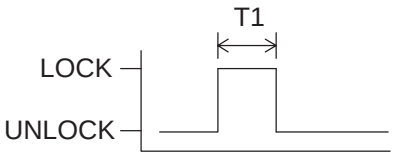
Continued from previous page

Within 40 sec.

9. Press either LOCK or UNLOCK switch on transmitter once.

Within 3 sec.

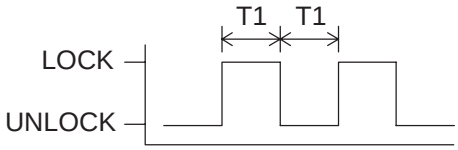
10. Press the same switch again.



Within 3 sec.

Response to registration completion:

Integration relay automatically performs power door LOCK–UNLOCK operation to show whether registration has been completed correctly or not.



LOCK–UNLOCK Occurs Once

Registration of recognition code has been completed.

LOCK–UNLOCK Occurs Twice

Registration of recognition code has failed.

T1: Approx. 1 sec.

HINT:
If LOCK–UNLOCK operation is performed twice, registration of recognition code has failed. Perform registration procedures by beginning once again.

Within 40 sec.

If other transmitter is to be registered.
HINT:
4 recognition codes can be registered at once.

Proceed to flow chart to finish registration.

Perform either of the following.
- Open a door.
- Insert key into ignition key cylinder.

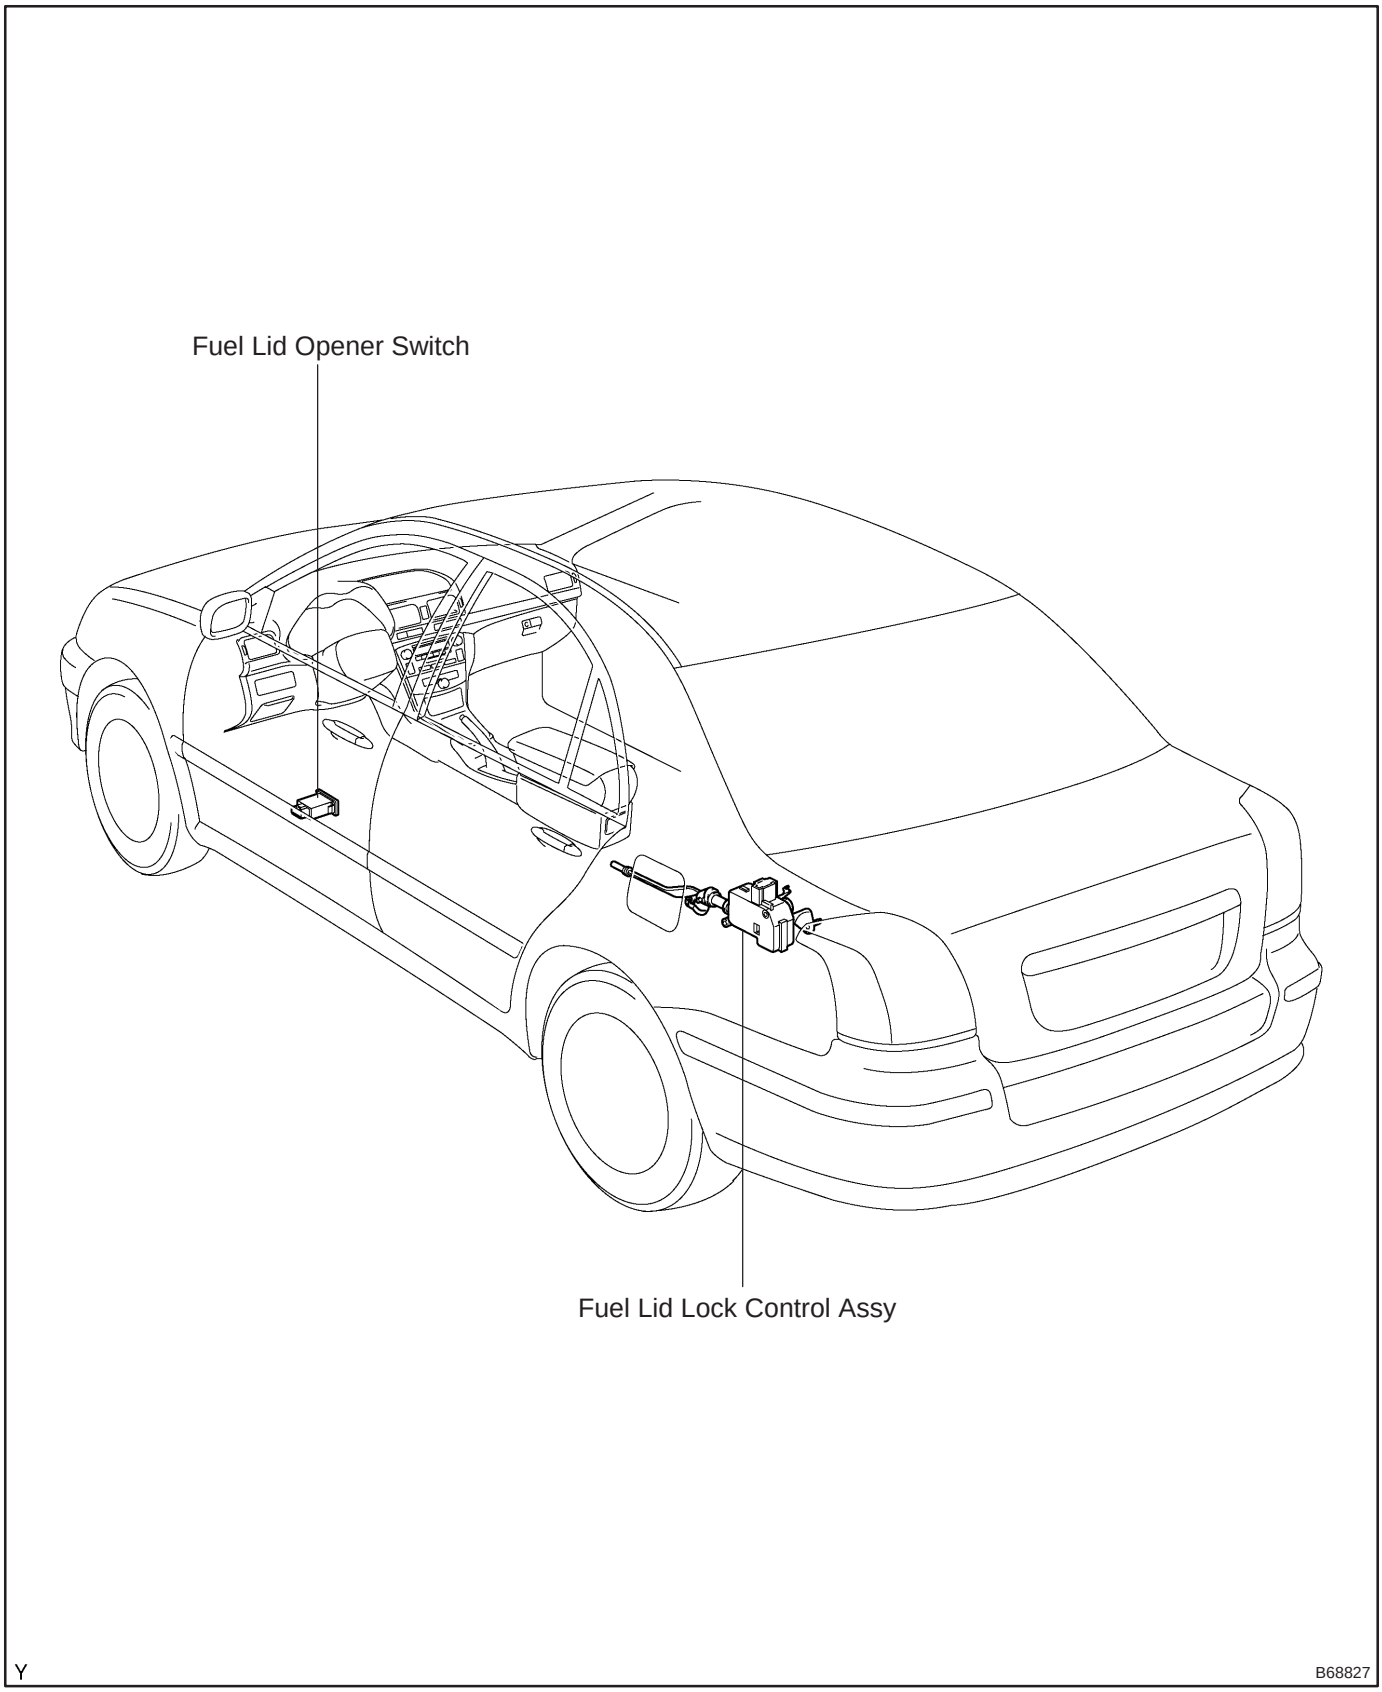
Registration of recognition codes (add mode and rewrite mode) is completed.

KEY REMINDER WARNING SYSTEM

730GU–01

ON–VEHICLE INSPECTION

1. FUNCTION CHECK



(a) Check that the key reminder warning buzzer sounds.
  (1) With the driver side door closed, insert the key into the ignition switch lock cylinder, and then turn the key to LOCK.
  (2) Then, check that the buzzer sounds intermittently when the driver side door is opened.

(b) Check that the key reminder warning buzzer stops.
  (1) Check that the buzzer stops sounding when any of the following operations is done while the buzzer is sounding.
    - Close the driver side door (front door courtesy lamp switch assy is off).
    - Turn the ignition switch ON.
    - Pull out the key from the ignition switch lock cylinder.

FUEL LID OPENER SYSTEM

LOCATION

73092–02

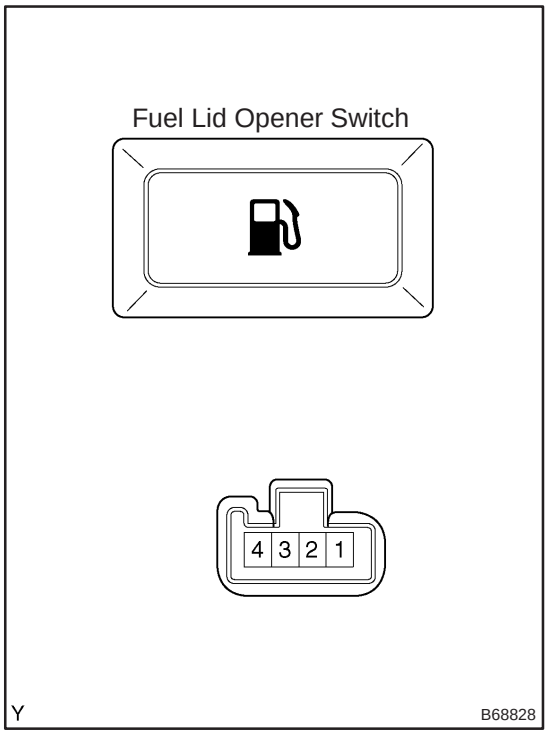
73093–02

ON–VEHICLE INSPECTION

1. CHECK FUEL LID OPENER OPERATION

(a) Check the basic function.

(1) Check that the fuel lid opens by pressing the fuel lid opener switch.



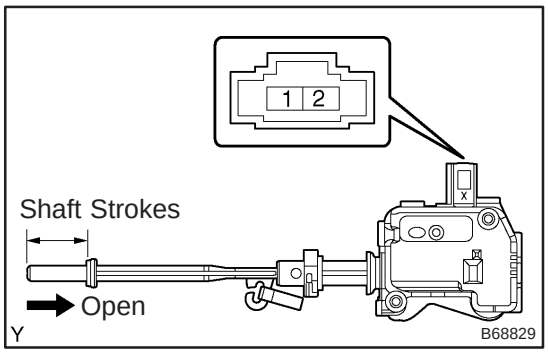
73094–02

PROBLEM SYMPTOMS TABLE

Symptom	Suspected Area	See Page
Fuel lid opener does not operate.	1. FUEL OPN fuse 2. Fuel lid opener switch 3. Fuel lid lock control assy 4. Wire harness	68–1 73–30 73–30

73095–02

INSPECTION



1. INSPECT FUEL LID OPENER SWITCH

(a) Check the switch resistance.

Standard:

Tester Connection	Switch Position	Specified Condition
2 – 3	OFF	10 kΩ or higher
	ON	Below 1 Ω

If the result is not as specified, replace the switch.

2. INSPECT FUEL LID LOCK CONTROL ASSY

(a) Apply battery voltage to the lock control and check the motor operates in the direction.

Standard:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (–) → Terminal 1	Open direction

If the result is not as specified, replace the lock control assy.

(b) Check the shaft strokes.

Standard: 18.0 mm (0.709 in.) or more

THEFT DETERRENT SYSTEM

730G8–01

ON–VEHICLE INSPECTION

1. OUTLINE OF THEFT DETERRENT SYSTEM

(a) When the theft deterrent system detects that the vehicle is being tampered with, the system sets off the alarm, causing the horns to sound and the lights to light up or blink in order to alert people around the vehicle to the theft.

(b) The theft deterrent system has an active arming mode; a disarmed state, an arming preparation state, an armed state and an alarm sounding state.

(1) Disarmed state:
- The alarm function is not operating.
- The theft deterrent system is not operating.

(2) Arming preparation state:
- The time until the system goes into the armed state.
- The theft deterrent system is not operating.

(3) Armed state:
- The theft deterrent system is operating.

HINT:

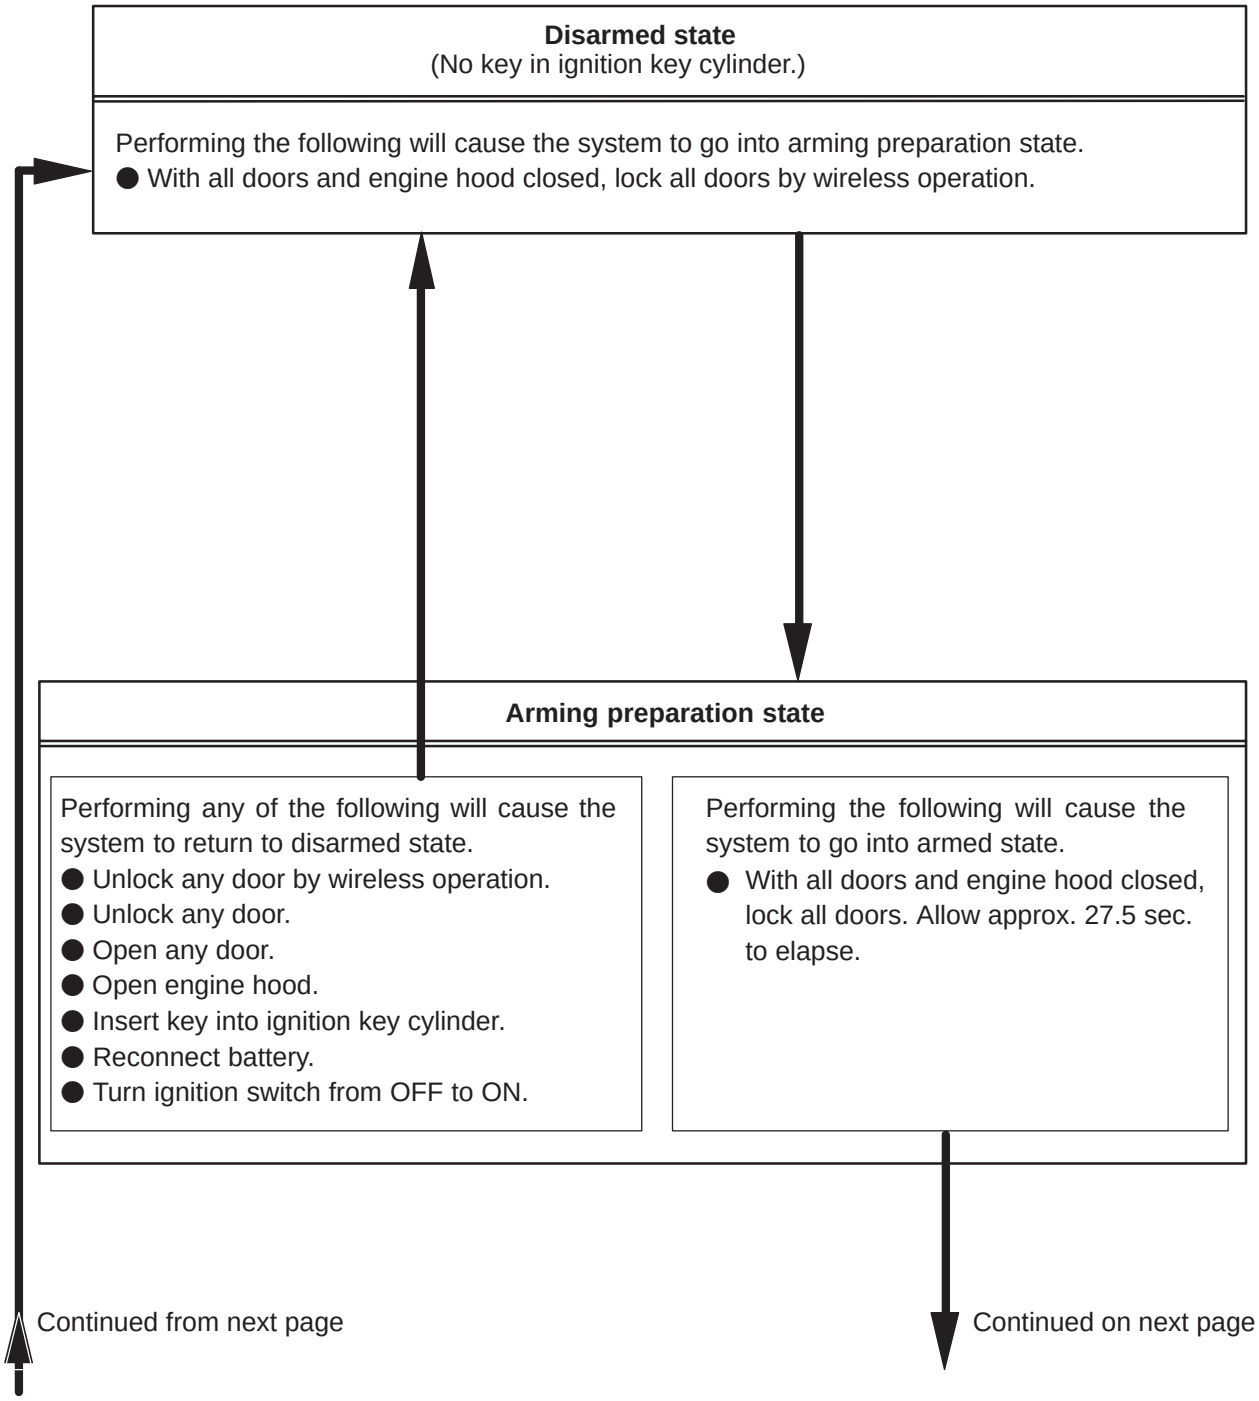
If the vehicle remains in a condition that sets off the alarm (any door remains open, engine hood remains open, ignition switch remains directly connected) after the alarm ends, the alarm will be set off repeatedly a maximum of 10 times for every one of the above specified conditions.

Alarm time: Approx. 27.5 sec. x 10

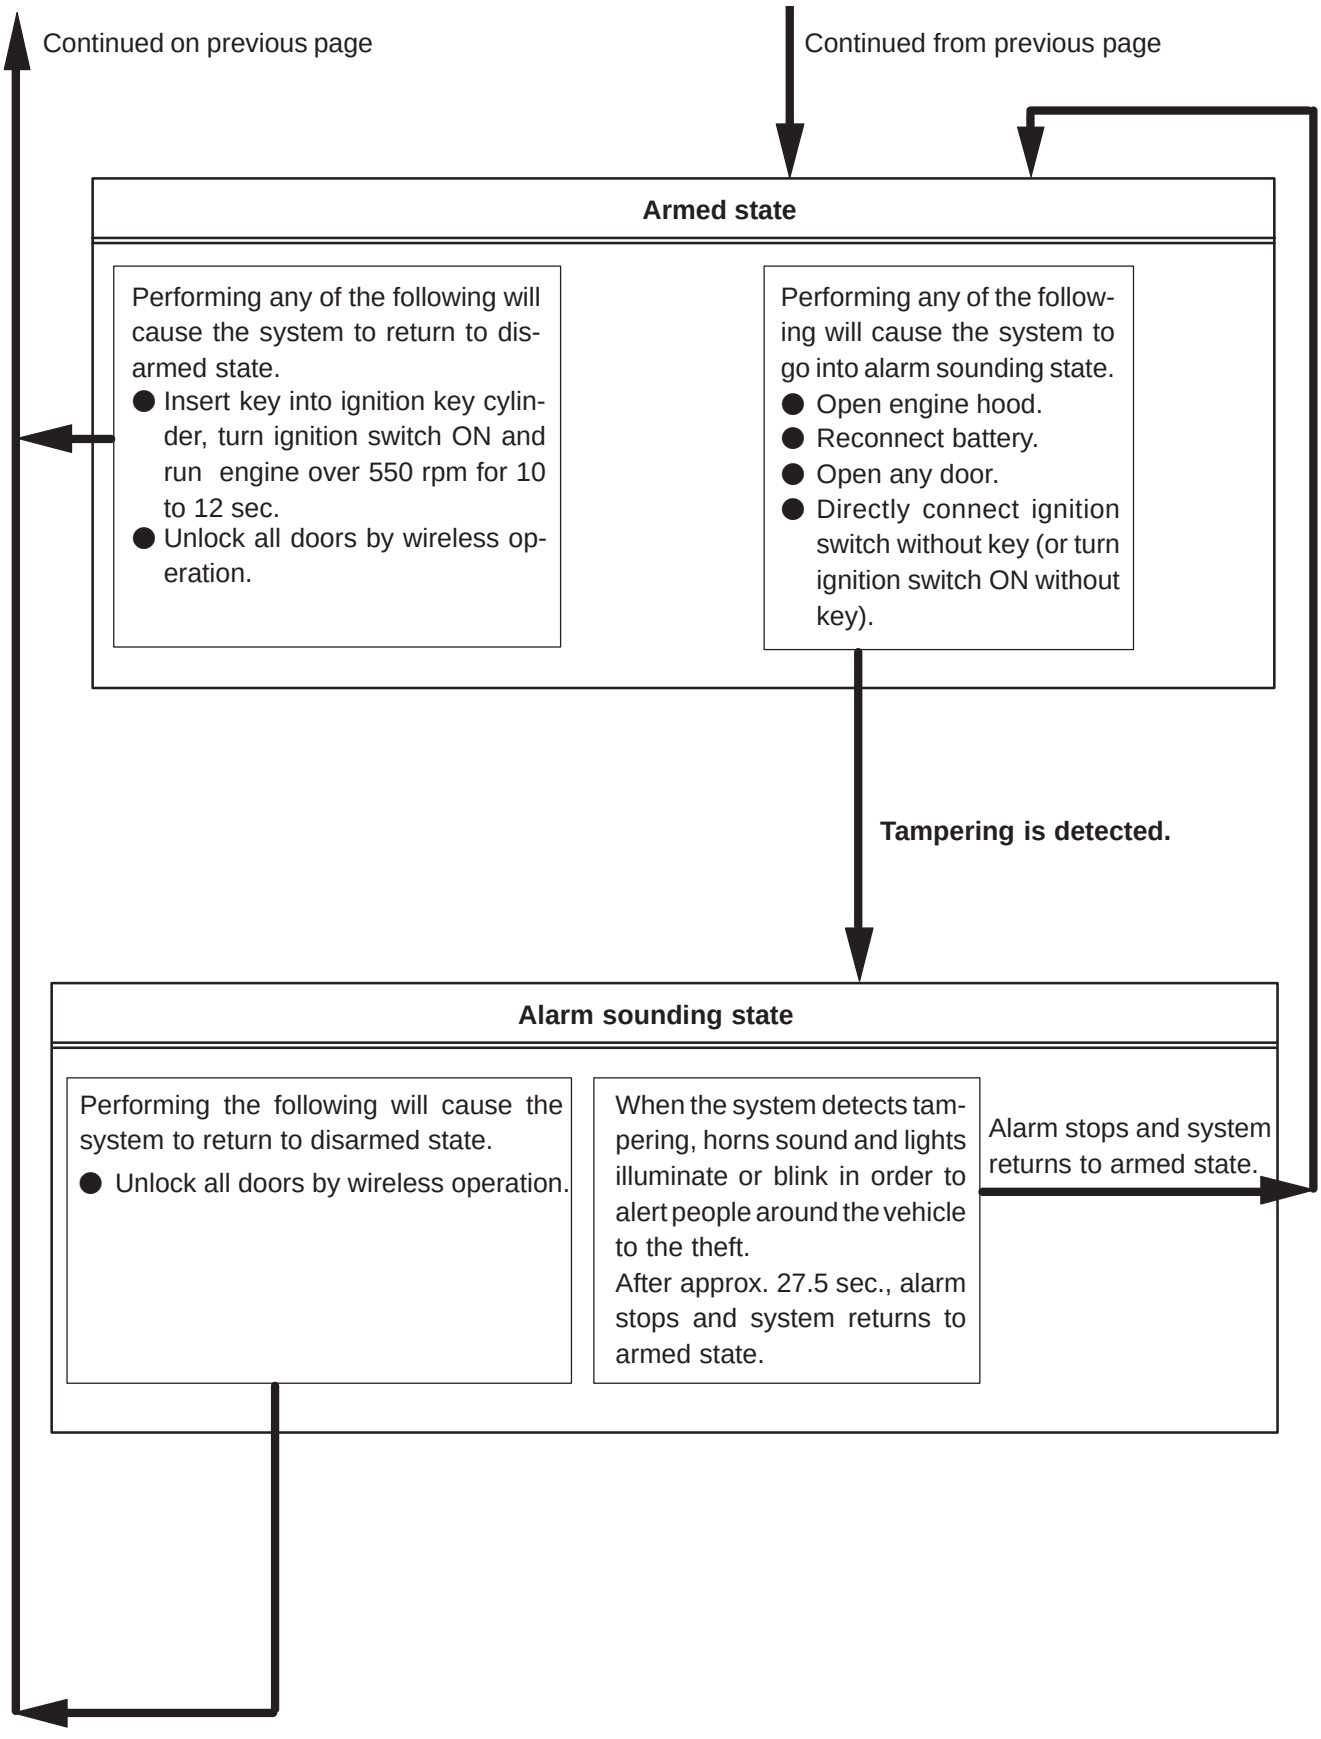
(4) Alarm sounding state:

When the theft deterrent system detects that the vehicle is being tampered with while in the armed state, the system causes the horns to sound and the lights to light up or blink in order to alert people around the vehicle to the theft.

Refer to table below for alarm method and time:



Alarm Method	Hazard Warning Lamp	Blinking (Cycle of flasher relay)
	Room Lamp	Illuminating
	Vehicle Horn	Sounding (Cycle of 0.4 sec.)
	Self–power Siren	Sounding (Cycle of 0.4 sec.)
Alarm Time	Approx. 27.5 sec. (Maximum 10 times)	



HINT:

If any of the doors are unlocked with no key in the ignition key cylinder during the armed state, a forced door lock signal will be output (See step 3).

2. ACTIVE ARMING MODE

- Active arming mode starts the alarm control right when the doors are locked.

Continued on previous page
Continued from previous page
Armed state
Performing any of the following will cause the system to return to disarmed state.
● Insert key into ignition key cylinder, turn ignition switch ON and run engine over 550 rpm for 10 to 12 sec.
● Unlock all doors by wireless operation.
Performing any of the following will cause the system to go into alarm sounding state.
● Open engine hood.
● Reconnect battery.
● Open any door.
● Directly connect ignition switch without key (or turn ignition switch ON without key).
Tampering is detected.
Alarm sounding state
Performing the following will cause the system to return to disarmed state.
● Unlock all doors by wireless operation.
When the system detects tampering, horns sound and lights illuminate or blink in order to alert people around the vehicle to the theft.
After approx. 27.5 sec., alarm stops and system returns to armed state.
Alarm stops and system returns to armed state.
Alarm sounding state is canceled.

3. FORCED DOOR LOCK CONTROL

(a) The forced door lock control prevents the vehicle from being tampered with. Immediately after a door is unlocked (alarm starts), the door is forced to lock by a forced door lock signal.

(1) Conditions that force the doors to lock:

When no key is in the ignition key cylinder and 0.4 seconds have elapsed after the previous output of a forced door lock signal, the doors will be forced to lock if any of the following conditions is present.

- The theft deterrent system is in the armed state of active arming mode.
- All the doors are locked. → Any door is unlocked.
- Any door is unlocked.

HINT:

Only Europe:

Forced door lock control does not operate if any door is unlocked by key.

4. ALARM MEMORY FUNCTION

(a) If the alarm is set off (tampering is detected) while the theft deterrent system is set, the alarm memory function will record it. Whenever you cancel the theft deterrent system, the alarm memory function causes the taillights to light up for 2 seconds in order to inform you that the alarm has been set off.

(1) Conditions of the alarm memory function that cause the taillights to light up:

When the theft deterrent system has entered into the alarm sounding state (tampering has been detected) even once, the taillights will light up for 2 seconds if any of the following conditions is present.

- Switched to the disarmed state from the armed state.

5. SECURITY INDICATOR OUTPUT

(a) The theft warning ECU outputs a signal to light up the security indicator, according to the state of the theft deterrent system. However, some of the actual lighting conditions of the security indicator are different from the outputs of the theft warning ECU.

Output:

State of Theft Deterrent System	Security Indicator	
	Output Signals from Theft Warning ECU	Actual Lighting Condition
Disarmed state	OFF	OFF (Immobiliser system unset) BLINKING (Immobiliser system set)
Arming preparation state	ON	ON
Armed state	OFF	BLINKING
Alarm sounding state	ON	ON

Blinking cycle:

Time	Security Indicator
0.2 sec.	ON
1.8 sec.	OFF

HINT:

When the immobiliser system is set, the security indicator blinks during the disarmed state and the armed state, due to the output signals from the immobiliser system.

6. INTRUSION (THEFT WARNING) SENSOR

(a) Function of the intrusion sensor:

The intrusion sensor (theft warning redar sensor) senses any moving object by using ultrasonic waves and outputs the signals to communicate an intrusion to the theft warning ECU so that the theft deterrent system can set off the alarm.

When the theft deterrent system is switched to the arming preparation state, the intrusion sensor is supplied with S+B by the theft warning ECU. This causes the theft deterrent system to set off the alarm when the signal is input from the intrusion sensor in a situation such as the window glass being broken.

(b) Press the intrusion sensor OFF switch.

HINT:

The theft deterrent system can be set (switched to the arming preparation state) with the intrusion sensor OFF when an animal is left inside the vehicle.

(1) Make sure that the theft deterrent system is in the disarmed state.

(2) Press the intrusion sensor OFF switch once.

