VDC Warning Light	ON operation of the VDC warning light is displayed.	ON or OFF
Valve Relay Signal	Valve relay operation signal is displayed.	ON or OFF
Motor Relay Signal	Motor relay operation signal is displayed.	ON or OFF
M. Relay monitor Voltage	Voltage applied to the motor relay is displayed.	V
OFF SW Signal	Operation condition of VDC OFF switch is displayed.	ON or OFF
Brake Switch	Brake ON/OFF is displayed.	ON or OFF
Longitudinal G sensor output	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed. (For MT vehicle only. For AT vehicle: At -0.1 m/s ² constantly)	m/s ²
Clutch Switch	Clutch ON/OFF is displayed. (For MT vehicle only. For AT vehicle: OFF fixed)	ON or OFF
Reverse Signal	Reverse gear ON/OFF is displayed. (For MT vehicle only. For AT vehicle: OFF fixed)	ON or OFF

NOTE:

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

3. FUNCTION CHECK

Display	Contents of display	Index No.
ABS Sequence Control Mode	Operate the valve and pump motor continuously to perform the ABS sequence control.	<Ref. to VDC-13, ABS Sequence Control.>
VDC Check Mode	Operate the valve and pump motor continuously to perform the VDC sequence control.	<Ref. to VDC-16, VDC Sequence Control.>
Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point	Set the steering angle sensor neutral position and the lateral G sensor "0" point.	<Ref. to VDC-21, Steering Angle Sensor.>

4. FREEZE FRAME DATA

NOTE:

- Data stored at the time of trouble occurrence is shown on display.
- Each time a trouble occurs, the latest information is stored in the freeze frame data in memory.
- If a freeze frame data is not properly stored in memory (due to a drop in VDCCM power supply, etc.), a DTC suffixed with a question mark "?" appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

Display	Contents to be displayed
Steer Angle Sensor Op	Steering angle detected by steering angle sensor is displayed.
Yaw Rate Sensor Output	Vehicle angular speed detected by yaw rate sensor is displayed.
Lateral G sensor Output	Vehicle lateral acceleration detected by lateral G sensor is displayed.
Pressure Sensor Output	Brake fluid pressure detected by pressure sensor is displayed.
Vehicle Speed	Vehicle speed calculated by VDC control module is displayed.
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed in km/h or MPH.
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed in km/h or MPH.
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed in km/h or MPH.
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed in km/h or MPH.
Accel. Opening Angle	Acceleration opening is displayed.
Engine Speed	Engine speed on malfunction occurrence is displayed.
Gear Position	Gear position on malfunction occurrence is displayed.
IG power supply voltage	Voltage supplied to VDC control module is displayed.
Steering angle flag	Whether the absolute angle of the steering angle sensor was determined is displayed.
E/G Control Stop Flag	Engine control command signal is displayed.
VDC Control Flag	VDC control condition is displayed.

Display	Contents to be displayed
EBD Control Flag	EBD control condition is displayed.
TCS Control Flag	TCS control condition is displayed.
ABS Control Flag	ABS control condition is displayed.
OFF Switch Detection	ON/OFF condition of the VDC operated by the driver is displayed.
Brake SW	Brake ON/OFF is displayed.
Fr Rr G sensor Output	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed. (For MT vehicle only. For AT vehicle: At -0.1 m/s^2 constantly)
Clutch Switch	Clutch ON/OFF is displayed. (For MT vehicle only. For AT vehicle: OFF fixed)
Reverse Signal	Reverse gear ON/OFF is displayed. (For MT vehicle only. For AT vehicle: OFF fixed)

5. PARAMETER SELECTION

CAUTION:

- **Subaru Select Monitor is required for parameter selection.**
- **This function can be used for the replacement part of VDCCM&H/U and VDCCM.**

NOTE:

- When the VDCCM is replaced with a replacement part, be sure to perform the parameter selection/registration to the VDCCM using this function.
- To confirm the applied model, refer to the “model number plate” attached on the vehicle. <Ref. to ID-2, IDENTIFICATION, Identification.>
- When the applied model is entered wrong, re-entry is possible.
- When the registration has not been performed, the DTC code “Parameter selection error” is detected together with the ABS/EBD/VDC warning light illumination.

- 1) Connect the Subaru Select Monitor.
- 2) On «Main Menu» display, select {Each System Check}.
- 3) On «System Selection Menu» display, select {Brake Control System}.
- 4) When {VDC} is displayed, select the [OK] button.
- 5) On «Brake Control Diagnosis» display, select {Select Parameter}.
- 6) Check the applied model and option code indicated in the “Model number plate”. <Ref. to ID-2, IDENTIFICATION, Identification.>
- 7) Enter the applied model of 7-digit alphanumeric characters and press the [Enter] key.
- 8) When the option code input screen appears after entering the applied model, enter the option code consisting of 4-digit alphanumeric characters, and press the [Enter] key. When the option code is 3 digits, add “0” in front and enter the code as 4 digits.
- 9) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the [OK] button.

NOTE:

- When the displayed applied model and grade are different from those of the vehicle, perform registration operations again after clicking the [OK] button.
- 10) Execute Clear Memory after parameter selection and registration operations because the DTC for “Parameter selection error” is memorized.

6. PARAMETER CHECK

NOTE:

The parameter data registered in the VDCCM is shown on the display.

- 1) Connect the Subaru Select Monitor.
- 2) On the «Main Menu» display, select {Each System Check}.
- 3) On the «System Selection Menu», select {Brake Control System}.
- 4) Click the [OK] button after the {VDC} is displayed.
- 5) On the «Brake Control Diagnosis», select {Confirm on parameter}.
- 6) On the {Confirm on parameter} display screen, check that the applied model and grade of the target vehicle are included, and click the [OK] button.
- 7) If the applied model and grade of the target vehicle are not included on the {Confirm on parameter} display screen, perform parameter selection and registration. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:

Defective harness connector

TROUBLE SYMPTOM:

Communication is impossible between VDC and Subaru Select Monitor.

WIRING DIAGRAM:

VDC00547

Step	Check	Yes	No
1 CHECK IGNITION SWITCH.	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select VDC mode using Subaru Select Monitor.
2 CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No	
3	CHECK BATTERY TERMINAL.	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step 4.
4	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step 8.	Go to step 5.
5	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6	CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the ECM, TCM, airbag CM, TPMS & keyless entry CM, and impact sensor. CAUTION: When disconnecting the connector from airbag CM, always follow the precautions on AB section. <Ref. to AB-5, CAUTION, General Description.> 3) Measure the resistance between data link connector and chassis ground. Connector & terminal (B40) No. 7 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 7.	Repair the harness and connector between each control module and data link connector.
7	CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND DATA LINK CONNECTOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between data link connector and chassis ground. Connector & terminal (B40) No. 7 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 8.	Repair the harness and connector between each control module and data link connector.
8	CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND DATA LINK CONNECTOR. Measure the resistance between VDCCM&H/U connector and data link connector. Connector & terminal (B310) No. 7 — (B40) No. 7:	Is the resistance less than 1 Ω?	Go to step 9.	Repair harness and connector between VDCCM&H/U and data link connector.
9	CHECK INSTALLATION OF VDCCM&H/U CONNECTOR. Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step 10.	Insert VDCCM&H/U connector into VDCCM&H/U.
10	CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 11.	Repair open circuit in harness between VDCCM&H/U and battery.

Subaru Select Monitor

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
11 CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U connector and chassis ground. <i>Connector & terminal (B310) No. 25 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 12.	Repair the open circuit of VDCCM&H/U ground harness and poor contact of connector.
12 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Brake Control System}.
- 3) Click the [OK] button after the {VDC} is displayed.
- 4) On «Brake Control Diagnosis» display, select {Diagnostic Code(s) Display}.
- 5) Record the DTC and data.

NOTE:

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>
- Up to 3 DTCs are displayed in the order of detection.
- If a particular DTC is not stored in memory properly at the occurrence of problem (due to a drop in VDCCM&H/U power supply etc.), the DTC suffixed with a question mark “?” is displayed on Subaru Select Monitor display screen. This shows it may be an unreliable reading.

Display	Contents to be displayed
(Current)	The current DTC is displayed on Subaru Select Monitor display screen.
(Old)	The latest DTC from the history of previous problems is displayed on Subaru Select Monitor display screen.
(Older)	The second latest DTC from the history of previous problems is displayed on the Subaru Select Monitor display screen.
(Before 3)	The third latest DTC from the history of previous problems is displayed on Subaru Select Monitor display screen.

Inspection Mode

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

8. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible.

Drive the vehicle at least ten minutes.

NOTE:

Make sure the vehicle is not dragged to one side under usual driving condition.

9. Clear Memory Mode

A: OPERATION

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Brake Control System}.
- 3) When {VDC} is displayed, select the [OK] button.
- 4) On «Brake Control Diagnosis» display, select {Clear Memory}.
- 5) When the «Clear Memory ?» is shown on the screen, click the [YES] button.
- 6) When «Done» and «Turn off the ignition switch.» are shown on the screen, turn the ignition switch to OFF.

NOTE:

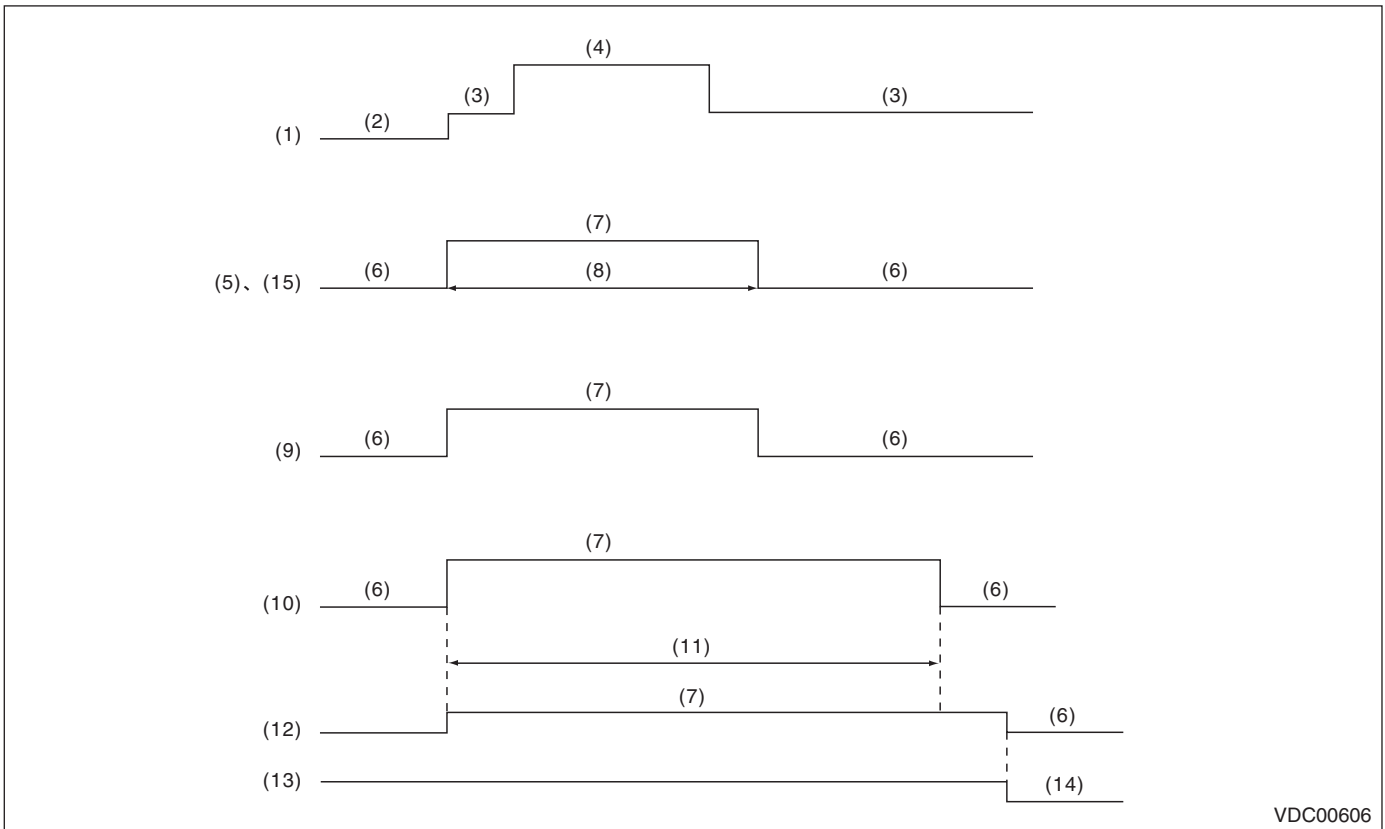

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

10.Warning Light Illumination Pattern

A: INSPECTION

VDC00606

- | | | |
|-----------------------|----------------------------------------------|----------------------------------------------------------------|
| (1) Ignition switch | (6) Light OFF | (11) Several seconds (depending on engine coolant temperature) |
| (2) OFF | (7) Light ON | (12) Brake warning light (EBD warning light) |
| (3) ON | (8) 2 seconds | (13) Parking brake |
| (4) Engine start | (9) VDC OFF indicator light | (14) Released |
| (5) ABS warning light | (10) VDC warning light & VDC indicator light | (15) Hill start assist warning light (MT model only) |

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) When warning lights or indicator lights remain constantly OFF, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-28, ABS WARNING LIGHT, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-28, HILL START ASSIST WARNING LIGHT DOES NOT COME ON, Warning Light Illumination Pattern.>

3) When the ABS warning light, VDC OFF indicator light, VDC warning light & VDC indicator light, and hill start assist warning light do not go off, check the combination meter circuit and CAN communication circuit. <Ref. to VDC(diag)-29, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-31, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-30, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-29, HILL START ASSIST WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

NOTE:

- Even though the ABS warning light does not go off after 2 seconds from ABS warning light illumination, the ABS system operates normally when the warning light goes off while driving at approximately 12 km/h (7 MPH). However, the ABS system does not work while the ABS warning light is illuminated.
- It may take several minutes before the VDC warning light & VDC indicator light goes off, if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature.
- With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, and VDC warning light & VDC indicator light may illuminate because VDC-CM&H/U detects the abnormal conditions from ABS wheel speed sensors. In this case, this is not a malfunction. Perform the Clear Memory Mode. <Ref. to VDC(diag)-25, Clear Memory Mode.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

B: ABS WARNING LIGHT, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

DETECTING CONDITION:

- Defective combination meter
- Defective CAN communication

TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), ABS warning light, VDC OFF indicator light, and VDC warning light & VDC indicator light do not illuminate.

NOTE:

When pressing the VDC OFF switch for 10 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

Step	Check	Yes	No	
1	CHECK OTHER INDICATOR LIGHT. Turn the ignition switch to ON.	Does other indicator light illuminate soon after "ON"?	Go to step 2.	Perform the self-diagnosis of combination meter. <Ref. to IDI-5, INSPECTION, Combination Meter System.>
2	CHECK VDCCM. When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Is the «EBD Warning Light» output ON?	Go to step 3.	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	CHECK VDCCM. Connect the Subaru Select Monitor, and start the engine. Press the VDC OFF switch to display the current data of VDCCM.	Is "OFF Lamp" output set to ON?	Go to step 4.	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5	CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-5, INSPECTION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>

C: HILL START ASSIST WARNING LIGHT DOES NOT COME ON

For the diagnostic procedure, refer to "ABS WARNING LIGHT, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON". <Ref. to VDC(diag)-28, ABS WARNING LIGHT, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

D: ABS WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective CAN communication

TROUBLE SYMPTOM:

When starting the engine, the ABS warning light and hill start assist warning light are kept ON.

	Step	Check	Yes	No
1	READ DTC. Read the DTC. <Ref. to VDC(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3	CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-5, INSPECTION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-22, Combination Meter.>

E: HILL START ASSIST WARNING LIGHT DOES NOT GO OFF

Refer to “ABS warning light does not go off” for diagnostic procedure. <Ref. to VDC(diag)-29, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

F: VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective engine
- Defective CAN communication

TROUBLE SYMPTOM:

When starting the engine, the VDC warning light & VDC indicator light remains lit.

Step	Check	Yes	No
1 READ DTC. Read the DTC. <Ref. to VDC(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK ENGINE.	Does the malfunction indicator light illuminate?	Repair the engine. <Ref. to EN(H4DO)(diag)-42, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(H4DOTC)(diag)-42, Read Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK ENGINE COOLANT TEMPERATURE. Warm up the engine, and check if the VDC warning light & VDC indicator light illumination condition changes.	When the engine coolant temperature is too low, the VDC warning light & VDC indicator light illuminates. Do the lights go off when the engine is warmed up?	Normal If DTC is recorded, clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.>	Go to step 4.
4 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-5, INSPECTION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

G: VDC OFF INDICATOR LIGHT DOES NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective CAN communication
- VDC OFF switch is shorted.

TROUBLE SYMPTOM:

When starting the engine, VDC OFF indicator light is kept ON.

NOTE:

When pressing the VDC OFF switch for 10 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

Step	Check	Yes	No
1 READ DTC. Read the DTC. <Ref. to VDC(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK VDC OFF SWITCH. Remove and check VDC OFF switch. <Ref. to VDC-28, VDC OFF Switch.>	Is the VDC OFF switch normal?	Go to step 3.	Replace the VDC OFF switch.
3 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-5, INSPECTION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

H: BRAKE WARNING LIGHT DOES NOT GO OFF

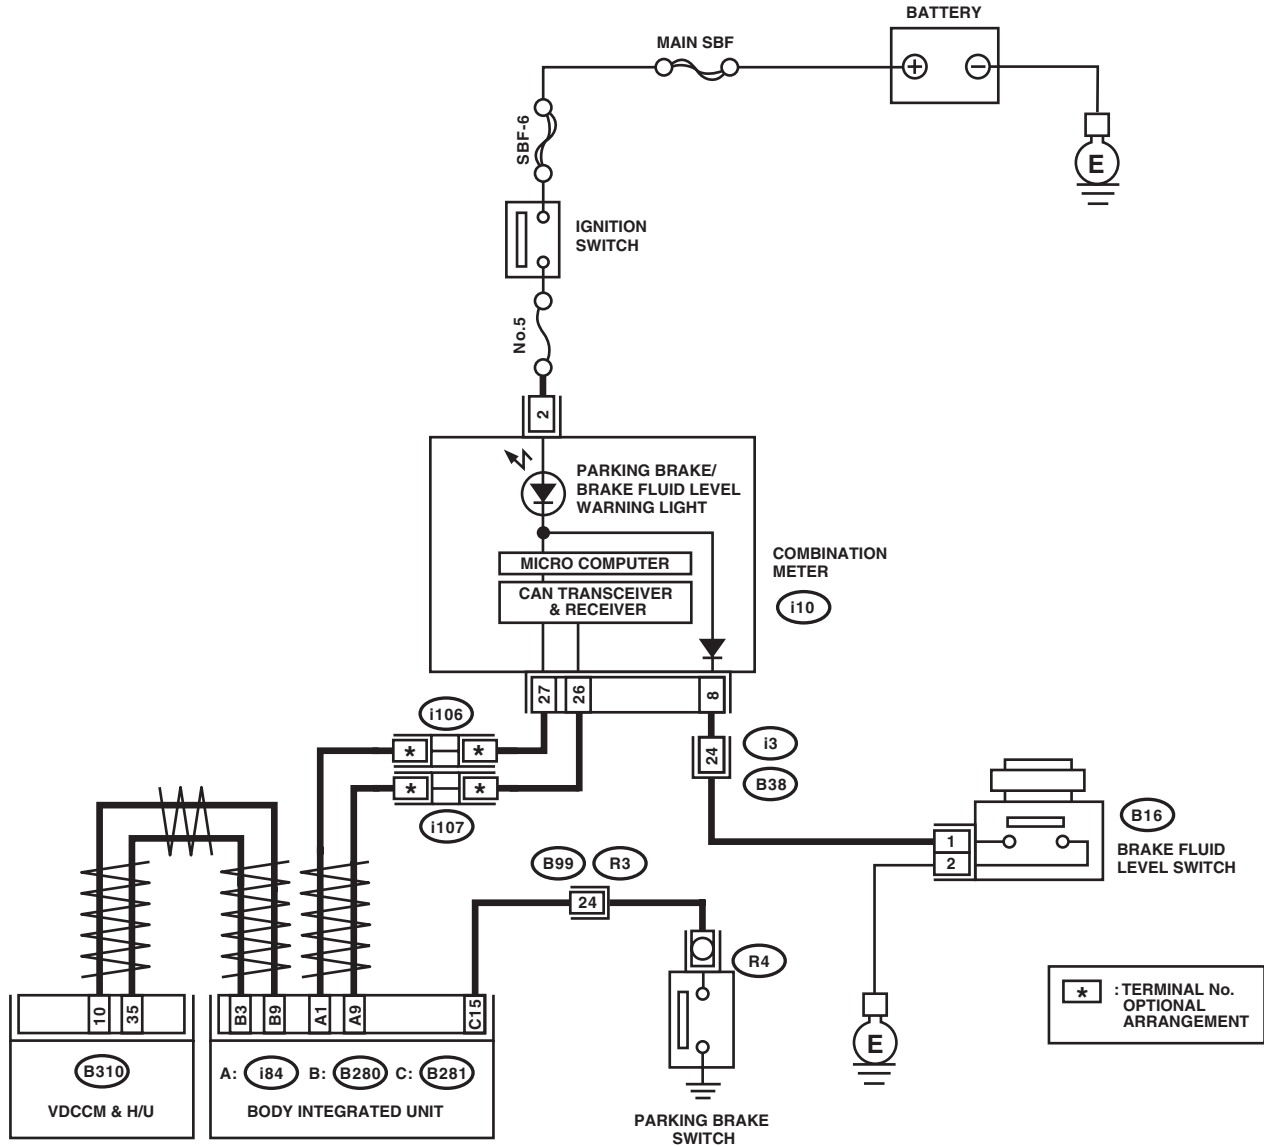

DETECTING CONDITION:

- Brake warning light circuit is shorted.
- Defective sensor/connector
- Defective CAN communication

TROUBLE SYMPTOM:

After starting the engine, the brake warning light remains lit though the parking lever is released.

WIRING DIAGRAM:

VDC00734

Warning Light Illumination Pattern

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK INSTALLATION OF VDCCM&H/U CONNECTOR. 1) Turn the ignition switch to OFF. 2) Check that the VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step 2.	Insert the VDCCM&H/U connector until it is locked by clamp.
2 READ DTC. Read the DTC. <Ref. to VDC(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK BRAKE FLUID AMOUNT. Check the amount of brake fluid in the reservoir tank of master cylinder.	Is the amount of brake fluid between the lines of "MAX" and "MIN"?	Go to step 4.	Replenish brake fluid to the specified value.
4 CHECK BRAKE FLUID LEVEL SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance of master cylinder terminals. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the master cylinder. <Ref. to BR-26, Master Cylinder.>
5 CHECK GROUND SHORT OF HARNESS. 1) Disconnect the connector (i10) from combination meter. 2) Measure the resistance between combination meter connector and chassis ground. <i>Connector & terminal</i> <i>(i10) No. 8 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Repair the ground short circuit in harness between combination meter and brake fluid level switch.
6 CHECK PARKING BRAKE SWITCH. 1) Disconnect the connector (R4) from parking brake switch. 2) Release the parking brake. 3) Measure the resistance between parking brake switch terminal and chassis ground.	Is the resistance 1 MΩ or more?	Go to step 7.	Replace the parking brake switch.
7 CHECK GROUND SHORT OF HARNESS. 1) Disconnect the connector (B281) from body integrated unit. 2) Measure the resistance between body integrated unit connector and chassis ground. <i>Connector & terminal</i> <i>(B281) No. 15 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 8.	Repair the ground short circuit of harness between body integrated unit and parking brake switch.
8 CHECK POOR CONTACT OF CONNECTOR. Check for poor contact of all connectors.	Is there poor contact?	Repair the connector.	Go to step 9.
9 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 10.
10 CHECK COMBINATION METER. Check the combination meter. <Ref. to IDI-5, INSPECTION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>

List of Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

11. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Detailed code	Item	Content of diagnosis	Reference
C0021	07B1H 07B2H 07C0H	Front Right ABS Sensor Circuit Open or Short	Open/high input of front ABS wheel speed sensor RH	<Ref. to VDC(diag)-40, DTC C0021 FRONT RIGHT ABS SENSOR CIRCUIT OPEN OR SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C0021 FRONT RIGHT ABS SENSOR CIRCUIT OPEN OR SHORT

NOTE:

For the diagnostic procedure, refer to DTC C0027 “RL WHEEL SPEED SENSOR CIRCUIT OPEN/HIGH INPUT”. <Ref. to VDC(diag)-41, DTC C0027 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C0023 FRONT LEFT ABS SENSOR CIRCUIT OPEN OR SHORT

NOTE:

For the diagnostic procedure, refer to DTC C0027 “RL WHEEL SPEED SENSOR CIRCUIT OPEN/HIGH INPUT”. <Ref. to VDC(diag)-41, DTC C0027 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C0025 REAR RIGHT ABS SENSOR CIRCUIT OPEN OR SHORT

NOTE:

For the diagnostic procedure, refer to DTC C0027 “RL WHEEL SPEED SENSOR CIRCUIT OPEN/HIGH INPUT”. <Ref. to VDC(diag)-41, DTC C0027 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

D: DTC C0027 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORT

DTC DETECTING CONDITION:

- Defective ABS wheel speed sensor (broken wire, input voltage too high)
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

VDC00629

Step	Check	Yes	No
1	CHECK POOR CONTACT OF CONNECTOR. Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector. Go to step 2.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<p>2</p> <p>CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR.</p> <p>1) Disconnect the connector (B310) from the VDCCM&H/U.</p> <p>2) Disconnect the connector from ABS wheel speed sensor.</p> <p>3) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector.</p> <p>Connector & terminal</p> <p>DTC C0021 (B310) No. 6 — (B6) No. 1: (B310) No. 5 — (B6) No. 2:</p> <p>DTC C0023 (B310) No. 1 — (B15) No. 1: (B310) No. 26 — (B15) No. 2:</p> <p>DTC C0025 (B310) No. 4 — (R72) No. 1: (B310) No. 3 — (R72) No. 2:</p> <p>DTC C0027 (B310) No. 27 — (R73) No. 1: (B310) No. 2 — (R73) No. 2:</p>	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
<p>3</p> <p>CHECK GROUND SHORT OF HARNESS.</p> <p>Measure the resistance between VDCCM&H/U connector and chassis ground.</p> <p>Connector & terminal</p> <p>DTC C0021 (B310) No. 6 — Chassis ground:</p> <p>DTC C0023 (B310) No. 1 — Chassis ground:</p> <p>DTC C0025 (B310) No. 4 — Chassis ground:</p> <p>DTC C0027 (B310) No. 27 — Chassis ground:</p>	Is the resistance 1 MΩ or more?	Go to step 4.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
<p>4</p> <p>CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.</p> <p>1) Connect the VDCCM&H/U connector.</p> <p>2) Turn the ignition switch to ON.</p> <p>3) Measure the voltage between ABS wheel speed sensor connector and chassis ground.</p> <p>Connector & terminal</p> <p>DTC C0021 (B6) No. 2 (+) — Chassis ground (-):</p> <p>DTC C0023 (B15) No. 2 (+) — Chassis ground (-):</p> <p>DTC C0025 (R72) No. 2 (+) — Chassis ground (-):</p> <p>DTC C0027 (R73) No. 2 (+) — Chassis ground (-):</p>	Is the voltage 5 — 16 V?	Go to step 6.	Go to step 5.
<p>5</p> <p>CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the VDCCM&H/U connector.</p> <p>3) Turn the ignition switch to ON.</p> <p>4) Measure the voltage between VDCCM&H/U connector terminals.</p> <p>Connector & terminal (B310) No. 28 (+) — (B310) No. 25 (-):</p>	Is the voltage 10 — 15 V?	Go to step 6.	Check the generator, battery and VDCCM&H/U power supply circuit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to VDC-24, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Is the pattern the same waveform as shown in the figure?	Go to step 7.	Replace the ABS wheel speed sensor. <Ref. to VDC-23, Front ABS Wheel Speed Sensor.>
7 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
8 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

E: DTC C0022 FRONT RIGHT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to DTC C0028 "RL WHEEL SPEED SENSOR SIGNAL". <Ref. to VDC(diag)-44, DTC C0028 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C0024 FRONT LEFT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to DTC C0028 "RL WHEEL SPEED SENSOR SIGNAL". <Ref. to VDC(diag)-44, DTC C0028 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C0026 REAR RIGHT ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to DTC C0028 "RL WHEEL SPEED SENSOR SIGNAL". <Ref. to VDC(diag)-44, DTC C0028 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

H: DTC C0028 REAR LEFT ABS SENSOR SIGNAL

DTC DETECTING CONDITION:

- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

VDC00629

Step	Check	Yes	No
1 CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR. 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the defective ABS wheel speed sensor output.	Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position?	Go to step 2.	Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2	CHECK POOR CONTACT OF CONNECTOR. Turn the ignition switch to OFF.	Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector. Go to step 3.
3	CHECK CAUSE OF SIGNAL NOISE. Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step 4. Install the radio wave devices and electronic components properly.
4	CHECK CAUSE OF SIGNAL NOISE. Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness. Go to step 5.
5	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step 6.
6	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).> It results from a temporary noise interference.
7	CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.	Is the ABS wheel speed sensor installation bolt tightened 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)?	Go to step 8. Tighten the ABS wheel speed sensor installation bolts.
8	CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to VDC-24, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?	Go to step 10. Go to step 9.
9	CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged. Go to step 10.
10	CHECK CAUSE OF SIGNAL NOISE. Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step 11. Install the radio wave devices and electronic components properly.
11	CHECK CAUSE OF SIGNAL NOISE. Check if the noise sources (such as an antenna) are installed near the sensor harness.	Is the noise sources installed?	Go to step 12. Install the noise sources apart from sensor harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
12 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 13.
13 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference. NOTE: Though the ABS warning light remains on at this time, this is normal. Drive the vehicle at 12 km/h (7 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

I: DTC C0029 ANY OF WHEEL SENSORS SIGNAL

DTC DETECTING CONDITION:

- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective magnetic encoder
- When a wheel is turned freely for a long time

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

NOTE:

Brake warning light comes on as well as ABS warning light when EBD does not operate.

WIRING DIAGRAM:

VDC00629

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 WHETHER A WHEEL TURNED FREELY OR NOT. Check if the wheels have been turned freely for one minute or more, such as when the vehicle is jacked-up, under full-lock cornering or when the wheels are not in contact with road surface.	Did the wheels turn freely?	VDC is normal. Clear the memory. NOTE: This diagnostic trouble code may sometimes occur if the wheels turn freely for a long time, for example when the vehicle is towed or jacked-up, or when steering wheel is continuously turned all the way.	Go to step 2.
2 CHECK TIRE SPECIFICATIONS. Turn the ignition switch to OFF.	Are the tire specifications correct?	Go to step 3.	Replace the tire.
3 CHECK WEAR OF TIRE.	Is the tire worn excessively?	Replace the tire.	Go to step 4.
4 CHECK TIRE INFLATION PRESSURE.	Is the tire pressure correct?	Go to step 5.	Adjust the tire pressure.
5 CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.	Are the ABS wheel speed sensor installation bolts tightened 7.5 N-m (0.76 kgf-m, 5.5 ft-lb)? (For four wheels)	Go to step 6.	Tighten the ABS wheel speed sensor installation bolts.
6 CHECK ABS WHEEL SPEED SENSOR SIGNAL. 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to VDC-24, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?	Go to step 8.	Go to step 7.
7 CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step 8.
8 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference. NOTE: Though the ABS warning light remains on at this time, this is normal. Drive the vehicle at 12 km/h (7 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

J: DTC C0031 FR HOLD VALVE MALFUNCTION

NOTE:

For the diagnostic procedure, refer to DTC C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C0035 RR HOLD VALVE MALFUNCTION

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C0036 RR PRESSURE REDUCING VALVE MALFUNCTION

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C0037 RL HOLD VALVE MALFUNCTION

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC C0038 RL PRESSURE REDUCING VALVE MALFUNCTION

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C0039 ANY ONE OF FOUR SOLENOID VALVES

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

S: DTC C0061 NORMAL OPENING VALVE 1 MALFUNCTION

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C0062 NORMAL OPENING VALVE 2 MALFUNCTION

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U: DTC C0063 NORMAL CLOSING VALVE 1 MALFUNCTION

NOTE:

For the diagnostic procedure, refer to C0064 "NORMAL CLOSING VALVE 2 MALFUNCTION". <Ref. to VDC(diag)-52, DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

V: DTC C0064 NORMAL CLOSING VALVE 2 MALFUNCTION

DTC DETECTING CONDITION:

- Defective harness connector
- Defective VDCH/U solenoid valve

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the power supply circuit.
2	CHECK VDCCM&H/U GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 25 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 3.	Repair the VDCCM&H/U ground harness.
3	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 4.
4	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

W: DTC C0041 ECM

DTC DETECTING CONDITION:

Defective VDCCM&H/U

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:

VDC00464

Step	Check	Yes	No
1 CHECK VDCCM&H/U GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. Connector & terminal (B310) No. 25 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 2.	Repair the VDCCM&H/U ground harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step 3.
3 CHECK CAUSE OF SIGNAL NOISE.	Are the radio wave devices and electronic components installed correctly?	Go to step 4.	Install the radio wave devices and electronic components properly.
4 CHECK CAUSE OF SIGNAL NOISE.	Is there a noise source (such as an antenna) installed near the sensor harness?	Install the noise source apart from the sensor harness.	Go to step 5.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

X: DTC C0041 PARAMETER SELECTION ERROR

DTC DETECTING CONDITION:

VDCCM parameter selection error

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

NOTE:

When the VDCCM or VDCCM&H/U is replaced, this DTC may be stored.

Step	Check	Yes	No
1	CHECK VDCCM&H/U REPLACEMENT HISTORY. Is there history of VDCCM replacement by itself?	Go to step 2.	Go to step 3.
2	CHECK VDCCM IDENTIFICATION SYMBOL. Check the identification symbol of the seal attached on the side of the VDCCM. AT: Z6 MT: Z7	Go to step 4.	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	CHECK VDCCM&H/U IDENTIFICATION SYMBOL. Check the identification symbol stamped on the upper part of the H/U. AT: Z6 MT: Z7	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	CHECK PARAMETER SELECTED IN VDC-CM. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.> Does the parameter registered in the VDCCM match the relevant vehicle?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Select and register the correct parameter. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Y: DTC C0042 POWER SUPPLY VOLTAGE FAILURE

DTC DETECTING CONDITION:

Improper VDCCM&H/U power supply voltage

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD may not operate.
- VDC does not operate.

NOTE:

Warning lights go off if voltage returns.

WIRING DIAGRAM:

VDC00463

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK GENERATOR. 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator terminal B and chassis ground. Terminals Generator terminal B (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the generator.
2 CHECK BATTERY TERMINAL. Turn the ignition switch to OFF.	Are the positive and negative battery terminals clamped tightly?	Go to step 3.	Tighten the terminal.
3 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Disconnect the connector from the VDCCM&H/U. 2) Run the engine at idle. 3) Operate devices such as headlights, air conditioner, defogger, etc. which produce an electrical load. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 4.	Repair the power supply circuit.
4 CHECK VDCCM&H/U GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 25 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 5.	Repair the VDCCM&H/U ground harness.
5 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Z: DTC C0044 TCM COMMUNICATION CIRCUIT

DTC DETECTING CONDITION:

No CAN signal from TCM.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

Step	Check	Yes	No	
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of TCM connector?	Repair the connector.	Go to step 3.
3	CHECK TCM. Refer to the basic diagnostic procedure for Automatic Transmission (diagnostics).	Is the TCM normal?	Go to step 4.	Replace the TCM. <Ref. to 4AT-66, Transmission Control Module (TCM).>
4	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AA:DTC C0045 INCORRECT VDC CONTROL MODULE SPECIFICATIONS

DTC DETECTING CONDITION:

Different control module specification

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

NOTE:

When parameter selection for VDCCM is improper, this DTC may be memorized.

Step	Check	Yes	No
1	CHECK VDCCM REPLACEMENT HISTORY. Is there history of VDCCM replacement by itself?	Go to step 2.	Go to step 3.
2	CHECK VDCCM IDENTIFICATION SYMBOL. Check the identification symbol of the seal attached on the side of the VDCCM. AT: Z6 MT: Z7	Go to step 4.	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	CHECK VDCCM&H/U IDENTIFICATION SYMBOL. Check the identification symbol stamped on the upper part of the H/U. AT: Z6 MT: Z7	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	CHECK PARAMETER SELECTED IN VDCCM. <Ref. to VDC(diag)-19, PARAMETER CHECK, OPERATION, Subaru Select Monitor.> Does the parameter registered in the VDCCM match the relevant vehicle?	Go to step 5.	Select and register the correct parameter. <Ref. to VDC(diag)-19, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>
5	CHECK TCM SPECIFICATION. Check the TCM specification. Is the specification of TCM same as vehicle specification?	Go to step 6.	Replace the TCM. <Ref. to 4AT-66, Transmission Control Module (TCM).>
6	CHECK AT SYSTEM. 1) Start the engine. 2) Check the DTC in AT system. Is DTC of AT system displayed?	Repair the AT system. <Ref. to 4AT(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step 7.
7	CHECK ECM SPECIFICATION. Check the ECM specification. Is the specification of ECM same as vehicle specification?	Go to step 8.	Replace the ECM. <Ref. to FU(H4DO)-101, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 9.
9 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AB:DTC C0045 TCM MALFUNCTION

DTC DETECTING CONDITION:

Defective TCM

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

	Step	Check	Yes	No
1	CHECK AT SYSTEM. 1) Start the engine. 2) Check the DTC in AT system.	Is DTC of AT system displayed?	Repair the AT system. <Ref. to 4AT(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 3.
3	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AC:DTC C0047 CAN COMMUNICATION

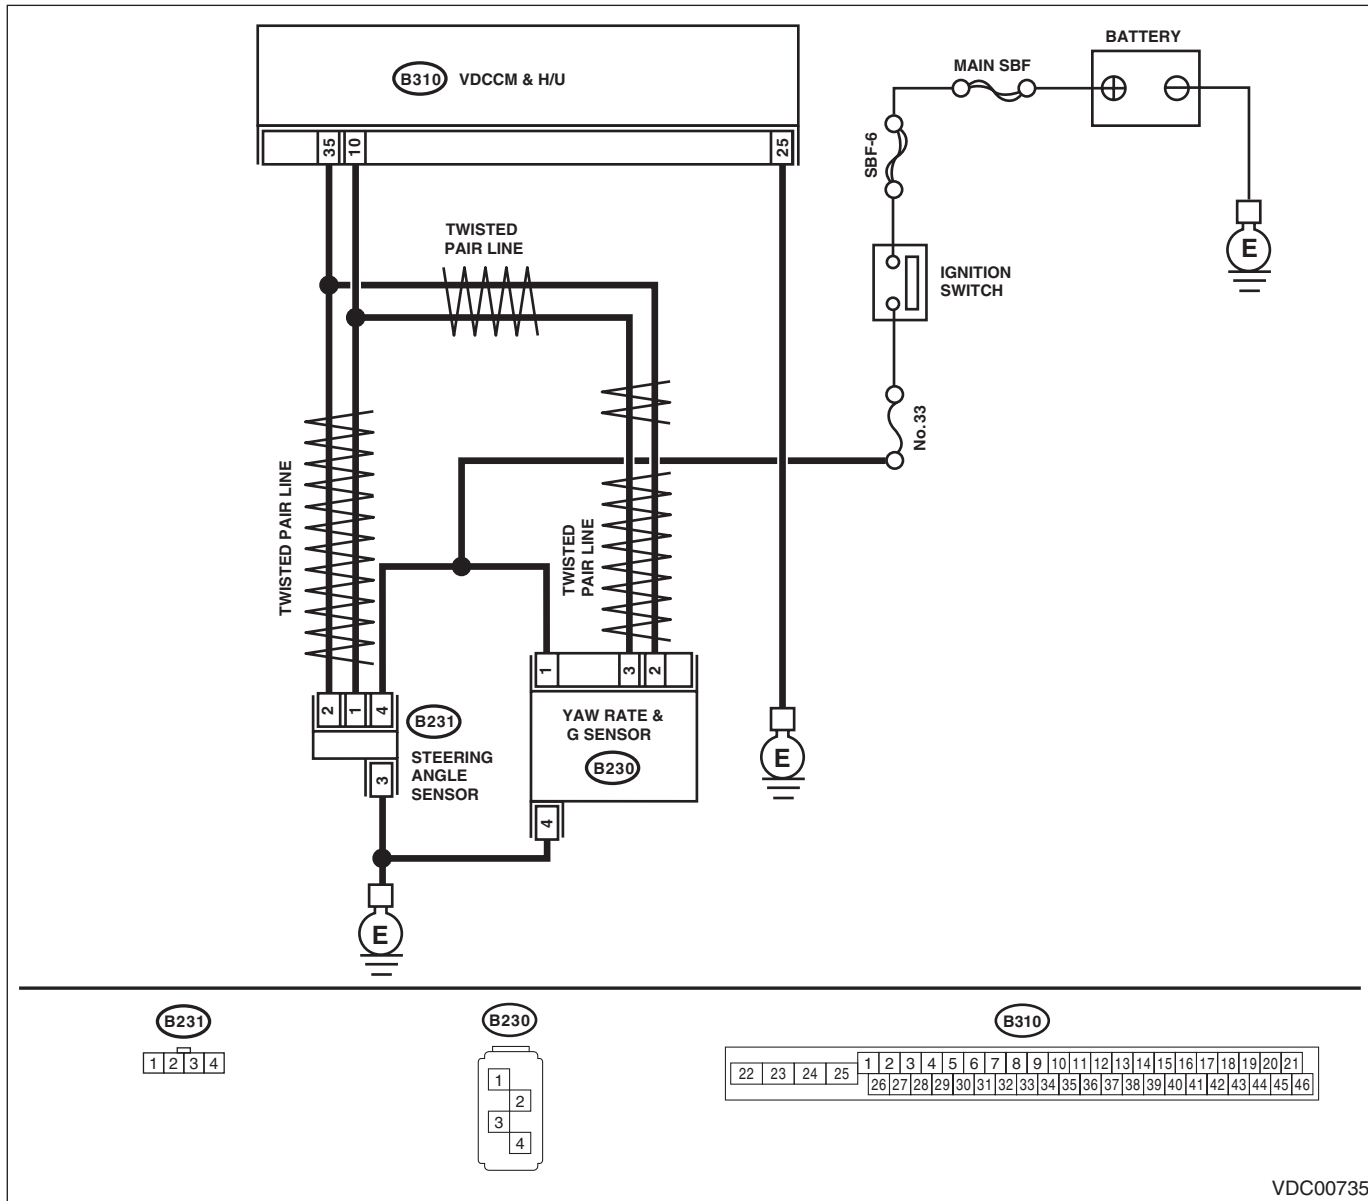

DTC DETECTING CONDITION:

CAN communication line circuit is open or shorted.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

VDC00735

Step	Check	Yes	No
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK POOR CONTACT OF CONNECTORS.	Repair the connector.	Go to step 3.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR. 1) Select "Current Data Display & Save" on the Subaru Select Monitor. 2) Check the steering angle sensor output.	Does the output signal change?	Go to step 4.	Check output of the steering angle sensor. <Ref. to VDC(diag)-85, DTC C0071 STEER ANGLE SENSOR OP, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4 CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR. 1) Select "Current Data Display & Save" on the Subaru Select Monitor. 2) Check the yaw rate & G sensor output.	Does the output signal change?	Go to step 5.	Check output of the yaw rate & G sensor. <Ref. to VDC(diag)-95, DTC C0072 YAW RATE SENSOR COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AD:DTC C0051 VALVE RELAY

DTC DETECTING CONDITION:

Defective valve relay

TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.

WIRING DIAGRAM:

VDC00466

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 28 (+) — Chassis ground (-): (B310) No. 24 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the power supply circuit.
2 CHECK VDCCM&H/U INPUT VOLTAGE. Calculate the voltage difference measured in step 1. A: (B310) No. 28 (+) — Chassis ground (-): B: (B310) No. 24 (+) — Chassis ground (-):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step 3.
3 CHECK VDCCM&H/U GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 25 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 4.	Repair the VDCCM&H/U ground harness.
4 CHECK VDCCM&H/U VALVE RELAY. Measure the resistance between VDCCM&H/U terminals. Terminals No. 24 — No. 25:	Is the resistance 1 M Ω or more?	Go to step 5.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
5 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AE:DTC C0052 MOTOR AND MOTOR RELAY OFF FAILURE

DTC DETECTING CONDITION:

- Defective motor and motor relay
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

WIRING DIAGRAM:

VDC00467

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK VDCCM&H/U INPUT VOLTAGE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 23 (+) — Chassis ground (-): (B310) No. 28 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the VDCCM&H/U power supply circuit.
2 CHECK INSTALLATION OF MOTOR GROUND.	Is the motor ground terminal installation bolt tightened 33 N·m (3.4 kgf-m, 24.3 ft-lb)?	Go to step 3.	Tighten the motor ground terminal installation bolt.
3 CHECK VDCCM&H/U GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 25 — Chassis ground: (B310) No. 22 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 4.	Repair the VDCCM&H/U ground harness.
4 CHECK VDCCM&H/U MOTOR RELAY. Measure the resistance between VDCCM&H/U terminals. Terminals No. 23 — No. 22:	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
5 CHECK POOR CONTACT OF CONNECTORS. Turn the ignition switch to OFF.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: Though the ABS warning light remains on at this time, this is normal. Drive the vehicle at 12 km/h (7 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AF:DTC C0052 MOTOR AND MOTOR RELAY ON FAILURE

DTC DETECTING CONDITION:

- Defective motor relay
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

WIRING DIAGRAM:

VDC00467

Step	Check	Yes	No
1	CHECK INSTALLATION OF MOTOR GROUND.	Go to step 2.	Tighten the motor ground installation bolt.
	Is the motor ground terminal installation bolt tightened 33 N·m (3.4 kgf-m, 24.3 ft-lb)?		

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK VDCCM&H/U MOTOR RELAY. 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U terminals. Terminals No. 23 — No. 22:	Is the resistance 1 MΩ or more?	Go to step 3.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 4.
4 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: Though the ABS warning light remains on at this time, this is normal. Drive the vehicle at 12 km/h (7 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

AG:DTC C0052 MOTOR MALFUNCTION

DTC DETECTING CONDITION:

- Defective motor
- Defective motor relay
- Defective harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

NOTE:

For the diagnostic procedure, refer to DTC C0052 "MOTOR/MOTOR RELAY OFF FAILURE". <Ref. to VDC(diag)-67, DTC C0052 MOTOR AND MOTOR RELAY OFF FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AH:DTC C0054 BLS CIRCUIT OPEN

DTC DETECTING CONDITION:

Defective stop light switch

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

VDC00774

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK OUTPUT OF STOP LIGHT SWITCH WITH SUBARU SELECT MONITOR. 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Release the brake pedal. 3) Read the stop light switch output in Subaru Select Monitor.	Is OFF displayed on the display screen?	Go to step 2.	Go to step 3.
2 CHECK OUTPUT OF STOP LIGHT SWITCH WITH SUBARU SELECT MONITOR. 1) Depress the brake pedal. 2) Read the stop light switch output in Subaru Select Monitor.	Is ON displayed on the display screen?	Go to step 6.	Go to step 3.
3 CHECK IF STOP LIGHTS ILLUMINATE. Depress the brake pedal.	Does the stop light illuminate?	Go to step 4.	Repair the stop light circuit.
4 CHECK FUSE. Check the fuse (B225) in the relay block.	Is the fuse OK?	Go to step 5.	Replace the fuse.
5 CHECK OPEN CIRCUIT OF HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Depress the brake pedal. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. Connector & terminal (B310) No. 30 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 6.	Repair the harness between stop light switch and VDCCM&H/U connector.
6 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between stop light switch and VDCCM&H/U?	Repair the connector.	Go to step 7.
7 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
8 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AI: DTC C0054 BLS ON MALFUNCTION

DTC DETECTING CONDITION:

Defective stop light switch

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK STOP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. Connector & terminal (B65) No. 2 — (B65) No. 3:	Is the resistance 1 MΩ or more when switch is OFF (when pedal is not depressed)?	Go to step 2.	Replace the stop light switch. <Ref. to BR-40, Stop Light Switch.>
2	INTERVIEW CUSTOMERS. Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded while brake is applied during driving.)	Go to step 3.
3	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 4.
4	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

VDC00774

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK STOP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. <i>Connector & terminal</i> <i>(B65) No. 2 — (B65) No. 3:</i>	Is the resistance 1 Ω or less when the switch is ON (when pedal is depressed)?	Go to step 2.	Replace the stop light switch. <Ref. to BR-40, Stop Light Switch.>
2 CHECK STOP LIGHT POWER SUPPLY. Measure the voltage between stop light switch terminal and chassis ground. <i>Connector & terminal</i> <i>(B65) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 — 15 V?	Go to step 3.	Repair the stop light power supply circuit.
3 CHECK STOP LIGHT SWITCH HARNESS. 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and stop light switch. <i>Connector & terminal</i> <i>(B65) No. 3 — (B310) No. 30:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the stop light switch circuit.
4 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of connector between stop light switch and VDCCM&H/U?	Repair the connector.	Go to step 5.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AK:DTC C0056 G SENSOR SIGNAL

DTC DETECTING CONDITION:

Defective longitudinal G sensor

TROUBLE SYMPTOM:

Hill start assist does not operate.

WIRING DIAGRAM:

VDC00735

Step	Check	Yes	No
1	<p>WHETHER A WHEEL TURNED FREELY OR NOT.</p> <p>Check if the wheels have been turned freely for one minute or more, such as when the vehicle is jacked-up, under full-lock cornering or when the wheels are not in contact with road surface.</p>	<p>Did the wheels turn freely?</p> <p>VDC is normal. Clear the memory.</p>	<p>Go to step 2.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK OUTPUT OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR. 1) Park the vehicle on a level surface. 2) Select {Current Data Display & Save} in Subaru Select Monitor. 3) Read the display for the forward/reverse G sensor output.	Is the indicated reading on the monitor display -1.2 — 1.2 m/s ² ?	Go to step 3.	Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.>
3 CHECK OUTPUT OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR. 1) Turn the ignition switch to OFF. 2) Remove the yaw rate & G sensor from vehicle. <Ref. to VDC-19, Yaw Rate and G Sensor.> 3) Turn the ignition switch to ON, and select the {Current Data Display & Save} in Subaru Select Monitor. 4) Read the display for the forward/reverse G sensor output.	When the yaw rate & G sensor is inclined 90° to the front, is the indicated value 6.8 — 12.8 m/s ² ?	Go to step 4.	Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.>
4 CHECK OUTPUT OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR. Read the display for the forward/reverse G sensor output.	When the yaw rate & G sensor is inclined 90° to the rear, is the indicated value -6.8 — -12.8 m/s ² ?	Go to step 5.	Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.>
5 CHECK POOR CONTACT OF CONNECTORS. Turn the ignition switch to OFF.	Is there poor contact of connector between VDCCM&H/U and yaw rate & G sensor?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AL:DTC C0057 ECM COMMUNICATION CIRCUIT

DTC DETECTING CONDITION:

No CAN signal from ECM.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

Step	Check	Yes	No
1 CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of ECM connector?	Repair the connector.	Go to step 3.
3 CHECK ECM. Refer to the basic diagnostic procedure for each engine (diagnostics).	Is ECM normal?	Go to step 4.	Replace the ECM. <Ref. to FU(H4DO)-101, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>
4 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AM:DTC C0057 ECM CONTROL SYSTEM

DTC DETECTING CONDITION:

Cooperation control prohibition of ECM

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

NOTE:

Warning lights go off if the cooperation control of ECM returns.

Step	Check	Yes	No	
1	CHECK WARNING LIGHT. Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h or more.	Does the VDC warning light illuminate?	Go to step 2.	VDC is normal. Perform the Clear Memory Mode. NOTE: DTC may be re-recorded if cranking is performed during driving.
2	CHECK POOR CONTACT OF CONNECTORS.	Is there poor contact of ECM connector?	Repair the connector.	Go to step 3.
3	CHECK ECM. Refer to the basic diagnostic procedure for each engine (diagnostics).	Is ECM normal?	Go to step 4.	Replace the ECM. <Ref. to FU(H4DO)-101, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>
4	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AN:DTC C0071 STEERING ANGLE SENSOR OFFSET IS TOO BIG

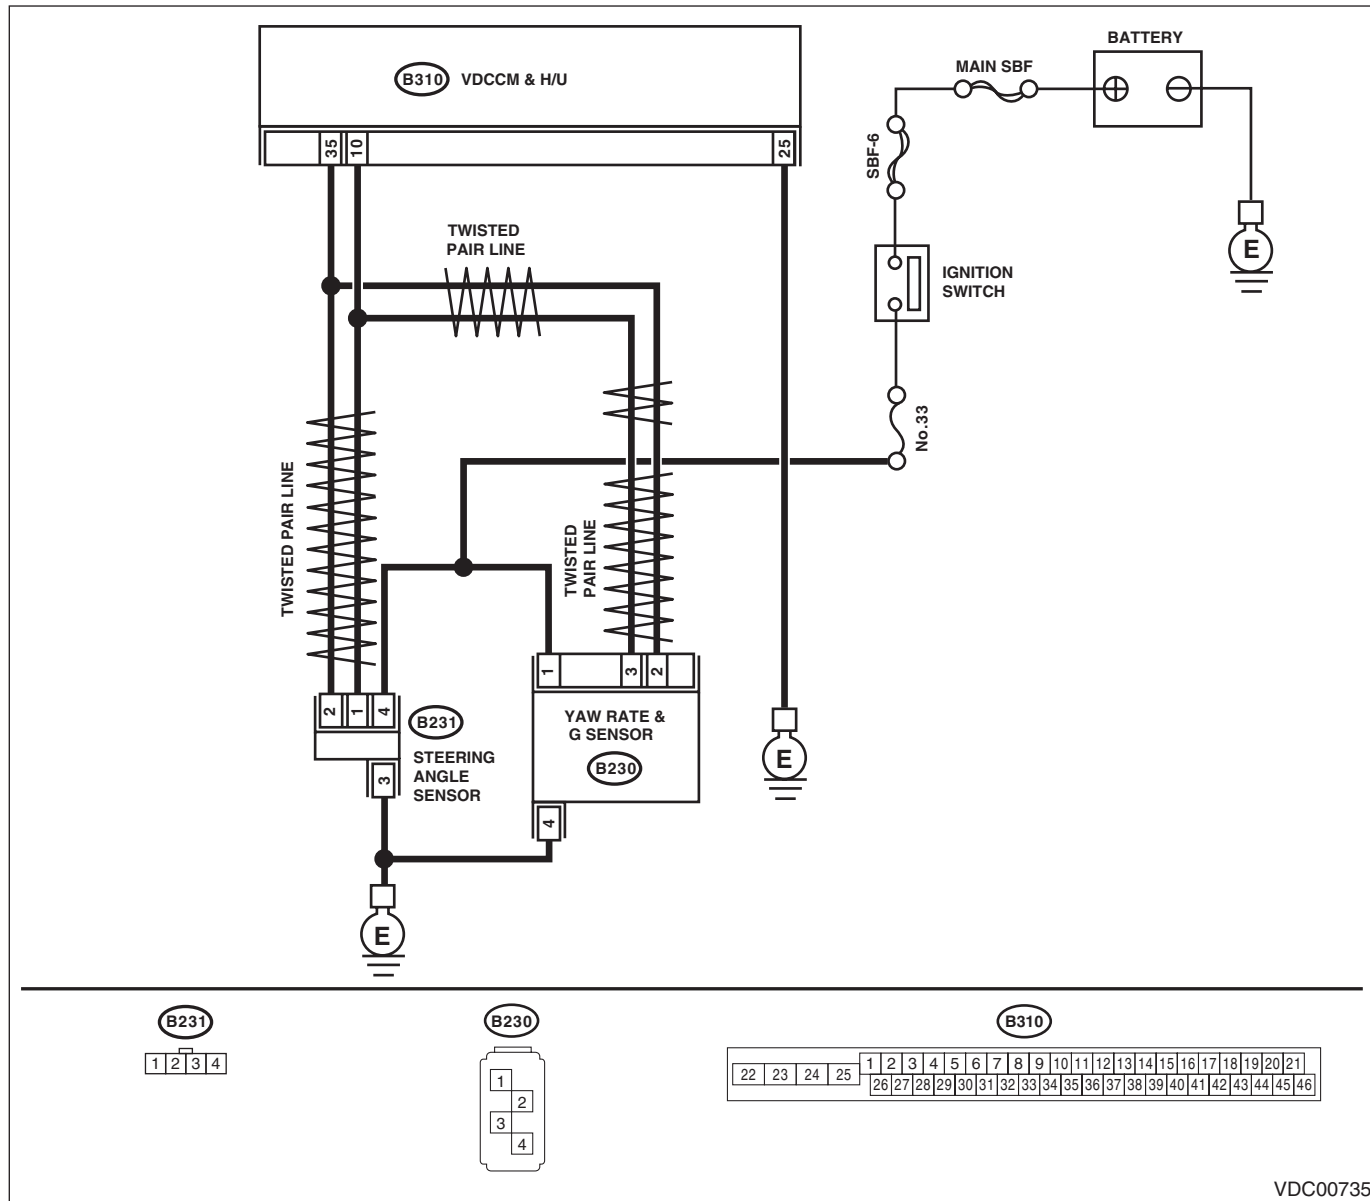

DTC DETECTING CONDITION:

Defective steering angle sensor

TROUBLE SYMPTOM:

VDC does not operate.

WIRING DIAGRAM:

VDC00735

Step	Check	Yes	No
1 CHECK STEERING WHEEL. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step 2.	Perform the centering adjustment of steering wheel.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 3 .
3 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AO:DTC C0071 CHANGE RANGE OF STEERING ANGLE SENSOR IS TOO BIG

DTC DETECTING CONDITION:

Defective steering angle sensor

TROUBLE SYMPTOM:

VDC does not operate.

Step	Check	Yes	No
2 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AP:DTC C0071 STEER ANGLE SENSOR OP

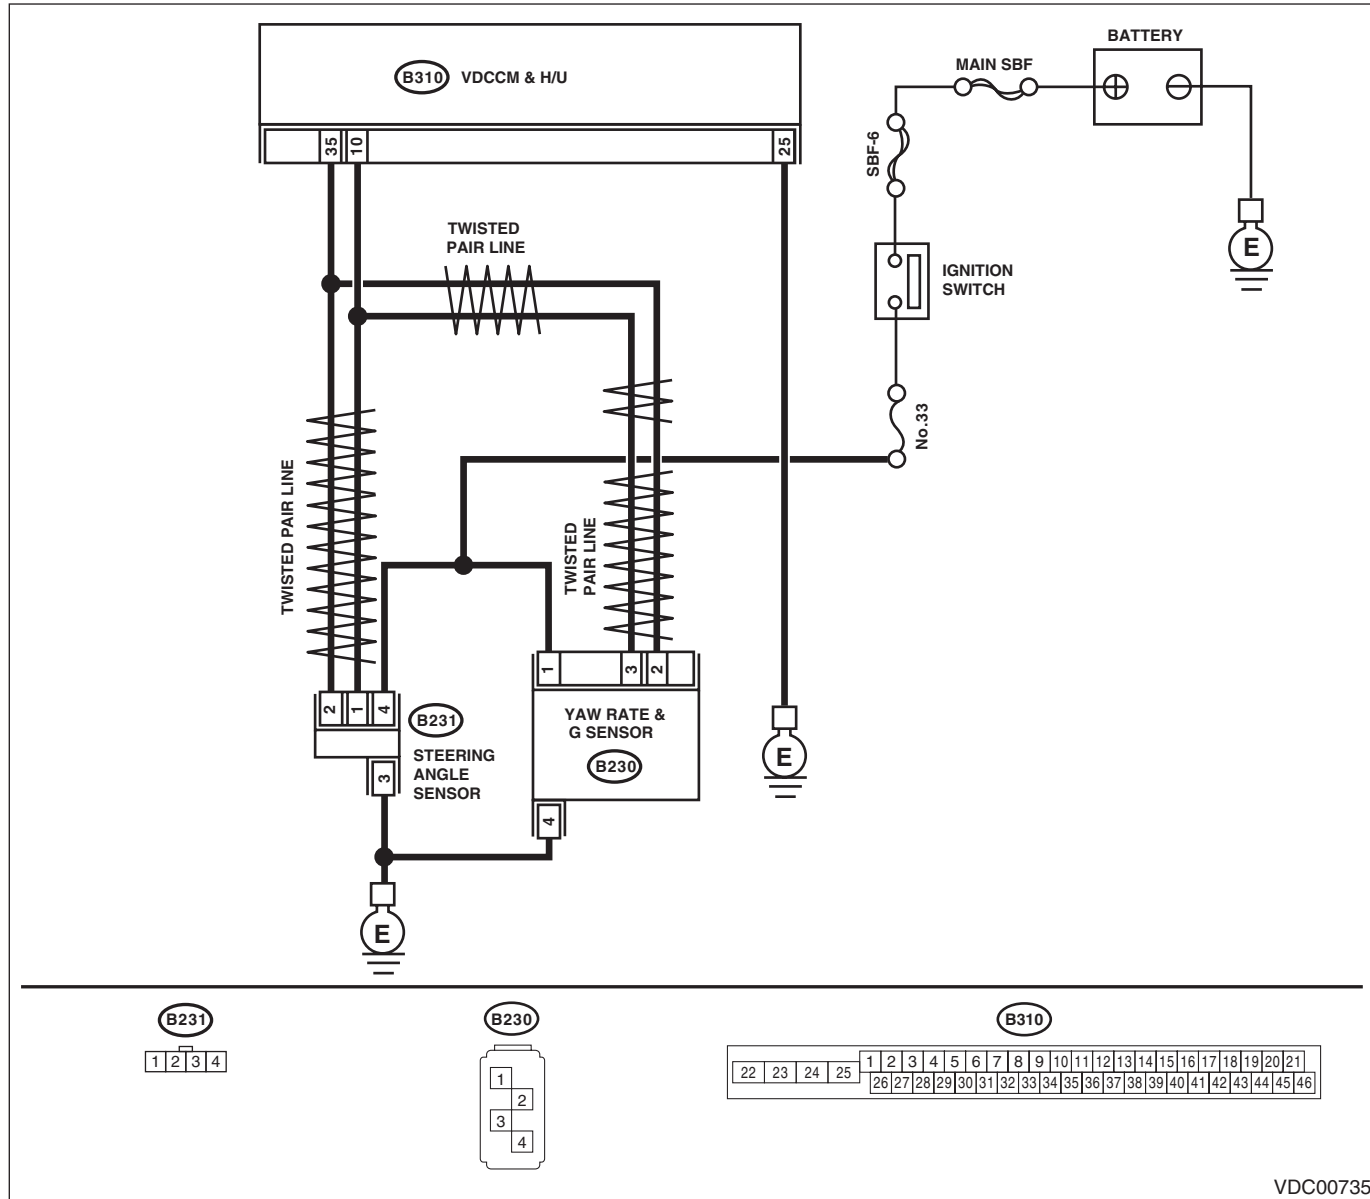

DTC DETECTING CONDITION:

Signal does not come from steering angle sensor.

TROUBLE SYMPTOM:

VDC does not operate.

WIRING DIAGRAM:

VDC00735

Step	Check	Yes	No
<p>1</p> <p>CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. <p>Connector & terminal (B231) No. 4 (+) — Chassis ground (-):</p>	<p>Is the voltage 10 — 15 V?</p>	<p>Go to step 2.</p>	<p>Repair the steering angle sensor power supply circuit.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR. Measure the resistance between steering angle sensor and chassis ground. <i>Connector & terminal</i> <i>(B231) No. 3 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 3.	Repair ground circuit in the steering angle sensor.
3 CHECK STEERING ANGLE SENSOR HARNESS. 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and steering angle sensor. <i>Connector & terminal</i> <i>(B231) No. 1 — (B310) No. 10:</i> <i>(B231) No. 2 — (B310) No. 35:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness between the steering angle sensor and VDCCM&H/U.
4 CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS. Measure the resistance between steering angle sensor and chassis ground. <i>Connector & terminal</i> <i>(B231) No. 1 — Chassis ground:</i> <i>(B231) No. 2 — Chassis ground:</i>	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the harness between the steering angle sensor and VDCCM&H/U.
5 CHECK STEERING ANGLE SENSOR. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Go to step 6.	Go to step 7.
6 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Replace the steering angle sensor. <Ref. to VDC-21, Steering Angle Sensor.> 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
7 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.
8 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Original steering angle sensor malfunction

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AQ:DTC C0071 STEERING ANGLE SENSOR MALFUNCTION

DTC DETECTING CONDITION:

Defective steering angle sensor

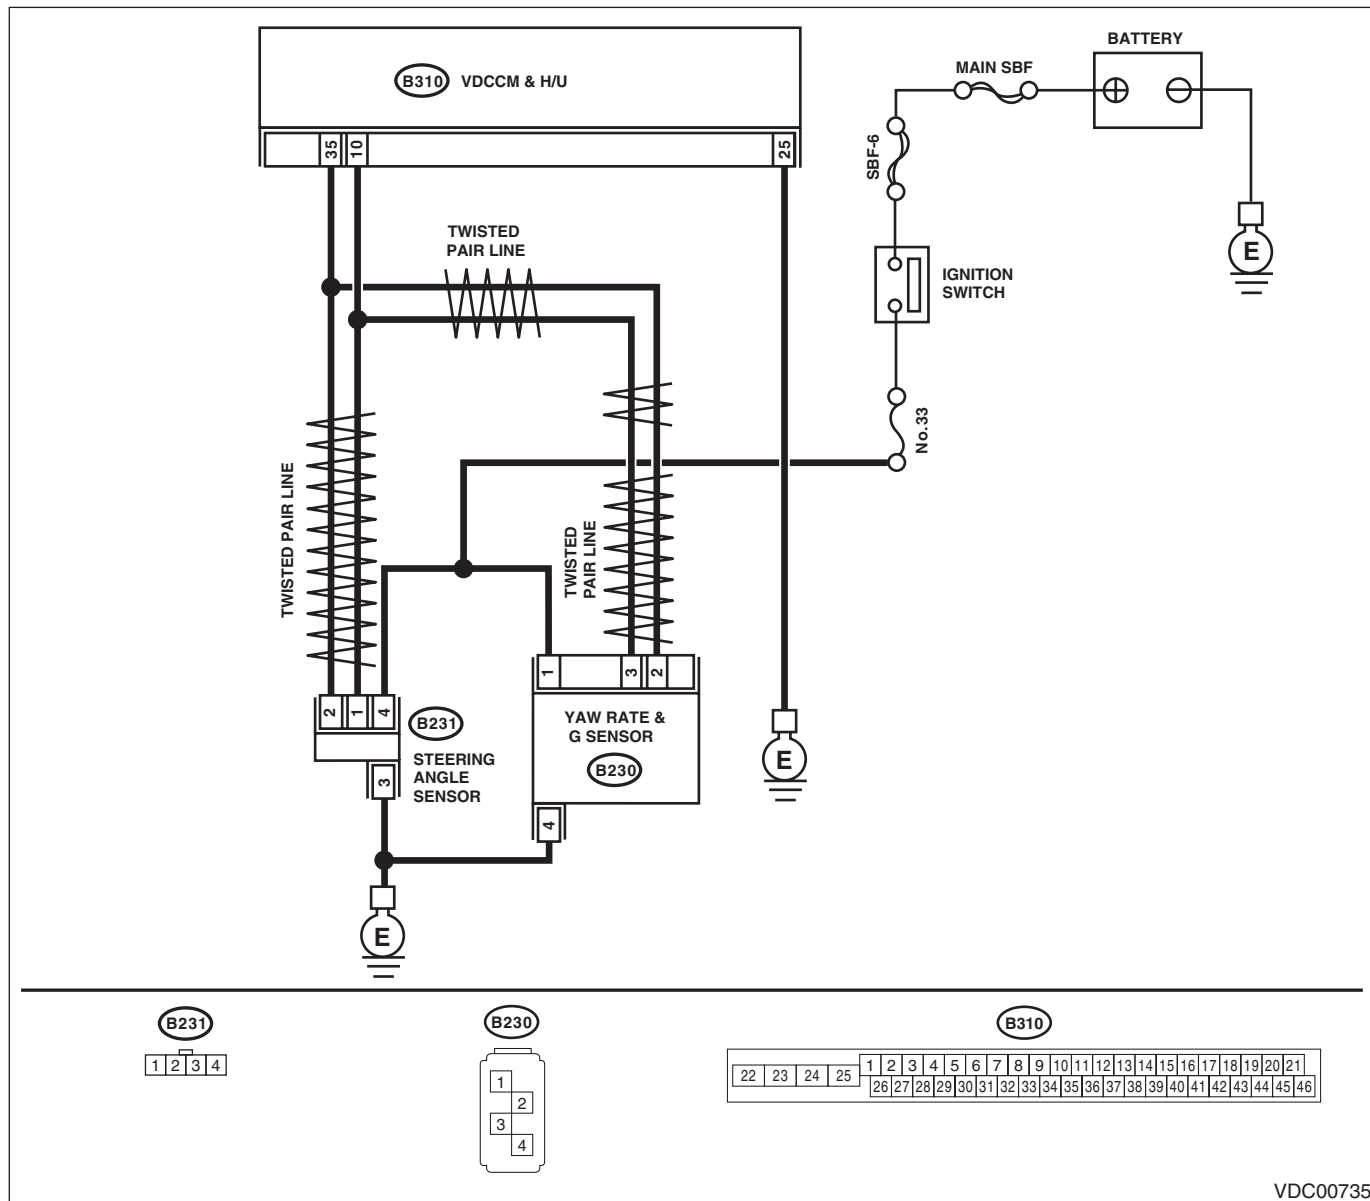

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

NOTE:

- Warning light does not illuminate though problem is detected.
- The ABS and VDC operate normally if voltage returns.

WIRING DIAGRAM:

VDC00735

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. Connector & terminal (B231) No. 4 (+) — Chassis ground (-):	Is the voltage 10 — 15 V?	Go to step 2.	Repair the steering angle sensor power supply circuit.
2 CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR. Measure the resistance between steering angle sensor and chassis ground. Connector & terminal (B231) No. 3 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 3.	Repair ground circuit in the steering angle sensor.
3 CHECK STEERING ANGLE SENSOR. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Go to step 4.	Go to step 5.
4 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Replace the steering angle sensor. <Ref. to VDC-21, Steering Angle Sensor.> 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
5 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK POWER SUPPLY OF YAW RATE & G SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from yaw rate & G sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between yaw rate & G sensor and chassis ground. <i>Connector & terminal</i> <i>(B230) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 — 15 V?	Go to step 4.	Repair the yaw rate & G sensor power supply circuit.
4 CHECK YAW RATE & G SENSOR GROUND CIRCUIT. Measure the resistance between yaw rate & G sensor and chassis ground. <i>Connector & terminal</i> <i>(B230) No. 4 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 5.	Repair the yaw rate & G sensor ground circuit.
5 CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR. 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select "Current Data Display & Save" on the Subaru Select Monitor. 4) Read the yaw rate output displayed on display.	Is the reading indicated on monitor display -4 — 4 deg/s?	Go to step 6.	Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.>
6 CHECK YAW RATE & G SENSOR. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Go to step 7.	Go to step 8.
7 CHECK VDCCM&H/U. 1) Turn the ignition switch to OFF. 2) Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.> 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 9.
8 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.
9 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Malfunction is found in original yaw rate & G sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AU:DTC C0072 YAW RATE SENSOR COMMUNICATION

DTC DETECTING CONDITION:

Communication failure between yaw rate sensor and VDCCM

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

VDC00735

Step	Check	Yes	No
<p>1</p> <p>CHECK POWER SUPPLY FOR YAW RATE & G SENSOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the connector from yaw rate & G sensor.</p> <p>3) Turn the ignition switch to ON.</p> <p>4) Measure the voltage between yaw rate & G sensor and chassis ground.</p> <p>Connector & terminal (B230) No. 1 (+) — Chassis ground (-):</p>	<p>Is the voltage 10 — 15 V?</p>	<p>Go to step 2.</p>	<p>Repair the yaw rate & G sensor power supply circuit.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK YAW RATE & G SENSOR GROUND CIRCUIT. Measure the resistance between yaw rate & G sensor and chassis ground. <i>Connector & terminal</i> <i>(B230) No. 4 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 3.	Repair the yaw rate & G sensor ground circuit.
3 CHECK YAW RATE & G SENSOR HARNESS. 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and yaw rate & G sensor. <i>Connector & terminal</i> <i>(B230) No. 3 — (B310) No. 10:</i> <i>(B230) No. 2 — (B310) No. 35:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness between yaw rate & G sensor and VDCCM&H/U.
4 CHECK GROUND SHORT CIRCUIT IN YAW RATE & G SENSOR HARNESS. Measure the resistance between yaw rate & G sensor and chassis ground. <i>Connector & terminal</i> <i>(B230) No. 2 — Chassis ground:</i> <i>(B230) No. 3 — Chassis ground:</i>	Is the resistance 1 M Ω or more?	Go to step 5.	Repair the harness between yaw rate & G sensor and VDCCM&H/U.
5 CHECK YAW RATE & G SENSOR. 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Go to step 6.	Go to step 7.
6 CHECK YAW RATE & G SENSOR. 1) Turn the ignition switch to OFF. 2) Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.> 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
7 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.
8 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Malfunction is found in original yaw rate & G sensor.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AV:DTC C0072 SENSOR TYPE ABNORMAL

DTC DETECTING CONDITION:

Different yaw rate sensor specification

TROUBLE SYMPTOM:

- VDC does not operate.
- Hill start assist does not operate.

Step	Check	Yes	No
1 CHECK YAW RATE & G SENSOR IDENTIFICATION MARK. Check the identification mark on the sticker applied on the top of the yaw rate & G sensor.	Is the identification symbol correct? AT: S MT: R	Go to step 2.	Replace the yaw rate & G sensor with a genuine part. <Ref. to VDC-19, Yaw Rate and G Sensor.>
2 CHECK VDCCM&H/U IDENTIFICATION SYMBOL. Check the identification symbol stamped on the upper part of the H/U.	Is the identification symbol correct? AT: Z6 MT: Z7	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AW:DTC C0073 LATERAL G SENSOR OFFSET IS TOO BIG

NOTE:

For the diagnostic procedure, refer to DTC C0073 "EXCESSIVE LATERAL G SENSOR SIGNAL". <Ref. to VDC(diag)-98, DTC C0073 EXCESSIVE LATERAL G SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AX:DTC C0073 ABNORMAL LATERAL G SENSOR OUTPUT

NOTE:

For the diagnostic procedure, refer to DTC C0073 "EXCESSIVE LATERAL G SENSOR SIGNAL". <Ref. to VDC(diag)-98, DTC C0073 EXCESSIVE LATERAL G SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AY:DTC C0073 EXCESSIVE LATERAL G SENSOR SIGNAL

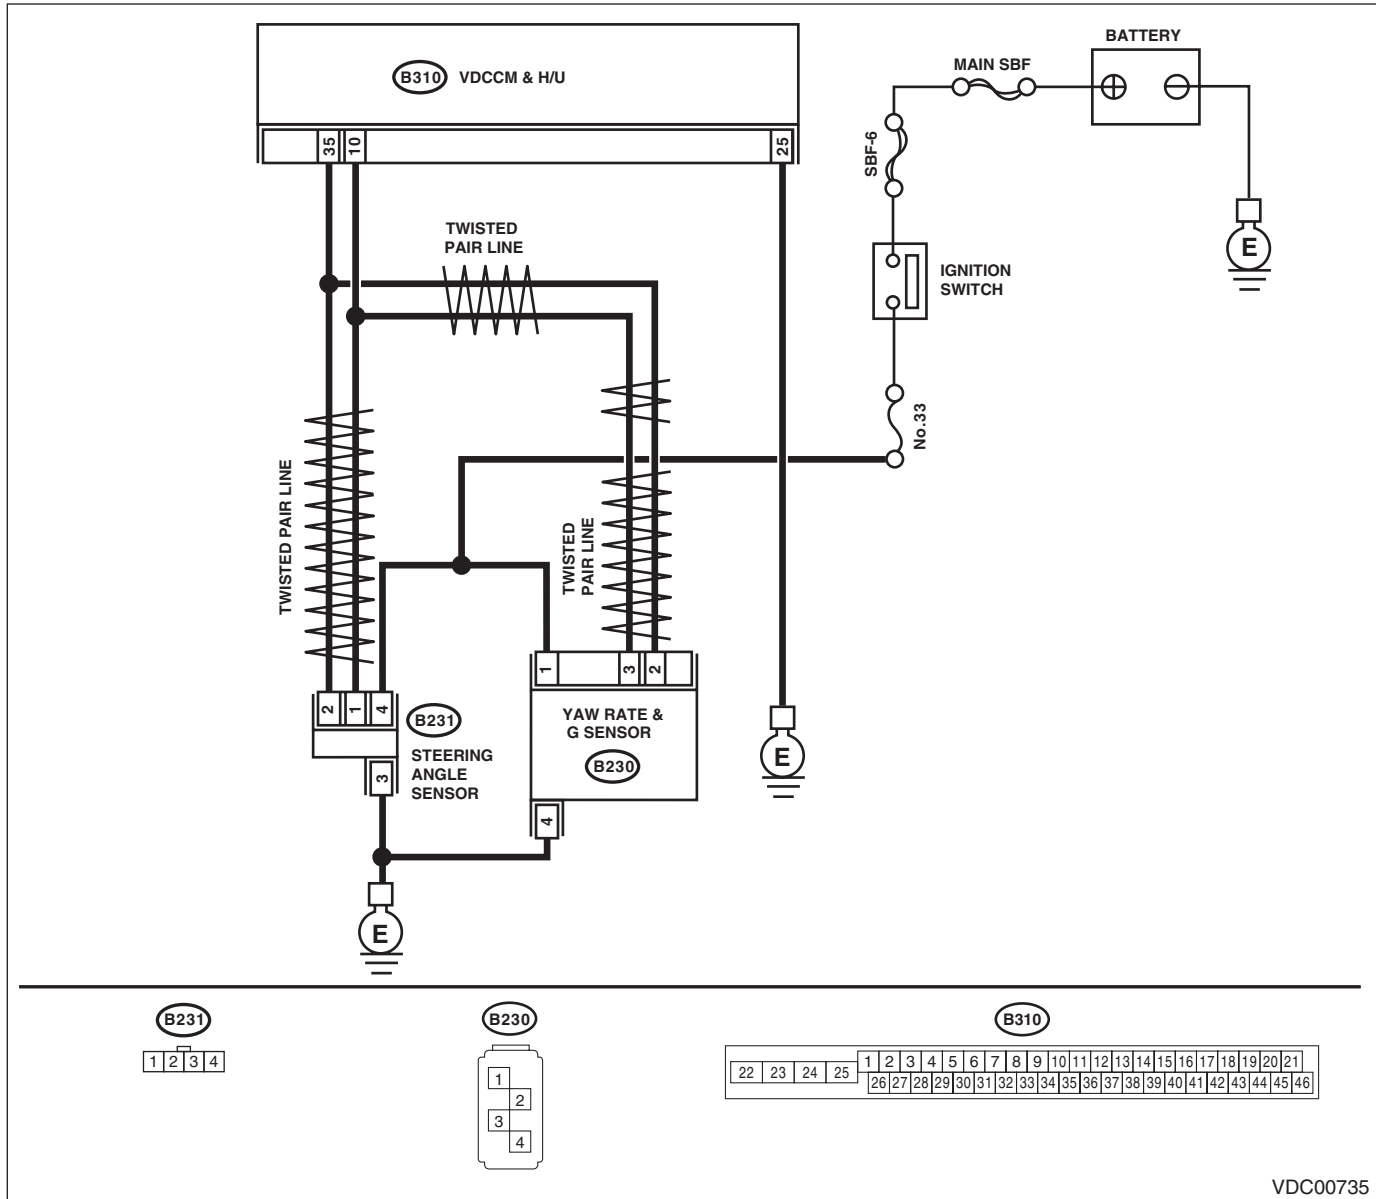

DTC DETECTING CONDITION:

Defective lateral G sensor

TROUBLE SYMPTOM:

VDC does not operate.

WIRING DIAGRAM:

VDC00735

Step	Check	Yes	No
1	CHECK YAW RATE & G SENSOR INSTALLATION.	Go to step 2.	Tighten the yaw rate & G sensor attachment bolt.
2	CHECK OUTPUT OF LATERAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Park the vehicle on a level surface. 2) Select {Current Data Display & Save} in Subaru Select Monitor. 3) Read the lateral G sensor output displayed on screen.	Go to step 3.	Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK OUTPUT OF LATERAL G SENSOR WITH SUBARU SELECT MONITOR. 1) Turn the ignition switch to OFF. 2) Remove the yaw rate & G sensor from vehicle. 3) Turn the ignition switch to ON, and select the {Current Data Display & Save} in Subaru Select Monitor. 4) Read the lateral G sensor output displayed on screen.	When the yaw rate & G sensor is inclined 90° to the right, is the indicated value 6.8 — 12.8 m/s ² ?	Go to step 4.	Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.>
4 CHECK LATERAL G SENSOR WITH SUBARU SELECT MONITOR. Read the lateral G sensor output displayed on screen.	When the yaw rate & G sensor is inclined 90° to the left, is the indicated value -6.8 — -12.8 m/s ² ?	Go to step 5.	Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.>
5 CHECK POOR CONTACT OF CONNECTORS. Turn the ignition switch to OFF.	Is there poor contact of connector between VDCCM&H/U and yaw rate & G sensor?	Repair the connector.	Go to step 6.
6 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
7 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

AZ:DTC C0074 PRESSURE SENSOR

DTC DETECTING CONDITION:

Defective pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

Step	Check	Yes	No	
1	CHECK STOP LIGHT SWITCH CIRCUIT. Check stop light switch open circuit.	Is the stop light switch circuit OK?	Go to step 2.	Repair the stop light switch circuit. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2	CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the pressure sensor output displayed on display.	When the brake pedal is released, is the displayed value -40 — 40 bar?	Go to step 3.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR. 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the pressure sensor output displayed on display.	When the brake pedal is operated, does the pressure sensor output value displayed on the screen change in accordance with the brake pedal?	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	CHECK PRESSURE SENSOR. 1) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 3) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BA:DTC C0075 REVERSE SIGNAL

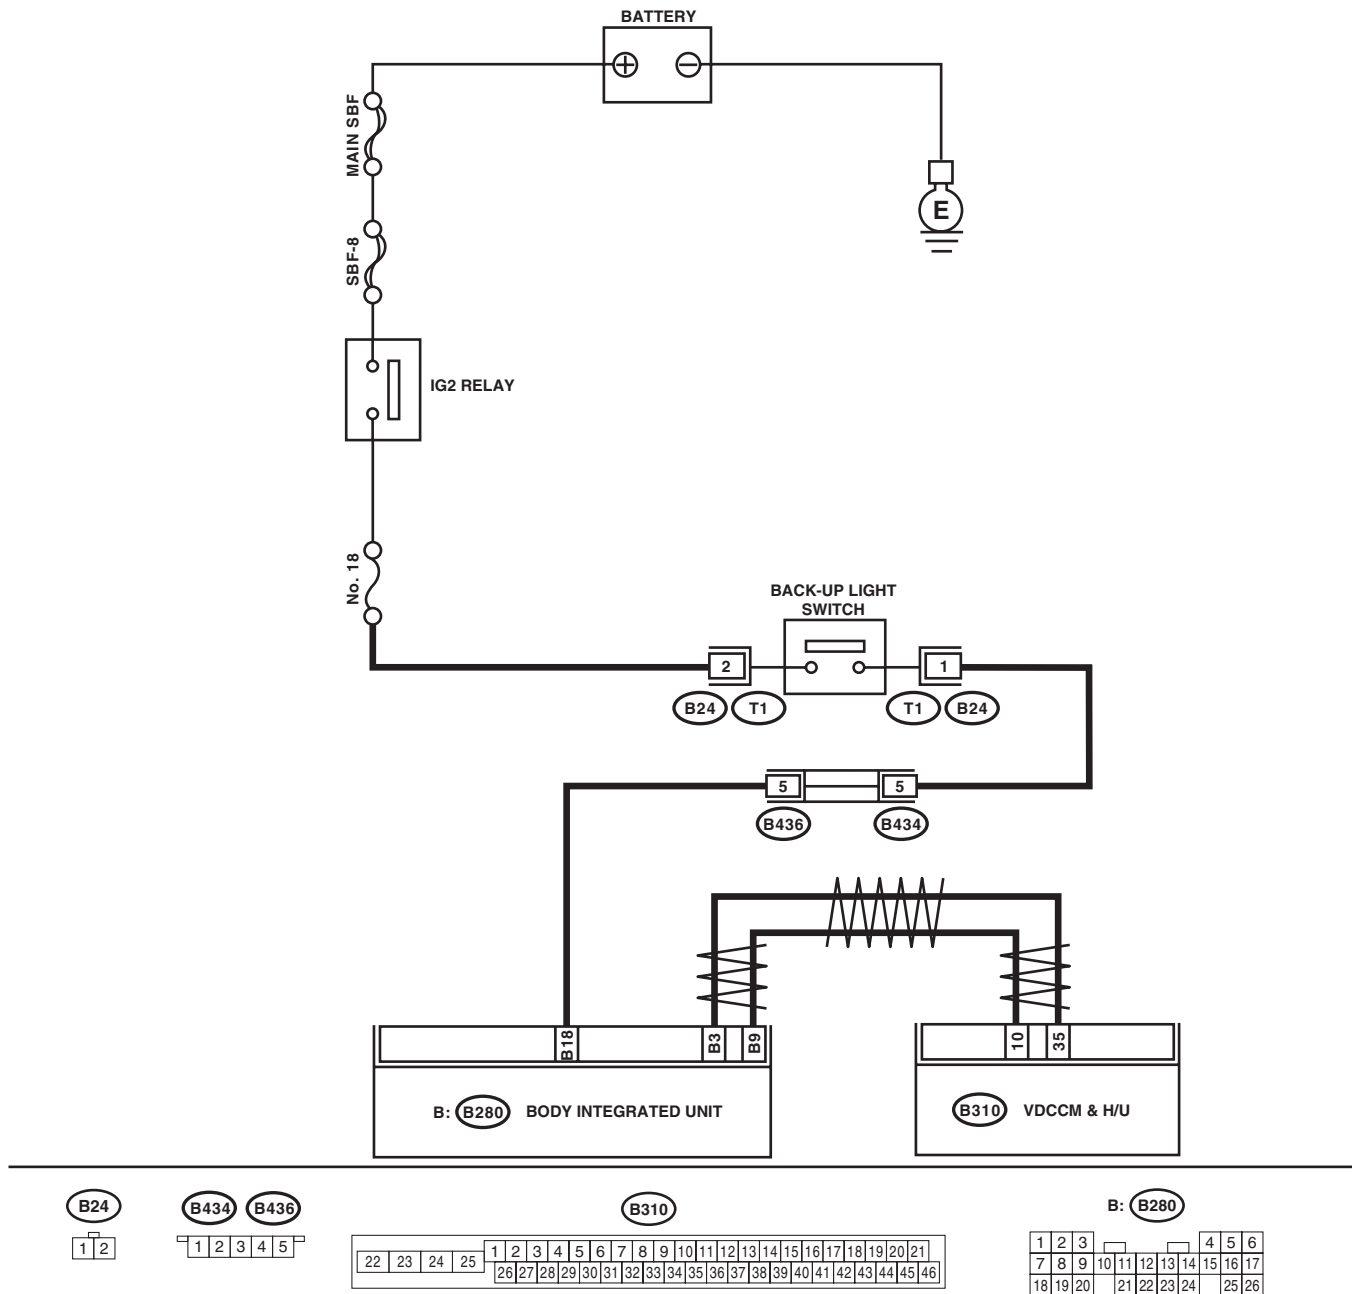

DTC DETECTING CONDITION:

Abnormal reverse signal

TROUBLE SYMPTOM:

Hill start assist does not operate.

WIRING DIAGRAM:

VDC00631

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2	CHECK REVERSE SIGNAL USING SUBARU SELECT MONITOR. 1) Select "Current Data Display & Save" on the Subaru Select Monitor. 2) Read the indication of reverse signal.	Is OFF displayed when the shift lever is placed in any position other than reverse, and is ON displayed in reverse position?	Go to step 5.	Go to step 3.
3	CHECK BACK-UP LIGHT ILLUMINATION. 1) Turn the ignition switch to ON. 2) Place the shift lever in reverse position.	Does the back-up light illuminate?	Go to step 4.	Repair the back-up light circuit.
4	CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND BACK-UP LIGHT SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from body integrated unit and back-up light switch. 3) Measure the resistance of harness between body integrated unit and back-up light switch connector. Connector & terminal (B280) No. 18 — (B24) No. 1:	Is the resistance less than 1 Ω ?	Replace the back-up light switch. <Ref. to 5MT-34, Switches and Harness.>	Repair the harness between body integrated unit and back-up light switch connector.
5	CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6	CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BB:DTC C0076 CLUTCH SIGNAL

DTC DETECTING CONDITION:

Abnormal clutch signal

TROUBLE SYMPTOM:

Hill start assist does not operate.

NOTE:

Depending on the user clutch operation patterns, the hill start assist warning light may illuminate for a while, and then go off.

Illumination condition:

While the condition such vehicle speed 10 km/h or more, clutch switch signal ON (depressed) lasts for 5 minutes or more, if the vehicle speed drops below 10 km/h or less, the module judges this condition as abnormal (clutch switch stuck ON), then illuminates the warning light.

Turning off condition:

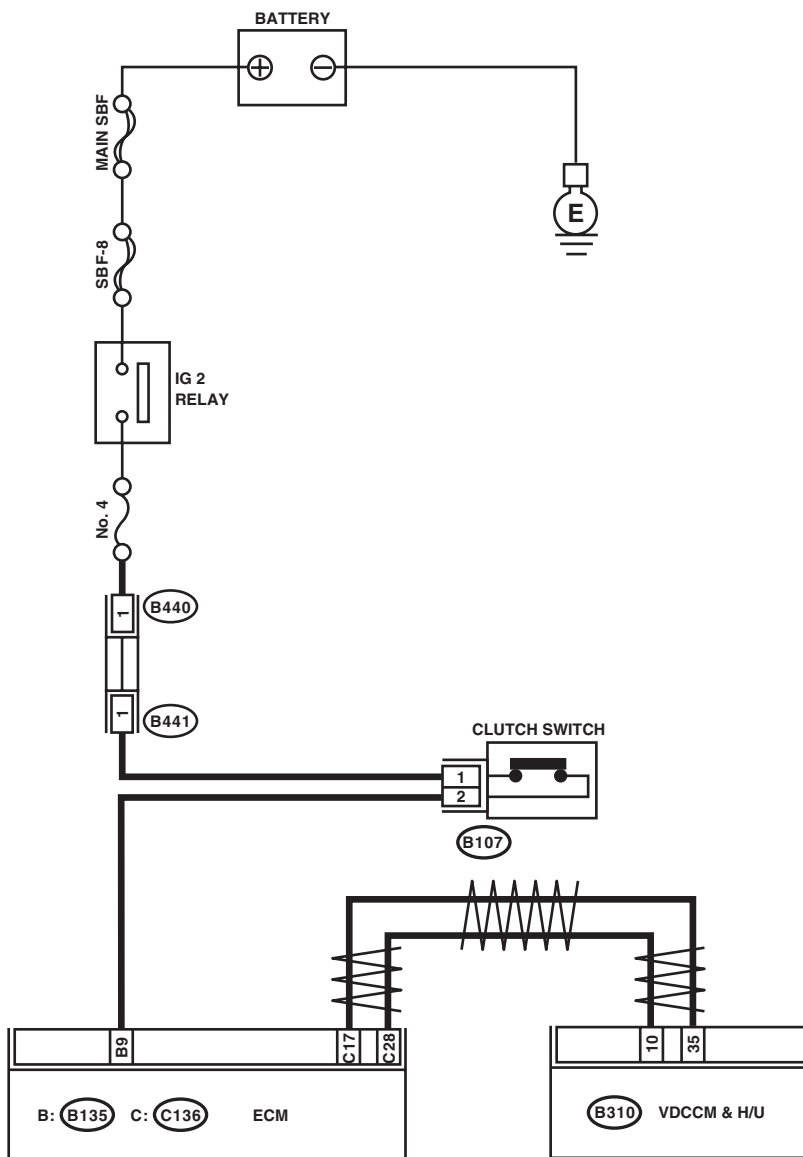

If the clutch switch signal OFF (foot released) condition continues one second, the module turns off the warning light.

The hill start assist function does not operate, while the warning light illuminates.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

WIRING DIAGRAM:

VDC00899

Step	Check	Yes	No
1	<p>CHECK LAN SYSTEM. Perform the diagnosis for LAN system. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).></p>	<p>Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).></p>	<p>Go to step 2.</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK CLUTCH SIGNAL USING SUBARU SELECT MONITOR. 1) Select "Current Data Display & Save" on the Subaru Select Monitor. 2) Read the indication of clutch switch signal.	Is OFF displayed when the clutch pedal is not depressed, and is ON displayed when depressed?	Go to step 5.	Go to step 3.
3 CHECK CLUTCH SIGNAL OF ECM USING SUBARU SELECT MONITOR. 1) Select "Current Data Display & Save" on Subaru Select Monitor. 2) Read the indication of clutch switch signal.	Is OFF displayed when the clutch pedal is not depressed, and is ON displayed when depressed?	Go to step 5.	Go to step 4.
4 CHECK HARNESS BETWEEN ECM AND CLUTCH SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from ECM and clutch switch. 3) Measure the resistance of harness between ECM and clutch switch connector. Connector & terminal (B136) No. 25 — (B107) No. 2:	Is the resistance less than 1 Ω?	Repair the power supply circuit of clutch switch. Or replace the clutch switch. <Ref. to CL-26, Clutch Switch.>	Repair the harness between ECM and clutch switch connector.
5 CHECK VDCCM&H/U. 1) Connect all connectors. 2) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-11, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 6.
6 CHECK OTHER DTC DETECTION.	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

BC:DTC C0081 SYSTEM FAILURE

DTC DETECTING CONDITION:

VDC long time sequential control

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of the VDCCM&H/U and yaw rate & G sensor connector?	Repair the connector.	Go to step 2.
2 CHECK VDCCM&H/U. 1) Replace the yaw rate & G sensor. <Ref. to VDC-19, Yaw Rate and G Sensor.> 2) Connect all connectors. 3) Clear the memory. <Ref. to VDC(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-24, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Malfunction is found in original yaw rate & G sensor.

General Diagnostic Table

C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.

General Description

BRAKE

D: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Snap ring pliers	Used for removing and installing snap rings.

Front Brake Pad

BRAKE

2. Front Brake Pad

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the caliper bolt.

- 3) Raise the caliper body and support it.

NOTE:

Do not disconnect the brake hose from the caliper body.

- 4) Remove the pads.

B: INSTALLATION

- 1) Apply a thin coat of Molykote M7439 (Part No. K0770YA000) or grease contained in the pad kit to the pad clip.

- 2) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) or grease contained in the pad kit to both surfaces of the pad inner shim.

- 3) Install the pad to support.

CAUTION:

- Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
- Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
- If the pad return spring is deformed or damaged, replace the brake pad.

- (1) Pad return spring
- (2) Supporting surface of pad clip
- (3) Direction of brake rotor rotation

NOTE:
Install the pad indicator in proper direction.

- (1) LH — IN
- (2) LH — OUT
- (3) RH — IN
- (4) RH — OUT
- (5) Pad indicator
- (6) Pad return spring

4) Install the caliper body to the support.

Tightening torque:
27 N·m (2.75 kgf·m, 19.9 ft·lb)

C: INSPECTION

Check the pad thickness A.

Pad thickness A mm (in)	Standard	11 (0.433)
	Wear limit	1.5 (0.059)

NOTE:

- Always replace the pads of both wheels and both sides as a set.
 - Replace pad clips if they are twisted or worn.
 - Wear indicators are installed on the inner and outer disc brake pads.
- If the pad is worn to the limit, the end of wear indicator contacts disc rotor, and a squeaking sound is heard as the wheel rotates. If the sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.

Front Disc Rotor

BRAKE

3. Front Disc Rotor

A: REMOVAL

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the caliper body assembly from housing, and suspend it from the strut using a wire.

CAUTION:

Be careful not to stretch the brake hose.

- 3) Remove the disc rotor.

NOTE:

If it is difficult to remove the disc rotor from the hub, drive an 8 mm bolt into the threaded section (B) of the rotor, then remove the rotor.

- 4) Remove mud and foreign matter from the caliper body assembly.

B: INSTALLATION

- 1) Install the disc rotor.
- 2) Install the caliper body assembly to the housing.

Tightening torque:

80 N·m (8.16 kgf·m, 59.0 ft·lb)

- 3) Install the front wheels.

C: INSPECTION

- 1) Check the front wheel bearing play and axle hub runout before the inspection of disc rotor runout limit. <Ref. to DS-16, INSPECTION, Front Axle.>
- 2) Secure the disc rotor by tightening the five wheel nuts.
- 3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference. Rotate the disc rotor to check runout. If the disc rotor runout exceeds the limit, resurface the disc rotor. After grinding, check the thickness of the disc rotor according to the procedure in step 4).

Disc rotor runout limit:

0.05 mm (0.0020 in)

- 4) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness. If the disc rotor thickness (A) exceeds the service limit, replace with a new disc rotor.

	Standard	Limit	Disc rotor diameter
Disc rotor thickness A mm (in)	24 (0.94)	22 (0.87)	294 (11.57)

4. Front Disc Brake Assembly

A: REMOVAL

CAUTION:

Do not allow brake fluid to come in contact with vehicle body. If it does, wash off with water and wipe away completely.

- 1) Lift up the vehicle, and then remove the front wheels.
- 2) Remove the union bolt, and disconnect the brake hose from the caliper body.

- 3) Remove the bolts which secure the caliper body.

- 4) Raise the caliper body, and then move it toward vehicle center to separate it from the support.
- 5) Remove the brake pad, and then remove the support from the housing.

NOTE:

Remove the support only when replacing the rotor or support. It is not necessary to remove it when servicing the caliper body.

- 6) Remove mud and foreign matter from the caliper body and the support.

B: INSTALLATION

- 1) Apply a thin coat of Molykote M7439 (Part No. K0770YA000) or grease contained in the pad kit to the support.

- 2) Install the support to the housing.

Tightening torque:

80 N·m (8.16 kgf·m, 59.0 ft·lb)

- 3) Apply a thin coat of Molykote M7439 (Part No. K0770YA000) or grease contained in the pad kit to the pad clip.

- 4) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) or grease contained in the pad kit to both surfaces of the pad inner shim.

Front Disc Brake Assembly

BRAKE

5) Install the pad to support.

CAUTION:

- Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
- Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
- If the pad return spring is deformed or damaged, replace the brake pad.

- (1) Pad return spring
- (2) Supporting surface of pad clip
- (3) Direction of brake rotor rotation

NOTE:

Install the pad indicator in proper direction.

- (1) LH — IN
- (2) LH — OUT
- (3) RH — IN
- (4) RH — OUT
- (5) Pad indicator
- (6) Pad return spring

6) Install the caliper body to the support.

Tightening torque:

27 N·m (2.75 kgf-m, 19.9 ft-lb)

7) Connect the brake hose using a new brake hose gasket.

Tightening torque:

18 N·m (1.84 kgf-m, 13.3 ft-lb)

8) Bleed air from the brake system. <Ref. to BR-33, PROCEDURE, Air Bleeding.>

C: DISASSEMBLY

1) Remove mud and foreign matter from the caliper body and the support.

CAUTION:

Be careful not to allow foreign matter to enter the brake hose connector.

2) Place a wooden block in the caliper body as shown in the figure to prevent the piston from jumping out and being damaged.

3) Gradually apply compressed air via the brake hose installation hole to push the piston out.

(1) Place a wooden block of 30 mm (1.18 in) width.

4) Remove the piston boot.

5) Remove the piston seal (1) from the caliper body cylinder.

CAUTION:

Do not damage the cylinder and piston seal groove.

6) Remove the guide pin and boot from caliper body.

D: ASSEMBLY

1) Clean the inside of the caliper body using brake fluid.

2) Apply a coat of brake fluid to piston seal and install the piston seal to the caliper body groove.

3) Apply a coat of brake fluid to the inner surface of cylinder and the entire outer surface of the piston.

4) Apply NIGLUBE RX-2 (Part No. 000041000) or grease contained in the piston seal kit to the boot, and install it to the groove at the end of the cylinder.

5) Insert the piston into cylinder.

CAUTION:

Do not force the piston into cylinder.

(1) Piston
(2) Piston boot

6) Position the boot in the grooves on cylinder and piston.

(1) Piston
(2) Piston boot
(3) Caliper body
(4) Piston seal

7) Apply NIGLUBE RX-2 (Part No. 000041000) or grease contained in the piston seal kit to the lock pin, guide pin outer surface, cylinder inner surface, and boot grooves.

Front Disc Brake Assembly

BRAKE

8) Insert the lock pin and guide pin boot into the support.

CAUTION:

Insert the lock pin and guide pin into specified position, and make sure that they slide and seat properly.

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Grease applied area

E: INSPECTION

- 1) Repair or replace the faulty parts.
- 2) Check the caliper body and piston for uneven wear, damage or rust.
- 3) Check the rubber parts for damage or deterioration.

5. Rear Brake Pad

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the brake hose bracket.

- 3) Remove the caliper bolt.

- 4) Raise the caliper body and support it.

NOTE:

Do not disconnect the brake hose from the caliper body.

- 5) Remove the pads.

B: INSTALLATION

- 1) Apply a thin coat of Molykote M7439 (Part No. K0770YA000) or grease contained in the pad kit to the pad clip.

- 2) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) or grease contained in the pad kit to the contact surface between the pad and shim.

- 3) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) or grease contained in the pad kit to both surfaces of the pad inner shim.

- 4) Install the pad to support.
- 5) Install the caliper body to the support.

Tightening torque:

27 N·m (2.75 kgf-m, 19.9 ft-lb)

- 6) Install the brake hose bracket.

Tightening torque:

33 N·m (3.36 kgf-m, 24.3 ft-lb)

Rear Brake Pad

BRAKE

C: INSPECTION

Check the pad thickness A.

Pad thickness A mm (in)	Standard	9.0 (0.354)
	Wear limit	1.5 (0.059)

NOTE:

- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- A wear indicator is installed on the inner disc brake pad.

If the pad is worn to the limit, the end of wear indicator contacts disc rotor, and a squeaking sound is heard as the wheel rotates. If the sound is heard, replace the pad.

- Replace the pad if there is oil or grease on it.

6. Rear Disc Rotor

A: REMOVAL

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Release the parking brake.
- 3) Remove the brake hose bracket.

- 4) Remove the caliper body assembly from housing, and suspend it from the strut using a wire.

CAUTION:

Be careful not to stretch the brake hose.

- 5) Remove the disc rotor.

NOTE:

If it is difficult to remove the disc rotor, perform the following two methods in order.

- (1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe is far enough away to allow removal of the disc rotor.

- (1) Adjusting screw
- (2) Flat tip screwdriver
- (3) Disc rotor

- (2) If it is difficult to remove the disc rotor from the hub, drive an 8 mm bolt into the threads B of the rotor, then remove the rotor.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

Brake hose bracket

33 N·m (3.36 kgf-m, 24.3 ft-lb)

Caliper body assembly

66 N·m (6.73 kgf-m, 48.7 ft-lb)

- 2) Adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

C: INSPECTION

- 1) Check the rear wheel bearing play and axle hub runout before inspecting the disc rotor runout. <Ref. to DS-25, INSPECTION, Rear Hub Unit Bearing.>
- 2) Secure the disc rotor by tightening the five wheel nuts.
- 3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference. Rotate the disc rotor to check runout. If the disc rotor runout exceeds the limit, resurface the disc rotor. After grinding, check the thickness of the disc rotor according to the procedure in step 4).

Disc rotor runout limit:
0.05 mm (0.0020 in)

- 4) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness. If the thickness A of the disc rotor exceeds the service limit, replace with a new disc rotor.

	Standard	Limit	Disc rotor diameter
Disc rotor thickness A mm (in)	10 (0.39)	8.5 (0.335)	286 (11.26)

7. Rear Disc Brake Assembly

A: REMOVAL

CAUTION:

Do not allow brake fluid to come in contact with vehicle body. If it does, wash off with water and wipe away completely.

- 1) Lift up the vehicle, and then remove the rear wheels.
- 2) Remove the brake hose bracket.
- 3) Disconnect the brake hose.

- 4) Remove the caliper bolt.

- 5) Raise the caliper body, and then move it toward vehicle center to separate it from the support.
- 6) Remove the brake pad, and then remove the support from the housing.

NOTE:

Remove the support only when replacing the rotor or support. It is not necessary to remove it when servicing the caliper body.

- 7) Remove mud and foreign matter from the caliper body and the support.

CAUTION:

Be careful not to allow foreign matter to enter the brake hose connector.

B: INSTALLATION

- 1) Apply a thin coat of Molykote M7439 (Part No. K0770YA000) or grease contained in the pad kit to the support.

- 2) Install the support to the housing.

Tightening torque:

66 N·m (6.73 kgf·m, 48.7 ft·lb)

- 3) Apply a thin coat of Molykote M7439 (Part No. K0770YA000) or grease contained in the pad kit to the pad clip.

- 4) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) or grease contained in the pad kit to the contact surface between the pad and shim.

Rear Disc Brake Assembly

BRAKE

5) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) or grease contained in the pad kit to both surfaces of the pad inner shim.

- 6) Install the pad to support.
- 7) Install the caliper body to the support.

Tightening torque:

27 N·m (2.75 kgf-m, 19.9 ft-lb)

- 8) Install the brake hose bracket.

Tightening torque:

33 N·m (3.36 kgf-m, 24.3 ft-lb)

- 9) Connect the brake hose using a new brake hose gasket.

Tightening torque:

18 N·m (1.84 kgf-m, 13.3 ft-lb)

- 10) Bleed air from the brake system. <Ref. to BR-33, PROCEDURE, Air Bleeding.>

C: DISASSEMBLY

- 1) Remove the piston boot.

- 2) Place a wooden block in the caliper body as shown in the figure to prevent the piston from jumping out and being damaged.
- 3) Gradually apply compressed air via the brake hose installation hole to push the piston out.

- (1) Place a wooden block of 30 mm (1.18 in) width.

- 4) Remove the piston seal from caliper body cylinder.

CAUTION:

Do not damage the cylinder and piston seal groove.

- 5) Remove the pin boot.

D: ASSEMBLY

- 1) Clean the inside of the caliper body using brake fluid.
- 2) Apply a coat of brake fluid to piston seal and install the piston seal to the caliper body groove.
- 3) Apply a coat of brake fluid to the inner surface of cylinder and the entire outer surface of the piston.
- 4) Apply NIGLUBE RX-2 (Part No. 000041000) or grease contained in the piston kit to the boot, and install it to the groove at the end of the cylinder.
- 5) Insert the piston into the cylinder.

CAUTION:

Do not force the piston into cylinder.

- 6) Position the boot in the grooves on piston and cylinder.

- (1) Piston
- (2) Piston boot
- (3) Caliper body
- (4) Piston seal

- 7) Apply NIGLUBE RX-2 (Part No. 000041000) or grease contained in the piston kit to cylinder inner surface, pin, bushing outer surface, and boot grooves.

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Grease applied area

- 8) Insert the pin boot into the support.

- 9) Install the pin boot to the support, and then insert the pin into the specified position.

CAUTION:

Insert pin into position, and make sure that it slides and seats properly.

E: INSPECTION

- 1) Repair or replace the faulty parts.
- 2) Check the caliper body and piston for uneven wear, damage or rust.
- 3) Check the rubber parts for damage or deterioration.

8. Master Cylinder

A: REMOVAL

CAUTION:

Do not allow brake fluid to come in contact with vehicle body. If it does, wash off with water and wipe away completely.

- 1) Drain brake fluid from the reservoir tank completely.
- 2) Disconnect the harness connector of the fluid level gauge.
- 3) Remove the brake pipe from the master cylinder.
- 4) Remove the master cylinder mounting nuts, and carefully remove the master cylinder from the brake booster.

B: INSTALLATION

- 1) Replace the O-ring for the master cylinder with a new part.

CAUTION:

Be careful not to install the O-ring in the wrong location.

- (1) Primary piston
- (2) O-ring
- (3) Do not install the O-ring on this groove.

- 2) Install each part in the reverse order of removal.

Tightening torque:

Master cylinder mounting nut

13 N·m (1.33 kgf-m, 9.6 ft-lb)

Piping flare nut

19 N·m (1.94 kgf-m, 14 ft-lb)

CAUTION:

Be sure to use recommended brake fluid.

- 3) Bleed air from the brake system. <Ref. to BR-33, PROCEDURE, Air Bleeding.>

C: REPLACEMENT

- 1) Remove mud and dirt from the surface of brake master cylinder.
- 2) Secure the master cylinder in a vise.

CAUTION:

To avoid damaging the master cylinder, place between aluminum plates or other material when holding with a vise.

- 3) Remove the pin which secures the master cylinder and reservoir tank, then remove the reservoir tank and seal.

BR-00364

- 4) While pushing in the primary piston, remove the C-ring using pliers.

BR-00169

- 5) While pushing in the primary piston, remove the cylinder pin (1) from the port on the reservoir tank attachment location using a magnet pick-up tool.

BR-00069

- 6) Extract the primary piston assembly and secondary piston assembly straight out while taking care not to scratch the inner surface of the cylinder.
- 7) Clean the inside of master cylinder with brake fluid. Check the inside of the cylinder for damage, deformation and wear. Replace the master cylinder as an assembly if faulty.

- 8) Apply brake fluid to the inner surface of master cylinder and piston assembly.
- 9) Make sure that the inner surface of master cylinder and the piston assembly are free of foreign matter. Install the primary piston assembly and the secondary piston assembly to master cylinder, while taking care not to scratch the master cylinder inner surface.
- 10) While pushing-in the primary piston, install the cylinder pin.
- 11) While pushing-in the primary piston, install the C-ring to the groove using pliers.

CAUTION:
Make sure the C-ring is installed to the groove securely.

- 12) Install the seal (1) to reservoir tank.

- 13) Install the reservoir tank to the master cylinder, and secure with pin.
- 14) Replace the O-ring for the master cylinder with a new part.

- (1) Primary piston
- (2) O-ring
- (3) Do not install the O-ring on this groove.

D: INSPECTION

Inspect for brake fluid leakage from the master cylinder.

NOTE:

After replacing the piston kit, if a brake fluid leakage is found even though there is no damage or scratches on the inside of the cylinder, the master cylinder inner wall may be worn. In this case, replace the master cylinder as an assembly.

Brake Booster

BRAKE

9. Brake Booster

A: REMOVAL

1) Remove or disconnect the following parts in the engine compartment.

- (1) Disconnect the connector of brake fluid level gauge.
- (2) Remove the brake pipe from the master cylinder.
- (3) Remove the master cylinder installation nut.
- (4) Disconnect the vacuum hose from brake booster.

2) Remove the following parts from the pedal bracket.

- (1) Snap pin and clevis pin
- (2) Four brake booster installation nuts

- (1) Nut
- (2) Clevis pin
- (3) Snap pin
- (4) Operating rod
- (5) Brake pedal

3) Remove the brake booster while avoiding the brake pipe.

CAUTION:

- Do not disassemble the brake booster.
- If external force (1) is applied from above when brake booster is placed in this position, the resin portion as indicated by "P" may become damaged.

NOTE:

- Make sure that the booster shell and vacuum pipe are not subject to strong impacts.
- Be careful not to drop the brake booster. If the booster is dropped, replace it.
- Use special care when handling the operating rod. If excessive force is applied to the operating rod, the angle may change by $\pm 3^\circ$, and it may result in damage to power piston cylinder.
- Be careful when placing the brake booster on floor.
- Do not change the push rod length.

B: INSTALLATION

1) Check and adjust the operating rod of the brake booster.

Specification L:

136.3 mm (5.37 in)

If it is out of specification, adjust it with the brake booster operating rod.

2) Mount the brake booster in position.

3) Install clevis pin and snap pin which secure the operating rod to the brake pedal.

- (1) Nut
- (2) Clevis pin
- (3) Snap pin
- (4) Operating rod
- (5) Brake pedal

NOTE:

- Replace with a new clevis pin.
 - Apply NIGTIGHT LYW No. 2 grease to the clevis pin.
- 4) Connect the vacuum hose to the brake booster.
 5) After replacing the O-ring, install the master cylinder to brake booster.

- (1) Primary piston
- (2) O-ring
- (3) Do not install the O-ring on this groove.

6) Connect the brake pipes to the master cylinder.
 7) Connect the connector of the brake fluid level gauge.

8) Apply grease to the operating rod connecting pin to prevent it from wear.

9) Bleed air from the brake system. <Ref. to BR-33, PROCEDURE, Air Bleeding.>

10) Perform a road test to make sure the brakes do not drag.

C: INSPECTION

NOTE:

On the model with brake assist mechanism, the following phenomena occur when the brake pedal is depressed. However, those are not malfunction but the phenomena that occur when the brake assist mechanism functions properly.

- Brake feel is soft when brake pedal is depressed hard or quicker than usual.
- ABS operating sound is heard when brake pedal is depressed hard or quicker than usual.

1. OPERATION CHECK (WITHOUT GAUGES)

CAUTION:

When checking operation, be sure to apply the parking brake securely.

- **CHECK WITHOUT GAUGES**

This method can not determine exactly what part is defective. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

- **AIR TIGHTNESS CHECK**

Start the engine, and idle it for 1 to 2 minutes, then turn it OFF. Depress the brake pedal several times applying the normal pedal force. The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression. If no change occurs in the pedal height when pressed, the brake booster is faulty.

- (1) Normal
- (2) Not OK
- (3) 1st
- (4) 2nd
- (5) 3rd

Brake Booster

BRAKE

NOTE:

- In case of defective operation, inspect the condition of the check valve and vacuum hose as well.
- Replace them if faulty, and perform the test again.
- If no improvement is observed, check precisely with gauges.

• CHECK OPERATION

1) While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.

- (1) When engine is stopped
(2) When engine is started

2) With the brake pedal depressed, start the engine.

3) As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the brake booster is faulty.

NOTE:

If faulty, check precisely with gauges.

• LOADED AIR TIGHTNESS CHECK

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed. Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of brake booster is normal. If the pedal height increases, it is faulty.

NOTE:

If faulty, check precisely with gauges.

2. OPERATION CHECK (WITH GAUGE)

CAUTION:

When checking operation, be sure to apply the parking brake securely.

• CHECK WITH GAUGE

Connect the gauge as shown in the figure. After bleeding air from the pressure gauge, perform each check.

- (1) Pressure gauge
(2) Vacuum gauge
(3) Adapter hose
(4) Vacuum hose
(5) Pedal force gauge

• AIR TIGHTNESS CHECK

1) Start the engine and keep it running until vacuum pressure indicates point A of the vacuum gauge = 66.7 kPa (500 mmHg, 19.69 inHg). Do not depress the brake pedal at this time.

- (1) Pressure gauge
(2) Vacuum gauge

2) Stop the engine and check the gauge. If the vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less, the function of brake booster is normal.

If faulty, the cause may be one of the following.

- Check valve malfunction
- Leak from vacuum hose
- Leak from shell joint section or stud bolt welded section
- Damaged diaphragm
- Leak from valve body seal and bearing section
- Leak from plate and seal assembly section
- Leak from poppet valve assembly section

• LOADED AIR TIGHTNESS CHECK

1) Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lbf). Keep the engine running and keep the pedal pressed until a vacuum of point B = 66.7 kPa (500 mmHg, 19.69 inHg) is indicated on the vacuum gauge.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Pedal force gauge
- (4) Depressed

2) Stop the engine and check the vacuum gauge. If the vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less, the function of brake booster is normal.

If defective, refer to "AIR TIGHTNESS CHECK".
<Ref. to BR-29, INSPECTION, Brake Booster.>

3) If the brake booster is faulty, replace it with a new part.

• LACK OF BOOST ACTION CHECK

Turn the engine OFF, and set the value of the vacuum gauge to "0". Then, check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal operation force N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure kPa (kgf/cm ² , psi)	545 (6, 79)	1,564 (16, 227)

• BOOSTING ACTION CHECK

Set the vacuum gauge reading to 66.7 kPa (500 mmHg, 19.69 inHg) with the engine running. Then, check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal operation force N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure kPa (kgf/cm ² , psi)	6,400 (65, 928)	11,273 (115, 1,635)

10.Brake Fluid

A: INSPECTION

1) Check that the brake fluid level is between “MIN” and “MAX”. If out of the specified range, refill or drain fluid. If the fluid level is close to “MIN”, check the brake pad for wear and refill the fluid.

2) Check the fluid for discoloration. If the fluid color has changed excessively, drain the fluid and refill with new fluid.

B: REPLACEMENT

CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
- Be careful not to allow dirt or dust to enter the reservoir tank.

NOTE:

- During the operation, keep the reservoir tank filled with brake fluid to prevent entry of air.
- Operate the brake pedal slowly.
- For convenience and safety, perform the work with 2 people.
- The required amount of brake fluid is approximately 500 ml (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.

1) Lift up the vehicle and set rigid racks at the specified locations, or keep the vehicle lifted.

2) Remove both the front and rear wheels.

3) Drain brake fluid from the reservoir tank.

4) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:

Refer to the “Specifications” in “General Description”. <Ref. to BR-2, SPECIFICATION, General Description.>

Perform the same procedure as for bleeding the brake line, until new brake fluid comes out from vinyl tube. <Ref. to BR-33, PROCEDURE, Air Bleeding.>

11. Air Bleeding

A: PROCEDURE

CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
- Be careful not to allow dirt or dust to enter the reservoir tank.

1. MASTER CYLINDER

NOTE:

- When the master cylinder is disassembled or the reservoir tank is empty, bleed the master cylinder.
- If bleeding of the master cylinder is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-33, BRAKE LINE, PROCEDURE, Air Bleeding.>

1) Fill the reservoir tank of the master cylinder with brake fluid.

NOTE:

While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.

2) Disconnect the brake line at primary and secondary sides.

3) Wrap the master cylinder with a plastic bag.

4) Depress the brake pedal slowly and hold it.

NOTE:

On the model with brake assist mechanism, the following phenomena occur when the brake pedal is depressed. However, those are not malfunction but the phenomena that occur when the brake assist mechanism functions properly.

- Brake feel is soft when brake pedal is depressed hard or quicker than usual.
- ABS operating sound is heard when brake pedal is depressed hard or quicker than usual.

5) Plug the outlet plug with your finger, and then release the brake pedal.

6) Repeat the step 4) and 5) several times.

7) Remove the plastic bag.

8) Install the brake pipe to the master cylinder.

Tightening torque:

19 N·m (1.94 kgf·m, 14.0 ft·lb)

9) Bleed air from the brake line. <Ref. to BR-33, BRAKE LINE, PROCEDURE, Air Bleeding.>

2. BRAKE LINE

1) When the master cylinder is disassembled or the reservoir tank is empty, bleed the master cylinder before bleeding the brake line. <Ref. to BR-33, MASTER CYLINDER, PROCEDURE, Air Bleeding.>

2) Fill the reservoir tank of the master cylinder with brake fluid.

NOTE:

While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.

3) Attach one end of the vinyl tube to the air bleeder and the other end to the brake fluid container.

4) Depress the brake pedal several times, and hold it.

5) Loosen the air bleeder screw to drain brake fluid. Tighten the air bleeder quickly, and release the brake pedal.

NOTE:

Perform air bleed starting in the order from the farthest wheel cylinder from the master cylinder.

6) Repeat the steps 4) to 5) until there are no more air bubbles in the vinyl tube.

Air Bleeding

BRAKE

7) Repeat the steps from 2) to 6) above to bleed air from each wheel.

8) Securely tighten the air bleeder screws.

Tightening torque:

8 N·m (0.82 kgf·m, 5.9 ft·lb)

9) Check that there are no brake fluid leaks in the entire system.

10) Check the pedal stroke.

Run the engine at idle after warming up the engine, and depress the brake pedal with a force of 500 N (51 kgf, 112 lbf). Measure the distance between the brake pedal and steering wheel. Release the pedal, and measure the distance between pedal and steering wheel again.

(1) Steering wheel

(2) Toe board

Specification of pedal stroke:

When depressing the pedal with a force of 500 N (51 kgf, 112 lbf).

95 mm (3.74 in) or less

11) If the distance is more than specification, there is a possibility of air being caught in the brake line. Bleed the brake line of all air until the pedal stroke meets the specification.

12) Operate the hydraulic control unit in the sequence control mode. <Ref. to VDC-13, ABS Sequence Control.>

13) Check the pedal stroke again.

14) If the distance is more than specification, there is a possibility of air being caught in the hydraulic unit. Repeat above steps 2) to 9) until the pedal stroke meets the specification.

15) Fill the reservoir tank with brake fluid up to the "MAX" level.

16) Test run the vehicle and ensure that the brakes operate normally.

