14.Freeze Frame Data Display

A: OPERATION

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Main Menu» display, select {Each System Check}.
2) On «Each System Check» display, select {HEV System}.
3) On «HEV System» display, select {Hybrid Powertrain Control System}.
4) On «Hybrid Powertrain Control System» display, select {Freeze Frame Data Display}.

Display	Contents	Unit of measure
Vehicle speed	Vehicle speed calculated by VDC CM (CAN communication data)	km/h
Ambient Temperature	Ambient temperature calculated by combination meter (CAN communication data)	°C
Engine Speed	Engine speed calculated by ECM (CAN communication data)	rpm
Coolant Temperature	Engine coolant temperature calculated by ECM (CAN communication data)	°C
Gear Ratio Actual	Gear ratio calculated by TCM (CAN communication data)	—
A/T Oil Temperature	ATF temperature calculated by TCM (CAN communication data)	°C
Trip Count	Number of times the ignition is ON judged by body integrated unit (CAN communication data)	times
Count	Identification information of synchronization/asynchronization of Trip Count, Time Count	—
Time Count	Detailed time elapsed after the ignition is ON calculated by body integrated unit (CAN communication data)	ms
Ignition switch	Ignition switch status	—
Starter SW	Starter switch status	—
P Range	Parking range status judged by TCM (CAN communication data)	—
R Range	Reverse range status judged by TCM (CAN communication data)	—
N Range	Neutral range status judged by TCM (CAN communication data)	—
D Range	Drive range status judged by TCM (CAN communication data)	—
Accel opening angle	Accelerator opening angle ratio calculated by ECM (CAN communication data)	%
Main Brake Pedal Stroke	Brake stroke calculated by main brake stroke sensor voltage	%
Sub Brake Pedal Stroke	Brake stroke calculated by sub brake stroke sensor voltage	%
Brake Booster Pressure 1	Vacuum pressure calculated by brake vacuum sensor voltage 1	kPa
Brake Booster Pressure 2	Vacuum pressure calculated by brake vacuum sensor voltage 2	kPa
Atmospheric pressure	Atmospheric pressure calculated by ECM (CAN communication data)	kPa
12V Battery Relay Target Mode	12V battery relay commanded status	—
Vacuum Pump Relay Actual	Voltage applied to brake vacuum pump relay	V
HPCM Target Control Mode	Target control mode of HPCM	—
HPCM Current Control Mode	Current control mode of HPCM	—
Drive Motor Inverter Input Voltage	Drive motor inverter input voltage calculated by DMCM (CAN communication data)	V
Drive Motor Output Torque Actual	Drive motor output torque calculated by DMCM (CAN communication data)	Nm
Drive Motor Speed	Drive motor speed calculated by DMCM (CAN communication data)	rpm
ISG Terminal Voltage	Terminal voltage calculated by integrated starter generator (ISG) (LIN communication data)	V

Display	Contents	Unit of measure
ISG Cranking Status	Cranking demand acceptance status judged by integrated starter generator (ISG) (LIN communication data)	—
ISG Control Mode Actual	Current control mode judged by integrated starter generator (ISG) (LIN communication data)	—
DCDC Converter Output Voltage Actual	DC/DC converter output voltage calculated by DMCM (CAN communication data)	V
Electric Oil Pump Motor Speed	Motor speed calculated by electric oil pump (CAN communication data)	rpm
High Voltage Battery SOC	High voltage battery residual quantity calculated by BECM (CAN communication data)	%
High Voltage Battery Total Voltage	High voltage battery voltage calculated by BECM (CAN communication data)	V
High Voltage Battery Discharge Power Limit 1	High voltage battery discharge power limit calculated by BECM (CAN communication data)	kW
High Voltage Battery Charge Power Limit 1	High voltage battery charge power limit calculated by BECM (CAN communication data)	kW
High Voltage Battery Cooling Fan Speed	High voltage battery cooling fan speed calculated by DMCM (CAN communication data)	rpm
BECM Control Status	BECM control mode judged by BECM (CAN communication data)	—
Contactor Close Status	Contactor close status judged by BECM (CAN communication data)	—
12V Engine Restart Battery Voltage	12 volt engine restart battery voltage calculated by 12 volt engine restart battery sensor (LIN communication data)	V
12V Engine Restart Battery SOC	12 volt engine restart battery capacity calculated by 12 volt engine restart battery sensor (LIN communication data)	%
12V Auxiliary Battery Voltage	12 volt auxiliary battery voltage	V
OBD Test Status	Diagnosis status of emission-related diagnosis	—
ECM Fail Safe Request Check	Fail safe request detailed information from ECM	—
TCM Fail Safe Request Check	Fail safe request detailed information from TCM	—
DMCM Fail Safe Request Check	Fail safe request detailed information from DMCM	—
BECM Fail Safe Request Check	Fail safe request detailed information from BECM	—
AUTO/MANUAL Mode Switch	Manual mode switch status judged by TCM (CAN communication data)	—
Brake Pedal Position Learning Status	Brake stroke sensor learning status	—
HPCM Check 20	Detailed information of control	—
HPCM Check 21	Detailed information of control	—
HPCM Check 22	Detailed information of control	—

2. DRIVE MOTOR CONTROL SYSTEM

1) On «Main Menu» display, select {Each System Check}.
2) On «Each System Check» display, select {HEV System}.
3) On «HEV System» display, select {Drive Motor Control System}.
4) On «Drive Motor Control System» display, select {Freeze Frame Data Display}.

Display	Contents	Unit of measure
ECU ACC	Voltage supplied to DMCM	V
Ignition switch	Ignition switch status	—
Ignition Switch Signal (CAN receive)	Ignition switch status detected by HPCM (CAN communication data)	—
Accel opening angle	Accelerator opening angle ratio detected by ECM (CAN communication data)	%
Judgment of Idling	Idle switch status detected by ECM (CAN communication data)	—
Main Brake Pedal Stroke	Main brake stroke sensor status calculated by HPCM (CAN communication data)	%
Engine Speed	Engine speed detected by ECM (CAN communication data)	rpm
Vehicle speed	Vehicle speed calculated by VDC CM (CAN communication data)	km/h
Coolant Temperature	Engine coolant temperature calculated by ECM (CAN communication data)	°C
A/T Oil Temperature	ATF temperature calculated by TCM (CAN communication data)	°C
D Range	Drive range status judged by TCM (CAN communication data)	—
N Range	Neutral range status judged by TCM (CAN communication data)	—
R Range	Reverse range status judged by TCM (CAN communication data)	—
P Range	Parking range status judged by TCM (CAN communication data)	—
Trip Count	Number of times the ignition is ON judged by body integrated unit (CAN communication data)	times
Time Count	Detailed time elapsed after the ignition is ON calculated by body integrated unit (CAN communication data)	ms
Detailed Time Counter	Calculated detailed time elapsed after the ignition is ON	ms
DMCM Check Detailed Code	—	—
Count	Identification information of synchronization/asynchronization of Trip Count, Time Count	—
Drive Motor Torque Target (HPCM)	Drive motor target torque calculated by HPCM (CAN communication data)	Nm
Drive Motor Output Torque Actual	Target drive motor torque	Nm
Drive Motor Torque Upper Limit	DMCM set value	Nm
Drive Motor Torque Lower Limit	DMCM set value	Nm
Drive Motor Speed Target (HPCM)	Target drive motor speed calculated by HPCM (CAN communication data)	rpm
Drive Motor Speed	Drive motor speed	rpm

Display	Contents	Unit of measure
Drive Motor Inverter Input High Voltage Sensor (Serial)	Drive motor inverter input high voltage (serial)	V
High Voltage Battery Total Voltage	High voltage battery voltage calculated by BECM (CAN communication data)	V
High Voltage Battery Amperage	High voltage battery current calculated by BECM (CAN communication data)	A
Phase U Voltage Target	DMCM output value	%
Phase V Voltage Target	DMCM output value	%
Phase W Voltage Target	DMCM output value	%
Phase U Amperage	Drive motor current	A
Phase U Amperage Sensor Voltage	Current sensor voltage	V
Phase V Amperage	Drive motor current	A
Phase V Amperage Sensor Voltage	Current sensor voltage	V
Phase W Amperage	Drive motor current	A
Phase W Amperage Sensor Voltage	Current sensor voltage	V
Drive Motor Amperage Sensor Power Supply Voltage	Current sensor power supply voltage	V
Drive Motor Output Power Actual	Drive motor output	W
High Voltage Battery Temperature (MIN)	The lowest temperature among high voltage battery temperature values detected through multiple sensors by BECM (CAN communication data)	°C
Drive Motor Inverter Temperature A	Drive motor inverter temperature (serial)	°C
Drive Motor Inverter Temperature B	Drive motor inverter temperature (serial)	°C
Drive Motor Inverter Temperature C	Drive motor inverter temperature (serial)	°C
Drive Motor Temperature A	Drive motor temperature	°C
Drive Motor Temperature A Sensor Voltage	Drive motor temperature sensor voltage	V
Drive Motor Temperature B	Drive motor temperature	°C
Drive Motor Temperature B Sensor Voltage	Drive motor temperature sensor voltage	V
Drive Motor Inverter Operation Signal(HPCM)	Drive motor inverter operation request (HPCM) (CAN communication data)	—
Drive Motor Inverter Operation Status	Drive motor inverter operation status	—
Drive Motor Inverter Power Supply Relay Output Signal	Drive motor inverter power supply relay operation signal	—
Drive Motor Inverter Power Supply Relay Output Actual	Monitor signal for drive motor inverter power supply relay operation signal	—
Contactor Signal(HPCM)	Contactor operation request status (HPCM) (CAN communication data)	—
Contactor Weld Diagnosis Status	Contactor stuck closed status judged by BECM (CAN communication data)	—
Contactor Close Status	Contactor close status judged by BECM (CAN communication data)	—

Display	Contents	Unit of measure
Contactor Close Sequence Status	Contactor status judged by BECM (CAN communication data)	—
Contactor Open Status	Contactor status judged by BECM (CAN communication data)	—
High Voltage Battery Cooling Fan Duty Target (HPCM)	High voltage battery cooling fan duty target calculated by HPCM (CAN communication data)	%
High Voltage Battery Cooling Fan Duty Output	High voltage battery cooling fan duty	%
High Voltage Battery Cooling Fan Speed	High voltage battery cooling fan speed	rpm
DCDC Converter Output Permit Signal (HPCM)	DC/DC converter output permission status calculated by HPCM (CAN communication data)	—
DCDC Converter Output Voltage Target (HPCM)	DC/DC converter output indicate voltage calculated by HPCM (CAN communication data)	V
DCDC Converter Output Voltage Actual	Voltage output at DC/DC converter	V
DCDC Converter Output Amperage	Current output at DC/DC converter	A
DCDC Converter Output Limit Amperage	DC/DC converter set value	A
DCDC Converter Input Voltage	Input high voltage detected at DC/DC converter	V
DCDC Converter Temperature	Temperature calculated at DC/DC converter	°C
DCDC Converter Status Check	DC/DC converter control value	—
DCDC Converter Check 1	DC/DC converter control value	—
DCDC Converter Check 2	DC/DC converter control value	—
DCDC Converter Operation Update Signal Count (Serial)	DC/DC converter operation counter	Count
DCDC Converter Output Permit Signal (Serial)	DC/DC converter output permission Serial transmission data (DMCM)	—
DCDC Converter Output Voltage Target (Serial)	DC/DC converter output indicate voltage Serial transmission data (DMCM)	V
DCDC Converter Initialize Completion	DC/DC converter initialize completion status	—
DCDC Converter Serial Check	DC/DC converter serial communication failure	—
Drive Motor Inverter Control Mode Target(HPCM)	Target control mode of drive motor inverter calculated by HPCM	—
Sequence Status Check	DMCM set value	—
Drive Motor Inverter Check	DMCM input value	—
Drive Motor Torque Limit Check	DMCM output value	—
Drive Motor Torque Limit Status	DMCM output value	—
Drive Motor Mechanical Angle Pulse	Drive motor mechanical angle	Pulse
DMCU Check A	DMCM detailed information A	—

Display	Contents	Unit of measure
DMCU Check B	DMCM detailed information B	—
DMCU Check C	DMCM detailed information C	—
DMCU Check D	DMCM detailed information D	—
System Check 1	Detailed information 1	—
System Check 2	Detailed information 2	—
Drive Motor Control Mode Check 1	DMCM control information 1	—

3. BATTERY ENERGY CONTROL SYSTEM

1) On «Main Menu» display, select {Each System Check}.
2) On «Each System Check» display, select {HEV System}.
3) On «HEV System» display, select {Battery Energy Control System}.
4) On «Battery Energy Control System» display, select {Freeze Frame Data Display}.

Display	Contents	Unit of measure

15.System Operation Check Mode

A: OPERATION

CAUTION:
After System Operation Check Mode is run, perform the Clear Memory Mode.

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

1. HYBRID POWERTRAIN CONTROL SYSTEM

1) On «Main Menu» display, select {Each System Check}.
2) On «Each System Check» display, select {HEV System}.
3) On «HEV System» display, select {Hybrid Powertrain Control System}.
4) On «Hybrid Powertrain Control System» display, select {Work Support}.
5) On «Work Support» display, select {System Operation Check Mode}.

NOTE:
A communication error will be displayed if any other modes are run while performing {System Operation Check Mode}.

Items under system operation check mode	Display	Note
ISG Cranking Operation	—	Perform engine cranking with integrated starter generator (ISG). Example of use: Used to check engine start with integrated starter generator (ISG).
ISG Voltage Control	Mid High ExtraHigh	Perform generated voltage control with the integrated starter generator (ISG). Example of use: Used to check electrical charge with integrated starter generator (ISG).
Brake Vacuum Pump System Check	—	Brake vacuum pump operates. Example of use: Used to check brake vacuum pump as a single unit.
12V Battery Relay Operation	—	Switch the 12V battery relay on/off. Example of use: Used to check operation of the 12V battery relay.
DCDC Converter Output Voltage Control	Mid High	Perform DC/DC converter output voltage control. Example of use: Used to check DC/DC converter as a single unit.
Engine only Drive Mode*	—	Drive vehicle without motor operation. Example of use: Used to check influence by motor for diagnosing noise or vibration problem.
Auto Start Stop Cancel Drive Mode (Engine only or Engine + Motor)*	—	Drive vehicle without operating Auto Start Stop or motor. (Transition of mode is possible in the operation described in Notes in the margin.) Example of use: Used to check influence by engine and motor for diagnosing noise or vibration problem. It is also used to drive vehicle or perform inspection with Auto Start Stop deactivated.

*: During this mode, the hybrid fail lamp blinks and the message “Hybrid system service mode is active” is displayed in MFD. The maintenance mode will end after 30 seconds or more have passed since the ignition switch is OFF.

NOTE:
In «Auto Start Stop Cancel Drive Mode (Engine only or Engine + Motor)», transition of mode is enabled by performing the following operation.
1. Turn the ignition switch to ON and perform the following procedures while depressing the brake pedal before starting the engine.
2. Set the shift lever to “N” and depress the accelerator pedal twice. (Fully closed → Fully open → Fully closed → Fully open)

3. Set the shift lever to “P” and depress the accelerator pedal twice. (Fully closed → Fully open → Fully closed → Fully open)
4. Set the shift lever to “N” and depress the accelerator pedal twice. (Fully closed → Fully open → Fully closed → Fully open)
5. Shift into P range.
(The hybrid fail lamp in the combination meter blinks, indicating that the service mode is active in MFD.)
6. Start the engine.
7. The maintenance mode will end after 30 seconds or more have passed since the ignition switch is OFF.
   *: This operation must be performed within 60 seconds after the ignition is turned ON.
   *: If the accelerator pedal is operated too fast, the operation may not be accepted.
   *: If any procedures are performed improperly, they are not accepted until the ignition switch is turned OFF.
   *: If any abnormal conditions are detected, cancel the procedure.

2. DRIVE MOTOR CONTROL SYSTEM

1) On «Main Menu» display, select {Each System Check}.
2) On «Each System Check» display, select {HEV System}.
3) On «HEV System» display, select {Drive Motor Control System}.
4) On «Drive Motor Control System» display, select {Work Support}.
5) On «Work Support» display, select {System Operation Check Mode}.

Items under system operation check mode	Display		Note
High Voltage Battery Cooling Fan	Target Output Mode	Stop Step1 Step2 Step3	Perform high voltage battery cooling fan compulsory drive. Example of use: Used to check high voltage battery cooling fan circuits.
	High Voltage Battery Cooling Fan Speed	0 — 6000 rpm	
Drive Motor Inverter power supply relay	Target Output Mode	OFF ON	Perform high voltage battery cooling fan/drive motor inverter power supply relay compulsory drive. Example of use: Used to check operation of high voltage battery cooling fan/drive motor inverter power supply relay.
	Drive Motor Inverter Operation Update Signal Count (Serial)	0 — 255 Count	

NOTE:
The conditions listed below must be met to perform the mode.

Display of current data	Value
Ignition switch	ON
ECU ACC	11.0 V or more
Drive Motor Inverter Operation Signal(HPCM)	OFF
Contactor Open Status	Open
High Voltage Battery Cooling Fan Duty Target (HPCM)	0%

16.List of Diagnostic Trouble Code (DTC)

A: LIST

1. HYBRID POWERTRAIN CONTROL SYSTEM

DTC	Item	Note
P0506	Idle Air Control System RPM Lower Than Expected	<Ref. to HEV(diag)-91, DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0507	Idle Air Control System RPM Higher Than Expected	<Ref. to HEV(diag)-92, DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0516	Battery Temperature Sensor Circuit Low	<Ref. to HEV(diag)-93, DTC P0516 BATTERY TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0517	Battery Temperature Sensor Circuit High	<Ref. to HEV(diag)-95, DTC P0517 BATTERY TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0556	Brake Booster Pressure Sensor Circuit Range/Performance	<Ref. to HEV(diag)-97, DTC P0556 BRAKE BOOSTER PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0572	Brake Switch "A" [Stop Lamp Switch] Circuit Low	<Ref. to HEV(diag)-100, DTC P0572 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0573	Brake Switch "A" [Stop Lamp Switch] Circuit High	<Ref. to HEV(diag)-101, DTC P0573 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P057B	Brake Pedal Position Sensor Circuit Range/Performance	<Ref. to HEV(diag)-102, DTC P057B BRAKE PEDAL POSITION SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P057C	Brake Pedal Position Sensor Circuit Low	<Ref. to HEV(diag)-104, DTC P057C BRAKE PEDAL POSITION SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P057D	Brake Pedal Position Sensor Circuit High	<Ref. to HEV(diag)-106, DTC P057D BRAKE PEDAL POSITION SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P058D	Battery Monitor Module Voltage Monitoring Performance	<Ref. to HEV(diag)-108, DTC P058D BATTERY MONITOR MODULE VOLTAGE MONITORING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	Internal Control Module Random Access Memory (RAM) Error	<Ref. to HEV(diag)-110, HYBRID POWERTRAIN CONTROL SYSTEM, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0605	Internal Control Module Read Only Memory (ROM) Error	<Ref. to HEV(diag)-112, HYBRID POWERTRAIN CONTROL SYSTEM, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0620	Generator Control Circuit	<Ref. to HEV(diag)-114, DTC P0620 GENERATOR CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P065A	Generator System Performance	<Ref. to HEV(diag)-116, DTC P065A GENERATOR SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P06EF	Engine Restart Performance	<Ref. to HEV(diag)-119, DTC P06EF ENGINE RESTART PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0719	Brake Switch "B" Circuit Low	<Ref. to HEV(diag)-121, DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0724	Brake Switch "B" Circuit High	<Ref. to HEV(diag)-122, DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A1D	Hybrid Powertrain Control Module	<Ref. to HEV(diag)-123, DTC P0A1D HYBRID POWERTRAIN CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C00	Battery "2" Monitor Module Performance	<Ref. to HEV(diag)-124, DTC P1C00 BATTERY "2" MONITOR MODULE PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C04	Output Clutch Linear Solenoid Control Circuit Low	<Ref. to HEV(diag)-125, DTC P1C04 OUTPUT CLUTCH LINEAR SOLENOID CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C05	Output Clutch Linear Solenoid Control Circuit High	<Ref. to HEV(diag)-127, DTC P1C05 OUTPUT CLUTCH LINEAR SOLENOID CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P1C06	12V Battery Relay Close Circuit Performance	<Ref. to HEV(diag)-129, DTC P1C06 12V BATTERY RELAY CLOSE CIRCUIT PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C07	12V Battery Relay Open Circuit Performance	<Ref. to HEV(diag)-131, DTC P1C07 12V BATTERY RELAY OPEN CIRCUIT PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C08	12V Battery Relay Performance or Stuck Off	<Ref. to HEV(diag)-133, DTC P1C08 12V BATTERY RELAY PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C09	12V Battery Relay Performance or Stuck On	<Ref. to HEV(diag)-135, DTC P1C09 12V BATTERY RELAY PERFORMANCE OR STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C0C	Brake Pedal Position Sensor "2" Circuit Low	<Ref. to HEV(diag)-136, DTC P1C0C BRAKE PEDAL POSITION SENSOR "2" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C0D	Brake Pedal Position Sensor "2" Circuit High	<Ref. to HEV(diag)-138, DTC P1C0D BRAKE PEDAL POSITION SENSOR "2" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C10	Vacuum Pump Performance	<Ref. to HEV(diag)-140, DTC P1C10 VACUUM PUMP PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C11	Vacuum Pump Supply Voltage Low	<Ref. to HEV(diag)-141, DTC P1C11 VACUUM PUMP SUPPLY VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C12	Vacuum Pump Supply Voltage High	<Ref. to HEV(diag)-143, DTC P1C12 VACUUM PUMP SUPPLY VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C14	Generator Performance	<Ref. to HEV(diag)-144, DTC P1C14 GENERATOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C16	Idle Control System RPM Lower Than Expected (HPCM)	<Ref. to HEV(diag)-145, DTC P1C16 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED (HPCM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C17	Idle Control System RPM Higher Than Expected (HPCM)	<Ref. to HEV(diag)-145, DTC P1C17 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED (HPCM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C18	Generator System "B" Performance	<Ref. to HEV(diag)-146, DTC P1C18 GENERATOR SYSTEM "B" PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C1E	Autodisconnect Experience	<Ref. to HEV(diag)-148, DTC P1C1E AUTODISCONNECT EXPERIENCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2158	Vehicle Speed Sensor "B"	<Ref. to HEV(diag)-148, DTC P2158 VEHICLE SPEED SENSOR "B", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	Control Module Communication Bus Off	<Ref. to HEV(diag)-319, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U0412	Invalid Data Received From Battery Energy Control Module	<Ref. to HEV(diag)-323, DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1290	Lost Communication With Hybrid Powertrain Control Module HEV-CAN	<Ref. to HEV(diag)-326, DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1591	Invalid Data Received From Hybrid Powertrain Control Module HEV-CAN	<Ref. to HEV(diag)-326, DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

3. BATTERY ENERGY CONTROL SYSTEM

DTC	Item	Note
P0604	Internal Control Module Random Access Memory (RAM) Error	<Ref. to HEV(diag)-111, BATTERY ENERGY CONTROL SYSTEM, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0605	Internal Control Module Read Only Memory (ROM) Error	<Ref. to HEV(diag)-113, BATTERY ENERGY CONTROL SYSTEM, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062F	Internal Control Module EEPROM Error	<Ref. to HEV(diag)-272, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A1F	Battery Energy Control Module	<Ref. to HEV(diag)-273, DTC P0A1F BATTERY ENERGY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A7D	Hybrid Battery Pack State of Charge Low	<Ref. to HEV(diag)-274, DTC P0A7D HYBRID BATTERY PACK STATE OF CHARGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A7E	Hybrid Battery Pack Over Temperature	<Ref. to HEV(diag)-275, DTC P0A7E HYBRID BATTERY PACK OVER TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A7F	Hybrid Battery Pack Deterioration	<Ref. to HEV(diag)-277, DTC P0A7F HYBRID BATTERY PACK DETERIORATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0A95	High Voltage Fuse	<Ref. to HEV(diag)-278, DTC P0A95 HIGH VOLTAGE FUSE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A9C	Hybrid Battery Temperature Sensor "A" Circuit Range/Performance	<Ref. to HEV(diag)-279, DTC P0A9C HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A9D	Hybrid Battery Temperature Sensor "A" Circuit Low	<Ref. to HEV(diag)-279, DTC P0A9D HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0A9E	Hybrid Battery Temperature Sensor "A" Circuit High	<Ref. to HEV(diag)-279, DTC P0A9E HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AA4	Hybrid Battery Negative Contactor Circuit Stuck Closed	<Ref. to HEV(diag)-280, DTC P0AA4 HYBRID BATTERY NEGATIVE CONTACTOR CIRCUIT STUCK CLOSED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AA6	Hybrid Battery Voltage System Isolation Fault	<Ref. to HEV(diag)-281, DTC P0AA6 HYBRID BATTERY VOLTAGE SYSTEM ISOLATION FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AA7	Hybrid Battery Voltage System Isolation Sensor Circuit	<Ref. to HEV(diag)-285, DTC P0AA7 HYBRID BATTERY VOLTAGE SYSTEM ISOLATION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AAD	Hybrid Battery Pack Air Temperature Sensor "A" Circuit Range/Performance	<Ref. to HEV(diag)-285, DTC P0AAD HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AAE	Hybrid Battery Pack Air Temperature Sensor "A" Circuit Low	<Ref. to HEV(diag)-285, DTC P0AAE HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AAF	Hybrid Battery Pack Air Temperature Sensor "A" Circuit High	<Ref. to HEV(diag)-285, DTC P0AAF HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ABF	Hybrid Battery Pack Current Sensor "A" Circuit	<Ref. to HEV(diag)-286, DTC P0ABF HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC0	Hybrid Battery Pack Current Sensor "A" Circuit Range/Performance	<Ref. to HEV(diag)-286, DTC P0AC0 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC1	Hybrid Battery Pack Current Sensor "A" Circuit Low	<Ref. to HEV(diag)-286, DTC P0AC1 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC2	Hybrid Battery Pack Current Sensor "A" Circuit High	<Ref. to HEV(diag)-286, DTC P0AC2 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC3	Hybrid Battery Pack Current Sensor "A" Circuit Intermittent/Erratic	<Ref. to HEV(diag)-287, DTC P0AC3 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC6	Hybrid Battery Temperature Sensor "B" Circuit Range/Performance	<Ref. to HEV(diag)-288, DTC P0AC6 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC7	Hybrid Battery Temperature Sensor "B" Circuit Low	<Ref. to HEV(diag)-288, DTC P0AC7 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AC8	Hybrid Battery Temperature Sensor "B" Circuit High	<Ref. to HEV(diag)-288, DTC P0AC8 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ACB	Hybrid Battery Temperature Sensor "C" Circuit Range/Performance	<Ref. to HEV(diag)-288, DTC P0ACB HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ACC	Hybrid Battery Temperature Sensor "C" Circuit Low	<Ref. to HEV(diag)-289, DTC P0ACC HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ACD	Hybrid Battery Temperature Sensor "C" Circuit High	<Ref. to HEV(diag)-289, DTC P0ACD HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0AD9	Hybrid Battery Positive Contactor Control Circuit/Open	<Ref. to HEV(diag)-289, DTC P0AD9 HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ADB	Hybrid Battery Positive Contactor Control Circuit Low	<Ref. to HEV(diag)-289, DTC P0ADB HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ADD	Hybrid Battery Negative Contactor Control Circuit/Open	<Ref. to HEV(diag)-290, DTC P0ADD HYBRID BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0ADF	Hybrid Battery Negative Contactor Control Circuit Low	<Ref. to HEV(diag)-290, DTC P0ADF HYBRID BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AE4	Hybrid Battery Precharge Contactor Control Circuit	<Ref. to HEV(diag)-290, DTC P0AE4 HYBRID BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0AE6	Hybrid Battery Precharge Contactor Control Circuit Low	<Ref. to HEV(diag)-290, DTC P0AE6 HYBRID BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B25	Hybrid Battery "A" Voltage Low	<Ref. to HEV(diag)-291, DTC P0B25 HYBRID BATTERY "A" VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B26	Hybrid Battery "A" Voltage High	<Ref. to HEV(diag)-293, DTC P0B26 HYBRID BATTERY "A" VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B37	High Voltage Service Disconnect Open	<Ref. to HEV(diag)-295, DTC P0B37 HIGH VOLTAGE SERVICE DISCONNECT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B3C	Hybrid Battery Voltage Sense "A" Circuit Range/Performance	<Ref. to HEV(diag)-296, DTC P0B3C HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B3D	Hybrid Battery Voltage Sense "A" Circuit Low	<Ref. to HEV(diag)-296, DTC P0B3D HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B3E	Hybrid Battery Voltage Sense "A" Circuit High	<Ref. to HEV(diag)-296, DTC P0B3E HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B41	Hybrid Battery Voltage Sense "B" Circuit Range/Performance	<Ref. to HEV(diag)-297, DTC P0B41 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B42	Hybrid Battery Voltage Sense "B" Circuit Low	<Ref. to HEV(diag)-297, DTC P0B42 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B43	Hybrid Battery Voltage Sense "B" Circuit High	<Ref. to HEV(diag)-297, DTC P0B43 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B46	Hybrid Battery Voltage Sense "C" Circuit Range/Performance	<Ref. to HEV(diag)-297, DTC P0B46 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B47	Hybrid Battery Voltage Sense "C" Circuit Low	<Ref. to HEV(diag)-298, DTC P0B47 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B48	Hybrid Battery Voltage Sense "C" Circuit High	<Ref. to HEV(diag)-298, DTC P0B48 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4A	Hybrid Battery Voltage Sense "D" Circuit	<Ref. to HEV(diag)-298, DTC P0B4A HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4B	Hybrid Battery Voltage Sense "D" Circuit Range/Performance	<Ref. to HEV(diag)-298, DTC P0B4B HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4C	Hybrid Battery Voltage Sense "D" Circuit Low	<Ref. to HEV(diag)-298, DTC P0B4C HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B4D	Hybrid Battery Voltage Sense "D" Circuit High	<Ref. to HEV(diag)-299, DTC P0B4D HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0B50	Hybrid Battery Voltage Sense "E" Circuit Range/Performance	<Ref. to HEV(diag)-299, DTC P0B50 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B51	Hybrid Battery Voltage Sense "E" Circuit Low	<Ref. to HEV(diag)-299, DTC P0B51 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B52	Hybrid Battery Voltage Sense "E" Circuit High	<Ref. to HEV(diag)-299, DTC P0B52 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B55	Hybrid Battery Voltage Sense "F" Circuit Range/Performance	<Ref. to HEV(diag)-300, DTC P0B55 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B56	Hybrid Battery Voltage Sense "F" Circuit Low	<Ref. to HEV(diag)-300, DTC P0B56 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B57	Hybrid Battery Voltage Sense "F" Circuit High	<Ref. to HEV(diag)-300, DTC P0B57 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B5A	Hybrid Battery Voltage Sense "G" Circuit Range/Performance	<Ref. to HEV(diag)-300, DTC P0B5A HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B5B	Hybrid Battery Voltage Sense "G" Circuit Low	<Ref. to HEV(diag)-301, DTC P0B5B HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0B5C	Hybrid Battery Voltage Sense "G" Circuit High	<Ref. to HEV(diag)-301, DTC P0B5C HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0BB8	Hybrid Battery Voltage Sense "Z" Circuit	<Ref. to HEV(diag)-301, DTC P0BB8 HYBRID BATTERY VOLTAGE SENSE "Z" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0C30	Hybrid Battery Pack State of Charge High	<Ref. to HEV(diag)-302, DTC P0C30 HYBRID BATTERY PACK STATE OF CHARGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0C78	Hybrid Battery System Precharge Time Too Long	<Ref. to HEV(diag)-303, DTC P0C78 HYBRID BATTERY SYSTEM PRECHARGE TIME TOO LONG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0CA6	Hybrid Battery Charging Current High	<Ref. to HEV(diag)-306, DTC P0CA6 HYBRID BATTERY CHARGING CURRENT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0CA7	Hybrid Battery Discharging Current High	<Ref. to HEV(diag)-308, DTC P0CA7 HYBRID BATTERY DISCHARGING CURRENT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C40	Hybrid Battery Positive Contactor or Pre-Charge Contactor Circuit Stuck Closed	<Ref. to HEV(diag)-310, DTC P1C40 HYBRID BATTERY POSITIVE CONTACTOR OR PRE-CHARGE CONTACTOR CIRCUIT STUCK CLOSED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C41	High Voltage Circuit Short	<Ref. to HEV(diag)-312, DTC P1C41 HIGH VOLTAGE CIRCUIT SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C42	High Voltage Circuit Open	<Ref. to HEV(diag)-315, DTC P1C42 HIGH VOLTAGE CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C43	Hybrid Battery Contactor Power Supply Circuit	<Ref. to HEV(diag)-317, DTC P1C43 HYBRID BATTERY CONTACTOR POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C44	Sub CPU in BECM	<Ref. to HEV(diag)-317, DTC P1C44 SUB CPU IN BECM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C45	Hybrid Battery Block 1 Balancing Performance	<Ref. to HEV(diag)-318, DTC P1C45 HYBRID BATTERY BLOCK 1 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C46	Hybrid Battery Block 2 Balancing Performance	<Ref. to HEV(diag)-318, DTC P1C46 HYBRID BATTERY BLOCK 2 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C47	Hybrid Battery Block 3 Balancing Performance	<Ref. to HEV(diag)-318, DTC P1C47 HYBRID BATTERY BLOCK 3 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C48	Hybrid Battery Block 4 Balancing Performance	<Ref. to HEV(diag)-318, DTC P1C48 HYBRID BATTERY BLOCK 4 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C49	Hybrid Battery Block 5 Balancing Performance	<Ref. to HEV(diag)-318, DTC P1C49 HYBRID BATTERY BLOCK 5 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C4A	Hybrid Battery Block 6 Balancing Performance	<Ref. to HEV(diag)-319, DTC P1C4A HYBRID BATTERY BLOCK 6 BALANCING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P1C5E	Hybrid Battery Block Voltage Too Low	<Ref. to HEV(diag)-319, DTC P1C5E HYBRID BATTERY BLOCK VOLTAGE TOO LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0076	Control Module Communication Bus "HEV-CAN" Off	<Ref. to HEV(diag)-320, DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0110	Lost Communication With Drive Motor Control Module "A"	<Ref. to HEV(diag)-320, DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0411	Invalid Data Received From Drive Motor Control Module "A"	<Ref. to HEV(diag)-323, DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1290	Lost Communication With Hybrid Powertrain Control Module HEV-CAN	<Ref. to HEV(diag)-326, DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1591	Invalid Data Received From Hybrid Powertrain Control Module HEV-CAN	<Ref. to HEV(diag)-326, DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

17.Fail-Safe Chart

A: LIST

1. HYBRID POWERTRAIN CONTROL SYSTEM

If any of the following DTCs are stored in the hybrid powertrain control system, the vehicle enter the appropriate fail safe pattern.

DTC	Fail safe pattern	Prohibited concurrent controls	Availability of system operation check mode
P0506	Fail safe pattern 1: Illuminates the hybrid fail lamp.	—	*2
P0507		—	*2
P0516		—	*2
P0517		—	*2
P0572		—	*2
P0573		—	*2
P058D		—	*4

18.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED

DIAGNOSIS:

• Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)

• GENERAL DESCRIPTION <Ref. to GD(HEV)-11, DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Engine • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK AIR CLEANER ELEMENT.** 1) Turn the ignition switch to OFF. 2) Check the air cleaner element.	Is there excessive clogging on air cleaner element?	Replace the air cleaner element. <Ref. to IN(H4DO(w/o HEV))-4, Air Cleaner Element.>	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Remove the electronic throttle control. <Ref. to FU(H4DO(w/o HEV))-15, REMOVAL, Throttle Body.> 2) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101 of engine. <Ref. to EN(H4DO HEV)(diag)-327, DTC P2101 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED

DIAGNOSIS:

• Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)

• GENERAL DESCRIPTION <Ref. to GD(HEV)-12, DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

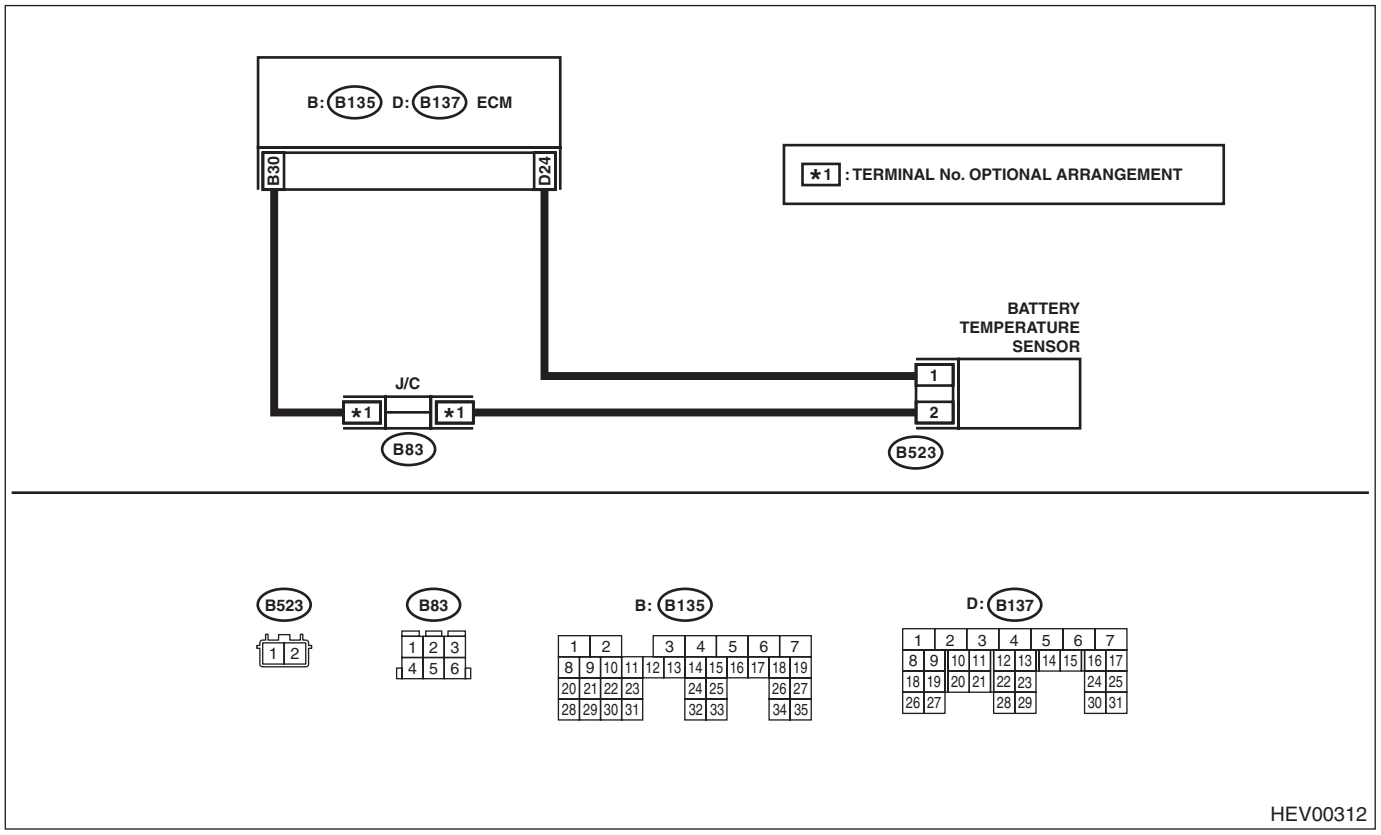
	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Engine • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK AIR INTAKE SYSTEM.** 1) Start and idle the engine. 2) Check the following items. • Loose installation of intake manifold and throttle body • Cracks of intake manifold gasket and throttle body gasket • Disconnection of vacuum hoses	Is there any fault in air intake system?	Repair air suction and leaks.	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control. <Ref. to FU(H4DO(w/o HEV))-15, REMOVAL, Throttle Body.> 3) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101 of engine. <Ref. to EN(H4DO HEV)(diag)-327, DTC P2101 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC P0516 BATTERY TEMPERATURE SENSOR CIRCUIT LOW

DIAGNOSIS:

- Detects short circuit to ground of 12 volt auxiliary battery temperature sensor harness.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Engine electrical system <Ref. to WI(HEV)-100, WIRING DIAGRAM, Engine Electrical System.>

HEV00312

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «12V Auxiliary Battery Temperature». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 100°C (212°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

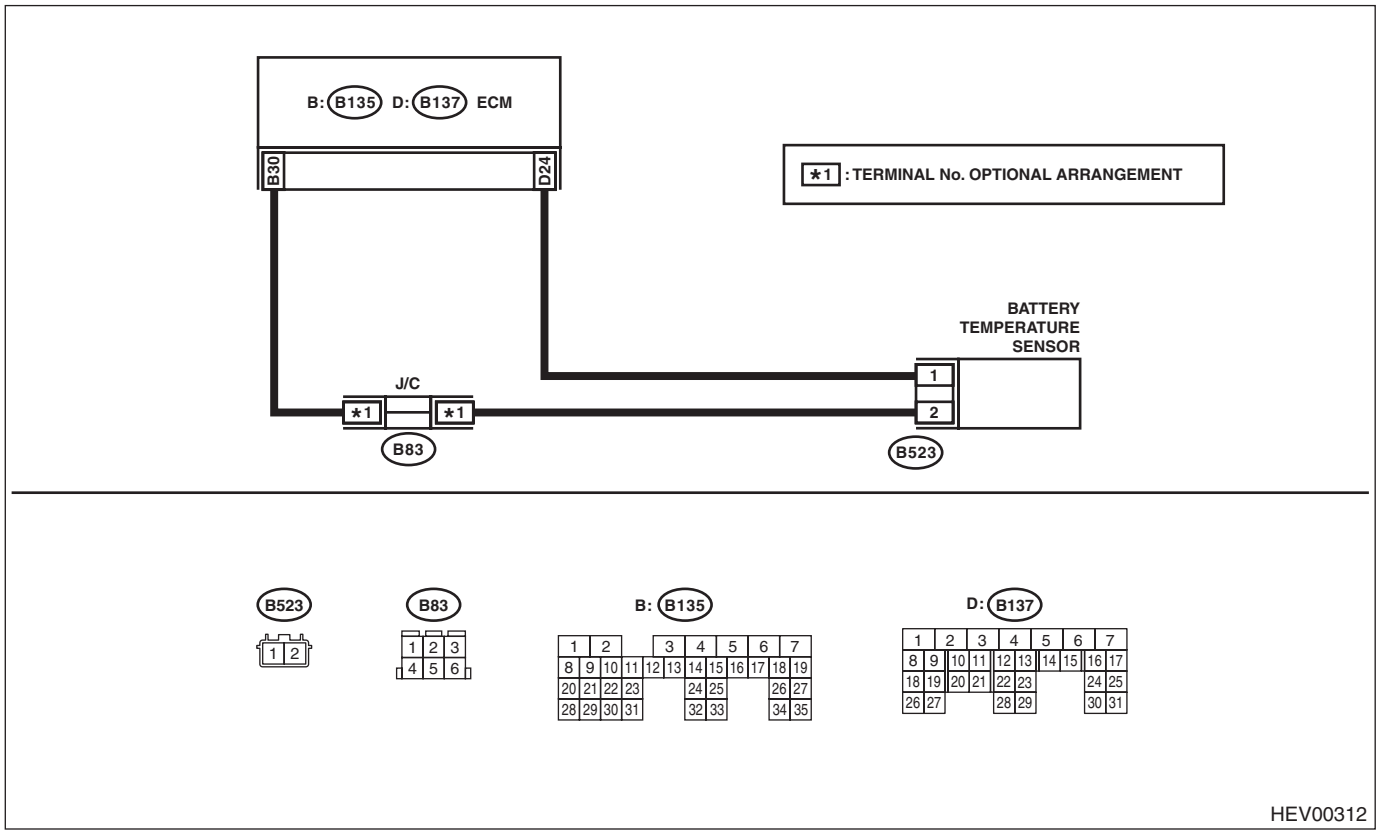
	Step	Check	Yes	No
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector and battery temperature sensor connector. 3) Using a tester, measure the resistance between the ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 24 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the battery temperature sensor. <Ref. to SC(H4DO(HEV))-56, Battery Temperature Sensor.>	Repair the short circuit to ground in the harness between the ECM connector and battery temperature sensor connector.

D: DTC P0517 BATTERY TEMPERATURE SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Detects open circuit and short circuit of 12 volt auxiliary battery temperature sensor harness.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Engine electrical system <Ref. to WI(HEV)-100, WIRING DIAGRAM, Engine Electrical System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «12V Auxiliary Battery Temperature». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value –40°C (–40°F) or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

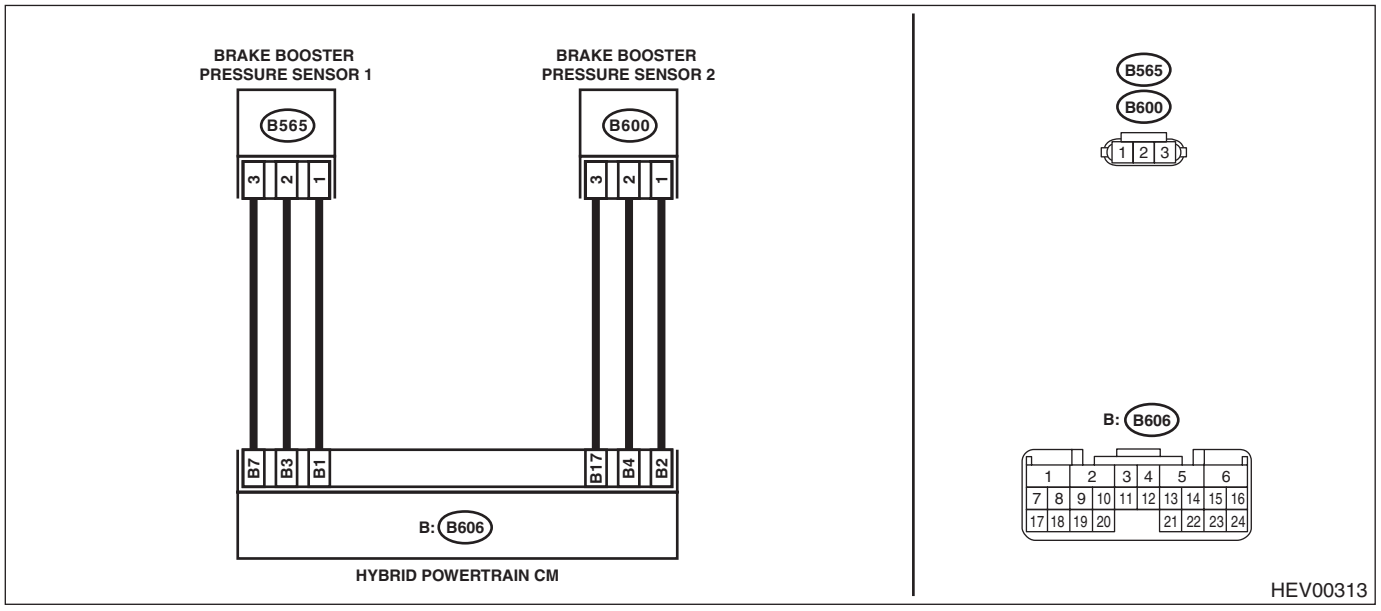
	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the ECM and battery temperature sensor. 3) Using a tester, measure the resistance of harness between ECM connector and battery temperature sensor connector. ***Connector & terminal*** ***(B137) No. 24 — (B523) No. 1:*** ***(B135) No. 30 — (B523) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in the harness between the ECM connector and battery temperature sensor connector.
3	**CHECK HARNESS (SHORT TO POWER).** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 24 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and battery temperature sensor connector.	Replace the battery temperature sensor. <Ref. to SC(H4DO(HEV))-56, Battery Temperature Sensor.>

E: DTC P0556 BRAKE BOOSTER PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions of brake booster pressure sensor range/performance.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs (brake booster pressure sensor related) detected? (current malfunction)	First diagnose other DTCs.	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 1»«Power Sensor Voltage 2». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Go to step **9**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Depress the brake pedal 10 times. 3) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Brake Booster Pressure 1»«Brake Booster Pressure 2»«Atmosphere Pressure». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Do «Brake Booster Pressure 1»«Brake Booster Pressure 2»«Atmosphere Pressure» match?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK SENSORS.** 1) Interchange brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Turn the ignition switch to ON. 3) Depress the brake pedal 10 times. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Brake Booster Pressure 1»«Brake Booster Pressure 2». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Did those two values interchange each other?	Replace the brake booster. <Ref. to BR-49, Brake Booster.>	Go to step **5**.
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Brake Booster Pressure Sensor Voltage 1»«Brake Booster Pressure Sensor Voltage 2». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value between 0.3 — 4.7 V?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	If 0.3 V or less Go to step **6**. If 4.7 V or more Go to step **7**.
6	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2 and the HPCM connector. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and chassis ground. ***Connector & terminal*** ***(B565) No. 2 — Chassis ground:*** ***(B600) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the ground short circuit of harness between HPCM connector and brake booster pressure sensor connector.

	Step	Check	Yes	No
7	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and the HPCM connector. ***Connector & terminal*** ***(B565) No. 2 — (B606) No. 3:*** ***(B600) No. 2 — (B606) No. 4:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair the open circuit of harness between HPCM connector and brake booster pressure sensor connector.
8	**CHECK HARNESS (SHORT TO POWER).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and chassis ground. ***Connector & terminal*** ***(B565) No. 2 (+) — Chassis ground (–):*** ***(B600) No. 2 (+) — Chassis ground (–):***	Is the voltage 5 V or less?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair short circuit to power in harness between HPCM connector and brake booster pressure sensor connector.
9	**CHECK CURRENT DATA.** 1) Disconnect the HPCM connector (B606). 2) Turn the ignition switch to ON. 3) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 1»«Power Sensor Voltage 2».	Is the value approx. 5 V?	Go to step **10**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
10	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and the HPCM connector. ***Connector & terminal*** ***(B565) No. 3 — (B606) No. 7:*** ***(B600) No. 3 — (B606) No. 17:***	Is the resistance 1 Ω or less?	Go to step **11**.	Repair the open circuit of harness between HPCM connector and brake booster pressure sensor connector.
11	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the connectors of brake booster pressure sensor 1 and brake booster pressure sensor 2. 2) Using a tester, measure the resistance between brake booster pressure sensor 1 and brake booster pressure sensor 2 connectors and chassis ground. ***Connector & terminal*** ***(B565) No. 3 — Chassis ground:*** ***(B600) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the ground short circuit of harness between HPCM connector and brake booster pressure sensor connector.

F: DTC P0572 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT LOW

DIAGNOSIS:
GENERAL DESCRIPTION <Ref. to GD(HEV)-13, DTC P0572 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>
WIRING DIAGRAM:
Stop light system <Ref. to WI(HEV)-208, WIRING DIAGRAM, Stop Light System.>

Step		Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-14, Stop Light & Brake Switch.>	Is the stop light & brake switch and installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the stop light & brake switch connector and chassis ground. ***Connector & terminal*** ***(B65) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check fuse No. 8 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance between the ECM connector and stop light & brake switch connector. ***Connector & terminal*** ***(B137) No. 7 — (B65) No. 4:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(H4DO(HEV))-85, Engine Control Module (ECM).>	Repair the open circuit of harness between ECM connector and stop light & brake switch connector.

G: DTC P0573 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT HIGH

DIAGNOSIS:

GENERAL DESCRIPTION <Ref. to GD(HEV)-14, DTC P0573 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:

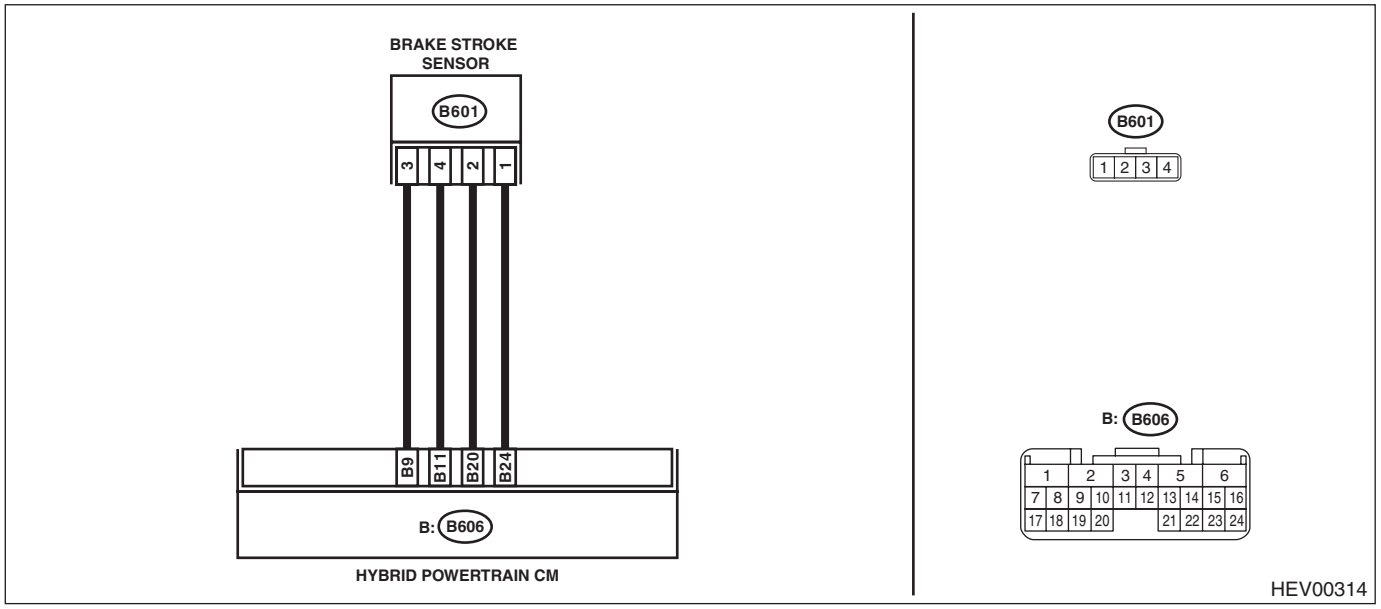
For the diagnostic procedure, refer to “DTC P0572 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT LOW”. <Ref. to HEV(diag)-100, DTC P0572 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC P057B BRAKE PEDAL POSITION SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-16, DTC P057B BRAKE PEDAL POSITION SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage»«Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

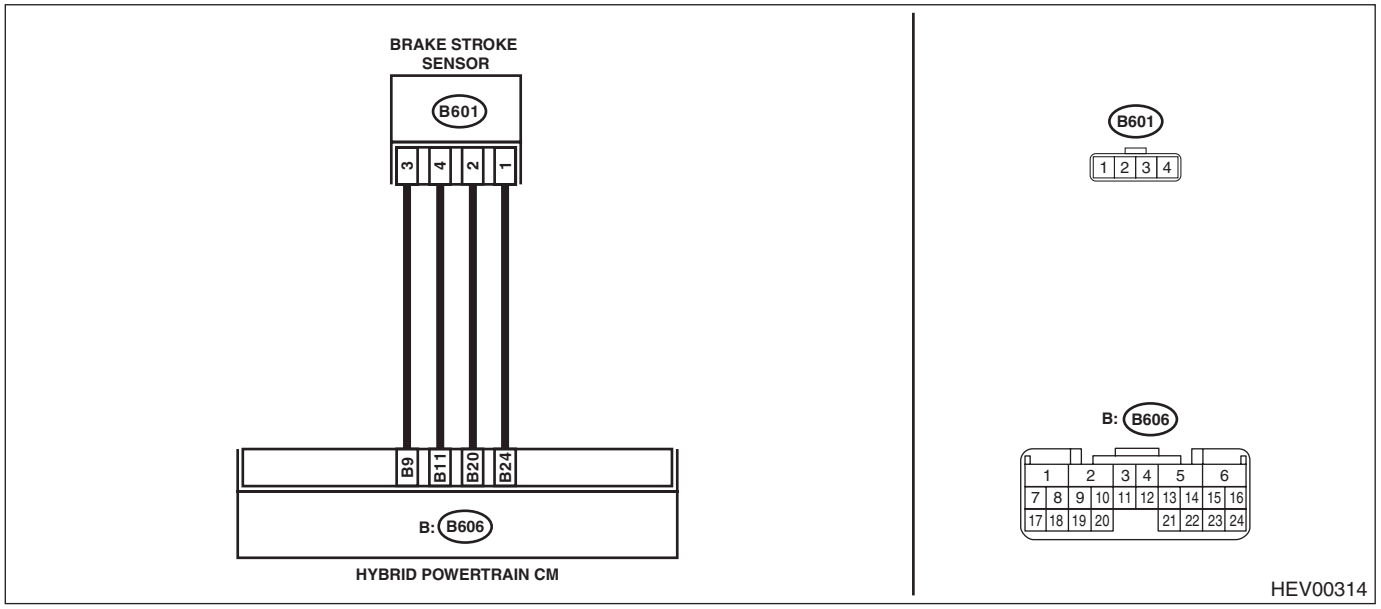
	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-40, HYBRID POWER-TRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the HPCM connector and brake stroke sensor connector. ***Connector & terminal*** ***(B601) No. 2 — (B606) No. 20:*** ***(B601) No. 4 — (B606) No. 11:*** ***(B601) No. 1 — (B606) No. 24:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
4	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 — Chassis ground:*** ***(B601) No. 4 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.
5	**CHECK HARNESS (SHORT TO POWER).** 1) Disconnect the brake stroke sensor connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 (+) — Chassis ground (–):*** ***(B601) No. 4 (+) — Chassis ground (–):*** ***(B601) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the brake pedal assembly. <Ref. to BR-68, Brake Pedal.>	Repair the short circuit to power in harness between the HPCM connector and the brake stroke sensor connector.

I: DTC P057C BRAKE PEDAL POSITION SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-18, DTC P057C BRAKE PEDAL POSITION SENSOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C0C detected? (current malfunction)	Go to step **6**.	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage»«Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

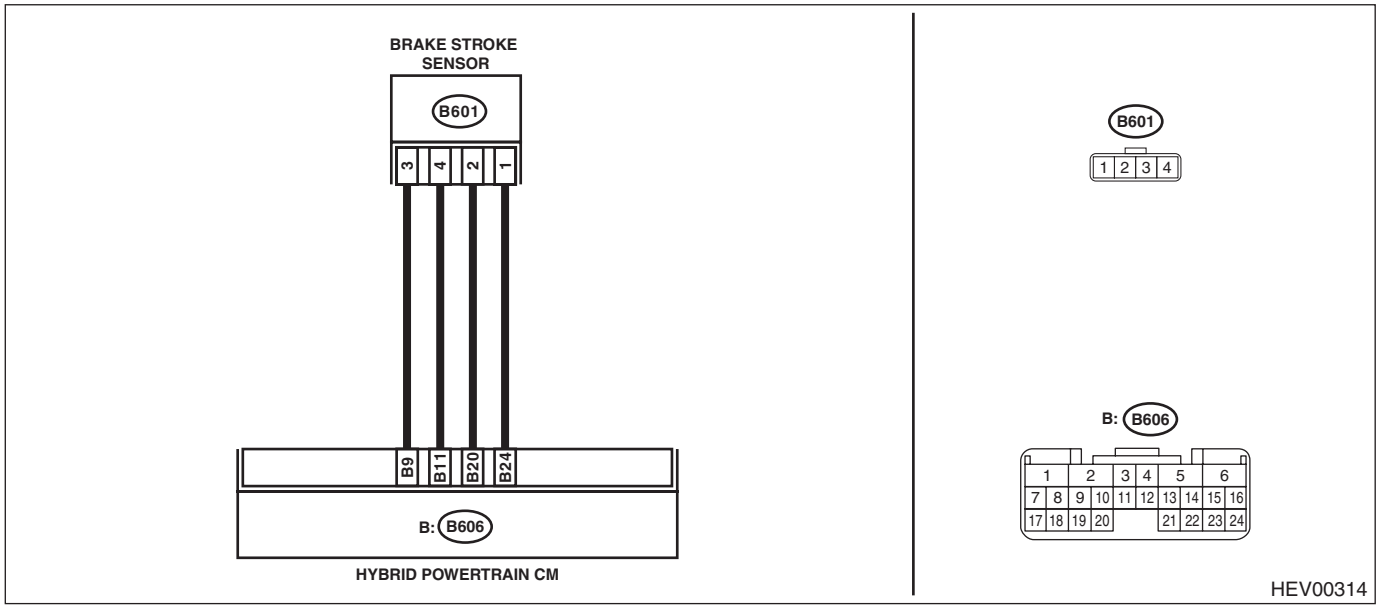
	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-40, HYBRID POWER-TRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 2 — (B606) No. 20:*** ***(B601) No. 1 — (B606) No. 24:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
5	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-68, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector and the HPCM connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 3 — (B606) No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
7	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-68, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.

J: DTC P057D BRAKE PEDAL POSITION SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-19, DTC P057D BRAKE PEDAL POSITION SENSOR CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

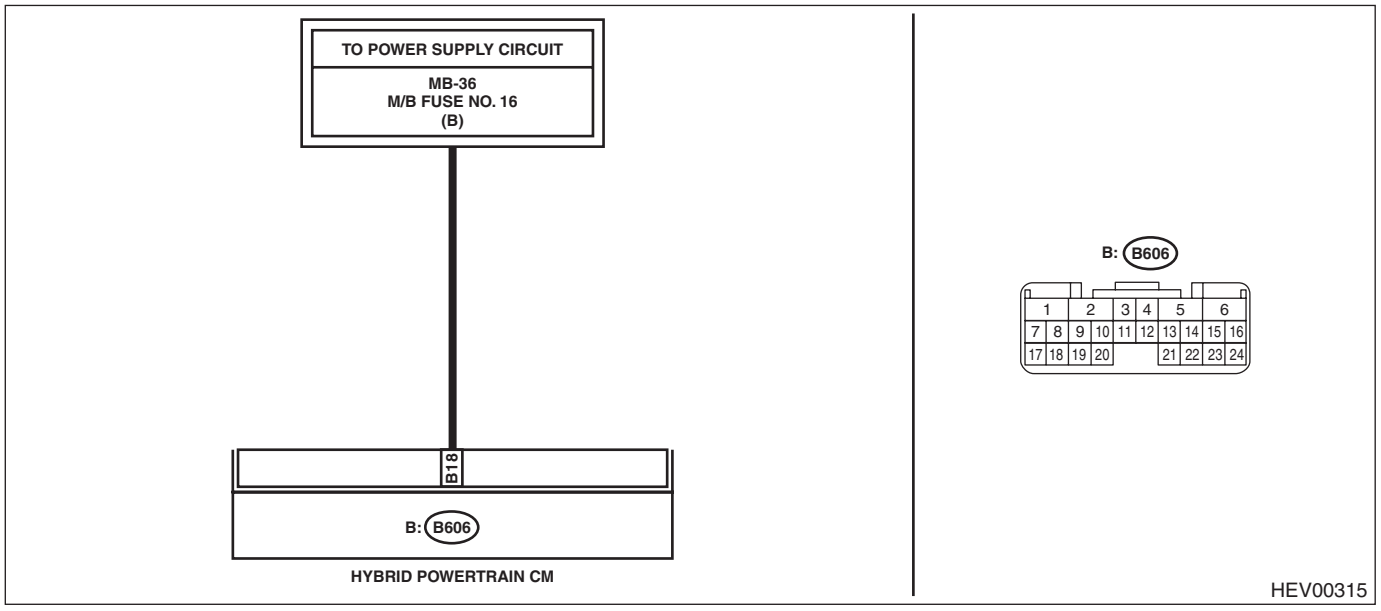
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage»«Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-40, HYBRID POWER-TRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HARNESS (SHORT TO POWER).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 2 (+) — Chassis ground (–):*** ***(B601) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the brake pedal assembly. <Ref. to BR-68, Brake Pedal.>	Repair the short circuit to power in harness between the HPCM connector and the brake stroke sensor connector.



K: DTC P058D BATTERY MONITOR MODULE VOLTAGE MONITORING PERFORMANCE

DIAGNOSIS:
- Detects open circuit and short circuit to ground of 12 volt auxiliary battery sensor.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- Normal control
- System operation check mode is prohibited. <Ref. to HEV(diag)-84, Fail-Safe Chart.>

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:
Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, repair ground short circuit of harness between HPCM connector and the battery.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «12V Auxiliary Battery Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 6 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 4) Disconnect the positive cable from the 12 volt auxiliary battery. 5) Using a tester, measure the resistance between the positive terminal of the 12 volt auxiliary battery and HPCM connector. ***Connector & terminal*** ***M/B fuse No. 16 — (B606) No. 18:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the positive terminal of the 12 volt auxiliary battery.
4	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between the positive terminal of the 12 volt auxiliary battery and chassis ground. ***Connector & terminal*** ***M/B fuse No. 16 — chassis ground:***	Is the resistance 1 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair short circuit to ground in harness between the HPCM connector and the positive terminal of the 12 volt auxiliary battery.

L: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

1. HYBRID POWERTRAIN CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-20, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK HPCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0604 detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. DRIVE MOTOR CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-20, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DMCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Read the DTC again. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0604 detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

3. BATTERY ENERGY CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-20, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

M: DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

1. HYBRID POWERTRAIN CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-22, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK HPCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF → ON. 3) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0605 detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. DRIVE MOTOR CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-22, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DMCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Read the DTC again. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0605 detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

3. BATTERY ENERGY CONTROL SYSTEM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-22, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

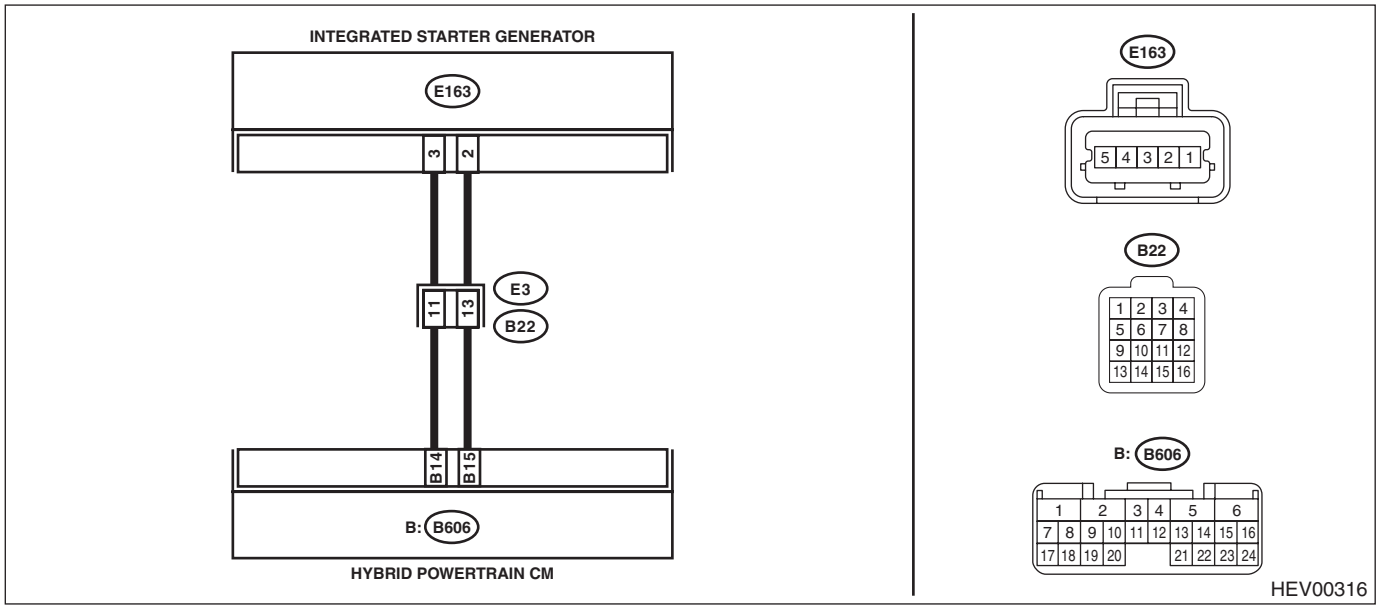
	Step	Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

N: DTC P0620 GENERATOR CONTROL CIRCUIT

DIAGNOSIS:

- Detects open circuit, short circuit to ground, and short circuit to power in ISG INHCRK line.
- Immediately at fault recognition

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Disconnect the integrated starter generator connector. 3) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B606) No. 14 — (E163) No. 3:*** ***(B606) No. 15 — (E163) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of the harness between the HPCM connector and integrated starter generator connector, or repair the intermediate connector.
2	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 14 — Chassis ground:*** ***(B606) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in the harness between the HPCM connector and integrated starter generator connector, or repair the intermediate connector.

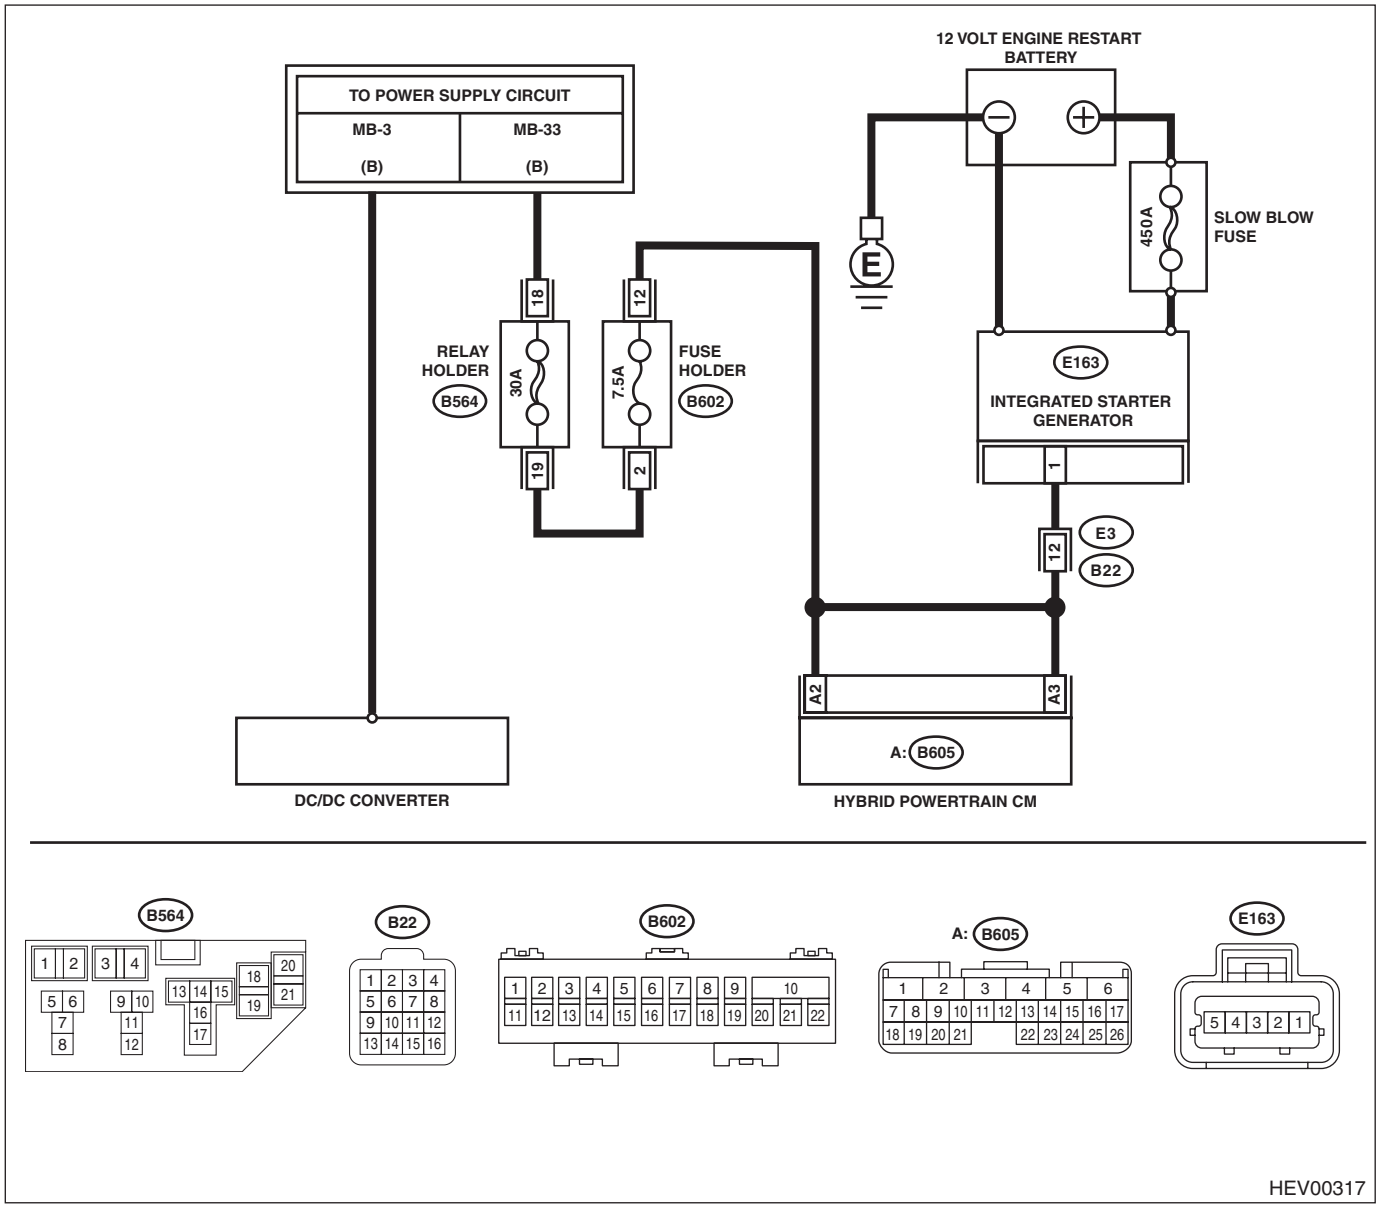
	Step	Check	Yes	No
3	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 14 (+) — Chassis ground (–):*** ***(B606) No. 15 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>	Repair the short circuit to power in the harness between the HPCM connector and integrated starter generator connector, or repair the intermediate connector.

O: DTC P065A GENERATOR SYSTEM PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions in battery charging functions.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>
Power Supply Circuit <Ref. to WI(HEV)-20, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the slow blow fuse of the 12 volt auxiliary battery.	Is the condition normal?	Go to step **2**.	Replace the fuse. When the replaced fuse blows out easily, repair short circuit to ground in harness between DC/DC converter and the battery.
2	**CHECK DC/DC CONVERTER FASTENING AREA.** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 2) Disconnect the positive cable from the 12 volt auxiliary battery. 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the fastening areas of the DC/DC converter 12 volt cable.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **3**.	Retighten the bolts.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the 12 volt cable of the DC/DC converter. 2) Using a tester, measure the resistance between the positive terminal of the 12 volt auxiliary battery and the fastening area of the DC/DC converter power cable. ***Connector & terminal*** ***12 volt auxiliary battery — DC/DC converter:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the power cable between the DC/DC converter and the positive terminal of the 12 volt auxiliary battery.
4	**CHECK BATTERY.** Check the 12 volt auxiliary battery. <Ref. to SC(H4DO(HEV))-38, Battery.> NOTE: Check for conditions such as loose terminals.	Is the condition normal?	Go to step **5**.	Charge or replace the battery.
5	**CHECK DCDC.** Using the Subaru Select Monitor, perform «DCDC Converter Output Voltage Control» of System Operation Check Mode for the hybrid powertrain control system. <Ref. to HEV(diag)-72, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Is the condition normal?	Go to step **6**.	Perform the diagnosis of DTC P0A94. <Ref. to HEV(diag)-220, DTC P0A94 DC/DC CONVERTER PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
6	**CHECK FUSE.** Check the fuse. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal?	Go to step **7**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
7	**CHECK BELTS.** Check the belt. <Ref. to ME(H4DO(w/o HEV))-120, V-belt.>	Is the condition normal?	Go to step **8**.	Adjust or replace the belt.

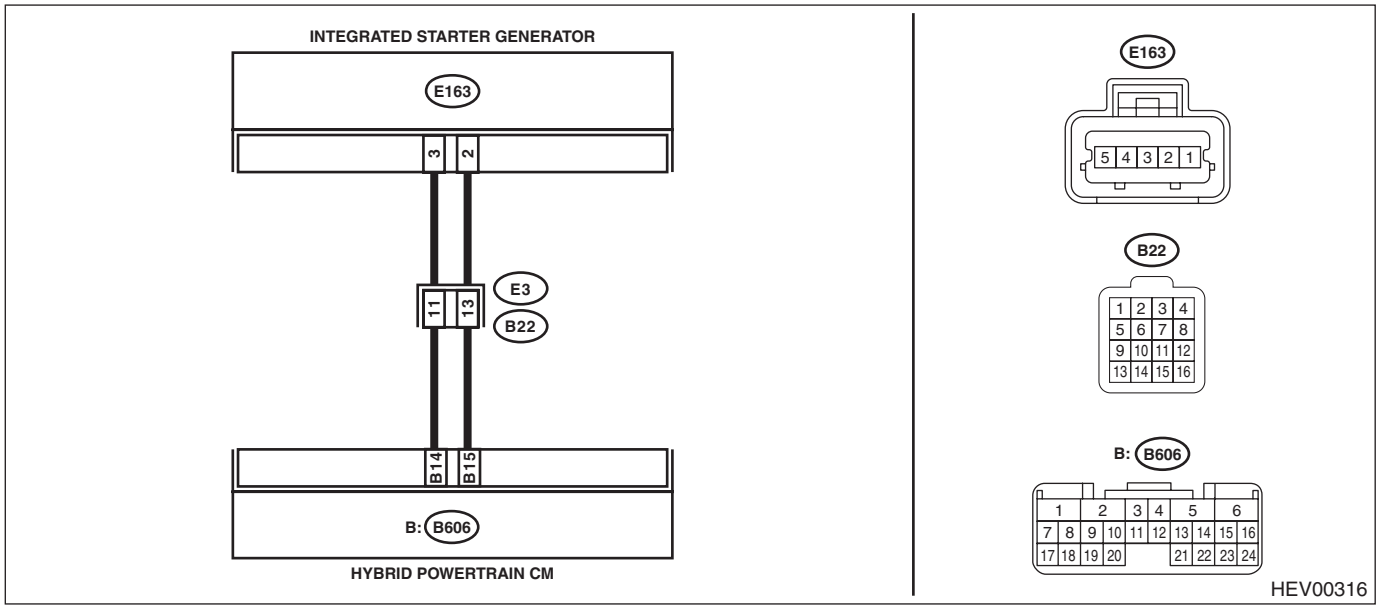
	Step	Check	Yes	No
8	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «ISG Control Mode Actual»«12V Engine Restart Battery Voltage»«ISG Terminal Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «12V Engine Restart Battery Voltage»«ISG Terminal Voltage» 12 — 15 V when the engine speed is at 2000 rpm or more and «ISG Control Mode Actual» is generating power?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **9**.
9	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «HPCM Check 40». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 30 m Ω or more?	Check for poor contact of 12 volt engine restart battery terminals. <Ref. to NT-5, BATTERY, NOTE, Note.>	Go to step **10**.
10	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the integrated starter generator connector. 4) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B605) No. 2 — (E163) No. 1:*** ***(B605) No. 3 — (E163) No. 1:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator terminal.
11	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-38, Battery.>	Is the condition normal?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>	Charge or replace the 12 volt engine restart battery.

P: DTC P06EF ENGINE RESTART PERFORMANCE

DIAGNOSIS:

- Detects communication error, open harness, engine restart system error due to trouble in starting devices.
- Immediately at fault recognition

TROUBLE SYMPTOM:



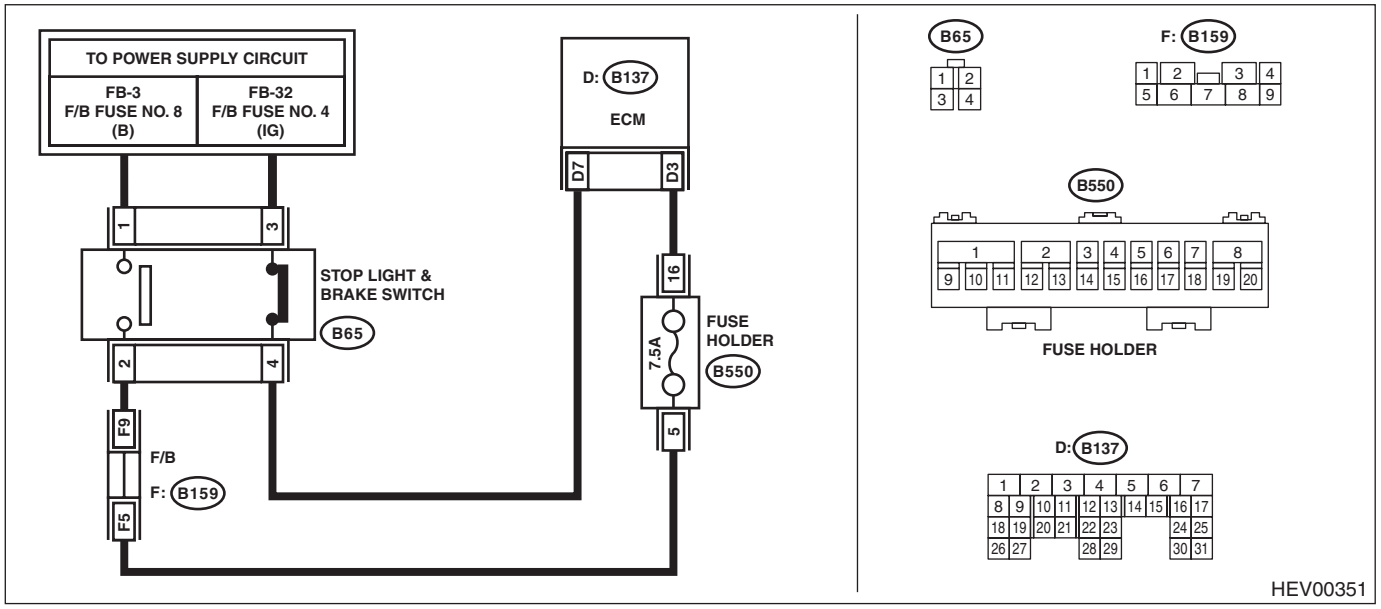
EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-74, HYBRID POWERTRAIN CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK INTEGRATED STARTER GENERATOR (SHORT TO GROUND).** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 2) Check the installation condition of integrated starter generator. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>	Is the condition normal?	Go to step **3**.	Attach the integrated starter generator securely.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Disconnect the integrated starter generator connector. 3) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B606) No. 15 — (E162) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator connector.
4	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair ground short circuit of harness between the HPCM connector and the integrated starter generator connector.
5	**CHECK HARNESS (SHORT TO POWER).** 1) Connect the disconnected battery. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 15 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair the short circuit to power in harness between the HPCM connector and the integrated starter generator connector.
6	**INSPECTION OF INTEGRATED STARTER GENERATOR UNIT.** Check the integrated starter generator as a single part. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>	Is the condition normal?	Go to step **7**.	Replace the integrated starter generator.
7	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-38, Battery.>	Is the condition normal?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Charge or replace the battery.

Q: DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW

DIAGNOSIS:
GENERAL DESCRIPTION <Ref. to GD(HEV)-24, DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>
WIRING DIAGRAM:
Stop light system <Ref. to WI(HEV)-208, WIRING DIAGRAM, Stop Light System.>

Step		Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-14, Stop Light & Brake Switch.>	Is the stop light & brake switch and installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the stop light & brake switch connector and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check fuse No. 8 (in fuse & relay box). • Check for open or short in the harness between stop light & brake switch and fuse & relay box.
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance between the ECM connector and stop light & brake switch connector. ***Connector & terminal*** ***(B137) No. 3 — (B65) No. 2:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(H4DO(HEV))-85, Engine Control Module (ECM).>	Repair the open circuit of harness between ECM connector and stop light & brake switch connector.

R: DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH

DIAGNOSIS:

GENERAL DESCRIPTION <Ref. to GD(HEV)-25, DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:

For the diagnostic procedure, refer to “DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW”. <Ref. to HEV(diag)-121, DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC P0A1D HYBRID POWERTRAIN CONTROL MODULE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-26, DTC P0A1D HYBRID POWERTRAIN CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK HPCM.** 1) Turn the ignition switch to OFF. 2) Wait for 30 seconds. 3) Turn the ignition switch to ON. 4) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 5) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A1D detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

T: DTC P1C00 BATTERY "2" MONITOR MODULE PERFORMANCE

DIAGNOSIS:
- Detects functional errors of the 12 volt engine restart battery sensor.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- System operation check mode is prohibited. <Ref. to HEV(diag)-84, Fail-Safe Chart.>
- Charge warning light illuminates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

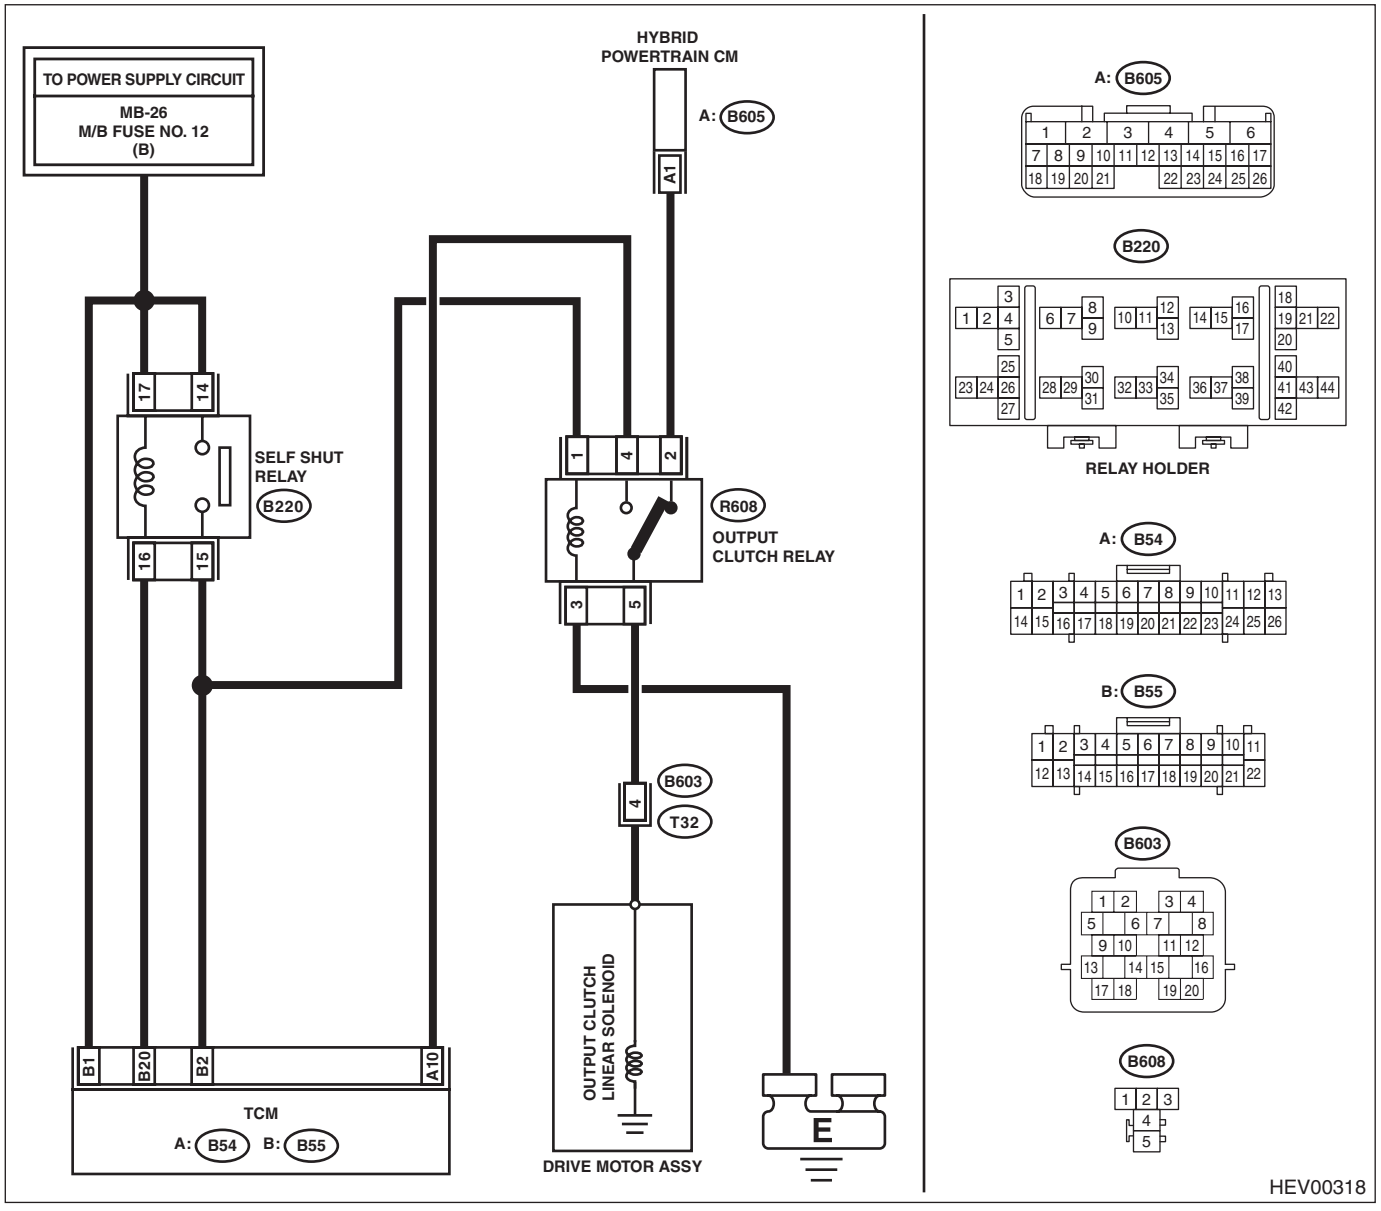
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C00 detected? (current malfunction)	Replace the 12V engine restart battery sensor. <Ref. to SC(H4DO(HEV))-54, Battery Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

U: DTC P1C04 OUTPUT CLUTCH LINEAR SOLENOID CONTROL CIRCUIT LOW

DIAGNOSIS:

- Detects short circuit to ground of output clutch linear solenoid HPCM side circuit (LOW).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

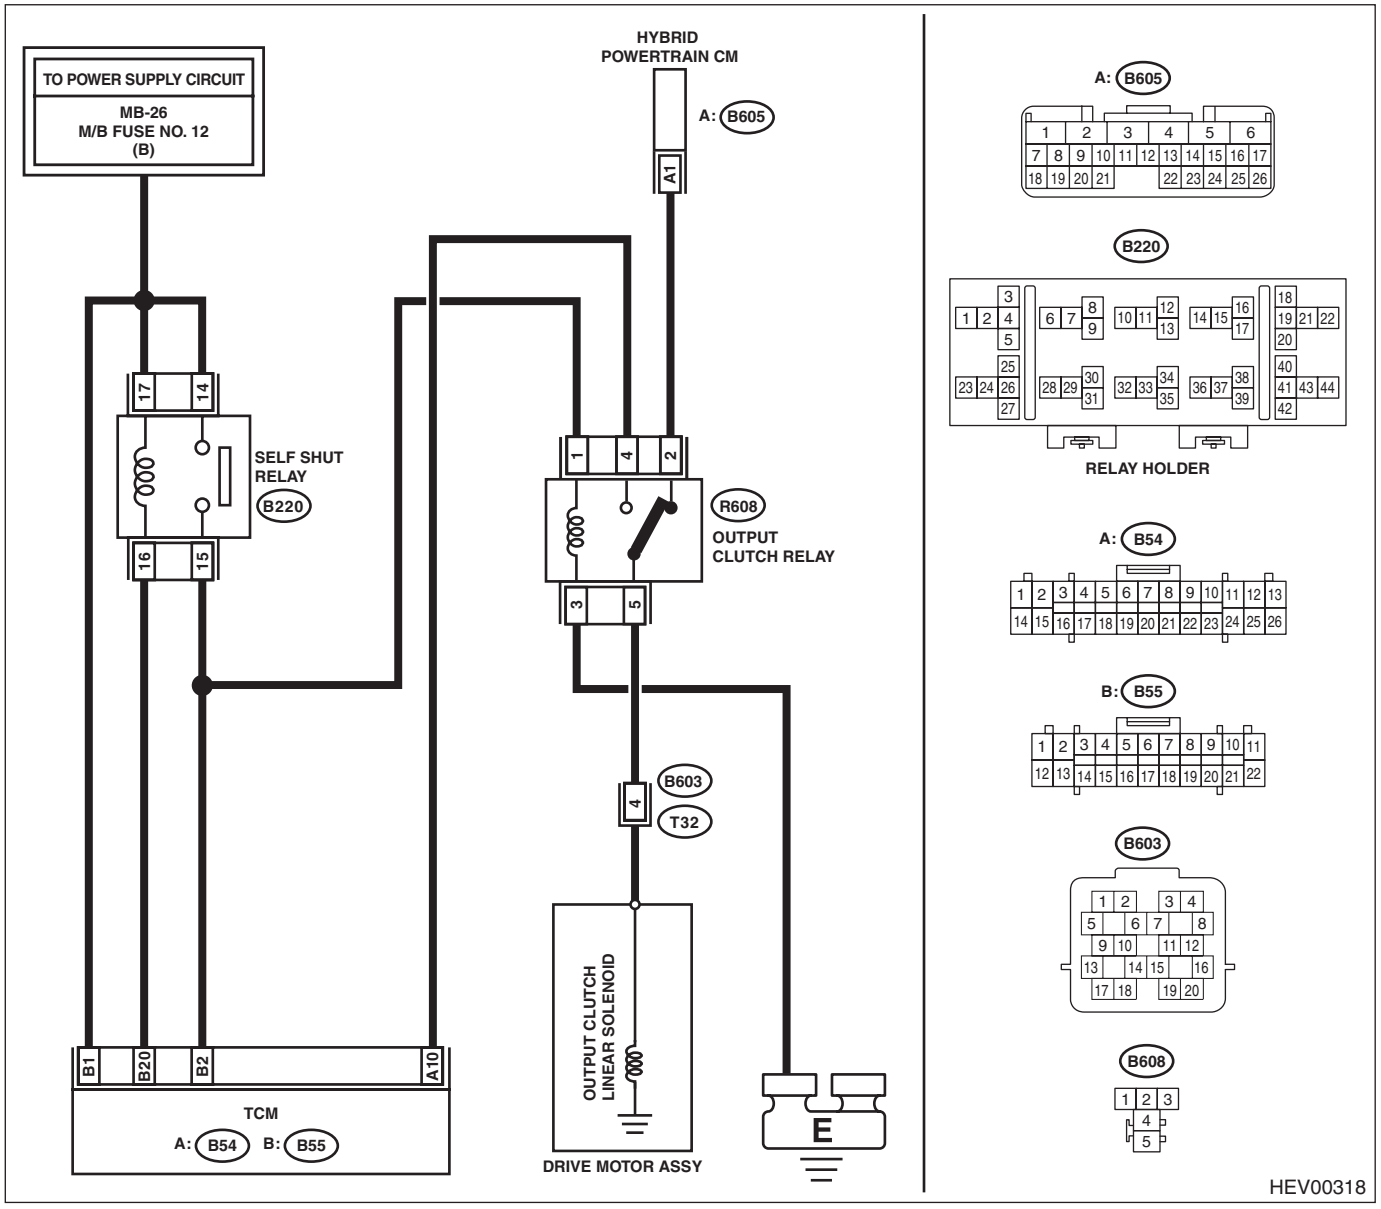
	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Transmission <Ref. to CVT(HEV)(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is either DTC P2719, P2720, or P2721 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to CVT(HEV)(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Remove the output clutch relay. 3) Using a tester, measure the resistance between the HPCM connector and output clutch relay connector. ***Connector & terminal*** ***(B605) No. 1 — (B608) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of the harness between the HPCM connector and the output clutch relay connector.
3	**CHECK RELAY.** Check the output clutch relay. <Ref. to CVT(TH58A)-158, Relay and Fuse.>	Is the output clutch relay OK?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Replace the output clutch relay.

V: DTC P1C05 OUTPUT CLUTCH LINEAR SOLENOID CONTROL CIRCUIT HIGH

DIAGNOSIS:

- Detects open circuit and short circuit to power in output clutch linear solenoid HPCM side circuit (LOW).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Transmission <Ref. to CVT(HEV)(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is either DTC P2719, P2720, or P2721 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to CVT(HEV)(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the HPCM connector. 2) Remove the output clutch relay. 3) Using a tester, measure the resistance between the output clutch connector and chassis ground. ***Connector & terminal*** ***(B608) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between output clutch relay connector and chassis ground.
3	**CHECK RELAY.** Check the output clutch relay. <Ref. to CVT(TH58A)-158, Relay and Fuse.>	Is the output clutch relay OK?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Replace the output clutch relay.

W: DTC P1C06 12V BATTERY RELAY CLOSE CIRCUIT PERFORMANCE

DIAGNOSIS:

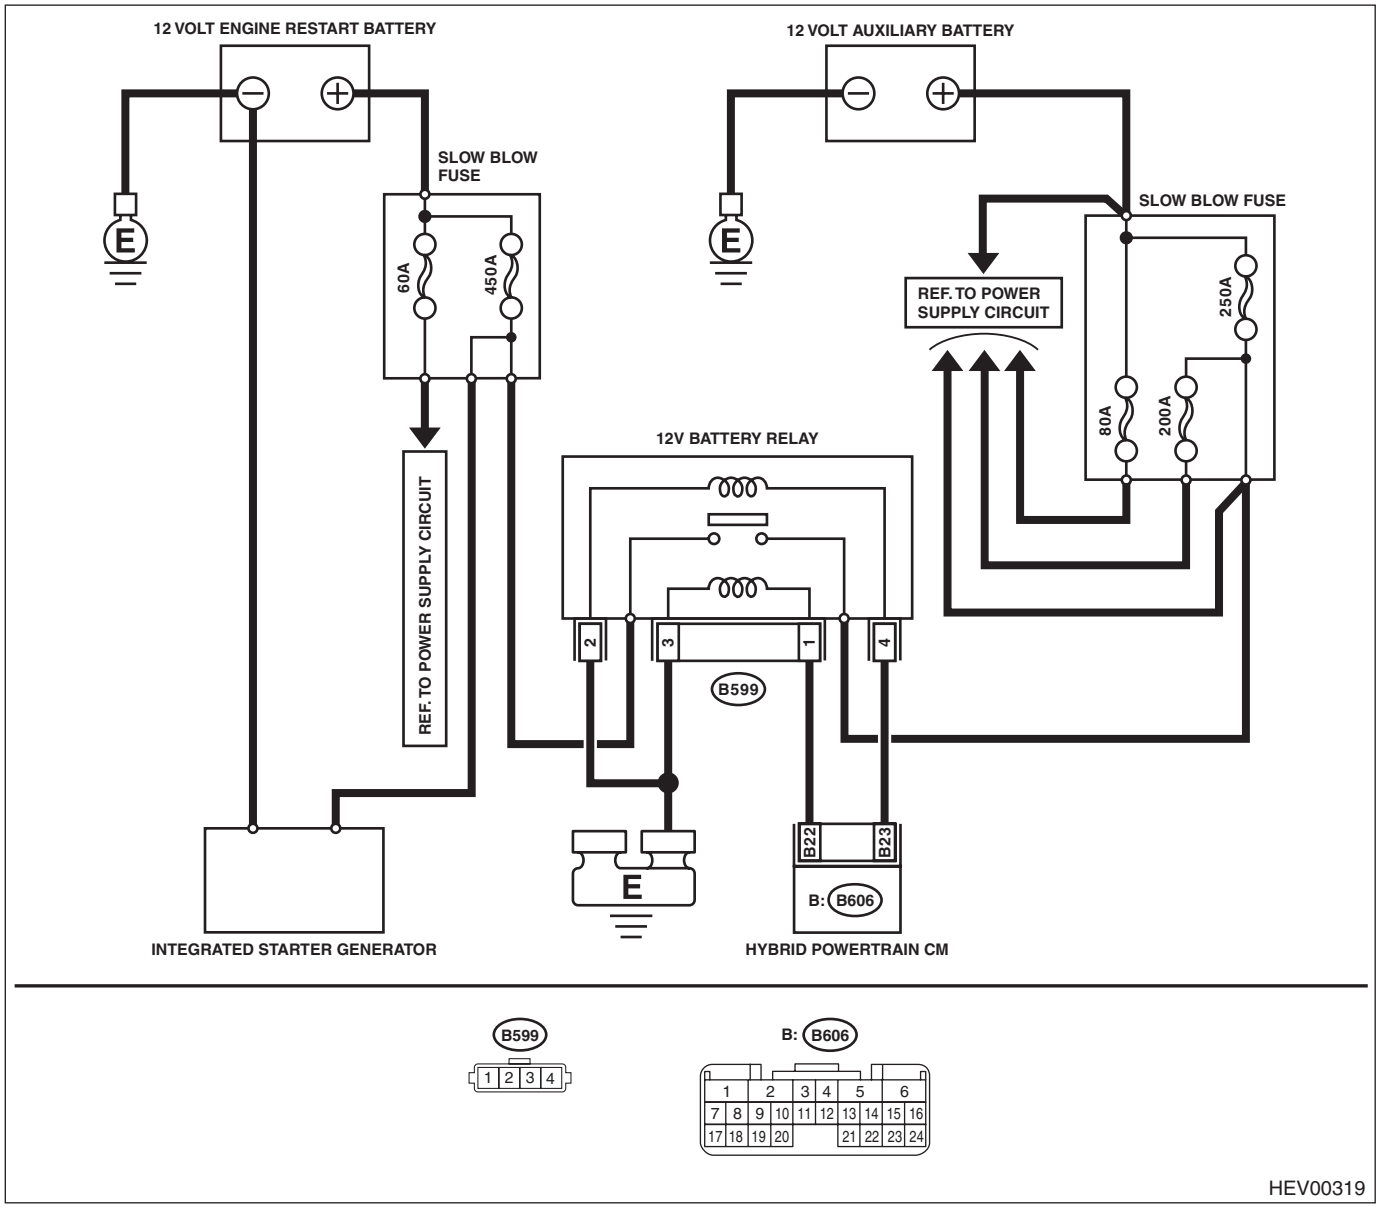
- Detects open circuit, short circuit to ground, and short circuit to power in the harness of 12V battery relay close circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)

- Charge warning light illuminates.



CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
If those trouble occurs, the 12 volt auxiliary battery may run out.

WIRING DIAGRAM:

Power Supply Circuit <Ref. to WI(HEV)-20, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the battery relay connector. 2) Disconnect the HPCM connector. 3) Using a tester, measure the resistance between the 12V battery relay connector and the HPCM connector and the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 1 — (B606) No. 22:*** ***(B606) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair open circuit in harness between the 12V battery relay connector and the HPCM connector and the harness between 12V battery relay connector and chassis ground.
2	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B606) No. 22 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in the harness between the 12V battery relay connector and the HPCM connector.
3	**CHECK HARNESS (SHORT TO POWER).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 1 — Chassis ground:*** ***(B606) No. 22 — Chassis ground:***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in the harness between the 12V battery relay connector and the HPCM connector.

X: DTC P1C07 12V BATTERY RELAY OPEN CIRCUIT PERFORMANCE

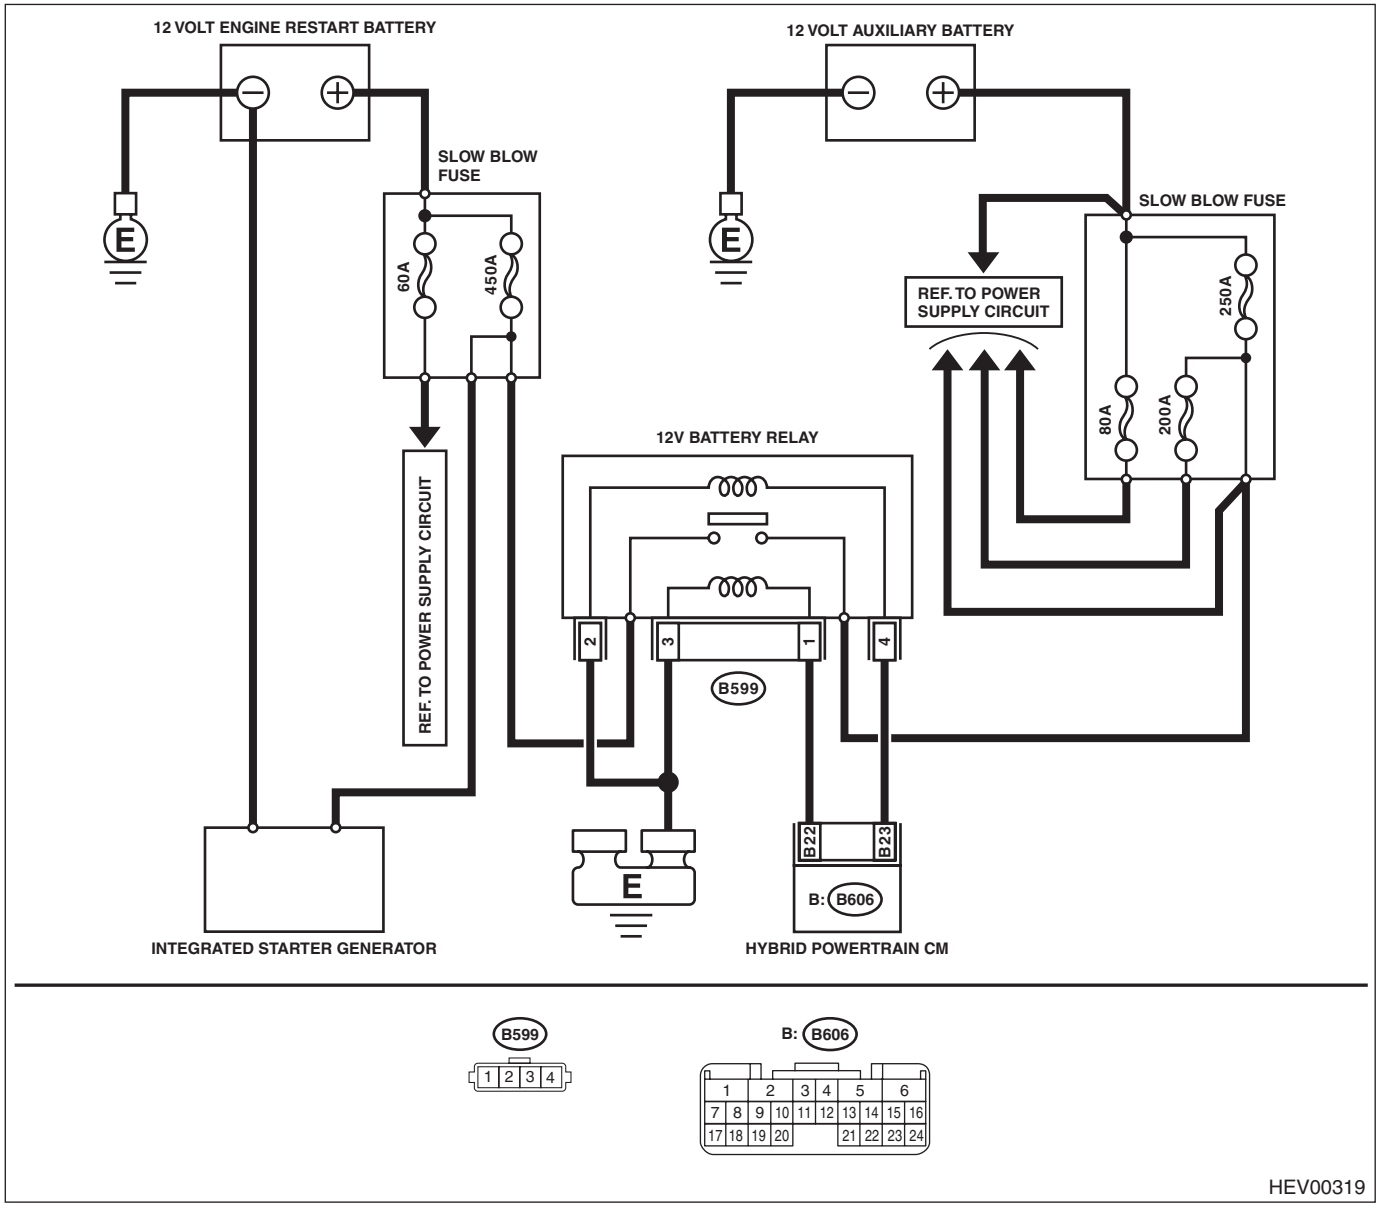
DIAGNOSIS:

- Detects open circuit, short circuit to ground, and short circuit to power in the harness of 12V battery relay open circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)



- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Power Supply Circuit <Ref. to WI(HEV)-20, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the 12V battery relay connector. 2) Disconnect the HPCM connector. 3) Using a tester, measure the resistance between the 12V battery relay connector and the HPCM connector and the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 4 — (B606) No. 23:*** ***(B599) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair open circuit in harness between the 12V battery relay connector and the HPCM connector and the harness between 12V battery relay connector and chassis ground.
2	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in the harness between the 12V battery relay connector and the HPCM connector.
3	**CHECK HARNESS (SHORT TO POWER).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between 12V battery relay connector and chassis ground. ***Connector & terminal*** ***(B599) No. 4 — Chassis ground:*** ***(B599) No. 3 — Chassis ground:***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in the harness between the 12V battery relay connector and the HPCM connector.

Y: DTC P1C08 12V BATTERY RELAY PERFORMANCE OR STUCK OFF

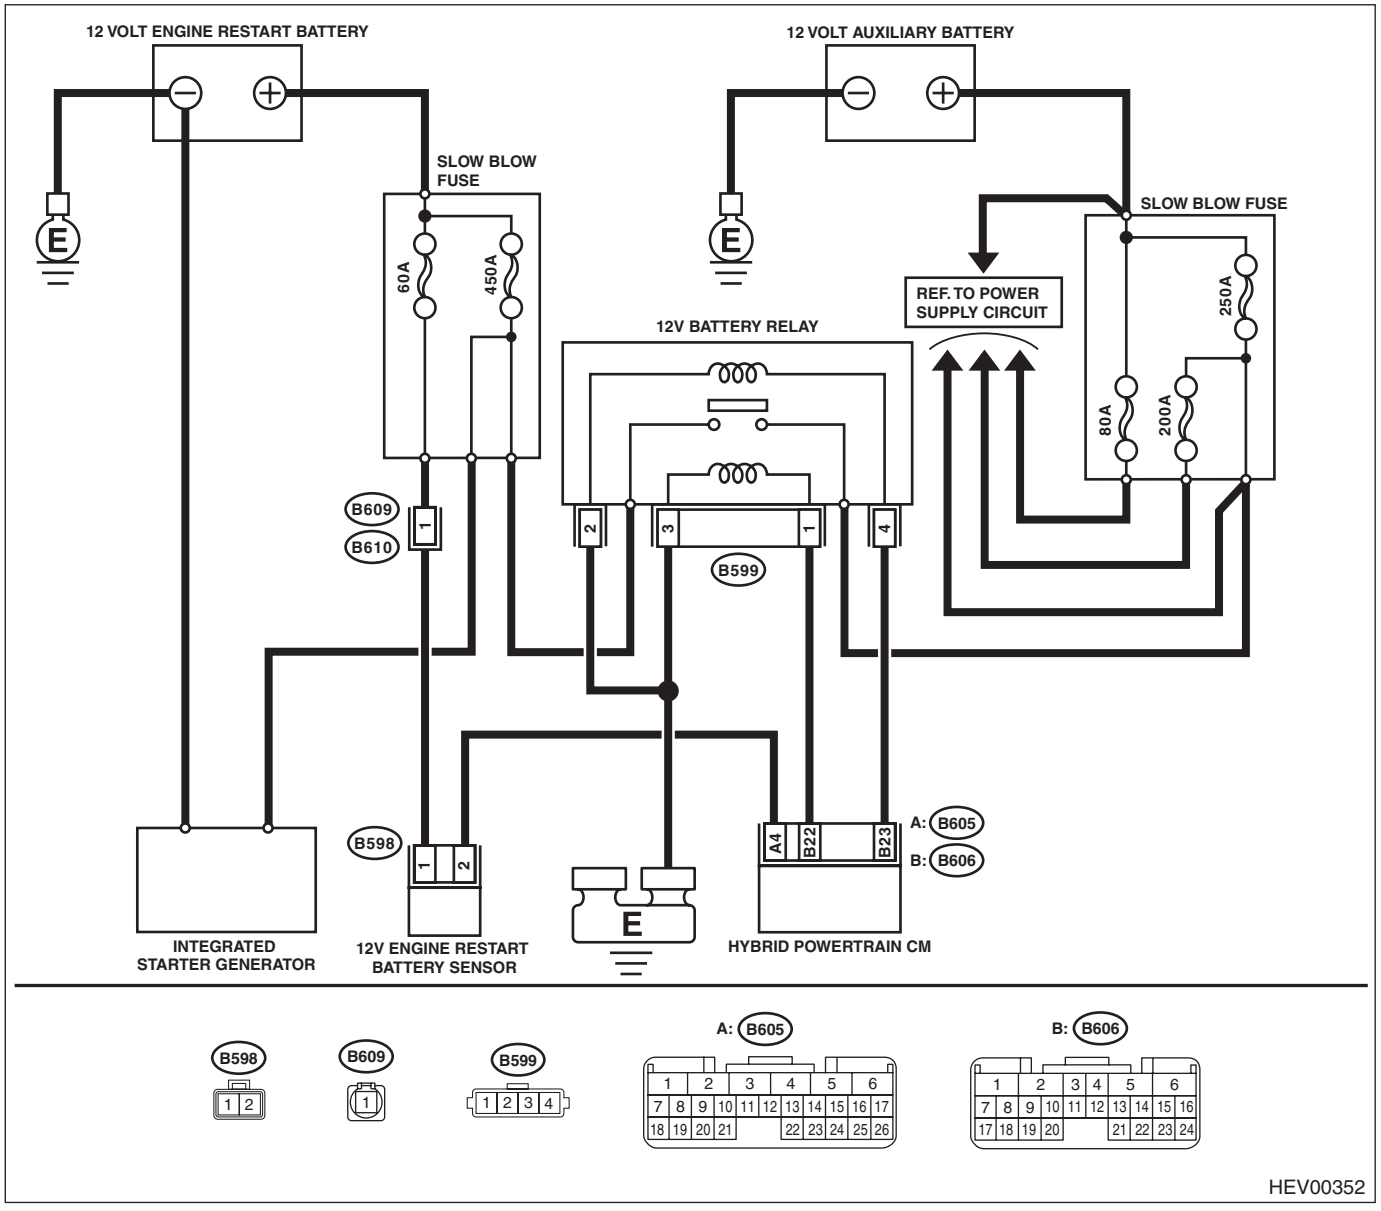
DIAGNOSIS:

- Detects a stuck condition in 12V battery relay open circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Charge warning light illuminates.

CAUTION:



Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:

If those trouble occurs, the 12 volt auxiliary battery may run out.

WIRING DIAGRAM:

Power Supply Circuit <Ref. to WI(HEV)-20, WIRING DIAGRAM, Power Supply Circuit.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check the connector (B598) of 12V engine restart battery sensor.	Is there looseness or poor contact of connector?	Repair the connector.	Go to step **2**.
2	**CHECK FUSE.** Check the slow blow fuse of the 12 volt auxiliary battery and 12 volt engine restart battery.	Is the condition normal?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, repair ground short circuit of harness between 12 volt engine restart battery and the 12 volt battery relay and the harness between 12 volt auxiliary battery and the 12V battery relay.
3	**CHECK RELAY.** Using the Subaru Select Monitor, perform «12V Battery Relay Operation» of System Operation Check Mode for the hybrid powertrain control system. <Ref. to HEV(diag)-72, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the relay operate?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK RELAY.** Check the 12V battery relay. <Ref. to SC(H4DO(HEV))-58, 12V Battery Relay.>	Is the condition normal?	Go to step **5**.	Replace the 12V battery relay.
5	**CHECK TERMINALS.** Check the 12V battery relay for loose bolts or corrosion.	Is the condition normal?	Go to step **6**.	Repair the terminals.
6	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between 12V battery relay connector and each battery. ***Connector & terminal*** ***Positive terminal of 12 volt engine restart battery — 12V battery relay terminal (12 volt engine restart battery side):*** ***Positive terminal of 12 volt auxiliary battery — 12V battery relay terminal (12 volt auxiliary battery side):***	Is the resistance 1 Ω or less?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the open circuit in harness between the 12V battery relay connector and each battery.