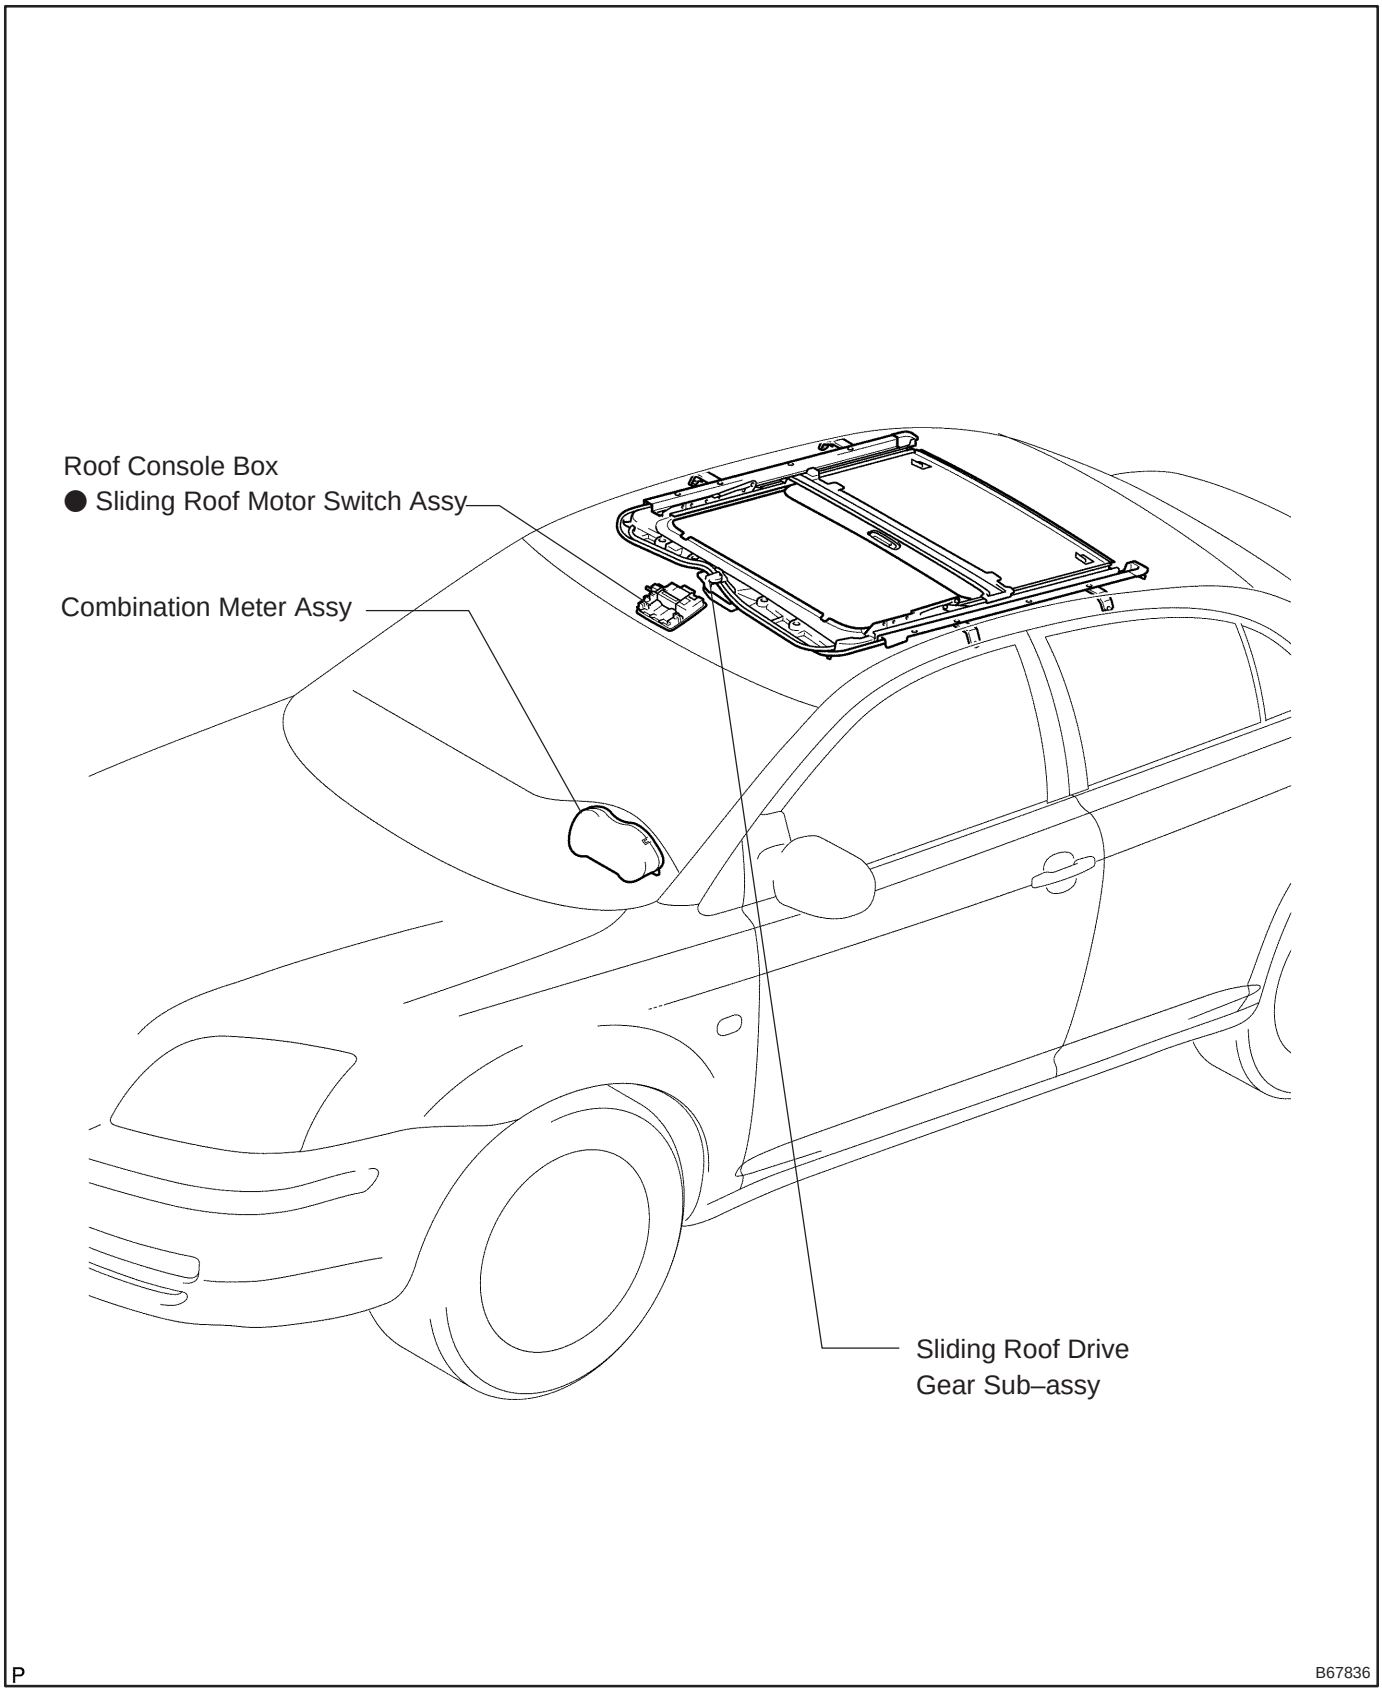
HINT:

The intrusion sensor and the OFF switch are provided on the roof console box in the vehicle front interior.

NOTICE:

The intrusion sensor returns to ON (initial state) when the doors are unlocked by the wireless operation.

7. THEFT WARNING (SELF–POWER) SIREN



(a) The theft warning siren has an internal battery. If any of the vehicle's battery or communication lines are opened, the theft warning siren detects it by itself and sounds. Although the theft warning siren usually sounds by receiving a signal from the theft warning ECU usually, the theft warning siren can sound using its internal battery in case that the vehicle's battery is opened.

(b) The theft warning ECU sends an arming signal to the theft warning siren while transferring to the armed state, as well as sending a disarming signal to the siren while transferring to the disarmed state. Additionally, the theft warning ECU can sound the theft warning siren by sending an alarm signal in the alarm sounding state.

7408T–01

ON–VEHICLE INSPECTION

1. CHECK WINDOW LOCK SWITCH

(a) Check that operation of the power windows excluding the driver side and the sliding roof are disabled when the window lock switch of the power window master switch is pressed.

(b) Check that the power windows and the sliding roof can be operated when the window lock switch is pressed again.

2. CHECK AUTO SLIDE–OPEN/CLOSE FUNCTION

(a) Check that the sliding roof switch can operate the sliding roof as follows when the tilt–UP/ DOWN function is not being used:

Standard:

Condition	Switch Condition	Switch Operation	Roof Glass
• Ignition switch ON • Window lock switch OFF	SLIDE OPEN	Pressed for more than 0.3 sec.	Fully open
	TILT UP		Fully closed

HINT:

The sliding roof stops partway when the sliding roof switch is pushed on either side during AUTO operation.

3. CHECK AUTO TILT UP/DOWN FUNCTION

(a) Check that the sliding roof switch can operate the sliding roof as follows when the slide–OPEN/CLOSE function is not being used:

Standard:

Condition	Switch Condition	Switch Operation	Roof Glass
• Ignition switch ON • Window lock switch OFF	TILT UP	Pressed for more than 0.3 sec.	Fully tilted up
	SLIDE OPEN		Fully closed

HINT:

The sliding roof stops partway when the sliding roof switch is pushed on either side during AUTO operation.

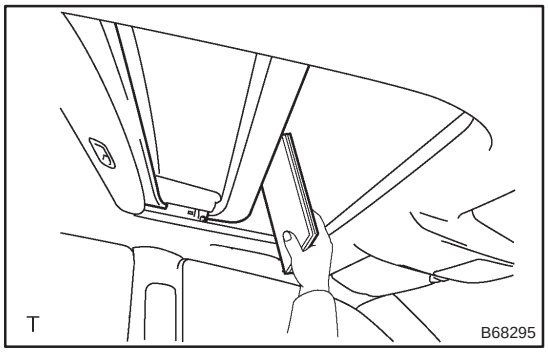
4. CHECK SLIDING ROOF OPERATION FUNCTION AFTER IGNITION IS TURNED OFF

(a) When both of the following conditions are fulfilled, check that the power windows and the sliding roof can be operated even after the ignition switch is turned OFF:

- Within 43 seconds after the ignition switch is turned OFF
- When the driver side door is closed

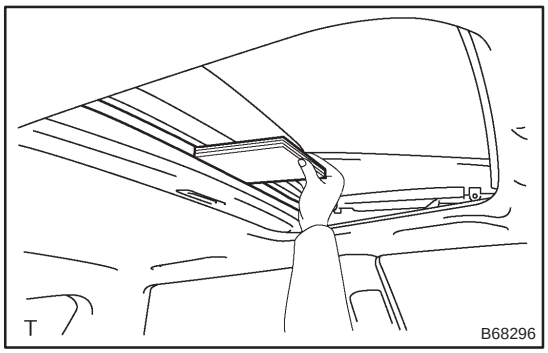
5. CHECK JAM PROTECTION FUNCTION

HINT:



The jam protection function prevents any part of your body from getting caught by accident between the vehicle body and the roof glass during sliding roof operation.

Operative condition:



- AUTO CLOSE
- AUTO CLOSE during sliding roof operation after the ignition switch is turned OFF
- AUTO TILT–DOWN
- AUTO TILT–DOWN during sliding roof operation after the ignition switch is turned OFF

CAUTION:

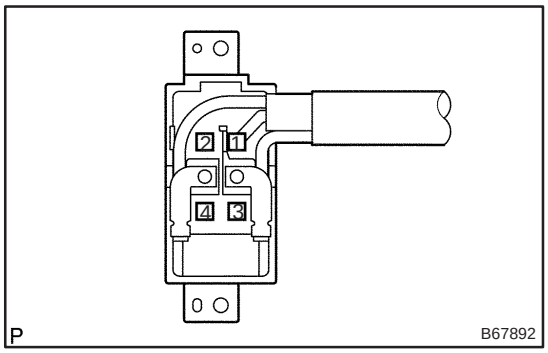
- **Do not check this function using a part of your body such as your hand. Also, pay thorough attention that nothing gets caught by accident during this process.**
- **If this function is checked by inserting a thin object (less than 5 mm (0.20 in.)) between the roof glass and vehicle body, it may not operate.**

(a) When the slide–OPEN/CLOSE function is operating:
Check that the sliding roof opens approximately 200 mm (7.87 in.) right when something gets caught between the vehicle body and the roof glass during sliding roof operation.

(b) When the tilt–UP/DOWN function is operating:
Check that the sliding roof fully tilts up when something gets caught between the vehicle body and the roof glass during sliding roof operation.

6. CHECK FAIL–SAFE FUNCTION

(a) If the sliding roof does not close because the jam protection function operates improperly, press the sliding roof switch on the TILT UP side and until the sliding roof fully closes. Then you can close the sliding roof using manual operation.



7408U–01

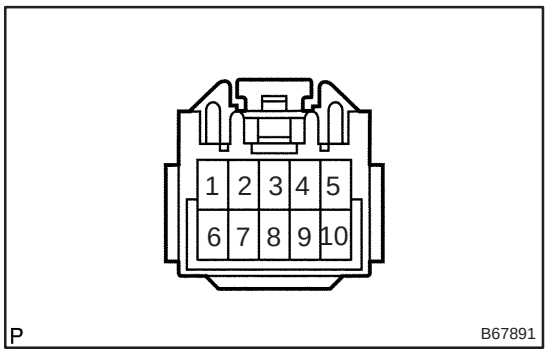
PROBLEM SYMPTOMS TABLE

Symptom	Suspected Area	See Page
AUTO function does not operate	1. Sliding roof motor assy	74–3
Sliding roof system does not operate	1. S/ROOF fuse	–
	2. GAUGE1 fuse	–
	3. IG1 relay	–
	4. Integration relay	–
	5. Sliding roof housing assy	74–15
	6. Sliding roof motor switch assy	74–6
	7. Sliding roof motor assy	74–3
	8. Wire harness	74–3
Sliding roof system stops operation halfway	1. Sliding roof motor assy	74–3
	2. Wire harness	74–3
	3. Sliding roof housing assy	74–15

7408V–01

INSPECTION

1. INSPECT SLIDING ROOF MOTOR SWITCH ASSY



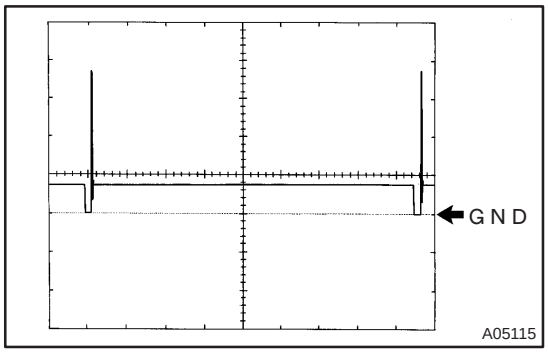
(a) Remove the sliding roof motor switch (See pages 76–36, 76–45 and 76–54).

(b) Check the resistance between the terminals when operating the switch.

Standard:

Terminals No.	Switch Operation	Specified Condition
1 – 2	TILT UP is pressed	Below 1 Ω
2 – 3	SLIDE OPEN is pressed	Below 1 Ω
1, 3 – 2	OFF	10 kΩ or higher

If the result is not as specified, replace the switch assy.



2. INSPECT SLIDING ROOF MOTOR ASSY

(a) Disconnect the sliding roof motor connector (See pages 76–36, 76–45 and 76–54).

(b) Check the resistance and voltage between the terminals of the wire harness side connector.

Standard:

Terminals No.	Condition	Specified Condition
5 ⇔ Body ground	Constant	Below 1 Ω
3 – 5	Ignition switch ON	10 to 14 V
10 – 5	Constant	10 to 14 V
6 – 5	TILT UP is pressed	Below 1 Ω
1 – 5	SLIDE OPEN is pressed	Below 1 Ω
8 – 5	Ignition switch OFF → ON, Engine idle speed	Pulse generation *

Reference (*): Using an oscilloscope

Item	Contents
Tool Setting	10 V/DIV., 20 ms/DV.
Vehicle Condition	Engine idle speed

If the result is not as specified, there may be a malfunction on the wire harness side.

7408W–01

RESET

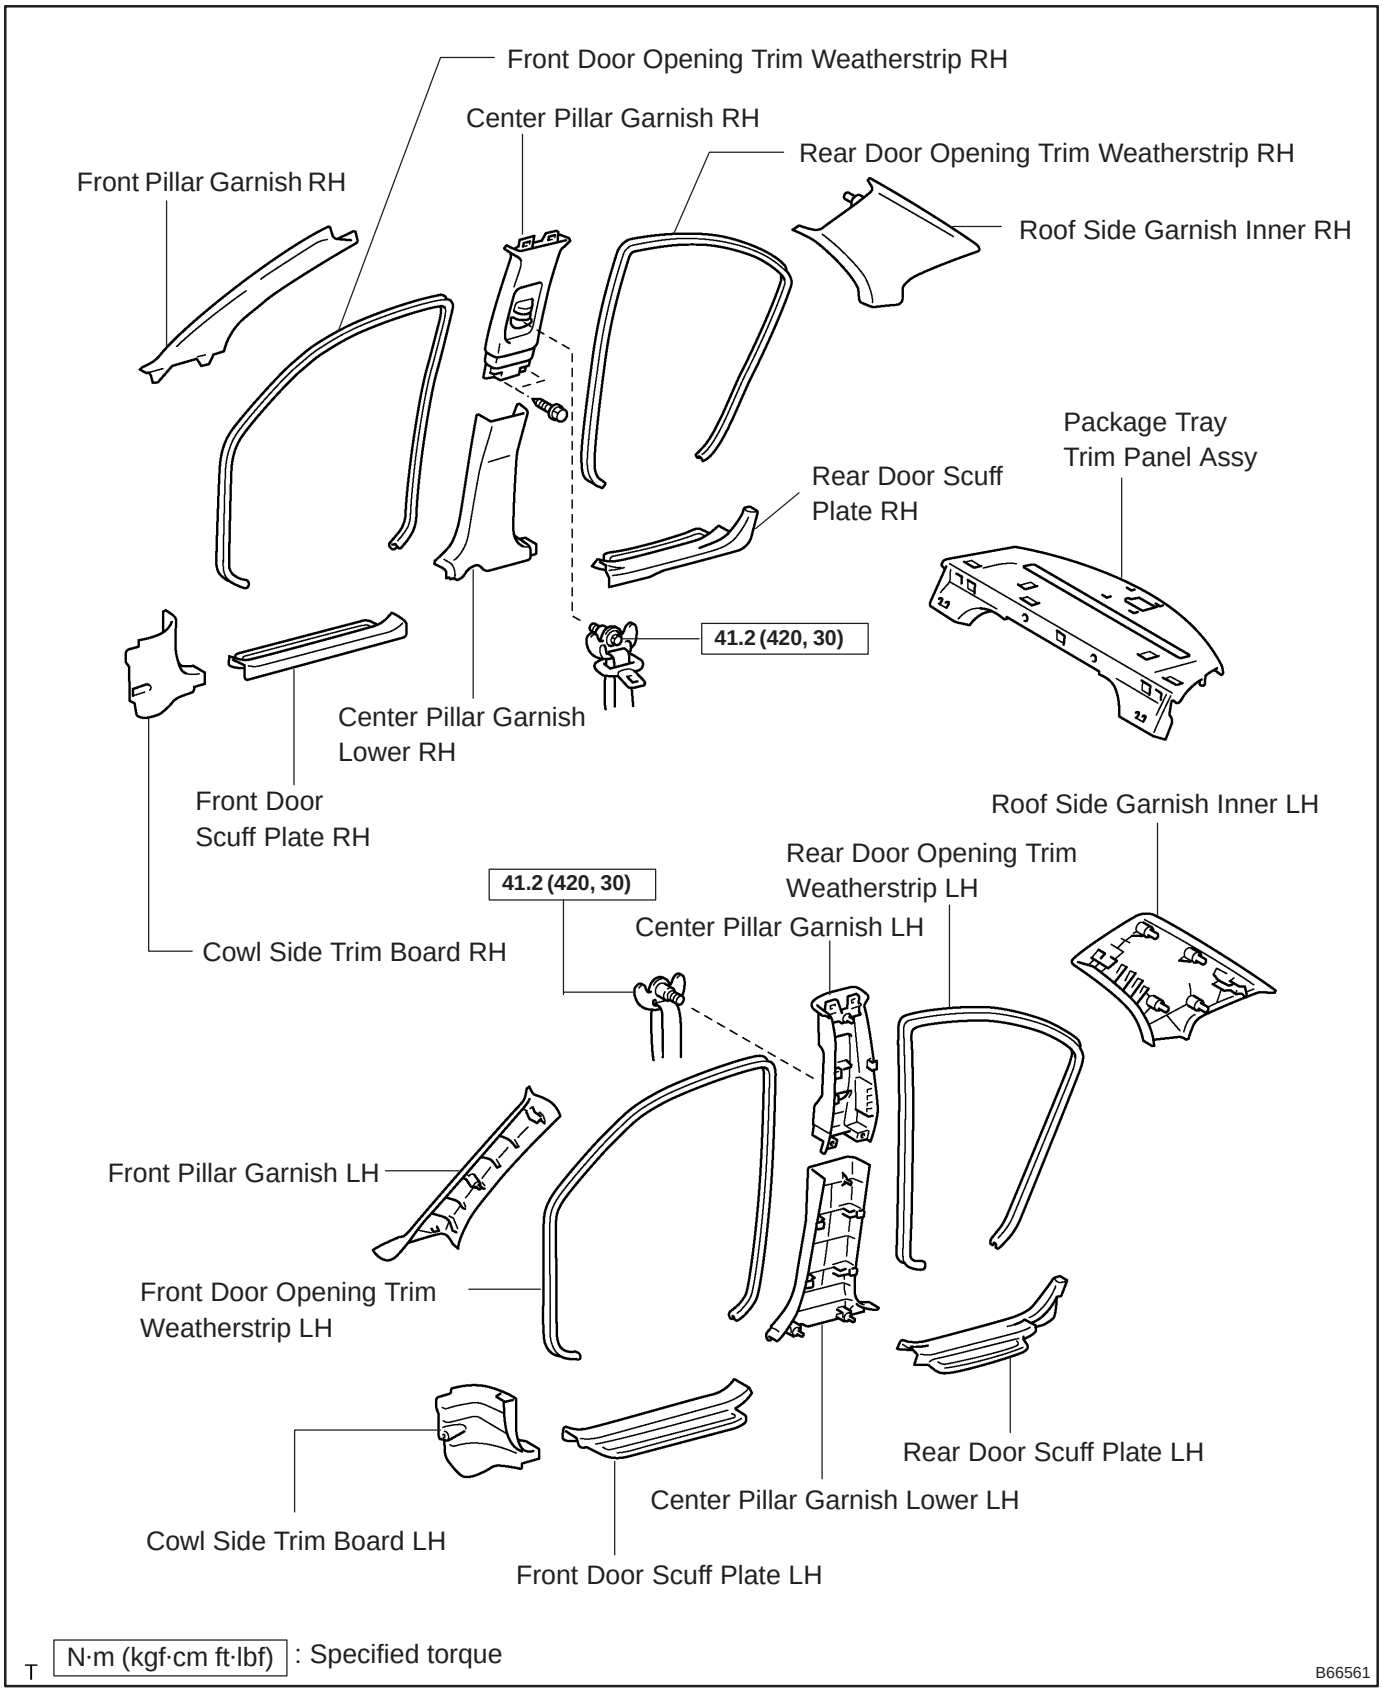
1. RESET SLIDING ROOF MOTOR

(a) If the AUTO operation function does not operate, reset the sliding roof motor as follows:

(1) Press the sliding roof switch on the TILT UP side and hold it until the sliding roof motor stops. Then release the switch and leave it untouched for 10 seconds or more.

(2) Press the sliding roof switch on the TILT UP side again for 10 seconds or more and hold it until the sliding roof glass stops at the fully open and up position.

(3) Release the switch, press it again within 5 seconds and hold it until a series of movements indicated below have been completed:
Fully closing → Fully opening → Fully closing



HINT:

When the battery terminal is disconnected or after the jam protection function has operated, the sliding roof motor ECU may not detect the position of the roof glass. If the AUTO operation function is still disabled even after the sliding roof motor is reset, the Hall IC (built in the sliding roof motor) for detecting the roof glass position may be malfunctioning.

REPLACEMENT

1. REMOVE ROOF HEADLINING ASSY (See pages 76–36, 76–45 and 76–54)

2. REMOVE SLIDING ROOF GLASS SUB–ASSY

(a) Using a torx driver, remove the 4 screws and glass.

3. REMOVE SLIDING ROOF HOUSING SUB–ASSY

(a) Remove the 8 bolts and 4 brackets.

(b) Remove the 8 nuts and roof housing.

4. REMOVE SLIDING ROOF DRIVE GEAR SUB–ASSY

(a) Remove the 3 bolts and drive gear.

5. INSTALL SLIDING ROOF DRIVE GEAR SUB–ASSY

(a) Install the drive gear with the 3 bolts.

6. INSTALL SLIDING ROOF HOUSING SUB–ASSY

(a) Install the roof housing with the 8 nuts.

(b) Install the 4 brackets with the 8 bolts.

7. ADJUST SLIDING ROOF GLASS SUB–ASSY

(a) Check for a difference in levels between the sliding roof (weatherstrip) and roof panel.

Dimension (Front end and rear end): 0 ± 1.5 mm (0 ± 0.059 in.)

Dimension (Corner of rear side): 0 ± 2.0 mm (0 ± 0.079 in.)

(b) Check for a difference in levels between the sliding roof (glass) and roof panel front end and rear end.

Dimension (Front end and rear end): 6.0 mm (0.236 in.)

(c) Adjust the roof panel.

(1) Loosen the adjusting screw to adjust the sliding roof panel position, and tighten the screw in the position where the sliding roof panel is fixed.

Torque: 4.0 N·m (40 kgf·cm, 35 in.·lbf)

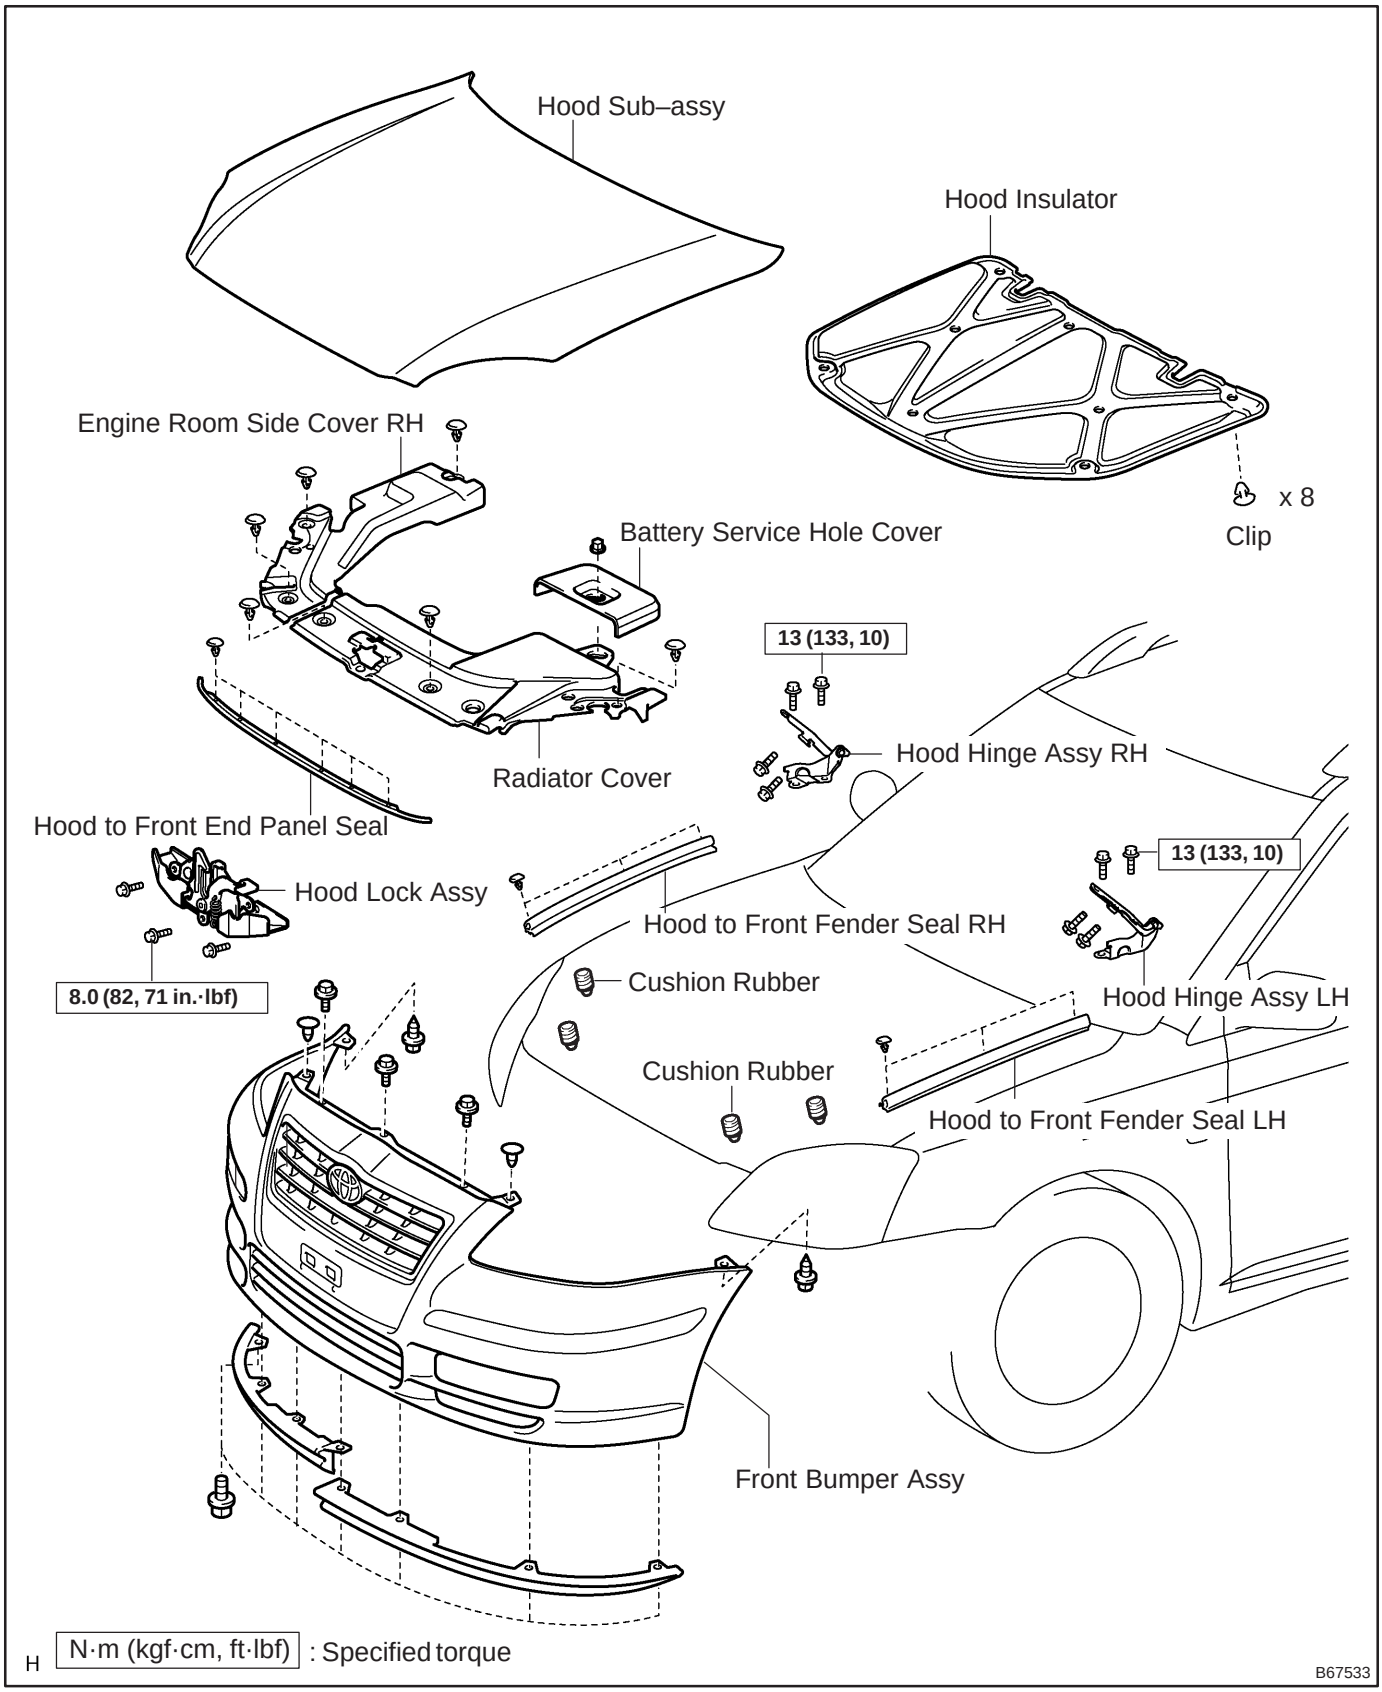
(d) Inspect for leaks.

(1) Adjusting the sliding roof, check that there are no water leaks.