12.Brake Hose

A: REMOVAL

1. FRONT BRAKE HOSE

- 1) Separate the brake pipe from brake hose using a flare nut wrench.
- 2) Remove the clamp, the strut mount bolts, and union bolt.

- (1) Brake hose
- (2) Brake pipe

2. REAR BRAKE HOSE

- 1) Remove union bolt and brake hose bracket bolt.

- 2) Separate the brake pipe from brake hose using a flare nut wrench.

- 3) Remove the clamp, and then remove the brake hose.

- (1) Brake pipe
- (2) Brake hose clamp
- (3) Brake hose

B: INSTALLATION

1. FRONT BRAKE HOSE

- 1) Secure the brake hose to strut mount.

Tightening torque:

33 N·m (3.36 kgf-m, 24.3 ft-lb)

- 2) Install the brake hose to the caliper body using a new gasket.

Tightening torque (union bolt):

18 N·m (1.84 kgf-m, 13.3 ft-lb)

- 3) Position the disc in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

CAUTION:

Do not twist the brake hose.

- 4) Temporarily tighten the flare nut which connects brake pipe and hose.
- 5) Secure the brake hose to wheel apron bracket with clamp.
- 6) Tighten the flare nut to the specified torque.

Tightening torque (brake pipe flare nut):

15 N·m (1.53 kgf-m, 11.1 ft-lb)

- 7) Bleed air from the brake system. <Ref. to BR-33, PROCEDURE, Air Bleeding.>

2. REAR BRAKE HOSE

- 1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
- 2) Insert the clamp to secure brake hose.

- (1) Brake pipe
- (2) Brake hose clamp
- (3) Brake hose

- 3) Install the brake hose bracket.

Tightening torque:

33 N·m (3.36 kgf-m, 24.3 ft-lb)

- 4) Install the brake hose to the caliper body using a new gasket.

Tightening torque (union bolt):

18 N·m (1.84 kgf-m, 13.3 ft-lb)

- 5) Tighten the flare nut to the specified torque.

Tightening torque (brake pipe flare nut):

15 N·m (1.53 kgf-m, 11.1 ft-lb)

- 6) Bleed air from the brake system. <Ref. to BR-33, PROCEDURE, Air Bleeding.>

C: INSPECTION

Make sure there are no cracks, breakage or damage on hoses. Check the joint for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the hose.

13.Brake Pipe

A: REMOVAL

CAUTION:

- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions for the airbag system in this case. <Ref. to AB-5, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, do not bend.

NOTE:

The airbag system wiring harness is routed near the center brake pipe.

B: INSTALLATION

CAUTION:

- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions for the airbag system in this case. <Ref. to AB-5, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When installing the brake pipe, do not bend.
- After installing the brake pipe and hose, perform air bleed.
- After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.

NOTE:

The airbag system wiring harness is routed near the center brake pipe.

Brake pipe tightening torque:

Refer to "COMPONENT" of "General Description".

Front brake pipes & hoses: <Ref. to BR-7, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.>

Center and rear brake pipes & hoses: <Ref. to BR-8, CENTER AND REAR BRAKE PIPES & HOSES, COMPONENT, General Description.>

C: INSPECTION

Make sure there are no cracks, breakage or damage on hoses. Check the joint for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the pipes.

NOTE:

Use a mirror when inspecting back sides and other locations which are hard to see.

14. Brake Pedal

A: REMOVAL

1. MT MODEL

- 1) Remove the steering column. <Ref. to PS-16, REMOVAL, Steering Column.>
- 2) Disconnect the connector from clutch switch.
- 3) Disconnect the connector from stop light switch.
- 4) Remove the clevis pin which secures the pedal and operating rod.

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod
- (4) Pedal

- 5) Remove the nut which secures the clutch master cylinder.
- 6) Remove the bolt and nut which secures the pedal bracket.

2. AT MODEL

- 1) Remove the steering column. <Ref. to PS-16, REMOVAL, Steering Column.>
- 2) Disconnect the connector from stop light switch.
- 3) Remove the clevis pin which secures the brake pedal and operating rod.

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod
- (4) Brake pedal

- 4) Remove the bolts and nuts which secure the brake pedal bracket.

B: INSTALLATION

1) Install the bolt and nut which secure the brake pedal bracket.

Tightening torque:

18 N·m (1.84 kgf·m, 13.3 ft·lb)

2) Install clevis pin and snap pin which secure the operating rod to the brake pedal.

NOTE:

- Replace with a new clevis pin.
- Apply NIGTIGHT LYW No. 2 grease to the clevis pin.

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod
- (4) Brake pedal

3) Connect the stop light switch connector.

4) Check that the brake light operate properly.

5) Check the brake pedal after installation. <Ref. to BR-39, INSPECTION, Brake Pedal.>

C: INSPECTION

1) Move the brake pedal pads in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

CAUTION:

If excessive deflection is noted, replace with a new bushing.

Deflection of brake pedal:

Limit

5.0 mm (0.197 in) or less

- (1) Brake pedal

2) Check the position of the pedal pad.

Pedal height L:

150 — 160 mm (5.91 — 6.29 in)

Brake pedal free play A:

0.5 — 2 mm (0.020 — 0.079 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf).]

- (1) Stop light switch
- (2) Mat
- (3) Toe board
- (4) Brake booster operating rod

3) If the inspection result is not within the specification, loosen the lock nuts of brake booster operating rod, and rotate the rod to adjust the pedal height L within the specification.

4) Tighten the lock nut.

Tightening torque:

22 N·m (2.24 kgf·m, 16.2 ft·lb)

Stop Light Switch

BRAKE

15. Stop Light Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the stop light switch connector.
- 3) Loosen the nuts, remove the screw of the stop light switch (1), and remove stop light switch.

B: INSTALLATION

- 1) Install the stop light switch onto the bracket with screws and position it with the nut.
 - 2) Adjust the stop light switch position, and then tighten the nut.
- <Ref. to BR-41, ADJUSTMENT, Stop Light Switch.>

Tightening torque:

8 N·m (0.82 kgf-m, 5.9 ft-lb)

C: INSPECTION

1. INSPECT THE SPECIFIED POSITION

- 1) If the stop light switch does not operate properly (or if it is not secured at the specified position), replace with a new part.

Specified position L:

2 mm (0.079 in)

- 2) Measure the clearance between the threaded end of the stop light switch and the stopper.

CAUTION:

Be careful not to rotate the stop light switch.

Stop light switch clearance A:

0.3 mm (0.012 in)

- (1) Stop light switch
- (2) Stopper
- (3) Brake pedal

- 3) Adjust the position of the stop light switch if the inspection result is not within the standard value.

CAUTION:

Be careful not to rotate the stop light switch.

2. INSPECT THE RESISTANCE

- 1) If the stop light switch does not operate properly, replace with a new part.
- 2) Measure the resistance between stop light switch terminals.

Pedal	Terminal No.	Standard
Released	2 and 3	1 M Ω or more
Depressed		Less than 1 Ω

- 3) Replace the stop light switch if the inspection result is not within the standard value.

D: ADJUSTMENT

Loosen the lock nut, and adjust the stop light switch position until the clearance (A) between the threaded end of the stop light switch and stopper becomes 0.3 mm (0.012 in). Then, tighten the lock nut.

Tightening torque:

8 N·m (0.82 kgf·m, 5.9 ft·lb)

- (1) Stop light switch
- (2) Lock nut A
- (3) Lock nut B
- (4) Stopper
- (5) Brake pedal

NOTE:

Tighten lock nut B until the threaded end of switch contacts with stopper. Hold the switch so that it does not rotate, then loosen the lock nut B approx. 60°. The clearance (A) will become approximately 0.3 mm (0.012 in).

General Diagnostic Table

BRAKE

16. General Diagnostic Table

A: INSPECTION

	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on lining	Replace, grind or clean.
	(4) Improper operation of master cylinder, disc caliper, brake booster or check valve	Correct or replace.
2. Unstable or uneven braking	(1) Fluid on lining or rotor	Correct the cause of fluid leakage, and clean or replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper lining contact, deteriorated surface, deteriorated or worn lining material	Repair by grinding, or replace.
	(4) Deformed back plate	Correct or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Faulty wheel bearing	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake and cable system.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Correct or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Repair or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Correct or replace.
	(7) Faulty wheel bearing	Replace.
5. Brake noise (1) (creaking sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose wheel bearing	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or support	Replace the pad or the support.

PARKING BRAKE

PB

	Page
1. General Description	2
2. Parking Brake Lever	4
3. Parking Brake Cable	5
4. Parking Brake Assembly (Rear Disc Brake)	6
5. General Diagnostic Table	9

General Description

PARKING BRAKE

1. General Description

A: SPECIFICATION

Model		Rear disc brake
Type		Mechanical, drum in disc rear brakes
Effective drum diameter	mm (in)	190 (7.48)
Lining dimensions (Length x Width x Thickness)	mm (in)	165.8 x 30.0 x 2.8 (6.53 x 1.181 x 0.11)
Clearance adjustment		Manual adjustment
Lever stroke	Notches/N (kgf, lbf)	7 — 8/200 (20.4, 45)

B: COMPONENT

1. PARKING BRAKE (REAR DISC BRAKE)

PB-00127

- | | | |
|------------------------------------|------------------------------|----------------------------|
| (1) Back plate | (7) Strut | (13) Shoe hold-down cup |
| (2) Retainer | (8) Shoe guide plate | (14) Shoe hold-down spring |
| (3) Lever | (9) Primary return spring | (15) Shoe hold-down pin |
| (4) Parking brake shoe (Primary) | (10) Secondary return spring | (16) Wave washer |
| (5) Parking brake shoe (Secondary) | (11) Adjusting screw | |
| (6) Strut spring | (12) Adjusting spring | |

2. PARKING BRAKE LEVER AND CABLE

PB-00131

- | | | |
|--------------------------------------|----------------------------|----------------------------|
| (1) Parking brake lever | (5) Bracket | (9) Parking brake cable LH |
| (2) Parking brake switch | (6) Clamp | |
| (3) Adjusting nut (self-locking nut) | (7) Parking brake cable RH | |
| (4) Equalizer | (8) Clamp | |

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.84, 13.3)

C: CAUTION

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Make sure grease does not come into contact with the parking shoes.

2. Parking Brake Lever

A: REMOVAL

- 1) Set the wheel stoppers to tires.
- 2) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 3) Disconnect the parking brake switch connector.
- 4) Remove the parking cable adjusting nut (self-locking nut).
- 5) Remove the bolt, and then detach the parking brake lever.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

Parking brake lever

18 N·m (1.84 kgf-m, 13.3 ft-lb)

- 2) Install a new adjusting nut (self-locking nut).
- 3) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION

- 1) Operate the parking brake lever 3 to 4 times and fully return the lever.
- 2) While slowly pulling the parking brake lever upward, count the notches.

Lever stroke:

7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)

- 3) Adjust the parking brake if the inspection result is not within the standard value. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

D: ADJUSTMENT

Adjust the parking lever stroke. <Ref. to PB-8, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

3. Parking Brake Cable

A: REMOVAL

- 1) Remove the rear seat cushion. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 2) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 3) Remove the parking cable adjusting nut (self-locking nut).
- 4) Remove the parking brake lever. <Ref. to PB-4, REMOVAL, Parking Brake Lever.>
- 5) Roll up the floor mat, remove the nuts, and then remove the clamps.

- 6) Remove the inner cable end (2) from the equalizer (1).

- 7) Lift up the vehicle, and then remove the rear wheels.
- 8) Remove the parking brake cable from rear brake. <Ref. to PB-6, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
- 9) Remove the clamp from the rear brake.
- 10) Remove the cable clamp from the rear arm bracket.

- 11) Remove the bolt and detach the cable clamp from the rear floor.

- 12) Remove the grommet from the rear floor, and remove the cable assembly.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

NOTE:

Be sure to pass the cable through the tunnel in the cable guide.

Tightening torque:

Cable clamp

18 N·m (1.84 kgf-m, 13.3 ft-lb)

- 2) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION

Check and replace the removed cable if damaged, rusty or faulty.

- 1) Check the cable for smooth operation.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends and cracks.

Parking Brake Assembly (Rear Disc Brake)

PARKING BRAKE

4. Parking Brake Assembly (Rear Disc Brake)

A: REMOVAL

- 1) Release the parking brake.
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the bolts and then remove the brake hose bracket.

- 4) Remove the attachment bolts and remove the rear caliper body assembly.

- 5) Suspend the rear caliper body assembly so that the brake hose is not stretched.
- 6) Remove the rear disc rotor.

NOTE:

If the disc rotor is difficult to remove, try the following two methods in order.

- (1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe moves adequately away from the disc rotor.

- (1) Adjusting screw
- (2) Flat tip screwdriver
- (3) Disc rotor

- (2) If disc rotor is seized on the hub, drive the disc rotor out by pushing two 8 mm bolts in holes B on the rotor.

- 7) Remove the shoe return spring.

- 8) Remove the brake shoe cup and brake shoe spring, and remove the primary brake shoe.

- (1) Brake shoe cup
(2) Primary brake shoe

- 9) Remove the strut and strut spring.
10) Remove the adjusting screw.
11) Remove brake shoe cup and brake shoe spring, and remove the secondary brake shoe.
12) Remove the parking brake cable from lever.

- (1) Parking brake cable
(2) Lever

- 13) Remove a retainer from the secondary side brake shoe. Remove the lever from the brake shoe.

B: INSTALLATION

CAUTION:

Be sure the lining surface is free from brake fluid and grease.

- 1) Apply brake grease to the following locations.

Brake grease:

Brake Grease (Part No. 003602002)

- Six contact surfaces of the brake shoe rim and back plate gasket
- Contact surface of the brake shoe and the anchor pin
- Contact surface of the parking brake lever and strut
- Contact surface of the brake shoe and adjusting screw
- Contact surface of the brake shoe and strut
- Contact surface of the lever and brake shoe

- 2) Install the wave washer and lever to the secondary side brake shoe pin, and lock the retainer securely.
3) Install the parking brake cable to the lever.
4) Install the adjusting screw and adjusting spring to the brake shoe.

NOTE:

Install the adjusting screw with the screw section facing toward the direction shown in the figure below.

- (1) Left wheel: front side of vehicle, right wheel: rear side of vehicle

- 5) Check that the parking brake cable does not fall from the cable guide.
6) Install the brake shoes to the back plate with shoe hold pins, brake shoe springs, and brake shoe cups.
7) Install the strut and strut spring to the brake shoes.

NOTE:

- Install the strut springs on front side of the vehicle.
8) Install the return springs on the primary side first, and then the secondary side.
9) Install the rear disc rotors and rear caliper body assembly.

Tightening torque:

Caliper body assembly

66 N·m (6.73 kgf-m, 48.7 ft-lb)

- 10) Install the brake hose bracket.

Tightening torque:

33 N·m (3.36 kgf-m, 24.3 ft-lb)

- 11) Adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

- 12) If new brake shoes are replaced, drive the vehicle to break-in the parking brake lining.

(1) Drive the vehicle at approximately 35 km/h (22 MPH) or more.

(2) While pressing the parking brake lever button, pull the parking brake lever with a force of 150 N (15.3 kgf, 33.7 lbf).

Parking Brake Assembly (Rear Disc Brake)

PARKING BRAKE

(3) Drive the vehicle for about 200 m (0.12 mile) in this condition.

(4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat steps (1) through (3) again.

(5) After breaking-in, re-adjust the parking brakes.

C: INSPECTION

1) Measure the inner diameter of the disc rotor. If scoring or worn is found on the disc, replace the disc rotor.

Disc rotor inner diameter:

Standard

190 mm (7.48 in)

Service limit

191 mm (7.52 in)

2) Measure the lining thickness. If it exceeds the limit, replace the brake shoe.

Lining thickness:

Standard

2.8 mm (0.11 in)

Service limit

1.5 mm (0.059 in)

NOTE:

Replace the right and left brake shoe as a set.

D: ADJUSTMENT

1. SHOE CLEARANCE

1) Return the parking brake lever fully.

2) Loosen the adjusting nut, and make the cable free.

3) Remove the adjusting hole cover from the disc rotor.

4) Using a flat tip screwdriver, turn the adjusting screw in the direction of the arrow as shown in the figure until the brake shoe is in close contact with the disc rotor.

- (1) Adjusting screw
- (2) Flat tip screwdriver
- (3) Disc rotor

5) Loosen the adjusting screw by 5 notches to opposite direction of arrow.

CAUTION:

- Check there is no brake drag.
- If the amount that the adjusting screw is turned back is little, securely loosen it by 5 notches to avoid dragging.

6) Install the adjusting hole cover to the disc rotor.

7) Adjust the parking lever stroke. <Ref. to PB-8, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2. LEVER STROKE

1) Adjust the shoe clearance before adjusting lever stroke. <Ref. to PB-8, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2) Remove the parking lever cover.

3) Pull the parking brake lever hard 3 to 5 times.

4) Turn the adjusting nut until the lever stroke is at the specified value.

Lever stroke:

7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)

(1) Adjusting nut (Self-locking nut)

5) Check there is no brake drag.

6) Install the parking lever cover.

5. General Diagnostic Table

A: INSPECTION

Symptom	Possible cause	Corrective action
Brake drag	Parking brake lever is not adjusted correctly.	Adjust.
	Parking brake cable does not move.	Correct or replace.
	Parking brake shoe clearance is maladjusted.	Adjust.
	Return spring is faulty.	Replace.
Noise from brake	Return spring is faulty.	Replace.
	Shoe hold-down spring faulty.	Replace.

General Description

POWER ASSISTED SYSTEM (POWER STEERING)

1. General Description

A: SPECIFICATION

Model		Non-turbo model	Turbo model	
Whole system	Minimum turning radius	m (ft)		
	Steering angle	Inner wheel	5.3 (17.4)	
		Outer wheel	38.3°±1.5°	
	Steering wheel diameter	mm (in)		
Lock-to-lock revolution number	3.2			
Gearbox	Type	Rack and Pinion, Integral		
	Backlash	0 (Automatic adjusting)		
	Valve (Power steering system)	Rotary valve		
Pump (Power steering system)	Type	Vane pump		
	Oil tank	Installed on body		
	Specific output	cm ³ (cu in)/rev.	7.2 (0.439)	8.5 (0.519)
	Relief pressure	kPa (kgf/cm ² , psi)	7,350 — 8,050 (75 — 82, 1,066 — 1,167)	8,100 — 8,800 (83 — 90, 1,174 — 1,276)
	Hydraulic fluid control	Engine speed sensitive		
	Hydraulic fluid	ℓ (US qt, Imp qt)	1,000 rpm: 6.5 (6.9, 5.7) 3,000 rpm: 5 (5.3, 4.4)	1,000 rpm: 6.3 (6.7, 5.5) 3,000 rpm: 5.9 (6.2, 5.2)
	RPM range	rpm	680 — 9,800	680 — 9,600
Direction of rotation	Clockwise			
Hydraulic oil (Power steering system)	Capacity ℓ (US qt, Imp qt)	Oil tank	0.2 (0.2, 0.2)	
		Whole system	0.7 (0.7, 0.6)	

Steering wheel	Free play	mm (in)	17 (0.67)	
Steering shaft	Clearance between the steering wheel and column cover	mm (in)	2 — 4 (0.08 — 0.16)	
Steering gearbox (Power steering system)	Sliding resistance	N (kgf, lbf)	314 (32, 71) or less Difference between right and left sliding resistance: 20% or less	
	Rack shaft play in the radial direction	Right-turn steering	mm (in)	0.4 (0.016) or less
		Left-turn steering	mm (in)	Horizontal play: 0.6 (0.024) or less Vertical play: 0.4 (0.016) or less
	Input shaft play	In radial direction	mm (in)	0.18 (0.0071) or less
		In axial direction	mm (in)	0.27 (0.0106) or less
Rotation resistance	N (kgf, lbf)	Maximum allowable value: 13 (1.33, 2.9) or less Difference between right and left sliding resistance: 20% or less		
Oil pump (Power steering system)	Pulley shaft	Radial play	mm (in)	0.4 (0.016) or less
		Axial play	mm (in)	0.9 (0.035) or less
	Pulley	Ditch deflection	mm (in)	1.0 (0.039) or less
		Rotation resistance	N (kgf, lbf)	9.22 (0.94, 2.07) or less
Regular pressure (Unloaded)	kPa (kgf/cm ² , psi)	981 (10, 142) or less		
Steering wheel effort (Power steering system)	At standstill with engine idling on paved road	N (kgf, lbf)	29.4 (2.99, 6.6) or less	
	At standstill with engine stalled on paved road	N (kgf, lbf)	294.2 (29.9, 66.2) or less	

Recommended power steering fluid
SUBARU genuine ATF or DEXRON III

C: CAUTION

- Wear appropriate work clothing, including a helmet, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine power steering fluid, grease etc. or equivalent. Do not mix fluid, grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wooden blocks, aluminum plate or cloth between the part and the vise.

Steering Wheel

POWER ASSISTED SYSTEM (POWER STEERING)

2. Steering Wheel

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Set the tire to the straight-ahead position.
- 3) Remove the airbag module. <Ref. to AB-18, REMOVAL, Driver's Airbag Module.>

WARNING:

Always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" before performing service on the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 4) Place alignment marks on the steering wheel and steering shaft.

(1) Alignment mark

- 5) Remove the steering wheel nut, and then draw out the steering wheel from shaft using steering puller.

CAUTION:

When removing, always use the steering wheel puller to avoid deforming the steering wheel.

B: INSTALLATION

WARNING:

Always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" before performing service on the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Align the center position of the roll connector. <Ref. to AB-31, ADJUSTMENT, Roll Connector.>
- 2) Install each part in the reverse order of removal.

CAUTION:

Insert the roll connector guide pin into the guide hole on the lower end of the steering wheel surface. Avoid damaging the pin.

NOTE:

Align the alignment marks on the steering wheel and steering shaft.

Tightening torque:

39 N·m (3.98 kgf-m, 28.8 ft-lb)

Column cover-to-steering wheel clearance:

2 — 4 mm (0.08 — 0.16 in)

C: INSPECTION

- 1) Check the steering wheel for deformation. If the deformation is excessive, replace the steering wheel.
- 2) Check the splines on the steering wheel for damage. If the damage is excessive, replace the steering wheel.

Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

3. Universal Joint

A: REMOVAL

- 1) Remove the steering wheel. <Ref. to PS-13, REMOVAL, Steering Wheel.>
- 2) Place alignment marks on universal joint.
- 3) Remove the universal joint bolt and remove the universal joint.

B: INSTALLATION

- 1) Align the cutout portion (a) at serrated section of the column shaft (c) and yoke (b), then install the universal joint into column shaft.

CAUTION:

Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If the protrusion is aligned with the other cutout (d), the universal joint bolt cannot be assembled.

- (A) Column shaft side
(B) Gearbox side

- 2) Install the universal joint to the serrations of gearbox assembly by matching alignment marks.
- 3) Tighten the bolts on the gearbox side first, and then the column shaft side.

CAUTION:

Be sure to follow the tightening order and tightening torque of universal joint to avoid the steering effort from becoming heavy.

Tightening torque:

24 N·m (2.45 kgf·m, 17.7 ft·lb)

Clearance between coupling of universal joint and turbo cover:

15 mm (0.59 in) or more

- 4) Align the center position of the roll connector. <Ref. to AB-31, ADJUSTMENT, Roll Connector.>
- 5) Install the steering wheel. <Ref. to PS-13, INSTALLATION, Steering Wheel.>

C: INSPECTION

- 1) Check for wear, damage or any other faults. Replace as necessary

Service limit:

Universal joint play: 0 mm (0 in)

- (1) Play

- 2) Measure the swing torque of universal joint.

Service limit:

Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less

- (1) Yoke (Gearbox side)

Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

Service limit:

Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less

(1) Yoke (Gearbox side)

Service limit:

Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less

(1) Yoke (Steering column side)

Service limit:

Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less

(1) Yoke (Steering column side)

Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

4. Steering Column

A: REMOVAL

PS-00845

(1) Tilt steering column

(2) Universal joint

- 1) Adjust the tilt position of the steering column to the highest position and lock the tilt lever.
- 2) Remove the steering wheel. <Ref. to PS-13, REMOVAL, Steering Wheel.>
- 3) Remove the universal joint. <Ref. to PS-14, REMOVAL, Universal Joint.>
- 4) Remove the instrument panel lower cover under.
- 5) Remove the knee guard panel.
- 6) Remove the instrument panel lower cover upper.
- 7) Remove the screws which secure the column cover lower, then remove the column cover lower.
- 8) Remove all connectors from the steering column.
- 9) Remove the bolts under instrument panel securing the steering column.

- 10) Pull out the steering shaft assembly from the hole on toe board.

CAUTION:

- Always remove the universal joint before removing the steering column installation bolt to avoid damage to the universal joint.
- Be sure to remove the universal joint before removing the parts, if the relative position between steering shaft and gearbox changes when removing steering shaft assembly or when lowering it and gearbox for servicing other parts.
- Do not loosen the tilt lever when the steering column is not secured to the vehicle.

PS-00798

Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

B: INSTALLATION

- 1) Install the grommet to the toe board.

- 2) Insert the end of the steering shaft into the toe board grommet.
- 3) With the tilt lever secured, tighten the steering shaft mounting bolts under instrument panel.

Tightening torque:

20 N·m (2.04 kgf·m, 14.8 ft·lb)

- 4) Connect all the connectors under the instrument panel.
- 5) Connect the airbag system connector at the harness spool.

NOTE:

Make sure to apply double lock.

- 6) Install the knee guard panel.

Tightening torque:

25 N·m (2.55 kgf·m, 18.4 ft·lb)

- 7) Install the instrument panel lower cover with tilt lever held in the lowered position.
- 8) Install the universal joint. <Ref. to PS-14, INSTALLATION, Universal Joint.>
- 9) Align the center position of the roll connector. <Ref. to AB-31, ADJUSTMENT, Roll Connector.>
- 10) Install the steering wheel. <Ref. to PS-13, INSTALLATION, Steering Wheel.>

CAUTION:

Insert the roll connector guide pin into the guide hole on lower end of steering wheel surface to prevent damage.

C: DISASSEMBLY

Remove the screw securing the upper steering column cover, and the screw securing the combination switch, and then remove related parts.

D: ASSEMBLY

Insert the combination switch to the upper column shaft, and install the upper column cover. Then route the ignition key harness and combination switch harness between the column cover mounting bosses.

CAUTION:

Do not overtorque the screw.

Tightening torque:

1.2 N·m (0.12 kgf·m, 0.9 ft·lb)

E: INSPECTION

1. BASIC INSPECTION

Measure the overall length of steering column. If not within specification, replace it.

Standard: Overall length L

Tilt column

$833.6^{+1.3}_{-0.3}$ mm ($32.82^{+0.051}_{-0.012}$ in)

Tilt & telescopic column (measure while minimized)

$823.6^{+1.5}_{-1.5}$ mm ($32.43^{+0.059}_{-0.059}$ in)

2. INSPECTION OF AIRBAG SYSTEM

Refer to "Airbag System" for airbag inspection procedure. <Ref. to AB-18, INSPECTION, Driver's Airbag Module.>

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

5. Steering Gearbox

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Loosen the front wheel nuts.
- 4) Lift up the vehicle, and then remove the front wheels.
- 5) Remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
- 6) Remove the front exhaust pipe assembly.
 - Non-turbo model: <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
 - Turbo model: <Ref. to EX(H4DOTC)-5, REMOVAL, Front Exhaust Pipe.>

WARNING:

Be careful not to burn yourself because the exhaust pipe is hot.

- 7) Remove the cotter pin and castle nut securing the tie-rod end.

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod end

- 8) Using a puller, remove the tie-rod.

- 9) Remove the front crossmember support plate, jack-up plate and front stabilizer. <Ref. to FS-15, REMOVAL, Front Stabilizer.>

- Large type

- (1) Front crossmember support plate

- Small type

- (1) Crossmember support plate
- (2) Jack-up plate

- 10) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

- (1) Pipe A
- (2) Pipe B

- 11) Remove the universal joint. <Ref. to PS-14, REMOVAL, Universal Joint.>

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

12) Disconnect the feed pipe from the pressure hose first, then disconnect the return pipe from the return hose.

- (1) Feed pipe
- (2) Return pipe
- (3) Pressure hose
- (4) Return hose

13) Remove the clamp bolts securing the gearbox to the crossmember, and remove the clamp.

- (1) Clamp

14) Remove the bolts which secure the gearbox bracket, and remove the stiffener and gearbox.

- (1) Stiffener

B: INSTALLATION

1) Insert the gearbox into crossmember, being careful not to damage gearbox boot.

2) Install the gearbox and stiffener. Temporarily tighten the bolts.

- (1) Stiffener

3) Insert bolts through the clamp to temporarily tighten the gearbox to the crossmember bracket.

- (1) Clamp

4) Tighten the bolts temporarily holding the gearbox clamp and bracket together to the specified torque.

Tightening torque:

60 N·m (6.12 kgf·m, 44.3 ft·lb)

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

5) Connect the return pipe to the return hose and then connect the feed pipe to the pressure hose.

Tightening torque:

15 N·m (1.53 kgf·m, 11.1 ft·lb)

- (1) Feed pipe
- (2) Return pipe
- (3) Pressure hose
- (4) Return hose

6) Install the universal joint. <Ref. to PS-14, INSTALLATION, Universal Joint.>

7) Connect the tie-rod end and knuckle arm, and tighten with castle nut.

CAUTION:

When connecting, do not hit the cap at the bottom of tie-rod end with hammer.

Castle nut tightening torque:

27 N·m (2.75 kgf·m, 19.9 ft·lb)

8) After tightening the castle nut to the specified tightening torque, tighten it further within 60° until the cotter pin hole is aligned with slot in the nut. Fit the cotter pin into the nut, and then bend the pin to lock.

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod end

9) Install the front stabilizer. <Ref. to FS-15, INSTALLATION, Front Stabilizer.>

10) Install the front crossmember support plate and jack-up plate.

11) Install the front exhaust pipe assembly.

- Non-turbo model: <Ref. to EX(H4DO)-8, INSTALLATION, Front Exhaust Pipe.>

- Turbo model: <Ref. to EX(H4DOTC)-5, INSTALLATION, Front Exhaust Pipe.>

12) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>

13) Install the front wheels.

14) Tighten the wheel nuts to the specified torque.

Tightening torque:

100 N·m (10.2 kgf·m, 73.8 ft·lb)

15) Lower the vehicle.

16) Remove the steering wheel. <Ref. to PS-13, REMOVAL, Steering Wheel.>

17) Align the center position of the roll connector. <Ref. to AB-31, ADJUSTMENT, Roll Connector.>

18) Install the steering wheel. <Ref. to PS-13, INSTALLATION, Steering Wheel.>

19) Connect the battery ground terminal.

20) Pour fluid into the oil tank, and bleed air. <Ref. to PS-51, Power Steering Fluid.>

21) Check for fluid leaks.

22) Check the fluid level in oil tank.

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

23) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

Tightening torque:

85 N·m (8.67 kgf-m, 62.7 ft-lb)

NOTE:

When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.

C: DISASSEMBLY

1) Disconnect the four pipes from gearbox.

NOTE:

Remove the pipes C and D, which are fixed to clamp plate, as a unit.

2) Secure the gearbox removed from vehicle in a vise using ST.

CAUTION:

Secure the gearbox assembly in a vise using ST as shown. Do not secure the gearbox to the vise without this ST.

ST1 92620000 STAND

- (1) Plug

22) Install the dust cover, and remove the vinyl tape.

- (1) Dust cover

23) Temporarily tighten the tie-rod to the rack end, and then operate the rack from lock to lock for two or three times to make it fit in.

CAUTION:

If operating the rack from lock to lock without installing tie-rods, it may damage the oil seal. Always install the tie-rods LH and RH.

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

24) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

Liquid gasket:

THREE BOND 1102 or THREE BOND 1215

(1) Apply liquid gasket to 1/3 or more of the entire perimeter.

25) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.

Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.

(1) Sleeve
(2) Spring
(3) Adjusting screw

26) Tighten the adjusting screw to the specified torque, then loosen it.

Tightening torque:

9.8 N-m (0.99 kgf-m, 7.2 ft-lb)

27) Tighten the adjusting screw to the specified torque, then loosen it.

Tightening torque:

4.9 N-m (0.49 kgf-m, 3.6 ft-lb)

28) Tighten the adjusting screw to the specified torque, then loosen it approx. 30°.

CAUTION:

Do not loosen 37° or more.

Tightening torque:

4.9 N-m (0.49 kgf-m, 3.6 ft-lb)

29) Remove the tie-rod.

30) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw. <Ref. to PS-32, SERVICE LIMIT, INSPECTION, Steering Gearbox.>

31) Attach the lock nut into adjusting screw, and while holding the adjusting screw with wrench, tighten the lock nut using ST.

ST 926230000 SPANNER

Tightening torque (lock nut):

39 N-m (3.98 kgf-m, 28.9 ft-lb)

NOTE:

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

32) Install the tie-rod into rack.

Tightening torque:

90 N-m (9.18 kgf-m, 66.4 ft-lb)

NOTE:

Check the mating face of rack and tie-rod for foreign matter such as dust etc.

33) Apply a coat of grease to the tie-rod groove, and then install the boot to the housing.

NOTE:

Make sure that the boot is installed without unusual inflation or deflation.

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

34) Using the boot clamp pliers, crimp the boot so that the clearance of the boot band crimp portion becomes 2 mm (0.08 in) or less.

NOTE:

Use a new boot band.

- (A) Boot band
- (B) 2 mm (0.08 in) or less

35) Fix the boot end with small clip.

- (1) Clip

36) After installing, check that the boot end is installed to the groove of the tie-rod.

37) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

**Installed tie-rod length L:
28 mm (1.1 in)**

38) Inspect the gearbox as follows:
“A” Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
“B” Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
Finally, make sure that the boot is installed in the specified position without inflating.

39) Remove the gearbox from ST.

ST1 926200000 STAND

ST2 34199AG000 BOSS D

40) Attach the 4 pipes to the steering body and control valve housing.

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

E: INSPECTION

1. BASIC INSPECTION

1) Clean all the disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.

2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bent input shaft (2) Damage on serration	If the bend or damage is excessive, replace the entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If the outer wall slips, the lip is worn out or damage is found, replace it with a new part.
3	Rack & pinion	Poor mating of rack with pinion	(1) Adjust the backlash properly. By measuring the turning torque of the gearbox and sliding resistance of rack, check if the rack & pinion engage uniformly and smoothly with each other. (Refer to "Service limit".) (2) Pull out the entire rack to allow viewing of the teeth, and check for damage. When the abnormality is found in either (1) or (2), replace the entire gearbox.
4	Gearbox unit	(1) Bending of the rack shaft (2) Bending of the cylinder portion (3) Crack or damage on the aluminum portion	Replace the gearbox with a new part.
		(4) Wear or damage on rack bushing	If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with new part. (Refer to "Service limit".)
		(5) Wear on input shaft bearing	If the free play of input shaft in radial and axial direction is out of the specified range, replace the gearbox with a new part. (Refer to "Service limit".)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration of dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipe	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

2. SERVICE LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

NOTE:

When making a measurement, vise the gearbox using ST. Never vise the gearbox by inserting aluminum plates etc. between vise and gearbox.

ST1 926200000 STAND
ST2 34199AG000 BOSS D

Rack shaft sliding resistance:

Limit

314 N (32 kgf, 71 lbf) or less

Left/right differential of sliding resistance:

20% or less

3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

Right-turn steering:

Limit

Direction $\leftarrow \rightarrow \leftarrow \rightarrow$

0.4 mm (0.016 in) or less

Condition

L: 5 mm (0.20 in)

P: 98 N (10 kgf, 22 lbf)

Left-turn steering:

Limit

Direction $\leftarrow \rightarrow$

0.6 mm (0.024 in) or less

Direction $\leftarrow \rightarrow$

0.4 mm (0.016 in) or less

6. OIL LEAKAGE

PS-00946

- | | | |
|--------------------|-----------------|-------------------|
| (1) Power cylinder | (3) Rack piston | (5) Input shaft |
| (2) Cylinder | (4) Rack axle | (6) Valve housing |

1) Lift up the vehicle.

2) If a fluid leak is found, clean the fluid completely from the suspect area, and turn the steering wheel 30 to 40 times to the left and right from lock to lock, with the engine running, and check again for leaks immediately, and also after a few hours have passed.

3) Cause and solution for oil leakage from "a"
The oil seal is damaged. Replace the valve assembly or oil seal with a new part.

4) Cause and measure for oil leakage from "b".
The torsion bar O-ring is damaged. Replace the valve assembly with a new part.

5) Cause and measure for oil leakage from "c".
The oil seal is damaged. Replace the oil seal with a new part.

6) Cause and solution for oil leakage from "d".
The pipe is damaged. Replace the faulty pipe or O-ring.

Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

F: ADJUSTMENT

1) Adjust the front toe. <Ref. to FS-11, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

(1) Lock nut

2) Check the steering angle of the wheels.

Standard of steering angle:

Model	Inner wheel	Outer wheel
All models	$38.3^{\circ} \pm 1.5^{\circ}$	$33.8^{\circ} \pm 1.5^{\circ}$

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, or error is more than 5° on the periphery of the steering wheel, correctly re-install the steering wheel.

(1) 5° or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle.

Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

6. Pipe Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle, and then remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
- 3) Remove the front crossmember support plate and jack-up plate.
 - Large type

(1) Front crossmember support plate

- Small type

(1) Front crossmember support plate
(2) Jack-up plate

- 4) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

(1) Pipe A
(2) Pipe B

- 5) Remove the clamp E from return hose and pressure hose.

(1) Pressure hose
(2) Return hose
(3) Clamp E

Pipe Assembly

- (3) Return hose

6) Tighten clamp E.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

7) Tighten the pressure hose to feed pipe and return hose to return pipe.

Tightening torque:

15 N·m (1.53 kgf·m, 11.1 ft·lb)

8) Connect pipes A and B to the four pipe joints of the gearbox.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to PS-4, POWER ASSISTED SYSTEM, COMPONENT, General Description.>

(1) Pipe A

(2) Pipe B

9) Install the front crossmember support plate and jack-up plate.

10) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>

11) Lower the vehicle.

12) Tighten the bolts which hold the hose bracket.

Tightening torque:

10 N·m (1.02 kgf·m, 7.4 ft·lb)

(1) Hose ASSY

(2) Hose bracket

13) Install the air intake duct.

• Non-turbo model: <Ref. to IN(H4DO)-14, INSTALLATION, Air Intake Duct.>

• Turbo model: <Ref. to IN(H4DOTC)-10, INSTALLATION, Air Intake Duct.>

14) Connect the battery ground terminal.

15) Fill with the specified fluid.

CAUTION:

Never start the engine before filling with fluid; otherwise the vane pump may become seized.

16) Finally, check the clearance between pipes or hoses as shown in the figure indicated in “General Diagnostic Table”. <Ref. to PS-56, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>

Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

C: INSPECTION

Check all disassembled parts for wear, damage or other problems. Repair or replace the defective parts as necessary.

Part	Maintenance parts	Corrective action
Pipe	<ul style="list-style-type: none"> • O-ring fitting surface damage • Nut damage • Pipe damage 	Replace with a new part.
Hose	<ul style="list-style-type: none"> • Flare surface damage • Flare nut damage • Outer surface cracks • Outer surface wear • Clip damage • End coupling or adapter deformation 	Replace with a new part.

CAUTION:

Although the surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe off hoses immediately if any of these come into contact with the hoses. Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.

Continuous discharge of the relief valve for 5 seconds or more will reduce the service lives of hoses, oil pump, fluid, etc., due to over heating.

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of the relief valve	Replace the oil pump.
	Poor cold characteristic of fluid	Replace fluid.
Disconnection of the return hose	Improper connection	Repair.
	Loosening of the clip	Replace the hose clip.
	Poor cold characteristic of fluid	Replace fluid.
Fluid slightly leaking out of hose	Wrong layout, tensioned	Replace the hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace the parts if defective.
	Improper stop position of pitching stopper	Replace the parts if defective.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customers.
	Power steering fluid, engine oil, electrolyte adhere on the hose surface	Replace. Be careful during service work.
	Too many uses in extremely cold weather	Replace. Instruct customers.

Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

NOTE:

There are conditions in which a fluid leak is diagnosed, but is not actually leaking. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.

PS-00933

Fluid leaking area	Possible cause	Corrective action
Leakage from the connections of pipes and hoses, numbered (1) through (8) in the figure	Insufficient tightening of flare nut, adhesion of dirt, damage to flare or flare nut or eye bolt	Loosen and retighten. Replace if ineffective.
	Improper installation of hose or clamp	Replace.
	Damaged O-ring or gasket	Replace the O-ring, gasket pipe or hose with new part, if still no improvement, replace the gearbox or oil pump as well.
Leakage from hose (9) through (13) in the figure	Crack or damage in hose	Replace with a new part.
	Crack or damage in hose hardware	Replace with a new part.
Leakage from surrounding of aluminum portion of oil pump, (14) and (15) in the figure	Damaged O-ring	Replace the oil pump.
	Damaged gasket	Replace the oil pump.
Leakage from oil tank, (16) and (17) in the figure	Crack in oil tank	Replace the oil tank.
Leakage from filler neck of (18)	Damaged cap gasket	Replace the cap.
	Crack in root of filler neck	Replace the oil tank.
	Fluid level too high	Adjust the fluid level.
Leakage from power cylinder of gear-box area (19) in the figure	Damaged oil seal	Replace the oil seal.
Leakage from (20), (21) in the figure and control valve of gearbox	Damaged gasket or oil seal	Replace the problem parts.
	Damage in control valve	Replace the control valve.

7. Oil Pump

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the V-belts (front side belt).
 - Non-turbo model: <Ref. to ME(H4DO)-70, V-BELT, REMOVAL, V-belt.>
 - Turbo model: <Ref. to ME(H4DOTC)-39, FRONT SIDE BELT, REMOVAL, V-belt.>
- 3) Disconnect the connector from power steering pump switch.
- 4) Disconnect the pressure hose and suction hose from the oil pump.

CAUTION:

- Do not allow fluid to come into contact with the pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends with clean cloth.
- Non-turbo model

- (1) Suction hose
- (2) Pressure hose

- Turbo model

- (1) Suction hose

40 N·m (4.08 kgf-m, 29.5 ft-lb)

CAUTION:

Be careful when installing; If the hose is twisted it may come into contact with other parts.

- Non-turbo model

- (1) Suction hose
- (2) Pressure hose

- Turbo model

- (1) Suction hose
- (2) Pressure hose

6) Connect the power steering pump switch to the connector.

7) After installing the oil pump, fill the oil pump with as much fluid as possible by rotating the pulley by hand.

CAUTION:

Always fill the oil pump with the fluid to prevent abnormal noise and seizure of the oil pump.

8) Install the V-belts (front side belt).

- Non-turbo model: <Ref. to ME(H4DO)-73, V-BELT, INSTALLATION, V-belt.>

- Turbo model: <Ref. to ME(H4DOTC)-39, FRONT SIDE BELT, INSTALLATION, V-belt.>

9) Connect the battery ground terminal.

10) Fill with the specified power steering fluid. <Ref. to PS-51, Power Steering Fluid.>

CAUTION:

Never start the engine before filling with fluid; otherwise the vane pump may become seized.

Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

C: INSPECTION

1. BASIC INSPECTION

Perform the following inspection procedures and replace faulty parts.

No.	Parts	Inspection	Corrective action
1	Oil pump (Exterior)	(1) Crack, damage or oil leakage	Replace the oil pump with a new part.
		(2) Play of pulley shaft	Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new part.
2	Pulley	(1) Damage	Replace with a new part.
		(2) Bend	Measure the V groove deflection. If it exceeds the service limit, replace the oil pump with a new part.
3	Oil pump (Interior)	(1) Faulty or seized of vane pump	Check the rotating resistance of pulley. If it exceeds the service limit, replace the oil pump with a new part.
		(2) Bend in the shaft or damage to bearing	If the a string is wrapped on the pulley and rotated, and the oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump, replace the oil pump with a new part.
4	O-ring	Cracking or deterioration	Replace with a new part.
5	Bracket	Cracks	Replace with a new part.

2. SERVICE LIMIT

Make a measurements as follows. If it exceeds the service limit, replace with a new part.

CAUTION:

- When securing the oil pump in a vice, hold the oil pump with the least possible force between two pieces of wood.
- Do not set the outside of flow control valve or pulley on a vise; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of the pulley shaft

Condition:

P: When applying a force of 9.8 N (0.99 kgf, 2.2 lbf)

Service limit:

Play in the radial direction (Direction ◀ ▶)

0.2 mm (0.008 in) or less

(1) Dial gauge

Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

Axial play (Direction ⇄)
0.9 mm (0.035 in) or less

(1) Dial gauge

2) Deflection of the pulley groove

Service limit:
1.0 mm (0.039 in) or less

NOTE:

Read the value on one surface of V groove, set the dial gauge on the other surface, and read the value of the dial gauge.

(1) Dial gauge

3) Rotating resistance of pulley

Service limit:

Maximum load: 9.22 N (0.94 kgf, 2.07 lbf) or less

NOTE:

- A rather higher value may be indicated when pulley starts turning.
- Measure the load during rotation to make a judgment.

(1) Spring scale

3. HYDRAULIC PRESSURE

NOTE:

- To measure hydraulic pressure correctly, be sure to complete all the items in "INSPECTION", prior to performing the measurement. <Ref. to PS-52, INSPECTION, General Diagnostic Table.>
- Do not leave the valve of pressure gauge closed or hold the steering wheel at lock for 5 seconds or more in any case, this can damage the oil pump.
- Before attaching a pressure gauge, place cloth at locations where fluid is expected to spill. Wipe off any spilt fluid completely after the measurement.

1) Regular pressure measurement

(1) Connect the ST1, ST2 and ST3.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

(2) Remove the air intake duct.

- Non-turbo model: <Ref. to IN(H4DO)-14, REMOVAL, Air Intake Duct.>
- Turbo model: <Ref. to IN(H4DOTC)-10, REMOVAL, Air Intake Duct.>

(3) Disconnect the pressure hose from the pump.

Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

(4) Using the gasket (Part No. 34621AC021) and bolt (Part No. 34620AC010), install the ST2 to pump instead of pressure hose.

- Non-turbo model

- (1) Suction hose
- (2) Pressure hose

- Turbo model

- (1) Suction hose
- (2) Pressure hose

(5) Attach the ST3 to the end of pressure hose which is removed from pump.

(6) Replenish power steering fluid up to the specified level.

(7) Open the valve, and start the engine.

(8) Measure the regular pressure.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

- (1) Valve

Service limit:

981 kPa (10 kgf/cm², 142 psi) or less

(9) If it is not within the specification, replace the faulty part for the following problems. (Pipe or hose clogged, leaks from fluid line, and mixture of foreign matter in fluid line)

2) Measure the relief pressure.

(1) Using the ST, measure the relief pressure.

(2) Close the valve.

(3) Measure the relief pressure.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

- (1) Valve

Service limit:

Non-turbo model:

7,350 — 8,050 kPa (75 — 82 kgf/cm², 1,066 — 1,167 psi)

Turbo model:

8,100 — 8,800 kPa (83 — 90 kgf/cm², 1,174 — 1,276 psi)

(4) If the torque is not within specified range, replace the oil pump.

Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

3) Measure the working pressure.

(1) Using the ST, measure the working pressure.

(2) Open the valve.

(3) Measure the working pressure of control valve by turning steering wheel from stop to stop.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

(1) Valve

Service limit:

Non-turbo model:

7,350 — 8,050 kPa (75 — 82 kgf/cm², 1,066 — 1,167 psi)

Turbo model:

8,100 — 8,800 kPa (83 — 90 kgf/cm², 1,174 — 1,276 psi)

(4) If it is out of specification, measure the steering effort. <Ref. to PS-55, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> If it is not within specification, replace the control valve itself or control valve and pinion as a single unit, using new parts.

If it is not within specification, replace the control valve itself or control valve and pinion as a single unit, using new parts.

Reservoir Tank

POWER ASSISTED SYSTEM (POWER STEERING)

8. Reservoir Tank

A: REMOVAL

- 1) Drain fluid from the reservoir tank.
- 2) Disconnect the hose from reservoir tank.

CAUTION:

To prevent foreign matter from entering the hose and pipe, cover the open ends of them with clean cloth.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

- 3) Remove the reservoir tank from the body.

B: INSTALLATION

- 1) Install the reservoir tank to the body.

Tightening torque:

13 N·m (1.33 kgf·m, 9.6 ft·lb)

- 2) Connect the hose to the reservoir tank.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

- 3) Replenish power steering fluid up to the specified level. <Ref. to PS-51, INSPECTION, Power Steering Fluid.>

C: INSPECTION

Check the reservoir tank for cracks, breakage or damage. If a failure is found, replace the reservoir tank.

9. Power Steering Fluid

A: SPECIFICATION

Recommended power steering fluid
SUBARU genuine ATF or DEXRON III

B: INSPECTION

1) Check the power steering fluid for deterioration or contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.

2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.

3) Inspect the fluid level of reservoir tank with vehicle on level surface and engine stopped.

If the level is at "MIN." point or below, add fluid to keep the level in the specified range of the indicator. If at "MAX". point or above, drain fluid by using a syringe or the like.

(1) Check at power steering fluid temperature 20°C (68°F); read the fluid level on the "COLD" side.

(2) Check at power steering fluid temperature 80°C (176°F); read the fluid level on the "HOT" side.

C: REPLACEMENT

- 1) Lift up the vehicle.
- 2) Remove the crossmember support.
- 3) Remove the pipe joint in the center of gearbox, and connect the vinyl hose to the pipe and joint. Wipe fluid off while turning the steering wheel.
- 4) Add the specified fluid to reservoir tank at "MAX" level.
- 5) Maintaining the fluid level of step 4), continue to turn the steering wheel slowly from lock to lock until the bubbles stop appearing on oil surface.
- 6) If the steering wheel is turned in a low fluid level condition, air will be sucked into the pipe. If air has entered, leave it for about half an hour and then repeat step 5) again.
- 7) Start the engine and let it idle.
- 8) Continue to turn the steering wheel slowly from lock to lock again until the bubbles stop appearing on oil surface, while keeping the fluid at the level in step 4).

Normally bubbles will stop appearing after turning the steering wheel from lock to lock three times.

9) In case bubbles do not stop appearing in the tank, leave it for about half an hour and then repeat step 4) again.

10) Lower the vehicle, and then idle the engine.

11) Continue to turn the steering wheel from lock to lock until the bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).

12) In case the following happens, leave it about half an hour and then do step 8) to 11) again.

(1) The fluid level changes 3 mm (0.12 in) or more.

(2) Bubbles remain on the upper surface of the fluid.

(3) Grinding noise is generated from oil pump.

13) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

10. General Diagnostic Table

A: INSPECTION

Trouble	Possible cause	Corrective action
<ul style="list-style-type: none"> Steering effort is heavy in all ranges. Steering effort is heavy at stand still. Steering wheel vibrates when turning. 	1. Pulley belt <ul style="list-style-type: none"> Unequal length of pulley belts Contact with oil or grease Looseness or damage of the pulley belt Poor uniformity of the pulley belt cross section Pulley belt touches to pulley bottom Poor revolution of pulleys (except oil pump pulley) Poor revolution of oil pump pulley 	Adjust or replace the faulty parts.
	2. Tire and wheel <ul style="list-style-type: none"> Improper tire out of specifications*1 Improper wheel out of specifications*1 Tires not properly inflated 	Replace or reinflate the tire and wheel. Instruct customers.
	3. Fluid <ul style="list-style-type: none"> Low fluid level Air entry in fluid Dust entry in fluid Fluid deterioration Inadequate warm up of fluid*2 	Refill the fluid, bleed air, replace or instruct customer.
	4. Idle speed <ul style="list-style-type: none"> Lower idle speed Excessive drop of idle speed at start or when turning the steering wheel*3 	Adjust the idle speed or instruct customer.
	5. Measure the hydraulic pressure. <Ref. to PS-46, INSPECTION, Oil Pump.>	Replace the faulty parts.
	6. Measure the steering wheel effort. <Ref. to PS-55, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace.
	7. Fluid line <ul style="list-style-type: none"> Fluid leakage from fluid line 	Replace the faulty parts.
<ul style="list-style-type: none"> Vehicle leads to one side or the other. Returning force of steering wheel to center is poor. Steering wheel vibrates when turning. 	1. Tire and wheel <ul style="list-style-type: none"> Flat tire Mixed use of different tires Mixed use of different wheels Abnormal wear of tire Unequal tread remaining Unequal pressure of tire 	Adjust, repair or replace the tire and wheel.
	2. Front alignment <ul style="list-style-type: none"> Improper or unequal caster Improper or unequal toe-in Loose suspension connections 	Adjust or retighten.
	3. Others <ul style="list-style-type: none"> Damaged joint assembly Unbalance of ground clearance Unbalance of load 	Replace or adjust the faulty parts, or instruct customer.
	4. Measure the steering wheel effort. <Ref. to PS-55, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.

*1 If the tires or wheels are wider than standard, the load to power steering system is increased. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before reaching maximum turning angle. In this case, steering effort may be heavy. When the measured hydraulic pressure is normal, there is no abnormal thing.

*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn the steering wheel from stop to stop several times to warm up fluid. If steering effort reduces normally, function is normal.

*3 In cold weather or with insufficient warm up of the engine, steering effort may be heavy due to excessive drop of idling when turning the steering wheel. In this case, start the vehicle with increasing engine speed than usual. If steering effort reduces normally, function is normal.

General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

1. NOISE AND VIBRATION

CAUTION:

Do not keep the relief valve operated for five seconds or more at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.

NOTE:

- A screeching noise may be heard immediately after the engine start in extremely cold conditions. In this case, if the noise goes off during warm-up there is no abnormal function in the system. This is due to the fluid characteristics in extremely cold condition.
- The oil pump normally makes a small whining noise due to its mechanism. Even if a noise is heard when steering wheel is turned at stand still, there is no abnormal function in the system provided that the noise eliminates when the vehicle is driving.
- When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
- There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.

These conditions do not indicate a problem in the system.

Confirm vibration for an AT model, by applying the parking brake on a concrete surface, shifting into the "D" range, and turning the steering wheel repeatedly from slow to rapid, step by step.

Trouble	Possible cause	Corrective action
Hiss noise (continuous) While engine is running.	Relief valve emits operating sound when steering wheel is completely turned in either direction. (Do not keep this condition for 5 seconds or more.)	Normal operation
	Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is defective.	Replace the oil pump.
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary. <Ref. to PS-56, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>
	Loosened installation of oil pump, oil tank, pump bracket, gearbox or crossmember	Retighten.
	Loose oil pump pulley or other pulley(s)	Retighten.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Sound generates from the inside of gearbox or oil pump.	Replace faulty parts in the gearbox or oil pump.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust and retighten.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (continuous) While engine is running.	Air in vane pump	Inspect and retighten the fluid line connection. Refill the fluid and vent air.
	Vane pump seizing	Replace the oil pump.
	Oil pump pulley bearing seized	Replace the oil pump.
	Folded hose, flattened pipe	Replace.
Squeal, squeak (intermittent or continuous) While engine is running.	Improper adjustment of pulley belt Damaged or over tensioned pulley belt Unequal length of pulley belts	Adjust or replace. (Replace two belts as a set.)
	Runout or dirty V-groove surface of oil pump pulley	Clean or replace.

General Diagnostic Table

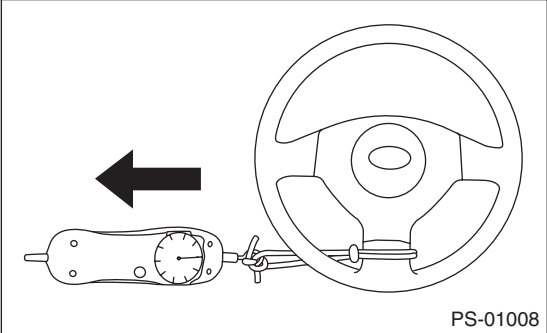

POWER ASSISTED SYSTEM (POWER STEERING)

Trouble	Possible cause	Corrective action
Sizzling noise (continuous) While engine is running.	Fluid aeration	Fix the faulty part causing aeration. Replace the fluid and vent air.
	Damaged pipe of gearbox	Replace the pipe.
	Faulty inside of hose or pipe Flattened hose or pipe	Correct or replace.
	Abnormal inside of oil tank	Replace.
	Removed oil tank cap	Install cap.
Whistle (continuous) While engine is running.	Faulty pipe of gearbox or faulty hose	Replace the faulty parts of the gearbox or the hose.
Whine or growl (intermittent or continuous) While engine is running. (with/ without steering operation)	Looseness of oil pump, oil pump bracket attachment	Retighten.
	Fault inside of oil pump or hose	Replace the oil pump or hose, if the noise can be heard when vehicle is running as well as being stopped.
	Torque converter growl, air conditioner compression growl	Remove the power steering pulley belt and check.
Grinding noise (continuous) While engine is running. (with steering operation)	Fault inside of gearbox	Replace the faulty parts of gearbox.
	Faulty steering shaft bearing	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running. (with/ without steering operation)	Engine speed is too low.	Adjust, and notify customer.
	Air in vane pump	Repair faulty part Vent air.
	Damaged valve in oil pump or gearbox	Replace the faulty parts in gearbox and oil pump.
	Excessive play in steering, looseness of suspension parts	Retighten.

General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

2. MEASUREMENT OF STEERING EFFORT

Step	Check	Yes	No
<p>1 CHECK STEERING EFFORT. 1) Stop the vehicle on paved road. 2) Start the engine. 3) Run the engine at idle. 4) Install a spring scale on the steering wheel. 5) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.</p>  <p style="text-align: right;">PS-01008</p> <p>NOTE: When turning the steering more quickly than necessary from a direction to the other direction at an engine speed of 2,000 rpm or higher, steering effort may be heavy. This is caused by flow characteristic of the fluid in the oil pump and is not a defect.</p>	<p>Is the steering effort less than 29.4 N (2.99 kgf, 6.6 lbf)?</p>	<p>Steering effort is normal.</p>	<p>Go to step 2.</p>
<p>2 CHECK STEERING EFFORT. 1) Stop the engine and lift up the vehicle. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.</p>	<p>Is the steering effort less than 14 N (1.43 kgf, 3.1 lbf)?</p>	<p>Go to step 3.</p>	<p>Perform the backlash adjustment.</p>
<p>3 CHECK STEERING WHEEL EFFORT. 1) Remove the universal joint. 2) Measure the steering wheel effort.</p>	<p>Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?</p>	<p>Go to step 4.</p>	<p>Replace the steering column.</p>
<p>4 CHECK STEERING WHEEL EFFORT. Measure the steering wheel effort.</p>	<p>Is the difference of steering effort between right and left less than 20%?</p>	<p>Go to step 5.</p>	<p>Replace the steering column.</p>
<p>5 CHECK UNIVERSAL JOINT. Measure the swing torque of joint. (Yoke of steering column side) <Ref. to PS-14, INSPECTION, Universal Joint.></p>	<p>Is the swing torque of the universal joint less than 7.3 N (0.74 kgf, 1.64 lbf)?</p>	<p>Go to step 6.</p>	<p>Replace the universal joint.</p>
<p>6 CHECK UNIVERSAL JOINT. Measure the swing torque of joint. (Yoke of gearbox side) <Ref. to PS-14, INSPECTION, Universal Joint.></p>	<p>Is the swing torque of the universal joint less than 3.8 N (0.39 kgf, 0.86 lbf)?</p>	<p>Go to step 7.</p>	<p>Replace the universal joint.</p>
<p>7 CHECK FRONT WHEEL. Check the front wheels.</p>	<p>Does the front wheels have unsteady revolution or rattling, or does the brake drag?</p>	<p>Inspect, readjust and replace if necessary.</p>	<p>Go to step 8.</p>
<p>8 CHECK TIE-ROD ENDS. Remove the tie-rod ends from housing.</p>	<p>If the tie-rod ends have unsteady revolution or rattling?</p>	<p>Inspect and replace if necessary.</p>	<p>Go to step 9.</p>
<p>9 CHECK GEARBOX. Measure the rotating of gearbox. <Ref. to PS-33, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox.></p>	<p>Is the turn resistance of the steering gearbox less than 13 N (1.33 kgf, 2.9 lbf)? Is the difference between right and left sides less than 24%?</p>	<p>Go to step 10.</p>	<p>Readjust the backlash, and if ineffective, replace the faulty parts.</p>

General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

Step	Check	Yes	No
10 CHECK GEARBOX. Measure the sliding of gearbox. <Ref. to PS-32, SERVICE LIMIT, INSPECTION, Steering Gearbox.>	Is the sliding resistance of the steering gearbox less than 314 N (32 kgf, 71 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal. Check the suspension.	Readjust the backlash, and if ineffective, replace the faulty parts.

3. INSPECTION OF CLEARANCE

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

Location	Minimum allowance mm (in)
(1) Crossmember to Hose ASSY	3 (0.12)
(2) Front exhaust pipe to hose ASSY	15 (0.59)
(3) Front frame side to Hose ASSY	10 (0.39)
(4) Turbo cover to hose ASSY	10 (0.39)
(5) Master cylinder to return hose	10 (0.39)
(6) Master cylinder to hose clip	10 (0.39)
(7) VDC H/U to hose ASSY	5 (0.20)
(8) Air cleaner to hose ASSY	5 (0.20)
(9) Air boot to Hose ASSY	10 (0.39)
(10) Air cleaner hose to hose ASSY	10 (0.39)
(11) Blow-by hose to hose ASSY	8 (0.31)
(12) Over flow hose to hose ASSY	8 (0.31)
(13) Brake pipe to return hose	10 (0.39)
(14) Front suspension bracket to Return hose	5 (0.20)
(15) Front wheel apron to Return hose	5 (0.20)
(16) VDC H/U bracket to suction hose	5 (0.20)
(17) Air cleaner case to Suction hose	5 (0.20)
(18) Air intake duct to suction hose	10 (0.39)
(19) Air duct to suction hose	10 (0.39)
(20) Front wheel apron to Reservoir tank	5 (0.20)
(21) VDC H/U to reserve tank	5 (0.20)
(22) Valve housing to DOJ (5MT model)	12 (0.47)
(23) Valve housing to Crossmember (Hole)	1 (0.04)
(24) Cannon mount to crossmember	There must be no contact
(25) Pipe to crossmember	5 (0.20)
(26) Pipe to stabilizer	15 (0.59)
(27) Pipe to exhaust pipe	18 (0.71)
(28) Tie-rod end to brake dust cover	2.5 (0.10)
(29) Universal joint coupling to turbo cover	15 (0.59)
(30) Universal joint column side yoke to Master cylinder (Closest point of approach when the universal joint turns by 360°)	5 (0.20)
(31) Universal joint coupling to ATF level gauge	10 (0.39)

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

1. General Description

A: SPECIFICATION

1. HEATER SYSTEM

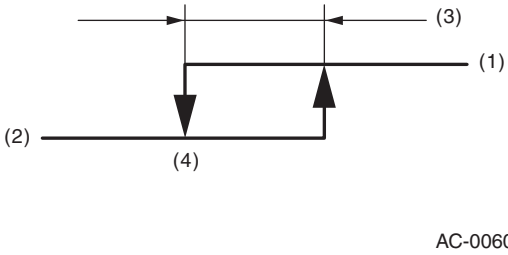

Item		Specifications	Condition
Heating capacity		5.0 kW (4,299 kcal/h, 17,059 BTU/h) or more	<ul style="list-style-type: none"> Air flow control dial or switch: FOOT Temperature adjustment dial: MAX HOT Temperature difference between hot water and inlet air: 65°C (149°F) Hot water flow rate: 360 ℓ (95.1 US gal, 79.2 Imp gal)/h
Air flow rate		290 m ³ (10,243 cu ft)/h	FOOT mode (FRESH), MAX HOT at 12.5 V
Max air flow rate		480 m ³ (16,954 cu ft)/h	<ul style="list-style-type: none"> Temperature adjustment dial: MAX COOL FAN switch Dual auto A/C model: 7th position Fan speed control dial Single auto A/C model: 7th position Manual A/C model: 4th position FRESH/RECIRC switch: RECIRC
Heater core size (height × length × width)		257.5 × 118.5 × 27 mm (10.1 × 4.67 × 1.06 in)	—
Blower motor	Type	Magnet motor 260 W or less	12 V
	Fan type and size (diameter × width)	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	—

2. A/C SYSTEM

Item		Specifications
Type of air conditioner		Reheat air-mix type
Cooling capacity		5.0 kW [at 480 m ³ (16,954 cu ft)/h] (4,299 kcal/h, 17,059 BTU/h)
Refrigerant		HFC-134a (CH ₂ FCF ₃) [0.5±0.05 kg (1.1±0.11 lb)]
Compressor	Type	Rotary, constant volume (DKV-10R)
	Discharge	105 cc (6.41 cu in)/rev
	Max. permissible speed	7,700 rpm
Magnet clutch	Type	Dry, single-disc type
	Power consumption	Non-turbo model: 41.2 W Turbo model: 38.8 W
	Type of belt	Non-turbo model: V-belt 6 PK Turbo model: V-belt 4 PK
	Pulley dia. (effective dia.)	Non-turbo model: 110 mm (4.33 in) Turbo model: 100 mm (3.94 in)
	Pulley ratio	Non-turbo model: 1.3 Turbo model: 1.33
Condenser	Type	Sub cool type
	Core face area	0.188 m ² (2.002 sq ft)
	Core thickness	16 mm (0.63 in)
	Radiation area	4.5 m ² (48.44 sq ft)
Expansion valve	Type	Block
Evaporator	Type	Dual-tank
	Dimensions (W × H × T)	290.1 × 172 × 39 mm (11.42 × 6.77 × 1.54 in)

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

Item		Specifications	
Blower fan	Fan type	Sirocco fan	
	Outer diameter × width	150 × 75 mm (5.91 × 2.95 in)	
	Power consumption	260 W	
Condenser fan (Sub fan)	Motor type	Magnet	
	Power consumption	Non-turbo model: 90 W Turbo model: 120 W	
	Fan outer diameter	Non-turbo model: 300 mm (11.8 in) Turbo model: 318.5 mm (12.5 in)	
Radiator fan (Main fan)	Motor type	Magnet	
	Power consumption	Non-turbo model: 90 W Turbo model: 120 W	
	Fan outer diameter	Non-turbo model: 300 mm (11.8 in) Turbo model: 318.5 mm (12.5 in)

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

6. HEATER DUCT

AC-01969

- (1) Front defroster nozzle
- (2) Side defroster duct
- (3) Side vent duct (LH)

- (4) Side vent duct (RH)
- (5) Center vent duct
- (6) Center vent duct front

- (7) Rear heater duct (LH)
- (8) Rear heater duct (RH)
- (9) Rear heater duct center

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.

1. HFC-134A A/C SYSTEM

- The cooling system components for the HFC-134a system such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
- Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle. Before maintenance, check which A/C system is installed to the vehicle.

2. COMPRESSOR OIL

- HFC-134a compressor oil has no compatibility with that of CFC-12 system.
- Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use DH-PR (ZXL200PG).
- Do not mix multiple compressor oils.

If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.

On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.

- HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

- CFC-12 refrigerant cannot be used in a HFC-134a A/C system. HFC-134a refrigerant, also cannot be used in a CFC-12 A/C system.
- If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

4. HANDLING OF REFRIGERANT

- The refrigerant boils at approx. -30°C (-22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite. If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of 40°C (104°F) or less.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
- When the engine is running, do not open the high-pressure valve of the manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
- Provide good ventilation and do not work in a closed area.

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.

- (A) Goggles
- (B) Gloves
- (C) Avoid open flame
- (D) No direct heat on container
- (E) Do not discharge
- (F) Loosen

5. O-RING CONNECTIONS

- Always use a new O-ring.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform work without using gloves or waste cloths.
- Before installation, apply compressor oil to O-rings to avoid sticking.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of the O-ring and deformation of the pipe end.
- If the work is interrupted before completing pipe connections, recap the pipes, components and fittings with a plug or tape to prevent foreign matter from entering.

(A) Seal

- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings straight against the pipe groove.

- (A) O-ring
- (B) OK
- (C) NG
- (D) Groove

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- Use compressor oil specified in the service manual to lubricate the O-rings.

Apply oil to the top and sides of O-rings before installation.

Apply compressor oil to the pipe grooves.

- After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
- If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

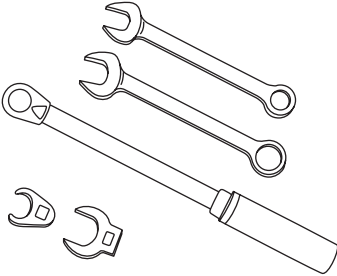

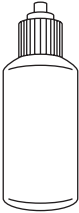

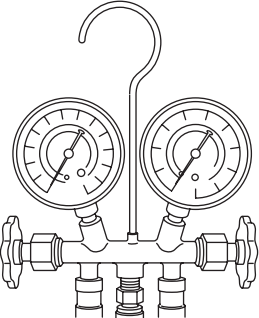

D: PREPARATION TOOL

CAUTION:

When working on vehicles with a HFC-134a system, only use HFC-134a specified tools and parts. Do not mix CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor itself may be damaged.

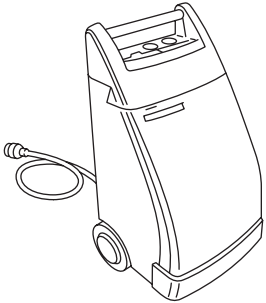

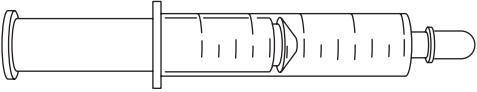

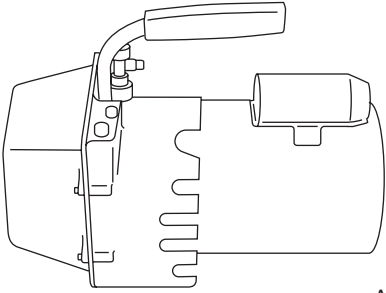

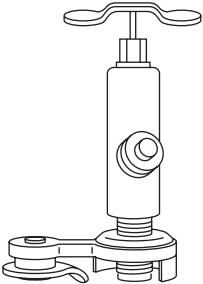

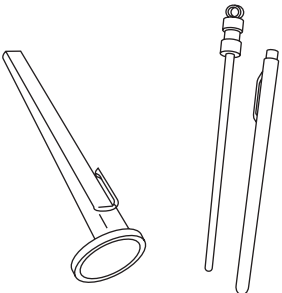

In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the type of tool and screw, and the replacement valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool & screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

3. Refrigerant Pressure with Manifold Gauge Set

A: PROCEDURE

- 1) Place the vehicle in the shade and windless condition.
- 2) Open the front hood.
- 3) Connect the manifold gauge set.
- 4) Open the front windows and close all doors.
- 5) Increase the engine to 1,500 rpm.
- 6) Turn the A/C switch to ON.
- 7) Turn the temperature control dial to MAX COOL position.
- 8) Turn the FRESH/RECIRC switch to RECIRC position.
- 9) Turn the fan speed control dial or switch to HI (MAX) position.
- 10) Read the gauge.

Specification:

Low pressure: 127 — 196 kPa (1.3 — 2.0 kgf/cm², 18 — 28 psi)

High pressure: 1,471 — 1,667 kPa (15 — 17 kgf/cm², 213 — 242 psi)

Ambient temperature: 30 — 35°C (86 — 95°F)

B: INSPECTION

Symptoms	Probable cause	Repair order
High-pressure side is unusually high.	<ul style="list-style-type: none">• Defective condenser fan motor• Clogged condenser fin• Too much refrigerant• Air inside the system• Defective receiver dryer (condenser)	<ul style="list-style-type: none">• Replace the fan motor.• Clean the condenser fin.• Discharge refrigerant.• Replace the condenser.• After evacuating again, charge an appropriate amount of refrigerant.
High-pressure side is unusually low.	<ul style="list-style-type: none">• Defective compressor• Not enough refrigerant• Clogged expansion valve• Expansion valve frozen temporarily by moisture.	<ul style="list-style-type: none">• Replace the compressor.• Check for leaks.• Replace the expansion valve.• Fully evacuate the expansion valve.
Low-pressure side is unusually high.	<ul style="list-style-type: none">• Defective compressor• Defective expansion valve• Too much refrigerant	<ul style="list-style-type: none">• Replace the compressor.• Replace the expansion valve.• Discharge refrigerant.
Low-pressure side is unusually low.	<ul style="list-style-type: none">• Not enough refrigerant• Clogged expansion valve• Expansion valve frozen temporarily by moisture.• Saturated receiver dryer (condenser)	<ul style="list-style-type: none">• Check for leaks.• Replace the expansion valve.• Replace the condenser.

Refrigerant Recovery Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

4. Refrigerant Recovery Procedure

A: PROCEDURE

CAUTION:

- During operation, be sure to wear protective goggles and protective gloves.
- Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.
- When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.

• Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

1) Perform compressor oil return operation. <Ref. to AC-28, PROCEDURE, Compressor Oil.>

2) Stop the engine.

3) Make sure the valves on low/high pressure sides of manifold gauge set are fully closed.

- L: Low pressure gauge
- H: High pressure gauge
- (1) Low pressure valve
- (2) Vacuum pump valve
- (3) High pressure valve
- (4) For low pressure
- (5) For vacuum pump
- (6) For high pressure

4) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

- (1) Low-pressure side service port
- (2) High-pressure side service port
- (3) Close

5) Connect the center hose to the refrigerant recovery system.

6) Follow the operation manual to activate the refrigerant recovery system.

Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5. Refrigerant Charging Procedure

A: PROCEDURE

CAUTION:

- While working, be sure to wear protective goggles and protective gloves.
- Air in the cycle can cause insufficient air conditioning, and water in the cycle can cause clogging in the cycle (icing) and rust. To remove this air and water content, use a vacuum pump to perform evacuation before filling with refrigerant. By making the inside of the cycle a vacuum, the water content will evaporate even at normal temperatures, and can be removed.

1) Close all valves of the manifold gauge.

- L: Low pressure gauge
- H: High pressure gauge
- (1) Low pressure valve
- (2) Vacuum pump valve
- (3) High pressure valve
- (4) For low pressure
- (5) For vacuum pump
- (6) For high pressure

2) Attach the low pressure side and high pressure side hoses to the vehicle service port.

CAUTION:

Confirm that the connections are secure.

- (1) Low-pressure side service port
- (2) High-pressure side service port
- (3) Close

3) Connect the center manifold hose of the manifold gauge to the vacuum pump.

4) Operate the vacuum pump and open the low pressure and high pressure side valves. Next, open the center manifold hose valve, and begin evacuation.

CAUTION:

Make sure to perform evacuation using a vacuum pump.

- (1) Vacuum pump
- (2) Open

Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5) Perform evacuation for 5 minutes or more, and when the low pressure gauge needle reaches -100.0 kPa (-750 mmHg, -29.5 inHg), close the center manifold hose valve, and stop the vacuum pump.

6) Leave alone for 5 to 10 minutes after closing the low pressure side and high pressure side valves, and check whether there is any change in the low pressure gauge needle indication. If the needle position changes, this indicates a leak. Check the pipe and hose connections, and repair the location with the problem. In this case, repeat again from step 1).

7) If there is no leakage, continue evacuation for additional 20 to 30 minutes.

8) Close all valves and stop the vacuum pump.

9) Follow the can tap operation manual, install to the refrigerant can.

- (1) Tap valve
- (2) To the center manifold hose

10) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

11) When a 13.6 kg (30 lb) refrigerant container is used, measure the amount of refrigerant with a refrigerant charging scale, and connect with the center manifold hose.

- (1) Refrigerant container (HFC-134a)
- (2) Weight scale

12) Open the valve on the HFC-134a source.

13) Loosen the center manifold hose connection on the manifold gauge for a few seconds (if there is a purge valve on the manifold gauge, push this instead) to allow the air in the center manifold hose to be bled by the refrigerant pressure.

14) Open the high pressure side and low pressure side valves of the manifold gauge to fill with refrigerant.

CAUTION:

When filling with the engine running, do not open the high pressure side valve. Always fill from the low pressure side.

- (1) Open (low pressure)
- (2) Open (high pressure)

15) When the gauge needle reaches approximately 200 kPa (1,500 mmHg, 59.1 inHg), close all valves.

16) Using a leak tester, check for refrigerant leaks in the system.

17) After checking that there are no refrigerant leaks, fill with refrigerant up to the specified amount.

18) If the HFC-134a supply container becomes empty, close all valves, and close the can tap valve to replace the empty container. After replacing with a new HFC-134a supply container, perform air purge, and resume the filling operation.

19) If the refrigerant filling efficiency drops, close all valves.

20) Check that both the low pressure and high pressure valves are closed. Start the engine with the A/C switch OFF.

Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

21) To prevent damage to the compressor, push the A/C switch ON-OFF quickly a few times.

22) Set up the vehicle to the following status:

CAUTION:

When filling with the engine running, do not open the high pressure side valve.

Always fill from the low pressure side valve.

- A/C switch: ON
- Engine running at 1,500 rpm
- Fan speed control dial or switch: HI
- Temperature control dial: MAX COOL
- FRESH/RECIRC switch: RECIRC
- Window: open

23) Open the low pressure side valve and fill with refrigerant up to the specified amount.

24) After filling with refrigerant, close all valves and disconnect the hose from the service port.

25) Attach the cap to the service port.

Refrigerant Leak Check

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

6. Refrigerant Leak Check

A: INSPECTION

1) Operate the A/C system for approx. 10 minutes, and check that the high-side pressure shows at least 690 kPa (7.03 kgf/cm², 100 psi). Then stop the engine to start the leak test.

2) Starting from the connection between high-pressure pipe and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.

- Check the joint and seam between pressure switch (triple pressure switch) and high-pressure pipe.
- Check the connections between condenser and pipes, and welded joints on the condenser.

NOTE:

The leak tester may detect the oil on the condenser fins as a leak.

- Check the joint between compressor and hoses.
- Check the machined area of the compressor and other joints on the compressor.
- Check the compressor shaft seal at the area near the center of compressor clutch pulley.

NOTE:

Shaft seals may show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.

3) Starting from the connection between low-pressure pipe and evaporator, check the system for leakage along the low-pressure side through the compressor. The following items must be checked thoroughly.

- Connection between 2 parts
- Connection between pipe and plate

4) Visually check the rubber area of the flexible hose for cracks. Check the entire length of the flexible hose, especially the connection with the metal hose end.

CAUTION:

Carefully check the external surface of hoses and pipes at approx. 25 mm (0.98 in) per second.

(A) Flexible hose

5) Disconnect the drain hose from the heater case, and check the hose end for at least 10 seconds.

After the test is finished, reconnect the drain hose.

6) Turn the ignition key to the ON position, and run the blower at high speed for approx. 1 minute. Stop the blower and check the ventilation grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that position for at least 10 seconds.

7) Check the valve in the service port.

8) Visually check the rubber seal in the service port cap.

Compressor Oil

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

7. Compressor Oil

A: PROCEDURE

NOTE:

Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

- 1) Increase the engine to 1,500 rpm.
- 2) Turn the A/C switch to ON.
- 3) Turn the temperature control dial to MAX COOL position.
- 4) Turn the FRESH/RECIRC switch to RECIRC position.
- 5) Turn the fan speed control dial or switch to HI (MAX) position.
- 6) Leave in this condition for 10 minutes.

B: REPLACEMENT

NOTE:

- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor) and install the new compressor.
- Since the hygroscopicity of compressor oil is high, perform this series of works quickly.

8. Blower Motor Unit Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower. <Ref. to EI-52, INSTRUMENT PANEL LOWER, REMOVAL, Center Console.>
- 3) Turn over the floor mat near the engine ECM protect cover.
- 4) Remove the bolts and nut, and then remove the engine ECM protect cover.

- 5) Disconnect the blower motor relay and blower motor connector.
- 6) Remove the relay holder.
- 7) Remove the bolts and nuts to remove blower motor unit assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to AC-6, BLOWER MOTOR UNIT, COMPONENT, General Description.>

Blower Motor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

9. Blower Motor

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the blower motor connector.
- 3) Turn over the floor mat near the blower motor.
- 4) Remove the screws and detach the blower motor.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Disconnect the blower motor connector.
- 2) Connect the battery positive (+) terminal to terminal No. 2 of blower motor connector, and negative (-) terminal to terminal No. 1. Check that the blower motor rotates normally.

- 3) If the blower motor does not operate normally, replace the blower motor.

Power Transistor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

10. Power Transistor (Auto A/C Model)

A: REMOVAL

- 1) Remove the instrument panel lower. <Ref. to EI-52, INSTRUMENT PANEL LOWER, REMOVAL, Center Console.>
- 2) Disconnect the power transistor connector.
- 3) Remove the screws and remove the power transistor.

B: INSTALLATION

Install each part in the reverse order of removal.

Blower Resistor (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

11. Blower Resistor (Manual A/C Model)

A: REMOVAL

- 1) Remove the instrument panel lower. <Ref. to EI-52, INSTRUMENT PANEL LOWER, REMOVAL, Center Console.>
- 2) Disconnect the blower resistor connector.
- 3) Remove the screw and remove the blower resistor.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Disconnect the blower resistor connector.
- 2) Check the resistance between blower resistor terminals.

Terminal No.	Standard
4 and 3	Approx. 0.43 Ω
4 and 2	Approx. 1.03 Ω
4 and 1	Approx. 3.0 Ω

- 3) Replace the blower resistor if the inspection result is not within the standard value.

Heater Core

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

12.Heater Core

A: REMOVAL

- 1) Remove the heater and cooling unit. <Ref. to AC-40, REMOVAL, Heater and Cooling Unit.>
- 2) Remove connector lock and screw, and remove the heater pipe cover.

- 3) Remove the screw and detach the clamp.

- 4) Remove the pipe clamp and pipe.

- 5) Remove the heater core cover.

- 6) Remove the heater core.

B: INSTALLATION

CAUTION:

Replace O-rings and pipe clamps with new parts and install securely.

- 1) Install each part in the reverse order of removal.
- 2) Fill engine coolant.
 - Non-turbo model: <Ref. to CO(H4DO)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
 - Turbo model: <Ref. to CO(H4DOTC)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 3) Charge refrigerant. <Ref. to AC-24, PROCEDURE, Refrigerant Charging Procedure.>

Control Unit (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

13. Control Unit (Manual A/C Model)

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the ornament panel. <Ref. to EI-50, ORNAMENT PANEL, REMOVAL, Center Console.>
- 3) Remove the knee guard panel.
- 4) Remove the control wires from both sides of the heater and cooling unit.

- 5) Remove the screws and claws, and remove the control module from the ornament panel RH.

B: INSTALLATION

CAUTION:

Securely assemble the plate at the end of the control wire to the heater case.

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to AC-7, CONTROL MODULE, COMPONENT, General Description.>

Control Unit (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

14. Control Unit (Auto A/C Model)

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the ornament panel. <Ref. to EI-50, ORNAMENT PANEL, REMOVAL, Center Console.>
- 3) Remove the screws and claws, and remove the control module from the ornament panel RH.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to AC-7, CONTROL MODULE, COMPONENT, General Description.>

Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

15. Compressor

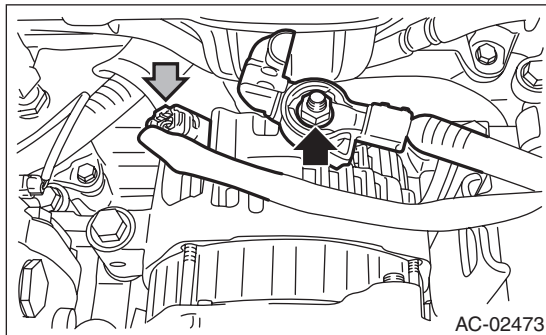

A: REMOVAL

1. NON-TURBO MODEL

- 1) Perform compressor oil return operation. <Ref. to AC-28, PROCEDURE, Compressor Oil.>
- 2) Turn the A/C switch to OFF and stop the engine.
- 3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, PROCEDURE, Refrigerant Recovery Procedure.>
- 4) Disconnect the ground cable from battery.
- 5) Remove the V-belts. <Ref. to ME(H4DO)-70, REMOVAL, V-belt.>
- 6) Remove the bolts and remove the V-belt cover bracket.

- 7) Disconnect the connector and terminal from generator.

- 8) Disconnect the compressor connector and clip, and move the generator harness to the right.

- 9) Remove the bolt and remove the low-pressure hose and high-pressure hose.

CAUTION:

Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.

- 10) Loosen the generator bracket bolts.
- 11) Remove the bolts and remove the compressor.

2. TURBO MODEL

- 1) Perform compressor oil return operation. <Ref. to AC-28, PROCEDURE, Compressor Oil.>
- 2) Turn the A/C switch to OFF and stop the engine.
- 3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, PROCEDURE, Refrigerant Recovery Procedure.>
- 4) Disconnect the ground cable from battery.
- 5) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
- 6) Remove the generator. <Ref. to SC(H4DO)-38, TURBO MODEL, REMOVAL, Generator.>
- 7) Remove the secondary air pump. <Ref. to EC(H4DOTC)-29, REMOVAL, Secondary Air Pump.>
- 8) Disconnect the compressor connector and lock, and move the generator harness to the right.

Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

9) Remove the bolt and remove the low-pressure hose and high-pressure hose.

CAUTION:

Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.

10) Remove the bolts and remove the compressor bracket.

NOTE:

Since the compressor cannot be removed by itself, remove with the compressor bracket as a unit.

11) Remove the bolts, then remove the bracket from the compressor.

B: INSTALLATION

CAUTION:

- Replace the O-rings with new parts, and then apply compressor oil.
- After replacing the compressor, adjust the amount of the compressor oil. <Ref. to AC-28, PROCEDURE, Compressor Oil.>

1) Install each part in the reverse order of removal.

NOTE:

Tighten the compressor for non-turbo model in the numerical order as shown in the figure.

2) Charge refrigerant. <Ref. to AC-24, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:

Refer to “COMPONENT” of “General Description”.

Air conditioning unit: <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.>

Compressor: <Ref. to AC-12, COMPRESSOR, COMPONENT, General Description.>

C: INSPECTION

1. MAGNETIC CLUTCH CLEARANCE

1) Check the clearance of entire circumference around the drive plate and pulley.

Specification:

0.3 — 0.6 mm (0.0118 — 0.0236 in)

2) Replace the compressor if the inspection result is not within the standard value.

2. MAGNETIC CLUTCH OPERATION

1) Disconnect the compressor connector.

2) Connect the battery positive (+) terminal to the terminal of the compressor connector.

3) Check the magnet clutch engagement.

4) If the magnet clutch does not operate normally, replace the compressor.

Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

16. Condenser

A: REMOVAL

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Disconnect the ground cable from battery.
- 3) Disconnect the high pressure hose and pipe from the condenser.

CAUTION:

Seal the disconnected hose and pipe with a plug or vinyl tape to prevent foreign matter from entering.

- 4) Remove the clips and remove the air intake duct (rear).

- 5) Remove the bolts and remove the radiator upper bracket.

- 6) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 7) Remove the bolts, and lift the condenser to pull it out through space between the radiator and the radiator panel.

CAUTION:

Be careful not to damage the condenser fins. If a damaged fin is found, repair it using a thin screwdriver.

B: INSTALLATION

CAUTION:

- If the condenser has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-28, REPLACEMENT, Compressor Oil.>
- Replace the O-rings on hoses and pipes with new parts, and then apply compressor oil.
- Confirm that lower guide (A) of condenser fits into holes on radiator panel.

- 1) Install each part in the reverse order of removal.

Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2) Charge refrigerant. <Ref. to AC-24, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:

Refer to “COMPONENT” of “General Description”.

Air conditioning unit: <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.>

Radiator & radiator fan (non-turbo model): <Ref. to CO(H4DO)-4, RADIATOR & RADIATOR FAN, COMPONENT, General Description.>

Radiator & radiator fan (turbo model): <Ref. to CO(H4DOTC)-4, RADIATOR AND RADIATOR FAN, COMPONENT, General Description.>

3) Adjust the fog light beam. <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

1) Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.

2) If any oil leak is found from the condenser, replace the condenser with a new part.

Heater and Cooling Unit

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

17. Heater and Cooling Unit

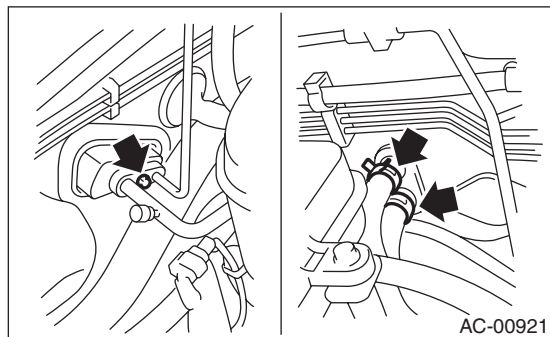

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Drain coolant from the radiator.
 - Non-turbo model: <Ref. to CO(H4DO)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
 - Turbo model: <Ref. to CO(H4DOTC)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 4) Remove the bolt and detach the hose and pipe from the expansion valve.

CAUTION:

Seal the disconnected hose and pipe with a plug or vinyl tape to prevent foreign matter from entering.

- 5) Release the heater hose clamps in engine compartment to remove the hoses.

- 6) Remove the instrument panel. <Ref. to EI-53, REMOVAL, Instrument Panel Assembly.>
- 7) Remove the blower motor unit assembly. <Ref. to AC-29, REMOVAL, Blower Motor Unit Assembly.>
- 8) Disconnect the connectors of the actuator, thermo sensor and blower resistor or power transistor.
- 9) Remove the bolt and nuts and remove the heater and cooling unit.

B: INSTALLATION

CAUTION:

Replace the O-rings on hoses and pipes with new parts, and then apply compressor oil.

- 1) Install each part in the reverse order of removal.
- 2) Fill engine coolant.
 - Non-turbo model: <Ref. to CO(H4DO)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
 - Turbo model: <Ref. to CO(H4DOTC)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 3) Charge refrigerant. <Ref. to AC-24, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:

Refer to "COMPONENT" of "General Description".

Heater cooling unit: <Ref. to AC-4, HEATER COOLING UNIT, COMPONENT, General Description.>

Blower motor unit: <Ref. to AC-6, BLOWER MOTOR UNIT, COMPONENT, General Description.>

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

18. Evaporator

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Remove the bolt and detach the hose and pipe from the expansion valve.

CAUTION:

Seal the disconnected hose and pipe with a plug or vinyl tape to prevent foreign matter from entering.

- 4) Remove the instrument panel lower. <Ref. to EI-52, INSTRUMENT PANEL LOWER, REMOVAL, Center Console.>
- 5) Remove the blower motor unit. <Ref. to AC-29, REMOVAL, Blower Motor Unit Assembly.>
- 6) Remove the screw and remove the evaporator pipe cover.

- 7) Remove the evaporator pipe mounting bolt, and evaporator cover mounting screw and clip.

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

8) Remove the evaporator cover and evaporator pipe.

CAUTION:

Since the evaporator cover and the evaporator pipe cannot be removed by itself, remove them as a unit.

(1) Disengage the evaporator and the pipe.

(2) Remove the evaporator pipe with the evaporator cover.

9) Remove the evaporator.

10) Remove the evaporator sensor from the evaporator.

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSTALLATION

CAUTION:

- If the evaporator has been replaced, add an appropriate amount of compressor oil to the evaporator. <Ref. to AC-28, REPLACEMENT, Compressor Oil.>
- Replace the O-rings on hoses and pipes with new parts, and then apply compressor oil.
- Make sure that the water seal gasket on the cover attachment area is securely attached.
- Install the sensor in the location shown in the figures below.

- (1) 148 mm (5.83 in) from the upper end of the fins
- (2) Sixth row fin from the left end
- (3) Sensor
- (4) Evaporator

- 1) Install each part in the reverse order of removal.
- 2) Charge refrigerant. <Ref. to AC-24, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:

Refer to “COMPONENT” of “General Description”.

Heater cooling unit: <Ref. to AC-4, HEATER COOLING UNIT, COMPONENT, General Description.>

Blower motor unit: <Ref. to AC-6, BLOWER MOTOR UNIT, COMPONENT, General Description.>

C: INSPECTION

1. EVAPORATOR

- 1) Check the evaporator fin for dust. Blow with compressed air or flush fins with water as needed.
- 2) If any oil leak is found from the evaporator, replace the evaporator.

2. EVAPORATOR SENSOR

Manual A/C model

Preparation tool:

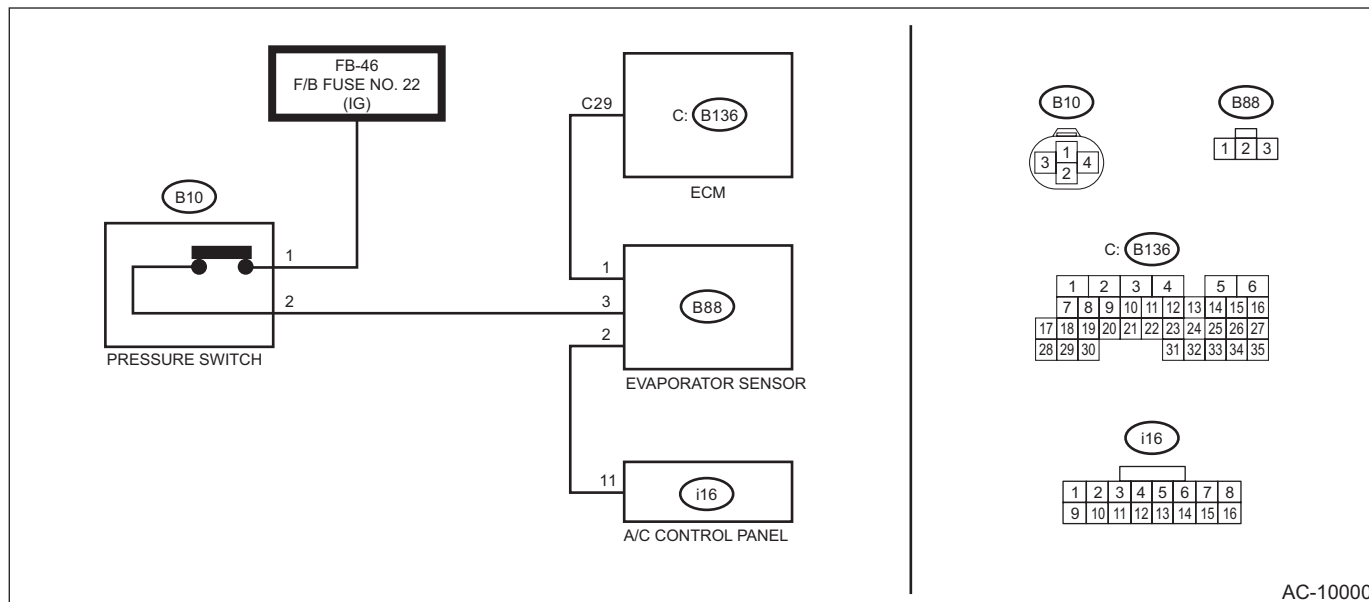

Circuit tester

Thermometer and hygrometer

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

WIRING DIAGRAM:

1) Prepare the vehicle.

NOTE:

Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.

- Place the vehicle in the workshop or in the shade and windless condition.
- Open all windows.

2) Set the vehicle to the following conditions and idle the engine for 15 minutes.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
A/C switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial	VENT
Fan dial	3/4 level

3) Check evaporator sensor power supply input

- (1) Turn the ignition to OFF.
- (2) Disconnect the evaporator sensor connector.
- (3) Turn the ignition to ON.
- (4) Measure the voltage between evaporator sensor connector and chassis ground.

Connector & terminal

(B88) No. 3 (+) — Chassis ground (-):

- (5) Is the voltage approx. 12 V?
 - **Yes** → Go to step 4).
 - **No** → Repair or replace the harness.

4) Check evaporator sensor ground circuit

- (1) Turn the ignition to OFF.
- (2) Check continuity between evaporator sensor connector and chassis ground.

Connector & terminal

(B88) No. 2 — Chassis ground:

- (3) Is there continuity?
 - **Yes** → Go to step 6).
 - **No** → Go to step 5).

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- 5) Check open circuit in evaporator sensor ground circuit
 - (1) Disconnect the control panel connector.
 - (2) Check continuity between evaporator sensor connector and control panel connector.

Connector & terminal

(B88) No. 2 — (i16) No. 11:

- (3) Is there continuity?
 - **Yes** → Replace the control panel.
 - **No** → Repair or replace the harness.
- 6) Check evaporator sensor signal output
 - (1) Connect the evaporator sensor connector and the control panel connector.
 - (2) Disconnect the engine control module (ECM) connector.
 - (3) Turn the ignition to ON.
 - (4) Turn the A/C switch to ON.
 - (5) Measure the voltage between engine control module (ECM) connector and chassis ground.

Connector & terminal

(B136) No. 29 — Chassis ground (-):

- (6) Is the voltage approx. 8 V or more?
 - **Yes** → Evaporator sensor is normal.
 - **No** → Go to step 7).
- 7) Check open circuit in evaporator sensor signal output circuit
 - (1) Turn the ignition to OFF.
 - (2) Disconnect the evaporator sensor connector.
 - (3) Check continuity between evaporator sensor connector and engine control module (ECM) connector.

Connector & terminal

(B88) No. 1 — (B136) No. 29:

- (4) Is there continuity?
 - **Yes** → Replace the evaporator sensor.
 - **No** → Repair or replace the harness.

Auto A/C model

Preparation tool:

Subaru Select Monitor III kit

Circuit tester

Thermometer and hygrometer

- 1) Prepare the vehicle.

NOTE:

Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.

- Place the vehicle in the workshop or in the shade and windless condition.
- Open all windows.

- 2) Set the vehicle to the following conditions.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
A/C switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Fan dial	5/7 level

Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

3) Using the Subaru Select Monitor, check «Evaporator Temperature».

NOTE:

For detailed procedures, refer to “PC application help for Subaru Select Monitor”.

(1) Idle the engine for 15 minutes, and then compare the air flow outlet temperature with «Evaporator Temperature».

NOTE:

For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

(2) Do the air flow outlet temperature and «Evaporator Temperature» differ by 3°C (5.4°F) or more?

- **Yes** → Go to step 4).
- **No** → Evaporator sensor is normal.

4) Check the evaporator sensor.

(1) Disconnect the evaporator sensor connector.

(2) Is the resistance between terminals of evaporator sensor within standard value?

AC-02815

Terminal No.	Inspection conditions	Standard
1 — 2	-20°C	15.37 — 16.62 kΩ
	-15°C	12.09 — 12.87 kΩ
	-10°C	9.576 — 10.05 kΩ
	-5°C	7.636 — 7.899 kΩ
	0°C	6.132 — 6.256 kΩ
	5°C	4.891 — 5.057 kΩ
	10°C	3.928 — 4.113 kΩ
	15°C	3.174 — 3.366 kΩ
	20°C	2.581 — 2.77 kΩ
	25°C	2.111 — 2.292 kΩ
	30°C	1.737 — 1.907 kΩ
	40°C	1.195 — 1.34 kΩ

- **Yes** → Evaporator sensor is normal.
- **No** → Replace the evaporator sensor.

19.Hose and Pipe

A: REMOVAL

CAUTION:

- When disconnecting hoses, do not apply excessive force.
- Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.

- 1) Disconnect the ground cable from battery.
- 2) Using the refrigerant recovery system, drain the refrigerant. <Ref. to AC-23, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Remove the bolts and detach the hoses and pipes.

B: INSTALLATION

CAUTION:

- Replace the O-rings with new parts.
- When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.

- 1) Install each part in the reverse order of removal.
- 2) Charge refrigerant. <Ref. to AC-24, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.>

C: INSPECTION

Check the hoses for cracks, damage and expansion, and then replace it with a new part if defective.

Relay and Fuse

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

20. Relay and Fuse

A: LOCATION

- (1) Joint box
- (2) Main fuse box

Main fan relay 1	(A)
Main fan relay 2	(B)
Sub fan relay	(C)
A/C relay	(D)
A/C Fuse	(E)

B: INSPECTION

1. FUSE

- 1) Remove and visually inspect the fuses.
- 2) Replace any fuse if the fuse is blown out.

2. RELAY

- 1) Connect terminal No. 4 to the battery positive terminal and the terminal No. 3 to the battery negative terminal, and check the resistance value between the relay terminals.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 Ω
No		1 MΩ or more

- 2) Replace the relay if the inspection result is not within the standard value.

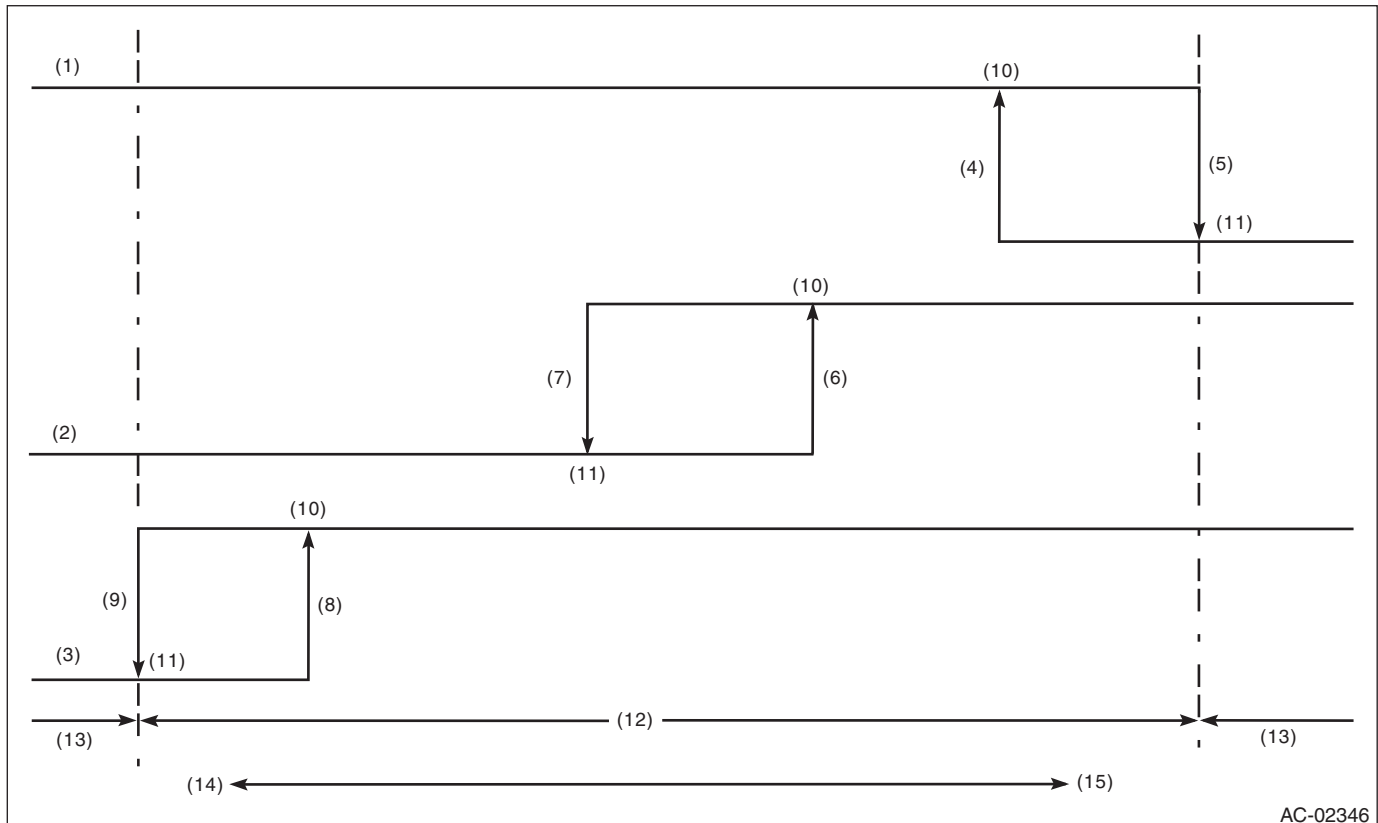

Pressure Switch (Triple Pressure Switch)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

21. Pressure Switch (Triple Pressure Switch)

A: INSPECTION

- 1) Connect the manifold gauge to the service valve on the high-pressure side.
- 2) Disconnect the pressure switch connector.
- 3) Start the air conditioner, and check the operating pressure of switch by turning the compressor (magnet clutch) to ON/OFF. Operation of each switch is as follows.

(1) High pressure switch	(6) 1,770±100 kPa (18.05±1.02 kg/cm ² , 256.65±14.5 psi)	(11) OFF
(2) Middle pressure switch	(7) 1,470±120 kPa (14.99±1.22 kg/cm ² , 213.15±17.4 psi)	(12) Operative range of compressor
(3) Low pressure switch	(8) 206±30 kPa (2.10±0.31 kg/cm ² , 29.9±4.3 psi)	(13) Inoperative range of compressor
(4) 2,350±200 kPa (24.00±2.04 kg/cm ² , 340.7±29.0 psi)	(9) 177±25 kPa (1.80±0.25 kg/cm ² , 25.7±3.6 psi)	(14) Low pressure
(5) 2,940±200 kPa (29.98±2.04 kg/cm ² , 426.3±29.0 psi)	(10) ON	(15) High pressure

NOTE:

- High pressure switch turns the compressor (magnet clutch) to OFF when the refrigerant pressure becomes extremely high to prevent the evaporator, air conditioner piping and expansion valve from getting damaged or frozen, etc.
- Middle pressure switch effectively controls the radiator fan output by judging high load/low load in normal range.
- The low pressure switch detects a refrigerant shortage and deactivates the compressor (magnet clutch) if the refrigerant pressure is abnormally low. (Because any further compressor operation in such a state may lead to compressor seizure)

Ambient Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

22. Ambient Sensor (Auto A/C Model)

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the ambient sensor connector.
- 3) Remove the ambient sensor from the radiator lower panel.

B: INSTALLATION

Install each part in the reverse order of removal.

Ambient Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

UNIT INSPECTION

Preparation tool: Circuit tester

- 1) Visually check the ambient sensor for dirt or damage, and clean or replace as necessary.
- 2) Check the resistance between ambient sensor terminals.

CAUTION:

During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

Terminal No.	Inspection conditions	Standard
1 — 2	10°C	5.82 — 6.18 kΩ
	15°C	4.58 — 4.87 kΩ
	20°C	3.64 — 3.86 kΩ
	25°C	2.91 — 3.09 kΩ
	30°C	2.35 — 2.49 kΩ
	35°C	1.9 — 2.02 kΩ
	40°C	1.56 — 1.65 kΩ
	45°C	1.28 — 1.36 kΩ
	50°C	1.06 — 1.12 kΩ
	55°C	0.88 — 0.93 kΩ
60°C	0.74 — 0.78 kΩ	

- 3) Replace the ambient sensor if the inspection result is not within the standard value.

Sunload Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

23. Sunload Sensor (Auto A/C Model)

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the audio. (model with audio) <Ref. to ET-9, REMOVAL, Audio.>
- 3) Remove the navigation unit. (model with navigation) <Ref. to ET-17, PROCEDURE, Navigation Body.>
- 4) Push out the sunload sensor from the back side of the instrument panel.

- 5) Disconnect the harness connector and remove the sunload sensor.

CAUTION:

Be careful not to damage the interior trims when removing the sensor.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

Refer to “Sunload Sensor” of “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-40, SUNLOAD SENSOR, Diagnostic Procedure for Sensors.>

In-Vehicle Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

24. In-Vehicle Sensor (Auto A/C Model)

A: REMOVAL

CAUTION:

Be careful not to damage the sensors and interior trims when removing.

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>
- 3) Disconnect the in-vehicle sensor connector and aspirator hose.
- 4) Remove the screw and remove the in-vehicle sensor from the instrument panel.

B: INSTALLATION

Install each part in the reverse order of removal.

In-Vehicle Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

UNIT INSPECTION

Preparation tool: Circuit tester

1) Check the resistance between in-vehicle sensor terminals.

CAUTION:

During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.772 — 4.101 kΩ
	15°C	3.096 — 3.338 kΩ
	20°C	2.556 — 2.734 kΩ
	25°C	2.121 — 2.251 kΩ
	30°C	1.756 — 1.878 kΩ
	35°C	1.462 — 1.574 kΩ
	40°C	1.223 — 1.326 kΩ
	45°C	1.028 — 1.122 kΩ
	50°C	0.868 — 0.954 kΩ
	55°C	0.7363 — 0.8147 kΩ
	60°C	0.6273 — 0.6984 kΩ

2) Replace the in-vehicle sensor if the inspection result is not within the standard value.

25. Air Vent Grille

A: REMOVAL

1. CENTER GRILLE

- 1) Insert a plastic remover into the slit at the bottom of the center panel, to lift the panel.
- 2) Remove the claws and resin hook and then remove the center panel.

- 3) Remove the claws, and remove the air vent center grille from the center panel.

2. SIDE GRILLE

- 1) Remove the ornament panel. <Ref. to EI-50, ORNAMENT PANEL, REMOVAL, Center Console.>
- 2) Remove the claws, and remove the air vent side grille.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Check that the direction and amount of air can be adjusted smoothly, and if there is any faulty, replace the air vent grille.
- 2) Check that the adjustment can be maintained in each position, and if there is any faulty, replace the air vent grille.

Heater Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

26.Heater Duct

A: REMOVAL

1. REAR HEATER DUCT

- 1) Remove the heater and cooling unit. <Ref. to AC-40, REMOVAL, Heater and Cooling Unit.>
- 2) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 3) Remove the lower inner trim (front). <Ref. to EI-56, REMOVAL, Lower Inner Trim.>
- 4) Pull off the floor mat to remove the rear heater duct center (A) and rear heater duct LH, RH (B).

B: INSTALLATION

Install each part in the reverse order of removal.

Heater Vent Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

27.Heater Vent Duct

A: REMOVAL

- 1) Remove the instrument panel. <Ref. to EI-53, REMOVAL, Instrument Panel Assembly.>
- 2) Remove the screws, and then remove the heater vent duct.

B: INSTALLATION

Install each part in the reverse order of removal.

28.A/C Filter

A: REPLACEMENT

1) Remove the glove box damper.

2) Disengage the stopper section and pull the glove box lid to remove it.

3) Pinch the tabs to release the lock and remove the A/C filter.

4) Install each part in the reverse order of removal.

General Diagnostic Table

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

29. General Diagnostic Table

A: INSPECTION

Refer to “Diagnostics with Phenomenon” for “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-42, INSPECTION, Diagnostics with Phenomenon.>

General Diagnostic Table

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

1. Basic Diagnostic Procedure	2
2. General Description	3
3. Electrical Component Location	6
4. Auto A/C Control Module I/O Signal	8
5. Diagnostic Chart for Self-Diagnosis	10
6. Diagnostics for A/C System Malfunction	17
7. Diagnostic Procedure for Actuators	28
8. Diagnostic Procedure for Sensors	34
9. Diagnostics with Phenomenon	42

Basic Diagnostic Procedure

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

Step	Check	Yes	No
1 START INSPECTIONS. 1) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.> 2) Perform the self-diagnosis. <Ref. to AC(diag)-10, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Does the self-diagnosis operate?	Go to step 2.	<Ref. to AC(diag)-17, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
2 IDENTIFY MALFUNCTION PART. Identify the malfunction part with self-diagnosis.	Can the malfunction part be confirmed?	Repair the malfunctioning part in accordance with each diagnostic chart.	Go to step 3.
3 CHECK COMPARTMENT TEMPERATURE. 1) Turn the A/C switch to ON. 2) Turn the temperature control dial at maximum cool position. 3) Check the compartment temperature change.	Does the compartment temperature change?	Go to step 4.	<Ref. to AC-22, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>
4 CHECK A/C SYSTEM RESPONSE. Change the temperature setting, and check the response of A/C system.	Does the A/C system respond quickly?	A/C system is normal.	<Ref. to AC(diag)-23, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY, Diagnostics for A/C System Malfunction.>

General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

2. General Description

A: CAUTION

- 1) Never connect the battery in reverse polarity.
 - Doing so may immediately damage the auto A/C control module.
- 2) Do not disconnect the battery terminals while the engine is running.
 - A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as auto A/C control module etc.
- 3) Before disconnecting the connectors of sensors and the auto A/C control module, be sure to turn off the ignition switch.
 - Auto A/C control module may be damaged.
- 4) Every A/C-related part is a precision part. Do not drop them.
- 5) Airbag system wiring harness is routed near the auto A/C control module and junction box.

CAUTION:

- Do not use electrical test equipment on the airbag system wiring harness and connector.
- Be careful not to damage the airbag system wiring harness when servicing the auto A/C control module and junction box.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems in the A/C system.

1. BATTERY

- 1) Measure the battery voltage and specific gravity of the electrolyte.

Standard voltage:

12 V

Specific gravity:

1.260 or more

- 2) Check the condition of the fuses for A/C system power supply and other fuses.
- 3) Check the condition of harness and harness connector connections.

2. ASPIRATOR HOSE

- 1) Turn the ignition switch to ON, and press the A/C switch.
- 2) Turn the temperature control dial to maximum hot position.
- 3) Set the blow vents to the DEF position.
- 4) Turn the fan switch to "MAX" position.

- 5) Put a strip of paper close to the front side of in-vehicle sensor suction port (A) located in the instrument panel lower cover, and check that air is being sucked into the port by seeing the paper moving towards the port.

NOTE:

Be careful not to let the paper get sucked into the port.

- 6) If the paper does not move at all, remove the instrument panel lower cover <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.> and check for poor connection of the aspirator hose (A), in-vehicle sensor and heater unit, and repair them if necessary.

3. A/C LINE

Check the connection for A/C line (A) and lower side high-pressure pipe.

4. CONTROL LINKAGE

- 1) Check the state of mode door linkage.
- 2) Check the state of air mix door linkage.
- 3) Check the state of FRESH/RECIRC door linkage.

General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

5. CONTROL SWITCHES

Start the engine and warm up completely.

1) Inspection using switches

- Without left/right independent air conditioning function

No.	Point to check	Switch operation	Judgment standard
1	Air flow control dial	Turn the dial to the right.	Outlet opening (mode) switches AUTO → VENT → BILEVEL → HEAT → DEF/HEAT → DEF each time turning the dial.
2	Fan speed control dial	Turn the dial to the right.	Each time the dial is turned, the fan speed switches OFF → AUTO → 1st → 2nd → 3rd → 4th → 5th → 6th → 7th.
3	FRESH/RECIRC switch	Press the FRESH/RECIRC switch.	Inlet opening switches RECIRC → FRESH → RECIRC each time pressing the switch. (LED illuminates at RECIRC)
		Set both the air flow control dial and fan speed control dial to the AUTO position.	The system switches to AUTO.
4	A/C switch	Turn the A/C switch to ON with the fan speed control dial set to other than OFF position.	The LED lights and the compressor operates.
		Set both the air flow control dial and fan speed control dial to the AUTO position.	The system switches to AUTO.
5	Auto function Operate in order from 1).	1) Set the following dial to AUTO. • Air flow control dial • Fan speed control dial 2) Turn the temperature control dial completely to the left, and set to the maximum cool position.	<ul style="list-style-type: none"> • Outlet air temperature: COOL • Fan speed: Max. • Outlet opening: VENT • Inlet opening: RECIRC • Compressor: AUTO
		3) Turn the temperature control dial to the right slowly up to the maximum hot position.	<ul style="list-style-type: none"> • Outlet air temperature: COOL → HOT • Fan speed: AUTO • Outlet opening: AUTO • Inlet opening: AUTO • Compressor: AUTO
		4) Turn the temperature control dial fully to the right, to the maximum hot position.	<ul style="list-style-type: none"> • Outlet air temperature: HOT • Fan speed: Max. • Outlet opening: HEAT • Inlet opening: FRESH • Compressor: AUTO
6	Defroster Interlock Function	Set the air flow control dial to the DEF or the DEF/HEAT position.	<ul style="list-style-type: none"> • Outlet air temperature: AUTO • Fan speed: AUTO • Outlet opening: DEF or DEF/HEAT • Inlet opening: FRESH • Compressor: ON
7	Rear defogger switch	Press the rear defogger switch.	LED illuminates.

- With left/right independent air conditioning function

No.	Point to check	Switch operation	Judgment standard
1	MODE switch	Press the MODE switch.	Each time the switch is pressed, the outlet opening (mode) switches VENT → BILEVEL → HEAT → DEF/HEAT.
2	Fan switch	Press the fan switch (UP).	Each time the switch is pressed, the fan speed switches 1st → 2nd → 3rd → 4th → 5th → 6th → 7th.
3	FRESH/RECIRC switch	Press the FRESH/RECIRC switch.	Inlet opening switches RECIRC → FRESH → RECIRC each time pressing the switch.
4	A/C switch	Turn the A/C switch to ON with the fan switch set to other than OFF position.	The A/C indicator appears and the compressor operates.
		Press the AUTO switch. ("FULL AUTO" display)	The system switches to AUTO.

General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

No.	Point to check	Switch operation	Judgment standard
5	Auto function Operate in order from 1).	1) Press the AUTO switch. ("FULL AUTO" display) 2) Turn the driver's side temperature control dial to the left fully, and set to 18°C (maximum cool position).	<ul style="list-style-type: none"> • Outlet air temperature: COOL • Fan speed: Max. • Outlet opening: VENT • Inlet opening: RECIRC • Compressor: AUTO
		3) Turn the driver's side temperature control dial to the right slowly, and change the setting gradually from 18°C (maximum cool position) to 32°C.	<ul style="list-style-type: none"> • Outlet air temperature: COOL → HOT • Fan speed: AUTO • Outlet opening: AUTO • Inlet opening: AUTO • Compressor: AUTO
		4) Turn the driver's side temperature control dial to the right fully, and set to 32°C (maximum hot position).	<ul style="list-style-type: none"> • Outlet air temperature: HOT • Fan speed: Max. • Outlet opening: HEAT • Inlet opening: FRESH • Compressor: AUTO
6	Temperature control dial (driver's and passenger's seats) and dual switch Operate in order from 1).	1) If the dual switch indicator illuminates, turn it off by pressing the switch. 2) Press the fan switch (UP). 3) Turn the driver's side temperature control dial clockwise and counterclockwise.	Each setting temperature display becomes higher by turning clockwise and lower by turning counterclockwise.
		4) Turn the passenger's side temperature control dial clockwise and counterclockwise.	The dual switch indicator illuminates. Only the passenger's side setting temperature display becomes higher by turning clockwise and lower by turning counterclockwise.
		5) Turn the driver's side temperature control dial clockwise and counterclockwise.	The dual switch indicator keeps illuminating. Only the driver's side setting temperature reading becomes higher by turning the dial clockwise and lower by turning counterclockwise.
		6) Press the dual switch.	The dual switch indicator turns off. The passenger's side setting temperature display is the same as the driver's side setting temperature display.
7	Defroster switch	Press the defroster switch.	<ul style="list-style-type: none"> • Outlet air temperature: AUTO • Blower fan: AUTO • Outlet opening: DEF • Inlet opening: FRESH • Compressor: ON • LED illuminates.
8	Rear defogger switch	Press the rear defogger switch.	LED illuminates.
9	OFF switch	Press the OFF switch.	All displays are turned off. <ul style="list-style-type: none"> • Blower fan: OFF • Compressor: OFF

2) Inspection of compressor operation

No.	Point to check	Switch operation	Judgment standard
1	Compressor	1) Turn the A/C switch to ON. 2) Set the fan switch between LO and HI.	Compressor: ON

3) Inspection of illumination control

No.	Point to check	Switch operation	Judgment standard
1	Illumination	Turn the lighting switch to ON.	Illumination comes on. If the LED lights, the LED will dim.

