Perform the same procedure as for bleeding the brake line, until new brake fluid comes out from vinyl tube. <Ref. to BR-37, PROCEDURE, Air Bleeding.>

## 14. Air Bleeding

### A: PROCEDURE

#### CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
- Be careful not to allow dirt or dust to enter the reservoir tank.

### 1. MASTER CYLINDER

#### NOTE:

- When the master cylinder is disassembled or the reservoir tank is empty, bleed the master cylinder.
- If bleeding of the master cylinder is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-37, BRAKE LINE, PROCEDURE, Air Bleeding.>

1) Fill the reservoir tank of the master cylinder with brake fluid.

#### NOTE:

While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.

2) Disconnect the brake line at primary and secondary sides.

3) Wrap the master cylinder with a plastic bag.

4) Depress the brake pedal slowly and hold it.

#### NOTE:

On the model with brake assist mechanism, the following phenomena occur when the brake pedal is depressed. However, those are not malfunction but the phenomena that occur when the brake assist mechanism functions properly.

- Brake feel is soft when brake pedal is depressed hard or quicker than usual.
- A light crack is heard when brake pedal is depressed hard or quicker than usual.

5) Plug the outlet plug with your finger, and then release the brake pedal.

6) Repeat the step 4) and 5) several times.

7) Remove the plastic bag.

8) Install the brake pipe to the master cylinder.

#### Tightening torque:

##### Model with ABS

**15 N·m (1.5 kgf-m, 11.1 ft-lb)**

##### Model with VDC

**19 N·m (1.9 kgf-m, 14 ft-lb)**

9) Bleed air from the brake line. <Ref. to BR-37, BRAKE LINE, PROCEDURE, Air Bleeding.>

### 2. BRAKE LINE

1) When the master cylinder is disassembled or the reservoir tank is empty, bleed the master cylinder before bleeding the brake line. <Ref. to BR-37, MASTER CYLINDER, PROCEDURE, Air Bleeding.>

2) Fill the reservoir tank of the master cylinder with brake fluid.

#### NOTE:

While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.

3) Attach one end of the vinyl tube to the air bleeder and the other end to the brake fluid container.

4) Depress the brake pedal several times, and hold it.

5) Loosen the air bleeder screw to drain brake fluid. Tighten the air bleeder quickly, and release the brake pedal.

6) Repeat the steps 4) to 5) until there are no more air bubbles in the vinyl tube.

# Air Bleeding

## BRAKE

7) Repeat the steps from 2) to 6) above to bleed air from each wheel.

### NOTE:

Perform air bleed starting in the order from the farthest wheel cylinder from the master cylinder.

8) Securely tighten the air bleeder screws.

### **Tightening torque:**

**8 N·m (0.8 kgf·m, 5.9 ft·lb)**

9) Check that there are no brake fluid leaks in the entire system.

10) Check the pedal stroke.

Run the engine at idle after warming up the engine, and depress the brake pedal with a force of 500 N (51 kgf, 112 lbf). Measure the distance between the brake pedal and steering wheel. Release the pedal, and measure the distance between pedal and steering wheel again.

- (1) Steering wheel
- (2) Toe board

### **Specification of pedal stroke:**

**When depressing the pedal with a force of 500 N (51 kgf, 112 lbf).**

**95 mm (3.74 in) or less**

11) If the distance is more than specification, there is a possibility of air being caught in the brake line. Bleed the brake line of all air until the pedal stroke meets the specification.

12) Operate the hydraulic control unit in the sequence control mode. <Ref. to ABS-10, ABS Sequence Control.>

13) Check the pedal stroke again.

14) If the distance is more than specification, there is a possibility of air being caught in the hydraulic unit. Repeat above steps 2) to 9) until the pedal stroke meets the specification.

15) Fill the reservoir tank with brake fluid up to the "MAX" level.

16) Test run the vehicle and ensure that the brakes operate normally.

## 15.Brake Hose

### A: REMOVAL

#### 1. FRONT BRAKE HOSE

- 1) Separate the brake pipe from brake hose using a flare nut wrench.
- 2) Remove the clamp, the strut mount bolts, and union bolt.

- (1) Brake hose
- (2) Brake pipe

#### 2. REAR BRAKE HOSE

- 1) Remove union bolt and brake hose bracket bolt.
  - Disc brake model

- Drum brake model

- 2) Separate the brake pipe from brake hose using a flare nut wrench.

- 3) Remove the clamp, and then remove the brake hose.

- (1) Brake pipe
- (2) Brake hose clamp
- (3) Brake hose

### B: INSTALLATION

#### 1. FRONT BRAKE HOSE

- 1) Secure the brake hose to strut mount.

##### **Tightening torque:**

**33 N·m (3.4 kgf-m, 24.3 ft-lb)**

- 2) Install the brake hose to the caliper using a new gasket.

##### **Tightening torque (union bolt):**

**18 N·m (1.8 kgf-m, 13.3 ft-lb)**

- 3) Position the disc in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

##### **CAUTION:**

**Do not twist the brake hose.**

- 4) Temporarily tighten the flare nut which connects brake pipe and hose.
- 5) Secure the brake hose to wheel apron bracket with clamp.
- 6) Tighten the flare nut to the specified torque.

##### **Tightening torque (brake pipe flare nut):**

**15 N·m (1.5 kgf-m, 11.1 ft-lb)**

- 7) Bleed air from brake system.

# Brake Hose

## BRAKE

### 2. REAR BRAKE HOSE

- 1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
- 2) Insert the clamp to secure brake hose.

- (1) Brake pipe
- (2) Brake hose clamp
- (3) Brake hose

- 3) Install the brake hose bracket.

#### **Tightening torque:**

**33 N·m (3.4 kgf-m, 24.3 ft-lb)**

- 4) Install the brake hose to rear brake caliper using a new gasket.

#### **Tightening torque (union bolt):**

**18 N·m (1.8 kgf-m, 13.3 ft-lb)**

- Disc brake

- Drum brake

- 5) Tighten the flare nut to the specified torque.

#### **Tightening torque (brake pipe flare nut):**

**15 N·m (1.5 kgf-m, 11.1 ft-lb)**

- 6) Bleed air from the brake system.

### C: INSPECTION

Make sure there are no cracks, breakage or damage on hoses. Check the joint for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the hose.

## 16.Brake Pipe

### A: REMOVAL

**NOTE:**

The airbag system wiring harness is routed near the center brake pipe.

**CAUTION:**

- Airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, do not bend.

### B: INSTALLATION

**NOTE:**

The airbag system wiring harness is routed near the center brake pipe.

**CAUTION:**

- Airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When installing the brake pipe, do not bend.
- After installing the brake pipe and hose, perform air bleed.
- After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.

**Brake pipe tightening torque:**

*Refer to "COMPONENT" of "General Description". <Ref. to BR-8, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.> <Ref. to BR-9, CENTER AND REAR BRAKE PIPES AND HOSES, COMPONENT, General Description.>*

### C: INSPECTION

Make sure there are no cracks, breakage or damage on hoses. Check the joint for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the pipes.

**NOTE:**

Use a mirror when inspecting back sides and other locations which are hard to see.

## 17.Brake Pedal

### A: REMOVAL

#### 1. MT MODEL

- 1) Remove the steering column. <Ref. to PS-15, REMOVAL, Tilt Steering Column.>
- 2) Disconnect the connector from clutch switch.
- 3) Disconnect the connector from stop light switch.
- 4) Turn the stop light switch counterclockwise and remove the switch.

(1) Stop light switch

- 5) Remove the clevis pin which secures the pedal and operating rod.

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod
- (4) Pedal

- 6) Remove the nut which secures the clutch master cylinder.

- 7) Remove the bolt and nut which secures the pedal bracket.

#### 2. AT MODEL

- 1) Remove the steering column. <Ref. to PS-15, REMOVAL, Tilt Steering Column.>
- 2) Disconnect the connector from stop light switch.
- 3) Turn the stop light switch counterclockwise and remove the switch.

(1) Stop light switch

- 4) Remove the clevis pin which secures the brake pedal and operating rod.

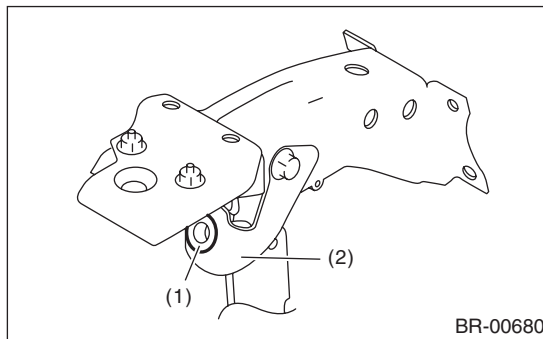

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod
- (4) Brake pedal

5) Remove the bolt and nut which secures the brake pedal bracket.

3) Make sure that the switch clip (gray) is securely installed to the brake pedal bracket.

## B: INSTALLATION

### CAUTION:

- Perform the following steps for the stop light switch.
- Do not install the stop light switch before step 2). Installing the stop light switch before step 2) may result in the switch falling off, remaining illuminated constantly, or an illumination fault.

1) Install the bolt and nut which secure the brake pedal bracket.

### Tightening torque:

**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

2) Install clevis pin and snap pin which secure the operating rod to the brake pedal.

### NOTE:

- Replace with a new clevis pin.
- Apply a thin coat of KOPR-KOTE (Part No. 003603001) to the clevis pin.

4) While pulling up the brake pedal, insert the stop light switch until it reaches the stopper (brown) at the brake pedal side. Turn the stop light switch clockwise and install the switch.

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod
- (4) Brake pedal

- (1) Stop light switch
- (2) Stopper

- 5) Connect the stop light switch connector.
- 6) Check that the brake light operate properly.
- 7) Check the brake pedal after installation. <Ref. to BR-44, INSPECTION, Brake Pedal.>

# Brake Pedal

## BRAKE

### C: INSPECTION

1) Move the brake pedal pads in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

#### CAUTION:

If excessive deflection is noted, replace with a new bushing.

#### Deflection of brake pedal:

##### Limit

**5.0 mm (0.197 in) or less**

(1) Brake pedal

2) Check the position of the pedal pad.

#### Pedal height L:

**150 — 160 mm (5.91 — 6.29 in)**

#### Brake pedal free play A:

**0.5 — 2 mm (0.020 — 0.079 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf).]**

- (1) Stop light switch
- (2) Mat
- (3) Toe board
- (4) Brake booster operating rod

3) If out of specification, perform the procedures below to adjust.

4) Remove the stop light switch. <Ref. to BR-45, REMOVAL, Stop Light Switch.>

5) Loosen the lock nut of the brake booster operating rod, and rotate the rod to adjust the pedal height L to be within the standard value.

6) Tighten the lock nut.

#### Tightening torque:

**22 N·m (2.2 kgf·m, 16.2 ft·lb)**

7) Install the stop light switch. <Ref. to BR-45, INSTALLATION, Stop Light Switch.>

## 18. Stop Light Switch

### A: REMOVAL

- 1) Disconnect the battery ground cable from the battery.
- 2) Disconnect the stop light switch connector.
- 3) Turn the stop light switch counterclockwise and remove the switch.

(1) Stop light switch

### B: INSTALLATION

- 1) Make sure that the switch clip (gray) is securely installed to the brake pedal bracket.

(1) Switch clip  
(2) Brake pedal bracket

- 2) While pulling up the brake pedal, insert the stop light switch to the stopper (brown) at the brake pedal side until it stops. Turn the stop light switch clockwise and install the switch.

(1) Stop light switch  
(2) Stopper

- 3) Pull up the brake pedal and make sure that play is 0.5 — 2 mm (0.020 — 0.079 in).
- 4) Connect the stop light switch connector.
- 5) Check that the brake light operate properly.

#### NOTE:

It is not necessary to check or adjust the clearance to the stop light switch because it is automatically adjusted at installation.

# Stop Light Switch

BRAKE

## C: INSPECTION

1) Measure the resistance between stop light switch terminals.

- 5 door model

Switch	Pedal	Terminal No.	Standard
Stop light	Released	1 and 2	1 M $\Omega$ or more
	Depressed		Less than 1 $\Omega$

- 4 door model

Switch	Pedal	Terminal No.	Standard
Stop light	Released	3 and 4	1 M $\Omega$ or more
	Depressed		Less than 1 $\Omega$

2) If the stop light switch does not operate properly, replace with a new part.

## 19. General Diagnostic Table

### A: INSPECTION

	Trouble and possible cause	Corrective action
<b>1. Insufficient braking</b>	(1) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on lining	Replace, grind or clean.
	(4) Improper operation of master cylinder, disc caliper, brake booster or check valve	Correct or replace.
<b>2. Unstable or uneven braking</b>	(1) Fluid on lining or rotor	Correct the cause of fluid leakage, and clean or replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper lining contact, deteriorated surface, deteriorated or worn lining material	Repair by grinding, or replace.
	(4) Deformed back plate	Correct or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Faulty wheel bearing	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake and cable system.
<b>3. Excessive pedal stroke</b>	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Correct or replace.
<b>4. Brake dragging or improper brake return</b>	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Repair or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Correct or replace.
	(7) Faulty wheel bearing	Replace.
<b>5. Brake noise (1) (creaking sound)</b>	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose wheel bearing	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
<b>6. Brake noise (2) (hissing sound)</b>	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
<b>7. Brake noise (3) (click sound)</b>	Excessively worn pad or support	Replace the pad or the support.

# General Diagnostic Table

BRAKE

---

# General Description

## PARKING BRAKE

### 1. General Description

#### A: SPECIFICATION

Model		Rear Drum Brake	Rear disc brake
Type		Rear brake mechanical	Mechanical, drum in disc rear brakes
Effective drum diameter	mm (in)	254 (10)	190 (7.48)
Lining dimensions (Length x Width x Thickness)	mm (in)	243.8 x 40.0 x 4.5 (9.6 x 1.575 x 0.177)	165.8 x 30.0 x 2.8 (6.53 x 1.181 x 0.11)
Clearance adjustment		Automatic adjusting	Manual adjustment
Lever stroke	Notches/N (kgf, lbf)	7 — 8/200 (20.4, 45)	

#### B: COMPONENT

##### 1. PARKING BRAKE (REAR DISC BRAKE)

PB-00127

- |                                    |                                       |                            |
|------------------------------------|---------------------------------------|----------------------------|
| (1) Back plate                     | (7) Strut                             | (12) Adjusting spring      |
| (2) Retainer                       | (8) Shoe guide plate                  | (13) Shoe hold-down cup    |
| (3) Lever                          | (9) Primary return spring (blue)      | (14) Shoe hold-down spring |
| (4) Parking brake shoe (Primary)   | (10) Secondary return spring (yellow) | (15) Shoe hold-down pin    |
| (5) Parking brake shoe (Secondary) | (11) Adjuster                         | (16) Wave washer           |
| (6) Strut spring                   |                                       |                            |

## 2. PARKING BRAKE LEVER & CABLE

- |                                      |                            |                            |
|--------------------------------------|----------------------------|----------------------------|
| (1) Parking brake lever              | (5) Bracket                | (9) Parking brake cable LH |
| (2) Parking brake switch             | (6) Clamp                  |                            |
| (3) Adjusting nut (self-locking nut) | (7) Parking brake cable RH |                            |
| (4) Equalizer                        | (8) Clamp                  |                            |

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 18 (1.8, 13.3)**

### C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Make sure grease does not come into contact with the parking shoes.

## 2. Parking Brake Lever

### A: REMOVAL

- 1) Set the wheel stoppers to tires.
- 2) Remove the console box.
- 3) Disconnect the parking brake switch connector.
- 4) Remove the parking cable adjusting nut (self-locking nut).
- 5) Remove the parking brake lever.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### **Tightening torque:**

##### **Parking brake lever**

**18 N·m (1.8 kgf-m, 13.3 ft-lb)**

- 2) Install a new adjusting nut (self-locking nut).
- 3) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

### C: INSPECTION

- 1) Operate the parking brake lever 3 to 4 times and fully return the lever.
- 2) While slowly pulling the parking brake lever upward, count the notches.

#### **Lever stroke:**

**7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)**

If it is not within the specified value, adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

### D: ADJUSTMENT

Adjust the parking lever stroke. <Ref. to PB-8, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

## 3. Parking Brake Cable

### A: REMOVAL

- 1) Remove the rear seat cushion.
- 2) Remove the console box.
- 3) Remove the parking cable adjusting nut (self-locking nut).
- 4) Remove the parking brake lever. <Ref. to PB-4, REMOVAL, Parking Brake Lever.>
- 5) Roll up the floor mat and remove the clamps.

- 6) Remove the inner cable end from equalizer.

- (1) Equalizer
- (2) Inner cable end

- 7) Lift up the vehicle, and then remove the rear wheels.
- 8) Remove the parking brake cable from rear brake. <Ref. to PB-6, REMOVAL, Parking Brake Assembly (Rear Disc Brake).> <Ref. to BR-27, REMOVAL, Rear Drum Brake Shoe.>
- 9) Remove the clamp from the rear brake.
- 10) Remove the cable clamp from the rear arm bracket.

- 11) Remove the cable clamp from rear floor.

- 12) Remove the grommet from the rear floor, and remove the cable assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### NOTE:

- Be sure to pass the cable through the tunnel in the cable guide.
- 2) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

### C: INSPECTION

Check and replace the removed cable if damaged, rusty or faulty.

- 1) Check the cable for smooth operation.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends and cracks.
- 4) Check the boot for damage, cracks, and corrosion.

# Parking Brake Assembly (Rear Disc Brake)

## PARKING BRAKE

### 4. Parking Brake Assembly (Rear Disc Brake)

#### A: REMOVAL

- 1) Release the parking brake.
- 2) Lift up the vehicle, and then remove the rear wheels.
- 3) Remove the brake hose bracket.

- 4) Remove the two mounting bolts and remove the rear disc brake caliper.

- 5) Suspend the rear disc brake caliper so that the brake hose is not stretched.
- 6) Remove the rear disc brake rotor.

#### NOTE:

If the disc rotor is difficult to remove, try the following two methods in order.

- (1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe moves adequately away from the disc rotor.

- (1) Adjuster
- (2) Flat tip screwdriver
- (3) Disc rotor

- (2) If disc rotor is seized on the hub, drive the disc rotor out by pushing two 8 mm bolts in holes B on the rotor.

- 7) Remove the shoe return spring.

- 8) Remove the brake shoe cup and brake shoe spring, and remove the primary brake shoe.

- (1) Brake shoe cup
- (2) Primary brake shoe

- 9) Remove the strut and strut spring.
- 10) Remove the adjuster.
- 11) Remove brake shoe cup and brake shoe spring, and remove the secondary brake shoe.

12) Remove the parking brake cable from lever.

- (1) Parking brake cable
- (2) Lever

13) Remove a retainer from the secondary side brake shoe. Remove the lever from the brake shoe.

## B: INSTALLATION

### CAUTION:

**Be sure the lining surface is free from brake fluid and grease.**

1) Apply brake grease to the following locations.

#### Brake grease:

##### Brake Grease (Part No. 003602002)

- Six contact surfaces of the brake shoe rim and back plate gasket
- Contact surface of the brake shoe and the anchor pin
- Contact surface of the parking brake lever and strut
- Contact surface of the brake shoe and adjuster
- Contact surface of the brake shoe and strut
- Contact surface of the lever and brake shoe

2) Install the wave washer and lever to the secondary side brake shoe pin, and lock the retainer securely.

3) Install the parking brake cable to the lever.

4) Install the adjuster and adjusting spring to the brake shoe.

### NOTE:

Install the adjuster with screw section in the arrowed direction shown in the figure below.

- (1) Left wheel: front side of vehicle, right wheel: rear side of vehicle

5) Check that the parking brake cable does not fall from the cable guide.

6) Install the brake shoes to the back plate with shoe hold pins, brake shoe springs, and brake shoe cups.

7) Install the strut and strut spring to the brake shoes.

### NOTE:

Install the strut springs on front side of the vehicle.

8) Install the return springs; first the primary side (blue) then the secondary side (yellow).

9) Adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

10) If new brake shoes are replaced, drive the vehicle to break-in the parking brake lining.

(1) Drive the vehicle at about 35 km/h (22 MPH).

(2) With the parking brake lever button pushed in, pull the parking brake lever gently.

(3) Drive the vehicle for about 200 m (0.12 mile) in this condition.

(4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat steps (1) through (3) again.

(5) After breaking-in, re-adjust the parking brakes.

# Parking Brake Assembly (Rear Disc Brake)

## PARKING BRAKE

### C: INSPECTION

1) Measure the brake disc rotor inside diameter. If the disc is scored or worn, replace the brake disc rotor.

#### **Disc rotor inside diameter:**

##### **Standard:**

**190 mm (7.48 in)**

##### **Service limit:**

**191 mm (7.52 in)**

2) Measure the lining thickness. If it exceeds the limit, replace the brake shoes.

#### **Lining thickness:**

##### **Standard:**

**2.8 mm (0.11 in)**

##### **Service limit:**

**1.5 mm (0.059 in)**

#### **NOTE:**

Replace the right and left brake shoe as a set.

### D: ADJUSTMENT

#### 1. SHOE CLEARANCE

- 1) Return the parking brake lever fully.
- 2) Loosen the adjusting nut, and make the cable free.
- 3) Remove the adjusting hole cover from the disc rotor.
- 4) Using a flat tip screwdriver, turn the adjusting screw in the direction of the arrow as shown in the figure until the brake shoe is in close contact with the disc rotor.

- (1) Adjusting screw
- (2) Flat tip screwdriver
- (3) Disc rotor

5) Loosen the adjusting screw by 5 notches to opposite direction of arrow.

#### **CAUTION:**

- Check there is no brake drag.
  - If the amount that the adjusting screw is turned back is little, securely loosen it by 5 notches to avoid dragging.
- 6) Install the adjusting hole cover to the disc rotor.

7) Adjust the parking lever stroke. <Ref. to PB-8, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

#### 2. LEVER STROKE

1) Adjust the shoe clearance before adjusting lever stroke. <Ref. to PB-8, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2) Remove the parking lever cover.

3) Pull the parking brake lever hard 3 to 5 times.

4) Turn the adjusting nut until the lever stroke is at the specified value.

#### **Lever stroke:**

**7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)**

(1) Adjusting nut (Self-locking nut)

- 5) Check there is no brake drag.
- 6) Install the parking lever cover.

## 5. General Diagnostic Table

### A: INSPECTION

Symptom	Possible cause	Corrective action
Brake drag	Parking brake lever not adjusted correctly.	Adjust.
	Parking brake cable does not move.	Correct or replace.
	Parking brake shoe clearance is maladjusted.	Adjust.
	Return spring is faulty.	Replace.
Noise from brake	Return spring is faulty.	Replace.
	Shoe hold-down spring faulty.	Replace.

## POWER ASSISTED SYSTEM (POWER STEERING)

### 1. General Description

#### A: SPECIFICATION

Model		Non-turbo model	WRX, WRX-S	WRX-SS
Whole system	Minimum turning radius	m (ft)		5.3 (17.4)
	Steering angle	Inner wheel	OUTBACK: 37.9°±1.5° Except for OUTBACK: 37.8°±1.5°	
		Outer wheel	OUTBACK: 33.5°±1.5° Except for OUTBACK: 33.4°±1.5°	
	Steering wheel diameter	mm (in)		375 (14.76)
	Whole gear ratio (Turn, from lock to lock. Gearbox)	2.8		
Gearbox	Type	Rack and Pinion, Integral		
	Backlash	0 (Automatic adjusting)		
	Valve (Power steering system)	Rotary valve		
Pump (Power steering system)	Type	Vane pump		
	Oil tank	Installed on body		
	Specific output	cm <sup>3</sup> (cu in)/rev.	7.2 (0.439)	8.5 (0.519)
	Relief pressure	kPa (kgf/cm <sup>2</sup> , psi)	7,350 — 8,050 (75 — 82, 1,066 — 1,167)	8,100 — 8,800 (83 — 90, 1,174 — 1,276)
	Hydraulic fluid control	Engine speed sensitive		
	Hydraulic fluid	ℓ (US qt, Imp qt)	1,000 rpm: 6.5 (6.9, 5.7) 3,000 rpm: 5 (5.3, 4.4)	1,000 rpm: 6.3 (6.7, 5.5) 3,000 rpm: 5.9 (6.2, 5.2)
	RPM range	rpm	680 — 9,800	680 — 9,600
	Direction of rotation	Clockwise		
Hydraulic oil (Power steering system)	Capacity ℓ (US qt, Imp qt)	Oil tank	0.2 (0.2, 0.2)	
		Whole system	0.7 (0.7, 0.6)	

Steering wheel	Free play	mm (in)	17 (0.67)	
Steering shaft	Clearance between the steering wheel and column cover	mm (in)	2 — 4 (0.08 — 0.16)	
Steering gearbox (Power steering system)	Rack shaft play in the radial direction	Right-turn steering	mm (in)	0.12 (0.005) or less
		Left-turn steering	mm (in)	0.3 (0.012) or less
	Input shaft play	In radial direction	mm (in)	0.26 (0.01) or less
		In axial direction	mm (in)	Without play
	Rotation resistance	N (kgf, lbf)	Maximum allowable value: 11.3 (1.15, 2.54) or less Difference between right and left sliding resistance: 24%	
Oil pump (Power steering system)	Pulley shaft	Radial play	mm (in)	0.4 (0.016) or less
		Axial play	mm (in)	0.9 (0.035) or less
	Pulley	Ditch deflection	mm (in)	1.0 (0.039) or less
		Rotation resistance	N (kgf, lbf)	9.22 (0.94, 2.07) or less
	Regular pressure (Unloaded)	kPa (kgf/cm <sup>2</sup> , psi)	981 (10, 142) or less	
Steering wheel effort (Power steering system)	At standstill with engine idling on paved road	N (kgf, lbf)	29.4 (3.0, 6.6) or less	
	At standstill with engine stalled on paved road	N (kgf, lbf)	294.2 (30, 66.2) or less	

Recommended power steering fluid
SUBARU ATF or DEXRON III

### C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine power steering fluid, grease etc. or the equivalent. Do not mix fluid, grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wooden blocks, aluminum plate or cloth between the part and the vise.

# Steering Wheel

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2. Steering Wheel

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Set the tire to the straight-ahead position.
- 3) Remove the airbag module. <Ref. to AB-15, REMOVAL, Driver's Airbag Module.>

#### WARNING:

Always refer to "Airbag System" before performing service on the airbag modules. <Ref. to AB-5, CAUTION, General Description.>

- 4) Place alignment marks on the steering wheel and steering shaft.

(1) Alignment mark

- 5) Remove the steering wheel nut, and then draw out the steering wheel from shaft using steering puller.

#### B: INSTALLATION

#### WARNING:

Always refer to "Airbag System" before performing service on the airbag modules. <Ref. to AB-5, CAUTION, General Description.>

- 1) Align the center position of the roll connector. <Ref. to AB-26, ADJUSTMENT, Roll Connector.>
- 2) Install in the reverse order of removal.

#### NOTE:

Align the alignment marks on the steering wheel and steering shaft.

#### Tightening torque:

**39 N·m (4.0 kgf·m, 28.8 ft·lb)**

#### Column cover-to-steering wheel clearance:

**2 — 4 mm (0.08 — 0.16 in)**

#### CAUTION:

Insert the roll connector guide pin into the guide hole on the lower end of the steering wheel surface. Avoid damaging the pin.

#### C: INSPECTION

- 1) Check the steering wheel for deformation. If the deformation is excessive, replace the steering wheel.
- 2) Check the splines on the steering wheel for damage. If the damage is excessive, replace the steering wheel.

# Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

## 3. Universal Joint

### A: REMOVAL

- 1) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
- 2) Place alignment marks on universal joint.
- 3) Remove the universal joint bolt and remove the universal joint.

### B: INSTALLATION

- 1) Align the cutout portion at serrated section of the column shaft and yoke, then install the universal joint into column shaft.

- (1) Cutout portion
- (2) Yoke
- (3) Column shaft
- (4) Column shaft side
- (5) Gearbox side

- 2) Install the universal joint to the serrations of gearbox assembly by matching alignment marks.

- 3) Tighten the bolts.

#### Tightening torque:

**24 N·m (2.4 kgf-m, 17.7 ft-lb)**

#### CAUTION:

**Excessively large tightening torque of universal joint bolts may lead to heavy steering wheel operation.**

#### Clearance between coupling of universal joint and turbo cover:

**15 mm (0.59 in) or more**

- 4) Align the center position of the roll connector. <Ref. to AB-26, ADJUSTMENT, Roll Connector.>
- 5) Install the steering wheel. <Ref. to PS-12, INSTALLATION, Steering Wheel.>

# Universal Joint

## POWER ASSISTED SYSTEM (POWER STEERING)

### C: INSPECTION

1) Check for wear, damage or any other faults. Replace as necessary

#### Service limit:

**Universal joint play: 0 mm (0 in)**

**Maximum swing torque: 0.3 N (0.03 kgf, 0.07 lbf)**

- (1) Swing torque
- (2) Play

2) Measure the swing torque of universal joint.

#### Service limit:

**Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less**

- (1) Yoke (Gearbox side)

#### Service limit:

**Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less**

- (1) Yoke (Gearbox side)

#### Service limit:

**Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less**

- (1) Yoke (Steering column side)

#### Service limit:

**Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less**

- (1) Yoke (Steering column side)

# Tilt Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

## 4. Tilt Steering Column

### A: REMOVAL

PS-00845

(1) Tilt steering column

(2) Universal joint

- 1) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
- 2) Remove the universal joint. <Ref. to PS-13, REMOVAL, Universal Joint.>
- 3) Remove the instrument panel lower cover under.
- 4) Remove the instrument panel lower cover upper.
- 5) Remove all connectors from the steering column.
- 6) Remove the two bolts under instrument panel securing the steering column.

7) Pull out the steering shaft assembly from the hole on toe board.

#### CAUTION:

- Be sure to remove the universal joint before removing steering shaft assembly installing bolts when removing steering shaft assembly or when lowering it for servicing other parts.
- Do not loosen the tilt lever when the steering column is not secured to the vehicle.

PS-00798

# Tilt Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

## B: INSTALLATION

1) Install the grommet to the toe board.

2) Insert the end of the steering shaft into the toe board grommet.

3) With the tilt lever secured, tighten the steering shaft mounting bolts under instrument panel.

### **Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

4) Connect all the connectors under the instrument panel.

5) Connect the airbag system connector at the harness spool.

### **NOTE:**

Make sure to apply double lock.

6) Install the instrument panel lower cover with tilt lever held in the lowered position.

7) Install the universal joint. <Ref. to PS-13, INSTALLATION, Universal Joint.>

8) Align the center position of the roll connector. <Ref. to AB-26, ADJUSTMENT, Roll Connector.>

9) Install the steering wheel. <Ref. to PS-12, INSTALLATION, Steering Wheel.>

### **CAUTION:**

**Insert the roll connector guide pin into the guide hole on lower end of steering wheel surface to prevent damage.**

## C: DISASSEMBLY

Remove the two screws securing the upper steering column covers, and the two screws securing the combination switch, and then remove related parts.

## D: ASSEMBLY

Insert the combination switch to the upper column shaft, and install the upper column cover. Then route the ignition key harness and combination switch harness between the column cover mounting bosses.

### **Tightening torque:**

**1.2 N·m (0.12 kgf·m, 0.9 ft·lb)**

### **CAUTION:**

**Do not overtorque the screw.**

## E: INSPECTION

### 1. BASIC INSPECTION

Measure the overall length of steering column. If not within specification, replace it.

**Standard: Overall length L**

**Tilt column**

**$833.6^{+1.3}_{-0.3}$  mm ( $32.82^{+0.051}_{-0.012}$  in)**

**Tilt & telescopic column (measure while minimized)**

**$818.6^{+1.5}_{-1.5}$  mm ( $32.23^{+0.059}_{-0.059}$  in)**

### 2. INSPECTION OF AIRBAG SYSTEM

Refer to "Airbag System" for airbag inspection procedure. <Ref. to AB-15, INSPECTION, Driver's Airbag Module.>

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 5. Steering Gearbox

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Loosen the front wheel nuts.
- 4) Lift up the vehicle, and remove the front wheels.
- 5) Remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
- 6) Remove the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO)-6, REMOVAL, Front Exhaust Pipe.>

#### WARNING:

**Be careful not to burn yourself because the exhaust pipe is hot.**

- 7) After pulling off the cotter pin and removing the castle nut, use a puller to remove the tie-rod end from the knuckle arm.

- (1) Castle nut
- (2) Tie-rod end
- (3) Knuckle arm

- 8) Remove the front crossmember support plate, jack-up plate and front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>

- Large type

- (1) Front crossmember support plate

- Small type

- (1) Crossmember support plate
- (2) Jack-up plate

- 9) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

- (1) Pipe A
- (2) Pipe B

- 10) Remove the universal joint. <Ref. to PS-13, REMOVAL, Universal Joint.>

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

11) Disconnect the pipe C from pressure hose first, then disconnect pipe D from the return hose.

- (1) Pipe C
- (2) Pipe D
- (3) Pressure hose
- (4) Return hose

12) Remove the clamp bolts securing the gearbox to the crossmember, and remove the clamp.

- (1) Clamp

13) Remove the bolts which secure the gearbox bracket, and remove the bracket and gearbox.

- (1) Bracket

## B: INSTALLATION

1) Insert the gearbox into crossmember, being careful not to damage gearbox boot.

2) Install the gearbox and bracket. Temporarily tighten the bolts.

- (1) Bracket

3) Insert bolts through the clamp to temporarily tighten the gearbox to the crossmember bracket.

- (1) Clamp

4) Tighten the bolts temporarily holding the gearbox clamp and bracket together to the specified torque.

**Tightening torque:**

**60 N-m (6.1 kgf-m, 44.3 ft-lb)**

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

5) Connect pipe D to the return hose, then connect pipe C to the pressure hose.

### **Tightening torque:**

**15 N·m (1.5 kgf-m, 11.1 ft-lb)**

- (1) Pipe C
- (2) Pipe D
- (3) Pressure hose
- (4) Return hose

6) Install the universal joint. <Ref. to PS-13, INSTALLATION, Universal Joint.>

7) Connect the tie-rod end and knuckle arm, and tighten with castle nut.

### **Castle nut tightening torque:**

**27 N·m (2.8 kgf-m, 19.9 ft-lb)**

### **CAUTION:**

**When connecting, do not hit the cap at the bottom of tie-rod end with hammer.**

8) After tightening the castle nut to the specified tightening torque, tighten it further within 60° until the cotter pin hole is aligned with slot in the nut. Fit the cotter pin into the nut, and then bend the pin to lock.

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod end

9) Install the front stabilizer. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>

10) Install the front crossmember support plate and jack-up plate.

11) Install the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO)-7, INSTALLATION, Front Exhaust Pipe.>

12) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>

13) Install the front wheels.

14) Tighten the wheel nuts to the specified torque.

### **Tightening torque:**

**100 N·m (10.2 kgf-m, 73.8 ft-lb)**

15) Lower the vehicle.

16) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>

17) Align the center position of the roll connector. <Ref. to AB-26, ADJUSTMENT, Roll Connector.>

18) Install the steering wheel. <Ref. to PS-12, INSTALLATION, Steering Wheel.>

19) Connect the ground cable to battery.

20) Pour fluid into the oil tank, and bleed air. <Ref. to PS-50, Power Steering Fluid.>

21) Check for fluid leaks.

22) Check the fluid level in oil tank.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

23) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

### Tightening torque:

**85 N-m (8.7 kgf-m, 62.7 ft-lb)**

### NOTE:

When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.

4) Remove the small clip from the boot using pliers, and then move the boot to tie-rod end side.

(1) Clip

5) Using a flat tip screwdriver, remove the band from boot.

### NOTE:

Replace the boot if there is damage, cracks or deterioration.

(1) Band

## C: DISASSEMBLY

### 1. RACK HOUSING ASSEMBLY

1) Disconnect the four pipes from gearbox.

### NOTE:

Remove the pipes C and D, which are fixed to clamp plate, as a unit.

2) Secure the gearbox removed from vehicle in a vise using ST.

## POWER ASSISTED SYSTEM (POWER STEERING)

18) Tighten the holder.

### Tightening torque:

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

19) Using the ST, crimp so that the diameter of punch hole is 2 — 2.5 mm (0.08 — 0.10 in) and is aligned to the position of 2 mm (0.08 in) from gearbox cylinder end surface.

ST1 34099FA060 PUNCH HOLDER

ST2 34199FE020 BASE

(A) Holder

(B) 2 mm (0.08 in)

20) Put a vinyl tape around the spline portion and apply genuine grease to the dust cover and install to valve assembly.

### CAUTION:

**Be sure to install the dust cover to groove of shaft.**

(1) Dust cover

(2) Groove

21) Apply the genuine grease to the pinion gear and bearing of valve assembly.

22) Install a new gasket on valve assembly. Insert the valve assembly into place while facing the rack teeth toward pinion.

23) Tighten the bolts alternately to secure the valve assembly.

### Tightening torque:

**20 N·m (2.0 kgf·m, 14.8 ft·lb)**

### CAUTION:

**Be sure to alternately tighten the bolts.**

24) Temporarily install the tie-rod to rack end, and then operate the rack from lock to lock for two or three times to make it fit in.

### CAUTION:

**Operating the rack from lock to lock without installing tie-rods may damage the oil seal. Always install the left and right tie-rods.**

25) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

### Liquid gasket:

**THREE BOND 1141**

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

26) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.  
Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.

- (1) Sleeve
- (2) Spring
- (3) Adjusting screw

27) Tighten the adjusting screw to the specified torque, then loosen it.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

28) Tighten the adjusting screw to the specified torque, then loosen it within 20°.

**Tightening torque:**

**3.9 N·m (0.4 kgf·m, 2.9 ft·lb)**

29) Remove the tie-rod.

30) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw.  
<Ref. to PS-34, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox.>

31) Apply liquid gasket to lock nut and install it into adjusting screw. While holding the adjusting screw with wrench, tighten the lock nut using ST.

**Liquid gasket:**

**THREE BOND 1141**

ST 926230000 SPANNER

**Tightening torque (lock nut):**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

**NOTE:**

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

32) Extend the rack approx. 40 mm (1.57 in) from steering body.

33) Install the tie-rod and new lock washer into rack.

**Tightening torque:**

**90 N·m (9.2 kgf·m, 66.4 ft·lb)**

- (1) Lock washer
- (2) Approx. 40 mm (1.57 in)

34) Bend the lock washer and crimp it.

**CAUTION:**

**Be careful not to scratch the rack when crimping lock washer.**

- (1) Lock washer

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

35) Apply a coat of grease to the tie-rod groove, and then install the boot to the housing.

### CAUTION:

Right side boot has groove for identification, be sure to install the right and left of boot.

- (1) Right side boot
- (2) Groove for identification

### NOTE:

Make sure that the boot is installed without unusual inflation or deflation.

36) Install a new boot band. Using band clamp pliers, crimp it so that the clearance of crimping portion becomes 2 mm (0.079 in) or less.

- (A) Boot band
- (B) 2 mm (0.079 in) or less

37) Fix the boot end with small clip.

- (1) Clip

38) After installing, check that the boot end is installed to the groove of the tie-rod.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

39) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

**Installed tie-rod length L:**  
**29 mm (1.14 in)**

40) Inspect the gearbox as follows:  
“A” Holding the tie-rod end, repeat lock to lock several times as quickly as possible.  
“B” Holding the tie-rod end, turn it slowly at a radius several times as large as possible.  
Finally, make sure that the boot is installed in the specified position without inflating.

41) Remove the gearbox from ST.  
ST1 926200000 STAND  
ST2 34199AG000 BOSS D

42) Install the four pipes on gearbox.  
(1) Connect the pipes A and B to the four pipe joints of gearbox.

**Tightening torque:**

**Refer to the component parts. <Ref. to PS-4, POWER ASSISTED SYSTEM, COMPONENT, General Description.>**

(2) Connect the pipes C and D to gearbox.

**Tightening torque:**

**Pipe C: 37 N·m (3.8 kgf-m, 27.3 ft-lb)**

**Pipe D: 29 N·m (3.0 kgf-m, 21.4 ft-lb)**

(1) Pipe D

(2) Pipe C

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2. CONTROL VALVE ASSEMBLY

#### Specified steering grease:

**VALIANT GREASE M2 (Part No. 003608001)**

- 1) Clean all parts and tools before reassembling.
- 2) Apply a coat of specified power steering fluid to the inner wall of valve housing.

- (1) Apply fluid.

- 3) Apply grease to the oil seal.
- 4) Verify the direction of oil seal.
- 5) Using the ST and a press, install the oil seal and the bushing in valve housing.  
ST 34199AG090 INSTALLER & REMOVER

- (1) Bushing
- (2) Oil seal

- 6) Apply vinyl tape to the groove of pinion.
- 7) Install the back-up ring and oil seal to pinion, and then remove the vinyl tape.

- (1) Pipe D
- (2) Pipe C

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## E: INSPECTION

### 1. BASIC INSPECTION

1) Clean all the disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.

2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bent input shaft (2) Damage on serration	If the bend or damage is excessive, replace the entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If the outer wall slips, the lip is worn out or damage is found, replace it with a new part.
3	Rack & pinion	Poor mating of rack with pinion	(1) Adjust the backlash properly. By measuring the turning torque of the gearbox and sliding resistance of rack, check if the rack & pinion engage uniformly and smoothly with each other. (Refer to "Service limit".) (2) Pull out the entire rack to allow viewing of the teeth, and check for damage. Even if abnormality is found in either (1) or (2), replace the entire gearbox.
4	Gearbox unit	(1) Bending of the rack shaft (2) Bending of the cylinder portion (3) Crack or damage on the cast iron portion	Replace the gearbox with a new part.
		(4) Wear or damage on rack bushing	If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with new part. (Refer to "Service limit".)
		(5) Wear on input shaft bearing	If the free play of input shaft in radial and axial direction is out of the specified range, replace the gearbox with a new part. (Refer to "Service limit".)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration of dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipe	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2. SERVICE LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

#### NOTE:

When making a measurement, vise the gearbox using ST. Never vise the gearbox by inserting aluminum plates etc. between vise and gearbox.

ST1 926200000 STAND  
ST2 34199AG000 BOSS D

### 3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

*Right-turn steering:*

**Service limit**

**0.12 mm (0.005 in) or less**

**Condition**

**Weighting point**

**L1: 10 mm (0.39 in)**

**P: 98 N (10 kgf, 22 lb)**

**Measuring point**

**L2: 25 mm (0.98 in)**

### 4. INPUT SHAFT PLAY

*In radial direction:*

**Service limit**

**0.26 mm (0.01 in) or less**

**Condition**

**P: 98 N (10 kgf, 22 lb)**

*In axial direction:*

**Without play**

### 5. TURNING RESISTANCE OF GEARBOX

Using the ST, measure the gearbox turning resistance.

ST 34099PA100 SPANNER

**Service limit:**

**Maximum allowable resistance:**

**11.3 N (1.15 kgf, 2.54 lb) or less**

**Difference between right and left turning resistance:**

**24% or less**

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 6. OIL LEAKAGE

(1) Power cylinder  
(2) Cylinder

(3) Rack piston  
(4) Rack axle

(5) Input shaft  
(6) Valve housing

1) Lift up the vehicle.

2) If a fluid leak is found, clean the fluid completely from the suspect area, and turn the steering wheel 30 to 40 times to the left and right from lock to lock, with the engine running, and check again for leaks immediately, and also after a few hours have passed.

3) Cause and solution for oil leakage from "a"  
The oil seal is damaged. Replace the valve assembly with a new part.

4) Cause and solution for oil leakage from "b"  
The torsion bar O-ring is damaged. Replace the valve assembly with a new part.

5) Cause and solution for oil leakage from "c"  
The oil seal is damaged. Replace the valve assembly or oil seal with a new part.

6) Cause and solution for oil leakage from "d"  
The pipe is damaged. Replace the faulty pipe or O-ring.

7) Cause and solution for oil leakage from "g".  
The hose is damaged. Replace the hose with a new part.

8) If leak is other than a, b, c, d or g, or if oil is leaking from gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove fluid from surrounding portions. Then, turn the steering wheel from lock to lock about 30 to 40 times with the engine running, then re-inspect the leaking area immediately after and several hours after this operation.

(1) Leakage from "e"

The cylinder seal is damaged. Replace the rack bushing with a new part.

(2) Leakage from "f"

There are two possible causes. Perform the following step first. Remove the pipe assembly B from the valve housing, and close the circuit using ST.

ST 926420000 PLUG

Turn the steering wheel from lock to lock approx. 30 to 40 times with the engine running, then inspect the leaked portion immediately after and several hours after this operation.

• If leakage from "f" is noted again:

The oil seal of pinion and valve assembly is damaged. Replace the pinion & valve assembly with a new part. Or replace the oil seal and the parts that are damaged during disassembly with new parts.

• If oil stops leaking from "f":

The oil seal of rack housing is damaged. Replace the oil seal and parts that are damaged during disassembly with new parts.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

### F: ADJUSTMENT

1) Adjust the front toe.  
<Ref. to FS-11, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

#### **Standard of front toe:**

**IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)**

(1) Lock nut

2) Adjust the steering angle of the wheels.

#### **Standard of steering angle:**

Model	Inner wheel	Outer wheel
OUTBACK	$37.9^{\circ} \pm 1.5^{\circ}$	$33.5^{\circ} \pm 1.5^{\circ}$
WRX-SS	$37.2^{\circ} \pm 1.5^{\circ}$	$32.9^{\circ} \pm 1.5^{\circ}$
Other than above	$37.8^{\circ} \pm 1.5^{\circ}$	$33.4^{\circ} \pm 1.5^{\circ}$

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, or error is more than  $5^{\circ}$  on the periphery of the steering wheel, correctly re-install the steering wheel.

(1)  $5^{\circ}$  or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle.

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

## 6. Pipe Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
  - 2) Lift up the vehicle, and then remove the front crossmember support plate and jack-up plate.
- Large type

(1) Front crossmember support plate

- Small type

(1) Front crossmember support plate  
(2) Jack-up plate

- 3) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

(1) Pipe A  
(2) Pipe B

- 4) Remove the clamp E from return hose and pressure hose.

(1) Return hose  
(2) Pressure hose  
(3) Clamp E

- 5) Disconnect the pipe D from return hose and pipe C from pressure hose.

(1) Pipe C  
(2) Pipe D  
(3) Pressure hose  
(4) Return hose

- 6) Remove the air intake duct.

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

7) Disconnect the suction hose and pressure hose from oil pump.

- Non-turbo model

- (1) Suction hose
- (2) Pressure hose

9) Remove the hose bracket and take out the hose assembly from vehicle.

- (1) Hose ASSY
- (2) Hose bracket

- Turbo model

- (1) Suction hose
- (2) Pressure hose

8) Disconnect the suction hose and return hose from the reservoir tank.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

## B: INSTALLATION

1) Temporarily tighten the hose bracket bolt.

- (1) Hose ASSY
- (2) Hose bracket

2) Install the plastic clip to the pressure hose and suction hose.

### CAUTION:

**Align the installation position of the plastic clip with the protector edge of the suction hose.**

- Non-turbo model

- (1) Plastic clip
- (2) Protector
- (3) Suction hose
- (4) Pressure hose

- Turbo model

- (1) Plastic clip
- (2) Protector
- (3) Suction hose
- (4) Pressure hose

3) Connect the suction hose and return hose to the reservoir tank.

### CAUTION:

**Firmly insert the plastic clip of return hose to the bracket.**

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

4) Connect the suction hose and pressure hose to the oil pump. Tighten the eye bolt of pressure hose.

### Tightening torque:

**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

- Non-turbo model

- (1) Suction hose
- (2) Pressure hose

- Turbo model

- (1) Suction hose
- (2) Pressure hose

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

5) Temporarily connect pressure hose and pipe C, and the return hose and pipe D. Temporarily tighten the bolt of clamp E.

- (1) Return hose
- (2) Pressure hose
- (3) Clamp E
- (4) Pipe C
- (5) Pipe D

6) Tighten clamp E.

### **Tightening torque:**

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

7) Tighten the pressure hose and pipe C, and the return hose and pipe D.

### **Tightening torque:**

**15 N·m (1.5 kgf-m, 11.1 ft-lb)**

8) Connect pipes A and B to the four pipe joints of the gearbox.

### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to PS-4, POWER ASSISTED SYSTEM, COMPONENT, General Description.>**

- (1) Pipe A
- (2) Pipe B

9) Install the front crossmember support plate and jack-up plate.

10) Lower the vehicle.

11) Tighten the bolts which hold the hose bracket.

### **Tightening torque:**

**10 N·m (1.0 kgf-m, 7.4 ft-lb)**

- (1) Hose ASSY
- (2) Hose bracket

12) Install the air intake duct.

13) Connect the ground cable to battery.

14) Fill with the specified fluid.

### **CAUTION:**

**Never start the engine before filling with fluid; otherwise the vane pump may become seized.**

15) Finally, check the clearance between pipes or hoses as shown in the figure indicated in "General Diagnostic Table". <Ref. to PS-56, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

## C: INSPECTION

Check all disassembled parts for wear, damage or other problems. Repair or replace the defective parts as necessary.

Part	Maintenance parts	Corrective action
Pipe	<ul style="list-style-type: none"> <li>• O-ring fitting surface damage</li> <li>• Nut damage</li> <li>• Pipe damage</li> </ul>	Replace with a new part.
Clamp	<ul style="list-style-type: none"> <li>• Loose clamps</li> </ul>	Replace with a new part.
Hose	<ul style="list-style-type: none"> <li>• Flare surface damage</li> <li>• Flare nut damage</li> <li>• Outer surface cracks</li> <li>• Outer surface wear</li> <li>• Clip damage</li> <li>• End coupling or adapter deformation</li> </ul>	Replace with a new part.

### CAUTION:

**Although the surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe off hoses immediately if any of these come into contact with the hoses. Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.**

**Continuous discharge of the relief valve for 5 seconds or more will reduce the service lives of hoses, oil pump, fluid, etc., due to over heating.**

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of the relief valve	Replace the oil pump.
	Poor cold characteristic of fluid	Replace fluid.
Disconnection of the return hose	Improper connection	Repair.
	Loosening of the clip	Retighten.
	Poor cold characteristic of fluid	Replace fluid.
Fluid slightly leaking out of hose	Wrong layout, tensioned	Replace the hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace the parts if defective.
	Improper stop position of pitching stopper	Replace the parts if defective.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customers.
	Excessive tightening torque for return hose clip	Replace.
	Power steering fluid, engine oil, electrolyte adhere on the hose surface	Replace. Be careful during service work.
	Too many uses in extremely cold weather	Replace. Instruct customers.

### NOTE:

There are conditions in which a fluid leak is diagnosed, but is not actually leaking. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

PS-00805

Fluid leaking area	Possible cause	Corrective action
Leakage from the connections of pipes and hoses, numbered (1) through (8) in the figure	Insufficient tightening of flare nut, adhesion of dirt, damage to flare or flare nut or eye bolt	Loosen and retighten. Replace if ineffective.
	Improper installation of hose or clamp	Retighten or replace the clamp.
	Damaged O-ring or gasket	Replace the O-ring, gasket pipe or hose with new part, if still no improvement, replace the gearbox as well.
Leakage from hose (9) through (13) in the figure	Crack or damage in hose	Replace with a new part.
	Crack or damage in hose hardware	Replace with a new part.
Leakage from surrounding of cast iron portion of oil pump, (14) and (15) in the figure	Damaged O-ring	Replace the oil pump.
	Damaged gasket	Replace the oil pump.
Leakage from oil tank, (16) and (17) in the figure	Crack in oil tank	Replace the oil tank.
Leakage from filler neck of (18)	Damaged cap gasket	Replace the cap.
	Crack in root of filler neck	Replace the oil tank.
	Fluid level too high	Adjust the fluid level.
Leakage from power cylinder of gearbox area (19) in the figure	Damaged oil seal	Replace the oil seal.
Leakage from (20), (21) in the figure and control valve of gearbox	Damaged gasket or oil seal	Replace the problem parts.
	Damage in control valve	Replace the control valve.

### 7. Oil Pump

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the V-belts (front side belt). <Ref. to ME(H4SO)-39, FRONT SIDE BELT, REMOVAL, V-belt.> <Ref. to ME(H4DOTC)-40, FRONT SIDE BELT, REMOVAL, V-belt.>
- 3) Disconnect the connector from power steering pump switch.
- 4) Disconnect the pressure hose and suction hose from the oil pump.

#### CAUTION:

- Do not allow fluid to come into contact with the pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends with clean cloth.
- Non-turbo model

- (1) Suction hose
- (2) Pressure hose

- Turbo model

- (1) Suction hose
- (2) Pressure hose

- 5) Remove the installation bolt of the power steering pump bracket.

- 6) Place the oil pump bracket in a vise, and remove the two bolts from the front side of the oil pump.

#### CAUTION:

- When securing the oil pump bracket in a vise, hold the oil pump bracket with the least possible force between two pieces of wood.

- 7) Remove the bolt from the rear side of oil pump.
- 8) Disassemble the oil pump and bracket by inserting a flat tip screwdriver as shown in the figure.

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

### B: INSTALLATION

1) Install the oil pump to bracket.

#### Tightening torque:

**16 N·m (1.6 kgf·m, 11.8 ft·lb)**

#### Tightening torque:

**36 N·m (3.7 kgf·m, 26.6 ft·lb) (non-turbo model)**

**48 N·m (4.9 kgf·m, 35.4 ft·lb) (turbo model)**

2) Attach the installation bolts of the power steering pump bracket.

#### Tightening torque:

**<Ref. to PS-6, OIL PUMP, COMPONENT, General Description.>**

3) After installing the oil pump, fill the oil pump with fluid while rotating the pulley by hand and bleed the air from the oil pump.

#### CAUTION:

**Always fill the oil pump with the fluid to prevent abnormal noise and seizure of the oil pump.**

4) Connect the pressure hose and suction hose.

#### Tightening torque:

##### Eye bolt

**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

#### CAUTION:

**Be careful when installing; If the hose is twisted it may come into contact with other parts.**

- Non-turbo model

(1) Suction hose

(2) Pressure hose

- Turbo model

(1) Suction hose

(2) Pressure hose

5) Connect the power steering pump switch to the connector.

6) Install the V-belts (front side belt). <Ref. to ME(H4SO)-39, FRONT SIDE BELT, INSTALLATION, V-belt.> <Ref. to ME(H4DOTC)-40, FRONT SIDE BELT, INSTALLATION, V-belt.>

7) Connect the ground cable to battery.

8) Fill with the specified power steering fluid. <Ref. to PS-50, Power Steering Fluid.>

#### CAUTION:

**Never start the engine before filling with fluid; otherwise the vane pump may become seized.**

# Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

## C: INSPECTION

### 1. BASIC INSPECTION

Perform the following inspection procedures and replace faulty parts.

No.	Parts	Inspection	Corrective action
1	Oil pump (Exterior)	(1) Crack, damage or oil leakage	Replace the oil pump with a new part.
		(2) Play of pulley shaft	Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new part.
2	Pulley	(1) Damage	Replace with a new part.
		(2) Bend	Measure the V groove deflection. If it exceeds the service limit, replace the pulley with a new part.
3	Oil pump (Interior)	(1) Faulty or seized of vane pump	Check the rotating resistance of pulley. If it exceeds the service limit, replace the oil pump with a new part.
		(2) Bend in the shaft or damage to bearing	If the a string is wrapped on the pulley and rotated, and the oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump, replace the oil pump with a new part.
4	O-ring	Cracking or deterioration	Replace with a new part.
5	Bracket	Crack	Replace with a new part.

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2. SERVICE LIMIT

Make a measurements as follows. If it exceeds the service limit, replace with a new part.

#### CAUTION:

- When securing the oil pump on a vise, hold the oil pump with the least possible force between two pieces of wood.
- Do not set the outside of flow control valve or pulley on a vise; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of the pulley shaft

#### Condition:

**P:** When applying the force of 9.8 N (1.0 kgf, 2.2 lbf)

#### Service limit:

Play in the radial direction (Direction ← →)  
0.4 mm (0.016 in) or less

(1) Dial gauge

Axial play (Direction ⇄)  
0.9 mm (0.035 in) or less

(1) Dial gauge

2) Deflection of the pulley groove

#### Service limit:

1.0 mm (0.039 in) or less

#### NOTE:

Read the value for one surface of V ditch, and then the value for another off the dial gauge.

(1) Dial gauge

3) Rotating resistance of pulley

#### Service limit:

Maximum load: 9.22 N (0.94 kgf, 2.07 lbf) or less

#### NOTE:

- A rather higher value may be indicated when pulley starts turning.
- Measure the load during rotation to make a judgement.

(1) Spring scale

# Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

## 3. HYDRAULIC PRESSURE

### NOTE:

- To measure hydraulic pressure correctly, be sure to complete all the items in "INSPECTION", prior to performing the measurement. <Ref. to PS-51, INSPECTION, General Diagnostic Table.>
- Do not leave the valve of pressure gauge closed or hold the steering wheel at lock for 5 seconds or more in any case, this can damage the oil pump.
- Before attaching a pressure gauge, place cloth at locations where fluid is expected to spill. Wipe off any spilt fluid completely after the measurement.

### 1) Regular pressure measurement

(1) Connect the ST1, ST2 and ST3.

ST1	925711000	PRESSURE GAUGE
ST2	34099AC020	ADAPTER HOSE B
ST3	34099AC010	ADAPTER HOSE A

(2) Remove the air intake duct.

(3) Disconnect the pipe C from pump.

(4) Using the gasket (Part No. 34621AC021) and bolt (Part No. 34620AC010), install the ST2 to pump instead of pressure hose.

- Non-turbo model

- (1) Suction hose  
(2) Pressure hose

- Turbo model

- (1) Suction hose  
(2) Pressure hose

(5) Attach the ST3 to the end of pressure hose which is removed from pump.

(6) Replenish power steering fluid up to the specified level.

(7) Open the valve, and start the engine.

(8) Measure the regular pressure.

ST1	925711000	PRESSURE GAUGE
ST2	34099AC020	ADAPTER HOSE B
ST3	34099AC010	ADAPTER HOSE A

- (1) Valve

### Service limit:

**981 kPa (10 kgf/cm<sup>2</sup>, 142 psi) or less**

(9) If it is not within the specification, replace the problem part for the following problems. (Pipe or hose clogged, leaks from fluid line, and mixture of foreign matter in fluid line)

### 2) Measure the relief pressure.

(1) Using the STs, measure the relief pressure.

(2) Close the valve.

(3) Measure the relief pressure.

ST1	925711000	PRESSURE GAUGE
ST2	34099AC020	ADAPTER HOSE B
ST3	34099AC010	ADAPTER HOSE A

- (1) Valve

### Service limit:

**Non-turbo model:**

**7,350 — 8,050 kPa**

**(75 — 82 kgf/cm<sup>2</sup>, 1,066 — 1,167 psi)**

**Turbo model:**

**8,100 — 8,800 kPa**

**(83 — 90 kgf/cm<sup>2</sup>, 1,174 — 1,276 psi)**

(4) If it is not within the specification, replace the oil pump.

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

---

3) Measure the working pressure.

- (1) Using the ST, measure the working pressure.
- (2) Open the valve.
- (3) Measure the working pressure of control valve by turning steering wheel from stop to stop.

ST1	925711000	PRESSURE GAUGE
ST2	34099AC020	ADAPTER HOSE B
ST3	34099AC010	ADAPTER HOSE A

(1) Valve

### **Service limit:**

#### **Non-turbo model:**

**7,350 — 8,050 kPa**

**(75 — 82 kgf/cm<sup>2</sup>, 1,066 — 1,167 psi)**

#### **Turbo model:**

**8,100 — 8,800 kPa**

**(83 — 90 kgf/cm<sup>2</sup>, 1,174 — 1,276 psi)**

(4) If it is out of specification, measure the steering effort. <Ref. to PS-54, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> If it is not within specification, replace the control valve itself or control valve and pinion as a single unit, using new parts.

## 8. Reservoir Tank

### A: REMOVAL

- 1) Drain fluid from the reservoir tank.
- 2) Disconnect the hose from reservoir tank.

#### CAUTION:

To prevent foreign matter from entering the hose and pipe, cover the open ends of them with clean cloth.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

- 3) Remove the reservoir tank from the body.

### B: INSTALLATION

- 1) Install the reservoir tank to the body.

#### Tightening torque:

**13 N·m (1.3 kgf·m, 9.6 ft·lb)**

- 2) Connect the hose to the reservoir tank.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

- 3) Replenish power steering fluid up to the specified level. <Ref. to PS-50, INSPECTION, Power Steering Fluid.>

### C: INSPECTION

Check the reservoir tank for cracks, breakage or damage. If a failure is found, replace the reservoir tank.

# Power Steering Fluid

POWER ASSISTED SYSTEM (POWER STEERING)

## 9. Power Steering Fluid

### A: SPECIFICATION

Recommended power steering fluid
SUBARU ATF or DEXRON III

### B: INSPECTION

1) Check the power steering fluid for deterioration or contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.

2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.

3) Inspect the fluid level of reservoir tank with vehicle on level surface and engine stopped.

If the level is at "MIN." point or below, add fluid to keep the level in the specified range of the indicator. If at "MAX". point or above, drain fluid by using a syringe or the like.

(1) Check at power steering fluid temperature 20°C (68°F); read the fluid level on the "COLD" side.

(2) Check at power steering fluid temperature 80°C (176°F); read the fluid level on the "HOT" side.

### C: REPLACEMENT

1) Lift up the vehicle.  
2) Remove the crossmember support.  
3) Remove the pipe joint in the center of gearbox, and connect the vinyl hose to the pipe and joint. Wipe fluid off while turning the steering wheel.

4) Add the specified fluid to reservoir tank at "MAX" level.

5) Continue to turn the steering wheel slowly from lock to lock until the bubbles stop appearing on oil surface while keeping the fluid at the level in the Step 4).

6) If the steering wheel is turned in a low fluid level condition, air will be sucked into the pipe. If air has entered, leave it for about half an hour and then repeat step 5) again.

7) Start the engine and let it idle.

8) Continue to turn the steering wheel slowly from lock to lock again until the bubbles stop appearing on oil surface, while keeping the fluid at the level in Step 4).

Normally bubbles will stop appearing after turning the steering wheel from lock to lock three times.

9) In case bubbles do not stop appearing in the tank, leave it for about half an hour and then repeat from step 4) again.

10) Lower the vehicle, and then idle the engine.

11) Continue to turn the steering wheel from lock to lock until the bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).

12) In case the following happens, leave it about half an hour and then perform step 8) to 11) again.

(1) The fluid level changes by 3 mm (0.12 in) or more.

(2) Bubbles remain on the upper surface of the fluid.

(3) Grinding noise is generated from oil pump.

13) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

# General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

## 10. General Diagnostic Table

### A: INSPECTION

Trouble	Possible cause	Corrective action
<ul style="list-style-type: none"> <li>Steering effort is heavy in all ranges.</li> <li>Steering effort is heavy at stand still.</li> <li>Steering wheel vibrates when turning.</li> </ul>	1. Pulley belt <ul style="list-style-type: none"> <li>Unequal length of pulley belts</li> <li>Contact with oil or grease</li> <li>Looseness or damage of the pulley belt</li> <li>Poor uniformity of the pulley belt cross section</li> <li>Pulley belt touches to pulley bottom</li> <li>Poor revolution of pulleys (except oil pump pulley)</li> <li>Poor revolution of oil pump pulley</li> </ul>	Adjust or replace.
	2. Tire and wheel <ul style="list-style-type: none"> <li>Improper tire out of specifications*1</li> <li>Improper wheel out of specifications*1</li> <li>Tires not properly inflated</li> </ul>	Replace or reinflate.
	3. Fluid <ul style="list-style-type: none"> <li>Low fluid level</li> <li>Air entry in fluid</li> <li>Dust entry in fluid</li> <li>Fluid deterioration</li> <li>Inadequate warm up of fluid*2</li> </ul>	Refill, bleed air, replace or instruct customer.
	4. Idle speed <ul style="list-style-type: none"> <li>Lower idle speed</li> <li>Excessive drop of idle speed at start or when turning the steering wheel*3</li> </ul>	Adjust or instruct customer.
	5. Measure the hydraulic pressure. <Ref. to PS-45, INSPECTION, Oil Pump.>	Replace the problem parts.
	6. Measure the steering wheel effort. <Ref. to PS-54, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace.
<ul style="list-style-type: none"> <li>Vehicle leads to one side or the other.</li> <li>Returning force of steering wheel to center is poor.</li> <li>Steering wheel vibrates when turning.</li> </ul>	1. Fluid line <ul style="list-style-type: none"> <li>Folded hose</li> <li>Flattened pipe</li> </ul>	Repair or replace.
	2. Tire and wheel <ul style="list-style-type: none"> <li>Flat tire</li> <li>Mixed use of different tires</li> <li>Mixed use of different wheels</li> <li>Abnormal wear of tire</li> <li>Unequal tread remaining</li> <li>Unequal pressure of tire</li> </ul>	Adjust, fix or replace.
	3. Front alignment <ul style="list-style-type: none"> <li>Improper or unequal caster</li> <li>Improper or unequal toe-in</li> <li>Loose suspension connections</li> </ul>	Adjust or retighten.
	4. Others <ul style="list-style-type: none"> <li>Damaged joint assembly</li> <li>Unbalanced height</li> <li>Unbalanced weight</li> </ul>	Replace, adjust or instruct customer.
	5. Measure the steering wheel effort. <Ref. to PS-54, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace.

\*1 If the tires or wheels are wider than standard, the load to power steering system is increased. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before reaching maximum turning angle. In this case, steering effort may be heavy. When the measured hydraulic pressure is normal, there is no abnormal thing.

\*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn the steering wheel from stop to stop several times to warm up fluid. If steering effort reduces normally, function is normal.

\*3 In cold weather or with insufficient warm up of the engine, steering effort may be heavy due to excessive drop of idling when turning the steering wheel. In this case, start the vehicle with increasing engine speed than usual. If steering effort reduces normally, function is normal.

# General Diagnostic Table

## POWER ASSISTED SYSTEM (POWER STEERING)

### 1. NOISE AND VIBRATION

#### CAUTION:

**Do not keep the relief valve operated for five seconds or more at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.**

#### NOTE:

- A screeching noise may be heard immediately after the engine start in extremely cold conditions. In this case, if the noise goes off during warm-up there is no abnormal function in the system. This is due to the fluid characteristics in extremely cold condition.
- The oil pump normally makes a small whining noise due to its mechanism. Even if a noise is heard when steering wheel is turned at stand still, there is no abnormal function in the system provided that the noise eliminates when the vehicle is driving.
- When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
- There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.

These conditions do not indicate a problem in the system.

Confirm vibration for an AT model, by applying the parking brake on a concrete surface, shifting into the "D" range, and turning the steering wheel repeatedly from slow to rapid, step by step.

Trouble	Possible cause	Corrective action
Hiss noise (continuous) While engine is running.	Relief valve emits operating sound when steering wheel is completely turned in either direction. (Do not keep this condition for 5 seconds or more.)	Normal operation
	Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is defective.	Replace the oil pump.
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary. <Ref. to PS-56, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>
	Loosened installation of oil pump, oil tank, pump bracket, gearbox or crossmember	Retighten.
	Loose oil pump pulley or other pulley(s)	Retighten.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Sound generates from the inside of gearbox or oil pump.	Replace faulty parts in the gearbox or oil pump.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust and retighten.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (continuous) While engine is running.	Air in vane pump	Inspect and retighten the fluid line connection. Refill the fluid and vent air.
	Vane pump seizing	Replace the oil pump.
	Oil pump pulley bearing seized	Replace the oil pump.
	Folded hose, flattened pipe	Replace.
Squeal, squeak (intermittent or continuous) While engine is running.	Improper adjustment of pulley belt Damaged or over tensioned pulley belt Unequal length of pulley belts	Adjust or replace. (Replace two belts as a set.)
	Runout or dirty V-groove surface of oil pump pulley	Clean or replace.

# General Diagnostic Table

## POWER ASSISTED SYSTEM (POWER STEERING)

Trouble	Possible cause	Corrective action
Sizzling noise (continuous) While engine is running.	Fluid aeration	Fix the faulty part causing aeration. Replace the fluid and vent air.
	Damaged pipe of gearbox	Replace the pipe.
	Faulty inside of hose or pipe Flattened hose or pipe	Correct or replace.
	Abnormal inside of oil tank	Replace.
	Removed oil tank cap	Install cap.
Whistle (continuous) While engine is running.	Faulty pipe of gearbox or faulty hose	Replace the faulty parts of the gearbox or the hose.
Whine or growl (intermittent or continuous) While engine is running with/ without steering turned.	Looseness of oil pump, oil pump bracket attachment	Retighten.
	Fault inside of oil pump or hose	Replace the oil pump or hose, if the noise can be heard when vehicle is running as well as being stopped.
	Torque converter growl, air conditioner compression growl	Remove the power steering pulley belt and check.
Grinding noise (continuous) While engine is running with the steering turned.	Fault inside of gearbox	Replace the faulty parts of gearbox.
	Faulty steering shaft bearing	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running with/ without steering turned.	Engine speed is too low.	Adjust, and notify customer.
	Air in vane pump	Repair faulty part Vent air.
	Damaged valve in oil pump or gearbox	Replace the faulty parts in gearbox and oil pump.
	Excessive play in steering, looseness of suspension parts	Retighten.

# General Diagnostic Table

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2. MEASUREMENT OF STEERING EFFORT

Step	Check	Yes	No
<p><b>1 CHECK STEERING EFFORT.</b>            1) Stop the vehicle on paved road.            2) Start the engine.            3) Run the engine at idle.            4) Install a spring scale on the steering wheel.            5) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.</p>  <p style="text-align: right;">PS-01008</p> <p><b>NOTE:</b>            When turning the steering more quickly than necessary from a direction to the other direction at an engine speed of 2,000 rpm or higher, steering effort may be heavy. This is caused by flow characteristic of the fluid in the oil pump and is not a defect.</p>	<p>Is the steering effort less than 29.4 N (3.0 kgf, 6.6 lbf)?</p>	<p>Go to step 2.</p>	<p>Adjust the backlash.</p>
<p><b>2 CHECK STEERING EFFORT.</b>            1) Stop the engine.            2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.</p>	<p>Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?</p>	<p>Go to step 3.</p>	<p>Perform the adjustment.</p>
<p><b>3 CHECK STEERING WHEEL EFFORT.</b>            1) Remove the universal joint.            2) Measure the steering wheel effort.</p>	<p>Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?</p>	<p>Go to step 4.</p>	<p>Check, adjust and replace if necessary.</p>
<p><b>4 CHECK STEERING WHEEL EFFORT.</b>            Measure the steering wheel effort.</p>	<p>Is the difference of steering effort between right and left less than 20%?</p>	<p>Go to step 5.</p>	<p>Check, adjust and replace if necessary.</p>
<p><b>5 CHECK UNIVERSAL JOINT.</b>            Measure the swing torque of the joint (yoke of steering column side). &lt;Ref. to PS-14, INSPECTION, Universal Joint.&gt;</p>	<p>Is the swing torque of the universal joint less than 7.3 N (0.74 kgf, 1.64 lbf)?</p>	<p>Go to step 6.</p>	<p>Replace with a new part.</p>
<p><b>6 CHECK UNIVERSAL JOINT.</b>            Measure the swing torque of the joint (yoke of gearbox side). &lt;Ref. to PS-14, INSPECTION, Universal Joint.&gt;</p>	<p>Is the swing torque of the universal joint less than 3.8 N (0.39 kgf, 0.86 lbf)?</p>	<p>Go to step 7.</p>	<p>Replace with a new part.</p>
<p><b>7 CHECK FRONT WHEEL.</b>            Check the front wheels.</p>	<p>Does the front wheels have unsteady revolution or rattling, or does the brake drag?</p>	<p>Inspect, readjust and replace if necessary.</p>	<p>Go to step 8.</p>
<p><b>8 CHECK TIE-ROD ENDS.</b>            Remove the tie-rod ends.</p>	<p>If the tie-rod ends of suspension have unsteady revolution or rattling?</p>	<p>Inspect and replace if necessary.</p>	<p>Go to step 9.</p>
<p><b>9 CHECK BALL JOINT.</b>            Remove the ball joint.</p>	<p>If the ball joints of suspension have unsteady revolution or rattling?</p>	<p>Inspect and replace if necessary.</p>	<p>Go to step 10.</p>

# General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

	Step	Check	Yes	No
10	<b>CHECK GEARBOX.</b> Measure the rotating of gearbox. <Ref. to PS-34, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox.>	Is the rotating resistance of steering gearbox less than 11.3N (1.15 kgf, 2.54 lbf)? Is the difference between right and left sides less than 24%?	Steering effort is normal.	Readjust the backlash, and if ineffective, replace the faulty parts.

## General Diagnostic Table

### POWER ASSISTED SYSTEM (POWER STEERING)

#### 3. INSPECTION OF CLEARANCE

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

Location	Minimum allowance mm (in)
(1) Crossmember to-Hose ASSY	3 (0.12)
(2) Front exhaust pipe to Hose ASSY (Turbo model)	15 (0.59)
(3) Front frame side to Hose ASSY	10 (0.39)
(4) Turbo cover to Hose ASSY (Turbo model)	10 (0.39)
(5) Master cylinder to Return hose (Turbo model)	10 (0.39)
(6) Master cylinder to Hose clip (Model with vehicle dynamics control (VDC))	10 (0.39)
(7) VDC H/U to Hose ASSY (Model with vehicle dynamics control (VDC))	5 (0.20)
(8) Air cleaner to Hose ASSY (Turbo model)	5 (0.20)
(9) Air boot to Hose ASSY	10 (0.39)
(10) Protector to Hose ASSY	10 (0.39)
(11) Blow-by hose to Hose ASSY (Turbo model)	8 (0.31)
(12) Over flow hose to Hose ASSY (Turbo model)	8 (0.31)
(13) Brake pipe to Return hose (Model with ABS)	10 (0.39)
(14) Front suspension bracket to Return hose	5 (0.20)
(15) Front wheel apron to Return hose	5 (0.20)
(16) VDC H/U bracket to Suction hose (Model with vehicle dynamics control (VDC))	5 (0.20)
(17) Air cleaner case to Suction hose	5 (0.20)
(18) Air intake duct to Suction hose (Turbo model)	10 (0.39)
(19) Air duct to Suction hose (Turbo model)	10 (0.39)
(20) Front wheel apron to Reservoir tank	5 (0.20)
(21) VDC H/U to Reservoir tank (Model with vehicle dynamics control (VDC))	5 (0.20)
(22) Valve housing to DOJ (MT model)	12 (0.47)
(23) Valve housing to Crossmember (Hole)	1 (0.04)
(24) Bracket to Crossmember	1 (0.04)
(25) Cylinder to Crossmember	5 (0.20)
(26) Elbow to Crossmember	1 (0.04)
(27) Cylinder to Exhaust pipe	18 (0.71)
(28) Universal joint coupling to Turbo cover (Turbo model)	15 (0.59)
(29) Universal joint column side yoke to Master cylinder (Closest point of approach when the universal joint turns by 360°)	5 (0.20)
(30) Cruise control to Hose ASSY (Model with cruise control)	10 (0.39)
(31) Universal joint coupling to ATF level gauge (LHD model)	10 (0.39)
(32) Boot to Exhaust pipe (LHD model)	18 (0.71)
(33) Return hose to Pressure hose	No contact between hoses

# General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 1. General Description

### A: SPECIFICATION

#### 1. HEATER SYSTEM

Item		Specification	Condition
Heating capacity		5.0 kW (4,299 kcal/h, 17,059 BTU/h) or more	<ul style="list-style-type: none"> <li>• Mode selector switch: HEAT</li> <li>• Temperature control switch: FULL HOT</li> <li>• Temperature difference between hot water and inlet air: 65°C (149°F)</li> <li>• How water flow rate: 360 ℓ (95.1 US gal, 79.2 Imp gal)/h</li> </ul>
Air flow rate		290 m <sup>3</sup> (10,243 cu ft)/h	Heat mode (FRESH), FULL HOT at 12.5 V
Max air flow rate		480 m <sup>3</sup> (16,954 cu ft)/h	<ul style="list-style-type: none"> <li>• Temperature control switch: FULL COLD</li> <li>• Blower fan speed: Auto A/C: 7th position Manual A/C: 4th position</li> <li>• Mode selector lever: RECIRC</li> </ul>
Heater core size (height × length × width)		257.5 × 118.5 × 27 mm (10.1 × 4.67 × 1.06 in)	—
Blower motor	Type	Magnet motor 250 W or less	12 V
	Fan type and size (diameter × width)	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	—

#### 2. A/C SYSTEM

- Auto A/C model

Item		Specifications
Type of air conditioner		Reheat air-mix type
Cooling capacity		5.0 kW (4,299 kcal/h, 17,059 BTU/h)
Refrigerant		HFC-134a (CH <sub>2</sub> FCF <sub>3</sub> ) [0.5±0.03 kg (1.1±0.07 lb)]
Compressor	Type	Rotary fixed capacity (DVK-10R)
	Discharge	105 cc (6.41 cu in)/rev
	Max. permissible speed	7,700 rpm
Magnet clutch	Type	Dry, single-disc type
	Power consumption	38.8 W
	Type of belt	V-belt 4 PK
	Pulley dia. (effective dia.)	100 mm (3.9 in)
	Pulley ratio	1.32
Condenser	Type	Sub cool type
	Core face area	0.188 m <sup>2</sup> (2.002 sq ft)
	Core thickness	16 mm (0.63 in)
	Radiation area	4.5 m <sup>2</sup> (48.44 sq ft)
Receiver drier	Effective inner capacity	177 cm <sup>3</sup> (10.8 cu in)
Expansion valve	Type	Block
Evaporator	Type	Dual-tank
	Dimensions (W × H × T)	290.1 × 172 × 39 mm (11.42 × 6.77 × 1.54 in)
Blower fan	Fan type	Sirocco fan
	Outer diameter × width	150 × 75 mm (5.91 × 2.95 in)
	Power consumption	250 W

# General Description

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

Item		Specifications	
Condenser fan (Sub fan)	Motor type	Magnet	
	Power consumption	Non-turbo model: 90 W Turbo model: 120 W	
	Fan outer diameter	Non-turbo model: 300 mm (11.8 in) Turbo model: 318.5 mm (12.5 in)	
Radiator fan (Main fan)	Motor type	Magnet	
	Power consumption	Non-turbo model: 90 W Turbo model: 120 W	
	Fan outer diameter	Non-turbo model: 300 mm (11.8 in) Turbo model: 318.5 mm (12.5 in)	
Idle speed	MPFI model	Turbo AT model (no load): 750±100 rpm Turbo AT model (A/C ON): 825±100 rpm Turbo MT model (no load): 750±100 rpm Turbo MT model (A/C ON): 800±100 rpm	
Triple switch (Pressure switch)	Low-pressure switch operating pressure	ON → OFF	177±25 kPa (1.80±0.25 kgf/cm <sup>2</sup> , 25.7±3.6 psi)
		OFF → ON	206±30 kPa (2.10±0.31 kgf/cm <sup>2</sup> , 29.9±4.3 psi)
	High-pressure switch operating pressure	ON → OFF	2,940±200 kPa (29.98±2.04 kgf/cm <sup>2</sup> , 426.3±29 psi)
		OFF → ON	2,350±200 kPa (24.00±2.04 kgf/cm <sup>2</sup> , 340.7±29.0 psi)
	Middle-pressure switch operating pressure	ON → OFF	1,470±120 kPa (14.99±1.22 kgf/cm <sup>2</sup> , 213.15±17.4 psi)
		OFF → ON	1,770±100 kPa (18.05±1.02 kgf/cm <sup>2</sup> , 256.65±14.5 psi)
Thermo-control amplifier working temperature	<p style="text-align: right;">AC-00601</p> <p>(1) ON (2) OFF (3) 1.5±0.3°C (34.7±0.5°F) (4) 1.0±0.5°C (33.8±0.9°F)</p>

## 5. COMPRESSOR

- (1) Compressor bracket
- (2) Compressor
- (3) V-belt

- (4) Compressor bracket (non-turbo model)
- (5) Compressor bracket (turbo model)

**Tightening torque: N-m (kgf-m, ft-lb)**  
**T1: 26.5 (2.7, 19.5)**  
**T2: 36 (3.7, 26.6)**

# General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 6. HEATER DUCT

AC-01969

- (1) Front defroster nozzle
- (2) Side defroster duct
- (3) Side vent duct (LH)

- (4) Side vent duct (RH)
- (5) Center vent duct
- (6) Center vent duct front

- (7) Rear heater duct (LH)
- (8) Rear heater duct (RH)
- (9) Rear heater duct center

# General Description

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### C: CAUTION

#### 1. HFC-134A A/C SYSTEM

- The cooling system components for the HFC-134a system such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
- Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle. Before maintenance, check which A/C system is installed to the vehicle.

#### 2. COMPRESSOR OIL

- HFC-134a compressor oil has no compatibility with that of CFC-12 system.
  - Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use DH-PR (ZXL200PG).
  - Do not mix multiple compressor oils.
- If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
- On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.
- HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

#### 3. REFRIGERANT

- CFC-12 refrigerant cannot be used in a HFC-134a A/C system. HFC-134a refrigerant, also cannot be used in a CFC-12 A/C system.
- If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

#### 4. HANDLING OF REFRIGERANT

- The refrigerant boils at approx.  $-30^{\circ}\text{C}$  ( $-22^{\circ}\text{F}$ ). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite. If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of  $40^{\circ}\text{C}$  ( $104^{\circ}\text{F}$ ) or less.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
- When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
- Provide good ventilation and do not work in a closed area.

## General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.

- (A) Goggles
- (B) Gloves
- (C) Avoid open flame
- (D) No direct heat on container
- (E) Do not discharge
- (F) Loosen

## 5. O-RING CONNECTIONS

- Always use a new O-ring.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform work without using gloves or waste cloths.
- Apply compressor oil to O-rings to avoid sticking, before installation.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of the O-ring and deformation of the pipe end.
- If the work is interrupted before completing pipe connections, recap the pipes, components and fittings with a plug or tape to prevent foreign matter from entering.

(A) Seal

- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.

## General Description

### HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

- Install the O-rings straight against the pipe groove.

- (A) O-ring
- (B) OK
- (C) NG
- (D) Groove

- Use compressor oil specified in the service manual to lubricate the O-rings. Apply oil to the top and sides of O-rings before installation.
- Apply compressor oil to the pipe grooves.

- After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
- If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

# General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## D: PREPARATION TOOL

### CAUTION:

When working on vehicles with a HFC-134a system, only use HFC-134a specified tools and parts. Do not mix CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor itself may be damaged.

In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the tool and screw type and the type of service valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool & screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

# Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 2. Refrigerant Pressure with Manifold Gauge Set

### A: PROCEDURE

- 1) Place the vehicle in the shade and windless condition.
- 2) Open the front hood.
- 3) Connect the manifold gauge set.
- 4) Open the front windows and close all doors.
- 5) Increase the engine to 1,500 rpm.
- 6) Turn the A/C switch to ON.
- 7) Turn the temperature control switch to MAX COOL.
- 8) Put in RECIRC position.
- 9) Turn the blower control switch to HI.
- 10) Read the gauge.

#### **Standard:**

**Low pressure: 127 — 196 kPa (1.3 — 2.0 kg/cm<sup>2</sup>, 18 — 28 psi)**

**High pressure: 1,471 — 1,667 kPa (15 — 17 kg/cm<sup>2</sup>, 213 — 242 psi)**

**Ambient temperature: 30 — 35°C (86 — 95°F)**

### B: INSPECTION

Symptom	Probable cause	Repair order
High-pressure side is unusually high.	<ul style="list-style-type: none"><li>• Defective condenser fan motor</li><li>• Clogged condenser fin</li><li>• Too much refrigerant</li><li>• Air inside the system</li><li>• Defective receiver dryer</li></ul>	<ul style="list-style-type: none"><li>• Replace the fan motor.</li><li>• Clean the condenser fin.</li><li>• Discharge refrigerant.</li><li>• Replace the receiver dryer.</li><li>• After evacuating again, charge an appropriate amount of refrigerant.</li></ul>
High-pressure side is unusually low.	<ul style="list-style-type: none"><li>• Defective compressor</li><li>• Not enough refrigerant</li><li>• Clogged expansion valve</li><li>• Expansion valve frozen temporarily by moisture.</li></ul>	<ul style="list-style-type: none"><li>• Replace the compressor.</li><li>• Check for leaks.</li><li>• Replace the expansion valve.</li><li>• Fully evacuate the expansion valve.</li></ul>
Low-pressure side is unusually high.	<ul style="list-style-type: none"><li>• Defective compressor</li><li>• Defective expansion valve</li><li>• Too much refrigerant</li></ul>	<ul style="list-style-type: none"><li>• Replace the compressor.</li><li>• Replace the expansion valve.</li><li>• Discharge refrigerant.</li></ul>
Low-pressure side is unusually low.	<ul style="list-style-type: none"><li>• Not enough refrigerant</li><li>• Clogged expansion valve</li><li>• Expansion valve frozen temporarily by moisture.</li><li>• Saturated receiver dryer</li></ul>	<ul style="list-style-type: none"><li>• Check for leaks.</li><li>• Replace the expansion valve.</li><li>• Replace the receiver dryer.</li></ul>

# Refrigerant Recovery Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 3. Refrigerant Recovery Procedure

### A: PROCEDURE

#### CAUTION:

- During operation, be sure to wear protective goggles and protective gloves.
- Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.
- When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
- Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

- 1) Perform compressor oil return operation. <Ref. to AC-26, PROCEDURE, Compressor Oil.>
- 2) Stop the engine.
- 3) Make sure the valves on low/high pressure sides of manifold gauge set are fully closed.

- 4) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

- (1) Low-pressure side service port
- (2) High-pressure side service port
- (3) Close

- L: Low pressure gauge
- H: High pressure gauge
- (1) Low pressure valve
- (2) Vacuum pump valve
- (3) High pressure valve
- (4) For low pressure
- (5) For vacuum pump
- (6) For high pressure

- 5) Connect the center hose to the refrigerant recovery system.
- 6) Follow the operation manual to activate the refrigerant recovery system.

# Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 4. Refrigerant Charging Procedure

### A: PROCEDURE

#### CAUTION:

- While working, be sure to wear protective goggles and protective gloves.
- Air in the cycle can cause insufficient air conditioning, and water in the cycle can cause clogging in the cycle (icing) and rust. To remove this air and water content, use a vacuum pump to perform evacuation of the system before filling with refrigerant. By making the inside of the cycle a vacuum, the water content will evaporate even at atmospheric temperatures, and can be removed.

1) Close all valves of the manifold gauge.

- L: Low pressure gauge
- H: High pressure gauge
- (1) Low pressure valve
- (2) Vacuum pump valve
- (3) High pressure valve
- (4) For low pressure
- (5) For vacuum pump
- (6) For high pressure

2) Attach the low pressure side and high pressure side hoses to the vehicle service port.

#### CAUTION:

Confirm that the connections are secure.

- (1) Low-pressure side service port
- (2) High-pressure side service port
- (3) Close

3) Connect the center manifold hose of the manifold gauge to the vacuum pump.

4) Operate the vacuum pump and open the low pressure and high pressure side valves. Next, open the center manifold hose valve, and begin evacuation.

#### CAUTION:

Make sure to perform evacuation using a vacuum pump.

- (1) Vacuum pump
- (2) Open

# Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5) Perform evacuation for 5 minutes or more, and when the low pressure gauge needle reaches  $-100.0$  kPa ( $-750$  mmHg,  $-29.5$  inHg) or higher, close the center manifold hose valve, and stop the vacuum pump.

6) Leave alone for 5 to 10 minutes after closing the low pressure side and high pressure side valves, and check whether there is any change in the low pressure gauge needle indication. If the needle position changes, this indicates a leak. Check the pipe and hose connections, and repair the location with the problem. In this case, repeat again from step 1).

7) If there is no leakage, continue evacuation for additional 20 to 30 minutes.

8) Close all valves and stop the vacuum pump.

9) Follow the can tap operation manual, install to the refrigerant can.

- (1) Tap valve
- (2) To the center manifold hose

10) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

11) When a 13.6 kg (30 lb) refrigerant container is used, measure the amount of refrigerant with a refrigerant charging scale, and connect with the center manifold hose.

- (1) Refrigerant container (HFC-134a)
- (2) Weight scale

12) Open the valve on the HFC-134a source.

13) Loosen the center manifold hose connection on the manifold gauge for a few seconds (if there is a purge valve on the manifold gauge, push this instead) to allow the air in the center manifold hose to escape using the refrigerant pressure.

14) Open the high pressure side and low pressure side valves of the manifold gauge to fill with refrigerant.

### CAUTION:

**When filling with the engine running, do not open the high pressure side valve. Always fill from the low pressure side.**

- (1) Open
- (2) Open

15) When the gauge needle reaches approximately 200 kPa (1,500 mmHg, 59.1 inHg), close all valves.

16) Using a leak tester, check for refrigerant leaks in the system.

17) After checking that there are no refrigerant leaks, fill with refrigerant up to the specified amount.