8. INSTALL SLIDING ROOF GLASS SUB–ASSY

(a) Install the glass with the 4 screws.

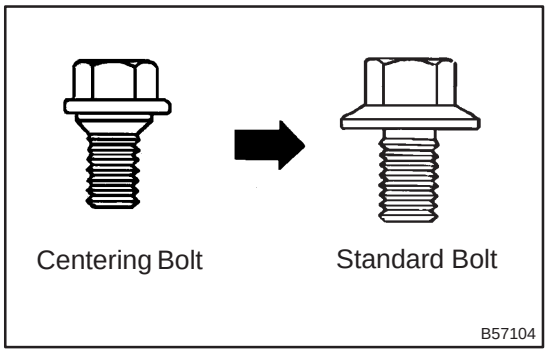
9. CHECK FOR WATER LEAKS



10. RESET SLIDING ROOF POSITION (See page 74–7)

11. INSTALL ROOF HEADLINING ASSY (See pages 76–36, 76–45 and 76–54)

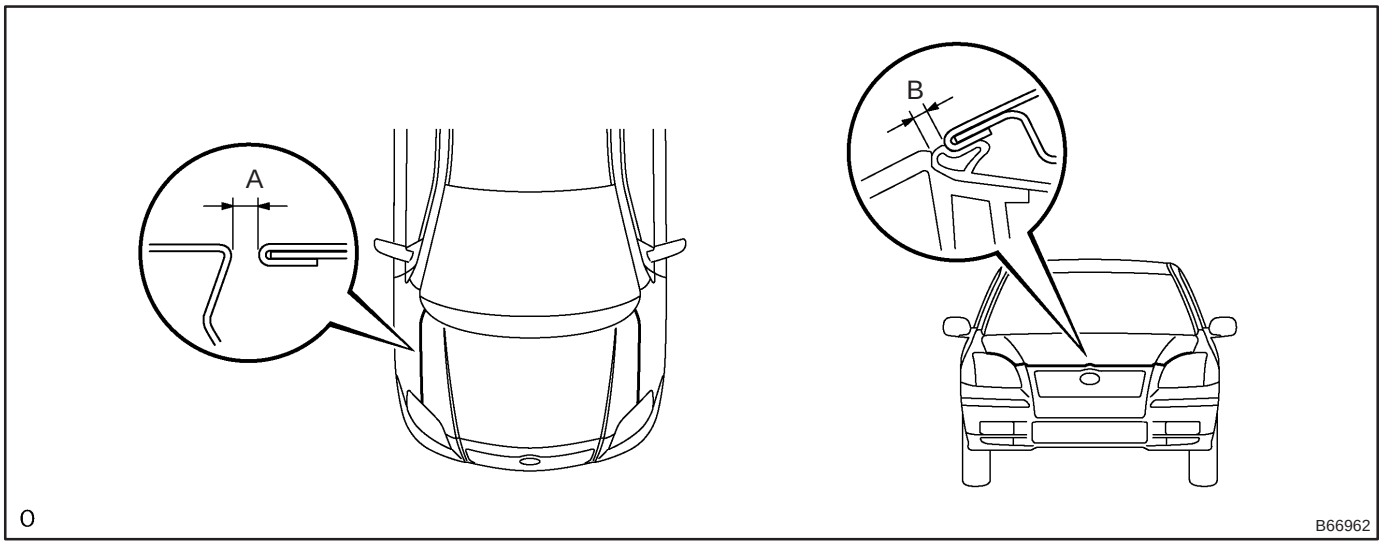
HOOD



COMPONENTS

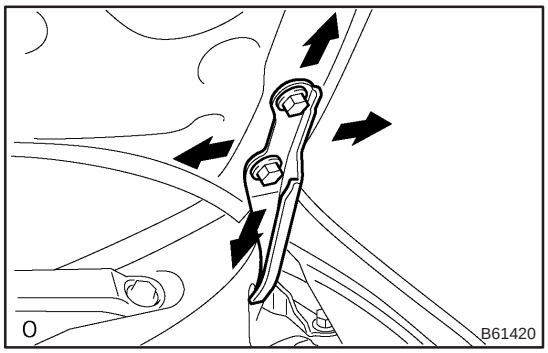
750MT–01

750MU–01



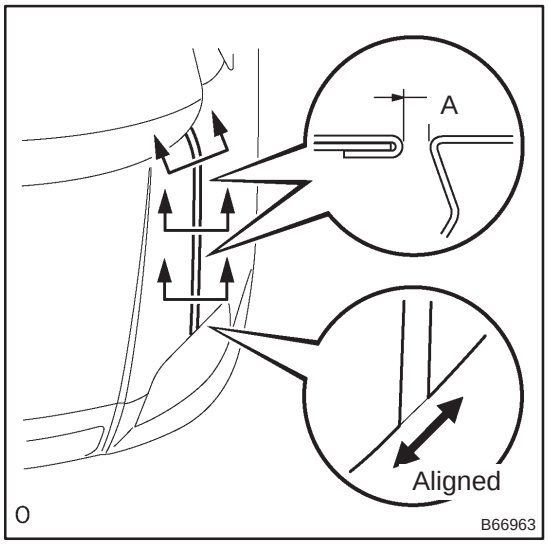
ADJUSTMENT

HINT:
Because a centering bolt is used as a hood hinge mounting bolt and hood lock mounting bolt, the hood and hood lock can not be adjusted with them on. Substitute a bolt with a washer for the centering bolt.



1. INSPECT HOOD SUB–ASSY

(a) Check that the clearance is within the standard range.

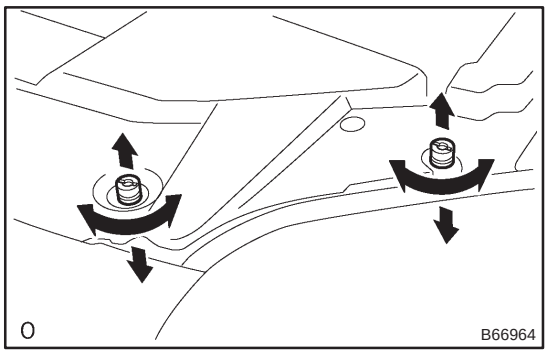


Standard range:

A	3.5 ± 1.5 mm (0.138 ± 0.059 in.)
B	3.5 – 1.5 or +2.5 mm (0.138 – 0.059 or + 0.098 in.)

2. ADJUST HOOD SUB–ASSY

(a) Horizontally and vertically adjust the hood.
(1) Loosen the 4 hood hinge bolts on the hood side.



(2) Adjust the clearance by moving the hood, so that it will be in the standard range.

Standard range (A): 3.5 ± 1.5 mm (0.138 ± 0.059 in.)

(3) Tighten the hood side hinge bolts after the adjustment.

Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

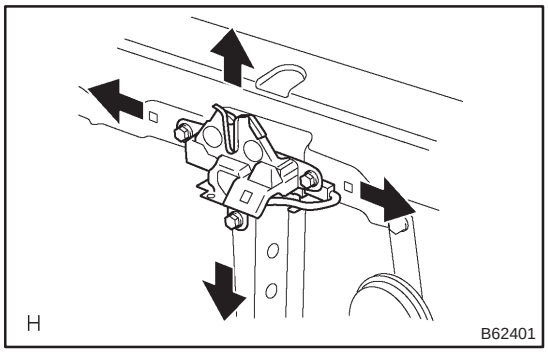
(b) Adjust the height of the hood front end using the cushion rubber.

(1) Adjust the cushion rubber so that the hood and the fender will be aligned.

HINT:

The cushion rubber goes up and down by turning it.

(c) Adjust the hood lock.



(1) Using a clip remover, remove the 6 clips and front end seal.

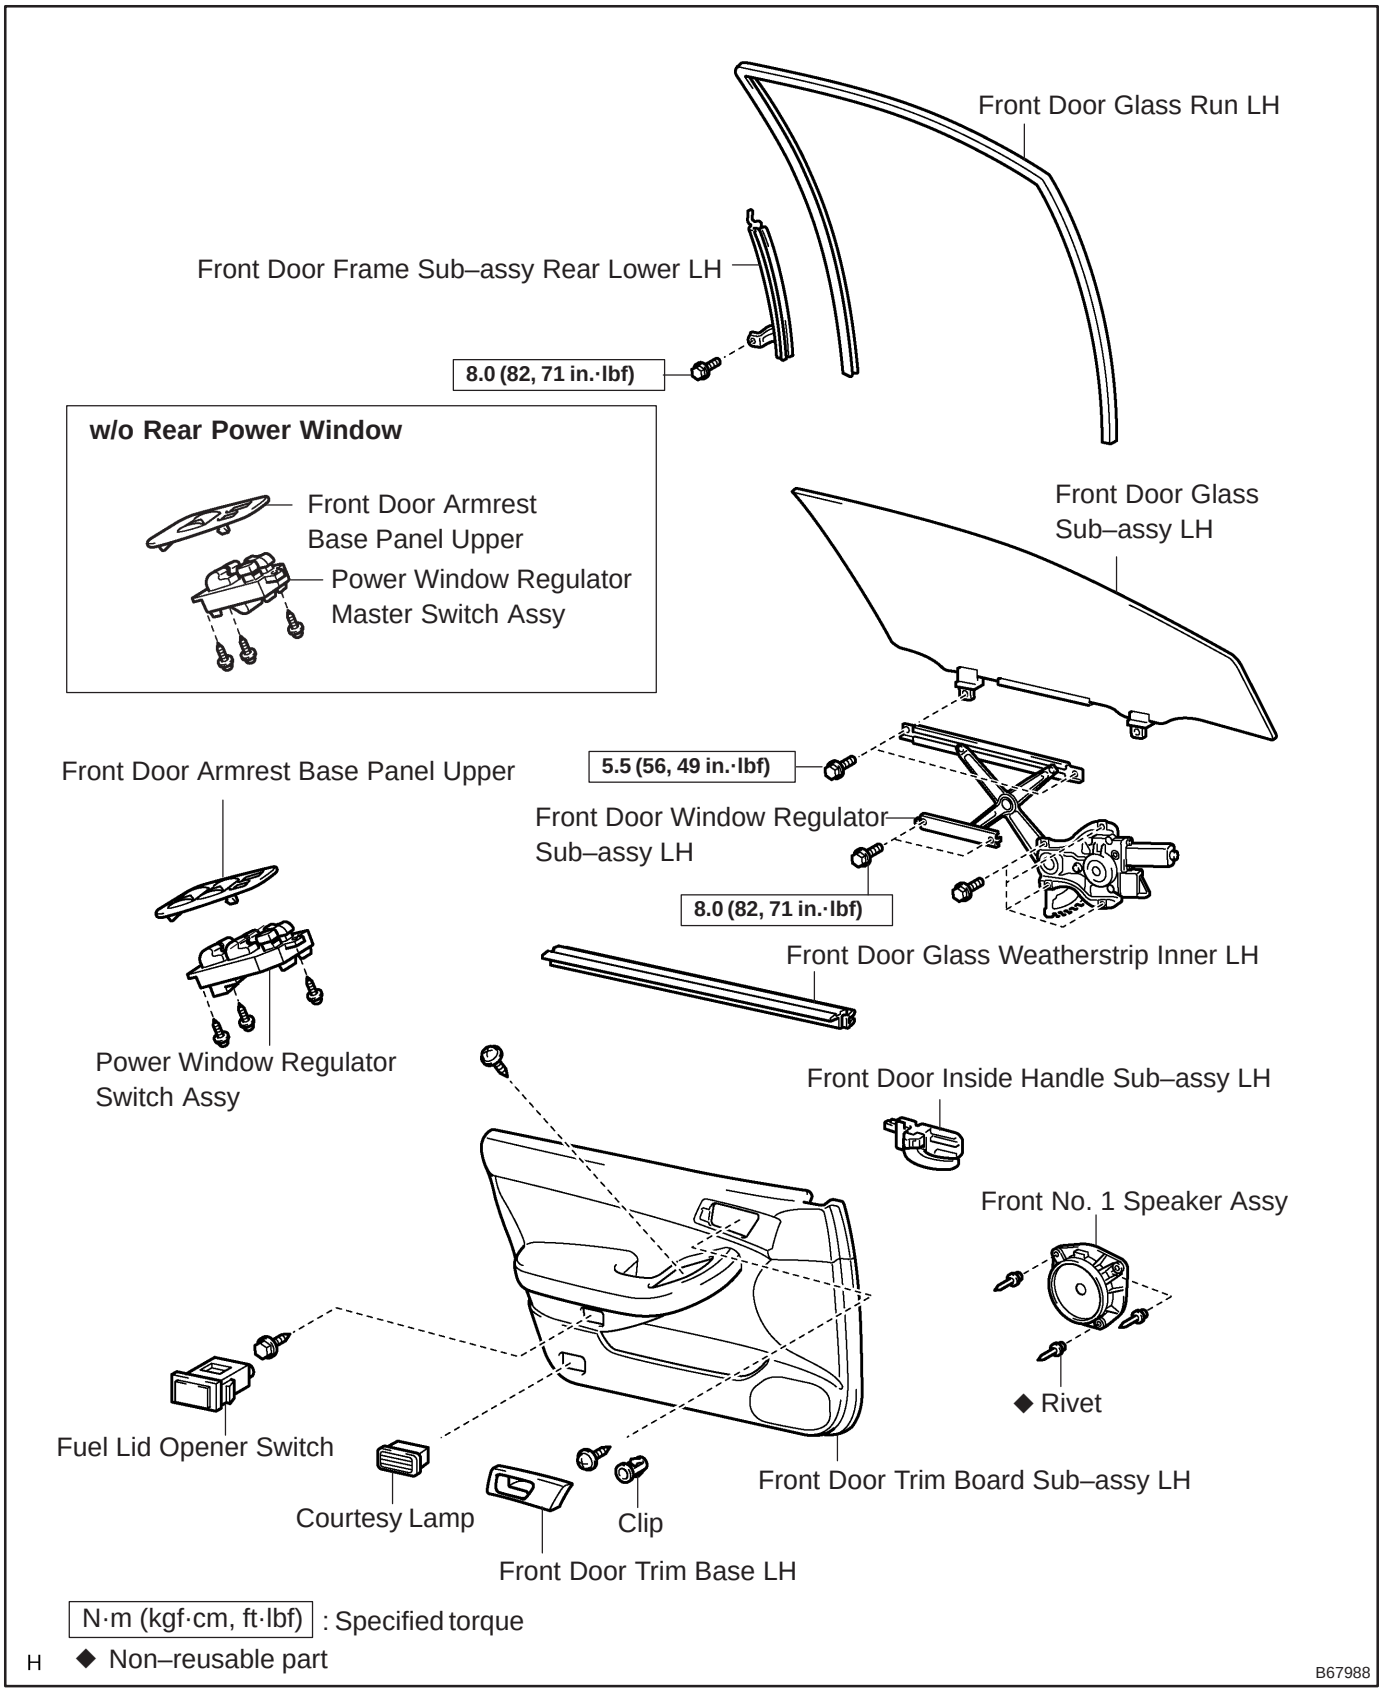
(2) Remove the retainer and battery service hole cover.

(3) Using a clip remover, remove the 3 clips and radiator cover.

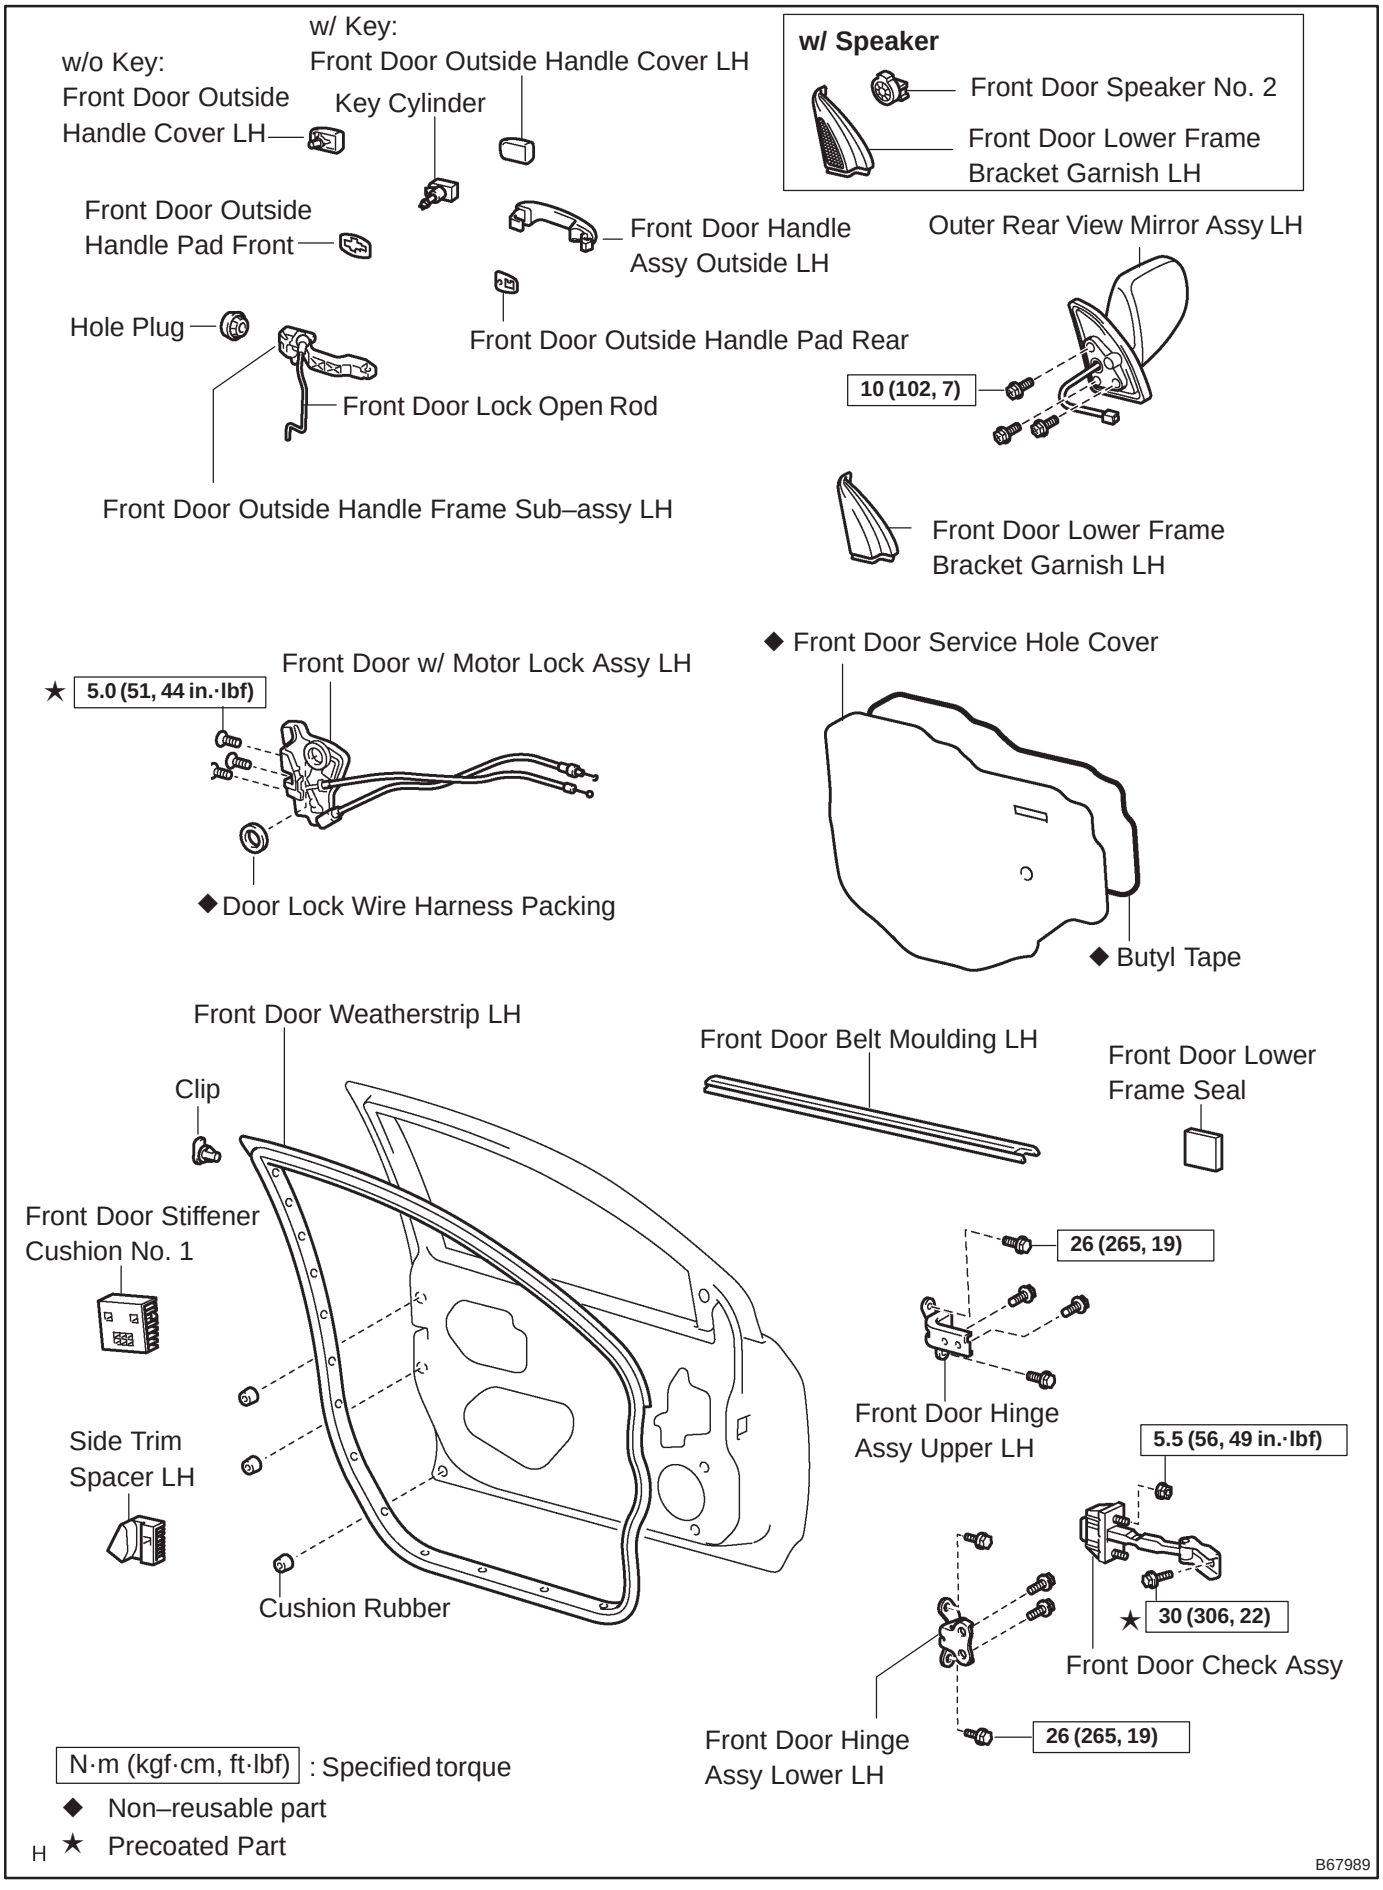
(4) Using a clip remover, remove the 3 clips and engine room side cover RH.

(5) Remove the front bumper (See page 76–3).

(6) Adjust the hood lock position by moving the striker, so that the striker can enter smoothly.



(7) Tighten the hood lock bolts after the adjustment.



Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

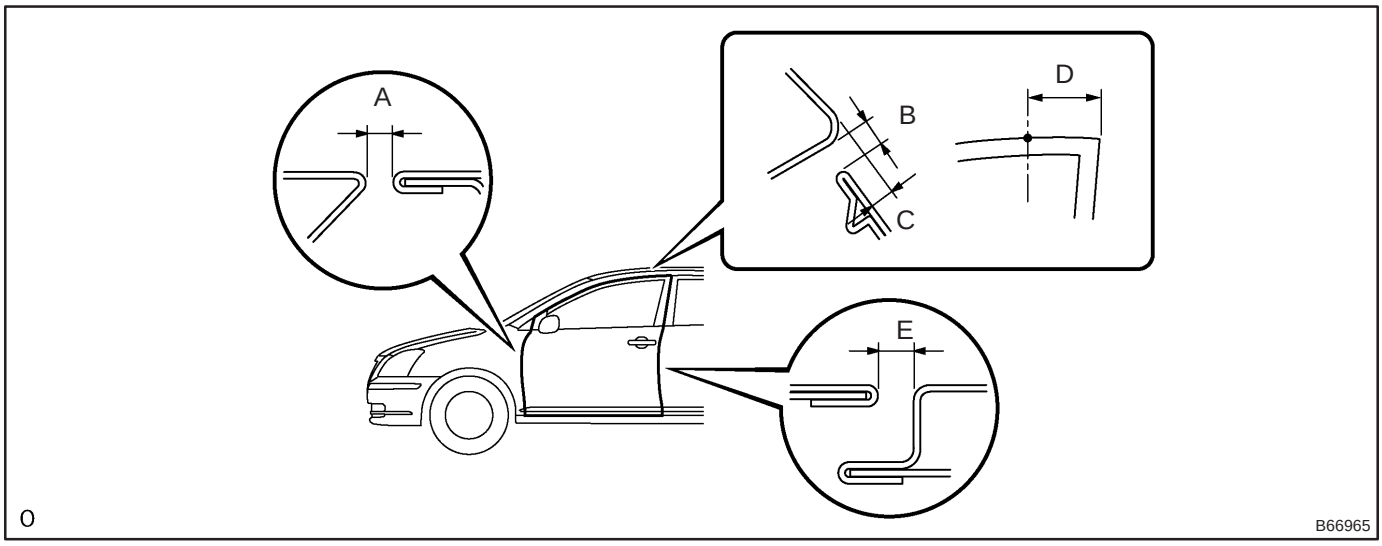
750MW–01

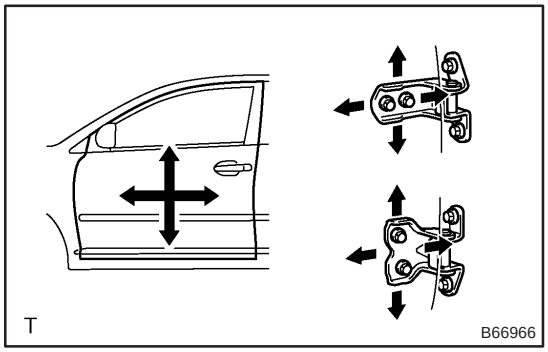
ADJUSTMENT

HINT:



- Use the same procedures on the RH side as on the LH side.

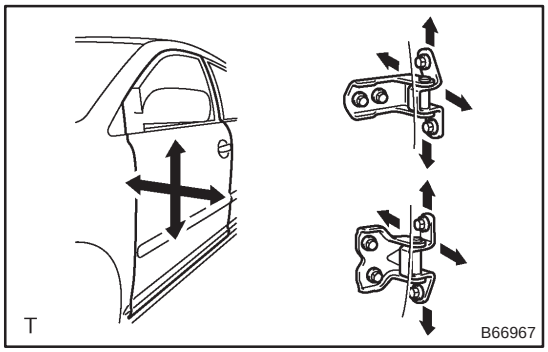
- Because a centering bolt is used as a door hinge mounting bolt on the body side and the door side, the door can not be adjusted with them on. Substitute a bolt with a washer for the centering bolt.



1. INSPECT FRONT DOOR PANEL SUB–ASSY LH

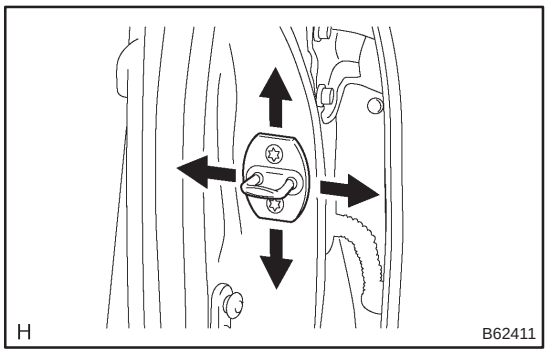
(a) Check that the clearance is within the standard range.

Standard range:



A	4.6 ± 1.5 mm (0.181 ± 0.059 in.)
B	5.5 ± 1.5 mm (0.220 ± 0.059 in.)
C	4.6 ± 1.5 mm (0.181 ± 0.059 in.)
D	160 mm (6.30 in.)
E	4.8 ± 1.5 mm (0.189 ± 0.059 in.)

2. ADJUST FRONT DOOR PANEL SUB–ASSY LH



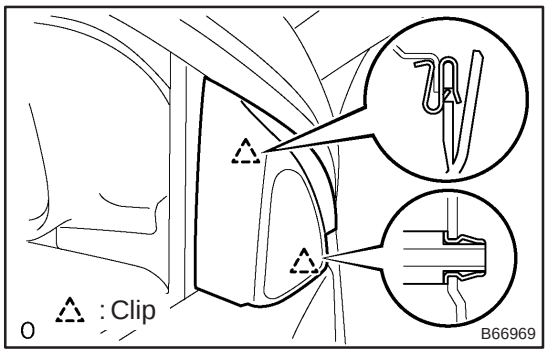
(a) Using SST, adjust the door horizontally and vertically by loosening the body side hinge bolts.
SST 09812–00010, 09812–00020

(b) Tighten the body side hinge bolts after the adjustment.
SST 09812–00010, 09812–00020
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

(c) Adjust the door forward/rearward and vertically by loosening the door side hinge bolts.

(d) Tighten the door side hinge bolts after the adjustment.
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

(e) Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic–faced hammer.



(f) Tighten the striker mounting screws after the adjustment.
Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

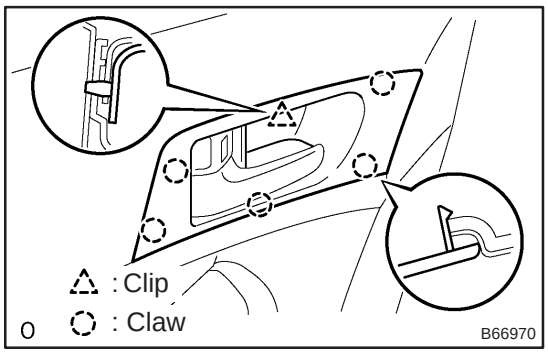
750MX–01

OVERHAUL

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the RH side as on the LH side.

1. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH



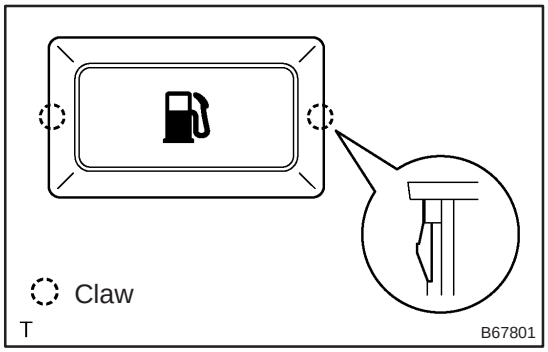
(a) Using a screwdriver, disengage the 2 clip and remove the garnish.

HINT:

Tape the screwdriver tip before use.

(b) w/ Speaker:

Remove the front door speaker No. 2 (See page 67–12).

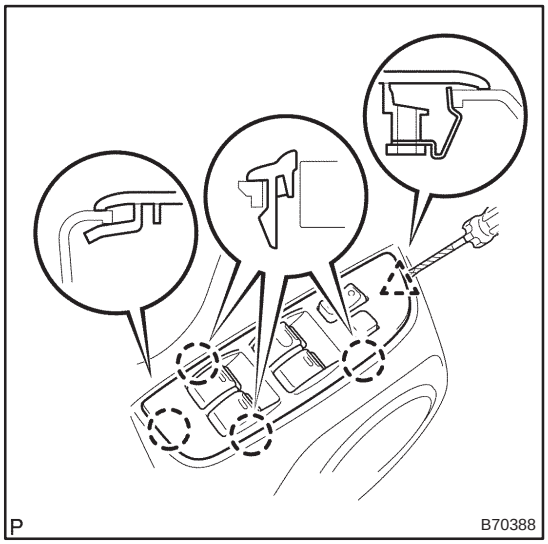


2. REMOVE FRONT DOOR TRIM BASE LH

(a) Using a screwdriver, disengage the 5 claws and clip, and remove the trim base.