Diagnostic Chart for Self-Diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

1. A/C CONTROL MODULE SELF-DIAGNOSIS

- Without left/right independent air conditioning function

Step	Check	Yes	No
1 SELECT SELF-DIAGNOSIS MODE IN THE CONTROL MODULE. 1) Set the air flow control dial and fan speed control dial to the AUTO position. 2) Start the engine with the A/C switch and the FRESH/RECIRC switch pressed.	Does the self-diagnosis mode operate?	Go to step 2.	<Ref. to AC(diag)-17, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
2 CHECK THE LIGHTING OF THE LED. Make sure that all switch LEDs on the control panel illuminate.	Do all LEDs blink eight times?	Go to step 3.	Replace the control module.
3 CHECK SENSOR MALFUNCTION. 1) Set the air flow control dial and fan speed control dial to the AUTO position. 2) If the system has trouble for each sensor, the FRESH/RECIRC switch LED blinks or is turned off. 3) If the system has no malfunctions, the FRESH/RECIRC switch LED is illuminated.	Does the FRESH/RECIRC switch LED illuminate?	Go to step 5.	Go to step 4.
4 CONFIRM MALFUNCTIONING SENSOR. 1) Set the air flow control dial to AUTO. 2) Turn the fan speed control dial to each mode position, and check each switch LED illumination according to sensor check table. <Ref. to AC(diag)-14, SENSOR CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	When turning the fan speed control dial to each mode position, does the FRESH/RECIRC switch LED go off?	Go to step 5.	Repair the defective sensor. <Ref. to AC(diag)-34, Diagnostic Procedure for Sensors.>
5 CHECK AIR MIX DOOR AND MODE DOOR POSITION OPERATION SIGNALS. 1) Set the air flow control dial to FACE. 2) Turn the fan speed control dial to AUTO. 3) If there is a system malfunction in the air mix door signal or the mode door position signal, the FRESH/RECIRC switch LED goes off or blinks. 4) If the system has no malfunctions, the FRESH/RECIRC switch LED is illuminated.	Does the FRESH/RECIRC switch LED illuminate?	Go to step 8.	Go to step 6.
6 CHECK AIR MIX DOOR POSITION DRIVE SIGNALS. 1) Set the air flow control dial to FACE. 2) Place the fan speed control dial in each position and then check each LED illumination conditions. <Ref. to AC(diag)-16, DRIVE SIGNAL CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Do the LEDs illuminate in accordance with operation signal table?	Go to step 7.	Check the air mix door actuator circuit. <Ref. to AC(diag)-32, AIR MIX DOOR ACTUATOR, Diagnostic Procedure for Actuators.>
7 CHECK MODE DOOR POSITION DRIVE SIGNAL. 1) Press the A/C switch. 2) Place the fan speed control dial in each position and then check each LED illumination conditions. <Ref. to AC(diag)-16, DRIVE SIGNAL CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Do the LEDs illuminate in accordance with operation signal table?	Go to step 8.	Check the mode door actuator circuit. <Ref. to AC(diag)-30, MODE DOOR ACTUATOR, Diagnostic Procedure for Actuators.>

Diagnostic Chart for Self-Diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK OPERATION OF EACH ACTUATOR, BLOWER FAN AND COMPRESSOR CLUTCH. 1) Set the air flow control dial to B/L. 2) Turn the fan speed control dial from AUTO to 7th, and select operating modes. 3) Check the operation of each mode according to operating mode table. <Ref. to AC(diag)-15, OPERATING MODE TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.> <ul style="list-style-type: none"> • FRESH/RECIRC door • Air flow control door • Air mix door • Blower fan • A/C compressor 	Does the operation of each mode match to operating mode table?	Turn the fan speed control dial to OFF or the ignition switch to OFF in order to complete self-diagnosis.	Repair the malfunctioning part in accordance with each diagnostic chart.

- With left/right independent air conditioning function

Step	Check	Yes	No
1 SELECT SELF-DIAGNOSIS MODE IN THE CONTROL MODULE. Start the engine with the A/C switch and the FRESH/RECIRC switch pressed.	Does the self-diagnosis mode operate?	Go to step 2.	<Ref. to AC(diag)-17, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
2 CHECK DISPLAY AND INDICATOR. Check if the screen display and all indicators illuminate.	Do the screen display and all indicators illuminate?	Go to step 3.	Replace the control module.
3 CHECK SENSOR MALFUNCTION. 1) After illumination of the display and indicator, the Inspection Mode for the sensor is initiated by pressing the fan switch (UP). ("2" illuminates at tenths place of driver's side setting temperature display) 2) When malfunction occurs in each sensor, codes are displayed on the screen. When malfunction does not occur in each sensor, code "20" is displayed on the screen. 3) Identify defective sensors according to the sensor check table. <Ref. to AC(diag)-14, SENSOR CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Is "20" displayed on the screen?	Go to step 4.	Repair the defective sensor. <Ref. to AC(diag)-34, Diagnostic Procedure for Sensors.>

Diagnostic Chart for Self-Diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p>4</p> <p>CHECK AIR MIX DOOR AND MODE DOOR POSITION OPERATION SIGNALS.</p> <p>1) After checking of the sensor, the Inspection Mode for the air mix door and mode door position drive signal is initiated by pressing the fan switch (UP). ("3" flashes at tenths place of driver's side setting temperature display for five seconds)</p> <p>2) When malfunction occurs in each actuator circuit, codes are displayed on the screen. When malfunction does not occur, code "30" is displayed on the screen.</p> <p>3) Identify defective actuator circuit according to the drive signal check table. <Ref. to AC(diag)-16, DRIVE SIGNAL CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.></p>	<p>Is "30" displayed on the screen?</p>	<p>Go to step 5.</p>	<p>Repair the defective actuator circuit. <Ref. to AC(diag)-28, Diagnostic Procedure for Actuators.></p>
<p>5</p> <p>CHECK OPERATION OF EACH ACTUATOR, BLOWER FAN AND COMPRESSOR CLUTCH.</p> <p>1) After checking of the air mix door and mode door position drive signal, the Operation Inspection Mode for the actuator, blower fan and compressor clutch is initiated by pressing the fan switch (UP). ("4" illuminates at tenths place of driver's side setting temperature display)</p> <p>2) The setting temperature display changes and the operation mode changes each time the mode switch is pressed.</p> <p>3) Check each operation according to the operating mode table. <Ref. to AC(diag)-15, OPERATING MODE TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.></p> <ul style="list-style-type: none"> • FRESH/RECIRC door • Air flow control door • Air mix door LH • Air mix door RH • Blower fan • A/C compressor 	<p>Does each operation match to operating mode table?</p>	<p>System is normal. Turn the ignition switch to OFF to end the self-diagnosis.</p>	<p>Repair the defective part in accordance with each diagnostic chart.</p>

Diagnostic Chart for Self-Diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

2. SENSOR CHECK TABLE

- Without left/right independent air conditioning function

NOTE:

- When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor at a location exposed to direct sunlight.
- Past malfunction will illuminate if four malfunctions or more were detected previously.
- To cancel the past malfunction, perform either of the following procedure: Disconnect the negative battery terminal or press and hold the FRESH/RECIRC switch for 5 seconds or more while performing self-diagnosis step 3 — 7.

Air flow control dial position	Fan speed control dial position	Sensor	No trouble	Short circuit	Open circuit	When currently malfunctioning	When having malfunctioned in the past
AUTO	AUTO	In-vehicle sensor	FRESH/RECIRC switch LED is turned off	FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ←→ turns off for 0.2 sec.)	FRESH/RECIRC switch LED blinks (Illuminates for 1 sec. ←→ turns off for 1 sec.)	Rear window defogger switch LED is turned off	Rear window defogger switch LED illuminates
	1st	Ambient sensor		FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ←→ turns off for 0.2 sec.)			
	2nd	Evaporator sensor		FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ←→ turns off for 0.2 sec.)			
	3rd	Engine coolant temperature sensor		—			
	4th	Sunload sensor		FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ←→ turns off for 0.2 sec.)			
	5th — 7th	CAN communication		—			

Diagnostic Chart for Self-Diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

- With left/right independent air conditioning function

NOTE:

- When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor at a location exposed to direct sunlight.
- If there are multiple defective sensors, display occurs two times.
- Past malfunction will illuminate if four malfunctions or more were detected previously.
- To cancel the past malfunction, perform either of the following procedure: Disconnect the negative battery terminal or press and hold the FRESH/RECIRC switch for 5 seconds or more while performing self-diagnosis step 3 — 4.

Sensor	No trouble	Open circuit	Short circuit	When currently malfunctioning	When having malfunctioned in the past
In-vehicle sensor	20	210	215	AUTO is turned off	AUTO illuminates
Ambient sensor		220	225		
Evaporator sensor		230	235		
Engine coolant temperature sensor		240	—		
Sunload sensor		250	255		
CAN communication		260	—		

3. OPERATING MODE TABLE

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

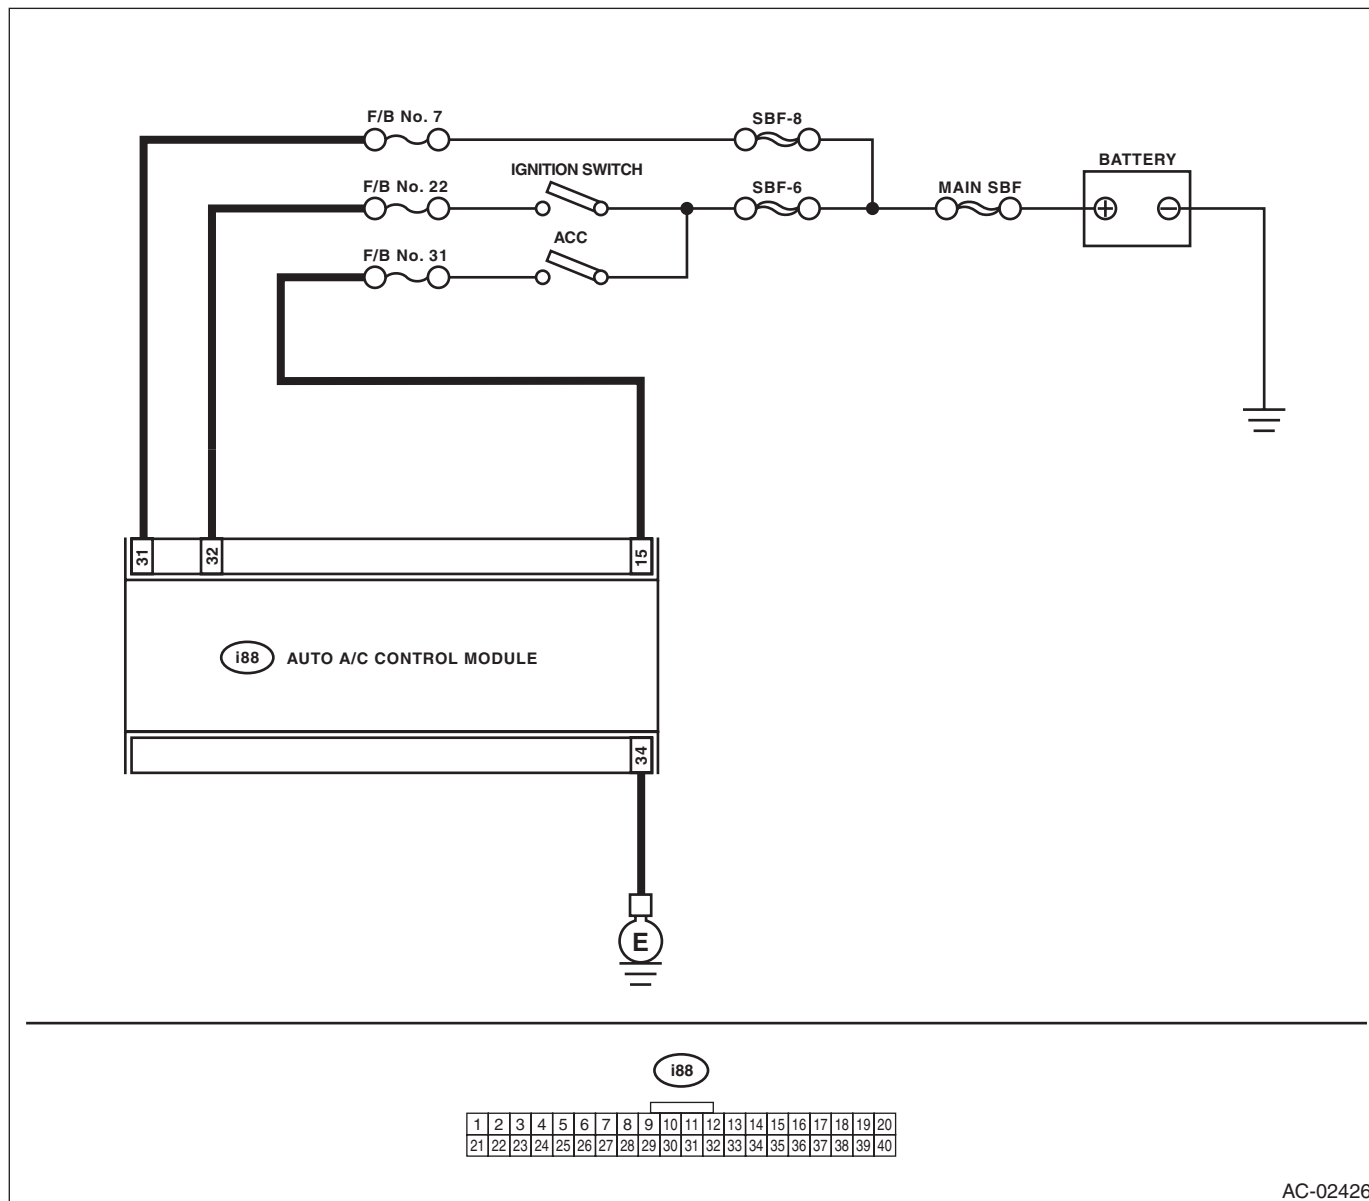

6. Diagnostics for A/C System Malfunction

A: A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

TROUBLE SYMPTOM:

- Set temperature is not indicated on the display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

WIRING DIAGRAM:

AC-02426

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 7, No. 22 and No. 31 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 2.
2 CHECK A/C CONTROL MODULE POWER CIRCUIT. 1) Remove the A/C control module. 2) Disconnect the A/C control module harness connector. 3) Turn the ignition switch to ACC, and measure the voltage between A/C control module harness connector terminal and chassis ground. <i>Connector & terminal (i88) No. 15 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check for open or short circuit in the harness between A/C control module and fuse.
3 CHECK A/C CONTROL MODULE POWER CIRCUIT. Measure the voltage between A/C control module harness connector terminal and chassis ground after turning the ignition switch to ON. <i>Connector & terminal (i88) No. 32 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Check for open or short circuit in the harness between A/C control module and fuse.
4 CHECK A/C CONTROL MODULE GROUND CIRCUIT. Measure the resistance of harness between A/C control module and chassis ground after turning the ignition switch to OFF. <i>Connector & terminal (i88) No. 34 — Chassis ground:</i>	Is the resistance less than 1 Ω ?	Go to step 5.	Repair the harness for ground line.
5 CHECK FOR POOR CONTACT. Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostics for A/C System Malfunction

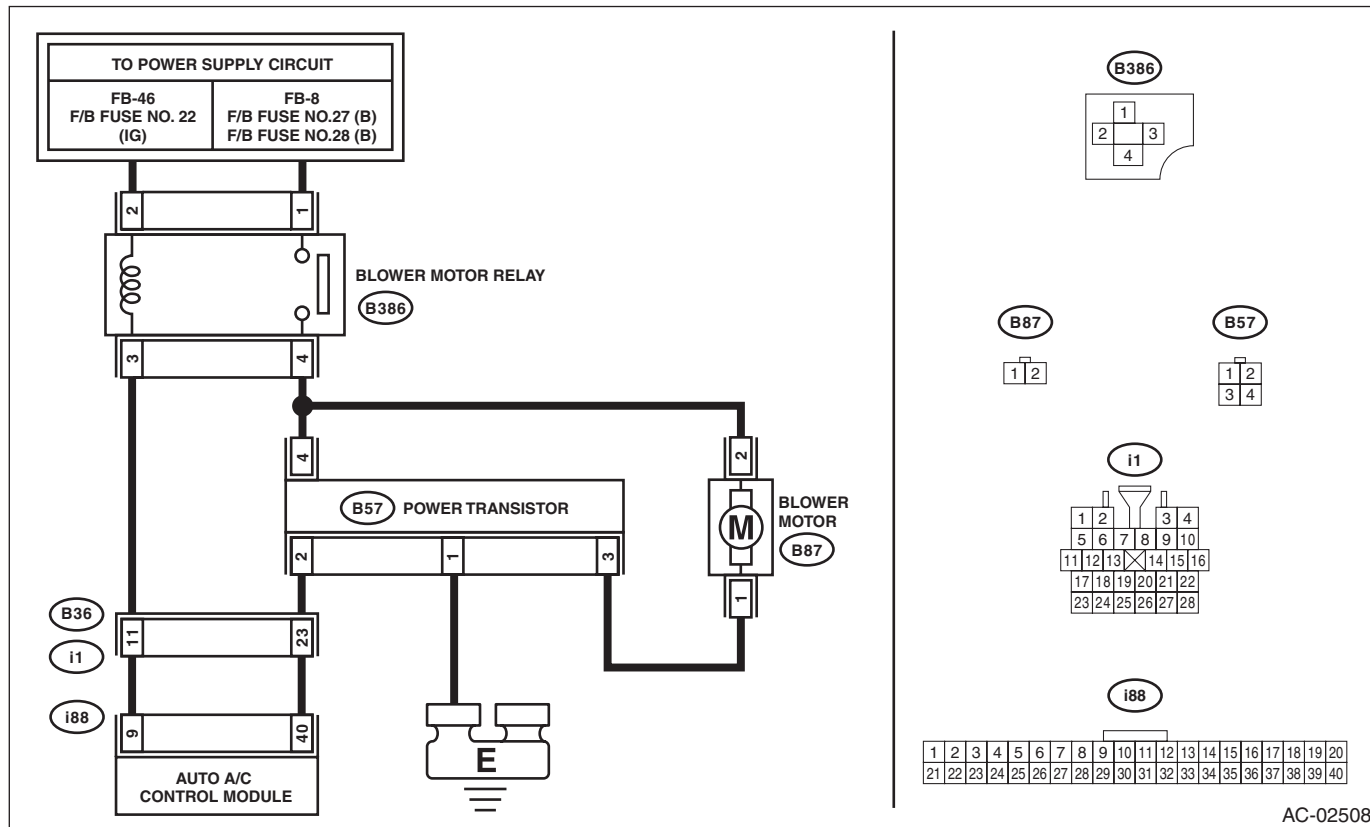

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: BLOWER MOTOR DOES NOT ROTATE

TROUBLE SYMPTOM:

- Blower motor does not rotate.
- Blower motor does not change speeds.

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK FUSE. 1) Remove fuse No. 22, 27 and 28 from fuse & relay box. 2) Check the condition of fuse.	Is any fuse blown out?	Replace the fuse.	Go to step 2.
2 CHECK POWER SUPPLY OF BLOWER MOTOR RELAY. 1) Turn the ignition switch to OFF. 2) Remove the blower motor relay. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the blower motor relay connector and chassis ground. Connector & terminal (B386) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 3.	Repair the open circuit of blower motor power supply line harness.
3 CHECK BLOWER MOTOR RELAY. 1) Turn the ignition switch to OFF. 2) Connect the battery positive terminal to the blower motor relay terminal No. 2, and the negative terminal to No. 3. 3) Using the tester, measure the resistance between terminals. Connector & terminal (Relay) No. 1 — No. 4:	Is the resistance less than 1 Ω?	Go to step 4.	Replace the blower motor relay.

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK HARNESS. 1) Remove the auto A/C control module. 2) Measure the resistance between auto A/C control module and relay using a tester. Connector & terminal (B386) No. 3 — (i88) No. 9:	Is the resistance less than 1 Ω ?	Go to step 5.	Repair or replace the harness.
5 CHECK BLOWER MOTOR POWER SUPPLY. 1) Install the blower motor relay and auto A/C control module. 2) Turn the ignition switch to ON. 3) Turn the blower fan switch to ON. 4) Use a tester to measure the voltage between the blower motor and chassis ground. Connector & terminal (B87) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 6.	Repair or replace the harness between relay and the blower motor.
6 CHECK BLOWER MOTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from blower motor. 3) Connect the battery positive terminal to the blower motor connector terminal No. 2, and the negative terminal to No. 1. 4) Make sure the blower motor runs.	Does the blower motor run?	Go to step 7.	Replace the blower motor. <Ref. to AC-30, REMOVAL, Blower Motor.>
7 CHECK HARNESS. 1) Disconnect the power transistor connector. 2) Disconnect the auto A/C control module connector. 3) Using the tester, measure the resistance between terminals of harness. Connector & terminal (B57) No. 1 — Chassis ground: (B57) No. 2 — (i88) No. 40: (B57) No. 3 — (B87) No. 1: (B57) No. 4 — (B87) No. 2: (B57) No. 4 — (B386) No. 4:	Is the resistance less than 1 Ω ?	Go to step 8.	Repair or replace the harness.
8 CHECK FAN CONTROL SIGNAL. 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) Set the fan dial or fan switch to 1st — 7th. 4) Measure the voltage between the power transistor and chassis ground using a tester. Connector & terminal (B57) No. 2 (+) — Chassis ground (-):	Is the voltage approx. 10 V at 1st and approx. 1 V at 7th?	Replace the power transistor. <Ref. to AC-31, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step 9.
9 CHECK FOR POOR CONTACT. Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: BLOWER MOTOR TURNS AROUND EARLY

TROUBLE SYMPTOM:

- The blower rotates even though the blower switch is not turned on.
- The blower motor continues to rotate at high speed. (Not adjustable.)

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK BLOWER MOTOR CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. Connector & terminal (B57) No. 3 — Chassis ground:	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step 2.
2 CHECK HARNESS. 1) Remove the auto A/C control module. 2) Use a tester to measure the resistance between the power transistor connector and chassis ground. Connector & terminal (B57) No. 2 — Chassis ground:	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step 3.
3 CHECK POWER TRANSISTOR. 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) Use a tester to measure the voltage between the power transistor connector and chassis ground. Connector & terminal (B57) No. 2 (+) — Chassis ground (-):	Is the voltage approx. 10 V when fan speed control dial or fan switch is in 1st position, and approx. 1 V in 7th position?	Replace the power transistor. <Ref. to AC-31, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step 4.

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK AUTO A/C CONTROL MODULE. 1) Turn the fan speed control dial or fan switch OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. Connector & terminal (B57) No. 2 — Chassis ground:	When turning the fan speed control dial or fan switch from OFF to another position, does the resistance change?	Replace the power transistor. <Ref. to AC-31, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostics for A/C System Malfunction

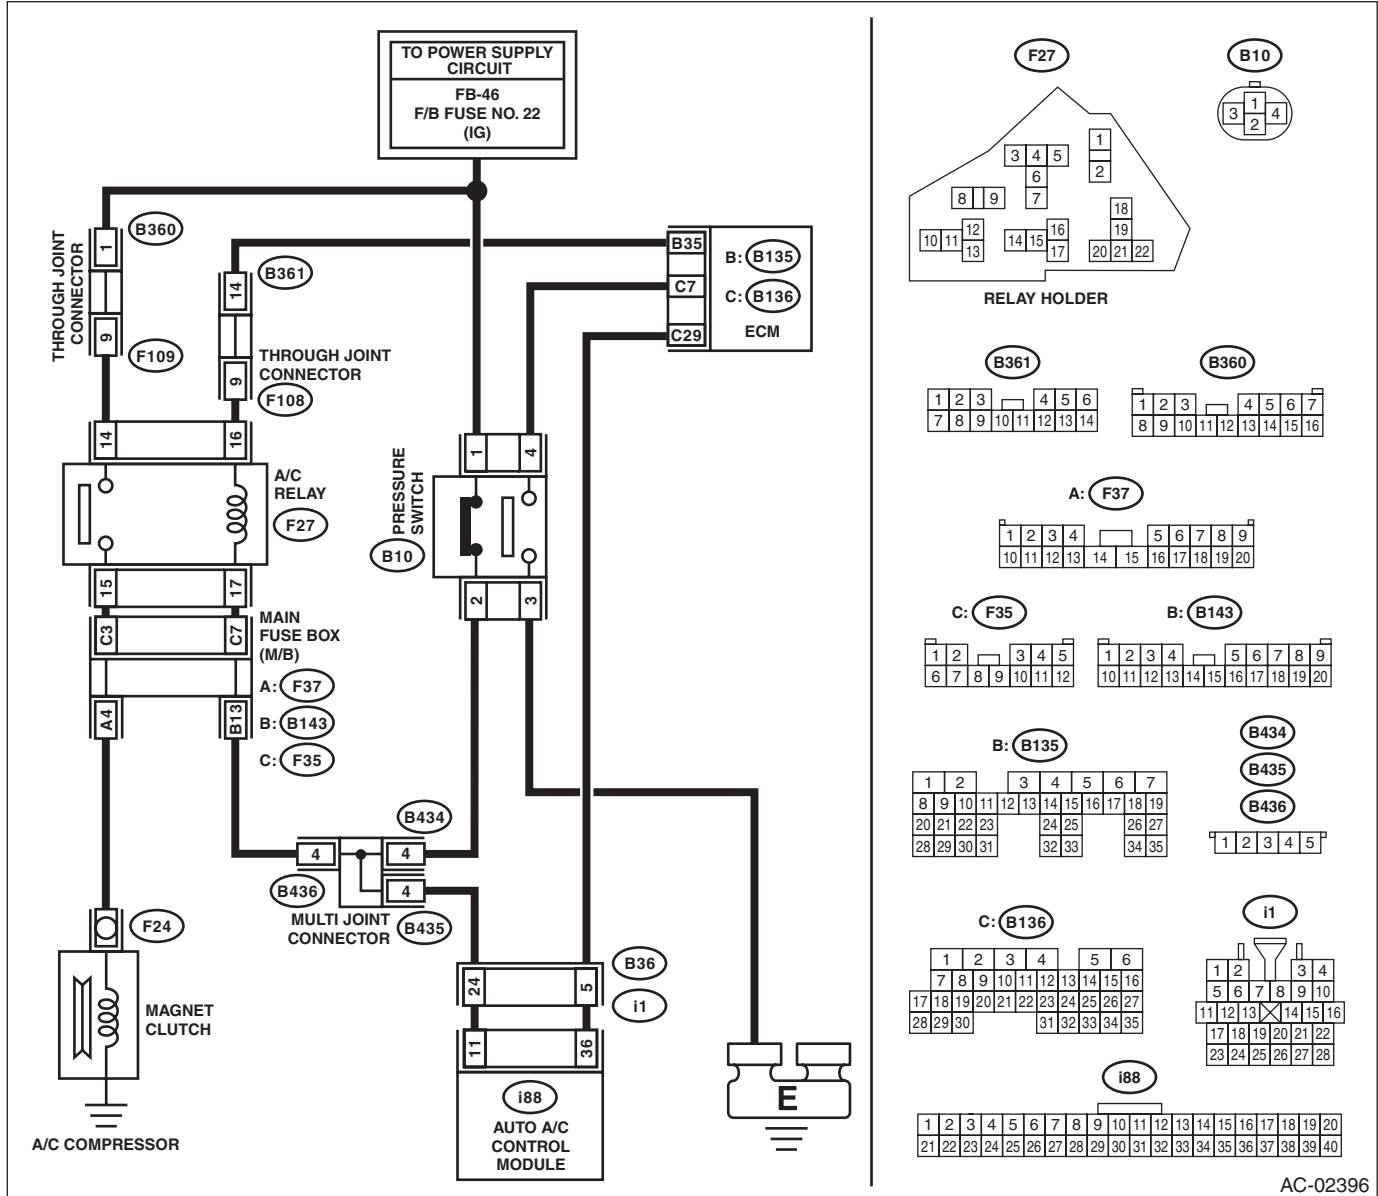

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

D: COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY

TROUBLE SYMPTOM:

- Compartment temperature does not change. (Cold air does not come out.)
- A/C system does not respond. (Response is extremely slow)

WIRING DIAGRAM:

AC-02396

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 2.
2 CHECK SIGNAL TO A/C RELAY AND AUTO A/C CONTROL MODULE. 1) Disconnect the A/C relay and auto A/C control module harness connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between A/C relay connector terminal and chassis ground. 4) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. Connector & terminal (F27) No. 17 (+) — Chassis ground (-): (i88) No. 11 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Go to step 3.
3 CHECK POWER SUPPLY FOR PRESSURE SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the pressure switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between pressure switch harness connector terminal and chassis ground. Connector & terminal (B10) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4.	Check for open or short circuit in the harness between fuse and pressure switch.
4 CHECK HARNESS BETWEEN PRESSURE SWITCH AND A/C RELAY, AUTO A/C CONTROL MODULE. 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between pressure switch connector and A/C relay connector. 3) Measure the resistance of harness between pressure switch connector and auto A/C control module connector. Connector & terminal (B10) No. 2 — (F27) No. 17: (B10) No. 2 — (i88) No. 11:	Is the resistance less than 1 Ω ?	Check the pressure switch. <Ref. to AC-49, INSPECTION, Pressure Switch (Triple Pressure Switch).>	Repair the harness.
5 CHECK POWER SUPPLY FOR A/C RELAY. Measure the voltage between A/C relay connector terminal and chassis ground. Connector & terminal (F27) No. 14 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 6.	Check open or short circuit of harness between fuse and A/C relay.
6 CHECK A/C RELAY. Check the A/C relay. <Ref. to AC-48, INSPECTION, Relay and Fuse.>	Is the A/C relay normal?	Go to step 7.	Replace the A/C relay.

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
7 CHECK A/C ON SIGNAL. 1) Turn the ignition switch to OFF. 2) Connect the A/C relay and all disconnected connectors. 3) Start the engine and turn the A/C switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. Connector & terminal (i88) No. 36 (+) — Chassis ground (-):	Is the voltage 5.5 V or more?	Go to step 8.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>
8 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND ECM. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of auto A/C control module and ECM. 3) Measure the resistance of harness between auto A/C control module connector and ECM connector. Connector & terminal (i88) No. 36 — (B136) No. 29:	Is the resistance less than 1 Ω?	Go to step 9.	Repair the harness.
9 CHECK MAGNET CLUTCH ON SIGNAL. 1) Stop the engine and turn the A/C switch to OFF. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminal and chassis ground. Connector & terminal (B136) No. 35 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 10.	Check for open or short circuit in the harness between A/C relay and ECM.
10 CHECK MAGNET CLUTCH ON SIGNAL. 1) Start the engine and turn the A/C switch to ON. 2) Turn the temperature control dial at maximum cool position. 3) Measure the voltage between ECM connector terminal and chassis ground. Connector & terminal (B136) No. 35 (+) — Chassis ground (-):	Is the voltage 0 V?	Go to step 11.	Replace the ECM. <Ref. to FU(H4DO)-101, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-57, REMOVAL, Engine Control Module (ECM).>
11 CHECK POWER SUPPLY FOR MAGNET CLUTCH. 1) Stop the engine and turn the A/C switch to OFF. 2) Disconnect the harness connector of magnet clutch. 3) Start the engine and turn the A/C switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between magnet clutch harness connector terminal and chassis ground. Connector & terminal (F24) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Inspect the compressor. <Ref. to AC-37, INSPECTION, Compressor.>	Check for open or short circuit in the harness between A/C relay and magnet clutch.

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

E: DEFROSTER SWITCH LIGHT IS BLINKING

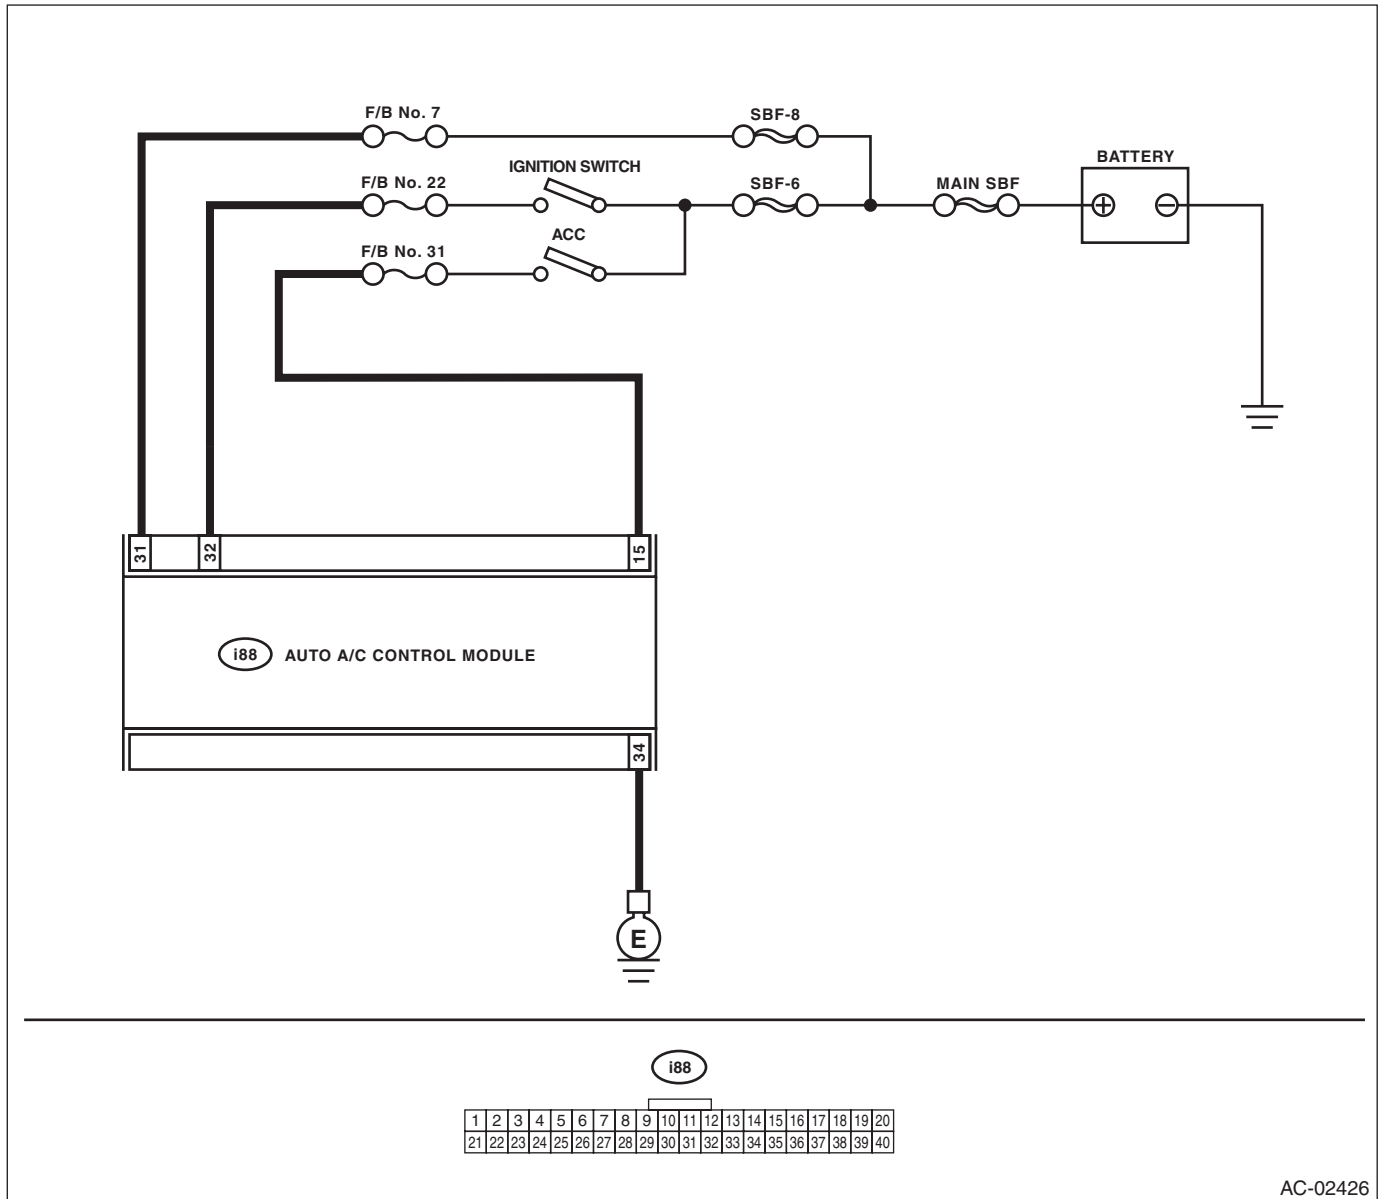

TROUBLE SYMPTOM:

Defroster switch (with left/right independent air conditioning function) or FRESH/RECIRC switch (without left/right independent air conditioning function) indicator blinks when the ignition switch is turned from OFF to ON.

NOTE:

When the ignition switch is turned from OFF to ON immediately after the reconnection of the battery or when the battery power supply voltage is low (battery voltage: 9 V or less), the indicator may blink. Throughout this blinking period, the system recognizes the specified position of the air mix door actuator and mode door actuator. So, this is not a malfunction. (Number of blinking: 12 at 0.5 second intervals)

WIRING DIAGRAM:

AC-02426

Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK INDICATOR BLINKING. Turn the ignition switch to ON.	Does the indicator blink?	Go to step 2.	System is normal.
2	CHECK INDICATOR BLINKING. 1) Turn the ignition switch to OFF and wait for 3 minutes. 2) Turn the ignition switch to ON again.	Does the indicator blink?	Go to step 3.	System is normal.
3	CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the auto A/C control module harness connector. 3) Measure the voltage between auto A/C control module and chassis ground after turning the ignition switch to the ON position. Connector & terminal (i88) No. 31 (+) — Chassis ground (-):	Is the voltage 9 V or less?	Check the harness for open or short circuit. Check the battery condition.	System is normal.

F: FRESH/RECIRC SWITCH LIGHT IS BLINKING

Refer to the "Defroster switch indicator blinks" for diagnostic procedure. <Ref. to AC(diag)-26, DEFROSTER SWITCH LIGHT IS BLINKING, Diagnostics for A/C System Malfunction.>

Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

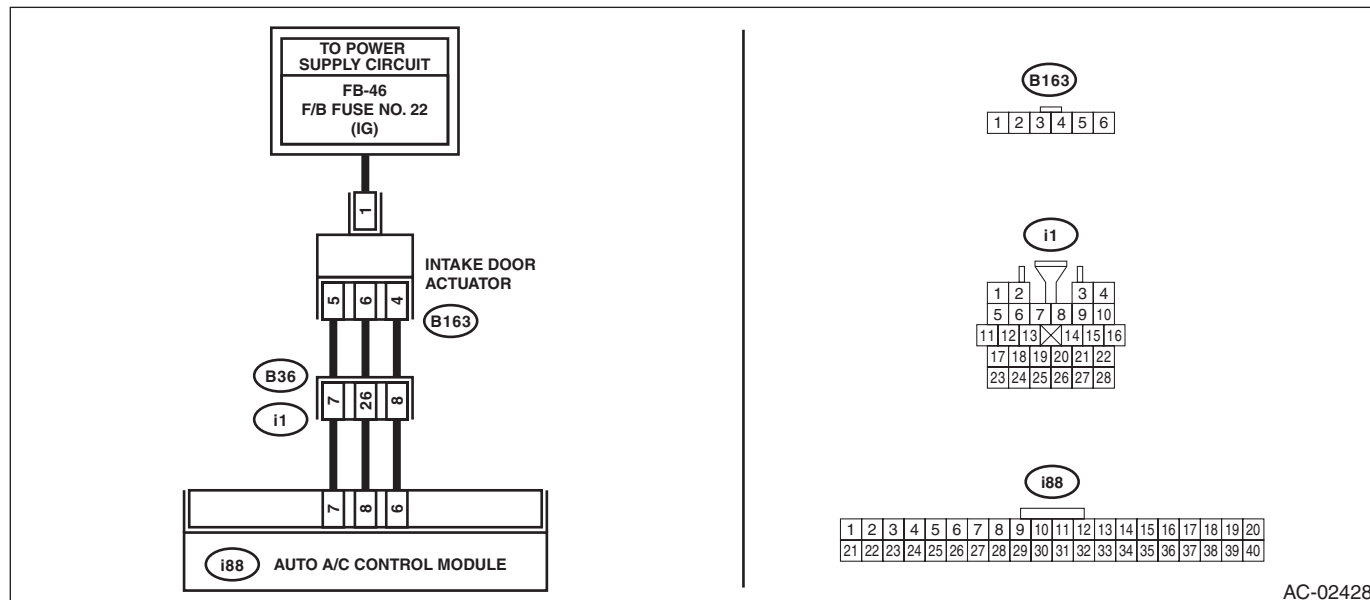

7. Diagnostic Procedure for Actuators

A: INTAKE DOOR ACTUATOR

TROUBLE SYMPTOM:

FRESH/RECIRC mode is not changed.

WIRING DIAGRAM:

AC-02428

Step	Check	Yes	No
1 CHECK POWER SUPPLY FOR INTAKE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the intake door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake door actuator connector and chassis ground. <i>Connector & terminal</i> <i>(B163) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Check for open or short circuit in the harness between intake door actuator and fuse.
2 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND INTAKE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the auto A/C control module connector. 3) Measure the resistance between intake door actuator connector and auto A/C control module connector. <i>Connector & terminal</i> <i>(i88) No. 8 — (B163) No. 6:</i> <i>(i88) No. 7 — (B163) No. 5:</i> <i>(i88) No. 6 — (B163) No. 4:</i>	Is the resistance less than 1 Ω ?	Go to step 3.	Repair the harness between auto A/C control module and intake door actuator.
3 CHECK OPERATION OF INTAKE DOOR ACTUATOR. 1) Connect the intake door actuator connector. 2) Ground the auto A/C control module connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. <i>Connector & terminal</i> <i>(i88) No. 6 — Chassis ground:</i>	Does the actuator move to the FRESH side?	Go to step 4.	Replace the intake door actuator.

Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
4 CHECK OPERATION OF INTAKE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Ground the auto A/C control module connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. Connector & terminal: (i88) No. 8 — Chassis ground:	Does the actuator move to the RECIRC side?	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>	Replace the intake door actuator.

Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: MODE DOOR ACTUATOR

TROUBLE SYMPTOM:

Air flow outlet is not changed.

WIRING DIAGRAM:

AC-02429

Step	Check	Yes	No
1 CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the mode door actuator connector terminal and chassis ground. <i>Connector & terminal</i> <i>(B77) No. 3 (+) — Chassis ground (-):</i>	Is the voltage approx. 10 V or more?	Go to step 2.	Check the DC power supply circuit.
2 CHECK MODE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between mode door actuator terminals using a tester. <i>Connector & terminal</i> <i>(B77) No. 3 — No. 1:</i> <i>(B77) No. 3 — No. 2:</i> <i>(B77) No. 3 — No. 5:</i> <i>(B77) No. 3 — No. 6:</i>	Is the resistance 80 — 100 Ω?	Go to step 3.	Replace the mode door actuator.

Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR. 1) Disconnect the auto A/C control module connector. 2) Measure the resistance between auto A/C control module and mode door actuator connector. Connector & terminal <i>(B77) No. 1 — (i88) No. 4:</i> <i>(B77) No. 2 — (i88) No. 3:</i> <i>(B77) No. 5 — (i88) No. 2:</i> <i>(B77) No. 6 — (i88) No. 1:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness between auto A/C control module and mode door actuator.
4 CHECK FOR POOR CONTACT. Check poor contact of auto A/C control module and connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostic Procedure for Actuators

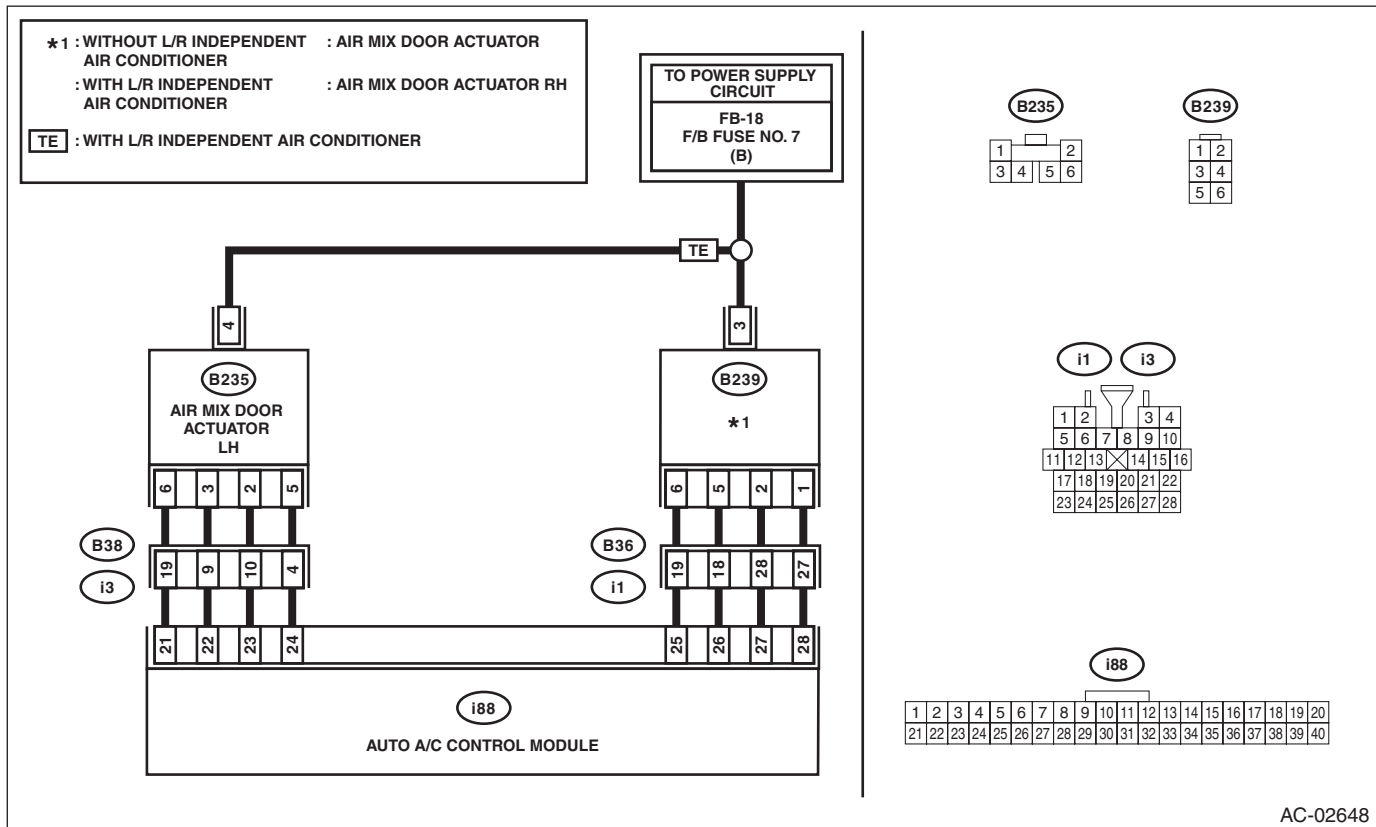

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: AIR MIX DOOR ACTUATOR

TROUBLE SYMPTOM:

Outlet air temperature does not change.

WIRING DIAGRAM:

AC-02648

Step	Check	Yes	No
<p>1</p> <p>CHECK POWER SUPPLY OF AIR MIX DOOR ACTUATOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the air mix door actuator connector.</p> <p>3) Turn the ignition switch to ON.</p> <p>4) Measure the voltage between the air mix door actuator connector terminal and chassis ground.</p> <p>Connector & terminal</p> <p>Without left/right independent air conditioning function</p> <p>(B239) No. 3 (+) — Chassis ground (-):</p> <p>With left/right independent air conditioning function</p> <p>(B235) No. 4 (+) — Chassis ground (-):</p> <p>(B239) No. 3 (+) — Chassis ground (-):</p>	<p>Is the voltage approx. 10 V or more?</p>	<p>Go to step 2.</p>	<p>Check the DC power supply circuit.</p>

Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p>2</p> <p>CHECK AIR MIX DOOR ACTUATOR.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Measure the resistance between air mix actuator terminals using a tester.</p> <p>Connector & terminal</p> <p>Without left/right independent air conditioning function</p> <p>(B239) No. 3 — No. 1: (B239) No. 3 — No. 2: (B239) No. 3 — No. 5: (B239) No. 3 — No. 6:</p> <p>With left/right independent air conditioning function</p> <p>(B235) No. 4 — No. 2: (B235) No. 4 — No. 3: (B235) No. 4 — No. 5: (B235) No. 4 — No. 6: (B239) No. 3 — No. 1: (B239) No. 3 — No. 2: (B239) No. 3 — No. 5: (B239) No. 3 — No. 6:</p>	Is the resistance 80 — 100 Ω?	Go to step 3.	Replace the air mix door actuator.

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

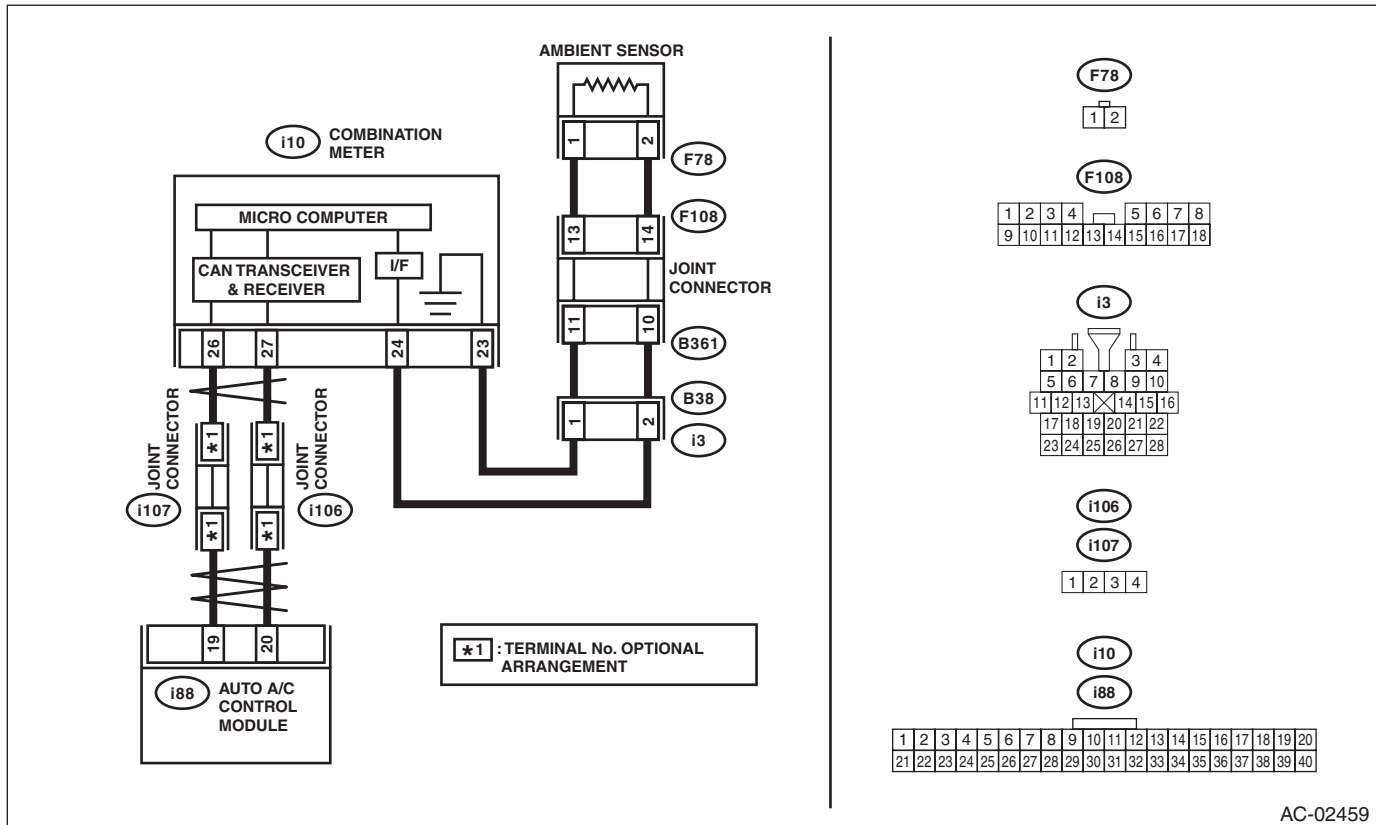

8. Diagnostic Procedure for Sensors

A: AMBIENT SENSOR

TROUBLE SYMPTOM:

- Fan speed is not switched when the fan speed control dial is in AUTO position.
- Failure related to the ambient sensor is indicated in self-diagnosis.

WIRING DIAGRAM:

AC-02459

Step	Check	Yes	No
1 CHECK AMBIENT SENSOR. Perform the inspection of ambient sensor unit. <Ref. to AC-51, INSPECTION, Ambient Sensor (Auto A/C Model).>	Is the ambient sensor operating properly?	Go to step 2.	Replace the ambient sensor. <Ref. to AC-50, REMOVAL, Ambient Sensor (Auto A/C Model).>
2 CHECK INPUT SIGNAL FOR AMBIENT SENSOR. 1) Turn the ignition to ON. 2) Measure the voltage between connector (F78) terminals. Connector & terminal (F78) No. 2 (+) — No. 1 (-):	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK COMBINATION METER OUTPUT SIGNAL. 1) Turn the ignition switch to OFF. 2) Pull out the combination meter. 3) Disconnect the connector from ambient sensor. 4) Turn the ignition switch to ON. 5) Measure the voltage between the combination meter connector terminals. <i>Connector & terminal (i10) No. 24 (+) — No. 23 (-):</i>	Is the voltage approx. 5 V?	Go to step 4.	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>
4 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AMBIENT SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the combination meter. 3) Measure the resistance of harness between combination meter and ambient sensor. <i>Connector & terminal (F78) No. 1 — (i10) No. 23:</i>	Is the resistance less than 1 Ω ?	Go to step 5.	Repair the open circuit of the harness between the combination meter and ambient sensor.
5 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AMBIENT SENSOR. Measure the resistance of harness between combination meter and ambient sensor. <i>Connector & terminal (F78) No. 2 — (i10) No. 24:</i>	Is the resistance less than 1 Ω ?	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>	Repair the open circuit of the harness between the combination meter and ambient sensor.
6 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AUTO A/C CONTROL MODULE. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the combination meter. 3) Disconnect the auto A/C control module connector. 4) Measure the resistance of harness between the combination meter and auto A/C control module. <i>Connector & terminal (i88) No. 19 — (i10) No. 26:</i>	Is the resistance less than 1 Ω ?	Go to step 7.	Repair the open circuit in the harness between the combination meter and auto A/C control module. <Ref. to LAN(diag)-6, LAN SYSTEM, CAUTION, General Description.>
7 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AUTO A/C CONTROL MODULE. Measure the resistance of harness between the combination meter and auto A/C control module. <i>Connector & terminal (i88) No. 20 — (i10) No. 27:</i>	Is the resistance less than 1 Ω ?	Go to step 8.	Repair the open circuit in the harness between the combination meter and auto A/C control module. <Ref. to LAN(diag)-6, LAN SYSTEM, CAUTION, General Description.>
8 CHECK FOR POOR CONTACT. Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: IN-VEHICLE SENSOR

TROUBLE SYMPTOM:

- Blower fan speed, air flow outlet and FRESH/RECIRC do not change after turning the AUTO switch to ON.
- Failure related to the in-vehicle sensor is indicated in self-diagnosis.

WIRING DIAGRAM:

AC-01700

Step	Check	Yes	No
1 CHECK IN-VEHICLE SENSOR. Perform the inspection of in-vehicle sensor unit. <Ref. to AC-54, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the in-vehicle sensor normal?	Go to step 2.	Replace the in-vehicle sensor. <Ref. to AC-53, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
2 CHECK INPUT SIGNAL FOR IN-VEHICLE SENSOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between in-vehicle sensor harness connector terminals. Connector & terminal <i>(i55) No. 2 (+) — No. 1 (-):</i>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.
3 CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL. 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. Connector & terminal <i>(i88) No. 17 (+) — (i88) No. 14 (-):</i>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 6.

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

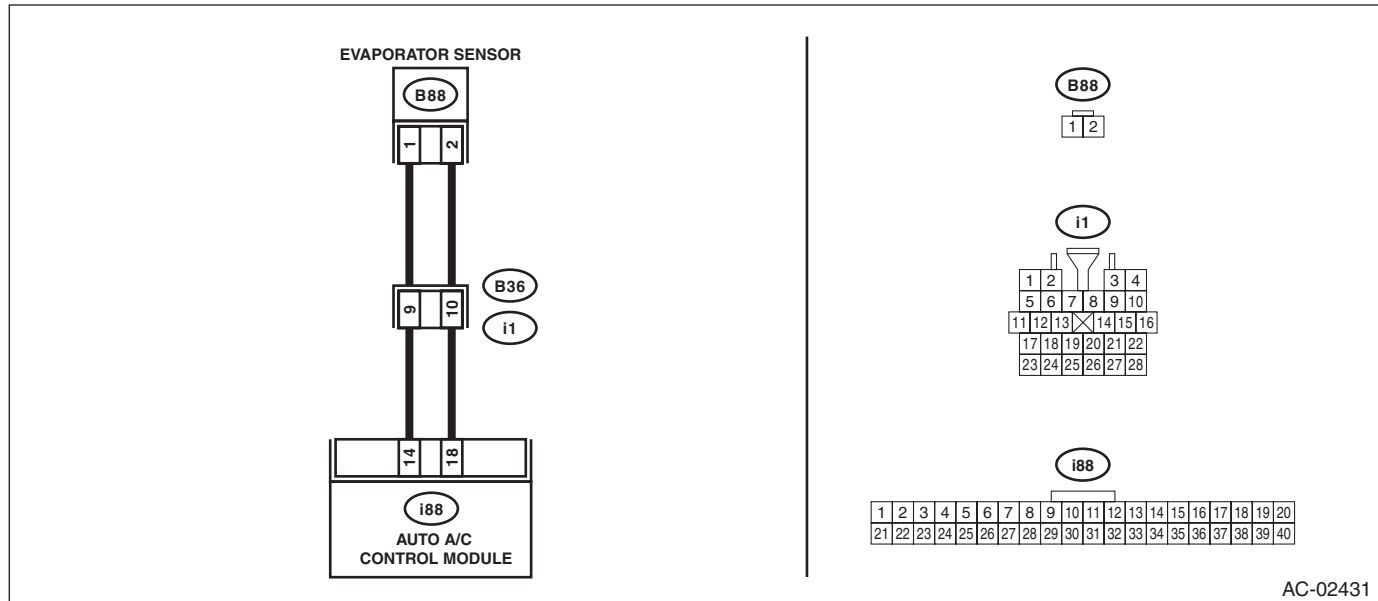

Step	Check	Yes	No
4 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of harness between auto A/C control module and in-vehicle sensor. Connector & terminal <i>(i55) No. 2 — (i88) No. 17:</i>	Is the resistance less than 1 Ω ?	Go to step 5.	Repair the harness between auto A/C control module and in-vehicle sensor.
5 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR. Measure the resistance of harness between auto A/C control module and in-vehicle sensor. Connector & terminal <i>(i55) No. 1 — (i88) No. 14:</i>	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the harness between auto A/C control module and in-vehicle sensor.
6 CHECK FOR POOR CONTACT. Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: EVAPORATOR SENSOR

WIRING DIAGRAM:

AC-02431

Step	Check	Yes	No
1 CHECK EVAPORATOR SENSOR. Perform the inspection of evaporator sensor unit. <Ref. to AC-43, INSPECTION, Evaporator.>	Is the evaporator sensor normal?	Go to step 2.	Replace the evaporator sensor.
2 CHECK INPUT SIGNAL FOR EVAPORATOR SENSOR. 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (B88) terminals. <i>Connector & terminal</i> <i>(B88) No. 2 (+) — No. 1 (-):</i>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.
3 CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL. 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. <i>Connector & terminal</i> <i>(i88) No. 18 (+) — (i88) No. 14 (-):</i>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 6.
4 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of harness between auto A/C control module and evaporator sensor. <i>Connector & terminal</i> <i>(B88) No. 2 — (i88) No. 18:</i>	Is the resistance less than 1 Ω?	Go to step 5.	Repair the open circuit of harness between auto A/C control module and evaporator sensor.

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR. Measure the resistance of harness between auto A/C control module and evaporator sensor. Connector & terminal (B88) No. 1 — (i88) No. 14:	Is the resistance less than 1 Ω ?	Go to step 6.	Repair the open circuit of harness between auto A/C control module and evaporator sensor.
6 CHECK FOR POOR CONTACT. Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

D: SUNLOAD SENSOR

TROUBLE SYMPTOM:

- Sensor identifies that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identifies that sunlight is at minimum. Then, A/C system is controlled to HOT side.

NOTE:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor with the sun shining on it.

WIRING DIAGRAM:

AC-01702

Step	Check	Yes	No
1 CHECK POWER SUPPLY VOLTAGE FOR SUNLOAD SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from sunload sensor. 3) Turn the ignition switch to ON. 4) Measure the power supply voltage for sunload sensor. <i>Connector & terminal</i> <i>(i51) No. 2 (+) — No. 1 (-):</i>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of the harness between the auto A/C control module and sunload sensor. <i>Connector & terminal</i> <i>(i51) No. 2 — (i88) No. 16:</i>	Is the resistance less than 1 Ω?	Go to step 3.	Repair the harness between auto A/C control module and sunload sensor.

Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR. Measure the resistance of the harness between the auto A/C control module and sunload sensor. <i>Connector & terminal</i> <i>(i51) No. 1 — (i88) No. 14:</i>	Is the resistance less than 1 Ω ?	Go to step 4.	Repair the harness between auto A/C control module and sunload sensor.
4 CHECK INPUT VOLTAGE FOR AUTO A/C CONTROL MODULE. 1) Connect the connectors of sunload sensor and auto A/C control module. 2) Turn the ignition switch to ON. 3) Measure the voltage between connector terminals of auto A/C control module. <i>Connector & terminal</i> <i>(i88) No. 16 (+) — (i88) No. 14 (-):</i>	Is the voltage within approximately 1.0 — 4.0 V?	Go to step 5.	Replace the sunload sensor. <Ref. to AC-52, REMOVAL, Sunload Sensor (Auto A/C Model).>
5 CHECK FOR POOR CONTACT. Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>

Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

9. Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
A/C system fails to operate.	<ul style="list-style-type: none"> • Fuse (F/B No. 7, 22, 31) • Connector (Poor contact) • Ground • Auto A/C control module • Blower fan motor • Blower fan relay • A/C relay • Compressor (Magnet clutch) • Evaporator sensor • ECM

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

10. STEERING ROLL CONNECTOR

11. AIRBAG HARNESS

B: CAUTION

1. BEFORE STARTING ALL WORKS

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 60 seconds or more before starting work.
- The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.

- If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wiring harness of airbag system.
- When painting or performing sheet metal work on the side of the vehicle including the side sill, center pillar and front and rear doors, or on the rear floor pan or around the rear crossmember, remove the side airbag sensors, curtain airbag sensor, satellite safing sensor and wiring harness of the airbag system.

- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

General Description

AIRBAG SYSTEM

2. BEFORE STARTING PARTS REPLACEMENT

- If any of the airbag sensors, airbag module, airbag control module, pretensioner, harness or satellite safing sensor cover is deformed or damaged, replace with new parts.

- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

- Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
- Never reuse any activated airbag module and pretensioner.
- Do not discard undeployed airbag or pretensioner.
- When airbag control module, front sub sensor, side airbag sensor, curtain airbag sensor and satellite safing sensor are removed, do not reuse the bolts and nuts of them. Always replace with the specified new bolts and nuts.
- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

- After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

- Do not drop each airbag module, airbag control module and each sensor, or store these parts under high temperature of 85°C (185°F) or more, or let water, oil or grease get on them; the internal parts may be damaged or the reliability may be decreased.

- When storing a removed airbag module, do not place it with the pad side facing downward. Do not place any objects on the airbag module. Do not pile up the airbag module. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.

- Driver's airbag module

- Passenger's airbag module and side airbag module

- Do not disassemble driver's airbag module, passenger's airbag module, side or curtain airbag modules, or pretensioner.

- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) 200 mm (8 in) or more

General Description

AIRBAG SYSTEM

3. BEFORE STARTING TROUBLESHOOTING

- Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

- Do not check continuity of the airbag modules for driver's side, passenger's side and curtain, or the pretensioner.

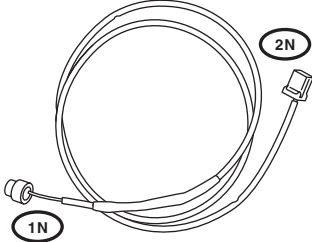

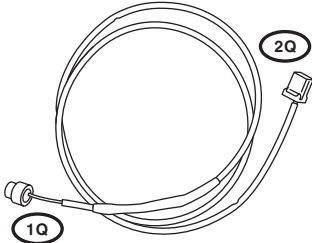

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST98299SA000</p>	98299SA000	TEST HARNESS N	Used for inspecting the steering roll connector.

2. GENERAL TOOL

TOOL NAME	REMARKS
TORX® T30	Used for removal/installation of driver's airbag module

Airbag Connector

AIRBAG SYSTEM

2. Airbag Connector

A: PROCEDURE

1. POWER SUPPLY

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

Press the lock (A), and then disconnect the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

2. AIRBAG CONTROL MODULE

1) How to disconnect:

Press the lock lever plate (A) and pull out the lock lever.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Insert the connector and push the lock lever in securely.

3. DRIVER'S AIRBAG MODULE (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR) AND PASSENGER'S AIRBAG MODULE

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the slide lock (A) in the direction of arrow.

(2) With the slide lock pushed, disconnect the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

4. DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER

1) How to disconnect:

(1) Using a flat tip screwdriver, pry the push lock upward to unlock.

(2) Pull the connector to disconnect from the driver's airbag module assembly or the retractor assembly.

2) How to connect:

CAUTION:

- Be sure to insert the connector in until it is locked.
- Be sure to push the push lock in securely. Then pull it gently to make sure that it is locked.

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

Airbag Connector

AIRBAG SYSTEM

5. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock arm.

(2) Holding outer part, pull it one step in the direction of arrow.

(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

6. SATELLITE SAFING SENSOR

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

Holding outer part (A), pull it in the direction of arrow.

2) How to connect:

CAUTION:

• **Do not touch the outer side section or else the outer side (A) will move back.**

• **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

7. SIDE AIRBAG MODULE

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Move the slide lock (A) in the direction of arrow and hold it.
- (2) With the slide lock (A) moved, pull the connector (B) in the direction of arrow.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

8. BUCKLE SWITCH RH

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- (1) Move the slide lock (A) in the direction of arrow and hold it.
- (2) With the slide lock (A) moved, pull the connector (B) in the direction of arrow.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

9. FRONT SUB SENSOR

1) How to disconnect:

CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock arm.

(2) Holding outer part, pull it for one level in the direction of arrow.

(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to separate the connector.

2) How to connect:

CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

3. Inspection Locations after a Collision

A: REPLACEMENT

Replace the following parts if the airbag has been activated.

1. FRONT COLLISION

- 1) Driver's airbag module
- 2) Passenger's airbag module
- 3) Driver's seat belt pretensioner
- 4) Passenger's seat belt pretensioner
- 5) Airbag control module
- 6) Front sub sensor (right and left)
- 7) Roll connector
- 8) Passenger's side seat cushion pad and frame assembly
- 9) Instrument panel (for integrating with passenger's airbag module)

2. SIDE COLLISION

- 1) Airbag control module
- 2) Satellite safing sensor
- 3) Satellite safing sensor cover (model without rear seat center table)
- 4) Driver's seat belt pretensioner
- 5) Passenger's seat belt pretensioner
- 6) Side airbag module (operating side seat backrest)
- 7) Side airbag sensor (operating side)
- 8) Curtain airbag module (operating side)
- 9) Curtain airbag sensor (operating side)

3. INSPECTION OF OTHER PARTS

Check for the following parts, and replace the damaged parts with new parts.

- 1) Steering wheel and steering shaft

Check the steering shaft for mounting conditions and deflection of front and rear, upward and downward directions, and deflection of front and rear direction with tilt lever released. (After a collision, absorbing part of steering shaft may have been operated.)

- 2) Check the direct type connector of driver's airbag module, curtain airbag module, pretensioner, etc. for damage, and also check each harness for pinch and connector damage. Replace the main harness as a unit if damage is found.

- 3) Check the seat cushion, backrest, slide rail and headrest for installation condition and looseness.

- 4) For the passenger's seat, replace the seat cushion pad frame assembly with a new part if the seat cushion frame assembly is deformed or cracked.

- 5) If there are tears or loosening in the passenger side seat cushion cover, it may interfere with the proper operation of the occupant detection system. Replace with a new cushion cover.

- 6) Be sure to perform the system calibration for the occupant detection system after removing or replacing the passenger seat cushion cover. If system adjustment is not performed, the occupant detection system may not function properly. <Ref. to OD(diag)-18, OPERATION, System Calibration (Rezeroing).>

- 7) Use the Subaru Select Monitor to check the front right seat belt buckle switch is operating normally.

Inspection Locations after a Collision

AIRBAG SYSTEM

B: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

1. DRIVER'S AIRBAG MODULE

1) Check for the following, and replace the damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- The module surface is fouled with grease, oil, water or cleaning solvent.

2) When installing a new driver's airbag module, check for the following, and replace the damaged parts with new parts.

- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.
- When steering wheel deformation in axial and vertical directions exceed limits.

Standard:

Axial deflection A

Less than 6 mm (0.24 in)

Vertical deflection L

Less than 17 mm (0.68 in)

2. PASSENGER'S AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket is cracked or deformed.

3. SIDE AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Front seat, airbag module and mounting bracket are damaged or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.

4. CURTAIN AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

5. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag has been activated.
- Side airbag has been activated.
- Curtain airbag has been activated.

6. FRONT SUB SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag has been activated.

7. SATELLITE SAFING SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Satellite safing sensor, side airbag sensor and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.
- Satellite safing sensor cover is cracked or deformed. (model without rear seat center table)
- Connector is scratched, cracked or deformed.
- Side airbag or curtain airbag has been activated. (operating side)

8. ROLL CONNECTOR

Check for the following, and replace the damaged parts such as cracks, deformation, etc. with new parts.

- Combination switch
- Steering roll connector

9. STEERING SHAFT

Measure the whole length of the steering column. If there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

Standard: Overall length L

Tilt column

$$833.6^{+1.3} -0.3 \text{ mm } (32.82^{+0.051} -0.012 \text{ in})$$

Tilt and telescopic column (measure while minimized)

$$818.6^{+1.5} -1.5 \text{ mm } (32.23^{+0.059} -0.059 \text{ in})$$

10.PASSENGER'S SEAT

1) Check for the following, and replace the damaged parts with new parts.

- Seat belt buckle body or bracket is scratched, cracked or deformed.
- Backrest frame for crack or deformation
- Headrest for deformation or play
- If the seat cushion cover and seat backrest cover is scratched or coming loose, replace with a new cover and readjust the system. <Ref. to OD(diag)-18, OPERATION, System Calibration (Rezeroing).>

CAUTION:

If any of the following applies, replace the seat cushion pad and frame assembly. Do not disassemble.

- **Cracks or deformation found in the seat cushion frame or seat cushion pad.**
- **Scratches, cracks, or deformation found on the passenger detection system pressure sensor hoses or passenger detection control module, or attachment brackets of the control module.**
- **Harness and/or connector is cracked, deformed or open. Harness wire is exposed.**

2) After checking the installing condition of passenger's seat, perform the system calibration of occupant detection system. <Ref. to OD(diag)-18, OPERATION, System Calibration (Rezeroing).>

11.BELT TENSION SENSOR

Check for the following, and replace the damaged parts with new parts.

- Belt tension sensor is scratched, cracked, or deformed.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.

4. Driver's Airbag Module

A: REMOVAL

CAUTION:

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Position the front wheels straight ahead. (After moving a vehicle 5 m (16 ft) or more with front wheels positioned straight ahead, make sure that the vehicle moves straight ahead.)
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 4) Using TORX® bit T30 (1), remove the two TORX® bolts on the side of the steering wheel.

- 5) Disconnect the horn harness.
- 6) Disconnect the airbag connector on the back of airbag module, and then remove the airbag module. <Ref. to AB-10, PROCEDURE, Airbag Connector.>

- 7) For handling of the removed airbag module, refer to "CAUTION". <Ref. to AB-5, CAUTION, General Description.>

B: INSTALLATION

CAUTION:

- Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
 - Do not allow harness and connectors to interfere or get tangled up with other parts.
- Install each part in the reverse order of removal.

Tightening torque:

10 N·m (1.02 kgf-m, 7.4 ft-lb)

C: INSPECTION

CAUTION:

- Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
 - Do not allow harness and connectors to interfere or get tangled up with other parts.
- Check for the following, and replace the damaged parts with new parts. <Ref. to AB-16, DRIVER'S AIRBAG MODULE, INSPECTION, Inspection Locations after a Collision.>
- Airbag module
 - Harness
 - Connector
 - Mounting bracket

5. Passenger's Airbag Module

A: REMOVAL

CAUTION:

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the instrument panel. <Ref. to EI-53, REMOVAL, Instrument Panel Assembly.>
- 4) Remove the claw, and remove the passenger's airbag module.

- 5) For handling of the removed airbag module, refer to "CAUTION". <Ref. to AB-5, CAUTION, General Description.>

B: INSTALLATION

CAUTION:

Do not allow harness and connectors to interfere or get tangled up with other parts.

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

CAUTION:

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts. <Ref. to AB-16, PASSENGER'S AIRBAG MODULE, INSPECTION, Inspection Locations after a Collision.>

- Airbag module
- Harness
- Connector
- Mounting bracket

Side Airbag Module

AIRBAG SYSTEM

6. Side Airbag Module

A: REMOVAL

CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

NOTE:

Remove the passenger’s side by referring to driver’s side.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the front seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>
- 4) Remove the clip from reverse side of seat cushion assembly and slide rail, and then remove the side airbag harness.
- 5) Remove the side airbag harness from backrest frame assembly.
- 6) Remove the plastic fastener at the back side (bottom) of backrest.

- 7) Open the fastener at the rear side of backrest.

- 8) Remove the hog rings of backrest cover.

CAUTION:

Be careful not to tear the vinyl inside the seat when removing the hog rings. If torn, replace with a new part.

- 9) Remove the pad (A), and remove the mounting nut from the side airbag module.

- 10) Remove the side airbag harness from backrest frame assembly.

B: INSTALLATION

CAUTION:

- Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
- Be sure to perform the system calibration for occupant detection system after passenger’s seat installation. <Ref. to OD(diag)-18, OPERATION, System Calibration (Rezeroing).>
- When installing the side airbag module assembly, be sure to put the side airbag module between backrest cover and airbag guide cloth.

- (A) Airbag guide cloth
- (B) Backrest cover
- (C) Side airbag module ASSY

- (1) Backrest frame ASSY
- (2) Airbag guide cloth
- (3) Backrest cover
- (4) Side airbag module ASSY
- (5) Hexagon cap nut

Besides, when the backrest cover is not installed securely, the side airbag module may not be activated properly, therefore keep strictly to the following procedure.

- Be careful not to stain or damage the backrest cover during assembly.
- Do not reuse hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on backrest cover.

- 1) Make sure that there is no foreign matter on side airbag module.
- 2) Install the side airbag module (A) to backrest frame assembly.

Tightening torque:

6 N·m (0.61 kgf-m, 4.4 ft-lb)

- 3) Install the side airbag harness to backrest frame assembly.
- 4) Install the backrest cover.
- 5) Install the side airbag harness to the clips on the back of the seat cushion assembly and on the slide rail.
- 6) Recline the seat or slide it backward and forward, and check there is no contact between the seat backrest assembly, cushion cover assembly and side airbag harness.
- 7) Install the front seat to the vehicle body.

Tightening torque:

Front seat assembly: <Ref. to SE-2, FRONT SEAT LH, COMPONENT, General Description.>

C: INSPECTION

CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

Check for the following, and replace damaged parts with new parts. <Ref. to AB-16, SIDE AIRBAG MODULE, INSPECTION, Inspection Locations after a Collision.>

1) With side collision (when side airbag is activated)

- Side airbag module assembly
- Satellite safing sensor
- Side airbag sensor
- Curtain airbag sensor
- Backrest pad assembly
- Backrest frame assembly
- Backrest cover assembly

2) When damage is found by visual check

- Headrest assembly
- Headrest lock bushing
- Outer slide rail
- Inner slide rail
- Seat hinge cover
- Seat lifter lever
- Reclining lever
- Side airbag harness and connector on body side
- Satellite safing sensor cover (model without rear seat center table)

3) With side collision (when side airbag is not activated)

Check the seat, airbag module, sensor visually, and then replace them with new parts if damaged or cracked.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

4) Without side collision (dirt and damage of cover)

Replace the corresponding part with a new part.

7. Curtain Airbag Module

A: REMOVAL

CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the upper inner trim. <Ref. to EI-58, REMOVAL, Upper Inner Trim.>
- 4) Remove the rear quarter trim. <Ref. to EI-60, REMOVAL, Rear Quarter Trim.>
- 5) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 6) Disconnect the curtain airbag module connector.

- 7) Remove the inflator pad.

- 8) Remove the bolt, and remove the curtain airbag module.

CAUTION:

- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.

B: INSTALLATION

CAUTION:

- Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
- When installing the curtain airbag module, install a specified part at specified place.
- Be careful not to damage the curtain airbag module during installation.
- Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.
- Make sure that there are no foreign matter on airbag module.

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft-lb)

C: INSPECTION

CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts. <Ref. to AB-16, CURTAIN AIRBAG MODULE, INSPECTION, Inspection Locations after a Collision.>

1) With side collision (when curtain airbag is activated)

- Curtain airbag module assembly
- Satellite safing sensor
- Curtain airbag sensor
- Roof trim
- Front pillar upper trim
- Center pillar upper trim
- Rear quarter pillar trim
- Airbag guide

2) When damage is found by visual check

- Assist grip
- Assist grip bracket
- Curtain airbag harness and connector on body side.
- Satellite safing sensor cover (model without rear seat center table)

3) With side collision (when curtain airbag is not activated)

Check the roof trim, pillar trim, airbag module and sensor visually, and then replace them with new parts if damaged or cracked.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

4) Without side collision (dirt and damage of cover)
Replace the corresponding part with a new part.

8. Airbag Control Module

A: REMOVAL

CAUTION:

- Do not disassemble the airbag control module.
- If the airbag control module is deformed or if the damage from water is suspected, replace the airbag control module with a new part.
- Do not drop the airbag control module.
- After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 4) Remove the console front panel. <Ref. to EI-50, CONSOLE FRONT PANEL, REMOVAL, Center Console.>
- 5) Remove the audio.
- 6) Disconnect the connector from airbag control module.
- 7) Remove the three bolts and remove airbag control module.

AB-02031

B: INSTALLATION

CAUTION:

- Do not reuse the bolt and nut.
- Always replace with the specified new bolts and nuts.
- Before installing the audio, make sure that the heater duct is securely connected.
- Install each part in the reverse order of removal.

Tightening torque:

25 N·m (2.55 kgf·m, 18.1 ft·lb)

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Control module, connector, and mounting bracket are damaged.
- Airbag has been activated.
- Side airbag has been activated.
- Curtain airbag has been activated.

9. Front Sub Sensor

A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the front bumper face. <Ref. to EI-29, REMOVAL, Front Bumper.>
- 4) Remove the headlight assembly. <Ref. to LI-18, REMOVAL, Headlight Assembly.>
- 5) Remove the bolt, and then detach the front sub sensor.

- 6) Disconnect the connector from front sub sensor.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

- Do not reuse the bolt and nut. Always replace with the specified new bolts and nuts.
- When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.
- After the installation of headlight assembly, be sure to perform headlight beam adjustment.

Tightening torque:

13 N·m (1.32 kgf·m, 9.6 ft·lb)

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Front sub sensor or connector is damaged.
- Airbag has been activated.

10.Side Airbag Sensor

A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the front outer seat belt. <Ref. to SB-17, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
- 4) Remove the nuts and then remove the side airbag sensor.

CAUTION:

- Do not separate the side airbag sensor and bracket. It cause the airbag system malfunction.
- If the sensor is removed from the bracket, be sure to replace with a new part.

- 5) Disconnect the airbag connector.

B: INSTALLATION

CAUTION:

Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

- 1) Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- 2) Adjust the headlight beam and fog light beam.
 - Adjust the headlight beam. <Ref. to LI-19, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
 - Adjust the fog light beam. (Model with fog light) <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- The bracket or connector of side airbag sensor is damaged.
- Side airbag has been activated.

11. Curtain Airbag Sensor

A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the rear seat cushion assembly and seatback shoulder. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 4) Remove the nuts and then remove the curtain airbag sensor.

- 5) Disconnect the airbag connector.

B: INSTALLATION

CAUTION:

- Do not reuse the bolt and nut. Always replace with the specified new bolts and nuts.
- When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Curtain airbag sensor or connector is damaged.
- Curtain airbag has been activated.

12.Satellite Safing Sensor

A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the rear seat cushion. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 4) Remove the satellite safing sensor cover. (model without rear seat center table)

- 5) Remove the nut, and remove the satellite safing sensor.

CAUTION:

- Do not separate the satellite safing sensor and bracket. It cause the airbag system malfunction.
- If the sensor is removed from the bracket, be sure to replace with a new part.

- 6) Disconnect the airbag connector.

B: INSTALLATION

CAUTION:

- Do not reuse the bolt and nut.
- Always replace with the specified new bolts and nuts.
- When installing the satellite safing sensor cover, push the cover securely until it contacts the floor panel.
 - When the installation of the satellite safing sensor cover becomes loose and it can be removed easily, replace the cover with a new part.
 - After installing the satellite safing sensor cover, make sure that the sensor harness does not get caught.

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Mounting bracket or connector of satellite safing sensor is damaged.
- The satellite safing sensor cover is damaged
- Side airbag or curtain airbag has been activated.

Roll Connector

13. Roll Connector

A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 3) Remove the driver's airbag module. <Ref. to AB-18, Driver's Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-13, REMOVAL, Steering Wheel.>
- 5) Remove the steering column cover.
- 6) Remove the screws, and then remove the roll connector.

B: INSTALLATION

- 1) Before attaching a new roll connector, apply a thin coat of grease contained in the connector onto the areas shown by the arrows.

- 2) Install each part in the reverse order of removal.
- 3) Before installing steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-31, ADJUSTMENT, Roll Connector.>

C: INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Combination switch is cracked or deformed.
- Roll connector is cracked or deformed.

2. UNIT INSPECTION OF ROLL CONNECTOR

CAUTION:

- Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
- When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.

- 1) Adjust the roll connector. <Ref. to AB-31, ADJUSTMENT, Roll Connector.>
- 2) Set the roll connector to the central position.
- 3) Connect the test harness to the airbag module connectors (black) and (orange).

PREPARATION TOOL:

Test harness N (98299SA000)

Test harness Q (98299SA040)

Airbag module connector (black) — Test harness (1N)

Airbag module connector (orange) — Test harness (1Q)

- 4) With the following conditions, check the resistance between the test harness connector terminals.

- Perform the check with the roll connector centered (front wheels direct straightforward).
- Rotate the roll connector counterclockwise from the center (front wheels direct straightforward) to an end stop. Then, perform the check while rotating it clockwise to approximately 3.25 turns.

Preparation tool: Circuit tester

Terminal No.	Inspection conditions	Standard
(2N) No. 1 and (2N) No. 2	Always	Less than 1 Ω
(2Q) No. 1 and (2Q) No. 2	Always	Less than 1 Ω

NOTE:

Terminals are designed to be shorted as the connection between airbag main harness and roll connector is disconnected.

- 5) Replace the roll connector with a new part if the inspection result is not within the standard value.

D: ADJUSTMENT

CAUTION:

- Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
- When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.

- 1) Check that front wheels are positioned in straight ahead direction.
- 2) Turn the roll connector pin (A) clockwise until it stops.
- 3) Turn the roll connector pins (A) approx. 3.25 turns until “▲” marks are aligned.

Roll Connector

AIRBAG SYSTEM

AIRBAG SYSTEM (DIAGNOSTICS)

Basic Diagnostic Procedure

AIRBAG SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	CHECK WARNING LIGHT. Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	READ DTC. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to AB(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AB(diag)-25, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step 3.	Go to "Airbag Warning Light Failure" <Ref. to AB(diag)-34, Airbag Warning Light Failure.>.
3	PERFORM DIAGNOSIS. 1) Verify the identification of the vehicle. <Ref. to AB(diag)-4, Identification.> 2) Determine the possible cause from "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).> 3) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 4) Repair the trouble cause. 5) Perform the Clear Memory Mode. <Ref. to AB(diag)-31, Clear Memory Mode.> 6) Perform the Inspection Mode. <Ref. to AB(diag)-30, Inspection Mode.> 7) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

Identification

AIRBAG SYSTEM (DIAGNOSTICS)

3. Identification

A: PROCEDURE

Identify the vehicle using the chassis number, part number of the airbag control module or Subaru Select Monitor.

NOTE:

Proper identification is necessary to ensure proper diagnosis. Components are not interchangeable between airbag system Type A and Airbag System Type B.

1. IDENTIFICATION METHOD USING CHASSIS NUMBER

Type A	Chassis number: From #400018
Type B	Chassis number: Before #400017

2. IDENTIFICATION METHOD USING PART NUMBER OF AIRBAG CONTROL MODULE

Type A	Except for the following part number
Type B	98221SC100

3. IDENTIFICATION METHOD USING SUBARU SELECT MONITOR

- 1) Connect the Subaru Select Monitor, and display the main menu screen.
- 2) On the main menu screen, select {Each System Check}.
- 3) Check the description of the airbag system displayed on the system selection menu, and identify the system.

Type A	Airbag system
Type B	Airbag system B

4. General Description

A: CAUTION

1. BEFORE STARTING ALL WORKS

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 60 seconds or more before starting work.
- The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.

- If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wiring harness of airbag system.
- When painting or performing sheet metal work on the side of the vehicle including the side sill, center pillar and front and rear doors, or on the rear floor pan or around the rear crossmember, remove the side airbag sensors, curtain airbag sensor, satellite safing sensor and wiring harness of the airbag system.

- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

2. BEFORE STARTING PARTS REPLACEMENT

- If any of the airbag sensors, airbag module, airbag control module, pretensioner, harness or satellite safing sensor cover is deformed or damaged, replace with new parts.

General Description

AIRBAG SYSTEM (DIAGNOSTICS)

- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

- Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
- Never reuse any activated airbag module and pretensioner.
- Do not discard undeployed airbag or pretensioner.
- When airbag control module, front sub sensor, side airbag sensor, curtain airbag sensor and satellite safing sensor are removed, do not reuse the bolts and nuts of them. Always replace with the specified new bolts and nuts.
- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.
- After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

- Do not drop each airbag module, airbag control module and each sensor, or store these parts under high temperature of 85°C (185°F) or more, or let water, oil or grease get on them; the internal parts may be damaged or the reliability may be decreased.

- When storing a removed airbag module, do not place it with the pad side facing downward. Do not place any objects on the airbag module. Do not pile up the airbag module. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.

General Description

AIRBAG SYSTEM (DIAGNOSTICS)

- Driver's airbag module

- Passenger's airbag module and side airbag module

- Do not disassemble driver's airbag module, passenger's airbag module, side or curtain airbag modules, or pretensioner.

- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) 200 mm (8 in) or more

3. BEFORE STARTING TROUBLESHOOTING

- Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

General Description

AIRBAG SYSTEM (DIAGNOSTICS)

- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

- Do not check continuity of the airbag modules for driver's side, passenger's side and curtain, or the pretensioner.

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

B: INSPECTION

Measure the battery voltage and check electrolyte.

Standard voltage: 12 V

Specific gravity: 1.260 or more

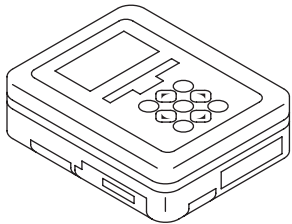

General Description

C: PREPARATION TOOL

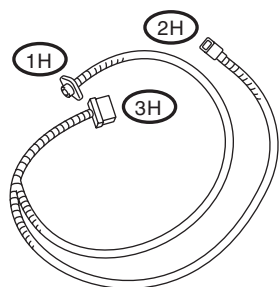

CAUTION:

To measure the voltage and resistance of airbag system component, be sure to use the specified test harness.

1. SPECIAL TOOL

6. Airbag Connector

A: PROCEDURE

For detailed operation procedures, refer to “Airbag Connector” in the airbag system section. <Ref. to AB-10, PROCEDURE, Airbag Connector.>

7. Airbag Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

- Terminal numbers in airbag control module connector are shown in the figure.
- The airbag warning light illuminates when the connector is removed from the airbag control module.

Item		Control module terminal No.
Data link connector		(1) — 16
Combination meter		(1) — 11
Battery power supply	Dedicated fuse	(1) — 21
Passenger's airbag module level one	+	(1) — 4
	-	(1) — 3
Passenger's airbag module level two	+	(1) — 1
	-	(1) — 2
Driver's airbag module level one	+	(1) — 5
	-	(1) — 6
Driver's airbag module level two	+	(1) — 8
	-	(1) — 7
Front sub sensor LH	+	(1) — 30
	-	(1) — 28
Front sub sensor RH	+	(1) — 29
	-	(1) — 27
Ground line (GND)		(1) — 25
		(1) — 26
Passenger's airbag OFF indicator		(1) — 17
Passenger's airbag ON indicator		(1) — 23
Passenger's seat belt warning light (integrated module)		(1) — 15
Seat belt pretensioner LH	+	(2) — 5
	-	(2) — 6
Side airbag sensor LH Curtain airbag sensor LH	+	(2) — 24
	-	(2) — 23
Side airbag module LH	+	(2) — 1
	-	(2) — 2
Curtain airbag module LH	+	(2) — 4
	-	(2) — 3

Airbag Control Module I/O Signal

AIRBAG SYSTEM (DIAGNOSTICS)

Item		Control module terminal No.
Satellite safing sensor (Type A)	+	(2) — 20

	-	(3) — 24

B: WIRING DIAGRAM

Refer to the WI section wiring diagram. <Ref. to WI-92, WIRING DIAGRAM, Airbag System.>

8. Subaru Select Monitor

A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to AB(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to the Subaru Select Monitor.

3) Connect the Subaru Select Monitor to the data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).

(2) Connect the diagnosis cable to the data link connector.

CAUTION:

Do not connect scan tools other than the Subaru Select Monitor.

4) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:

Defective harness connector

TROUBLE SYMPTOM:

Communication is impossible between the airbag control module and the Subaru Select Monitor.

Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

WIRING DIAGRAM:

AB-02103

Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK IGNITION SWITCH.	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select the airbag mode using the Subaru Select Monitor.
2	CHECK BATTERY. 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	CHECK BATTERY TERMINAL.	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step 4.
4	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step 11.	Go to step 5.
5	CHECK SUBARU SELECT MONITOR.	Is Subaru Select Monitor powered on?	Go to step 7.	Go to step 6.
6	CHECK FUSE. Remove fuse No. 13 from the fuse & relay box, and perform visual inspection.	Is the fuse OK?	Repair the harness between the battery and the data link connector.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
7	CHECK AIRBAG CONTROL MODULE CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step 8.	Connect the connector of the airbag control module.
8	CHECK SUBARU SELECT MONITOR COMMUNICATION. 1) Disconnect the airbag control module connector. 2) Connect the battery ground terminal. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 9.
9	CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the airbag control module, VDCCM&H/U, body integrated unit, ECM, and TCM. 3) Measure the resistance between data link connector and chassis ground. Connector & terminal (B40) No. 7 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 10.	Repair the harness and connector between each control module and data link connector. (Replace the entire harness if repair is necessary for airbag harness.)

Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK OUTPUT SIGNAL TO THE AIRBAG CONTROL MODULE. 1) Turn the ignition switch to ON in the condition of step 9. 2) Measure the voltage between data link connector and chassis ground. <i>Connector & terminal</i> <i>(B40) No. 7 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Repair each control module.	Repair the harness and connector between each control module and data link connector. (Replace the entire harness if repair is necessary for airbag harness.)
11 CHECK FUSE. Remove fuse No. 25 from the fuse & relay box, and perform visual inspection.	Is the fuse OK?	Go to step 12.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
12 CHECK AIRBAG CONTROL MODULE CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step 13.	Connect the connector of the airbag control module.
13 CHECK THE HARNESS BETWEEN THE AIRBAG CONTROL MODULE AND DATA LINK CONNECTOR. 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Measure the resistance between connector (4AG) in the test harness AG and the data link connector. <i>Connector & terminal</i> <i>(4AG) No. 1 — (B40) No. 7:</i>	Is the resistance less than 10 Ω ?	Go to step 14.	Repair the harness between the airbag control module and the data link connector. Or replace the airbag main harness along with the bulkhead harness.
14 CHECK POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal</i> <i>(2AG) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 15.	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.
15 CHECK BETWEEN AIRBAG CONTROL MODULE AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal</i> <i>(2AG) No. 4 — Chassis ground:</i> <i>(2AG) No. 3 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 16.	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.
16 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of the control module power supply, ground circuit and data link connector?	Repair the connector. (Replace the harness instead of repairing the airbag system connector.)	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

9. Read Diagnostic Trouble Code (DTC)

A: OPERATION

When malfunction of airbag system occurs, the DTC stored in airbag control module will be read out.

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Airbag System}.
- 3) After {Airbag System} is displayed, select [OK].
- 4) Select the {Diagnostic Code(s) Display} in «Airbag System».
- 5) Record the DTC displayed.

NOTE:

- For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>
- If “No diagnostic Code Present” is displayed, the combination meter fault or the open circuit of harness is possible. For the diagnostic procedure, refer to <Ref. to AB(diag)-34, Airbag Warning Light Failure.>.
- When the airbag warning light is OFF and “No diagnostic Code Present” is displayed on Subaru Select Monitor, the airbag system is operating properly.

10. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

11. Clear Memory Mode

A: OPERATION

Clear the DTC stored in the airbag control module after repairing the airbag system. (After the breakdown is recovered, the breakdown code for completed recoveries are read out when the next breakdown occurs if the memory clear work is not performed.)

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Airbag System}.
- 3) Select the {Clear Memory} in «Airbag System».
- 4) When the “Clear Memory?” is shown on the screen, select the [OK] button.
- 5) When “Done” is displayed, end the Subaru Select Monitor.
- 6) When “Done” and “Turn Ignition Switch OFF.” are shown on the display, turn the ignition switch to OFF.

NOTE:

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

Display of Status Information

AIRBAG SYSTEM (DIAGNOSTICS)

12. Display of Status Information

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Airbag System}.
- 3) On «Airbag System» display, select {Status Data}.

The following table is for support data.

Item	Display
Seat position sensor LH	— ^{*2}
Seat position sensor RH	— ^{*2}
Seat belt buckle switch LH	— ^{*6}
Seat belt buckle switch RH	Latched ^{*3} / Not Latched ^{*4} / Others ^{*5} / Initial setting ^{*1} / — ^{*6}
Passenger's airbag control status	ON ^{*7} / OFF ^{*8} / Initial setting ^{*1}

*1: Displayed when it is initial.

*2: Seat position sensor not supported

*3: Seat belt fastened

*4: Seat belt not fastened

*5: Displayed when data other than belt fastened or not fastened, such as breakdowns is input.

*6: Seat belt buckle switch not supported

*7: Passenger's airbag operating state

*8: Passenger's airbag non-operating state

NOTE:

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

13. Airbag Warning Light Illumination Pattern

A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds and then goes off afterwards.

- (1) Airbag warning light
- (2) Approx. 6 sec.
- (3) Ignition switch ON

Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

14. Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON

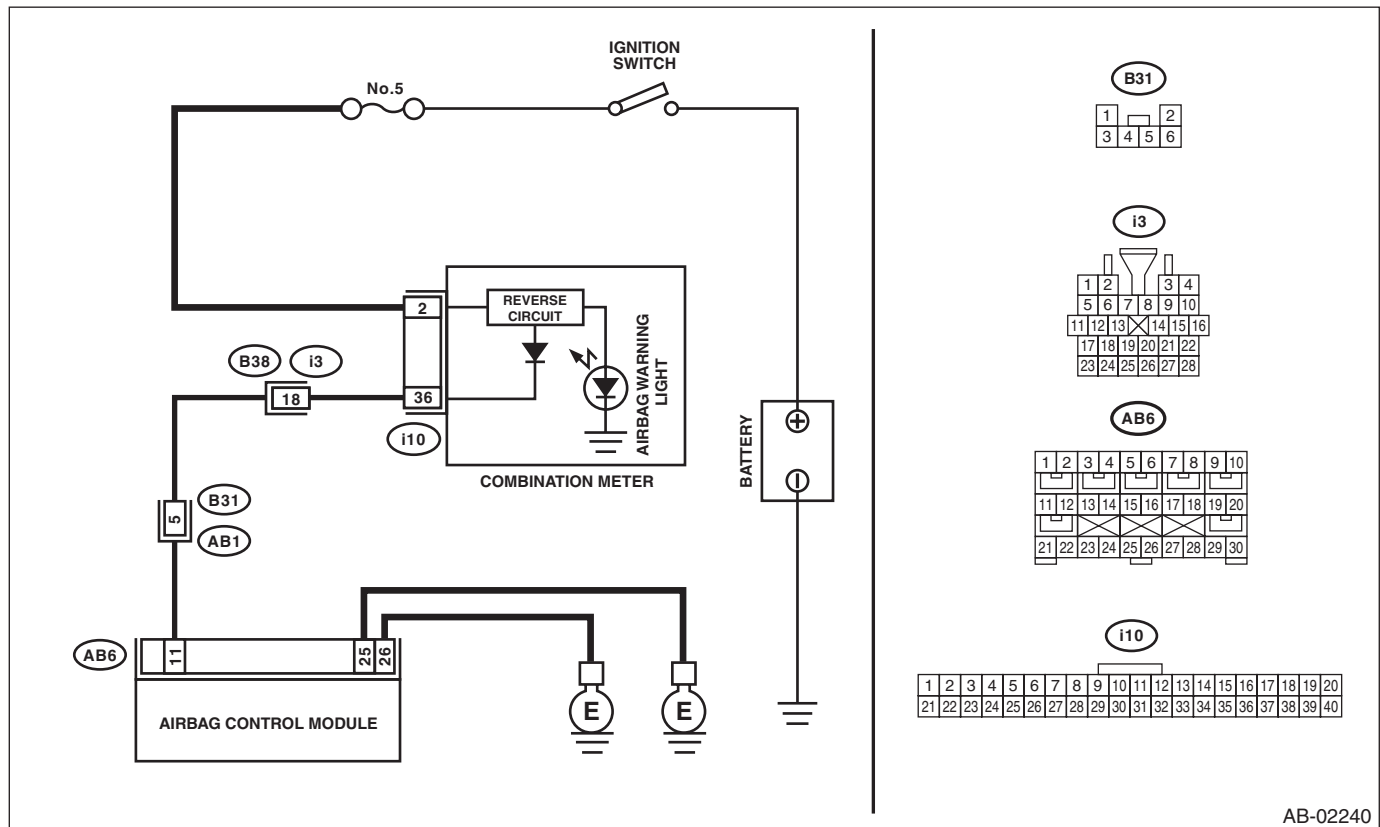

DETECTING CONDITION:

- Airbag warning light is faulty.
- Airbag control module to airbag warning light circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connector connection is improper.
- Connections of (AB6, AB17, AB18) to airbag control module are improper.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AB-02240

Step	Check	Yes	No
1 READ DTC. Read the DTC. <Ref. to AB(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 2.

Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK FOR POOR CONTACT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check that the airbag control module and the connectors (AB6, AB17, AB18) are securely connected.</p>	Are there poor contact of connectors (AB6, AB17, AB18)?	If the faulty connector contact remains, replace the airbag main harness along with body harness or replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 3.
<p>3 CHECK AIRBAG MAIN HARNESS. 1) Remove the instrument panel lower cover and disconnect the connectors (AB7) and (AB2). 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 4) Connect the battery ground terminal and turn the ignition switch to ON. 5) Connect the connectors (7AG) and (8AG) in the test harness AG. NOTE: After the fault has been cleared, disconnect the connectors (7AG) and (8AG).</p>	Does the airbag warning light go off?	Go to step 4.	Go to step 5.
<p>4 CHECK GROUND CIRCUIT. Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal</i> <i>(2AG) No. 4 — Chassis ground:</i> <i>(2AG) No. 3 — Chassis ground:</i></p>	Is the resistance less than 10 Ω ?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Repair the chassis ground circuit.
<p>5 CHECK AIRBAG MAIN HARNESS AND BULKHEAD HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (7AG) and (8AG). 3) Remove the combination meter. 4) Measure the resistance between the combination meter connector and test harness AG connector (2AG). <i>Connector & terminal</i> <i>(2AG) No. 5 — (i10) No. 36:</i></p>	Is the resistance less than 10 Ω ?	Check the combination meter.	Go to step 6.
<p>6 CHECK POOR CONTACT OF CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more. 2) Confirm that the connectors between the airbag control module and the combination meter are securely connected.</p>	Is there poor contact of connector?	Repair the bulkhead harness or replace the airbag main harness along with body harness.	Go to step 7.
<p>7 CHECK AIRBAG MAIN HARNESS. Check the airbag main harness for defect.</p>	Is there any defect in the airbag main harness?	Replace the airbag main harness along with bulkhead harness.	Repair the bulkhead harness.

Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

B: AIRBAG WARNING LIGHT REMAINS OFF

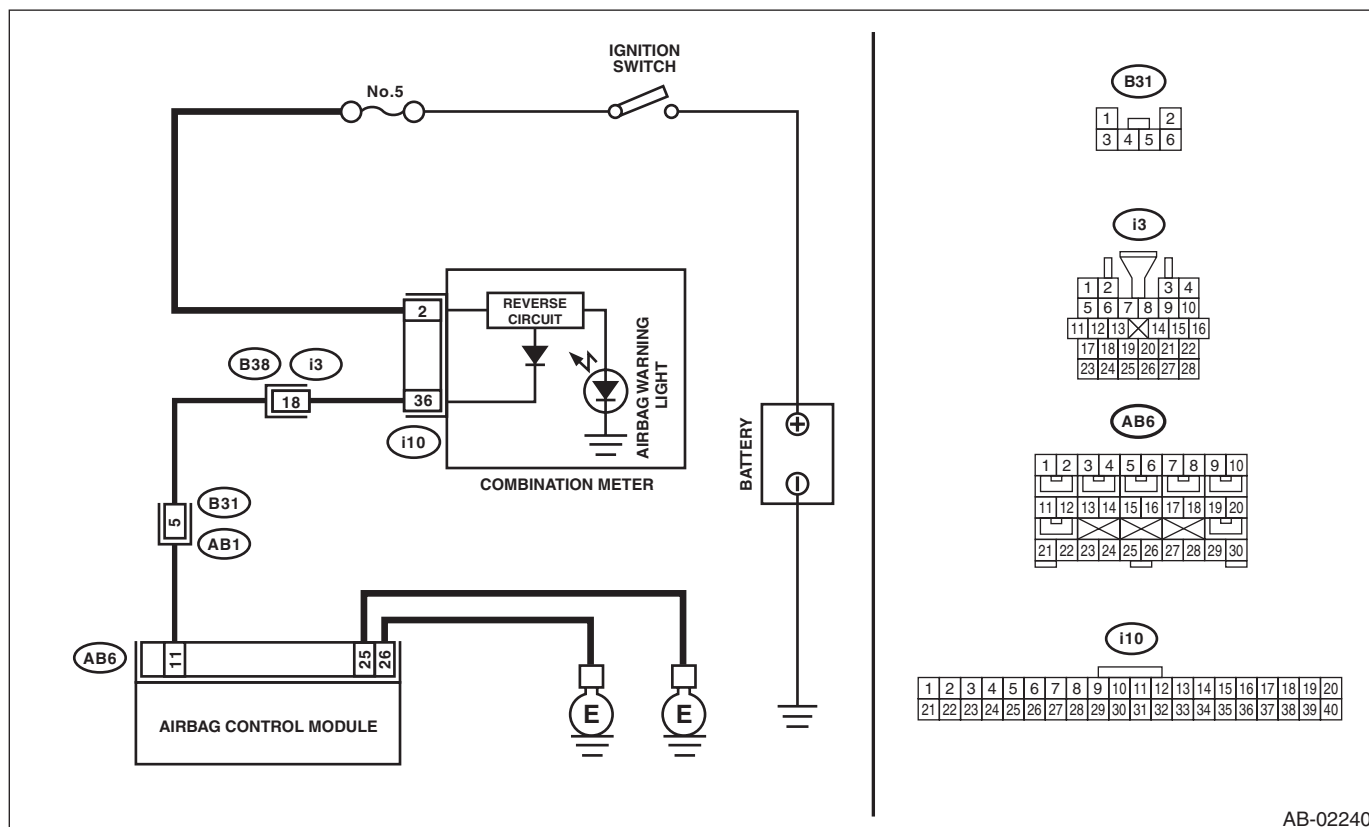

DETECTING CONDITION:

- Fuse No. 5 (in fuse & relay box) is blown out.
- Body harness circuit is open.
- Airbag warning light is faulty.
- Airbag main harness is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AB-02240

Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK COMBINATION METER. Turn the ignition switch to ON, and confirm that warning lights of combination meter illuminate.	Do warning lights except for airbag illuminate?	Go to step 2.	Check the combination meter.
2 CHECK DTC. Read the DTC. <Ref. to AB(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 3.
3 CHECK FUSE. Remove fuse No. 5 from the fuse & relay box, and perform visual inspection.	Is the fuse OK?	Go to step 4.	Replace the fuse. If the fuse is blown out again, go to step 4.
4 CHECK AIRBAG WARNING LIGHT CIRCUIT (IN COMBINATION METER). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB1) and (B31). 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does airbag warning light illuminate?	Go to step 5.	Check the combination meter.
5 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the connector (AB1) and (B31). 3) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does airbag warning light illuminate?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Replace the airbag main harness along with bulkhead harness.

List of Diagnostic Trouble Code (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

15. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference

A: DTC 11 DRIVER'S AIRBAG FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (driver's side) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

AB-02487

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-18, Driver's Airbag Module.>	Go to step 3.
3 CHECK ROLL CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the roll connector. <Ref. to AB-30, Roll Connector.>	Go to step 4.
4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the console front panel and disconnect the connectors (AB10) and (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) in the test harness AG and connectors (2P) and (3P) in the test harness P. Connector & terminal (3AG) No. 1 — (2P) No. 1: (3AG) No. 3 — (2P) No. 2:	Is the resistance less than 10 Ω ?	Go to step 5.	Replace the airbag main harness along with body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). Measure the resistance between connector (3AG) terminals in the test harness AG. Connector & terminal <i>(3AG) No. 1 — (3AG) No. 3:</i> <i>(3AG) No. 3 — Chassis ground:</i> <i>(3AG) No. 1 — Chassis ground:</i> <i>(3AG) No. 2 — (3AG) No. 4:</i> <i>(3AG) No. 2 — Chassis ground:</i> <i>(3AG) No. 4 — Chassis ground:</i> <i>(3AG) No. 1 — (3AG) No. 2:</i> <i>(3AG) No. 1 — (3AG) No. 4:</i> <i>(3AG) No. 2 — (3AG) No. 3:</i> <i>(3AG) No. 3 — (3AG) No. 4:</i>	Is the resistance 1 M Ω or more?	Go to step 6.	Replace the airbag main harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

2. TYPE B

DTC DETECTING CONDITION:

- Airbag main harness circuit is shorted to ground.
- Airbag module harness (driver's side) circuit is shorted to ground.
- Roll connector circuit is shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

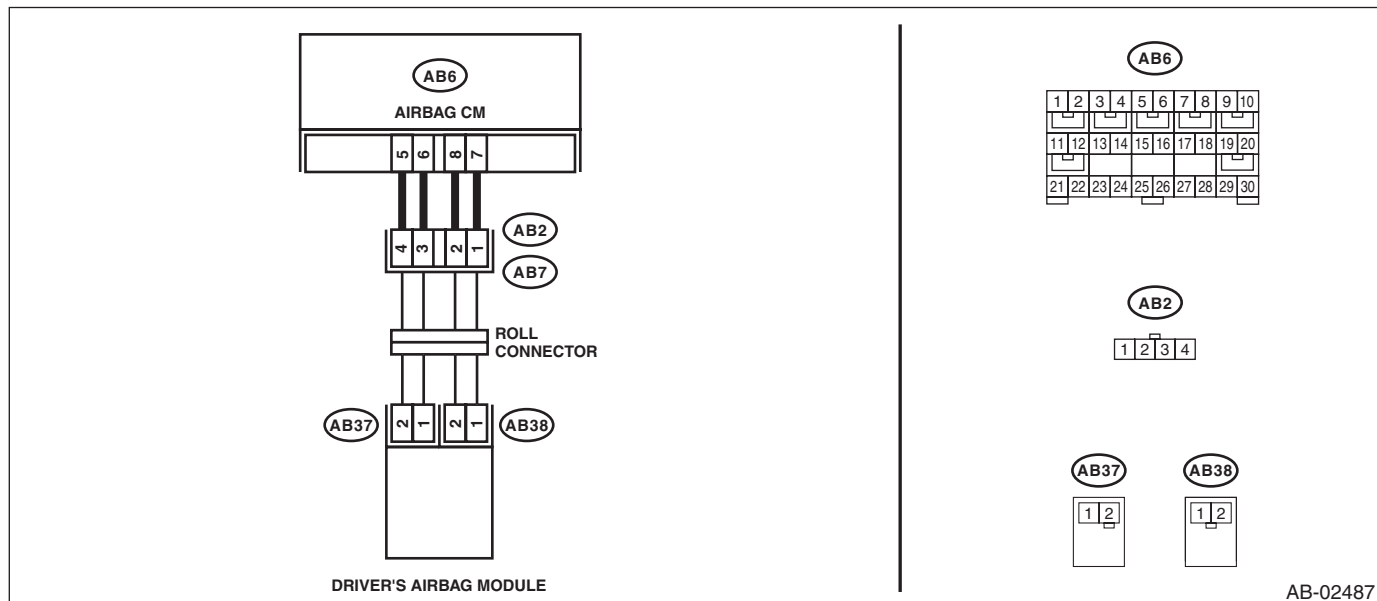

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-18, Driver's Airbag Module.>	Go to step 3.
3 CHECK ROLL CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the roll connector. <Ref. to AB-30, Roll Connector.>	Go to step 4.
4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 1 — Chassis ground: (3AG) No. 3 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag main harness along with body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 6 .
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

B: DTC 12 PASSENGER'S AIRBAG FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (passenger's side) circuit is open, shorted or shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Step	Check	Yes	No
1	CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Replace the airbag harness.	Go to step 2.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connectors (AB10) from (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-19, Passenger's Airbag Module.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) in the test harness AG and connectors (2P) and (3P) in the test harness P. Connector & terminal (3AG) No. 9 — (2P) No. 1: (3AG) No. 7 — (2P) No. 2:	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS). Measure the resistance between connectors (3AG) in the test harness AG, and between connector (3AG) and chassis ground. Connector & terminal (3AG) No. 9 — (3AG) No. 7: (3AG) No. 9 — Chassis ground: (3AG) No. 7 — Chassis ground: (3AG) No. 8 — (3AG) No. 6: (3AG) No. 8 — Chassis ground: (3AG) No. 6 — Chassis ground: (3AG) No. 7 — (3AG) No. 6: (3AG) No. 6 — (3AG) No. 9: (3AG) No. 7 — (3AG) No. 8: (3AG) No. 8 — (3AG) No. 9:	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag main harness along with body harness.
5 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 6.
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

2. TYPE B

DTC DETECTING CONDITION:

- Airbag main harness circuit is shorted to ground.
- Airbag module harness (passenger's side) circuit is shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

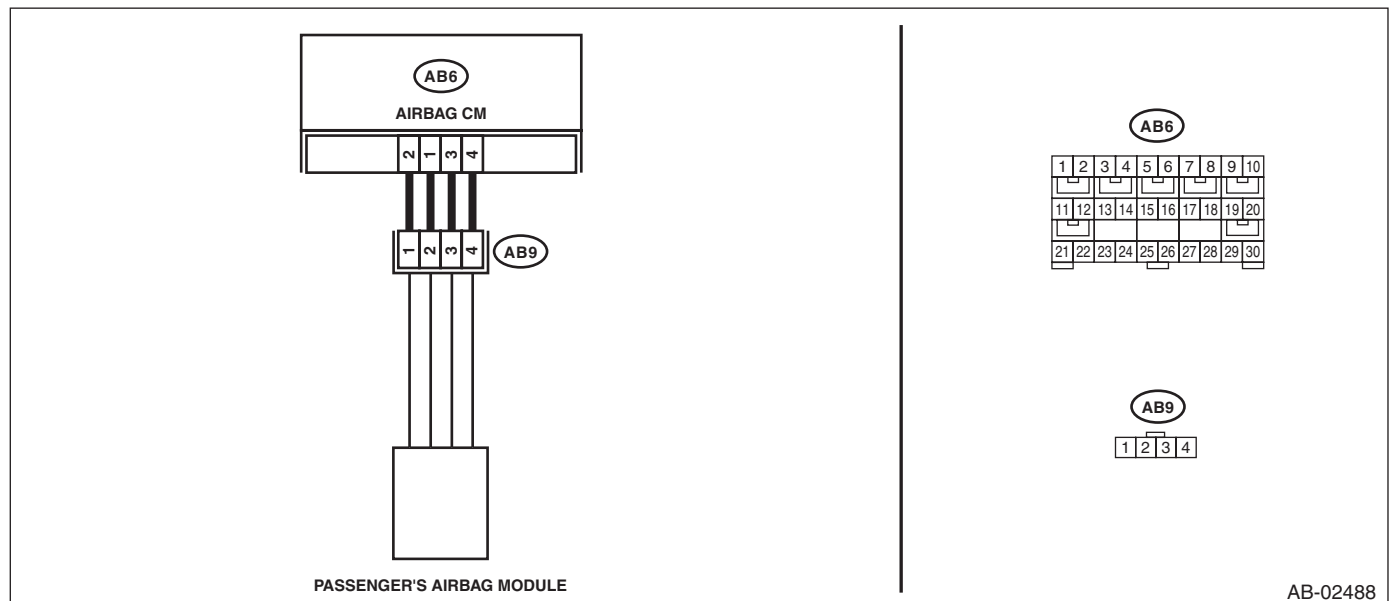

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-19, Passenger's Airbag Module.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 9 — Chassis ground: (3AG) No. 7 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

C: DTC 15 DRIVER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit (driver's side) is shorted to power supply.
- Airbag module harness circuit (driver's side) is shorted to power supply.
- Roll connector is shorted to power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (AB38) to the connector (1N) in the test harness N. 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-18, Driver's Airbag Module.>	Go to step 3.
3 CHECK ROLL CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the roll connector. <Ref. to AB-30, Roll Connector.>	Go to step 4.
4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Connect the battery ground terminal and turn the ignition switch to ON. (engine OFF) 6) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 3 (+) — Chassis ground (-): (3AG) No. 1 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 5.	Replace the airbag main harness along with body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 6 .
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

D: DTC 16 PASSENGER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit (passenger's side) is shorted to power supply.
- Airbag module harness circuit (passenger's side) is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness along with chassis harness.	Go to step 2.
2 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-19, Passenger's Airbag Module.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Connect the battery ground terminal and turn the ignition switch to ON. (engine OFF) 6) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 9 (+) — Chassis ground (-): (3AG) No. 7 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AIRBAG SYSTEM (DIAGNOSTICS)

F: DTC 1B PASSENGER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit is shorted.
- Airbag module harness (passenger's side) circuit is shorted.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

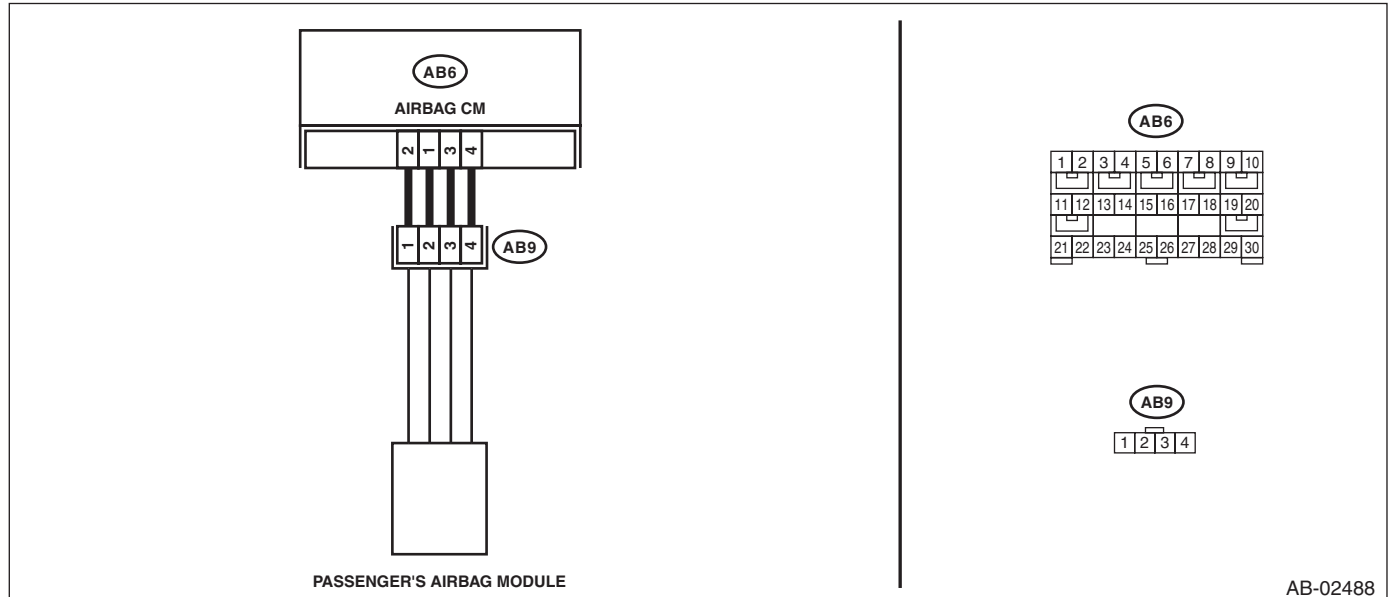

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-19, Passenger's Airbag Module.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) terminals in test harness AG. Connector & terminal (3AG) No. 7 — (3AG) No. 9:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

G: DTC 1D DRIVER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit is open.
- Airbag module harness (driver's side) circuit is open.
- Roll connector circuit is open.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

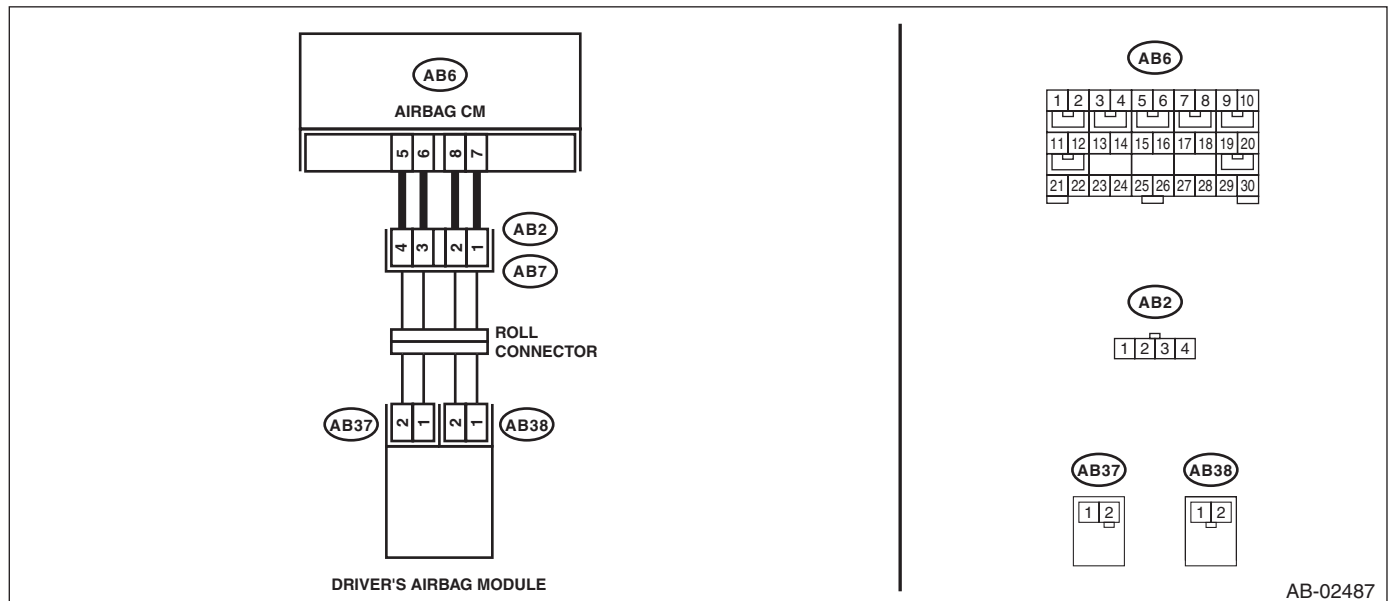

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the driver's airbag module. <Ref. to AB-18, Driver's Airbag Module.>	Go to step 3.
3 CHECK ROLL CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (1N) in the test harness N from the connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the roll connector. <Ref. to AB-30, Roll Connector.>	Go to step 4.
4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) of test harness AG and connector (2P) of test harness P. Connector & terminal (3AG) No. 1 — (2P) No. 1: (3AG) No. 3 — (2P) No. 2:	Is the resistance less than 10 Ω ?	Go to step 5.	Replace the airbag main harness along with body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 6 .
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

H: DTC 1E PASSENGER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit is open.
- Airbag module harness (passenger's side) circuit is open.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

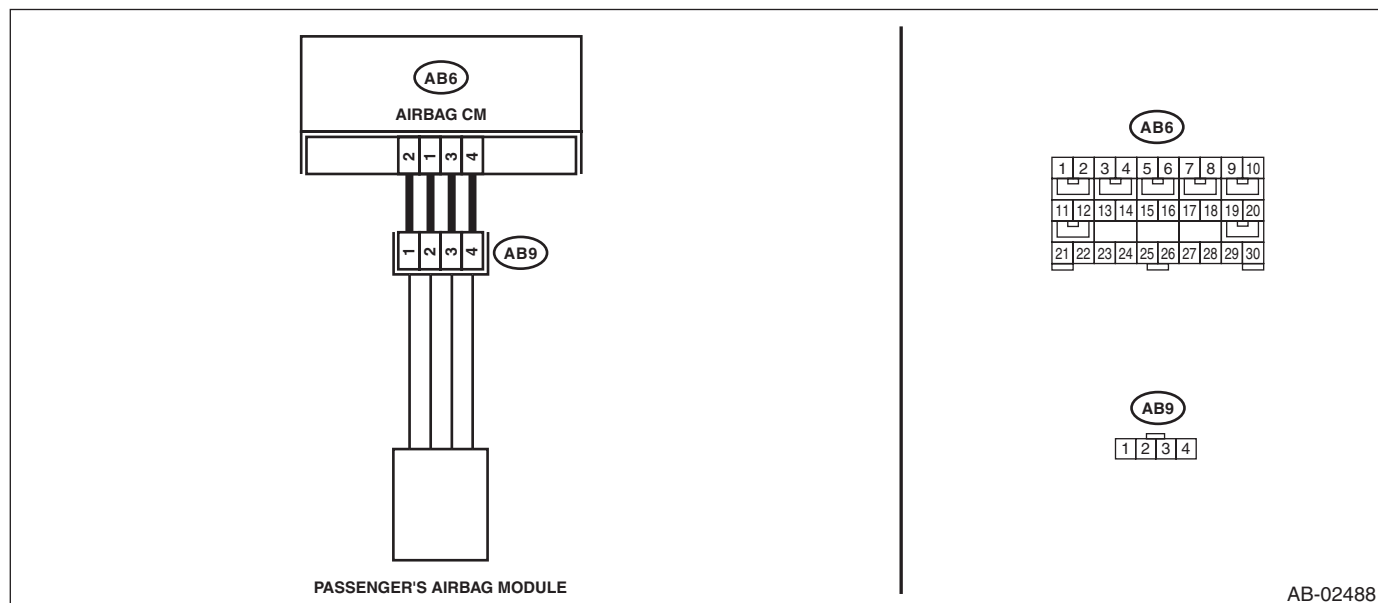

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-19, Passenger's Airbag Module.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) of test harness AG and connector (2P) of test harness P. Connector & terminal (3AG) No. 9 — (2P) No. 1: (3AG) No. 7 — (2P) No. 2:	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

I: DTC 21 AIRBAG ECM FAILURE

DTC DETECTING CONDITION:

Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.

