning bulbs.

# License plate light

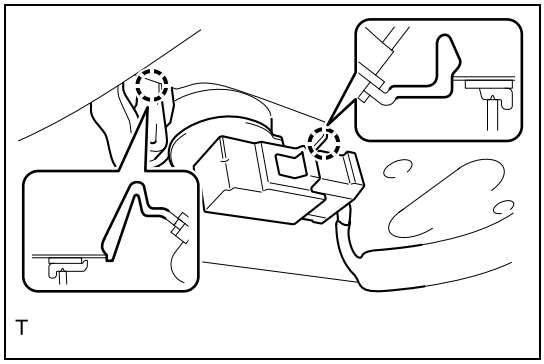
## Exploded view



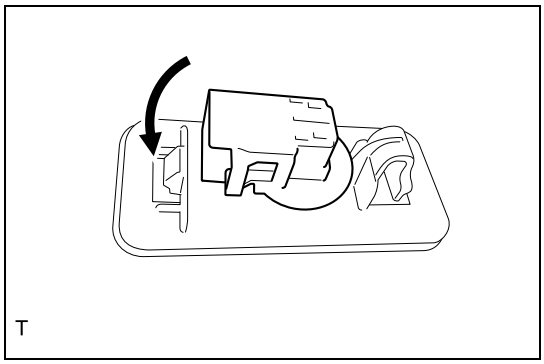
LE

## Removal

1. Removal of trunk garnish (Refer to ET - 40)



2. Removal of the license plate light ASSY
   (1) Release the 2 tabs and remove the license plate light ASSY.



3. Removal of the license plate light bulb
   (1) Turn in the direction of the arrow in the figure, and remove the license plate light bulb as a unit with the license plate light socket plug.
   (2) Remove the license plate light bulb from the license plate light socket plug.

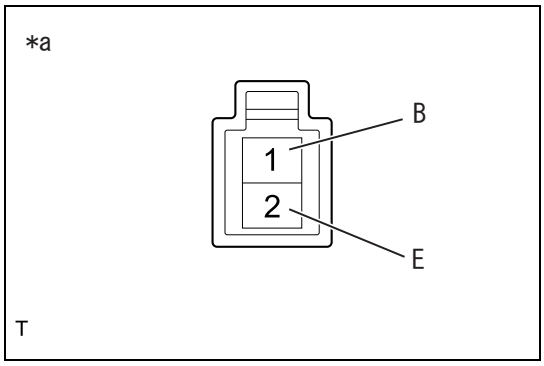
## Installation

1. Installation of the license plate light bulb
   (1) Install the license plate light bulb on the license plate light socket plug.

   (2) Turn in the direction of the arrow in the figure, and install the license plate light bulb as a unit with the license plate light socket plug.

2. Installation of the license plate light ASSY
   (1) Fit in the 2 tabs and install the license plate light ASSY.
3. Installation of trunk garnish (Refer to ET - 41)

## Unit inspection



1. Inspection of the license plate light ASSY
   (1) Light inspection
      (a)Inspect if the light turns on when battery voltage is applied to each connector terminal.

Criteria

| Battery connection | Criteria |
|---|---|
| Battery positive →1 (B)<br>Battery ground →2 (E) | Light turns on. |

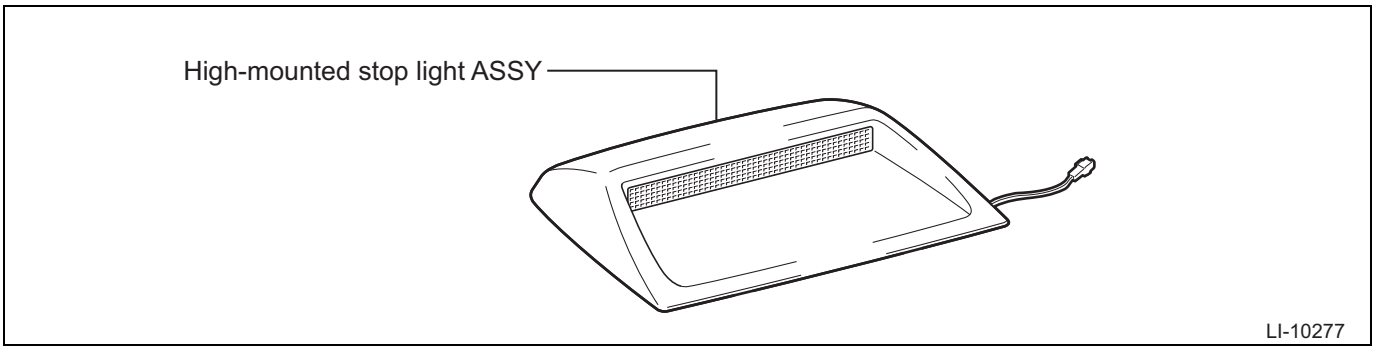
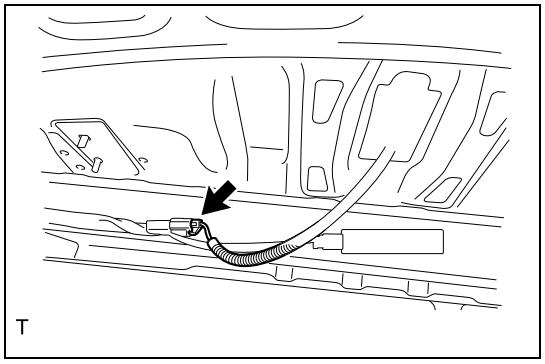
# High-mounted stop light

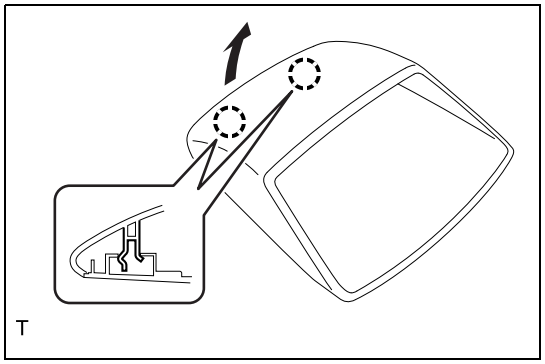
## Exploded view



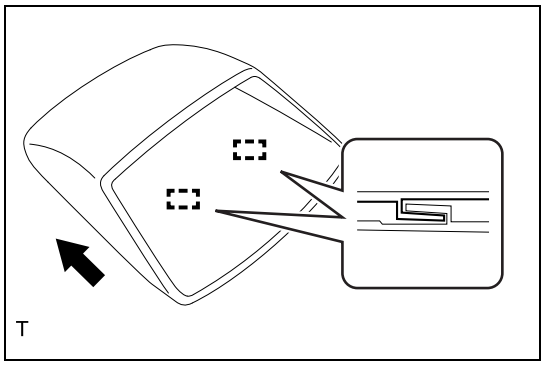
## Removal



1. Removal of the high-mounted stop light ASSY
   (1) Disconnect the connector.



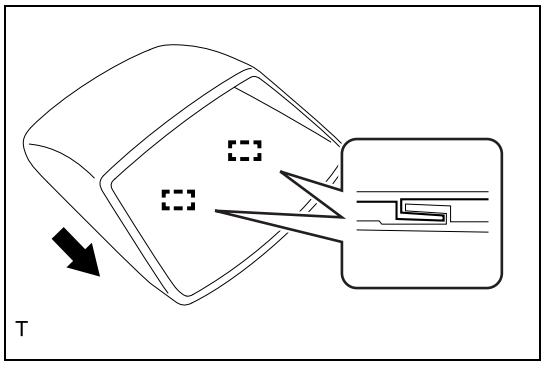
(2) Lift in the direction of the arrow in the figure, and release the 2 tabs.



(3) Slide in the direction of the arrow in the figure, release the 2 guides, and remove the high-mounted stop light ASSY.

LE

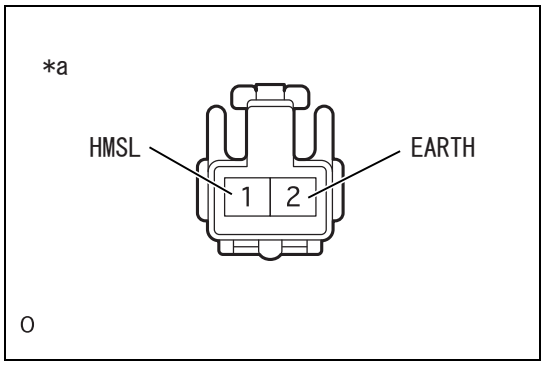
## Installation



1. Installation of the high-mounted stop light ASSY
   (1) Slide in the direction of the arrow in the figure, and insert the 2 guides.

   (2) Engage two claws and install the high-mounted stop light ASSY.
   (3) Connect the connector.

## Unit inspection



1. Check of high-mounted stop light ASSY
   (1) Connect the battery positive and ground between each terminal, and check if the high-mounted stop light ASSY turns on.
   Criteria

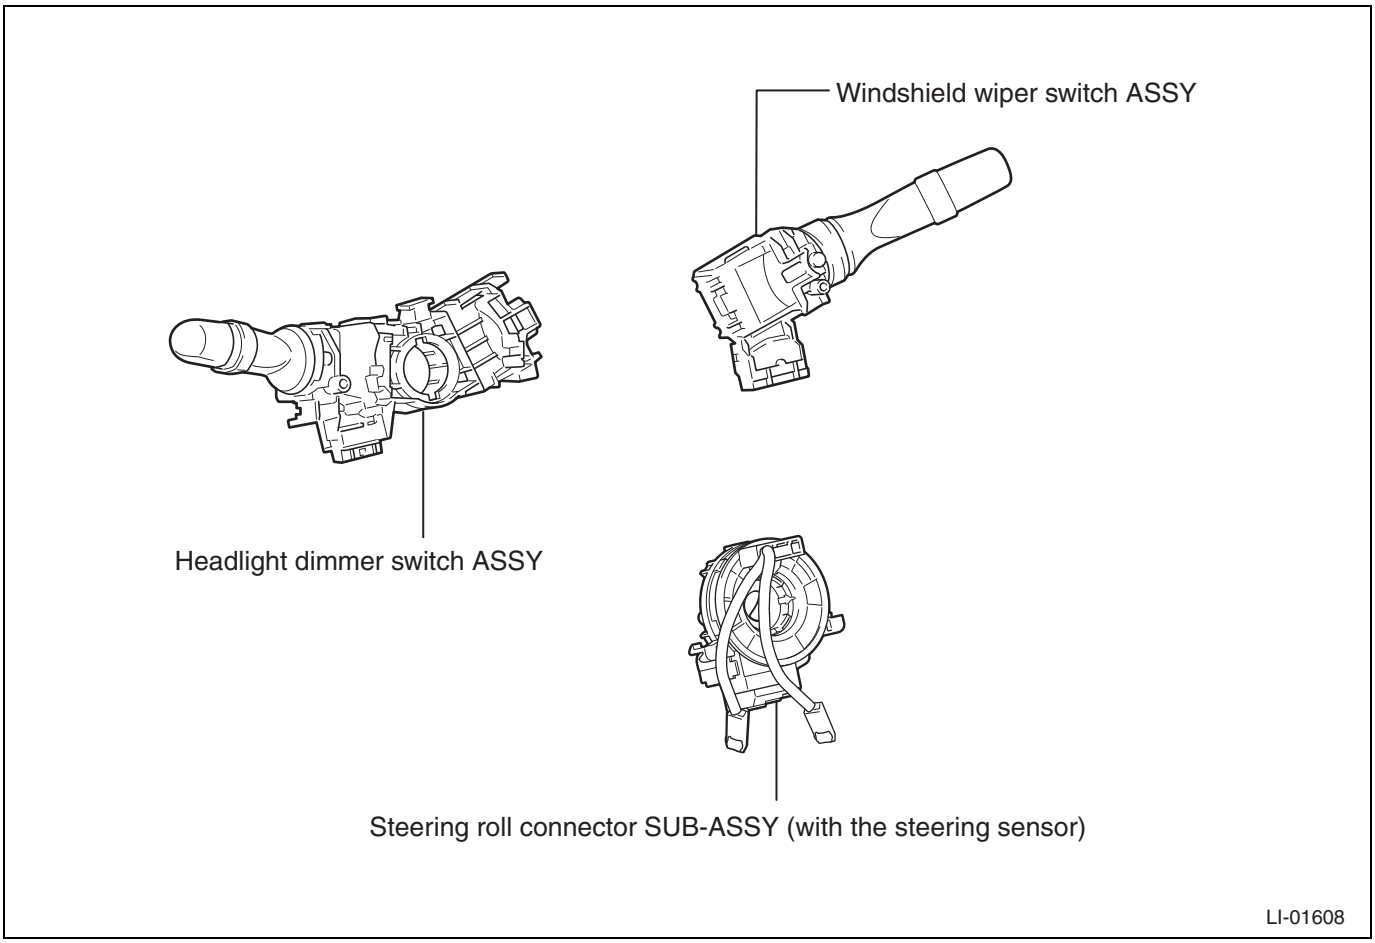
| Battery connection | Criteria |
|---|---|
| Battery positive →1 (HMSL)<br>Battery ground →2 (EARTH) | The high-mounted stop light ASSY turns on. |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(High-mounted stop light ASSY) |

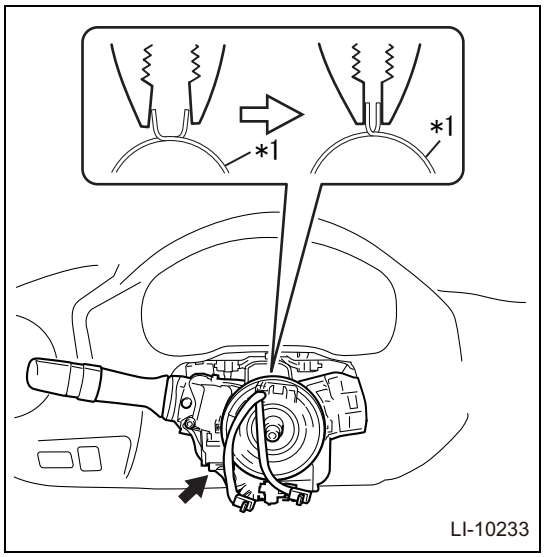
# Headlight dimmer switch

## Exploded view



## Removal

1. Removal of the steering roll connector SUB-ASSY (with steering sensor) (Refer toRS - 250)
2. Removal of the windshield wiper switch ASSY (Refer to WW - 23)

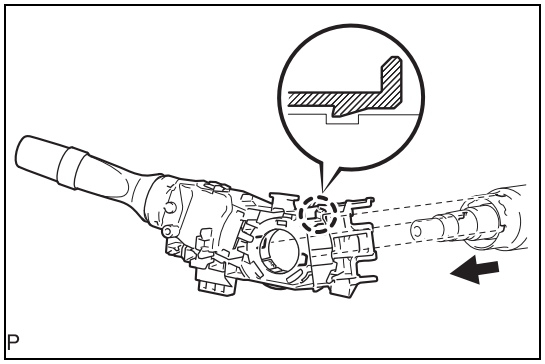


3. Removal of the headlight dimmer switch ASSY
   (1) Disconnect the connector.
   (2) Using pliers, loosen the band clamp as in the figure.

Captions in illustration

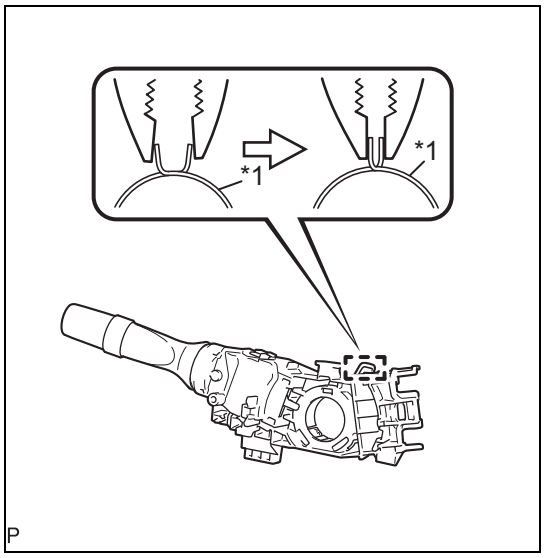
| | |
|---|---|
| *1 | Band clamp |

LE



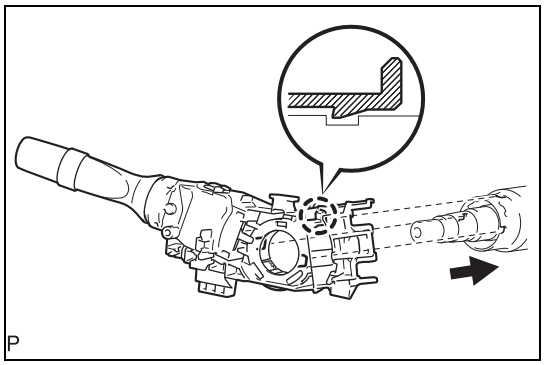
(3) With the band clamp loosened, release the tab, and remove the headlight dimmer switch ASSY.

## Installation

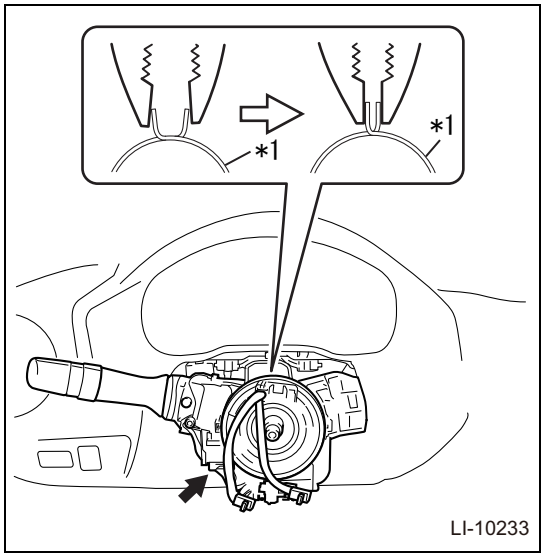


1. Installation of the headlight dimmer switch ASSY
   (1) Using pliers, loosen the band clamp as in the figure.

| | |
|---|---|
| *1 | Band clamp |



(2) With the band clamp loosened, insert the headlight dimmer switch ASSY on the steering column so that the convex and concave parts of the turning stopper match.
(3) Fit in the tab, and install the headlight dimmer switch ASSY.



(4) As in the figure, install the band clamp.

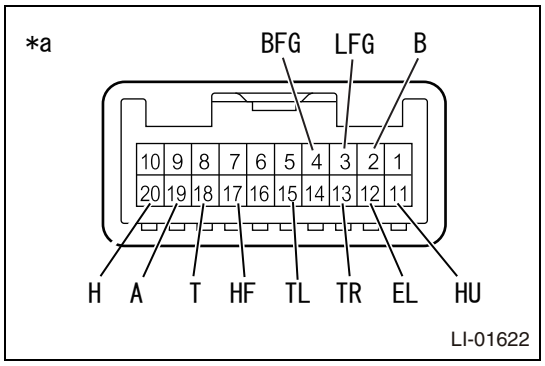
Captions in illustration

| | |
|---|---|
| *1 | Band clamp |

(5) Connect the connector.

2. Installation of the windshield wiper switch ASSY (Refer to WW - 23)
3. Installation of the steering roll connector SUB-ASSY (with steering sensor) (Refer to RS - 252)

## Unit inspection



1. Inspection of the headlight dimmer switch ASSY
   (1) Measurement of the Resistance of the light control switch
      (a)Check the resistance between the connector terminals.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 18 (T) - 12 (EL) | Light control switch OFF | 10 kΩ or more |
| 20 (H) - 12 (EL) | | 10 kΩ or more |
| 19 (A) - 12 (EL) [*1] | | 10 kΩ or more |
| 18 (T) - 12 (EL) | Light control switch TAIL | Less than 1 Ω |
| 18 (T) - 12 (EL) | Light control switch HEAD | Less than 1 Ω |
| 20 (H) - 12 (EL) | | Less than 1 Ω |
| 19 (A) - 12 (EL) [*1] | Light control switch AUTO | Less than 1 Ω |

*1: With light control system

   (2) Measurement of the Resistance of the dimmer switch
      (a)Check the resistance between the connector terminals.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 11 (HU) - 12 (EL) | Dimmer switch FLASH | Less than 1 Ω |
| 17 (HF) - 12 (EL) | | Less than 1 Ω |
| 11 (HU) - 12 (EL) | Dimmer switch HI BEAM | Less than 1 Ω |

NOTE:
"HI BEAM" inspection is performed when the light control switch is in the "HEAD" position.