Z: DTC P1C09 12V BATTERY RELAY PERFORMANCE OR STUCK ON

DIAGNOSIS:

- Detects a stuck condition in 12V battery relay close circuit.
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

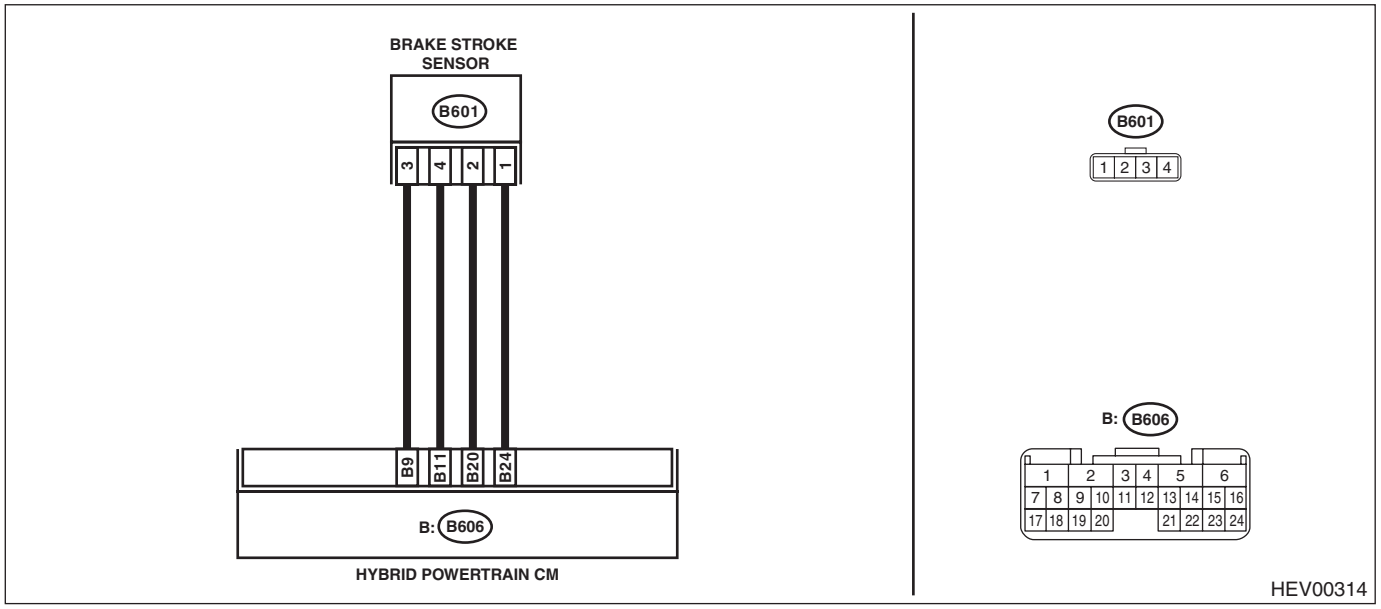
NOTE:
For the diagnostic procedure, “DTC P1C08 12V BATTERY RELAY PERFORMANCE OR STUCK OFF”. <Ref. to HEV(diag)-133, DTC P1C08 12V BATTERY RELAY PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AA:DTC P1C0C BRAKE PEDAL POSITION SENSOR "2" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-27, DTC P1C0C BRAKE PEDAL POSITION SENSOR "2" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P057C detected? (current malfunction)	Go to step **6**.	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage»«Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

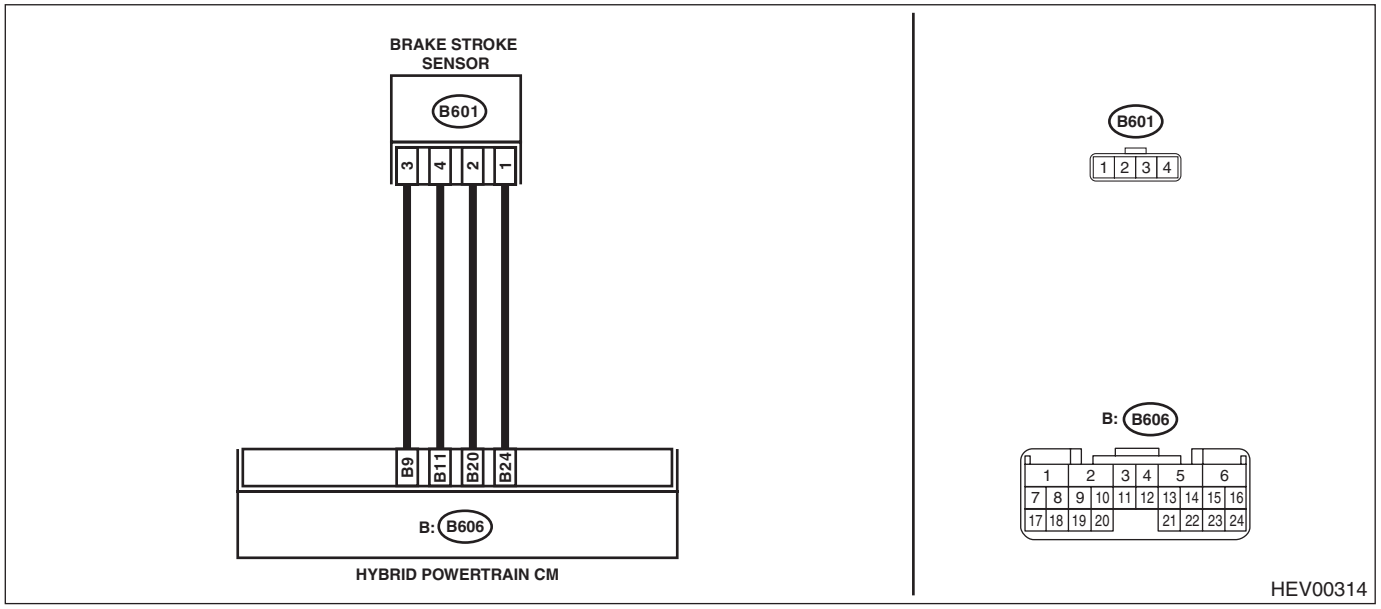
	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 4 — (B606) No. 11:*** ***(B601) No. 1 — (B606) No. 24:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
5	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 4 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-68, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the brake stroke sensor connector. 3) Using a tester, measure the resistance between the brake stroke sensor connector and the HPCM connector. ***Connector & terminal*** ***(B601) No. 3 — (B606) No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of the harness between the HPCM connector and the brake stroke sensor connector.
7	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the brake pedal assembly. <Ref. to BR-68, Brake Pedal.>	Repair ground short circuit of harness between the HPCM connector and the brake stroke sensor connector.

AB:DTC P1C0D BRAKE PEDAL POSITION SENSOR "2" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-28, DTC P1C0D BRAKE PEDAL POSITION SENSOR "2" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Main Brake Pedal Position Sensor Voltage»«Sub Brake Pedal Position Sensor Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Main Brake Pedal Position Sensor Voltage» approximately 1 V, and the value of «Sub Brake Pedal Position Sensor Voltage» approximately 4 V when the pedal is not depressed? Also, do values of «Main Brake Pedal Position Sensor Voltage» and «Sub Brake Pedal Position Sensor Voltage» change when the pedal is depressed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector (B606). 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «Power Sensor Voltage 3». <Ref. to HEV(diag)-40, HYBRID POWER-TRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value approx. 5 V?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HARNESS (SHORT TO POWER).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between brake stroke sensor connector and chassis ground. ***Connector & terminal*** ***(B601) No. 4 — Chassis ground:*** ***(B601) No. 1 — Chassis ground:***	Is the voltage less than 1 V?	Replace the brake pedal assembly. <Ref. to BR-68, Brake Pedal.>	Repair the short circuit to power in harness between the HPCM connector and the brake stroke sensor connector.

AC:DTC P1C10 VACUUM PUMP PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions in vacuum pump system functions.
- Judge as NG when the detection result is out of specification.
- The DTC is set when the condition occurs three times in total.

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

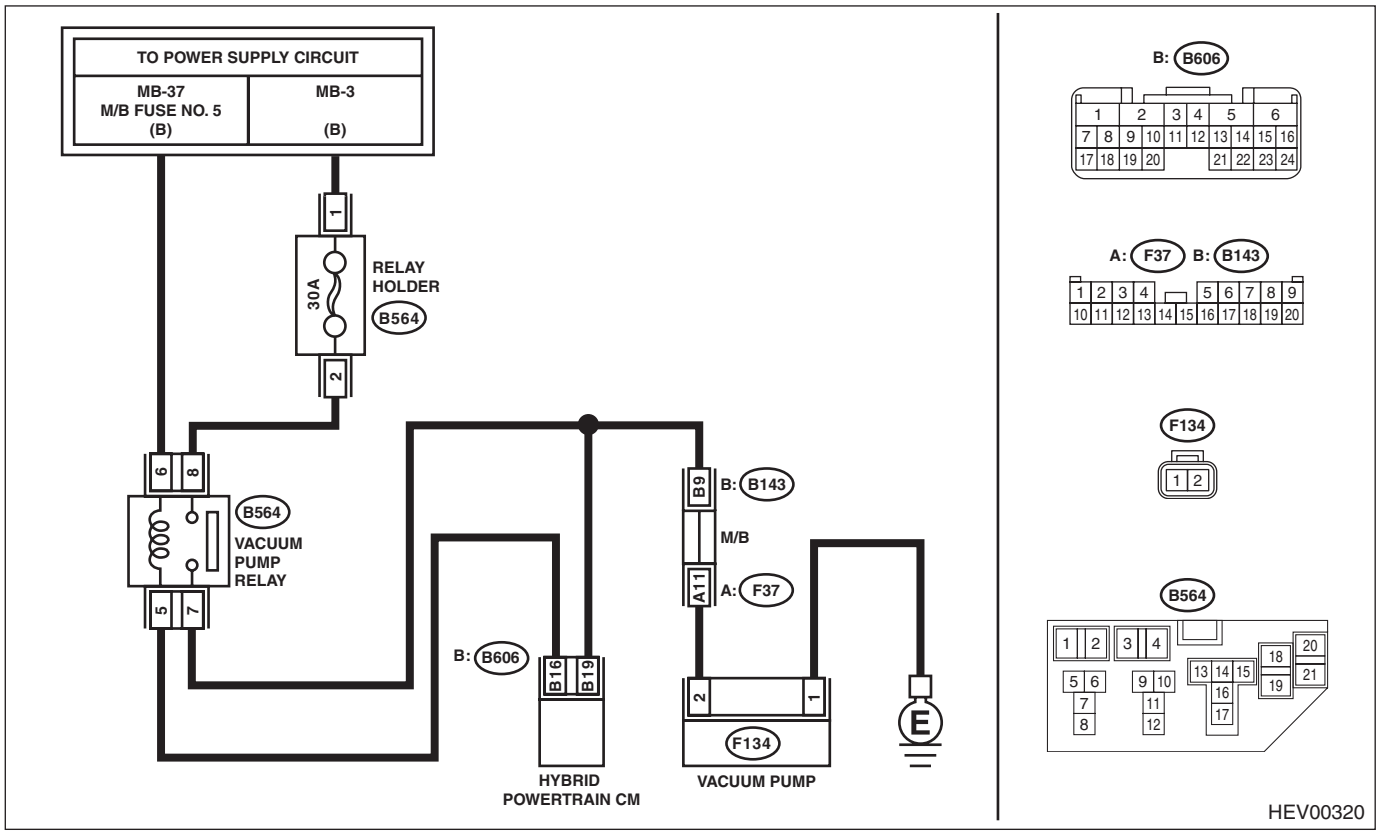
	Step	Check	Yes	No
1	**CHECK VACUUM PRESSURE.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform «Brake Vacuum Pump System Check» of System Operation Check Mode for the hybrid powertrain control system. <Ref. to HEV(diag)-72, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Is the result of operation check mode OK?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK BRAKE VACUUM HOSE.** Check the brake vacuum hose. (Check the hose for any external damage and also check that air only flows in one direction, when air is blown into or sucked from the hose.)	Is the condition normal?	Replace the brake vacuum pump. <Ref. to BR-78, Brake Vacuum Pump.>	Replace the brake vacuum hose. <Ref. to BR-78, Brake Vacuum Pump.>

AD:DTC P1C11 VACUUM PUMP SUPPLY VOLTAGE LOW

DIAGNOSIS:

- Detects a stuck condition in the vacuum pump supply voltage circuit (LOW).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to BR-16, Relay and Fuse.>	Is the condition normal?	Go to step **2**.	Replace the fuse. When the replaced fuse blows out easily, repair short circuit to power in harness between 12 volt auxiliary battery and the brake vacuum pump relay.
2	**CHECK BRAKE VACUUM PUMP RELAY.** Check the relay. <Ref. to BR-16, Relay and Fuse.>	Is the condition normal?	Go to step **3**.	Replace the relay. <Ref. to BR-16, Relay and Fuse.>

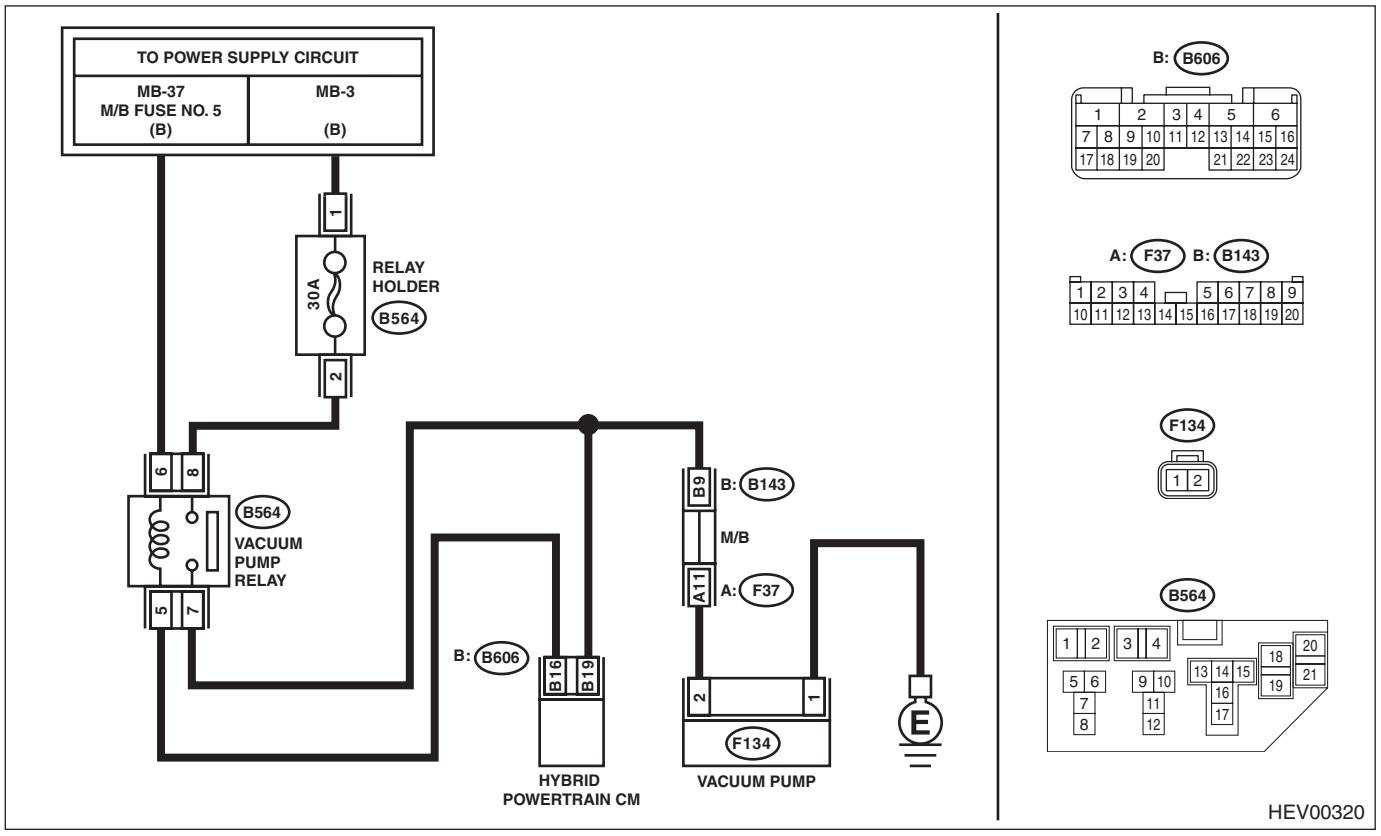
Step		Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Remove the brake vacuum pump relay. 4) Using a tester, measure the resistance between HPCM connector and the brake vacuum pump relay connector. ***Connector & terminal (open)*** ***(B564) No. 5 — (B606) No. 16:*** ***(B564) No. 7 — (F134) No. 2:*** ***(F134) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the HPCM connector and the brake vacuum pump relay connector.
4	**CHECK HARNESS (SHORT TO POWER).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the brake vacuum pump relay connector and chassis ground. ***Connector & terminal (open)*** ***(B564) No. 5 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in harness between the HP connector and the brake vacuum pump relay connector.

AE:DTC P1C12 VACUUM PUMP SUPPLY VOLTAGE HIGH

DIAGNOSIS:

- Detects a stuck condition in the vacuum pump supply voltage circuit (HIGH).
- Judge as NG when the detection result is out of specification.
- Immediately at fault recognition

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Vacuum pump fail lamp illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BRAKE VACUUM PUMP RELAY.** Check the relay. <Ref. to BR-16, Relay and Fuse.>	Is the condition normal?	Go to step **2**.	Replace the relay.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Remove the brake vacuum pump relay. 4) Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B606) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short circuit to ground in harness between the HPCM connector and the brake vacuum pump relay connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORT TO POWER).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the brake vacuum pump relay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in harness between the HP connector and the brake vacuum pump relay connector.

AF:DTC P1C14 GENERATOR PERFORMANCE

DIAGNOSIS:

- Detects functional errors of the integrated starter generator.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)

- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C14 detected? (current malfunction)	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AG:DTC P1C16 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED (HPCM)

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-28, DTC P1C16 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED (HPCM), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Normal control.

NOTE:

For the diagnostic procedure, refer to DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED. <Ref. to HEV(diag)-91, DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AH:DTC P1C17 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED (HPCM)

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-28, DTC P1C17 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED (HPCM), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Normal control.

NOTE:

For the diagnostic procedure, refer to DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED. <Ref. to HEV(diag)-92, DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AI: DTC P1C18 GENERATOR SYSTEM "B" PERFORMANCE

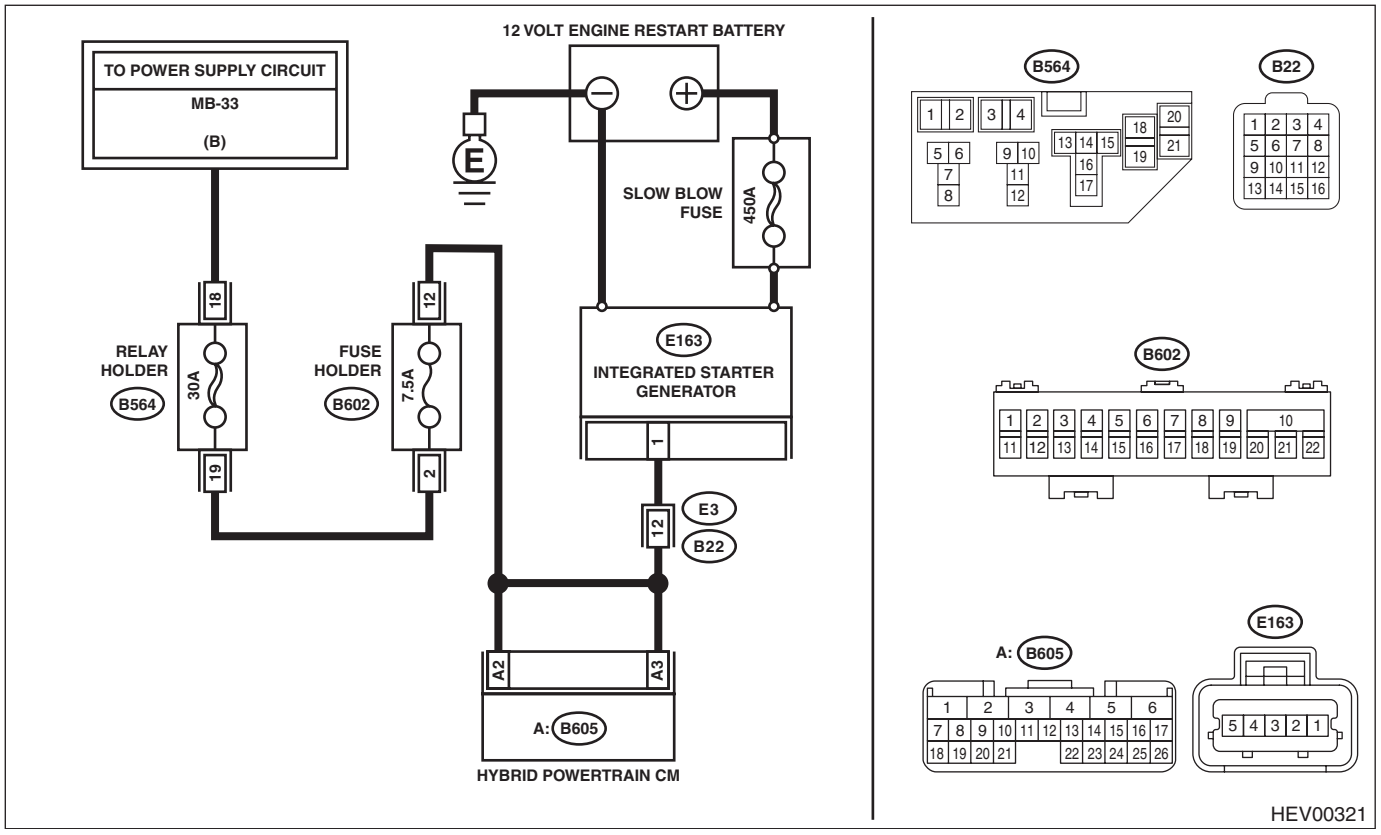
DIAGNOSIS:

- Detects malfunctions due to open harness or trouble in the charging device.
- Detects abnormal conditions in the charging system for the 12 volt engine restart battery due to the integrated starter generator.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)



- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK BELTS.** Check the belt. <Ref. to ME(H4DO(w/o HEV))-120, V-belt.>	Is the condition normal?	Go to step **3**.	Adjust or replace the belt.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «ISG Control Mode Actual»«12V Engine Restart Battery Voltage»«ISG Terminal Voltage». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «12V Engine Restart Battery Voltage»«ISG Terminal Voltage» 12 — 15 V when the engine speed is at 2000 rpm or more and «ISG Control Mode Actual» is generating power?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of hybrid powertrain control system, the value of «HPCM Check 40». <Ref. to HEV(diag)-40, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 30 m Ω or more?	Check for poor contact of 12 volt engine restart battery terminals. <Ref. to NT-5, BATTERY, NOTE, Note.>	Go to step **5**.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the integrated starter generator connector. 4) Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B605) No. 2 — (E163) No. 1:*** ***(B605) No. 3 — (E163) No. 1:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator terminal.
6	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-38, Battery.>	Is the condition normal?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>	Charge or replace the 12 volt engine restart battery.

AJ:DTC P1C1E AUTODISCONNECT EXPERIENCE

DIAGNOSIS:
Detects collision history of the vehicle.
TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Vehicle speed is limited to 20 km/h (12.4 MPH) or below.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
- At normal condition, this cannot be deleted from the readiness code.
- The high voltage battery must not be reconnected until the repair is complete.

	Step	Check	Yes	No
1	**CHECK VEHICLE.** Check the vehicle conditions.	Are the vehicle conditions normal? (Check for evidence of collision, etc.)	Go to step **2**.	Repair the problem.
2	**CHECK HPCM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C1E detected? (current malfunction)	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AK:DTC P2158 VEHICLE SPEED SENSOR "B"

DIAGNOSIS FOR DTC:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-29, DTC P2158 VEHICLE SPEED SENSOR "B", Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

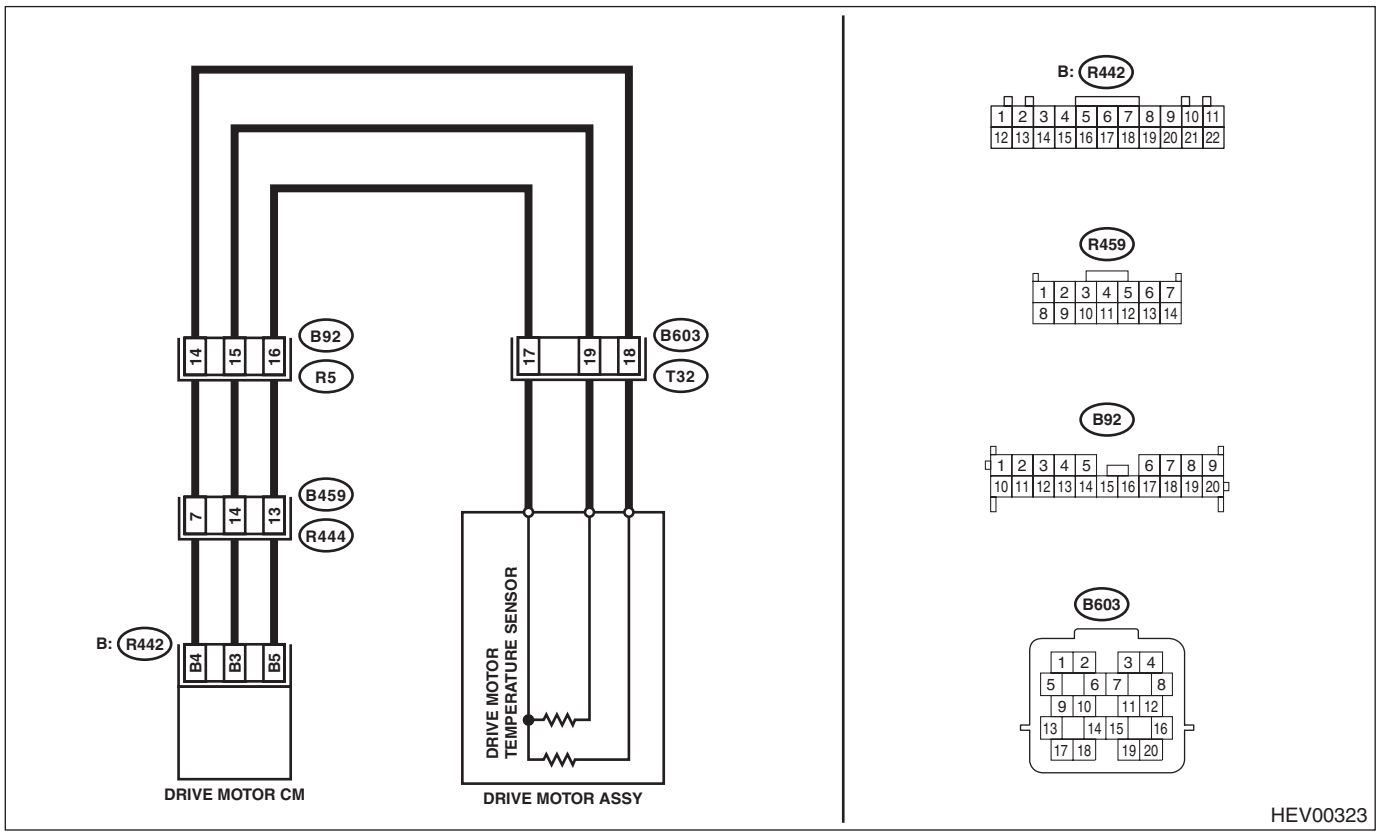
NOTE:
For the diagnostic procedure, refer to the Vehicle Dynamics Control System (VDC) (DIAGNOSTICS). <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AL:DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-30, DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

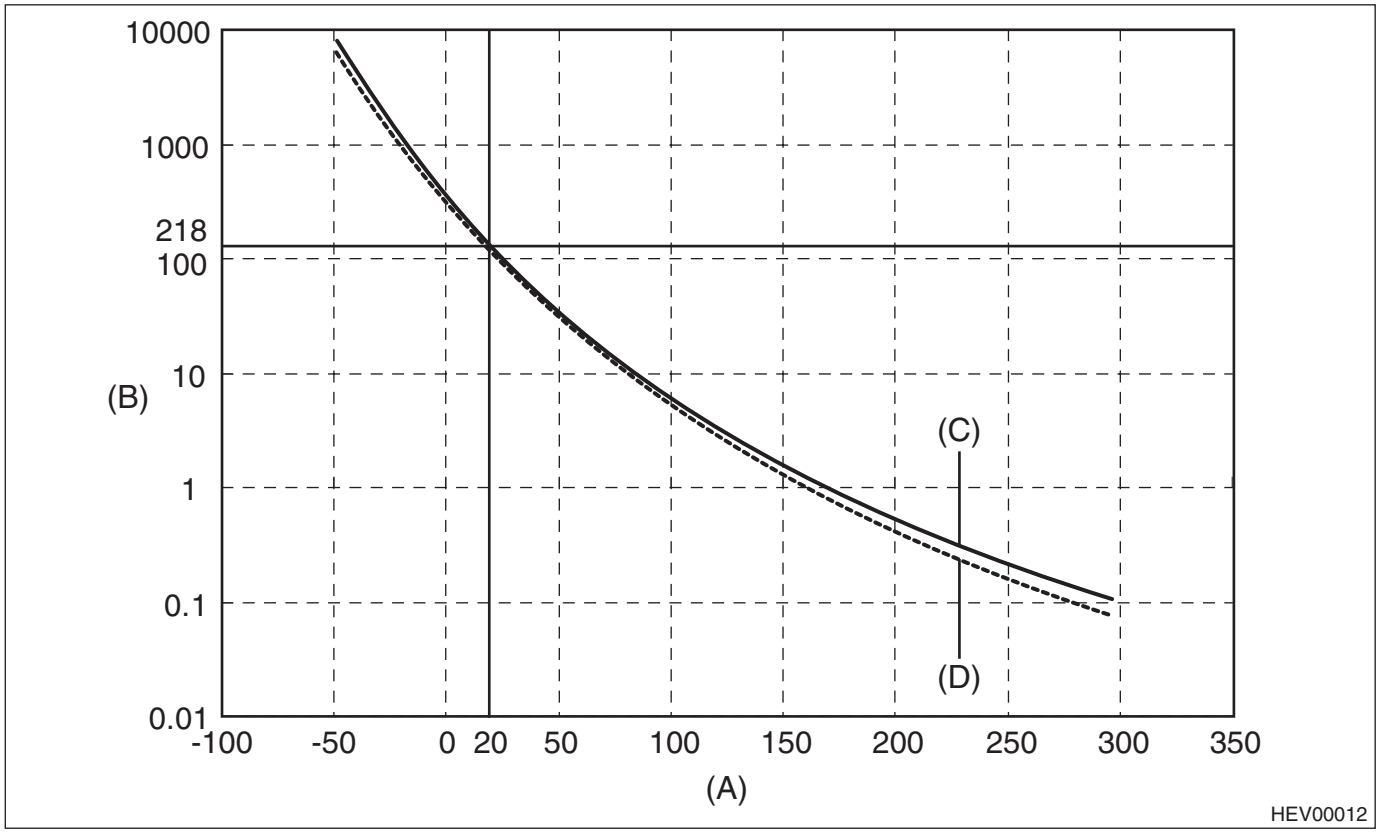
TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>



WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Warm up the engine. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Temperature A Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «Drive Motor Temperature A Sensor Voltage» 4.5 V or more when «A/T Oil Temperature» is 40°C (104°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in the DMCM connector. ***Connector & terminal*** ***(R442) No. 4 — (R442) No. 5:*** ***(R442) No. 3 — (R442) No. 5:***	Does the resistance between either two points show 218 kΩ or more?	Go to step **3**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>
3	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector (R603). 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 18 — (T32) No. 17:*** ***(T32) No. 19 — (T32) No. 17:***	Does the resistance between either two points show 218 kΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the open circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

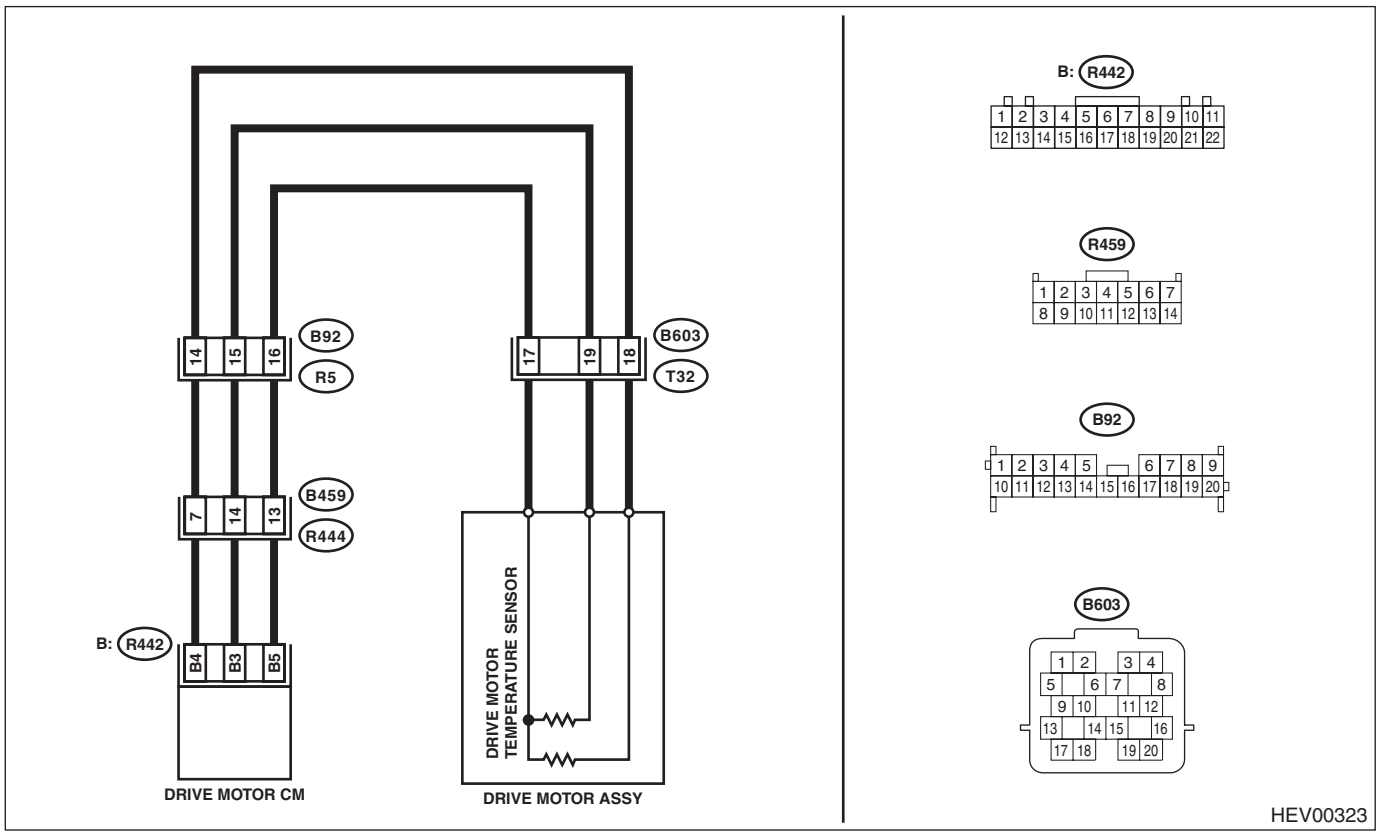
AM:DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-31, DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

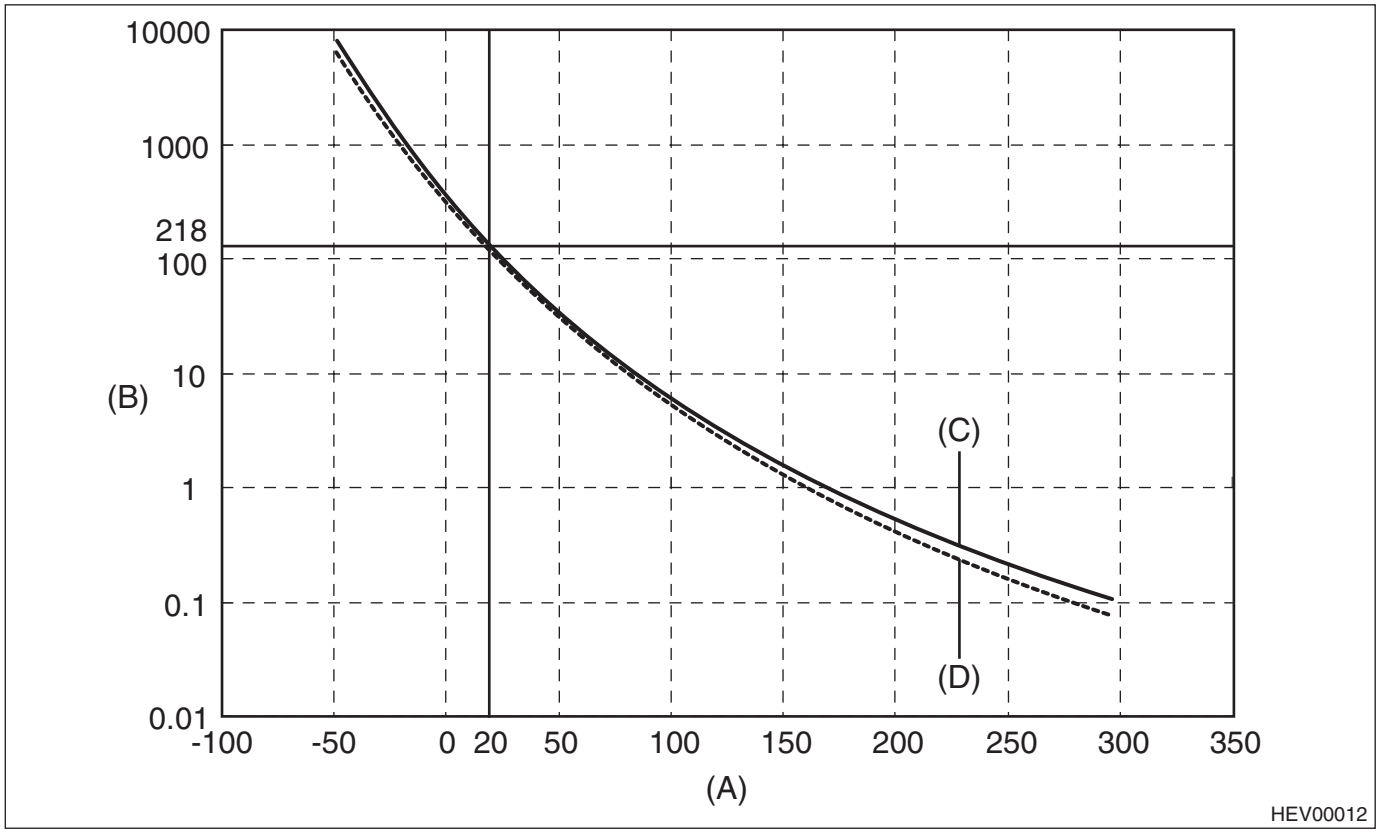
TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>



WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Temperature A Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value less than 0.23 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 4 — Ground bolt of inverter frame body:*** ***(R442) No. 3 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 256.4 Ω or less?	Go to step **3**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>
3	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector (B603). 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 18 — Chassis ground:*** ***(T32) No. 19 — Chassis ground:***	Does the resistance between either two points show 256.4 Ω or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

NOTE:

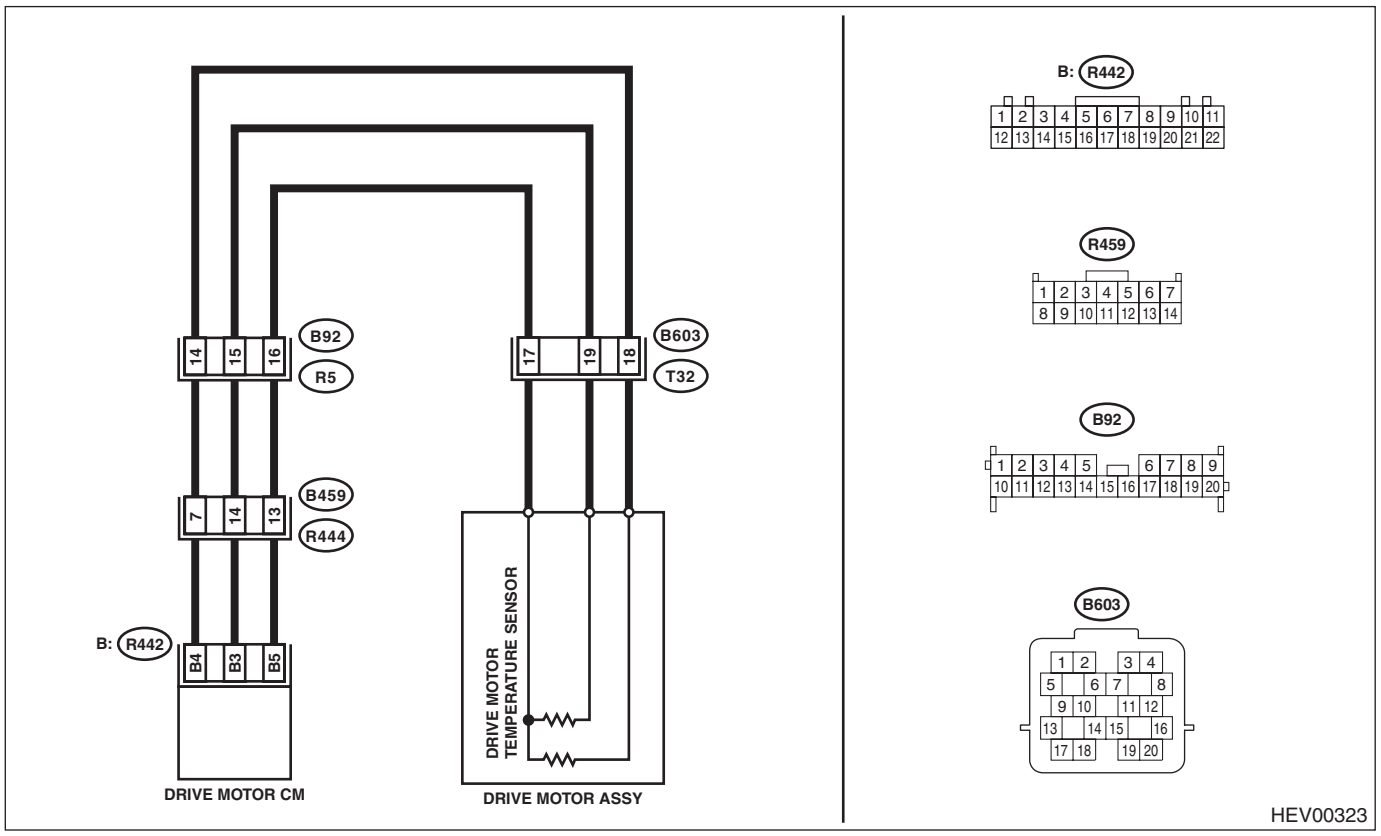
AN:DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-32, DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Temperature A Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 4.6 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442, R443). 3) Disconnect the drive motor assembly connector (B603). 4) Using a tester, measure the resistance between terminals in the DMCM connector and between the terminals in the drive motor assembly connector. ***Connector & terminal*** ***DMCM side*** ***(R442) No. 3 — (R442) No. 1 — 22 (except No. 5):*** ***(R442) No. 3 — (R443) No. 1 — 26:*** ***(R442) No. 4 — (R442) No. 1 — 22 (except No. 5):*** ***(R442) No. 4 — (R443) No. 1 — 26:*** ***Drive motor side*** ***(B603) No. 18 — (B603) No. 1 — 19 (except No. 17):*** ***(B603) No. 19 — (B603) No. 1 — 19 (except No. 17):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **3**.	Repair the short circuit to power in harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
3	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 18 — (T32) No. 1 — 19 (except No. 17):*** ***(T32) No. 19 — (T32) No. 1 — 19 (except No. 17):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>

AO:DTC P0A3C DRIVE MOTOR "A" INVERTER OVER TEMPERATURE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-33, DTC P0A3C DRIVE MOTOR "A" INVERTER OVER TEMPERATURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

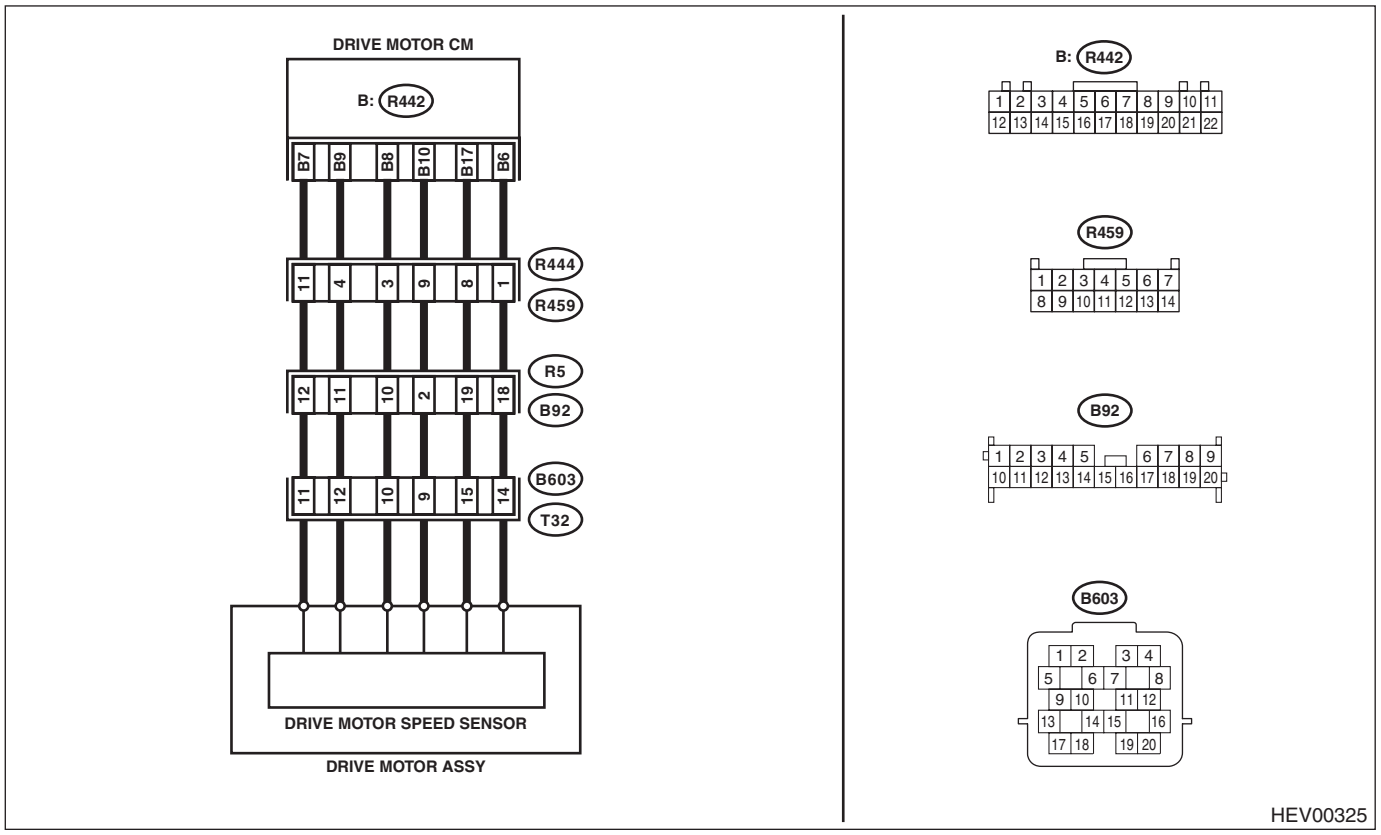
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are DTC P0A5D, P0A60, and P0A63 detected? (current malfunction)	Perform a check according to the DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-73, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the high voltage battery cooling fan operate?	Go to step **3**.	Check the high voltage battery cooling fan as a single part. <Ref. to HEV-59, High Voltage Battery Cooling System.>
3	**CHECK DUCT.** Check the high voltage battery cooling fan ducts. <Ref. to HEV-59, High Voltage Battery Cooling System.>	Are the conditions of ducts normal? (Check for clogging, dislodging of connections, etc.)	Go to step **4**.	Repair the ducts.
4	**CHECK DTC.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 3) Check the freeze frame data and drive the vehicle to reproduce the same conditions. <Ref. to HEV(diag)-65, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.> 4) Read the DTC again. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.

AP:DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-34, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in DMCM connector. ***Connector & terminal*** ***R1-R2*** ***(R442) No. 6 — (R442) No. 17:*** ***S1-S3*** ***(R442) No. 10 — (R442) No. 8:*** ***S2-S4*** ***(R442) No. 9 — (R442) No. 7:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***R1-R2*** ***(T32) No. 14 — (T32) No. 15:*** ***S1-S3*** ***(T32) No. 9 — (T32) No. 10:*** ***S2-S4*** ***(T32) No. 12 — (T32) No. 11:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the open circuit and short circuit to ground in harness between DMCM connector and drive motor assembly connector.
3	**CHECK HARNESS AND DRIVE MOTOR.** Using a tester, check the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 6 — Ground bolt of inverter frame body:*** ***(R442) No. 10 — Ground bolt of inverter frame body:*** ***(R442) No. 9 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 1 MΩ or less?	Go to step **4**.	Go to step **5**.
4	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 14 — Chassis ground:*** ***(T32) No. 9 — Chassis ground:*** ***(T32) No. 12 — Chassis ground:***	Does the resistance between either two points show 1 MΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

	Step	Check	Yes	No
5	**CHECK HARNESS.** 1) Disconnect the DMCM connector (R443). 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between terminals in the DMCM connector and between the terminals in the intermediate connector (R436). ***Connector & terminal*** ***(R442) No. 10 — (R442) No. 1 — 22 (except No. 8):*** ***(R442) No. 10 — (R443) No. 1 — 26:*** ***(R442) No. 10 — (R436) No. 1 — 8:*** ***(R442) No. 8 — (R442) No. 1 — 22 (except No. 10):*** ***(R442) No. 8 — (R443) No. 1 — 26:*** ***(R442) No. 8 — (R436) No. 1 — 8:*** ***(R442) No. 9 — (R442) No. 1 — 22 (except No. 7):*** ***(R442) No. 9 — (R443) No. 1 — 26:*** ***(R442) No. 9 — (R436) No. 1 — 8:*** ***(R442) No. 7 — (R442) No. 1 — 22 (except No. 9):*** ***(R442) No. 7 — (R443) No. 1 — 26:*** ***(R442) No. 7 — (R436) No. 1 — 8:*** ***(R442) No. 6 — (R442) No. 1 — 22 (except No. 17):*** ***(R442) No. 6 — (R443) No. 1 — 26:*** ***(R442) No. 6 — (R436) No. 1 — 8:*** ***(R442) No. 17 — (R442) No. 1 — 22 (except No. 6):*** ***(R442) No. 17 — (R443) No. 1 — 26:*** ***(R442) No. 17 — (R436) No. 1 — 8:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
6	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(B603) No. 9 — (B603) No. 1 — 20 (except No. 10):*** ***(B603) No. 10 — (B603) No. 1 — 20 (except No. 9):*** ***(B603) No. 12 — (B603) No. 1 — 20 (except No. 11):*** ***(B603) No. 11 — (B603) No. 1 — 20 (except No. 12):*** ***(B603) No. 14 — (B603) No. 1 — 20 (except No. 15):*** ***(B603) No. 15 — (B603) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

	Step	Check	Yes	No
7	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 9 — (T32) No. 1 — 20 (except No. 10):*** ***(T32) No. 10 — (T32) No. 1 — 20 (except No. 9):*** ***(T32) No. 12 — (T32) No. 1 — 20 (except No. 11):*** ***(T32) No. 11 — (T32) No. 1 — 20 (except No. 12):*** ***(T32) No. 14 — (T32) No. 1 — 20 (except No. 15):*** ***(T32) No. 15 — (T32) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>

AQ:DTC P0A40 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-35, DTC P0A40 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

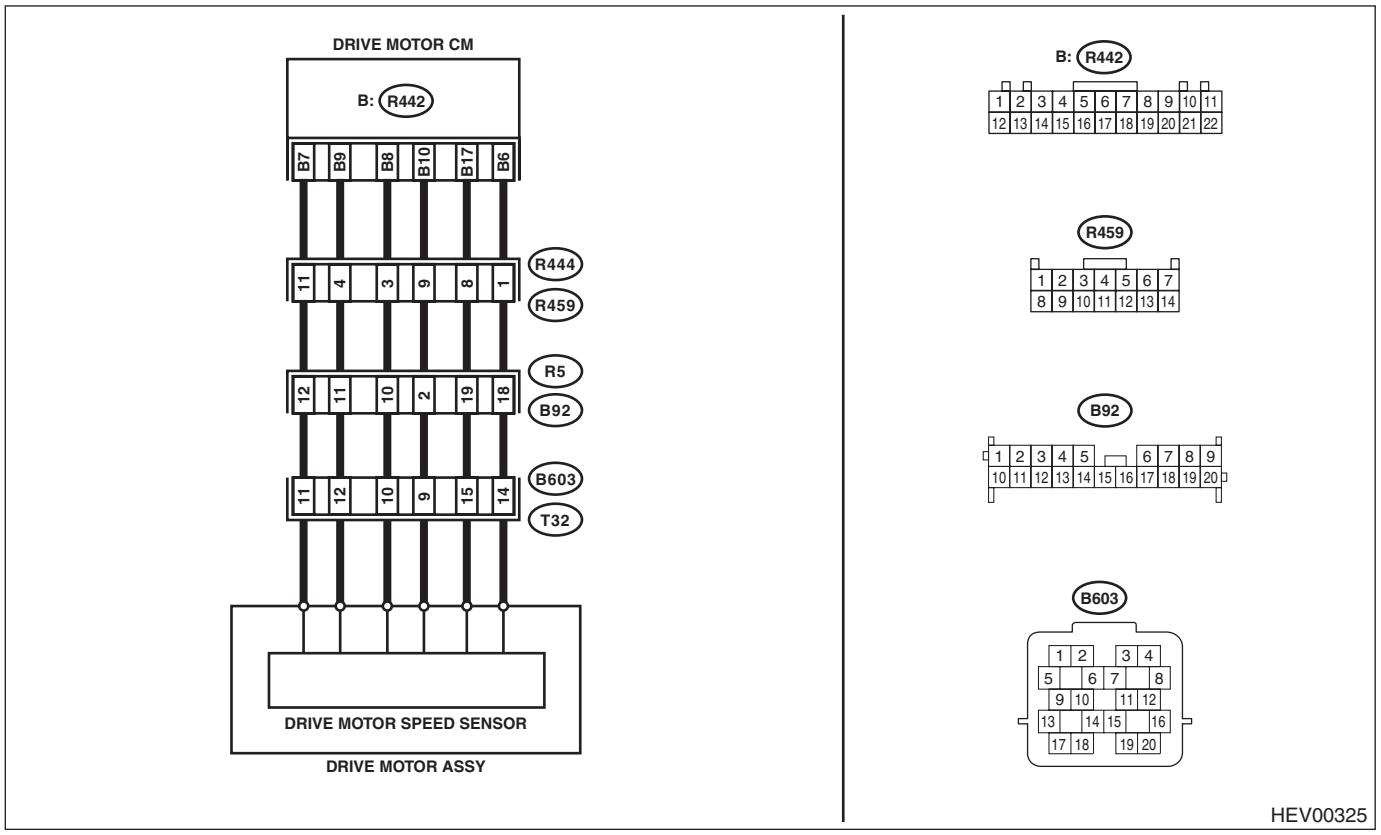
NOTE:
For the diagnostic procedure, “DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT”. <Ref. to HEV(diag)-160, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AR:DTC P0A43 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT INTERMITTENT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-36, DTC P0A43 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT INTERMITTENT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A3F detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

Step		Check	Yes	No
2	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in DMCM connector. ***Connector & terminal*** ***R1-R2*** ***(R442) No. 6 — (R442) No. 17:*** ***S1-S3*** ***(R442) No. 10 — (R442) No. 8:*** ***S2-S4*** ***(R442) No. 9 — (R442) No. 7:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Go to step **3**.	Go to step **4**.
3	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***R1-R2*** ***(T32) No. 14 — (T32) No. 15:*** ***S1-S3*** ***(T32) No. 9 — (T32) No. 10:*** ***S2-S4*** ***(T32) No. 12 — (T32) No. 11:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the open circuit and short circuit to ground in harness between DMCM connector and drive motor assembly connector.
4	**CHECK HARNESS AND DRIVE MOTOR.** Using a tester, measure the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 6 — Ground bolt of inverter frame body:*** ***(R442) No. 10 — Ground bolt of inverter frame body:*** ***(R442) No. 9 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 1 MΩ or less?	Go to step **5**.	Go to step **6**.
5	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 14 — Chassis ground:*** ***(T32) No. 9 — Chassis ground:*** ***(T32) No. 12 — Chassis ground:***	Does the resistance between either two points show 1 MΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

	Step	Check	Yes	No
6	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the DMCM connector (R442, R443), between the terminals in the intermediate connector (R436), and between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(R442) No. 10 — (R442) No. 1 — 22 (except No. 8):*** ***(R442) No. 10 — (R443) No. 1 — 26:*** ***(R442) No. 10 — (R436) No. 1 — 8:*** ***(R442) No. 8 — (R442) No. 1 — 22 (except No. 10):*** ***(R442) No. 8 — (R443) No. 1 — 26:*** ***(R442) No. 8 — (R436) No. 1 — 8:*** ***(R442) No. 9 — (R442) No. 1 — 22 (except No. 7):*** ***(R442) No. 9 — (R443) No. 1 — 26:*** ***(R442) No. 9 — (R436) No. 1 — 8:*** ***(R442) No. 7 — (R442) No. 1 — 22 (except No. 9):*** ***(R442) No. 7 — (R443) No. 1 — 26:*** ***(R442) No. 7 — (R436) No. 1 — 8:*** ***(R442) No. 6 — (R442) No. 1 — 22 (except No. 17):*** ***(R442) No. 6 — (R443) No. 1 — 26:*** ***(R442) No. 6 — (R436) No. 1 — 8:*** ***(R442) No. 17 — (R442) No. 1 — 22 (except No. 6):*** ***(R442) No. 17 — (R443) No. 1 — 26:*** ***(R442) No. 17 — (R436) No. 1 — 8:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **7**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
7	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(B603) No. 9 — (B603) No. 1 — 20 (except No. 10):*** ***(B603) No. 10 — (B603) No. 1 — 20 (except No. 9):*** ***(B603) No. 12 — (B603) No. 1 — 20 (except No. 11):*** ***(B603) No. 11 — (B603) No. 1 — 20 (except No. 12):*** ***(B603) No. 14 — (B603) No. 1 — 20 (except No. 15):*** ***(B603) No. 15 — (B603) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **8**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

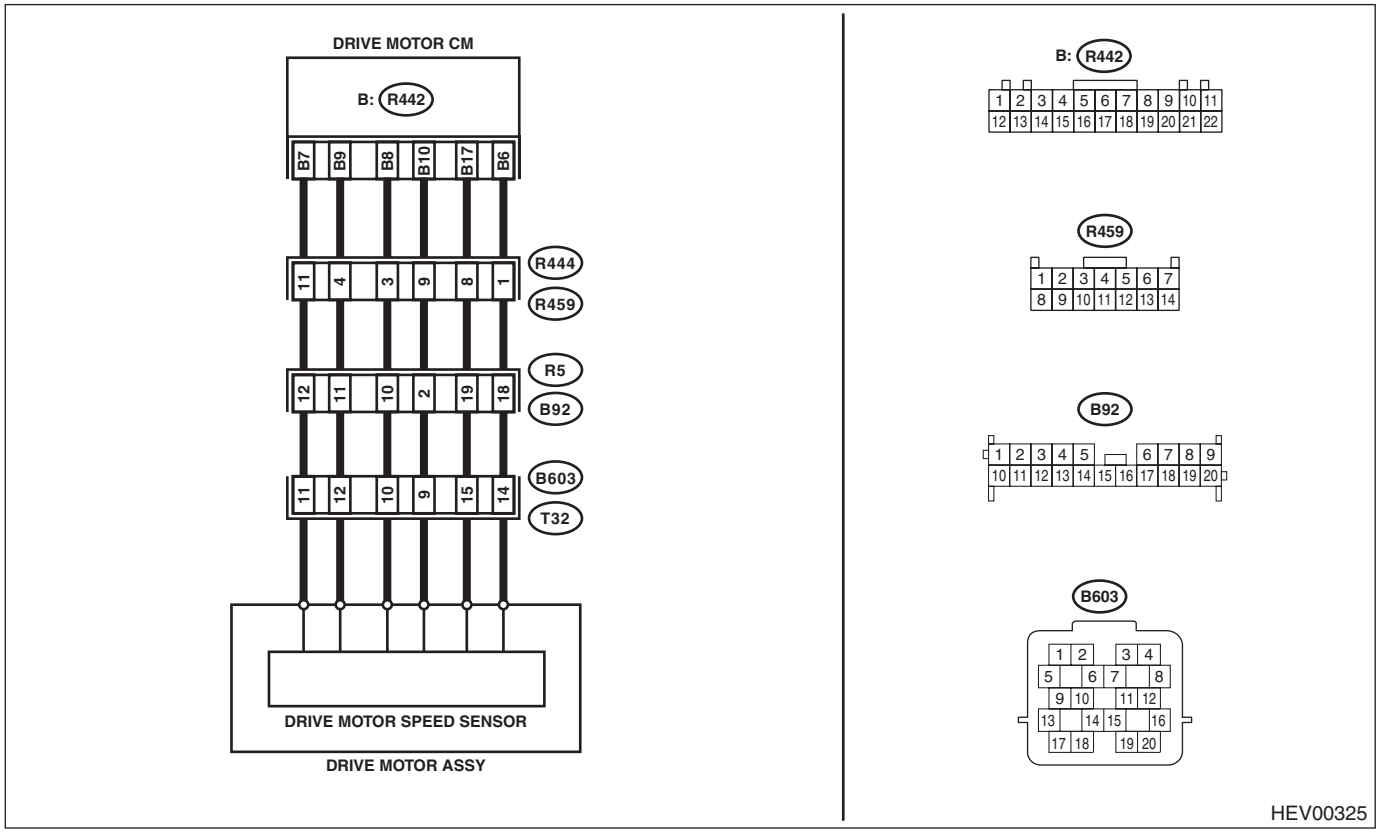
Step		Check	Yes	No
8	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 9 — (T32) No. 1 — 20 (except No. 10):*** ***(T32) No. 12 — (T32) No. 1 — 20 (except No. 11):*** ***(T32) No. 14 — (T32) No. 1 — 20 (except No. 15):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>

AS:DTC P0A44 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT OVERSPEED

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-37, DTC P0A44 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT OVERSPEED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Transmission <Ref. to CVT(HEV)(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to CVT(HEV)(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is either DTC P0A3F or P0A43 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK HARNESS AND DRIVE MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector (R442). 3) Using a tester, measure the resistance between terminals in DMCM connector. ***Connector & terminal*** ***R1-R2*** ***(R442) No. 6 — (R442) No. 17:*** ***S1-S3*** ***(R442) No. 10 — (R442) No. 8:*** ***S2-S4*** ***(R442) No. 9 — (R442) No. 7:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Go to step **4**.	Go to step **5**.
4	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***R1-R2*** ***(T32) No. 14 — (T32) No. 15:*** ***S1-S3*** ***(T32) No. 9 — (T32) No. 10:*** ***S2-S4*** ***(T32) No. 12 — (T32) No. 11:***	Is each resistance value as shown in below? R1-R2: Is the value out of 7 — 23 Ω range? or S1-S3: Is the value out of 10 — 39 Ω range? or S2-S4: Is the value out of 11 — 40 Ω range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the open circuit and short circuit to ground in harness between DMCM connector and drive motor assembly connector.
5	**CHECK HARNESS AND DRIVE MOTOR.** Using a tester, measure the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 6 — Ground bolt of inverter frame body:*** ***(R442) No. 10 — Ground bolt of inverter frame body:*** ***(R442) No. 9 — Ground bolt of inverter frame body:***	Does the resistance between either two points show 1 MΩ or less?	Go to step **6**.	Go to step **7**.
6	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between the drive motor assembly connector and chassis ground. ***Connector & terminal*** ***(T32) No. 14 — Chassis ground:*** ***(T32) No. 9 — Chassis ground:*** ***(T32) No. 12 — Chassis ground:***	Does the resistance between either two points show 1 MΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the short circuit to ground in harness between DMCM connector and drive motor assembly connector.

	Step	Check	Yes	No
7	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the DMCM connector (R442, R443), between the terminals in the intermediate connector (R436), and between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(R442) No. 10 — (R442) No. 1 — 22 (except No. 8):*** ***(R442) No. 10 — (R443) No. 1 — 26:*** ***(R442) No. 10 — (R436) No. 1 — 8:*** ***(R442) No. 8 — (R442) No. 1 — 22 (except No. 10):*** ***(R442) No. 8 — (R443) No. 1 — 26:*** ***(R442) No. 8 — (R436) No. 1 — 8:*** ***(R442) No. 9 — (R442) No. 1 — 22 (except No. 7):*** ***(R442) No. 9 — (R443) No. 1 — 26:*** ***(R442) No. 9 — (R436) No. 1 — 8:*** ***(R442) No. 7 — (R442) No. 1 — 22 (except No. 9):*** ***(R442) No. 7 — (R443) No. 1 — 26:*** ***(R442) No. 7 — (R436) No. 1 — 8:*** ***(R442) No. 6 — (R442) No. 1 — 22 (except No. 17):*** ***(R442) No. 6 — (R443) No. 1 — 26:*** ***(R442) No. 6 — (R436) No. 1 — 8:*** ***(R442) No. 17 — (R442) No. 1 — 22 (except No. 6):*** ***(R442) No. 17 — (R443) No. 1 — 26:*** ***(R442) No. 17 — (R436) No. 1 — 8:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **8**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.
8	**CHECK HARNESS.** 1) Disconnect the drive motor assembly connector. 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(B603) No. 9 — (B603) No. 1 — 20 (except No. 10):*** ***(B603) No. 10 — (B603) No. 1 — 20 (except No. 9):*** ***(B603) No. 12 — (B603) No. 1 — 20 (except No. 11):*** ***(B603) No. 11 — (B603) No. 1 — 20 (except No. 12):*** ***(B603) No. 14 — (B603) No. 1 — 20 (except No. 15):*** ***(B603) No. 15 — (B603) No. 1 — 20 (except No. 14):***	Does the resistance between either two points show 1 MΩ or more?	Go to step **9**.	Repair the short circuit of harness between DMCM connector and drive motor assembly connector, or repair the intermediate connector.

Step		Check	Yes	No
9	**CHECK DRIVE MOTOR.** Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***(T32) No. 9 — (T32) No. 1 — 20 (except No. 10):*** ***(T32) No. 12 — (T32) No. 1 — 20 (except No. 11):*** ***(T32) No. 14 — (T32) No. 1 — 20 (except No. 15):***	Does the resistance between either two points show 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>

AT:DTC P0C52 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "A" LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-67, DTC P0C52 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "A" LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
For the diagnostic procedure, “DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT”. <Ref. to HEV(diag)-160, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AU:DTC P0C5C DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "B" LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-68, DTC P0C5C DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "B" LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
For the diagnostic procedure, “DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT”. <Ref. to HEV(diag)-160, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AV:DTC P0CDC DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-70, DTC P0CDC DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
For the diagnostic procedure, “DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT”. <Ref. to HEV(diag)-160, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AW:DTC P0CDD DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-71, DTC P0CDD DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

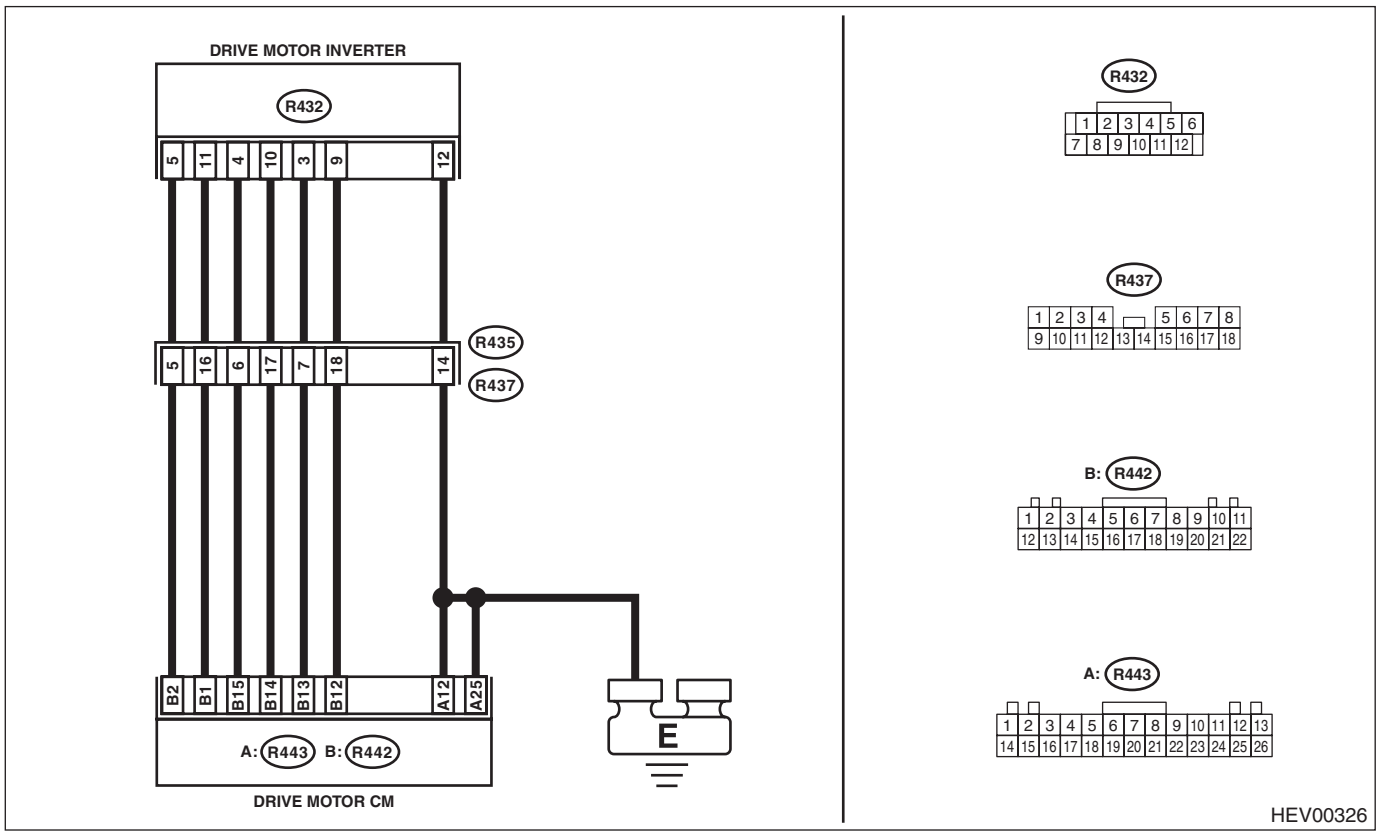
NOTE:
For the diagnostic procedure, “DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT”. <Ref. to HEV(diag)-160, DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AX:DTC P0A5D DRIVE MOTOR "A" PHASE U CURRENT

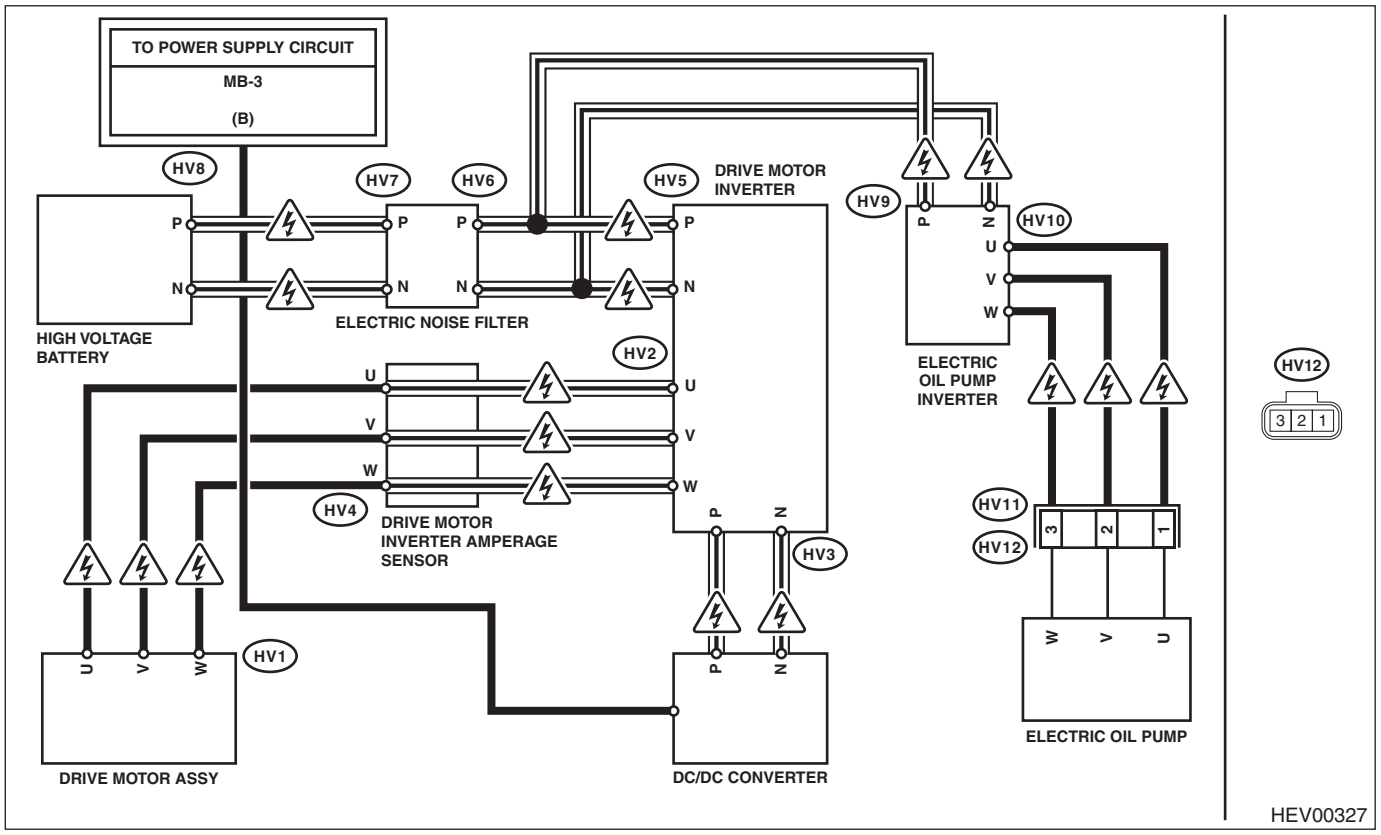
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-38, DTC P0A5D DRIVE MOTOR "A" PHASE U CURRENT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V ±0.1 V with IG ON?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>

Step		Check	Yes	No
3	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector (R442, R443). 6) Disconnect the intermediate connector (R436). 7) Disconnect the drive motor inverter connector. 8) Using a tester, measure the resistance between terminals in DMCM connectors (R442, R443) and between each terminal in inverter connector. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and drive motor inverter, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnects power cable terminals (HV2, HV3) of the drive motor inverter and bus bar (HV5). NOTE: Be sure to use insulating tape. 2) Using a tester, check for continuity between drive motor inverter terminals. NOTE: When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV2) V (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) W (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **5**.
5	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on an insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Check continuity between each terminal of the unit. NOTE: • When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **13**.	Go to step **7**.
7	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminal (HV2) of the drive motor inverter and the ground bolt of inverter frame body. ***Connector & terminal*** ***(HV2) U — Ground bolt of inverter frame body:*** ***(HV2) V — Ground bolt of inverter frame body:*** ***(HV2) W — Ground bolt of inverter frame body:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **8**. If a milliohm tester is NOT at hand, Go to step **11**.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between terminals of drive motor inverter power cable. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines less than 25 mΩ?	Go to step **10**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>
9	**CHECK DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using an insulation multimeter (250 V range), measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
10	**CHECK DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
11	**CHECK DRIVE MOTOR (SHORT).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **12**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

	Step	Check	Yes	No
12	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 6) Disconnect the power cable (HV2) of drive motor inverter. 7) Using an insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
13	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to “D” range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>

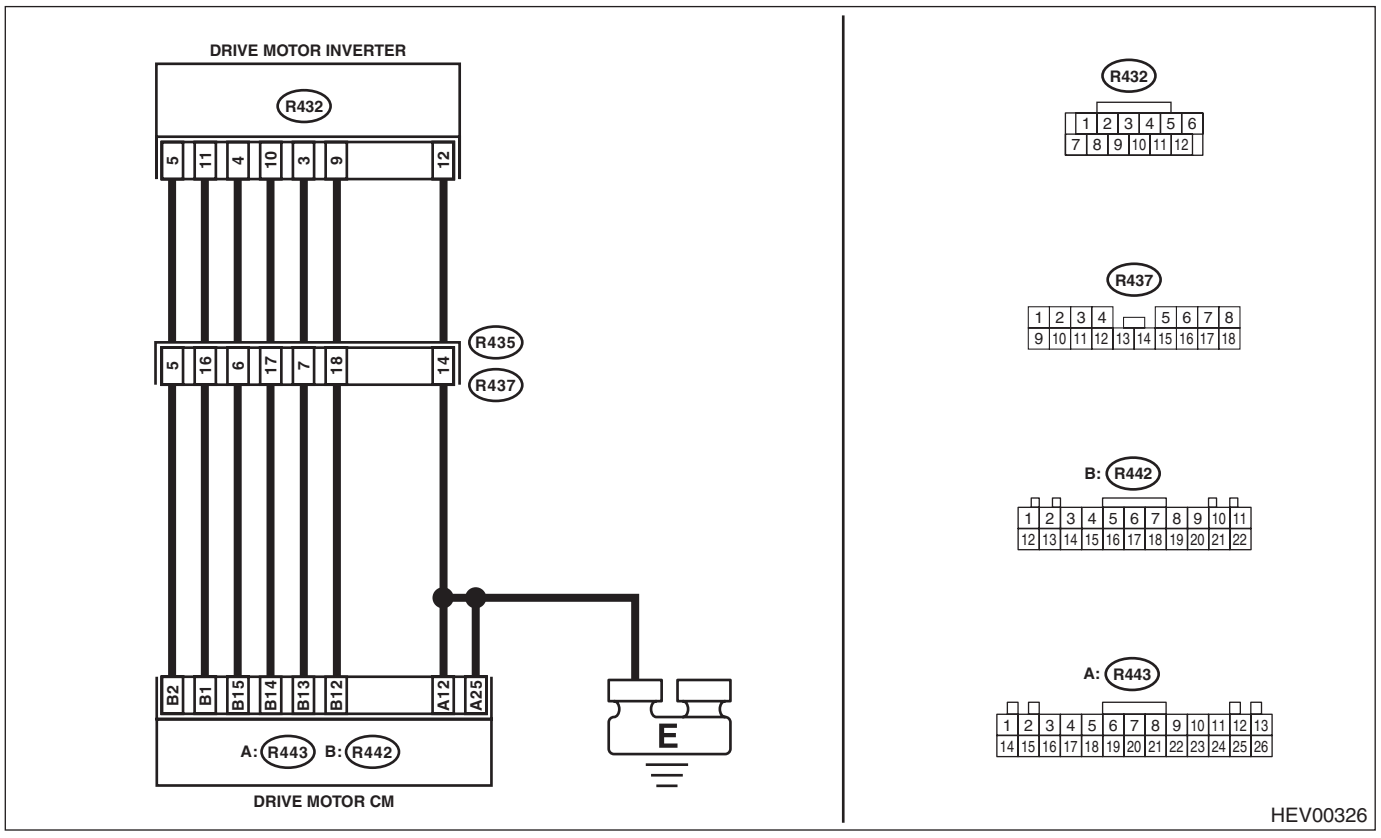
AY:DTC P0A60 DRIVE MOTOR "A" PHASE V CURRENT

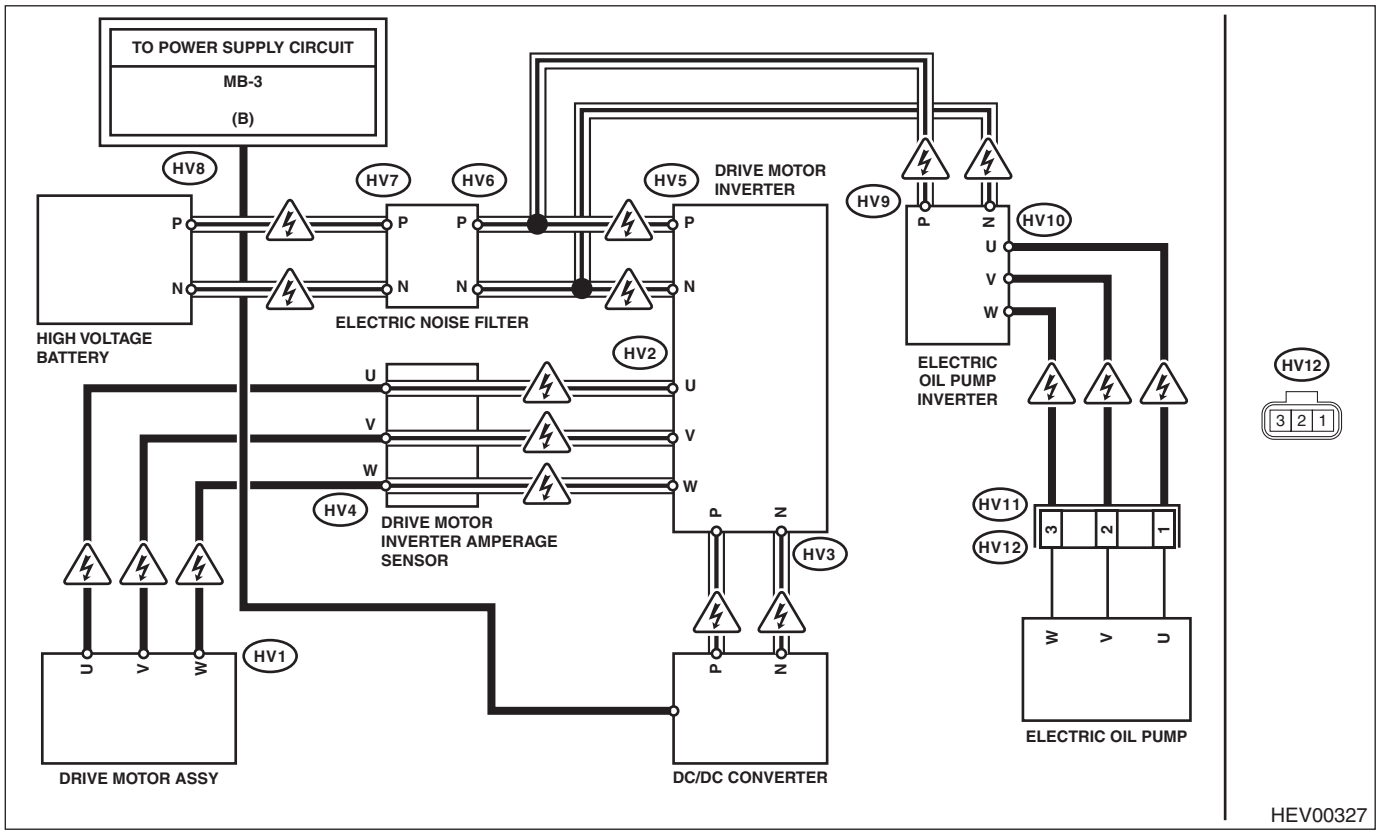
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-39, DTC P0A60 DRIVE MOTOR "A" PHASE V CURRENT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A78 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase V Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V ±0.1 V with IG ON?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
3	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector (R442, R443). 6) Disconnect the intermediate connector (R436). 7) Disconnect the drive motor inverter connector. 8) Using a tester, measure the resistance between terminals in DMCM connectors (R442, R443) and between each terminal in inverter connector. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and drive motor inverter, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnects power cable terminals (HV2, HV3) of the drive motor inverter and bus bar (HV5). NOTE: Be sure to use insulating tape. 2) Using a tester, check for continuity between drive motor inverter terminals. NOTE: When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV2) V (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) W (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **5**.
5	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on an insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Check continuity between each terminal of the unit. NOTE: • When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **13**.	Go to step **7**.
7	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminal (HV2) of the drive motor inverter and the ground bolt of inverter frame body. ***Connector & terminal*** ***(HV2) U — Ground bolt of inverter frame body:*** ***(HV2) V — Ground bolt of inverter frame body:*** ***(HV2) W — Ground bolt of inverter frame body:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **8**. If a milliohm tester is NOT at hand, Go to step **11**.	Go to step **9**.

	Step	Check	Yes	No
8	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between terminals of drive motor inverter power cable. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines less than 25 mΩ?	Go to step **10**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>
9	**CHECK DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using an insulation multimeter (250 V range), measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
10	**CHECK DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
11	**CHECK DRIVE MOTOR (SHORT).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **12**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

	Step	Check	Yes	No
12	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 6) Disconnect the power cable (HV2) of drive motor inverter. 7) Using an insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
13	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to “D” range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A78 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V ±0.1 V with IG ON?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>

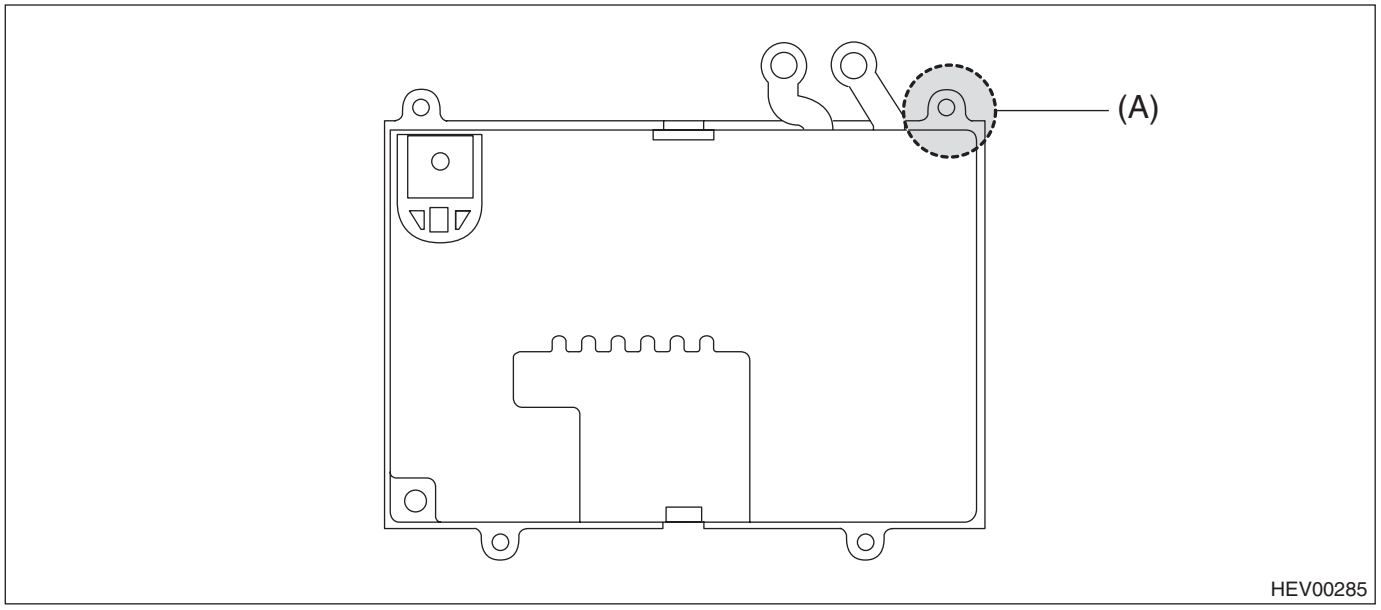
	Step	Check	Yes	No
3	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector (R442, R443). 6) Disconnect the intermediate connector (R436). 7) Disconnect the drive motor inverter connector. 8) Using a tester, measure the resistance between terminals in DMCM connectors (R442, R443) and between each terminal in inverter connector. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Does the resistance between either two points show 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and drive motor inverter, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnects power cable terminals (HV2, HV3) of the drive motor inverter and bus bar (HV5). NOTE: Be sure to use insulating tape. 2) Using a tester, check for continuity between drive motor inverter terminals. NOTE: When checking continuity, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV2) V (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) W (+) — (HV5) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **5**.
5	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on an insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **13**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Check continuity between each terminal of the unit. NOTE: • When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **13**.	Go to step **7**.
7	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminal (HV2) of the drive motor inverter and the ground bolt of inverter frame body. ***Connector & terminal*** ***(HV2) U — Ground bolt of inverter frame body:*** ***(HV2) V — Ground bolt of inverter frame body:*** ***(HV2) W — Ground bolt of inverter frame body:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **8**. If a milliohm tester is NOT at hand, Go to step **11**.	Go to step **9**.

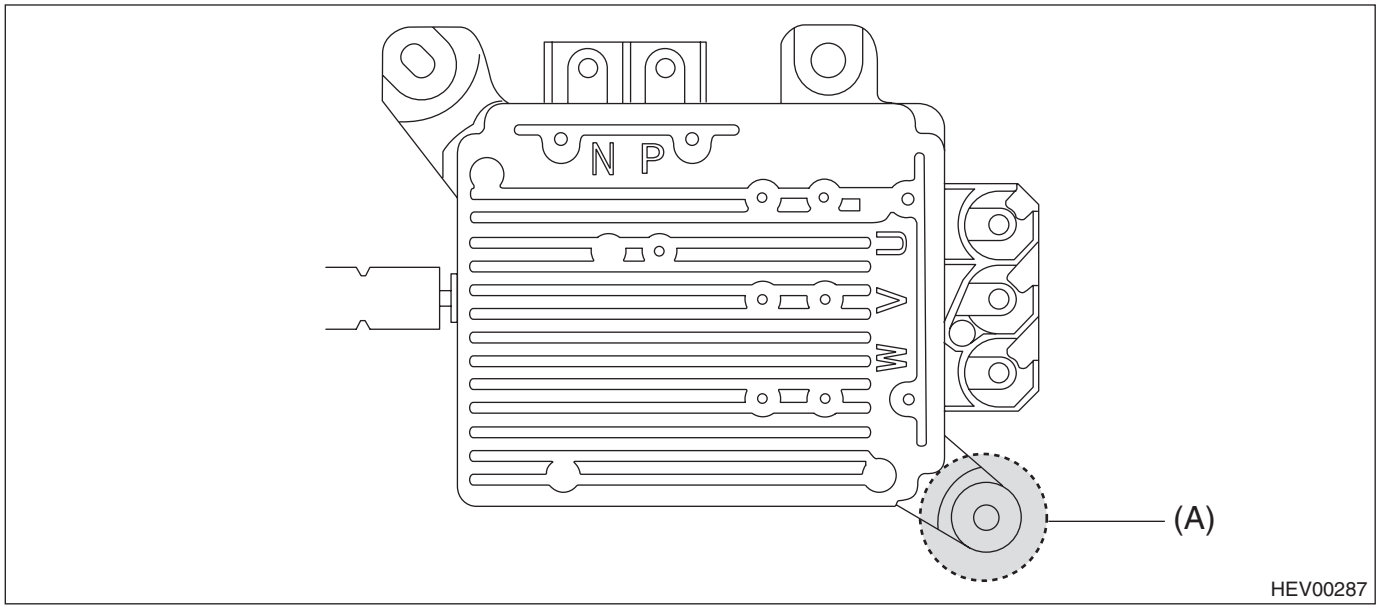
	Step	Check	Yes	No
8	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between terminals of drive motor inverter power cable. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines less than 25 mΩ?	Go to step **10**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>
9	**CHECK DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using an insulation multimeter (250 V range), measure the resistance between each terminal and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
10	**CHECK DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
11	**CHECK DRIVE MOTOR (SHORT).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **12**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

	Step	Check	Yes	No
12	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. 4) Wait for 10 minutes. 5) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 6) Disconnect the power cable (HV2) of drive motor inverter. 7) Using an insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **13**.
13	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>



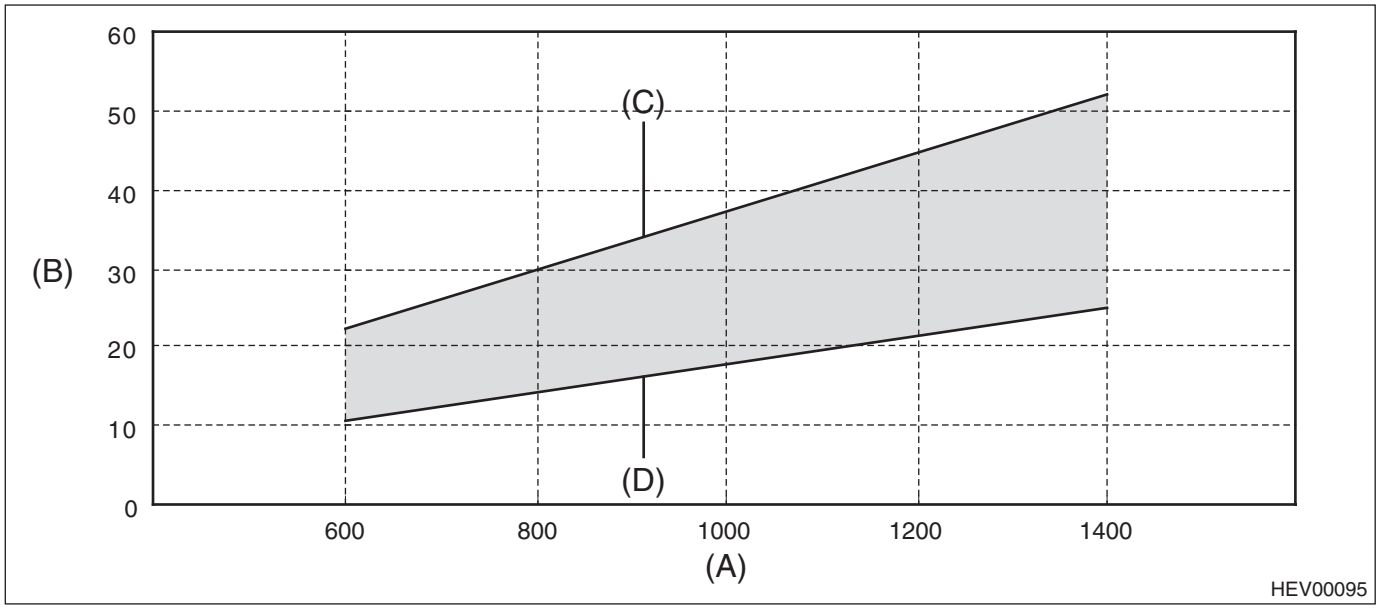
NOTE:
Ground measuring points

- Electric noise filter



(A) Ground measuring points

- DC/DC converter



(A) Ground measuring points

- Electric oil pump inverter

(A) Ground measuring points

NOTE:
Value of «Drive Motor Inverter Input High Voltage Sensor (Serial)» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

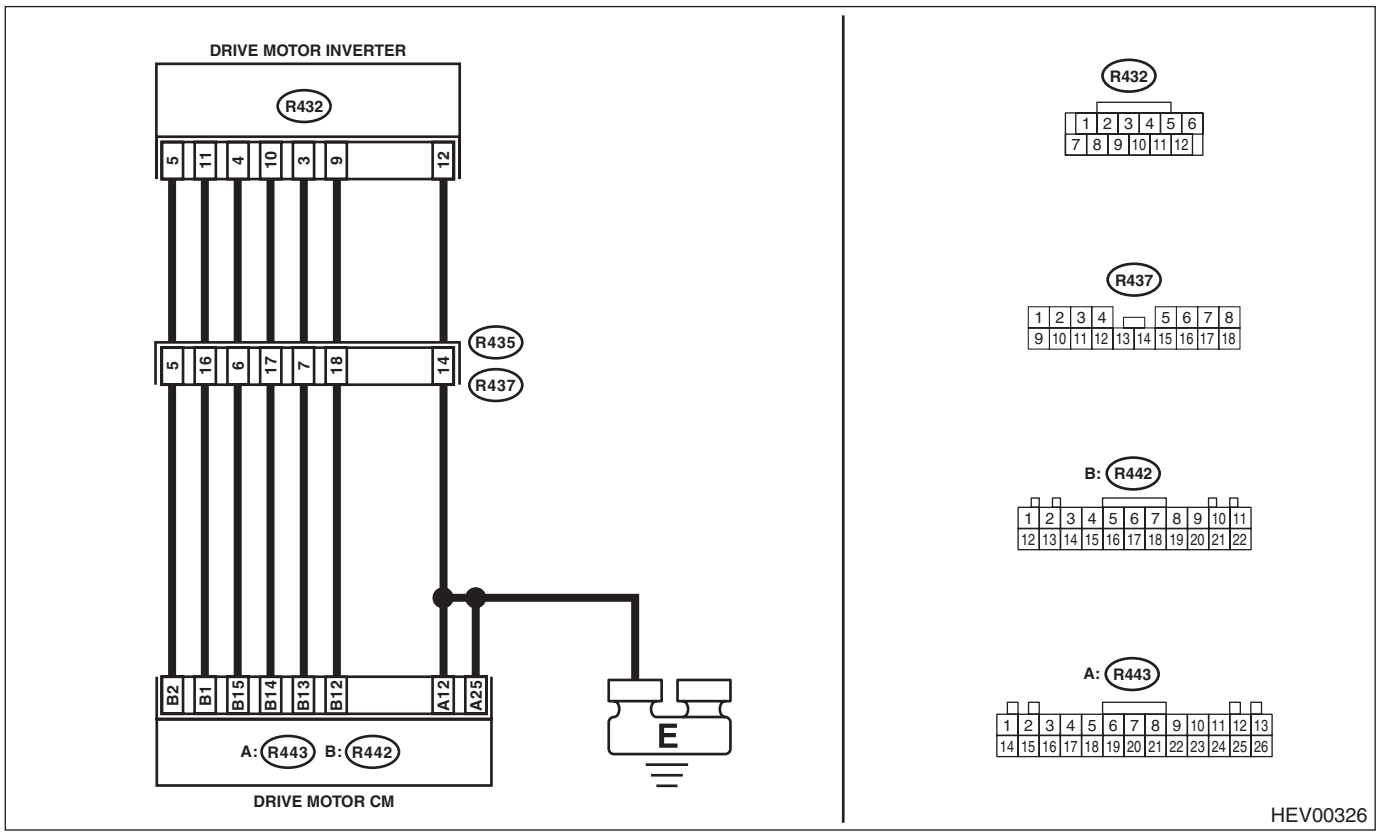
(A) Drive motor speed
(B) Drive Motor Inverter Input High Voltage Sensor (Serial)
(C) Standard at Max.
(D) Standard at Min.

BA:DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE

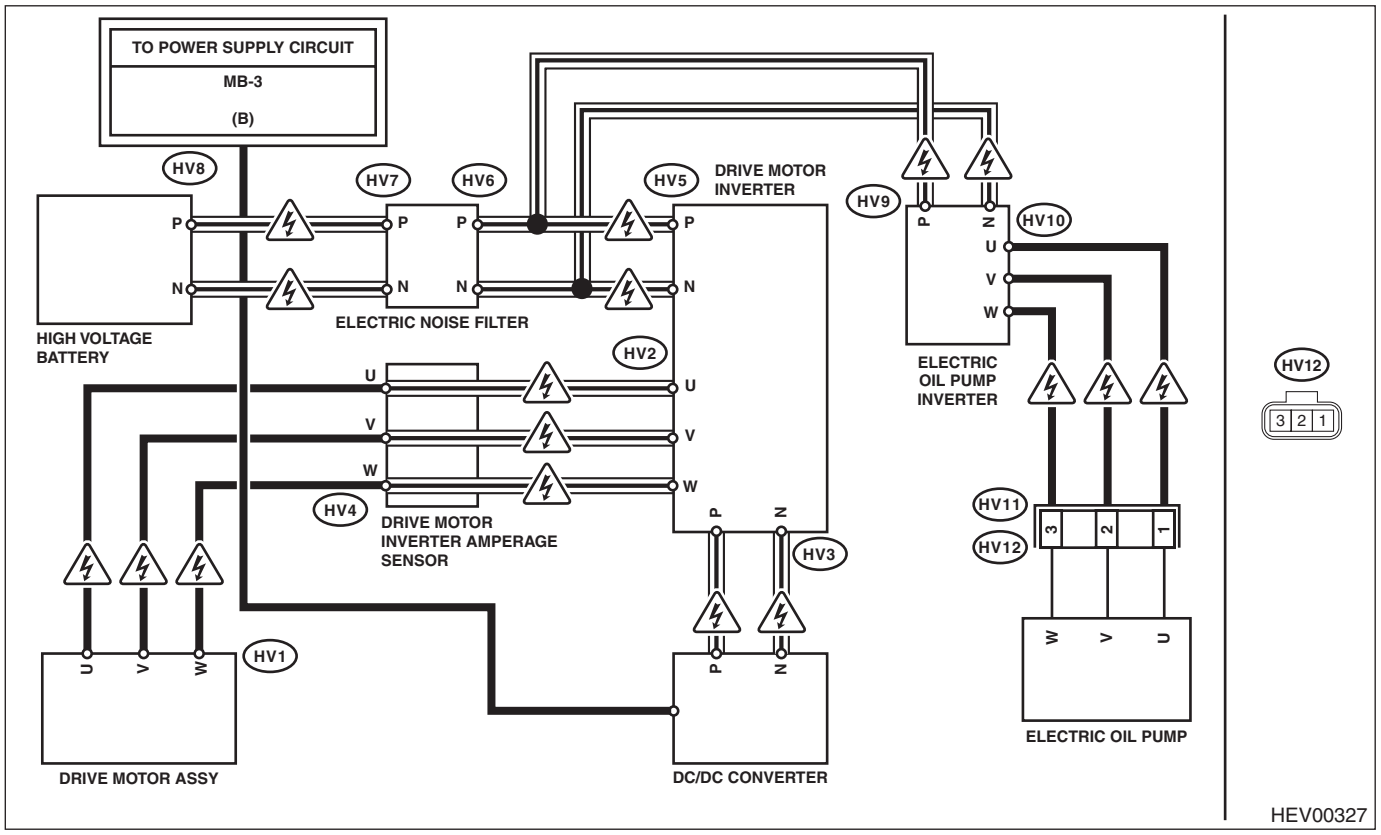
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-41, DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DETAIL CODE.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Detail code». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «Detail code» displayed?	If 500 is displayed, Go to step **2**. If 501, 502 are displayed, Go to step **17**. If 503 — 508 is displayed, Go to step **19**. NOTE: Check all the counting codes.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Serial Check». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «Abnormal»?	Perform the diagnosis according to DTC P1C30. <Ref. to HEV(diag)-258, DTC P1C30 MANUFACTURER CONTROLLED DTC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage Sensor Voltage»«Phase V Amperage Sensor Voltage»«Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Go to step **5**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>
5	**CHECK HARNESS (GATE SIGNAL SHORT TO POWER AND SHORT IN OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector. 3) Disconnect the drive motor inverter connector. 4) Disconnect the intermediate connector (R436). 5) Using a tester, measure the resistance between DMCM connector and individual connectors. ***Connector & terminal*** ***(R442) No. 2 — (R442) No. 1 — 22:*** ***(R442) No. 2 — (R443) No. 1 — 26:*** ***(R442) No. 2 — (R436) No. 1 — 8:*** ***(R442) No. 2 — (R432) No. 7:*** ***(R442) No. 1 — (R442) No. 1 — 22:*** ***(R442) No. 1 — (R443) No. 1 — 26:*** ***(R442) No. 1 — (R436) No. 1 — 8:*** ***(R442) No. 1 — (R432) No. 7:*** ***(R442) No. 15 — (R442) No. 1 — 22:*** ***(R442) No. 15 — (R443) No. 1 — 26:*** ***(R442) No. 15 — (R436) No. 1 — 8:*** ***(R442) No. 15 — (R432) No. 7:*** ***(R442) No. 14 — (R442) No. 1 — 22:*** ***(R442) No. 14 — (R443) No. 1 — 26:*** ***(R442) No. 14 — (R436) No. 1 — 8:*** ***(R442) No. 14 — (R432) No. 7:*** ***(R442) No. 13 — (R442) No. 1 — 22:*** ***(R442) No. 13 — (R443) No. 1 — 26:*** ***(R442) No. 13 — (R436) No. 1 — 8:*** ***(R442) No. 13 — (R432) No. 7:*** ***(R442) No. 12 — (R442) No. 1 — 22:*** ***(R442) No. 12 — (R443) No. 1 — 26:*** ***(R442) No. 12 — (R436) No. 1 — 8:*** ***(R442) No. 12 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between DMCM connector and drive motor inverter connector, or repair the intermediate connector.

	Step	Check	Yes	No
6	**CHECK DRIVE MOTOR INVERTER (SHORT).** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 2) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 3) Wait for 10 minutes. 4) Disconnects power cable (HV2, HV3) and bus bar (HV5) from the drive motor inverter. NOTE: Be sure to use insulating tape. 5) Using a tester, check continuity between drive motor inverter terminals. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV5) P (+) — (HV2) U (–):*** ***(HV5) P (+) — (HV2) V (–):*** ***(HV5) P (+) — (HV2) W (–):*** ***(HV2) U (+) — (HV5) N (–):*** ***(HV2) V (+) — (HV2) N (–):*** ***(HV2) W (+) — (HV2) N (–):*** ***(HV5) P (+) — (HV5) N (–):*** ***(HV2) U (+) — (HV2) V (–):*** ***(HV2) U (+) — (HV2) W (–):*** ***(HV2) V (+) — (HV2) W (–):*** ***(HV5) P (+) — Chassis ground (–):*** ***(HV5) N (+) — Chassis ground (–):*** ***(HV2) U (+) — Chassis ground (–):*** ***(HV2) V (+) — Chassis ground (–):*** ***(HV2) W (+) — Chassis ground (–):***	Is there continuity?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **15**.	Go to step **7**.
7	**CHECK DRIVE MOTOR INVERTER (RELEASED).** Using diode voltage measuring mode on an insulation multimeter, measure the voltage between the terminals of the drive motor inverter. NOTE: When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. ***Connector & terminal*** ***(HV2) U (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) U (–):*** ***(HV2) V (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) V (–):*** ***(HV2) W (+) — (HV5) P (–):*** ***(HV5) N (+) — (HV2) W (–):***	Is “O.L” indicated?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> Go to step **15**.	Go to step **8**.

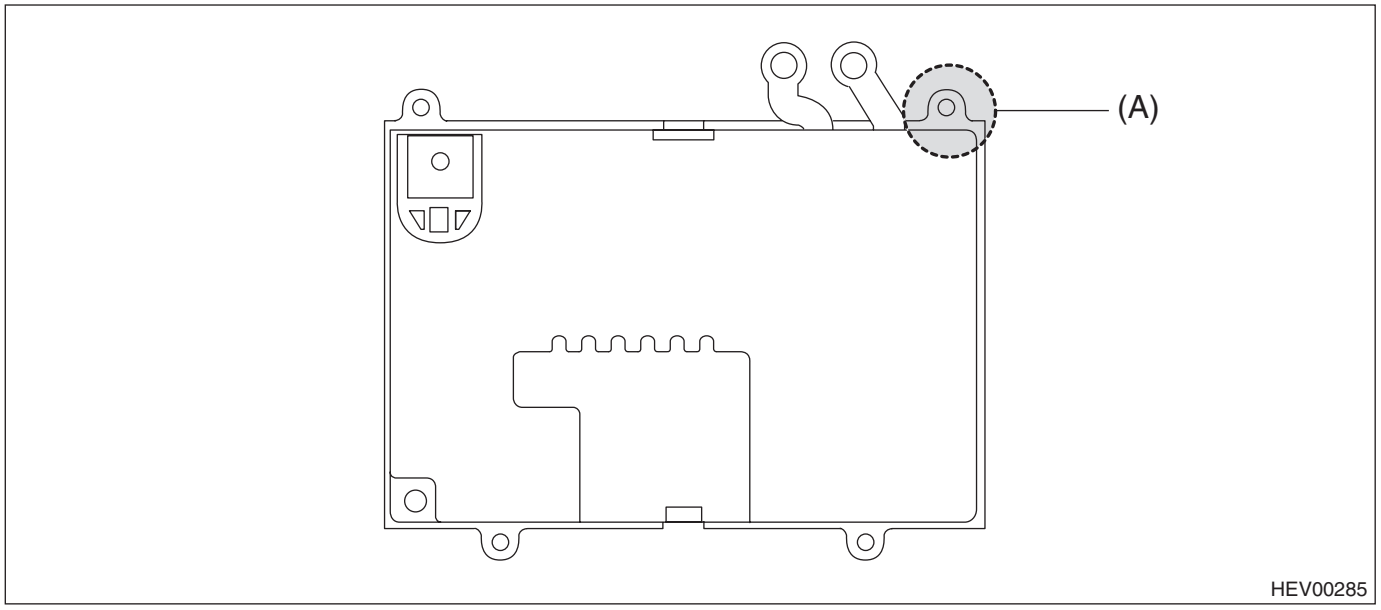
	Step	Check	Yes	No
8	**CHECK HIGH VOLTAGE UNIT (SHORT).** 1) Remove electric noise filter, DC/DC converter, and electric oil pump inverter. 2) Using a tester, check for continuity between terminals of each unit. NOTE: • When checking voltage values, always follow the combinations as follows with correct polarities. If polarities are reversed when checking, the trouble may not be accurately diagnosed. • For ground measuring points of electric noise filter, DC/DC converter, and electric oil pump inverter, refer to Notes in the margin. ***Connector & terminal*** ***(HV6) P (+) — (HV7) N (–):*** ***(HV6) P (+) — Electric noise filter ground (–):*** ***(HV6) N (+) — Electric noise filter ground (–):*** ***(HV3) P (+) — (HV3) N (–):*** ***(HV3) P (+) — DC/DC converter ground (–) :*** ***(HV3) N (+) — DC/DC converter ground (–):*** ***(HV9) P (+) — (HV9) N (–):*** ***(HV9) P (+) — (HV10) U (–):*** ***(HV9) P (+) — (HV10) V (–):*** ***(HV9) P (+) — (HV10) W (–):*** ***(HV10) U (+) — (HV9) N (–):*** ***(HV10) V (+) — (HV9) N (–):*** ***(HV10) W (+) — (HV9) N (–):*** ***(HV10) U (+) — (HV10) V (–):*** ***(HV10) U (+) — (HV10) W (–):*** ***(HV10) V (+) — (HV10) W (–):*** ***(HV9) P (+) — Electric oil pump inverter ground (–):*** ***(HV9) N (+) — Electric oil pump inverter ground (–):*** ***(HV10) U (+) — Electric oil pump inverter ground (–):*** ***(HV10) V (+) — Electric oil pump inverter ground (–) :*** ***(HV10) W (+) — Electric oil pump inverter ground (–):*** ***(HV8) P (+) — (HV8) N (–):*** ***(HV8) P (+) — Chassis ground (–):*** ***(HV8) N (+) — Chassis ground (–):***	Is there continuity?	Replace the unit that has continuity. Go to step **14**.	Go to step **9**.
9	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** Using an insulation multimeter (250 V range), measure the resistance between power cable terminals and chassis ground. ***Connector & terminal*** ***(HV2) U — Chassis ground:*** ***(HV2) V — Chassis ground:*** ***(HV2) W — Chassis ground:***	Is the resistance 2 MΩ or more?	If you have a milliohm tester at hand, Go to step **10**. If a milliohm tester is NOT at hand, Go to step **13**.	Go to step **11**.

	Step	Check	Yes	No
10	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value less than 25 mΩ?	Go to step **12**.	Go to step **16**.
11	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT TO GROUND).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using an insulation multimeter (250 V range), measure the resistance between power cable terminals and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Does the resistance between any points show less than 2 MΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **15**.
12	**CHECK POWER CABLE AND DRIVE MOTOR (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using a milliohm tester, measure the resistance between power cable terminals and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Is resistance between either lines less than 20 mΩ?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **15**.
13	**CHECK DRIVE MOTOR (SHORT).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	Go to step **14**.	Go to step **16**.

	Step	Check	Yes	No
14	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Disconnect the power cable (HV2) of drive motor inverter. 4) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 5) Using an insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the short circuit of the power cable. Go to step **15**.
15	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to "D" range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>
16	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-31, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.
17	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Serial Check». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «Abnormal»?	Perform the diagnosis according to DTC P1C30. <Ref. to HEV(diag)-258, DTC P1C30 MANUFACTURER CONTROLLED DTC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **18**.

	Step	Check	Yes	No
18	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-31, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.
19	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **20**.
20	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage Sensor Voltage»«Phase V Amperage Sensor Voltage»«Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Go to step **21**.	Perform the diagnosis according to DTC P0BE6 and P06B1. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>
21	**CHECK DRIVE MOTOR INVERTER (INTERNAL SHORT).** 1) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 2) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 3) Wait for 10 minutes. 4) Disconnect the DMCM connector. 5) Disconnect the drive motor inverter connector. 6) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R442) No. 2 — Ground bolt of inverter frame body:*** ***(R442) No. 1 — Ground bolt of inverter frame body:*** ***(R442) No. 15 — Ground bolt of inverter frame body:*** ***(R442) No. 14 — Ground bolt of inverter frame body:*** ***(R442) No. 13 — Ground bolt of inverter frame body:*** ***(R442) No. 12 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **22**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter connector, or repair the intermediate connector.

	Step	Check	Yes	No
22	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the drive motor inverter connector and DMCM connector. ***Connector & terminal*** ***(R442) No. 2 — (R432) No. 5:*** ***(R442) No. 1 — (R432) No. 11:*** ***(R442) No. 15 — (R432) No. 4:*** ***(R442) No. 14 — (R432) No. 10:*** ***(R442) No. 13 — (R432) No. 3:*** ***(R442) No. 12 — (R432) No. 9:***	Is the resistance less than 1 Ω?	Go to step **23**.	Repair open circuit in harness between DMCM connector and drive motor inverter connector, or repair the intermediate connector.
23	**CHECK POWER CABLE AND DRIVE MOTOR (OPEN CIRCUIT).** 1) Leave the vehicle for ten minutes under temperature of 40°C (104°F) or less. 2) Disconnect the power cable (HV2) from drive motor inverter. 3) Using a tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines 1 Ω or more?	Go to step **24**.	Go to step **25**.
24	**CHECK DRIVE MOTOR (OPEN CIRCUIT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 3) Using a tester, measure the resistance between drive motor terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines 1 Ω or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair or replace the open circuit of the power cable.
25	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-31, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.