	Step	Check	Yes	No
1	CHECK IF DTC 21 IS INDICATED. Read the DTC. <Ref. to AB(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).>	Does the Subaru Select Monitor display DTC21?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-31, OPERATION, Clear Memory Mode.>

J: DTC 22 FRONT AIRBAG FIRING OUTPUT

This DTC is indicated when the front airbag module and the pretensioner are deployed.

Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module <Ref. to AB-25, Airbag Control Module.>
- Driver's airbag module <Ref. to AB-18, Driver's Airbag Module.>
- Passenger's airbag module <Ref. to AB-19, Passenger's Airbag Module.>
- Front sub sensor of both sides. <Ref. to AB-26, Front Sub Sensor.>
- Front outer seat belt with pretensioner of both sides. <Ref. to SB-17, Front Seat Belt.>
- Steering roll connector <Ref. to AB-30, Roll Connector.>
- Occupant detection system (passenger's seat cushion & frame assembly) <Ref. to SE-7, Front Seat.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

K: DTC 26 PASSENGER'S AIRBAG INDICATOR FAILURE

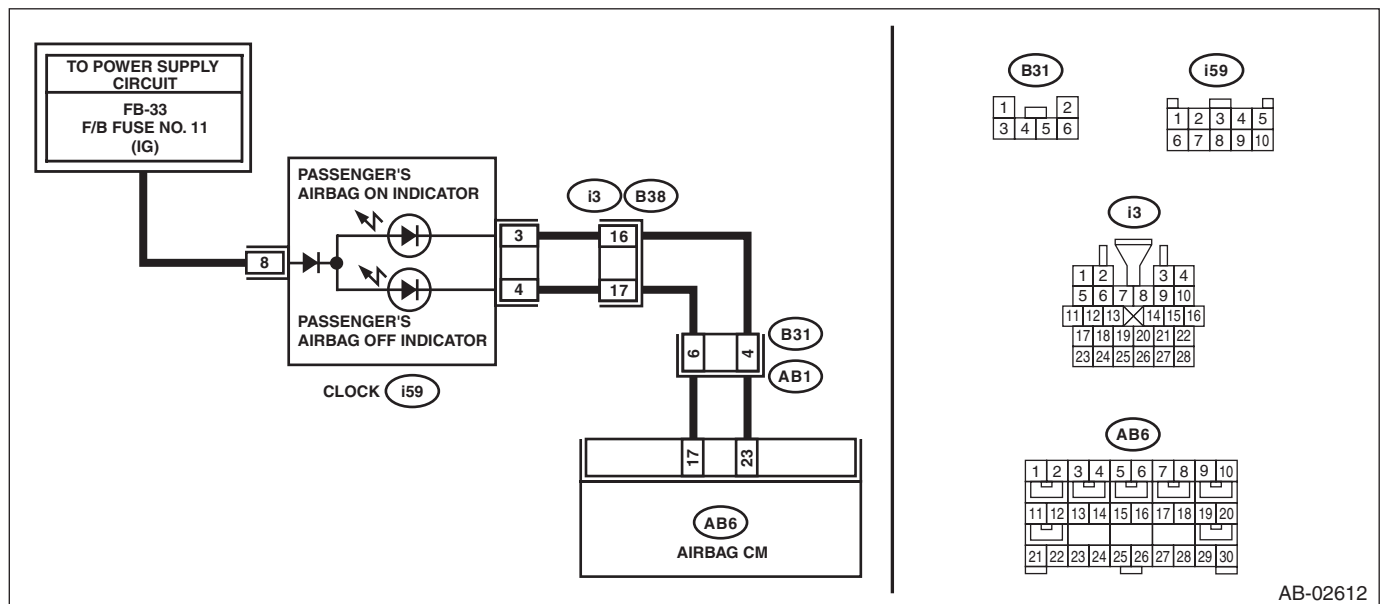

DTC DETECTING CONDITION:

- Passenger's airbag indicator is faulty.
- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Body harness circuit is open.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AB-02612

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK FOR POOR CONTACT. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that firm contact is secured for the connector between the airbag control module and the clock.	Is there poor contact of any connector?	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.	Go to step 2.
2 CHECK AIRBAG MAIN HARNESS. 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the battery ground terminal and turn the ignition switch to ON. NOTE: Neither of ON/OFF illuminates when it is normal.	Does the passenger's airbag indicator illuminate?	Go to step 3.	Go to step 4.
3 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch to OFF. 2) Remove the clock and disconnect the connector (i59). 3) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 4) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal</i> <i>(2AG) No. 9 — (2AG) No. 8:</i> <i>(2AG) No. 9 — Chassis ground:</i> <i>(2AG) No. 8 — Chassis ground:</i>	Is the resistance 1 M Ω or more?	Replace the clock. <Ref. to IDI-28, REMOVAL, Clock.>	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
4 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Connect the connectors (7AG) and (8AG) in the test harness AG. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's airbag indicator illuminate?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Remove the clock and disconnect the connector (i59). 3) Measure the resistance between connector (2AG) in the test harness AG and connector (i59). <i>Connector & terminal</i> <i>(2AG) No. 9 — (i59) No. 4:</i> <i>(2AG) No. 8 — (i59) No. 3:</i>	Is the resistance less than 10 Ω ?	Go to step 6.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
6 CHECK BODY HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (i59) and chassis ground. <i>Connector & terminal</i> <i>(i59) No. 8 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the clock. <Ref. to IDI-28, REMOVAL, Clock.>	Repair the clock power supply line.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

L: DTC 27 ODS COMMUNICATION ERROR

DTC DETECTING CONDITION:

- Communication to the occupant detection control module is faulty.
- Airbag rear harness circuit is open, shorted, shorted to ground or shorted to power supply.
- Occupant detection harness (seat harness) is faulty.
- Occupant detection system is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the occupant detection control module.	Is there poor contact?	Reconnect the connector. If defective is not improved, replace the airbag rear harness along with the body harness or the occupant detection harness (seat harness).	Go to step 2.
2 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 4) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 5) Connect the connector (1AB) in the test harness AB to the connector (AB53). 6) Measure the resistance between connector (6AG) in the test harness AG and connector (2AB) in the test harness AB. Connector & terminal (6AG) No. 9 — (2AB) No. 1: (6AG) No. 11 — (2AB) No. 2:	Is the resistance less than 10 Ω ?	Go to step 3.	Replace the airbag rear harness along with body harness.
3 CHECK AIRBAG HARNESS. Measure the resistance between connector (6AG) in the test harness AG and chassis ground. Connector & terminal (6AG) No. 9 — Chassis ground: (6AG) No. 9 — (6AG) No. 11: (6AG) No. 11 — Chassis ground:	Is the resistance less than 1 M Ω ?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (2AB) in the test harness AB and chassis ground. Connector & terminal (2AB) No. 3 (+) — Chassis ground (-):	Is the voltage 9 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order.	Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness along with body harness or replace the body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

M: DTC 29 ODS FAILURE

NOTE:

Refer to “Occupant Detection System” for details on DTC 29. <Ref. to OD(diag)-26, DTC 29 ODS FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC 2A ODS CALIBRATION ERROR

NOTE:

Refer to “Occupant Detection System” for details on DTC 2A. <Ref. to OD(diag)-23, DTC 2A ODS CALIBRATION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC 2B ODS SYSTEM WRONG PARTS

NOTE:

Refer to “Occupant Detection System” for details on DTC 2B. <Ref. to OD(diag)-23, DTC 2B ODS SYSTEM WRONG PARTS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC 2C BELT TENSION SENSOR FAILURE

NOTE:

Refer to “Occupant Detection System” for details on DTC 2C. <Ref. to OD(diag)-24, DTC 2C BELT TENSION SENSOR FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC 2D AIRBAG WARNING INDICATOR FAILURE

DTC DETECTING CONDITION:

- Airbag warning light is faulty.
- Harness between airbag control module and airbag warning light is shorted or open.
- Connection of airbag main harness and instrument panel harness is improper.
- Grounding circuit is faulty.
- Airbag control module is faulty.

NOTE:

For the diagnostic procedure, refer to “Airbag Warning Light Failure”. <Ref. to AB(diag)-34, Airbag Warning Light Failure.>

R: DTC 33 FRONT SUB SENSOR RH FAILURE

DTC DETECTING CONDITION:

Front sub sensor (RH) is faulty.

When DTC 33 is displayed, the circuit within the front sub sensor (RH) is faulty.

Replace the front sub sensor (RH). <Ref. to AB-26, Front Sub Sensor.>

S: DTC 34 FRONT SUB SENSOR LH FAILURE

DTC DETECTING CONDITION:

Front sub sensor (LH) is faulty.

If DTC 34 is displayed, the circuit within the front sub sensor (LH) is faulty.

Replace the front sub sensor (LH). <Ref. to AB-26, Front Sub Sensor.>

T: DTC 37 BUCKLE SWITCH RH FAILURE

NOTE:

Refer to “Occupant Detection System” for details on DTC 37. <Ref. to OD(diag)-27, DTC 37 BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

U: DTC 39 SEAT BELT WARNING FAILURE

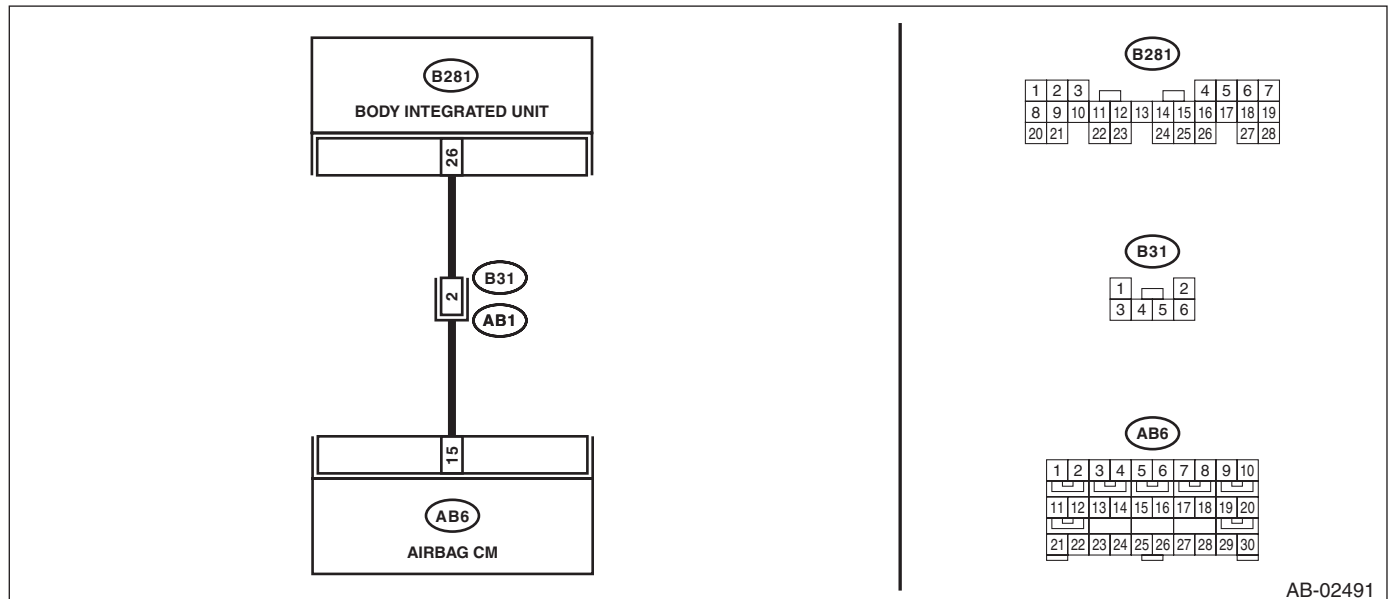

DTC DETECTING CONDITION:

- Airbag control module is faulty.
- Body integrated unit is faulty.
- Harness circuits between body integrated unit and airbag control module are open, shorted or shorted to ground.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.

WIRING DIAGRAM:

AB-02491

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds and go off?	Go to step 3.	Go to step 2.
2 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector & terminal (2AG) No. 10 — Chassis ground:</i>	Is the resistance 1 M Ω or more?	Replace the body integrated unit.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
3 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 3) Connect the connectors (7AG) and (8AG) in the test harness AG. 4) Turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds, then repeatedly light and go off?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 4.
4 CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors (7AG) and (8AG) in the test harness AG. 3) Disconnect the connector (B281) from body integrated unit. 4) Measure the resistance between connector (2AG) in the test harness AG and connector (B281). <i>Connector & terminal (2AG) No. 10 — (B281) No. 26:</i>	Is the resistance less than 10 Ω ?	Replace the body integrated unit.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

V: DTC 3A FRONT SUB SENSOR RH FALSE INSTALLATION

DTC DETECTING CONDITION:

Front sub sensor (RH) is misinstalled.

Step	Check	Yes	No
1 REPLACE FRONT SUB SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor (RH) with a genuine sensor. <Ref. to AB-26, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

W: DTC 3B FRONT SUB SENSOR LH FALSE INSTALLATION

DTC DETECTING CONDITION:

Front sub sensor (LH) is misinstalled.

Step	Check	Yes	No
1 REPLACE FRONT SUB SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor (LH) with a genuine sensor. <Ref. to AB-26, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

X: DTC 3C SATELLITE SENSOR BUS FAILURE

DTC DETECTING CONDITION:

Satellite safing sensor is faulty.

Step	Check	Yes	No
1 REPLACE SATELLITE SAFING SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-29, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

Y: DTC 3D SATELLITE SENSOR FALSE INSTALLATION

DTC DETECTING CONDITION:

Satellite safing sensor is misinstalled.

Step	Check	Yes	No
1 REPLACE SATELLITE SAFING SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-29, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

Diagnostic Chart with Trouble Code

Z: DTC 41 SIDE AIRBAG RH FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

DTC DETECTING CONDITION:

- Side airbag harness (RH) is open, shorted or shorted to ground.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AB-02613

Step	Check	Yes	No
<p>1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.</p>	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
<p>2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB25) and (AB24), and connect the test harness AJ connector (1AJ) to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.</p>	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module (RH). <Ref. to AB-20, REMOVAL, Side Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from test harness AJ. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between the test harness AG connector (5AG) and the test harness AJ connector (3AJ). Connector & terminal (5AG) No. 5 — (3AJ) No. 1: (5AG) No. 7 — (3AJ) No. 2:	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH). Measure the resistance between connector (5AG) terminals in the test harness AG. Connector & terminal (5AG) No. 5 — (5AG) No. 7:	Is the resistance 1 M Ω or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
5 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH). Measure the resistance between connector (5AG) in the test harness AG and chassis ground. Connector & terminal (5AG) No. 5 — Chassis ground: (5AG) No. 7 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

2. TYPE B

DTC DETECTING CONDITION:

- Side airbag harness (RH) circuit is shorted to ground.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24), and connect the connector (1AJ) in test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module (RH). <Ref. to AB-20, REMOVAL, Side Airbag Module.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from test harness AJ. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. Connector & terminal (5AG) No. 5 — Chassis ground: (5AG) No. 7 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AA:DTC 42 SIDE AIRBAG LH FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

DTC DETECTING CONDITION:

- Side airbag harness (LH) is open, shorted or shorted to ground.
- Side airbag module (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AB-02614

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB20) and (AB19), and connect the test harness AJ connector (1AJ) to the connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module (LH). <Ref. to AB-20, REMOVAL, Side Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Disconnect the connector (AB31) from curtain airbag module (LH). 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between the test harness AG connector (5AG) and the test harness AJ connector (3AJ). Connector & terminal (5AG) No. 1 — (3AJ) No. 2: (5AG) No. 3 — (3AJ) No. 1:	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH). Measure the resistance between connector (5AG) terminals in the test harness AG. Connector & terminal (5AG) No. 1 — (5AG) No. 3:	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
5 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH). Measure the resistance between connector (5AG) in the test harness AG and chassis ground. Connector & terminal (5AG) No. 1 — Chassis ground: (5AG) No. 3 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

2. TYPE B

DTC DETECTING CONDITION:

- Side airbag harness (LH) circuit is shorted to ground.
- Side airbag module (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB19), and connect the connector (1AJ) in test harness AJ to connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module (LH). <Ref. to AB-20, REMOVAL, Side Airbag Module.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Disconnect the connector (AB31) from curtain airbag module (LH). 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. Connector & terminal (5AG) No. 1 — Chassis ground: (5AG) No. 3 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AB:DTC 45 SIDE AIRBAG RH FAILURE

DTC DETECTING CONDITION:

- Side airbag harness (RH) is shorted to power supply.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24), and connect the connector (1AJ) in test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module (RH). <Ref. to AB-20, REMOVAL, Side Airbag Module.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (5AG) in the test harness AG and chassis ground. Connector & terminal (5AG) No. 5 (+) — Chassis ground (-): (5AG) No. 7 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SIDE AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB19) from the side airbag module (LH), and connect the connector (1AJ) in test harness AJ to the connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module (LH). <Ref. to AB-20, REMOVAL, Side Airbag Module.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Disconnect the connector (AB31) from curtain airbag module (LH). 4) Disconnect the airbag resistor from test harness AJ. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between the test harness AG connector (5AG) and the test harness AJ connector (3AJ). Connector & terminal (5AG) No. 1 — (3AJ) No. 2: (5AG) No. 3 — (3AJ) No. 1:	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AH:DTC 53 SIDE AIRBAG SENSOR RH FAILURE

DTC DETECTING CONDITION:

Side airbag sensor (RH) is faulty.

When DTC 53 is displayed, the circuit within the side airbag sensor (RH) is faulty.

Replace the side airbag sensor (RH). <Ref. to AB-27, Side Airbag Sensor.>

AI: DTC 54 SIDE AIRBAG SENSOR LH FAILURE

DTC DETECTING CONDITION:

Side airbag sensor (LH) is faulty.

When DTC 54 is displayed, the circuit within the side airbag sensor (LH) is faulty.

Replace the side airbag sensor (LH). <Ref. to AB-27, Side Airbag Sensor.>

AJ:DTC 55 SIDE CURTAIN AIRBAG FIRING OUTPUT

This DTC is displayed when the side airbag module and curtain airbag module are deployed.

Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-25, Airbag Control Module.>
- Front seat with side airbag module (Operating side) <Ref. to SE-7, Front Seat.>
- Side airbag sensor (Operating side) <Ref. to AB-27, Side Airbag Sensor.>
- Curtain airbag module (Operating side) <Ref. to AB-23, Curtain Airbag Module.>
- Curtain airbag sensor (Operating side) <Ref. to AB-28, Curtain Airbag Sensor.>
- Satellite safing sensor <Ref. to AB-29, Satellite Safing Sensor.>

AK:DTC 58 CURTAIN AIRBAG SENSOR RH FAILURE

DTC DETECTING CONDITION:

Curtain airbag sensor (RH) is faulty.

If DTC 58 is displayed, the circuit within the curtain airbag sensor (RH) is faulty.

Replace the curtain airbag sensor (RH). <Ref. to AB-28, Curtain Airbag Sensor.>

AL:DTC 59 CURTAIN AIRBAG SENSOR LH FAILURE

DTC DETECTING CONDITION:

Curtain airbag sensor (LH) is faulty.

If DTC 59 is displayed, the circuit within the curtain airbag sensor (LH) is faulty.

Replace the curtain airbag sensor (LH). <Ref. to AB-28, Curtain Airbag Sensor.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AM:DTC 5A SIDE AIRBAG SENSOR RH FALSE INSTALLATION

DTC DETECTING CONDITION:

Side airbag sensor RH is misinstalled.

Step	Check	Yes	No
1 REPLACE SIDE AIRBAG SENSOR (RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side A/B sensor (RH) with a genuine sensor. <Ref. to AB-27, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

AN:DTC 5B SIDE AIRBAG SENSOR LH FALSE INSTALLATION

DTC DETECTING CONDITION:

Side airbag sensor LH is misinstalled.

Step	Check	Yes	No
1 REPLACE SIDE AIRBAG SENSOR (LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side A/B sensor (LH) with a genuine sensor. <Ref. to AB-27, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

AO:DTC 5C CURTAIN AIRBAG SENSOR RH FALSE INSTALLATION

DTC DETECTING CONDITION:

Curtain airbag sensor RH is misinstalled.

Step	Check	Yes	No
1 REPLACE CURTAIN AIRBAG SENSOR (RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain A/B sensor (RH) with a genuine sensor. <Ref. to AB-28, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

AP:DTC 5D CURTAIN AIRBAG SENSOR LH FALSE INSTALLATION

DTC DETECTING CONDITION:

Curtain airbag sensor LH is misinstalled.

Step	Check	Yes	No
1 REPLACE CURTAIN AIRBAG SENSOR (LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain A/B sensor (LH) with a genuine sensor. <Ref. to AB-28, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.>

Diagnostic Chart with Trouble Code

AQ:DTC 61 BELT PRETENSIONER RH FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

DTC DETECTING CONDITION:

- Seat belt pretensioner (RH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

	Step	Check	Yes	No
1	<p>CHECK POOR CONTACT OF CONNECTORS.</p> <p>Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.</p>	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK SEAT BELT PRETENSIONER. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner (RH). <Ref. to SB-17, Front Seat Belt.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness. 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the connector (AB33) from curtain airbag module (RH). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. Connector & terminal (3AG) No. 18 — (2N) No. 2: (3AG) No. 20 — (2N) No. 1:	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH). Measure the resistance between connector (3AG) terminals in the test harness AG. Connector & terminal (3AG) No. 18 — (3AG) No. 20:	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
5 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH). Measure the resistance between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 18 — Chassis ground: (3AG) No. 20 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

2. TYPE B

DTC DETECTING CONDITION:

- Seat belt pretensioner (RH) circuit is shorted to ground.
- Pretensioner (RH) is faulty.
- Pretensioner harness (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SEAT BELT PRETENSIONER. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner (RH). <Ref. to SB-17, Front Seat Belt.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness. 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the connector (AB33) from curtain airbag module (RH). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. Connector & terminal (3AG) No. 18 — Chassis ground: (3AG) No. 20 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SEAT BELT PRETENSIONER. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner (RH). <Ref. to SB-17, Front Seat Belt.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the connector (AB33) from curtain airbag module (RH). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. Connector & terminal (3AG) No. 18 — (2N) No. 2: (3AG) No. 20 — (2N) No. 1:	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AX:DTC 6E BELT PRETENSIONER LH FAILURE

DTC DETECTING CONDITION:

- Seat belt pretensioner (LH) circuit is open.
- Pretensioner (LH) is faulty.
- Pretensioner harness (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the airbag warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK SEAT BELT PRETENSIONER. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner (LH). <Ref. to SB-17, Front Seat Belt.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect connector (AB19) from side airbag module (LH). 4) Disconnect the connector (AB31) from curtain airbag module (LH). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. Connector & terminal (3AG) No. 10 — (2N) No. 1: (3AG) No. 12 — (2N) No. 2:	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

AY:DTC 71 DRIVER'S AIRBAG FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (driver's side) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

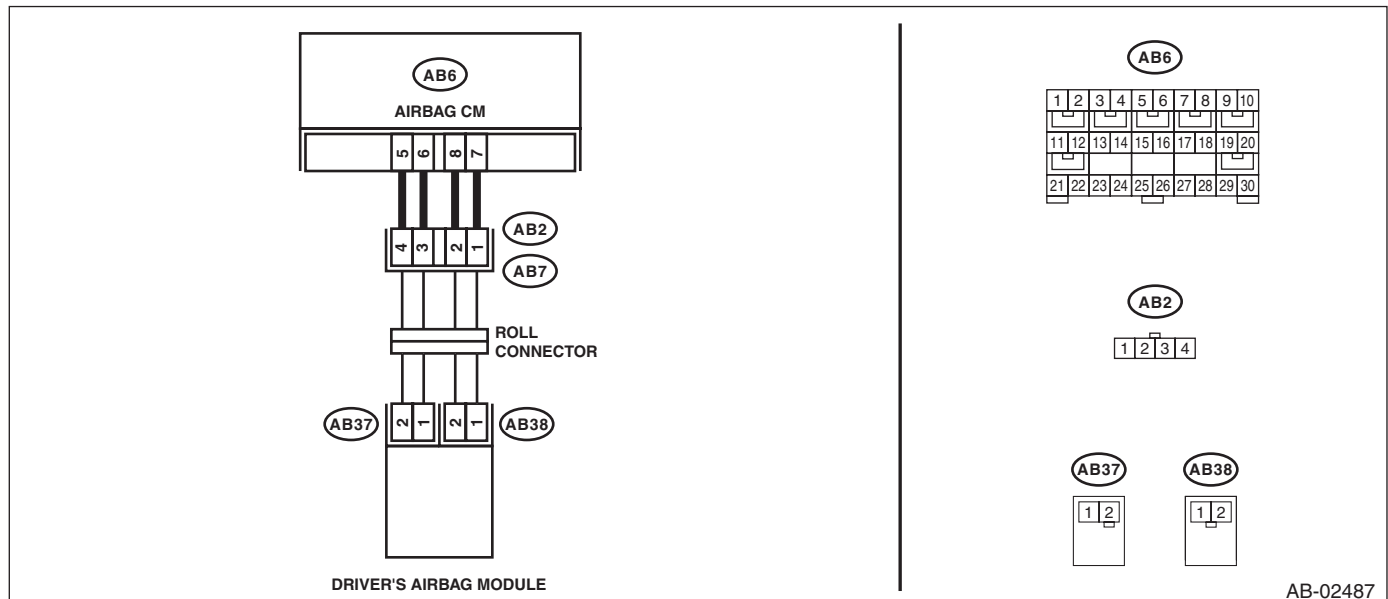

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-18, Driver's Airbag Module.>	Go to step 3.
3 CHECK ROLL CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the roll connector. <Ref. to AB-30, Roll Connector.>	Go to step 4.
4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the console front panel and disconnect the connectors (AB10) and (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) in the test harness AG and connectors (2P) and (3P) in the test harness P. Connector & terminal (3AG) No. 2 — (3P) No. 3: (3AG) No. 4 — (3P) No. 4:	Is the resistance less than 10 Ω ?	Go to step 5.	Replace the airbag main harness along with body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). Measure the resistance between connectors (3AG) in the test harness AG, and between connector (3AG) and chassis ground. Connector & terminal (3AG) No. 1 — (3AG) No. 3: (3AG) No. 3 — Chassis ground: (3AG) No. 1 — Chassis ground: (3AG) No. 2 — (3AG) No. 4: (3AG) No. 2 — Chassis ground: (3AG) No. 4 — Chassis ground: (3AG) No. 1 — (3AG) No. 2: (3AG) No. 1 — (3AG) No. 4: (3AG) No. 2 — (3AG) No. 3: (3AG) No. 3 — (3AG) No. 4:	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag main harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

2. TYPE B

DTC DETECTING CONDITION:

- Airbag main harness circuit is shorted to ground.
- Airbag module harness (driver's side) circuit is shorted to ground.
- Roll connector circuit is shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

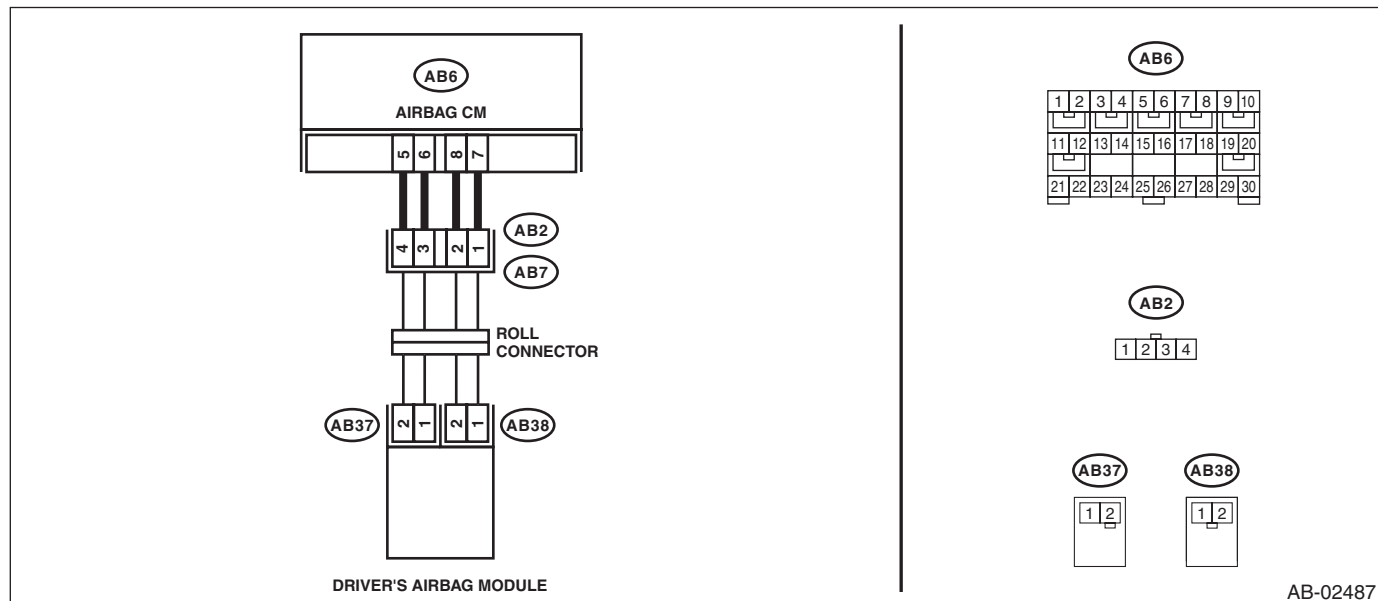

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

AIRBAG SYSTEM (DIAGNOSTICS)

BC:DTC 7A DRIVER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit is shorted.
- Airbag module harness (driver's side) circuit is shorted.
- Roll connector circuit is shorted.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

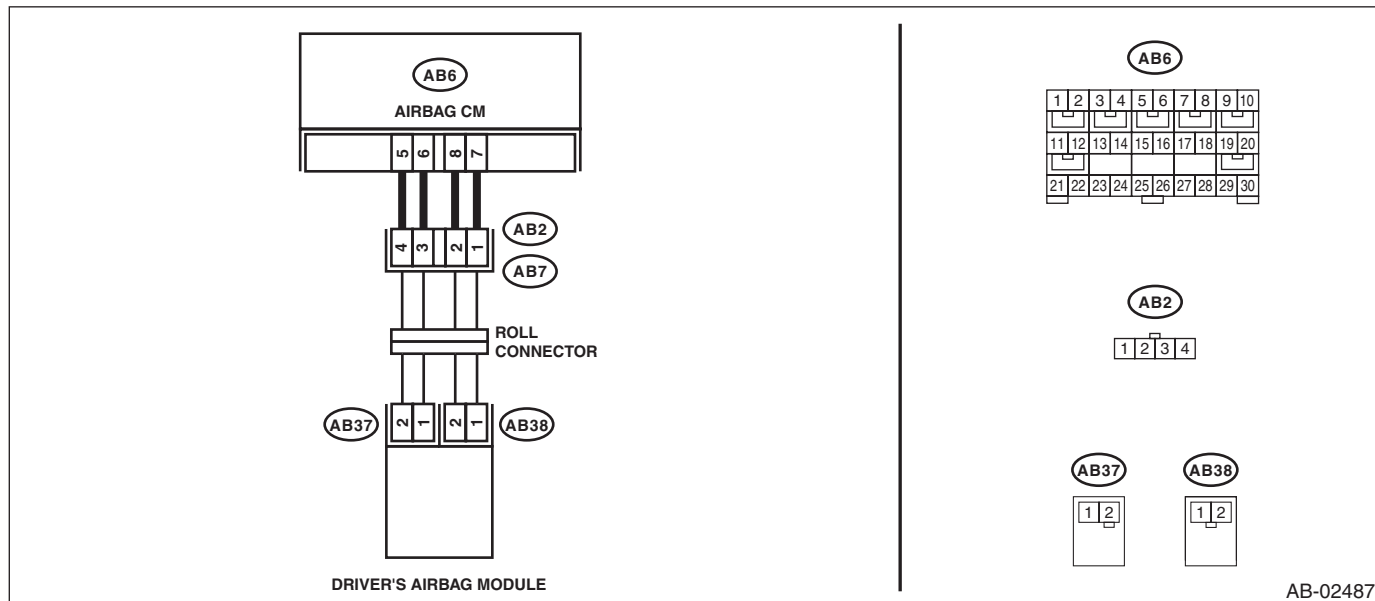

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

AB-02487

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-18, Driver's Airbag Module.>	Go to step 3.
3 CHECK ROLL CONNECTOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the roll connector. <Ref. to AB-30, Roll Connector.>	Go to step 4.
4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) terminals in test harness AG. Connector & terminal (3AG) No. 2 — (3AG) No. 4:	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag main harness along with body harness.
5 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 6.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
6 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BD:DTC 7B PASSENGER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit is shorted.
- Airbag module harness (passenger's side) circuit is shorted.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Prior to starting work, prepare two AIRBAG RESISTORS (98299PA040).

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
2 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-19, Passenger's Airbag Module.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) terminals in test harness AG. Connector & terminal (3AG) No. 6 — (3AG) No. 8:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BE:DTC 7D DRIVER'S AIRBAG FAILURE

DTC DETECTING CONDITION:

- Airbag main harness circuit is open.
- Airbag module harness (driver's side) circuit is open.
- Roll connector circuit is open.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

NOTE:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BG:DTC 91 CURTAIN AIRBAG MODULE RH FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

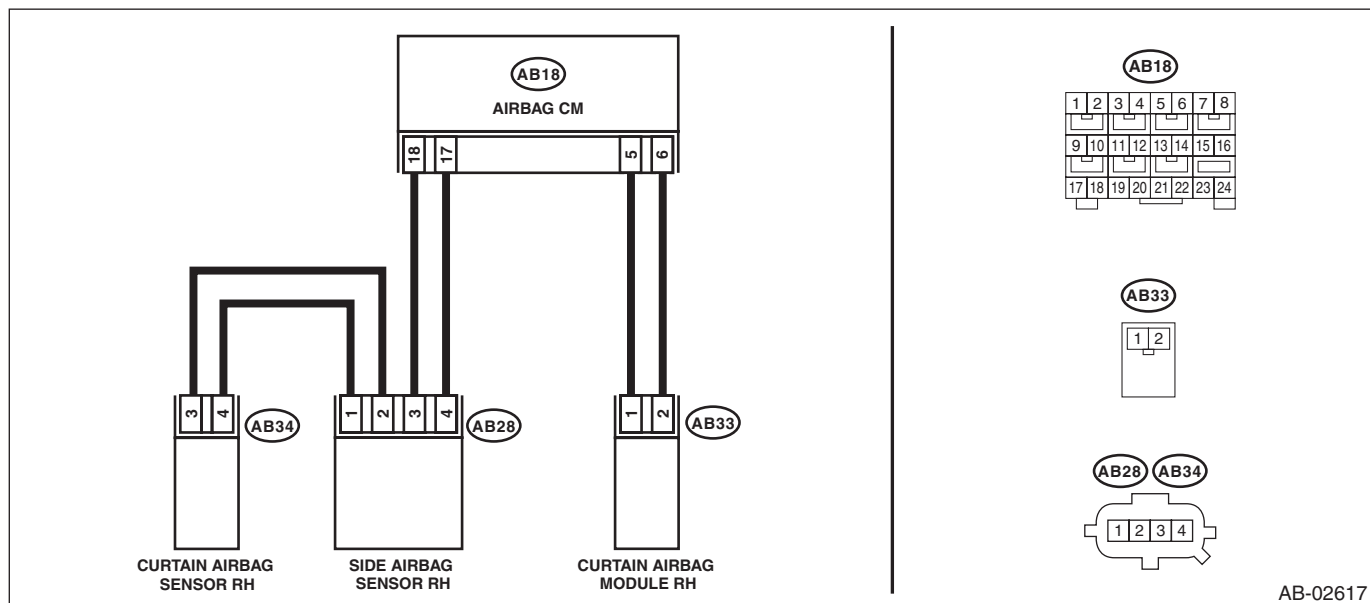

DTC DETECTING CONDITION:

- Curtain airbag harness (RH) is open, shorted or shorted to ground.
- Curtain airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK CURTAIN AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module (RH). <Ref. to AB-23, Curtain Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. <i>Connector & terminal</i> <i>(6AG) No. 6 — (2N) No. 1:</i> <i>(6AG) No. 8 — (2N) No. 2:</i>	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH). Measure the resistance between connector (6AG) terminals in the test harness AG. <i>Connector & terminal</i> <i>(6AG) No. 6 — (6AG) No. 8:</i>	Is the resistance 1 M Ω or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
5 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH). Measure the resistance between connector (6AG) in the test harness AG and chassis ground. <i>Connector & terminal</i> <i>(6AG) No. 6 — Chassis ground:</i> <i>(6AG) No. 8 — Chassis ground:</i>	Is the resistance 1 M Ω or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

2. TYPE B

DTC DETECTING CONDITION:

- Curtain airbag harness (RH) circuit is shorted to ground.
- Curtain airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK CURTAIN AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module (RH). <Ref. to AB-23, Curtain Airbag Module.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (6AG) in the test harness AG and chassis ground. Connector & terminal (6AG) No. 6 — Chassis ground: (6AG) No. 8 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BH:DTC 92 CURTAIN AIRBAG MODULE LH FAILURE

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

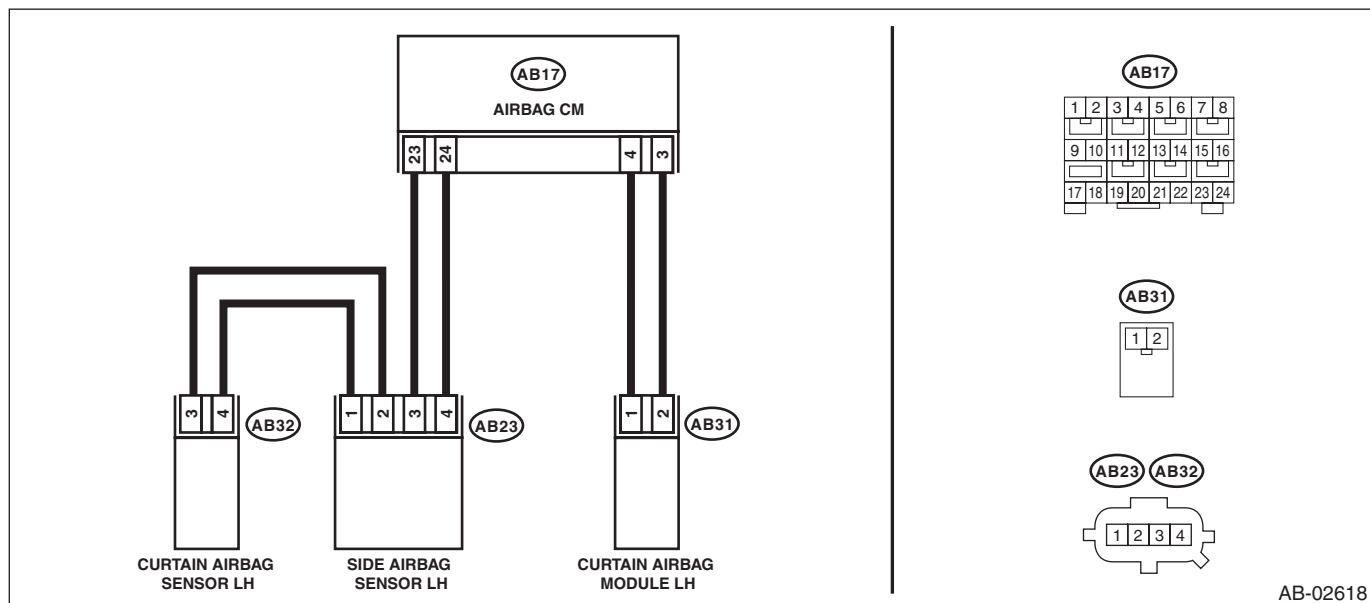

DTC DETECTING CONDITION:

- Curtain airbag harness (LH) is open, shorted or shorted to ground.
- Curtain airbag module (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AB-02618

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK CURTAIN AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module (LH). <Ref. to AB-23, Curtain Airbag Module.>	Go to step 3.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Disconnect connector (AB19) from side airbag module (LH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. <i>Connector & terminal</i> <i>(6AG) No. 1 — (2N) No. 2:</i> <i>(6AG) No. 3 — (2N) No. 1:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH). Measure the resistance between connector (6AG) terminals in the test harness AG. <i>Connector & terminal</i> <i>(6AG) No. 1 — (6AG) No. 3:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
5 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH). Measure the resistance between connector (6AG) in the test harness AG and chassis ground. <i>Connector & terminal</i> <i>(6AG) No. 1 — Chassis ground:</i> <i>(6AG) No. 3 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
2 CHECK CURTAIN AIRBAG MODULE. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module (RH). <Ref. to AB-23, Curtain Airbag Module.>	Go to step 3.
3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (6AG) in the test harness AG and chassis ground. Connector & terminal (6AG) No. 6 (+) — Chassis ground (-): (6AG) No. 8 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 4.	Replace the airbag rear harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-25, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BJ:DTC 96 CURTAIN AIRBAG MODULE LH FAILURE

DTC DETECTING CONDITION:

- Curtain airbag harness (LH) is shorted to power supply.
- Curtain airbag module (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the airbag control module and the front sub sensor.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step 2.
2 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 6) Disconnect the connector (AB13) from the front sub sensor (LH), and then connect the connector (1H) in the test harness H to connector (AB13). 7) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H. Connector & terminal (4AG) No. 7 — (3H) No. 5: (4AG) No. 9 — (3H) No. 6:	Is the resistance less than 10 Ω ?	Go to step 3.	Replace the airbag main harness along with body harness.
3 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH). Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. Connector & terminal (4AG) No. 7 — Chassis ground: (4AG) No. 9 — Chassis ground: (4AG) No. 7 — (4AG) No. 9:	Is the resistance 1 M Ω or more?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH). 1) Disconnect the connector (1H) in the test harness H from connector (AB13). 2) Disconnect the connector (AB16) from the front sub sensor (RH), and then connect the connector (1H) in the test harness H to connector (AB16). 3) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H. Connector & terminal (4AG) No. 14 — (3H) No. 5: (4AG) No. 12 — (3H) No. 6:	Is the resistance less than 10 Ω ?	Go to step 5.	Replace the airbag main harness along with body harness.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH). Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. Connector & terminal (4AG) No. 12 — Chassis ground: (4AG) No. 14 — Chassis ground: (4AG) No. 12 — (4AG) No. 14:	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag main harness along with body harness.
6 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the front sub sensor (LH) and front sub sensor (RH). <Ref. to AB-26, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-25, REMOVAL, Airbag Control Module.>	Go to step 7.
7 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BP:DTC BB ROLL OVER: FIRING OUTPUT

This DTC is indicated when the curtain airbag module and the seat belt pretensioner are deployed. Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-25, Airbag Control Module.>
- Curtain airbag module (operating side) <Ref. to AB-23, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-28, Curtain Airbag Sensor.>
- Front outer seat belt with pretensioner (operating side) <Ref. to SB-17, Front Seat Belt.>

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

BV:DTC E8 FRONT SENSOR BUS LH COMMUNICATION ERROR

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

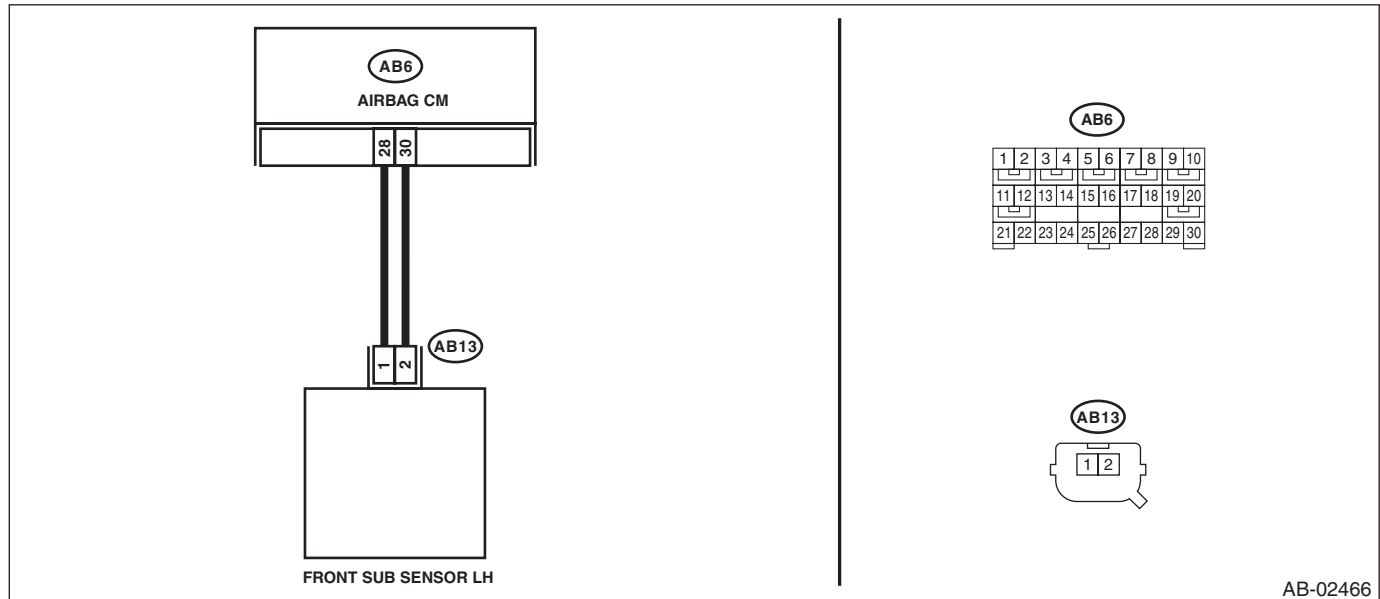

DTC DETECTING CONDITION:

- Open or short circuit in harness of front sensor bus (LH).
- Front sub sensor (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait approx. 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors and seat belt pretensioners of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor (LH).	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step 2.
2 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH). 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connectors (AB9) and (AB10). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 6) Disconnect the front sub sensor (LH), and then connect the connector (1H) in the test harness H to connector (AB13). 7) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H. <i>Connector & terminal</i> <i>(4AG) No. 7 — (3H) No. 5:</i> <i>(4AG) No. 9 — (3H) No. 6:</i>	Is the resistance less than 10 Ω?	Go to step 3.	Replace the airbag main harness along with body harness.
3 CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH). Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. <i>Connector & terminal</i> <i>(4AG) No. 7 — Chassis ground:</i> <i>(4AG) No. 9 — Chassis ground:</i> <i>(4AG) No. 7 — (4AG) No. 9:</i>	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag main harness along with body harness.
4 CHECK AIRBAG CONTROL MODULE. 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the front sub sensor (LH). <Ref. to AB-26, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-25, REMOVAL, Airbag Control Module.>	Go to step 5.
5 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code". <Ref. to AB(diag)-38, LIST, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AIRBAG SYSTEM (DIAGNOSTICS)

BZ:DTC EC SIDE SENSOR BUS RH COMMUNICATION ERROR

DTC DETECTING CONDITION:

- Open or short circuit in harness of side sensor bus (RH).
- Side airbag sensor (RH) and curtain airbag sensor (RH) are faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors and seat belt pretensioners of the driver's and passenger's seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

WIRING DIAGRAM:

AB-02619

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors (AB18, AB28, AB34) between the airbag control module and the curtain airbag sensor (RH).	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

Diagnostic Chart with Trouble Code

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

CK:DTC FA SATELLITE SENSOR BUS COMMUNICATION ERROR

NOTE:

Be sure to properly identify the airbag system type prior to performing any diagnostics.

1. TYPE A

DTC DETECTING CONDITION:

- Open or short circuit in harness of satellite safing sensor.
- Satellite safing sensor is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait approx. 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors and seat belt pretensioners of the driver's and passenger's seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

Basic Diagnostic Procedure

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	CHECK WARNING LIGHT. Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	READ DTC. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to the data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to OD(diag)-14, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to AB(diag)-25, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step 3.	Go to "Airbag Warning Light Failure". <Ref. to AB(diag)-34, Airbag Warning Light Failure.>
3	PERFORM DIAGNOSIS. 1) Determine the possible cause from "List of Diagnostic Trouble Code (DTC)". <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).> 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to OD(diag)-16, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to OD(diag)-15, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

General Description

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

3. General Description

A: CAUTION

1) If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-18, System Calibration (Rezeroing).>

Failure to do so may cause improper operation of the occupant detection system.

2) The passenger detection system (passenger seat only) control unit and the passenger detection sensor are fixed to the seat cushion frame. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.

3) Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the passenger detection system may not operate properly.

4) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

5) Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.

6) Do not disconnect the battery terminals while the engine is running.

A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.

7) Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 60 seconds or more. Occupant detection control module may be damaged.

8) Every occupant detection system-related part is a precision part. Do not drop them.

CAUTION:

- Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
- Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.
- Refer to CAUTION in Airbag System when repairing the occupant detection system. <Ref. to AB(diag)-5, CAUTION, General Description.>

B: INSPECTION

Measure the battery voltage and check electrolyte.

Standard voltage:

12 V

Specific gravity:

1.260 or more

Fluid level:

Between the upper level and lower level

General Description

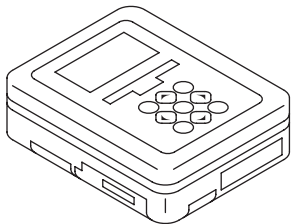

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

C: PREPARATION TOOL

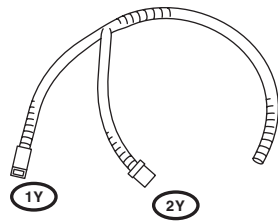

CAUTION:

To measure the voltage and resistance of airbag system and occupant detection system components, be sure to use the specified test harness.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

Electrical Component Location

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

4. Electrical Component Location

A: LOCATION

- (1) Occupant detection control module
- (2) Occupant detection sensor
- (3) Airbag ON/OFF indicator light
- (4) Buckle switch (Passenger's seat)
- (5) Seat belt tension sensor

5. Airbag Connector

A: PROCEDURE

1. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS & BELT TENSION SENSOR)

1) How to disconnect:

Press the lock arm (A) to disconnect the connector.

CAUTION:

When pulling the slide lock or disconnecting the connector, make sure to hold the connector rather than the harness.

2) How to connect:

Hold the connector and push in firmly until it clicks.

CAUTION:

Make sure to insert the connector until the connector is locked. Pull lightly to confirm that it is fixed securely.

2. AIRBAG CONTROL MODULE

Refer to the airbag system section. <Ref. to AB-10, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>

3. BUCKLE SWITCH RH

Refer to the airbag system section. <Ref. to AB-13, BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

Control Module I/O Signal

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

6. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

CAUTION:

Never remove the occupant detection control module, occupant detection sensor or seat frame because they are integrated into one unit.

Terminal name	Terminal No.	Input/Output value	Remarks	
IG – power supply	9	9 — 16 V	When ignition switch ON	
Airbag control module communication (COM)	10	Open collector terminal	Communication line	
Airbag control module communication (GND)	5	0 V	Ground	
Belt tension sensor	(Vcc)	4	0 — 5 V	Belt tension sensor power supply
	(Vout)	16	0.5 — 4.5 V	Sensor output voltage
	(GND)	14	0 V	Sensor ground
Occupant detection sensor	(Vcc)	6	0 — 5 V	Pressure sensor power supply
	(Vout)	7	0.5 — 4.5 V	Sensor output voltage
	(GND)	15	0 V	Sensor ground
Buckle switch	1	0 — IG voltage	Ignition voltage when switch ON	
Buckle switch (GND)	2	0 V	Switch ground	

B: WIRING DIAGRAM

Refer to the electrical wiring diagram. <Ref. to WI-101, WIRING DIAGRAM, Occupant Detection System.>

7. Subaru Select Monitor

A: OPERATION

- 1) Prepare the Subaru Select Monitor kit. <Ref. to AB(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>
- 2) Connect the diagnosis cable to Subaru Select Monitor.
- 3) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools other than the Subaru Select Monitor.

- 4) Turn the ignition switch to ON and run the Subaru Select Monitor.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:

Defective harness connector

TROUBLE SYMPTOM:

Communication is impossible between the airbag control module and the Subaru Select Monitor.

Refer to "COMMUNICATION FOR INITIALIZING IMPOSSIBLE" in the DTC of the AIRBAG SYSTEM (diag). <Ref. to AB(diag)-25, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

2. WITHOUT DTC

DETECTING CONDITION:

- Defective combination meter
- Open circuit of harness

TROUBLE SYMPTOM:

- Airbag warning light remains on.
- "No diagnostic Code Present" will be displayed on the Subaru Select Monitor.

NOTE:

- For detailed operation procedures, refer to "Airbag Warning Light Failure". <Ref. to AB(diag)-34, Airbag Warning Light Failure.>
- When the airbag warning light is OFF and "No diagnostic Code Present" is displayed on Subaru Select Monitor, the system is operating properly.

Read Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) Using the Subaru Select Monitor, on the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Airbag System}.
- 3) After {Airbag System} is displayed, select [OK].
- 4) Select the {Diagnostic Code(s) Display} in «Airbag System».
- 5) Record the displayed DTC.

NOTE:

- For details concerning the operation procedure, refer to the “PC Application Help for Subaru Select Monitor”.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (Airbag system, Occupant detection system). <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).> <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

Clear Memory Mode

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

10. Clear Memory Mode

A: OPERATION

Clear the DTC stored in the airbag control module after repairing the airbag system and occupant detection system. (After the breakdown is recovered, the breakdown code for completed recoveries are read out when the next breakdown occurs if the memory clear work is not performed.)

- 1) Select {Each System Check} in «Main Menu».
- 2) On the «System Selection Menu» display screen, select the {Airbag System}.
- 3) On the «Airbag System» display screen, select the {Clear Memory}.
- 4) When the «Clear Memory?» is shown on the screen, select the [OK].
- 5) When «Done» is displayed, terminate the Subaru Select Monitor and turn the ignition switch to OFF.

NOTE:

For details concerning the operation procedure, refer to the “PC Application Help for Subaru Select Monitor”.

Display of Status Information

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

11. Display of Status Information

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch and seat position sensor, or when the seat belt buckle switch and seat position sensor has been replaced.

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Airbag System}.
- 3) On «Airbag System» display, select {Status Data}.

The following table is for support data.

Contents	Display Contents
Seat position sensor LH	— ^{*2}
Seat position sensor RH	— ^{*2}
Seat belt buckle switch LH	— ^{*6}
Seat belt buckle switch RH	Equipped ^{*3} /Unequipped ^{*4} /Other ^{*5} /Initial setting ^{*1} /— ^{*6}
Passenger's airbag control status	ON ^{*7} /OFF ^{*8} /Initial setting ^{*1}

*1: Displayed when it is initial.

*2: Seat position sensor not supported

*3: Seat belt fastened

*4: Seat belt not fastened

*5: Displayed when data other than belt fastened or not fastened, such as breakdowns is input.

*6: Seat belt buckle switch not supported

*7: Passenger's airbag operating state

*8: Passenger's airbag non-operating state

NOTE:

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

System Calibration (Rezeroing)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

12. System Calibration (Rezeroing)

A: OPERATION

NOTE:

When replacing the occupant detection system, or removing and disassembling the passenger's seat, always perform the system calibration after installing a seat in the vehicle.

CAUTION:

When the trouble occurs in the system during calibration process, "Occupant detection calibration failure" is detected in the DTC 2A of the airbag system and the airbag warning light lights. In this case, after turning the ignition switch to OFF once, redo the system calibration (Rezeroing), or after clearing the cause of the failure, perform the system calibration again.

- 1) Park empty vehicle on a level surface.
- 2) On «Main Menu» display, select {Each System Check}.
- 3) On «System Selection Menu» display, select {Occupant Detection System}.
- 4) On «Occupant Detection System» display, select {Re-zeroing}.
- 5) «See service manual. And check vehicle condition for successfully completing the rezeroing.» is displayed. Check the following to adjust the condition of the vehicle.
 - Adjust the seat backrest to be fully upright. (For models with power seats, press the power seat button until the backrest comes to a stop.)
 - Adjust the seat slide position all the way back. (For models with power seats, press the power seat button until the seat slide does not move any further.)
 - Do not place anything on the top of the seat cushion.
 - Sit on the seat cushion to smooth the seat surface.
 - Check that the passenger's seat belt is not inserted into the buckle, not tense or not stuck.
 - Check that ambient temperature is in a range from 0 to 40°C.

6) When the «Re-zeroing Adjust the passenger seat to the condition shown in service manual» is displayed, slide the passenger seat all the way to the back, check that the backrest is adjusted to all the way up, and select the [OK].

7) When the «Re-zeroing Unbelt the Passenger seatbelt Continue: OK, Quit: NO» is displayed, make sure the passenger's seatbelt is disconnected from the buckle and select the [OK].

8) When the «Re-zeroing Empty the passenger seat Continue: OK, Quit: NO» is displayed, make sure that the passenger's seat is empty, airbag OFF indicator illuminates and airbag ON indicator does not illuminate, and select the [OK].

NOTE:

- After selecting the [OK], «In process...Please wait for a while without touching vehicle» is displayed. Do not touch or rock the vehicle while the message is displayed.
 - During the system calibration process, if the «Re-zeroing is unsuccessful See service manual Press OK to END» is displayed, go to step 10).
- 9) When the re-zeroing is ended normally, the «Rezeroing is successfully completed Press "OK" to END» is displayed. Then turn the ignition switch to OFF to finish the diagnosis.
- 10) During the system calibration process, if «Re-zeroing is unsuccessful See service manual Press "OK" to END» is displayed, turn the ignition switch to OFF once and turn it to ON again, then read the DTC of the airbag system. <Ref. to OD(diag)-14, Read Diagnostic Trouble Code (DTC).>
- When DTC is input, fix the fault and then perform the system calibration. When DTC is not input, check the seat and vehicle status and then perform the system calibration again. <Ref. to OD(diag)-18, System Calibration (Rezeroing).>

System Calibration (Rezeroing)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

NOTE:

When the re-zeroing is unsuccessful, there could be occupant detection system failure or improper seat and vehicle status. When the airbag warning light illuminates, read the DTC of the airbag system, and perform the diagnosis while referring to List of Diagnostic Trouble Code. <Ref. to OD(diag)-14, Read Diagnostic Trouble Code (DTC).> <Ref. to AB(diag)-38, LIST, List of Diagnostic Trouble Code (DTC).>

Airbag Warning Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

13. Airbag Warning Light Illumination Pattern

A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds and then goes off afterwards.

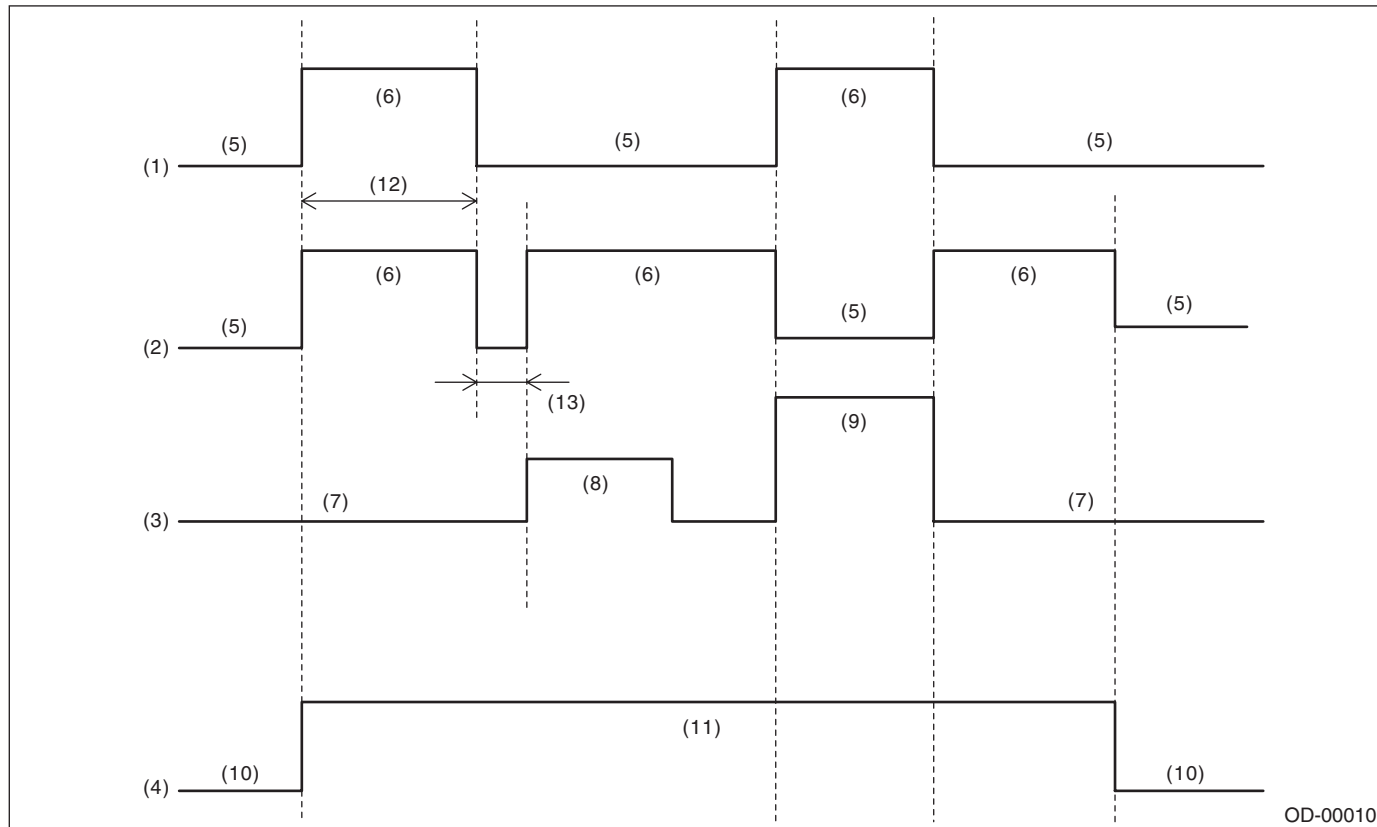

- (1) Airbag warning light
- (2) Approx. 6 sec.
- (3) Ignition switch ON

Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

14. Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

A: INSPECTION

OD-00010

- | | | |
|--------------------------------------------|--------------|---------------------|
| (1) Passenger's airbag ON indicator light | (6) Light ON | (10) OFF |
| (2) Passenger's airbag OFF indicator light | (7) Empty | (11) ON |
| (3) Occupant seating | (8) Child | (12) Approx. 6 sec. |
| (4) Ignition switch | (9) Adult | (13) Approx. 2 sec. |
| (5) Light OFF | | |

List of Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

15. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
2A	ODS Calibration Error	System calibration (Rezeroing) was not completed normally.	<Ref. to OD(diag)-23, DTC 2A ODS CALIBRATION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
2B	ODS System Wrong Parts	<ul style="list-style-type: none"> • Wrong airbag control module is installed. • Wrong occupant detection system is installed. • Occupant detection system is faulty. 	<Ref. to OD(diag)-23, DTC 2B ODS SYSTEM WRONG PARTS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
2C	Belt Tension Sensor Failure	<ul style="list-style-type: none"> • Passenger's seat belt tension sensor is faulty. • Airbag rear harness circuit is open or shorted. • Occupant detection system is faulty. • Occupant detection harness is faulty. 	<Ref. to OD(diag)-24, DTC 2C BELT TENSION SENSOR FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
27	ODS Communication Error	<ul style="list-style-type: none"> • Occupant detection control module and airbag control module communication is faulty. • Airbag rear harness circuit is open, shorted, shorted to ground or shorted to power supply. • Occupant detection harness is faulty. • Occupant detection system is faulty. • Airbag control module is faulty. 	<Ref. to OD(diag)-25, DTC 27 ODS COMMUNICATION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
29	ODS Failure	<ul style="list-style-type: none"> • Occupant detection sensor is faulty. • Occupant detection control module is faulty. • Occupant detection harness is faulty. • Fuse No. 25 (in joint box) is blown. 	<Ref. to OD(diag)-26, DTC 29 ODS FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
37	Buckle Switch RH Failure	<ul style="list-style-type: none"> • Passenger's buckle switch circuit is open, shorted or shorted to ground. • Occupant detection system is faulty. • Occupant detection harness is faulty. 	<Ref. to OD(diag)-27, DTC 37 BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

16. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC 2A ODS CALIBRATION ERROR

DTC DETECTING CONDITION:

System calibration (Rezeroing) was not completed properly.

	Step	Check	Yes	No
1	PERFORM RE-ZEROING. Perform system calibration using the Subaru Select Monitor. <Ref. to OD(diag)-18, System Calibration (Rezeroing).>	Did the system calibration complete properly?	Finish the diagnosis.	Follow the system calibration procedures. <Ref. to OD(diag)-18, System Calibration (Rezeroing).>

B: DTC 2B ODS SYSTEM WRONG PARTS

DTC DETECTING CONDITION:

- Wrong airbag control module is installed.
- Wrong occupant detection system is installed.

	Step	Check	Yes	No
1	CHECK OCCUPANT DETECTION SYSTEM. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the passenger's seat cushion pad frame assembly. <Ref. to SE-7, REMOVAL, Front Seat.> <Ref. to SE-9, DRIVER'S SEAT (POWER SEAT), DISASSEMBLY, Front Seat.> 3) Connect the ground cable to battery. 4) Connect Subaru Select Monitor to the vehicle and perform the system calibration. <Ref. to OD(diag)-18, System Calibration (Rezeroing).>	Did the system calibration complete properly?	Finish the diagnosis.	Go to step 2.
2	CHECK AIRBAG CONTROL SYSTEM. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the airbag control module. <Ref. to AB-25, REMOVAL, Airbag Control Module.> 3) Connect the ground cable to battery. 4) Connect Subaru Select Monitor to the vehicle and perform the system calibration. <Ref. to OD(diag)-18, System Calibration (Rezeroing).>	Did the system calibration complete properly?	Finish the diagnosis.	Check between the occupant detection control module and airbag control module.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

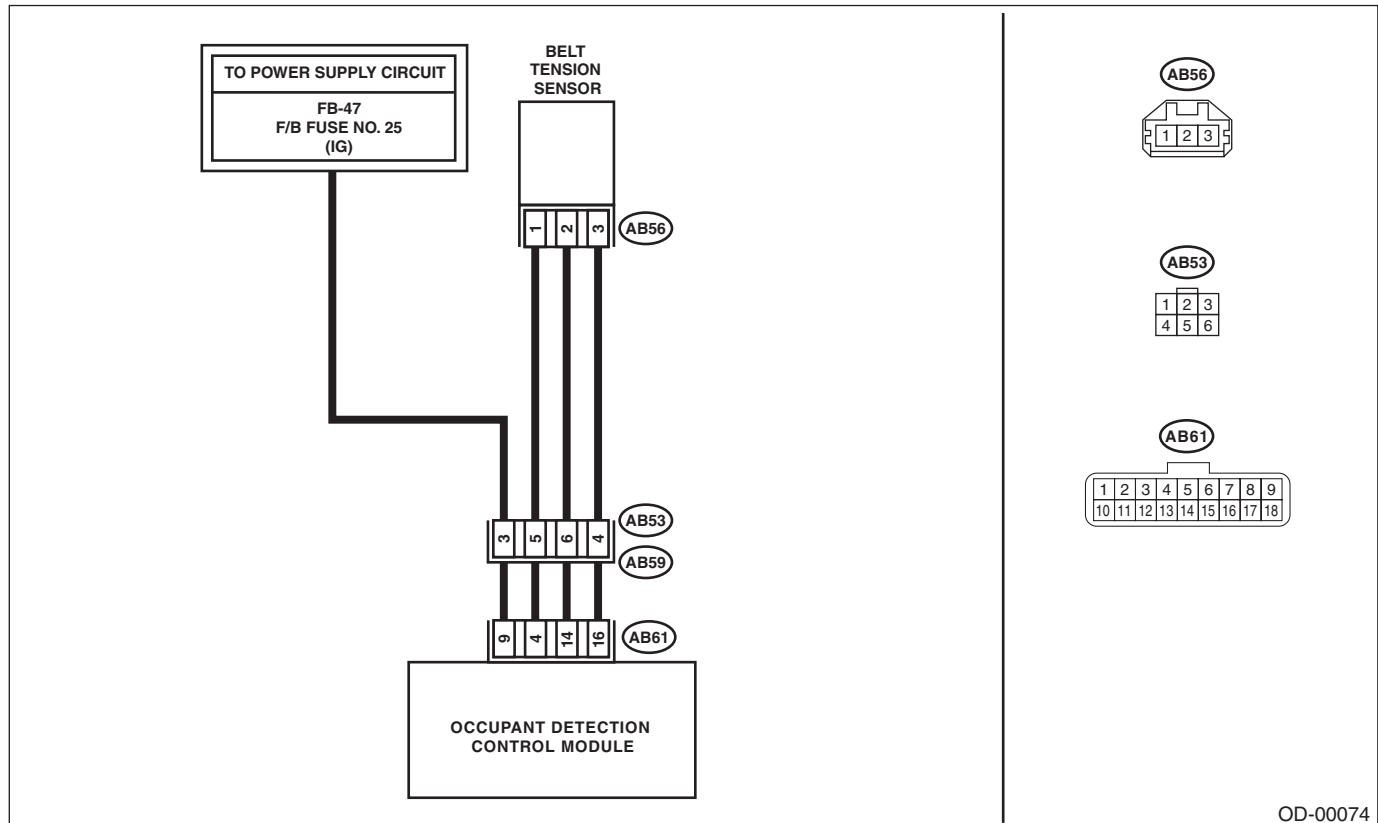

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

C: DTC 2C BELT TENSION SENSOR FAILURE

DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

WIRING DIAGRAM:

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the occupant detection control module and belt tension sensor.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
2	CHECK BELT TENSION SENSOR. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the belt tension sensor connector (AB56) from the airbag harness. 3) Connect the test harness AC to the connector (AB56). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for approximately 6 seconds and go off?	Replace the seat belt outer. <Ref. to SB-17, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>	Go to step 3.
3	CHECK AIRBAG HARNESS. 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the test harness AC from the belt tension sensor connector (AB56). 3) Connect the test harness AD (1AD) to the connector (AB56). 4) Disconnect the airbag harness connector (AB53), and connect connector (1AB) of test harness AB. 5) Measure the resistance between test harness terminals. Connector & terminal (2AB) No. 5 — (2AD) No. 1: (2AB) No. 4 — (2AD) No. 3: (2AB) No. 6 — (2AD) No. 2:	Is the resistance less than 10 Ω ?	Go to step 4.	Replace the airbag harness along with chassis harness.
4	CHECK AIRBAG HARNESS. Measure the resistance between test harness terminals, and between test harness terminal and chassis ground. Connector & terminal (2AB) No. 4 — (2AD) No. 1: (2AB) No. 4 — (2AD) No. 2: (2AB) No. 4 — chassis ground: (2AB) No. 5 — (2AD) No. 2: (2AB) No. 5 — chassis ground:	Is the resistance 1 M Ω or more?	Go to step 5.	Replace the airbag harness along with chassis harness.
5	CHECK AIRBAG HARNESS. 1) Connect the battery ground terminal and turn the ignition switch to ON. 2) Measure the voltage between test harness and chassis ground. Connector & terminal (2AD) No. 1 (+) — Chassis ground (-): (2AD) No. 3 (+) — Chassis ground (-):	Is the voltage 1 V or less?	Replace the airbag harness along with chassis harness.	Check the seat harness, and if any fault is found, replace the seat harness. If no fault is found in the seat harness, replace the seat cushion frame assembly. <Ref. to SE-12, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

D: DTC 27 ODS COMMUNICATION ERROR

Perform the diagnosis following diagnostic procedures for the airbag system. <Ref. to AB(diag)-77, DTC 27 ODS COMMUNICATION ERROR, Diagnostic Chart with Trouble Code.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

E: DTC 29 ODS FAILURE

DTC DETECTING CONDITION:

- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.
- Occupant detection harness is faulty.
- Rear airbag harness is faulty.
- Fuse No. 25 (in joint box) is blown.

	Step	Check	Yes	No
1	CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
2	CHECK DIAGNOSTIC TROUBLE CODE (DTC). Read diagnostic trouble code (DTC) for the airbag system.	Is "2C Belt Tension Sensor Failure or 37 Buckle Switch Failure" displayed in the diagnostics code?	Perform the diagnosis according to each DTC.	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-12, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

F: DTC 37 BUCKLE SWITCH RH FAILURE

DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

WIRING DIAGRAM:

OD-00075

Step	Check	Yes	No
1 CHECK POOR CONTACT OF CONNECTORS. Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
2 CHECK BUCKLE SWITCH. 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE and test harness connector Y to buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-17, INNER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system.

General Description

SEAT BELT SYSTEM

B: CAUTION

- Before starting the work, turn the ignition switch to OFF, disconnect the battery ground cable and wait for 60 seconds or more.
- The pretensioner system has a back-up power supply. Be aware that the pretensioner might deploy if you do not wait for 60 seconds or more before starting work.
- Do not drop or apply any impact to the pretensioner.
- If oil, grease or water gets on the pretensioner, wipe it off immediately with a dry cloth.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new part.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new parts.
- When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not reuse a seat belt with deployed pretensioner.

C: PREPARATION TOOL

1. SPECIAL TOOL

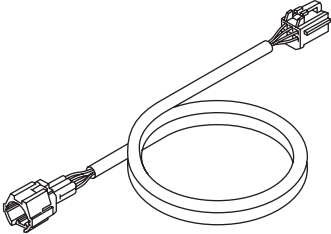

- Subaru Select Monitor

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

SEAT BELT SYSTEM

• AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST98299PA040</p>	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module. Two STs are required for diagnosis of two-stage inflator type airbag module.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Pretensioner Connector

A: PROCEDURE

Refer to "Airbag Connector" of Airbag section for the connectors of the seat belt pretensioners and buckle switch RH. <Ref. to AB-10, PROCEDURE, Airbag Connector.>

Inspection Locations after a Collision

SEAT BELT SYSTEM

3. Inspection Locations after a Collision

A: INSPECTION

Refer to “Inspection Locations After a Collision” of Airbag section. <Ref. to AB-15, Inspection Locations after a Collision.>

4. Seat Belt Warning System

A: WIRING DIAGRAM

Refer to “Seat Belt Warning Light System” in the wiring diagram. <Ref. to WI-100, WIRING DIAGRAM, Seat Belt Warning System.>

B: INSPECTION

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 60 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver’s and passenger’s seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

TROUBLE SYMPTOM:

- Driver’s side seat belt warning light does not illuminate or it remains illuminating.
- Warning buzzer does not beep.

Step	Check	Yes	No
1 CHECK CURRENT SETTINGS. 1) Prepare the Subaru Select Monitor. 2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”. 3) Select the “current data display” and read the data of the “Belt Warning Switch”.	Is the belt warning display ON?	Go to step 2.	Turn the belt warning ON with unit customization.
2 CHECK CURRENT DATA. 1) Select the “current data display” and read the data of the “IG power supply voltage”. 2) Turn the ignition switch ON ↔ OFF.	Does the voltage change between 9 V or higher ↔ less than 1.5 V, according to the ignition switch ON ↔ OFF operation?	Go to step 3.	Check the ignition switch circuit.
3 CHECK FUNCTION. 1) Sit on the driver’s seat and passenger’s seat and disconnect the seat belts of the both. 2) Turn the ignition switch to ON (engine OFF). 3) Check if the driver’s seat belt warning light in the combination meter and the passenger’s seat belt warning light in the clock unit illuminate, and if the warning buzzer sounds.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step 4.	<ul style="list-style-type: none"> • Malfunction of the driver’s seat belt warning light → Go to step 10. • Malfunction of the passenger’s seat belt warning light → Go to step 16. • The buzzer does not sound → Go to step 6.
4 CHECK FUNCTION. 1) Wait until the buzzer stops sounding in step 3. (for approximately six seconds after starting sounding) 2) Connect and disconnect the seat belts of the driver’s and passenger’s. 3) Check the illumination of the driver’s seat belt warning light in the combination meter and the passenger’s seat belt warning light in the clock unit.	Do the seat belts warning light illuminate ↔ go off according to the operation?	Go to step 5.	<ul style="list-style-type: none"> • Malfunction of the driver’s seat belt warning light → Go to step 6. • Malfunction of the passenger’s seat belt warning light → Go to step 12.

Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
5 CHECK FUNCTION. 1) Wait until the buzzer stops sounding in step 3. (for approximately six seconds after starting sounding) 2) Start the engine, and set the vehicle speed at 15 km/h (9 MPH) or more. 3) Check the seat belt warning lights of the driver's and the passenger's, and if the warning buzzer sounds.	Do the driver's warning light and passenger's warning light blink and the buzzer sound while blinking?	Seat belt warning system is normal.	Go to step 19.
6 CHECK CURRENT DATA. 1) Select the "current data display" and read the data of the seat belt switch of the driver's. 2) Connect and disconnect the seat belt buckle.	Does the seat belt SW display turn ON ←→ OFF according to the operation?	Go to step 10.	Go to step 7.
7 CHECK HARNESS. 1) Disconnect the negative terminal from the battery, and wait for 60 seconds or more. 2) Disconnect the connector of body integrated unit and the seat belt buckle switch. 3) Check for short circuit to battery, open circuit and short circuit to ground between the body integrated unit and the seat belt buckle switch LH. Connector & terminal (B281) No. 16 — (R108) No. 3:	Is the harness normal?	Go to step 8.	Repair or replace the harness.
8 CHECK HARNESS. Measure the resistance between the seat belt buckle switch LH and chassis ground. Connector & terminal (R108) No. 1 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 9.	Repair or replace the harness.
9 CHECK SEAT BELT BUCKLE SWITCH LH. Measure the resistance between the connector terminals of the driver's seat belt switch when the driver's seat belt is fastened and detached. Connector & terminal (R108) No. 1 — (R108) No. 3:	Is the resistance when the belt is fastened 1 MΩ or more, and less than 10 Ω when the belt is detached?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Replace the inner belt assembly LH. <Ref. to SB-17, INNER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
10 CHECK DTC. Read the DTC using Subaru Select Monitor.	Is any CAN-related body system DTC detected?	Check the CAN system according to the DTC.	Go to step 11.
11 CHECK COMBINATION METER. Perform the self-diagnosis of combination meter. <Ref. to IDI-5, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	At the start of combination meter self diagnosis, did the buzzer sound and the seat belt warning light illuminate?	Replace the body integrated unit or the combination meter. Or replace both. It may be due to the transmission failure of the body integrated unit or the reception failure of the combination meter.	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>
12 CHECK CURRENT DATA. 1) Sit in the passenger's seat. 2) Select "Current Data Display" and display the data of "P seat belt SW input". 3) Fasten and detach the passenger's side seat belt buckle, and read the data of the seat belt switch. <Ref. to LAN(diag)-20, OPERATION, Read Current Data.>	Does the seat belt switch display turn ON ←→ OFF according to the operation of the seat belt buckle?	Go to step 16.	Go to step 13.

Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
13 CHECK AIRBAG SYSTEM AND OCCUPANT DETECTION SYSTEM. Perform the check in accordance with the diagnostic procedure DTC 27 of the airbag system. <Ref. to AB(diag)-77, DTC 27 ODS COMMUNICATION ERROR, Diagnostic Chart with Trouble Code.>	Is there any problem on the inspection result?	Go to step 14.	Repair or replace the harness.
14 CHECK BUCKLE SWITCH RH. Perform the check in accordance with the diagnostic procedure DTC 37 of the occupant detection system. <Ref. to OD(diag)-27, DTC 37 BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is there any problem on the inspection result?	Go to step 15.	Repair or replace the harness.
15 CHECK AIRBAG CONTROL MODULE AND BODY INTEGRATED UNIT. Check the airbag control module, occupant detection sensor and seat belt buckle switch RH. Perform the check in accordance with the diagnostic procedure DTC 39 of the airbag system. <Ref. to AB(diag)-80, DTC 39 SEAT BELT WARNING FAILURE, Diagnostic Chart with Trouble Code.>	Is there any problem on the inspection result?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Repair or replace the harness.
16 CHECK HARNESS. 1) Disconnect the clock connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ignition power supply and the clock. <i>Connector & terminal</i> <i>(i59) No. 8 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 17.	Repair or replace the harness.
17 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connector of body integrated unit. 3) Check for battery short and open circuits, and short to ground between the body integrated unit and clock. <i>Connector & terminal</i> <i>(i84) No. 25 — (i59) No. 2:</i>	Is the harness normal?	Go to step 18.	Repair or replace the harness.
18 CHECK CLOCK. 1) Connect the clock connector. 2) Turn the ignition switch to ON. 3) Use an appropriate wiring harness to create a short between the body integrated unit and clock. <i>Connector & terminal</i> <i>(i84) No. 25 — Chassis ground:</i> <i>(i59) No. 2 — Chassis ground:</i>	Does passenger's seat belt warning light in the clock illuminate?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Replace the clock. <Ref. to IDI-28, REMOVAL, Clock.>
19 CHECK DTC. Read the DTCs for all systems using the Subaru Select Monitor.	Is a DTC detected?	Perform a check according to the DTC.	Go to step 20.

Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
20 CHECK CURRENT DATA. Select "Current Data Display" and read the data of the "Front Wheel Speed". <Ref. to LAN(diag)-20, OPERATION, Read Current Data.>	Does the data display the wheel speed data correctly?	Go to step 11.	Check the following items. • LAN system <Ref. to LAN(diag)-63, DTC U1223 CAN-HS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> • VDC <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

5. Front Seat Belt

A: REMOVAL

1. OUTER SEAT BELT ASSEMBLY

CAUTION:

- Do not drop or subject the pretensioner to any impact.
- Since the pretensioner and bracket are integrated as a unit, do not disassemble them.

1) Before starting the work, turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.

2) Tilt the backrest forward and move the seat to the front most position.

3) Remove the center pillar lower trim. <Ref. to EI-56, REMOVAL, Lower Inner Trim.>

4) Remove the shoulder anchor.

(1) Remove the anchor cover (A).

(2) Loosen the shoulder anchor bolt (B), and then detach the shoulder anchor from center pillar.

5) Disconnect the connector of the belt tension sensor on passenger's seat.

6) Turn over the floor mat to disconnect the belt tension sensor connector.

7) Remove the three bolts to remove the seat belt retractor.

8) Remove the center pillar upper trim. <Ref. to EI-58, REMOVAL, Upper Inner Trim.>

9) Remove the two bolts to remove the adjustable anchor assembly.

2. INNER SEAT BELT ASSEMBLY

1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.

NOTE:

For the power seat, remove the slide rail installing bolt before removing the battery ground.

2) Remove the slide rail installing bolt.

(1) Tilt the backrest forward and move the seat to the front most position.

(2) Remove the rear bolt cover at the rear side of the slide rail and remove the bolt.

(3) Move the seat to the rearmost position, and remove the bolt on the front side of the slide rail.

3) Disconnect the seat belt warning light connector under the seat.

4) Remove the harness clips from seat cushion frame.

5) Remove the bolts, then remove the inner seat belt assembly.

Front Seat Belt

SEAT BELT SYSTEM

B: INSTALLATION

CAUTION:

- Before installation, make sure that the correct part is used.
- Be careful not to twist the seat belts during installation.

Install each part in the reverse order of removal.

Tightening torque:

Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

Front seat assembly: 53 N·m (5.40 kgf-m, 39.1 ft-lb)

C: INSPECTION

Check for the following, and replace with new parts if necessary.

- Pretensioner is cracked or deformed.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Inner seat belt assembly is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

6. Rear Seat Belt

A: REMOVAL

1. OUTER SEAT BELT ASSEMBLY RH & LH

- 1) Remove the luggage floor mat.
- 2) Remove the rear seat cushion assembly and seatback shoulder. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 3) Remove the seat belt lower anchor bolt.

- 4) Remove the rear quarter trim. <Ref. to EI-60, REMOVAL, Rear Quarter Trim.>
- 5) Remove the nuts, and remove the outer belt assembly.

CAUTION:
Do not remove the bolt and nut securing the retractor and bracket.

2. OUTER SEAT BELT CENTER ASSY

- 1) Carefully remove the snap lock, and remove cover (B). Pull the outer seat belt center tongue (A) from the hole towards the trim.

- 2) Remove the clip and drop the rear end of the roof trim from the roof.
- 3) Remove the bolts, then remove the outer seat belt center assembly.

3. CENTER SEAT BELT ASSEMBLY

- 1) Remove the rear seat cushion. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 2) Remove the bolts, then remove the center seat belt assembly.

Rear Seat Belt

SEAT BELT SYSTEM

B: INSTALLATION

CAUTION:

- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belts are smoothly extended and wound.
- Check that the center seat belt is not assembled wrongly.

1) Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

2) Route the seat belt as shown in the figure below, and affix with Velcro tape.

- LH side

- RH side

3) Install the seat cushion and pull out the center seat belt assembly.

C: INSPECTION

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Inner seat belt is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

General Description

LIGHTING SYSTEM

1. General Description

A: SPECIFICATION

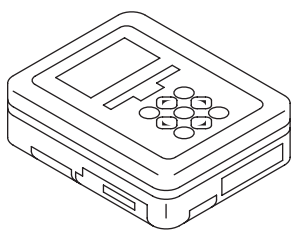

Headlight	Low beam (Halogen type)	12 V — 55 W
	Low beam (HID type)	12 V — 35 W
	High beam	12 V — 60 W
Front turn signal light		12 V — 21 W
Parking light		12 V — 5 W
Front fog light		12 V — 51 W
Side turn signal light		12 V — 1.4 W (LED)
Front side marker light		12 V — 5 W
Rear combination light	Tail/stop light	12 V — 5 / 21 W
	Turn signal light	12 V — 21 W
	Back-up light	12 V — 21 W
License plate light		12 V — 5 W
High-mounted stop light	9 light bulb type	12 V — 3.3 W (LED)
	12 light bulb type	12 V — 3.8 W (LED)
Room light		12 V — 8 W
Spot map light		12 V — 8 W
Luggage room light		12 V — 13 W
Door step light		12 V — 5 W

B: CAUTION

- Before removing or installing parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.
- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions for the airbag system in this case. <Ref. to AB-5, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>ST1B022XU0</p>	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Headlight and Tail Light System

A: WIRING DIAGRAM

1. HALOGEN TYPE HEADLIGHT

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-104, WIRING DIAGRAM, Headlight System.>

2. HID TYPE HEADLIGHT

Refer to “Headlight System” in the wiring diagram. <Ref. to WI-104, WIRING DIAGRAM, Headlight System.>

3. CLEARANCE LIGHT AND ILLUMINATION LIGHT

Refer to “Clearance Light and Illumination Light System” in the wiring diagram. <Ref. to WI-113, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

B: INSPECTION

1. LIGHTING SWITCH

Measure the resistance between lighting switch terminals. <Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. DIMMER & PASSING SWITCH

Measure the resistance between dimmer & passing switch terminals. <Ref. to LI-10, INSPECTION, Combination Switch (Light).>

3. HEADLIGHT RELAY

1) Connect terminal No. 4 to the battery positive terminal and the terminal No. 3 to the battery negative terminal, and check the resistance value between the headlight relay terminals.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 Ω
No		1 MΩ or more

2) Replace the headlight relay if the inspection result is not within the standard value.

4. TAIL AND ILLUMINATION RELAY

1) Connect terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal, and check the resistance between tail and illumination relay terminals.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 Ω
No		1 MΩ or more

2) If the result of the inspection is not at the standard value, replace the tail & illumination relay.

C: NOTE

For operation procedures of each component of the headlight and tail light system, refer to the respective section.

- Headlight Assembly: <Ref. to LI-18, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-21, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-10, Combination Switch (Light).>
- Combination base switch: <Ref. to LI-17, Combination Base Switch Assembly.>
- License plate light: <Ref. to LI-34, License Plate Light.>
- Parking light bulb: <Ref. to LI-24, Clearance/Parking Light Bulb.>
- Rear combination light assembly: <Ref. to LI-30, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-31, Tail/Stop Light Bulb.>
- Front side marker light bulb: <Ref. to LI-25, Front Side Marker Light Bulb.>

Day Time Running Light System

LIGHTING SYSTEM

3. Day Time Running Light System

A: WIRING DIAGRAM

Refer to "Headlight System" in the wiring diagram. <Ref. to WI-104, WIRING DIAGRAM, Headlight System.>

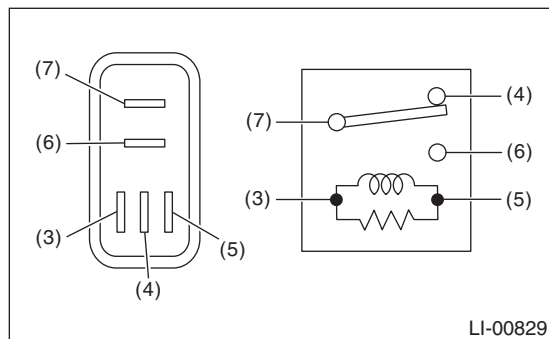

B: INSPECTION

1. DAYTIME RUNNING LIGHT MODULE CHECK

Step	Check	Yes	No
1 CHECK DTC. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2 CHECK INPUT SIGNAL. 1) From the state in step 1), select {Integ. unit mode}. 2) Select the following input signals. (1) Parking Brake Switch Input (2) Shift position (3) Lighting II Switch Input	Is the input signal normal?	Go to step 3.	Check the defective part.
3 CHECK RELAY. Check the daytime running light relay.	Is the relay OK?	Go to step 4.	Replace the relay.
4 CHECK HARNESS.	Is harness normal?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Repair or replace the harness.

2. DAYTIME RUNNING LIGHT RELAY

1) Check the resistance between the daytime running relay terminals when connecting terminal No. 3 to the battery positive terminal and terminal No. 5 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	7 and 6	Less than 1 Ω
No		1 MΩ or more
Yes	7 and 4	1 MΩ or more
No		Less than 1 Ω

2) Replace the daytime running light relay if the inspection result is not within the standard value.

4. Front Fog Light System

A: WIRING DIAGRAM

Refer to “Front Fog Light System” in the wiring diagram. <Ref. to WI-109, WIRING DIAGRAM, Front Fog Light System.>

B: INSPECTION

1. FRONT FOG LIGHT SWITCH

Measure the resistance between front fog light switch terminals. <Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. FRONT FOG LIGHT RELAY

1) Connect terminal No. 4 to the battery positive terminal and the terminal No. 3 to the battery negative terminal, and check the resistance value between the front fog light relay terminals.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 Ω
No		1 M Ω or more

2) If the result of the inspection is not at the standard value, replace the front fog light relay.

C: NOTE

For operation procedures of each component of the front fog light system, refer to the respective section.

- Front fog light assembly: <Ref. to LI-26, Front Fog Light Assembly.>
- Front fog light bulb: <Ref. to LI-28, Front Fog Light Bulb.>
- Combination switch (light): <Ref. to LI-10, Combination Switch (Light).>
- Combination base switch: <Ref. to LI-17, Combination Base Switch Assembly.>

Turn Signal Light and Hazard Light System

LIGHTING SYSTEM

5. Turn Signal Light and Hazard Light System

A: WIRING DIAGRAM

Refer to “Turn Signal Light and Hazard Light System” in the wiring diagram. <Ref. to WI-118, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

B: INSPECTION

1. TURN SIGNAL SWITCH

Measure the resistance between turn signal switch terminals. <Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. HAZARD SWITCH

1) Measure the resistance between hazard switch terminals.

Switch position	Terminal No.	Standard
OFF	2 and 3	1 M Ω or more
ON		Less than 1 Ω

2) If the result of the inspection is not at the standard value, replace the hazard switch.

3. TURN SIGNAL AND HAZARD MODULE

1) Connect the battery and turn signal light bulb to the module. The module is properly functioning if it blinks when power is supplied to the circuit.

2) Replace the turn signal & hazard module if it is found defective.

C: NOTE

For operation procedures of each component of the turn signal and hazard light system, refer to the respective sections.

- Rear combination light assembly: <Ref. to LI-30, Rear Combination Light Assembly.>
- Front turn signal light bulb: <Ref. to LI-23, Front Turn Signal Light Bulb.>
- Rear turn signal light bulb: <Ref. to LI-32, Rear Turn Signal Light Bulb.>
- Combination switch (light): <Ref. to LI-10, Combination Switch (Light).>
- Combination base switch: <Ref. to LI-17, Combination Base Switch Assembly.>
- Side turn signal light assembly: <Ref. to LI-29, Side Turn Signal Light Assembly.>

6. Back-up Light System

A: WIRING DIAGRAM

Refer to “Back-up Light System” in the wiring diagram. <Ref. to WI-111, WIRING DIAGRAM, Back-up Light System.>

B: INSPECTION

1. BACK-UP LIGHT SWITCH (MT MODEL)

1) Measure the resistance between back-up light switch terminals.

Switch position	Terminal No.	Standard
When shift lever is set in reverse position	1 and 2	Less than 1 Ω
Other positions		1 M Ω or more

2) Replace the back-up light switch if the inspection result is not within the standard value.

2. INHIBITOR SWITCH (AT MODEL)

1) Measure the resistance between inhibitor switch terminals.

Switch position	Terminal No.	Standard
When the selector lever is in the “R” range	7 and 8	Less than 1 Ω
Other positions		1 M Ω or more

2) Replace the inhibitor switch if the inspection result is not within the standard value.

3. REFERENCE

For operation procedures of each component of the back-up light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-30, Rear Combination Light Assembly.>
- Back-up light bulb: <Ref. to LI-33, Back-up Light Bulb.>

Stop Light System

LIGHTING SYSTEM

7. Stop Light System

A: WIRING DIAGRAM

Refer to “Stop Light System” in the wiring diagram.
<Ref. to WI-112, WIRING DIAGRAM, Stop Light System.>

B: INSPECTION

1. STOP LIGHT SWITCH

1) Measure the resistance between stop light switch terminals.

Switch position	Terminal No.	Standard
When brake pedal is depressed	2 and 3	Less than 1 Ω
When brake pedal is released		1 M Ω or more

2) Replace the stop light switch if the inspection result is not within the standard value.

2. REFERENCE

For operation procedures of each component of the stop light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-30, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-31, Tail/Stop Light Bulb.>
- High-mounted stop light: <Ref. to LI-35, High-mounted Stop Light.>

8. Room Light System

A: WIRING DIAGRAM

Refer to “Interior Light System” in the wiring diagram. <Ref. to WI-121, WIRING DIAGRAM, Interior Light System.>

B: INSPECTION

1. DOOR SWITCH

1) Measure the resistance between door switch terminals.

Switch position	Terminal No.	Standard
When door is opened	1 and 3	Less than 1 Ω
When door is closed		1 MΩ or more

2) Replace the door switch if the inspection result is not within the standard value.

2. REAR GATE LATCH SWITCH

1) Measure the resistance between rear gate latch switch terminals.

Switch position	Terminal No.	Standard
When rear gate is opened	3 and 4	Less than 1 Ω
When rear gate is closed		1 MΩ or more

2) If the inspection result is not within the standard value, replace the rear gate latch and actuator assembly.

3. REFERENCE

For operation procedures of each component of the room light system, refer to the respective section.

- Spot map light: <Ref. to LI-36, Spot Map Light.>
- Room light: <Ref. to LI-37, Room Light.>
- Luggage room light: <Ref. to LI-38, Luggage Room Light.>
- Door step light: <Ref. to LI-39, Door Step Light.>
- Door switch: <Ref. to LI-46, Door Switch.>
- Ignition switch illumination: <Ref. to LI-40, Ignition Switch Illumination.>

Combination Switch (Light)

LIGHTING SYSTEM

9. Combination Switch (Light)

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and remove the steering column cover lower.

- 3) Remove the harness cover lock.
- 4) Remove the screws and detach the knee protector.

- 5) Remove the mounting screws of steering column cover upper.

- 6) Disconnect the connector from combination switch.

- 7) Remove the screws which secure the switch, then remove the combination switch.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Disconnect the combination switch connector.
- 2) Check the resistance between combination switch terminals.

- 3) Replace the combination switch (light) if the inspection result of each switch is not within the standard value.

1. LIGHTING SWITCH

Switch position	Terminal No.	Standard
OFF	—	1 M Ω or more
Tail	14 and 16	Less than 1 Ω
Head	13, 14 and 16	Less than 1 Ω

2. DIMMER & PASSING SWITCH

Switch position	Terminal No.	Standard
Passing	7, 8 and 16	Less than 1 Ω
High beam	7 and 16	Less than 1 Ω

3. TURN SIGNAL SWITCH

Switch position	Terminal No.	Standard
Left	1 and 2	Less than 1 Ω
Neutral	—	1 M Ω or more
Right	3 and 2	Less than 1 Ω

4. FRONT FOG LIGHT SWITCH

Switch position	Terminal No.	Standard
OFF	11 and 10	1 M Ω or more
ON		Less than 1 Ω

Auto Headlight Beam Leveler System

LIGHTING SYSTEM

10. Auto Headlight Beam Leveler System

A: WIRING DIAGRAM

Refer to "Headlight Beam Leveler System" in the wiring diagram. <Ref. to WI-107, WIRING DIAGRAM, Headlight Beam Leveler System.>

B: SPECIFICATION

1. CONNECTOR TERMINAL ARRANGEMENT

LI-00549

- | | | |
|--------------------------|--------------------------------|-------------------------------------|
| (1) IG power supply | (9) GND | (17) Actuator control signal output |
| (2) Not used | (10) Actuator power supply | (18) Not used |
| (3) Headlights ON signal | (11) Not used | (19) Rear sensor input |
| (4) Not used | (12) Rear sensor power supply | (20) Not used |
| (5) Not used | (13) Not used | (21) Rear sensor GND |
| (6) Indicator output | (14) Not used | (22) Not used |
| (7) Not used | (15) Not used | (23) Actuator GND |
| (8) Not used | (16) Vehicle speed pulse input | (24) Not used |

2. VEHICLE HEIGHT SENSOR UNIT TERMINAL LAYOUT

- (1) GND
- (2) Output
- (3) Power supply

C: INSPECTION

1. SYMPTOM CHART

- Beam level control does not function

	Step	Check	Yes	No
1	CHECK INDICATOR OUTPUT. Turn the ignition switch to ON.	Does the warning indicator turn on for three seconds?	Go to step 2.	Go to step 5.
2	CHECK INDICATOR OUTPUT. Leave the ignition switch to ON for 10 seconds.	Does the warning indicator light go off?	Go to step 10.	Go to step 3.
3	CHECK OUTPUT VOLTAGE BETWEEN AUTO HEADLIGHT BEAM LEVELER CONTROL MODULE AND VEHICLE HEIGHT SENSOR. 1) Disconnect the vehicle height sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the vehicle height sensor connector and chassis ground. Connector & terminal (R29) No. 3 (+) — Chassis ground (-):	Is the voltage 5 V±0.25 V?	Go to step 8.	Go to step 4.
4	CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CONTROL MODULE AND VEHICLE HEIGHT SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler control module connector. 3) Measure the continuity between the auto headlight beam leveler control module connector and the vehicle height sensor connector. Connector & terminal (B150) No. 21 — (R29) No. 1: (B150) No. 19 — (R29) No. 2: (B150) No. 12 — (R29) No. 3:	Is there continuity?	Replace the auto headlight beam leveler control module.	Repair the open circuit and poor contact of the connector in the harness between the auto headlight beam leveler control module and vehicle height sensor.
5	CHECK HARNESS BETWEEN BATTERY — INDICATOR BULB — AUTO HEADLIGHT BEAM LEVELER CONTROL MODULE. 1) Disconnect the auto headlight beam leveler control module connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between auto headlight beam leveler control module and chassis ground. Connector & terminal (B150) No. 6 (+) — Chassis ground (-):	Is the voltage 12 V?	Replace the auto headlight beam leveler control module.	Go to step 6.
6	CHECK INDICATOR BULB. 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Measure the continuity between combination meter body terminals. Connector & terminal (i10) No. 2 — (i10) No. 7:	Is there continuity?	Go to step 7.	Replace the meter case assembly.

Auto Headlight Beam Leveler System

LIGHTING SYSTEM

Step	Check	Yes	No
<p>7 CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CONTROL MODULE AND INDICATOR BULB.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler control module connector. 3) Disconnect the combination meter connector. 4) Measure the continuity between the auto headlight beam leveler control module connector and the combination meter connector.</p> <p>Connector & terminal (B150) No. 6 — (i10) No. 7:</p>	Is there continuity?	Replace the auto headlight beam leveler control module.	Repair the open circuit and poor contact of the connector in the harness between the auto headlight beam leveler control module and indicator.
<p>8 CHECK VEHICLE HEIGHT SENSOR OUTPUT SIGNAL.</p> <p>1) Connect three dry cell batteries (1.5 V) in series. 2) Connect the (+) side of the battery to the No. 3 terminal of the sensor body, and the (-) side of the battery to terminal No. 1, and apply a voltage of 4.5 V between terminals No. 3 — No. 1. 3) With voltage applied, use a tester to measure the voltage between the No. 2 — No. 1 terminals when the sensor body link is moved slowly up and down.</p> <p>Connector & terminal Sensor body No. 2 (+) — No. 1 (-):</p>	Is the voltage 0.5 — 4.1 V?	Go to step 9.	Replace the vehicle height sensor.
<p>9 CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CONTROL MODULE AND VEHICLE HEIGHT SENSOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler control module connector. 3) Measure the continuity between the auto headlight beam leveler control module connector and the vehicle height sensor connector.</p> <p>Connector & terminal (B150) No. 21 — (R29) No. 1: (B150) No. 19 — (R29) No. 2: (B150) No. 12 — (R29) No. 3:</p>	Is there continuity?	Replace the auto headlight beam leveler control module.	Repair the open circuit and poor contact of the connector in the harness between the auto headlight beam leveler control module and vehicle height sensor.
<p>10 CHECK HEADLIGHT ON SIGNAL.</p> <p>1) Disconnect the auto headlight beam leveler control module connector. 2) Turn the ignition switch to ON. 3) Turn the headlight switch to ON. 4) Measure the voltage between auto headlight beam leveler control module connector and chassis ground.</p> <p>Connector & terminal (B150) No. 3 (+) — Chassis ground (-):</p>	Is the voltage 12 V?	Go to step 11.	Repair the open circuit and poor contact of the connector in the harness between the auto headlight relay and headlight leveler control module.

Auto Headlight Beam Leveler System

LIGHTING SYSTEM

Step	Check	Yes	No
11 CHECK HEADLIGHT ASSEMBLY (LEVELER ACTUATOR) DRIVE. 1) Set the vehicle in a parked state. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → ON operation of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the headlight beam drop down once, and then return?	Replace the auto headlight beam leveler control module.	Go to step 12.
12 CHECK OUTPUT VOLTAGE BETWEEN AUTO HEADLIGHT BEAM LEVELER CONTROL MODULE AND HEADLIGHT ASSEMBLY (LEVELER ACTUATOR). 1) Disconnect the headlight assembly (leveler actuator) connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between auto headlight beam leveler control module connector and chassis ground. <i>Connector & terminal</i> <i>(B150) No. 10 (+) — Chassis ground (-):</i>	Is the voltage 12 V?	Replace the headlight assembly.	Go to step 13.
13 CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CONTROL MODULE AND HEADLIGHT ASSEMBLY (LEVELER ACTUATOR). Measure the continuity between the auto headlight beam leveler control module connector and headlight assembly (leveler actuator) connector. <i>Connector & terminal</i> <ul style="list-style-type: none"> • <i>Headlight beam leveler RH</i> <i>(B150) No. 10 — (F59) No. 3:</i> <i>(B150) No. 17 — (F59) No. 2:</i> <i>(B150) No. 23 — (F59) No. 1:</i> • <i>Headlight beam leveler LH</i> <i>(B150) No. 10 — (F58) No. 3:</i> <i>(B150) No. 17 — (F58) No. 2:</i> <i>(B150) No. 23 — (F58) No. 1:</i> 	Is there continuity?	Replace the auto headlight beam leveler control module.	Repair the open circuit and poor contact of the connector in the harness between the auto headlight assembly and headlight leveler control module.

Auto Headlight Beam Leveler System

LIGHTING SYSTEM

D: PROCEDURE

When parts related to the auto headlight beam leveler system are removed or replaced, perform the following procedures to initialize or reinitialize.

NOTE:

Before performing initialization or reinitialization, check the following:

- Vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- Unload any cargo from the vehicle.
- Vehicle's fuel tank is fully filled.
- Refer to the following chart to determine whether to initialize or reinitialize.

Initializa- tion	<ul style="list-style-type: none">• When the auto headlight beam leveler control module has been replaced with a new module.
Reinitial- ization	<ul style="list-style-type: none">• When the auto headlight beam leveler control module has been replaced with a part from a different vehicle.• When suspension parts have been removed or replaced. (Crossmember, front arm, housing, lateral link, strut)• When the vehicle height sensor has been replaced or removed.

1. INITIALIZATION

- 1) Check that the indicator in the meter is flashing twice repeatedly.
- 2) Bounce the vehicle several times to normalize the suspension.
- 3) Make certain that someone is seated in the driver's seat.
- 4) Turn the ignition switch to ON, and, within 1.5 — 20 seconds, turn the headlight switch OFF → ON three times.
- 5) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that initialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
- 6) Perform beam adjustment for the headlight. <Ref. to LI-19, ADJUSTMENT, Headlight Assembly.>

2. REINITIALIZATION

- 1) Bounce the vehicle several times to normalize the suspension.
- 2) Make certain that someone is seated in the driver's seat.
- 3) Turn the ignition switch to ON, and, within 1.5 — 10 seconds, turn the headlight switch OFF → ON five or more successive times.
- 4) Check that the headlight beam drops once, then returns to normal.
- 5) After confirming 4), turn the ignition switch to OFF within 30 seconds.
- 6) Turn the ignition switch to ON again, and, within 1.5 — 10 seconds, turn the headlight switch OFF → ON five or more successive times.
- 7) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that reinitialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
- 8) Perform beam adjustment for the headlight. <Ref. to LI-19, ADJUSTMENT, Headlight Assembly.>

CAUTION:

If the indicator does not flash three times or the headlight beam does not operate, it can be assumed that there is an open circuit or faulty wiring in the harness of the auto headlight beam leveler control module, rear vehicle height sensors or headlight assembly. Perform inspection and repair according to the inspection results, then perform initialization/reinitialization again.

- **Inspection:** <Ref. to LI-13, INSPECTION, Auto Headlight Beam Leveler System.>
- **Initialization:** <Ref. to LI-16, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>
- **Reinitialization:** <Ref. to LI-16, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

3. REFERENCE

For operation procedures of each component of the auto headlight beam leveler system, refer to the respective section.

- Auto headlight beam leveler control module: <Ref. to LI-42, Auto Headlight Beam Leveler Control Module.>
- Rear vehicle height sensor: <Ref. to LI-43, Rear Height Sensor.>

11. Combination Base Switch Assembly

A: REMOVAL

- 1) Remove the driver's airbag module. <Ref. to AB-18, REMOVAL, Driver's Airbag Module.>
- 2) Remove the steering wheel. <Ref. to PS-13, REMOVAL, Steering Wheel.>
- 3) Remove the screws and remove the steering column cover lower.

- 4) Remove the harness cover lock.
- 5) Remove the screws and detach the knee protector.

- 6) Remove the screws and remove the steering column cover.

- 7) Remove the screws, and then remove the roll connector.

- 8) Remove the screws, disconnect the harness connector and remove the combination base switch assembly.

- 9) Remove the combination switch from the combination base switch assembly.
 - Combination switch (light): <Ref. to LI-10, REMOVAL, Combination Switch (Light).>
 - Combination switch (wiper): <Ref. to WW-9, REMOVAL, Combination Switch (Wiper).>

B: INSTALLATION

- 1) Before installing steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-31, ADJUSTMENT, Roll Connector.>
- 2) Install each part in the reverse order of removal.

C: INSPECTION

1. COMBINATION BASE SWITCH ASSEMBLY

Inspect the combination base switch assembly and roll connector for cracks or deformation. If any damage is found, replace with a new part.

12. Headlight Assembly

A: REMOVAL

WARNING:

Because the headlight system uses high voltage, be careful not to perform work with wet hands. There is a possibility of electrical shock.

CAUTION:

The HID headlight uses very high voltages for the lighting circuit. Make sure that the power is turned OFF before working.

- 1) Disconnect the ground cable from battery.
- 2) Remove the clips and remove the air intake duct (rear). (When removing the headlight RH)

- 3) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 4) Disconnect harness connectors.
- 5) Remove the bolts and clips, and remove the headlight assembly.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- 2) Adjust the headlight beam and fog light beam.
 - Adjust the headlight beam. <Ref. to LI-19, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
 - Adjust the fog light beam. (Model with fog light) <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: DISASSEMBLY

1. HID HEADLIGHT BALLAST

WARNING:

Because the headlight system uses high voltage, be careful not to perform work with wet hands. There is a possibility of electrical shock.

CAUTION:

- The HID headlight uses very high voltages for the lighting circuit. Make sure that the power is turned OFF before working.
- Do not leave the headlight without a ballast and back cover for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from battery.
- 2) Remove the headlight assembly. <Ref. to LI-18, REMOVAL, Headlight Assembly.>
- 3) Remove the back cover.

- 4) Disconnect the bulb connector.

5) Remove the harness connector and screws to pull out the ballast.

6) Remove the harness connector and screws on the back to remove the headlight ballast.

D: ASSEMBLY

1. HID HEADLIGHT BALLAST

CAUTION:

- When installing the ballast cover, be sure to install the gasket.
- After installing the ballast to the vehicle, be sure to perform beam adjustment.

Assemble each part in the reverse order of removal.

Tightening torque:

1.3 N·m (0.13 kgf·m, 0.96 ft·lb)

NOTE:

Adjust the projector lens to near the center of the extension opening before installing the ballast. This makes the beam adjustment work easier.

E: ADJUSTMENT

1. HEADLIGHT BEAM ADJUSTMENT

CAUTION:

- Turn off the light before adjusting the headlight beam level. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.
- When blocking the light emitted from the headlight, use a light shield or equivalent. Do not apply the tape on the lens or place the cloth over it. It may raise the temperature in the light and cause deformation/bubble formations of the plastic lens.

1) Before checking the headlight beam level, be sure of the following:

- The area around the headlight has not sustained any scratches, damage or other type of deformation.
- Vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- Vehicle's fuel tank is fully filled.

2) Bounce the vehicle several times to normalize the suspension.

3) Make certain that someone is seated in the driver's seat.

4) Measure the distance between the low beam bulb centers and the height of the bulb center.

CAUTION:

Check the bulb center mark on the inner side of the lens since the low beam bulb center will differ according to bulb shape.

(A) HID type

(B) Halogen type

Headlight Assembly

LIGHTING SYSTEM

5) Turn the headlights on and then adjust the low beam pattern.

- (1) Adjust the vertical beam level (A).
- (2) Adjust the horizontal beam level (B).

- (A) Vehicle center
- (B) Bulb center marking
- (C) 3 m (10 ft)
- (D) Height of headlight center

W mm (in)	h mm (in) at 3 m (10 ft)
1,210 (47.64)	30 (1.18)

13. Headlight Bulb

A: REMOVAL

1. HIGH BEAM & HALOGEN TYPE LOW BEAM

WARNING:

Because the headlight system uses high voltage, be careful not to perform work with wet hands. There is a possibility of electrical shock.

CAUTION:

- Because the halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb's service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.
- Do not leave the headlight without a bulb and back cover for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from battery.
- 2) Remove the clips and remove the air intake duct (rear). (When removing the headlight bulb RH)

- 3) Disconnect the harness connector.
- 4) Remove the bulb assembly (A) then remove the high beam. To remove the low beam, remove the back cover (B), and then go to step 5.

- 5) Disconnect the bulb connector, and remove the bulb.

2. HID TYPE LOW BEAM

WARNING:

Because the headlight system uses high voltage, be careful not to perform work with wet hands. There is a possibility of electrical shock.

CAUTION:

- Because the HID lighting circuit uses high voltage, be sure to confirm that the power supply is turned off before operation.
- When replacing bulb, hold the flange area. Be careful not to touch the glass area.
- Do not leave the headlight without a bulb and back cover for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from battery.
- 2) Remove the headlight assembly. <Ref. to LI-18, REMOVAL, Headlight Assembly.>
- 3) Remove the back cover.

- 4) Disconnect the bulb connector.

Headlight Bulb

LIGHTING SYSTEM

5) Remove the retaining spring of bulb, and remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. HALOGEN TYPE

WARNING:

Because the headlight system uses high voltage, be careful not to perform work with wet hands. There is a possibility of electrical shock.

CAUTION:

- Because the halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb's service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.

- Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

2. HID TYPE

WARNING:

Because the headlight system uses high voltage, be careful not to perform work with wet hands. There is a possibility of electrical shock.

CAUTION:

- When lit (lighting switch is ON), do not touch the harness, light internals, or metal parts of the light.

- When performing a lighting test, make sure that the headlight is mounted on the vehicle, and the power supply is connected to the connector on the vehicle's side.

- 1) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>

- 2) Install the factory HID bulb to check whether it lights properly.

- 3) If it fails to illuminate normally, replace the bulb with a new part.

- 4) Inspect the HID ballast.

Inspect the ballast in the following manner, and determine whether or not to reuse.

- (1) Perform cold starts (light the headlight after turning off for 10 minutes or more), and hot starts (light the headlight for 15 minutes or more, then turn off for 1 minute and relight) several times, to make sure that the headlight lights properly.

- (2) Monitor the lighting condition right after a cold start up to a stable state (approx. 5 min.), to see if there are any unstable conditions such as flickering.

- (3) Install bulbs with the same number of operating hours on both headlights, and light for approximately 30 minutes. Check for whether there is a difference in brightness on the right and left sides.

- 5) Replace the ballast if it is found defective.

14. Front Turn Signal Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Turn socket (A) and remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Clearance/Parking Light Bulb

LIGHTING SYSTEM

15. Clearance/Parking Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Turn socket (A) and remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

16. Front Side Marker Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Turn socket (A) and remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Front Fog Light Assembly

LIGHTING SYSTEM

17. Front Fog Light Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the fog light cover.

- 3) Remove the screw and clips, and turn over the mud guard.

- 4) Disconnect the bulb connector.
- 5) Remove the plastic nut and bolt, and then detach the fog light assembly.

NOTE:
Remove the bracket as required.

B: INSTALLATION

CAUTION:

After connecting the connector, make sure that the bulb is locked securely.

- 1) Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

- 2) Adjust the fog light beam. <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: ADJUSTMENT

1. FOG LIGHT AIMING

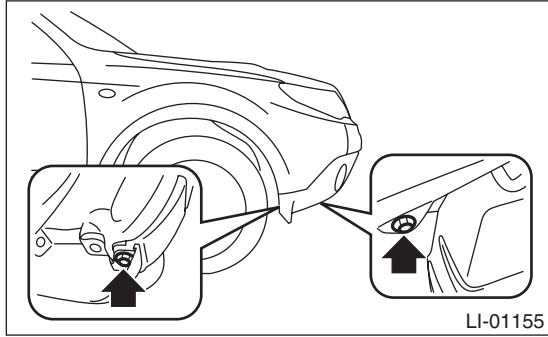

- 1) Before checking the fog light beam level, be sure of the following:

- The area around the fog light has not sustained any accident, damage or other type of deformation.
- Vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- Vehicle's fuel tank is fully filled.

- 2) Bounce the vehicle several times to normalize the suspension.

- 3) Make certain that someone is seated in the driver's seat.

4) Remove the clips and turn over the mud guard.

5) Adjust the front fog light pattern by inserting a Philips screwdriver to the adjusting hole (1).

- (A) Vehicle center
- (B) Bulb center marking
- (C) 3 m (10 ft)
- (D) Height of fog light center

h mm (in) at 3 m (10 ft)
60 (2.38)

18. Front Fog Light Bulb

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the clips and turn over the mud guard.

- 3) Disconnect the bulb connector.
- 4) Rotate the bulb then detach the fog light bulb.

B: INSTALLATION

CAUTION:

- Align the bulb tabs with the fog light securely, push the bulb fully, and then rotate it.
- After connecting the connector, make sure that the bulb is locked securely.

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

19. Side Turn Signal Light Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the mirror. <Ref. to GW-16, REPLACEMENT, Outer Mirror.>
- 3) Remove the scalp cap. <Ref. to GW-14, REPLACEMENT, Scalp Cap.>
- 4) Remove the outer mirror lower cover.

- 5) Remove the side turn signal light assembly.

- (1) Remove the screws.
- (2) Disconnect the harness connector.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Install the side turn signal light assembly and check that it blinks normally.
- 2) If it fails to blink normally, replace the side turn signal light assembly with a new part.

NOTE:

Since LED (Light Emitting Diode) is used for the side turn signal light, replace the side turn signal light assembly if the LED burns out.

Rear Combination Light Assembly

LIGHTING SYSTEM

20.Rear Combination Light Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the bolts, and then detach the rear combination light by pulling it to the rear side of vehicle.

- 3) Disconnect the harness connector and remove the rear combination light.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

21. Tail/Stop Light Bulb

A: REMOVAL

- 1) Remove the rear combination light assembly.
<Ref. to LI-30, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn socket (A) and remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Rear Turn Signal Light Bulb

LIGHTING SYSTEM

22.Rear Turn Signal Light Bulb

A: REMOVAL

- 1) Remove the rear combination light assembly.
<Ref. to LI-30, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn socket (A) and remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

23.Back-up Light Bulb

A: REMOVAL

- 1) Remove the rear combination light assembly.
<Ref. to LI-30, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn socket (A) and remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

24. License Plate Light

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screw and remove the license light cover.

- 3) Remove the bulb.

- 4) Remove the rear gate trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 5) Remove the license plate light assembly harness.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

25.High-mounted Stop Light

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the caps and screws, then detach the high-mounted stop light cover.

- 3) Remove the high-mounted stop light.

- (1) Remove the screws.
- (2) Disconnect the harness connector.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Install the high-mounted stop light to test if it illuminates normally.
- 2) If it fails to illuminate normally, replace the high-mounted stop light with a new part.

NOTE:

Since LED (Light Emitting Diode) is used for the high-mounted stop light, replace the high-mounted stop light assembly if the LED burns out.

Spot Map Light

LIGHTING SYSTEM

26. Spot Map Light

A: REMOVAL

NOTE:

The spot map light is a single unit with the overhead console.

- 1) Disconnect the ground cable from battery.
- 2) Push and open the rear end of the overhead console lid, and remove the screws.

- 3) Disconnect the harness connector and remove the overhead console assembly.
- 4) Remove the spot map light lens.

- 5) Remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. SPOT MAP LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

2. SPOT MAP LIGHT SWITCH

- 1) Measure the resistance between spot map light terminals.

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
ON	7 and 8	1.5±0.5 Ω

- 2) Replace the overhead console assembly if the inspection result is not within the standard value.

3. SPOT MAP LIGHT SLIDE SWITCH

- 1) Turn the spot map light switch to OFF.
- 2) Measure the resistance between spot map light slide switch terminals.

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
DOOR	6 and 7	1.5±0.5 Ω

- Replace the overhead console assembly if the inspection result is not within the standard value.