   (3) Measurement of the Resistance of the turn signal switch
      (a)Check the resistance between the connector terminals.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 13 (TR) - 12 (EL) | Turn signal switch OFF | 10 kΩ or more |
| 15 (TL) - 12 (EL) | | 10 kΩ or more |
| 13 (TR) - 12 (EL) | Turn signal switch (TURN R) ON | Less than 1 Ω |
| 15 (TL) - 12 (EL) | Turn signal switch (TURN L) ON | Less than 1 Ω |

(4) Measurement of the Resistance of the fog light switch

(a)Check the resistance between the connector terminals.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 4 (BFG) - 3 (LFG) [*1] | Fog light switch OFF | 10 kΩ or more |
| 4 (BFG) - 3 (LFG) [*1] | Fog light switch Fr | Less than 1 Ω |

*1: With front fog lights

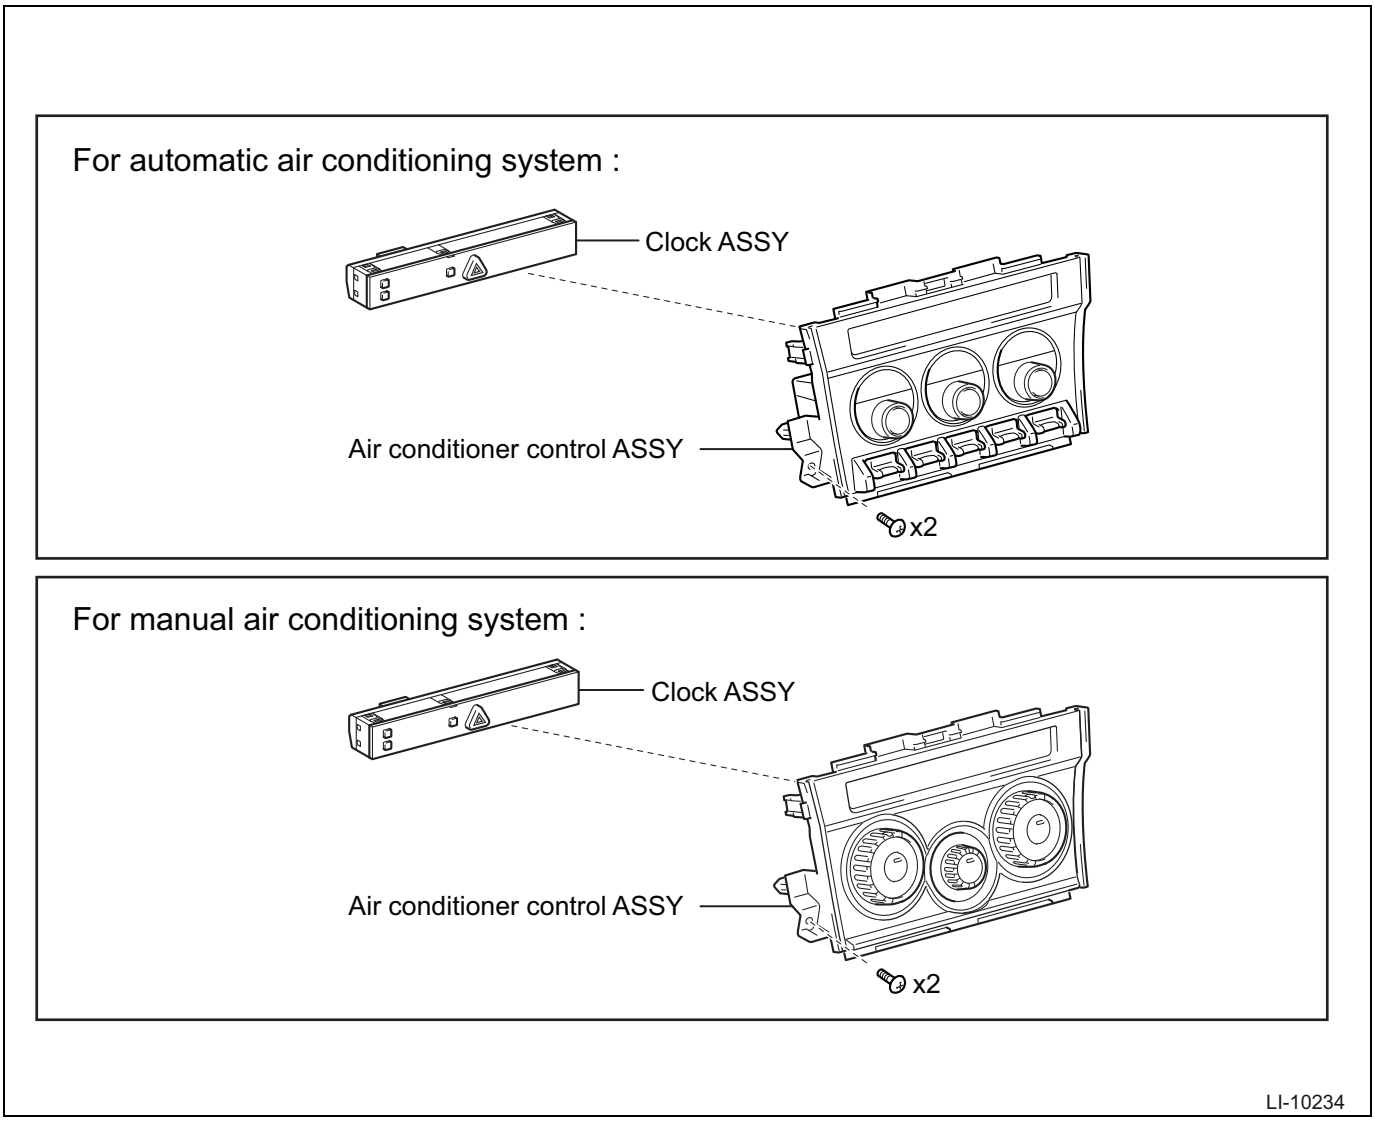
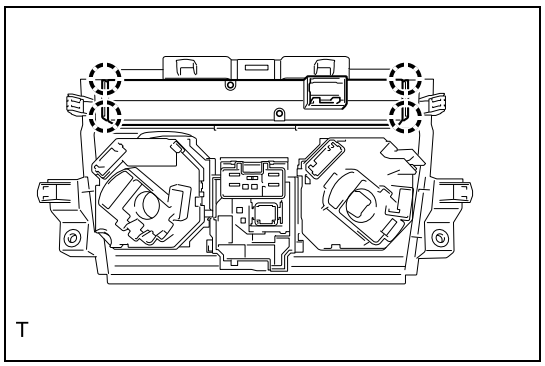
# Hazard warning switch

## Exploded view



## Removal

1. Removal of the air conditioner control ASSY (for automatic air conditioning systems) (Refer to AC - 163)
2. Removal of the air conditioner control ASSY (for manual air conditioning systems) (Refer to AC - 167)



3. Removal of the clock ASSY
   (1) Release the 4 tabs, and remove the clock ASSY.

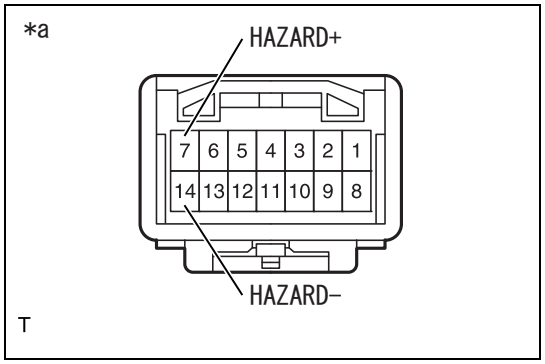
LE

## Installation

1. Installation of the clock ASSY
   (1) Fit in the 4 tabs and install the clock ASSY.

2. Installation of the air conditioner control ASSY (for automatic air conditioning systems) (Refer to AC - 164)
3. Installation of the air conditioner control ASSY (for manual air conditioning systems) (Refer to AC - 171)

## Unit inspection



1. Inspection of the clock ASSY
   (1) Measurement of the resistance of the hazard warning signal switch
      (a)Measure the resistance between connector terminals when the hazard warning signal switch is operated.
      Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| 7 (HAZARD+) - 14 (HAZARD-) | Switch OFF | 10 kΩ or more |
| 7 (HAZARD+) - 14 (HAZARD-) | Switch ON | Less than 1 Ω |

   (2) Inspection of LED light (night-time illumination)
      (a)Inspect if the LED light turns on when battery voltage is applied to each connector terminal.

Criteria

| Inspection terminals | Criteria |
|---|---|
| Battery positive →9<br>Battery ground →13 | Light turns on. |

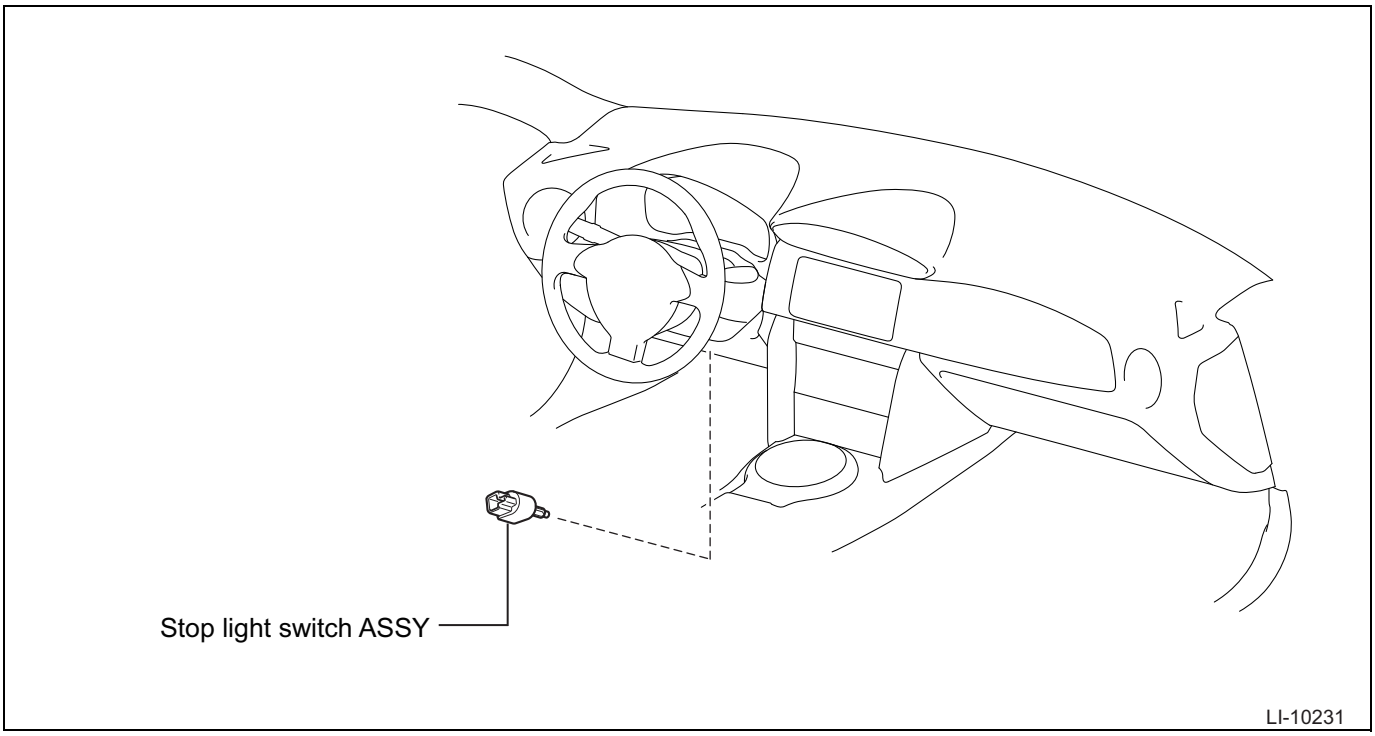
Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Clock ASSY) |

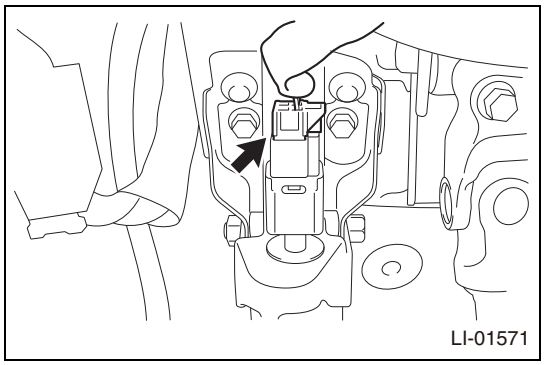
LE

# Stop light switch

## Exploded view



## Removal

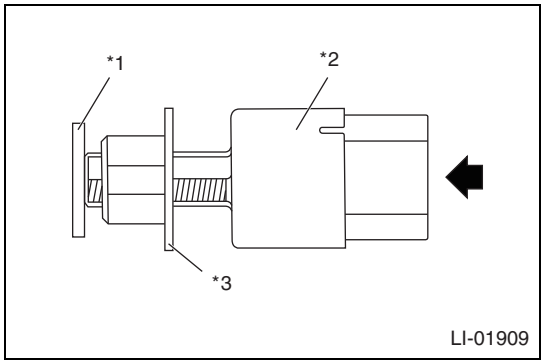


1. Removal of the stop light switch ASSY
   (1) Disconnect the connector.

   (2) Turn in the direction in the figure, and remove the stop light switch ASSY.

## Installation

1. Installation of the stop light switch ASSY

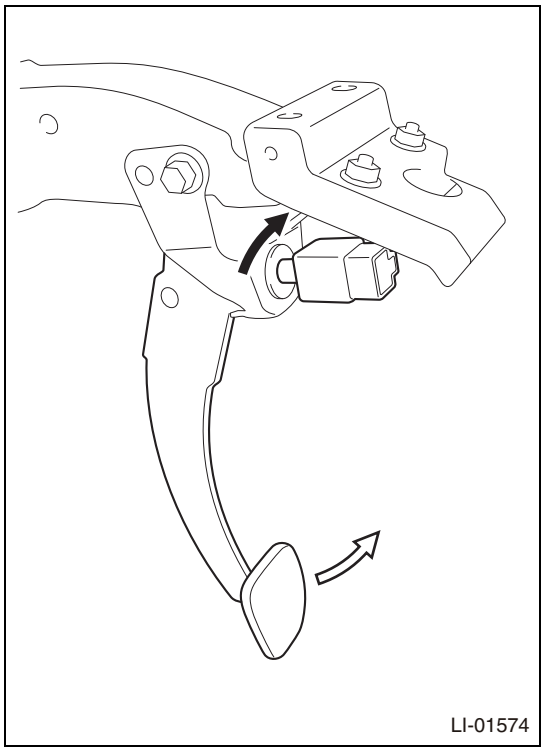


(1) Align the groove of the stop light switch ASSY mounting adjuster and the cutout portion of the push rod for stop light switch.

(2) Pull up the brake pedal and let the push rod of the stop light switch ASS stroke, then push in the stop lamp switch until it touches the stopper.

Captions in illustration

| | |
|---|---|
| *1 | Stopper |
| *2 | Stop light switch ASSY |
| *3 | Stop light switch ASSY mounting adjuster |



(3) Rotate the stop light switch by 45° clockwise and then secure it while holding the brake pedal towards you.

CAUTION:

- When disassembling or assembling the brake pedal, be sure to install the stop light switch ASSY last.
- When pressing the stop light switch to the stopper, do not push it too hard.
- The stop light switch ASSY should be tightened to the specified torque or less.

Standard value:T=3.0 N·m {30 kgf·cm} {2.2 ft·lbf}

(4) Check the brake pedal play when pushing the brake pedal with a force of less than 10 N {1 kgf, 2.2 lbf}.
Standard value: 0.5 - 2.7 mm {0.019 - 0.106 in}

(5) Connect the connector.

(6) Connect the battery ground terminal.

(7) Check that brake lights turn on.
NOTE:
Check that the stop light turns on after depressing the brake pedal by 5 mm (0.2 in) or more.

2. Operation check for the stop light switch ASSY

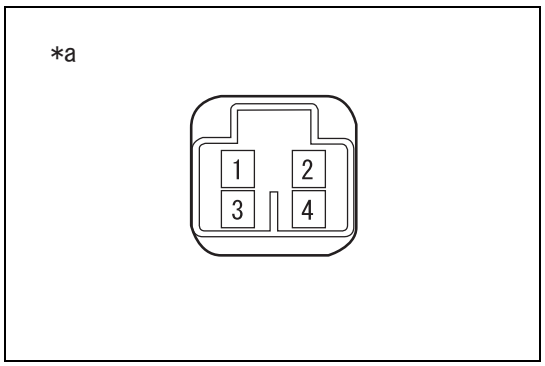
(1) Turn the ignition switch to OFF and connect the SSM4 to the DLC3.

(2) Turn the ignition switch to ON, follow the screen display of the SSM4, and display the data for [Stop Lamp Switch] and [Master cylinder pressure].

(3) Without depressing the brake pedal, check that the stop light switch is OFF.

(4) Slowly depress the brake pedal, measure the master cylinder pressure when the stop light switch changes from OFF to ON, and check that it is within the standard values.
Standard value: Less than 0.27 MPa

## Unit inspection



1. Inspection of the stop light switch ASSY.
   (1) Resistance check
      (a)Measure the resistance according to the following chart.

Resistance

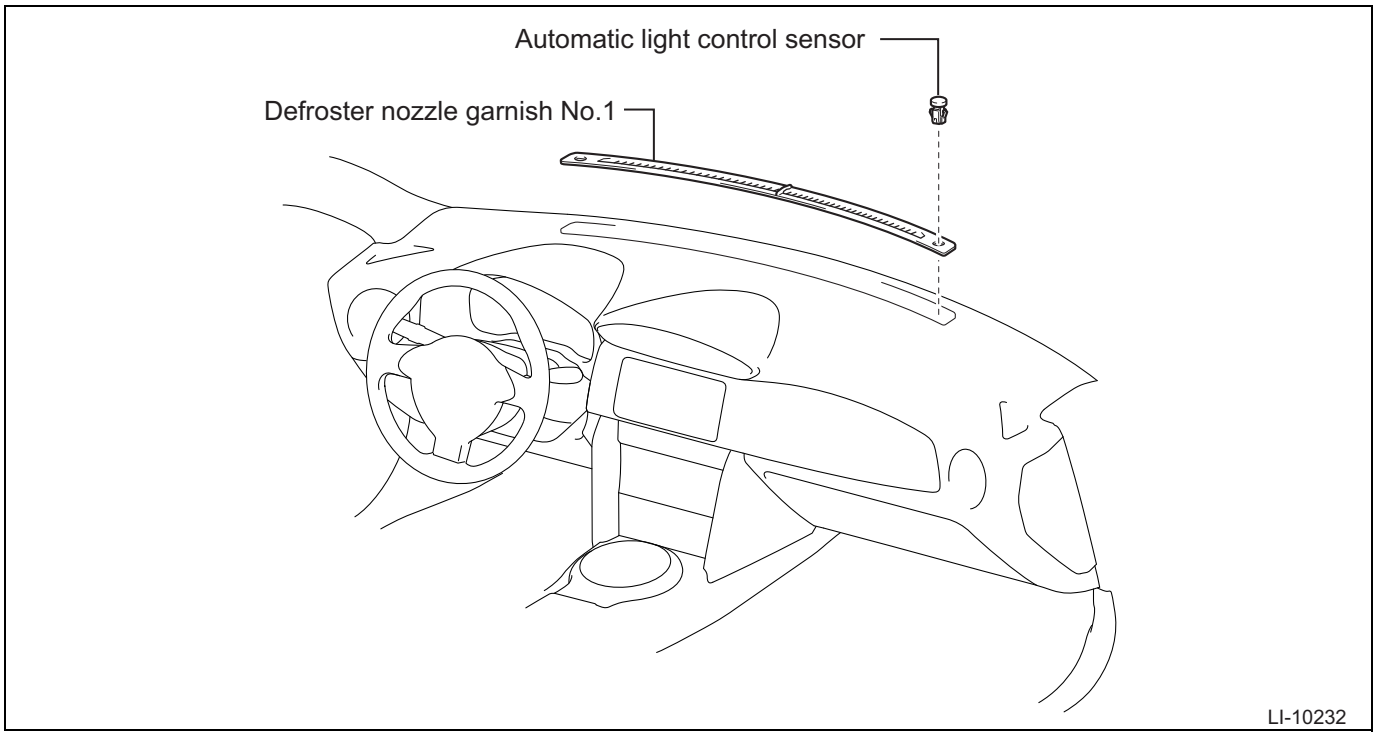
| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 1 - 2 | When the shaft is not pushed in | Less than 1 Ω |
| | When the shaft is pushed in | 10 kΩ or more |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Stop light switch ASSY) |

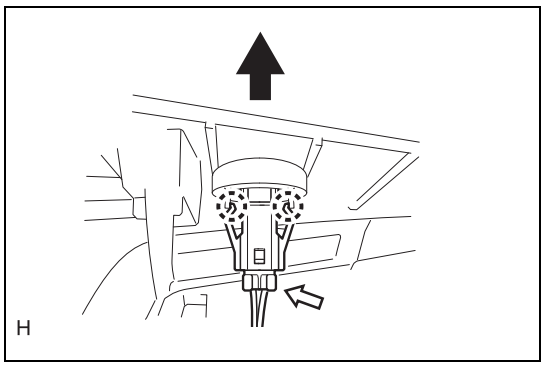
# Automatic light control sensor

## Exploded view



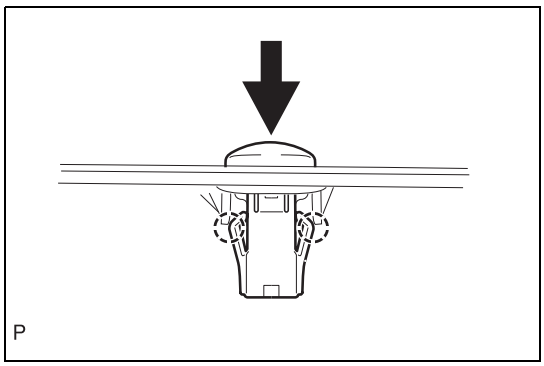
## Removal

1. Disconnection of the defroster nozzle garnish NO.1 (Refer to AC - 155)



2. Removal of the automatic light control sensor
   (1) Disconnect the connector.
   (2) Release the 2 tabs, and remove the automatic light control sensor.

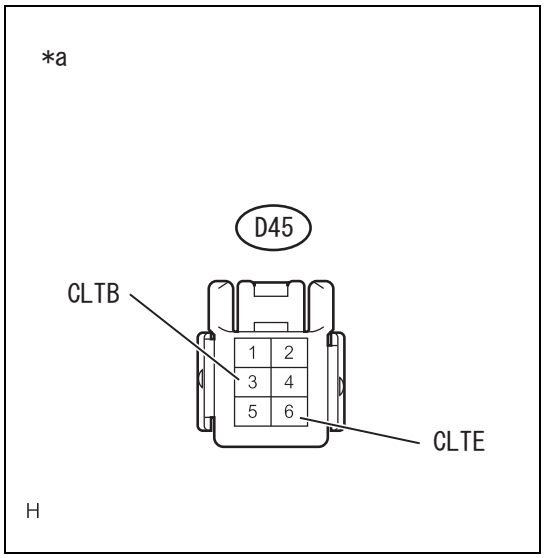
## Installation



1. Installation of the automatic light control sensor
   (1) Fit in the 2 tabs, and install the automatic light control sensor.
   (2) Connect the connector.

2. Installation of the defroster nozzle garnish NO.1 (Refer to AC - 156)

## On-vehicle inspection



1. Inspection of the automatic light control sensor
   (1) Sensor power supply
      (a) Disconnect the connector D45 of the automatic light control sensor.
      (b) Measure the voltage according to the following chart.

Voltage

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D45-3 (CLTB) - D45-6 (CLTE) | IG OFF →IG ON | 11 to 14V |

      (c) Measure the resistance according to the following chart.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D45-6 (CLTE) - chassis ground | Always | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Front side of vehicle wiring harness connector (Automatic light control sensor) |

   (2) Sensor waveform
      (a) Connect the connector D45 of the automatic light control sensor.
      (b) Using a oscilloscope, inspect if a waveform is occurring between the terminals.
      CAUTION:
      With the connectors connected, perform this inspection from the rear of the connectors.
      NOTE:
      Match the oscilloscope settings with chart 1.