18) If the HFC-134a supply container becomes empty, close all valves, and close the can tap valve to replace the empty container. After replacing with a new HFC-134a supply container, perform air purge, and resume the filling operation.

19) If the refrigerant filling efficiency drops, close all valves.

20) Check that both the low pressure and high pressure valves are closed. Start the engine with the A/C switch OFF.

## Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

21) To prevent damage to the compressor, push the A/C switch ON-OFF quickly a few times.

22) Set up the vehicle to the following status:

**CAUTION:**

**When filling with the engine running, do not open the high pressure side valve.**

**Always fill from the low pressure side valve.**

- A/C switch ON
- Engine running at 1,500 rpm
- Blower speed setting to "HI"
- Temperature setting to "MAX COOL"
- Air inlet setting to "RECIRC"
- Window open

23) Open the low pressure side valve and fill with refrigerant up to the specified amount.

24) After filling with refrigerant, close all valves and disconnect the hose from the service port.

25) Attach the cap to the service port.

# Refrigerant Leak Check

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 5. Refrigerant Leak Check

### A: INSPECTION

1) Operate the A/C system for approx. 10 minutes, and check that the high-pressure side shows at least 690 kPa (7.03 kgf/cm<sup>2</sup>, 100 psi). Then stop the engine to start the leak test.

2) Starting from the connection between high-pressure pipe and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.

- Check the joint and seam between pressure switch (triple pressure switch) and high-pressure pipe.
- Check the connections between condenser and pipes, and welded joints on the condenser.

#### NOTE:

The leak tester may detect the oil on the condenser fins as a leak.

- Check the joint between compressor and hoses.
- Check the machined area of the compressor and other joints on the compressor.
- Check the compressor shaft seal at the area near the center of compressor clutch pulley.

#### NOTE:

Some shaft seals will show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.

3) Starting from the connection between low-pressure pipe and evaporator, check the system for leakage along the low-pressure side through the compressor. The following items must be checked thoroughly.

- Connection between 2 parts
- Connection between pipe and plate

4) Visually check the rubber area of the flexible hose for cracks. Check the entire length of the flexible hose, especially the connection with the metal hose end.

#### CAUTION:

**Carefully check the external surface of hoses and pipes at approx. 25 mm (0.98 in) per second.**

(A) Flexible hose

5) Disconnect the drain hose from the heater case, and check the hose end for at least 10 seconds.

After the test is finished, reconnect the drain hose.

6) Turn the ignition switch to the ON, and run the blower at high speed for approx. 1 minute. Stop the blower to check the ventilation grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that position for at least 10 seconds.

7) Check the valve in the service port.

8) Visually check the rubber seal in the service port cap.

# Compressor Oil

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 6. Compressor Oil

### A: PROCEDURE

NOTE:

Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

- 1) Increase the engine to 1,500 rpm.
- 2) Turn on the A/C switch.
- 3) Turn the temperature control switch to MAX COOL.
- 4) Put in RECIRC position.
- 5) Turn the blower control switch to HI.
- 6) Leave in this condition for 10 minutes.

### B: REPLACEMENT

NOTE:

- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor) and install the new compressor.
- Since the hygroscopicity of compressor oil is high, perform this series of works quickly.

# Blower Motor Unit Assembly

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 7. Blower Motor Unit Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower. <Ref. to EI-51, INSTRUMENT PANEL, LOWER, REMOVAL, Center Console.>
- 3) Remove the engine ECM protect cover.

- 4) Disconnect the intake door actuator and blower motor harness connectors.
- 5) Remove the relay holder.
- 6) Remove the bolts and nuts to remove blower motor unit assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to AC-6, HEATER COOLING UNIT, COMPONENT, General Description.>**  
**<Ref. to AC-8, BLOWER MOTOR UNIT, COMPONENT, General Description.>**

# Blower Motor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 8. Blower Motor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the blower motor connector.
- 3) Turn up the floor mat near the blower motor.
- 4) Remove the screws and detach the blower motor.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Connect the battery positive (+) terminal to terminal No. 2 of blower motor connector, and negative (-) terminal to terminal No. 1. Check the blower motor for smooth rotation.

Replace the blower motor if defective.

## Power Transistor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 9. Power Transistor (Auto A/C Model)

#### A: REMOVAL

- 1) Remove the instrument panel lower. <Ref. to EI-51, INSTRUMENT PANEL, LOWER, REMOVAL, Center Console.>
- 2) Disconnect the power transistor connector.
- 3) Remove the two screws and remove the power transistor.

#### B: INSTALLATION

Install in the reverse order of removal.

# Blower Resistor (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 10. Blower Resistor (Manual A/C Model)

### A: REMOVAL

- 1) Remove the instrument panel lower. <Ref. to EI-51, INSTRUMENT PANEL, LOWER, REMOVAL, Center Console.>
- 2) Disconnect the blower resistor connector.
- 3) Remove the two screws and remove the blower resistor.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the blower resistor resistance.

Terminal No.	Standard
4 and 3	Approx. 0.43 $\Omega$
4 and 2	Approx. 1.03 $\Omega$
4 and 1	Approx. 3.0 $\Omega$

If NG, replace the blower resistor.

# Heater Core

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 11.Heater Core

### A: REMOVAL

- 1) Remove the heater and cooling unit. <Ref. to AC-36, REMOVAL, Heater and Cooling Unit.>
- 2) Remove the screws and detach the heater pipe cover.

- 3) Remove the screws and detach the clamp.

- 4) Remove the pipe clamp and detach the pipe.

- 5) Remove the heater core cover.

- 6) Remove the heater core.

### B: INSTALLATION

#### CAUTION:

Replace O-rings and pipe clamps with new parts and install securely.

- 1) Install in the reverse order of removal.
- 2) Fill engine coolant. <Ref. to CO(H4DOTC)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.> <Ref. to CO(H4SO)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 3) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

## Control Unit (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 12. Control Unit (Manual A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the ornament panel. <Ref. to EI-49, ORNAMENT PANEL, REMOVAL, Center Console.>
- 3) Remove the control wires from both sides of the heater and cooling unit.

- 4) Remove the screws and claws, and remove the control module from the ornament panel.

#### B: INSTALLATION

##### CAUTION:

**Securely assemble the plate at the end of the control wire to the heater case.**

Install in the reverse order of removal.

### 13. Control Unit (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the ornament panel. <Ref. to EI-49, ORNAMENT PANEL, REMOVAL, Center Console.>
- 3) Remove the screws and claws, and remove the control module from the ornament panel.

#### B: INSTALLATION

Install in the reverse order of removal.

##### *Tightening torque:*

*Refer to "COMPONENT" of "General Description". <Ref. to AC-9, CONTROL MODULE, COMPONENT, General Description.>*

# Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 14. Compressor

### A: REMOVAL

- 1) Perform compressor oil return operation. <Ref. to AC-26, PROCEDURE, Compressor Oil.>
- 2) Turn the A/C switch to OFF and stop the engine.
- 3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 4) Disconnect the ground cable from battery.
- 5) Remove the V-belts. <Ref. to ME(H4DOTC)-40, REMOVAL, V-belt.> <Ref. to ME(H4SO)-39, REMOVAL, V-belt.>
- 6) Remove the generator. <Ref. to SC(H4SO)-16, REMOVAL, Generator.>
- 7) Remove the bolt and remove the low-pressure hose and high-pressure hose.

- 8) Disconnect the compressor harness from body harness.
- 9) Remove the bolts and remove the compressor bracket.

- 10) Remove the bolts, then remove the bracket from the compressor.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Replace the O-rings on low-/high-pressure hoses with new parts, then apply compressor oil.
- 3) After replacing the compressor, adjust the amount of compressor oil. <Ref. to AC-26, PROCEDURE, Compressor Oil.>
- 4) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

#### Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.> <Ref. to AC-12, COMPRESSOR, COMPONENT, General Description.>

### C: INSPECTION

#### 1. MAGNETIC CLUTCH CLEARANCE

- 1) Check the clearance of the entire circumference around the drive plate and pulley.

#### Specification:

**0.3 — 0.6 mm (0.0118 — 0.0236 in)**

- 2) If it is not at the standard value, replace the compressor.

#### 2. MAGNETIC CLUTCH OPERATION

- 1) Disconnect the compressor connector.
- 2) Connect the battery positive (+) terminal to the terminal of the compressor connector.
- 3) Check the magnet clutch engagement.
- 4) If there is a malfunction, replace the compressor.

# Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 15. Condenser

### A: REMOVAL

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Disconnect the ground cable from battery.
- 3) Disconnect the pressure hose and pipe from the condenser.

- 4) Remove the radiator bracket.

- 5) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 6) Remove two bolts. While lifting the condenser, pull out through space between the radiator and the radiator panel.

### CAUTION:

- Be careful not to damage the condenser fins. If a damaged fin is found, repair it using a thin screwdriver.
- If the condenser is replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-26, REPLACEMENT, Compressor Oil.>

### B: INSTALLATION

#### CAUTION:

- Replace the O-rings on hoses or pipes with new parts, and then apply compressor oil.
- Confirm that lower guide (A) of condenser fits into holes on radiator panel.

- 1) Install in the reverse order of removal.
- 2) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.> <Ref. to CO(H4DOTC)-4, RADIATOR AND RADIATOR FAN, COMPONENT, General Description.> <Ref. to CO(H4SO)-4, RADIATOR & RADIATOR FAN, COMPONENT, General Description.>

### C: INSPECTION

- 1) Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.
- 2) Inspect for oil leakage from the condenser. If a failure is found, replace the condenser with a new part.

# Heater and Cooling Unit

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 16.Heater and Cooling Unit

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Drain the coolant from the radiator.
- 4) Remove the bolts securing expansion valve and pipe in engine compartment. Release the heater hose clamps in engine compartment to remove the hoses.

- 5) Remove the instrument panel. <Ref. to EI-52, REMOVAL, Instrument Panel Assembly.>
- 6) Remove the blower motor unit assembly. <Ref. to AC-27, REMOVAL, Blower Motor Unit Assembly.>
- 7) Disconnect the harness connectors of the actuator, thermo sensor, power transistor and blower resistor.
- 8) Remove the bolt and nuts and remove the heater and cooling unit.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Fill engine coolant. <Ref. to CO(H4DOTC)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.> <Ref. to CO(H4SO)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 3) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

#### **Tightening torque:**

**Refer to “COMPONENT” of “General Description”. <Ref. to AC-6, HEATER COOLING UNIT, COMPONENT, General Description.>**

# Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 17. Evaporator

### A: REMOVAL

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Remove the heater and cooling unit from the vehicle body. <Ref. to AC-36, REMOVAL, Heater and Cooling Unit.>
- 3) Remove the screws and detach the cover.

- 4) Remove the bolt and detach the pipe.

- 5) Remove the screws and detach the cover.

- 6) Remove the evaporator.

### CAUTION:

If the evaporator is replaced, add an appropriate amount of compressor oil to evaporator. <Ref. to AC-26, REPLACEMENT, Compressor Oil.>

### B: INSTALLATION

### CAUTION:

Install the sensor in the location shown in the figures below.

- (1) 148 mm (5.83 in) from the top edge of the fins
- (2) Sixth row fin from the left end
- (3) Sensor
- (4) Evaporator

- 1) Install in the reverse order of removal.
- 2) Fill engine coolant. <Ref. to CO(H4DOTC)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.> <Ref. to CO(H4SO)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 3) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

## 18.Hose and Pipe

### A: REMOVAL

**CAUTION:**

- When disconnecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
  - Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.
- 1) Disconnect the ground cable from battery.
  - 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
  - 3) Remove the bolt and detach the hoses and pipes.

### B: INSTALLATION

**CAUTION:**

- Replace the O-rings with new parts.
  - When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
- 1) Install in the reverse order of removal.
  - 2) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

**Tightening torque:**

*Refer to “COMPONENT” of “General Description”. <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>*

### C: INSPECTION

Check the hoses for cracks, damage and expansion. If any fault is found, replace with new parts.

# Relay and Fuse

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 19. Relay and Fuse

### A: LOCATION

- (1) Joint box
- (2) Main fuse box

Main fan relay 1	(A)
Main fan relay 2	(B)
Sub fan relay	(C)
A/C relay	(D)
A/C Fuse	(E)

### B: INSPECTION

- (3) — (4): Continuity exists
- (1) — (2): Continuity does not exist

- 1) While applying battery voltage to the terminal between (3) and (4), check for continuity between (1) and (2).
- 2) Replace the relay if faulty.

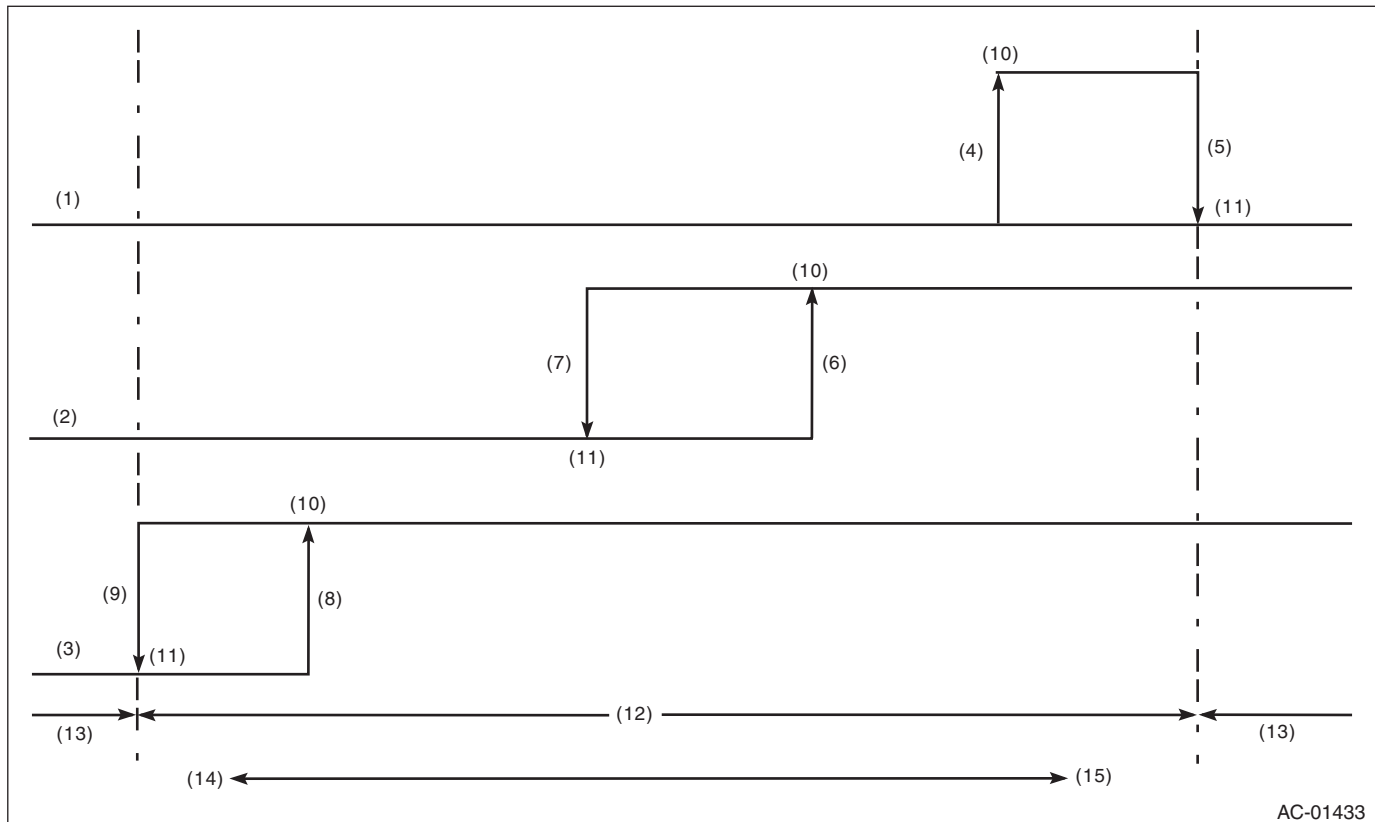

## Pressure Switch (Triple Pressure Switch)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 20. Pressure Switch (Triple Pressure Switch)

#### A: INSPECTION

- 1) Connect the manifold gauge to the service valve on the high-pressure side.
- 2) Disconnect the pressure switch harness connector.
- 3) Start the air conditioner, and check the operating pressure of switch by turning the compressor (magnet clutch) to ON/OFF. Operation of each switch is as follows.

AC-01433

(1) High pressure switch	(6) 1,770±100 kPa (18.05±1.02 kg/cm <sup>2</sup> , 256.65±14.5 psi)	(9) 177±25 kPa (1.80±0.25 kg/cm <sup>2</sup> , 25.7±3.6 psi)
(2) Middle pressure switch	(7) 1,470±120 kPa (14.99±1.22 kg/cm <sup>2</sup> , 213.15±17.4 psi)	(10) ON
(3) Low pressure switch	(8) 206±30 kPa (2.10±0.31 kg/cm <sup>2</sup> , 29.9±4.3 psi)	(11) OFF
(4) 2,350±200 kPa (24.00±2.04 kg/cm <sup>2</sup> , 340.7±29.0 psi)	(12) Operative range of compressor	(13) Inoperative range of compressor
(5) 2,940±200 kPa (29.98±2.04 kg/cm <sup>2</sup> , 426.3±29.0 psi)	(14) Low pressure	(15) High pressure

#### NOTE:

- High pressure switch turns the compressor (magnet clutch) to OFF when the refrigerant pressure becomes extremely high to prevent the evaporator, air conditioner piping and expansion valve from getting damaged or frozen, etc.
- Middle pressure switch effectively controls the radiator fan output by judging high load/low load in normal range.
- If the refrigerant pressure is abnormally low, the low pressure switch determines that there is insufficient refrigerant, and turns the compressor (magnetic clutch) OFF since there is a possibility that the compressor will seize if it is continued to run.

## Ambient Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 21. Ambient Sensor (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Disconnect the ambient sensor connector.
- 3) Remove the ambient sensor from the radiator lower panel.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

Refer to "Ambient Sensor" of HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS). <Ref. to AC(diag)-28, AMBIENT SENSOR, Diagnostic Procedure for Sensors.>

## Sunload Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 22.Sunload Sensor (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the audio. <Ref. to ET-6, REMOVAL, Audio.>
- 3) Push out the sunload sensor from the back side of the instrument panel.

- 4) Disconnect the harness connector and remove the sunload sensor.

#### CAUTION:

**Be careful not to damage the interior trims when removing the sensor.**

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

Refer to "Sunload Sensor" of HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS). <Ref. to AC(diag)-34, SUNLOAD SENSOR, Diagnostic Procedure for Sensors.>

### 23. In-Vehicle Sensor (Auto A/C Model)

#### A: REMOVAL

##### CAUTION:

Be careful not to damage the sensors and interior trims when removing.

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>
- 3) Disconnect the connector and aspirator hose, remove the screw and remove the in-vehicle sensor from the instrument panel.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

Refer to "In-Vehicle Sensor" of HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS). <Ref. to AC(diag)-30, IN-VEHICLE SENSOR, Diagnostic Procedure for Sensors.>

# Air Vent Grille

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 24. Air Vent Grille

### A: REMOVAL

#### 1. CENTER GRILLE

- 1) Insert a plastic remover into the slit at the bottom of the center panel, to lift the panel.
- 2) Remove the claws and resin hook and then remove the center panel.

- 3) Remove the claws, and remove the air vent center grille from the center panel.

#### 2. SIDE GRILLE

- 1) Remove the ornament panel. <Ref. to EI-49, ORNAMENT PANEL, REMOVAL, Center Console.>
- 2) Remove the claws, and remove the air vent side grille.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Check that the direction and amount of air can be adjusted smoothly.
- 2) Check that the adjustment can be maintained in each position.

## 25.Heater Duct

### A: REMOVAL

#### 1. REAR HEATER DUCT

- 1) Remove the heater cooling unit. <Ref. to AC-36, REMOVAL, Heater and Cooling Unit.>
- 2) Remove the front seats. <Ref. to SE-6, REMOVAL, Front Seat.>
- 3) Remove the front side sill cover.
- 4) Pull off the floor mat to remove the rear heater duct center (A) and rear heater duct LH, RH (B).

### B: INSTALLATION

Install in the reverse order of removal.

## Heater Vent Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 26.Heater Vent Duct

#### A: REMOVAL

- 1) Remove the instrument panel. <Ref. to EI-52, REMOVAL, Instrument Panel Assembly.>
- 2) Remove the screws, and then remove the heater vent duct.

#### B: INSTALLATION

Install in the reverse order of removal.

### 27.A/C Filter

#### A: REPLACEMENT

1) Remove the glove box damper.

2) Remove the stoppers and pull the glove box lid assembly forward to remove.

3) Pinch the tabs to release the lock and remove the A/C filter.

4) Install in the reverse order of removal.

# General Diagnostic Table

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 28. General Diagnostic Table

### A: INSPECTION

Symptom		Repair order	
Blower motor	Does not operate.	Fuse	
		Blower motor relay	
		Blower motor	
		Blower motor resistor (Manual A/C)	
		Blower switch	
		Wiring harness	
	Noise	Blower motor	
Compressor	Does not operate.	Refrigerant	
		Fuse	
		Air conditioning relay	
		Magnet clutch	
		Compressor	
		Pressure switch	
		A/C switch	
		Blower switch	
		Wiring harness	
	Noise	V-belt	
		Magnet clutch	
		Compressor	
Cold air not emitted.		Refrigerant	
		V-belt	
		Magnet clutch	
		Compressor	
		Pressure switch	
		Aspirator hose	
		Blower fan relay	
		Blower motor	
		A/C switch	
		Blower switch	
		Control module	
		Expansion valve	
		Evaporator	
		Air mix actuator (Auto A/C)	
		Temperature control cable (Manual A/C)	
		Wiring harness	
		Heater duct	
		Heater vent duct	
	Warm air not emitted.		Engine coolant
			Aspirator hose
		Air mix actuator (Auto A/C)	
		Temperature control cable (Manual A/C)	
		Blower switch	
	Heater core		

# General Diagnostic Table

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

Symptom	Repair order
Temperature of air from vents does not change.	Engine coolant
	Air mix actuator (Auto A/C)
	Temperature control cable (Manual A/C)
	Temperature control switch
	Wiring harness (Auto A/C)
Unable to switch blow vents.	Mode actuator (Auto A/C)
	Mode switch cable (Manual A/C)
	Mode switch (Auto A/C)
	Wiring harness (Auto A/C)
Unable to switch suction vents.	FRESH/RECIRC switch (Auto A/C)
	Intake door actuator (Auto A/C)
	Wiring harness (Auto A/C)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

# Basic Diagnostic Procedure

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

	Step	Check	Yes	No
1	<b>START INSPECTIONS.</b> 1) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.> 2) Perform the self-diagnosis. <Ref. to AC(diag)-9, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Does the self-diagnosis operate?	Go to step 2.	<Ref. to AC(diag)-13, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
2	<b>IDENTIFY MALFUNCTION PART.</b> Identify the malfunction part with self-diagnosis.	Can the malfunction part be confirmed?	Repair the malfunctioning part in accordance with each diagnostic chart.	Go to step 3.
3	<b>CHECK COMPARTMENT TEMPERATURE.</b> 1) Turn on the A/C switch. 2) Turn the temperature control dial at maximum cool position. 3) Check the compartment temperature change.	Does the compartment temperature change?	Go to step 4.	<Ref. to AC(diag)-19, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY, Diagnostics for A/C System Malfunction.>
4	<b>CHECK A/C SYSTEM RESPONSE.</b> Change the temperature setting, and check the response of A/C system.	Does the A/C system respond quickly?	A/C system is normal.	<Ref. to AC(diag)-19, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY, Diagnostics for A/C System Malfunction.>

# General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 2. General Description

### A: CAUTION

- 1) Never connect the battery in reverse polarity.
  - Doing so may immediately damage the auto A/C control module.
- 2) Do not disconnect the battery terminals while the engine is running.
  - A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as auto A/C control module etc.
- 3) Before disconnecting the connectors of sensors and the auto A/C control module, be sure to turn off the ignition switch.
  - Auto A/C control module may be damaged.
- 4) Every A/C-related part is a precision part. Do not drop them.
- 5) Airbag system wiring harness is routed near the A/C control panel and junction box.

### CAUTION:

- Do not use electrical test equipment on the airbag system wiring harness and connector.
- Be careful not to damage the airbag system wiring harness when servicing the A/C control panel and junction box.

### B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems in the A/C system.

#### 1. BATTERY

- 1) Measure the battery voltage and specific gravity of the electrolyte.

**Standard voltage:**

**12 V**

**Specific gravity:**

**1.260 or more**

- 2) Check the condition of the fuses for A/C system power supply and other fuses.
- 3) Check the condition of harness and harness connector connections.

#### 2. ASPIRATOR HOSE

- 1) Turn the ignition switch to ON, and press the A/C switch.
- 2) Turn the temperature control dial to maximum hot position.
- 3) Set the blow vents to the DEF position.
- 4) Turn the fan switch to "MAX" position.

- 5) Put a strip of paper close to the front side of in-vehicle sensor suction port (A) located in the instrument panel lower cover, and check that air is being sucked into the port by seeing the paper moving towards the port.

### NOTE:

Be careful not to let the paper get sucked into the port.

- 6) If the paper does not move at all, remove the instrument panel lower cover <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.> and check for poor connection of the aspirator hose (A), in-vehicle sensor and heater unit, and repair them if necessary.

#### 3. A/C LINE

Check the connection for A/C line (A) and lower side high-pressure pipe.

#### 4. CONTROL LINKAGE

- 1) Check the state of mode door linkage.
- 2) Check the state of air mix door linkage.
- 3) Check the state of FRESH/RECIRC door linkage.

## General Description

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

#### 5. CONTROL SWITCHES

Start the engine and warm up completely.

##### 1) Inspection using switches

No.	Point to check	Switch operation	Judgement standard
1	Air flow control dial	Turn the dial to the right.	Outlet opening (mode) switches AUTO → VENT → BI-LEVEL → HEAT → DEF/HEAT → DEF each time turning the dial.
2	Fan speed control dial	Turn the dial to the right.	Each time the dial is turned, the fan speed switches OFF → AUTO → 1st → 2nd → 3rd → 4th → 5th → 6th → 7th.
3	FRESH/RECIRC switch	Press the FRESH/RECIRC switch.	Inlet opening switches RECIRC → FRESH → RECIRC each time pressing the switch. (LED illuminates at RECIRC)
		Set the air flow control dial and fan speed control dial to the AUTO position.	The system switches to AUTO.
4	A/C switch	Turn the A/C switch to ON with the fan speed control dial set to other than OFF position.	The LED lights and the compressor operates.
		Set the air flow control dial and fan speed control dial to the AUTO position.	The system switches to AUTO.
5	Auto function Operate in order from 1).	1) Set the following dial and switch to AUTO. <ul style="list-style-type: none"> <li>• Air flow control dial</li> <li>• Fan speed control dial</li> <li>• FRESH/RECIRC switch</li> <li>• A/C switch</li> </ul> 2) Turn the temperature control dial completely to the left, and set to the maximum cool position.	<ul style="list-style-type: none"> <li>• Outlet air temperature: COOL</li> <li>• Fan speed: Max.</li> <li>• Outlet opening: VENT</li> <li>• Inlet opening: RECIRC</li> <li>• Compressor: AUTO</li> </ul>
		3) Turn the temperature control dial to the right slowly up to the maximum hot position.	<ul style="list-style-type: none"> <li>• Outlet air temperature: COOL → HOT</li> <li>• Fan speed: AUTO</li> <li>• Outlet opening: AUTO</li> <li>• Inlet opening: AUTO</li> <li>• Compressor: AUTO</li> </ul>
		4) Turn the temperature control dial fully to the right, to the maximum hot position.	<ul style="list-style-type: none"> <li>• Outlet air temperature: HOT</li> <li>• Fan speed: Max.</li> <li>• Outlet opening: HEAT</li> <li>• Inlet opening: FRESH</li> <li>• Compressor: AUTO</li> </ul>
6	Defroster Interlock Function	Set the air flow control dial to the DEF or the DEF/HEAT position.	<ul style="list-style-type: none"> <li>• Outlet air temperature: AUTO</li> <li>• Fan speed: AUTO</li> <li>• Outlet opening: DEF or DEF/HEAT</li> <li>• Inlet opening: FRESH</li> <li>• Compressor: ON</li> </ul>
7	Rear defogger switch	Press the rear defogger switch.	LED illuminates.

##### 2) Inspection of compressor operation

No.	Point to check	Switch operation	Judgement standard
1	Compressor	1) Turn the A/C switch to ON. 2) Set the FAN switch between LO and HI.	Compressor: ON

##### 3) Inspection of illumination control

No.	Point to check	Switch operation	Judgement standard
1	Illumination	Turn the lighting switch to ON.	Illumination comes on. If the LED lights, the LED will dim.

### 1. A/C CONTROL PANEL SELF-DIAGNOSIS

Step	Check	Yes	No
<b>1 SELECT SELF-DIAGNOSIS MODE IN THE CONTROL PANEL.</b> 1) Set the air flow control dial and the fan speed control dial to AUTO. 2) Start the engine with the A/C switch and the FRESH/RECIRC switch pressed.	Does the self-diagnosis mode operate?	Go to step 2.	<Ref. to AC(diag)-13, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
<b>2 CHECK THE LIGHTING OF THE LED.</b> Make sure that all switch LEDs on the control panel illuminate.	Do all LEDs blink eight times?	Go to step 3.	Replace the control panel.
<b>3 CHECK SENSOR MALFUNCTION.</b> 1) Set the air flow control dial and the fan speed control dial to AUTO. 2) If the system has trouble for each sensor, the FRESH/RECIRC switch LED blinks or is turned off. 3) If the system has no malfunctions, the FRESH/RECIRC switch LED is illuminated.	Does the FRESH/RECIRC switch LED illuminate?	Go to step 5.	Go to step 4.
<b>4 CONFIRM MALFUNCTIONING SENSOR.</b> 1) Set the air flow control dial to AUTO. 2) Turn the fan speed control dial to each mode position, and check each switch LED illumination according to sensor check table. <Ref. to AC(diag)-11, SENSOR CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	When turning the fan speed control dial to each mode position, does the FRESH/RECIRC switch LED go off?	Go to step 5.	Repair the defective sensor. <Ref. to AC(diag)-28, Diagnostic Procedure for Sensors.>

## Diagnostic Chart for Self-Diagnosis

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>5 CHECK AIR MIX DOOR AND MODE DOOR POSITION SIGNALS.</b> 1) Set the air flow control dial to FACE. 2) Turn the fan speed control dial to AUTO. 3) If there is a system malfunction in the air mix door signal or the mode door position signal, the FRESH/RECIRC switch LED goes off or blinks. 4) If the system has no malfunctions, the FRESH/RECIRC switch LED is illuminated.	Does the FRESH/RECIRC switch LED illuminate?	Go to step 8.	Go to step 6.
<b>6 CHECK AIR MIX DOOR DRIVE SIGNAL.</b> 1) Set the air flow control dial to FACE. 2) Place the fan speed control dial in each position and then check each LED illumination conditions. <Ref. to AC(diag)-12, DRIVE SIGNAL CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Do the LEDs illuminate in accordance with operation signal table?	Go to step 7.	Check the air mix door actuator circuit. <Ref. to AC(diag)-26, AIR MIX DOOR ACTUATOR, Diagnostic Procedure for Actuators.>
<b>7 CHECK MODE DOOR POSITION DRIVE SIGNAL.</b> 1) Press the A/C switch. 2) Place the fan speed control dial in each position and then check each LED illumination conditions. <Ref. to AC(diag)-12, DRIVE SIGNAL CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.>	Do the LEDs illuminate in accordance with operation signal table?	Go to step 8.	Check the mode door actuator circuit. <Ref. to AC(diag)-24, MODE DOOR ACTUATOR, Diagnostic Procedure for Actuators.>
<b>8 CHECK OPERATION OF EACH ACTUATOR, BLOWER FAN AND COMPRESSOR CLUTCH.</b> 1) Set the air flow control dial to B/L. 2) Turn the fan speed control dial from AUTO to 7th, and select operating modes. 3) Check the operation of each mode according to operating mode table. <Ref. to AC(diag)-11, OPERATING MODE TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.> <ul style="list-style-type: none"> <li>• FRESH/RECIRC door</li> <li>• Air flow control door</li> <li>• Air mix door</li> <li>• Blower fan</li> <li>• A/C compressor</li> </ul>	Does the operation of each mode match to operating mode table?	Turn the fan speed control dial to OFF or the ignition switch to OFF in order to complete self-diagnosis.	Repair the malfunctioning part in accordance with each diagnostic chart.

# Diagnostic Chart for Self-Diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 2. SENSOR CHECK TABLE

NOTE:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor at a location exposed to direct sunlight.

Air flow control dial position	Fan dial position	Sensor	No trouble	Short circuit	Open circuit	When currently malfunctioning	When having malfunctioned in the past
AUTO	AUTO	In-vehicle sensor	FRESH/RECIRC switch LED is turned off	FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ⇔ turns off for 0.2 sec.)	FRESH/RECIRC switch LED blinks (Illuminates for 1 sec. ⇔ turns off for 1 sec.)	Rear window defogger switch LED is turned off	Rear window defogger switch LED illuminates
	1st	Ambient sensor		FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ⇔ turns off for 0.2 sec.)			
	2nd	Evaporator sensor		FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ⇔ turns off for 0.2 sec.)			
	3rd	Engine coolant temperature sensor		—			
	4th	Sunload sensor		FRESH/RECIRC switch LED blinks (Illuminates for 0.2 sec. ⇔ turns off for 0.2 sec.)			
	5th – 7th	CAN communication		—			

## 3. OPERATING MODE TABLE

Operation	Fan speed control dial position							
	AUTO	1st	2nd	3rd	4th	5th	6th	7th

## 6. Diagnostics for A/C System Malfunction

### A: A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

#### TROUBLE SYMPTOM:

- Set temperature is not indicated on the display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

#### WIRING DIAGRAM:

AC-01876

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 7, No. 22 and No. 31 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 2.
<b>2</b> <b>CHECK A/C CONTROL MODULE POWER CIRCUIT.</b> 1) Remove the A/C control panel. 2) Disconnect the A/C control panel harness connector. 3) Turn the ignition switch to ACC, and measure the voltage between A/C control panel harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(i88) No. 15 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	Check for open or short circuit in the harness between A/C control panel and fuse.
<b>3</b> <b>CHECK A/C CONTROL MODULE POWER CIRCUIT.</b> Measure the voltage between A/C control panel harness connector terminal and chassis ground after turning the ignition switch to ON. <b>Connector &amp; terminal</b> <b>(i88) No. 32 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 4.	Check for open or short circuit in the harness between A/C control panel and fuse.
<b>4</b> <b>CHECK A/C CONTROL PANEL GROUND POWER CIRCUIT.</b> Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. <b>Connector &amp; terminal</b> <b>(i88) No. 34 — Chassis ground:</b>	Is the resistance less than 10 $\Omega$ ?	Go to step 5.	Repair the harness for ground line.
<b>5</b> <b>CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## B: BLOWER MOTOR DOES NOT ROTATE

### TROUBLE SYMPTOM:

- Blower motor does not rotate.
- Blower motor does not change speeds.

### WIRING DIAGRAM:

Step	Check	Yes	No
<b>1 CHECK FUSE.</b> 1) Remove fuse No. 22, 27 and 28 from fuse & relay box. 2) Check the condition of fuse.	Is any fuse blown out?	Replace the fuse.	Go to step 2.
<b>2 CHECK POWER SUPPLY OF BLOWER MOTOR RELAY.</b> 1) Turn the ignition switch to OFF. 2) Remove the blower motor relay. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the terminals. <b>Connector &amp; terminal</b> <b>(B386) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	Repair the open circuit of blower motor power supply line harness.

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>3 CHECK BLOWER MOTOR RELAY.</b> 1) Turn the ignition switch to OFF. 2) Connect the battery positive terminal to the blower motor relay terminal No. 2, and the negative terminal to No. 4. 3) Using the tester, measure the resistance between terminals. <b>Connector &amp; terminal</b> <b>(Relay) No. 1 — No. 5:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 4.	Replace the blower motor relay.
<b>4 CHECK HARNESS.</b> 1) Remove the auto A/C control module. 2) Measure the resistance between auto A/C control module and relay using a tester. <b>Connector &amp; terminal</b> <b>(B386) No. 4 — (i88) No. 9:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair or replace the harness.
<b>5 CHECK BLOWER MOTOR POWER SUPPLY.</b> 1) Install the blower motor relay and auto A/C control module. 2) Turn the ignition switch to ON. 3) Turn the blower fan switch to ON. 4) Use a tester to measure the voltage between the blower motor and chassis ground. <b>Connector &amp; terminal</b> <b>(B87) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 6.	Repair or replace the harness between relay and the blower motor.
<b>6 CHECK BLOWER MOTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from blower motor. 3) Connect the battery positive terminal to the blower motor connector terminal No. 2, and the negative terminal to No. 1. 4) Make sure the blower motor runs.	Does the blower motor run?	Go to step 7.	Replace the blower motor. <Ref. to AC-28, REMOVAL, Blower Motor.>
<b>7 CHECK HARNESS.</b> 1) Disconnect the power transistor connector. 2) Disconnect the auto A/C control module connector. 3) Using the tester, measure the resistance between terminals of harness. <b>Connector &amp; terminal</b> <b>(B57) No. 1 — Chassis ground:</b> <b>(B57) No. 2 — (i88) No. 40:</b> <b>(B57) No. 3 — (B87) No. 1:</b> <b>(B57) No. 4 — (B87) No. 2:</b> <b>(B57) No. 4 — (B386) No. 5:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 8.	Repair or replace the harness.
<b>8 CHECK FAN CONTROL SIGNAL.</b> 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) Change the fan speed control dial from 1st to 7th. 4) Measure the voltage between the power transistor and chassis ground using a tester. <b>Connector &amp; terminal</b> <b>(B57) No. 2 (+) — Chassis ground (-):</b>	Is the voltage approx. 10 V at 1st and approx. 1 V at 7th?	Replace the power transistor. <Ref. to AC-29, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step 9.
<b>9 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## C: BLOWER MOTOR TURNS AROUND EARLY

### TROUBLE SYMPTOM:

- The blower rotates even though the blower switch is not turned on.
- The blower motor continues to rotate at high speed. (Not adjustable.)

### WIRING DIAGRAM:

AC-01961

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK BLOWER MOTOR CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B57) No. 3 — Chassis ground:</b>	Is the resistance 10 $\Omega$ or more?	Go to step 2.	Repair or replace the harness.
<b>2</b> <b>CHECK POWER TRANSISTOR.</b> Measure the resistance between power transistor terminals using a tester. <b>Connector &amp; terminal</b> <b>(B57) No. 3 — No. 1:</b>	Is the resistance less than 10 $\Omega$ ?	Replace the power transistor. <Ref. to AC-29, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step 3.
<b>3</b> <b>CHECK HARNESS.</b> 1) Remove the auto A/C control module. 2) Measure the resistance between the power transistor connector and chassis ground using a tester. <b>Connector &amp; terminal</b> <b>(B57) No. 2 — Chassis ground:</b>	Is the resistance less than 10 $\Omega$ ?	Repair or replace the short circuit of the harness.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

# Diagnostics for A/C System Malfunction

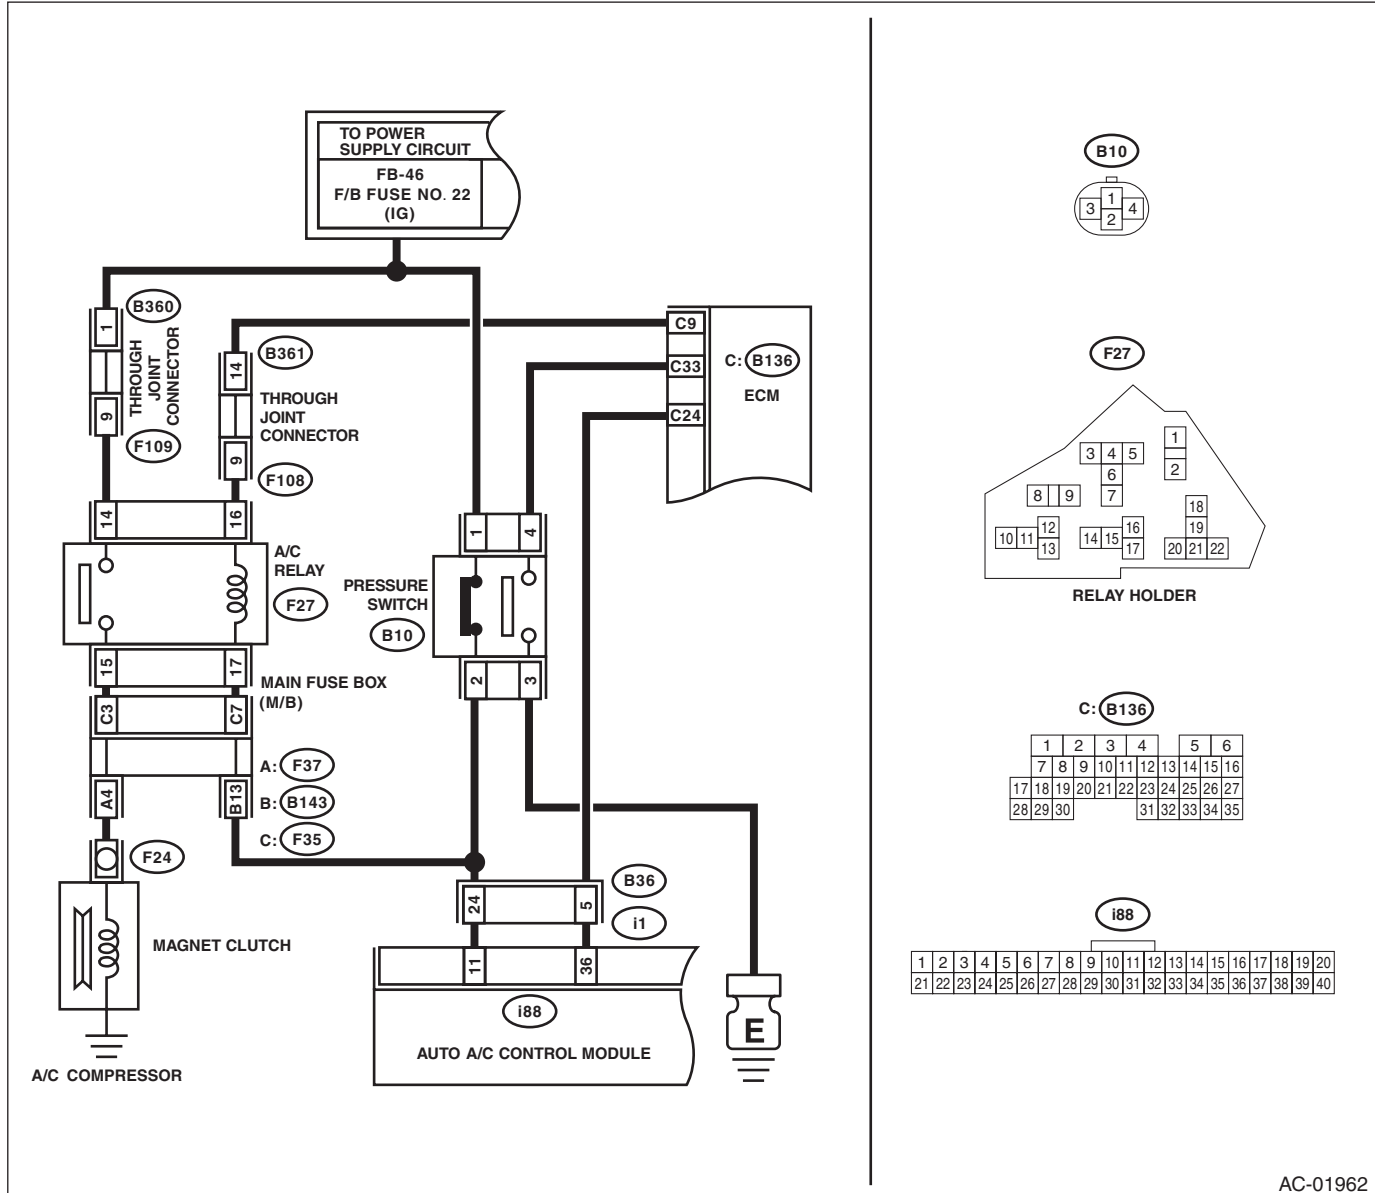

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## D: COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY

### TROUBLE SYMPTOM:

- Compartment temperature does not change. (Cold air does not come out.)
- A/C system does not respond. (Response is extremely slow)

### WIRING DIAGRAM:

AC-01962

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 2.
<b>2 CHECK SIGNAL TO A/C RELAY AND AUTO A/C CONTROL MODULE.</b> 1) Disconnect the A/C relay and auto A/C control module harness connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between A/C relay connector terminal and chassis ground. 4) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F27) No. 17 (+) — Chassis ground (-):</b> <b>(i88) No. 11 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 5.	Go to step 3.
<b>3 CHECK POWER SUPPLY FOR PRESSURE SWITCH.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the pressure switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between pressure switch harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B10) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 4.	Check for open or short circuit in the harness between fuse and pressure switch.
<b>4 CHECK HARNESS BETWEEN PRESSURE SWITCH AND A/C RELAY, AUTO A/C CONTROL MODULE.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between pressure switch connector and A/C relay connector. 3) Measure the resistance of harness between pressure switch connector and auto A/C control module connector. <b>Connector &amp; terminal</b> <b>(B10) No. 2 — (F27) No. 17:</b> <b>(B10) No. 2 — (i88) No. 11:</b>	Is the resistance less than 1 Ω?	Check the pressure switch. <Ref. to AC-40, INSPECTION, Pressure Switch (Triple Pressure Switch).>	Repair the harness.
<b>5 CHECK POWER SUPPLY FOR A/C RELAY.</b> Measure the voltage between A/C relay connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F27) No. 14 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 6.	Check open or short circuit of harness between fuse and A/C relay.
<b>6 CHECK A/C RELAY.</b> Check the A/C relay. <Ref. to AC-39, INSPECTION, Relay and Fuse.>	Is the A/C relay OK?	Go to step 7.	Replace the A/C relay.

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>7 CHECK A/C ON SIGNAL.</b> 1) Turn the ignition switch to OFF. 2) Connect the A/C relay and all disconnected connectors. 3) Start the engine and turn the A/C switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(i88) No. 36 (+) — Chassis ground (-):</b>	Is the voltage 5.5 V or more?	Go to step 8.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>
<b>8 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND ECM.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of auto A/C control module and ECM. 3) Measure the resistance of harness between auto A/C control module connector and ECM connector. <b>Connector &amp; terminal</b> <b>(i88) No. 36 — (B136) No. 24:</b>	Is the resistance less than 1 Ω?	Go to step 9.	Repair the harness.
<b>9 CHECK MAGNET CLUTCH ON SIGNAL.</b> 1) Stop the engine and turn the A/C switch to OFF. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B136) No. 9 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 10.	Check for open or short circuit in the harness between A/C relay and ECM.
<b>10 CHECK MAGNET CLUTCH ON SIGNAL.</b> 1) Start the engine and turn the A/C switch to ON. 2) Turn the temperature control dial at maximum cool position. 3) Measure the voltage between ECM connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B136) No. 9 (+) — Chassis ground (-):</b>	Is the voltage 0 V?	Go to step 11.	Replace the ECM. <Ref. to FU(H4SO)-44, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, REMOVAL, Engine Control Module (ECM).>
<b>11 CHECK POWER SUPPLY FOR MAGNET CLUTCH.</b> 1) Stop the engine and turn the A/C switch to OFF. 2) Disconnect the harness connector of magnet clutch. 3) Start the engine and turn the A/C switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between magnet clutch harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F24) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Inspect the compressor. <Ref. to AC-34, INSPECTION, Compressor.>	Check for open or short circuit in the harness between A/C relay and magnet clutch.

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 7. Diagnostic Procedure for Actuators

### A: INTAKE DOOR ACTUATOR

#### TROUBLE SYMPTOM:

FRESH/RECIRC mode is not changed.

#### WIRING DIAGRAM:

AC-01758

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY FOR INTAKE DOOR ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the intake door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake door actuator connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B163) No. 1 (+) — Chassis ground (-):</b>	Is the voltage approx. 10 V or more?	Go to step 2.	Check for open or short circuit in the harness between intake door actuator and fuse.
<b>2 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND INTAKE DOOR ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the auto A/C control module connector. 3) Measure the resistance between intake door actuator connector and auto A/C control module connector. <b>Connector &amp; terminal</b> <b>(i88) No. 8 — (B163) No. 6:</b> <b>(i88) No. 7 — (B163) No. 5:</b> <b>(i88) No. 6 — (B163) No. 4:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 3.	Repair the harness between auto A/C control module and intake door actuator.
<b>3 CHECK OPERATION OF INTAKE DOOR ACTUATOR.</b> 1) Connect the intake door actuator connector. 2) Ground the auto A/C control module connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. <b>Connector &amp; terminal</b> <b>(i88) No. 6 — Chassis ground:</b>	Does the actuator move to the FRESH side?	Go to step 4.	Replace the intake door actuator.
<b>4 CHECK OPERATION OF INTAKE DOOR ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Ground the auto A/C control module connector with a suitable wire. 3) Turn the ignition switch to ON, and check the operation of intake door actuator. <b>Connector &amp; terminal:</b> <b>(i88) No. 8 — Chassis ground:</b>	Does the actuator move to the RECIRC side?	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>	Replace the intake door actuator.

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## B: MODE DOOR ACTUATOR

### TROUBLE SYMPTOM:

Air flow outlet is not changed.

### WIRING DIAGRAM:

AC-01963

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the mode door actuator connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B77) No. 3 (+) — Chassis ground (-):</b>	Is the voltage approx. 10 V or more?	Go to step 2.	Check the DC power supply circuit.
<b>2 CHECK MODE DOOR ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Measure the resistance between mode door actuator terminals using a tester. <b>Connector &amp; terminal</b> <b>(B77) No. 3 — No. 1:</b> <b>(B77) No. 3 — No. 2:</b> <b>(B77) No. 3 — No. 5:</b> <b>(B77) No. 3 — No. 6:</b>	Is the resistance between 80 — 100 $\Omega$ ?	Go to step 3.	Replace the mode door actuator.
<b>3 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR.</b> 1) Disconnect the auto A/C control module connector. 2) Measure the resistance between auto A/C control module and mode door actuator connector. <b>Connector &amp; terminal</b> <b>(B77) No. 1 — (i88) No. 4:</b> <b>(B77) No. 2 — (i88) No. 3:</b> <b>(B77) No. 5 — (i88) No. 2:</b> <b>(B77) No. 6 — (i88) No. 1:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 4.	Repair the harness between auto A/C control module and mode door actuator.
<b>4 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module and connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## C: AIR MIX DOOR ACTUATOR

### TROUBLE SYMPTOM:

Outlet air temperature does not change.

### WIRING DIAGRAM:

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY OF AIR MIX DOOR ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(B239) No. 3 (+) — Chassis ground (-):</b></i>	Is the voltage approx. 10 V or more?	Go to step 2.	Check the DC power supply circuit.
<b>2 CHECK AIR MIX DOOR ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between air mix actuator terminals using a tester. <i><b>Connector &amp; terminal</b></i> <i><b>(B239) No. 3 — No. 1:</b></i> <i><b>(B239) No. 3 — No. 2:</b></i> <i><b>(B239) No. 3 — No. 5:</b></i> <i><b>(B239) No. 3 — No. 6:</b></i>	Is the resistance between 80 — 100 $\Omega$ ?	Go to step 3.	Replace the air mix door actuator.
<b>3 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR.</b> 1) Disconnect the auto A/C control module connector. 2) Measure the resistance between auto A/C control module and air mix door actuator connector. <i><b>Connector &amp; terminal</b></i> <i><b>(B239) No. 1 — (i88) No. 28:</b></i> <i><b>(B239) No. 2 — (i88) No. 27:</b></i> <i><b>(B239) No. 5 — (i88) No. 26:</b></i> <i><b>(B239) No. 6 — (i88) No. 25:</b></i>	Is the resistance less than 1 $\Omega$ ?	Go to step 4.	Repair the harness between auto A/C control module and air mix door actuator.
<b>4 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module and connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

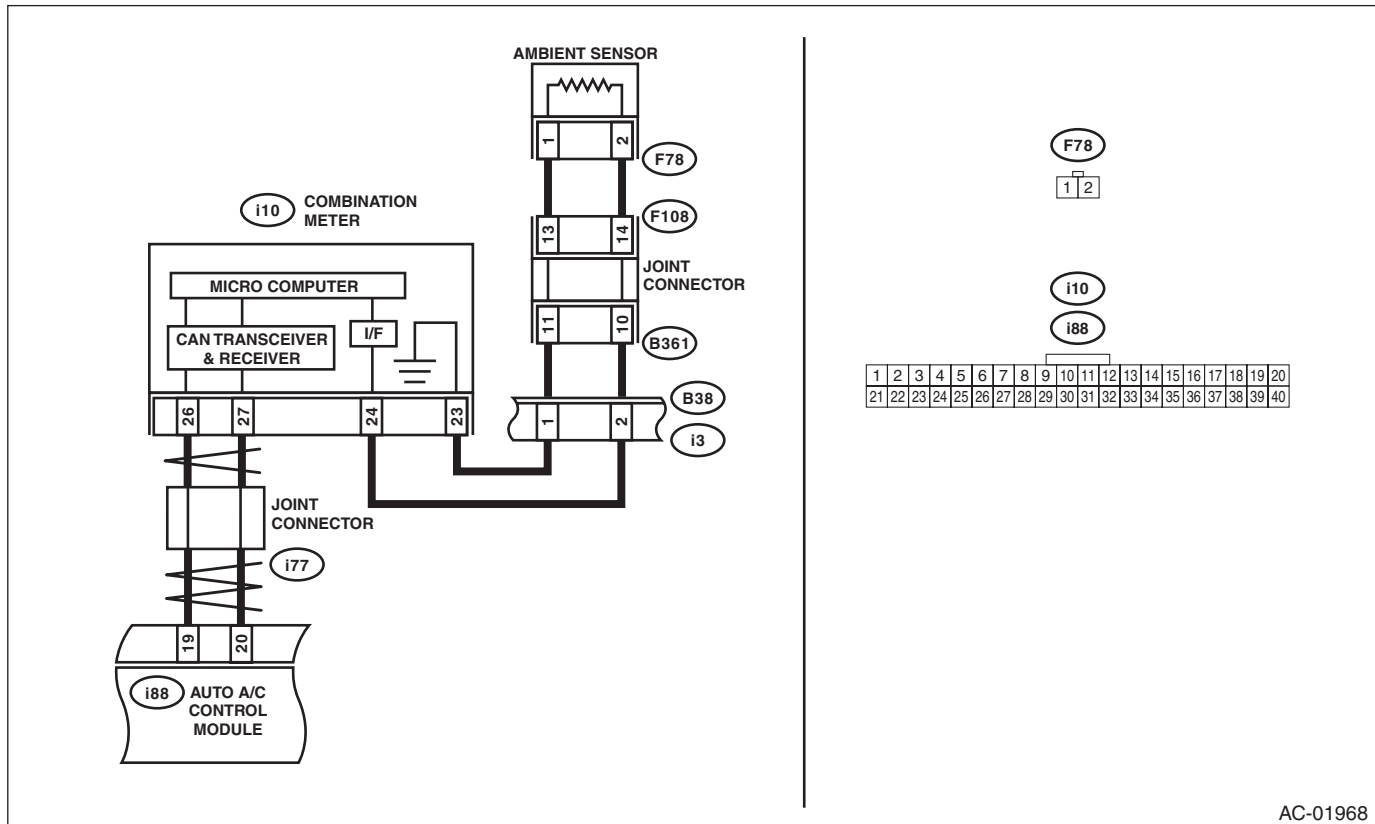

## 8. Diagnostic Procedure for Sensors

### A: AMBIENT SENSOR

#### TROUBLE SYMPTOM:

- Fan speed is not switched when the fan speed control dial is in AUTO position.
- Failure related to the ambient sensor is indicated in self-diagnosis.

#### WIRING DIAGRAM:

AC-01968

Step	Check	Yes	No
<b>1 CHECK AMBIENT SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ambient sensor. 3) Measure the resistance between terminals of ambient sensor. <b>Terminals</b> <b>No. 2 — No. 1:</b>	Is the resistance approximately 3 kΩ at 25°C (77°F)?	Go to step 2.	Replace the ambient sensor. <Ref. to AC-41, REMOVAL, Ambient Sensor (Auto A/C Model).>
<b>2 CHECK INPUT SIGNAL FOR AMBIENT SENSOR.</b> 1) Turn the ignition to ON. 2) Measure the voltage between connector (F78) terminals. <b>Connector &amp; terminal</b> <b>(F78) No. 2 (+) — No. 1 (-):</b>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>3</b></p> <p><b>CHECK COMBINATION METER OUTPUT SIGNAL.</b>                      1) Turn the ignition switch to OFF.                      2) Draw out the combination meter.                      3) Disconnect the connector from ambient sensor.                      4) Turn the ignition switch to ON.                      5) Measure the voltage between the combination meter connector terminals.</p> <p><b>Connector &amp; terminal</b>  <i>(i10) No. 24 (+) — No. 23 (-):</i></p>	Is the voltage approx. 5 V?	Go to step 4.	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>
<p><b>4</b></p> <p><b>CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AMBIENT SENSOR.</b>                      1) Turn the ignition switch to OFF.                      2) Disconnect the connector from the combination meter.                      3) Measure the resistance of harness between combination meter and ambient sensor.</p> <p><b>Connector &amp; terminal</b>  <i>(F78) No. 2 — (i10) No. 24:</i></p>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair the open circuit of the harness between the combination meter and ambient sensor.
<p><b>5</b></p> <p><b>CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AMBIENT SENSOR.</b>                      Measure the resistance of harness between combination meter and ambient sensor.</p> <p><b>Connector &amp; terminal</b>  <i>(F78) No. 1 — (i10) No. 23:</i></p>	Is the resistance less than 1 $\Omega$ ?	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>	Repair the open circuit of the harness between the combination meter and ambient sensor.
<p><b>6</b></p> <p><b>CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AUTO A/C CONTROL MODULE.</b>                      1) Turn the ignition switch to OFF.                      2) Disconnect the connector from the combination meter.                      3) Disconnect the auto A/C control module connector.                      4) Measure the resistance of harness between the combination meter and auto A/C control module.</p> <p><b>Connector &amp; terminal</b>  <i>(i88) No. 19 — (i10) No. 26:</i></p>	Is the resistance less than 1 $\Omega$ ?	Go to step 7.	Repair the open circuit in the harness between the combination meter and auto A/C control module. <Ref. to LAN(diag)-6, LAN SYSTEM, CAUTION, General Description.>
<p><b>7</b></p> <p><b>CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND AUTO A/C CONTROL MODULE.</b>                      Measure the resistance of harness between the combination meter and auto A/C control module.</p> <p><b>Connector &amp; terminal</b>  <i>(i88) No. 20 — (i10) No. 27:</i></p>	Is the resistance less than 1 $\Omega$ ?	Go to step 8.	Repair the open circuit in the harness between the combination meter and auto A/C control module. <Ref. to LAN(diag)-6, LAN SYSTEM, CAUTION, General Description.>
<p><b>8</b></p> <p><b>CHECK POOR CONTACT.</b>                      Check poor contact of auto A/C control module connector.</p>	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## B: IN-VEHICLE SENSOR

### TROUBLE SYMPTOM:

- Blower fan speed, air flow outlet and FRESH/RECIRC do not change after turning the AUTO switch to ON.
- Failure related to the in-vehicle sensor is indicated in self-diagnosis.

### WIRING DIAGRAM:

AC-01700

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK IN-VEHICLE SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Remove the driver's side lower cover. 3) Disconnect the connector from in-vehicle sensor. 4) Measure the resistance between terminals of in-vehicle sensor. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance approximately 2.2 k $\Omega$ at 25°C (77°F)?	Go to step 2.	Replace the in-vehicle sensor. <Ref. to AC-43, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
<b>2 CHECK INPUT SIGNAL FOR IN-VEHICLE SENSOR.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between in-vehicle sensor harness connector terminals. <i>Connector &amp; terminal</i> <i>(i55) No. 2 (+) — No. 1 (-):</i>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.
<b>3 CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL.</b> 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. <i>Connector &amp; terminal</i> <i>(i88) No. 17 (+) — (i88) No. 14 (-):</i>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 6.
<b>4 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of harness between auto A/C control module and in-vehicle sensor. <i>Connector &amp; terminal</i> <i>(i55) No. 2 — (i88) No. 17:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair the harness between auto A/C control module and in-vehicle sensor.
<b>5 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR.</b> Measure the resistance of harness between auto A/C control module and in-vehicle sensor. <i>Connector &amp; terminal</i> <i>(i55) No. 1 — (i88) No. 14:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 6.	Repair the harness between auto A/C control module and in-vehicle sensor.
<b>6 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK EVAPORATOR SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Remove the glove box. 3) Disconnect the connector from evaporator sensor. 4) Measure the resistance between terminals of the evaporator sensor. <i>Terminals</i> <i>No. 1 — No. 2:</i>	Is the resistance approx. 6.2 k $\Omega$ at 0°C (32°F) and approx. 3.3 k $\Omega$ at 15°C (59°F)?	Go to step 2.	Replace the evaporator sensor. <Ref. to AC-37, REMOVAL, Evaporator.>
<b>2 CHECK INPUT SIGNAL FOR EVAPORATOR SENSOR.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (B88) terminals. <i>Connector &amp; terminal</i> <i>(B88) No. 2 (+) — No. 1 (-):</i>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.
<b>3 CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL.</b> 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. <i>Connector &amp; terminal</i> <i>(i88) No. 18 (+) — (i88) No. 14 (-):</i>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 6.
<b>4 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of harness between auto A/C control module and evaporator sensor. <i>Connector &amp; terminal</i> <i>(B88) No. 2 — (i88) No. 18:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair the open circuit of harness between auto A/C control module and evaporator sensor.
<b>5 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.</b> Measure the resistance of harness between auto A/C control module and evaporator sensor. <i>Connector &amp; terminal</i> <i>(B88) No. 1 — (i88) No. 14:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 6.	Repair the open circuit of harness between auto A/C control module and evaporator sensor.
<b>6 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## D: SUNLOAD SENSOR

### TROUBLE SYMPTOM:

- Sensor identifies that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identifies that sunlight is at minimum. Then, A/C system is controlled to HOT side.

### NOTE:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor with the sun shining on it.

### WIRING DIAGRAM:

AC-01702

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY VOLTAGE FOR SUNLOAD SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from sunload sensor. 3) Turn the ignition switch to ON. 4) Measure the power supply voltage for sunload sensor. <b>Connector &amp; terminal</b> <b>(i51) No. 2 (+) — No. 1 (-):</b>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 2.
<b>2 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of the harness between the auto A/C control module and sunload sensor. <b>Connector &amp; terminal</b> <b>(i51) No. 2 — (i88) No. 16:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 3.	Repair the harness between auto A/C control module and sunload sensor.
<b>3 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b> Measure the resistance of the harness between the auto A/C control module and sunload sensor. <b>Connector &amp; terminal</b> <b>(i51) No. 1 — (i88) No. 14:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 4.	Repair the harness between auto A/C control module and sunload sensor.
<b>4 CHECK INPUT VOLTAGE FOR AUTO A/C CONTROL MODULE.</b> 1) Connect the connectors of sunload sensor and auto A/C control module. 2) Turn the ignition switch to ON. 3) Measure the voltage between connector terminals of auto A/C control module. <b>Connector &amp; terminal</b> <b>(i88) No. 16 (+) — (i88) No. 14 (-):</b>	Is the voltage between approx. 1.0 — 4.0 V?	Go to step 5.	Replace the sunload sensor. <Ref. to AC-42, REMOVAL, Sunload Sensor (Auto A/C Model).>
<b>5 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact of connector?	Repair the connector.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>

## Diagnostics with Phenomenon

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

### 9. SATELLITE SAFING SENSOR

#### CAUTION:

Do not reuse mounting bolts and nuts.

(A) Nut

#### Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

### 10. STEERING ROLL CONNECTOR

### 11. AIRBAG HARNESS

## B: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds or more before starting airbag system servicing.

- If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
- If any of the airbag sensors, airbag module, airbag control module, pretensioner, harness or satellite safing sensor cover is deformed or damaged, replace with new parts.

- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

- When checking, use a test harness (1). Damage to connector terminal cause malfunction. Do not directly apply the tester probe to connector terminal of airbag.

- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals.

- Do not check continuity of the airbag modules for driver's side, passenger's side and curtain, or the pretensioner.

# General Description

## AIRBAG SYSTEM

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wiring harness of airbag system.
- When painting or performing sheet metal work on the side of the vehicle or rear floor pan, around rear crossmember, including the side sill, center pillar and front and rear doors, remove the side airbag sensors, curtain airbag sensor, satellite safing sensor and wiring harness of the airbag system.

- Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
- Never reuse a deployed airbag module and pretensioner.

- Do not discard the uninflated airbag or pretensioner.
- When airbag control module, front sub sensor, side airbag sensor, curtain airbag sensor and satellite safing sensor are removed, do not reuse the bolts and nuts of them. Always use new bolts and nuts for them.
- Do not drop each airbag module, airbag control module and each sensor, or store these parts under high temperature of 85°C (185°F) or more, or let water, oil or grease get on them; the internal parts may be damaged or the reliability may be greatly lowered.

- After removal of each parts for airbag system, keep them with the pad facing upward on a dry, clean and flat surface without heat, light sources, moisture and dust.

- Do not disassemble driver's airbag module, passenger's airbag module, side or curtain airbag modules, or pretensioner.

- When performing attachment of the steering wheel and steering roll connector, make sure to perform adjustment of the steering roll connector.
- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) 200 mm (8 in) or more

- When storing a removed airbag module, do not place with its pad side facing down. Do not place any objects on the airbag module. Do not pile up the airbag module. If the airbag inflates for some reason when an airbag module pad is touching other objects, it may cause serious accident.

- Driver's airbag module

- Passenger's airbag module and side airbag module

## C: PREPARATION TOOL

### 1. GENERAL TOOL

TOOL NAME	REMARKS
TORX® T30	Used for removal/installation of driver's airbag module

# Airbag Connector

AIRBAG SYSTEM

## 2. Airbag Connector

### A: PROCEDURE

#### 1. POWER SUPPLY

1) How to disconnect:

**CAUTION:**

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

Press the lock (A), and then disconnect the connector.

2) How to connect:

**CAUTION:**

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

#### 2. AIRBAG CONTROL MODULE

1) How to disconnect:

**CAUTION:**

**When disconnecting connector, be sure to hold the connector, not the harness.**

Press the lock lever plate (A) and pull out the lock lever.

2) How to connect:

**CAUTION:**

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Insert the connector and push the lock lever in securely.

#### 3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR) AND PASSENGER'S AIRBAG

**CAUTION:**

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

1) How to disconnect:

(1) Push the slide lock (A) in the direction of arrow.

(2) With the slide lock pushed, disconnect the connector.

2) How to connect:

**CAUTION:**

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

## 4. DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER

1) How to disconnect:

(1) Using a flat tip screwdriver, pry the push lock upward to unlock.

(2) Pull the connector to disconnect from the driver's airbag module assembly or the retractor assembly.

2) How to connect:

**CAUTION:**

- Be sure to insert the connector in until it is locked.

- Press in the push lock securely. Then pull it gently to make sure that it is locked.

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

## 5. SIDE AIRBAG SENSOR, CURTAIN AIRBAG SENSOR AND SATELLITE SAFING SENSOR

1) How to disconnect:

**CAUTION:**

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

Holding outer part (A), pull it in the direction of arrow.

# Airbag Connector

## AIRBAG SYSTEM

2) How to connect:

### CAUTION:

- Outer side (A) moves back, and so do not touch the outer part.
- Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

## 6. SIDE AIRBAG MODULE

1) How to disconnect:

### CAUTION:

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

- (1) Move the slide lock (A) in the direction of arrow and hold it.
- (2) While holding the slide lock (A), pull the connector (B) in the direction of arrow.

2) How to connect:

### CAUTION:

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

## 7. BUCKLE SWITCH RH

1) How to disconnect:

### CAUTION:

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

- (1) Move the slide lock (A) in the direction of arrow and hold it.
- (2) While holding the slide lock (A), pull the connector (B) in the direction of arrow.

2) How to connect:

**CAUTION:**

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

## 8. FRONT SUB SENSOR

1) How to disconnect:

**CAUTION:**

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

- (1) Push the lock arm.
- (2) Holding outer part, pull it one step in the direction of arrow.

- (3) Push the lock arm again.
- (4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

2) How to connect:

**CAUTION:**

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

## 9. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS) AND BELT TENSION SENSOR

Refer to the occupant detection system section.  
<Ref. to OD(diag)-12, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS) AND BELT TENSION SENSOR, PROCEDURE, Airbag Connector.>

# Inspection Locations After a Collision

## AIRBAG SYSTEM

### 3. Inspection Locations After a Collision

#### A: REPLACEMENT

Replace the following parts when the airbag is deployed.

##### 1. FRONT COLLISION

- 1) Driver's airbag module
- 2) Passenger's airbag module
- 3) Driver's seat belt (Pretensioner)
- 4) Passenger's seat belt (Pretensioner)
- 5) Airbag control module
- 6) Front sub sensor
- 7) Roll connector
- 8) Passenger's side seat cushion pad and frame assembly
- 9) Instrument panel (for integrating with passenger's airbag module)

##### 2. SIDE COLLISION

- 1) Airbag control module
- 2) Satellite safing sensor
- 3) Satellite safing sensor cover
- 4) Side airbag module (operating side seat backrest)
- 5) Side airbag sensor (operating side)
- 6) Curtain airbag module (operating side)
- 7) Curtain airbag sensor (operating side)

##### 3. INSPECTION OF OTHER PARTS

Check for the following parts, and replace the damaged parts with new parts.

- 1) Steering wheel and steering shaft  
Check the steering shaft for mounting conditions and deflection of front and rear, upward and downward directions, and deflection of front and rear direction with tilt lever released. (After a collision, absorbing part of steering shaft may have been operated.)
- 2) Check the direct type connector of driver's airbag module, curtain airbag module, pretensioner, etc. for damage, and also check each harness for pinch and connector damage. Replace the main harness as a unit if damage is found.
- 3) Check the seat cushion, backrest, seat rail and headrest for installing condition and play.
- 4) For the passenger's seat, replace the seat cushion pad frame assembly with a new part if the seat cushion frame assembly is deformed or cracked.
- 5) If there are tears or loosening in the passenger side seat cushion cover, it may interfere with the proper operation of the occupant detection system. Replace with a new cushion cover.

6) Be sure to perform the system calibration for the occupant detection system after removing or replacing the passenger seat cushion cover. If system adjustment is not performed, the occupant detection system may not function properly. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

7) Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.

#### B: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

##### 1. DRIVER'S AIRBAG MODULE

1) Check for the following, and replace the damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- The module surface is fouled with grease, oil, water or cleaning solvent.

2) When installing a new driver's airbag module, check for the following, and replace the damaged parts with new parts.

- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.
- When steering wheel deformation in axial and vertical directions exceed limits.

##### Standard:

##### **Axial deflection A**

**Less than 6 mm (0.24 in)**

##### **Vertical deflection L**

**Less than 17 mm (0.68 in)**

AB-00028

## 2. PASSENGER'S AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket is cracked or deformed.

## 3. SIDE AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Front seat, airbag module and mounting bracket are damaged or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.

## 4. CURTAIN AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

## 5. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.
- Side airbag is deployed.
- Curtain airbag is deployed.

## 6. FRONT SUB SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.

## 7. SATELLITE SAFING SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Satellite safing sensor, side airbag sensor and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.
- Satellite safing sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag or curtain airbag is deployed. (operating side)

## 8. ROLL CONNECTOR

Check for the following, and replace the damaged parts such as cracks, deformation, etc. with new parts.

- Combination switch
- Steering roll connector

## 9. STEERING SHAFT

Measure the overall length of steering column. If the length is not within the specification, the steering column may be damaged. Replace it with a new part.

**Standard: Overall length L**

**Tilt column**

$$833.6^{+1.3}_{-0.3} \text{ mm } (32.82^{+0.051}_{-0.012} \text{ in})$$

**Tilt and telescopic column (measure while minimized)**

$$818.6^{+1.5}_{-1.5} \text{ mm } (32.23^{+0.059}_{-0.059} \text{ in})$$

# Inspection Locations After a Collision

## AIRBAG SYSTEM

---

### 10.PASSENGER'S SEAT

1) Check for the following, and replace the damaged parts with new parts.

- Seat belt buckle body or bracket is scratched, cracked or deformed.
- Backrest frame for crack or deformation
- Headrest for deformation or play
- If the seat cushion cover and seat backrest cover is scratched or coming loose, replace with a new cover and readjust the system. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

#### **CAUTION:**

**If any of the following applies, replace the seat cushion pad and frame assembly. Do not disassemble.**

- **Cracks or deformation found in the seat cushion frame or seat cushion pad.**
- **Scratches, cracks, or deformation found on the passenger detection system pressure sensor hoses or passenger detection control module, or attachment brackets of the control module.**
- **Harness and/or connector is cracked, deformed or open. Harness wire is exposed.**

2) After checking the installing condition of passenger's seat, perform the system calibration of occupant detection system. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

### 11.BELT TENSION SENSOR

Check for the following, and replace the damaged parts with new parts.

- Belt tension sensor is scratched, cracked, or deformed.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.

## 4. Driver's Airbag Module

### A: REMOVAL

#### CAUTION:

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Position the front wheels straight ahead. (After moving a vehicle 5 m (16 ft) or more with front wheels positioned straight ahead, make sure that the vehicle moves straight ahead.)
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using TORX® bit T30 (1), remove the two TORX® bolts on the side of steering wheel.

- 5) Disconnect the horn harness.
- 6) Disconnect the airbag connector on the back of airbag module, and then remove the airbag module. <Ref. to AB-8, PROCEDURE, Airbag Connector.>

- 7) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-5, CAUTION, General Description.>

### B: INSTALLATION

#### CAUTION:

- Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
  - Do not allow harness and connectors to interfere or get tangled up with other parts.
- Install in the reverse order of removal.

#### Tightening torque:

10 N·m (1.02 kgf-m, 7.4 ft-lb)

### C: INSPECTION

#### CAUTION:

- Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
  - Do not allow harness and connectors to interfere or get tangled up with other parts.
- Check for the following, and replace the damaged parts with new parts. <Ref. to AB-12, DRIVER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>
- Airbag module
  - Harness
  - Connector
  - Mounting bracket

### 5. Passenger's Airbag Module

#### A: REMOVAL

**CAUTION:**

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the instrument panel. <Ref. to EI-52, REMOVAL, Instrument Panel Assembly.>
- 4) Remove the claw, and remove the passenger's airbag module.

- 5) Refer to “CAUTION” for handling of a removed airbag module. <Ref. to AB-5, CAUTION, General Description.>

#### B: INSTALLATION

**CAUTION:**

Do not allow harness and connectors to interfere or get tangled up with other parts.

Install in the reverse order of removal.

**Tightening torque:**

*7.5 N·m (0.76 kgf-m, 5.5 ft-lb)*

#### C: INSPECTION

**CAUTION:**

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts. <Ref. to AB-13, PASSENGER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

- Airbag module
- Harness
- Connector
- Mounting bracket

## 6. Side Airbag Module

### A: REMOVAL

**CAUTION:**

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

**NOTE:**

Remove the passenger’s side by referring to driver’s side.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the front seat from vehicle. <Ref. to SE-6, REMOVAL, Front Seat.>
- 4) Remove the side airbag harness from the harness holder on the backside of seat cushion assembly.
- 5) Remove the side airbag harness from backrest frame assembly.
- 6) Remove the plastic fastener at the bottom-back side of backrest.

- 7) Open the fastener at the rear side of backrest.

- 8) Remove the hog rings of backrest cover.

**CAUTION:**

When removing the hog rings, be careful not to tear the vinyl sheet within the seat. If the sheet has torn, replace it with a new sheet.

- 9) Remove the pad (A), and remove the mounting nut from the side airbag module.

- 10) Remove the side airbag harness from backrest frame assembly.

### B: INSTALLATION

**CAUTION:**

- Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
- Be sure to perform the system calibration for occupant detection system after passenger’s seat installation. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

- 1) Make sure that there is no foreign matter on side airbag module.

# Side Airbag Module

## AIRBAG SYSTEM

2) Install the side airbag module to backrest frame assembly.

### CAUTION:

**When installing the side airbag module assembly, be sure to put the side airbag module between backrest cover and airbag guide cloth.**

- (A) Airbag guide cloth
- (B) Backrest cover
- (C) Side airbag module ASSY

- (1) Backrest frame ASSY
- (2) Airbag guide cloth
- (3) Backrest cover
- (4) Side airbag module ASSY
- (5) Hexagon cap nut

**If the backrest cover is not installed securely, the side airbag module may not be deployed properly, therefore keep strictly to the following procedure.**

- Be careful not to stain or damage the backrest cover during assembly.
- Always use new hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on backrest cover.

### Tightening torque:

**6.0 N·m (0.61 kgf-m, 4.4 ft-lb)**

3) Install the side airbag harness to backrest frame assembly.

4) Install the backrest cover.

5) Install the side airbag harness to the clip of the slide rail IN.

6) Recline the seat or slide it backward and forward, and check there is no contact between the seat backrest assembly, cushion cover assembly and side airbag harness.

## C: INSPECTION

### CAUTION:

**Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>**

Check for the following, and replace damaged parts with new parts. <Ref. to AB-13, SIDE AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

1) With side collision (when side airbag is deployed)

- Side airbag module assembly
  - Satellite safing sensor
  - Side airbag sensor
  - Curtain airbag sensor
  - Backrest pad assembly
  - Backrest frame assembly
  - Backrest cover assembly
- 2) When damage is found by visual check
- Headrest assembly
  - Headrest lock bushing
  - Outer slide rail
  - Inner slide rail
  - Seat hinge cover
  - Seat lifter lever
  - Reclining lever
  - Side airbag harness and connector on body side
  - Satellite safing sensor cover

3) With side collision (when side airbag is not deployed)

Check the seat, airbag module, sensor visually, and then replace them with new parts if damaged or cracked.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

4) Without side collision (dirt and damage of cover) Replace the corresponding part with a new part.

## 7. Curtain Airbag Module

### A: REMOVAL

**CAUTION:**

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>
- 4) Disconnect the curtain airbag module connector.

- 5 DOOR MODEL

- 4 DOOR MODEL

- 5) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 6) Remove the airbag guide from the front pillar.

- 7) Remove the bolt, and remove the curtain airbag module.

**CAUTION:**

- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before deploying it. Never reuse the deployed curtain airbag module.
- 5 DOOR MODEL

- 4 DOOR MODEL

### B: INSTALLATION

**CAUTION:**

- Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>
- When installing the curtain airbag module, install a specified part at specified place.
- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before deploying it. Never reuse the deployed curtain airbag module.
- Make sure that there are no foreign matter on airbag module.

Install in the reverse order of removal.

**Tightening torque:**

**7.5 N·m (0.76 kgf·m, 5.5 ft·lb)**

### C: INSPECTION

#### CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-5, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts. <Ref. to AB-13, CURTAIN AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

1) With side collision (when curtain airbag is deployed)

- Curtain airbag module assembly
- Satellite safing sensor
- Curtain airbag sensor
- Roof trim
- Front pillar upper trim
- Center pillar upper trim
- Rear quarter pillar trim
- Airbag guide

2) When damage is found by visual check

- Assist grip
- Assist grip bracket
- Curtain airbag harness and connector on body side.
- Satellite safing sensor bracket
- Satellite safing sensor cover

3) With side collision (when curtain airbag is not deployed)

Check the roof trim, pillar trim, airbag module and sensor visually, and then replace them with new parts if damaged or cracked.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

4) Without side collision (dirt and damage of cover)

Replace the corresponding part with a new part.

## 8. Airbag Control Module

### A: REMOVAL

#### CAUTION:

- Do not disassemble the airbag control module.
- If the airbag control module is deformed or if the damage from water is suspected, replace the airbag control module with a new part.
- Do not drop the airbag control module.
- After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>
- 4) Remove the center panel. <Ref. to EI-49, CENTER PANEL, REMOVAL, Center Console.>
- 5) Remove the console front panel. <Ref. to EI-49, CONSOLE FRONT PANEL, REMOVAL, Center Console.>
- 6) Remove the audio.
- 7) Remove the heater duct.

- 8) Disconnect the connector from airbag control module.
- 9) Remove the three bolts and remove airbag control module.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut. Always use new bolts and nuts for them.
  - Before installing the audio, make sure that the heater duct is securely connected.
- Install in the reverse order of removal.

#### Tightening torque:

25 N·m (2.55 kgf-m, 18.4 ft-lb)

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Control module, connector, and mounting bracket are damaged.
- Airbag is deployed.
- Side airbag is deployed.
- Curtain airbag is deployed.

## 9. Front Sub Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 4) Remove the headlight assembly. <Ref. to LI-14, REMOVAL, Headlight Assembly.>
- 5) Remove the bolt, and then detach the front sub sensor.

- 6) Disconnect the connector from front sub sensor.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut.  
Always use new bolts and nuts for them.
- When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.
- After the installation of headlight assembly, be sure to perform headlight beam adjustment.  
Install in the reverse order of removal.

#### *Tightening torque:*

**13 N·m (1.33 kgf·m, 9.6 ft·lb)**

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Front sub sensor or connector is damaged.
- Airbag is deployed.

## 10.Side Airbag Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the front outer seat belt. <Ref. to SB-17, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
- 4) Remove the nuts and then remove the side airbag sensor.

#### CAUTION:

**Do not separate the side airbag sensor and bracket. Doing so will cause the airbag system malfunction. If the sensor is removed from the bracket, be sure to replace with a new part.**

- 5) Disconnect the airbag connector.

### B: INSTALLATION

#### CAUTION:

**Do not reuse the bolt and nut.**

**Always use new bolts and nuts for them.**

Install in the reverse order of removal.

#### *Tightening torque:*

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- The bracket or connector of side airbag sensor is damaged.
- Side airbag is deployed.

## 11. Curtain Airbag Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 4) Remove the nuts and then remove the curtain airbag sensor.

- 5) Disconnect the airbag connector.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut.  
Always use new bolts and nuts for them.
- When installing the sensor, securely insert the arrest pin on the back side of sensor into the body side hole.

Install in the reverse order of removal.

#### *Tightening torque:*

*7.5 N·m (0.76 kgf-m, 5.5 ft-lb)*

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Curtain airbag sensor or connector is damaged.
- Curtain airbag is deployed.

## 12.Satellite Safing Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the rear seat cushion. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 4) Remove the cover.

- 5) Remove the nut, and remove the satellite safing sensor.

#### CAUTION:

**Do not separate the satellite safing sensor and bracket. Doing so will cause the airbag system malfunction. If the sensor is removed from the bracket, be sure to replace with a new part.**

- 6) Disconnect the airbag connector.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut. Always use new bolts and nuts for them.
- When installing the satellite safing sensor cover, push the cover securely until it contacts the floor panel.
- If the satellite safing sensor cover is too loose at its mounting portion to remove easily, replace with a new satellite safing sensor cover.
- After installing the satellite safing sensor cover, make sure that the sensor harness does not get caught.

Install in the reverse order of removal.

#### Tightening torque:

**7.5 N·m (0.76 kgf·m, 5.5 ft·lb)**

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Mounting bracket or connector of satellite safing sensor is damaged.
- The satellite safing sensor cover is damaged
- Side airbag or curtain airbag is deployed.

## 13. Roll Connector

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the driver's airbag module. <Ref. to AB-15, Driver's Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
- 5) Remove the steering column cover.
- 6) Remove the screws, and then remove the roll connector.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Before installing steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-26, ADJUSTMENT, Roll Connector.>

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Combination switch and roll connector are cracked or deformed.

### D: ADJUSTMENT

- 1) Check that front wheels are positioned in straight ahead direction.
- 2) Turn the roll connector pin (A) clockwise until it stops.
- 3) Turn the roll connector pins (A) approx. 3.25 turns in the counterclockwise direction until “▲” marks are aligned.

# Basic Diagnostic Procedure

AIRBAG SYSTEM (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK WARNING LIGHT.</b> Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	<b>READ DTC.</b> 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to AB(diag)-30, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AB(diag)-26, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step 3.	Go to "Airbag Warning Light Failure" <Ref. to AB(diag)-34, Airbag Warning Light Failure.>.
3	<b>PERFORM DIAGNOSIS.</b> 1) Determine the possible cause "List of Diagnostic Trouble Code (DTC)" <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to AB(diag)-32, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-31, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

## Check List for Interview

AIRBAG SYSTEM (DIAGNOSTICS)

### 2. Check List for Interview

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

### 3. General Description

#### A: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds or more before starting airbag system servicing.

- If sensors, airbag module, airbag control module, pretensioner or harness is deformed or damaged, replace with new parts.

- Do not use the airbag system and pretensioners on other vehicles. When replacing parts, be sure to replace them with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

- When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

- Do not drop the airbag system parts, or keep them at high temperature of 85°C (185°F) or more, or let water, oil or grease get on them; the internal parts may be damaged and reliability greatly lowered.

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals.

- Do not disassemble driver's airbag module, passenger's airbag module, side or curtain airbag modules, or pretensioner.

- The airbag module cannot be used again if deployed once.
- After removal, keep the airbag module with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

- Do not check continuity of the airbag modules for driver's side, passenger's side and curtain, or the pretensioner.

- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) 200 mm (8 in) or more

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wiring harness of airbag system.

## General Description

### AIRBAG SYSTEM (DIAGNOSTICS)

---

- When painting or repairing sheet metal work on the side of the vehicle, including the side sill, center pillar, front and rear doors, rear crossmember and rear floorpan, remove the side airbag sensors, curtain airbag sensor, satellite safing sensor and wiring harness of the airbag system.

- Do not discard undeployed airbag module. They could easily cause a serious accident if accidentally deployed.

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

- When storing a removed airbag module, do not place it with the pad side facing downward. Do not place any objects on the airbag module. Do not pile up the airbag module. If the airbag inflates for some reason when an airbag module pad is touching other objects, it may cause serious accident.

AB-01543

(1) Driver's airbag module

(2) Passenger's airbag module

### B: INSPECTION

Measure the battery voltage and check electrolyte.

**Standard voltage: 12 V**

**Specific gravity: 1.260 or more**

# General Description

## B: WIRING DIAGRAM

Refer to the WI section wiring diagram. <Ref. to WI-93, WIRING DIAGRAM, Airbag System.>

### 7. Subaru Select Monitor

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

When malfunction of airbag system occurs, the DTC stored in airbag control module will be read out.

1) Prepare the Subaru Select Monitor kit. <Ref. to AB(diag)-8, SPECIAL TOOL, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

#### CAUTION:

**Do not connect the scan tools other than the Subaru Select Monitor.**

4) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.

5) On «Main Menu» display, select {Each System Check}.

6) On «System Selection Menu» display, select {Airbag System}.

7) After {Airbag System} is displayed, select [OK].

8) Select the {Diagnostic Code(s) Display} in «Airbag System».

#### NOTE:

- For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

- For details concerning DTCs, refer to List of Diagnostic Trouble Code (DTC). <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>

## 2. DISPLAY OF STATUS INFORMATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Airbag System}.
- 3) On «Airbag System» display, select {Status Data}.

The following table is for support data.

Item	Display
Seat position sensor LH	— <sup>*5</sup>
Seat position sensor RH	— <sup>*5</sup>
Seat belt buckle switch LH	— <sup>*9</sup>
Seat belt buckle switch RH	Belted <sup>*6</sup> / Unbelted <sup>*7</sup> / Other <sup>*8</sup> / Initial Setting <sup>*4</sup> / — <sup>*9</sup>
Passenger's airbag control status	ON <sup>*10</sup> / OFF <sup>*11</sup> / Initial Setting <sup>*4</sup>

\*1: The seat position is forward.

\*2: The seat position is rearward.

\*3: Displayed when data other than before and behind the seat, such as the breakdown etc, is input.

\*4: Displayed when it is initial.

\*5: Seat position sensor not supported

\*6: Seat belt fastened

\*7: Seat belt not fastened

\*8: Displayed when data other than belt fastened or not fastened, such as breakdowns is input.

\*9: Seat belt buckle switch not supported

\*10: Passenger's airbag operating state

\*11: Passenger's airbag non-operating state

### NOTE:

For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

## 3. CLEAR MEMORY MODE

Clear the DTC stored in the airbag control module after repairing the airbag system. (After the breakdown is recovered, the breakdown code for completed recoveries are read out when the next breakdown occurs if the memory clear work is not performed.)

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Airbag System}.
- 3) Select the {Clearing Memory} in «Airbag System».
- 4) When the “Clear Memory?” is shown on the screen, select [OK].
- 5) When “Done” is displayed, end the Subaru Select Monitor.