4. OVERHEAD CONSOLE ILLUMINATION LIGHT BULB

- 1) Install the overhead console assembly to test if it illuminates normally.
- 2) If it does not illuminate normally, replace the overhead console assembly.

NOTE:

Since LEDs (Light Emitting Diode) are used for the overhead console illumination light bulb, replace the overhead console assembly if an LED burns out.

27. Room Light

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lens (A) and room light mounting screws (B).

- Model without sunroof

- Model with sunroof

- 3) Disconnect the harness connector and remove the room light.
- 4) Remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

2. ROOM LIGHT SWITCH

- 1) Measure the resistance between room light switch terminals.

(A) Model without sunroof

(B) Model with sunroof

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
ON	1 and 3	1.5±0.5 Ω
DOOR	2 and 3: Models without sunroof 1 and 2: Model with sunroof	1.5±0.5 Ω

- 2) Check the room light illumination condition.

- Model without sunroof

Connect terminal No. 3 to the battery positive terminal and terminal No. 1 and No. 2 to the battery ground terminal.

- Model with sunroof

Connect terminal No. 1 to the battery positive terminal and terminal No. 2 and No. 3 to the battery ground terminal.

Switch position	Light status
OFF	Light OFF
ON	Light ON
DOOR	Light ON

- 3) Replace the room light if it is found defective.

Luggage Room Light

LIGHTING SYSTEM

28. Luggage Room Light

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Insert a flat tip screwdriver into the edge of the luggage room light body to remove the luggage room light.

- 3) Disconnect the harness connector and remove the luggage room light.
- 4) Insert a flat tip screwdriver to remove the luggage room light.

- 5) Remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. LUGGAGE ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

2. LUGGAGE ROOM LIGHT SWITCH

- 1) Measure the resistance between luggage room light switch terminals.

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
ON	1 and 2	Less than 1 Ω
DOOR	2 and 3	Less than 1 Ω

- 2) Replace the luggage room light if the inspection result is not within the standard value.

29. Door Step Light

A: REMOVAL

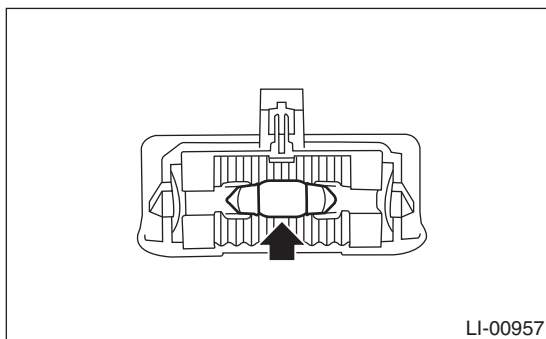

- 1) Disconnect the ground cable from battery.
- 2) Remove the door step light.

CAUTION:

Be careful not to damage light and door trim.

- (1) Insert a flat tip screwdriver into the slit of the door step light body to remove the door step light.
- (2) Disconnect the harness connector.
- 3) Remove the bulb.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) Replace the bulb if it is found defective.

Ignition Switch Illumination

LIGHTING SYSTEM

30. Ignition Switch Illumination

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and steering cover lower.

- 3) Remove the harness cover lock.
- 4) Remove the screws and detach the knee protector.

- 5) Remove the screws and remove the steering column cover upper.

- 6) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>
- 7) Disconnect the ignition switch illumination connector (A).

- 8) Turn the ignition switch illumination connector to the left and remove it.

- (A) Ignition switch illumination connector
- (B) Ignition switch illumination
- (C) Immobilizer antenna connector

B: INSTALLATION

Install each part in the reverse order of removal.

Ignition Switch Illumination

LIGHTING SYSTEM

C: INSPECTION

	Step	Check	Yes	No
1	CHECK THE IGNITION SWITCH ILLUMINATION. Make sure the ignition switch illumination illuminates when driver's side door is open.	Does the ignition switch illumination illuminate?	Ignition switch illumination is normal.	Go to step 2.
2	CHECK THE IGNITION SWITCH ILLUMINATION. Make sure the ignition switch illumination blinks when the ignition switch is turned to ON.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to LAN(diag)-28, REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING), OPERATION, Registration Body Integrated Unit.>	Check the ignition switch illumination circuit. <Ref. to SL-23, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>

31. Auto Headlight Beam Leveler Control Module

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the harness connector.
- 3) Remove the bolts and the auto headlight beam leveler control module.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

NOTE:

When the auto headlight beam leveler control module is removed, perform initialization or reinitialization. <Ref. to LI-16, PROCEDURE, Auto Headlight Beam Leveler System.>

32.Rear Height Sensor

A: REMOVAL

CAUTION:

Always remove the vehicle height sensor before removing any parts related to the suspension.

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle body, and remove the left rear wheel.
- 3) Disconnect the rear vehicle height sensor connector.
- 4) Remove the nut and remove the rear vehicle height sensor.

CAUTION:

Remove the bracket as a unit, and do not disassemble the sensor and lever.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

NOTE:

If the rear vehicle height sensor is removed, perform reinitialization. <Ref. to LI-16, PROCEDURE, Auto Headlight Beam Leveler System.>

Day Time Running Resistor

LIGHTING SYSTEM

33. Day Time Running Resistor

A: REMOVAL

- 1) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 2) Disconnect the harness connector.
- 3) Remove the bolt, and remove the daytime running resistor.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

7.5 N-m (0.76 kgf-m, 5.5 ft-lb)

- 2) Adjust the fog light beam. (Model with fog light)
<Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

34. Reflex Reflector

A: REMOVAL

- 1) Remove the nut (A) of the reflex reflector from the backside of the bumper.
- 2) Press the tabs (B) to remove the reflex reflector.

B: INSTALLATION

Install each part in the reverse order of removal.

35. Door Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screw, and pull out the door switch.

- 3) Disconnect the harness connector and remove the door switch.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

Refer to "Inspection" of "Room Light System".
<Ref. to LI-9, DOOR SWITCH, INSPECTION, Room Light System.>

WIPER AND WASHER SYSTEMS

WIPER AND WASHER SYSTEMS

1. General Description

A: SPECIFICATION

Front wiper motor	Input	12 V — 72 W or less
Rear wiper motor	Input	12 V — 42 W or less
Front washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less
Rear washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less

B: COMPONENT

1. FRONT WIPER

WW-00583

- (1) Wiper rubber
- (2) Wiper blade ASSY
- (3) Wiper arm

- (4) Wiper link
- (5) Wiper motor

Tightening torque: N·m (kgf·m, ft·lb)

T1: 6.0 (0.61, 4.4)

T2: 7.5 (0.76, 5.5)

T3: <Ref. to WW-18, INSTALLATION, Front Wiper Motor and Link.>

T4: 22 (2.24, 16.2)

General Description

WIPER AND WASHER SYSTEMS

2. REAR WIPER

WW-00568

- (1) Wiper rubber
- (2) Wiper blade ASSY
- (3) Wiper arm

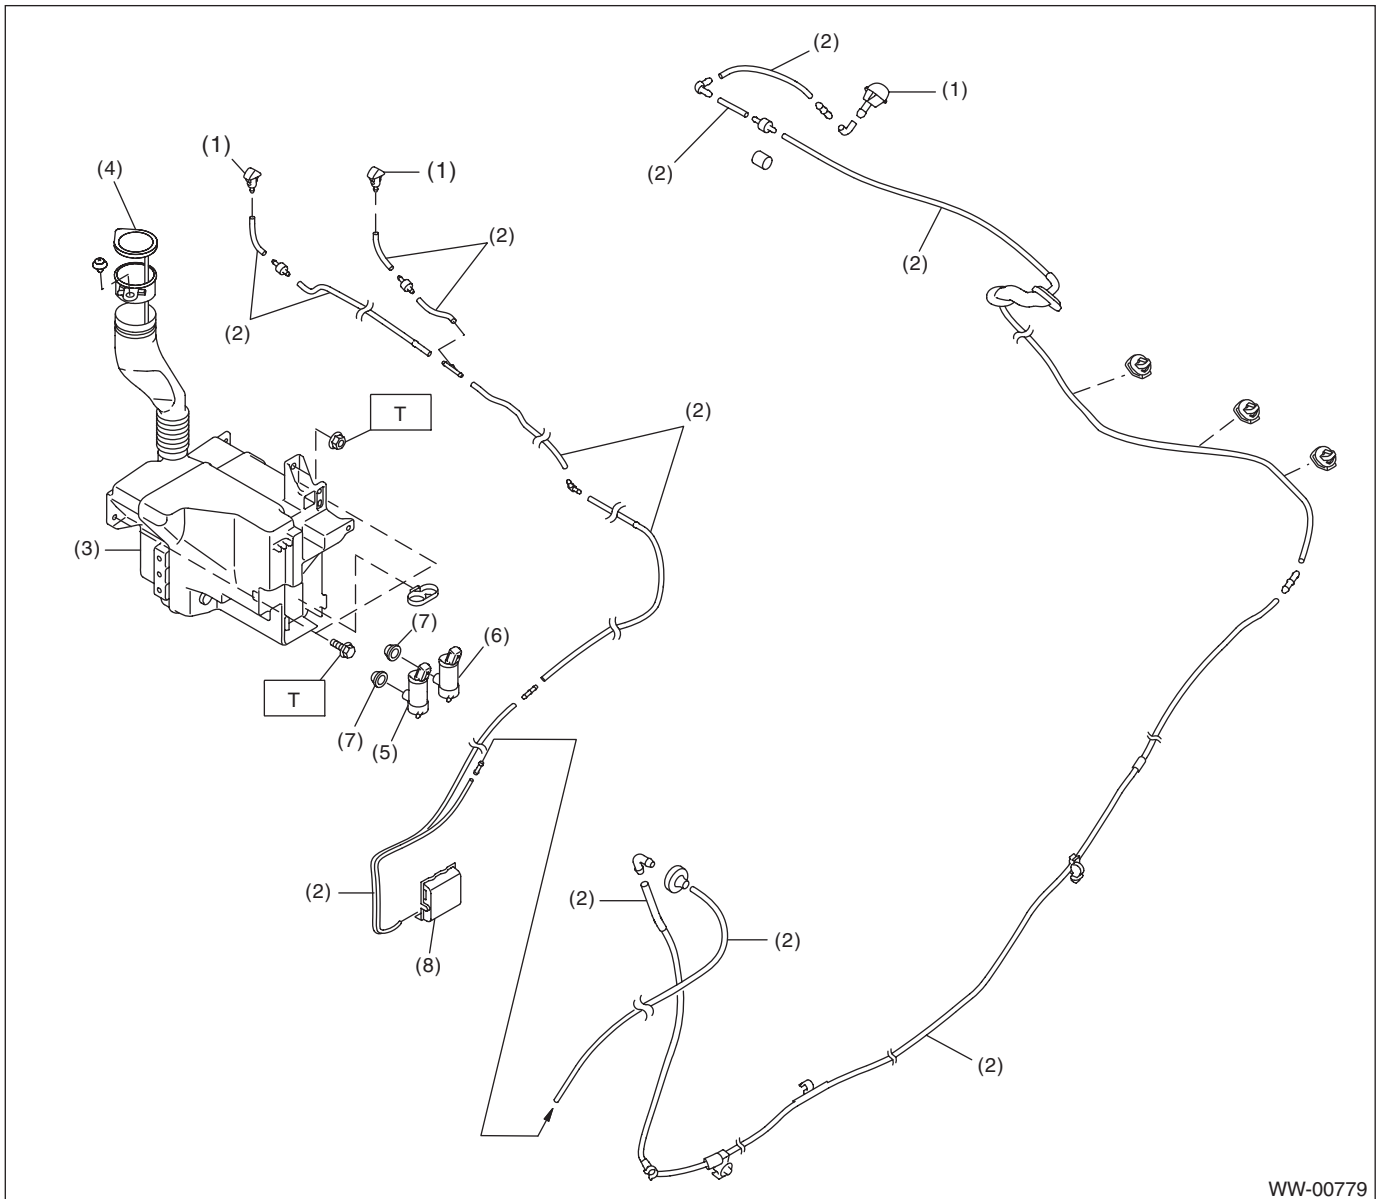

- (4) Wiper arm cover
- (5) Pivot cap
- (6) Wiper motor

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6.0 (0.61, 4.4)

T2: 8.0 (0.82, 5.9)

3. WASHER TANK

- | | |
|-----------------------------------|------------------------|
| (1) Washer nozzle | (5) Front washer motor |
| (2) Washer hose | (6) Rear washer motor |
| (3) Washer tank | (7) Grommet |
| (4) Washer tank cap & level gauge | (8) Washer motor cover |

Tightening torque: N·m (kgf·m, ft·lb)

T: 6.0 (0.61, 4.4)

C: CAUTION

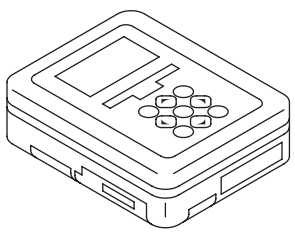

- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure that the each function operates normally.
- Be careful with the airbag system wiring harness which passes near electrical parts and switches.
- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions for the airbag system in this case. <Ref. to AB-5, CAUTION, General Description.>
- Care must be taken when connecting the hose to the pipe so that no bending, jamming, etc. are caused.
- If even a small amount of silicon oil or grease enters tank and washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

General Description

WIPER AND WASHER SYSTEMS

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>ST1B022XU0</p>	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and troubleshooting for electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
TORX® T50	Used for removing and installing the wiper motor assembly.
Circuit tester	Used for checking voltage and continuity.

NOTE:

Refer to the data described below, prepare the materials to make a front washer nozzle adjustment tool.

General Description

Materials

- Vertebra of wiper blade which is to be discarded
- Vinyl tape

Steps of making a front washer nozzle adjustment tool

WW-00791

1. Bend the vertebra at the position 25 mm (0.98 in) away from its end by 45°.
2. Bend the vertebra at the position 29 mm (1.14 in) away from the other end by 45°.
3. Double up the vertebra so that the longer end (29 mm (1.14 in)) comes upward.
4. Secure the vertebra with a vise (a) so that the tip clearance becomes 5 mm (0.20 in).
5. Bend the vertebra at the position approximately 90 mm (3.54 in) away from the bending point for the longer end.
6. Check that the tip clearance is 5 mm (0.20 in), and secure the vertebra with vinyl tape (b).

Wiper and Washer System

WIPER AND WASHER SYSTEMS

2. Wiper and Washer System

A: WIRING DIAGRAM

1. WIPER AND WASHER (FRONT)

Refer to “Front Wiper and Washer System” in the wiring diagram. <Ref. to WI-125, WIRING DIAGRAM, Front Wiper and Washer System.>

2. WIPER AND WASHER (REAR)

Refer to “Rear Wiper and Washer System” in the wiring diagram. <Ref. to WI-126, WIRING DIAGRAM, Rear Wiper and Washer System.>

B: INSPECTION

Symptoms	Repair order
Wiper and washers do not operate.	1. Wiper fuse 2. Combination switch 3. Wiper motor assembly 4. Wiring harness
Wipers do not operate in LO or HI.	1. Combination switch 2. Wiper motor assembly 3. Wiring harness
Wipers do not operate in INT.	1. Combination switch 2. Wiper motor assembly 3. Wiring harness
Washer motor does not operate.	1. Washer switch 2. Washer motor 3. Wiring harness
Wipers do not operate when washer switch is ON.	1. Wiper motor assembly 2. Wiring harness
Washer fluid spray does not operate properly.	1. Washer motor 2. Washer hose and nozzle

C: NOTE

For procedure of each component of the wiper and washer system, refer to the respective sections.

- Combination switch (Wiper): <Ref. to WW-9, Combination Switch (Wiper).>
- Wiper blade: <Ref. to WW-13, Wiper Blade.>
- Front wiper arm: <Ref. to WW-17, Front Wiper Arm.>
- Front wiper motor and link: <Ref. to WW-18, Front Wiper Motor and Link.>
- Rear wiper arm: <Ref. to WW-22, Rear Wiper Arm.>
- Rear wiper motor: <Ref. to WW-23, Rear Wiper Motor.>
- Washer tank and motor: <Ref. to WW-15, Washer Tank and Motor.>
- Front washer nozzle: <Ref. to WW-20, Front Washer Nozzle.>
- Rear washer nozzle: <Ref. to WW-24, Rear Washer.>

3. Combination Switch (Wiper)

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and remove the steering column cover lower.

- 3) Remove the harness cover lock.
- 4) Remove the screws and detach the knee protector.

- 5) Remove the mounting screws of steering column cover upper.

- 6) Disconnect the connector from wiper switch.

- 7) Remove the screws and then remove the wiper switch.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Operate the switches to check the continuity between terminals.

	Switch position	Terminal No.	Standard
Front	OFF	7 and 16	Less than 1 Ω
	INT	7 and 16	Less than 1 Ω
	LO	7 and 17	Less than 1 Ω
	HI	8 and 17	Less than 1 Ω
	Washer ON	2 and 11	Less than 1 Ω
Rear	OFF	2 and 10 10 and 12 2 and 12	1 MΩ or more
	INT	2 and 13	Less than 1 Ω
	ON	2 and 10	Less than 1 Ω
	Washer ON	2 and 12	Less than 1 Ω

Combination Switch (Wiper)

WIPER AND WASHER SYSTEMS

2) Replace the switch if the inspection result is not within the standard value.

1. FRONT WIPER

1) Check with Subaru Select Monitor

When the front wiper switch is operated, check the input signal using the Subaru Select Monitor.

- (1) Prepare the Subaru Select Monitor kit.
- (2) Turn the ignition switch to ON.
- (3) On «System Selection Menu» display, select {Integ. unit mode}.
- (4) Select the {Current Data Display & Save}.
- (5) Check the input signal when the front wiper switch is set to LO or HI.

Is the input signal normal?

- **Yes** → Finish the diagnosis.
- **No** →
 1. Check the harness.
 2. Check ACC input voltage of body integrated unit.

Connector & terminal

(B281) No. 5 (+) — Chassis ground (-):

3. Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>

2) Check the intermittent operation (inspection of the wiper switch alone)

- (1) Set the voltage meter between terminal No. 7 (+) and No. 2 (-).
- (2) Connect the battery to connector. (Terminal No. 17 (+), terminal No. 2 & 16 (-))
- (3) Turn the front wiper switch to INT.
- (4) Connect the battery (+) to the terminal No. 16 for 5 seconds.
- (5) Connect the battery (-) to the terminal No. 16, and check the voltage between terminal No. 7 — No. 2 when performing the intermittent operation.

(6) Perform step (1) to (5) above when intermittent control switch is in MIN or MAX, and replace the switch if the operation is not as specified.

Intermittent stationary time

MIN: Approx. 4 seconds

MAX: Approx. 19 seconds

(A): Connect the battery (-) to the terminal No. 16.

S: Intermittent downtime (sec.)

Combination Switch (Wiper)

2. REAR WIPER

1) Check with Subaru Select Monitor

	Step	Check	Yes	No
1	<p>CHECK INPUT OF REAR WIPER SWITCH. Check the input from body integrated unit using the Subaru Select Monitor.</p> <ol style="list-style-type: none"> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON. 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Current Data Display & Save}. 5) Check the input of the rear wiper switch. 	Is the input normal?	Go to step 4.	Go to step 2.
2	<p>CHECK HARNESS.</p> <ol style="list-style-type: none"> 1) Disconnect the ground cable from battery. 2) Disconnect the connector of body integrated unit. 3) Disconnect the connector from wiper switch. 4) Measure the resistance between body integrated unit and wiper switch. <p>Connector & terminal (B281) No. 18 — (B70) No. 10: (B281) No. 27 — (B70) No. 13: (B281) No. 28 — (B70) No. 12:</p>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the harness between the body integrated unit and wiper switch.
3	<p>CHECK INPUT VOLTAGE OF BODY INTEGRATED UNIT.</p> <ol style="list-style-type: none"> 1) Connect the ground cable to battery. 2) Turn the ignition switch to ACC. 3) Check the input voltage of body integrated unit. <p>Connector & terminal (B280) No. 7 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 4.	Check the harness and fuse.
4	<p>CHECK OUTPUT OF BODY INTEGRATED UNIT. When the rear wiper switch is operated, check the output using the Subaru Select Monitor.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to ON. 2) Operate the rear wiper switch and set to each position of ON and INT. 3) At this time, check the body integrated unit output. 	When set to ON, is ON output continuous? When set to INT, is ON/OFF output repeated? (INT OFF time (when vehicle parked): 12 seconds)	Check the rear wiper motor circuit.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>

Combination Switch (Wiper)

WIPER AND WASHER SYSTEMS

2) Check rear wiper motor circuit

Step	Check	Yes	No
1 CHECK POWER SUPPLY CIRCUIT OF THE REAR WIPER MOTOR. 1) Disconnect the harness connector of the rear wiper motor. 2) Turn the ignition switch to ACC. 3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground. <i>Connector & terminal</i> <i>(D43) No. 3 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	<ul style="list-style-type: none"> • Check the fuse (No. 23 in fuse & relay box). • Check the fusible link (No. 7 in main fuse box).
2 CHECK GROUND CIRCUIT OF REAR WIPER MOTOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground. <i>Connector & terminal</i> <i>(D43) No. 4 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 3.	Repair the open circuit of the rear wiper motor ground circuit.
3 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND REAR WIPER MOTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the harness connector of the rear wiper motor. 4) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor. <i>Connector & terminal</i> <i>(B279) No. 8 — (D43) No. 1:</i> <i>(B279) No. 9 — (D43) No. 2:</i>	Is the resistance less than 10 Ω ?	Go to step 4.	Repair the open circuit of the harness between body integrated unit and rear wiper motor.
4 CHECK INPUT VOLTAGE OF BODY INTEGRATED UNIT. 1) Turn the ignition switch to ACC. 2) Check the input voltage of body integrated unit. <i>Connector & terminal</i> <i>(B279) No. 21 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 5.	Check the harness and fuse.
5 CHECK OUTPUT OF BODY INTEGRATED UNIT. 1) Connect the harness connector of body integrated unit. 2) Disconnect the connector of the rear wiper motor. 3) Turn the ignition switch to ACC. 4) Measure the voltage between rear wiper motor connector and chassis ground. <i>Connector & terminal</i> <i>(D43) No. 2 (+) — Chassis ground (-):</i>	Is the voltage less than 1.5 V when the rear wiper switch is OFF, and is the voltage 10 V or more when the rear wiper switch is ON?	Go to step 6.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>
6 CHECK OPERATION OF REAR WIPER MOTOR. 1) Remove the rear wiper motor. 2) Check the rear wiper motor. <Ref. to WW-23, INSPECTION, Rear Wiper Motor.>	Does the rear wiper motor rotate normally?	End.	Replace the rear wiper motor.

4. Wiper Blade

A: REMOVAL

1. FRONT

- 1) Pull up locking clip (A), and push the arm into the blade assembly side. (Arrow 2)
- 2) While lifting the arm, pull out (Arrow 3), and remove the blade assembly from the arm.

2. REAR

Turn the blade in the direction of arrow (A) and remove it from arm.

(A) Turn the wiper blade.

- (1) Wiper arm
- (2) Wiper blade
- (3) Wiper blade attachment section

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Confirm that the clip is locked securely.

C: DISASSEMBLY

1. FRONT

Pull side (A) of the wiper rubber stopper and remove the rubber from the blade assembly.

2. REAR

Pull the wiper rubber top slightly from stopper (A) and pull out completely.

Wiper Blade

WIPER AND WASHER SYSTEMS

D: ASSEMBLY

1. FRONT

1) Insert the wiper rubber onto the blade so that the stopper is in the position shown in the figure.

2) Make sure the wiper rubber is securely fastened to the pull stopper (A).

2. REAR

1) Insert the wiper rubber through claw (B).

2) Insert the wiper rubber until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).

3) Insert the wiper rubber into claw (A).

E: INSPECTION

1) When the wiper does not operate properly, inspect the following item.

- Make sure the movable part of blade assembly moves smoothly.
- Make sure the wiper rubber is not deformed or damaged.

2) Replace with a new part if damage is found.

5. Washer Tank and Motor

A: REMOVAL

- 1) Open the front hood.
- 2) Disconnect the ground cable from battery.
- 3) Remove the front bumper. <Ref. to EI-29, REMOVAL, Front Bumper.>
- 4) Remove the clip of the washer tank duct.

- 5) Remove the washer motor cover, and disconnect the connector.

- 6) Prepare a container before disconnecting the washer hose and drain all washer fluid in the tank.

- 7) Remove the bolts and nuts and remove the washer tank.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

6.0 N·m (0.61 kgf·m, 4.4 ft·lb)

- 2) Adjust the headlight beam and fog light beam.
 - Adjust the headlight beam. <Ref. to LI-19, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
 - Adjust the fog light beam. (Model with fog light) <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: DISASSEMBLY

Pull out the washer motor from the tank.

- (A) Front
- (B) Rear

Washer Tank and Motor

WIPER AND WASHER SYSTEMS

D: ASSEMBLY

- 1) Assemble each part in the reverse order of disassembly.
- 2) Confirm that water does not leak from installation area of motor.

E: INSPECTION

Apply battery voltage to the connector terminal of the washer motor and make sure that the motor operates.

6. Front Wiper Arm

A: REMOVAL

- 1) Open the front hood.
- 2) Remove the cap.
- 3) Remove the nut, and remove the arm.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Operate the wiper once.
- 3) Align the wiper blade to ceramic print point mark (A) of front window panel.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to WW-3, FRONT WIPER, COMPONENT, General Description.>

C: ADJUSTMENT

Operate the wiper once. Align the wiper blade to ceramic print point mark (A) of front window panel.

Front Wiper Motor and Link

WIPER AND WASHER SYSTEMS

7. Front Wiper Motor and Link

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the cowl panel. <Ref. to EI-38, REMOVAL, Cowl Panel.>
- 3) Disconnect the connector of motor.
- 4) Remove the bolt, and remove the wiper link.

- 5) Remove the TORX® bolt and nuts, and remove the wiper motor assembly.

B: INSTALLATION

- 1) Connect the battery ground terminal.
- 2) To confirm that the motor is at the auto stop position, connect the harness to the motor and turn the wiper switch to ON/OFF once.
- 3) Disconnect the ground cable from battery.

- 4) Install the wiper motor assembly.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to WW-3, FRONT WIPER, COMPONENT, General Description.>

- 5) Tighten the nut of the link plate and motor assembly.

CAUTION:

Tighten the nut where rod (A) and link plate (B) is aligned in a straight line.

Tightening torque:

Tighten to 8.5 N·m (0.87 kgf·m, 6.3 ft·lb) by 115°.

- 6) Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to WW-3, FRONT WIPER, COMPONENT, General Description.>

C: INSPECTION

1) Check that the wiper motor operates at low speed when the battery is connected to the connectors terminal as shown in the figure.

2) Check that the wiper motor operates at high speed when the battery is connected to the connectors terminal as shown in the figure.

3) Connect the battery to the terminals to the connector, run the motor at low speed, and then disconnect the terminal to stop the wiper motor in mid motion.

4) Connect the battery and confirm that the motor stops at the automatic stop position after the motor operates at low speed.

Front Washer Nozzle

WIPER AND WASHER SYSTEMS

8. Front Washer Nozzle

A: REMOVAL

- 1) Remove the cowl panel. <Ref. to EI-38, REMOVAL, Cowl Panel.>
- 2) Remove the washer hose from the washer nozzle.
- 3) Using a driver with a narrow tip, etc., remove the washer nozzle from the cowl panel.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Adjust the washer nozzle position. <Ref. to WW-20, ADJUSTMENT, Front Washer Nozzle.>

C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

D: ADJUSTMENT

- 1) Turn the wiper switch to OFF position.
- 2) While the vehicle is at a standstill, insert the washer nozzle adjustment tool (a) into upper side (c) and lower side (b) of the washer nozzle to perform necessary adjustment.

CAUTION:

Washer nozzle is made of resin. If precision screwdriver (A) or equivalent is inserted into discharge port for adjustment, the discharge port can be deformed, and washer fluid cannot be sprayed.

3) Adjust the injection position of the washer fluid as shown in the figure.

Injection position:

A: 250 mm (9.84 in)

B: 279 mm (10.99 in)

- (1) Washer nozzle
- (2) Center of lower nozzle

Rear Wiper Arm

WIPER AND WASHER SYSTEMS

9. Rear Wiper Arm

A: REMOVAL

- 1) Detach the wiper arm cover (A).

- 2) Remove the nut and remove the wiper arm.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Operate the rear wiper once.
- 3) Align the blade with the marking (A) of the glass.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

C: ADJUSTMENT

- 1) Operate the rear wiper once.
- 2) Align the blade with the marking (A) of the glass.

10.Rear Wiper Motor

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear wiper arm. <Ref. to WW-22, REMOVAL, Rear Wiper Arm.>
- 3) Remove the rear gate lower trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 4) Disconnect the harness connector of wiper motor assembly.
- 5) Remove the bolt, and then remove the wiper assembly.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) As shown in the figure, make sure that the diamond mark of the pivot cap is facing upward.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

C: INSPECTION

- 1) Connect the battery to the wiper motor connector and confirm that wiper motor operates.

- 2) Connect the battery to the connector terminal, run the motor and disconnect the terminal connection, and stop the wiper motor in mid motion.

- 3) Connect the battery and confirm that the motor stops at the automatic stop position after the motor operates at low speed.

11.Rear Washer

A: REMOVAL

- 1) Remove the roof spoiler. (Model with roof spoiler) <Ref. to EI-39, REMOVAL, Roof Spoiler.>
- 2) Remove the high-mounted stop light. <Ref. to LI-35, REMOVAL, High-mounted Stop Light.>
- 3) Remove the washer nozzle.

CAUTION:

Be careful not to scratch the rear gate panel during removal.

- (1) Using a driver with a narrow tip, etc., push out the nozzle craw from the rear side of rear gate panel.

- (2) Hold the washer nozzle from the outer side of the rear gate, and pull the washer nozzle.

- (3) Remove the washer hose (B) from washer nozzle (A).

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. VISUAL INSPECTION

Check for the following items, and if any malfunction is found, replace the corresponding part.

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

2. INSPECTING THE SPRAY POSITION

- 1) Turn the wiper switch to OFF position.
- 2) While the vehicle is stopped, check that the washer spray position is as shown in the figure.
- 3) After inspection, if the spray position is really out of the specified range, replace with the new washer nozzle.

Spray position:

A: 72°

B: 45 mm (1.8 in)

C: 36 mm (1.4 in)

	Page
1. General Description	2

1. General Description

A: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.

B: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Audio System

A: WIRING DIAGRAM

1. AUDIO

Refer to “Audio System” in the wiring diagram. <Ref. to WI-129, WIRING DIAGRAM, Audio System.>

B: INSPECTION

Symptoms	Repair order
No power coming in. (No display and no sound from speakers)	<ol style="list-style-type: none"> 1. Check the fuse and power supply for audio. 2. Check the audio ground. 3. Remove the audio for repair.
A specific speaker does not operate.	<ol style="list-style-type: none"> 1. Check the speaker. 2. Check the output circuit between audio and speaker.
Audio generates noise with engine running.	<ol style="list-style-type: none"> 1. Check the audio ground. 2. Check the generator. 3. Check the ignition coil. 4. Remove the audio for repair.
Volume is low in AM and FM modes or interference noise occurs.	<ol style="list-style-type: none"> 1. Check the antenna. 2. Check the audio ground. 3. Remove the audio for repair.

NOTE:

For HD radio, the following symptoms may occur in the nature of radio waves.

- Hybrid mode providing both digital broadcasting and analog broadcasting
- When the vehicle moves outside the digital broadcasting area (smaller than analog broadcasting area regulated by FCC output specification), the digital voice is automatically switched to the analog voice.
- Main channel and sub channel are available in the same frequency. (FM broadcasting only)
- Digital voice failure (delay echo skip) may occur due to reasons of broadcasting station. This is not a malfunction of audio unit.
- Depending on the broadcasting area, digital spectrum cannot be received even in the area where analog broadcasting can be normally received. Or switching between digital broadcasting and analog broadcasting may frequently occur. These are not malfunction of audio unit.

Audio System

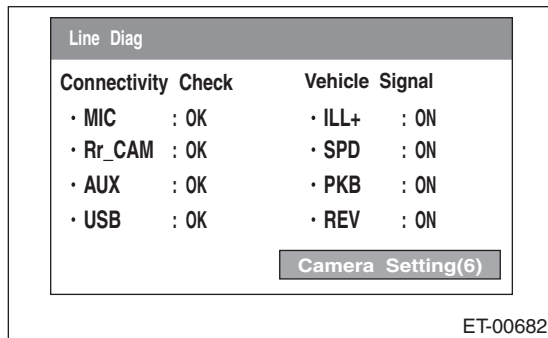

ENTERTAINMENT

1. CHECK EACH CONNECTION (DISPLAY AUDIO)

1) Turn the ignition switch to ON, and then while pressing the buttons (a) and (b), press and hold the button (c) for 3 seconds or more.

2) The display will switch to the Line Diag screen.

• CHECK MICROPHONE

Check that "OK" is displayed in MIC.

OK: Normal.

NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK REARVIEW CAMERA

Check that "OK" is displayed in Rr_CAM.

OK: Normal.

NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK AUX

Check that "OK" is displayed in AUX.

OK: Normal.

NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK USB

Check that "OK" is displayed in USB when USB memory is connected.

NOTE:

When USB memory is connected, it takes approximately 2 seconds for audio unit to recognize the USB memory.

OK: Normal.

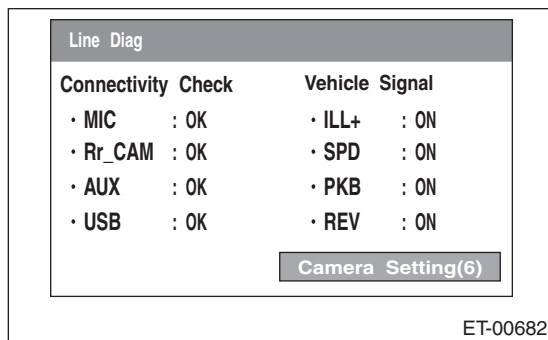

NG: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

2. CHECK EACH VEHICLE SIGNAL (DISPLAY AUDIO)

1) Turn the ignition switch to ON, and then while pressing the buttons (a) and (b), press and hold the button (c) for 3 seconds or more.

2) The display will switch to the Line Diag screen.

• CHECK ILLUMINATION

NOTE:

Before starting inspections, turn the ignition switch to ON.

1) Turn the lighting switch to level 1.

Make sure that the bright switch is not turned ON at this time.

2) Make sure that "ON" lights in ILL+ and then the screen becomes dim.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK SPEED SENSOR

NOTE:

- Before starting inspections, check the safety around the vehicle.

- Lift up the vehicle as necessary.

- When the diagnostic trouble code is input in the VDCCM, perform the Clear Memory operation.

1) Move the vehicle slowly 2 to 3 meters (6.6 to 9.8 ft).

2) Check that "ON" is displayed in SPD.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK PARKING BRAKE SIGNAL

1) Pull parking brake lever.

2) Check that "ON" is displayed in PKB.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

Audio System

ENTERTAINMENT

• CHECK BACK SENSOR

NOTE:

Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition switch to ON.

1) Pull the parking brake and depress the brake, then put the gear in reverse.

2) Make sure that "ON" is displayed in REV.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

C: NOTE

For procedure of each component in the audio system, refer to the respective sections.

- Audio unit: <Ref. to ET-9, Audio.>
- Front speaker: <Ref. to ET-10, Front Speaker.>
- Tweeter: <Ref. to ET-11, Tweeter.>
- Rear speaker: <Ref. to ET-12, Rear Speaker.>
- Antenna: <Ref. to ET-13, Antenna.>
- Steering satellite switch: <Ref. to ET-14, Steering Satellite Switch.>
- Steering switch: <Ref. to ET-16, Steering Switch.>
- AUX input terminal: <Ref. to ET-25, AUX Input Terminal.>
- Microphone: <Ref. to ET-26, Microphone.>
- Rearview camera: <Ref. to ET-19, Rearview Camera System.>

3. Navigation System

A: WIRING DIAGRAM

Refer to “Navigation System” in the wiring diagram. <Ref. to WI-137, WIRING DIAGRAM, Navigation System.>

B: INSPECTION

NOTE:

If no problems are found in “CHECK NAVIGATION OPERATION”, “CHECK CONNECTION” and “CHECK EACH VEHICLE SIGNAL” as described below, check the navigation system circuit. <Ref. to WI-137, WIRING DIAGRAM, Navigation System.>

1. CHECK THE OPERATION OF THE NAVIGATION

Start the engine, and then inspect that the opening screen is displayed.

Standard value: The opening screen should be displayed.

OK: Normal

NG: When not displayed, check the connecting lines for the power supply connector at the back side of the audio unit. If there are no problems in the connecting lines or the lines were repaired, check that the opening screen is displayed.

At this point, if the display is not viewable, the unit is defective.

2. CHECK EACH CONNECTION

1) With the main power OFF, press and hold the button (c) for 3 seconds or more while pressing the buttons (a) and (b) simultaneously.

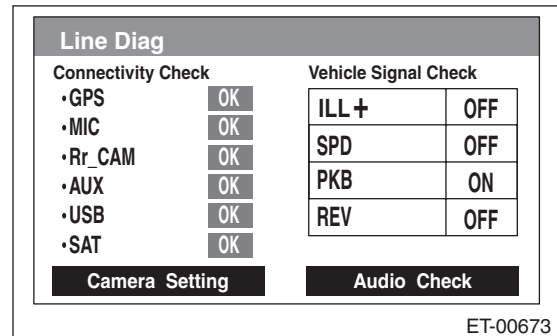

NOTE:

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from ACC OFF to ON position can exit the diagnostic mode.

2) Line Diag screen is displayed.

3) Check the connection status for each item listed in “Connectivity Check” displayed on the left of the screen.

OK: Each connection device is connected properly.
 NG: No connection or abnormal connection is detected.

4) Check the connection status of the connector. If there are no problems, the connection device or unit could be faulty.

3. CHECK EACH VEHICLE SIGNAL

1) With the main power OFF, press and hold the button (c) for 3 seconds or more while pressing the buttons (a) and (b) simultaneously.

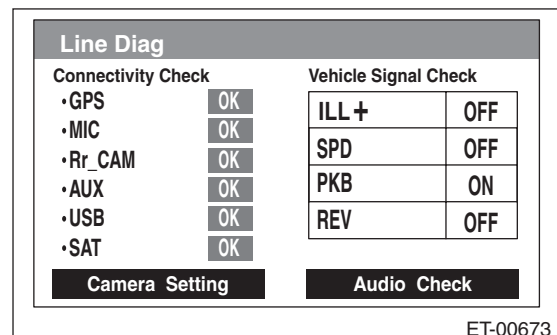

NOTE:

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from ACC OFF to ON position can exit the diagnostic mode.

2) Line Diag screen is displayed.

3) Check the connection status for each item listed in “Vehicle Signal Check” displayed on the right of the screen.

OK: Each connection device is connected properly.

• CHECK ILLUMINATION

NOTE:

Before starting inspections, turn the ignition switch to ON.

1) Turn the lighting switch to level 1.

Make sure that the bright switch is not turned ON at this time.

2) Make sure that "ON" lights in ILL+ and then the screen becomes dim.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK SPEED SENSOR

NOTE:

- Before starting inspections, check the safety around the vehicle.

- Lift up the vehicle as necessary.

- When the diagnostic trouble code is input in the VDCCM, perform the Clear Memory operation.

1) Drive the vehicle at 9 km/h (6 mph) or more.

2) Check that "ON" is displayed in SPD.

ON: Normal.

OFF: Vehicle speed is less than 7 km/h (4 mph), or malfunction is detected in the signal line. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK PARKING BRAKE SIGNAL

1) Pull parking brake lever.

2) Check that "ON" is displayed in PKB.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

• CHECK BACK SENSOR

NOTE:

Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition switch to ON.

1) Pull the parking brake and depress the brake, then put the gear in reverse.

2) Make sure that "ON" is displayed in REV.

ON: Normal.

OFF: Abnormal. Check the signal line connector. If there are no problems, the unit could be faulty.

C: NOTE

For procedure of each component in the navigation system, refer to the respective section.

- Navigation unit: <Ref. to ET-17, Navigation Body.>

- GPS antenna: <Ref. to ET-18, GPS Antenna.>

- Rearview camera: <Ref. to ET-19, Rearview Camera System.>

4. Audio

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the center panel. <Ref. to EI-50, CENTER PANEL, REMOVAL, Center Console.>
- 3) Remove the fitting screws, and slightly pull the audio out from the center console.

- 4) Disconnect the harness connectors and antenna feeder cord.
- 5) Remove the audio.

B: INSTALLATION

Install each part in the reverse order of removal.

5. Front Speaker

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the mounting screw of the front speaker.

- 4) Disconnect the harness connector and remove the front speaker.

B: INSTALLATION

Install each part in the reverse order of removal.

6. Tweeter

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Disconnect the harness connector and remove the front door gusset cover.
- 3) Remove the claws and detach the tweeter.

B: INSTALLATION

Install each part in the reverse order of removal.

7. Rear Speaker

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-44, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the mounting screw of the rear speaker.

- 4) Disconnect the harness connector and remove the rear speaker.

B: INSTALLATION

Install each part in the reverse order of removal.

8. Antenna

A: REMOVAL

1. ROOF ANTENNA

- 1) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 2) Disconnect the harness connector and terminal, and remove the mounting nut (A).

- 3) Pull out the antenna from the roof top.

2. FEEDER CORD

- 1) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 2) Remove the feeder cord from the roof trim.

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

For how to attach the feeder cord, refer to the "Roof Trim" section. <Ref. to EI-65, INSTALLATION, Roof Trim.>

C: INSPECTION

Check for cracks or damages.
Replace the antenna if defective.

Steering Satellite Switch

ENTERTAINMENT

9. Steering Satellite Switch

A: REMOVAL

CAUTION:

Before handling the airbag module, refer to “CAUTION” of “General Description” in “AIR-BAG SYSTEM”. <Ref. to AB-5, CAUTION, General Description.>

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 4) Using TORX® bit T30 (1), loosen two TORX® bolts which secure the driver’s airbag module.

- 5) Disconnect the airbag module connector on back of the airbag module. <Ref. to AB-10, PROCEDURE, Airbag Connector.>
- 6) Remove the steering wheel. <Ref. to PS-13, REMOVAL, Steering Wheel.>
- 7) Remove the screws to remove the lower cover from steering wheel.

- 8) Loosen the screws on the backside of the steering wheel and remove the satellite switch.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Remove the airbag module from the steering wheel. <Ref. to AB-18, REMOVAL, Driver’s Airbag Module.>
- 2) Check the resistance between satellite switch connector terminals.
 - Model with normal audio and navigation

Switch	Position	Terminal No.	Standard
Mute Volume (+) Volume (-) Mode SEEK (∧) SEEK (∨)	All OFF	4 and 5	Approx. 4.7 kΩ
Mute	ON	4 and 5	Approx. 22 Ω
Volume (+)	ON	4 and 5	Approx. 90 Ω
Volume (-)	ON	4 and 5	Approx. 200 Ω
Mode	ON	4 and 5	Approx. 360 Ω
Preset CH UP/ SEEK (∧)	ON	4 and 5	Approx. 690 Ω
Preset CH DOWN/SEEK (∨)	ON	4 and 5	Approx. 1.5 kΩ

- Model with premium audio (Bluetooth applicable)

Switch	Position	Terminal No.	Standard
Volume (+) Volume (-) Mode SEEK (∧) SEEK (∨)	All OFF	4 and 5 5 and 11	Approx. 100 kΩ
Volume (+)	ON	4 and 5	Approx. 1010 Ω
Volume (-)	ON	4 and 5	Approx. 3.21 kΩ
Mode	ON	5 and 11	Less than 1 Ω
SEEK (∧)	ON	4 and 5	Less than 1 Ω
SEEK (∨)	ON	4 and 5	Approx. 330 Ω

3) Replace the satellite switch if the inspection result is not within the standard value.

10. Steering Switch

A: REMOVAL

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 4) Using TORX® bit T30 (1), loosen two TORX® bolts which secure the driver's airbag module.

- 5) Disconnect the airbag module connector on back of the airbag module. <Ref. to AB-10, PROCEDURE, Airbag Connector.>

- 6) Remove the steering wheel.
- 7) Remove the screws, disconnect the steering switch connector, and remove the lower cover from steering wheel.

- 8) Remove the screws and remove the steering switch.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Remove the airbag module from the steering wheel. <Ref. to AB-18, REMOVAL, Driver's Airbag Module.>
- 2) Connect the tester as shown in the figure, then check resistance between terminals when each switch is pressed.

Switch	Resistance
No switch pressed	1 MΩ or more
HOOK ON	Approx. 330 Ω
HOOK OFF	Approx. 1010 Ω
TALK	Approx. 3.21 kΩ

- 3) If internal resistance is out of specification shown in the above table, replace the steering switch.

11.Navigation Body

A: PROCEDURE

For the removal and installation operation procedures of navigation unit, refer to the removal and installation procedures of the audio unit. <Ref. to ET-9, Audio.>

12. GPS Antenna

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the center panel. <Ref. to EI-50, CENTER PANEL, REMOVAL, Center Console.>
- 3) Remove the navigation body. <Ref. to ET-17, PROCEDURE, Navigation Body.>
- 4) Disconnect the connector (green) of GPS antenna.

NOTE:

- Attach a string of about 50 cm in length, etc. to the GPS antenna connector for easy installation work.
- 5) Remove the combination meter assembly. <Ref. to IDI-22, REMOVAL, Combination Meter.>
 - 6) Remove the screw and harness clamp to remove the GPS antenna.

NOTE:

When the GPS antenna harness connector is pulled out, remove the string attached to the connector in step 4).

B: INSTALLATION

Install each part in the reverse order of removal.

13. Rearview Camera System

A: WIRING DIAGRAM

Refer to "Rearview Camera System" in the wiring diagram. <Ref. to WI-144, WIRING DIAGRAM, Rearview Camera System.>

B: REMOVAL

CAUTION:

- Do not drop or apply any impact to the rearview camera because it is a precision equipment.
- When removing the rearview camera, remove the screws located at the specified position only. Do not remove the screws attaching the bracket. Removing them will decrease the rearview camera attaching force.

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 3) Remove the rear wiper motor. <Ref. to WW-23, REMOVAL, Rear Wiper Motor.>
- 4) Remove the rear gate garnish. <Ref. to EI-69, REMOVAL, Rear Gate Garnish.>

- 5) Remove the rearview camera assembly.
 - (1) Disconnect the connector.

- (2) Pull out the harness, and then remove the screws.

- (3) Rotate the camera harness to remove the rearview camera.

C: INSTALLATION

CAUTION:

- If the urethane foam of connector is removed during removal, be sure to apply new urethane foam.
- Be sure to confirm the marker position, whenever the rearview camera is removed/installed/replaced.

Install each part in the reverse order of removal.

Tightening torque:

Rear gate garnish: 4.5 N·m (0.46 kgf·m, 3.3 ft·lb)

Rear wiper motor & wiper arm: <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

Rearview Camera System

ENTERTAINMENT

D: INSPECTION

- 1) Park the vehicle at the level place where there are enough area at the rear of the vehicle.
- 2) Attach the tape as the target point for standard at the floor rearward of the vehicle as shown in the figure below.

NOTE:

Standard tape width is about 30 — 50 mm (1.18 — 1.97 in) and brilliant color shall be used.

- (A) Vehicle body center line
- (B) Rear edge of bumper
- (C) Target point

- 3) Confirm the following before checking the corresponding items.

- If the display is blank.

Rearview camera image is not displayed. (Navigation screen or display audio screen is displayed normally.)

1. Check the condition of back sensor connection. <Ref. to ET-7, CHECK EACH VEHICLE SIGNAL, INSPECTION, Navigation System.>
2. Check the condition of rearview camera connection. <Ref. to ET-7, CHECK EACH CONNECTION, INSPECTION, Navigation System.>

- If the marker position is not aligned.

Adjust the marker position according to the MARKER ADJUSTMENT MODE. <Ref. to ET-20, MARKER ADJUSTMENT MODE, ADJUSTMENT, Rearview Camera System.>

E: ADJUSTMENT

1. MARKER ADJUSTMENT MODE

• Navigation system

- 1) Prepare the target point. <Ref. to ET-20, INSPECTION, Rearview Camera System.>
- 2) With the main power OFF, press and hold the button (c) for 3 seconds or more while pressing the buttons (a) and (b) simultaneously.

NOTE:

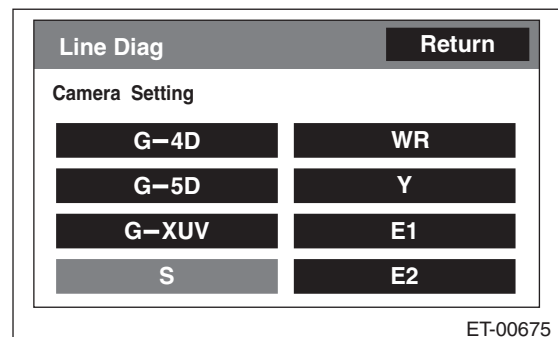

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from ACC OFF to ON position can exit the diagnostic mode.

- 3) Line Diag screen is displayed.

- 4) Touch {Camera Setting} key to display «Camera Setting» screen.

- 5) Touch {S} key.

- 6) Shift the select lever to the “R” position to display the image of the rearview camera.

7) Touch the adjustment keys (d), (e), (f) and (g) on the display screen to adjust the marker line.

- (a) Returns to vehicle selection screen.
- (b) Rotates the cross line on the center of the screen counterclockwise by 0.25°.
- (c) Rotates the cross line on the center of the screen clockwise by 0.25°.
- (d) Moves the guide line and cross line to the left.
- (e) Moves the guide line and cross line to the right.
- (f) Moves the guide line and cross line downward.
- (g) Moves the guide line and cross line upward.
- (h) Saves settings for vehicle selection and guide line.
- (i) Resets the adjustment value to the default condition.

(1) Confirm that the target point position in the display screen is identified.

(2) Adjust by touching the adjustment keys so that the cross line and target point join together.

8) Turn the ignition switch to OFF and wait for 60 seconds or more before turning the ignition switch to ON again.

CAUTION:

If the ignition switch is turned to OFF, be sure to wait for 60 seconds or more before turning the ignition switch to ON again.

If turning the ignition switch to ON again or disconnecting the ground cable from battery within 60 seconds after turning the ignition switch to OFF, the navigation unit data updating can not be performed correctly.

9) Shift the select lever to the “R” position to display the image of the rearview camera.

10) Confirm that the marker line position is correctly adjusted before turning the ignition switch to OFF, then finish the procedures.

• **Display audio**

CAUTION:

When replacing the audio unit, be sure to replace with specified audio unit. The marker adjustment can not be performed correctly if replacing with unspecified audio unit.

1) With the main power OFF, turn the TUNE/TRACK/CH dial (b) by 30 clicks while pressing the preset 6 key (a).

2) When the version information screen is displayed, press the MENU/ENTER key (c).

3) When the uploader screen is displayed, press the MENU/ENTER key (c).

Rearview Camera System

ENTERTAINMENT

4) When the rearview camera marker adjust screen is displayed, press and hold the MENU/ENTER key (c).

NOTE:

When the ENTER key (c) is tapped, the version information screen is displayed again.

5) With the image of the rearview camera displayed, adjust the rearview camera marker.

CAUTION:

Operate the keys shown in the table only.

- (a) Line marker line
- (b) Center marker
- (c) Bumper marker
- (d) Warning message display position

Key operation	Contents
TUNE/TRACK/CH dial CCW	Line marker moves upward.
TUNE/TRACK/CH dial CW	Line marker moves downward.
» key	Line marker moves to the right.
« key	Line marker moves to the left.
MENU/ENTER key	Modified line marker position is determined, and then rearview camera marker screen is displayed.

6) Turn the ignition switch to OFF and wait for 60 seconds or more before finishing the procedures.

CAUTION:

Do not turn the ignition switch to ON or disconnect the ground cable from battery within 60 seconds after turning the ignition switch to OFF. The audio unit data updating can not be performed correctly.

14. Front Accessory Power Supply Socket

A: WIRING DIAGRAM

Refer to “Front Accessory Power Supply Socket System” in the wiring diagram. <Ref. to WI-135, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

B: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-52, INSTRUMENT PANEL LOWER, REMOVAL, Center Console.>
- 3) Disconnect the harness connectors and remove the front accessory power supply socket.

C: INSTALLATION

Install each part in the reverse order of removal.

Rear Accessory Power Supply Socket

ENTERTAINMENT

15. Rear Accessory Power Supply Socket

A: WIRING DIAGRAM

Refer to “Rear Accessory Power Supply Socket System” in the wiring diagram. <Ref. to WI-136, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

B: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 3) Disconnect the harness connector, and remove the claws (two) in accessory power supply socket.
- 4) Pull the accessory power supply socket out to remove.

C: INSTALLATION

Install each part in the reverse order of removal.

16.AUX Input Terminal

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 3) Disconnect the harness connector.
- 4) Remove the four claws to remove the AUX input terminal by pushing it into the console box.

- AUX type

- AUX and USB type

B: INSTALLATION

Install each part in the reverse order of removal.

17. Microphone

A: PROCEDURE

Refer to "Spot Map Light" for removal and installation procedures of microphone. <Ref. to LI-36, Spot Map Light.>

B: INSPECTION

- 1) Check the connection status of the microphone.
- 2) Replace the spot map light assembly if the microphone is found defective. <Ref. to LI-36, REMOVAL, Spot Map Light.>

COMMUNICATION SYSTEM

COM

3. Horn	4
4. Horn Switch	5

General Description

COMMUNICATION SYSTEM

1. General Description

A: COMPONENT

COM00090

(1) Lo side horn

(2) Hi side horn

(3) Roll connector

(4) Horn switch (Driver's airbag module ASSY)

(5) Horn relay

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX® T30	Used for removal/installation of drivers airbag module

2. Horn System

A: WIRING DIAGRAM

Refer to “Horn System” in the wiring diagram. <Ref. to WI-147, WIRING DIAGRAM, Horn System.>

B: INSPECTION

Symptoms	Inspection steps
Horn does not sound	1. Check the fuse.
	2. Check the horn relay.
	3. Check the role connector.
	4. Check the horn switch.
	5. Check the horn assembly.
	6. Check the harness.

1. HORN RELAY

1) Connect terminal No. 4 to the battery positive terminal and the terminal No. 3 to the battery negative terminal, and check the resistance value between the horn relay terminals.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 Ω
No		1 MΩ or more

2) Replace the horn relay if the inspection result is not within the standard value.

C: NOTE

For procedure of each component in the horn system, refer to the respective section.

- Horn assembly: <Ref. to COM-4, Horn.>
- Horn switch: <Ref. to COM-5, Horn Switch.>

3. Horn

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Disconnect the harness connector.
- 4) Remove the horn bracket mounting bolt to remove the horn assembly.

- (1) Low side horn
- (2) High side horn

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

Lo side: 18 N·m (1.84 kgf-m, 13.3 ft-lb)

Hi side: 13 N·m (1.33 kgf-m, 9.6 ft-lb)

- 2) Adjust the fog light beam. <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

- 1) Remove the horn. <Ref. to COM-4, REMOVAL, Horn.>
- 2) Check the horn sounds when applying the battery voltage to the horn assembly.

- 3) If it does not operate normally, replace the horn assembly.

4. Horn Switch

A: REMOVAL

WARNING:

Always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

NOTE:

Horn switch is a unit with the driver’s airbag module.

- 1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 2) Remove the driver’s airbag module. <Ref. to AB-18, REMOVAL, Driver’s Airbag Module.>

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Driver’s airbag module: 10 N·m (1.02 kgf·m, 7.4 ft·lb)

C: INSPECTION

- 1) Remove the horn switch. <Ref. to COM-5, REMOVAL, Horn Switch.>
- 2) Check the resistance between horn switch terminal and airbag module bracket.

- (1) Horn switch terminal
- (2) Airbag module bracket

Switch position	Terminal No.	Standard
The airbag module bracket being pushed	Horn switch terminal and airbag module bracket	Less than 1 Ω
The airbag module bracket being separated		1 MΩ or more

- 3) Replace the driver’s airbag module if the inspection result is not within the standard value.

B: CAUTION

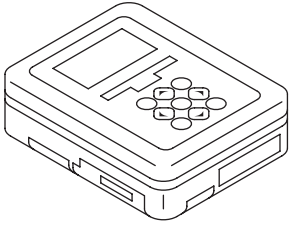

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Avoid impact and damage to the glass.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.

General Description

GLASS/WINDOWS/MIRRORS

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Piano wire	Used for removing the window glass.
Cutter knife	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.

2. Power Window System

A: WIRING DIAGRAM

Refer to “Power Window System” in the wiring diagram. <Ref. to WI-148, WIRING DIAGRAM, Power Window System.>

B: INSPECTION

Symptoms	Repair order
All power windows do not operate.	<ol style="list-style-type: none"> 1. Check the fuse (SBF-4). 2. Check the power window circuit breaker. 3. Check the power window relay. 4. Check the wiring harness.
Particular window does not operate.	<ol style="list-style-type: none"> 1. Check the power window main switch. 2. Check the power window sub-switch. 3. Check the power window motor. 4. Check the wiring harness.
“Window Lock” does not operate.	Check the power window main switch.
Driver’s side window moves slightly (approx. 20 mm (0.79 in)). (model with driver’s side AUTO UP function)	<ol style="list-style-type: none"> 1. Check the power window motor. 2. Check the power window main switch. 3. Check the wiring harness.
Driver’s side window moves slightly (approx. 50 mm (1.97 in)). (model with driver’s side AUTO UP function) (This status is not a failure.)	Perform reset operation A. <Ref. to GW-7, RESET OPERATION A, INSPECTION, Power Window System.>
Driver’s side window does not close completely. (model with driver’s side AUTO UP function) (Using AUTO UP allows the window to fully close first and then move in reverse resulting in slightly opening.)	Perform reset operation B. <Ref. to GW-7, RESET OPERATION B, INSPECTION, Power Window System.>

1. RESET OPERATION A

- 1) Sit in the driver’s seat and close the door.
- 2) Turn the ignition switch to ON.
- 3) Operate the power window main switch to open the window glass halfway.
- 4) Operate the power window main switch to “UP” direction to fully close the driver’s side window glass.
- 5) While the window glass is fully closed, hold down the power window switch to “UP” direction for one second.
- 6) Operate the power window main switch to “AUTO DOWN” direction to check whether the window fully opens properly. If the window does not fully open properly, repeat steps 1) to 6).

2. RESET OPERATION B

- 1) Sit in the driver’s seat and close the door.
- 2) Turn the ignition switch to ON.
- 3) Perform “AUTO UP” operation for the driver’s side window glass, by fully pulling up the power window main switch to cause the reverse operation (in reverse operation, the window is repeatedly fully closed and then reversed to open it slightly.) 10 times in row.
- 4) Check that the “AUTO UP” does not operate.
- 5) Perform reset operation A.
- 6) Check that the window operates properly by operating the “AUTO UP” and “AUTO DOWN” switch. If the window does not fully open/close properly, repeat steps 1) to 6).

C: NOTE

For procedure of each component in the power window system, refer to the respective section.

- Power window control switch: <Ref. to GW-8, Power Window Control Switch.>
- Front door glass: <Ref. to GW-11, Front Door Glass.>
- Front regulator and motor assembly: <Ref. to GW-12, Front Regulator and Motor Assembly.>
- Rear door glass: <Ref. to GW-18, Rear Door Glass.>
- Rear regulator and motor assembly: <Ref. to GW-19, Rear Regulator and Motor Assembly.>

Power Window Control Switch

GLASS/WINDOWS/MIRRORS

3. Power Window Control Switch

A: REMOVAL

1. MAIN SWITCH

- 1) Disconnect the ground cable from battery.
- 2) Remove the power window switch panel.

- (1) Open the cover and remove the screws.
- (2) Lift up the tip of switch panel by using a plastic remover.

- (3) Disengage the end face tabs by using a plastic remover.

- (4) Remove the power window switch panel.
- 3) Disconnect the main switch connector.
- 4) Remove the screws to remove the power window main switch assembly.

2. SUB-SWITCH

- 1) Remove the power window switch panel.

- (1) Open the cover and remove the screws.
- (2) Lift up the tip of switch panel by using a plastic remover.

- (3) Disengage the end face tabs by using a plastic remover.

- (4) Remove the power window switch panel.
- 2) Disconnect the power window sub-switch connector.
- 3) Remove the screws to remove the power window sub-switch assembly.

B: INSTALLATION

CAUTION:

After installation of main switch, always perform the reset operation A (initial setting). (model with driver's side AUTO UP function) Failure to do so may cause the improper activation of auto-reverse operation for pinching hazard prevention. <Ref. to GW-7, RESET OPERATION A, INSPECTION, Power Window System.>

Install each part in the reverse order of removal.

C: INSPECTION

1. MAIN SWITCH

• Driver's seat

Check output from the power window main switch to driver's side motor using the oscilloscope function in the Subaru Select Monitor.

CAUTION:

Since the driver's side power window switch is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester may damage the driver's side power window switch circuit.

- 1) Disconnect the ground cable from battery.
- 2) Remove the power window main switch. <Ref. to GW-8, REMOVAL, Power Window Control Switch.>
- 3) Connect the battery and the Subaru Select Monitor to the power window main switch connector.

CAUTION:

Never mix up the terminals when connecting the power window main switch connector and battery. If connected to a wrong terminal, the power window main switch may be damaged.

NOTE:

- When the battery is connected to the power window main switch, the letters "AUTO" on the driver's side knob illuminates.
- For detailed procedures, refer to "Subaru Select Monitor Operation Manual".

- (1) Power window main switch connector (16 poles)
- (2) Power window main switch connector (3 poles)
- (3) Subaru Select Monitor

- 4) Operate the driver's side power window switch knob and check the output.

NOTE:

Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the knob is operated for window DOWN operation.

- Model without auto-reverse function

Switch knob position	Output time	Standard
AUTO UP	Approx. 600 ms	Battery voltage
UP	During switch knob operation	
OFF	—	0 V
DOWN	During switch knob operation	Battery voltage
AUTO DOWN	Approx. 600 ms	

- Model with auto-reverse function

Switch knob position	Output time	Standard
AUTO UP	Approx. 200 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch knob operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

- 5) Replace the power window main switch if the inspection result is not within the standard value.

Power Window Control Switch

GLASS/WINDOWS/MIRRORS

• **Except for driver's seat**

1) Check the resistance between switch terminals.

	Switch position	Terminal No.	Standard
Passen-ger's seat	UP	14 and 8 12 and 19	Less than 1 Ω
	OFF	14 and 12 14 and 8	1 MΩ or more
		8 and 12 8 and 19 12 and 19	Less than 1 Ω
Rear LH	DOWN	14 and 12 8 and 19	Less than 1 Ω
	UP	14 and 7 5 and 19	Less than 1 Ω
		OFF	14 and 7 14 and 5
DOWN	19 and 7 19 and 5 7 and 5		Less than 1 Ω
	Rear RH	UP	14 and 5 7 and 19
UP		14 and 1 3 and 19	Less than 1 Ω
		OFF	14 and 1 14 and 3
DOWN	19 and 3 19 and 1 3 and 1		Less than 1 Ω
		14 and 3 1 and 19	Less than 1 Ω

2) Replace the power window main switch if the inspection result is not within the standard value.

2. SUB-SWITCH

1) Remove the sub-switch. <Ref. to GW-8, SUB-SWITCH, REMOVAL, Power Window Control Switch.>

2) Check the resistance between sub-switch terminals.

	Switch position	Terminal No.	Standard
Passen-ger seat, rear	UP	4 and 5 6 and 7	Less than 1 Ω
	OFF	7 and 4 8 and 4	1 MΩ or more
		5 and 8 6 and 7	Less than 1 Ω
DOWN	4 and 6 5 and 8	Less than 1 Ω	

3) Replace the power window sub-switch if the inspection result is not within the standard value.

4. Front Door Glass

A: REMOVAL

- 1) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-18, REMOVAL, Front Sealing Cover.>
- 3) Remove the pads.
- 4) Operate the power window switch to move the glass, and remove the bolts.

- 5) Tilt the door glass forward and remove the door glass from the glass run rubber.
- 6) Remove the door glass while tilting.

CAUTION:

Avoid impact and damage to the glass.

B: INSTALLATION

CAUTION:

Make sure that the glass run rubber is placed securely in door frame and sash.

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to GW-3, FRONT DOOR GLASS, COMPONENT, General Description.>

Front Regulator and Motor Assembly

GLASS/WINDOWS/MIRRORS

5. Front Regulator and Motor Assembly

A: REMOVAL

- 1) Remove the front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 2) Disconnect the motor connector.
- 3) Remove the bolts, and then remove the front regulator and motor assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to GW-3, FRONT DOOR GLASS, COMPONENT, General Description.>

C: INSPECTION

- 1) Disconnect the motor connector.
- 2) Apply battery voltage between the motor connector terminals and check the motor operation. Check to ensure that the motor rotates in reverse direction when the terminal to which battery voltage is applied is changed.
- 3) If the inspection results in improper operation, replace the front regulator and motor assembly.

6. Remote Control Mirror System

A: WIRING DIAGRAM

Refer to “Remote Control Mirror System” in the wiring diagram. <Ref. to WI-156, WIRING DIAGRAM, Remote Control Mirror System.>

B: INSPECTION

Symptoms	Repair order
All functions do not operate.	<ol style="list-style-type: none"> 1. Check the fuse (F/B No. 6). 2. Check the remote control mirror switch. 3. Check the wiring harness.
One side of the mirror motor does not operate.	<ol style="list-style-type: none"> 1. Check the remote control mirror switch. 2. Check the mirror motor. 3. Check the wiring harness.
Mirror heater does not operate.	<ol style="list-style-type: none"> 1. Check the defogger switch. 2. Check the mirror heater. 3. Check the wiring harness.

NOTE:

The mirror heater operates with the rear window defogger at the same time. Refer to “INSPECTION” of “Rear Window Defogger System” for details. <Ref. to GW-28, INSPECTION, Rear Window Defogger System.>

C: NOTE

For procedure of each component in the remote control mirror system, refer to the respective section.

- Scalp cap: <Ref. to GW-14, Scalp Cap.>
- Outer mirror assembly: <Ref. to GW-15, Outer Mirror Assembly.>
- Outer mirror: <Ref. to GW-16, Outer Mirror.>
- Remote control mirror switch: <Ref. to GW-17, Remote Control Mirror Switch.>

7. Scalp Cap

A: REPLACEMENT

- 1) Remove the mirror. <Ref. to GW-16, REPLACEMENT, Outer Mirror.>
- 2) Press-in the clips (A) from inside of outer mirror.

- 3) Pull the scalp cap towards the front of the outer mirror, then remove the scalp cap.

CAUTION:

Be careful not to apply excessive force when removing the scalp cap, as the lower hooks may become damaged.

- 4) Align clip (A) on the reverse side of the scalp cap and the clip attachment hole of the outer mirror, and push the scalp cap in.

- 5) Install the scalp cap securely.

8. Outer Mirror Assembly

A: REMOVAL

- 1) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 2) Disconnect the outer mirror connector.
- 3) Remove the bolts to remove outer mirror assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

4.5 N·m (0.46 kgf·m, 3.3 ft·lb)

C: INSPECTION

- 1) Disconnect the outer mirror connector.
- 2) Apply battery voltage between the outer mirror connector terminals and check the mirror operation.

- Model without mirror heater

Switch position	Terminal No.
OFF	—
UP	6 (+) and 3 (-)
DOWN	3 (+) and 6 (-)
LEFT	7 (+) and 3 (-)
RIGHT	3 (+) and 7 (-)

- Model with mirror heater

Switch position	Terminal No.
OFF	—
UP	7 (+) and 3 (-)
DOWN	3 (+) and 7 (-)
LEFT	8 (+) and 3 (-)
RIGHT	3 (+) and 8 (-)
Folding	6 (+) and 3 (-)
Unfolding	3 (+) and 6 (-)

- 3) Replace the outer mirror assembly if faulty is found in the inspection.

NOTE:

There always exists a current of 1.2 mA at the electric retraction terminal.

9. Outer Mirror

A: REPLACEMENT

CAUTION:

- When removing the mirror, be careful not to damage the back surface of mirror with a flat tip screwdriver.
 - When installing the mirror, insert the fitting area securely.
- 1) Face the mirror upward.
 - 2) Disconnect the ground cable from battery. (Model with mirror heater)
 - 3) Lift the lower part of the mirror and the outer side, and remove fitting (1) and (2).

- 4) Disconnect the mirror heater connector. (Model with mirror heater)

- 5) Attach a mirror to the fitting area (1), and attach the worm to the fitting area (2).

CAUTION:

When installing the mirror, insert the worm securely.

10.Remote Control Mirror Switch

A: REMOVAL

- 1) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>
- 2) Remove the remote control mirror switch from instrument panel lower cover.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Disconnect the remote control mirror switch connector.
- 2) Check the resistance between remote control mirror switch terminals.

- Switch the change over switch to the right side.

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
UP	8 and 3, 6 and 7	Less than 1 Ω
DOWN	8 and 6, 3 and 7	Less than 1 Ω
LEFT	8 and 2, 6 and 7	Less than 1 Ω
RIGHT	8 and 6, 2 and 7	Less than 1 Ω

- Switch the change over switch to the left side.

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
UP	8 and 4, 6 and 7	Less than 1 Ω
DOWN	8 and 6, 4 and 7	Less than 1 Ω
LEFT	8 and 5, 6 and 7	Less than 1 Ω
RIGHT	8 and 6, 5 and 7	Less than 1 Ω

- Folding switch

Switch position	Terminal No.	Standard
Folding	8 and 9, 7 and 10	Less than 1 Ω
Unfolding	8 and 10, 7 and 9	Less than 1 Ω

- 3) Replace the remote control mirror switch if the inspection result is not within the standard value.

11. Rear Door Glass

A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-44, REAR DOOR, REMOVAL, Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-21, REMOVAL, Rear Sealing Cover.>
- 3) Operate the power window switch to move the glass, and remove the bolts.

- 4) Remove the glass from the carrier plate, and while holding the glass, lower the carrier plate alone to the lowest position.

CAUTION:

Without the carrier plate lowered to the bottom most position, do not lower the glass by itself to the lowest position within the door panel. Otherwise the glass may come off of the sash and become damaged.

- 5) Lower the glass slowly to the bottom most position in the door panel.
- 6) Remove the bolts and nuts, and then remove the sash. (Remove the upper attachment point first.)

- 7) Remove the glass run rubber.
- 8) Remove the door glass while tilting.

CAUTION:

Avoid impact and damage to the glass.

B: INSTALLATION

CAUTION:

Make sure that the glass run rubber is placed securely in door frame and sash.

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to GW-4, REAR DOOR GLASS, COMPONENT, General Description.>

12. Rear Regulator and Motor Assembly

A: REMOVAL

- 1) Remove the rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 2) Disconnect the motor connector.
- 3) Remove the bolts, and then remove the rear regulator and regulator assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to GW-4, REAR DOOR GLASS, COMPONENT, General Description.>

C: INSPECTION

- 1) Disconnect the motor connector.
- 2) Apply battery voltage between the motor connector terminals and check the motor operation. Check to ensure that the motor rotates in reverse direction when the terminal to which battery voltage is applied is changed.
- 3) If the inspection results in improper operation, replace the rear regulator and motor assembly.

Windshield Glass

GLASS/WINDOWS/MIRRORS

13. Windshield Glass

A: REMOVAL

1. WHEN USING WINDSHIELD GLASS KNIFE

CAUTION:

Apply protective tape, etc, and be careful that the inner and outer components of the vehicle are not damaged.

- 1) Disconnect the ground cable from battery. (Models with wiper deicer)
- 2) Remove the front pillar upper trim. <Ref. to EI-58, REMOVAL, Upper Inner Trim.>
- 3) Disconnect the wiper deicer connector. (Models with wiper deicer)
- 4) Remove the cowl panel. <Ref. to EI-38, REMOVAL, Cowl Panel.>
- 5) Remove the glass molding.
- 6) Tape the body side of the circumference of windshield glass for protection.
- 7) Apply sufficient amount of soapy water to the adhesive part.
- 8) Make a slit using a cutter knife to make it easier to insert the windshield glass knife.
- 9) Insert the windshield glass knife into adhesive part.
- 10) While holding the knife edge and windshield glass edge at a right angle, move the windshield glass knife in parallel to the windshield glass edge along the surface and edge of windshield glass to cut the adhesive part.

NOTE:

- Do not twist the windshield glass knife.
- Cutting of adhesive part shall be started with wider gap between windshield glass and body.

- (1) Tape for protection
- (2) Locating pin
- (3) Cutter knife
- (4) Windshield glass knife

- The locating pins are bonded to the corners of glass. Use piano wire to disconnect the pins.

- (1) Locating pin
- (2) Body panel
- (3) Windshield glass

2. WHEN USING PIANO WIRE

CAUTION:

- Do not tightly pull the piano wire against the windshield glass edge.
- Apply protective tape, etc., and be careful not to damage interior and exterior parts.
- Do not cross piano wires. Otherwise they may be cut.

- 1) Disconnect the ground cable from battery. (Models with wiper deicer)
- 2) Remove the front pillar upper trim. <Ref. to EI-58, REMOVAL, Upper Inner Trim.>
- 3) Disconnect the wiper deicer connector. (Models with wiper deicer)
- 4) Remove the cowl panel. <Ref. to EI-38, REMOVAL, Cowl Panel.>
- 5) Remove the glass molding.
- 6) Tape the body side of the circumference of windshield glass for protection.
- 7) Using a drill or razor blade, make a hole in the adhesive part.
- 8) Pass the piano wire through the hole, and attach both the wire ends securely to pieces of wood.

- 9) Pull the wire ends alternately to cut off the adhesive part.

B: INSTALLATION

- 1) Cut the cartridge nozzle tip as shown in the figure, and set the adhesive in the sealant gun.

- (1) 10 mm (0.39 in)
- (2) 8 mm (0.31 in)

- 3) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

CAUTION:

Be careful not to damage the body and paint surface.

- (1) Adhesive
- (2) 2 mm (0.08 in)
- (3) Dam rubber
- (4) Glass

- 4) Clean the body with alcohol or white gasoline to eliminate cutting powder, dust and dirt completely from body.
- 5) Install the dam rubber.

- (1) Locating pin
- (2) Dam rubber
- (3) 11 mm (0.43 in)
- (4) 13.5 mm (0.53 in)

- 2) Clean the external circumference of windshield glass with alcohol or white gasoline.

Windshield Glass

GLASS/WINDOWS/MIRRORS

6) Attach the molding to the glass.

- (1) Align the molding (A) to the upper ends of the windshield glass (C).
- (2) Attach the molding from the upper corners towards the center.
- (3) Attach the molding from the upper corners downward.
- (4) Firmly apply the double sided tape (B) of the molding evenly to the end face of the glass.

7) Apply the seal to the molding.

- (1) Locating pin
- (2) Dam rubber
- (3) Seal
- (4) Molding
- (5) 10 mm (0.39 in)
- (6) 1.5 mm (0.06 in)
- (7) Adhesive

NOTE:

Apply so that the sticker does not overlap out to the adhesive side (6).

8) Using a sponge, apply primer to the glass side and body side adhesive surfaces.

Glass primer:

Dow Automotive

- **ESSEX U-401, U-402 or equivalent**

Painted surface primer:

Dow Automotive

- **ESSEX U-413 or equivalent**

NOTE:

- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
- Let primer dry for about ten minutes before installing the glass.
- Do not touch the surface coated with primer.

- (1) Application of primer
- (2) Glass side
- (3) Body side
- (4) Molding
- (5) Dam rubber

9) Apply adhesive to the glass end surface as shown in the figure.

Adhesive:

Dow Automotive

- **ESSEX U-400HV or equivalent**

- (1) Molding
- (2) Locating pin
- (3) Dam rubber
- (4) Adhesive
- (5) Seal

Windshield Glass

GLASS/WINDOWS/MIRRORS

- A-A Upper end area
 B-B Lower end area
 C-C Side area

- (1) Glass
 (2) Molding
 (3) Adhesive
 (4) Dam rubber
 (5) Cowl panel

10) Using suction rubber cups, fit the locator pins into the body side, and attach the windshield glass.

- 11) Lightly press the windshield glass for tight fit.
 12) Make flush the adhesive surface juttred out using spatula.
 13) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

14) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

15) Install the cowl panel. <Ref. to EI-38, INSTALLATION, Cowl Panel.>

16) Connect the wiper deicer connector. (Models with wiper deicer)

17) Install the front pillar upper trim. <Ref. to EI-59, INSTALLATION, Upper Inner Trim.>

14.Rear Gate Glass

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the roof spoiler. <Ref. to EI-39, REMOVAL, Roof Spoiler.>
- 3) Remove the rear wiper motor. <Ref. to WW-23, REMOVAL, Rear Wiper Motor.>
- 4) Disconnect the connectors from rear defogger terminal.
- 5) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-20, REMOVAL, Windshield Glass.>

B: INSTALLATION

- 1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

- (1) 10 mm (0.39 in)
- (2) 8 mm (0.31 in)

- 2) Prepare and clean the adhesion surfaces of the glass and body using the same procedures as for the windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>
- 3) Install the dam rubber.

- (1) Locating pin
- (2) Dam rubber
- (3) 16 mm (0.63 in)
- (4) 45 mm (1.77 in)

- 4) Install the molding.
 - (1) Align the molding and glass corners, and adhere together.
 - (2) Because the lower end of the molding can become removed easily, affix the contact surfaces of the glass and molding with an adhesive agent.

Adhesive:

Cemedine

- **Cemedine 3000 (jelly type) or equivalent**

- (1) Rear gate glass
- (2) Molding
- (3) Adhesive application area

- 5) Apply the primer to the glass and body sides in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

Rear Gate Glass

GLASS/WINDOWS/MIRRORS

6) Apply adhesive in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

- (1) Locating pin
- (2) Dam rubber
- (3) Fastener
- (4) Adhesive
- (5) Rubber spacer
- (6) Molding

- A-A Upper end
- B-B Lower end
- C-C Side end
- D-D Lower end area

- (1) Glass
- (2) Adhesive
- (3) Dam rubber
- (4) Fastener
- (5) Molding

- 7) Attach the fastener to the rear gate panel.
- 8) Insert the glass locating pin into the hole on rear gate panel and push on the area around the locating pin to secure it.
- 9) Push lightly on the area around the fastener and spacer to seal.
- 10) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

- 11) Connect the rear defogger terminals.
- 12) Install the rear wiper motor. <Ref. to WW-23, INSTALLATION, Rear Wiper Motor.>
- 13) Install the roof spoiler. <Ref. to EI-39, INSTALLATION, Roof Spoiler.>
- 14) Connect the battery ground terminal.
- 15) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

Rear Window Defogger System

GLASS/WINDOWS/MIRRORS

15. Rear Window Defogger System

A: WIRING DIAGRAM

Refer to “Rear Defogger System” in the wiring diagram. <Ref. to WI-158, WIRING DIAGRAM, Rear Defogger System.>

B: INSPECTION

1. SYSTEM INSPECTION

Symptoms	Repair order
Rear window defogger does not operate.	<ol style="list-style-type: none"> 1. Check the fuse. 2. Check the rear defogger relay. 3. Check the rear defogger switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:

Rear window defogger system can be customized on the Subaru Select Monitor, when the body integrated unit customize setting {A/C ECM setting} is “support”. (Auto A/C model)

System name	Initial setting	Customize setting
Rr defogger op. mode	OFF after 15 min.	Repeat 15 min. operation and 2 min. stop.

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:

Check whether the “Rr defogger op. mode” setting is in initial setting or customize setting before performing inspection.

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.

(1) Prepare the Subaru Select Monitor. <Ref. to GW-6, PREPARATION TOOL, General Description.>

(2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.

(3) On «System Selection Menu» display, select {Integ. unit mode}.

(4) Select the {Rr defogger output} on {Current Data Display & Save}.

(5) Check the displayed data (ON/OFF) by operating the rear window defogger switch.

2) Check the operation with rear window defogger switch ON.

- When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.

- When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.

3) When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION

CAUTION:

When wiping off the stain on glass with cloth, use a dry and soft cloth and move it in the direction of the heat wire extension to avoid damage to the heat wire.

1) Prepare the following checking items.

- Liquid crystal thermograph sheet (Approximate Size: 300 × 300 mm (11.8 × 11.8 in) and thermal temperature: 35 — 40°C (95 — 104°F))

- Aluminum foil

2) Turn the ignition switch to ON.

3) Turn the defogger switch to ON.

4) Push the liquid crystal thermograph sheet from the outside of the rear glass.

(A) Liquid crystal thermograph sheet

(B) Separate line

NOTE:

Use the liquid crystal thermograph sheet every range it is separated with the separate line.

5) Determine the faulty heat wire by checking the color of the liquid crystal thermograph sheet.

Liquid crystal thermograph sheet	Criteria
Change occurred (red → blue)	Normal
No change (black)	Open

NOTE:

- Check from the inside of the glass if the liquid crystal thermograph sheet does not change.

- The time for the color change may differ depends on the surface temperature of the glass.

6) Wrap a piece of aluminum foil around the tip of tester probe and press it against the heat wire with your finger.

- (A) Tester probe
- (B) Aluminum foil
- (C) Heat wire

7) To both ends of the section that has been found to include an open in the step 5), apply the tester positive (+) probe and the negative (-) probe.

8) Move the tester probe on the negative (-) side slowly along the heat wire. If voltage changes from zero while moving the tester probe, heat wire is open at the voltage change point.

9) Repair the heat wire that determines the place of the open circuit. <Ref. to GW-29, REPAIR, Rear Window Defogger System.>

C: REPAIR

- 1) Clean the broken portion with alcohol or white gasoline.
- 2) Cover both sides of the heat wire with masking tapes.
- 3) Apply conductive silver composition to the damaged point.

Conductive silver composition:

- Permatex**
- **QUICK GRID**

- (1) Broken portion
- (2) Masking tape
- (3) Broken wire
- (4) Conductive silver composition

4) After applying conductive silver composition, dry it using a drier.

5) After repair, check the wire.

Rear Quarter Glass

GLASS/WINDOWS/MIRRORS

16. Rear Quarter Glass

A: REMOVAL

1. REAR QUARTER GLASS ASSEMBLY

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear quarter trim. <Ref. to EI-60, REMOVAL, Rear Quarter Trim.>
- 3) Remove the rear quarter glass in the same procedure as for windshield glass. <Ref. to GW-20, REMOVAL, Windshield Glass.>

2. REAR QUARTER GLASS MOLDING

- 1) Remove the door inner weather strip.

- 2) Attach protective tapes on body. Attach two layers of protective tapes onto (A), and attach four layers of protective tapes onto (B).

- 3) Apply primer to the molding.

Primer:

Dow Automotive's
• BETAPRIME 5404

NOTE:

- Allow the primer to dry for eight minutes or more.
- After eight hours or more have elapsed, the molding will lose treatment effect on its surface. Thus the primer should be applied again.

(1) Application of primer

- 4) Heat the molding while moving the dryer up and down, and facing it to the molding from the side of the vehicle (vertically against the glass surface).

CAUTION:

- Heat the molding with the dryer at a distance of 50 mm (1.97 in) from the glass.
- Do not keep heating the same position with dryer. The glass can be broken. Do not rapidly cool down the glass heated by the dryer.

NOTE:

Use industrial dryers because a household hairdryer cannot generate sufficient amount of heat.

5) While heating the molding with dryer, cut the arrow position (A) upward using a scraper.

CAUTION:

Do not keep heating the same position with dryer. The glass can be broken. Do not rapidly cool down the glass heated by the dryer.

- (1) Molding
- (2) Glass
- (3) Body panel
- (4) Adhesive

6) Cut the molding rib on the arrow position (A) downward using a cutter.

CAUTION:

Cutter edge shall be approximately 10 mm (0.39 in) to protect the vehicle body from damage.

- (1) Molding
- (2) Glass
- (3) Body panel
- (4) Adhesive

7) Make a slit approximately for 15 mm (0.59 in) to the adhesive surface between molding and glass (arrow position (A)) using a cutter.

CAUTION:

Use care not to cut all adhesives on the glass and body panel.

- (1) Molding
- (2) Glass
- (3) Body panel
- (4) Adhesive

8) Make a slit approximately for 15 mm (0.59 in) to the adhesive surface between molding and body (arrow position (A)) using a cutter.

CAUTION:

- **Use care not to cut all adhesives on the glass and body panel.**
- **Attach protective tape so that body will not be damaged.**

- (1) Molding
- (2) Glass
- (3) Body panel
- (4) Adhesive
- (5) Protective tape

Rear Quarter Glass

GLASS/WINDOWS/MIRRORS

9) Remove the molding using a longnose pliers while heating the glass surface.

CAUTION:

- Heat the molding with the dryer at a distance of 50 mm (1.97 in) from the glass.
- Do not keep heating the same position with dryer. The glass can be broken. Do not rapidly cool down the glass heated by the dryer.

10) Using a cutter, remove old adhesive for installing the molding, which occupies the greater part of the glass.

CAUTION:

Be careful of receiving burns from heated glass.

B: INSTALLATION

1. REAR QUARTER GLASS ASSEMBLY

1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(1) 10 mm (0.39 in)

(2) 8 mm (0.31 in)

2) Prepare and clean the adhesion surfaces of the glass and body using the same procedures as for the windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

3) Mount the fastener on the vehicle body.

4) Attach the outer dam rubber at a position 4 mm (0.16 in) from the glass end. Cut the excess dam rubber to the appropriate length, and use it for front side dam rubber.

5) On the front end, attach the inner periphery dam rubber at a position 13 mm (0.51 in) from the border of the glass ceramic gradation, and for other locations 17 mm (0.61 in) from the end of the glass.

6) Attach the front side dam rubber to the distance of 1.5 mm (0.06 in) from the molding edge.

7) Using the same procedures as for the windshield glass, apply primer to the glass and body. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

CAUTION:

Do not allow the primer to come in contact with the molding during the application of the primer.

8) Apply adhesive in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

- (1) Adhesive
- (2) Outer periphery dam rubber
- (3) Molding
- (4) Fastener
- (5) Locating pin
- (6) Inner periphery dam rubber
- (7) Front side dam rubber

- A-A Upper end
- B-B Lower end
- C-C Front end
- D-D Rear end area

- (1) Glass
- (2) Adhesive
- (3) Molding
- (4) Outer periphery dam rubber
- (5) Glass ceramic gradation border
- (6) Inner periphery dam rubber
- (7) Front side dam rubber

9) Insert the glass locating pins in the side panel holes, and push the area around the locating pins to affix the glass in place.

10) Push lightly on the area around the fastener and spacer to seal.

11) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

12) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

13) Install the rear quarter trim. <Ref. to EI-61, INSTALLATION, Rear Quarter Trim.>

Rear Quarter Glass

GLASS/WINDOWS/MIRRORS

2. REAR QUARTER GLASS MOLDING

1) Wipe off any dirt on the glass surface with a dry cloth.

CAUTION:

- Before wiping off the glass with wet cloth, always make sure that the glass is cold. Otherwise, it will be broken.

- Do not clean the glass with solvent.

2) Apply adhesive to the glass. Apply adhesive so that (A) will be approximately half of (B) in length.

Adhesive:

Dow Automotive's

• **BETASEAL U-400HV**

NOTE:

Apply adhesive to inside of the glass to prevent the adhesive from being squeezed out after the molding is attached.

- (1) Glass
- (2) Body panel
- (3) Adhesive
- (4) Spatula

3) Remove the protective tape, and attach the molding.

CAUTION:

When removing the protective tape, use care not to remove adhesive applied on the glass.

(1) Temporarily attach the molding onto the glass from bottom to top.

(2) Adjust the position so that the upper and lower clearances between molding and body will be approximately 2.2 mm (0.09 in).

(3) After the positioning has been completed, press the molding into the glass to attach it securely.

4) Insert the thick paper from outside surface of the molding, and fix the molding with tape.

NOTE:

- Do not use cardboard to fix the molding because it has less shape holding strength than that of thick paper.

- This adhesive is a water absorption hardening type, which requires waterproof measures. However, plastic sheets, etc. cannot keep out water completely. Therefore, do not return the vehicle to the customer when it is raining.

5) Attach the door inner weather strip.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

17. Rearview Mirror

A: REMOVAL

CAUTION:

- Never reuse the spring. When the rearview mirror assembly is removed from the mirror base, fixed force will decline and the rearview mirror assembly may come off.
- Be careful not to damage the mirror surface and windshield glass.

NOTE:

Never reuse the spring. Prepare a new spring before removal.

- 1) Turn the mirror base 90° clockwise or counterclockwise to remove it.

- 2) Remove the spring from the mirror base.

- 3) When the mirror base is damaged, use a piano wire, spatula, etc. to remove.

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

If the mirror base is removed, install it in the following procedure.

1. Clean the old adhesive completely.
2. Align the mirror base with the mark on the windshield glass to install it.
3. Make sure the mirror base is securely attached and then install the spring to it.

Adhesive:

- **REPAIR KIT IN MR (Part No. 65029FC000) or equivalent**

C: INSPECTION

Check the mirror, mirror base and spring for damage, and replace if defective.

18. Wiper Deicer System

A: WIRING DIAGRAM

Refer to “Wiper Deicer System” in the wiring diagram. <Ref. to WI-128, WIRING DIAGRAM, Wiper Deicer System.>

B: INSPECTION

1. SYSTEM INSPECTION

NOTE:

- The wiper deicer does not operate when the ambient temperature becomes 5°C (41°F) or more.
- The wiper deicer operates with the rear window defogger at the same time.
- It is possible to perform a forced operation if you keep holding the rear window defogger switch for 3 seconds or more.

Symptoms	Inspection order
Wiper deicer does not operate.	<ol style="list-style-type: none"> 1. Check the fuse. 2. Check the wiper deicer relay. 3. Check the rear defogger switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:

- Wiper deicer system can be customized using the Subaru Select Monitor, when the customize setting {A/C ECM setting} of the body integrated unit is set to With. (auto A/C model)
- Set the system using the Rr Defogger op. mode, and setting will be the same as rear defogger system setting.

System name	Initial setting	Customize setting
Rear defogger operation mode	OFF after 15 min.	Continuous operation*

- *: When one of the following conditions occurs, continuous operation is suspended and turned off after 15 minutes.
- Ambient temperature at 5°C (41°F) or more continues for 10 seconds.
 - Malfunction occurs on ambient sensor.
 - Vehicle speed of 15 km/h (9 MPH) or less continues 15 minutes (OFF when conditions are met)
 - Malfunction occurs in CAN communication.
 - Battery voltage remains at 10 V or less for 30 seconds.

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:

Before performing the inspection, check the following settings.

- Wiper deicer setting → “support”. If “no support”, set to “support” using customize setting.
- Rr Defogger op. mode setting → Initial setting or customize setting.

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.

(1) Prepare the Subaru Select Monitor. <Ref. to GW-6, PREPARATION TOOL, General Description.>

(2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.

(3) On «System Selection Menu» display, select {Integ. unit mode}.

(4) Select the {wiper deicer output} on {Current Data Display & Save}.

(5) Check the displayed data (ON/OFF) by operating the rear window defogger switch.

2) Check the operation with rear window defogger switch ON.

- When customize setting is “Continuous”, it is normal if the operation lasts without any termination conditions.

- When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.

3) When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION

For operation procedures, refer to “HEAT WIRE INSPECTION” of “Rear Window Defogger System”. <Ref. to GW-28, HEAT WIRE INSPECTION, INSPECTION, Rear Window Defogger System.>

NOTE:

Heat wire inspection needs removing/installing procedure of instrument panel assembly.

C: REPAIR

For operation procedures, refer to “REPAIR” of “Rear Window Defogger System”. <Ref. to GW-29, REPAIR, Rear Window Defogger System.>

NOTE:

Heat wire repair needs removing/installing procedure of instrument panel assembly.

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply an excessive force on the printed circuit.
- Do not drop or otherwise apply impact.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.
- When the combination meter has been replaced, be sure to perform the registration of immobilizer.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>ST1B022XU0</p>	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Combination Meter System

A: WIRING DIAGRAM

Refer to “Combination Meter System” in the wiring diagram. <Ref. to WI-159, WIRING DIAGRAM, Combination Meter System.>

B: INSPECTION

1. SELF-DIAGNOSIS

The self-diagnosis (checking of each meter, warning light, indicator light, illumination, LCD) of combination meter can be performed in the following procedure.

CAUTION:

Perform the steps described in 2) through 4) within 10 seconds.

- 1) Within 3 seconds after turning the ignition switch to ON, set the lighting switch to tail light or headlight position.
- 2) Press the odo/trip meter knob three times.
- 3) Turn the lighting switch to OFF, and press the odo/trip meter knob three times.
- 4) Set the lighting switch to tail light or headlight position again, and press the odo/trip meter knob three times.

NOTE:

- When pressing the odo/trip meter knob four times, the display changes to DTC display mode. <Ref. to IDI-16, DTC DISPLAY MODE, INSPECTION, Combination Meter System.>
- Warning light, indicator light, and LCD display checks are performed when self-diagnosis is performed. After this, every time the odo/trip meter knob is pressed, the buzzer will sound for 0.5 seconds, and operation checks for meter operation, meter readings, and the LCD are performed in this order. Turn the ignition switch to OFF to cancel the self-diagnosis function.
- The self-diagnosis function is not canceled if the engine is started during diagnosis. However, the self-diagnosis function is canceled automatically for safety when you start to drive the vehicle.
- 5) Go to “Check meter indicator operation”.

Check meter operation, warning light, indicator light, and LCD.

NOTE:

- “dIAGS.1” (model with normal meter) or “_S_1” (model with luminescent meter) is displayed on the LCD for one second. After that, the meter indicator operation check mode is initiated.
- Each of the meter indicator operation display and LCD display switches every 6 seconds.

Meter indicator	LCD display, illumination	Warning light, indicator light
MIN indication ↓	ILL1 (Min. brightness) ↓ ^{*4}	*1, *2, *3
MAX indication	ILL6 (Max. brightness)	
MAX indication ↓	ILL6 (Max. brightness) ↓ ^{*4}	
MIN indication	ILL1 (Min. brightness)	

*1: Warning lights and indicator lights controlled by the meter drive circuit are illuminated. <Ref. to IDI-2, SPECIFICATION, General Description.>

*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>

*3: Engine coolant temperature warning light illuminates in red. (models with normal meters)

*4: Display for one second for each level

6) Press the odo/trip meter knob once.

Combination Meter System

INSTRUMENTATION/DRIVER INFO

7) Go to “Meter Indicator Needle Indication Check”.
Check meter operation, warning light, indicator light, and LCD.

NOTE:

- Meter indicator switches every 1.5 seconds for each indication.
- ILL indication illuminates at the same brightness as when entering “Meter Indicator Needle Indication Check”.
- During operation, “dIAGS.2” (model with normal meter) or “_S_2” (model with luminescent meter) is displayed on the LCD.

Model with normal meter

Speedometer (km/h)	Tachometer (rpm)	Fuel gauge	Fuel level warning light	Warning light, indicator light
0	0	Lowest point	Light ON	*1, *2, *3
0	0	E	Light ON	
40	1000	1/2	Light OFF	
100	4000	F	Light OFF	
40	1000	1/2	Light OFF	
0	0	E	Light ON	

Model with luminescent meter

Speedometer (km/h)	Tachometer (rpm)	Engine coolant temperature gauge	ECO gauge	Warning light, indicator light
0	0	Lowest point	Lowest point	*1, *2
0	0	C	-Max	
40	1000	Starting point of the red line	0	
100	4000	H	+Max	
40	1000	Starting point of the red line	0	
0	0	C	-Max	

*1: Warning lights and indicator lights controlled by the meter drive circuit turn off. <Ref. to IDI-2, SPECIFICATION, General Description.>

*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>

*3: Engine coolant temperature indicator light illuminates in blue. (models with normal meters)

8) Press the odo/trip meter knob once.

9) Go to “Check LCD display”.

Check the LCD.

NOTE:

- “dIAGS.3” (model with normal meter) or “_S_3” (model with luminescent meter) is displayed on the LCD for one second. After that, the LCD display check mode is initiated.
- LCD display switches every 1 second.
- Warning lights and indicator lights controlled by the meter drive circuit turn off. <Ref. to IDI-2, SPECIFICATION, General Description.>
- Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>
- The meter indication remains at the same level as “Meter Indicator Needle Indication Check”.
- ILL indication illuminates at ILL6 level (max. brightness).
- After No. 13 is displayed in the illumination order, display is repeated from No. 1 again. (models with normal meters)
- After No. 14 is displayed in the illumination order, display is repeated from No. 1 again. (models with luminescent meter)

Combination Meter System

2. SYMPTOM CHART

CAUTION:

When measuring the voltage and resistance of each control module or sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin more than 2 mm (0.08 in).

Symptoms	Repair order	Note
Combination meter assembly does not operate.	<ol style="list-style-type: none"> 1. Power supply 2. Ground circuit 3. Combination meter 	<Ref. to IDI-10, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Combination Meter System.>
Speedometer does not operate.	<ol style="list-style-type: none"> 1. VDC C/M 2. Harness 3. Combination meter 	<Ref. to IDI-10, CHECK VDC CONTROL MODULE, INSPECTION, Combination Meter System.>
Tachometer does not operate.	<ol style="list-style-type: none"> 1. ECM 2. Harness 3. Combination meter 	<Ref. to IDI-11, CHECK ENGINE CONTROL MODULE (ECM), INSPECTION, Combination Meter System.>
Fuel gauge does not operate.	<ol style="list-style-type: none"> 1. Communication circuit 2. Harness 3. Body integrated unit 4. Fuel level sensor 5. Combination meter 	<Ref. to IDI-12, CHECK FUEL LEVEL SENSOR, INSPECTION, Combination Meter System.>
Engine coolant temperature gauge or engine coolant temperature indicator light/engine coolant temperature warning light does not operate.	<ol style="list-style-type: none"> 1. ECO gauge does not operate. (model with luminescent meter)	<ol style="list-style-type: none"> 1. Communication circuit 2. Combination meter 	<Ref. to IDI-14, CHECK ECO GAUGE (MODEL WITH LUMINESCENT METER), INSPECTION, Combination Meter System.> NOTE: The ECO gauge does not operate unless the vehicle is driven at least 1 km after the trip meter is reset.
Warning buzzer for key left in ignition does not sound.	<ol style="list-style-type: none"> 1. Communication circuit 2. Combination meter 	<Ref. to IDI-15, CHECK WARNING BUZZER FOR KEY LEFT IN IGNITION, INSPECTION, Combination Meter System.>

Combination Meter System

INSTRUMENTATION/DRIVER INFO

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
1 CHECK POWER SUPPLY FOR COMBINATION METER. 1) Remove the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.> 2) Measure the voltage between combination meter connector and chassis ground. Connector & terminal <i>(i10) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short between the fuse and combination meter.
2 CHECK POWER SUPPLY FOR COMBINATION METER. 1) Turn the ignition switch to ON. 2) Measure the voltage between combination meter connector and chassis ground. Connector & terminal <i>(i10) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short between the ignition switch and combination meter.
3 CHECK GROUND CIRCUIT OF COMBINATION METER. 1) Turn the ignition switch to OFF. 2) Measure the resistance between combination meter connector and chassis ground. Connector & terminal <i>(i10) No. 21 — Chassis ground:</i> <i>(i10) No. 22 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Replace the meter case assembly.	Repair or replace the harness.

4. CHECK VDC CONTROL MODULE

Step	Check	Yes	No
1 CHECK VEHICLE SPEED SIGNAL. 1) Remove the combination meter mounting screws. 2) Lift up the vehicle and support it with rigid racks. 3) Drive the vehicle faster than 10 km/h (6 MPH). WARNING: Be careful not to get caught in the running wheels. 4) Measure the voltage between combination meter connector and chassis ground. Connector & terminal <i>(i10) No. 31 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V \leftrightarrow 5 V or more?	Replace the meter case assembly.	Go to step 2.
2 CHECK HARNESS BETWEEN VDC CONTROL MODULE AND COMBINATION METER. 1) Turn the ignition switch to OFF. 2) Disconnect the VDC control unit connector and the combination meter connector. 3) Measure the resistance between the VDC control module connector and the combination meter connector. Connector & terminal <i>(B310) No. 33 — (i10) No. 31:</i>	Is the resistance less than 10 Ω ?	Check VDC control module. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

Combination Meter System

INSTRUMENTATION/DRIVER INFO

5. CHECK ENGINE CONTROL MODULE (ECM)

Step	Check	Yes	No
<p>1</p> <p>CHECK ECM SIGNAL.</p> <p>1) Start the engine.</p> <p>2) Measure the voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B135) No. 15 (+) — Chassis ground (-):</p>	<p>Is the voltage 0 ↔ 14 V or more?</p>	<p>Go to step 2.</p>	<p>Inspect the ECM.</p> <ul style="list-style-type: none"> • Non-turbo model: <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.> • Turbo model: <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.>
<p>2</p> <p>CHECK HARNESS BETWEEN COMBINATION METER AND ECM.</p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the ECM connector and combination meter connector.</p> <p>3) Measure the resistance between the ECM connector and the combination meter connector.</p> <p>Connector & terminal (B135) No. 15 — (i10) No. 32:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Replace the meter case assembly.</p>	<p>Repair or replace the harness.</p>

Combination Meter System

INSTRUMENTATION/DRIVER INFO

6. CHECK FUEL LEVEL SENSOR

	Step	Check	Yes	No
1	CHECK COMBINATION METER. 1) Drain fuel. 2) Check the indication status of the fuel gauge in the combination meter.	Does the fuel gauge needle or segment display indicate EMPTY and is the low fuel warning light blinking?	Go to step 4.	Go to step 2.
2	CHECK COMBINATION METER. Perform the self-diagnosis of combination meter. <Ref. to IDI-5, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is it operating normally?	Go to step 3.	Replace the meter case assembly.
3	CHECK DIAGNOSTIC TROUBLE CODE (DTC). 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC being displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-31, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4	CHECK HARNESS. 1) Disconnect the body integrated unit connector. 2) Measure the resistance between body integrated unit connector and chassis ground. Connector & terminal (B281) No. 7 — Chassis ground:	Is the resistance 2 — 96 Ω?	Go to step 5. If the step 1 is "Yes", Go to step 9.	Repair or replace the harness.
5	CHECK COMMUNICATION BETWEEN BODY INTEGRATED UNIT AND METERS. 1) Remove the fuel sub level sensor. • Non-turbo model: <Ref. to FU(H4DO)-147, REMOVAL, Fuel Sub Level Sensor.> • Turbo model: <Ref. to FU(H4DOTC)-80, REMOVAL, Fuel Sub Level Sensor.> 2) Short the fuel sub level sensor connector terminal to the chassis ground with approx. 100 Ω resistance. 3) Turn the ignition switch to ON. Terminals (R59) No. 1 — Chassis ground:	Does the meter needle or segment display indicate EMPTY?	Go to step 7.	Go to step 6.
6	CHECK BODY INTEGRATED UNIT. 1) Retain the condition in step 5. 2) On {Integ. unit mode}, select {Fuel level resistance} using the Subaru Select Monitor.	Is the resistance displayed as approx. 100 Ω?	Go to step 11.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>
7	CHECK COMMUNICATION BETWEEN BODY INTEGRATED UNIT AND COMBINATION METERS. 1) Remove the fuel sub level sensor. • Non-turbo model: <Ref. to FU(H4DO)-147, REMOVAL, Fuel Sub Level Sensor.> • Turbo model: <Ref. to FU(H4DOTC)-80, REMOVAL, Fuel Sub Level Sensor.> 2) Short the fuel sub level sensor connector terminal to the chassis ground with approx. 2 Ω to 6 Ω resistance. 3) Turn the ignition switch to ON. Terminals (R59) No. 1 — Chassis ground:	Does the meter needle or segment display indicate FULL?	Go to step 9.	Go to step 8.

Combination Meter System

INSTRUMENTATION/DRIVER INFO

Step	Check	Yes	No
8 CHECK BODY INTEGRATED UNIT. 1) Retain the condition in step 7. 2) On {Integ. unit mode}, select {Fuel level resistance} using the Subaru Select Monitor.	Is the resistance 2 — 6 Ω?	Go to step 11.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>
9 CHECK FUEL SUB LEVEL SENSOR. 1) Remove the fuel sub level sensor. • Non-turbo model: <Ref. to FU(H4DO)-147, REMOVAL, Fuel Sub Level Sensor.> • Turbo model: <Ref. to FU(H4DOTC)-80, REMOVAL, Fuel Sub Level Sensor.> 2) Measure the resistance between the fuel sub level sensor connector terminals when the float is in FULL and EMPTY position. Connector & terminal (R59) No. 1 — No. 2:	Is the resistance 1.0 to 2.5 Ω (FULL) and 61 to 63 Ω (EMPTY)?	Go to step 10.	Replace the fuel sub level sensor.
10 CHECK FUEL LEVEL SENSOR. 1) Remove the fuel level sensor. • Non-turbo model: <Ref. to FU(H4DO)-143, REMOVAL, Fuel Level Sensor.> • Turbo model: <Ref. to FU(H4DOTC)-79, REMOVAL, Fuel Level Sensor.> 2) Measure the resistance between the fuel level sensor connector terminals when the float is in FULL and EMPTY position. Connector & terminal (R58) No. 1 — No. 4:	Is the resistance 1.0 to 2.5 Ω (FULL, non-turbo model), 1.0 to 3.0 Ω (FULL, turbo model), and 31 to 33 Ω (EMPTY)?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the fuel level sensor.
11 CHECK COMBINATION METER OPERATION. 1) Remove the combination meter. 2) Attach the combination meter to another vehicle on which the fuel gauge operates normally to check its operation.	Is the fuel gauge normal?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Replace the meter case assembly.

Combination Meter System

INSTRUMENTATION/DRIVER INFO

7. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Step	Check	Yes	No
1 CHECK COMMUNICATION STATUS. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC being displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-31, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK ENGINE COOLANT TEMPERATURE SENSOR. Check the engine coolant temperature sensor. • Non-turbo model: <Ref. to EN(H4DO)(diag)-2, Basic Diagnostic Procedure.> • Turbo model: <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.>	Is the engine coolant temperature sensor OK?	Replace the meter case assembly.	Replace the engine coolant temperature sensor. • Non-turbo model: <Ref. to FU(H4DO)-46, REMOVAL, Engine Coolant Temperature Sensor.> • Turbo model: <Ref. to FU(H4DOTC)-34, REMOVAL, Engine Coolant Temperature Sensor.>

8. CHECK ECO GAUGE (MODEL WITH LUMINESCENT METER)

Step	Check	Yes	No
1 CHECK DIAGNOSTIC TROUBLE CODE (DTC). 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is a DTC of high-speed CAN detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-31, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK ECO GAUGE. Perform the self-diagnosis of combination meter. <Ref. to IDI-5, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Does ECO gauge operate properly?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the meter case assembly.

Combination Meter System

INSTRUMENTATION/DRIVER INFO

9. CHECK WARNING BUZZER FOR KEY LEFT IN IGNITION

Step	Check	Yes	No
1 CHECK KEY WARNING SWITCH ALARM. 1) Insert the key into ignition key lock. 2) Open the driver's side door.	Does the buzzer sound from the meter?	Normal	Go to step 2.
2 CHECK COMMUNICATION STATUS. 1) Prepare the Subaru Select Monitor. 2) On «System Selection Menu» display, select {Integ. unit mode}. 3) On {Current Data Display & Save}, select {key-lock warning SW}. 4) Insert and remove the key.	Does the display change between ON ↔ OFF?	Go to step 3.	Check the ignition circuit. <Ref. to SL-38, INSPECTION, Ignition Key Lock.>
3 CHECK COMMUNICATION STATUS. 1) On {Current Data Display & Save}, select {Driver's door SW input}. 2) Open and close the door.	Does the display change between ON ↔ OFF?	Go to step 4.	Check the door switch circuit. <Ref. to SL-9, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
4 CHECK COMMUNICATION STATUS. 1) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 2) On «System Selection Menu» display, select {Integ. unit mode}. 3) Select {Diagnostic Code(s) Display}.	Is DTC being displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-31, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5 CHECK COMBINATION METER. Perform the self-diagnosis of combination meter. <Ref. to IDI-5, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Did the buzzer sound?	Go to step 6.	Replace the meter case assembly.
6 CHECK COMBINATION METER. 1) Remove the combination meter. 2) Attach the buzzer to another vehicle on which the buzzer operates normally to check its operation.	Did the buzzer sound?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Replace the meter case assembly.

Combination Meter System

INSTRUMENTATION/DRIVER INFO

10.DTC DISPLAY MODE

Model with normal meter

The combination meter DTCs can be displayed according to the following procedure.

CAUTION:

Perform the steps described in 2) through 4) within 10 seconds.

- 1) Within 3 seconds after turning the ignition switch to ON, set the lighting switch to tail light or headlight position.
- 2) Press the odo/trip meter knob four times.
- 3) Turn the lighting switch to OFF, and press the odo/trip meter knob four times.
- 4) Set the lighting switch to tail light or headlight position again, and press the odo/trip meter knob four times.
- 5) Go to "DTC display mode".

When the DTC display mode operates, the display is changed every 3 seconds or {ECM}, {TCM}, {ABS/VDC} is displayed cyclically in this order for every press of the trip knob. DTC is displayed in the following table according to type of control module, receiving DTC, DTC detected or No DTC.

Control module	Condition	Display
ECM	Receiving DTC	Trip "A" + "P (Blink)"
	DTC detected	Trip "A" + "P xxxx"
	No DTC	Trip "A" + "P ----"
TCM	Receiving DTC	Trip "B" + "P (Blink)"
	DTC detected	Trip "B" + "P xxxx"
	No DTC	Trip "B" + "P ----"
VDC CM	Receiving DTC	Trip "A" + "C (Blink)"
	DTC detected	Trip "A" + "C xxxx"
	No DTC	Trip "A" + "C ----"
When CAN communication error is occurred	—	"-----"

NOTE:

- When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once ignition switch is turned OFF or the vehicle is driven, the DTC display mode is cancelled automatically for safety.
- When the DTC of individual control modules changes in status from current trouble to past trouble, and the trouble is fixed, the DTC will no longer appear in the combination meter if the engine is started three times or more. In this case, read the DTC using the Subaru Select Monitor.
- Because the MT model is not equipped with a TCM, only "Receiving DTC" is displayed.

Model with luminescent meter

The combination meter DTCs can be displayed according to the following procedure.

CAUTION:

Perform the steps described in 1) through 4) within 10 seconds.

- 1) Within 3 seconds after turning the ignition switch to ON, set the lighting switch to tail light or headlight position.
- 2) Press the trip meter knob four times.
- 3) Turn the lighting switch to OFF, and press the trip meter knob four times.
- 4) Set the lighting switch to tail light or headlight position again, and press the trip meter knob four times.
- 5) Go to "DTC display mode".

NOTE:

- If a diagnostic trouble code (DTC) is detected, an input error to meters exists. Check the harness on the body side and related parts.
- Detected diagnostic trouble code (DTC) cannot be cleared.
- When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once ignition switch is turned OFF or the vehicle is driven, the DTC display mode is cancelled automatically.

Combination Meter System

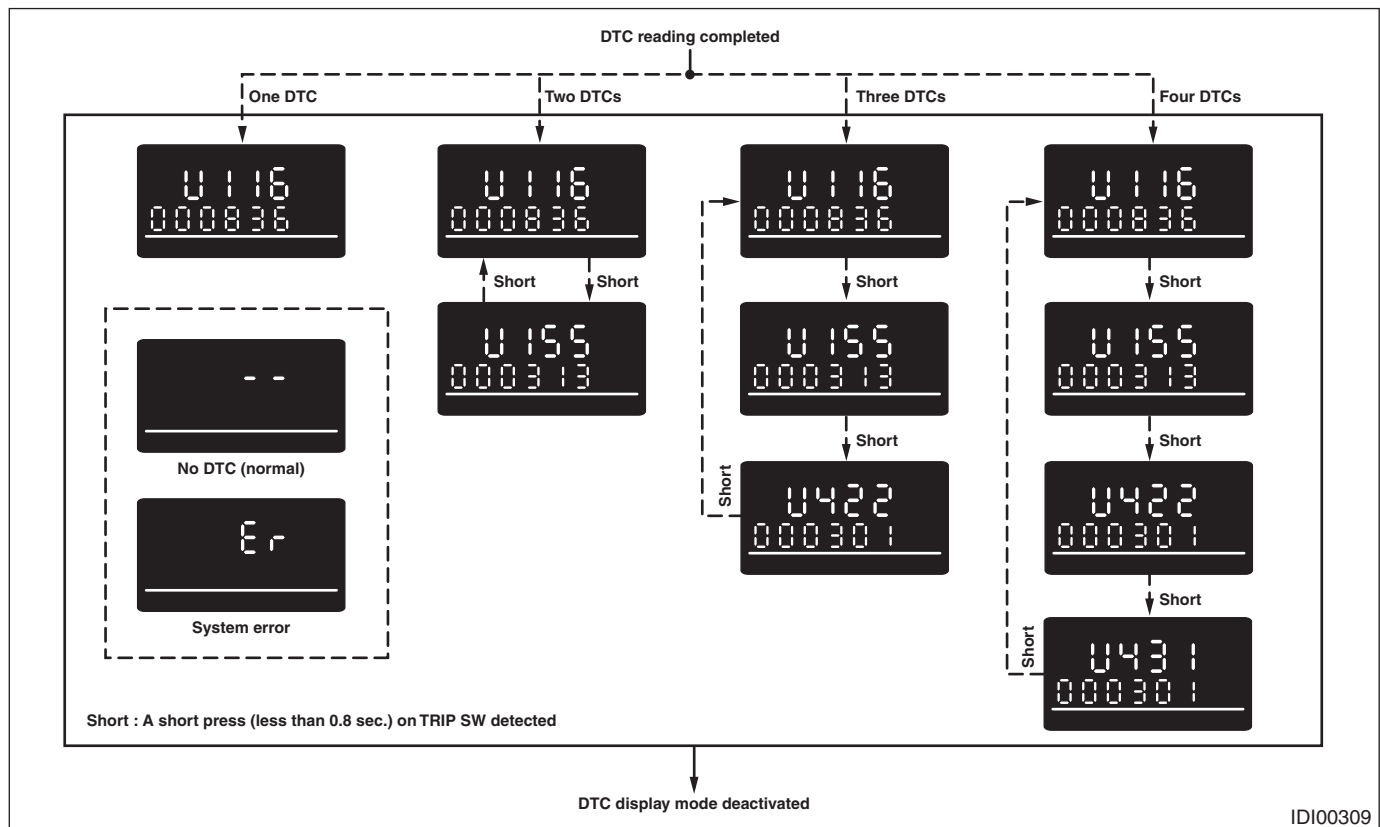

(1) When the DTC display mode operates, the LCD displays whether diagnostic trouble code (DTC) exists.

DTC display	Item	Condition
"--"	-	Normal
"Er"	-	System error (meter error)
B900	Power supply system	When IG OFF is detected while driving
B901	Speedometer	Abnormal speed pulse value and CAN data value with engine ON
B902	Speedometer	Inconsistency between speed pulse value and CAN data value with engine ON
U116	Engine coolant temperature gauge	Abnormal input data with engine ON
U140	Fuel gauge	Abnormal input data with engine ON
U155	CAN communication	CAN communication error
U167	Immobilizer collation	Collation with body integrated unit failed
U422	Fuel gauge	Abnormal input data with IG ON
U431	Fuel gauge	When input data out of range is detected with engine ON

(2) If the diagnostic trouble code (DTC) is stored, ODO value at occurrence of trouble is displayed.

NOTE:

- Diagnostic trouble code (DTC) is stored for up to four cases. If diagnostic trouble code (DTC) is input exceeding four cases, the code is deleted in order starting with the oldest one.
- When there are more than one diagnostic trouble code (DTC), the code is displayed according to the following conditions and switches every time when the trip meter knob is pressed.
 1. Displayed in the descending order of ODO value.
 2. If the ODO value is the same, displayed in the ascending order of diagnostic trouble code (DTC) value.

3. Clock System

A: WIRING DIAGRAM

Refer to “Clock System” in the wiring diagram. <Ref. to WI-170, WIRING DIAGRAM, Clock System.>

B: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Note
No display is shown.	<ol style="list-style-type: none"> 1. Power supply 2. Ground circuit 3. Communication circuit harness 4. Clock body 	<Ref. to IDI-19, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Clock System.>
Ambient air temperature/fuel economy display does not appear.	<ol style="list-style-type: none"> 1. Power supply 2. Ground circuit 3. Communication circuit harness 4. Clock body 	<Ref. to IDI-20, CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT, INSPECTION, Clock System.>
Only ambient air temperature display is not displayed.	<ol style="list-style-type: none"> 1. Power supply 2. Harness 3. Ambient sensor 4. Communication circuit 5. Clock body 	<Ref. to IDI-20, CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT, INSPECTION, Clock System.>
Only fuel economy display is not displayed.	<ol style="list-style-type: none"> 1. Setting 2. Communication circuit 3. Clock body 	<Ref. to IDI-21, CHECK FUEL ECONOMY SYSTEM COMMUNICATION CIRCUIT, INSPECTION, Clock System.>

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the clock connector. 2) Measure the voltage between clock connector and chassis ground. <i>Connector & terminal (i59) No. 10 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for an open or short between the fuse and clock.
2 CHECK GROUND CIRCUIT. Measure the resistance between the clock connector and chassis ground. <i>Connector & terminal (i59) No. 6 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair or replace the harness.
3 CHECK HARNESS BETWEEN CLOCK AND COMBINATION METER. 1) Disconnect the combination meter connector. 2) Measure the resistance between the clock connector and combination meter connector. <i>Connector & terminal (i59) No. 5 — (i10) No. 29:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
4 CHECK CLOCK. 1) Remove the clock. 2) Attach the clock to another vehicle on which the clock operates normally to check its operation.	Is clock normal?	Replace the meter case assembly.	Replace the clock body.

Clock System

INSTRUMENTATION/DRIVER INFO

3. CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT

Step	Check	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the clock connector. 2) Measure the voltage between clock connector and chassis ground. <i>Connector & terminal</i> <i>(i59) No. 8 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Repair or replace the harness.
2 CHECK GROUND CIRCUIT. Measure the resistance between the clock connector and chassis ground. <i>Connector & terminal</i> <i>(i59) No. 6 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 3.	Repair or replace the harness.
3 CHECK HARNESS BETWEEN CLOCK AND COMBINATION METER. 1) Disconnect the combination meter connector. 2) Measure the resistance between the clock connector and combination meter connector. <i>Connector & terminal</i> <i>(i59) No. 5 — (i10) No. 29:</i>	Is the resistance less than 10 Ω ?	Go to step 4.	Repair or replace the harness.
4 CHECK CLOCK. 1) Remove the clock. 2) Attach the clock to another vehicle on which the clock operates normally to check its operation.	Is clock normal?	Replace the meter case assembly.	Replace the clock body.

4. CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT

Step	Check	Yes	No
1 CHECK AMBIENT SENSOR POWER SUPPLY. 1) Disconnect the ambient sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ambient sensor connector and chassis ground. <i>Connector & terminal</i> <i>(F78) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 4 V or more?	Go to step 2.	Check the harness for a open or short between the fuse and clock.
2 CHECK HARNESS BETWEEN AMBIENT SENSOR AND COMBINATION METER. 1) Disconnect the combination meter connector. 2) Measure the resistance between the ambient sensor connector and the combination meter connector. <i>Connector & terminal</i> <i>(F78) No. 1 — (i10) No. 23:</i> <i>(F78) No. 2 — (i10) No. 24:</i>	Is the resistance less than 10 Ω ?	Go to step 3.	Repair or replace the harness.
3 CHECK AMBIENT SENSOR. 1) Remove the ambient sensor. <Ref. to AC-50, REMOVAL, Ambient Sensor (Auto A/C Model).> 2) Check the ambient sensor. <Ref. to AC(diag)-34, AMBIENT SENSOR, Diagnostic Procedure for Sensors.>	Is the ambient sensor operating properly?	Go to step 4.	Replace the ambient sensor.

Clock System

INSTRUMENTATION/DRIVER INFO

Step	Check	Yes	No
4 CHECK AMBIENT TEMPERATURE DISPLAY. 1) Connect the combination meter connector. 2) Install the 3 Ω resistance to ambient sensor connector terminal. 3) Turn the ignition switch to ON. Connector & terminal (F78) No. 1 — No. 2:	Does the ambient temperature display 25°C (77°F)?	Repair the poor contact between the ambient sensor and harness connector.	Go to step 5.
5 CHECK AMBIENT TEMPERATURE OUTPUT DATA. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select {Ambient Temperature}.	Does the ambient temperature display 25°C (77°F)?	Go to step 6.	Replace the meter case assembly. <Ref. to IDI-22, Combination Meter.>
6 CHECK CLOCK. 1) Remove the clock. 2) Attach the ambient temperature display to another vehicle on which the ambient temperature display operates normally to check its operation.	Does the ambient temperature display 25°C (77°F)?	Replace the clock body.	Replace the meter case assembly.