HINT:

Tape the screwdriver tip before use.



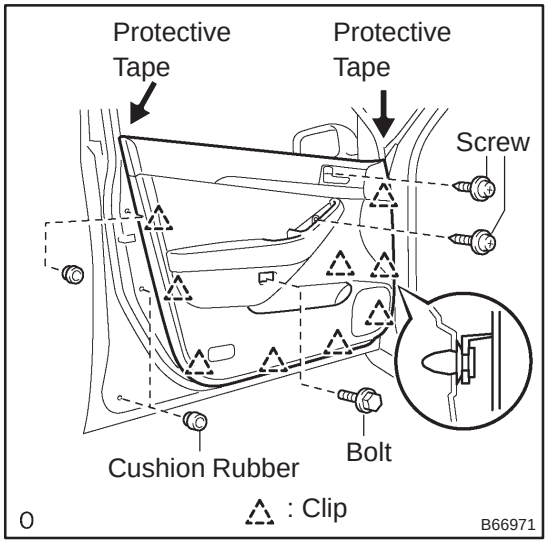
3. REMOVE FUEL LID OPENER SWITCH

(a) Using a screwdriver, disengage the 2 claws and remove the switch.

HINT:

Tape the screwdriver tip before use.

4. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSY



(a) Using a screwdriver, disengage the 4 claws and clip, and remove the armrest base panel upper together with the switch.

HINT:

Tape the screwdriver tip before use.

(b) Disconnect the switch connector.

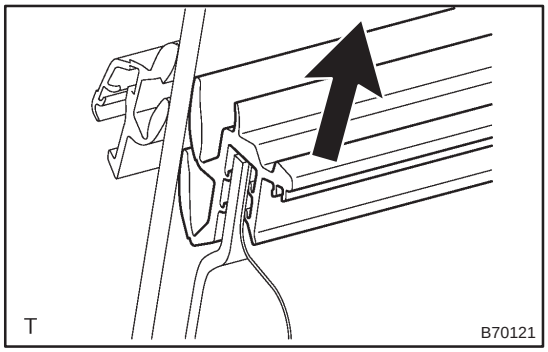
(c) Remove the 3 screws and switch from the armrest base panel upper.

5. REMOVE FRONT DOOR TRIM BOARD SUB–ASSY LH

(a) Disconnect the courtesy lamp connector.

(b) Remove the 3 cushion rubbers.

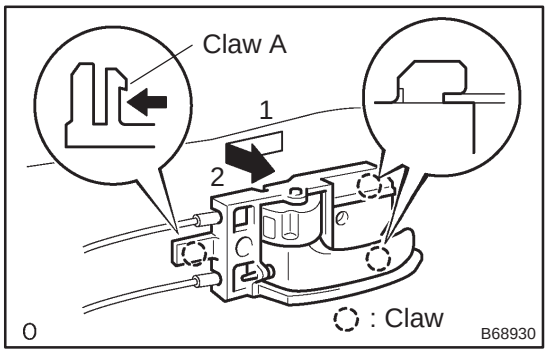
(c) Remove the 2 screws and bolt as indicated.



(d) Using a clip remover, disengage 9 clips.

(e) Remove the trim board upward.

HINT:



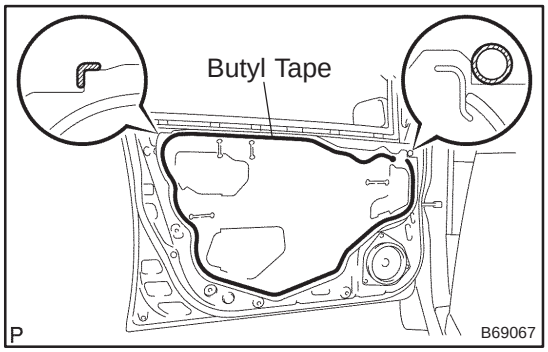
In order to prevent the door panel from being damaged, cover the areas indicated by the arrow marks in the illustration with protective tape.

(f) Disengage the 2 claws and remove the courtesy lamp.

6. REMOVE FRONT DOOR GLASS WEATHERSTRIP INNER LH

(a) Remove the weatherstrip inner upward in the direction indicated by the arrow mark in the illustration.

7. REMOVE FRONT DOOR INSIDE HANDLE SUB–ASSY LH



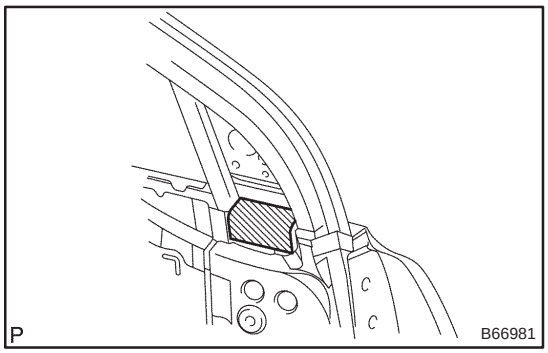
(a) Using a screwdriver, disengage the claw A indicated.

HINT:

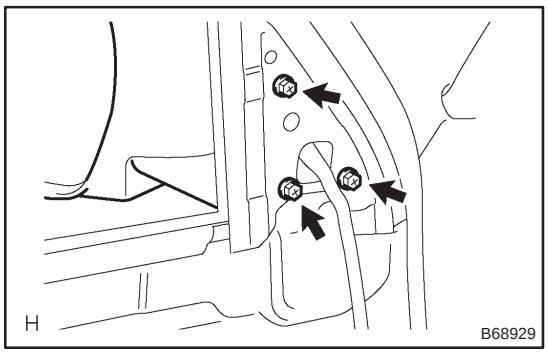
Tape the screwdriver tip before use.

(b) Move the inside handle in the direction indicated the by arrow mark in the illustration.

(c) Disconnect the 2 cables from the inside handle.



8. REMOVE FRONT DOOR SERVICE HOLE COVER

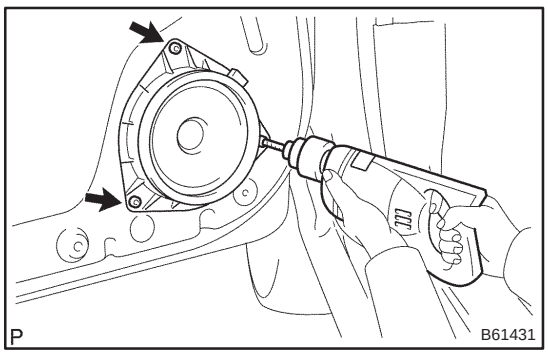


(a) Remove the service hole cover.

NOTICE:

Remove the tape remaining on the door side.

(b) Remove the lower frame seal.



9. REMOVE OUTER REAR VIEW MIRROR ASSY LH

(a) Disconnect the mirror connector.

(b) Remove the 3 screws and mirror.

NOTICE:

When the screws are removed, the mirror may fall and become deformed.

10. REMOVE FRONT NO.1 SPEAKER ASSY (W/ SPEAKER)

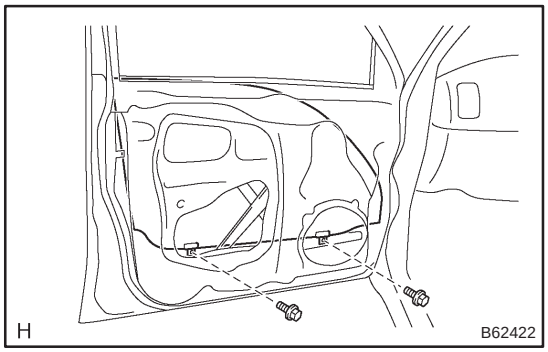
(a) Using a drill of less than ø 4 mm (0.16 in.), drill out the 3 rivets heads and remove the speaker.

NOTICE:

- **Prizing the hole with a drill can lead to damage to the rivet hole or breaking the drill.**
- **Be careful with the cut rivet, because it is hot.**

(b) Even if the flange is taken off, continue drilling and push out the remaining fragments using the drill.

(c) Using a vacuum cleaner, remove the drilled rivet and dust from the inside of the door.



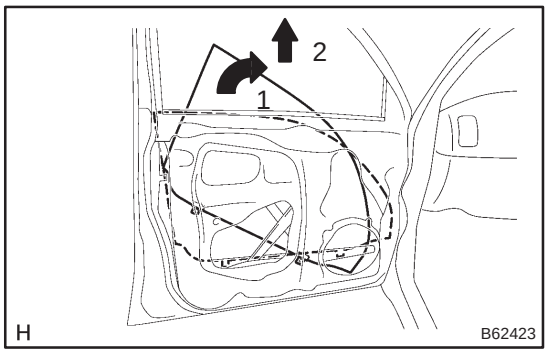
11. REMOVE FRONT DOOR BELT MOULDING ASSY LH (See page 76–23)

12. REMOVE FRONT DOOR STIFFENER CUSHION NO.1

(a) Using a screwdriver, disengage the 2 claws and remove the cushion.

13. REMOVE FRONT DOOR SPACER LH

(a) Using a screwdriver, disengage the 2 claws and remove the spacer.



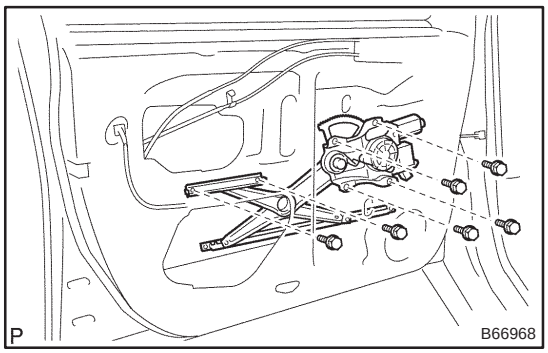
14. REMOVE FRONT DOOR GLASS SUB–ASSY LH

HINT:

Insert a shop rag inside the door panel to prevent the glass from being scratched.

(a) Move the door glass until the bolts appear in the service holes.

(b) Remove the 2 bolts holding the door glass to the window regulator.



(c) Remove the door glass in the direction indicated by the arrows in the illustration.

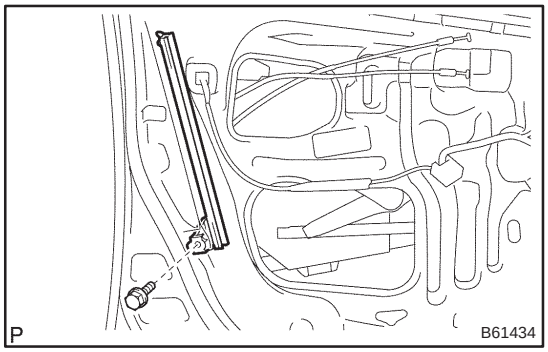
NOTICE:

- **Do not damage the glass.**
- **When the bolts are removed, the glass may fall and become deformed.**

(d) Remove the glass run.

15. REMOVE FRONT DOOR WINDOW REGULATOR SUB–ASSY LH

(a) Disconnect the window regulator connector.



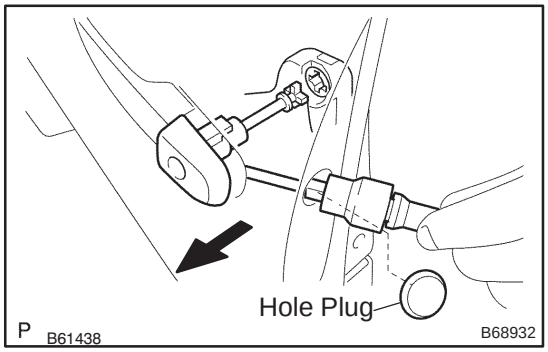
(b) Remove the 6 bolts and window regulator.

NOTICE:

When the bolts are removed, the window regulator may fall and become deformed.

HINT:

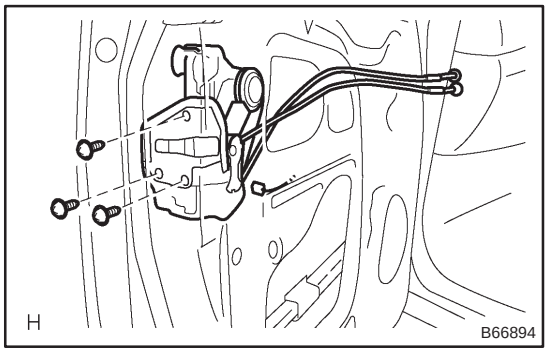
Remove the window regulator through the service hole.



16. REMOVE FRONT DOOR FRAME SUB–ASSY REAR LOWER LH

(a) Remove the bolt and frame.

HINT:



Remove the frame through the service hole.

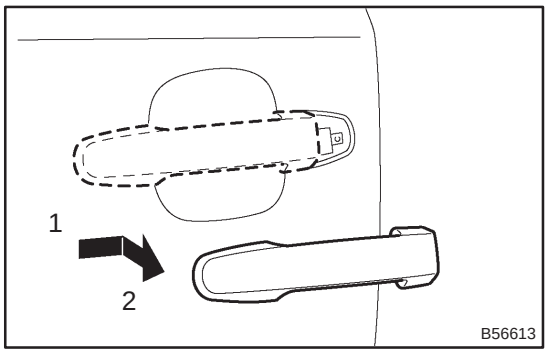
17. REMOVE FRONT DOOR OUTSIDE HANDLE COVER

(a) Remove the hole plug.

(b) Using a torx socket wrench (T30), loosen the screw and remove the cover with the door lock key cylinder installed.

18. REMOVE FRONT DOOR W/MOTOR LOCK ASSY LH

(a) Disconnect the door lock connector.

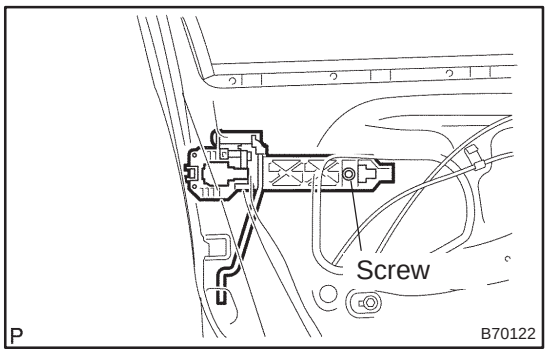


(b) Using a torx socket wrench (T30), remove the 3 screws and door lock.

NOTICE:

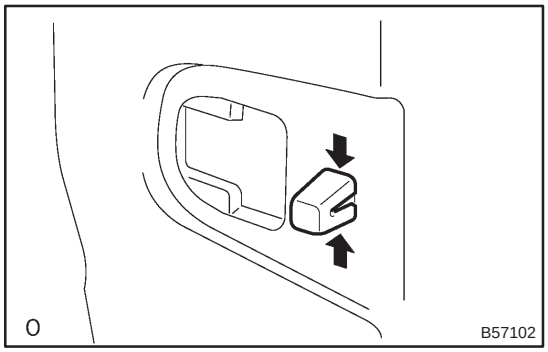
When the bolts are removed, the window regulator may fall and become deformed.

HINT:



Remove the door lock through the service hole.

19. REMOVE FRONT DOOR HANDLE ASSY OUTSIDE LH

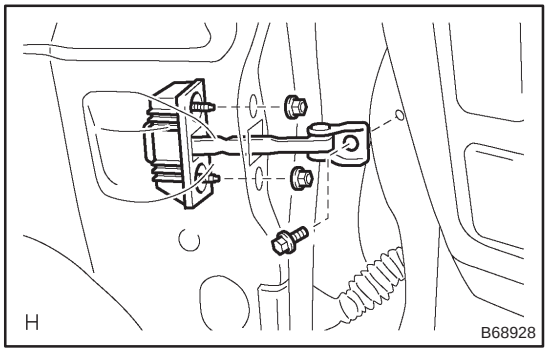


(a) Remove the handle pushing and pulling it in the direction indicated by the arrow mark in the illustration.

(b) Remove the outside handle pads front and rear.

20. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB–ASSY LH

(a) Using a torx socket wrench (T30), loosen the screw of the frame.



(b) Using pliers, disengage the clips and remove the frame, as shown in the illustration.

NOTICE:

Be sure to remove the outside handle together with the clips, as the clips will be damaged if they remain attached to the door panel.

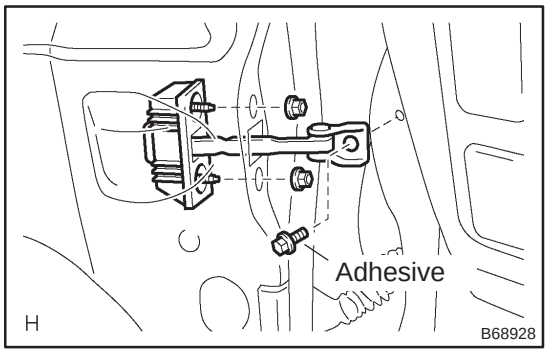
HINT:

Remove the frame through the service hole.

21. REMOVE FRONT DOOR CHECK ASSY LH

(a) Remove the 2 nuts, bolt and check.

HINT:



Remove the check through the service hole.

22. REMOVE FRONT DOOR WEATHERSTRIP LH

(a) Using a clip remover, disengage the clips and remove the weatherstrip.

HINT:

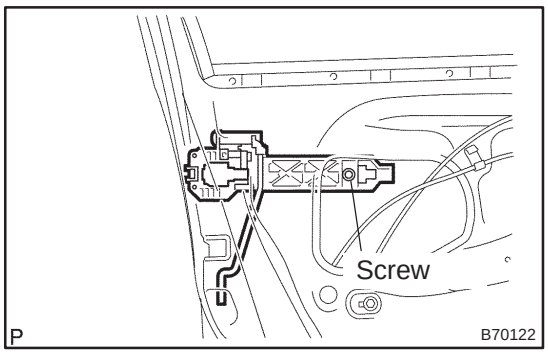
If the clips are damaged, replace them with new clips.

23. INSTALL FRONT DOOR CHECK ASSY LH

(a) Apply MP grease to the sliding areas of the check.

(b) Install the check to the door panel with the 2 nuts.

Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)



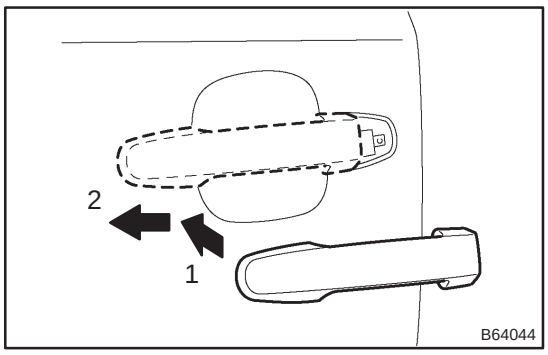
(c) Apply adhesive to the threads of the bolt.

Adhesive:

Part No. 08833–00070, THREE BOND 1324 or equivalent

(d) Install the door check to the body panel with the bolt.

Torque: 30 N·m (306 kgf·cm, 22 in.·lbf)



24. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB–ASSY LH

(a) Install the outside handle link.

(b) Apply MP grease to the sliding areas of the frame.

(c) Using a torx socket wrench (T30), install the frame with the screw.

Torque: 4.0 N·m (41 kgf·cm, 35 in.·lbf)

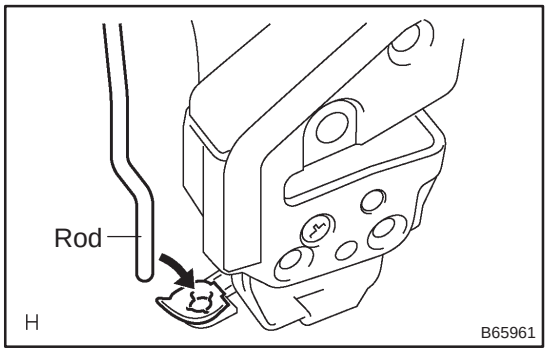
25. INSTALL FRONT DOOR HANDLE ASSY OUTSIDE LH

(a) Install the outside handle pads front and rear.

(b) Install the handle pushing it in the direction of the arrow mark in the illustration.

NOTICE:

If the release plate is not pulled and held when installing the handle, the release plate will interfere with the handle and become damaged.

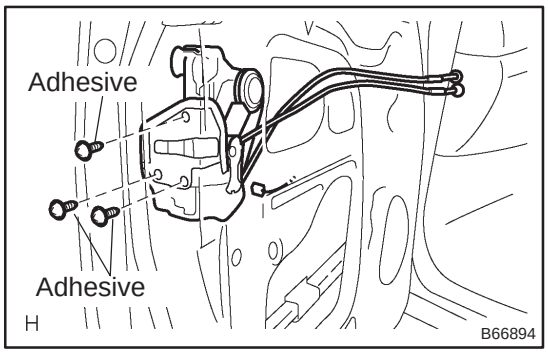


26. INSTALL FRONT DOOR W/MOTOR LOCK ASSY LH

(a) Apply MP grease to the sliding and rotating areas of the door lock.

(b) Install a new door lock wire harness packing.

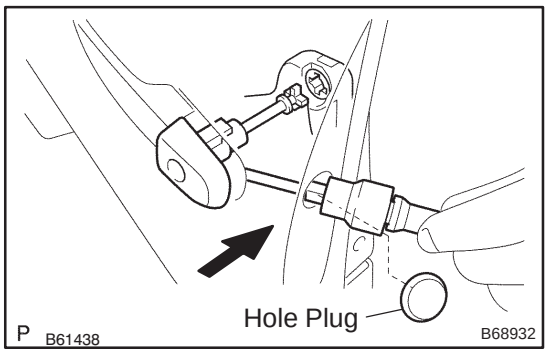
NOTICE:



- **When reusing a door lock that has been removed, replace the packing in the connecting part with a new one.**
- **Be careful that no grease or dirt does not sticks to the packing surface in the connecting part.**
- **Reusing removed packing or using damaged packing will allow water to penetrate through to the connecting part resulting in a door lock malfunction.**

(c) Insert the control rod into the door lock, and then set it to the door panel.

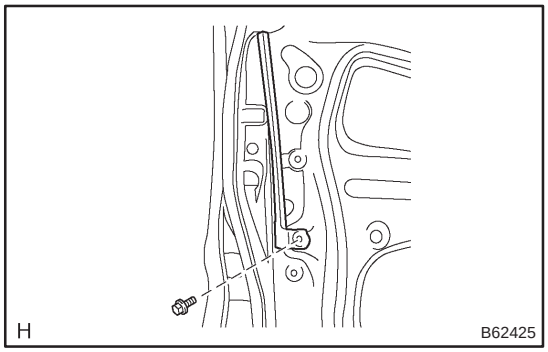
NOTICE:



Make sure that the handle link is securely engaged with the lock.

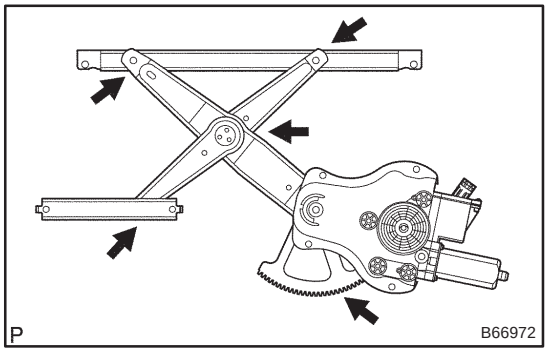
(d) Apply adhesive to the threads of the 3 screws.
Adhesive:
Part No. 08833–00070, THREE BOND 1324 or equivalent

(e) Using a torx socket wrench (T30), install the door lock with the 3 screws.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)



(f) Connect the door lock connector.

27. INSTALL FRONT DOOR OUTSIDE HANDLE COVER

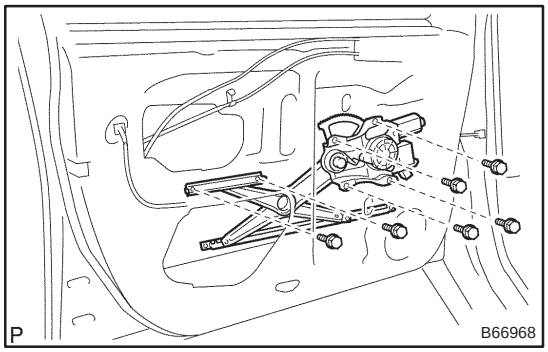


(a) Using a torx socket wrench (T30), install the cover with the door lock key cylinder installed with the screw.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

(b) Install the hole plug.

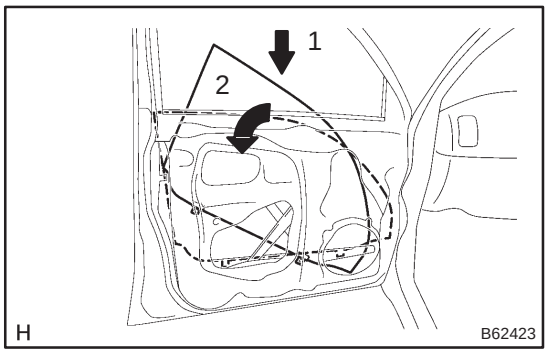
28. INSTALL FRONT DOOR FRAME SUB–ASSY REAR LOWER LH

(a) Install the frame with the bolt.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)



29. INSTALL FRONT DOOR WINDOW REGULATOR SUB–ASSY LH

(a) Apply MP grease to the sliding and rotating areas of the window regulator.

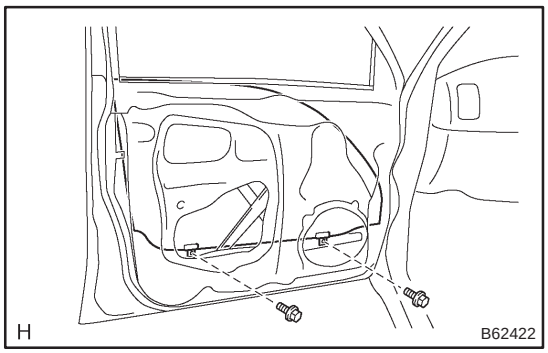


NOTICE:

Do not apply grease to the spring of the window regulator.

(b) Install the window regulator with the 6 bolts.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
(c) Connect the window regulator connector.

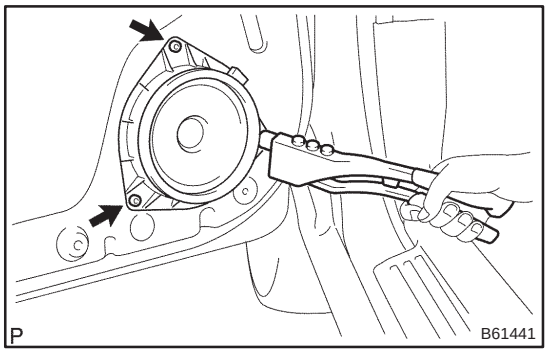
NOTICE:
Be careful not to drop and deform the door window regulator as this may cause deformation.



30. INSTALL FRONT DOOR GLASS SUB–ASSY LH

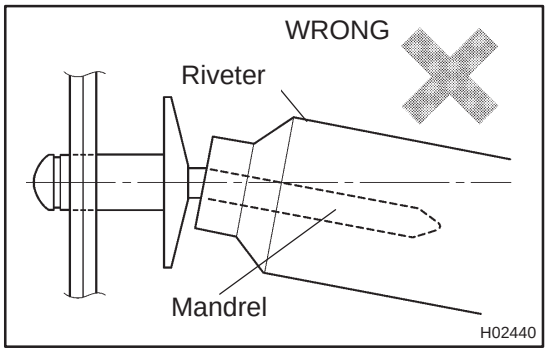
(a) Install the glass run.

NOTICE:
Do not damage the door glass.



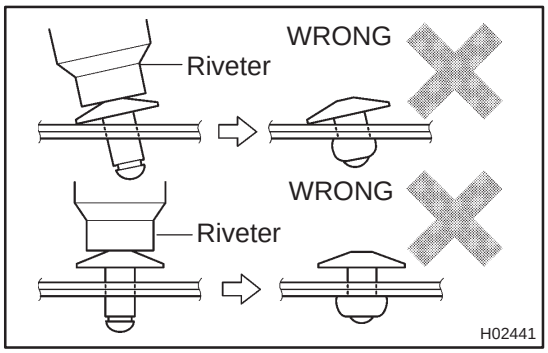
(b) Insert the door glass into the door panel along the glass run in the direction indicated by arrows in the illustration.

(c) Install the door glass to the window regulator with the 2 bolts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
(d) Reset the power window motor (See page 70–13).
(e) Inspect operation of the power window.



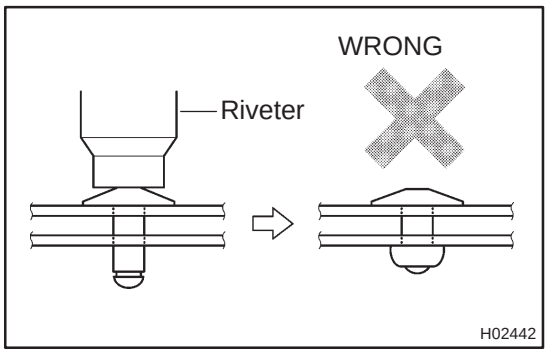
HINT:
When the installation point of the door glass does not match, adjust the regulator position in manual operation.

(1) Connect the power window switch to the wire harness and turn the ignition switch ON.
(2) Repeat UP and DOWN operation several times in manual operation.



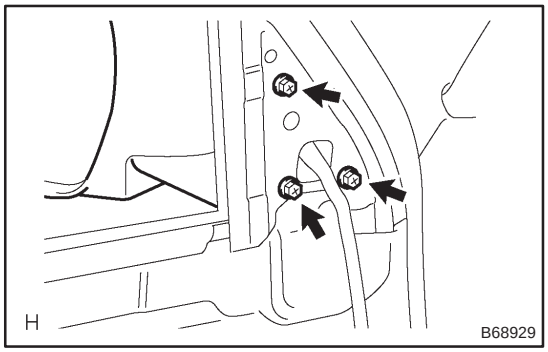
31. INSTALL FRONT NO.1 SPEAKER ASSY

(a) Using an air riveter or hand riveter, install the speaker to the door with the 3 rivets.



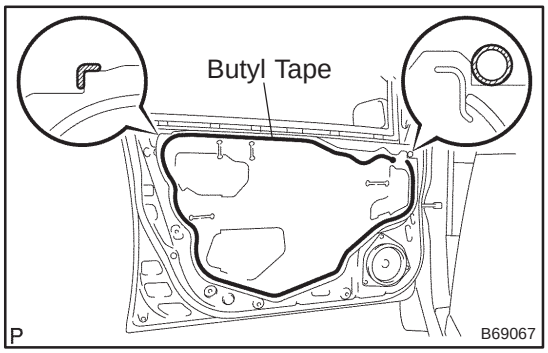
NOTICE:

- **Do not operate the riveter an angle as this will damage it bend the mandrel.**



- **Do not tilt the riveter when removing the rivet as the speaker will not be tightened firmly.**

- **Install the rivet while attaching the speaker to ensure that it is tightened firmly.**

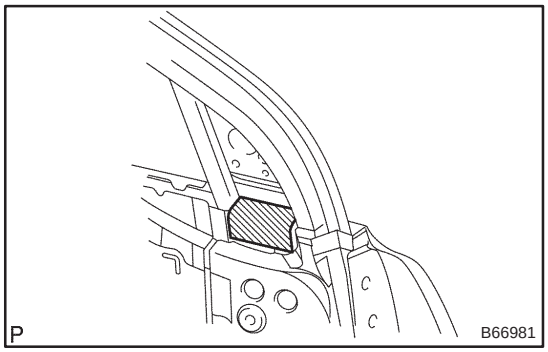


(b) Connect the speaker connector.

32. INSTALL OUTER REAR VIEW MIRROR ASSY LH

(a) Install the mirror with the 3 screws.
Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)

(b) Connect the mirror connector.