Chart 1

| Item | Contents |
|---|---|
| Measuring terminal | D45-4 (CLTS) - D45-6 (CLTE) |
| Equipment setting | 5 V/DIV, 5 ms/DIV |
| Measuring conditions | IG ON, light control switch is AUTO, automatic light control sensor is covered by something that doesn't let light through →exposed |

Standard value (waveform)

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D45-4 (CLTS) - D45-6 (CLTE) | IG ON, light control switch is AUTO, automatic light control sensor is covered by something that doesn't let light through →exposed | Shown in the figure |

      NOTE:
      The brighter the area becomes, the shorter the A interval becomes.

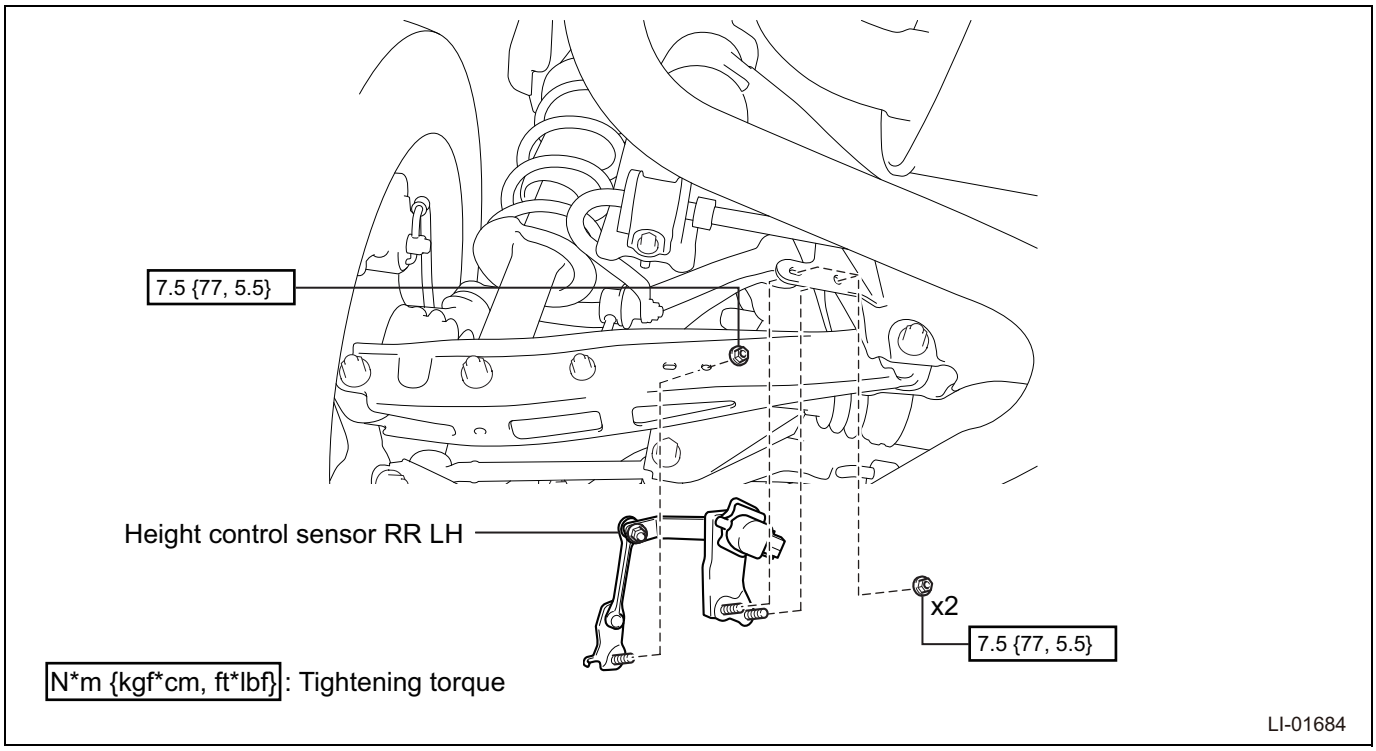
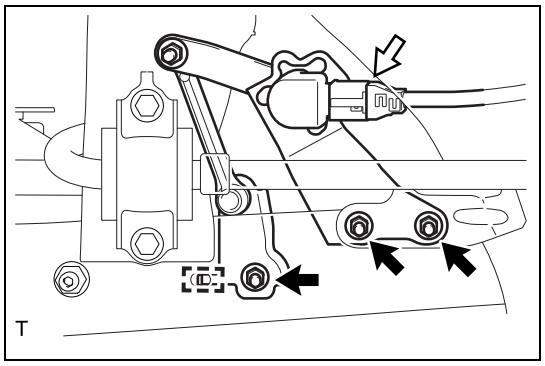
LE

# Height control sensor

## Exploded view

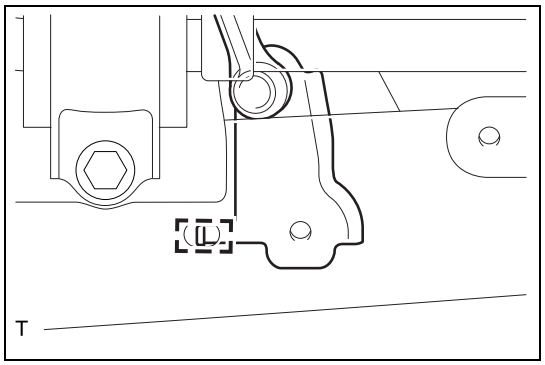


## Removal



1. Removal of the height control sensor RR LH
   (1) Disconnect the connector.
   (2) Remove 3 nuts and remove the height control sensor RR LH.
   CAUTION:
   If you drop the height control sensor RR LH, replace it with a new one.

## Installation



1. Installation of the height control sensor RR LH
   (1) Align the guide to the position in the figure, and install the height control sensor RR LH with 3 nuts.
   Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
   (2) Connect the connector.
2. Initialization of the headlight leveling computer (Refer to LE - 38)
3. Headlight beam adjustment (Refer to LE - 51)

## Unit inspection

1. Inspection of the height control sensor RR LH
   (1) Preparation before inspection
      (a)Connect 3 dry-cell batteries (1.5 V) in series.
      CAUTION:
      Do not use rechargeable dry-cell batteries. They may not output 1.5 V of voltage.

      (b)Connect the battery's positive terminal to the connector terminal 3, the battery ground to terminal 1, and apply 4.5 V of voltage between terminals 3 and 1.

   (2) Measuring voltage
      (a)With the voltage applied, measure the voltage between terminals when slowly moving the link up and down.

Voltage

| Inspection terminals (Terminal symbol) | Link angle (vehicle height) | Standard value |
|---|---|---|
| 2 (OUT) - 1 (GND) | +45° (high) | Approx. 4.5 V |
| 2 (OUT) - 1 (GND) | -15° (standard position for inspection) | Approx. 2.5 V |
| 2 (OUT) - 1 (GND) | -45° (low) | Approx. 0.5 V |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(Height control sensor RR LH) |
| *b | +45° |
| *c | -15° |
| *d | -45° |
| *e | Criteria |

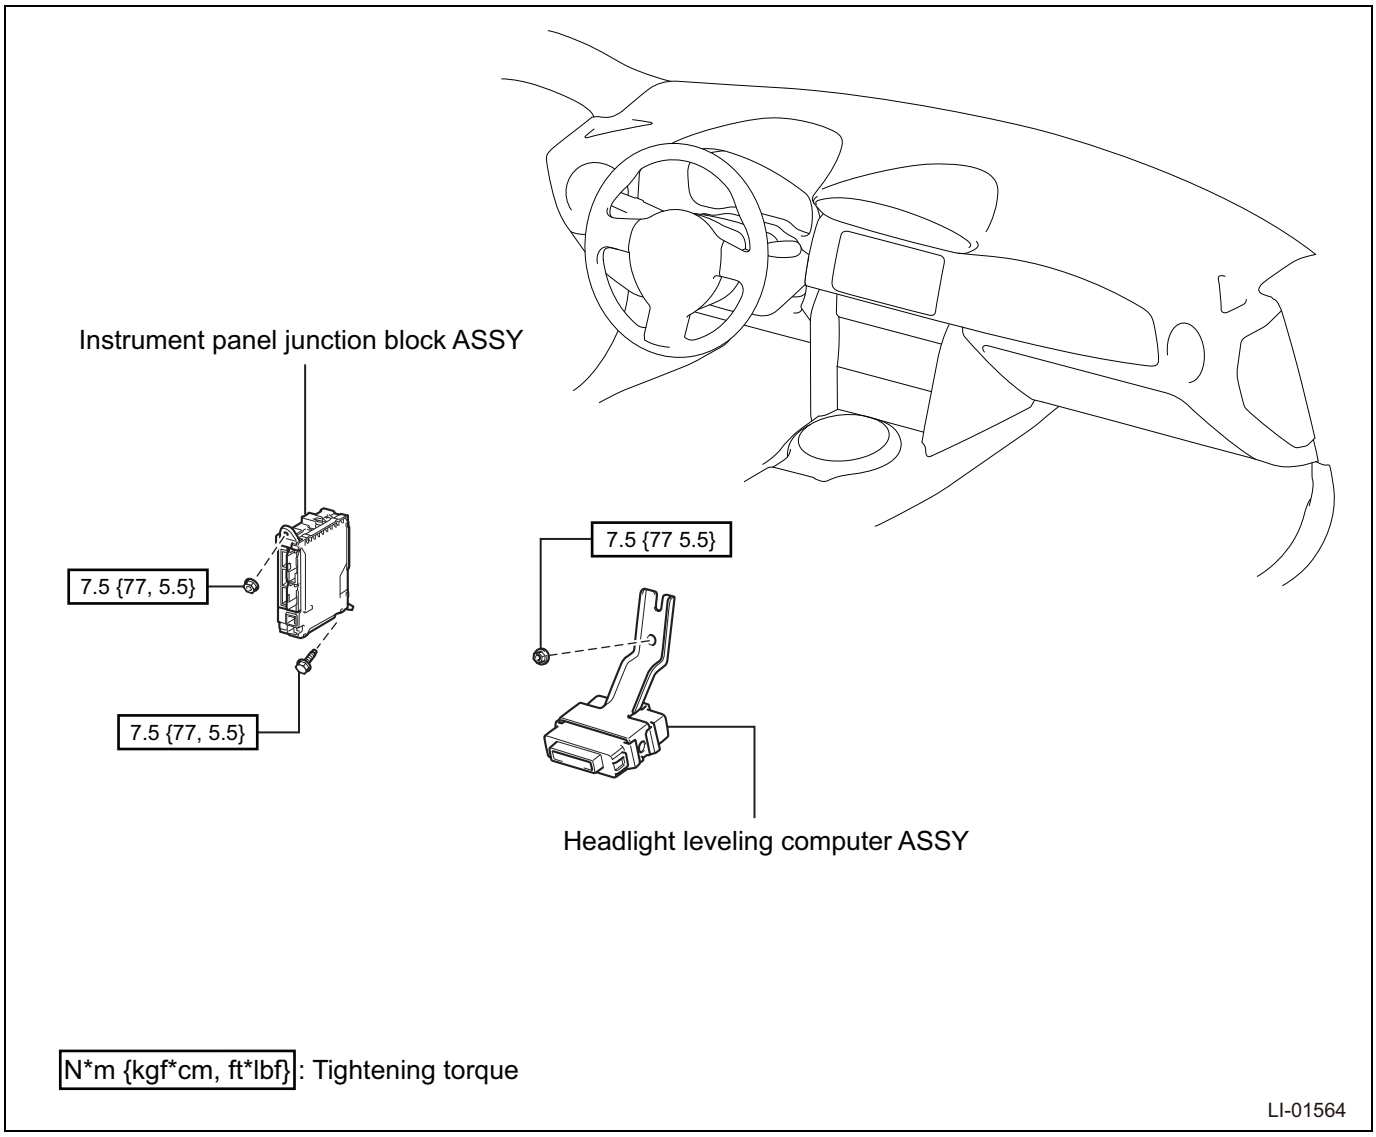
LE

CAUTION:
- Do not apply 5 V or more of voltage between the terminals.
- If you drop the height control sensor RR LH, replace it with a new one.

NOTE:
If the power source voltage changes, so will the output voltage.

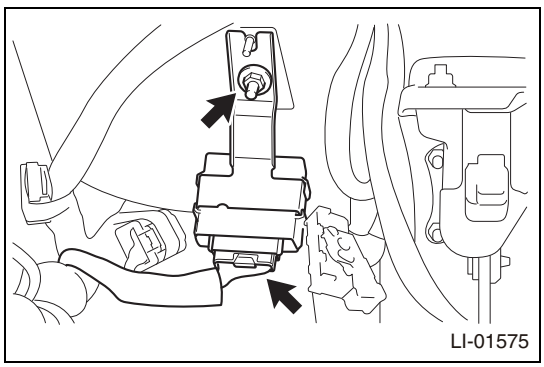
# Headlight leveling computer

## Exploded view



## Removal

1. Removal of the power steering computer ASSY (Refer to PA - 40)
2. Removal of the instrument panel junction block ASSY (Refer to PD - 25)



3. Removal of the headlight leveling computer ASSY
   (1) Disconnect the connector.
   (2) Remove the nut, and remove the headlight leveling computer ASSY.

LE

## Installation

1. Installation of the headlight leveling computer ASSY
   (1) Use a nut to install the headlight leveling computer ASSY.

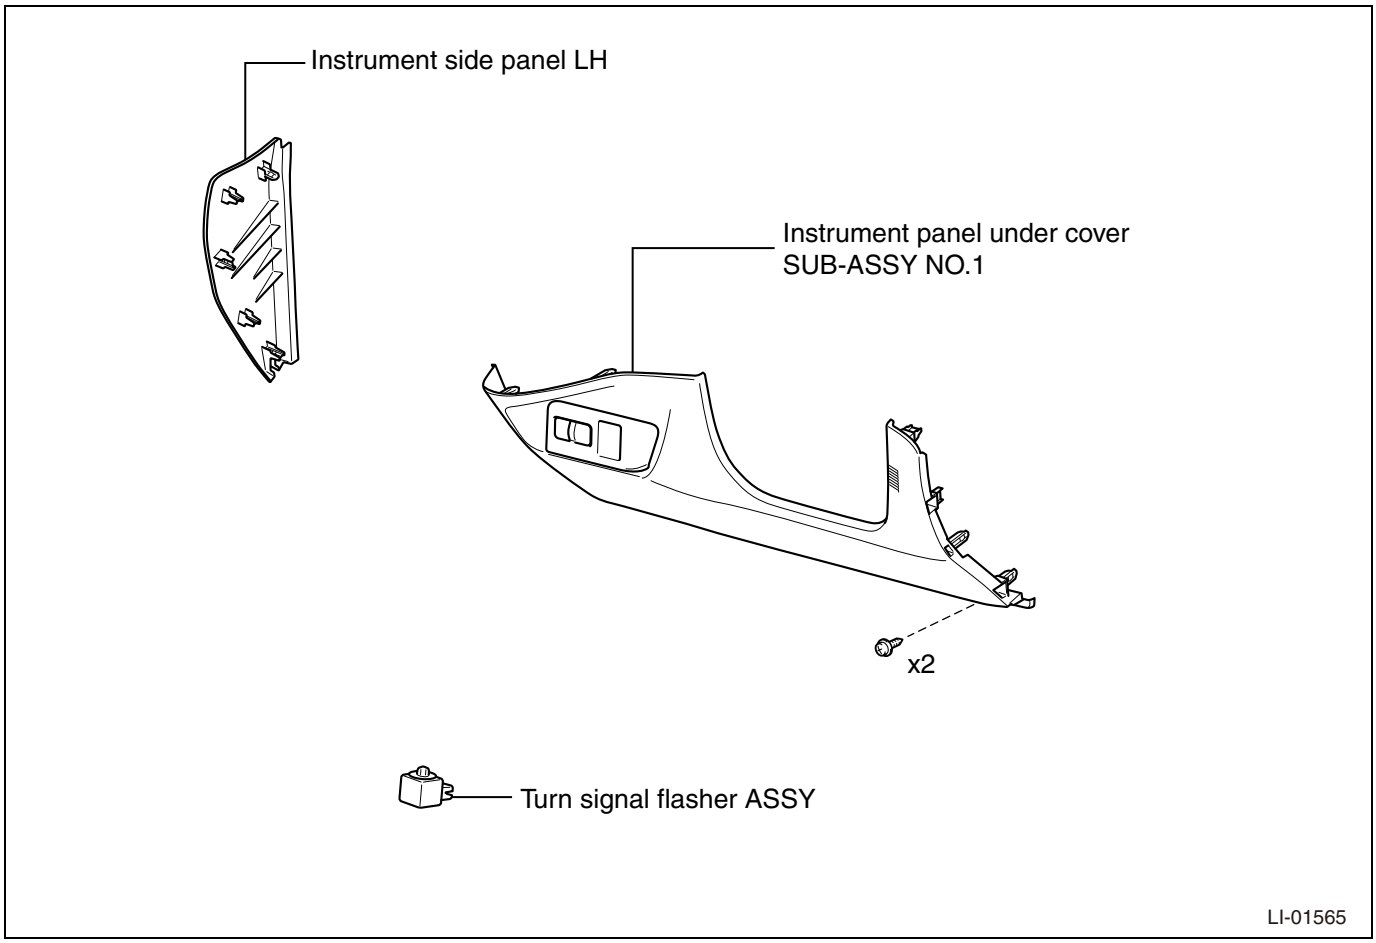
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

(2) Connect the connector.

2. Installation of the instrument panel junction block ASSY (Refer to PD - 28)
3. Installation of the power steering computer ASSY (Refer to PA - 41)
4. Initialization of the headlight leveling computer ASSY (Refer to LE - 38)
5. Headlight beam adjustment (Refer to LE - 51)

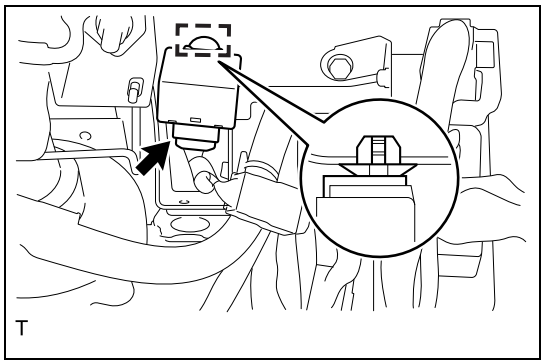
# Turn signal flasher

## Exploded view



## Removal

1. Removal of the instrument side panel RH (Refer to IT - 24)
2. Removal of the instrument panel under cover SUB-ASSY No. 1 (Refer to ME - 68)

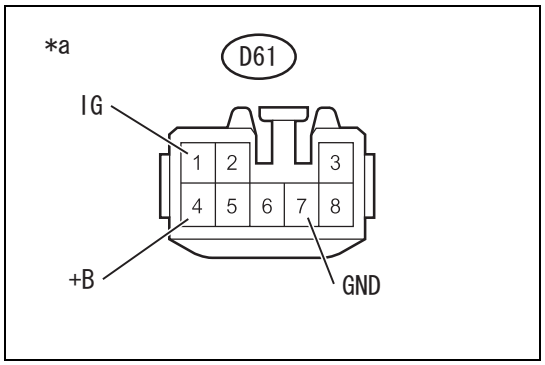


3. Removal of the turn signal flasher ASSY
   (1) Using a clip remover, release the clamp.
   (2) Disconnect the connector and remove the turn signal flasher ASSY.

## Installation

1. Installation of the turn signal flasher ASSY
   (1) Connect the connector.
   (2) Fit in the clamp, and install the turn signal flasher ASSY.
2. Installation of the instrument panel under cover SUB-ASSY No.1 (Refer to ME - 69)
3. Installation of the instrument side panel RH (Refer to IT - 29)

## On-vehicle inspection



1. Inspection of the turn signal flasher ASSY
   (1) Inspection of input / output operation
   (a) Disconnect the connector D61 of the turn signal flasher ASSY.
   (b) Measure the voltage between the each terminal of the vehicle wiring harness connector and the chassis ground.

Voltage

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D61-4 (+B) - chassis ground | IG OFF | 11 to 14 V |
| D61-1 (IG) - chassis ground | IG OFF →ON | Less than 1 V →11 to 14 V |

   (c) Measure the resistance between the each terminal of the vehicle wiring harness connector and the chassis ground.