5. CHECK FUEL ECONOMY SYSTEM COMMUNICATION CIRCUIT

Step	Check	Yes	No
1 CHECK FUEL ECONOMY DISPLAY OFF MODE. Hold down the button "+" on the clock for 5 seconds or more.	Does the fuel economy display part blink?	Go to step 2.	Go to step 3.
2 CHECK FUEL ECONOMY DISPLAY OFF MODE. Turn the ignition switch to ON.	Is fuel economy displayed?	Clock is normal.	Go to step 3.
3 CHECK DIAGNOSTIC TROUBLE CODE (DTC). 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC displayed?	Go to step 4.	Replace the meter case assembly.
4 CHECK CLOCK. 1) Remove the clock. 2) Attach the fuel economy display to another vehicle on which the fuel economy display operates normally to check its operation.	Is the fuel economy display correct?	Replace the clock body.	Replace the meter case assembly.

Combination Meter

INSTRUMENTATION/DRIVER INFO

4. Combination Meter

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Set the tilt steering at the lowest position. For steering wheel with telescopic system, pull the steering.
- 3) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>
- 4) Remove the plastic hook (A), and detach the meter visor.

- 5) Remove the screws of the combination meter, and pull on the meter while tipping it towards yourself.

- 6) Disconnect the connector in the rear side of combination meter to remove meter.

CAUTION:

- Be careful not to damage the meter or instrument panel.
- Pay particular attention to avoid damaging the meter glass.

B: INSTALLATION

CAUTION:

- Make sure the electrical connector is connected securely.
- Make sure that each meter operates normally.
- When the combination meter has been replaced, be sure to perform the registration of immobilizer.

Install each part in the reverse order of removal.

C: DISASSEMBLY

1. DISASSEMBLY OF COMBINATION METER

CAUTION:

- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Be careful not to apply excessive force to the trip knob.
- Be sure not to touch the meter indicator needle.

Disengage the tabs (A), and remove the meter glass assembly (B) and meter visor (C) from the meter case assembly (D).

2. BULB REPLACEMENT

LEDs are used for all of warning lights and indicator lights of combination meters, replace the meter case assembly if faulty.

D: ASSEMBLY

Assemble each part in the reverse order of disassembly.

5. Speedometer

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back surface.)

6. Tachometer

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back surface.)

7. Fuel Gauge

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back surface.)

Engine Coolant Temperature Gauge

INSTRUMENTATION/DRIVER INFO

8. Engine Coolant Temperature Gauge

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the engine coolant temperature gauge alone. (Do not remove the cover on the back surface.)

9. ECO Gauge

A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the ECO gauge alone. (Do not remove the cover on the back surface.)

10.Clock

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the audio. (model with audio) <Ref. to ET-9, REMOVAL, Audio.>
- 3) Remove the navigation unit. (model with navigation) <Ref. to ET-17, PROCEDURE, Navigation Body.>
- 4) Insert hands from the audio space, disengage the tabs of the bracket on the back side of the instrument panel, and push the clock.

- 5) Disconnect the harness connector and remove the clock.

B: INSTALLATION

Install each part in the reverse order of removal.

General Description

SEATS

B: CAUTION

- If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-18, OPERATION, System Calibration (Rezeroing).>

If system adjustment is not performed, the occupant detection system may not function properly.

- The passenger detection system (passenger seat only) control unit and the passenger detection sensor are fixed to the seat cushion frame. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.
- Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the passenger detection system may not operate properly.
- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
- When removing the front seat from a vehicle loaded a side airbag, follow cautions given in the airbag section. <Ref. to AB-5, CAUTION, General Description.>

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Long nose plier	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
Circuit tester	Used for measuring resistance and voltage.

2. Front Seat

A: REMOVAL

CAUTION:

The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.

1. DRIVER'S SEAT

1) Disconnect the ground cable from battery, and wait for 60 seconds or more before starting work.

NOTE:

Remove the front and rear bolts from the slide rail of the power seat before removing the battery ground.

2) Remove the headrest.

3) Remove the slide rail installing bolt.

(1) Tilt the backrest forward and move the seat to the front most position.

(2) Remove the rear bolt cover at the rear side of the slide rail and remove the bolt.

(3) Move the seat to the rearmost position, and remove the bolt on the front side of the slide rail.

4) Disconnect the connector under the seat.

- Seat belt warning light connector (driver's seat)
- Side airbag connector
- Seat heater connector (model with seat heater)
- Power seat connector (model with power seats)

5) Remove the front seat from vehicle.

2. PASSENGER'S SEAT

CAUTION:

Always refer to "CAUTION" of "General Description" before starting the work. <Ref. to SE-6, CAUTION, General Description.>

1) Disconnect the ground cable from battery, and wait for 60 seconds or more before starting work.

2) Remove the headrest.

3) Remove the slide rail installing bolt.

(1) Tilt the backrest forward and move the seat to the front most position.

(2) Remove the rear bolt cover at the rear side of the slide rail and remove the bolt.

(3) Move the seat to the rearmost position, and remove the bolt on the front side of the slide rail.

4) Disconnect all the connectors of connector holder in the backside of seat cushion.

- Harness connector of occupant detection control module
- Side airbag connector
- Seat heater connector (model with seat heater)

5) Remove the seat from vehicle.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

• The seat mounting bolts differ between the front mounting points and the rear mounting points. Make sure that you are using correct bolts at correct positions.

• Tighten the slide rail installing bolt gradually in several steps to the specified torque in the order as shown in the figure.

Tightening torque:

53 N·m (5.40 kgf-m, 39.1 ft-lb)

C: DISASSEMBLY

1. DRIVER'S SEAT (NORMAL)

CAUTION:

Before assembling, make sure how the harnesses of the side airbag and inner seat belt are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.

1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>

2) Remove the seat lifter cover using a flat tip screwdriver and loosen the inner bolt to remove the seat lifter lever.

Front Seat

SEATS

3) Disengage the tab on the backside while pulling the reclining lever, and remove the reclining lever cover.

4) Remove screws (A) and clips (B), and then detach the seat side cover outside.

5) Remove the bolts, then remove the inner seat belt assembly.

6) Remove the screws and detach the seat side cover inside.

7) Remove the bolts on the side of seat cushion assembly, and then remove the slide rail.

CAUTION:

Do not reuse the removed bolts because they are coated with the thread lock material. Always use new bolts during assembly.

8) Remove the bolts from reclining hinge of both sides.

9) Remove the plastic fastener at the back side (bottom) of backrest.

10) Open the fastener at the rear side of backrest.

11) Remove the hog rings of backrest cover.

CAUTION:

Be careful not to tear the vinyl inside the seat when removing the hog rings. If torn, replace with a new part.

12) Remove the pad (A), and remove the mounting nut from the side airbag module.

13) Remove the headrest bushing.

NOTE:

Push outside to remove it from the inside of seat.

14) Pull out the backrest frame.

15) Remove all the hog rings at front side of seat back, and then remove the seat back cover from seat back.

16) Remove the plastic hooks of the seat cushion cover, and then remove the seat cushion assembly.

17) Remove all the hog rings, and then remove the seat cushion cover from seat cushion pad.

2. DRIVER'S SEAT (POWER SEAT)

CAUTION:

- Make sure how the harnesses of the side airbag and inner seat belt are routed before assembling to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.

- Do not disassemble the backrest assembly and seat cushion frame and slide rail assembly.

1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>

2) Remove the power seat switch knob.

3) Disconnect the connector for reclining motor from the backside of seat cushion.

Front Seat

SEATS

4) Remove the screw (A) and clips (B), and then disconnect the seat switch connector to remove seat side cover outside.

5) Remove the bolts, then remove the inner seat belt assembly.

6) Remove the screw (A) and clip (B), and then remove the seat side cover inside.

7) Remove the bolts from reclining hinge of both sides.

8) Remove the plastic fastener at the back side (bottom) of backrest.

9) Open the fastener at the rear side of backrest.

10) Remove the hog rings of backrest cover.

CAUTION:

Be careful not to tear the vinyl inside the seat when removing the hog rings. If torn, replace with a new part.

11) Remove the pad (A), and remove the mounting nut from the side airbag module.

12) Remove the headrest bushing.

NOTE:

Push outside to remove it from the inside of seat.

13) Pull out the backrest frame.

14) Remove all the hog rings at front side of seat back, and then remove the seat back cover from seat back.

15) Remove the clip (A) and straps (B) on the back of seat cushion.

16) Remove the bolts on left and right side, and remove the seat cushion frame from the slide rail assembly.

17) Remove the hooks (A), and then remove the seat cushion from seat cushion frame.

18) Remove the hog rings, and then remove the seat cushion cover from the seat cushion pad.

Front Seat

SEATS

3. PASSENGER'S SEAT

CAUTION:

• If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-18, OPERATION, System Calibration (Rezeroing).>

Failure to do so may prevent the passenger's airbag from operating properly.

• The passenger detection system (passenger seat only) control unit, passenger detection sensor, seat cushion pad and seat cushion frame are considered as a single seat cushion pad and frame assembly. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.

• If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

1) Remove the seat from the vehicle. <Ref. to SE-7, PASSENGER'S SEAT, REMOVAL, Front Seat.>

2) Refer to the disassembly procedures for the driver's seat. <Ref. to SE-7, DRIVER'S SEAT (NORMAL), DISASSEMBLY, Front Seat.>

D: ASSEMBLY

CAUTION:

• Do not confuse the harness routing of the side airbag and inner seat belt etc. Assembling with harnesses improperly routed may cause the harness to get caught and short out.

• When installing the side airbag module assembly, be sure to put the side airbag module between backrest cover and airbag guide cloth.

- (A) Airbag guide cloth
- (B) Backrest cover
- (C) Side airbag module ASSY

- (1) Backrest frame ASSY
- (2) Airbag guide cloth
- (3) Backrest cover
- (4) Side airbag module ASSY
- (5) Hexagon cap nut

Besides, if the backrest cover is not installed securely, the side airbag module may not be activated properly, therefore keep strictly to the following procedures.

- Be careful not to stain or damage the backrest cover during assembly.
- Do not reuse hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on backrest cover.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-2, FRONT SEAT LH, COMPONENT, General Description.> <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

1) Assemble the seat cover.

(1) Adjust so that the left and right clearances between wire and seat pad become equal, and mark the seat pad.

(1) Marking

(2) Mark the center of the wire on the pad side to which the hog ring is attached.

(1) Marking

(3) Insert the wire into the seat cover, and align the wire with the position marked in Step 1).

SE-01261

(4) Mark the wire on the seat cover side according to the markings on the seat pad.

SE-01262

(1) Marking

(5) Perform Steps 1) — 4) to all sections to which the hog rings are attached.

(6) Make sure that all hog rings (A) are attached securely.

SE-01263

2) Assemble each part in the reverse order of disassembly.

Front Seat

SEATS

3) If any wrinkles are found after the assembly of the seat cover, finish the seat cover with iron.

(1) Place the wet towel on wrinkles.

(2) Touch up with warm iron.

CAUTION:

Keep moving the iron, otherwise the seat cover surface can be damaged.

NOTE:

This method is available for genuine leather, synthetic leather, cloth, etc.

1. DRIVER'S SEAT

NOTE:

- When installing the inner seat belt assembly, follow the procedures described in the seat belt section. <Ref. to SB-18, INSTALLATION, Front Seat Belt.>

- Install the backrest assembly and seat cushion assembly in the following procedure.

1) Make sure that there is no foreign matter on side airbag module.

2) Temporarily tighten the reclining hinge bolts.

3) Place the backrest in the most upright position.

4) Tighten the reclining hinge bolts (1) through (4) in order, in two or three steps by gradually increasing the torque until they reach the specified torque.

(A) Vehicle inside

(B) Vehicle outside

5) Assemble each part in the reverse order of disassembly.

2. PASSENGER'S SEAT

CAUTION:

Make sure to adhere to the following rules when assembling the passenger seat. Improper work procedures can cause the passenger detection system to not operate properly.

- If the seat cushion cover is removed or replaced, make sure to perform occupant detection system adjustment after installing the seat. <Ref. to OD(diag)-18, OPERATION, System Calibration (Rezeroing).>

Failure to do so may prevent the passenger's airbag from operating properly.

- The passenger detection system (passenger seat only) control unit, passenger detection sensor, seat cushion pad and seat cushion frame are considered as a single seat cushion pad and frame assembly. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.
- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
- Make sure to install the hog rings/clips to the specified locations. Do not reuse hog rings.

- 1) Assemble the seat cushion in the reverse order of disassembly.
- 2) Assemble the backrest in the reverse order of disassembly.
- 3) When assembling the backrest assembly to the seat cushion assembly, fill up the gap in the front side of slide rail LH and in the rear side of slide rail RH using cloth etc.

- 4) Temporarily tighten the reclining hinge bolts in the order of (1) through (4) to an extent that the seat backrest assembly is not held securely.

- (A) Vehicle inside
(B) Vehicle outside

- 5) Use the reclining lever to place the backrest in the most upright position, and check the first lock position of recliner.
- 6) Hold the seat cushion assembly securely, and tighten the reclining hinge bolts in the order described above until they reach the specified torque.

CAUTION:

Do not touch the backrest assembly when tightening the reclining hinge bolts.

- 7) Assemble each harness, inner belt assembly and each cover in the reverse order of removal.
- 8) Install the seat assembly.

CAUTION:

Tighten the slide rail installing bolt gradually in several steps to the specified torque in the order as shown in the figure.

Tightening torque:

53 N·m (5.40 kgf·m, 39.1 ft·lb)

E: INSPECTION

Check that no tear or fray on the backrest cover and seat cushion cover.

NOTE:

For model with side airbag, if the door side of the backrest cover is torn or frayed, the side airbag may not be deployed properly. In this case, replace the backrest cover.

3. Rear Seat

A: REMOVAL

CAUTION:

- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” before removing the rear seat. <Ref. to AB-5, CAUTION, General Description.>

- The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.

- 1) Disconnect the ground cable from battery, and wait for 60 seconds or more before starting work.
- 2) Remove the cap behind the seat table and disconnect the connector. (Models with seat table)
- 3) Remove the bolt. (Models with seat table)

- 4) Remove the hooks while lifting up the rear seat cushion.

- Without seat table

- With seat table

CAUTION:

If the hooks on the vehicle body side is disengaged (remained on the seat cushion side) when removing the rear seat cushion, always replace with new hooks to prevent the decline of the fixed force of the seat.

- 5) Remove the hook (A) by pushing it back while lifting the front side of the seat cushion, and remove the seat cushion.

- 6) Remove the headrest, and then tilt the backrest forward.
- 7) Remove the luggage floor mat.
- 8) Turn over the mat to remove the bolt.

- 9) Remove the backrest from the hinge assembly LH (hinge assembly RH).

NOTE:

The backrests cannot be detached while pin positions of the hinge assembly and backrests are not aligned.

- 10) Remove the reclining button.

CAUTION:

Use the following procedures to remove the reclining button. Damage to the reclining button may result if the procedures are not followed correctly.

- (1) Remove the weather strip, and insert a flat tip screwdriver into the rear of the rear seat backrest shoulder.

- (2) Press the tab on the rear side of the reclining button downwards and remove the reclining button.

CAUTION:

Do not press strongly on the button tab. Pressing with excessive force may break the tab.

NOTE:

- Direct a light from under the rear seat backrest shoulder to easily identify the tab position.
- The LH side is left and right symmetrical.

Rear Seat

SEATS

- 11) Remove the nut, and remove the seat backrest shoulder.

B: INSTALLATION

CAUTION:

If the hooks on the vehicle body side is disengaged (remained on the seat cushion side) when removing the rear seat cushion, always replace with new hooks to prevent the decline of the fixed force of the seat.

- 1) Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-5, REAR SEAT, COMPONENT, General Description.>

- 2) Route the seat belt securely. <Ref. to SB-20, INSTALLATION, Rear Seat Belt.>

C: DISASSEMBLY

- 1) Remove the rear seat. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 2) Remove the armrest hinge cover in the direction of the black arrow, and remove the screws to remove the armrest.

NOTE:

The armrests cannot be detached while the backrest assembly RH and armrest side pin positions are not aligned.

- 3) Remove the backrest knob. (Screw-in type)

- 4) Remove the seat backrest latch cover.

5) Peel back the backrest cover and remove the hog rings.

6) Remove all the hog rings securing the backrest frame and backrest pad.

7) Remove the headrest bushing.

8) Remove the backrest pad and backrest cover from the backrest frame.

9) Disassemble the backrest assembly LH by referring to above procedures.

10) Remove the bolts on the backside of the seat cushion, and remove the seat table assembly.

11) Remove the bolts on the right and left sides, and remove the seat table assembly.

12) Remove the bolts and the seat table hinge.

13) Remove the hooks and the seat table plate.

14) Remove all the hog rings on the backside of the seat cushion, and disassemble the seat cushion cover and seat cushion pad.

15) Detach the plastic zipper and hog ring, and then remove the armrest cover.

D: ASSEMBLY

CAUTION:

- Do not reuse hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on backrest cover.

NOTE:

- Do not contaminate or damage the cover.
- While installing the hog rings, prevent the seat from getting wrinkled.

1) Assemble the seat cover in the same manner as the front seat. <Ref. to SE-12, ASSEMBLY, Front Seat.>

Rear Seat

SEATS

2) Make sure that all hog rings (A) are attached securely.

• Model with seat table

3) Assemble each part in the reverse order of disassembly.

4. Power Seat System

A: REMOVAL

CAUTION:

When removing the front seat, disconnect the ground cable from the battery before disconnecting the side airbag module harness connector, and wait for 60 seconds before starting the operation.

1. POWER SEAT SWITCH

- 1) Detach the connectors and remove the seat side cover outside. <Ref. to SE-7, DISASSEMBLY, Front Seat.>
- 2) Remove the screws to remove the power seat switch assembly.

2. LUMBAR SWITCH

- 1) Detach the connectors and remove the seat side cover outside. <Ref. to SE-7, DISASSEMBLY, Front Seat.>
- 2) Disconnect the lumbar switch connector and remove the lumbar switch assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. WIRING DIAGRAM

Refer to "Power Seat System" in the wiring diagram. <Ref. to WI-91, WIRING DIAGRAM, Power Seat System.>

2. TROUBLE SYMPTOM

- Driver's side

Symptom	Criteria
All function fails to operate. <Ref. to SE-22, ALL FUNCTION FAILS TO OPERATE, INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> • Power seat switch • Lumbar switch • Power seat harness • Body harness
A part of function does not operate. <Ref. to SE-23, SOME OF THE MOTORS DO NOT OPERATE (DRIVER'S SEAT), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> • Power seat switch • Lumbar switch • Power seat harness • Relevant motor

3. CHECK SWITCH

Check resistance between terminals while operating each switch.

- Power seat switch

Switch position	Terminal No.	Standard
Slide forward	7 and 14 8 and 13	Less than 10 Ω
Slide rearward	7 and 13 8 and 14	Less than 10 Ω
Tilt up	7 and 2 8 and 1	Less than 10 Ω
Tilt down	7 and 1 8 and 2	Less than 10 Ω
Lifter up	7 and 5 8 and 6	Less than 10 Ω
Lifter down	7 and 6 8 and 5	Less than 10 Ω
Reclining forward	7 and 3 8 and 4	Less than 10 Ω
Reclining rearward	7 and 4 8 and 3	Less than 10 Ω

Power Seat System

SEATS

- Lumbar switch

Switch position	Terminal No.	Standard
Lumbar forward	1 and 3 2 and 4	Less than 10 Ω
Lumbar backward	1 and 4 2 and 3	Less than 10 Ω

4. ALL FUNCTION FAILS TO OPERATE

Step	Check	Yes	No
1 CHECK SEAT FUNCTIONS. Operate each power seat switch and check that each power seat function operates normally.	Does all function fails to operate?	Go to step 2.	Check the motor which does not operate. <Ref. to SE-23, SOME OF THE MOTORS DO NOT OPERATE (DRIVER'S SEAT), INSPECTION, Power Seat System.>
2 CHECK FUSE. Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step 3.
3 CHECK POWER SUPPLY CIRCUIT. 1) Disconnect the connectors for power seat switch and lumbar switch. 2) Measure the voltage between harness connector and chassis ground. Connector & terminal (R200) No. 7 (+) — Chassis ground (-): (R195) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4.	Check body harness.
4 CHECK POWER SUPPLY CIRCUIT. Measure the resistance between the harness connectors for power seat switch and lumbar switch and the chassis ground. Connector & terminal (R200) No. 8 — Chassis ground: (R195) No. 2 — Chassis ground:	Is the resistance less than 10 Ω ?	Replace the faulty switch assembly.	Check body harness.

5. SOME OF THE MOTORS DO NOT OPERATE (DRIVER'S SEAT)

- Slide operation failure

Step	Check	Yes	No
1 CHECK SWITCH. 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-21, CHECK SWITCH, INSPECTION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 2.	Replace the power seat switch assembly.
2 CHECK HARNESS. 1) Disconnect the power seat switch connector and slide motor connector. 2) Measure the resistance between power seat switch connector and slide motor connector. <i>Connector & terminal</i> (R202) No. 1 — (R200) No. 14: (R202) No. 2 — (R200) No. 13:	Is the resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3 CHECK SLIDE MOTOR. 1) Connect the power seat switch connector and slide motor connector. 2) Apply 12 V to the slide motor and check the motor rotation. <i>Connector & terminal</i> (R200) No. 14 (+) — (R200) No. 13 (-): (R200) No. 13 (+) — (R200) No. 14 (-):	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in slide rail.	Slide motor problem. Replace the slide rail assembly.

- Malfunction of tilt operation

Step	Check	Yes	No
1 CHECK SWITCH. 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-21, CHECK SWITCH, INSPECTION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 2.	Replace the power seat switch assembly.
2 CHECK HARNESS. 1) Disconnect the power seat switch connector and tilt motor connector. 2) Measure the resistance between power seat switch connector and tilt motor connector. <i>Connector & terminal</i> (R203) No. 2 — (R200) No. 2: (R203) No. 3 — (R200) No. 1:	Is the resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3 CHECK TILT MOTOR. 1) Connect the power seat switch connector and tilt motor connector. 2) Apply 12 V to the tilt motor and check the motor rotation. <i>Connector & terminal</i> (R200) No. 2 (+) — (R200) No. 1 (-): (R200) No. 1 (+) — (R200) No. 2 (-):	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in tilt mechanism.	Tilt motor problem. Replace the slide rail assembly.

Power Seat System

SEATS

• Malfunction of lifter operation

Step	Check	Yes	No
1 CHECK SWITCH. 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-21, CHECK SWITCH, INSPECTION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 2.	Replace the power seat switch assembly.
2 CHECK HARNESS. 1) Disconnect the power seat switch connector and lifter motor connector. 2) Measure the resistance between power seat switch connector and lifter motor connector. Connector & terminal (R204) No. 4 — (R200) No. 5: (R204) No. 3 — (R200) No. 6:	Is the resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3 CHECK LIFTER MOTOR. 1) Connect the power seat switch connector and lifter motor connector. 2) Apply 12 V to the lifter motor and check the motor rotation. Connector & terminal (R200) No. 5 (+) — (R200) No. 6 (-): (R200) No. 6 (+) — (R200) No. 5 (-):	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lifter mechanism.	Lifter motor problem. Replace the slide rail assembly.

• Malfunction of reclining operation

Step	Check	Yes	No
1 CHECK SWITCH. 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-21, CHECK SWITCH, INSPECTION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 2.	Replace the power seat switch assembly.
2 CHECK HARNESS. 1) Disconnect the power seat switch connector and reclining motor connector. 2) Measure the resistance between power seat switch connector and reclining motor connector. Connector & terminal (R201) No. 2 — (R200) No. 3: (R201) No. 1 — (R200) No. 4:	Is the resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3 CHECK RECLINING MOTOR. 1) Connect the power seat switch connector and reclining motor connector. 2) Apply 12 V to the reclining motor and check the motor rotation. Connector & terminal (R200) No. 3 (+) — (R200) No. 4 (-): (R200) No. 4 (+) — (R200) No. 3 (-):	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in reclining hinge.	Reclining motor problem. Replace the backrest hinge and motor assembly.

• Malfunction of lumbar operation

Step	Check	Yes	No
1 CHECK SWITCH. 1) Disconnect the connector of lumbar switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lumbar forward and lumbar backward. <Ref. to SE-21, CHECK SWITCH, INSPECTION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 2.	Replace the lumbar switch assembly.
2 CHECK HARNESS. 1) Disconnect the lumbar switch connector and lumbar motor connector. 2) Measure the resistance between lumbar switch connector and lumbar motor connector. Connector & terminal (R198) No. 1 — (R195) No. 3: (R198) No. 2 — (R195) No. 4:	Is the resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3 CHECK LUMBAR MOTOR. 1) Connect the lumbar switch connector and lumbar motor connector. 2) Apply 12 V to the lumbar motor and check the motor rotation. Connector & terminal (R195) No. 3 (+) — (R195) No. 4 (-): (R195) No. 4 (+) — (R195) No. 3 (-):	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lumbar mechanism.	Lumbar motor problem. Replace the lumbar motor assembly.

5. Seat Heater System

A: REMOVAL

1. SEAT HEATER UNIT

- 1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-7, DISASSEMBLY, Front Seat.>
- 3) Remove the seat heater unit.

2. SEAT HEATER SWITCH

- 1) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 2) Remove the seat heater switch from the console box.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. WIRING DIAGRAM

Refer to "Seat Heater System" in the wiring diagram. <Ref. to WI-102, WIRING DIAGRAM, Seat Heater System.>

2. DIAGNOSIS CHART

Symptoms	Repair order
Seat heater does not operate.	1. Check the fuse. <Ref. to SE-26, CHECK SEAT HEATER FUSE, INSPECTION, Seat Heater System.>
	2. Check the seat heater system power supply and ground circuit. <Ref. to SE-26, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Seat Heater System.>
	3. Check the seat heater module. <Ref. to SE-27, SEAT HEATER UNIT, INSPECTION, Seat Heater System.>
	4. Check the seat heater switch circuit. <Ref. to SE-27, SEAT HEATER SWITCH, INSPECTION, Seat Heater System.>

3. CHECK SEAT HEATER FUSE

Remove the seat heater fuse, and then visually check.

Is the fuse blown out?

- **Yes** → Replace the fuse.
- **No** → Check the power supply and ground circuits.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT

- 1) Check power supply circuit.
 - (1) Disconnect the seat heater switch.
 - (2) Turn the ignition switch to ON.
 - (3) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal

(R43) No. 7 (+) — Chassis ground (-):

Is the voltage 12 V or more?

- **Yes** → Go to step 2.
- **No** → Check the harness between the seat heater switch and fuse.

- 2) Check ground circuit.

Measure the resistance between harness connector terminal and chassis ground.

Connector & terminal

(R43) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

- **Yes** → Go to step 3.
- **No** → Repair the harness.

3) Check ground circuit.

Measure the resistance between seat heater switch terminals.

Connector & terminal

(R43) No. 7 — (R43) No. 2:

Is the resistance less than 10 Ω?

- **Yes** → The power supply and ground circuits are normal.
- **No** → Replace the seat heater switch.

5. SEAT HEATER UNIT

1) Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

Connector & terminal

No. 1 — No. 3:

No. 1 — No. 4:

No. 3 — No. 4:

2) If no continuity exists, replace the seat heater module with a new part.

6. SEAT HEATER SWITCH

1) Inspect the continuity between the seat heater switch terminals.

Connector & terminal

HI

No. 7 — No. 2:

No. 7 — No. 4:

No. 7 — No. 8:

LOW

No. 7 — No. 1:

No. 7 — No. 2:

No. 7 — No. 3:

2) If no continuity exists, replace the seat heater switch with a new part.

6. Rear Seat Reclining System

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the backrest shoulder. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 3) Remove the rear quarter lower trim. <Ref. to EI-60, REMOVAL, Rear Quarter Trim.>
- 4) Remove the bolts and the wire, and remove the rear seat backrest striker assembly.

- 5) Remove the nuts and remove the reclining button bracket.

B: INSTALLATION

Install each part in the reverse order of removal.

7. Remote Control Back Rest System

A: REMOVAL

1. REMOTE CONTROL BACK REST SWITCH

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear quarter lower trim. <Ref. to EI-60, REMOVAL, Rear Quarter Trim.>
- 3) Remove the remote control back rest switch from the rear quarter lower trim.

2. REMOTE CONTROL BACK REST ACTUATOR

- 1) Remove the rear seat backrest. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 2) Remove the remote control back rest actuator from the rear seat backrest. <Ref. to SE-18, DISASSEMBLY, Rear Seat.>

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

1. WIRING DIAGRAM

Refer to “Remote Control Back Rest System” in the wiring diagram. <Ref. to WI-103, WIRING DIAGRAM, Remote Control Back Rest System.>

2. DIAGNOSTIC CHART

Symptoms	Repair order
Remote control back rest system does not operate.	1. Check the fuse. <Ref. to SE-29, CHECK REMOTE CONTROL BACK REST SYSTEM FUSE, INSPECTION, Remote Control Back Rest System.>
	2. Check the power supply and ground circuit for the remote control back rest system. <Ref. to SE-29, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Remote Control Back Rest System.>
	3. Perform the inspection of switch unit. <Ref. to SE-30, INSPECTION OF SWITCH UNIT, INSPECTION, Remote Control Back Rest System.>
	4. Perform the inspection of actuator unit. <Ref. to SE-30, INSPECTION OF ACTUATOR UNIT, INSPECTION, Remote Control Back Rest System.>

3. CHECK REMOTE CONTROL BACK REST SYSTEM FUSE

Remove the fuse (FB-6) of remote control back rest system, and visually check.

Is the fuse blown out?

- **Yes** → Replace the fuse.
- **No** → Check the power supply and ground circuits.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT

- 1) Check power supply circuit.
 - (1) Disconnect the remote control back rest switch.
 - (2) Turn the ignition switch to ON.
 - (3) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal

RH side:

(R172) No. 5 (+) — Chassis ground (-):

LH side:

(R173) No. 5 (+) — Chassis ground (-):

Is the voltage 12 V or more?

- **Yes** → Go to step 2.
- **No** → Check the harness between the remote control back rest switch and fuse.

- 2) Check ground circuit.

Measure the resistance between harness connector terminal and chassis ground.

Connector & terminal

RH side:

(R172) No. 1 — Chassis ground:

LH side:

(R173) No. 1 — Chassis ground:

Is the resistance less than 10 Ω when the switch is ON?

- **Yes** → Go to step 3.
- **No** → Check the switch.

Remote Control Back Rest System

SEATS

- 3) Check power supply circuit.
 - (1) Connect the remote control back rest switch.
 - (2) Disconnect the remote control back rest actuator.
 - (3) Turn the ignition switch to ON.
 - (4) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal

RH side:

(R170) No. 1 (+) — Chassis ground (-):

LH side:

(R171) No. 1 (+) — Chassis ground (-):

Is the voltage 12 V or more when the switch is ON?

- **Yes** → Go to step 4.
- **No** → Check the harness between the remote control back rest switch and actuator.

- 4) Check ground circuit.

Measure the resistance between harness connector terminal and chassis ground.

Connector & terminal

RH side:

(R170) No. 2 — Chassis ground:

LH side:

(R171) No. 2 — Chassis ground:

Is the resistance 1 M Ω or more when the switch is ON?

- **Yes** → Perform the inspection of actuator unit.
- **No** → Repair the harness of ground circuit.

5. INSPECTION OF SWITCH UNIT

- 1) Disconnect the remote control back rest switch connector.
- 2) Measure the resistance between terminals of remote control back rest switch connector.

Connector & terminal

RH side:

(R172) No. 5 — (R172) No. 1:

LH side:

(R173) No. 5 — (R173) No. 1:

Is the resistance less than 10 Ω when the switch is ON?

- **Yes** → Normal operation.
- **No** → Replace the switch.

6. INSPECTION OF ACTUATOR UNIT

- 1) Disconnect the connector of actuator.
- 2) Connect the battery to the actuator connector.

Connector & terminal

RH side:

(R170) No. 1 (+) — (R170) No. 2 (-):

LH side:

(R171) No. 1 (+) — (R171) No. 2 (-):

Does the actuator operate?

- **Yes** → Normal operation.
- **No** → Replace the actuator.

24. Immobilizer Antenna	48

General Description

SECURITY AND LOCKS

1. General Description

A: COMPONENT

1. DOOR LOCK ASSEMBLY

SL-00860

(A) Front

(B) Rear

- | | |
|--------------------------------------------------|-------------------------------------------------|
| (1) Inner remote ASSY | (6) Door outer handle spacer |
| (2) Front door latch and door lock actuator ASSY | (7) Front door outer handle frame ASSY |
| (3) Door outer handle | (8) Striker |
| (4) Door outer handle cover | (9) Rear door latch and door lock actuator ASSY |
| (5) Key cylinder (driver's side only) | (10) Rear door outer handle frame ASSY |

Tightening torque: N·m (kgf·m, ft·lb)

T1: 6.5 (0.66, 4.8)

T2: 7.5 (0.76, 5.5)

T3: 18 (1.84, 13.3)

2. REAR GATE LOCK

SL-00724

- (1) Rear gate latch and actuator ASSY
- (2) Striker

Tightening torque: N·m (kgf·m, ft·lb)
T: 25 (2.55, 18.4)

General Description

SECURITY AND LOCKS

3. FRONT HOOD LOCK AND REMOTE OPENERS

SL-01405

(A) Fuel lock release

(B) Hood lock release

(1) Pull handle ASSY

(2) Cable

(3) Lever ASSY

(4) Lever ASSY bracket

(5) Front hood lock ASSY

Tightening torque: N·m (kgf·m, ft·lb)

T1: 33 (3.36, 24.2)

T2: 7.5 (0.76, 5.5)

4. KEYLESS ENTRY SYSTEM

SL-00923

- | | | |
|------------------------------|----------------------------------|--------------------|
| (1) Body integrated unit | (3) Rear gate latch switch | (5) Door switch |
| (2) Power window main switch | (4) Keyless entry control module | (6) Keyless buzzer |

General Description

SECURITY AND LOCKS

5. SECURITY SYSTEM

SL-01372

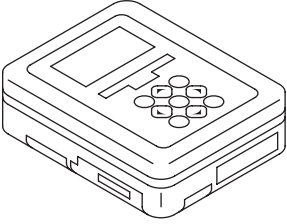

- | | | |
|-----------------------------------------------------|-----------------------------------|-------------------------------------------------------------------------|
| (1) Horn | (4) Turn signal and hazard module | (7) Impact sensor (driver's seat instrument panel side) (dealer option) |
| (2) Body integrated unit | (5) Rear gate latch switch | (8) Horn relay (in main fuse box) |
| (3) Security indicator light (in combination meter) | (6) Door switch | |

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- When performing a check after disconnecting the battery or restoring from a dead battery condition, perform the check after turning the ignition to ON and OFF, then opening and closing the driver's side door a few times.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust the parts to the specifications described in this manual if so designated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.
- If any immobilizer related part has been replaced, make sure to register the immobilizer.
- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Using a tester above such circuits may cause malfunction of airbag system. Follow the cautions for the airbag system in this case. <Ref. to AB-5, CAUTION, General Description.>
- Be careful not to damage the airbag system wiring harness when servicing the ignition key cylinder.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center; margin-top: 10px;">ST1B022XU0</p>	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Drill	Used for replacing the ignition key lock.
TORX® T30	Used for removing and installing door outer handles.
Clip remover	Used for removing trim clip

Door Lock Control System

SECURITY AND LOCKS

2. Door Lock Control System

A: WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-181, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

1. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “LAN SYSTEM (DIAGNOSTICS)” section. <Ref. to LAN(diag)-10, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptom	Repair order	Reference
The door lock control system does not operate.	1. Remove the following fuses and inspect visually. <ul style="list-style-type: none">• No. 3 (In fuse & relay box)• No. 7 (In fuse & relay box)• No. 8 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. Check the power supply and ground circuit, if the fuse has no abnormality. <Ref. to SL-9, CHECK POWER SUPPLY & GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-9, CHECK POWER SUPPLY & GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-9, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the rear gate opener button and circuit.	<Ref. to SL-10, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>
	5. Check the door lock actuator and the circuit.	<Ref. to SL-11, CHECK DOOR LOCK ACTUATOR & CIRCUIT, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-11, CHECK DOOR LOCK ACTUATOR & CIRCUIT, INSPECTION, Door Lock Control System.>

2. CHECK POWER SUPPLY & GROUND CIRCUIT

Step	Check	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the harness connector of body integrated unit. 2) Measure the voltage between body integrated unit connector and chassis ground. <i>Connector & terminal</i> <i>(i84) No. 34 (+) — Chassis ground (-):</i> <i>(B280) No. 6 (+) — Chassis ground (-):</i> <i>(B281) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 9 V or more?	Go to step 2.	Check the harness for open or short circuit between body integrated unit and fuse.
2 CHECK GROUND CIRCUIT. Measure the resistance between body integrated unit connector and chassis ground. <i>Connector & terminal</i> <i>(i84) No. 28 — Chassis ground:</i> <i>(B280) No. 17 — Chassis ground:</i> <i>(B281) No. 20 — Chassis ground:</i> <i>(B279) No. 27 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	The power supply and ground circuit are OK.	Repair or replace the harness.

3. CHECK DOOR LOCK SWITCH

Step	Check	Yes	No
1 CHECK DOOR LOCK SWITCH. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select {Current Data Display & Save}. 5) Select {Manual lock SW input}.	Does the display switch between OFF \leftrightarrow ON when each door lock switch is moved to LOCK?	Go to step 2.	Go to step 3.
2 CHECK DOOR LOCK SWITCH. From the condition in step 1), operate each door lock switch (driver's and passenger's) in the UNLOCK direction.	Does the display switch between OFF \leftrightarrow ON?	The door lock switch is OK.	Go to step 4.
3 CHECK DOOR LOCK SWITCH. 1) Disconnect the door lock switch harness connector. 2) Check the continuity when the door lock switch is operated to the LOCK direction. <i>Connector & terminal</i> <i>Driver's side:</i> <i>Without auto-reverse function:</i> <i>(D102) No. 2 — (D102) No. 3:</i> <i>With auto-reverse function:</i> <i>(D7) No. 10 — (D102) No. 3:</i> <i>Passenger's side:</i> <i>(D125) No. 4 — (D125) No. 5:</i>	Did the indicator change from "No continuity" (1 M Ω or more) to "Continuity exists" (less than 10 Ω)?	Go to step 4.	Replace the power window main switch or door lock switch. <Ref. to GW-8, Power Window Control Switch.>
4 CHECK DOOR LOCK SWITCH. Check the continuity when the door lock switch is operated to the UNLOCK direction. <i>Connector & terminal</i> <i>Driver's side:</i> <i>Without auto-reverse function:</i> <i>(D102) No. 1 — (D102) No. 3:</i> <i>With auto-reverse function:</i> <i>(D7) No. 2 — (D102) No. 3:</i> <i>Passenger's side:</i> <i>(D125) No. 2 — (D125) No. 5:</i>	Did the indicator change from "No continuity" (1 M Ω or more) to "Continuity exists" (less than 10 Ω)?	Go to step 5.	Replace the power window main switch or door lock switch. <Ref. to GW-8, Power Window Control Switch.>

Door Lock Control System

SECURITY AND LOCKS

Step	Check	Yes	No
5 CHECK HARNESS. Measure the resistance between the door lock switch connector and chassis ground. Connector & terminal Driver's side: (D102) No. 3 — Chassis ground: Passenger's side: (D125) No. 5 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the harness.
6 CHECK HARNESS. 1) Disconnect the harness connector of body integrated unit. 2) Check the harness between body integrated unit connector and door lock switch. Connector & terminal Driver's side: Without auto-reverse function: (D102) No. 2 — (i84) No. 15: (D102) No. 1 — (i84) No. 29: With auto-reverse function: (D7) No. 10 — (i84) No. 15: (D7) No. 2 — (i84) No. 29: Passenger's side: (D125) No. 4 — (i84) No. 15: (D125) No. 2 — (i84) No. 29:	Is harness normal?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Repair or replace the harness.

4. CHECK REAR GATE OPENER BUTTON CIRCUIT

Step	Check	Yes	No
1 CHECK REAR GATE OPENER BUTTON. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select {Current Data Display & Save}. 5) Select the {R Gate SW input}.	Does the display change to OFF ←→ ON, when the rear gate opener button is operated?	Rear gate opener button is normal.	Go to step 2.
2 CHECK HARNESS. Check the harness between the body integrated unit and rear gate opener button. Connector & terminal (B281) No. 24 — (D99) No. 5:	Is harness normal?	Go to step 3.	Repair or replace the harness.
3 CHECK HARNESS. Measure the resistance between the rear gate opener button and chassis ground. Connector & terminal (D99) No. 6 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
4 CHECK REAR GATE OPENER BUTTON. Measure the resistance between connector terminals when the rear gate opener button is pressed, and when it is released. Connector & terminal (D99) No. 5 — (D99) No. 6:	Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Replace the rear gate opener button. <Ref. to SL-34, Rear Gate Opener Button.>

5. CHECK DOOR LOCK ACTUATOR & CIRCUIT

Step	Check	Yes	No
<p>1 CHECK HARNESS (DOOR LOCK). 1) Disconnect the body integrated unit connector and each door lock actuator. 2) Check the harness between body integrated unit and each door lock actuator.</p> <p>Connector & terminal Front door LH <i>(i84) No. 7 — (D18) No. 1:</i> Front door RH <i>(i84) No. 7 — (D72) No. 1:</i> Rear door LH <i>(i84) No. 7 — (D26) No. 1:</i> Rear door RH <i>(i84) No. 7 — (D32) No. 1:</i></p>	Is harness normal?	Go to step 2.	Repair or replace the harness.
<p>2 CHECK HARNESS (DOOR UNLOCK). Check the harness between body integrated unit and each door lock actuator.</p> <p>Connector & terminal Front door LH <i>(i84) No. 23 — (D18) No. 2:</i> Front door RH <i>(i84) No. 8 — (D72) No. 2:</i> Rear door LH <i>(i84) No. 8 — (D26) No. 2:</i> Rear door RH <i>(i84) No. 8 — (D32) No. 2:</i></p>	Is harness normal?	Go to step 3.	Repair or replace the harness.
<p>3 CHECK HARNESS (REAR GATE UNLOCK). Check the harness between the body integrated unit and rear gate lock actuator.</p> <p>Connector & terminal <i>(i84) No. 22 — (D46) No. 1:</i></p>	Is harness normal?	Go to step 4.	Repair or replace the harness.
<p>4 CHECK HARNESS (REAR GATE UNLOCK). Measure the resistance between the rear gate lock actuator and chassis ground.</p> <p>Connector & terminal <i>(D46) No. 2 — Chassis ground:</i></p>	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the harness.
<p>5 CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL. Measure the voltage between terminals of the body integrated unit connector when operating the door lock switch to LOCK direction.</p> <p>Connector & terminal Except for front door LH <i>(i84) No. 7 (+) — (i84) No. 8 (-):</i> Front door LH <i>(i84) No. 7 (+) — (i84) No. 23 (-):</i></p>	Does the voltage change from less than 1 V → 9 V or more? (During lock output)	Go to step 6.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>
<p>6 CHECK OUTPUT SIGNAL OF BODY INTEGRATED UNIT. Measure the voltage between terminals of the body integrated unit connector when operating the door lock switch to UNLOCK direction.</p> <p>Connector & terminal Except for front door LH <i>(i84) No. 8 (+) — (i84) No. 7 (-):</i> Front door LH <i>(i84) No. 23 (+) — (i84) No. 7 (-):</i></p>	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step 7.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>

Door Lock Control System

SECURITY AND LOCKS

Step	Check	Yes	No
7 CHECK OUTPUT SIGNAL OF BODY INTEGRATED UNIT. Measure the voltage between body integrated unit and chassis ground when operating the rear gate opener button. <i>Connector & terminal</i> <i>(i84) No. 22 (+) — Chassis ground (-):</i>	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step 8 .	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>
8 CHECK DOOR LOCK ACTUATOR. Check the door lock actuator. <ul style="list-style-type: none"> • Front door lock actuator: <Ref. to SL-30, INSPECTION, Front Door Latch and Door Lock Actuator Assembly.> • Rear door lock actuator: <Ref. to SL-33, INSPECTION, Rear Door Latch and Door Lock Actuator Assembly.> 	Is the door lock actuator OK?	Go to step 9 .	Replace the door latch and door lock actuator assembly.
9 CHECK REAR GATE LOCK ACTUATOR. Check the rear gate lock actuator. <Ref. to SL-35, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the rear gate latch and actuator assembly.

3. Keyless Entry System

A: WIRING DIAGRAM

1. KEYLESS ENTRY

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-181, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

1. KEYLESS ENTRY CONTROL MODULE

- Model without tire pressure monitoring system

Terminal No.	Item	Measuring condition	Standard
3 (U-ART com.)	—	Cannot be measured	—
4 (+B) ↔ chassis ground	Voltage	Always	10 — 14 V
7 (GND) ↔ chassis ground	Resistance	Always	Less than 1 Ω

Keyless Entry System

SECURITY AND LOCKS

- Model with tire pressure monitoring system

Terminal No.	Item	Measuring condition	Standard
2 ← → Chassis ground	Voltage	Tire pressure warning light: Not illuminated → Illuminated	0 V → 10 — 14 V
3 ← → Chassis ground	Waveform	Speedometer	Pulse generation
4 (IG) ↔ chassis ground	Resistance	IG OFF → ON	0 V → 10 — 14 V
5 (GND) ↔ chassis ground	Resistance	Always	Less than 1 Ω
6(+B) ↔ chassis ground	Voltage	Always	10 — 14 V
11 (U-ART com.)	—	Cannot be measured	—
12 (SSM communication)	—	Cannot be measured	—

2. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “LAN SYSTEM (DIAGNOSTICS)” section. <Ref. to LAN(diag)-10, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
None of the functions of the keyless entry system operate.	1. Check the keyless transmitter battery.	<Ref. to SL-17, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTIONS, INSPECTION, Keyless Entry System.>
	2. Remove the following fuses and inspect visually. <ul style="list-style-type: none"> • No. 31 (in fuse & relay box) • No. 7 (in fuse & relay box) 	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-9, CHECK POWER SUPPLY & GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the keyless entry control module.	<Ref. to SL-18, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-18, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>
	5. Check the key warning switch.	<Ref. to SL-20, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	6. Check the door switch.	<Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	7. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
The keyless transmitter cannot be registered.	1. Check the keyless transmitter battery.	<Ref. to SL-17, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTIONS, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-20, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the door lock switch signal.	<Ref. to SL-23, CHECK DOOR LOCK SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Keyless Entry System

SECURITY AND LOCKS

Symptoms	Repair order	Reference
Door lock or unlock does not operate. NOTE: If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-8, INSPECTION, Door Lock Control System.>	1. Check the keyless transmitter battery.	<Ref. to SL-17, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTIONS, INSPECTION, Keyless Entry System.>
	2. Check the keyless entry control module.	<Ref. to SL-18, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	3. Check the key warning switch.	<Ref. to SL-20, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the door switch.	<Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Buzzer and hazard light do not operate.	1. Check the buzzer operation.	<Ref. to SL-22, CHECK KEYLESS BUZZER, INSPECTION, Keyless Entry System.>
	2. Check the hazard light operation.	<Ref. to SL-22, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	3. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-21, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-23, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTIONS

CAUTION:

Be sure to reset keyless transmitter of other vehicles registered to the inspection target vehicle, and vehicles to which keyless transmitters were registered for inspection, to the condition before performing the inspection. (Re-register the keyless transmitters.)

Step	Check	Yes	No
<p>1</p> <p>CHECK KEYLESS TRANSMITTER BATTERY. 1) Remove the battery from the keyless transmitter. <Ref. to SL-45, REMOVAL, Transmitter.> 2) Check the battery voltage. <Ref. to SL-45, INSPECTION, Transmitter.></p>	Is the voltage 2.5 V or more?	Go to step 2.	Replace the keyless transmitter battery. <Ref. to SL-45, Transmitter.>
<p>2</p> <p>CHECK KEYLESS TRANSMITTER. Register the keyless transmitter which operates normally on other vehicles to the inspection target vehicle. <Ref. to SL-45, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.> 1) Close all the doors and rear gate of inspection target vehicle. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle.</p>	Can the check vehicle be locked and unlocked properly?	Go to step 3.	Due to vehicle malfunction, continue the keyless entry system diagnosis.
<p>3</p> <p>CHECK KEYLESS TRANSMITTER. Register the keyless transmitter of inspection target vehicle to the another vehicle on which the keyless system operates normally. <Ref. to SL-45, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.></p>	Is the keyless transmitter registered correctly?	Go to step 4.	Replace the keyless transmitter. <Ref. to SL-45, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>
<p>4</p> <p>CHECK KEYLESS TRANSMITTER. Check the registered keyless transmitter. 1) Close all the doors and rear gate of the vehicle which keyless system operates normally. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle.</p>	Does the vehicle operate lock and unlock normally?	The keyless transmitter is working properly.	Replace the keyless transmitter. <Ref. to SL-45, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>

Keyless Entry System

SECURITY AND LOCKS

3. CHECK KEYLESS ENTRY CONTROL MODULE

	Step	Check	Yes	No
1	CHECK DIAGNOSTIC TROUBLE CODE (DTC). 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC B1500 "Keyless UART com. Malfunction" displayed?	Go to step 2.	Keyless entry control module is normal.
2	CHECK POWER SUPPLY. 1) Disconnect the keyless entry control module harness connector. 2) Measure the voltage between keyless entry control module and chassis ground. Connector & terminal Model without tire pressure monitoring system: <i>(R80) No. 4 (+) — Chassis ground (-):</i> Model with tire pressure monitoring system: <i>(R221) No. 6 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open circuits and shorts between the keyless entry control module and fuse.
3	CHECK GROUND CIRCUIT. Measure the resistance between keyless entry control module and chassis ground. Connector & terminal Model without tire pressure monitoring system <i>(R80) No. 7 — Chassis ground:</i> Model with tire pressure monitoring system <i>(R221) No. 5 — Chassis ground:</i>	Is the resistance less than 10 Ω ?	Go to step 4.	Repair or replace the harness.
4	CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT. 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between body integrated unit and keyless entry control module. Connector & terminal Model without tire pressure monitoring system <i>(i84) No. 24 — (R80) No. 3:</i> Model with tire pressure monitoring system <i>(i84) No. 24 — (R221) No. 11:</i>	Is the resistance less than 10 Ω ?	Replace the keyless entry control module. <Ref. to SL-42, Keyless Entry Control Module.>	Repair or replace the harness.

4. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Refer to the "INSPECTION of POWER SUPPLY AND GROUND CIRCUIT" of "Door Lock Control System" for detailed procedures. <Ref. to SL-9, CHECK POWER SUPPLY & GROUND CIRCUIT, INSPECTION, Door Lock Control System.>

5. CHECK DOOR SWITCH

Step	Check	Yes	No
<p>1 CHECK INPUT CIRCUIT. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”. 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select {Current Data Display & Save}. 5) Select {Driver’s door SW input}, {P-door SW input}, {Rear right door SW input}, {Rear left door SW input}, and {R Gate SW input}.</p>	<p>Does the display switch between OFF ←→ ON when each door or rear gate is opened?</p>	<p>The door and rear gate latch switch circuits are normal.</p>	<p>Go to step 2.</p>
<p>2 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the door switch harness connector that the display does not change. 4) Check the harness between body integrated unit and defective door switch. Connector & terminal <i>Front door LH</i> (i84) No. 19 — (R9) No. 1: <i>Front door RH</i> (i84) No. 32 — (R12) No. 1: <i>Rear door LH</i> (i84) No. 20 — (R22) No. 1: <i>Rear door RH</i> (i84) No. 6 — (R16) No. 1: <i>Rear gate</i> (i84) No. 33 — (D46) No. 3:</p>	<p>Is harness normal?</p>	<p>Go to step 3.</p>	<p>Repair or replace the harness.</p>
<p>3 CHECK HARNESS CIRCUIT. Measure the resistance between defective door switch harness connector terminal and chassis ground. Connector & terminal <i>Front door LH</i> (R9) No. 3 — Chassis ground: <i>Front door RH</i> (R12) No. 3 — Chassis ground: <i>Rear door LH</i> (R22) No. 3 — Chassis ground: <i>Rear door RH</i> (R16) No. 3 — Chassis ground: <i>Rear gate</i> (D46) No. 4 — Chassis ground:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 4.</p>	<p>Repair or replace the harness.</p>
<p>4 CHECK DOOR SWITCH. Measure the resistance between faulty door switch or rear gate latch switch terminals. Connector & terminal <i>Front LH door switch</i> (R9) No. 1 — No. 3: <i>Front RH door switch</i> (R12) No. 1 — No. 3: <i>Rear LH door switch</i> (R22) No. 1 — No. 3: <i>Rear RH door switch</i> (R16) No. 1 — No. 3: <i>Rear gate latch switch</i> (D46) No. 3 — No. 4:</p>	<p>Is the resistance 1 MΩ or more when the door switch is pushed or the rear gate is closed?</p>	<p>Go to step 5.</p>	<p>Replace the faulty parts.</p> <ul style="list-style-type: none"> • Door switch • Rear gate latch and actuator ASSY

Keyless Entry System

SECURITY AND LOCKS

Step	Check	Yes	No
5 CHECK DOOR SWITCH. Measure the resistance between faulty door switch or rear gate latch switch terminals. Connector & terminal Front LH door switch <i>(R9) No. 1 — No. 3:</i> Front RH door switch <i>(R12) No. 1 — No. 3:</i> Rear LH door switch <i>(R22) No. 1 — No. 3:</i> Rear RH door switch <i>(R16) No. 1 — No. 3:</i> Rear gate latch switch <i>(D46) No. 3 — No. 4:</i>	Is the resistance less than 10 Ω when door switch is released or the rear gate is opened?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Replace the door switch, or rear gate latch and actuator assembly.

6. CHECK KEY WARNING SWITCH

Step	Check	Yes	No
1 CHECK KEY WARNING SWITCH. 1) Prepare the Subaru Select Monitor kit. 2) On «System Selection Menu» display, select {Integ. unit mode}. 3) Select {Current Data Display & Save}. 4) Select the {key-lock warning SW}.	Is the normal input signal displayed when the key is inserted in/removed from the ignition switch?	The key warning switch is OK.	Go to step 2.
2 CHECK FUSE. Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 3.
3 CHECK KEY WARNING SWITCH CIRCUIT. 1) Disconnect the harness connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between body integrated unit and chassis ground. Connector & terminal <i>(B279) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 9 V or more?	Go to step 4.	Go to step 5.
4 CHECK KEY WARNING SWITCH CIRCUIT. 1) Remove the key from ignition switch. 2) Measure the voltage between body integrated unit and chassis ground. Connector & terminal <i>(B279) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 1.5 V?	The key warning switch is OK.	Go to step 5.
5 CHECK KEY WARNING SWITCH. 1) Disconnect the key warning switch connector. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. Connector & terminal <i>(B350) No. 3 — No. 4:</i>	Is the resistance less than 1 Ω ?	Go to step 6.	Replace the key warning switch.

Keyless Entry System

SECURITY AND LOCKS

Step	Check	Yes	No
6 CHECK KEY WARNING SWITCH. 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. Connector & terminal (B350) No. 3 — No. 4:	Is the resistance 1 M Ω or more?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse • Harness for open or short between the body integrated unit and key warning switch	Replace the key warning switch.

7. CHECK ROOM LIGHT OPERATION

Step	Check	Yes	No
1 CHECK ROOM LIGHT OPERATION. Make sure the room light illuminates when the room light switch is ON, and goes off when the switch is OFF.	Does the room light illuminate or go off?	Go to step 2.	Check the room light circuit. <Ref. to LI-37, INSPECTION, Room Light.>
2 CHECK ROOM LIGHT OPERATION. 1) Turn the room light switch to the "DOOR" position. 2) Open and close any door.	Does the room light illuminate \leftrightarrow go off (including off delay) when the door is opened and closed?	Go to step 3.	Go to step 4.
3 CHECK KEYLESS ENTRY OPERATION. Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Room light is normal.	Check keyless entry system. <Ref. to SL-15, SYMPTOM CHART, INSPECTION, Keyless Entry System.>
4 CHECK ROOM LIGHT. 1) Disconnect the harness connector of the room light. 2) Check the room light. <Ref. to LI-37, INSPECTION, Room Light.>	Is room light normal?	Go to step 5.	Replace the bulb or room light assembly.
5 CHECK HARNESS. 1) Disconnect the harness connector of body integrated unit. 2) Check the harness between body integrated unit and room light. Connector & terminal (B279) No. 5 — (R52) No. 2:	Is harness normal?	Go to step 6.	Repair or replace the harness.
6 CHECK HARNESS. Measure the voltage between room light and chassis ground. Connector & terminal Model without sunroof (R52) No. 1 (+) — Chassis ground (-): Model with sunroof (R52) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Repair or replace the harness.

Keyless Entry System

SECURITY AND LOCKS

8. CHECK HAZARD LIGHT OPERATION

Step	Check	Yes	No
1 CHECK HAZARD LIGHT OPERATION. Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step 2.	Check the hazard light circuit.
2 CHECK OUTPUT TO HAZARD LIGHT. 1) Turn the ignition switch to OFF. 2) Disconnect the key warning switch harness connector. 3) Prepare the Subaru Select Monitor kit. 4) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 5) On «System Selection Menu» display, select {Integ. unit mode}. 6) Select {Integ. Unit customizing}. 7) Check {Emergency light setup}, and then switch to ON setting if necessary. 8) Select the {Current Data Display & Save}. 9) Remove the key from ignition switch. 10) Select the {Hazard Output}.	Is output signal present when operating the transmitter LOCK/UNLOCK button?	The hazard light operation circuit is OK.	Go to step 3.
3 CHECK HARNESS BETWEEN HAZARD LIGHT AND BODY INTEGRATED UNIT. 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the turn signal and hazard unit harness connector. 3) Measure the resistance between body integrated unit and turn signal & hazard unit. Connector & terminal (B281) No. 22 — (B32) No. 8:	Is the resistance less than 10 Ω?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

9. CHECK KEYLESS BUZZER

Step	Check	Yes	No
1 CHECK FUNCTION. Using the Subaru Select Monitor, check {Buzzer beeping setup}. <Ref. to LAN(diag)-20, OPERATION, Read Current Data.>	Is it ON?	Go to step 2.	Change the setting to ON. <Ref. to LAN(diag)-25, OPERATION, User Customizing.>
2 CHECK OUTPUT TO KEYLESS BUZZER. 1) Remove the key from ignition switch. 2) Display the {Keyless Buzzer Output} of the body integrated unit using the Subaru Select Monitor. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).> 3) Press the LOCK/UNLOCK button of the keyless transmitter. NOTE: Due to the screen refresh timing of the Subaru Select Monitor, repeat the operation a few times to confirm, as there may be no change of OFF → ON at first.	Does display change from OFF → ON?	Go to step 3.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>
3 CHECK KEYLESS BUZZER. 1) Remove the keyless buzzer. 2) Install the keyless buzzer to another vehicle which operates keyless buzzer normally, check the buzzer sounds.	Does the keyless buzzer sound?	Go to step 4.	Replace the keyless buzzer.

Step	Check	Yes	No
4 CHECK HARNESS. 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the keyless buzzer harness connector. 3) Measure the resistance between body integrated unit and keyless buzzer. Connector & terminal (B279) No. 24 — (B164) No. 1:	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the harness.
5 CHECK HARNESS. Measure the resistance between keyless buzzer and chassis ground. Connector & terminal (B164) No. 2 — Chassis ground:	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Repair or replace the harness.

10.CHECK DOOR LOCK SWITCH

For diagnostic procedures, refer to the “INSPECTION OF DOOR LOCK SWITCH” of the “Door Lock Control System”. <Ref. to SL-9, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

11.CHECK IGNITION SWITCH ILLUMINATION

Step	Check	Yes	No
1 CHECK IGNITION CIRCUIT. Check the ignition circuit.	Is the circuit normal?	Go to step 2.	Repair or replace.
2 CHECK DOOR SWITCH CIRCUIT. Inspect door switch circuit.	Is the circuit normal?	Go to step 3.	Repair or replace.
3 CHECK FUSE. Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 4.
4 CHECK HARNESS. 1) Disconnect the ignition switch illumination harness connector. 2) Measure the voltage between ignition switch illumination and chassis ground. Connector & terminal (B224) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 5.	Check the harness for open or short circuits between the ignition switch illumination and fuse.
5 CHECK IGNITION SWITCH ILLUMINATION CIRCUIT. 1) Disconnect the harness connector of body integrated unit and ignition switch illumination harness connector. 2) Check the harness between body integrated unit connector terminal and ignition switch illumination connector terminal. Connector & terminal (B281) No. 23 — (B224) No. 1:	Is harness normal?	Go to step 6.	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.
6 CHECK IGNITION SWITCH ILLUMINATION BULB. Apply battery voltage to the bulb.	Does the bulb illuminate?	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>	Replace the ignition switch illumination bulb. <Ref. to LI-40, REMOVAL, Ignition Switch Illumination.>

Security System

SECURITY AND LOCKS

4. Security System

A: WIRING DIAGRAM

Refer to "Security System" in the wiring diagram. <Ref. to WI-177, WIRING DIAGRAM, Security System.>

B: ELECTRICAL SPECIFICATION

1. BODY INTEGRATED UNIT

Refer to "Control Module I/O Signal" of "LAN SYSTEM (DIAGNOSTICS)" section. <Ref. to LAN(diag)-10, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. BASIC DIAGNOSTIC PROCEDURE

Step	Check	Yes	No
1 INITIAL CHECK. Check keyless entry system.	Does the keyless entry system operate normally?	Go to step 2.	Check keyless entry system. <Ref. to SL-15, INSPECTION, Keyless Entry System.>
2 CHECK SECURITY ON/OFF SETTING. 1) Press the LOCK button of the keyless transmitter. 2) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? / When monitoring lag is set to 0 seconds: flashes twice within 0.5 seconds, in 2 second intervals / When monitoring lag is set to 30 seconds: flashes 3 times within 1 second, in 0.4 second intervals.	Go to step 5.	Go to step 3.
3 CHANGE SETTING OF SECURITY SYSTEM. Change the setting of security system to ON. <Ref. to SL-26, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Go to step 4.	<ul style="list-style-type: none"> • Check the ignition switch circuit. <Ref. to SL-27, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.> • Check the door lock switch circuit. <Ref. to SL-23, CHECK DOOR LOCK SWITCH, INSPECTION, Keyless Entry System.>
4 CHECK SETTING CHANGE OF SECURITY SYSTEM. 1) Remove the key from ignition switch, and then close all doors. 2) Press the LOCK button of the keyless transmitter. 3) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? / When monitoring lag is set to 0 seconds: flashes twice within 0.5 seconds, in 2 second intervals / When monitoring lag is set to 30 seconds: flashes 3 times within 1 second, in 0.4 second intervals.	Go to step 5.	Check the security indicator light circuit. <Ref. to SL-26, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>
5 CHECK SECURITY SYSTEM OPERATION. Press the LOCK button of keyless transmitter, and wait for 30 seconds.	Does the security indicator light blink twice within 0.5 seconds in 2 second intervals?	Go to step 6.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>

Security System

SECURITY AND LOCKS

Step	Check	Yes	No
6 CHECK SECURITY ALARM OPERATION. 1) Unlock all doors using the door lock switch on driver's door. 2) Open any door or rear gate.	Does the security alarm operate when opening any door or rear gate?	Go to step 7.	Check the door switch or rear gate latch switch. <Ref. to SL-26, CHECK DOOR SWITCH, INSPECTION, Security System.>
7 CHECK SECURITY ALARM OPERATION. Check the security alarm operation.	Do all security alarms operate? / Horn sound / Hazard lights flash / Security indicator light illuminates	Go to step 8.	<ul style="list-style-type: none"> • Check the horn. <Ref. to SL-27, CHECK HORN, INSPECTION, Security System.> • Check the hazard light. <Ref. to SL-27, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.>
8 CHECK SECURITY ALARM CANCEL OPERATION. Press any button of transmitter while the security alarm is operating. Or turn the ignition switch to ON.	Do all security alarms stop? / Horn / Hazard lights	Go to step 9.	Check the ignition switch circuit. <Ref. to SL-27, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.>
9 CHECK SECURITY SYSTEM CONDITION MEMORY. Check that the system functions properly even when the battery is not connected temporarily. <Ref. to SL-26, CHECK SECURITY SYSTEM CONDITION MEMORY, INSPECTION, Security System.>	Does the system function properly when the battery is not connected temporarily?	Go to step 10.	Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.>
10 CHECK IMPACT SENSOR (DEALER OPERATION). Check the sensibility of impact sensor. <Ref. to SL-41, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.>	Is the sensibility set properly?	Press the UNLOCK button of keyless transmitter, and finish the diagnosis.	Adjust the sensitivity. <Ref. to SL-41, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.>

NOTE:

If the horn sounds when the security is turned on (monitor condition) using the keyless transmitter, check the function setting of the body integrated unit. As a cause, it is possible that the impact sensor present (ON) / not present (OFF) setting is set to ON in the customization function though there is no impact sensor. <Ref. to LAN(diag)-25, User Customizing.>

Security System

SECURITY AND LOCKS

2. CHECK SECURITY SYSTEM CONDITION MEMORY

- 1) Pull out the key from the ignition switch, or turn the ignition to OFF.
- 2) Close all the doors and the rear gate.
- 3) Open the front hood.
- 4) Press the LOCK button of the keyless transmitter.

NOTE:

Wait until the security indicator light blinks twice within 0.5 seconds at 2 second intervals.

If the 30 second monitoring lag has been set, wait 30 seconds.

5) Disconnect the ground cable from the battery.

6) Connect the ground cable to the battery.

7) Check that the security indicator light blinks twice within 0.5 seconds at 2 second intervals. When it does not blink, replace the body integrated unit.

3. SECURITY SYSTEM ON/OFF SETTING

1) Close all doors and rear gate, and sit in the driver's seat. Press the UNLOCK button of the keyless transmitter.

2) Turn the ignition switch to ON.

3) Push the centralized door lock switch down and open the driver's side door at the same time, and hold in this condition for 10 seconds. (Keep the central door unlock switch pressed down.)

4) If the security system is ON, it will turn OFF. If OFF, it will turn ON.

Setting	Horn activation	Meter display
ON → OFF	Twice	[AL_OF]
OFF → ON	Once	[AL_ON]

4. CHECK DOOR SWITCH

For operation procedure, refer to "CHECK DOOR SWITCH" of "Keyless Entry System". <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>

5. CHECK SECURITY INDICATOR LIGHT CIRCUIT

For operation procedures, refer to "CHECK SECURITY INDICATOR LIGHT CIRCUIT" of "IMMOBILIZER (DIAGNOSTICS)" section. <Ref. to IM(diag)-11, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>

6. CHECK HORN

Step	Check	Yes	No
1 CHECK HORN OPERATION. Check the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step 2.	Check the horn circuit.
2 CHECK OUTPUT TO HORN RELAY. 1) Connect the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select {Function check}. 5) Select {Horn Output} and execute.	Does the horn sound?	Horn circuit is OK.	Go to step 3.
3 CHECK HORN RELAY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the harness connector of main fuse box. 4) Measure the resistance between harness connector terminals. Connector & terminal (B279) No. 29 — (B186) No. 1:	Is the resistance less than 10 Ω?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

7. CHECK HAZARD LIGHT OPERATION

For operation procedure, refer to "CHECK HAZARD LIGHT OPERATION" of "Keyless Entry System". <Ref. to SL-22, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>

8. CHECK IGNITION SWITCH CIRCUIT

Step	Check	Yes	No
1 CHECK IGNITION SWITCH VOLTAGE. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Current Data Display & Save}. 5) Check the {BATT voltage} and {IG power supply}.	Is the {IG power supply voltage} within ±1 V against {BATT voltage}?	The ignition switch input circuit is OK.	Go to step 2.
2 CHECK IGNITION SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between body integrated unit and chassis ground. Connector & terminal (B280) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open or short circuit between body integrated unit and fuse.

5. Front Inner Remote

A: REMOVAL

- 1) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 2) Remove the cable from the cable holder.
- 3) Remove the screws, and remove the inner remote handle.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- Check if the front remote handle operates normally.
- If the lever is faulty, replace the front inner remote handle.
 - If the cable is deformed, replace the front door latch & door lock actuator assembly.

6. Front Outer Handle

A: REMOVAL

- 1) Raise the front door glass to the top position.
- 2) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-18, REMOVAL, Front Sealing Cover.>
- 4) Remove the rod clamp.
- 5) Remove the plug at the rear of the door panel, and loosen the TORX® bolt (1).

- 6) Remove the door outer handle cover.
- 7) Move the front outer handle towards the rear, and remove the front outer handle.

CAUTION:

Do not apply excessive force to remove the handle from the door panel. The door panel may become deformed.

- 8) Remove the outer side spacer.
- 9) Loosen TORX® bolt (2).
- 10) Remove the frame assembly from inside the door panel.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

C: INSPECTION

Check if the front outer handle operates normally.

- If the lever is faulty, replace the front outer handle.
- If the rod is deformed, replace the front door latch & door lock actuator assembly.

Front Door Latch and Door Lock Actuator Assembly

SECURITY AND LOCKS

7. Front Door Latch and Door Lock Actuator Assembly

A: REMOVAL

- 1) Raise the front door glass to the top position.
- 2) Disconnect the ground cable from battery.
- 3) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 4) Remove the sealing cover. <Ref. to EB-18, REMOVAL, Front Sealing Cover.>
- 5) Remove the glass run rubber (A) partially.

- 6) Remove the bolts, and then remove the door sash.
- 7) Remove the rod from the outer handle rod clamp.
- 8) Disconnect the harness connector of front door latch and door lock actuator assembly.
- 9) Remove the screws, and remove the front door latch & door lock actuator assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

C: INSPECTION

1. DOOR LATCH

Check if the front door latch operates normally.

- If the cable or rod is faulty, replace the front door latch & door lock actuator assembly.

2. LOCK ACTUATOR

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to door lock actuator terminals.

Actuator operation	Terminals	
	No. 1	No. 2
Lock → Unlock	-	+
Unlock → Lock	+	-

- 3) Replace the front door latch & door lock actuator assembly if it is found defective.

8. Rear Inner Remote

A: REMOVAL

Refer to “Front Inner Remote” for the removal procedure. <Ref. to SL-28, REMOVAL, Front Inner Remote.>

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

Check if the rear remote handle operates normally.

- If the lever is faulty, replace the rear inner remote handle.
- If the cable is deformed, replace the rear door latch & door lock actuator assembly.

Rear Outer Handle

SECURITY AND LOCKS

9. Rear Outer Handle

A: REMOVAL

- 1) Raise the rear door glass to the top position.
- 2) Remove the rear door trim. <Ref. to EI-44, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-21, REMOVAL, Rear Sealing Cover.>
- 4) Disconnect the harness connector of rear door latch and door lock actuator assembly.
- 5) Remove the screws, and move aside the rear door latch and door lock actuator assembly.

- 6) Remove the child protector cover, and loosen the TORX® bolt.

- 7) Detach the outer handle cover.
- 8) Move the rear outer handle towards the rear, and remove the rear outer handle.
- 9) Remove the outer side spacer.
- 10) Remove the TORX® bolt.

- 11) Remove the frame assembly from inside the door panel.

CAUTION:

Do not apply excessive force to remove the handle from the door panel. The door panel may become deformed.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

C: INSPECTION

Check if the rear outer handle operates normally.

- If the lever is faulty, replace the rear outer handle.
- If the rod is deformed, replace the rear door latch & door lock actuator assembly.

10. Rear Door Latch and Door Lock Actuator Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-44, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the wire from the rear inner remote. <Ref. to SL-31, REMOVAL, Rear Inner Remote.>
- 4) Remove the sealing cover. <Ref. to EB-21, REMOVAL, Rear Sealing Cover.>
- 5) Remove the rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 6) Disconnect the harness connector of rear door latch and door lock actuator assembly.
- 7) Remove the screws, and remove the rear door latch & door lock actuator assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

C: INSPECTION

1. DOOR LATCH

Check if the rear door latch operates normally.

- If the cable or rod is faulty, replace the rear door latch & door lock actuator assembly.

2. LOCK ACTUATOR

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to door lock actuator terminals.

Actuator operation	Terminals	
	No. 1	No. 2
Lock → Unlock	-	+
Unlock → Lock	+	-

- 3) Replace the rear door latch & door lock actuator assembly if it is found defective.

Rear Gate Opener Button

SECURITY AND LOCKS

11. Rear Gate Opener Button

A: REMOVAL

NOTE:

The rear gate opener button is integrated into the license plate light assembly harness.

- 1) Remove the rear gate trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 2) Remove the rear gate garnish. <Ref. to EI-69, REMOVAL, Rear Gate Garnish.>
- 3) Remove the screws, and then remove the rear gate garnish lower cover.

- 4) Hold down the rear gate opener button hook, and remove the rear gate opener button.

- 5) Remove the license plate light. <Ref. to LI-34, REMOVAL, License Plate Light.>
- 6) Remove the license plate light assembly harness.

B: INSTALLATION

CAUTION:

- Install with the band tightened point of switch harness facing towards the vehicle.
- Make sure that the harness grommet is securely installed.

If not properly installed, this may cause leaks.

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Disconnect the rear gate opener button harness connector.
- 2) Check the resistance between rear gate opener button connector terminals.

Switch	Terminal No.	Standard
Open	5 and 6	Less than 1 Ω

- 3) Replace the rear gate opener button if the inspection result is not within the standard value.

12. Rear Gate Latch and Actuator Assembly

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 3) Disconnect the harness connector of rear gate latch and actuator assembly.
- 4) Remove the bolts, and remove the rear gate latch & actuator assembly.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SL-3, REAR GATE LOCK, COMPONENT, General Description.>

C: INSPECTION

1. REAR GATE LATCH

Check if the rear gate latch operates normally.

- If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the rear gate latch & actuator assembly.

2. CHECK LOCK ACTUATOR

- 1) Disconnect the harness connector of rear gate latch and actuator assembly.
- 2) Connect the battery to the rear gate latch and actuator assembly terminals.

Actuator operation	Terminals	
	No. 1	No. 2
Lock → Unlock	+	-

- 3) Replace the rear gate latch and actuator assembly if it is found defective.

Front Hood Lock Assembly

SECURITY AND LOCKS

13. Front Hood Lock Assembly

A: REMOVAL

- 1) Open the front hood.
- 2) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Remove the bolts, and then detach the front hood lock assembly.
- 4) Remove the release cable from the lock assembly.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SL-4, FRONT HOOD LOCK AND REMOTE OPENERS, COMPONENT, General Description.>

NOTE:

Apply grease to the movable part.

- 2) Adjust the fog light beam. <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: ADJUSTMENT

- 1) Loosen the bolt, and adjust the lock assembly while moving it up and down.

- 2) After adjustment, tighten the bolts securely.

D: INSPECTION

Check if the front hood lock assembly operates normally.

- If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the front hood lock assembly.

14. Remote Openers

A: REMOVAL

1. FRONT HOOD OPENER

- 1) Remove the cable from the front hood lock.
- 2) Remove the bolt, and then detach the opener lever.

2. FUEL FILLER LID OPENER

- 1) Remove the rear seat. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 2) Remove the lower inner trim, rear quarter trim and floor mat on the driver's side. Remove the clip holding the cable.
- 3) Remove the bolt, and then remove the opener pull handle (B).
- 4) Remove cable (A) from the opener pull handle (B).

- 5) Rotate the fuel lock inside the quarter panel to 90° and remove. (Either right or left turn)

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-4, FRONT HOOD LOCK AND REMOTE OPENERS, COMPONENT, General Description.>

C: INSPECTION

Check if the front hood and fuel flap operate normally.

Ignition Key Lock

SECURITY AND LOCKS

15. Ignition Key Lock

A: REPLACEMENT

- 1) Disconnect the ground cable from battery.
- 2) Remove the steering column. <Ref. to PS-16, REMOVAL, Steering Column.>
- 3) Secure the steering column in a vise. Remove the bolt with a drill.

- 4) Remove the ignition key lock.
- 5) Use new bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).

B: INSPECTION

- 1) Remove the instrument panel lower cover.
- 2) Remove the lower column cover.
- 3) Unfasten the fixing clip which secures harness, and then disconnect the harness connector of the ignition switch from body harness.
- 4) Turn the ignition key plate to each position and check the resistance between ignition connector terminals.

Switch position	Terminal No.	Standard
LOCK	—	—
ACC	3 and 5	Less than 1 Ω
ON	3 and 1 and 4 3 and 5	Less than 1 Ω
ST	3 and 2 3 and 1 and 6	Less than 1 Ω

- 5) Replace the ignition switch if the inspection result is not within the standard value.

16. Key Lock Cylinders

A: REPLACEMENT

1. FRONT DOOR

- 1) Raise the front door glass to the top position.
- 2) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-18, REMOVAL, Front Sealing Cover.>
- 4) Remove the rod clamp.
- 5) Remove the plug to the rear of the door panel.
- 6) Loosen TORX® bolt (1).

- 7) Remove the key cylinder along with the handle cover.
- 8) Remove the key cylinder from the cover, and replace the key cylinder.

- (1) Latch connection rod
- (2) Key cylinder
- (3) Door outer handle cover

2. GLOVE BOX LID

- 1) Remove the glove box damper.

- 2) Remove the stoppers and pull the glove box lid assembly forward to remove.

- 3) Pull up the lock knob with the key cylinder in UNLOCK.

- 4) Insert the key while holding the condition of step 3), and pull out the key in LOCK status.

- 5) Remove the key cylinder from lock knob while pushing in the metal plate, and replace the key cylinder.

17. Security Control Module

A: NOTE

The control of security system is carried out in body integrated unit. For operation procedures, refer to "Body Integrated Unit".

- Removal: <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
- Installation: <Ref. to SL-44, INSTALLATION, Body Integrated Unit.>

18. Impact Sensor

A: REMOVAL

- 1) Remove the key from ignition switch.
- 2) Close all the doors and the rear gate.
- 3) Press the UNLOCK button of the keyless transmitter.
- 4) Disconnect the ground cable from the battery.
- 5) Remove the impact sensor.
- 6) Change the setting of impact sensor using Subaru Select Monitor.

B: INSTALLATION

- 1) Remove the key from ignition switch.
- 2) Close all the doors and the rear gate.
- 3) Press the UNLOCK button of the keyless transmitter.
- 4) Disconnect the ground cable from the battery.
- 5) Install the impact sensor.
- 6) Change the setting of impact sensor using Subaru Select Monitor.

C: OPERATION

1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

- 1) Connect the Subaru Select Monitor to data link connector.
- 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor".
- 3) On «System Selection Menu» display, select {Integ. unit mode}.
- 4) Select {ECM customizing}.
- 5) Make a impact monitor setting.
 - When installing: ON
 - When removing: OFF
- 6) Make a impact monitor ON/OFF setting.
 - When installing: ON
 - When removing: OFF
- 7) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

D: ADJUSTMENT

1. CHECK IMPACT SENSOR

- 1) Remove the key from ignition switch.
- 2) Close all the windows.
- 3) Close all the doors and the rear gate. Leave open the front hood.
- 4) Press the LOCK button of the keyless transmitter from outside of vehicle.
- 5) Check that the security indicator light blinks twice within 0.5 second in 2 seconds cycles after 30 seconds.

- 6) Hit all windows with the palm with force repeatedly, to check for whether the security alarm operates. Lift up the front hood approx. 12 cm (4.7 in) or more, and then drop it off to check the operation of security alarm.

- 7) If NG, adjust the impact sensitivity.

2. IMPACT SENSITIVITY ADJUSTMENT

- 1) Connect the Subaru Select Monitor to data link connector.
- 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor".
- 3) On the «System Selection Menu», select the {Impact Sensor}.
- 4) Make a {Sensitivity Adjustment Mode}.
 - Sensitivity can be adjusted in 11 levels (0 to 10).
 - Initial setting is 5.
 - Smaller number means more sensitive.
 - Larger number means less sensitive.
- 5) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

NOTE:

- Set the sensor so that it is not triggered by normal vibrations (someone reclining on the door, hit by a ball, etc.).
- Set the sensor to operate the alarm when the windshield glass or door is hit hard repeatedly, etc, where it can be assumed that there is an attempt to damage the car by a burglar, etc.
- Even if there is no burglary attempt, if there is vibration (road construction, elevated parking lots, passage of trains or boarding of ferries), the alarm can be triggered. Because of this, ask the customer about their parking conditions, and set an appropriate sensitivity level after discussion.
- The impact sensitivity can also be adjusted on the manufacturer's optional display, and it can be set in 11 levels from 0 to 10. The sensitivity is set to 5 by default. (Unlike the specification of the Subaru Select Monitor, the setting becomes duller as the setting value becomes smaller, and more sensitive as the number becomes larger.)
- If the sensitivity setting was not performed properly, a buzzer will sound four times. In this case, check the following:
 - Is there an error in CAN communication?
 - Is there an open circuit in the harness between the body integrated unit and the impact sensor?
 - Is there a malfunction in the display, body integrated unit or impact sensor?

19. Keyless Entry Control Module

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the left rear quarter trim. <Ref. to EI-60, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect the keyless entry control module harness connector.
- 4) Remove the bolt and then remove the keyless entry control module.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

13 N·m (1.33 kgf-m, 9.6 ft-lb)

20. Keyless Buzzer

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Remove the bolt, and then remove the keyless buzzer.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

- 2) Adjust the fog light beam. <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

Using the Subaru Select Monitor, perform forced operation of the keyless buzzer. <Ref. to LAN(di-ag)-30, Function Check.>

NOTE:

If it does not sound, replace the buzzer.

21. Body Integrated Unit

A: NOTE

1. WHEN REPLACING THE BODY INTEGRATED UNIT

- 1) Check and record the current setting. <Ref. to LAN(diag)-27, CONFIRMATION OF CURRENT SETTING, OPERATION, Registration Body Integrated Unit.>
- 2) Prepare the following.
 - Security ID plate
 - Required number of registered immobilizer keys or new immobilizer keys.

2. AFTER REPLACING THE BODY INTEGRATED UNIT

- 1) Register the immobilizer. For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- 2) Set the current settings as recorded.

B: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the driver's side instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the bolts, and remove the knee guard panel.
- 4) Disconnect the harness connector of body integrated unit.

CAUTION:

Be careful to keep water and other foreign materials away from body integrated unit.

- 5) Remove the mounting bolt for the body integrated unit bracket, and remove the body integrated unit.

C: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

NOTE:

Make sure that there are no differences from the contents of the current settings after installation. <Ref. to LAN(diag)-27, CONFIRMATION OF CURRENT SETTING, OPERATION, Registration Body Integrated Unit.>

22. Transmitter

A: REMOVAL

1. TRANSMITTER BATTERY

CAUTION:

To prevent static electricity damage to the transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the transmitter.

Remove the battery (1) from the transmitter.

B: INSTALLATION

1. TRANSMITTER BATTERY

Install each part in the reverse order of removal.

C: INSPECTION

1. TRANSMITTER BATTERY

1) Check the voltage between the transmitter battery (+) terminal and (-) terminal.

NOTE:

Battery discharge occurs during the inspection. Complete the measurement within 5 seconds.

(A) Resistance 47 Ω

Tester connection		Standard
(+)	(-)	
Battery Positive terminal	Battery Ground terminal	2.5 — 3.0 V

2) Replace the battery if the inspection result is not within the standard value. (Use CR2025 or equivalent.)

D: REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

NOTE:

- A maximum of four keyless transmitter can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of transmitter is necessary.

1) Prepare the Subaru Select Monitor kit. <Ref. to SL-7, SPECIAL TOOL, PREPARATION TOOL, General Description.>

Transmitter

SECURITY AND LOCKS

2) Prepare PC with Subaru Select Monitor installed.

3) Connect the USB cable to SDI (Subaru Diagnosis Interface) and USB port on the personal computer (dedicated port for the Subaru Select Monitor).

NOTE:

The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.

4) Connect the diagnosis cable to SDI.

5) Connect SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:

Do not connect scan tools other than the Subaru Select Monitor.

6) Start the PC.

7) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor".

8) On the «Main Menu» of the Subaru Select Monitor, select the {Each System Check} → {Integ. unit mode} → {Keyless ID registration}.

9) Input the 8-digit ID number attached to the tag plate of the transmitter or inside the transmitter, from left to right. Press the [OK] key.

10) The ID number you have entered will be shown. Make sure that the ID number shown is the same as that of plastic bag or inside of transmitter.

11) Press the [OK] key if the ID number is correct. Press the [EXIT] key if incorrect, to return to the step 3) and enter the ID number again.

12) «ID is being registered...» is displayed and registration starts.

13) «ID registration completed » will be displayed when the registration process is done.

14) To exit, select «Quit: NO» to return to {Keyless ID registration}. If there are additional keyless transmitters to be registered, select «The following are registered: OK» to return to the step 4).

NOTE:

- If the registration fails, «ID cannot register. Try again.» will be shown. Select the [OK] key to return to the {Keyless ID registration}. Retry starting from the step 3).

- «Quit: NO» is shown on the Subaru Select Monitor when fourth keyless transmitter has been registered. Select the [NO] key to return to {Keyless ID registration}.

23. Immobilizer Control Module

A: NOTE

The control of immobilizer system is carried out in body integrated unit. For operation procedures, refer to "Body Integrated Unit".

- Removal: <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
- Installation: <Ref. to SL-44, INSTALLATION, Body Integrated Unit.>

24. Immobilizer Antenna

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and remove the steering column cover lower.

- 3) Remove the harness cover lock.
- 4) Remove the screws and detach the knee protector.

- 5) Remove the screws and remove the steering column cover upper.

- 6) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>
- 7) Disconnect the immobilizer antenna harness connector (A) and ignition switch lighting harness connector (B).

- 8) Loosen the screw and release the lock (D) at opposite side using flat tip screwdriver (1), and then detach the immobilizer antenna (C).

CAUTION:

Do not apply excessive force to remove the immobilizer antenna and lock. Otherwise they may be broken because those parts are the products made of a plastic.

B: INSTALLATION

Install each part in the reverse order of removal.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

SR

	Page
1. General Description	2

General Description

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

1. General Description

A: COMPONENT

SR-00137

- (1) Sunroof lid
- (2) Rear drain ASSY
- (3) Frame ASSY
- (4) Motor ASSY
- (5) Drive unit
- (6) Drain tube
- (7) Harness

- (8) Sunshade
- (9) Garnish
- (10) Frame bracket
- (11) Cover
- (12) Deflector
- (13) Shim
- (14) Sunroof bracket

- (15) Band
- (16) Shade stopper

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.76, 5.5)

General Description

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

Sunroof Control System

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

2. Sunroof Control System

A: WIRING DIAGRAM

Refer to “Sunroof Control System” in the wiring diagram. <Ref. to WI-176, WIRING DIAGRAM, Sunroof Control System.>

B: INSPECTION

Symptoms	Inspection order
Water leakage	<ol style="list-style-type: none">1. Check roof panel and sunroof lid for improper or poor sealing.2. Check drain tube for clogging.3. Check sunroof frame seal and body for improper fit.
Booming noise, wind noise and other noise	<ol style="list-style-type: none">1. Check the deflector upright position without binding.2. Check sunroof lid and roof panel for improper clearance.3. Check sunshade and roof trim for improper clearance.
Abnormal motor noise	<ol style="list-style-type: none">1. Check the motor mounting screws for looseness.2. Check gears and bearings for wear.3. Check cable for wear.4. Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	<ol style="list-style-type: none">1. Check guide rail for foreign particles.2. Check guide rail for improper installation.3. Check parts for mutual interference.4. Check cable slider for improper clinching.5. Check cable for improper installation.
Motor does not rotate or it rotates improperly.	<ol style="list-style-type: none">1. Check fuse for blown out.2. Check switch for improper function.3. Check motor for incorrect terminal voltage.4. Check the relay for improper operation.5. Check poor grounding system.6. Check harness for open or short and terminals for poor connections.

C: NOTE

For procedure of each component in the sunroof control system, refer to the respective section.

- Sunroof lid: <Ref. to SR-5, Sunroof Lid.>
- Sunroof assembly: <Ref. to SR-6, Sunroof Assembly.>
- Sunroof motor: <Ref. to SR-8, Sunroof Motor.>
- Sunroof switch: <Ref. to SR-9, Sunroof Switch.>

Sunroof Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

3. Sunroof Lid

A: REMOVAL

- 1) Completely close the sunroof lid, and open the sunshade.
- 2) Remove the cover (A), then remove the nuts.

- 3) Remove the sunroof lid carefully.

B: INSTALLATION

Install each part in the reverse order of removal.

C: ADJUSTMENT

Adjust the height between sunroof lid and roof panel.

Loosen the sunroof lid nuts, and then adjust the height by adding (max: four pieces) or extracting (min: zero pieces) shims (normally two pieces) which are installed between the sunroof lid and the roof panel.

Difference in height between sunroof and roof panel

2.0±1.0 mm (0.079±0.039 in)

- (A) Shim
- (B) Sunroof lid
- (C) Roof panel

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

4. Sunroof Assembly

A: REMOVAL

CAUTION:

Use great care not to damage the roof trim.

- 1) Disconnect the ground cable from battery.
- 2) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 3) Remove the sunroof lid. <Ref. to SR-5, REMOVAL, Sunroof Lid.>
- 4) Disconnect the sunroof motor connector.
- 5) Remove the bolts and then move the curtain air-bag module.
- 6) Remove the bolts and then remove the frame bracket.

- 7) Remove the drain tube (A) from the sunroof frame.
- 8) Remove the nuts and bolts to remove the sunroof frame.

B: INSTALLATION

CAUTION:

Be careful not to snag the harness.

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SR-2, COMPONENT, General Description.>

NOTE:

- Be sure to connect the harness connector.
- When installing the drain tube, insert it securely into drain pipe.

Length A:

15 mm (0.59 in) or more

C: DISASSEMBLY

- 1) Remove the sunroof frame. <Ref. to SR-6, REMOVAL, Sunroof Assembly.>
- 2) Remove the shade stopper (A).
- 3) Remove the motor bracket screw (B).
- 4) Remove the guide pipe screw (C), slightly pull out the guide pipe from the guide rail and then lower the motor bracket.

Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

5) Pull out the sunshade (D) from sunroof frame.

D: ASSEMBLY

Assemble each part in the reverse order of disassembly.

E: INSPECTION

Check the moving load of the sunshade.

1) Attach a spring scale to sunshade edge using a cloth.

2) Pull the spring scale to measure moving load of the sunshade.

Moving load of sunshade:

20 N (2.04 kgf, 4.5 lb) or less

NOTE:

Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while sunshade sliding smoothly.

3) If it exceeds the specification, check the sunroof lid, sunshade, deflector and guide rail assembly for improper installation.

Sunroof Motor

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

5. Sunroof Motor

A: REMOVAL

CAUTION:

- When removing the sunroof motor, completely close the sunroof.
- When removing the clip, use great care not to damage the roof trim.

- 1) Completely close the sunroof.
- 2) Disconnect the ground cable from battery.
- 3) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 4) Disconnect sunroof motor connector (A).
- 5) Remove the screws (B) and nuts (C), and remove the sunroof motor.

B: INSTALLATION

CAUTION:

When installing the sunroof motor assembly, be careful not to move the sunroof cable.

- 1) Install the sunroof motor.
- 2) Connect the sunroof motor connector, and connect the ground cable to battery.
- 3) Reset the sunroof motor. <Ref. to SR-8, ADJUSTMENT, Sunroof Motor.>
- 4) Check the sunroof operation as follows:

Inspection order	Switch position
(1) Sunroof closes completely.	Close
(2) Sunroof opens 500 mm (19.7 in) away from completely closed position.	Open
(3) Sunroof opens completely.	Open
(4) Sunroof closes 200 mm (7.87 in) in front of the completely closed position.	Close
(5) Sunroof closes completely.	Close

- 5) Install the roof trim. <Ref. to EI-65, INSTALLATION, Roof Trim.>

C: ADJUSTMENT

Reset the sunroof motor.

- 1) Completely close the sunroof lid.
- 2) After completely closing the sunroof lid, press and hold the switch to CLOSE side again for one second or more.

D: INSPECTION

CAUTION:

Do not place objects in the way to check the auto-reverse mechanism.

Inspect the sunroof lid auto-reverse mechanism.

- 1) Open the sunroof lid.
- 2) Forcefully push the sunroof lid in the opening direction while auto-closing, to check whether the window auto-reverse mechanism functions.
- 3) Check whether the window auto-reverse mechanism operates and the roof moves back 150 mm (5.91 in) in the opening direction.

NOTE:

- The auto-function is cancelled when the window auto-reverse mechanism is activated more than five times.
- If the auto function is cancelled, reset it. <Ref. to SR-8, ADJUSTMENT, Sunroof Motor.>

Sunroof Switch

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

6. Sunroof Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the overhead console.

- (1) Push and open the rear end of the overhead console lid, and remove the screws.
- (2) Remove the overhead console and disconnect the harness connector.
- 3) Remove the sunroof switch from the overhead console.

B: INSTALLATION

Install each part in the reverse order of removal.

C: INSPECTION

- 1) Check the resistance between sunroof switch terminals.

Switch position	Terminal No.	Standard
Open	1 and 3	Less than 1 Ω
Close	3 and 4	Less than 1 Ω

- 2) Replace the sunroof switch if the inspection result is not within the standard value.

Sunroof Switch

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing trim. <ul style="list-style-type: none"> • KTC AP201-10A • KTC AP201-N • KTC AP203-10A • KTC AP20L-10B Or equivalent.
Clip clamp pliers	Used for removal of various clips and clamps. <ul style="list-style-type: none"> • KTC CCP-190 Or equivalent.

2. Front Grille

A: REMOVAL

- 1) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 2) Remove the screws (A) from the backside of the bumper face.
- 3) Detach the tabs (B) and remove the front grille assembly.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Adjust the headlight beam and fog light beam.
 - Adjust the headlight beam. <Ref. to LI-19, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
 - Adjust the fog light beam. (Model with fog light) <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

3. Front Hood Grille

A: REMOVAL

- 1) Open the front hood.
- 2) Remove screws (A) and clips (B), and remove the hood duct assembly.

- 3) Remove the nuts (A) and clips (B), and remove the front hood grille.

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

Insert the hooks (B) of the front hood duct into holes (A) of the front hood.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EI-4, FRONT HOOD GRILLE, COMPONENT, General Description.>

Front Under Cover

EXTERIOR/INTERIOR TRIM

4. Front Under Cover

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove clips and bolts in front fender, then remove the front under cover.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

18 N·m (1.84 kgf·m, 13.3 ft·lb)

5. Fuel Tank Protector

A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the bolts (A) and nuts (B), and then remove the fuel tank protector.

B: INSTALLATION

CAUTION:

Do not reuse the nut (self locking nut). Always replace with a new part.

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EI-3, UNDER PROTECTOR, COMPONENT, General Description.>

Mud Guard

EXTERIOR/INTERIOR TRIM

6. Mud Guard

A: REMOVAL

1. FRONT MUD GUARD

- 1) Lift up the vehicle.
- 2) Remove the front wheels.
- 3) Remove the clips, then remove the mud guard.

- (1) Air flap
- (2) Front mud guard

2. REAR MUD GUARD

- 1) Lift up the vehicle.
- 2) Remove the rear wheels.
- 3) Loosen the clips and screws (RH side one location) to remove the mud guard.

- (1) Rear mud guard RH
- (2) Mud guard rear RH
- (3) Rear mud guard LH
- (4) Mud guard rear LH

B: INSTALLATION

Install each part in the reverse order of removal.

7. Front Bumper

A: REMOVAL

1. FRONT BUMPER FACE

- 1) Disconnect the ground cable from battery.
- 2) Remove the clips at the upper side of the bumper.

- 3) Remove the clips from the fender.

- 4) Remove the clips at the lower side of bumper.

- 5) Disconnect the fog light connector. (Model with fog light)

- 6) Detach the flange section on the bumper face side from the front side bracket.

CAUTION:

Do not pull forcibly. It may damage the flange sections of the bumper face.

NOTE:

It is easier to detach them from the fender side in the order from (1) to (3), while pulling up the bumper face to the direction of arrow (upward).

- 7) Remove the bumper face from vehicle body.
- 8) Remove the front grille from bumper face. <Ref. to EI-24, REMOVAL, Front Grille.>
- 9) Remove the fog light from bumper face. <Ref. to LI-26, REMOVAL, Front Fog Light Assembly.>

Front Bumper

EXTERIOR/INTERIOR TRIM

2. FRONT BUMPER BEAM ASSEMBLY

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Remove the energy absorber foam from the bumper beam assembly.

- 4) Remove the bolts, and remove the bumper beam assembly from vehicle body.

NOTE:

After all bolts are removed, raise the whole bumper beam a little to remove it from vehicle body.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Securely attach the bumper tabs (A) to the plastic bracket (B).

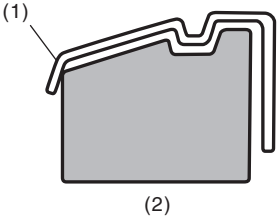

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EI-5, FRONT BUMPER, COMPONENT, General Description.>

- 3) Adjust the headlight beam and fog light beam.
 - Adjust the headlight beam. <Ref. to LI-19, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
 - Adjust the fog light beam. (Model with fog light) <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: REPAIR

1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.	 <p>(1) Bumper (2) Set bumper section</p> <p style="text-align: right;">EI-00234</p>
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP.	
3	Degreasing/cleaning	Clean all parts to be painted with white gasoline, normal alcohol, etc. to remove dirt, oil, fat, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature [10 to 15 min. at 20°C (68°F)]. In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi) 	Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minute intervals. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If the temperature is higher than 80°C (176°F), PP may be deformed. Keep maximum temperature at 80°C (176°F) or less.	
10	Inspection	Check paint.	
11	Removal of masking	Remove the masking tape applied in procedure 2.	

Front Bumper

EXTERIOR/INTERIOR TRIM

2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

NOTE:

All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter.

Repair methods are outlined below, based on a classification of the extent of damage.

1) Minor damage causing only a change in the luster of the bumper due to a light touch
Almost restorable.

Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with #500 sand paper in a "feathering" motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using soft cloth (such as flannel). Recommended wax: Tire wax or equivalent	Perform either the same procedures as for the resin section or process No. 18 and subsequent in section 3), depending on the degree and nature of damage.
		Polish the waxed area with clean cloth after 5 — 10 minutes.	

2) Deep damage caused by scratching with fences etc.

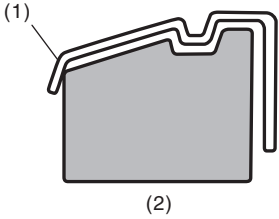

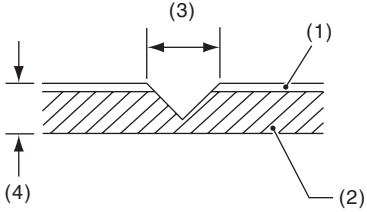

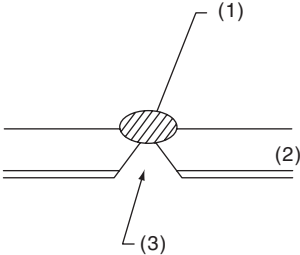

A dent cannot be repaired but a whitened or swelled part can be removed.

Process No.	Process name	Job contents	
1	Cleaning	Clean the damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the affected area with #100 — #500 sand paper.	
4	Finish	Resin section	Coated section
		Same as process No. 3 in section 1).	Perform process No. 12 and subsequent operations in section 3).

Front Bumper

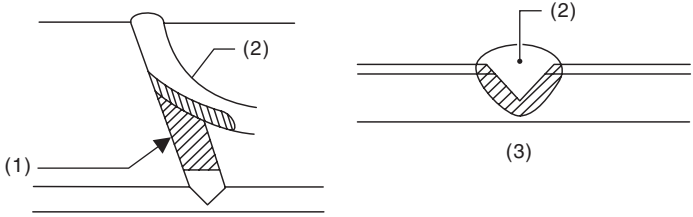

EXTERIOR/INTERIOR TRIM

3) Deep damage such as a break or hole that requires filling
 Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

Process No.	Process name	Job contents
1	Bumper removal	Remove the bumper as required.
2	Removal of parts	Remove the parts built into bumper as required.
3	Bumper placement	<p>Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.</p>  <p>(1) Bumper (2) Set bumper section</p> <p>EI-00234</p>
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (white gasoline or alcohol, etc.).
5	Cutting	<p>If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.</p>  <p>(1) Paint surface (2) PP base surface (3) 20 — 30 mm (0.79 — 1.18 in) (4) 3 mm (0.12 in)</p> <p>EI-00235</p>
6	Sanding (I)	Grind beveled surface with sand paper (#40 — #60) to smooth finish.
7	Cleaning	Clean the sanded surface with the same solvent as used in process No. 4.
8	Temporary welding	<p>Grind the side just opposite the beveled area with sand paper (#40 — #60) and clean using a solvent. Temporarily spot-weld the side, using PP welding rod and heater gun.</p>  <p>(1) Welded point (Use heater gun and PP welding rod) (2) PP base surface (3) Beveled section</p> <p>NOTE:</p> <ul style="list-style-type: none"> Do not melt welding rod until it flows out. This results in reduced strength. Leave the welded spot unattended until it cools completely. <p>EI-00236</p>

Front Bumper

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents
9	Welding	<p>Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.</p>  <p>(1) Welding rod (2) Melt hatched area (3) Section</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Melt the sections indicated by hatched area. • Do not melt the welding rod until it flows out, in order to provide strength. • Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot. • Leave the welded spot unattended until it cools completely. <p style="text-align: right;">EI-00237</p>
10	Sanding (II)	<p>Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at a rate lower than 1,500 rpm and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.</p>  <p style="text-align: right;">EI-00042</p> <p>Sand the welded spot smooth with #240 sand paper.</p>
11	Masking	Mask the black substrate section using masking tape.
12	Cleaning/degreasing	Completely clean the entire coated area, using solvent similar to that used in process No. 4.
13	Primer coating	<p>Apply a coat of primer for bumpers to the repaired surface and its surrounding areas. Mask these areas, if necessary.</p> <p>NOTE: Be sure to apply a coat of primer using a spray gun at a pressure of 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi).</p>
14	Leave unattended	<p>Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry.</p> <p>NOTE: If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since the coated area tends to melt.)</p>
15	Surfacer coating	<p>Apply a coat of surfacer for PP bumpers to the repaired area two or three times at an interval of 3 — 5 minutes.</p> <p>For surfacer/hardener mixture, viscosity and paint thickness, observe the specifications of the surfacers to be used.</p>
16	Drying	Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].
17	Sanding (III)	Sand the coated surface and its surrounding areas using #400 sand paper and water.
18	Cleaning/degreasing	Same as process No. 12.

Front Bumper

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents	
		Non-colored	Metallic paint
19	Top coat (I)	Use a "block" coating method. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 40 — 50 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi) 	Use a "block" coating method. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 11 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi)
20	Leave unattended	Not required.	Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry. NOTE: Be careful to keep dust or dirt from coming in contact with the affected area.
21	Top coat (II)	Not required.	Apply a clear coat three times at an interval of 3 to 5 minutes. For paint/hardener mixture, observe the specifications recommended by the manufacturers. <ul style="list-style-type: none"> • Viscosity: 10 — 13 sec./20°C (68°F) • Coating film thickness: 20 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm², 36 — 50 psi)
22	Drying	Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F). NOTE: Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.	
23	Inspection	Carefully check the condition of the repaired area.	
24	Removal of masking	Remove the masking tape applied in process No. 11 and 13.	
25	Parts installation	Install parts on the bumper in reverse order of removal.	
26	Bumper installation	Install the bumper.	

Rear Bumper

EXTERIOR/INTERIOR TRIM

8. Rear Bumper

A: REMOVAL

1. REAR BUMPER FACE

- 1) Remove the clips inside the wheel housing.

- 2) Remove the bolt.

- 3) Remove the clips on the lower side of rear bumper.

- 4) Remove the rear bumper from vehicle body.
 - (1) Detach from the fender side in order from (1) to (3) while pulling up on the bumper face and twisting it towards you. (Both sides)
 - (2) Detach in order from (4) to (6) while pulling up on the center part of the bumper face.

CAUTION:

Do not pull with a excessive force. Otherwise the bracket installation area may be damaged.

- 5) Remove the reflector.

2. REAR BUMPER BEAM ASSEMBLY

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear bumper face. <Ref. to EI-36, REAR BUMPER FACE, REMOVAL, Rear Bumper.>
- 3) Remove the nuts, and remove the bumper beam assembly from the vehicle body.

NOTE:

After all nuts are removed, raise the whole bumper beam a little to remove it from the vehicle body.

3. REAR BUMPER BRACKET

Remove the rear bumper face from vehicle body, and remove each bumper bracket.

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

If the bumper face comes off easily from the beam upper rear, adjust the hook of the bracket side.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EI-6, REAR BUMPER, COMPONENT, General Description.>

C: REPAIR

Refer to front bumper repair. <Ref. to EI-31, REPAIR, Front Bumper.>

Cowl Panel

EXTERIOR/INTERIOR TRIM

9. Cowl Panel

A: REMOVAL

- 1) Open the front hood.
- 2) Remove the wiper arm. <Ref. to WW-17, REMOVAL, Front Wiper Arm.>
- 3) Detach the tabs and remove the cowl panel, side.

- (1) Detach tabs (A), (B), and (C) from the vehicle exterior.
 - (2) Detach tabs (D) and (E).
- 4) Pull out and disconnect the washer hose.

- 5) Remove clips (A) and (B), and remove the cowl panel.

CAUTION:
Press on the clip tabs from the left and right when removing clips (B).
Do not pull forcibly on the clips to prevent damaging them.

- 6) Disconnect the washer hose.
- 7) Remove the washer nozzle. <Ref. to WW-20, REMOVAL, Front Washer Nozzle.>

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

Hook the claw of the cowl panel on the lower end of the windshield.

- (1) Windshield cross section

10. Roof Spoiler

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the high-mounted stop light. <Ref. to LI-35, REMOVAL, High-mounted Stop Light.>
- 3) Remove the rear gate trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 4) Remove the nuts.

- 5) Open the caps (1), and remove the bolt inside.

- 6) Remove the clips (a) and (b), and remove the roof spoiler.

B: INSTALLATION

CAUTION:

- Make sure the bolt is tightened securely because improper installation may cause the water leakage.
- If the clip (b) is deformed or broken, replace it with a new part.
- Install the clip (b) to the spoiler side first.
 - Right side: Install clip (b) to the right of protrusions (c).
 - Left side: Install clip (b) to the left of protrusions (c).

Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

Side Sill Spoiler

EXTERIOR/INTERIOR TRIM

11.Side Sill Spoiler

A: REMOVAL

Remove the clips, and remove the side spoiler.

EI-02449

B: INSTALLATION

Install each part in the reverse order of removal.

12. Roof Molding

A: REMOVAL

1) Peel the end of the roof molding, and slide the inner clip in the direction of the arrow using a flat tip screwdriver, to remove the clip from the stud on the vehicle side.

CAUTION:

Be careful not to damage the body.

Right side: Slide towards the front of the vehicle.

Left side: Slide towards the rear of the vehicle.

2) Pull up the roof molding upward, and remove from the vehicle.

3) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>

4) Remove the nuts, and remove the roof carrier bracket.

B: INSTALLATION

1) Install the roof carrier bracket.

Tightening torque:

7.5 N-m (7.6 kgf-m, 5.5 ft-lb)

2) Remove the clips from the roof molding, and attach to the studs on the vehicle.

CAUTION:

Always replace clips that were damaged during removal of the roof molding.

3) Push the front end of the roof molding against the front window, and attach the forward positioning clip onto the rivet on the body.

- (1) Windshield
- (2) Positioning clip
- (3) Roof molding
- (4) Rivet
- (5) Clip

4) While pushing down on the roof molding from above, join the roof molding and clips.

13. Roof Rail

A: REMOVAL

- 1) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 2) Remove the front installation nuts.

- 3) Remove the inflator pad (1) and then remove the rear mounting nuts.

B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:

When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

14. Door Trim

A: REMOVAL

1. FRONT DOOR

- 1) Disconnect the ground cable from battery.
- 2) Remove the gusset cover.
 - (1) Pull the gusset cover backward to detach the claws (A) on the backside of the gusset cover.

- (2) Insert a plastic remover into the position shown in the figure while retaining the condition in step (1), and lift up the gusset cover.

- (3) Remove the gusset cover in the direction of the arrow to detach the clip section (B), and disconnect the connector.

- 3) Open the cover of the inner remote section, and remove the screws.

- 4) Remove the power window switch panel.

- (1) Open the cover and remove the screws.
- (2) Lift up the tip of switch panel by using a plastic remover.

- (3) Disengage the end face tabs by using a plastic remover.

- (4) Disconnect the harness connector, and remove the power window switch panel.

Door Trim

EXTERIOR/INTERIOR TRIM

5) Remove the door trim screws.

6) Remove the door trim.

(1) Remove the clips, then lift the door trim.

NOTE:

Insert a plastic clip remover into the slit at the bottom of the door trim, to lift the door trim.

(2) Remove the cable (1) and (2) from the cable holder of inner remote.

(3) Disconnect the harness connector and remove the door trim.

2. REAR DOOR

1) Disconnect the ground cable from battery.

2) Remove the gusset cover.

(1) Push gusset cover in direction of vehicle front to detach the claws (A) on the backside of the gusset cover.

CAUTION:

Be careful not to damage the claws (A).

(2) Insert a plastic remover into the position shown in the figure while retaining the condition in step (1), and lift up the gusset cover.

(3) Remove the gusset cover in the direction of the arrow to detach the clip section.

Door Trim

EXTERIOR/INTERIOR TRIM

3) Open the cover of the inner remote section, and remove the screws.

4) Remove the power window switch panel.

(1) Open the cover and remove the screws.
(2) Lift up the tip of switch panel by using a plastic remover.

(3) Disengage the end face tabs by using a plastic remover.

(4) Disconnect the harness connector, and remove the power window switch panel.

5) Remove the door trim screws.

6) Remove the door trim.

(1) Remove the clips, then lift the door trim.

NOTE:

Insert a plastic clip remover into the slit at the bottom of the door trim, to lift the door trim.

(2) Attach the protective tape (a) to the front door sash.

(3) Remove the door trim by rotating it around the trim tip part (b).

Door Trim

EXTERIOR/INTERIOR TRIM

(4) Remove the cable (1) and (2) from the cable holder of inner remote.

(5) Disconnect the harness connector and remove the door trim.

B: INSTALLATION

Install each part in the reverse order of removal.

15. Instrument Panel Lower Cover

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Detach the plastic hooks (A) and remove the instrument panel side cover LH.

- 3) Remove the screws.

- 4) Disconnect the connectors and remove the instrument panel lower cover.

B: INSTALLATION

Install each part in the reverse order of removal.

16. Glove Box

A: REMOVAL

NOTE:

Refer to "Security and Locks" section for key cylinder replacement. <Ref. to SL-39, GLOVE BOX LID, REPLACEMENT, Key Lock Cylinders.>

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box damper.

- 3) Remove the stoppers and pull the glove box lid assembly forward to remove.

- 4) Remove the clips, and remove the glove box lower cover.

- 5) Remove the instrument panel lower. <Ref. to EI-52, INSTRUMENT PANEL LOWER, REMOVAL, Center Console.>

B: INSTALLATION

Install each part in the reverse order of removal.

17. Console Box

A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the parking brake lever boot.

- 3) Remove bolts (A), screw (B), and clips (C).

- 4) Disconnect the connectors and remove the console box.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

2 N·m (0.20 kgf·m, 1.5 ft·lb)

Center Console

EXTERIOR/INTERIOR TRIM

18.Center Console

A: REMOVAL

1. CENTER PANEL

- 1) Insert a plastic clip remover into the slit at the bottom edge of the center panel, and lift the panel.
- 2) Disengage the tabs and plastic hooks, and remove the center panel.

2. CONSOLE FRONT PANEL

- 1) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 2) Remove the shift knob. (MT model)
- 3) Detach the plastic hooks (A) and pull up on the console front panel.

NOTE:
Pull up towards the rear of the vehicle to remove.

- 4) Remove the clips and screws, and remove the console side panel.

NOTE:
Pull towards the rear of the vehicle to remove.

3. ORNAMENT PANEL

• Driver's side

- 1) Detach the plastic hooks (A) and remove the instrument panel side cover LH.

- 2) Remove the plastic hook (A), and detach the meter visor.

NOTE:

Pull the plastic hooks at the bottom of the meter visor towards you to remove.

3) Detach the screws and the tabs to remove the ornament panel LH.

• Passenger's side

1) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>

2) Remove the plastic hook (A), and detach the meter visor.

NOTE:

Pull the plastic hooks at the bottom of the meter visor towards you to remove.

3) Insert a plastic clip remover into the slit at the bottom edge of the center panel, and lift the panel.

4) Remove the claws and resin hook and then remove the center panel.

5) Detach the plastic hooks (A) and remove the instrument panel side cover RH.

6) Remove the glove box lid. (Manual air conditioning model) <Ref. to EI-48, REMOVAL, Glove Box.>

7) On manual air conditioning models, remove the control cable.

8) Detach the screws and the plastic hooks to remove the ornament panel RH.

9) Disconnect the connectors.

Center Console

EXTERIOR/INTERIOR TRIM

4. INSTRUMENT PANEL LOWER

- 1) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>
- 2) Remove the center panel. <Ref. to EI-50, CENTER PANEL, REMOVAL, Center Console.>
- 3) Remove the console front panel. <Ref. to EI-50, CONSOLE FRONT PANEL, REMOVAL, Center Console.>
- 4) Remove the ornament panel RH. <Ref. to EI-50, ORNAMENT PANEL, REMOVAL, Center Console.>
- 5) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>
- 6) Remove the glove box lid and glove box lower cover. <Ref. to EI-48, REMOVAL, Glove Box.>
- 7) Remove the screws and nuts to remove the instrument panel lower.

NOTE:

The screw indicated by the white arrow is installed on the reverse face.

B: INSTALLATION

Install each part in the reverse order of removal.

19. Instrument Panel Assembly

A: REMOVAL

CAUTION:

Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.

- 1) Disconnect the ground cable from battery.
- 2) Remove the front pillar upper trim. <Ref. to EI-58, REMOVAL, Upper Inner Trim.>
- 3) Detach the plastic hooks (A) and remove the instrument panel side cover LH.

- 4) Detach the plastic hooks (A) and remove the instrument panel side cover RH.

- 5) Remove the clips, and remove the glove box lower cover.

- 6) Remove the console box. <Ref. to EI-49, REMOVAL, Console Box.>

- 7) Remove the console front panel. <Ref. to EI-50, CONSOLE FRONT PANEL, REMOVAL, Center Console.>

- 8) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Lower Cover.>

- 9) Remove the glove box lid. (Manual air conditioning model) <Ref. to EI-48, REMOVAL, Glove Box.>

- 10) On manual air conditioning models, remove the control cable.

- 11) Remove the steering shaft assembly. <Ref. to PS-16, REMOVAL, Steering Column.>

- 12) Disconnect the connectors.

NOTE:

To make reassembly easier, place matching markings on connectors as necessary.

Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

13) Remove the bolts on the driver's side and fuse box.

14) Remove the bolts on the passenger's side.

15) Check that the connectors are disconnected, and remove the instrument panel from the vehicle.

16) Remove the steering support beam bracket.

B: INSTALLATION

1) Install the parts in the reverse order of removal until the instrument panel assembly is formed.

NOTE:

Insulator installation procedures

- Adhesive

Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.

- Double-sided tape

Use commercial double-sided tape. (Use strong double-sided adhesive tape.)

2) Insert the matching pins (three locations) on the body side into the instrument panel assembly.

3) Check that the matching pins are inserted securely, and then route the harness.

4) Install in the reverse order of removal.

Tightening torque:

Steering support beam & steering support beam bracket: 25 N·m (2.55 kgf·m, 18.4 ft·lb)

Steering shaft: <Ref. to PS-3, STEERING WHEEL AND COLUMN, COMPONENT, General Description.>

Instrument panel lower: 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

C: DISASSEMBLY

- 1) Remove the combination meter assembly. <Ref. to IDI-22, REMOVAL, Combination Meter.>
- 2) Remove the audio. <Ref. to ET-9, REMOVAL, Audio.>
- 3) Remove the GPS antenna. <Ref. to ET-18, REMOVAL, GPS Antenna.>
- 4) Remove the heater vent duct. <Ref. to AC-57, REMOVAL, Heater Vent Duct.>
- 5) Remove the bolts securing the passenger's side airbag module to the steering support beam.

- 6) Remove the claw, and remove the passenger's airbag module.

Lower Inner Trim

EXTERIOR/INTERIOR TRIM

20. Lower Inner Trim

A: REMOVAL

1) Remove the hook, and remove the inside scuff plate.

CAUTION:

Do not pull with excessive force. There is the possibility of the scuff plate being damaged.

2) Remove the door molding (A), and remove the outside scuff plate.

3) Remove clip (A), and remove the front pillar lower trim.

4) Remove the rear seat cushion. <Ref. to SE-16, REMOVAL, Rear Seat.>

5) Remove clip (A), and remove the inside scuff plate.

CAUTION:

Do not pull with excessive force. There is the possibility of the scuff plate being damaged.

NOTE:

- To facilitate the work, remove the weather strip and access the scuff plate tabs from behind the floor mat.
- To release the tabs on the front edge of the scuff plate easily, use a clip remover.

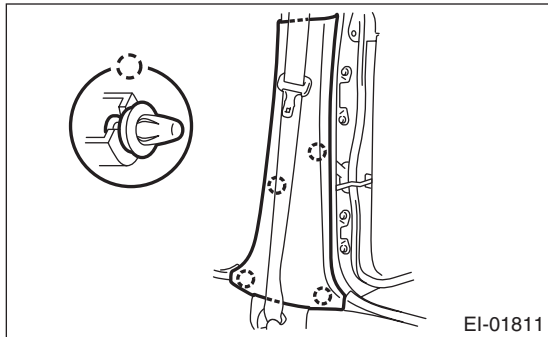

6) Remove door molding (A) and door catcher cover (B), then remove the outside scuff plate.

7) Spread the lower trim tab outward to disengage and pull the upper trim to remove.

8) Remove the clips of the center pillar lower trim.

B: INSTALLATION

Install each part in the reverse order of removal.

Upper Inner Trim

EXTERIOR/INTERIOR TRIM

21.Upper Inner Trim

A: REMOVAL

1) Pull the upper part of the front pillar upper trim towards the center of the vehicle.

2) Insert long-nose pliers into the top part of the trim, grip the clip with the pliers and twist 90° in that position.

CAUTION:

Be careful not to damage the pillar trim surface and curtain airbag module when inserting the pliers.

3) Holding the clip twisted as in the previous step, remove the front pillar upper trim from the clip.

4) Remove the clip and the front pillar upper trim.

5) Remove the front inside scuff plate, rear inside scuff plate and center pillar lower trim. <Ref. to EI-56, REMOVAL, Lower Inner Trim.>

6) Remove the shoulder anchor.

(1) Remove anchor bolt cover (A).

(2) Loosen the shoulder anchor bolt (B), and then detach the shoulder anchor from center pillar.

7) Remove the cap (B) on the upper side of the pillar trim, and remove the bolt.

NOTE:

Remove molding (A), and remove the cap from the backside of the pillar trim being careful not to damage the trim.

Upper Inner Trim

EXTERIOR/INTERIOR TRIM

8) Pull the upper trim clip part of the center pillar towards yourself along with the entire lower trim.

9) Spread the lower trim tab outward to disengage and pull the upper trim to remove.

2) Prepare new clips and install the front pillar trim.

3) Install the front pillar trim.

4) Install each part in the reverse order of removal.

Tightening torque

Refer to "COMPONENT" of "General Description".

Upper inner trim: <Ref. to EI-18, INNER TRIM, COMPONENT, General Description.>

Seat belt anchor: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

B: INSTALLATION

CAUTION:

- Do not reuse the pillar trim upper clips. The securing strength of the clips is reduced once they are removed from the pillar trim. Reuse might result in the pillar trim falling off.

Always use new clips when installing the pillar trim.

- Before installing the pillar trim, check the condition of the protective fabric (white) of the curtain airbags. Replace the curtain airbag module assembly with a new module if the protective fabric is damaged (if the pink fabric of the airbag module can be seen).

1) Remove the remaining clips from the vehicle body.

Rear Quarter Trim

EXTERIOR/INTERIOR TRIM

22.Rear Quarter Trim

A: REMOVAL

- 1) Remove the rear seat. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 2) Remove the seat belt lower anchor bolt.

- 3) Remove cap (B) on the upper side of the rear quarter pillar front trim.

NOTE:

Remove molding (A), and remove the cap from the backside of the pillar trim being careful not to damage the trim.

- 4) Remove the bolt and screw, and remove the rear quarter pillar front trim.

- 5) Remove covers (A) and (B).

- 6) Remove the clips and screws, and remove the rear quarter upper trim.

- 7) Remove the rear floor spacer.

- 8) Remove the luggage room end covers.

9) Remove the bolt and screws, and remove the rear quarter lower trim.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque

Refer to "COMPONENT" of "General Description".

Rear quarter upper trim: <Ref. to EI-18, INNER TRIM, COMPONENT, General Description.>

Seat belt anchor: <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

23.Sun Visor

A: REMOVAL

1) Remove the mounting screws and detach the sun visor.

2) While pressing the (A) on the both side using flat tip screwdriver, pull the sun visor hook to remove it.

B: INSTALLATION

Install each part in the reverse order of removal.