### NOTE:

For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

### B: INSPECTION

#### 1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

##### DETECTING CONDITION:

Faulty harness connectors

##### TROUBLE SYMPTOM:

Communication is impossible between the airbag control module and the Subaru Select Monitor.

##### WIRING DIAGRAM:

AB-02016

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK IGNITION SWITCH.</b>	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select the airbag mode using the Subaru Select Monitor.
2	<b>CHECK BATTERY.</b> 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	<b>CHECK BATTERY TERMINAL.</b>	Is there poor contact at battery terminal?	Tighten the battery terminal or replace it.	Go to step 4.
4	<b>CHECK SUBARU SELECT MONITOR COMMUNICATION.</b> 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step 10.	Go to step 5.
5	<b>CHECK FUSE NO. 25 (IN FUSE &amp; RELAY BOX).</b> Remove the fuse No. 25 and perform visual inspection.	Is the fuse No. 25 (in fuse & relay box) blown out?	Replace the fuse No. 25. If fuse No. 25 is blown out again, check the power supply circuit.	Go to step 6.
6	<b>CHECK AIRBAG CONTROL MODULE CONNECTOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Confirm that the connectors of the airbag control modules (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step 7.	Connect the connector of the airbag control module.
7	<b>CHECK SUBARU SELECT MONITOR COMMUNICATION.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the airbag control module connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 8.
8	<b>CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the airbag control module, ABSCM&H/U, ECM and TCM. 3) Measure the resistance between data link connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 7 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 9.	Repair the harness and connector between each control module and data link connector. (Replace the entire harness if repair is necessary for airbag harness.)

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>9 CHECK OUTPUT SIGNAL TO THE AIRBAG CONTROL MODULE.</b> 1) Turn the ignition switch to ON in the condition of step 8. 2) Measure the voltage between data link connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 7 (+) — Chassis ground (-):</b>	Is the voltage less than 1 V?	Go to step 10.	Repair the harness and connector between each control module and data link connector. (Replace the entire harness if repair is necessary for airbag harness.)
<b>10 CHECK THE HARNESS BETWEEN THE AIRBAG CONTROL MODULE AND DATA LINK CONNECTOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 4) Measure the resistance between connector (4AG) in the test harness AG and the data link connector. <b>Connector &amp; terminal</b> <b>(4AG) No. 1 — (B40) No. 7:</b>	Is the resistance less than 10 Ω?	Go to step 11.	Repair the harness between the airbag control module and the data link connector. Or replace the airbag main harness along with the bulkhead harness.
<b>11 CHECK POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (2AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(2AG) No. 1 — Chassis ground:</b>	Is the voltage 10 V or more?	Go to step 12.	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.
<b>12 CHECK BETWEEN THE AIRBAG CONTROL MODULE AND CHASSIS GROUND.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(2AG) No. 4 — Chassis ground:</b> <b>(2AG) No. 3 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 13.	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.
<b>13 CHECK POOR CONTACT OF CONNECTOR.</b>	Is there poor contact of the control module power supply, ground circuit and data link connector?	Repair the connector. (For airbag system connectors, do not repair but replace the entire harness.)	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

## 2. WITHOUT DTC

### DETECTING CONDITION:

- Defective combination meter
- Open circuit in harness

### TROUBLE SYMPTOM:

- Airbag warning light remains on.
- “NO TROUBLE CODE” will be displayed on the Subaru Select Monitor.

### NOTE:

- For detailed operation procedures, refer to “Airbag Warning Light Failure”. <Ref. to AB(diag)-34, Airbag Warning Light Failure.>
- When the airbag warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is operating properly.

## Read Diagnostic Trouble Code (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

---

### **8. Read Diagnostic Trouble Code (DTC)**

#### **A: OPERATION**

For details about reading of DTCs, refer to “Subaru Select Monitor”. <Ref. to AB(diag)-24, Subaru Select Monitor.>

## 9. Inspection Mode

### A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

### 10. Clear Memory Mode

#### A: OPERATION

- Clear the memory in the following steps after the malfunction is repaired.
- For details concerning DTC clear operation, refer to “Subaru Select Monitor”. <Ref. to AB(diag)-24, Subaru Select Monitor.>

## 11. Airbag Warning Light Illumination Pattern

### A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

- (1) Airbag warning light
- (2) Approx. 6 sec.
- (3) Ignition switch ON

# Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>2 CHECK POOR CONTACT.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Confirm that the airbag control module and the connectors (AB6, AB17, AB18) are securely connected.	Is there faulty connector contact (AB6, AB17, AB18)?	If the faulty connector contact remains, replace the airbag main harness along with body harness or replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 3.
<b>3 CHECK AIRBAG MAIN HARNESS.</b> 1) Remove the instrument panel lower cover and disconnect the connectors (AB7) and (AB2). 2) Remove the console front panel and disconnect the connectors (AB10) and (AB9). 3) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the test harness AG connector (1AG). 4) Connect the battery ground terminal and turn the ignition switch to ON. 5) Connect the connectors (7AG) and (8AG) in the test harness AG. NOTE: After the fault has been cleared, disconnect the connectors (7AG) and (8AG).	Does the airbag warning light go off?	Go to step 4.	Go to step 5.
<b>4 CHECK GROUND CIRCUIT.</b> Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(2AG) No. 4 — Chassis ground:</i> <i>(2AG) No. 3 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Repair the chassis ground circuit.
<b>5 CHECK AIRBAG MAIN HARNESS AND BULKHEAD HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 20 seconds or more. 2) Disconnect the connectors (7AG) and (8AG). 3) Remove the combination meter. 4) Measure the resistance between the combination meter connector and test harness AG connector (2AG). <i>Connector &amp; terminal</i> <i>(2AG) No. 5 — (i10) No. 36:</i>	Is the resistance less than 10 Ω?	Check the combination meter.	Go to step 6.
<b>6 CHECK POOR CONTACT OF CONNECTORS (AB1) AND (B31).</b> Confirm that there is a firm contact between connectors (AB1) and (B31).	Is there poor contact of connectors (AB1) and (B31)?	Repair the bulkhead harness or replace the airbag main harness along with body harness.	Go to step 7.
<b>7 CHECK AIRBAG MAIN HARNESS.</b> Check the airbag main harness for defect.	Is there any defect in the airbag main harness?	Replace the airbag main harness along with bulkhead harness.	Repair the bulkhead harness.

# Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

## B: AIRBAG WARNING LIGHT REMAINS OFF

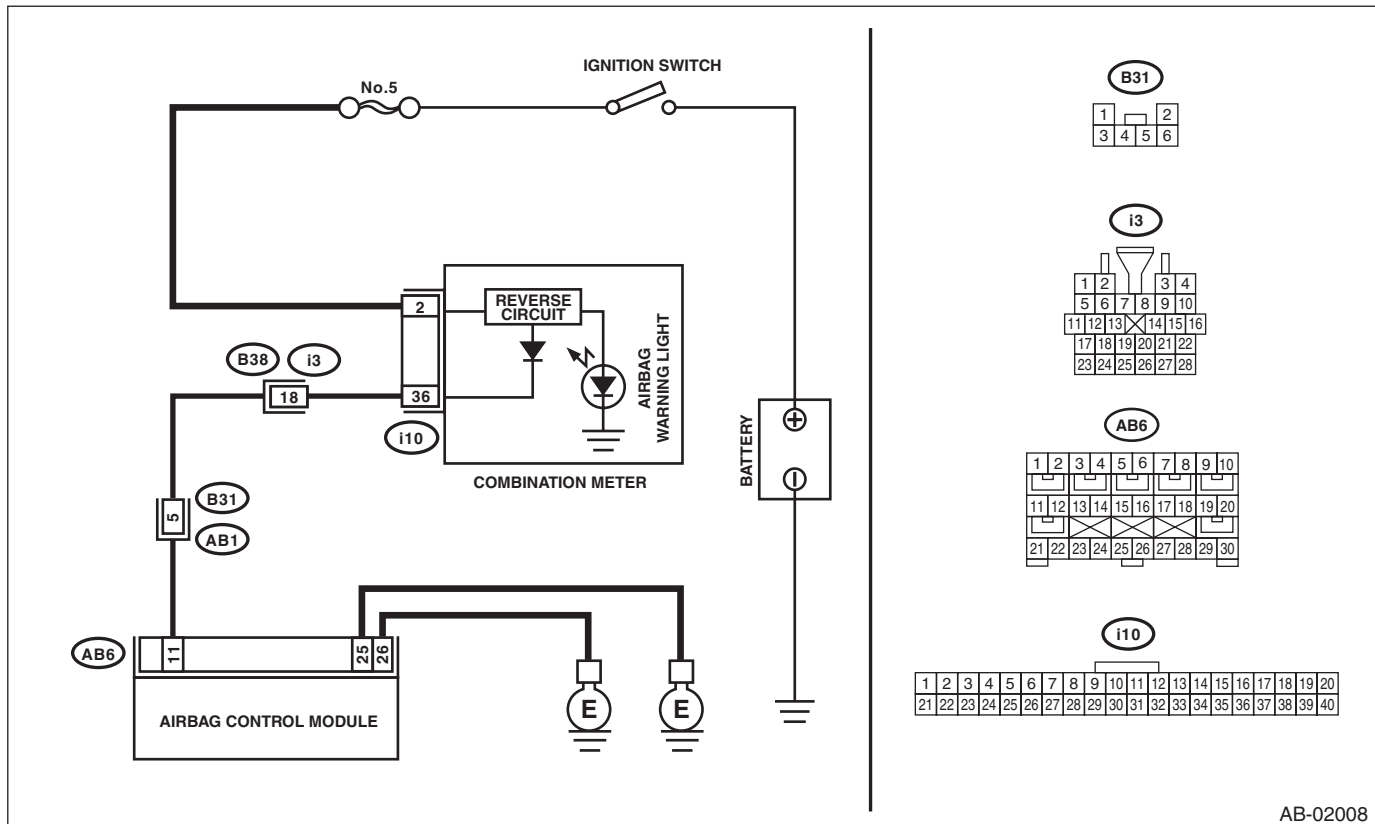

### DETECTING CONDITION:

- Fuse No. 5 (in fuse box) is blown out.
- Body harness circuit is open.
- Airbag warning light is faulty.
- Airbag main harness is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

AB-02008

# Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK COMBINATION METER.</b> Turn the ignition switch to ON, and confirm that warning lights of combination meter illuminate.	Do warning lights except for airbag illuminate?	Go to step 2.	Check the combination meter.
<b>2</b> <b>CHECK DTC.</b> Read the DTC. <Ref. to AB(diag)-24, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 3.
<b>3</b> <b>CHECK FUSE NO. 5 (IN MAIN FUSE BOX).</b> Remove the fuse No. 5 and perform visual inspection.	Is the fuse No. 5 (in main fuse box) blown out?	Replace the fuse No. 5. If the fuse No. 5 is blown out again, go to step 4.	Go to step 4.
<b>4</b> <b>CHECK AIRBAG WARNING LIGHT CIRCUIT (IN COMBINATION METER).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connectors (AB1) and (B31). 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does airbag warning light illuminate?	Go to step 5.	Check the combination meter.
<b>5</b> <b>CHECK AIRBAG MAIN HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Connect the connector (AB1) and (B31). 3) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does airbag warning light illuminate?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Replace the airbag main harness along with bulkhead harness.

## List of Diagnostic Trouble Code (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### 14. Diagnostic Chart with Trouble Code

#### A: DTC 11 DRIVER'S AIRBAG FAILURE

##### DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver's side) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

##### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

##### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

##### WIRING DIAGRAM:

AB-02009

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1 CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the driver's airbag module.</p>	Is there poor contact?	Replace the airbag harness.	Go to step 2.
<p><b>2 CHECK DRIVER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.</p>	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the driver's airbag module. <Ref. to AB-15, Driver's Airbag Module.>	Go to step 3.
<p><b>3 CHECK ROLL CONNECTOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.</p>	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the roll connector. <Ref. to AB-26, Roll Connector.>	Go to step 4.
<p><b>4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the console front panel and disconnect the connectors (AB10) and (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the test harness AG connector (1AG). 5) Measure the resistance between connector (3AG) in the test harness AG and connectors (2P) and (3P) in the test harness P. <b>Connector &amp; terminal</b> <b>(3AG) No. 1 — (2P) No. 1:</b> <b>(3AG) No. 3 — (2P) No. 2:</b></p>	Is the resistance less than 10 Ω?	Go to step 5.	Replace the airbag main harness along with body harness.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>5 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).</b> Measure the resistance between connector (3AG) terminals in the test harness AG. <b>Connector &amp; terminal</b> <i>(3AG) No. 1 — (3AG) No. 3:</i> <i>(3AG) No. 3 — Chassis ground:</i> <i>(3AG) No. 1 — Chassis ground:</i> <i>(3AG) No. 2 — (3AG) No. 4:</i> <i>(3AG) No. 2 — Chassis ground:</i> <i>(3AG) No. 4 — Chassis ground:</i> <i>(3AG) No. 1 — (3AG) No. 2:</i> <i>(3AG) No. 1 — (3AG) No. 4:</i> <i>(3AG) No. 2 — (3AG) No. 3:</i> <i>(3AG) No. 3 — (3AG) No. 4:</i>	Is the resistance 1 M $\Omega$ or more?	Go to step 6.	Replace the airbag main harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## B: DTC 12 PASSENGER'S AIRBAG FAILURE

### DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Passenger's side) circuit is open, shorted or shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

### WIRING DIAGRAM:

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
<b>2 CHECK PASSENGER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Remove the console front panel and disconnect the connectors (AB10) from (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-16, Passenger's Airbag Module.>	Go to step 3.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the test harness AG connector (1AG). 5) Measure the resistance between connector (3AG) in the test harness AG and connectors (2P) and (3P) in the test harness P. <b>Connector &amp; terminal</b> <i>(3AG) No. 9 — (2P) No. 1:</i> <i>(3AG) No. 7 — (2P) No. 2:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag main harness along with body harness.
<b>4 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).</b> Measure the resistance between connectors (3AG) in the test harness AG, and between connector (3AG) and chassis ground. <b>Connector &amp; terminal</b> <i>(3AG) No. 9 — (3AG) No. 7:</i> <i>(3AG) No. 9 — Chassis ground:</i> <i>(3AG) No. 7 — Chassis ground:</i> <i>(3AG) No. 8 — (3AG) No. 6:</i> <i>(3AG) No. 8 — Chassis ground:</i> <i>(3AG) No. 6 — Chassis ground:</i> <i>(3AG) No. 7 — (3AG) No. 6:</i> <i>(3AG) No. 6 — (3AG) No. 9:</i> <i>(3AG) No. 7 — (3AG) No. 8:</i> <i>(3AG) No. 8 — (3AG) No. 9:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag main harness along with body harness.
<b>5 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 6.
<b>6 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

## C: DTC 15 DRIVER'S AIRBAG FAILURE

### DTC DETECTING CONDITION:

- Airbag main harness circuit (Driver's side) is shorted to power supply.
- Airbag module harness circuit (Driver's side) is shorted to power supply.
- Roll connector is shorted to power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness along with chassis harness.	Go to step 2.
<b>2 CHECK PASSENGER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Remove the console front panel and disconnect the connectors (AB10) from (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-16, Passenger's Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, and connect the test harness AG connector (1AG). 5) Connect the battery ground terminal and turn the ignition switch to ON. (engine OFF) 6) Measure the voltage between connector (3AG) in the test harness AG and chassis ground.  <i>Connector &amp; terminal</i> <i>(3AG) No. 9 (+) — Chassis ground (-):</i> <i>(3AG) No. 7 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Go to step 4.	Replace the airbag main harness along with body harness.
<b>4 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 5.
<b>5 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

---

## E: DTC 21 AIRBAG ECM FAILURE

### DTC DETECTING CONDITION:

Airbag control module is faulty.

### CAUTION:

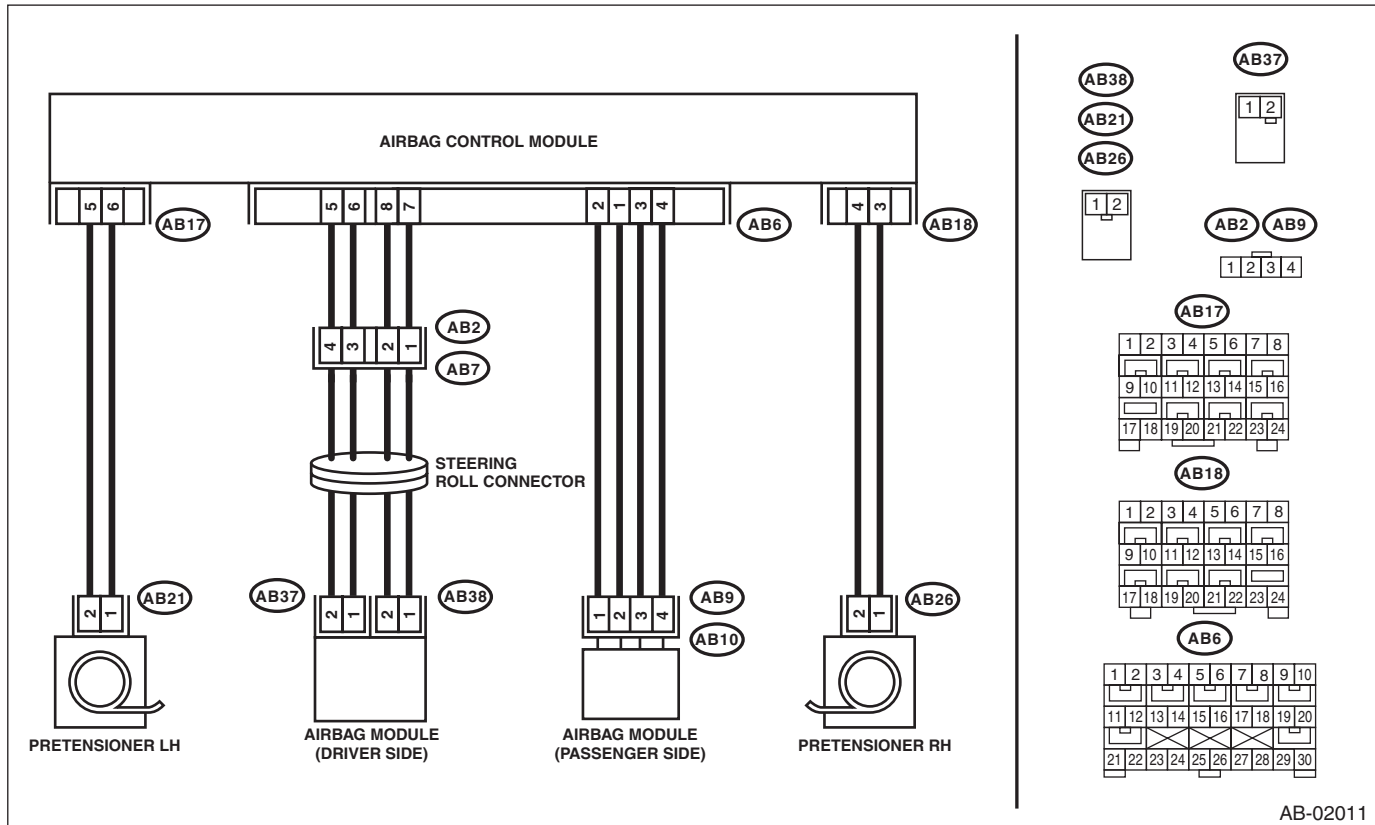

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.

	Step	Check	Yes	No
1	<b>CHECK IF DTC 21 IS INDICATED.</b> Read the DTC. <Ref. to AB(diag)-24, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Does the Subaru Select Monitor display DTC21?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-25, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

# Diagnostic Chart with Trouble Code

## F: DTC 22 FRONT AIRBAG FIRING OUTPUT

### WIRING DIAGRAM:

This DTC is indicated when the front airbag module and the pretensioner are deployed.

Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module <Ref. to AB-21, Airbag Control Module.>
- Driver's airbag module <Ref. to AB-15, Driver's Airbag Module.>
- Passenger's airbag module <Ref. to AB-16, Passenger's Airbag Module.>
- Front sub sensor of both sides. <Ref. to AB-22, Front Sub Sensor.>
- Front outer seat belt with pretensioner of both sides. <Ref. to SB-17, Front Seat Belt.>
- Steering roll connector <Ref. to AB-26, Roll Connector.>
- Occupant detection system (passenger's seat cushion & frame assembly) <Ref. to SE-6, Front Seat.>

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### G: DTC 26 PASSENGER'S AIRBAG INDICATOR FAILURE

#### DTC DETECTING CONDITION:

- Passenger's airbag indicator is faulty.
- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Body harness circuit is open.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### WIRING DIAGRAM:

AB-02012

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Confirm that firm contact is secured for the connector between the airbag control module and the clock.	Is there poor contact of any connector?	Replace the airbag harness connector.	Go to step 2.
<b>2</b> <b>CHECK AIRBAG MAIN HARNESS.</b> 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the battery ground terminal and turn the ignition switch to ON. NOTE: Neither of ON/OFF illuminates when it is normal.	Does the passenger's airbag indicator illuminate?	Go to step 3.	Go to step 4.
<b>3</b> <b>CHECK AIRBAG MAIN HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Remove the clock and disconnect the connector (i59). 3) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 4) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(2AG) No. 9 — (2AG) No. 8:</i> <i>(2AG) No. 9 — Chassis ground:</i> <i>(2AG) No. 8 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Replace the clock. <Ref. to IDI-21, REMOVAL, Clock.>	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
<b>4</b> <b>CHECK AIRBAG HARNESS.</b> 1) Connect the connectors (7AG) and (8AG) in the test harness AG. 2) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's airbag indicator illuminate?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 5.
<b>5</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 3) Measure the resistance between connector (2AG) in the test harness AG and connector (i59). <i>Connector &amp; terminal</i> <i>(2AG) No. 9 — (i59) No. 4:</i> <i>(2AG) No. 8 — (i59) No. 3:</i>	Is the resistance less than 10 Ω?	Go to step 6.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
<b>6</b> <b>CHECK BODY HARNESS.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (i59) and chassis ground. <i>Connector &amp; terminal</i> <i>(i59) No. 8 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the clock. <Ref. to IDI-21, REMOVAL, Clock.>	Repair the clock power supply line.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### H: DTC 27 ODS COMMUNICATION ERROR

#### DTC DETECTING CONDITION:

- Communication to the occupant detection control module is faulty.
- Airbag rear harness circuit is open, shorted, shorted to ground or shorted to power supply.
- Occupant detection harness (seat harness) is faulty.
- Occupant detection system is faulty.
- Airbag control module is faulty.

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the occupant detection control module.	Is there poor contact?	Reconnect the connector. If defective is not improved, replace the airbag rear harness along with the body harness or the occupant detection harness (seat harness).	Go to step 2.
<b>2</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 4) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 5) Connect the connector (1AB) in the test harness AB to the connector (AB53). 6) Measure the resistance between connector (6AG) in the test harness AG and connector (2AB) in the test harness AB. <b>Connector &amp; terminal</b> <b>(6AG) No. 9 — (2AB) No. 1:</b> <b>(6AG) No. 11 — (2AB) No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 3.	Replace the airbag rear harness along with body harness.
<b>3</b> <b>CHECK AIRBAG HARNESS.</b> Measure the resistance between connector (6AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(6AG) No. 9 — Chassis ground:</b> <b>(6AG) No. 9 — (6AG) No. 11:</b> <b>(6AG) No. 11 — Chassis ground:</b>	Is the resistance less than 1 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (2AB) in the test harness AB and chassis ground. <b>Connector &amp; terminal</b> <b>(2AB) No. 3 (+) — Chassis ground (-):</b>	Is the voltage 9 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order.	Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness along with body harness or replace the body harness.

## AIRBAG SYSTEM (DIAGNOSTICS)

### P: DTC 39 SEAT BELT WARNING FAILURE

#### DTC DETECTING CONDITION:

- Airbag control module is faulty.
- Body integrated unit is faulty.
- Harness circuits between body integrated unit and airbag control module are open, shorted or shorted to ground.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### WIRING DIAGRAM:

AB-02187

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds and go off?	Go to step 3.	Go to step 2.
<b>2</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 3) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal (2AG) No. 10 — Chassis ground:</i>	Is the resistance 1 M $\Omega$ or more?	Replace the body integrated unit.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
<b>3</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Connect the connectors (7AG) and (8AG) in the test harness AG in the condition of step 2. 3) Turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds, then repeatedly light and go off?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 4.
<b>4</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connectors (7AG) and (8AG) in the test harness AG in the condition of step 3. 3) Disconnect the connector (B281) from body integrated unit. 4) Measure the resistance between connector (2AG) in the test harness AG and connector (B281). <i>Connector &amp; terminal (2AG) No. 10 — (B281) No. 26:</i>	Is the resistance less than 10 $\Omega$ ?	Replace the body integrated unit.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### Q: DTC 41 SIDE AIRBAG RH FAILURE

#### DTC DETECTING CONDITION:

- Side airbag harness (RH) is faulty.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### WIRING DIAGRAM:

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>2 CHECK SIDE AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connectors (AB25) and (AB24), and connect the test harness AJ connector (1AJ) to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module (RH). <Ref. to AB-17, REMOVAL, Side Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from test harness AJ. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 7) Measure the resistance between the test harness AG connector (5AG) and the test harness AJ connector (3AJ). <i>Connector &amp; terminal</i> <i>(5AG) No. 5 — (3AJ) No. 1:</i> <i>(5AG) No. 7 — (3AJ) No. 2:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (5AG) terminals in the test harness AG. <i>Connector &amp; terminal</i> <i>(5AG) No. 5 — (5AG) No. 7:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (5AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(5AG) No. 5 — Chassis ground:</i> <i>(5AG) No. 7 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### R: DTC 42 SIDE AIRBAG LH FAILURE

#### DTC DETECTING CONDITION:

- Side airbag harness (LH) is faulty.
- Side airbag module (LH) is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### WIRING DIAGRAM:

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>2 CHECK SIDE AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connectors (AB20) and (AB19), and connect the test harness AJ connector (1AJ) to the connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module (LH). <Ref. to AB-17, REMOVAL, Side Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Disconnect the connector (AB31) from curtain airbag module (LH). 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 7) Measure the resistance between the test harness AG connector (5AG) and the test harness AJ connector (3AJ). <i>Connector &amp; terminal</i> <i>(5AG) No. 1 — (3AJ) No. 2:</i> <i>(5AG) No. 3 — (3AJ) No. 1:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).</b> Measure the resistance between connector (5AG) terminals in the test harness AG. <i>Connector &amp; terminal</i> <i>(5AG) No. 1 — (5AG) No. 3:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).</b> Measure the resistance between connector (5AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(5AG) No. 1 — Chassis ground:</i> <i>(5AG) No. 3 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

---

#### **U: DTC 53 SIDE AIRBAG SENSOR RH FAILURE**

##### **DTC DETECTING CONDITION:**

Side airbag sensor (RH) is faulty.

When DTC 53 is displayed, the circuit within the side airbag sensor (RH) is faulty.

Replace the side airbag sensor (RH). <Ref. to AB-23, Side Airbag Sensor.>

#### **V: DTC 54 SIDE AIRBAG SENSOR LH FAILURE**

##### **DTC DETECTING CONDITION:**

Side airbag sensor (LH) is faulty.

When DTC 54 is displayed, the circuit within the side airbag sensor (LH) is faulty.

Replace the side airbag sensor (LH). <Ref. to AB-23, Side Airbag Sensor.>

#### **W: DTC 55 SIDE CURTAIN AIRBAG FIRING OUTPUT**

This DTC is displayed when the side airbag module and curtain airbag module are deployed.

Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module <Ref. to AB-21, Airbag Control Module.>
- Side airbag module (operating side) <Ref. to AB-17, Side Airbag Module.>
- Side airbag sensor (operating side) <Ref. to AB-23, Side Airbag Sensor.>
- Curtain airbag module (operating side) <Ref. to AB-19, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-24, Curtain Airbag Sensor.>
- Satellite safing sensor <Ref. to AB-25, Satellite Safing Sensor.>

#### **X: DTC 58 CURTAIN AIRBAG SENSOR RH FAILURE**

##### **DTC DETECTING CONDITION:**

Curtain airbag sensor (RH) is faulty.

If DTC 58 is displayed, the circuit within the curtain airbag sensor (RH) is faulty.

Replace the curtain airbag sensor (RH). <Ref. to AB-24, Curtain Airbag Sensor.>

#### **Y: DTC 59 CURTAIN AIRBAG SENSOR LH FAILURE**

##### **DTC DETECTING CONDITION:**

Curtain airbag sensor (LH) is faulty.

If DTC 59 is displayed, the circuit within the curtain airbag sensor (LH) is faulty.

Replace the curtain airbag sensor (LH). <Ref. to AB-24, Curtain Airbag Sensor.>

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## Z: DTC 61 BELT PRETENSIONER RH FAILURE

### DTC DETECTING CONDITION:

- Seat belt pretensioner (RH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

AB-01880

Step	Check	Yes	No
<b>1</b>	<b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.  Go to step 2.
<b>2</b>	<b>CHECK SEAT BELT PRETENSIONER.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner (RH). <Ref. to SB-17, Front Seat Belt.>  Go to step 3.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>3 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from test harness. 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the connector (AB33) from curtain airbag module (RH). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. <i><b>Connector &amp; terminal</b></i> <i><b>(3AG) No. 18 — (2N) No. 2:</b></i> <i><b>(3AG) No. 20 — (2N) No. 1:</b></i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH).</b> Measure the resistance between connector (3AG) terminals in the test harness AG. <i><b>Connector &amp; terminal</b></i> <i><b>(3AG) No. 18 — (3AG) No. 20:</b></i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS RH).</b> Measure the resistance between connector (3AG) in the test harness AG and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(3AG) No. 18 — Chassis ground:</b></i> <i><b>(3AG) No. 20 — Chassis ground:</b></i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## AA:DTC 62 BELT PRETENSIONER LH FAILURE

### DTC DETECTING CONDITION:

- Seat belt pretensioner (LH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
<b>2 CHECK SEAT BELT PRETENSIONER.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner (LH). <Ref. to SB-17, Front Seat Belt.>	Go to step 3.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>3 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from test harness. 3) Disconnect connector (AB19) from side airbag module (LH). 4) Disconnect the connector (AB31) from curtain airbag module (LH). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. <b>Connector &amp; terminal</b> <b>(3AG) No. 12 — (2N) No. 2:</b> <b>(3AG) No. 10 — (2N) No. 1:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS LH).</b> Measure the resistance between connector (3AG) terminals in the test harness AG. <b>Connector &amp; terminal</b> <b>(3AG) No. 10 — (3AG) No. 12:</b>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS LH).</b> Measure the resistance between connector (3AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(3AG) No. 10 — Chassis ground:</b> <b>(3AG) No. 12 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

AB-02036

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>2 CHECK CURTAIN AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module (RH). <Ref. to AB-19, Curtain Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. <i>Connector &amp; terminal</i> <i>(6AG) No. 6 — (2N) No. 1:</i> <i>(6AG) No. 8 — (2N) No. 2:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (6AG) terminals in the test harness AG. <i>Connector &amp; terminal</i> <i>(6AG) No. 6 — (6AG) No. 8:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (6AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(6AG) No. 6 — Chassis ground:</i> <i>(6AG) No. 8 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AIRBAG SYSTEM (DIAGNOSTICS)

## AI: DTC 92 CURTAIN AIRBAG MODULE LH FAILURE

### DTC DETECTING CONDITION:

- Curtain airbag harness (LH) is faulty.
- Curtain airbag module (LH) is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

AB-01879

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>2 CHECK CURTAIN AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module (LH). <Ref. to AB-19, Curtain Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Disconnect connector (AB19) from side airbag module (LH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the test harness AG connector (1AG) to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. <i>Connector &amp; terminal</i> <i>(6AG) No. 1 — (2N) No. 2:</i> <i>(6AG) No. 3 — (2N) No. 1:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).</b> Measure the resistance between connector (6AG) terminals in the test harness AG. <i>Connector &amp; terminal</i> <i>(6AG) No. 1 — (6AG) No. 3:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).</b> Measure the resistance between connector (6AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(6AG) No. 1 — Chassis ground:</i> <i>(6AG) No. 3 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Clear the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-21, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors and seat belt pretensioners of the driver's and passenger's seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors (AB18, AB28, AB34) between the airbag control module and the curtain airbag sensor (RH).</p>	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
<p><b>2</b></p> <p><b>CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR (RH) AND CURTAIN AIRBAG SENSOR (RH)).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect connectors (AB25) and (AB24) from side airbag module (RH). 5) Disconnect connector (AB28) from side airbag sensor (RH). 6) Connect the connector (AB28) of side airbag sensor (RH) and the connector (1AI) in the test harness AI. 7) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 8) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 9) Measure the resistance between connector (3V) terminals in the test harness V. <b>Connector &amp; terminal</b> <b>(3V) No. 2 — (3V) No. 6:</b> <b>(3V) No. 1 — (3V) No. 7:</b></p>	Is the resistance less than 10 Ω?	Go to step 3.	Replace the airbag rear harness along with body harness.
<p><b>3</b></p> <p><b>CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).</b> Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. <b>Connector &amp; terminal</b> <b>(3V) No. 2 — Chassis ground:</b> <b>(3V) No. 1 — Chassis ground:</b> <b>(3V) No. 2 — (3V) No. 1:</b></p>	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>4 CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR (RH)).</b></p> <p>1) Disconnect the connectors (AB17, AB6, AB18) from airbag control module.</p> <p>2) Connect the connector (1AG) in the test harness AG to the connectors (AB17, AB6, AB18).</p> <p>3) Disconnect the connector (AB28) in the side airbag sensor (RH) from the connector (1AI) in the test harness AI.</p> <p>4) Disconnect the connector (2AI) in the test harness AI from the connector (1V) in the test harness V.</p> <p>5) Connect the connector (AB28) of side airbag sensor (RH) and the connector (2V) in the test harness V to the connector (AB28).</p> <p>6) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V.</p> <p><b>Connector &amp; terminal</b>  <b>(5AG) No. 16 — (3V) No. 2:</b>  <b>(5AG) No. 14 — (3V) No. 1:</b></p>	Is the resistance less than 10 Ω?	Go to step 5.	Replace the airbag rear harness along with body harness.
<p><b>5 CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).</b></p> <p>Measure the resistance between connector (5AG) in the test harness AG and chassis ground, and the resistance between connector (5AG) terminals in the test harness AG.</p> <p><b>Connector &amp; terminal</b>  <b>(5AG) No. 16 — Chassis ground:</b>  <b>(5AG) No. 14 — Chassis ground:</b>  <b>(5AG) No. 16 — (5AG) No. 14:</b></p>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<p><b>6 CHECK AIRBAG CONTROL MODULE.</b></p> <p>1) Connect all connectors.</p> <p>2) Clear the memory.</p> <p>3) Perform the Inspection Mode.</p> <p>4) Read the DTC.</p>	Is the same DTC displayed?	Go to step 7.	Go to step 8.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## BG:DTC 3A FRONT SUB SENSOR RH FALSE INSTALLATION

### DTC DETECTING CONDITION:

Front sub sensor (RH) is misinstalled.

Step	Check	Yes	No
1 <b>REPLACE FRONT SUB SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the front sub sensor (RH) with a genuine sensor. <Ref. to AB-22, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

## BH:DTC 3B FRONT SUB SENSOR LH FALSE INSTALLATION

### DTC DETECTING CONDITION:

Front sub sensor (LH) is misinstalled.

Step	Check	Yes	No
1 <b>REPLACE FRONT SUB SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the front sub sensor (LH) with a genuine sensor. <Ref. to AB-22, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

## BI: DTC 3C SATELLITE SENSOR BUS FAILURE

### DTC DETECTING CONDITION:

Satellite safing sensor is faulty.

Step	Check	Yes	No
1 <b>REPLACE SATELLITE SAFING SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-25, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

## BJ:DTC 3D SATELLITE SENSOR FALSE INSTALLATION

### DTC DETECTING CONDITION:

Satellite safing sensor is misinstalled.

Step	Check	Yes	No
1 <b>REPLACE SATELLITE SAFING SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-25, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

## Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

### BK:DTC 5A SIDE AIRBAG SENSOR RH FALSE INSTALLATION

DTC DETECTING CONDITION:

Side airbag sensor RH is missinstalled.

	Step	Check	Yes	No
1	<b>REPLACE SIDE AIRBAG SENSOR (RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the side A/B sensor (RH) with a genuine sensor. <Ref. to AB-23, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

### BL:DTC 5B SIDE AIRBAG SENSOR LH FALSE INSTALLATION

DTC DETECTING CONDITION:

Side airbag sensor LH is missinstalled.

	Step	Check	Yes	No
1	<b>REPLACE SIDE AIRBAG SENSOR (LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the side A/B sensor (LH) with a genuine sensor. <Ref. to AB-23, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

### BM:DTC 5C CURTAIN AIRBAG SENSOR RH FALSE INSTALLATION

DTC DETECTING CONDITION:

Curtain airbag sensor RH is missinstalled.

	Step	Check	Yes	No
1	<b>REPLACE CURTAIN AIRBAG SENSOR (RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the curtain A/B sensor (RH) with a genuine sensor. <Ref. to AB-24, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

### BN:DTC 5D CURTAIN AIRBAG SENSOR LH FALSE INSTALLATION

DTC DETECTING CONDITION:

Curtain airbag sensor LH is missinstalled.

	Step	Check	Yes	No
1	<b>REPLACE CURTAIN AIRBAG SENSOR (LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the curtain A/B sensor (LH) with a genuine sensor. <Ref. to AB-24, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.>

# Basic Diagnostic Procedure

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 1. Basic Diagnostic Procedure

#### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK WARNING LIGHT.</b> Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	<b>READ DTC.</b> 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to OD(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AB(diag)-26, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step 3.	Go to "Airbag Warning Light Failure" <Ref. to AB(diag)-34, Airbag Warning Light Failure.>
3	<b>PERFORM DIAGNOSIS.</b> 1) Determine the possible cause "List of Diagnostic Trouble Code (DTC)". <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).> 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to OD(diag)-19, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to OD(diag)-18, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

## Check List for Interview

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 2. Check List for Interview

#### A: CHECK

Customer's name		Inspector's name

Passenger's airbag ON/OFF indicator operation	<input type="checkbox"/> Normal (After turning the ignition switch to ON, illuminates for 6 seconds then goes off for 2 seconds; Lights ON (adult) or OFF (children/unoccupied).) <input type="checkbox"/> Both remain ON <input type="checkbox"/> Both remain OFF		
DTC output	<input type="checkbox"/> OK code <input type="checkbox"/> DTC: (Code:                    )		

## General Description

### OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 3. General Description

#### A: CAUTION

1) If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper operation of the passenger detection system.

2) The passenger detection system (passenger seat only) control unit and the passenger detection sensor are fixed to the seat cushion frame. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.

3) Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the passenger detection system may not operate properly.

4) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

5) Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.

6) Do not disconnect the battery terminals while the engine is running.

A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.

7) Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 20 seconds or more. Occupant detection control module may be damaged.

8) All passenger detection system parts are precision components. Do not drop them.

#### CAUTION:

- **Do not use electrical test equipment on the airbag system wiring harness and connector circuit.**
- **Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.**
- **Refer to Airbag System when repairing the occupant detection system. <Ref. to AB(diag)-4, CAUTION, General Description.>**

#### B: INSPECTION

Measure the battery voltage and check electrolyte.

##### **Standard voltage:**

**12 V**

##### **Specific gravity:**

**1.260 or more**

##### **Fluid level:**

**Between the upper level and lower level**

# General Description

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## C: PREPARATION TOOL

### CAUTION:

To measure the voltage and resistance of airbag system and occupant detection system components, be sure to use the specified test harness.

### 1. SPECIAL TOOL

# Airbag Connector

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

## 5. Airbag Connector

### A: PROCEDURE

#### 1. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS) AND BELT TENSION SENSOR

1) How to disconnect:

Press the lock arm (A) and disconnect the connector.

#### CAUTION:

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

2) How to connect:

Holding the connector, push it in securely until a clicking sound is heard.

#### CAUTION:

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

# Control Module I/O Signal

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## 6. Control Module I/O Signal

### A: ELECTRICAL SPECIFICATION

#### CAUTION:

Never remove the occupant detection control module, occupant detection sensor or seat frame because they are integrated into one unit.

Terminal name	Terminal No.	Input/Output value	Remarks	
IG – power supply	9	9 — 16 V	When ignition switch ON	
Airbag control module communication (COM)	10	Open collector terminal	Communication line	
Airbag control module communication (GND)	5	0 V	Ground	
Belt tension sensor	(Vcc)	4	0 — 5 V	Belt tension sensor power supply
	(Vout)	16	0.5 — 4.5 V	Sensor output voltage
	(GND)	14	0 V	Sensor ground
Occupant detection sensor	(Vcc)	6	0 — 5 V	Pressure sensor power supply
	(Vout)	7	0.5 — 4.5 V	Sensor output voltage
	(GND)	15	0 V	Sensor ground
Buckle switch	1	0 — IG voltage	Ignition voltage when switch ON	
Buckle switch (GND)	2	0 V	Switch ground	

### B: WIRING DIAGRAM

Refer to the electrical wiring diagram. <Ref. to WI-98, WIRING DIAGRAM, Occupant Detection System.>

# Subaru Select Monitor

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 7. Subaru Select Monitor

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

When malfunction of the airbag system and the occupant detection system occur, the DTC stored in airbag control module will be read out.

Refer to the READ DIAGNOSTIC TROUBLE CODE (DTC) of the Airbag system (diagnostics). <Ref. to AB(diag)-24, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

NOTE:

- For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (Airbag system, Occupant detection system). <Ref. to AB(diag)-38, List of Diagnostic Trouble Code (DTC).> <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).>

##### 2. DISPLAY OF STATUS INFORMATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch and seat position sensor, or when the seat belt buckle switch and seat position sensor has been replaced.

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Airbag System}.
- 3) Select the {Status Data} in «Airbag System».

The following table is for support data.

Contents	Display Contents
Seat position sensor LH	—*5
Seat position sensor RH	—*5
Seat belt buckle switch LH	—*9
Seat belt buckle switch RH	Belted *6 / Unbelted*7 / Other*8 / Initial Setting*4 / —*9
Passenger's airbag control status	ON*10 / OFF*11 / Initial Setting*4

\*1: The seat position is forward.

\*2: The seat position is rearward.

\*3: Displayed when data other than before and behind the seat, such as the breakdown etc, is input.

\*4: Displayed when it is initial.

\*5: Seat position sensor not supported

\*6: Seat belt fastened

\*7: Seat belt not fastened

\*8: Displayed when data other than belt fastened or not fastened, such as breakdowns is input.

\*9: Seat belt buckle switch not supported

\*10: Passenger's airbag operating state

\*11: Passenger's airbag non-operating state

NOTE:

For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

##### 3. CLEAR MEMORY MODE

Clear the DTC stored in the airbag control module after repairing the airbag system and occupant detection system. (After the breakdown is recovered, the breakdown code for completed recoveries are read out when the next breakdown occurs if the memory clear work is not performed.)

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Airbag System}.
- 3) Select {Clearing Memory} in {Airbag System} menu screen.
- 4) When the “Clear Memory?” is shown on the screen, click the [YES] button.
- 5) When Done is displayed, terminate the Subaru Select Monitor and turn the ignition switch to OFF.

NOTE:

For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

### 4. SYSTEM CALIBRATION (REZEROING)

#### NOTE:

When replacing the occupant detection system, or removing and disassembling the passenger's seat, always perform the system calibration after installing a seat in the vehicle.

#### CAUTION:

**When the trouble occurs in the system during calibration process, "Occupant detection calibration failure" is detected in the DTC 2A of the airbag system and the airbag warning light lights. In this case, after turning the ignition switch to OFF once, redo the system calibration (Rezeroing), or after clearing the cause of the failure, perform the system calibration again.**

- 1) Park empty vehicle on a level surface.
- 2) On «Main Menu» display, select {Each System Check}.
- 3) On «System Selection Menu» display, select {Occupant Detection System}.
- 4) On the {Occupant Detection System} display, select {Rezeroing}.
- 5) «See service manual. And check vehicle condition for successfully completing the rezeroing» is displayed.
  - Adjust the seat backrest to be fully upright. (For models with power seats, press the power seat button until the backrest comes to a stop.)
  - Adjust the seat slide position all the way back. (For models with power seats, press the power seat button until the seat slide does not move any further.)
  - Do not place anything on the top of the seat cushion.
  - Sit on the seat cushion to smooth the seat surface.
  - Check that the passenger's seat belt is not inserted into the buckle, not tense or not stuck.
  - Check that ambient temperature is in a range from 0 to 40°C.
- 6) When the «Re-zeroing Adjust the passenger seat to the condition shown in service manual» is displayed, slide the passenger seat all the way to the back, check that the backrest is adjusted to all the way up, and select the [OK].

7) When the «Re-zeroing Unbelt the Passenger seatbelt Continue: OK, Quit: NO» is displayed, make sure the passenger's seatbelt is disconnected from the buckle and select the [OK].

8) When the Re-zeroing Empty the passenger seat Continue: OK, Quit: NO is displayed, make sure that the passenger's seat is empty, airbag OFF indicator illuminates and airbag ON indicator does not illuminate, and select the [OK].

#### NOTE:

- After selecting the [OK], «In process... Please wait for a while without touching vehicle» is displayed. Do not touch or rock the vehicle while the message is displayed.
  - During the system calibration process, if the «Re-zeroing is unsuccessful See service manual Press OK to END» is displayed, go to step 10).
- 9) When the re-zeroing is ended normally, the «Re-zeroing is successfully completed Press OK to END» is displayed. And then turn the ignition switch to OFF to finish the diagnosis.
- 10) During the system calibration process, if «Re-zeroing is unsuccessful See service manual Press OK to END» is displayed, turn the ignition switch to OFF once and turn it ON again, then read the DTC of the airbag system. <Ref. to AB(diag)-24, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

When DTC is input, fix the fault and then perform the system calibration. When DTC is not input, check the seat and vehicle status and then perform the system calibration again. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

#### NOTE:

When the re-zeroing is unsuccessful, there could be occupant detection system failure or improper seat and vehicle status. When the airbag warning light illuminates, read the DTC of the airbag system, and perform the diagnosis while referring to List of Diagnostic Trouble Code (DTC). <Ref. to AB(diag)-24, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to AB(diag)-38, LIST, List of Diagnostic Trouble Code (DTC).>

### **B: INSPECTION**

#### **1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE**

**DETECTING CONDITION:**

Defective harness connector

**TROUBLE SYMPTOM:**

Communication is impossible between the airbag control module and the Subaru Select Monitor.

Refer to “Initial Communication Impossible” in the DTC of the airbag system (diagnosis). <Ref. to AB(diag)-26, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

#### **2. WITHOUT DTC**

**DETECTING CONDITION:**

- Defective combination meter
- Open circuit of harness

**TROUBLE SYMPTOM:**

- Airbag warning light remains on.
- “NO TROUBLE CODE” will be displayed on the Subaru Select Monitor.

**NOTE:**

- For detailed operation procedures, refer to “Airbag Warning Light Failure”. <Ref. to AB(diag)-34, Airbag Warning Light Failure.>
- When the airbag warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is operating properly.

## Read Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 8. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

For details on reading DTCs, refer to “Airbag System (Diagnosis) Subaru Select Monitor”. <Ref. to AB(diag)-24, Subaru Select Monitor.>

## Inspection Mode

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 9. Inspection Mode

#### A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

### 10. Clear Memory Mode

#### A: OPERATION

- Clear the memory in the following steps after the malfunction is repaired.
- For details to clear the DTC, refer to “Airbag System (Diagnosis) Subaru Select Monitor”. <Ref. to AB(diag)-24, Subaru Select Monitor.>

# Airbag Warning Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

## 11. Airbag Warning Light Illumination Pattern

### A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds and then goes off afterwards.

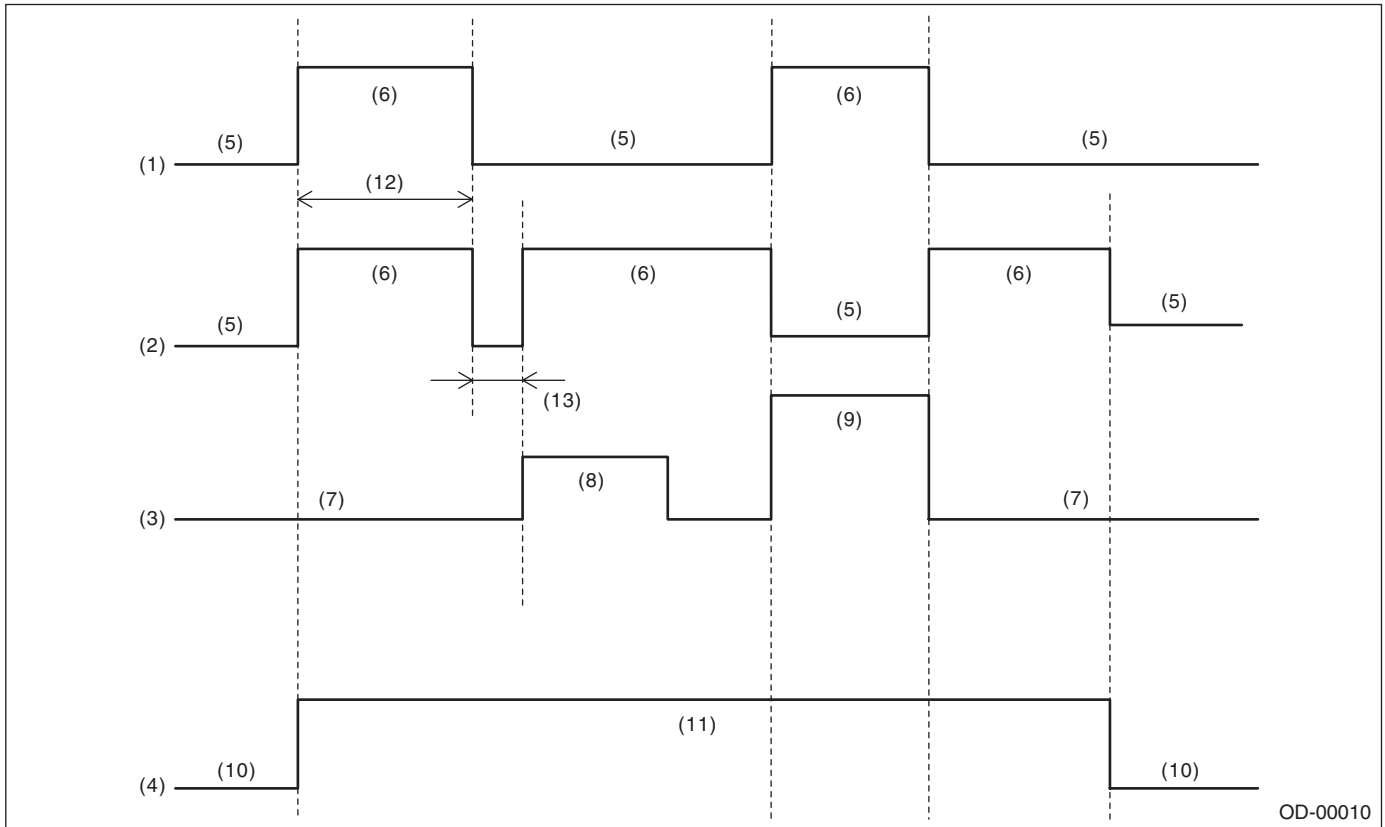

- (1) Airbag warning light
- (2) Approx. 6 sec.
- (3) Ignition switch ON

# Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## 12. Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

### A: INSPECTION

- |  |                     |                     |
|--|---------------------|---------------------|

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## 14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC 2A ODS CALIBRATION ERROR

#### DTC DETECTING CONDITION:

System calibration (Rezeroing) was not completed properly.

	Step	Check	Yes	No
1	<b>PERFORM RE-ZEROING.</b> Perform system calibration using the Subaru Select Monitor. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>	Did the system calibration complete properly?	Finish the diagnosis.	Follow the system calibration procedures. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

### B: DTC 2B ODS SYSTEM WRONG PARTS

#### DTC DETECTING CONDITION:

- Wrong airbag control module is installed.
- Wrong occupant detection system is installed.

	Step	Check	Yes	No
1	<b>CHECK OCCUPANT DETECTION SYSTEM.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the passenger's seat cushion pad frame assembly. <Ref. to SE-6, REMOVAL, Front Seat.> <Ref. to SE-8, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.> 3) Connect the ground cable to battery. 4) Connect Subaru Select Monitor to the vehicle and perform the system calibration. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>	Did the system calibration complete properly?	Finish the diagnosis.	Go to step 2.
2	<b>CHECK AIRBAG CONTROL SYSTEM.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the airbag control module. <Ref. to AB-21, REMOVAL, Airbag Control Module.> 3) Connect the ground cable to battery. 4) Connect Subaru Select Monitor to the vehicle and perform the system calibration. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>	Did the system calibration complete properly?	Finish the diagnosis.	Check between the occupant detection control module and airbag control module.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

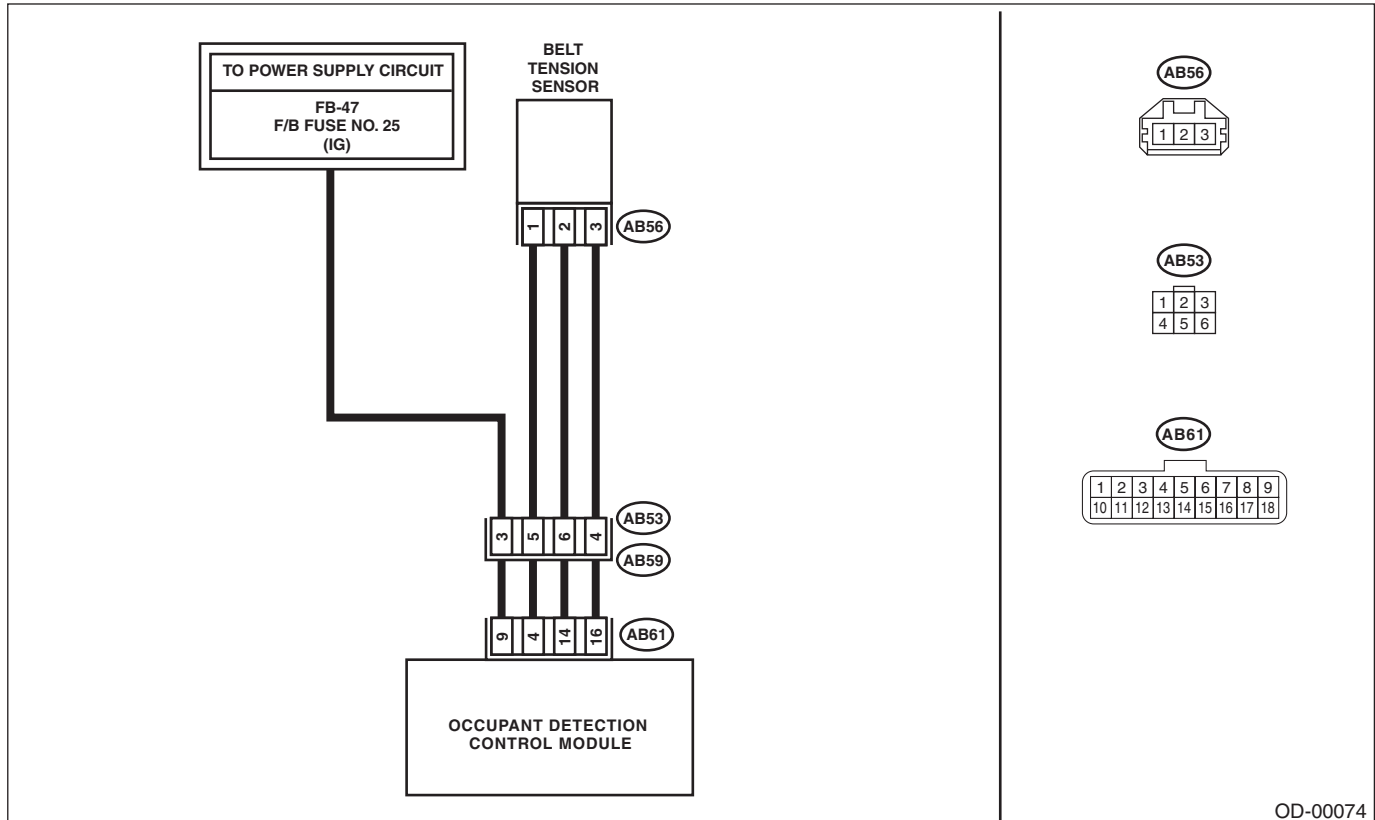

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### C: DTC 2C BELT TENSION SENSOR FAILURE

#### DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

#### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the occupant detection control module and belt tension sensor.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
2	<b>CHECK BELT TENSION SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the belt tension sensor connector (AB56) from the airbag harness. 3) Connect the test harness AC to the connector (AB56). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for approximately 6 seconds and go off?	Replace the seat belt outer. <Ref. to SB-17, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>	Go to step 3.
3	<b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the test harness AC from the belt tension sensor connector (AB56). 3) Connect the test harness AD (1AD) to the connector (AB56). 4) Disconnect the airbag harness connector (AB53), and connect connector (1AB) of test harness AB. 5) Measure the resistance between test harness terminals. <b>Connector &amp; terminal</b> <b>(2AB) No. 5 — (2AD) No. 1:</b> <b>(2AB) No. 4 — (2AD) No. 3:</b> <b>(2AB) No. 6 — (2AD) No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag harness along with chassis harness.
4	<b>CHECK AIRBAG HARNESS.</b> Measure the resistance between test harness terminals, and between test harness terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(2AB) No. 4 — (2AD) No. 1:</b> <b>(2AB) No. 4 — (2AD) No. 2:</b> <b>(2AB) No. 4 — chassis ground:</b> <b>(2AB) No. 5 — (2AD) No. 2:</b> <b>(2AB) No. 5 — chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag harness along with chassis harness.
5	<b>CHECK AIRBAG HARNESS.</b> 1) Connect the battery ground terminal and turn the ignition switch to ON. 2) Measure the voltage between test harness and chassis ground. <b>Connector &amp; terminal</b> <b>(2AD) No. 1 (+) — Chassis ground (-):</b> <b>(2AD) No. 3 (+) — Chassis ground (-):</b>	Is the voltage 1 V or less?	Replace the airbag harness along with chassis harness.	Check the seat harness, and if any fault is found, replace the seat harness. If no fault is found in the seat harness, replace the seat cushion frame assembly. <Ref. to SE-8, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

### D: DTC 27 ODS COMMUNICATION ERROR

Perform the diagnosis following diagnostic procedures for the airbag system. <Ref. to AB(diag)-60, DTC 27 ODS COMMUNICATION ERROR, Diagnostic Chart with Trouble Code.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### E: DTC 29 ODS FAILURE

#### DTC DETECTING CONDITION:

- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.
- Occupant detection harness is faulty.
- Rear airbag harness is faulty.
- Fuse No. 25 (in joint box) is blown.

	Step	Check	Yes	No
1	<b>CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
2	<b>CHECK DTC.</b> Read diagnostic trouble code (DTC) for the airbag system.	Is "2C Belt Tension Sensor failure" or "37 Buckle Switch failure" displayed in the diagnostics code?	Perform the diagnosis according to each DTC.	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-8, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## F: DTC 37 BUCKLE SWITCH RH FAILURE

### DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

### WIRING DIAGRAM:

OD-00075

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT OF CONNECTORS.</b> Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
<b>2 CHECK BUCKLE SWITCH.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 20 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE1 and test harness connector Y to the buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-17, INNER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system.

## General Description

### SEAT BELT SYSTEM

---

#### **B: CAUTION**

- Before starting the work, turn the ignition switch to OFF, disconnect the battery ground cable and wait for 20 seconds or more.
- The pretensioner system has a back-up power supply. Be aware that the pretensioner might deploy if you do not wait for 20 seconds or more before starting work.
- Do not drop or apply any impact to the pretensioner.
- If oil, grease or water gets on the pretensioner, wipe it off immediately with a dry cloth.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new part.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new parts.
- When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not reuse a seat belt with deployed pretensioner.

### **3. Inspection Locations After a Collision**

#### **A: INSPECTION**

Refer to “Inspection Locations After a Collision” of Airbag section. <Ref. to AB-12, Inspection Locations After a Collision.>

## 4. Seat Belt Warning System

### A: WIRING DIAGRAM

<Ref. to WI-97, WIRING DIAGRAM, Seat Belt Warning System.>

### B: INSPECTION

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### TROUBLE SYMPTOM:

- Driver's side seat belt warning light does not illuminate or it remains illuminating.
- Warning buzzer does not beep.

Step	Check	Yes	No
<b>1 CHECK CURRENT SETTINGS.</b> 1) Prepare the Subaru Select Monitor. 2) Turn the ignition switch to ON (engine OFF), and run the "PC application for Subaru Select Monitor". 3) Select "Current Data Display" and read the data of "Belt Warning Switch".	Is the belt warning display ON?	Go to step 2.	Turn the belt warning ON with unit customizing.
<b>2 CHECK CURRENT DATA.</b> 1) Select "Current Data Display" and read the data of "IG power supply voltage". 2) Turn the ignition switch ON ↔ OFF.	Does the voltage change between 10 V or higher ↔ less than 1.5 V, matching the ignition switch ON ↔ OFF operation?	Go to step 3.	Check the ignition switch circuit.
<b>3 CHECK FUNCTION.</b> 1) Sit in the driver's seat and passenger's seat, and disconnect the seat belts of both seats. 2) Turn the ignition switch to ON (engine OFF). 3) Check the illumination of the driver's seat belt warning light in the combination meter and the passenger's seat belt warning light in the clock unit, and the sounding of the buzzer.	Do the driver's and passenger's warning lights flash, and does the buzzer sound while the warning lights are flashing?	Go to step 4.	<ul style="list-style-type: none"> <li>• Malfunction of the driver's seat belt warning light → Go to step 10.</li> <li>• Malfunction of the passenger's seat belt warning light → Go to step 16.</li> <li>• The buzzer does not sound. → Go to step 6.</li> </ul>
<b>4 CHECK FUNCTION.</b> 1) Wait until the buzzer sound stops in step 3. (Approximately 6 seconds from starting to sound) 2) Fasten and detach the driver's and passenger's seat belts. 3) Check the illumination of the driver's seat belt warning light in the combination meter, and the passenger's seat belt warning light in the clock unit, and the sounding of the buzzer.	Does each seat belt warning light illuminate ↔ turn off according to the action?	Go to step 5.	<ul style="list-style-type: none"> <li>• Malfunction of the driver's seat belt warning light → Go to step 6.</li> <li>• Malfunction of the passenger's seat belt warning light → Go to step 12.</li> </ul>

# Seat Belt Warning System

## SEAT BELT SYSTEM

Step	Check	Yes	No
<b>5 CHECK FUNCTION.</b> 1) Wait until the buzzer sound stops in step 3. (Approximately 6 seconds from starting to sound) 2) Start the engine, and set the vehicle speed to 15 km/h (9 MPH) or faster. 3) Check the driver's and passenger's seat belt warning lights, and sounding of the alarm buzzer.	Do the driver's and passenger's warning lights flash, and does the buzzer sound while the warning lights are flashing?	The seat belt warning system is normal.	Go to step 19.
<b>6 CHECK CURRENT DATA.</b> 1) Select "Current Data Display" and read the data of the driver's seat belt switch. 2) Fasten and detach the seat belt buckle.	Does the seat belt SW display turn ON $\longleftrightarrow$ OFF according to the operation?	Go to step 10.	Go to step 7.
<b>7 CHECK HARNESS.</b> 1) Disconnect the negative terminal from the battery, and wait for 20 seconds or more. 2) Disconnect the connectors of the body integrated unit and the seat belt buckle switch. 3) Check for a short circuit to battery, open circuit and short circuit to ground between the body integrated unit and the seat belt buckle switch LH. <i>Connector &amp; terminal (B281) No. 16 — (R107) No. 3:</i>	Is the harness normal?	Go to step 8.	Repair or replace the harness.
<b>8 CHECK HARNESS.</b> Measure the resistance between the seat belt buckle switch LH and chassis ground. <i>Connector &amp; terminal (R107) No. 1 — Chassis ground:</i>	Is the resistance less than 10 $\Omega$ ?	Go to step 9.	Repair or replace the harness.
<b>9 CHECK SEAT BELT BUCKLE SWITCH LH.</b> Measure the resistance between the connector terminals of the driver's seat belt switch when the driver's seat belt is fastened and detached. <i>Connector &amp; terminal (R107) No. 1 — (R107) No. 3:</i>	Is the resistance when the belt is fastened 1 M $\Omega$ or higher, and less than 10 $\Omega$ when the belt is detached?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Replace the inner belt assembly LH. <Ref. to SB-17, INNER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
<b>10 CHECK DTC.</b> Read the DTC using the Subaru Select Monitor.	Are any body CAN related DTC detected?	Check the CAN according to DTC.	Go to step 11.
<b>11 CHECK COMBINATION METER.</b> Perform self-diagnosis of the combination meter. <Ref. to IDI-4, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	At the start of combination meter self diagnosis, did the buzzer sound and the seat belt warning light illuminate?	Replace the body integrated unit or the combination meter. Or, replace both. There may be a communication malfunction of the body integrated unit, or a reception malfunction of the combination meter.	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>
<b>12 CHECK CURRENT DATA.</b> 1) Sit in the passenger's seat. 2) Select "Current Data Display" and display the data of "P seatbelt SW input". 3) Fasten and detach the passenger's side seat belt buckle, and read the data of the seat belt switch. <Ref. to LAN(diag)-33, OPERATION, Read Current Data.>	Does the seat belt switch display turn ON $\longleftrightarrow$ OFF according to the operation of the seat belt buckle?	Go to step 16.	Go to step 13.

# Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
<b>13 CHECK AIRBAG SYSTEM AND OCCUPANT DETECTION SYSTEM.</b> Perform the check in accordance with the diagnostic procedure DTC 27 of the airbag system. <Ref. to AB(diag)-60, DTC 27 ODS COMMUNICATION ERROR, Diagnostic Chart with Trouble Code.>	Is there any problem on the inspection result?	Go to step 14.	Replace with new parts according to DTC 27.
<b>14 CHECK BUCKLE SWITCH RH.</b> Perform the check in accordance with the diagnostic procedure DTC 37 of the occupant detection system. <Ref. to OD(diag)-27, DTC 37 BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is there any problem on the inspection result?	Go to step 15.	Replace with new parts according to DTC 37.
<b>15 CHECK AIRBAG CONTROL MODULE AND BODY INTEGRATED UNIT.</b> Check the airbag control module, occupant detection sensor and seat belt buckle switch RH. Perform the check in accordance with the diagnostic procedure DTC 39 of the airbag system. <Ref. to AB(diag)-62, DTC 39 SEAT BELT WARNING FAILURE, Diagnostic Chart with Trouble Code.>	Is there any problem on the inspection result?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Replace with new parts according to DTC 39.
<b>16 CHECK HARNESS.</b> 1) Disconnect the clock connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the body integrated unit and the clock. <b>Connector &amp; terminal</b> <b>(i59) No. 8 (+) — Chassis ground (-):</b>	Is the voltage 10 V or higher?	Go to step 17.	Repair or replace the harness.
<b>17 CHECK HARNESS.</b> 1) Turn the ignition switch to ON. 2) Disconnect the connector of body integrated unit. 3) Check for a short circuit to battery, open circuit and short circuit to ground between the body integrated unit and the clock. <b>Connector &amp; terminal</b> <b>(i84) No. 25 — (i59) No. 2:</b>	Is the harness normal?	Go to step 18.	Repair or replace the harness.
<b>18 CHECK CLOCK.</b> 1) Connect the clock connector. 2) Turn the ignition switch to ON. 3) Use an appropriate wiring harness to create a short between the body integrated unit and the clock. <b>Connector &amp; terminal</b> <b>(i84) No. 25 — Chassis ground:</b> <b>(i59) No. 2 — Chassis ground:</b>	Does passenger's seat belt warning light in the clock illuminate?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Replace the clock. <Ref. to IDI-21, REMOVAL, Clock.>
<b>19 CHECK DTC.</b> Read the DTCs for all systems using the Subaru Select Monitor.	Is a DTC detected?	Perform a check according to the DTC.	Go to step 20.

# Seat Belt Warning System

## SEAT BELT SYSTEM

Step	Check	Yes	No
<b>20</b> <b>CHECK CURRENT DATA.</b> Select "Current Data Display" and read the data of the "Front Wheel Speed" of the body integrated unit. <Ref. to LAN(diag)-33, OPERATION, Read Current Data.>	Does the data indicate the normal vehicle speed?	Go to step 11.	Check the following items. <ul style="list-style-type: none"> <li>• LAN system &lt;Ref. to LAN(diag)-69, DTC U1223 CANS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).&gt;</li> <li>• VDC &lt;Ref. to VDC(diag)-2, Basic Diagnostic Procedure.&gt;</li> <li>• ABS &lt;Ref. to ABS(diag)-2, Basic Diagnostic Procedure.&gt;</li> </ul>

## 5. Front Seat Belt

### A: REMOVAL

#### 1. OUTER SEAT BELT ASSEMBLY

**CAUTION:**

- Do not drop or subject the pretensioner to any impact.
- Since the pretensioner and bracket are integrated as a unit, do not disassemble them.

- 1) Before starting the work, turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more.
- 2) Fold the backrest all the way forward, and then move the front seat all the way forward.
- 3) Remove the center pillar lower trim. <Ref. to EI-55, REMOVAL, Lower Inner Trim.>
- 4) Remove the anchor cover (A).
- 5) Loosen the shoulder anchor bolt (B), and then detach the shoulder anchor from center pillar.

- 6) Turn over the floor mat and disconnect the pretensioner connector (A).
- 7) Remove the bolts, then remove the front outer seat belt.

- 8) Remove the center pillar upper trim. <Ref. to EI-57, REMOVAL, Upper Inner Trim.>

- 9) Remove the bolts and then remove adjustable anchor assembly.

#### 2. INNER SEAT BELT ASSEMBLY

- 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more.
- 2) Remove the front seats. <Ref. to SE-6, REMOVAL, Front Seat.>
- 3) Disconnect the seat belt warning light connector under the seat.
- 4) Remove the seat belt harness from the harness holder on the backside of seat cushion assembly.
- 5) Remove the TORX® bolt, and then remove the inner seat belt assembly.

### B: INSTALLATION

**CAUTION:**

- The parts of the driver and passenger sides are not the same. Before installation, make sure that the correct part is used.
- Be careful not to twist the seat belts during installation.

Install in the reverse order of removal.

**Tightening torque:**

**Seat belt:** <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

**Upper inner trim:** 7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

# Front Seat Belt

## SEAT BELT SYSTEM

---

### **C: INSPECTION**

Check for the following, and replace with new parts if necessary.

- Pretensioner is cracked or deformed.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Inner seat belt assembly is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

## 6. Rear Seat Belt

### A: REMOVAL

#### 1. OUTER SEAT BELT ASSEMBLY RH & LH

- 1) Remove the luggage floor mat.
- 2) Remove the rear seat cushion. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 3) Remove the seat belt lower anchor bolt.

- 4) Remove the rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>
- 5) Remove the outer seat belt assembly.

#### • 5 DOOR MODEL

Remove the nut.

#### CAUTION:

Do not remove the bolt and nut securing the retractor and bracket.

#### • 4 DOOR MODEL

Remove the bolt.

#### 2. SHOULDER SEAT BELT CENTER ASSEMBLY (5 DOOR MODEL)

- 1) Remove the shoulder anchor bolt cover (A).
- 2) Remove the shoulder anchor bolt (B) and remove the shoulder anchor from the quarter pillar.

- 3) Remove the rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>

- 4) Remove the bolts, and then detach the outer seat belt center assembly.

# Rear Seat Belt

## SEAT BELT SYSTEM

### 3. SHOULDER SEAT BELT CENTER ASSEMBLY (4 DOOR MODEL)

- 1) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 2) Remove the rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>
- 3) Remove the rear shelf trim. <Ref. to EI-60, REMOVAL, Rear Shelf Trim.>
- 4) Remove the bolts, then remove the shoulder seat belt assembly.

- 5) Remove the seat belt lower anchor bolt.

### 4. CENTER SEAT BELT ASSEMBLY

- 1) Remove the rear seat cushion.
- 2) Remove the bolts, then remove the center seat belt assembly.

### B: INSTALLATION

#### CAUTION:

- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belts are smoothly extended and wound.
- Make sure that the center seat belt is securely installed.

- 1) Install in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

- 2) Turn the seat belt as shown in the figure.
- LH SIDE

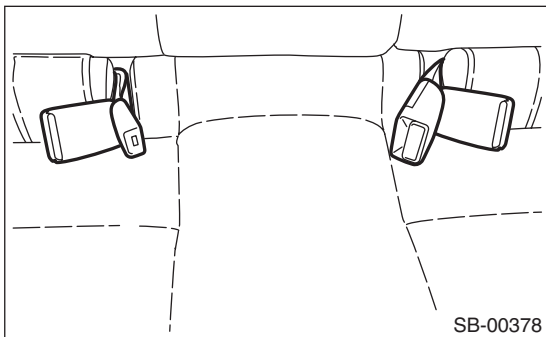

- RH SIDE (5 DOOR MODEL ONLY)

3) Install the seat cushion and pull out the center seat belt assembly.

- 5 DOOR MODEL

- 4 DOOR MODEL

### C: INSPECTION

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Inner seat belt is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

## Rear Seat Belt

# General Description

## LIGHTING SYSTEM

### 1. General Description

#### A: SPECIFICATION

Headlight	Halogen type low beam	12 V — 55 W
	HID type low beam	12 V — 35 W
	Halogen type high beam	12 V — 60 W
Front turn signal light		12 V — 21 W
Clearance/parking light		12 V — 5 W
Front fog light		12 V — 51 W
Rear combination light (4 door)	Tail/stop light	12 V — 21/5 W
	Turn signal light	12 V — 21 W
	Back-up light	12 V — 16 W
Rear combination light (5 door)	Tail/stop light	12 V — 0.3 W (LED) / 12 V — 4.8 W (LED)
	Turn signal light	12 V — 21 W
	Side marker light	12 V — 5 W
Back-up light (5 door)		12 V — 21 W
License plate light		12 V — 5 W
High-mounted stop light	4 door with built-in rear spoiler	12 V — 1.2 W (LED)
	4 door standard type	12 V — 21 W
	5 door small type with built-in roof spoiler	12 V — 2.7 W (LED)
	5 door large type with built-in roof spoiler	12 V — 1.2 W (LED)
Room light		12 V — 8 W
Spot map light		12 V — 8 W
Luggage room light		12 V — 5 W
Trunk room light		12 V — 5 W

#### B: CAUTION

- Before removing or installing parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

#### WARNING:

- **The airbag system wiring harness is routed near electrical parts and switches. Do not use electrical test devices on any airbag system wiring harnesses or connector circuits.**
- **Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.**

# Headlight and Tail Light System

## LIGHTING SYSTEM

### 2. Headlight and Tail Light System

#### A: WIRING DIAGRAM

##### 1. HALOGEN TYPE HEADLIGHT

Refer to “Headlight System” in WI section. <Ref. to WI-100, WIRING DIAGRAM, Headlight System.>

##### 2. HID TYPE HEADLIGHT

Refer to “Headlight System” in WI section. <Ref. to WI-100, WIRING DIAGRAM, Headlight System.>

##### 3. CLEARANCE LIGHT AND ILLUMINATION LIGHT

Refer to “Clearance Light and Illumination Light System” in WI section. <Ref. to WI-107, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

#### B: INSPECTION

##### 1. LIGHTING SWITCH

Measure the resistance between lighting switch terminals. <Ref. to LI-12, LIGHTING SWITCH, INSPECTION, Combination Switch (Light).>

##### 2. DIMMER & PASSING SWITCH

Measure the resistance between dimmer & passing switch terminals. <Ref. to LI-12, DIMMER & PASSING SWITCH, INSPECTION, Combination Switch (Light).>

##### 3. HEADLIGHT RELAY

Measure the headlight relay resistance between terminals when connecting terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

##### 4. TAIL AND ILLUMINATION RELAY

Measure the resistance between the tail and illumination relay terminals when connecting terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

## 3. Day Time Running Light System

### A: WIRING DIAGRAM

Refer to “Headlight System” in WI section. <Ref. to WI-100, WIRING DIAGRAM, Headlight System.>

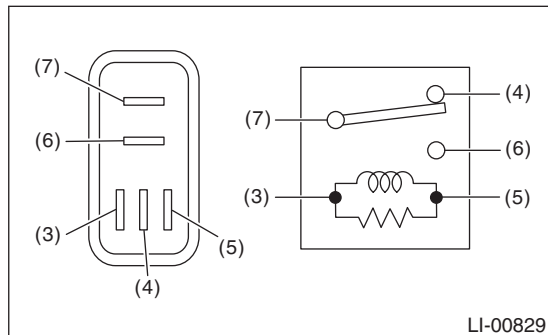

### B: INSPECTION

#### 1. DAYTIME RUNNING LIGHT MODULE CHECK

Step	Check	Yes	No
<b>1 CHECK DTC.</b> 1) Connect the Subaru Select Monitor. 2) Read the DTC of the integrated unit.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 2.
<b>2 CHECK INPUT SIGNAL.</b> 1) Display the current data of the integrated unit. 2) Check the following input signals. (1) Parking brake switch (2) Shift position (3) Light 2	Is the input signal normal?	Go to step 3.	Check the defective part.
<b>3 CHECK RELAY.</b> Check the daytime running light relay.	Is the relay OK?	Go to step 4.	Replace the relay.
<b>4 CHECK HARNESS.</b>	Is harness normal?	Replace the integrated unit.	Repair the harness.

#### 2. DAYTIME RUNNING LIGHT RELAY

Measure the resistance between the daytime running relay terminals when connecting terminal No. 3 to the battery positive terminal and terminal No. 5 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	7 and 6	Less than 1 Ω
No		1 MΩ or more
Yes	7 and 4	1 MΩ or more
No		Less than 1 Ω

# Front Fog Light System

LIGHTING SYSTEM

## 4. Front Fog Light System

### A: WIRING DIAGRAM

Refer to “Front Fog Light System” in WI section.  
<Ref. to WI-103, WIRING DIAGRAM, Front Fog Light System.>

### B: INSPECTION

#### 1. FRONT FOG LIGHT SWITCH

Measure the resistance between front fog light switch terminals. <Ref. to LI-12, FRONT FOG LIGHT SWITCH, INSPECTION, Combination Switch (Light).>

#### 2. FRONT FOG LIGHT RELAY

Connect terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal, and measure the front fog light relay resistance between terminals.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

## 5. Turn Signal Light and Hazard Light System

### A: WIRING DIAGRAM

Refer to “Turn Signal Light and Hazard Light System” in WI section. <Ref. to WI-112, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

### B: INSPECTION

#### 1. TURN SIGNAL SWITCH

Measure the resistance between turn signal switch terminals. <Ref. to LI-12, TURN SIGNAL SWITCH, INSPECTION, Combination Switch (Light).>

#### 2. HAZARD SWITCH

Measure the resistance between hazard switch terminals.

Switch position	Terminal No.	Standard
OFF	2 and 3	1 MΩ or more
ON		Less than 1 Ω

Replace the hazard switch if faulty.

#### 3. TURN SIGNAL AND HAZARD MODULE

Connect the battery and turn signal light bulb to the module. The module is properly functioning if it blinks when power is supplied to the circuit.

Replace the turn signal & hazard module if faulty.

## 6. Back-up Light System

### A: WIRING DIAGRAM

Refer to “Back-up Light System” in WI section.  
 <Ref. to WI-104, WIRING DIAGRAM, Back-up Light System.>

### B: INSPECTION

#### 1. BACK-UP LIGHT SWITCH (MT MODEL)

Measure the resistance between the back-up light switch terminals.

Switch position	Terminal No.	Standard
When shift lever is set in reverse position	1 and 2	Less than 1 $\Omega$
Other positions		1 M $\Omega$ or more

Replace the back-up light switch if faulty.

#### 2. INHIBITOR SWITCH (AT MODEL)

Measure the resistance between the inhibitor switch terminals.

Switch position	Terminal No.	Standard
When the selector lever is in the “R” range	7 and 8	Less than 1 $\Omega$
Other positions		1 M $\Omega$ or more

Replace the inhibitor switch if faulty.

## 7. Stop Light System

### A: WIRING DIAGRAM

Refer to “Stop Light System” in WI section. <Ref. to WI-105, WIRING DIAGRAM, Stop Light System.>

### B: INSPECTION

#### 1. STOP LIGHT SWITCH

Measure the resistance between stop light switch terminals.

- 5 door model

- 4 door model

Switch position	Terminal No.	Standard
When brake pedal is depressed	5 door model: 1 and 2	Less than 1 Ω
When brake pedal is released	4 door model: 3 and 4	

Replace the stop light switch if faulty.

# Room Light System

## LIGHTING SYSTEM

### 8. Room Light System

#### A: WIRING DIAGRAM

Refer to “Interior Light System” in WI section. <Ref. to WI-115, WIRING DIAGRAM, Interior Light System.>

#### B: INSPECTION

##### 1. DOOR SWITCH

Measure the resistance between door switch terminals.

Switch position	Terminal No.	Standard
When door is opened	1 and 3	Less than 1 $\Omega$
When door is closed		1 M $\Omega$ or more

Replace the door switch if faulty.

##### 2. REAR GATE LATCH SWITCH

Measure the resistance between rear gate latch switch terminals.

Switch position	Terminal No.	Standard
When rear gate is opened	3 and 4	Less than 1 $\Omega$
When rear gate is closed		1 M $\Omega$ or more

Replace the rear gate latch and actuator assembly if faulty.

##### 3. TRUNK LID SWITCH

Measure the resistance between trunk lid switch terminals.

Switch position	Terminal No.	Standard
When trunk lid is opened	1 and 3	Less than 1 $\Omega$
When trunk lid is closed		1 M $\Omega$ or more

Replace the trunk lid latch and actuator assembly if faulty.

## 9. Combination Switch (Light)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and remove the steering column cover lower.

- 3) Remove the three mounting screws of steering column cover upper.

- 4) Disconnect the connector from combination switch.
- 5) Remove the three screws, and pull out the combination base switch assembly.

- 6) Remove the screws which secure the switch, then remove the combination switch.

### B: INSTALLATION

Install in the reverse order of removal.

# Combination Switch (Light)

## LIGHTING SYSTEM

### C: INSPECTION

Measure the resistance between combination switch terminals.

### 4. FRONT FOG LIGHT SWITCH

Switch position	Terminal No.	Standard
OFF	11 and 10	1 M $\Omega$ or more
ON		Less than 1 $\Omega$

Replace the combination switch (light) if faulty.

### 1. LIGHTING SWITCH

Switch position	Terminal No.	Standard
OFF	—	1 M $\Omega$ or more
Tail	14 and 16	Less than 1 $\Omega$
Head	13, 14 and 16	Less than 1 $\Omega$

Replace the combination switch (light) if faulty.

### 2. DIMMER & PASSING SWITCH

Switch position	Terminal No.	Standard
Passing	7, 8 and 16	Less than 1 $\Omega$
High beam	7 and 16	Less than 1 $\Omega$

Replace the combination switch (light) if faulty.

### 3. TURN SIGNAL SWITCH

Switch position	Terminal No.	Standard
Left	1 and 2	Less than 1 $\Omega$
Neutral	—	1 M $\Omega$ or more
Right	3 and 2	Less than 1 $\Omega$

Replace the combination switch (light) if faulty.

## 10. Combination Base Switch Assembly

### A: REMOVAL

- 1) Remove the driver's airbag module. <Ref. to AB-15, REMOVAL, Driver's Airbag Module.>
- 2) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
- 3) Remove the combination switch. <Ref. to LI-11, REMOVAL, Combination Switch (Light).> <Ref. to WW-7, REMOVAL, Combination Switch (Wiper).>
- 4) Remove the four screws and remove the roll connector.

- 5) Remove the three screws.

- 6) Disconnect the harness connector and remove the combination base switch assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Before installing steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-26, ADJUSTMENT, Roll Connector.>

### C: INSPECTION

#### 1. COMBINATION BASE SWITCH ASSEMBLY

Inspect the combination base switch assembly and roll connector for cracks or deformation. If any damage is found, replace with a new part.

# Headlight Assembly

LIGHTING SYSTEM

## 11. Headlight Assembly

### A: REMOVAL

#### CAUTION:

- Do not perform work with wet hands.
- The HID headlight uses very high voltages for the lighting circuit. Make sure that the power is turned OFF before working.

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake duct. (When removing the headlight RH).

- 3) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>

- 4) Disconnect harness connectors.

- 5) Remove the five bolts and clip to remove the headlight assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**7.5 N·m (0.76 kgf·m, 5.5 ft·lb)**

### C: DISASSEMBLY

#### 1. HID HEADLIGHT BALLAST

#### CAUTION:

- Do not perform work with wet hands.
- The HID headlight uses very high voltages for the lighting circuit. Make sure that the power is turned OFF before working.

- Do not leave the headlight without the ballast for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from battery.
- 2) Remove the headlight assembly. <Ref. to LI-14, REMOVAL, Headlight Assembly.>

- 3) Remove the back cover.

- 4) Disconnect the harness connector.

- 5) Remove the harness connector and screws to pull out the ballast.

6) Remove the harness connector and screws on the back to remove the headlight ballast.

6) Turn the headlights on and then adjust the low beam pattern.

## D: ASSEMBLY

### 1. HID HEADLIGHT BALLAST

#### CAUTION:

- When installing the ballast cover, be sure to install the gasket.
- After installing the ballast to the vehicle, be sure to perform beam adjustment. Install in the reverse order of removal.

#### Tightening torque:

**1.3 N·m (0.13 kgf·m, 0.96 ft·lb)**

#### NOTE:

Adjust the projector lens to near the center of the extension opening before installing the ballast. This makes the beam adjustment work easier.

## E: ADJUSTMENT

### 1. HEADLIGHT BEAM ADJUSTMENT

#### CAUTION:

Turn off the light before adjusting the headlight beam level. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.

1) Before checking the headlight beam level, be sure of the following:

- The area around the headlight has not sustained any accident, damage or other type of deformation.
- Vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- Vehicle's fuel tank is fully filled.

2) For vehicle with a manual leveler, set the headlight beam leveler switch to the "0" position.

3) Bounce the vehicle several times to normalize the suspension.

4) Make certain that someone is seated in the driver's seat.

5) Measure the distance between the low beam bulb centers and the height of the bulb center.

- (1) Adjust the vertical beam level (A).
- (2) Adjust the horizontal beam level (B).

- (A) Vehicle center
- (B) Bulb center marking
- (C) 3 m (10 ft)
- (D) Height of headlight center

W mm (in)	h mm (in) at 3 m (10 ft)
1,160 (45.67)	30 (1.18)

# Headlight Bulb

## LIGHTING SYSTEM

### 12. Headlight Bulb

#### A: REMOVAL

##### 1. HIGH BEAM & HALOGEN TYPE LOW BEAM

###### CAUTION:

- Because the halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb's service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.

- Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake duct. (When removing the headlight bulb RH).

- 3) Remove the battery cover. (When removing the headlight bulb LH)
- 4) Tilt the washer tank filler neck. (When removing the headlight bulb LH)
- 5) Disconnect the harness connector.
- 6) Remove the bulb assembly (A) then remove the high beam. To remove the low beam, remove the back cover (B), and then go to step 7.

- 7) Disconnect the harness connector, and remove the bulb.

##### 2. HID TYPE LOW BEAM

###### CAUTION:

- Do not work with wet hands.
- Because the lighting circuit uses high voltage, be sure to confirm that the power supply is turned off before operation.

- When replacing the bulb, hold the flange portion, and never touch the glass.
- Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from the battery.
- 2) Remove the headlight assembly. <Ref. to LI-14, REMOVAL, Headlight Assembly.>
- 3) Remove the back cover.

- 4) Disconnect the harness connector.

5) Remove the light bulb retaining spring, and remove the bulb.

(3) Install bulbs with the same number of operating hours on both headlights, and light for approximately 30 minutes. Check for whether there is a difference in brightness on the right and left sides.

5) If there is a malfunction, replace with a new ballast.

## B: INSTALLATION

Install in the reverse order of removal.

## C: INSPECTION

### 1. HALOGEN TYPE

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

### 2. HID TYPE

#### CAUTION:

- Do not perform work with wet hands.
- When lit (lighting switch is ON), do not touch the harness, light internals, or metal parts of the light.
- When performing a lighting test, make sure that the headlight is mounted on the vehicle, and the power supply is connected to the connector on the vehicle's side.

- 1) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 2) Install the factory HID bulb to check whether it lights properly.
- 3) If it does not light properly, replace with a new bulb.
- 4) Inspect the HID ballast.

Inspect the ballast in the following manner, and determine whether or not to reuse.

(1) Perform cold starts (light the headlight after turning off for 10 minutes or more), and hot starts (light the headlight for 15 minutes or more, then turn off for 1 minute and relight) several times, to make sure that the headlight lights properly.

(2) Monitor the lighting condition right after a cold start up to a stable state (approx. 5 min.), to see if there are any unstable conditions such as flickering.