Resistance

| Inspection terminals (Terminal symbol) | Inspection conditions | Standard value |
|---|---|---|
| D61-7 (GND) - chassis ground | Always | Less than 1 Ω |

Captions in illustration

| | |

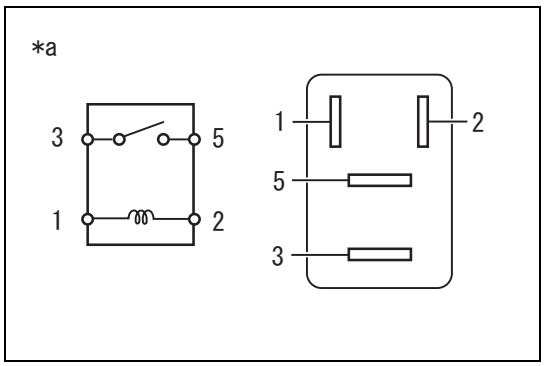
# Relay

## Unit inspection



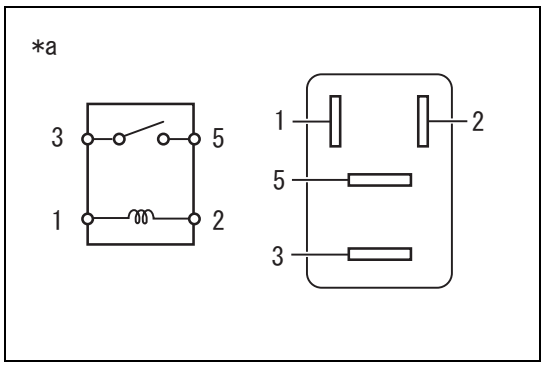
1. Inspection of the H-LP relay
   (1) Measure the resistance between connector terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3 - 5 | When battery voltage is not applied between terminals 1 and 2. | 10 kΩ or more |
| | When battery voltage is applied between terminals 1 and 2. | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Relay not connected (H-LP relay) |



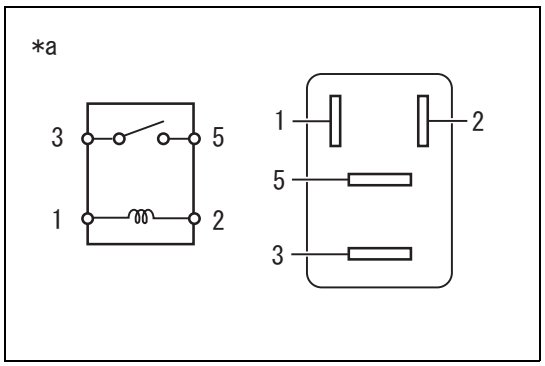
2. Inspection of the DIM relay
   (1) Measure the resistance between connector terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3 - 5 | When battery voltage is not applied between terminals 1 and 2. | 10 kΩ or more |
| | When battery voltage is applied between terminals 1 and 2. | Less than 1 Ω |

Captions in illustration

| | |
|---|---|
| *a | Relay not connected (DIM relay) |



3. Inspection of the RR FOG relay
   (1) Measure the resistance between connector terminals.

Resistance

| Inspection terminals | Inspection conditions | Standard value |
|---|---|---|
| 3 - 5 | When battery voltage is not applied between terminals 1 and 2. | 10 kΩ or more |
| | When battery voltage is applied between terminals 1 and 2. | Less than 1 Ω |

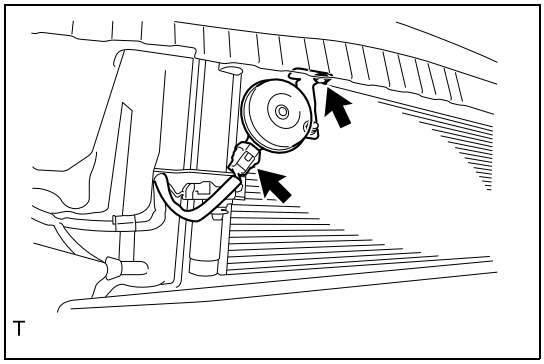
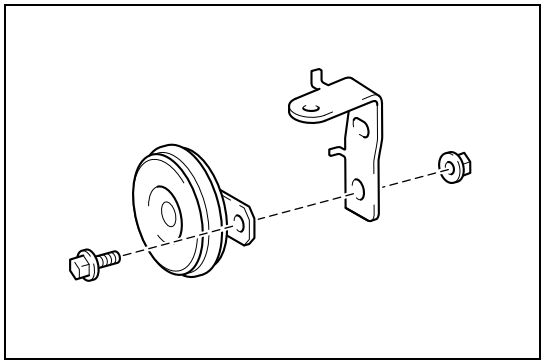
COM00207

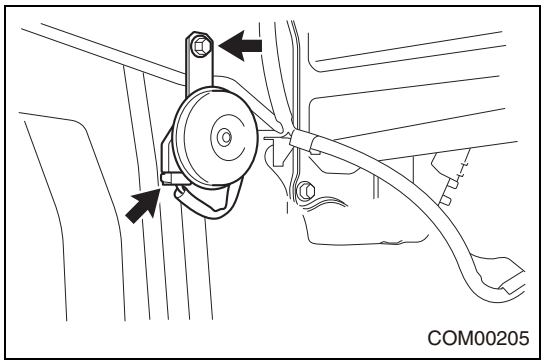
## Removal



1. Removal of the high-pitched horn ASSY
   (1) Remove the front bumper cover. (Refer to ET - 2)
   (2) Disconnect the connector.
   (3) Remove the bolt, and remove the high-pitched horn ASSY as a unit with the horn bracket.



2. Removal of the horn bracket
   (1) Remove the bolt and the nut, and remove the horn bracket from the high-pitched horn ASSY.

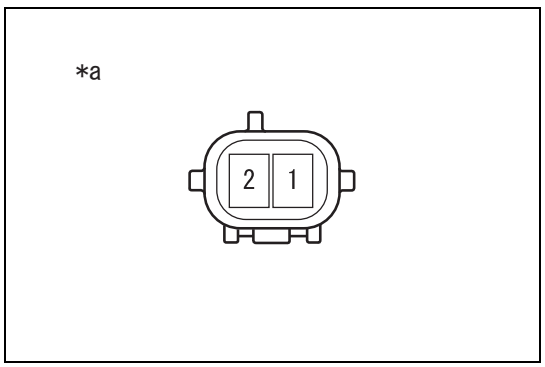


3. Removal of the low-pitched horn ASSY
   (1) Turn over the mud guard RH.
   (2) Disconnect the connector.
   (3) Remove the bolt, and remove the low-pitched horn ASSY.

## Installation

1. Installation of the low-pitched horn ASSY
   (1) Using the bolt, install the low-pitched horn ASSY.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
   (2) Connect the connector.
2. Installation of the horn bracket
   (1) Using the bolt and nut, install the horn bracket on the high-pitched horn ASSY.
   Standard value:T=18N·m {184kgf·cm} {13.3ft·lbf}
3. Installation of the high-pitched horn ASSY
   (1) Using the bolt, install the high-pitched horn ASSY as a unit with the horn bracket.
   Standard value:T=13N·m {132kgf·cm} {9.6ft·lbf}
   (2) Connect the connector.
4. Installation of the front bumper cover (Refer to ET - 10)

## Unit inspection



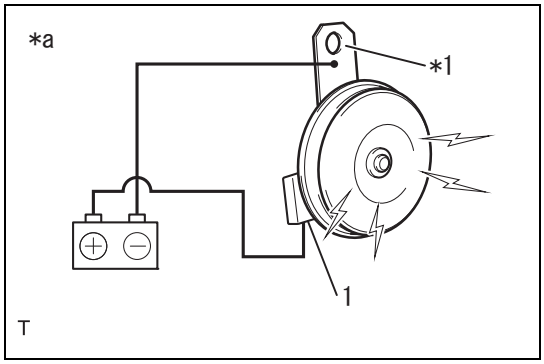
1. Inspection of the high-pitched horn ASSY
   (1) Inspect if the high-pitched horn ASSY sounds when battery voltage is applied between each connector terminal.

Criteria

| Inspection terminals | Criteria |
|---|---|
| Battery positive →1<br>Battery ground →2 | The high-pitched horn ASSY sounds. |

Captions in illustration

| | |
|---|---|
| *a | Connector not connected<br>(High-pitched horn ASSY) |



2. Inspection of the low-pitched horn ASSY
   (1) Inspect if the low-pitched horn ASSY sounds when battery voltage is applied between the terminal and the bracket.

Criteria

| Inspection terminals | Criteria |
|---|---|
| Battery positive →1<br>Battery ground →bracket | The low-pitched horn ASSY sounds. |

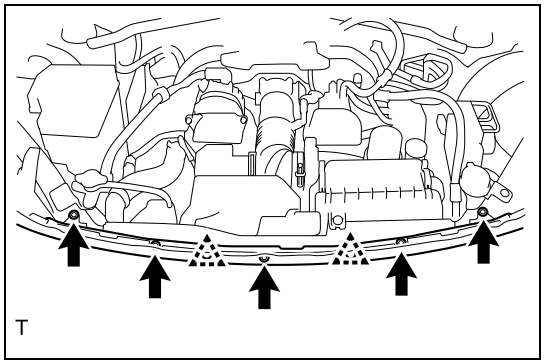
## Removal

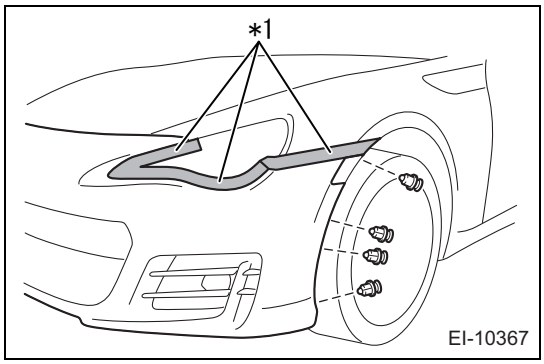
1. Removal of the front side marker light ASSY LH (Refer to LE - 57)
2. Removal of the front side marker light ASSY RH
   NOTE:
   Remove the part in the same manner as LH side.

ET



T

3. Removal of the front bumper retainer UPR
   (1) Remove the 2 clips.
   (2) Remove the 5 bolts, and remove the front bumper retainer UPR.



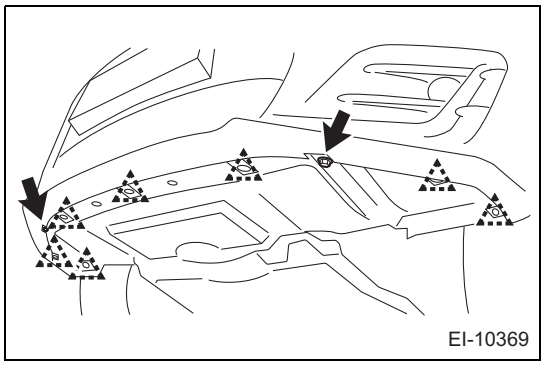
4. Removal of the front bumper cover
   (1) Apply protective tape to the location shown in the figure.

Captions in illustration

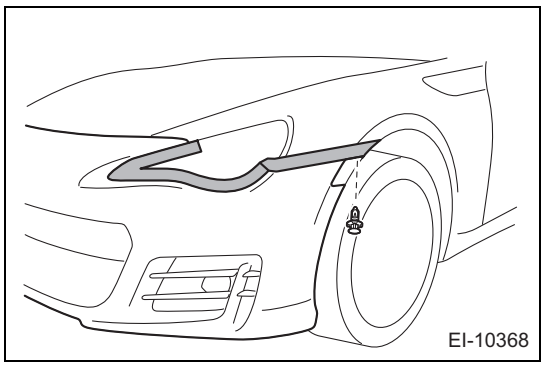
| | |
|---|---|
| *1 | Protective tape |

NOTE:
Perform same procedures for the RH side.

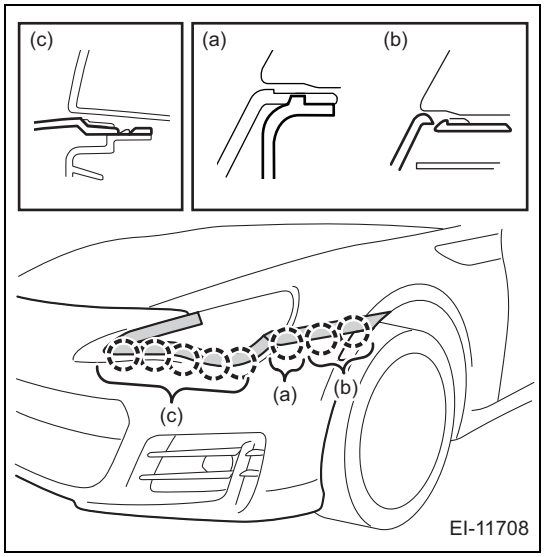
(2) Remove the 4 clips.
NOTE:
Perform same procedures for the RH side.



(3) Remove the 7 clips.
(4) Remove the 2 bolts.



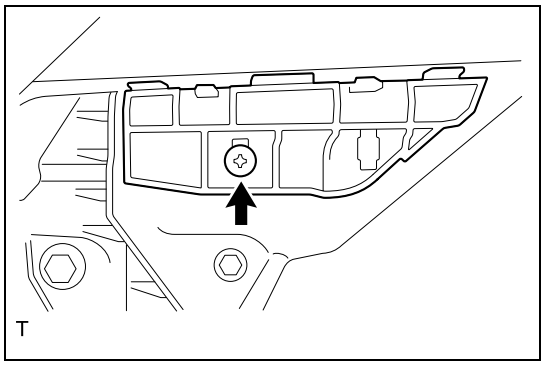
(5) Remove the clip.
NOTE:
Perform same procedures for the RH side.



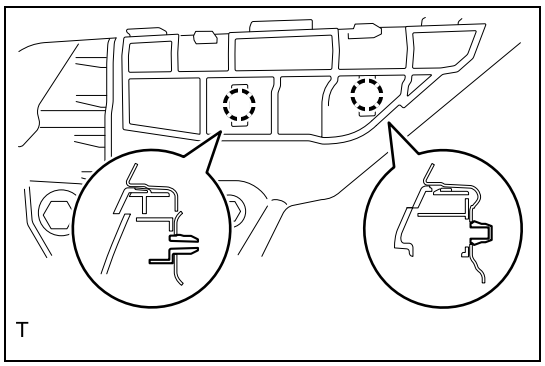
(6) Pull the front bumper cover in the direction of the arrow in the figure, and release the 8 claws.
NOTE:
1. Release 3 claws (a) and (b) located on the side of the vehicle by pulling the bumper cover at a right angle to the surface.
2. Make sure that the claws (a) and (b) are released.
3. Release 5 claws (c) located on the front side of the vehicle by pulling the bumper cover towards the front of the vehicle.
4. Perform same procedures for the RH side.

(7) Disconnect each connector, and remove the front bumper cover.

## Disassembly

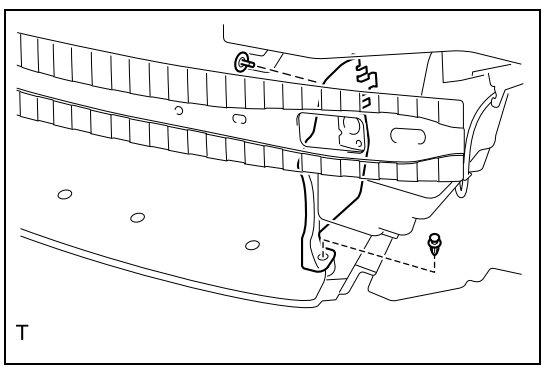


1. Removal of the front bumper side support LH
(1) Remove the screw.



(2) Release the 2 claws, and remove the front bumper side support LH.

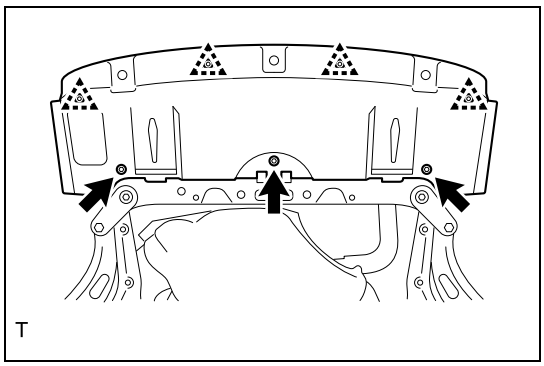
2. Removal of the front bumper side support RH
NOTE:
Remove the part in the same manner as LH side.



3. Removal of front bumper beam plate LH
(1) Remove the 2 clips, and remove the front bumper beam plate LH.

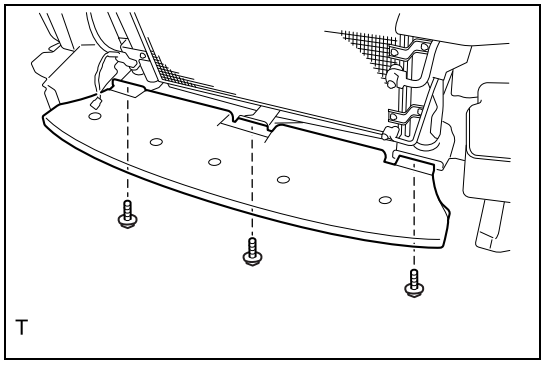
ET

4. Removal of front bumper beam plate RH
   NOTE:
   Remove the part in the same manner as LH side.



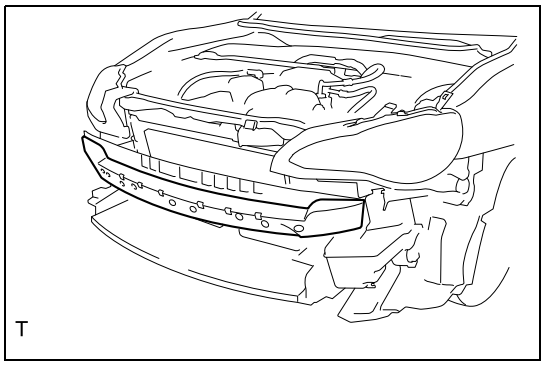
T

5. Removal of the front bumper cover LWR
   (1) Remove the 3 bolts.
   (2) Remove the 4 clips, and remove the front bumper cover LWR.



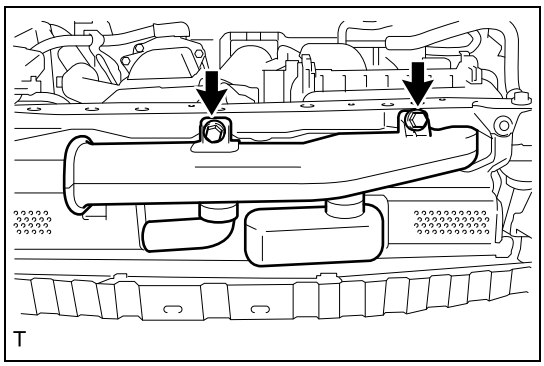
T

6. Removal of the front bumper stay bracket
   (1) Remove the 3 bolts, and remove the front bumper stay bracket.



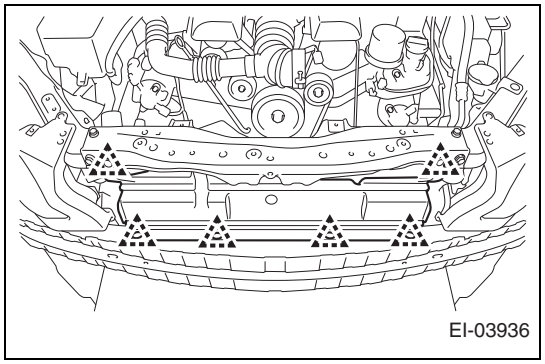
T

7. Removal of the front bumper energy absorber
   (1) Remove the front bumper energy absorber.

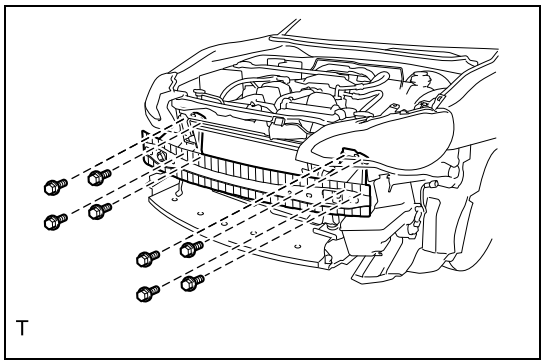


T

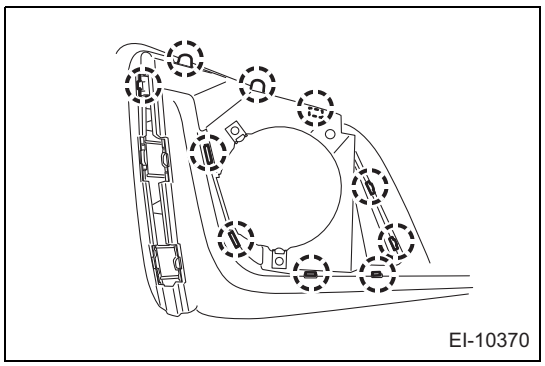
8. Removal of air cleaner duct
   (1) Remove 2 bolts, and remove the air cleaner duct.



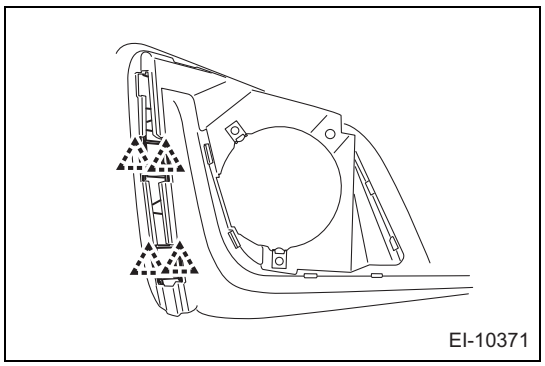
9. Removal of the radiator cover plate
   (1) Remove the 6 clips, and remove the radiator cover plate.
10. Removal of the high-pitched horn ASSY (Refer to HO - 5)
11. Removal of windshield washer tank (Refer to WW - 30)



12. Removal of front bumper beam COMPL
    (1) Remove the 8 bolts, and remove the front bumper beam COMPL.
13. Removal of the fog light ASSY LH (when there are fog lights) (Refer to LE - 54)
14. Removal of the fog light ASSY RH (when there are fog lights)
    NOTE:
    Remove the part in the same manner as LH side.



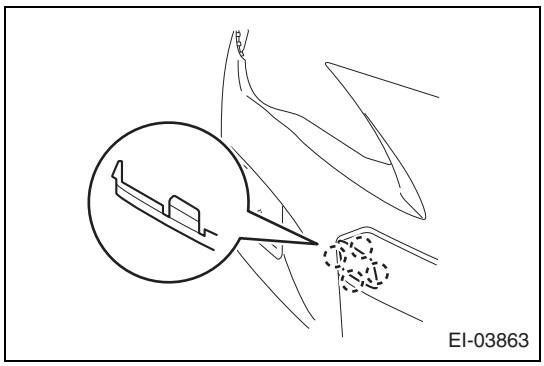
15. Removal of the fog light cover LH
    (1) Release the 10 claws, and remove the fog light cover LH.
16. Removal of the fog light cover RH
    NOTE:
    Remove the part in the same manner as LH side.