24. Assist Grip

A: REMOVAL

- 1) Remove the screw cover, and remove the screw inside.
- 2) Pull the left side of assist grip, and rotate the right side of it counterclockwise to remove.

- 3) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 4) Remove the bolts, and remove the assist grip bracket.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

25. Roof Trim

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the spot map light. <Ref. to LI-36, REMOVAL, Spot Map Light.>
- 3) Remove the room light. <Ref. to LI-37, REMOVAL, Room Light.>
- 4) Remove the sun visor. <Ref. to EI-62, REMOVAL, Sun Visor.>
- 5) Remove the assist grip. <Ref. to EI-63, REMOVAL, Assist Grip.>
- 6) Remove the upper inner trim. <Ref. to EI-58, REMOVAL, Upper Inner Trim.>
- 7) Remove the rear quarter trim. <Ref. to EI-60, REMOVAL, Rear Quarter Trim.>
- 8) Remove the sunroof opening trim. (model with sunroof)

- 9) Disconnect the harness connectors of the right and left front pillars, and the rear quarter (LH).
- 10) Remove the clips, and then remove the roof trim.

B: INSTALLATION

1) Apply the roof cord and feeder cord along the mark-off line of the roof trim.

Tape:

Item number: 86359SC000/TAPE

NOTE:

Use the tape (service parts) by cutting into 80 mm × 50 mm (3.2 in × 2.0 in).

EI-03087

Roof Trim

EXTERIOR/INTERIOR TRIM

EI-03088

- | | | |
|----------------------------------------------------------------|------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| (A) Place the roof cord along the roof trim clamp to secure. | (D) Adjust the excess roof cord to 55 ± 15 mm (2.2 ± 0.6 in). | (G) Align the red tape of the feeder cord to the roof trim end. |
| (B) Fix the roof cord branching point with the clip. | (E) Fix the roof cord branching point to the patch area of overhead console. | (H) Affix with tape while aligning with the white tape of the feeder cord. |
| (C) Attach the tape along the back side line of the sun visor. | (F) Fix with the tape by adjusting the excess portion of cord at the (F) position. | (I) Adjust the excess roof cord to 55 ± 15 mm (2.2 ± 0.6 in). |

2) Install each part in the reverse order of removal.

26.Rear Gate Trim

A: REMOVAL

- 1) Remove the high-mounted stop light. <Ref. to LI-35, REMOVAL, High-mounted Stop Light.>
- 2) Remove the clips, and remove the rear gate upper trim.

- 3) Using a plastic clip remover, disengage the trim tabs and remove the rear gate pillar trim.

- 4) Remove the hand grip and clip of rear gate.

CAUTION:

Be careful not to scratch the trim.

- (1) Open the cover by using a plastic remover, etc.

- (2) Remove the screws and detach the hand grip.

NOTE:

If the screw cover cannot be opened, perform the procedures indicated in the figure.

- (a) Precise screwdriver, etc

- (1) Insert the precise screwdriver, etc.
- (2) With the precise screwdriver, etc inserted, push down the tab to disengage and pull it towards yourself.

- 5) Remove the clips and rear gate lower trim.

B: INSTALLATION

Install each part in the reverse order of removal.

27.Floor Mat

A: REMOVAL

- 1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 2) Remove the rear seat cushion. <Ref. to SE-16, REMOVAL, Rear Seat.>
- 3) Remove the console box. <Ref. to EI-49, Console Box.>
- 4) Remove the console side panel. <Ref. to EI-50, CONSOLE FRONT PANEL, REMOVAL, Center Console.>
- 5) Remove the lower inner trim. <Ref. to EI-56, REMOVAL, Lower Inner Trim.>
- 6) Remove the fuel filler lid opener. <Ref. to SL-37, FUEL FILLER LID OPENER, REMOVAL, Remote Openers.>
- 7) Remove the footrest.
- 8) Remove the clips from the floor mat.
- 9) Remove the mat hook on both sides.
- 10) Remove the mat from toe board area.
- 11) Remove the mat from rear heater duct.
- 12) Roll the mat, and then take it out of opened rear door.

(AT) Automatic transmission model

B: INSTALLATION

Install each part in the reverse order of removal.

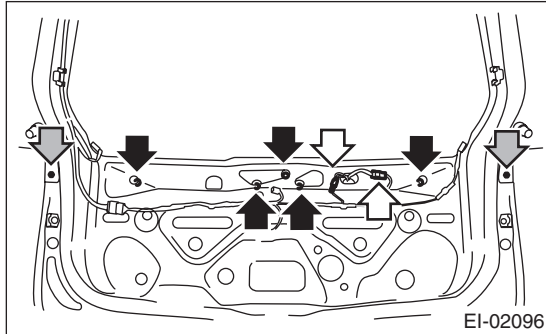

NOTE:

- Secure the mat firmly with hook and clip.
- Insert the mat edge firmly into the groove of side sill cover.

28.Rear Gate Garnish

A: REMOVAL

- 1) Remove the rear gate trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 2) Remove the rear wiper motor. <Ref. to WW-23, Rear Wiper Motor.>
- 3) Disconnect the connectors (white arrows).
- 4) Remove the nuts (black and gray arrows).

- 5) Remove the clips and rear gate garnish.

B: INSTALLATION

CAUTION:

Make sure that the harness grommet is securely installed.

If not properly installed, this may cause leaks.

Install each part in the reverse order of removal.

Tightening torque

4.5 N·m (0.46 kgf-m, 3.3 ft-lb)

Heat Shield Cover

EXTERIOR/INTERIOR TRIM

29. Heat Shield Cover

A: REMOVAL

1. FRONT HEAT SHIELD COVER

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from oxygen (A/F) sensor.
 - Turbo model: <Ref. to EX(H4DOTC)-7, REMOVAL, Center Exhaust Pipe.>
 - Non-turbo model: <Ref. to EX(H4DO)-5, REMOVAL, Front Exhaust Pipe.>
- 3) Remove the exhaust pipe and muffler.
- 4) Remove the four bolts to remove the front heat shield cover.

(A) Transmission mount

2. CENTER HEAT SHIELD COVER

- 1) Remove the rear exhaust pipe and muffler.
- 2) Remove the propeller shaft. (Turbo model only) <Ref. to DS-10, REMOVAL, Propeller Shaft.>
- 3) Remove the bolt (A), nut (B) and clip (C) to remove center heat shield cover.

3. REAR HEAT SHIELD COVER

- 1) Remove the rear exhaust pipe and muffler.
- 2) Remove the bolts, and remove the rear heat shield cover.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EI-22, HEAT SHIELD COVER, COMPONENT, General Description.>

30. Trailer Hitch

A: REMOVAL

- 1) Remove the muffler.
- 2) Remove the trailer hitch harness.

- 3) Remove the rear bumper face. <Ref. to EI-36, REAR BUMPER FACE, REMOVAL, Rear Bumper.>
- 4) Remove the bolts, then remove the side plate lower.

- 5) Remove the nuts, and then remove the trailer hitch main frame assembly.

CAUTION:

The trailer hitch main frame assembly is heavy.
Be careful when removing.

- 6) Remove the side plate upper from the vehicle.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EI-23, TRAILER HITCH, COMPONENT, General Description.>

Ornament

EXTERIOR/INTERIOR TRIM

31.Ornament

A: INSTALLATION

1. LETTER MARK

Apply the letter mark according to the following steps.

EI-02133

EI-02098

- (1) Align the top end of application tape to the rear gate garnish. (2) Align the slit of application tape to the end of rear gate panel and break off the application tape.

Front Hood

EXTERIOR BODY PANELS

2. Front Hood

A: REMOVAL

1. FRONT HOOD INSULATOR

CAUTION:

Do not reuse any clips damaged during removal. Always replace with new clips.

Release the clips to remove the front hood insulator.

2. FRONT HOOD SEAL

Remove the seal.

3. FRONT HOOD DAMPER

CAUTION:

- Do not damage piston rods and oil seals.
- Never disassemble cylinders: They contain gas.
- The front hood panel is heavy. When removing or installing the damper stay and hood hinge, be sure to work in a group of two or more.

1) Remove mounting bolt, and remove the damper stay.

2) Remove the mounting bolt of front hood damper stay.

4. FRONT HOOD HINGE

CAUTION:

The front hood panel is very heavy. Always work with two persons when removing/installing the damper stay and hood hinges.

- 1) Remove the front hood damper.
- 2) Remove the bolts and front hood panel.

3) Detach the tabs and remove the cowl side panel front.

(1) Detach tabs (A), (B), and (C) from the vehicle exterior.

(2) Detach tabs (D) and (E).

4) Remove the front hood hinge bolts.

5. FRONT HOOD PANEL

CAUTION:

The front hood panel is heavy. Always work with two persons when removing/installing the damper stay and hood hinges.

- 1) Remove the front hood insulator.
- 2) Remove the front hood seal.
- 3) Remove the window washer hose and nozzle. <Ref. to WW-20, REMOVAL, Front Washer Nozzle.>
- 4) Remove the front hood damper.
- 5) Remove the bolt, and remove the front hood panel from the front hood hinge.

B: INSTALLATION

Install each part in the reverse order of removal.

NOTE:

- Be careful not to catch the window washer hose between insulators etc.
- Install while paying attention to make a uniform clearance around the front hood panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EB-6, FRONT HOOD, COMPONENT, General Description.>

C: ADJUSTMENT

- 1) Adjust the clearance between front hood panel and front fender panel. Clearance must be equal at both sides. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>
- 2) Use the hinge mounting bolts to align the front hood longitudinal and lateral position.

- 3) Adjust the height at the front end of hood. <Ref. to SL-36, ADJUSTMENT, Front Hood Lock Assembly.>
- 4) Rotate the hood buffer to adjust lateral height.

D: DISPOSAL

For the disposal procedures of front hood damper stay, refer to "Disposal Procedures of Rear Gate Damper Stay". <Ref. to EB-31, REAR GATE DAMPER STAY, DISPOSAL, Rear Gate.>

3. Front Fender

A: REMOVAL

1. FRONT FENDER PANEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the side sill spoilers. <Ref. to EI-40, REMOVAL, Side Sill Spoiler.>
- 3) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 4) Remove the headlight assembly. <Ref. to LI-18, REMOVAL, Headlight Assembly.>
- 5) Remove the mud guard. <Ref. to EI-28, REMOVAL, Mud Guard.>
- 6) Detach the tabs and remove the cowl panel, side.

- (1) Detach tabs (A), (B), and (C) from the vehicle exterior.
- (2) Detach tabs (D) and (E).
- 7) Remove the bolt, and remove the front fender panel.

2. COWL SIDE STAY

For operation procedures of cowl side stay, refer to "Front Performance Stay" items. <Ref. to EB-15, REMOVAL, Front Performance Stay.>

B: INSTALLATION

CAUTION:

- Always use new double sided tape.
 - After the installation of front fender panel, be sure to perform headlight beam adjustment.
- 1) Install each part in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

NOTE:

- Install while paying attention to make a uniform clearance around the front fender panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>
- 2) Adjust the headlight beam and fog light beam.
 - Adjust the headlight beam. <Ref. to LI-19, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
 - Adjust the fog light beam. (Model with fog light) <Ref. to LI-26, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

4. Front Performance Stay

A: REMOVAL

- 1) Remove the front fender. <Ref. to EB-14, REMOVAL, Front Fender.>
- 2) Remove the bolts and harness clip, and remove the front performance stay.

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:

70 N·m (7.14 kgf-m, 51.6 ft-lb)

Front Door

EXTERIOR BODY PANELS

5. Front Door

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the outer mirror assembly. <Ref. to GW-15, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the front door speaker. <Ref. to ET-10, REMOVAL, Front Speaker.>
- 5) Remove the sealing cover. <Ref. to EB-18, REMOVAL, Front Sealing Cover.>
- 6) Remove the front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 7) Remove the front door regulator and motor. <Ref. to GW-12, REMOVAL, Front Regulator and Motor Assembly.>
- 8) Remove the front door latch assembly. <Ref. to SL-30, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
- 9) Remove the front outer handle. <Ref. to SL-29, REMOVAL, Front Outer Handle.>
- 10) Remove the front door weather strip.

NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 11) Remove the bolts and nuts to remove the door checker.

- 12) Remove the front pillar lower trim. <Ref. to EI-56, REMOVAL, Lower Inner Trim.>

- 13) Disconnect the connector of door harness from body harness.

- 14) Put a wooden block on jack and place jack under the front door. Support the door with a jack to protect it from damage.

- 15) Remove the door-side bolts for upper and lower hinges to remove front door panel.

- 16) Remove the door hinge from vehicle.

B: INSTALLATION

1) Put a wooden block on jack and place the front door on that.

- 2) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.
- 3) Install the front door to upper hinge and lower hinge adjusting by jack.
- 4) Tighten bolt of door checker.
- 5) Connect door harness connector, and install the instrument panel lower cover.
- 6) Install the front pillar lower trim.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EB-9, REAR DOOR, COMPONENT, General Description.>

7) Install while paying attention to make a uniform clearance around the front door panel. For the dimension of clearance, refer to “SPECIFICATION” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

C: ADJUSTMENT

1) Using the ST, loosen the body-side bolts of the upper and lower hinges to align the position for vertical and horizontal direction of the front door panel.

Preparation tool: WRENCH (925610000)

2) Loosen the screw (A), and tap the striker (B) using a plastic hammer to adjust the gap between rear end surface of front door panel and front end surface of rear door.

CAUTION:

Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

Front Sealing Cover

EXTERIOR BODY PANELS

6. Front Sealing Cover

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover.

NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new part.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) When replacing the sealing cover, use the butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

Butyl tape:

3M8626 or the equivalent

NOTE:

- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

C: INSPECTION

If the sealing cover gets damaged, replace it with a new part.

7. Rear Door

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-44, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the rear speaker. <Ref. to ET-12, REMOVAL, Rear Speaker.>
- 4) Remove the sealing cover. <Ref. to EB-21, REMOVAL, Rear Sealing Cover.>
- 5) Remove the door sash and rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 6) Remove the rear door regulator and motor assembly. <Ref. to GW-19, REMOVAL, Rear Regulator and Motor Assembly.>
- 7) Remove the rear door latch. <Ref. to SL-33, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 8) Remove the rear outer handle. <Ref. to SL-32, REMOVAL, Rear Outer Handle.>
- 9) Remove the rear door weather strip.

NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 10) Remove the bolts and nuts to remove the door checker.

- 11) Pull the door harness connector inside the center pillar, then disconnect the connector.

- 12) Put a wooden block on jack and place jack under the rear door. Support the rear door with a jack to protect it from damage.

- 13) Remove the door-side bolts for upper and lower hinges to remove the rear door panel.

- 14) Remove the door hinge from vehicle.

Rear Door

EXTERIOR BODY PANELS

B: INSTALLATION

- 1) Put a wooden block on jack and place the rear door on that.

- 2) Apply grease to the moving part of door hinges.
- 3) Install the rear door to upper hinge and lower hinge adjusting by jack.
- 4) Tighten bolt of door checker.
- 5) Connect door harness connector.

Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EB-9, REAR DOOR, COMPONENT, General Description.>

- 6) Install while paying attention to make a uniform clearance around the rear door panel. For the dimension of clearance, refer to “SPECIFICATION” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

C: ADJUSTMENT

- 1) Open the rear door, loosen the door-side bolts of upper and lower hinges to align the position for vertical and horizontal direction of rear door panel.

- 2) Loosen the screw (A) and tap striker (B) using plastic hammer to adjust the gap between rear end surface of rear door panel and body surface.

CAUTION:

Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

8. Rear Sealing Cover

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-44, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the rear speaker. <Ref. to ET-12, REMOVAL, Rear Speaker.>
- 4) Remove the sealing cover.

NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new part.

B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) When replacing the sealing cover, use the butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

Butyl tape:

3M8626 or the equivalent

NOTE:

- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- If the butyl tape is applied unevenly, it will cause water leakage and soiling.

C: INSPECTION

If the sealing cover gets damaged, replace it with a new part.

Door Sash Tape

EXTERIOR BODY PANELS

9. Door Sash Tape

A: REMOVAL

1. FRONT DOOR

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-43, FRONT DOOR, REMOVAL, Door Trim.>
- 3) Remove the outer mirror assembly. <Ref. to GW-15, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the sealing cover. <Ref. to EB-18, REMOVAL, Front Sealing Cover.>
- 5) Remove the front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 6) Remove the glass run rubber.
- 7) Remove the B pillar upper clip, and remove the front door weather strip.

- 8) Remove the screws, and remove the front door weather strip outer.

CAUTION:

- When removing the weather strip outer, be careful not to damage the vehicle.
- If the weather strip outer is deformed, always replace with a new part.

- 9) Peel the door sash tape from the door sash.

NOTE:

- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

2. REAR DOOR

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-44, REAR DOOR, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-21, REMOVAL, Rear Sealing Cover.>
- 4) Remove the rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 5) Remove the glass run rubber.
- 6) Remove the B pillar upper clip, and remove the rear door weather strip.

- 7) Loosen the screws and clips to remove the gusset cover outer.

- 8) Remove the rear door weather strip outer.

CAUTION:

- When removing the weather strip outer, be careful not to damage the vehicle.
- If the weather strip outer is deformed, always replace with a new part.

9) Peel the door sash tape from the door sash.

NOTE:

- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

B: INSTALLATION

CAUTION:

- Press evenly along the sash when applying the tape using a spatula or similar object to make sure no bubbles are formed. If air bubbles are formed, reapply the tape.
- If the tape is wrinkled, etc. during application, replace the tape.
- Be sure to press the ends of the tape firmly to adhere securely. If the tape comes off at the ends or where folded, the adhesive strength is weakened and the tape may peel off.
- There are locations where the tape ends will overlap each other. When applying the tape, be careful of the order of their application.

• **Front**

• **Rear**

1. FRONT DOOR

1) Match the upper area of the gusset and the cut area of the tape as shown in the figure. (Position of the arrow)

(1) Front door sash tape - front

Door Sash Tape

EXTERIOR BODY PANELS

2) Apply tape from the front of the vehicle towards the rear.

NOTE:

Apply the tape so that the end of the tape is within 2.5 ± 1.5 mm (0.1 ± 0.06 in) from a line extending from the front door rear sash.

- (1) Front door sash tape - front
- (2) Line extending from the front door rear sash

3) Cut away both ends of the front door sash tape - rear.

4) Match the sash corner and the cut area of the tape as shown in the figure. (Position of the arrow)

5) The lower end of the tape is to be aligned so that a space of approximately 3.7 mm (0.15 in) remains, so that the attachment holes of the weather strip outer are not blocked. (Position of the arrow)

- (1) Front door sash tape - rear

6) Apply tape from the top of the vehicle towards the bottom.

7) Fold the corners at the door upper end area in the order of (1) - (3).

8) Thereafter, install door parts in the reverse order of disassembly.

9) Install while paying attention to make a uniform clearance around the front door panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

2. REAR DOOR

1) Cut away both ends of the rear door sash tape - rear.

2) Apply the tape so that the end of the tape is within 2.5 ± 1.5 mm (0.1 ± 0.06 in) of a line extending from the rear door upper sash.

- (1) Rear door sash tape - rear
- (2) Line extending from the rear door upper sash

3) Apply tape from the top of the vehicle towards the bottom.

4) Match the rear door upper sash corner and the cut area of the tape as shown in the figure. (Position of the arrow)

NOTE:

Apply the tape so that the end of the tape is within 2.5 ± 1.5 mm (0.1 ± 0.06 in) of a line extending from the rear door front sash.

- (1) Rear door sash tape - medium
- (2) Line extending from the front sash of the rear door

Door Sash Tape

EXTERIOR BODY PANELS

5) Apply tape from the rear of the vehicle towards the front.

6) Fold the corners at the door upper end area in the order of (1) - (3).

7) Cut away both ends of the rear door sash tape - front.

8) Match the sash corner and the cut area of the tape as shown in the figure. (Position of the arrow)

9) The lower end of the tape is to be aligned so that a space of approximately 3.7 mm (0.15 in) remains, so that the attachment holes of the weather strip outer are not blocked. (Position of the arrow)

(1) Rear door sash tape - front

10) Apply tape from the top of the vehicle towards the bottom.

11) Fold the corners at the door upper end area in the order of (1) - (2).

12) Thereafter, install door parts in the reverse order of disassembly.

13) Install while paying attention to make a uniform clearance around the rear door panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

10. Rear Gate

A: REMOVAL

1. REAR GATE PANEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear gate trim. <Ref. to EI-67, REMOVAL, Rear Gate Trim.>
- 3) Remove the rear gate garnish. <Ref. to EI-69, REMOVAL, Rear Gate Garnish.>
- 4) Remove the rear wiper arm. <Ref. to WW-22, REMOVAL, Rear Wiper Arm.>
- 5) Remove the rear wiper motor. <Ref. to WW-23, REMOVAL, Rear Wiper Motor.>
- 6) Remove the rear gate latch and actuator assembly. <Ref. to SL-35, REMOVAL, Rear Gate Latch and Actuator Assembly.>
- 7) Remove the roof spoiler. <Ref. to EI-39, REMOVAL, Roof Spoiler.>
- 8) Remove the connecting part of rubber duct (A).

- 9) Pull off the harness and washer hose from the rear gate.
- 10) Remove harness clip of each connector from the rear gate panel.
- 11) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

- 12) Remove the mounting bolt of rear gate damper stay.

- 13) Remove the rear gate hinge bolt, and remove the rear gate panel.

- 14) Remove the rear gate hinge from the vehicle.

2. REAR GATE DAMPER STAY

CAUTION:

- Do not damage piston rods and oil seals.
- Never disassemble cylinders: They contain gas.

- 1) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

- 2) Remove the mounting bolt of rear gate damper stay.

- 3) Remove the mounting bolts and the damper stay.

3. REAR GATE HINGE

- 1) Disconnect the ground cable from battery.
- 2) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 3) Disconnect the rear gate harness connector and rear washer hose behind the rear quarter.
- 4) Remove the connecting part of rubber duct (A).

NOTE:

To remove the rubber duct from the vehicle side, press the tab.

- 5) Pull out the rear gate harness and rear washer hose.

- 6) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

- 7) Remove the mounting bolt of rear gate damper stay.

Rear Gate

EXTERIOR BODY PANELS

- 8) Remove the rear gate hinge bolt, and remove the rear gate panel.

- 9) Remove the nuts and remove the rear gate hinge from the vehicle.

B: INSTALLATION

1. REAR GATE PANEL

- 1) Install each part in the reverse order of removal.

Tightening torque:

25 N·m (2.55 kgf·m, 18.4 ft·lb)

- 2) Install while paying attention to make a uniform clearance around the rear gate panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

2. REAR GATE DAMPER STAY

- 1) Prevent the rear gate from closing using prop or the like.

CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

- 2) Install each part in the reverse order of removal.

Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EB-10, REAR GATE, COMPONENT, General Description.>

C: ADJUSTMENT

For the panel clearance around the rear gate panel, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

- 1) Adjust the rear gate panel position in the vertical and horizontal directions.

- (1) Loosen the hinge mounting bolts.
 - (2) Adjust the panel clearance for the rear gate panel in the vertical and horizontal directions.
- 2) Adjust the height difference between the rear gate panel and the body.

- (1) Loosen the bolts.
- (2) By tapping on the striker with a plastic hammer, adjust the height difference between the rear gate panel and the body.

D: DISPOSAL**1. REAR GATE DAMPER STAY****CAUTION:**

Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.

1) Cover with a vinyl sack as shown in the figure.

- (1) Rear gate damper stay
- (2) Vinyl sack

NOTE:

Prevent the vinyl sack from being caught by drill cutting edge.

2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.

Drill a hole of 2 to 3 mm (0.08 to 0.12 in) diameter at a point 10 to 200 mm (0.39 to 7.87 in) from the body side, and bleed the gas in the rear gate damper stay completely.

- (1) Door side
- (2) Body side
- (3) 190 mm (7.48 in)
- (4) 10 mm (0.39 in)
- (5) Piston rod
- (6) Cylinder
- (7) Portion to be drilled

Protector Tape

EXTERIOR BODY PANELS

11.Protector Tape

A: INSTALLATION

EB-00757

(a) Application tape

(b) Protector tape

(c) Door panel

(1) Align the application paper to the rounded edge of door panel.

- 1) Clean the area around applying position to remove any foreign objects on body.
- 2) Detach the backing paper and apply the protector tape after positioning it correctly.
- 3) Detach the backing papers, and moisten the applying area and the backside of protector tape by spraying liquid (mild detergent solution at 3% concentration).
- 4) Apply the protector tape to the vehicle body.

CAUTION:

Remove the water or air bubbles out of the protector tape by using the plastic or rubber spatula.

- 5) Remove the application tape.

General Description

CRUISE CONTROL SYSTEM

1. General Description

A: COMPONENT

CC-00886

- | | | |
|-----------------------------------|-----------------------------------------------------------|----------------------------------------|
| (1) Engine control module (ECM) | (4) Cruise indicator light and cruise set indicator light | (7) Neutral position switch (MT model) |
| (2) Cruise control command switch | (5) Transmission control module (TCM) (AT model) | (8) Clutch switch (MT model) |
| (3) Stop light and brake switch | (6) Inhibitor switch (AT model) | |

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure that the functional parts operate normally.

General Description

CRUISE CONTROL SYSTEM

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX® bit T30	Used for removing/installing driver's airbag module.

Cruise Control System

CRUISE CONTROL SYSTEM

2. Cruise Control System

A: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. <Ref. to WI-185, WIRING DIAGRAM, Cruise Control System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to CC(di-ag)-2, Basic Diagnostic Procedure.>

C: NOTE

For operation procedures of each component of the cruise control system, refer to the respective section.

- Cruise control unit: <Ref. to CC-5, Cruise Control Module.>
- Cruise control command switch: <Ref. to CC-6, Cruise Control Command Switch.>
- Combination meter: <Ref. to CC-8, Combination Meter.>
- Stop light and brake switch: <Ref. to CC-9, Stop Light & Brake Switch.>
- Clutch switch: <Ref. to CC-10, Clutch Switch.>
- Inhibitor switch: <Ref. to CC-12, Inhibitor Switch.>
- Transmission control module (TCM): <Ref. to CC-11, Transmission Control Module (TCM).>
- Neutral position switch: <Ref. to CC-13, Neutral Position Switch.>

3. Cruise Control Module

A: NOTE

The control of cruise control system is carried out in engine control module (ECM).

B: REMOVAL

For removal procedures of the control module, refer to "FUEL INJECTION (FUEL SYSTEM)".

- Non-turbo model: <Ref. to FU(H4DO)-101, REMOVAL, Engine Control Module (ECM).>
- Turbo model: <Ref. to FU(H4DOTC)-57, REMOVAL, Engine Control Module (ECM).>

C: INSTALLATION

For installation procedures of the control module, refer to "FUEL INJECTION (FUEL SYSTEM)".

- Non-turbo model: <Ref. to FU(H4DO)-102, INSTALLATION, Engine Control Module (ECM).>
- Turbo model: <Ref. to FU(H4DOTC)-57, INSTALLATION, Engine Control Module (ECM).>

Cruise Control Command Switch

CRUISE CONTROL SYSTEM

4. Cruise Control Command Switch

A: REMOVAL

CAUTION:

Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIR-BAG SYSTEM". <Ref. to AB-5, CAUTION, General Description.>

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
- 4) Using TORX® bit T30 (1), loosen two TORX® bolts on the side of the steering wheel.

- 5) Disconnect the horn harness.
- 6) Disconnect the airbag module connector on the back of airbag module, and then remove the airbag module. <Ref. to AB-10, PROCEDURE, Airbag Connector.>

- 7) Remove the steering wheel. <Ref. to PS-13, REMOVAL, Steering Wheel.>

- 8) Remove the screws to remove the lower cover from steering wheel.

- 9) Remove the screws on the backside of the steering wheel to remove the cruise control command switch.

B: INSTALLATION

CAUTION:

- Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIR-BAG SYSTEM". <Ref. to AB-5, CAUTION, General Description.>
 - Do not allow harness and connectors to interfere or get tangled up with other parts.
- Install each part in the reverse order of removal.

Tightening torque:

Airbag module: 10 N·m (1.02 kgf·m, 7.4 ft·lb)

C: INSPECTION

- 1) Disconnect the cruise control command switch connector.
- 2) Check the resistance between cruise control command switch terminals.

Switch	Position	Terminal No.	Standard
CANCEL SET/COAST RESUME/ ACCEL	All OFF	7 and 6	Approx. 4 k Ω
CANCEL	ON	7 and 6	Less than 1 Ω
SET/COAST	ON	7 and 6	Approx. 250 Ω
RESUME/ ACCEL	ON	7 and 6	Approx. 1500 Ω
MAIN (CRUISE)	OFF	8 and 6	1 M Ω or more
	ON	8 and 6	Less than 1 Ω

- 3) Replace the cruise control command switch if the inspection result is not within the standard value.

5. Combination Meter

A: NOTE

For the combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-22, Combination Meter.>

6. Stop Light & Brake Switch

A: NOTE

For stop light and brake switch, refer to "BRAKE" section. <Ref. to BR-40, Stop Light Switch.>

7. Clutch Switch

A: NOTE

For clutch switch, refer to “CLUTCH SYSTEM” section. <Ref. to CL-26, Clutch Switch.>

8. Transmission Control Module (TCM)

A: NOTE

For transmission control module (TCM), refer to “AUTOMATIC TRANSMISSION” section. <Ref. to 4AT-66, Transmission Control Module (TCM).>

9. Inhibitor Switch

A: NOTE

For inhibitor switch, refer to "AUTOMATIC TRANSMISSION" section. <Ref. to 4AT-52, Inhibitor Switch.>

10. Neutral Position Switch

A: NOTE

For neutral position switch, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section.

<Ref. to 5MT-34, Switches and Harness.>

Neutral Position Switch

A: PROCEDURE

	Step	Check	Yes	No
1	CHECK MALFUNCTION INDICATOR LIGHT. Make sure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step 5.	Go to step 2.
2	CHECK CRUISE INDICATOR LIGHT. Make sure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step 7.	Go to step 3.
3	CHECK CRUISE CONTROL MAIN SWITCH OPERATION. Check cruise control main switch operation. (Ensure the cruise indicator light illuminates.)	Is the cruise control main switch turned on? (Does the cruise indicator light illuminate?)	Go to step 4.	Go to phenomenon 1. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	CHECK CRUISE CONTROL SET OPERATION. Check the cruise control setting operation.	Can the cruise control be set while driving at 40 km/h (25 MPH) or more?	Go to step 8.	Go to step 7.
5	CHECK DTC. Read all DTCs using the Subaru Select Monitor.	Is an engine or ABS/VDC related DTC displayed?	Record the DTC. Go to step 6.	Go to phenomenon 2. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	CHECK FREEZE FRAME DATA. Using the Subaru Select Monitor, check the Freeze Frame Data or Information in Trouble State.	Was the Freeze Frame Data or Information in Trouble State recorded?	Record the data. Perform the diagnosis according to DTC related to engine or ABS/VDC.	Perform the diagnosis according to DTC related to engine or ABS/VDC.
7	CHECK CANCEL CODE. Using the Subaru Select Monitor, read the cancel codes. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the cruise control command switch after the cruise control is deactivated. If the above is performed, the cancel code will be cleared.	Is it possible to read the cancel codes?	Perform the diagnosis according to the cancel code. <Ref. to CC(diag)-11, LIST, List of Cancel Code.>	Go to step 8.
8	CHECK CRUISE SET INDICATOR LIGHT. Make sure the cruise set indicator light illuminates.	Does the cruise set indicator light illuminate?	Go to step 9.	Go to phenomenon 3. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Basic Diagnostic Procedure

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED. Make sure the vehicle speed is held within set speed.	Is the vehicle speed kept within setting speed ± 3 km/h (± 2 MPH)? (Make sure that on a level road.)	Go to step 10.	Go to phenomenon 4. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10 CHECK RESUME/ACCEL OPERATION. Check the RESUME/ACCEL switch operation.	Does the vehicle speed increase or return to set speed after RESUME/ACCEL switch has been pressed?	Go to step 11.	Go to phenomenon 5. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11 CHECK SET/COAST OPERATION. Check the SET/COAST switch operation.	Does the vehicle speed decrease after SET/COAST switch has been pressed?	Go to step 12.	Go to phenomenon 6. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12 CANCEL OPERATION CHECK. Check the CANCEL switch operation.	Is the cruise control released after CANCEL switch has been pressed?	Go to step 13.	Go to phenomenon 7. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13 CHECK CRUISE CONTROL RELEASE OPERATION. Check the cruise control release operation.	Is the cruise control released after brake pedal has been depressed?	Go to step 14.	Go to phenomenon 8. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
14 CHECK CRUISE CONTROL RELEASE OPERATION. Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step 15.	Go to phenomenon 9. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
15 CHECK CRUISE CONTROL RELEASE OPERATION. Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

General Description

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

2. General Description

A: CAUTION

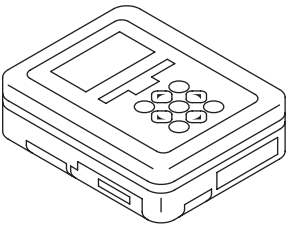

Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch. Airbag system wiring harness is routed near the cruise control command switch.

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

C: INSPECTION

Measure the battery voltage and specific gravity of electrolyte.

Standard voltage:

12 V or more

Specific gravity:

1.260 or more

Electrical Component Location

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

3. Electrical Component Location

A: LOCATION

Neutral signal (AT model)		C35	<ul style="list-style-type: none"> Battery voltage is detected when the shift lever is in any position except for "P" or "N". "0 V" is detected when the shift lever is in "P" or "N" position.

B: WIRING DIAGRAM

<Ref. to WI-185, WIRING DIAGRAM, Cruise Control System.>

5. Subaru Select Monitor

A: OPERATION

- 1) Prepare the Subaru Select Monitor kit.
- 2) Prepare PC with Subaru Select Monitor installed.
- 3) Connect the SDI (Subaru Diagnostic Interface) to the PC USB port (exclusively for Subaru Selector Monitor) using a USB cable.

NOTE:

Port exclusively for Subaru Select Monitor refers to the USB port used when installing Subaru Select Monitor.

- 4) Connect the diagnosis cable to the SDI.
- 5) Connect the SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:

Do not connect scan tools other than the Subaru Select Monitor.

- 6) Turn the ignition switch to ON.
- 7) Start the PC.
- 8) Run the "PC application for Subaru Select Monitor".

Read Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

6. Read Cancel Code

A: OPERATION

1. GENERAL DESCRIPTION

The on-board diagnosis function operates in two categories, which are used depending on the type of problems;

1) Cruise Control Cancel Conditions Diagnosis:

(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.

(2) Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.

CAUTION:

- **The cruise control memory stores not only the cruise “cancel” which occurred (although “cancel” operation is not entered by the driver), but also the “cancel” condition input by the driver.**

- **The latest memory content (latest code) is cleared when ignition switch is turned to OFF. However, the memory content by the diagnosis of faulty switches relating to the system and cruise control is retained as the fault history (memory code) after the ignition switch is turned OFF.**

2) Real-time Diagnosis:

Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.

(2) Monitor the signal conditions from switches and sensors.

2. CRUISE CONTROL CANCEL CONDITIONS DIAGNOSIS

1) Run the Subaru Select Monitor.

2) On «Main Menu» display, select {Each System Check}.

On «System Selection Menu» display, select {Engine Control System} and select the [OK]. Select [OK] after the engine type information is displayed.

3) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

CAUTION:

- **When performing diagnosis, observe the legal speed limit on the road.**

- **The cancel code will be also appear when cruise control is cancelled by the driver’s operation. Do not confuse them.**

- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

4) When the set speed is cancelled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, selecting the {Cancel Code(s) Display} on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.

NOTE:

The {Latest Diagnostic Code(s)} and {Memorized Diagnostic Code(s)} are contained in the cancel code. The latest code recognized during current test drive is displayed in {Latest Diagnostic Code(s)}. Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in {Memorized Diagnostic Code(s)}.

5) Perform Engine DTC Clear Memory operation. <Ref. to EN(H4DO)(diag)-55, OPERATION, Clear Memory Mode.> <Ref. to EN(H4DOTC)(diag)-55, OPERATION, Clear Memory Mode.>

Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:

The latest code will be cleared by turning ignition switch to OFF.

3. REAL-TIME DIAGNOSIS

1) Select {Current Data Display & Save} in «Engine Diagnosis» display screen.

2) Make sure that normal display is shown when operated as follows:

- Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)

- Turn the main switch to ON.

- Turn the “CANCEL” switch to ON.

- Turn the “SET/COAST” switch to ON.

- Turn the “RESUME/ACCEL” switch to ON.

- Depress or release the clutch pedal.

- Place the shift lever in any position other than neutral.

NOTE:

- For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.

- For detailed concerning cancel code, refer to the “List of Cancel Codes”. <Ref. to CC(diag)-11, List of Cancel Code.>

Diagnostics with Phenomenon

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

7. Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check item	Reference
1	Cruise control main switch is not turned to ON. (Cruise indicator light does not illuminate.) Or, the cruise control was released without operating the cruise control main switch.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check the cruise indicator light.	<Ref. to CC(diag)-10, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2	Cruise control cannot be set. Or, the cruise control was released without a releasing operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check stop light switch and brake switch.	<Ref. to BR-38, Brake Pedal.> <Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.>
		(5) Check clutch switch.	<Ref. to CL-26, Clutch Switch.> <Ref. to CC(diag)-18, 13, Diagnostic Procedure with Cancel Code.>
		(6) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
		(7) Check vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
3	Cruise set indicator light does not illuminate.	Check the cruise set indicator light.	<Ref. to CC(diag)-10, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ± 3 km/h (± 2 MPH).	Check the vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RESUME/ACCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the RESUME/ACCEL switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
6	Vehicle speed does not decrease after SET/COAST switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the SET/COAST switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
7	Cruise control is not released after CANCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the CANCEL switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
8	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check stop light switch and brake switch.	<Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-40, INSTALLATION, Stop Light Switch.>
9	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to 4AT-52, INSPECTION, Inhibitor Switch.>
10	Cruise control is not released after clutch pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check clutch switch.	<Ref. to CC(diag)-18, 13, Diagnostic Procedure with Cancel Code.> <Ref. to CL-26, CLUTCH SWITCH, INSTALLATION, Clutch Switch.>

Diagnostics with Phenomenon

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

B: CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

TROUBLE SYMPTOM:

Cruise control can be set, but the cruise indicator light and cruise set indicator light do not illuminate.

	Step	Check	Yes	No
1	CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT. 1) Perform the self-diagnosis of combination meter. <Ref. to IDI-5, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.> 2) Check the cruise indicator light and cruise set indicator light if they illuminate.	Do the cruise indicator light and cruise set indicator light illuminate?	Go to step 2.	Replace the meter case assembly. <Ref. to IDI-22, Combination Meter.>
2	CHECK DTC OF LAN COMMUNICATION CIRCUIT. 1) Complete self-diagnosis, and turn the ignition switch to ON again. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC of low-speed CAN displayed?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>

List of Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

8. List of Cancel Code

A: LIST

NOTE:

- The cancel code is registered even when cancel is performed intentionally by the driver.
- Cancel codes are cleared if the ignition switch is turned to OFF.
- If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.
- If the cruise indicator light is flashing, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.
- To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.

Cancel code	Item	Contents of diagnosis	Note
11	Main Switch	Main switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the main switch. <Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
12	Stop Light & Brake Switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the brake pedal. <Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.>
13	Clutch Switch	Clutch switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the clutch pedal. <Ref. to CC(diag)-18, 13, Diagnostic Procedure with Cancel Code.>
14	Neutral Position Switch	Neutral position switch is turned to ON, and then the cruise control is released.	This code is displayed without shifting to neutral position. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>
15	Cancel Switch	Cancel switch is turned to ON, and then the cruise control is released.	This code is displayed without operating the cancel switch. <Ref. to CC(diag)-21, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the ignition switch. <Ref. to CC(diag)-22, 16, Diagnostic Procedure with Cancel Code.>
21	Cruise control switch malfunction when ignition switch is turned to ON	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This code is displayed when the ignition switch is turned to ON without operating the cruise control command switch. <Ref. to CC(diag)-22, 21, Diagnostic Procedure with Cancel Code.>

List of Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Cancel code	Item	Contents of diagnosis	Note
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.)	This code is displayed with normal operation. <Ref. to CC(diag)-23, 24, Diagnostic Procedure with Cancel Code.>
25	Abnormality of input circuit for Brake switch	Malfunction of brake switch input circuit in ECM is detected.	<Ref. to CC(diag)-23, 25, Diagnostic Procedure with Cancel Code.>
31	Abnormal engine speed Signal	<ul style="list-style-type: none"> • Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st or Reverse position. 	Cruise in 2nd shift position or more. <Ref. to CC(diag)-23, 31, Diagnostic Procedure with Cancel Code.>
32	Cruse Control out of Range	<ul style="list-style-type: none"> • Controlled vehicle speed decreased under the limit during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed. 	This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-23, 32, Diagnostic Procedure with Cancel Code.>
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. <Ref. to CC(diag)-24, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-24, 35, Diagnostic Procedure with Cancel Code.>
41	VDC/TCS Operating	Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-24, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	ABS or Vehicle dynamics control (VDC) system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 43, Diagnostic Procedure with Cancel Code.>

List of Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Cancel code	Item	Contents of diagnosis	Note
44	Body Integrated unit Failure	Body integrated unit system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 44, Diagnostic Procedure with Cancel Code.>
45	Meter Failure	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 45, Diagnostic Procedure with Cancel Code.>
61	Brake switch abnormal	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-24, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-24, 62, Diagnostic Procedure with Cancel Code.>
63	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-24, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-25, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality 1 of switches related to cruise control	Cruise control command switch malfunction is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-25, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Cruise control calculation (microcomputer) malfunction is detected.	<Ref. to CC(diag)-25, 66, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

9. Diagnostic Procedure with Cancel Code

A: 11

Detected when main switch is pressed or when main switch related malfunction occurs.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

WIRING DIAGRAM:

CC-00858

Step	Check	Yes	No
1 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT. 1) Remove the driver's airbag module. <Ref. to AB-18, REMOVAL, Driver's Airbag Module.> 2) Disconnect the harness connector of cruise control command switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (ST3) No. 8 (+) — Chassis ground (-): (ST3) No. 7 (+) — Chassis ground (-):	Is the voltage 5 V or more?	Go to step 2.	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.
2 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between harness connector terminal and chassis ground. Connector & terminal (ST3) No. 6 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 3.	Check for open circuit between cruise control command switch, ECM, and chassis ground and check the ECM.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK CRUISE CONTROL COMMAND SWITCH. Measure the resistance between switch terminals when the cruise control command switch is not depressed. <i>Terminals</i> No. 6 — No. 7:	Is the resistance approx. 4 k Ω ?	Go to step 4.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
4 CHECK CANCEL SWITCH. 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between switch terminals with the CANCEL switch pressed. <i>Terminals</i> No. 6 — No. 7:	Is the resistance approx. less than 1 Ω when the CANCEL switch is pressed?	Go to step 5.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
5 CHECK SET/COAST SWITCH. Measure the resistance between switch terminals with the SET/COAST switch pressed. <i>Terminals</i> No. 6 — No. 7:	Is the resistance approx. 250 Ω when SET/COAST switch is pressed?	Go to step 6.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
6 CHECK RESUME/ACCEL SWITCH CIRCUIT. Measure the resistance between switch terminals with the RESUME/ACCEL switch pressed. <i>Terminals</i> No. 6 — No. 7:	Is the resistance approx. 1,500 Ω when RESUME/ACCEL switch is pressed?	Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

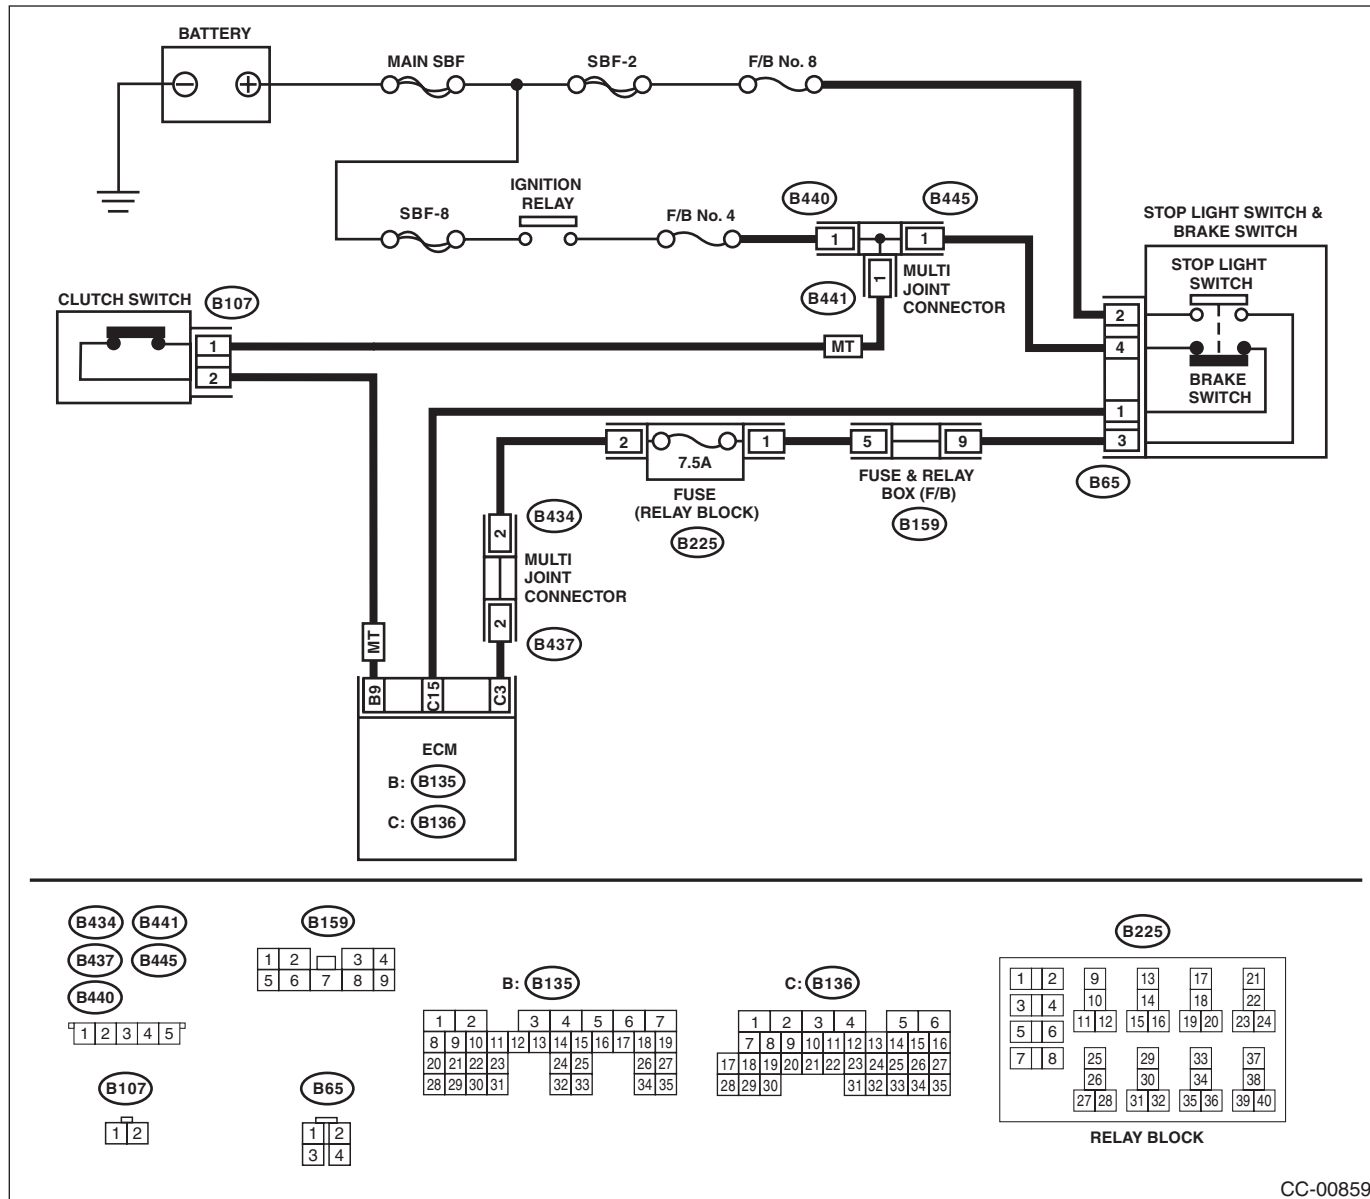

B: 12

Detected when brake pedal is depressed or malfunction related to stop light & brake switch occurs.

TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

WIRING DIAGRAM:

CC-00859

Step	Check	Yes	No
1	CHECK STOP LIGHT & BRAKE SWITCH. Check the stop light & brake switch. <Ref. to CC-9, Stop Light & Brake Switch.>	Go to step 2.	Replace the stop light & brake switch. Or adjust the installation position.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B65) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 3.	<ul style="list-style-type: none"> • Check fuse No. 8 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.
3 CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT. Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B65) No. 4 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 4.	<ul style="list-style-type: none"> • Check fuse No. 4 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.
4 CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light & brake switch harness connector terminal. Connector & terminal (B136) No. 15 — (B65) No. 1: (B136) No. 3 — (B65) No. 3:	Is the resistance less than 10 Ω ?	Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>	Repair the harness.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

C: 13

Detected when clutch pedal is depressed or malfunction related to clutch switch occurs.

TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

WIRING DIAGRAM:

CC-00859

Step	Check	Yes	No
1	CHECK CLUTCH SWITCH. Check the clutch switch. <Ref. to CL-26, INSPECTION, Clutch Switch.>	Go to step 2.	Replace the clutch switch. Or adjust the installation position.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p>2 CHECK CLUTCH SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B107) No. 1 (+) — Chassis ground (-):</p>	<p>Is the voltage 10 V or more?</p>	<p>Go to step 3.</p>	<ul style="list-style-type: none"> • Check fuse No. 4 (in fuse & relay box). • Check open or shorted circuit of harness between clutch switch and fuse & relay box.
<p>3 CHECK CLUTCH SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between clutch switch harness connector terminal and ECM harness connector terminal. Connector & terminal (B107) No. 2 — (B135) No. 9:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).></p>	<p>Repair the harness.</p>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

D: 14

Detected when select lever is set in the neutral position, or when malfunction related to neutral position switch occurs.

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

Step	Check	Yes	No
1	CHECK TRANSMISSION TYPE.	Go to step 5.	Go to step 2.
2	CHECK INHIBITOR SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (T7) No. 6 (+) — Chassis ground (-):	Is the voltage approx. 10 V or more? Go to step 3.	Check for open or short circuit in the harness between inhibitor switch and ECM.
3	CHECK INHIBITOR SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor connector. 3) Turn the ignition switch to ON. 4) Measure the resistance between inhibitor switch harness connector terminal and starter motor. Connector & terminal (T7) No. 9 — Starter motor:	Is the resistance less than 10 Ω? Repair the harness.	Go to step 4.
4	CHECK INHIBITOR SWITCH. Remove and check the inhibitor switch. <Ref. to 4AT-52, INSPECTION, Inhibitor Switch.>	Is the inhibitor switch working normal? Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>	Replace the inhibitor switch.

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
5 CHECK NEUTRAL POSITION SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the neutral position switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B25) No. 2 (+) — Chassis ground (-):	Is the voltage approx. 10 V or more?	Go to step 6.	Check for open or short in the harness between neutral position switch and ECM.
6 CHECK NEUTRAL POSITION SWITCH CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure resistance between harness connector terminal of neutral position switch and chassis ground. Connector & terminal (B25) No. 1 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 7.	Repair the harness.
7 CHECK NEUTRAL POSITION SWITCH. Remove and check the neutral position switch. <Ref. to 5MT-35, INSPECTION, Switches and Harness.>	Is the neutral position switch OK?	Replace the ECM. <Ref. to FU(H4DO)-101, Engine Control Module (ECM).>	Replace the neutral position switch.

E: 15

Detected when CANCEL switch is pressed or malfunction related to main switch occurs.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.

<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

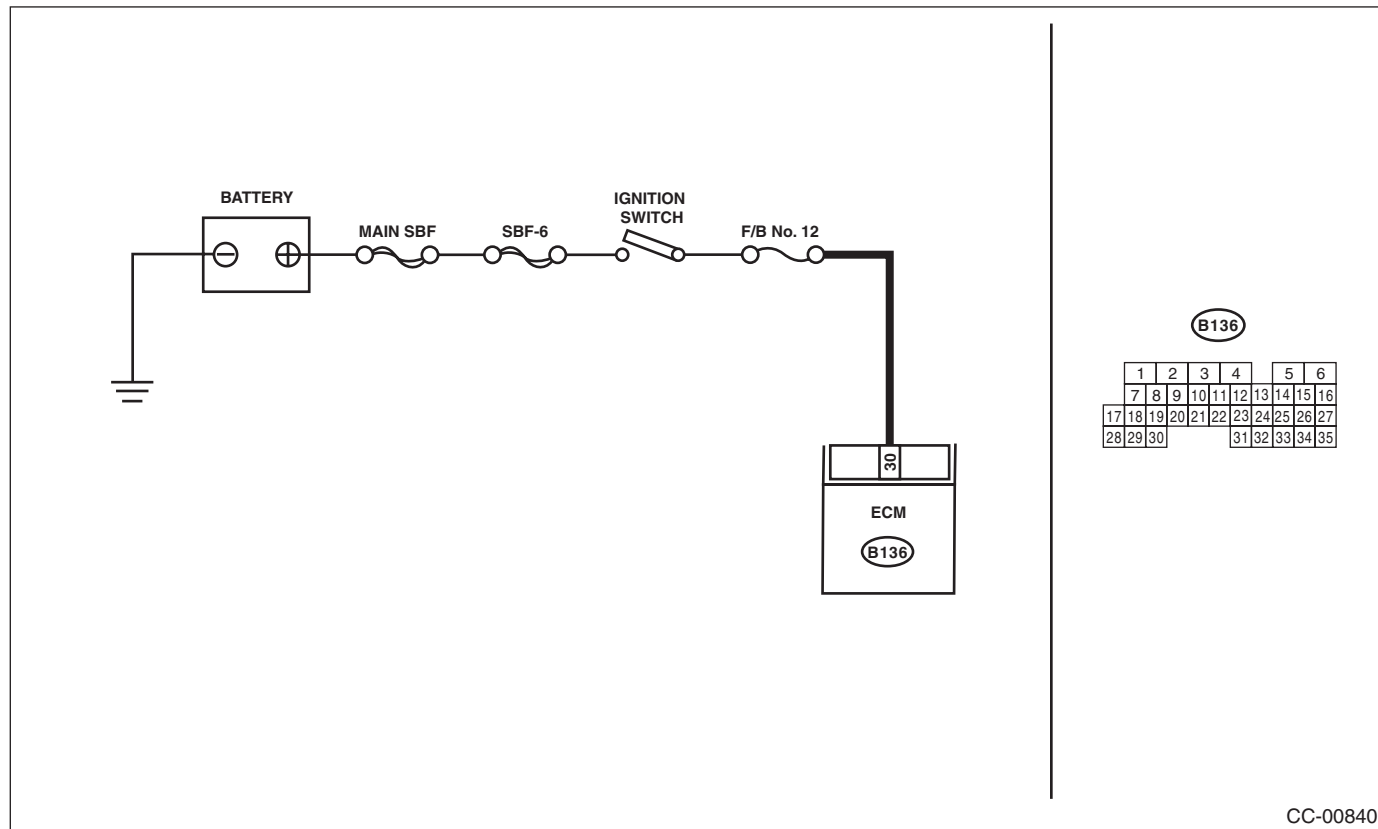

F: 16

Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

CC-00840

Step	Check	Yes	No
1 CHECK IGNITION SWITCH CIRCUIT 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. Connector & terminal (B136) No. 30 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Check for poor contact of ECM connector.	<ul style="list-style-type: none"> • Check fuse No. 12 (in fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

G: 21

Cruise control command switch malfunction is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure. <Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

H: 22

Malfunction related to vehicle speed sensor is detected.

DIAGNOSIS:

Open or shorted circuit in vehicle speed sensor system.

TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

	Step	Check	Yes	No
1	CHECK ABS OR VDC WARNING LIGHT. 1) Turn the ignition switch to ON. 2) After the initial operation of the combination meter is completed, check whether the VDC warning light continues to illuminate.	Does the warning light continue to illuminate?	Check the VDCCM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step 2.
2	CHECK DTC OF LAN COMMUNICATION CIRCUIT. Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC of low-speed CAN displayed?	Check the LAN communication circuit.	Replace the ECM. <Ref. to FU(H4DO)-101, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).>

I: 24

Malfunction in cruise control-related switch is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.

<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

J: 25

Malfunction of brake input circuit in ECM is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: 31

Engine speed signal malfunction is detected.

Abnormal increase of engine speed is detected.

Gear is placed in 1st or Reverse position.

After driving at the 2nd gear position or higher, perform the cruise setting again. If a cancel code is not detected, it is normal.

L: 32

Detected when the vehicle speed is out of the system controllable range.

Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.

If the cancel code is detected after performing the setting operation again, perform diagnosis of 22.

Refer to 22 for diagnostic procedure.

<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

M: 34

The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.

This cancel code is detected when driving for a long period of time at a speed higher than appropriate for cruise control setting by operating the accelerator pedal.

Perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

N: 35

Detected when it is impossible to perform the vehicle speed feedback.

Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, etc.) during cruise driving.

Cancel code is detected when driving condition is not suitable for cruise control.

Perform cruise set operation again after clearing the possible cause.

O: 41

VDC/TCS has operated.

Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: 43

ABS/VDC malfunction is detected.

VDC malfunction is detected during cruise driving or cruise setting.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: 44

Body integrated unit malfunction is detected.

Body integrated unit system malfunction is detected during cruise driving or cruise setting. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: 45

Combination meter malfunction is detected.

Combination meter malfunction is detected during cruise driving or cruise setting. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: 61

Malfunction in the stop light & brake switch is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to 12 for diagnostic procedure. <Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.>

T: 62

Neutral position switch malfunction is detected.

TROUBLE SYMPTOM:

Cruise control cannot be set.

Refer to 14 for diagnostic procedure. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>

U: 63

Malfunction of vehicle speed signal variation is detected.

TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

Refer to 22 for diagnostic procedure. <Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

V: 64

Malfunction related to engine is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: 65

Cruise control command switch malfunction is detected.

While the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.

TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure. <Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

X: 66

Cruise control calculation malfunction is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure. <Ref. to EN(H4DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

9. List of Diagnostic Trouble Code (DTC)	14
10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	15

Basic Diagnostic Procedure

IMMOBILIZER (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

Step	Check	Yes	No
1 CHECK SECURITY INDICATOR LIGHT. 1) Turn the ignition switch to "OFF" or "ACC". 2) Wait at least 60 seconds.	Does the security indicator light blink?	Go to step 2.	Check the security indicator light circuit. <Ref. to IM(diag)-11, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
2 CHECK KEY SWITCH. Remove the key from ignition switch.	Does the security indicator light begin to blink within 1 second after the key is removed?	Go to step 3.	Check the key switch circuit. <Ref. to IM(diag)-13, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
3 CHECK SECURITY INDICATOR LIGHT. Turn the ignition switch to ON.	Does the security indicator light go off?	Go to step 5.	Go to step 4.
4 CHECK ENGINE START. Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step 7.
5 CHECK ENGINE START. Turn the ignition switch to START.	Does the starter operate?	Go to step 6.	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
6 CHECK ENGINE START. Turn the ignition switch to START.	Does the engine start?	Immobilizer system is normal.	Go to step 8.
7 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. <Ref. to IM(diag)-8, Subaru Select Monitor.> 3) Turn the ignition switch and Subaru Select Monitor switch to ON. 4) Read the DTC of the body integrated unit.	Is the DTC displayed on screen?	Go to step 10.	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".

Basic Diagnostic Procedure

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. <Ref. to IM(diag)-8, Subaru Select Monitor.> 3) Turn the ignition switch and Subaru Select Monitor switch to ON. 4) Read the DTC of the ECM.	Is the DTC displayed on screen?	Go to step 9.	Perform the diagnosis for engine system. <Ref. to EN(H4DO)(diag)-70, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(H4DOTC)(diag)-67, PROCEDURE, Diagnostics for Engine Starting Failure.>
9 CHECK FREEZE FRAME DATA. Using the Subaru Select Monitor, check the Freeze Frame Data.	Was the Freeze Frame Data recorded?	Record the data. Go to step 10.	Go to step 10.
10 PERFORM DIAGNOSIS. 1) Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. 4) Read DTCs again.	Is the DTC displayed on screen?	Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

General Description

IMMOBILIZER (DIAGNOSTICS)

2. General Description

A: CAUTION

CAUTION:

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.

- When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

- (1) Ignition switch position
- (2) Sec.

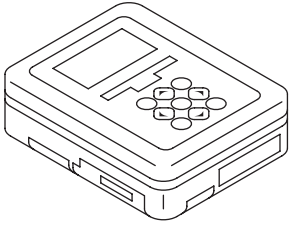

- If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
- Before performing the diagnostics, obtain all keys for the vehicle from the owner.
- Do not install or register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

General Description

IMMOBILIZER (DIAGNOSTICS)

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

Electrical Component Location

IMMOBILIZER (DIAGNOSTICS)

3. Electrical Component Location

A: LOCATION

IM-00308

(1) Antenna

(3) Body integrated unit

(4) Transponder

(2) Security indicator light (LED bulb)

4. Immobilizer Control Module I/O Signal

A: WIRING DIAGRAM

1. IMMOBILIZER

<Ref. to WI-180, WIRING DIAGRAM, Immobilizer System.>

5. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

- 1) Prepare the Subaru Select Monitor kit.
- 2) Connect the diagnosis cable to Subaru Select Monitor.
- 3) Connect the Subaru Select Monitor to data link connector.
 - (1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

- (2) Connect the diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools other than the Subaru Select Monitor.

- 4) Turn the ignition switch to ON and start the Subaru Select Monitor.
- 5) Using the Subaru Select Monitor, call up DTCs and various data, then record them.

2. COMMUNICATION LINE CHECK

NOTE:

Use "System Operation Check Mode" to check the communication line between ECM and the body integrated unit. This is called "communication line check".

- 1) Connect the Subaru Select Monitor.
- 2) On «Main Menu» display, select {Each System Check}.
- 3) On «System Selection Menu» display, select {Engine Control System}.
- 4) After engine type information is displayed, select [OK].
- 5) On «Engine Diagnosis» display, select {System Operation Check Mode}.
- 6) On «System Operation Check Mode» display, select {Immobilizer System}.
- 7) Start the communication line check.
- 8) Is «OK» displayed on screen?
If displayed, go to step 9).
If not, go to step 10).

9) After diagnostic results, it is determined that the circuit is not shorted. Finish the communication line check.

10) If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. ECM

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Engine Control System}.
- 3) Select [OK] after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display, select {Diagnostic Code(s) Display}.
- 5) On «Diagnostic Code(s) Display» display, select {Current DTC} or {Past DTC}.

NOTE:

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to IM(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>

2. BODY INTEGRATED UNIT

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. Unit}.
- 3) After {Integ. unit} is displayed, select [OK].
- 4) On «Integ. unit mode failure diag.» display, select {Diagnostic Code(s) Display}.

NOTE:

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to IM(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>

7. Clear Memory Mode

A: OPERATION

1. ECM

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Engine Control System}.
- 3) After engine type information is displayed, select [OK].
- 4) On «Engine Diagnosis» display, select {Clear Memory}.
- 5) When “Done” is displayed on the display, end the Subaru Select Monitor and turn the ignition switch to OFF.

NOTE:

- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

2. BODY INTEGRATED UNIT

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Integ. Unit}.
- 3) After {Integ. Unit} is displayed, select [OK].
- 4) On the «Integ. unit mode», select {Clear Memory}.
- 5) When “Done” is displayed on the display screen, end the Subaru Select Monitor and turn the ignition switch to OFF.

NOTE:

For detailed operation procedure, refer to the “PC application help for Subaru Select Monitor”.

Diagnostics Chart for Security Indicator Light

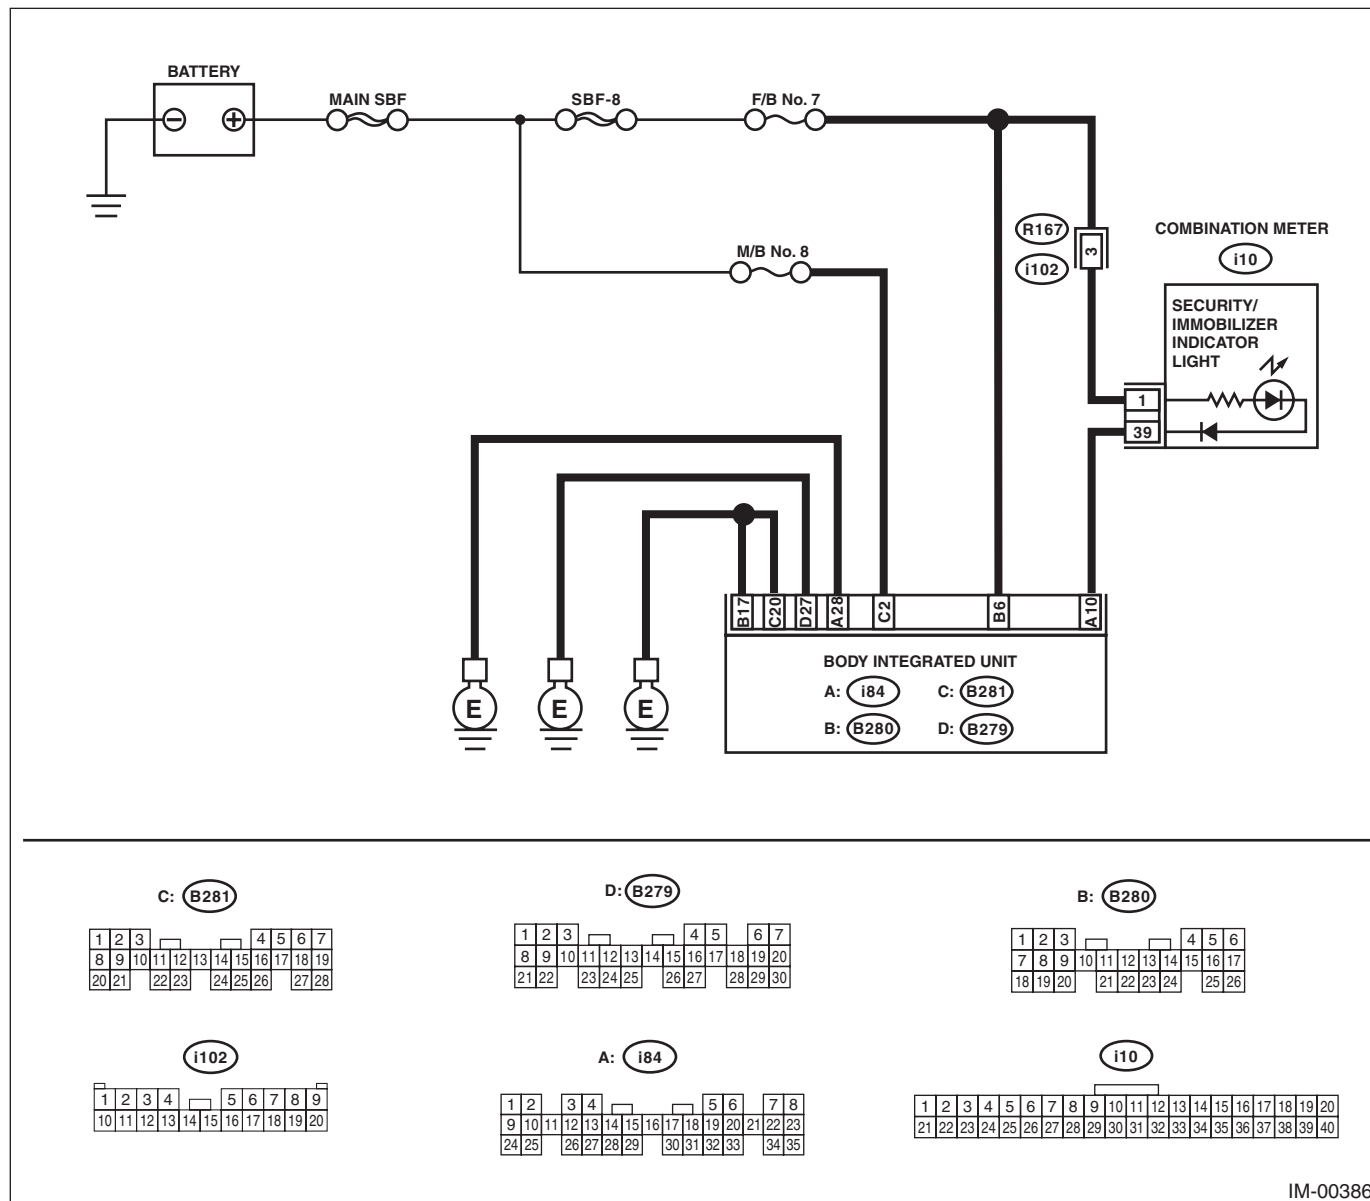

IMMOBILIZER (DIAGNOSTICS)

8. Diagnostics Chart for Security Indicator Light

A: INSPECTION

1. CHECK SECURITY INDICATOR LIGHT CIRCUIT

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK FUSE. 1) Remove the ignition key from ignition switch. 2) Check the fuse (M/B No. 8).	Is the fuse OK?	Go to step 2.	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.

Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK SECURITY INDICATOR LIGHT. 1) Disconnect the connector from body integrated unit. 2) Connect the resistor (100 Ω) between the body integrated unit connector terminal (i84) No. 10 and chassis ground.	Does the security indicator light illuminate?	Go to step 3.	Go to step 5.
3 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT. Measure the resistance between the body integrated unit connector terminal and chassis ground. <i>Connector & terminal</i> <i>(i84) No. 28 — Chassis ground:</i> <i>(B280) No. 17 — Chassis ground:</i> <i>(B281) No. 20 — Chassis ground:</i> <i>(B279) No. 27 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the open circuit of the body integrated unit ground circuit.
4 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT. 1) Turn the ignition switch to OFF. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground. <i>Connector & terminal</i> <i>(B280) No. 6 (+) — Chassis ground (-):</i> <i>(B281) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".	Check the harness for open or short circuit between body integrated unit and fuse.
5 CHECK COMBINATION METER CIRCUIT. 1) Remove the combination meter. <Ref. to IDI-22, Combination Meter.> 2) Measure the voltage between combination meter connector terminal and chassis ground. <i>Connector & terminal</i> <i>(i10) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 6.	Check for an open or short circuit in the harness between the combination meter and fuse.
6 CHECK COMBINATION METER CIRCUIT. Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal. <i>Connector & terminal</i> <i>(i84) No. 10 — (i10) No. 39:</i>	Is the resistance less than 10 Ω?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-22, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

2. CHECK KEY SWITCH CIRCUIT

WIRING DIAGRAM:

IM-00278

Step	Check	Yes	No
1 CHECK POWER SUPPLY CIRCUIT. 1) Disconnect the connector from key warning switch. 2) Measure the voltage between key warning switch connector terminal and chassis ground. Connector & terminal (B350) No. 3 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 2.	Check the harness for an open or short between the key warning switch and fuse.
2 CHECK KEY WARNING SWITCH. 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Measure the resistance between key warning switch connector terminals. Connector & terminal No. 3 — No. 4:	Is the resistance less than 1 Ω ?	Go to step 3.	Replace the key warning switch.
3 CHECK KEY WARNING SWITCH. 1) Remove the ignition key from ignition switch. 2) Measure the resistance between key warning switch connector terminals. Connector & terminal No. 3 — No. 4:	Is the resistance 1 M Ω or more?	Go to step 4.	Replace the key warning switch.
4 CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT. 1) Disconnect the connector from body integrated unit. 2) Measure the resistance between key warning switch connector terminal and body integrated unit connector terminal. Connector & terminal (B350) No. 4 — (B279) No. 2:	Is the resistance less than 10 Ω ?	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".	Repair the harness between key warning switch and body integrated unit.

List of Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

9. List of Diagnostic Trouble Code (DTC)

A: LIST

1. ECM

DTC	Item	Contents of diagnosis	Index No.
P0513	Incorrect Immobilizer Key	Incorrect immobilizer key (Use of unregistered key in body integrated unit)	<Ref. to IM(diag)-15, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1570	Antenna	Faulty antenna	<Ref. to IM(diag)-16, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1571	Reference Code Incompatibility	Reference code incompatibility between body integrated unit and ECM	<Ref. to IM(diag)-18, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1572	IMM Circuit Failure (Except Antenna Circuit)	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1574	Key Communication Failure	Communication failure between key and body integrated unit	<Ref. to IM(diag)-22, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1576	EGI Control Module EEPROM	ECM malfunctioning	<Ref. to IM(diag)-23, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1577	IMM Control Module EEPROM	Body integrated unit malfunctioning	<Ref. to IM(diag)-24, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1578	Meter Failure	<ul style="list-style-type: none"> Reference code incompatibility between combination meter and body integrated unit Communication failure between body integrated unit and ECM 	<Ref. to IM(diag)-25, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:

Perform diagnosis of engine DTC when a DTC other than an immobilizer DTC is detected. <Ref. to EN(H4DOTC)(diag)-80, List of Diagnostic Trouble Code (DTC).>

2. BODY INTEGRATED UNIT

DTC	Item	Contents of diagnosis	Index No.	Relation between ECM and DTC
B1401	M Collation NG	Reference code incompatibility between combination meter and body integrated unit	<Ref. to IM(diag)-25, DTC B1401 M COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1578
B1402	Immobilizer Key Collation NG	<ul style="list-style-type: none"> Incorrect immobilizer key (Use of unregistered key in body integrated unit) Faulty antenna 	<Ref. to IM(diag)-25, DTC B1402 IMMOBILIZER KEY COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	<ul style="list-style-type: none"> P0513 P1570 P1574
B1403	E/G request NG	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-25, DTC B1403 E/G REQUEST NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1572

NOTE:

The starter relay control is performed in immobilizer system. When the body integrated unit detects a non-conformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0513 INCORRECT IMMOBILIZER KEY

DTC DETECTING CONDITION:

Incorrect immobilizer key (Use of unregistered key in body integrated unit)

	Step	Check	Yes	No
1	PERFORM IGNITION KEY REGISTRATION. Perform registration to all keys used for the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration of all keys complete?	End.	Replace ignition keys (including transponder) which cannot be registered. Go to step 2.
2	PERFORM IGNITION KEY REGISTRATION. Perform registration to all keys used for the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration of all keys complete?	End.	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

B: DTC P1570 ANTENNA

DTC DETECTING CONDITION:

Faulty antenna

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK ANTENNA CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the antenna. <Ref. to SL-48, Immobilizer Antenna.> 3) Measure the resistance of antenna circuit. Connector & terminal (B415) No. 1 — No. 2:	Is the resistance 6 — 10 Ω?	Go to step 2.	Replace the antenna. <Ref. to SL-48, Immobilizer Antenna.>
2 CHECK ANTENNA CIRCUIT. 1) Disconnect the connector from body integrated unit. 2) Measure the resistance between body integrated unit connector and antenna connector. Connector & terminal (B280) No. 25 — (B415) No. 1: (B280) No. 26 — (B415) No. 2:	Is the resistance less than 10 Ω?	Go to step 3.	Repair the harness.
3 CHECK ANTENNA CIRCUIT. Measure the resistance between body integrated unit connector and chassis ground. Connector & terminal (B280) No. 25 — Chassis ground: (B280) No. 26 — Chassis ground:	Is the resistance 1 MΩ or more?	Go to step 4.	Repair the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<p>4</p> <p>CHECK BODY INTEGRATED UNIT FUNCTION.</p> <p>1) Connect the connector to antenna.</p> <p>2) Connect the connector to body integrated unit.</p> <p>3) Insert the key into the ignition switch, then use an oscilloscope to measure changes in voltage between the antenna connector and the chassis ground.</p> <p>Connector & terminal (B280) No. 25 (+) — Chassis ground (-):</p>	<p>Is the maximum voltage more than 40 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)</p>	<p>Go to step 5.</p>	<p>Replace the body integrated unit. <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".</p>
<p>5</p> <p>CHECK IGNITION KEY (TRANSPONDER).</p> <p>1) Remove the key from ignition switch.</p> <p>2) Start the engine using other key which is already registered.</p>	<p>Does the engine start?</p>	<p>Replace the ignition key (transponder). Refer to the "PC application help for Subaru Select Monitor".</p>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

C: DTC P1571 REFERENCE CODE INCOMPATIBILITY

DTC DETECTING CONDITION:

Reference code incompatibility between body integrated unit and ECM

Step	Check	Yes	No
1 PERFORM IGNITION KEY REGISTRATION. Perform registration to all keys used for the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration of all keys complete?	End.	Go to step 2.
2 CHECK FOR ANY OTHER DTC ON DISPLAY.	Is any other immobilizer DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-14, List of Diagnostic Trouble Code (DTC).> Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".	Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).> Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> and register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

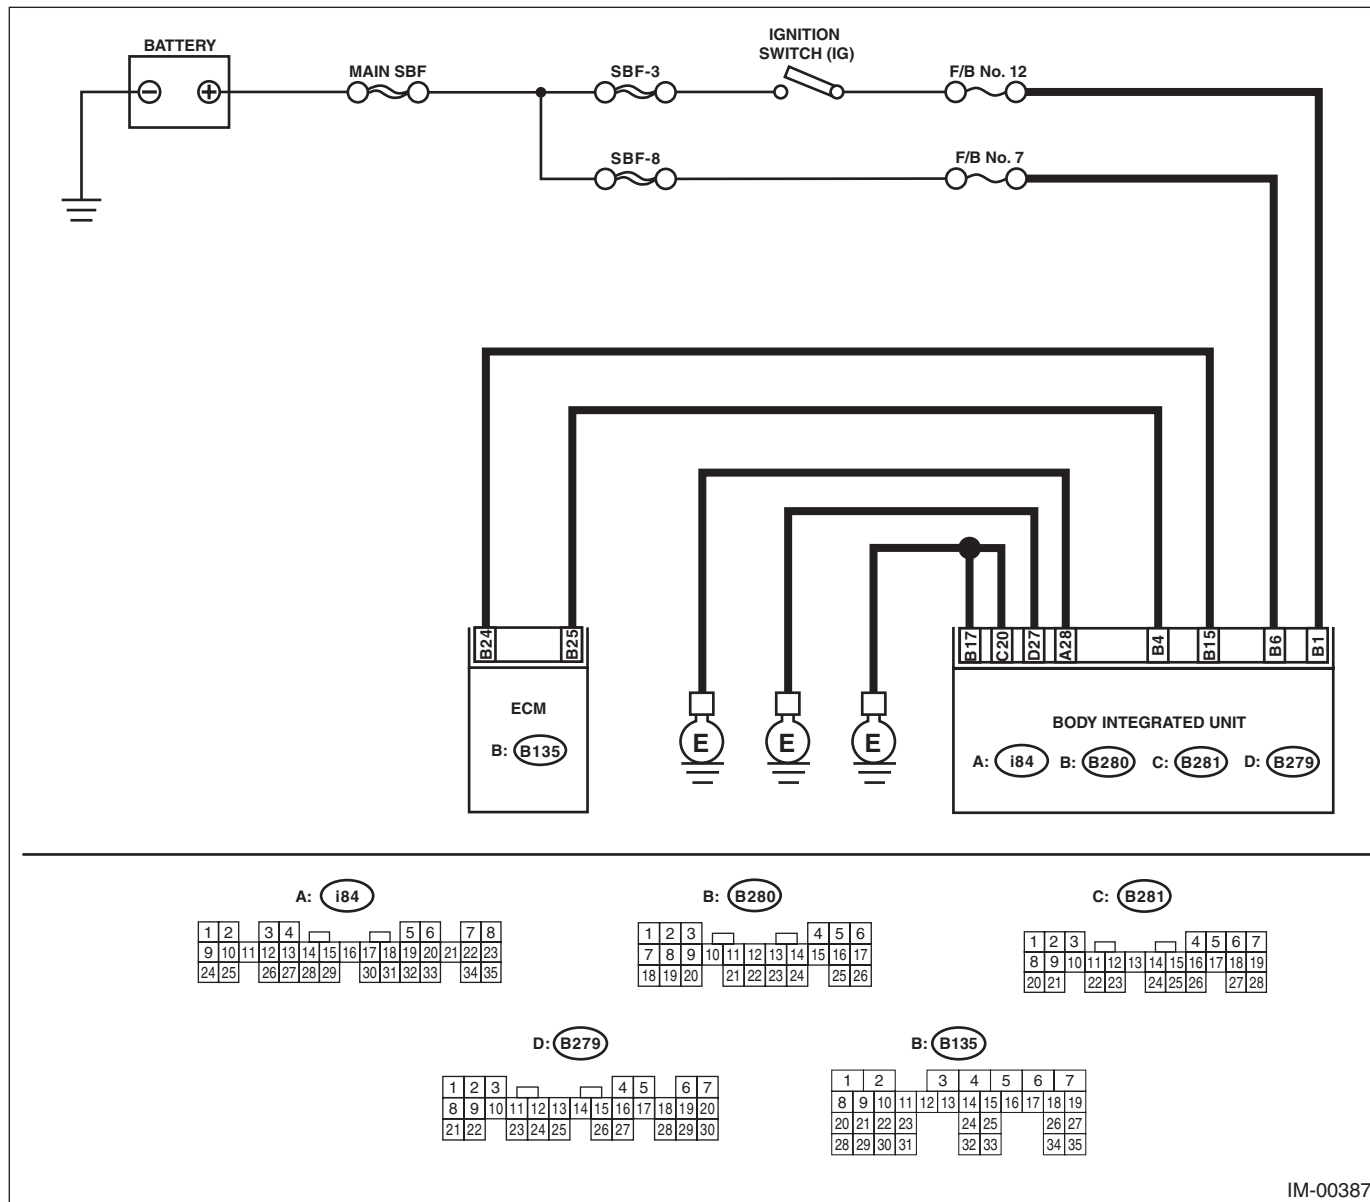

IMMOBILIZER (DIAGNOSTICS)

D: DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)

DTC DETECTING CONDITION:

Communication failure between body integrated unit and ECM

WIRING DIAGRAM:

IM-00387

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<p>1 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the voltage between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (B280) No. 6 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short circuit between body integrated unit and fuse.
<p>2 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</p> <p>1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (B280) No. 1 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short circuit between the body integrated unit and ignition switch.
<p>3 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.</p> <p>1) Turn the ignition switch to OFF. 2) Measure the resistance between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (i84) No. 28 — Chassis ground: (B280) No. 17 — Chassis ground: (B281) No. 20 — Chassis ground: (B279) No. 27 — Chassis ground:</p>	Is the resistance less than 10 Ω ?	Go to step 4.	Repair the open circuit of the body integrated unit ground circuit.
<p>4 CHECK GROUND CIRCUIT FOR ECM.</p> <p>Measure the resistance between the ECM ground terminal and engine ground.</p>	Is the resistance less than 10 Ω ?	Go to step 5.	Repair the ECM ground circuit.
<p>5 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND ECM.</p> <p>1) Disconnect the connector from the ECM and body integrated unit. 2) Measure the resistance between body integrated unit connector terminal and ECM connector terminal.</p> <p>Connector & terminal (B280) No. 4 — (B135) No. 25: (B280) No. 15 — (B135) No. 24:</p>	Is the resistance less than 10 Ω ?	Go to step 6.	Repair the open circuit of the harness between the body integrated unit and ECM.
<p>6 CHECK COMMUNICATION CIRCUIT HARNESS.</p> <p>1) Turn the ignition switch to ON. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground.</p> <p>Connector & terminal (B280) No. 4 (+) — Chassis ground (-): (B280) No. 15 (+) — Chassis ground (-):</p>	Is the voltage 6 V or more?	Repair the harness between body integrated unit and ECM.	Go to step 7.
<p>7 CHECK COMMUNICATION CIRCUIT HARNESS.</p> <p>Measure the voltage between ECM connector terminal and engine ground.</p> <p>Connector & terminal (B135) No. 24 (+) — Chassis ground (-): (B135) No. 25 (+) — Chassis ground (-):</p>	Is the voltage 6 V or more?	Repair the harness between body integrated unit and ECM.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
8 CHECK ECM BY COMMUNICATION SHORT CHECK. 1) Connect the connector to ECM. 2) Disconnect the connector from body integrated unit. 3) Start the communication short check. <Ref. to IM(diag)-8, COMMUNICATION LINE CHECK, OPERATION, Subaru Select Monitor.>	Is the communication short check OK?	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".	Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).> Perform the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".

NOTE:

Refer to the following inspection when DTC is detected after inspection above. <Ref. to IM(diag)-25, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

E: DTC P1574 KEY COMMUNICATION FAILURE

DTC DETECTING CONDITION:

Communication failure between key and body integrated unit

	Step	Check	Yes	No
1	CHECK BODY INTEGRATED UNIT FUNCTION. Insert the key into the ignition switch (LOCK position), then measure changes in voltage between the antenna connector and the chassis ground. Connector & terminal (B415) No. 1 (+) — Chassis ground (-):	Is the maximum voltage more than 40 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)	Go to step 2.	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".
2	CHECK IGNITION KEY (TRANSPONDER). 1) Remove the key from ignition switch. 2) Start the engine using other key which is already registered.	Does the engine start?	Register ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

F: DTC P1576 EGI CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

- ECM malfunctioning
- Inaccessible ROM in ECM during key registration.

	Step	Check	Yes	No
1	PERFORM REGISTRATION ON IGNITION KEY. Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 2.
2	PERFORM REGISTRATION ON IGNITION KEY. Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 3.
3	PERFORM REGISTRATION ON IGNITION KEY. Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Replace the ECM. <Ref. to FU(H4DOTC)-57, Engine Control Module (ECM).> Perform the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

G: DTC P1577 IMM CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

- Body integrated unit malfunctioning
- Failed to access the ROM inside the body integrated unit.

Step	Check	Yes	No
1 PERFORM IGNITION KEY REGISTRATION. Perform registration to all keys used for the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration of all keys complete?	Using the all registered keys, make sure that the engine can start. This completes the work.	Go to step 2.
2 PERFORM IGNITION KEY REGISTRATION. Perform registration to all keys used for the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration of all keys complete?	Using the all registered keys, make sure that the engine can start. This completes the work.	Go to step 3.
3 PERFORM IGNITION KEY REGISTRATION. Perform registration to all keys used for the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration of all keys complete?	Using the all registered keys, make sure that the engine can start. This completes the work.	Replace the body integrated unit <Ref. to SL-44, Body Integrated Unit.> Register all ignition keys (transponders). Refer to the "PC application help for Subaru Select Monitor".

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

H: DTC P1578 METER FAILURE

DTC DETECTING CONDITION:

- Reference code incompatibility between combination meter and body integrated unit
- Communication failure between body integrated unit and ECM

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC B1401 detected?	Go to step 2.	<Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
2 CHECK LAN COMMUNICATION SYSTEM. Inspect LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC U1300, U1301, U1302, B1100 or B1101 of the body integrated unit displayed?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK COMBINATION METER. 1) Perform the registration of immobilizer. Refer to the "PC application help for Subaru Select Monitor". 2) Start the engine.	Does the engine start?	System is normal.	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>

NOTE:

- When the combination meter has been replaced, be sure to perform the registration procedure of immobilizer.
- When the combination meter and body integrated unit are replaced at a time, the registration can not be completed. In this case, it is necessary to rewrite the ID into the body integrated unit.

I: DTC B1401 M COLLATION NG

NOTE:

For the diagnostic procedure, refer to DTC P1578 "METER FAILURE". <Ref. to IM(diag)-25, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC B1402 IMMOBILIZER KEY COLLATION NG

NOTE:

Refer to the following inspection for diagnostic procedure.

- DTC P0513 "INCORRECT IMMOBILIZER KEY". <Ref. to IM(diag)-15, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- DTC P1570 "ANTENNA". <Ref. to IM(diag)-16, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- DTC P1574 "KEY COMMUNICATION FAILURE". <Ref. to IM(diag)-22, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B1403 E/G REQUEST NG

NOTE:

For the diagnostic procedure, refer to DTC P1572 "IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)". <Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	34
15. General Diagnostic Table	79

Basic Diagnostic Procedure

LAN SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:

- **Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.**
- **Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.**
- **For model with immobilizer, registration of immobilizer may be needed after the replacement of controller etc. For details, refer to the “PC application help for Subaru Select Monitor”.**

NOTE:

- To check harness for open or short circuits, shake the suspected trouble spot or connector.
- Check List for Interview <Ref. to LAN(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	CHECK PRE-INSPECTION. Ask the customer when and how the trouble occurred using the interview check list. <Ref. to LAN(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step 2.	Interview the customer.
2	BASIC INSPECTION. Check components which might affect body control. <Ref. to LAN(diag)-6, INSPECTION, General Description.>	Is the component that might influence the body control problem normal?	Go to step 3.	Repair or replace each component.
3	CHECK DTC. 1) Read the DTC. <Ref. to LAN(diag)-18, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(diag)-15, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 2) Record all DTCs and freeze frame data.	Is DTC displayed on Subaru Select Monitor?	Go to step 5.	Go to step 4.
4	PERFORM GENERAL DIAGNOSTICS. Inspect using “General Diagnostics Table”. <Ref. to LAN(diag)-79, General Diagnostic Table.>	Is result of inspection OK?	LAN system is normal.	Go to step 5.
5	PERFORM DIAGNOSIS. 1) Correct the cause of trouble. 2) Perform the Clear Memory Mode. <Ref. to LAN(diag)-19, Clear Memory Mode.> 3) Read the DTC. <Ref. to LAN(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed on Subaru Select Monitor?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

Check List for Interview

LAN SYSTEM (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Inspect the following item about the vehicle's state.

1. DISPLAY STATUS IN THE COMBINATION METER

Display status in the combination meter	Engine coolant temperature gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
	Fuel gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
Display of other indicators	Malfunction indicator light	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	SPORT indicator light (AT warning light)	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Engine coolant temperature warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Fuel level warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	ATF temperature warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	EBD warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	ABS warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	VDC warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Hill start assist warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Security/immobilizer indicator	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF

General Description

LAN SYSTEM (DIAGNOSTICS)

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

CAUTION:

- Do not use electric test equipment on any wiring harnesses and connectors in the airbag system.
- Be careful not to damage the airbag system wiring harness when servicing the body integrated unit and LAN system.

2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to bypass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).

(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with insulating tape etc.

(A) Soldering and protection with insulating tape

B: INSPECTION

Before performing diagnostics, check the following item which might affect body integrated unit malfunctions.

- 1) Measure the battery voltage and check electrolyte.

Standard voltage: 12 V or more

Specific gravity: 1.260 or more

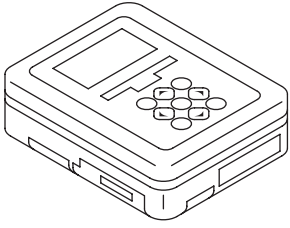

- 2) Check the fuse condition.
Make sure that ampere of the fuse is setting value, and it is not blown out.
(Be sure to check the back-up fuse also.)
- 3) Check the connecting condition of harness and harness connector.
- 4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to LAN(diag)-27, Registration Body Integrated Unit.>
- 5) Make sure that a setting that does not match the vehicle equipment, is not set in the User Customizing of the body integrated unit. <Ref. to LAN(diag)-25, User Customizing.>
- 6) Confirm “Factory or Market setting” of body integrated unit registrations is “Market”.
- 7) Confirm key illumination does not blink with ignition switch turned to ON.

Dimmer switch, Hi beam	B12 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Dimmer switch, passing	B22 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Front fog light switch	B24 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
MT reverse switch	B18 ↔ chassis ground	Less than 1.5 V → 8 V or more	Other than reverse → reverse
Parking brake switch	C15 ↔ chassis ground	8 V or more → less than 1.5 V	With parking brake not operated → operated
Bright switch	A14 ↔ chassis ground	Less than 1.5 V → 8 V or more	Switch OFF → ON
Illumination (Vi1)	A12 ↔ chassis ground	Approx. 5 V	Always
Illumination (Vi2)	A3 ↔ chassis ground	0.5 V — approx. 5 V	Always
Illumination (Vi3)	A26 ↔ chassis ground	Less than 1.5 V	Always
Fuel level sensor	C7 ↔ chassis ground	Approx. 2 — 96 Ω	Ignition ON
Wiper deicer & rear defogger switch	A16 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Seat belt switch (driver's seat)	C16 ↔ chassis ground	Less than 1.5 V → 8 V or more	With seat belt unbuckled → buckled
Seat belt switch (Passenger's seat)	C26 ↔ chassis ground	Less than 1.5 V → 8 V or more	With seat belt unbuckled → buckled

Control Module I/O Signal

LAN SYSTEM (DIAGNOSTICS)

Contents	Terminal No.	Standard	Measuring condition
Impact sensor	B8 ↔ chassis ground	Less than 1.5 V → 8 V or more	When a shock is applied
Key lock solenoid output	D11 ↔ chassis ground	Less than 1.5 V → 6 V or more	While key is inserted in other than P range
Shift lock solenoid output	D12 ↔ chassis ground	Less than 1 V → 9 V or more	When vehicle stopped, IGN ON, other than P range, brake pedal depressed
Rear wiper output ON	D9 ↔ chassis ground	Less than 1 V → 9 V or more	When rear wiper operates
Rear wiper output RTN	D8 ↔ chassis ground	Less than 1 V → 9 V or more	When rear wiper reversed
Door lock output	A7 ↔ A8	Less than 1 V → 9 V or more	During lock output
Door unlock output	A8 ↔ A7	Less than 1 V → 9 V or more	While unlock output
Driver's side door unlock output	A23 ↔ A7	Less than 1 V → 9 V or more	While unlock output
Trunk/rear gate UNLOCK output	A22 ↔ chassis ground	Less than 1 V → 9 V or more	While rear gate UNLOCK output
Lighting power supply	C1 ↔ chassis ground	Less than 1 V → 9 V or more	"With back-up fuse inserted, ACC ON or IGN ON" or "When key warning switch is ON"
	D1 ↔ chassis ground		
Clearance light relay output	D19 ↔ chassis ground	9 V or more → less than 1 V	Small light ON
Lo beam relay output	C3 ↔ chassis ground	9 V or more → less than 1 V	Headlight switch ON
	D7 ↔ chassis ground	9 V or more → less than 1 V	Headlight switch ON
Hi beam relay output	D20 ↔ chassis ground	9 V or more → less than 1 V	Headlight switch ON and Hi beam ON or Passing switch ON
Front fog light relay output	D17 ↔ chassis ground	9 V or more → less than 1 V	Headlight switch ON, and front fog light switch ON
DRL cancel output	D18 ↔ chassis ground	9 V or more → less than 1 V	When Hi beam 100% illuminates
Room light output	D5	Pulse control	Illumination is adjusted through PWM control
Key ring illumination output	C23	Pulse control	Illumination is adjusted through PWM control
Illumination output	A2	Pulse control	Illumination is adjusted through PWM control
Map light output (model with sunroof)	D4	Pulse control	Illumination is adjusted through PWM control
Rear defogger relay output	D16 ↔ chassis ground	9 V or more → less than 1 V	While rear defogger output
Wiper deicer relay output	D15 ↔ chassis ground	9 V or more → less than 1 V	While wiper deicer output
Seat belt warning light passenger's seat	A25 ↔ chassis ground	9 V or more → less than 1 V	Indicator go off → illuminate
Buzzer sound output	D24 ↔ chassis ground	Less than 1 V → 9 V or more	Door lock → unlock with keyless entry system
Turn & hazard output	C22 ↔ chassis ground	9 V or more → less than 1 V	Door lock or unlock with keyless entry system
Horn relay output	D29 ↔ chassis ground	9 V or more → less than 1 V	During security alarm operation
Security indicator output	A10 ↔ chassis ground	9 V or more → less than 1 V	While indicator in combination meter blinks

Control Module I/O Signal

LAN SYSTEM (DIAGNOSTICS)

Contents	Terminal No.	Standard	Measuring condition
Immobilizer antenna 1	B26 ↔ B25	-30 — +30 V	While key secret code is verified
Immobilizer antenna 2	B25 ↔ B26		
Immobilizer communication_1	B4	Can not be measured because of digital communication	Serial communication line
Immobilizer communication_2	B15	Can not be measured because of digital communication	Serial communication line
Keyless entry module communication	A24	Can not be measured because of digital communication	Serial communication line
SSM communication (K line)	B20	Can not be measured because of digital communication	Serial communication line
Body system CAN_Hi	A1 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line
Body system CAN_Lo	A9 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line
Driving system CAN_Hi	B3 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line
Driving system CAN_Lo	B9 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line

B: WIRING DIAGRAM

<Ref. to WI-193, WIRING DIAGRAM, CAN Communication System.>

Subaru Select Monitor

LAN SYSTEM (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to LAN(diag)-7, PREPARATION TOOL, General Description.>

2) Prepare PC with Subaru Select Monitor installed.

3) Connect the USB cable to SDI (Subaru Diagnosis Interface) and USB port on the personal computer (dedicated port for the Subaru Select Monitor).

NOTE:

The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.

4) Connect the diagnosis cable to SDI.

5) Connect SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

6) Start the PC.

7) Turn the ignition switch to ON and run the "PC application for Subaru Select Monitor".

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

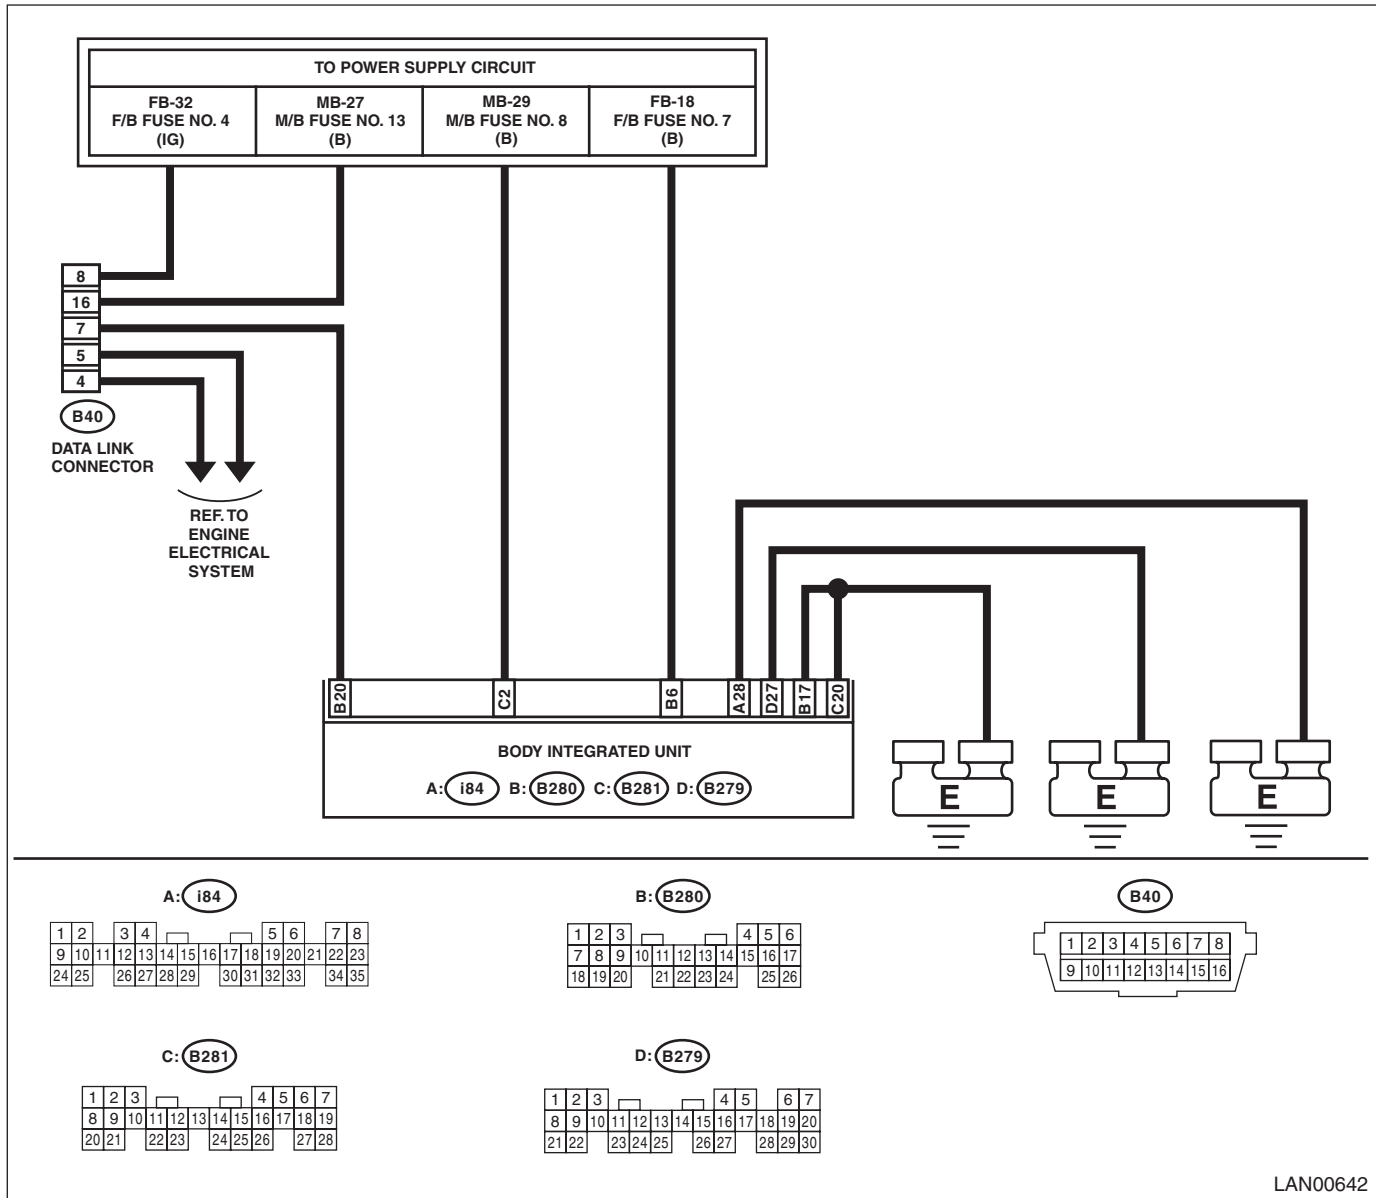

DETECTING CONDITION:

Defective harness connector

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

Step	Check	Yes	No
1	CHECK IGNITION SWITCH.		
	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select Integ. unit mode using Subaru Select Monitor.
2	CHECK BATTERY.		
	1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Go to step 3.	Charge or replace the battery.

Subaru Select Monitor

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK BATTERY TERMINAL.	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step 4.
4 CHECK COMMUNICATION OF SUBARU SELECT MONITOR. 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step 7.	Go to step 5.
5 CHECK COMMUNICATION OF SUBARU SELECT MONITOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step 7.	Go to step 6.
6 CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND SUBARU SELECT MONITOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between data link connector and chassis ground. Connector & terminal (B40) No. 7 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 7.	Repair the harness and connector between each control module and Subaru Select Monitor.
7 CHECK OUTPUT SIGNAL TO BODY INTEGRATED UNIT. 1) Turn the ignition switch to ON. 2) Measure the voltage between data link connector and chassis ground. Connector & terminal (B40) No. 7 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 8.	Repair the harness and connector between each control module and Subaru Select Monitor.
8 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND DATA LINK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between body integrated unit and data link connector. Connector & terminal (B40) No. 7 — (B280) No. 20:	Is the resistance less than 1 Ω ?	Go to step 9.	Repair the harness and connector between body integrated unit and Subaru Select Monitor.
9 CHECK BACK-UP FUSE. Check that back-up fuse is not blown out, or check that it is inserted.	Is back-up fuse OK?	Go to step 10.	Replace the back-up fuse, or insert it into the fuse holder.
10 CHECK POWER SUPPLY CIRCUIT. 1) Connect the body integrated unit. 2) Measure the voltage between body integrated unit connector and chassis ground. Connector & terminal (B280) No. 6 (+) — Chassis ground (-): (B281) No. 2 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 11.	Repair the open circuit of harness between body integrated unit and battery.

Subaru Select Monitor

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
11 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the resistance of harness between the body integrated unit and chassis ground. Connector & terminal <i>(i84) No. 28 — Chassis ground:</i> <i>(B279) No. 27 — Chassis ground:</i> <i>(B280) No. 17 — Chassis ground:</i> <i>(B281) No. 20 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 12.	Repair the poor contact of harness between body integrated unit and ground.
12 CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of the control unit ground and the Subaru Select Monitor?	Repair the poor contact of connector.	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>

CAUTION:

For model with immobilizer, immobilizer registration work is necessary when the body integrated unit replaced. For details, refer to the “PC application help for Subaru Select Monitor”.

Read Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On the «Main Menu» display screen, select {Each System Check}.
- 2) On the «Each System Check» menu display screen, select the {Integ. unit mode}.
- 3) Select the [OK] after the information of body integrated unit type is displayed.
- 4) On the «Integ. unit mode» display screen, select the {Diagnostic Code(s) Display}.
- 5) Record the DTC displayed.

NOTE:

- For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to LAN(diag)-31, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) Press the [OK] key after the information of body integrated unit type is displayed.
- 4) On «Integ. unit mode failure diag» display, select {Clear Memory} and press the [OK] key.

Display	Contents to be displayed
Clear Memory ?	Clear function of DTC and freeze frame data

- 5) When “Done” is shown on the display screen, turn the ignition switch to OFF.

NOTE:

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Read Current Data

LAN SYSTEM (DIAGNOSTICS)

9. Read Current Data

A: OPERATION

- 1) On the «Main Menu» display screen, select {Each System Check}.
- 2) On the «System Selection Menu» display screen, select the {Integ. unit mode}.
- 3) On the «Integ. unit mode failure diag» display screen, select the {Current Data Display & Save}.
- 4) Using the scroll key, scroll the display screen up or down until the desired data is shown.

B: LIST

Items to be displayed	Unit of measure	Remarks	Note
BATT voltage (control)	9 — 16 V	Body integrated unit input value	Always
BATT voltage (BACKUP)	9 — 16 V	Body integrated unit input value	Always
IG power supply voltage	9 — 16 V	Body integrated unit input value	Ignition switch ON
ACC voltage	9 — 16 V	Body integrated unit input value	Ignition switch ACC
Illumination VR Voltage	0 — 5 V	Body integrated unit input value	Input value from illumination volume
Illumi. output d-ratio	0 — 100%	Body integrated unit output value	Small light ON Illumination volume is other than bright.
Ambient Temperature	-40 — 87.5°C	CAN data input value	Ignition switch ON
Fuel level voltage	0 — 10 V	Body integrated unit input value	Ignition switch ON
Fuel level resistance	0 — 102.3 Ω	Body integrated unit input value	Ignition switch ON
key-lock solenoid V	6 — 15 V	Body integrated unit output value	Key warning switch ON, other than parking range Ignition ON
number of regist.	0 — 4	Number of keyless key registered	Number of transmitter registered is displayed
Front Wheel Speed	km/h	CAN data input value	Reception from VDC module
VDC/ABS latest f-code	DTC display (Temporarily)	CAN data input value	It is normal when DTC is not been input even if this code is displayed. Received from VDC (displayed by hexadecimal number system)
Blower fan steps	0 — 2 levels	CAN data input value	0: OFF, 1: 1 level, 2: 2 levels or more Reception from air conditioner ECM
Fuel level resistance 2	0 — 102.3 Ω	CAN data output value	Reception from body integrated unit
Fuel consumption	cc/s	CAN data input value	Reception from ECM and transmission to center monitor
Coolant Temp.	-40 — 130°C	CAN data input value	Reception from ECM
Vehicle longitudinal G	m/s ²	CAN data input value	Reception from VDC module
SPORT Shift Stages	0 — 7 levels	CAN data input value	(0: Light OFF; 1 — 5: Gear display; 6: Fail; 7: ATF temperature High/Low) Reception from TCM
Shift Position	0 — 7 levels	CAN data input value	0: 1, 1: 2, 2: 3, 3: 4, 4: D, 5: N, 6: R, 7: P shift position (8 indicates no input) 8 is displayed in manual mode Reception from TCM
VDC/ABS condition	0 — 4	CAN data input value	Reception from VDC module
Destination Code	0 — 16	CAN data input value	Reception from combination meter
Touch SW	0 — 64	CAN data input value	Reception from navigation module
key-lock warning SW	ON/OFF	Body integrated unit input value	ON when ignition key inserted
Stop Light Switch	ON/OFF	Body integrated unit input value	ON when brake pedal is depressed
Front fog lamp SW input	ON/OFF	Body integrated unit input value	When front fog light switch is ON
Driver's door SW input	ON/OFF	Body integrated unit input value	ON when driver's door is open
P-door SW input	ON/OFF	Body integrated unit input value	ON when passenger's door is open
Rear right door SW input	ON/OFF	Body integrated unit input value	ON when rear right door is open
Rear left door SW input	ON/OFF	Body integrated unit input value	ON when rear left door is open

Read Current Data

LAN SYSTEM (DIAGNOSTICS)

Items to be displayed	Unit of measure	Remarks	Note
R Gate SW input	ON/OFF	Body integrated unit input value	ON when rear gate/trunk open
Manual lock SW input	ON/OFF	Body integrated unit input value	Manual lock switch ON
Manual unlock SW input	ON/OFF	Body integrated unit input value	Manual unlock switch ON
Bright SW input	ON/OFF	Body integrated unit input value	ON when bright switch is ON
P SW	ON/OFF	Body integrated unit input value	ON when shift range is in parking Shift lever P switch signal
MT Reverse Switch	ON/OFF	Body integrated unit input value	Shift lever is at reverse position
R wiper ON SW input	ON/OFF	Body integrated unit input value	Rear wiper switch ON
R wiper INT SW input	ON/OFF	Body integrated unit input value	Rear wiper switch (INT ON)
R washer SW input	ON/OFF	Body integrated unit input value	Rear washer switch ON
wiper deicer SW input	ON/OFF	Body integrated unit input value	Rear defogger switch ON
Rear Defogger SW	ON/OFF	Body integrated unit input value	
Driver's Seat SW input	ON/OFF	Body integrated unit input value	Driver's seat buckle switch ON
P seatbelt SW input	ON/OFF	Body integrated unit input value	Passenger's seat occupied and buckle switch ON
Fr wiper input	ON/OFF	Body integrated unit input value	ON when front wiper is operating
Parking Brake Switch Input	ON/OFF	Body integrated unit input value	ON when parking brake locked
R gate lock status SW input	ON/OFF	Body integrated unit inner memory value	Displays door lock/unlock state, ON when locked
R Gate Release SW input	ON/OFF	Body integrated unit input value	When rear gate opener button is ON
Rr Defogger output	ON/OFF	Body integrated unit output value	ON when rear defogger relay is operating
lock actuat. LOCK output	ON/OFF	Body integrated unit output value	ON when LOCK signal is output
All seat UNLOCK output	ON/OFF	Body integrated unit output value	ON when unlock signal is output
D-seat UNLOCK output	ON/OFF	Body integrated unit output value	ON when unlock signal is output
R gate/trunk UNLK output	ON/OFF	Body integrated unit output value	ON when rear gate/trunk unlock signal is output
R wiper output	ON/OFF	Body integrated unit output value	ON when rear wiper motor is operating
Shift Lock Solenoid	ON/OFF	Body integrated unit output value	ON when shift lock solenoid is operating (only AT)
Key locking output	ON/OFF	Body integrated unit output value	With ignition switch ON and in other than the shift P range, with key in switch ON
wiper deicer output	ON/OFF	Body integrated unit output value	ON when wiper deicer relay is operating
Hazard Output	ON/OFF	Body integrated unit output value	ON when answer-back signal is received or when emergency light (answer-back) is operating
Keyless Buzzer Output	ON/OFF	Body integrated unit output value	ON when lock/unlock signal is received
Horn Output	ON/OFF	Body integrated unit output value	ON when security warning is operating
D-belt warning light O/P	ON/OFF	CAN data output value	ON when ignition switch is turned to ON, and buckle switch is turned off
P-belt warning light O/P	ON/OFF	Body integrated unit output value	ON when ignition switch is turned to ON, occupant is seated, and buckle switch is turned off
Illumination lamp O/P	ON/OFF	Body integrated unit output value	ON when illumination is illuminated
Room lamp output	ON/OFF	Body integrated unit output value	When one of the doors is open
key illumi. lamp o/p	ON/OFF	Body integrated unit output value	ON when key illumination light is illuminated
Immobilizer lamp output	ON/OFF	Body integrated unit output value	ON when immobilizer pilot light blinks
Keyless operation 1	Regist./Normal	Body integrated unit input value	When keyless is registered
Keyless operation 2	Deletion/Normal	Body integrated unit input value	When keyless registration is deleted
CC Main Lamp	ON/OFF	CAN data input value	Cruise control switch ON Reception from ECM and transmission to combination meter

Read Current Data

LAN SYSTEM (DIAGNOSTICS)

Items to be displayed	Unit of measure	Remarks	Note
CC Set Lamp	ON/OFF	CAN data input value	ON when cruise control vehicle speed is set Reception from ECM and transmission to combination meter
SPORT Lamp	ON/OFF	CAN data input value	SPORT mode switch ON Reception from TCM and transmission to combination meter (only AT)
SPORT Blink	Blink/OFF	CAN data input value	Blinks when there is an AT failure Reception from TCM and transmission to combination meter (only AT)
ATF Temperature Lamp	ON/OFF	CAN data input value	When ATF temperature rise (only AT)
ATF Blink	Blink/OFF	CAN data input value	Blinks when there is an AT failure Reception from TCM and transmission to combination meter (only AT)
ECO Lamp (AT)	ON/OFF	CAN data input value	Not applicable
ECO Lamp (MT)	ON/OFF	CAN data input value	Not applicable
Tire diameter abnormal 1	ON/OFF	CAN data input value	Lit when FWD fuse is connected (4AT only)
Tire diameter abnormal 2	Blink/OFF	CAN data input value	Blinks when the difference in rotation between front and rear wheels is 4% or more Reception from TCM and transmission to combination meter (only AT)
Shift Up Indication	UP/OFF	CAN data input value	ON when shift lever up-operation is possible (only AT)
Shift Down Indication	DOWN/OFF	CAN data input value	ON when shift lever down-operation is possible (only AT)
SPORT Shift (buzzer 1)	ON/OFF	CAN data input value	ON while the shift change prohibited warning buzzer is operating Reception from TCM and transmission to combination meter (only AT)
SPORT Shift (buzzer 2)	ON/OFF	CAN data input value	ON when the ATF high temperature warning buzzer is operating Reception from TCM and transmission to combination meter (only AT)
ABS/VDC Judging	ABS/VDC	CAN data input value	Transmission from vehicle dynamic control (VDC) to high speed control module
Small Light SW	ON/OFF	CAN data output value	ON when small light is illuminated
Headlamp	ON/OFF	CAN data output value	When headlight LO is ON
High Beam	ON/OFF	CAN data output value	When headlight HI is ON
km/mile display	mile/km	CAN data input value	Unit of distance received from meter
Large diameter tire	large Tire/Others	CAN data output value	Large tire when the standard tire is 18 in Reception from combination meter
Number of cylinders	4 Cylinder/6 Cylinder	CAN data input value	Display engine equipped
Cam shaft specification	SOHC/DOHC	CAN data input value	Display engine equipped

10. User Customizing

A: OPERATION

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) On «Integ. unit mode failure diag.» display, select {Integ. Unit customizing}.
- 4) Change the setting with UP/DOWN key and set with the [OK] key.

- List of User Customizing item

Data	Initial setting value	Customize setting	Remarks
Off delay time	Long		Delay time below can be selected by setting.
		OFF	0 second
		Short	10 seconds
		Normal	20 seconds
		Long	30 seconds
Rr Defogger op. mode	15 minutes	15 minutes	Automatically stops in 15 minutes after switch is turned to ON.
		Continuous	Repeats active condition for 15 minutes and inactive condition for 2 minutes until switch is turned to OFF.
Security Alarm Setup	ON	ON	Security alarm (hazard, horn or siren) in active condition
		OFF	Security alarm in inactive condition
Impact Sensor Setup	OFF	ON	Workable when Impact Sensor Setup is set to "ON". Impact sensor function becomes activated.
		OFF	Impact sensor in inactive condition (Set to "OFF" in models without sensors.)
Alarm delay setup	ON		After the keyless lock operation, the alarm monitor starts after the following delay time has passed.
		ON	Delay time is 30 seconds.
		OFF	Delay time is 0 seconds.
Lockout prevention	ON	ON	Lockout prevention in active condition. (The function does not operate if safety knob is locked by hand.)
		OFF	Lockout prevention in inactive condition
Impact sensor (OP)	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Make sure to set to "OFF" for models without the impact sensor. When "ON", hazard, horn or siren become activated by keyless lock (alarm monitor start).
		OFF	Vehicle is controlled in no impact sensor mode.
Buzzer beeping setup	ON	ON	When lock/unlock is selected by keyless entry system operation, buzzer operates.
		OFF	When lock/unlock is selected by keyless entry system operation, buzzer does not operate.
Emergency light setup	ON	ON	When lock/unlock is selected by keyless entry system operation, buzzer operates.
		OFF	When lock/unlock is selected by keyless entry system operation, buzzer does not operate.
Buzzer setting	ON	ON	Vehicle is controlled in answer-back buzzer equipped mode.
		OFF	Vehicle is controlled in answer-back buzzer non-equipped mode. (Make sure to set to "OFF" in models without answer back buzzers.)
Initial keyless setting	—	—	—
		Execution	Settings of keyless entry system are initialized.
Initial button setting	—	—	—
		Execution	Settings of each function are initialized.

User Customizing

LAN SYSTEM (DIAGNOSTICS)

Data	Initial setting value	Customize setting	Remarks
Passive Alarm	OFF	ON	Setting only for North American models
		OFF	
Door open warning	ON	ON	If detecting door open for 20 minutes, room light, map light, and key ring illumination that are related to doors are turned off to prevent battery run-out.
		OFF	Room light, map light, key illumination and door warning light are not turned off.
Dome Light Alarm Setting	OFF	ON	The room light lights by being interlocked with the activation of the alarm.
		OFF	
Map Light Setting	ON	ON	Illuminates in accordance with the door interlocked room light.
		OFF	
Belt Warning Switch	ON	ON	When using normally
		OFF	Stop the belt warning buzzer beep and warning light illumination.

5) After setting, make sure that the setting changed in the {Current Data Display & Save} is same as vehicle equipment.

CAUTION:

- **The above settings must match the actual vehicle equipment.**
- **Do not change settings except for setting above while setting the functions.**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

NOTE:

For detailed operation procedures, refer to "PC application help for Subaru Select Monitor".

11.Registration Body Integrated Unit

A: OPERATION

1. CONFIRMATION OF CURRENT SETTING

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) On «Integ. unit mode failure diag.» display, select {Current Data Display & Save}.
- 4) Using the scroll key, scroll the display screen up or down until the desired data is shown.
- 5) Display the following item and record the settings.

Required items for new registration (Except for system not equipped)

Item	Item to confirm				Remarks
	1	2	3	4	
number of regist.					Registered ID type
Off delay time	OFF	Long	Normal	Short	Setting for lighting off time
Rr Defogger op. mode	Normal		Continuous		
Security Alarm Setup	ON		OFF		
Impact Sensor Setup	ON		OFF		Option setting
Alarm delay setup	ON		OFF		
Lockout prevention	ON		OFF		
Impact sensor	support		no support		Option setting
Buzzer beeping setup	ON		OFF		
Emergency light setup	ON		OFF		
Buzzer setting	support		no support		
Passive Alarm	ON		OFF		
Door open warning	support		no support		
Dome Light Alarm Setting	ON		OFF		
Map Light Setting	ON		OFF		
Belt Warning Switch	ON		OFF		Switch the belt warning lighting and the buzzer sound.
Map lamp 30 sec off record	support		no support		
A/C ECM setting	support		no support		Model with auto A/C
wiperdeicer	support		no support		Option setting
Sedan/Wagon Setting	Sedan		Wagon		
MT/AT Setting	AT		MT		
6MT Setting	6MT		Other than 6MT		
Factory initial setting	Factory		Market		Do not change to factory mode.

Registration Body Integrated Unit

LAN SYSTEM (DIAGNOSTICS)

2. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

CAUTION:

Body integrated unit is core of LAN system, and also can select the function of all vehicle system control. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.

If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.

- Be sure to correspond registrations and function settings to vehicle equipment.
 - Do not change the settings of vehicle improperly.
 - Confirm key illumination does not blink when ignition key is turned ON, or “Factory initial setting” of body integrated unit registrations is set to “Market”. If “Factory initial setting” is set to “Factory”, key illumination blinks when ignition key is turned ON, to notify that the settings are unconfirmed.
 - Key illumination does not blink with ignition switch turned to ON and go off with door closed.
 - Be sure to register immobilizer if body integrated unit is replaced with a new part. (model with immobilizer)
 - Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the “PC application help for Subaru Select Monitor”.
- 1) On «Main Menu» display, select {Each System Check}.
 - 2) On «System Selection Menu» display, select {Integ. unit mode}.
 - 3) Click the [OK] button after the control module name {Integ. Unit} is displayed.
 - 4) On «Integ. unit mode failure diag.» display, select {Integ. Unit customizing}.
 - 5) Change the setting with UP/DOWN key.
- List of body integrated unit registration item

NOTE:

Setting is different depending on the grade of vehicle.