NOTE:

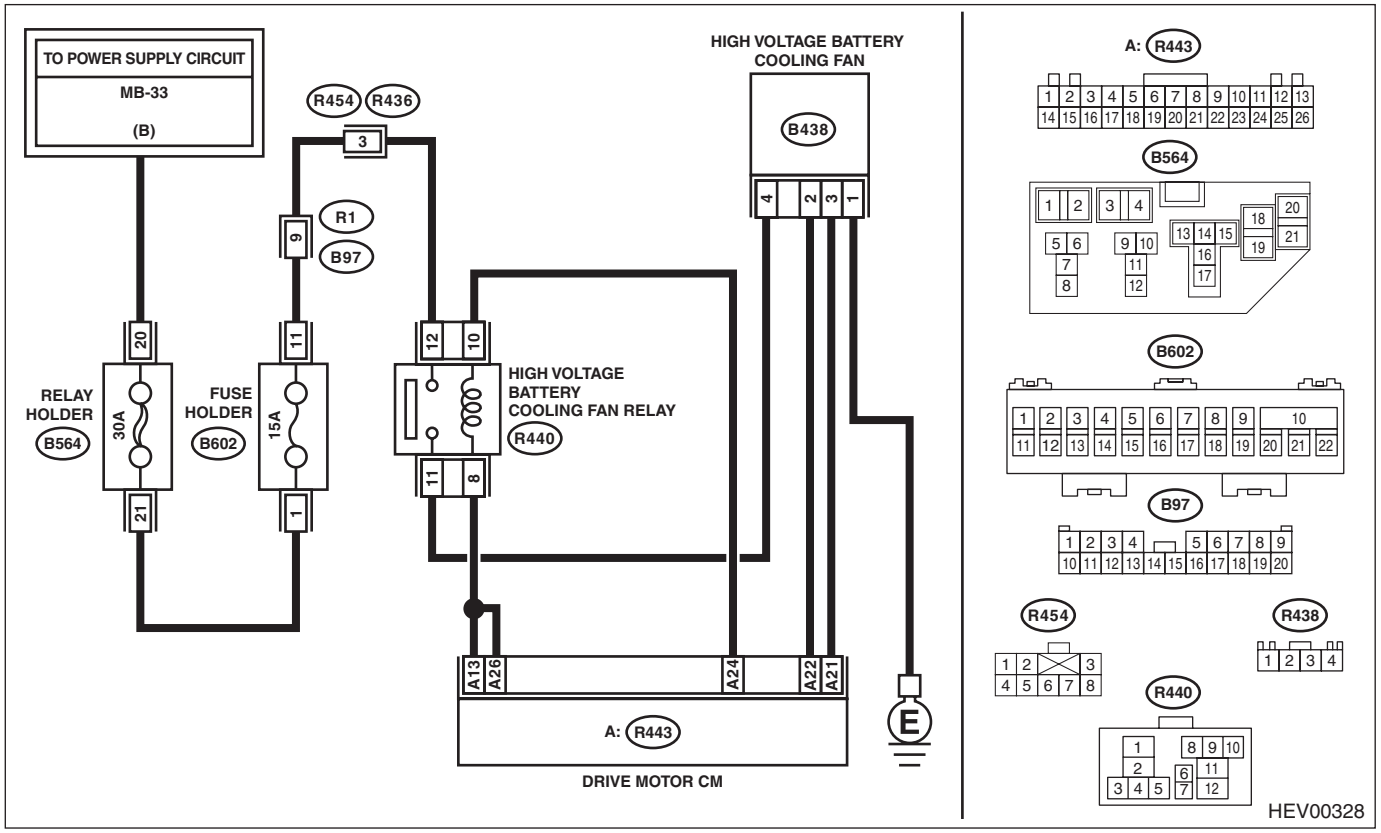
BB:DTC P0A82 HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/ STUCK OFF

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-42, DTC P0A82 HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

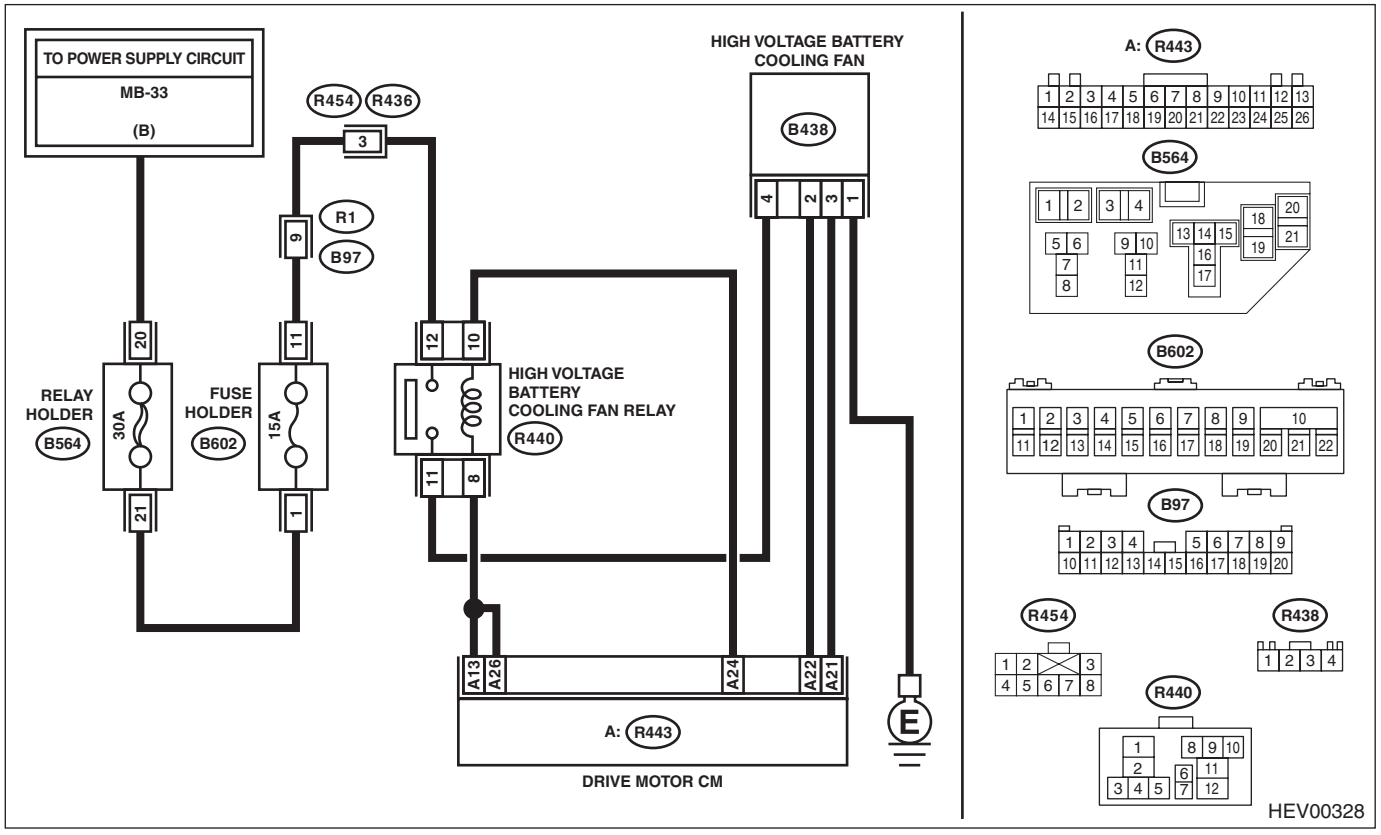
	Step	Check	Yes	No
1	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-73, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the cooling fan speed change when the speed is switched across 4 steps (Stop, Steps 1 — 3)?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector. 3) Disconnect the high voltage battery cooling fan connector. 4) Using a tester, measure the resistance between the high voltage battery cooling fan connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 21 — (R438) No. 3:*** ***(R443) No. 22 — (R438) No. 2:*** ***(R438) No. 1 — Ground bolt of inverter frame body:*** ***(R438) No. 4 — (R440) No. 11:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair open circuit in harness between DMCM connector and high voltage battery cooling fan connector, or repair the intermediate connector.
3	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the resistance between the high voltage battery cooling fan connector and other signal lines. ***Connector & terminal*** ***(R443) No. 21 — (R438) No. 4:*** ***(R443) No. 21 — (R443) No. 1 — 26:*** ***(R443) No. 21 — (R442) No. 1 — 22:*** ***(R443) No. 21 — (R436) No. 1 — 8:*** ***(R443) No. 22 — (R438) No. 4:*** ***(R443) No. 22 — (R443) No. 1 — 26:*** ***(R443) No. 22 — (R442) No. 1 — 22:*** ***(R443) No. 22 — (R436) No. 1 — 8:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to power in harness between DMCM connector and high voltage battery cooling fan connector, or repair the intermediate connector.
4	**CHECK DTC.** 1) Replace the high voltage battery cooling fan. <Ref. to HEV-59, High Voltage Battery Cooling System.> 2) Perform drive cycle H. <Ref. to HEV(diag)-38, DRIVE CYCLE H, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	There is an abnormal condition in the high voltage battery cooling fan.

BC:DTC P0A83 HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-43, DTC P0A83 HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

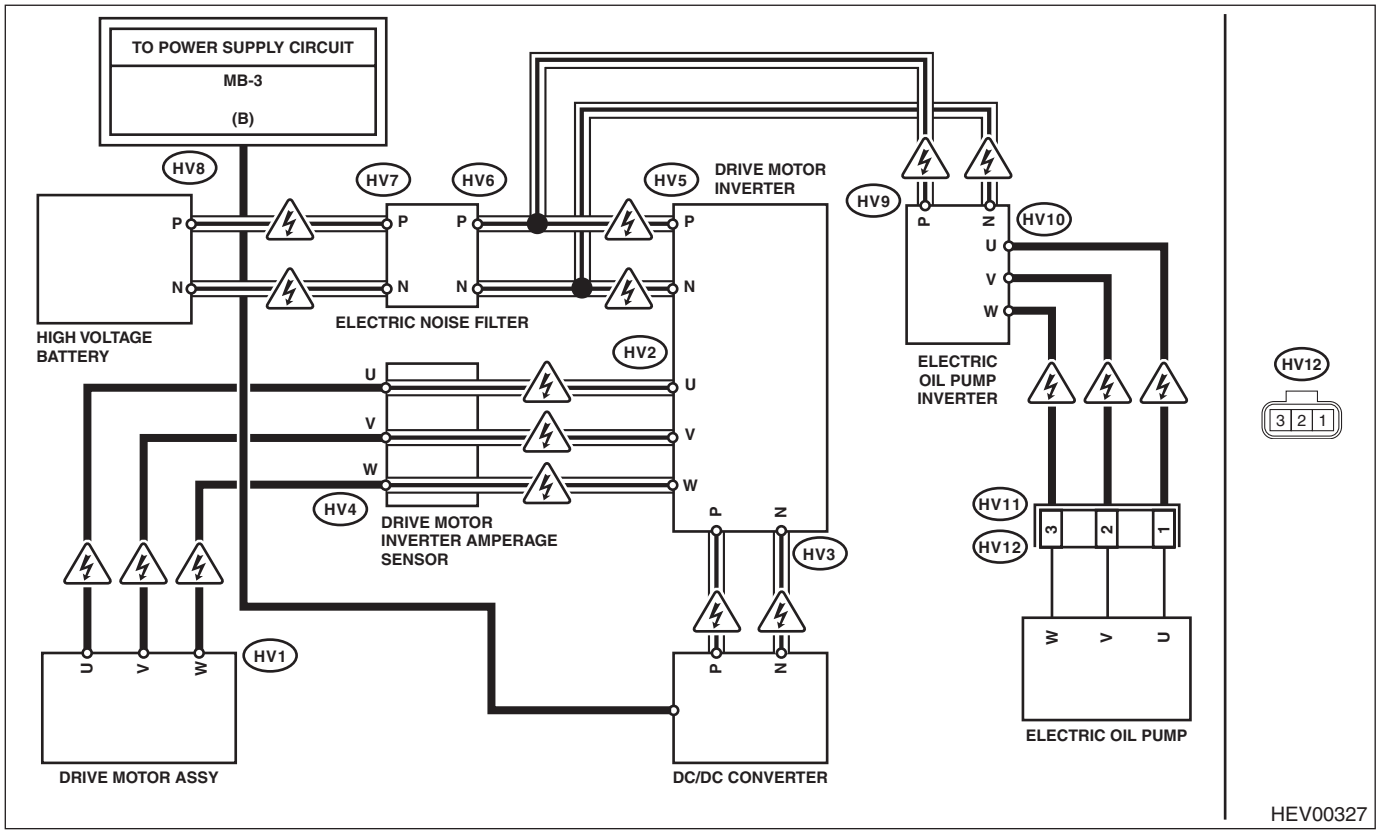
	Step	Check	Yes	No
1	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-73, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the cooling fan speed change when the speed is switched across 4 steps (Stop, Steps 1 — 3)?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the DMCM connector. 3) Disconnect the high voltage battery cooling fan connector. 4) Using a tester, measure the resistance between the high voltage battery cooling fan connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R438) No. 2 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and high voltage battery cooling fan connector, or repair the intermediate connector.
3	**CHECK DTC.** 1) Replace the high voltage battery cooling fan. <Ref. to HEV-59, High Voltage Battery Cooling System.> 2) Perform drive cycle H. <Ref. to HEV(diag)-38, DRIVE CYCLE H, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	There is an abnormal condition in the high voltage battery cooling fan.

BD:DTC P0A90 DRIVE MOTOR "A" PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-44, DTC P0A90 DRIVE MOTOR "A" PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are DTCs (relating to current sensors, speed sensors) detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage Sensor Voltage»«Phase V Amperage Sensor Voltage»«Phase W Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Go to step **3**.	Perform the diagnosis according to DTC P0BE6. <Ref. to HEV(diag)-226, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3	**CHECK DRIVE MOTOR AND POWER CABLE (DEMAGNETIZATION, SHORT).** 1) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 2) Lift up the vehicle. 3) Start the engine, and set the shift lever to "D" range. 4) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Are any of the following statements relevant? • «Drive Motor Inverter Input High Voltage Sensor (Serial)» is out of the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm. • Abnormal noise and changes in rotation speed occur near 600 rpm.	If you have a milliohm tester at hand, Go to step **6**. If a milliohm tester is NOT at hand, Go to step **11**.	If you have a milliohm tester at hand, Go to step **4**. If a milliohm tester is NOT at hand, Go to step **10**.
4	**CHECK DRIVE MOTOR AND POWER CABLE (SHORT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A»«Drive Motor Temperature B» are 40°C (104°F) or less. <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.> 3) Turn the ignition switch to OFF. 4) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 5) Disconnect the power cable (HV2) of drive motor inverter. 6) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value 25 mΩ or less?	Go to step **5**.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>

	Step	Check	Yes	No
5	**CHECK DRIVE MOTOR (SHORT).** 1) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 2) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is either resistance value 20 mΩ or less?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.> Go to step **16**.
6	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **7**.	Retighten the bolts. Or replace the bus bar.
7	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A»«Drive Motor Temperature B» are 40°C (104°F) or less. <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.> 3) Turn the ignition switch to OFF. 4) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 5) Disconnect the power cable (HV2) of drive motor inverter. 6) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value out of 25 — 80 mΩ range?	Go to step **8**.	Go to step **9**.
8	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 2) Using a milliohm tester, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is either resistance value out of 20 — 70 mΩ range?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.> Go to step **16**.

	Step	Check	Yes	No
9	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Replace the removed/disconnected parts back to the vehicle. 3) Perform drive cycle B. <Ref. to HEV(diag)-33, DRIVE CYCLE B, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.
10	**CHECK POWER CABLE (SHORT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Disconnect the power cable (HV2) of drive motor inverter. 4) Using an insulation multimeter (250 V range), measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Does the resistance between any points show 2 MΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.> Go to step **16**.
11	**CHECK BUS BAR.** Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **12**.	Retighten the bolts. Or replace the bus bar.
12	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A»«Drive Motor Temperature B» are 40°C (104°F) or less. <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.> 3) Turn the ignition switch to OFF. 4) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 5) Disconnect the power cable (HV2) of drive motor inverter. 6) Using an insulation multimeter, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV2) U — (HV2) V:*** ***(HV2) U — (HV2) W:*** ***(HV2) V — (HV2) W:***	Is either resistance value 0.3 Ω or more?	Go to step **13**.	Go to step **14**.

	Step	Check	Yes	No
13	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor power cable (HV1). NOTE: The gasket is NOT reusable. 2) Using an insulation multimeter, measure the resistance between power cable terminals. ***Connector & terminal*** ***(HV1) U — (HV1) V:*** ***(HV1) U — (HV1) W:*** ***(HV1) V — (HV1) W:***	Is either resistance value 0.3 Ω or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.>
14	**CHECK DRIVE MOTOR AND POWER CABLE.** 1) Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.> 2) Replace the power cable. <Ref. to HEV-51, Power Cable.> 3) Replace the removed/disconnected parts back to the vehicle. 4) Perform drive cycle B. <Ref. to HEV(diag)-33, DRIVE CYCLE B, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Go to step **15**.	Problem is present in drive motor assembly or power cable.
15	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle B. <Ref. to HEV(diag)-33, DRIVE CYCLE B, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.
16	**CHECK OF DRIVE MOTOR (DEMAGNETIZATION).** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to “D” range. 5) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>

NOTE:
Value of «Drive Motor Inverter Input High Voltage Sensor (Serial)» is proportional to «Drive Motor Speed».

- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

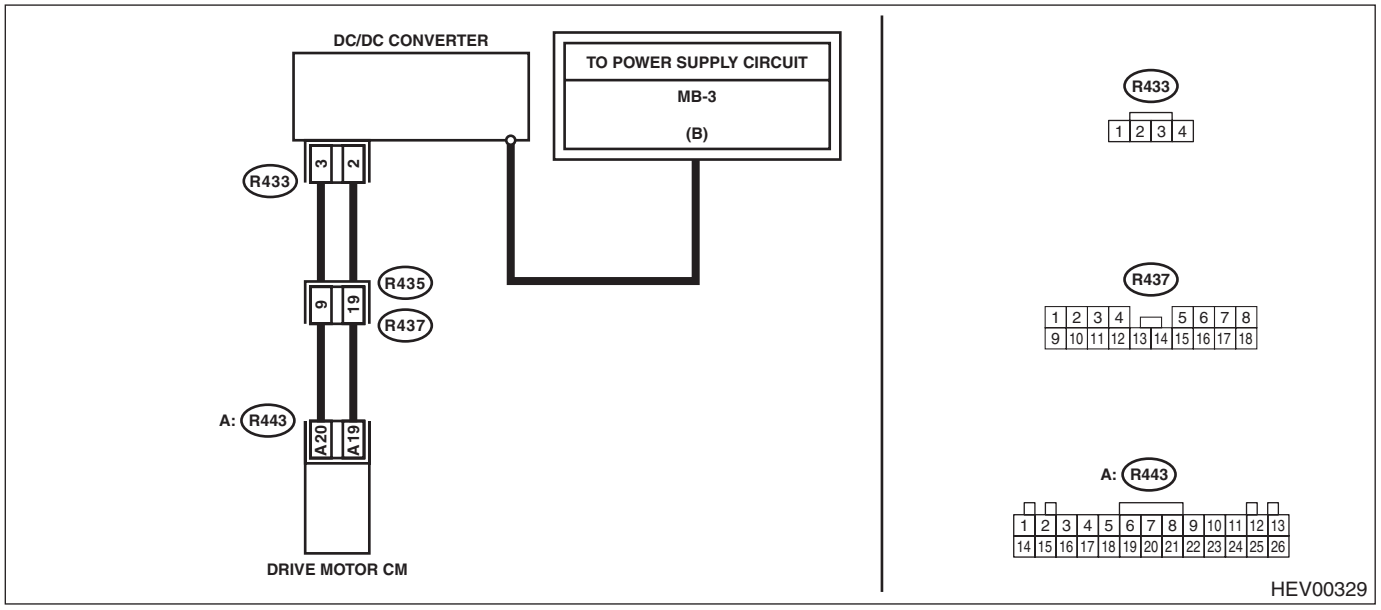
(A) Drive motor speed
(B) Drive Motor Inverter Input High Voltage Sensor (Serial)
(C) Standard at Max.
(D) Standard at Min.

BE:DTC P0A94 DC/DC CONVERTER PERFORMANCE

DIAGNOSIS:

- Detects abnormal conditions in DC/DC converter.
- If the DC/DC converter detects serial communication errors with the drive motor control module, or internal errors are detected in the DC/DC converter, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DETAIL CODE.** Using the Subaru Select Monitor, confirm «Detail code» in the freeze frame data of the drive motor control system. <Ref. to HEV(diag)-65, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is «Detail code» displayed?	If 0800 is displayed, Go to step **3**. If 0801 — 0806 is displayed, replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.>	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the DC/DC converter connector. 2) Disconnect the DMCM connector. 3) Using a tester, measure the resistance between DC/DC converter connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R433) No. 2 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short to ground circuit in harness between DC/DC converter connector and DMCM connector, or repair the intermediate connector.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between DC/DC converter connector and DMCM connector. ***Connector & terminal*** ***(R433) No. 2 — (R443) No. 19:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between DC/DC converter connector and DMCM connector, or repair the intermediate connector.
5	**CHECK HARNESS (SHORT TO OTHER SIGNAL).** Using the tester, measure the resistance in the DMCM connector. ***Connector & terminal*** ***(R443) No. 19 — (R442) No. 1 — 22:*** ***(R443) No. 19 — (R443) No. 1 — 26:*** ***(R443) No. 19 — (R436) No. 1 — 8:*** ***(R443) No. 19 — (R432) No. 7:*** ***(R443) No. 19 — DC/DC converter 12 V output line:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between DC/DC converter connector and DMCM connector, or repair the intermediate connector.
6	**CHECK DTC.** 1) Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in DC/DC converter.

BF:DTC P0AED DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-45, DTC P0AED DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Temperature A». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

BG:DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-46, DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF and leave the vehicle 10 minutes unattended. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Operation Update Counter». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Has the value changed (when the ignition is turned to ON)?	Go to step **2**.	Perform the diagnosis according to DTC P0C0C and P1C30. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Inverter Temperature A»«Drive Motor Inverter Temperature B»«Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is either value at 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Go to step **3**.
3	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Inverter Temperature A»«Drive Motor Inverter Temperature B»«Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the difference between each temperature 30°C (54°F) or less?	Go to step **4**.	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>
4	**CHECK CURRENT DATA.** 1) With the Subaru Select Monitor connected, drive the vehicle for 10 minutes or more. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Inverter Temperature A»«Drive Motor Inverter Temperature B»«Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Have any of those values changed 10°C (18°F) or more from the temperature before driving the vehicle?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>

BH:DTC P0AF2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-48, DTC P0AF2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Temperature B». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

BI: DTC P0AF3 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-49, DTC P0AF3 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:

For the diagnostic procedure, refer to "DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE". <Ref. to HEV(diag)-223, DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BJ:DTC P0BD1 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-51, DTC P0BD1 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Temperature C». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 204°C (399°F)?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

BK:DTC P0BD2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-52, DTC P0BD2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:

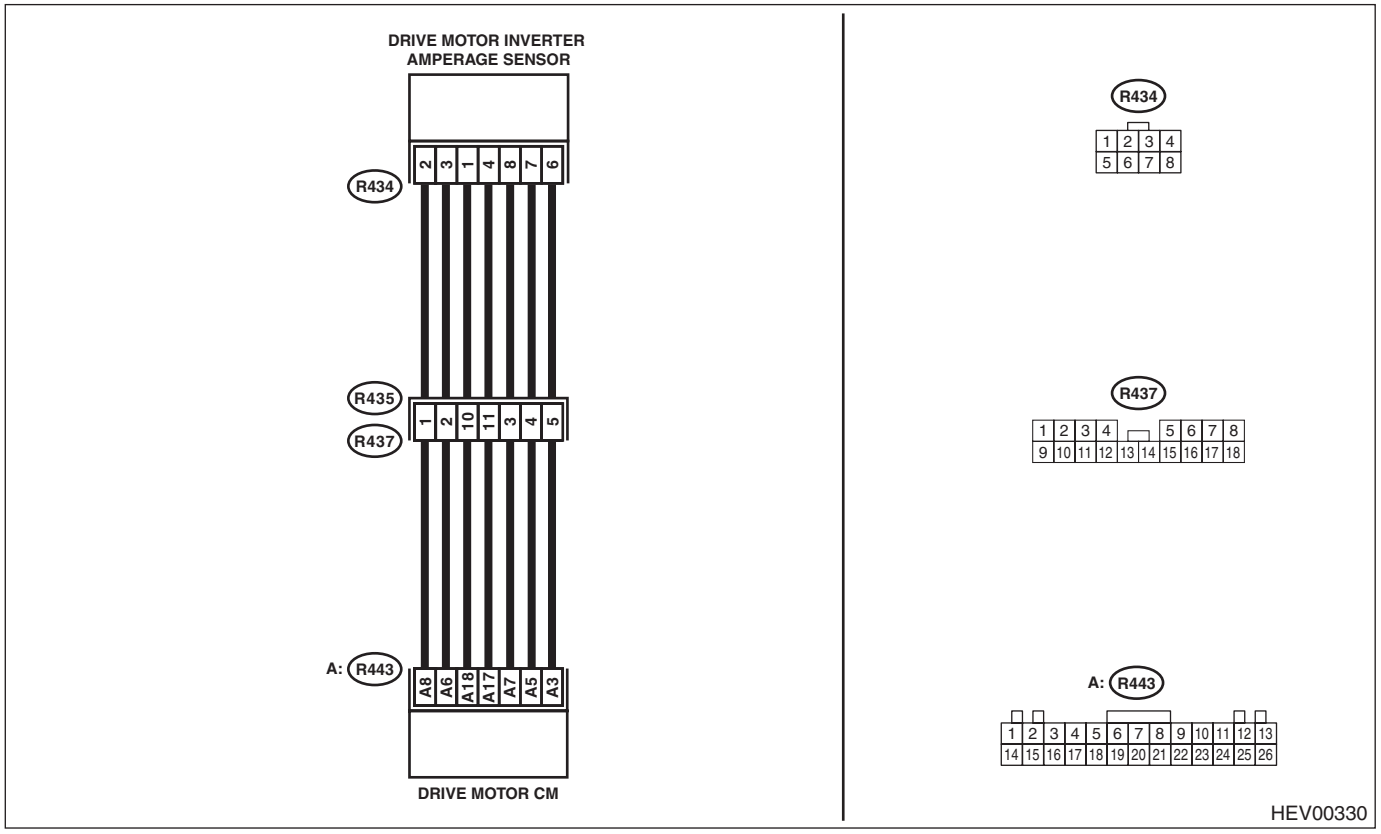
For the diagnostic procedure, refer to “DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE”. <Ref. to HEV(diag)-223, DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BL:DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-54, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 2.5 V±0.1 V?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 7 — Ground bolt of inverter frame body:*** ***(R443) No. 5 — Ground bolt of inverter frame body:*** ***(R443) No. 3 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between DMCM connector and the drive motor inverter amperage sensor connector. ***Connector & terminal:*** ***(R443) No. 7 — (R434) No. 8:*** ***(R443) No. 5 — (R434) No. 7:*** ***(R443) No. 3 — (R434) No. 6:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair open circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

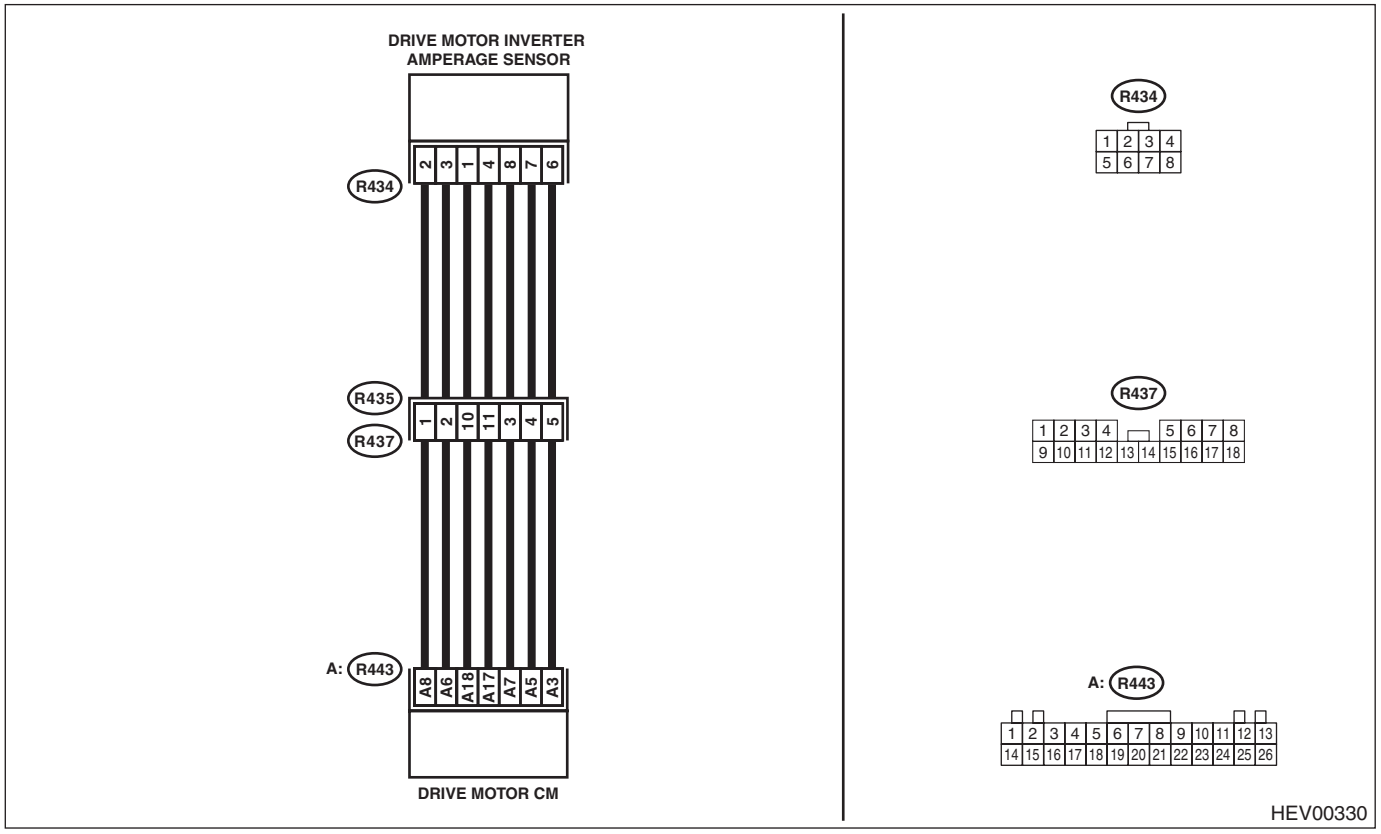
	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance within the DMCM connector and between the DMCM connector and the drive motor inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
5	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

BM:DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-55, DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 0.5 V or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 7 — Ground bolt of inverter frame body:*** ***(R443) No. 5 — Ground bolt of inverter frame body:*** ***(R443) No. 3 — Ground bolt of inverter frame body:*** ***(R443) No. 8 — Ground bolt of inverter frame body:*** ***(R443) No. 6 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between DMCM connector and the drive motor inverter amperage sensor connector. ***Connector & terminal:*** ***(R443) No. 7 — (R434) No. 8:*** ***(R443) No. 5 — (R434) No. 7:*** ***(R443) No. 3 — (R434) No. 6:*** ***(R443) No. 8 — (R434) No. 2:*** ***(R443) No. 6 — (R434) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair open circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

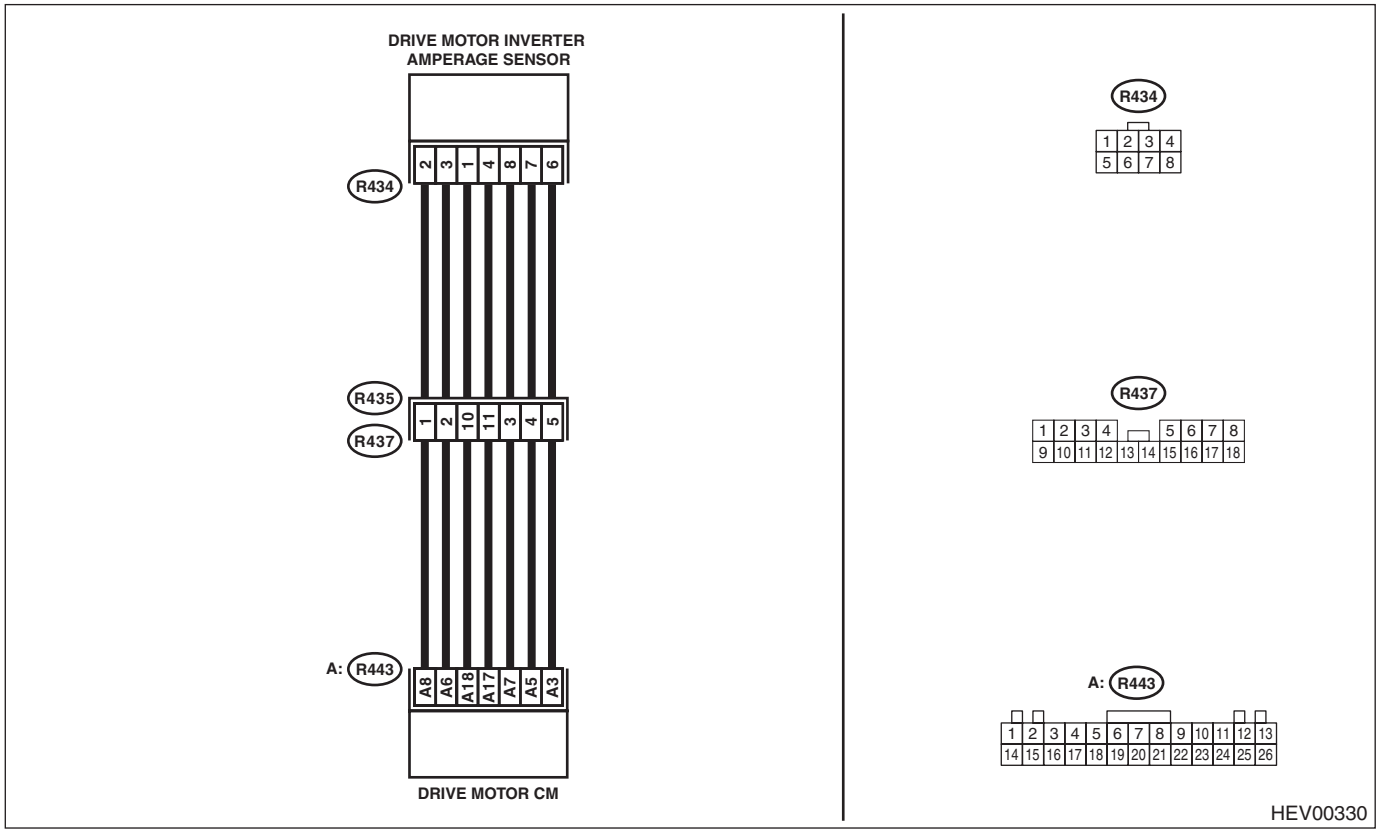
	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance within the DMCM connector and between the DMCM connector and the drive motor inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
5	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

BN:DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-56, DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Phase U Amperage Sensor Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 4.5 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 18 — (R434) No. 1:*** ***(R443) No. 17 — (R434) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance within the DMCM connector and between the DMCM connector and the drive motor inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

	Step	Check	Yes	No
4	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

BO:DTC P0BEA DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-57, DTC P0BEA DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
Refer to DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE. <Ref. to HEV(diag)-226, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BP:DTC P0BEB DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-58, DTC P0BEB DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
Refer to DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW. <Ref. to HEV(diag)-229, DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BQ:DTC P0BEC DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-59, DTC P0BEC DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
Refer to DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH. <Ref. to HEV(diag)-232, DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BR:DTC P0BEE DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-60, DTC P0BEE DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
Refer to DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE. <Ref. to HEV(diag)-226, DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BS:DTC P0BEF DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-61, DTC P0BEF DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
Refer to DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW. <Ref. to HEV(diag)-229, DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BT:DTC P0BF0 DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-62, DTC P0BF0 DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

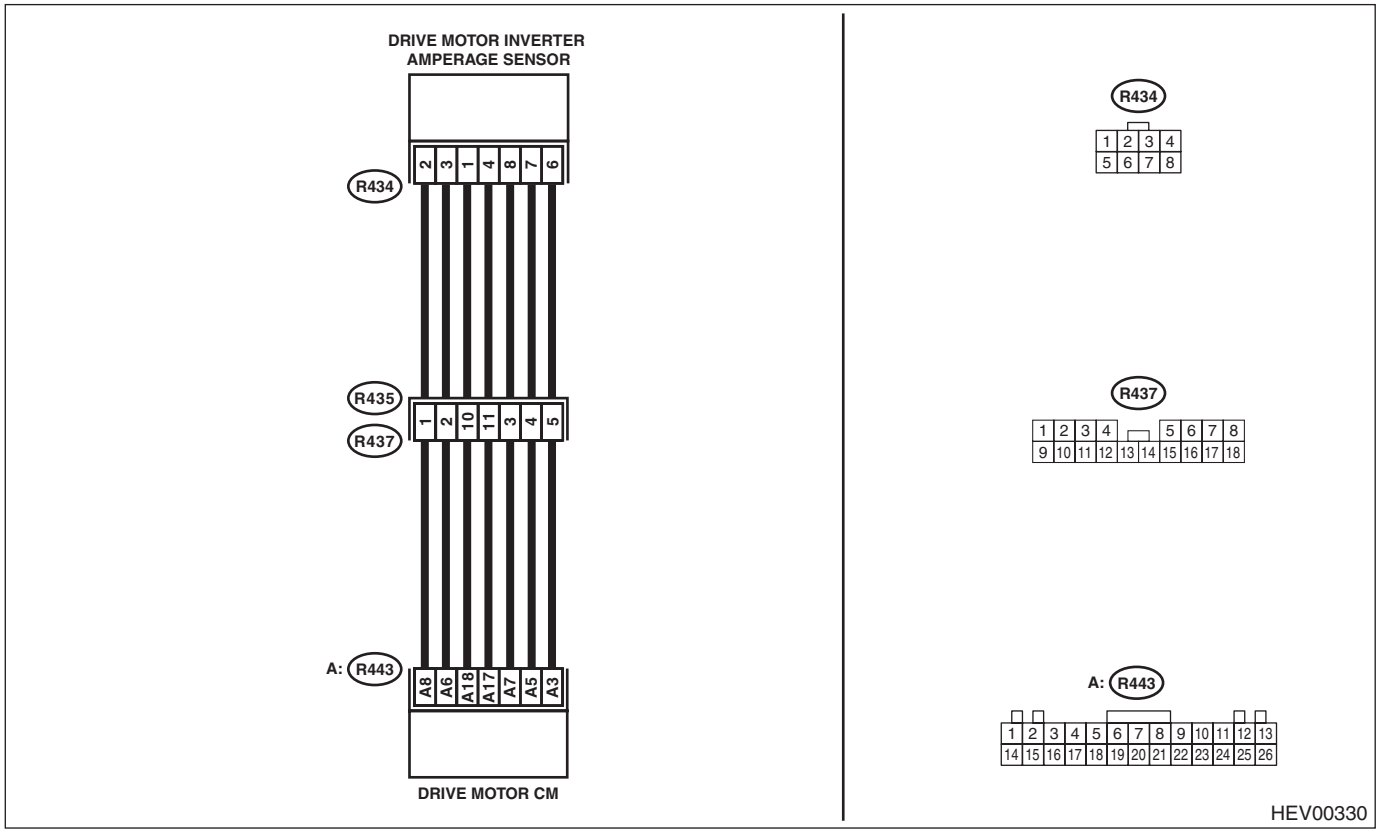
NOTE:
Refer to DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH. <Ref. to HEV(diag)-232, DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BU:DTC P0BFD DRIVE MOTOR "A" PHASE U-V-W CURRENT SENSOR CORRELATION

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-63, DTC P0BFD DRIVE MOTOR "A" PHASE U-V-W CURRENT SENSOR CORRELATION, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Phase U Amperage»«Phase V Amperage»«Phase W Amperage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the sum of those three values 45 A or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the current sensor connector. Connector & terminal ***Connector & terminal:*** ***(R443) No. 7 — (R434) No. 8:*** ***(R443) No. 5 — (R434) No. 7:*** ***(R443) No. 3 — (R434) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair open circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
3	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal:*** ***(R443) No. 7 — Ground bolt of inverter frame body:*** ***(R443) No. 5 — Ground bolt of inverter frame body:*** ***(R443) No. 3 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short to ground circuit in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.

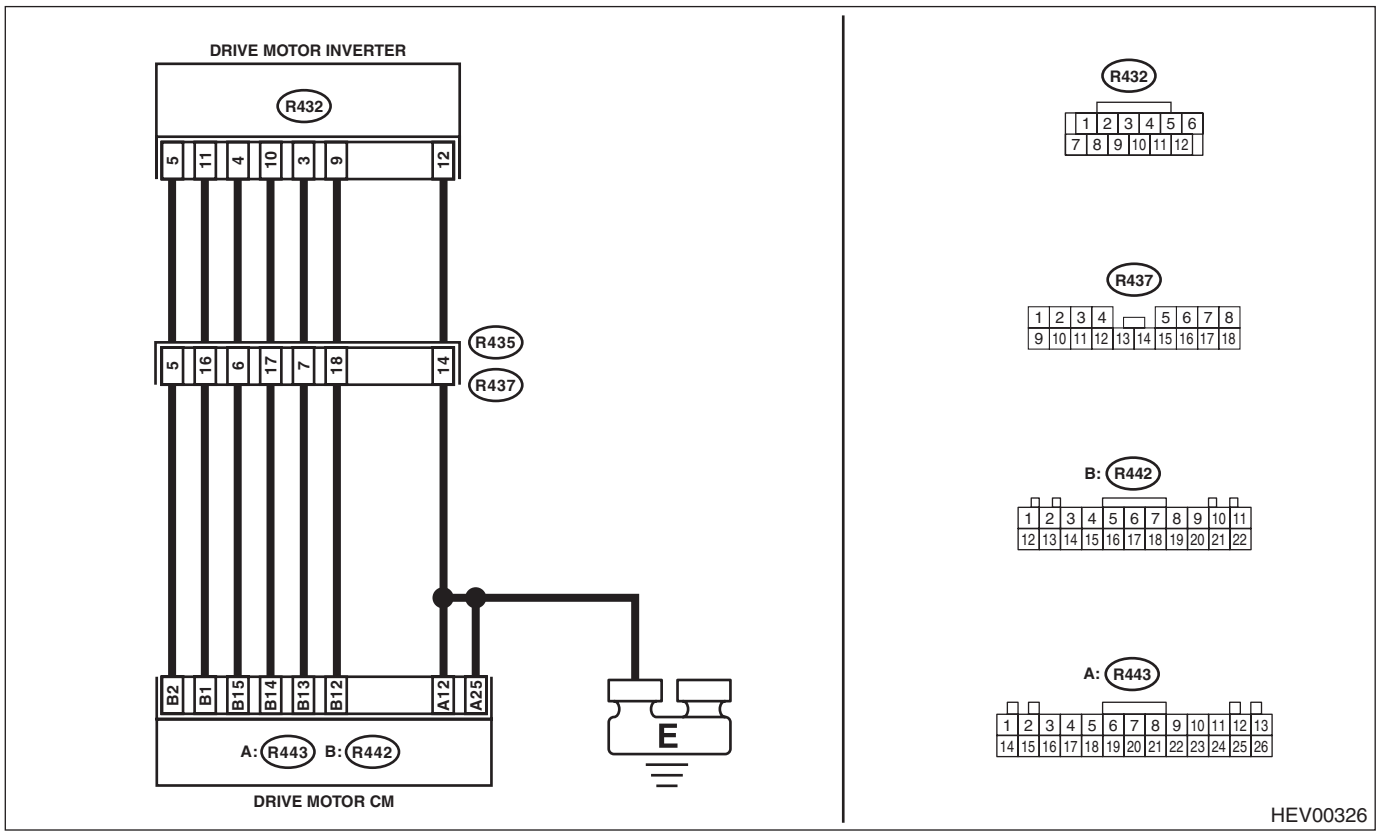
	Step	Check	Yes	No
4	**CHECK HARNESS (BATTERY SHORT AND SHORT IN OTHER SIGNAL LINES).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between the DMCM connector, each signal pin of DMCM, and the inverter connector. ***Connector & terminal:*** ***(R443) No. 7 — (R442) No. 1 — 22:*** ***(R443) No. 7 — (R443) No. 1 — 26:*** ***(R443) No. 7 — (R436) No. 1 — 8:*** ***(R443) No. 7 — (R432) No. 7:*** ***(R443) No. 5 — (R442) No. 1 — 22:*** ***(R443) No. 5 — (R443) No. 1 — 26:*** ***(R443) No. 5 — (R436) No. 1 — 8:*** ***(R443) No. 5 — (R432) No. 7:*** ***(R443) No. 3 — (R442) No. 1 — 22:*** ***(R443) No. 3 — (R443) No. 1 — 26:*** ***(R443) No. 3 — (R436) No. 1 — 8:*** ***(R443) No. 3 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair short circuit to power in harness between DMCM connector and drive motor inverter amperage sensor connector, or repair the intermediate connector.
5	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

BV:DTC P0C05 DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN

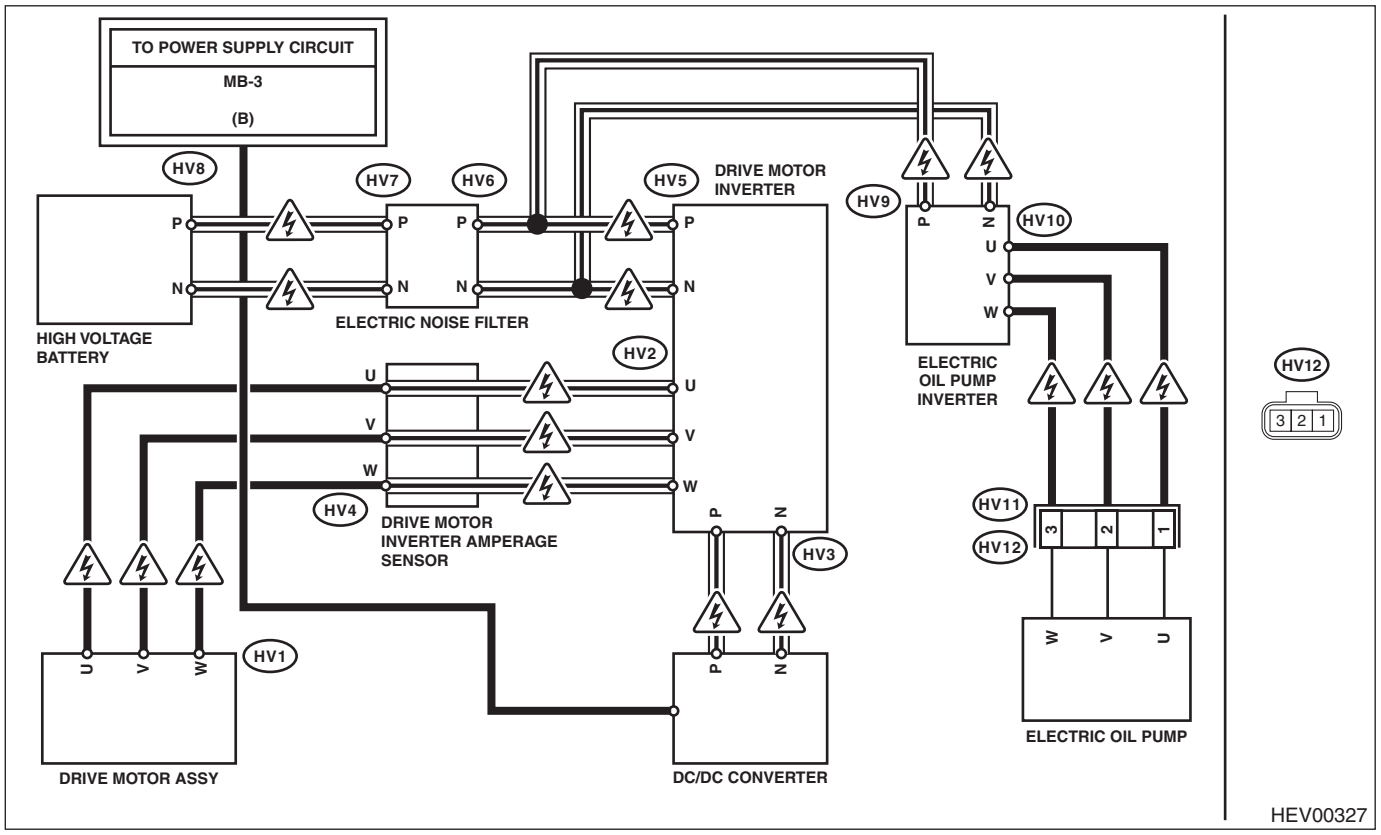
DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-64, DTC P0C05 DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT IN INVERTER CONTROL GND).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter connector. 7) Using a tester, measure the resistance between the drive motor inverter connector and the ground bolt of inverter frame body. ***Connector & terminal:*** ***(R432) No. 12 — Ground bolt of inverter frame body:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair open circuit in harness between drive motor inverter connector and chassis ground, or repair the intermediate connector.

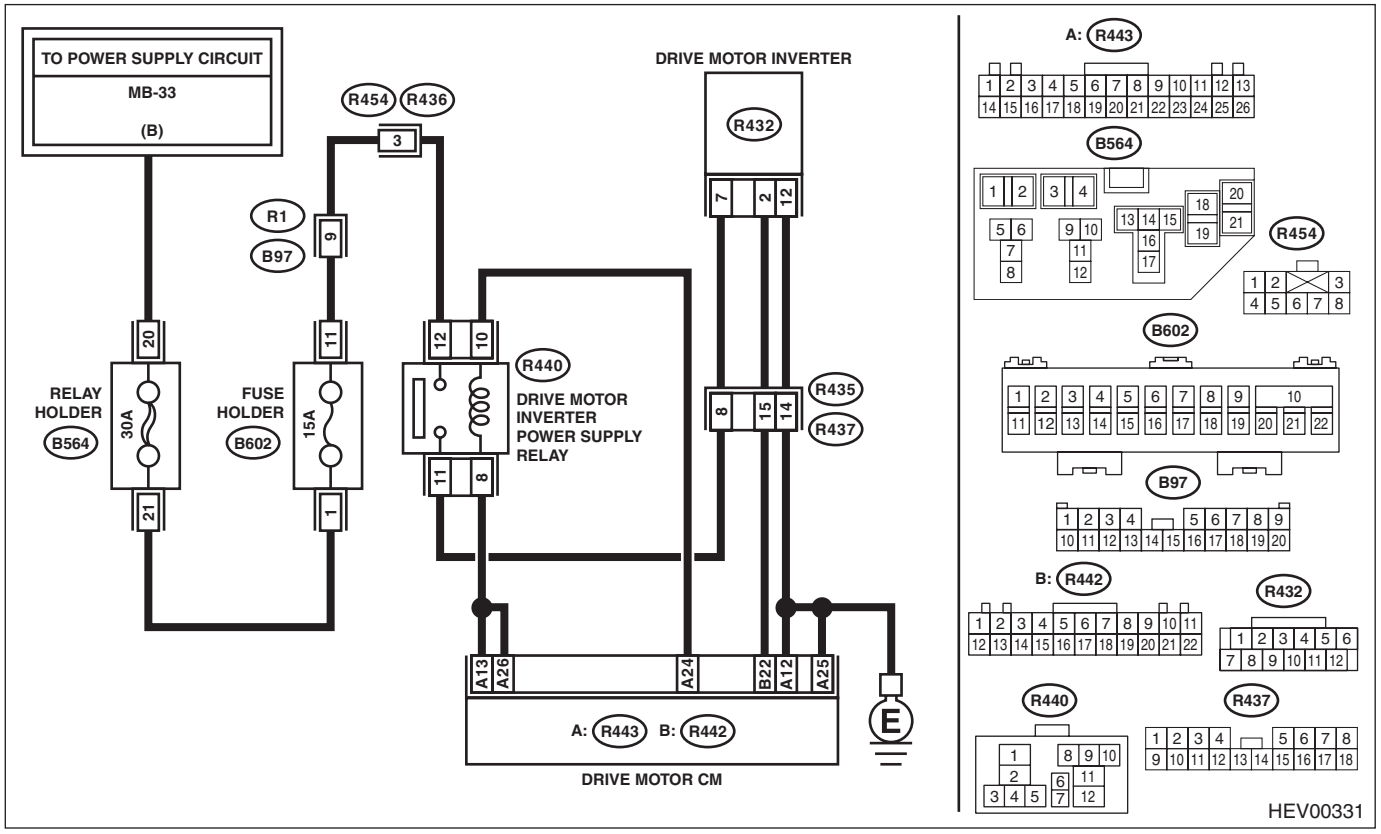
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the drive motor inverter connector and DMCM connector. ***Connector & terminal:*** ***(R442) No. 2 — (R432) No. 5:*** ***(R442) No. 1 — (R432) No. 11:*** ***(R442) No. 15 — (R432) No. 4:*** ***(R442) No. 14 — (R432) No. 10:*** ***(R442) No. 13 — (R432) No. 3:*** ***(R442) No. 12 — (R432) No. 9:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair open circuit in harness between drive motor inverter connector and DMCM connector, or repair the intermediate connector.
4	**CHECK HARNESS (SHORT TO GROUND).** Measure the resistance between drive motor inverter connector and chassis ground. ***Connector & terminal:*** ***(R432) No. 5 — Ground bolt of inverter frame body:*** ***(R432) No. 11 — Ground bolt of inverter frame body:*** ***(R432) No. 4 — Ground bolt of inverter frame body:*** ***(R432) No. 10 — Ground bolt of inverter frame body:*** ***(R432) No. 3 — Ground bolt of inverter frame body:*** ***(R432) No. 9 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the circuit in harness and the intermediate connector.
5	**CHECK DRIVE MOTOR AND POWER CABLE (OPEN CIRCUIT).** 1) Leave the vehicle under temperature of 40°C (104°F) or less for 10 minutes. 2) Disconnect the power cable (HV2) of drive motor inverter. 3) Measure the resistance between each terminal of the power cable. ***(HV2) U — (HV2) V:*** ***(HV2) W — (HV2) U:*** ***(HV2) V — (HV2) W:***	Is resistance between either lines 1 Ω or more?	Go to step **6**.	Go to step **7**.
6	**CHECK DRIVE MOTOR (OPEN CIRCUIT).** 1) Disconnect the drive motor power cable (HV1). NOTE: Supply the gasket because it must be replaced. 2) Measure the resistance between each terminal of the power cable. ***Connector & terminal:*** ***(HV1) U — (HV1) V:*** ***(HV1) W — (HV1) U:*** ***(HV1) V — (HV1) W:***	Is resistance between either lines 1 Ω or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Replace the power cable. <Ref. to HEV-51, Power Cable.>
7	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform drive cycle A. <Ref. to HEV(diag)-31, DRIVE CYCLE A, PROCEDURE, Drive Cycle.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.

BW:DTC P0C0C DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-65, DTC P0C0C DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK RELAY.** Using the Subaru Select Monitor, perform «Drive Motor Inverter power supply relay» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-73, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the relay operate?	Go to step **2**.	Go to step **3**.

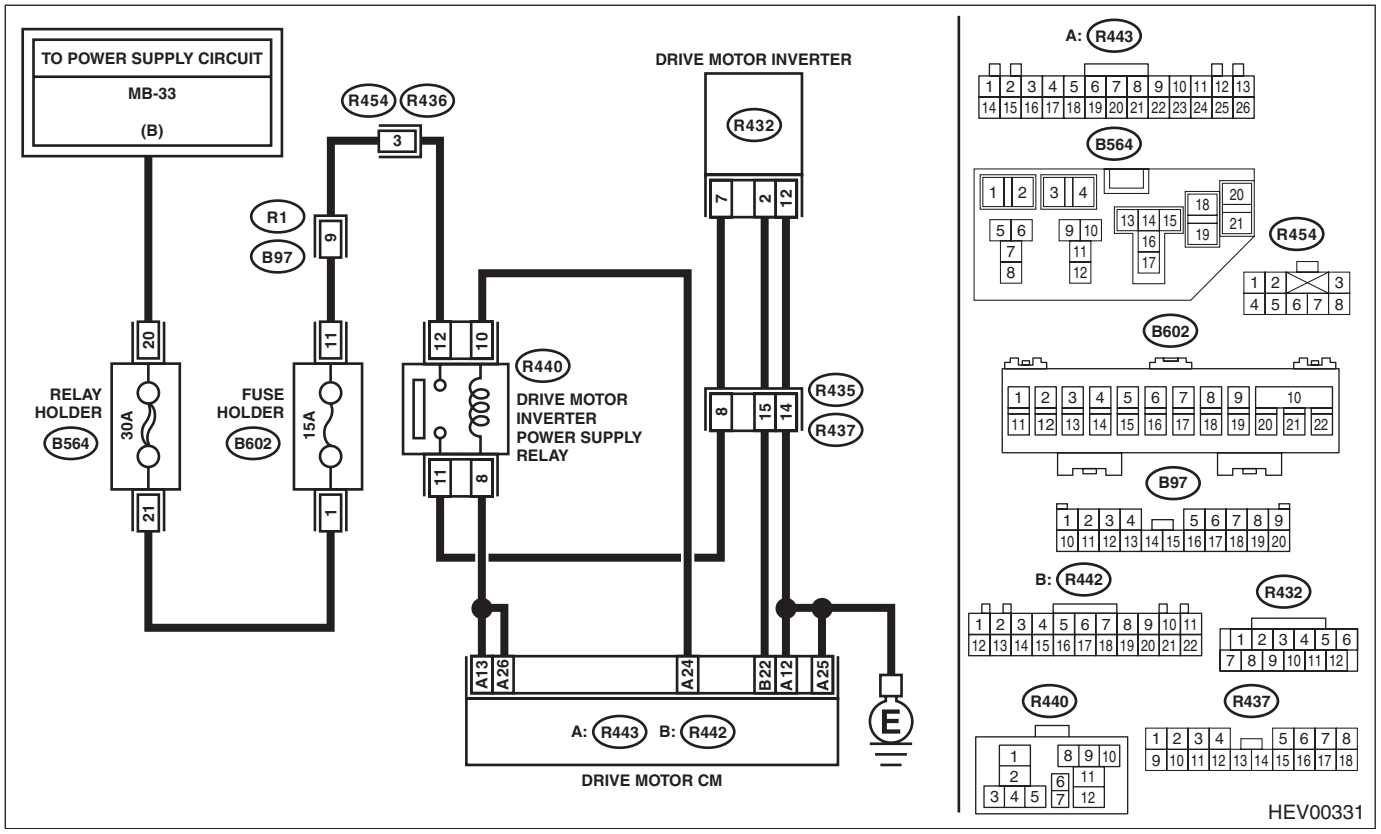
	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Inverter Operation Update Counter». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value change?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the diagnosis according to DTC P1C30. <Ref. to HEV(diag)-258, DTC P1C30 MANUFACTURER CONTROLLED DTC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3	**CHECK RELAY.** Check the inverter power supply relay as a single unit. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal? (Check for continuity between terminals, damage, etc.)	Go to step **4**.	Replace the relay.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Remove the inverter power supply relay. 7) Using a tester, measure the resistance between the inverter power supply relay and DMCM connector. ***Connector & terminal*** ***(R440) No. 10 — (R443) No. 24:*** ***(R440) No. 8 — (R443) No. 13:*** ***(R440) No. 8 — (R443) No. 26:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between DMCM connector and inverter power supply relay connector, or repair the intermediate connector.
5	**CHECK HARNESS (SHORT TO GROUND).** 1) Using a tester, measure the resistance between the inverter power supply relay and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R440) No. 10 — Ground bolt of inverter frame body:*** ***(R440) No. 8 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Repair short circuit to ground in harness between DMCM connector and inverter power supply relay connector or between inverter power supply relay and inverter connector, or repair the intermediate connector.

BX:DTC P0C0D DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-66, DTC P0C0D DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, perform «Drive Motor Inverter power supply relay» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-73, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.> 2) Confirm the current data of in System Operation Check Mode, the value of «Drive Motor Inverter Operation Update Counter».	Does «Drive Motor Inverter Operation Update Counter» stop when «Drive Motor Inverter power supply relay» is OFF?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK RELAY.** Check the inverter power supply relay as a single unit. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal? (Check for continuity between terminals, damage, etc.)	Go to step **3**.	Replace the relay.
3	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the DMCM connector. 2) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 24 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to ground in harness between DMCM connector and inverter power supply relay connector, or repair the intermediate connector.
4	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor inverter connector. 6) Disconnect the intermediate connector (R436). 7) Remove the inverter power supply relay. 8) Using a tester, measure the resistance between inverter power supply relay connector and all DMCM signal pins. ***Connector & terminal*** ***(R440) No. 12 — (R442) No. 1 — 22:*** ***(R440) No. 12 — (R443) No. 1 — 26:*** ***(R440) No. 12 — (R436) No. 1 — 8 (except No. 3):*** ***(R440) No. 10 — (R442) No. 1 — 22:*** ***(R440) No. 10 — (R443) No. 1 — 26 (except No. 24):*** ***(R440) No. 10 — (R436) No. 1 — 8:*** ***(R440) No. 10 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Repair short circuit in harness between the inverter power supply relay and DMCM, harness between inverter power supply relay and drive motor inverter, or repair the intermediate connector.

BY:DTC P0C79 DRIVE MOTOR "A" INVERTER VOLTAGE TOO HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-69, DTC P0C79 DRIVE MOTOR "A" INVERTER VOLTAGE TOO HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

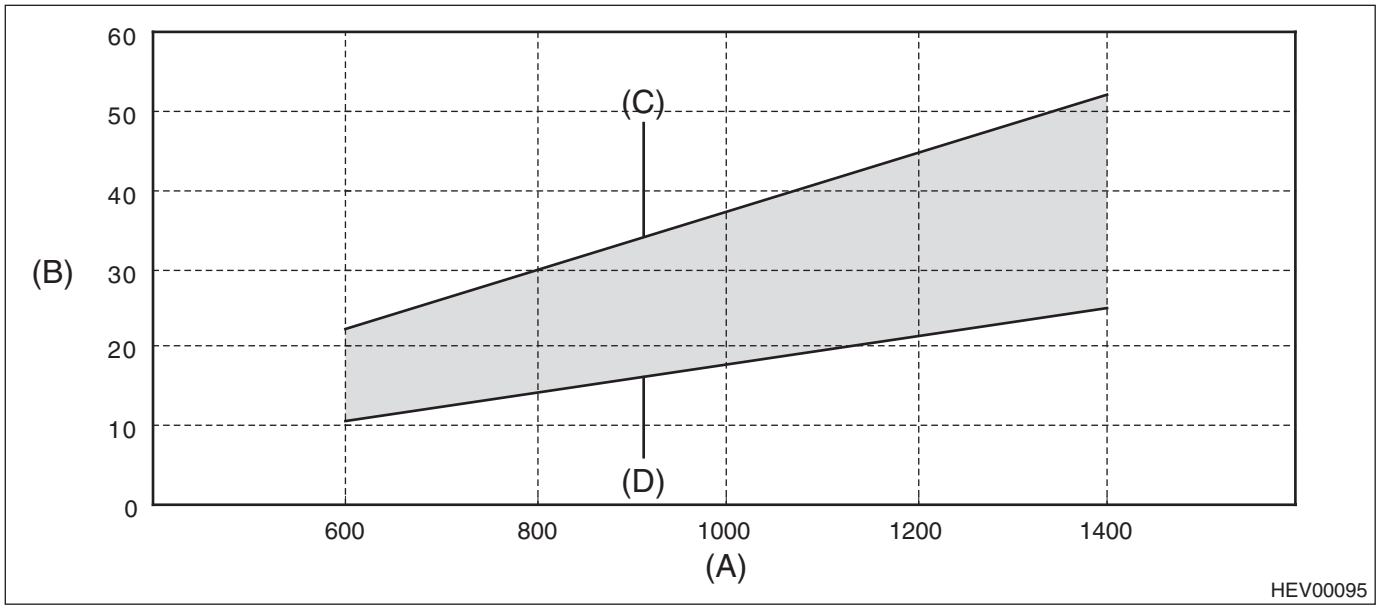
	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «Contactor Signal(HPCM)» in the freeze frame data of the drive motor control system. <Ref. to HEV(diag)-65, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is either «OFF» or «Abnormal OFF» displayed?	Go to step **2**.	Go to step **3**.
2	**CHECK DTC.** Read DTCs of the following system. <Ref. to HEV(diag)-23, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system • Battery energy control system	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-74, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **4**.	Retighten the bolts. Or replace the bus bar.
4	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.

BZ:DTC P0DA8 HYBRID/EV BATTERY VOLTAGE/DRIVE MOTOR "A" INVERTER VOLTAGE CORRELATION

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-72, DTC P0DA8 HYBRID/EV BATTERY VOLTAGE/DRIVE MOTOR "A" INVERTER VOLTAGE CORRELATION, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DRIVE MOTOR INVERTER.** 1) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 2) Lift up the vehicle. 3) Start the engine, and set the shift lever to "D" range. 4) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «A/T Oil Temperature»«Drive Motor Speed»«Drive Motor Inverter Input High Voltage Sensor (Serial)». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	«Drive Motor Inverter Input High Voltage Sensor (Serial)» is within the standard specified in Note when «ATF Temperature» is 20 — 60°C (68 — 140°F) and «Drive Motor Speed» is 600 — 1400 rpm.	Go to step **3**.	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>
3	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **4**.	Retighten the bolts. Or replace the bus bar.
4	**CHECK DMCM.** 1) Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Problem is present in DMCM.

NOTE:
Value of «Drive Motor Inverter Input High Voltage Sensor (Serial)» is proportional to «Drive Motor Speed».

- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

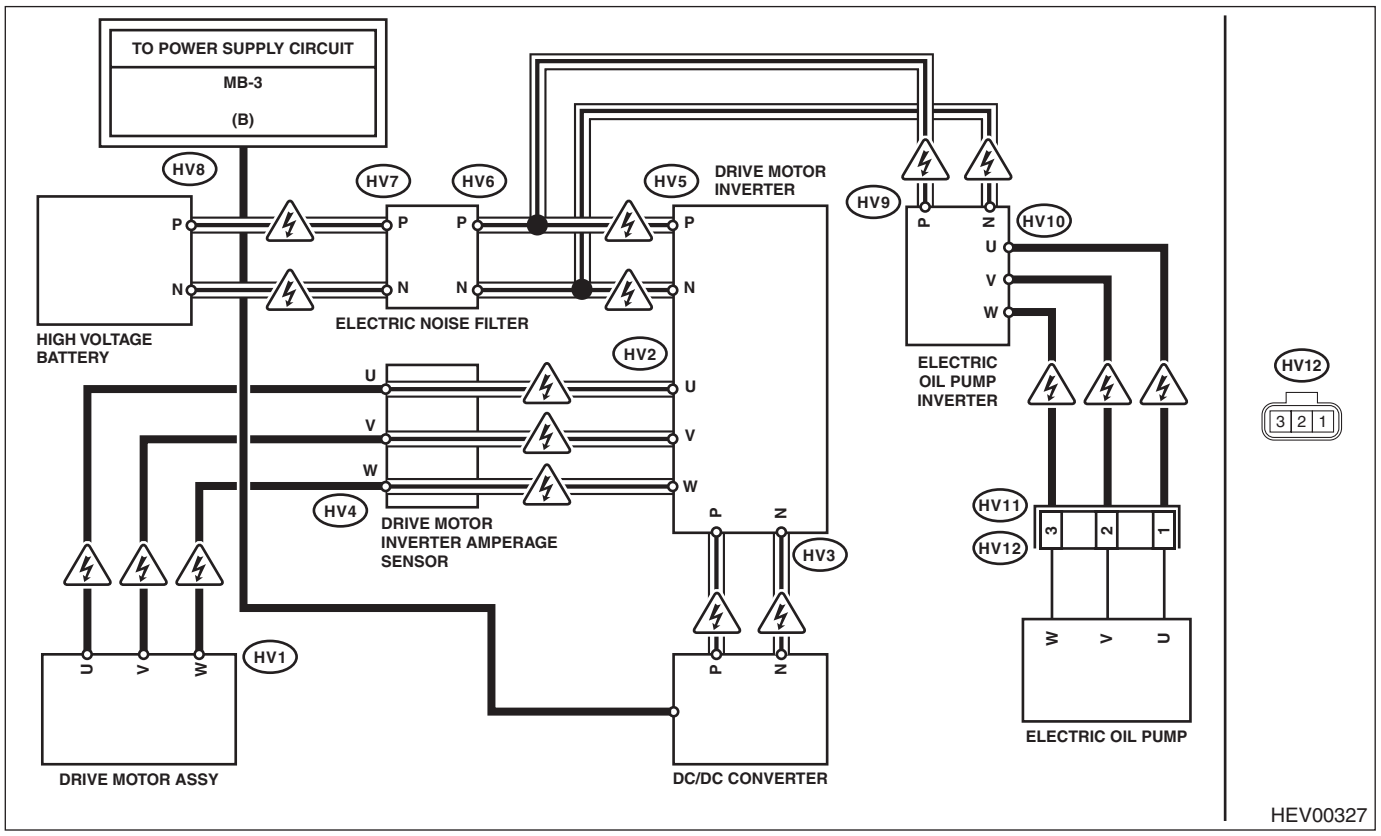
(A) Drive motor speed
(B) Drive Motor Inverter Input High Voltage Sensor (Serial)
(C) Standard at Max.
(D) Standard at Min.

CA:DTC P1C20 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-73, DTC P1C20 MANUFACTURER CONTROLLED DTC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Battery energy control system <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-79, BATTERY ENERGY CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK READY.** Start the engine.	Does READY come on?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK DTC.** With engine running, read DTCs of the following system. • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Battery energy control system <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Engine <Ref. to EN(H4DO HEV)(diag)-46, Read Diagnostic Trouble Code (DTC).> • Transmission <Ref. to CVT(HEV)(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs other than DTC P1C20 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-74, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **5**.	Retighten the bolts. Or replace the bus bar.
5	**CHECK ELECTRIC NOISE FILTER (INTERNAL SHORT).** 1) Remove the electric noise filter. 2) Measure the resistance between each terminal of electric noise filter. ***Connector & terminal*** ***(HV6) P — (HV6) N:*** ***(HV6) P — Electric noise filter ground:*** ***(HV6) N — Electric noise filter ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the electric noise filter. <Ref. to HEV-31, Noise Filter.>

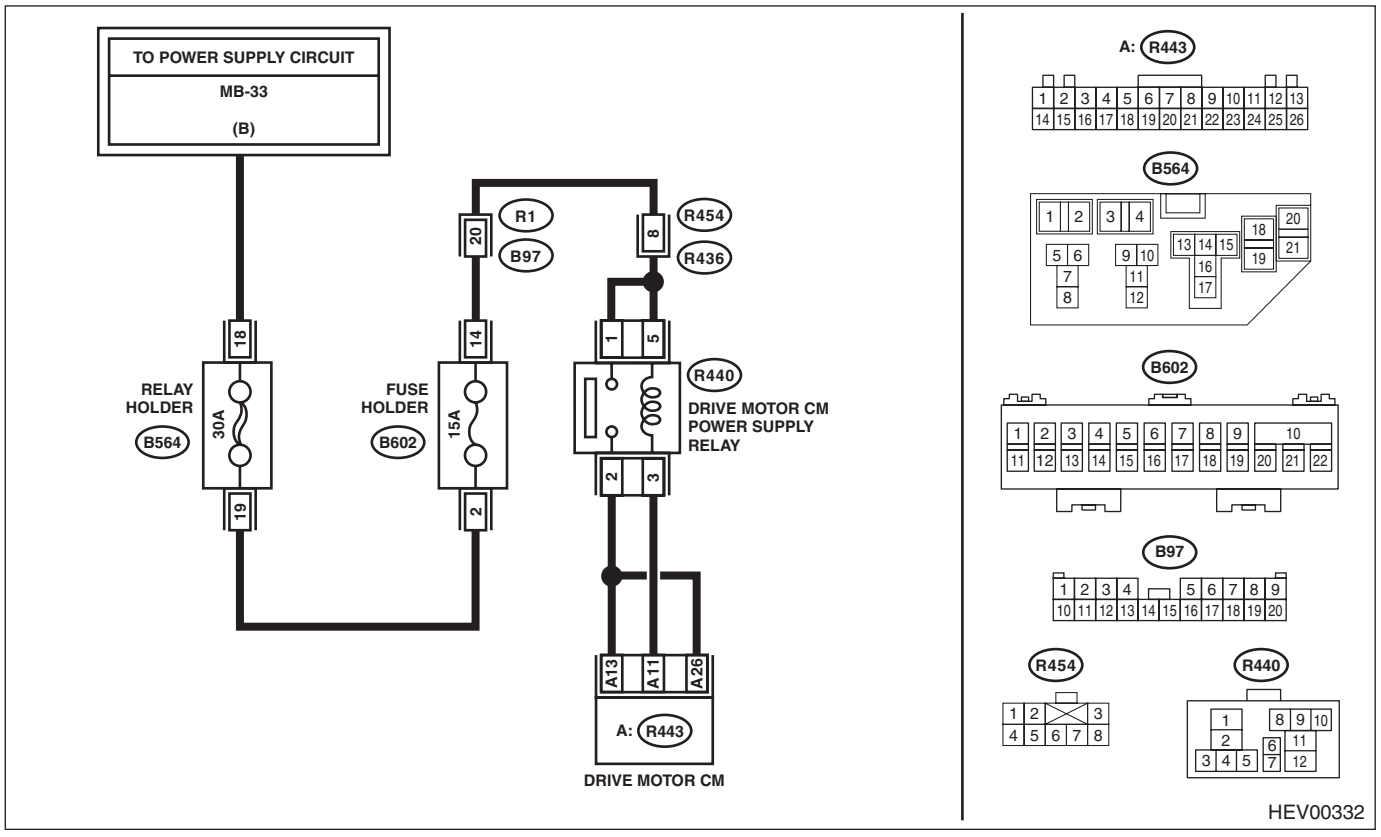
	Step	Check	Yes	No
6	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.

CB:DTC P1C22 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Detects drive motor control module voltage malfunction.
- If the drive motor control module detects that power supply voltage is out of the standard, it is judged as NG.
- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Control Module Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 9 V or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Disconnect battery terminals. 3) Check the 12 volt auxiliary battery as a single part. <Ref. to SC(H4DO(HEV))-38, Battery.>	Is the condition normal?	Go to step **3**.	Charge or replace the battery.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Connect the 12 volt auxiliary battery. 2) Using a tester, measure the voltage between the DMCM power relay and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R440) No. 2 (+) — Ground bolt of inverter frame body (–):***	Is the voltage 9 V or less?	Repair open circuit in harness between DMCM power supply relay connector and 12 volt auxiliary battery, or repair the intermediate connector.	Go to step **4**.
4	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the DMCM connector. 2) Remove the DMCU power relay. <Ref. to CVT(TH58A)-158, Relay and Fuse.> 3) Using a tester, measure the resistance between DMCM connector terminals and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 13 — Ground bolt of inverter frame body:*** ***(R443) No. 26 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Repair short to ground circuit in harness between DMCM power supply relay connector and 12 volt auxiliary battery, or repair the intermediate connector.

CC:DTC P1C24 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-74, DTC P1C24 MANUFACTURER CONTROLLED DTC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
For the diagnostic procedure, refer to “DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT”. <Ref. to HEV(diag)-149, DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CD:DTC P1C25 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-75, DTC P1C25 MANUFACTURER CONTROLLED DTC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
For the diagnostic procedure, refer to “DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW”. <Ref. to HEV(diag)-153, DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CE:DTC P1C26 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-76, DTC P1C26 MANUFACTURER CONTROLLED DTC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

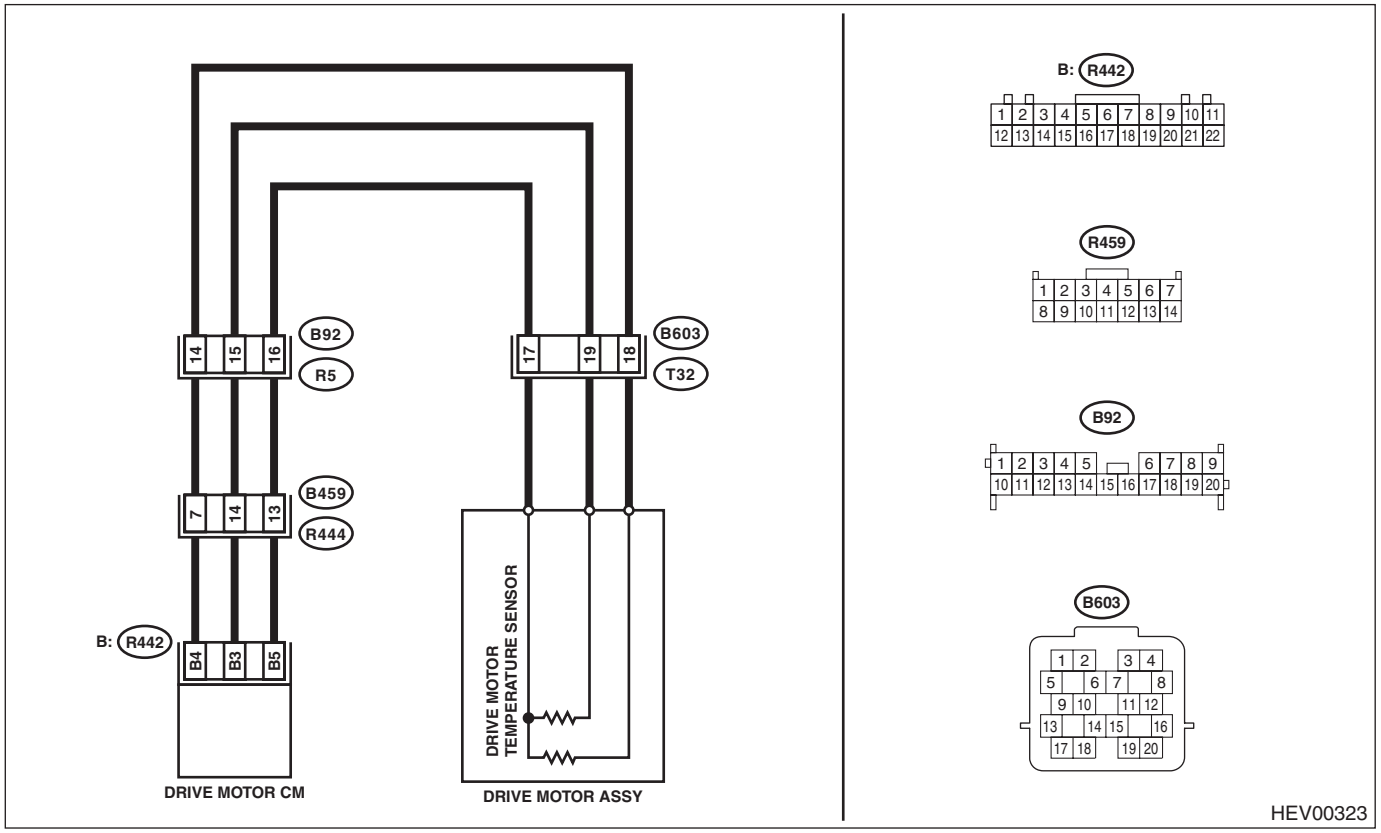
NOTE:
For the diagnostic procedure, refer to “DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH”. <Ref. to HEV(diag)-157, DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CF:DTC P1C27 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-77, DTC P1C27 MANUFACTURER CONTROLLED DTC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

CVT control system <Ref. to WI(HEV)-86, WIRING DIAGRAM, CVT Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs (related to temperature sensor) detected?	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Warm up the engine. 2) Using the Subaru Select Monitor, confirm the current data of drive motor control system, the values of «Drive Motor Temperature A»«Drive Motor Temperature B». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the difference in temperature between «Drive Motor Temperature A»«Drive Motor Temperature B» 20°C (36°F) or more when the temperature of «Drive Motor Temperature A» or «Drive Motor Temperature B» is in 30 — 140°C (86 — 284°F) range?	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS AND DMCM.** 1) Disconnect the DMCM connector (R442). 2) Using a tester, measure the resistance between terminals in the DMCM connector. ***Connector & terminal*** ***TMPA*** ***(R442) No. 4 — (R442) No. 5:*** ***TMPB*** ***(R442) No. 3 — (R442) No. 5:***	Is the difference in resistance between TMPA and TMPB 136 kΩ or more?	Go to step **4**.	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>
4	**CHECK DRIVE MOTOR.** 1) Disconnect the drive motor assembly connector (B603). 2) Using a tester, measure the resistance between terminals in the drive motor assembly connector. ***Connector & terminal*** ***TMPA*** ***(T32) No. 18 — (T32) No. 17:*** ***TMPB*** ***(T32) No. 10 — (T32) No. 17:***	Is the difference in resistance between TMPA and TMPB 136 kΩ or more?	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>	Repair the harness between DMCM connector and drive motor assembly connector.

CG:DTC P1C2A MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Detect the malfunction of drive motor inverter.
- If malfunction is detected in the internal circuit of drive motor inverter, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

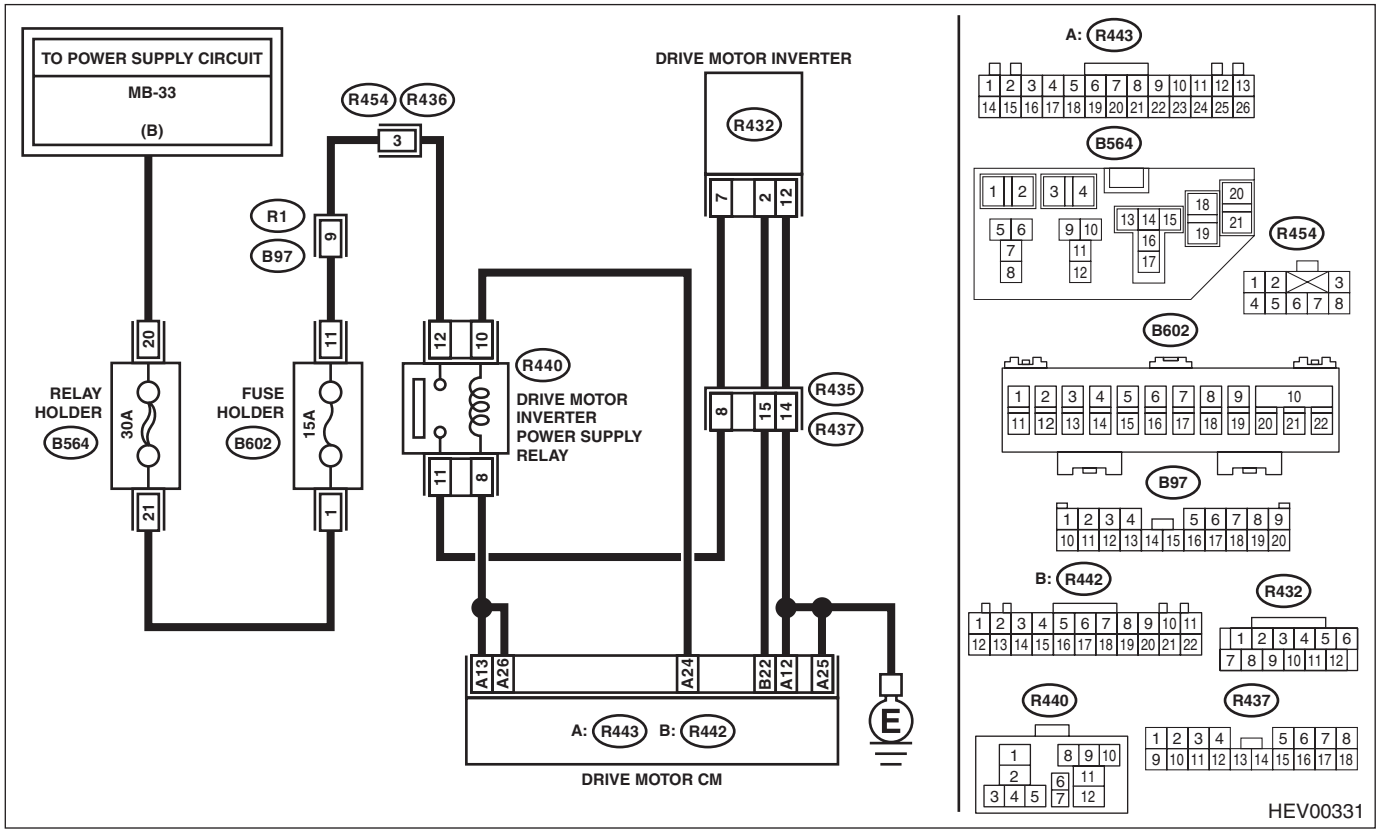
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0A78 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-199, DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Replace the power cable after completing the diagnosis. <Ref. to HEV-51, Power Cable.>	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

CH:DTC P1C30 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-79, DTC P1C30 MANUFACTURER CONTROLLED DTC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, perform «Drive Motor Inverter power supply relay» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-73, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.> 2) Confirm the current data of in System Operation Check Mode, the value of «Drive Motor Inverter Operation Update Counter».	Does «Drive Motor Inverter Operation Update Counter» stop when «Drive Motor Inverter power supply relay» is OFF?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK RELAY.** Check the inverter power supply relay as a single unit. <Ref. to HEV-12, Relay and Fuse.>	Is the condition normal? (Check for continuity between terminals, damage, etc.)	Go to step **3**.	Replace the relay.
3	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor inverter connector. 6) Disconnect the DMCM connector. 7) Using a tester, measure the resistance between the drive motor inverter connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R432) No. 2 — Ground bolt of inverter frame body:*** ***(R432) No. 7 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to ground in harness between drive motor inverter connector and DMCM connector, or repair the intermediate connector.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between drive motor inverter connector and DMCM connector and between the ground bolt of inverter frame body and inverter power supply relay. ***Connector & terminal:*** ***(R442) No. 22 — (R432) No. 2:*** ***(R440) No. 11 — (R432) No. 7:*** ***(R432) No. 12 — Ground bolt of inverter frame body:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between drive motor inverter connector and DMCM connector or between drive motor inverter connector and inverter power supply relay, or repair the intermediate connector.

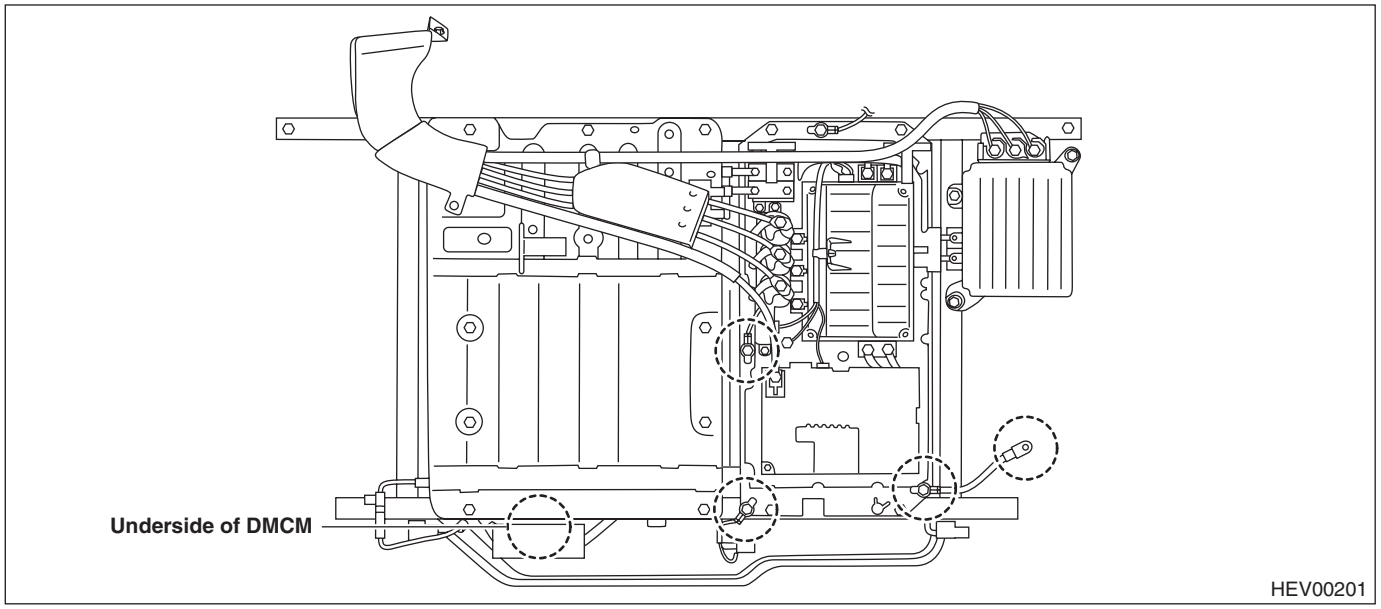
	Step	Check	Yes	No
5	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Disconnect the intermediate connector (R436). 2) Using a tester, measure the resistance within DMCM connector, between DMCM connector and intermediate connector (R436), and within drive motor inverter connector. ***Connector & terminal:*** ***(R442) No. 22 — (R442) No. 1 — 22:*** ***(R442) No. 22 — (R443) No. 1 — 26:*** ***(R442) No. 22 — (R436) No. 1 — 8:*** ***(R442) No. 22 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between drive motor inverter connector and DMCM connector or repair the intermediate connector.
6	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.

CI: DTC P1C31 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-80, DTC P1C31 MANUFACTURER CONTROLLED DTC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C31 detected? (current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK GROUND WIRE.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the fastening area shown in the margin.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, etc.)	Go to step **3**.	Retighten the bolts. Or replace the harness.
3	**CHECK DRIVE MOTOR INVERTER.** 1) Replace the drive motor inverter. <Ref. to HEV-42, Inverter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter.

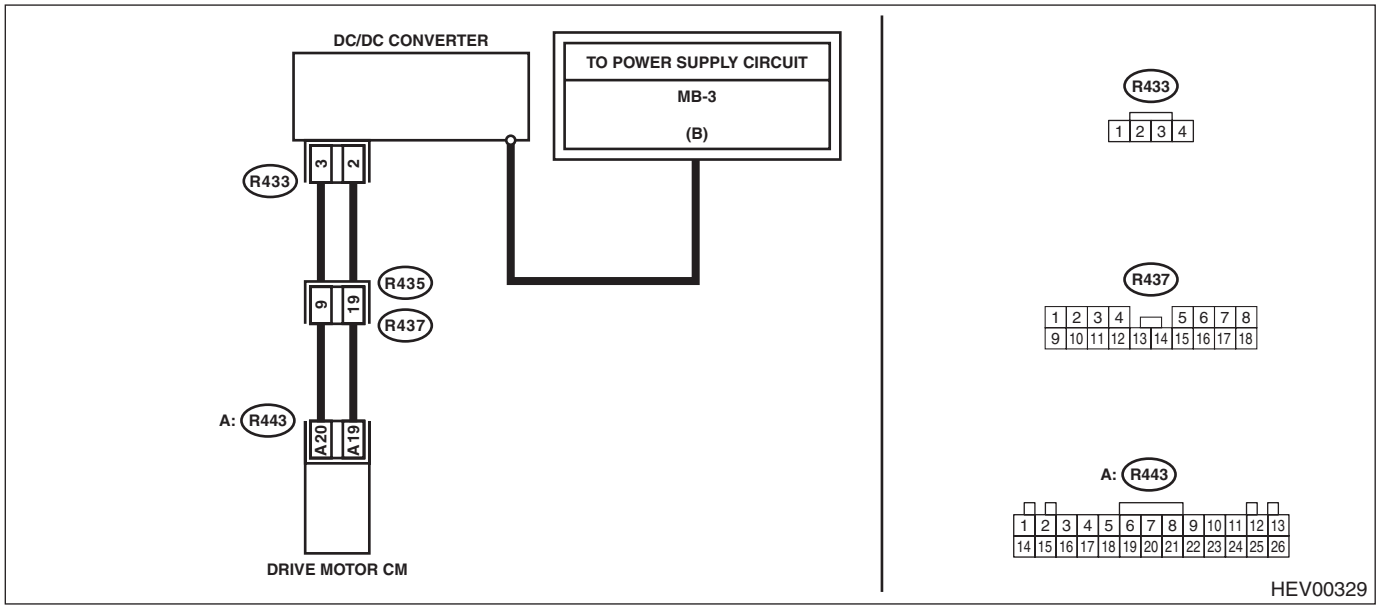
NOTE:

CJ:DTC P1C34 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Detects serial communication error with DC/DC converter.
- If serial data from the DC/DC converter is not received, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:



EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Start the engine. 2) Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C34 detected? (current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

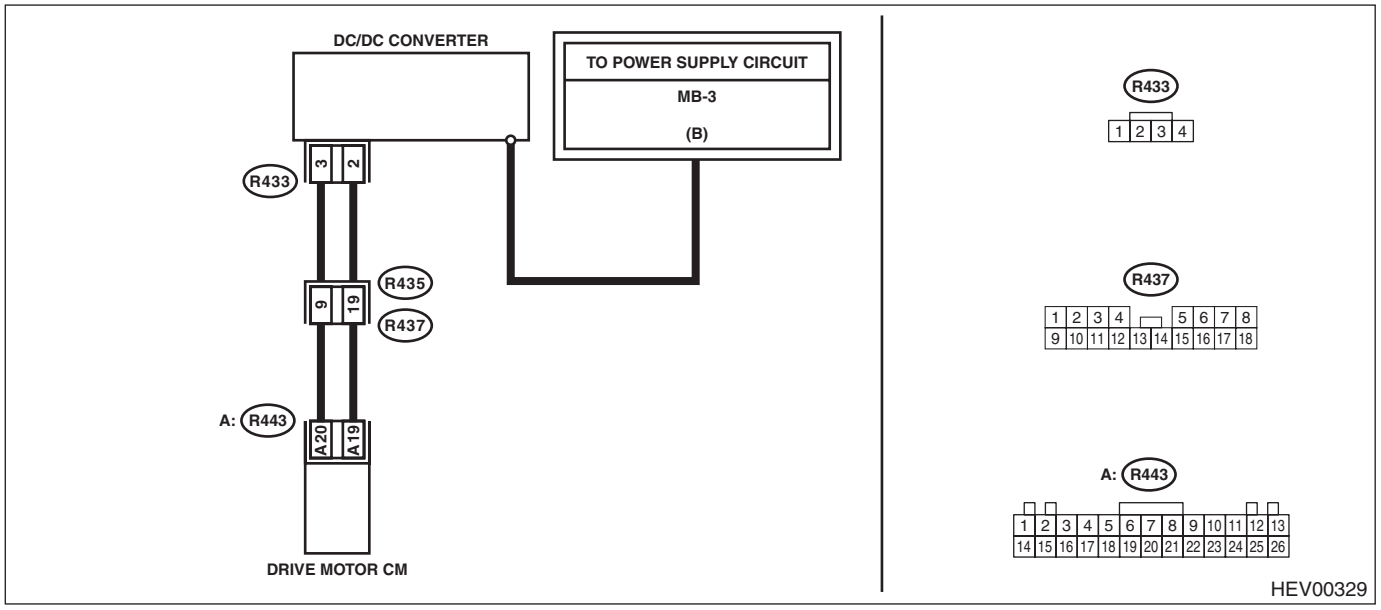
	Step	Check	Yes	No
2	**CHECK CONNECTOR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Visually check each connector and fastening areas of the DC/DC converter.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, etc.)	Go to step **3**.	Repair or replace faulty parts.
3	**CHECK HARNESS.** 1) Disconnect the DC/DC converter connector. 2) Disconnect the DMCM connector. 3) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 20 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short to ground circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
4	**CHECK HARNESS.** Using a tester, measure the resistance between DC/DC converter connector and DMCM connector. ***Connector & terminal*** ***(R443) No. 20 — (R433) No. 3:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair open circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
5	**CHECK HARNESS (SHORT TO OTHER SIGNAL).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between DMCM connector and individual connectors of drive motor inverter. ***Connector & terminal:*** ***(R443) No. 20 — (R442) No. 1 — 22:*** ***(R443) No. 20 — (R443) No. 1 — 26:*** ***(R443) No. 20 — (R436) No. 1 — 8:*** ***(R443) No. 20 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair short circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
6	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the resistance between DC/DC converter connector and DC/DC converter 12 V output line. ***Connector & terminal*** ***(R433) No. 3 — DC/DC converter 12 V output line:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair short circuit in harness between DMCM connector and DC/DC converter 12 V output line or repair the intermediate connector.
7	**CHECK DC/DC CONVERTER.** 1) Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in DC/DC converter.

CK:DTC P1C35 MANUFACTURER CONTROLLED DTC

DIAGNOSIS:

- Detects serial communication error with DC/DC converter.
- If an incorrect serial data is received from DC/DC converter, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:

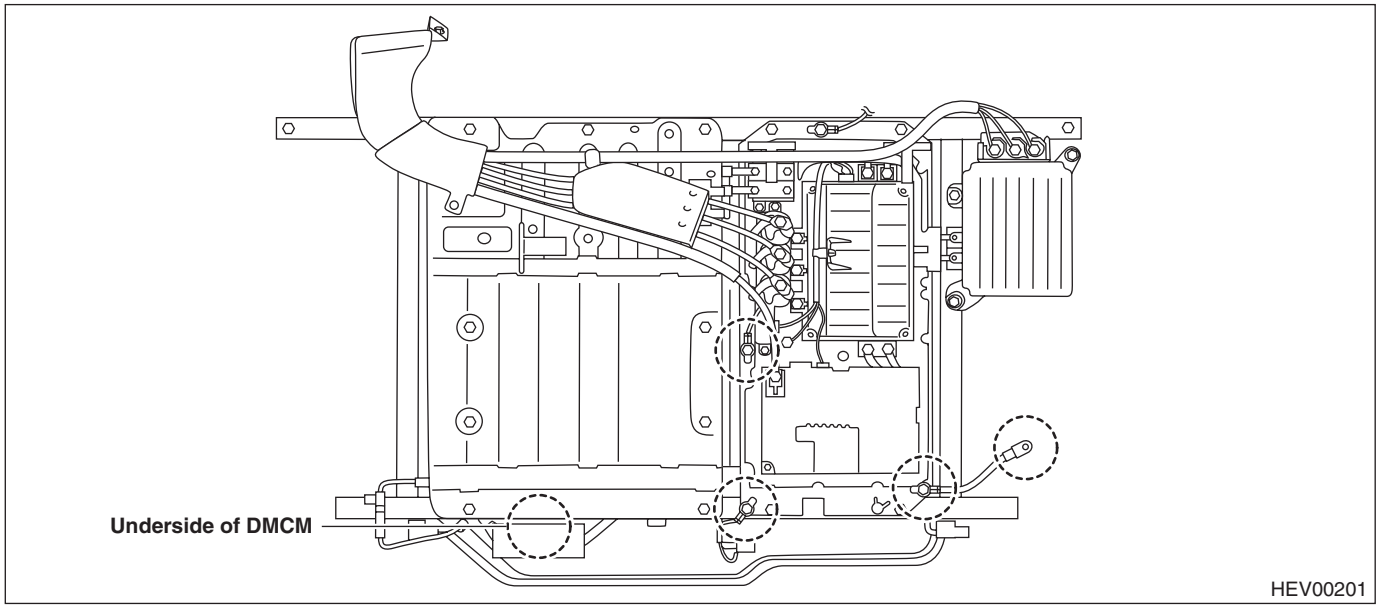


EV traveling/Auto Start Stop does not operate.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM



Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Start the engine. 2) Read the DTC. <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C35 detected? (current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK GROUND WIRE.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Check the fastening area shown in the margin.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, etc.)	Go to step **3**.	Retighten the bolts. Or replace the harness.
3	**CHECK HARNESS (SHORT TO OTHER SIGNAL).** 1) Disconnect the drive motor inverter connector. 2) Disconnect the intermediate connector (R436). 3) Using a tester, measure the resistance between DMCM connector and individual connectors of drive motor inverter. ***Connector & terminal:*** ***(R443) No. 20 — (R442) No. 1 — 22:*** ***(R443) No. 20 — (R443) No. 1 — 26:*** ***(R443) No. 20 — (R436) No. 1 — 8:*** ***(R443) No. 20 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit in harness between DMCM connector and DC/DC converter connector, or repair the intermediate connector.
4	**CHECK DC/DC CONVERTER.** 1) Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in DC/DC converter.

NOTE:

CL:DTC P0A1B DRIVE MOTOR "A" CONTROL MODULE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-81, DTC P0A1B DRIVE MOTOR "A" CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

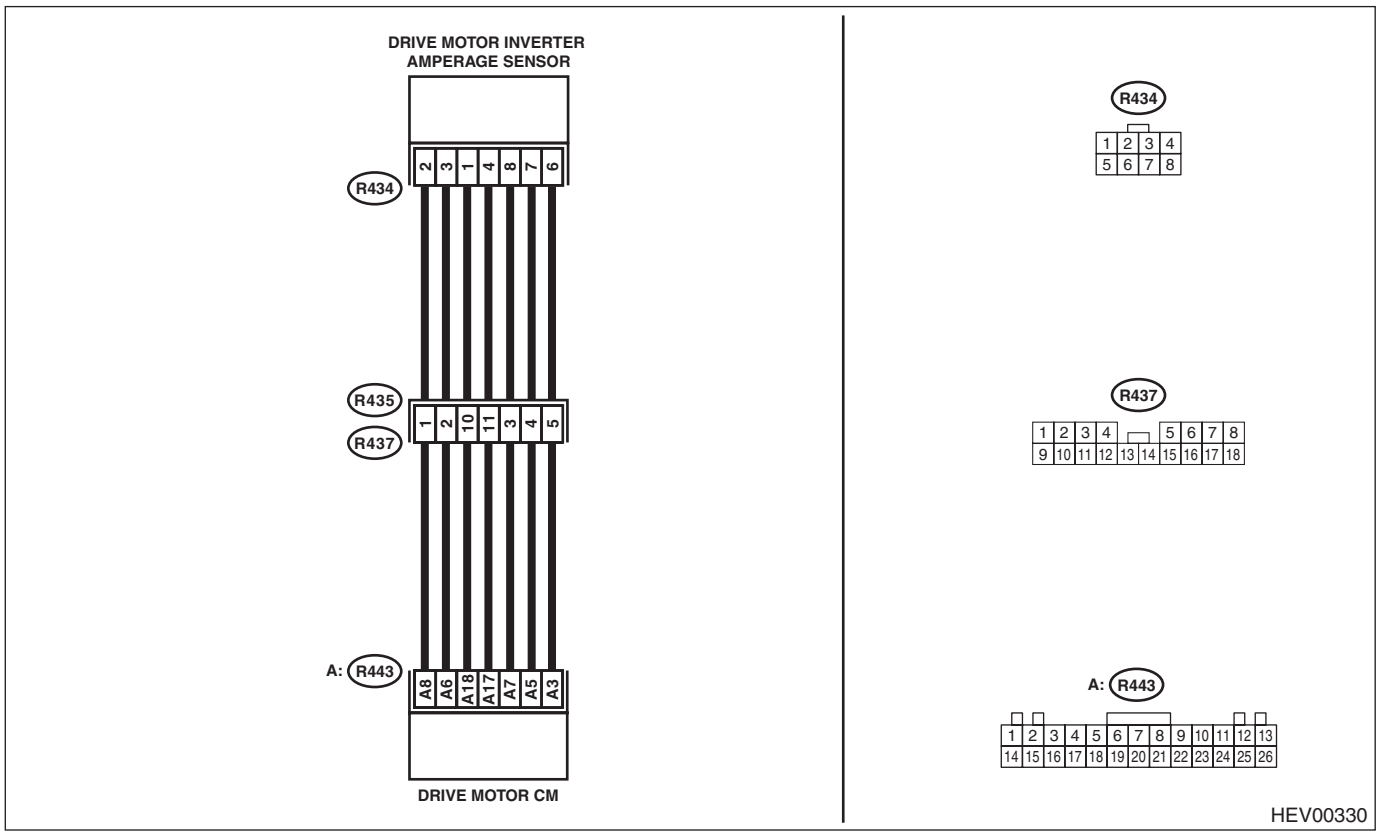
NOTE:
For the diagnostic procedure, refer to “DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR”. <Ref. to HEV(diag)-110, DRIVE MOTOR CONTROL SYSTEM, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CM:DTC P06B1 SENSOR POWER SUPPLY "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-82, DTC P06B1 SENSOR POWER SUPPLY "A" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

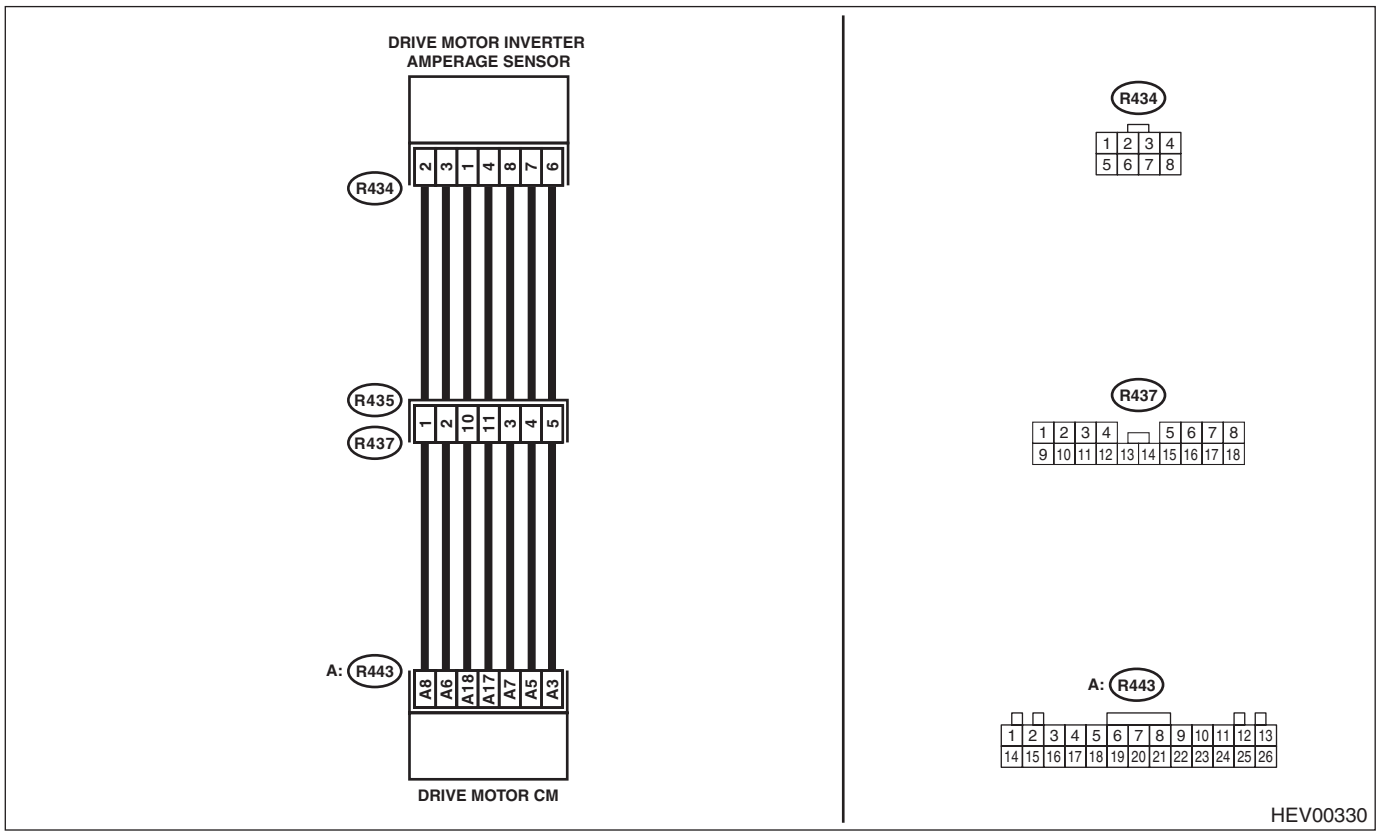
	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Amperage Sensor Power Supply Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value less than 4.536 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the DMCM connector. 6) Disconnect the drive motor inverter amperage sensor connector. 7) Using a tester, measure the resistance between DMCM connector and the ground bolt of inverter frame body. ***Connector & terminal*** ***(R443) No. 8 — Ground bolt of inverter frame body:*** ***(R443) No. 6 — Ground bolt of inverter frame body:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short circuit in harness between drive motor inverter amperage sensor connector and DMCM connector or repair the intermediate connector.
3	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

CN:DTC P06B2 SENSOR POWER SUPPLY "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-83, DTC P06B2 SENSOR POWER SUPPLY "A" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of drive motor control system, the value of «Drive Motor Amperage Sensor Power Supply Voltage». <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value more than 5.418 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (SHORT TO POWER AND SHORT TO OTHER SIGNAL LINES).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the drive motor inverter amperage sensor connector. 6) Disconnect the DMCM connector. 7) Disconnect the drive motor inverter connector. 8) Disconnect the intermediate connector (R436). 9) Using a tester, measure the resistance between DMCM connector and other signal lines and within inverter connector. ***Connector & terminal*** ***(R443) No. 8 — (R442) No. 1 — 22 (except No. 6):*** ***(R443) No. 8 — (R443) No. 1 — 26:*** ***(R443) No. 8 — (R436) No. 1 — 8:*** ***(R443) No. 8 — (R432) No. 7:*** ***(R443) No. 6 — (R442) No. 1 — 22 (except No. 8):*** ***(R443) No. 6 — (R443) No. 1 — 26:*** ***(R443) No. 6 — (R436) No. 1 — 8:*** ***(R443) No. 6 — (R432) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair short circuit in harness between drive motor inverter amperage sensor connector and DMCM connector or repair the intermediate connector.
3	**CHECK DRIVE MOTOR INVERTER AMPERAGE SENSOR.** 1) Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.> 2) Perform the Inspection Mode. <Ref. to HEV(diag)-26, Inspection Mode.>	Is the same DTC detected? (current malfunction)	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>	Problem is present in drive motor inverter amperage sensor.

CO:DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-84, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

CP:DTC P0A1F BATTERY ENERGY CONTROL MODULE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-85, DTC P0A1F BATTERY ENERGY CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Wait for 30 seconds. 4) Turn the ignition switch to ON. 5) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

CQ:DTC P0A7D HYBRID BATTERY PACK STATE OF CHARGE LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-86, DTC P0A7D HYBRID BATTERY PACK STATE OF CHARGE LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Amperage» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value 1A (discharge) or more?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • CVT System <Ref. to CVT(HEV)(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-74, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to CVT(HEV)(diag)-32, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Turn the ignition to OFF. 2) Start the engine. 3) Check illumination of "Hybrid READY indicator light" in the meter.	Is the indicator illuminating?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK CURRENT DATA.** 1) Drive approximately 2 km (1.2 miles) at a speed of 30 km/h (18.6 MPH) or more. 2) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery SOC». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 6% or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

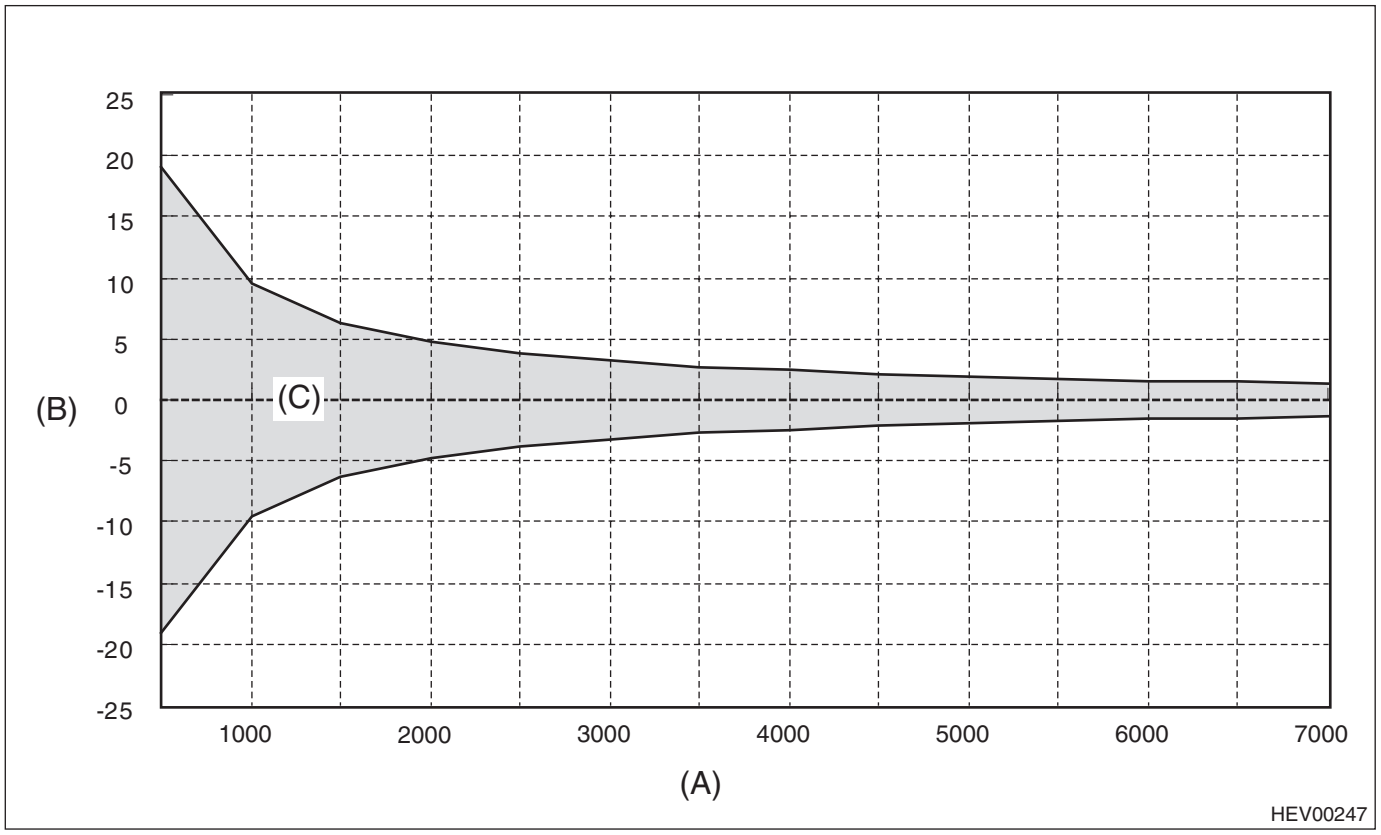
CR:DTC P0A7E HYBRID BATTERY PACK OVER TEMPERATURE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-87, DTC P0A7E HYBRID BATTERY PACK OVER TEMPERATURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.



CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is either DTC P0A83 or P0A82 detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Cooling Fan Duty Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-13, HIGH VOLTAGE BATTERY, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>	Is the value 20% or more?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK HIGH VOLTAGE BATTERY COOLING FAN.** Using the Subaru Select Monitor, perform «High Voltage Battery Cooling Fan» of System Operation Check Mode for the drive motor control system. <Ref. to HEV(diag)-73, DRIVE MOTOR CONTROL SYSTEM, OPERATION, System Operation Check Mode.>	Does the high voltage battery cooling fan operate?	Go to step **4**.	Check the high voltage battery cooling fan as a single part. <Ref. to HEV-59, High Voltage Battery Cooling System.>
4	**CHECK DUCT.** Check the high voltage battery cooling fan ducts. <Ref. to HEV-59, High Voltage Battery Cooling System.>	Are the conditions of ducts normal? (Check for clogging, dislodging, etc.)	Go to step **5**.	Repair the ducts.
5	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Discharge Power Limit 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value 0.5 kw or less?	Go to step **6**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
6	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Charge Power 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value 0.5 kw or less?	Go to step **7**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

	Step	Check	Yes	No
7	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target(HPCM)»«Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target(HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **8**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
8	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual»«Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

NOTE:

(A) Drive Motor Speed Target(HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

CS:DTC P0A7F HYBRID BATTERY PACK DETERIORATION

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-88, DTC P0A7F HYBRID BATTERY PACK DETERIORATION, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

CT:DTC P0A95 HIGH VOLTAGE FUSE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-90, DTC P0A95 HIGH VOLTAGE FUSE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK SERVICE DISCONNECT PLUG.** Check installation condition of service disconnect plug. <Ref. to HEV-15, Service Plug.>	Is the service disconnect plug securely installed? Is it locked?	Go to step **2**.	Securely install the service disconnect plug.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery Fuse Condition». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «Blow out»?	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK SERVICE DISCONNECT PLUG.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Measure the resistance between service disconnect plug terminals.	Is the resistance less than 1 Ω?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace the service disconnect plug.