17. Removal of the front bumper side cover LH
    (1) Release the 4 claws, and remove the front bumper side cover LH.

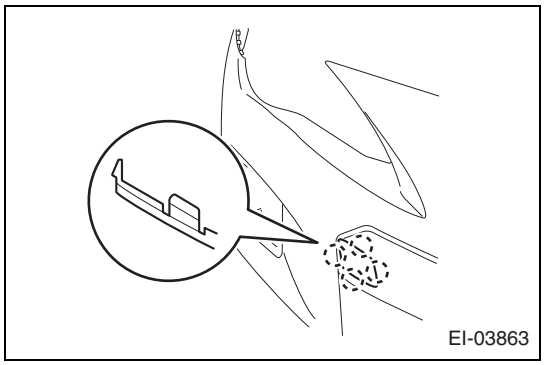
ET

18. Removal of the front bumper side cover RH
    NOTE:
    Remove the part in the same manner as LH side.

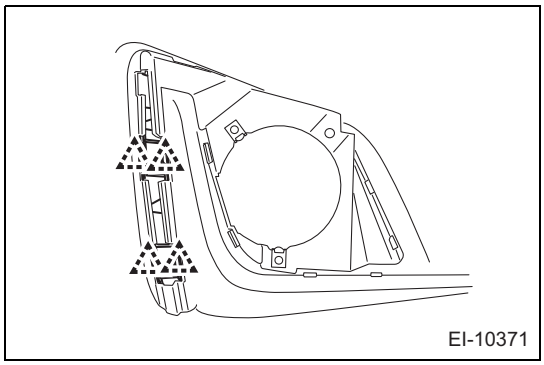


19. Removal of the front bumper hole cover
    (1) Release the 4 claws, and remove the front bumper hole cover.

## Assembly

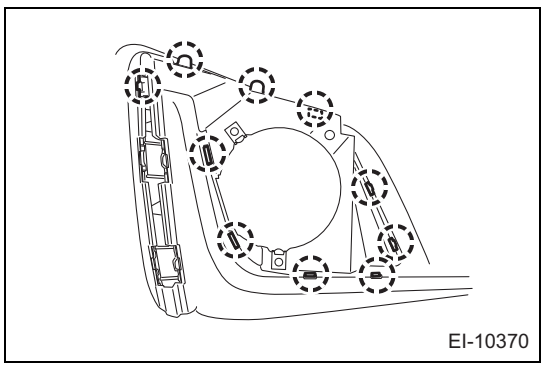


1. Installation of the front bumper hole cover
   (1) Fit in the 4 claws and install the front bumper hole cover.



2. Installation of the front bumper side cover LH
   (1) Fit in the 4 claws and install the front bumper side cover LH.

3. Installation of the front bumper side cover RH
   NOTE:
   Install the part in the same manner as LH side.

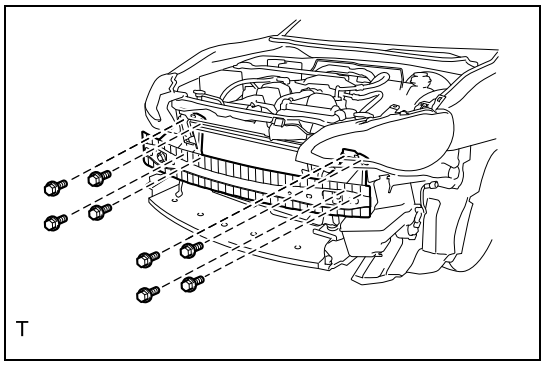


4. Installation of the fog light cover LH
   (1) Fit in the 10 claws and install the fog light cover LH.

5. Installation of the fog light cover RH
   NOTE:
   Install the part in the same manner as LH side.

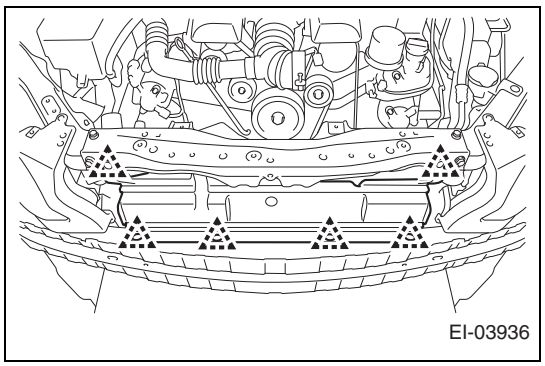
ET

6. Installation of the fog light ASSY LH (when there are fog lights) (Refer to LE - 55)
7. Installation of the fog light ASSY RH (when there are fog lights)
   NOTE:
   Install the part in the same manner as LH side.
8. Installation of windshield washer tank (Refer to WW - 30)

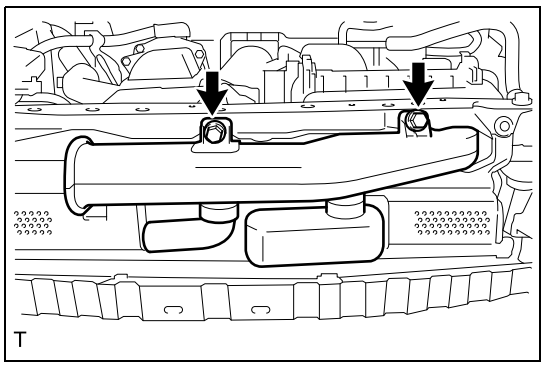


9. Installation of the front bumper beam COMPL
   (1) Using the 8 bolts, install the front bumper beam COMPL.
   Standard value:T=32N·m {326kgf·cm} {23.6 ft·lbf}

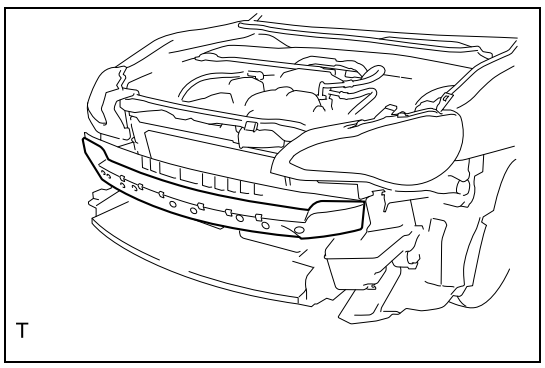
10. Installation of the high-pitched horn ASSY (Refer to HO - 6)



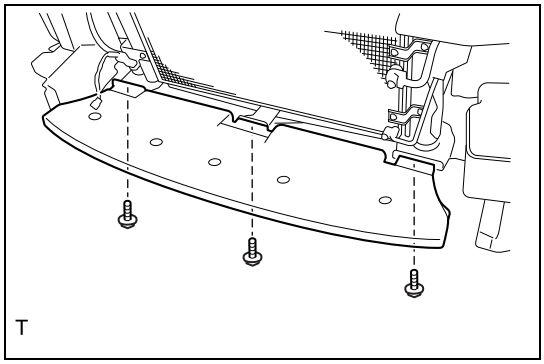
11. Installation of the radiator cover plate
   (1) Using 6 clips, install the radiator cover plate.



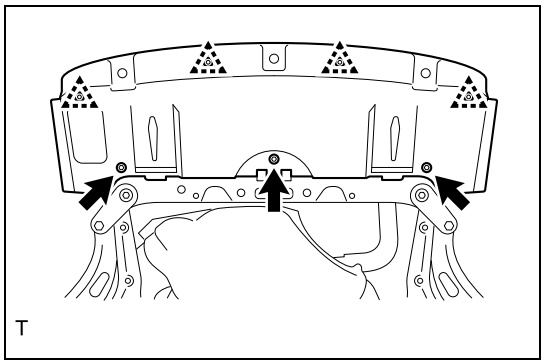
12. Installation of air cleaner duct
   (1) Using 2 bolts, install the air cleaner duct.
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}



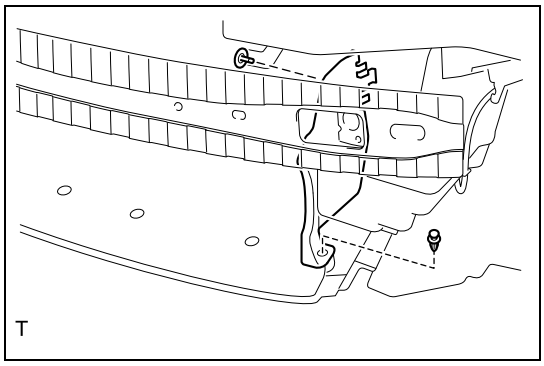
13. Installation of the front bumper energy absorber
   (1) Install the front bumper energy absorber.



14. Installation of the front bumper stay bracket
    (1) Using the 3 bolts, install the front bumper stay bracket.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

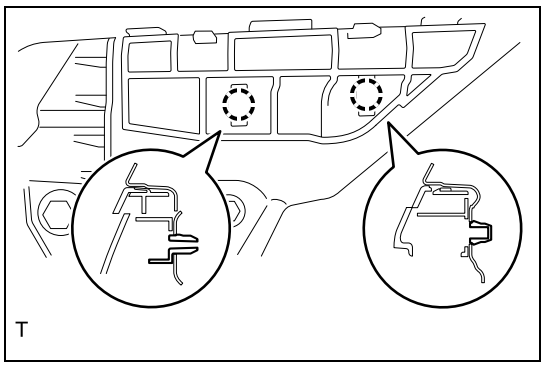


15. Installation of the front bumper cover LWR
    (1) Using 4 clips, install the front bumper cover LWR.
    (2) Install the 3 bolts.
    Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

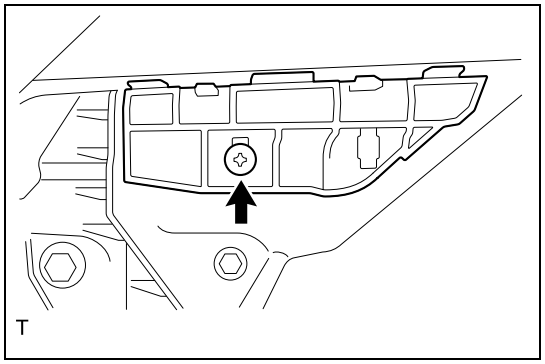


16. Installation of the front bumper beam plate LH
    (1) Using 2 clips, install the front bumper beam plate LH.

17. Installation of the front bumper beam plate RH
    NOTE:
    Install the part in the same manner as LH side.



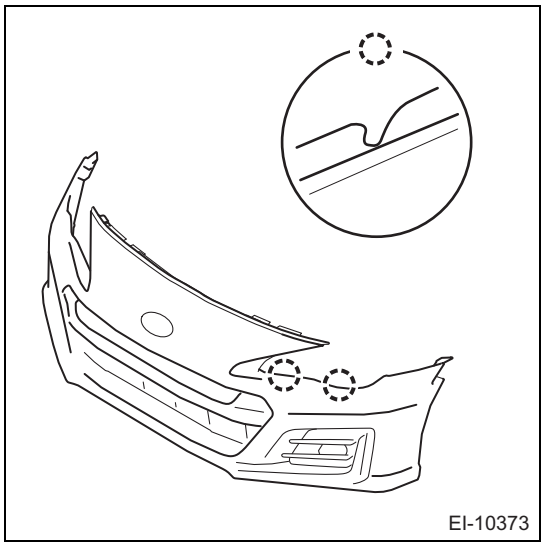
18. Installation of the front bumper side support LH
    (1) Fit in the 2 claws and install the front bumper side support LH.

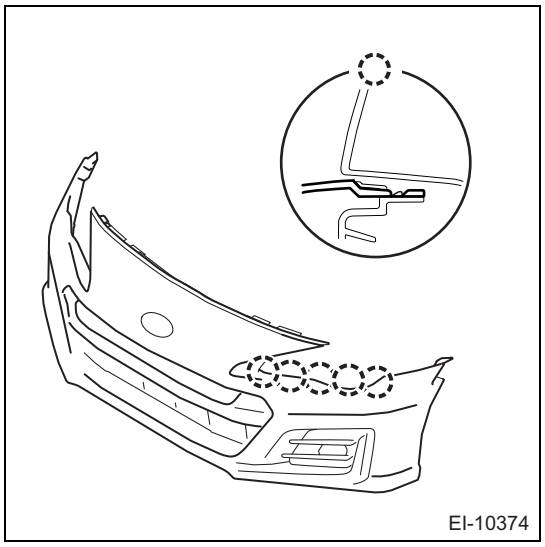


19. Installation of the front bumper side support RH
    NOTE:
    Install the part in the same manner as LH side.

## Installation

1. Installation of the front bumper cover
   (1) Connect each connector.

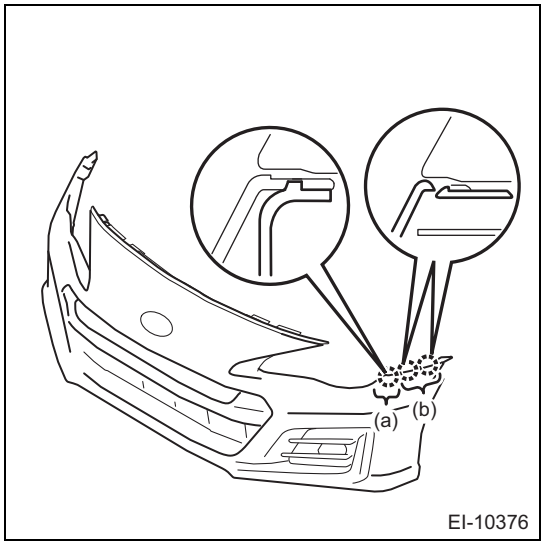




(2) Install the screw.

(2) Securely align the cutout portion exclusively provided for positioning on the front bumper side with the positioning rib on the front bumper front support side.

(3) Engage the 5 claws equipped under the headlight ASSY.



(4) Engage the 3 claws equipped under the fender.

(5) Check the engagement of the claws (a).
NOTE:
1. Pull the installation section of the front side marker light to the outside to release the claw (b).
2. Pull out the bumper cover from the condition described above at a right angle to the surface by 20 to 30 mm (0.79 to 1.18 in).
3. When the claw (a) is securely engaged, go to Step (7). If the claw (a) is disengaged, return to Step (4) to perform the claw engagement again.

(6) Install the clip.
NOTE:
Perform same procedures for the RH side.

(7) Install the 4 clips.
NOTE:
Perform same procedures for the RH side.

(8) Install the 7 clips.

(9) Install the 2 bolts.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}

2. Installation of the front bumper retainer UPR
(1) Using the 5 bolts, install the front bumper retainer UPR.
Standard value:T=7.5N·m {77kgf·cm} {5.5ft·lbf}
(2) Install the 2 clips.

3. Installation of the front side marker light ASSY LH (Refer to LE - 59)

4. Installation of the front side marker light ASSY RH
NOTE:
Install the part in the same manner as LH side.

5. Preliminary operation for adjusting the fog light beams (when there are fog lights) (Refer to LE - 55)

6. Adjusting the fog light beams (when there are fog lights) (Refer to LE - 55)

7. Inspection of the fog light beams (when there are fog lights) (Refer to LE - 55)

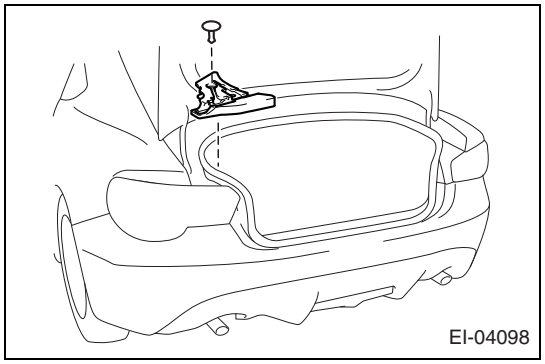
## Removal

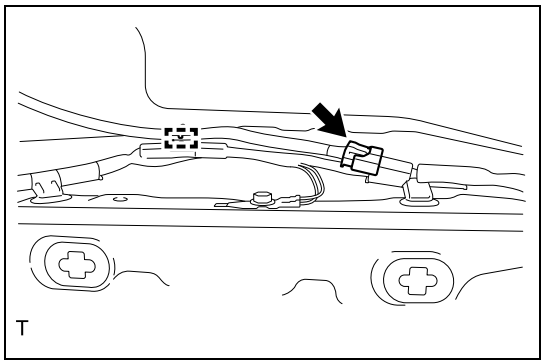
1. Removal of the trunk floor mat
2. Removal of the rear floor finish plate (Refer to LE - 61)

ET



3. Removal of the trunk side tray LH
   (1) Using a clip remover, remove the clip.
   (2) Remove the trunk side tray LH.

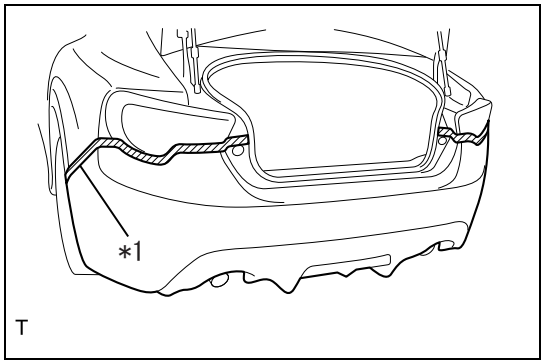
4. Removal of the trunk trim cover INN LH (Refer to LE - 62)



5. Removal of the rear bumper cover
   (1) Disconnect the connector of the back-up light ASSY.
   (2) Release the clamp, and disconnect the wiring harness.

   (3) Disconnect the grommet, and pull the wiring harness out to the vehicle exterior.

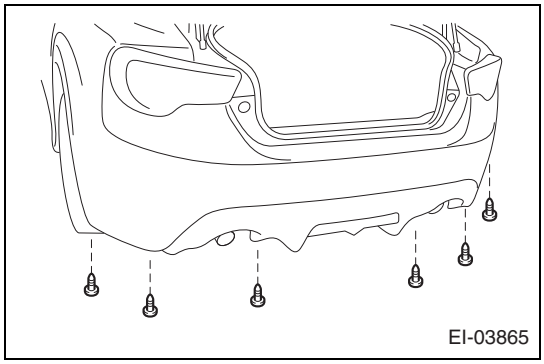
   (4) Remove the 2 screws.



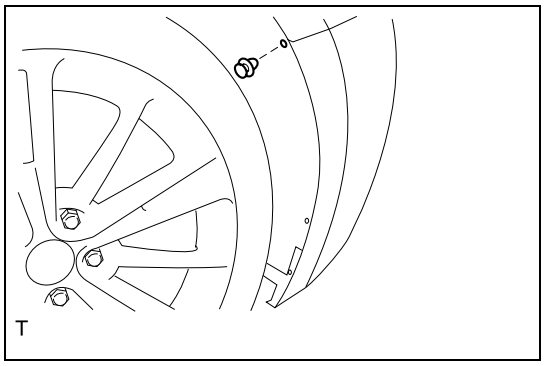
(5) Apply protective tape around the rear bumper cover.

Captions in illustration

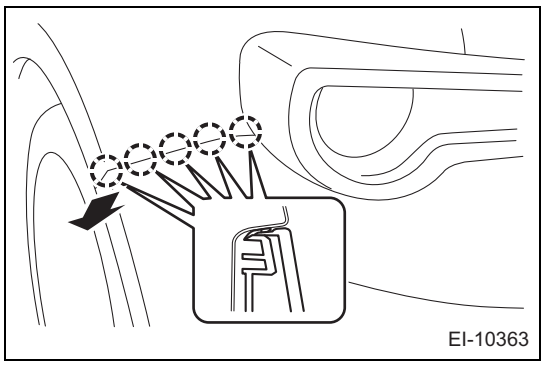
| | |
|---|---|
| *1 | Protective tape |



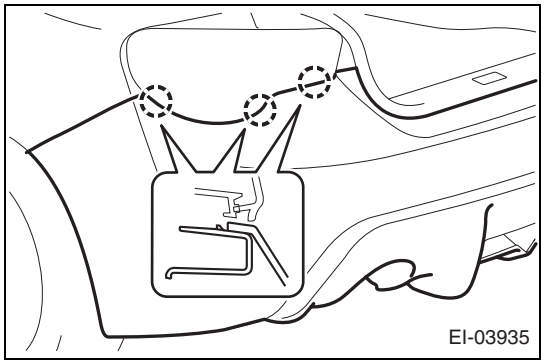
(6) Using a clip remover, remove the 6 clips.



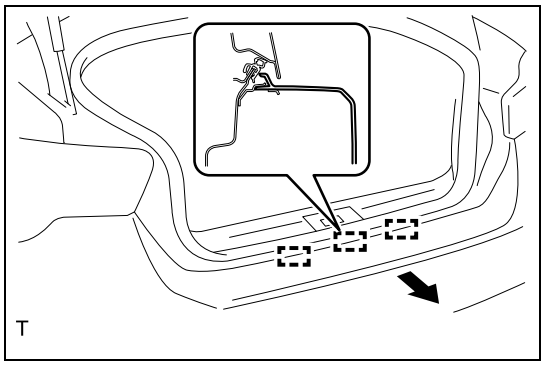
(7) Using a clip remover, remove the clip.
NOTE:
Perform same procedures for the RH side.



(8) Pull the rear bumper cover towards the exterior, and release the 5 claws.
NOTE:
Perform same procedures for the RH side.



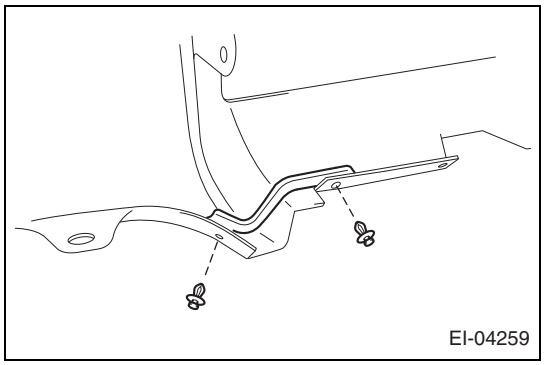
(9) Pull the rear bumper cover towards the rear, and release the 3 claws.
NOTE:
Perform same procedures for the RH side.



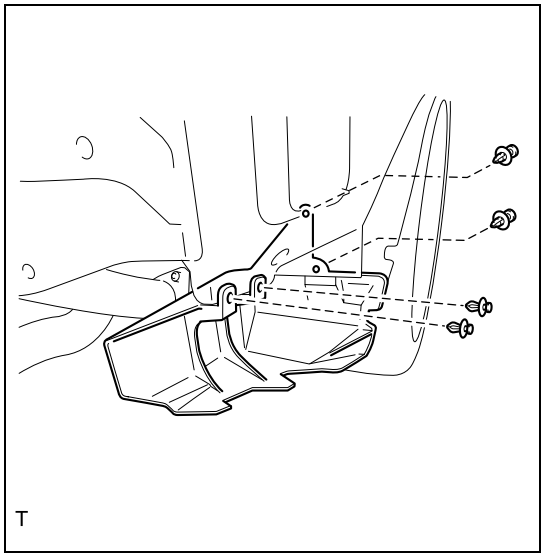
(10) Remove the 3 guides, and remove the rear bumper cover.

## Disassembly

1. Removal of the back-up light ASSY (Refer to LE - 65)



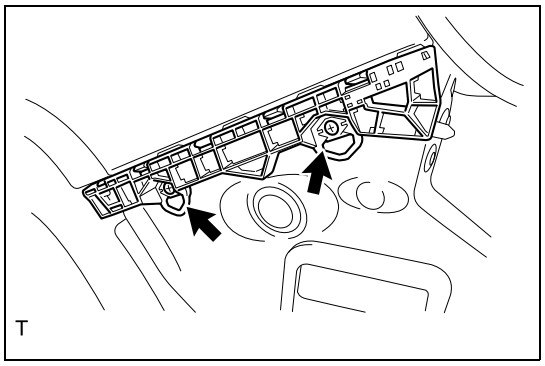
2. Removal of the rear bumper reinforcement NO. 2 (Installed on the LH side)
   (1) Using a clip remover, remove the 2 clips and remove the rear bumper reinforcement NO. 2.
3. Removal of the rear bumper reinforcement NO. 1 (Installed on the RH side)
   NOTE:
   Remove the part in the same manner as LH side.