# Front Turn Signal Light Bulb

LIGHTING SYSTEM

---

## 13. Front Turn Signal Light Bulb

### A: REMOVAL

- 1) When removing the turn signal light bulb, fully turn the steering wheels to opposite direction from the turn signal light bulb to remove.
- 2) Disconnect the ground cable from battery.
- 3) Turn the mud guard inward.
- 4) Turn socket (A) from the wheel arch, and remove the front turn signal light bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 14. Clearance/Parking Light Bulb

### A: REMOVAL

- 1) When removing the clearance/parking light bulb, fully turn the steering wheels to opposite direction from the turn signal light bulb to remove.
- 2) Disconnect the ground cable from battery.
- 3) Turn the mud guard inward.
- 4) Turn socket (A) from the wheel arch, and remove the clearance/parking light bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

# Front Fog Light Assembly

LIGHTING SYSTEM

## 15. Front Fog Light Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disengage the two clips, and then turn over the mud guard.

- 3) Disconnect the harness connector.
- 4) Remove the upper clip and the lower bolt and clip, and then remove the fog light assembly.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

### C: ADJUSTMENT

#### 1. FOG LIGHT AIMING

- 1) Before checking the fog light beam level, be sure of the following:
  - The area around the fog light has not sustained any accident, damage or other type of deformation.
  - Vehicle is parked on a level surface.
  - The inflation pressure of tires is correct.
  - Vehicle's fuel tank is fully filled.
- 2) Bounce the vehicle several times to normalize the suspension.
- 3) Make certain that someone is seated in the driver's seat.
- 4) Disengage the two clips, and then turn over the mud guard.

5) Adjust the front fog light pattern by inserting a Philips screwdriver to the adjusting hole.

(1) Adjusting hole

- (A) Vehicle center
- (B) Bulb center marking
- (C) 3 m (10 ft)
- (D) Height of fog light center

h mm (in) at 3 m (10 ft)
60 (2.38)

## 16. Front Fog Light Bulb

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disengage the two clips, and then turn over the mud guard.

- 3) Disconnect the harness connector.
- 4) Rotate the bulb then detach the fog light bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 17. Rear Combination Light Assembly

### A: REMOVAL

#### 1. 4 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the trunk room side trim. <Ref. to EI-61, REMOVAL, Trunk Room Trim.>
- 3) Remove the harness connector and four nuts, and remove the rear combination light.

#### 2. 5 DOOR MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the two bolts, and then detach the rear combination light by pulling it to the rear side of vehicle.

- 3) Disconnect the harness connector and rear combination light.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**7.5 N·m (0.76 kgf·m, 5.5 ft·lb)**

### C: INSPECTION

#### 1. 4 DOOR MODEL

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. 5 DOOR MODEL

- 1) Install the rear combination light assembly and check that it blinks normally.
- 2) If it does not blink normally, replace the rear combination light assembly with a new part.

#### NOTE:

Since LED (Light Emitting Diode) is used for the tail light/stop light bulb, replace the rear combination light assembly if the LED burns out.

### 18. Tail/Stop Light Bulb

#### A: REMOVAL

##### 1. 4 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the trunk room side trim cover. <Ref. to EI-61, REMOVAL, Trunk Room Trim.>
- 3) Turn the socket and remove the bulb.

##### 2. 5 DOOR MODEL

Since LED (Light Emitting Diode) is used for the tail light / stop light bulb, they can not removed.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

##### 1. 4 DOOR MODEL

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

##### 2. 5 DOOR MODEL

- 1) Install the rear combination light assembly and check that it blinks normally.
- 2) If it does not blink normally, replace the rear combination light assembly with a new part.

#### NOTE:

Since LED (Light Emitting Diode) is used for the tail light/stop light bulb, replace the rear combination light assembly if the LED burns out.

## 19.Rear Turn Signal Light Bulb

### A: REMOVAL

#### 1. 4 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the trunk room side trim cover. <Ref. to EI-61, REMOVAL, Trunk Room Trim.>
- 3) Turn the socket and remove the bulb.

#### 2. 5 DOOR MODEL

- 1) Remove the rear combination light assembly. <Ref. to LI-23, 5 DOOR MODEL, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

# Rear Finisher Light Assembly

LIGHTING SYSTEM

---

## 20. Rear Finisher Light Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-66, REMOVAL, Rear Gate Trim.>
- 3) Disconnect the harness connector.
- 4) Remove the attachment nuts and remove the rear finisher light assembly.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**4.5 N·m (0.46 kgf-m, 3.3 ft-lb)**

## 21. Back-up Light Bulb

### A: REMOVAL

#### 1. 4 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the trunk room side trim cover. <Ref. to EI-61, REMOVAL, Trunk Room Trim.>
- 3) Turn the socket and remove the bulb.

#### 2. 5 DOOR MODEL

##### NOTE:

For models with a rear fog light, the back-up light is installed on the passenger's side.

- 1) Disconnect the ground cable from battery.
- 2) Remove the bulb inspection cover of the rear gate trim.
- 3) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 22. License Plate Light

### A: REMOVAL

#### 1. 4 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the license plate light mounting screw (A) and then remove the lens.

- 3) Remove the bulb.

#### 2. 5 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the license plate light while pushing it to the left and pulling it.

- 3) Remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 23.High-mounted Stop Light

### A: REMOVAL

#### 1. 4 DOOR MODEL (STANDARD TYPE)

- 1) Disconnect the ground cable from the battery.
- 2) Disconnect the connector of the high-mounted stop light from the body harness.
- 3) Remove the bolt, then remove the high-mounted stop light assembly.

#### 2. 4 DOOR MODEL (WITH BUILT-IN REAR SPOILER)

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear spoiler. <Ref. to EI-40, REMOVAL, Rear Spoiler.>
- 3) Remove the caps and screws, then detach the high-mounted stop light.

#### 3. 5 DOOR MODEL (WITH BUILT-IN SMALL TYPE ROOF SPOILER)

- 1) Disconnect the ground cable from the battery.
- 2) Remove the roof spoiler. <Ref. to EI-39, REMOVAL, Roof Spoiler.>

- 3) Remove the nuts, then detach the high-mounted stop light.

#### 4. 5 DOOR MODEL (WITH BUILT-IN LARGE TYPE ROOF SPOILER)

- 1) Disconnect the ground cable from battery.
- 2) Remove the roof spoiler. <Ref. to EI-39, REMOVAL, Roof Spoiler.>
- 3) Remove the caps and screws, then detach the high-mounted stop light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. 4 DOOR MODEL (STANDARD TYPE)

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. EXCEPT FOR 4 DOOR MODEL (STANDARD TYPE)

- 1) Install the high-mounted stop light to test if it illuminates normally.
- 2) If the high-mounted stop light does not illuminate, replace it with a new part.

#### NOTE:

Since LED (Light Emitting Diode) is used for the high-mounted stop light, replace the high-mounted stop light assembly if the LED burns out.

# Spot Map Light

## LIGHTING SYSTEM

### 24. Spot Map Light

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
  - 2) Remove the lens (A) and spot map light mounting screws (B).
- Model without sunroof

- Model with sunroof

- 3) Disconnect the harness connectors and remove the spot map light.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

##### 1. SPOT MAP LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

##### 2. SPOT MAP LIGHT SWITCH

Measure the spot map light resistance.

Switch position	Terminal No.	Standard
OFF	1 and 2	1 MΩ or more
ON	1 and 2	18±5.4 Ω

Replace the spot map light if faulty.

## 25. Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the lens (A) and mounting screws (B).

- 3) Disconnect the harness connector and remove the room light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. ROOM LIGHT SWITCH

- 1) Measure the resistance between room light switch terminals.

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
ON	1 and 3	1.5±0.5 Ω
DOOR	2 and 3	1.5±0.5 Ω

- 2) Connect terminal No. 3 to the battery positive terminal and terminal No. 1 and No. 2 to the battery ground terminal, and check room light operation.

Switch position	Light status
OFF	Light OFF
ON	Light ON
DOOR	Light ON

- 3) Replace the room light if faulty.

## 26. Luggage Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Insert a flat tip screwdriver into the edge of the luggage room light body to remove the luggage room light.

- 3) Disconnect the harness connector and remove the lens.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. LUGGAGE ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. LUGGAGE ROOM LIGHT SWITCH

Measure the resistance between luggage room light switch terminals.

Switch position	Terminal No.	Standard
OFF	1 and 2	1 M $\Omega$ or more
ON		Less than 1 $\Omega$

Replace the luggage room light if faulty.

## 27. Trunk Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Turn the trunk room light counterclockwise 60° to remove it and disconnect the harness connector.

- 3) Remove bulb (A).

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. TRUNK ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

# Ignition Switch Illumination

## LIGHTING SYSTEM

### 28. Ignition Switch Illumination

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and remove the steering column cover lower.

- 3) Remove the three mounting screws of steering column cover upper.

- 4) Remove the instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>
- 5) Disconnect the ignition switch illumination connector (A).
- 6) Turn the ignition switch illumination connector to the left and remove it.

- (A) Ignition switch illumination connector
- (B) Ignition switch illumination
- (C) Immobilizer antenna connector

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

Step	Check	Yes	No
1 <b>CHECK THE IGNITION SWITCH ILLUMINATION.</b> Make sure the ignition switch illumination illuminates when driver's side door is open.	Does the ignition switch illumination illuminate?	Ignition switch illumination is normal.	Go to step 2.
2 <b>CHECK THE IGNITION SWITCH ILLUMINATION.</b> Make sure the ignition switch illumination blinks when the ignition switch is turned to ON.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the ignition switch illumination circuit. <Ref. to SL-25, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>

## 29. Reflex Reflector

### A: REMOVAL

1) Remove the reflex reflector by pressing the claw of the reflex reflector from the backside of bumper.

### B: INSTALLATION

Install in the reverse order of removal.

### 30. Door Switch

#### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the screw, and pull out the door switch.

- 3) Disconnect the harness connector.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

Refer to the door switch inspection of the room light system. <Ref. to LI-10, DOOR SWITCH, INSPECTION, Room Light System.>

# General Description

## WIPER AND WASHER SYSTEMS

### 1. General Description

#### A: SPECIFICATION

Front wiper motor	Input	12 V — 72 W or less
Rear wiper motor	Input	12 V — 42 W or less
Front washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less
Rear washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less

#### B: COMPONENT

##### 1. FRONT WIPER

WW-00499

- (1) Wiper rubber
- (2) Wiper blade ASSY
- (3) Wiper arm

- (4) Wiper link
- (5) Wiper motor

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 6.0 (0.61, 4.4)**

**T2: 20 (2.04, 14.8)**

### 2. REAR WIPER

WW-00601

- (1) Wiper rubber
- (2) Wiper blade ASSY
- (3) Wiper arm

- (4) Wiper arm cover
- (5) Pivot cap
- (6) Wiper motor

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 6.0 (0.61, 4.4)**

**T2: 8.0 (0.82, 5.9)**

# General Description

## WIPER AND WASHER SYSTEMS

### 3. WASHER TANK

- |                                   |                        |
|-----------------------------------|------------------------|
| (1) Washer nozzle                 | (5) Front washer motor |
| (2) Washer hose                   | (6) Rear washer motor  |
| (3) Washer tank                   | (7) Grommet            |
| (4) Washer tank cap & level gauge | (8) Washer motor cover |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T: 6.0 (0.61, 4.4)**

### C: CAUTION

- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.
- Be careful with the airbag system wiring harness which passes near electrical parts and switches.
- Airbag system wiring harness connectors are yellow. Do not use a tester equipment on these circuits.
- Care must be taken when connecting the hose to the pipe so that no bending, jamming, etc. are caused.
- If even a small amount of silicon oil or grease enters tank and washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

# General Description

WIPER AND WASHER SYSTEMS

## D: PREPARATION TOOL

### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and troubleshooting for electrical system.

### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for checking voltage and continuity.

# Wiper and Washer System

## WIPER AND WASHER SYSTEMS

---

## 2. Wiper and Washer System

- Front wiper arm <Ref. to WW-14, Front Wiper Arm.>
- Front wiper motor & link <Ref. to WW-15, Front Wiper Motor and Link.>
- Rear wiper arm <Ref. to WW-18, Rear Wiper Arm.>
- Rear wiper motor <Ref. to WW-19, Rear Wiper Motor.>
- Washer tank & motor <Ref. to WW-13, Washer Tank and Motor.>
- Front washer nozzle <Ref. to WW-17, Front Washer Nozzle.>
- Rear washer nozzle <Ref. to WW-20, Rear Washer.>

## 3. Combination Switch (Wiper)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and remove the steering column cover lower.

- 3) Remove the three mounting screws of steering column cover upper.

- 4) Disconnect the connector from wiper switch.
- 5) Remove the screws and then remove the wiper switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- Inspect the continuity between each connector terminal.

	Switch position	Terminal No.	Standard
Front	OFF	7 and 16	Less than 1 Ω
	INT	7 and 16	Less than 1 Ω
	LO	7 and 17	Less than 1 Ω
	HI	8 and 17	Less than 1 Ω
	Washer ON	2 and 11	Less than 1 Ω
Rear	OFF	2 and 10 10 and 12 2 and 12	1 MΩ or more
	INT	2 and 13	Less than 1 Ω
	ON	2 and 10	Less than 1 Ω
	Washer ON	2 and 12	Less than 1 Ω

If continuity is not at the standard value, replace the switch.

# Combination Switch (Wiper)

## WIPER AND WASHER SYSTEMS

### 1. FRONT WIPER

1) Check with Subaru Select Monitor

When the front wiper switch is operated, check the input signal using the Subaru Select Monitor.

- (1) Prepare the Subaru Select Monitor kit.
- (2) Turn the ignition switch to ON.
- (3) On «System Selection Menu» display, select {Integ. unit mode}.
- (4) Select the {Current Data Display & Save}.
- (5) Check the input signal when the front wiper switch is set to LO or HI.

Is the input signal normal?

- Yes → Finish the diagnosis.
- No →
  1. Check the harness.
  2. Check ACC input voltage of body integrated unit.

#### **Connector & terminal**

##### **(B281) No. 5 (+) — Chassis ground (-):**

3. Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>

2) Check the intermittent operation (inspection of the wiper switch alone)

- (1) Set the voltage meter between terminal No. 7 (+) and No. 2 (-).
- (2) Connect the battery to connector. (Terminal No. 17 (+), terminal No. 2 & 16 (-))
- (3) Turn the front wiper switch to INT.
- (4) Connect the battery (+) to the terminal No. 16 for 5 seconds.
- (5) Connect the battery (-) to the terminal No. 16, and check the voltage between terminal No. 7 — No. 2 when performing the intermittent operation.
- (6) Perform step (1) to (5) above when intermittent control switch is in MIN or MAX, and replace the switch if the operation is not as specified.

#### **Intermittent stationary time**

**MIN: Approx. 4 seconds**

**MAX: Approx. 19 seconds**

(A): Connect the battery (-) to the terminal No. 16.

S: Intermittent downtime (sec.)

# Combination Switch (Wiper)

## 2. REAR WIPER

### 1) Check with Subaru Select Monitor

	Step	Check	Yes	No
1	<p><b>CHECK INPUT OF REAR WIPER SWITCH.</b> Check the input from body integrated unit using the Subaru Select Monitor.</p> <ol style="list-style-type: none"> <li>1) Prepare the Subaru Select Monitor kit.</li> <li>2) Turn the ignition switch to ON.</li> <li>3) On «System Selection Menu» display, select {Integ. unit mode}.</li> <li>4) Select the {Current Data Display &amp; Save}.</li> <li>5) Check the input of the rear wiper switch.</li> </ol>	Is the input normal?	Go to step 4.	Go to step 2.
2	<p><b>CHECK HARNESS.</b></p> <ol style="list-style-type: none"> <li>1) Turn the ignition switch to OFF, disconnect the ground cable from battery.</li> <li>2) Disconnect the connector of body integrated unit.</li> <li>3) Disconnect the connector from wiper switch.</li> <li>4) Measure the resistance between body integrated unit and wiper switch.</li> </ol> <p><b>Connector &amp; terminal</b> <b>(B281) No. 18 — (B70) No. 10:</b> <b>(B281) No. 27 — (B70) No. 13:</b> <b>(B281) No. 28 — (B70) No. 12:</b></p>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the harness between the body integrated unit and wiper switch.
3	<p><b>CHECK INPUT VOLTAGE OF BODY INTEGRATED UNIT.</b></p> <ol style="list-style-type: none"> <li>1) Connect the ground cable to battery.</li> <li>2) Turn the ignition switch to ACC.</li> <li>3) Check the input voltage of body integrated unit.</li> </ol> <p><b>Connector &amp; terminal</b> <b>(B280) No. 7 (+) — Chassis ground (-):</b></p>	Is the voltage 10 V or more?	Go to step 4.	Check the harness and fuse.
4	<p><b>CHECK OUTPUT OF BODY INTEGRATED UNIT.</b> When the rear wiper switch is operated, check the output using the Subaru Select Monitor.</p> <ol style="list-style-type: none"> <li>1) Turn the ignition switch to ON.</li> <li>2) Operate the rear wiper switch and set to each position of ON and INT.</li> <li>3) At this time, check the body integrated unit output.</li> </ol>	When set to ON, is ON output continuous? When set to INT, is ON/OFF output repeated? (INT OFF time (when vehicle parked): 12 seconds)	Check the rear wiper motor circuit.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>

# Combination Switch (Wiper)

## WIPER AND WASHER SYSTEMS

### 2) Check rear wiper motor circuit

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY CIRCUIT OF THE REAR WIPER MOTOR.</b> 1) Disconnect the harness connector of the rear wiper motor. 2) Turn the ignition switch to ACC. 3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(D43) No. 3 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	<ul style="list-style-type: none"> <li>• Check the fuse (No. 23 in fuse &amp; relay box).</li> <li>• Check the fusible link (No. 7 in main fuse box).</li> </ul>
<b>2 CHECK GROUND CIRCUIT OF REAR WIPER MOTOR.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(D43) No. 4 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the open circuit of the rear wiper motor ground circuit.
<b>3 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND REAR WIPER MOTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the harness connector of the rear wiper motor. 4) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor. <b>Connector &amp; terminal</b> <b>(B279) No. 8 — (D43) No. 1:</b> <b>(B279) No. 9 — (D43) No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the open circuit of the harness between body integrated unit and rear wiper motor.
<b>4 CHECK INPUT VOLTAGE OF BODY INTEGRATED UNIT.</b> 1) Turn the ignition switch to ACC. 2) Check the input voltage of body integrated unit. <b>Connector &amp; terminal</b> <b>(B279) No. 21 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 5.	Check the harness and fuse.
<b>5 CHECK OUTPUT OF BODY INTEGRATED UNIT.</b> 1) Connect the harness connector of body integrated unit. 2) Disconnect the connector of the rear wiper motor. 3) Turn the ignition switch to ACC. 4) Measure the voltage between rear wiper motor connector and chassis ground. <b>Connector &amp; terminal</b> <b>(D43) No. 2 (+) — Chassis ground (-):</b>	Is the voltage less than 1.5 V when rear wiper switch is OFF, and is the voltage 10 V or more when rear wiper switch is ON?	Go to step 6.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>
<b>6 CHECK OPERATION OF REAR WIPER MOTOR.</b> 1) Remove the rear wiper motor. 2) Check the rear wiper motor. <Ref. to WW-19, INSPECTION, Rear Wiper Motor.>	Does the rear wiper motor rotate normally?	End.	Replace the rear wiper motor.

## 4. Wiper Blade

### A: REMOVAL

#### 1. FRONT

- 1) While pushing the locking clip (A), push in the arm to the blade assembly side. (arrow mark 2)
- 2) Float and pull out the arm (arrow mark 3), and remove the blade assembly from the arm.

#### 2. REAR

Turn the blade in the direction of arrow (A) and remove it from arm.

(A) Turn the wiper blade.

- (1) Wiper arm
- (2) Wiper blade
- (3) Wiper blade attachment section

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Confirm that the clip is locked securely.

### C: DISASSEMBLY

#### 1. FRONT

Pull side (A) of the wiper rubber stopper and remove the rubber from the blade assembly.

#### 2. REAR

Pull the wiper rubber top slightly from stopper (A) and pull out completely.

# Wiper Blade

## WIPER AND WASHER SYSTEMS

### D: ASSEMBLY

#### 1. FRONT

1) Insert the wiper rubber onto the blade so that the stopper is in the position shown in the figure.

2) Make sure the wiper rubber is securely fastened to the pull stopper (A).

#### 2. REAR

1) Insert the wiper rubber into claw (B).

2) Insert the wiper rubber until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).

3) Insert the wiper rubber into claw (A).

### E: INSPECTION

1) When the wiper does not operate properly, inspect the following item.

- Make sure the movable part of blade assembly moves smoothly.
- Make sure the wiper rubber is not deformed or damaged.

2) Replace with a new part if damage is found.

## 5. Washer Tank and Motor

### A: REMOVAL

- 1) Open the front hood.
- 2) Disconnect the ground cable from battery.
- 3) Remove the front bumper face. <Ref. to EI-29, REMOVAL, Front Bumper.>
- 4) Remove the duct clip.

- 5) Disconnect the connector.

- 6) Remove the screws and detach the cover.

- 7) Disconnect the hoses.

- 8) Remove the bolts and nuts and remove the washer tank.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**6.0 N·m (0.61 kgf·m, 4.4 ft·lb)**

### C: DISASSEMBLY

Pull out the washer motor from the tank.

(A) Front

(B) Rear

### D: ASSEMBLY

- 1) Assemble in the reverse order of disassembly.
- 2) Confirm that water does not leak from installation area of motor.

### E: INSPECTION

Apply battery voltage to the connector terminal of the washer motor and make sure the motor operates.

### 6. Front Wiper Arm

#### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the cap.
- 3) Remove the nut and remove the arm.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate the wiper once.
- 3) Align the wiper blade to ceramic print point mark (A) of front window panel.

#### **Tightening torque:**

Refer to “COMPONENT” of “General Description”. <Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>

#### C: ADJUSTMENT

Operate the wiper once. Align the wiper blade to ceramic print point mark (A) of front window panel.

## 7. Front Wiper Motor and Link

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the cowl panel. <Ref. to EI-38, REMOVAL, Cowl Panel.>
- 3) Disconnect the connector of motor.
- 4) Remove the bolt, and then remove the wiper link.

- 5) Remove the bolts and nuts and remove the motor.

### B: INSTALLATION

- 1) Connect the ground cable to battery.
- 2) To confirm that the motor is at the auto stop position, connect the harness to the motor and turn the wiper switch to ON/OFF once.
- 3) Disconnect the ground cable from battery.
- 4) Tighten the nut where rod (A) and link plate (B) is aligned in a straight line.

- 5) Install in the reverse order of removal.

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>

### C: INSPECTION

- 1) When the battery is connected to the terminal of connectors as shown in the figure, confirm that the motor operates at low speed.

- 2) When the battery is connected to the terminal of connectors as shown in the figure, confirm that the wiper motor operates at high speed.

- 3) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating at low speed, and stop the wiper motor in mid-operation.

## Front Wiper Motor and Link

### WIPER AND WASHER SYSTEMS

---

4) Connect the battery and confirm that the motor stops at the automatic stop position after the motor operates at low speed again.

## 8. Front Washer Nozzle

### A: REMOVAL

- 1) Remove the washer hose from the washer nozzle.
- 2) Open the clips on the underside of the front hood with a thin screwdriver or other tool, and remove the washer nozzle.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. VISUAL CHECK

Check the following items, if a failure is found replace the parts.

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

#### 2. SPRAY POSITION CHECK

- 1) Turn the wiper switch to OFF position.
- 2) While the vehicle is at a standstill, make sure that the washer injection position is as shown in the figure.
- 3) After check, if the spray position is largely different from the position, replace with a new washer nozzle.

**Spray position:**

**A: 250 mm (9.84 in)**

**B: 315 mm (12.4 in)**

# Rear Wiper Arm

## WIPER AND WASHER SYSTEMS

### 9. Rear Wiper Arm

#### A: REMOVAL

- 1) Detach the wiper arm cover (A).

- 2) Remove the nut and remove the wiper arm.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate the rear wiper once.
- 3) Align the blade with the marking (A) of the glass.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>

#### C: ADJUSTMENT

- 1) Operate the rear wiper once.
- 2) Align the blade with the marking (A) of the glass.

## 10. Rear Wiper Motor

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear wiper arm. <Ref. to WW-18, REMOVAL, Rear Wiper Arm.>
- 3) Remove the rear gate lower trim. <Ref. to EI-66, REMOVAL, Rear Gate Trim.>
- 4) Disconnect the harness connector of wiper motor assembly.
- 5) Remove the bolt, and then remove the wiper motor assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Make sure that the pivot cap with the round mark facing up, as shown in the figure.

**Tightening torque:**

Refer to "COMPONENT" of "General Description". <Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>

### C: INSPECTION

- 1) Connect the battery to the wiper motor connector and confirm that wiper motor operates.

- 2) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating, and stop the wiper motor in mid-operation.

- 3) Connect the battery and confirm that the motor stops at the automatic stop position after the motor operates at low speed again.

### 11.Rear Washer

#### A: REMOVAL

- 1) Remove the high-mounted stop light. <Ref. to LI-29, REMOVAL, High-mounted Stop Light.>
- 2) Remove the washer hose from the washer nozzle.
- 3) Push the claw of the nozzle from the reverse side of roof spoiler with a flat tip screwdriver or equivalent, and remove the washer nozzle.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

##### 1. VISUAL CHECK

Check the following items, if a failure is found replace the parts.

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

##### 2. SPRAY POSITION CHECK

- 1) Turn the wiper switch to OFF position.
- 2) While the vehicle is at a standstill, make sure that the washer injection position is as shown in the figure.
- 3) After check, if the spray position is largely different from the position, replace with a new washer nozzle.

**Spray position:**

**A: 140 mm (5.5 in)**

**B: 70°**

## 1. General Description

### A: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

### B: PREPARATION TOOL

#### 1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

## 2. Audio System

### A: WIRING DIAGRAM

#### 1. AUDIO

<Ref. to WI-122, WIRING DIAGRAM, Audio System.>

### B: INSPECTION

Symptom	Repair order
No power coming in. (No display and no sound from speakers)	<ol style="list-style-type: none"> <li>1. Check the fuse and power supply for audio.</li> <li>2. Check the audio ground.</li> <li>3. Remove the audio for repair.</li> </ol>
A specific speaker does not operate.	<ol style="list-style-type: none"> <li>1. Check the speaker.</li> <li>2. Check the output circuit between audio and speaker.</li> </ol>
Audio generates noise with engine is running.	<ol style="list-style-type: none"> <li>1. Check the audio ground.</li> <li>2. Check the generator.</li> <li>3. Check the ignition coil.</li> <li>4. Remove the audio for repair.</li> </ol>
Volume is low in AM and FM modes or interference noise occurs.	<ol style="list-style-type: none"> <li>1. Check the antenna.</li> <li>2. Check the audio ground.</li> <li>3. Remove the audio for repair.</li> </ol>

### C: NOTE

For procedure of each component in the audio system, refer to the respective section.

- Audio unit <Ref. to ET-6, Audio.>
- Front speaker <Ref. to ET-7, Front Speaker.>
- Tweeter <Ref. to ET-8, Tweeter.>
- Rear speaker <Ref. to ET-9, Rear Speaker.>
- Antenna <Ref. to ET-10, Antenna.>

## 3. Navigation System

### A: WIRING DIAGRAM

<Ref. to WI-126, WIRING DIAGRAM, Navigation System.>

### B: INSPECTION

#### NOTE:

If there are no problems in the following “CHECK NAVIGATION OPERATION”, “CHECK DVD-ROM”, “CHECK CONNECTION” and “CHECK EACH VEHICLE SIGNAL”, check the navigation system circuit. <Ref. to WI-126, WIRING DIAGRAM, Navigation System.>

#### 1. CHECK THE OPERATION OF THE NAVIGATION

Start the engine, and then inspect that the opening screen is displayed.

Standard value: The opening screen should be displayed.

OK: Normal

NG: When not displayed, check the connecting lines for the power supply connector at the back side of the audio unit. If there are no problems in the connecting lines or the lines were repaired, check that the opening screen is displayed.

At this point, if the display is not viewable, the unit is defective.

#### 2. CHECK THE DVD-ROM

An opening screen is displayed, then it switches to the map screen by pressing the «Agree» key.

When a screen other than the opening screen is displayed, press the «MAP» key.

Standard value: The map screen should be displayed.

OK: Normal

NG: If the map screen is not displayed, the following causes are possible.

- The DVD-ROM is not set in the navigation system unit.
- The DVD-ROM is inserted with its wrong side.
- The type of DVD-ROM is wrong.
- The DVD-ROM has scratches etc.

If there are no problems on the DVD-ROM, the main body is defective.

### 3. CHECK CONNECTION

#### CHECK AUX

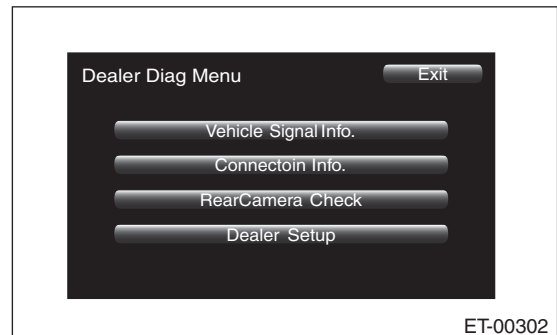

1) Press «Audio» key to display the Audio OFF screen.

2) Touch the screen in the order of (1) to (6) shown in the figure.

3) The display will switch to the Dealer Diag Menu screen.

4) Touch {Connection Info.} on the «Dealer Diag Menu» screen.

5) Check that “Connect” is displayed in the respective section of AUX.

Connect: Normal.

NC: Abnormal. Check the signal line connection. If there are no problems, the unit could be faulty.

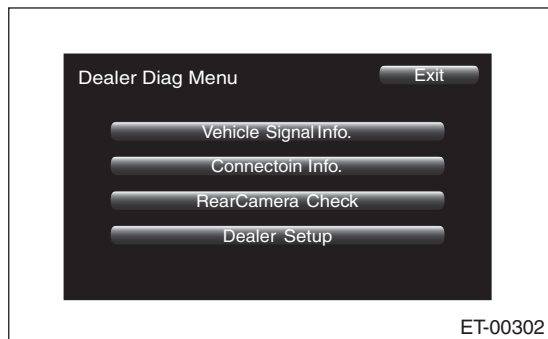

## 4. CHECK EACH VEHICLE SIGNAL

- 1) Press «Audio» key to display the Audio OFF screen.
- 2) Touch the screen in the order of (1) to (6) shown in the figure.

- 3) The display will switch to the Dealer Diag Menu screen.

### • CHECK GPS ANTENNA

#### NOTE:

When checking the GPS antenna, perform the check operation outdoors to improve the receiver sensitivity.

- 1) Touch {Vehicle Signal Info.} on the «Dealer Diag Menu» screen.
- 2) Check that “Connect” is displayed in the GPS Antenna item.

Connect: Normal.

NC: Abnormal. Check the GPS antenna connection.

### • CHECK BACK SENSOR

#### NOTE:

Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition switch to ON.

- 1) Touch {Vehicle Signal Info.} on the «Dealer Diag Menu» screen.
- 2) Pull the parking brake and depress the brake, then put the gear in reverse.
- 3) Make sure that “ON” is displayed in the Reverse item.

ON: Normal.

OFF: Abnormal. Check the signal line connection. If there are no problems, the unit could be faulty.

### • CHECK ILLUMINATION

#### NOTE:

Before starting inspections, turn the ignition switch to ON.

- 1) Touch {Vehicle Signal Info.} on the «Dealer Diag Menu» screen.

- 2) Turn the lighting switch to level 1.

Make sure that the bright switch is not turned ON at this time.

- 3) Make sure that “ON” lights in the Illumination item and then the screen fades out.

ON: Normal.

OFF: Abnormal. Check the signal line connection. If there are no problems, the unit could be faulty.

### • CHECK SPEED SENSOR

#### NOTE:

- Before starting inspections, check the safety around the vehicle.

- Lift up the vehicle as necessary.

- When the diagnostic trouble code is input in the VDCCM, perform the Clear Memory operation.

- 1) Touch {Vehicle Signal Info.} on the «Dealer Diag Menu» screen.

- 2) Move the vehicle 2 to 3 meters (6.6 to 9.8 ft).

- 3) Check that “ON” is displayed in the Speed item.

ON: Normal.

OFF: Abnormal. Check the signal line connection. If there are no problems, the unit could be faulty.

### • CHECK IGNITION SIGNAL

- 1) Touch {Vehicle Signal Info.} on the «Dealer Diag Menu» screen.

- 2) Turn the ignition switch to ON.

- 3) Check that “ON” is displayed in the IGN item.

ON: Normal.

OFF: Abnormal. Check the signal line connection. If there are no problems, the unit could be faulty.

### • CHECK PARKING BRAKE SIGNAL

- 1) Touch {Vehicle Signal Info.} on the «Dealer Diag Menu» screen.

- 2) Pull parking brake lever.

- 3) Check that “ON” is displayed in the Parking item.

ON: Normal.

OFF: Abnormal. Check the signal line connection. If there are no problems, the unit could be faulty.

## C: NOTE

For procedure of each component in the navigation system, refer to the respective section.

- Navigation unit <Ref. to ET-12, Navigation Body.>

- GPS antenna <Ref. to ET-13, GPS Antenna.>

## 4. Audio

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the center panel. <Ref. to EI-49, CENTER PANEL, REMOVAL, Center Console.>
- 3) Remove the screws, and partially pull the audio out from center console.

- 4) Disconnect the harness connectors and antenna feeder cord.
- 5) Remove the audio.
- 6) Remove the screws and detach the satellite radio unit.

### B: INSTALLATION

Install in the reverse order of removal.

## 5. Front Speaker

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the front speaker mounting screws.

- 4) Disconnect the harness connector and remove the front speaker.

### B: INSTALLATION

Install in the reverse order of removal.

## 6. Tweeter

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door gusset cover. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Disconnect the harness connector.
- 4) Remove the screws and detach the tweeter.

### B: INSTALLATION

Install in the reverse order of removal.

## 7. Rear Speaker

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the rear speaker mounting screws.

- 4) Disconnect the harness connector and remove the rear speaker.

### B: INSTALLATION

Install in the reverse order of removal.

## 8. Antenna

### A: REMOVAL

- 1) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 2) Disconnect the harness connectors and terminals and remove the fitting nut (A).

- 3) Pull off the antenna from the roof.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Check for cracks or damages.  
If any cracks or damages, replace the antenna.

## 9. Steering Satellite Switch

### A: REMOVAL

**WARNING:**

Before servicing, be sure to read the notes in the “AB” section for proper handling of the driver’s airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using TORX® bit T30 (1), loosen two TORX® bolts which secure the driver’s airbag module.

- 5) Disconnect the airbag module connector on back of the airbag module. <Ref. to AB-8, PROCEDURE, Airbag Connector.>
- 6) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
- 7) Remove the screws to remove the lower cover from steering wheel.

- 8) Loosen the screws on the backside of the steering wheel and remove the satellite switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the resistance between satellite switch connector terminals.

Switch	Position	Terminal No.	Standard
Mute Volume (+) Volume (-) Mode SEEK (∧) SEEK (∨)	All OFF	4 and 5	Approx. 4.7 kΩ
Mute	ON	4 and 5	Approx. 22 Ω
Volume (+)	ON	4 and 5	Approx. 90 Ω
Volume (-)	ON	4 and 5	Approx. 200 Ω
Mode	ON	4 and 5	Approx. 360 Ω
SEEK (∧)	ON	4 and 5	Approx. 690 Ω
SEEK (∨)	ON	4 and 5	Approx. 1.5 kΩ

If the result of the measurement is not at the standard value, replace the satellite switch.

### **10.Navigation Body**

#### **A: PROCEDURE**

For the removal and installation operation procedures of navigation unit, refer to the removal and installation procedures of the audio unit. <Ref. to ET-6, Audio.>

## 11. GPS Antenna

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the center panel. <Ref. to EI-49, CENTER PANEL, REMOVAL, Center Console.>
- 3) Remove the audio. <Ref. to ET-6, REMOVAL, Audio.>
- 4) Disconnect the connector (green) of GPS antenna.

#### NOTE:

Attach a string of about 50 cm in length, etc. to the GPS antenna for easy installation work.

5) Remove the combination meter assembly. <Ref. to IDI-16, REMOVAL, Combination Meter.>

6) Remove the screw and harness clamp to remove the GPS antenna.

#### NOTE:

When the GPS antenna harness connector is pulled out, remove the string attached to the connector in step 4).

### B: INSTALLATION

Install in the reverse order of removal.

# Front Accessory Power Supply Socket

ENTERTAINMENT

---

## 12. Front Accessory Power Supply Socket

### A: WIRING DIAGRAM

<Ref. to WI-124, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

### B: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower. <Ref. to EI-51, INSTRUMENT PANEL, LOWER, REMOVAL, Center Console.>
- 3) Disconnect the harness connectors and remove the front accessory power supply socket.

### C: INSTALLATION

Install in the reverse order of removal.

## 13. Rear Accessory Power Supply Socket

### A: WIRING DIAGRAM

<Ref. to WI-125, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

### B: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>
- 3) Disconnect the harness connector, and remove the claws (two) in accessory power supply socket.
- 4) Pull the accessory power supply socket out to remove.

### C: INSTALLATION

Install in the reverse order of removal.

## 14.AUX Input Terminal

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>
- 3) Disconnect the harness connector.
- 4) Disengage four claws, and remove the AUX input terminal by pushing it into the console box.

### B: INSTALLATION

Install in the reverse order of removal.

### 1. General Description

#### A: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the radio, control unit, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

#### B: PREPARATION TOOL

##### 1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX® T30	Used for removal/installation of driver's airbag module.

## 2. Horn System

### A: WIRING DIAGRAM

Refer to “Horn System” in WI section. <Ref. to WI-129, WIRING DIAGRAM, Horn System.>

### B: INSPECTION

#### 1. HORN RELAY

Measure the horn relay resistance between terminals when connecting terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

### C: NOTE

For procedure of each component in the horn system, refer to the respective section.

- Horn assembly <Ref. to COM-4, Horn.>
- Horn switch <Ref. to COM-5, Horn Switch.>

### 3. Horn

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Disconnect the harness connector.
- 4) Remove the horn bracket mounting bolt, and remove the horn assembly.

- (1) Lo side horn
- (2) Hi side horn

#### B: INSTALLATION

Install in the reverse order of removal.

##### *Tightening torque:*

**Lo side: 18 N·m (1.8 kgf-m, 13.3 ft-lb)**

**Hi side: 13 N·m (1.3 kgf-m, 9.6 ft-lb)**

#### C: INSPECTION

With 12 V direct current supply between horn terminal and case ground, check that the horn sounds properly.

If defective, replace the horn.

## 4. Horn Switch

### A: REMOVAL

#### WARNING:

Before servicing, be sure to read the notes in the AB section for proper handling of the driver's airbag module. <Ref. to AB-5, CAUTION, General Description.>

#### NOTE:

Horn switch is a unit with the driver's airbag module.

- 1) Disconnect the ground cable from battery.
- 2) Remove the driver's airbag module. <Ref. to AB-15, REMOVAL, Driver's Airbag Module.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the resistance between horn switch terminal and airbag module bracket.

- (1) Horn switch terminal
- (2) Airbag module bracket

Switch position	Terminal No.	Resistance
The airbag module bracket being pushed	Horn switch terminal and airbag module bracket	Less than 1 $\Omega$
The airbag module bracket being separated		1 M $\Omega$ or more

If defective, replace the driver's airbag module.

# Horn Switch

### B: CAUTION

- When electrical connectors are disconnected, always conduct an operational check after connecting them again.
- Avoid impact and damage to the glass.

## C: PREPARATION TOOL

### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST1B022XU0</p>	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system.

### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for checking voltage and continuity.
Piano wire	Used for removing the window glass.
Cutter knife	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.

# Power Window System

GLASS/WINDOWS/MIRRORS

---

## 2. Power Window System

### A: WIRING DIAGRAM

Refer to "Power Window System" in WI section. <Ref. to WI-130, WIRING DIAGRAM, Power Window System.>

### B: INSPECTION

Symptom	Repair order
All power windows do not operate.	<ol style="list-style-type: none"><li>1. Fuse (SBF-4)</li><li>2. Power window circuit breaker</li><li>3. Power window relay</li><li>4. Wiring harness</li></ol>
Particular window does not operate.	<ol style="list-style-type: none"><li>1. Power window main switch</li><li>2. Power window sub-switch</li><li>3. Power window motor</li><li>4. Wiring harness</li></ol>
"Window Lock" does not operate.	Power window main switch

### C: NOTE

For procedure of each component in the power window system, refer to the respective section.

- Power window control switch <Ref. to GW-9, Power Window Control Switch.>
- Front door glass <Ref. to GW-11, Front Door Glass.>
- Front regulator & motor assembly <Ref. to GW-12, Front Regulator and Motor Assembly.>
- Rear door glass <Ref. to GW-18, Rear Door Glass.>
- Rear regulator & motor assembly <Ref. to GW-19, Rear Regulator and Motor Assembly.>

## 3. Power Window Control Switch

### A: REMOVAL

#### 1. MAIN SWITCH

- 1) Disconnect the ground cable from battery.
- 2) Open the screw cover by using a flat tip screwdriver.
- 3) Remove the screw to remove the power window main switch panel.

#### NOTE:

Remove it from the cutout portion at the tip of the switch panel.

- 4) Disconnect the harness connector.
- 5) Remove the screws to remove the power window main switch assembly.

#### 2. SUB-SWITCH

- 1) Open the screw cover by using a flat tip screwdriver.
- 2) Remove the screw to remove the power window main switch panel.

#### NOTE:

Remove it from the cutout portion at the tip of the switch panel.

- 3) Disconnect the harness connector.
- 4) Remove the screws to remove the power window sub-switch assembly.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. MAIN SWITCH

- 1) Remove the main switch. <Ref. to GW-9, MAIN SWITCH, REMOVAL, Power Window Control Switch.>

# Power Window Control Switch

## GLASS/WINDOWS/MIRRORS

2) Measure the main switch resistance.

	Switch position	Terminal No.	Standard
Driver's side	UP	14 and 16 13 and 19	Less than 1 $\Omega$
	OFF	14 and 13 14 and 16	1 M $\Omega$ or more
		17 and 18	Less than 1 $\Omega$
	DOWN	14 and 13 16 and 19	Less than 1 $\Omega$
Passenger's side	AUTO DOWN	14 and 13 16 and 19	Less than 1 $\Omega$
	UP	14 and 8 12 and 19	Less than 1 $\Omega$
		14 and 12 14 and 8	1 M $\Omega$ or more
	OFF	8 and 12 8 and 19 12 and 19	Less than 1 $\Omega$
DOWN		14 and 12 8 and 19	Less than 1 $\Omega$
Rear LH	UP	14 and 7 5 and 19	Less than 1 $\Omega$
	OFF	14 and 7 14 and 5	1 M $\Omega$ or more
		19 and 7 19 and 5 7 and 5	Less than 1 $\Omega$
DOWN	14 and 5 7 and 19	Less than 1 $\Omega$	
Rear RH	UP	14 and 1 3 and 19	Less than 1 $\Omega$
	OFF	14 and 1 14 and 3	1 M $\Omega$ or more
		19 and 3 19 and 1 3 and 1	Less than 1 $\Omega$
	DOWN	14 and 3 1 and 19	Less than 1 $\Omega$

Replace the main switch if faulty.

## 2. SUB-SWITCH

1) Remove the sub-switch. <Ref. to GW-9, SUB-SWITCH, REMOVAL, Power Window Control Switch.>

2) Measure the sub-switch resistance.

	Switch position	Terminal No.	Standard
Passenger seat, rear	UP	4 and 5 6 and 7	Less than 1 $\Omega$
	OFF	7 and 4 8 and 4	1 M $\Omega$ or more
		5 and 8 6 and 7	Less than 1 $\Omega$
	DOWN	4 and 6 5 and 8	Less than 1 $\Omega$

Replace the sub-switch if faulty.

## 4. Front Door Glass

### A: REMOVAL

- 1) Remove the front door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-22, REMOVAL, Front Sealing Cover.>
- 3) Operate the power window switch to move the glass, and remove the two bolts.

- 4) Tilt the door glass forward and remove the door glass from the glass run rubber.
- 5) Remove the door glass while tilting.

### CAUTION:

**Avoid impact and damage to the glass.**

### B: INSTALLATION

#### CAUTION:

**Make sure that the glass run rubber is placed securely in door frame and sash.**

Install in the reverse order of removal.

#### *Tightening torque:*

**Refer to "COMPONENT" of "General Description". <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>**

# Front Regulator and Motor Assembly

GLASS/WINDOWS/MIRRORS

---

## 5. Front Regulator and Motor Assembly

### A: REMOVAL

- 1) Remove the door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 2) Disconnect the motor connector.
- 3) Remove seven bolts to remove the front regulator and motor assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>**

### C: INSPECTION

- 1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
- 2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.

## 6. Remote Control Mirror System

### A: WIRING DIAGRAM

Refer to “Remote Control Mirror System” in WI section. <Ref. to WI-134, WIRING DIAGRAM, Remote Control Mirror System.>

### B: INSPECTION

Symptom	Repair order
All function does not operate.	<ol style="list-style-type: none"> <li>1. Fuse (F/B No. 6)</li> <li>2. Mirror switch</li> <li>3. Wiring harness</li> </ol>
One side of the mirror motor does not operate.	<ol style="list-style-type: none"> <li>1. Mirror switch</li> <li>2. Mirror motor</li> <li>3. Wiring harness</li> </ol>
Mirror heater does not operate.	<ol style="list-style-type: none"> <li>1. Defogger switch</li> <li>2. Mirror heater</li> <li>3. Wiring harness</li> </ol>

### C: NOTE

For procedure of each component in the remote control mirror system, refer to the respective section.

- Scalp cap <Ref. to GW-14, Scalp Cap.>
- Outer mirror assembly <Ref. to GW-15, Outer Mirror Assembly.>
- Outer mirror <Ref. to GW-16, Outer Mirror.>
- Remote control mirror switch <Ref. to GW-17, Remote Control Mirror Switch.>

## 7. Scalp Cap

### A: REPLACEMENT

- 1) Remove the mirror. <Ref. to GW-16, REPLACEMENT, Outer Mirror.>
- 2) Press-in the clips (A) from inside of outer mirror.

- 3) Pull the scalp cap towards the front of the outer mirror, then remove the scalp cap.
- 4) Align clips (A) on the reverse side of the scalp cap and the clip attachment hole of the outer mirror, and push the scalp cap in.

- 5) Install the scalp cap and lower cover securely.

## 8. Outer Mirror Assembly

### A: REMOVAL

- 1) Remove the front door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 2) Disconnect the outer mirror connector.
- 3) Remove the bolt, and remove the outer mirror assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**4.5 N·m (0.46 kgf·m, 3.3 ft·lb)**

### C: INSPECTION

Check to ensure that the outer mirror moves properly when the battery voltage is applied to terminals.

#### Model without mirror heater

Switch position	Terminal No.
OFF	—
UP	6 (+) and 3 (-)
DOWN	3 (+) and 6 (-)
LEFT	7 (+) and 3 (-)
RIGHT	3 (+) and 7 (-)

Replace the outer mirror if defective.

#### Model with mirror heater

Switch position	Terminal No.
OFF	—
UP	7 (+) and 3 (-)
DOWN	3 (+) and 7 (-)
LEFT	8 (+) and 3 (-)
RIGHT	3 (+) and 8 (-)

Replace the outer mirror if defective.

## 9. Outer Mirror

### A: REPLACEMENT

#### CAUTION:

- When removing the mirror, be careful not to damage the back surface of mirror with a flat tip screwdriver.
  - When installing the mirror, insert the fitting area securely.
- 1) Face the mirror upward.
  - 2) Use a flat tip screwdriver to remove clips (A).
  - 3) Lift the lower mirror up to remove hooks (B).

- 4) Disconnect the mirror heater connector from side of the mirror. (Model with mirror heater)

- 5) Catch the hooks (B) and install clips (A).

## 10. Remote Control Mirror Switch

### A: REMOVAL

- 1) Remove the instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>
- 2) Remove the remote control mirror switch from instrument panel lower cover.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Move the remote control mirror switch to each position and check continuity between terminals.

- Switch the change over switch to the right side:

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
UP	8 and 3, 6 and 7	Less than 1 Ω
DOWN	8 and 6, 3 and 7	Less than 1 Ω
LEFT	8 and 2, 6 and 7	Less than 1 Ω
RIGHT	8 and 6, 2 and 7	Less than 1 Ω

- Switch the change over switch to the left side:

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
UP	8 and 4, 6 and 7	Less than 1 Ω
DOWN	8 and 6, 4 and 7	Less than 1 Ω
LEFT	8 and 5, 6 and 7	Less than 1 Ω
RIGHT	8 and 6, 5 and 7	Less than 1 Ω

If NG, replace the remote control mirror switch.

# Rear Door Glass

GLASS/WINDOWS/MIRRORS

## 11.Rear Door Glass

### A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-25, REMOVAL, Rear Sealing Cover.>
- 3) Operate the power window switch to move the glass, and remove the two bolts.

- 4) Remove the glass from the carrier plate, and while holding the glass, lower the carrier plate alone to the lowest position.

### CAUTION:

**Without the carrier plate lowered to the bottom most position, do not lower the glass by itself to the lowest position within the door panel. The glass may come off of the sash, and become damaged.**

- 5) Lower the glass slowly to the bottom most position in the door panel.
- 6) Remove the bolts and nuts, and then remove the sash. (Detach starting from the upper holding points.)

- 7) Remove the glass run rubber.
- 8) Remove the door glass while tilting.

### CAUTION:

**Avoid impact and damage to the glass.**

### B: INSTALLATION

#### CAUTION:

**Make sure that the glass run rubber is placed securely in door frame and sash.**

Install in the reverse order of removal.

#### Tightening torque:

**Refer to "COMPONENT" of "General Description". <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>**

## 12. Rear Regulator and Motor Assembly

### A: REMOVAL

- 1) Remove the rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 2) Disconnect the motor connector.
- 3) Remove six bolts to remove the rear regulator and motor assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>**

### C: INSPECTION

- 1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
- 2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.

# Windshield Glass

GLASS/WINDOWS/MIRRORS

## 13. Windshield Glass

### A: REMOVAL

#### 1. WHEN USING WINDSHIELD GLASS KNIFE

##### CAUTION:

Apply protective tape, etc, and be careful that the inner and outer components of the vehicle are not damaged.

- 1) Disconnect the ground cable from battery. (Model with wiper deicer)
- 2) Remove the front pillar upper trim. <Ref. to EI-57, REMOVAL, Upper Inner Trim.>
- 3) Disconnect the wiper deicer connector. (Model with wiper deicer)
- 4) Remove the cowl panel. <Ref. to EI-38, REMOVAL, Cowl Panel.>
- 5) Remove the glass molding.
- 6) Tape the body side of the circumference of windshield glass for protection.
- 7) Apply sufficient amount of soapy water to the adhesive part.
- 8) Make a slit using a cutter knife to make it easier to insert the windshield glass knife.
- 9) Insert the windshield glass knife into the adhesive.

10) While holding the knife edge and windshield glass edge at a right angle, move the windshield glass knife in parallel to the windshield glass edge along the surface and edge of windshield glass to cut the adhesive part.

- (1) Tape for protection
- (2) Locating pin
- (3) Cutter knife
- (4) Windshield glass knife

##### NOTE:

- Do not twist the windshield glass knife.
- Cutting of adhesive part shall be started with wider gap between windshield glass and body.
- The locating pins are bonded to the corners of glass. Use piano wire to disconnect the pins.

- (1) Locating pin
- (2) Body panel
- (3) Windshield glass

## 2. WHEN USING PIANO WIRE

### CAUTION:

- Do not tightly pull the piano wire against the windshield glass edge.
- Apply protective tape, etc, and be careful that the inner and outer components are not damaged.
- Do not cross piano wires. Otherwise they may be cut.

- 1) Disconnect the ground cable from battery. (Model with wiper deicer)
- 2) Remove the front pillar upper trim. <Ref. to EI-57, REMOVAL, Upper Inner Trim.>
- 3) Disconnect the wiper deicer connector. (Model with wiper deicer)
- 4) Remove the cowl panel. <Ref. to EI-38, REMOVAL, Cowl Panel.>
- 5) Remove the glass molding.
- 6) Tape the body side of the circumference of windshield glass for protection.
- 7) Make a hole in the adhesive part using drill or cutter knife.
- 8) Pass the piano wire through the hole, and attach both the wire ends securely to pieces of wood.

- 9) Pull the wire ends alternately to cut off the adhesive part.

## B: INSTALLATION

- 1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

- (1) 10 mm (0.39 in)
- (2) 8 mm (0.31 in)

- 2) Clean the external circumference of windshield glass with alcohol or white gasoline.
- 3) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

### CAUTION:

Be careful not to damage the body and paint surface.

- (1) Adhesive
- (2) 2 mm (0.08 in)
- (3) Dam rubber
- (4) Glass

- 4) Clean the body with alcohol or white gasoline to eliminate cutting powder, dust and dirt completely from body.
- 5) Install the dam rubber.

- (1) Locating pin
- (2) Dam rubber
- (3) 11 mm (0.43 in)
- (4) 14.5 mm (0.57 in)

# Windshield Glass

## GLASS/WINDOWS/MIRRORS

6) Attach the seal to the glass. (driver's side only)

- (1) Adhesive
- (2) Dam rubber
- (3) Ceramic print cutout portion
- (4) Seal

**NOTE:**

Attach the seal between the ceramic print cutout portions (3) located at the lower edge of the glass (driver's seat side).

Attach the seal and dam rubber so that there are no gap by pressing on them.

7) Install the molding to the glass.

- (1) Align the molding (A) with both ends of the upper edge of the windshield glass (C).
- (2) Install the molding from both corners of the upper edge toward the center.
- (3) Install the molding from both corners of the upper edge toward the lower side.
- (4) Apply the double-sided tapes (B) of the molding uniformly on both sides of the glass.

8) Apply the seal to the molding.

- (1) Locating pin
- (2) Dam rubber
- (3) Seal
- (4) Molding
- (5) 3 mm (0.12 in)
- (6) 165 mm (6.50 in)
- (7) Adhesive

**NOTE:**

Apply so that the seal does not overlap out to the adhesive side (5).

9) Apply the primer to the adhesive surface of glass side and body side using sponge.

**Primer for glass:**  
**Dow Automotive's**  
**ESSEX U-401, U-402**

**Painted surface primer:**  
**Dow Automotive's**  
**ESSEX U-413**

**NOTE:**

- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
- Let primer dry for about ten minutes before installing the glass.
- Do not touch the surface coated with primer.

- (1) Application of primer
- (2) Glass side
- (3) Body side
- (4) Molding
- (5) Dam rubber

10) Apply adhesive to the glass end surface as shown.

**Adhesive:**  
**Dow Automotive's**  
**ESSEX U-400HV or equivalent**

- (1) Molding
- (2) Locating pin
- (3) Dam rubber
- (4) Adhesive
- (5) Seal (driver's side only)

# Windshield Glass

## GLASS/WINDOWS/MIRRORS

- A Upper end
- B Lower end
- C Side end

- (1) Glass
- (2) Molding
- (3) Adhesive
- (4) Dam rubber
- (5) Cowl panel

11) Fit the locating pins to vehicle body using suction rubber cup to install the windshield glass.

12) Lightly press the windshield glass for tight fit.  
13) Make flush the adhesive surface jugged out using spatula.

14) After completion of all work, allow the vehicle to stand for about 24 hours.

### NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

15) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

### NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

16) Install the cowl panel. <Ref. to EI-38, INSTALLATION, Cowl Panel.>

17) Connect the wiper deicer connector. (Model with wiper deicer)

18) Install the front pillar upper trim. <Ref. to EI-57, INSTALLATION, Upper Inner Trim.>

## 14.Rear Gate Glass

### A: REMOVAL

- 1) Remove the rear spoiler. <Ref. to EI-39, REMOVAL, Roof Spoiler.>
- 2) Remove the rear wiper motor. <Ref. to WW-19, REMOVAL, Rear Wiper Motor.>
- 3) Disconnect the electrical connectors from rear defogger terminal.
- 4) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-20, REMOVAL, Windshield Glass.>

### B: INSTALLATION

- 1) Apply the primer to the glass and body sides in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>
- 2) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

- (1) 10 mm (0.39 in)
- (2) 8 mm (0.31 in)

- 3) Apply adhesive in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

- (1) Glass
- (2) Adhesive
- (3) Molding
- (4) Spacer
- (5) Heat wire terminal
- (6) Seal

# Rear Gate Glass

## GLASS/WINDOWS/MIRRORS

- A Upper end
- B Lower end
- C Side end

- (1) Glass
- (2) Adhesive
- (3) Molding

4) Insert the glass locating pin into the hole on rear gate panel and push on the area around the locating pin to secure it.

### NOTE:

Insert the locating pin into the lower hole of the rear gate panel.

5) Push lightly all around the locating pin to seal it.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

### NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

7) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

### NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

8) Connect the rear defogger terminals.

9) Install the rear wiper. <Ref. to WW-19, INSTALLATION, Rear Wiper Motor.>

10) Install the rear spoiler. <Ref. to EI-39, INSTALLATION, Roof Spoiler.>

## 15.Rear Window Glass

### A: REMOVAL

- 1) Remove the rear wiper motor. <Ref. to WW-19, REMOVAL, Rear Wiper Motor.>
- 2) Disconnect the connectors from rear defogger terminal.
- 3) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-20, REMOVAL, Windshield Glass.>

### B: INSTALLATION

- 1) Apply the primer to the glass and body sides in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>
- 2) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

- (1) 10 mm (0.39 in)
- (2) 8 mm (0.31 in)

- 3) Apply adhesive with the dam rubber installed in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

- (1) Molding
- (2) Locating pin (adhered)
- (3) Dam rubber
- (4) Adhesive
- (5) Spacer

# Rear Window Glass

## GLASS/WINDOWS/MIRRORS

- A Upper end
- B Lower end
- C Side end

- (1) Glass
- (2) Adhesive
- (3) Dam rubber
- (4) Molding

4) Install the glass in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

5) After completion of all work, allow the vehicle to stand for about 24 hours.

### NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

6) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

### NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

7) Connect the rear defogger terminals.

8) Install the rear wiper motor. <Ref. to WW-19, INSTALLATION, Rear Wiper Motor.>

## 16. Rear Window Defogger System

### A: WIRING DIAGRAM

Refer to “Rear Defogger System” in WI section. <Ref. to WI-135, WIRING DIAGRAM, Rear Defogger System.>

### B: INSPECTION

#### 1. SYSTEM INSPECTION

Symptom	Repair order
Rear window defogger does not operate.	<ol style="list-style-type: none"> <li>1. Fuse (M/B No. 10)</li> <li>2. Rear defogger relay</li> <li>3. Defogger switch</li> <li>4. Heat wire</li> <li>5. Wiring harness</li> <li>6. Body integrated unit</li> </ol>

**NOTE:**

Rear window defogger system can be customized on the Subaru Select Monitor.

System name	Initial setting	Customize setting
Rear window defogger timer	OFF after 15 min.	Repeat 15 min. operation and 2 min. stop.

#### 2. CHECK WITH SUBARU SELECT MONITOR

**CAUTION:**

**Check that the rear window defogger timer is in initial setting or customize setting before performing inspection.**

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.

(1) Prepare the Subaru Select Monitor. <Ref. to GW-7, PREPARATION TOOL, General Description.>

(2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.

(3) On «System Selection Menu» display, select {Integ. unit mode}.

(4) Select the {Current Data Display & Save}.

(5) Display the data of rear window defogger switch.

2) After rear window defogger switch is set to ON, check whether it turns to OFF in 15 minutes or repeats 15 minutes operation and 2 minutes stop.

3) When it becomes OFF on above 2), it is normal. When it repeats 15 minutes operation and 2 minutes stop, replace body integrated unit.

#### 3. HEAT WIRE INSPECTION

**CAUTION:**

**When wiping off the stain on glass with cloth, use a dry and soft cloth and move it in the direction of the heat wire extension to avoid damage to the heat wire.**

1) Prepare the following checking items.

- Liquid crystal thermograph sheet (Approximate Size: 300 × 300 mm (11.8 × 11.8 in) and thermal temperature: 35 — 40°C (95 — 104°F))
- Aluminum foil

2) Turn the ignition switch to ON.

3) Turn the defogger switch to ON.

4) Push the liquid crystal thermograph sheet from the outside of the rear glass.

(A) Liquid crystal thermograph sheet

(B) Separate line

**NOTE:**

Use the liquid crystal thermograph sheet every range it is separated with the separate line.

5) Determine the faulty heat wire by checking the color of the liquid crystal thermograph sheet.

Liquid crystal thermograph sheet	Criteria
Change occurred (red → blue)	Normal
No change (black)	Open

**NOTE:**

- Check from the inside of the glass if the liquid crystal thermograph sheet does not change.
- The time for the color change may differ depends on the surface temperature of the glass.

# Rear Window Defogger System

## GLASS/WINDOWS/MIRRORS

6) Wrap a piece of aluminum foil around the tip of tester probe and press it against the heat wire with your finger.

- (A) Tester probe
- (B) Aluminum foil
- (C) Heat wire

7) Fasten the tester probe on the positive (+) side and negative (-) side to end of positive side of open harness of step 5).

8) Move the tester probe on the negative (-) side slowly along the heat wire. If voltage changes from zero to several volts during movement of tester probe, heat wire is open at the voltage change point.

9) Repair the heat wire that determines the place of the open circuit. <Ref. to GW-30, REPAIR, Rear Window Defogger System.>

## C: REPAIR

- 1) Clean the broken portion with alcohol or white gasoline.
- 2) Mask both side of wire with masking tape.
- 3) Apply the conductive silver composition to the broken portion.

**Conductive silver composition:**  
**by Permatex**  
**QUICK GRID**

- (1) Broken portion
- (2) Masking tape
- (3) Broken wire
- (4) Conductive silver composition

- 4) Dry using a dryer after applying the composition.
- 5) After repair, check the wire.

## 17.Rear Quarter Glass

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>
- 3) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-20, REMOVAL, Windshield Glass.>

### B: INSTALLATION

#### 1. 5 DOOR MODEL

- 1) Mount the fastener on the vehicle body.
- 2) Apply the primer to the glass and body sides in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>
- 3) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

- (1) 10 mm (0.39 in)
- (2) 8 mm (0.31 in)

- 4) Apply adhesive with the dam rubber installed in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

- (1) Glass
- (2) Adhesive
- (3) Dam rubber
- (4) Molding
- (5) Fastener
- (6) Clip
- (7) 66 mm (2.60 in)
- (8) 17 mm (0.61 in)

# Rear Quarter Glass

## GLASS/WINDOWS/MIRRORS

- A Upper end
- B Lower end
- C Front end

- (1) Glass
- (2) Adhesive
- (3) Molding
- (4) Dam rubber

## 2. 4 DOOR MODEL

- 1) Mount the fastener on the vehicle body.
- 2) Apply the primer to the glass and body sides in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>
- 3) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

- (1) 10 mm (0.39 in)
- (2) 8 mm (0.31 in)

5) Insert the glass locating pin into the hole on side panel and push on the area around the locating pin to secure it.

Then push lightly all around the locating pin to seal it.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

### NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

7) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

### NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

4) Apply adhesive with the dam rubber installed in the same procedure as for windshield glass. <Ref. to GW-21, INSTALLATION, Windshield Glass.>

- (1) Glass
- (2) Adhesive
- (3) Dam rubber
- (4) Molding
- (5) Fastener

5) Insert the glass locating pin into the hole on side panel and push on the area around the locating pin to secure it. Then push lightly all around the locating pin to seal it.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

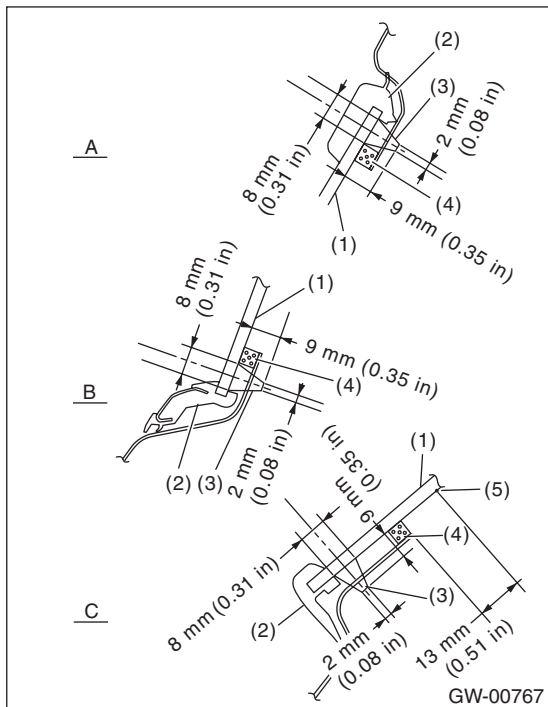

**NOTE:**

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

7) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

**NOTE:**

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

- A Upper end
- B Lower end
- C Front end

- (1) Glass
- (2) Molding
- (3) Adhesive
- (4) Dam rubber
- (5) Ceramic line edge

## 18. Rearview Mirror

### A: REMOVAL

#### CAUTION:

- Never reuse the spring. When the rearview mirror assembly is removed from the mirror base, fixed force will decline and the rearview mirror assembly may come off.
- Be careful not to damage the mirror surface and windshield glass.

#### NOTE:

Never reuse the spring. Prepare a new spring before removal.

- 1) Turn the mirror base 90° clockwise or counterclockwise to remove it.

- 2) Remove the spring from the mirror base.

- 3) When the mirror base is damaged, use a piano wire, spatula, etc. to remove.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

If the mirror base is removed, install it in the following procedure.

1. Clean the old adhesive completely.
2. Align the mirror base with the mark on the windshield glass to install it.
3. Make sure the mirror base is securely attached and then install the spring to it.

#### Adhesive:

**REPAIR KIT IN MR (Part No. 65029FC000) or equivalent**

### C: INSPECTION

- Make sure the mirror is not damaged.
- Make sure the spring is not damaged.
- Make sure the mirror base is not damaged.

## 19. Wiper Deicer System

### A: WIRING DIAGRAM

Refer to “Wiper Deicer System” in WI section. <Ref. to WI-121, WIRING DIAGRAM, Wiper Deicer System.>

### B: INSPECTION

NOTE:

Wiper deicer system does not operate under ambient temperature of 5° or more.

#### 1. SYSTEM INSPECTION

Symptom	Repair order
Wiper deicer does not operate.	<ol style="list-style-type: none"> <li>1. Fuse (F/B No. 9)</li> <li>2. Fuse (F/B No. 4)</li> <li>3. Wiper deicer relay</li> <li>4. Defogger switch</li> <li>5. Wiper deicer wire</li> <li>6. Wiring harness</li> </ol>

#### 2. HEAT WIRE INSPECTION

Refer to “HEAT WIRE INSPECTION” of “Rear Window Defogger System”. <Ref. to GW-29, HEAT WIRE INSPECTION, INSPECTION, Rear Window Defogger System.>

NOTE:

Heat wire inspection needs removing/installing procedure of instrument panel assembly.

### C: REPAIR

Refer to “REPAIR” of “Rear Window Defogger System”. <Ref. to GW-30, REPAIR, Rear Window Defogger System.>

NOTE:

Heat wire repair needs removing/installing procedure of instrument panel assembly.

## B: CAUTION

- Be careful not to damage the meters and instrument panel.
- Be careful not to damage the meter glass.
- Make sure the electrical connector is connected securely.
- After installation, make sure that each meter operates normally.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply an excessive force on the printed circuit.
- Do not drop or otherwise apply impact.
- When the combination meter of model with immobilizer has been replaced, be sure to perform the registration of immobilizer.

## C: PREPARATION TOOL

INSTRUMENTATION/DRIVER INFO

## 2. Combination Meter System

### A: WIRING DIAGRAM

Refer to “Combination Meter System” in WI section. <Ref. to WI-136, WIRING DIAGRAM, Combination Meter System.>

### B: INSPECTION

#### 1. SELF-DIAGNOSIS

The self-diagnosis (checking of each meter, warning light, indicator light, illumination, LCD) of combination meter can be performed in the following procedure.

#### CAUTION:

**Perform the steps described in 2) through 4) within 10 seconds.**

- 1) Within 3 seconds after turning the ignition switch to ON, set the lighting switch to tail light or headlight position.
- 2) Press the odo/trip meter knob three times.
- 3) Turn the lighting switch to OFF, and press the odo/trip meter knob three times.
- 4) Set the lighting switch to tail light or headlight position again, and press the odo/trip meter knob three times.

#### NOTE:

- When pressing the odo/trip meter knob four times, the display changes to DTC display mode. <Ref. to IDI-11, DTC DISPLAY MODE, INSPECTION, Combination Meter System.>
  - Warning light, indicator, and LCD display checks are performed when self-diagnosis is performed. After this, every time the odo/trip meter knob is pressed, the buzzer will sound for 0.5 seconds, and operation checks for meter operation, meter readings, and the LCD are performed in this order. Turn the ignition switch to OFF to cancel the self-diagnosis function.
  - The self-diagnosis function is not cancelled if the engine is started during diagnosis. However, the self-diagnosis function is cancelled automatically for safety when you start to drive the vehicle.
- 5) Go to “Check meter indicator operation”.

Check meter operation, warning light, indicator light, and LCD.

Meter indicator	LCD display, illumination	Warning light, indicator light
MIN indication ↓ MAX indication	ILL1 (Min. brightness) ↓(Displayed for one second for each level) ILL6 (Max. brightness)	Light ON Engine coolant temperature warning light color is red. (Non-turbo model)
MAX indication ↓ MIN indication	ILL6 (Max. brightness) ↓(Displayed for one second for each level) ILL1 (Min. brightness)	

- 6) Press the odo/trip meter knob once.

# Combination Meter System

7) Go to “Check meter indication”.

Check meter operation, warning light, indicator light, and LCD.

NOTE:

- The meter indicator needle will switch every 1.5 seconds.
- ILL indication illuminates at the same brightness as when entering “Meter Indicator Needle Indication Check”.

Speedometer (km/h)	Tachometer (rpm)	Fuel gauge	Engine coolant temperature gauge	Fuel level warning light	Warning light, indicator light
0	0	Lowest point	Lowest point	Light ON	Light OFF Engine coolant temperature indicator light color is blue. (Non-turbo model)
0	0	E	C	Light ON	
40	1000	1/2	1/2	Light OFF	
100	4000	F	H	Light OFF	
40	1000	1/2	1/2	Light OFF	
0	0	E	C	Light ON	

8) Press the odo/trip meter knob once.

9) Go to “Check LCD display”.

Check the LCD.

NOTE:

- All warning and indicator lights go off.
- The meter indication remains at the same level as “Meter Indicator Needle Indication Check”.
- ILL indication illuminates at ILL6 level (max. brightness).

Illuminating order	1	2	3	4	5	6	7	8	9	10	11	12	13	Go back to 1 and repeat.

INSTRUMENTATION/DRIVER INFO

## 2. SYMPTOM CHART

### CAUTION:

When measuring the voltage and resistance of each control module or sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin more than 2 mm (0.08 in).

Symptom	Repair order	Index
Combination meter assembly does not operate.	1. Power supply 2. Ground circuit 3. Combination meter	<Ref. to IDI-6, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Combination Meter System.>
Speedometer does not operate.	1. ABS C/M or VDC C/M 2. Harness 3. Combination meter	<Ref. to IDI-7, CHECK ABS CONTROL MODULE OR VDC CONTROL MODULE., INSPECTION, Combination Meter System.>
Tachometer does not operate.	1. ECM 2. Harness 3. Combination meter	<Ref. to IDI-7, CHECK ENGINE CONTROL MODULE (ECM), INSPECTION, Combination Meter System.>
Fuel gauge does not operate.	1. Communication circuit 2. Fuel level sensor 3. Harness 4. Combination meter	<Ref. to IDI-8, CHECK FUEL LEVEL SENSOR., INSPECTION, Combination Meter System.>
Engine coolant temperature gauge does not operate. (Turbo model)	1. Communication circuit 2. Engine coolant temperature sensor 3. Harness 4. Combination meter	<Ref. to IDI-9, CHECK ENGINE COOLANT TEMPERATURE SENSOR, INSPECTION, Combination Meter System.>

## 3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY FOR COMBINATION METER.</b> 1) Remove the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.> 2) Disconnect the combination meter connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between combination meter connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i10) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short between the ignition switch and combination meter.
<b>2 CHECK POWER SUPPLY FOR COMBINATION METER.</b> Measure the voltage between combination meter connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i10) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short between the fuse and combination meter.
<b>3 CHECK GROUND CIRCUIT OF COMBINATION METER.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between combination meter connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i10) No. 21 — Chassis ground:</b> <b>(i10) No. 22 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Replace the meter case assembly.	Repair the wiring harness.

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

## 4. CHECK ABS CONTROL MODULE OR VDC CONTROL MODULE

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK VEHICLE SPEED SIGNAL.</b></p> <p>1) Lift up the vehicle and support it with rigid racks.</p> <p>2) Drive the vehicle faster than 10 km/h (6 MPH).</p> <p><b>WARNING:</b> <b>Be careful not to get caught in the running wheels.</b></p> <p>3) Measure the voltage between combination meter connector and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(i10) No. 31 (+) — Chassis ground (-):</b></p>	<p>Is the voltage less than 1 V ←→ 5 V or more?</p>	<p>Replace the meter case assembly.</p>	<p>Go to step 2.</p>
<p><b>2</b></p> <p><b>CHECK HARNESS BETWEEN ABSCM OR VDCCM AND COMBINATION METER.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the ABSCM or VDCCM connector and combination meter connector.</p> <p>3) Measure the resistance between ABSCM or VDCCM and combination meter.</p> <p><b>Connector &amp; terminal</b> <b>Model without VDC</b> <b>(B301) No. 23 — (i10) No. 31:</b> <b>Model with VDC</b> <b>(B310) No. 33 — (i10) No. 31:</b></p>	<p>Is the resistance less than 10 Ω?</p>	<p>Model without VDC: Check the ABS control module. &lt;Ref. to ABS(diag)-2, Basic Diagnostic Procedure.&gt; Model with VDC: Check the VDC control module. &lt;Ref. to VDC(diag)-2, Basic Diagnostic Procedure.&gt;</p>	<p>Repair the wiring harness.</p>

## 5. CHECK ENGINE CONTROL MODULE (ECM)

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK ECM SIGNAL.</b></p> <p>1) Start the engine.</p> <p>2) Measure the voltage between ECM connector and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(B136) No. 22 (+) — Chassis ground (-):</b></p>	<p>Is the voltage 0 ←→ 14 V or more?</p>	<p>Go to step 2.</p>	<p>Inspect the ECM. &lt;Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.&gt; &lt;Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.&gt;</p>
<p><b>2</b></p> <p><b>CHECK HARNESS BETWEEN COMBINATION METER AND ECM.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the ECM connector and combination meter connector.</p> <p>3) Measure the resistance between the ECM connector and combination meter connector.</p> <p><b>Connector &amp; terminal</b> <b>(B136) No. 22 — (i10) No. 32:</b></p>	<p>Is the resistance less than 10 Ω?</p>	<p>Replace the meter case assembly.</p>	<p>Repair the wiring harness.</p>

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

## 6. CHECK FUEL LEVEL SENSOR

	Step	Check	Yes	No
1	<b>CHECK COMBINATION METER.</b> 1) Drain fuel. 2) Check the indication status of the fuel gauge in the combination meter.	Does the fuel gauge needle indicate EMPTY and is the low fuel warning light blinking?	Go to step 4.	Go to step 2.
2	<b>CHECK COMBINATION METER.</b> Perform the self-diagnosis of combination meter. <Ref. to IDI-4, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is it operating normally?	Go to step 3.	Replace the meter case assembly.
3	<b>CHECK COMMUNICATION STATUS.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC being displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-35, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 4.
4	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector. 2) Measure the resistance between the body integrated unit and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(B281) No. 7 — Chassis ground:</b></i>	Is the resistance 2 — 96 Ω?	Go to step 5. If the step 1 is "Yes", Go to step 9.	Repair the wiring harness.
5	<b>CHECK COMMUNICATION BETWEEN BODY INTEGRATED UNIT AND METERS.</b> 1) Remove the fuel sub level sensor. <Ref. to FU(H4SO)-67, REMOVAL, Fuel Sub Level Sensor.> <Ref. to FU(H4DOTC)-76, REMOVAL, Fuel Sub Level Sensor.> 2) Short the fuel sub level sensor connector terminal to the chassis ground with approx. 100 Ω resistance. 3) Turn the ignition switch to ON. <i><b>Connector &amp; terminal</b></i> <i><b>(R59) No. 1 — Chassis ground:</b></i>	Does the meter needle indicate EMPTY?	Go to step 7.	Go to step 6.
6	<b>CHECK BODY INTEGRATED UNIT.</b> 1) Retain the condition in step 5. 2) On {Integ. unit mode}, select {Fuel level resistance} using the Subaru Select Monitor.	Is approx. 100 Ω displayed in the data?	Go to step 11.	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>
7	<b>CHECK COMMUNICATION BETWEEN BODY INTEGRATED UNIT AND METERS.</b> 1) Remove the fuel sub level sensor. <Ref. to FU(H4SO)-67, REMOVAL, Fuel Sub Level Sensor.> <Ref. to FU(H4DOTC)-76, REMOVAL, Fuel Sub Level Sensor.> 2) Short the fuel sub level sensor connector terminal to the chassis ground with approx. 2 Ω to 6 Ω resistance. 3) Turn the ignition switch to ON. <i><b>Connector &amp; terminal</b></i> <i><b>(R59) No. 1 — Chassis ground:</b></i>	Does the meter needle indicate FULL?	Go to step 9.	Go to step 8.
8	<b>CHECK BODY INTEGRATED UNIT.</b> 1) Retain the condition in step 7. 2) On {Integ. unit mode}, select {Fuel level resistance} using the Subaru Select Monitor.	Is the resistance approximately 2 to 6 Ω?	Go to step 11.	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

Step	Check	Yes	No
<b>9 CHECK FUEL SUB LEVEL SENSOR.</b> 1) Remove the fuel sub level sensor. <Ref. to FU(H4SO)-67, REMOVAL, Fuel Sub Level Sensor.> <Ref. to FU(H4DOTC)-76, REMOVAL, Fuel Sub Level Sensor.> 2) Measure the resistance between the fuel sub level sensor connector terminals when the float is in FULL and EMPTY position. <b>Connector &amp; terminal (R59) No. 1 — No. 2:</b>	Is the resistance 1.0 to 3.0 Ω (FULL) and 61 to 63 Ω (EMPTY)?	Go to step 10.	Replace the fuel sub level sensor.
<b>10 CHECK FUEL LEVEL SENSOR.</b> 1) Remove the fuel level sensor. <Ref. to FU(H4SO)-66, REMOVAL, Fuel Level Sensor.> <Ref. to FU(H4DOTC)-75, REMOVAL, Fuel Level Sensor.> 2) Measure the resistance between the fuel level sensor connectors when the float is in FULL and EMPTY position. <b>Connector &amp; terminal (R58) No. 1 — No. 4:</b>	Is the resistance 1.0 to 3.0 Ω (FULL) and 31 to 33 Ω (EMPTY)?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the fuel level sensor.
<b>11 CHECK COMBINATION METER OPERATION.</b> 1) Remove the combination meter. 2) Attach the combination meter to another vehicle on which the fuel gauge operates normally to check its operation.	Is the fuel gauge normal?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Replace the meter case assembly.

## 7. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Step	Check	Yes	No
<b>1 CHECK COMMUNICATION STATUS.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC being displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-35, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
<b>2 CHECK ENGINE COOLANT TEMPERATURE SENSOR.</b> Check the engine coolant temperature sensor. <Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.>	Is the engine coolant temperature sensor OK?	Replace the meter case assembly.	Replace the engine coolant temperature sensor.

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

## 8. CHECK KEY WARNING SWITCH ALARM

	Step	Check	Yes	No
1	<b>CHECK KEY WARNING SWITCH ALARM.</b> 1) Insert the key to the ignition key lock. 2) Open the driver's side door.	Does the buzzer sound from the meter?	Normal	Go to step 2.
2	<b>CHECK COMMUNICATION STATUS.</b> 1) Prepare the Subaru Select Monitor. 2) On «System Selection Menu» display, select {Integ. unit mode}. 3) On {Current Data Display & Save}, select {Key-lock warning SW}. 4) Remove and insert the key.	Does the display change between ON ⇔ OFF?	Go to step 3.	Check the ignition switch circuit. <Ref. to SL-44, INSPECTION, Ignition Key Lock.>
3	<b>CHECK COMMUNICATION STATUS.</b> 1) On {Current Data Display & Save}, select {Driver's door SW input}. 2) Open and close the door.	Does the display change between ON ⇔ OFF?	Go to step 4.	Check the door switch circuit. <Ref. to SL-10, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
4	<b>CHECK COMMUNICATION STATUS.</b> 1) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 2) On «System Selection Menu» display, select {Integ. unit mode}. 3) Select the {Diagnostic Code(s) Display}.	Is DTC being displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-35, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step 5.
5	<b>CHECK COMBINATION METER.</b> Perform the self-diagnosis of combination meter. <Ref. to IDI-4, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Did the buzzer sound?	Go to step 6.	Replace the meter case assembly.
6	<b>CHECK COMBINATION METER.</b> 1) Remove the combination meter. 2) Attach the buzzer to another vehicle on which the buzzer operates normally to check its operation.	Did the buzzer sound?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Replace the meter case assembly.

## 9. DTC DISPLAY MODE

The combination meter DTC can be displayed according to the following procedure.

### CAUTION:

**Perform the steps described in 2) through 4) within 10 seconds.**

- 1) Within 3 seconds after turning the ignition switch to ON, set the lighting switch to tail light or headlight position.
- 2) Press the odo/trip meter knob four times.
- 3) Turn the lighting switch to OFF, and press the odo/trip meter knob four times.
- 4) Set the lighting switch to tail light or headlight position again, and press the odo/trip meter knob four times.
- 5) Go to "DTC display mode".

When the DTC display mode operates, the display is changed every 3 seconds or {ECM}, {TCM}, {ABS/VDC} is displayed cyclically in this order for every press of the trip knob. DTC is displayed in the following table according to type of control module, receiving DTC, DTC detected or No DTC.

Control module	Condition	Display
ECM	Receiving DTC	Trip "A" + "P (Blink)"
	DTC detected	Trip "A" + "P xxxx"
	No DTC	Trip "A" + "P ----"
TCM	Receiving DTC	Trip "B" + "P (Blink)"
	DTC detected	Trip "B" + "P xxxx"
	No DTC	Trip "B" + "P ----"
ABS/VDCCM	Receiving DTC	Trip "A" + "C (Blink)"
	DTC detected	Trip "A" + "C xxxx"
	No DTC	Trip "A" + "C ----"
When CAN communication error is occurred	—	" ---- "

### NOTE:

- When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once ignition switch is turned OFF or the vehicle is driven, the DTC display mode is cancelled automatically for safety.
- When the DTC of individual control modules changes in status from current trouble to past trouble, and the trouble is fixed, the DTC will no longer appear in the combination meter if the engine is started three times or more. In this case, read the DTC using the Subaru Select Monitor.
- Because the MT model is not equipped with a TCM, only "Receiving DTC" is displayed.

### C: NOTE

For procedure of each component in the combination meter system, refer to the respective section.

- Combination meter <Ref. to IDI-16, Combination Meter.>
- Speedometer <Ref. to IDI-17, Speedometer.>
- Tachometer <Ref. to IDI-18, Tachometer.>
- Fuel gauge <Ref. to IDI-19, Fuel Gauge.>
- Engine coolant temperature gauge (turbo model) <Ref. to IDI-20, Engine Coolant Temperature Gauge.>

# Clock System

INSTRUMENTATION/DRIVER INFO

## 3. Clock System

### A: WIRING DIAGRAM

Refer to "Clock System" in WI section. <Ref. to WI-147, WIRING DIAGRAM, Clock System.>

### B: INSPECTION

#### 1. SYMPTOM CHART

Symptom	Repair order	Index
No display is shown.	1. Power supply 2. Ground circuit 3. Communication circuit harness 4. Clock body	<Ref. to IDI-12, CHECK POWER SUPPLY AND GROUND CIRCUIT AND COMMUNICATION CIRCUIT, INSPECTION, Clock System.>
Ambient air temperature/fuel economy displays do not appear.	1. Power supply 2. Ground circuit 3. Communication circuit harness 4. Clock body	<Ref. to IDI-13, CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT., INSPECTION, Clock System.>
Only ambient air temperature display is not displayed.	1. Power supply 2. Harness 3. Ambient sensor 4. Communication circuit 5. Clock body	<Ref. to IDI-14, CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT., INSPECTION, Clock System.>
Only fuel economy display is not displayed.	1. Setting 2. Communication circuit 3. Clock body	<Ref. to IDI-15, CHECK COMMUNICATION CIRCUIT OF FUEL ECONOMY SYSTEM, INSPECTION, Clock System.>

#### 2. CHECK POWER SUPPLY AND GROUND CIRCUIT AND COMMUNICATION CIRCUIT

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY.</b> 1) Disconnect the clock connector. 2) Measure the voltage between clock connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i59) No. 10 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for a open or short between the fuse and clock.
<b>2 CHECK GROUND CIRCUIT.</b> Measure the resistance between the clock connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i59) No. 6 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 3.	Repair or replace the harness.
<b>3 CHECK HARNESS BETWEEN CLOCK AND COMBINATION METER.</b> 1) Disconnect the combination meter connector. 2) Measure the resistance between the clock connector and combination meter connector. <b>Connector &amp; terminal</b> <b>(i59) No. 5 — (i10) No. 29:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
<b>4 CHECK CLOCK.</b> 1) Remove the clock. 2) Attach the clock to another vehicle on which the clock operates normally to check its operation.	Is clock normal?	Replace the meter case assembly.	Replace the clock body.

## 3. CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY.</b> 1) Disconnect the clock connector. 2) Measure the voltage between clock connector and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(i59) No. 8 (+) — Chassis ground (-):</b></i>	Is the voltage 10 V or more?	Go to step 2.	Repair or replace the harness.
<b>2 CHECK GROUND CIRCUIT.</b> Measure the resistance between the clock connector and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(i59) No. 6 — Chassis ground:</b></i>	Is the resistance less than 10 $\Omega$ ?	Go to step 3.	Repair or replace the harness.
<b>3 CHECK HARNESS BETWEEN CLOCK AND COMBINATION METER.</b> 1) Disconnect the combination meter connector. 2) Measure the resistance between the clock connector and combination meter connector. <i><b>Connector &amp; terminal</b></i> <i><b>(i59) No. 5 — (i10) No. 29:</b></i>	Is the resistance less than 10 $\Omega$ ?	Go to step 4.	Repair or replace the harness.
<b>4 CHECK CLOCK.</b> 1) Remove the clock. 2) Attach the clock to another vehicle on which the clock operates normally to check its operation.	Is clock normal?	Replace the meter case assembly.	Replace the clock body.

# Clock System

INSTRUMENTATION/DRIVER INFO

## 4. CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT

Step	Check	Yes	No
<b>1 CHECK AMBIENT SENSOR POWER SUPPLY.</b> 1) Disconnect the ambient sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ambient sensor connector and chassis ground. <i>Connector &amp; terminal</i> <i>(F78) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 4 V or more?	Go to step 2.	Check the harness for a open or short between the fuse and clock.
<b>2 CHECK HARNESS BETWEEN AMBIENT SENSOR AND COMBINATION METER.</b> 1) Disconnect the combination meter connector. 2) Measure the resistance between the ambient sensor connector and combination meter connector. <i>Connector &amp; terminal</i> <i>(F78) No. 1(+)</i> — <i>(i10) No. 23:</i> <i>(F78) No. 2(+)</i> — <i>(i10) No. 24:</i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair or replace the harness.
<b>3 CHECK AMBIENT SENSOR.</b> 1) Remove the ambient sensor. <Ref. to AC-41, REMOVAL, Ambient Sensor (Auto A/C Model).> 2) Check the ambient sensor. <Ref. to AC(diag)-28, AMBIENT SENSOR, Diagnostic Procedure for Sensors.>	Is the ambient sensor operating properly?	Go to step 4.	Replace the ambient sensor.
<b>4 CHECK AMBIENT TEMPERATURE DISPLAY.</b> 1) Connect the combination meter connector. 2) Install the 3 Ω resistance to ambient sensor connector. 3) Turn the ignition switch to ON. <i>Connector &amp; terminal</i> <i>(F78) No. 1 — (F78) No. 2:</i>	Is the ambient temperature display 25°C (77°F)?	Repair the poor contact between the ambient sensor and harness connector.	Go to step 5.
<b>5 CHECK AMBIENT TEMPERATURE OUTPUT DATA.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”. 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select {Ambient Temperature}.	Is the ambient temperature display 25°C (77°F)?	Go to step 6.	Replace the meter case assembly. <Ref. to IDI-16, Combination Meter.>
<b>6 CHECK CLOCK.</b> 1) Remove the clock. 2) Attach the ambient temperature display to another vehicle on which the ambient temperature display operates normally to check its operation.	Is the ambient temperature display 25°C (77°F)?	Replace the clock body.	Replace the meter case assembly. <Ref. to IDI-16, Combination Meter.>

## 5. CHECK COMMUNICATION CIRCUIT OF FUEL ECONOMY SYSTEM

Step	Check	Yes	No
<b>1</b> <b>CHECK FUEL ECONOMY DISPLAY OFF MODE.</b> Hold down the button “+” on the clock for 5 seconds or more.	Does the fuel economy display part blink?	Go to step 2.	Go to step 3.
<b>2</b> <b>CHECK FUEL ECONOMY DISPLAY OFF MODE.</b> Turn the ignition switch to ON.	Is fuel economy displayed?	Clock is normal.	Go to step 3.
<b>3</b> <b>CHECK DIAGNOSTIC TROUBLE CODE (DTC).</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”. 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}.	Is DTC detected?	Go to step 4.	Replace the meter case assembly. <Ref. to IDI-16, Combination Meter.>
<b>4</b> <b>CHECK CLOCK.</b> 1) Remove the clock. 2) Attach the fuel economy display to another vehicle on which the fuel economy display operates normally to check its operation.	Is the fuel economy display correct?	Replace the clock body.	Replace the meter case assembly. <Ref. to IDI-16, Combination Meter.>

### C: NOTE

For procedure of each component in the clock system, refer to the respective section.