CU:DTC P0A9C HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-91, DTC P0A9C HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

CV:DTC P0A9D HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-92, DTC P0A9D HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

CW:DTC P0A9E HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-93, DTC P0A9E HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

CX:DTC P0AA4 HYBRID BATTERY NEGATIVE CONTACTOR CIRCUIT STUCK CLOSED

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-94, DTC P0AA4 HYBRID BATTERY NEGATIVE CONTACTOR CIRCUIT STUCK CLOSED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

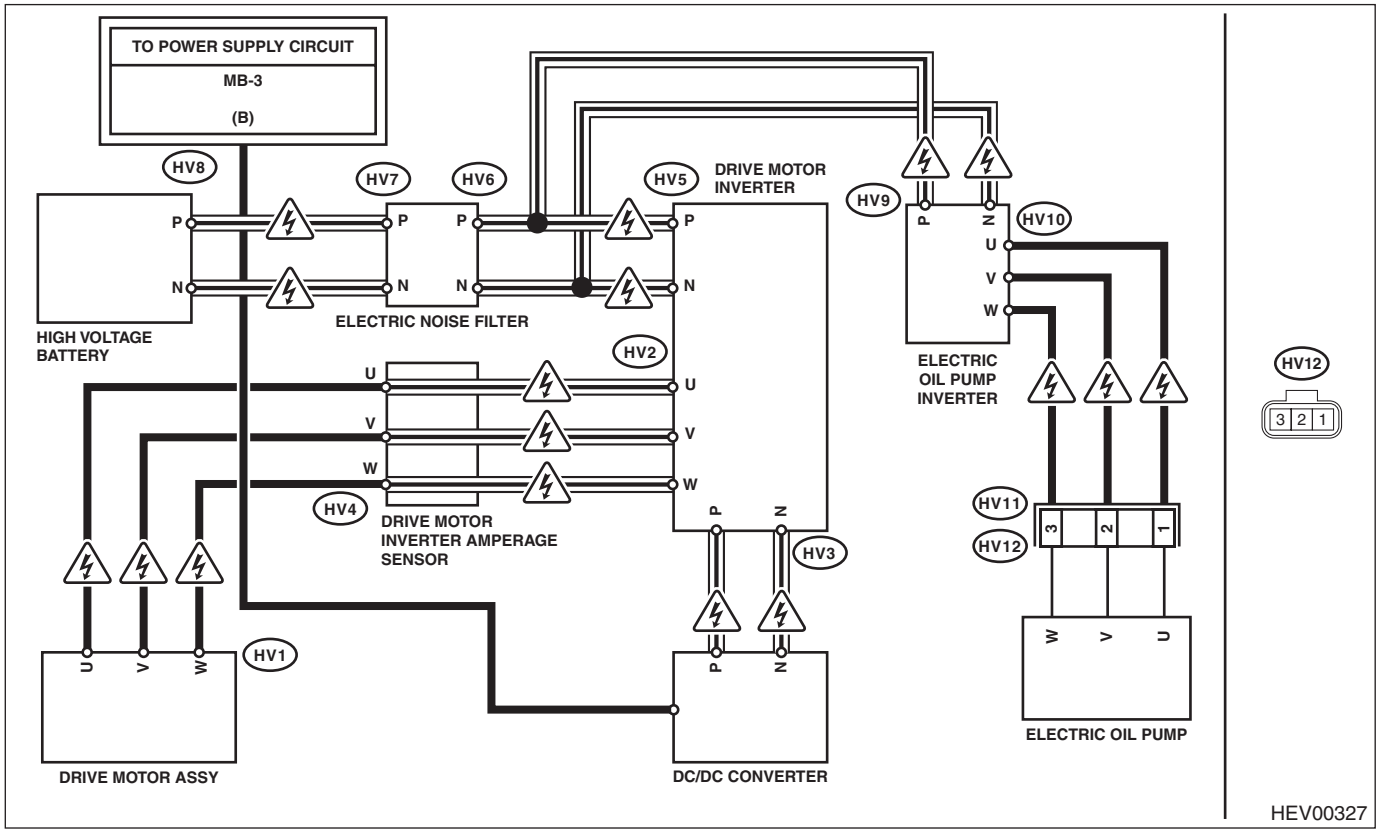
Step		Check	Yes	No
1	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Start the engine. 3) Turn the ignition switch to OFF. 4) Wait for 30 seconds. 5) Turn the ignition switch to ON. 6) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC P0AA4 detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

CY:DTC P0AA6 HYBRID BATTERY VOLTAGE SYSTEM ISOLATION FAULT

DIAGNOSIS:

- Detects leakage in high voltage system circuit.
- If hybrid system leakage resistance, leakage resistance in high voltage battery are smaller than the standard, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:



Normal control

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF → ON. 2) Leave the vehicle 1 minute unattended. 3) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the values of «High Voltage Battery Pack Leakage Resistance (+)»«High Voltage Battery Pack Leakage Resistance (–)». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value of «High Voltage Battery Pack Leakage Resistance (+)» or «High Voltage Battery Pack Leakage Resistance (–)» 290 kΩ or less?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Stop the engine. 2) Start the engine. 3) Using the Subaru Select Monitor, display the current data of battery energy control system, the values of «HEV System Leakage Resistance (+)» «HEV System Leakage Resistance (–)». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.> 4) With the current data displayed, drive the vehicle at 10 km/h (6.2 MPH) or faster at least 1 minute. 5) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the recorded values of «HEV System Leakage Resistance (+)» «HEV System Leakage Resistance (–)». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the minimum value of «HEV System Leakage Resistance (+)» or «HEV System Leakage Resistance (–)» 290 kΩ or less?	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER CABLE AND BUS BAR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Disconnect the power cable (HV4) from drive motor inverter amperage sensor. 6) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Go to step **13**.	Go to step **4**.
4	**CHECK POWER CABLE AND BUS BAR.** 1) Disconnect the power cable (HV10) from electric oil pump. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Go to step **14**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK BUS BAR.** 1) Check the bus bar between the high voltage battery (HV8) and the electric noise filter (HV7) and the surrounding area for metallic foreign bodies, and if there are any, remove them. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **6**.
6	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the bus bar between high voltage battery (HV8) and the electric noise filter (HV7). 2) Using an insulation multimeter (250 V range), measure the resistance between High Voltage battery terminals and chassis ground. ***Connector & terminal*** ***(HV8) P — Chassis ground:*** ***(HV8) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Go to step **7**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
7	**CHECK POWER CABLE AND BUS BAR.** 1) Check bus bars between the electric noise filter (HV6), the drive motor inverter (HV5), and electric oil pump inverter (HV9) and the surrounding area for metallic foreign bodies, and if there are any, remove them. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **8**.
8	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the DC/DC converter (HV3). 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.>	Go to step **9**.
9	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the electric oil pump inverter (HV9). 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the electric oil pump inverter. <Ref. to HEV-42, Inverter.>	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the drive motor inverter amperage sensor (HV2) from the drive motor inverter. 2) Check the bus bar of the drive motor inverter amperage sensor (HV2) and the surrounding area for metallic foreign bodies, and remove them if there any, then reinstall the sensor. 3) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **11**.
11	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the drive motor inverter amperage sensor (HV2) from the drive motor inverter. 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the drive motor inverter amperage sensor. <Ref. to HEV-27, Drive Motor Inverter Current Sensor.>	Go to step **12**.
12	**CHECK POWER CABLE AND BUS BAR.** 1) Remove the bus bar between the electric noise filter (HV6) and the drive motor inverter (HV5). 2) Using an insulation multimeter (250 V range), measure the resistance between high voltage battery side terminal and chassis ground of electric noise filter. ***Connector & terminal*** ***(HV7) P — Chassis ground:*** ***(HV7) N — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>	Replace the electric noise filter. <Ref. to HEV-31, Noise Filter.>
13	**CHECK POWER CABLE AND DRIVE MOTOR ASSEMBLY.** 1) Disconnect the power cable (HV1) from the drive motor assembly. NOTE: The gasket is NOT reusable. 2) Using an insulation multimeter (250 V range), measure the resistance between drive motor assembly and chassis ground. ***Connector & terminal*** ***(HV1) U — Chassis ground:*** ***(HV1) V — Chassis ground:*** ***(HV1) W — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the power cable. <Ref. to HEV-51, Power Cable.>	Replace the drive motor assembly. <Ref. to CVT(TH58A)-215, Drive Motor Assembly.>
14	**CHECK POWER CABLE AND ELECTRIC OIL PUMP.** 1) Disconnect the power cable (HV12) from electric oil pump. 2) Using an insulation multimeter (250 V range), measure the resistance between electric oil pump and chassis ground. ***Connector & terminal*** ***(HV12) U — Chassis ground:*** ***(HV12) V — Chassis ground:*** ***(HV12) W — Chassis ground:***	Is the resistance 2 MΩ or more?	Replace the power cable. <Ref. to HEV-51, Power Cable.>	Replace the electric oil pump. <Ref. to CVT(TH58A)-132, Electric Fluid Pump.>

CZ:DTC P0AA7 HYBRID BATTERY VOLTAGE SYSTEM ISOLATION SENSOR CIRCUIT

DIAGNOSIS:
- Detects a fault in leakage detection circuit.
- Detects open, short conditions in switches within the leakage detection circuit.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DA:DTC P0AAD HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:
- Detected when two consecutive driving cycles with fault occur. (Single engine startup is counted as one drive cycle.)
- GENERAL DESCRIPTION <Ref. to GD(HEV)-95, DTC P0AAD HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DB:DTC P0AAE HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-96, DTC P0AAE HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DC:DTC P0AAF HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-97, DTC P0AAF HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DD:DTC P0ABF HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-98, DTC P0ABF HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DE:DTC P0AC0 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-99, DTC P0AC0 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DF:DTC P0AC1 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-100, DTC P0AC1 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DG:DTC P0AC2 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-101, DTC P0AC2 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DH:DTC P0AC3 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-102, DTC P0AC3 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Start the engine. 3) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery Amperage Sensor Output». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 1 A or more? (When ignition is ON)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

DI: DTC P0AC6 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-104, DTC P0AC6 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DJ:DTC P0AC7 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-105, DTC P0AC7 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DK:DTC P0AC8 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-106, DTC P0AC8 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DL:DTC P0ACB HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-107, DTC P0ACB HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DM:DTC P0ACC HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-108, DTC P0ACC HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DN:DTC P0ACD HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-109, DTC P0ACD HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DO:DTC P0AD9 HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-110, DTC P0AD9 HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DP:DTC P0ADB HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-111, DTC P0ADB HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DQ:DTC P0ADD HYBRID BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-112, DTC P0ADD HYBRID BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DR:DTC P0ADF HYBRID BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT LOW

DIAGNOSIS:
- Detects short conditions in – side contactor control signal line.
- If short conditions are detected in – side contactor control signal line, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DS:DTC P0AE4 HYBRID BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-113, DTC P0AE4 HYBRID BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DT:DTC P0AE6 HYBRID BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT LOW

DIAGNOSIS:
- Detects short conditions in precharge contactor control signal line.
- If short conditions are detected in precharge contactor control signal line, it is judged as NG.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

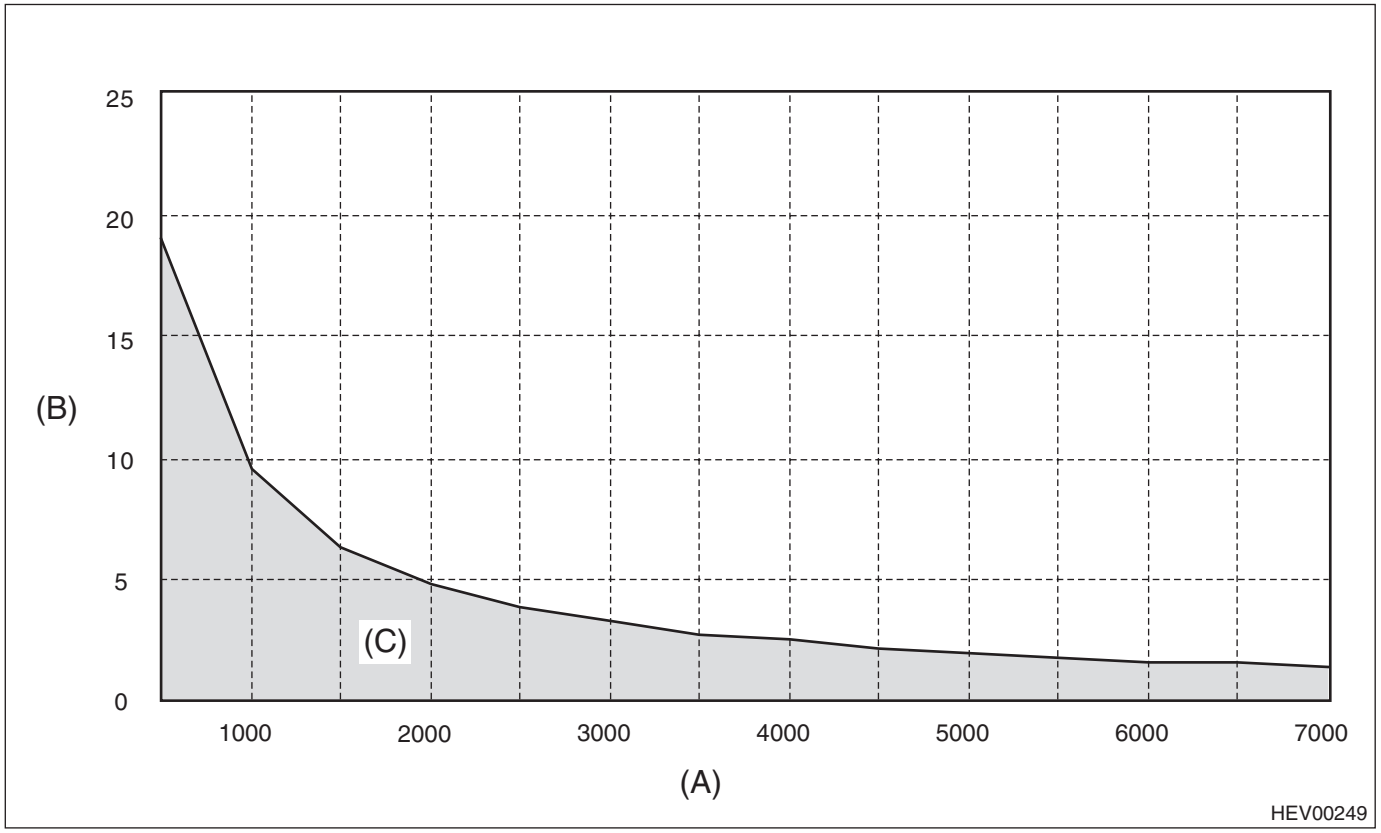
NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DU:DTC P0B25 HYBRID BATTERY "A" VOLTAGE LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-114, DTC P0B25 HYBRID BATTERY "A" VOLTAGE LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Discharge Power Limit 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 kw?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target(HPCM)»«Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target(HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual»«Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

NOTE:

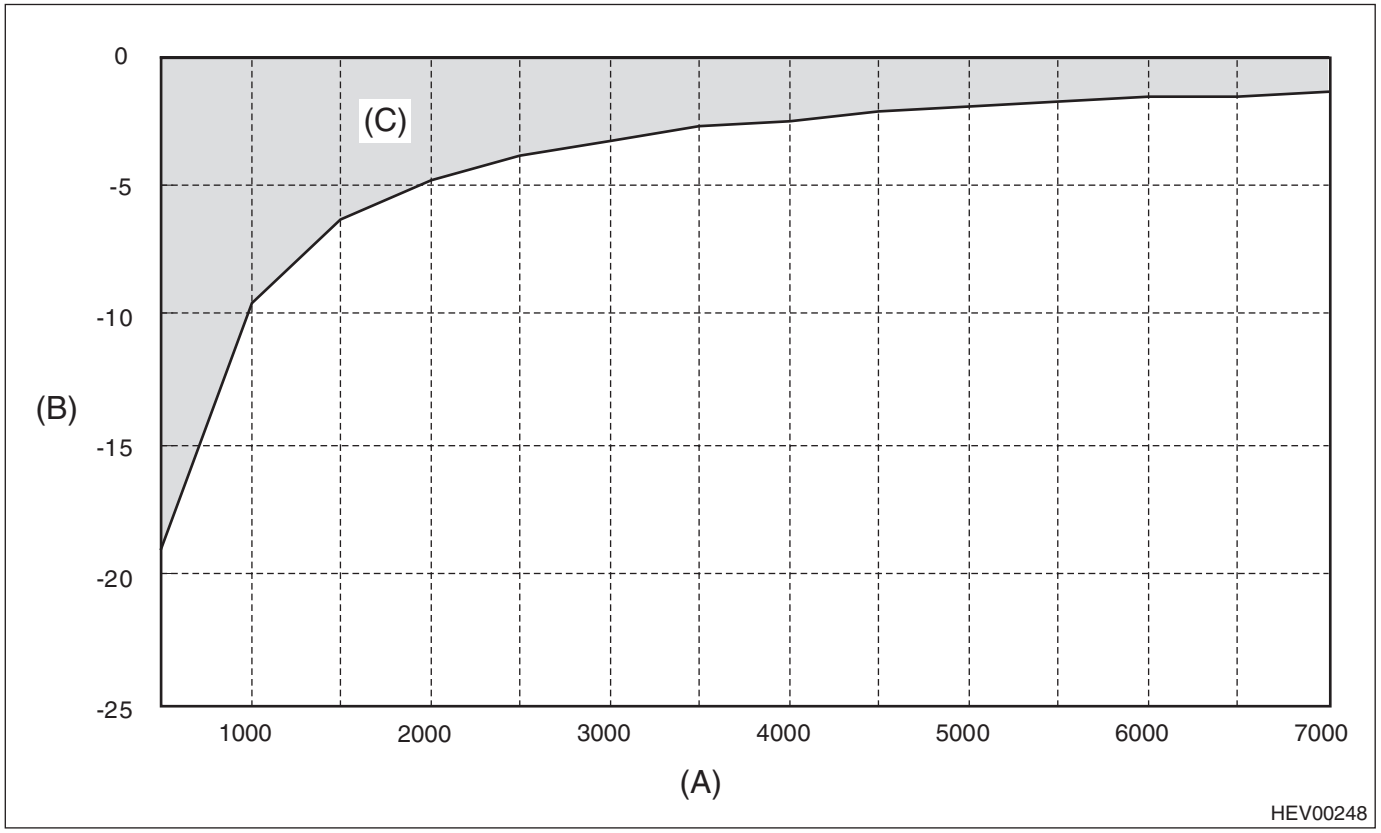
(A) Drive Motor Speed Target(HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

DV:DTC P0B26 HYBRID BATTERY "A" VOLTAGE HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-115, DTC P0B26 HYBRID BATTERY "A" VOLTAGE HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Charge Power 1» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 kw?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target(HPCM)»«Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target(HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **3**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual»«Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

NOTE:

(A) Drive Motor Speed Target(HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

DW:DTC P0B37 HIGH VOLTAGE SERVICE DISCONNECT OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-116, DTC P0B37 HIGH VOLTAGE SERVICE DISCONNECT OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK SERVICE DISCONNECT PLUG.** Check installation condition of service disconnect plug. <Ref. to HEV-15, Service Plug.>	Is the service disconnect plug securely installed? Is it locked?	Go to step **2**.	Securely install the service disconnect plug.
2	**CHECK SERVICE DISCONNECT PLUG.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.>	Is the condition of service disconnect plug normal? (Check for defective lock, rust or contamination in terminals, etc.)	Go to step **3**.	Replace the service disconnect plug.
3	**CHECK CURRENT DATA.** 1) Install the service disconnect plug. 2) Turn the ignition switch to ON. 3) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «Service Plug Status». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «OFF»?	Go to step **4**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Install the service disconnect plug. 5) Turn the ignition switch to OFF. 6) Wait for 30 seconds. 7) Turn the ignition switch to ON. 8) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «Service Plug Status». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Does the value show «OFF»?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

DX:DTC P0B3C HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-117, DTC P0B3C HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DY:DTC P0B3D HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-118, DTC P0B3D HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

DZ:DTC P0B3E HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-119, DTC P0B3E HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EA:DTC P0B41 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-120, DTC P0B41 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EB:DTC P0B42 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-121, DTC P0B42 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EC:DTC P0B43 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-122, DTC P0B43 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

ED:DTC P0B46 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-123, DTC P0B46 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EE:DTC P0B47 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-124, DTC P0B47 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EF:DTC P0B48 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-125, DTC P0B48 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EG:DTC P0B4A HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-126, DTC P0B4A HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Normal control

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EH:DTC P0B4B HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-127, DTC P0B4B HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EI: DTC P0B4C HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-128, DTC P0B4C HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EJ:DTC P0B4D HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-129, DTC P0B4D HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EK:DTC P0B50 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-130, DTC P0B50 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EL:DTC P0B51 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-131, DTC P0B51 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EM:DTC P0B52 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-132, DTC P0B52 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EN:DTC P0B55 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-133, DTC P0B55 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EO:DTC P0B56 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-134, DTC P0B56 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EP:DTC P0B57 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-135, DTC P0B57 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EQ:DTC P0B5A HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT RANGE/ PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-136, DTC P0B5A HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

ER:DTC P0B5B HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-137, DTC P0B5B HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

ES:DTC P0B5C HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-138, DTC P0B5C HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

EV traveling/Auto Start Stop does not operate.
(Engine does not restart under EV traveling/Auto Start Stop condition.)

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

ET:DTC P0BB8 HYBRID BATTERY VOLTAGE SENSE "Z" CIRCUIT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-139, DTC P0BB8 HYBRID BATTERY VOLTAGE SENSE "Z" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EU:DTC P0C30 HYBRID BATTERY PACK STATE OF CHARGE HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-140, DTC P0C30 HYBRID BATTERY PACK STATE OF CHARGE HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

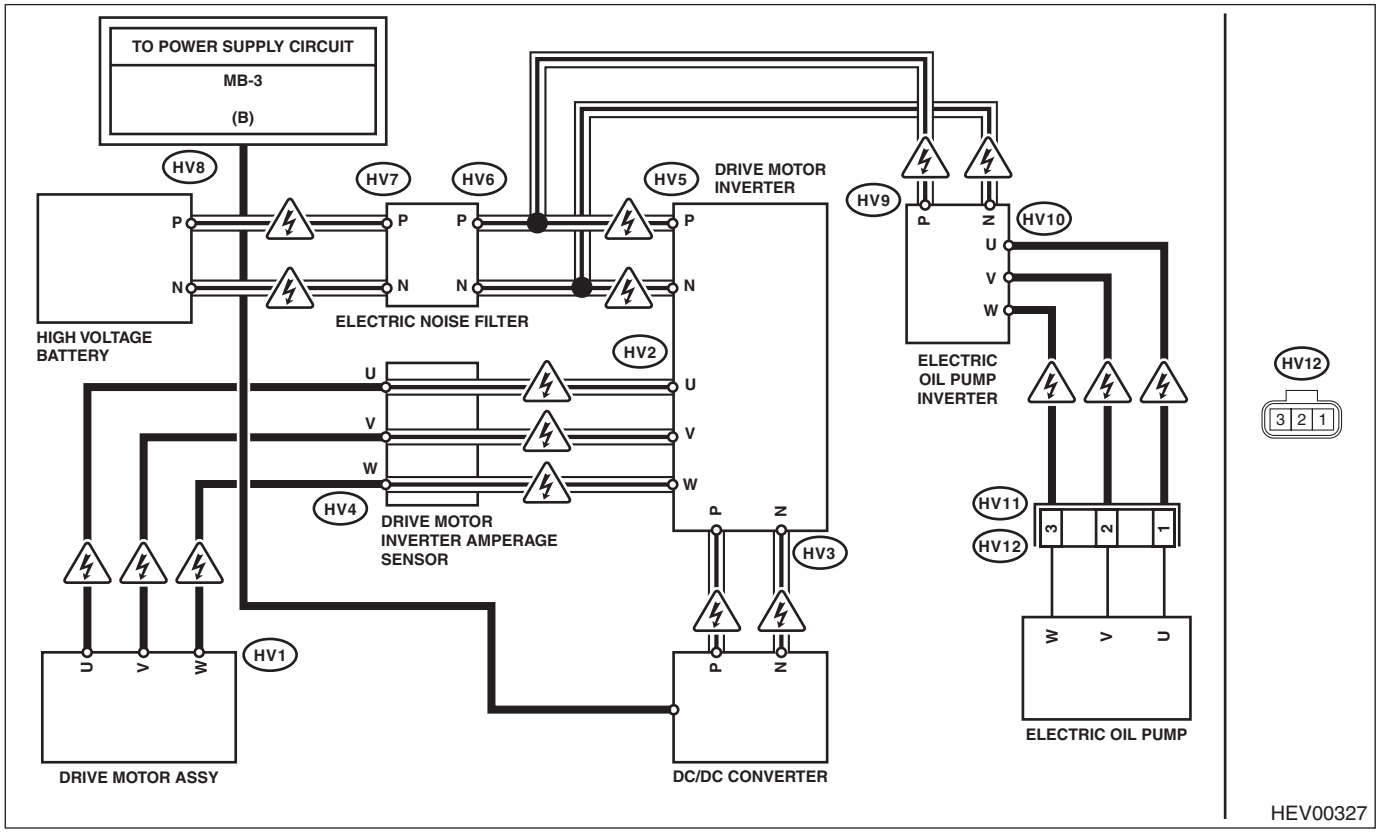
	Step	Check	Yes	No
1	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «High Voltage Battery Amperage» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Is the value –1A or less?	Go to step **2**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
2	**CHECK INDICATOR.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Check illumination of "Hybrid READY indicator light" in the meter.	Is the indicator illuminating?	Go to step **3**.	Replace HPCM and the high voltage battery. <Ref. to HEV-37, Hybrid Powertrain Control Module.> <Ref. to HEV-17, High Voltage Battery.>
3	**CHECK CURRENT DATA.** 1) Drive approximately 2 km (1.2 miles) at a speed of 30 km/h (18.6 MPH) or more. 2) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High Voltage Battery SOC». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 94% or less?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

EV:DTC P0C78 HYBRID BATTERY SYSTEM PRECHARGE TIME TOO LONG

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-141, DTC P0C78 HYBRID BATTERY SYSTEM PRECHARGE TIME TOO LONG, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

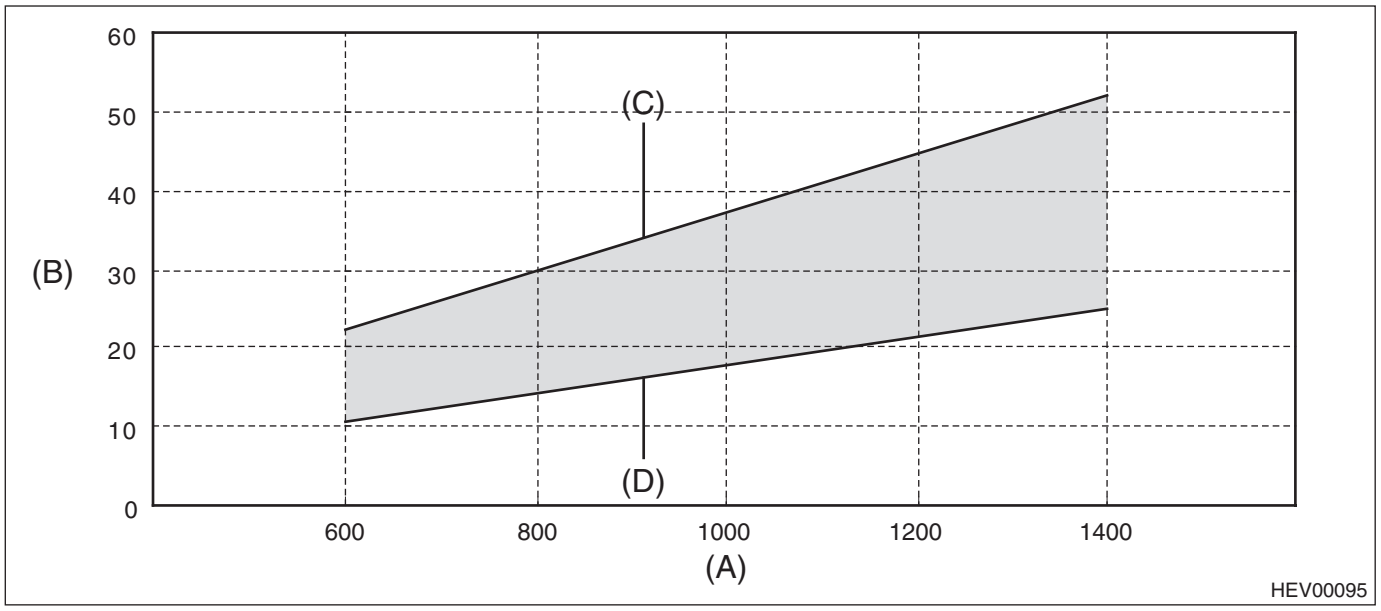


- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:



Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Using the Subaru Select Monitor, read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, confirm the current data of battery energy control system, the value of «High voltage Battery Total Voltage». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.>	Is the value 75 V or more?	Go to step **3**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

Step		Check	Yes	No
3	**CHECK DRIVE MOTOR.** 1) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 2) Lift up the vehicle. 3) Start the engine, and set the shift lever to "D" range. 4) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the values of «Drive Motor Speed»«Drive Motor Inverter Input Voltage». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.> NOTE: When current data of the drive motor control system, «ATF Temperature» is 20 — 60°C (68 — 140°F). <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «Drive Motor Inverter Input Voltage» within the standard in the margin when «Drive Motor Speed» is 600 — 1400 rpm?	Go to step **4**.	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>
4	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. 4) Wait for 10 minutes. 5) Check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **5**.	Retighten the bolts. Or replace the bus bar.
5	**CHECK BUS BAR.** 1) Remove the bus bar. 2) Using the tester, measure the resistance between bus bar terminals. ***Connector & terminal*** ***(HV5) P — (HV6) P:*** ***(HV5) N — (HV6) N:*** ***(HV5) P — (HV9) P:*** ***(HV5) N — (HV9) N:*** ***(HV7) P — (HV8) P:*** ***(HV7) N — (HV8) N:***	Is the resistance less than 1 Ω?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace the bus bar.

NOTE:
Value of «Drive Motor Inverter Input Voltage» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

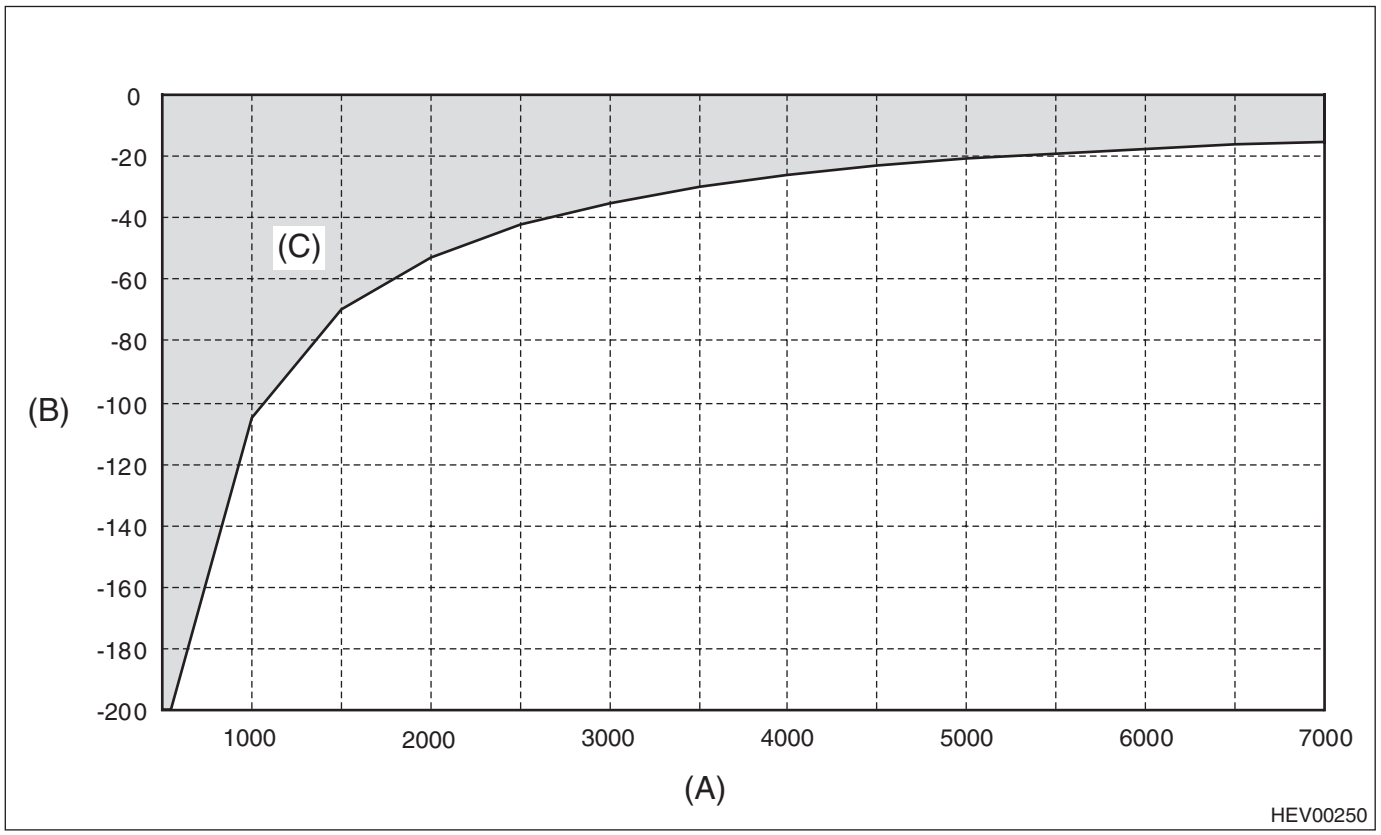
(A) Drive motor speed
(B) Drive Motor Inverter Input Voltage
(C) Standard at Max.
(D) Standard at Min.

EW:DTC P0CA6 HYBRID BATTERY CHARGING CURRENT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-142, DTC P0CA6 HYBRID BATTERY CHARGING CURRENT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «Drive Motor Torque Target(HPCM)» in the freeze frame data of the battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 N or less?	Go to step **3**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target(HPCM)»«Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target(HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque»«Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

NOTE:

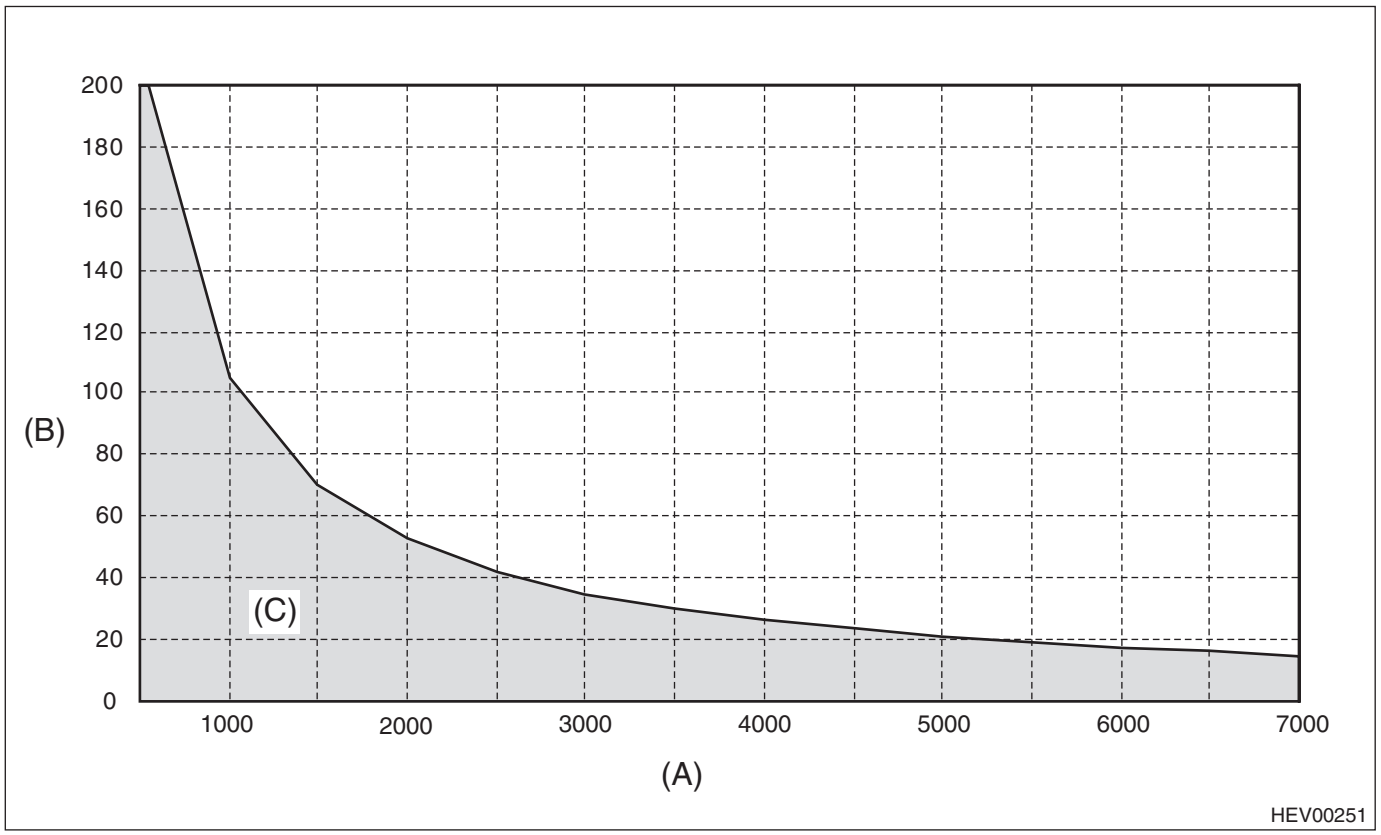
(A) Drive Motor Speed Target(HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

EX:DTC P0CA7 HYBRID BATTERY DISCHARGING CURRENT HIGH

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-143, DTC P0CA7 HYBRID BATTERY DISCHARGING CURRENT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	Perform the diagnosis according to DTC. <Ref. to HEV(diag)-77, DRIVE MOTOR CONTROL SYSTEM, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the value of «Drive Motor Output Torque Actual» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Does the value show 0 N or more?	Go to step **3**.	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>
3	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Torque Target(HPCM)»«Drive Motor Speed Target(HPCM)» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Torque Target(HPCM)» and «Drive Motor Speed Target(HPCM)» within the standard in the margin?	Go to step **4**.	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>
4	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, confirm the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» in the freeze frame data of battery energy control system. <Ref. to HEV(diag)-68, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Freeze Frame Data Display.>	Are the values of «Drive Motor Output Torque Actual» and «Drive Motor Speed» within the standard in the margin?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace DMCM. <Ref. to CVT(TH58A)-155, Drive Motor Control Module.>

NOTE:

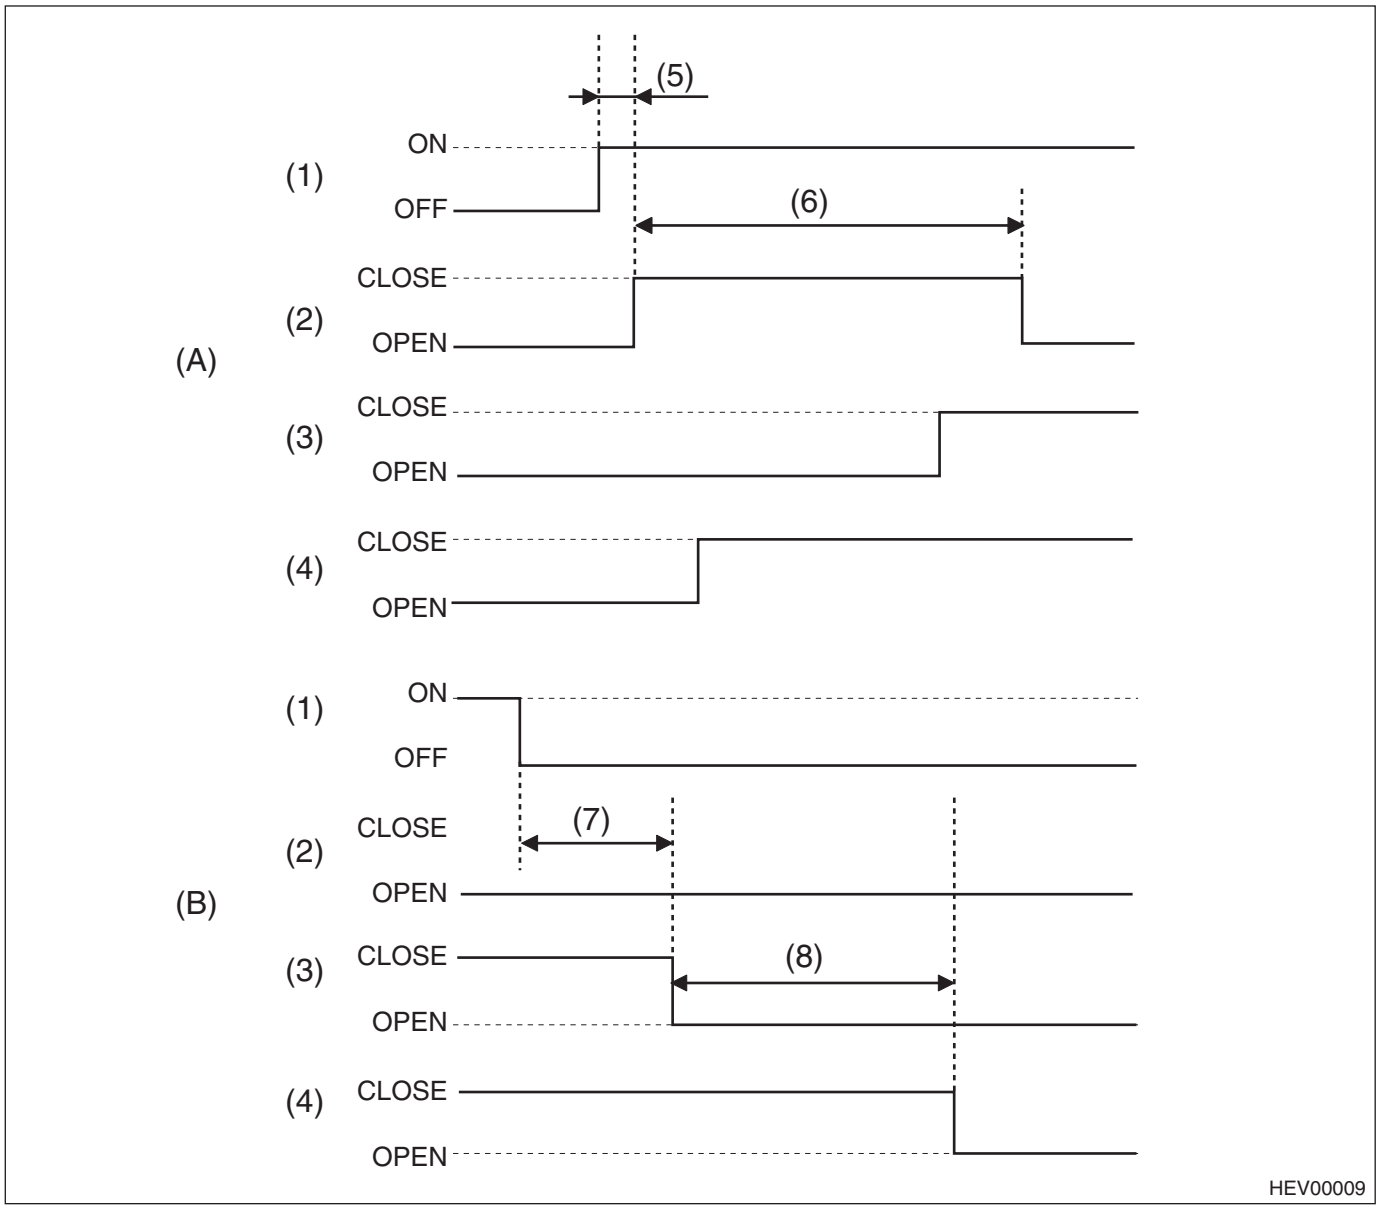
(A) Drive Motor Speed Target(HPCM) or Drive Motor Speed
(B) Drive Motor Torque Target (HPCM) or Drive Motor Output Torque Actual
(C) Standard

EY:DTC P1C40 HYBRID BATTERY POSITIVE CONTACTOR OR PRE-CHARGE CONTACTOR CIRCUIT STUCK CLOSED

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-144, DTC P1C40 HYBRID BATTERY POSITIVE CONTACTOR OR PRE-CHARGE CONTACTOR CIRCUIT STUCK CLOSED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of the following system. • Engine • Transmission <Ref. to CVT(HEV)(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).> • Hybrid powertrain control system <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Drive motor control system <Ref. to HEV(diag)-23, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).> • Airbag system <Ref. to AB(diag)-26, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK BECM.** 1) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 2) Start the engine. 3) Turn the ignition switch to OFF. 4) Wait for 30 seconds. 5) Turn the ignition switch to ON. 6) Read the DTC again. <Ref. to HEV(diag)-23, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC detected? (current malfunction)	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

NOTE:
Operation of contactor relay under the normal condition.

(A) Contactor relay closing sequence
(B) Contactor relay opening sequence

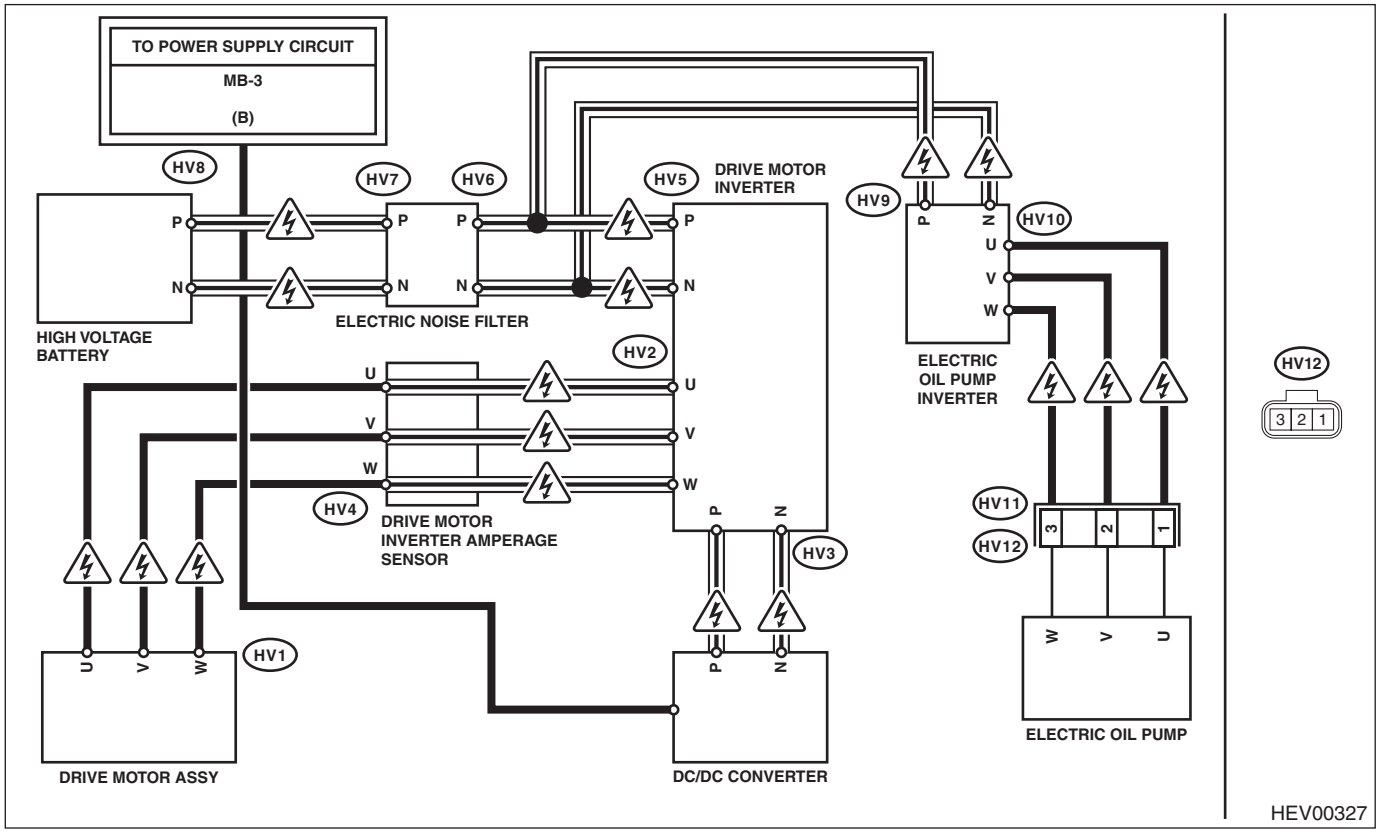
(1) Contactor command
(2) Precharge contactor status
(3) Positive contactor status
(4) Negative contactor status
(5) 10 seconds
(6) 0.8 seconds maximum
(7) 2.0 seconds maximum
(8) 1.3 seconds maximum

EZ:DTC P1C41 HIGH VOLTAGE CIRCUIT SHORT

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-145, DTC P1C41 HIGH VOLTAGE CIRCUIT SHORT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:



- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC.	Are any other DTCs detected? (current malfunction)	First perform the diagnosis according to other DTCs.	Go to step **2**.
2	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Visually check the bus bar.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **3**.	Retighten the bolts. Or replace the bus bar.

	Step	Check	Yes	No
3	**CHECK POWER CABLE.** Visually check the power cable.	Is the condition normal? (Check for loose bolts, insecure connection, foreign matter caught, trace of arc (burnt terminals) etc.)	Go to step **4**.	Retighten the bolts. Or replace the power cable. <Ref. to HEV-51, Power Cable.>
4	**CHECK EACH MODULE.** Using a tester, measure the resistance between electric noise filter terminals on the high voltage battery side. ***Connector & terminal*** ***(HV7) P — (HV7) N:***	Is the resistance 1 Ω or more?	Go to step **7**.	Go to step **5**.
5	**CHECK DC/DC CONVERTER.** 1) Remove the DC/DC converter. 2) Using a tester, measure the resistance between electric noise filter terminals on the high voltage battery side. ***Connector & terminal*** ***(HV7) P — (HV7) N:***	Is the resistance 1 Ω or more?	Replace the DC/DC converter. <Ref. to HEV-38, DC/DC Converter.>	Go to step **6**.
6	**CHECK EACH MODULE.** 1) Disconnect the power cable (HV4) from drive motor inverter amperage sensor. 2) Remove the drive motor inverter amperage sensor (HV2). 3) Remove bus bars (HV5, HV6, HV7, HV8, HV9). 4) Using a tester, measure the resistance between terminals of each module. ***Connector & terminal*** ***Drive motor inverter*** ***(HV5) P — (HV5) N:*** ***Electric noise filter*** ***(HV7) P — (HV7) N:*** ***High voltage battery*** ***(HV8) P — (HV8) N:*** ***Electric oil pump inverter*** ***(HV9) P — (HV9) N:***	Is the resistance 1 Ω or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Replace the unit that has short circuits.
7	**CHECK EACH MODULE.** Using a tester, measure the resistance between drive motor inverter amperage sensor terminals on the power cable side. ***Connector & terminal*** ***(HV4) W — (HV4) V:*** ***(HV4) W — (HV4) U:*** ***(HV4) V — (HV4) U:***	Is the resistance 1 Ω or more?	Go to step **9**.	Go to step **8**.

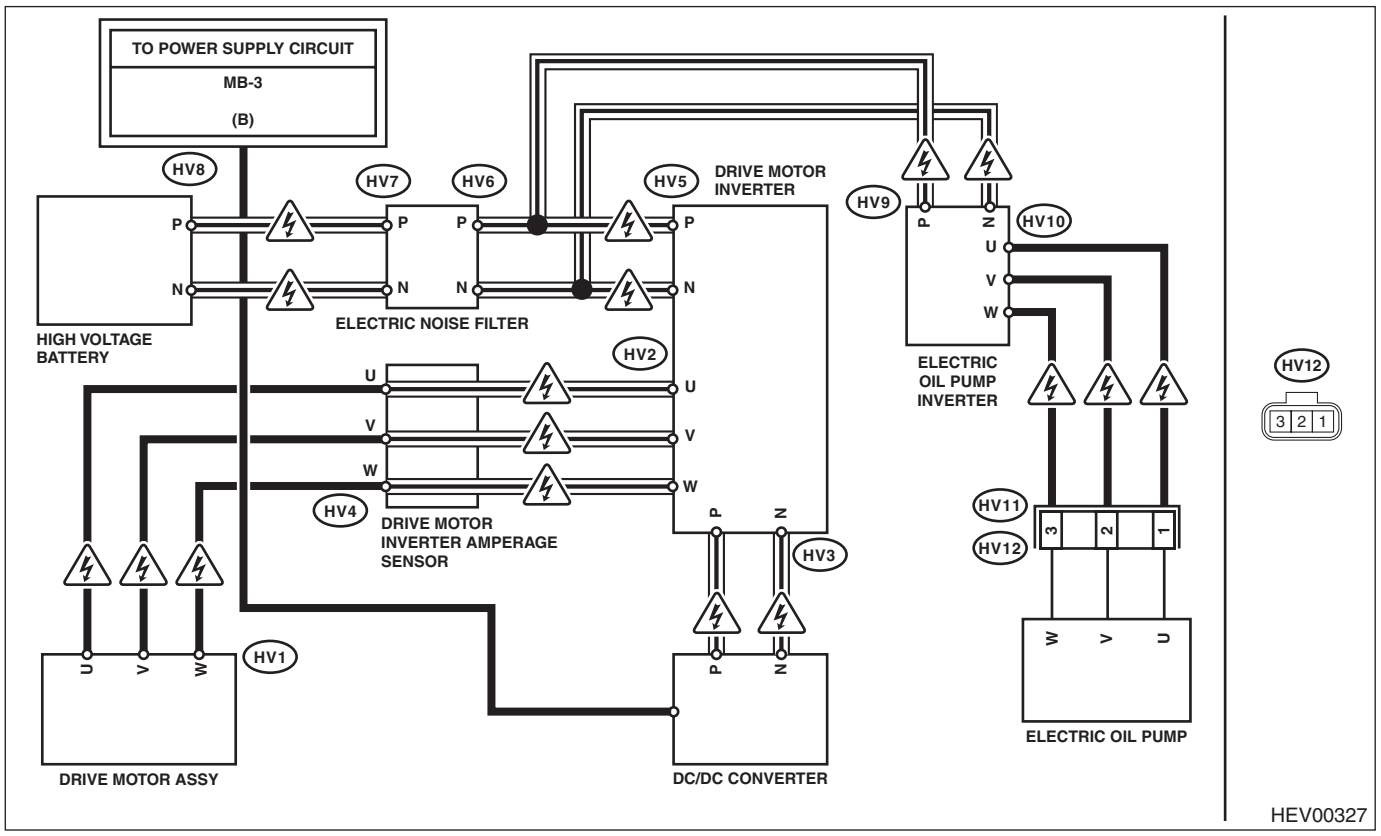
	Step	Check	Yes	No
8	**CHECK EACH MODULE.** 1) Disconnect the power cable (HV4) from drive motor inverter amperage sensor. 2) Remove the drive motor inverter amperage sensor (HV2). 3) Disconnect the power cable (HV1) from the drive motor assembly. NOTE: The gasket is NOT reusable. 4) Using a tester, measure the resistance between each module and power cable terminals. ***Connector & terminal*** ***Drive motor assembly*** ***(HV1) W — (HV1) V:*** ***(HV1) W — (HV1) U:*** ***(HV1) V — (HV1) U:*** ***Drive motor inverter*** ***(HV2) W — (HV2) V:*** ***(HV2) W — (HV2) U:*** ***(HV2) V — (HV2) U:*** ***Drive motor inverter amperage sensor*** ***(HV4) W — (HV4) V:*** ***(HV4) W — (HV4) U:*** ***(HV4) V — (HV4) U:*** ***Power cable*** ***(HV4) W — (HV4) V:*** ***(HV4) W — (HV4) U:*** ***(HV4) V — (HV4) U:***	Is the resistance 1 Ω or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Replace the unit that has short circuits.
9	**CHECK EACH MODULE.** 1) Disconnect the power cable (HV10) from electric oil pump inverter. 2) Disconnect the power cable (HV12) from electric oil pump. 3) Using a tester, measure the resistance between each module and power cable terminals. ***Connector & terminal*** ***Electric oil pump inverter*** ***(HV10) W — (HV10) V:*** ***(HV10) W — (HV10) U:*** ***(HV10) V — (HV10) U:*** ***Electric oil pump*** ***(HV12) W — (HV12) V:*** ***(HV12) W — (HV12) U:*** ***(HV12) V — (HV12) U:*** ***Power cable*** ***(HV10) W — (HV10) V:*** ***(HV10) W — (HV10) U:*** ***(HV10) V — (HV10) U:***	Is the resistance 1 Ω or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Replace the unit that has short circuits.

FA:DTC P1C42 HIGH VOLTAGE CIRCUIT OPEN

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-146, DTC P1C42 HIGH VOLTAGE CIRCUIT OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

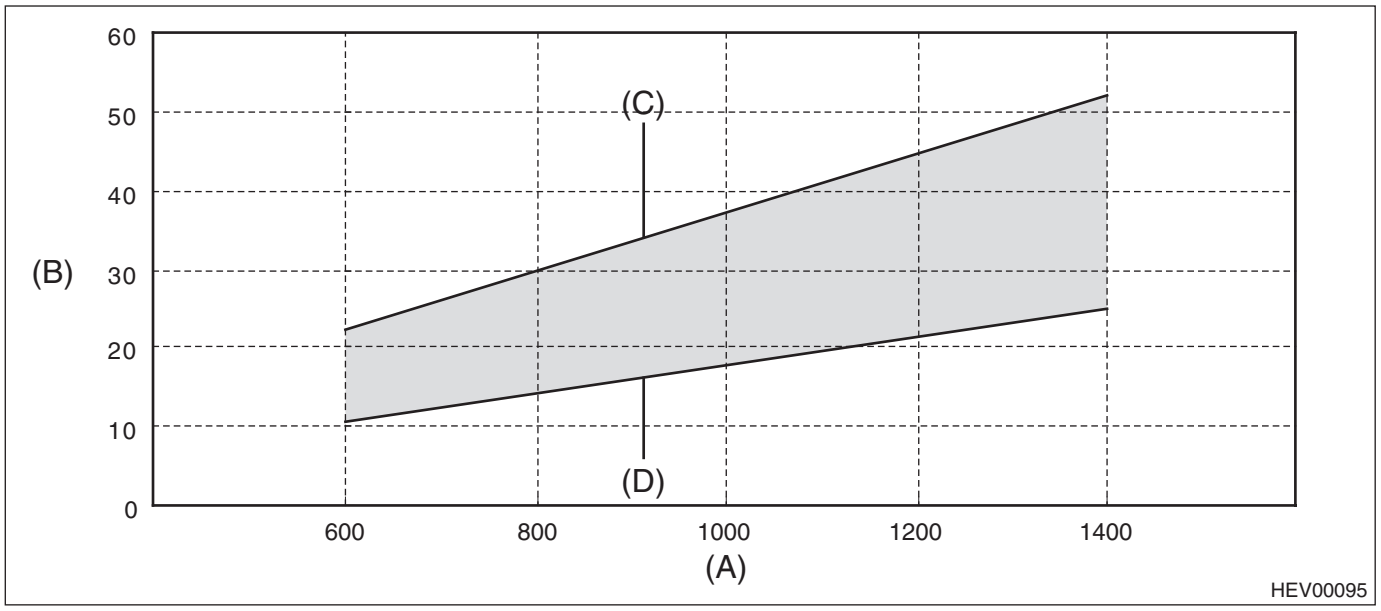


- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

WIRING DIAGRAM:



Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BUS BAR.** 1) Turn the ignition to OFF. 2) Disconnect the ground cable of the 12 volt auxiliary battery, and as for the 12 volt engine restart battery, disconnect the ground cable from the 12V engine restart battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.> 3) Remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> 4) Wait for 10 minutes. 5) Visually check the bus bar.	Is the condition normal? (Check for loose bolts, etc.)	Go to step **2**.	Retighten the bolts. Or replace the bus bar.

	Step	Check	Yes	No
2	**CHECK BUS BAR.** 1) Remove the bus bar. 2) Using the tester, measure the resistance between bus bar terminals. ***Connector & terminal*** ***(HV5) P — (HV6) P:*** ***(HV5) N — (HV6) N:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the bus bar. (Between electric noise filter and drive motor inverter.)
3	**CHECK ELECTRIC NOISE FILTER.** Using a tester, measure the resistance between electric noise filter terminals. ***Connector & terminal*** ***(HV6) P — (HV7) P:*** ***(HV6) N — (HV7) N:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the electric noise filter. <Ref. to HEV-31, Noise Filter.>
4	**CHECK BUS BAR.** Using the tester, measure the resistance between bus bar terminals. ***Connector & terminal*** ***(HV7) P — (HV8) P:*** ***(HV7) N — (HV8) N:***	Is the resistance less than 1 Ω?	Go to step **5**.	Replace the bus bar. (Between high voltage battery and electric noise filter.)
5	**CHECK DRIVE MOTOR.** 1) Replace the removed/disconnected parts back to the vehicle. 2) With the 12 V battery connected, remove the service disconnect plug. <Ref. to HEV-15, Service Plug.> **CAUTION:** **Watch for an electrical short at each harness because the 12 V battery is connected.** 3) Lift up the vehicle. 4) Start the engine, and set the shift lever to “D” range. 5) Using the Subaru Select Monitor, confirm the current data of battery energy control system, the values of «Drive Motor Speed»«Drive Motor Inverter Input Voltage». <Ref. to HEV(diag)-57, BATTERY ENERGY CONTROL SYSTEM, OPERATION, Read Current Data.> NOTE: When current data of the drive motor control system, «ATF Temperature» is 20 — 60°C (68 — 140°F). <Ref. to HEV(diag)-51, DRIVE MOTOR CONTROL SYSTEM, OPERATION, Read Current Data.>	Is «Drive Motor Inverter Input Voltage» within the standard in the margin when «Drive Motor Speed» is 600 — 1400 rpm?	Replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>	Replace the drive motor inverter. <Ref. to HEV-42, Inverter.>

NOTE:
Value of «Drive Motor Inverter Input Voltage» is proportional to «Drive Motor Speed».
- 1000 rpm: 18 V — 37 V
- 1400 rpm: 25 V — 52 V

(A) Drive motor speed
(B) Drive Motor Inverter Input Voltage
(C) Standard at Max.
(D) Standard at Min.

FB:DTC P1C43 HYBRID BATTERY CONTACTOR POWER SUPPLY CIRCUIT

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-147, DTC P1C43 HYBRID BATTERY CONTACTOR POWER SUPPLY CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FC:DTC P1C44 SUB CPU IN BECM

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-148, DTC P1C44 SUB CPU IN BECM, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FD:DTC P1C45 HYBRID BATTERY BLOCK 1 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-149, DTC P1C45 HYBRID BATTERY BLOCK 1 BALANCING PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FE:DTC P1C46 HYBRID BATTERY BLOCK 2 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-150, DTC P1C46 HYBRID BATTERY BLOCK 2 BALANCING PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FF:DTC P1C47 HYBRID BATTERY BLOCK 3 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-151, DTC P1C47 HYBRID BATTERY BLOCK 3 BALANCING PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FG:DTC P1C48 HYBRID BATTERY BLOCK 4 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-152, DTC P1C48 HYBRID BATTERY BLOCK 4 BALANCING PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FH:DTC P1C49 HYBRID BATTERY BLOCK 5 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-153, DTC P1C49 HYBRID BATTERY BLOCK 5 BALANCING PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FI: DTC P1C4A HYBRID BATTERY BLOCK 6 BALANCING PERFORMANCE

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-154, DTC P1C4A HYBRID BATTERY BLOCK 6 BALANCING PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FJ: DTC P1C5E HYBRID BATTERY BLOCK VOLTAGE TOO LOW

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-155, DTC P1C5E HYBRID BATTERY BLOCK VOLTAGE TOO LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
If this DTC is detected, replace the high voltage battery. <Ref. to HEV-17, High Voltage Battery.>

FK:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-156, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FL:DTC U0075 CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-157, DTC U0075 CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FM:DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-158, DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FN:DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-160, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FO:DTC U0101 LOST COMMUNICATION WITH TCM

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-161, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FP:DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A"

DIAGNOSIS:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-162, DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A", Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FQ:DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-164, DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FR:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-166, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FS:DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with electric power steering system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FT:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with body integrated unit.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FU:DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with airbag system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FV:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with combination meter.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FW:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with air conditioner.
- Immediately at fault recognition

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FX:DTC U0287 LOST COMMUNICATION WITH TRANSMISSION FLUID PUMP MODULE

DIAGNOSIS:
- Detects CAN communication error with electric oil pump.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FY:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-167, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

FZ:DTC U0402 INVALID DATA RECEIVED FROM TCM

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-168, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GA:DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A"

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-169, DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A", Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GB:DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-171, DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GC:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-173, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GD:DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with electric power steering system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GE:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with body integrated unit.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GF:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with combination meter.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GG:DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with air conditioner.
- Immediately at fault recognition

TROUBLE SYMPTOM:
EV traveling/Auto Start Stop does not operate.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GH:DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DIAGNOSIS:
- Detects CAN communication error with airbag system.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GI: DTC U0588 INVALID DATA RECEIVED FROM TRANSMISSION FLUID PUMP MODULE

DIAGNOSIS:
- Detects CAN communication error with electric oil pump.
- Immediately at fault recognition

TROUBLE SYMPTOM:
Normal control

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GJ:DTC U1100 LOST COMMUNICATION WITH ECM/PCM PU-CAN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-174, DTC U1100 LOST COMMUNICATION WITH ECM/PCM PU-CAN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GK:DTC U1101 LOST COMMUNICATION WITH TCM PU-CAN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-175, DTC U1101 LOST COMMUNICATION WITH TCM PU-CAN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GL:DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-176, DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GM:DTC U1401 INVALID DATA RECEIVED FROM ECM/PCM PU-CAN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-178, DTC U1401 INVALID DATA RECEIVED FROM ECM/PCM PU-CAN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GN:DTC U1402 INVALID DATA RECEIVED FROM TCM PU-CAN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-179, DTC U1402 INVALID DATA RECEIVED FROM TCM PU-CAN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.
- Sometimes driving power and shifting behavior are different from the normal states.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GO:DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

DIAGNOSIS:
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(HEV)-180, DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Motor assist does not regenerates.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

GP:DTC U1676 LIN COMMUNICATION BUS ERROR HYBRID POWERTRAIN CONTROL MODULE

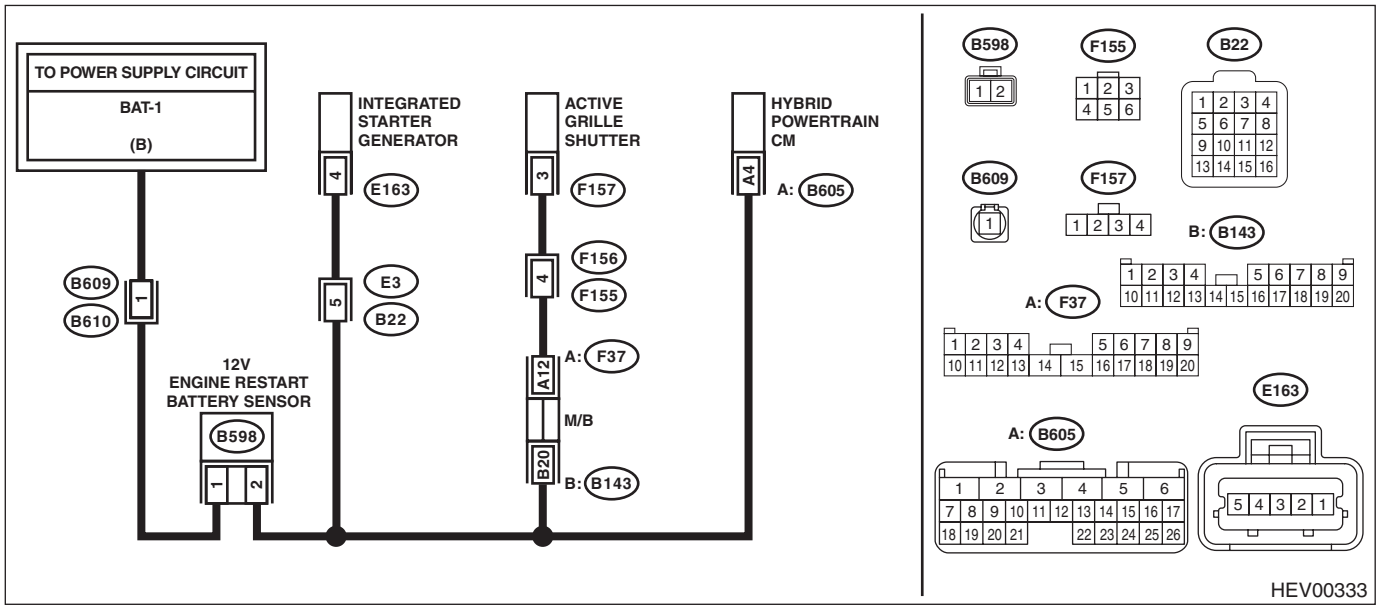
DIAGNOSIS:

- Detects LIN communication error.
- Immediately at fault recognition

TROUBLE SYMPTOM:

- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)



- Charge warning light illuminates.

CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

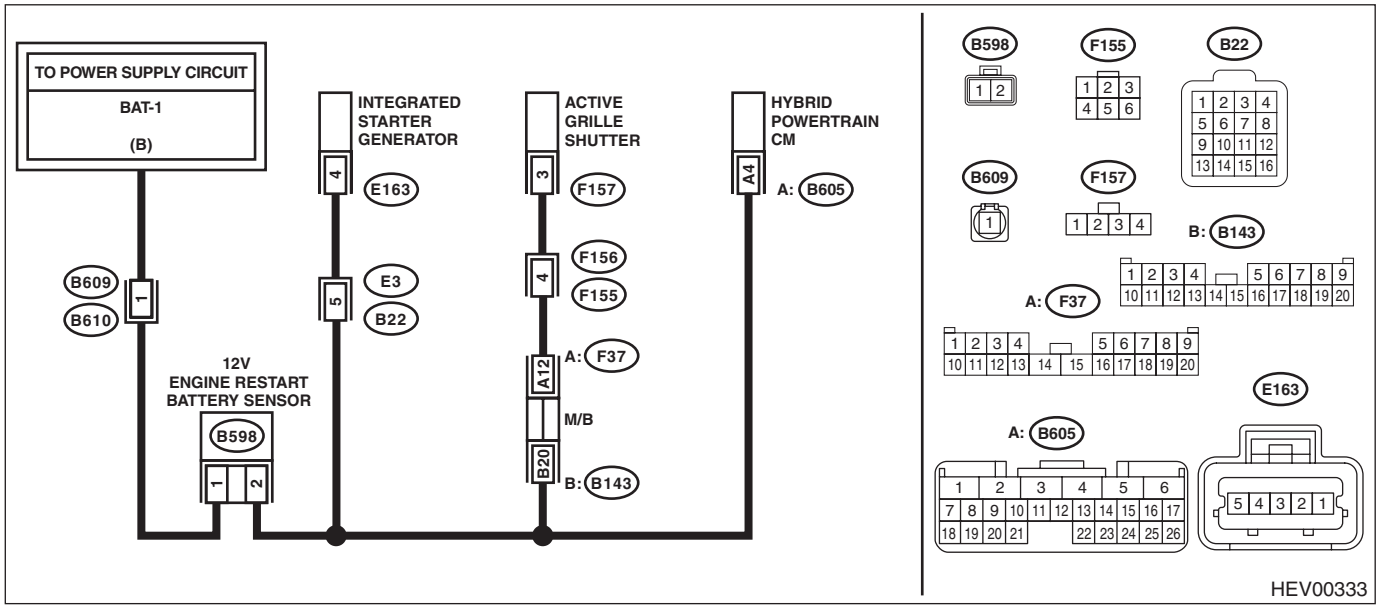
WIRING DIAGRAM

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BATTERY.** Check the 12 volt engine restart battery.	Is the condition normal?	Go to step **2**.	Charge or replace the 12 volt engine restart battery.
2	**CHECK MODULES.** 1) Disconnect the integrated starter generator connector. 2) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 3) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC U1676 detected? (current malfunction)	Go to step **3**.	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>

	Step	Check	Yes	No
3	**CHECK MODULES.** 1) Turn the ignition switch to OFF. 2) Disconnect the 12V engine restart battery sensor connector. 3) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 4) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC U1676 detected? (current malfunction)	Go to step **4**.	Replace the 12V engine restart battery sensor. <Ref. to SC(H4DO(HEV))-54, Battery Sensor.>
4	**CHECK MODULES.** 1) Turn the ignition switch to OFF. 2) Disconnect the active grille shutter connector. 3) Perform the Clear Memory Mode. <Ref. to HEV(diag)-24, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Clear Memory Mode.> 4) Read the DTC again. <Ref. to HEV(diag)-23, HYBRID POWERTRAIN CONTROL SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC U1676 detected? (current malfunction)	Go to step **5**.	Replace the active grille shutter.
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Using a tester, measure the resistance between the HPCM connector and connector of each unit. ***Connector & terminal*** ***(B605) No. 4 — (F157) No. 3:*** ***(B605) No. 4 — (B598) No. 2:*** ***(B605) No. 4 — (E163) No. 4:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair open circuit of the harness between HPCM connector and connector of each unit.
6	**CHECK HARNESS (SHORT TO GROUND).** Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair ground short circuit of harness between the HPCM connector and the integrated starter generator connector.
7	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the HPCM. <Ref. to HEV-37, Hybrid Powertrain Control Module.>	Repair the short circuit to power in harness between the HPCM connector and the integrated starter generator connector.

GQ:DTC U1711 LOST COMMUNICATION WITH BATTERY "2" MONITOR MODULE



DIAGNOSIS:
- Detects LIN communication error with 12V engine restart battery sensor.
- Immediately at fault recognition

TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.
- Charge warning light illuminates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
This DTC may be set when terminals of the 12 volt engine restart battery are disconnected.

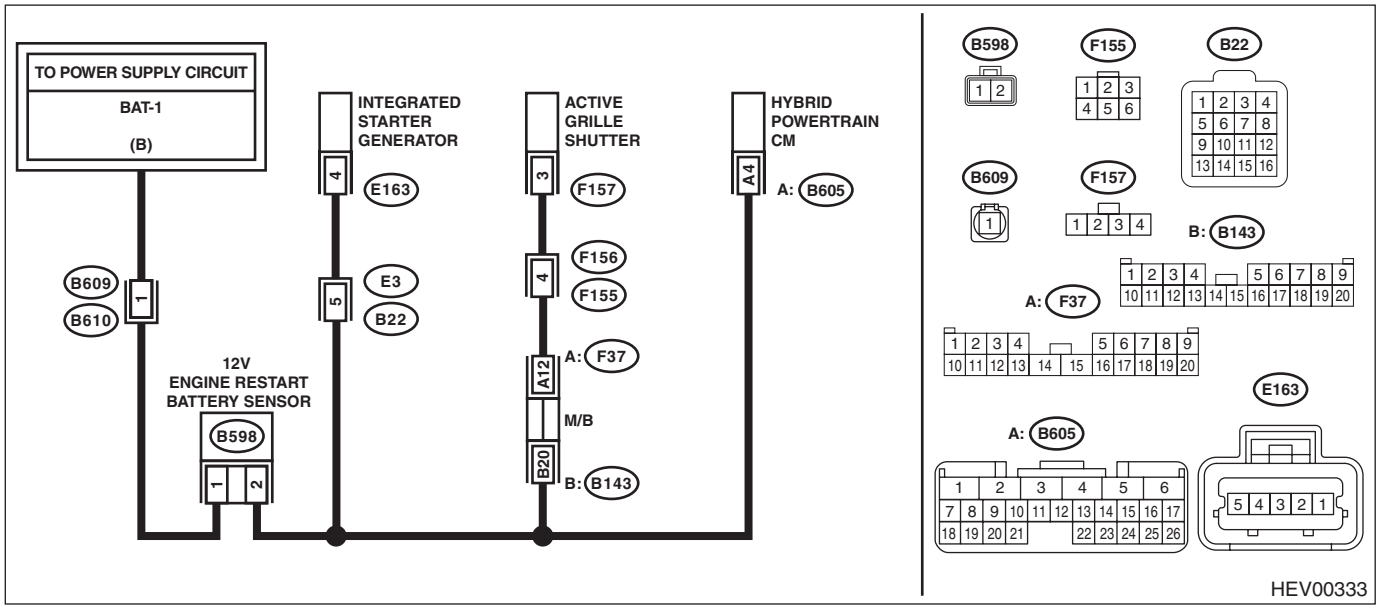
WIRING DIAGRAM
Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the HPCM connector. 2) Disconnect the 12V engine restart battery sensor connector. 3) Using a tester, measure the resistance between the HPCM connector and 12V engine restart battery sensor connector. ***Connector & terminal*** ***(B605) No. 4 — (B598) No. 2:*** ***(B598) No. 1 — 12 volt engine restart battery positive terminal:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of the harness between the HPCM connector and the 12 volt engine restart battery and the 12V engine restart battery sensor connector or replace fuses.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Disconnect the integrated starter generator connector. 2) Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short circuit of harness between the HPCM connector and the 12V engine restart battery sensor connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair the short circuit to power in harness between the HPCM connector and the 12V engine restart battery sensor connector.
4	**CHECK BATTERY.** Check the 12 volt engine restart battery. <Ref. to SC(H4DO(HEV))-38, Battery.>	Is the condition normal?	Replace the 12V engine restart battery sensor. <Ref. to SC(H4DO(HEV))-54, Battery Sensor.>	Replace or charge the battery.

GR:DTC U1720 LOST COMMUNICATION WITH INTEGRATED STARTER GENERATOR

DIAGNOSIS:
- Detects LIN communication error with integrated starter generator.
- Immediately at fault recognition



TROUBLE SYMPTOM:
- EV traveling/Auto Start Stop does not operate.

(Engine does not restart under EV traveling/Auto Start Stop condition.)
- Charge warning light illuminates.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to HEV(diag)-8, CAUTION, General Description.>

NOTE:
This DTC may be set when terminals of the 12 volt engine restart battery are disconnected.

WIRING DIAGRAM
Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

Step		Check	Yes	No
1	**CHECK BATTERY.** Check the 12 volt engine restart battery.	Is the condition normal?	Go to step **2**.	Replace or charge the battery.
2	**CHECK HARNESS (SHORT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the HPCM connector. 3) Disconnect the integrated starter generator connector. 4) Disconnect the 12V engine restart battery sensor connector. 5) Using a tester, measure the resistance between HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short circuit of harness between the HPCM connector and the integrated starter generator connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORT TO POWER).** Using a tester, measure the voltage between the HPCM connector and chassis ground. ***Connector & terminal*** ***(B605) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair the short circuit to power in harness between the HPCM connector and the integrated starter generator connector.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the HPCM connector and integrated starter generator connector. ***Connector & terminal*** ***(B605) No. 4 — (E163) No. 4:***	Is the resistance less than 1 Ω?	Replace the integrated starter generator. <Ref. to SC(H4DO(HEV))-31, Integrated Starter Generator (ISG).>	Repair the open circuit of the harness between the HPCM connector and the integrated starter generator connector.

19.Diagnostics with Phenomenon

A: INSPECTION

1. SYMPTOM TABLE

Symptoms	Maintenance parts	Note
Hybrid fail lamp does not illuminate.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
Hybrid fail lamp remains ON. (If DTCs are detected, perform inspection according to those DTC diagnostic procedures.)	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
Charge warning light illuminates.	Integrated starter generator	Check the charge warning light. <Ref. to SC(H4DO(HEV))-37, CHECK CHARGE WARNING LIGHT, INSPECTION, Integrated Starter Generator (ISG).>
Unable to switch to EV traveling.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
	Check EV traveling conditions. <Ref. to HEV(diag)-49, HYBRID POWERTRAIN CONTROL SYSTEM (Auto Start Stop AND EV TRAVELING CONDITIONS), OPERATION, Read Current Data.>	The brake vacuum pressure must be sufficient. (The vacuum pressure may decrease at high altitude or repetitive brake operation.)
		The 12 volt engine restart battery must not have abnormality.
		Engine coolant temperature must not be too low. (60°C (140°F) or more)
		The shift lever must be in “D” range.
		Battery pack must not have abnormality.
		Integrated starter generator must not have abnormality.
		ABS must not be operating.
		There must not be a steep incline in uphill.
		Accelerator pedal must not be depressed.
		Brake pedal must not be depressed.
		Warning lights are not illuminating.
		DC/DC converter must be operating normally.
		System Operation Check Mode must not be active.

Symptoms	Maintenance parts	Note
EV MODE indicator light does not illuminate.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
EV MODE indicator light remains on.	CAN communication	Perform the basic inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, COMBINATION METER, PROCEDURE, Basic Diagnostic Procedure.>
Poor acceleration	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	CVT System	Perform the basic inspection for CVT system. <Ref. to CVT(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
READY ON does not occur. (Models without keyless access system)	Ignition switch assembly	Perform unit check for the ignition switch.
	IG relay	Perform unit check for the ignition relay.
	ECM power supply system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Check READY mode conditions	The current data «Contactor Close Status» must be «close». (The ignition switch is OFF, battery runout prevention control is active, no fault conditions)
		Current data «Engine Speed» must have input.
		Drive motor must not have abnormality.
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Symptoms	Maintenance parts	Note
READY ON does not occur. (Models with keyless access system)	Keyless access system	Perform the basic inspection for keyless access system. <Ref. to KPS(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	ECM power supply system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Check READY mode conditions	The current data «Contactor Close Status» must be «close». (The ignition switch is OFF, battery runout prevention control is active, no fault conditions)
		Current data «Engine Speed» must have input.
		Drive motor must not have abnormality.
	Combination meter assembly	Perform the basic inspection for meter system. <Ref. to IDI(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
Defective operation of Auto Start Stop	Check Auto Start Stop mode conditions. <Ref. to HEV(diag)-49, HYBRID POWERTRAIN CONTROL SYSTEM (Auto Start Stop AND EV TRAVELING CONDITIONS), OPERATION, Read Current Data.>	The brake vacuum pressure must be sufficient. (The vacuum pressure may decrease at high altitude or repetitive brake operation.)
		The 12 volt engine restart battery must not have abnormality.
		Engine coolant temperature must not be too low. (60°C (140°F) or more)
		The shift lever must be in “D” range.
		Battery pack must not have abnormality.
		Drive motor must not have abnormality.
		Integrated starter generator must not have abnormality.
		The vehicle must not be moving. (0.1 km/h (0.1 MPH) or less)
		ABS must not be operating.
		There must not be a steep incline in uphill.
		Accelerator pedal must not be depressed.
		Defroster must not be on.
		Warning lights are not illuminating.
		DC/DC converter must be operating normally.
		System Operation Check Mode must not be active.

Symptoms	Maintenance parts	Note
The braking force is weak.	VDC system	Perform the basic inspection for VDC system. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system (brake vacuum pump)	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
Engine does not restart under Auto Start Stop or EV traveling.	Engine system	Perform the basic inspection for engine system. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	Hybrid system	Perform the basic inspection for hybrid system. <Ref. to HEV(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> NOTE: Restarting the engine may be temporarily prohibited due to certain voltage or temperature condition. In such case, the engine may be restarted when normal voltage or temperature condition is restored.

GENERAL DESCRIPTION (HEV)

2. Diagnostic Trouble Code (DTC) Detecting Criteria

A: DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ISC.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12V battery system voltage	≥ 10.9 V
Measured lambda	≥ 0.85 and < 1.151
Vehicle speed	= 0 mph
Engine Auto Stop command by HPCM	False
SOC of hybrid battery	≤ 44%
CVT secondary pulley shaft speed	≥ 100 rpm
Accelerator pedal position	= 0%

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	< – 100 rpm

Time Needed for Diagnosis: 15 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	≥ – 100 rpm

Time Needed for Diagnosis: 15 seconds

B: DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ISC.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12V battery system voltage	≥ 10.9 V
Measured lambda	≥ 0.85 and < 1.151
Vehicle speed	= 0 mph
Engine Auto Stop command by HPCM	False
SOC of hybrid battery	≤ 44%
CVT secondary pulley shaft speed	≥ 100 rpm
Accelerator pedal position	= 0%

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	> 200 rpm

Time Needed for Diagnosis: 15 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
(Actual engine speed) – (Target engine speed)	≤ 200 rpm

Time Needed for Diagnosis: 15 seconds

C: DTC P0572 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-A ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	OFF
(Brake pedal)	(Not Pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch B status has been changed from ON to OFF)	≤ –0.69 deg
(Brake pedal)	(Not Pressed)

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM	OFF
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch B will go from ON to OFF immediately, and from switch B OFF, switch A will go OFF to ON after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK.
Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM	ON
(Brake pedal)	Not Pressed
NOTE: For a normal system, when applying the brakes switch B will go from ON to OFF immediately, and from switch B OFF, switch A will go OFF to ON after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 seconds

D: DTC P0573 BRAKE SWITCH "A" [STOP LAMP SWITCH] CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-A ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	ON
(Brake pedal)	(Pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch B status has been changed from OFF to ON)	≥ +0.69 deg
(Brake pedal)	(Pressed)
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
(Current BPP sensor 1 angle) – (Minimum BPP sensor 1 angle that has experienced from ignition switch: ON)	≥ +3.5 deg
(Brake pedal)	(Pressed)

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM	ON
(Brake pedal)	Not pressed
NOTE: For a normal system, when applying the brakes switch B will go from OFF to ON immediately, and from switch B ON, switch A will go ON to OFF after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle.	
NOTE: For a normal system, switch A will go ON to OFF within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK. Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch A signal from ECM (Brake pedal) NOTE: For a normal system, when applying the brakes switch B will go from OFF to ON immediately, and from switch B ON, switch A will go ON to OFF after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle. NOTE: For a normal system, switch A will go ON to OFF within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	OFF Pressed

Time Needed for Diagnosis: 1 seconds

E: DTC P057B BRAKE PEDAL POSITION SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of brake stroke sensor 1 and 2.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Current BPP sensor 1 angle – Min (BPP sensor 1 angle)	≥ 1 deg or
Current BPP sensor 2 angle – Min (BPP sensor 2 angle)	≥ 1 deg

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Max (BPP sensor 1 angle) – Current BPP sensor 1 angle	< 0.5 deg and
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	≥ 2 deg or
Max (BPP sensor 1 angle) – Current BPP sensor 1angle	≥ 2 deg and
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	< 0.5 deg
Diagnosis 2	
BPP sensor 1 voltage + BPP sensor 2 voltage	≤ 3.5 V
NOTE: The sum should be 5 V for typical sensors	or ≥ 6.5 V

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Max (BPP sensor 1 angle) – Current BPP sensor 1 angle	≥ 0.5 deg
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	≥ 2 deg
Max (BPP sensor 1 angle) – Current BPP sensor 1angle	≥ 2 deg
Max (BPP sensor 2 angle) – Current BPP sensor 2 angle	≥ 0.5 deg
Diagnosis 2	
BPP sensor 1 voltage + BPP sensor 2 voltage	> 3.5 V
NOTE: The sum should be 5 V for typical sensors	or < 6.5 V

Time Needed for Diagnosis: 0.2 seconds

F: DTC P057C BRAKE PEDAL POSITION SENSOR CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of brake stroke sensor 1 and ground short.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	≤ 0.25 V (≤ –11.25 deg)

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	> 0.25 V (> –11.25 deg)

Time Needed for Diagnosis: 0.2 seconds

G: DTC P057D BRAKE PEDAL POSITION SENSOR CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the power supply short of brake stroke sensor 1.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	≥ 3.4 V (≥ 36 deg)

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	< 3.4 V (< 36 deg)

Time Needed for Diagnosis: 0.2 seconds

H: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

HYBRID POWERTRAIN CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer (RAM).
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
The written data in the whole area of RAM	≠ The read data

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
The written data in the whole area of RAM	The read data

Time Needed for Diagnosis: Immediately
DRIVE MOTOR CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor control module.
Judge as NG when the malfunction is detected at the peripheral function of drive motor control module microcomputer.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	OFF to ON (ON = Run or crank) (OFF ≠ Run or crank)

6. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Written data in RAM	≠ The read data

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Written data in RAM	Read data

Time Needed for Diagnosis: Immediately
BATTERY ENERGY CONTROL SYSTEM

7. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer RAM.

8. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

9. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inconsistency between the write and read to RAM within the BECM Main CPU	Detected

Time Needed for Diagnosis: Less than 0.01 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inconsistency between the write and read to RAM within the BECM Main CPU	Not Detected

Time Needed for Diagnosis: Less than 0.01 second

I: DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

HYBRID POWERTRAIN CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer (ROM).
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	≠ Error

Time Needed for Diagnosis: Immediately
DRIVE MOTOR CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor control module.
Judge as NG when the malfunction is detected at the peripheral function of drive motor control module microcomputer.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	OFF to ON (ON = Run or crank)

6. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	≠ Error

Time Needed for Diagnosis: Less than 1 second
BATTERY ENERGY CONTROL SYSTEM

7. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer FlashROM.

8. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

9. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Program area)	Detected

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Program area)	Not Detected

Time Needed for Diagnosis: Less than 2 second

J: DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-B ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	OFF
(Brake pedal)	(Pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch A status has been changed from ON to OFF)	≥ +0.69 deg
(Brake pedal)	(Pressed)
(Current BPP sensor 1 angle) – (Minimum BPP sensor 1 value that has experienced from ignition switch: ON)	≥ +3.5 deg
(Brake pedal)	(Pressed)

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	OFF
(Brake pedal)	Not pressed
NOTE: For a normal system, when applying the brakes switch A will go from ON to OFF immediately, and from switch A OFF, switch B will go OFF to ON after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle.	
NOTE: For a normal system, switch B will go OFF to ON within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK.
Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	ON
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch A will go from ON to OFF immediately, and from switch A OFF, switch B will go OFF to ON after 0.69 degrees of travel in the direction of increasing the value of the brake pedal angle.	
NOTE: For a normal system, switch B will go OFF to ON within 3.5 degrees of travel in the direction of increasing the value of the brake pedal angle from initial brake pedal position.	

Time Needed for Diagnosis: 1 seconds

K: DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect brake pedal SW-B ON/OFF stuck.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s
Brake switch B signal from ECM	ON
(Brake pedal)	(Not pressed)
(Current BPP sensor 1 angle) – (BPP sensor 1 angle that was stored when the brake switch A status has been changed from OFF to ON)	≤ –0.69 deg
(Brake pedal)	(Not pressed)

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	ON
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch A will go from OFF to ON immediately, and from switch A ON, switch B will go ON to OFF after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 s x 5 times
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as OK.
Do not clear NG during hybrid system activated.

Judgment Value

Malfunction Criteria	Threshold Value
Brake switch B signal from ECM	OFF
(Brake pedal)	Pressed
NOTE: For a normal system, when applying the brakes switch A will go from OFF to ON immediately, and from switch A ON, switch B will go ON to OFF after 0.69 degrees of travel in the direction of decreasing the value of the brake pedal angle.	

Time Needed for Diagnosis: 1 seconds

L: DTC P0A1D HYBRID POWERTRAIN CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of hybrid powertrain control module.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Internal Hardware module error Exception interrupt by the HPCM CPU	Detected or Detected

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Internal Hardware module error Exception interrupt by the HPCM CPU	≠ Detected and ≠ Detected

Time Needed for Diagnosis: Immediately

M: DTC P1C0C BRAKE PEDAL POSITION SENSOR "2" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of brake stroke sensor 2 and ground short.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 2 (Mechanical pedal angle)	≤ 1.5 V (≥ 37.5 deg)

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	> 1.5 V (< 37.5 deg)

Time Needed for Diagnosis: 0.2 seconds

N: DTC P1C0D BRAKE PEDAL POSITION SENSOR "2" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the power supply short of brake stroke sensor 2.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 2 (Mechanical pedal angle)	≥ 4.7 V (≤ –10.5 deg)

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Brake Pedal Position Sensor 1 (Mechanical pedal angle)	< 4.7 V (> –10.5 deg)

Time Needed for Diagnosis: 0.2 seconds

O: DTC P1C16 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED (HPCM)

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0506. <Ref. to GD(HEV)-11, DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

P: DTC P1C17 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED (HPCM)

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0507. <Ref. to GD(HEV)-12, DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

Q: DTC P2158 VEHICLE SPEED SENSOR "B"

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the wheel speed of rear wheels.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 0.2 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Vehicle speed (Rear) from Vehicle Dynamics NOTE: The VDC controller detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH.	≥ 186.4 MPH

Time Needed for Diagnosis: 2.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Wheel speed of rear wheel (either left or right) and Wheel speed of rear wheel (both left and right)	< 186 MPH > 0 MPH

Time Needed for Diagnosis: 2.5 seconds

R: DTC P0A2A DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	ON
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 15 s
Generated energy of drive motor	≥ Map1
Assist energy of drive motor	≥ Map2

Map 1

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Generated energy of drive motor (Wh)	630	320	200	130	0	0

Map 2

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Assist energy of drive motor (Wh)	270	130	75	50	0	0

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	> 4.5 V
(Temperature equivalent)	< –3.4°C (25.9°F)

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≤ 4.5 V
(Temperature equivalent)	≥ -3.4°C (25.9°F)

Time Needed for Diagnosis: 4 seconds

S: DTC P0A2C DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	< 0.23 V
(Temperature equivalent)	> 234°C (453.2°F)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≥ 0.23 V
(Temperature equivalent)	≤ 234°C (453.2°F)

Time Needed for Diagnosis: 2 seconds

T: DTC P0A2D DRIVE MOTOR "A" TEMPERATURE SENSOR CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	> 4.6 V (< –55°C (–67°F))

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	≤ 4.6 V (≥ -55°C (–67°F))

Time Needed for Diagnosis: 2 seconds

U: DTC P0A3C DRIVE MOTOR "A" INVERTER OVER TEMPERATURE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature.
Judge as NG when the value of drive motor inverter temperature is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (over temperature) from IC in the drive motor inverter	ON

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (over temperature) from IC in the drive motor inverter	OFF

Time Needed for Diagnosis: 0.2 seconds

V: DTC P0A3F DRIVE MOTOR "A" POSITION SENSOR CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the drive motor rotation angle sensor.
Judge as NG when the malfunction of drive motor rotation angle sensor is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
Ignition state	OFF to ON (ON = Run or crank) (OFF ≠ Run or crank)
Diagnosis 2	
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from the resolver to digital (R/D) converter	Parity error
Diagnosis 2	
R/D converter error output (Internal tracking error)	Detected

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.0002 s
- **Diagnosis 2:** 0.0005 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from the resolver to digital (R/D) converter	≠ Parity error
Diagnosis 2	
R/D converter error output (Internal tracking error)	Not detected

Time Needed for Diagnosis:
- **Diagnosis 1:** Immediately
- **Diagnosis 2:** 0.02 s

W: DTC P0A40 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the drive motor rotation angle sensor.
Judge as NG when the detected angle of drive motor rotation angle sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
Resolver initialization	Completed
NOTE: It is defined that "Resolver initialization=Completed", if all of the following conditions are satisfied: 1. The communication between the R/D converter and DMCM is established. 2. The R/D converter succeed to recognize the first motor position (angle) after power-up.	

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured drive motor angle	> 180.5 deg
Diagnosis 2	
Measured drive motor angle (When the reference pulse occurs)	< 179.5 deg and > 0.5 deg
NOTE: Diagnosis will be performed only when the reference pulse is generated	

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured drive motor angle	≤ 180.5 deg
Diagnosis 2	
Measured drive motor angle (When the reference pulse occurs)	≥ 179.5 deg and ≤ 0.5 deg

Time Needed for Diagnosis: 0.02 seconds

X: DTC P0A43 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT INTERMITTENT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the drive motor rotation angle sensor.
Judge as NG when the angle detected by drive motor rotation angle sensor is not continuous.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Resolver initialization	Completed
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 6 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Difference between the current and previous values of Measured drive motor angle) NOTE: • ABS: Absolute value • Sampling time = 0.001 s	> 11.25 deg

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Difference between the current and previous values of Measured drive motor angle)	≤ 11.25 deg

Time Needed for Diagnosis: 0.02 seconds

Y: DTC P0A44 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT OVERSPEED

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor rotation count.
Judge as NG when the rotation count of drive motor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Resolver initialization	Completed
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 6 V
Continuous time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Motor speed) NOTE: ABS: Absolute value	> 7000 rpm

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Motor speed) NOTE: ABS: Absolute value	≤ 7000 rpm

Time Needed for Diagnosis: 2 seconds

Z: DTC P0A5D DRIVE MOTOR "A" PHASE U CURRENT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	ON

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu) NOTE: • ABS: Absolute value • Iu: U phase current	> 350 A

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu)	≤ 350 A

Time Needed for Diagnosis: 0.0006 seconds

AA:DTC P0A60 DRIVE MOTOR "A" PHASE V CURRENT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	ON

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iv) NOTE: • ABS: Absolute value • Iv: V phase current	> 350 A

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iv)	≤ 350 A

Time Needed for Diagnosis: 0.0006 seconds

AB:DTC P0A63 DRIVE MOTOR "A" PHASE W CURRENT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	ON

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iw) NOTE: • ABS: Absolute value • Iw: W phase current	> 350 A

Time Needed for Diagnosis: 0.0003 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iw)	≤ 350 A

Time Needed for Diagnosis: 0.0006 seconds

AC:DTC P0A78 DRIVE MOTOR "A" INVERTER PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter.
Judge as NG when the malfunction is detected in the internal circuit of drive motor inverter.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (internal data) from IC in the drive motor inverter	ON

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal (internal data) from IC in the drive motor inverter	OFF

Time Needed for Diagnosis: 0.02 seconds

AD:DTC P0A82 HYBRID/EV BATTERY PACK COOLING FAN 1 PERFORMANCE/ STUCK OFF

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery cooling fan.
Judge as NG when the performance of high voltage battery cooling fan is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Commanded cooling fan duty	≥ 20%
12V battery system voltage	> 9.3 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	< Map

Map

Commanded cooling fan duty (%)	20	40	60	80	100
Measured inverter cooling fan motor speed (rpm)	300	700	1050	1200	1200

Time Needed for Diagnosis: 20 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	≥ Map

Time Needed for Diagnosis: 1 seconds

AE:DTC P0A83 HYBRID/EV BATTERY PACK COOLING FAN 1 STUCK ON

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery cooling fan.
Judge as NG when the performance of high voltage battery cooling fan is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Commanded cooling fan duty	= 0%
12V battery system voltage	> 9.3 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	> 300 rpm

Time Needed for Diagnosis: 20 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured cooling fan speed	≤ 300 rpm

Time Needed for Diagnosis: 20 seconds

AF:DTC P0A90 DRIVE MOTOR "A" PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor.
Judge as NG when the performance of drive motor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: PWM output to the drive motor inverter	ON
b: ABS (Commanded motor output power) NOTE: ABS: Absolute value	> 5 kW
c: Motor speed	> 1000 rpm and < 3500 rpm
Continuous time of a, b and c	> 0.5 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
(Estimated motor output power / Commanded motor output power) × 100 NOTE: • Estimated motor output power = (V × I) • Commanded motor output power = (N × T × 2 × π) / 60 • V: Commanded motor voltage • I: Measured motor current • N: Motor speed • T: Commanded motor torque	< 40%

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
(Estimated motor output power / Commanded motor output power) × 100	≥ 40%

Time Needed for Diagnosis: 2 seconds

AG:DTC P0AED DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter temperature sensor.
Judge as NG when the value of drive motor inverter temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Received

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Not received

Time Needed for Diagnosis: 0.02 seconds

AH:DTC P0AEE DRIVE MOTOR INVERTER TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature sensor.
Judge as NG when the characteristic of drive motor inverter temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
ABS (Variation of inverter temperature median)	> 20°C (68°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature A – Inverter temperature median)	> 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature A) – (Variation of Inverter temperature median)) NOTE: • Variation of Inverter temperature A = Max (Inverter temperature A) – Min (Inverter temperature A) • Variation of Inverter temperature median = Max (Inverter temperature median) – Min (Inverter temperature median) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 10°C (18°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature A – Inverter temperature median)	≤ 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature A) – (Variation of Inverter temperature median))	≤ 10°C (18°F)

Time Needed for Diagnosis: 20 seconds

AI: DTC P0AF2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter temperature sensor.
Judge as NG when the value of drive motor inverter temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Received

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Not received

Time Needed for Diagnosis: 2 seconds

AJ:DTC P0AF3 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature sensor.
Judge as NG when the characteristic of drive motor inverter temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
ABS (Variation of inverter temperature median)	> 20°C (68°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature B – Inverter temperature median)	> 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature B) – (Variation of Inverter temperature median)) NOTE: • Variation of Inverter temperature B = Max (Inverter temperature B) – Min (Inverter temperature B) • Variation of Inverter temperature median = Max (Inverter temperature median) – Min (Inverter temperature median) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 10°C (18°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature B – Inverter temperature median)	≤ 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature B) – (Variation of Inverter temperature median))	≤ 10°C (18°F)

Time Needed for Diagnosis: 20 seconds

AK:DTC P0BD1 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter temperature sensor.
Judge as NG when the value of drive motor inverter temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Received

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Fault data (temperature sensor) from IC in the drive motor inverter	Not received

Time Needed for Diagnosis: 2 seconds

AL:DTC P0BD2 DRIVE MOTOR INVERTER TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter temperature sensor.
Judge as NG when the characteristic of drive motor inverter temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Inverter temperature median	> 30°C (86°F)
NOTE: Inverter temperature median: The median value of the Inverter temperature sensor A, B and C	
First SCI data from drive motor inverter	Received
ABS (Variation of inverter temperature median)	> 20°C (68°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature C – Inverter temperature median)	> 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature C) – (Variation of Inverter temperature median)) NOTE: • Variation of Inverter temperature C = Max (Inverter temperature C) – Min (Inverter temperature C) • Variation of Inverter temperature median = Max (Inverter temperature median) – Min (Inverter temperature median) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 10°C (18°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear NG when continuous time when the following conditions are met is predetermined time or more (diagnosis 1 and diagnosis 2).

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Inverter temperature C – Inverter temperature median)	≤ 30°C (54°F)
Diagnosis 2 ABS ((Variation of Inverter temperature C) – (Variation of Inverter temperature median))	≤ 10°C (18°F)

Time Needed for Diagnosis: 20 seconds

AM:DTC P0BE6 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	OFF

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (U phase average offset current) NOTE: ABS: Absolute value	> 31 A

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (U phase average offset current)	≤ 31 A

Time Needed for Diagnosis: 0.01 seconds

AN:DTC P0BE7 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage	≤ 0.5 V
(Current equivalent)	≤ –400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage	> 0.5 V
(Current equivalent)	> –400 A

Time Needed for Diagnosis: 0.06 seconds

AO:DTC P0BE8 DRIVE MOTOR "A" PHASE U CURRENT SENSOR CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage	≥ 4.5 V
(Current equivalent)	≥ 400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
U phase current sensor output voltage	< 4.5 V
(Current equivalent)	< 400 A

Time Needed for Diagnosis: 0.06 seconds

AP:DTC P0BEA DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	OFF

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (V phase average offset current) NOTE: ABS: Absolute value	> 31 A

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (V phase average offset current)	≤ 31 A

Time Needed for Diagnosis: 0.01 seconds

AQ:DTC P0BEB DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	≤ 0.5 V
(Current equivalent)	≤ –400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	> 0.5 V
(Current equivalent)	> –400 A

Time Needed for Diagnosis: 0.06 seconds

AR:DTC P0BEC DRIVE MOTOR "A" PHASE V CURRENT SENSOR CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	≥ 4.5 V
(Current equivalent)	≥ 400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
V phase current sensor output voltage	< 4.5 V
(Current equivalent)	< 400 A

Time Needed for Diagnosis: 0.06 seconds

AS:DTC P0BEE DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	OFF

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (W phase average offset current) NOTE: ABS: Absolute value	> 31 A

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (W phase average offset current)	≤ 31 A

Time Needed for Diagnosis: 0.01 seconds

AT:DTC P0BEF DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	≤ 0.5 V
(Current equivalent)	≤ –400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	> 0.5 V
(Current equivalent)	> –400 A

Time Needed for Diagnosis: 0.06 seconds

AU:DTC P0BF0 DRIVE MOTOR "A" PHASE W CURRENT SENSOR CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor inverter amperage sensor.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	≥ 4.5 V
(Current equivalent)	≥ 400 A

Time Needed for Diagnosis: 0.03 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
W phase current sensor output voltage	< 4.5 V
(Current equivalent)	< 400 A

Time Needed for Diagnosis: 0.06 seconds

AV:DTC P0BFD DRIVE MOTOR "A" PHASE U-V-W CURRENT SENSOR CORRELATION

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor circuit.
Judge as NG when the value of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu + Iv + Iw) NOTE: • ABS: Absolute value • Iu: U phase current • Iv: V phase current • Iw: W phase current	> 45 A

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Iu + Iv + Iw)	≤ 45 A

Time Needed for Diagnosis: 2 seconds

AW:DTC P0C05 DRIVE MOTOR "A" PHASE U-V-W CIRCUIT/OPEN

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current flowing in drive motor.
Judge as NG when the current flowing in drive motor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	ON
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 1 s
c: ABS (Motor speed) NOTE: ABS: Absolute value	≥ 125 rpm and ≤ 1500 rpm
Continuous time of c	≥ 0.12 s
d: ABS (Commanded motor torque)	≥ 7 N·m (0.7 kgf-m, 5.2 ft-lb)
Continuous time of d	≥ 0.13 s

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Tu1 – Tu2 or Tv1 – Tv2 or Tw1 – Tw2 NOTE: • Tu1: Integrated time that ABS (Iu) is less than or equal to 13.5 A • Tu2: Integrated time that ABS (Iu) is greater than 13.5 A • Tv1, Tw1: Similar to Tu1 • Tv2, Tw2: Similar to Tu2 • Iu: U phase current • Iv: V phase current • Iw: W phase current	≥ 0.3 s

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Tu1 – Tu2 and Tv1 – Tv2 and Tw1 – Tw2	< 0.3 s

Time Needed for Diagnosis: 0.6 seconds

AX:DTC P0C0C DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of high voltage battery cooling fan and drive motor inverter power supply relay.
Judge as NG when the drive signal of high voltage battery cooling fan and drive motor inverter power supply relay circuit is abnormal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: Ignition state	Run or crank
Continuous time of a	≥ 0.142 s
DMCM commanded inverter power supply relay	Open
b: DMCM measured inverter power supply relay	Closed
Continuous time of b	≥ 0.051 s
Diagnosis 2	
c: 12V battery system voltage	≥ 8 V
Continuous time of c	≥ 1 s
DMCM commanded inverter power supply relay	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from drive motor Inverter	Not received
Diagnosis 2	
DMCM measured inverter power supply relay	Open

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.0104 s
- **Diagnosis 2:** 0.04 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from drive motor Inverter	Received
Diagnosis 2	
DMCM measured inverter power supply relay	Closed

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.0104 s
- **Diagnosis 2:** 0.08 s

AY:DTC P0C0D DRIVE MOTOR "A" INVERTER POWER SUPPLY CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of high voltage battery cooling fan and drive motor inverter power supply relay.
Judge as NG when the drive signal of high voltage battery cooling fan and drive motor inverter power supply relay circuit is abnormal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: Ignition state	Run or crank
Continuous time of a	≥ 0.142 s
DMCM commanded inverter power supply relay	Open
b: DMCM measured inverter power supply relay	Open
Continuous time of b	≥ 0.051 s
Diagnosis 2	
a: Ignition state	Run or crank
Continuous time of a	≥ 0.142 s
DMCM commanded inverter power supply relay	Open
b: DMCM measured inverter power supply relay	Closed
Continuous time of b	≥ 0.051 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SCI message from the drive motor Inverter	Received

Time Needed for Diagnosis: 0.0104 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SCI message from the drive motor Inverter	Not received

Time Needed for Diagnosis: 0.0104 seconds

AZ:DTC P0C52 DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "A" LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (S1) is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S13 circuit error	Detected

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S13 circuit error	Not Detected

Time Needed for Diagnosis: 0.01 seconds

BA:DTC P0C5C DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "B" LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (S2) is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S24 circuit error	Detected

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver S24 circuit error	Not Detected

Time Needed for Diagnosis: 0.01 seconds

BB:DTC P0C79 DRIVE MOTOR "A" INVERTER VOLTAGE TOO HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter input voltage.
Judge as NG when the input voltage value of drive motor inverter is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage	≥ 155 V

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage	< 155 V

Time Needed for Diagnosis: 0.02 seconds

BC:DTC P0CDC DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" LOW

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (R1, R2) is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Detected

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Not Detected

Time Needed for Diagnosis: 0.01 seconds

BD:DTC P0CDD DRIVE MOTOR "A" POSITION SENSOR CIRCUIT "C" HIGH

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor rotation angle sensor.
Judge as NG when the voltage of drive motor rotation angle sensor terminal (R1, R2) is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Detected

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Resolver R12 circuit error	Not Detected

Time Needed for Diagnosis: 0.01 seconds

BE:DTC P0DA8 HYBRID/EV BATTERY VOLTAGE/DRIVE MOTOR "A" INVERTER VOLTAGE CORRELATION

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter input voltage.
Judge as NG when the difference between the input voltage value of drive motor inverter and the total voltage of high voltage battery is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 1 s
HPCM contactor request	Closed
BECM pre-charge contactor command	Open
BECM positive contactor command	Closed
BECM negative contactor command	Closed
First SCI data from drive motor inverter	Received

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Inverter voltage – Battery pack voltage) NOTE: ABS: Absolute value	> 20 V

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Inverter voltage – Battery pack voltage)	≤ 20 V

Time Needed for Diagnosis: 4 seconds

BF:DTC P1C20 MANUFACTURER CONTROLLED DTC

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter input voltage.
Judge as NG when the input voltage value of drive motor inverter is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
First SCI data from drive motor inverter	Received
HPCM contactor request	Closed
BECM pre-charge contactor command	Open
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage	≤ 70 V

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage	> 70 V

Time Needed for Diagnosis: 0.02 seconds

BG:DTC P1C24 MANUFACTURER CONTROLLED DTC

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
PWM output to the drive motor inverter	ON
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 15 s
Generated energy of drive motor	> Map1
Assist energy of drive motor	> Map2
First SCI data from drive motor inverter	Received

Map 1

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Generated energy of drive motor (Wh)	630	320	200	130	0	0

Map 2

Hybrid battery temperature and Drive motor inverter temperature either lower temperature (°C (°F))	–30 (–22)	–10 (14)	0 (32)	10 (50)	30 (86)	40 (104)
Assist energy of drive motor (Wh)	270	130	75	50	0	0

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	> 4.5 V
(Temperature equivalent)	< –3.4°C (25.9°F)

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≤ 4.5 V
(Temperature equivalent)	≥ –3.4°C (25.9°F)

Time Needed for Diagnosis: 4 seconds

BH:DTC P1C25 MANUFACTURER CONTROLLED DTC

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	< 0.23 V
(Temperature equivalent)	> 234°C (453.2°F)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage	≥ 0.23 V
(Temperature equivalent)	≤ 234°C (453.2°F)

Time Needed for Diagnosis: 2 seconds

BI: DTC P1C26 MANUFACTURER CONTROLLED DTC

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drive motor temperature sensor.
Judge as NG when the value of drive motor temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	> 4.6 V < –55°C (–67°F)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Output voltage (Temperature equivalent)	≤ 4.6 V ≥ –55°C (–67°F)

Time Needed for Diagnosis: 2 seconds

BJ:DTC P1C27 MANUFACTURER CONTROLLED DTC

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor temperature sensor.
Judge as NG when the characteristic of drive motor temperature sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Drive motor temperature A	> 30°C (86°F) and < 140°C (284°F)
or	
Drive motor temperature B	> 30°C (86°F) and < 140°C (284°F)
Diagnosis 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 10 V
Continuous time of a and b	≥ 240 s
c: ABS (Drive motor speed)	> 125 rpm
NOTE: ABS: Absolute value	
or	
d: ABS (Commanded motor torque)	< 15 N·m (1.5 kgf-m, 11.1 ft-lb)
Continuous time of c or d	≥ 240 s
Drive motor temperature A	> 30°C (86°F) and < 140°C (284°F)
or	
Drive motor temperature B	> 30°C (86°F) and < 140°C (284°F)
Variation of motor temperature A or Variation of motor temperature B	> 25°C (77°F)

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Motor temperature A – Motor temperature B) NOTE: ABS: Absolute value	> 20°C (36°F)
Diagnosis 2 ABS (Variation of motor temperature A – Variation of motor temperature B) NOTE: • Variation of motor temperature A = Max (Motor temperature A) – Min (Motor temperature A) • Variation of motor temperature B = Max (Motor temperature B) – Min (Motor temperature B) • Max: The maximum value of the experience in the current driving cycle • Min: The minimum value of the experience in the current driving cycle	> 20°C (36°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS (Motor temperature A – Motor temperature B)	≤ 20°C (36°F)
Diagnosis 2 ABS (Variation of motor temperature A – Variation of motor temperature B)	≤ 20°C (36°F)

Time Needed for Diagnosis: 20 seconds

BK:DTC P1C30 MANUFACTURER CONTROLLED DTC

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of serial communication with drive motor inverter.
Judge as NG when the serial data from drive motor inverter is not received.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
Inverter power supply relay control signal	ON

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SCI data from drive motor inverter	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SCI data from drive motor inverter	Received

Time Needed for Diagnosis: 1 seconds

BL:DTC P1C31 MANUFACTURER CONTROLLED DTC

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of serial communication with drive motor inverter.
Judged as NG when incorrect serial data is received from drive motor inverter.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1 and 2	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
SCI data from drive motor inverter	Received
Diagnosis 3	
a: Ignition state	Run or crank
b: 12 V battery system voltage	> 8 V
Continuous time of a and b	≥ 1 s
SCI data from drive motor inverter	Received
SCI data from drive motor inverter	≠ Parity error
SCI data from drive motor inverter	≠ Framing error

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from drive motor inverter	Parity error
Diagnosis 2	
SCI data from drive motor inverter	Framing error
Diagnosis 3	
SCI data from drive motor inverter	Checksum error

Time Needed for Diagnosis: 0.015 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
SCI data from drive motor inverter	≠ Parity error
Diagnosis 2	
SCI data from drive motor inverter	≠ Framing error
Diagnosis 3	
SCI data from drive motor inverter	≠ Checksum error

Time Needed for Diagnosis: 0.03 seconds

BM:DTC P0A1B DRIVE MOTOR "A" CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor control module.
Judge as NG when the malfunction is detected at the peripheral function of drive motor control module microcomputer.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Internal Hardware module error	Detected
Diagnosis 2 Exception interrupt by the DMCM CPU	Detected

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Internal Hardware module error	Not detected
Diagnosis 2 Exception interrupt by the DMCM CPU	Not detected

Time Needed for Diagnosis: Immediately

BN:DTC P06B1 SENSOR POWER SUPPLY "A" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor power supply circuit.
Judge as NG when the power supply voltage of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	≤ 4.536 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	> 4.536 V

Time Needed for Diagnosis: 2 seconds

BO:DTC P06B2 SENSOR POWER SUPPLY "A" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of drive motor inverter amperage sensor power supply circuit.
Judge as NG when the power supply voltage of drive motor inverter amperage sensor is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	> 5.418 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured sensor power supply output voltage at DMCM	≤ 5.418 V

Time Needed for Diagnosis: 2 seconds

BP:DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer DataFlashROM.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Data area)	Detected

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Data area)	Not Detected

Time Needed for Diagnosis: Less than 0.01 second

BQ:DTC P0A1F BATTERY ENERGY CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer AD converter.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
Diagnosis 2 and 3	
Ignition state	OFF to ON (Run or crank)
12V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Power sustain circuit monitor signal	High (Power ON)
Diagnosis 2	
Power sustain circuit monitor signal	Low (Power OFF)
Diagnosis 3	
Elapsed time of A / D conversion	≤ 0.0002 s

Time Needed for Diagnosis: Less than 0.05 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Power sustain circuit monitor signal	≠ High (Power ON)
Diagnosis 2	
Power sustain circuit monitor signal	≠ Low (Power OFF)
Diagnosis 3	
Elapsed time of A / D conversion	> 0.0002 s

Time Needed for Diagnosis: Less than 0.05 second

BR:DTC P0A7D HYBRID BATTERY PACK STATE OF CHARGE LOW

1. OUTLINE OF DIAGNOSIS

Detect high voltage battery SOC low.
Judge as NG when the high voltage battery SOC is at the specified value or less.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SOC NOTE: SOC: State Of Charge	≤ 5%

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SOC	> 5%

Time Needed for Diagnosis: 10 seconds

BS:DTC P0A7E HYBRID BATTERY PACK OVER TEMPERATURE

1. OUTLINE OF DIAGNOSIS

Detect high temperature abnormality of high voltage battery.
Judge as NG when the high voltage battery temperature is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Maximum temperature of hybrid battery	> 63°C (145.4°F)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Maximum temperature of hybrid battery	≤ 63°C (145.4°F)

Time Needed for Diagnosis: 1 seconds

BT:DTC P0A7F HYBRID BATTERY PACK DETERIORATION

1. OUTLINE OF DIAGNOSIS

Detect the low output (longevity) of high voltage battery.
Judge as NG when the internal resistance value of high voltage battery is at the specified value or more.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Condition #1	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
| Hybrid battery current x Hybrid battery voltage | NOTE: Hybrid battery current < 0: Discharge	≥ Map1 ×0.1 kw < Map1 kw
or	
| Hybrid battery current x Hybrid battery voltage | NOTE: Hybrid battery current ≥ 0: Discharge	≥ Map2 ×0.1 kw < Map2 kw
HPCM contactor request	Closed
Condition #2	
NOTE: During a 60 second block the following conditions must be satisfied:	
Number of the Hybrid battery current and the Hybrid battery voltage data that satisfies Condition #1	≥ 50 counts
Number of the Hybrid battery current and Hybrid battery voltage data that satisfies the following:	≥ 1 count
| Hybrid battery current x Hybrid battery voltage |	≥ Map1 ×0.5 kw
Number of the Hybrid battery current and Hybrid battery voltage data that satisfies the following:	≥ 1 count
| Hybrid battery current x Hybrid battery voltage |	≥ Map2 ×0.5 kw
The highest value among the Hybrid battery temperature A, B and C	≥ – 5.0°C (23°F)) and ≤ 45°C (113°F)
|Change of the highest value among the Hybrid battery temperature A, B and C|	≤ 2.0°C (35.6°F)/60 s

Map 1

Maximum discharge Power (kW)		SOH (%)		
		100	62.5	25
Battery Temperature (°C (°F))	–10 (14)	4.7	3.3	1.9
	0 (32)	7.0	4.7	2.7
	10 (50)	10.4	6.3	3.6
	15 (59)	12.1	7.2	4.1
	25 (77)	14.0	9.9	5.5
	45 (113)	14.0	9.9	5.5

Map 2

Maximum charge power (kW)		SOH (%)		
		100	62.5	25
Battery Temperature (°C (°F))	–10 (14)	4.2	3.5	2.2
	0 (32)	6.7	5.0	3.0
	10 (50)	10.1	6.7	4.0
	15 (59)	11.6	7.5	4.4
	25 (77)	13.4	10.5	6.0
	45 (113)	13.4	10.5	6.0

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) (Hybrid battery internal resistance)	> Map 3 Ω

Map 3

Minimum hybrid battery temperature (°C (°F))	–5 (23)	0 (32)	5 (41)	20 (68)	40 (104)
Hybrid battery internal resistance (mΩ)	998	809	662	420	287

Time Needed for Diagnosis: 60 s x 10 times

NOTE:
Failure count can increment over multiple driving cycles until cleared by passing result
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) (Hybrid battery internal resistance)	≤ Map 3 Ω

Time Needed for Diagnosis: depends on driving (charge/discharge amount)

BU:DTC P0A95 HIGH VOLTAGE FUSE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the fuse.
Judge as NG when the fuse is open.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Any two of following conditions are satisfied	
Hybrid battery voltage “C”	< –25 mV
Hybrid battery voltage “D”	< –25 mV

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Any two of following conditions are satisfied	
Hybrid battery voltage “C”	≥ –25 mV
Hybrid battery voltage “D”	≥ –25 mV

Time Needed for Diagnosis: 0.1 seconds

BV:DTC P0A9C HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 1.
Judge as NG when the deviation of high voltage battery temperature is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature A – Hybrid battery temperature B	> 20°C (68°F)
Hybrid battery temperature A – Hybrid battery temperature C	> 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature B – Hybrid battery temperature A	> 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	> 20°C (68°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature A – Hybrid battery temperature B	≤ 20°C (68°F)
Hybrid battery temperature A – Hybrid battery temperature C	≤ 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature B – Hybrid battery temperature A	≤ 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	≤ 20°C (68°F)

Time Needed for Diagnosis: 10 seconds

BW:DTC P0A9D HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 1.
Judge as NG when the high voltage battery temperature 1 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 8 seconds

BX:DTC P0A9E HYBRID BATTERY TEMPERATURE SENSOR "A" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 1.
Judge as NG when the high voltage battery temperature 1 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature A sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds

BY:DTC P0AA4 HYBRID BATTERY NEGATIVE CONTACTOR CIRCUIT STUCK CLOSED

1. OUTLINE OF DIAGNOSIS

Detect the adhesion of –side contactor and precharge contactor.
Judge as NG when the difference between the total voltage value of high voltage battery when contactor is open and the inverter voltage is at the specified value or more.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Contactors request from HPCM	Closed
Pre-charge contactor command	Closed
Positive contactor command	Open
Negative contactor command	Open
SubCPU in BECM: P1C44	No failure
High voltage fuse: P0A95	No failure
Hybrid battery voltage sense circuit “Z”: P0BB8	No failure
Hybrid Battery Positive or Precharge Contactor Circuit:	No failure

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage / Hybrid battery pack voltage	≥ 0.8

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage / Hybrid battery pack voltage	< 0.8

Time Needed for Diagnosis: Less than 0.1 second

BZ:DTC P0AAD HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor.
Judge as NG when the deviation of high voltage battery temperature is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
Soak time from ECM	≥ 6.0 h

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) NOTE: The smallest value among follows |Hybrid Battery Pack Air Temperature – Hybrid battery temperature A| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature B| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature C|	> 16°C (60.8°F)

Time Needed for Diagnosis: 15 seconds
Malfunction Indicator Light Illumination: detects when malfunction occurs in 2 continuous driving cycles. (Single engine startup is counted as one drive cycle.)