Data	Initial setting	Registration	Remarks
Map lamp 30 sec off record	OFF	ON	Set to “OFF” for models with door interlock switch in map light, “ON” for models without door interlock switch.
		OFF	
A/C ECM setting	OFF	ON	Set to “ON” in case of model with auto A/C. Set to “OFF” in case of model without auto A/C.
		OFF	
wiperdeicer (Manufacturer option)	OFF	ON	ON signal does not output with operation of wiper deicer switch if wiper deicer is set to “OFF” in models with a wiper deicer.
		OFF	
Sedan/Wagon Setting	Wagon	Wagon	Door lock/unlock control by Wagon
		Sedan	Door lock/unlock control by Sedan
MT/AT Setting	AT	MT	No control of shift lock solenoid, key-lock solenoid
		AT	Control of shift lock solenoid, key-lock solenoid
6MT Setting	Other than 6MT	6MT	Set to “6MT” for 6MT model, and set to “Other than 6MT” for AT/5AT model.
		Other than 6MT	
Factory initial setting	Factory	Factory	Be sure to set to “Market”. After setting change, turn the ignition switch to OFF and settle the changed settings.
		Market (Confirmed)	

CAUTION:

- To perform normal operation of vehicle and diagnosis, the above settings must match the actual vehicle equipment.
- When body integrated unit is a new part or “Factory” mode, key illumination blinks to show equipment settings have not been completed. Check the detailed procedures of function setting.
- Be sure not to change Factory initial setting except when installing a new body integrated unit.

NOTE:

“Factory” mode:

- Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON.
- All replacement body integrated units are set to “Factory” mode. When replacing a body integrated unit, be sure to perform the registration operation.

“Market” mode:

- Each settings have been set. It can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON.

6) Perform the Factory initial setting. On the «Integ. Unit customizing» display screen of Subaru Select Monitor, select the {Factory initial setting}.

7) Change the mode from Factory to Market.

8) Turn the ignition switch to OFF to settle the setting.

9) Change the Subaru Select Monitor system selection to «Immobilizer» to register the immobilizer key.

10) Perform the operation according to the “PC application help for Subaru Select Monitor”.

11) When key registration is completed, “Do you want to register remote engine start?” is displayed. Perform registration only for equipped models.

12) Perform the User Customizing. <Ref. to LAN(diag)-25, OPERATION, User Customizing.>

NOTE:

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

12.Function Check

A: OPERATION

NOTE:

In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) On «Integ. unit mode failure diag.» display, select {Function check}.
- 4) Select the item to be operated on the «Function check» display screen with “UP/Down key” and press the [Next] button.
- 5) Pressing [Next] starts, [End] cancels the operation and [OK] returns to the System Operation Check Mode display screen.

NOTE:

- If not equipped (based on area or condition), process will not go on.
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

List of Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

13. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note

List of Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

1. DTC TABLE

NOTE:

When more than two DTC codes are recorded, referring to their combination will make it easy to identify the possible cause. Refer to the list for typical examples.

DTC to Check	Diagnostic Code that was displayed.				Probable cause
	Body integrated unit	ECM	TCM	VDC/ABS CM	
B1100 <Ref. to LAN(diag)-34, DTC B1100 INTEG. UNIT SYSTEM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1100	—	—	—	There could be a problem in the body integrated unit.
U1221 <Ref. to LAN(diag)-58, DTC U1221 CAN-HS ECM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1221	—	P1718	C0047	It is possible that the ECM is faulty.
U1222 <Ref. to LAN(diag)-61, DTC U1222 CAN-HS TCM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1222	U0101	—	C0047	It is possible that the TCM is faulty.
U1223 <Ref. to LAN(diag)-63, DTC U1223 CAN-HS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1223	U0122	P1718	—	It is possible that the VDC/ABS CM is faulty.
U1321 <Ref. to LAN(diag)-75, DTC U1321 CAN-LS METER NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1321	—	—	—	It is possible that the combination meter is faulty.
B1500 <Ref. to LAN(diag)-77, DTC B1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1500	—	—	—	It's possible that there is an internal problem in the keyless entry control module, or a problem in the communication line.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1100 INTEG. UNIT SYSTEM ERROR

DTC DETECTING CONDITION:

Memory read out error in body integrated unit

TROUBLE SYMPTOM:

LAN communication immobilizer function may not be executed normally.

	Step	Check	Yes	No
1	CHECK DTC. Check DTC indicated by body integrated unit. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is B1100 current malfunction?	Go to step 2.	Temporary EEPROM access error occurred.
2	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1100 current malfunction?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Temporary EEPROM access error occurred.

B: DTC B1101 BATT P/SUPPLY MALFUNCTION CONT

DTC DETECTING CONDITION:

- Open or short in battery power supply control circuit
- Voltage malfunction caused by poor contact

TROUBLE SYMPTOM:

Each function stops operation.

NOTE:

- When B1102 BATT p/supply (backup) malfunction is output at the same time, all the function of body integrated unit may not operate.
- B1101 may input when the battery run-out occurs.

WIRING DIAGRAM:

LAN00643

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is B1101 current malfunction?	Go to step 2.	Go to step 5.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1101 current malfunction?	Go to step 3.	Go to step 5.
3 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
4 CHECK HARNESS. 1) Disconnect the body integrated unit connector (B280). 2) Measure the voltage between body integrated unit connector and chassis ground using tester. Connector & terminal (B280) No. 6 (+) — Chassis ground (-):	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
5	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B280).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

C: DTC B1102 BATT P/SUPPLY MALFUNCTION BACKUP

DTC DETECTING CONDITION:

- Open or short of battery power supply backup circuit
- Voltage malfunction caused by poor contact

TROUBLE SYMPTOM:

No influence.

NOTE:

- When B1101 BATT p/supply (cont.) malfunction are output at the same time, all function of body integrated unit may not operate.
- B1101 may input when the battery run-out occurs.

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is B1102 current malfunction?	Go to step 2.	Go to step 5.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1102 current malfunction?	Go to step 3.	Go to step 5.
3 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
4 CHECK HARNESS. 1) Disconnect the body integrated unit connector (B281). 2) Measure the voltage between body integrated unit connector and chassis ground using tester. Connector & terminal (B281) No. 2 (+) — Chassis ground (-):	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
5	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B281).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

D: DTC B1103 IGNITION POWER FAILURE

DTC DETECTING CONDITION:

- Open or short in IGN power supply circuit
- Voltage malfunction caused by poor contact

TROUBLE SYMPTOM:

Error related to LAN system will not be detected.

NOTE:

B1103 may output when the ignition switch turns to ON with the weak battery condition.

WIRING DIAGRAM:

Step	Check	Yes	No
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Go to step 2.	Go to step 5.
2	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Turn the ignition switch to ON. 4) Wait approx. 2 minutes. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Go to step 3.	Go to step 5.
3	CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Go to step 4.	Replace the defective fuse.
4	CHECK HARNESS. 1) Disconnect the body integrated unit connector (B280). 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit connector and chassis ground using tester. Connector & terminal (B280) No. 1 (+) — Chassis ground (-):	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.
5	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B280).	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

E: DTC B1104 ACC POWER FAILURE

DTC DETECTING CONDITION:

- Open or short in ACC power supply circuit
- Voltage malfunction caused by poor contact

TROUBLE SYMPTOM:

Does not exist.

NOTE:

B1104 may output when the ignition switch turns to ACC with the weak battery condition.

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is B1104 current malfunction?	Go to step 2.	Go to step 5.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Turn the ignition switch to ON. 4) Wait approx. 2 minutes. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1104 current malfunction?	Go to step 3.	Go to step 5.
3 CHECK FUSE. 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
4 CHECK HARNESS. 1) Disconnect the body integrated unit connector (B280). 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit connector and chassis ground using tester. Connector & terminal (B280) No. 7 (+) — Chassis ground (-):	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.
5 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B280).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

F: DTC B1105 KEY INTERLOCK CIRCUIT ABNORMAL

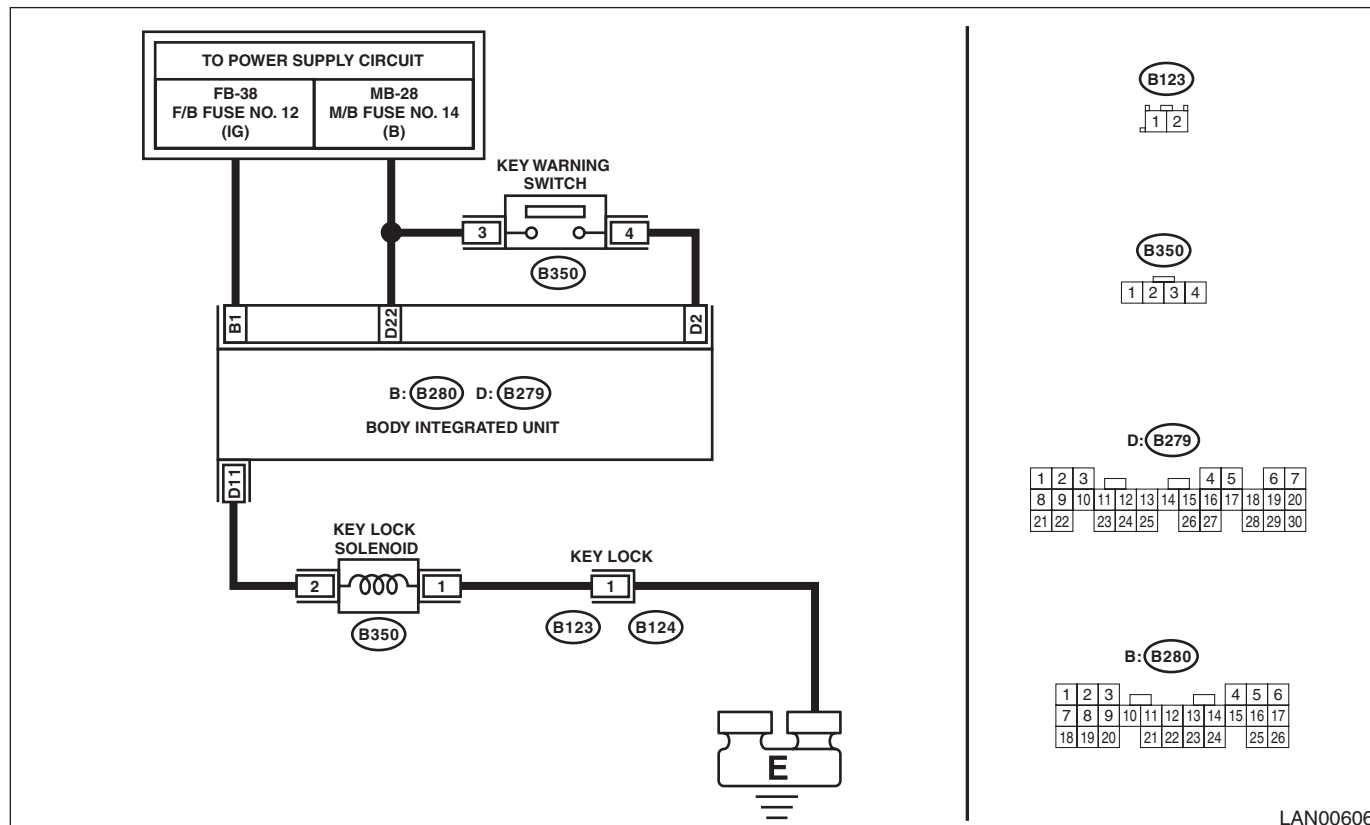

DTC DETECTING CONDITION:

Ground short of key interlock circuit

TROUBLE SYMPTOM:

Key interlock does not keep lock condition.

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK DTC. 1) Insert the ignition key. 2) Shift to the Neutral range. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is B1105 current malfunction?	Go to step 2.	Go to step 8.
2 CHECK DTC. 1) Shift the select lever to P range. 2) Remove the ignition key. 3) Disconnect the key lock solenoid connector (B350) and body integrated unit connector (B279). 4) Connect the disconnected connectors. 5) Insert the ignition key. 6) Turn the ignition switch to ON and shift into Neutral. 7) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1105 current malfunction?	Go to step 3.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK KEY LOCK SOLENOID. 1) Turn the ignition switch to OFF. 2) Disconnect the key lock solenoid connector (B350). 3) Measure the resistance between the key lock solenoid connector. Connector & terminal (B350) No. 1 — No. 2:	Is the resistance 12 — 14.5 Ω ?	Go to step 4.	Replace the key lock solenoid.
4 CHECK KEY LOCK SOLENOID. Connect the battery terminal to key lock solenoid. Terminals (B350) No. 2 — positive terminal: (B350) No. 1 — ground terminal:	Is the solenoid activated and then key locked?	Go to step 5.	Replace the key lock solenoid.
5 CHECK HARNESS. 1) Disconnect the body integrated unit connector (B279). 2) Measure the resistance between body integrated unit and key lock solenoid using tester. Connector & terminal (B350) No. 2 — (B279) No. 11:	Is the resistance less than 10 Ω ?	Go to step 6.	Repair or replace the open circuit of harness.
6 CHECK HARNESS. Measure the resistance between body integrated unit and chassis ground using tester. Connector & terminal (B279) No. 11 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 7.	Repair or replace the short circuit of the harness.
7 CHECK HARNESS. 1) Connect the body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit and chassis ground using tester. Connector & terminal (B279) No. 11 — Chassis ground:	Is the voltage 6 V or more?	Repair or replace the short circuit of the harness.	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
8 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and key lock solenoid connector (B350).	Is there poor contact at disconnected connector terminal?	Repair the terminal where poor contact exists, or replace harness.	It is possible that temporary poor contact occurs.

G: DTC B1106 SHIFT LOCK CIRCUIT FAILURE

DTC DETECTING CONDITION:

Shift lock circuit is open or shorted.

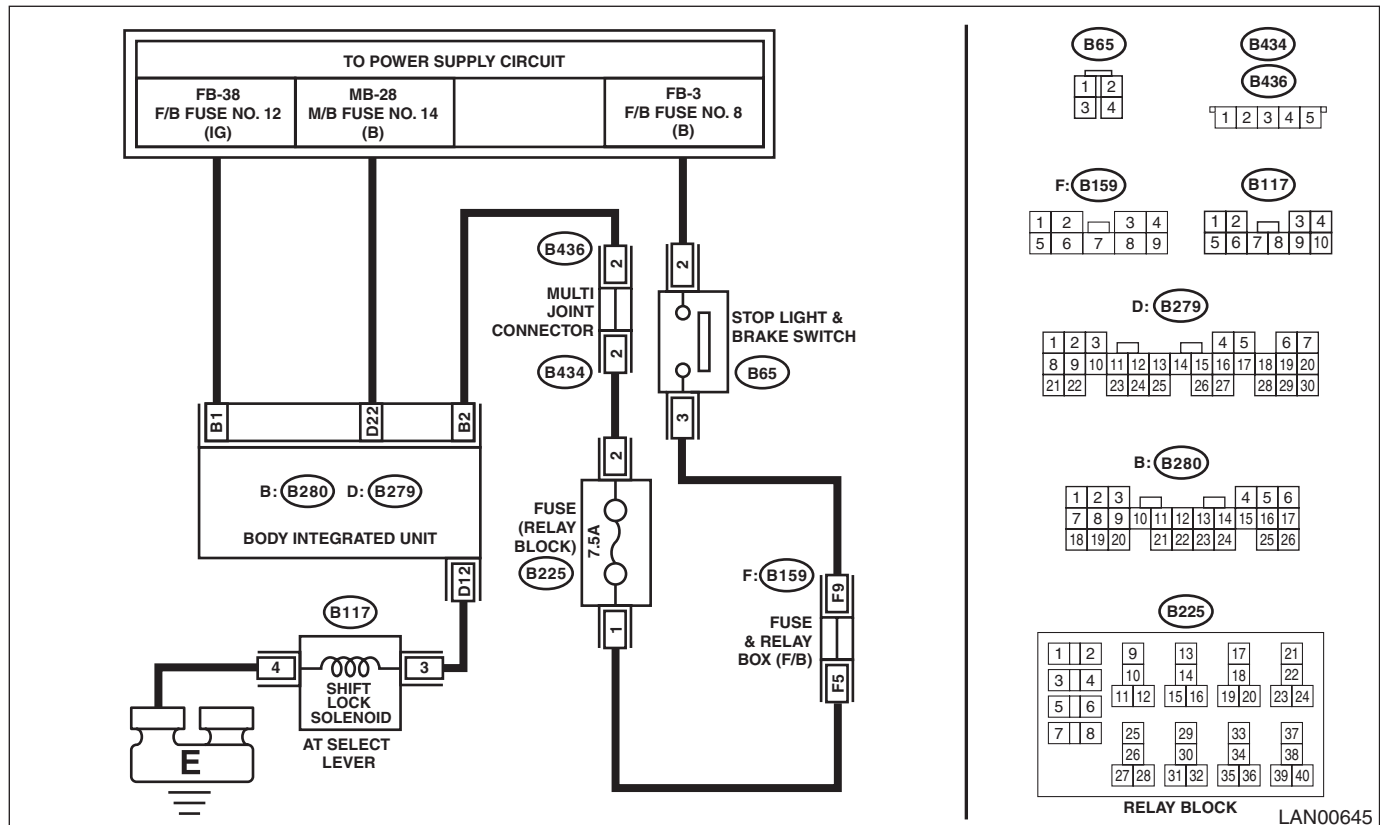

TROUBLE SYMPTOM:

Shift lock does not be released or remain locked.

NOTE:

P0801 may input simultaneously.

WIRING DIAGRAM:

Step	Check	Yes	No
1 CHECK DTC. 1) Turn the ignition switch to ON. 2) Keep the Parking range for approx. 5 seconds. 3) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 2.	Go to step 8.
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and shift lock solenoid connector (B117). 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON, then keep the Parking range for approx. 5 seconds. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 3.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector (B117). 3) Measure the resistance between shift lock solenoid and chassis ground using tester. Connector & terminal (B117) No. 4 — Chassis ground:	Is the resistance less than 10 Ω ?	Go to step 4.	Repair the open circuit of harness or replace harness.
4 CHECK SHIFT LOCK SOLENOID. Measure the resistance between the shift lock solenoid connector. Connector & terminal (B117) No. 4 — No. 3:	Is the resistance 19 — 25 Ω ?	Go to step 5.	Replace the shift lock solenoid.
5 CHECK SHIFT LOCK SOLENOID. Connect the battery terminal to shift lock solenoid. Terminals (B117) No. 3 — positive terminal: (B117) No. 4 — ground terminal:	Is the solenoid activated, and then the shift lock released?	Go to step 6.	Replace the shift lock solenoid.
6 CHECK HARNESS. 1) Disconnect the body integrated unit connector (B279). 2) Measure the resistance between body integrated unit connector (B279) and chassis ground. Connector & terminal (B279) No. 12 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 7.	Repair the short circuit of harness or replace harness.
7 CHECK HARNESS. Measure the resistance between body integrated unit connector (B279) and shift lock solenoid (B117). Connector & terminal (B117) No. 3 — (B279) No. 12:	Is the resistance less than 10 Ω ?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Repair the open circuit of harness or replace harness.
8 CHECK DTC. 1) With Parking range, depress the brake pedal and keep it at depressed condition. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 9.	Go to step 10.
9 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and shift lock solenoid connector (B117). 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Shift into Parking range, then depress the brake pedal. 6) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 4.	Go to step 10.
10 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and shift lock solenoid connector (B117).	Is there poor contact of connector terminal?	Repair the poor contact of the terminal or replace the harness.	It is possible that temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

H: DTC U1201 CAN-HS COUNTER ABNORMAL

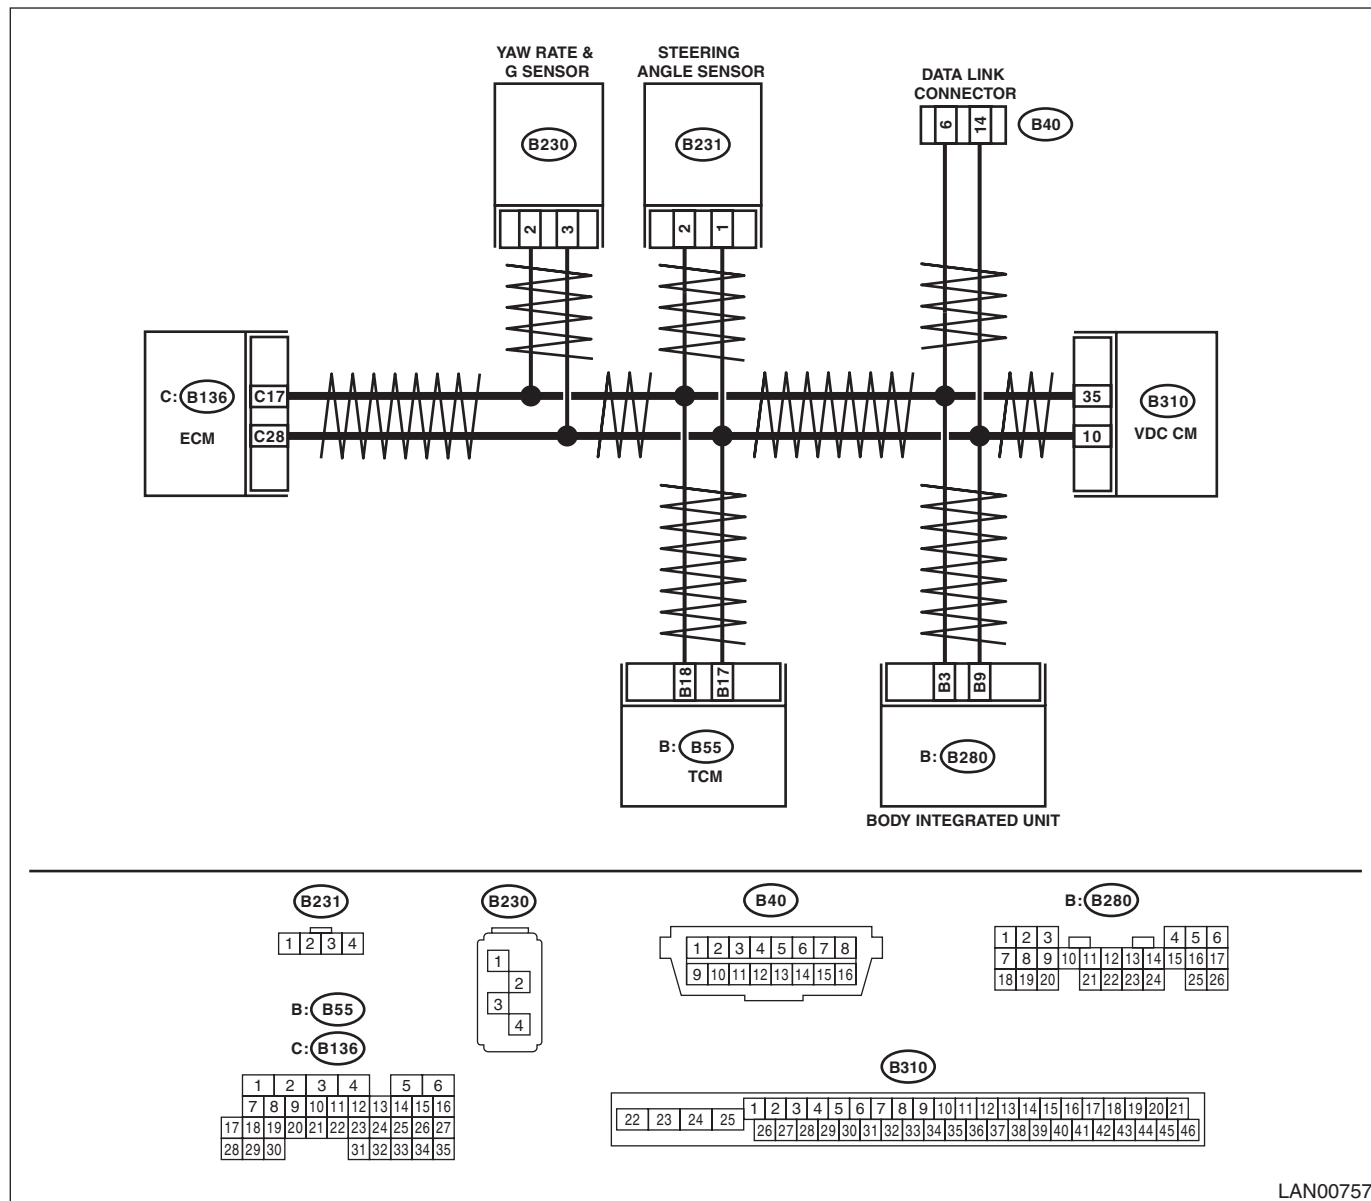

DTC DETECTING CONDITION:

Communication is unstable because of high speed CAN communication error.

TROUBLE SYMPTOM:

Malfunction indicator light illuminates.

WIRING DIAGRAM:

Step	Check	Yes	No
1	CHECK DTC. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Are there U1202 or DTCs other than for the body integrated unit?	Perform the diagnosis according to DTC. Go to step 2.
2	CHECK DTC. Check DTC indicated by body integrated unit.	Is U1201 a current malfunction?	Go to step 3. Go to step 14.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Connect all the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 4.	Go to step 14.
4 CHECK TCM. NOTE: If the vehicle is MT model, go to the next step. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector (B55). 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 5.	Go to step 16.
5 CHECK STEERING ANGLE SENSOR. 1) Turn the ignition switch to OFF. 2) Connect the TCM connector. 3) Disconnect the steering angle sensor connector (B231). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 6.	Go to step 17.
6 CHECK YAW RATE SENSOR. 1) Turn the ignition switch to OFF. 2) Connect the steering angle sensor connector. 3) Disconnect the yaw rate sensor connector (B230). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 7.	Go to step 18.
7 CHECK VDC/ABS CM. 1) Turn the ignition switch to OFF. 2) Connect the yaw rate sensor connector. 3) Disconnect the VDC/ABS CM connector (B310). 4) Install the 120 Ω resistance to VDC/ABS CM connector terminals. Terminals (B310) No. 10 — No. 35: 5) Using the tester, measure the resistance between terminals of data link connector. Terminals (B40) No. 6 — No. 14:	Is the resistance 60 Ω ?	Go to step 8.	Go to step 10.
8 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 9.	Go to step 10.
9 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Replace the VDC/ABS CM. <Ref. to VDC-7, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 10.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
10 CHECK ECM. 1) Turn the ignition switch to OFF. 2) Connect the VDC/ABS CM. 3) Disconnect the ECM connector (B136). 4) Install the 120 Ω resistance to ECM connector. Terminals (B136) No. 17 — No. 28: 5) Using the tester, measure the resistance between terminals of data link connector. Connector & terminal (B40) No. 6 — No. 14:	Is the resistance 60 Ω?	Go to step 11.	Repair or replace the open circuit of harness.
11 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 12.	Go to step 13.
12 CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Replace the ECM. <Ref. to FU(H4DOTC)-57, REMOVAL, Engine Control Module (ECM).>	Go to step 13.
13 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Reconnect all the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Go to step 14.
14 CHECK HARNESS. 1) Shake the instrument harness and bulk-head harness, rear harness. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Repair or replace the harness.	Go to step 15.
15 CHECK CONNECTOR. 1) Disconnect the connector used for CAN circuit. 2) Check the connector terminal.	Is there poor contact of connector terminal?	Repair the connector terminal where poor contact exists, or replace harness.	It is possible that temporary poor communication occurs.
16 CHECK HARNESS. Using the tester, check for open or short (power supply-output short, GND-output short) in the harness between terminals of data link connector and TCM. Connector & terminal (B40) No. 14 — (B55) No. 17: (B40) No. 6 — (B55) No. 18:	Is harness normal?	Replace the TCM. <Ref. to 4AT-66, REMOVAL, Transmission Control Module (TCM).>	Repair or replace the harness.
17 CHECK HARNESS. Using the tester, check for open or short (power supply-output short, GND-output short) in the harness between terminals of data link connector and steering angle sensor. Connector & terminal (B40) No. 14 — (B231) No. 1: (B40) No. 6 — (B231) No. 2:	Is harness normal?	Replace the steering angle sensor. <Ref. to VDC-21, REPLACEMENT, Steering Angle Sensor.>	Repair or replace the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
18 CHECK HARNESS. Using the tester, check for open or short (power supply-output short, GND-output short) in the harness between terminals of data link connector and yaw rate sensor. Connector & terminal (B40) No. 14 — (B230) No. 3: (B40) No. 6 — (B230) No. 2:	Is harness normal?	Replace the yaw rate sensor. <Ref. to VDC-19, REMOVAL, Yaw Rate and G Sensor.>	Repair or replace the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

I: DTC U1202 CAN-HS BUS OFF

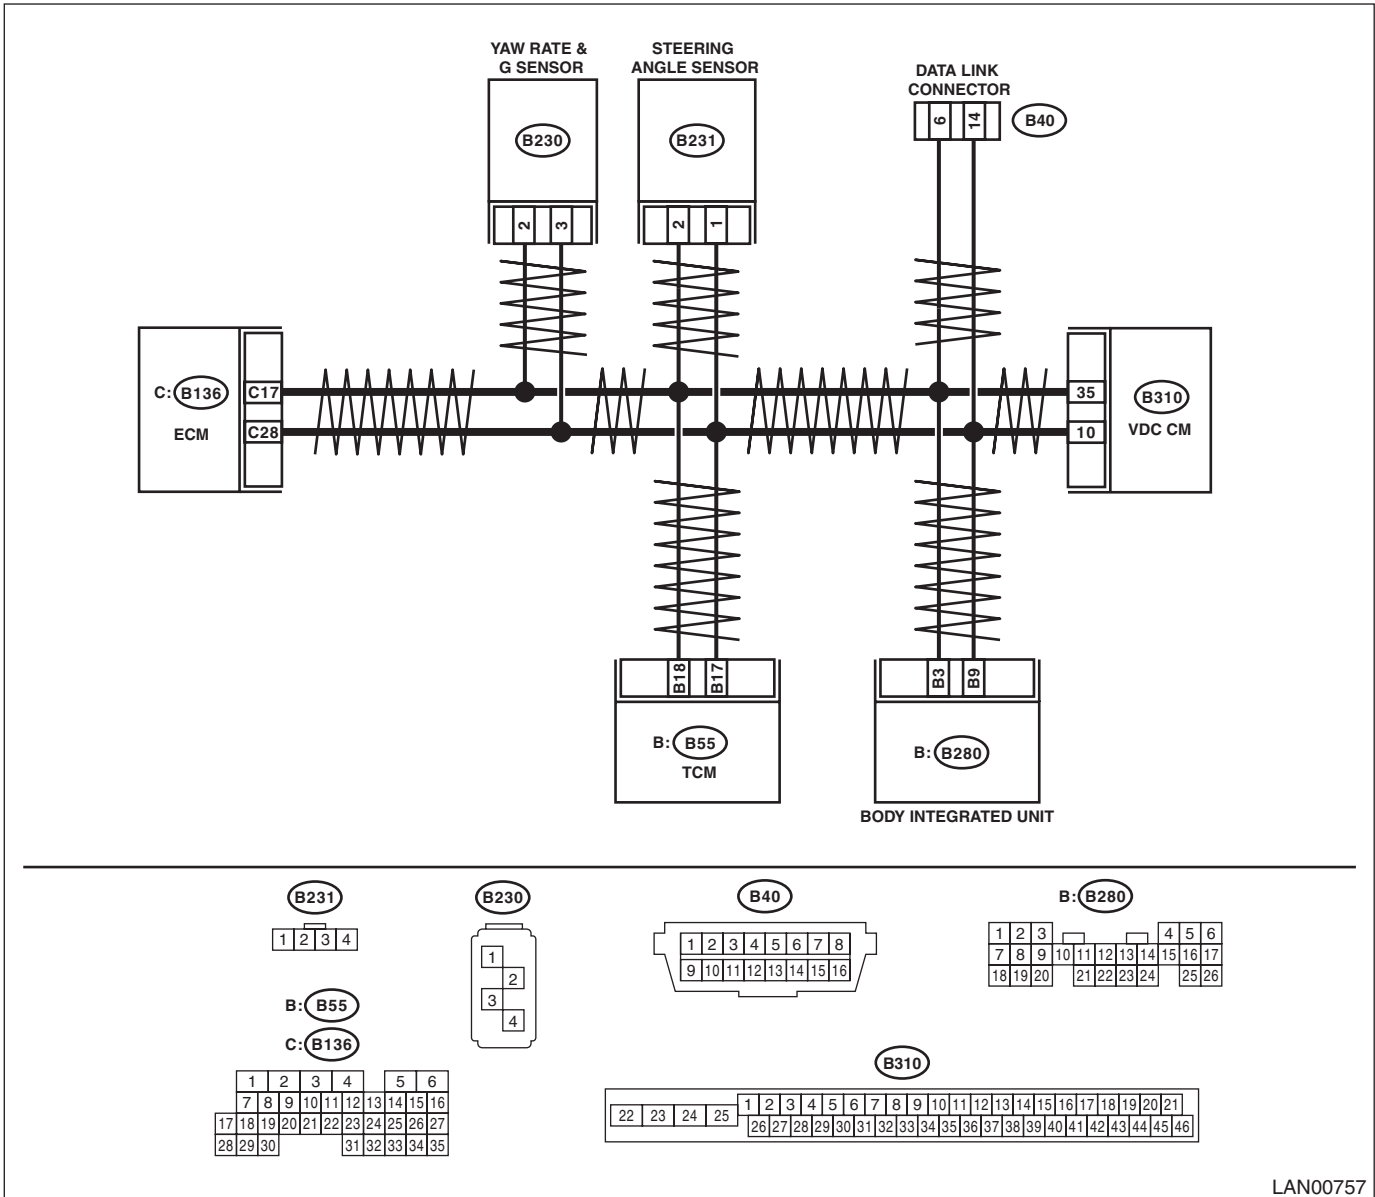

DTC DETECTING CONDITION:

Integrated unit communication is shut down because of high speed CAN error.

TROUBLE SYMPTOM:

Each warning light illuminates because the CAN communication (sending and receiving) is not normal.

WIRING DIAGRAM:

Step	Check	Yes	No
1	CHECK DTC. Using the Subaru Select Monitor, confirm all DTCs. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Perform the diagnosis according to displayed DTC.	Go to step 2.
2	CHECK DTC. 1) Turn the ignition switch to OFF → ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Go to step 3.	Go to step 10.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Go to step 4.	Go to step 10.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal (B40) No. 6 — (B136) No. 17: (B40) No. 6 — (B310) No. 35: (B40) No. 6 — (B230) No. 2: (B40) No. 6 — (B231) No. 2: (B40) No. 6 — (B55) No. 18 (AT model): (B40) No. 6 — (B280) No. 3:	Is harness normal?	Go to step 5.	Repair or replace the harness.
5 CHECK HARNESS. Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal (B40) No. 14 — (B136) No. 28: (B40) No. 14 — (B310) No. 10: (B40) No. 14 — (B230) No. 3: (B40) No. 14 — (B231) No. 1: (B40) No. 14 — (B55) No. 17 (AT model): (B40) No. 14 — (B280) No. 9:	Is harness normal?	Go to step 6.	Repair or replace the harness.
6 CHECK ECM. 1) Connect the ECM. 2) Using the tester, measure the resistance between terminals of data link connector. Connector & terminal (B40) No. 6 — No. 14:	Is the resistance $120 \pm 5 \Omega$?	Go to step 7.	Replace the ECM. <Ref. to FU(H4DOTC)-57, REMOVAL, Engine Control Module (ECM).>
7 CHECK VDC/ABS CM. 1) Disconnect the ECM connector (B136). 2) Connect the VDC/ABS CM. 3) Using the tester, measure the resistance between terminals of data link connector. Connector & terminal (B40) No. 6 — No. 14:	Is the resistance $120 \pm 5 \Omega$?	Go to step 8.	Replace the VDC/ABS CM. <Ref. to VDC-7, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8 CHECK HARNESS. 1) Connect the disconnected connectors. 2) Using the tester, measure the resistance between terminals of data link connector and chassis ground. Connector & terminal (B40) No. 6 — Chassis ground: (B40) No. 14 — Chassis ground:	Is the resistance 1 M Ω or more?	Go to step 9.	Go to step 12.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals of data link connector and chassis ground. Connector & terminal (B40) No. 6 — Chassis ground: (B40) No. 14 — Chassis ground:	Is the voltage less than 6 V?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Go to step 13.
10 CHECK HARNESS. 1) Shake the harness. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Repair or replace the harness.	Go to step 11.
11 CHECK CONNECTOR. Disconnect the connector used for high speed CAN circuit.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	It is possible that temporary poor communication occurs.
12 CHECK CONTROL MODULE. With the tester connected, disconnect each control module connector.	Is there any control module whose resistance has changed?	Replace the control module whose resistance has changed.	Repair or replace the open or short circuit of the harness.
13 CHECK ECM. With the tester connected, disconnect each control module connector.	Is there any control module whose voltage has changed?	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the harness.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

J: DTC U1211 CAN-HS ECM DATA ABNORMAL

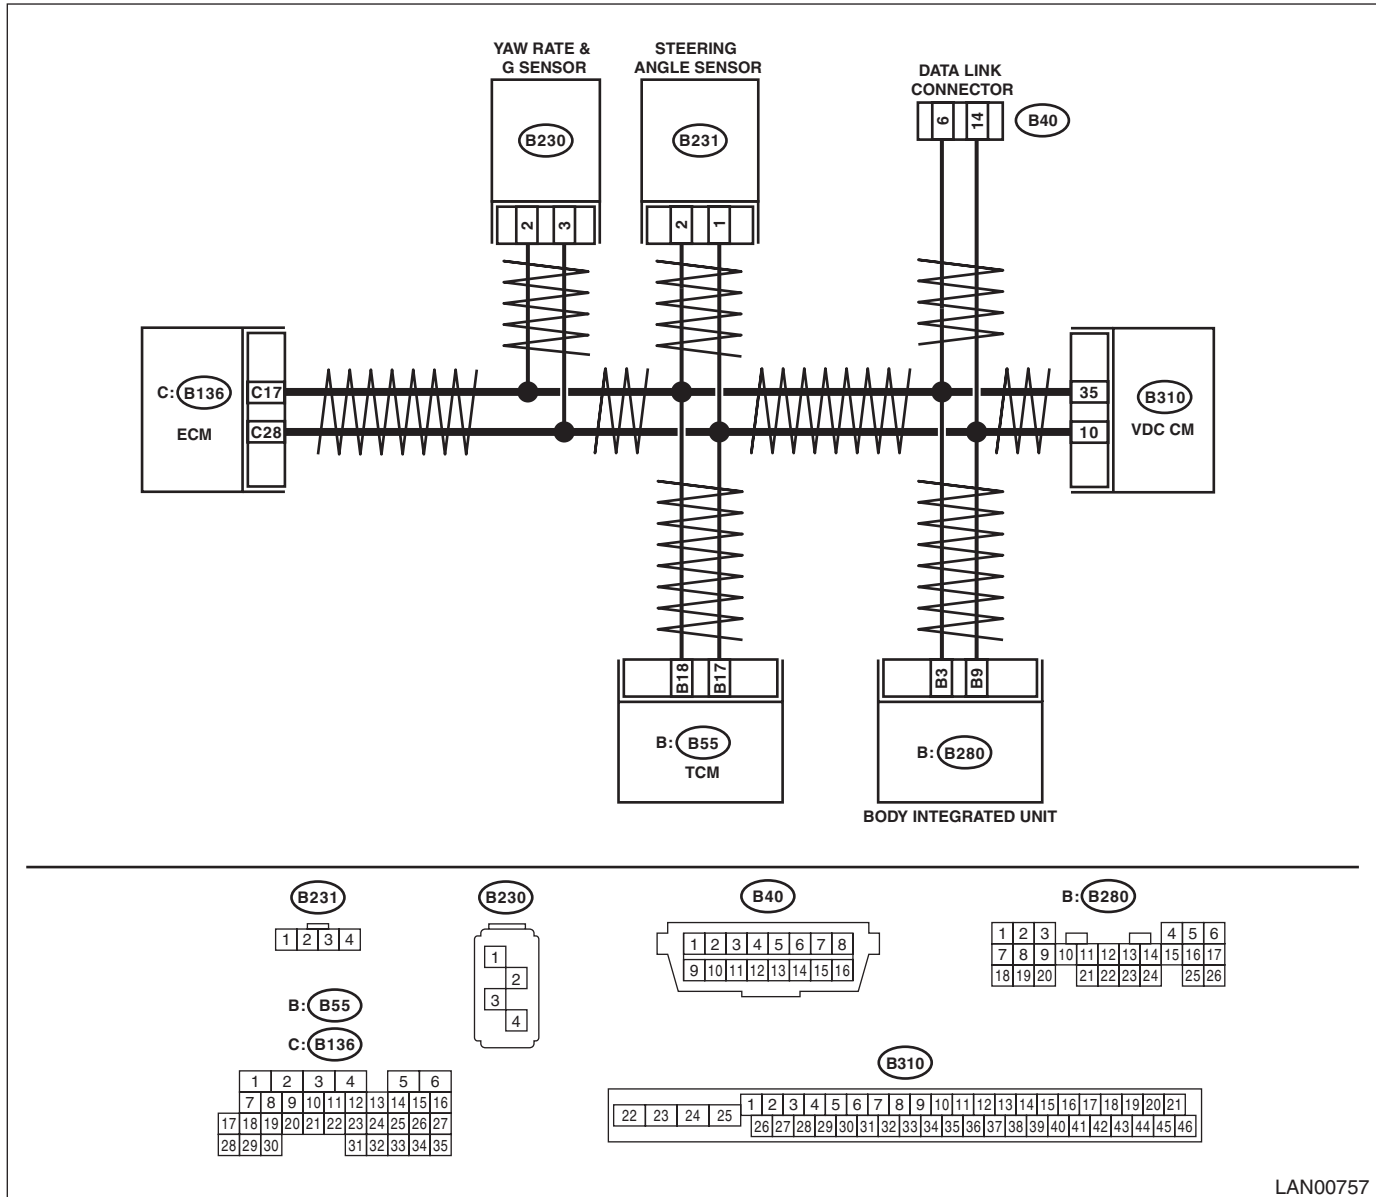

DTC DETECTING CONDITION:

Received error data from ECM.

TROUBLE SYMPTOM:

It is possible that engine control error may occur.

WIRING DIAGRAM:

LAN00757

Step	Check	Yes	No
1	CHECK DTC. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is there DTC U1202?	Perform the diagnosis according to DTC. Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1211 a current malfunction?	Go to step 3. Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK ECM. 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1211 a current malfunction?	Replace the ECM. <Ref. to FU(H4DOTC)-57, REMOVAL, Engine Control Module (ECM).>	Go to step 4.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1211 a current malfunction?	Repair the poor contact or temporary open circuit of harness.	Go to step 5.
5 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector that is connected to high speed CAN circuit.	Is there poor contact of connector?	Repair the connector terminal where poor contact exists, or replace harness.	It is possible that temporary poor communication occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

K: DTC U1212 CAN-HS TCM DATA ABNORMAL

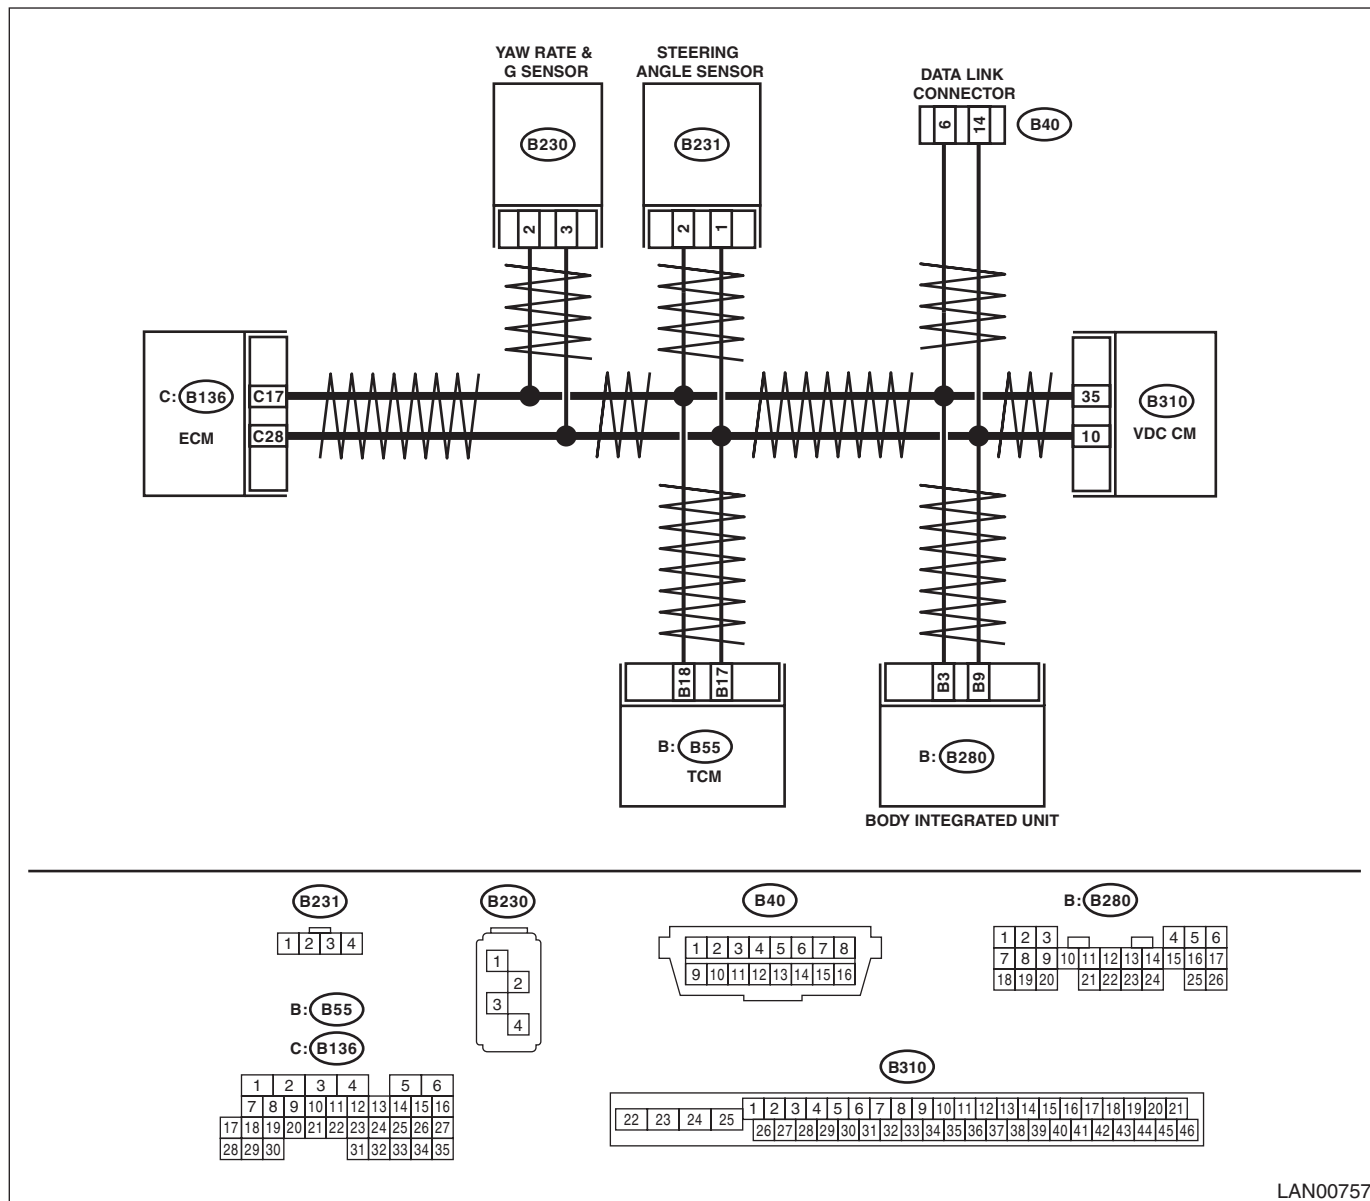

DTC DETECTING CONDITION:

Received error data from TCM.

TROUBLE SYMPTOM:

It is possible that transmission control error may occur.

WIRING DIAGRAM:

LAN00757

Step	Check	Yes	No
1	CHECK DTC. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is there DTC U1202?	Perform the diagnosis according to DTC. Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1212 a current malfunction?	Go to step 3. Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1212 a current malfunction?	Replace the TCM. <Ref. to 4AT-66, REMOVAL, Transmission Control Module (TCM).>	Go to step 4.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1212 a current malfunction?	Repair or replace the harness.	Go to step 5.
5 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector that is connected to high speed CAN circuit.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	Temporary communication failure occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

L: DTC U1213 CAN-HS VDC/ABS DATA ABNORMAL

DTC DETECTING CONDITION:

Received error data from VDC/ABS module.

TROUBLE SYMPTOM:

It is possible that brake control error may occur.

WIRING DIAGRAM:

LAN00757

Step	Check	Yes	No
1	CHECK DTC. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is there DTC U1202?	Perform the diagnosis according to DTC. Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1213 a current malfunction?	Go to step 3. Go to step 4.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the VDC/ABS CM connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1213 a current malfunction?	Replace the VDC/ABS CM. <Ref. to VDC-7, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 4.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1213 a current malfunction?	Repair or replace the harness.	Go to step 5.
5 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector that is connected to high speed CAN circuit.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	It is possible that temporary poor communication occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

M: DTC U1221 CAN-HS ECM NO-RECEIVE DATA

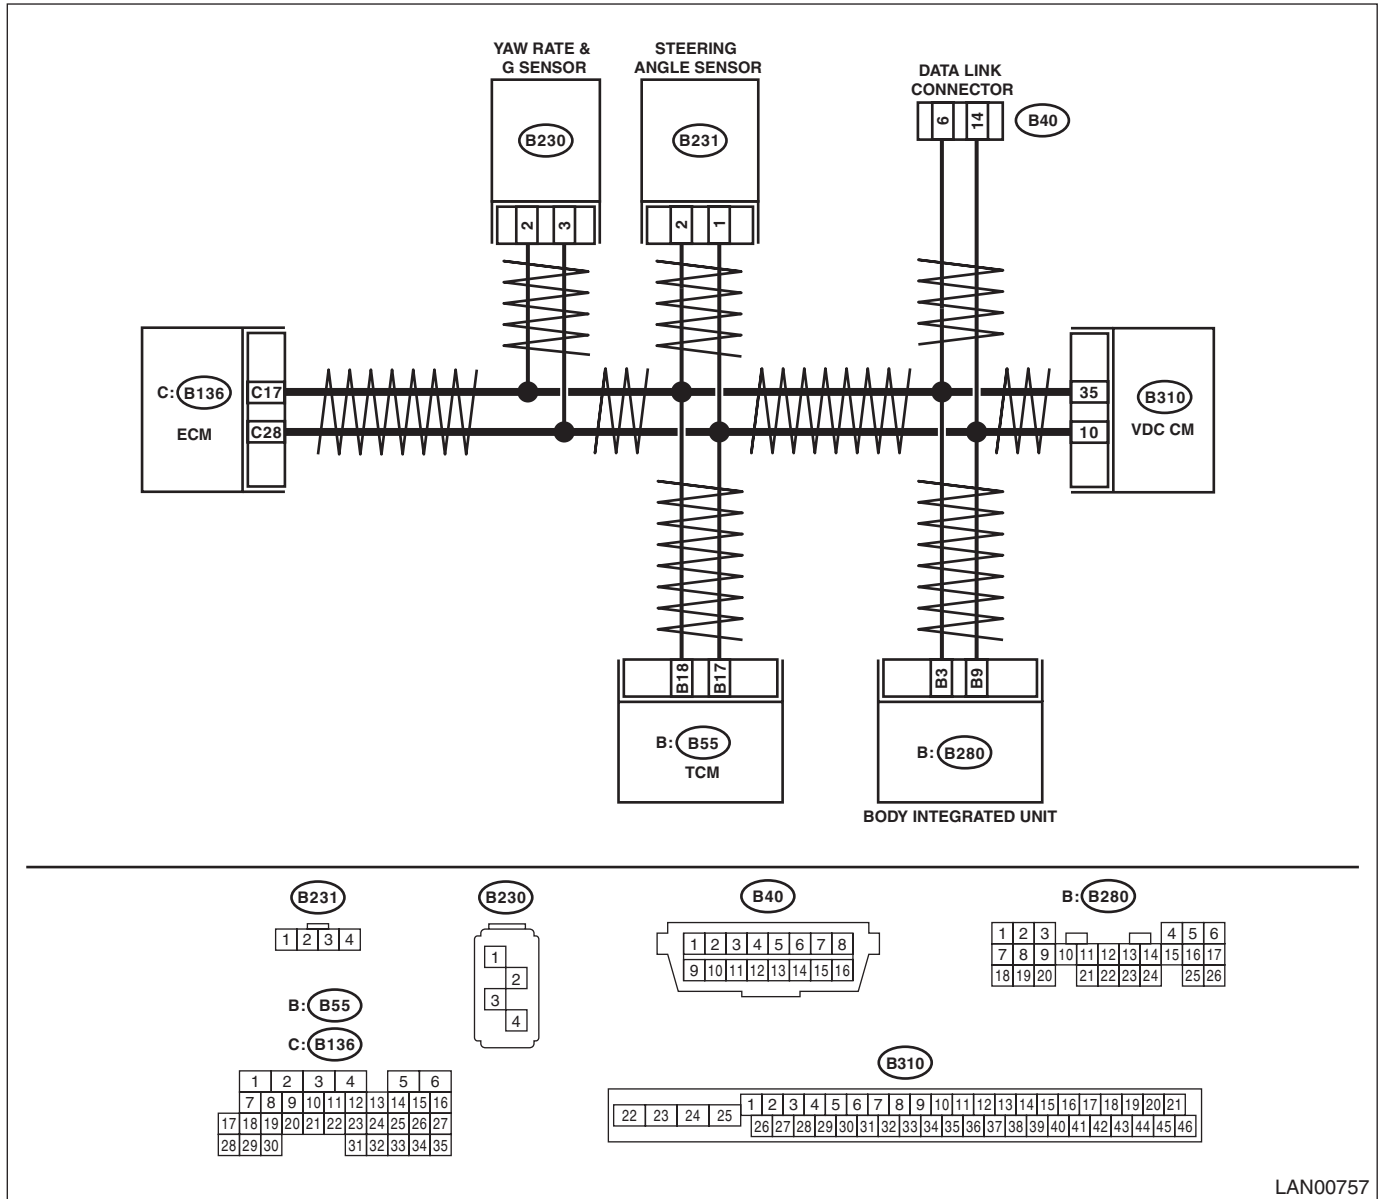

DTC DETECTING CONDITION:

Not received data from ECM.

TROUBLE SYMPTOM:

Malfunction indicator light illuminates.

WIRING DIAGRAM:

Step	Check	Yes	No
1	CHECK DTC. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Go to step 3.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1221 a current malfunction?	Go to step 4.	Go to step 8.
4 CHECK CURRENT DATA. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal (B40) No. 6 — (B136) No. 17: (B40) No. 6 — (B310) No. 35: (B40) No. 6 — (B230) No. 2: (B40) No. 6 — (B231) No. 2: (B40) No. 6 — (B55) No. 18 (AT model): (B40) No. 6 — (B280) No. 3:	Is harness normal?	Go to step 5.	Repair or replace the harness.
5 CHECK HARNESS. Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal (B40) No. 14 — (B136) No. 28: (B40) No. 14 — (B310) No. 10: (B40) No. 14 — (B230) No. 3: (B40) No. 14 — (B231) No. 1: (B40) No. 14 — (B55) No. 17 (AT model): (B40) No. 14 — (B280) No. 9:	Is harness normal?	Go to step 6.	Repair or replace the harness.
6 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Connect the disconnected connectors. 3) Start the engine and stop. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1221 a current malfunction?	Go to step 7.	Go to step 8.
7 CHECK DTC. Read all DTCs using the Subaru Select Monitor.	Are DTCs P1718 or C0047 detected?	Replace the ECM. <Ref. to FU(H4DOTC)-57, REMOVAL, Engine Control Module (ECM).>	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
8 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1221 a current malfunction?	Repair or replace the harness.	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
9	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect all the connector that is connected to high speed CAN circuit.	Is there poor contact of connector terminal?	Repair the connector terminal where poor contact exists, or replace harness.	Temporary communication failure occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

N: DTC U1222 CAN-HS TCM NO-RECEIVE DATA

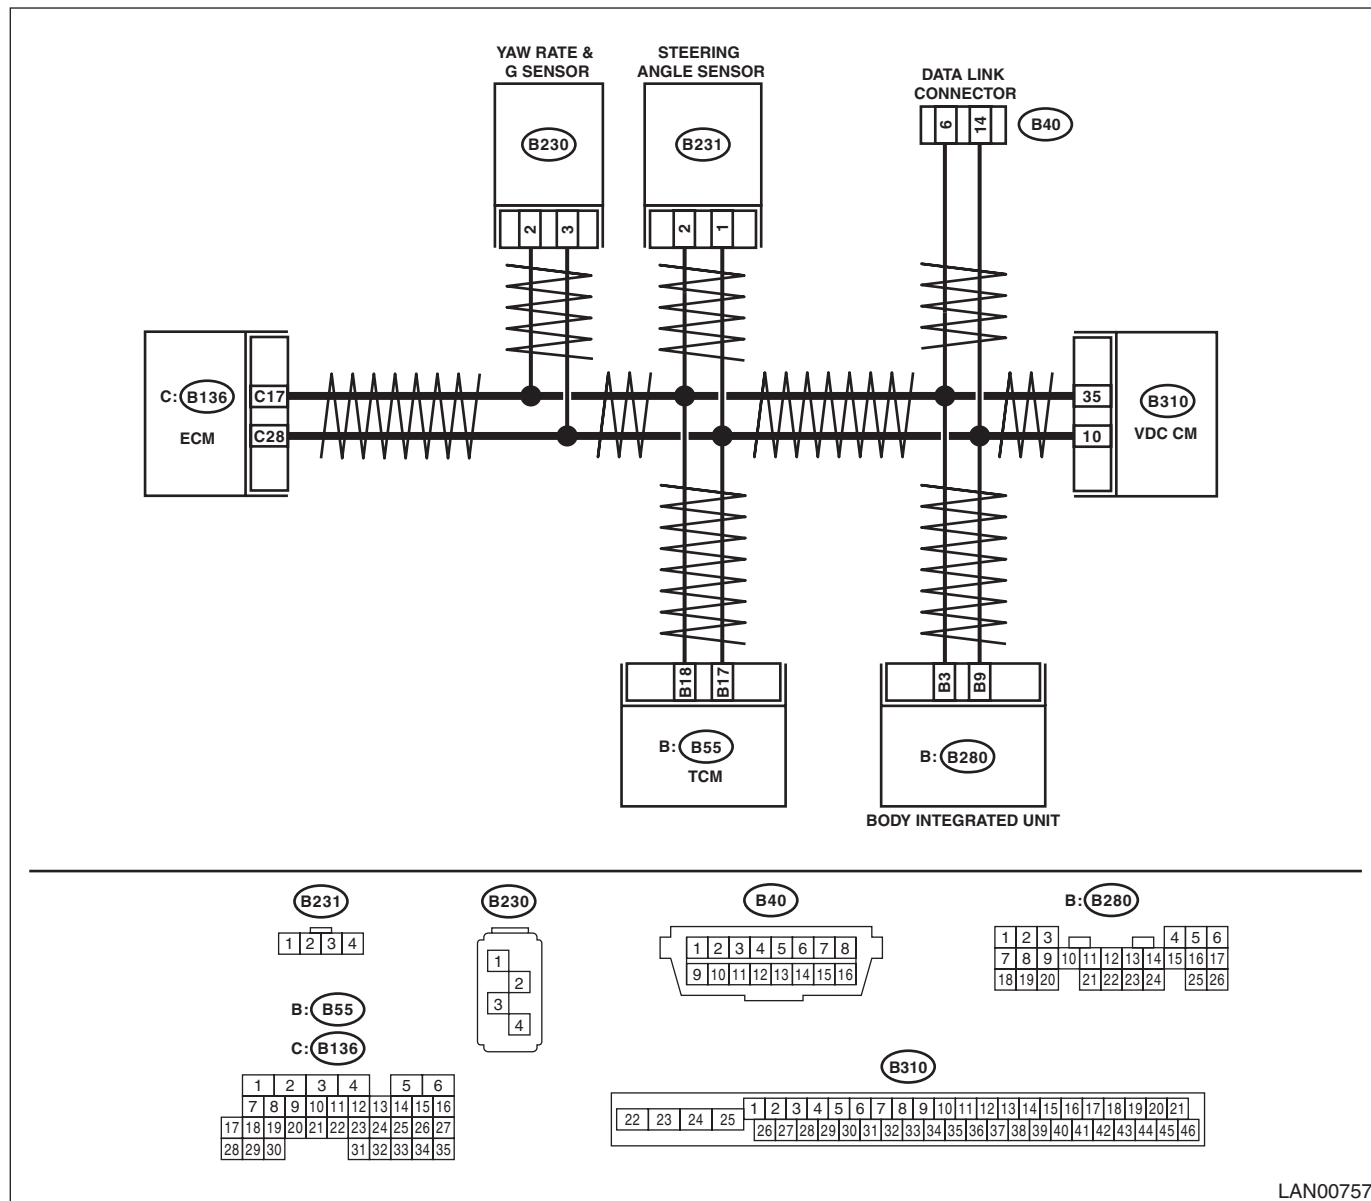

DTC DETECTING CONDITION:

Not received data from TCM.

TROUBLE SYMPTOM:

Malfunction indicator light illuminates.

WIRING DIAGRAM:

LAN00757

Step	Check	Yes	No
1	CHECK DTC. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is there DTC U1202?	Perform the diagnosis according to DTC. Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1222 a current malfunction?	Go to step 3. Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1222 a current malfunction?	Go to step 4.	Go to step 7.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal (B55) No. 17 — (B40) No. 14: (B55) No. 18 — (B40) No. 6:	Is harness normal?	Go to step 5.	Repair or replace the harness.
5 CHECK DTC. 1) Connect the disconnected connectors. 2) Start the engine and stop. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1222 a current malfunction?	Go to step 6.	Go to step 7.
6 CHECK DTC. Using the Subaru Select Monitor, read all DTCs.	Is U0101 or C0047 displayed?	Replace the TCM. <Ref. to 4AT-66, REMOVAL, Transmission Control Module (TCM).>	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
7 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1222 a current malfunction?	Repair or replace the harness.	Go to step 8.
8 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect all the connector that is connected to high speed CAN circuit.	Is there poor contact of connector terminal?	Repair the connector terminal where poor contact exists, or replace harness.	Temporary communication failure occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

O: DTC U1223 CAN-HS VDC/ABS NO-RECEIVE DATA

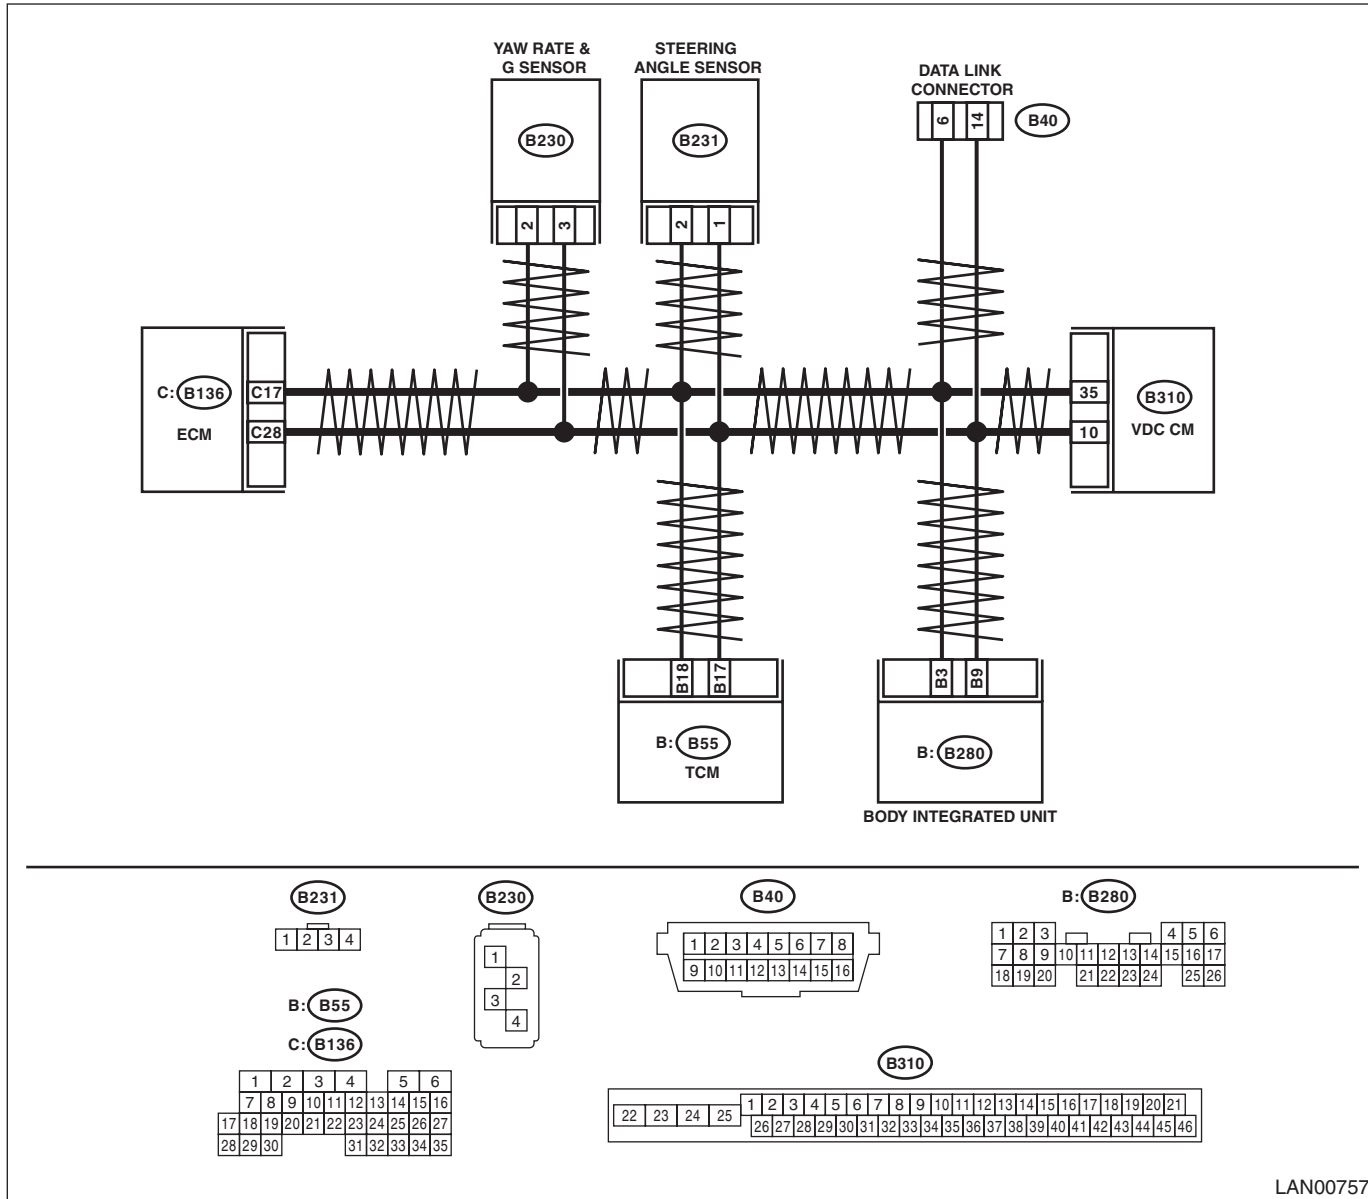

DTC DETECTING CONDITION:

Not received data from VDC/ABS CM.

TROUBLE SYMPTOM:

ABS warning light and VDC warning light illuminate.

WIRING DIAGRAM:

LAN00757

Step	Check	Yes	No
1	CHECK DTC. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is there DTC U1202?	Perform the diagnosis according to DTC. Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1223 a current malfunction?	Go to step 3. Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1223 a current malfunction?	Go to step 4.	Go to step 7.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal (B40) No. 6 — (B310) No. 35: (B40) No. 14 — (B310) No. 10:	Is harness normal?	Go to step 5.	Repair or replace the harness.
5 CHECK DTC. 1) Connect the disconnected connectors. 2) Start the engine and stop. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1223 a current malfunction?	Go to step 6.	Go to step 7.
6 CHECK DTC. Read all DTCs using the Subaru Select Monitor.	Is P1718 or U0122 displayed?	Replace the VDC/ABS CM. <Ref. to VDC-7, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
7 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1223 a current malfunction?	Repair or replace the harness.	Go to step 8.
8 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect all control module connectors (B280, B310, B55, B136, B230, B231) that are connected to high speed CAN communication line.	Is there connector terminal where poor contact exists?	Repair the connector terminal where poor contact exists, or replace harness.	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

P: DTC U1300 CAN-LS MALFUNCTION

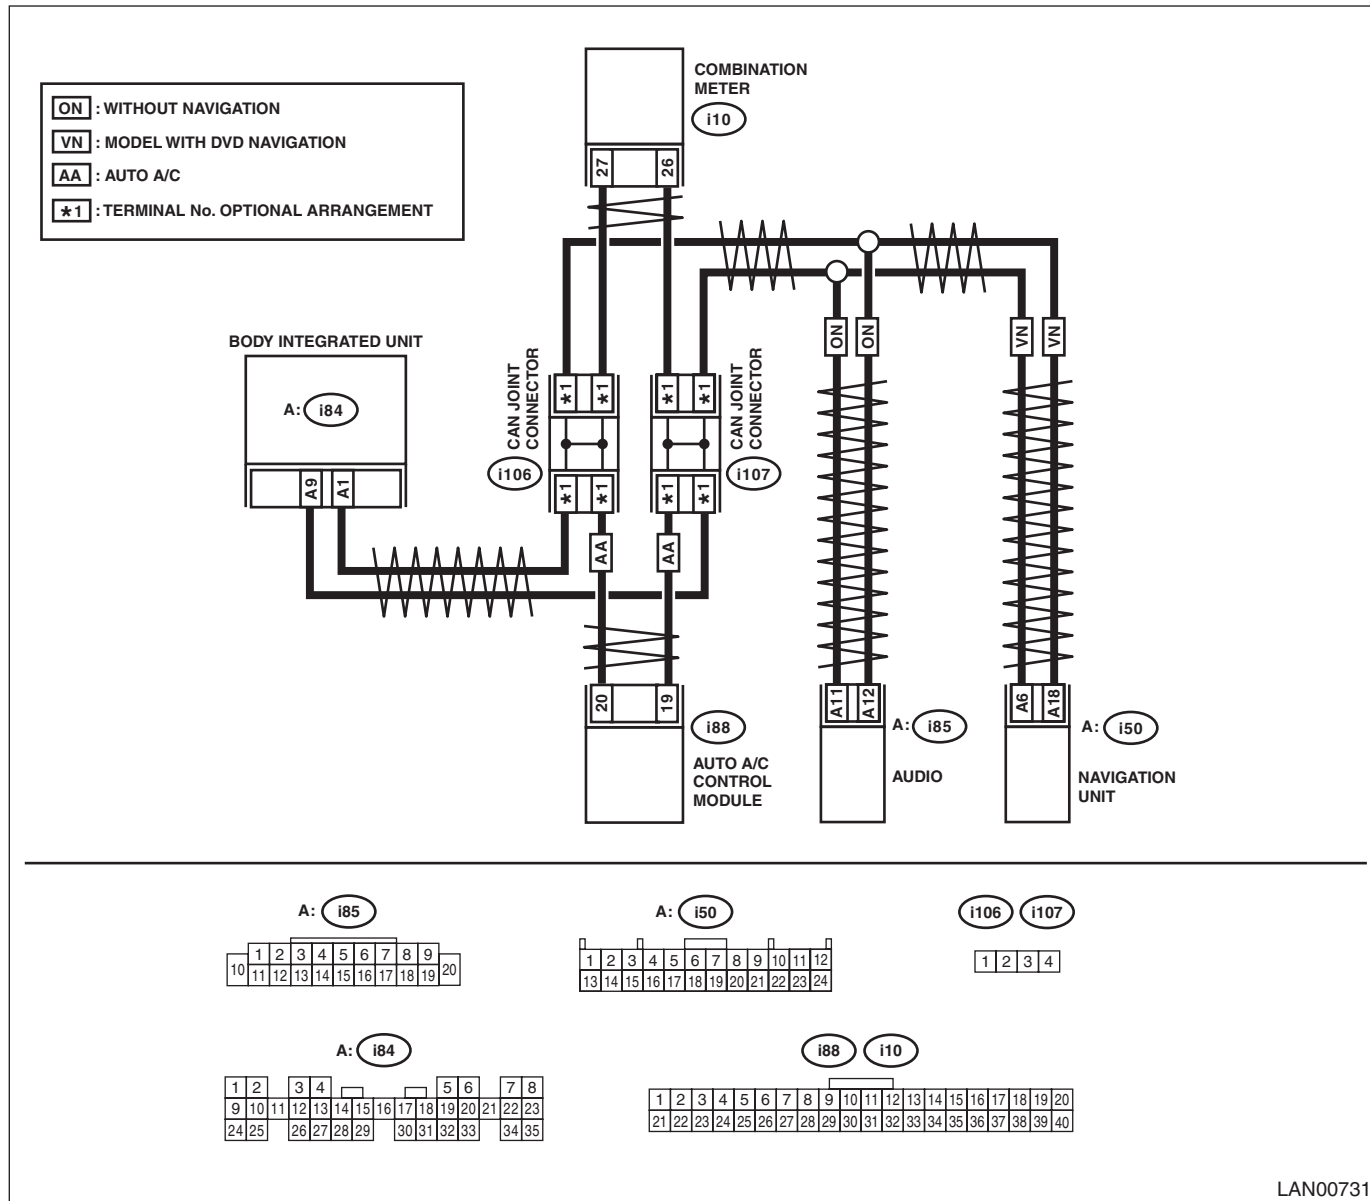

DTC DETECTING CONDITION:

Open or short in low speed CAN circuit

TROUBLE SYMPTOM:

Low speed CAN communication is not normal.

WIRING DIAGRAM:

LAN00731

Step	Check	Yes	No
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Go to step 2.	Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK DTC. 1) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Go to step 3.	Go to step 7.
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 4.	Repair or replace the harness.
4 CHECK AUDIO OR NAVIGATION. 1) Connect the disconnected connectors. 2) Disconnect the connector of navigation (i50) or audio (i85). 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Go to step 5.	Replace the navigation or audio. <Ref. to ET-9, REMOVAL, Audio.>
5 CHECK AUTO A/C CONTROL MODULE. 1) Turn the ignition switch to OFF. 2) Connect the audio or navigation connectors. 3) Disconnect the auto A/C control module connector (i88). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Go to step 6.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>
6 CHECK BODY INTEGRATED UNIT. 1) Turn the ignition switch to OFF. 2) Connect the auto A/C control module. 3) Replace the body integrated unit of your vehicle with the body integrated unit from other vehicle, which is working normally. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
7 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Repair or replace the harness.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
8	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector that is connected to low speed CAN circuit.	Is there poor contact at disconnected connector?	Repair the connector terminal, or replace harness.	Temporary communication failure occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Q: DTC U1301 CAN-LS COUNTER ABNORMAL

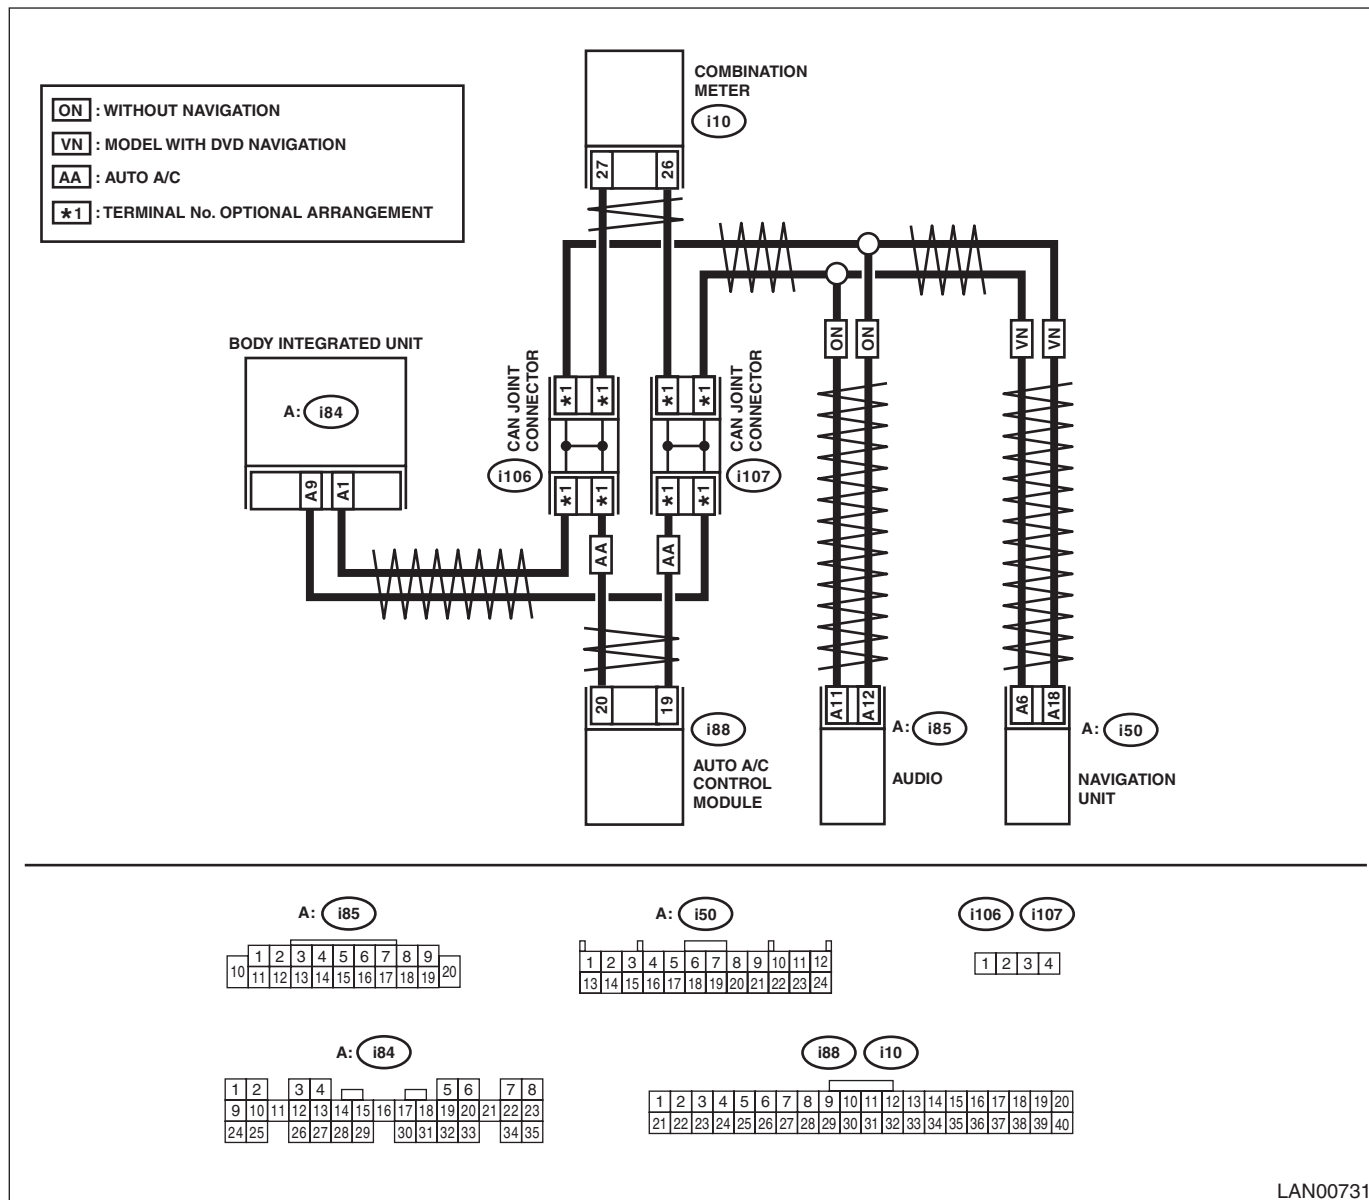

DTC DETECTING CONDITION:

Communication is unstable because of low speed CAN communication error.

TROUBLE SYMPTOM:

Display error may occur in fuel gauge because the CAN communication is not transmitted (sending/receiving) normally.

WIRING DIAGRAM:

LAN00731

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Are there DTC U1300 or U1302?	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 a current malfunction?	Go to step 3.	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 a current malfunction?	Go to step 4.	Go to step 9.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 5.	Repair or replace the harness.
5 CHECK AUDIO OR NAVIGATION. 1) Connect the disconnected connectors. 2) Disconnect the connector of navigation (i50) or audio (i85). 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 a current malfunction?	Go to step 6.	Replace the audio or navigation. <Ref. to ET-9, REMOVAL, Audio.>
6 CHECK AUTO A/C CONTROL MODULE. 1) Turn the ignition switch to OFF. 2) Connect the audio or navigation module. 3) Disconnect the auto A/C control module connector (i88). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 a current malfunction?	Go to step 7.	Replace the auto A/C control module. <Ref. to AC-35, REMOVAL, Control Unit (Auto A/C Model).>
7 CHECK COMBINATION METER. 1) Turn the ignition switch to OFF. 2) Connect the disconnected connectors. 3) Perform the self-diagnosis of combination meter. <Ref. to IDI-5, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self-diagnosis of combination meter OK?	Go to step 8.	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>
8 CHECK BODY INTEGRATED UNIT. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 a current malfunction?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
9 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for low speed CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 a current malfunction?	Repair or replace the harness.	Go to step 10.
10 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	Temporary communication failure occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

R: DTC U1302 CAN-LS BUS OFF

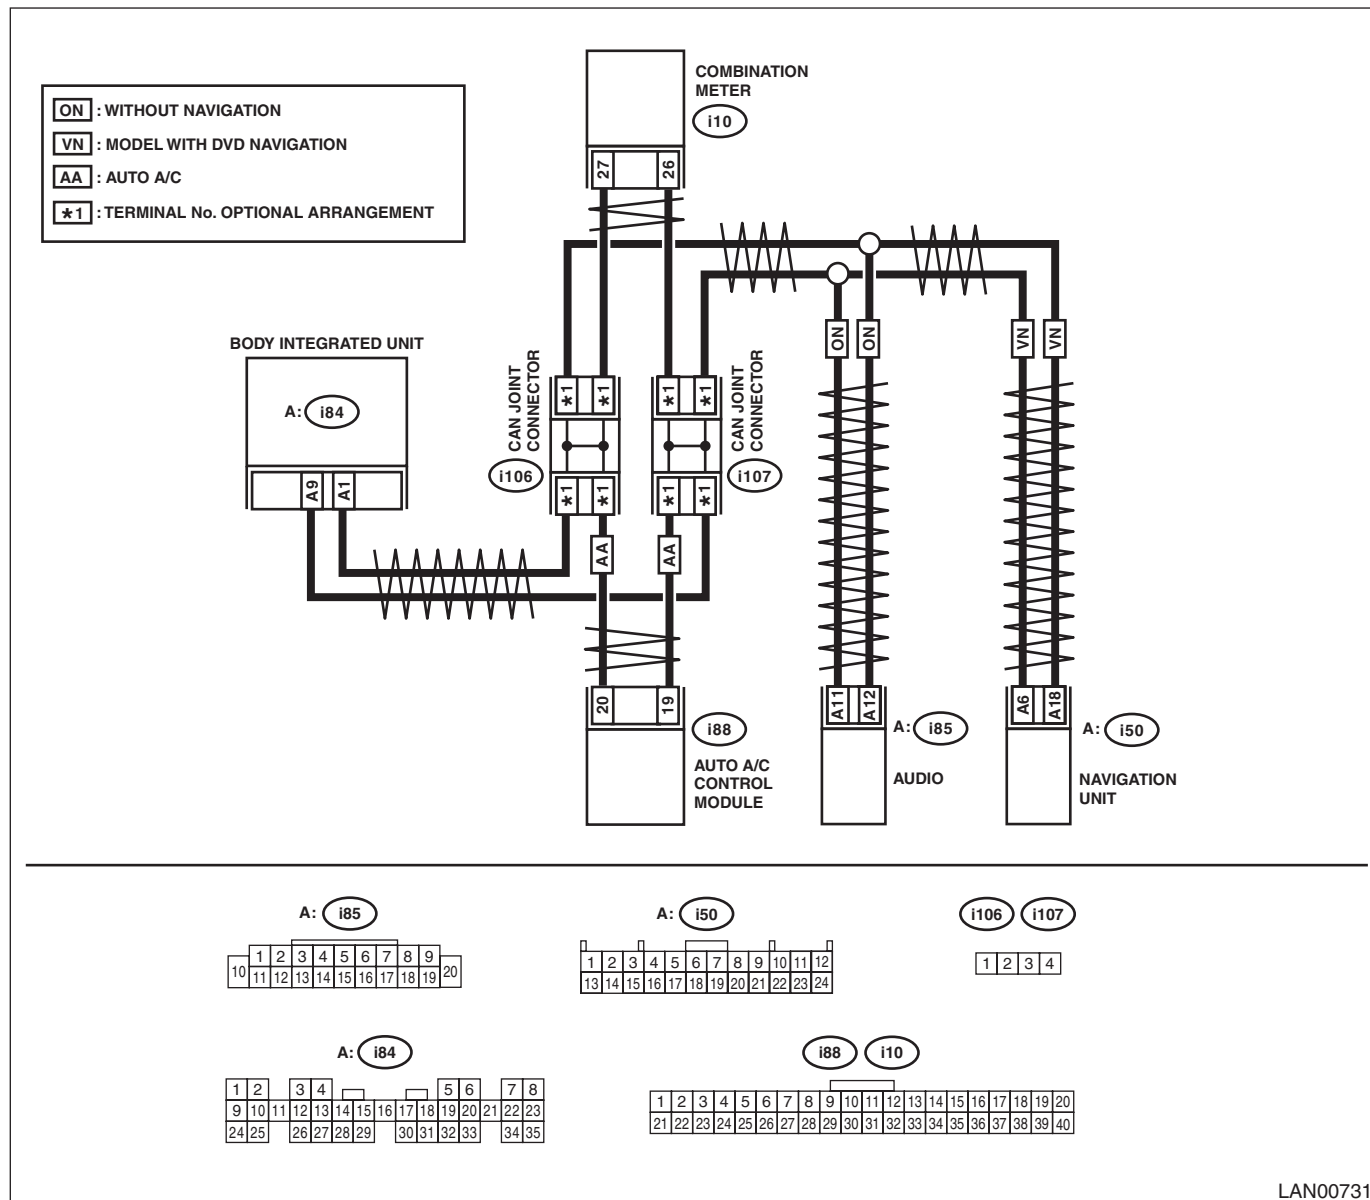

DTC DETECTING CONDITION:

Integrated unit communication is shut down because of low speed CAN communication error.

TROUBLE SYMPTOM:

Display error may occur in fuel gauge because the CAN communication is not transmitted (sending/receiving) normally.

WIRING DIAGRAM:

LAN00731

Step	Check	Yes	No
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Go to step 2.	Go to step 8.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1302 a current malfunction?	Go to step 3.	Go to step 8.
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 4.	Repair or replace the harness.
4 CHECK HARNESS. 1) Connect the disconnected connectors. 2) Using the tester, measure the resistance between harness connector and chassis ground. Connector & terminal <i>(i84) No. 1 — Chassis ground:</i> <i>(i84) No. 9 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Go to step 7.
5 CHECK HARNESS. 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between harness connector and chassis ground. Connector & terminal <i>(i84) No. 1 (+) — Chassis ground (-):</i> <i>(i84) No. 9 (+) — Chassis ground (-):</i>	Is the voltage less than 6 V?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Go to step 6.
6 CHECK HARNESS. With the tester connected, disconnect control module.	Is there any control module whose voltage has changed?	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the harness.
7 CHECK HARNESS. With the tester connected, disconnect control module.	Is there any control module whose resistance has changed?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the harness.
8 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for low speed CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1302 a current malfunction?	Repair or replace the open, short circuit of the harness.	Go to step 9.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
9	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	Temporary communication failure occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

S: DTC U1311 CAN-LS METER UNIT DATA ABNORMAL

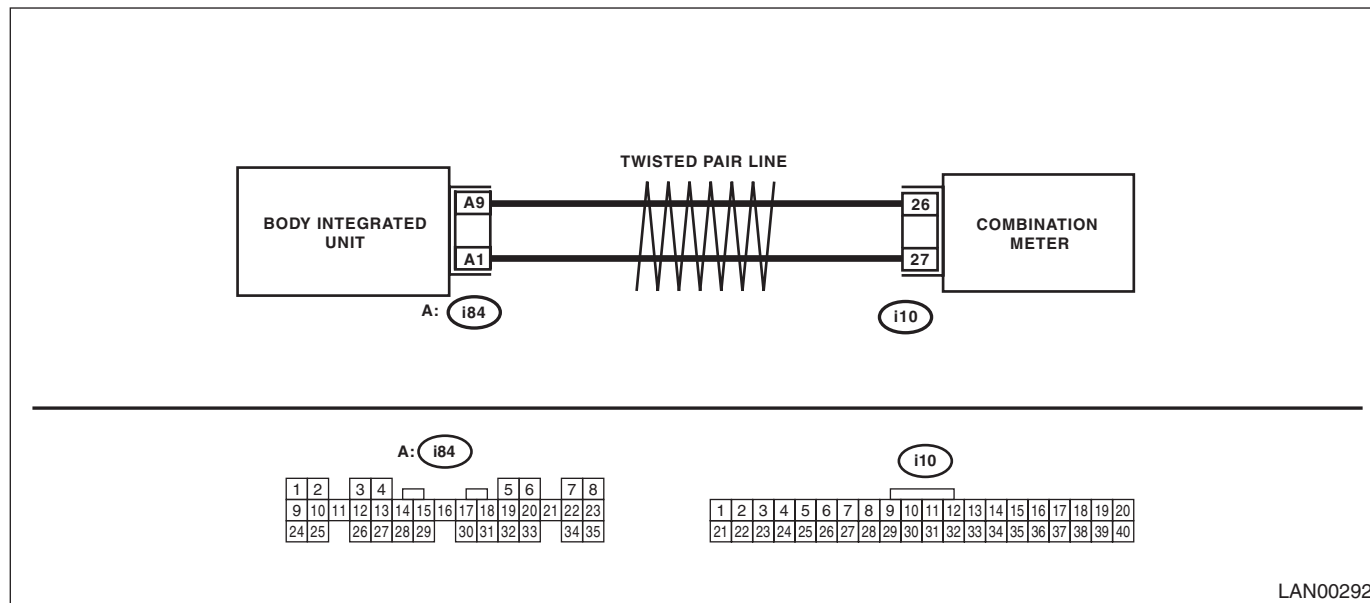

DTC DETECTING CONDITION:

Received error data from meter.

TROUBLE SYMPTOM:

Defective data from combination meter occurs.

WIRING DIAGRAM:

LAN00292

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is DTC U1300 or U1302 displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1311 a current malfunction?	Go to step 3.	Go to step 4.
3	CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector (i10). 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1311 a current malfunction?	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>	Go to step 4.
4	CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Shake the harness used for low speed CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1311 a current malfunction?	Repair or replace the harness.	Go to step 5.
5	CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	Temporary poor contact occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

T: DTC U1321 CAN-LS METER NO-RECEIVE DATA

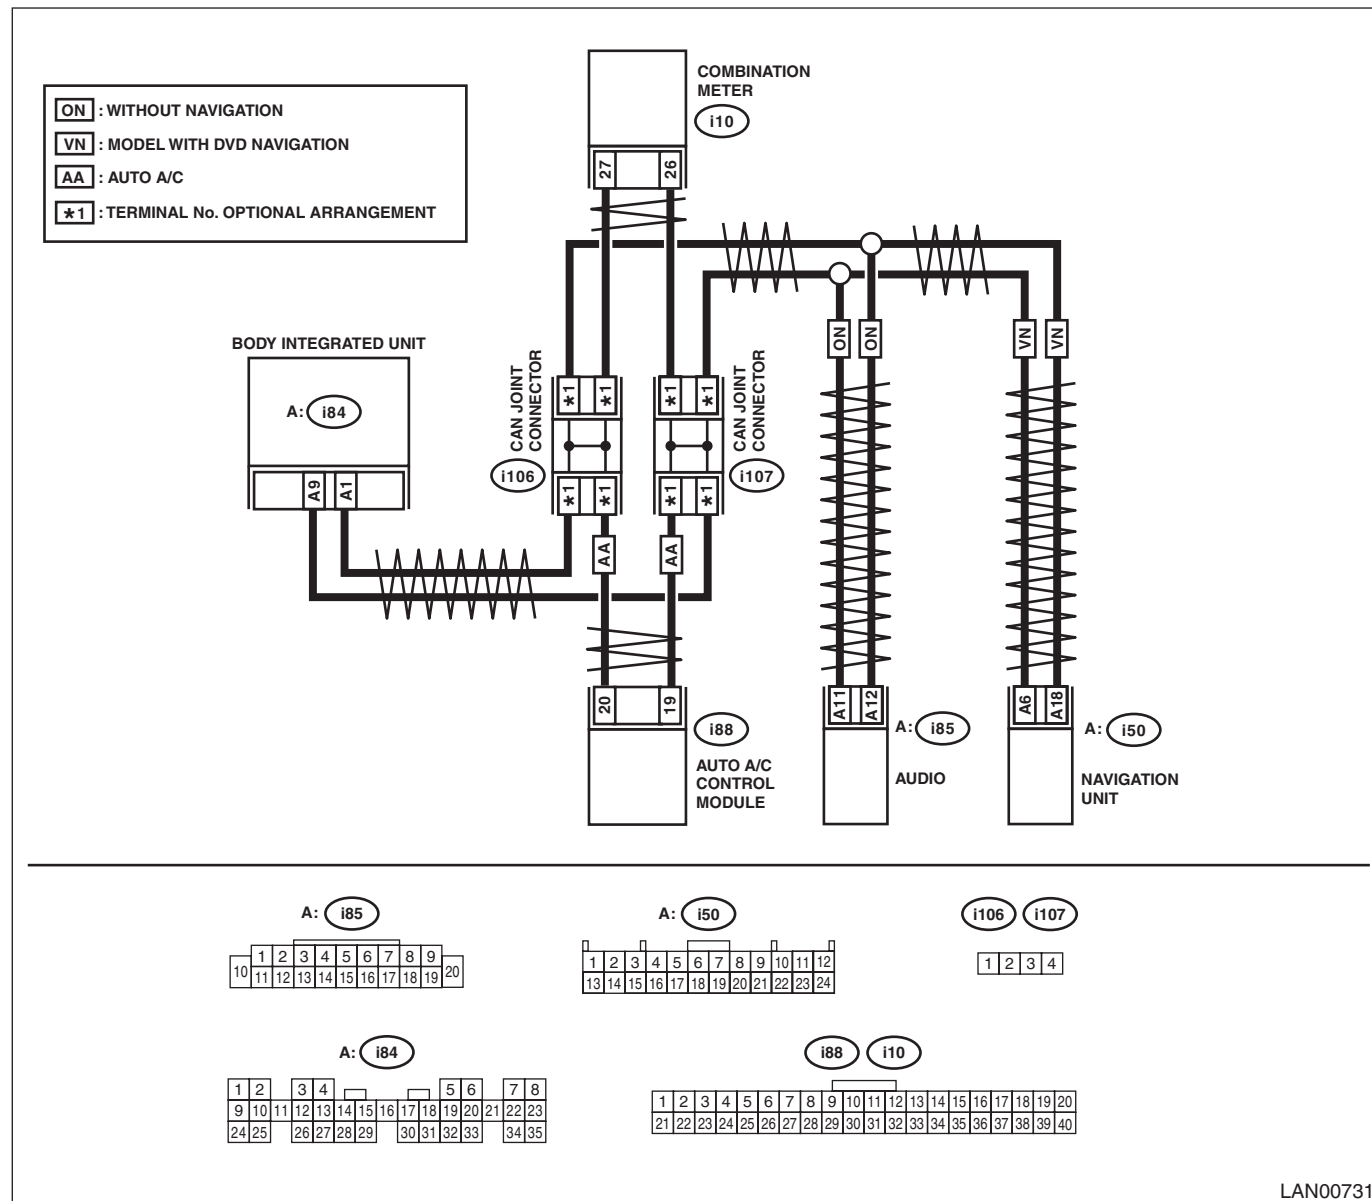

DTC DETECTING CONDITION:

Not received data from meter.

TROUBLE SYMPTOM:

Engine may not be started.

WIRING DIAGRAM:

LAN00731

Step	Check	Yes	No
1	CHECK ALL DTCS. Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>	Is U1300 or U1302 displayed?	Perform the diagnosis according to DTC. Go to step 2.
2	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Go to step 3. Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
3 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Go to step 4.	Go to step 7.
4 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, check for open, short (power supply-output short, GND-output short) in the harness. Connector & terminal <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 5.	Repair or replace the harness.
5 CHECK COMBINATION METER. 1) Connect the disconnected connectors. 2) Perform the self-diagnosis of combination meter. <Ref. to IDI-5, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self diagnosis normal?	Go to step 6.	Replace the combination meter. <Ref. to IDI-22, REMOVAL, Combination Meter.>
6 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>	Go to step 7.
7 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Shake the harness used for low speed CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Repair the poor contact, open circuit of harness or replace harness.	Go to step 8.
8 CHECK CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	It is possible that temporary poor communication occurs.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

U: DTC B1500 KEYLESS UART COM. MALFUNCTION

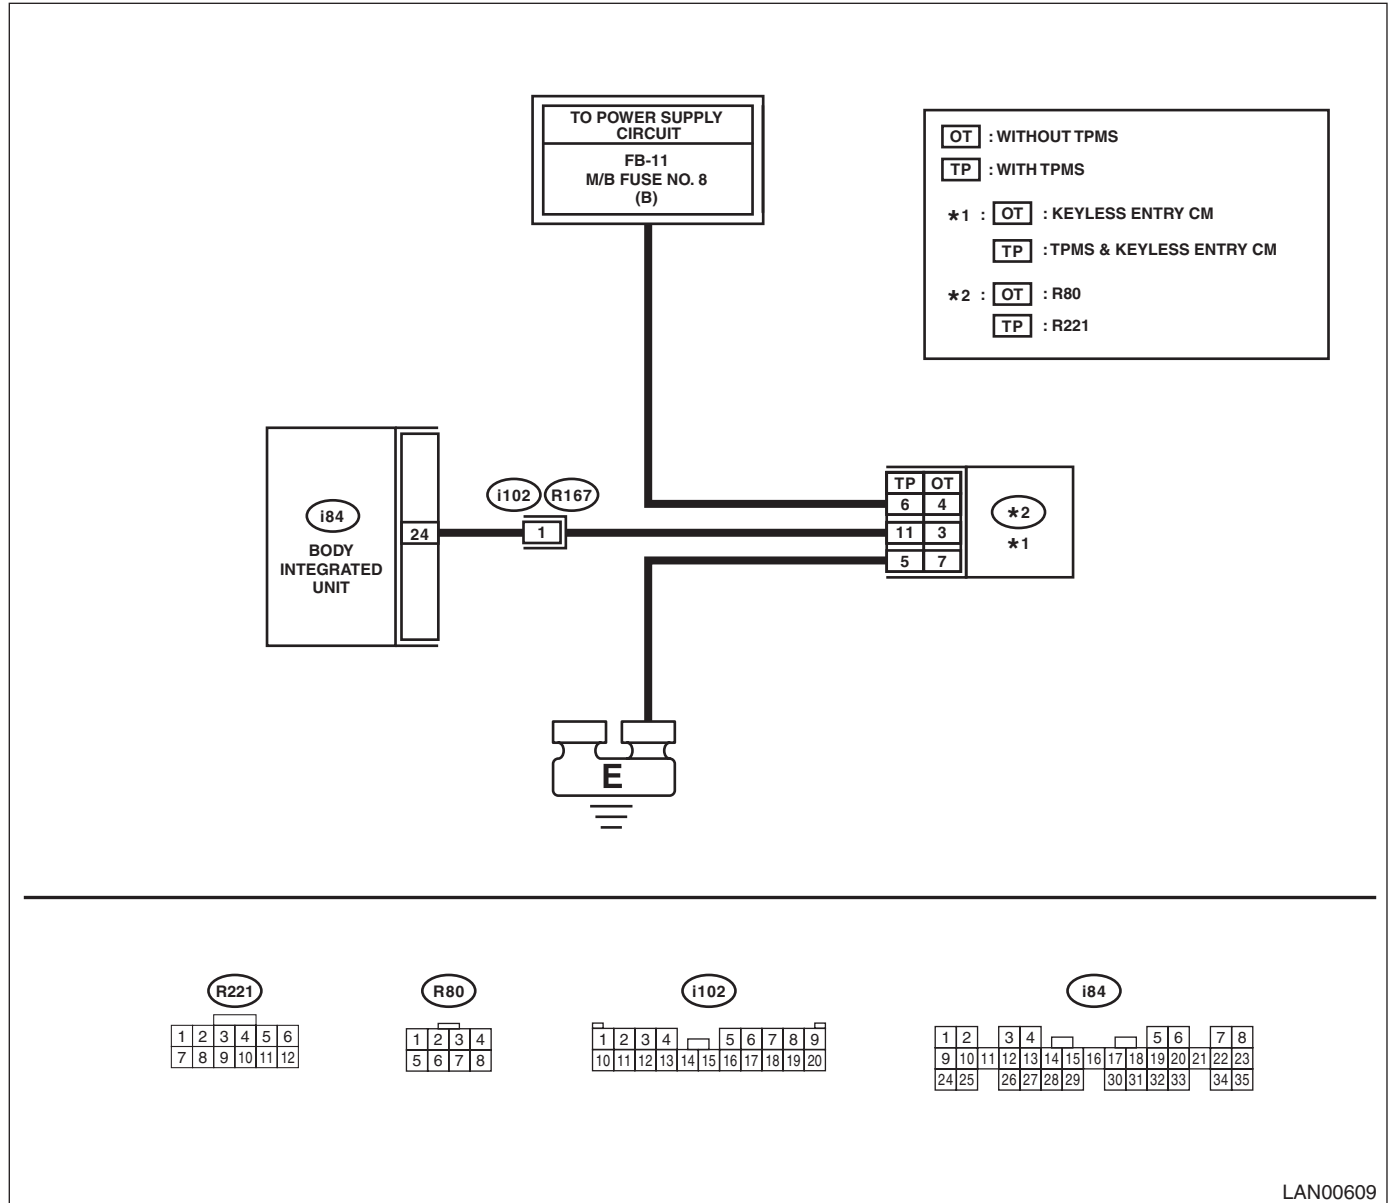

DTC DETECTING CONDITION:

Open or short circuit in keyless UART circuit

TROUBLE SYMPTOM:

Door lock does not operate with keyless.

WIRING DIAGRAM:

Step	Check	Yes	No	
1	CHECK DTC. Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is B1500 current malfunction?	Go to step 2.	Go to step 7.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
2 CHECK DTC. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from body integrated unit and keyless entry control module. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1500 current malfunction?	Go to step 3.	Go to step 7.
3 CHECK HARNESS. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from body integrated unit and keyless entry control module. 3) Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). Connector & terminal Keyless entry CM (i84) No. 24 — (R80) No. 3: TPMS & keyless entry CM (i84) No. 24 — (R221) No. 11:	Is harness normal?	Go to step 4.	Repair or replace the harness.
4 CHECK HARNESS. Using the tester, measure the voltage between keyless entry control module and chassis ground. Connector & terminal Keyless entry CM (R80) No. 4 (+) — Chassis ground (–): TPMS & keyless entry CM (R221) No. 6 (+) — Chassis ground (–):	Is the voltage battery voltage?	Go to step 5.	Check the power supply circuit for keyless entry control module.
5 CHECK HARNESS. Using the tester, measure the resistance between keyless entry control module and chassis ground. Connector & terminal Keyless entry CM (R80) No. 7 — Chassis ground: TPMS & keyless entry CM (R221) No. 5 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair the open circuit of harness or replace harness.
6 CHECK OPERATION. 1) Install the keyless entry control module from other vehicle, which is working normally. 2) Register the keyless key which is working normally. 3) Operate the keyless key.	Is the door locking operate?	Replace the keyless entry control module. <Ref. to SL-42, REMOVAL, Keyless Entry Control Module.>	Replace the body integrated unit. <Ref. to SL-44, REMOVAL, Body Integrated Unit.>
7 CHECK CONNECTOR. Disconnect the connectors from body integrated unit and keyless entry control module.	Is there poor contact of connector?	Repair the connector, or replace harness.	Temporary poor contact occurs.

15. General Diagnostic Table

A: INSPECTION

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	System is normal.	Perform the diagnosis according to DTC.	—
Engine coolant temperature	Engine coolant temperature gauge displays correctly without engine coolant temperature warning light illuminating/blinking.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> • Engine cooling system • LAN system 	If three data values are different when display the current data of ECM, TCM and body integrated unit, it is possible that driving system CAN is malfunction.
Remaining fuel level	Fuel gauge displays correctly. Fuel level warning light does not remain illuminated.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> • Combination meter system • LAN system 	If the values of “Fuel level resistance” and “Fuel level resistance 2” are different when display the current data of body integrated unit, it is possible that body integrated unit is malfunction.
ATF temperature warning light	ATF temperature warning light is free from illuminating/blinking.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> • Automatic transmission • Shift lock control system • LAN system 	Warning light also blinks when DTC: B1106 occurs.
EBD warning light ABS warning light VDC warning light Hill start assist warning light	EBD warning light/ABS warning light/VDC warning light/Hill start assist warning light are free from ON/OFF all the time.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> • ABS (diagnostics) • VDC (diagnostics) • Parking brake • Combination meter system • LAN system 	—
Shift position	Meter display of shift position is correct. Shift position changes when switch the shift (up/down) on manual mode.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> • Automatic transmission • Combination meter system • LAN system 	—
Clearance light Low beam High beam	Clearance light/low beam/high beam illuminate correctly by switch operation. Indicator in the meter illuminates when clearance light/high beam are illuminating.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> • Lighting system • Combination meter system • LAN system 	—
Fog light	Fog light illuminates correctly by switch operation. Indicator in the meter illuminates when each fog light is illuminating.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> • Lighting system • Combination meter system • LAN system 	—

General Diagnostic Table

LAN SYSTEM (DIAGNOSTICS)

Item	Operation	Specifications		Note
		YES	NO	
DRL	DRL operates correctly.	System is normal.	Refer to the following to check. • Lighting system • LAN system	—
Key interlock	Key cannot be removed in other than P range. Key can be removed in P range.	System is normal.	Refer to the following to check. • Shift lock control system • LAN system	—
Shift lock	Shift operation is normal.	System is normal.	Refer to the following to check. • Shift lock control system • Combination meter system • LAN system	—
Key warning switch alarm	Alarm sounds when drivers door is open with the key inserted.	System is normal.	Refer to the following to check. • Combination meter system • LAN system	—
Seat belt warning alarm	Indicator in the meter illuminate and alarm sounds when driver's seat belt is not worn. Indicator in the clock illuminates. When passenger's seat is occupied without passenger's seat belt worn. Alarm sounds when vehicle speed is approx. 15 km/h without seat belt fastened.	System is normal.	Refer to the following to check. • Seat belt warning system • Combination meter system • LAN system	—
Rear window defogger	Rear window defogger operates by operating the switch. Indicator in the switch illuminates when rear window defogger is operating.	System is normal.	Refer to the following to check. • Rear window defogger • A/C control module	—
Wiper deicer	Wiper deicer operates by operating the switch. (When the outside temperature is 5°C or higher, press the switch for three seconds or more to operate forcibly, otherwise the wiper deicer operation will be canceled.)	System is normal.	Refer to the following to check. • Wiper deicer system • A/C control module	—
Rear wiper	Rear wiper operates by operating the switch.	System is normal.	Refer to the following to check. • Wiper and washer system	Vehicle speed response time varies depending on the condition of customization of the body integrated unit "Sedan/Wagon Setting".
Door lock	Lock/unlock operates by operating the central door lock switch. Rear gate opens by operating the rear gate opener button.	System is normal.	Refer to the following to check. • Security and locks • LAN system	Rear gate cannot open by operating the rear gate opener button when customization of the body integrated unit "Sedan/Wagon Setting" is set to "Sedan".

General Diagnostic Table

LAN SYSTEM (DIAGNOSTICS)

Item	Operation	Specifications		Note
		YES	NO	
Keyless entry	Lock/unlock operates by operating the keyless transmitter. Trunk/rear gate unlocks by operating the trunk opener button and rear gate lock/unlock button.	System is normal.	Refer to the following to check. • Security and locks • LAN system	Rear gate swung to open by operating the trunk/rear gate unlock button when customization of the body integrated unit "Sedan/Wagon Setting" is set to "Sedan".
Hazard lights	Answer back operates by operating lock/unlock with the keyless entry.	System is normal.	Refer to the following to check. • Security and locks • LAN system	—
Room light	ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry, and the ignition operation.	System is normal.	Refer to the following to check. • Room light system • Security and locks • LAN system	—
Map light	ON/OFF according to the door open/close operation except rear gate, the lock/unlock operation with the keyless entry, and the ignition operation.	System is normal.	Refer to the following to check. • Spot map light • Security and locks • LAN system	—
Key illumination	ON/OFF according to the driver's door open/close operation, the lock/unlock operation with the keyless entry, and the ignition operation.	System is normal.	Refer to the following to check. • Ignition switch illumination • Security and locks • LAN system	Key illumination blinks when customization of the body integrated unit "Factory initial setting" is set to "Factory" for models with keyless entry.
Illumination control	Illumination volume control is available.	System is normal.	Refer to the following to check. • Combination meter system • LAN system	Lighting adjustment is not possible when customization of the body integrated unit "Illumination Control On/Off" is set to "OFF".
Engine start	Engine starts normally.	System is normal.	Refer to the following to check. • Engine (diagnostics) • Immobilizer • LAN system	—
Vehicle security	When locked by the keyless entry, security monitor condition starts. When unlocked by the keyless entry, security is released.	System is normal.	Refer to the following to check. • Security and locks • LAN system	When the "Impact sensor" setup is set to "ON" without connecting the impact sensor (dealer option), the alarm operates as soon as security monitor condition occurs.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

- 1) Using the diagnostics, narrow down the causes.
- 2) If necessary, use a voltmeter, ohmmeter, etc.
- 3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

5. SYSTEM OPERATION CHECK

After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT

- 1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
- 2) Touch connector (A) with the positive probe of the volt meter. The voltmeter will indicate a voltage.
- 3) Touch connector (B) with the positive probe. The voltmeter will indicate no voltage.

- 4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.

- 5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

2. CIRCUIT CONTINUITY CHECKS

- 1) Disconnect the battery terminal or connector so there is no voltage between the check points. Contact the two leads of an ohmmeter to each of the check points.

If the circuit has diodes, reverse the two leads and check again.

- 2) Use an ohmmeter to check for diode continuity. When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.

When contacting the two leads in reverse, there should be no continuity.

- 3) The symbol "○ — ○" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.

Terminal	Switch Position					
	1	2	3	4	5	6
OFF						
1	○ — ○				○ — ○	
2	○ — ○			○ — ○		
3	○ — ○		○ — ○			○ — ○
4	○ — ○	○ — ○				○ — ○

WI-02741

Basic Diagnostic Procedure

WIRING SYSTEM

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) WITH VOLTMETER:

An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.

2) WITH OHMMETER:

Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates "infinite", the wiring is open.

4. HOW TO DETERMINE A SHORT CIRCUIT

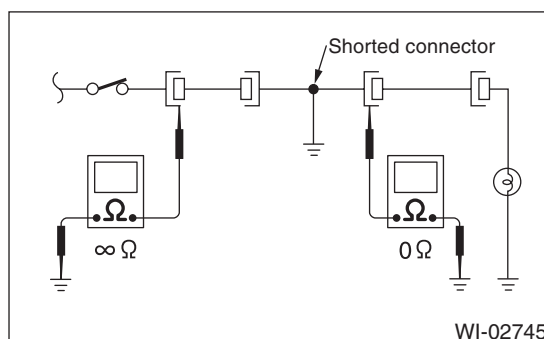

1) WITH TEST LIGHT:

Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

2) WITH OHMMETER:

Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

C: HOW TO READ WIRING DIAGRAMS

1. WIRING DIAGRAM:

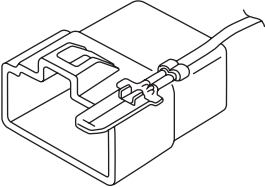

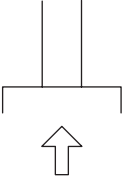

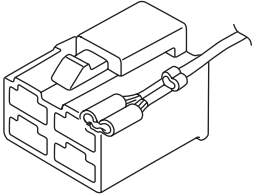

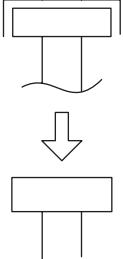

The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.

Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.

- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram												
	Sketch	Symbol	Number of poles										
	<p>Double frames</p> <p>Indicates a lock is included.</p> <table border="1" style="margin: auto; text-align: center;"> <tr> <td>4</td> <td>3</td> <td>7</td> <td>2</td> <td>1</td> </tr> <tr> <td>9</td> <td>8</td> <td>7</td> <td>6</td> <td>5</td> </tr> </table> <p>Indicates the number of poles.</p>	4	3	7	2	1	9	8	7	6	5		<p>Numbered in order from upper right to lower left.</p>
4	3	7	2	1									
9	8	7	6	5									
	<p>Indicates a lock is included.</p> <table border="1" style="margin: auto; text-align: center;"> <tr> <td>1</td> <td>2</td> <td>7</td> <td>3</td> <td>4</td> </tr> <tr> <td>5</td> <td>6</td> <td>7</td> <td>8</td> <td>9</td> </tr> </table> <p>Single frame</p>	1	2	7	3	4	5	6	7	8	9		<p>Numbered in order from upper left to lower right.</p>
1	2	7	3	4									
5	6	7	8	9									

WI-02747

Basic Diagnostic Procedure

WIRING SYSTEM

- When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

• WIRING DIAGRAM:

The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.

- The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:

A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.

- In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

- The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (Inner)
SB	Sealed (Outer)

- The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.

- The table lists the nominal sectional areas and allowable currents of the wires.

CAUTION:

When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

NOTE:

- The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
- The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

Nominal sectional area mm ²	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

- Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

- The ground points shown in the wiring diagram refer to the following:

NOTE:

All wiring harnesses are provided with a ground point which must be securely connected.

Basic Diagnostic Procedure

WIRING SYSTEM

- Relays are classified as normally-open or normally-closed.
- The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Key to symbols:

- —▶ : Current flows.
- × —▶ : Current does not flow.

WI-16724

- Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a "F" for F8, "i" for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness, Generator cord
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord, Rear oxygen sensor cord
D	Front door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness LH & RH, Fuel tank cord, Roof cord, Rear gate cord
AB	Airbag wiring harness

Basic Diagnostic Procedure

WIRING SYSTEM

D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

1. RELAY

A symbol used to indicate a relay.

2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. FUSE NO. & RATING

The "FUSE No. & RATING" corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number "G4" refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE

A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

A ↔ A, B ↔ B

10. SYMBOLS OF WIRE CONNECTION AND CROSSING

11. POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

"MB - 5", "MB - 6", etc., which are used as power-supply symbols throughout the text, correspond with those shown in the "DC POWER SUPPLY CIRCUIT" in the wiring diagram.

Accordingly, using the "DC POWER SUPPLY CIRCUIT" and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

12. CLASSIFICATION BY SPECIFICATION

When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.

13. TWISTED PAIR LINE

The twisted pair line is indicated by a symbol in the wiring diagrams.

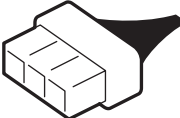

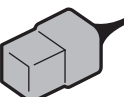

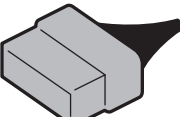

Basic Diagnostic Procedure

WIRING SYSTEM

E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Water proof type: Male

F: ABBREVIATION IN WIRING DIAGRAMS

Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
AT	Automatic Transmission
A/F	Air/Fuel (Air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B	Battery
CAN	Controller Area Network
CM	Control Module
D	Drive Range
DN	Down
E	Ground
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
ELCM	Evaporative Leak Check Module
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
FWD	Front Wheel Drive
G	Gravity (G sensor)
H/L	Headlight
HI	High
I/F	Interface
IG	Ignition
INT	Intermittent
LCD	Liquid Crystal Display
LH	Left Hand
LO	Low
M	Motor
M/B	Main Fuse Box
MT	Manual Transmission
N	Neutral Range
NA	Natural Aspiration
OP	Open
P	Parking Range
PASS	Passing
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range or Rear
RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
ST	Starter

Abbr.	Full name
SW	Switch
TCM	Transmission Control Module
TPMS	Tire Pressure Monitor System
U	Up
VDC	Vehicle Dynamics Control
VFD	Vacuum Fluorescent Display
WASH	Washer

Working Precautions

WIRING SYSTEM

2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

- 1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
- 2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
- 3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
- 4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

- 1) The battery cable must be disconnected from the battery's (-) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
- 2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
- 3) When installing parts, be careful not to catch them on the wiring harness.
- 4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

- 5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector. To connect, insert the connector until it snaps and confirm that it is connected securely.

- 6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.

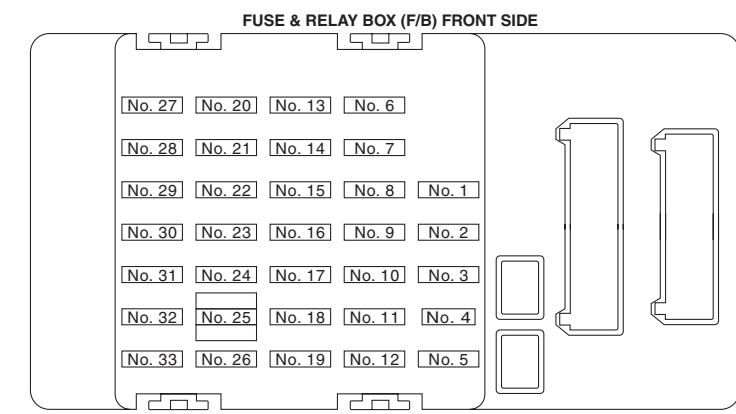

To check water-proof connectors (which are not measurable from the wiring side), touch test probes on the terminal side and be careful not to bend or damage the terminals.

- 7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts. Handle them with care so that they are not dropped or mishandled.

E2	54	Black	A-2	B21	Bulkhead wiring harness
E4	2	Black	B-3		Purge control solenoid valve 1
E5	2	Dark gray	B-2		Fuel injector No. 1
E6	2	Dark gray	A-2		Fuel injector No. 3
E8	2	Black	B-2		Engine coolant temperature sensor
E10	2	Light gray	B-2		Crankshaft position sensor
E11	1	—	B-2		Oil pressure switch
E14	2	Gray	B-3		Knock sensor
E16	2	Dark gray	B-3		Fuel injector No. 2
E17	2	Dark gray	B-3		Fuel injector No. 4
E19	1	★	B-2		Power steering oil pressure switch
E21	3	Black	B-2		Manifold absolute pressure sensor
E23	4	Dark gray	B-1		Front oxygen (A/F) sensor
E31	3	Gray	B-1		Ignition coil No. 1
E32	3	Gray	C-4		Ignition coil No. 2
E33	3	Gray	B-2		Ignition coil No. 3
E34	3	Gray	B-4		Ignition coil No. 4
E35	3	Light gray	B-4		Intake camshaft position sensor LH
E36	3	Light gray	A-2		Intake camshaft position sensor RH
E37	2	Blue	B-4		Intake oil flow control solenoid valve LH
E38	2	Blue	B-2		Intake oil flow control solenoid valve RH
E40	2	Black	B-4		Secondary air combination valve LH
E41	6	Black	A-3		Secondary air combination valve RH
E51	5	Light gray	B-4		Tumble generator valve assembly LH
E52	2	Black	B-2		Purge control solenoid valve 2
E55	5	Light gray	B-1		Tumble generator valve assembly RH
E57	6	Black	B-3		Electronic throttle control
E64	2	Blue	B-2		Wastegate control solenoid valve
E80	2	Dark gray	A-3		Leak diagnosis connector 1
E87	2	Dark gray	A-2		Leak diagnosis connector 2
E88	2	Dark gray	B-4		Leak diagnosis connector 3