T

4. Removal of the rear bumper side seal LH
   (1) Using a clip remover, remove the 4 clips and remove the rear bumper side seal LH.

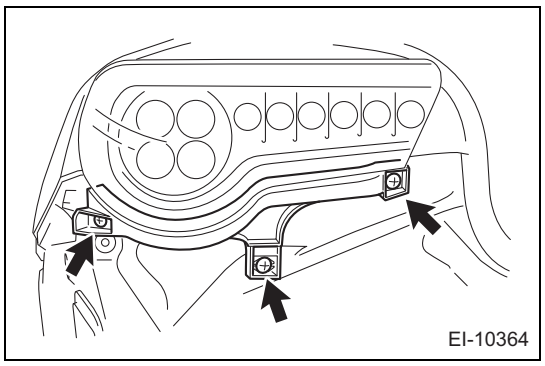
5. Removal of the rear bumper side seal RH
   NOTE:
   Remove the part in the same manner as LH side.



T

6. Removal of the rear bumper side retainer LH
   (1) Remove the 2 screws, and remove the rear bumper side retainer LH.

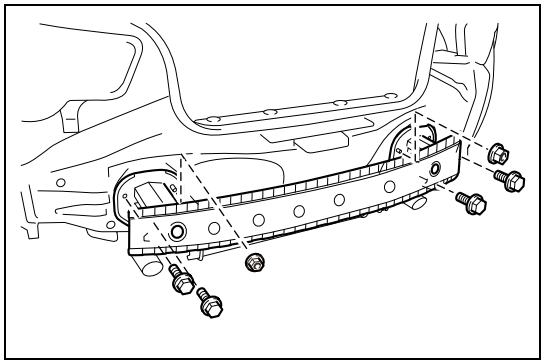
7. Removal of the rear bumper side retainer RH
   NOTE:
   Remove the part in the same manner as LH side.



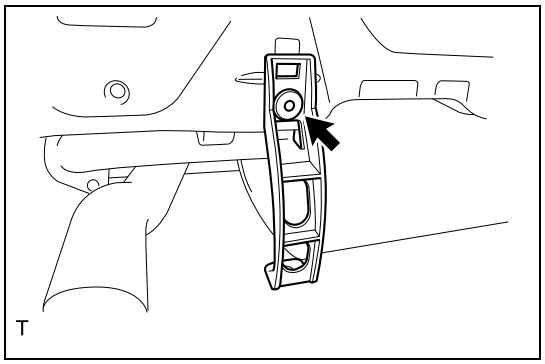
EI-10364

8. Removal of the rear bumper side bracket LH
   (1) Remove the 3 screws, and remove the rear bumper side bracket LH.

9. Removal of the rear bumper side bracket RH
   NOTE:
   Remove the part in the same manner as LH side.



10. Removal of rear bumper beam COMPL
    (1) Remove the 4 bolts and the 2 nuts, and remove the rear bumper beam COMPL.

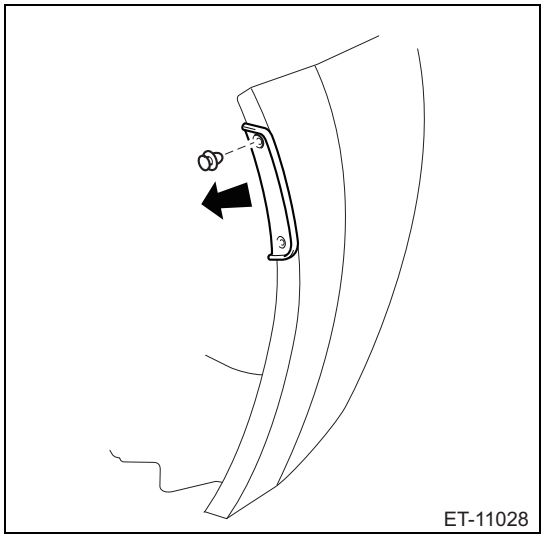


11. Removal of the rear bumper bracket CTR (Installed on the LH side)
    (1) Using a clip remover, remove the clip, and remove the rear bumper bracket CTR.

12. Removal of the rear bumper bracket CTR (Installed on the RH side)
    NOTE:
    Remove the part in the same manner as LH side.

13. Removal of arch fin LH

    (1) Remove the rivet.
    NOTE:
    Remove the rivet with a rivet cutter or nipper, etc.

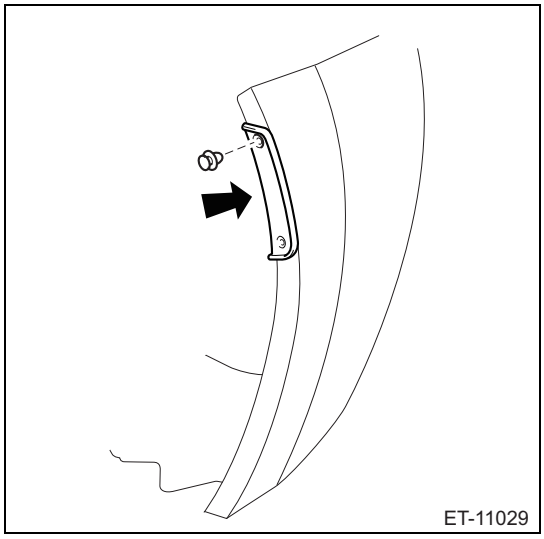


(2) Remove the clip and remove the arch fin.

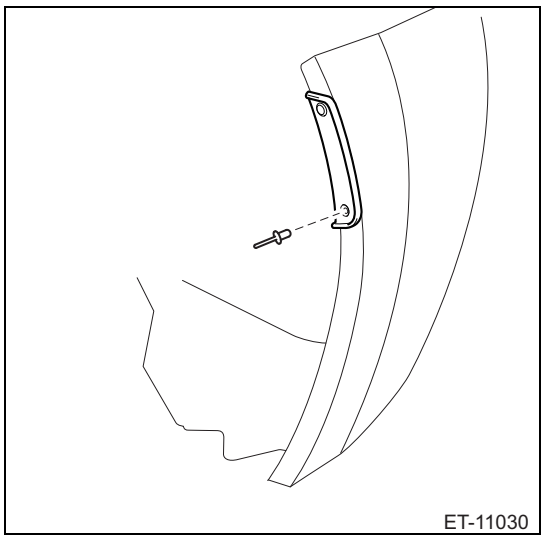
14. Removal of arch fin RH
    NOTE:
    Remove the part in the same manner as LH side.

## Assembly

1. Installation of arch fin LH

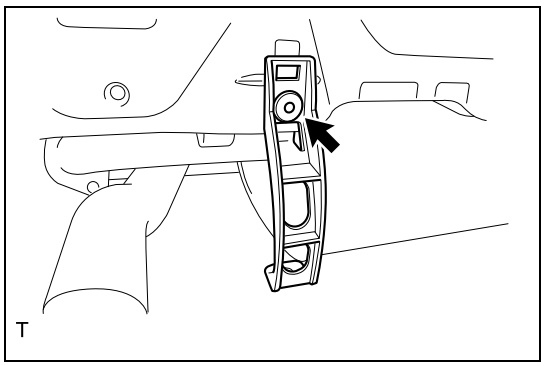


(1) Temporally install the arch fin with the clip.



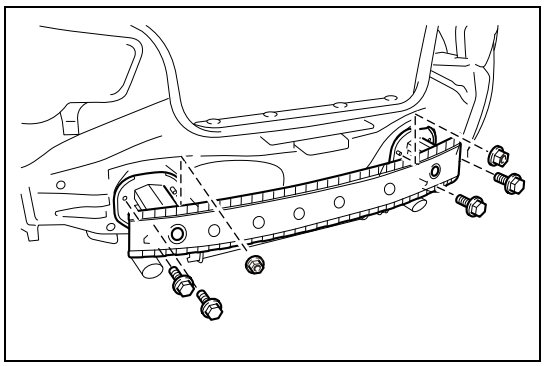
(2) Install the arch fin with the rivet.
    Preparation items: Rivet

2. Installation of arch fin RH
   NOTE:
   Install the part in the same manner as LH side.

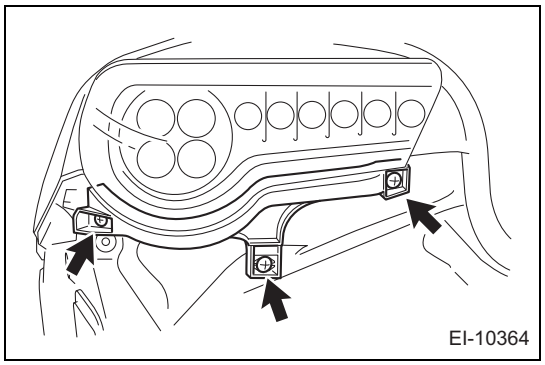


3. Installation of the rear bumper bracket CTR (Installed on the LH side)
   (1) Install the rear bumper bracket CTR.

4. Installation of the rear bumper bracket CTR (Installed on the RH side)
   NOTE:
   Install the part in the same manner as LH side.

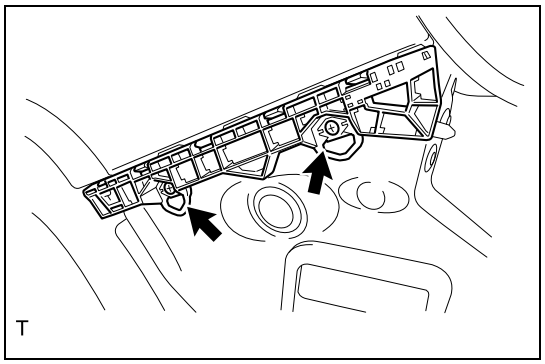


5. Installation of the rear bumper beam COMPL
   (1) Using the 4 bolts and the 2 nuts, install the rear bumper beam COMPL.
   Standard value:T=45N·m {459kgf·cm} {33.2ft·lbf}



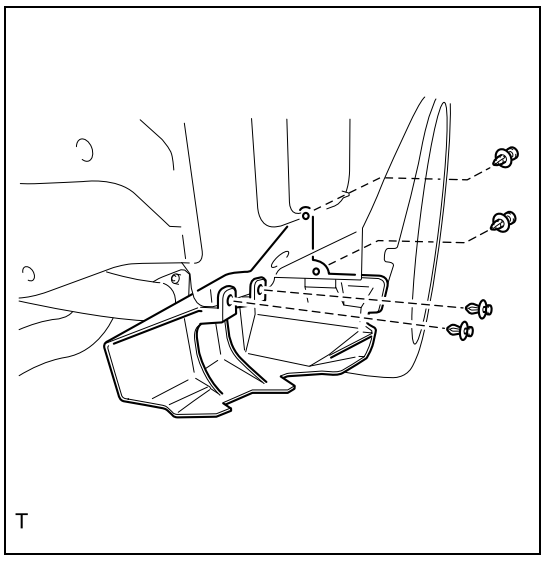
6. Installation of the rear bumper side bracket LH
   (1) Using 3 screws, install the rear bumper side bracket LH.

7. Installation of the rear bumper side bracket RH
   NOTE:
   Install the part in the same manner as LH side.



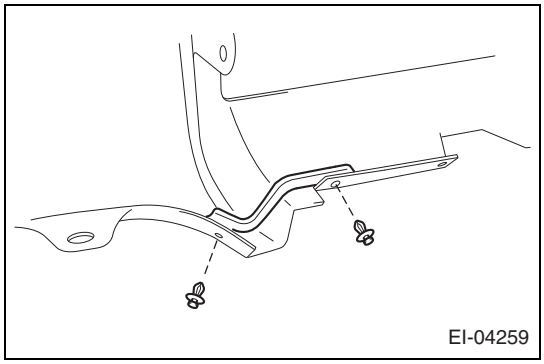
8. Installation of the rear bumper side retainer LH
   (1) Using 2 screws, install the rear bumper side retainer LH.

9. Installation of the rear bumper side retainer RH
   NOTE:
   Install the part in the same manner as LH side.



10. Installation of the rear bumper side seal LH
    (1) Using 4 clips, install the rear bumper side seal LH.

11. Installation of the rear bumper side seal RH
    NOTE:
    Install the part in the same manner as LH side.



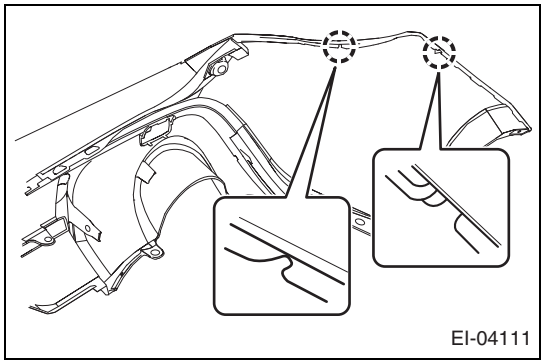
12. Installation of the rear bumper reinforcement NO. 2 (Installed on the LH side)
    (1) Using 2 clips, install the rear bumper reinforcement NO. 2.

13. Installation of the rear bumper reinforcement NO. 1 (Installed on the RH side)
    NOTE:
    Install the part in the same manner as LH side.
14. Installation of the back-up light ASSY (Refer to LE - 67)

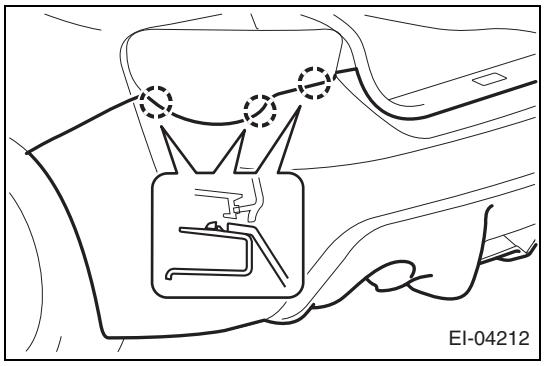
## Installation

1. Installation of the rear bumper cover
   (1) Preparations for installation
      (a)Pull the wiring harness of the back-up light ASSY in to the interior.

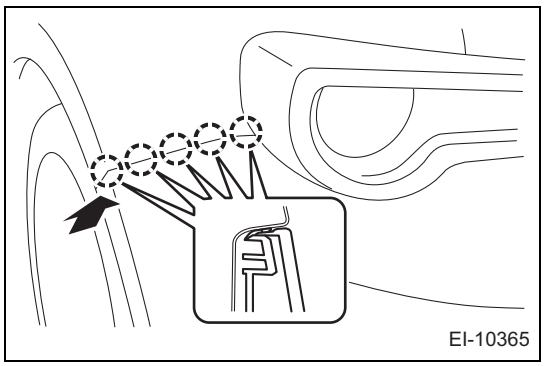
   (2) In the direction of the arrow in the figure, insert the 3 guides.



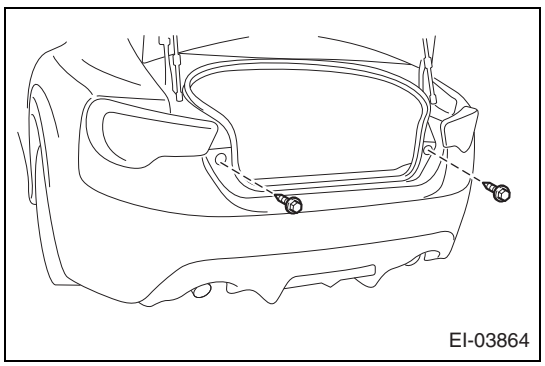
(3) Securely align two cutout portions on the rear bumper.
- The positioning rib on the rear bumper side bracket
- The positioning rib on the rear bumper side retainer



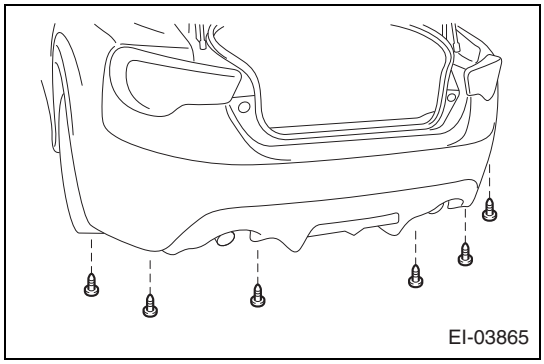
(4) Fit in the 3 claws.
NOTE:
Perform same procedures for the RH side.



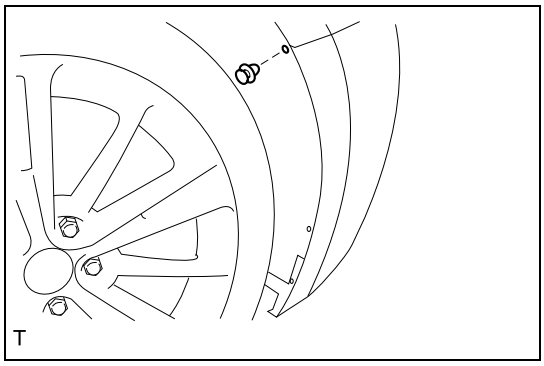
(5) Fit in the 5 claws.
NOTE:
Perform same procedures for the RH side.



(6) Install the 2 screws.



(7) Using 8 clips, install the rear bumper cover.



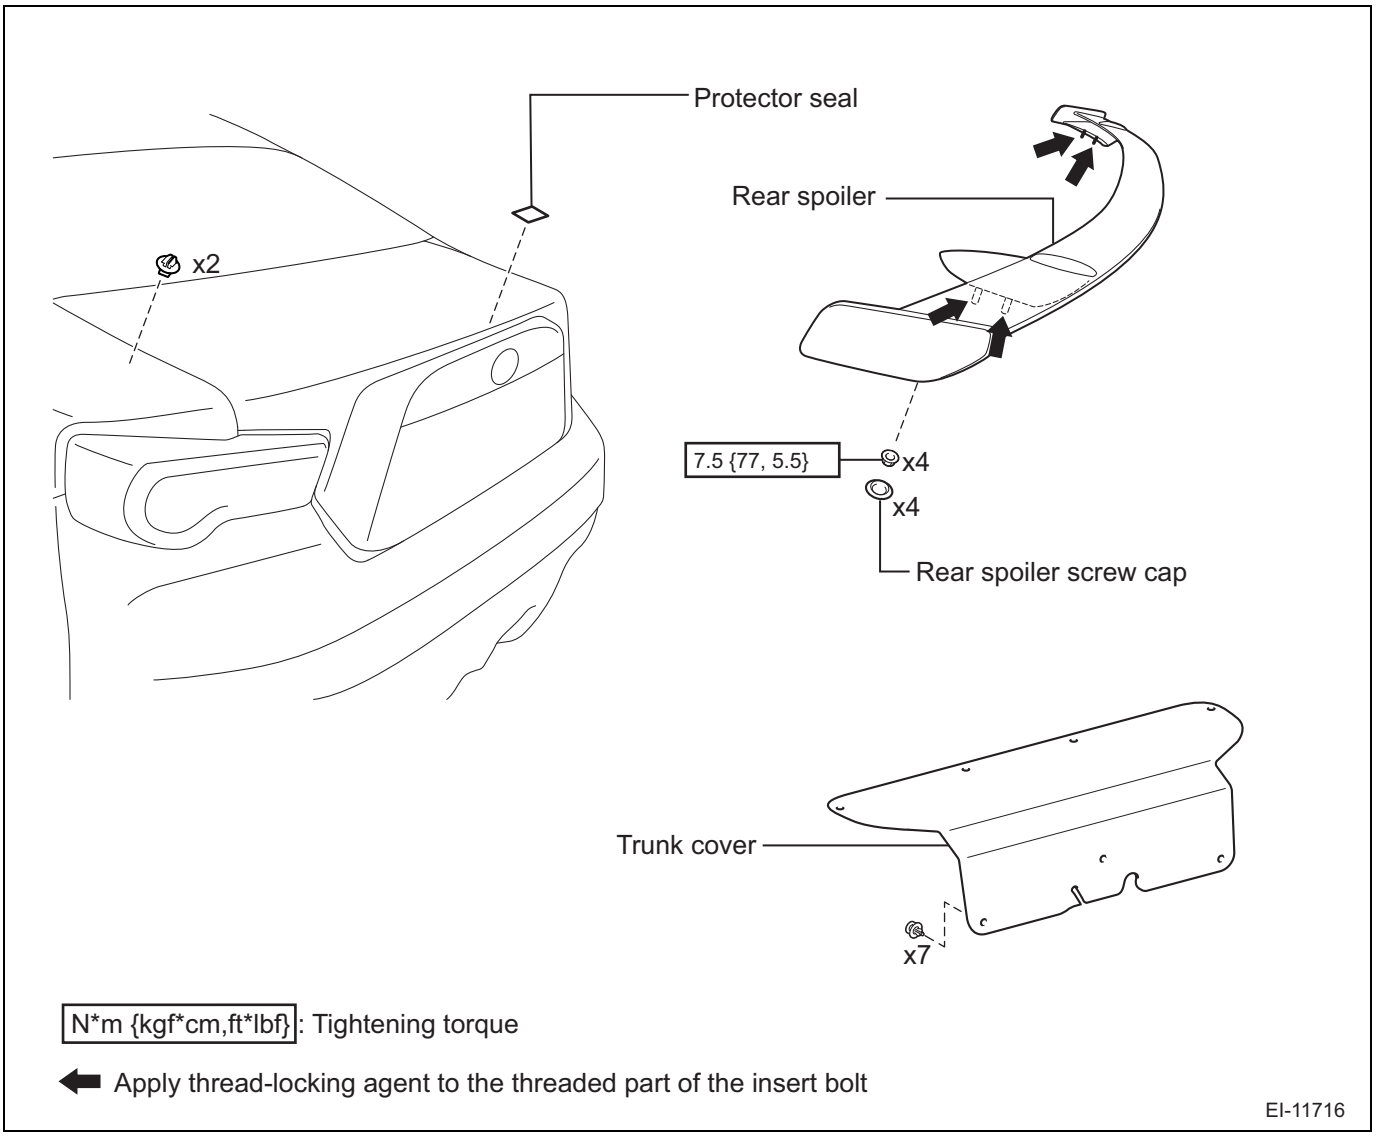
(8) Connect the connector.