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic Value (DV) NOTE: The smallest value among follows |Hybrid Battery Pack Air Temperature – Hybrid battery temperature A| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature B| |Hybrid Battery Pack Air Temperature – Hybrid battery temperature C|	≤ 16°C (60.8°F)

Time Needed for Diagnosis: 15 seconds

CA:DTC P0AAE HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor.
Judge as NG when the intake air temperature is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 10 seconds

CB:DTC P0AAF HYBRID BATTERY PACK AIR TEMPERATURE SENSOR "A" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor.
Judge as NG when the intake air temperature is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack air temperature sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 10 seconds

CC:DTC P0ABF HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the current sensor circuit.
Judge as NG when the high voltage battery current value is below the specified value under the condition that the motor operates at overload.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
(Commanded Drive Motor Torque	› 15 Nm
Measured Drive Motor Speed)	› 125 rpm
or	
(Commanded Drive Motor Torque	< –40 Nm
Measured Drive Motor Speed)	› 1700 rpm

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	< 1 A

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	≥ 1 A

Time Needed for Diagnosis: 1 seconds

CD:DTC P0AC0 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the offset malfunction of high voltage battery current sensor.
Judge as NG when the high voltage battery current offset is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
Continuous time of a	≤ 0.2 s
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	> 1 A

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	≤ 1 A

Time Needed for Diagnosis: 0.01 seconds

CE:DTC P0AC1 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery current sensor.
Judge as NG when the high voltage battery current value is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	< –1.91 V (< –240 A)

Time Needed for Diagnosis: 0.4 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	≥ –1.91 V (≥ –240 A)

Time Needed for Diagnosis: 0.4 seconds

CF:DTC P0AC2 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery current sensor.
Judge as NG when the high voltage battery current value is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	> 1.91 V (> 240 A)

Time Needed for Diagnosis: 0.4 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current sensor output voltage (current equivalent)	≤ –1.91 V (≤ –240 A)

Time Needed for Diagnosis: 0.4 seconds

CG:DTC P0AC3 HYBRID BATTERY PACK CURRENT SENSOR "A" CIRCUIT INTERMITTENT/ERRATIC

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery current sensor.
Judge as NG when the stuck of high voltage battery current sensor value is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
Hybrid battery voltage D (Actual state: discharge)	< –120 mV
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed
Diagnosis 2	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
Hybrid battery voltage D (Actual state: discharge)	> 120 mV
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack current	≥ 10 A
(Detected state: charge)	≤ 110 A
NOTE: (The system should be discharging, but a charge condition is detected.)	
Diagnosis 2	
Hybrid battery pack current	≤ –10 A
(Detected state: discharge)	≥ –190 A
NOTE: (The system should be charging, but a discharge condition is detected.)	

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack current	≤ –10 A
(Detected state: discharge)	≥ –190 A
Diagnosis 2	
Hybrid battery pack current	≥ 10 A
(Detected state: charge)	≤ 110 A

Time Needed for Diagnosis: 1 seconds

CH:DTC P0AC6 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 2.
Judge as NG when the deviation of high voltage battery temperature is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature B – Hybrid battery temperature A	> 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	> 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature B	> 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature B	> 20°C (68°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature B – Hybrid battery temperature A	≤ 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	≤ 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature B	≤ 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature B	≤ 20°C (68°F)

Time Needed for Diagnosis: 10 seconds

CI: DTC P0AC7 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 2.
Judge as NG when the high voltage battery temperature 2 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 8 seconds

CJ:DTC P0AC8 HYBRID BATTERY TEMPERATURE SENSOR "B" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 2.
Judge as NG when the high voltage battery temperature 2 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature B sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds

CK:DTC P0ACB HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 3.
Judge as NG when the deviation of high voltage battery temperature is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature C – Hybrid battery temperature B	> 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	> 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature C	> 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	> 20°C (68°F)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery temperature C – Hybrid battery temperature B	≤ 20°C (68°F)
Hybrid battery temperature C – Hybrid battery temperature A	≤ 20°C (68°F)
Diagnosis 2	
Hybrid battery temperature A – Hybrid battery temperature C	≤ 20°C (68°F)
Hybrid battery temperature B – Hybrid battery temperature C	≤ 20°C (68°F)

Time Needed for Diagnosis: 10 seconds

CL:DTC P0ACC HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 3.
Judge as NG when the high voltage battery temperature 3 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	< 0.49 V (> 95°C (203°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	≥ 0.49 V (≤ 95°C (203°F)

Time Needed for Diagnosis: 8 seconds

CM:DTC P0ACD HYBRID BATTERY TEMPERATURE SENSOR "C" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery temperature 3.
Judge as NG when the high voltage battery temperature 3 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	> 4.82 V (< –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery temperature C sensor output voltage (temperature equivalent)	≤ 4.82 V (≥ –45°C (–49°F))

Time Needed for Diagnosis: 8 seconds

CN:DTC P0AD9 HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT/OPEN

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of +side contactor drive signal line.
Judge as NG when the open circuit of +side contactor drive signal line is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
Measured Positive contactor control signal (BECM main CPU output)	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Positive contactor control signal (BECM output)	Open

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Positive contactor control signal (BECM output)	Closed

Time Needed for Diagnosis: 0.5 seconds

CO:DTC P0ADB HYBRID BATTERY POSITIVE CONTACTOR CONTROL CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the short circuit of +side contactor drive signal line.
Judge as NG when the short circuit of +side contactor drive signal line is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
Measured Positive contactor control signal (BECM main CPU output)	Closed
Diagnosis 2	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured Positive contactor control signal (BECM output)	Closed
Diagnosis 2	
Measured Positive contactor control signal	Closed

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured Positive contactor control signal (BECM output)	Open
Diagnosis 2	
Measured Positive contactor control signal	Open

Time Needed for Diagnosis: 0.1 seconds

CP:DTC P0ADD HYBRID BATTERY NEGATIVE CONTACTOR CONTROL CIRCUIT/OPEN

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of –side contactor drive signal line.
Judge as NG when the open circuit of –side contactor drive signal line is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM negative contactor command	Closed
Measured negative contactor control signal (BECM main CPU output)	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Negative contactor control signal (BECM output)	Open

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Negative contactor control signal (BECM output)	Closed

Time Needed for Diagnosis: 0.5 seconds

CQ:DTC P0AE4 HYBRID BATTERY PRECHARGE CONTACTOR CONTROL CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of precharge contactor drive signal line.
Judge as NG when the open circuit of precharge contactor drive signal line is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Request contractors from HPCM	Closed
Precharge contactor command	Closed
Precharge contactor control circuit monitor signal	High
(Drive control circuit output)	(Closed)

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Precharge contactor control signal (BECM main CPU output)	High (Open)

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum error of Flash EEPROM within the BECM Main CPU (Data area)	Not Detected

Time Needed for Diagnosis: Less than 0.01 second

CR:DTC P0B25 HYBRID BATTERY "A" VOLTAGE LOW

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery voltage is below the lowest voltage.
Judge as NG when the high voltage battery voltage value is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	< 73.6 V

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	≥ 73.6 V

Time Needed for Diagnosis: 5 seconds

CS:DTC P0B26 HYBRID BATTERY "A" VOLTAGE HIGH

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery voltage exceeds the highest voltage.
Judge as NG when the voltage value of high voltage battery is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	> 136.4 V

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack voltage	≤ 136.4 V

Time Needed for Diagnosis: 5 seconds

CT:DTC P0B37 HIGH VOLTAGE SERVICE DISCONNECT OPEN

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of service disconnect plug.
Judge as NG when service disconnect plug unplugs or service disconnect plug SW is open.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Interlock switch signal	Open

Time Needed for Diagnosis: 0.05 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Interlock switch signal	Closed

Time Needed for Diagnosis: 0.05 seconds

CU:DTC P0B3C HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT RANGE/ PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 0.
Judge as NG when the stuck of high voltage battery voltage 0 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage A	> 96.0 V ≤ 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage A	≥ –98.54 V < 9.60 V (Low side)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage A	≤ 96.0 V > 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage A	< –98.54 V ≥ 9.60 V (Low side)

Time Needed for Diagnosis: 1 seconds

CV:DTC P0B3D HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 0.
Judge as NG when the high voltage battery voltage 0 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	< –98.54 V

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	≥ –98.54 V

Time Needed for Diagnosis: 0.1 seconds

CW:DTC P0B3E HYBRID BATTERY VOLTAGE SENSE "A" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 0.
Judge as NG when the high voltage battery voltage 0 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	> 98.54 V

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage A	≤ 98.54 V

Time Needed for Diagnosis: 0.1 seconds

CX:DTC P0B41 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT RANGE/ PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 1.
Judge as NG when the stuck of high voltage battery voltage 1 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage B	> 64.0 V ≤ 66.27 V (High side)
Diagnosis 2	
Hybrid battery voltage B	≥ –66.27 V < 6.40 V (Low side)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage B	≤ 64.0 V > 66.27 V (High side)
Diagnosis 2	
Hybrid battery voltage B	< –66.27 V ≥ 6.40 V (Low side)

Time Needed for Diagnosis: 1 seconds

CY:DTC P0B42 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 1.
Judge as NG when the high voltage battery voltage 1 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	< –66.27 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	≥ –66.27 V

Time Needed for Diagnosis: 1 seconds

CZ:DTC P0B43 HYBRID BATTERY VOLTAGE SENSE "B" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 1.
Judge as NG when the high voltage battery voltage 1 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	> 66.27 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage B	≤ 66.27 V

Time Needed for Diagnosis: 1 seconds

DA:DTC P0B46 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT RANGE/ PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 2.
Judge as NG when the stuck of high voltage battery voltage 2 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage C	 > 32.0 V ≤ 56.34 V (High side)
Diagnosis 2 Hybrid battery voltage C	 ≥ –56.34 V < 3.20 V (Low side)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage C	 ≤ 32.0 V > 56.34 V (High side)
Diagnosis 2 Hybrid battery voltage C	 < –56.34 V ≥ 3.20 V (Low side)

Time Needed for Diagnosis: 1 seconds

DB:DTC P0B47 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 2.
Judge as NG when the high voltage battery voltage 2 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	< –56.34 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	≥ –56.34 V

Time Needed for Diagnosis: 1 seconds

DC:DTC P0B48 HYBRID BATTERY VOLTAGE SENSE "C" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 2.
Judge as NG when the high voltage battery voltage 2 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	> 56.34 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage C	≤ 56.34 V

Time Needed for Diagnosis: 1 seconds

DD:DTC P0B4A HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the open circuit of high voltage battery voltage sensor 3 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
Elapsed time of a	≤ 0.2 s
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "D" Circuit' as determined by the BECM Sub CPU	Open

Time Needed for Diagnosis: 0.01 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "D" Circuit' as determined by the BECM Sub CPU	Close

Time Needed for Diagnosis: 0.01 seconds

DE:DTC P0B4B HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT RANGE/ PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the stuck of high voltage battery voltage 3 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage D	> 2.10V ≤ 76.2V (High side)
Diagnosis 2 Hybrid battery voltage C	≥ –76.2 V < –2.10V (Low side)

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage C	≤ 2.10 V > 76.2 V (High side)
Diagnosis 2 Hybrid battery voltage C	< –76.2 V ≥ –2.10V (Low side)

Time Needed for Diagnosis: 10 seconds

DF:DTC P0B4C HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the high voltage battery voltage 3 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	< –76.20 V

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	> –76.20 V

Time Needed for Diagnosis: 0.1 seconds

DG:DTC P0B4D HYBRID BATTERY VOLTAGE SENSE "D" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 3.
Judge as NG when the high voltage battery voltage 3 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	> 76.20 V

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage D	≤ 76.20 V

Time Needed for Diagnosis: 0.1 seconds

DH:DTC P0B50 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT RANGE/ PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 4.
Judge as NG when the stuck of high voltage battery voltage 4 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage E	> –1.60V ≤ 23.03 V (High side)
Diagnosis 2 Hybrid battery voltage E	≥ –23.03 V < –16.00 V (Low side)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage E	≤ –1.60 V > 23.03 V (High side)
Diagnosis 2 Hybrid battery voltage E	< –23.03 V ≥ –16.00 V (Low side)

Time Needed for Diagnosis: 1 seconds

DI: DTC P0B51 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 4.
Judge as NG when the high voltage battery voltage 4 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	< –23.03 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	≥ –23.03 V

Time Needed for Diagnosis: 1 seconds

DJ:DTC P0B52 HYBRID BATTERY VOLTAGE SENSE "E" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 4.
Judge as NG when the high voltage battery voltage 4 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	> 23.03 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage E	≤ 23.03 V

Time Needed for Diagnosis: 1 seconds

DK:DTC P0B55 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT RANGE/ PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 5.
Judge as NG when the stuck of high voltage battery voltage 5 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage F	> –4.80 V ≤ 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage F	≥ –98.54 V < –48.00 V (Low side)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery voltage F	≤ –4.80 V > 98.54 V (High side)
Diagnosis 2	
Hybrid battery voltage F	< –98.54 V ≥ –48.00 V (Low side)

Time Needed for Diagnosis: 1 seconds

DL:DTC P0B56 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 5.
Judge as NG when the high voltage battery voltage 5 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	< –98.54 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	≥ –98.54 V

Time Needed for Diagnosis: 1 seconds

DM:DTC P0B57 HYBRID BATTERY VOLTAGE SENSE "F" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 5.
Judge as NG when the high voltage battery voltage 5 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	> 98.54 V

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage F	≤ 98.54 V

Time Needed for Diagnosis: 1 seconds

DN:DTC P0B5A HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT RANGE/ PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 6.
Judge as NG when the stuck of high voltage battery voltage 6 is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage G	> –7.20 V ≤ 98.54 V (High side)
Diagnosis 2 Hybrid battery voltage G	≥ –98.54 V < –72.00 V (Low side)

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Hybrid battery voltage G	≤ –7.20 V > 98.54 V (High side)
Diagnosis 2 Hybrid battery voltage G	< –98.54 V ≥ –72.00 V (Low side)

Time Needed for Diagnosis: 1 seconds

DO:DTC P0B5B HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 6.
Judge as NG when the high voltage battery voltage 6 is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	< –98.54 V

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	≥ –98.54 V

Time Needed for Diagnosis: 0.1 seconds

DP:DTC P0B5C HYBRID BATTERY VOLTAGE SENSE "G" CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high voltage battery voltage sensor 6.
Judge as NG when the high voltage battery voltage 6 is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	> 98.54 V

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery voltage G	≤ 98.54 V

Time Needed for Diagnosis: 0.1 seconds

DQ:DTC P0BB8 HYBRID BATTERY VOLTAGE SENSE "Z" CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage battery GND.
Judge as NG when the high voltage battery GND is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "Z" Circuit' as determined by the BECM Sub CPU	Open

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Status fault flag for 'Voltage Sense "Z" Circuit' as determined by the BECM Sub CPU	Close

Time Needed for Diagnosis: 0.1 seconds

DR:DTC P0C30 HYBRID BATTERY PACK STATE OF CHARGE HIGH

1. OUTLINE OF DIAGNOSIS

Detect high voltage battery SOC high.
Judge as NG when the high voltage battery SOC is at the specified value or more.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
SOC NOTE: SOC: State Of Charge	≥ 95%

Time Needed for Diagnosis: 60 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
SOC	< 95%

Time Needed for Diagnosis: 60 seconds

DS:DTC P0C78 HYBRID BATTERY SYSTEM PRECHARGE TIME TOO LONG

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of high voltage circuit open and precharge resistance.
Judge as NG when the difference between the total voltage value of high voltage battery when contactor is close and the inverter voltage is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM precharge contactor command	Closed
BECM positive contactor command	Open
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Hybrid battery pack voltage – Inverter voltage) NOTE: ABS: Absolute value	> 20 V

Time Needed for Diagnosis: 0.6 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
ABS (Hybrid battery pack voltage – Inverter voltage) NOTE: ABS: Absolute value	≤ 20 V

Time Needed for Diagnosis: 0.6 seconds

DT:DTC P0CA6 HYBRID BATTERY CHARGING CURRENT HIGH

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery current exceeds the rated charging current.
Judge as NG when the current value (charging) is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: charge) NOTE: (Detected state: charge)	> 110 A

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: charge) NOTE: (Detected state: charge)	≤ 110 A

Time Needed for Diagnosis: 2 seconds

DU:DTC P0CA7 HYBRID BATTERY DISCHARGING CURRENT HIGH

1. OUTLINE OF DIAGNOSIS

Detect that the high voltage battery current exceeds the rated charging current.
Judge as NG when the current value (discharging) is above the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: discharge)	< –190 A

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Hybrid battery pack current (Detected state: discharge)	≥ –190 A

Time Needed for Diagnosis: 2 seconds

DV:DTC P1C40 HYBRID BATTERY POSITIVE CONTACTOR OR PRE-CHARGE CONTACTOR CIRCUIT STUCK CLOSED

1. OUTLINE OF DIAGNOSIS

Detect the adhesion of +side contactor and precharge contactor.
Judge as NG when the difference between the total voltage value of high voltage battery when contactor is open and the inverter voltage is at the specified value or more.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Open
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage / Hybrid battery pack voltage	≥ 0.8 V

Time Needed for Diagnosis: 1.3 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Inverter voltage / Hybrid battery pack voltage	< 0.8 V

Time Needed for Diagnosis: 1.3 seconds

DW:DTC P1C41 HIGH VOLTAGE CIRCUIT SHORT

1. OUTLINE OF DIAGNOSIS

Detect the short circuit of high voltage line + and –.
Judge as NG when the current at contactor close is at the specified value or more.
Judge as NG when the high voltage battery voltage value at close is below the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM precharge contactor command	Closed
BECM positive contactor command	Open
BECM negative contactor command	Closed
Diagnosis 2	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
BECM precharge contactor command	Open
BECM positive contactor command	Closed
BECM negative contactor command	Closed

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack discharge current	> 1.75 A
Diagnosis 2	
Hybrid battery pack voltage	< 48 V

Time Needed for Diagnosis:
- **Diagnosis 1:** less than 0.6 s
- **Diagnosis 2:** 0.1 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Hybrid battery pack discharge current	≤ 1.75 A
Diagnosis 2	
Hybrid battery pack voltage	≥ 48 V

Time Needed for Diagnosis: 0.6 s after engine start

DX:DTC P1C42 HIGH VOLTAGE CIRCUIT OPEN

1. OUTLINE OF DIAGNOSIS

Detect the high voltage circuit open at driving.
Judge as NG both when the difference between the high voltage battery voltage value and the inverter voltage value is at the specified value or more, and when the high voltage battery current value is within specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Closed
Measured Positive contactor control signal (BECM main CPU output)	Closed
Measured Positive contactor control signal (BECM output)	Closed
Measured Negative contactor control signal (BECM main CPU output)	Closed
Measured Negative contactor control signal (BECM output)	Closed
Measured contactor power supply control signal	ON
Measured contactor power supply voltage	≥ 4 V

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	≤ 1 A
Inverter voltage / Hybrid battery voltage	≤ 0.8

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Absolute value of hybrid battery pack current	> 1 A
Inverter voltage / Hybrid battery voltage	> 0.8

Time Needed for Diagnosis: 1 seconds

DY:DTC P1C43 HYBRID BATTERY CONTACTOR POWER SUPPLY CIRCUIT

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of power supply instantaneous interruption detection circuit and power supply circuit of contactor.
Judge as NG when the open circuit of power supply instantaneous interruption detection circuit and power supply circuit of contactor is detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
BECM positive contactor command	Closed or
BECM negative contactor command	Closed or
BECM precharge contactor command	Closed
Diagnosis 2	
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
Measured Contactor power supply monitoring signal	Power on

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured Contactor power supply monitoring signal	Power off
Diagnosis 2	
Measured contactor power supply voltage dropped signal	ON

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Measured contactor power supply monitoring signal	Power on
Diagnosis 2 Measured contactor power supply voltage dropped signal	Off

Time Needed for Diagnosis: 0.5 seconds

DZ:DTC P1C44 SUB CPU IN BECM

1. OUTLINE OF DIAGNOSIS

Detect the communication failure of MAINCPU and SubCPU.
Judge as NG when data is not received from SubCPU.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Serial communication between BECM Main CPU and BECM Sub CPU is lost (no message received)	Detected
Diagnosis 2 Hybrid Battery voltage input circuit error for BECM Sub CPU	Detected
Diagnosis 3 A/D Converter failure for BECM Sub CPU	Detected
Diagnosis 4 Multiplex connection error for BECM Sub CPU	Detected

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 Serial communication between BECM Main CPU and BECM Sub CPU is lost (no message received)	Not detected
Diagnosis 2 Hybrid Battery voltage input circuit error for BECM Sub CPU	Not detected
Diagnosis 3 A/D Converter failure for BECM Sub CPU	Not detected
Diagnosis 4 Multiplex connection error for BECM Sub CPU	Not detected

Time Needed for Diagnosis: 10 seconds

EA:DTC P1C45 HYBRID BATTERY BLOCK 1 BALANCING PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the cell malfunction of high voltage battery block 1.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 1.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 1.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

EB:DTC P1C46 HYBRID BATTERY BLOCK 2 BALANCING PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the cell malfunction of high voltage battery block 2.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 2.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 2.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

EC:DTC P1C47 HYBRID BATTERY BLOCK 3 BALANCING PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 3.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 3.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

ED:DTC P1C48 HYBRID BATTERY BLOCK 4 BALANCING PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=2 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 4.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=2 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 4.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

EE:DTC P1C49 HYBRID BATTERY BLOCK 5 BALANCING PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 5.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=4 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 5.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

EF:DTC P1C4A HYBRID BATTERY BLOCK 6 BALANCING PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Detect the abnormality of voltage deviation between high voltage battery cells.
Judge as NG when the deviation of high voltage battery block voltage is large.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=3 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 6.	> 1.2 V

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnostic value = (Adjusted average module voltage – Min. module voltage) x N N=3 NOTE: This DTC will be stored only if the “Min. module voltage” equal to the average module voltage of Block 6.	≤ 1.2 V

Time Needed for Diagnosis: 10 seconds

EG:DTC P1C5E HYBRID BATTERY BLOCK VOLTAGE TOO LOW

1. OUTLINE OF DIAGNOSIS

Detect high voltage battery block voltage low.
Judge as NG when the high voltage battery block voltage is less than specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Ignition state	Run or crank
12V battery system voltage	≥ 6.5 V and ≤ 17 V
HPCM contactor request	Open
BECM precharge contactor command	Open
BECM positive contactor command	Open
BECM negative contactor command	Open

3. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Minimum average module voltage of block	< Map4

Map 4

Minimum Hybrid battery temperature (°C (°F))	–40 (–40)	–20 (–4)	–10 (14)	0 (32)	10 (50)	25 (77)	35 (95)	45 (113)	50 (122)
Minimum average module voltage of block (V)	4.485	4.365	4.340	4.320	4.290	4.230	4.195	4.170	4.170

Time Needed for Diagnosis: 0.1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Minimum average module voltage of block	≥ Map4

Time Needed for Diagnosis: 0.1 seconds

EH:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

1. OUTLINE OF DIAGNOSIS

Detect the bus error of CAN channel 1.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9 V
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 0.48 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0 seconds

EI: DTC U0075 CONTROL MODULE COMMUNICATION BUS "PU-CAN" OFF

1. OUTLINE OF DIAGNOSIS

Detect the bus error of CAN channel 2.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 0.48 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0 seconds

EJ:DTC U0076 CONTROL MODULE COMMUNICATION BUS "HEV-CAN" OFF

HYBRID POWERTRAIN CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the CAN failure and bus error of HEV-CAN.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: Less than 0.48 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0 seconds
DRIVE MOTOR CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the serial communication failure with inverter.
Judge as NG when the data from inverter is not received correctly.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: Immediately
BATTERY ENERGY CONTROL SYSTEM

7. OUTLINE OF DIAGNOSIS

Detect CAN bus off error.

8. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s

9. DIAGNOSTIC METHOD

• Abnormality Judgment

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

• Normality Judgment

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Bus off

Time Needed for Diagnosis: 0.2 seconds

EK:DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

1. OUTLINE OF DIAGNOSIS

Detect the engine data not received.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

EL:DTC U0101 LOST COMMUNICATION WITH TCM

1. OUTLINE OF DIAGNOSIS

Detect the transmission data not received.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from TCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

EM:DTC U0110 LOST COMMUNICATION WITH DRIVE MOTOR CONTROL MODULE "A"

HYBRID POWERTRAIN CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the motor control module data not received.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from DMCM	Lost

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	≠ Lost

Time Needed for Diagnosis: 0 seconds
BATTERY ENERGY CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the malfunction of CAN data not received from drive motor control module.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from DMCM	Lost

Time Needed for Diagnosis: 1 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Received

Time Needed for Diagnosis: 1 seconds

EN:DTC U0111 LOST COMMUNICATION WITH BATTERY ENERGY CONTROL MODULE

HYBRID POWERTRAIN CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the battery energy control module data not received.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	Lost

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	≠ Lost

Time Needed for Diagnosis: 0 seconds
DRIVE MOTOR CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the serial communication failure with inverter.
Judge as NG when the data from inverter is not received correctly.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BECM	Received

Time Needed for Diagnosis: 8 seconds

EO:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

Detect the VDC data not received.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

EP:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

1. OUTLINE OF DIAGNOSIS

Detect the engine data error.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from ECM	Parity error
Diagnosis 2 CAN data from ECM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.15 s
- **Diagnosis 2:** 2.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from ECM	≠ Parity error
Diagnosis 2 CAN data from ECM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

EQ:DTC U0402 INVALID DATA RECEIVED FROM TCM

1. OUTLINE OF DIAGNOSIS

Detect the transmission data error.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from TCM	Parity error
Diagnosis 2	
CAN data from TCM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.15 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from TCM	≠ Parity error
Diagnosis 2	
CAN data from TCM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

ER:DTC U0411 INVALID DATA RECEIVED FROM DRIVE MOTOR CONTROL MODULE "A"

HYBRID POWERTRAIN CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the data error of drive motor control module.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from DMCM	Checksum error
Diagnosis 2	
CAN data from DMCM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.3 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from DMCM	≠ Checksum error
Diagnosis 2	
CAN data from DMCM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

BATTERY ENERGY CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the CAN data stuck failure from drive motor control module.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s
Diagnosis 2	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s
CAN data from DMCM	Changed

6. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from DMCM	Did not change
Diagnosis 2	
CAN data from DMCM	Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.5 s
- **Diagnosis 2:** 3 times

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from DMCM	change
Diagnosis 2	
CAN data from DMCM	≠ Checksum error

Time Needed for Diagnosis: 0.5 seconds

ES:DTC U0412 INVALID DATA RECEIVED FROM BATTERY ENERGY CONTROL MODULE

HYBRID POWERTRAIN CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the data error of battery energy control module.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from BECM	Checksum error
Diagnosis 2	
CAN data from BECM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.3 s
- **Diagnosis 2:** 20 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from BECM	≠ Checksum error
Diagnosis 2	
CAN data from BECM	Changed

Time Needed for Diagnosis: 0 seconds

DRIVE MOTOR CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the communication error with battery energy control module.
Judge as NG when the data from battery energy control module is not received correctly.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
CAN data from BECM	Received
CAN data from BECM	≠ Checksum error
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s
Diagnosis 2	
CAN data from BECM	Received
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from BECM	Did not change
Diagnosis 2	
CAN data from BECM	Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.6 s
- **Diagnosis 2:** 0.03 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from BECM	Changed
Diagnosis 2	
CAN data from BECM	≠ Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 2.2 s
- **Diagnosis 2:** 0.6 s

ET:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

Detect the VDC data error.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from Vehicle Dynamics Control Module	Parity error
Diagnosis 2 CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.06 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from Vehicle Dynamics Control Module	≠ Parity error
Diagnosis 2 CAN data from Vehicle Dynamics Control Module	≠ Did not change

Time Needed for Diagnosis: 0 seconds

EU:DTC U1100 LOST COMMUNICATION WITH ECM/PCM PU-CAN

1. OUTLINE OF DIAGNOSIS

Detect the engine PU-CAN data not received.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	≠ Lost

Time Needed for Diagnosis: 0 seconds

EV:DTC U1101 LOST COMMUNICATION WITH TCM PU-CAN

1. OUTLINE OF DIAGNOSIS

Detect the transmission PU-CAN data not received.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from TCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from TCM	≠ Lost

Time Needed for Diagnosis: 0 seconds

EW:DTC U1290 LOST COMMUNICATION WITH HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

DRIVE MOTOR CONTROL SYSTEM

1. OUTLINE OF DIAGNOSIS

Detect the communication error with hybrid powertrain control module.
Judge as NG when the data from hybrid powertrain control module is not received correctly.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Received

Time Needed for Diagnosis: 2 seconds

BATTERY ENERGY CONTROL SYSTEM

4. OUTLINE OF DIAGNOSIS

Detect the malfunction of CAN data not received from hybrid powertrain control module.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s

6. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from HPCM	Received

Time Needed for Diagnosis: 0.5 seconds

EX:DTC U1401 INVALID DATA RECEIVED FROM ECM/PCM PU-CAN

1. OUTLINE OF DIAGNOSIS

Detect the engine PU-CAN data error.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from ECM	Checksum error
Diagnosis 2 CAN data from ECM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.03 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from ECM	≠ Checksum error
Diagnosis 2 CAN data from ECM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

EY:DTC U1402 INVALID DATA RECEIVED FROM TCM PU-CAN

1. OUTLINE OF DIAGNOSIS

Detect the transmission PU-CAN data error.
Judge as NG when the detection result is out of specification.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
a: Ignition state	Run or crank
b: 12 V battery system voltage	≥ 10.9
Elapsed time of a and b	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from TCM	Checksum error
Diagnosis 2 CAN data from TCM	Did not change

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.03 s
- **Diagnosis 2:** 0.5 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1 CAN data from TCM	≠ Checksum error
Diagnosis 2 CAN data from TCM	≠ Did not change

Time Needed for Diagnosis: 0 seconds

EZ:DTC U1591 INVALID DATA RECEIVED FROM HYBRID POWERTRAIN CONTROL MODULE HEV-CAN

Drive motor control module

1. OUTLINE OF DIAGNOSIS

Detect the CAN communication error with hybrid powertrain control module.
Judge as NG when the data from hybrid powertrain control module is not received correctly.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
CAN data from HPCM	Received
CAN data from HPCM	≠ Checksum error
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s
Diagnosis 2	
CAN data from HPCM	Received
a: 12 V battery system voltage	≥ 10 V
Continuous time of a	≥ 1 s

3. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from HPCM	Did not change
Diagnosis 2	
CAN data from HPCM	Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.6 s
- **Diagnosis 2:** 0.03 s

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from HPCM	Changed
Diagnosis 2	
CAN data from HPCM	≠ Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 2.2 s
- **Diagnosis 2:** 0.3 s

Battery energy control module

4. OUTLINE OF DIAGNOSIS

Detect the CAN data stuck failure from hybrid powertrain control module.

5. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s
Diagnosis 2	
a: (Ignition state	Run or crank
12 V battery system voltage)	≥ 9 V and ≤ 17 V
Continuous time of a	≥ 1 s
CAN data from HPCM	Changed

6. DIAGNOSTIC METHOD

- **Abnormality Judgment**

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from HPCM	Did not change
Diagnosis 2	
CAN data from HPCM	Checksum error

Time Needed for Diagnosis:
- **Diagnosis 1:** 0.5 s
- **Diagnosis 2:** 3 times

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

- **Normality Judgment**

Judge as OK and clear the NG if the continuous time while the following conditions are established is more than the predetermined time.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
CAN data from HPCM	Changed
Diagnosis 2	
CAN data from HPCM	≠ Checksum error

Time Needed for Diagnosis:

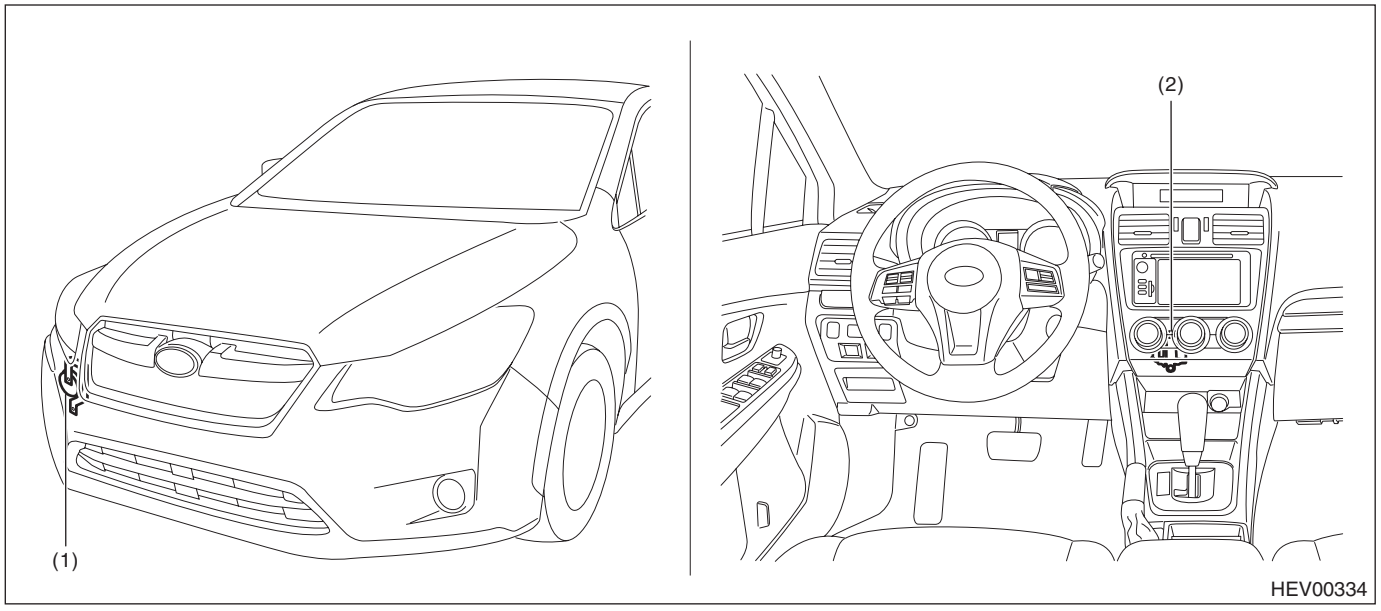
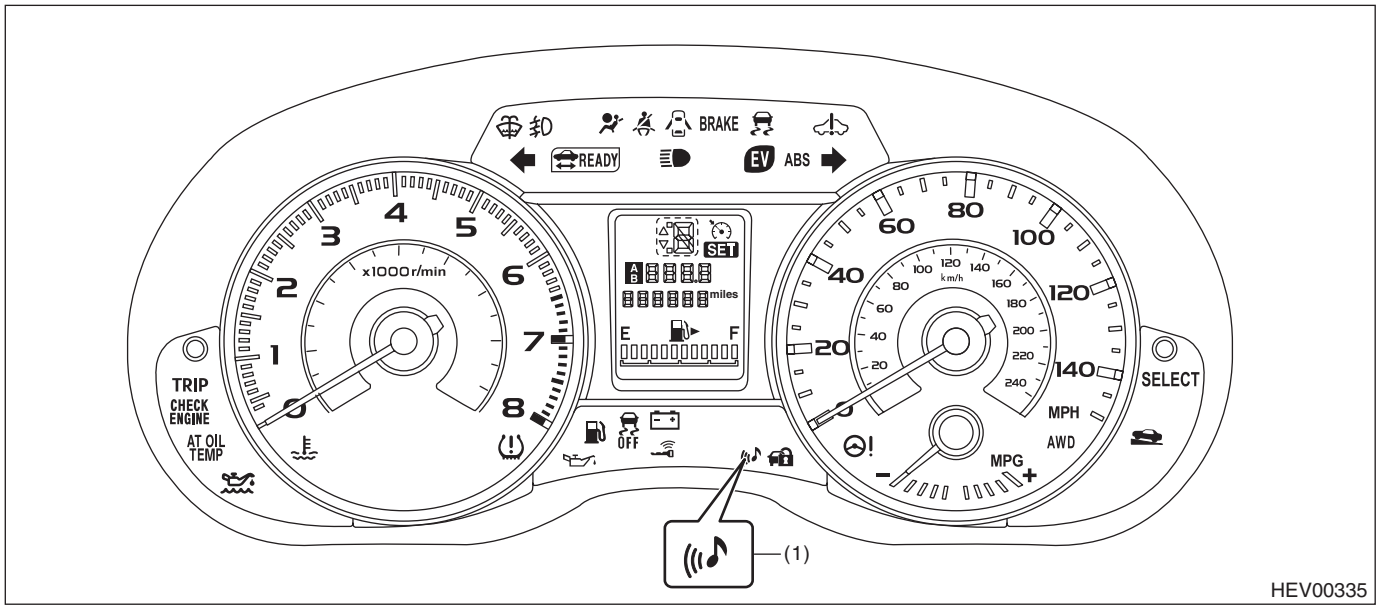
- **Diagnosis 2:** 0.5 s

PEDESTRIAN ALERT SYSTEM



PA

Page

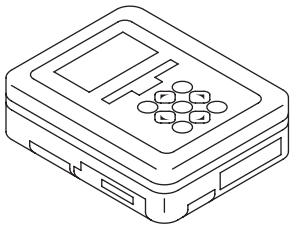


1. General Description 2
2. Relay and Fuse 4
3. Pedestrian Alert System 5
4. Pedestrian Alert Control Unit 6
5. Pedestrian Alert Speaker 7
6. Combination Meter 9
7. Stop Light & Brake Switch 10
8. Diagnostics with Phenomenon 11

1. General Description

A: COMPONENT

(1) Pedestrian alert speaker (2) Pedestrian alert control unit



(1) Pedestrian alert warning light

B: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
• Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
• Connect the connectors securely during reassembly.
• After reassembly, make sure that the each component operates normally.
• Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. Use great care to protect the connector or wiring harness from being damaged. Otherwise, malfunction may occur in the airbag system.
• The report sound may not be heard well in loud ambient sound, or to people behind the vehicle.
• When the front of speaker is covered with foreign matter such as mud and snow, it may change the tone of report sound.

C: PREPARATION TOOL

1. SPECIAL TOOL

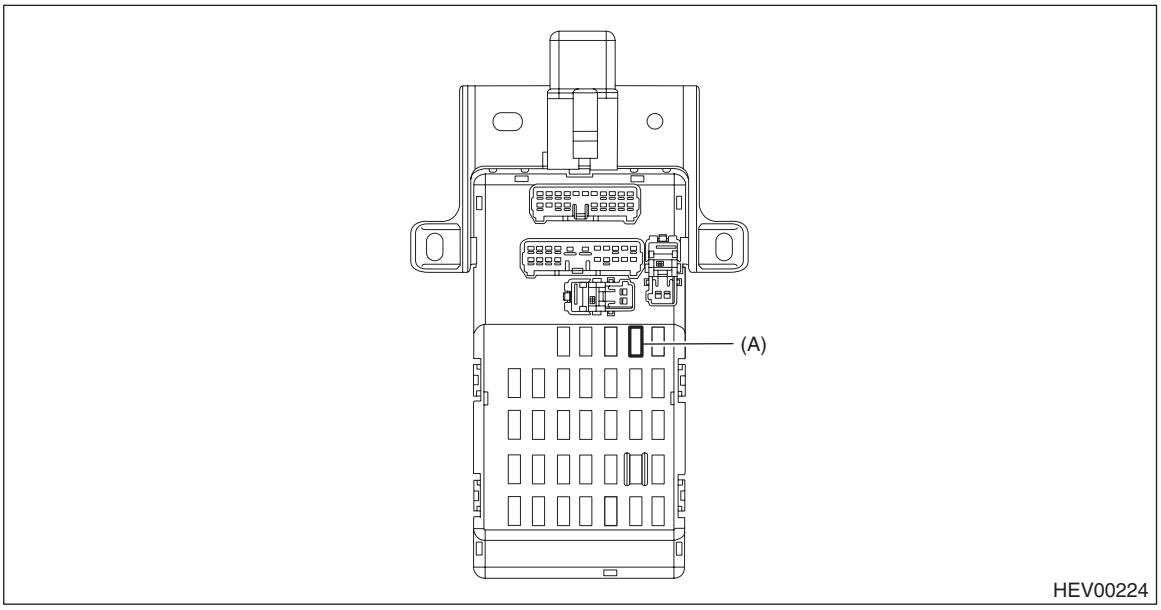


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Relay and Fuse

A: LOCATION

Relay & fuse box	Fuse 10 A (pedestrian alert control unit)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI(HEV)-20, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Pedestrian Alert System

A: WIRING DIAGRAM

Refer to “Pedestrian Alert System” in the wiring diagram. <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>

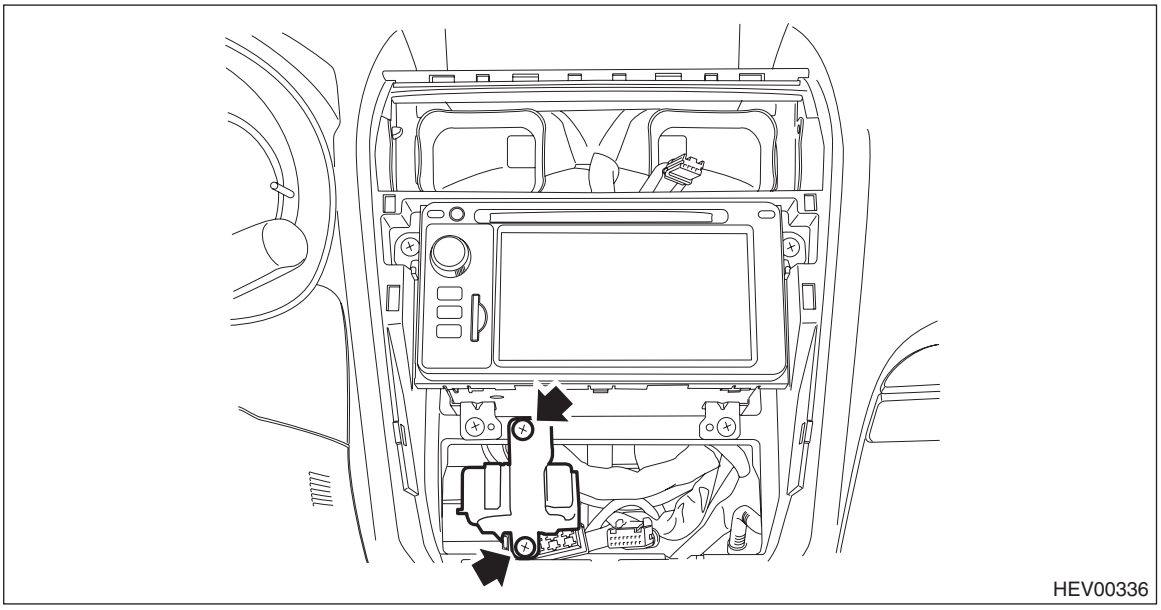
B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)” section. <Ref. to PA(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the pedestrian alert system, refer to the respective section.

- Pedestrian alert control unit: <Ref. to PA-6, Pedestrian Alert Control Unit.>
- Pedestrian alert speaker: <Ref. to PA-7, Pedestrian Alert Speaker.>



4. Pedestrian Alert Control Unit

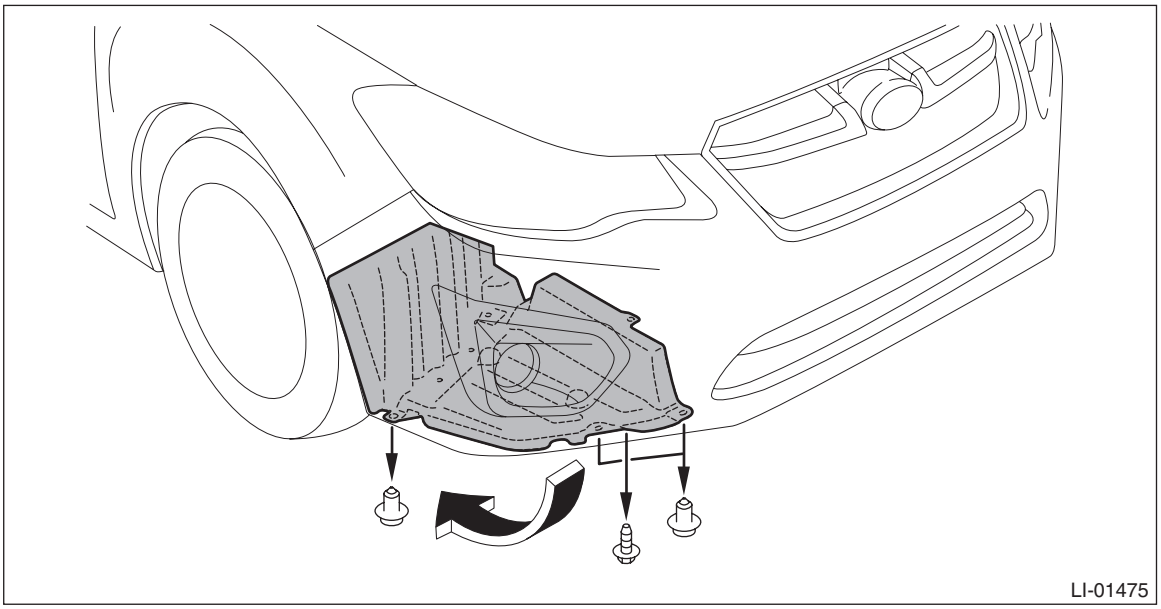
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.

2) Remove the panel center assembly. <Ref. to EI-75, REMOVAL, Center Console.>
3) Remove the pedestrian alert control unit.
   (1) Remove the screws.
   (2) Pull out the pedestrian alert control unit toward you, and disconnect the connector.

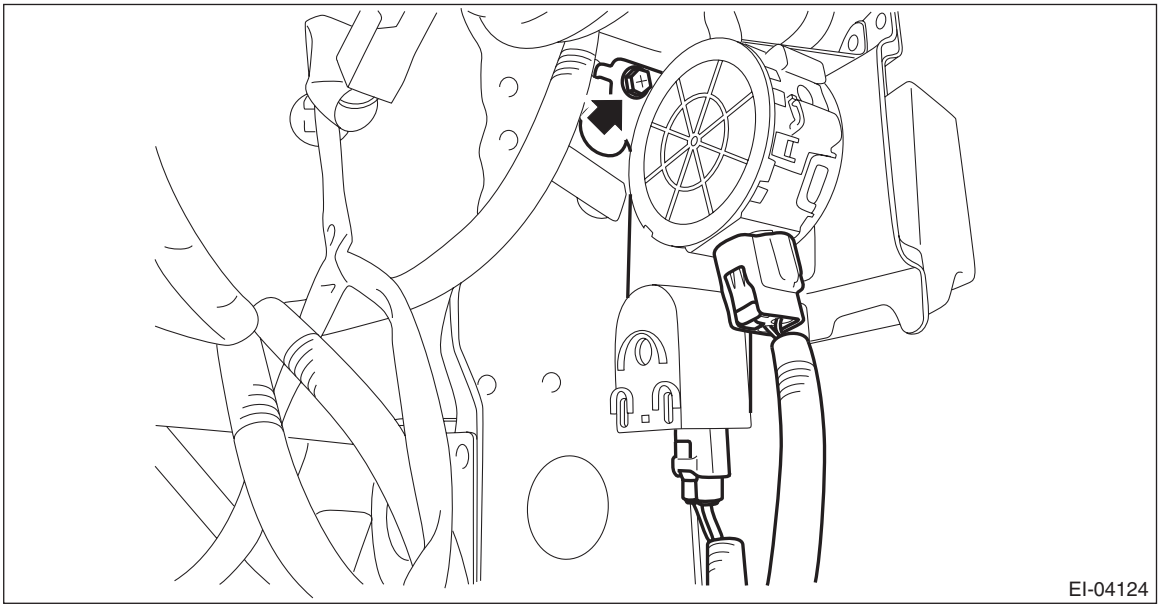
B: INSTALLATION



Install each part in the reverse order of removal.

5. Pedestrian Alert Speaker

A: REMOVAL



1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For the 12 volt engine restart battery, disconnect the ground terminal from 12V engine restart battery sensor.
2) Lift up the vehicle.
3) Remove the clips, and turn over the front side of the mud guard - front.

4) Remove the pedestrian alert speaker.
(1) Disconnect the connector.

NOTE:
On models with keyless access, disconnect the keyless buzzer connector.
(2) Remove the bolt, and remove the pedestrian alert speaker and bracket as a unit.

(3) Remove the keyless buzzer from bracket. (Model with keyless access)

B: INSTALLATION

Install each part in the reverse order of removal.

Tightening torque:
Pedestrian alert speaker: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

Using the Subaru Select Monitor, perform the compulsory sound generation of the speaker. <Ref. to PA(diag)-12, System Operation Check Mode.>
When a malfunction is detected for the speaker, refer to “Diagnostics with Phenomenon” of “PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)” section. <Ref. to PA(diag)-16, Diagnostics with Phenomenon.>

6. Combination Meter

A: NOTE

For the combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-16, Combination Meter.>

7. Stop Light & Brake Switch

A: NOTE

For stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-74, INSPECTION, Stop Light Switch.>

8. Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)” section. <Ref. to PA(diag)-16, Diagnostics with Phenomenon.>

PEDESTRIAN ALERT SYSTEM (DIAGNOSTICS)

PA(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	4
4.	Electrical Component Location	5
5.	Control Module I/O Signal	6
6.	Subaru Select Monitor	7
7.	Read Diagnostic Trouble Code (DTC)	9
8.	Clear Memory Mode	10
9.	Read Current Data	11
10.	System Operation Check Mode	12
11.	List of Diagnostic Trouble Code (DTC)	13
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	14
13.	Diagnostics with Phenomenon	16

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs.	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to PA(diag)-3, CHECK, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Using Subaru Select Monitor, check that it can normally communicate with the pedestrian alert system. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PA(diag)-7, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step **3**.	Check the communication circuit. <Ref. to PA(diag)-7, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>
3	**CHECK PEDESTRIAN ALERT SYSTEM.** Read the DTC of the pedestrian alert system using the Subaru Select Monitor. <Ref. to PA(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC. <Ref. to PA(diag)-13, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**PERFORM DIAGNOSTICS WITH PHENOMENON.** Check the list for diagnostics with phenomenon. <Ref. to PA(diag)-16, INSPECTION, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection. <Ref. to PA(diag)-4, General Description.> 2) Check the pedestrian alert CM. <Ref. to PA(diag)-6, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to PA(diag)-11, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Correct or repair the cause of trouble, and then clear the memory. <Ref. to PA(diag)-10, OPERATION, Clear Memory Mode.>	System is normal.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

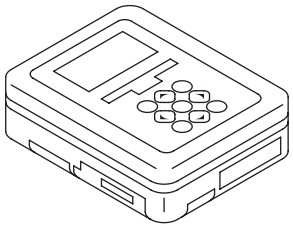
Pedestrian alert system check list for interview		Date of Vehicle Bring-in Year Month Date	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date when problem occurred	Year Month Date	Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions		Occurrence location	
Accessory installation condition			
Confirmation of trouble condition	❑ No sound comes out from the pedestrian alert speaker.		
	❑ Other		
Diagnostic code			

3. General Description

A: CAUTION

1. PEDESTRIAN ALERT SYSTEM

a. The sound pressure or tone of the pedestrian alert system may change in the following cases:
• When the vehicle is parked under the scorching sun or in snow-covered areas for a prolonged time. (Over time, the symptom is recovered.)
• When pedestrian alert speaker is directly subject to high-pressure water sprayer from under the vehicle.
• When front of pedestrian alert speaker is covered with foreign matters such as mud, snow, or ice.
• When whole of pedestrian alert speaker is frozen.
b. Warning sound may be difficult to be heard in the following cases:
• When the ambient noise is too loud. (In the very crowded crossing or when emergency vehicle is approaching.)
• When there is a person at the rear of the vehicle, he or she cannot hear the warning sound.



B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect pedestrian alert system related problems.
1) Check 12 volt auxiliary battery. <Ref. to SC(H4DO(HEV))-41, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to PA-4, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

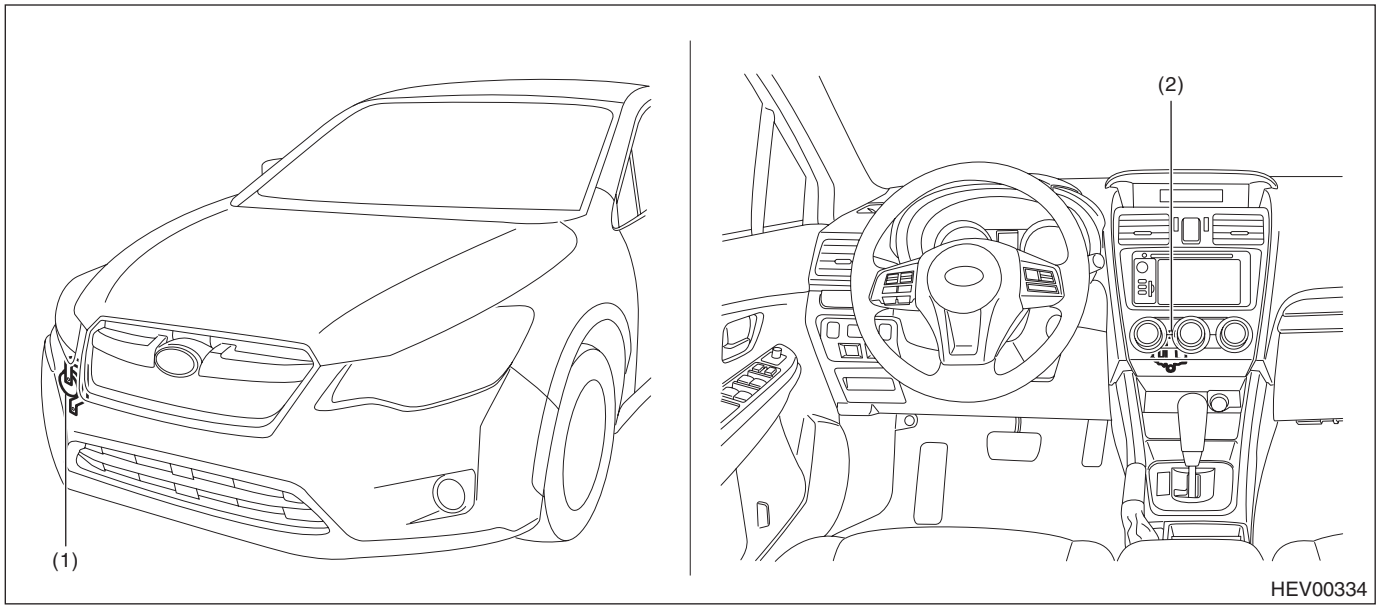


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
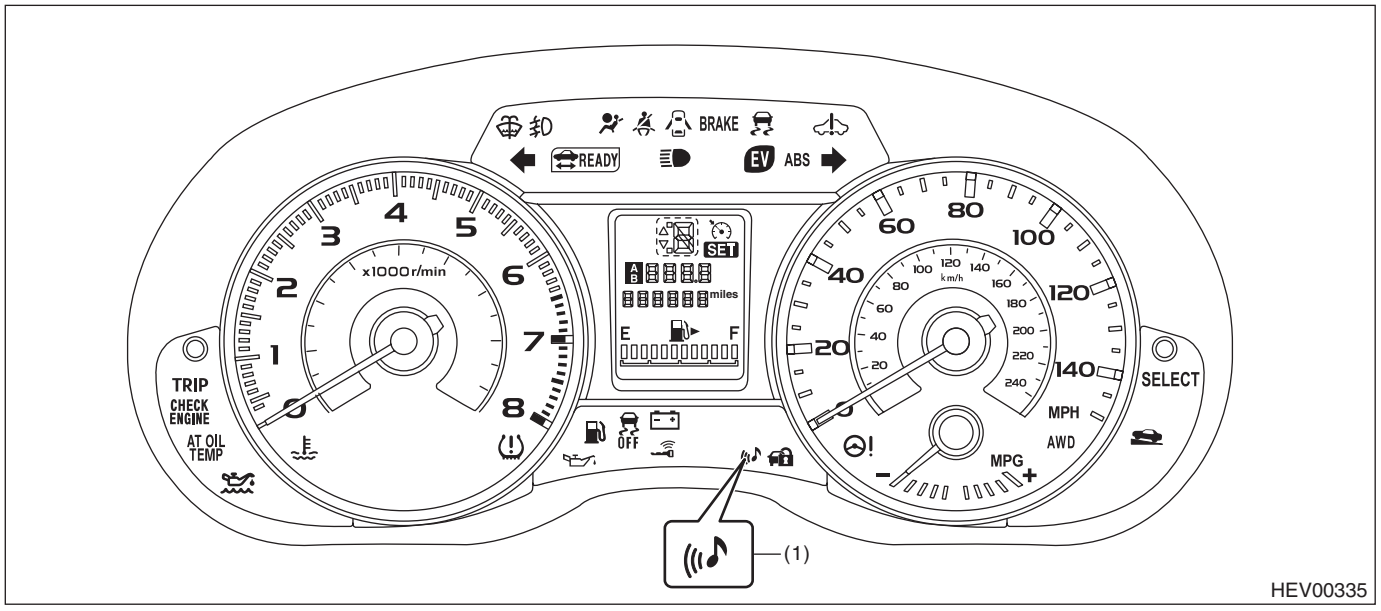
 ST1B022XU0	ST1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

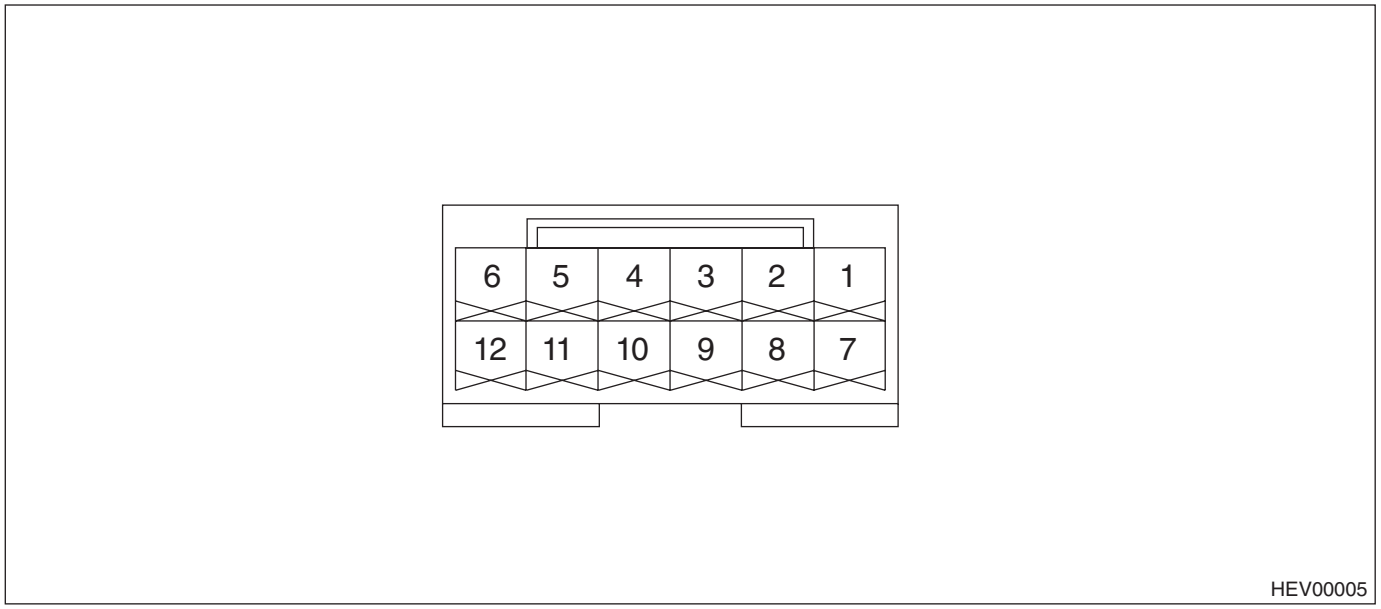


TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location

A: LOCATION

(1) Pedestrian alert speaker (2) Pedestrian alert control unit



(1) Pedestrian alert warning light

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. PEDESTRIAN ALERT CONTROL UNIT

Item	Terminal No. (terminal symbol)	Measuring condition	Measurement value	Note
Operational power supply	1 (IG)	IG ON	10 V or more	—
STOP light signal	2 (STP)	Brake pedal ON → OFF	8 V or more → less than 1 V	—
Pedestrian alert speaker output (+)	3 (SP+)	—	—	Pulse output
Vehicle speed signal	6 (SPD)	—	—	Pulse output
GND	7 (GND)	Always	0 V	—
Pedestrian alert speaker output (–)	8 (SP–)	—	—	Pulse output
K-line	9 (PRST)	—	—	Communication line
IND output	10 (IND)	OFF	8 V or more	—
Shift position signal	11 (SFTP)	Except for P range	8 V or more	—
Oil pressure signal	12 (OPSW)	Engine running	8 V or more	—

B: WIRING DIAGRAM

Refer to “Pedestrian Alert System” in the wiring diagram. <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>

6. Subaru Select Monitor

A: OPERATION

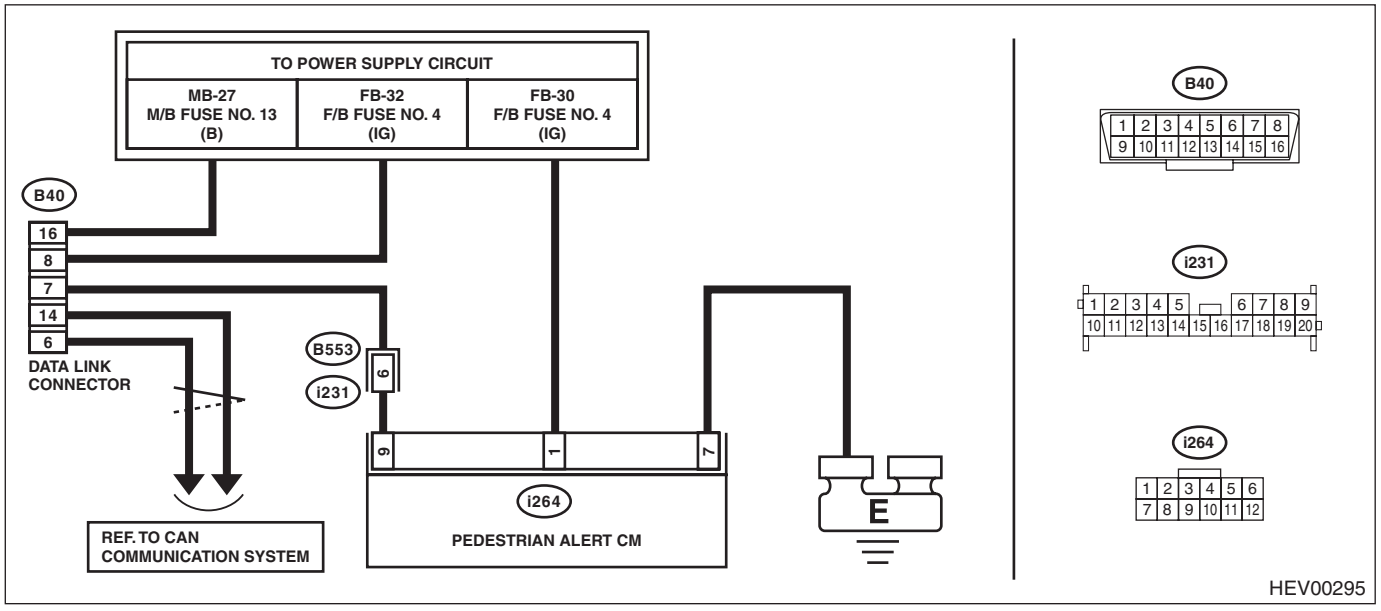
- For operation procedures, refer to the “PC application help for Subaru Select Monitor”.
- When the pedestrian alert system cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with pedestrian alert CM

DETECTING CONDITION:



- Defective harness connector
- Power supply circuit malfunction
- Defective pedestrian alert CM
- Defective K-line communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Communication is impossible between the pedestrian alert control unit and Subaru Select Monitor.

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the pedestrian alert system using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the voltage for 12 volt auxiliary battery.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.** Check the terminal for 12 volt auxiliary battery.	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK COMMUNICATION OF SUBARU SELECT MONITOR.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step **8**.	Go to step **5**.
5	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Using the tester, measure the resistance between data link connector and pedestrian alert CM (harness side). ***Connector & terminal*** ***(B40) No. 7 — (i264) No. 9:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between pedestrian alert CM (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between pedestrian alert CM (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 7 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of pedestrian alert CM connector and data link connector?	Repair the poor contact of connector.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- For operation procedures, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to PA(diag)-13, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

9. Read Current Data

A: OPERATION

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
1) On «Main Menu» display, select {Each System Check}.
2) On «Each System Check» display, select {Approach Info UNIT}.
3) On «Approach Info UNIT» display, select {Current Data Display & Save}.

B: LIST

Display	Description	Note (when normal)	Unit of measure
P-Range SW	Gear shift position	P range: when in P range Other than P range: when in other than P range	—
OIL Pressure SW	Status of oil pressure switch	Engine RUN: during engine start	—
Foot Brakes SW	Status of stop light switch	ON: when brake pedal is ON	—
Vehicle speed	Vehicle speed	Show vehicle speed	mpH
Voltage of IGN	Value of IGN power supply voltage	0 — 20.4 V	V
Speaker Terminal voltage	Value of vehicle approach information speaker voltage	0 — 4.998 V	V
P-Range SW voltage	Value of shift switch voltage	0 — 4.998 V	V
OIL Pressure SW voltage	Value of oil pressure switch voltage	0 — 4.998 V	V

10.System Operation Check Mode

A: OPERATION

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

B: LIST

1) On «Main Menu» display, select {Each System Check}.
2) On «Each System Check» display, select {Approach Info UNIT}.
3) On «Approach Info UNIT» display, select {Work Support}.
4) On «Work Support» display, select {System Operation Check Mode}.

Data	Customize setting	Note
Speaker Check	320 Hz	Make a single sound at a frequency of 320 Hz.
	1 kHz	Make a single sound at a frequency of 1 kHz.
	3.2 kHz	Make a single sound at a frequency of 3.2 kHz.

11.List of Diagnostic Trouble Code (DTC)

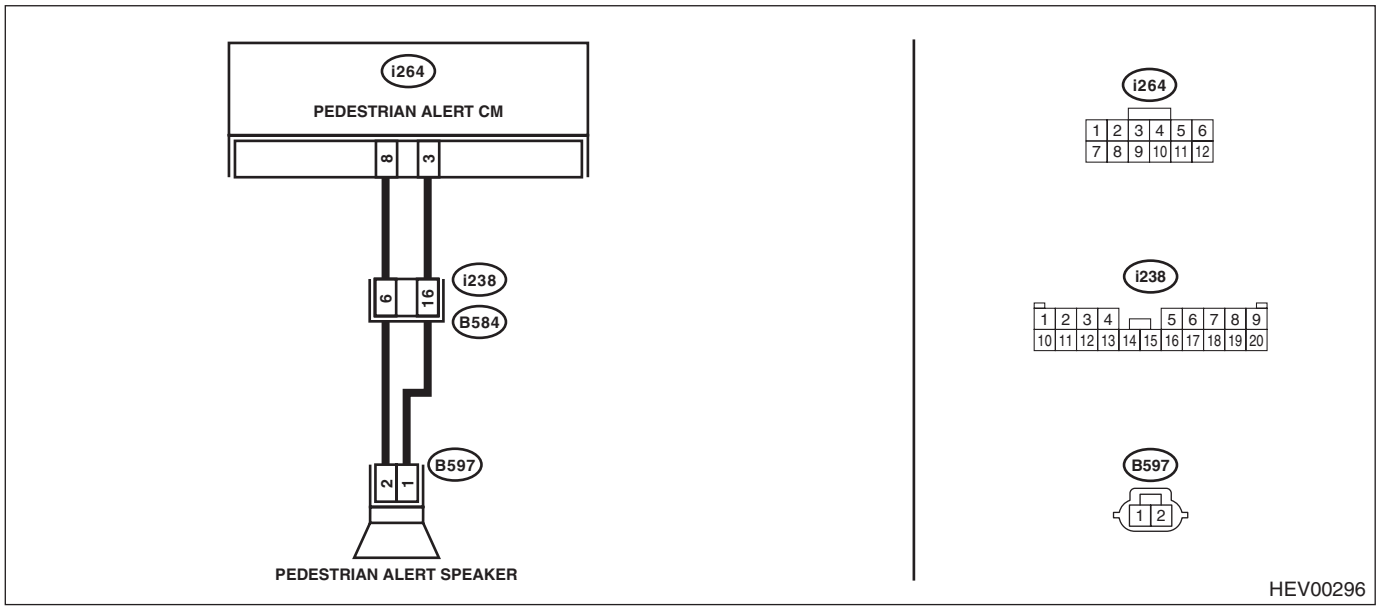
A: LIST

DTC	Item	Content of diagnosis	Note
B1700	Approach Information Speaker Abnormal	Vehicle approach information speaker harness is open or shorted.	<Ref. to PA(diag)-14, DTC B1700 APPROACH INFORMATION SPEAKER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1700 APPROACH INFORMATION SPEAKER ABNORMAL

DTC DETECTING CONDITION:



Detected when harness between pedestrian alert CM and pedestrian alert speaker is open or shorted, or when internal voice coil of pedestrian alert speaker is open or shorted.

TROUBLE SYMPTOM:

- No sound comes out from the pedestrian alert speaker during EV mode driving.
- After turning to IGN-ON, the light illuminates → blinks → illuminates.

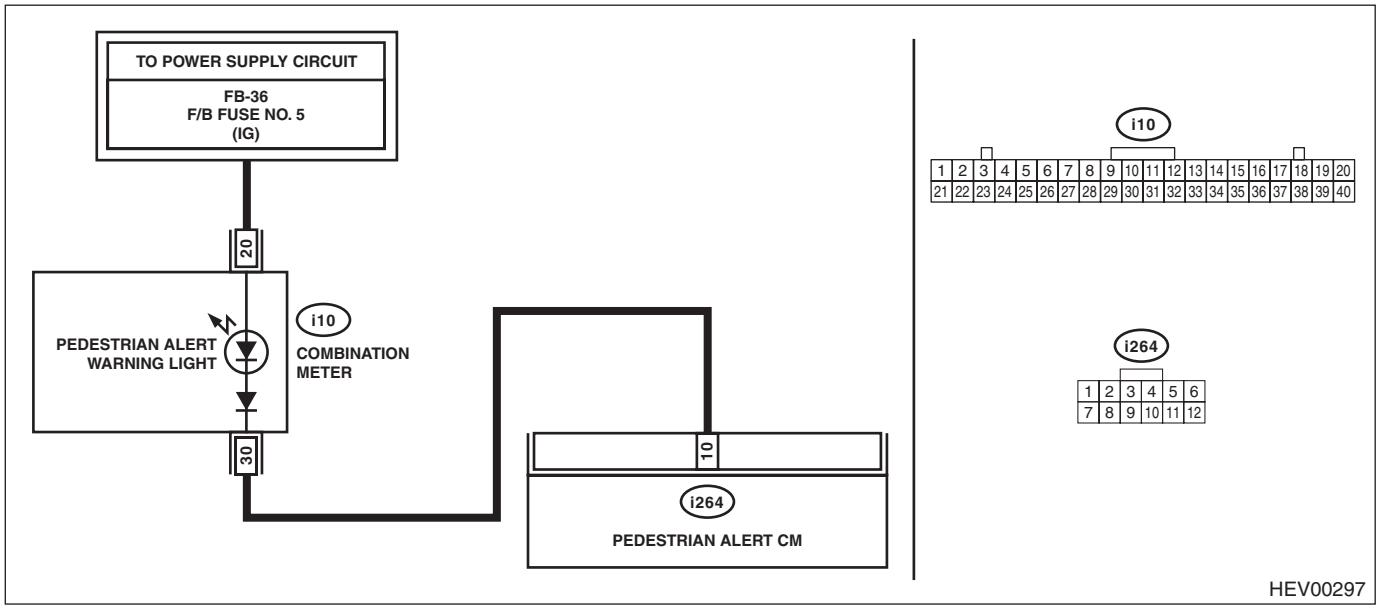
WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read DTCs of the pedestrian alert CM using the Subaru Select Monitor.	Is B1700 displayed?	Go to step **2**.	Go to step **4**.
2	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Check the pedestrian alert CM connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS (SHORT).** Using the tester, measure the resistance between pedestrian alert CM connector (harness side). ***Connector & terminal*** ***(i264) No. 3 — (i264) No. 8:***	Is the resistance less than 2 Ω?	Repair the pedestrian alert speaker or the short circuit of the harness. Go to step **5**.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using the tester, measure the resistance between pedestrian alert CM connector (harness side). ***Connector & terminal*** ***(i264) No. 3 — (i264) No. 8:***	Is the resistance 20 Ω or more?	Repair the pedestrian alert speaker or the open circuit of the harness. Go to step **5**.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

	Step	Check	Yes	No
5	**CHECK PEDESTRIAN ALERT SYSTEM.** 1) Connect the disconnected connectors. 2) Using the Subaru Select Monitor, perform «Speaker Check» of the system operation check mode. <Ref. to PA(diag)-12, System Operation Check Mode.>	Does any sound come out from the pedestrian alert speaker?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

13.Diagnostics with Phenomenon



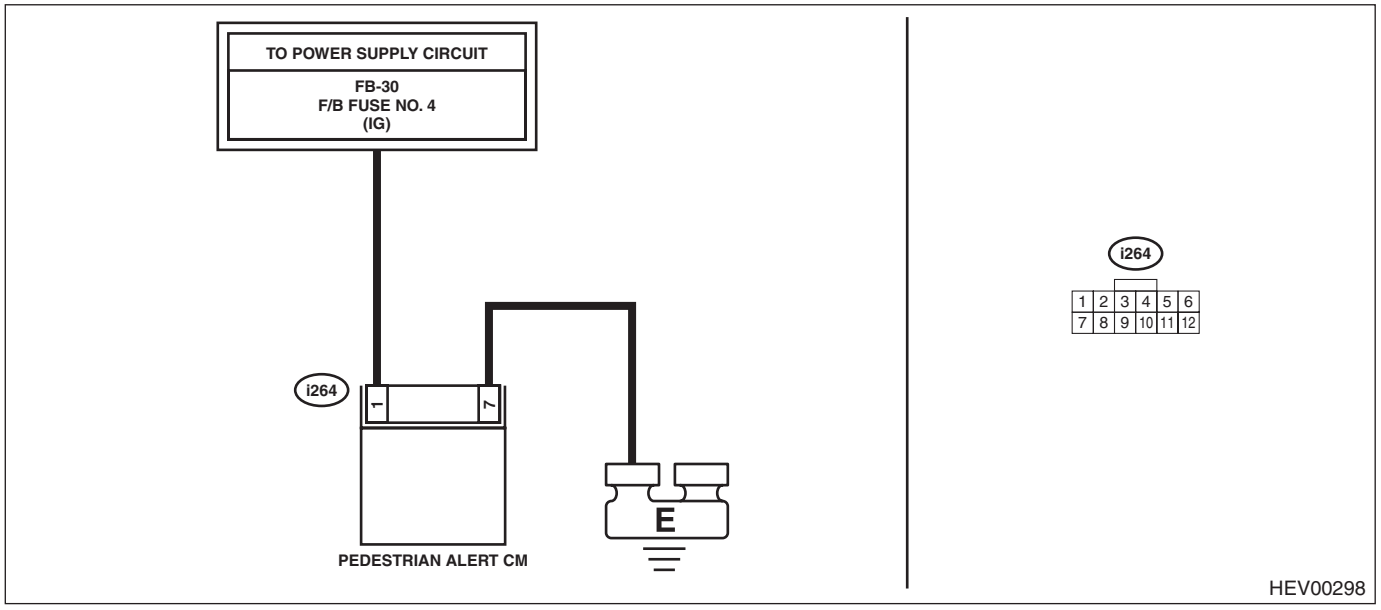
A: INSPECTION

Symptoms	Reference
When the ignition switch is turned on, the pedestrian alert warning light on the combination meter does not illuminate.	<Ref. to PA(diag)-16, PEDESTRIAN ALERT WARNING LIGHT DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
No sound comes out immediately after the brake pedal is released when the vehicle stops.	<Ref. to PA(diag)-18, CHECK STOP LIGHT SWITCH CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
No sound comes out during EV mode driving (at 24 km/h (15 MPH) or less). Or speaker sound is very small. (Perform steps listed on the right column in numerical order.)	1. <Ref. to PA(diag)-17, CHECK POWER SUPPLY CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	2. <Ref. to PA(diag)-19, CHECK P RANGE SWITCH CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	3. <Ref. to PA(diag)-20, CHECK OIL PRESSURE SWITCH CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	4. <Ref. to PA(diag)-21, CHECK VEHICLE SPEED SIGNAL CIRCUIT, INSPECTION, Diagnostics with Phenomenon.>
	5. Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

1. PEDESTRIAN ALERT WARNING LIGHT DOES NOT ILLUMINATE

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>



Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse for the combination meter.	Is the fuse OK?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, repair or replace the short-circuited portion of the harness.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Turn the ignition switch to ON. 4) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair or replace the open circuit of harness. Or, repair it according to combination meter inspection.

2. CHECK POWER SUPPLY CIRCUIT

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to PA-4, Relay and Fuse.>	Is the fuse OK?	Go to step **2**.	Replace the defective fuse. When the fuse is blown immediately, repair the short circuit.
2	**CHECK HARNESS.** 1) Disconnect the pedestrian alert CM connector. 2) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using the tester, measure the resistance between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 7 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA.** Check «Voltage of IGN» using the Subaru Select Monitor. <Ref. to PA(diag)-11, Read Current Data.>	Is the voltage 10 V or more when the ignition switch is ON?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

3. CHECK STOP LIGHT SWITCH CIRCUIT

WIRING DIAGRAM:

Stop light system <Ref. to WI(HEV)-208, WIRING DIAGRAM, Stop Light System.>

	Step	Check	Yes	No
1	**CHECK STOP LIGHT.** Check the illumination status of the stop light.	Do all stop lights illuminate?	Go to step **2**.	Repair the stop lights. Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the pedestrian alert CM connector. 2) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the brake pedal is depressed and less than 1 V when not depressed?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair the stop light circuit. Go to step **3**.

Step		Check	Yes	No
3	**CHECK HARNESS.** 1) Connect the disconnected connectors. 2) Apply parking brake. 3) Turn the ignition switch to ON. 4) Set the select lever from P to N while depressing the brake pedal. 5) Check that sound comes out from the pedestrian alert speaker immediately after the brake pedal is released. (For 3 seconds)	Does any sound come out?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>

4. CHECK P RANGE SWITCH CIRCUIT

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check «P-Range SW» using the Subaru Select Monitor. <Ref. to PA(diag)-11, Read Current Data.> 3) Move the select lever to P range ←→ other than P range.	Is the display normal?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK P RANGE SWITCH.** 1) Disconnect the ground terminal from the 12 volt auxiliary battery. 2) Disconnect the pedestrian alert CM connector. 3) Using the tester, measure the resistance between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 11 — Chassis ground:***	Is the resistance 1 Ω or less when the shift lever is in P range and 1 kΩ or more when the shift lever is in other than P range?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair or replace the P range switch circuit.

5. CHECK OIL PRESSURE SWITCH CIRCUIT

WIRING DIAGRAM:

Hybrid system <Ref. to WI(HEV)-139, WIRING DIAGRAM, Hybrid Electric Vehicle System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, check «OIL Pressure SW». <Ref. to PA(diag)-11, Read Current Data.> 2) Apply the parking brake. 3) Move the select lever in P range. 4) Start the engine.	Is the display normal?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Using the tester, measure the voltage between pedestrian alert CM connector (harness side) and chassis ground. ***Connector & terminal*** ***(i264) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V when the ignition switch is turned to ON and 8 V or more while the engine is starting?	Replace the pedestrian alert CM. <Ref. to PA-6, Pedestrian Alert Control Unit.>	Repair the oil pressure switch or the short circuit portion of the harness.

6. CHECK VEHICLE SPEED SIGNAL CIRCUIT

WIRING DIAGRAM:

Pedestrian alert system <Ref. to WI(HEV)-214, WIRING DIAGRAM, Pedestrian Alert System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Check «Vehicle Speed» using Subaru Select Monitor. <Ref. to PA(diag)-11, Read Current Data.>	Is the display normal?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK VDC.** Check the VDC system. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is the VDC system normal?	Go to step **3**.	Perform the diagnosis according to inspection for the VDC system.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the pedestrian alert CM connector. 3) Disconnect the VDC CM connector. 4) Using the tester, measure the resistance between pedestrian alert CM connector (harness side) and VDC CM connector (harness side). ***Connector & terminal*** ***(i264) No. 6 — (B310) No. 27:***	Is the resistance 1 Ω or less?	Even if abnormality is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair or replace the open circuit of harness.

15.	Diagnostics with Phenomenon	100

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor kit is required for reading DTC, performing diagnosis and reading current data.
• Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.).
• For models with the keyless access system, registration of the immobilizer may be required after a replacement of the control module, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

NOTE:
• Using the Function Setting (Customize), check that the keyless access system is not in a cancelled state. <Ref. to SL-120, OPERATION, Function Setting (Customize).>
• Check List for Interview <Ref. to KPS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK BATTERY.** Using a tester, measure the voltage for 12 volt auxiliary battery.	Is the voltage 11 V or more?	Go to step **2**.	Charge or replace the battery and perform check pre-inspection. Go to step **2**.
2	**CHECK PRE-INSPECTION.** Use the interview check list to interview the user. <Ref. to KPS(diag)-4, Check List for Interview.>	Was the symptoms of the trouble recorded in the interview?	Go to step **3**.	Interview the user again.
3	**BASIC INSPECTION.** Perform the inspection for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **4**.	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
4	**CHECK TROUBLE SYMPTOM.** 1) Read diagnostic trouble code (DTC) for the keyless access system. <Ref. to KPS(diag)-25, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to KPS(diag)-22, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed on Subaru Select Monitor?	Perform diagnosis according to the DTC.	Go to step **5**.
5	**CHECK PHENOMENON LIST.** Check the "Phenomenon List". <Ref. to KPS(diag)-98, General Diagnostic Table.>	Is there a symptom that corresponds in the phenomenon list?	Perform diagnosis according to the procedures in the phenomenon list.	Go to step **6**.

Step		Check	Yes	No
6	**CHECK TROUBLE PHENOMENON.** 1) Perform check of current data. 2) Perform a function check. 3) Perform a unit check.	Was the trouble cause found?	Repair the cause of trouble.	Repeat a basic check again.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="4">Keyless Access with Push Button Start System Trouble Check List for Interview Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content</td></tr>
<tr><td>Date and time when the trouble occurred</td><td></td><td>Frequency of trouble occurrence</td><td></td></tr>
<tr><td>Condition of trouble occurrence</td><td></td><td>Weather</td><td></td></tr>
<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td colspan="4">Trouble condition</td></tr>
<tr><td colspan="2">❑ Diagnostic code</td><td colspan="2">❑ ( )</td></tr>
<tr><td>❑ Immobilizer system</td><td colspan="2">Engine does not start</td><td>❑ Starter does not operate
❑ Starter operates but engine does not start
❑ Engine starts but stops immediately</td></tr>
<tr><td></td><td colspan="3">Does not start with remote engine starter</td></tr>
<tr><td rowspan="2">❑ Steering lock system</td><td colspan="3">The steering lock is not released</td></tr>
<tr><td colspan="3">The steering lock does not lock</td></tr>
<tr><td rowspan="7">❑ Keyless access system</td><td colspan="3">Cannot lock/unlock using the touch sensor (lock), touch sensor (unlock), rear gate opener button and rear lock button</td></tr>
<tr><td colspan="2">Cannot lock with the touch sensor (lock)
Cannot unlock with the touch sensor (unlock)
Cannot lock nor unlock with the touch sensor (lock), touch sensor (unlock)
Rear gate can not be locked with the rear lock button</td><td>❑ Driver's side door
❑ Passenger's side door
❑ Rear gate door</td></tr>
<tr><td colspan="3">Cannot unlock with the rear gate opener button</td></tr>
<tr><td colspan="2">Access key lockout protection function does not operate.</td><td>❑ Passenger room
❑ Luggage room</td></tr>
<tr><td colspan="3">The LED does not illuminate when the access key button is pressed</td></tr>
<tr><td colspan="3">The external buzzer does not beep</td></tr>
<tr><td colspan="3">The passenger room buzzer does not sound</td></tr>
<tr><td>❑ Other</td><td colspan="3">The room light or map light does not illuminate
( )</td></tr>
</table>

NOTE:
- Perform the diagnostics according to the basic diagnostic procedure.
- If the room light or map light does not illuminate and the steering lock does not lock at the same time, the back-up fuse may be loose or blown.

3. General Description

A: CAUTION

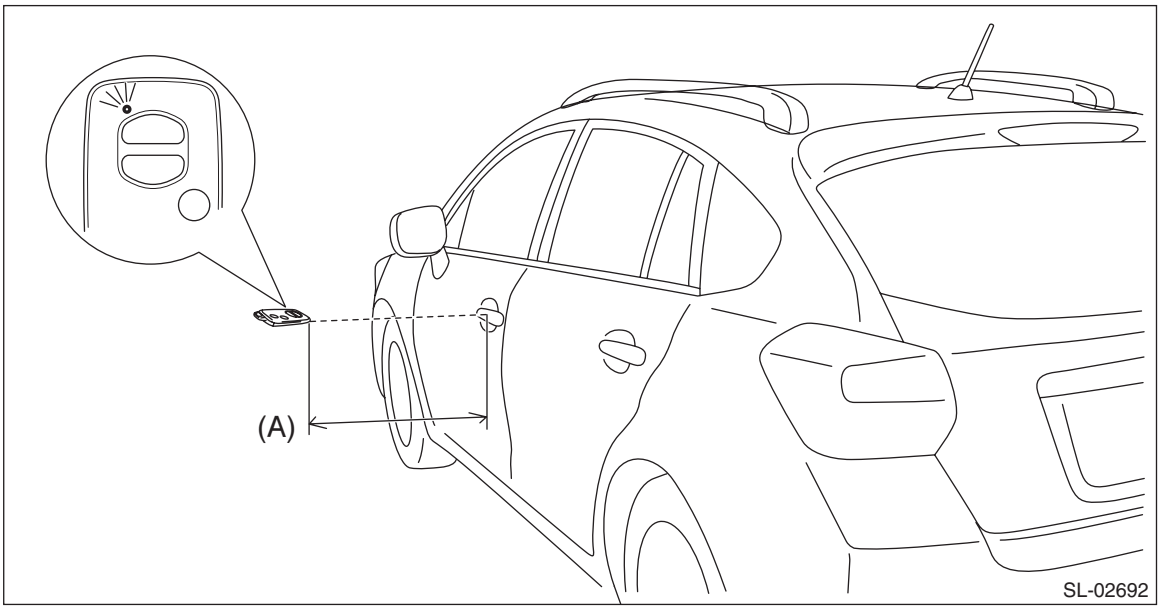
1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the keyless access with push button start system.

CAUTION:
- **Do not use electrical test equipment on any wiring harnesses and connectors in the airbag system.**
- **Be careful not to damage the wiring harness of the airbag system when servicing the keyless access with push button start system.**

2. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
- Using the function setting (ECM customizing), check that the keyless access system is not OFF. <Ref. to SL-120, OPERATION, Function Setting (Customize).>
- The dark current is approx. 400 mA if there is communication between the vehicle and access key.
- The dark current is approx. 40 mA if there is no communication between the vehicle and access key.*



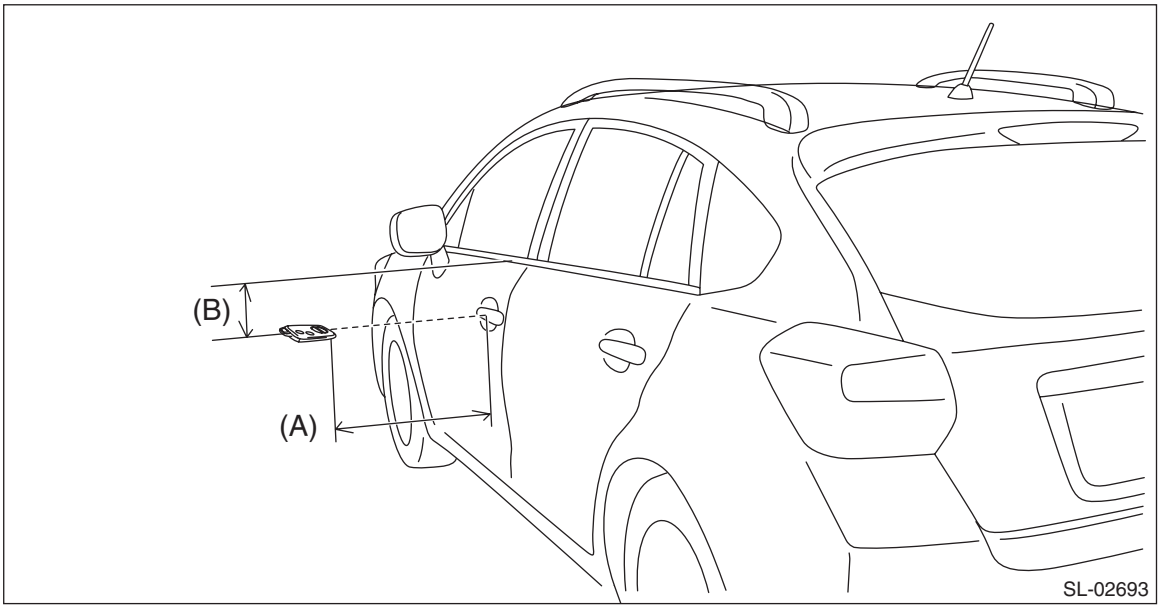
* No communication with the vehicle means that the keyless access function has been cancelled or that the access key has not been near the vehicle for 15 minutes or more after door locking.

1) Keyless access door unlock function check

(1) When carrying the access key with all doors locked by keyless lock operation, check that when the touch sensor (unlock) built in to the back side surface of door outer handle of front door is touched, the door will unlock (model with double lock), all doors will unlock (model without double lock) and the answer-back function operates (hazard light blinks twice).

(2) In the keyless access door unlock detection area, hold the access key at the same height as the outer handle (approx. 80 cm from the ground) and in the direction shown in the figure, and check that the vehicle becomes unlock mode [access key LED (red) blinks] at 40 to 80 cm (A) from the vehicle.

NOTE:
Check the access key battery if the LED (red) does not illuminates when the access key button is pressed. <Ref. to SL-89, INSPECTION, Access Key.>



2) Check keyless access door lock function

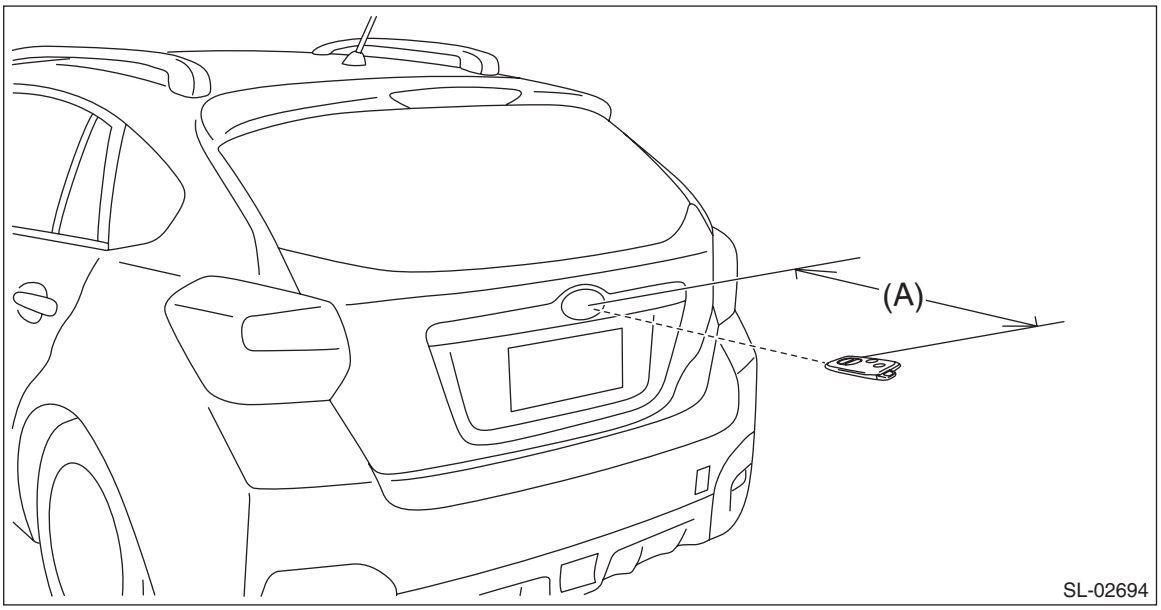
(1) When carrying the access key outside of the vehicle with all doors closed and unlocked, check that when the touch sensor (lock) on the surface of door outer handle of front door is touched, all doors will lock and the answer-back function operates (hazard light blinks once).

CAUTION:

If the access key is within the vehicle but not within the detection area (in the instrument panel, on the rear tray, in the glove box, on the floor, in the door trim pocket or at the corner of the luggage room), then lockout protection will not function when the doors are locked and the access key will be locked into the vehicle.

(2) To check the keyless access door lock operation range, hold the access key at a height (B) of 10 cm under the bottom edge of the door glass (approx. 80 cm from the ground) in the direction shown in the figure, and check that all doors lock and the answer-back function operates (hazard light blinks once) when you touch the touch sensor (lock) at a distance (A) of approx. 30 cm from the vehicle.

(3) Check the passenger's side door in the same manner.



NOTE:

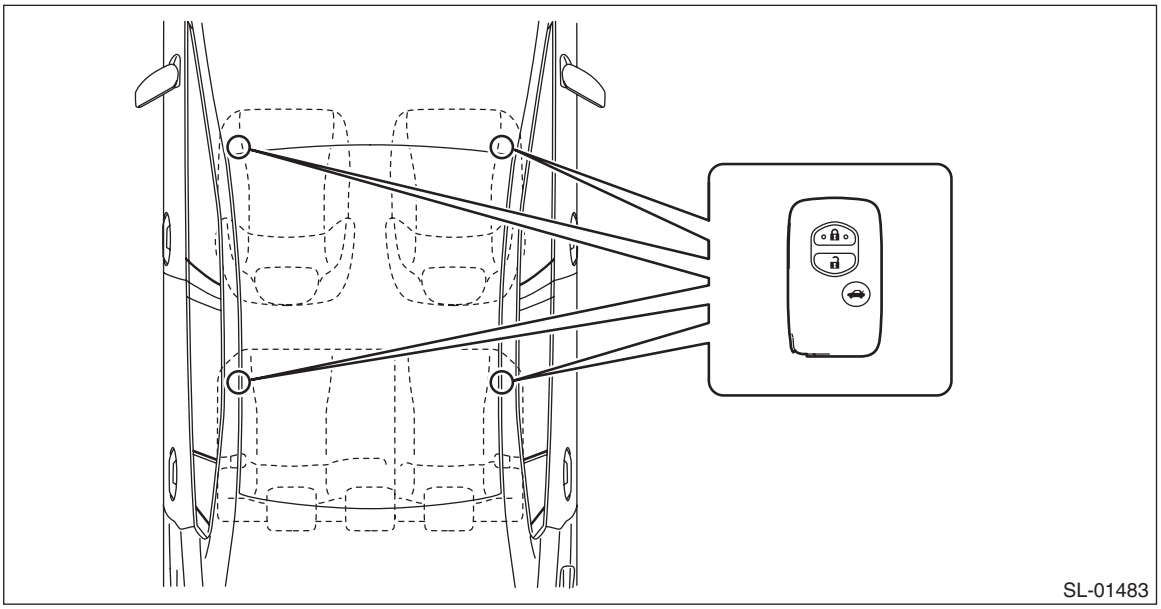
- When the door cannot lock if the touch sensor (lock) is touched, touch the touch sensor (lock) with palm.
- Since communication is not possible within close range (20 cm or less) of the door outer handle, the access key may not operate if you touch the touch sensor (lock) with the same hand you are holding the access key.
- If the lockout prevention buzzer sounds, it is possible that the interior transmitter has radio wave leakage.

3) Check of the keyless access rear gate function

(1) With the rear gate locked, check that the all doors unlock and rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice) when you press the rear gate opener button while carrying the access key.

(2) To check the range for keyless access rear gate open operation, hold the access key behind and in the center of the vehicle at the same height as the rear gate opener button (90 cm from the ground) in the direction shown in the figure, and check that all doors unlock, the rear gate opens, and the answer-back function operates (hazard light blinks twice) when the rear gate opener button is pressed at a distance of 40 to 80 cm (A) from the vehicle.

(3) With the rear gate unlocked, check that all doors lock and the answer-back function operates (hazard light blinks once) when you press the rear lock button while carrying the access key.



4) Check of the keyless access ignition switching function

(1) With the ignition OFF, enter the vehicle while carrying the access key. With the shift lever in the P range, check that the push button ignition switch indicator is illuminated in green when you depress the brake pedal, and check that the engine starts when you press the push button ignition switch while the indicator illuminated in green.

(2) While carrying the access key, check that when you press the push button ignition switch without depressing the brake pedal, the following occurs: 'Ignition OFF' → 'ACC ON' → 'Ignition ON' → 'Ignition OFF'. If the shift lever is in any range except for the P range and the push button ignition switch is pressed from ignition ON, then it will change to ACC ON without changing to ignition OFF.

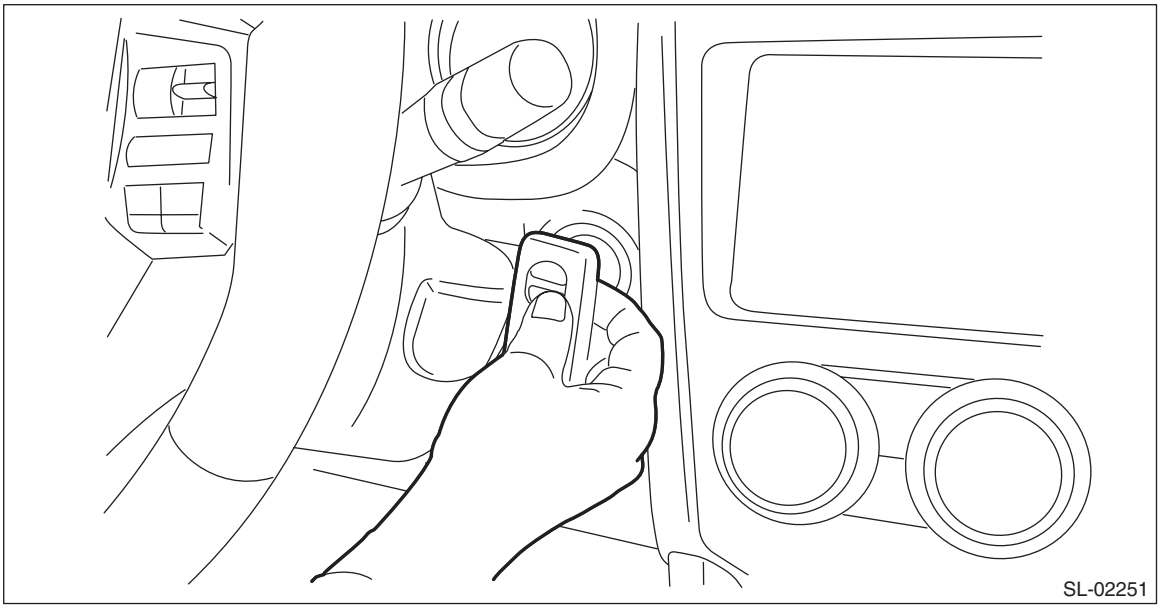
(3) After the vehicle has stopped, press the push button ignition switch and ignition is turned OFF (engine stopped · all power supplies OFF). However, if the shift lever is in any range except for the P range and the push button ignition switch is pressed with the vehicle stopped, then the ignition is not turned OFF and instead the power supplies changes to ACC ON. Check that the steering lock operates if the door is opened in the ignition OFF state (shift P range).

(4) To check the range of the keyless access ignition operation, check that the engine can start when you set the access key at the check position on the sheet in the direction indicated in the figure.

CAUTION:
The access key may not be correctly detected even though it is within the detection area within the passenger room, if it is in the instrument panel, on the rear tray, in the glove box, on the floor, in the door trim pocket, or at the corner of the luggage room.

NOTE:
Perform the check twice, once each with the access key positioned on the driver's, passenger's and rear seats.

5) Lockout protection function check (in the passenger room)

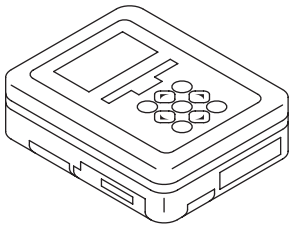


CAUTION:
Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

(1) Position the access key on the driver's or passenger's seat.
(2) Close all doors. (with all doors unlocked)
(3) Check that the doors do not lock and the lockout protection buzzer (exterior) sounds for 2 seconds when you touch the touch sensor (lock) of either the driver's or passenger's door.

6) Check of the keyless access cancel function

(1) After setting the keyless access cancel function, check that all keyless access and start system (keyless access) functions are inoperable. (For cancel setting, refer to <Ref. to SL-120, OPERATION, Function Setting (Customize).>)



NOTE:
When keyless access is cancelled, door lock and unlock can be operated by access key button operation and the starter system can be operated by passing the access key over the push button ignition switch with the access key button toward you.

7) Access key diagnostic mode
(1) Connect the Subaru Select Monitor, and select «Work Support» of {Keyless access system}. <Ref. to KPS(diag)-33, Keyless Access System Check.>
(2) From {Work Support}, select «Function Check Sequence».
(3) From {Function Check Sequence}, select «Keyless access system check».
(4) Select the transmitter to check from the items.
(5) Check that the door lock buzzer sounds (short blips, a continuous beeping sound for the center room antenna) when the access key is near the selected transmitter or antenna.

B: PREPARATION TOOL

1. SPECIAL TOOL

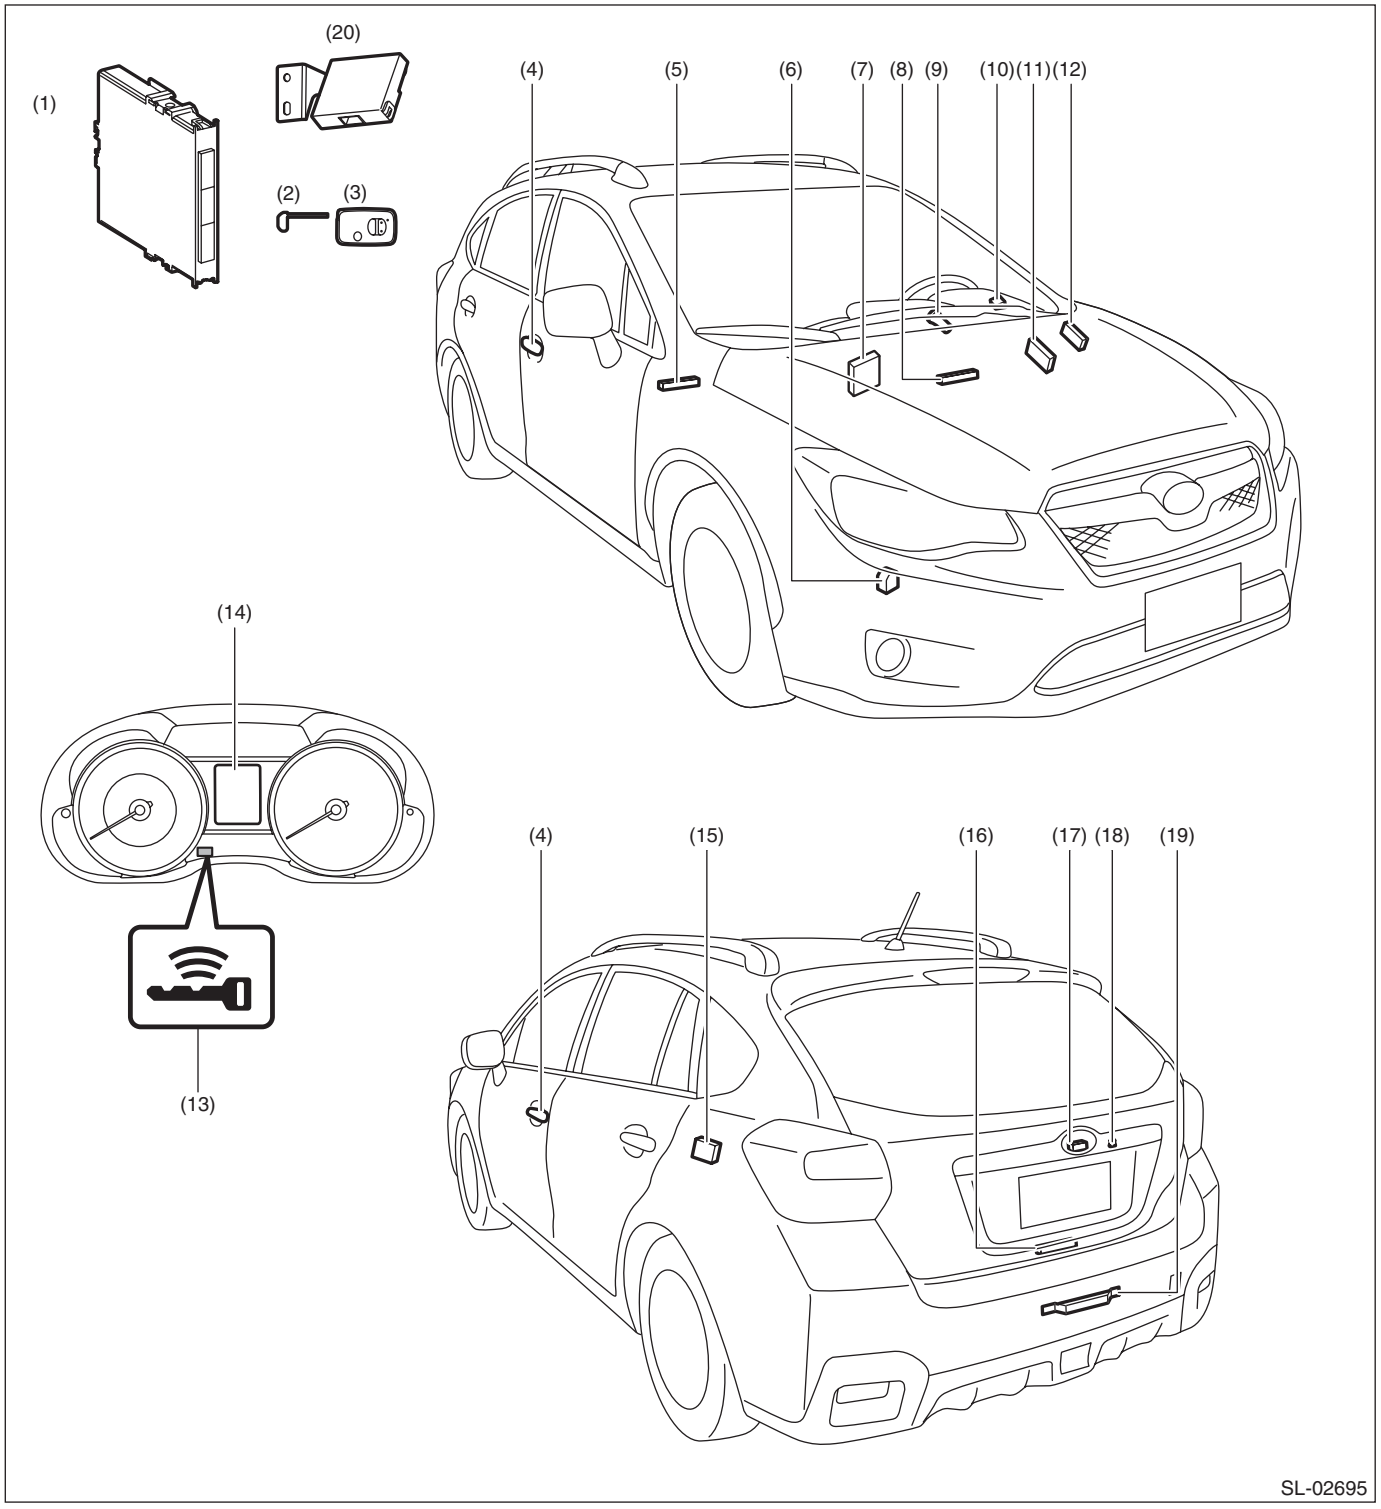


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

(B574) No. 30	SSW2	Start switch input 2

Disconnect the control module connector (B572) before checking the following items.

NOTE:
If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B572) No. 2 (+B) ←→ (B572) No. 11 (E)	Voltage	Always	9.5 — 16 V
(B572) No. 11 (E) ←→ Chassis ground	Resistance	Always	Less than 1 Ω

Disconnect the control module connector (B573) before checking the following items.

NOTE:
If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B573) No. 15 (IDW) ←→ Chassis ground (For C0 and C5 model only)	Continuity	Always	Continuity exists

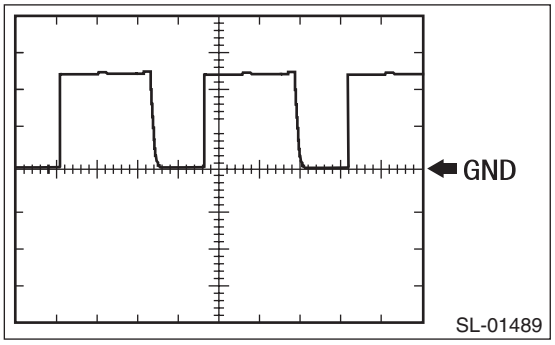
Disconnect the control module connectors (B574) and (B572) before checking the following items.

NOTE:
If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Item	Measuring condition	Standard
(B574) No. 4 (ACCD) ←→ Chassis ground	Resistance	Always (20°C)	152.61 — 216.5 Ω
(B572) No. 9 (IG2D) ←→ Chassis ground	Resistance	Always (20°C)	74.15 — 460.88 Ω
(B574) No. 6 (IG1D) ←→ Chassis ground	Resistance	Always (20°C)	50.87 — 72.17 Ω
(B572) No. 18 (STP1) ←→ Chassis ground (AT model only)	Voltage	Brake pedal depressed → released	11 — 14 V → 1 V or less
(B574) No. 25 (P) ←→ Chassis ground (AT model only)	Resistance	Except for shift positions P → Shift position P	40 kΩ or more → 200 Ω or less
(B574) No. 27 (SPD) ←→ Chassis ground	Resistance	Always	30 kΩ or more
(B574) No. 28 (SSW1) ←→ Chassis ground	Resistance	Push button ignition switch pressed → released	Less than 1 Ω → 10 kΩ or more
(B574) No. 29 (SLR+) ←→ Chassis ground	Resistance	Always	10 kΩ or more
(B574) No. 30 (SSW2) ←→ Chassis ground	Resistance	Push button ignition switch pressed → released	Less than 1 Ω → 10 kΩ or more
(B574) No. 17 (LIN) ←→ Chassis ground	Continuity	Always	Continuity does not exist
(B574) No. 14 (CANH) ←→ Chassis ground	Pulse	ACC ON or IGN ON or ACC and IGN OFF and open/close the door	Pulse generation
(B574) No. 15 (CANL) ←→ Chassis ground	Pulse	ACC ON or IGN ON or ACC and IGN OFF and open/close the door	Pulse generation

Connect the control module connector before checking the following items.

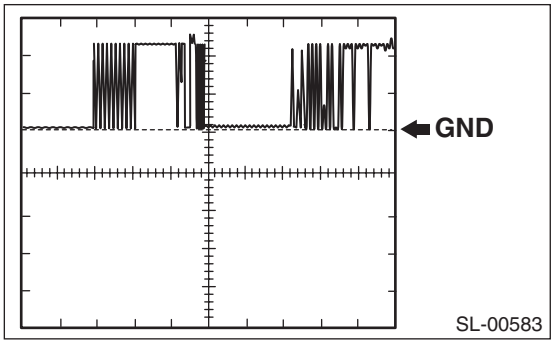
NOTE:
If the measured value is out of standard, it is possible that the keyless access CM has a fault.



Terminal No.	Item	Measuring condition	Standard
(B574) No. 1 (VC5) ←→ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room.	Waveform 1
(B574) No. 2 (CG5B) ←→ (B572) No. 11 (E)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B574) No. 3 (CLG5) ←→ (B572) No. 11 (E)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B574) No. 4 (ACCD) ←→ (B572) No. 11 (E)	Voltage	IG OFF → ACC ON	1 V or less → 9 — 14 V
(B574) No. 6 (IG1D) ←→ (B572) No. 11 (E)	Voltage	ACC ON → IG ON	1 V or less → 9 — 14 V
(B574) No. 7 (CODE) ←→ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch*1	Waveform 2

Terminal No.	Item	Measuring condition	Standard
(B574) No. 9 (TXCT) ←→ (B574) No. 24 (AGND)	Voltage	30 seconds or more have passed after the door was opened or closed with IG OFF and the brake pedal released.	1 V or less
	Waveform	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch*1	Waveform 3
(B574) No. 10 (CG2B) ←→ (B572) No. 11 (E)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 11 (CLG2) ←→ (B572) No. 11 (E)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 12 (CLG1) ←→ (B572) No. 11 (E)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 13 (CG1B) ←→ (B572) No. 11 (E)	Pulse	ACC and IG OFF, all doors closed, all doors locked by lock operation with wireless remote control, access key not in passenger room	No pulse output → Pulse output detected
(B574) No. 19 (SEL1) ←→ (B572) No. 11 (E)	Voltage	ACC and IG OFF, access key carried, driver's seat touch sensor OFF → ON	9 — 14 V → less than 2 V
(B574) No. 21 (SEL2) ←→ (B572) No. 11 (E)	Voltage	ACC and IG OFF, access key carried, driver's seat touch sensor OFF → ON	9 — 14 V → less than 2 V
(B574) No. 24 (AGND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω
(B574) No. 25 (P) ←→ (B572) No. 11 (E) (AT model only)	Voltage	Except for shift positions P → Shift position P	9 — 14 V or more → 1.5 V or less
(B574) No. 26 (SLP) ←→ (B572) No. 11 (E)	Voltage	With ignition switch OFF and shift position P, Steering lock → Steering unlock	11 — 14 V → 1.2 V or less
(B574) No. 27 (SPD) ←→ Chassis ground	Pulse	Driving at approx. 5 km/h	Pulse generation according to vehicle speed (approx. 5 km/h: 3.54 Hz)
(B574) No. 28 (SSW1) ←→ (B572) No. 11 (E)	Voltage	Push button ignition switch released → pressed	11 — 14 V → 1 V or less
(B574) No. 29 (SLR+) ←→ (B572) No. 11 (E)	Voltage	When the following conditions are met, the doors are closed → opened, and steering lock motor is driven • Steering lock is unlocked • IG OFF • Shift position P	11 — 14 V (Steering lock motor is stopped) → 1 V or less (Steering lock motor is driven)
(B574) No. 30 (SSW2) ←→ (B572) No. 11 (E)	Voltage	Push button ignition switch released → pressed	11 — 14 V → 1 V or less
(B573) No. 1 (CG8B) ←→ (B572) No. 11 (E)	Pulse	ACC and IG OFF, all doors closed, rear gate opener button OFF → ON	No pulse output → Pulse output detected
(B573) No. 2 (CLG8) ←→ (B572) No. 11 (E)	Pulse	ACC and IG OFF, all doors closed, rear gate opener button OFF → ON	No pulse output → Pulse output detected
(B573) No. 5 (RCO) ←→ (B572) No. 11 (E)	Voltage	ACC and IG OFF, access key is locked or unlock switch OFF → ON	1 V or less → 4.5 — 5.5 V
(B573) No. 8 (CG7B) ←→ (B572) No. 11 (E)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B573) No. 9 (CLG7) ←→ (B572) No. 11 (E)	Pulse	All doors closed, ACC and IG OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected

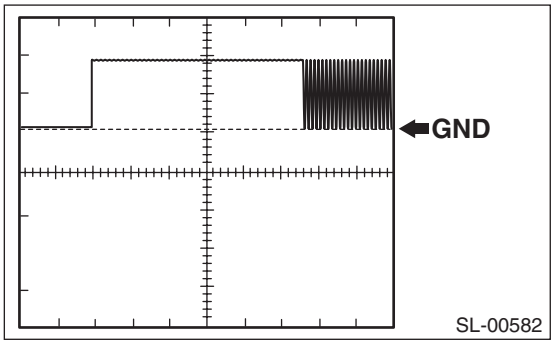
Terminal No.	Item	Measuring condition	Standard
(B573) No. 19 (RSSI) ←→ (B572) No. 11 (E)	Voltage	All doors closed, all doors locked, access key is locked or unlock switch OFF → ON	11 — 14 V → 2 V or less
(B573) No. 27 (TSW5) ←→ (B572) No. 11 (E)	Pulse/voltage	ACC and IG OFF, all doors locked, rear gate lock button OFF → ON	9 V or more → less than 2 V
(B572) No. 9 (IG2D) ←→ (B572) No. 11 (E)	Voltage	ACC ON → IG ON	1 V or less → 9 — 14 V
(B572) No. 13 (EGIO) ←→ (B574) No. 24 (AGND)	Voltage/pulse	IG ON	11 to 14 V (Waveform 4)
(B574) No. 8 (TSW2) ←→ (B572) No. 11 (E)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, passenger's seat touch sensor (lock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 20 (TSW1) ←→ (B572) No. 11 (E)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, driver's seat touch sensor (lock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 23 (SEN2) ←→ (B572) No. 11 (E)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, passenger's seat touch sensor (unlock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 22 (SEN1) ←→ (B572) No. 11 (E)	Voltage	ACC and IG OFF, all doors closed, all doors locked, access key carried, driver's seat touch sensor (unlock) OFF → ON	9 V or more → less than 2 V (→ 9 V or more)
(B574) No. 16 (SWIL) ←→ (B572) No. 11 (E)	Voltage	When illumination of start switch goes off, headlight goes off after setting the illumination control to MAX	Less than 2 V → 9 V or more
(B572) No. 17 (TACH) ←→ Chassis ground	Waveform	While engine idling	Pulse generation (waveform 5)
(B573) No. 28 (ACCR) ←→ (B572) No. 11 (E)	Voltage	Brake pedal depressed, push button ignition switch pressed (while cranking) → Except when cranking	Less than 2 V → 9 V or more
(B572) No. 5 (N-SW) ←→ (B572) No. 11 (E) (AT model only)	Voltage	Shift position N → other than P or N	Less than 2 V → 9 V or more
(B573) No. 17 (RDA) ←→ (B572) No. 11 (E)	Pulse	All doors closed, all doors locked, access key is locked or unlock switch OFF → ON	2 V or less → 11 — 14 V → 2 V or less
(B572) No. 7 (STSW) ←→ (B572) No. 11 (E)	Voltage	Shift lever is in position P or position N and access key is in passenger room. While depressing the brake pedal, press the push button ignition switch. (Engine start)	Less than 2 V → 9 V or more
(B572) No. 3 (INDS) ←→ (B572) No. 11 (E)	Voltage	Depress the brake pedal.	9 V or more
(B574) No. 18 (INDW) ←→ (B572) No. 11 (E)	Voltage	With ACC ON or IG ON, brake pedal not depressed.	9 V or more



NOTE:
*1: Remove the access key battery before checking.