- CLOCK<Ref. to IDI-21, Clock.>

# Combination Meter

INSTRUMENTATION/DRIVER INFO

## 4. Combination Meter

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Set the tilt steering at the lowest position. For steering wheel with telescopic system, pull the steering.
- 3) Remove the plastic hook (A), and detach the meter visor.

- 4) Remove the screws of the combination meter, and pull on the meter while tipping it towards yourself.

- 5) Disconnect the connector in the rear side of combination meter to remove meter.

### CAUTION:

- Be careful not to damage the meter or instrument panel.
- Pay particular attention to avoid damaging the meter glass.

### B: INSTALLATION

#### CAUTION:

- Make sure the electrical connector is connected securely.
  - Make sure that each meter operates normally.
  - When the combination meter of model with immobilizer has been replaced, be sure to perform the registration of immobilizer.
- Install in the reverse order of removal.

## C: DISASSEMBLY

### 1. DISASSEMBLY OF COMBINATION METER

#### CAUTION:

- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Be careful not to apply excessive force to the trip knob.
- Be sure not to touch the meter indicator needle.

Disengage the tabs (A), and remove the meter glass assembly (B) and meter visor (C) from the meter case assembly (D).

### 2. BULB REPLACEMENT

LEDs are used for all of warning lights and indicator lights of combination meters, replace the meter case assembly if faulty.

### D: ASSEMBLY

Assemble in the reverse order of disassembly.

## 5. Speedometer

### A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back surface.)

## **6. Tachometer**

### **A: SPECIFICATION**

Since the meter case assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back surface.)

## 7. Fuel Gauge

### A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back surface.)

# Engine Coolant Temperature Gauge

INSTRUMENTATION/DRIVER INFO

---

## 8. Engine Coolant Temperature Gauge

### A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the engine coolant temperature gauge alone. (Do not remove the cover on the back surface.)

## 9. Clock

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the audio. <Ref. to ET-6, REMOVAL, Audio.>
- 3) Reach through the audio space to release the four tabs from the bracket behind the instrument panel.

- 4) Disconnect the harness connector and remove the clock.

### B: INSTALLATION

Install in the reverse order of removal.

**T1: 6 (0.61, 4.4)**

**T2: 52 (5.3, 38.4)**

**T3: 53 (5.4, 39.1)**

## B: CAUTION

- If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

If system adjustment is not performed, the occupant detection system may not function properly.

- The passenger detection system (passenger seat only) control unit and the passenger detection sensor are fixed to the seat cushion frame. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.
- Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the passenger detection system may not operate properly.
- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
- When removing the front seat from a side airbag loaded vehicle, follow cautions given in the airbag section. <Ref. to AB-5, CAUTION, General Description.>

## C: PREPARATION TOOL

### 1. GENERAL TOOL

TOOL NAME	REMARKS
Long nose plier	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
TORX® T50	Used for removing and installing the inner seat belt assembly.
Circuit tester	Used for checking voltage and continuity.

## 2. Front Seat

### A: REMOVAL

**CAUTION:**

The airbag system is fitted with a backup power source. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds before starting the service of airbag system.

#### 1. DRIVER'S SEAT

- 1) Disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- 2) Remove the headrest.
- 3) Remove the slide rail installing bolt.
  - (1) Tilt the backrest forward, and move the seat to the full forward position.
  - (2) Remove the rear bolt cover at the rear end of the slide rail, and remove the two bolts.
  - (3) Move the seat to the rearmost position, and remove the two bolts at the front side of the slide rail.
- 4) Tilt the backrest forward, and move the seat forward.
- 5) Remove the rear bolt cover, and remove the two bolts at the rear side of the slide rail.
- 6) Move the seat towards the rear, and remove the two bolts at the front side of the slide rail.
- 7) Disconnect the connector under the seat.
  - Seat belt buckle switch connector
  - Side airbag connector
  - Seat heater connector (model with seat heater)
- 8) Remove the seat from vehicle.

#### 2. PASSENGER'S SEAT

**CAUTION:**

Refer to "CAUTION" of "General Description" before starting the work. <Ref. to SE-5, CAUTION, General Description.>

- 1) Disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- 2) Remove the headrest.
- 3) Tilt the backrest forward, and move the seat forward.
- 4) Remove the rear bolt cover, and then remove the rear side of slide rail.
- 5) Move the seat backward, remove the front bolt cover, and then remove the bolt at the front side of slide rail.
- 6) Disconnect all the connectors of connector holder in the backside of seat cushion.
  - Harness connector of occupant detection control module
  - Side airbag connector
  - Seat heater connector (model with seat heater)
- 7) Remove the seat from vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

**NOTE:**

Tighten the slide rail installing bolt gradually in several steps to the specified torque in the order as shown in the figure.

**Tightening torque:**

Refer to "COMPONENT" of "General Description". <Ref. to SE-2, FRONT SEAT LH, COMPONENT, General Description.>

### C: DISASSEMBLY

#### 1. STANDARD SEAT

- 1) Remove the seat from vehicle. <Ref. to SE-6, REMOVAL, Front Seat.>
- 2) Remove the seat lifter cover using a flat tip screwdriver and loosen the inner bolt to remove the seat lifter lever.

- 3) Disengage the tab while pulling the reclining lever, and remove the reclining lever cover.

4) Remove screws (A) and clips (B), and then detach the seat side cover outside.

5) Remove the TORX® bolt, and then remove the inner seat belt assembly.

6) Loosen the screws to detach the seat side cover inside.

7) Remove the bolts on the side of seat cushion assembly, and then remove the slide rail.

8) Remove the bolts from reclining hinge of both sides.

9) Remove the plastic fastener at the bottom-back side of backrest.

10) Open the fastener at the rear side of backrest.

# Front Seat

## SEATS

11) Remove the hog rings of backrest cover.

### CAUTION:

**When removing the hog rings, be careful not to tear the vinyl sheet within the seat. If torn, replace with a new part.**

12) Remove the pad (A), and remove the mounting nut from the side airbag module.

13) Remove the headrest bushing.

### NOTE:

Push outside to remove it from the inside of seat.

14) Pull out the backrest frame.

15) Remove all the hog rings at front of seat back, and then remove the seat back cover from seat backrest.

16) Remove the plastic hooks (A) of the seat cushion cover, and then remove the seat cushion frame assembly.

17) Remove all the hog rings, and then remove the seat cushion cover from seat cushion pad.

18) Open the plastic fastener on the bottom of the headrest, and then remove the headrest cover from the headrest.

## 2. PASSENGER'S SEAT

### CAUTION:

- If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper activation of passenger's airbag.

- The passenger detection system (passenger seat only) control unit, passenger detection sensor, seat cushion pad and seat cushion frame are considered as a single seat cushion pad and frame assembly. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.

- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

1) Remove the seat from vehicle. <Ref. to SE-6, PASSENGER'S SEAT, REMOVAL, Front Seat.>

2) Refer to the disassembly procedures for the driver's seat.

## D: ASSEMBLY

### CAUTION:

When installing the side airbag module assembly, be sure to put the side airbag module between backrest cover and airbag guide cloth.

- (A) Airbag guide cloth
- (B) Backrest cover
- (C) Side airbag module ASSY

- (1) Backrest frame ASSY
- (2) Airbag guide cloth
- (3) Backrest cover
- (4) Side airbag module ASSY
- (5) Hexagon cap nut

Besides, when the backrest cover is not installed securely, the side airbag module may not be deployed properly, therefore keep strictly to the following procedure.

- Be careful not to stain or damage the backrest cover during assembly.
- Always use new hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on backrest cover.

Assemble in the reverse order of disassembly.

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-2, FRONT SEAT LH, COMPONENT, General Description.>

## 1. DRIVER'S SEAT

### NOTE:

• When installing the inner seat belt assembly, follow the procedure described in the seat belt section. <Ref. to SB-17, INSTALLATION, Front Seat Belt.>

• Install the backrest assembly and seat cushion assembly in the following procedure.

- 1) Temporarily tighten the four reclining hinge bolts.
- 2) Place the backrest in the most upright position.
- 3) Tighten the reclining hinge bolts in the order of (1) through (4), in two or three steps by gradually increasing the torque until they reach the specified torque.

- (A) Vehicle inside
- (B) Vehicle outside

- 4) Assemble in the reverse order of disassembly.

# Front Seat

## SEATS

### 2. PASSENGER'S SEAT

#### CAUTION:

Make sure to adhere to the following rules when assembling the passenger seat. Improper work procedures can cause the passenger detection system to not operate properly.

- If the seat cushion cover is removed or replaced, make sure to perform occupant detection system adjustment after installing the seat. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may prevent the passenger's airbag from operating properly.

- The passenger detection system (passenger seat only) control unit, passenger detection sensor, seat cushion pad and seat cushion frame are considered as a single seat cushion pad and frame assembly. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.
- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

- Make sure to install the hog rings/clips to the specified locations. Do not reuse hog rings.

1) Assemble the seat cushion in the reverse order of disassembly.

2) Assemble the backrest in the reverse order of disassembly.

3) When installing the backrest assembly to the seat cushion assembly, fill the gap in the front side of slide rail LH and in the rear side of slide rail RH with cloth etc. in order to stabilize the seat cushion assembly.

4) Temporarily tighten the reclining hinge bolts in the order of (1) through (4) to an extent that the seat backrest assembly is not held securely.

(A) Vehicle inside

(B) Vehicle outside

5) Use the reclining lever to place the backrest in the most upright position, and check the first lock position of recliner.

6) Hold the seat cushion assembly securely, and tighten the reclining hinge bolts in the order described above until they reach the specified torque.

#### CAUTION:

Do not touch the backrest assembly when tightening the reclining hinge bolts.

7) Assemble each harness, inner belt assembly and each cover in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-2, FRONT SEAT LH, COMPONENT, General Description.>

### E: INSPECTION

Check that no tear or fray on the backrest cover and seat cushion cover.

#### NOTE:

If the door side of the backrest cover is torn or frayed, the side airbag may not be deployed properly. In this case, replace the backrest cover.

### 3. Rear Seat

#### A: REMOVAL

##### CAUTION:

- Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Read the cautions and warnings indicated in the AB section before removing the rear seat. <Ref. to AB-5, CAUTION, General Description.>
- The airbag system is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds before starting the service of airbag system.

- 1) Disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- 2) Remove the hooks (three locations) while lifting up the rear seat cushion.

##### CAUTION:

If the hooks on the vehicle body side disengage (remained on the seat cushion side), when the rear seat cushion is removed, always replace with new hooks.

- 3) Remove the hook (A) by pushing it back while lifting the front side of the seat cushion, and remove the seat cushion.

- 4) Remove the headrest, and then tilt the backrest forward.
- 5) Remove the luggage floor mat.
- 6) Turn over the mat to remove the bolt.

# Rear Seat

## SEATS

7) Remove the backrest from the hinge assembly LH (hinge assembly RH).

### NOTE:

The armrests cannot be detached while pin positions of the hinge assembly and armrest are not aligned.

## B: INSTALLATION

### CAUTION:

If the hooks on the vehicle body side disengage (remained on the seat cushion side), when the rear seat cushion is removed, always replace with new hooks.

Install in the reverse order of removal.

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-4, REAR SEAT, COMPONENT, General Description.>

## C: DISASSEMBLY

1) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>

2) Remove the armrest hinge cover in the direction of arrow (black), and loosen the screws to remove the armrest.

### NOTE:

The armrests cannot be detached while the backrest assembly RH and armrest side pin positions are not aligned.

3) Remove the backrest knob. (Screw-in type) (5 door model)

4) Remove the seat back latch cover.

5) Peel the backrest cover, and remove the hog rings.

6) Remove all the hog rings which fix the backrest frame and backrest pad.

7) Remove the headrest bushing.

8) Remove the backrest pad and backrest cover from the backrest frame.

9) Disassemble the backrest assembly LH following the procedures described above.

10) Remove all the hog rings of the seat cushion, and separate the seat cushion cover and seat cushion pad.

11) Open the plastic fastener, and then remove the headrest cover from the headrest.

12) Remove the plastic fastener and hog rings, and then remove the armrest cover.

## D: ASSEMBLY

### CAUTION:

- Always use new hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on backrest cover.

Assemble in the reverse order of disassembly.

### NOTE:

- Do not contaminate or damage the cover.
- While installing the hog rings, prevent the seat from getting wrinkled.

## 4. Seat Heater System

### A: REMOVAL

#### 1. SEAT HEATER UNIT

- 1) Remove the front seats. <Ref. to SE-6, REMOVAL, Front Seat.>
- 2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-6, DISASSEMBLY, Front Seat.>
- 3) Remove the seat heater unit.

#### 2. SEAT HEATER SWITCH

- 1) Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>
- 2) Remove the seat heater switch from the console box.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. WIRING DIAGRAM

<Ref. to WI-99, WIRING DIAGRAM, Seat Heater System.>

#### 2. SEAT HEATER UNIT

Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

##### Connector & terminal

**No. 1 — No. 3:**

**No. 1 — No. 4:**

**No. 3 — No. 4:**

If no continuity exists, replace the seat heater unit with a new part.

#### 3. SEAT HEATER SWITCH

##### • CHECK THERMISTOR OUTPUT VOLTAGE

- 1) Connect the battery to the connector.  
**Connector terminals No. 2 (+):**
- 2) Measure the voltage between connector and chassis ground.

##### Connector & terminal:

**LHD side seat**

**(R43) No. 4 (+) — Chassis ground (-):**

**RHD side seat**

**(R42) No. 4 (+) — Chassis ground (-):**

If voltage is not 1.5 V or more, replace the seat heater switch.

##### • CHECK SWITCH OUTPUT VOLTAGE

- 1) Connect the battery to the connector.  
**Connector terminals No. 2 (+):**
- 2) Measure the voltage between connector and chassis ground while turning the switch to ON.

##### Connector & terminal:

**LHD side seat**

**(R43) No. 3 (+) — Chassis ground (-):**

**RHD side seat**

**(R42) No. 3 (+) — Chassis ground (-):**

If voltage does not change from 10 V or more to zero, replace the seat heater switch.

### **B: CAUTION**

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, these contents are erased upon disconnection.
- When performing a check after disconnecting the battery or restoring from a dead battery condition, perform the check after turning the ignition to ON and OFF, then opening and closing the driver's side door a few times.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust the parts to the specifications described in this manual if so designated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure all the functional parts operate smoothly.
- The airbag system wiring harness is routed near electrical parts and switches.
- Do not use electrical test devices on any airbag system wiring harnesses or connector circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ignition key cylinder.

## C: PREPARATION TOOL

### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST1B022XU0</p>	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Drill	Used for replacing ignition key lock.

Clip remover	Used for removing trim clip

# Door Lock Control System

## SECURITY AND LOCKS

## 2. Door Lock Control System

### A: WIRING DIAGRAM

Refer to “Keyless Entry System” in WI section. <Ref. to WI-158, WIRING DIAGRAM, Keyless Entry System.>

### B: ELECTRICAL SPECIFICATION

#### 1. BODY INTEGRATED UNIT

Refer to the Control Module I/O Signal of the LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-10, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

### C: INSPECTION

#### 1. SYMPTOM CHART

Symptom	Repair order	Index
The door lock control system does not operate.	1. Remove and visually inspect the following fuses. <ul style="list-style-type: none"><li>• No. 3 (in fuse &amp; relay box)</li><li>• No. 7 (in fuse &amp; relay box)</li><li>• No. 8 (in main fuse box)</li></ul>	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-9, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-9, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-10, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the rear gate opener button and the circuit.	<Ref. to SL-11, CHECK REAR GATE OPENER BUTTON CIRCUIT, INSPECTION, Door Lock Control System.>
	5. Check the door lock actuator and the circuit.	<Ref. to SL-12, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-12, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

## 2. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
<b>1</b> <b>CHECK POWER SUPPLY.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <i>(i84) No. 34 (+) — Chassis ground (-):</i> <i>(B280) No. 6 (+) — Chassis ground (-):</i> <i>(B281) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short circuit between body integrated unit and fuse.
<b>2</b> <b>CHECK GROUND CIRCUIT.</b> Measure the resistance between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <i>(i84) No. 28 — Chassis ground:</i> <i>(B280) No. 17 — Chassis ground:</i> <i>(B281) No. 20 — Chassis ground:</i> <i>(B279) No. 27 — Chassis ground:</i>	Is the resistance less than 10 Ω?	The power supply and ground circuit are OK.	Repair or replace the harness.

# Door Lock Control System

## SECURITY AND LOCKS

### 3. CHECK DOOR LOCK SWITCH

Step	Check	Yes	No
<b>1 CHECK DOOR LOCK SWITCH.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Current Data Display & Save}. 5) Select the {Manual lock SW input}.	Does the display switch between OFF ⇔ ON when each door lock switch is moved to LOCK?	Go to step 2.	Go to step 3.
<b>2 CHECK DOOR LOCK SWITCH.</b> From the condition in step 1), operate each door lock switch (driver's and passenger's) in the UNLOCK direction.	Does the display switch between OFF ⇔ ON?	The door lock switch is OK.	Go to step 4.
<b>3 CHECK DOOR LOCK SWITCH.</b> 1) Disconnect the door lock switch harness connector. 2) Check the continuity when the door lock switch is operated to the LOCK side. <b>Connector &amp; terminal</b> <b>Driver's side:</b> (D102) No. 2 — (D102) No. 3: <b>Passenger's side:</b> (D125) No. 4 — (D125) No. 5:	Did the indicator change from "No continuity" (1 MΩ or more) to "Continuity exists" (less than 10 Ω)?	Go to step 4.	Replace the power window main switch or door lock switch.
<b>4 CHECK DOOR LOCK SWITCH.</b> Check the continuity when the door lock switch is operated to the UNLOCK side. <b>Connector &amp; terminal</b> <b>Driver's side:</b> (D102) No. 1 — (D102) No. 3: <b>Passenger's side:</b> (D125) No. 2 — (D125) No. 5:	Did the indicator change from "No continuity" (1 MΩ or more) to "Continuity exists" (less than 10 Ω)?	Go to step 5.	Replace the power window main switch or door lock switch.
<b>5 CHECK HARNESS.</b> measure the resistance between the door lock switch harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>Driver's side:</b> (D102) No. 3 — Chassis ground: <b>Passenger's side:</b> (D125) No. 5 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 6.	Repair or replace the harness.
<b>6 CHECK HARNESS.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between the body integrated unit and door lock switch. <b>Connector &amp; terminal</b> <b>Driver's side:</b> (D102) No. 2 — (i84) No. 15: (D102) No. 1 — (i84) No. 29: <b>Passenger's side:</b> (D125) No. 4 — (i84) No. 15: (D125) No. 2 — (i84) No. 29:	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Repair or replace the harness.

## 4. CHECK REAR GATE OPENER BUTTON CIRCUIT

Step	Check	Yes	No
<b>1</b> <b>CHECK REAR GATE OPENER BUTTON.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Current Data Display & Save}. 5) Select the {R Gate Release SW input}.	Is the display change to OFF ⇔ ON, when the rear gate opener button is operated?	Rear gate opener button is normal.	Go to step 2.
<b>2</b> <b>CHECK HARNESS.</b> Measure the resistance between the body integrated unit and rear gate opener button. <i><b>Connector &amp; terminal</b></i> <i><b>(B281) No. 24 — (D47) No. 2:</b></i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair or replace the harness.
<b>3</b> <b>CHECK HARNESS.</b> Measure the resistance between the rear gate opener button and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(D47) No. 1 — Chassis ground:</b></i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
<b>4</b> <b>CHECK REAR GATE OPENER BUTTON.</b> Measure the resistance between connector terminals when the rear gate opener button is pressed, and when it is released. <i><b>Connector &amp; terminal</b></i> <i><b>(D47) No. 2 — (D47) No. 1:</b></i>	Is the resistance when the switch is pressed less than 10 Ω, and 1 MΩ or more when released?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Replace the rear gate opener button. <Ref. to SL-38, Rear Gate Opener Button.>

# Door Lock Control System

## SECURITY AND LOCKS

### 5. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

Step	Check	Yes	No
<b>1 CHECK HARNESS (DOOR LOCK).</b> 1) Disconnect the body integrated unit connector and each door lock actuator. 2) Measure the resistance between body integrated unit and each door lock actuator. <b>Connector &amp; terminal</b> <i>(i84) No. 7 — (D72) No. 1: (front door LH)</i> <i>(i84) No. 7 — (D18) No. 1: (front door RH)</i> <i>(i84) No. 7 — (D26) No. 1: (rear door LH)</i> <i>(i84) No. 7 — (D32) No. 1: (rear door RH)</i>	Is the resistance less than 10 Ω?	Go to step 2.	Repair or replace the harness.
<b>2 CHECK HARNESS (DOOR UNLOCK).</b> Measure the resistance between body integrated unit and each door lock actuator. <b>Connector &amp; terminal</b> <i>(i84) No. 23 — (D72) No. 2: (front door LH)</i> <i>(i84) No. 8 — (D18) No. 2: (front door RH)</i> <i>(i84) No. 8 — (D26) No. 2: (rear door LH)</i> <i>(i84) No. 8 — (D32) No. 2: (rear door RH)</i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair or replace the harness.
<b>3 CHECK HARNESS (TRUNK OR REAR GATE UNLOCK).</b> Measure the resistance between body integrated unit and trunk lid lock actuator or rear gate lock actuator. <b>Connector &amp; terminal</b> <i>(i84) No. 22 — (R186) No. 2: (4 door model)</i> <i>(i84) No. 22 — (D46) No. 1: (5 door model)</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
<b>4 CHECK HARNESS (TRUNK OR REAR GATE UNLOCK).</b> Measure the resistance between the trunk lid lock actuator or rear gate lock actuator and chassis ground. <b>Connector &amp; terminal</b> <i>(R186) No. 1 — Chassis ground: (4 door model)</i> <i>(D46) No. 2 — Chassis ground: (5 door model)</i>	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the harness.
<b>5 CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.</b> Measure the voltage between the connector terminals of the body integrated unit when moving the door lock switch to LOCK. <b>Connector &amp; terminal</b> <b>Except for front door LH</b> <i>(i84) No. 7 (+) — (i84) No. 8 (-):</i> <b>Front door LH</b> <i>(i84) No. 7 (+) — (i84) No. 23 (-):</i>	Does the voltage change from less than 1.5 V → 10 V or more? (During lock output)	Go to step 6.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>
<b>6 CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.</b> Measure the voltage between the connector terminals of the body integrated unit when moving the door lock switch to UNLOCK. <b>Connector &amp; terminal</b> <b>Except for front door LH</b> <i>(i84) No. 8 (+) — (i84) No. 7 (-):</i> <b>Front door LH</b> <i>(i84) No. 23 (+) — (i84) No. 7 (-):</i>	Does the voltage change from less than 1.5 V → 10 V or more? (During unlock output)	Go to step 7.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>

# Door Lock Control System

Step	Check	Yes	No
<p><b>7</b></p> <p><b>CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.</b>                      Measure the voltage between body integrated unit and chassis ground when moving the rear gate opener button.  <i>Connector &amp; terminal (i84) No. 22 (+) — Chassis ground (-):</i></p>	Does the voltage change from less than 1.5 V → 10 V or more? (During unlock output)	Go to step <b>8</b> .	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>
<p><b>8</b></p> <p><b>CHECK DOOR LOCK ACTUATOR.</b>                      Check the door lock actuator.</p> <ul style="list-style-type: none"> <li>• Front door lock actuator &lt;Ref. to SL-34, INSPECTION, Front Door Latch and Door Lock Actuator Assembly.&gt;</li> <li>• Rear door lock actuator &lt;Ref. to SL-37, INSPECTION, Rear Door Latch and Door Lock Actuator Assembly.&gt;</li> </ul>	Is the door lock actuator OK?	Go to step <b>9</b> .	Replace the door latch and door lock actuator assembly.
<p><b>9</b></p> <p><b>CHECK TRUNK LID LOCK ACTUATOR OR REAR GATE LOCK ACTUATOR.</b></p> <ul style="list-style-type: none"> <li>• Trunk lid lock actuator &lt;Ref. to SL-40, INSPECTION, Trunk Lid Latch and Actuator Assembly.&gt;</li> <li>• Rear gate lock actuator &lt;Ref. to SL-39, INSPECTION, Rear Gate Latch and Actuator Assembly.&gt;</li> </ul>	Is trunk lid lock actuator or rear gate lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the trunk lid latch and actuator assembly or rear gate latch and actuator assembly.

# Keyless Entry System

## SECURITY AND LOCKS

### 3. Keyless Entry System

#### A: WIRING DIAGRAM

Refer to “Keyless Entry System” in WI section. <Ref. to WI-158, WIRING DIAGRAM, Keyless Entry System.>

	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Buzzer and hazard light do not operate.	1. Check the buzzer operation.	<Ref. to SL-23, CHECK KEYLESS BUZZER, INSPECTION, Keyless Entry System.>
	2. Check the hazard light operation.	<Ref. to SL-22, CHECK HAZARD LIGHT OPERATION., INSPECTION, Keyless Entry System.>
	3. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-22, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-25, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

## 2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

**CAUTION:**

**Be sure to reset keyless transmitter of other vehicles registered to the inspection target vehicle, and vehicles to which keyless transmitters were registered for inspection, to the condition before performing the inspection. (Re-register the keyless transmitters.)**

Step	Check	Yes	No
<b>1</b> <b>CHECK KEYLESS TRANSMITTER BATTERY.</b> 1) Remove the battery from the keyless transmitter. <Ref. to SL-51, REMOVAL, Transmitter.> 2) Check the battery voltage. <Ref. to SL-51, INSPECTION, Transmitter.>	Is the voltage 2.5 V or more?	Go to step 2.	Replace the keyless transmitter battery. <Ref. to SL-51, Transmitter.>
<b>2</b> <b>CHECK KEYLESS TRANSMITTER.</b> Register the keyless transmitter which operates normally on other vehicles to the inspection target vehicle. <Ref. to SL-51, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.> 1) Close all the doors and rear gate (5 door model) or trunk lid (4 door model) of the inspection target vehicle. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle. For the 4 door model, unlock the trunk lid.	Can lock, unlock of doors and unlock of the trunk lid be performed properly on the inspection target vehicle?	Go to step 3.	Due to vehicle malfunction, continue the keyless entry system diagnosis.
<b>3</b> <b>CHECK KEYLESS TRANSMITTER.</b> Register the keyless transmitter of the inspected vehicle to another vehicle whose keyless system operates normally. <Ref. to SL-51, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>	Is the keyless transmitter registered correctly?	Go to step 4.	Replace the keyless transmitter. <Ref. to SL-51, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>
<b>4</b> <b>CHECK KEYLESS TRANSMITTER.</b> Check the registered keyless transmitter. 1) Close all the doors and rear gate of the vehicle which keyless system operates normally. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle. For the 4 door model, unlock the trunk lid.	Can lock, unlock of doors and unlock of the trunk lid be performed properly on the vehicle?	Keyless transmitter is OK.	Replace the keyless transmitter. <Ref. to SL-51, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>

# Keyless Entry System

## SECURITY AND LOCKS

### 3. CHECK KEYLESS ENTRY CONTROL MODULE

	Step	Check	Yes	No
1	<b>CHECK DIAGNOSTIC TROUBLE CODE (DTC).</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Diagnostic Code(s) Display}. 5) Check that the DTC is displayed.	Is DTC B1500 "Keyless UART com. Malfunction" displayed?	Go to step 2.	Keyless entry control module is normal.
2	<b>CHECK POWER SUPPLY.</b> 1) Disconnect the keyless entry control module harness connector. 2) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(R80) No. 4 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open circuits and shorts between the keyless entry control module and fuse.
3	<b>CHECK GROUND CIRCUIT.</b> Measure the resistance between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(R80) No. 7 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
4	<b>CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(i84) No. 24 — (R80) No. 3:</b>	Is the resistance less than 10 Ω?	Replace the keyless entry control module. <Ref. to SL-48, Keyless Entry Control Module.>	Repair or replace the harness.

### 4. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Refer to the INSPECTION of POWER SUPPLY AND GROUND CIRCUIT of the Door Lock Control System for detailed procedures. <Ref. to SL-9, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>

## 5. CHECK DOOR SWITCH

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK INPUT CIRCUIT.</b></p> <p>1) Prepare the Subaru Select Monitor kit.</p> <p>2) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.</p> <p>3) On «System Selection Menu» display, select {Integ. unit mode}.</p> <p>4) Select the {Current Data Display}.</p> <p>5) Select the {Driver’s door SW input}, {P-door SW input}, {Rear right door SW input}, {Rear left door SW input}, and {R Gate SW input}.</p>	<p>Does the display switch between OFF ⇔ ON when each door or rear gate, trunk lid is opened/closed?</p>	<p>The door switch circuit is OK.</p>	<p>Go to step 2.</p>
<p><b>2</b></p> <p><b>CHECK HARNESS.</b></p> <p>1) Disconnect the harness connector of body integrated unit.</p> <p>2) Disconnect the door switch harness connector that the display does not change.</p> <p>3) Check the harness for open or short circuits between the body integrated unit terminal and the faulty door switch terminal.</p> <p><b>Connector &amp; terminal</b></p> <p><b>Front door RH</b> (i84) No. 32 — (R12) No. 1:</p> <p><b>Front door LH</b> (i84) No. 19 — (R9) No. 1:</p> <p><b>Rear door RH</b> (i84) No. 6 — (R16) No. 1:</p> <p><b>Rear door LH</b> (i84) No. 20 — (R22) No. 1:</p> <p><b>Trunk lid switch</b> (i84) No. 33 — (R186) No. 3:</p> <p><b>Rear gate latch switch</b> (i84) No. 33 — (D46) No. 3:</p>	<p>Is harness normal?</p>	<p>Go to step 3.</p>	<p>Repair or replace the harness.</p>
<p><b>3</b></p> <p><b>CHECK HARNESS.</b></p> <p>Measure the resistance between faulty door switch harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b></p> <p><b>Front door RH</b> (R12) No. 3 — Chassis ground:</p> <p><b>Front door LH</b> (R9) No. 3 — Chassis ground:</p> <p><b>Rear door RH</b> (R16) No. 3 — Chassis ground:</p> <p><b>Rear door LH</b> (R22) No. 3 — Chassis ground:</p> <p><b>Trunk lid switch</b> (R186) No. 1 — Chassis ground:</p> <p><b>Rear gate latch switch</b> (D46) No. 4 — Chassis ground:</p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 4.</p>	<p>Repair or replace the harness.</p>

# Keyless Entry System

## SECURITY AND LOCKS

	Step	Check	Yes	No
4	<p><b>CHECK DOOR SWITCH.</b> Measure the resistance between faulty door switch terminals.</p> <p><b>Connector &amp; terminal</b>  <b>Front RH door switch</b>  <i>(R12) No. 1 — No. 3:</i>  <b>Front LH door switch</b>  <i>(R9) No. 1 — No. 3:</i>  <b>Rear RH door switch</b>  <i>(R16) No. 1 — No. 3:</i>  <b>Rear LH door switch</b>  <i>(R22) No. 1 — No. 3:</i>  <b>Trunk lid switch</b>  <i>(R186) No. 1 — No. 3:</i>  <b>Rear gate latch switch</b>  <i>(D46) No. 3 — No. 4:</i></p>	Is the resistance 1 M $\Omega$ or more when switch is pushed?	Go to step 5.	<p>Replace the faulty parts.</p> <ul style="list-style-type: none"> <li>• Door switch</li> <li>• Trunk lid latch and actuator ASSY</li> <li>• Rear gate latch and actuator ASSY</li> </ul>
5	<p><b>CHECK DOOR SWITCH.</b> Measure the resistance between faulty door switch terminals.</p> <p><b>Connector &amp; terminal</b>  <b>Front RH door switch</b>  <i>(R12) No. 1 — No. 3:</i>  <b>Front LH door switch</b>  <i>(R9) No. 1 — No. 3:</i>  <b>Rear RH door switch</b>  <i>(R16) No. 1 — No. 3:</i>  <b>Rear LH door switch</b>  <i>(R22) No. 1 — No. 3:</i>  <b>Trunk lid switch</b>  <i>(R186) No. 1 — No. 3:</i>  <b>Rear gate latch switch</b>  <i>(D46) No. 3 — No. 4:</i></p>	Is the resistance less than 10 $\Omega$ when switch is released?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	<p>Replace the faulty parts.</p> <ul style="list-style-type: none"> <li>• Door switch</li> <li>• Trunk lid latch and actuator ASSY</li> <li>• Rear gate latch and actuator ASSY</li> </ul>

## 6. CHECK KEY WARNING SWITCH

Step	Check	Yes	No
<b>1 CHECK KEY WARNING SWITCH.</b> 1) Prepare the Subaru Select Monitor kit. 2) On «System Selection Menu» display, select {Integ. unit mode}. 3) Select the {Current Data Display & Save}. 4) Select the {key-lock warning SW}.	Is the proper input signal displayed when the key is inserted and removed from the ignition switch?	The key warning switch is OK.	Go to step 2.
<b>2 CHECK FUSE.</b> Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 3.
<b>3 CHECK KEY WARNING SWITCH CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B279) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 4.	Go to step 5.
<b>4 CHECK KEY WARNING SWITCH CIRCUIT.</b> 1) Remove the key from ignition switch. 2) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B279) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 0 V?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Go to step 5.
<b>5 CHECK KEY WARNING SWITCH.</b> 1) Disconnect the key warning switch harness connector. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. <b>Connector &amp; terminal</b> <b>(B350) No. 3 — No. 4:</b>	Is the resistance less than 1 Ω?	Go to step 6.	Replace the key warning switch.
<b>6 CHECK KEY WARNING SWITCH.</b> 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. <b>Connector &amp; terminal</b> <b>(B350) No. 3 — No. 4:</b>	Is the resistance 1 MΩ or more?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse. • Harness for open or short between the body integrated unit and key warning switch	Replace the key warning switch.

# Keyless Entry System

## SECURITY AND LOCKS

### 7. CHECK ROOM LIGHT OPERATION

	Step	Check	Yes	No
1	<b>CHECK ROOM LIGHT OPERATION.</b> Make sure the room light illuminates when the room light switch is ON, and goes off when the switch is OFF.	Does the room light illuminate or go off?	Go to step 2.	Check the harness between the fuse and main fuse box and room light.
2	<b>CHECK ROOM LIGHT OPERATION.</b> 1) Turn the room light switch to the "DOOR" position. 2) Open/close any door (other than trunk).	Does the room light illuminate ⇔ go off (including off delay) when the door is opened and closed?	Go to step 3.	Go to step 4.
3	<b>CHECK KEYLESS ENTRY OPERATION.</b> Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Check the bulb or room light assembly, and replace if necessary.
4	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit harness connector and room light harness connector. 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B279) No. 5 — (R52) No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the harness.
5	<b>CHECK HARNESS.</b> Measure the voltage between room light harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(R52) No. 3 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Repair or replace the harness.

### 8. CHECK HAZARD LIGHT OPERATION

	Step	Check	Yes	No
1	<b>CHECK HAZARD LIGHT OPERATION.</b> Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step 2.	Check the hazard light circuit.
2	<b>CHECK OUTPUT TO HAZARD LIGHT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the key warning switch harness connector. 3) Prepare the Subaru Select Monitor kit. 4) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 5) On «System Selection Menu» display, select {Integ. unit mode}. 6) Select {ECM customizing}. 7) Check {Hazard answer-back setup}, and then switch to ON setting if necessary. 8) Select the {Current Data Display & Save}. 9) Remove the key from ignition switch. 10) Select the {Hazard Output}.	Is output signal present when operating the transmitter LOCK/UNLOCK button?	Go to step 3.	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
3	<b>CHECK CIRCUIT OF HAZARD LIGHT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the turn signal and hazard unit harness connector. 3) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B281) No. 22 — (B32) No. 8:</b>	Is the resistance less than 10 Ω?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

## 9. CHECK KEYLESS BUZZER

Step	Check	Yes	No
<b>1 CHECK FUNCTION.</b> Using the Subaru Select Monitor, check {Answer-back buzzer setup}. <Ref. to LAN(diag)-22, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>	Is it ON?	Go to step 2.	Change the setting to ON. <Ref. to LAN(diag)-26, USER CUSTOMIZING, OPERATION, Subaru Select Monitor.>
<b>2 CHECK OUTPUT TO KEYLESS BUZZER.</b> 1) Remove the key from ignition switch. 2) Display the {Keyless Buzzer Output} of the body integrated unit using the Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> 3) Press the LOCK/UNLOCK button of the keyless transmitter.  NOTE: Due to the screen refresh timing of the Subaru Select Monitor, repeat the operation a few times to confirm, as there may be no change of OFF → ON at first.	Does display change from OFF → ON?	Go to step 3.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>
<b>3 CHECK KEYLESS BUZZER.</b> 1) Remove the keyless buzzer. 2) Install the keyless buzzer to another vehicle which operates keyless buzzer normally, check the buzzer sounds.	Does the keyless buzzer sound?	Go to step 4.	Replace the keyless buzzer.
<b>4 CHECK HARNESS.</b> 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the keyless buzzer harness connector. 3) Measure the resistance between harness connector terminals.  <b>Connector &amp; terminal</b> <b>(B279) No. 24 — (B164) No. 1:</b>	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the harness.
<b>5 CHECK HARNESS.</b> Measure the resistance between the keyless buzzer harness connector and chassis ground.  <b>Connector &amp; terminal</b> <b>(B164) No. 2 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Repair or replace the harness.

# Keyless Entry System

## SECURITY AND LOCKS

### 10.CHECK TRUNK LID LOCK ACTUATOR

	Step	Check	Yes	No
1	<b>CHECK UNLOCK OPERATION OF TRUNK ALONE.</b> By using the keyless transmitter, perform the UNLOCK operation of trunk alone.	Does answer-back occur?	Go to step 3.	Go to step 2.
2	<b>CHECK KEYLESS ENTRY SYSTEM CIRCUIT.</b> 1) Remove the keyless entry control module from the vehicle with faults. 2) Install the keyless control module that was removed to the other vehicle which is working normally. 3) Perform the UNLOCK operation by using the keyless transmitter of vehicle with faults.	Does UNLOCK occur?	Check body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Check the following: • Keyless entry control module • Transmitter
3	<b>CHECK HARNESS.</b> 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the trunk lid lock actuator harness connector. 3) Measure the resistance between harness connectors. <b>Connector &amp; terminal</b> <b>(i84) No. 22 — (R186) No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
4	<b>CHECK HARNESS.</b> Measure the resistance between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(R186) No. 1 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 5.	Repair or replace the harness.
5	<b>CHECK TRUNK LID LOCK ACTUATOR.</b> Check the trunk lid lock actuator. <Ref. to SL-40, Trunk Lid Latch and Actuator Assembly.>	Is trunk lid lock actuator normal?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Replace the trunk lid lock actuator. <Ref. to SL-40, Trunk Lid Latch and Actuator Assembly.>

### 11.CHECK DOOR LOCK SWITCH

For operation procedure, refer to the door lock switch inspection of the door lock control system. <Ref. to SL-10, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

## 12.CHECK IGNITION SWITCH ILLUMINATION

Step	Check	Yes	No
<b>1</b> <b>CHECK IGNITION CIRCUIT.</b> Check the ignition circuit.	Is the circuit normal?	Go to step 2.	Repair or replace.
<b>2</b> <b>CHECK DOOR SWITCH CIRCUIT.</b> Inspect door switch circuit.	Is the circuit normal?	Go to step 3.	Repair or replace.
<b>3</b> <b>CHECK FUSE.</b> Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 4.
<b>4</b> <b>CHECK HARNESS.</b> 1) Disconnect the ignition switch illumination harness connector. 2) Measure the voltage between harness connector terminal and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(B224) No. 2 (+) — Chassis ground (-):</b></i>	Is the voltage 10 V or more?	Go to step 5.	Check the harness for open or short circuits between the ignition switch illumination and fuse.
<b>5</b> <b>CHECK IGNITION SWITCH ILLUMINATION CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit and ignition switch illumination harness connector. 2) Check the harness for open circuits and shorts between the body integrated unit harness connector terminal and the ignition switch illumination harness connector terminal. <i><b>Connector &amp; terminal</b></i> <i><b>(B281) No. 23 — (B224) No. 1:</b></i>	Is harness normal?	Go to step 6.	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.
<b>6</b> <b>CHECK IGNITION SWITCH ILLUMINATION BULB.</b> Apply battery voltage to the bulb.	Does the bulb illuminate?	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>	Replace the ignition switch illumination bulb. <Ref. to LI-34, REMOVAL, Ignition Switch Illumination.>

# Security System

## SECURITY AND LOCKS

### 4. Security System

#### A: WIRING DIAGRAM

Refer to "Security System" in WI section. <Ref. to WI-154, WIRING DIAGRAM, Security System.>

#### B: ELECTRICAL SPECIFICATION

##### 1. BODY INTEGRATED UNIT

Refer to the Control Module I/O Signal of the LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-10, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

#### C: INSPECTION

##### 1. BASIC DIAGNOSTIC PROCEDURE

	Step	Check	Yes	No
1	<b>INITIAL CHECK.</b> Check keyless entry system.	Does the keyless entry system operate normally?	Go to step 2.	Check keyless entry system. <Ref. to SL-15, INSPECTION, Keyless Entry System.>
2	<b>CHECK SECURITY ON/OFF SETTING.</b> 1) Remove the key from ignition switch or turn the ignition to OFF, and close all doors. 2) Press the UNLOCK button of the keyless transmitter. 3) Check the security indicator light blinking patterns.	Does the security indicator light blink at 3 second intervals?	Go to step 3.	Check the security indicator light circuit. <Ref. to SL-30, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>
3	<b>CHECK SECURITY ON/OFF SETTING.</b> 1) Press the LOCK button of the keyless transmitter. 2) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? / When monitoring lag is set to 0 seconds: flashes twice within 0.5 seconds, in 2 second intervals / When monitoring lag is set to 30 seconds: flashes 3 times per second, in 0.4 second intervals.	Go to step 6.	Go to step 4.
4	<b>CHANGE SETTING OF SECURITY SYSTEM.</b> Change the setting of security system to ON. <Ref. to SL-28, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Go to step 5.	<ul style="list-style-type: none"> <li>• Check the ignition switch circuit. &lt;Ref. to SL-31, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.&gt;</li> <li>• Check the door lock switch circuit. &lt;Ref. to SL-24, CHECK DOOR LOCK SWITCH, INSPECTION, Keyless Entry System.&gt;</li> </ul>

# Security System

## SECURITY AND LOCKS

Step	Check	Yes	No
<b>5 CHECK SETTING CHANGE OF SECURITY SYSTEM.</b> 1) Remove the key from ignition switch, and then close all doors. 2) Press the LOCK button of the keyless transmitter. 3) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? / When monitoring lag is set to 0 seconds: flashes twice within 0.5 seconds, in 2 second intervals / When monitoring lag is set to 30 seconds: flashes 3 times per second, in 0.4 second intervals.	Go to step 6.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>
<b>6 CHECK SECURITY SYSTEM OPERATION.</b> Press the LOCK button of keyless transmitter, and wait for 30 seconds.	Is the blinking pattern of security indicator light blink twice within 0.5 seconds in 2 second cycles?	Go to step 7.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>
<b>7 CHECK SECURITY ALARM OPERATION.</b> 1) Unlock all doors using the door lock switch on driver's door. 2) Open any door, trunk or rear gate.	Does the security alarm operate when opening any door, trunk or rear gate?	Go to step 8.	Check the door switch, trunk lid switch or rear gate latch switch. <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
<b>8 CHECK SECURITY ALARM OPERATION.</b> Check the security alarm operation.	Do all security alarms operate? / Horn sound / Hazard lights flash / Security indicator light illuminates	Go to step 9.	<ul style="list-style-type: none"> <li>• Check the horn. &lt;Ref. to SL-30, CHECK HORN, INSPECTION, Security System.&gt;</li> <li>• Check the hazard light. &lt;Ref. to SL-30, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.&gt;</li> </ul>
<b>9 CHECK SECURITY ALARM CANCEL OPERATION.</b> Press any button of transmitter while the security alarm is operating. Or turn the ignition switch to ON.	Do all security alarms stop? / Horn / Hazard lights	Go to step 10.	Check the ignition switch circuit. <Ref. to SL-31, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.>
<b>10 CHECK SECURITY SYSTEM CONDITION MEMORY.</b> Check that the system functions properly even when the battery is not connected temporarily. <Ref. to SL-28, CHECK SECURITY SYSTEM CONDITION MEMORY, INSPECTION, Security System.>	Does the system function properly when the battery is not connected temporarily?	Go to step 11.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>
<b>11 CHECK IMPACT SENSOR (DEALER OPTION).</b> Check the sensibility of impact sensor. <Ref. to SL-47, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.>	Is the sensibility set properly?	Press the UNLOCK button of keyless transmitter, and finish the diagnosis.	Adjust the sensitivity. <Ref. to SL-47, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.>

# Security System

## SECURITY AND LOCKS

---

### NOTE:

Check the function settings of the body integrated unit if any of the following symptoms appear. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

- The horn does not sound even when the security alarm is triggered and operating. As a cause, it is possible that the siren ON/OFF setting is set to ON in the customization function.
- The horn sounds when setting the security to ON (Monitoring condition) using the keyless transmitter. As a cause, it is possible that the impact sensor present (ON) / not present (OFF) setting is set to ON in the customization function though there is no impact sensor.

### **2. CHECK SECURITY SYSTEM CONDITION MEMORY**

- 1) Pull out the key from the ignition switch, or turn the ignition to OFF.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Open the front hood.
- 4) Press the LOCK button of the keyless transmitter.

### NOTE:

Wait until the security indicator light blinks twice within 0.5 seconds at 2 second intervals.

If the 30 second monitoring lag has been set, wait 30 seconds.

- 5) Disconnect the ground cable from the battery.
- 6) Connect the ground cable to the battery.
- 7) Check that the security indicator light blinks twice within 0.5 seconds at 2 second intervals. When it does not blink, replace the body integrated unit.

### **3. SECURITY SYSTEM ON/OFF SETTING**

- 1) Close all doors, trunk lid and rear gate, and sit down on the driver seat. Press the UNLOCK button of the keyless transmitter.
- 2) Turn the ignition switch to ON.
- 3) Push the centralized door lock switch down and open the driver's side door at the same time, and hold in this condition for 10 seconds.
- 4) If the security system is ON, it will turn OFF. If OFF, it will turn ON.

### **4. CHECK DOOR SWITCH**

For operation procedure, refer to the door switch inspection of the keyless entry system. <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>

## 5. CHECK TRUNK LID SWITCH (4 DOOR MODEL) OR REAR GATE LATCH SWITCH (5 DOOR MODEL)

Step	Check	Yes	No
<b>1</b> <b>CHECK INPUT FROM TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Current Data Display & Save}. 5) Select the {R Gate SW input}.	Is the input signal present when opening the trunk lid or rear gate?	The trunk lid switch or rear gate latch switch circuit is OK.	Go to step 2.
<b>2</b> <b>CHECK CIRCUIT FOR TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the harness connector of the trunk lid switch or the rear gate latch switch. 4) Measure the resistance between harness connector terminals. <i><b>Connector &amp; terminal</b></i> <i>(i84) No. 33 — (D46) No. 3: (5 door model)</i> <i>(i84) No. 33 — (R186) No. 3: (4 door model)</i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair or replace the harness.
<b>3</b> <b>CHECK GROUND CIRCUIT OF TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b> 1) Disconnect the harness connector of the trunk lid switch or the rear gate latch switch. 2) Measure the resistance between harness connector terminal and chassis ground. <i><b>Connector &amp; terminal</b></i> <i>(D46) No. 4 — Chassis ground: (5 door model)</i> <i>(R186) No. 1 — Chassis ground: (4 door model)</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair or replace the harness.
<b>4</b> <b>CHECK TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b> 1) Disconnect the harness connector of the trunk lid switch or the rear gate latch switch. 2) Measure the resistance between switch terminals. <i><b>Terminals</b></i> <i>No. 4 — No. 3: (5 door model)</i> <i>No. 1 — No. 3: (4 door model)</i>	Is the resistance 1 MΩ or more when switch is pushed?	Go to step 5.	Replace the trunk lid latch and actuator assembly or rear gate latch and actuator assembly.
<b>5</b> <b>CHECK TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b> Measure the resistance between switch terminals. <i><b>Terminals</b></i> <i>No. 4 — No. 3: (5 door model)</i> <i>No. 1 — No. 3: (4 door model)</i>	Is the resistance less than 1 Ω when switch is released?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the trunk lid latch and actuator assembly or rear gate latch and actuator assembly.

# Security System

## SECURITY AND LOCKS

### 6. CHECK SECURITY INDICATOR LIGHT CIRCUIT

Step	Check	Yes	No
<b>1 CHECK SECURITY INDICATOR LIGHT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Place a 100 $\Omega$ resistance on the harness connector terminal using a suitable lead wire, and connect to ground through the resistance. <i>Connector &amp; terminal (i84) No. 10 — Chassis ground:</i>	Does the security indicator light illuminate?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step 2.
<b>2 CHECK POWER SUPPLY FOR SECURITY INDICATOR LIGHT.</b> 1) Disconnect the connector from the combination meter. 2) Measure the voltage between the combination meter harness connector terminal and chassis ground. <i>Connector &amp; terminal (i10) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short circuits between combination meter and fuse.
<b>3 CHECK SECURITY INDICATOR LIGHT CIRCUIT.</b> Measure the resistance between the combination meter harness connector terminal and the security control unit harness connector terminal. <i>Connector &amp; terminal (i10) No. 39 — (i84) No. 10:</i>	Is the resistance less than 10 $\Omega$ ?	Replace the combination meter. <Ref. to IDI-16, Combination Meter.>	Check the harness for open or short circuits between the combination meter and body integrated unit.

### 7. CHECK HORN

Step	Check	Yes	No
<b>1 CHECK HORN OPERATION.</b> Check the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step 2.	Check the horn circuit.
<b>2 CHECK OUTPUT TO HORN RELAY.</b> 1) Connect the Subaru Select Monitor Kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select {Function check}. 5) Select {Horn Output} and execute.	Does the horn sound?	Horn circuit is OK.	Go to step 3.
<b>3 CHECK HORN RELAY CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the main fuse box harness connector (B186). 4) Measure the resistance between harness connector terminals. <i>Connector &amp; terminal (B279) No. 29 — (B186) No. 1:</i>	Is the resistance less than 10 $\Omega$ ?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

### 8. CHECK HAZARD LIGHT OPERATION

For operation procedure, refer to the hazard light inspection of the keyless entry system. <Ref. to SL-23, CHECK KEYLESS BUZZER, INSPECTION, Keyless Entry System.>

## 9. CHECK IGNITION SWITCH CIRCUIT

Step	Check	Yes	No
<b>1</b> <b>CHECK IGNITION SWITCH VOLTAGE.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor". 3) On «System Selection Menu» display, select {Integ. unit mode}. 4) Select the {Current Data Display & Save}. 5) Select the {BATT voltage} and {IG power supply}.	Is the {IG power supply voltage} within $\pm 1$ V against {BATT voltage}?	The ignition switch input circuit is OK.	Go to step 2.
<b>2</b> <b>CHECK IGNITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Check body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open or short circuit between the body integrated unit and fuse.

### 5. Front Inner Remote

#### A: REMOVAL

- 1) Remove the door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 2) Remove the cable from the cable holder.
- 3) Remove the screws, and remove the inner remote handle.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

- 1) Check the cable of the door opener and door lock for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the front door latch and door lock actuator assembly.
- 2) Check the lever, rod and wire for smooth operation.

## 6. Front Outer Handle

### A: REMOVAL

- 1) Raise the front door glass to the top position.
- 2) Remove the door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-22, REMOVAL, Front Sealing Cover.>
- 4) Remove the rod clamp.
- 5) Remove the plug at the rear of the door panel, and loosen the TORX<sup>®</sup> bolt (1).

- 6) Remove the door outer handle cover.
- 7) Move the front outer handle towards the rear, and remove the front outer handle.

#### CAUTION:

**Do not apply excessive force to remove the handle from the door panel. The door panel may become deformed.**

- 8) Remove the outer side spacer.
- 9) Loosen TORX<sup>®</sup> bolt (2).
- 10) Remove the frame assembly from inside the door panel.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>**

### C: INSPECTION

- 1) Check the rod for deformation.
- 2) Check the lever and rod for smooth operation.

# Front Door Latch and Door Lock Actuator Assembly

## SECURITY AND LOCKS

### 7. Front Door Latch and Door Lock Actuator Assembly

#### A: REMOVAL

- 1) Raise the front door glass to the top position.
- 2) Disconnect the ground cable from battery.
- 3) Remove the front door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 4) Remove the sealing cover. <Ref. to EB-22, REMOVAL, Front Sealing Cover.>
- 5) Remove the glass run rubber (A) partially.

- 6) Remove the rear sash.
- 7) Remove the rod from the outer handle rod clamp.
- 8) Disconnect the harness connector.
- 9) Remove the three screws, and then remove the front door latch and door lock actuator assembly.

#### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

#### C: INSPECTION

##### 1. DOOR LATCH

- 1) Check the rod, door opener and door lock cable for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the front door latch and door lock actuator assembly.
- 2) Check the lever, rod and wire for smooth operation.

##### 2. LOCK ACTUATOR

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to door lock actuator terminals.

Actuator operation	Terminals	
	No. 1	No. 2
Lock → Unlock	-	+
Unlock → Lock	+	-

If defective, replace the front door latch and door lock actuator assembly.

## 8. Rear Inner Remote

### A: REMOVAL

Refer to “Front Inner Remote” for the removal procedure. <Ref. to SL-32, REMOVAL, Front Inner Remote.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Check the cable of the door opener and door lock for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch and door lock actuator assembly.
- 2) Check the lever, rod and wire for smooth operation.
- 3) Check the child safety lock for correct operations.

# Rear Outer Handle

## SECURITY AND LOCKS

### 9. Rear Outer Handle

#### A: REMOVAL

- 1) Raise the rear door glass to the top position.
- 2) Remove the rear door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-25, REMOVAL, Rear Sealing Cover.>
- 4) Remove the three screws, and move aside the rear door latch and door lock actuator assembly.

- 5) Remove the child protector cover, and loosen the TORX® bolt.

- 6) Remove the outer handle cover.
- 7) Move the rear outer handle towards the rear, and remove the rear outer handle.
- 8) Remove the outer spacer, and remove the frame assembly from the inner side.
- 9) Remove the TORX® bolt.

- 10) Remove the frame assembly from inside the door panel.

#### CAUTION:

Do not apply excessive force to remove the handle from the door panel. The door panel may become deformed.

#### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

#### C: INSPECTION

- 1) Check that the latch joins securely.
- 2) Check the handle and wire for smooth operation.

## 10. Rear Door Latch and Door Lock Actuator Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the wire from the rear inner remote. <Ref. to SL-35, REMOVAL, Rear Inner Remote.>
- 4) Remove the sealing cover. <Ref. to EB-25, REMOVAL, Rear Sealing Cover.>
- 5) Remove the rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 6) Disconnect the harness connector.
- 7) Remove the three screws, and remove the rear door latch and door lock actuator assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

### C: INSPECTION

#### 1. DOOR LATCH

- 1) Check the cable for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch and door lock actuator assembly.
- 2) Check the lever and wire for smooth operation.

#### 2. LOCK ACTUATOR

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to door lock actuator terminals.

Actuator operation	Terminals	
	No. 1	No. 2
Lock → Unlock	-	+
Unlock → Lock	+	-

If defective, replace the rear door latch and door lock actuator assembly.

### 11.Rear Gate Opener Button

#### A: REMOVAL

- 1) Remove the rear gate trim. <Ref. to EI-66, REMOVAL, Rear Gate Trim.>
- 2) Remove the rear gate garnish. <Ref. to EI-69, REMOVAL, Rear Gate Garnish.>
- 3) Disconnect the rear gate opener button harness connector.
- 4) Hold down the rear gate opener button hook, and remove the rear gate opener button.

#### B: INSTALLATION

##### CAUTION:

**Make sure that the harness grommet is securely installed.**

**If not properly installed, this may cause water immersion.**

Install in the reverse order of removal.

#### C: INSPECTION

- 1) Disconnect the rear gate opener button harness connector.
- 2) Inspect the continuity between the rear gate opener button connector terminals.

Switch	Terminals	Standard
Open	No. 1 and No. 2	Less than 1 $\Omega$
Close		1 M $\Omega$ or more

If defective, replace the rear gate opener button.

## 12. Rear Gate Latch and Actuator Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-66, REMOVAL, Rear Gate Trim.>
- 3) Disconnect the harness connector.
- 4) Remove the two bolts to remove the rear gate latch and actuator assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to “COMPONENT” of “General Description”. <Ref. to SL-3, REAR GATE LOCK AND TRUNK LID, COMPONENT, General Description.>**

### C: INSPECTION

#### 1. REAR GATE LATCH

- 1) Check the latch for deformation or abnormal wear.
- 2) Check other levers and springs for rust formation or unsmooth movement.

#### 2. LOCK ACTUATOR

- 1) Disconnect the harness connector of rear gate latch and actuator assembly.
- 2) Connect the battery to the rear gate latch and actuator assembly terminals.

Actuator operation	Terminals	
	No. 1	No. 2
Lock → Unlock	+	-

Replace the rear gate latch and actuator assembly if faulty.

# Trunk Lid Latch and Actuator Assembly

## SECURITY AND LOCKS

### 13. Trunk Lid Latch and Actuator Assembly

#### A: REMOVAL

- 1) Disconnect the connector to remove the trunk opener cable.
- 2) Remove the two bolts to remove the trunk lid latch and actuator assembly.

#### B: INSTALLATION

##### CAUTION:

Route the safety lever wire so that it runs inside the trunk panel.

Install in the reverse order of removal.

##### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SL-3, REAR GATE LOCK AND TRUNK LID, COMPONENT, General Description.>

##### NOTE:

Apply grease to the movable part.

#### C: INSPECTION

##### 1. TRUNK LID LATCH

- 1) Check the latch for deformation or abnormal wear.
- 2) Check the safety lever for improper movement.
- 3) Check other levers and springs for rust formation or unsmooth movement.
- 4) Check the trunk opener cable for smooth operation.

##### 2. LOCK ACTUATOR

- 1) Disconnect the harness connector of trunk lid latch and actuator assembly.
- 2) Connect the battery to the trunk lid latch and actuator assembly terminals.

Actuator operation	Terminals	
	No. 1	No. 2
Lock → Unlock	-	+

Replace the trunk lid latch and actuator assembly if faulty.

## 14. Front Hood Lock Assembly

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Remove the bolts, and then detach the front hood lock assembly.
- 4) Remove the release cable from the lock assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*Refer to “COMPONENT” of “General Description”. <Ref. to SL-4, FRONT HOOD LOCK AND REMOTE OPENERS, COMPONENT, General Description.>*

#### NOTE:

Apply grease to the movable part.

### C: ADJUSTMENT

Loosen the bolt, and adjust the lock assembly while moving it up and down.

### D: INSPECTION

- 1) Check the striker for deformation or abnormal wear.
- 2) Check the safety lever for improper movement.
- 3) Check other levers and springs for rust formation or unsmooth movement.

## 15. Remote Openers

### A: REMOVAL

#### 1. FRONT HOOD OPENER

- 1) Remove the cable from the front hood lock.
- 2) Remove the bolt, and then detach the opener lever.

#### 2. TRUNK LID OPENER

- 1) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 2) Remove the lower inner trim, rear quarter trim and floor mat on the driver's side. Remove the clip holding the cable.
- 3) Remove the opener lever (1).
- 4) Remove the pin (2) and remove front cover (3).

- 5) Remove the bolt and nut, and remove the pull handle assembly (4).

- (1) Opener lever
- (2) Pin
- (3) Front cover
- (4) Pull handle ASSY
- (5) Cable
- (6) Clamp
- (7) Key cylinder

- 6) Remove the cable (5) from the pull handle assembly (4).
- 7) Remove clamp (6) to remove the key cylinder (7).

**CAUTION:**

**Remove the key cylinder in the UNLOCK position.**

- 8) Remove the trunk lid lock assembly from the trunk lid.

9) Remove the cable from the trunk lid lock assembly.

- (1) Trunk lid lock ASSY
- (2) Cable

### 3. FUEL FILLER LID OPENER

#### 4 DOOR MODEL

Refer to the trunk lid opener. <Ref. to SL-42, TRUNK LID OPENER, REMOVAL, Remote Openers.>

#### 5 DOOR MODEL

- 1) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 2) Remove the lower inner trim, rear quarter trim and floor mat on the driver's side. Remove the clip holding the cable.
- 3) Remove the opener lever and detach the cover (1).
- 4) Remove the bolt and nut, and remove the pull handle assembly (2).

- (1) Cover
- (2) Pull handle ASSY
- (3) Cable

5) Remove the cable (3) from the pull handle assembly (2).

6) Rotate the fuel lock inside the quarter panel to 90° and remove. (Either right or left turn)

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Make sure the front hood, trunk lid and fuel flap open and close smoothly.

# Ignition Key Lock

## SECURITY AND LOCKS

### 16. Ignition Key Lock

#### A: REPLACEMENT

- 1) Disconnect the ground cable from battery.
- 2) Remove the steering column. <Ref. to PS-15, REMOVAL, Tilt Steering Column.>
- 3) Secure the steering column in a vise. Remove the bolt with a drill.

- 4) Remove the ignition key lock.
- 5) Use new bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).

#### B: INSPECTION

- 1) Remove the instrument panel lower cover.
- 2) Remove the lower column cover.
- 3) Unfasten the fixing clip which secures harness, and then disconnect the connector of the ignition switch from body harness.
- 4) Turn the ignition key plate to each position and check the continuity between terminals of ignition connector.

Switch position	Terminal No.	Standard
LOCK	—	—
ACC	No. 3 and No. 5	Less than 1 $\Omega$
ON	No. 3, No. 1 and No. 4 No. 3 and No. 5	Less than 1 $\Omega$
ST	No. 3 and No. 2 No. 3, No. 1 and No. 6	Less than 1 $\Omega$

If NG, replace the ignition switch.

## 17. Key Lock Cylinders

### A: REPLACEMENT

- 1) Raise the front door glass to the top position.
- 2) Remove the door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-22, REMOVAL, Front Sealing Cover.>
- 4) Remove the rod clamp.
- 5) Remove the plug to the rear of the door panel.
- 6) Remove the TORX® bolt (1).

- 7) Remove the key cylinder along with the handle cover.
- 8) Remove the key cylinder from the cover, and replace the key cylinder.

- (1) Latch connection rod
- (2) Key cylinder
- (3) Door outer handle cover

### 18. Security Control Module

#### A: NOTE

The control of security system is carried out in body integrated unit. Refer to the section on the body integrated unit for the work procedures.

- Removal <Ref. to SL-50, REMOVAL, Body Integrated Unit.>
- Installation <Ref. to SL-50, INSTALLATION, Body Integrated Unit.>

## 19. Impact Sensor

### A: REMOVAL

- 1) Remove the key from ignition switch.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Press the UNLOCK button of the keyless transmitter.
- 4) Disconnect the ground cable from the battery.
- 5) Remove the impact sensor.
- 6) Change the setting of impact sensor using Subaru Select Monitor.

### B: INSTALLATION

- 1) Remove the key from ignition switch.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Press the UNLOCK button of the keyless transmitter.
- 4) Disconnect the ground cable from the battery.
- 5) Install the impact sensor.
- 6) Change the setting of impact sensor using Subaru Select Monitor.

### C: OPERATION

#### 1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

- 1) Connect the Subaru Select Monitor to the data link connector.
- 2) Turn the ignition switch to ON.
- 3) On the "System Selection Menu", select {Integ. unit mode}.
- 4) Select {ECM customizing}.
- 5) Make a impact monitor setting.
  - When installing: ON
  - When removing: OFF
- 6) Make a impact monitor ON/OFF setting.
  - When installing: ON
  - When removing: OFF
- 7) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

### D: ADJUSTMENT

#### 1. CHECK IMPACT SENSOR

- 1) Remove the key from ignition switch.
- 2) Close all the windows.
- 3) Close all the doors, trunk lid and rear gate. Leave open the front hood.
- 4) Press the LOCK button of the keyless transmitter from outside of vehicle.
- 5) Check that the security indicator light blinks twice within 0.5 seconds in 2 second cycles after 30 seconds.

- 6) Hit all windows with the palm with force repeatedly, to check for whether the security alarm operates. Lift up the front hood approx. 12 cm (4.7 in) or more, and then drop it off to check the operation of security alarm.
- 7) If NG, adjust the impact sensitivity.

#### 2. IMPACT SENSITIVITY ADJUSTMENT

- 1) Connect the Subaru Select Monitor to the data link connector.
- 2) Turn the ignition switch to ON.
- 3) On the "System Selection Menu", select {Impact Sensor}.
- 4) Make a {Sensitivity Adjustment Mode}.
  - Sensitivity can be adjusted in 11 levels (0 to 10).
  - Initial setting is 5.
  - Smaller number means more sensitive.
  - Larger number means less sensitive.
- 5) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

#### NOTE:

- Set the sensor so as not to let the alarm on normal vibration (reclining to the door, hit the ball and etc.).
- Set the sensor to operate the alarm with hitting the door or window glass, etc. continuously like a mayhem by robbery.
- Even if there is no burglary attempt, if there is vibration (road construction, elevated parking lots, passage of trains or boarding of ferries), the alarm can be triggered. Because of this, ask the customer about their parking conditions, and set an appropriate sensitivity level after discussion.
- The impact sensitivity can also be adjusted on the manufacturer's optional display, and it can be set in 11 levels from 0 to 10. The sensitivity is set to 5 by default. (Unlike the specification of the Subaru Select Monitor, the setting becomes duller as the setting value becomes smaller, and more sensitive as the number becomes larger.)
- If the sensitivity setting was not performed properly, a buzzer will sound four times. In this case, check the following:
  - Is there an error in CAN communication?
  - Is there an open circuit in the harness between the body integrated unit and the impact sensor?
  - Is there a malfunction in the display, body integrated unit or impact sensor?

## 20. Keyless Entry Control Module

### A: REMOVAL

#### 1. 5 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the left rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect the harness connector.
- 4) Remove the bolt and then remove the keyless entry control module.

#### 2. 4 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear shelf trim. <Ref. to EI-60, REMOVAL, Rear Shelf Trim.>
- 3) Disconnect the harness connector.
- 4) Remove the bolt and then remove the keyless entry control module.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**13 N·m (1.33 kgf·m, 9.6 ft·lb)**

## 21. Keyless Buzzer

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Turn over the left front mud guard.
- 3) Remove the bolt, and then remove the keyless buzzer.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**13 N·m (1.33 kgf-m, 9.6 ft-lb)**

### C: INSPECTION

Using the Subaru Select Monitor, perform forced operation of the keyless buzzer. <Ref. to LAN(di-ag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

#### NOTE:

If it does not sound, replace the buzzer.

## 22. Body Integrated Unit

### A: REMOVAL

#### NOTE:

1. When replacing the body integrated unit
    - Prepare the security ID plate.
    - For models with immobilizers, prepare the required number of new (unregistered) immobilizer keys.
    - When replacing the body integrated unit, check the current settings and record it. <Ref. to LAN(diag)-22, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>
  2. After replacing the body integrated unit with immobilizer
    - Register the immobilizer. For detailed operation procedure, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
    - Set the current settings as recorded.
- 1) Disconnect the ground cable from battery.
  - 2) Remove the driver’s side instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>
  - 3) Remove the knee guard panel.
  - 4) Disconnect the harness connector of body integrated unit.

#### CAUTION:

**Be careful to keep water and other foreign materials away from body integrated unit.**

- 5) Remove two mounting nuts for body integrated unit bracket, and remove the body integrated unit.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

#### NOTE:

Make sure that there are no differences from the contents of the current settings after installation. <Ref. to LAN(diag)-22, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

## 23. Transmitter

### A: REMOVAL

#### 1. TRANSMITTER BATTERY

**CAUTION:**

To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

Remove the battery (1) from the transmitter.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. TRANSMITTER BATTERY

Measure the voltage between the keyless transmitter battery (+) terminal and (-) terminal.

**NOTE:**

Battery discharge occurs during the measurement. Complete the measurement within 5 seconds.

(A) Resistance (47 Ω)

Tester connection		Standard
(+)	(-)	
Battery Positive terminal	Battery Ground terminal	2.5 — 3.0 V

If NG, replace the battery. (Use CR2025 or equivalent.)

### D: REPLACEMENT

#### 1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

**NOTE:**

- A maximum of four keyless transmitter can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of transmitter is necessary.

1) Connect the Subaru Select Monitor to the vehicle.

2) Turn the ignition switch to ON.

3) From the «System Selection Menu» of the Subaru Select Monitor, select the {2. Each System Check} → {7. Integ. unit mode} → {8. Keyless ID registration}.

4) Input the 8-digit ID number attached to the plastic bag of the keyless transmitter or inside the transmitter, from left to right, then press the [Enter] key.

**NOTE:**

Press the [▲] key on the Subaru Select Monitor to increase the number, and the [▼] key to decrease. Press the [<] key to move to the digit in the left, and [>] to the right.

5) The ID number you have entered will be shown. Make sure that the ID number shown is the same as that of plastic bag or inside of transmitter.

6) Press the [OK] key if the ID number is correct. If the ID number is incorrect, select [NO] to return to the step 3) and reenter the ID number.

7) «ID is being registered...» is displayed and registration starts.

8) «ID registration completed» will be displayed when the registration process is done.

9) To exit, select «Quit: NO» to return to {8. Keyless ID registration}. If there are additional keyless transmitters to be registered, select «The following are registered: OK» to return to the step 4).

**NOTE:**

• If the registration fails, «ID cannot register. Please try again.» will be displayed. Select the [OK] key to return to the {8. Keyless ID registration}. And retry from the step 3).

• «Quit: NO» is shown on the Subaru Select Monitor when fourth keyless transmitter has been registered. Select the [NO] key to return to {8. Keyless ID registration}.

### 24. Immobilizer Control Module

#### A: NOTE

The control of immobilizer system is carried out in body integrated unit. Refer to the section on the body integrated unit for the work procedures.

- Removal <Ref. to SL-50, REMOVAL, Body Integrated Unit.>
- Installation <Ref. to SL-50, INSTALLATION, Body Integrated Unit.>

## 25. Immobilizer Antenna

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws and remove the steering column cover lower.

- 3) Remove the three mounting screws of steering column cover upper.

- 4) Remove the instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>
- 5) Disconnect the immobilizer antenna connector (A) and ignition switch lighting connector (B).

- 6) Loosen the screw and release the lock (D) at opposite side using flat tip screwdriver (1), and then detach the immobilizer antenna (C).

### CAUTION:

**Do not apply excessive force to remove the immobilizer antenna and lock. Otherwise they may be broken because those parts are the products made of a plastic.**

### B: INSTALLATION

Install in the reverse order of removal.

# Immobilizer Antenna

SECURITY AND LOCKS

---

# General Description

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

---

## B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control unit, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable in order to prevent memory deletion.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely for reassembly.
- After reassembly, make sure functional parts operate smoothly.

## C: PREPARATION TOOL

### 1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX <sup>®</sup> T25	Used for removing and installing the glass lid.
Hexagon wrench	Used for forcedly driving the sunroof motor.

# Sunroof Control System

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 2. Sunroof Control System

### A: WIRING DIAGRAM

Refer to “Sunroof Control System” in WI section. <Ref. to WI-153, WIRING DIAGRAM, Sunroof Control System.>

### B: INSPECTION

Symptom	Inspection order
Water leakage	1. Check roof panel and glass lid for improper or poor sealing. 2. Check drain tube for clogging. 3. Check sunroof frame seal and body for improper fit.
Booming noise, wind noise and other noise	1. Check glass lid and roof panel for improper clearance. 2. Check sunshade and roof trim for improper clearance.
Abnormal motor noise	1. Check installing part of motor for looseness. 2. Check gears and bearings for wear. 3. Check cable for wear. 4. Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	1. Check guide rail for foreign particles. 2. Check guide rail for improper installation. 3. Check parts for mutual interference. 4. Check cable slider for improper clinching. 5. Check cable for improper installation.
Motor does not rotate or rotate improperly.	1. Check fuse for blown out. 2. Check switch for improper function. 3. Check motor for incorrect terminal voltage. 4. Check the relay for improper operation. 5. Check poor grounding system. 6. Check harness for open or short and terminals for poor connections.
Failure turn of glass lid	Check guide rail for foreign particles.

- Failure turn of glass lid while driving rough road.

Glass lid has auto-reverse function. When specified or more force is applied to the glass lid, the lid turns back and stops. When operating the glass lid (open or close) while driving the rough road, the lid judges vibration as a force and may causes failure turns. When the failure turn is occurred, need to perform the initialize operation with following procedure.

### 1. INITIALIZE OPERATION

- 1) Tilt up the glass lid.
- 2) Release the switch once, and press the tilt up switch again for 15 seconds.
- 3) When the glass lid is raised a little and returned to tilt up position, release the switch for the moment. (Initialization of position detecting function)
- 4) Keep pressing the tilt up switch within 5 seconds from releasing the switch. The glass lid will tilt down → slides open → slides close automatically. (When more than 5 seconds pass, the position detecting function is cancelled.)
- 5) Initialize operation is completed.

### C: NOTE

For procedure of each component in the sunroof control system, refer to the respective section.

- Glass lid <Ref. to SR-5, Glass Lid.>
- Sunroof assembly <Ref. to SR-6, Sunroof Assembly.>
- Sunroof motor <Ref. to SR-7, Sunroof Motor.>
- Sunroof switch <Ref. to SR-8, Sunroof Switch.>
- Sunshade <Ref. to SR-9, Sunshade.>

# Glass Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 3. Glass Lid

### A: REMOVAL

- 1) Open the sunshade, tilt up the glass lid.
- 2) Remove the guide rail cover.

- 3) Remove the TORX® bolt, and then remove the glass lid carefully.

#### CAUTION:

The thread locker is applied to the TORX® bolts, so use the new parts once they are removed.

### B: INSTALLATION

Install in the reverse order of removal.

### C: ADJUSTMENT

- 1) Open the sunshade, tilt up the glass lid.
- 2) Remove the guide rail cover.

- 3) Loosen the glass lid mounting TORX® bolts (A), and then adjust the height with moving the lid side.

**Difference in height between glass lid and roof panel L:**

**0.75 mm (0.03 in)**

### D: FORCED DRIVE

#### CAUTION:

After a forced operation, make sure to perform an initialize operation. <Ref. to SR-4, INSPECTION, Sunroof Control System.>

#### NOTE:

If the glass lid does not operate or is not supplied with power, move the glass lid using the hexagon wrench.

- 1) Remove the spot map light. <Ref. to LI-30, REMOVAL, Spot Map Light.>
- 2) Insert the hexagon wrench securely until it touches the motor shaft end.
- 3) Turn the hexagon wrench, and move the glass lid.

- Turning right, the glass lid open.
- Turning left, the glass lid close.

# Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 4. Sunroof Assembly

### A: REMOVAL

#### CAUTION:

When removing the clip, use great care not to damage the roof trim.

- 1) Disconnect the ground cable from battery.
- 2) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 3) Disconnect the harness connector of sunroof motor.
- 4) Remove the glass lid. <Ref. to SR-5, REMOVAL, Glass Lid.>
- 5) Remove the four drain tubes from frame assembly.
- 6) Remove the assist rail bracket (front) (A) and assist rail bracket (rear) (B).

- 7) Remove the curtain airbag module. (model with curtain airbag module) <Ref. to AB-19, REMOVAL, Curtain Airbag Module.>
- 8) Remove the bolts and nuts and remove the frame assembly.

### B: INSTALLATION

#### CAUTION:

Be careful not to snag the harness. Install in the reverse order of removal.

#### NOTE:

- Be sure to connect the harness connector.
- When installing the drain tube, insert it securely into drain pipe.

#### Length A:

15 mm (0.59 in) or more

### C: DISASSEMBLY

- 1) Remove the sunroof motor. <Ref. to SR-7, REMOVAL, Sunroof Motor.>
- 2) Remove the sunshade. <Ref. to SR-9, REMOVAL, Sunshade.>

### D: ASSEMBLY

Assemble in the reverse order of disassembly.

## 5. Sunroof Motor

### A: REMOVAL

**CAUTION:**

Never rotate the motor assembly after removing it.

- 1) Completely close the glass lid.
- 2) Disconnect the ground cable from battery.
- 3) Remove the spot map light. <Ref. to LI-30, REMOVAL, Spot Map Light.>
- 4) Remove the motor assembly.

**CAUTION:**

When removing the motor assembly, secure the cable wires to prevent moves.

- (1) Disconnect the harness connector (A).
- (2) Remove the attachment screw (B).

### B: INSTALLATION

**CAUTION:**

When installing the motor assembly, be careful not to move the sunroof cable.

- 1) Install in the reverse order of removal.
- 2) Perform the initialize operation of motor.
  - (1) Tilt up the glass lid.
  - (2) Release the switch once, and press the tilt up switch again for 15 seconds.
  - (3) When the glass lid is raised a little and on tilt up position, release the switch for the moment.
  - (4) Keep pressing the tilt up switch within 5 seconds from releasing the switch, glass lid automatically performs the tilts down → slides open → slides close operation, then the initialize operation is completed.
- 3) Check the operation of sunroof with following table.

Operation	Switch position
(1) Glass lid closes completely.	Close
(2) Glass lid tilt up to the top position.	Tilt up
(3) Glass lid closes completely.	Tilt down
(4) Glass lid opens completely.	Open
(5) Glass lid closes completely.	Close

# Sunroof Switch

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 6. Sunroof Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the spot map light lens (A) and sunroof switch mounting screws (B).

- 3) Disconnect the harness connector, and then remove the sunroof switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the sunroof switch resistance.

Switch position	Terminal No.	Standard	Connector No.
Open	1 and 3	Less than 1 $\Omega$	R128
Close	3 and 4	Less than 1 $\Omega$	
Tilt up	1 and 3	Less than 1 $\Omega$	R187
Tilt down	3 and 4	Less than 1 $\Omega$	

Replace the sunroof switch if defective.

#### NOTE:

If the glass lid does not operate or is not supplied with power, move the glass lid using the hexagon wrench. <Ref. to SR-5, FORCED DRIVE, Glass Lid.>

# Sunshade

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 7. Sunshade

### A: REMOVAL

- 1) Remove the sunroof assembly. <Ref. to SR-6, REMOVAL, Sunroof Assembly.>
- 2) Remove the two screws to remove the drip rail.

- 3) Remove the sunshade.

### CAUTION:

Being careful not to damage the shade knob, pull out it while bending the sunshade.

- (1) Remove the shade stopper (A).
- (2) Pull out the sunshade (B) from the frame assembly.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. CHECK FOR MOVING LOAD OF SUNSHADE

- 1) Attach a spring scale to sunshade edge using a cloth.

- 2) Pull the spring scale to measure moving load of the sunshade.

#### Moving load of sunshade:

##### Specification

$18.0 \pm 5.0 \text{ N}$  ( $1.8 \pm 0.5 \text{ kgf}$ ,  $13 \pm 3.7 \text{ lbf}$ )

#### NOTE:

Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while sunshade sliding smoothly.

- 3) If moving load exceeds specifications, check the glass lid, sunshade and frame assembly for improper installation.

# Sunshade

# General Description

EXTERIOR/INTERIOR TRIM

## B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing trim. <ul style="list-style-type: none"><li>• KTC AP201-10A</li><li>• KTC AP201-N</li><li>• KTC AP203-10A</li><li>• KTC AP20L-10B</li></ul> Or equivalent.
Clip clamp pliers	Used for removal of various clips and clamps. <ul style="list-style-type: none"><li>• KTC CCP-190</li></ul> Or equivalent.

## 2. Front Grille

### A: REMOVAL

1) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>

2) Remove the screws from the reverse side of the bumper face, and remove the front grille assembly.

### B: INSTALLATION

Install in the reverse order of removal.

## 3. Front Hood Grille

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the front hood insulator. <Ref. to EB-15, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
- 3) Remove screws (A) and clip (B), and remove the hood duct assembly.

- 4) Remove the nuts (A) and clips (B), and remove the front hood grille.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Insert the hooks (B) of the front hood duct into holes (A) of the front hood.

#### Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to EI-4, FRONT HOOD GRILLE, COMPONENT, General Description.>

# Front Under Cover

EXTERIOR/INTERIOR TRIM

## 4. Front Under Cover

### A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove clips (A) and (C), and bolts (B) in the front fender, then remove the front under cover.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**14 N·m (1.43 kgf·m, 10.3 ft·lb)**

## 5. Fuel Tank Protector

### A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the bolts (A) and nuts (B), and then remove the fuel tank protector.

### B: INSTALLATION

#### CAUTION:

**Do not reuse the nut (self locking nut). Always replace with a new part.**

Install in the reverse order of removal.

#### *Tightening torque:*

**Refer to "COMPONENT" of "General Description". <Ref. to EI-3, UNDER PROTECTOR, COMPONENT, General Description.>**

## 6. Mud Guard

### A: REMOVAL

#### 1. FRONT MUD GUARD

- 1) Jack-up the vehicle.
- 2) Remove the front wheels.
- 3) Remove the screws and clips to remove the mud guard.

#### 2. REAR MUD GUARD

- 1) Jack-up the vehicle.
- 2) Remove the rear wheels.
- 3) Remove the screws and clips to remove the mud guard.

- (1) Rear mud guard RH
- (2) Rear mud guard LH

### B: INSTALLATION

Install in the reverse order of removal.

## 7. Front Bumper

### A: REMOVAL

#### 1. FRONT BUMPER FACE

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip of the front grille.

- 3) Turn over the front mud guard, and remove the clips connecting the fender and bumper.

- 4) Remove the clips at the lower side of bumper.

- 5) Disconnect the fog light connector. (Model with fog light)

- 6) Detach the flange sections on the bumper face side from guide bracket (A).

#### CAUTION:

**Do not pull forcibly. It may damage the flange sections of the bumper face.**

#### NOTE:

It is easier to detach them from the fender side in the order from (1) to (3), while pulling up the bumper face to the direction of arrow (B) (upward).

- 7) Remove the bumper from the vehicle body.
- 8) Remove the front grille from bumper face. <Ref. to EI-24, REMOVAL, Front Grille.>
- 9) Remove the fog light from bumper face. <Ref. to LI-20, REMOVAL, Front Fog Light Assembly.>

#### 2. FRONT BUMPER BEAM ASSEMBLY

- 1) Disconnect the ground cable from battery.
- 2) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Remove the bolts, and remove the bumper beam assembly from vehicle body.

#### NOTE:

After all bolts are removed, raise the whole bumper beam a little to remove it from vehicle body.

# Front Bumper

EXTERIOR/INTERIOR TRIM

---

## B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Fit the bumper face to the gap (B) between the guide bracket (A) and fender securely.

**Tightening torque:**

**Refer to “COMPONENT” of “General Description”. <Ref. to EI-5, FRONT BUMPER, COMPONENT, General Description.>**

## C: REPAIR

### 1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.	 <p style="text-align: right;">EI-00234</p>
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP (example, Nichiban No. 533, etc.).	
3	Degreasing/cleaning	Clean all parts to be painted with white gasoline, normal alcohol, etc. to remove dirt, oil, fat, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature [10 to 15 min. at 20°C (68°F)]. In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. • Paint to be used (for each color): Solid paint Hardener PB Thinner T-301 • Mixture ratio: Main agent : Hardener = 4 : 1 • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi)	Use section (block) paint for top coat. • Paint to be used (for each color): Metallic paint Hardener PB Thinner T-306 • Mixture ratio: Main agent : Hardener = 10 : 1 • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minutes intervals. • Paint to be used: Metallic paint Hardener PB Thinner T-301 • Mixture ratio: Clear coat : Hardener = 6 : 1 • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If higher than 80°C (176°F), PP may become be deformed. Keep maximum temperature 80°C (176°F) or less.	
10	Inspection	Check paint.	
11	Removal of masking	Remove the masking tape applied in procedure 2.	

# Front Bumper

EXTERIOR/INTERIOR TRIM

## 2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

**NOTE:**

All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter. Repair methods are outlined below, based on a classification of the extent of damage.

1) Minor damage causing only a change in the luster of the bumper due to a light touch  
Almost restorable.

Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with #500 sand paper in a "feathering" motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using soft cloth (such as flannel). Recommended wax: NITTO KASEI Soft 99 TIRE WAX BLACK, or equivalent.	Perform either the same process as for the resin section or process No. 18 and subsequent in the 3) section, depending on the degree and nature of damage.
		Polish the waxed area with clean cloth after 5 — 10 minutes.	

2) Deep damage caused by scratching with fences etc.  
A dent cannot be repaired but a whitened or swelled part can be removed.

Process No.	Process name	Job contents	
1	Cleaning	Clean the damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the affected area with #100 — #500 sand paper.	
4	Finish	Resin section	Coated section
		Same as process No. 3 in the "1)" section.	Perform process No. 12 and subsequent operations in the "3)" section.

# Front Bumper

EXTERIOR/INTERIOR TRIM

3) Deep damage such as a break or hole that requires filling  
 Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)  
 Recommended repair kit: PP Part Repair Kit (NRM)

Process No.	Process name	Job contents	
1	Bumper removal	Remove the bumper as required.	
2	Removal of parts	Remove the parts built into bumper as required.	
3	Bumper placement	Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.	 <p style="text-align: right;">EI-00234</p> <p>(1) Bumper (2) Set bumper section</p>
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (NRM No. 900 Precleno, white gasoline, or alcohol, etc.).	
5	Cutting	If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.	 <p style="text-align: right;">EI-00235</p> <p>(1) Paint surface (2) PP base surface (3) 20 — 30 mm (0.79 — 1.18 in) (4) 3 mm (0.12 in)</p>
6	Sanding (I)	Grind the beveled surface with sand paper (#40 — #60) to smooth finish.	
7	Cleaning	Clean the sanded surface with the same solvent as used in process No. 4.	
8	Temporary welding	Grind the side just opposite the beveled area with sand paper (#40 — #60) and clean using a solvent. Temporarily spot-weld the side, using PP welding rod and heater gun.	 <p style="text-align: right;">EI-00236</p> <p>(1) Welded point (Use heater gun and PP welding rod) (2) PP base surface (3) Beveled section</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>• Do not melt welding rod until it flows out. This results in reduced strength.</li> <li>• Leave the welded spot unattended until it cools completely.</li> </ul>

# Front Bumper

## EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents
9	Welding	<p>Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.</p>  <p>(1) Welding rod (2) Melt hatched area (3) Section</p> <p><b>NOTE:</b></p> <ul style="list-style-type: none"> <li>• Melt the sections indicated by hatched area.</li> <li>• Do not melt the welding rod until it flows out, in order to provide strength.</li> <li>• Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot.</li> <li>• Leave the welded spot unattended until it cools completely.</li> </ul> <p style="text-align: right;">EI-00237</p>
10	Sanding (II)	<p>Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at a rate lower than 1,500 rpm and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.</p>  <p style="text-align: right;">EI-00042</p> <p>Sand the welded spot smooth with #240 sand paper.</p>
11	Masking	Mask the black substrate section using masking tape. Recommended masking tape: Nichiban No. 533 or equivalent
12	Cleaning/ degreasing	Completely clean the entire coated area, using solvent similar to that used in process No. 4.
13	Primer coating	<p>Apply a coat of primer to the repaired surface and its surrounding areas. Mask these areas, if necessary. Recommended primer: Mp/ 364 PP Primer</p> <p><b>NOTE:</b> Be sure to apply a coat of primer using a spray gun at a pressure of 245 — 343 kPa (2.5 — 3.5 kgf/cm<sup>2</sup>, 36 — 50 psi).</p>
14	Leave unattended	<p>Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry.</p> <p><b>NOTE:</b> If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since the coated area tends to melt.)</p>
15	Primer surfacer coating	<p>Apply primer surfacer to the repaired area two or three times at an interval of 3 — 5 minutes. Recommended surfacer:</p> <ul style="list-style-type: none"> <li>• UPS 300 Flex Primer</li> <li>• No. 303 UPS 300 Exclusive hardener</li> <li>• NPS 725 Exclusive Reducer (thinner)</li> <li>• Mixture ratio: 2 : 1 (UPS 300 : No. 303)</li> <li>• Viscosity: 12 — 14 sec./20°C (68°F)</li> <li>• Coating film thickness: 40 — 50 μ</li> </ul>
16	Drying	Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].