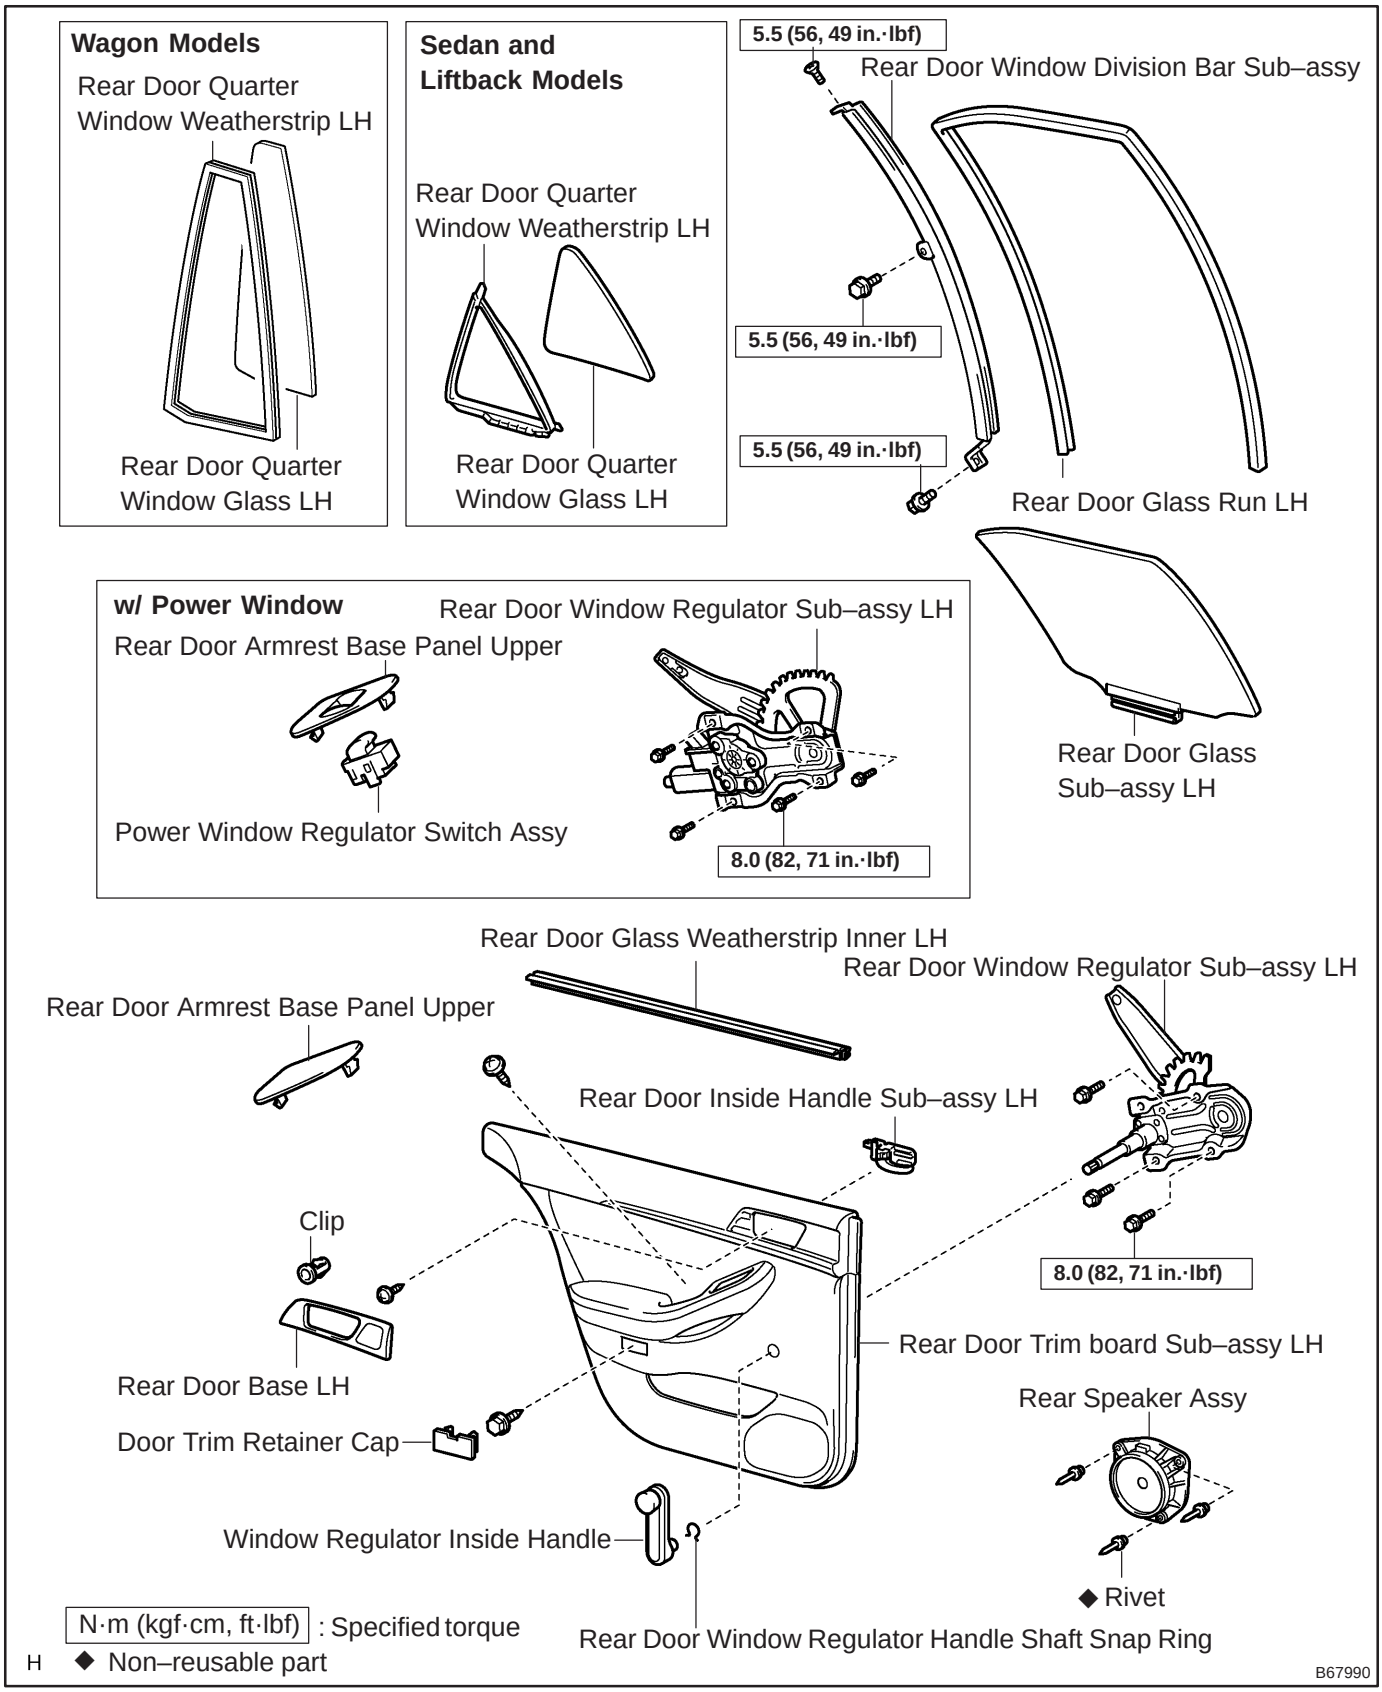
33. INSTALL FRONT DOOR SERVICE HOLE COVER

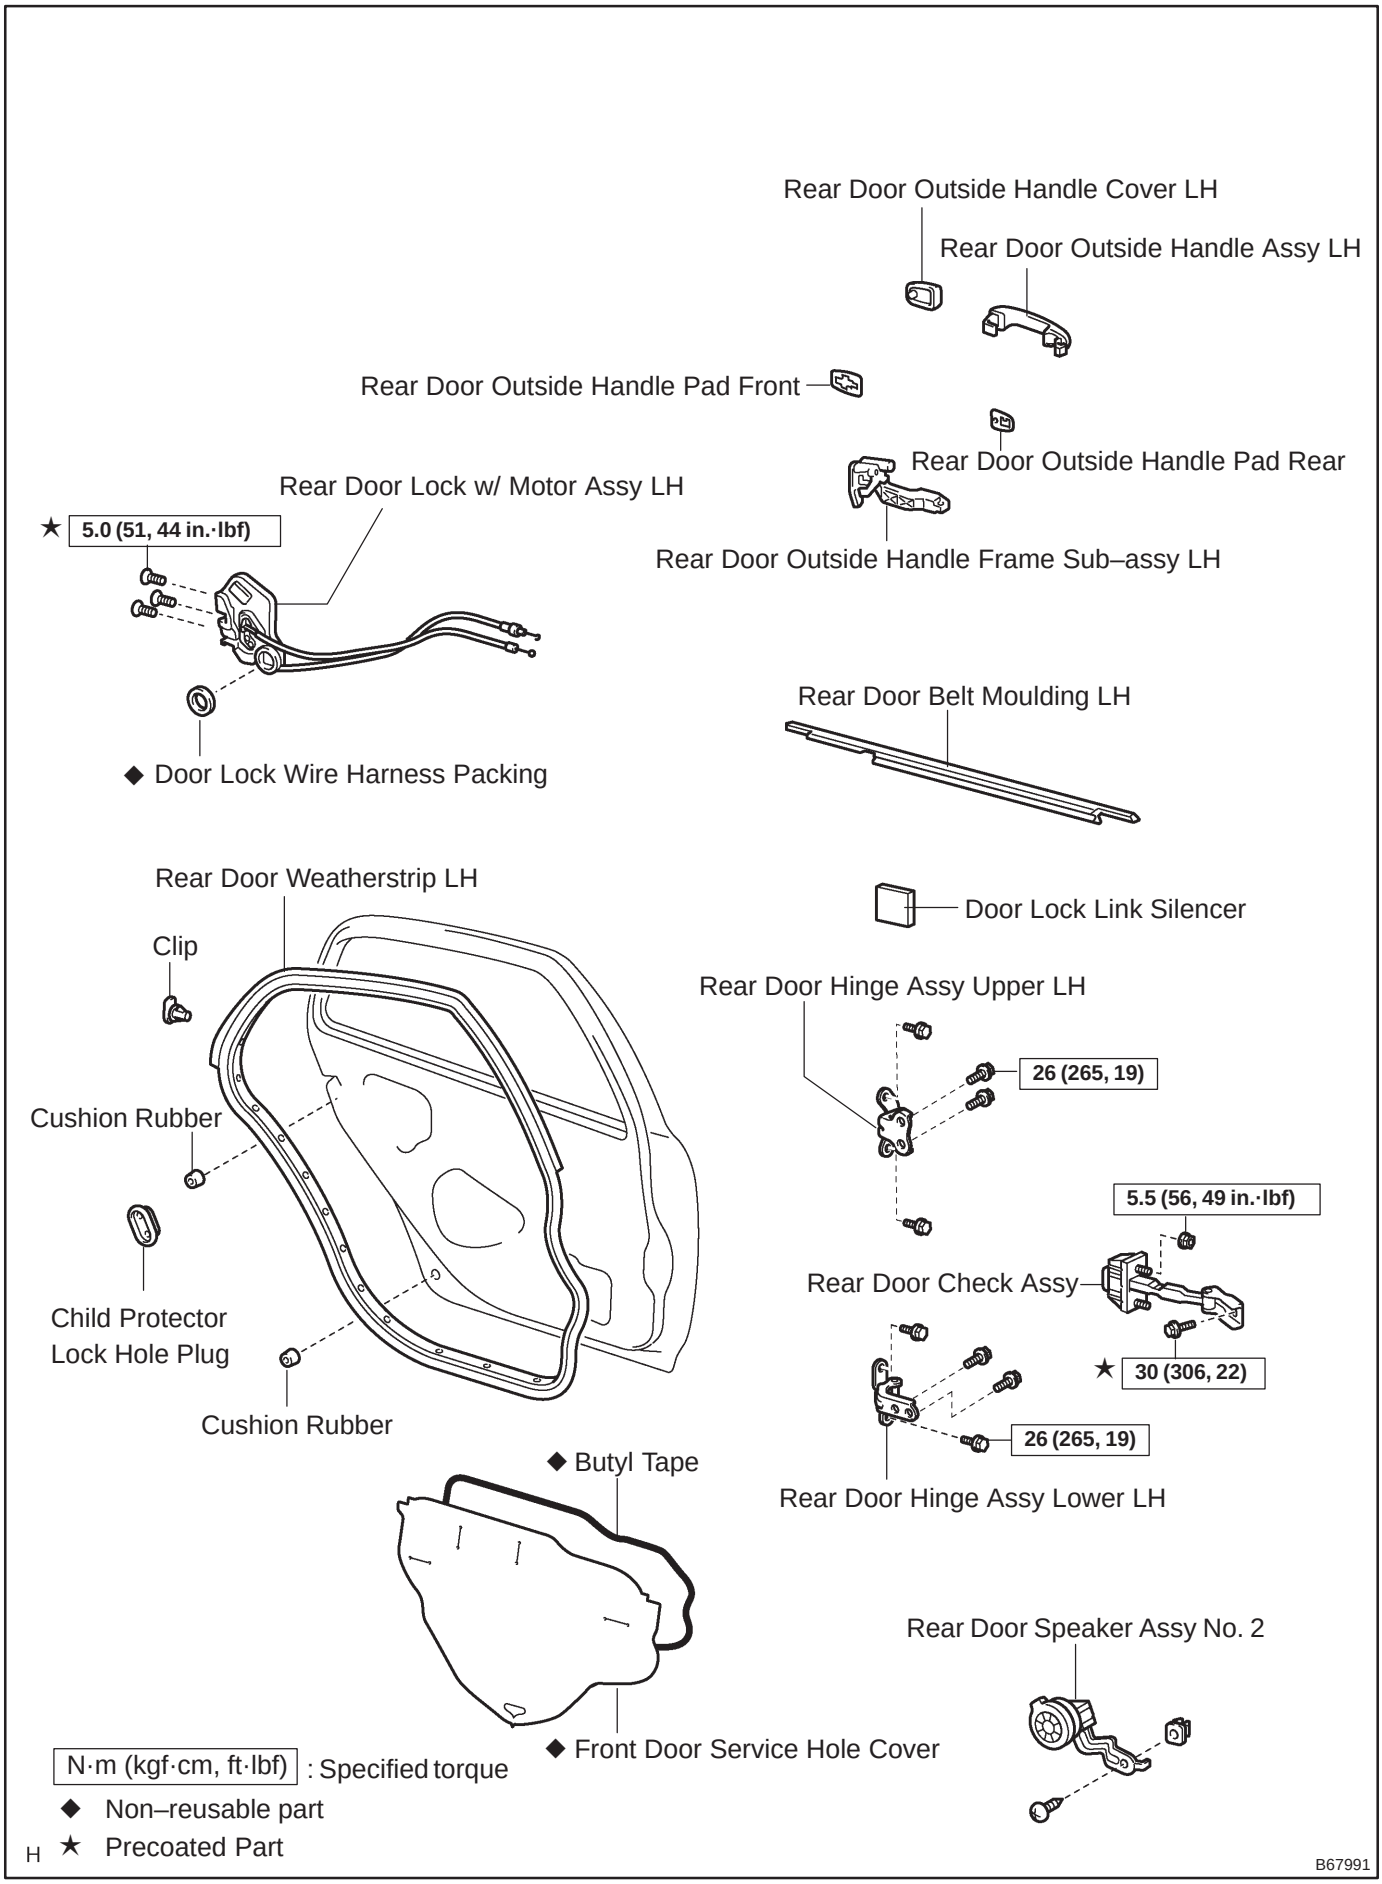
(a) Apply butyl tape to the door as shown in the illustration.

(b) Install the service hole cover.

HINT:

- When installing the service hole cover, pull out the links and connectors through the service hole cover.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the sealing quality.





(c) Install the lower frame seal front.

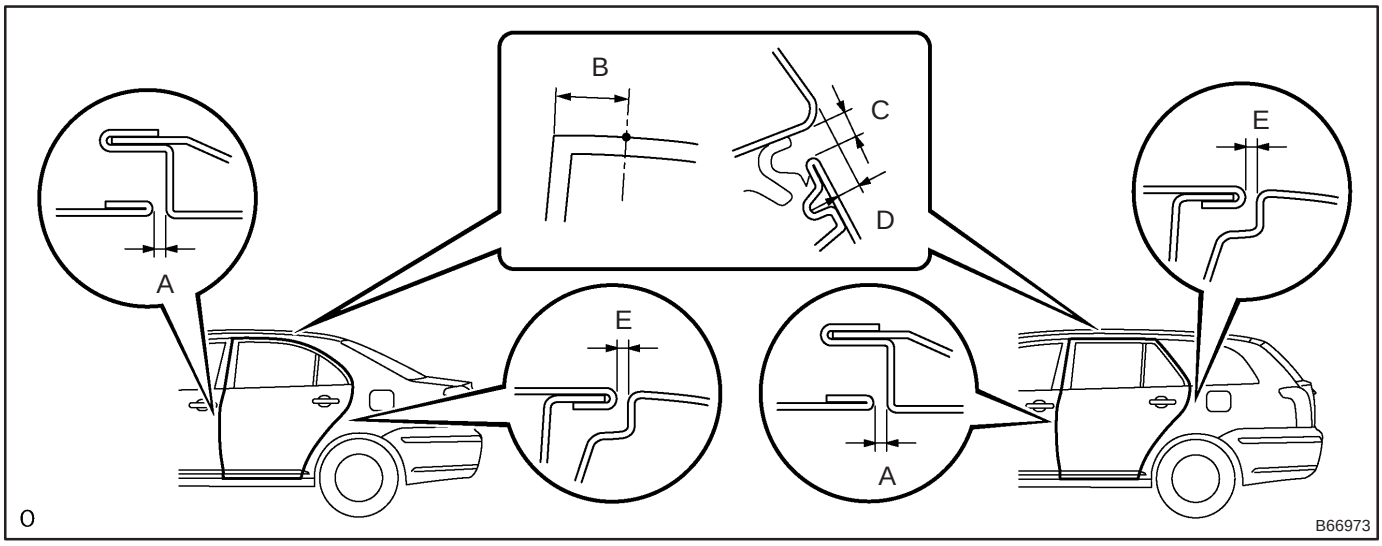
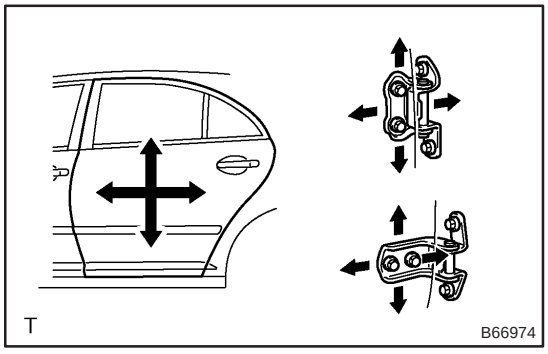
ADJUSTMENT

HINT:



- Use the same procedures on the RH side as on the LH side.

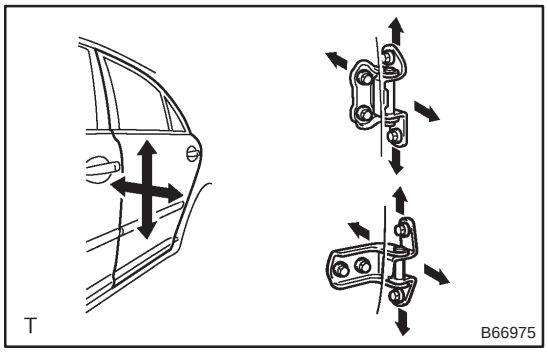
- Because centering bolt is used as a door hinge mounting bolt on the body side and the door side, the door can not be adjusted with them on. Substitute a bolt with a washer for the centering bolt.



1. INSPECT REAR DOOR PANEL SUB–ASSY LH

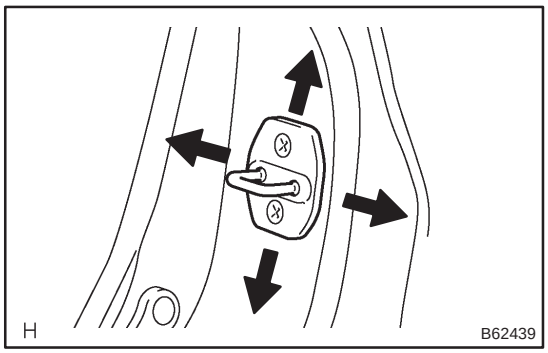
(a) Check that the clearance is within the standard range.

Standard range:



A	4.8 ± 1.5 mm (0.189 ± 0.059 in.)
D	160 mm (6.30 in.)
B	5.5 ± 1.5 mm (0.220 ± 0.059 in.)
E	4.3 ± 1.5 mm (0.169 ± 0.059 in.)
C	4.8 ± 1.5 mm (0189 ± 0.059 in.)

2. ADJUST REAR DOOR PANEL SUB–ASSY LH



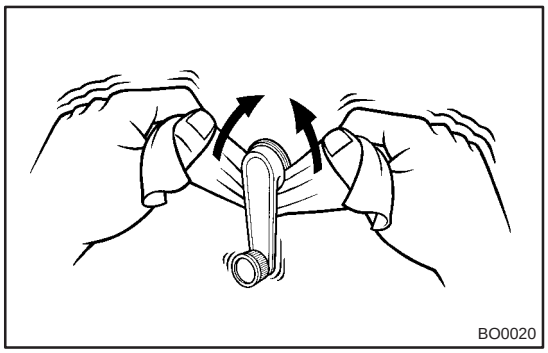
(a) Adjust the door forward/rearward and vertically by loosening the body side hinge bolts.

(b) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

(c) Horizontally and vertically adjust the door by loosening the door side hinge bolts.

(d) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

(e) Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic–faced hammer.

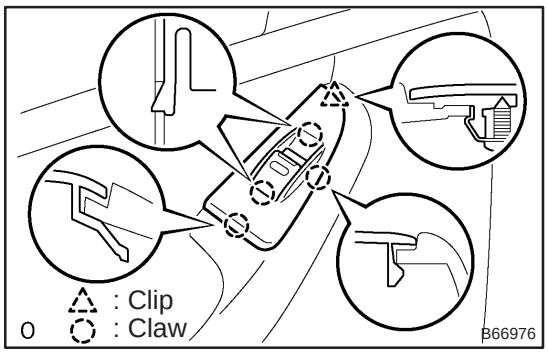


(f) Tighten the striker mounting screws after the adjustment.
Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

750N0–01

OVERHAUL

HINT:



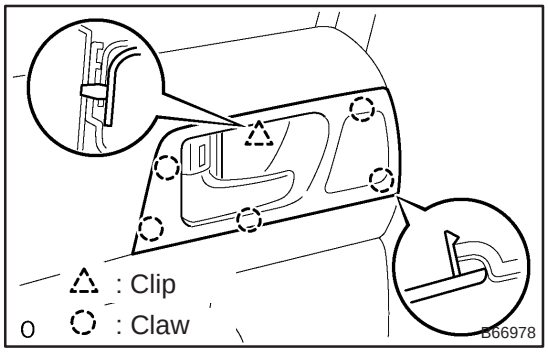
- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the RH side as on the LH side.

1. REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSY (W/O POWER WINDOW)

(a) Using a shop rag, remove the snap ring.

(b) Remove the window regulator handle.

2. REMOVE POWER WINDOW REGULATOR SWITCH ASSY REAR (W/ POWER WINDOW)



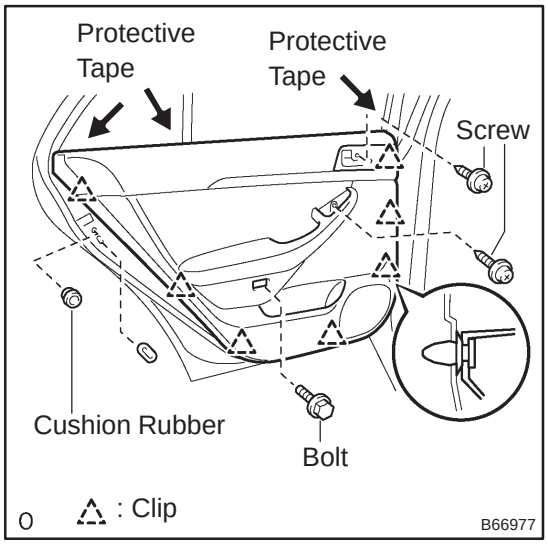
(a) Using a screwdriver, disengage the claw and clip, and remove the armrest base panel upper together with the switch.

HINT:

Tape the screwdriver tip before use.

(b) Disconnect the switch connector.

(c) Disengage the 2 claws and remove the switch from the armrest base panel upper



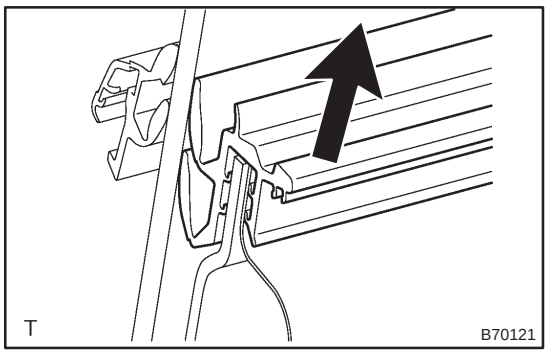
3. REMOVE REAR DOOR TRIM BASE LH

(a) Using a screwdriver, disengage the 5 claws and clip, and remove the trim base.

HINT:

Tape the screwdriver tip before use.

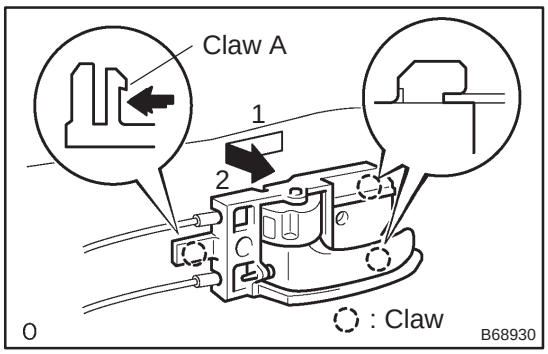
4. REMOVE REAR DOOR TRIM BOARD SUB–ASSY LH



(a) Remove the cushion rubber.

(b) Remove the bolt and 2 screws.

(c) Using a clip remover, remove the 10 clips and the trim board upward.



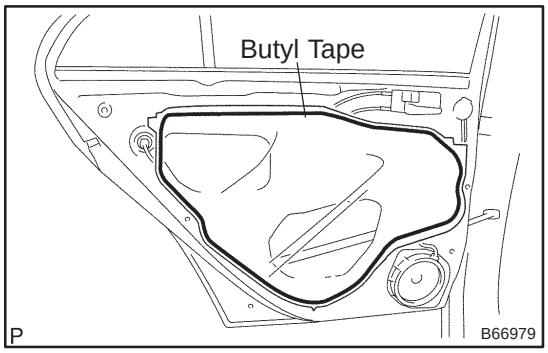
HINT:

In order to prevent the door panel from being damaged, cover the areas indicated by the arrow marks in the illustration with protective tape.

5. REMOVE REAR DOOR GLASS WEATHERSTRIP INNER LH

(a) Remove the weatherstrip inner, as shown in the illustration.

6. REMOVE REAR DOOR INSIDE HANDLE SUB–ASSY LH



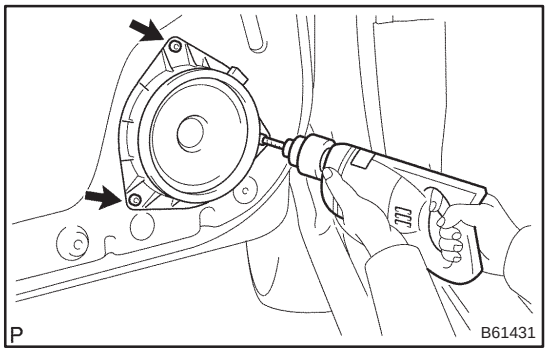
(a) Using a screwdriver, disengage the claw A as indicated.

HINT:

Tape the screwdriver tip before use.

(b) Move the inside handle in the direction indicated by the arrow mark in the illustration.

(c) Disconnect the 2 cables from the inside handle.



7. REMOVE REAR DOOR SERVICE HOLE COVER

(a) Remove the service hole cover.

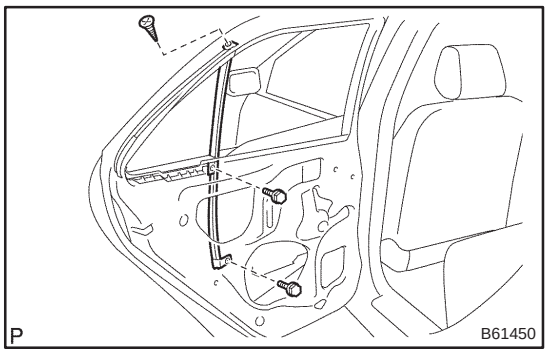
NOTICE:

Remove the remaining tape on the door side.

8. REMOVE REAR SPEAKER ASSY (W/ SPEAKER)

(a) Using a drill of less than ø 4 mm (0.16 in.), drill out the 3 rivet heads and remove the speaker.

NOTICE:

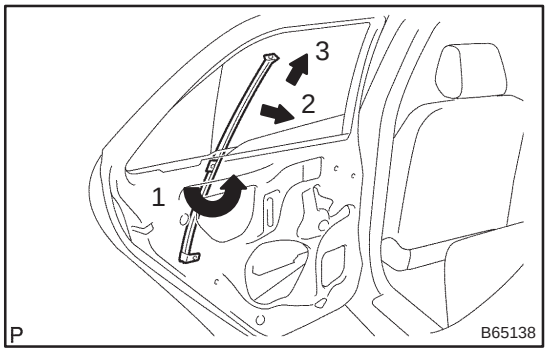


- **Be sure to gently place the drill perpendicularly to the rivet to prevent the rivet hole and the drill itself from being damaged.**
- **Be careful with the cut rivet because it is hot.**

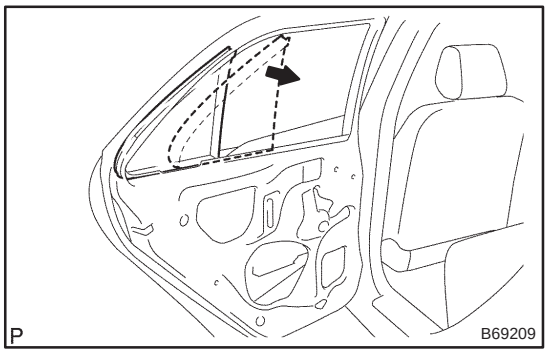
(b) Even if the flange is taken off, continue drilling and push out the remaining fragments using the drill.

(c) Using a vacuum cleaner, remove the drilled rivet and dust from the inside of the door.

9. REMOVE REAR SPEAKER ASSY NO.2 (W/ SPEAKER) (See page 67–15)



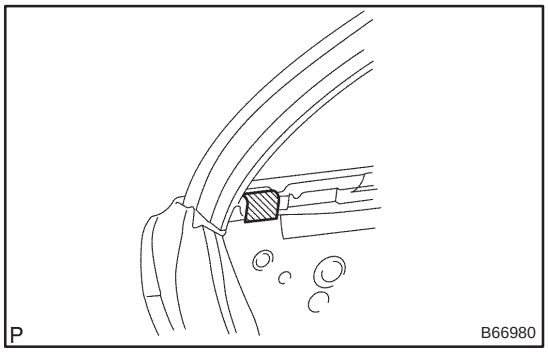
10. REMOVE REAR DOOR BELT MOULDING ASSY LH (See page 76–24)



11. REMOVE REAR DOOR WINDOW DIVISION BAR SUB–ASSY LH

(a) Remove the glass run.

(b) Remove the screw and 2 bolts.

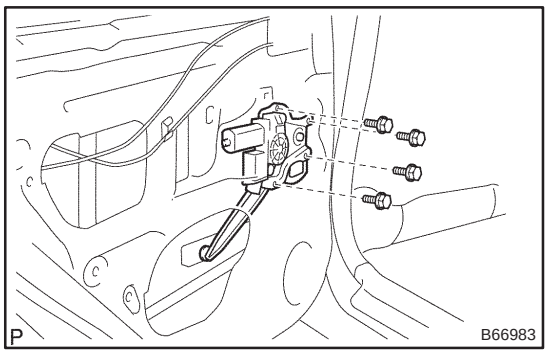


(c) Rotate the division bar by 45° and pull it upwards in the direction indicated by the arrow marks in the illustration. Then remove the division bar.