(9) Using a clamp, install the wiring harness of the back-up light ASSY.

2. Installation of the trunk trim cover INN LH (Refer to LE - 63)
3. Installation of the trunk side tray LH
4. Installation of the rear floor finish plate (Refer to LE - 63)
5. Installation of the trunk floor mat

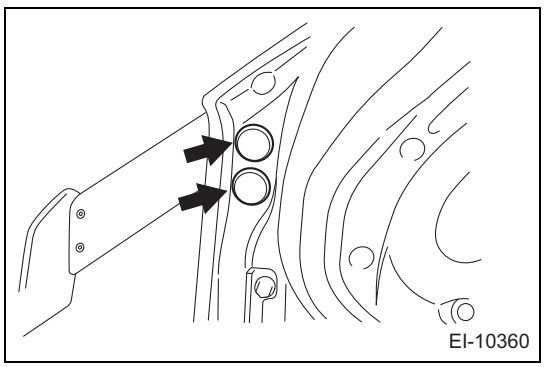
# Rear spoiler

## Exploded view



## Removal

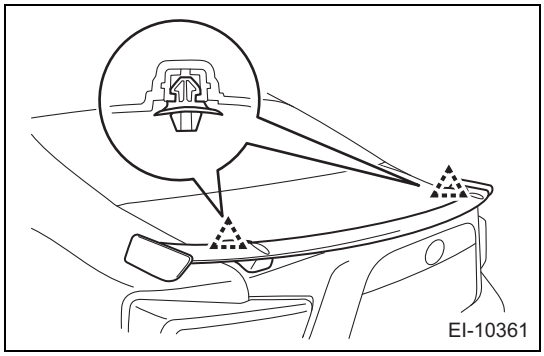
1. Removal of trunk cover (Refer to DH - 61)



2. Removal of the rear spoiler screw caps (Installed on the LH side)
   (1) Remove the 2 rear spoiler screw caps.
   NOTE:
   Perform same procedures for the RH side.

3. Removal of the rear spoiler
   (1) Remove the 4 nuts.

ET

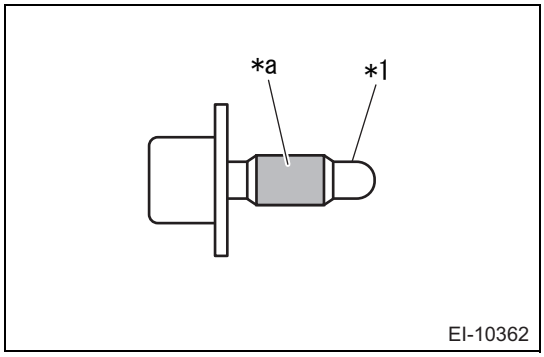


(2) Release the 2 clips, and remove the rear spoiler.
CAUTION:
Hold the rear spoiler to prevent it from falling.

## Installation

1. Installation of the rear spoiler
CAUTION:
- If the clips are damaged, or if the gasket is worn out, replace them with new clips.
- Hold the rear spoiler ASSY rear spoiler to prevent it from falling.

(1) Clean the threaded part of the insert bolt on the rear spoiler.



(2) Apply thread-locking agent to the threaded part of the insert bolt.

Captions in illustration

| | |

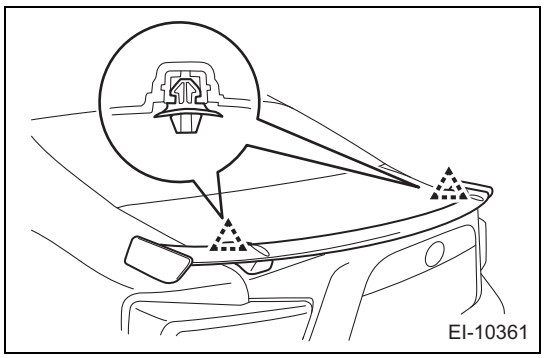
| *3 | Trunk locator |



(4) Install 2 clips on the trunk panel.

(5) Fit in the 2 clips.

(6) Using 4 nuts, install the rear spoiler.
Standard value:T=7.5N·m {77kgf·cm} {5.5 ft·lbf}

2. Installation of the rear spoiler screw caps (Installed on the LH side)

(1) Install the 2 rear spoiler screw caps.

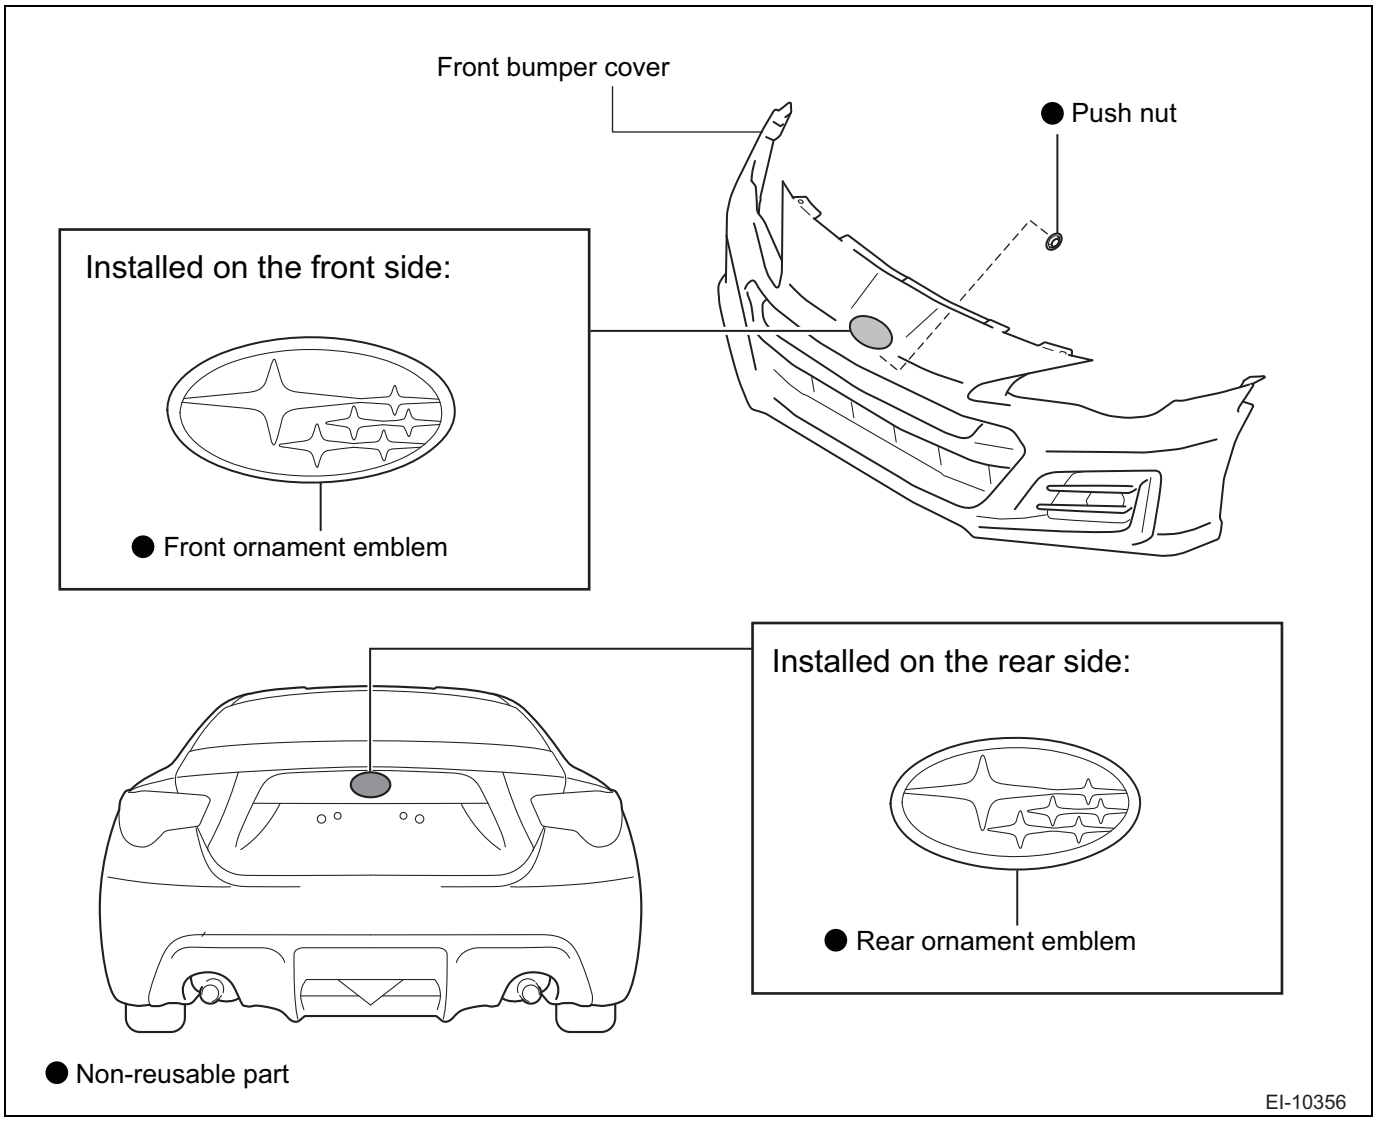
ET

NOTE:
Perform same procedures for the RH side.

3. Installation of trunk cover (Refer to DH - 62)

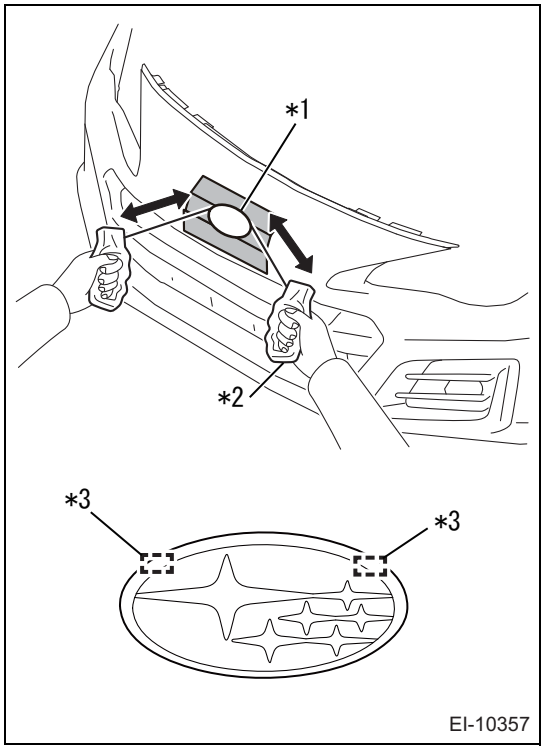
# Name plate

## Exploded view



## Removal

1. Removal of the front bumper cover (Refer to ET - 2)

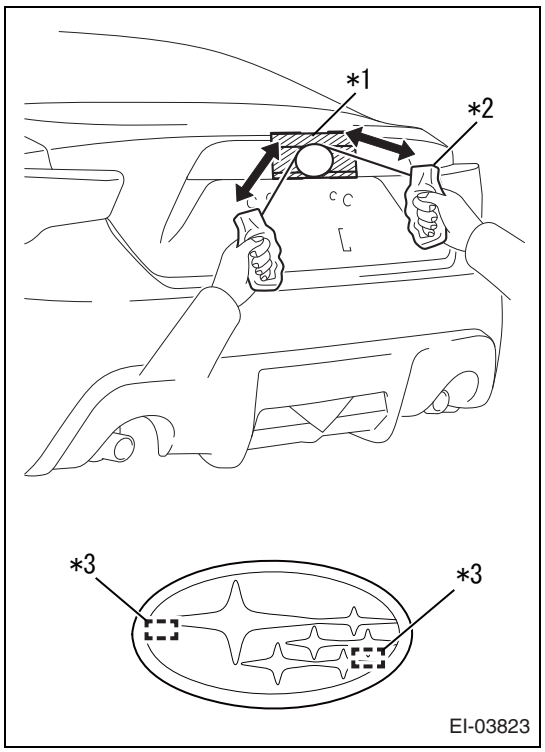


2. Removal of the front ornament emblem (Installed on the front side)
   (1) Apply protective tape around the front ornament emblem.

Captions in illustration

| | |
|---|---|
| *1 | Protective tape |
| *2 | Winch |
| *3 | Positioning pins |

   (2) Using a heat light, heat up the front ornament emblem.
   WARNING:
   Be careful of burns from the heated body or the heat from the heat lamp.
   NOTE:
   Heat up for 3 to 5 minutes at 40 to 60°C {104 to 140°F}.
   (3) Set a piano wire to the winch.
   (4) Pull the piano wire both ways and cut the adhesive part of the acrylic foam tape.
   CAUTION:
   Be careful of the locations of the positioning pins.
   (5) Remove the push nut from the back side of the front bumper cover.
   (6) Remove the front ornament emblem.



3. Removal of the rear ornament emblem (Installed on the rear side)
   (1) Apply protective tape around the rear ornament emblem.

Captions in illustration

| | |

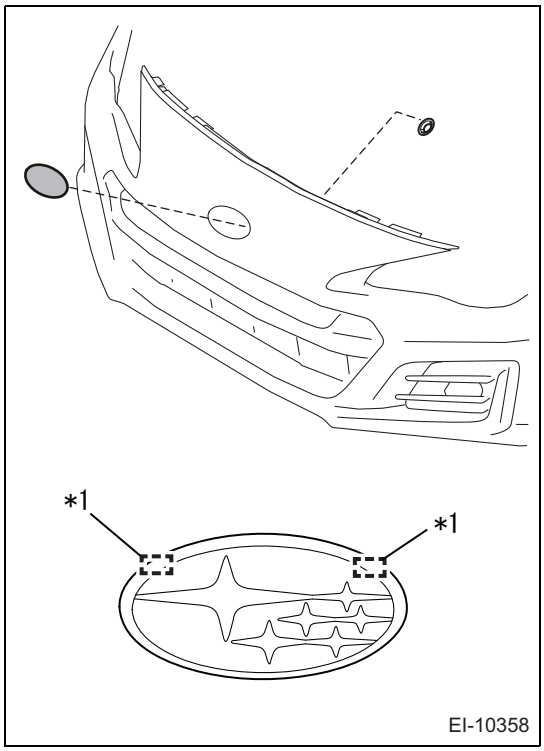
| *1 | Protective tape |
| *2 | Winch |
| *3 | Positioning pins |

   (2) Using a heat light, heat up the rear ornament emblem.
   WARNING:
   Be careful of burns from the heated body or the heat from the heat lamp.
   NOTE:
   Heat up for 3 to 5 minutes at 40 to 60°C {104 to 140°F}.
   (3) Set a piano wire to the winch.
   (4) Pull the piano wire both ways, cut the adhesive part of the acrylic foam tape, and remove the rear ornament emblem.
   CAUTION:
   Be careful of the locations of the positioning pins.

## Installation



1. Installation of the front ornament emblem (Installed on the front side)
   (1) Cleaning the installation surface of the front ornament emblem
      (a)Remove any remaining acrylic foam tape on the front ornament emblem installation surface.
      (b)Degrease the installation surface of the front ornament emblem.
   (2) Using a heat light, heat up the new front ornament emblem and the vehicle installation surface.
      WARNING:
      Be careful of burns from the heated body or the heat from the heat lamp.
      NOTE:
      - Body side: 40 to 60°C (104 to 140°F)
      - Front ornament emblem side: 20 to 30°C {68 to 86°F}
   (3) Peel the backing sheet of the acrylic foam tape, avoiding touching the adhesive surface.
   (4) Align the positions of the positioning pins, and install the front ornament emblem.

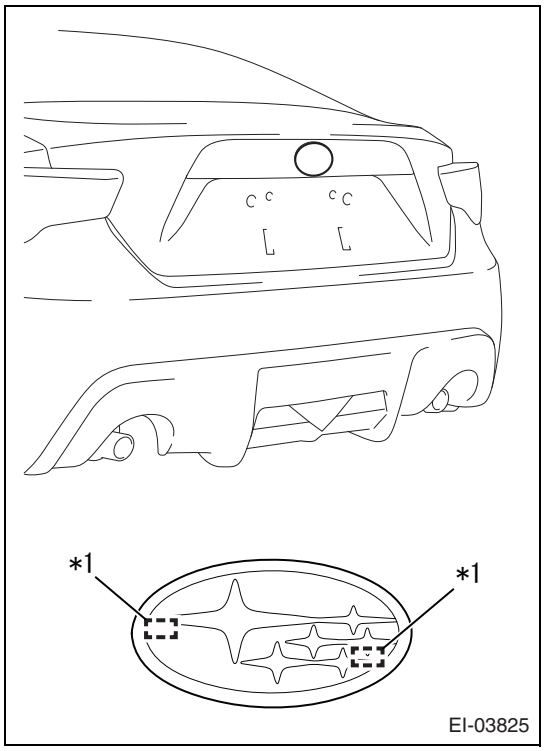
Captions in illustration

| | |
|---|---|
| *1 | Positioning pins |

NOTE:
Press the front ornament emblem firmly to install it.

   (5) Using a push nut, firmly secure the front ornament emblem.

2. Installation of the front bumper cover (Refer to ET - 10)



3. Installation of the rear ornament emblem (Installed on the rear side)
   (1) Cleaning the installation surface of the rear ornament emblem
      (a)Remove any remaining acrylic foam tape on the rear ornament emblem installation surface.
      (b)Degrease the installation surface of the rear ornament emblem.
   (2) Using a heat light, heat up the new rear ornament emblem and the vehicle installation surface.
      WARNING:
      Be careful of burns from the heated body or the heat from the heat lamp.
      NOTE:
      - Body side: 40 to 60°C (104 to 140°F)
      - Rear ornament emblem side: 20 to 30°C {68 to 86°F}
   (3) Peel the backing sheet of the acrylic foam tape, avoiding touching the adhesive surface.
   (4) Align the positions of the positioning pins, and install the rear ornament emblem.

|---|---|
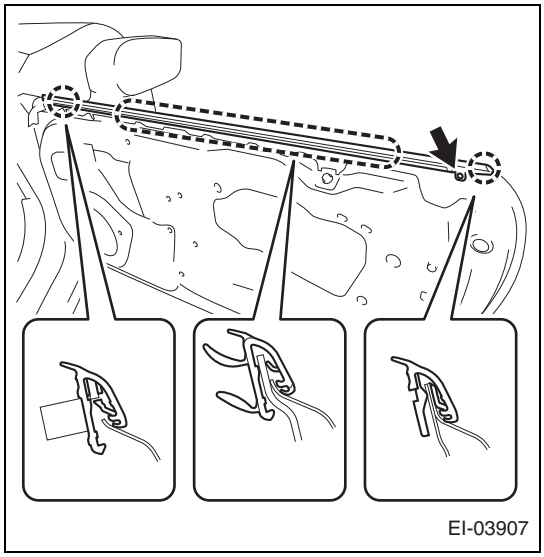
| *1 | Protective tape |

## Installation

NOTE:

The procedures described below are for the RH side. Unless otherwise specified, perform the same procedures for the LH and RH sides.

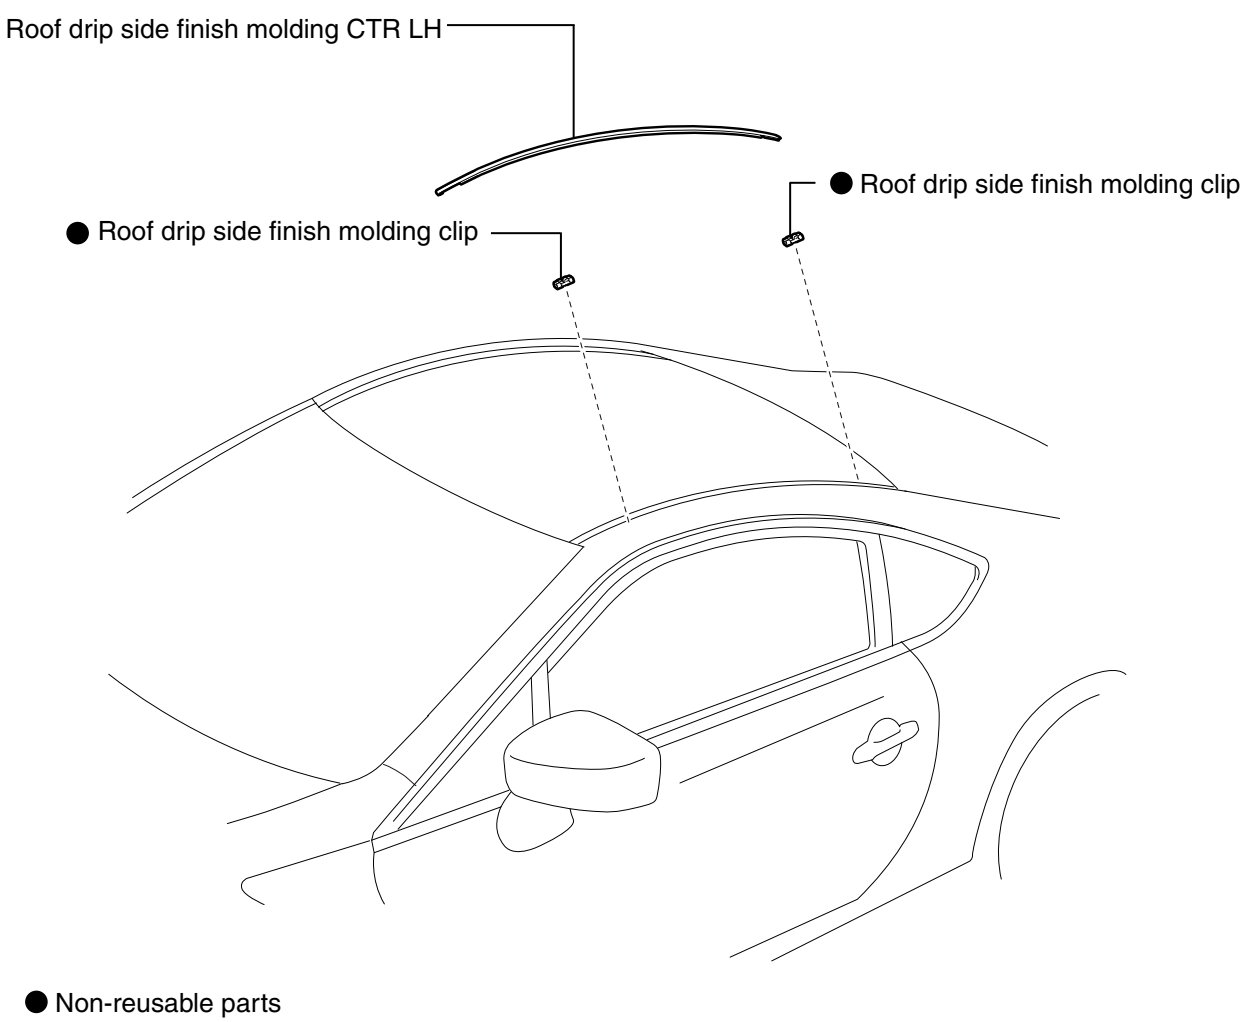


EI-03907

1. Installation of the front door glass weather strip ASSY OUT RH
   (1) Fit in the tabs, and install the new front door glass weather strip ASSY OUT RH.
   (2) Install the screw.
   (3) Install the front door weather strip RH.
   (4) Install the front door rear cover RH.
2. Installation of the front door trim board SUB-ASSY RH (driver's door) (Refer to DH - 52)
3. Installation of the door arm rest cover RH (Refer to DH - 54)
4. Connection of the battery ground terminal
   Standard value:T=6.0N·m {61kgf·cm} {4.4ft·lbf}
5. Settings when removing/installing battery terminals (Refer to IN - 6)
6. Power window registration settings (Refer to WS - 5)
7. Function inspection of the power windows (Refer to WS - 59)

# Roof drip side finish molding

## Exploded view

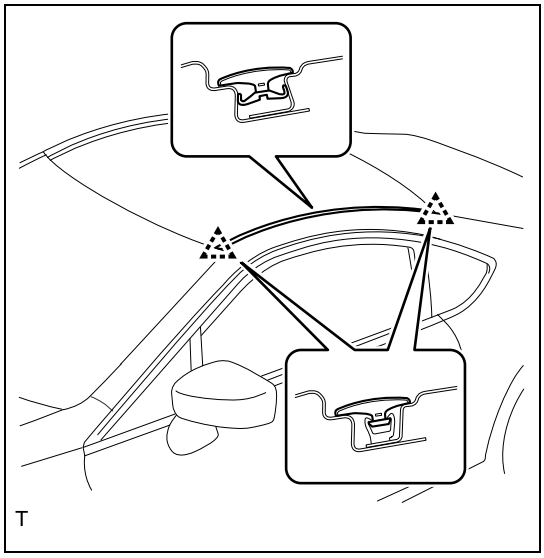


T

## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.