# Front Bumper

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents	
17	Sanding (III)	Sand the coated surface and its surrounding areas using #400 sand paper and water.	
18	Cleaning/ degreasing	Same as process No. 12.	
19	Top coat (I)	Non-colored	Metallic paint
		Use a "block" coating method. <ul style="list-style-type: none"> <li>Recommended paint: Suncryl (SC) No. 307 Flex Hardener SC Reducer (thinner)</li> <li>Mixture ratio: Suncryl (SC): No. 307 Flex Hardener = 3 : 1</li> <li>Viscosity: 11 — 13 sec./20°C (68°F)</li> <li>Coating film thickness: 40 — 50 μ</li> <li>Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm<sup>2</sup>, 36 — 50 psi)</li> </ul>	Use a "block" coating method. <ul style="list-style-type: none"> <li>Recommended paint: Suncryl (SC) No. 307 Flex Hardener SC Reducer (thinner)</li> <li>Mixture ratio: Suncryl (SC): No. 307 Flex Hardener = 3 : 1</li> <li>Viscosity: 11 — 13 sec./20°C (68°F)</li> <li>Coating film thickness: 20 — 30 μ</li> <li>Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm<sup>2</sup>, 36 — 50 psi)</li> </ul>
20	Leave unattended	Not required.	Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry. <b>NOTE:</b> Be careful to keep dust or dirt from coming in contact with the affected area.
21	Top coat (II)	Not required.	Apply a clear coat three times at an interval of 3 to 5 minutes. <ul style="list-style-type: none"> <li>Recommended paint: SC710 Overlay Clear No. 307 Flex Hardener SC Reducer (thinner)</li> <li>Mixture ratio: Suncryl (SC): No. 307 Flex Hardener = 3 : 1</li> <li>Viscosity: 10 — 13 sec./20°C (68°F)</li> <li>Coating film thickness: 20 — 30 μ</li> <li>Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm<sup>2</sup>, 36 — 50 psi)</li> </ul>
22	Drying	Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F)]. <b>NOTE:</b> Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.	
23	Inspection	Carefully check the condition of the repaired area.	
24	Removal of masking	Remove the masking tape applied in process No. 11 and 13.	
25	Parts installation	Install parts on the bumper in reverse order of removal.	
26	Bumper installation	Install the bumper.	

# Rear Bumper

EXTERIOR/INTERIOR TRIM

## 8. Rear Bumper

### A: REMOVAL

#### 1. REAR BUMPER FACE

1) Remove the clips inside the wheel housing.

2) Remove the clips on the lower side of rear bumper.

• 5 DOOR MODEL

• 4 DOOR MODEL

3) Remove the rear bumper from vehicle body.

#### CAUTION:

Do not pull with an excessive force. Otherwise the bracket installation area may be damaged.

• 5 DOOR MODEL

• 4 DOOR MODEL

(1) Lifting the whole bumper face upward and twist it forward, then detach them from the fender side in the order from (a) to (c). (both side)

(2) Lifting the center of bumper face upward, detach in the order from (d) to (f).

4) Remove the reflector.

## 2. REAR BUMPER BEAM ASSEMBLY

1) Remove the rear bumper face. <Ref. to EI-36, REAR BUMPER FACE, REMOVAL, Rear Bumper.>

2) Remove the nuts, and remove the bumper beam assembly from the vehicle body.

- 5 DOOR MODEL

- 4 DOOR MODEL

**NOTE:**

After all nuts have been removed, lift the whole bumper beam slightly while detaching it from the vehicle body.

## 3. REAR BUMPER BRACKET

Remove the rear bumper face from vehicle body, and remove each bumper bracket.

- Corner bracket

- Lower bracket

## B: INSTALLATION

Install in the reverse order of removal.

**NOTE:**

If the bumper face comes off easily from the beam upper rear, adjust the hook of the bracket side.

**Tightening torque:**

*Refer to "COMPONENT" of "General Description".*

*5 door model: <Ref. to EI-6, REAR BUMPER (5 DOOR MODEL), COMPONENT, General Description.>*

*4 door model: <Ref. to EI-7, REAR BUMPER (4 DOOR MODEL), COMPONENT, General Description.>*

## C: REPAIR

Refer to the description for front bumper repair. <Ref. to EI-31, REPAIR, Front Bumper.>

# Cowl Panel

EXTERIOR/INTERIOR TRIM

## 9. Cowl Panel

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the wiper arm. <Ref. to WW-14, REMOVAL, Front Wiper Arm.>
- 3) Detach the tabs and remove the cowl panel side.

- (1) Detach tabs (A), (B), and (C) from the vehicle exterior.
  - (2) Detach tabs (D) and (E).
- 4) Remove the clips (A) and (B), and remove the cowl panel.

### CAUTION:

When removing clip (B), push the claws of the clips from both the left and right to remove. If pulled with excessive force, the clip will become damaged.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Hook the claw of the cowl panel on the lower end of the wind shield.

- (1) Wind shield cross section

## 10. Roof Spoiler

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-66, REMOVAL, Rear Gate Trim.>
- 3) Disconnect the connector of high-mounted stop light and the washer hose of rear washer.
- 4) Remove the bolts and nuts.

- 5) Remove the clips, and remove the roof spoiler.

### B: INSTALLATION

#### CAUTION:

- Improper installing may cause the water leakage, make sure the harness grommet is installed securely.
- Check that there is no foreign matter in roof spoiler between the high-mounted stop light harness or washer hose, it may cause washer defective and improper installation of spoiler.

Install in the reverse order of removal.

#### Tightening torque:

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

## 11.Rear Spoiler

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Open the trunk lid.
- 3) Remove the high mount stop light connector (A).
- 4) Remove the rear spoiler attachment nut (B) and clip (C), and remove the rear spoiler.

#### CAUTION:

- When removing the nut, be careful not to drop the nut inside the trunk lid panel.
- Be careful not to cause damage during removal and installation.

### B: INSTALLATION

#### CAUTION:

Improper installing may cause the water leakage, make sure the harness grommet is installed securely.

- 1) Install in the reverse order of removal.
- 2) Clean the trunk lid and spoiler attachment surface before installation.

#### *Tightening torque:*

*7.5 N·m (0.76 kgf·m, 5.5 ft·lb)*

## 12.Side Sill Spoiler

### A: REMOVAL

Remove the clips and detach the side spoiler.

EI-02270

(1) Side sill spoiler

(2) Gasket

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

For the rearmost clip securing the side sill spoiler, install through the air flap.

EI-01918

(1) Vehicle body

(2) Air flap

(3) Side sill spoiler

# Roof Molding

EXTERIOR/INTERIOR TRIM

## 13. Roof Molding

### A: REMOVAL

1) Peel the end of the roof molding, and slide the inner clip in the direction of the arrow using a flat tip screwdriver, to remove the clip from the stud on the vehicle side.

Right side: Slide towards the front of the vehicle.

Left side: Slide towards the rear of the vehicle.

2) Pull up the roof molding upward, and remove from the vehicle.

3) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>

4) Remove the nut, and remove the roof carrier bracket.

### B: INSTALLATION

#### CAUTION:

**Always replace clips that were damaged during removal of the roof molding.**

1) Install the roof carrier bracket.

#### Tightening torque:

**7.5 N·m (0.76 kgf·m, 5.5 ft·lb)**

2) Remove the clips from the roof molding, and attach to the studs on the vehicle.

3) Push the front end of the roof molding against the front window, and attach the forward positioning clip onto the rivet on the body.

- (1) Windshield
- (2) Positioning clip
- (3) Roof molding
- (4) Rivet
- (5) Clip

4) While pushing down the roof molding from above, connect the roof molding and the clip.

## 14. Door Trim

### A: REMOVAL

#### 1. FRONT DOOR

- 1) Disconnect the ground cable from battery.
- 2) Remove the gusset cover.
  - (1) Pull the gusset cover backward to detach the claws (A) on the backside of the gusset cover.

- (2) Insert a plastic remover into the position shown in the figure while retaining the condition in step (1), and lift up the gusset cover.

- (3) Remove the gusset cover in the direction of the arrow to detach the clip section (B), and disconnect the connector.

- 3) Open the cover of the inner remote section, and remove the screws.

- 4) Remove the power window switch panel.

- (1) Open the cover and remove the screws.
- (2) Lift up the tip of switch panel by using a plastic remover.

- (3) Remove the side claws by using a plastic remover.

- (4) Remove the power window switch panel.

# Door Trim

## EXTERIOR/INTERIOR TRIM

5) Remove the door trim screws.

6) Remove the door trim.

(1) Remove the clips, then lift the door trim.

### NOTE:

Insert a plastic clip remover into the slit at the bottom of the door trim, to lift the door trim.

(2) Remove the cable (1) and (2) from the cable holder of inner remote.

(3) Disconnect the harness connector and remove the door trim.

## 2. REAR DOOR

1) Disconnect the ground cable from battery.

2) Remove the gusset cover.

(1) Push gusset cover in direction of vehicle front to detach the claws (A) on the backside of the gusset cover.

(2) Insert a plastic remover into to the position shown in the figure while retaining the condition in step (1), and lift up the gusset cover.

(3) Remove the gusset cover in the direction of the arrow to detach the clip section.

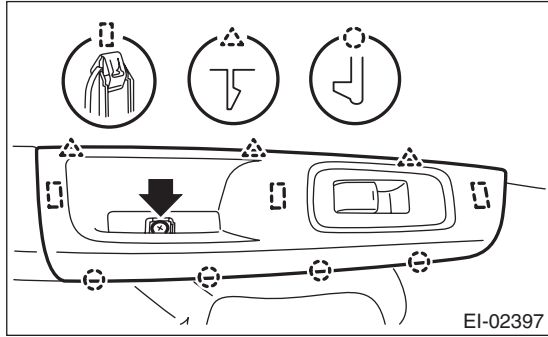

3) Open the cover of the inner remote section, and remove the screws.

4) Remove the power window switch panel.

(1) Open the cover and remove the screws.  
 (2) Lift up the tip of switch panel by using a plastic remover.

(3) Remove the side claws by using a plastic remover.

(4) Remove the power window switch panel.

5) Remove the door trim screws.

6) Remove the door trim.

(1) Remove the clips, then lift the door trim.

**NOTE:**

Insert a plastic clip remover into the slit at the bottom of the door trim, to lift the door trim.

(2) Remove the cable (1) and (2) from the cable holder of inner remote.

(3) Disconnect the harness connector and remove the door trim.

**B: INSTALLATION**

Install in the reverse order of removal.

# Instrument Panel Lower Cover

EXTERIOR/INTERIOR TRIM

## 15. Instrument Panel Lower Cover

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the plastic hook (A), and remove the instrument panel side cover LH.

- 3) Remove the screws.

- 4) Remove plastic hook (A), disconnect connectors and remove the instrument panel lower cover.

### B: INSTALLATION

Install in the reverse order of removal.

## 16. Glove Box

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the glove box damper.

- 3) Remove the stopper section, and pull out the glove box lid assembly towards yourself.

- 4) Remove the instrument panel lower cover. <Ref. to EI-51, INSTRUMENT PANEL, LOWER, REMOVAL, Center Console.>

### B: INSTALLATION

Install in the reverse order of removal.

## 17. Console Box

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the parking brake lever boot.

- 3) Remove bolt (A) screw (B) and clip (C).

- 4) Disconnect connectors, and remove the console box.

### B: INSTALLATION

Install in the reverse order of removal.

## 18.Center Console

### A: REMOVAL

#### 1. CENTER PANEL

- 1) Insert the plastic clip remover into the slit on the bottom of the center panel, to lift the panel.
- 2) Remove the claws and resin hook and then remove the center panel.

#### NOTE:

Pull towards the rear of the vehicle to remove.

#### 3. ORNAMENT PANEL

##### • Driver's side

- 1) Remove the plastic hook (A), and remove the instrument panel side cover LH.

#### 2. CONSOLE FRONT PANEL

- 1) Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>
- 2) Remove the shift knob. (MT model)
- 3) Detach plastic hook (A), and remove the console front panel.

- 2) Remove the plastic hook (A), and detach the meter visor.

#### NOTE:

When removing the console front panel, pull it in the direction of the rear vehicle.

- 4) Remove the clips and screws, and remove the console side cover.

#### NOTE:

Remove the plastic hook on the bottom side of the meter visor by pulling it.

# Center Console

## EXTERIOR/INTERIOR TRIM

3) Detach the screw and the claw to take out ornament panel LH.

5) Detach the plastic hook (A), and remove the instrument panel side cover RH.

### • Passenger's side

1) Remove the instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>

2) Remove the plastic hook (A), and detach the meter visor.

### NOTE:

Remove the plastic hook on the bottom side of the meter visor by pulling it.

3) Insert the plastic clip remover into the slit on the bottom of the center panel, to lift the panel.

4) Remove the claws and resin hook and then remove the center panel.

6) Remove the glove box lid. (Manual A/C model) <Ref. to EI-47, REMOVAL, Glove Box.>

7) On manual A/C models, detach the control cable.

8) Detach the screws and the plastic hooks to remove ornament panel RH.

9) Disconnect connectors.

#### 4. INSTRUMENT PANEL, LOWER

- 1) Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>
- 2) Remove the center panel. <Ref. to EI-49, CENTER PANEL, REMOVAL, Center Console.>
- 3) Remove the console front panel. <Ref. to EI-49, CONSOLE FRONT PANEL, REMOVAL, Center Console.>
- 4) Remove ornament panel RH. <Ref. to EI-49, ORNAMENT PANEL, REMOVAL, Center Console.>
- 5) Remove the instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>
- 6) Remove the glove box lid. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>
- 7) Remove the screws and nuts, and remove the instrument panel lower.

#### NOTE:

The screws indicated with the white arrows are tightened from the opposing side.

#### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

# Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

## 19. Instrument Panel Assembly

### A: REMOVAL

#### CAUTION:

Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.

- 1) Disconnect the ground cable from battery.
- 2) Remove the front pillar upper trim. <Ref. to EI-57, REMOVAL, Upper Inner Trim.>
- 3) Remove the plastic hook (A), and remove the instrument panel side cover LH.

- 4) Detach the plastic hook (A), and remove the instrument panel side cover RH.

Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>

- 5) Remove the console box. <Ref. to EI-48, REMOVAL, Console Box.>

- 6) Remove the console front panel. <Ref. to EI-49, CONSOLE FRONT PANEL, REMOVAL, Center Console.>

- 7) Remove the instrument panel lower cover. <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>

- 8) Remove the glove box lid. (Manual A/C model) <Ref. to EI-46, REMOVAL, Instrument Panel Lower Cover.>

- 9) On manual A/C models, detach the control cable.

- 10) Remove the steering shaft assembly. <Ref. to PS-15, REMOVAL, Tilt Steering Column.>
- 11) Disconnect connectors.

#### NOTE:

To make reassembly easier, place matching markings on connectors as necessary.

- 12) Remove the bolts and fuse box on the driver's side.

13) Remove the bolts on the passenger's side.

14) Make sure that the connectors are disconnected, and remove the instrument panel from the vehicle.

**CAUTION:**

**When taking the instrument panel out of the vehicle, be careful not to damage the vehicle. Perform this work by a group of two persons or more.**

15) Remove the steering support beam bracket.

## B: INSTALLATION

- 1) Insert the vehicle side matching pins (3 locations) into the instrument panel assembly.
- 2) Check that the matching pins are inserted securely, and then route the harness.
- 3) Install in the reverse order of removal.

**Tightening torque:**

**Steering support beam & steering support beam bracket: 25 N·m (2.55 kgf-m, 18.4 ft-lb)**

**Steering shaft: <Ref. to PS-3, STEERING WHEEL AND COLUMN, COMPONENT, General Description.>**

**Instrument panel lower: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

## C: DISASSEMBLY

- 1) Remove the combination meter assembly. <Ref. to IDI-16, REMOVAL, Combination Meter.>
- 2) Remove the audio. <Ref. to ET-6, REMOVAL, Audio.>
- 3) Remove the GPS antenna. <Ref. to ET-13, REMOVAL, GPS Antenna.>
- 4) Remove the heater vent duct. <Ref. to AC-46, REMOVAL, Heater Vent Duct.>
- 5) Remove the bolts securing the passenger's side airbag module to the steering support beam.

6) Remove the claw, and remove the passenger's airbag module.

# Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

---

## D: ASSEMBLY

### CAUTION:

**Be careful with the wiring harness routing during installation. When installing to the vehicle body, pinching the wiring harness may cause open circuits and shorts.**

Attach each part in the reverse order of disassembly, until the instrument panel assembly is formed.

### NOTE:

Method of installing insulator

- Adhesive

Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.

- Double-sided tape

Use commercial double-sided tape. (Use strong double-sided adhesive tape.)

### ***Tightening torque:***

***Instrument panel lower:***

***7.5 N·m (0.76 kgf-m, 5.5 ft-lb)***

***Passenger's airbag module:***

***7.5 N·m (0.76 kgf-m, 5.5 ft-lb)***

## 20. Lower Inner Trim

### A: REMOVAL

1) Remove the hook, and remove the inside scuff plate.

**CAUTION:**  
Do not pull with excessive force. Doing so may damage the scuff plate.

**NOTE:**  
It is easier to remove the weather strip and pull off the floor mat to detach the claw of scuff plate from the backside.

2) Remove the weather strip (A), and remove the outside scuff plate.

3) Remove clip (A), and remove the front pillar lower trim.

4) Remove the rear seat cushion. <Ref. to SE-11, REMOVAL, Rear Seat.>

5) Remove clip (A), and remove the inside scuff plate.

**CAUTION:**  
Do not pull with excessive force. Doing so may damage the scuff plate.

**NOTE:**

- It is easier to remove the weather strip to detach the claw of scuff plate from the backside of floor mat.
- It is easier to detach the tip claw of scuff plate using a clip remover.

6) Remove weather strip (A) and door catcher cover (B), then remove the outside scuff plate.

## Lower Inner Trim

### EXTERIOR/INTERIOR TRIM

---

7) Remove the clips of the center pillar lower trim.

8) Spread the lower trim outwards to remove the claw, and pull on the upper trim to remove.

### **B: INSTALLATION**

Install in the reverse order of removal.

## 21. Upper Inner Trim

### A: REMOVAL

1) Remove the cap (B) on the upper side of the pillar trim, and remove the bolt.

#### NOTE:

Remove the molding (A), and remove the cap from the backside of pillar trim not to damage the trim.

2) Remove the front pillar upper trim.

3) Remove the front inside scuff plate, rear inside scuff plate and center pillar lower trim. <Ref. to EI-55, REMOVAL, Lower Inner Trim.>

4) Remove anchor bolt cover (A).

5) Loosen the shoulder anchor bolt (B), and then detach the shoulder anchor from center pillar.

6) Remove the cap (B) on the upper side of the pillar trim, and remove the bolt.

#### NOTE:

Remove the molding (A), and remove the cap from the backside of pillar trim not to damage the trim.

7) Pull and remove the upper trim clip section of the center pillar along with the lower trim.

8) Spread the lower trim outwards to remove the claw, and pull on the upper trim to remove.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque

Refer to "COMPONENT" of "General Description".

Upper inner trim (5 door model): <Ref. to EI-19, INNER TRIM (5 DOOR MODEL), COMPONENT, General Description.>

Upper inner trim (4 door model): <Ref. to EI-20, INNER TRIM (4 DOOR MODEL), COMPONENT, General Description.>

Seat belt anchor: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

# Rear Quarter Trim

EXTERIOR/INTERIOR TRIM

## 22.Rear Quarter Trim

### A: REMOVAL

#### 1. 5 DOOR MODEL

- 1) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 2) Remove the seat belt lower anchor bolt.

- 3) Remove the cap (B) on the upper side of the rear quarter pillar front trim, and remove the bolt inside.

#### NOTE:

Remove the molding (A), and remove the cap from the backside of pillar trim not to damage the trim.

- 4) Remove the side belt cover (C).
- 5) Remove center belt cover (D), and remove the anchor bolt inside.

- 6) Remove the clips and screws, and remove the rear quarter upper trim.

- 7) Remove the luggage floor end cover.

- 8) Remove the bolts, and remove the rear quarter lower trim.

## 2. 4 DOOR MODEL

- 1) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 2) Remove the inside scuff plate. <Ref. to EI-55, REMOVAL, Lower Inner Trim.>
- 3) Peel the trim, and use a screwdriver, etc. to press claw (A) of the metal clip, to remove the quarter upper trim.

### CAUTION:

If the metal clip comes off or becomes damaged, replace both the quarter upper trim rear and metal clips.

- 4) Remove the seat belt lower anchor bolt.

- 5) Remove the cap (B) on the upper side of the rear quarter trim, and remove the bolt inside.

### NOTE:

Remove the molding (A), and remove the cap from the backside of pillar trim not to damage the trim.

- 6) Remove side belt cover (A).

- 7) Remove the bolts and clips, and remove the quarter upper trim front.

- 8) Remove the rear seat. <Ref. to SE-11, REMOVAL, Rear Seat.>

- 9) Remove the clip of the trunk room side trim.

- 10) Remove the clips, then remove the quarter lower trim.

## B: INSTALLATION

Install in the reverse order of removal.

### Tightening torque

Refer to "COMPONENT" of "General Description".

Rear quarter upper trim (5 door model): <Ref. to EI-19, INNER TRIM (5 DOOR MODEL), COMPONENT, General Description.>

Rear quarter upper trim (4 door model): <Ref. to EI-20, INNER TRIM (4 DOOR MODEL), COMPONENT, General Description.>

Seat belt anchor: <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

## 23. Rear Shelf Trim

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear quarter trim. <Ref. to EI-59, 4 DOOR MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Remove the seat belt center anchor lower bolt.

- 4) Remove the clips, and remove the rear shelf trim.

### B: INSTALLATION

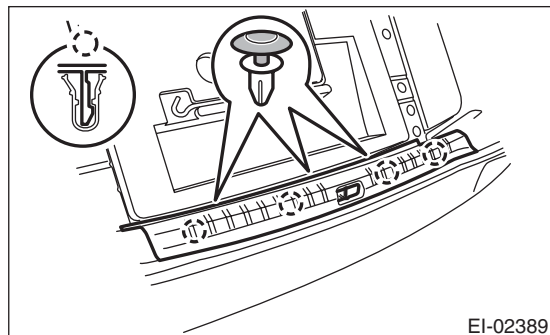

Install in the reverse order of removal.

## 24. Trunk Room Trim

### A: REMOVAL

- 1) Remove the rear seat backrest. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 2) Remove the trunk room mat.
- 3) Remove the clips, and then remove the trunk room rear trim.

- 4) Remove the clips, and remove the trunk side trim.

### B: INSTALLATION

Install in the reverse order of removal.

## 25.Sun Visor

### A: REMOVAL

1) Remove the screws and detach the sun visor.

2) Disconnect the connector. (Model with vanity mirror light)

3) While pressing the (A) on the both side using flat tip screwdriver, pull the sun visor hook to remove it.

### B: INSTALLATION

Install in the reverse order of removal.

## 26. Assist Grip

### A: REMOVAL

- 1) Remove the screw cover, and remove the screw inside.
- 2) Pull the left side of assist grip, and rotate the right side of it counterclockwise to remove.

- 3) Remove the roof trim. <Ref. to EI-64, REMOVAL, Roof Trim.>
- 4) Remove the bolts, and remove the assist grip bracket.

### B: INSTALLATION

Install in the reverse order of removal.

#### ***Tightening torque***

***7.5 N·m (0.76 kgf·m, 5.5 ft·lb)***

## 27. Roof Trim

### A: REMOVAL

#### 1. 5 DOOR MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the spot map light. <Ref. to LI-30, REMOVAL, Spot Map Light.>
- 3) Remove the room light. <Ref. to LI-31, REMOVAL, Room Light.>
- 4) Remove the sun visor. <Ref. to EI-62, REMOVAL, Sun Visor.>
- 5) Remove the assist grip. <Ref. to EI-63, REMOVAL, Assist Grip.>
- 6) Remove the upper inner trim. <Ref. to EI-57, REMOVAL, Upper Inner Trim.>
- 7) Remove the rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>
- 8) Disconnect the harness connectors of the right and left front pillars, and the rear quarter (LH).
- 9) Remove the sunroof opening trim. (Model with sunroof)

- 10) Remove the clips, and then remove the roof trim.

**CAUTION:**

Do not remove the roof end trim with excessive force. Otherwise the roof trim may become damaged. Roof trim and roof end trim are fastened by rivets.

#### 2. 4 DOOR MODEL

**CAUTION:**

When taking the roof trim out of the vehicle, be careful not to damage the room inner trim. Perform this work with 3 persons.

- 1) Disconnect the ground cable from battery.
- 2) Apply protective tape, etc. to prevent damage to the face of the instrument panel.
- 3) Remove the spot map light. <Ref. to LI-30, REMOVAL, Spot Map Light.>
- 4) Remove the room light. <Ref. to LI-31, REMOVAL, Room Light.>
- 5) Remove the sun visor. <Ref. to EI-62, REMOVAL, Sun Visor.>
- 6) Remove the assist grip. <Ref. to EI-63, REMOVAL, Assist Grip.>
- 7) Remove the upper inner trim. <Ref. to EI-57, REMOVAL, Upper Inner Trim.>
- 8) Remove the rear quarter trim. <Ref. to EI-58, REMOVAL, Rear Quarter Trim.>
- 9) Disconnect the harness connectors of the right and left front pillars, and the rear quarter (LH).
- 10) Remove the console front panel. <Ref. to EI-49, CONSOLE FRONT PANEL, REMOVAL, Center Console.>
- 11) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
- 12) Remove the passenger's side door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 13) Remove the passenger's side door checker.

- 14) Fully recline the front seat.
- 15) Remove the sunroof opening trim. (Model with sunroof)

16) Remove the clips, and then remove the roof trim.

17) Open the passenger's side door all the way, and maintain at that position.

18) Take out the roof trim from the passenger's side opening.

**NOTE:**

Rotate the roof trim to go through the gap between the front accessory socket and airbag control unit.

**B: INSTALLATION**

Install in the reverse order of removal.

# Rear Gate Trim

EXTERIOR/INTERIOR TRIM

## 28.Rear Gate Trim

### A: REMOVAL

#### CAUTION:

When detaching the rear gate upper trim and pillar trim, do not pull these parts with excessive force. Pulling with excessive force may damage the trim.

1) Remove the clips, and remove the rear gate upper trim.

#### CAUTION:

When removing trim, make sure to follow the procedures below. Applying excessive force when removing can damage the trim. Use flat tip screwdrivers (1) or clip removers (2) to detach the claws of the trim.

1. Use a flat tip screwdriver (1) to detach the claws of the trim.
2. Use a clip remover (2) to detach the claws of the trim.

#### Tools used

**Flat tip screwdriver:** Those with a shaft length of around 100 mm.

**Clip remover:** KTC AP20L-10B

- 2) Use a flat tip screwdriver to detach the claws of the trim, and remove the rear gate pillar trim.

# Rear Gate Trim

EXTERIOR/INTERIOR TRIM

## CAUTION:

When removing trim, make sure to follow the procedures below. Applying excessive force when removing can damage the trim.

1. Insert a flat tip screwdriver (1) as shown in the figure, to detach the claws of the trim.

2. Insert a flat tip screwdriver (2) as shown in the figure, to detach the claws of the trim.

3) Remove the clips, and then remove the rear gate lower trim.

## B: INSTALLATION

Install in the reverse order of removal.

### Tools used

Flat tip screwdriver (1): Axle length 100 mm

Flat tip screwdriver (2): Axle length 290 mm

### 29. Floor Mat

#### A: REMOVAL

- 1) Remove the front seats. <Ref. to SE-6, REMOVAL, Front Seat.>
- 2) Remove the rear seat cushion. <Ref. to SE-11, REMOVAL, Rear Seat.>
- 3) Remove the console box. <Ref. to EI-48, Console Box.>
- 4) Remove the console side panel. <Ref. to EI-49, REMOVAL, Center Console.>
- 5) Remove the lower inner trim. <Ref. to EI-55, REMOVAL, Lower Inner Trim.>
- 6) Remove the footrest. (MT model)
- 7) Remove the clips from the floor mat.
- 8) Remove the mat hook on both sides.
- 9) Remove the mat from toe board area.
- 10) Remove the mat from rear heater duct.
- 11) Roll the mat, and then take it out of opened rear door.

(AT) Automatic transmission model

#### B: INSTALLATION

Install in the reverse order of removal.

##### NOTE:

- Secure the mat firmly with hook and clip.
- Insert the mat edge firmly into the groove of side sill cover.

## 30.Rear Gate Garnish

### A: REMOVAL

- 1) Remove the rear gate trim. <Ref. to EI-66, REMOVAL, Rear Gate Trim.>
- 2) Remove the rear wiper motor. <Ref. to WW-19, Rear Wiper Motor.>
- 3) Remove the rear finisher light. <Ref. to LI-26, REMOVAL, Rear Finisher Light Assembly.>
- 4) Disconnect the connector.
  - Rear gate opener button harness connector
  - Rear request switch harness connector (Smart keyless models)
- 5) Remove the nuts.

- 6) Remove the clips, and remove the rear gate garnish.

### B: INSTALLATION

#### CAUTION:

Make sure that the harness grommet is securely installed.

If not properly installed, this may cause leaks.

Install in the reverse order of removal.

#### Tightening torque:

**4.5 N·m (0.46 kgf·m, 3.3 ft·lb)**

# Trunk Lid Garnish

EXTERIOR/INTERIOR TRIM

## 31.Trunk Lid Garnish

### A: REMOVAL

1) Remove the clip in the upper corner of the trunk lid garnish.

2) Place your hands between the trunk lid garnish and the trunk lid panel, and remove the trunk lid garnish starting from the edge, in order.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**4.5 N·m (0.46 kgf·m, 3.3 ft·lb)**

## 32. Heat Shield Cover

### A: REMOVAL

#### 1. FRONT HEAT SHIELD COVER

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from oxygen (A/F) sensor.
  - Turbo model:<Ref. to EX(H4DOTC)-8, REMOVAL, Center Exhaust Pipe.>
  - Non-turbo model:<Ref. to EX(H4SO)-6, REMOVAL, Front Exhaust Pipe.>
- 3) Remove the exhaust pipe.
  - Turbo model:<Ref. to EX(H4DOTC)-13, REMOVAL, Rear Exhaust Pipe.>
  - Non-turbo model:<Ref. to EX(H4SO)-10, REMOVAL, Rear Exhaust Pipe.>
- 4) Remove the four bolts to remove the front heat shield cover.

(A) Transmission mount

#### 2. CENTER HEAT SHIELD COVER

- 1) Remove the rear exhaust pipe.
  - Turbo model:<Ref. to EX(H4DOTC)-13, REMOVAL, Rear Exhaust Pipe.>
  - Non-turbo model:<Ref. to EX(H4SO)-10, REMOVAL, Rear Exhaust Pipe.>
- 2) Remove the propeller shaft. (Turbo model only) <Ref. to DS-10, REMOVAL, Propeller Shaft.>

- 3) Remove the bolt (A), nut (B) and clip (C) to remove center heat shield cover.

#### 3. REAR HEAT SHIELD COVER

- 1) Remove the muffler.
    - Turbo model:<Ref. to EX(H4DOTC)-15, REMOVAL, Muffler.>
    - Non-turbo model:<Ref. to EX(H4SO)-12, REMOVAL, Muffler.>
  - 2) Remove the bolts, and remove the rear heat shield cover.
- 5 DOOR MODEL

- 4 DOOR MODEL

# Heat Shield Cover

EXTERIOR/INTERIOR TRIM

---

## **B: INSTALLATION**

Install in the reverse order of removal.

### ***Tightening torque:***

***Refer to “COMPONENT” of “General Description”. <Ref. to EI-22, HEAT SHIELD COVER, COMPONENT, General Description.>***

## 33.Ornament

### A: INSTALLATION

#### 1. LETTER MARK

Adhere the letter mark according to the following position.

- 5 DOOR MODEL

EI-02395

- (1) Match the end of the application tape to the end of the rear gate panel. (2) Application tape

- 4 DOOR MODEL

EI-02396

- (1) Match the end of the application tape to the end of the rear gate panel. (2) Match the end of the application tape to the end of the trunk lid garnish. (4 door model)
- (3) Application tape (4) Fold the slit of the application tape to match the end of the trunk panel.

### C: CAUTION

Exterior body panels are heavy. When removing or installing, do not drop and damage the panels. Do not damage the panel painting surface.

# General Description

## EXTERIOR BODY PANELS

### D: PREPARATION TOOL

#### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925610000	925610000	WRENCH	Used for removing and installing door hinge.
 ST-927780000	927780000	REMOVER	Used for removing and installing the trunk torsion bar.

#### 2. GENERAL TOOL

TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips

## 2. Front Hood

### A: REMOVAL

#### 1. FRONT HOOD INSULATOR

Release the clips to remove the front hood insulator.

**CAUTION:**

Do not reuse any clips damaged during removal. Always replace with new clips.

#### 2. FRONT HOOD SEAL

Remove the seal.

#### 3. FRONT HOOD DAMPER

**CAUTION:**

- Do not damage piston rods and oil seals.
- Never disassemble cylinders: They contain gas.
- The front hood panel is heavy. When removing or installing the damper stay and hood hinge, be sure to work in a group of two or more.

1) Remove mounting bolt, and remove the damper stay.

2) Remove the mounting bolt of front hood damper stay.

# Front Hood

## EXTERIOR BODY PANELS

### 4. FRONT HOOD HINGE

#### CAUTION:

The front hood panel is heavy. When removing or installing the damper stay and hood hinge, be sure to work in a group of two or more.

- 1) Remove the front hood damper.
- 2) Remove the bolt, and remove the front hood panel.

- 3) Detach the tabs and remove the cowl panel side.

- (1) Detach tabs (A), (B), and (C) from the vehicle exterior.
  - (2) Detach tabs (D) and (E).
- 4) Remove the bolts of front hood hinge.

### 5. FRONT HOOD PANEL

#### CAUTION:

The front hood panel is heavy. When removing or installing the damper stay and hood hinge, be sure to work in a group of two or more.

- 1) Remove the front hood insulator.
- 2) Remove the front hood seal.
- 3) Remove the window washer hose and nozzle. <Ref. to WW-17, REMOVAL, Front Washer Nozzle.>
- 4) Remove the front hood damper.
- 5) Remove the bolt, and remove the front hood panel from the front hood hinge.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- Be careful not to catch the window washer hose between insulators etc.
- Install while paying attention to make a uniform clearance around the front hood panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EB-8, FRONT HOOD, COMPONENT, General Description.>

## C: ADJUSTMENT

- 1) Adjust the clearance between front hood panel and front fender panel. Clearance must be equal at both sides. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>
- 2) Use the hinge mounting bolts to align the front hood longitudinal and lateral position.

- 3) Adjust the height at the front end of hood. <Ref. to SL-41, ADJUSTMENT, Front Hood Lock Assembly.>
- 4) Rotate the hood buffer to adjust lateral height.

## D: DISPOSAL

For the disposal procedures of front hood damper stay, refer to the disposal procedures of rear gate damper stay. <Ref. to EB-33, REAR GATE DAMPER STAY, DISPOSAL, Rear Gate.>

## 3. Front Fender

### A: REMOVAL

#### 1. FRONT FENDER PANEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the side sill spoilers. <Ref. to EI-41, REMOVAL, Side Sill Spoiler.>
- 3) Remove the front bumper face. <Ref. to EI-29, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 4) Remove the headlight assembly. <Ref. to LI-14, REMOVAL, Headlight Assembly.>
- 5) Remove the mud guard. <Ref. to EI-28, REMOVAL, Mud Guard.>
- 6) Detach the tabs and remove the cowl panel side.

- (1) Detach tabs (A), (B), and (C) from the vehicle exterior.
  - (2) Detach tabs (D) and (E).
- 7) Remove the bolt, and remove the front fender panel.

#### 2. COWL SIDE STAY

For operation procedures, refer to performance stay items. <Ref. to EB-19, REMOVAL, Front Performance Stay.>

### B: INSTALLATION

#### CAUTION:

After the installation of front fender panel, be sure to perform headlight beam adjustment. Install in the reverse order of removal.

#### Tightening torque:

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

#### NOTE:

Install while paying attention to make a uniform clearance around the front fender panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

## 4. Front Performance Stay

### A: REMOVAL

- 1) Remove the front fender. <Ref. to EB-18, REMOVAL, Front Fender.>
- 2) Remove the bolts and harness clip, and remove the front performance stay.

### B: INSTALLATION

Install in the reverse order of removal.

#### ***Tightening torque:***

***70 N·m (7.14 kgf-m, 51.6 ft-lb)***

# Front Door

## EXTERIOR BODY PANELS

### 5. Front Door

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the outer mirror assembly. <Ref. to GW-15, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the front door speaker. <Ref. to ET-7, REMOVAL, Front Speaker.>
- 5) Remove the sealing cover. <Ref. to EB-22, REMOVAL, Front Sealing Cover.>
- 6) Remove the front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 7) Remove the front door regulator and motor. <Ref. to GW-12, REMOVAL, Front Regulator and Motor Assembly.>
- 8) Remove the front door latch assembly. <Ref. to SL-34, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
- 9) Remove the front outer handle. <Ref. to SL-33, REMOVAL, Front Outer Handle.>
- 10) Remove the front door weather strip.

#### NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 11) Remove the bolts and nuts to remove the door checker.

- 12) Remove the front pillar lower trim. <Ref. to EI-55, REMOVAL, Lower Inner Trim.>

- 13) Disconnect the connector of door harness from body harness.

- 14) Put a wooden block on jack and place jack under the front door. Support the door with a jack to protect it from damage.

- 15) Remove the door-side bolts for upper and lower hinges to remove front door panel.

- 16) Remove the door hinge from vehicle.

## B: INSTALLATION

1) Put a wooden block on jack and place the front door on that.

- 2) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.
- 3) Install the front door to upper hinge and lower hinge adjusting by jack.
- 4) Tighten bolt of door checker.
- 5) Connect door harness connector, and install the instrument panel lower cover.
- 6) Install the front pillar lower trim.

### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to EB-11, REAR DOOR, COMPONENT, General Description.>**

7) Install while paying attention to make a uniform clearance around the front door panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

## C: ADJUSTMENT

1) Using the ST, loosen the body-side bolts of upper and lower hinges to align the vertical and horizontal positions of the front door panel.

ST 925610000 WRENCH

2) Loosen the screw (A) and tap striker (B) using plastic hammer to adjust the gap between rear end surface of front door panel and front end surface of rear door.

### **CAUTION:**

**Do not use an impact wrench. Welding area on the striker nut plate is easily broken.**

# Front Sealing Cover

EXTERIOR BODY PANELS

---

## 6. Front Sealing Cover

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the sealing cover.

#### NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new part.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing the sealing cover, use the butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

#### **Butyl tape:**

**3M8626 or the equivalent**

#### NOTE:

- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

### C: INSPECTION

If the sealing cover gets damaged, replace it with a new part.

## 7. Rear Door

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the rear speaker. <Ref. to ET-9, REMOVAL, Rear Speaker.>
- 4) Remove the sealing cover. <Ref. to EB-25, REMOVAL, Rear Sealing Cover.>
- 5) Remove the door sash and rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 6) Remove the rear door regulator and motor assembly. <Ref. to GW-19, REMOVAL, Rear Regulator and Motor Assembly.>
- 7) Remove the rear door latch. <Ref. to SL-37, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 8) Remove the rear outer handle. <Ref. to SL-36, REMOVAL, Rear Outer Handle.>
- 9) Remove the rear door weather strip.

**NOTE:**

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 10) Remove the bolts and nuts to remove the door checker.

- 11) Pull the door harness connector inside the center pillar, then disconnect the connector.

- 12) Put a wooden block on jack and place jack under the rear door. Support the rear door with a jack to protect it from damage.

- 13) Remove the door-side bolts for upper and lower hinges to remove the rear door panel.

- 14) Remove the door hinge from vehicle.

# Rear Door

## EXTERIOR BODY PANELS

### B: INSTALLATION

- 1) Put a wooden block on jack and place the rear door on that.

- 2) Apply grease to the moving part of door hinges.
- 3) Install the rear door to upper hinge and lower hinge adjusting by jack.
- 4) Tighten bolt of door checker.
- 5) Connect door harness connector.

#### **Tightening torque:**

**Refer to “COMPONENT” of “General Description”. <Ref. to EB-11, REAR DOOR, COMPONENT, General Description.>**

- 6) Install while paying attention to make a uniform clearance around the rear door panel. For the dimension of clearance, refer to “SPECIFICATION” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

### C: ADJUSTMENT

- 1) Open the rear door, loosen the door-side bolts of upper and lower hinges to align the position for vertical and horizontal direction of rear door panel.

- 2) Loosen the screw (A) and tap striker (B) using plastic hammer to adjust the gap between rear end surface of rear door panel and body surface.

#### **CAUTION:**

**Do not use an impact wrench. Welding area on the striker nut plate is easily broken.**

## 8. Rear Sealing Cover

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the rear speaker. <Ref. to ET-9, REMOVAL, Rear Speaker.>
- 4) Remove the sealing cover.

#### NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new part.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing the sealing cover, use the butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

#### **Butyl tape:**

**3M8626 or the equivalent**

#### NOTE:

- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- If the butyl tape is applied unevenly, it will cause water leakage and soiling.

### C: INSPECTION

If the sealing cover gets damaged, replace it with a new part.

# Door Sash Tape

## EXTERIOR BODY PANELS

### 9. Door Sash Tape

#### A: REMOVAL

##### 1. FRONT DOOR

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the outer mirror assembly. <Ref. to GW-15, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the sealing cover. <Ref. to EB-22, REMOVAL, Front Sealing Cover.>
- 5) Remove the front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 6) Remove the glass run rubber.
- 7) Remove the B pillar upper clip, and remove the front door weather strip.

- 8) Remove the screws, and remove the front door weather strip outer.

#### CAUTION:

- When removing the weather strip outer, be careful not to damage the vehicle.
- If the weather strip outer is deformed, always replace with a new part.

- 9) Peel the door sash tape from the door sash.

#### NOTE:

- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

##### 2. REAR DOOR

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-43, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-25, REMOVAL, Rear Sealing Cover.>
- 4) Remove the rear door glass. <Ref. to GW-18, REMOVAL, Rear Door Glass.>
- 5) Remove the glass run rubber.
- 6) Remove the B pillar upper clip, and remove the rear door weather strip.

- 7) Loosen the screws and clips to remove the gusset cover outer.

- 8) Remove the rear door weather strip outer.

#### CAUTION:

- When removing the weather strip outer, be careful not to damage the vehicle.
- If the weather strip outer is deformed, always replace with a new part.

9) Peel the door sash tape from the door sash.

**NOTE:**

- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

**B: INSTALLATION**

**CAUTION:**

- When applying tape, use a spatula, etc. to apply evenly, pushing it against the sash to make sure that no air bubbles are formed. If air bubbles are formed, reapply the tape.
- If the tape is wrinkled, etc. during application, replace the tape.
- Turning points and ends of the tape will be a cause for peeling if the pressure is insufficient during application, so make sure to push down on the tape firmly when applying.
- There are locations where the tape ends will overlap each other. When applying the tape, be careful of the order of their application.

• Front

• Rear

**1. FRONT DOOR**

1) Match the upper area of the gusset and the cut area of the tape as shown in the figure. (Position of the arrow)

(1) Front door sash tape - front

# Door Sash Tape

## EXTERIOR BODY PANELS

2) Apply tape from the front of the vehicle towards the rear.

### NOTE:

Apply the tape end at a position within  $2.5 \pm 1.5$  mm ( $0.1 \pm 0.06$  in) from the front door rear sash line.

- (1) Front door sash tape - front
- (2) Front door rear sash line

3) Cut off both ends of the front door sash tape — rear.

4) Match the sash corner and the cut area of the tape as shown in the figure. (Position of the arrow)

5) The lower end of the tape is to be aligned so that a space of approximately 3.7 mm (0.15 in) remains, so that the attachment holes of the weather strip outer are not blocked. (Position of the arrow)

- (1) Front door sash tape — rear

6) Apply tape from the top of the vehicle towards the bottom.

7) Fold the corners at the door upper end area in the order of (1) - (3).

8) Thereafter, install door parts in the reverse order of disassembly.

9) Install while paying attention to make a uniform clearance around the front door panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

## 2. REAR DOOR

1) Apply the tape end at a position within  $2.5 \pm 1.5$  mm ( $0.1 \pm 0.06$  in) from the rear door front sash line.

- (1) Rear door sash tape — rear
- (2) Rear door upper sash line

2) Apply tape from the top of the vehicle towards the bottom.

3) Match the rear door upper sash corner and the cut area of the tape as shown in the figure. (Position of the arrow)

### NOTE:

Apply the tape end at a position within  $2.5 \pm 1.5$  mm ( $0.1 \pm 0.06$  in) from the rear door front sash line.

- (1) Rear door sash tape — medium
- (2) Rear door front sash line

4) Apply tape from the rear of the vehicle towards the front.

# Door Sash Tape

## EXTERIOR BODY PANELS

5) Fold the corners at the door upper end area in the order of (1) - (3).

6) Cut off both ends of the rear door sash tape — front.

7) Match the sash corner and the cut area of the tape as shown in the figure. (Position of the arrow)  
 8) The lower end of the tape is to be aligned so that a space of approximately 3.7 mm (0.15 in) remains, so that the attachment holes of the weather strip outer are not blocked. (Position of the arrow)

(1) Rear door sash tape — front

9) Apply tape from the top of the vehicle towards the bottom.

10) Fold the corners at the door upper end area in the order of (1) - (2).

11) Thereafter, install door parts in the reverse order of disassembly.

12) Install while paying attention to make a uniform clearance around the rear door panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

## 10. Rear Gate

### A: REMOVAL

#### 1. REAR GATE PANEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-66, REMOVAL, Rear Gate Trim.>
- 3) Remove the rear finisher light assembly. <Ref. to LI-26, REMOVAL, Rear Finisher Light Assembly.>
- 4) Remove the rear gate garnish. <Ref. to EI-69, REMOVAL, Rear Gate Garnish.>
- 5) Remove the rear wiper arm. <Ref. to WW-18, REMOVAL, Rear Wiper Arm.>
- 6) Remove the rear wiper motor. <Ref. to WW-19, REMOVAL, Rear Wiper Motor.>
- 7) Remove the rear gate latch and actuator assembly. <Ref. to SL-39, REMOVAL, Rear Gate Latch and Actuator Assembly.>
- 8) Remove the roof spoiler. <Ref. to EI-39, REMOVAL, Roof Spoiler.>
- 9) Remove the rubber duct (A) connection.

- 10) Remove harness clip of each connector from the rear gate panel.
- 11) Pull out the harness and washer hose from the rear gate.

- 12) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

#### CAUTION:

**If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.**

- 13) Remove the mounting bolt of rear gate damper stay.

- 14) Remove the rear gate hinge bolt, and remove the rear gate panel.

- 15) Remove the rear gate hinge from the vehicle.

# Rear Gate

## EXTERIOR BODY PANELS

### 2. REAR GATE DAMPER STAY

#### CAUTION:

- Do not damage piston rods and oil seals.
- Never disassemble cylinders: They contain gas.

1) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

#### CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

2) Remove the mounting bolt of rear gate damper stay.

3) Remove mounting bolt, and remove the damper stay.

### B: INSTALLATION

#### 1. REAR GATE PANEL

1) Install in the reverse order of removal.

#### Tightening torque:

**25 N·m (2.55 kgf-m, 18.4 ft-lb)**

2) Install while paying attention to make a uniform clearance around the rear gate panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

#### 2. REAR GATE DAMPER STAY

1) Prevent the rear gate from closing using prop or the like.

#### CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

2) Install in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EB-12, REAR GATE, COMPONENT, General Description.>

## C: ADJUSTMENT

For the dimension of panel around the rear gate panel, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

- 1) Align the rear gate panel longitudinal and lateral position.

- (1) Loosen the hinge attaching bolts.
- (2) Align the rear gate panel longitudinal and lateral panel dimension.

- 2) Adjust the gap between rear gate panel and body surface.

- (1) Loosen the bolt.
- (2) Tap striker using plastic hammer to adjust the gap between rear gate panel and body surface.

## D: DISPOSAL

### 1. REAR GATE DAMPER STAY

#### CAUTION:

**Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.**

- 1) Cover with a vinyl sack as shown in the figure.

- (1) Rear gate damper stay
- (2) Vinyl sack

#### NOTE:

Prevent the vinyl sack from being caught by drill cutting edge

- 2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.

Drill a hole in 2 to 3 mm (0.08 to 0.12 in) diameter at a point 10 to 200 mm (0.39 to 7.87 in) from door side, and bleed rear gate damper stay gas completely.

- (1) Door side
- (2) Body side
- (3) 190 mm (7.48 in)
- (4) 10 mm (0.39 in)
- (5) Piston rod
- (6) Cylinder
- (7) Portion to be drilled

## 11. Trunk Lid

### A: REMOVAL

#### 1. TORSION BAR

- 1) Open the trunk lid.
- 2) Using the ST, remove the torsion bar from the hinge link.

ST 927780000 REMOVER

#### CAUTION:

During removal and installation, handle the torsion bar carefully, because it will generate reactive force.

- 3) Remove the torsion bars RH/LH.

#### 2. TRUNK LID ARM

- 1) Disconnect the ground cable from battery.
- 2) Open the trunk lid to remove the trunk room trim. <Ref. to EI-61, REMOVAL, Trunk Room Trim.>
- 3) Disconnect the trunk lid release cable. <Ref. to SL-40, REMOVAL, Trunk Lid Latch and Actuator Assembly.>
- 4) Disconnect the connectors, and remove the harness clip, etc.
- 5) Remove the trunk lid mounting bolts, to remove the trunk lid panel from the trunk lid arm.

- 6) Remove the torsion bar from the trunk lid hinge link. <Ref. to EB-34, TORSION BAR, REMOVAL, Trunk Lid.>
- 7) Remove the rear shelf trim. <Ref. to EI-60, REMOVAL, Rear Shelf Trim.>

- 8) Remove the bolts, then remove the trunk lid arm.

#### 3. TRUNK LID PANEL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector to remove the trunk lid harness.
- 3) Remove the trunk lid latch and actuator assembly. <Ref. to SL-40, REMOVAL, Trunk Lid Latch and Actuator Assembly.>
- 4) Remove the trunk lid garnish. <Ref. to EI-70, REMOVAL, Trunk Lid Garnish.>
- 5) Remove the bolts, then remove the trunk lid panel from the trunk lid arm.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Apply grease to the rotating area of hinges and the torsion bar.
- 3) Install while paying attention to make a uniform clearance around the trunk lid panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EB-9, FRONT FENDER, COMPONENT, General Description.>

## C: ADJUSTMENT

For the dimension of panel around the trunk lid panel, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

1) Adjust the trunk lid panel lateral position.

- (1) Loosen the mounting bolt.
- (2) Align the trunk lid panel lateral panel dimension.

2) Adjust the gap between trunk lid panel and body surface.

- (1) Loosen the bolt.
- (2) Tap striker using plastic hammer to adjust the gap between trunk lid panel and body surface.

# Protector Tape

EXTERIOR BODY PANELS

## 12.Protector Tape

### A: INSTALLATION

Adhere the protector tape to position, follow the procedures below.

- 1) Open the rear door and moisten around the adhering position.
- 2) Peel away the backing paper of (a).
- 3) Align the application tape to the position shown in the following figure.
- 4) Peel away the film of (a).
- 5) Peel away the backing paper of (b) and adhere the protector tape to the vehicle body.
- 6) Get rid of water and air bubbles in the protector tape and remove the application tape and the film.

(1) Align the R terminal of side sill panel to application paper.

(2) Align the PCV coat terminal to application paper.

(3) Apply the protector tape to align the R.

# General Description

## CRUISE CONTROL SYSTEM

### 1. General Description

#### A: COMPONENT

- (1) Engine control module (ECM)
- (2) Cruise control command switch
- (3) Stop light and brake switch
- (4) Cruise indicator light and cruise set indicator light

- (5) Transmission control module (TCM) (AT model)
- (6) Inhibitor switch (AT model)

- (7) Neutral position switch (MT model)
- (8) Clutch switch (MT model)

## B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, the memory will be cleared.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust the parts to specifications specified in this manual.
- Connect the connectors securely during reassembly.
- After reassembly, ensure functional parts operate properly.

## C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX® bit T30	Used for removing/installing driver's airbag module.

## 2. Cruise Control Module

### A: NOTE

The control of cruise control system is carried out in engine control module (ECM).

For removal/installation procedures of the control module, refer to Engine section.

### B: REMOVAL

- 2.5 L turbo model <Ref. to FU(H4DOTC)-52, REMOVAL, Engine Control Module (ECM).>
- 2.5 L non-turbo model <Ref. to FU(H4SO)-2, SPECIFICATION, General Description.>

### C: INSTALLATION

- 2.5 L turbo model <Ref. to FU(H4DOTC)-52, INSTALLATION, Engine Control Module (ECM).>
- 2.5 L non-turbo model <Ref. to FU(H4SO)-2, SPECIFICATION, General Description.>

## 3. Cruise Control Command Switch

### A: REMOVAL

**WARNING:**

Before servicing, be sure to read the notes in the “AB” section for proper handling of the driver’s airbag module. <Ref. to AB-5, CAUTION, General Description.>

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using TORX® bit T30 (1), loosen two TORX® bolts which secure the driver’s airbag module.

- 5) Disconnect the horn harness.
- 6) Disconnect the airbag module connector on back of the airbag module. <Ref. to AB-8, PROCEDURE, Airbag Connector.>

- 7) Remove the steering wheel. <Ref. to PS-12, REMOVAL, Steering Wheel.>
- 8) Remove the screws to remove the lower cover from steering wheel.

- 9) Remove the screws on the backside of the steering wheel to remove the cruise control command switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the cruise control command switch resistance.

Switch	Position	Terminal No.	Standard
CANCEL SET/COAST RESUME/ ACCEL	All OFF	7 and 6	Approx. 4 kΩ
CANCEL	ON	7 and 6	Less than 1 Ω
SET/COAST	ON	7 and 6	Approx. 250 Ω
RESUME/ ACCEL	ON	7 and 6	Approx. 1500 Ω
MAIN (CRUISE)	OFF	8 and 6	1 MΩ or more
	ON	8 and 6	Less than 1 Ω

If NG, replace the cruise control command switch.

## 4. Combination Meter

### A: NOTE

For the combination meter, refer to the "IDI" section. <Ref. to IDI-16, Combination Meter.>

## 5. Stop Light & Brake Switch

### A: NOTE

For stop light & brake switch, refer to "BR". <Ref. to BR-45, Stop Light Switch.>

### **6. Clutch Switch**

#### **A: NOTE**

For clutch switch, refer to "CL". <Ref. to CL-27, Clutch Switch.>

## 7. Transmission Control Module (TCM)

### A: NOTE

For transmission control module (TCM), refer to Automatic Transmission section. <Ref. to 4AT-63, Transmission Control Module (TCM).>

## 8. Inhibitor Switch

### A: NOTE

For inhibitor switch, refer to Automatic Transmission section. <Ref. to 4AT-48, INSPECTION, Inhibitor Switch.>

## 9. Neutral Position Switch

### A: NOTE

For neutral position switch, refer to Manual Transmission & Differential section. <Ref. to 5MT-33, Switches and Harness.>

# Neutral Position Switch

CRUISE CONTROL SYSTEM

---

# Basic Diagnostic Procedure

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 1. Basic Diagnostic Procedure

#### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK MALFUNCTION INDICATOR LIGHT.</b> Make sure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step 5.	Go to step 2.
2	<b>CHECK CRUISE INDICATOR LIGHT.</b> Make sure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step 6.	Go to step 3.
3	<b>CHECK CRUISE CONTROL MAIN SWITCH OPERATION.</b> Check cruise control main switch operation. (Ensure the cruise indicator light illuminates.)	Is the cruise control main switch turned on? (Does the cruise indicator light illuminate?)	Go to step 4.	Go to phenomenon 1. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	<b>CHECK CRUISE CONTROL SET OPERATION.</b> Check the cruise control setting operation.	Can the cruise control be set while driving at 40 km/h (25 MPH) or more?	Go to step 7.	Go to step 6.
5	<b>CHECK DTC.</b> Read all DTCs using the Subaru Select Monitor.	Is an engine or ABS/VDC related DTC displayed?	Perform the diagnosis according to the engine or ABS/VDC related DTC.	Go to phenomenon 2. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	<b>CHECK CANCEL CODE.</b> Using the Subaru Select Monitor, read the cancel codes. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the cruise control command switch after the cruise control is deactivated. If the above is performed, the cancel code will be cleared.	Is it possible to read the cancel codes?	Perform the diagnosis according to the cancel code. <Ref. to CC(diag)-11, LIST, List of Cancel Code.>	Go to step 7.
7	<b>CHECK CRUISE SET INDICATOR LIGHT.</b> Make sure the cruise set indicator light illuminates.	Does the cruise set indicator light illuminate?	Go to step 8.	Go to phenomenon 3. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
8	<b>CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED.</b> Make sure the vehicle speed is held within set speed.	Is the vehicle speed kept within setting speed $\pm 3$ km/h ( $\pm 2$ MPH)? (Make sure that on a level road.)	Go to step 9.	Go to phenomenon 4. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

# Basic Diagnostic Procedure

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>9 CHECK RESUME/ACCEL OPERATION.</b> Check the RESUME/ACCEL switch operation.	Does the vehicle speed increase or return to set speed after RESUME/ACCEL switch has been pressed?	Go to step 10.	Go to phenomenon 5. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>10 CHECK SET/COAST OPERATION.</b> Check the SET/COAST switch operation.	Does the vehicle speed decrease after SET/COAST switch has been pressed?	Go to step 11.	Go to phenomenon 6. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>11 CANCEL OPERATION CHECK.</b> Check the CANCEL switch operation.	Is the cruise control released after CANCEL switch has been pressed?	Go to step 12.	Go to phenomenon 7. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>12 CHECK CRUISE CONTROL RELEASE OPERATION.</b> Check the cruise control release operation.	Is the cruise control released after brake pedal has been depressed?	Go to step 13.	Go to phenomenon 8. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>13 CHECK CRUISE CONTROL RELEASE OPERATION.</b> Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step 14.	Go to phenomenon 9. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>14 CHECK CRUISE CONTROL RELEASE OPERATION.</b> Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

# General Description

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 2. General Description

#### A: CAUTION

Airbag system wiring harness is routed near the cruise control command switch.

#### CAUTION:

- Airbag system wiring harnesses and connectors are yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch. Airbag system wiring harness is routed near the cruise control command switch.

#### B: PREPARATION TOOL

##### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

##### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

#### C: INSPECTION

Measure the battery voltage and specific gravity of electrolyte.

#### **Standard voltage:**

**12 V or more**

#### **Specific gravity:**

**1.260 or more**

#### B: WIRING DIAGRAM

<Ref. to WI-162, WIRING DIAGRAM, Cruise Control System.>

### 5. Subaru Select Monitor

#### A: OPERATION

##### 1. GENERAL DESCRIPTION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor.

The on-board diagnosis function operates in two categories, which are used depending on the type of problems;

##### 1) Cruise Control Cancel Conditions Diagnosis:

(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.

(2) Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.

#### CAUTION:

- **The cruise control memory stores not only the cruise “cancel” which occurred (although “cancel” operation is not entered by the driver), but also the “cancel” condition input by the driver.**
- **The latest memory content (latest code) is cleared when ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.**

##### 2) Real-time Diagnosis:

Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.

(2) Monitor the signal conditions from switches and sensors.

##### 2. CRUISE CONTROL CANCEL CONDITIONS DIAGNOSIS

- 1) Prepare the Subaru Select Monitor kit.
- 2) Connect the diagnosis cable to Subaru Select Monitor.
- 3) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

- 4) Start the engine and turn the cruise control main switch to ON.
- 5) Run the Subaru Select Monitor.
- 6) On «Main Menu» display, select {Each System Check}.
- On «System Selection Menu» display, select {Engine Control System} and select the [OK]. Select [OK] after the engine type information is displayed.
- 7) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

#### CAUTION:

- **When performing diagnosis, observe the legal speed limit on the road.**
- **The cancel code will be also appear when cruise control is cancelled by the driver's operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

# Subaru Select Monitor

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

8) When the set speed is cancelled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, selecting the {Cancel Code(s) Display} on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.

### NOTE:

The {Latest Diagnostic Code(s)} and {Memorized diagnostic code(s)} are contained in the cancel code. The latest code recognized during current test drive is displayed in {Latest Diagnostic Code(s)}. Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in {Memorized Diagnostic Code(s)}.

9) Perform Engine DTC Clear Memory operation. <Ref. to EN(H4DOTC)(diag)-54, OPERATION, Clear Memory Mode.>

Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

### NOTE:

The latest code will be cleared by turning ignition switch to OFF.

## 3. REAL-TIME DIAGNOSIS

- 1) Connect the Subaru Select Monitor.
- 2) Turn the ignition switch and cruise control main switch to ON.
- 3) Run the Subaru Select Monitor.
- 4) On «Main Menu» display, select {Each System Check}.
- 5) On «System Selection Menu» display, select {Engine Control System}.
- 6) Select [OK] after engine type information is displayed.
- 7) On «Cruise Control Diagnosis» display, select {Current Data Display & Save}.
- 8) Make sure that normal display is shown when operated as follows:
  - Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
  - Turn the main switch to ON.
  - Turn the “CANCEL” switch to ON.
  - Turn the “SET/COAST” switch to ON.
  - Turn the “RESUME/ACCEL” switch to ON.
  - Depress or release the clutch pedal.
  - Place the shift lever in any position other than neutral.

### NOTE:

- For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.
- For detailed concerning cancel codes, refer to the “List of Cancel Codes”. <Ref. to CC(diag)-11, List of Cancel Code.>

# Diagnostics with Phenomenon

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## 6. Diagnostics with Phenomenon

### A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check item	Index
1	Cruise control main switch is not turned to ON. (Cruise indicator light does not illuminate.) Or cruise control is cancelled without operating the cruise control command switch.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check the cruise indicator light.	<Ref. to CC(diag)-10, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2	Cruise control cannot be set. Or cruise control is cancelled without releasing operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check stop light switch and brake switch.	<Ref. to BR-42, Brake Pedal.> <Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.>
		(5) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-25, 62, Diagnostic Procedure with Cancel Code.>
		(6) Check vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
3	Cruise set indicator light does not illuminate.	Check the cruise set indicator light.	<Ref. to CC(diag)-10, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed $\pm 3$ km/h ( $\pm 2$ MPH).	Check the vehicle speed sensor.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RESUME/ACCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the RESUME/ACCEL switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
6	Vehicle speed does not decrease after SET/COAST switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the SET/COAST switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
7	Cruise control is not released after CANCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the CANCEL switch.	<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
8	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check stop light switch and brake switch.	<Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-45, INSTALLATION, Stop Light Switch.>
9	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the neutral position switch.	<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>
10	Cruise control is not released after clutch pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check clutch switch.	<Ref. to CC(diag)-18, 13, Diagnostic Procedure with Cancel Code.>

## Diagnostics with Phenomenon

### CRUISE CONTROL SYSTEM (DIAGNOSTICS)

#### **B: CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT**

**TROUBLE SYMPTOM:**

Cruise control can be set, but the cruise indicator light and cruise set indicator light do not illuminate.

Step	Check	Yes	No
<b>1</b> <b>CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.</b> 1) Perform the self-diagnosis of combination meter. <Ref. to IDI-4, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.> 2) Check the cruise indicator light and cruise set indicator light if they illuminate.	Do the cruise indicator light and cruise set indicator light illuminate?	Go to step 2.	Replace the meter case assembly. <Ref. to IDI-16, Combination Meter.>
<b>2</b> <b>CHECK DTC OF LAN COMMUNICATION CIRCUIT.</b> 1) Complete self-diagnosis, and turn the ignition switch to ON again. 2) Using the Subaru Select Monitor to read the DTC of body integrated unit.	Is DTC of low-speed CAN displayed?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the ECM. <Ref. to FU(H4SO)-44, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>

# List of Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## 7. List of Cancel Code

### A: LIST

**NOTE:**

- The cancel code is registered even when cancel is performed intentionally by the driver.
- Cancel codes are cleared if the ignition switch is turned to OFF.
- If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.
- If the cruise indicator light is flashing, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.
- To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.

Cancel code	Item	Contents of diagnosis	Reference
11	Main Switch	Main switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the main switch. <Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>
12	Stop Light & Brake Switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the brake pedal. <Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.>
13	Clutch Switch	Clutch switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the clutch pedal. <Ref. to CC(diag)-18, 13, Diagnostic Procedure with Cancel Code.>
14	Neutral Position Switch	Neutral position switch is turned to ON, and then the cruise control is released.	This code is displayed without shifting to neutral position. <Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>
15	Cancel Switch	Cancel switch is turned to ON, and then the cruise control is released.	This code is displayed without operating the cancel switch. <Ref. to CC(diag)-21, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the ignition switch. <Ref. to CC(diag)-22, 16, Diagnostic Procedure with Cancel Code.>
21	Cruise control switch malfunction when ignition switch is turned to ON	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This code is displayed when the ignition switch is turned to ON without operating the cruise control command switch. <Ref. to CC(diag)-22, 21, Diagnostic Procedure with Cancel Code.>

## List of Cancel Code

### CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Cancel code	Item	Contents of diagnosis	Reference
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.)	This code is displayed with normal operation. <Ref. to CC(diag)-24, 24, Diagnostic Procedure with Cancel Code.>
25	Abnormality of Input Circuit for Brake Switch	Malfunction of brake switch input circuit in ECM is detected.	<Ref. to CC(diag)-24, 25, Diagnostic Procedure with Cancel Code.>
31	Abnormal engine speed Signal	<ul style="list-style-type: none"> <li>• Abnormal increase of engine speed is detected.</li> <li>• Gear is placed in Neutral, 1st or Reverse position.</li> </ul>	Cruise in 2nd shift position or more. <Ref. to CC(diag)-24, 31, Diagnostic Procedure with Cancel Code.>
32	Cruse Control out of Range	<ul style="list-style-type: none"> <li>• Controlled vehicle speed decreased under the limit during cruising.</li> <li>• Set operation was performed at vehicle speed unavailable for setting.</li> <li>• RESUME operation was performed without memorized vehicle speed.</li> </ul>	This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-24, 32, Diagnostic Procedure with Cancel Code.>
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. <Ref. to CC(diag)-24, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-24, 35, Diagnostic Procedure with Cancel Code.>
41	VDC/TCS Operating	Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-24, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	ABS or Vehicle dynamics control (VDC) system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 43, Diagnostic Procedure with Cancel Code.>

# List of Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Cancel code	Item	Contents of diagnosis	Reference
44	Body Integrated unit Failure	Body integrated unit system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-24, 44, Diagnostic Procedure with Cancel Code.>
45	Meter Failure	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-25, 45, Diagnostic Procedure with Cancel Code.>
61	Brake switch abnormal	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-25, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-25, 62, Diagnostic Procedure with Cancel Code.>
63	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-25, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-25, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality 1 of switches related to cruise control 1	Cruise control command switch malfunction is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-25, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Cruise control calculation (microcomputer) malfunction is detected.	<Ref. to CC(diag)-25, 66, Diagnostic Procedure with Cancel Code.>

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 8. Diagnostic Procedure with Cancel Code

#### A: 11

Detected when main switch is pressed or when main switch related malfunction occurs.

#### TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

#### WIRING DIAGRAM:

CC-00601

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.</b></p> <p>1) Remove the driver's airbag module. &lt;Ref. to AB-15, REMOVAL, Driver's Airbag Module.&gt;</p> <p>2) Disconnect the harness connector of cruise control command switch.</p> <p>3) Turn the ignition switch to ON.</p> <p>4) Measure the voltage between harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b>  <b>(ST3) No. 8 (+) — Chassis ground (-):</b>  <b>(ST3) No. 7 (+) — Chassis ground (-):</b></p>	Is the voltage 5 V or more?	Go to step 2.	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.
<p><b>2 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Remove the cruise control command switch. &lt;Ref. to CC-5, REMOVAL, Cruise Control Command Switch.&gt;</p> <p>3) Measure the resistance between harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b>  <b>(ST3) No. 6 — Chassis ground:</b></p>	Is the resistance less than 10 $\Omega$ ?	Go to step 3.	Check for open circuit between cruise control command switch, ECM, and chassis ground and check the ECM.
<p><b>3 CHECK CRUISE CONTROL COMMAND SWITCH.</b></p> <p>Measure the resistance between switch terminals when the cruise control command switch is not depressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. 4 k $\Omega$ ?	Go to step 4.	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
<p><b>4 CHECK CANCEL SWITCH.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Remove the cruise control command switch. &lt;Ref. to CC-5, REMOVAL, Cruise Control Command Switch.&gt;</p> <p>3) Measure the resistance between switch terminals with the CANCEL switch pressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. less than 1 $\Omega$ when the CANCEL switch is pressed?	Go to step 5.	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
<p><b>5 CHECK SET/COAST SWITCH.</b></p> <p>Measure the resistance between switch terminals with the SET/COAST switch pressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. 250 $\Omega$ when SET/COAST switch is pressed?	Go to step 6.	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
<p><b>6 CHECK RESUME/ACCEL SWITCH CIRCUIT.</b></p> <p>Measure the resistance between switch terminals with the RESUME/ACCEL switch pressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. 1,500 $\Omega$ when RESUME/ACCEL switch is pressed?	Replace the ECM. <Ref. to FU(H4SO)-44, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

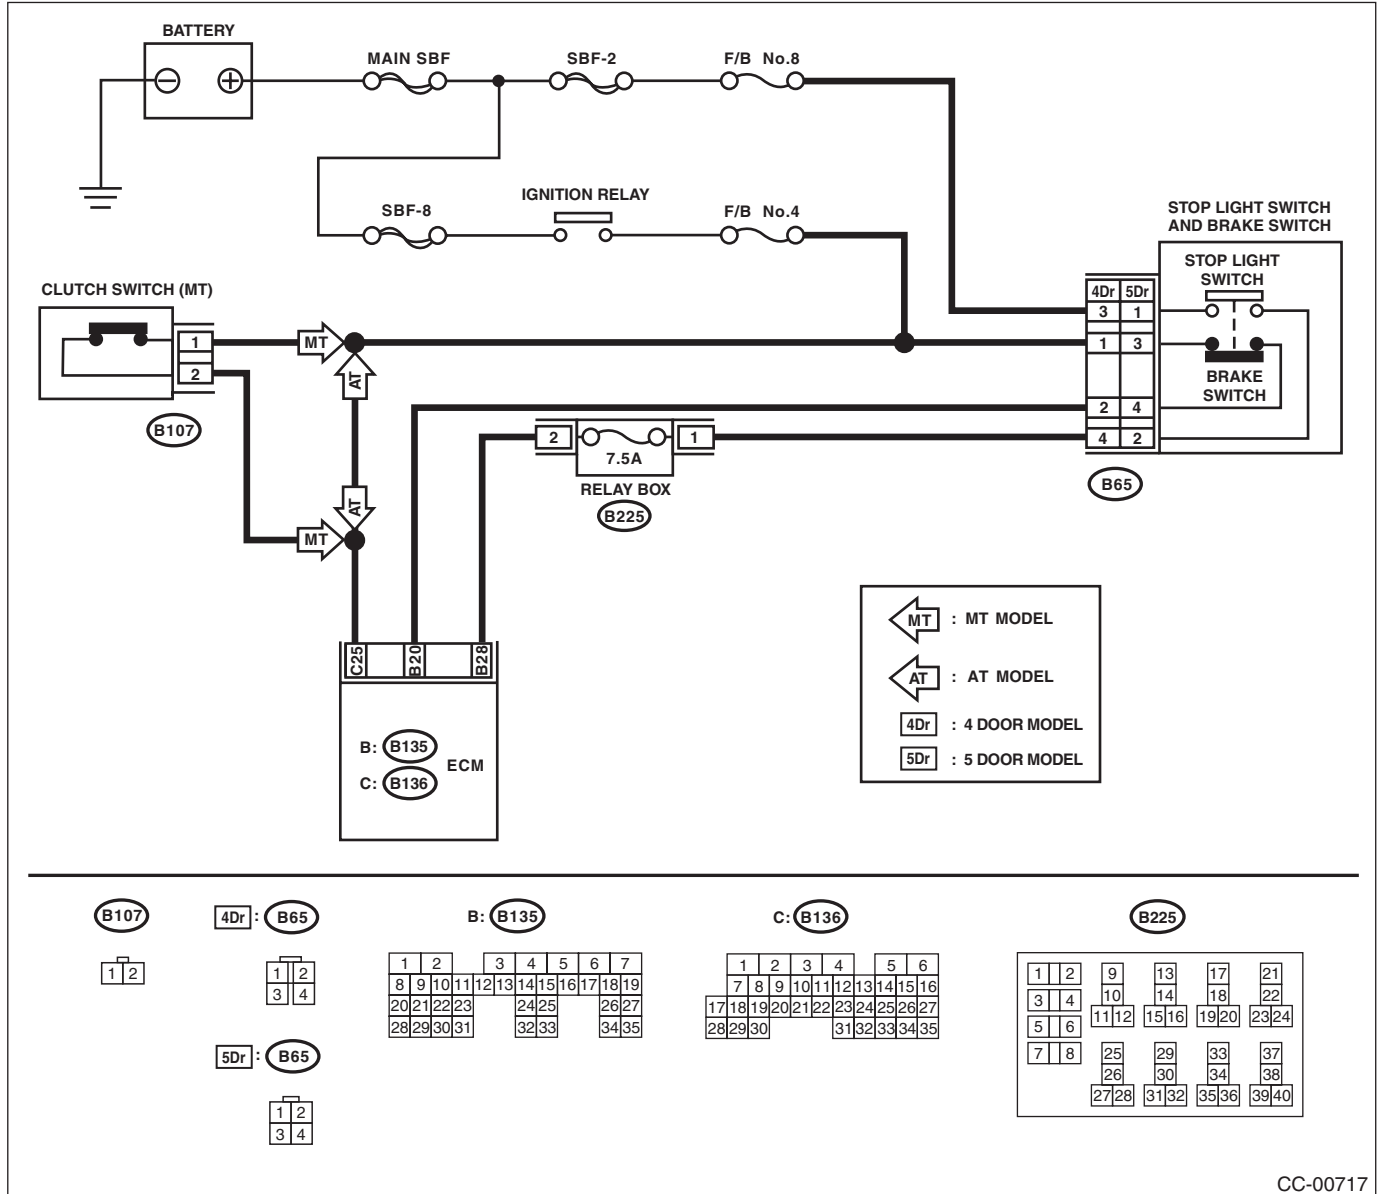

### B: 12

Detected when brake pedal is depressed or malfunction related to stop light & brake switch occurs.

#### TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

#### WIRING DIAGRAM:

CC-00717

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1</b>     <b>CHECK STOP LIGHT &amp; BRAKE SWITCH CIRCUIT.</b>            1) Turn the ignition switch to OFF.            2) Disconnect the stop light &amp; brake switch harness connector.            3) Turn the ignition switch to ON.            4) Measure the voltage between harness connector terminal and chassis ground.  <b>Connector &amp; terminal</b>  <b>5 door model:</b>                <b>(B65) No. 1 (+) — Chassis ground (-):</b>  <b>4 door model:</b>                <b>(B65) No. 3 (+) — Chassis ground (-):</b></p>	Is the voltage 10 V or more?	Go to step 2.	<ul style="list-style-type: none"> <li>• Check fuse No. 8 (in fuse &amp; relay box).</li> <li>• Check for open or short in the harness between stop light &amp; brake switch and fuse &amp; relay box.</li> </ul>
<p><b>2</b>     <b>CHECK STOP LIGHT &amp; BRAKE SWITCH CIRCUIT.</b>            Measure the voltage between harness connector terminal and chassis ground.  <b>Connector &amp; terminal</b>  <b>5 door model:</b>                <b>(B65) No. 3 (+) — Chassis ground (-):</b>  <b>4 door model:</b>                <b>(B65) No. 1 (+) — Chassis ground (-):</b></p>	Is the voltage 10 V or more?	Go to step 3.	<ul style="list-style-type: none"> <li>• Check fuse No. 4 (in fuse &amp; relay box).</li> <li>• Check for open or short in the harness between stop light &amp; brake switch and fuse &amp; relay box.</li> </ul>
<p><b>3</b>     <b>CHECK STOP LIGHT &amp; BRAKE SWITCH CIRCUIT.</b>            1) Turn the ignition switch to OFF.            2) Disconnect the harness connector of ECM.            3) Measure the resistance between ECM harness connector terminal and stop light &amp; brake switch harness connector terminal.  <b>Connector &amp; terminal</b>  <b>5 door model:</b>                <b>(B135) No. 20 — (B65) No. 4:</b>                <b>(B135) No. 28 — (B65) No. 2:</b>  <b>4 door model:</b>                <b>(B135) No. 20 — (B65) No. 2:</b>                <b>(B135) No. 28 — (B65) No. 4:</b></p>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the harness.
<p><b>4</b>     <b>CHECK STOP LIGHT &amp; BRAKE SWITCH.</b>            Check the stop light &amp; brake switch. &lt;Ref. to CC-7, Stop Light &amp; Brake Switch.&gt;</p>	Is the stop light & brake switch OK?	Replace the ECM. <Ref. to FU(H4SO)-44, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>	Replace the stop light & brake switch.

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### C: 13

Detected when clutch pedal is depressed or malfunction related to clutch switch occurs.

#### TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

#### WIRING DIAGRAM:

CC-00717

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK CLUTCH SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B107) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	<ul style="list-style-type: none"> <li>• Check fuse No. 4 (in fuse &amp; relay box).</li> <li>• Check open or shorted circuit of harness between clutch switch and fuse &amp; relay box.</li> </ul>
<b>2</b> <b>CHECK CLUTCH SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between clutch switch harness connector terminal and ECM harness connector terminal. <b>Connector &amp; terminal</b> <b>(B107) No. 2 — (B136) No. 25:</b>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the harness.
<b>3</b> <b>CHECK CLUTCH SWITCH.</b> Check the clutch switch. <Ref. to CL-27, INSPECTION, Clutch Switch.>	Is the clutch switch working normal?	Replace the ECM. <Ref. to FU(H4SO)-44, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>	Replace the clutch switch.

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

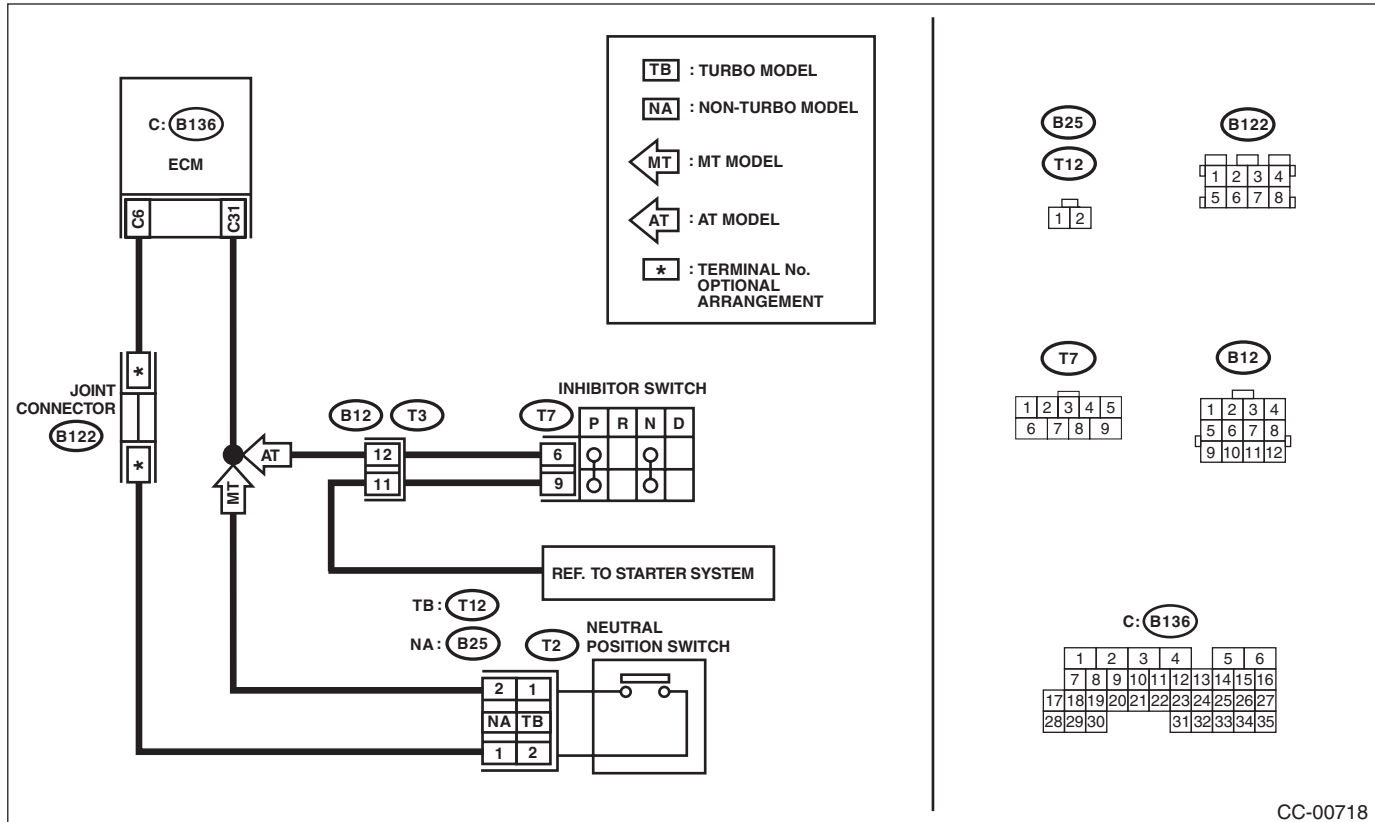

### D: 14

Detected when select lever is set in the neutral position, or when malfunction related to neutral position switch occurs.

#### TROUBLE SYMPTOM:

Cruise control cannot be set.

#### WIRING DIAGRAM:

CC-00718

Step	Check	Yes	No
1	<b>CHECK TRANSMISSION TYPE.</b>	Is the transmission type 4AT?	Go to step 2. MT model, Go to step 5.
2	<b>CHECK INHIBITOR SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(T7) No. 6 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3. Check for open or short in the harness between inhibitor switch and ECM.
3	<b>CHECK INHIBITOR SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between inhibitor switch harness connector terminal and starter motor. <b>Connector &amp; terminal</b> <b>(T7) No. 9 — Starter motor:</b>	Is the resistance less than 10 Ω?	Go to step 4. Repair the harness.

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>4 CHECK INHIBITOR SWITCH.</b> Remove and check the inhibitor switch. <Ref. to CC-10, Inhibitor Switch.>	Is the inhibitor switch working normal?	Replace the ECM. <Ref. to FU(H4SO)-44, Engine Control Module (ECM).>	Replace the inhibitor switch.
<b>5 CHECK NEUTRAL POSITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the neutral position switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>Non-turbo model</b> (B25) No. 2 (+) — Chassis ground (-): <b>Turbo model</b> (T12) No. 1 (+) — Chassis ground (-):	Is the voltage 10 V or more?	Go to step 6.	Check for open or short in the harness between neutral position switch and ECM.
<b>6 CHECK NEUTRAL POSITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Measure resistance between harness connector terminal of neutral position switch and chassis ground. <b>Connector &amp; terminal</b> <b>Non-turbo model</b> (B25) No. 1 — Chassis ground: <b>Turbo model</b> (T12) No. 2 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 7.	Repair the harness.
<b>7 CHECK NEUTRAL POSITION SWITCH.</b> Remove and check the neutral position switch. <Ref. to 4AT-48, INSPECTION, Inhibitor Switch.>	Is the neutral position switch OK?	Replace the ECM. <Ref. to FU(H4SO)-44, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>	Replace the neutral position switch.

### E: 15

Detected when CANCEL switch is pressed or malfunction related to main switch occurs.

#### TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

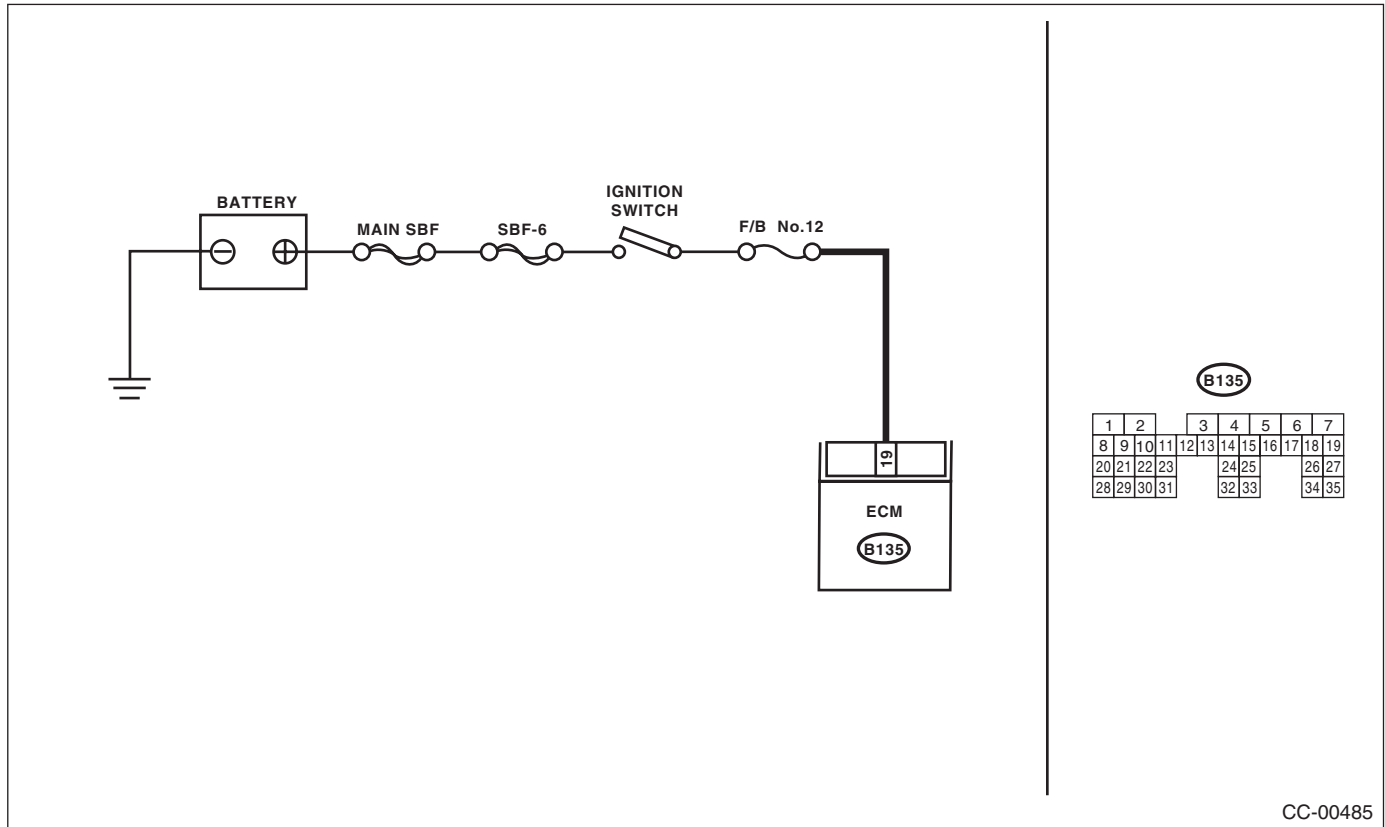

### F: 16

Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.

#### TROUBLE SYMPTOM:

Cruise control cannot be set.

#### WIRING DIAGRAM:

CC-00485

Step	Check	Yes	No
<b>1</b> <b>CHECK IGNITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B135) No. 19 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Check for poor contact of ECM connector.	<ul style="list-style-type: none"> <li>• Check fuse No. 12 (in fuse &amp; relay box).</li> <li>• Check the harness for open or short circuit between ignition switch and ECM.</li> </ul>

### G: 21

Cruise control command switch malfunction is detected.

#### TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

# Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## H: 22

Malfunction related to vehicle speed sensor is detected.

### DIAGNOSIS:

Open or shorted circuit in vehicle speed sensor system.

### TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

	Step	Check	Yes	No
1	<b>CHECK ABS OR VDC WARNING LIGHT.</b> 1) Turn the ignition switch to ON. 2) After the initial operation of combination meter is completed, check if ABS or VDC warning light continues to illuminate.	Does the warning light continue to illuminate?	Check ABSCM or VDCCM. <Ref. to ABS(diag)-2, Basic Diagnostic Procedure.> <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step 2.
2	<b>CHECK DTC OF LAN COMMUNICATION CIRCUIT.</b> Using the Subaru Select Monitor to read the DTC of body integrated unit.	Is DTC of low-speed CAN displayed?	Check the LAN communication circuit.	Replace the ECM. <Ref. to FU(H4SO)-44, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>

# Diagnostic Procedure with Cancel Code

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

### **I: 24**

Malfunction in cruise control-related switch is detected.

#### **TROUBLE SYMPTOM:**

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

### **J: 25**

Malfunction of brake input circuit in ECM is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4SO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

### **K: 31**

Engine speed signal malfunction is detected.

Abnormal increase of engine speed is detected.

Gear is placed in 1st or Reverse position.

After driving at the 2nd gear position or higher, perform the cruise setting again. If a cancel code is not detected, it is normal.

### **L: 32**

Detected when the vehicle speed is out of the system controllable range.

Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.

If cancel code is still detected after setting cruise again, perform the diagnosis for DTC 22.

Refer to DTC 22 for diagnostic procedure.

<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

### **M: 34**

The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.

This cancel code is detected when driving for a long period of time at a speed higher than appropriate for cruise control setting by operating the accelerator pedal.

Perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

### **N: 35**

Detected when it is impossible to perform the vehicle speed feedback.

Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, etc.) during cruise driving.

Cancel code is detected when driving condition is not suitable for cruise control.

Perform cruise set operation again after clearing the possible cause.

### **O: 41**

VDC/TCS has operated.

Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

### **P: 43**

ABS/VDC malfunction is detected.

VDC malfunction is detected during cruise driving or cruise setting.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

### **Q: 44**

Body integrated unit malfunction is detected.

Body integrated unit system malfunction is detected during cruise driving or cruise setting.

# Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

## **R: 45**

Combination meter malfunction is detected.

Combination meter malfunction is detected during cruise driving or cruise setting.

## **S: 61**

Malfunction in the stop light & brake switch is detected.

### **TROUBLE SYMPTOM:**

- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to DTC 12 for diagnostic procedure.

<Ref. to CC(diag)-16, 12, Diagnostic Procedure with Cancel Code.>

## **T: 62**

Neutral position switch malfunction is detected.

### **TROUBLE SYMPTOM:**

Cruise control cannot be set.

Refer to DTC 14 for diagnostic procedure.

<Ref. to CC(diag)-20, 14, Diagnostic Procedure with Cancel Code.>

## **U: 63**

Malfunction of vehicle speed signal variation is detected.

### **TROUBLE SYMPTOM:**

Cruise control cannot be set. (Cancelled immediately.)

Refer to DTC 22 for diagnostic procedure.

<Ref. to CC(diag)-23, 22, Diagnostic Procedure with Cancel Code.>

## **V: 64**

Malfunction related to engine is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4SO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

## **W: 65**

Cruise control command switch malfunction is detected.

While the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.

### **TROUBLE SYMPTOM:**

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-14, 11, Diagnostic Procedure with Cancel Code.>

## **X: 66**

Cruise control calculation malfunction is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4SO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

# Diagnostic Procedure with Cancel Code

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

# Basic Diagnostic Procedure

IMMOBILIZER (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK SECURITY INDICATOR LIGHT.</b> 1) Turn the ignition switch to "OFF" or "ACC". 2) Wait at least 60 seconds.	Does the security indicator light blink?	Go to step 2.	Check the security indicator light circuit. <Ref. to IM(diag)-10, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
2	<b>CHECK KEY SWITCH.</b> Remove the key from ignition switch.	Does the security indicator light begin to blink within 1 second after the key is removed?	Go to step 3.	Check the key switch circuit. <Ref. to IM(diag)-12, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
3	<b>CHECK SECURITY INDICATOR LIGHT.</b> Turn the ignition switch to ON.	Does the security indicator light go off?	Go to step 5.	Go to step 4.
4	<b>CHECK ENGINE START.</b> Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Inspect the DTC display (body integrated unit). Go to step 7.
5	<b>CHECK ENGINE START.</b> Turn the ignition switch to START.	Does the starter operate?	Go to step 6.	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
6	<b>CHECK ENGINE START.</b> Turn the ignition switch to START.	Does the engine start?	Immobilizer system is normal.	Check the DTC display (ECM). Go to step 7.
7	<b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b> 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. <Ref. to IM(diag)-7, Subaru Select Monitor.> 3) Turn the ignition switch and Subaru Select Monitor switch to ON. 4) Read DTC's on the display.	Is the DTC displayed on screen?	Go to step 8.	Repair the related parts.
8	<b>PERFORM DIAGNOSIS.</b> 1) Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. 4) Read DTC's again.	Is the DTC displayed on screen?	Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

## 2. General Description

### A: CAUTION

**CAUTION:**

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.

- When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

- (1) Ignition switch position
- (2) Sec.

- If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
- Before performing the diagnostics, obtain all keys for the vehicle from the owner.
- Do not install or register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

# General Description

IMMOBILIZER (DIAGNOSTICS)

## B: PREPARATION TOOL

### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

## 3. Electrical Component Location

### A: LOCATION

IM-00276

- (1) Antenna
- (2) Security indicator light (LED bulb)
- (3) Body integrated unit
- (4) Transponder

# Immobilizer Control Module I/O Signal

IMMOBILIZER (DIAGNOSTICS)

---

## 4. Immobilizer Control Module I/O Signal

### A: WIRING DIAGRAM

#### 1. IMMOBILIZER

<Ref. to WI-157, WIRING DIAGRAM, Immobilizer  
System.>

## 5. Subaru Select Monitor

### A: OPERATION

#### 1. HOW TO USE THE SUBARU SELECT MONITOR

- 1) Prepare the Subaru Select Monitor kit.
- 2) Connect the diagnosis cable to the Subaru Select Monitor.
- 3) Connect the Subaru Select Monitor to the data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to the data link connector.

#### CAUTION:

**Do not connect scan tools other than the Subaru Select Monitor.**

- 4) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.
- 5) Using the Subaru Select Monitor, call up DTCs and various data, then record them.

#### 2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE AND BODY INTEGRATED UNIT

Refer to "Read Diagnostic Trouble Code" for information about how to display a DTC. <Ref. to IM(diag)-8, Read Diagnostic Trouble Code (DTC).>

#### 3. COMMUNICATION LINE CHECK

##### NOTE:

The communication line between ECM and body integrated unit can be checked in "System Operation Check Mode". This is referred to as "Communication line check".

- 1) Connect the Subaru Select Monitor.
- 2) On «Main Menu» display, select {Each System Check}.
- 3) On «System Selection Menu» display, select {Engine Control System}.
- 4) Select [OK] after the information of engine type is displayed.
- 5) On «Engine Diagnosis» display, select {System Operation Check Mode}.
- 6) On «System Operation Check Mode» display, select {Immobilizer System}.
- 7) Start the communication line check.
- 8) Is «OK» displayed on screen?  
If displayed, go to step 9).  
If not, go to step 10).

9) After diagnostic results, it is determined that the circuit is not shorted. Finish the communication line check.

10) If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Read Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

---

## 6. Read Diagnostic Trouble Code (DTC)

### A: OPERATION

#### 1. ECM

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Engine Control System}.
- 3) Select [OK] after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display, select {Diagnostic Code(s) Display}.
- 5) On «Diagnostic Code(s) Display» display, select {Current DTC} or {Past DTC}.

#### NOTE:

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to IM(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>

#### 2. BODY INTEGRATED UNIT

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. Unit}.
- 3) After {Integ. unit} is displayed, select [OK].
- 4) On «Integ. unit mode failure diag» display, select {Diagnostic Code(s) Display}.

#### NOTE:

- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to IM(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>

## 7. Clear Memory Mode

### A: OPERATION

#### 1. ECM

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Engine Control System}.
- 3) Select [OK] after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display, select {Clearing Memory}.
- 5) When “Done” is displayed on the display, end the Subaru Select Monitor and turn the ignition switch to OFF.

#### NOTE:

- After the memory is cleared, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.
- For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

#### 2. BODY INTEGRATED UNIT

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. Unit}.
- 3) After {Integ. unit} is displayed, select [OK].
- 4) On «Integ. unit mode» display, select {Clearing Memory}.
- 5) When “Done” is displayed on the display, end the Subaru Select Monitor and turn the ignition switch to OFF.

#### NOTE:

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

# Diagnostics Chart for Security Indicator Light

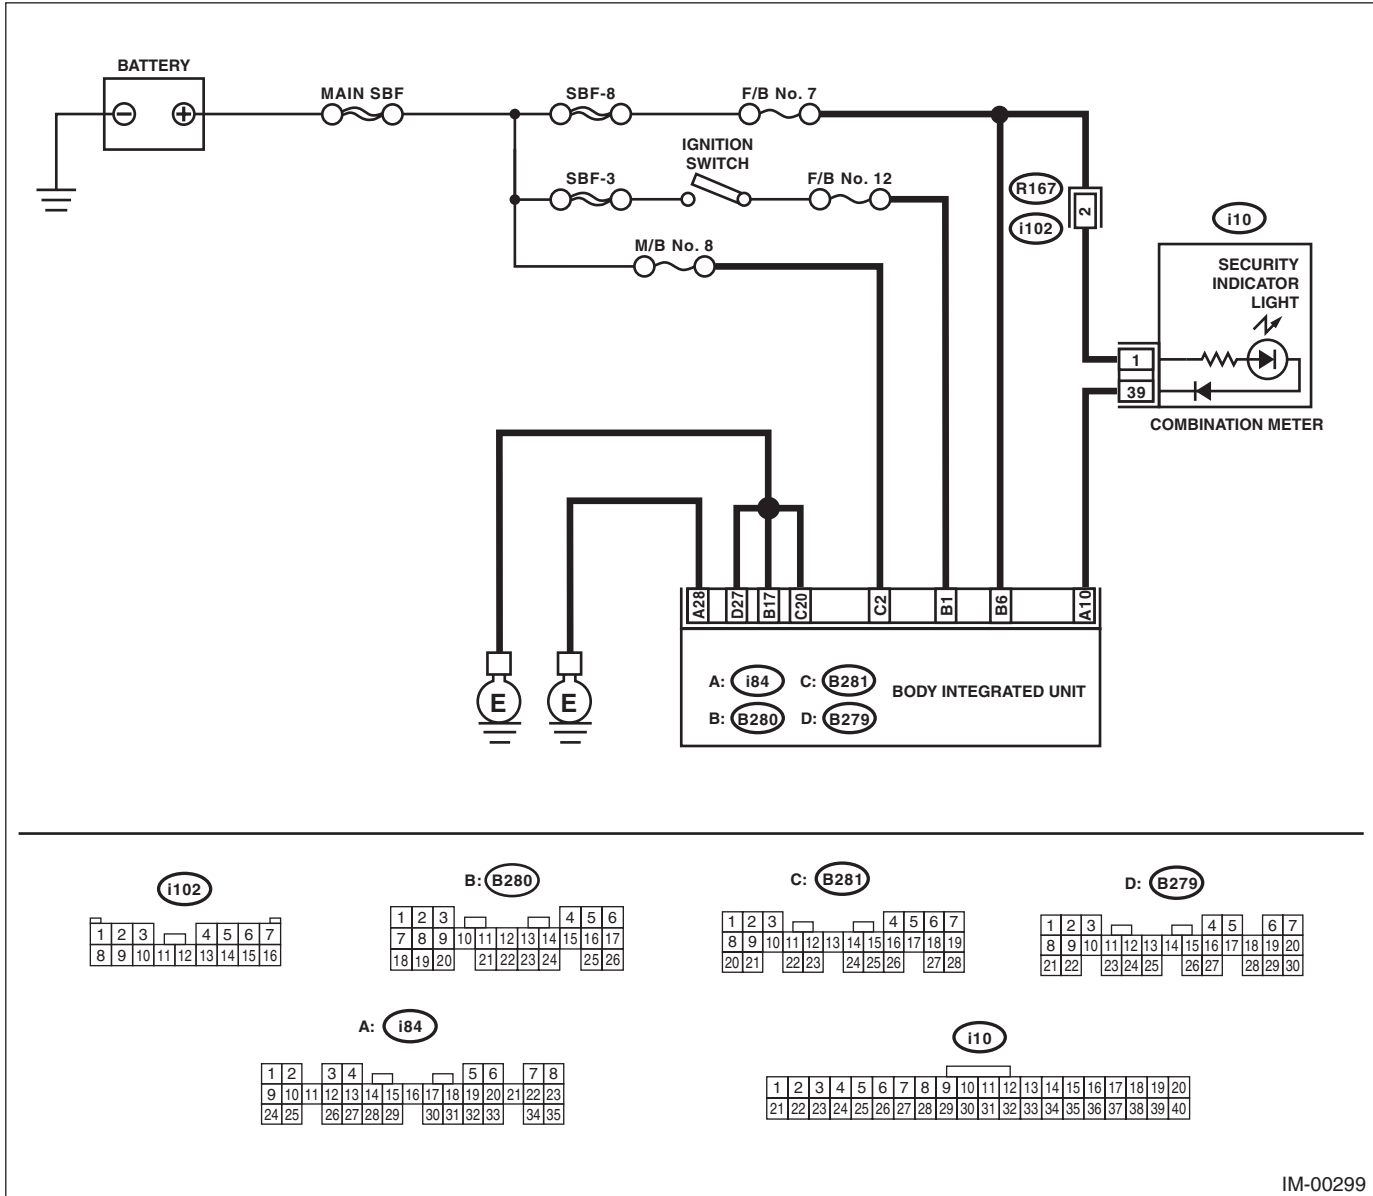

IMMOBILIZER (DIAGNOSTICS)

## 8. Diagnostics Chart for Security Indicator Light

### A: INSPECTION

#### 1. CHECK SECURITY INDICATOR LIGHT CIRCUIT

WIRING DIAGRAM:

Step	Check	Yes	No
<b>1</b> <b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Check the fuse (M/B No. 8).	Is the fuse blown out?	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.	Go to step 2.

# Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

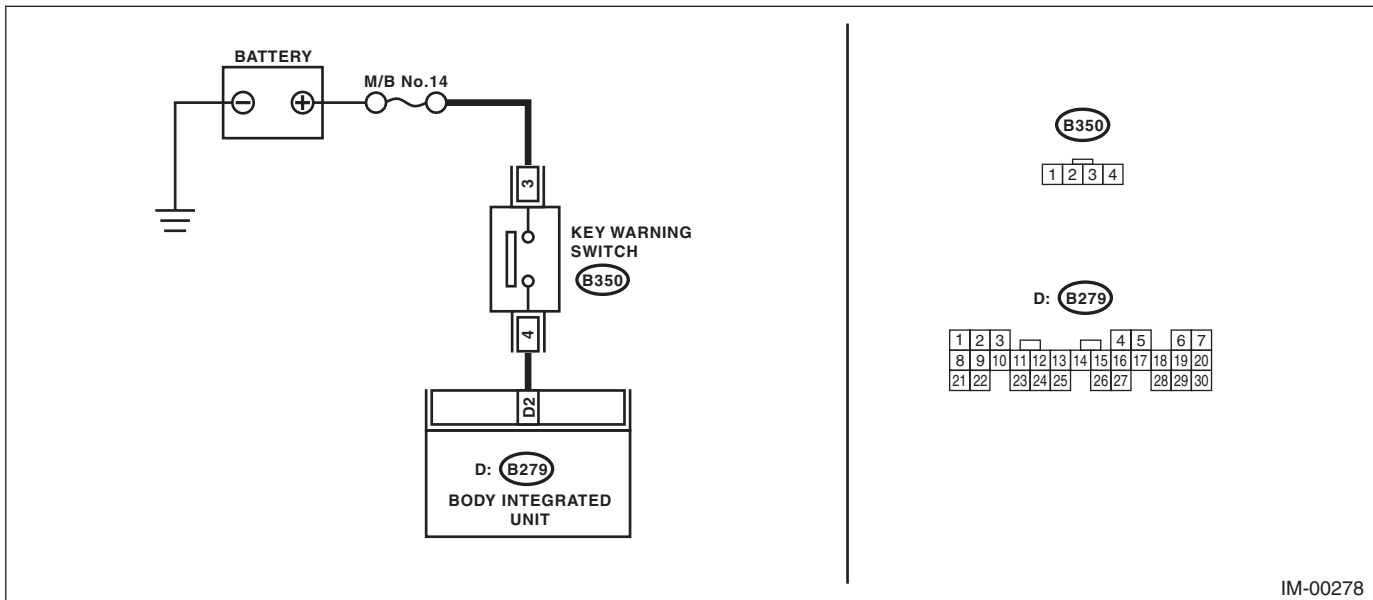

Step	Check	Yes	No
<b>2 CHECK SECURITY INDICATOR LIGHT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from body integrated unit. 3) Connect a resistor (100 Ω) between the body integrated unit harness connector terminal (i84) No. 10 and chassis ground.	Does the security indicator light illuminate?	Go to step 3.	Go to step 6.
<b>3 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.</b> Measure the resistance between body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(i84) No. 28 — Chassis ground:</i> <i>(B280) No. 17 — Chassis ground:</i> <i>(B281) No. 20 — Chassis ground:</i> <i>(B279) No. 27 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the open circuit of the body integrated unit ground circuit.
<b>4 CHECK BODY INTEGRATED UNIT IGNITION CIRCUIT.</b> 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 5.	Check the harness for open or short circuit between the body integrated unit and ignition switch.
<b>5 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 6 (+) — Chassis ground (-):</i> <i>(B281) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the “PC application help for Subaru Select Monitor”.	Check the harness for open or short circuit between the body integrated unit and fuse.
<b>6 CHECK COMBINATION METER CIRCUIT.</b> 1) Remove the combination meter. <Ref. to IDI-16, Combination Meter.> 2) Measure the voltage between combination meter harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(i10) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 7.	Check for an open or short circuit in the harness between the combination meter and fuse.
<b>7 CHECK COMBINATION METER CIRCUIT.</b> Measure the resistance between the body integrated unit harness connector terminal and combination meter harness connector terminal. <i>Connector &amp; terminal</i> <i>(i84) No. 10 — (i10) No. 39:</i>	Is the resistance less than 10 Ω?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-16, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

# Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

## 2. CHECK KEY SWITCH CIRCUIT

WIRING DIAGRAM:

IM-00278

# Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK POWER SUPPLY CIRCUIT.</b>                      1) Disconnect the harness connector from key warning switch.                      2) Turn the ignition switch to ACC or LOCK. (with key inserted)                      3) Measure the voltage between key warning switch harness connector terminal and chassis ground.  <b>Connector &amp; terminal</b>  <b>(B350) No. 3 (+) — Chassis ground (-):</b></p>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for an open or short between the key warning switch and fuse.
<p><b>2</b></p> <p><b>CHECK KEY WARNING SWITCH.</b>                      1) Insert the ignition key in the ignition switch. (OFF or ACC)                      2) Measure the resistance between key warning switch connector terminals.  <b>Connector &amp; terminal</b>  <b>No. 3 — No. 4:</b></p>	Is the resistance less than 1 $\Omega$ ?	Go to step 3.	Replace the key warning switch.
<p><b>3</b></p> <p><b>CHECK KEY WARNING SWITCH.</b>                      1) Remove the ignition key from ignition switch.                      2) Measure the resistance between key warning switch connector terminals.  <b>Connector &amp; terminal</b>  <b>No. 3 — No. 4:</b></p>	Is the resistance 1 M $\Omega$ or more?	Go to step 4.	Replace the key warning switch.
<p><b>4</b></p> <p><b>CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT.</b>                      1) Disconnect the harness connector from key warning switch.                      2) Disconnect the harness connector from body integrated unit.                      3) Measure the resistance between key warning switch harness connector terminal and body integrated unit harness connector terminal.  <b>Connector &amp; terminal</b>  <b>(B350) No. 4 — (B279) No. 2:</b></p>	Is the resistance less than 10 $\Omega$ ?	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".	Repair the harness between key warning switch and body integrated unit.

## List of Diagnostic Trouble Code (DTC)

### IMMOBILIZER (DIAGNOSTICS)

## 9. List of Diagnostic Trouble Code (DTC)

### A: LIST

#### 1. ECM

DTC	Item	Contents of diagnosis	Index No.
P0513	Incorrect Immobilizer Key	Incorrect immobilizer key (Use of unregistered key in body integrated unit)	<Ref. to IM(diag)-15, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1570	Antenna	Faulty antenna	<Ref. to IM(diag)-16, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1571	Reference Code Incompatibility	Reference code incompatibility between body integrated unit and ECM	<Ref. to IM(diag)-18, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1572	IMM Circuit Failure (Except Antenna Circuit)	<ul style="list-style-type: none"> <li>Communication failure between body integrated unit and ECM</li> <li>Combination meter and body integrated unit registration failed</li> </ul>	<Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1574	Key Communication Failure	Communication failure between key and body integrated unit	<Ref. to IM(diag)-22, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1576	EGI Control Module EEPROM	ECM malfunctioning	<Ref. to IM(diag)-22, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1577	IMM Control Module EEPROM	Body integrated unit malfunctioning	<Ref. to IM(diag)-23, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1578	Meter Failure	<ul style="list-style-type: none"> <li>Reference code incompatibility between combination meter and body integrated unit</li> <li>Communication failure between body integrated unit and ECM</li> </ul>	<Ref. to IM(diag)-23, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### NOTE:

Perform diagnosis of engine DTC when a DTC other than an immobilizer DTC is detected. <Ref. to EN(H4DOTC)(diag)-83, List of Diagnostic Trouble Code (DTC).>

#### 2. BODY INTEGRATED UNIT

DTC	Item	Contents of diagnosis	Index No.	Relation between ECM and DTC
B1401	M Collation NG	Reference code incompatibility between combination meter and body integrated unit	<Ref. to IM(diag)-24, DTC B1401 M COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1578
B1402	Immobilizer Key Collation NG	<ul style="list-style-type: none"> <li>Incorrect immobilizer key (Use of unregistered key in body integrated unit)</li> <li>Faulty antenna</li> </ul>	<Ref. to IM(diag)-24, DTC B1402 IMMOBILIZER KEY COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	<ul style="list-style-type: none"> <li>P0513</li> <li>P1570</li> <li>P1574</li> </ul>
B1403	E/G Request NG	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-24, DTC B1403 E/G REQUEST NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1572

#### NOTE:

The starter relay control is performed in immobilizer system. When the body integrated unit detects a non-conformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## 10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC P0513 INCORRECT IMMOBILIZER KEY

#### DTC DETECTING CONDITION:

Incorrect immobilizer key (Use of unregistered key in body integrated unit)

	Step	Check	Yes	No
1	<b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	End.	Replace ignition keys (including transponder) which cannot be registered. Go to step 2.
2	<b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	End.	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## B: DTC P1570 ANTENNA

### DTC DETECTING CONDITION:

Faulty antenna

### WIRING DIAGRAM:

Step	Check	Yes	No
<b>1</b> <b>CHECK ANTENNA CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from the antenna. <Ref. to SL-53, Immobilizer Antenna.> 3) Measure the resistance of antenna circuit. <b>Connector &amp; terminal</b> <b>(B415) No. 1 — No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 2.	Replace the antenna. <Ref. to SL-53, Immobilizer Antenna.>
<b>2</b> <b>CHECK ANTENNA CIRCUIT.</b> 1) Disconnect the harness connector from body integrated unit. 2) Measure the resistance between harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 26 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Repair the harness.	Go to step 3.
<b>3</b> <b>CHECK ANTENNA CIRCUIT.</b> Measure the resistance of harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 25 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Repair the harness.	Go to step 4.
<b>4</b> <b>CHECK ANTENNA CIRCUIT.</b> 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 26 (+) — Chassis ground (-):</b>	Is the voltage 0 V?	Go to step 5.	Repair the harness.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<b>5</b> <b>CHECK ANTENNA CIRCUIT.</b> Measure the voltage between harness connector and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(B280) No. 25 (+) — Chassis ground (-):</b></i>	Is the voltage 0 V?	Go to step 6.	Because the battery voltage or ignition switch "ON" circuit is shorted, repair the harness between the body integrated unit and antenna.
<b>6</b> <b>CHECK BODY INTEGRATED UNIT FUNCTION.</b> 1) Turn the ignition switch to OFF. 2) Connect the harness connector to body integrated unit. 3) Insert the key into the ignition switch, then measure changes in voltage between the antenna harness connectors. <i><b>Connector &amp; terminal</b></i> <i><b>(B280) No. 25 (+) — No. 26 (-):</b></i>	Is the voltage -30 — 30 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)	Go to step 7.	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".
<b>7</b> <b>CHECK IGNITION KEY (TRANSPONDER).</b> 1) Remove the key from ignition switch. 2) Start the engine using other key which is already registered.	Does the engine start?	Replace the ignition key (including the transponder). Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## C: DTC P1571 REFERENCE CODE INCOMPATIBILITY

### DTC DETECTING CONDITION:

Reference code incompatibility between body integrated unit and ECM

Step	Check	Yes	No
<b>1</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	End.	Go to step 2.
<b>2</b> <b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other immobilizer DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-14, List of Diagnostic Trouble Code (DTC).> Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".	Replace the ECM. <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).> Body integrated unit <Ref. to SL-50, Body Integrated Unit.>, and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

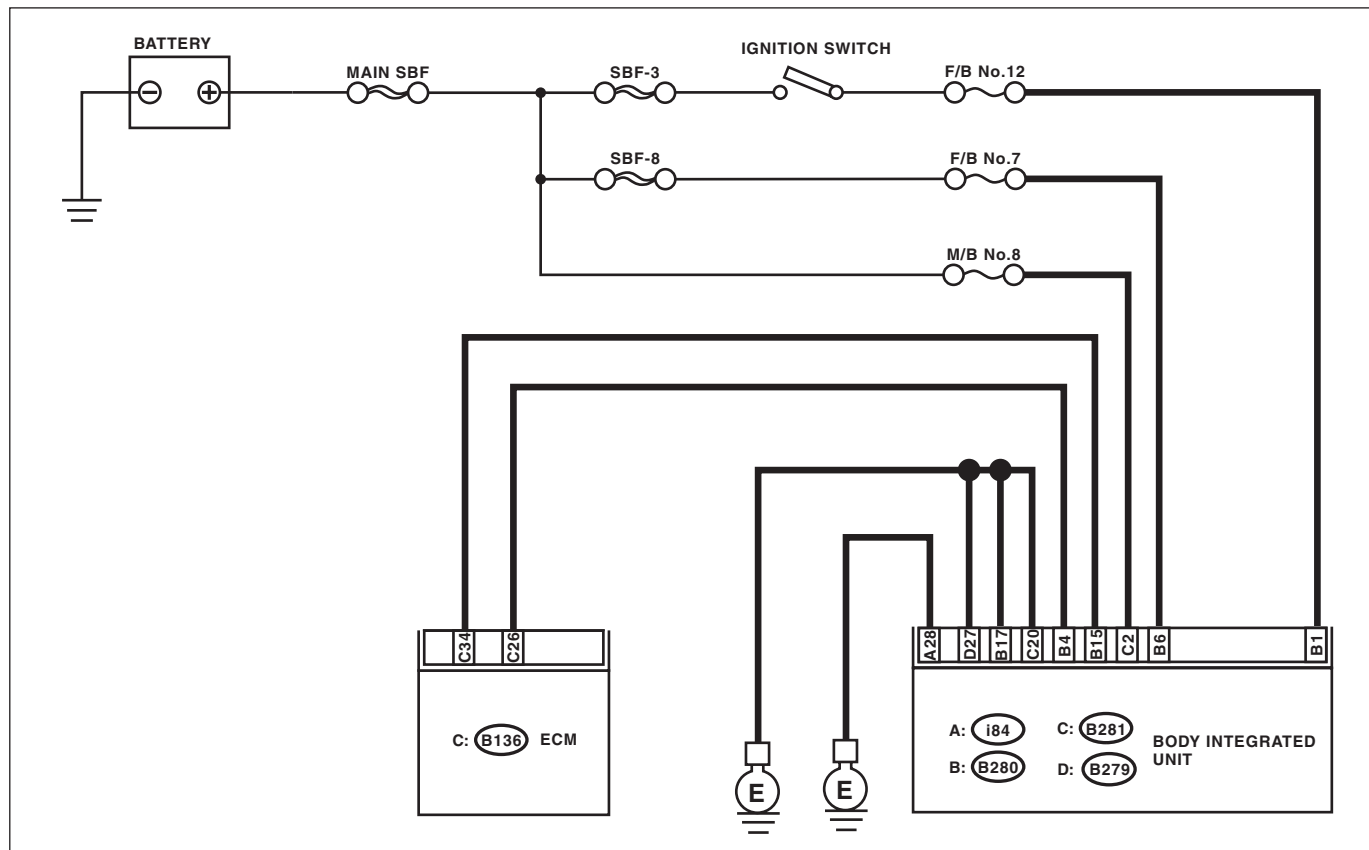

IMMOBILIZER (DIAGNOSTICS)

## D: DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)

### DTC DETECTING CONDITION:

Communication failure between body integrated unit and ECM

### WIRING DIAGRAM:

IM-00322

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from body integrated unit. 3) Measure the voltage between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B281) No. 2 (+) — Chassis ground (-):</i> <i>(B280) No. 6 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short circuit between the body integrated unit and fuse.
<b>2 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short circuit between the body integrated unit and ignition switch.
<b>3 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(i84) No. 28 — Chassis ground:</i> <i>(B280) No. 17 — Chassis ground:</i> <i>(B281) No. 20 — Chassis ground:</i> <i>(B279) No. 27 — Chassis ground:</i>	Is the resistance less than 10 $\Omega$ ?	Go to step 4.	Repair the open circuit of the body integrated unit ground circuit.
<b>4 CHECK GROUND CIRCUIT FOR ECM.</b> Measure the resistance between the ECM ground terminal and engine ground.	Is the resistance less than 10 $\Omega$ ?	Go to step 5.	Repair the ECM ground circuit.
<b>5 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND ECM.</b> 1) Disconnect the harness connector from the ECM and body integrated unit. 2) Measure the resistance between body integrated unit harness connector terminal and ECM harness connector terminal. <i>Connector &amp; terminal</i> <i>(B280) No. 4 — (B136) No. 26:</i>	Is the resistance less than 10 $\Omega$ ?	Go to step 6.	Repair the open circuit of the harness between the body integrated unit and ECM.
<b>6 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND ECM.</b> Measure the resistance between body integrated unit harness connector terminal and ECM harness connector terminal. <i>Connector &amp; terminal</i> <i>(B280) No. 15 — (B136) No. 34:</i>	Is the resistance less than 10 $\Omega$ ?	Go to step 7.	Repair the open circuit of the harness between the body integrated unit and ECM.
<b>7 CHECK COMMUNICATION CIRCUIT HARNESS.</b> 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 4 (+) — Chassis ground (-):</i> <i>(B280) No. 15 (+) — Chassis ground (-):</i>	Is the voltage 0 V?	Go to step 8.	Because the battery voltage or ignition switch "ON" circuit is shorted, repair the harness between the body integrated unit and ECM.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

	Step	Check	Yes	No
8	<p><b>CHECK COMMUNICATION CIRCUIT HARNESS.</b>                      Measure the voltage between ECM harness connector terminal and engine ground.  <b>Connector &amp; terminal</b>  <i>(B136) No. 26 (+) — Engine ground (-):</i>  <i>(B136) No. 34 (+) — Engine ground (-):</i></p>	Is the voltage 0 V?	Go to step 9.	Because the battery voltage or ignition switch "ON" circuit is shorted, repair the harness between the body integrated unit and ECM.
9	<p><b>CHECK ECM BY COMMUNICATION LINE CHECK.</b>                      1) Connect the harness connector to ECM.                      2) Disconnect the harness connector from body integrated unit.                      3) Start the communication line short check.                      &lt;Ref. to IM(diag)-7, COMMUNICATION LINE CHECK, OPERATION, Subaru Select Monitor.&gt;</p>	Is the communication line check OK?	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".	Replace the ECM. <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).> Perform the registration procedure next. Refer to the "PC application help for Subaru Select Monitor".

**NOTE:**

Refer to the following inspection when DTC is detected after inspection above. <Ref. to IM(diag)-23, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

### E: DTC P1574 KEY COMMUNICATION FAILURE

#### DTC DETECTING CONDITION:

Communication failure between key and body integrated unit

Step	Check	Yes	No
<b>1</b> <b>CHECK BODY INTEGRATED UNIT FUNCTION.</b> Insert the key into the ignition switch (LOCK position), then measure changes in voltage between the antenna connectors. <b>Connector &amp; terminal</b> <b>(B415) No. 1 (+) — No. 2 (-):</b>	Is the voltage -30 — 30 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)	Go to step 2.	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the “PC application help for Subaru Select Monitor”.
<b>2</b> <b>CHECK IGNITION KEY (TRANSPONDER).</b> 1) Remove the key from ignition switch. 2) Start the engine using other key which is already registered.	Does the engine start?	Replace the ignition key (including the transponder). Execute the registration procedure next. Refer to the “PC application help for Subaru Select Monitor”.	Replace the body integrated unit <Ref. to SL-50, Body Integrated Unit.> Replace all ignition keys (including the transponder). Execute the registration procedure next. Refer to the “PC application help for Subaru Select Monitor”.

### F: DTC P1576 EGI CONTROL MODULE EEPROM

#### DTC DETECTING CONDITION:

- ECM malfunctioning
- Inaccessible ROM in ECM during key registration.

Step	Check	Yes	No
<b>1</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the “PC application help for Subaru Select Monitor”.	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 2.
<b>2</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the “PC application help for Subaru Select Monitor”.	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 3.
<b>3</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the “PC application help for Subaru Select Monitor”.	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Replace the ECM. <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## G: DTC P1577 IMM CONTROL MODULE EEPROM

### DTC DETECTING CONDITION:

- Body integrated unit malfunctioning
- Failed to access the ROM inside the body integrated unit.

Step	Check	Yes	No
<b>1</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 2.
<b>2</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 3.
<b>3</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "PC application help for Subaru Select Monitor".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Replace the body integrated unit. <Ref. to SL-50, Body Integrated Unit.>

## H: DTC P1578 METER FAILURE

### DTC DETECTING CONDITION:

Reference code incompatibility between combination meter and body integrated unit

Step	Check	Yes	No
<b>1</b> <b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC B1401 detected?	Go to step 2.	<Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
<b>2</b> <b>CHECK LAN COMMUNICATION SYSTEM.</b> Inspect LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC U1300, U1301, U1302, B1100 or B1101 of the body integrated unit displayed?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-35, List of Diagnostic Trouble Code (DTC).>	Go to step 3.
<b>3</b> <b>CHECK COMBINATION METER.</b> 1) Perform the registration of immobilizer. Refer to the "PC application help for Subaru Select Monitor". 2) Start the engine.	Does the engine start?	System is normal.	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

---

### **I: DTC B1401 M COLLATION NG**

NOTE:

Refer to DTC P1578 "METER FAILURE" for diagnostic procedure. <Ref. to IM(diag)-23, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

### **J: DTC B1402 IMMOBILIZER KEY COLLATION NG**

NOTE:

For diagnostic procedures, refer to the following items.

- DTC P0513 "INCORRECT IMMOBILIZER KEY" <Ref. to IM(diag)-15, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- DTC P1570 "ANTENNA" <Ref. to IM(diag)-16, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
- DTC P1574 "KEY COMMUNICATION FAILURE" <Ref. to IM(diag)-22, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

### **K: DTC B1403 E/G REQUEST NG**

NOTE:

For diagnostic procedures, refer to DTC P1572 "IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)". <Ref. to IM(diag)-19, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Basic Diagnostic Procedure

LAN SYSTEM (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

#### CAUTION:

- **Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.**
- **Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.**
- **For model with immobilizer, registration of immobilizer may be needed after the replacement of controller etc. For details, refer to the “PC application help for Subaru Select Monitor”.**

#### NOTE:

- To check harness for open or short circuits, shake the suspected trouble spot or connector.
- Check List for Interview <Ref. to LAN(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	<b>CHECK PRE-INSPECTION.</b> Ask the customer when and how the trouble occurred using the interview check list. <Ref. to LAN(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step 2.	Interview the customer.
2	<b>BASIC INSPECTION.</b> Check the components which might affect body control. <Ref. to LAN(diag)-6, INSPECTION, General Description.>	Is the component that might influence the body control problem normal?	Go to step 3.	Repair or replace each component.
3	<b>CHECK DTC.</b> 1) Read the DTC. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(diag)-28, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 2) Record all DTCs and freeze frame data.	Is DTC displayed on the Subaru Select Monitor?	Go to step 5.	Go to step 4.
4	<b>PERFORM GENERAL DIAGNOSTICS.</b> Inspect using the “General Diagnostics Table”. <Ref. to LAN(diag)-85, General Diagnostic Table.>	Is result of inspection OK?	LAN system is normal.	Go to step 5.
5	<b>PERFORM DIAGNOSIS.</b> 1) Correct the cause of trouble. 2) Perform the Clear Memory Mode. <Ref. to LAN(diag)-25, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Read the DTC. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC displayed on the Subaru Select Monitor?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

# Check List for Interview

LAN SYSTEM (DIAGNOSTICS)

## 2. Check List for Interview

### A: CHECK

Inspect the following item about the vehicle's state.

#### 1. DISPLAY STATUS IN THE COMBINATION METER

Display status in the combination meter	Engine coolant temperature gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
	Fuel gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
Display of other indicators	Malfunction indicator light	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	SPORT indicator light (AT warning light)	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Engine coolant temperature warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Fuel level warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	ATF temperature warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	EBD warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	ABS warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	VDC warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Hill start assist warning light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	Immobilizer indicator	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF

## Check List for Interview

LAN SYSTEM (DIAGNOSTICS)

### 2. SYMPTOM

Vehicle condition	Clearance light does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Clearance light indicator does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Low beam does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	High beam does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	High beam indicator does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Front fog light does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Front fog light indicator does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	DRL does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Key cannot be removed from key cylinder.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Key can be removed from any other than parking range.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Shift lever can not be operated.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Shift lock does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Key warning switch alarm does not sound.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Driver's seat belt warning light does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Passenger's seat belt warning light does not illuminate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Seat belt warning alarm does not sound.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Wiper deicer does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Rear defogger does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Illumination volume control is not available.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Combination meter does not dim when headlights are ON.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Rear wiper does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Doors can not be locked/unlocked with central door lock switch.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Doors can not be locked/unlocked with keyless entry system.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Rear gate can not be opened when rear gate opener button is pressed.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Rear gate/trunk can not be opened with keyless entry system.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Hazard answer-back does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Answer-back buzzer does not sound.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Ignition key illumination does not light.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Ignition key illumination blinks.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Room light does not operate in accordance with door open/close operations.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Room light blinks.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Map light does not operate in accordance with door open/close operations. (model with sunroof)	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Map light blinks. (model with sunroof)	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Indicator does not illuminate when parking brake is operated.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Security monitor condition does not occur.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Security condition can not be cancelled.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Hazard light does not blink during security operation.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Horn does not sound during security operation.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Alarm operates as soon as security monitor condition occurs.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	Security alarm does not operate even when impact is applied (model with impact sensor).	<input type="checkbox"/> Yes / <input type="checkbox"/> No
Engine does not start.	<input type="checkbox"/> Yes / <input type="checkbox"/> No

LAN SYSTEM (DIAGNOSTICS)

## 3. CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	<input type="checkbox"/> At standstill (While idling) <input type="checkbox"/> When the vehicle is running      Vehicle speed km/h (MPH) <input type="checkbox"/> While accelerating      Acceleration    km/h (MPH) to    km/h (MPH) <input type="checkbox"/> Decelerating (With braking)      Deceleration    km/h (MPH) to    km/h (MPH) <input type="checkbox"/> Decelerating (Without braking)      Deceleration    km/h (MPH) to    km/h (MPH)
	<input type="checkbox"/> Flat road <input type="checkbox"/> Uphill <input type="checkbox"/> Downhill <input type="checkbox"/> Gravel road <input type="checkbox"/> Bumpy road <input type="checkbox"/> Snowy road
	Does it occur when operating any part? Operated part: <b>Trouble symptom:</b>
	Are there any other troubles occurred? From where: <b>Trouble symptom:</b>

# General Description

## LAN SYSTEM (DIAGNOSTICS)

### 3. General Description

#### A: CAUTION

##### 1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

##### CAUTION:

- Do not use electric test equipment on any wiring harnesses and connectors in the airbag system.
- Be careful not to damage the airbag system wiring harness when servicing the body integrated unit and LAN system.

##### 2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to by-pass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).

(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with insulating tape etc.

(A) Soldering and protection with insulating tape

#### B: INSPECTION

Before performing diagnostics, check the following item which might affect body integrated unit malfunctions.

- 1) Measure the battery voltage and check electrolyte.

**Standard voltage: 12 V or more**

**Specific gravity: 1.260 or more**

- 2) Check the fuse condition.  
Make sure that ampere of the fuse is setting value, and it is not blown out.  
(Be sure to check the back-up fuse also.)
- 3) Check the connecting condition of harness and harness connector.
- 4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to LAN(diag)-23, REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING), OPERATION, Subaru Select Monitor.>
- 5) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to LAN(diag)-26, USER CUSTOMIZING, OPERATION, Subaru Select Monitor.>
- 6) Confirm “Factory or Market setting” of body integrated unit registrations is “Market”.
- 7) Confirm key illumination does not blink with ignition switch turned to ON.

LAN SYSTEM (DIAGNOSTICS)

## 5. Control Module I/O Signal

### A: ELECTRICAL SPECIFICATION

LAN00314

Description	Terminal No.	Standard value	Measuring conditions
BAT (control)	B6 ↔ chassis ground	10 — 14 V	Always
BAT (backup)	C2 ↔ chassis ground	10 — 14 V	Always
BAT (door lock)	A34 ↔ chassis ground	10 — 14 V	Always
BAT (shift lock/key lock)	D22 ↔ chassis ground	10 — 14 V	Always
ACC (rear wiper)	D21 ↔ chassis ground	10 — 15 V	When ACC is ON
Ground	A28 ↔ chassis ground	Less than 1.5 V	Always
Ground	B17 ↔ chassis ground	Less than 1.5 V	Always
Ground	C20 ↔ chassis ground	Less than 1.5 V	Always
Ground	D27 ↔ chassis ground	Less than 1.5 V	Always
Key warning switch	D2 ↔ chassis ground	Less than 1.5 V → 10 — 15 V	With key removed → inserted
ACC	B7 ↔ chassis ground	Less than 1.5 V → 10 — 15 V	ACC OFF → ACC ON

# Control Module I/O Signal

LAN SYSTEM (DIAGNOSTICS)

Description	Terminal No.	Standard value	Measuring conditions
IGN	B1 ↔ chassis ground	Less than 1.5 V → 10 — 15 V	IGN OFF → IGN ON
P range switch	C4 ↔ chassis ground	Less than 1.5 V → 8 V or more	P range → other than P range
Stop light switch	B2 ↔ chassis ground	Less than 1.5 V → 8 V or more	With brake pedal released → depressed
Door switch, driver's seat	A19 ↔ chassis ground	8 V or more → less than 1.5 V	With driver's door closed → opened
Door switch, passenger's seat	A32 ↔ chassis ground	8 V or more → less than 1.5 V	With passenger's door closed → opened
Door switch, rear RH seat	A6 ↔ chassis ground	8 V or more → less than 1.5 V	With rear RH seat door closed → opened
Door switch, rear LH seat	A20 ↔ chassis ground	8 V or more → less than 1.5 V	With rear LH seat door closed → opened
Door switch, trunk/rear gate	A33 ↔ chassis ground	8 V or more → less than 1.5 V	With trunk/rear gate closed → opened
Rear gate opener button	C24 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Manual switch (LOCK)	A15 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Manual switch (UNLOCK)	A29 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Delivery (test) mode connector	A17 ↔ chassis ground	8 V or more → less than 1.5 V	When delivery (test) mode connector is connected
Front wiper input RTN	C5 ↔ chassis ground	8 V or more → less than 1.5 V	When front wiper is reversed
Rear wiper switch ON	C18 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Rear wiper switch (INT)	C27 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Rear wiper switch, washer	C28 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Lighting I switch	B11 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Lighting II switch	C8 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
	D6 ↔ chassis ground	8 V or more → less than 1.5 V	Key warning switch ON and lighting switch OFF → ON

## Control Module I/O Signal

### LAN SYSTEM (DIAGNOSTICS)

Description	Terminal No.	Standard value	Measuring conditions
Dimmer switch, Hi beam	B12 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Dimmer switch, passing	B22 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Front fog light switch	B24 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
TPMS answer-back request input	B13 ↔ chassis ground	8 V or more → less than 1.5 V	When TPMS transmitter registration answer-back is output
MT reverse switch	B18 ↔ chassis ground	8 V or more → less than 1.5 V	Other than reverse → reverse
Parking brake switch	C15 ↔ chassis ground	8 V or more → less than 1.5 V	With parking brake not operated → operated
Bright switch	A14 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Illumination (Vi1)	A12 ↔ chassis ground	Approx. 5 V	While clearance light illuminates
Illumination (Vi2)	A3 ↔ chassis ground	0.5 V — 4.5 V	While clearance light illuminates
Illumination (Vi3)	A26 ↔ chassis ground	Less than 1.5 V	Always
Fuel level sensor	C7 ↔ chassis ground	Approx. 2 — 96 Ω	Ignition ON
Wiper deicer & rear defogger switch	A16 ↔ chassis ground	8 V or more → less than 1.5 V	Switch OFF → ON
Seat belt switch (driver's seat)	C16 ↔ chassis ground	Less than 1.5 V → 8 V or more	With seat belt unbuckled → buckled
Seat belt switch (passenger's seat)	C26 ↔ chassis ground	Less than 1.5 V → 8 V or more	With seat belt unbuckled → buckled
Impact sensor	B8 ↔ chassis ground	Less than 1.5 V → 8 V or more	When impact is applied
Key lock solenoid output	D11 ↔ chassis ground	Less than 1.5 V → 6 V or more	While key is inserted in other than P range
Shift lock solenoid output	D12 ↔ chassis ground	Less than 1.5 V → 10 V or more	When vehicle stopped, IGN ON, other than P range, brake pedal depressed
Rear wiper output ON	D9 ↔ chassis ground	Less than 1.5 V → 10 V or more	When rear wiper operates
Rear wiper output RTN	D8 ↔ chassis ground	Less than 1.5 V → 10 V or more	When rear wiper reversed

# Control Module I/O Signal

LAN SYSTEM (DIAGNOSTICS)

Description	Terminal No.	Standard value	Measuring conditions
Door lock output	A7 ↔ A8	Less than 1.5 V → 10 V or more	While lock output
Door unlock output	A8 ↔ A7	Less than 1.5 V → 10 V or more	While unlock output
Driver's door unlock output	A23 ↔ A7	Less than 1.5 V → 10 V or more	While unlock output
Trunk/rear gate UNLOCK output	A22 ↔ chassis ground	Less than 1.5 V → 10 V or more	4 door: While trunk UNLOCK output 5 door: While rear gate UNLOCK output
Lighting power supply	C1 ↔ chassis ground	Less than 1.5 V → 10 V or more	With back-up fuse inserted, ACC ON or IGN ON
	D1 ↔ chassis ground	Less than 1.5 V → 10 V or more	When key warning switch is ON
Clearance light relay output	D19 ↔ chassis ground	8 V or more → less than 1.5 V	Small light ON
Lo beam relay output	C3 ↔ chassis ground	8 V or more → less than 1.5 V	Headlight switch ON
	D7 ↔ chassis ground	8 V or more → less than 1.5 V	Headlight switch ON
Hi beam relay output	D20 ↔ chassis ground	8 V or more → less than 1.5 V	Headlight switch ON and Hi beam ON Passing switch ON
Front fog light relay output	D17 ↔ chassis ground	8 V or more → less than 1.5 V	Lo beam ON, Hi beam OFF, front fog light switch ON
DRL cancel output	D18 ↔ chassis ground	8 V or more → less than 1.5 V	When Hi beam 100 % illuminates
Room light output	D5	Pulse control	Illumination is adjusted through PWM control
Key ring illumination output	C23	Pulse control	Illumination is adjusted through PWM control
Illumination output	A2	Pulse control	Illumination is adjusted through PWM control
Map light output (model with sunroof)	D4	Pulse control	Illumination is adjusted through PWM control
Rear defogger relay output	D16 ↔ chassis ground	8 V or more → less than 1.5 V	While rear defogger output
Wiper deicer relay output	D15 ↔ chassis ground	8 V or more → less than 1.5 V	While wiper deicer output
Seat belt warning light passenger's seat	A25 ↔ chassis ground	8 V or more → less than 1.5 V	Indicator go off → illuminate
Answer-back buzzer output	D24 ↔ chassis ground	Can not be measured because of high speed ON/OFF	Door lock → unlock with keyless entry system
Turn & hazard output	C22 ↔ chassis ground	8 V or more → less than 1.5 V	Door lock or unlock with keyless entry system
Horn relay output	D29 ↔ chassis ground	8 V or more → less than 1.5 V	While security alarm operates

## Control Module I/O Signal

### LAN SYSTEM (DIAGNOSTICS)

Description	Terminal No.	Standard value	Measuring conditions
Security indicator output	A10 ↔ chassis ground	8 V or more → less than 1.5 V	While indicator in combination meter blinks
Immobilizer antenna 1	B26 ↔ B25	-30 — +30 V	While key secret code is verified
Immobilizer antenna 2	B25 ↔ B26		
Immobilizer communication_1	B4	Can not be measured because of digital communication	Serial communication line
Immobilizer communication_2	B15	Can not be measured because of digital communication	Serial communication line
Keyless entry control module communication	A24	Can not be measured because of digital communication	Serial communication line
SSM communication (K line)	B20	Can not be measured because of digital communication	Serial communication line
Body system CAN_Hi	A1 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line
Body system CAN_Lo	A9 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line
Driving system CAN_Hi	B3 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line
Driving system CAN_Lo	B9 ↔ chassis ground	Can not be measured because of digital communication	Serial communication line

### **B: WIRING DIAGRAM**

<Ref. to WI-170, WIRING DIAGRAM, CAN Communication System.>

## 6. Subaru Select Monitor

### A: OPERATION

#### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit. <Ref. to LAN(diag)-7, PREPARATION TOOL, General Description.>

2) Prepare the personal computer which has been installed the Subaru Select Monitor.

3) Connect the USB cable between SDI (Subaru Diagnosis Interface) and USB port on the personal computer (dedicated port for the Subaru Select Monitor).

#### NOTE:

The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.

4) Connect the diagnosis cable to SDI.

5) Connect the SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

6) Start a PC.

7) Turn the ignition switch to ON (engine OFF), and run the "PC application for Subaru Select Monitor".

8) Call up DTC and data, then record them.

#### NOTE:

For detailed operation procedure, refer to the «help on PC application for Subaru Select Monitor».

#### 2. READ CURRENT DATA

1) On the «Main Menu», select {Each System Check}.

2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.

3) Select «Current Data Display & Save» screen.

4) Using the scroll key, scroll the display screen up or down until the desired data is shown.

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

### 3. DISPLAY OF ANALOG DATA

Items to be displayed	Unit of measure	Remarks	Note
BATT voltage (control)	10 — 15 V	Body integrated unit input value	Always
BATT voltage (BACKUP)	10 — 15 V	Body integrated unit input value	Always
IG power supply voltage	10 — 15 V	Body integrated unit input value	Ignition switch ON
ACC voltage	10 — 15 V	Body integrated unit input value	Ignition switch ACC
Illumination VR Voltage	0 — 5 V	Body integrated unit input value	Input value from illumination volume
Illumi. output d-ratio	0 — 100%	Body integrated unit output value	Small light ON Illumination volume is other than bright.
Ambient Temperature	-40 — 87.5°C	CAN data input value	Ignition switch ON
Fuel level voltage	0 — 10 V	Body integrated unit input value	Ignition switch ON
Fuel level resistance	0 — 102.3 Ω	Body integrated unit input value	Ignition switch ON
key-lock solenoid V	6 — 15 V	Body integrated unit output value	Key warning switch ON, other than parking range Ignition switch ON
number of regist.	0 — 4	Number of keyless key registered	Number of transmitter registered is displayed
Front Wheel Speed	km/h	CAN data input value	Reception from VDC module
VDC/ABS latest f-code	DTC display (Temporarily)	CAN data input value	It is normal when DTC is not been input even if this code is displayed. Received from VDC (displayed by hexadecimal number system)
Blower Fan Steps	0 — 2 levels	CAN data input value	0: OFF, 1: Low, 2: 2 levels or more Reception from air conditioner ECM
Fuel level resistance 2	0 — 102.3 Ω	CAN data output value	Reception from body integrated unit
Fuel consumption	cc/s	CAN data input value	Reception from ECM and transmission to center monitor
Coolant Temp.	-40 — 130°C	CAN data input value	Reception from ECM
Vehicle longitudinal G	m/s <sup>2</sup>	CAN data input value	Reception from VDC module
SPORT Shift Stages	0 — 7 levels	CAN data input value	(0: Light OFF; 1 — 5: Gear display; 6: Fail; 7: ATF temperature High/Low) Reception from TCM
Shift Position	0 — 7 levels	CAN data input value	0: 1, 1: 2, 2: 3, 3: 4, 4: D, 5: N, 6: R, 7: P shift position (8 indicates no input) 8 is displayed in manual mode Reception from TCM
VDC/ABS condition	0 — 4	CAN data input value	Reception from VDC module
Destination Code	0 — 16	CAN data input value	Reception from combination meter
Touch SW	0 — 64	CAN data input value	Reception from navigation unit

## 4. DISPLAY OF ON/OFF DATA

Items to be displayed	Unit of measure	Remarks	Note
key-lock warning SW	ON/OFF	Body integrated unit input value	ON when ignition key inserted
Stop Light Switch	ON/OFF	Body integrated unit input value	ON when brake pedal is depressed
Front fog lamp SW input	ON/OFF	Body integrated unit input value	When front fog light switch is ON
TPMS input	ON/OFF	Body integrated unit input value	Registration done signal
Driver's door SW input	ON/OFF	Body integrated unit input value	ON when driver's door is open
P-door SW input	ON/OFF	Body integrated unit input value	ON when passenger's door is open
Rear right door SW input	ON/OFF	Body integrated unit input value	ON when rear right door is open
Rear left door SW input	ON/OFF	Body integrated unit input value	ON when rear left door is open
R Gate SW input	ON/OFF	Body integrated unit input value	ON when rear gate/trunk open
Manual lock SW input	ON/OFF	Body integrated unit input value	Manual lock switch ON
Manual unlock SW input	ON/OFF	Body integrated unit input value	Manual unlock switch ON
Bright SW input	ON/OFF	Body integrated unit input value	ON when bright switch is ON
P SW	ON/OFF	Body integrated unit input value	ON when shift range is in parking Shift lever P switch signal
MT Reverse Switch	ON/OFF	Body integrated unit input value	Shift lever is at reverse position
R wiper ON SW input	ON/OFF	Body integrated unit input value	Rear wiper switch ON
R wiper INT SW input	ON/OFF	Body integrated unit input value	Rear wiper switch (INT ON)
R washer SW input	ON/OFF	Body integrated unit input value	Rear washer switch ON
wiper deicer SW input	ON/OFF	Body integrated unit input value	Rear defogger switch ON
Rear Defogger SW	ON/OFF	Body integrated unit input value	
Driver's Seat SW input	ON/OFF	Body integrated unit input value	Driver's seat buckle switch ON
P seatbelt SW input	ON/OFF	Body integrated unit input value	Passenger's seat occupied and buckle switch ON
Fr wiper input	ON/OFF	Body integrated unit input value	ON when front wiper is operating
Parking Brake Switch Input	ON/OFF	Body integrated unit input value	When parking brake locked
R gate lock status SW input	ON/OFF	Body integrated unit inner memory value	Displays door lock/unlock state, ON when locked
R Gate Release SW input	ON/OFF	Body integrated unit input value	When rear gate opener button is ON
Rr defogger output	ON/OFF	Body integrated unit output value	ON when rear defogger relay is operating

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

Items to be displayed	Unit of measure	Remarks	Note
lock actuat. LOCK output	ON/OFF	Body integrated unit output value	ON when LOCK signal is output
All seat UNLOCK output	ON/OFF	Body integrated unit output value	ON when unlock signal is output
D-seat UNLOCK output	ON/OFF	Body integrated unit output value	ON when unlock signal is output
R gate/trunk UNLK output	ON/OFF	Body integrated unit output value	ON when rear gate/trunk unlock signal is output
R wiper output	ON/OFF	Body integrated unit output value	ON when rear wiper motor is operating
Shift Lock Solenoid	ON/OFF	Body integrated unit output value	ON when shift lock solenoid is operating (only AT)
Key locking output	ON/OFF	Body integrated unit output value	With ignition switch ON and in other than the shift P range, with key in switch ON
wiper deicer output	ON/OFF	Body integrated unit output value	ON when wiper deicer relay is operating
Hazard Output	ON/OFF	Body integrated unit output value	ON when answer-back signal is received or when hazard is operating
Keyless Buzzer Output	ON/OFF	Body integrated unit output value	ON when lock/unlock signal is received
Horn Output	ON/OFF	Body integrated unit output value	ON when security warning is operating
D-belt warning light O/P	ON/OFF	CAN data output value	ON when ignition switch is turned to ON, and buckle switch is turned off
P-belt warning light O/P	ON/OFF	Body integrated unit output value	ON when ignition switch is turned to ON, occupant is seated, and buckle switch is turned OFF
Illumination lamp O/P	ON/OFF	Body integrated unit output value	ON when illumination is illuminated
Room lamp output	ON/OFF	Body integrated unit output value	ON when keyless lock/unlock signal is received (when keyless switch connector is removed)
key illumi. lamp o/p	ON/OFF	Body integrated unit output value	ON when key illumination light is illuminated
Immobilizer lamp output	ON/OFF	Body integrated unit output value	ON when immobilizer pilot light blinks
Keyless operation 1	Regist./Normal	Body integrated unit input value	When keyless is registered
Keyless operation 2	Deletion/Normal	Body integrated unit input value	When keyless registration is deleted
CC Main Lamp	ON/OFF	CAN data input value	Cruise control switch ON Reception from ECM and transmission to combination meter
CC Set Lamp	ON/OFF	CAN data input value	ON when cruise control vehicle speed is set Reception from ECM and transmission to combination meter
SPORT Lamp	ON/OFF	CAN data input value	SPORT mode switch ON Reception from TCM and transmission to combination meter (only AT)
SPORT Blink	Blink/OFF	CAN data input value	Blinks when there is an AT failure Reception from TCM and transmission to combination meter (only AT)

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

Items to be displayed	Unit of measure	Remarks	Note
ATF Temperature Lamp	ON/OFF	CAN data input value	When ATF temperature rise (only AT)
ATF Blink	Blink/OFF	CAN data input value	Blinks when there is an AT failure Reception from TCM and transmission to combination meter (only AT)
ECO Lamp (AT)	ON/OFF	CAN data input value	Not applicable
ECO Lamp (MT)	ON/OFF	CAN data input value	Not applicable
Tire diameter abnormal 1	ON/OFF	CAN data input value	Lit when FWD fuse is connected (4AT only)
Tire diameter abnormal 2	Blink/OFF	CAN data input value	Blinks when the difference in rotation between front and rear wheels is 4% or more Reception from TCM and transmission to combination meter (only AT)
Shift Up Indication	UP/OFF	CAN data input value	ON when shift lever up-operation is possible (only AT)
Shift Down Indication	DOWN/OFF	CAN data input value	ON when shift lever down-operation is possible (only AT)
SPORT Shift (buzzer 1)	ON/OFF	CAN data input value	ON while the shift change prohibited warning buzzer is operating Reception from TCM and transmission to combination meter (only AT)
SPORT Shift (buzzer 2)	ON/OFF	CAN data input value	ON when the ATF high temperature warning buzzer is operating Reception from TCM and transmission to combination meter (only AT)
ABS/VDC Judging	ABS/VDC	CAN data input value	Transmission from vehicle dynamic control (VDC) to high speed control module
Small Light SW	ON/OFF	CAN data output value	ON when small light is illuminated
Headlamp	ON/OFF	CAN data output value	When headlight LO is ON
High Beam	ON/OFF	CAN data output value	When headlight HI is ON
large Diameter Tire	large tire/Others	CAN data output value	large tire when the standard tire is 18 in Reception from combination meter
Number of cylinders	4 Cylinder/6 Cylinder	CAN data input value	Display engine equipped
Cam shaft specification	SOHC/DOHC	CAN data input value	Display engine equipped
Turbo	Turbo/Non-turbo	CAN data input value	Display engine equipped
E/G displacement (2.5L)	2.5 L/ OFF	CAN data input value	Display engine equipped
E/G displacement (3.0L)	3.0 L/ OFF	CAN data input value	Display engine equipped
AT Vehicle ID Signal	ON/OFF	CAN data input value	Display transmission equipped
Blower fan information	ON/OFF	CAN data input value	ON when blower fan is operating (always OFF for auto A/C equipped models)
Center display failure	OK/NG	CAN data input value	NG when there is a center display failure Reception from center display (NAVI monitor)
NAVI Failure	OK/NG	CAN data input value	NG when there is a navigation system failure Reception from Center Display
IE Bus failure	Can not use	CAN data input value	Reception from Center Display
Auto A/C failure	OK/NG	CAN data input value	NG when there is a failure in auto air conditioning system Reception from auto A/C module

## LAN SYSTEM (DIAGNOSTICS)

### 5. CONFIRMATION OF CURRENT SETTING

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) On «Integ. unit mode failure diag» display, select {Current Data Display & Save}.
- 4) Using the scroll key, scroll the display screen up or down until the desired data is shown.
- 5) Display the following item and record the settings.

Required items for new registration (Except for system not equipped)

Contents	Item to confirm				Remarks
	1	2	3	4	
Registration number					Registered ID type
Off delay time	OFF	Long	Normal	Short	Setting for lighting off time
Rr defogger op. mode	Normal		Continuous		
Security Alarm Setup	ON		OFF		
Impact Sensor Setup	ON		OFF		Option setting
Alarm delay setup	ON		OFF		
Lockout prevention	ON		OFF		
Impact sensor	support		no support		Option setting
Answer-back buzzer setup	ON		OFF		
Hazard answer-back setup	ON		OFF		
Ans.-back Buzzer	support		no support		
Passive Alarm	ON		OFF		
Door open warning	support		no support		
Dome Light Alarm Setting	ON		OFF		
Map Light Setting	ON		OFF		
Belt Warning Switch	ON		OFF		Switch the belt warning lighting and the buzzer sound.
A/C ECM setting	support		no support		Model with auto A/C
wiperdeicer	support		no support		Option setting
Sedan/Wagon Setting	Sedan		Wagon		
MT/AT Setting	AT		MT		
6MT Setting	6MT		Other than 6MT		
Destination Setting					
Factory or Market setting	Factory		Market		Do not change to factory mode.

## 6. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

### CAUTION:

Body integrated unit is core of LAN system, and also can select the function of all vehicle system control. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.

If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.

- Be sure to correspond registrations and function settings to vehicle equipment.
- Do not change the settings of vehicle improperly.
- Confirm key illumination does not blink or “Factory or Market setting” of body integrated unit registrations is “Market”. If “Factory or Market setting” is set to “Factory,” key illumination blinks when ignition key is turned ON, to notify that the settings are unconfirmed.
- Key illumination does not blink with ignition switch turned to ON and go off with door closed.
- Be sure to register immobilizer if body integrated unit is replaced with a new part. (models with immobilizer)
- Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the “PC application help for Subaru Select Monitor”.

1) Connect SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

### CAUTION:

Do not connect the scan tools other than the Subaru Select Monitor.

- 2) Start the PC.
- 3) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.
- 4) On «Main Menu» display, select {Each System Check}.

5) On «System Selection Menu» display, select {Integ. unit mode}.

6) Click the [OK] button after the control module name {Integrated unit} is displayed.

7) On «Integ. unit mode failure diag» display, select {Unit customizing}.

8) Change the setting with UP/DOWN key.

## Subaru Select Monitor

### LAN SYSTEM (DIAGNOSTICS)

- List of body integrated unit registration item

**NOTE:**

Setting is different depending on the grade of vehicle.

Data	Initial setting	Registration	Remarks
A/C ECM setting	OFF	ON	Set to "ON" in case of model with auto A/C. Set to "OFF" in case of model without auto A/C.
		OFF	
wiperdeicer (Manufacturer option)	OFF	ON	Be sure to set exactly according to vehicle equipment. ON signal does not output even when the switch is operated, if "OFF" is set.
		OFF	
Sedan/Wagon Setting	Wagon	Sedan	Be sure to set exactly according to vehicle model. This relates to door lock control.
		Wagon	
MT/AT Setting	AT	MT	Be sure to set exactly according to vehicle model. This relates to key interlock control, shift lock control.
		AT	
6MT Setting	Other than 6MT	6MT	Set "6MT" for 6MT model, and set "Other than 6MT" for AT/5AT model.
		Other than 6MT	
Factory or Market setting	Factory	Factory	Be sure to set to "Market". After setting change, turn the ignition switch to OFF and settle the changed settings.
		Market	

**CAUTION:**

- **To perform normal operation of vehicle and diagnosis, above settings must match the actual vehicle equipment.**
- **When body integrated unit is a new part or "Factory" mode, key illumination blinks to show equipment settings have not been completed. Check the detailed procedures of function setting.**
- **Be sure not to change Factory or Market setting except when installing a new body integrated unit.**

**NOTE:**

"Factory" mode:

- Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON.
- All replacement body integrated units are set to "Factory" mode. When replacing a body integrated unit, be sure to perform the registration operation.

"Market" mode:

- Each settings have been set. It can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON.

- 9) Perform the Factory or Market setting. On the «ECM customizing» display screen of Subaru Select Monitor, select the {Factory or Market setting}.
- 10) Change the mode from Factory to Market and then turn the ignition switch to OFF.
- 11) Change the Subaru Select Monitor system selection to «Immobilizer» to register the immobilizer key. (models with immobilizer)
- 12) Perform the operation according to the “PC application help for Subaru Select Monitor”.
- 13) When key registration is completed, “Do you want to register remote engine start?” is displayed. Perform registration only for equipped models.
- 14) Perform the User Customizing.  
<Ref. to LAN(diag)-26, USER CUSTOMIZING, OPERATION, Subaru Select Monitor.>

**NOTE:**

For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

**7. CLEAR MEMORY MODE**

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) Press the [OK] key after the information of body integrated unit type is displayed.
- 4) On «Integ. unit mode failure diag» display, select {Clearing Memory} and press the [OK] key.

Display	Contents to be monitored
Clear Memory ?	Clear function of DTC and freeze frame data

- 5) When “Done” is shown on the display screen, turn the ignition switch to OFF.

**NOTE:**

For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

**8. FREEZE FRAME DATA****NOTE:**

- Data stored at the time of trouble occurrence is shown on the display.
- Freeze frame data will be memorized maximum to 20.
- If freeze frame data is not stored in memory correctly (caused by low power supply of body integrated unit), DTC will be displayed with “?” on the head of it in the Subaru Select Monitor display. This shows it may be an unreliable reading.

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

### 9. USER CUSTOMIZING

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) On «Integ. unit mode failure diag» display, select {Unit Customizing}.
- 4) Change the setting with UP/DOWN key and set with the [OK] key.

- List of User Customizing item

Data	Initial setting value	Customize setting	Remarks
Off delay time	Long		Delay time below can be selected by setting.
		OFF	0 seconds
		Short	10 seconds
		Normal	20 seconds
		Long	30 seconds
Rr defogger op. mode	15 minutes	15 minutes	Automatically stops in 15 minutes after switch is turned to ON.
		Continuous	Repeats active condition for 15 minutes and inactive condition for 2 minutes until switch is turned to OFF.
Security Alarm Setup	ON	ON	Security alarm (hazard, horn or siren) in active condition
		OFF	Security alarm in inactive condition
Impact Sensor Setup	OFF	ON	Workable when Impact Sensor Setup is set to "ON". Impact sensor function becomes activated.
		OFF	Impact sensor in inactive condition. (Set to "OFF" in models without sensors.)
Alarm delay setup	ON		After the keyless lock operation, the alarm monitor starts after the following delay time has passed.
		ON	Delay time is 30 seconds.
		OFF	Delay time is 0 second.
Lockout prevention	ON	ON	Lockout prevention in active condition. (The function does not operate if safety knob is locked by hand.)
		OFF	Lockout prevention in inactive condition
Impact sensor (OP)	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Make sure to set to "OFF" for models without the impact sensor. When set to "ON" hazard, horn or siren will operate after doors are locked by the keyless entry system operation (Alarm monitor start).)
		OFF	Vehicle is controlled in no impact sensor mode.
Answer-back buzzer setup	ON	ON	Workable when answer-back buzzer setup is set to "ON". When lock/unlock is selected by keyless entry system operation, hazard answer-back buzzer operates.
		OFF	When lock/unlock is selected by keyless entry system operation, answer-back buzzer does not sound.
Hazard answer-back setup	ON	ON	Workable when hazard answer-back setup is set to "ON". When lock/unlock is selected by keyless entry system operation, hazard answer-back buzzer operates.
		OFF	When lock/unlock is selected by keyless entry system operating, answer-back buzzer does not sound.
Ans.-back Buzzer	ON	ON	Vehicle is controlled in answer-back buzzer equipped mode.
		OFF	Vehicle is controlled in answer-back buzzer non-equipped mode. (Make sure to set to "OFF" in models without answer back buzzers.)
Initial keyless setting	—	—	—
		Execution	Settings of keyless entry system are initialized. (No. 2: 30 sec., No. 11: ON, No. 12: ON, No. 13: ON, No. 14: ON)

Data	Initial setting value	Customize setting	Remarks
Initial button setting	—	—	—
		Execution	Settings of each function are initialized. (No. 1: Normal, No. 3: 15 min., No. 4: 15 min., No. 8: ON)
Passive Alarm	OFF	ON	Setting only for North American models
		OFF	
Door open warning	ON	ON	If detecting door open for 30 minutes, room light, and key ring illumination that are related to doors are turned off to prevent battery run-out.
		OFF	Room light, key illumination and door warning light is not turned off.
Dome Light Alarm Setting	OFF	ON	The room light lights by being interlocked with the activation of the alarm.
		OFF	
Map Light Setting	ON	ON	Illuminates in accordance with the door interlocked room light. (model with sunroof)
		OFF	
Belt Warning Switch	ON	ON	When using normally
		OFF	Stop the belt warning buzzer beep and warning light illumination.

5) After setting, make sure that the setting changed in the {Current Data Display & Save} is same as vehicle equipment.

**CAUTION:**

- The above settings must match the actual vehicle equipment.
- Do not change settings except for setting above while setting the functions.
- Be sure not to change Factory or Market setting except when installing a new body integrated unit.

**NOTE:**

For details concerning the operation procedure, refer to “PC application help for Subaru Select Monitor”.

**10.FUNCTION CHECK**

In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.

- 1) On «Main Menu» display, select {Each System Check}.
- 2) On «System Selection Menu» display, select {Integ. unit mode}.
- 3) On «Integ. unit mode failure diag» display, select {Function check}.
- 4) Select the item to be operated on the «Function check» display screen with “UP/Down key” and press the [Next] button.

5) Pressing [Next] starts, [End] cancels the operation and [OK] returns to the System Operation Check Mode display screen.

**NOTE:**

If not equipped (based on area or condition), process will not go on.

**FUNCTION CHECK**

**HEATER COCK VALVE OUTPUT**

**DOOR LOCK ACTUATOR LOCK OUTPUT**

**ALL SEAT UNLOCK OUTPUT**

**HORN OUTPUT**

**R GATE/TRUNK UNLK OUTPUT**

**DOUBLE LOCK OUTPUT**

**SHIFT LOCK SOLENOID**

**KEY LOCK OUTPUT**

LAN SYSTEM (DIAGNOSTICS)

## B: INSPECTION

### 1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

#### DETECTING CONDITION:

Faulty harness connectors

#### TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

#### WIRING DIAGRAM:

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK IGNITION SWITCH.</b>	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select Integ. unit mode using Subaru Select Monitor.
2	<b>CHECK BATTERY.</b> 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	<b>CHECK BATTERY TERMINAL.</b>	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step 4.
4	<b>CHECK COMMUNICATION OF SUBARU SELECT MONITOR.</b> 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step 7.	Go to step 5.
5	<b>CHECK COMMUNICATION OF SUBARU SELECT MONITOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step 7.	Go to step 6.
6	<b>CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND SUBARU SELECT MONITOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Measure the resistance between data link connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 7 — Chassis ground:</b>	Is the resistance 1 M $\Omega$ or more?	Go to step 7.	Repair the harness and connector between each control module and Subaru Select Monitor.
7	<b>CHECK OUTPUT SIGNAL TO BODY INTEGRATED UNIT.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 7 (+) — Chassis ground (-):</b>	Is the voltage less than 1 V?	Go to step 8.	Repair the harness and connector between each control module and Subaru Select Monitor.
8	<b>CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND DATA LINK CONNECTOR.</b> Measure the resistance between body integrated unit and data link connector. <b>Connector &amp; terminal</b> <b>(B40) No. 7 — (B280) No. 20:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 9.	Repair the harness and connector between body integrated unit and Subaru Select Monitor.
9	<b>CHECK BACK-UP FUSE.</b> Check that back-up fuse is not blown out, or check that it is inserted.	Is back-up fuse OK?	Go to step 10.	Replace the back-up fuse, or insert it into the fuse holder.
10	<b>CHECK POWER SUPPLY CIRCUIT.</b> Measure the voltage between body integrated unit connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B281) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 11.	Repair the open circuit of harness between body integrated unit and battery.

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>11 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the resistance of harness between the body integrated unit and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 12.	Repair the poor contact of harness between body integrated unit and ground.
<b>12 CHECK POOR CONTACT OF CONNECTOR.</b>	Is there poor contact of the control unit ground and the Subaru Select Monitor?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Repair the poor contact of connector.

### CAUTION:

For model with immobilizer, immobilizer registration work is necessary when the body integrated unit replaced. For details, refer to the “PC application help for Subaru Select Monitor”.

### 7. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

For details concerning DTC reading procedure, refer to "Subaru Select Monitor". <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

### **8. Clear Memory Mode**

#### **A: OPERATION**

For details concerning DTC clear operation, refer to "Subaru Select Monitor". <Ref. to LAN(diag)-25, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

## 9. Read Current Data

### A: OPERATION

1) On the «Main Menu» display screen, select the {Each System Check}.

2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.

3) On the «Integ. Unit mode failure diag» display screen, select the {Current Data Display & Save}.

4) Using the scroll key, scroll the display screen up or down until the desired data is shown.

<Ref. to LAN(diag)-16, DISPLAY OF ANALOG DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-17, DISPLAY OF ON/OFF DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-22, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

### **10. User Customizing**

#### **A: OPERATION**

For detailed procedures of User Customizing, refer to "SUBARU SELECT MONITOR". <Ref. to LAN(diag)-26, USER CUSTOMIZING, OPERATION, Subaru Select Monitor.>

# List of Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## 1. DTC TABLE

### NOTE:

When more than two DTC codes are recorded, referring to their combination will make it easy to identify the possible cause. Refer to the list for typical examples.

DTC to Check	Diagnostic Code that was displayed.				Probable cause
	Body integrated unit	ECM	TCM	VDC/ABS CM	
B1100 <Ref. to LAN(diag)-38, DTC B1100 INTEG. UNIT SYSTEM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1100	—	—	—	There could be a problem in the body integrated unit.
U1221 <Ref. to LAN(diag)-64, DTC U1221 CAN-HS ECM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1221	—	P1718	C0057	It is possible that the ECM is faulty.
U1222 <Ref. to LAN(diag)-67, DTC U1222 CAN-HS TCM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1222	P0600	—	C0057	It is possible that the TCM is faulty.
U1223 <Ref. to LAN(diag)-69, DTC U1223 CAN-HS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1223	P0600	P1718	—	It is possible that the VDC/ABS CM is faulty.
U1321 <Ref. to LAN(diag)-81, DTC U1321 CAN-LS METER NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1321	—	—	—	It is possible that the combination meter is faulty.
B1500 <Ref. to LAN(diag)-83, DTC B1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1500	—	—	—	It's possible that there is an internal problem in the keyless entry control module, or a open circuit in the communication line.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

### 12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### A: DTC B1100 INTEG. UNIT SYSTEM ERROR

##### DTC DETECTING CONDITION:

Memory read out error in body integrated unit

##### TROUBLE SYMPTOM:

- Check light comes on in the combination meter.
- LAN communication immobilizer function may not be executed normally.

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Check DTC indicated by body integrated unit. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is the DTC B1100 displayed current malfunction?	Go to step 2.	Temporary EEPROM access error occurred.
2	<b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is the DTC B1100 displayed current malfunction?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Temporary EEPROM access error occurred.

## B: DTC B1101 BATT P/SUPPLY MALFUNCTION CONT

### DTC DETECTING CONDITION:

- Open or short in battery power supply control circuit
- Voltage malfunction caused by poor contact

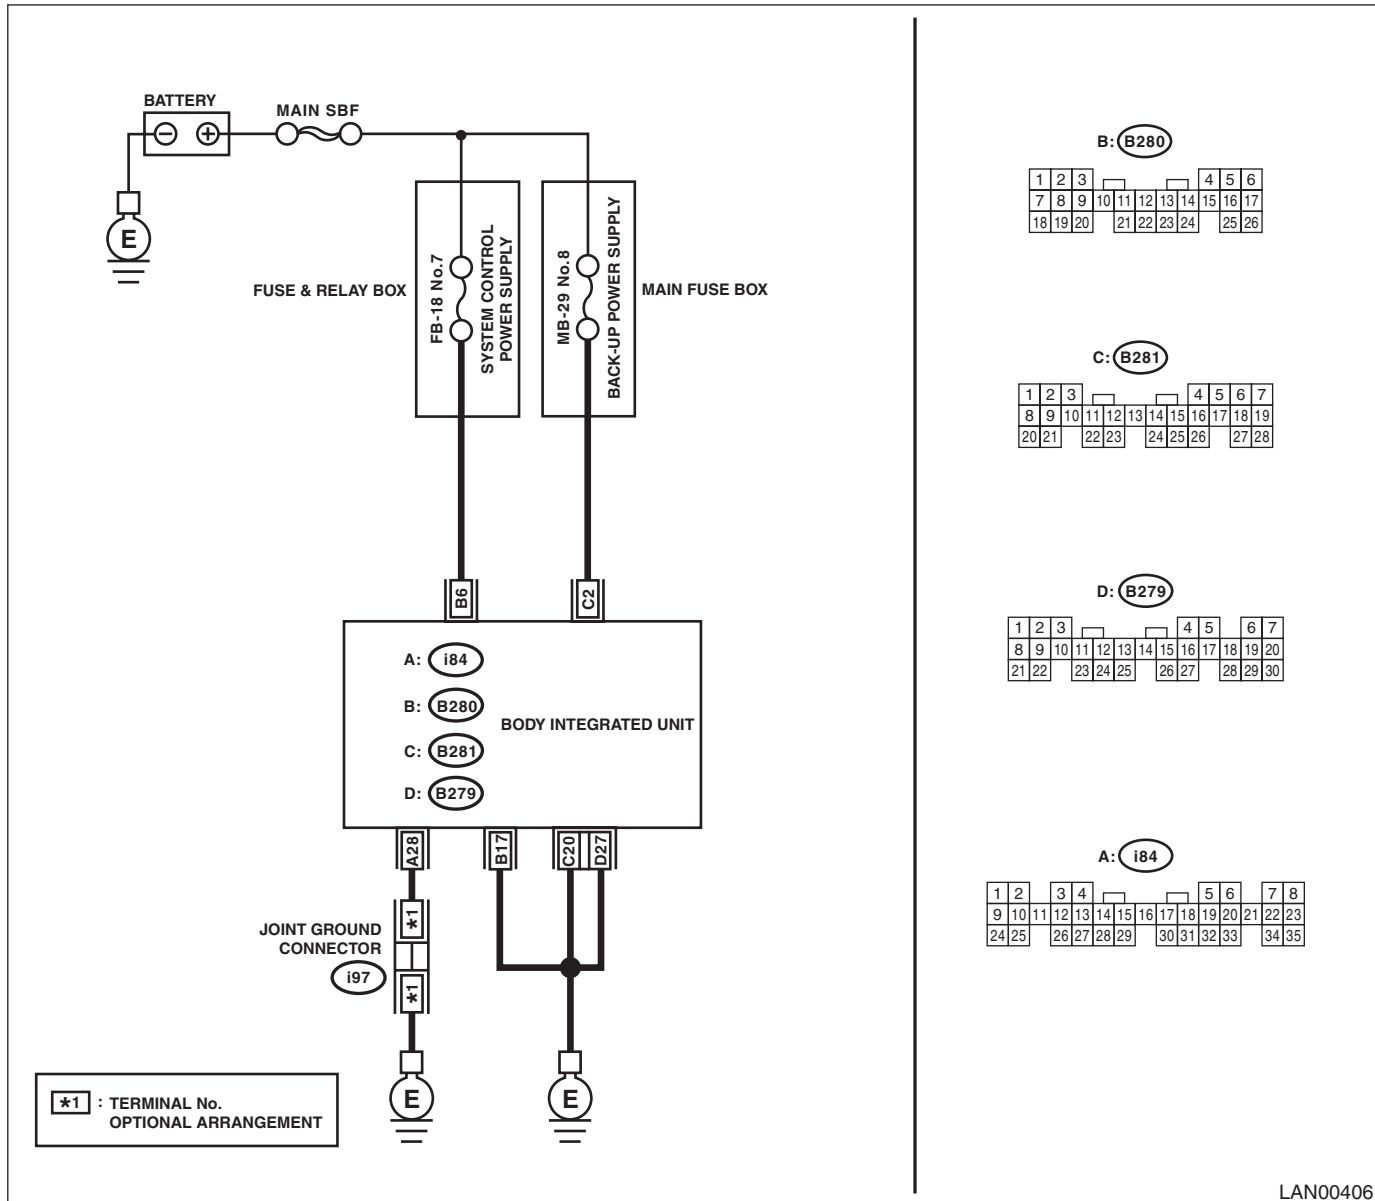

### TROUBLE SYMPTOM:

Each function stops operation.

### NOTE:

- When B1102 BATT p/supply (backup) malfunction is output at the same time, all the function of body integrated unit may not operate.
- B1101 may input when the battery run-out occurs.

### WIRING DIAGRAM:

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is B1101 current malfunction?	Go to step 2.	Go to step 5.
<b>2 CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1101 current malfunction?	Go to step 3.	Go to step 5.
<b>3 CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Inspect the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
<b>4 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the voltage between body integrated unit connector and chassis ground using tester. <i>Connector &amp; terminal (B280) No. 6 (+) — Chassis ground (-):</i>	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.
<b>5 CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B280).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## C: DTC B1102 BATT P/SUPPLY MALFUNCTION BACKUP

### DTC DETECTING CONDITION:

Voltage malfunction caused by poor contact of battery power supply backup circuits

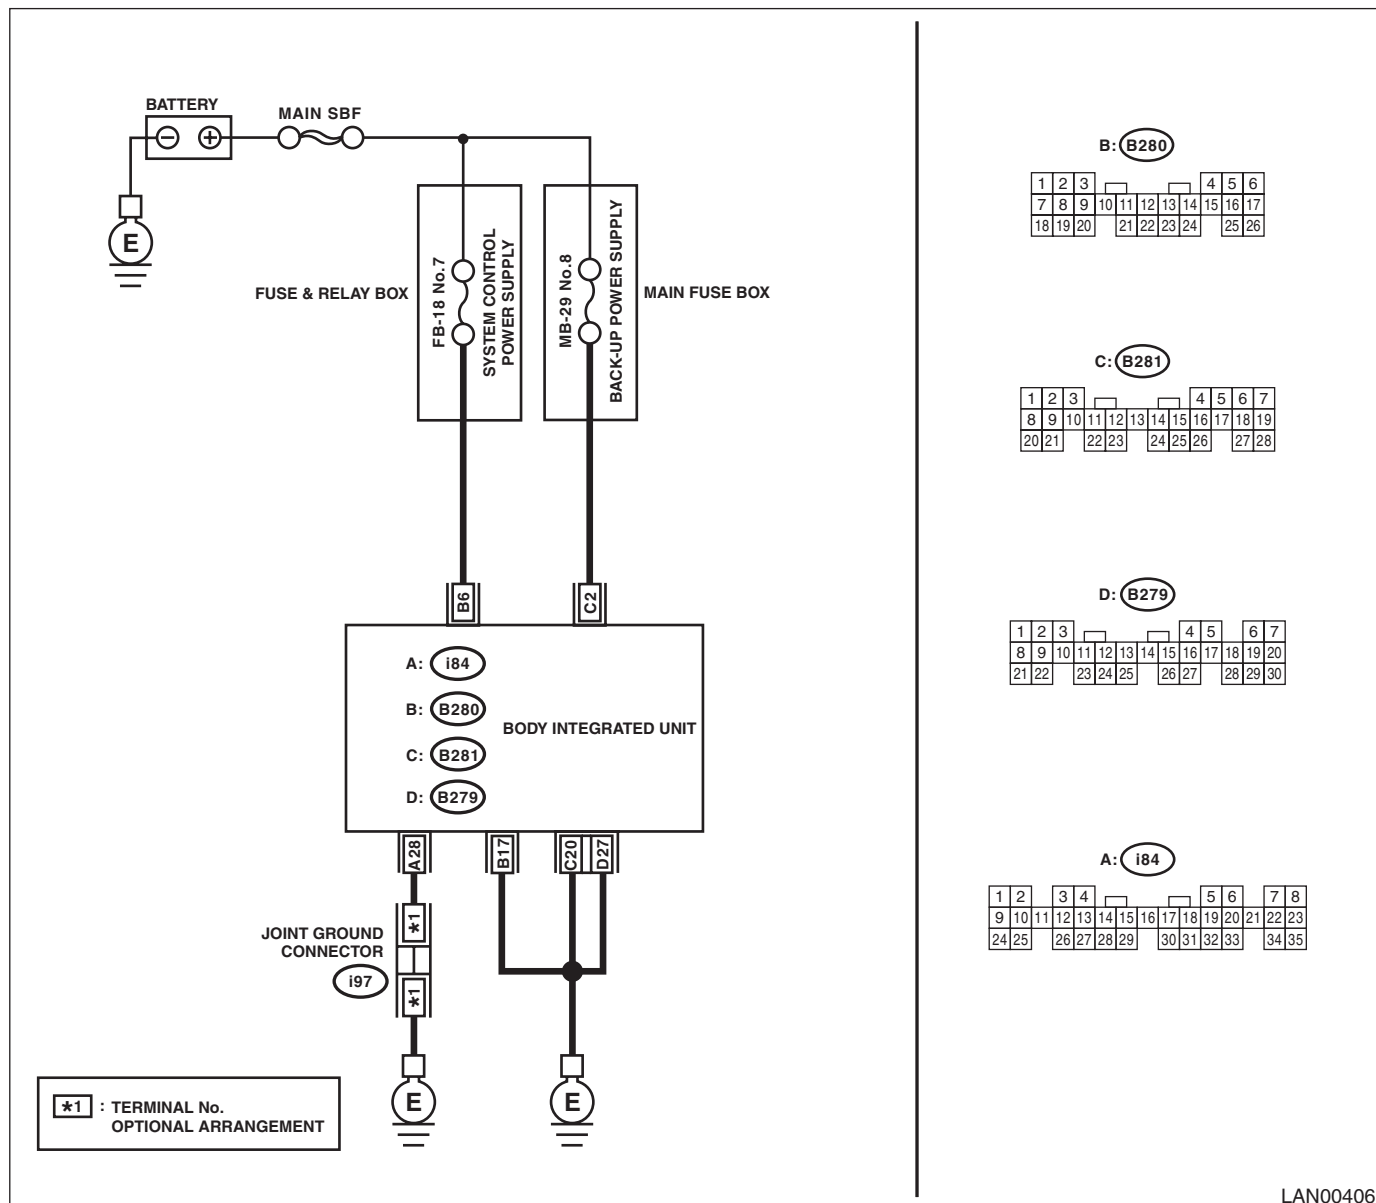

### TROUBLE SYMPTOM:

No influence.

### NOTE:

- When B1101 BATT p/supply (cont.) malfunction are output at the same time, all function of body integrated unit may not operate.
- B1101 may input when the battery run-out occurs.