12. REMOVE REAR DOOR QUARTER WINDOW GLASS LH

(a) Remove the quarter glass together with the quarter window glass weatherstrip in the direction indicated by arrow marks in the illustration.

(b) Remove the quarter window glass weatherstrip.



(c) Remove the door lock link silencer.

13. REMOVE REAR DOOR GLASS SUB–ASSY LH

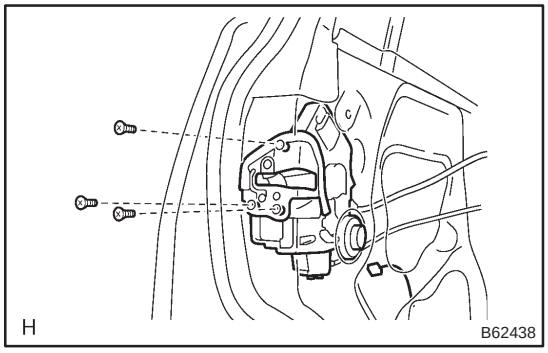
(a) Carefully pull up the door glass out of the door panel.

HINT:

Insert a shop rag inside the door panel to prevent the glass from being scratched.

14. REMOVE REAR DOOR WINDOW REGULATOR SUB–ASSY LH

(a) w/ Power window:
Disconnect the window regulator connector.



(b) Remove the 4 bolts and window regulator.

NOTICE:

When the bolts are removed, the window regulator may fall and become deformed.

HINT:

Remove the door window regulator through the service hole.

15. REMOVE REAR DOOR W/MOTOR LOCK ASSY LH

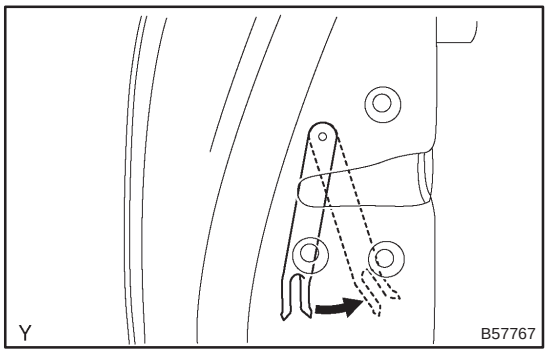
(a) Disconnect the door lock connector.

(b) Using a torx socket wrench (T30), remove the 3 screws and door lock.

HINT:

Remove the door lock through the service hole.

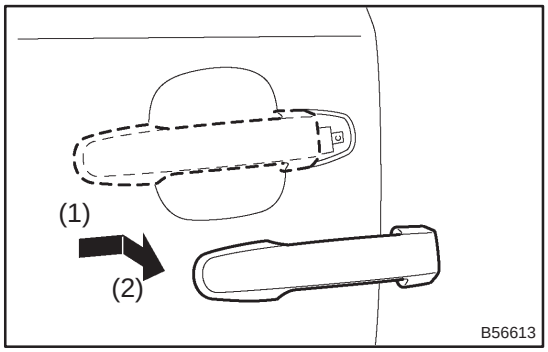
(c) Remove the door lock wire harness packing.



16. REMOVE REAR DOOR OUTSIDE HANDLE COVER LH

(a) Using a torx socket wrench (T30), loosen the screw.

(b) Remove the cover.

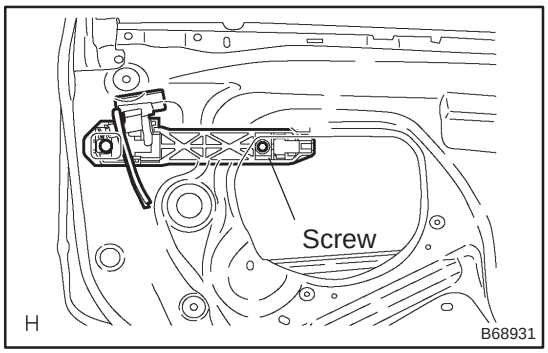


HINT:

Remove the cover through the service hole.

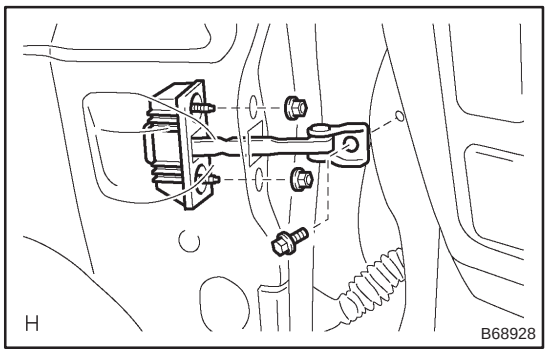
17. REMOVE REAR DOOR OUTSIDE HANDLE ASSY LH

(a) Pull and hold the release plate of the handle frame as shown in the illustration.



(b) Remove the handle pushing and pulling it in the direction indicated by the arrow mark in the illustration.

NOTICE:



If the release plate is not pulled and held when removing the handle, the release plate will interfere with the handle and become damaged .

(c) Remove the outside handle pads front and rear.

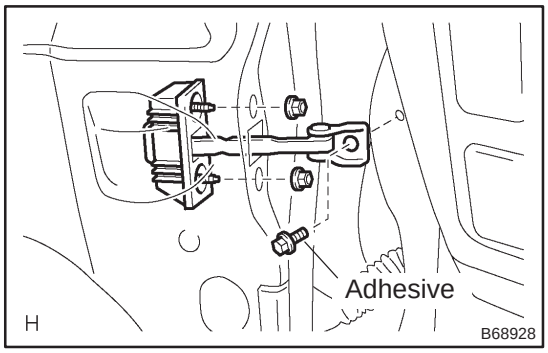
18. REMOVE REAR DOOR OUTSIDE HANDLE FRAME SUB–ASSY LH

(a) Using a torx socket wrench (T30), loosen the screw and remove the frame.

19. REMOVE REAR DOOR CHECK ASSY LH

(a) Remove the 2 nuts, bolt and check.

HINT:



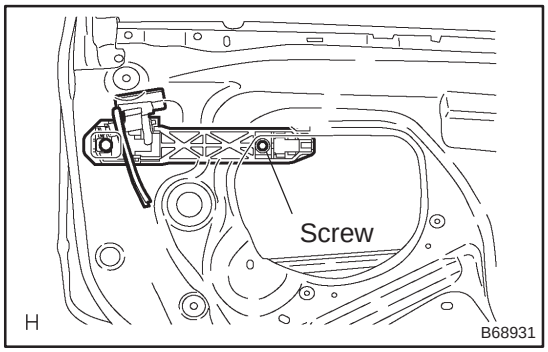
Remove the check through the service hole.

20. REMOVE REAR DOOR WEATHERSTRIP LH

(a) Using a clip remover, disengage the clip and remove the weatherstrip.

HINT:

If the clip is damaged, replace it with a new clip.



21. INSTALL REAR DOOR CHECK ASSY LH

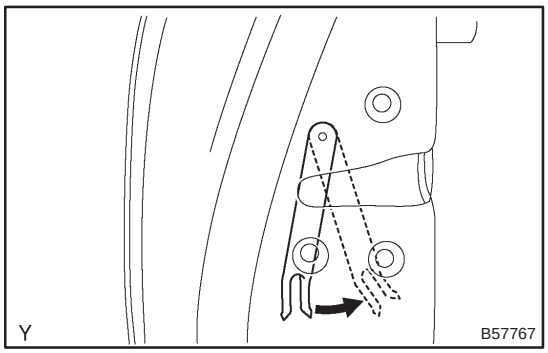
(a) Apply MP grease to the sliding areas of the check.

(b) Install the check to the door panel with the 2 nuts.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

(c) Apply adhesive to the threads of the bolt.
Adhesive:
Part No. 08833–00070, THREE BOND 1324 or equivalent

(d) Install the check to the body panel with the bolt.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

22. INSTALL REAR DOOR OUTSIDE HANDLE FRAME SUB–ASSY LH

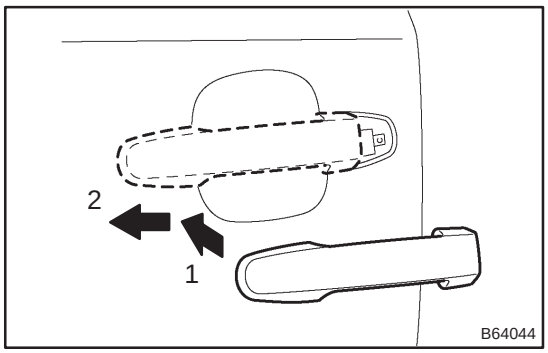


(a) Apply MP grease to the sliding areas of the frame.

(b) Using a torx socket wrench (T30), install the handle frame with the screw.

Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

NOTICE:



A cover should be inserted between the nut and the door panel.

23. INSTALL REAR DOOR OUTSIDE HANDLE ASSY LH

(a) Install the outside handle pads front and rear.

(b) Pull and hold the release plate of the frame, as shown in the illustration.

(c) Install the handle pushing it in the direction indicated by arrow marks in the illustration.

NOTICE:

If the release plate is not pulled and held when installing the handle, the release plate will interfere with the handle become damaged .

24. INSTALL REAR DOOR OUTSIDE HANDLE COVER LH

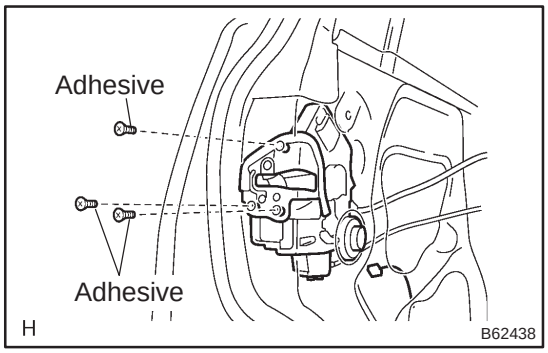
(a) Using a torx socket wrench (T30), install the outside handle cover with the screw.

Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

25. INSTALL REAR DOOR W/MOTOR LOCK ASSY LH

(a) Apply MP grease to the sliding and rotating areas of the door lock.

(b) Install a new door lock wire harness packing.

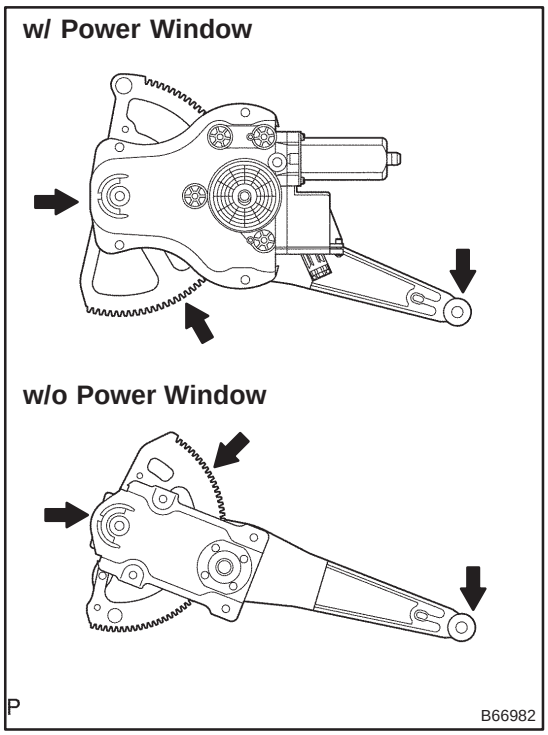


NOTICE:

- **When reusing a lock that has been removed, replace the packing in the connecting part with a new one.**
- **Be careful that grease or dirt does not stick to the packing surface in the connecting part.**
- **Reusing removed packing or using damaged packing will allow water to penetrate through to the connecting part resulting in a door lock malfunction.**

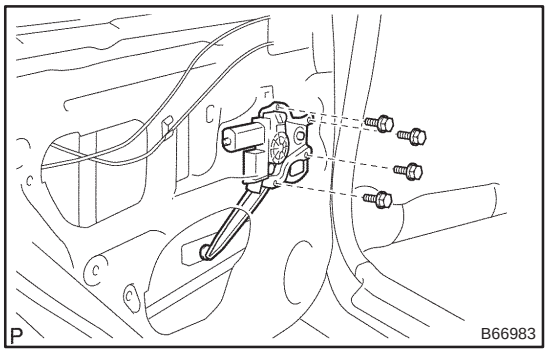
(c) Engage the door lock with the release plate of the handle, and then set it to the door panel.

NOTICE:



Make sure that the release plate of the frame is securely engaged with the door lock.

(d) Apply adhesive to the threads of the 3 screws.
Adhesive:
Part No. 08833–00070, THREE BOND 1324 or equivalent



(e) Using a torx socket wrench (T30), install the door lock with the 3 screws.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

(f) Connect the door lock connector.

26. INSTALL REAR DOOR WINDOW REGULATOR SUB–ASSY LH

(a) Apply MP grease to the sliding and rotating areas of the window regulator.

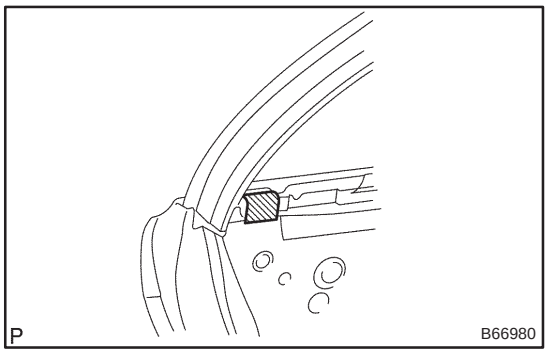
(b) Install the window regulator with the 4 bolts.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

NOTICE:

Be careful not to drop the window regulator as this may cause deformation.

(c) Connect the window regulator connector.

27. INSTALL REAR DOOR GLASS SUB–ASSY LH



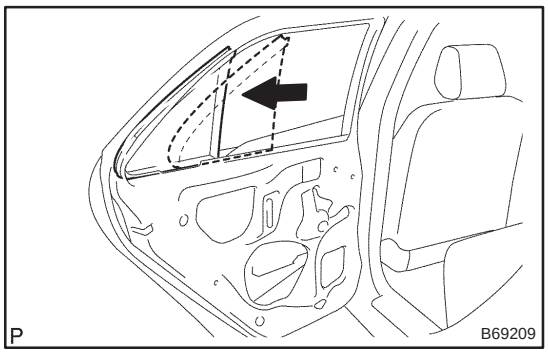
NOTICE:

Be careful not to drop the glass as this may cause deformation.

(a) Install the door glass into the door panel.

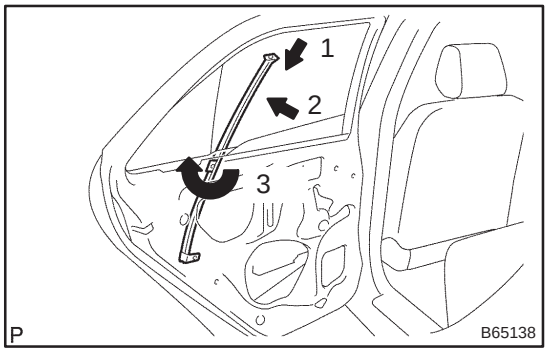
HINT:

Insert a shop rag inside the door panel to prevent the door glass from being scratched.



28. INSTALL REAR DOOR QUARTER WINDOW GLASS LH

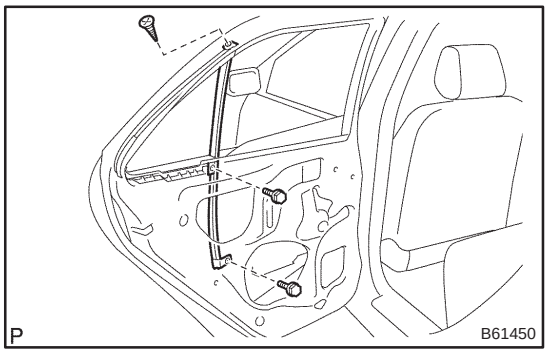
(a) Install the quarter window weatherstrip on the glass.



NOTICE:

Do not damage the glass.

(b) Install the door lock link silencer.



(c) Install the quarter window glass with the weatherstrip installed in the direction indicated by the arrow in the illustration.

29. INSTALL REAR DOOR WINDOW DIVISION BAR SUB–ASSY LH

(a) Insert the division bar to the door panel and then rotate it by 90°, as shown in the illustration.

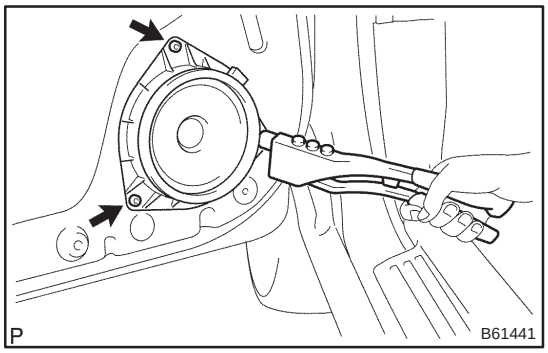
(b) Mount the door glass to the window regulator.

(c) Install the division bar with the 2 bolts and screw.

Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

(d) Install the glass run.

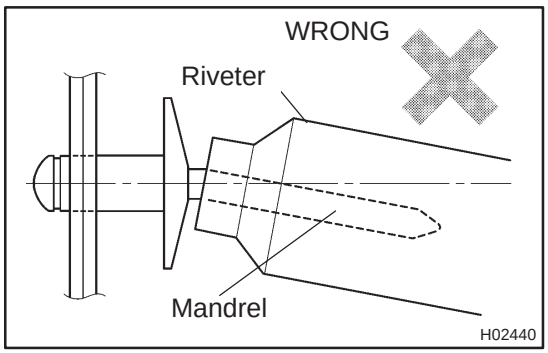
(e) Reset the power window motor (See page 70–13).



(f) Inspect operation of the power window.

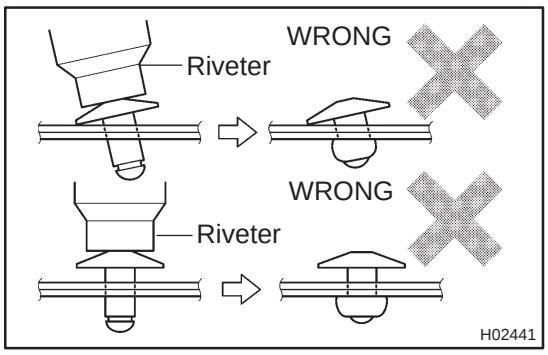
HINT:

When the installation point of the door glass does not match, adjust the window regulator position in manual operation.



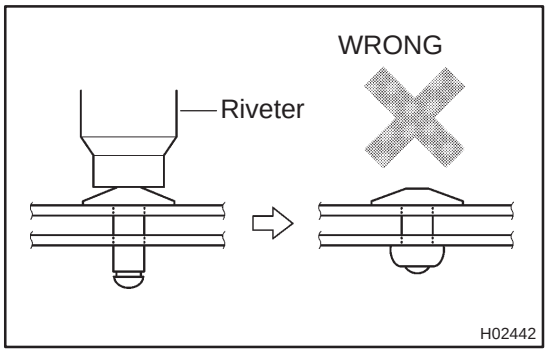
(1) Connect the power window switch to the wire harness and turn the ignition switch ON.

(2) Repeat UP and DOWN operation several times in manual operation.



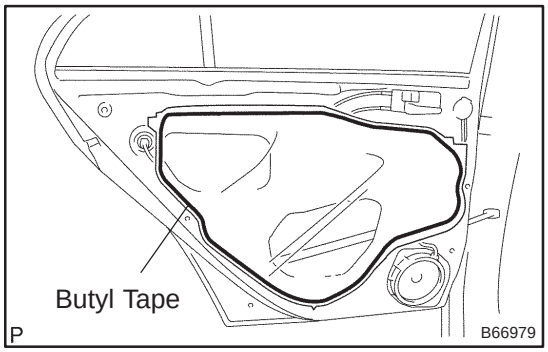
30. INSTALL REAR SPEAKER ASSY

(a) Using an air riveter or hand riveter, install the speaker to the door with the 3 rivets.



NOTICE:

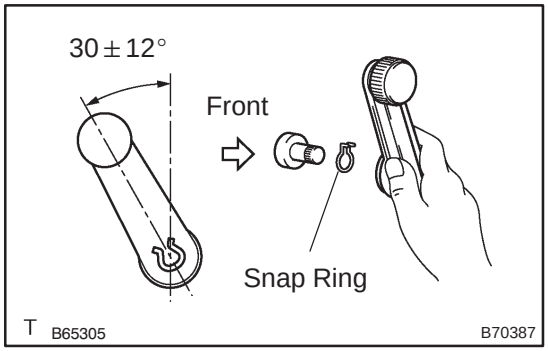
- **Do not operate the riveter an angle as this will damage it bend the mandrel.**



- **Do not tilt the riveter when removing the rivet as the speaker will not be tightened firmly.**

- **Install the rivet while attaching the speaker to ensure that it is tightened firmly.**

(b) Connect the speaker connector.



31. INSTALL REAR DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the door panel, as shown in the illustration.

(b) Install the service hole cover.

HINT:

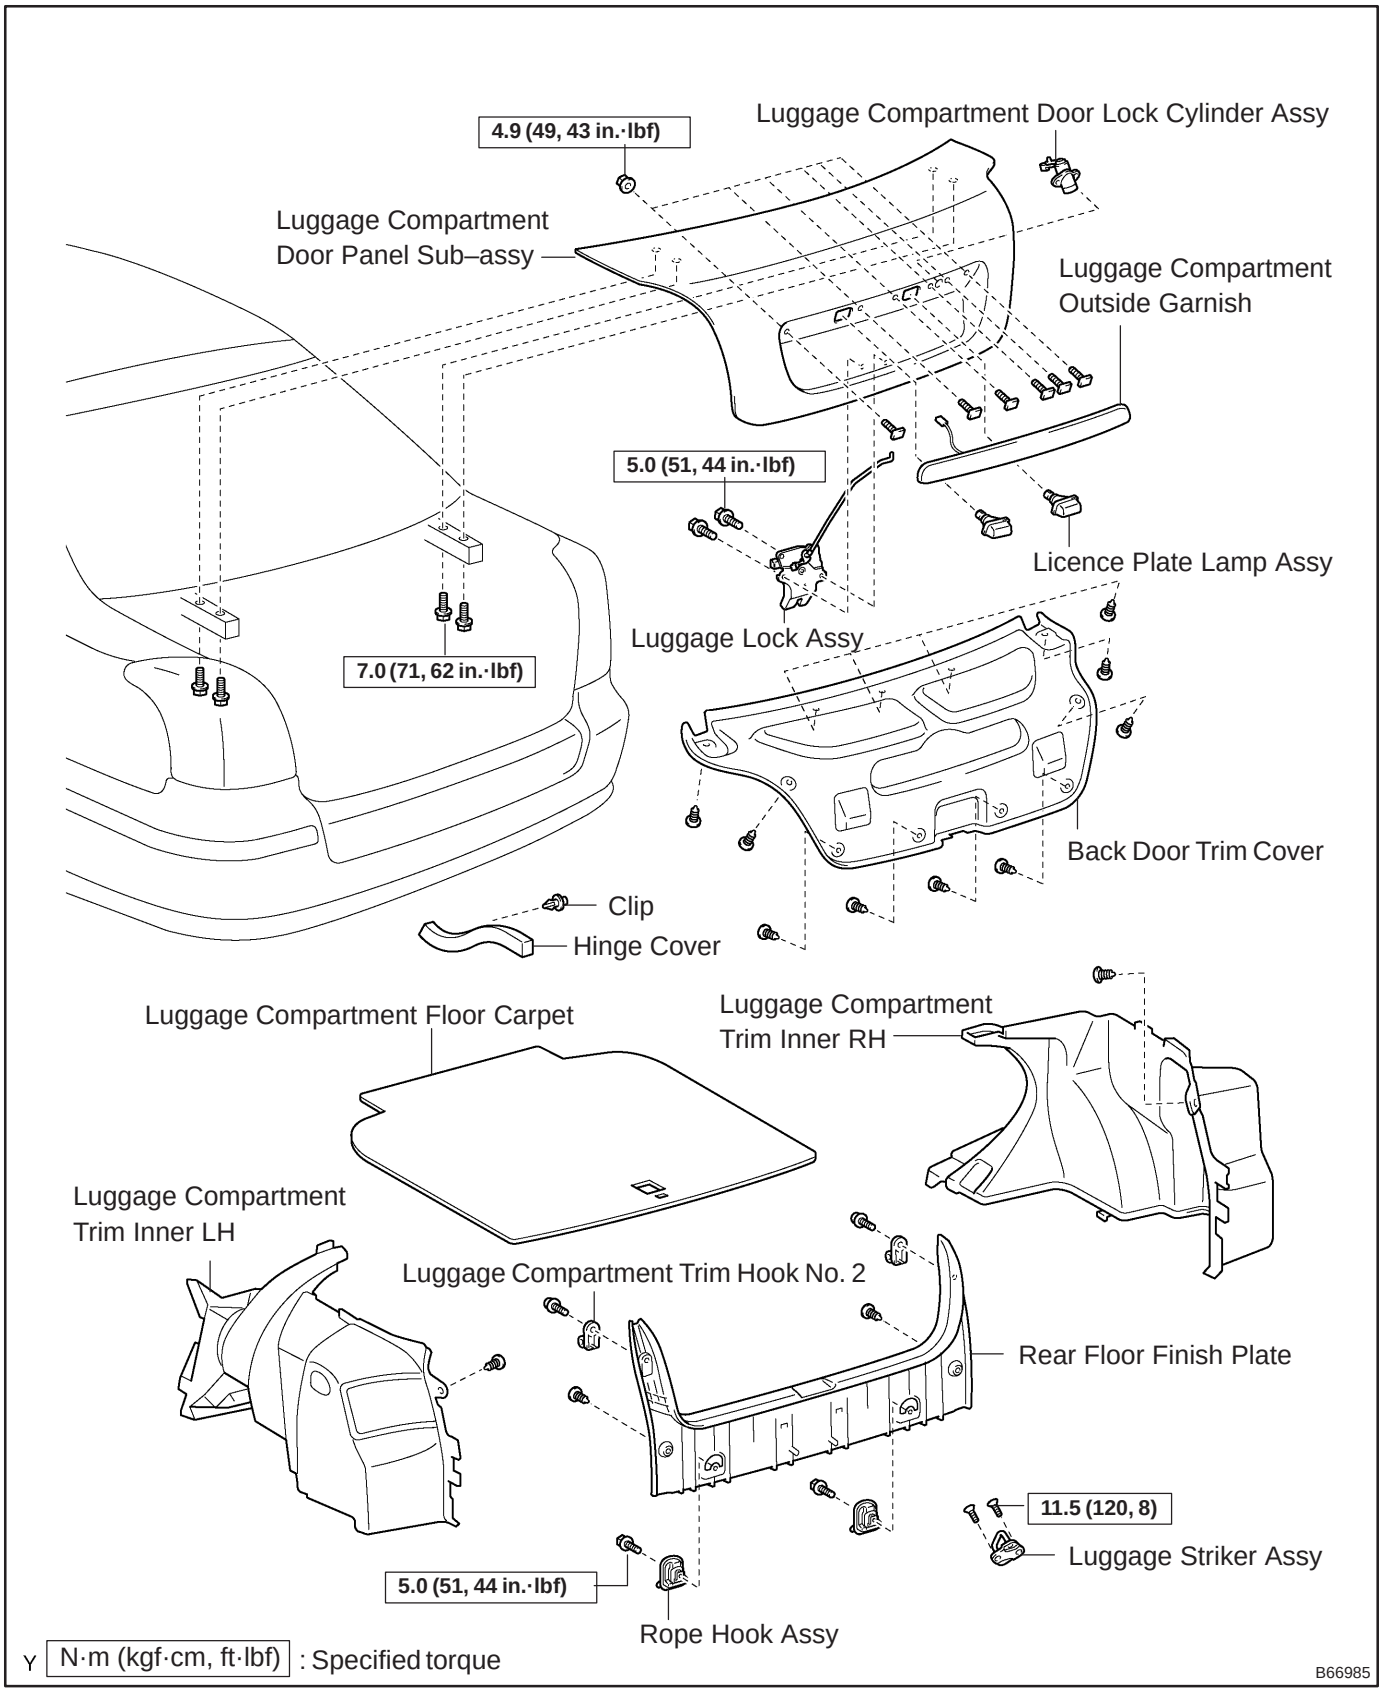
- When installing the service hole cover, pull out the links and connectors through the service hole cover.
- There should be no wrinkles or folds after attaching the service hole cover.
- After attaching the service hole cover, check the sealing quality.

32. INSTALL REAR DOOR WINDOW REGULATOR HANDLE ASSY (W/O POWER WINDOW)

(a) Fully close the window.

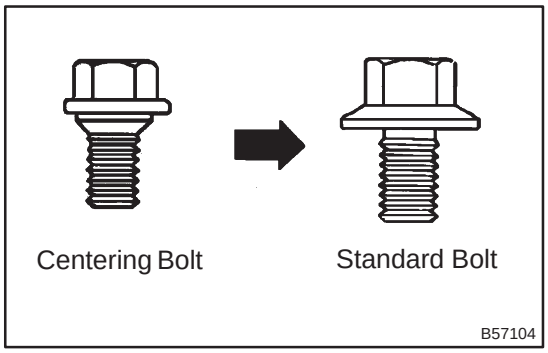
(b) Install the snap ring to the regulator handle.

(c) Install the regulator handle.



HINT:

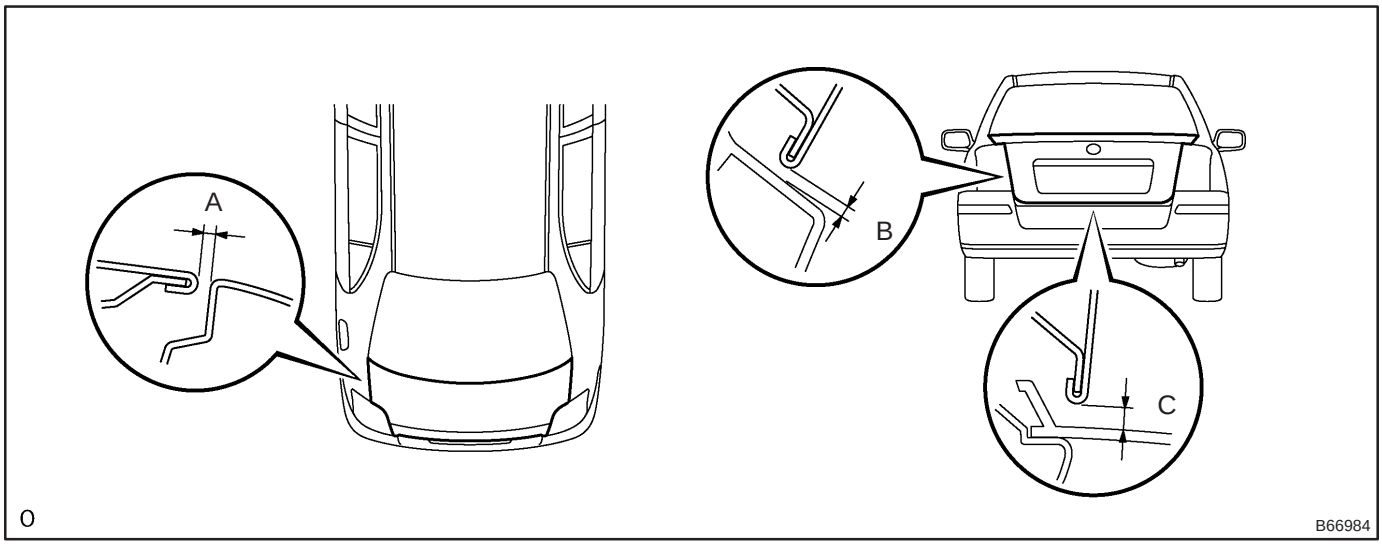
With the window fully closed, install the plate and regulator handle with the snap ring as shown in the illustration.



