| <b>4</b><br><b>CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR.</b><br>1) Turn the A/C and ignition switch to OFF.<br>2) Disconnect the auto A/C control module connector.<br>3) Measure the resistance between auto A/C control module and air mix door actuator connector.<br><b>Connector &amp; terminal</b><br><b>Driver's side</b><br><b>(B390) No. 1 — (B282) No. 15:</b><br><b>(B390) No. 3 — (B282) No. 8:</b><br><b>(B390) No. 5 — (B282) No. 12:</b><br><b>(B390) No. 6 — (B283) No. 19:</b><br><b>(B390) No. 7 — (B283) No. 9:</b><br><b>Passenger's side</b><br><b>(B235) No. 1 — (B282) No. 8:</b><br><b>(B235) No. 3 — (B282) No. 15:</b><br><b>(B235) No. 5 — (B282) No. 4:</b><br><b>(B235) No. 6 — (B283) No. 8:</b><br><b>(B235) No. 7 — (B283) No. 18:</b> | Is the resistance less than 1 Ω?            | Go to step 5. | Repair the harness between auto A/C control module and air mix door actuator. |

## Diagnostic Procedure for Actuators

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Check                                                               | Yes                   | No                                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|-----------------------|--------------------------------------|
| <b>5</b><br><b>CHECK AIR MIX DOOR ACTUATOR POSITION SWITCH SIGNAL.</b><br>1) Connect the connector of auto A/C control module and air mix door actuator.<br>2) Turn the ignition switch and AUTO switch to ON.<br>3) Check the voltage between auto A/C control module connector terminals while changing the setting temperature between maximum COOL and maximum HOT.<br><b>Connector &amp; terminal</b><br><b>Driver's side</b><br><b>(B282) No. 12 (+) — (B282) No. 15 (-):</b><br><b>Passenger's side</b><br><b>(B282) No. 4 (+) — (B282) No. 15 (-):</b> | Does the voltage change between 1 V (Max. HOT) and 4 V (Max. COOL)? | Go to step 6.         | Replace the air mix door actuator.   |
| <b>6</b><br><b>CHECK POOR CONTACT.</b><br>Check poor contact of auto A/C control module and connector.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Is there poor contact in connector?                                 | Repair the connector. | Replace the auto A/C control module. |