### WIRING DIAGRAM:

LAN00406

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is B1102 current malfunction?	Go to step 2.	Go to step 5.
<b>2</b> <b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1102 current malfunction?	Go to step 3.	Go to step 5.
<b>3</b> <b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Inspect the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
<b>4</b> <b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B281). 2) Measure the voltage between body integrated unit connector and chassis ground using tester. <i>Connector &amp; terminal (B281) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.
<b>5</b> <b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B280).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## D: DTC B1103 IGNITION POWER FAILURE

### DTC DETECTING CONDITION:

Voltage malfunction caused by poor contact of IGN power supply circuits

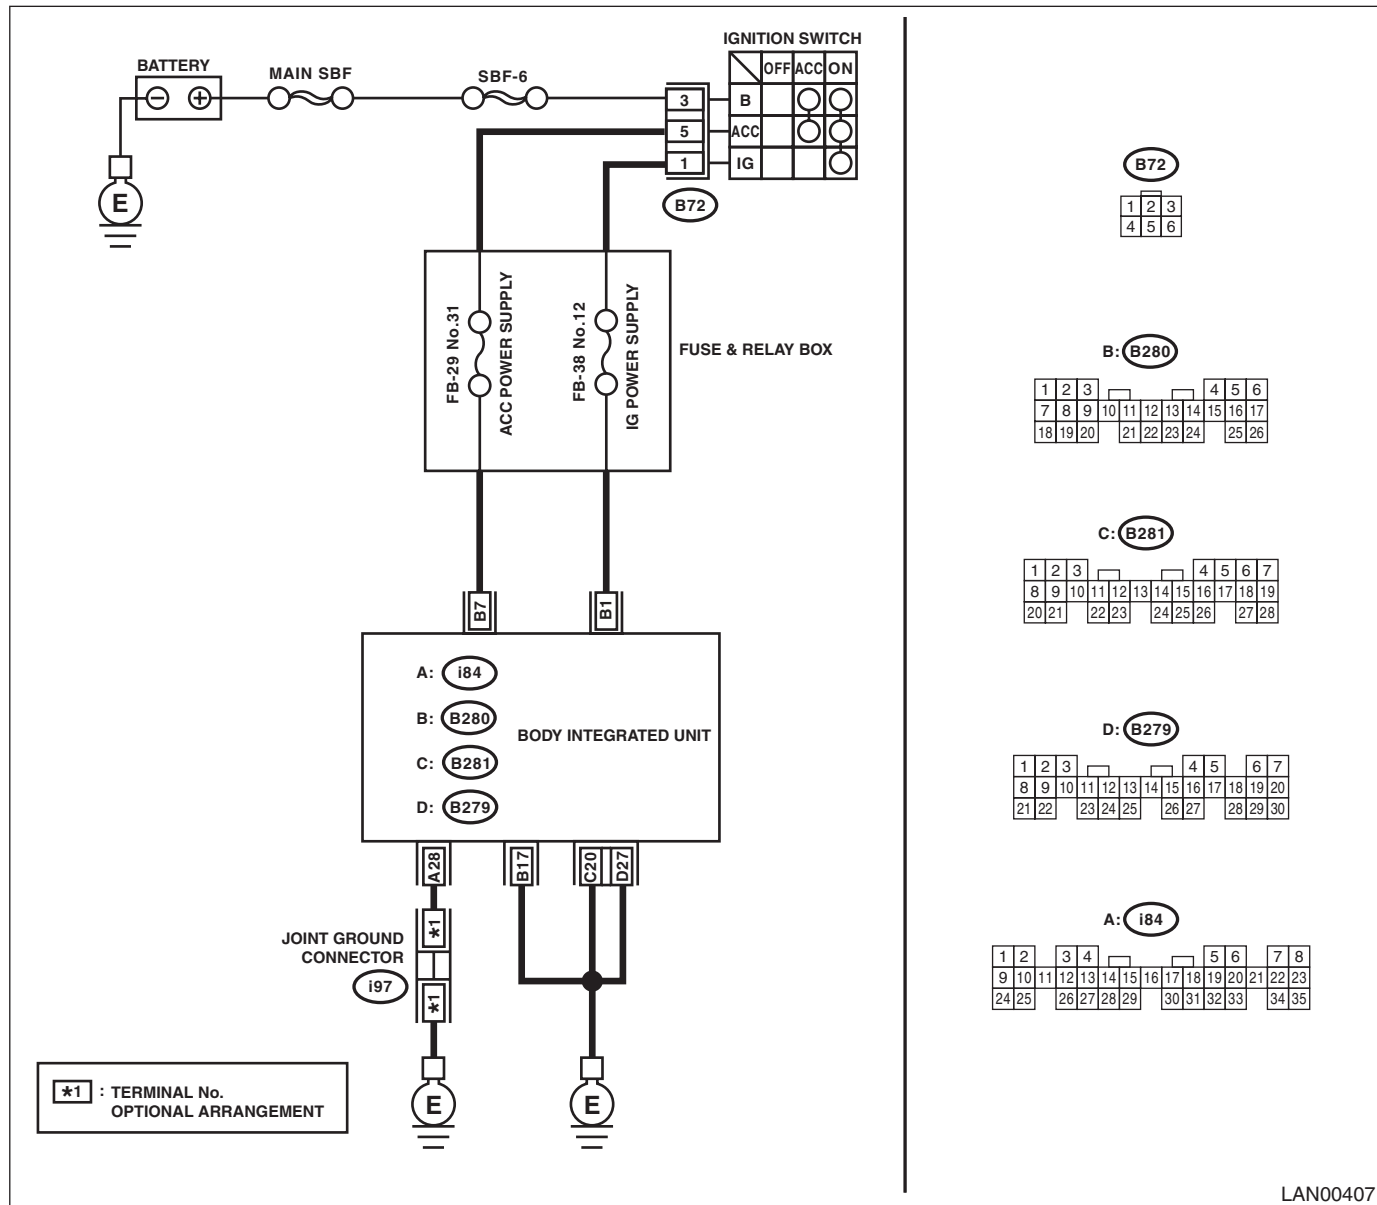

### TROUBLE SYMPTOM:

Error related to LAN system will not be detected.

### NOTE:

B1103 may output when the ignition switch turns to ON with the weak battery condition.

### WIRING DIAGRAM:

LAN00407

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is B1103 current malfunction?	Go to step 2.	Go to step 5.
<b>2 CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Turn the ignition switch to ON. 4) Wait approx. 2 minutes. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1103 current malfunction?	Go to step 3.	Go to step 5.
<b>3 CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Inspect the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
<b>4 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit connector and chassis ground using tester.  <i>Connector &amp; terminal (B280) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.
<b>5 CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B280).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## E: DTC B1104 ACC POWER FAILURE

### DTC DETECTING CONDITION:

Voltage malfunction caused by poor contact of ACC power supply circuits

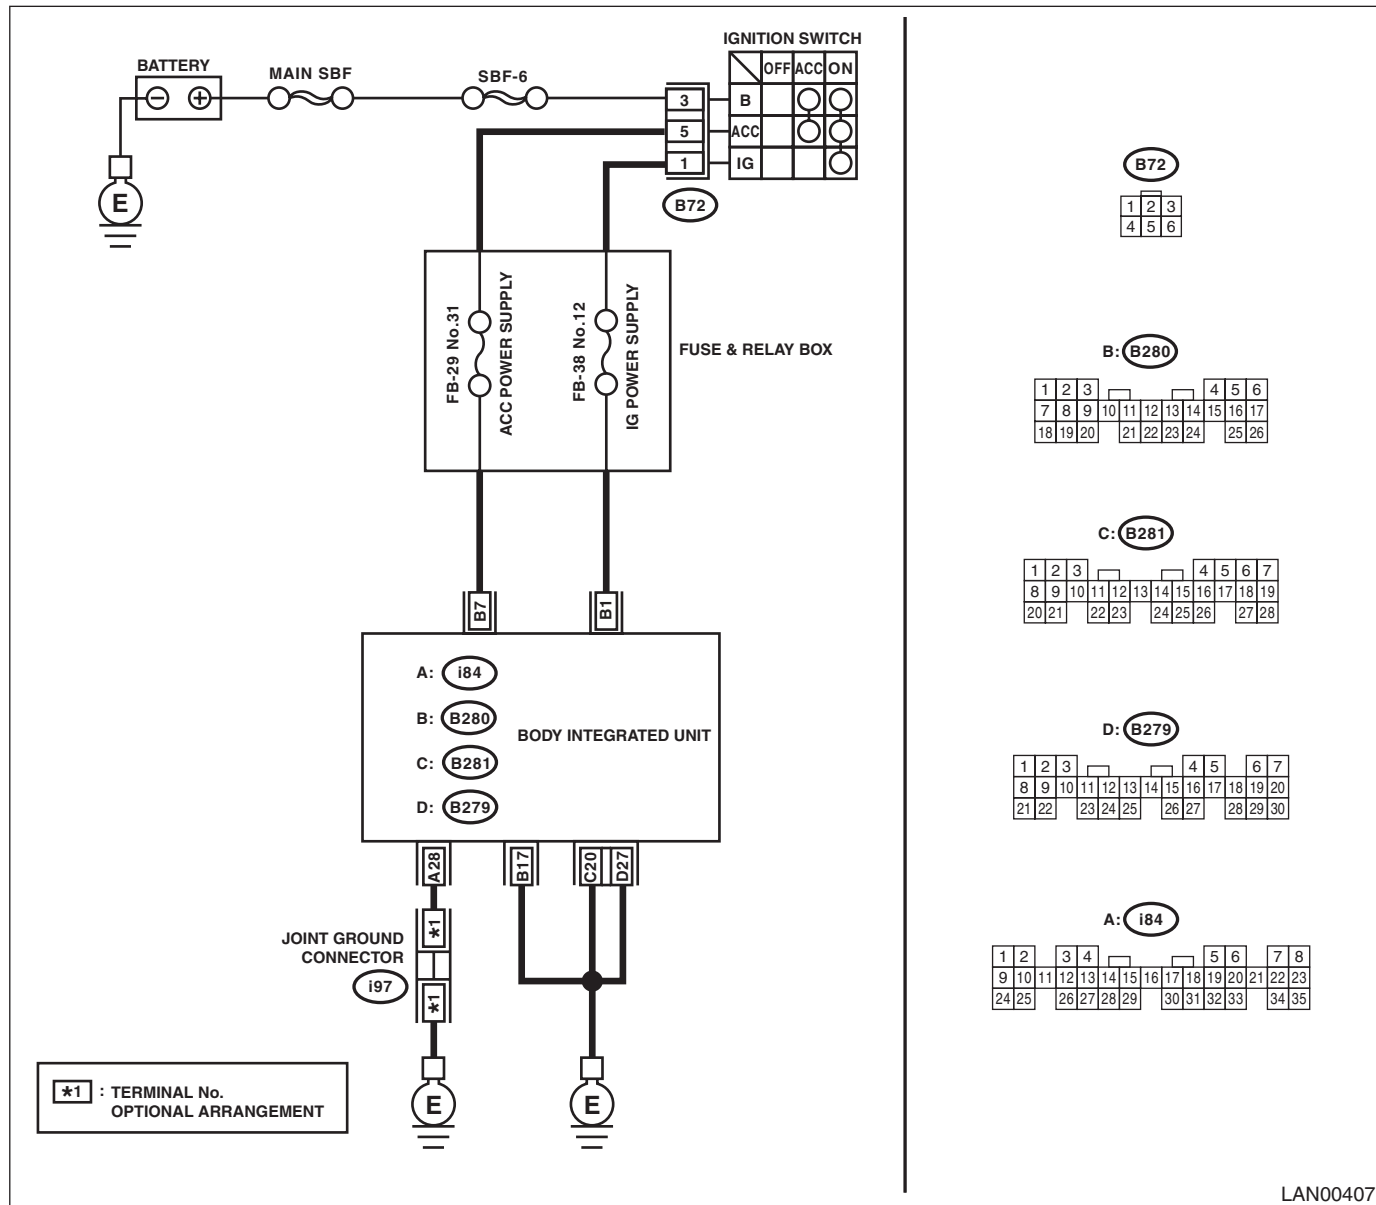

### TROUBLE SYMPTOM:

Does not exist.

### NOTE:

B1104 may output when the ignition switch turns to ACC with the weak battery condition.

### WIRING DIAGRAM:

LAN00407

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is B1104 current malfunction?	Go to step 2.	Go to step 5.
2	<b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit and reconnect. 3) Turn the ignition switch to ACC. 4) Wait approx. 2 minutes. 5) Turn the ignition switch to ON. 6) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1104 current malfunction?	Go to step 3.	Go to step 5.
3	<b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Inspect the fuse.	Is the fuse OK?	Go to step 4.	Replace the defective fuse.
4	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B279). 2) Turn the ignition switch to ACC. 3) Measure the voltage between body integrated unit connector and chassis ground using tester. <b>Connector &amp; terminal (B280) No. 7 (+) — Chassis ground (-):</b>	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Repair or replace the open or shorted circuit between body integrated unit and fuse.
5	<b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B280).	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## F: DTC B1105 KEY INTERLOCK CIRCUIT ABNORMAL

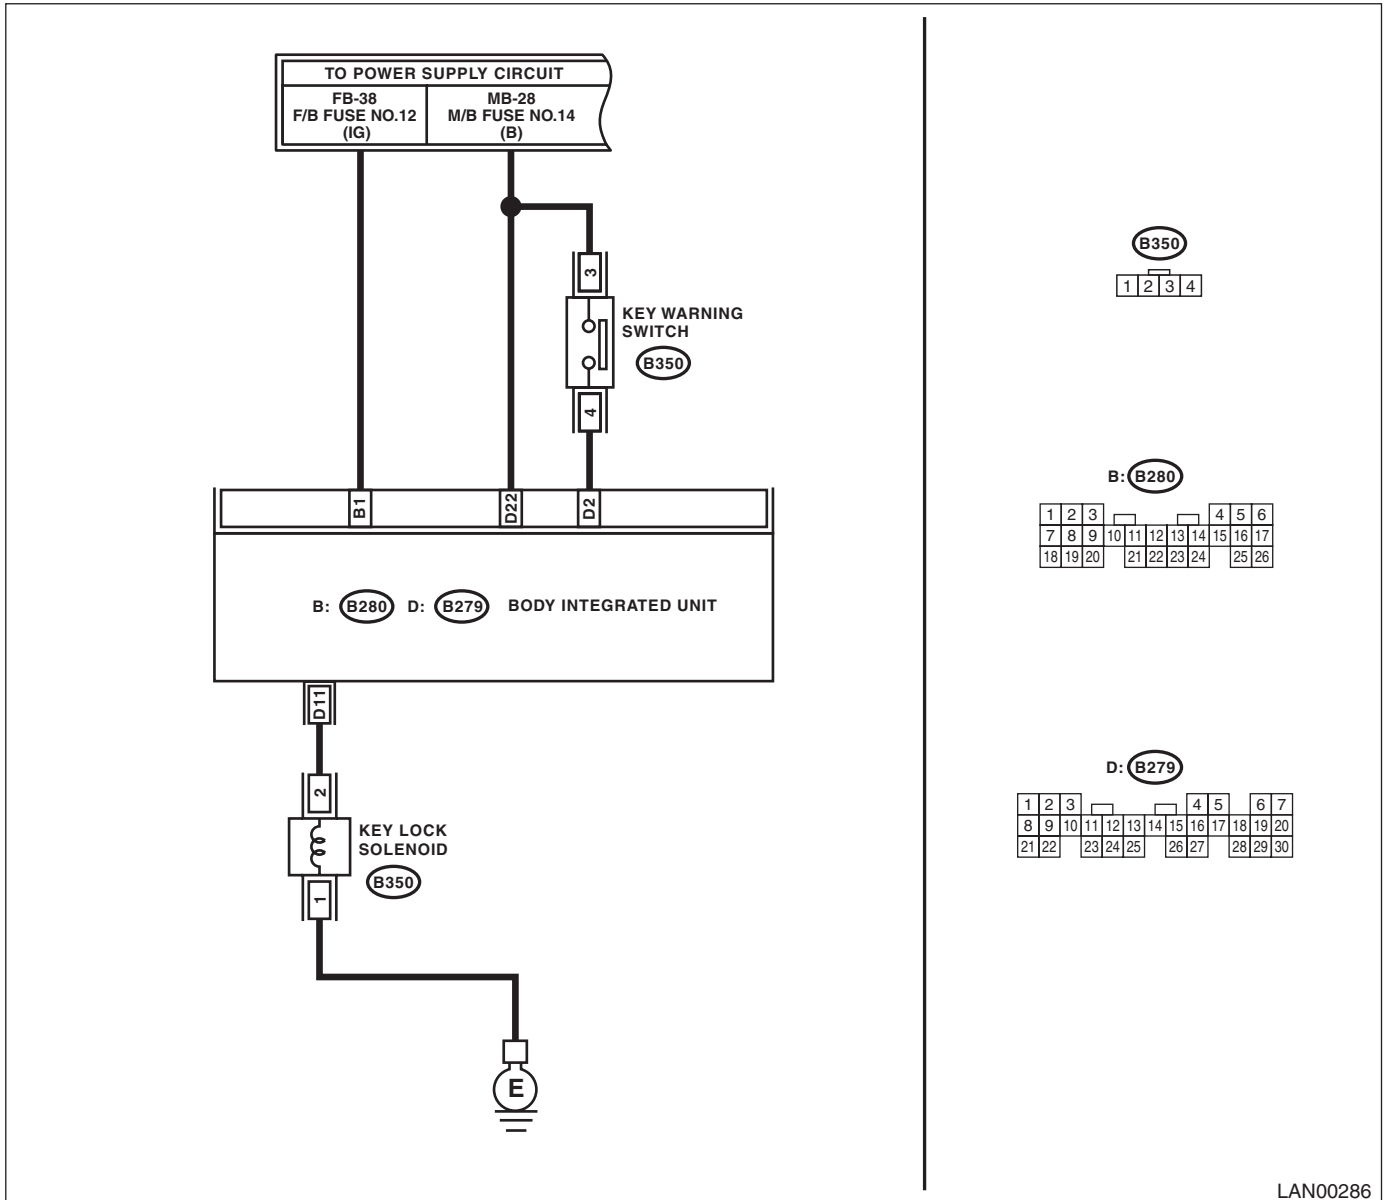

### DTC DETECTING CONDITION:

Ground short of key interlock circuit

### TROUBLE SYMPTOM:

Key interlock does not keep lock condition.

### WIRING DIAGRAM:

LAN00286

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> 1) Insert the ignition key. 2) Shift to the Neutral range. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1105 current malfunction?	Go to step 2.	Go to step 8.
2	<b>CHECK DTC.</b> 1) Remove the ignition key. 2) Disconnect the key lock solenoid connector (B350) and body integrated unit connector (B279). 3) Connect the disconnected connectors. 4) Insert the key and shift into Neutral. 5) Turn the ignition switch to ON. 6) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1105 current malfunction?	Go to step 3.	Go to step 8.
3	<b>CHECK KEY LOCK SOLENOID.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the key lock solenoid connector (B350). 3) Measure the resistance between the key lock solenoid connector. <b>Connector &amp; terminal</b> <b>(B350) No. 1 — No. 2:</b>	Is the resistance 12 — 14.5 $\Omega$ ?	Go to step 4.	Replace the key lock solenoid.
4	<b>CHECK KEY LOCK SOLENOID.</b> Connect the battery terminal to key lock solenoid. <b>Terminals</b> <b>(B350) No. 2 — positive terminal:</b> <b>(B350) No. 1 — ground terminal:</b>	Is the solenoid activated and then key locked?	Go to step 5.	Replace the key lock solenoid.
5	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B279). 2) Measure the resistance between body integrated unit and key lock solenoid using tester. <b>Connector &amp; terminal</b> <b>(B350) No. 2 — (B279) No. 11:</b>	Is the resistance less than 10 $\Omega$ ?	Go to step 6.	Repair or replace the open circuit of harness.
6	<b>CHECK HARNESS.</b> Measure the resistance between body integrated unit and chassis ground using tester. <b>Connector &amp; terminal</b> <b>(B279) No. 11 — Chassis ground:</b>	Is the resistance 1 M $\Omega$ or more?	Go to step 7.	Repair or replace the short circuit of the harness.
7	<b>CHECK HARNESS.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit and chassis ground using tester. <b>Connector &amp; terminal</b> <b>(B279) No. 11 (+) — Chassis ground (-):</b>	Is the voltage 1.5 V or more?	Repair or replace the short circuit of the harness.	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>
8	<b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and key lock solenoid connector (B350).	Is there poor contact at disconnected connector terminal?	Repair the terminal where poor contact exists, or replace harness.	It is possible that temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## G: DTC B1106 SHIFT LOCK CIRCUIT FAILURE

### DTC DETECTING CONDITION:

Shift lock circuit is open or shorted.

### TROUBLE SYMPTOM:

Shift lock does not be released or remain locked.

### NOTE:

P0801 may input simultaneously.

### WIRING DIAGRAM:

LAN00408

Step	Check	Yes	No
<b>1</b> <b>CHECK DTC.</b> 1) Turn the ignition switch to ON. 2) Keep the Parking range for approx. 5 seconds. 3) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 2.	Go to step 7.
<b>2</b> <b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and shift lock solenoid connector (B117). 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON, then keep the Parking range for approx. 5 seconds. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 3.	Go to step 7.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>3 CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector (B117). 3) Measure the resistance between shift lock solenoid unit and chassis ground using tester. <b>Connector &amp; terminal</b> <b>(B117) No. 4 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the open circuit of harness or replace harness.
<b>4 CHECK SHIFT LOCK SOLENOID.</b> Measure the resistance between the shift lock solenoid connector. <b>Connector &amp; terminal</b> <b>(B117) No. 4 — No. 3:</b>	Is the resistance 19 — 25 Ω?	Go to step 5.	Replace the shift lock solenoid.
<b>5 CHECK SHIFT LOCK SOLENOID.</b> Connect the battery terminal to shift lock solenoid. <b>Terminals</b> <b>(B117) No. 3 — positive terminal:</b> <b>(B117) No. 4 — ground terminal:</b>	Is the solenoid activated, and then the shift lock released?	Go to step 6.	Replace the shift lock solenoid.
<b>6 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B279). 2) Measure the resistance between body integrated unit connector (B279) and chassis ground. <b>Connector &amp; terminal</b> <b>(B279) No. 12 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Repair the short circuit of harness or replace harness.
<b>7 CHECK DTC.</b> 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) With Parking range, depress the brake pedal and keep it at depressed condition. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 8.	Go to step 9.
<b>8 CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and shift lock solenoid connector (B117). 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Shift into Parking range, then depress the brake pedal. 6) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step 4.	Go to step 9.
<b>9 CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B279) and shift lock solenoid connector (B117).	Is there poor contact of connector terminal?	Repair the poor contact of the terminal or replace the harness.	It is possible that temporary poor contact occurs.

## H: DTC U1201 CAN-HS COUNTER ABNORMAL

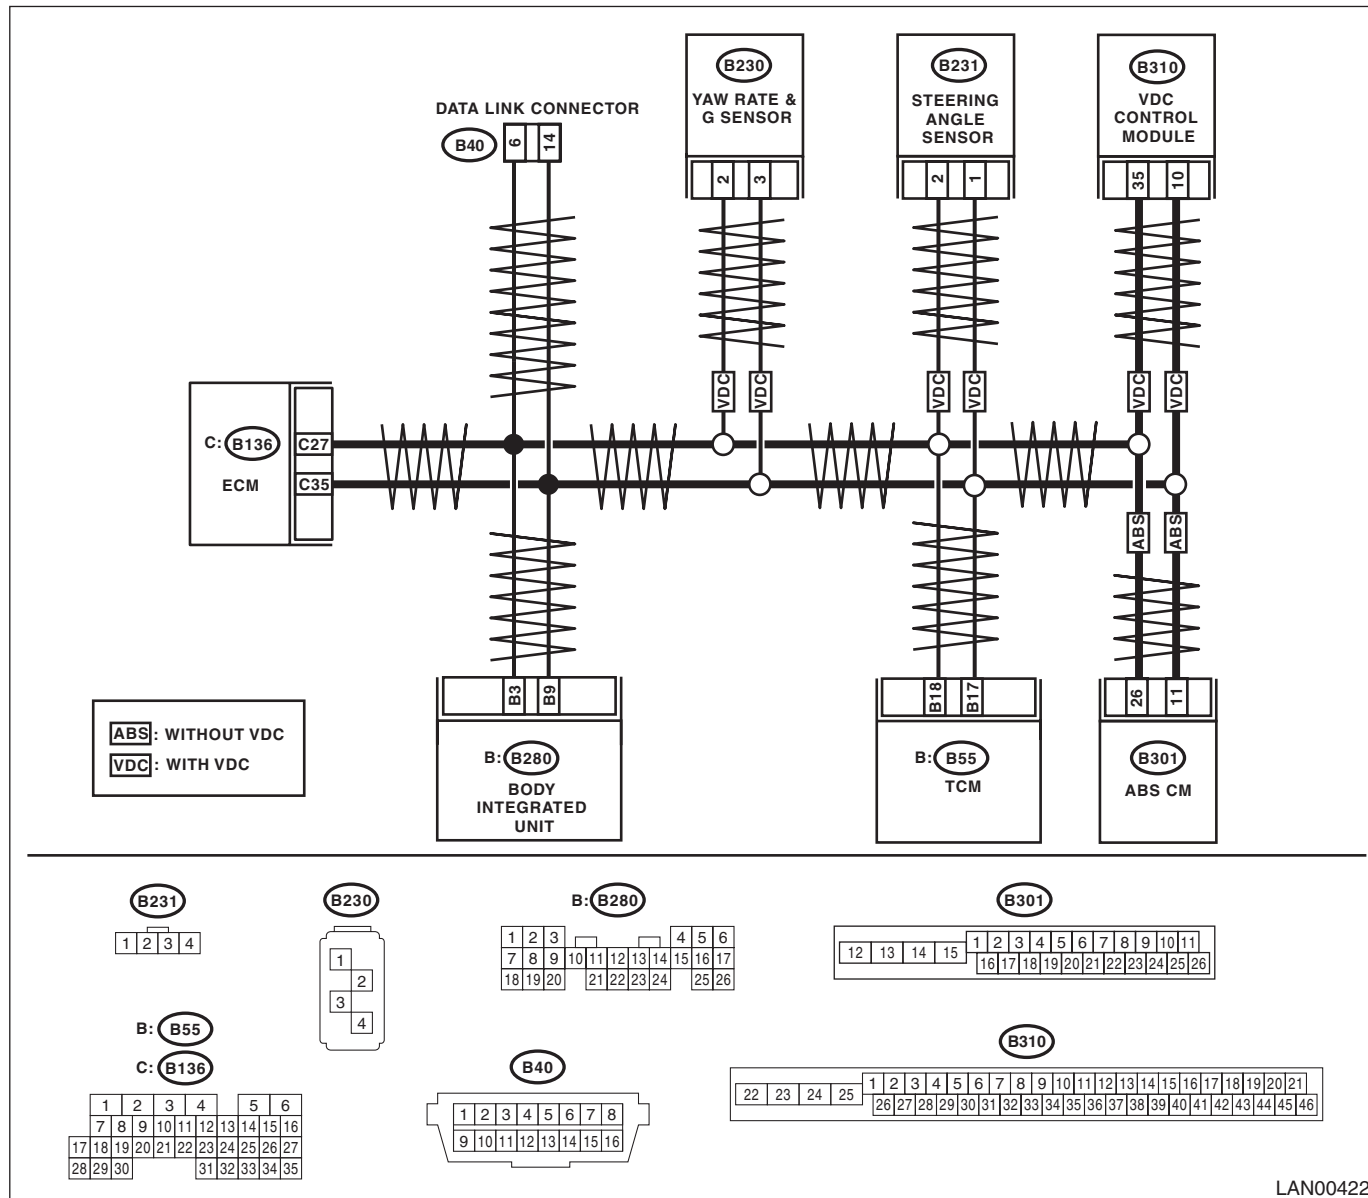

### DTC DETECTING CONDITION:

Communication is unstable because of high speed CAN communication error.

### TROUBLE SYMPTOM:

Malfunction indicator light illuminates.

### WIRING DIAGRAM:

LAN00422

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK DTC.</b> Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Are there any DTC other than U1201 or DTC not related to body integrated unit?	Perform the diagnosis according to DTC.	Go to step 2.
<b>2</b> <b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Is U1201 a current malfunction?	Go to step 3.	Go to step 14.
<b>3</b> <b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (B280, B310 or B301, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Connect all the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 4.	Go to step 14.
<b>4</b> <b>CHECK TCM.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector (B55). 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 5.	Go to step 16.
<b>5</b> <b>CHECK STEERING ANGLE SENSOR.</b> NOTE: For model without VDC, Go to step 7. 1) Turn the ignition switch to OFF. 2) Connect the TCM connector. 3) Disconnect the steering angle sensor connector (B231). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 6.	Go to step 17.
<b>6</b> <b>CHECK YAW RATE SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Connect the steering angle sensor connector. 3) Disconnect the yaw rate sensor connector (B230). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 7.	Go to step 18.
<b>7</b> <b>CHECK VDC/ABS CM HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Connect the yaw rate sensor connector. 3) Disconnect the VDC/ABS CM (B301 or B310) connector. 4) Install the 120 $\Omega$ resistance to VDC/ABS CM connector terminals. <b>Terminals</b> <b>Models with VDC</b> (B310) No. 10 — No. 35: <b>Models without VDC</b> (B301) No. 11 — No. 26: 5) Using the tester, measure the resistance between terminals of data link connector. <b>Terminals</b> (B40) No. 6 — No. 14:	Is the resistance 60 $\Omega$ ?	Go to step 8.	Go to step 10.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>8</b> <b>CHECK DTC.</b> 1) Turn the ignition switch to ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 16.	Go to step 9.
<b>9</b> <b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Replace the VDC/ABS CM. <Ref. to ABS-6, REMOVAL, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> <Ref. to VDC-7, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 10.
<b>10</b> <b>CHECK ECM.</b> 1) Turn the ignition switch to OFF. 2) Connect the VDC/ABS CM. 3) Disconnect the ECM connector (B136). 4) Install the 120 Ω resistance to ECM connector.  <i>Terminals</i> <i>(B136) No. 27 — No. 35:</i> 5) Using the tester, measure the resistance between terminals of data link connector.  <i>Connector &amp; terminal</i> <i>(B40) No. 6 — No. 14:</i>	Is the resistance 60 Ω?	Go to step 11.	Repair or replace the open circuit of harness.
<b>11</b> <b>CHECK DTC.</b> 1) Turn the ignition switch to ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Go to step 12.	Repair or replace the open circuit of measured related harness.
<b>12</b> <b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Replace the ECM. <Ref. to FU(H4SO)-45, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, REMOVAL, Engine Control Module (ECM).>	Go to step 13.
<b>13</b> <b>CHECK DTC.</b> 1) Reconnect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Go to step 14.
<b>14</b> <b>CHECK HARNESS.</b> 1) Shake the instrument harness and bulk-head harness, rear harness. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1201 a current malfunction?	Repair or replace the harness.	Go to step 15.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>15 CHECK CONNECTOR.</b> 1) Disconnect the connector used for CAN circuit. 2) Check the connector terminal.	Is there poor contact of connector terminal?	Repair the connector terminal where poor contact exists, or replace harness.	Replace the ECM. <Ref. to FU(H4SO)-45, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, Engine Control Module (ECM).>
<b>16 CHECK HARNESS.</b> Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short) between terminals of data link connector and TCM. <i><b>Connector &amp; terminal</b></i> <i><b>(B40) No. 14 — (B55) No. 17:</b></i> <i><b>(B40) No. 6 — (B55) No. 18:</b></i>	Is harness normal?	Go to step 17.	Repair or replace the harness.
<b>17 CHECK HARNESS.</b> Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short) between terminals of data link connector and steering angle sensor. <i><b>Connector &amp; terminal</b></i> <i><b>(B40) No. 14 — (B231) No. 1:</b></i> <i><b>(B40) No. 6 — (B231) No. 2:</b></i>	Is harness normal?	Go to step 18.	Repair or replace the harness.
<b>18 CHECK HARNESS.</b> Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short) between terminals of data link connector and yaw rate sensor. <i><b>Connector &amp; terminal</b></i> <i><b>(B40) No. 14 — (B230) No. 3:</b></i> <i><b>(B40) No. 6 — (B230) No. 2:</b></i>	Is harness normal?	Replace the yaw rate sensor. <Ref. to VDC-16, REMOVAL, Yaw Rate and G Sensor.>	Repair or replace the harness.

## I: DTC U1202 CAN-HS BUS OFF

### DTC DETECTING CONDITION:

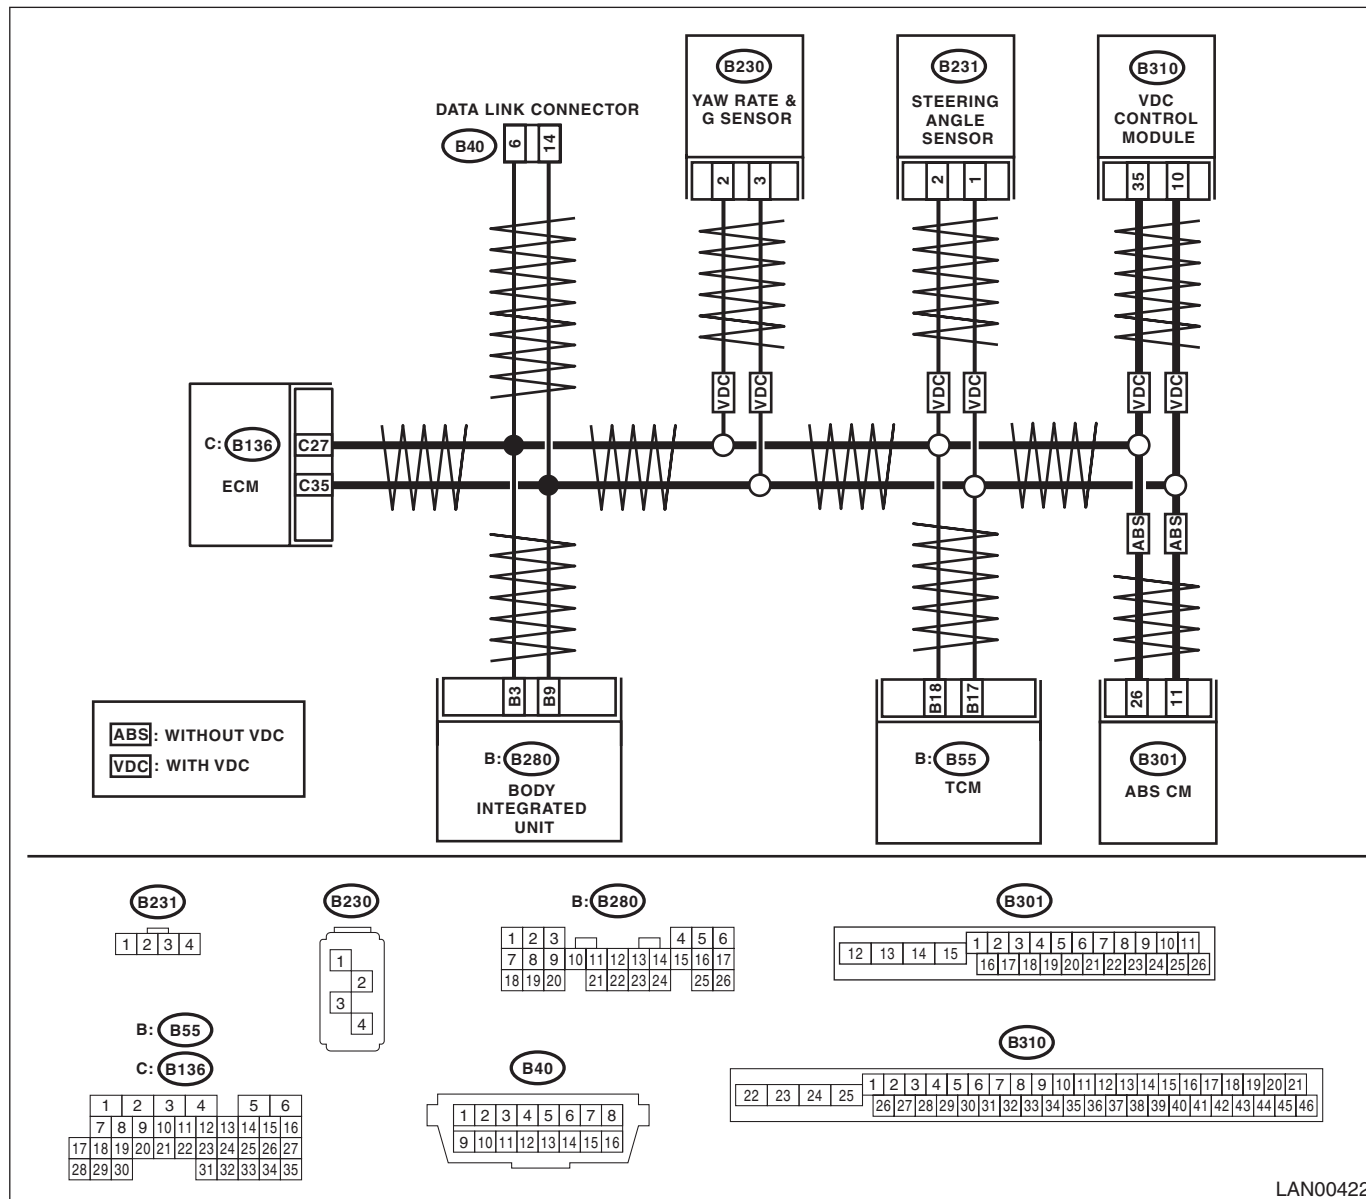

Communication with body integrated unit is not possible because of the following reasons.

- Open or power supply-output short, GND-output short occurs in CAN line.
- End resistance malfunction
- Internal error in each control module

### TROUBLE SYMPTOM:

Each warning light illuminates because the CAN communication (sending and receiving) is not normal.

### WIRING DIAGRAM:

LAN00422

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Using the Subaru Select Monitor, confirm all DTCs. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is any DTC other than for the body integrated unit displayed?	Perform the diagnosis according to displayed DTC.	Go to step 2.
2	<b>CHECK DTC.</b> 1) Turn the ignition switch to OFF → ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Go to step 3.	Go to step 10.
3	<b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (B280, B310 or B301, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Go to step 4.	Go to step 10.
4	<b>CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (B280, B310 or B301, B55, B136, B230, B231) that are connected to high speed CAN communication line. 3) Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). <b>Connector &amp; terminal</b> <b>Models with VDC</b> (B40) No. 6 — (B136) No. 27: (B40) No. 6 — (B310) No. 35: (B40) No. 6 — (B230) No. 2: (B40) No. 6 — (B231) No. 2: (B40) No. 6 — (B55) No. 18: (B40) No. 6 — (B280) No. 3: <b>Models without VDC</b> (B40) No. 6 — (B136) No. 27: (B40) No. 6 — (B301) No. 26: (B40) No. 6 — (B55) No. 18: (B40) No. 6 — (B280) No. 3:	Is harness normal?	Go to step 5.	Repair or replace the harness.
5	<b>CHECK HARNESS.</b> Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). <b>Connector &amp; terminal</b> <b>Models with VDC</b> (B40) No. 14 — (B136) No. 35: (B40) No. 14 — (B310) No. 10: (B40) No. 14 — (B230) No. 3: (B40) No. 14 — (B231) No. 1: (B40) No. 14 — (B55) No. 17: (B40) No. 14 — (B280) No. 9: <b>Models without VDC</b> (B40) No. 14 — (B136) No. 35: (B40) No. 14 — (B301) No. 11: (B40) No. 14 — (B55) No. 17: (B40) No. 14 — (B280) No. 9:	Is harness normal?	Go to step 6.	Repair or replace the harness.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
6	<b>CHECK ECM.</b> 1) Connect the ECM. 2) Using the tester, measure the resistance between terminals of data link connector. <b>Connector &amp; terminal</b> <b>(B40) No. 6 — No. 14:</b>	Is the resistance 120±5 Ω?	Go to step 7.	Replace the ECM. <Ref. to FU(H4SO)-45, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, REMOVAL, Engine Control Module (ECM).>
7	<b>CHECK VDC/ABS CM.</b> 1) Disconnect the ECM connector (B136). 2) Connect the VDC/ABS CM. 3) Using the tester, measure the resistance between terminals of data link connector. <b>Connector &amp; terminal</b> <b>(B40) No. 6 — No. 14:</b>	Is the resistance 120±5 Ω?	Go to step 8.	Replace the VDC/ABS CM. <Ref. to VDC-7, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8	<b>CHECK HARNESS.</b> 1) Connect the disconnected connectors. 2) Using the tester, measure the resistance between terminals of data link connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 6 — Chassis ground:</b> <b>(B40) No. 14 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 9.	Go to step 12.
9	<b>CHECK HARNESS.</b> 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals of data link connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 6 — Chassis ground:</b> <b>(B40) No. 14 — Chassis ground:</b>	Is the voltage 6 V or more?	Go to step 13.	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>
10	<b>CHECK HARNESS.</b> 1) Shake the harness. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1202 a current malfunction?	Repair or replace the harness.	Go to step 11.
11	<b>CHECK CONNECTOR.</b> Disconnect the connector used for high speed CAN circuit.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	It is possible that temporary poor contact occurs.
12	<b>CHECK CONTROL MODULE.</b> With the tester connected, disconnect each control module connector.	Is there any control module whose resistance has changed?	Replace the control module whose resistance has changed.	Repair or replace the open or short circuit of the harness.
13	<b>CHECK ECM.</b> With the tester connected, disconnect each control module connector.	Is there any control module whose voltage has changed?	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the harness.

## J: DTC U1211 CAN-HS ECM DATA ABNORMAL

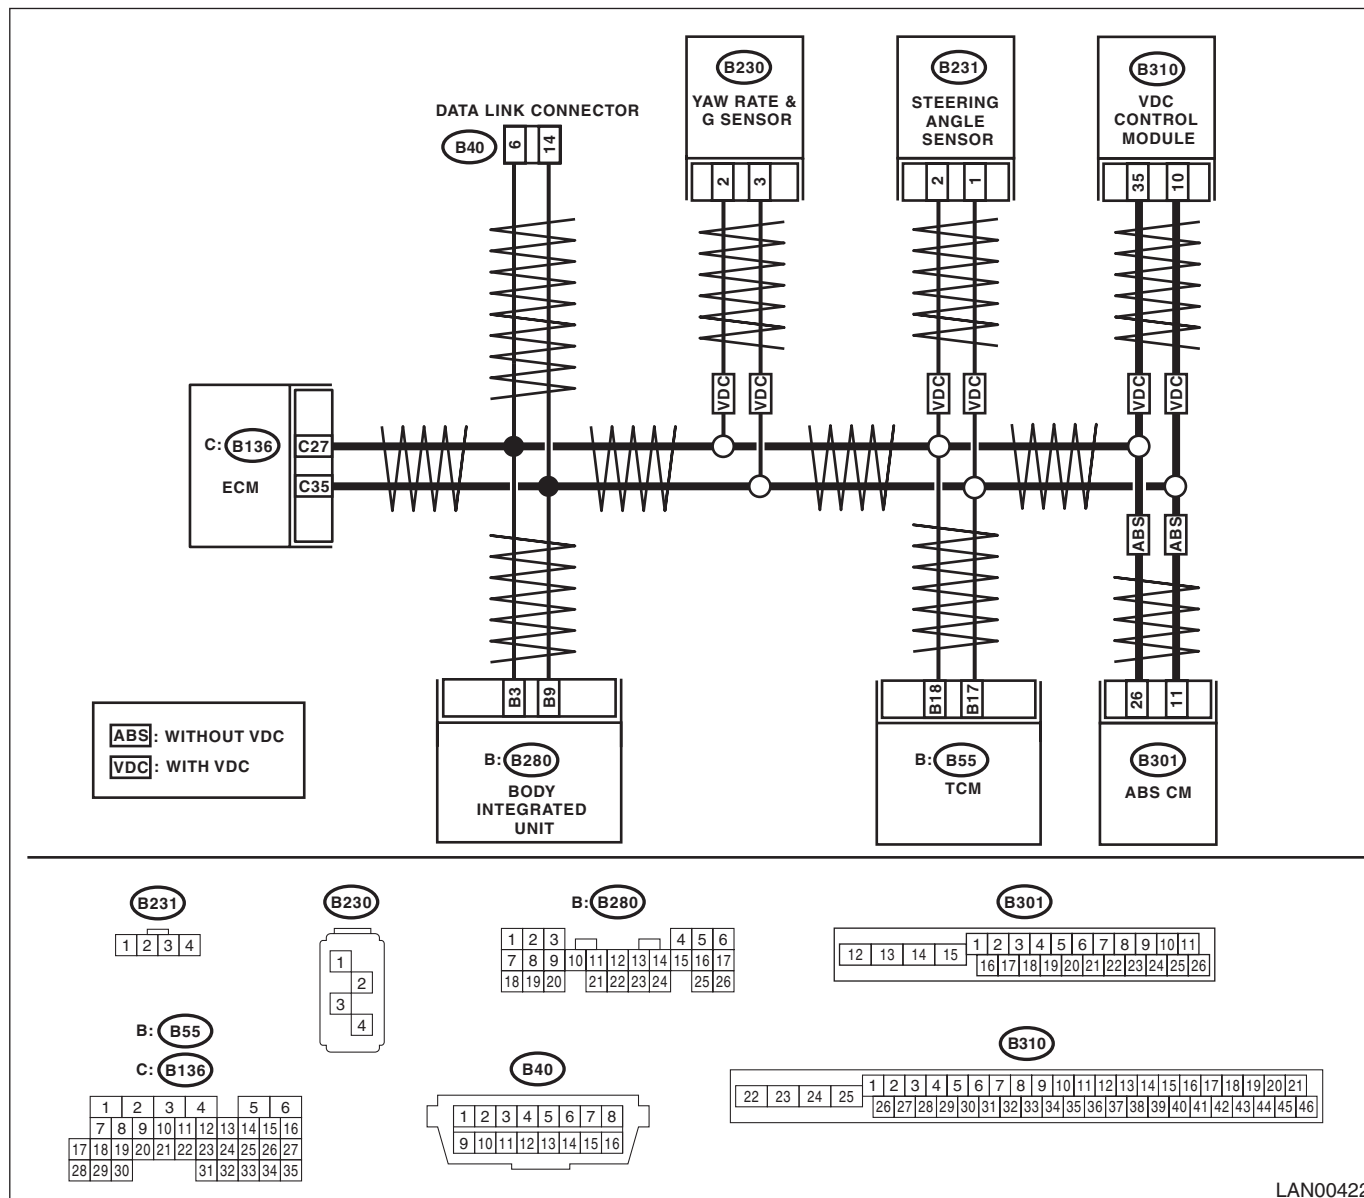

### DTC DETECTING CONDITION:

Received error data from ECM.

### TROUBLE SYMPTOM:

It is possible that engine control error may occur.

### WIRING DIAGRAM:

LAN00422

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is there DTC U1202?	Perform the diagnosis according to DTC.	Go to step 2.
2	<b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1211 a current malfunction?	Go to step 3.	Go to step 4.
3	<b>CHECK ECM.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1211 a current malfunction?	Replace the ECM. <Ref. to FU(H4SO)-45, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-52, REMOVAL, Engine Control Module (ECM).>	Go to step 4.
4	<b>CHECK HARNESS.</b> 1) Shake the harness used for CAN communication circuit. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1211 a current malfunction?	Repair the poor contact or temporary open circuit of harness.	Go to step 5.
5	<b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector that is connected to high speed CAN circuit.	Is there poor contact of connector?	Repair the connector terminal where poor contact exists, or replace harness.	It is possible that temporary poor contact occurs.

Step	Check	Yes	No
<b>1 CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is U1300 a current malfunction?	Go to step 2.	Go to step 7.
<b>2 CHECK DTC.</b> 1) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Go to step 3.	Go to step 7.
<b>3 CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). <b>Connector &amp; terminal</b> <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (auto A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (auto A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 4.	Repair or replace the harness.
<b>4 CHECK AUDIO OR NAVIGATION.</b> 1) Connect the disconnected connectors. 2) Disconnect the connector of navigation (i85) or audio (i50). 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Go to step 5.	Repair the navigation or audio. <Ref. to ET-6, REMOVAL, Audio.>
<b>5 CHECK AUTO A/C CONTROL MODULE.</b> 1) Turn the ignition switch to OFF. 2) Connect the audio or navigation connectors. 3) Disconnect the auto A/C control module connector (i88). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Go to step 6.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>
<b>6 CHECK BODY INTEGRATED UNIT.</b> 1) Turn the ignition switch to OFF. 2) Connect the auto A/C control module. 3) Replace the body integrated unit of your vehicle with the body integrated unit from other vehicle, which is working normally. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	<b>Step</b>	<b>Check</b>	<b>Yes</b>	<b>No</b>
<b>7</b>	<b>CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Shake the harness used for CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1300 a current malfunction?	Repair or replace the harness.	Go to step <b>8</b> .
<b>8</b>	<b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector that is connected to low speed CAN circuit.	Is there poor contact at disconnected connector?	Repair the connector terminal, or replace harness.	Temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## Q: DTC U1301 CAN-LS COUNTER ABNORMAL

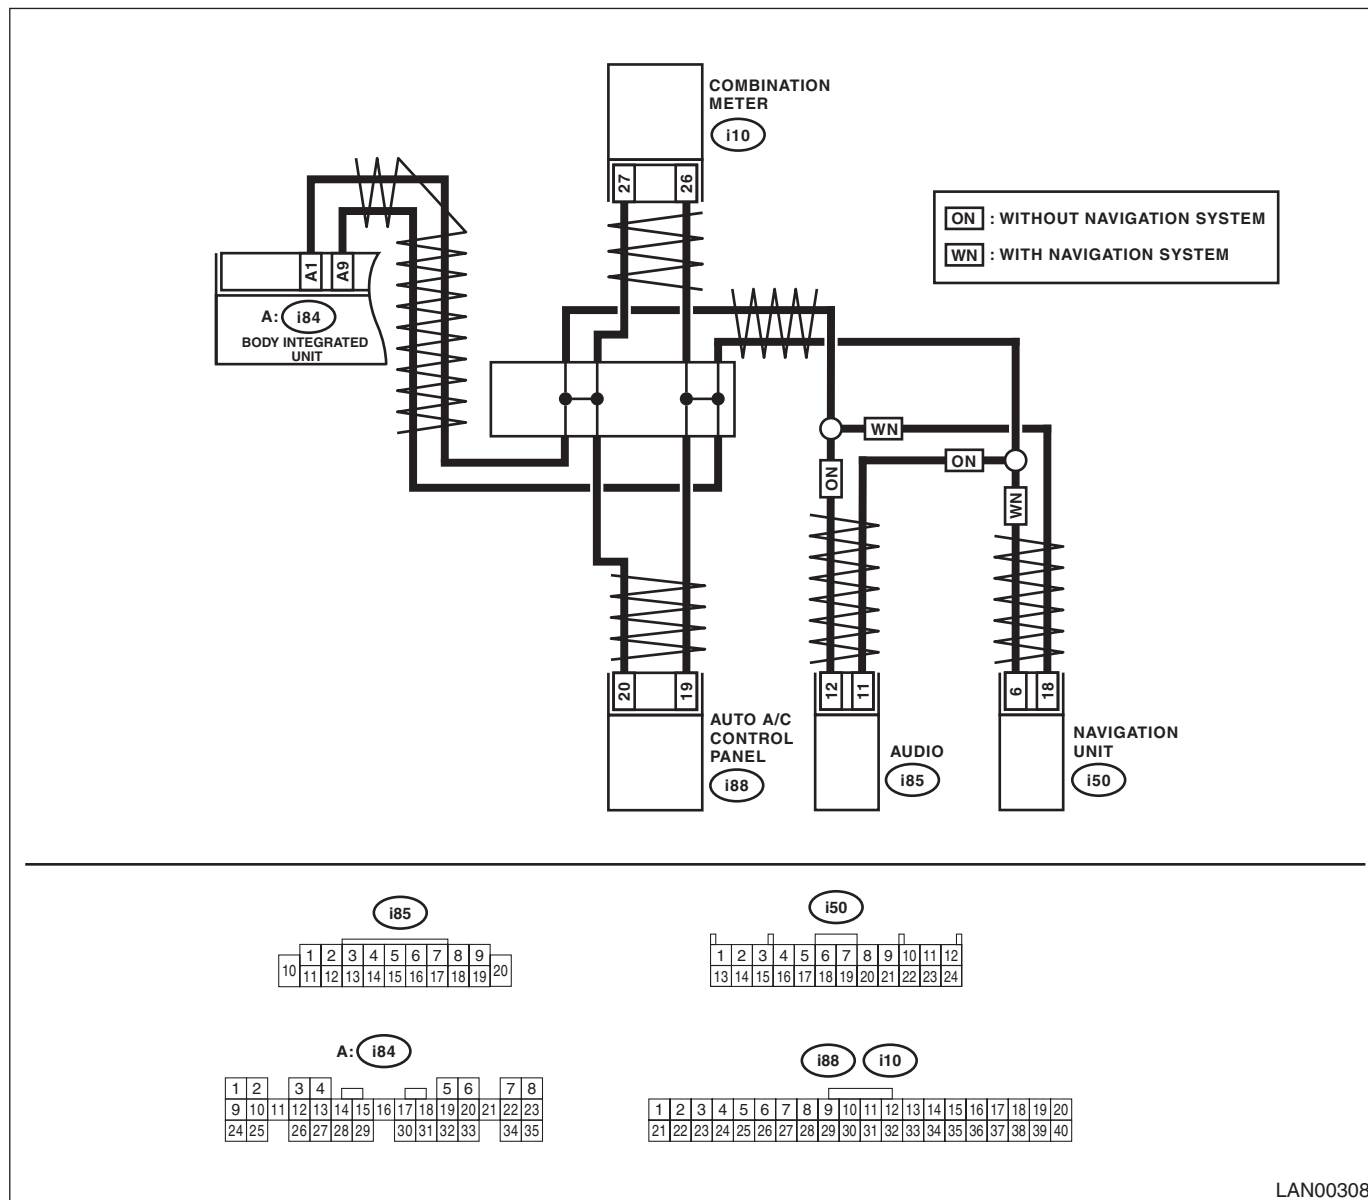

### DTC DETECTING CONDITION:

Communication is unstable because of low speed CAN communication error.

### TROUBLE SYMPTOM:

Display error may occur in fuel gauge because the CAN communication is not transmitted (sending/receiving) normally.

### WIRING DIAGRAM:

LAN00308

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Are there DTC U1300 or U1302?	Perform the diagnosis according to DTC.	Go to step 2.
<b>2 CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 current malfunction?	Go to step 3.	Go to step 9.
<b>3 CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 current malfunction?	Go to step 4.	Go to step 9.
<b>4 CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). <b>Connector &amp; terminal</b> <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (auto A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (auto A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 5.	Repair or replace the harness.
<b>5 CHECK AUDIO OR NAVIGATION.</b> 1) Connect the disconnected connectors. 2) Disconnect the connector of navigation (i85) or audio (i50). 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 current malfunction?	Go to step 6.	Go to step 9.
<b>6 CHECK AUTO A/C CONTROL MODULE.</b> 1) Turn the ignition switch to OFF. 2) Connect the audio or navigation module. 3) Disconnect the auto A/C control module connector (i88). 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 current malfunction?	Go to step 7.	Replace the auto A/C control module. <Ref. to AC-33, REMOVAL, Control Unit (Auto A/C Model).>
<b>7 CHECK COMBINATION METER.</b> 1) Turn the ignition switch to OFF. 2) Connect the disconnected connectors. 3) Perform the self-diagnosis of combination meter. <Ref. to IDI-4, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self-diagnosis of combination meter OK?	Go to step 8.	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>8 CHECK BODY INTEGRATED UNIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC U1301 a current malfunction?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Go to step 9.
<b>9 CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Shake the harness used for low speed CAN communication circuit. 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1301 current malfunction?	Repair or replace the harness.	Go to step 10.
<b>10 CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	Temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## R: DTC U1302 CAN-LS BUS OFF

### DTC DETECTING CONDITION:

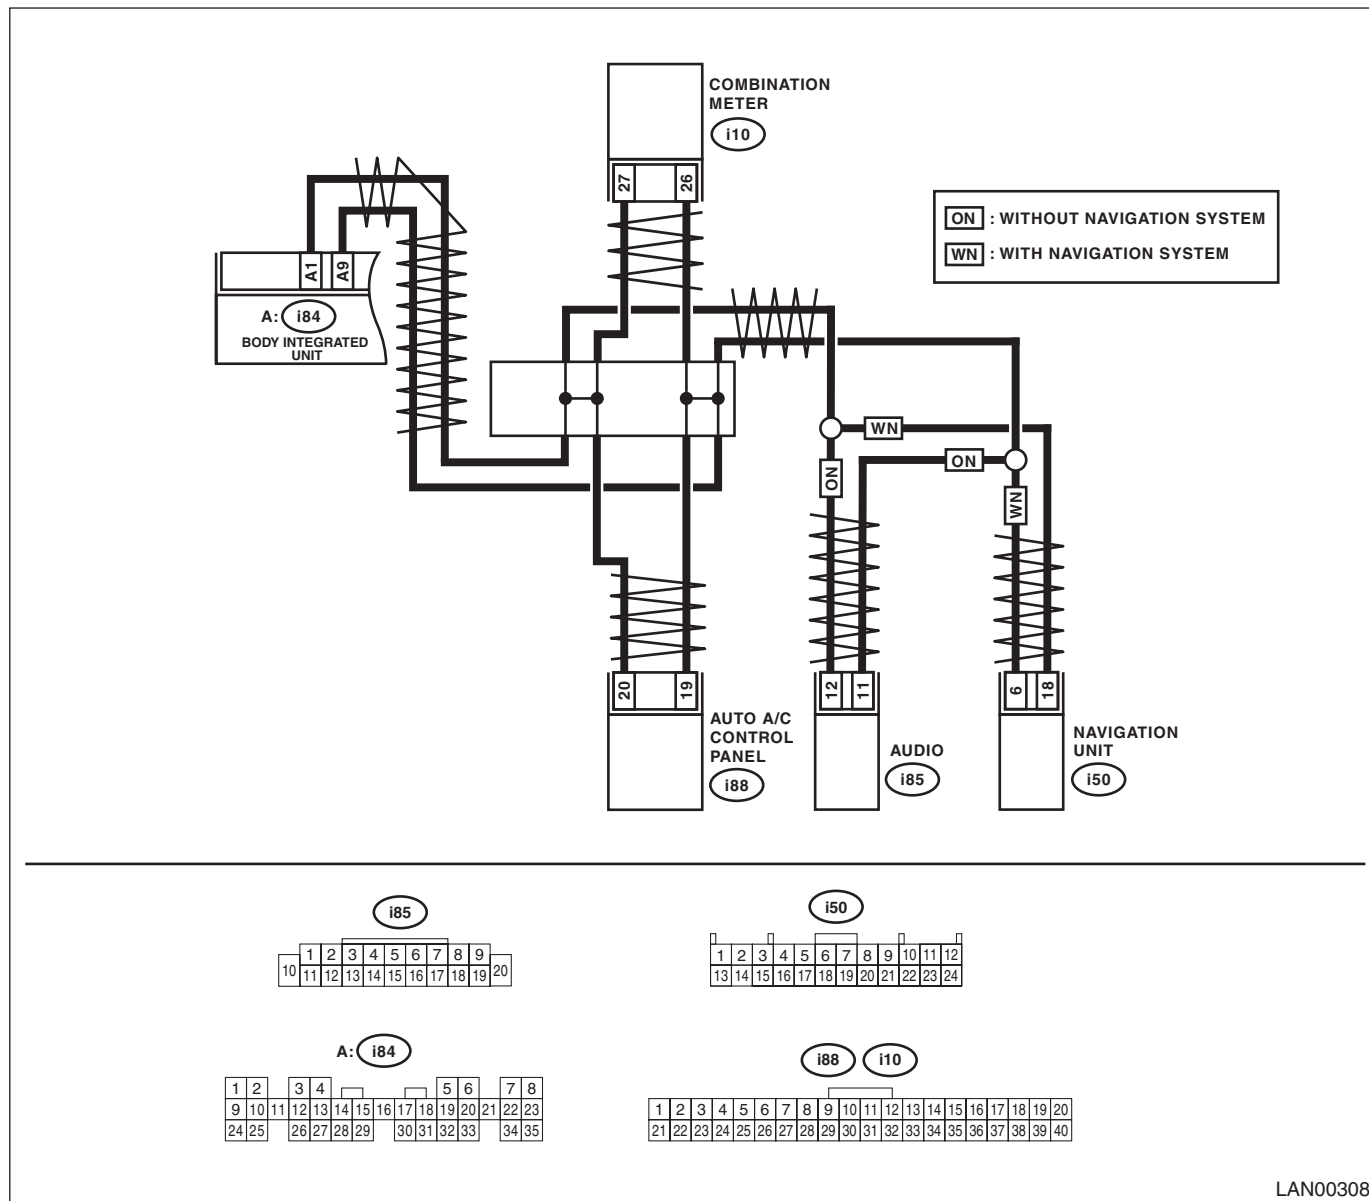

Communication with body integrated unit is not possible because of the following reasons.

- Open or power supply-output short, GND-output short occurs in both CAN line.
- Internal error in each control module

### TROUBLE SYMPTOM:

Display error may occur in fuel gauge because the CAN communication is not transmitted (sending/receiving) normally.

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is U1302 a current malfunction?	Go to step 2.	Go to step 8.
<b>2</b> <b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1302 a current malfunction?	Go to step 3.	Go to step 8.
<b>3</b> <b>CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). <b>Connector &amp; terminal</b> <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (auto A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (auto A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 4.	Repair or replace the harness.
<b>4</b> <b>CHECK HARNESS.</b> 1) Connect the disconnected connectors. 2) Using the tester, measure the resistance between harness connector and chassis ground. <b>Connector &amp; terminal</b> <i>(i84) No. 1 — Chassis ground:</i> <i>(i84) No. 9 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Go to step 7.
<b>5</b> <b>CHECK HARNESS.</b> 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between harness connector and chassis ground. <b>Connector &amp; terminal</b> <i>(i84) No. 1 — Chassis ground:</i> <i>(i84) No. 9 — Chassis ground:</i>	Is the voltage less than 6 V?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Go to step 6.
<b>6</b> <b>CHECK HARNESS.</b> With the tester connected, disconnect control module.	Is there any control module that the voltage becomes 6 V or less.	Replace the control module whose voltage has changed.	Repair or replace the short circuit of the harness.
<b>7</b> <b>CHECK HARNESS.</b> With the tester connected, disconnect control module.	Is there any control module whose resistance has changed?	Replace the control module whose resistance has changed.	Repair or replace the short circuit of the harness.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
8	<b>CHECK HARNESS.</b> 1) Shake the harness used for low speed CAN communication circuit. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1302 a current malfunction?	Repair or replace the open, short circuit of the harness.	Go to step 9.
9	<b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	Temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## S: DTC U1311 CAN-LS METER UNIT DATA ABNORMAL

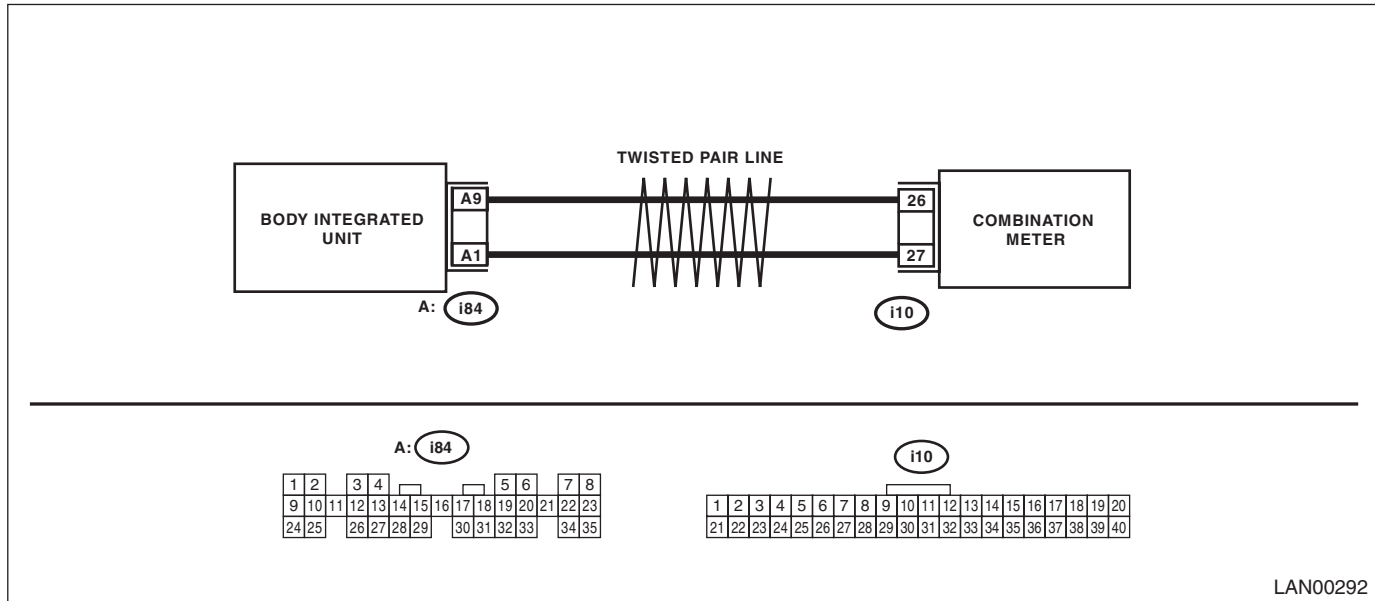

### DTC DETECTING CONDITION:

Received error data from meter.

### TROUBLE SYMPTOM:

Defective data from combination meter occurs.

### WIRING DIAGRAM:

Step	Check	Yes	No	
1	<b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC U1300 or U1302 displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2	<b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1311 a current malfunction?	Go to step 3.	Go to step 4.
3	<b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector (i10). 3) Turn the ignition switch to ON. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1311 a current malfunction?	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>	Go to step 4.
4	<b>CHECK HARNESS.</b> 1) Shake the harness used for low speed CAN communication circuit. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1311 a current malfunction?	Repair or replace the harness.	Go to step 5.
5	<b>CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	Temporary poor contact occurs.

LAN SYSTEM (DIAGNOSTICS)

## T: DTC U1321 CAN-LS METER NO-RECEIVE DATA

### DTC DETECTING CONDITION:

Not received data from meter.

### TROUBLE SYMPTOM:

Engine may not be started.

### WIRING DIAGRAM:

Step	Check	Yes	No	
1	<b>CHECK ALL DTCS.</b> Read all DTCs using the Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC U1300 or U1302 displayed?	Perform the diagnosis according to DTC.	Go to step 2.
2	<b>CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Go to step 3.	Go to step 7.
3	<b>CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Go to step 4.	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>4 CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). <b>Connector &amp; terminal</b> <i>(i84) No. 1 — (i10) No. 27 (combination meter):</i> <i>(i84) No. 9 — (i10) No. 26 (combination meter):</i> <i>(i84) No. 1 — (i88) No. 20 (auto A/C):</i> <i>(i84) No. 9 — (i88) No. 19 (auto A/C):</i> <i>(i84) No. 1 — (i85) No. 12 (audio):</i> <i>(i84) No. 9 — (i85) No. 11 (audio):</i> <i>(i84) No. 1 — (i50) No. 18 (navigation):</i> <i>(i84) No. 9 — (i50) No. 6 (navigation):</i>	Is harness normal?	Go to step 5.	Repair or replace the harness.
<b>5 CHECK COMBINATION METER.</b> 1) Connect the disconnected connectors. 2) Perform the self-diagnosis of combination meter. <Ref. to IDI-4, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.>	Is the self-diagnosis OK?	Go to step 6.	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>
<b>6 CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>	Go to step 7.
<b>7 CHECK DTC.</b> 1) Shake the harness used for low speed CAN communication circuit. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is U1321 a current malfunction?	Repair the poor contact, open circuit of harness or replace harness.	Go to step 8.
<b>8 CHECK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect all connectors (i84, i10, i88, i85 or i50) that are connected to low speed CAN communication line.	Is there poor contact of connector terminal?	Repair the connector terminal, or replace harness.	It is possible that temporary poor communication occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## U: DTC B1500 KEYLESS UART COM. MALFUNCTION

### DTC DETECTING CONDITION:

Open or short circuit in keyless UART circuit

### TROUBLE SYMPTOM:

Door lock does not operate with keyless.

### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is B1500 current malfunction?	Go to step 2.	Go to step 6.
<b>2 CHECK DTC.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from body integrated unit and keyless entry control module. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1500 current malfunction?	Go to step 3.	Go to step 6.
<b>3 CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from body integrated unit and keyless entry control module. 3) Using the tester, inspect the open circuit of harness and short (power supply-output short, GND-output short). <b>Connector &amp; terminal</b> <b>(i84) No. 24 — (R80) No. 3:</b>	Is harness normal?	Go to step 4.	Repair or replace the harness.
<b>4 CHECK HARNESS.</b> Using the tester, measure the voltage between keyless entry control module and chassis ground. <b>Connector &amp; terminal</b> <b>(R80) No. 4 (+) — Chassis ground (-):</b>	Is the voltage battery voltage?	Go to step 5.	Check the power supply circuit for keyless entry control module.
<b>5 CHECK OPERATION.</b> 1) Install the keyless entry control module from other vehicle, which is working normally. 2) Register the keyless key which is working normally. 3) Operate the keyless key.	Is the door locking operate?	Replace the keyless entry control module. <Ref. to SL-48, REMOVAL, Keyless Entry Control Module.>	Replace the body integrated unit. <Ref. to SL-50, REMOVAL, Body Integrated Unit.>
<b>6 CHECK CONNECTOR.</b> Disconnect the connectors from body integrated unit and keyless entry control module.	Is there poor contact of connector?	Repair the connector, or replace harness.	Temporary poor contact occurs.

## 13. General Diagnostic Table

### A: INSPECTION

Item	Operation	Specifications		Index
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	System is normal.	Perform the diagnosis according to DTC.	—
Engine coolant temperature	Engine coolant temperature gauge displays correctly without engine coolant temperature warning light illuminating/blinking.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> <li>• Engine cooling system</li> <li>• LAN system</li> </ul>	If three data values are different when display the current data of ECM, TCM and body integrated unit, it is possible that driving system CAN is malfunction.
Remaining fuel level	Fuel gauge displays correctly without low fuel warning light remaining illuminated.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> <li>• Combination meter system</li> <li>• LAN system</li> </ul>	If the values of “Fuel level resistance” and “Fuel level resistance 2” are different when display the current data of body integrated unit, it is possible that body integrated unit is malfunction.
ATF temperature warning light	ATF temperature warning is free from illuminating/blinking.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> <li>• Automatic transmission</li> <li>• Shift lock control system</li> <li>• LAN system</li> </ul>	Warning light also blinks when DTC: B1106 occurs.
EBD warning light ABS warning light VDC warning light Hill start assist warning light	EBD warning Light/ABS warning light/VDC warning light/Hill start assist warning light are free from ON/OFF all the time.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> <li>• ABS (diagnostics)</li> <li>• VDC (diagnostics)</li> <li>• Parking brake</li> <li>• Combination meter system</li> <li>• LAN system</li> </ul>	—
Shift position	Meter display of shift position is correct. Shift position changes when switch the shift (up/down) on manual mode.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> <li>• Automatic transmission</li> <li>• Combination meter system</li> </ul>	—
Clearance light Low beam High beam	Clearance light/low beam/high beam illuminate correctly by switch operation. Indicator in the meter illuminates when clearance light/high beam are illuminating.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> <li>• Lighting system</li> <li>• Combination meter system</li> <li>• LAN system</li> </ul>	—
Fog light	Fog light illuminate correctly by operating the switch. Indicator in the meter illuminates when each fog light is illuminating.	System is normal.	Refer to the following to check. <ul style="list-style-type: none"> <li>• Lighting system</li> <li>• Combination meter system</li> <li>• LAN system</li> </ul>	—

## General Diagnostic Table

### LAN SYSTEM (DIAGNOSTICS)

Item	Operation	Specifications		Index
		YES	NO	
DRL	DRL operates correctly.	System is normal.	Refer to the following to check. • Lighting system • LAN system	—
Key interlock	Key cannot be removed in other than P range. Key can be removed in P range.	System is normal.	Refer to the following to check. • Shift lock control system • LAN system	—
Shift Lock	Shift operation is normal.	System is normal.	Refer to the following to check. • Shift lock control system • Combination meter system • LAN system	—
Key warning switch alarm	Alarm sounds when driver's door is open with the key removed.	System is normal.	Refer to the following to check. • Combination meter system • LAN system	—
Seat belt warning alarm	Indicator in the meter illuminate and alarm sounds when driver's seat belt is not worn. Indicator in the clock illuminates. When passenger's seat is occupied without passenger's seat belt worn. Alarm sounds when vehicle speed is approx. 15 km/h without seat belt fastened.	System is normal.	Refer to the following to check. • Seat belt warning system • Combination meter system • LAN system	—
Rear window defogger	Rear window defogger operates by operating the switch. Indicator in the switch illuminates when rear window defogger is operating.	System is normal.	Refer to the following to check. • Rear window defogger • A/C control module	—
Wiper deicer	Wiper deicer operates by operating the switch.	System is normal.	Refer to the following to check. • Wiper deicer system • A/C control module	—
Rear wiper	Rear wiper operates by operating the switch.	System is normal.	Refer to the following to check. • Wiper and washer system	Vehicle speed response time varies depending on the condition of customization of the body integrated unit "Sedan/Wagon Setting".
Door lock	Lock/unlock operates by operating the central door lock switch. Rear gate opens by operating the rear gate release switch.	System is normal.	Refer to the following to check. • Security and locks • LAN system	Rear gate cannot open by operating the rear gate release switch when customization of the body integrated unit "Sedan/Wagon Setting" is set to "Sedan".

# General Diagnostic Table

## LAN SYSTEM (DIAGNOSTICS)

Item	Operation	Specifications		Index
		YES	NO	
Keyless Entry	Lock/unlock operates by operating the keyless transmitter. Trunk/rear gate unlock by operating the trunk/rear gate unlock button.	System is normal.	Refer to the following to check. • Security and locks • LAN system	Rear gate opens up by operating the trunk/rear gate unlock button when customization of the body integrated unit "Sedan/Wagon Setting" is set to "Sedan".
Answer back	Answer back operates by operating lock/unlock with the keyless entry.	System is normal.	Refer to the following to check. • Security and locks • LAN system	—
Room light	ON/OFF according to the operation of the door open/close, lock/unlock with the keyless entry, and ignition.	System is normal.	Refer to the following to check. • Room light system • Security and locks • LAN system	—
Map light	ON/OFF according to the operation of the door open/close other than rear gate, lock/unlock with the keyless entry, and ignition.	System is normal.	Refer to the following to check. • Spot map light • Security and locks • LAN system	—
Key illumination	ON/OFF according to the operation of the driver's side door open/close and ignition.	System is normal.	Refer to the following to check. • Ignition switch illumination • Security and locks • LAN system	Key illumination blinks when customization of the body integrated unit "Factory or Market setting" is set to "Factory" for models with keyless entry.
Illumination control	Illumination volume control is available.	System is normal.	Refer to the following to check. • Combination meter system • LAN system	Lighting adjustment is not possible when customization of the body integrated unit "Illumination Control On/Off" is set to "Off".
Engine start	Engine starts normally.	System is normal.	Refer to the following to check. • Engine (diagnostics) • Immobilizer • LAN system	—
Vehicle security	When locked by the keyless entry, security monitor condition starts. When unlocked by the keyless entry, security is released.	System is normal.	Refer to the following to check. • Security and locks • LAN system	—

# General Diagnostic Table

LAN SYSTEM (DIAGNOSTICS)

---

## 1. Basic Diagnostic Procedure

### A: BASIC PROCEDURES

#### 1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

#### 2. IDENTIFICATION OF TROUBLE SYMPTOM

Determine what the problem is based on the symptom.

#### 3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

#### 4. LOCATION AND REPAIR OF TROUBLE

- 1) Using the diagnostics, narrow down the causes.
- 2) If necessary, use a voltmeter, ohmmeter, etc.
- 3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

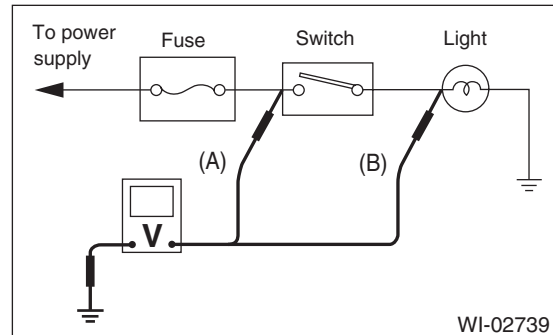

#### 5. SYSTEM OPERATION CHECK

After repairing, ensure that the system operates properly.

## B: BASIC INSPECTION

### 1. VOLTAGE MEASUREMENT

- 1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
- 2) Touch connector (A) with the positive probe of the volt meter. The voltmeter will indicate a voltage.
- 3) Touch connector (B) with the positive probe. The voltmeter will indicate no voltage.

- 4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
- 5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

### 2. CIRCUIT CONTINUITY CHECKS

- 1) Disconnect the battery terminal or connector so there is no voltage between the check points. Contact the two leads of an ohmmeter to each of the check points. If the circuit has diodes, reverse the two leads and check again.
- 2) Use an ohmmeter to check for diode continuity. When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity. When contacting the two leads in reverse, there should be no continuity.

# Basic Diagnostic Procedure

## WIRING SYSTEM

3) The symbol “○ — ○” indicates that continuity exists between two points or terminals. For example, when a switch position is at “3”, continuity exists among terminals 1, 3 and 6, as shown in the table below.

Terminal	1	2	3	4	5	6
Switch Position						
OFF						
1	○ — ○				○ — ○	
2	○ — ○			○ — ○		○ — ○
3	○ — ○		○ — ○			○ — ○
4	○ — ○	○ — ○				○ — ○

WI-02741

### 3. HOW TO DETERMINE AN OPEN CIRCUIT

#### 1) WITH VOLTMETER:

An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.

#### 2) WITH OHMMETER:

Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.

### 4. HOW TO DETERMINE A SHORT CIRCUIT

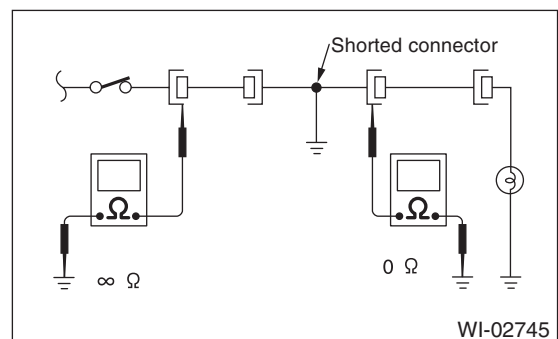

#### 1) WITH TEST LIGHT:

Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

#### 2) WITH OHMMETER:

Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

## C: HOW TO READ WIRING DIAGRAMS

### 1. WIRING DIAGRAM:

The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.

Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.

- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
	<p>Double frames</p> <p>Indicates a lock is included.</p> <p>Indicates the number of poles.</p>		Numbered in order from upper right to lower left.
	<p>Indicates a lock is included.</p> <p>Single frame</p>		Numbered in order from upper left to lower right.

WI-02747

# Basic Diagnostic Procedure

## WIRING SYSTEM

- When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

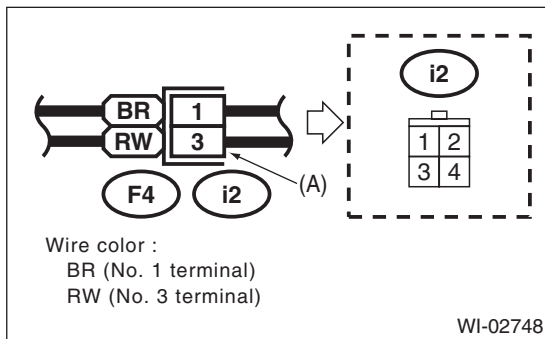

### • WIRING DIAGRAM:

The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.

- The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

### NOTE:

A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.

- In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

- The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (Inner)
SB	Sealed (Outer)

- The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.

- The table lists the nominal sectional areas and allowable currents of the wires.

### CAUTION:

**When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.**

### NOTE:

- The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
- The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

Nominal sectional area mm <sup>2</sup>	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

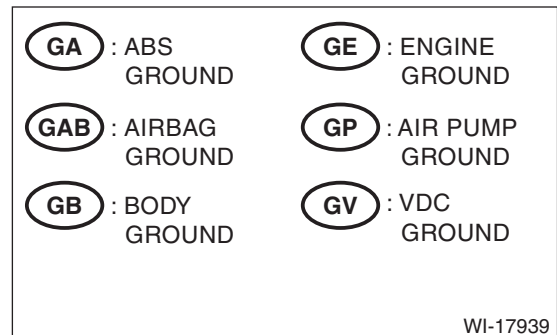

- Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

- The ground points shown in the wiring diagram refer to the following:

### NOTE:

All wiring harnesses are provided with a ground point which must be securely connected.

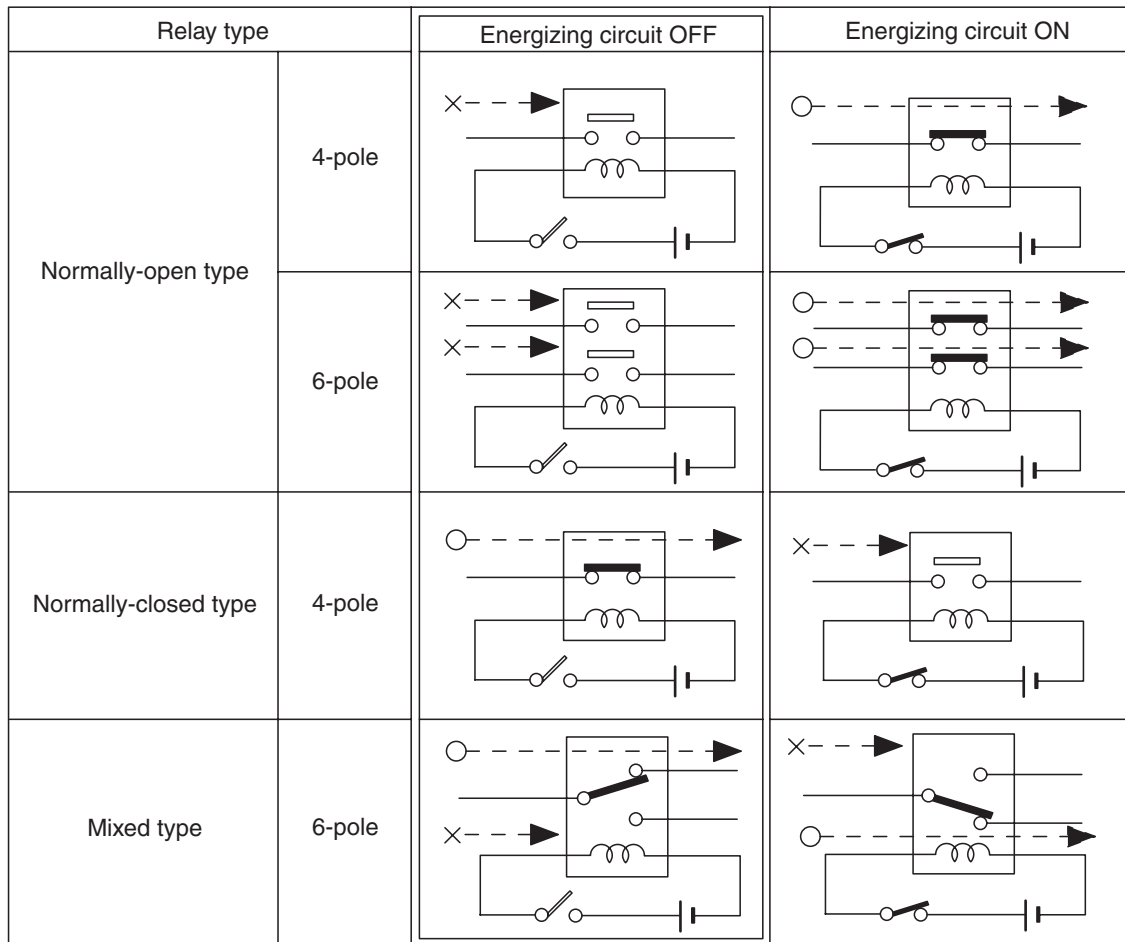

# Basic Diagnostic Procedure

## WIRING SYSTEM

- Relays are classified as normally-open or normally-closed.
- The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Key to symbols:

- : Current flows.
- : Current does not flow.

WI-16724

- Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a "F" for F8, "i" for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord
AB	Airbag wiring harness

# Basic Diagnostic Procedure

## WIRING SYSTEM

### D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

## 1. RELAY

A symbol used to indicate a relay.

## 2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

## 3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

## 4. FUSE NO. & RATING

The "FUSE No. & RATING" corresponds with that used in the fuse box (main fuse box, fuse and joint box).

## 5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number "G4" refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

## 6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

## 7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

## 8. DIODE

A symbol is used to indicate a diode.

## 9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

A ↔ A, B ↔ B

## 10. SYMBOLS OF WIRE CONNECTION AND CROSSING

## 11. POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

"MB – 5", "MB – 6", etc., which are used as power-supply symbols throughout the text, correspond with those shown in the "DC POWER SUPPLY CIRCUIT" in the wiring diagram.

Accordingly, using the "DC POWER SUPPLY CIRCUIT" and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

## 12. CLASSIFICATION BY SPECIFICATION

When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.

## 13. TWISTED PAIR LINE

The twisted pair line is indicated by a symbol in the wiring diagrams.

# Basic Diagnostic Procedure

## WIRING SYSTEM

### E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Water proof type: Male		
		
		

WI-02756

## F: ABBREVIATION IN WIRING DIAGRAMS

Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
AT	Automatic Transmission
A/F	Air/Fuel (Air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B	Battery
CAN	Controller Area Network
D	Drive range or Down
DN	Down
E	Ground
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
FWD	Front Wheel Drive
G	Gravity (G sensor)
H/L	Headlight
HI	High
I/F	Interface
IG	Ignition
Illumi	Illumination
INT	Intermittent
LCD	Liquid Crystal Display
LH	Left Hand
LO	Low
M	Motor
M/B	Main Fuse Box
MT	Manual Transmission
N	Neutral Range
NA	Natural Aspiration
NAVI	Navigation
OP	Open or Optional Parts
P	Parking Range
PASS	Passing
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range
RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
ST	Starter

Abbr.	Full name
SW	Switch
TCM	Transmission Control Module
TPM	Tire Pressure Monitor
VDC	Vehicle Dynamics Control
VFD	Vacuum Fluorescent Display
WASH	Washer

### 2. Working Precautions

#### A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

- 1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
- 2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
- 3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
- 4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

#### B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

- 1) The battery cable must be disconnected from the battery's (-) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
- 2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
- 3) When installing parts, be careful not to catch them on the wiring harness.
- 4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

- 5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector. To connect, insert the connector until it snaps and confirm that it is connected securely.

- 6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads. To check water-proof connectors (which are not measurable from the wiring side), touch test probes on the terminal side and be careful not to bend or damage the terminals.

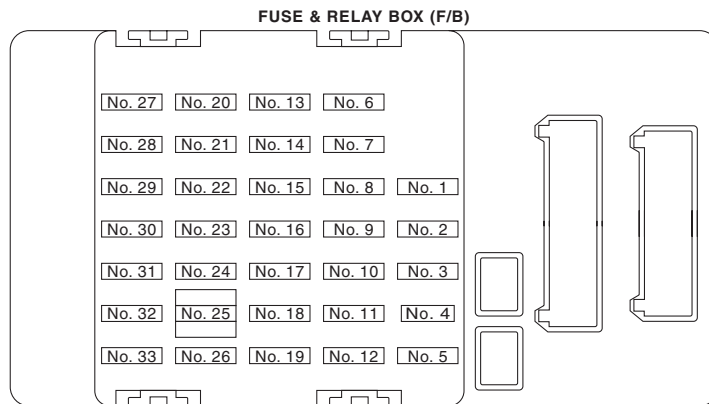

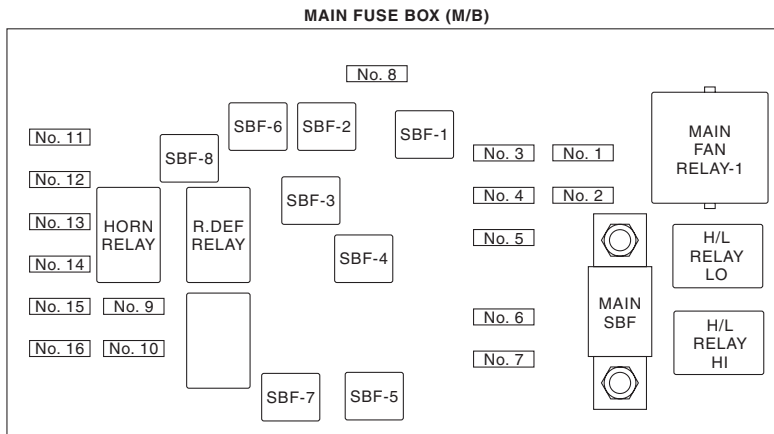

- 7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts. Handle them with care so that they are not dropped or mishandled.