LUGGAGE COMPARTMENT DOOR

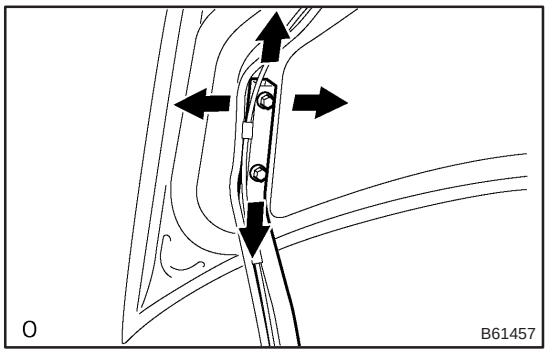
COMPONENTS

750N1–01



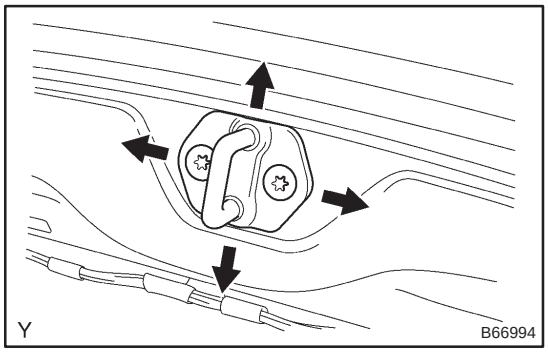
ADJUSTMENT

HINT:
Because a centering bolt is used as a luggage compartment door mounting bolt, the luggage compartment door can not be adjusted with it on. Substitute a bolt with a washer for the centering bolt.



1. INSPECT LUGGAGE COMPARTMENT DOOR PANEL SUB–ASSY

(a) Check that the clearance is within the standard range.



Standard range:

A	4.0 ± 1.5 mm (0.157 ± 0.059 in.)
B	5.3 ± 1.5 mm (0.209 ± 0.059 in.)
C	7.1 – 1.5 or + 2.5 mm (0.280 – 0.059 or + 0.098 in.)

2. ADJUST LUGGAGE COMPARTMENT DOOR PANEL SUB–ASSY

(a) Using a clip remover, remove the clips and hinge cover.
(b) Using a clip remover, remove the 11 clips and trim cover.
(c) Adjust the door horizontally and vertically by Loosening the door bolts.
(d) Tighten the door mounting bolts after the adjustment.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

(e) Adjust the striker.

HINT:

Adjust the door lock position by moving the striker so that the door striker can enter smoothly.

(1) Using a hammer and a brass bar, tap the striker to adjust it.

(2) Tighten the 2 bolts after the adjustment.

Torque: 11.5 N·m (120 kgf·cm, 8 ft·lbf)

LUGGAGE DOOR HINGE TORSION BAR

750N3–01

REPLACEMENT

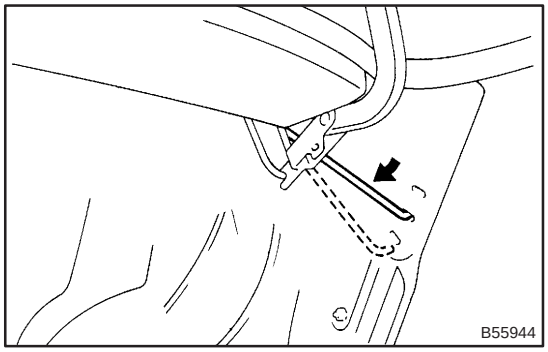
HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the RH side as on the LH side.
- After removing the torsion bar, opening and closing door operation should be carried out while holding the door with your hand in order to perform an accurate test by providing sliding resistance.
- The RH side torsion bar is on the upper side and the LH side torsion bar is on the lower side, thus the installation should be performed in the order of RH to LH and removal should be performed in the order of LH to RH.

1. REMOVE LUGGAGE DOOR HINGE TORSION BAR LH

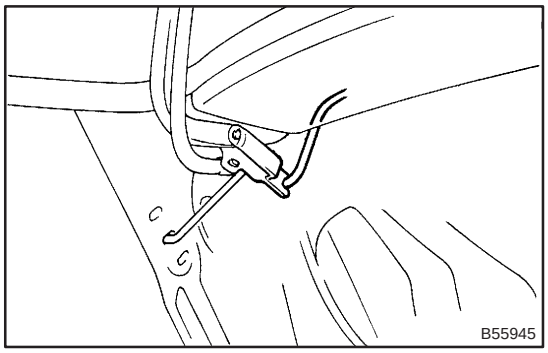
(a) Remove the floor carpet.

(b) Remove the floor finish plate.



(1) Remove the 2 screws and 2 No. 2 trim hooks.

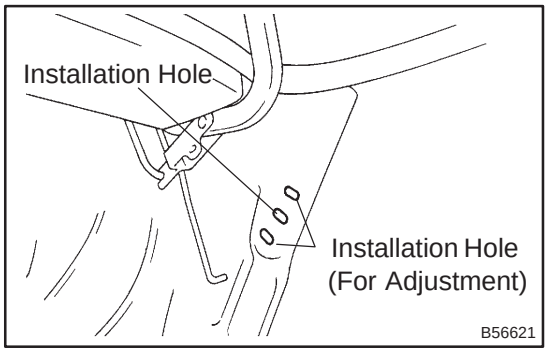
(2) Remove the 2 bolts and rope hook assy



(3) Using a clip remover, remove the 2 clips and floor finish plate.

(c) Remove the clips and trim cover inner LH and RH.

(d) Remove the torsion bar RH from the clip placed in the center of the upper back panel.



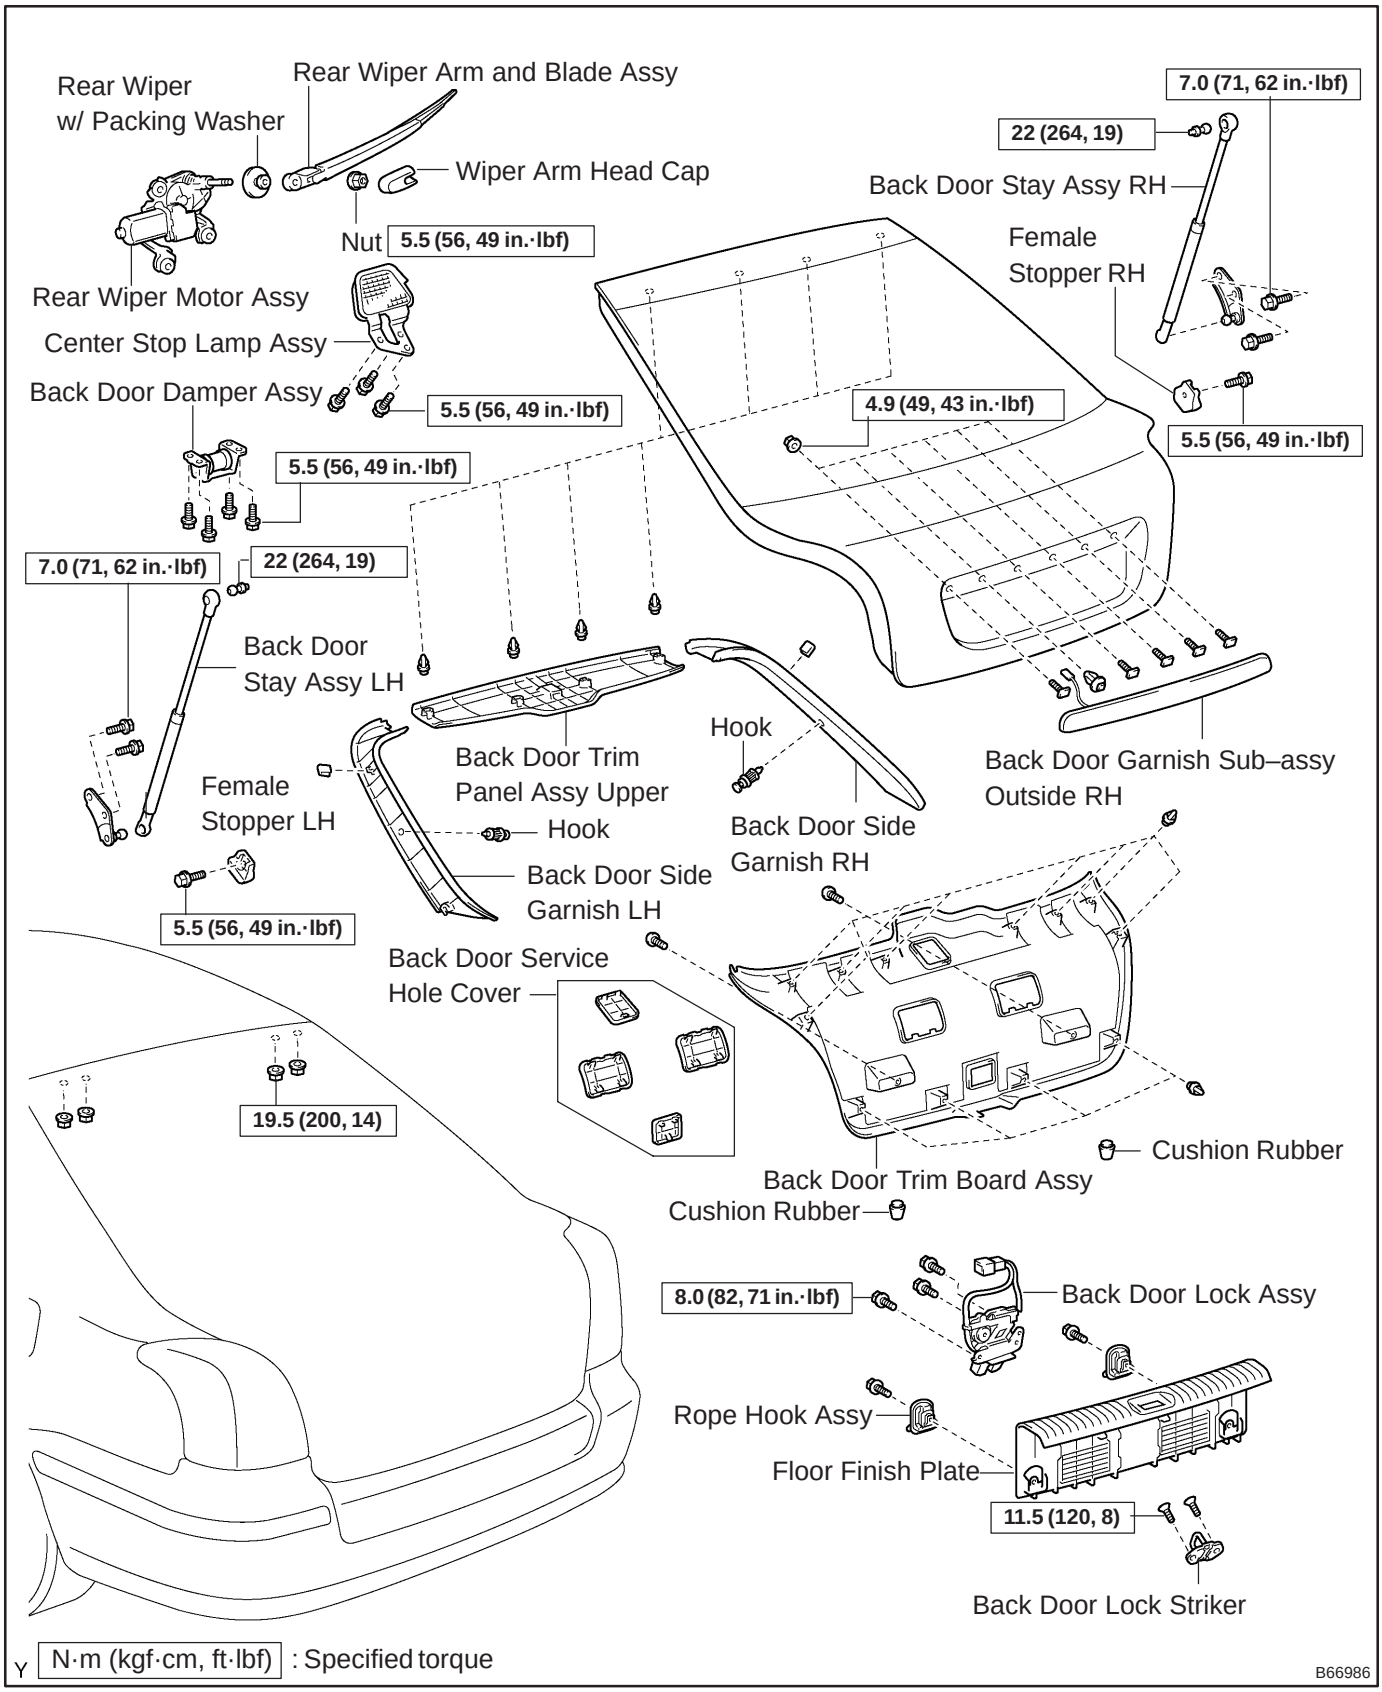
(e) Remove the tip of the torsion bar from the roof side inner panel by hand.

(f) Take out the hinge arm from the torsion bar in the rear direction.

(g) Pull the torsion bar to your side in order to remove the U–shaped part from the hinge support.

2. REMOVE LUGGAGE DOOR HINGE TORSION BAR RH

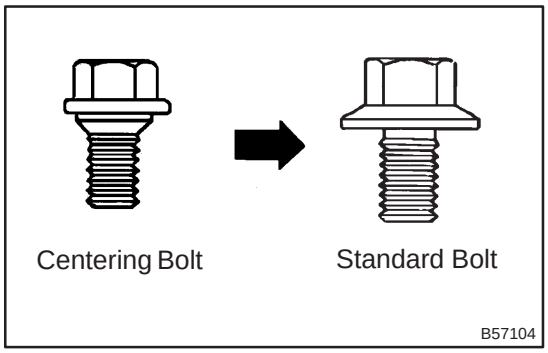
3. INSTALL LUGGAGE DOOR HINGE TORSION BAR LH



(a) Set the tip of the torsion bar in the installation hole placed in the center part. The holes placed in the upper and lower parts are used for adjustment.

4. INSTALL LUGGAGE DOOR HINGE TORSION BAR RH

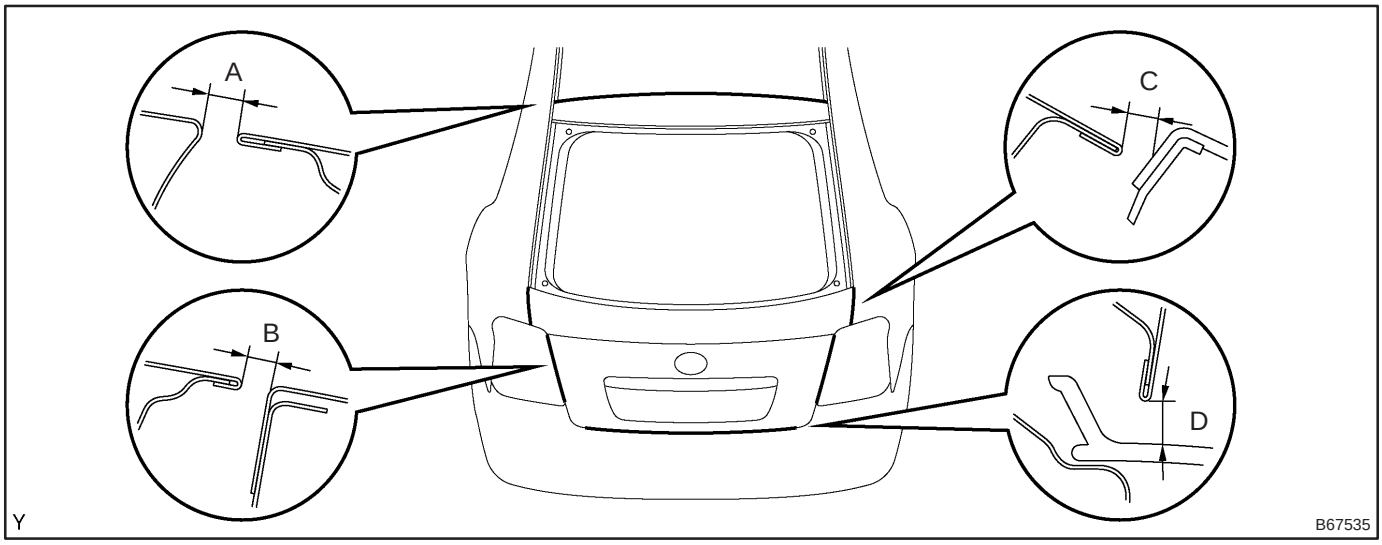
BACK DOOR (LIFTBACK MODELS)



COMPONENTS

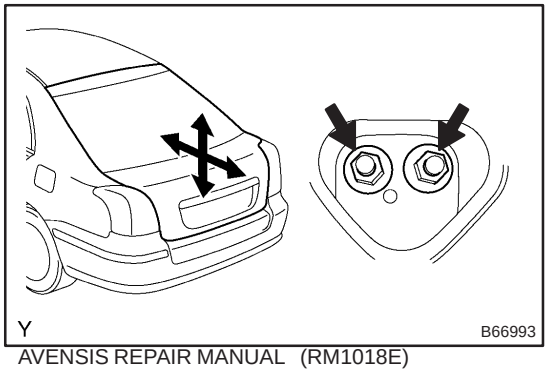
750N4–01

750N5–01



ADJUSTMENT

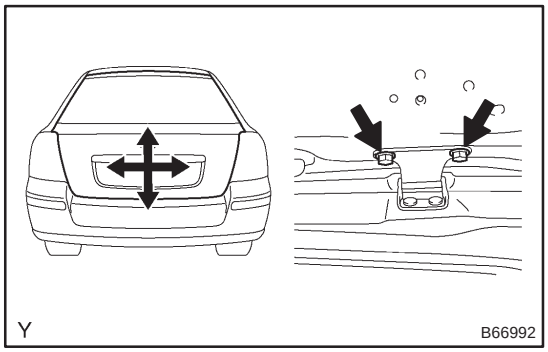
HINT:
Because a centering bolt is used as a door hinge mounting bolt on the body side and door side, the door can not be adjusted with them on. Substitute a bolt with a washer for the centering bolt.



1. INSPECT BACK DOOR PANEL SUB–ASSY

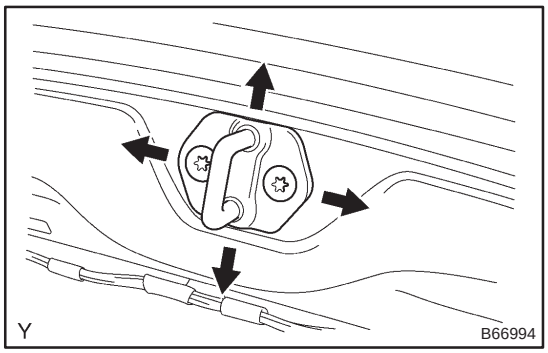
(a) Check that the clearance is within the standard range.

Standard range:



A	6.3 ± 1.5 mm (0.248 ± 0.059 in.)
B	4.9 ± 1.5 mm (0.193 ± 0.059 in.)
C	5.0 ± 1.5 mm (0.197 ± 0.059 in.)
D	8.0 ± 1.5 mm (0.315 ± 0.059 in.)

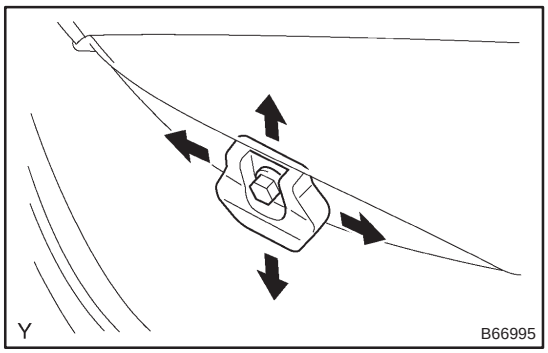
2. ADJUST BACK DOOR PANEL SUB–ASSY



(a) Adjust the door vertically and forward/rearward by loosening the body side hinge bolts.

(b) Tighten the body side hinge bolts after the adjustment.
Torque: 19.5 N·m (200 kgf·cm, 14 ft·lbf)

(c) Horizontally and vertically adjust the door by loosening the 8 door side hinge bolts.



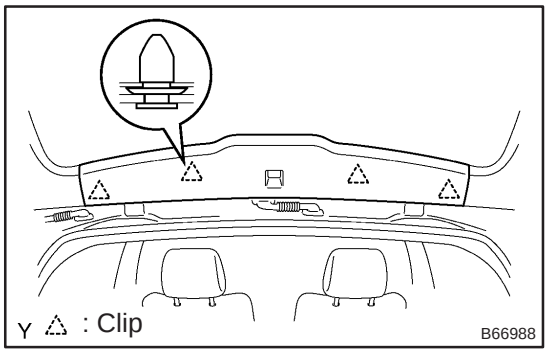
(d) Tighten the door side hinge bolts after the adjustment.
Torque: 19.5 N·m (200 kgf·cm, 14 ft·lbf)

(e) Remove the floor finish plate (See page 76–45)

(f) Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic–faced hammer.

(g) Tighten the striker mounting screws after the adjustment.
Torque: 11.5 N·m (120 kgf·cm, 8 ft·lbf)

(h) Adjust the side female stopper so that the door can be opened/closed smoothly, as shown in the illustration.



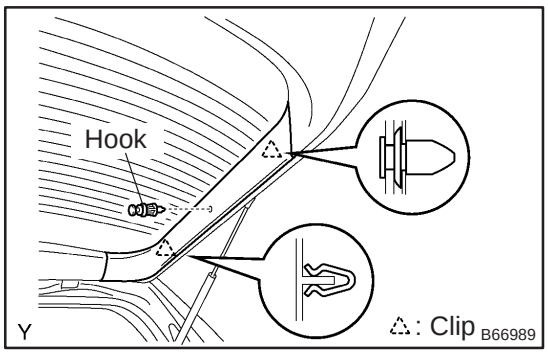
(i) Tighten the side female stopper after the adjustment.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

750N6–01

OVERHAUL

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.



1. REMOVE BACK DOOR TRIM PANEL ASSY UPPER

(a) Using a screwdriver, disengage the 4 clips and remove the trim.

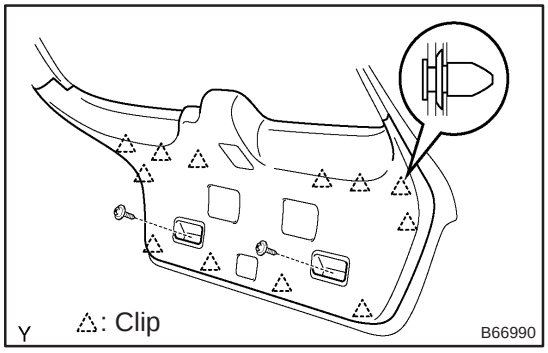
HINT:

Tape the screwdriver tip before use.

2. REMOVE BACK DOOR SIDE GARNISH LH

(a) Using a clip remover, remove the hook.

(b) Using a screwdriver, disengage the 2 clips and remove the side garnish.



HINT:

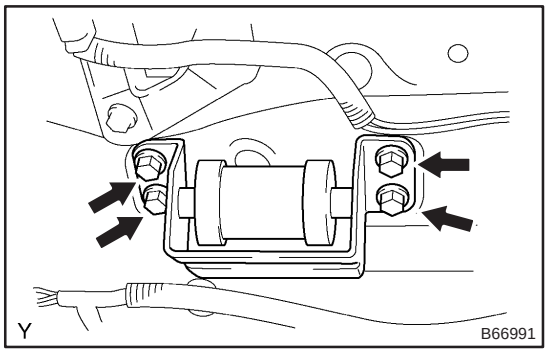
Tape the screwdriver tip before use.

3. REMOVE BACK DOOR SIDE GARNISH RH

HINT:

Use the same procedures described for the LH side.

4. REMOVE BACK DOOR TRIM BOARD ASSY



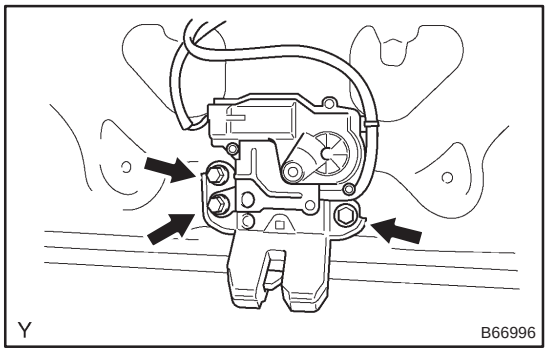
(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the 12 clips and remove the trim board.

HINT:

Tape the screwdriver tip before use.

(c) Remove the 4 service hole covers.



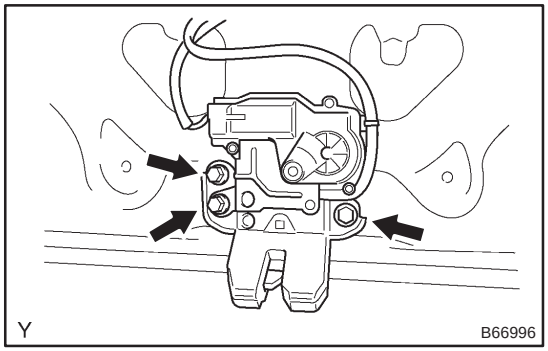
5. REMOVE BACK DOOR DAMPER ASSY

(a) Remove the 4 bolts and damper.

6. REMOVE BACK DOOR GARNISH SUB–ASSY OUTSIDE RH (See page 76–27)

7. REMOVE REAR WIPER MOTOR ASSY (See page 66–17)

8. REMOVE CENTER STOP LAMP ASSY (See page 65–26)

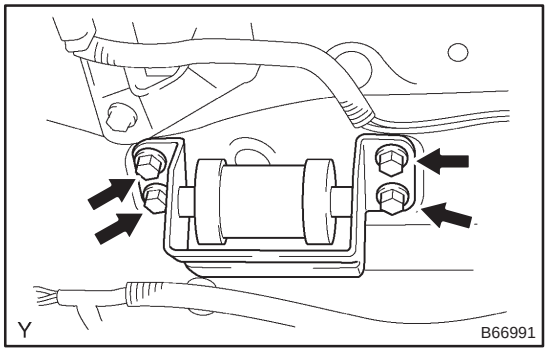


9. REMOVE BACK DOOR LOCK ASSY

(a) Disconnect the connector.

(b) Remove the 3 bolts and door lock.

10. REMOVE BACK DOOR STAY ASSY LH (See page 75–47)

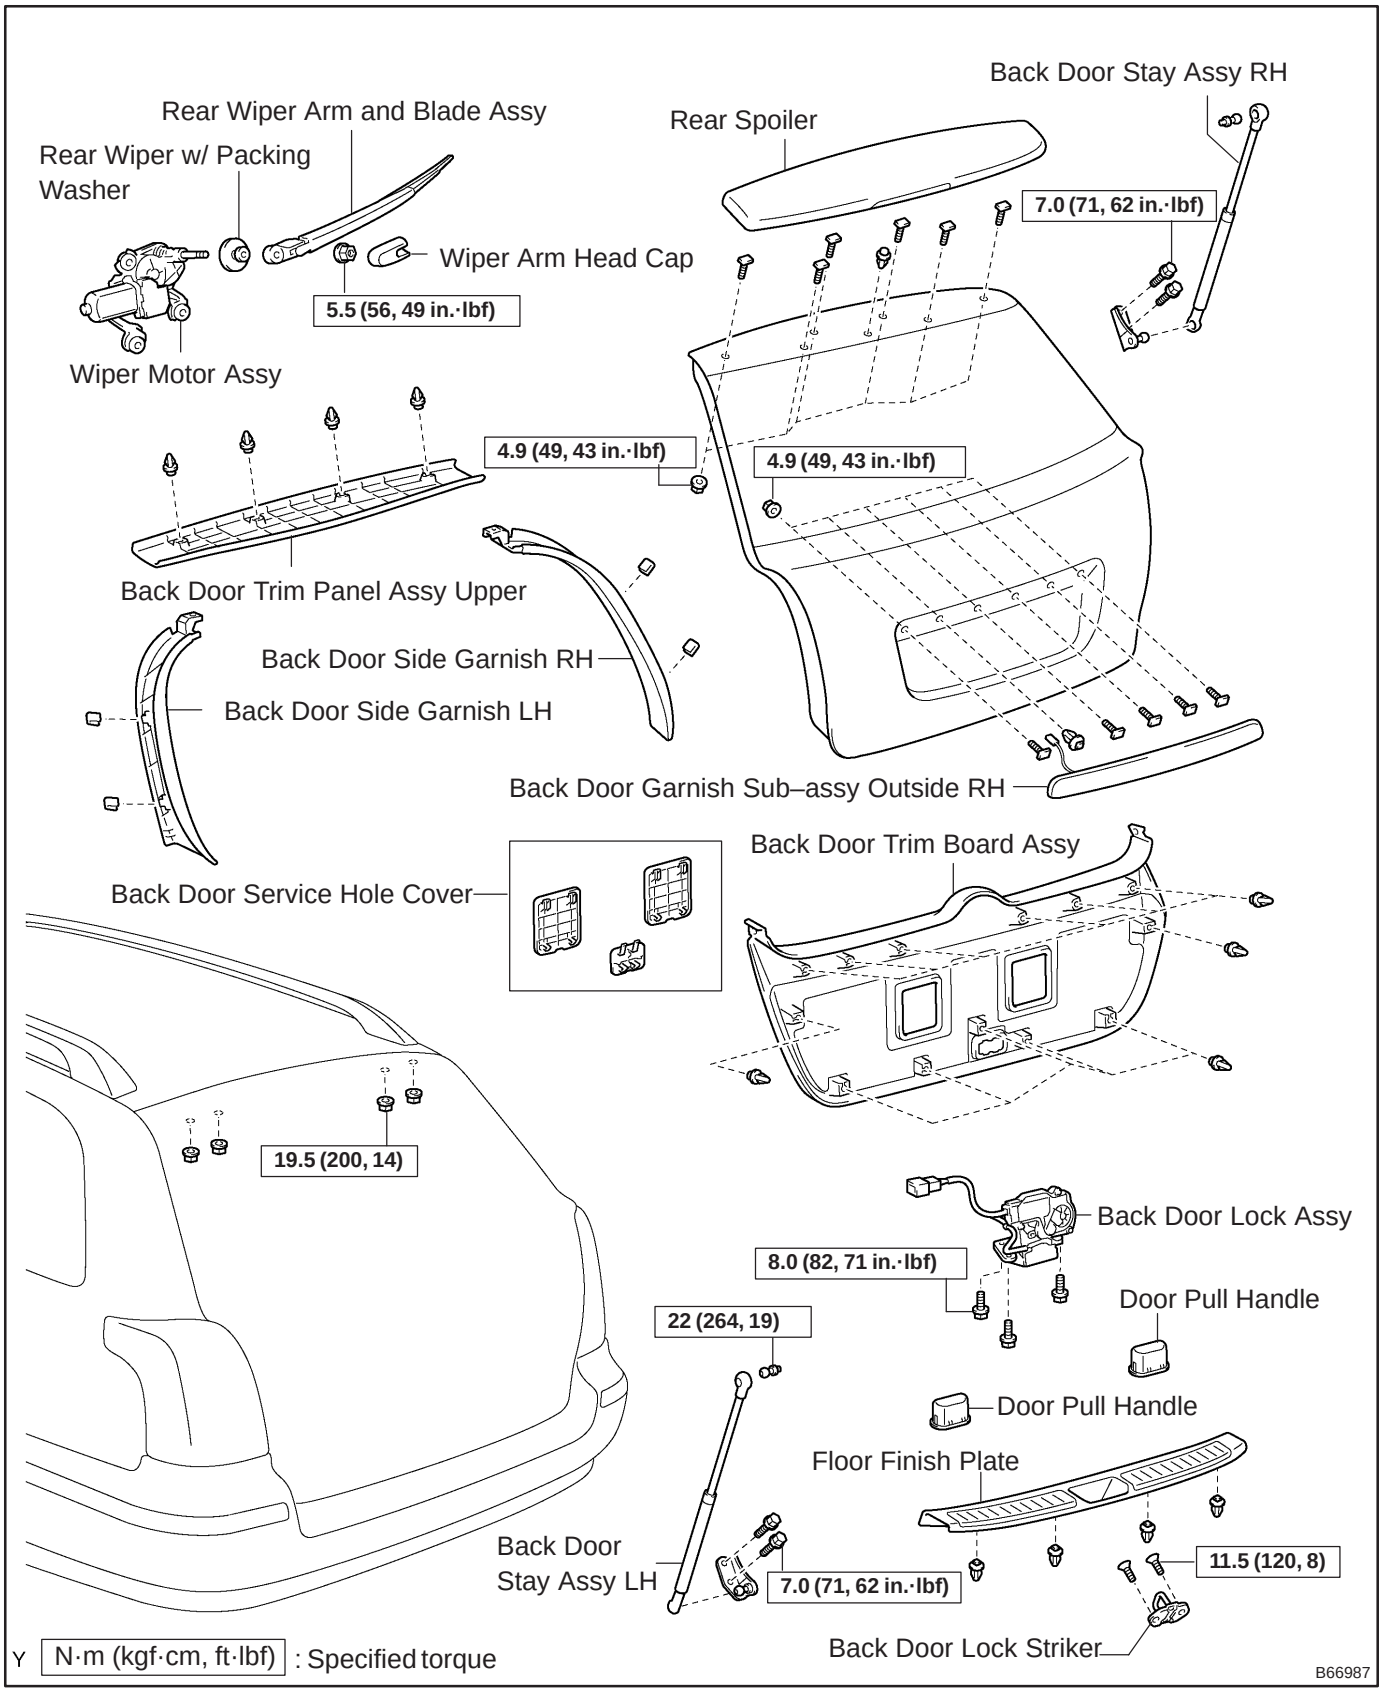


11. REMOVE BACK DOOR STAY ASSY RH (See page 75–47)

12. INSTALL BACK DOOR LOCK ASSY

(a) Install the door lock with the 3 bolts.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