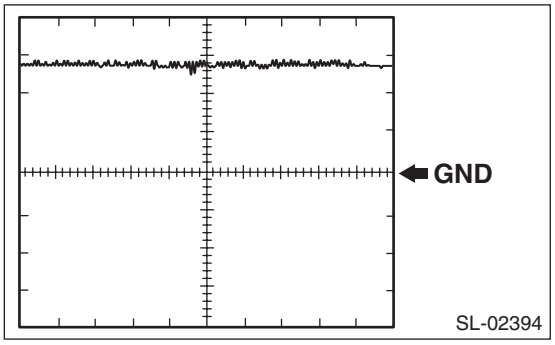
1. Waveform 1

Item	Content
Measured terminal	(B574) No. 1 (VC5) ←→ (B574) No. 24 (AGND)
Equipment setting	2 V/DIV, 200 ms/DIV
Measuring condition	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room.



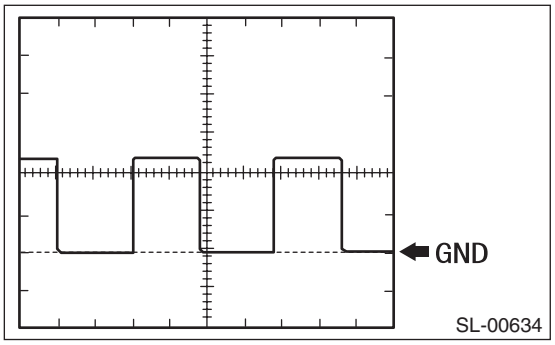
2. Waveform 2

Item	Content
Measured terminal	(B574) No. 7 (CODE) ←→ (B574) No. 24 (AGND)
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch. *1



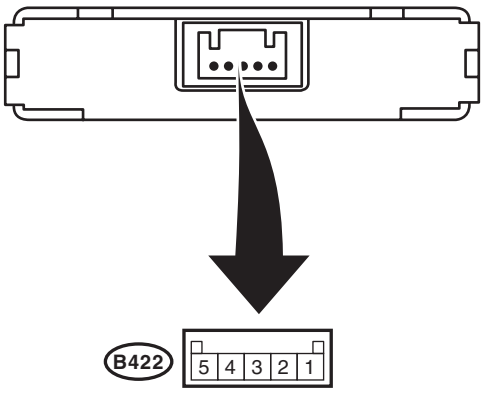
NOTE:
*1: Remove the access key battery before checking.

3. Waveform 3



Item	Content
Measured terminal	(B574) No. 9 (TXCT) ←→ (B574) No. 24 (AGND)
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room.

4. Waveform 4



Item	Content
Measured terminal	(B572) No. 13 (EGIO) ⟷ (B572) No. 11 (GND)
Equipment setting	5 V/DIV, 100 ms/DIV
Measuring condition	Ignition ON

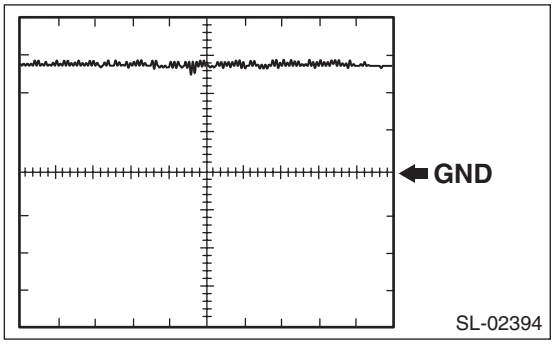
5. Waveform 5

Item	Content
Equipment setting	5 V/DIV, 100 ms/DIV

2. ID CODE BOX

SL-01558

Terminal No.	Terminal symbol	Content
(B422) No. 1	+B	+B
(B422) No. 2	LIN	LIN communication
(B422) No. 3	IMO2	Immobilizer communication 2
(B422) No. 4	IMO1	Immobilizer communication 1
(B422) No. 5	GND	GND



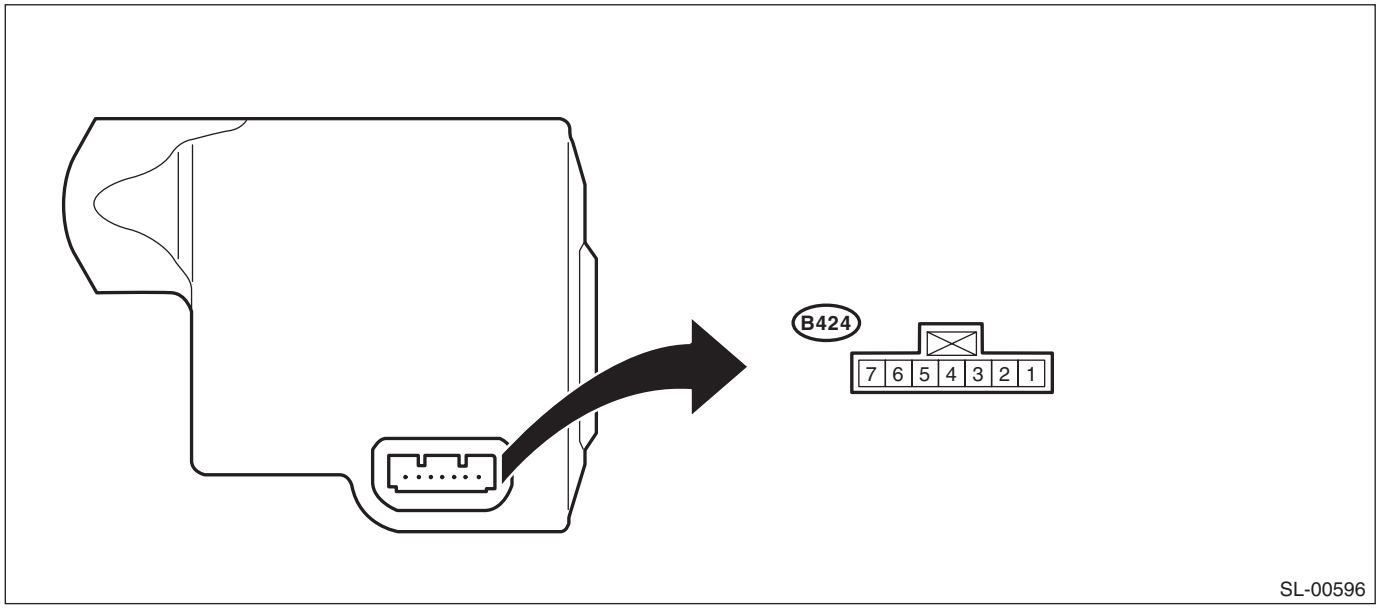
NOTE:
Disconnect the control module connector before checking the following items.

Terminal No.	Standard	Measuring condition	Item
1(+B) ←→ 5 (GND)	10 — 14 V	Always	Voltage
3 (IMO2) ←→ 5 (GND)	0 V	Ignition OFF	Voltage
4 (IMO1) ←→ 5 (GND)	0 V	Ignition OFF	Voltage
5 (GND) ←→ Chassis ground	Continuity exists	Always	Continuity

NOTE:
Connect the control module connector before checking the following items.

Terminal No.	Standard	Measuring condition	Item
3 (IMO2) ←→ 5 (GND)	0 V	Ignition OFF	Voltage
3 (IMO2) ←→ 5 (GND)	Waveform 1	Ignition ON	Voltage
4 (IMO1) ←→ 5 (GND)	0 V	Ignition OFF	Voltage
4 (IMO1) ←→ 5 (GND)	Waveform 1	Ignition ON	Voltage

Waveform 1



Item	Content
Measured terminal	4 (IMO1) ←→ 5 (GND)
Equipment setting	5 V/DIV, 100 ms/DIV
Measuring condition	Ignition ON

3. BODY INTEGRATED UNIT

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the I/O Signal of the body integrated unit. <Ref. to BC(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

4. STEERING LOCK CM

Terminal No.	Terminal symbol	Content
(B424) No. 1	GND	GND
(B424) No. 3	SLR+	Steering lock motor drive power supply
(B424) No. 4	SLP	Unlock position output
(B424) No. 5	LIN	LIN communication
(B424) No. 6	IG2	IGN power supply
(B424) No. 7	B	+B

NOTE:
Perform the following check from the back side of the connector, with the connector of the control module connected.

If the measured value is out of standard, it is possible that the vehicle has a fault.

Terminal No.	Standard	Measuring condition	Item
1 (GND) ←→ Chassis ground	Continuity exists	Always	Continuity
—	—	—	—
3 (SLR+) ←→ Chassis ground	10 — 14 V → 1 V or less	Motor not operating → Motor operating	Voltage
4 (SLP) ←→ Chassis ground	10 — 14 V → 1 V or less	Lock → Unlock	Voltage
5 (LIN)	Input/output signal	—	—
6 (IG2) ←→ Chassis ground	10 — 14 V	Ignition ON	Voltage
7 (B) ←→ Chassis ground	10 — 14 V	Always	Voltage

B: WIRING DIAGRAM

Refer to “Keyless Access System” in the wiring diagram. <Ref. to WI(HEV)-157, WIRING DIAGRAM, Keyless Access System.>

6. Subaru Select Monitor

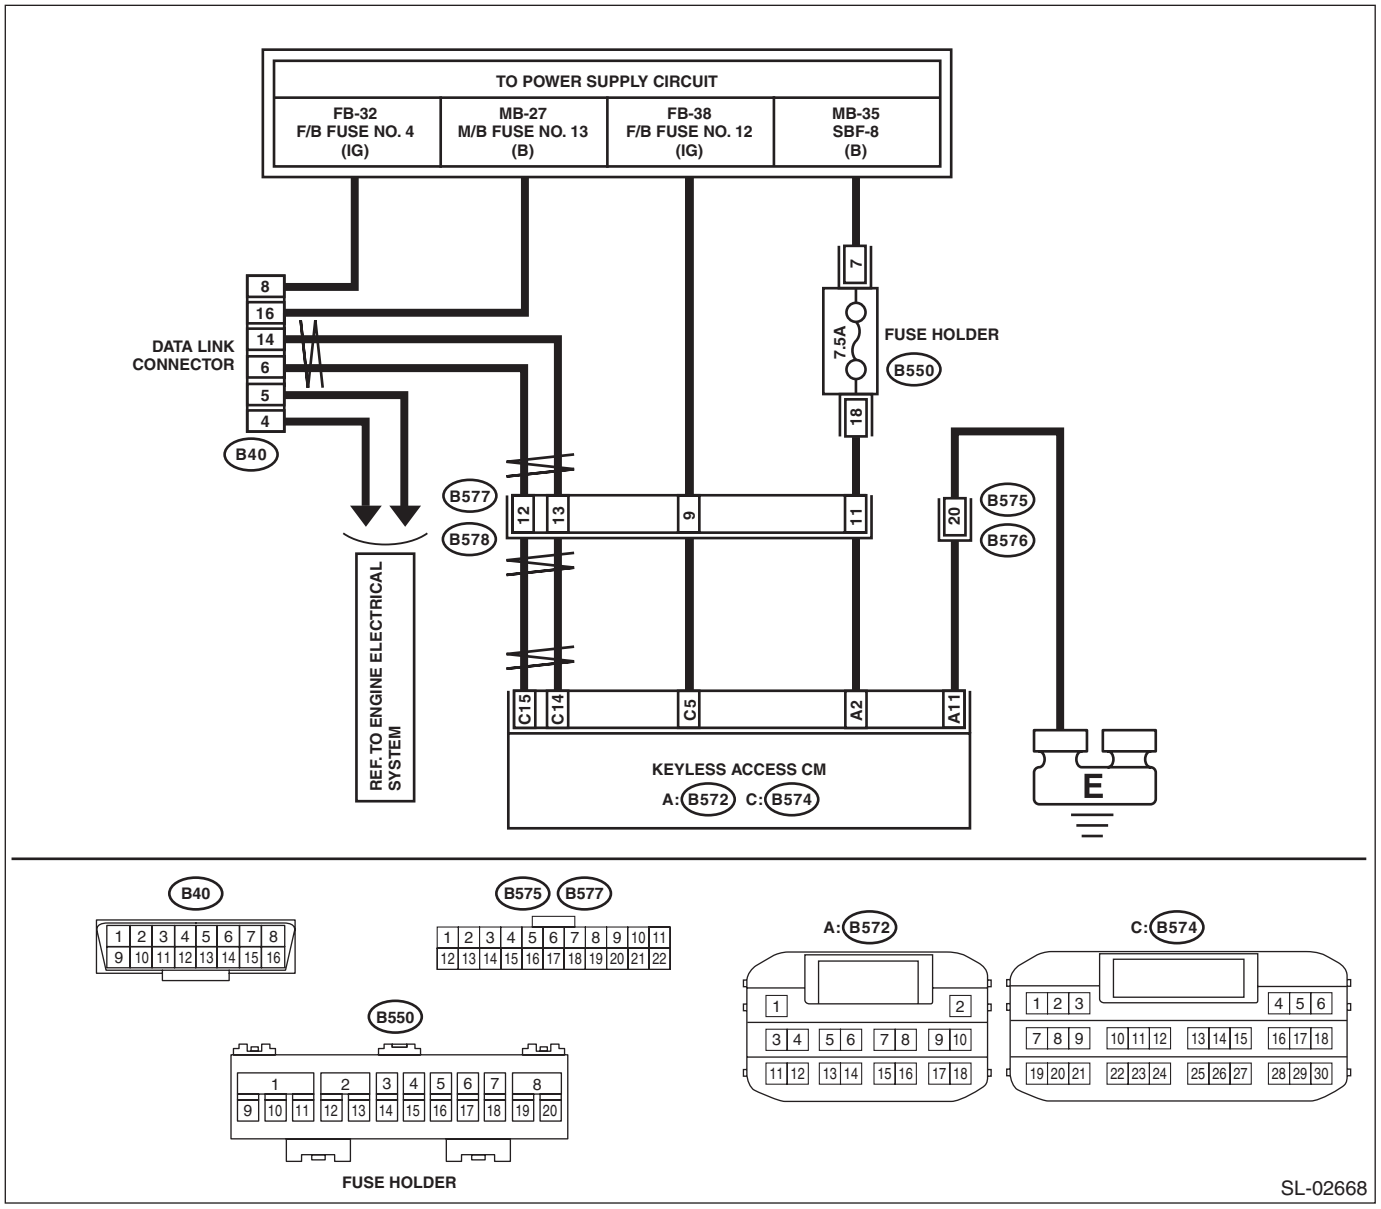
A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
Confirm that the LAN system is working properly before the diagnosis.
Subaru Select Monitor communication line is open or shorted.

DETECTING CONDITION:



- Defective harness
- Power supply circuit malfunction
- Defective keyless access CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

TROUBLE SYMPTOM:

Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:

- Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>
- CAN communication system <Ref. to WI(HEV)-64, WIRING DIAGRAM, CAN Communication System.>

Step		Check	Yes	No
1	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the keyless access system using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **2**.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(HEV)(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

Step		Check	Yes	No
2	**CHECK DTC.** Read the DTC of the LAN system using the Subaru Select Monitor. <Ref. to LAN(HEV)(diag)-29, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Perform communication with the keyless access system using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

8. Read Current Data

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

B: LIST

1. Keyless access system

Items to be displayed	Unit of measure	Remarks	Note
Driver’s unlock touch sensor switch	ON/OFF	Keyless access CM input value	ON when the touch sensor (unlock) built on the back surface of the driver’s door outer handle is touched
Passenger’s unlock touch sensor switch	ON/OFF	Keyless access CM input value	ON when the touch sensor (unlock) built on the back surface of the passenger’s door outer handle is touched
Driver’s lock touch sensor SW	ON/OFF	Keyless access CM input value	ON when the touch sensor (lock) built on the surface of the driver’s door outer handle is touched
Passenger’s lock touch sensor SW	ON/OFF	Keyless access CM input value	ON when the touch sensor (lock) built on the surface of the passenger’s door outer handle is touched
Rear Gate Request SW	ON/OFF	Keyless access CM input value	ON when rear lock button is pressed (5 door models only)
IGN SW	ON/OFF	Keyless access CM input value	ON when ignition is ON
B/up fuse	Connecting/Not connected	Keyless access CM internal value	When backup fuse is connected/connecting
ACC SW	ON/OFF	Keyless access CM input value	ON when accessory or ignition is ON
Incorrect vehicle ID	Yes/No	Keyless access CM internal value	Yes when the access key is different when keyless access is performed
No response	Yes/No	Keyless access CM internal value	Yes when there is no response from the access key when keyless access is performed
Incorrect response code, format	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Exhausted battery	Yes/No	Keyless access CM internal value	Yes if the access key battery is depleted
Incorrect response code, ID code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect response code, collation result	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect ID code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Incorrect rolling code	Yes/No	Keyless access CM internal value	Yes if the response from the access key differs when keyless access is performed
Smart Cancel	Cancel/Normal	Keyless access CM internal value	Cancel in the keyless access function stopped condition
ID Code Box W/H Connection State	Connecting/Not connected	Keyless access CM internal value	When ID code box is connected/connecting
ID Code Box Existence Judging	ON/OFF/Existence Judging	Keyless access CM internal value	
Immobilizer	Set/Unset	Keyless access CM internal value	
Remote engine starter communication ID confirmation	Collation NG/Collation OK	Keyless access CM internal value	

Items to be displayed	Unit of measure	Remarks	Note
Remote engine starter code registration confirmation	Unregistered/Registered	Keyless access CM internal value	
STLC sleep possible status	Possible/Impossible	Steering lock CM internal value	
STLC wake-up transmission status	Transmission/No transmission	Steering lock CM internal value	
Lock side sensor status	ON/OFF	Steering lock CM internal value	
Unlock side sensor status	ON/OFF	Steering lock CM internal value	
Lock confirmation	Confirmed/Unconfirmed	Steering lock CM internal value	Confirmed when steering lock is locked
Unlock confirmation	Confirmed/Unconfirmed	Steering lock CM internal value	Confirmed when steering lock is unlocked
Sensor initialization	Completed/Not Completed	Steering lock CM internal value	
Motor protection control status	Rejected range/Permitted range	Steering lock CM internal value	
Motor operation prohibition voltage evaluation	ON/OFF	Steering lock CM internal value	
Diagnosis response	Normal/Response	Steering lock CM internal value	
Sensor abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor power supply short-circuit abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor driver short-circuit abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Lock bar engagement abnormal	Normal/Abnormal	Steering lock CM internal value	ON when the steering lock bar has experienced interference
Push start abnormal	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Lock side relay operation	Stopped/Activating	Steering lock CM internal value	
Unlock side relay operation	Stopped/Activating	Steering lock CM internal value	
Motor drive FET drive	Stopped/Activating	Steering lock CM internal value	
Motor reversal protection control	Stopped/Activating	Steering lock CM internal value	
Engine start	Engine start permission/Engine start prohibition	Steering lock CM internal value	Permission when ignition ON
Sensor abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor power supply short-circuit abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Motor driver short-circuit abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
Steering lock lock/unlock command reception history	ON/OFF	Steering lock CM internal value	ON when steering lock is locked → unlocked, unlocked → locked
Lock bar engagement abnormal (past)	ON/OFF	Steering lock CM internal value	ON when the steering lock bar has experienced interference in the past
Push start abnormal (past)	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM

Items to be displayed	Unit of measure	Remarks	Note
STLC Abnormal EEPROM access	Normal/Abnormal	Steering lock CM internal value	Abnormal when a trouble occurs in steering lock CM
ID code BOX sleep possible status	Impossible/Possible	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	
ID code BOX wake-up transmission status	No transmission/ Transmission	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	
ID code BOX Abnormal EEPROM access (now)	Normal/Abnormal	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	
EGI code reception status	Reception/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception at engine start operation
Engine start permission request reception status	Reception/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception at ignition ON
Provisional injection request reception status	Reception/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception at ignition ON
Code collation result between smart ECM and ID code box	Normal/Abnormal	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Normal when engine start is allowed
Code collation result between steering locked ECM and ID code box	Normal/Abnormal	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Normal when steering lock operation allowed
Steering lock unlock request reception status	Reception (keep 10 sec)/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception when steering lock is performing unlock
Steering lock lock request reception status	Reception (keep 10 sec)/Not yet received	Keyless access CM internal value (models without ID code box) or ID code box internal value (models with ID code box)	Reception when steering lock is performing lock
Driver's external transmitter output circuit abnormal	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit
Passenger's external transmitter output circuit abnormal	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit
Driver's external transmitter output circuit abnormal (past)	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit in the past

Items to be displayed	Unit of measure	Remarks	Note
Passenger's external transmitter output circuit abnormal (past)	Normal/Abnormal	Keyless access CM internal value	Abnormal when a trouble occurs in transmitter output circuit in the past
ID code registration mode status	Normal/Regist./Deletion	—	For immobilizer registration
Smart related ECM code registration mode status	On mode/Normal		
ID code collation completion confirmation	Completed/Normal		
ID code registration completion confirmation	Completed/Normal		
Smart related ECM code registration completion confirmation	Completed/Normal		
Registered smart key confirmation status	Confirming/Normal		
Smart related ECM code confirmation status	Confirming/Normal		
ID code registration status	Registering/Normal		
ID code collation status	Normal/Collating the immobilizer/Collating the smart		
All registered keys confirmation status	Confirming/Normal		
Confirmed number of all registered keys	0 — 7		
Number of required registrations (smart)	0 — 7		
Number of collation completed (smart)	0 — 7		
Number of registration completed (smart)	0 — 7	Keyless access CM internal value	Number of recognized keyless access CM
ID Code Box	Connecting/Not connected	Keyless access CM internal value	Connecting with ID code box normal connection
Steering Lock ECM	Connecting/Not connected	Keyless access CM internal value	Connecting with steering lock CM normal connection

Items to be displayed	Unit of measure	Remarks	Note
Driver's lock request SW/ touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	The display is continued when the collation is once established by the combination indicated on the left. NOTE: When confirming the data on the left, confirm after performing the keyless access system check. <Ref. to KPS(diag)-33, Keyless Access System Check.>
Passenger's unlock request SW/touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	
Rear gate lock request SW ON edge history	ON/OFF	Keyless access CM internal value	
Driver's unlock touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	
Passenger's unlock touch sensor switch ON edge record	ON/OFF	Keyless access CM internal value	
Collation OK result history (driver's external transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (passenger's external transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (front interior transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (rear interior transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (rear gate internal transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (rear gate external transmitter + interior tuner)	ON/OFF	Keyless access CM internal value	
Collation OK result history (immobilizer amplifier + immobilizer amplifier)	ON/OFF	Keyless access CM internal value	
Push start SW 1	ON/OFF	Keyless access CM input value	ON when push button start is pressed
Push start SW 2	ON/OFF	Keyless access CM input value	ON when push button start is pressed
Stop light SW	ON/OFF	Keyless access CM input value	ON when brake pedal is depressed
Steering Unlock Switch	ON/OFF	Keyless access CM input value	OFF when steering locked
Shift P signal(AT only)	ON/OFF	Keyless access CM input value	ON when the shift position is "P"
Neutral SW/Clutch SW	ON/OFF	Keyless access CM output value	ON when the shift position is at "P" or "N"
Shift N signal(AT only)	ON/OFF	Keyless access CM input value	ON when the shift position is "N"
Delivery mode signal(AT only)	ON/OFF	Keyless access CM input value	
IGN2 relay monitor (drive output)	ON/OFF	Keyless access CM output value	ON during IG relay 2 (push button start) drive output
IGN1 relay monitor (drive output)	ON/OFF	Keyless access CM output value	ON during IG relay 1 (push button start) drive output
ACC relay monitor	ON/OFF	Keyless access CM output value	ON during accessory relay (push button start) drive output

Items to be displayed	Unit of measure	Remarks	Note
IGN2 relay monitor (coil voltage)	ON/OFF	Keyless access CM output value	ON during IG relay 2 (push button start) drive output
IGN1 relay monitor (coil voltage)	ON/OFF	ON during IG relay 1 (push button start) drive output	ON during IG relay 1 (push button start) drive output
IGN latch monitor	ON/OFF	Keyless access CM output value	ON during IG relay 2 (push button start) drive output
STSW signal monitor	ON/OFF	Keyless access CM output value	ON when brake pedal (except MT model) or clutch pedal (MT model) is depressed, and push button ignition switch is pressed
ACCR signal	ON/OFF	Keyless access CM input value	ON during starter relay drive output
Vehicle speed signal	Drive status/Stop status	Keyless access CM input value	Set as “Drive status” when vehicle speed is input
Engine Speed	Rotating/Stopped	Keyless access CM input value	Set as “Rotating” while the engine is running
Power supply status	All OFF status	Keyless access CM output value	Displayed when IG relay 1 (push button start), IG relay 2 (push button start), and accessory relay (push button start) are all OFF
	ACC relay ON status	Keyless access CM output value	Displayed when accessory ON
	IGN1 relay ON status	Keyless access CM output value	Displayed when ignition ON
	IGN2 relay ON status	Keyless access CM output value	Displayed when ignition ON
	STSW Condition	Keyless access CM output value	Displayed when brake pedal (except MT model) or clutch pedal (MT model) is depressed, and push button ignition switch is pressed
Vehicle identification	GAS MT/GAS AT/HEV AT/Auto Start Stop MT/Auto Start Stop AT	Keyless access CM output value	Equipped vehicle is displayed.
IGN1 external circuit abnormal	No/Yes	Keyless access CM output value	
IGN2 external circuit abnormal	No/Yes	Keyless access CM output value	
Start SW trouble	No/Yes	Keyless access CM output value	
P signal mismatch	No/Yes	Keyless access CM output value	
Steering lock unlock waiting time out	No/Yes	Keyless access CM output value	
Key collation waiting time out	No/Yes	Keyless access CM output value	

2. Body integrated unit

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the current data of the body integrated unit. <Ref. to BC(diag)-11, LIST, Read Current Data.>

9. Clear Memory Mode

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

NOTE:
Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

10.Keyless Access System Check

A: OPERATION

1) On «Main Menu» display, select {Each System Check}.
2) On «System Selection Menu» display, select {Keyless access system}.
3) On «Keyless access system» display, select {Work Support}.
4) Select {Function Check Sequence}.
5) Select {Keyless access system check}.
6) Select the transmitter to be checked and click [OK].
7) Select [Exit] to exit the system check. The screen will return to the «Keyless access system check» screen.

Data	Customize setting	Remarks
Keyless access system check	Driver side external transmitter - internal tuner	When the setting content on the left is selected, the access key is neared to the selected transmitter (access antenna) and collation matches, the buzzer will sound.
	Passenger side external transmitter - internal tuner	
	Fr internal transmitter - internal tuner	
	Rr internal transmitter - internal tuner	
	R gate internal transmitter - internal tuner	
	R gate external transmitter - internal tuner	
	Immobilizer amplifier transmission	
Collation result history Clear	Execution	
	—	

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

11.System Operation Check Mode

A: OPERATION

1) On «Main Menu» display, select {Each System Check}.
2) On «System Selection Menu» display, select {Keyless access system}.
3) On «Keyless access system» display, select {Work Support}.
4) Select {System Operation Check Mode}.
5) Select the check point and click [OK].
6) Select [Exit] to exit the drive item mode. The screen will return to the «Drive item» screen.

NOTE:
Each output check continues to run for five seconds before stopping automatically.

Data	Keyless access CM output check	Remarks
Tuner power supply ON (indoor tuner)	Output	Perform the power supply check for the receiver.
	Stop	
Driver's external transmitter	Output	Perform the output check for the driver's side door outside antenna.
	Stop	
Passenger's external transmitter	Output	Perform the output check for the passenger's side door outside antenna.
	Stop	
STSW	Output	Turn on the STSW. *2
	Stop	
IGN2	Output	Turn on the IGN2.
	Stop	
IGN1	Output	Turn on the IGN1.
	Stop	
ACC	Output	Turn on the ACC.
	Stop	
Start SW character illumination lighted	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (green)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Start SW indicator lighted (orange)	Output	Perform ON output of the push button ignition switch back-up light. *1
	Stop	
Steering lock power supply	Output	Output power supply signal from power supply CM to steering lock CM.
	Stop	

*1: When lit by a condition other than for a system operation check mode, it will not become unlit even when set to OFF or no output.
*2: When performed with ignition switch ON, engine will start. Therefore, great care must be exercised.

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

12.List of Diagnostic Trouble Code (DTC)

A: LIST

1. Keyless access system

DTC	Item	Content of diagnosis	Note
U0073	Control Module Communication Bus Off	Detected when CAN line abnormality is detected.	<Ref. to KPS(diag)-39, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	Lost Communication With ECM/PCM “A”	Detected when CAN data from the engine control module (ECM) does not arrive.	<Ref. to KPS(diag)-39, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	Lost Communication With TCM	Detected when CAN data from TCM does not arrive.	<Ref. to KPS(diag)-39, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	Lost Communication With Vehicle Dynamics Control Module	Detected when CAN data from VDC does not arrive.	<Ref. to KPS(diag)-39, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	Lost Communication With Body Control Module	Detected when CAN data from BIU does not arrive.	<Ref. to KPS(diag)-39, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	Detected when CAN data from meter does not arrive.	<Ref. to KPS(diag)-39, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM “A”	Detected when there is malfunction in CAN data from the engine control module (ECM).	<Ref. to KPS(diag)-39, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	Invalid Data Received From Body Control Module	Detected when CAN data from BIU is abnormal.	<Ref. to KPS(diag)-39, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1120	Lost Communication With Autostart Stop Control Module	Detected when CAN data from ISS unit does not arrive.	<Ref. to KPS(diag)-40, DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1242	Wireless Tuner Abnormal	When short circuit occurs in harness between keyless access CM and receiver.	<Ref. to KPS(diag)-41, DTC B1242 WIRELESS TUNER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2271	IGN Fuse Blown or IGN Circuit Abnormal	• When malfunction is detected in IG1 and IG2 drive circuits in the keyless access CM. • When malfunction is detected in IG hold circuit in the keyless access CM.	<Ref. to KPS(diag)-43, DTC B2271 IGN FUSE BLOWN OR IGN CIRCUIT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2274	ACC Monitor	When malfunction is detected in ACC relay drive circuit in the keyless access CM or external circuit.	<Ref. to KPS(diag)-45, DTC B2274 ACC MONITOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
B2275	STSW Circuit Abnormal	• When malfunction is detected in engine start permission signal output circuit in the keyless access CM. • When malfunction is detected in external engine start permission signal circuit.	<Ref. to KPS(diag)-47, DTC B2275 STSW CIRCUIT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2276	ACCR Signal Abnormal	When input error occurs in accessory relay cut input signal of keyless access CM.	<Ref. to KPS(diag)-49, DTC B2276 ACCR SIGNAL ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2277	Submerging Circuit Abnormal	When the water-submersion detection circuit integrated into the keyless access CM detects the water submersion.	<Ref. to KPS(diag)-51, DTC B2277 SUBMERGING CIRCUIT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2282	Vehicle Speed Signal Abnormal	When the vehicle speed signal transmitted from the combination meter via solid line and the vehicle speed signal transmitted via CAN communication line do not match.)	<Ref. to KPS(diag)-52, DTC B2282 VEHICLE SPEED SIGNAL ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2283	Vehicle Speed Sensor Fault Detection	Either of the following malfunctions is detected. (Vehicle speed sensor failure is detected.) • Vehicle speed signal failure detection 1: Excessive deceleration detection • Vehicle speed signal failure detection 2: Engine speed interlock detection	<Ref. to KPS(diag)-54, DTC B2283 VEHICLE SPEED SENSOR FAULT DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2284	Brake Signal (Cable-Information Does Not Match to Bean-Information)	When the brake signal transmitted via solid line and the brake signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-56, DTC B2284 BRAKE SIGNAL (CABLE-INFORMATION DOES NOT MATCH TO BEAN-INFORMATION), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2285	Steering Lock Position Signal Abnormal	When the steering lock position signal transmitted from the steering lock CM via solid line and the steering lock position signal transmitted via LIN communication system do not match.	<Ref. to KPS(diag)-58, DTC B2285 STEERING LOCK POSITION SIGNAL ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2286	Driving Possible Signal Abnormal	When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-61, DTC B2286 DRIVING POSSIBLE SIGNAL ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B228A	Sub-Travel Possible Signal Abnormal	When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.	<Ref. to KPS(diag)-63, DTC B228A SUB-TRAVEL POSSIBLE SIGNAL ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2779	Remote Control Engine Starter Communication Collation NG	When the keyless access CM does not respond to engine start even when the remote control engine starter is ON, or when there is a code mismatch.	<Ref. to KPS(diag)-65, DTC B2779 REMOTE CONTROL ENGINE STARTER COMMUNICATION COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
B2781	Steering Lock ECU Open/ Short	• When malfunction is detected in lock/unlock position detection sensor. • When the open or short circuit in the steering lock motor drive circuit is detected.	<Ref. to KPS(diag)-65, DTC B2781 STEERING LOCK ECU OPEN/SHORT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2782	Steering Lock Power Supply Circuit Abnormal (Smart ECU-Side Abnormal)	When the open or short circuit in the steering lock motor power supply circuit is detected.	<Ref. to KPS(diag)-66, DTC B2782 STEERING LOCK POWER SUPPLY CIRCUIT ABNORMAL (SMART ECU-SIDE ABNORMAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2784	Antenna Coil Fault	When open or short circuit occurs in the antenna coil.	<Ref. to KPS(diag)-68, DTC B2784 ANTENNA COIL FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2785	LIN Communication Error	When the keyless access CM detects the collation system LIN bus communication error three times in a row.	<Ref. to KPS(diag)-69, DTC B2785 LIN COMMUNICATION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2786	No Response From Steering Lock ECU	When communication between keyless access CM and steering lock CM is interrupted for a set amount of time.	<Ref. to KPS(diag)-71, DTC B2786 NO RESPONSE FROM STEERING LOCK ECU, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2788	IGN1 Input Abnormal	When mismatch occurs in the IG1 input of the steering lock CM between LIN communication line input and solid line input.	<Ref. to KPS(diag)-73, DTC B2788 IGN1 INPUT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2789	ID Code Box No Response	• When communication between keyless access CM and ID code box is interrupted for a set amount of time. • Open or short circuit in the wiring harness between keyless access CM and ID code box	<Ref. to KPS(diag)-75, DTC B2789 ID CODE BOX NO RESPONSE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B278A	Abnormal Immobilizer Power Supply	When the power supply circuit of the push button ignition switch is shorted to ground.	<Ref. to KPS(diag)-77, DTC B278A ABNORMAL IMMOBILIZER POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B278D	ID Code Box Recognition Judgment Abnormal	• When ID code box ON input is detected while the ID code box setting is set to OFF. • When ID code box LIN signal is received while the ID code box setting is set to OFF.	<Ref. to KPS(diag)-79, DTC B278D ID CODE BOX RECOGNITION JUDGMENT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2790	ID Code Box Abnormal (EEPROM Abnormal)	An error has occurred inside the ID code box.	<Ref. to KPS(diag)-80, DTC B2790 ID CODE BOX ABNORMAL (EEPROM ABNORMAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A1	Driver Side External Antenna Output Stage Open	When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle.	<Ref. to KPS(diag)-81, DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OUTPUT STAGE OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A2	Passenger Side External Antenna Output Stage Open	When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle.	<Ref. to KPS(diag)-83, DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OUTPUT STAGE OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A5	Front Internal Antenna Output Stage Open	When open circuit occurs in the harness between keyless access CM and front interior antenna.	<Ref. to KPS(diag)-85, DTC B27A5 FRONT INTERNAL ANTENNA OUTPUT STAGE OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
B27A6	Rear Internal Antenna Output Stage Open	When open circuit occurs in the harness between keyless access CM and rear interior antenna.	<Ref. to KPS(diag)-87, DTC B27A6 REAR INTERNAL ANTENNA OUTPUT STAGE OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A7	Trunk/Rear Gate Internal Antenna Output Stage Open	When open circuit occurs in the harness between keyless access CM and rear interior antenna.	<Ref. to KPS(diag)-89, DTC B27A7 TRUNK/ REAR GATE INTERNAL ANTENNA OUTPUT STAGE OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B27A8	Trunk/Rear Gate External Antenna Output Stage Open	When open circuit occurs in the harness between keyless access CM and rear exterior antenna.	<Ref. to KPS(diag)-91, DTC B27A8 TRUNK/ REAR GATE EXTERNAL ANTENNA OUTPUT STAGE OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. Immobilizer (ECM)

DTC	Item	Content of diagnosis	Note
B1571	Reference Code Incompatibility	Reference code incompatibility between keyless access CM (models without ID code box) or ID code box (models with ID code box) and ECM	<Ref. to KPS(diag)-93, DTC B1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM Circuit Failure (Except Antenna Circuit)	Communication error between keyless access CM (models without ID code box) or ID code box (models with ID code box) and ECM	<Ref. to KPS(diag)-94, DTC B1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI Control Module EEPROM	ECM malfunctioning	<Ref. to KPS(diag)-97, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM Control Module EEPROM	Malfunction in keyless access CM (models without ID code box) or ID code box (models with ID code box)	<Ref. to KPS(diag)-97, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

Detected when there is malfunction in CAN data from the engine control module (ECM).

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

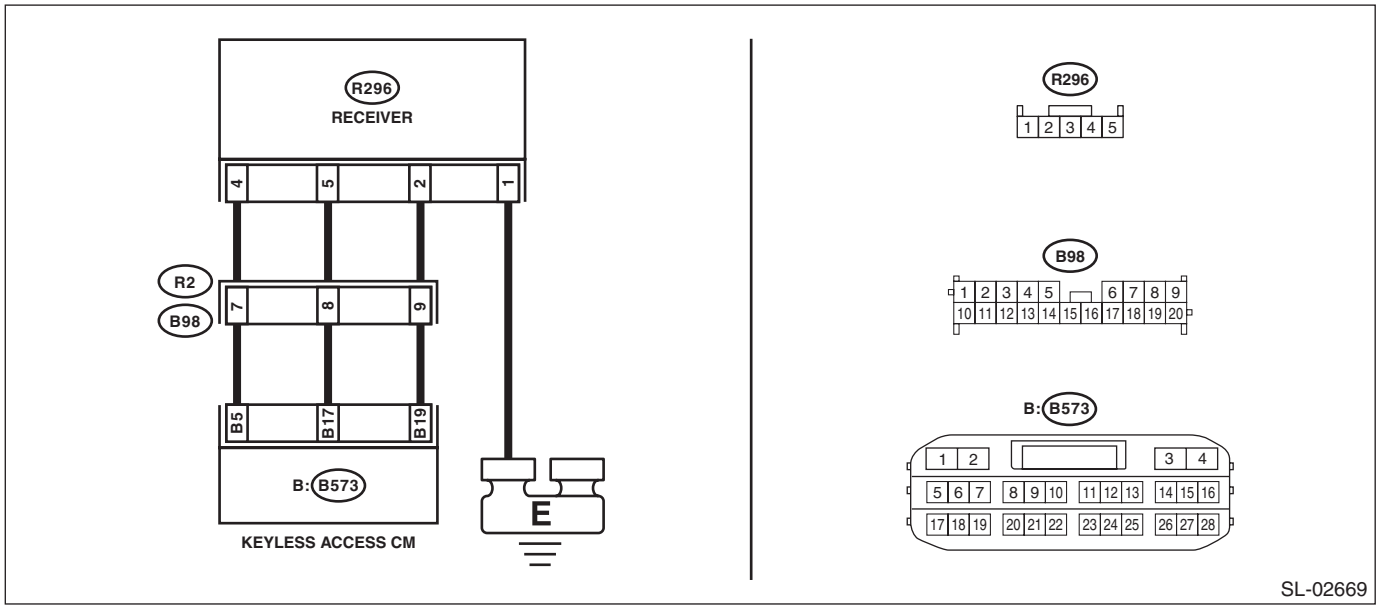
H: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data from BIU is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

This is detected when CAN data from hybrid system is abnormal.



NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC B1242 WIRELESS TUNER ABNORMAL

DTC DETECTING CONDITION:
When short circuit occurs in harness between keyless access CM and receiver.
TROUBLE SYMPTOM:
- The keyless access with push button start function (except for emergency function) does not operate properly.
- Operation by the access key button does not function.

CAUTION:
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **When the harness comes close to the receiver, the performance of keyless access system operation and wireless operation may reduce. So, when replacing or inspecting the receiver and harness, do not change the route and length of the surrounding harnesses.**

WIRING DIAGRAM:
Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the receiver connector. 3) Using the tester, measure the resistance between terminals of keyless access CM connector and receiver connector, and keyless access CM and chassis ground. ***Connector & terminal*** ***(B573) No. 19 — (R296) No. 2:*** ***(B573) No. 17 — (R296) No. 5:*** ***(B573) No. 5 — (R296) No. 4:*** ***(R296) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

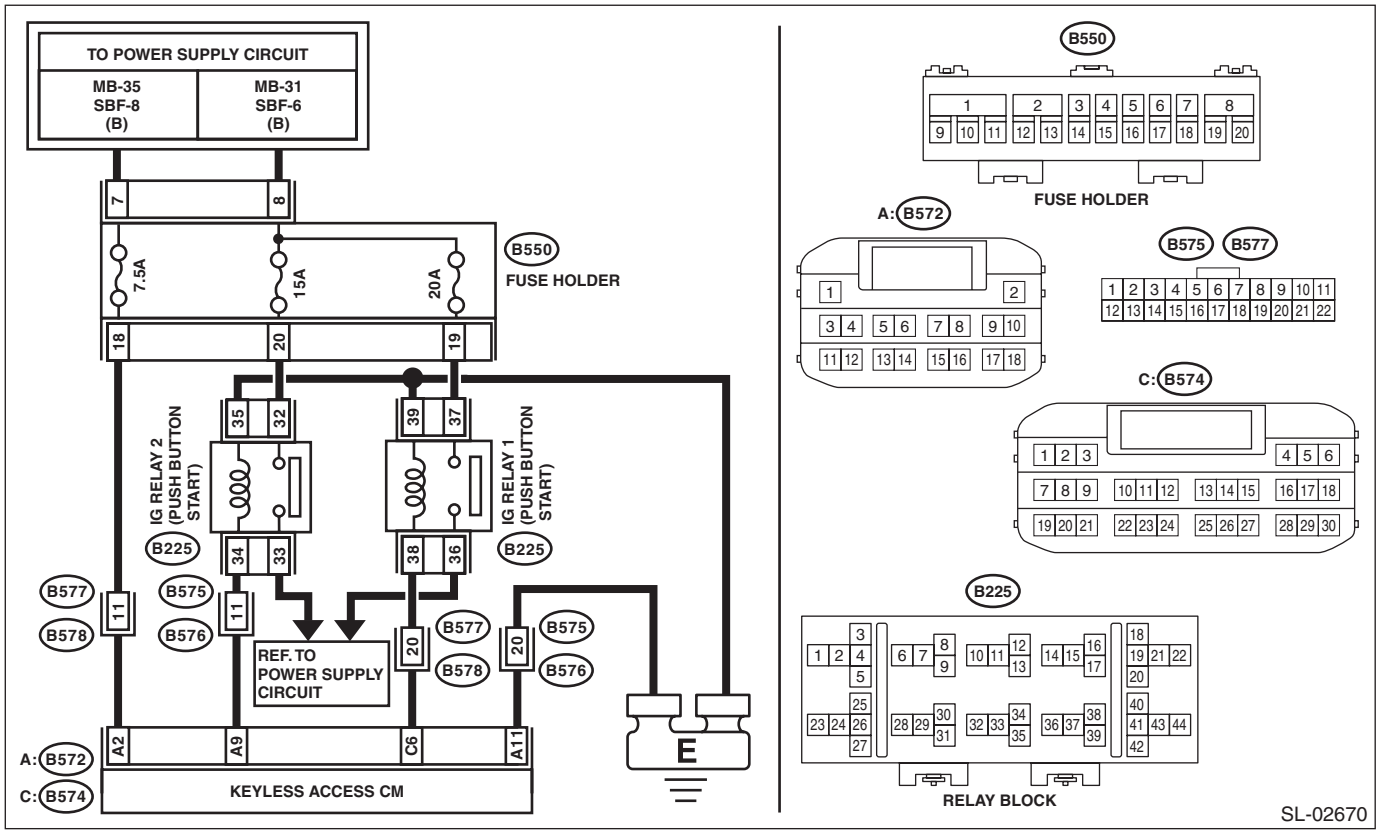
	Step	Check	Yes	No
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 19 — Chassis ground:*** ***(B573) No. 17 — Chassis ground:*** ***(B573) No. 5 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK RECEIVER.** 1) Replace the receiver, and then connect it. <Ref. to SL-101, Receiver.> 2) Using the Subaru Select Monitor, clear the memory. 3) Use the Subaru Select Monitor and read DTCs.	Is B1242 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Receiver has a malfunction.

K: DTC B2271 IGN FUSE BLOWN OR IGN CIRCUIT ABNORMAL

DTC DETECTING CONDITION:

- When malfunction is detected in IG1 and IG2 drive circuits in the keyless access CM.
- When malfunction is detected in IG hold circuit in the keyless access CM.

TROUBLE SYMPTOM:



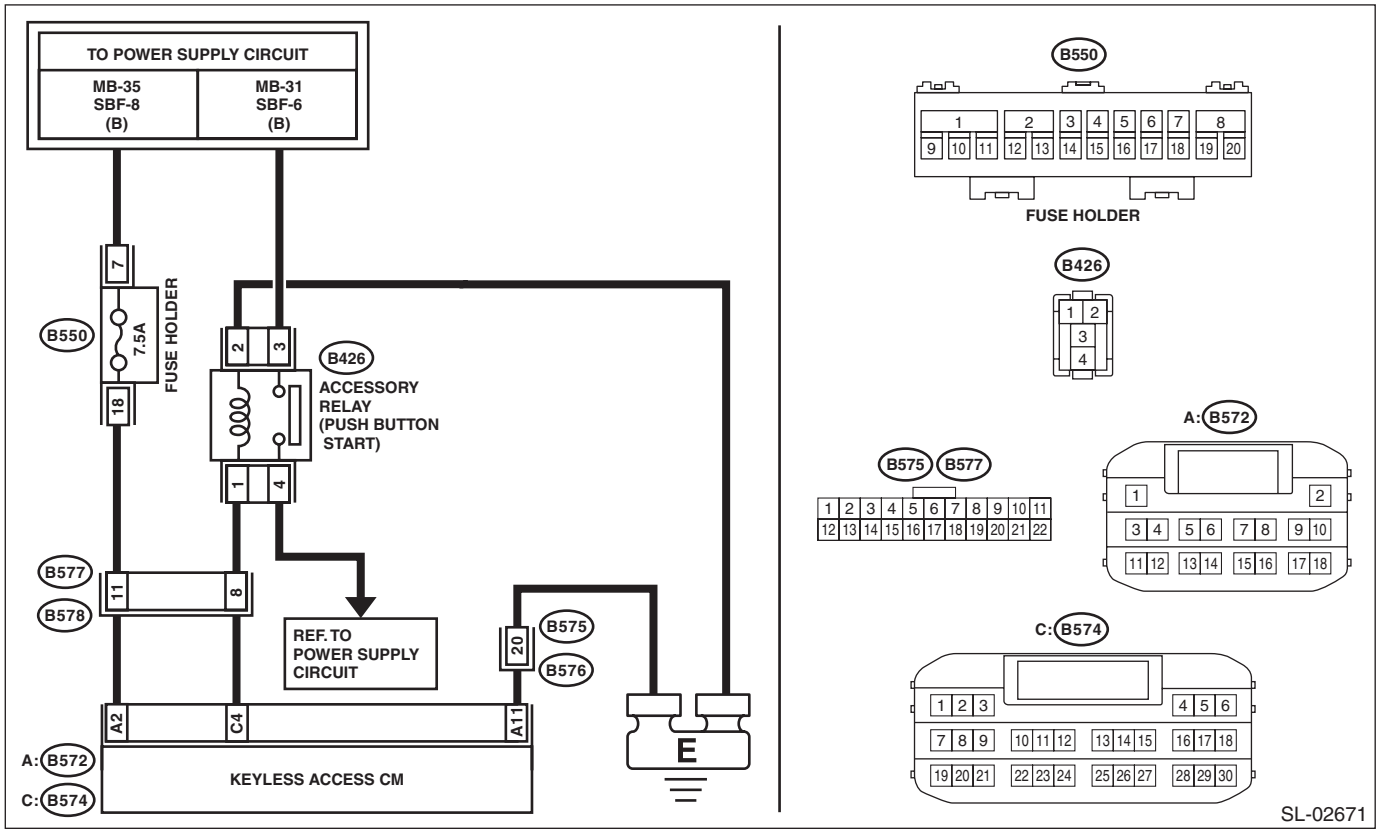
Not all functions operate at IGN ON.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 9 — Chassis ground:***	Is resistance 128 — 157 Ω? (20°C)	Go to step **6**.	Check IG relay 2. Go to step **7**.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 6 — Chassis ground:***	Is resistance 128 — 157 Ω? (20°C)	Go to step **8**.	Check IG relay 1. Go to step **7**.
7	**CHECK RELAY.** Perform unit inspection of IG relay 1 and IG relay 2. <Ref. to SL-11, CHECK RELAY, INSPECTION, Relay and Fuse.>	Is the relay OK?	Go to step **8**.	Replace the relay. <Ref. to SL-111, REMOVAL, IG Relay1 (Push Button Start).> <Ref. to SL-113, REMOVAL, IG Relay2 (Push Button Start).>
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the terminals of keyless access CM connector. ***Connector & terminal*** ***(B574) No. 6 (+) — Chassis ground (–):*** ***(B572) No. 9 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when ACC → IGN ON?	System is normal. It is possible that temporary poor contact occurs.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>

L: DTC B2274 ACC MONITOR

DTC DETECTING CONDITION:
When malfunction is detected in ACC relay drive circuit in the keyless access CM or external circuit.
TROUBLE SYMPTOM:
Each function does not operate at the ACC position.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Remove the fuse.	Is the fuse OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.

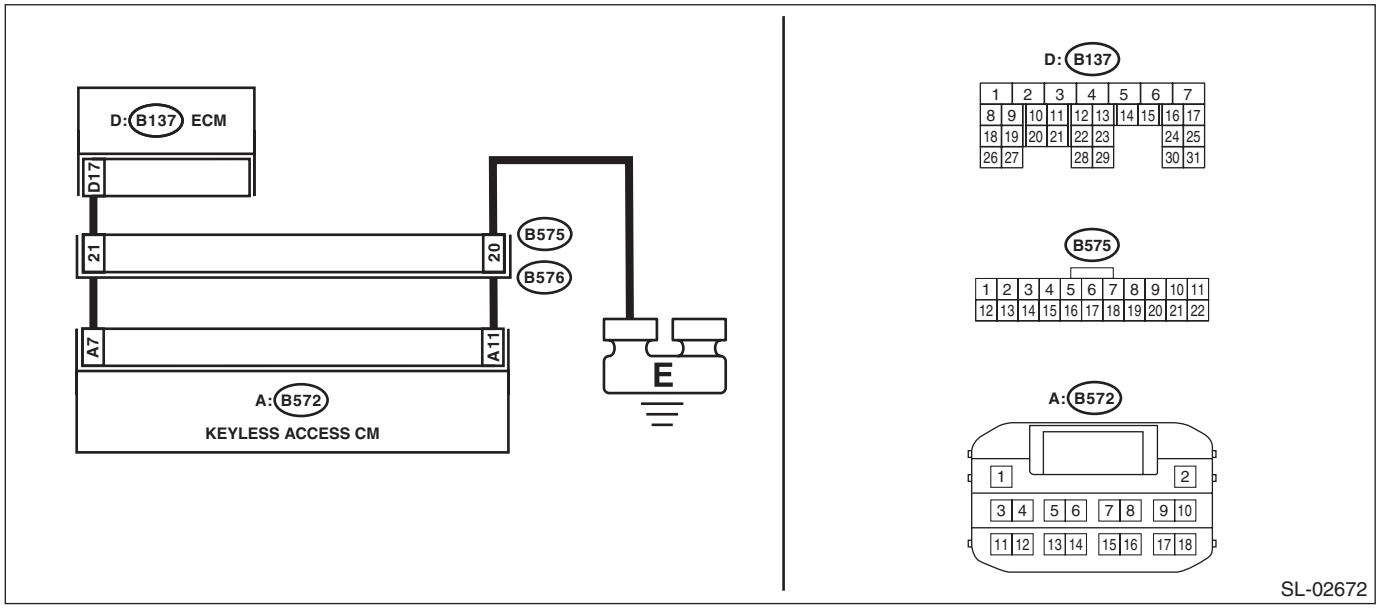
	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:***	Is resistance 128 — 157 Ω? (20°C)	Go to step **7**.	Go to step **6**.
6	**CHECK RELAY.** Perform inspection of ACC relay unit. <Ref. to SL-115, Accessory Relay (Push Button Start).>	Is the relay OK?	Go to step **7**.	Replace the relay.
7	**CHECK HARNESS.** Using a tester, measure the resistance between keyless access CM connectors. ***Connector & terminal*** ***(B574) No. 4 — (B426) No. 2:*** ***(B426) No. 3 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when OFF → ACC ON?	System is normal. It is possible that temporary poor contact occurs.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

M: DTC B2275 STSW CIRCUIT ABNORMAL

DTC DETECTING CONDITION:

- When malfunction is detected in engine start permission signal output circuit in the keyless access CM.
- When malfunction is detected in external engine start permission signal circuit.

TROUBLE SYMPTOM:



Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Remove the fuse.	Is the fuse OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(B572) No. 7 — (B137) No. 17:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 7 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Using a tester, measure the voltage between the terminals of keyless access CM connector. ***Connector & terminal*** ***(B572) No. 7 (+) — (B572) No. 11 (–):***	Is the voltage 2 V or less → 9 V or more when the push button ignition switch is turned on while depressing the brake pedal with the shift position in P or N?	Perform inspection according to the diagnosis of engine. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

N: DTC B2276 ACCR SIGNAL ABNORMAL

DTC DETECTING CONDITION:
When input error occurs in accessory relay cut input signal of keyless access CM.
TROUBLE SYMPTOM:
- The accessory power supply is not cut during engine start.
- Starter rotation is slow.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(B573) No. 28 — (B135) No. 32:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 28 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Using a tester, measure the voltage between terminals of the keyless access CM connector when the push button ignition switch is pressed, while depressing the brake pedal with the shift lever in the “P” range. ***Connector & terminal*** ***(B573) No. 28 (+) — (B572) No. 11 (–):***	Is the voltage 9.5 — 16 V → 1 V or less?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the ECM. <Ref. to FU(H4DO(HEV))-85, REMOVAL, Engine Control Module (ECM).>

O: DTC B2277 SUBMERGING CIRCUIT ABNORMAL

DTC DETECTING CONDITION:

When the water-submersion detection circuit integrated into the keyless access CM detects the water submersion.

TROUBLE SYMPTOM:

- The ignition can be turned ON, but cannot be turned OFF.
- Engine will not start.

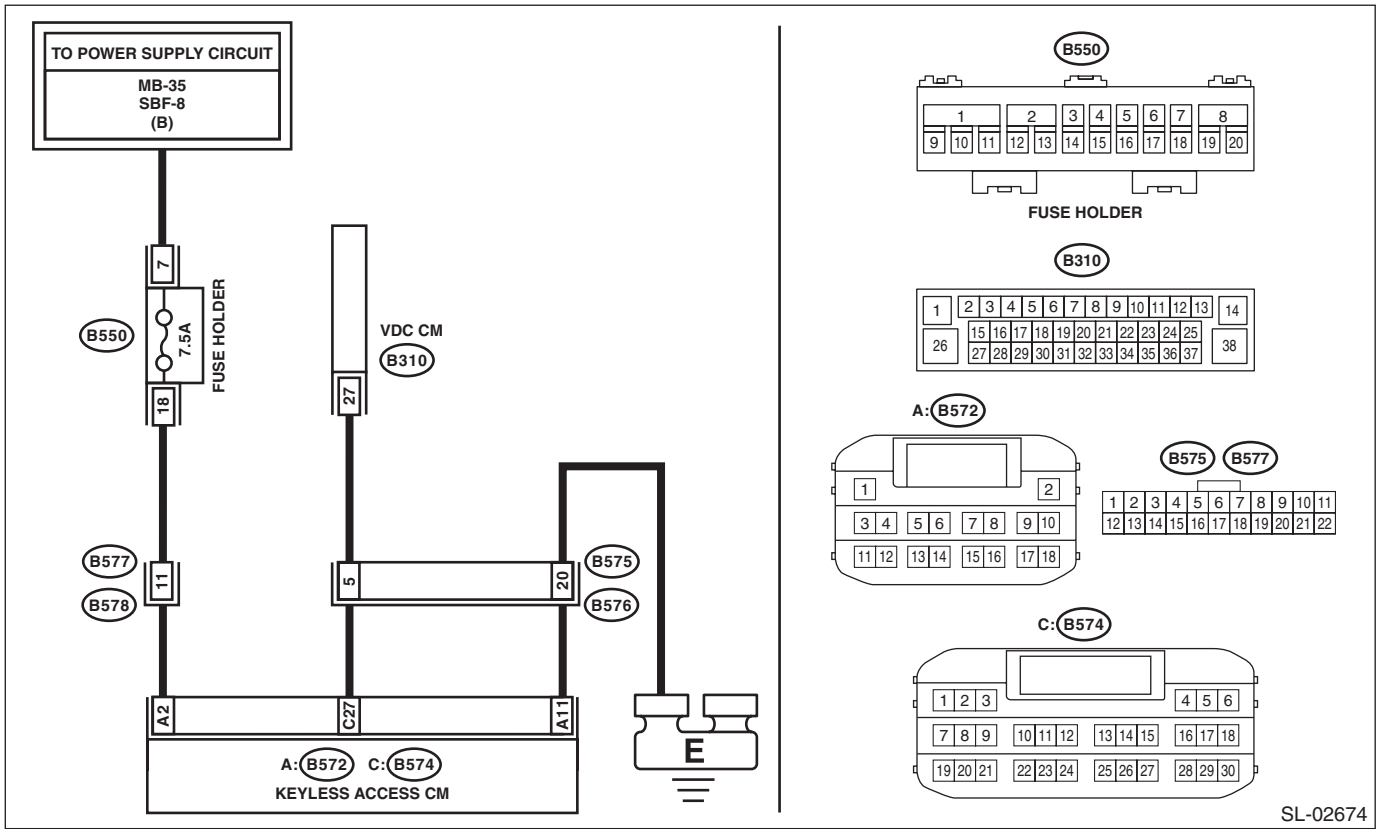
CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK SUBMERSION CONDITION.** Check the keyless access CM and environment of equipment, and check the harness for any trace of water submersion.	Is there any trace of water submersion?	Take necessary measures against water submersion and replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

P: DTC B2282 VEHICLE SPEED SIGNAL ABNORMAL

DTC DETECTING CONDITION:



When the vehicle speed signal transmitted from VDC via solid line and the vehicle speed signal transmitted via CAN communication line do not match.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally.	Is the meter display normal?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
3	**CHECK CURRENT DATA.** Confirm the current data display of keyless access system using Subaru Select Monitor. • Vehicle speed signal	Is the parked state or driving state displayed normally?	Go to step **4**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
4	**CHECK FUSE.** Remove the fuse.	Is the fuse OK?	Go to step **5**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **6**.	Check the power supply circuit.
6	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the combination meter connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***(B574) No. 27 — (B310) No. 27:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **9**.	Repair or replace the short circuit of the harness.
9	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the terminals of keyless access CM. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven approx. at 5 km/h?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

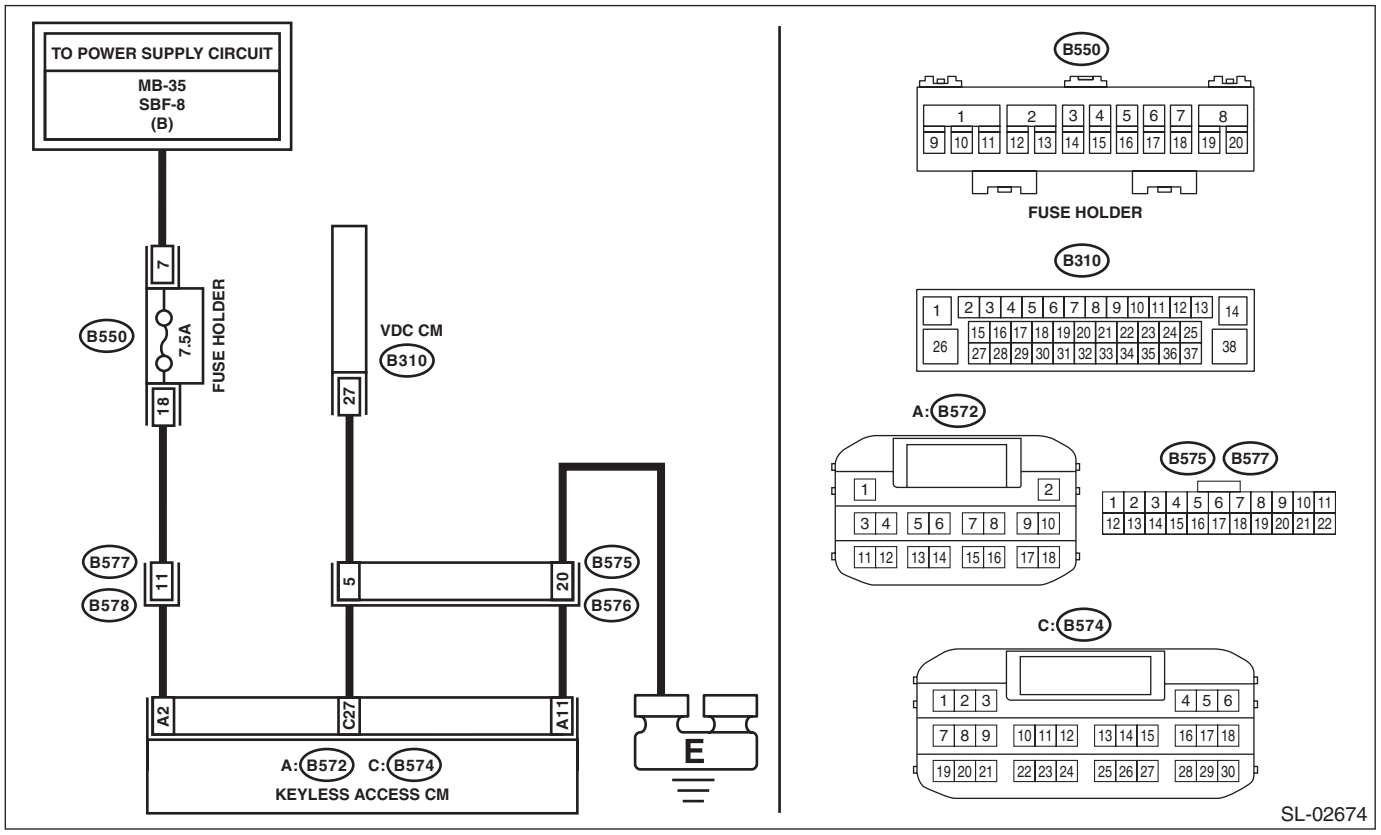
Q: DTC B2283 VEHICLE SPEED SENSOR FAULT DETECTION

DTC DETECTING CONDITION:

Either of the following malfunctions is detected (Vehicle speed sensor failure is detected.).

- Vehicle speed signal failure detection 1: Excessive deceleration detection
- Vehicle speed signal failure detection 2: Engine speed interlock detection

TROUBLE SYMPTOM:



The steering lock cannot be released.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

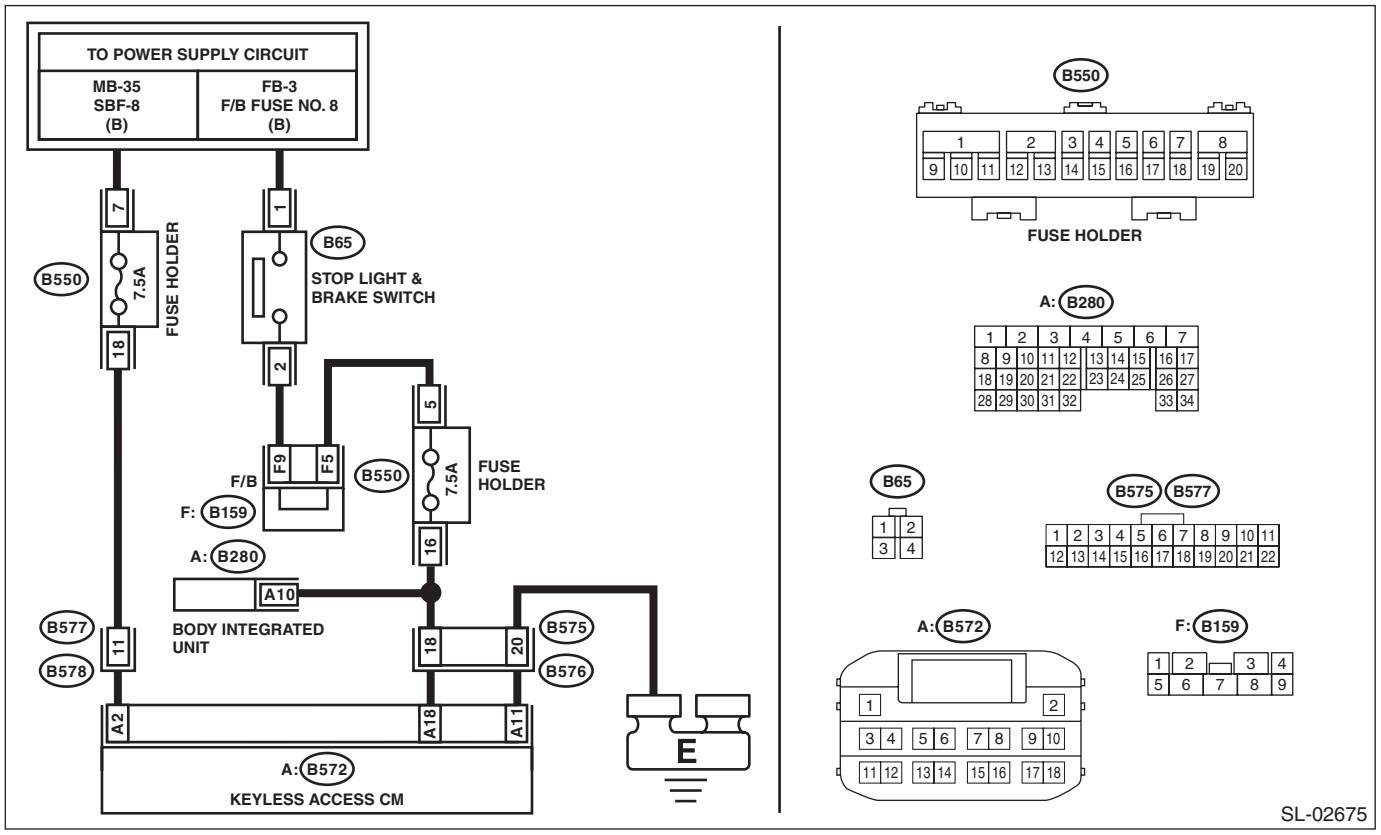
Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally. • Vehicle speed signal	Is the meter display normal?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
3	**CHECK CURRENT DATA.** Confirm the current data display of keyless access system using Subaru Select Monitor. • Vehicle speed signal	Is the parked state or driving state displayed normally?	Go to step **4**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
4	**CHECK FUSE.** Remove the fuse.	Is the fuse OK?	Go to step **5**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **6**.	Check the power supply circuit.
6	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the combination meter connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***(B574) No. 27 — (B310) No. 27:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **9**.	Repair or replace the short circuit of the harness.
9	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the terminals of keyless access CM. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven approx. at 5 km/h?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC B2284 BRAKE SIGNAL (CABLE-INFORMATION DOES NOT MATCH TO BEAN-INFORMATION)

DTC DETECTING CONDITION:

When the brake signal transmitted via solid line and the brake signal transmitted via CAN communication line do not match.



TROUBLE SYMPTOM:

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Stop light system <Ref. to WI(HEV)-208, WIRING DIAGRAM, Stop Light System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CURRENT DATA.** Confirm the current data display of keyless access system using Subaru Select Monitor. • Stop light SW	Is DTC displayed normally according to the brake pedal operation?	Go to step **3**.	Check the stop light system.
3	**CHECK CURRENT DATA.** Check the current data display of body integrated unit using Subaru Select Monitor. • Stop light SW	Is DTC displayed normally according to the brake pedal operation?	Go to step **4**.	Check body integrated unit <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> and the stop light switch circuit.

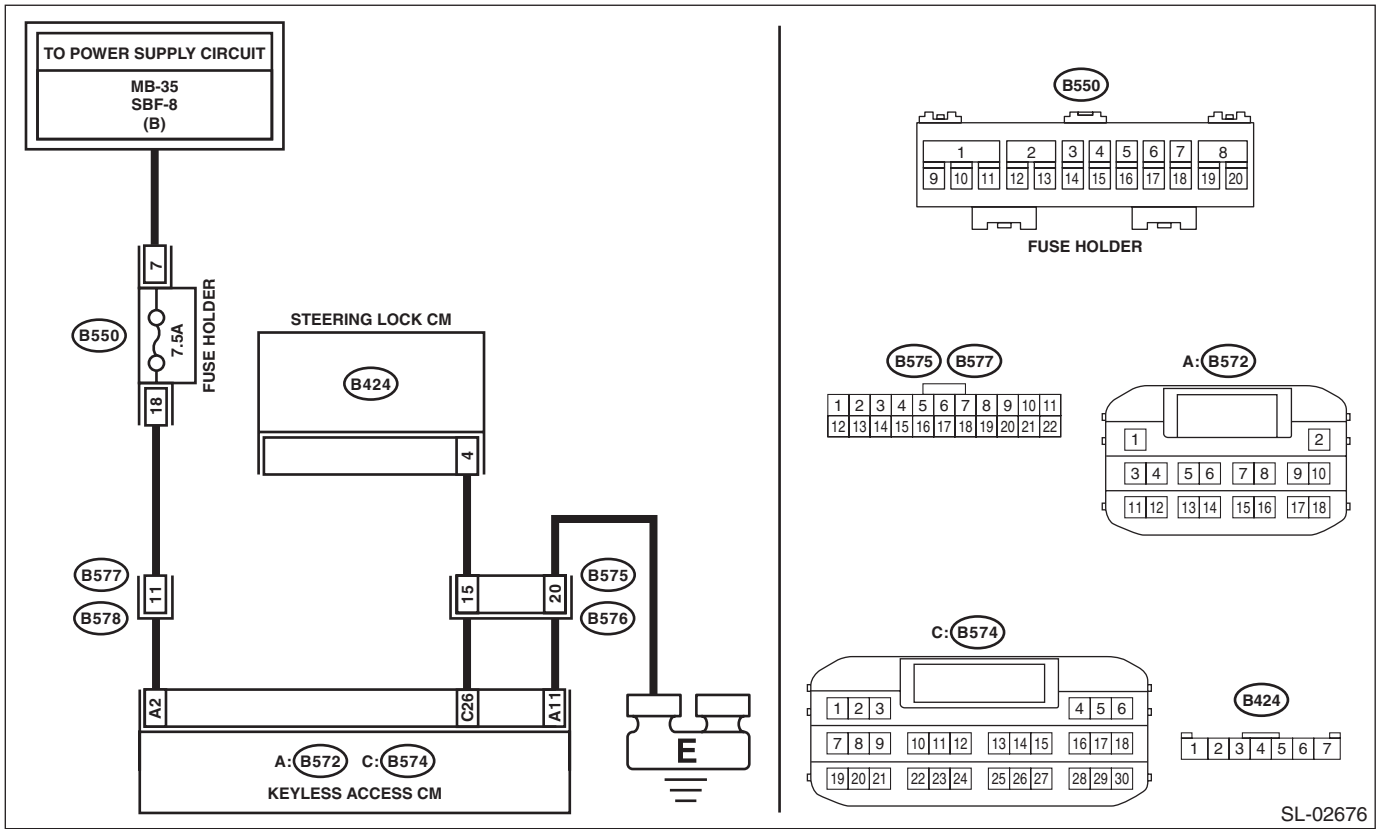
	Step	Check	Yes	No
4	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **5**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **6**.	Check the power supply circuit.
6	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** 1) Disconnect the stop light switch connector. 2) Using a tester, measure the resistance between the keyless access CM connector and stop light switch connector. ***Connector & terminal*** ***(B572) No. 18 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 18 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **9**.	Repair or replace the short circuit of the harness.
9	**CHECK HARNESS.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the brake pedal is depressed. ***Connector & terminal*** ***(B572) No. 18 (+) — Chassis ground (–):***	Does the voltage change as follows? Brake pedal not depressed: 1 V or less → Brake pedal depressed: 11 — 14 V	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Check the power supply circuit of stop light switch.

S: DTC B2285 STEERING LOCK POSITION SIGNAL ABNORMAL

DTC DETECTING CONDITION:

When the steering lock position signal transmitted from the steering lock CM via solid line and the steering lock position signal transmitted via LIN communication system do not match.

TROUBLE SYMPTOM:



- There are conditions when the steering lock is not released.
- Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK DTC.** Use the Subaru Select Monitor and read DTCs.	Is B2785 displayed?	Perform the inspection according to B2785. <Ref. to KPS(diag)-69, DTC B2785 LIN COMMUNICATION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CURRENT DATA.** Confirm the current data display of keyless access system using Subaru Select Monitor. When locked: • Lock side sensor status: ON • Unlock side sensor status: OFF • Lock confirmation: Confirmed • Unlock confirmation: Not confirmed When unlocked: • Lock side sensor status: OFF • Unlock side sensor status: ON • Lock confirmation: Not confirmed • Unlock confirmation: Confirmed NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Go to step **4**.	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>
4	**CHECK CURRENT DATA.** Confirm the current data display of keyless access system using Subaru Select Monitor. When locked: • Steering unlock switch: OFF When unlocked: • Steering unlock switch: ON NOTE: To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Go to step **5**.
5	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **6**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **7**.	Check the power supply circuit.
7	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 4 — Chassis ground:***	Does the following occur? Steering lock: 10 kΩ or more → Steering unlock: less than 1 Ω	Go to step **9**.	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>

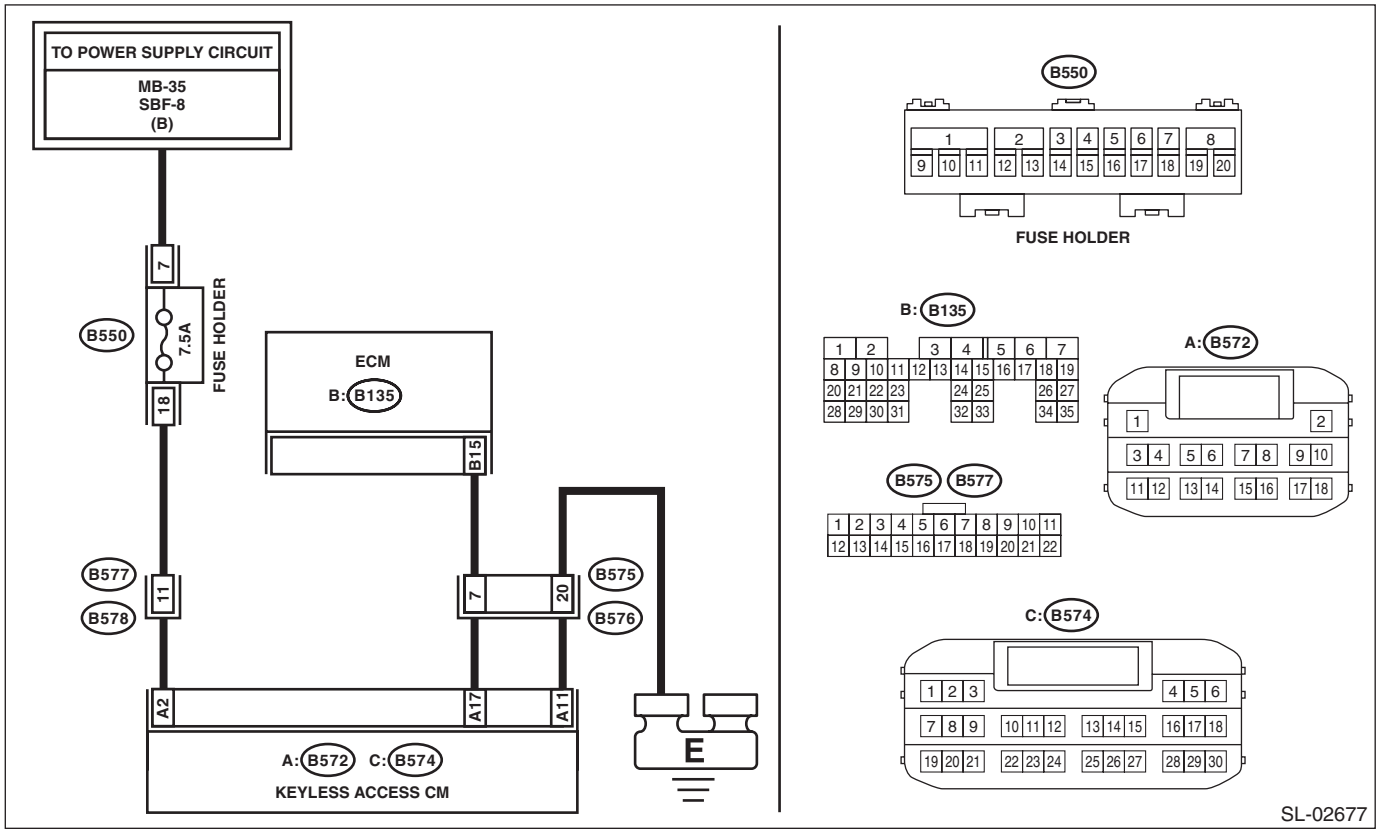
	Step	Check	Yes	No
9	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and steering lock CM. ***Connector & terminal*** ***(B574) No. 26 — (B424) No. 4:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 26 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the short circuit of the harness.

T: DTC B2286 DRIVING POSSIBLE SIGNAL ABNORMAL

DTC DETECTING CONDITION:

When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.

TROUBLE SYMPTOM:



Cannot start the engine, or the engine stops after starting.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CURRENT DATA.** Confirm the current data display of keyless access system using Subaru Select Monitor. • Engine speed	Can the data be read normally?	Perform the diagnosis for the engine. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step **3**.

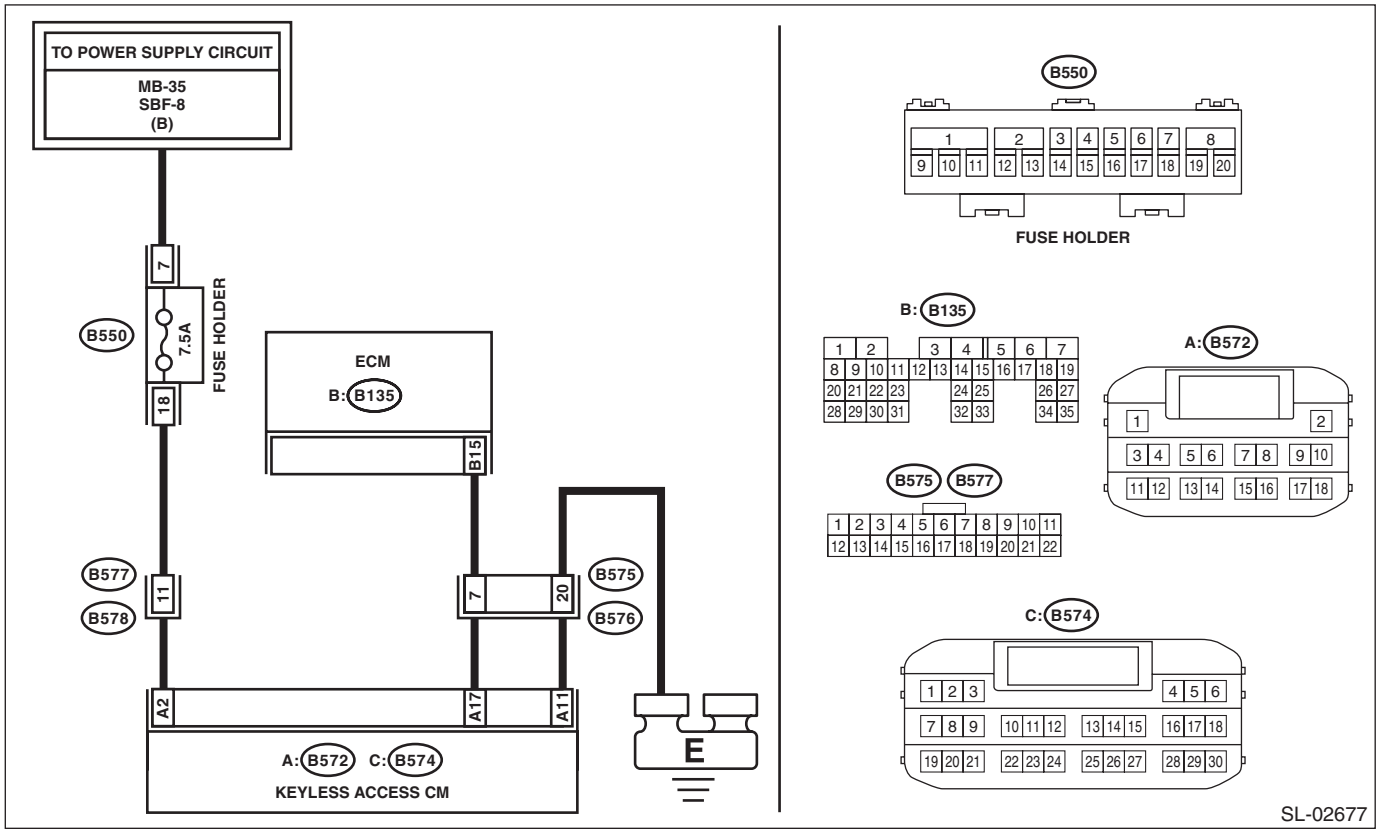
	Step	Check	Yes	No
3	**CHECK FUSE.** Remove the fuse.	Is the fuse OK?	Go to step **4**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **5**.	Check the power supply circuit.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***(B572) No. 17 — (B135) No. 15:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** 1) Connect the keyless access CM connector and ECM connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

U: DTC B228A SUB-TRAVEL POSSIBLE SIGNAL ABNORMAL

DTC DETECTING CONDITION:

When the engine speed signal transmitted from the ECM via solid line and the engine speed signal transmitted via CAN communication line do not match.

TROUBLE SYMPTOM:



Cannot start the engine, or the engine stops after starting.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CURRENT DATA.** Confirm the current data display of keyless access system using Subaru Select Monitor. • Engine speed	Can the data be read normally?	Perform the diagnosis for the engine. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK FUSE.** Remove the fuse.	Is the fuse OK?	Go to step **4**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between keyless access CM connectors. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **5**.	Check the power supply circuit.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***(B572) No. 17 — (B135) No. 15:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS.** 1) Connect the keyless access CM connector and ECM connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 17 — Chassis ground:***	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(H4DO HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC B2779 REMOTE CONTROL ENGINE STARTER COMMUNICATION COLLATION NG

DTC DETECTING CONDITION:
When the keyless access CM does not respond to engine start even when the remote control engine starter is ON, or when there is a code mismatch.
TROUBLE SYMPTOM:
Remote engine starter does not function.

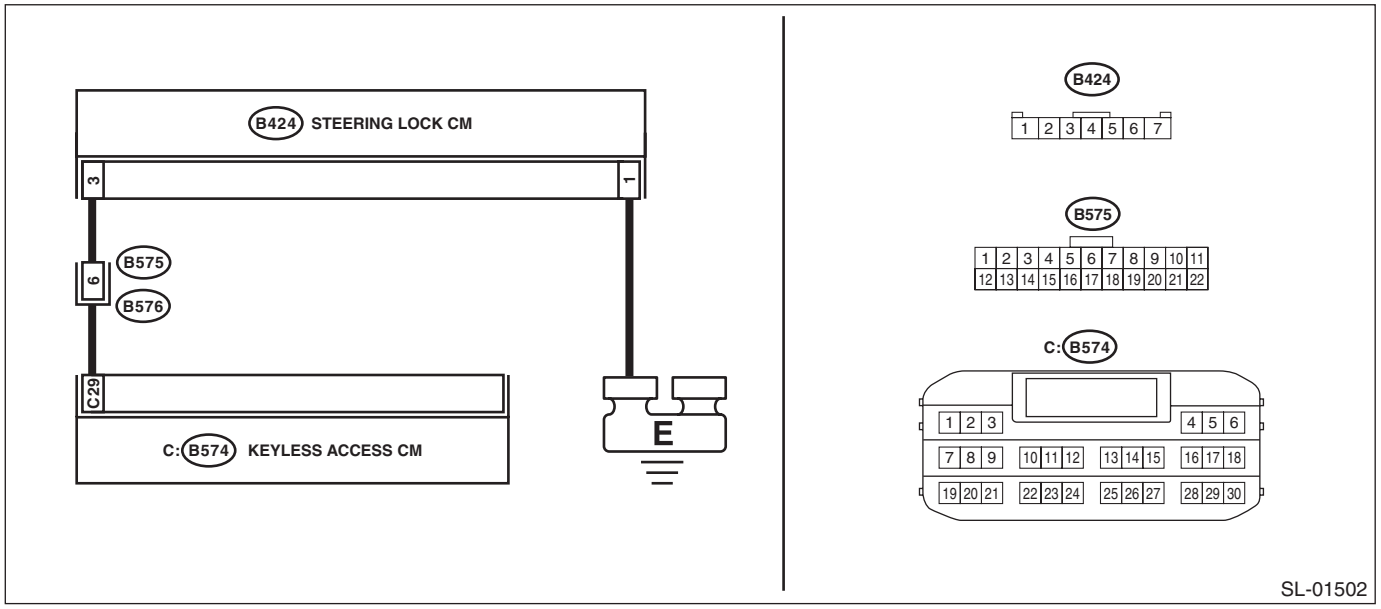
	Step	Check	Yes	No
1	**REGISTER THE REMOTE ENGINE STARTER.** 1) Clear the DTC. 2) Register the remote engine starter using the Subaru Select Monitor. (Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".) 3) Read the DTC again.	Is DTC B2779 detected?	Replace the remote engine starter.	System is normal. It is possible that temporary poor contact occurs.

W: DTC B2781 STEERING LOCK ECU OPEN/SHORT

DTC DETECTING CONDITION:
- When malfunction is detected in lock/unlock position detection sensor.
- When the open or short circuit in the steering lock motor drive circuit is detected.

TROUBLE SYMPTOM:
- The steering lock cannot be released.
- Engine will not start.

CAUTION:
For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".



NOTE:
When all ECMs connected to collation system LIN bus cannot communicate with the keyless access CM, DTC B2785 is output.

	Step	Check	Yes	No
1	**CHECK DTC.** Use the Subaru Select Monitor and read DTCs.	Is B2785 displayed?	Perform the diagnosis according to DTC.	Replace the steering lock CM. <Ref. to SL-105, Steering Lock CM.>

X: DTC B2782 STEERING LOCK POWER SUPPLY CIRCUIT ABNORMAL (SMART ECU-SIDE ABNORMAL)

DTC DETECTING CONDITION:
When the open or short circuit in the steering lock motor power supply circuit is detected.
TROUBLE SYMPTOM:
- The steering lock cannot be released.
- Engine will not start.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK STEERING LOCK CM.** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK CURRENT DATA.** 1) Connect the steering lock CM connector. 2) Set to ACC OFF, IGN OFF, and the shift position P. 3) Using a tester, open the door, and measure the voltage between terminals of steering CM connector when the steering lock motor is driven. ***Connector & terminal*** ***(B424) No. 3 (+) — (B424) No. 1 (–):***	Does the voltage change as follows? Steering lock motor in operation: 1 V or less → Steering lock motor is stopped: 11 — 14 V	Go to step **3**.	Go to step **4**.

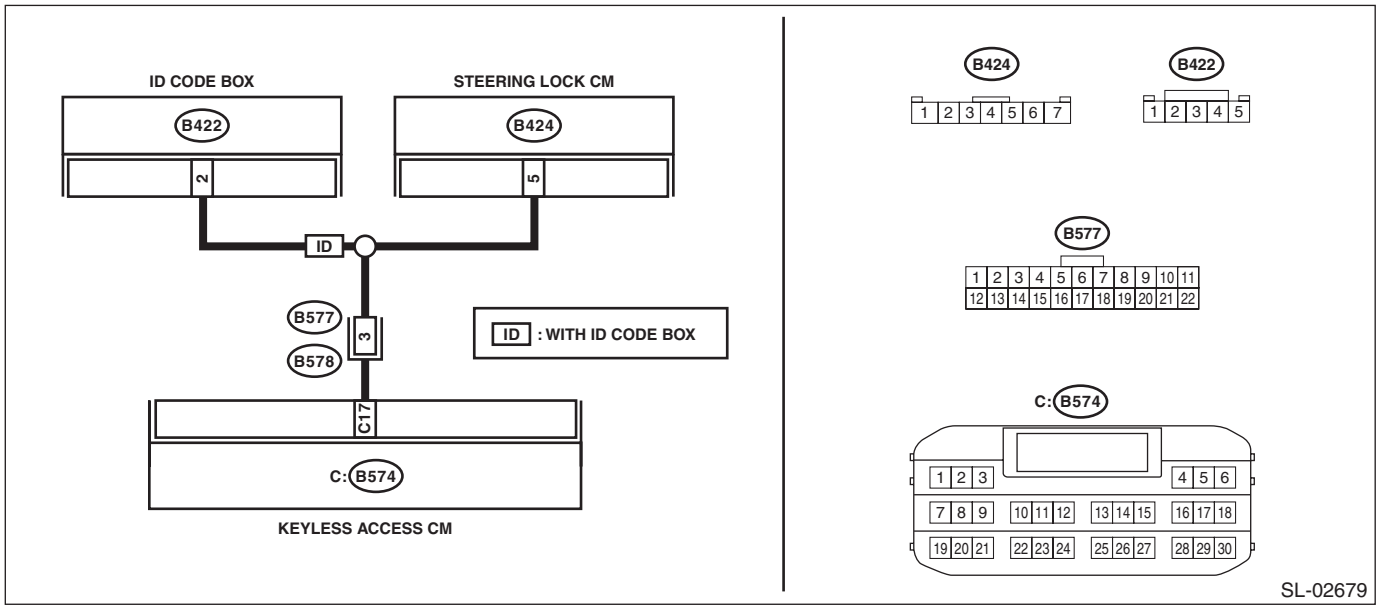
	Step	Check	Yes	No
3	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, clear the memory. 3) Turn the ignition switch to OFF. 4) Disconnect the battery ground cable and reconnect it, and then clear the abnormal information displayed on the data monitor. 5) Turn the ignition switch to ON. 6) Use the Subaru Select Monitor and read DTCs.	Is B2782 displayed?	Replace the steering lock CM. <Ref. to SL-105, Steering Lock CM.>	System is normal. It is possible that temporary poor contact occurs.
4	**CHECK CONNECTOR.** 1) Disconnect the steering lock CM connector. 2) Disconnect the keyless access CM connector.	Are connectors normal?	Go to step **5**.	Repair or replace the connector.
5	**CHECK HARNESS.** Using a tester, measure the resistance between steering lock CM connector and keyless access CM connector. ***Connector & terminal*** ***(B574) No. 29 — (B424) No. 3:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Using a tester, measure the resistance between steering lock CM connector and chassis ground, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 3 — Chassis ground:*** ***(B574) No. 29 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the short circuit of the harness.

Y: DTC B2784 ANTENNA COIL FAULT

DTC DETECTING CONDITION:
When open or short circuit occurs in the antenna coil.
TROUBLE SYMPTOM:
The keyless access function may not be operable.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Immobilizer system <Ref. to WI(HEV)-150, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK STEERING LOCK CM.** 1) Disconnect the push button ignition switch connector. 2) Disconnect the keyless access CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i150) No. 14 — (B574) No. 1:*** ***(i150) No. 9 — (B574) No. 9:*** ***(i150) No. 10 — (B574) No. 7:*** ***(i150) No. 8 — (B574) No. 24:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i150) No. 14 — Chassis ground:*** ***(i150) No. 9 — Chassis ground:*** ***(i150) No. 10 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **3**.	Repair or replace the short circuit of the harness.
3	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Replace the push button ignition switch. <Ref. to SL-106, Push Button Ignition Switch.> 2) Using the Subaru Select Monitor, clear the memory. 3) Use the Subaru Select Monitor and read DTCs.	Is B2784 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the push button ignition switch.



Z: DTC B2785 LIN COMMUNICATION ERROR

DTC DETECTING CONDITION:
When the keyless access CM detected the collation system LIN bus communication error three times in a row.

TROUBLE SYMPTOM:
The keyless access function may not be operable.

CAUTION:
For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:
Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** Use the Subaru Select Monitor and read DTCs.	Is B2785 displayed?	Go to step **2**.	Check the connector.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Disconnect the ID code box connector. (with ID code box) 4) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 17 — (B424) No. 5:*** ***(B574) No. 17 — (B422) No. 2: (with ID code box)***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B424) No. 5 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:*** ***(B422) No. 5 — Chassis ground: (with ID code box)***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

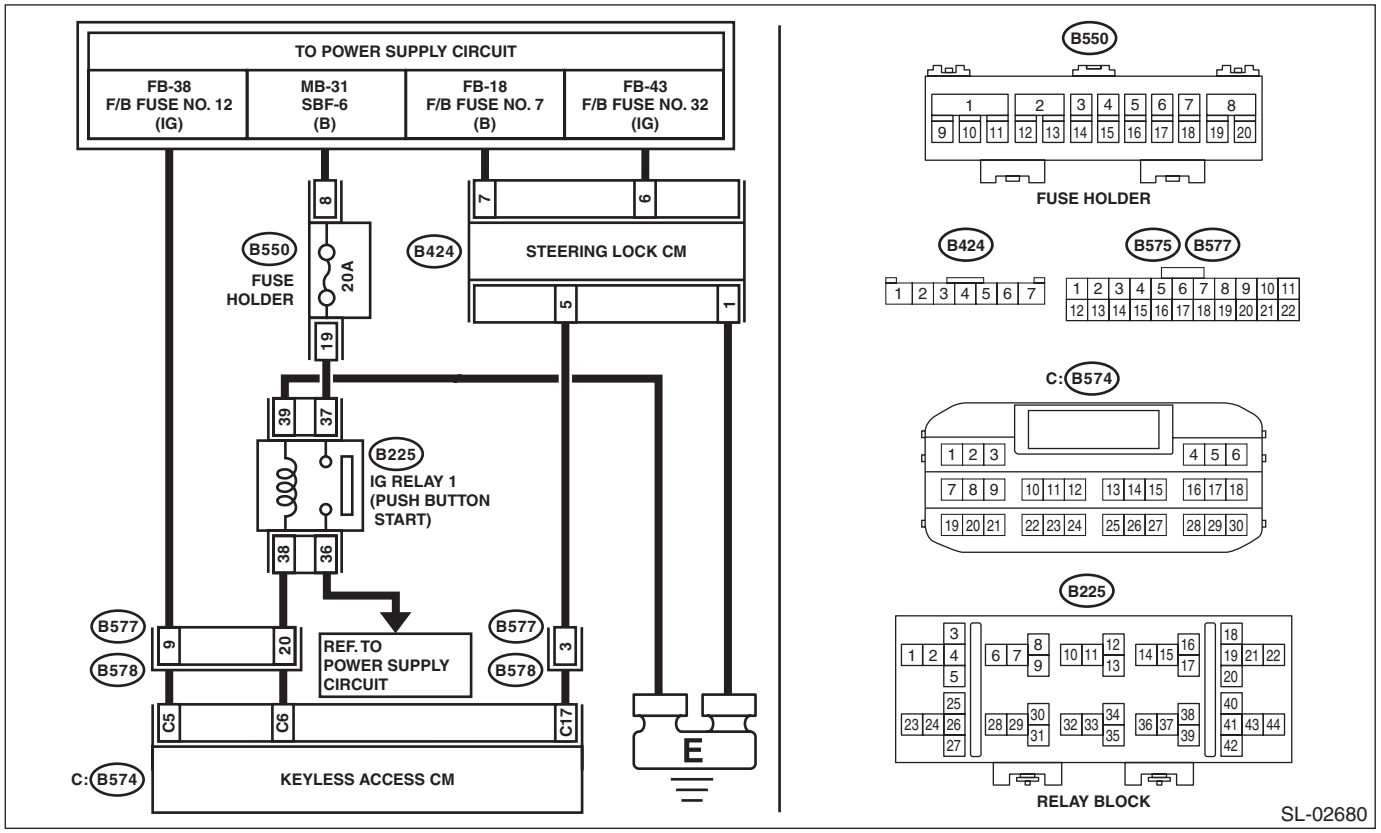
	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Connect the keyless access CM connector only. 2) Use the Subaru Select Monitor and read DTCs.	Is B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **5**.
5	**CHECK ID CODE BOX.** NOTE: For model without ID code box, go to the next step. 1) Connect only the ID code box. 2) Use the Subaru Select Monitor and read DTCs.	Is B2785 displayed?	Replace the ID code box.	Go to step **6**.
6	**CHECK STEERING LOCK CM.** 1) Replace the steering lock CM, and then connect it. <Ref. to SL-105, Steering Lock CM.> 2) Using the Subaru Select Monitor, clear the memory. 3) Use the Subaru Select Monitor and read DTCs.	Is B2785 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the steering lock CM.

AA:DTC B2786 NO RESPONSE FROM STEERING LOCK ECU

DTC DETECTING CONDITION:

When communication between keyless access CM and steering lock CM is interrupted for a set amount of time.

TROUBLE SYMPTOM:



The steering lock cannot be released.

CAUTION:

For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** Use the Subaru Select Monitor and read DTCs.	Is a DTC other than B2786 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 17 — (B424) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B424) No. 5 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

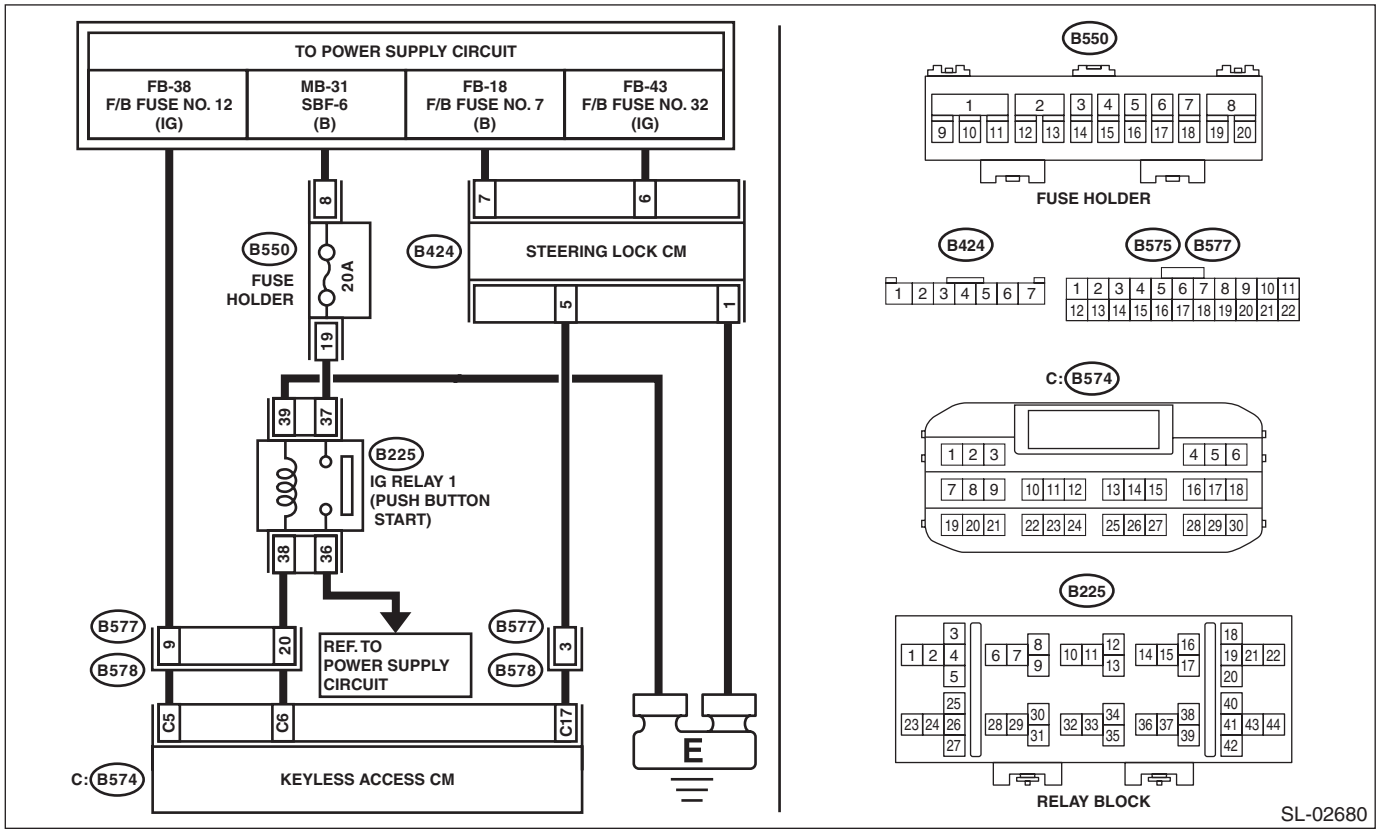
	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 6 (+) — Chassis ground (–):*** ***(B424) No. 7 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Replace the steering lock CM. <Ref. to SL-105, Steering Lock CM.> 3) Using the Subaru Select Monitor, clear the memory. 4) Use the Subaru Select Monitor and read DTCs.	Is B2786 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the steering lock CM.

AB:DTC B2788 IGN1 INPUT ABNORMAL

DTC DETECTING CONDITION:

When mismatch occurs in the IG1 input of the steering lock CM for both LIN communication line input (IG1 input value of keyless access CM) and solid line input.

TROUBLE SYMPTOM:



The steering lock cannot be released.

CAUTION:

For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
2	**CHECK CURRENT DATA.** Check the current data display of keyless access CM using the Subaru Select Monitor. • IGN SW	Is the display normal according to the ignition switch operation?	Go to step **3**.	Go to step **5**.
3	**CHECK HARNESS.** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

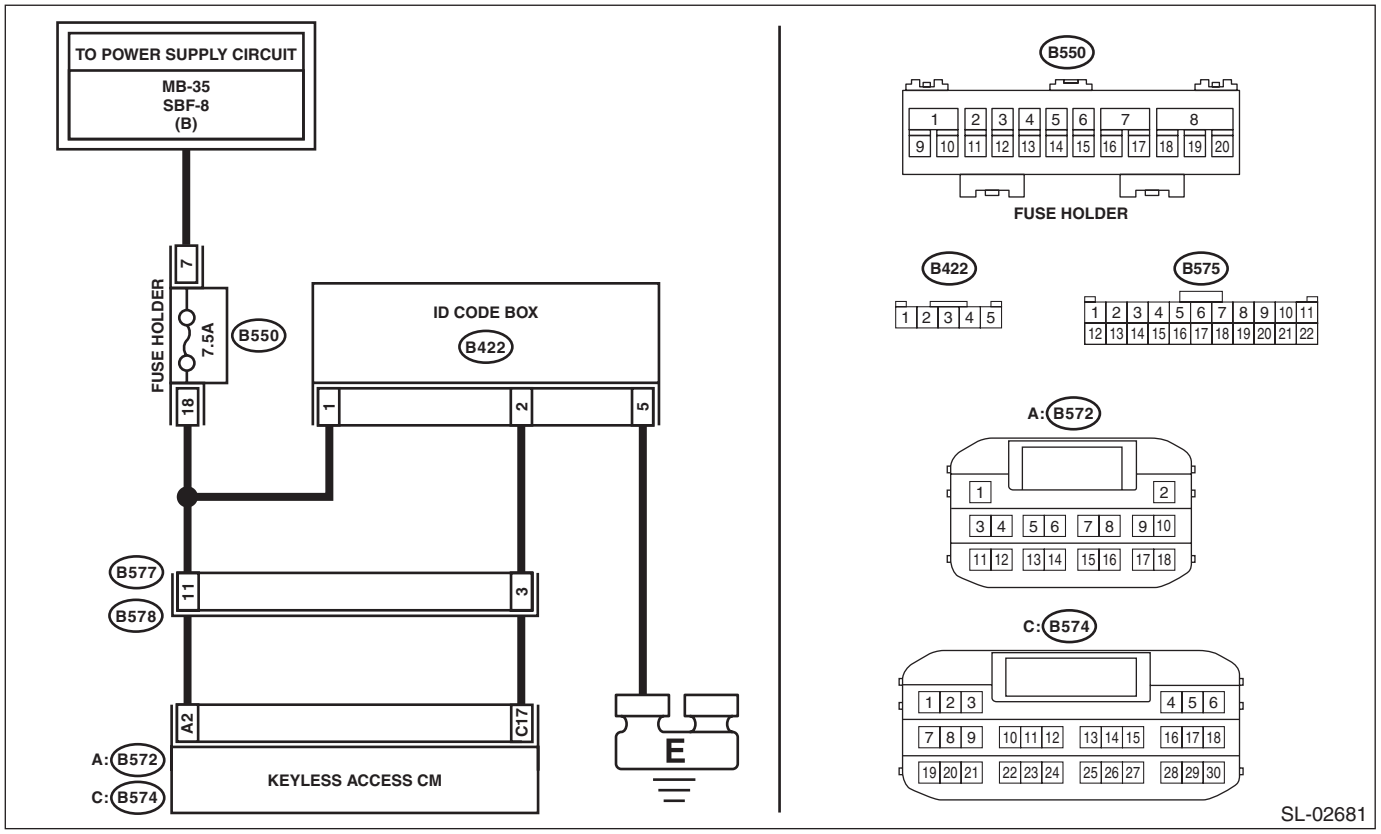
	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Connect the steering lock CM connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B424) No. 6 (+) — (B424) No. 1 (–):***	Is the voltage 11 — 14 V with IG ON? Is the voltage less than 1 V with IG OFF?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Check the DC power supply circuit.
5	**CHECK HARNESS.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 5 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V with IG ON? Is the voltage less than 1 V with IG OFF?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Check the DC power supply circuit.

AC:DTC B2789 ID CODE BOX NO RESPONSE

DTC DETECTING CONDITION:

- When communication between keyless access CM and ID code box is interrupted for a set amount of time.
- Open or short circuit in the wiring harness between keyless access CM and ID code box

TROUBLE SYMPTOM:



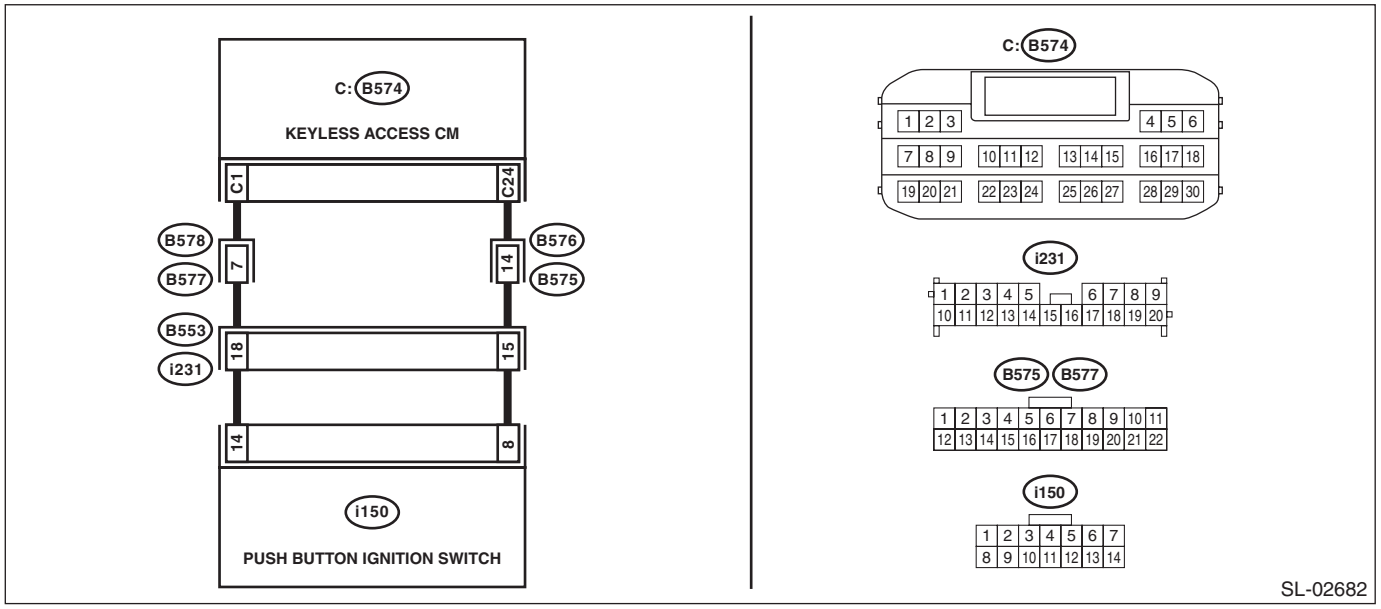
Engine will not start.

CAUTION:

For replacement procedure of keyless access CM and ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK DTC.** Use the Subaru Select Monitor and read DTCs.	Is B2789 displayed?	Go to step **2**.	Check the connector.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the ID code box connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 17 — (B422) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between ID code box connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B422) No. 2 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the voltage between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 1 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK ID CODE BOX.** 1) Replace the ID code box. <Ref. to SL-104, ID Code Box.> 2) Using the Subaru Select Monitor, clear the memory. 3) Use the Subaru Select Monitor and read DTCs.	Is B2789 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	ID code box has an error.

AD:DTC B278A ABNORMAL IMMOBILIZER POWER SUPPLY

DTC DETECTING CONDITION:
When the power supply circuit of the push button ignition switch is shorted to ground.
TROUBLE SYMPTOM:
- Engine will not start.
- The keyless access system function does not operate.

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Immobilizer system <Ref. to WI(HEV)-150, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Take the access key out of the passenger room. 3) Push the push button ignition switch. Within 30 seconds, use oscilloscope to measure the waveform between connectors. ***Connector & terminal*** ***(i150) No. 14 — (i150) No. 8:*** 	Is the waveform shown in the left column displayed?	Replace the push button ignition switch. <Ref. to SL-106, Push Button Ignition Switch.>	Go to step **2**.

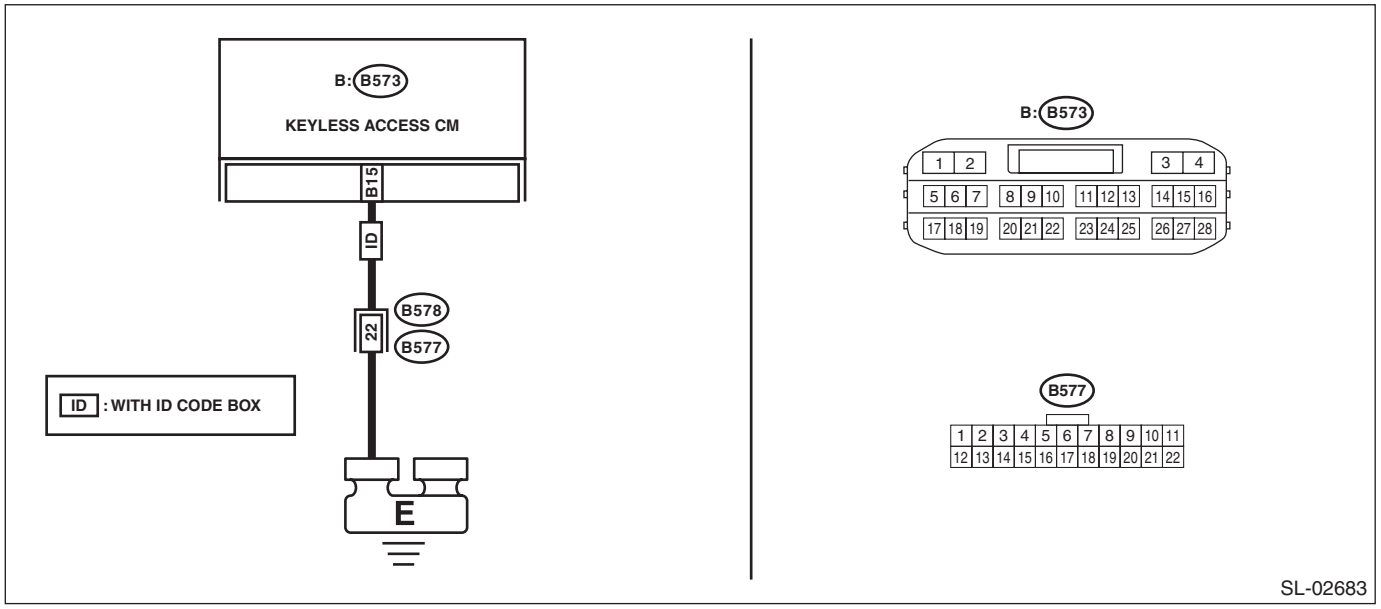
	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the push button ignition switch connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i150) No. 14 — (B574) No. 1:*** ***(i150) No. 8 — (B574) No. 24:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 24 — Chassis ground:***	Is the resistance 1 Ω or less?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.

AE:DTC B278D ID CODE BOX RECOGNITION JUDGMENT ABNORMAL

DTC DETECTING CONDITION:

- When ID code box setting is set to OFF, ID code box ON input is detected.
- When ID code box setting is set to OFF, ID code box LIN signal is received.

TROUBLE SYMPTOM:



Engine will not start.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the keyless access system memory. 3) Turn the ignition switch to OFF → ON. 4) Use the Subaru Select Monitor and read DTCs.	Is B278D displayed?	Go to step **2**.	System is normal. It is possible that temporary poor contact occurs.
2	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Measure the resistance between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 15 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the short circuit of the harness.

AF:DTC B2790 ID CODE BOX ABNORMAL (EEPROM ABNORMAL)

DTC DETECTING CONDITION:
An error has occurred inside the ID code box.
TROUBLE SYMPTOM:
Engine will not start.

CAUTION:
For replacement procedure of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

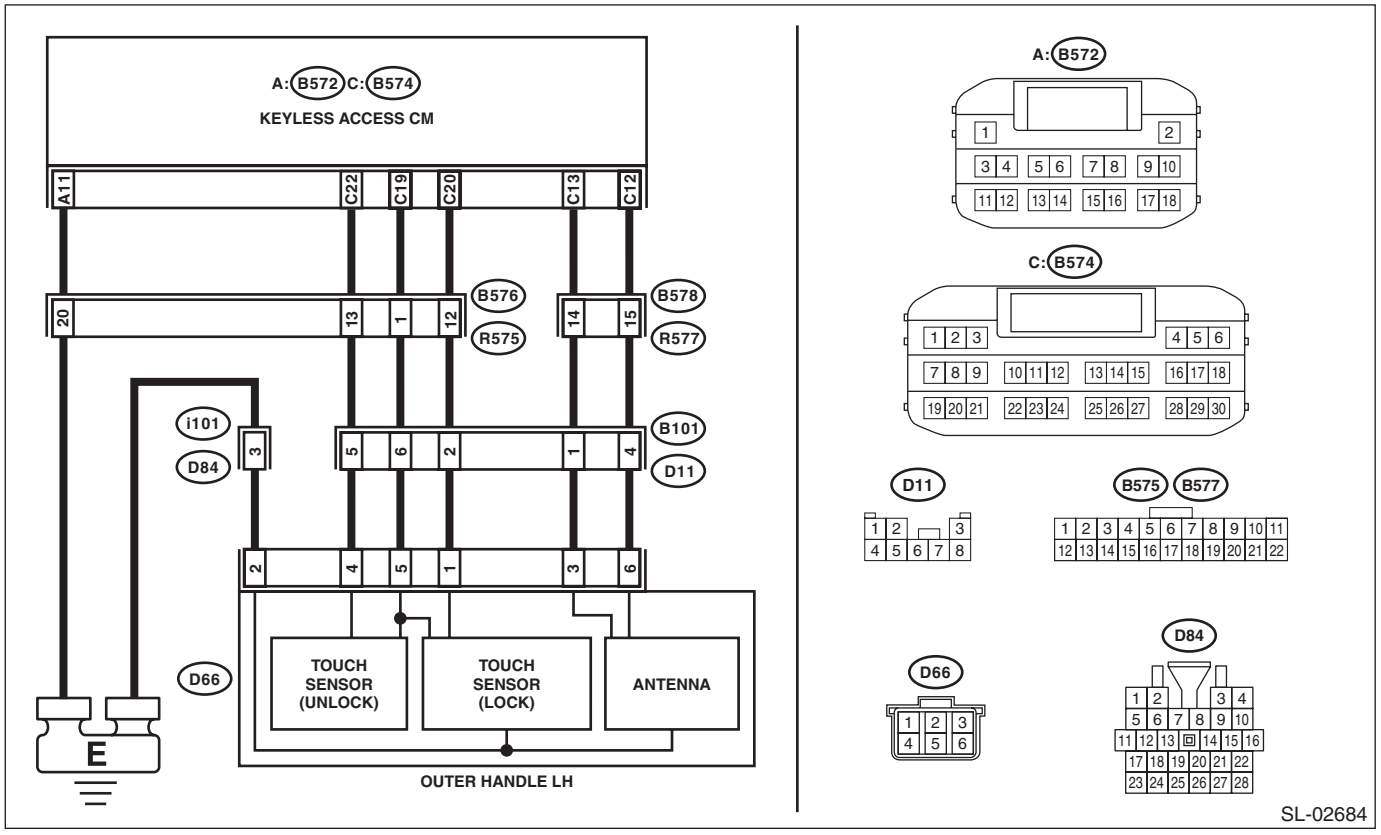
	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the keyless access system memory. 3) Turn the ignition switch to OFF → ON. 4) Register the ID code box. 5) Use the Subaru Select Monitor and read DTCs.	Is B2790 displayed?	Replace the ID code box. <Ref. to SL-104, ID Code Box.>	System is normal. It is possible that temporary poor contact occurs.