T

1. Removal of the roof drip side finish molding CTR LH
   (1) Release the 2 clips, and remove the roof drip side finish molding CTR LH.
   CAUTION:
   - Do not remove the roof drip side finish molding clip.
   - If the roof drip side finish molding clip is damaged, replace it with a spare roof drip side finish molding clip.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Replacement of the roof drip side finish molding clip
   CAUTION:
   - When installing the roof drip side finish molding clip, peel off any double-sided tape remaining on the body installation surface, and clean the body side.
   - The primer for use is included in the 3M DP-100. (It is described as having primer, but because it is a 2-liquid type adhesive, don't let the primer dry)

   NOTE:

   Because it is a 2-liquid type adhesive, after mixing the 2 liquids in a separate container, it is possible to apply to the adhesive surface and attach.

   (1) Using an industrial dryer, loosen the roof drip side finish molding clip.
   CAUTION:
   In cases where the hot air from the dryer might cause discoloration in the paint, use a dryer with a narrow tip diameter.
   (2) While blowing hot air on it, remove the roof drip side finish molding clip with needle-nose pliers or something similar.
   CAUTION:
   Do not damage the painted surface with the edge of the roof drip side finish molding clip.
   (3) While blowing hot air from the dryer on the tape left on the body, use a bamboo paddle or something similar to remove the tape.
   (4) Clean the area from which the tape has been removed.
   (5) Apply 3M DP-100 to a mat board, and mix the 2 liquids.

   (6) Uniformly apply 0.5 mm of the mixed 3M DP-100 on the new roof drip side finish molding clip.

| *a | Uniformly apply 0.5 mm |

   CAUTION:
   When the sealant was applied during body repair, level the sealant in the vicinity of the clip installation area.

   (7) Use the accessory brush to apply the primer to the body where the roof drip side finish molding clip is installed.
   CAUTION:
   Do not let the primer dry.
   (8) Press the 2 roof drip side finish molding clips firmly to install them.

(9) Reference the position in the figure, then immediately after applying primer, apply the clip to the roof panel, and make it so that they lightly rub together. After the adhesive and the primer have been blended, set the positioning, and press firmly.

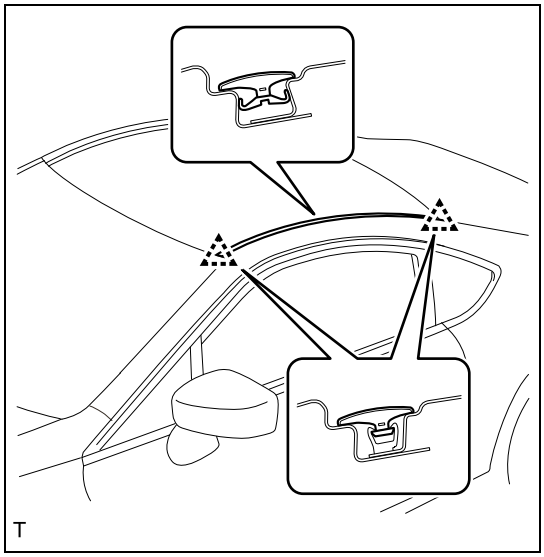
Standard installation location

| Part | Criteria |
|---|---|
| A | 2.0 mm |
| B | 20.6 mm |
| C | 26.5 mm |

(10) The installation of the roof drip side finish molding CTR LH is performed once 40 minutes or more have passed since application.

NOTE:

- Initial hardening time- 40 minutes
- Complete hardening time- 24 hours

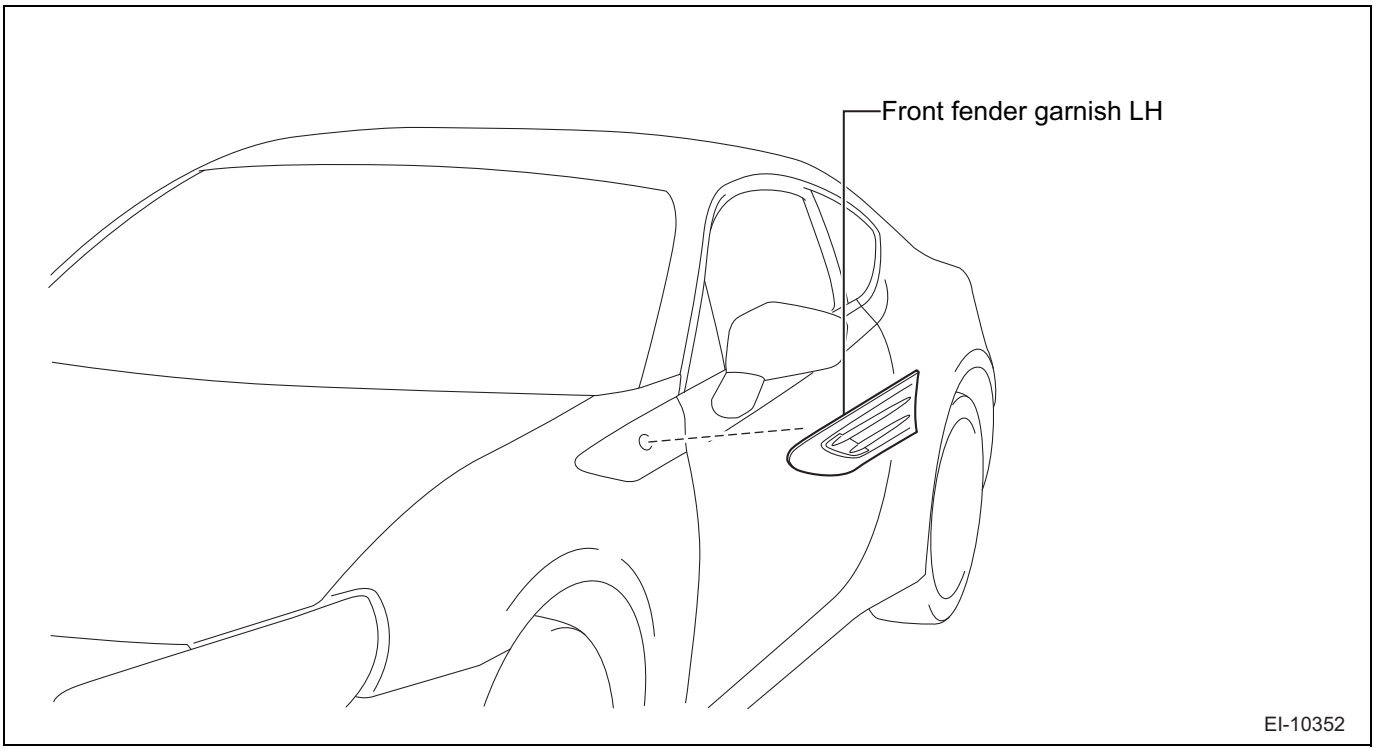


T

2. Installation of the roof drip side finish molding CTR LH
   (1) Fit in the front clip, and temporarily install the roof drip side finish molding CTR LH.
   (2) While pushing the roof drip side finish molding CTR LH towards the body, install it.
   (3) Fit in the rear clip, and install the roof drip side finish molding CTR LH.

# Front fender garnish

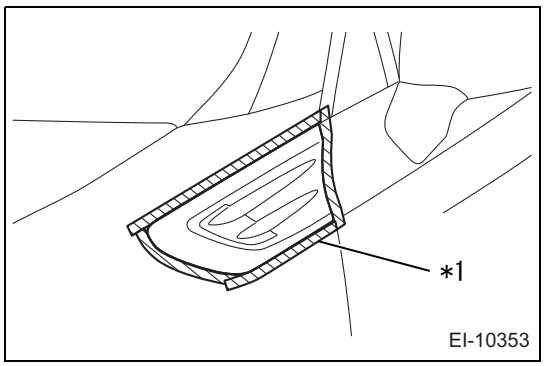
## Exploded view



## Removal

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.



1. Removal of front fender garnish LH
   (1) Apply protective tape around the front fender garnish LH.
   (2) Using a heat light, heat up the front fender garnish LH.
   CAUTION:
   Be careful of burns from the heated body or the heat from the heat lamp.
   NOTE:
   3 to 5 minutes at 40 to 60°C {104 to 140°F}

Captions in illustration

|---|---|
| *1 | Protective tape |

   (3) Set a piano wire to the winch.
   (4) Pull the piano wire both ways and cut the adhesive part of the double-sided tape.
   CAUTION:
   Pay attention to the clip position of the front fender garnish LH.

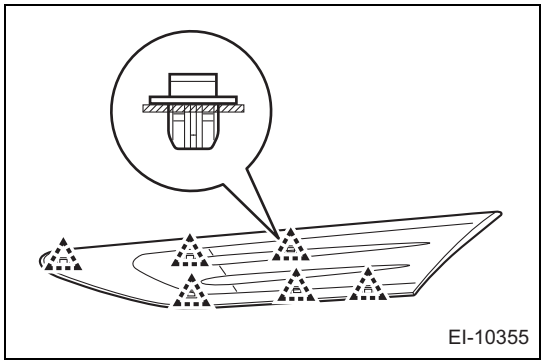
| *2 | Winch |



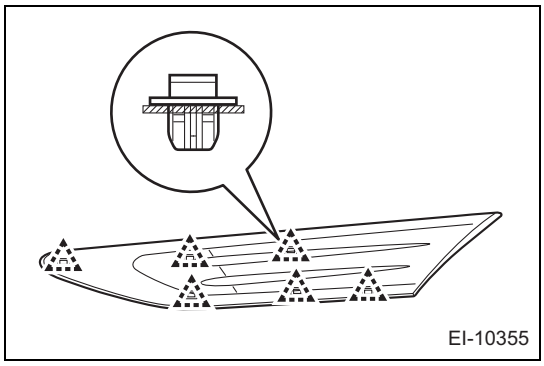
(5) Using a molding remover, remove the 6 clips and remove the front fender garnish LH.

## Installation

NOTE:

The following procedure is for LH side. Perform the same procedures for the RH and LH side.

1. Cleaning of the body installation surface
   (1) Using a cloth, rub off any double-sided tape remaining on the body.
   CAUTION:
   If you install the front fender garnish with double-sided tape remaining, it can cause poor adhesion, so be sure to fully remove it.
   (2) Clean the adhesive surface.
2. Installation of front fender garnish LH
   (1) Cleaning of front fender garnish LH installation surface (when reusing front fender garnish)
   (a)Using a cloth, rub off any double-sided tape remaining on the front fender garnish LH.
   (b)Clean the adhesive surface.

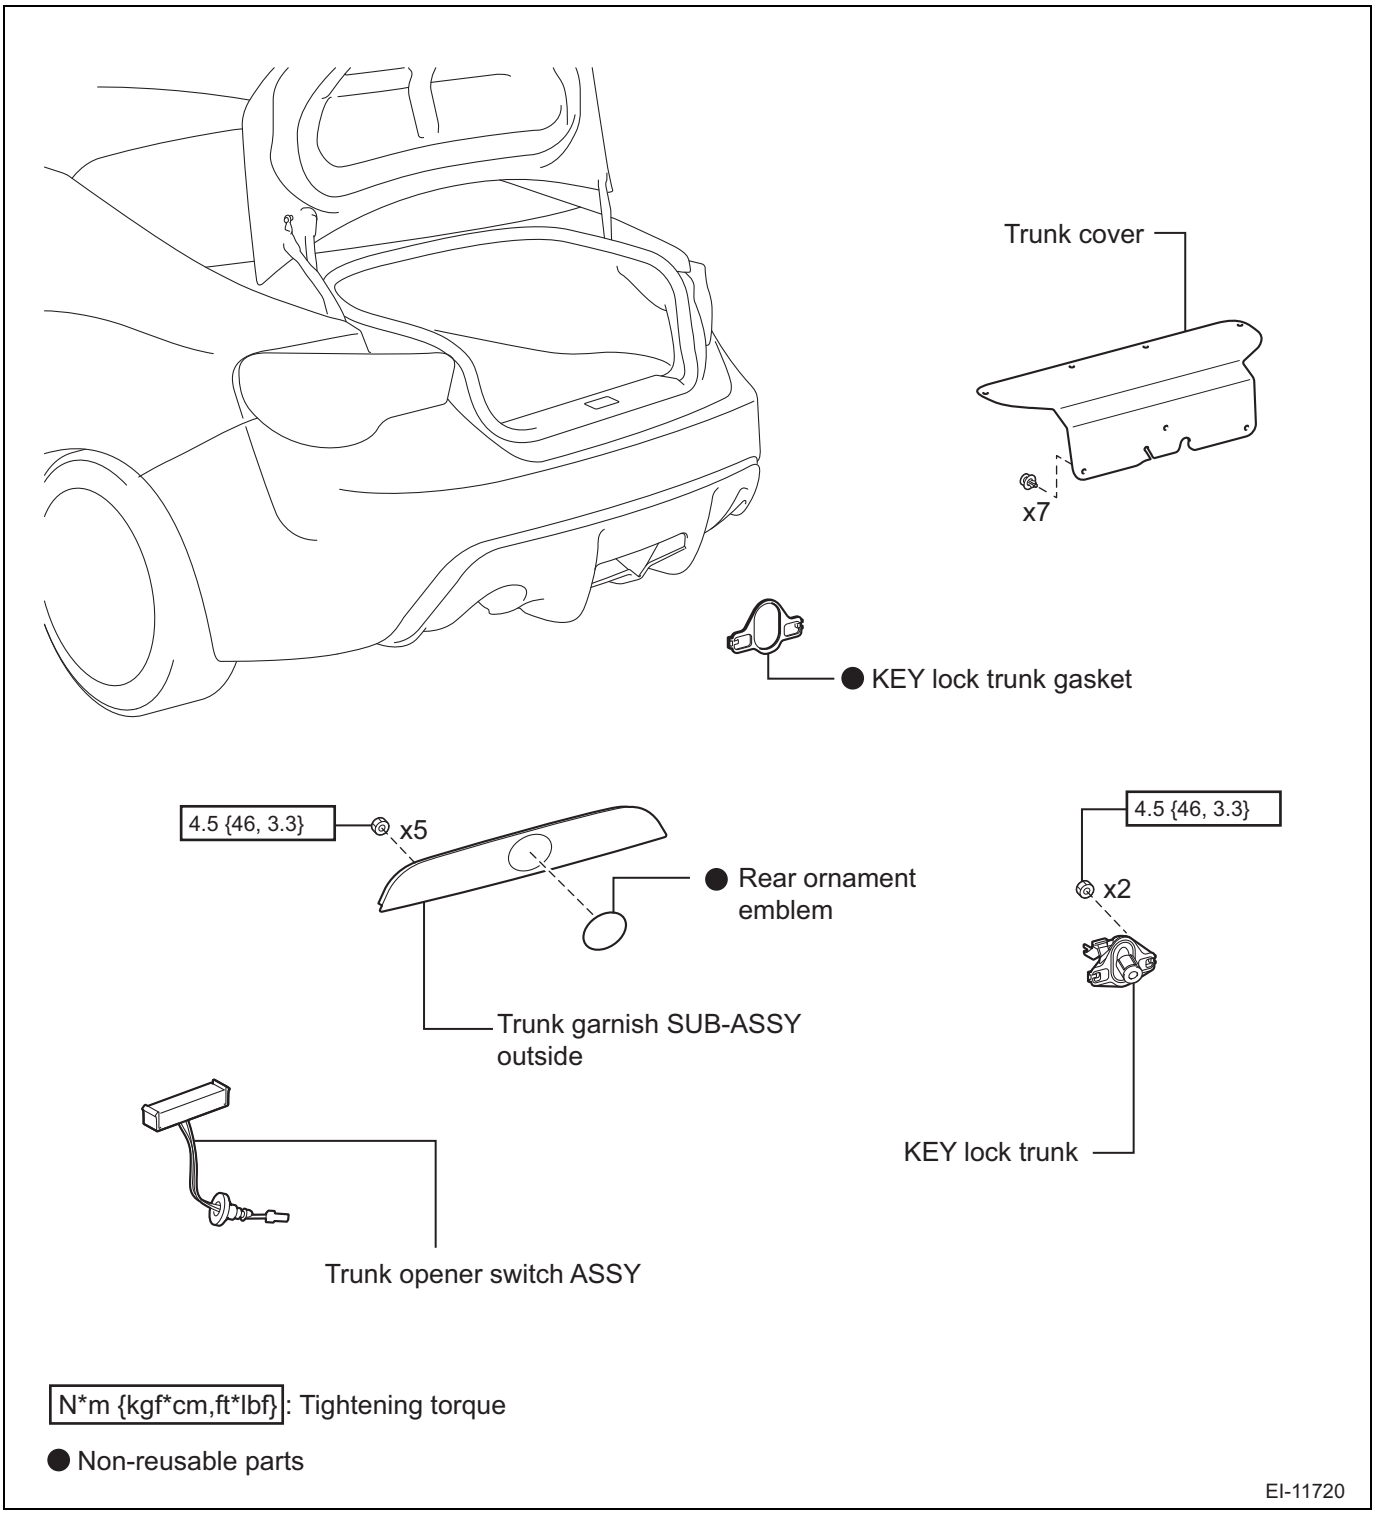


(2) Using a heat light, heat up the front fender garnish LH and the vehicle installation surface.
CAUTION:
Be careful of burns from the heated body or the heat from the heat lamp.
NOTE:
- Heat up the body side to 40 to 60°C {104 to 140°F}
- Heat up the front fender garnish side to 20 to 30°C {68 to 86°F}.

(3) Apply primer to installation surfaces of the front fender garnish LH.
CAUTION:
Do not apply the primer thickly.
(4) After the primer has dried, peel the backing sheet of the double-sided tape, and apply the double-sided tape to the installation surface of the front fender garnish LH.
CAUTION:
Be careful not to touch the adhesive surface.
(5) Peel the backing sheet of the double-sided tape, and engage the 6 clips, and then install the front fender garnish LH.
CAUTION:
- Press the front fender garnish LH firmly to install it.
- Confirm that a gasket is attached to each clip.

# Trunk garnish

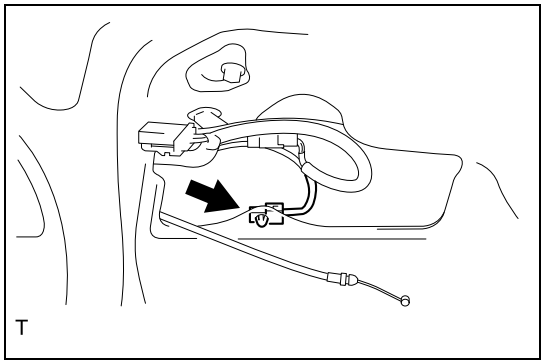
## Exploded view



ET

## Removal

1. Removal of trunk cover (Refer to DH - 61)
2. Removal of key lock trunk (Refer to DL - 107)



3. Removal of trunk garnish SUB-ASSY outside
   (1) Disconnect the connector for the trunk opener switch ASSY.
   (2) Remove the grommet for the trunk opener switch ASSY.

   (3) Disconnect the connector of the license plate light RH side.
   (4) Disconnect on the LH side using the same steps as the RH side.

   (5) Remove the 5 nuts.
   (6) Remove the clip, and remove the trunk garnish SUB-ASSY outside.

4. Removal of the trunk opener switch ASSY (Refer to DH - 71)
5. Removal of the rear ornament emblem (installed on the rear) (Refer to ET - 28)

## Installation

1. Installation of the rear ornament emblem (installed on the rear) (Refer to ET - 29)
2. Installation of the trunk opener switch ASSY (Refer to DH - 71)
3. Installation of the trunk garnish SUB-ASSY outside
   (1) Using the 5 nuts and the clip, install the trunk garnish SUB-ASSY outside.
   Standard value:T=4.5N·m {46kgf·cm} {3.3ft·lbf}
   (2) Connect the 2 license plate light connectors.
   (3) Connect the connector for the trunk opener switch ASSY.
4. Installation of key lock trunk (Refer to DL - 107)
5. Installation of trunk cover (Refer to DH - 62)