AG:DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OUTPUT STAGE OPEN

DTC DETECTING CONDITION:

When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle.

TROUBLE SYMPTOM:



Keyless access system does not function.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Keyless access system <Ref. to WI(HEV)-157, WIRING DIAGRAM, Keyless Access System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.

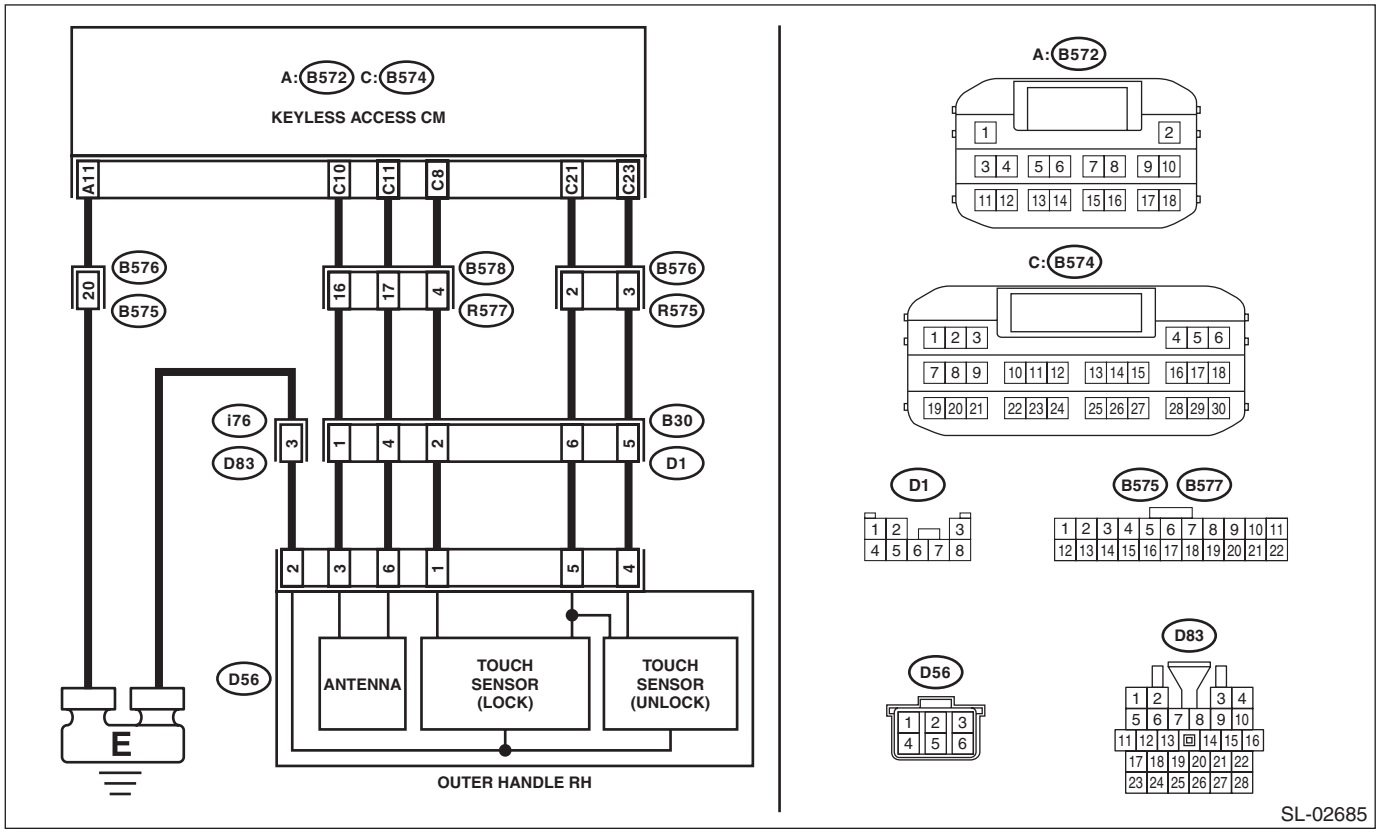
	Step	Check	Yes	No
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — (D66) No. 6:*** ***(B574) No. 13 — (D66) No. 3:*** ***(D66) No. 2 — Chassis ground:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front door outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — Chassis ground:*** ***(B574) No. 13 — Chassis ground:*** ***(D66) No. 6 — Chassis ground:*** ***(D66) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Use an oscilloscope, measure the waveform between terminals with ignition switch OFF, all doors closed and access key not in passenger room. ***Connector & terminal*** ***(B574) No. 12 — (B572) No. 11:*** ***(B574) No. 13 — (B572) No. 11:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the driver's front door outer handle with the passenger's front door outer handle. 2) Read DTC using the Subaru Select Monitor.	Is B27A1 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the driver's front door outer handle. <Ref. to SL-35, Front Outer Handle.>

AH:DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OUTPUT STAGE OPEN

DTC DETECTING CONDITION:

When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle.

TROUBLE SYMPTOM:



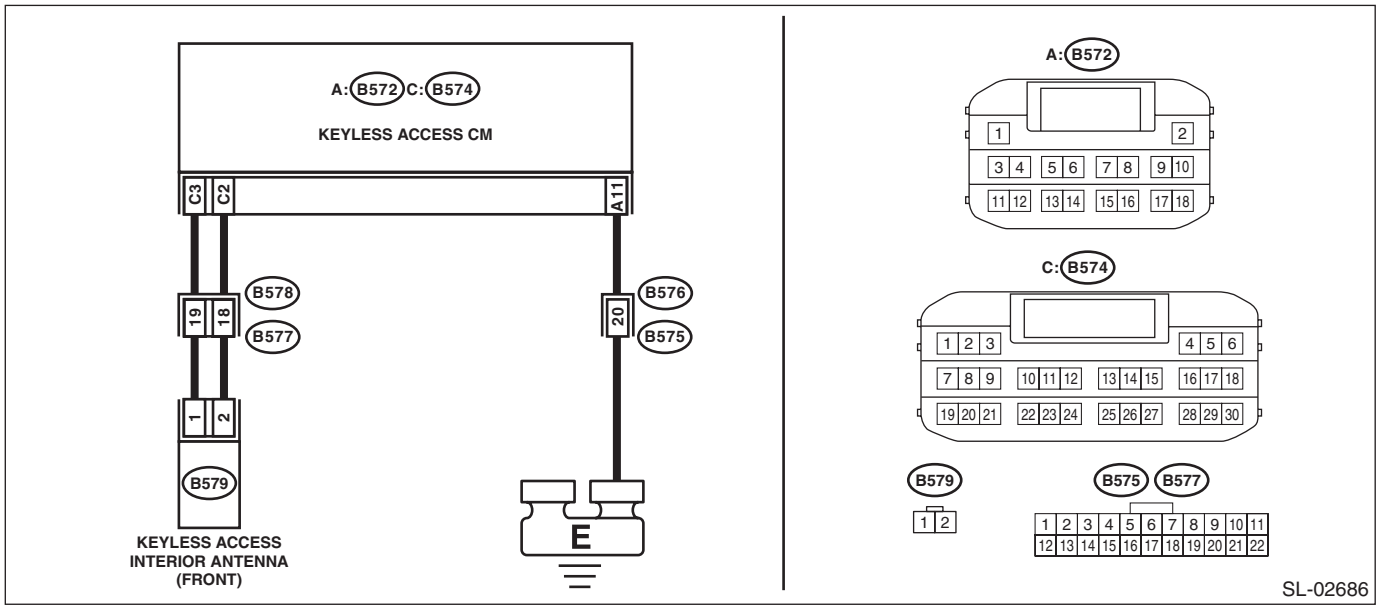
Keyless access system does not function.

CAUTION:

For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

WIRING DIAGRAM:

Keyless access system <Ref. to WI(HEV)-157, WIRING DIAGRAM, Keyless Access System.>



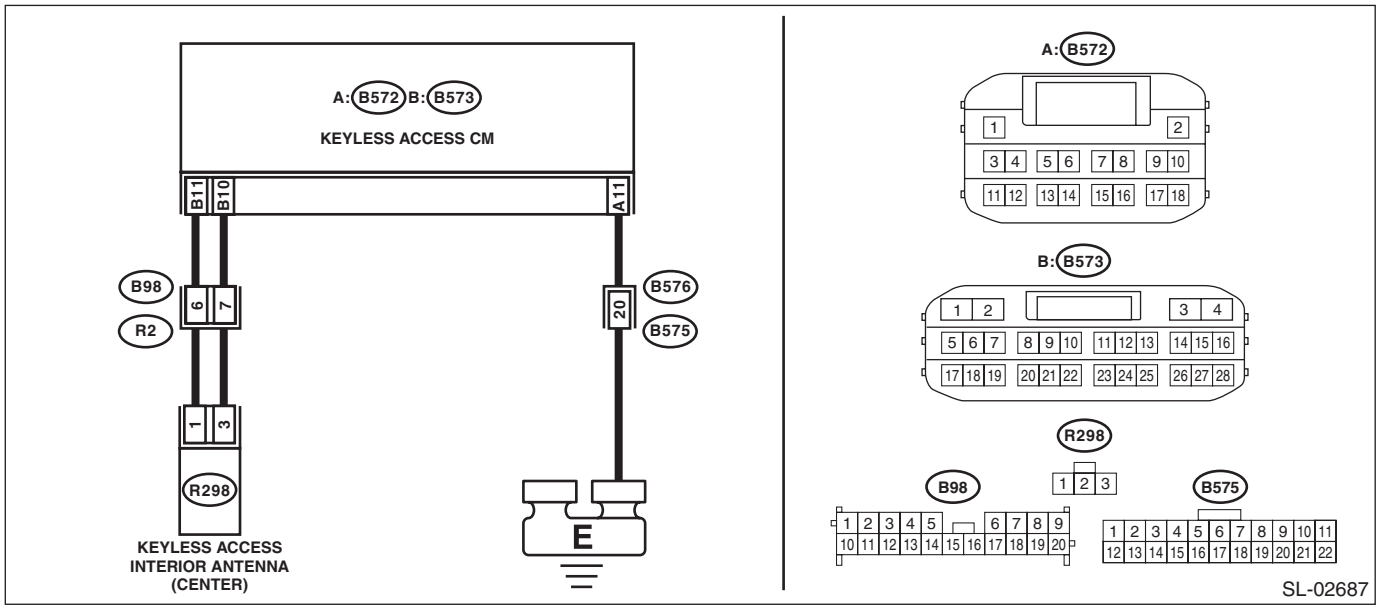
Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between front door outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — (D56) No. 6:*** ***(B574) No. 10 — (D56) No. 3:*** ***(D56) No. 2 — Chassis ground:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front door outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — Chassis ground:*** ***(B574) No. 10 — Chassis ground:*** ***(D56) No. 6 — Chassis ground:*** ***(D56) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Use an oscilloscope, measure the waveform between terminals with ignition switch OFF, all doors closed and access key not in passenger room. ***Connector & terminal*** ***(B574) No. 12 — (B572) No. 11:*** ***(B574) No. 13 — (B572) No. 11:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the passenger's front door outer handle with the driver's front door outer handle. 2) Read DTC using the Subaru Select Monitor.	Is B27A2 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the passenger's front door outer handle. <Ref. to SL-35, Front Outer Handle.>

AI: DTC B27A5 FRONT INTERNAL ANTENNA OUTPUT STAGE OPEN

DTC DETECTING CONDITION:
When open circuit occurs in the harness between keyless access CM and front interior antenna.
TROUBLE SYMPTOM:
Keyless access system does not function. (When the access key is in the front area of the passenger room)

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Keyless access system <Ref. to WI(HEV)-157, WIRING DIAGRAM, Keyless Access System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front interior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and front interior antenna connector, and between front interior antenna connector and chassis ground. ***Connector & terminal*** ***(B574) No. 3 — (B579) No. 1:*** ***(B574) No. 2 — (B579) No. 2:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front interior antenna connector and chassis ground. ***Connector & terminal*** ***(B574) No. 3 — Chassis ground:*** ***(B579) No. 1 — Chassis ground:*** ***(B574) No. 2 — Chassis ground:*** ***(B579) No. 2 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Use an oscilloscope, measure the waveform between terminals with ignition switch OFF, all doors closed and access key not in passenger room. ***Connector & terminal*** ***(B574) No. 3 — (B572) No. 11:*** ***(B574) No. 2 — (B572) No. 11:***	Does pulse output change from pulse output OFF → pulse output ON by operating the touch sensor (lock)?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**CHECK FRONT INTERIOR ANTENNA.** 1) Replace the front interior antenna. <Ref. to SL-94, Keyless Access Indoor Antenna.> 2) Read DTC using the Subaru Select Monitor.	Is B27A5 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the front interior antenna.

AJ:DTC B27A6 REAR INTERNAL ANTENNA OUTPUT STAGE OPEN

DTC DETECTING CONDITION:
When open circuit occurs in the harness between keyless access CM and center interior antenna.
TROUBLE SYMPTOM:
Keyless access system does not function. (When the access key is in the rear area of the passenger room (near the seat))

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Keyless access system <Ref. to WI(HEV)-157, WIRING DIAGRAM, Keyless Access System.>

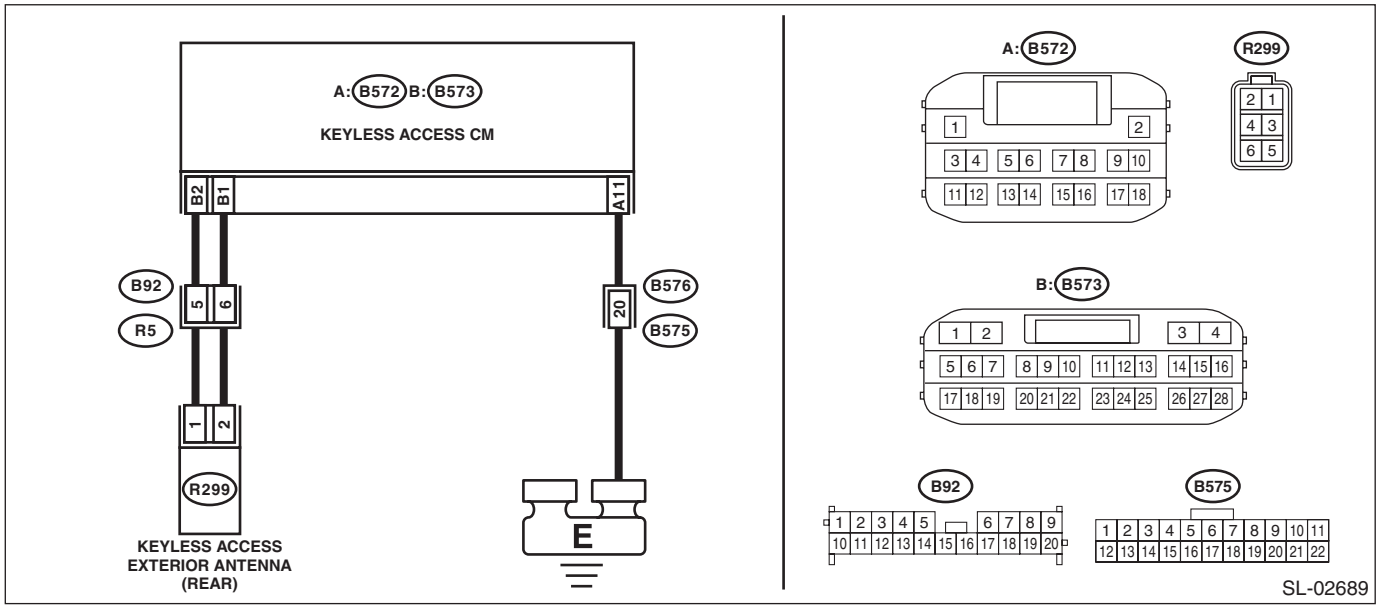
	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the center interior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and center interior antenna connector, and between center interior antenna connector and chassis ground. ***Connector & terminal*** ***(B573) No. 10 — (R298) No. 3:*** ***(B573) No. 11 — (R298) No. 1:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between center interior antenna connector and chassis ground. ***Connector & terminal*** ***(B573) No. 10 — Chassis ground:*** ***(B573) No. 11 — Chassis ground:*** ***(R298) No. 1 — Chassis ground:*** ***(R298) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Use an oscilloscope, measure the waveform between terminals with ignition switch OFF, all doors closed and access key not in passenger room. ***Connector & terminal*** ***(B573) No. 10 — (B572) No. 11:*** ***(B573) No. 11 — (B572) No. 11:***	Does pulse output change from pulse output OFF → pulse output ON by operating the touch sensor (lock)?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**CHECK CENTER INTERIOR ANTENNA.** 1) Replace the center interior antenna. <Ref. to SL-94, Keyless Access Indoor Antenna.> 2) Read DTC using the Subaru Select Monitor.	Is B27A6 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the center interior antenna.

AK:DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OUTPUT STAGE OPEN

DTC DETECTING CONDITION:
When open circuit occurs in the harness between keyless access CM and rear interior antenna.
TROUBLE SYMPTOM:
Keyless access system does not function. (When the access key is in the rear area of the passenger room (in the luggage room or the trunk))

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Keyless access system <Ref. to WI(HEV)-157, WIRING DIAGRAM, Keyless Access System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear interior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and rear interior antenna connector, and between rear interior antenna connector and chassis ground. ***Connector & terminal*** ***(B573) No. 9 — (R439) No. 1:*** ***(B573) No. 8 — (R439) No. 3:*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between rear interior antenna connector and chassis ground. ***Connector & terminal*** ***(B573) No. 9 — Chassis ground:*** ***(B579) No. 8 — Chassis ground:*** ***(R439) No. 1 — Chassis ground:*** ***(R439) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Use an oscilloscope, measure the waveform between terminals with ignition switch OFF, all doors closed and access key not in passenger room. ***Connector & terminal*** ***(B573) No. 9 — (B572) No. 11:*** ***(B573) No. 8 — (B572) No. 11:***	Does pulse output change from pulse output OFF → pulse output ON by operating the touch sensor (lock)?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**CHECK REAR INTERIOR ANTENNA.** 1) Replace the rear interior antenna. <Ref. to SL-94, Keyless Access Indoor Antenna.> 2) Read DTC using the Subaru Select Monitor.	Is B27A7 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Malfunction occurred in the rear interior antenna.

AL:DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OUTPUT STAGE OPEN

DTC DETECTING CONDITION:
When open circuit occurs in the harness between keyless access CM and rear exterior antenna.
TROUBLE SYMPTOM:
Keyless access system does not function.
(Unable to unlock with the rear gate opener button, or unable to lock with the rear lock button.)

CAUTION:
For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
WIRING DIAGRAM:
Keyless access system <Ref. to WI(HEV)-157, WIRING DIAGRAM, Keyless Access System.>

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(HEV)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is LAN system normal?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear exterior antenna connector.	Is the connector OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and rear exterior antenna connector, and between rear exterior antenna connector and chassis ground. ***Connector & terminal*** ***(B573) No. 2 — (R299) No. 1:*** ***(B573) No. 1 — (R299) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

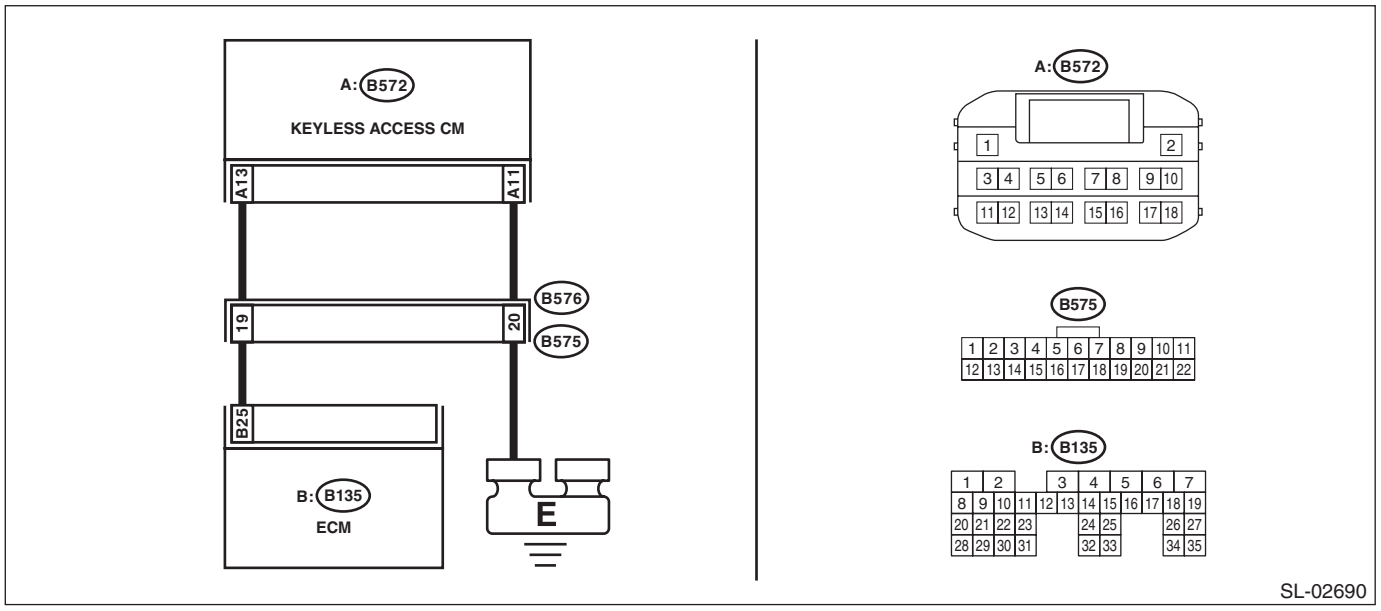
	Step	Check	Yes	No
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between rear exterior antenna connector and chassis ground. ***Connector & terminal*** ***(B573) No. 2 — Chassis ground:*** ***(B573) No. 1 — Chassis ground:*** ***(R299) No. 1 — Chassis ground:*** ***(R299) No. 2 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK REAR EXTERIOR ANTENNA.** 1) Remove the rear exterior antenna. 2) Using a tester, measure the resistance between rear exterior antenna connectors. ***Connector & terminal*** ***(R299) No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Replace the rear exterior antenna. <Ref. to SL-97, Keyless Access Outdoor Antenna.>
6	**CHECK KEYLESS ACCESS CM.** 1) Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.> 2) Read DTC using the Subaru Select Monitor.	Is B27A8 displayed?	Replace the rear exterior antenna. <Ref. to SL-97, Keyless Access Outdoor Antenna.>	Malfunction occurred in the keyless access CM.

AM:DTC B1571 REFERENCE CODE INCOMPATIBILITY

DTC DETECTING CONDITION:

Incompatibility of reference code between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM occurs.

TROUBLE SYMPTOM:



Engine will not start.

	Step	Check	Yes	No
1	**CHECK ECM.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is ECM registration finished? And does the engine start?	System is normal.	Go to step **2**.
2	**REPLACE ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO(HEV))-85, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace Keyless access CM (model without ID code box), <Ref. to SL-102, Keyless Access CM.> or replace ID code box (model with ID code box). <Ref. to SL-104, REMOVAL, ID Code Box.>

AN:DTC B1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)

1. EXCEPT FOR C0 AND C5 MODELS

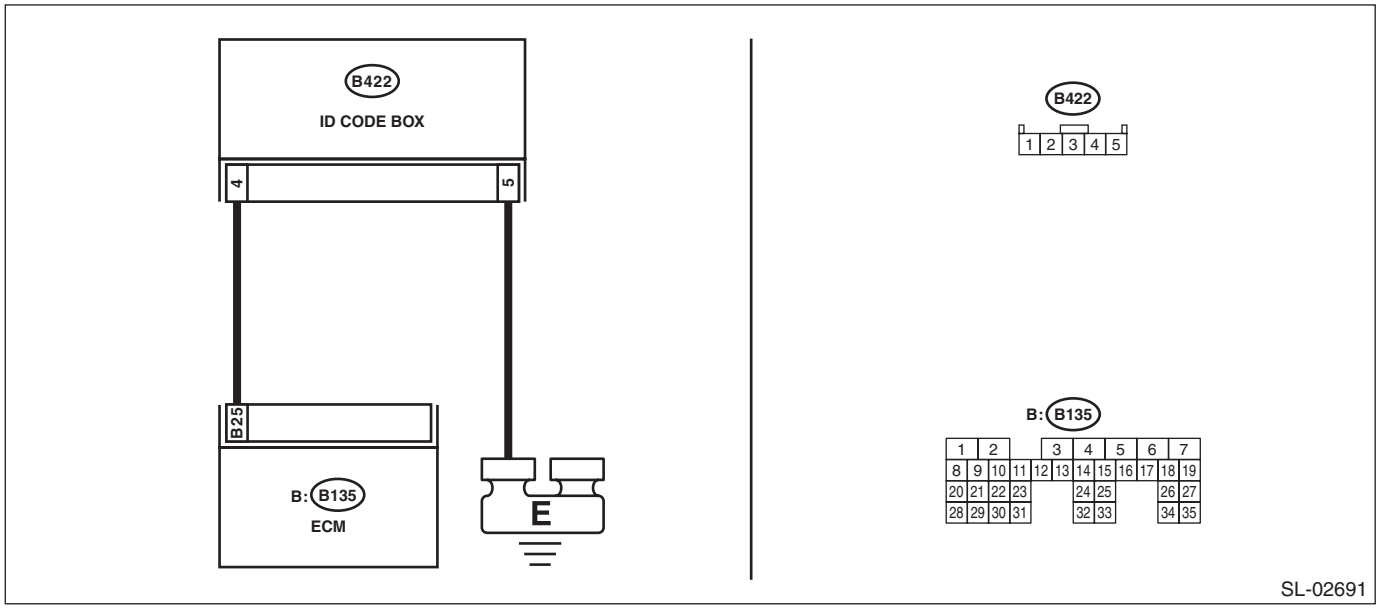
DTC DETECTING CONDITION:
Communication error between keyless access CM and ECM
TROUBLE SYMPTOM:
Engine will not start.
WIRING DIAGRAM:
Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check the keyless access CM data using the Subaru Select Monitor. 3) Display the next data. “Immobilizer” “Engine start” “Unlock confirmation” ***Data*** ***Immobilizer = Unset:*** ***Engine start = Engine start permission:*** ***Unlock confirmation = Confirmed:***	Is the data displayed as described above?	Go to step **2**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-123, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
2	**CHECK CURRENT DATA.** Use the Subaru Select Monitor to check the keyless access CM data when holding down the push button ignition switch while depressing on the brake pedal. ***Data*** ***EGI code reception status = Reception:*** NOTE: If “Reception” is displayed, the status changes to “Not yet received” in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as described above?	Go to step **3**.	Repair or replace the harness between keyless access CM and ECM.

	Step	Check	Yes	No
3	**CHECK WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector and ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***(B572) No. 13 — (B135) No. 25:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK WIRING HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO(HEV))-85, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

2. FOR C0 AND C5 MODELS

DTC DETECTING CONDITION:



Communication error between ID code box and ECM

TROUBLE SYMPTOM:

Engine will not start.

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Check the keyless access CM data using the Subaru Select Monitor. 3) Display the next data. “Immobilizer” “Engine start” “Unlock confirmation” ***Data*** ***Immobilizer = Unset:*** ***Engine start = Engine start permission:*** ***Unlock confirmation = Confirmed:***	Is the data displayed as described above?	Go to step **2**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-123, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
2	**CHECK CURRENT DATA.** Use the Subaru Select Monitor to check the keyless access CM data when holding down the push button ignition switch while depressing on the brake pedal. ***Data*** ***EGI code reception status = Reception:*** NOTE: If “Reception” is displayed, the status changes to “Not yet received” in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as described above?	Go to step **3**.	Repair or replace the harness between ID code box and ECM.
3	**CHECK WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the ID code box connector and the ECM connector. 3) Using a tester, measure the resistance between ID code box connector and ECM. ***Connector & terminal*** ***(B422) No. 4 — (B135) No. 25:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK WIRING HARNESS.** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(H4DO(HEV))-85, REMOVAL, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the ID code box. <Ref. to SL-104, REMOVAL, ID Code Box.>

AO:DTC B1576 EGI CONTROL MODULE EEPROM

DTC DETECTING CONDITION:

- ECM malfunctioning
- When inaccessible to ROM in ECM during registration.

	Step	Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Replace the ECM. <Ref. to FU(H4DO(HEV))-85, REMOVAL, Engine Control Module (ECM).>

AP:DTC B1577 IMM CONTROL MODULE EEPROM

1. EXCEPT FOR C0 AND C5 MODELS

DTC DETECTING CONDITION:

- Defective keyless access CM
- When inaccessible to ROM in keyless access CM.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. 3) Turn the ignition switch to OFF. 4) Remove and install the battery. 5) Turn the ignition switch to ON. 6) After 5 seconds or more, read DTC.	Is B1577 displayed?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	System is normal.

2. FOR C0 AND C5 MODELS

DTC DETECTING CONDITION:

- ID code box malfunction
- When inaccessible to ROM in ID code box.

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Perform the clear memory operation of ECM. 3) Turn the ignition switch to OFF. 4) Register the ID code box. 5) Read the DTC again.	Is B1577 displayed?	Replace the ID code box. <Ref. to SL-104, ID Code Box.>	System is normal.

14.General Diagnostic Table

A: INSPECTION

1. IMMOBILIZER SYSTEM

Symptoms	Note
Engine does not start	<Ref. to KPS(diag)-123, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
	<Ref. to KPS(diag)-68, DTC B2784 ANTENNA COIL FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-77, DTC B278A ABNORMAL IMMOBILIZER POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-69, DTC B2785 LIN COMMUNICATION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-75, DTC B2789 ID CODE BOX NO RESPONSE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-80, DTC B2790 ID CODE BOX ABNORMAL (EEPROM ABNORMAL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	Check the brake switch. <Ref. to BR-74, INSPECTION, Stop Light Switch.>
	Check the parking switch signal. <Ref. to CS-57, INSPECTION, AT Shift Lock Solenoid and “P” Range Switch.>
	Check the DTC of the ECM.
Cannot register the immobilizer.	Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
Engine does not start with the remote engine starter.	<Ref. to KPS(diag)-65, DTC B2779 REMOTE CONTROL ENGINE STARTER COMMUNICATION COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. KEYLESS ACCESS SYSTEM

Symptoms	Reference
All doors cannot be locked/unlocked with keyless access.	<Ref. to KPS(diag)-100, KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock with keyless access from the driver’s door.	<Ref. to KPS(diag)-101, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the driver’s door with keyless access.	<Ref. to KPS(diag)-102, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the driver’s door with keyless access.	<Ref. to KPS(diag)-103, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the passenger’s door with keyless access.	<Ref. to KPS(diag)-106, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the passenger’s door with keyless access.	<Ref. to KPS(diag)-105, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock from the passenger’s door with keyless access.	<Ref. to KPS(diag)-104, CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Keyless access passenger room buzzer does not sound.	<Ref. to KPS(diag)-107, THE KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>
Keyless access external buzzer does not beep.	<Ref. to KPS(diag)-107, THE KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP, INSPECTION, Diagnostics with Phenomenon.>
Interior collation does not function.	<Ref. to KPS(diag)-108, INTERNAL COLLATION DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
Rear gate cannot be unlocked with the rear gate opener button.	<Ref. to KPS(diag)-111, CAN NOT UNLOCK WHEN USING THE REAR GATE OPENER BUTTON, INSPECTION, Diagnostics with Phenomenon.>
Rear gate can not be locked when using the rear lock button.	<Ref. to KPS(diag)-112, CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON, INSPECTION, Diagnostics with Phenomenon.>

3. STEERING LOCK SYSTEM

Symptoms	Index
The steering lock cannot be released (cannot start the engine)	<Ref. to KPS(diag)-114, THE STEERING LOCK IS NOT RELEASED, INSPECTION, Diagnostics with Phenomenon.>
The steering lock does not operate	<Ref. to KPS(diag)-115, THE STEERING LOCK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

4. POWER SUPPLY SWITCHING SYSTEM

Symptoms	Index
Power will not turn ON (both accessory and ignition)	<Ref. to KPS(diag)-116, POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (accessory only)	<Ref. to KPS(diag)-119, POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (ignition only)	<Ref. to KPS(diag)-121, POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON), INSPECTION, Diagnostics with Phenomenon.>

15.Diagnostics with Phenomenon

A: INSPECTION

1. KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK OPERATION OF KEYLESS DOOR LOCK.** Using the keyless function of the access key, check the operation of the door lock.	Does it lock/unlock normally?	Check the exterior antenna, oscillator, touch sensor, lock/unlock buttons.	Go to step **2**.
2	**CHECK ACCESS KEY.** Check for whether lock and unlock is possible with the registered access key.	Is there any access key which can lock/unlock when the touch sensor is operated?	Check the access key that does not operate. Go to step **3**.	Go to step **4**.
3	**CHECK ACCESS KEY.** Measure the battery voltage of the access key that does not operate.	Is the voltage 2.5 — 3.2 V?	Replace the access key.	Replace the battery.
4	**CHECK DOOR LOCK.** Operate the driver's center door lock switch.	Does the door lock operate?	Go to step **5**.	Check the door lock control system. <Ref. to SL-12, INSPECTION, Door Lock Control System.>
5	**CHECK HARNESS.** 1) Disconnect the receiver connector (R296). 2) Using a tester, measure the resistance between receiver and chassis ground. ***Connector & terminal*** ***(R296) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between receiver and keyless access CM. ***Connector & terminal*** ***(R296) No. 4 — (B573) No. 5:*** ***(R296) No. 5 — (B573) No. 17:*** ***(R296) No. 2 — (B573) No. 19:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK RECEIVER.** Replace with a receiver that is operating normally. <Ref. to SL-101, REMOVAL, Receiver.>	When the front unlock sensor and the rear gate opener button are operated, does it lock/unlock?	Malfunction occurred in receiver.	Go to step **8**.
8	**CHECK HARNESS.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the ignition switch is turned to ON?	Go to step **9**.	Check the keyless access CM power supply circuit.

	Step	Check	Yes	No
9	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

2. CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's seat lock status SW input» of body integrated unit using Subaru Select Monitor. 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Driver's lock touch sensor SW» of Keyless access system check for keyless access system using Subaru Select Monitor. 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 20 — (D66) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 20 — Chassis ground:*** ***(D66) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle.	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

3. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — (D66) No. 6:*** ***(B574) No. 13 — (D66) No. 3:*** ***(B574) No. 19 — (D66) No. 5:*** ***(D66) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 12 — Chassis ground:*** ***(D66) No. 6 — Chassis ground:*** ***(B574) No. 13 — Chassis ground:*** ***(D66) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. ***Connector & terminal*** ***(D66) No. 6 — (D66) No. 3:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle.	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-35, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

4. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

CAUTION:
- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's seat lock status SW input» of body integrated unit using Subaru Select Monitor. 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Driver's unlock touch sensor switch» of Keyless access system check for keyless access system using Subaru Select Monitor. 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 22 — (D66) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 22 — Chassis ground:*** ***(D66) No. 4 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle.	Does it operate properly?	Replace the driver's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

5. CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's seat lock status SW input» of body integrated unit using Subaru Select Monitor. 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's lock touch sensor SW» of Keyless access system check for keyless access system using Subaru Select Monitor. 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 8 — (D56) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 8 — Chassis ground:*** ***(D56) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle.	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

6. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — (D56) No. 6:*** ***(B574) No. 10 — (D56) No. 3:*** ***(B574) No. 21 — (D56) No. 5:*** ***(D56) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 11 — Chassis ground:*** ***(D56) No. 6 — Chassis ground:*** ***(B574) No. 10 — Chassis ground:*** ***(D56) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors. ***Connector & terminal*** ***(D56) No. 6 — (D66) No. 3:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle.	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-35, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

7. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's seat lock status SW input» of body integrated unit using Subaru Select Monitor. 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK CURRENT DATA.** 1) Display the current data «Passenger's unlock touch sensor switch» of Keyless access system check for keyless access system using Subaru Select Monitor. 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 23 — (D56) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK HARNESS.** Using a tester, measure the resistance between the keyless access CM connector and chassis ground, and between front outer handle connector and chassis ground. ***Connector & terminal*** ***(B574) No. 23 — Chassis ground:*** ***(D56) No. 4 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle.	Does it operate properly?	Replace the passenger's front outer handle. <Ref. to SL-35, REMOVAL, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

8. THE KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND

CAUTION:
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Check the combination meter.	Is combination meter OK?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter.>

9. THE KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Using the Subaru Select Monitor, check the «Ans.-back Buzzer» data of body integrated unit.	Is the setting "ON"?	Go to step **2**.	Change the setting to "ON".
2	**CHECK BUZZER OPERATION.** Use the Subaru Select Monitor to perform the body integrated unit function check «Keyless Buzzer Output». <Ref. to BC(diag)-21, OPERATION, Function Check.>	Does the buzzer sound?	Go to step **3**.	Go to step **5**.
3	**CHECK KEYLESS ACCESS SYSTEM.** 1) Turn to IGN ON. 2) With all doors closed and the access key carried, touch the touch sensor (lock) on the driver's door handle.	Does the door lock?	Go to step **4**.	Refer to "CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR" and perform inspection. <Ref. to KPS(diag)-101, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
4	**CHECK KEYLESS ACCESS SYSTEM.** 1) Open the door glass. 2) Place the access key on the driver's seat, and close the door. 3) Touch the touch sensor (lock) on the driver's door handle.	Does the buzzer sound? (Lock-out protection warning)	System is normal.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
5	**CHECK HARNESS.** 1) Turn to IGN OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Measure the resistance between body integrated unit connector and keyless buzzer connector. ***Connector & terminal*** ***(B280) No. 20 — (B164) No. 1:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS.** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK BODY INTEGRATED UNIT.** 1) Connect the connector of body integrated unit. 2) Use the Subaru Select Monitor to perform the body integrated unit function check «Keyless Buzzer Output». <Ref. to BC(diag)-21, OPERATION, Function Check.> 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (–):***	Is the frequency 2kHz, voltage 9 V or more?	Replace the keyless buzzer. <Ref. to SL-80, REMOVAL, Keyless Buzzer.>	Replace the body integrated unit. <Ref. to SL-82, Body Integrated Unit.>

10.INTERNAL COLLATION DOES NOT FUNCTION

CAUTION:
When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK ACCESS KEY.** Check the access key. <Ref. to SL-89, INSPECTION, Access Key.>	Is the battery OK?	Go to step **2**.	Replace the battery.
2	**CHECK INTERIOR ANTENNA.** 1) Using the Subaru Select Monitor, select System check of the keyless access CM «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(B57) No. 2 — No. 3:***	Is a pulse output?	Go to step **3**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

	Step	Check	Yes	No
3	**CHECK INTERIOR ANTENNA.** 1) Using the Subaru Select Monitor, select System check of the keyless access CM «Rear interior transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(B573) No. 10 — No. 11:***	Is a pulse output?	Go to step **4**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
4	**CHECK INTERIOR ANTENNA.** 1) Using the Subaru Select Monitor, select System check of the keyless access CM «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Using a tester, check the output between keyless access CM connector terminals while performing the Keyless access system check. ***Connector & terminal*** ***(B573) No. 8 — No. 9:***	Is a pulse output?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
5	**CHECK WIRING HARNESS.** 1) Disconnect the front interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the front interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(B579) No. 1 — (B574) No. 3:*** ***(B579) No. 2 — (B574) No. 2:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK WIRING HARNESS.** 1) Disconnect the center interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the center interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(R298) No. 1 — (B573) No. 11:*** ***(R298) No. 3 — (B573) No. 10:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS.** 1) Disconnect the rear interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the rear interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(R439) No. 1 — (B573) No. 9:*** ***(R439) No. 3 — (B573) No. 8:***	Is there continuity?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK ANTENNA.** Replace the front interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the front interior antenna. <Ref. to SL-94, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK ANTENNA.** Replace the center interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the center interior antenna. <Ref. to SL-94, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **10**.
10	**CHECK ANTENNA.** Replace the rear interior antenna with a new or properly functioning part.	Does it operate properly?	Replace the rear interior antenna. <Ref. to SL-94, REMOVAL, Keyless Access Indoor Antenna.>	Go to step **11**.
11	**CHECK WIRING HARNESS.** 1) Disconnect the receiver connector and the keyless access CM connector. 2) Using a tester, check continuity between the receiver connector and keyless access CM connector. ***Connector & terminal*** ***(R296) No. 4 — (B573) No. 5:*** ***(R296) No. 5 — (B573) No. 17:*** ***(R296) No. 2 — (B573) No. 19:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK RECEIVER.** Replace the receiver with a new or properly functioning part.	Does it operate properly?	Replace the receiver. <Ref. to SL-101, REMOVAL, Receiver.>	Go to step **13**.
13	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of the keyless access CM «Front interior transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the audio panel, then come closer to within 0.8 m.	Does the buzzer sound?	Go to step **14**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
14	**CHECK KEYLESS ACCESS SYSTEM CHECK.** NOTE: For 5 door model, go to the next step. 1) Using the Subaru Select Monitor, select System check of the keyless access CM «Rear interior transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the center of the second row seats, then come closer to within 0.8 m.	Does the buzzer sound?	Go to step **15**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
15	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of the keyless access CM «Trunk internal transmitter + interior tuner» or «Rear gate internal transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the back of the rear seat, then come closer to within 0.8 m.	Does the buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

11.CAN NOT UNLOCK WHEN USING THE REAR GATE OPENER BUTTON

CAUTION:
• Check that there are no other registered access keys inside the rear gate.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK KEYLESS OPERATION.** Check that the rear gate unlocks when the rear gate unlock button of the access key is pressed.	Does it operate properly?	Go to step **6**.	Go to step **2**.
2	**CHECK REAR GATE UNLOCK OPERATION.** 1) Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of the body integrated unit. 2) Check that the rear gate unlocks when the R gate/trunk UNLK signal is output.	Does it operate properly?	Go to step **6**.	Go to step **3**.
3	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (D46) No. 1:***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Check the continuity between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D47) No. 2 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK REAR GATE LOCK ACTUATOR.** 1) Check the rear gate lock actuator. <Ref. to SL-52, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Replace the body integrated unit. <Ref. to SL-82, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-51, Rear Gate Latch and Actuator Assembly.>
6	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the rear gate lock can be unlocked with each access key.	Does it operate properly?	Go to step **7**.	Replace the access key. <Ref. to SL-89, REPLACEMENT, Access Key.>
7	**CHECK CURRENT DATA.** 1) Display the current data «R Gate Release SW input» of body integrated unit using Subaru Select Monitor. 2) Read the data when pressing the rear gate opener button.	Does the data display ON?	Go to step **14**.	Go to step **8**.
8	**CHECK WIRING HARNESS.** 1) Disconnect the rear gate opener button connector and body integrated unit connector. 2) Using a tester, check the continuity between the rear gate opener button connector and body integrated unit connector. ***Connector & terminal*** ***(D77) No. 1 — (i84) No. 10:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
9	**CHECK WIRING HARNESS.** 1) Using a tester, check the continuity between the rear gate opener button connector and chassis ground. ***Connector & terminal*** ***(D77) No. 2 — Chassis ground:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK REAR GATE OPENER BUTTON.** Using a tester, check the continuity between rear gate opener button switch terminals. ***Connector & terminal*** ***(D77) No. 1 — (D77) No. 2:***	Is there continuity when pressing the switch?	Go to step **11**.	Replace the rear gate opener button. <Ref. to SL-49, Rear Gate Opener Button.>
11	**CHECK WIRING HARNESS.** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R299) No. 1 — (B573) No. 2:*** ***(R299) No. 2 — (B573) No. 1:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts.	Does it operate properly?	The outside rear antenna has a failure.	Go to step **13**.
13	**CHECK CURRENT DATA.** 1) Display the current data «R gate lock status SW input» of body integrated unit using Subaru Select Monitor. 2) Read the data when locking/unlocking the rear gate lock actuator.	Does the data change from ON ←→ OFF?	Go to step **14**.	Check body integrated unit. <Ref. to SL-82, REMOVAL, Body Integrated Unit.>
14	**CHECK KEYLESS ACCESS SYSTEM CHECK.** 1) Using the Subaru Select Monitor, select System check of the keyless access CM «Rear gate external transmitter + interior tuner». <Ref. to KPS(diag)-33, Keyless Access System Check.> 2) Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

12.CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON

CAUTION:
• Check that there are no other registered access keys inside the vehicle.
• Check that the keyless access function is not stopped.
• Inspect LAN system or keyless access system according to the basic diagnostic procedure, and make sure that DTC is not input.
• When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK REAR GATE ACTUATOR.** While carrying the access key, operate the touch sensor (lock) and touch sensor (unlock).	When the switch is operated, does the rear gate lock/unlock?	Go to step **2**.	Go to step **10**.
2	**CHECK REAR LOCK BUTTON.** 1) Display the «Rear Gate Request SW» of the keyless access CM using the Subaru Select Monitor. 2) Read the data when operating the rear lock button.	Does the data change between ON/OFF?	Go to step **8**.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the rear lock button connector and the keyless access CM connector. 2) Using a tester, measure the resistance between harness. ***Connector & terminal*** ***(D77) No. 3 — (B573) No. 27:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of the harness.
4	**CHECK HARNESS.** Using a tester, measure the resistance between harness and chassis ground. ***Connector & terminal*** ***(D77) No. 3 — Chassis ground:***	Is the resistance 10 MΩ or more?	Go to step **5**.	Repair or replace the short of harness.
5	**CHECK HARNESS.** Using a tester, measure the resistance between harness and chassis ground. ***Connector & terminal*** ***(D77) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of the harness.
6	**CHECK REAR LOCK BUTTON.** Measure the resistance when the rear lock button is operated using the tester. ***Connector & terminal*** ***(D77) No. 3 — No. 4:***	Did the resistance change from 1 MΩ or more to less than 10 Ω?	Go to step **7**.	Replace the rear lock button. <Ref. to SL-99, REMOVAL, Rear Lock Button.>
7	**CHECK REAR LOCK BUTTON.** 1) Display the «Rear Gate Request SW» of the keyless access CM using the Subaru Select Monitor. 2) Read the data when operating the rear lock button.	Does the data change between ON/OFF?	Go to step **8**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
8	**CHECK WIRING HARNESS.** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R299) No. 1 — (B573) No. 2:*** ***(R299) No. 2 — (B573) No. 1:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts. <Ref. to SL-97, REMOVAL, Keyless Access Outdoor Antenna.>	Does it operate properly?	The outside rear antenna has a failure.	Go to step **10**.
10	**CHECK BODY INTEGRATED UNIT.** 1) Connect the disconnected connectors. 2) Use the Subaru Select Monitor to perform the body integrated unit function check. 3) Actuate the door lock actuator LOCK output.	Does the rear gate lock actuator lock?	It is possible that temporary poor communication occurs.	Go to step **11**.
11	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector and rear gate lock actuator connector. 2) Check the continuity between body integrated unit connector and rear gate lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (D46) No. 1:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK HARNESS.** 1) Check the continuity between the rear gate lock actuator connector and chassis ground. ***Connector & terminal*** ***(D46) No. 2 — Chassis ground:***	Is there continuity?	Go to step **13**.	Repair or replace the open circuit of harness.

Step		Check	Yes	No
13	**CHECK REAR GATE LOCK ACTUATOR.** 1) Check the rear gate lock actuator. <Ref. to SL-52, INSPECTION, Rear Gate Latch and Actuator Assembly.>	Is the rear gate lock actuator normal?	Replace the body integrated unit. <Ref. to SL-82, Body Integrated Unit.>	Replace the rear gate latch and actuator assembly. <Ref. to SL-51, Rear Gate Latch and Actuator Assembly.>

13.THE STEERING LOCK IS NOT RELEASED

CAUTION:
When the steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

Step		Check	Yes	No
1	**CHECK OPERATION.** 1) Depress the brake pedal. 2) While turning the steering wheel lightly to the left and right, press the push button ignition switch. 3) Confirm that the steering lock is released and the engine start.	Does the engine fail to start with the steering lock released?	Perform the diagnosis for engine system. <Ref. to EN(H4DO HEV)(diag)-67, Diagnostics for Engine Starting Failure.>	Go to step **2**.
2	**CHECK DTC.** Read keyless access CM DTCs using the Subaru Select Monitor.	Is a DTC displayed?	Perform the diagnosis according to the corresponding procedures of DTC.	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, display the current data of the keyless access CM «Steering lock unlock request reception status» and «Steering lock lock/unlock command reception history». 2) Read the data when the push button ignition switch is pressed while in possession of the access key. (Maintain for 10 seconds after switch operation)	Does the data change from «Not yet received» to «Reception», and from «OFF» to «ON»?	Go to step **4**.	Go to step **7**.
4	**CHECK STEERING LOCK CM.** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 7 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK STEERING LOCK CM.** Using a tester, check continuity between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK STEERING LOCK CM.** 1) Connect the disconnected connectors. 2) Using a tester, measure the voltage between steering lock CM terminals right after the ignition switch is turned to ON. ***Connector & terminal*** ***(B424) No. 3 (+) — (B424) No. 1 (–):***	Is the voltage 1 V or less right after the ignition ON?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
7	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of the keyless access CM «Code collation result between smart ECM and ID code box».	Is data displayed as being normal?	Go to step **9**.	Go to step **8**.
8	**CHECK CURRENT DATA.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-104, REMOVAL, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of the keyless access CM «Code collation result between smart ECM and ID code box».	Is data displayed as being normal?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
9	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data of the keyless access CM «Code collation result between steering locked ECM and ID code box».	Is data displayed as being normal?	System is normal.	Go to step **10**.
10	**CHECK ID CODE BOX.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-104, REMOVAL, ID Code Box.> 2) Using the Subaru Select Monitor, display the current data of the keyless access CM «Code collation result between steering locked ECM and ID code box».	Is data displayed as being normal?	System is normal.	Go to step **11**.
11	**CHECK STEERING LOCK CM.** 1) Replace with a properly functioning or new steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.> 2) After registering, the steering lock operates when the ignition is turned to OFF and the driver's door is opened and closed. 3) Turn the ignition to ON. 4) Operate the steering and check for whether the steering lock is released.	Is the steering lock released, and does the engine start?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

14.THE STEERING LOCK DOES NOT OPERATE

CAUTION:
When the keyless access CM or steering lock CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK DTC.** Read keyless access system DTCs using the Subaru Select Monitor.	Is a DTC displayed?	Perform the diagnosis according to the corresponding DTC.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Display the current data «Driver's door SW input» of body integrated unit using Subaru Select Monitor. 2) Read the data when opening and closing the driver's door.	Does the data change from ON to OFF according to the opening and closing?	Go to step **3**.	Inspect door switch circuit.
3	**CHECK CURRENT DATA.** Display the current data «Shift P Signal» of keyless access system using Subaru Select Monitor.	Is the status displayed correctly when the shift lever is shifted from P to other than P?	Go to step **4**.	Check the P range switch and harness.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data «Code collation result between smart ECM and ID code box» of keyless access system.	Is the status normal?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the current data «Code collation result between steering locked ECM and ID code box» of keyless access system.	Is the status normal?	Go to step **6**.	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>
6	**CHECK CURRENT DATA.** 1) Using Subaru Select Monitor, display the current data «Steering lock lock/unlock command reception history» of keyless access system. 2) While in possession of the access key, perform engine start operations, and read data within 10 seconds after starting.	Is data displayed as ON?	Go to step **7**.	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>
7	**CHECK STEERING LOCK CM.** Using a tester, measure the waveform between steering lock CM terminals immediately after the following operations. Perform ignition ON, driver's side door close → shift lever "P" range, ignition OFF, and close → open the driver's side door. ***Connector & terminal*** ***(B424) No. 3 — No. 1:***	Is the waveform immediately after opening the driver's side door abnormal?	Replace the steering lock CM. <Ref. to SL-105, REMOVAL, Steering Lock CM.>	Go to step **8**.
8	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector and the steering lock CM connector. 2) Using a tester, check continuity between the keyless access CM connector and steering lock CM connector. ***Connector & terminal*** ***(B424) No. 3 — (B574) No. 29:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, REMOVAL, Keyless Access CM.>	Repair or replace the open circuit of harness.

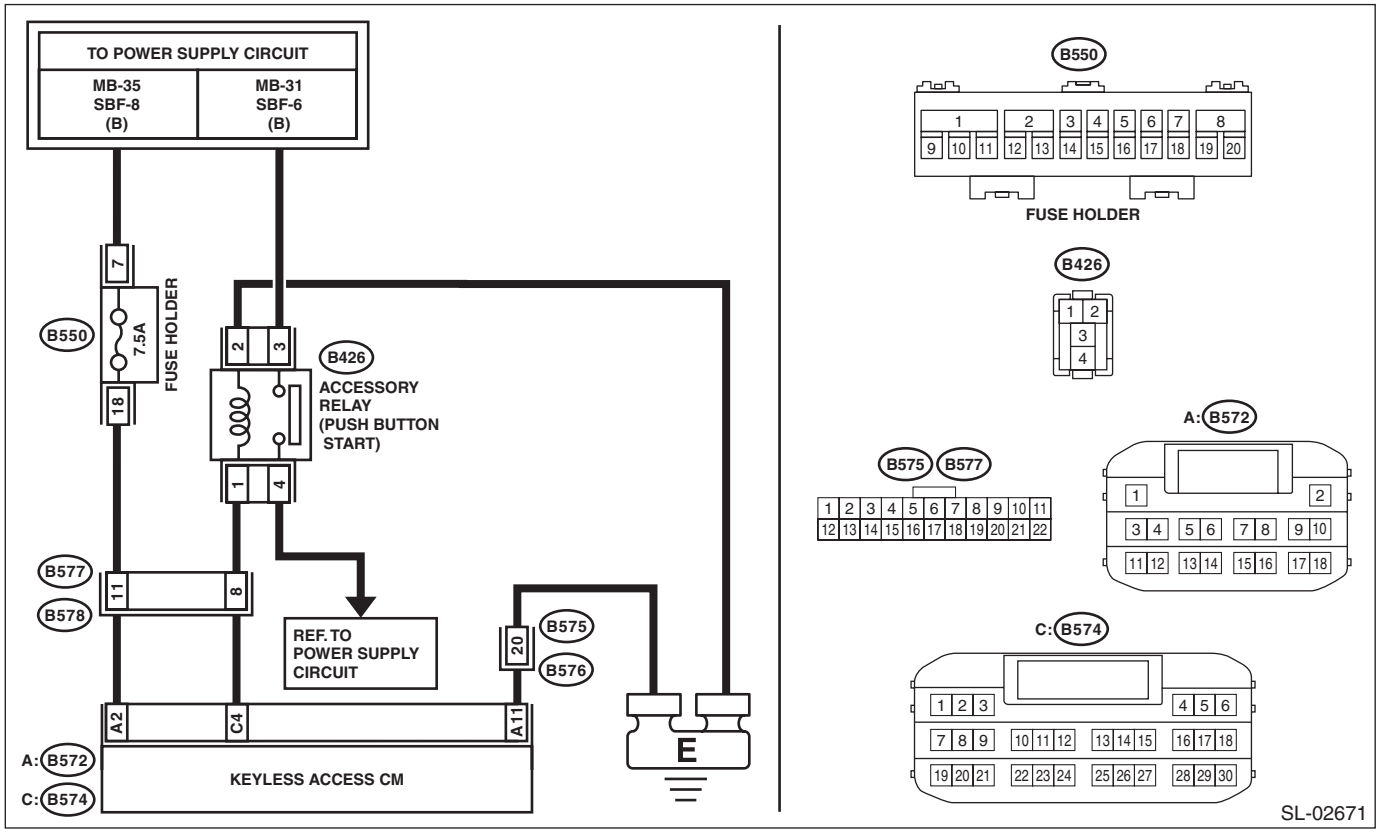
15.POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION)

CAUTION:
• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
• When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY.** 1) Remove IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, measure the voltage between the relay block connector and chassis ground.	Is the voltage 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK CONNECTOR.** Check the engagement of each connector and for any deformation or looseness.	Are the connectors and terminals normal?	Go to step **4**.	Repair the connector, or replace harness.
4	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Carrying the access key, depress the brake pedal (except for MT model) or clutch pedal (MT model), and push the push button ignition switch. 3) Read keyless access CM DTCs using the Subaru Select Monitor.	Is a DTC output?	Perform diagnosis according to the DTC.	Go to step **7**.
7	**CHECK CURRENT DATA.** 1) Display the current data «Push start SW 1» and «Push start SW 2» of the keyless access CM using the Subaru Select Monitor. 2) Read the data when pressing the push button ignition switch.	Does it change from OFF to ON along with the operation?	Go to step **8**.	Go to step **15**.
8	**CHECK RELAY (PUSH BUTTON START).** Check IG relay 1 and 2 (push button start), and accessory relay (push button start). <Ref. to SL-112, INSPECTION, IG Relay1 (Push Button Start).>	Is each relay normal?	Go to step **9**.	Replace the faulty relay.
9	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, check continuity between terminals of keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). ***Connector & terminal*** ***(B574) No. 6 — (B225) No. 38:*** ***(B572) No. 9 — (B225) No. 34:*** ***(B574) No. 4 — (B426) No. 1:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
10	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 9 — Chassis ground:*** ***(B574) No. 4 — Chassis ground:*** ***(B574) No. 6 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **11**.
11	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the IG relay 2 (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 39 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the IG relay 1 connector and chassis ground. ***Connector & terminal*** ***(B225) No. 35 — Chassis ground:***	Is there continuity?	Go to step **13**.	Repair or replace the open circuit of harness.
13	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the accessory relay connector and chassis ground. ***Connector & terminal*** ***(B426) No. 2 — Chassis ground:***	Is there continuity?	Go to step **14**.	Repair or replace the open circuit of harness.
14	**CHECK KEYLESS ACCESS CM.** 1) Connect all the disconnected connectors. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B572) No. 9 (+) — Chassis ground (–):*** ***(B574) No. 4 (+) — Chassis ground (–):*** ***(B574) No. 6 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less to +B-2 V or more?	Go to step **15**.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
15	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Disconnect the push button ignition switch. 2) Using a tester, check the continuity between terminals. ***Connector & terminal*** ***(i150) No. 7 — No. 5:*** ***(i150) No. 2 — No. 5:***	When the button was pressed, did it change to continuity exists? (No continuity when button is released)	Go to step **16**.	Replace the push button ignition switch. <Ref. to SL-106, REMOVAL, Push Button Ignition Switch.>
16	**CHECK WIRING HARNESS.** Using a tester, check the continuity between the push button ignition switch connector and chassis ground. ***Connector & terminal*** ***(i150) No. 4 — Chassis ground:*** ***(i150) No. 5 — Chassis ground:***	Is there continuity?	Go to step **17**.	Repair or replace the open circuit of harness.
17	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, check continuity between the keyless access CM connector and push button ignition switch. ***Connector & terminal*** ***(i150) No. 7 — (B574) No. 28:*** ***(i150) No. 2 — (B574) No. 30:***	Is there continuity?	System is normal.	Repair or replace the open circuit of harness.



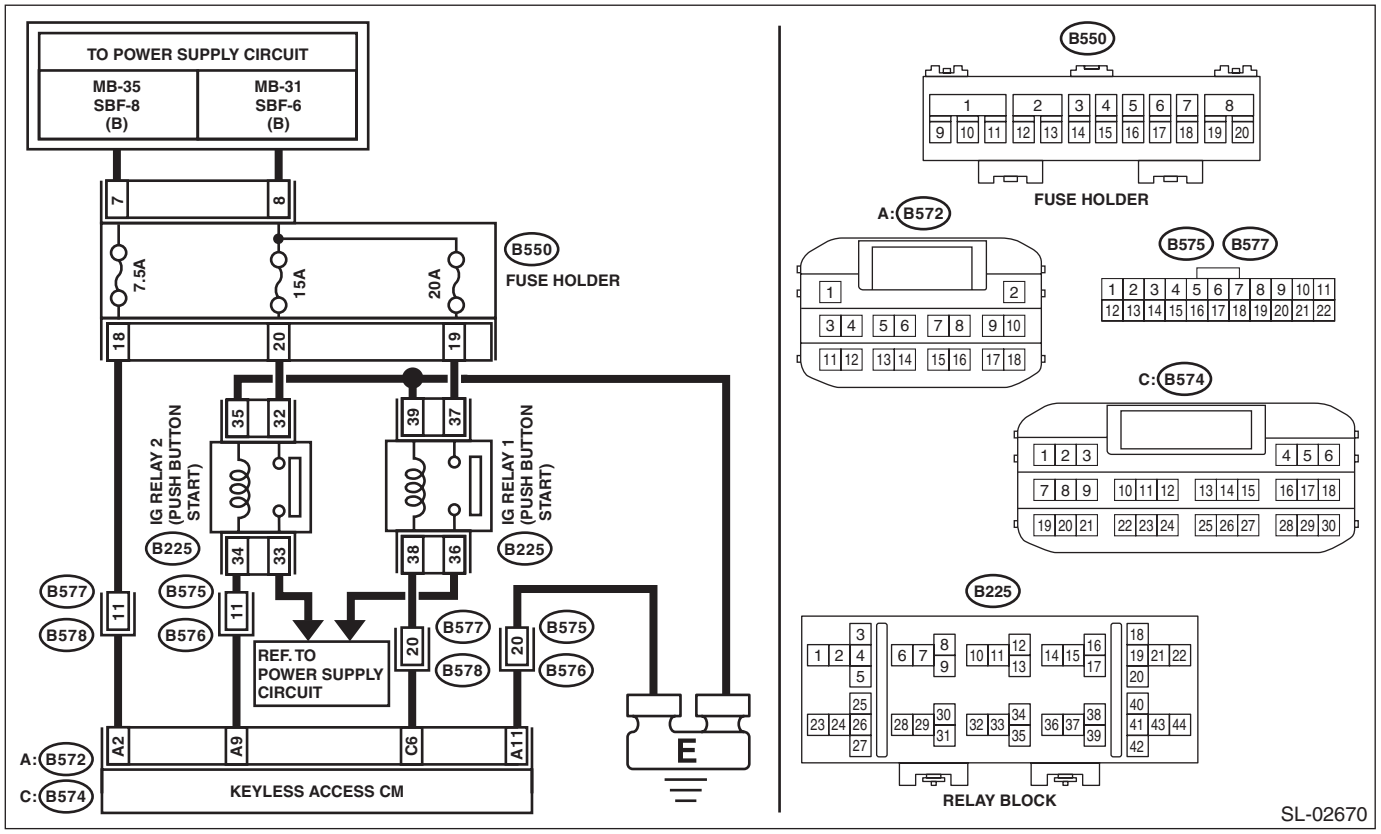
16.POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON)

CAUTION:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".**

WIRING DIAGRAM:

Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and for any deformation or looseness.	Are the connectors and terminals normal?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK ACCESSORY RELAY (PUSH BUTTON START).** Check the accessory relay (push button start). <Ref. to SL-115, INSPECTION, Accessory Relay (Push Button Start).>	Is the relay OK?	Go to step **6**.	Replace the relay.
6	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector and the accessory relay (push button start). 2) Using a tester, check continuity between the keyless access CM connector and accessory relay (push button start). ***Connector & terminal*** ***(B574) No. 4 — (B426) No. 1:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B574) No. 4 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

17.POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON)

CAUTION:
When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

WIRING DIAGRAM:
Push button start system <Ref. to WI(HEV)-180, WIRING DIAGRAM, Push Button Start System.>

Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and for any deformation or looseness.	Are the connectors and terminals normal?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 2 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 11 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK IG RELAY 1 AND 2 (PUSH BUTTON START).** Check IG relay 1 (push button start) and IG relay 2 (push button start). <Ref. to SL-112, INSPECTION, IG Relay1 (Push Button Start).>	Is the relay OK?	Go to step **6**.	Replace the relay.
6	**CHECK WIRING HARNESS.** 1) Disconnect the keyless access CM connector and the IG relay 1 and 2 (push button start). 2) Using a tester, check continuity between keyless access CM connector and IG relay 1 (push button start) or IG relay 2 (push button start). ***Connector & terminal*** ***(B572) No. 9 — (B225) No. 34:*** ***(B574) No. 6 — (B225) No. 38:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK WIRING HARNESS.** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B572) No. 9 — Chassis ground:*** ***(B574) No. 6 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B572) No. 9 (+) — Chassis ground (–):*** ***(B574) No. 6 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	System is normal.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>

18.ENGINE DOES NOT START

CAUTION:
• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.
• When the keyless access CM or ID code box is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

	Step	Check	Yes	No
1	**INITIALIZE STEERING LOCK.** 1) Place the shift lever in the Parking range. 2) Operate the driver's door switch ON/OFF with the ignition switch OFF. 3) Wait for 10 seconds. 4) Place the access key on the driver's seat. 5) Press the push button ignition switch while depressing the brake pedal.	Can the engine start?	System is normal.	Go to step **2**.
2	**CHECK DTC.** Read the DTC of the keyless access system using Subaru Select Monitor.	Is DTC detected?	Perform the diagnosis according to the DTC. <Ref. to KPS(diag)-35, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK POWER SUPPLY SWITCHING.** 1) Place the access key on the driver's seat. 2) Press the push button ignition switch without depressing the brake pedal.	When the switch is operated, does the <IG-OFF> → <ACC-ON> → <IG-ON> → <IG-OFF> change occur?	Go to step **4**.	Perform the diagnostics according to the symptom for power supply switching system in General Diagnostic Table. <Ref. to KPS(diag)-99, POWER SUPPLY SWITCHING SYSTEM, INSPECTION, General Diagnostic Table.>
4	**CHECK CURRENT DATA.** 1) Place the access key on the driver's seat. 2) Press the push button ignition switch while depressing the brake pedal. 3) Using the Subaru Select Monitor, confirm the keyless access CM, the current data «STSW signal monitor» when pressing the push button ignition switch. NOTE: If it is difficult to confirm, press and hold the push button ignition switch for approximately five seconds.	Does the data change from OFF → ON?	Go to step **10**.	Go to step **5**.
5	**CHECK CURRENT DATA.** Check the keyless access CM, current data «Shift P Signal» using the Subaru Select Monitor.	Is ON displayed in parking position, and OFF displayed in other positions?	Go to step **6**.	Go to step **11**.
6	**CHECK CURRENT DATA.** Confirm the keyless access CM, current data «Stop Light Switch» using the Subaru Select Monitor.	Is ON displayed when brake pedal depressed, and OFF displayed when brake pedal not depressed?	Go to step **7**.	Go to step **13**.

	Step	Check	Yes	No
7	**CHECK CURRENT DATA.** Confirm the keyless access CM, current data «Neutral SW/Clutch SW» using the Subaru Select Monitor.	Is ON displayed in parking and neutral positions, and OFF displayed in other positions?	Go to step **8**.	Go to step **15**.
8	**CHECK STEERING LOCK.** Operate the push button ignition switch to perform the power supply switching and check steering lock condition during ACC-ON condition.	Is the steering lock in unlocked condition?	Go to step **9**.	Perform the diagnostics according to the symptom for steering lock system in General Diagnostic Table. <Ref. to KPS(diag)-99, STEERING LOCK SYSTEM, INSPECTION, General Diagnostic Table.>
9	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Using a tester, measure the battery voltage in following procedures. 1. Press the push button ignition switch with the brake pedal depressed. (Measure within 10 seconds.) 2. Release the push button ignition switch from the condition of step 1. above. ***Connector & terminal*** ***(B572) No. 13 (+) — Chassis ground (–):***	Does the value change from 1 V or less to +B-2 V or more in the step 1, and return to 1 V or less in the step 2?	Perform the diagnosis for engine system. <Ref. to EN(H4DO HEV)(diag)-67, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
10	**CHECK CURRENT DATA.** 1) Connect the disconnected connectors. 2) Confirm the keyless access CM, current data «Engine start permission request reception status» using the Subaru Select Monitor.	Is “Reception” displayed with ignition switch ON, and “Not yet received” displayed in other positions?	Perform the diagnosis for engine system.	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>
11	**CHECK “P” RANGE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the AT shift lever connector. 3) Using a tester, check the continuity of “P” range switch. ***Connector & terminal*** ***(B116) No. 1 — 2:***	Does it change from Continuity ←→ No continuity according to shift lever operation?	Go to step **12**.	Replace the “P” range switch. <Ref. to CS-55, REMOVAL, AT Shift Lock Solenoid and “P” Range Switch.>
12	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Using a tester, check continuity between the keyless access CM and AT select lever. ***Connector & terminal*** ***(B116) No. 1 — (B574) No. 25:*** ***(B116) No. 2 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.
13	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Using a tester, check the continuity of the stop light switch. ***Connector & terminal*** ***(B65) No. 3 — No. 4:***	Does it change from Continuity ←→ No continuity according to brake pedal operation?	Go to step **14**.	Replace the stop light switch. <Ref. to BR-72, REMOVAL, Stop Light Switch.>

	Step	Check	Yes	No
14	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between the keyless access CM and stop light switch. ***Connector & terminal*** ***(B572) No. 18 — (B65) No. 2:*** ***(B65) No. 1 — F/B fuse No. 8:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.
15	**CHECK INHIBITOR SWITCH.** Check the inhibitor switch. <Ref. to CVT(TH58A)-96, INSPECTION, Inhibitor Switch.>	Is the inhibitor switch working normal?	Go to step **16**.	Replace the inhibitor switch. <Ref. to CVT(TH58A)-99, REMOVAL, Inhibitor Switch.>
16	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch connector. 3) Using a tester, check continuity between the keyless access CM connector and inhibitor switch connector. ***Connector & terminal*** ***(B572) No. 5 — (B12) No. 16:*** ***(B12) No. 15 — Starter motor:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-102, Keyless Access CM.>	Repair or replace the harness.

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
• Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.
• For model with immobilizer or model with keyless access, registration of immobilizer may be needed after the replacement of controller etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

NOTE:
• To check harness for open or short circuits, shake the suspected trouble spot or connector.
• Check List for Interview <Ref. to BC(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the interview check list. <Ref. to BC(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer.
2	**BASIC INSPECTION.** Check components which might affect body control. <Ref. to BC(diag)-4, INSPECTION, General Description.>	Is the component that might influence the body control problem normal?	Go to step **3**.	Repair or replace each component.
3	**CHECK DTC.** 1) Read the DTC. <Ref. to BC(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(w/o HEV)(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> <Ref. to LAN(HEV)(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(w/o HEV)(diag)-6, TIME STAMP, CAUTION, General Description.> <Ref. to LAN(HEV)(diag)-6, TIME STAMP, CAUTION, General Description.>	Is DTC displayed on Subaru Select Monitor?	Go to step **5**.	Go to step **4**.
4	**PERFORM GENERAL DIAGNOSTICS.** Inspect using the "General Diagnostic Table". <Ref. to BC(diag)-42, General Diagnostic Table.>	Is result of inspection OK?	The body control system is normal.	Go to step **5**.
5	**PERFORM DIAGNOSIS.** 1) Correct the cause of trouble. 2) Perform the Clear Memory Mode. <Ref. to BC(diag)-10, OPERATION, Clear Memory Mode.> 3) Read the DTC. <Ref. to BC(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed on Subaru Select Monitor?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

Body Control System Check List for Interview		Date of Vehicle Bring-in Year Month Day	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content			
Date and time when the trouble occurred		Frequency of trouble occurrence	
Condition of trouble occurrence		Weather	
Road conditions		Occurrence location	
Accessory installation condition			
Trouble condition			
❑ Diagnostic code		❑ ( )	

3. General Description

A: CAUTION

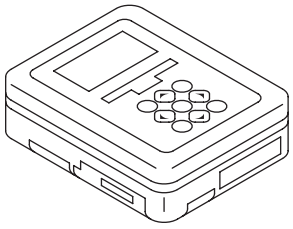
1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and body control circuits.

CAUTION:
- **Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.**
- **Be careful not to damage the airbag system wiring harness, when servicing the body control system.**

B: INSPECTION

Before performing diagnosis, check the following items which might affect body control system problems.
1) Measure the battery voltage and check electrolyte.



NOTE:
For HEV model, check the 12 volt auxiliary battery.

Standard voltage: 12 V or more

Specific gravity: 1.260 or more
2) Check the fuse condition.
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Check the connecting condition of harness and harness connector.
4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to BC(diag)-17, OPERATION, Registration Body Integrated Unit.>
5) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to BC(diag)-15, OPERATION, User Customizing.>
6) Confirm “Factory initial setting” of body integrated unit registrations is “Market”.

C: PREPARATION TOOL

1. SPECIAL TOOL

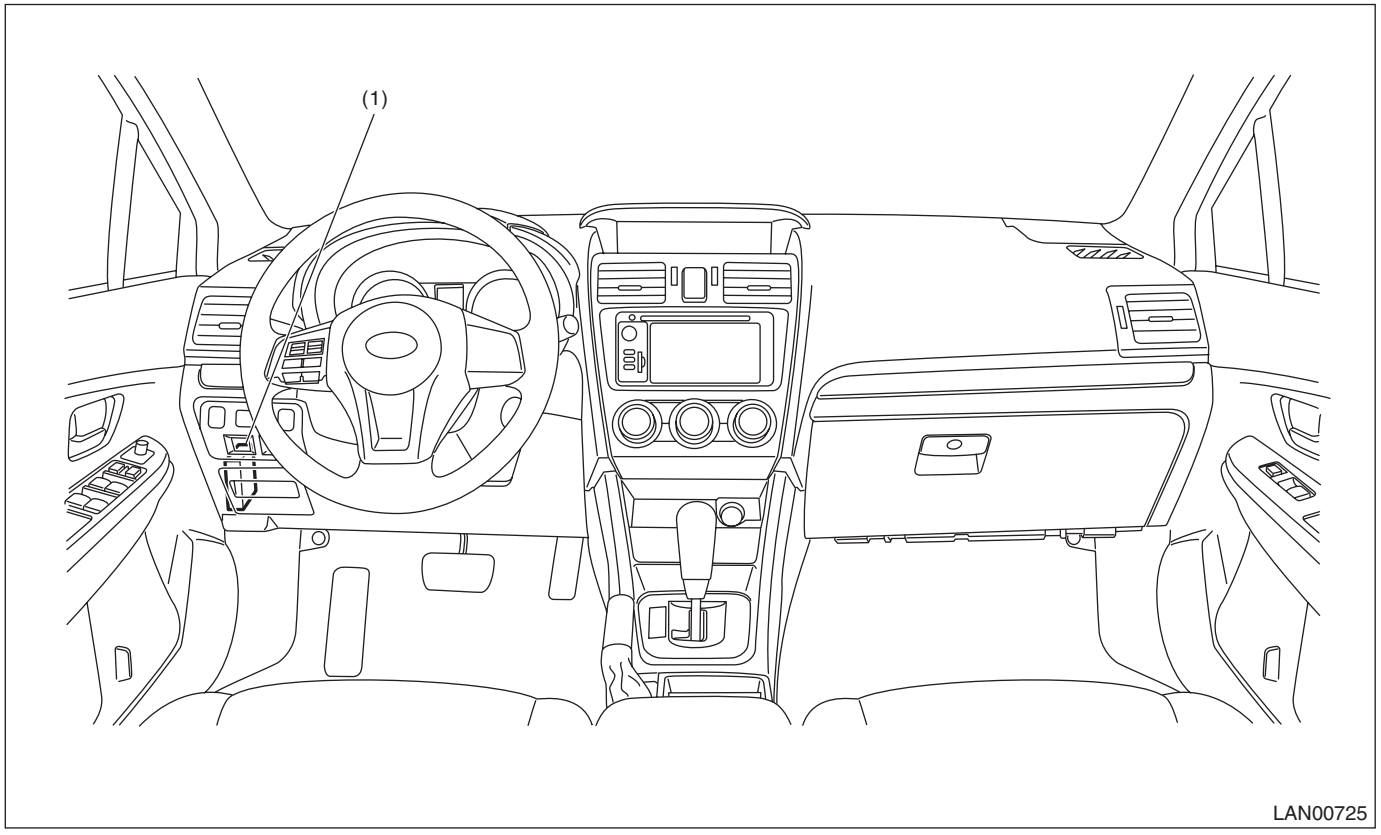


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
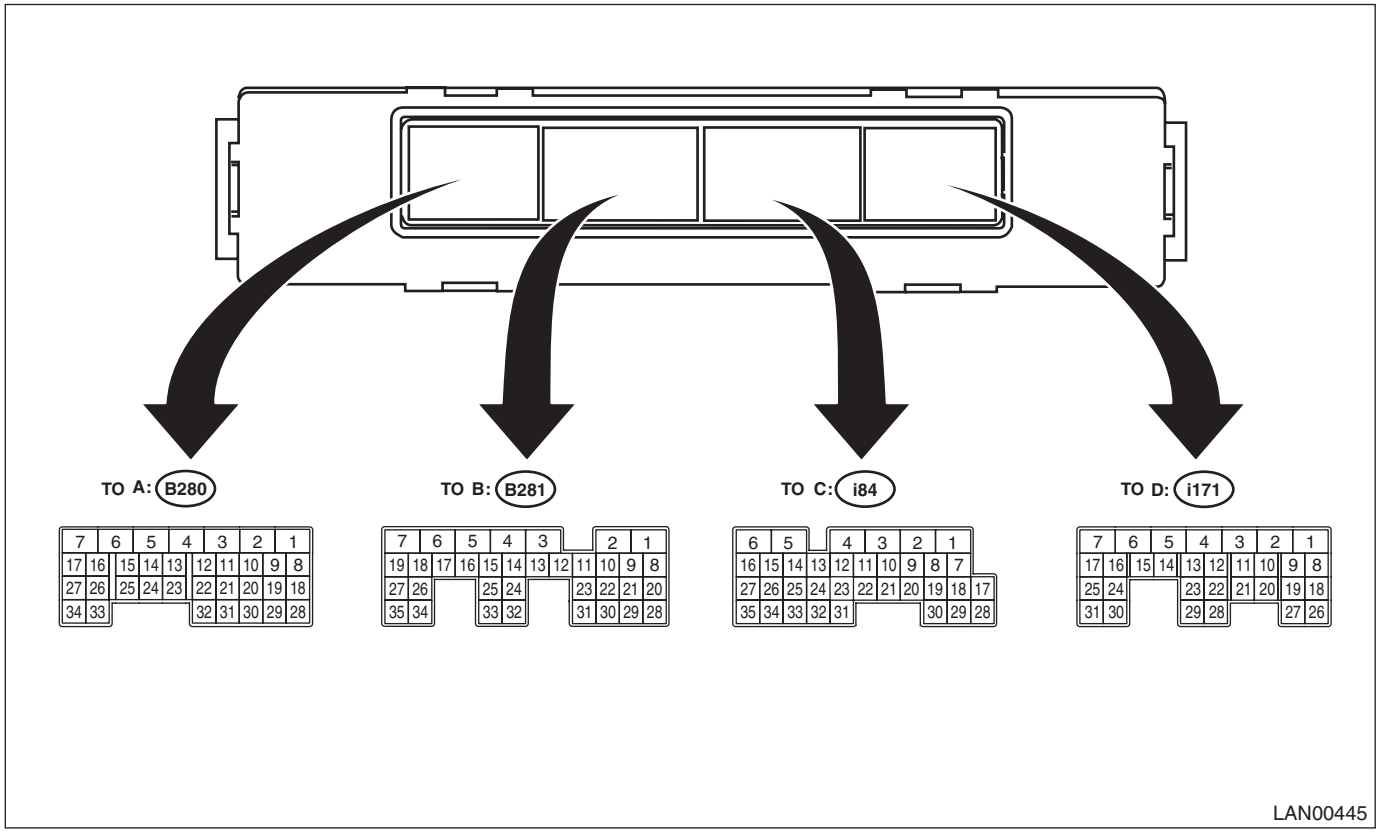
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

4. Electrical Component Location



A: LOCATION

(1) Body integrated unit

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (engine OFF)	
Ignition power supply (rear wiper)	A5 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Ignition switch OFF → ON
Battery power supply (shift lock/ key lock)	B6 ←→ Chassis ground	10 — 13 V	Always
Battery power supply (door lock)	D1 ←→ Chassis ground	10 — 13 V	Always
Battery power supply (control)	C6 ←→ Chassis ground	10 — 13 V	Always
Ground	A1 ←→ Chassis ground	Less than 1.5 V	Always
	B31 ←→ Chassis ground		
	C1 ←→ Chassis ground		
	D29 ←→ Chassis ground		
Battery power supply (back-up)	B7 ←→ Chassis ground	10 — 13 V	Always
Ignition power supply	B3 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Ignition switch OFF → ON
ACC power supply	A32 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Ignition switch OFF → Accessory ON
Key-in switch	A4 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	Key inserted (models without keyless access)
ACC input	A4 ←→ Chassis ground	Less than 1.5 V → 10 — 13 V	ACC ON (model with keyless access)
P range SW	B18 ←→ Chassis ground	8 V or more → less than 1.5 V	P range to other than P range
Stop light SW	A10 ←→ Chassis ground	Less than 1.5 V → 8 V	Stop light switch OFF → ON
Door SW (driver's)	C14 ←→ Chassis ground	8 V or more → less than 1.5 V	Front right door closed → open
Door SW (passenger's)	C13 ←→ Chassis ground	8 V or more → less than 1.5 V	Front left door closed → open

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (engine OFF)	
Door SW (rear right)	C25 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear right door closed → open
Door SW (rear left)	C24 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear left door closed → open
Rear gate SW/trunk SW	C33 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear gate/trunk closed → open
Opener SW (trunk/rear gate)	C10 ←→ Chassis ground	8 V or more → less than 1.5 V	Rear gate/trunk opener switch ON
Manual switch (LOCK)	C9 ←→ Chassis ground	8 V or more → less than 1.5 V	Door lock switch ON
Manual switch (UNLOCK)	C20 ←→ Chassis ground	8 V or more → less than 1.5 V	Door unlock switch ON
Lighting AUTO	B16 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at AUTO position
Lighting II	A34 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at II position
	B34 ←→ Chassis ground		
Lighting I	B17 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at I position
Dimmer passing	B25 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at passing position
Dimmer Hi beam	B15 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at Hi beam position
Front fog light SW	B26 ←→ Chassis ground	8 V or more → less than 1.5 V	Front fog light switch ON
Illumination sensor power supply	B1 ←→ A29	Less than 1.5 V → 4.5 V or more	Ignition switch OFF → ON
Illumination sensor signal	A19	0.2 — 4.5 V	Ignition switch OFF → ON
Ground (illumination sensor)	A29 ←→ Chassis ground	Less than 1.5 V	Always
Rear wiper SW ON	A12 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at ON position
Rear wiper SW INT	A22 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at INT position
Rear washer SW	A30 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at ON position
Illumination SW (Vi1)	D12 ←→ Chassis ground	Approx. 5 V	While clearance light illuminates
Illumination SW (Vi2)	D22 ←→ Chassis ground	0.5 — 4.8 V	
Illumination SW (Vi3)	D28 ←→ Chassis ground	Less than 1.5 V	Always
Bright SW	C21 ←→ Chassis ground	8 V or more → less than 1.5 V	Switch at ON position
Reverse SW (MT)	B12 ←→ Chassis ground	Less than 1.5 V → 8 V or more	Reverse SW ON
Impact sensor	A11 ←→ Chassis ground	8 V or more	Apply an impact
Hi-speed CAN communication circuit 1 (Hi)	B20	Serial communication	Except for sleep status*1
Hi-speed CAN communication circuit 1 (Lo)	B28		
Hi-speed CAN communication circuit 2 (Hi)	C27	Serial communication	Except for sleep status*1
Hi-speed CAN communication circuit 2 (Lo)	C35		
Immobilizer antenna (B)	B22	Serial communication	Communication with ignition key in progress
Immobilizer antenna (A)	B10		
Immobilizer antenna amplifier GND	B30 ←→ Chassis ground	Less than 1.5 V	Always
Immobilizer antenna amplifier power supply	B2 ←→ B30	4.5 — 5.5 V	Communication with ignition key in progress
Security UART	A21	Serial communication	Always
Front wiper return	A2 ←→ Chassis ground	8 V	When front wiper is operated
Rear washer switch	A30 ←→ Chassis ground	8 V or more → less than 1.5 V	When rear washer switch is ON
Door UNLOCK (driver's seat) output	D4 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When driver's side door unlock is output

Description	Terminal No.	Signal (V or Ω)	Note
		Ignition switch ON (engine OFF)	
Keyless entry communication line	D11	Serial communication	When door lock/unlock is operated with the keyless transmitter, or when TPMS is operated
Rear defogger switch	C18 ←→ Chassis ground	Less than 1.5 V → 8 V or more	When the rear defogger switch is ON
Parking brake switch	C32 ←→ Chassis ground	8 V or more → less than 1.5 V	When parking brake is ON
Shift lock solenoid	B5 ←→ Chassis ground	Less than 1.5 V → 8 V or more	When shift lock is operating (AT models)
Key lock solenoid	B4 ←→ Chassis ground	Less than 1.5 V → 8 V or more	LOCK status ON (AT models without keyless access)
Rear wiper ON output	A7 ←→ Chassis ground	Less than 0.5 V → 8 V or more	Rear wiper operation in progress
Rear wiper return	A6 ←→ Chassis ground	Less than 0.5 V → 8 V or more	Rear wiper operation in progress
Door LOCK output	D2 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When LOCK signal is output
Door UNLOCK output	D3 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When UNLOCK signal is output
Rear gate/trunk UNLOCK output	D7 ←→ Chassis ground	Less than 0.5 V → 8 V or more	When UNLOCK signal is output
Lighting relay power supply	A3 ←→ Chassis ground	10 — 13 V	ACC or key-in SW ON
	B19 ←→ Chassis ground	10 — 13 V	ACC or key-in SW ON
Lighting relay Hi output	A17 ←→ Chassis ground	8 V or more → less than 1.0 V	Dimmer SW at Hi position
Lighting relay Lo output	B35 ←→ Chassis ground	8 V or more → less than 1.0 V	Lighting II SW at ON position
Lighting Lo relay output 2	A27 ←→ Chassis ground	8 V or more → less than 1.0 V	Lighting II SW at ON position
Lighting relay I output	A16 ←→ Chassis ground	8 V or more → less than 1.0 V	Lighting I SW at ON position
Front fog light output	A15 ←→ Chassis ground	8 V or more → less than 1.0 V	Front fog light SW at ON position
DRL cancel output	D10 ←→ Chassis ground	8 V or more → less than 1.0 V	Headlight switch ON or Hi beam ON, passing switch ON
Illumination output	B8	Pulse output	Illumination ON
	C16	Pulse output	Illumination ON
Key ring illumination	A25	Pulse output	Illumination ON
Room light output	C4	Pulse output	Room light ON (doors interlocked)
Map light output	D8	Pulse output	Map light ON (keyless answer-back, etc.)
Luggage/trunk light output	C3	Pulse output	Luggage/trunk at open state
Rear defogger relay output	A26 ←→ Chassis ground	8 V or more → less than 1.0 V	Rear defogger SW ON
Wiper deicer relay output	D9 ←→ Chassis ground	8 V or more → less than 1.0 V	Wiper deicer SW ON
Turn/hazard output	D18 ←→ Chassis ground	8 V or more → less than 1.0 V	When answer-back is output
Security horn output	A24 ←→ Chassis ground	8 V or more → less than 1.0 V	When security is operating
Security light	D26	Pulse control	When security light is illuminating
Answer-back buzzer output	A20 ←→ Chassis ground	8 V or more → less than 1.0 V	When answer-back operates
Immobilizer communication	A31	Serial communication	(Model without keyless access)

*1: For CAN sleep state, hold on for approx. one minute with ignition OFF and the doors, trunk, and rear gate all closed.

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

NOTE:
For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to BC(diag)-22, List of Diagnostic Trouble Code (DTC).>

7. Clear Memory Mode

A: OPERATION

For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

8. Read Current Data

A: OPERATION

For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

B: LIST

Items to be displayed	Unit of measure	Remarks	Note

Illumination Sensor Setting	ON/OFF	Body integrated unit setting value	Customize setting
Factory initial setting	Market/Factory	Body integrated unit setting value	Displays body integrated unit customizing

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

9. User Customizing

A: OPERATION

1) On «Main Menu» display, select {Each System Check}.
2) On «System Selection Menu» display, select {Integ. unit mode}.
3) On «Integ. unit mode failure diag.» display, select {Work Support}.
4) On «Work Support» display, select {Unit customizing}.
5) Change the setting with UP/DOWN key and set with the [OK] key.

List of User Customizing item

Data	Initial setting value	Customize setting	Remarks
Off delay time	30s	OFF	Room light off delay time can be selected.
		10 Sec	
		20 Sec	
		30s	
Auto Light Sensitivity Adjustment	Normal	Dull	Slow response
		Normal	Standard
		Sensitive	Quick response
		Very sensitive	Fairly quick response
Power rear gate setting	— (*1)	ON	Fixed at OFF because this is not applicable.
		OFF	
Back auto rear wiper setting	OFF	ON	Fixed at OFF because this is not applicable.
		OFF	
TPMS Setting	— (*1)	TPMS	Set to “ON” for model with TPMS.
		No TPMS	
Driver’s door select unlock	ALL	Select	ALL fixed (impossible to change)
		ALL	
R gate select unlock	ALL	Select	ALL fixed (impossible to change)
		ALL	
Rear defogger operation mode	Normal	Normal	Automatically stops in 15 minutes after switch is turned to ON.
		Continuous	Repeats active condition for 15 minutes and inactive condition for 2 minutes until switch is turned to OFF.
Security Alarm Setup	ON	ON	Security alarm (hazard, horn or siren) in active condition
		OFF	Security alarm in inactive condition
Impact Sensor Setup	OFF	ON	Workable when the “Impact sensor” is set to “ON”. Impact sensor function becomes activated.
		OFF	Impact sensor in inactive condition (Set to “OFF” in models without sensors.)
Alarm delay setup	ON		After the keyless lock operation, the alarm monitor starts after the following delay time has passed.
		ON	Delay time is 30 seconds.
		OFF	Delay time is 0 seconds.
Lockout prevention	ON	ON	key lockout prevention function is activated. (The function does not operate if safety knob is locked by hand.)
		OFF	Key lockout prevention function is deactivated.
Impact sensor (OP)	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Make sure to set to “OFF” for models without the impact sensor. When “ON”, hazard, horn or siren become activated by keyless lock (alarm monitor start).)
		OFF	Vehicle is controlled in no impact sensor mode.

Data	Initial setting value	Customize setting	Remarks
Buzzer sounding setting	ON	ON	When lock/unlock is selected by keyless entry system operation, buzzer operates.
		OFF	When lock/unlock is selected by keyless entry system operation, buzzer does not operate.
Abnormal warning lamp flashing setting	ON	ON	When lock/unlock is selected by keyless entry system operation, hazard blinks.
		OFF	When lock/unlock is selected by keyless entry system operation, hazard does not interlock.
Passive Alarm	OFF	ON	
		OFF	
Door open warning	ON	ON	
		OFF	
Dome Light Alarm Setting	OFF	ON	Room light illuminates interlocking with alarm.
		OFF	Room light does not illuminate interlocking with alarm.
Auto A/C ECU Setting	—	ON	Diagnoses with auto A/C CM.
		OFF	Diagnoses without auto A/C CM.
wiperdeicer	—	ON	Wiper deicer control is performed.
		OFF	Wiper deicer control is not performed.
Illumination Control On/Off	ON	ON	
		OFF	
Sedan/Wagon Setting	—	Sedan	Body control is performed by Sedan.
		Wagon	Body control is performed by Wagon.
MT/AT Setting	—	MT	Body control is performed by MT.
		AT	Body control is performed by AT.
6MT Setting	—	6MT	Body control is performed by 6MT.
		Other than 6MT	Body control is performed by other than 6MT.
Illumination Sensor Setting	— (*1)	ON	Set to “ON” for model with auto light.
		OFF	
Factory initial setting	Market	Market	Customize setting is reset when mode is switched from Market to Factory.
		Factory	

*1: Customization item according to the actual vehicle equipment

6) After setting, make sure that the setting changed in the {Current Data Display & Save} is same as vehicle equipment.

CAUTION:
- **The above settings must match the actual vehicle equipment.**
- **Do not change settings except for setting above while setting the functions.**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

10.Registration Body Integrated Unit

A: OPERATION

1. CONFIRM CURRENT SETTING

1) On «Main Menu» display, select {Others}.
2) On «Others» display, select {Customized Setting}.
3) Save the setting.
Required items for new registration. (Except for system not equipped)

Item	Item to confirm				Remarks
number of regist.	1	2	3	4	Number of registered ID
Off delay time	OFF	10 Sec	20 Sec	30s	Setting for lighting off time
Auto Light Sensitivity Adjustment	Dull	Normal (Standard)	Sensitive	Very sensitive	1st (slow) — 4th (fairly quick)
Power rear gate setting	ON		OFF		N/A
Back auto rear wiper setting	ON		OFF		N/A
TPMS Setting	TPMS		No TPMS		
Driver's door select unlock	ALL		Select		N/A
R gate select unlock	ALL		Select		N/A
Rear defogger operation mode	Normal		Continuous		
Security Alarm Setup	ON		OFF		
Impact Sensor Setup	ON		OFF		Option setting
Alarm delay setup	ON		OFF		
Lockout prevention	ON		OFF		
Impact sensor	ON		OFF		Option setting
Buzzer sounding setting	ON		OFF		
Abnormal warning lamp flashing setting	ON		OFF		
Passive Alarm	ON		OFF		
Door open warning	ON		OFF		
Dome Light Alarm Setting	ON		OFF		
Auto A/C ECU Setting	ON		OFF		
wiperdeicer	ON		OFF		Option setting
Illumination Control On/Off	ON		OFF		
Sedan/Wagon Setting	Wagon		Sedan		
MT/AT Setting	MT		AT		
6MT Setting	6MT		Other than 6MT		
Illumination Sensor Setting	ON		OFF		
Factory initial setting	Factory		Market		Do not change to factory mode.

2. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

CAUTION:
For the body integrated unit, function selection is available to control the entire vehicle systems. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.

- **Be sure to correspond registrations, or User Customizing settings to vehicle equipment.**
- **Do not change the settings of vehicle improperly.**
- **Make sure that the key illumination does not blink with ignition switch ON, or that the body integrated unit registration item, "Factory initial setting", is set as "Market". If "Factory initial setting" is set to "Factory", key illumination blinks when the ignition switch is turned ON, to notify that the settings are not confirmed. (Except for model with keyless access)**

• Key illumination does not blink with ignition switch turned to ON and go off with door closed. (Except for model with keyless access)
• Be sure to register immobilizer if body integrated unit is replaced with a new part. (Except for model with keyless access)
• Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER". (Except for model with keyless access)
1) On «Main Menu» display, select {Each System Check}.
2) On «System Selection Menu» display, select {Integ. unit mode}.
3) Click the [OK] button after the control module name (integrated unit) is displayed.
4) On «Integ. unit mode failure diag.» display, select {Work Support}.
5) On «Work Support» display, select {Unit customizing}.

NOTE:
For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen. <Ref. to BC(diag)-19, DESTINATION SETTING, OPERATION, Registration Body Integrated Unit.>
6) Change the setting to the contents saved at confirmation of current setting.

CAUTION:
• To perform normal operation of vehicle and diagnosis, the above settings must match the actual vehicle equipment.
• When the body integrated unit is new or in Factory mode, the key illumination blinks, and user customizing is incomplete. Check the user customizing settings. (If the vehicle is a model with keyless access, check by the current data display function of Subaru Select Monitor because no key illumination is available.)
• Be sure not to change Factory initial setting except when installing a new body integrated unit.

NOTE:
"Factory" mode:
• Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON. (Except for model with keyless access)
• All replacement body integrated units are set to "Factory" mode. When replacing a body integrated unit, be sure to perform the registration operation.
"Market" mode:
• Each settings have been set. It can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON.
7) Perform the Factory initial setting. On the «Unit customizing» display screen of Subaru Select Monitor, select the {Factory initial setting}.
8) Change the mode from Factory to Market.
9) Turn the ignition switch to OFF to settle the setting.
10) Change the Subaru Select Monitor system selection to «Immobilizer» to register the immobilizer key. (Except for model with keyless access)
11) Perform the registration according to the procedures of the "REGISTRATION MANUAL FOR IMMOBILIZER". (Except for model with keyless access)
12) For a vehicle equipped with remote engine starter, register the remote engine starter according to "REGISTRATION MANUAL FOR IMMOBILIZER". (Except for model with keyless access)
13) Perform the User Customizing. <Ref. to BC(diag)-15, OPERATION, User Customizing.>

NOTE:
For detailed operation procedures, refer to "PC application help for Subaru Select Monitor".

3. DESTINATION SETTING

NOTE:
For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen.

	Step	Check	Yes	No
1	**CONFIRM CURRENT SETTING.** Always perform confirmation of current setting before replacing the module. Record the contents of the “Destination Setting”. NOTE: Refer to the “Read Current Data” and “CONFIRMATION OF CURRENT SETTING” to confirm the current setting. <Ref. to BC(diag)-17, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.> <Ref. to BC(diag)-11, OPERATION, Read Current Data.>	Is the current setting recorded?	Go to step **2**.	Confirm the current setting. Go to step **1**.
2	**CONFIRM DESTINATION SETTING.** 1) Connect the Subaru Select Monitor, and run the application. 2) On «Main Menu» display, select {Each System Check}. 3) On the «System Selection Menu» display, select {Integ. unit mode}. 4) On «Integ. unit mode» display, select {Work Support}. 5) On «Work Support» display, select {Unit customizing}. 6) The vehicle destination screen is displayed.	Is the vehicle destination setting screen displayed?	Go to step **3**.	Go to step **4**.
3	**CONFIRM DESTINATION SETTING.** Confirm the screen displayed on Subaru Select Monitor and the actual vehicle destination.	Is it necessary to change the destination setting?	Select [Yes]. Go to step **4**.	Select [No]. Go to step **5**.
4	**ENTER DESTINATION CODE.** Enter the appropriate code in the screen. JPN: JP00 KA, KC: KA00 KS: KS00 U4, U5, U6, C6 and C0, C5 (with keyless access): U400 C0, C5 (without keyless access): C000 EK, ER: EK00 Other than above: EC00	Is the appropriate code entered?	Select [Yes]. Go to step **5**.	Enter the destination code. Go to step **5**.
5	**REGISTER VEHICLE EQUIPMENTS.** Customizing screen is displayed. NOTE: Match the each item setting of body integrated unit registration item list with the vehicle equipments.	Do all setting contents match with the vehicle equipment specification?	Go to step **6**.	Change the items until each content setting match with the vehicle equipments specification. Go to step **6**.

	Step	Check	Yes	No
6	**CONFIRM MARKET MODE.** 1) Customizing screen, select the {Factory initial setting} to change the setting from "Factory" mode to "Market" mode. 2) Turn the ignition switch to OFF. NOTE: When the setting is changed from "Factory" mode to "Market" mode, turning the ignition switch from ON → OFF confirms the setting. 3) Turn the ignition switch to ON, and check the contents of settings.	Is the mode changed to "Market" mode?	Go to step **7**.	Perform the destination setting from the first step. Go to step **1**.
7	**CONFIRM MARKET MODE.** Check the following. Make sure that the "Destination Setting" in the current data display is the same as the one you confirmed in step 1.	Is the display the same as indicated?	Registration of body integrated unit is finished.	It is possible that harness malfunction may occur. Perform the diagnosis.

11.Function Check

A: OPERATION

NOTE:
In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.
1) On «Main Menu» display, select {Each System Check}.
2) On «System Selection Menu» display, select {Integ. unit mode}.
3) On «Integ. unit mode failure diag.» display, select {Work Support}.
4) On «Work Support» display, select {Active Test}.
5) Select an item to be operated on «Active Test» display, and press the [OK] button.
6) Pressing [Next] starts, [End] cancels the operation and [OK] returns to the System Operation Check Mode display screen.

NOTE:
• If not equipped (based on area or condition), process will not go on.
• Because the model with keyless access is not equipped with key lock solenoid, the operation is disabled.
• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

12.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
None	Communication for Initializing Impossible	Subaru Select Monitor communication is open or shorted.	<Ref. to LAN(w/o HEV)(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
B1100	Integ. Unit System Error	Body integrated unit internal error	<Ref. to BC(diag)-23, DTC B1100 INTEG. UNIT SYSTEM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1101	BATT P/Supply Malfunction Cont	Voltage malfunction caused by poor contact of battery power supply control circuits	<Ref. to BC(diag)-24, DTC B1101 BATT P/SUPPLY MALFUNCTION CONT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1102	BATT P/Supply Malfunction Backup	Voltage malfunction caused by poor contact of battery power supply backup circuits	<Ref. to BC(diag)-26, DTC B1102 BATT P/SUPPLY MALFUNCTION BACKUP, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1103	Ignition Power Failure	Voltage malfunction caused by poor contact of IGN power supply circuits	<Ref. to BC(diag)-28, DTC B1103 IGNITION POWER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1104	ACC Power Failure	Voltage malfunction caused by poor contact of ACC power supply circuits	<Ref. to BC(diag)-31, DTC B1104 ACC POWER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1105	Key Interlock Circuit Abnormal	GND-output short of key interlock circuit	<Ref. to BC(diag)-33, DTC B1105 KEY INTERLOCK CIRCUIT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1106	Shift Lock Circuit Failure	Voltage malfunction caused by poor contact of shift lock circuits	<Ref. to BC(diag)-35, DTC B1106 SHIFT LOCK CIRCUIT FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1401	M Collation NG	Malfunction related immobilizer	<Ref. to BC(diag)-37, DTC B1401 M COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1402	Immobilizer Key Collation NG	Malfunction related immobilizer	<Ref. to BC(diag)-37, DTC B1402 IMMOBILIZER KEY COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1405	SCU Collation NG	Malfunction related immobilizer	<Ref. to BC(diag)-37, DTC B1405 SCU COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1406	SCU_EEPROM_NG	Malfunction of security control module	<Ref. to BC(diag)-37, DTC B1406 SCU_EEPROM_NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1407	M Communication Abnormal	Communication failure between body integrated unit and combination meter	<Ref. to BC(diag)-37, DTC B1407 M COMMUNICATION ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1408	Meter EEPROM Abnormal	Combination meter malfunction	<Ref. to BC(diag)-37, DTC B1408 METER EEPROM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1409	SCU Communication Abnormal	Communication failure between body integrated unit and security control module	<Ref. to BC(diag)-37, DTC B1409 SCU COMMUNICATION ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1410	Transponder Communication Abnormal	Communication failure between key and body integrated unit	<Ref. to BC(diag)-37, DTC B1410 TRANSPONDER COMMUNICATION ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1411	Immobilizer Antenna Abnormal	Faulty antenna	<Ref. to BC(diag)-37, DTC B1411 IMMOBILIZER ANTENNA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1500	Keyless UART Com. Malfunction	Open or short circuit in keyless UART circuit	<Ref. to BC(diag)-38, DTC B1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

13.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1100 INTEG. UNIT SYSTEM ERROR

DTC DETECTING CONDITION:
System error in body integrated unit
TROUBLE SYMPTOM:
LAN communication immobilizer function may not be executed normally.

	Step	Check	Yes	No
1	**CHECK DTC.** Check DTC indicated by body integrated unit.	Is B1100 current malfunction?	Go to step **2**.	Temporary EEPROM access error occurred.
2	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1100 current malfunction?	Replace the body integrated unit. <Ref. to SL-82, REMOVAL, Body Integrated Unit.>	Temporary EEPROM access error occurred.

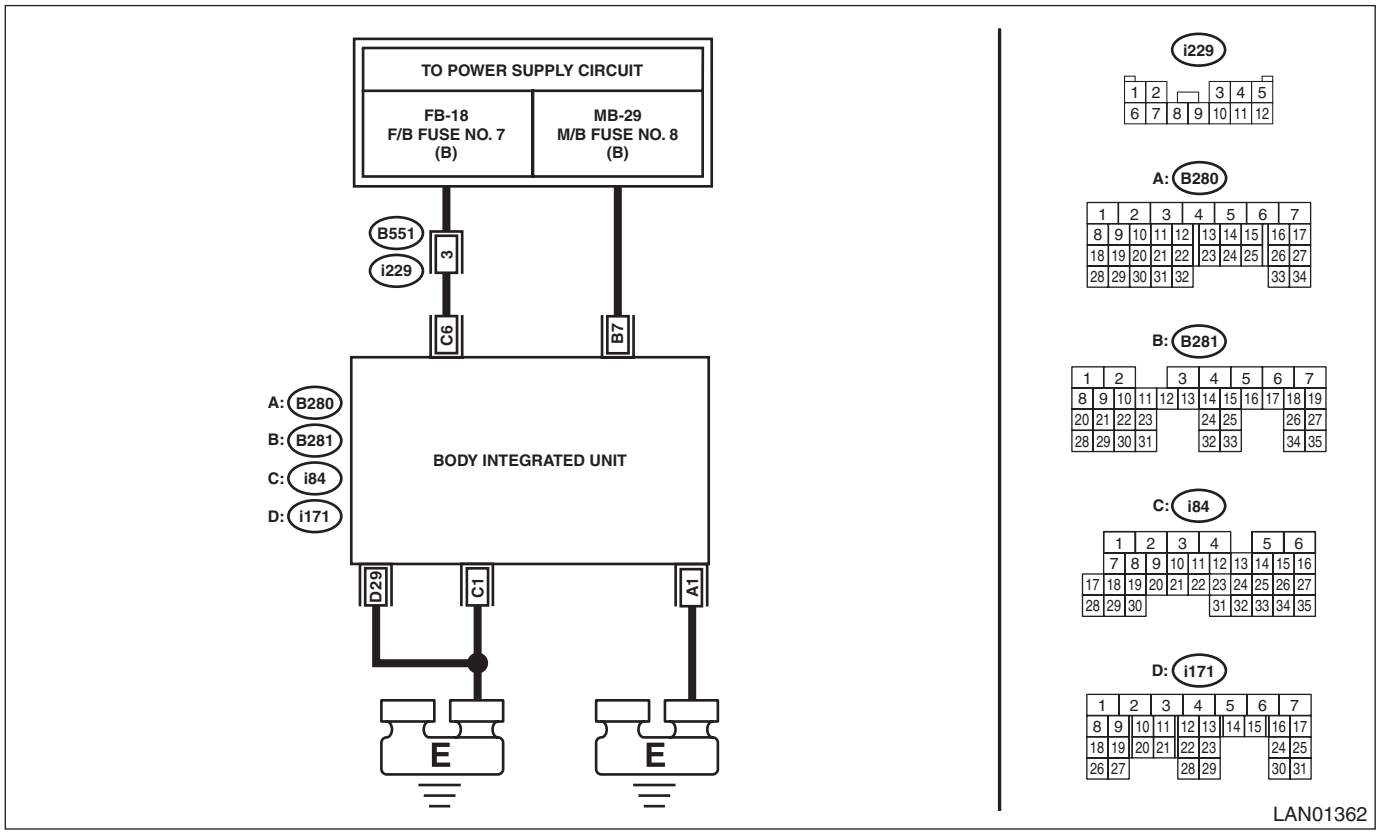
B: DTC B1101 BATT P/SUPPLY MALFUNCTION CONT

DTC DETECTING CONDITION:

- Voltage malfunction caused by poor contact of battery power supply control circuit
- Battery voltage of body integrated unit is not within the 8.5 — 16.5 V range.

TROUBLE SYMPTOM:

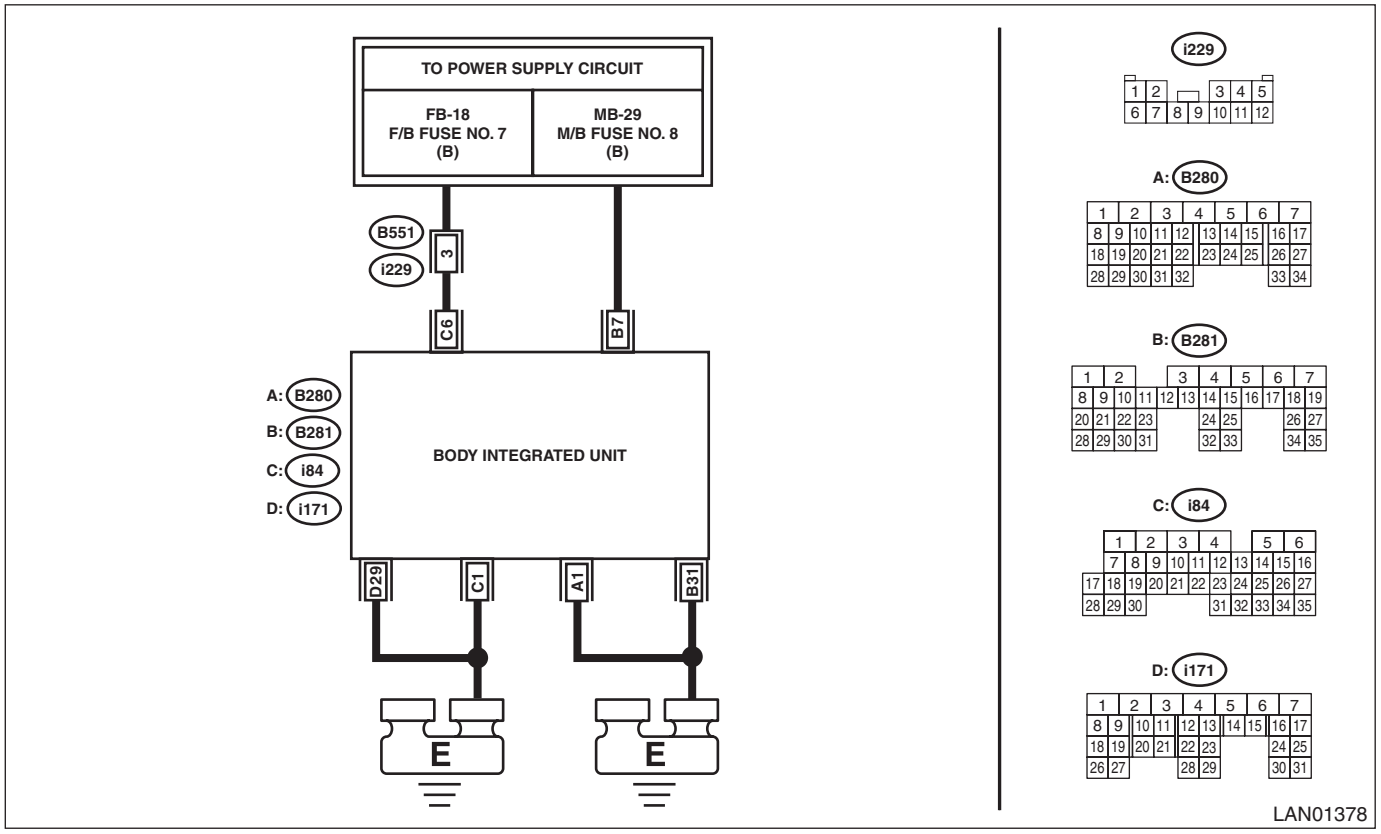
Functions of body integrated unit stop.



NOTE:

When B1102 BATT P/SUPPLY MALFUNCTION BACKUP is output at the same time, all the function of body integrated unit may not operate.

WIRING DIAGRAM:



- Gasoline engine model

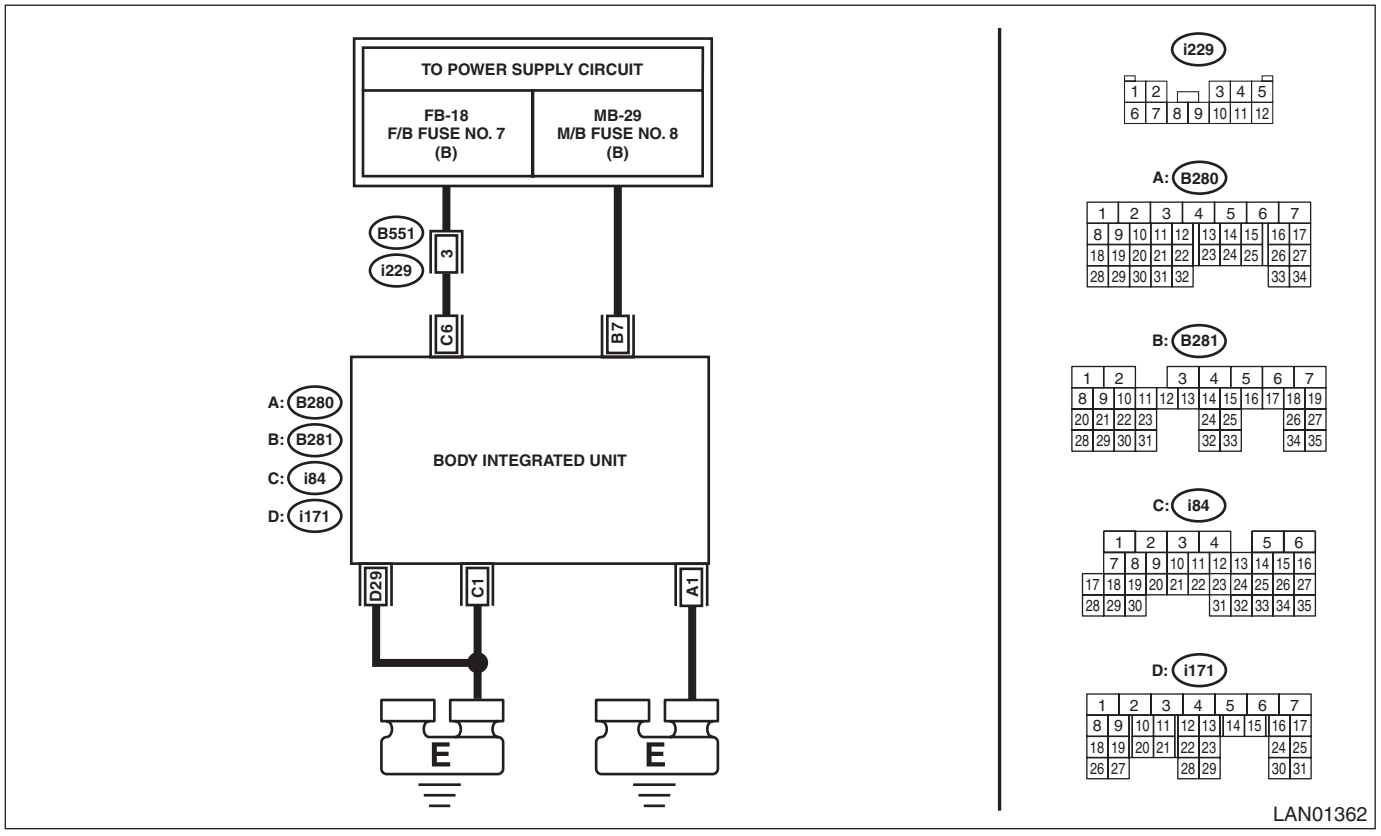
Immobilizer system <Ref. to WI(w/o HEV)-100, WIRING DIAGRAM, Immobilizer System.>

• HEV model

Immobilizer system <Ref. to WI(HEV)-150, WIRING DIAGRAM, Immobilizer System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1101 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1101 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-82, REMOVAL, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

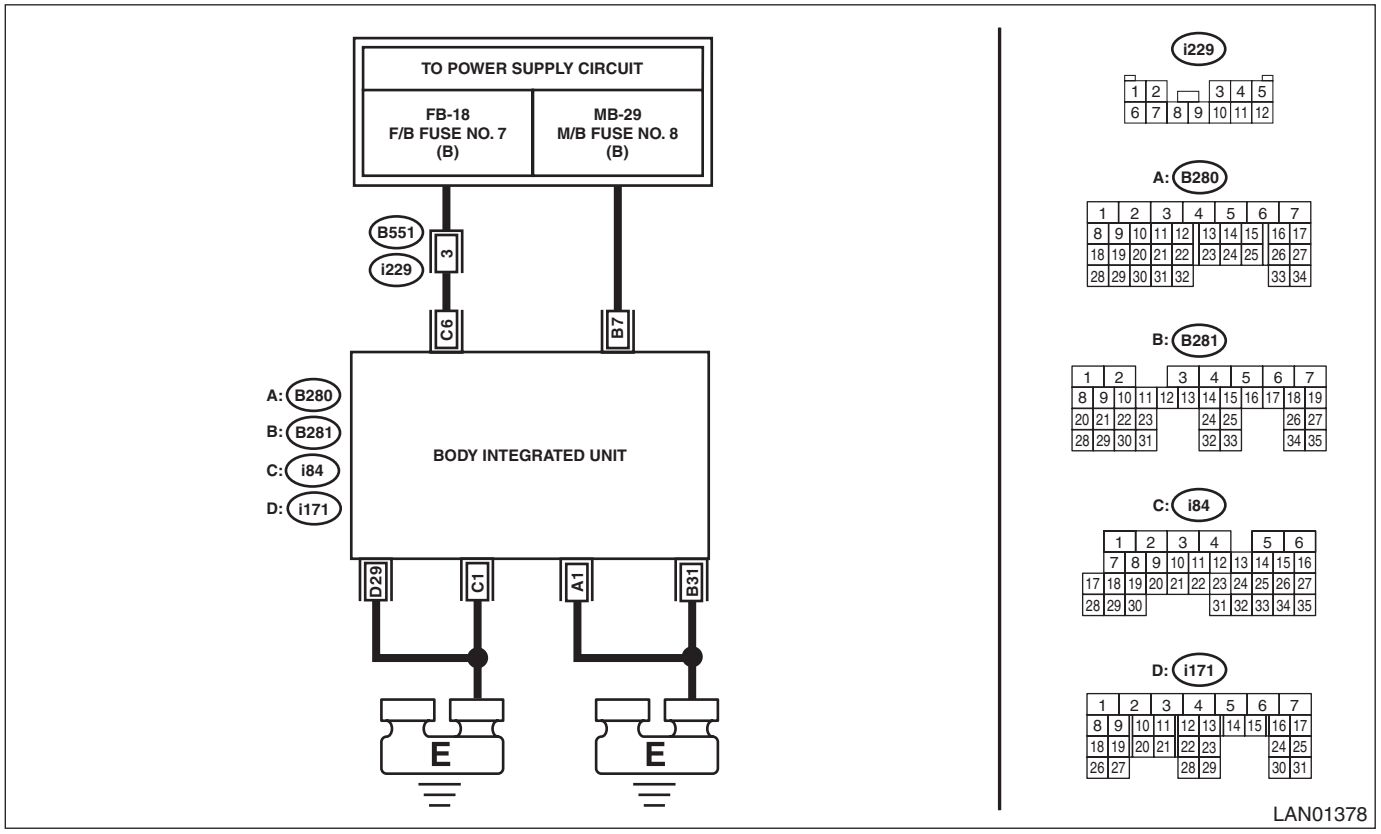
C: DTC B1102 BATT P/SUPPLY MALFUNCTION BACKUP



DTC DETECTING CONDITION:
Voltage malfunction caused by poor contact of battery power supply backup circuits

TROUBLE SYMPTOM:
Illuminations for the keyless entry, map light, luggage light, trunk light, room light, and ignition switch do not turn on.

NOTE:
When B1101 BATT P/SUPPLY MALFUNCTION CONT. is output at the same time, all function of body integrated unit may not operate.

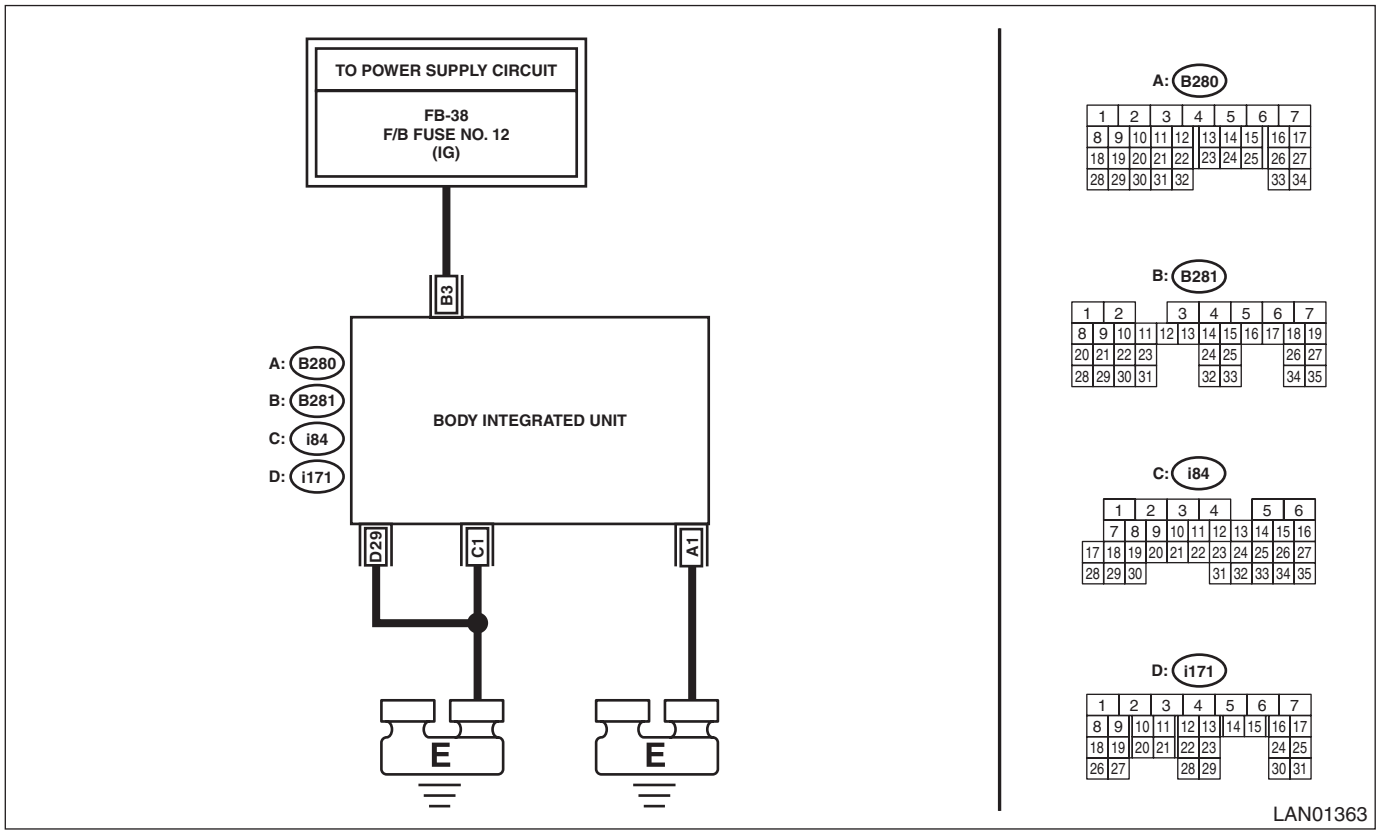


WIRING DIAGRAM:
- Gasoline engine model

Immobilizer system <Ref. to WI(w/o HEV)-100, WIRING DIAGRAM, Immobilizer System.>

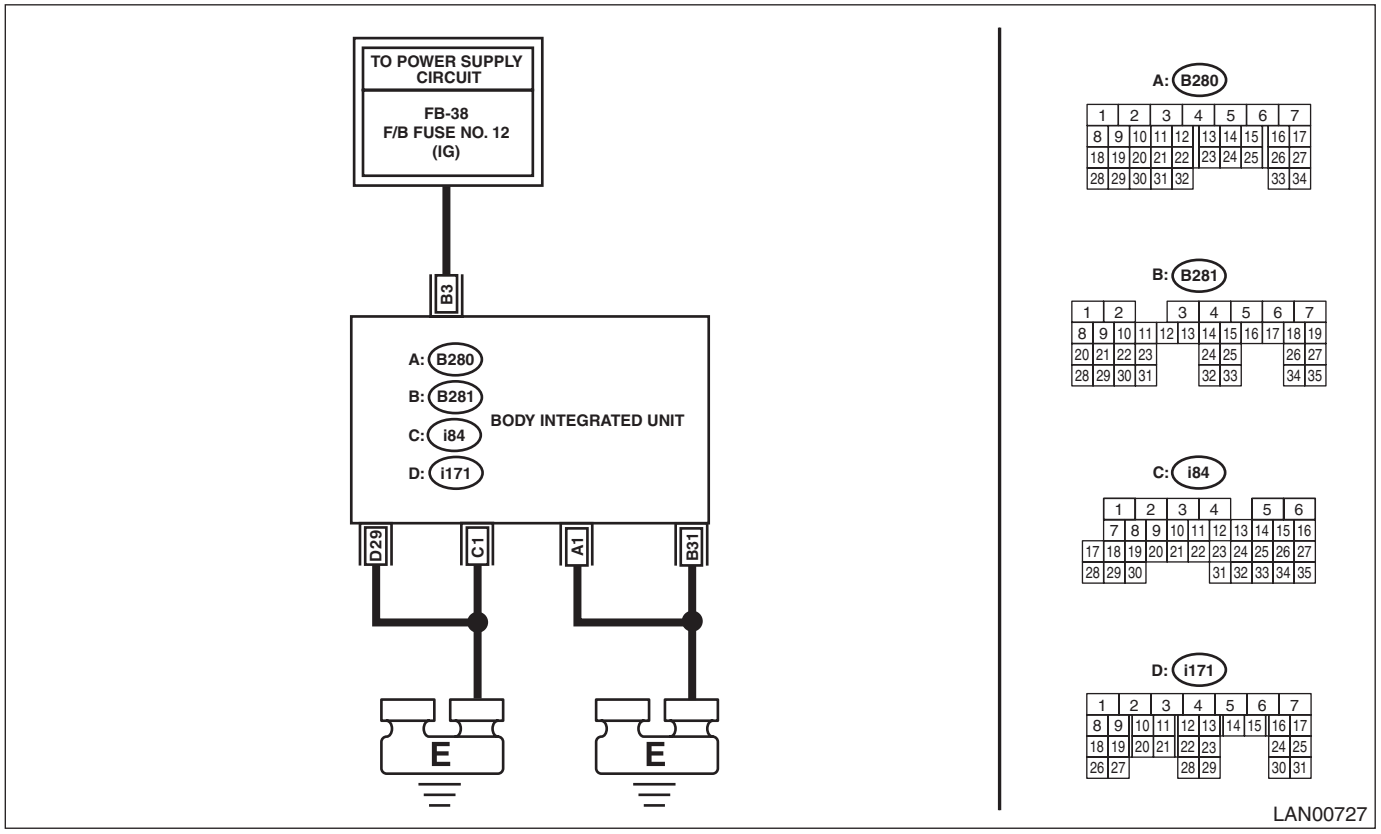
• HEV model

Immobilizer system <Ref. to WI(HEV)-150, WIRING DIAGRAM, Immobilizer System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1102 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1102 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 7 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-82, REMOVAL, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

D: DTC B1103 IGNITION POWER FAILURE



DTC DETECTING CONDITION:
Voltage malfunction caused by poor contact of IGN power supply circuits
TROUBLE SYMPTOM:
Symptoms such as shift lock or wiper not operating may occur.
WIRING DIAGRAM:
- Gasoline engine model

Shift lock control system <Ref. to WI(w/o HEV)-142, WIRING DIAGRAM, Shift Lock Control System.>

- HEV model

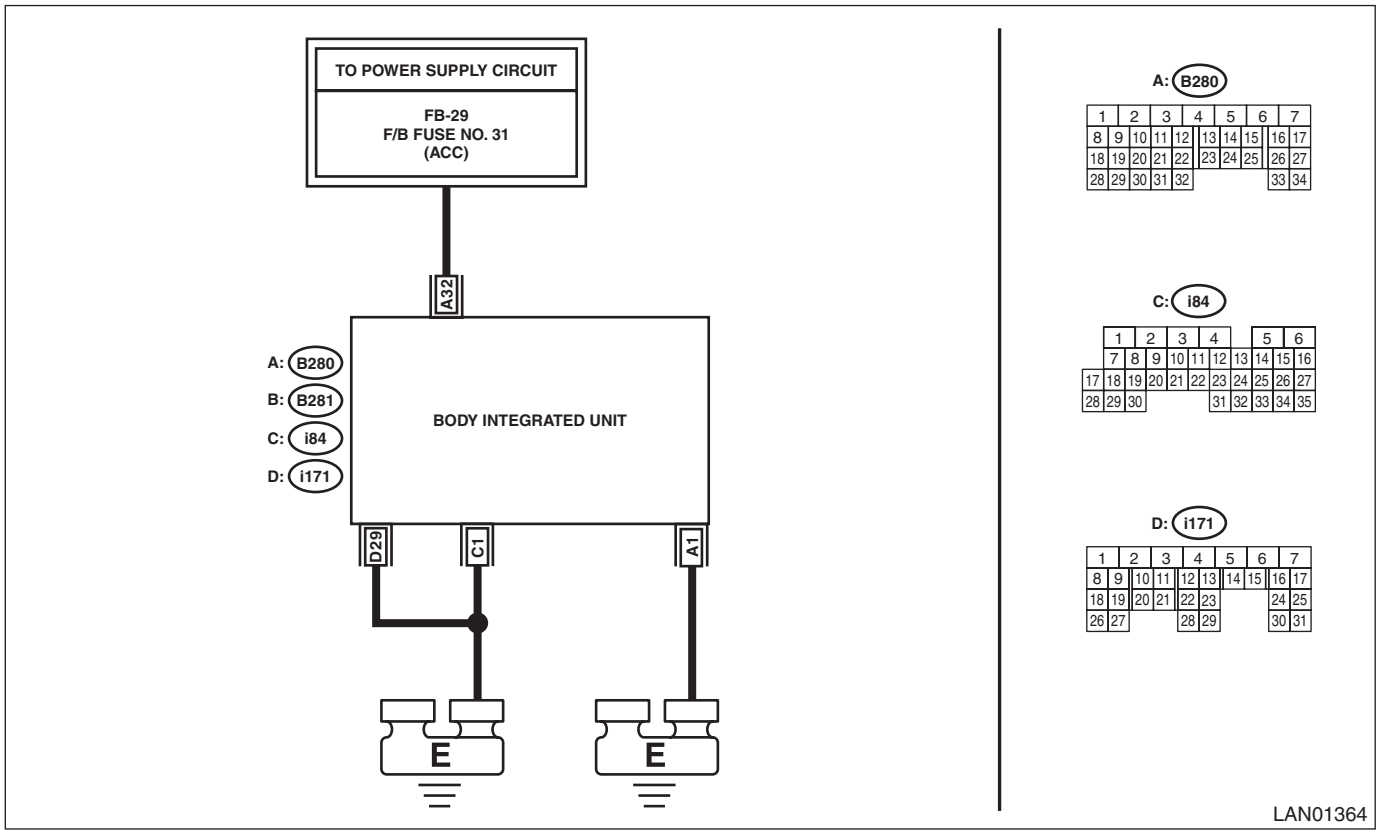
Shift lock control system <Ref. to WI(HEV)-205, WIRING DIAGRAM, Shift Lock Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1103 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1103 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-82, REMOVAL, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

E: DTC B1104 ACC POWER FAILURE

DTC DETECTING CONDITION:

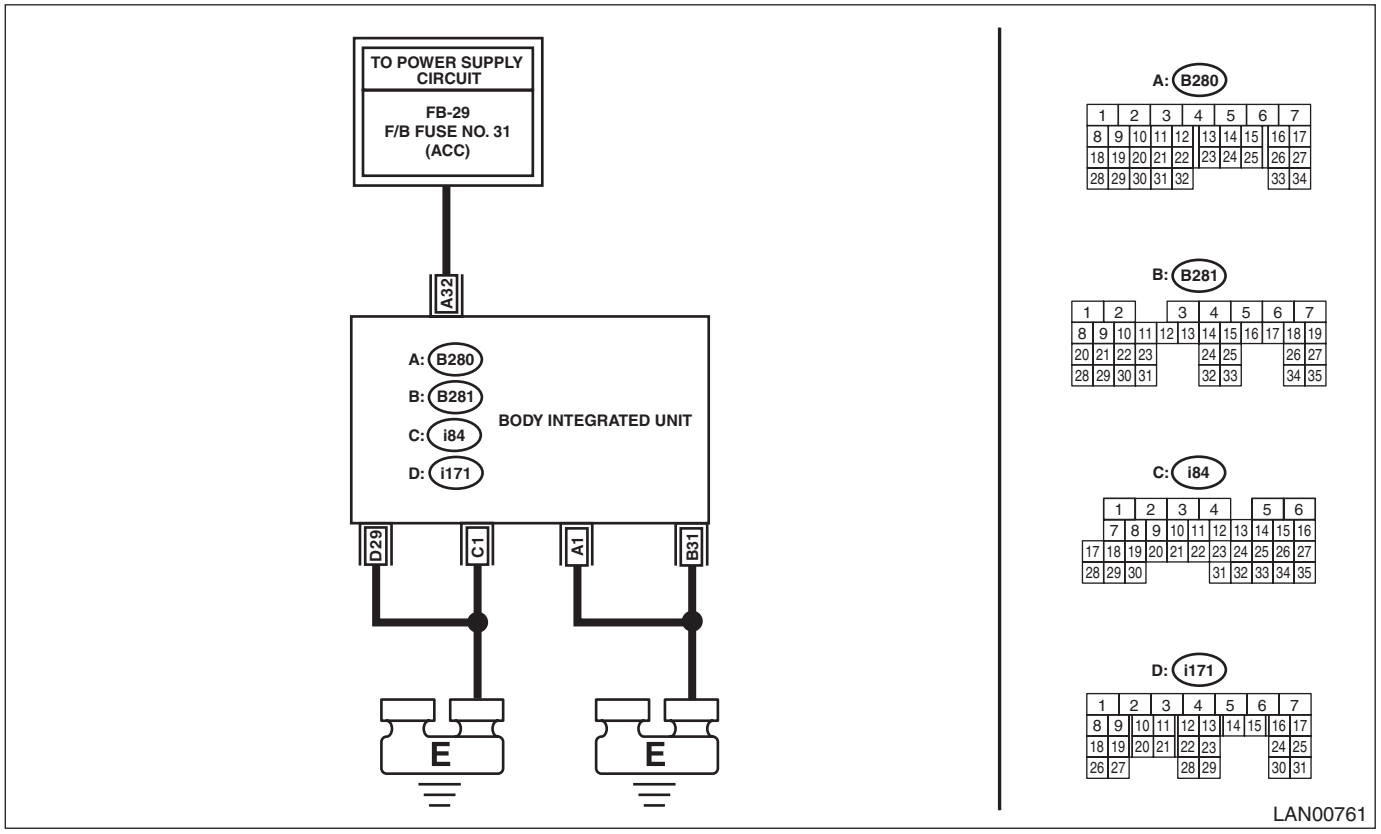
Voltage malfunction caused by poor contact of ACC power supply circuit



TROUBLE SYMPTOM:

DRL may not illuminate.

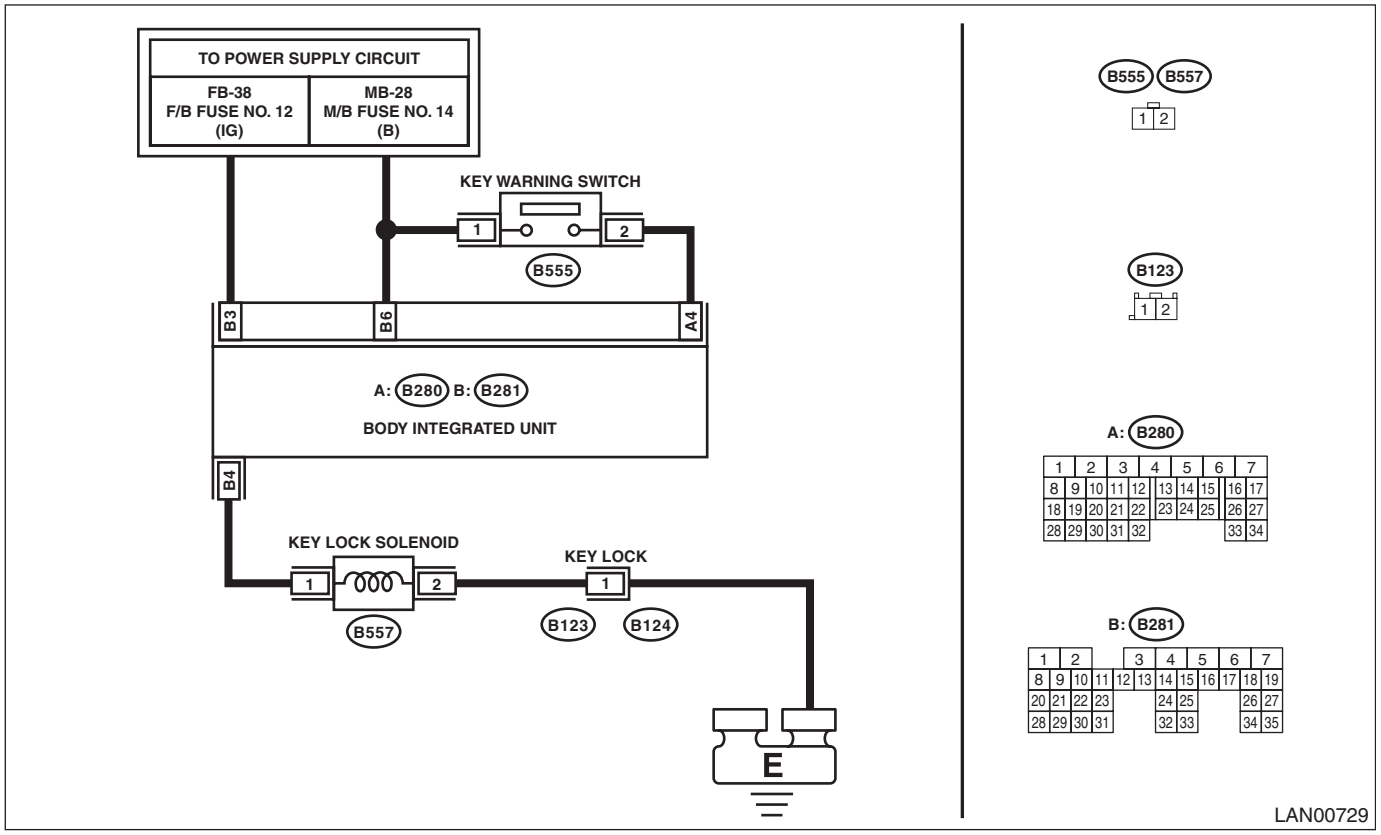
WIRING DIAGRAM:



- Gasoline engine model

Shift lock control system <Ref. to WI(w/o HEV)-142, WIRING DIAGRAM, Shift Lock Control System.>

• HEV model

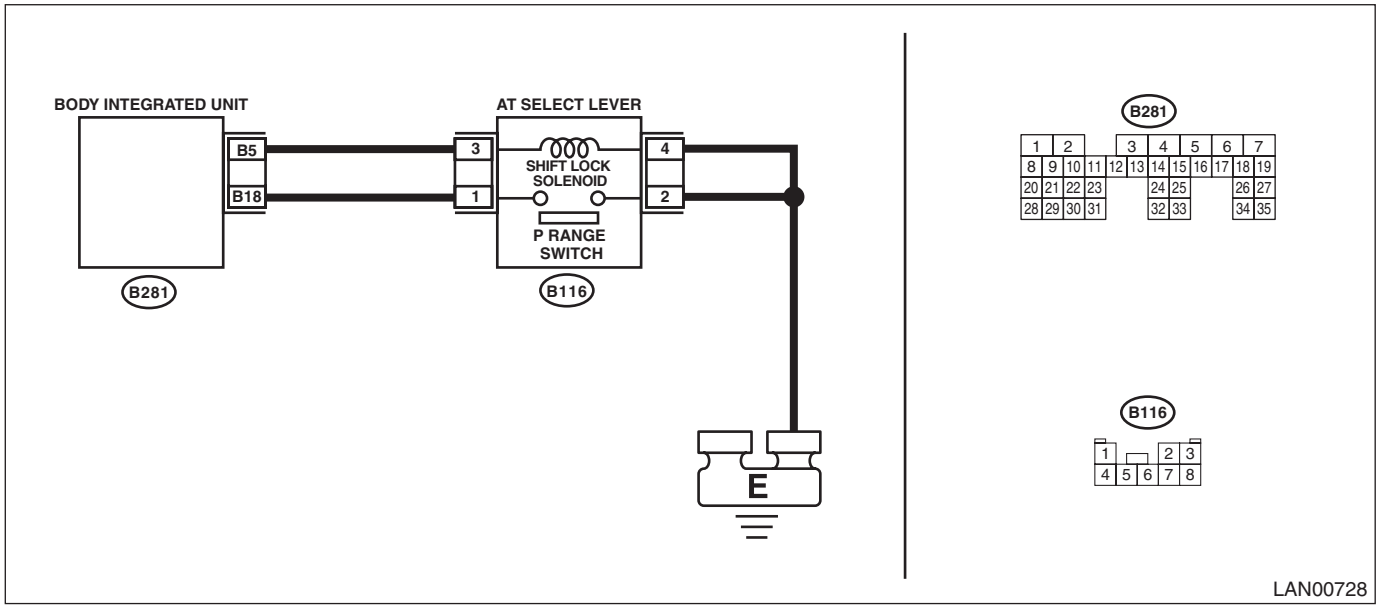


Shift lock control system <Ref. to WI(HEV)-205, WIRING DIAGRAM, Shift Lock Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1104 current malfunction?	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1104 current malfunction?	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the fuse OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B280) No. 32 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-82, REMOVAL, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

F: DTC B1105 KEY INTERLOCK CIRCUIT ABNORMAL

DTC DETECTING CONDITION:
Ground short of key interlock circuit
TROUBLE SYMPTOM:
Key interlock does not keep lock condition.
WIRING DIAGRAM:
Shift lock control system <Ref. to WI(w/o HEV)-142, WIRING DIAGRAM, Shift Lock Control System.> <Ref. to WI(HEV)-205, WIRING DIAGRAM, Shift Lock Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key. 2) Turn the ignition switch to ON. 3) Shift to the Neutral range. 4) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1105 current malfunction?	Go to step **2**.	Go to step **8**.
2	**CHECK DTC.** 1) Shift the select lever to P range. 2) Remove the ignition key. 3) Disconnect the key actuator connector (B557) and body integrated unit connector (B281). 4) Connect the disconnected connectors. 5) Insert the ignition key. 6) Turn the ignition switch to ON and shift into Neutral. 7) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1105 current malfunction?	Go to step **3**.	Go to step **8**.

	Step	Check	Yes	No
3	**CHECK KEY ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the key actuator connector (B557). 3) Measure the resistance between key actuator connectors. ***Connector & terminal*** ***(B557) No. 1 — No. 2:***	Is the resistance 103 — 115 Ω?	Go to step **4**.	Replace the key actuator.
4	**CHECK KEY ACTUATOR.** Connect the battery terminals to the key actuator. ***Terminals*** ***(B557) No. 2 — positive terminal:*** ***(B557) No. 1 — ground terminal:***	Is the actuator activated and then key locked?	Go to step **5**.	Replace the key actuator.
5	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B281). 2) Measure the resistance between body integrated unit and key actuator using tester. ***Connector & terminal*** ***(B557) No. 1 — (B281) No. 4:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS.** Measure the resistance between body integrated unit and chassis ground using tester. ***Connector & terminal*** ***(B281) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS.** 1) Connect the body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit and chassis ground using tester. ***Connector & terminal*** ***(B281) No. 4 (+) — Chassis ground (–):***	Is the voltage 6 V or more?	Repair or replace the short circuit of the harness.	Replace the body integrated unit. <Ref. to SL-82, REMOVAL, Body Integrated Unit.>
8	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B281) and key actuator connector (B557).	Is there poor contact at disconnected connector terminal?	Repair the terminal where poor contact exists, or replace harness.	It is possible that temporary poor contact occurs.

G: DTC B1106 SHIFT LOCK CIRCUIT FAILURE

DTC DETECTING CONDITION:
Open or power supply-output short, GND-output short in shift lock circuit.
TROUBLE SYMPTOM:
Shift lock does not be released or remain locked.
WIRING DIAGRAM:
Shift lock control system <Ref. to WI(w/o HEV)-142, WIRING DIAGRAM, Shift Lock Control System.> <Ref. to WI(HEV)-205, WIRING DIAGRAM, Shift Lock Control System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Keep the Parking range for approx. 5 seconds. 3) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step **6**.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON, then keep the Parking range for approx. 5 seconds. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step **3**.	Go to step **7**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B116) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK SHIFT LOCK SOLENOID.** Using a tester, measure the resistance between shift lock solenoid terminals. ***Connector & terminal*** ***(B116) No. 4 — No. 3:***	Is the resistance less than 27 — 31 Ω?	Go to step **5**.	Replace the shift lock solenoid. <Ref. to CS-37, DISASSEMBLY, Select Lever.>

	Step	Check	Yes	No
5	**CHECK SHIFT LOCK SOLENOID.** Connect the battery terminal to shift lock solenoid. ***Connector & terminal*** ***(B116) No. 3 — positive terminal:*** ***(B116) No. 4 — ground terminal:***	Does the shift lock solenoid operate and then release the lock?	Go to step **6**.	Replace the shift lock solenoid. <Ref. to CS-37, DISASSEMBLY, Select Lever.>
6	**CHECK HARNESS.** Use a tester to measure the resistance between harness terminals. ***Connector & terminal*** ***(B116) No. 3 — (B281) No. 5:*** NOTE: If body integrated unit and shift lock connector are not disconnected, disconnect them first and then perform measurement.	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-82, Body Integrated Unit.>	Repair or replace the open circuit of harness.
7	**CHECK DTC.** 1) Depress the brake pedal at the parking range. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step **8**.	Go to step **9**.
8	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Depress the brake pedal at the parking range. 6) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1106 current malfunction?	Go to step **4**.	Go to step **9**.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector.	Is there poor contact of connector terminal?	Repair or replace the poor contact of terminal.	It is possible that temporary poor contact occurs.

H: DTC B1401 M COLLATION NG

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-27, DTC B1401 M COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

I: DTC B1402 IMMOBILIZER KEY COLLATION NG

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-28, DTC B1402 IMMOBILIZER KEY COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC B1405 SCU COLLATION NG

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-28, DTC B1405 SCU COLLATION NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B1406 SCU_EEPROM_NG

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-28, DTC B1406 SCU_EEPROM_NG, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC B1407 M COMMUNICATION ABNORMAL

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAGNOSTICS). <Ref. to IM(diag)-29, DTC B1407 M COMMUNICATION ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC B1408 METER EEPROM ABNORMAL

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAGNOSTICS). <Ref. to IM(diag)-29, DTC B1408 METER EEPROM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B1409 SCU COMMUNICATION ABNORMAL

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAGNOSTICS). <Ref. to IM(diag)-30, DTC B1409 SCU COMMUNICATION ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC B1410 TRANSPONDER COMMUNICATION ABNORMAL

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAGNOSTICS). <Ref. to IM(diag)-33, DTC B1410 TRANSPONDER COMMUNICATION ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

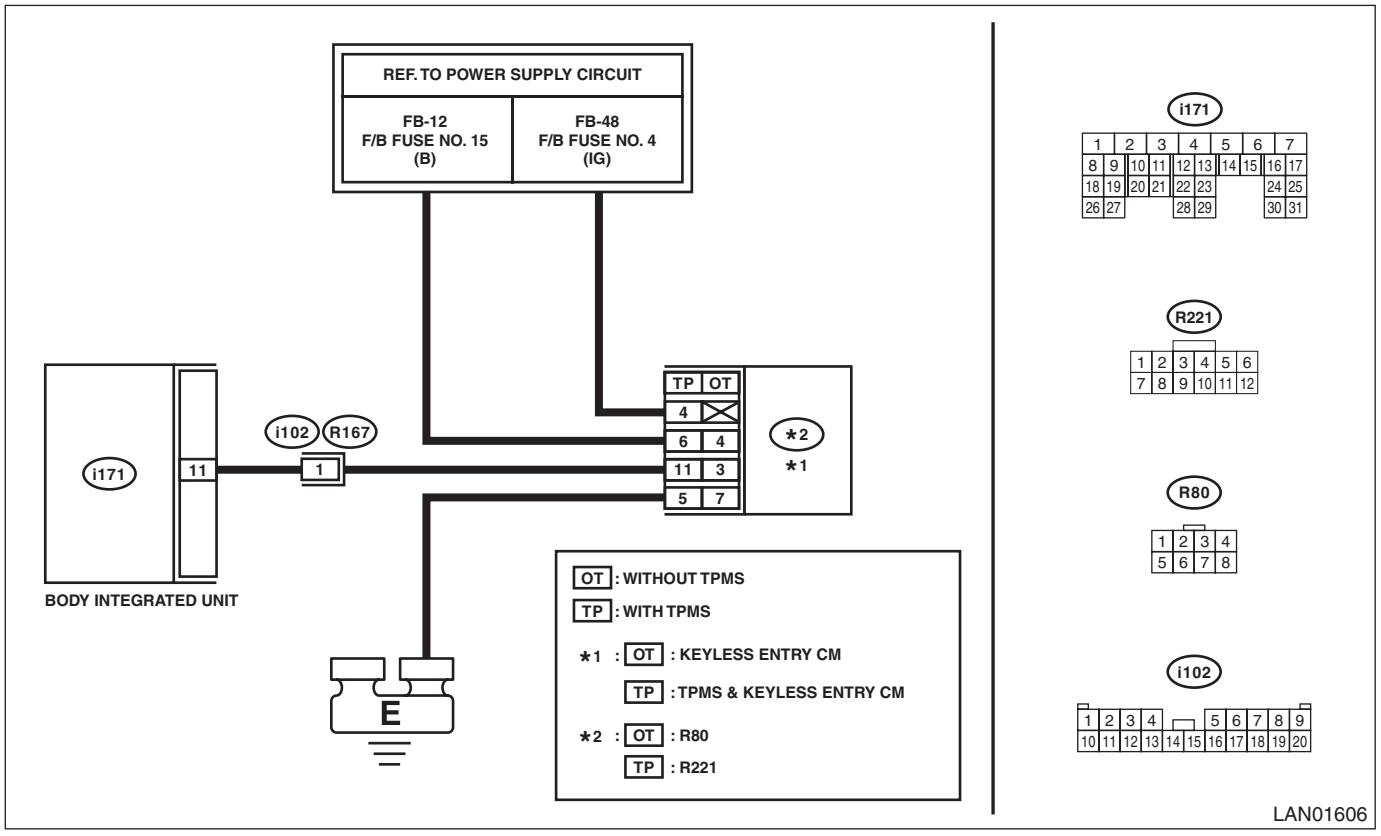
P: DTC B1411 IMMOBILIZER ANTENNA ABNORMAL

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAGNOSTICS). <Ref. to IM(diag)-33, DTC B1411 IMMOBILIZER ANTENNA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC B1500 KEYLESS UART COM. MALFUNCTION

1. MODELS WITHOUT KEYLESS ACCESS

DTC DETECTING CONDITION:



UART between the TPMS & keyless entry CM or keyless entry CM and body integrated unit is open or shorted, or has communication failure.

TROUBLE SYMPTOM:

- Door lock does not operate with keyless.
- TPMS does not operate. (The indicator blinks.)

WIRING DIAGRAM:

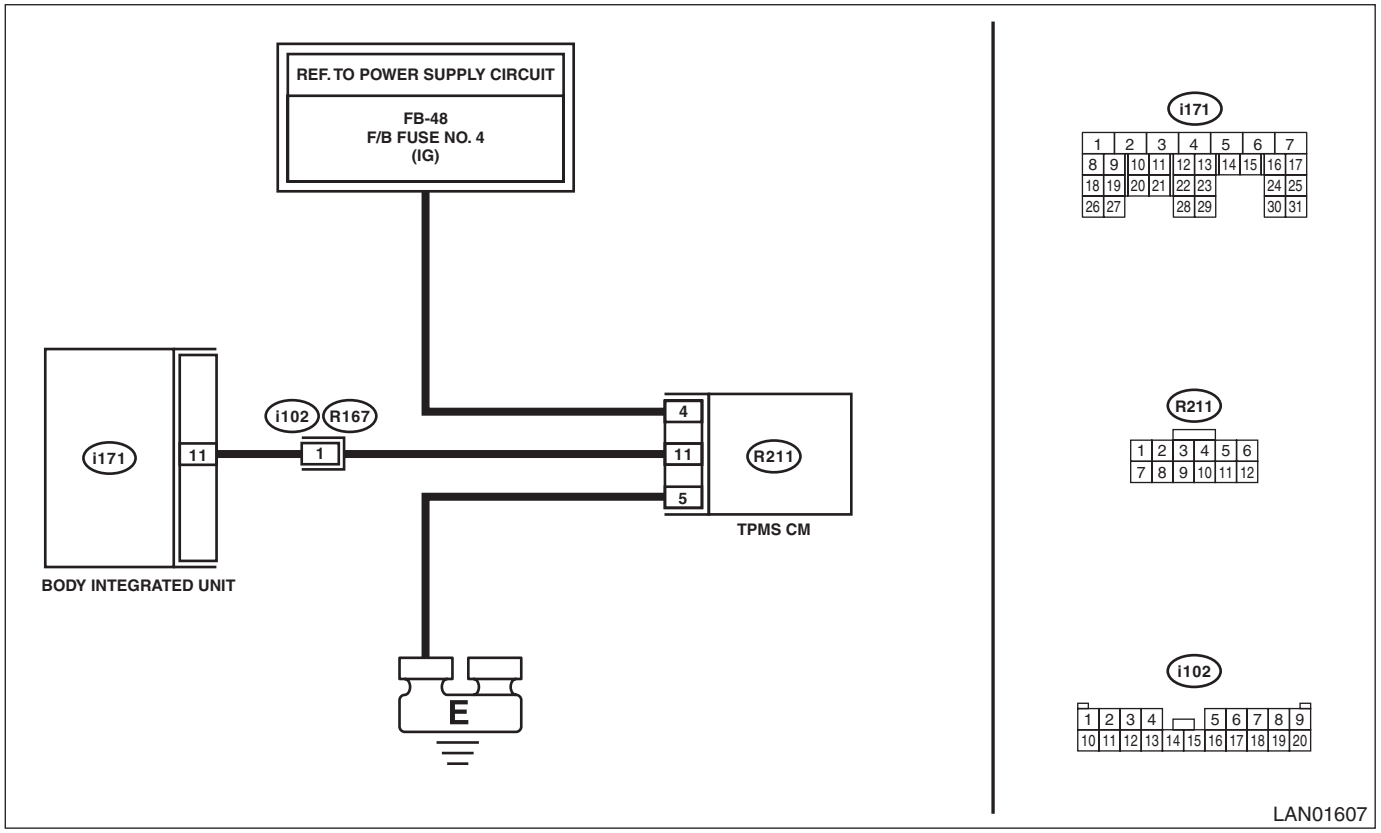
Keyless entry system <Ref. to WI(w/o HEV)-104, WIRING DIAGRAM, Keyless Entry System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key to the ignition key cylinder and remove. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1500 current malfunction?	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the body integrated unit and the TPMS & keyless entry CM or the keyless entry CM. 3) Connect the disconnected connectors. 4) Insert the ignition key to the ignition key cylinder and remove. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1500 current malfunction?	Go to step **3**.	Go to step **7**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the body integrated unit and the TPMS & keyless entry CM or the keyless entry CM. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***With TPMS*** ***(i171) No. 11 — (R221) No. 11:*** ***Without TPMS*** ***(i171) No. 11 — (R80) No. 3:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***With TPMS*** ***(R221) No. 6 (+) — Chassis ground (–):*** ***(R221) No. 4 (+) — Chassis ground (–):*** ***Without TPMS*** ***(R80) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the power supply circuit.
5	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***With TPMS*** ***(R221) No. 5 — Chassis ground:*** ***Without TPMS*** ***(R80) No. 7 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair the ground circuit.
6	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Remove the TPMS & keyless entry CM or the keyless entry CM. 3) Install the TPMS & keyless entry CM or the keyless entry CM that was working properly on another vehicle.	Does it operate with the remote control key of another vehicle?	Replace the TPMS & keyless entry CM or the keyless entry CM. <Ref. to SL-78, REMOVAL, Keyless Entry Control Module.> <Ref. to WT-8, REMOVAL, Tire Pressure Monitoring System.>	Replace the body integrated unit. <Ref. to SL-82, Body Integrated Unit.>
7	**CHECK CONNECTOR.** Check the connector used for keyless communication for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

2. MODELS WITH KEYLESS ACCESS

DTC DETECTING CONDITION:



UART between the TPMS CM and the body integrated unit is open or shorted, or has communication failure.

TROUBLE SYMPTOM:

TPMS does not operate. (The indicator blinks.)

WIRING DIAGRAM:

Tire Pressure Monitoring System <Ref. to WI(w/o HEV)-148, WIRING DIAGRAM, Tire Pressure Monitoring System.>

Step		Check	Yes	No
1	**CHECK DTC.** 1) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1500 current malfunction?	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Connect the disconnected connectors. 4) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor.	Is B1500 current malfunction?	Go to step **3**.	Go to step **7**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i171) No. 11 — (R211) No. 11:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R211) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the power supply circuit.
5	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R211) No. 5 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair the ground circuit.
6	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Remove the TPMS CM. 3) Install a TPMS CM that was operating normally on another vehicle.	Does it operate with the remote control key of another vehicle?	Replace the TPMS CM. <Ref. to WT-10, TPMS CM, REMOVAL, Tire Pressure Monitoring System.>	Replace the body integrated unit. <Ref. to SL-82, Body Integrated Unit.>
7	**CHECK CONNECTOR.** Check the connector used for keyless communication for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

14.General Diagnostic Table

A: INSPECTION

Using the Subaru Select Monitor, read DTC, or check the following data on the current data display to make judgments.

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis according to DTC.	—
Clearance light (Low beam) (High beam)	Clearance light and low/high beams illuminate normally when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
Auto light	When the area around the light control sensor is darkened after the ignition switch and the lighting switch (AUTO) are turned to ON, the clearance light and the low beam illuminate after 5 seconds. Indicator in the combination meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
	When the ignition switch and the lighting switch (AUTO) are turned to ON after the area around the light control sensor is darkened, the clearance light and the low beam illuminate immediately. Indicator in the combination meter illuminates at the same time.			—
Fog light	Front and rear fog lights illuminate when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	Rear fog light operates when “Rear fog light setting” of the body integrated unit is set to on.
Rear defogger	Rear defogger operates when the switch is operated. The indicator illuminates at the same time.	System is normal.	Check the rear window defogger system and A/C system.	—
Wiper deicer	Wiper deicer operates by operating the switch. The indicator illuminates at the same time. When the ambient temperature is 5°C (41°F) or higher, press the switch 3 seconds or more to forcibly activate the system.	System is normal.	Check the wiper deicer system and A/C system.	Wiper deicer operates when “Wiper deicer setting” of the body integrated unit is set to on.
DRL	After starting the engine and releasing the parking brake, the DRL illuminates.	System is normal.	Check the lighting system and LAN system.	—
Rear wiper	Rear wiper operates when the switch is operated.	System is normal.	Check wiper or washer system.	Depending on user customizing “Sedan/Wagon Setting” of the body integrated unit, vehicle sensory time varies.
Key interlock	• Key cannot be removed in other than P range. • Key can be removed in other than P range.	System is normal.	Check the body control system.	—

Item	Operation	Specifications		Note
		YES	NO	
Shift lock	The select lever can be moved from the P range to other ranges only when the brake pedal is depressed with IG ON.	System is normal.	Check the body control system.	—
Key warning switch alarm	When the driver's door is open without the key removed, the buzzer sounds.	System is normal.	Check the combination meter and body control system.	—
Door lock	The doors lock/unlock when the door switch is operated. Rear gate/trunk opens when the rear gate/trunk release switch is operated.	System is normal.	Check the security & lock and body control system.	If user customizing "Sedan/Wagon Setting" is different, trunk and rear gate do not open.
Keyless entry	The lock locks/unlocks when the keyless transmitter is operated. Trunk/rear gate unlocks when trunk/rear gate unlock button is operated.	System is normal.	Check the keyless entry and body control system.	—
Keyless access	The lock locks/unlocks when the access key is operated. With the access key held, the touch sensor (lock) operation locks/touch sensor (unlock) operation unlocks. Rear gate unlocks when the rear gate unlock button is operated.	System is normal.	Check the keyless access and body control system.	—
Answer back	Answer-back operates when the keyless entry/keyless access locks/unlocks.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	—
Room light	ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access, and the ignition operation.	System is normal.	Check the room light system, security & lock, keyless access with push button start system, and LAN system.	For vehicles with the keyless access, the room light blinks when "Factory" mode is selected. For vehicles with the keyless entry, the room light blinks when the keyless registration mode connector is connected.
Map light	ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access, and the ignition operation. (Except for rear gate)	System is normal.	Check the spot map light, security & lock, keyless access with push button start system, and LAN system.	For vehicles with the keyless access, the map light blinks when "Factory" mode is selected. For vehicles with the keyless entry, the map light blinks when the keyless registration mode connector is connected.
Luggage/trunk light	The light illuminates/goes off according to the rear gate open/close. The light goes off when the doors are locked with the keyless entry/keyless access and the ignition is turned ON while the luggage light is dimming after the rear gate is closed.	System is normal.	Check the luggage/trunk light, security & lock, keyless access with push button start system, and LAN system.	For vehicles with the keyless access, the luggage/trunk light blinks when "Factory" mode is selected. For vehicles with the keyless entry, the luggage/trunk light blinks when the keyless registration mode connector is connected.

General Diagnostic Table

Item	Operation	Specifications		Note
		YES	NO	
Key illumination	The light illuminates/goes off according to the driver's door open/close. The light goes off when the doors are locked with the keyless entry/keyless access and the ignition is turned ON while illuminating.	System is normal.	Check the ignition switch illumination, security & lock, and LAN system.	For vehicles with keyless entry, the key illumination blinks when "Factory" mode is selected.
Illumination control	Illumination volume control is available.	System is normal.	Check the illumination control switch, combination meter, and body control system.	Illumination volume control is not available when user customizing "Illumination Control On/Off" of the body integrated unit is set to off.
Engine start	Engine starts.	System is normal.	Check the engine system, immobilizer, and LAN system.	—
Vehicle security	Security monitoring/security canceling can be performed by operating the keyless entry/keyless access.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	Security monitoring starts and at the same time the warning buzzer sounds, when impact sensor is not connected and user customizing "Impact Sensor" of the body integrated unit is set to on.

WIRING SYSTEM SECTION

WIRING SYSTEM WI(w/o HEV)

WIRING SYSTEM WI(HEV)

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

FUJI HEAVY INDUSTRIES LTD. G1171BE8

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

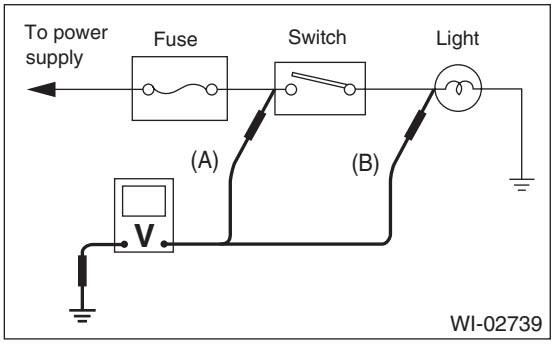
Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

1) Using the diagnostics, narrow down the causes.
2) If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

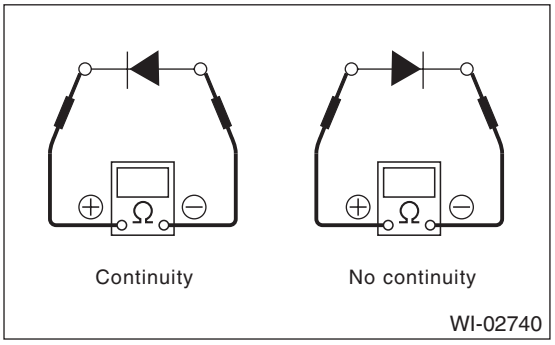


5. SYSTEM OPERATION CHECK

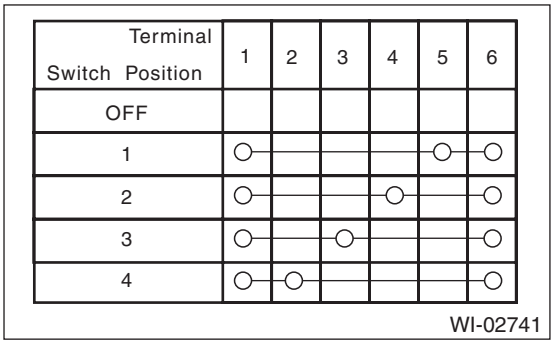
After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT



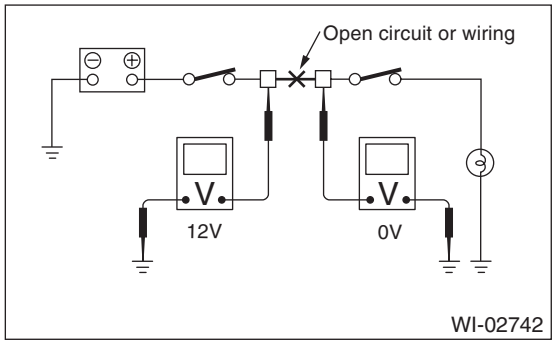
1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Touch connector (B) with the positive probe. The voltmeter will indicate no voltage.



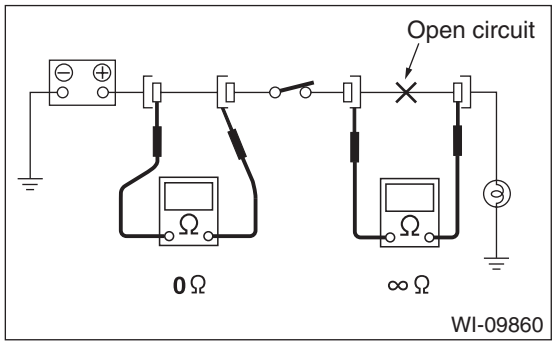
4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

2. CIRCUIT CONTINUITY CHECKS

1) Disconnect the battery terminal or connector so there is no voltage between the check points.
Contact the two leads of an ohmmeter to each of the check points.
If the circuit has diodes, reverse the two leads and check again.
2) Use an ohmmeter to check for diode continuity.
When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.
When contacting the two leads in reverse, there should be no continuity.



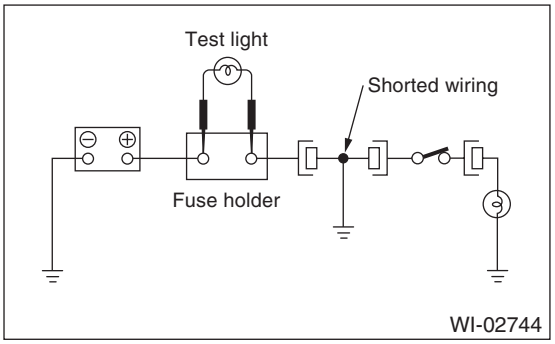
3) The symbol "❍ — ❍" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.



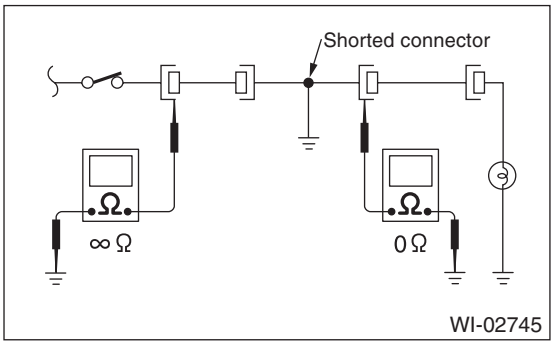
Terminal / Switch Position	1	2	3	4	5	6
OFF						
1	○				○	○
2	○			○		○
3	○		○			○
4	○	○				○

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) WITH VOLTMETER:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.



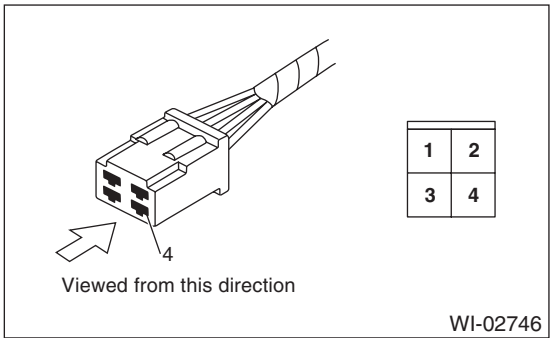
2) WITH OHMMETER:
Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.



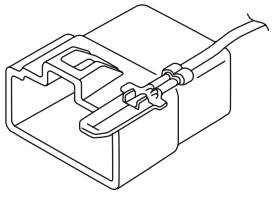
4. HOW TO DETERMINE A SHORT CIRCUIT

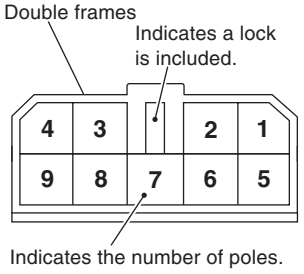
1) WITH TEST LIGHT:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

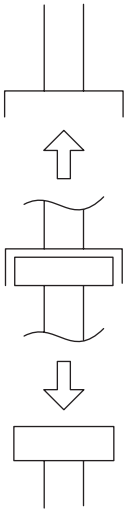
2) WITH OHMMETER:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

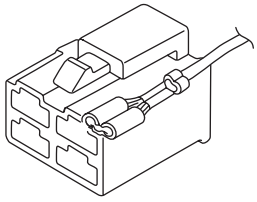


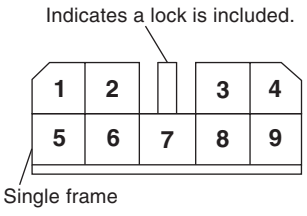
C: HOW TO READ WIRING DIAGRAMS







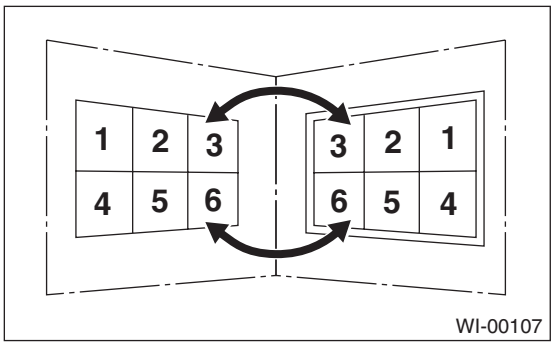




1. WIRING DIAGRAM

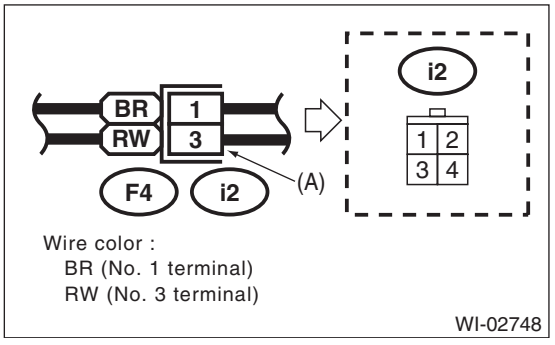
The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.
Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.



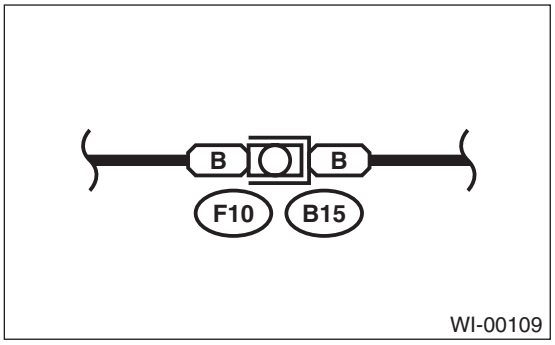
- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
			Numbered in order from upper right to lower left.
			Numbered in order from upper left to lower right.



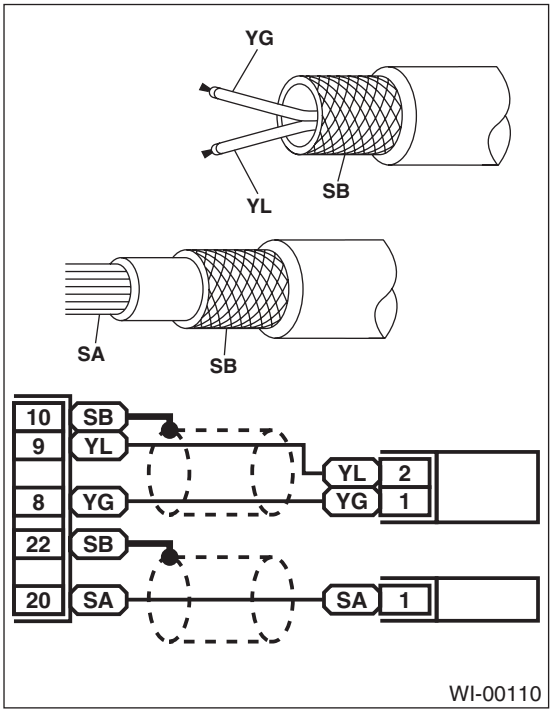
WI-02747

• When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

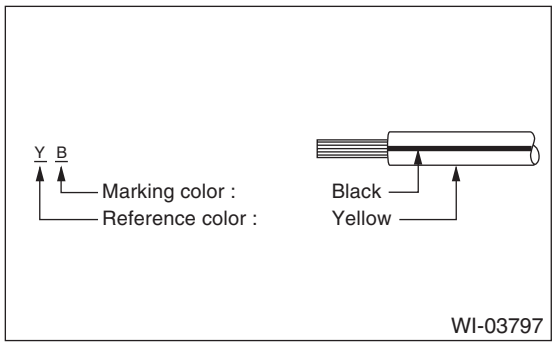


• WIRING DIAGRAM:
The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.
• The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:
A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.



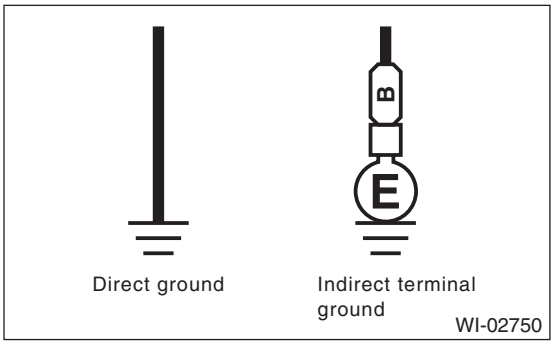
• In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.



• The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (inner)
SB	Sealed (outer)

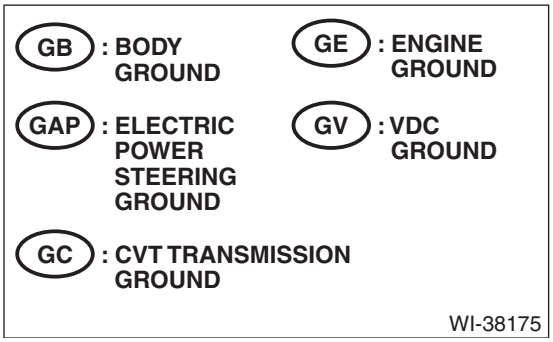
• The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.



• The table lists the nominal sectional areas and allowable currents of the wires.

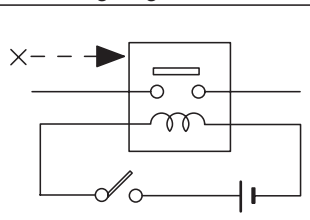
CAUTION:
When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

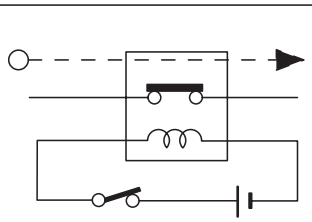
NOTE:
• The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
• The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

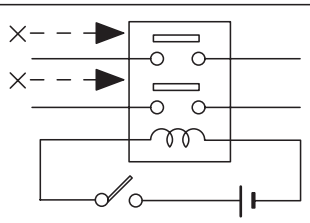


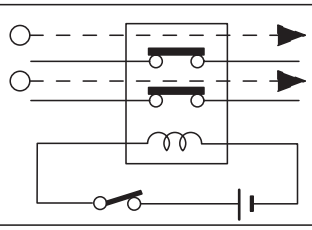
Nominal sectional area mm^2	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

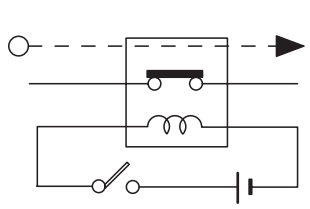
• Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

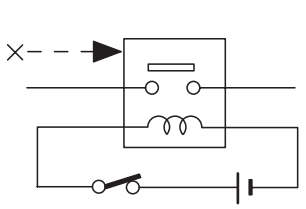


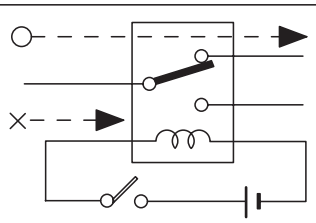


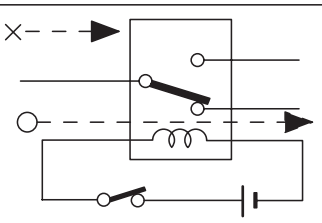












• The ground points shown in the wiring diagram refer to the following:

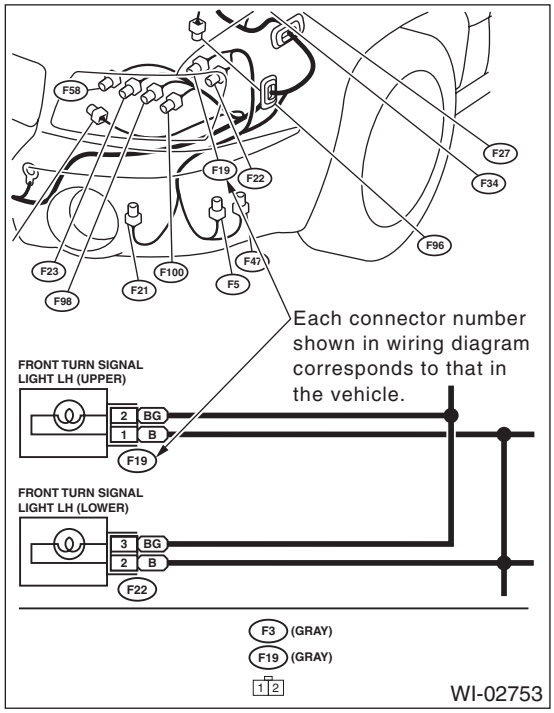
NOTE:
All wiring harnesses are provided with a ground point which must be securely connected.

- Relays are classified as normally-open or normally-closed.

The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Relay type		Energizing circuit OFF	Energizing circuit ON
Normally-open type	4-pole		
	6-pole		
Normally-closed type	4-pole		
Mixed type	6-pole		

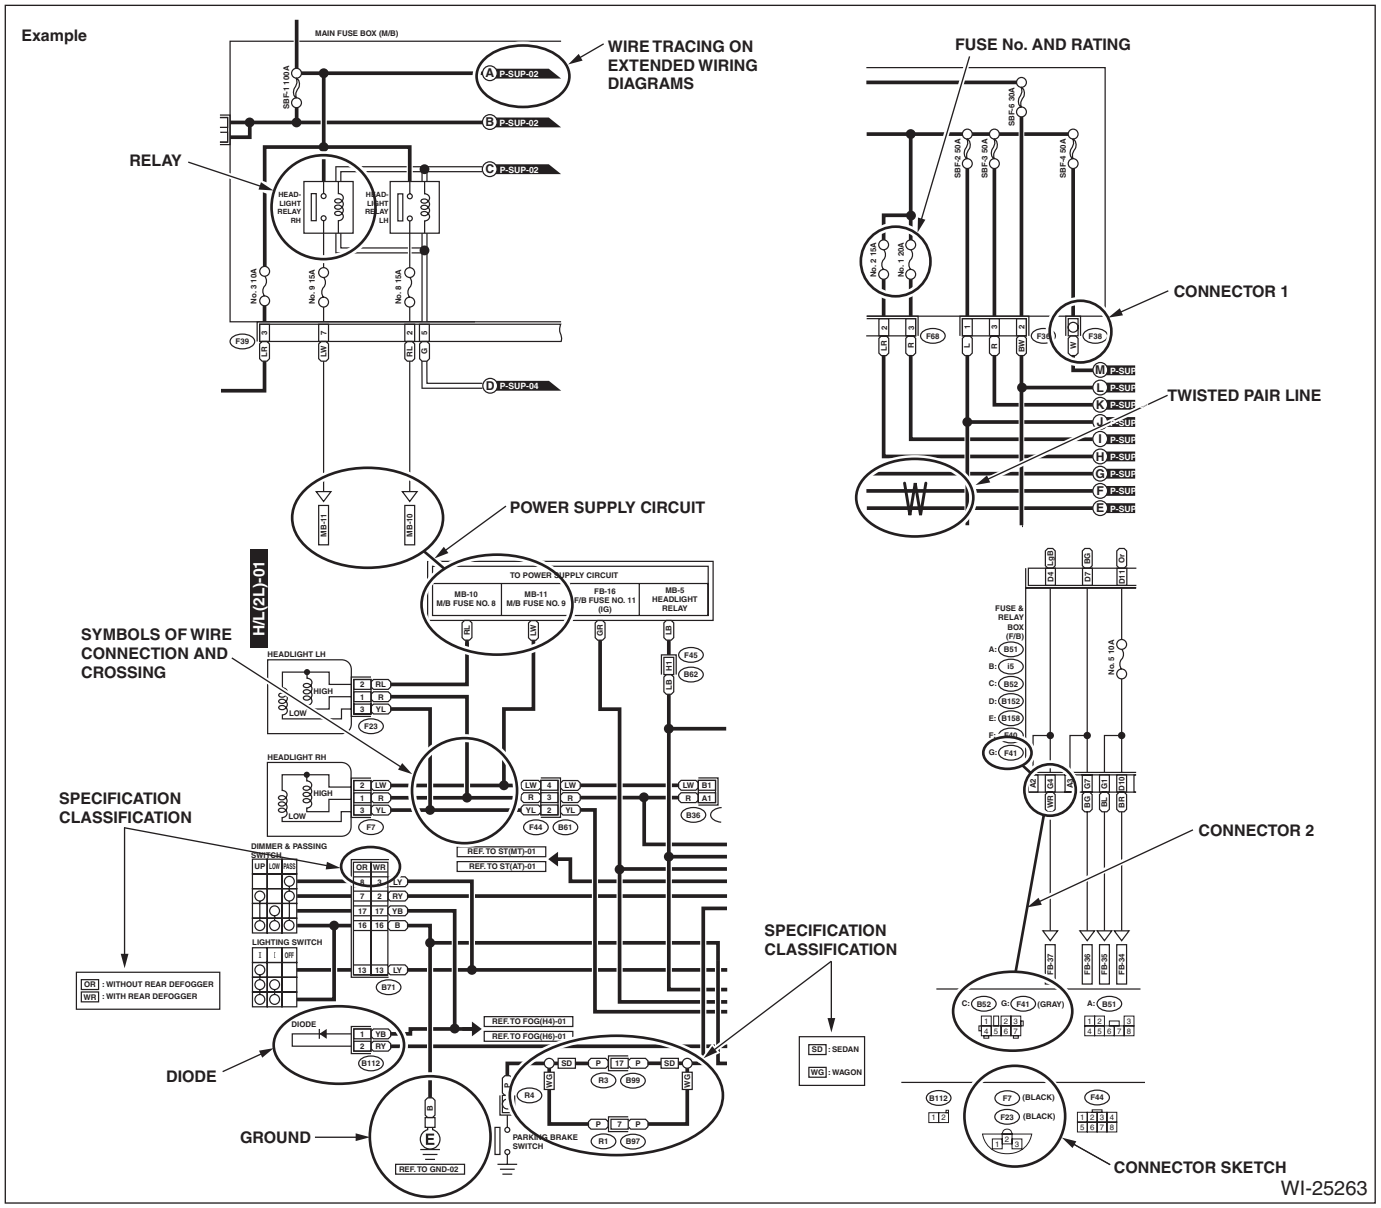
Key to symbols:



○ ⟶ : Current flows.

× ⟶ : Current does not flow.

WI-16724



• Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord
AB	Airbag wiring harness

D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

1. RELAY

A symbol used to indicate a relay.

2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. FUSE NO. & RATING

The “FUSE No. & RATING” corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number “G4” refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

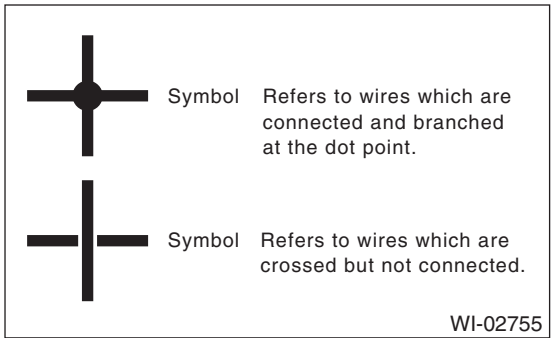
6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE



A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

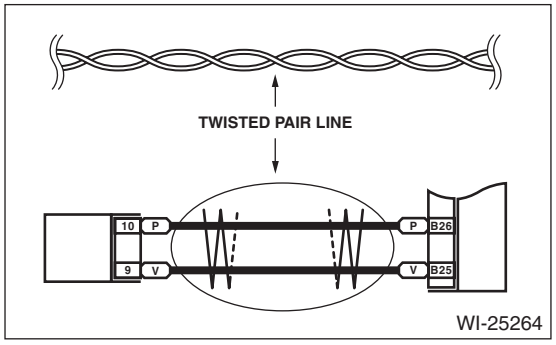
A ←→ A, B ←→ B

10.SYMBOLS OF WIRE CONNECTION AND CROSSING

11.POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

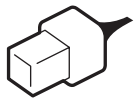
“MB – 5”, “MB – 6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram.

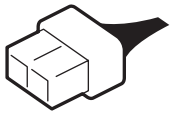


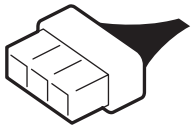
Accordingly, using the “DC POWER SUPPLY CIRCUIT” and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

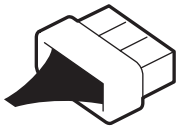
12.CLASSIFICATION BY SPECIFICATION

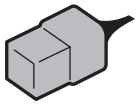
When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.

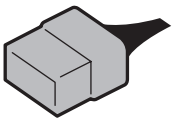


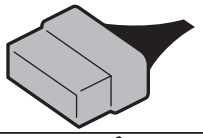


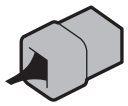


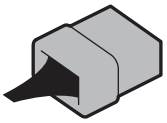


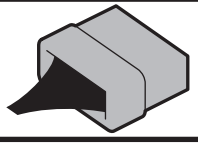




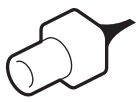


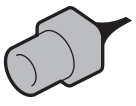


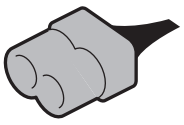


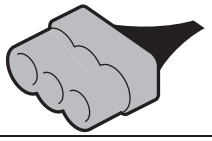


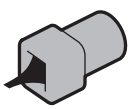
13.TWISTED PAIR LINE

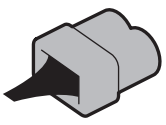


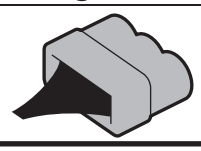












The twisted pair line is indicated by a symbol in the wiring diagrams.

E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

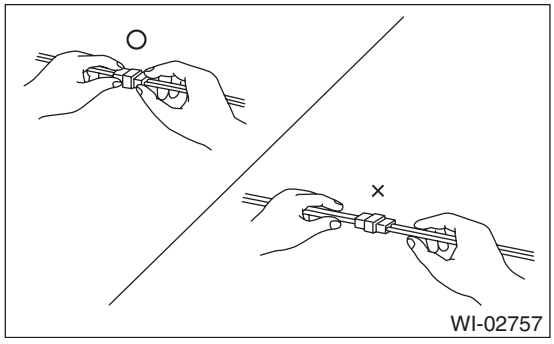
Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Water proof type: Male		
		
		

WI-02756

F: ABBREVIATION IN WIRING DIAGRAMS

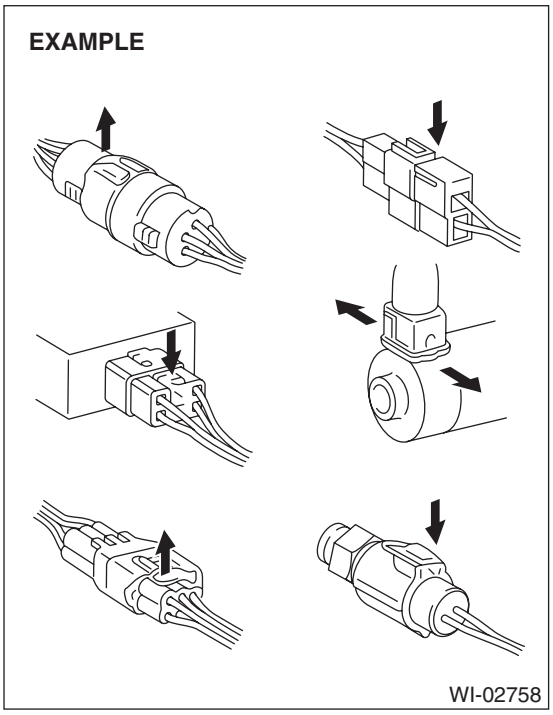
Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
AT	Automatic Transmission
A/F	Air/Fuel (Air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B	Battery
CAN	Controller Area Network
CM	Control Module
CVT	Continuously Variable Transmission
D	Drive range or Down
DN	Down
E	Ground
ELCM	Evaporative Leak Check Module
ECO	Economy
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
G	Gravity (G sensor)
H/L	Headlight
HI	High
I/F	Interface
IG	Ignition
INT	Intermittent
ISO	International Organization for Standardization
J/C	Joint Connector
LCD	Liquid Crystal Display
LH	Left Hand
LO	Low
LWR	Lower
M	Motor
M/B	Main Fuse Box
MFD	Multi Function Display
MT	Manual Transmission
N	Neutral Range
NAVI	Navigation
OP	Open or Optional Parts
P	Parking or Parking range
PASS	Passing
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range

Abbr.	Full name
RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
ST	Starter
SW	Switch
TCM	Transmission Control Module
TFT	Thin Film Transistor
TPMS	Tire Pressure Monitor System
UPR	Upper
VDC	Vehicle Dynamics Control
WASH	Washer



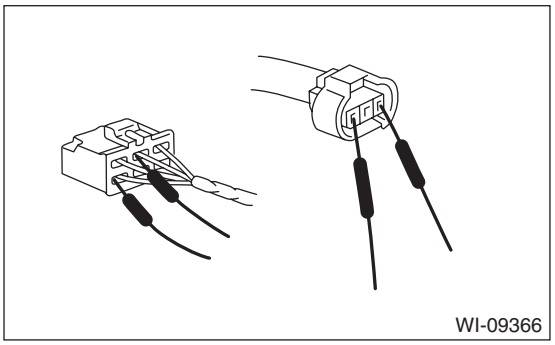
2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE



1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS



1) The battery cable must be disconnected from the battery's (–) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
3) When installing parts, be careful not to catch them on the wiring harness.
4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector.
To connect, insert the connector until it snaps and confirm that it is connected securely.

6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.
To check water-proof connectors (which are not measurable from the wiring side), touch test probes on the terminal side and be careful not to bend or damage the terminals.

7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts.
Handle them with care so that they are not dropped or mishandled.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

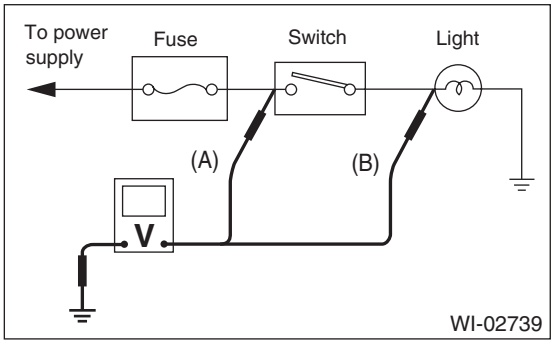
Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

1) Using the diagnostics, narrow down the causes.
2) If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

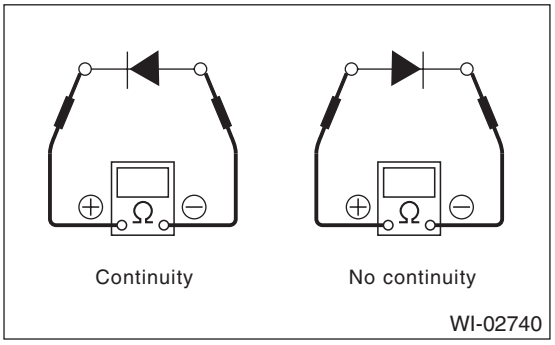


5. SYSTEM OPERATION CHECK

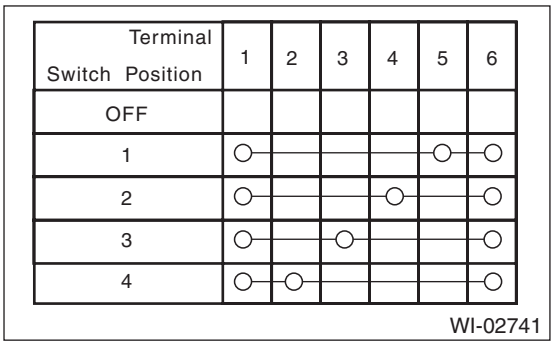
After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT



1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Touch connector (B) with the positive probe. The voltmeter will indicate no voltage.

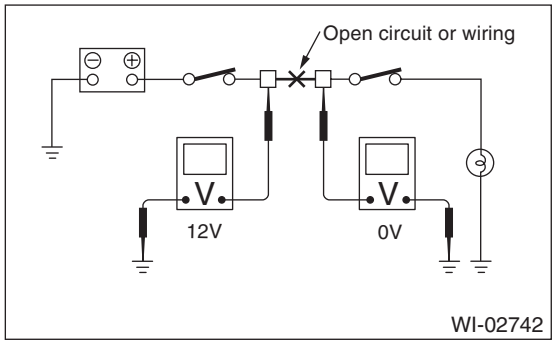


4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

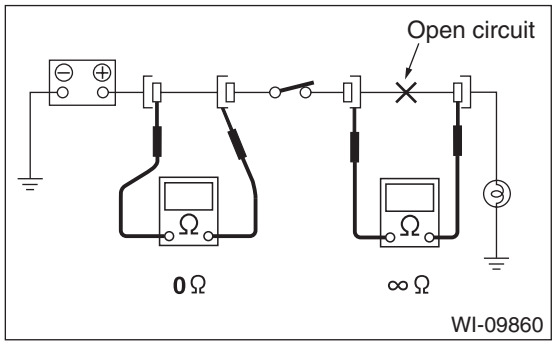
2. CIRCUIT CONTINUITY CHECKS

1) Disconnect the battery terminal or connector so there is no voltage between the check points.
Contact the two leads of an ohmmeter to each of the check points.
If the circuit has diodes, reverse the two leads and check again.
2) Use an ohmmeter to check for diode continuity.
When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.
When contacting the two leads in reverse, there should be no continuity.

3) The symbol "❍ — ❍" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.



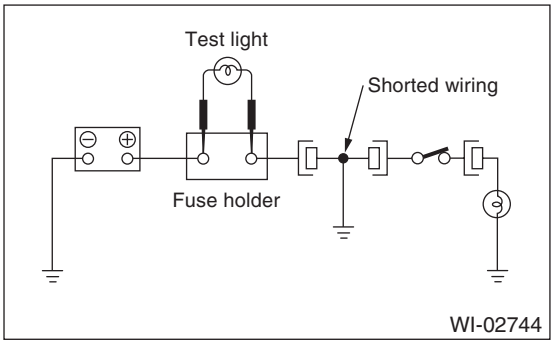
Terminal / Switch Position	1	2	3	4	5	6
OFF						
1	○				○	○
2	○			○		○
3	○		○			○
4	○	○				○



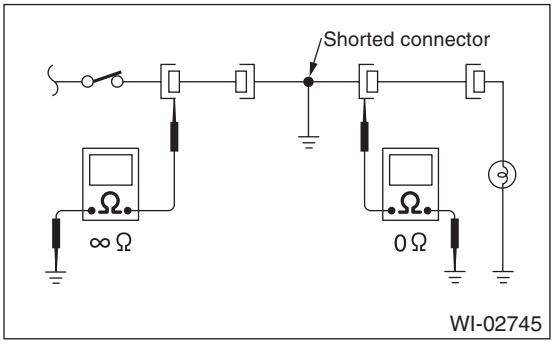
WI-02741

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) With voltmeter:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.



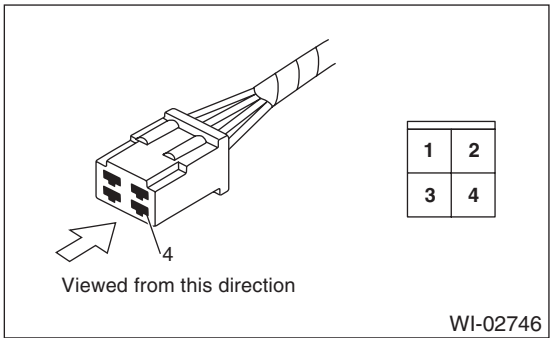
2) With ohmmeter:
Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.



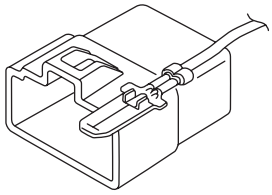
4. HOW TO DETERMINE A SHORT CIRCUIT

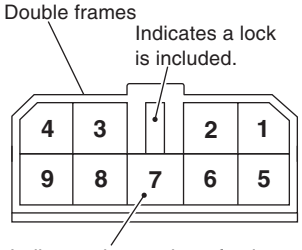
1) With test light:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

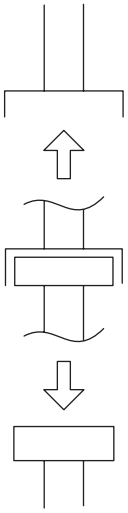
2) With ohmmeter:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

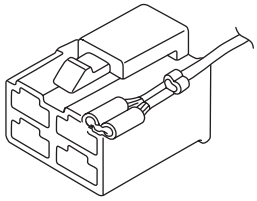


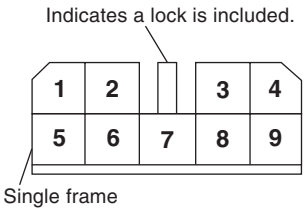
C: HOW TO READ WIRING DIAGRAMS







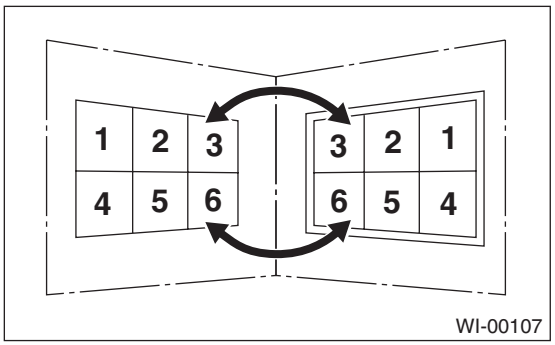




1. WIRING DIAGRAM

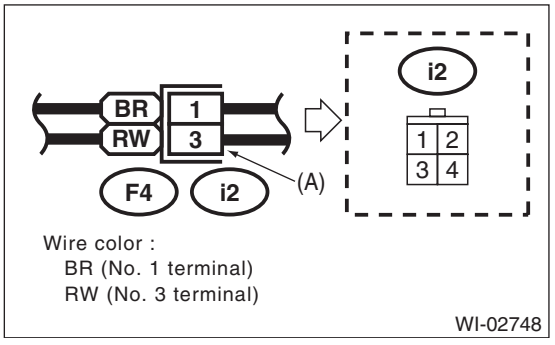
The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.
Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.



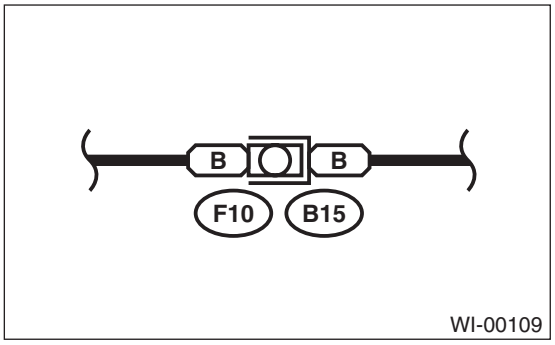
- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
			Numbered in order from upper right to lower left.
			Numbered in order from upper left to lower right.



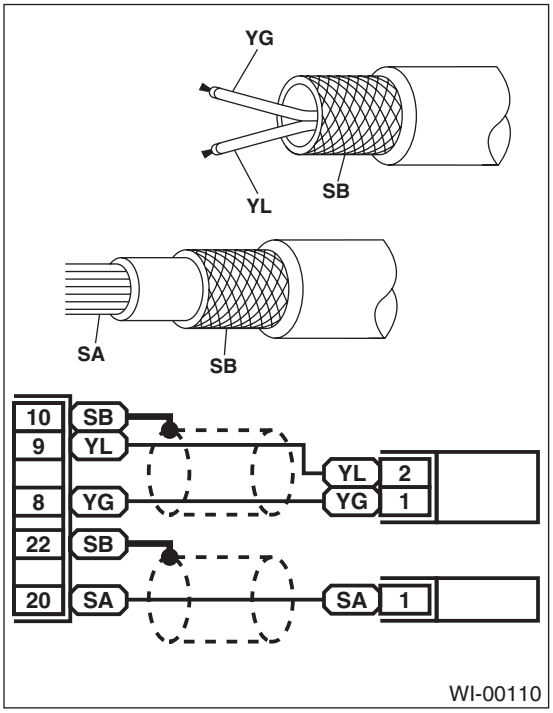
WI-02747

• When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

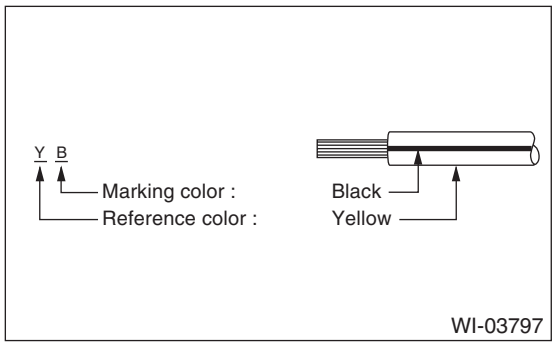


• WIRING DIAGRAM:
The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.
• The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:
A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.



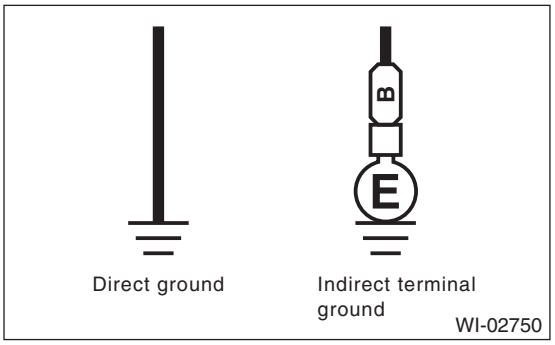
• In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.



• The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (inner)
SB	Sealed (outer)

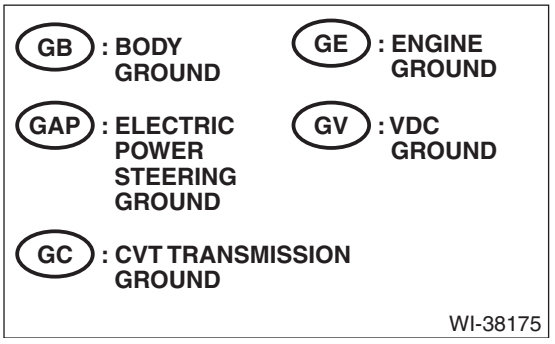
• The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.



• The table lists the nominal sectional areas and allowable currents of the wires.

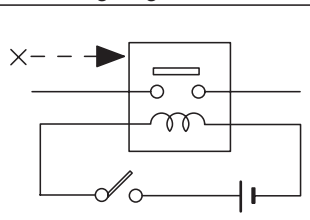
CAUTION:
When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

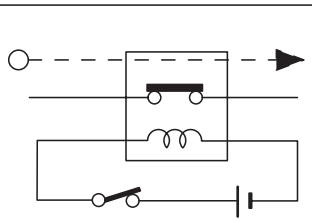
NOTE:
• The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
• The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

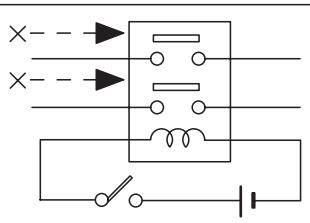


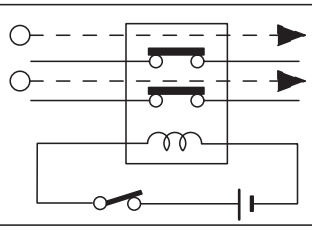
Nominal sectional area mm^2	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

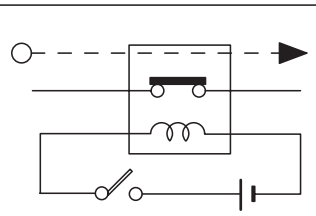
• Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

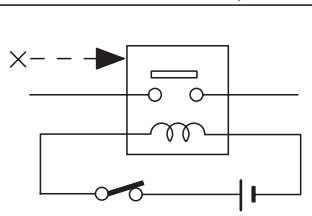


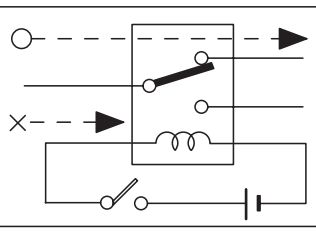


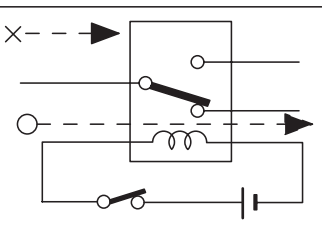












• The ground points shown in the wiring diagram refer to the following:

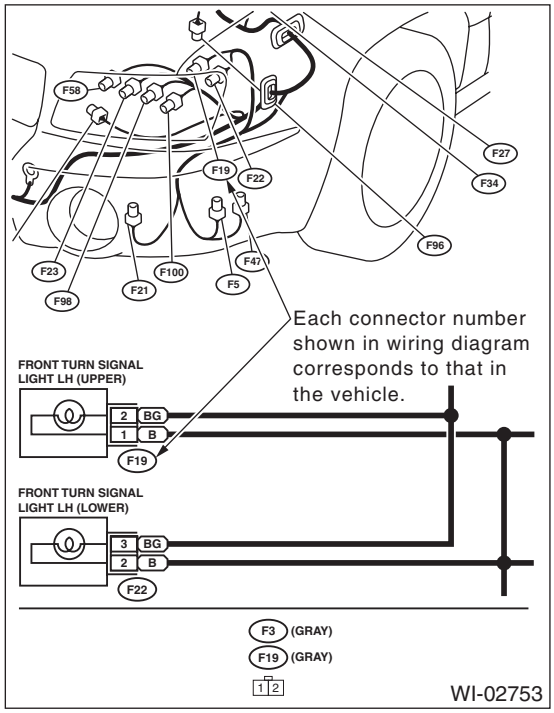
NOTE:
All wiring harnesses are provided with a ground point which must be securely connected.

- Relays are classified as normally-open or normally-closed.

The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Relay type		Energizing circuit OFF	Energizing circuit ON
Normally-open type	4-pole		
	6-pole		
Normally-closed type	4-pole		
Mixed type	6-pole		

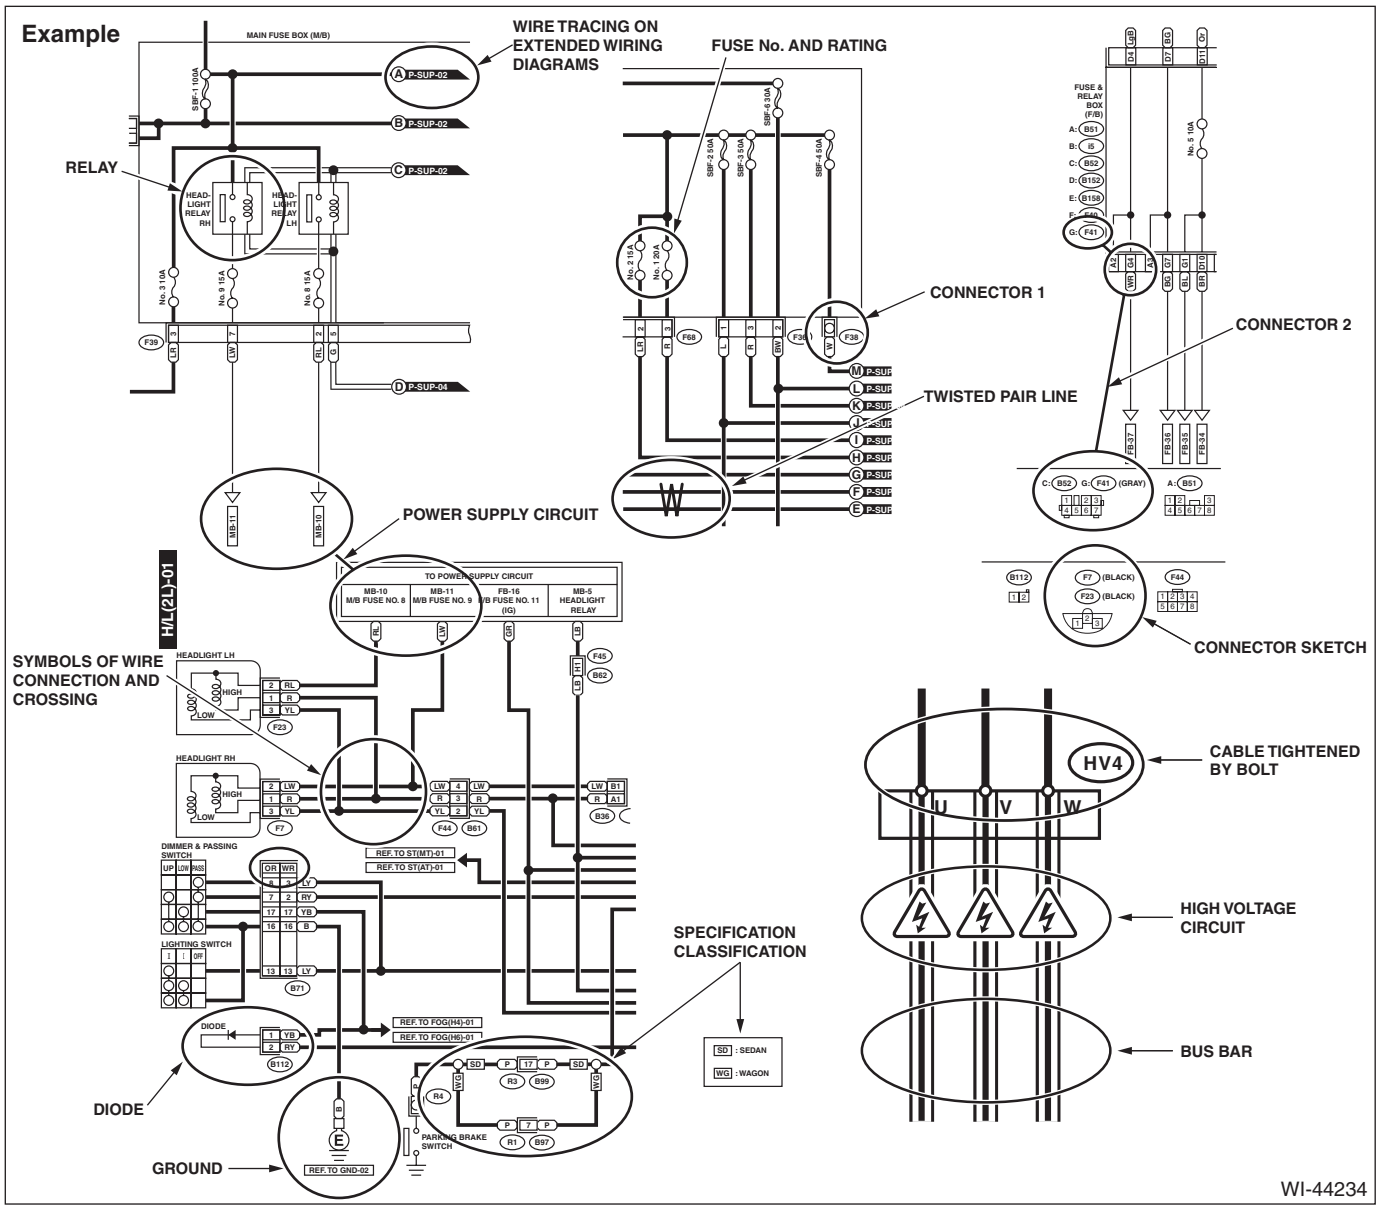
Key to symbols:



○ ⟶ : Current flows.

× ⟶ : Current does not flow.

WI-16724



• Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord
AB	Airbag wiring harness

D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

1. RELAY

A symbol used to indicate a relay.

2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. FUSE NO. & RATING

The “FUSE No. & RATING” corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number “G4” refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

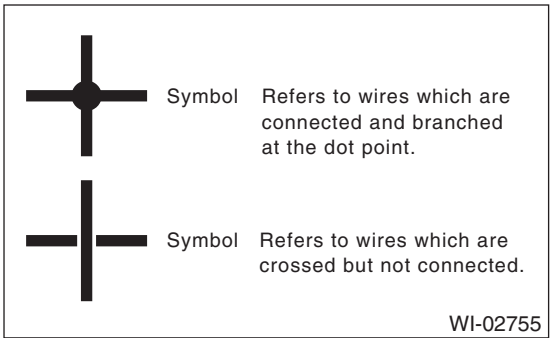
6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE



A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

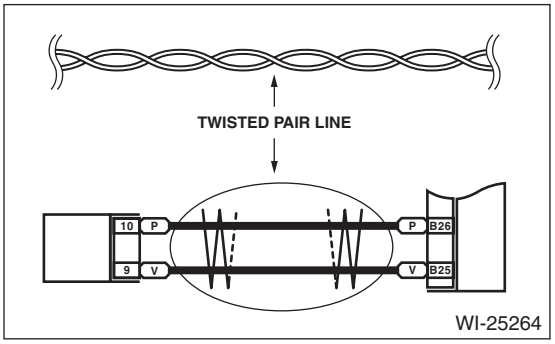
A ←→ A, B ←→ B

10.SYMBOLS OF WIRE CONNECTION AND CROSSING

11.POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

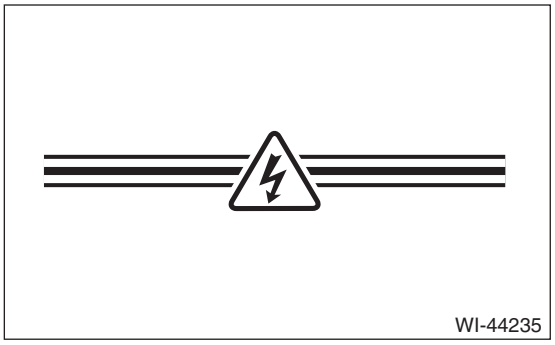
“MB – 5”, “MB – 6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram.



Accordingly, using the “DC POWER SUPPLY CIRCUIT” and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

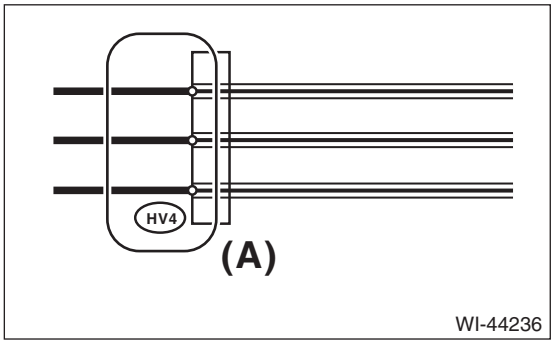
12.CLASSIFICATION BY SPECIFICATION

When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.



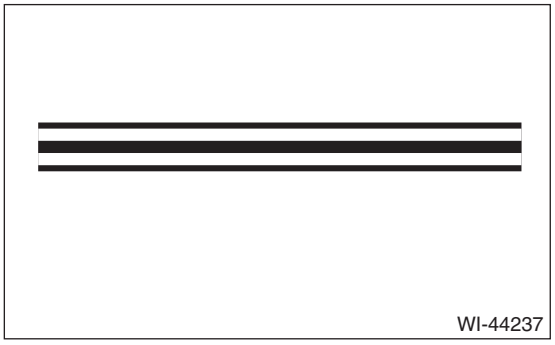
13.TWISTED PAIR LINE

The twisted pair line is indicated by a symbol in the wiring diagrams.



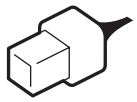
14.HIGH VOLTAGE CIRCUIT

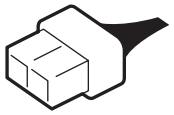
The following signs denote high voltage circuit.

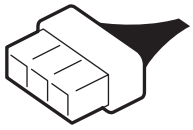


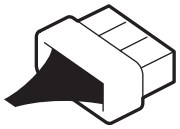
15.CABLE WITH BOLT CONNECTION

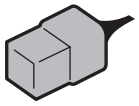
Cable connections with bolt (HV**) are denoted by (A) below. Signs for connection (HV**) are also used in location section.

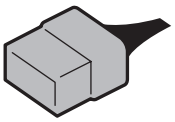


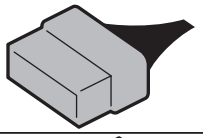


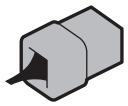


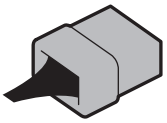


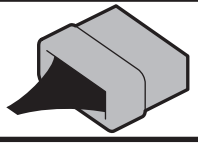




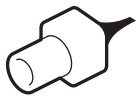


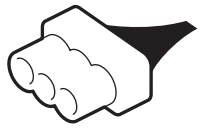


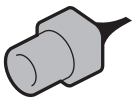


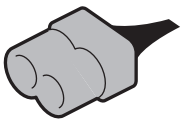


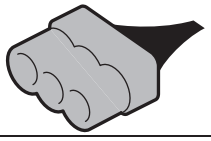
16.BUS BAR

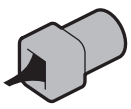


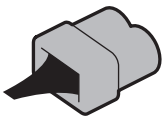


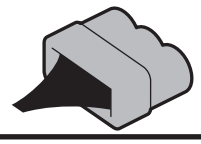












The following signs denote bus bar.

E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

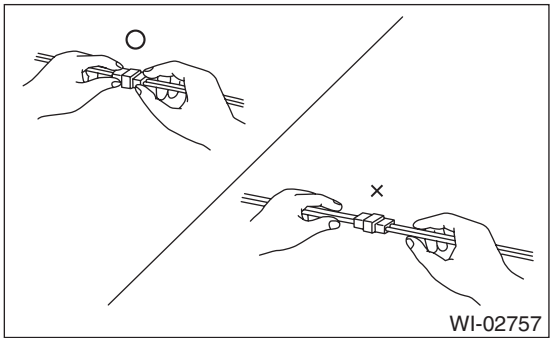
Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Water proof type: Male		
		
		

WI-02756

F: ABBREVIATION IN WIRING DIAGRAMS

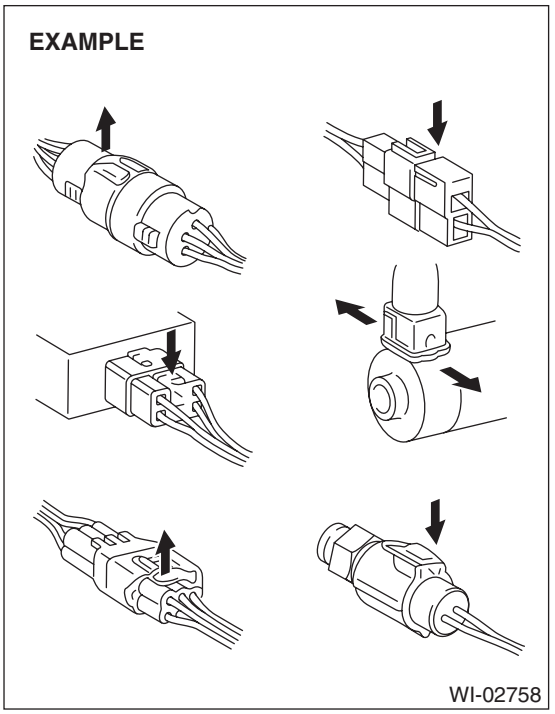
Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
AT	Automatic Transmission
A/F	Air/Fuel (air fuel ratio sensor)
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AWD	All Wheel Drive
B	Battery
BECM	Battery Energy Control Module
CAN	Controller Area Network
CM	Control Module
CVT	Continuously Variable Transmission
D	Drive range or Down
DMCM	Drive Motor Control Module
DN	Down
E	Ground
ELCM	Evaporative Leak Check Module
ECO	Economy
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
G	Gravity (G sensor)
H/L	Headlight
HI	High
HPCM	Hybrid Powertrain Control Module
I/F	Interface
IG	Ignition
INT	Intermittent
ISG	Integrated Starter Generator
ISO	International Organization for Standardization
J/C	Joint Connector
LCD	Liquid Crystal Display
LH	Left Hand
LO	Low
LWR	Lower
M	Motor
M/B	Main Fuse Box
MFD	Multi Function Display
MT	Manual Transmission
N	Neutral Range
NAVI	Navigation
OP	Open or Optional Parts

Abbr.	Full name
P	Parking or Parking range
PASS	Passing
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range
RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
ST	Starter
SW	Switch
TCM	Transmission Control Module
TFT	Thin Film Transistor
TPMS	Tire Pressure Monitor System
UPR	Upper
VDC	Vehicle Dynamics Control
WASH	Washer



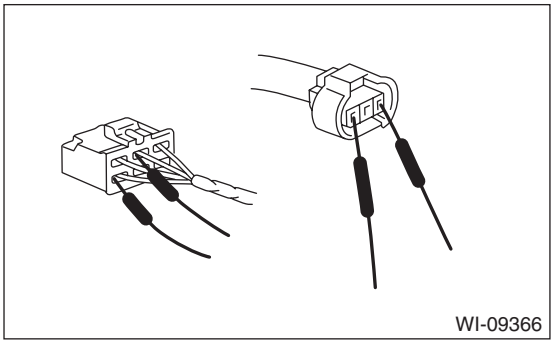
2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE



1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

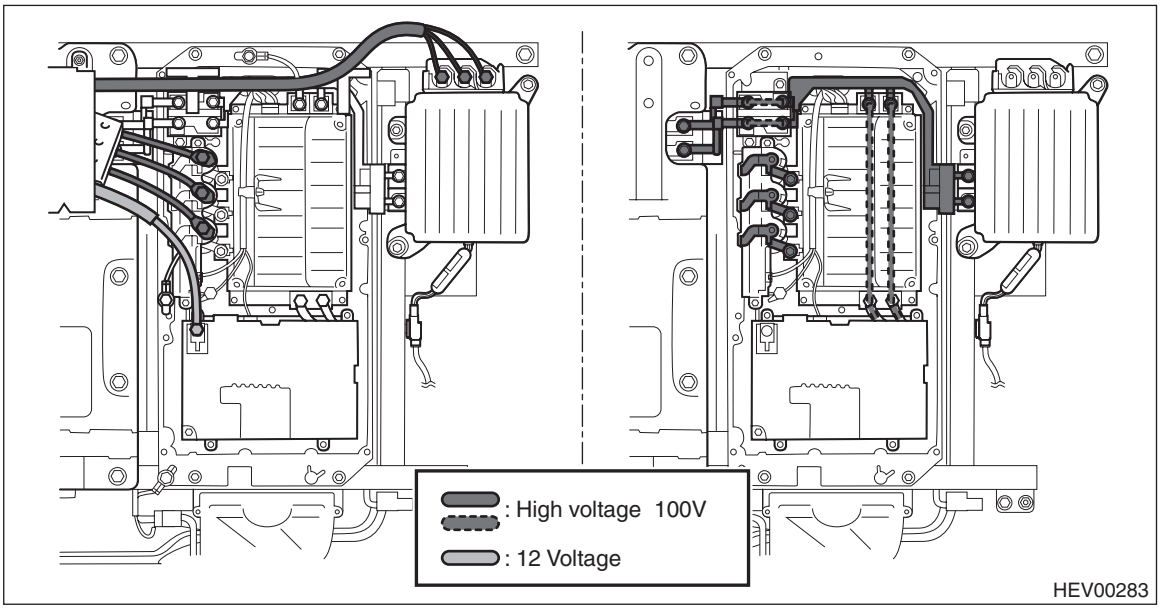
B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS



1) The battery cable must be disconnected from the battery's (–) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
3) When installing parts, be careful not to catch them on the wiring harness.
4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector.
To connect, insert the connector until it snaps and confirm that it is connected securely.

6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.
To check water-proof connectors (which are not measurable from the wiring side), touch test probes on the terminal side and be careful not to bend or damage the terminals.



7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts.
Handle them with care so that they are not dropped or mishandled.
8) For inspection of airbag system, always refer to "CAUTION" of "General Description" under AIRBAG SYSTEM in the service manual for the same model to prevent malfunctioning.

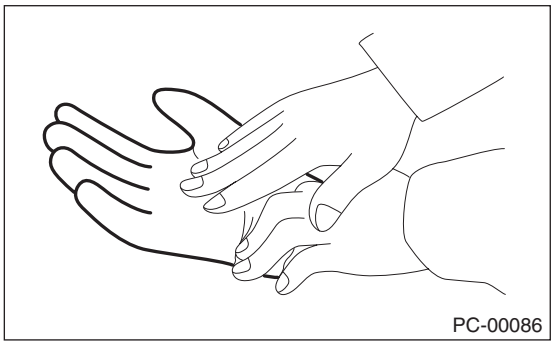
C: PRECAUTIONS REGARDING THE HYBRID SYSTEM

1. PRECAUTIONS FOR MAINTENANCE

The hybrid system includes a high voltage circuit. Mishandling may cause electric shocks and leakage. Therefore, perform proper operations by following procedures in this manual.

- Engineers are required to receive a special training in order to perform maintenance of high voltage system.
- All the harnesses and connectors for power cables are orange in color. In addition, caution labels indicating [High Voltage] are attached on the High voltage battery and its battery cover. Do not touch the wires and parts related to high voltage carelessly.
- Use great care, when handling the power supply circuits for high voltage system shown in the figure.

- When performing maintenance of the high voltage system, make sure to take measures for preventing electrocution, by wearing insulated gloves, removing the service disconnect plug, etc. In addition, carry the removed service disconnect plug in your pocket in order to prevent other servicemen from accidentally installing during work.



NOTE:
Do not turn the ignition to ON with the service disconnect plug removed in order to prevent malfunctions.

- After removing the service disconnect plug, be sure to wait for ten minutes before touching the high voltage connectors and terminals.

NOTE:
This time allows the high voltage condenser in the inverter to discharge.

- When wearing insulated gloves for work, make sure there is no holes or damages on the gloves.
- During the work, do not carry any metallic products, such as mechanical pencils and scales, which may be dropped and may cause short.
- Parts with high voltage and strong magnetic force are used. Therefore, during the work, do not carry any metallic products that may cause short, or magnetic recording media (such as cash cards and prepaid cards) whose magnetic record may get destroyed.
- When touching the high voltage terminals without insulation covering, make sure, in advance, to wear insulated gloves and to confirm that the voltage is 0 V using an insulation multimeter.
- Insulate the high voltage connectors and terminals with insulating tape immediately after removing.
- Be sure to tighten the high voltage screw terminals firmly to the specified torque. Lack of and excess of torque cause failures.
- Be careful not to allow foreign matter to enter the battery.
- Make sure to insulate the power cable terminals by wrapping insulating tape around.
- To work on the high voltage wire connections, use insulated tools, or wrap tools with vinyl tape for insulation before use.

• When using tools wrapped with vinyl tape as alternatives to insulated tools, cover tools with the standardized product, pressure-sensitive polyvinyl chloride tapes for electrical purposes (JIS C2336), and confirm the insulated condition before working, using an insulation multimeter.
• When inspecting insulated gloves, make sure there is no cracks, breakage, other damages, or air leakage by rolling insulated gloves from the opening side up to the wrist area and pressing the inflated portion. Do not use wet insulated gloves.

• When performing work, wear or use insulated gloves, protective goggles, and rubber boots for electrical purposes, insulated protective shoes or insulating rubber sheet.
• Even after the service disconnect plug is removed, make sure to wear insulated gloves during maintenance of all the parts inside the cover including the battery cover, and of underfloor power cable. (Maintenance of the high voltage battery cooling fan and cooling duct parts outside the battery cover, and the drive motor control module parts does not require to wear insulated gloves even in the compartment, because the voltage is 12 V only.)
• For maintenance of engine compartment and of CVT unit except for the power cable, insulated gloves are not required.

• During the work for the high voltage system, make sure to alert other servicemen to take precautions, for instance by displaying [HIGH VOLTAGE. DO NOT TOUCH DURING OPERATION] on the vehicle. (An example is shown. Make a photocopy for use.)

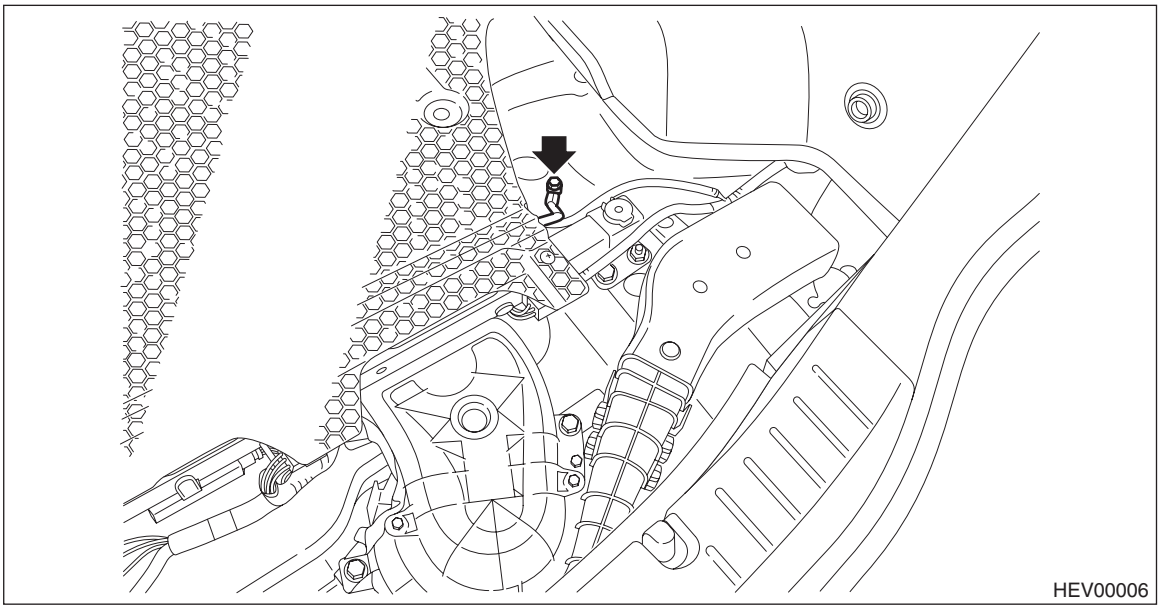
HIGH VOLTAGE CAUTION LABEL

Person in charge: _____

CAUTION:
HIGH VOLTAGE.
DO NOT TOUCH
DURING OPERATION

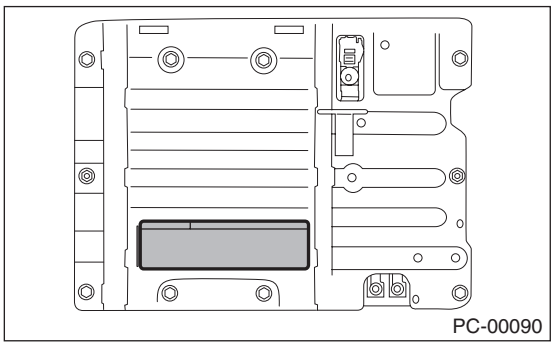
CAUTION:
HIGH VOLTAGE.
DO NOT TOUCH
DURING OPERATION

Person in charge: _____



Copy this page and put it after folding on the roof of the vehicle in service.

HEV00088



• After performing work for the high voltage system, make sure to check again for misplaced parts and tools, tightening conditions of high voltage terminals, and connector connections, before connecting the service disconnect plug.

CAUTION:
Make sure the connectors are connected completely without insecurity.

• Make sure to check the positive and negative terminal connections during the battery removal and installation procedures.
• Never connect the battery in reverse polarity. Otherwise, the control module will be broken instantly, and other parts will also be damaged.
• Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated, and this voltage may damage electronic parts such as control modules.
• When disconnecting the connectors of the electrical components, always be sure to turn the ignition switch to OFF.
• When measuring the voltage or resistance of individual sensors or all control modules, use a tapered pin with a diameter of less than 0.6 mm (0.024 in). Do not insert the pin 4 mm (0.16 in) or more into the part.
• Take care not to allow water to get into the connectors when servicing or washing the vehicle in rainy weather. Avoid exposure to water even if the connectors are waterproof.
• Use the engine ground terminal or engine assembly for the grounding point when measuring the voltage and resistance in engine compartment.
• All parts related to the hybrid system are precision parts. Do not drop or otherwise apply impact. Do not reuse the parts that are dropped accidentally.
• Use the body ground bolt on the inverter frame as the grounding point, when measuring voltage and resistance in rear of the vehicle.

HEV00006

• Take the ignition key or access key out of the vehicle, except when the key is needed inside.
• When the part is replaced or the label is detached, make sure to attach a new label in the original position and direction.

PC-00090

• This vehicle starts and stops the engine automatically, when the Hybrid READY indicator light in the meter illuminates. Make sure to turn the ignition to OFF before performing maintenance.
• When the state of battery charge is in a good condition while the engine is warmed-up, the engine will be stopped automatically while the vehicle is stopped. Therefore, when continuous running of the engine is necessary during vehicle stoppage in the cases such as ignition timing inspection, set to «Auto Start Stop Cancel Drive Mode (Engine only or Engine + Motor)».