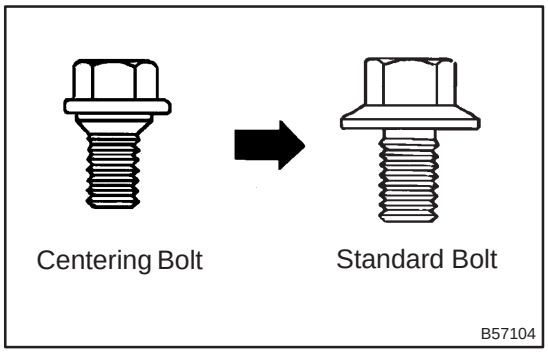
(b) Connect the door lock connector



13. INSTALL BACK DOOR DAMPER ASSY

(a) Install the damper with the 4 bolts.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

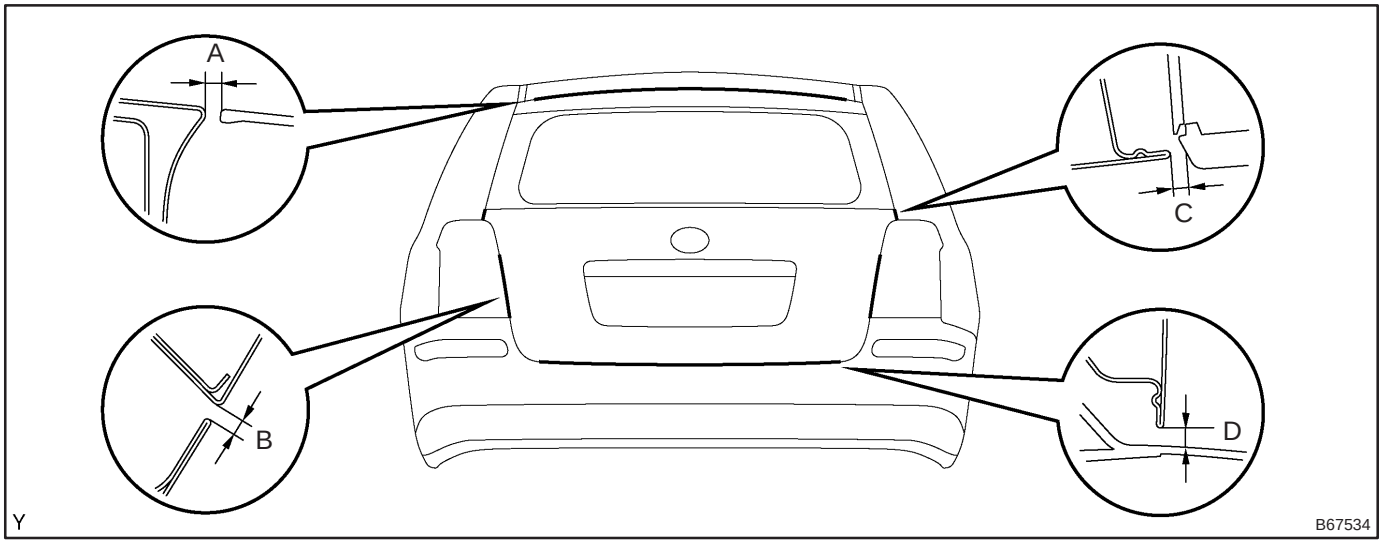
BACK DOOR (WAGON MODELS)



COMPONENTS

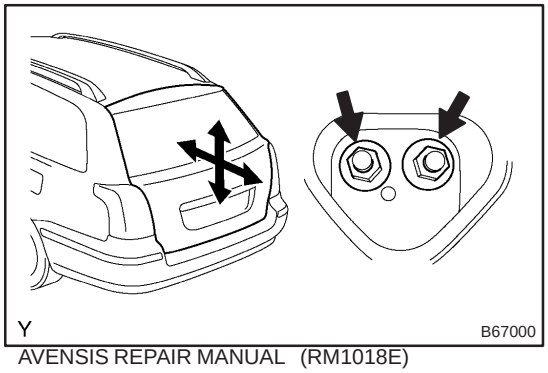
750N7–01

750N8–01



ADJUSTMENT

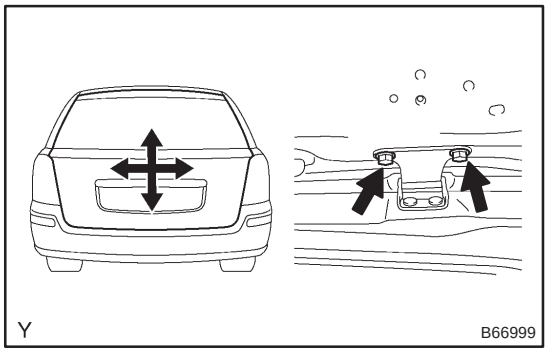
HINT:
Because a centering bolt is used as a door hinge mounting bolt on the body side and door side, the door can not be adjusted with them on. Substitute a bolt with a washer for the centering bolt.



1. INSPECT BACK DOOR PANEL SUB–ASSY

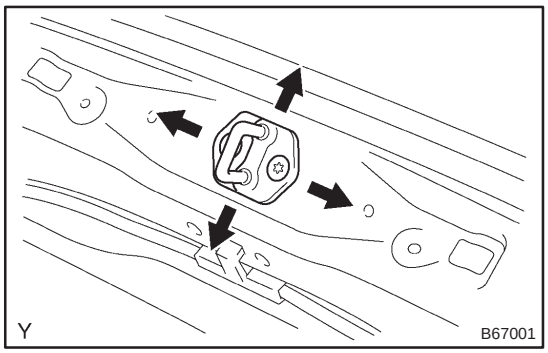
(a) Check that the clearance is within the standard range.

Standard range:



A	7.5 ± 1.5 mm (0.295 ± 0.059 in.)
B	4.9 ± 1.5 mm (0.193 ± 0.059 in.)
C	5.4 ± 1.5 mm (0.213 ± 0.059 in.)
D	6.0 ± 1.5 mm (0.236 ± 0.059 in.)

2. ADJUST BACK DOOR PANEL SUB–ASSY



(a) Adjust the door horizontally and forward/rearward by loosening the body side hinge bolts.

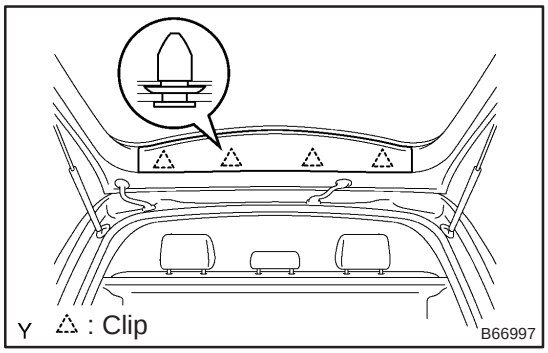
(b) Tighten the body side hinge bolts after the adjustment.
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

(c) Horizontally and vertically adjust the door by loosening the door side hinge bolts.

(d) Tighten the door side hinge bolts after the adjustment.
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

(e) Remove the floor finish plate (See page 76–54)

(f) Adjust the striker position by slightly loosening the striker mounting 2 screws and hitting the striker with a plastic–faced hammer.



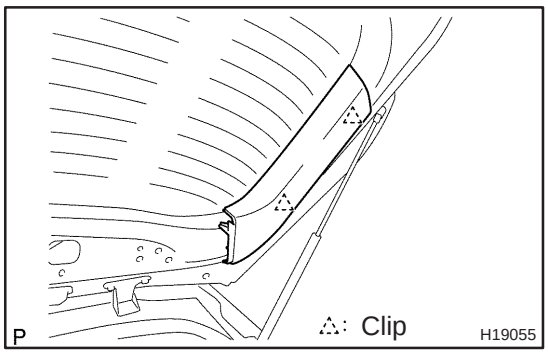
(g) Tighten the striker mounting screws after the adjustment.
Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

750N9–01

OVERHAUL

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.



1. REMOVE BACK DOOR TRIM PANEL ASSY UPPER

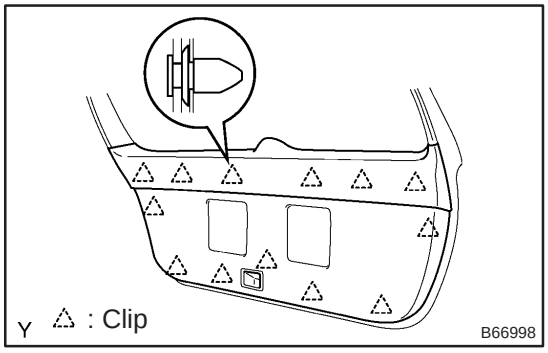
(a) Using a screwdriver, disengage the 4 clips and remove the trim panel.

HINT:

Tape the screwdriver tip before use.

2. REMOVE BACK DOOR SIDE GARNISH LH

(a) Using a screwdriver, disengage the 2 clips and remove the side garnish.



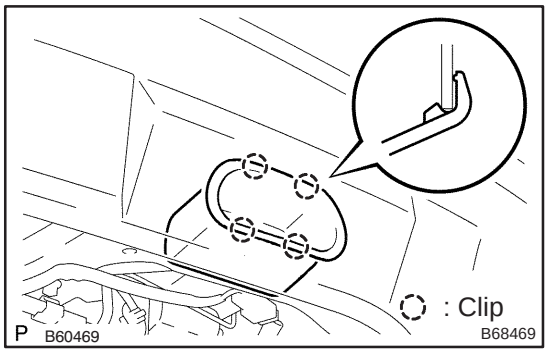
HINT:

Tape the screwdriver tip before use.

3. REMOVE BACK DOOR SIDE GARNISH RH

HINT:

Use the same procedures described for the LH side.



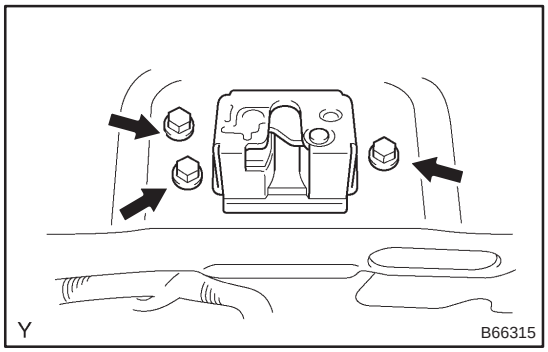
4. REMOVE BACK DOOR TRIM BOARD ASSY

(a) Using a screwdriver, disengage the 13 clips and remove the trim board.

HINT:

Tape the screwdriver tip before use.

(b) Remove the 3 service hole covers.



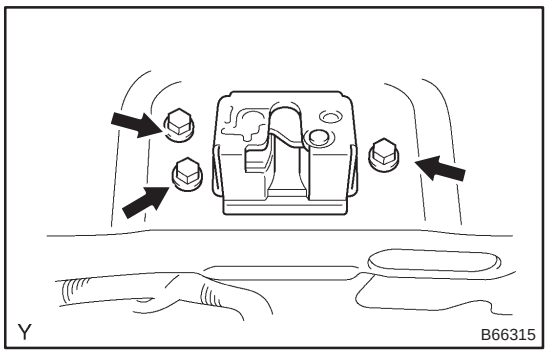
5. REMOVE DOOR PULL HANDLE

(a) Using a screwdriver, disengage the 4 claws and remove the pull handle.

6. REMOVE REAR SPOILER (See page 76–30)

7. REMOVE REAR WIPER MOTOR ASSY (See page 66–17)

8. REMOVE BACK DOOR GARNISH SUB–ASSY OUTSIDE RH (See page 76–29)



9. REMOVE BACK DOOR LOCK ASSY

(a) Disconnect the door lock connector.

(b) Remove the 3 bolts and door lock.

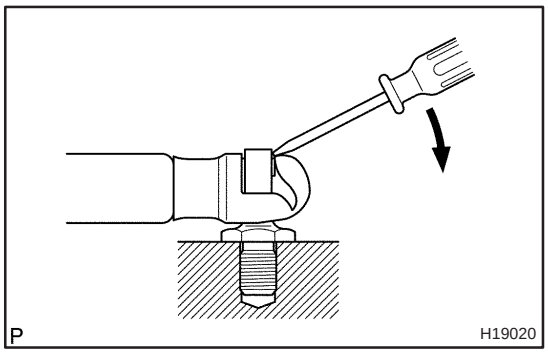
10. BACK DOOR STAY ASSY LH (See page 65–26)

11. BACK DOOR STAY ASSY RH (See page 65–26)

12. INSTALL BACK DOOR LOCK ASSY

(a) Install the door lock with the 3 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)



(b) Connect the door lock connector.

BACK DOOR STAY

750NA–01

REPLACEMENT

HINT:
Use the same procedures on the RH side as on the LH side.

1. REMOVE BACK DOOR STAY ASSY LH

(a) Using a screwdriver, remove the stay from the door panel.

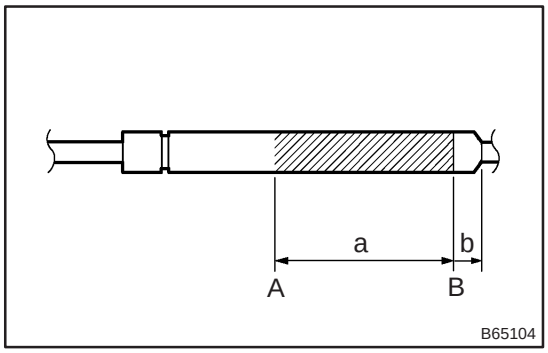
HINT:

- Remove the door stay while supporting the back door with your hands.
- Tape the screwdriver tip before use.

(b) Remove the 2 bolts and stay from the body.

2. INSTALL BACK DOOR STAY ASSY LH

(a) Install the stay with the bolts.



Torque:
22 N·m (264 kgf·cm, 19 ft·lbf) on door side
7.0 N·m (71 kgf·cm, 63 in.·lbf) on body side

750NB–01

DISPOSAL

HINT:

Use the same procedures on the RH side as on the LH side.

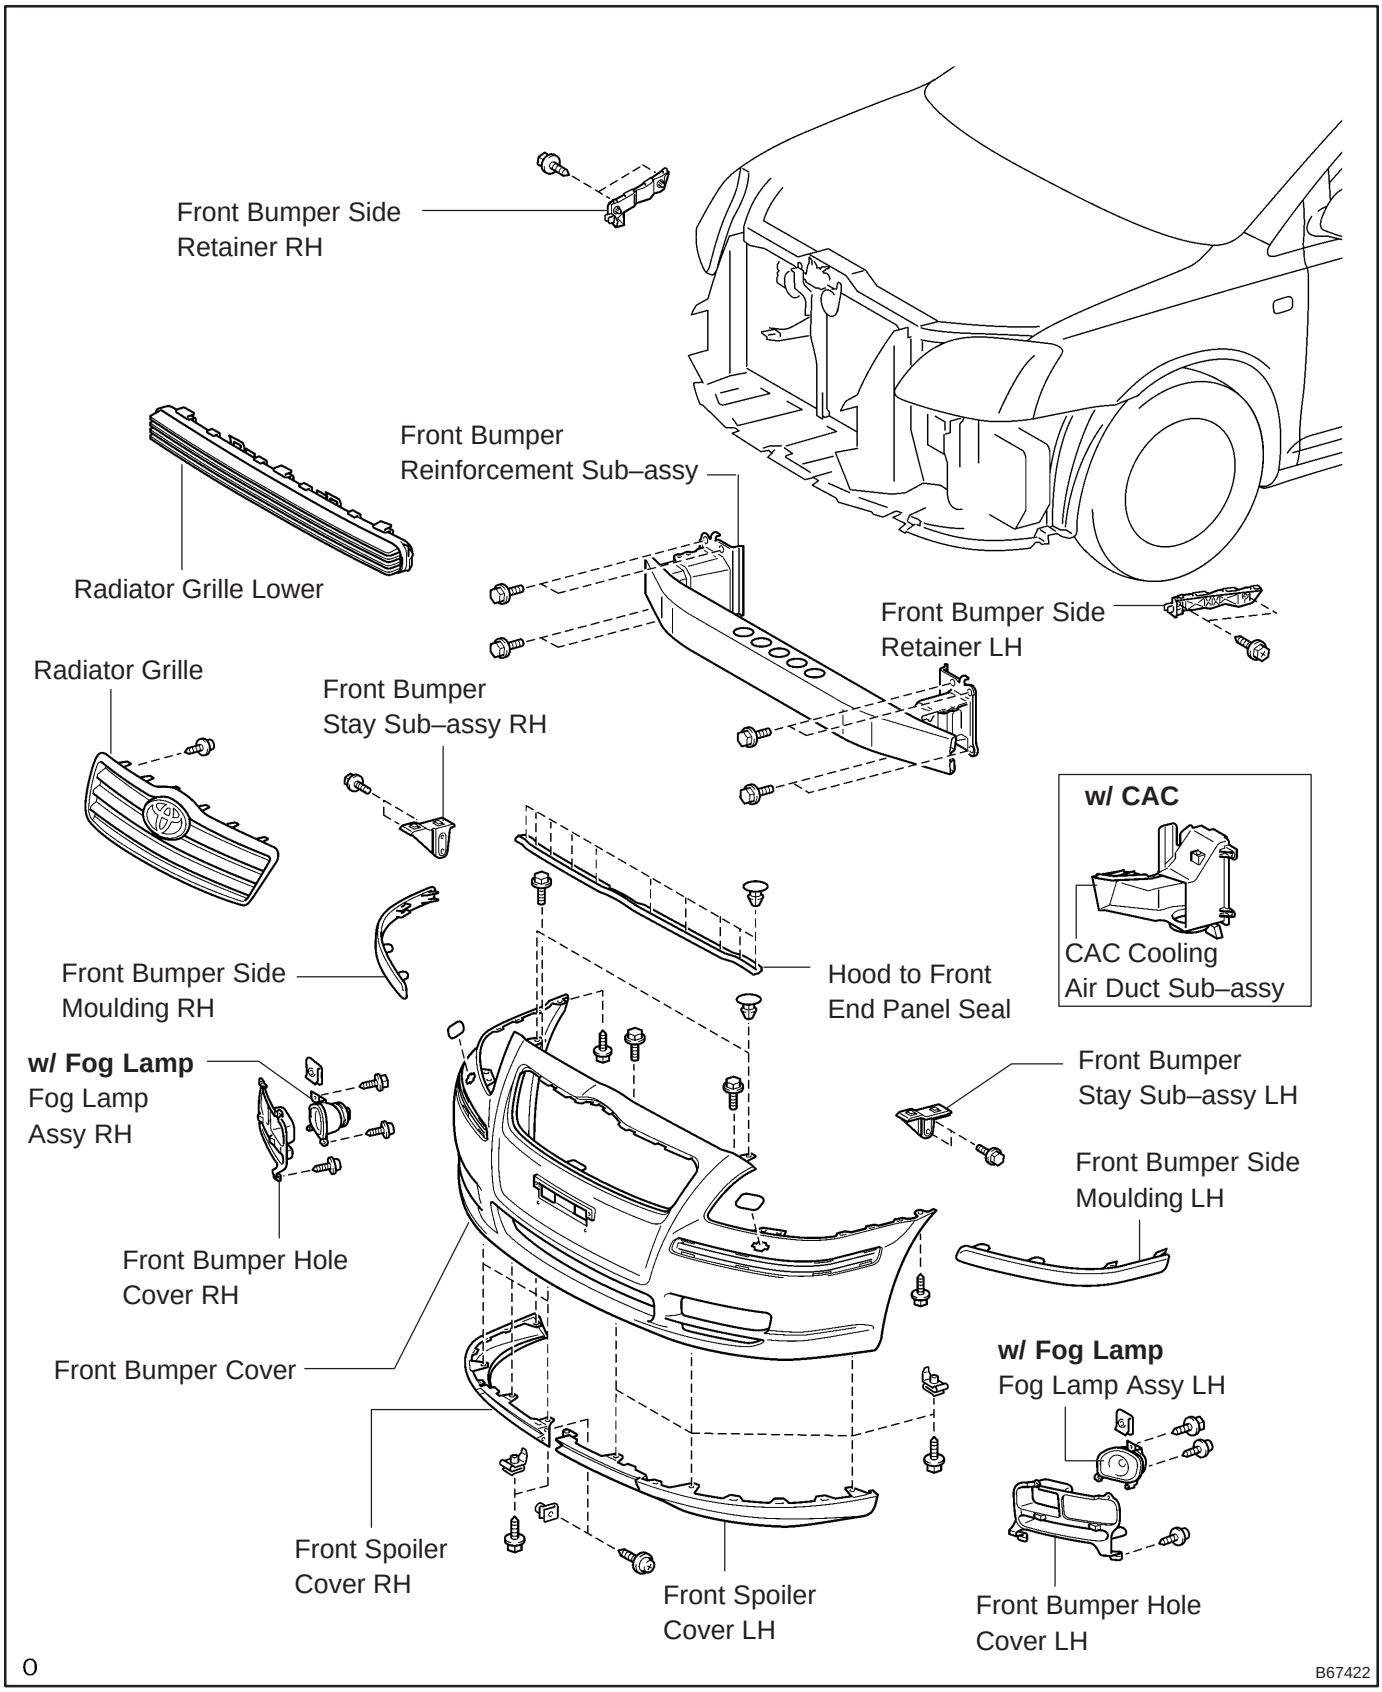
1. DISPOSE OF BACK DOOR STAY ASSY LH

(a) Horizontally fix the stay in a vise with the piston–rod pulled out.

(b) Wearing safety glasses, gradually cut a part between A and B as shown in the illustration using a metal saw to gradually release the gas.

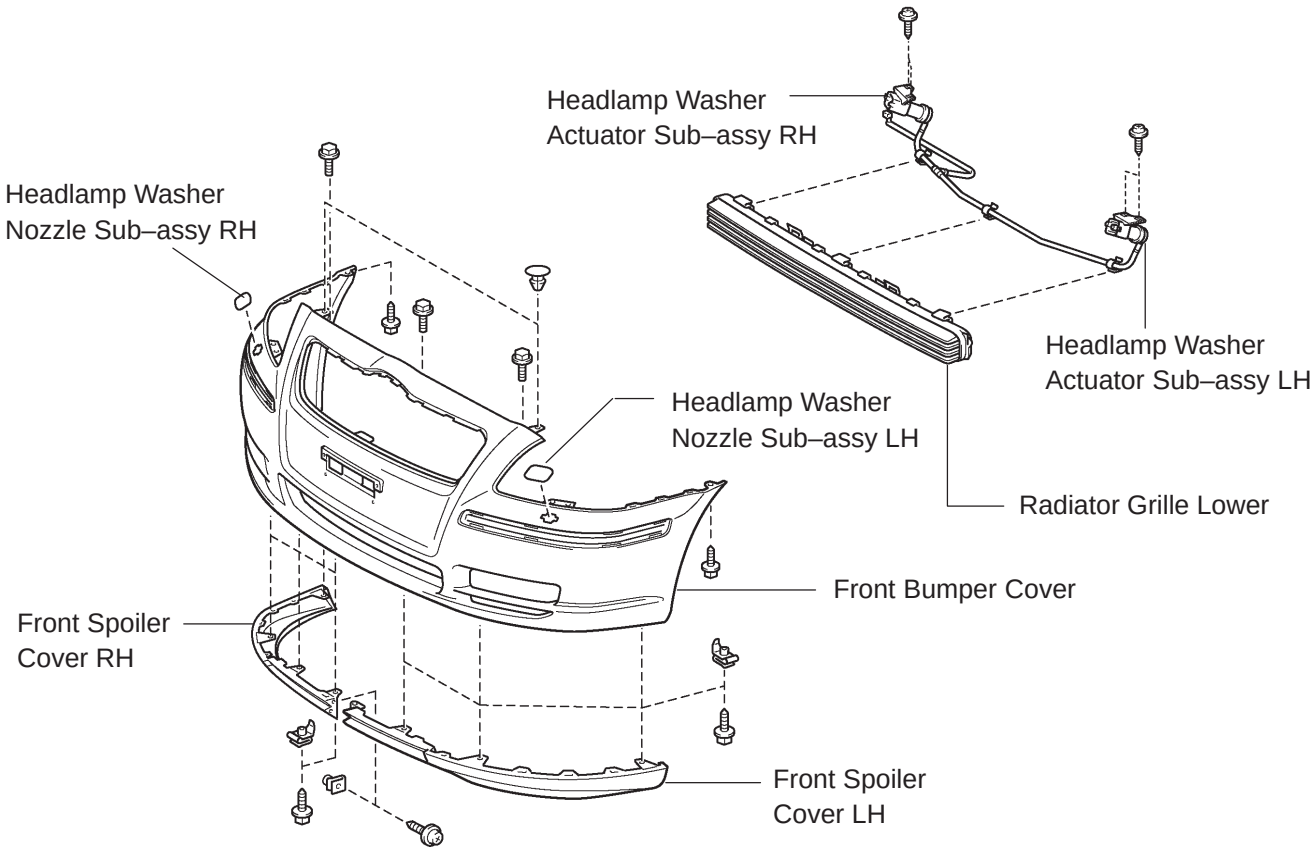
Standard dimension:

a	80 mm (3.15 in.)
b	20 mm (0.80 in.)



NOTICE:

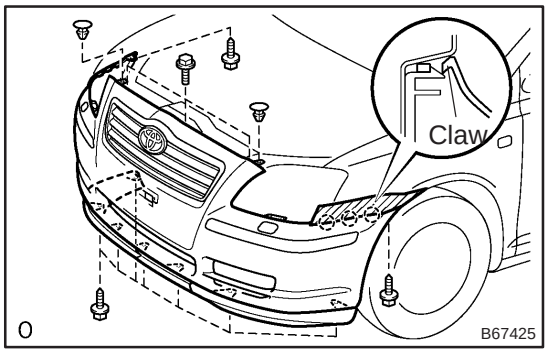
Although the gas inside the stay is colorless, odorless and harmless, there is a possibility that metal debris from cutting could be blown out. Therefore, cover it with clothes or thr like.



FRONT BUMPER

COMPONENTS

760WX–01



w/ Headlamp Cleaner

REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

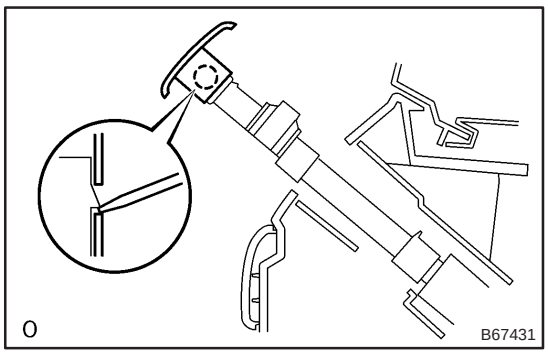
1. REMOVE FRONT BUMPER COVER

(a) Put protective tape under the front fender.

HINT:

Because the spoiler covers LH and RH are assembled, remove them together.

(b) Remove the spoiler.
  (1) Remove the 9 screws and 6 claws.
  (2) Remove the 6 retainers.
  (3) Remove the spoiler covers LH and RH together.
  (4) Remove the bolt and separate the spoiler cover RH from the LH.



(c) Remove the 3 bolts and 2 clips.

(d) Using a screwdriver, disengage the 6 claws and remove the bumper cover.

HINT:

Tape the screwdriver tip before use.

(e) w/ Fog lamp:
  Disconnect the fog lamp connectors.

2. REMOVE HEADLAMP WASHER ACTUATOR SUB–ASSY LH (W/ HEADLAMP CLEANER)

(a) Remove the washer hose clip.

(b) Using a screwdriver, pry out the front washer nozzle.

HINT:

Tape the screwdriver tip before use.

(c) Remove the 2 screws and actuator.

3. REMOVE HEADLAMP WASHER ACTUATOR SUB–ASSY RH (W/ HEADLAMP CLEANER)

HINT:

Use the same procedures described for the LH side.

4. REMOVE INTERCOOLER COOLING AIR DUCT SUB–ASSY (W/ CAC 1CD–FTV ENGINE TYPE)

(a) Remove the 3 screws and air duct.

5. REMOVE FRONT BUMPER REINFORCEMENT SUB–ASSY

(a) Using a screwdriver, remove the wire harness.

(b) Remove the 8 bolts and reinforcement.

6. REMOVE FRONT BUMPER SIDE RETAINER LH

(a) Using a screwdriver, remove the 2 screws and retainer.

HINT:

Tape the screwdriver tip before use.

7. REMOVE FRONT BUMPER SIDE RETAINER RH

HINT:

Use the same procedures described for the LH side.

8. REMOVE FRONT BUMPER STAY SUB–ASSY LH

(a) Remove the 2 bolts and stay.

9. REMOVE FRONT BUMPER STAY SUB–ASSY RH

(a) Remove the 2 bolts and stay.

10. REMOVE FOG LAMP ASSY LH (W/ FOG LAMP)

(a) Remove the 2 screws and fog lamp.

11. REMOVE FOG LAMP ASSY RH (W/ FOG LAMP)

(a) Remove the 2 screws and fog lamp.

12. REMOVE FRONT BUMPER HOLE COVER LH

13. REMOVE FRONT BUMPER HOLE COVER RH

14. REMOVE FRONT BUMPER SIDE MOULDING LH

(a) Using a screwdriver, disengage the 9 claws and remove the retainer.

HINT:

Tape the screwdriver tip before use.

15. REMOVE FRONT BUMPER SIDE MOULDING RH

HINT:

Use the same procedures described for the LH side.

16. REMOVE HOOD TO FRONT END PANEL SEAL

(a) Using a screwdriver, remove the 10 clips and panel seal.

HINT:

Tape the screwdriver tip before use.

17. REMOVE RADIATOR GRILLE

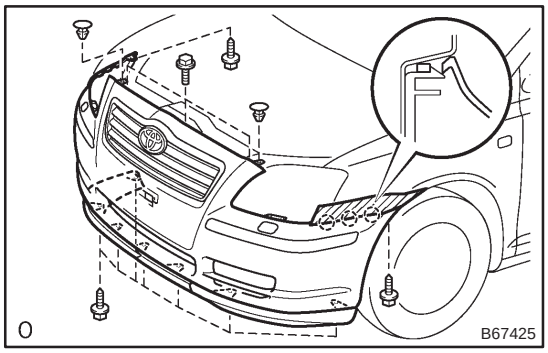
(a) Using a screwdriver, disengage the 13 claws and remove the 2 screws and radiator grille.

HINT:

Tape the screwdriver tip before use.

18. REMOVE RADIATOR GRILLE LOWER

(a) Using a screwdriver, disengage the 10 claws and remove the grille lower.



HINT:

Tape the screwdriver tip before use.

19. INSTALL FRONT BUMPER REINFORCEMENT SUB–ASSY

(a) Install the reinforcement with the 8 bolts.

(b) Install the wire harness.

20. INSTALL FRONT BUMPER COVER

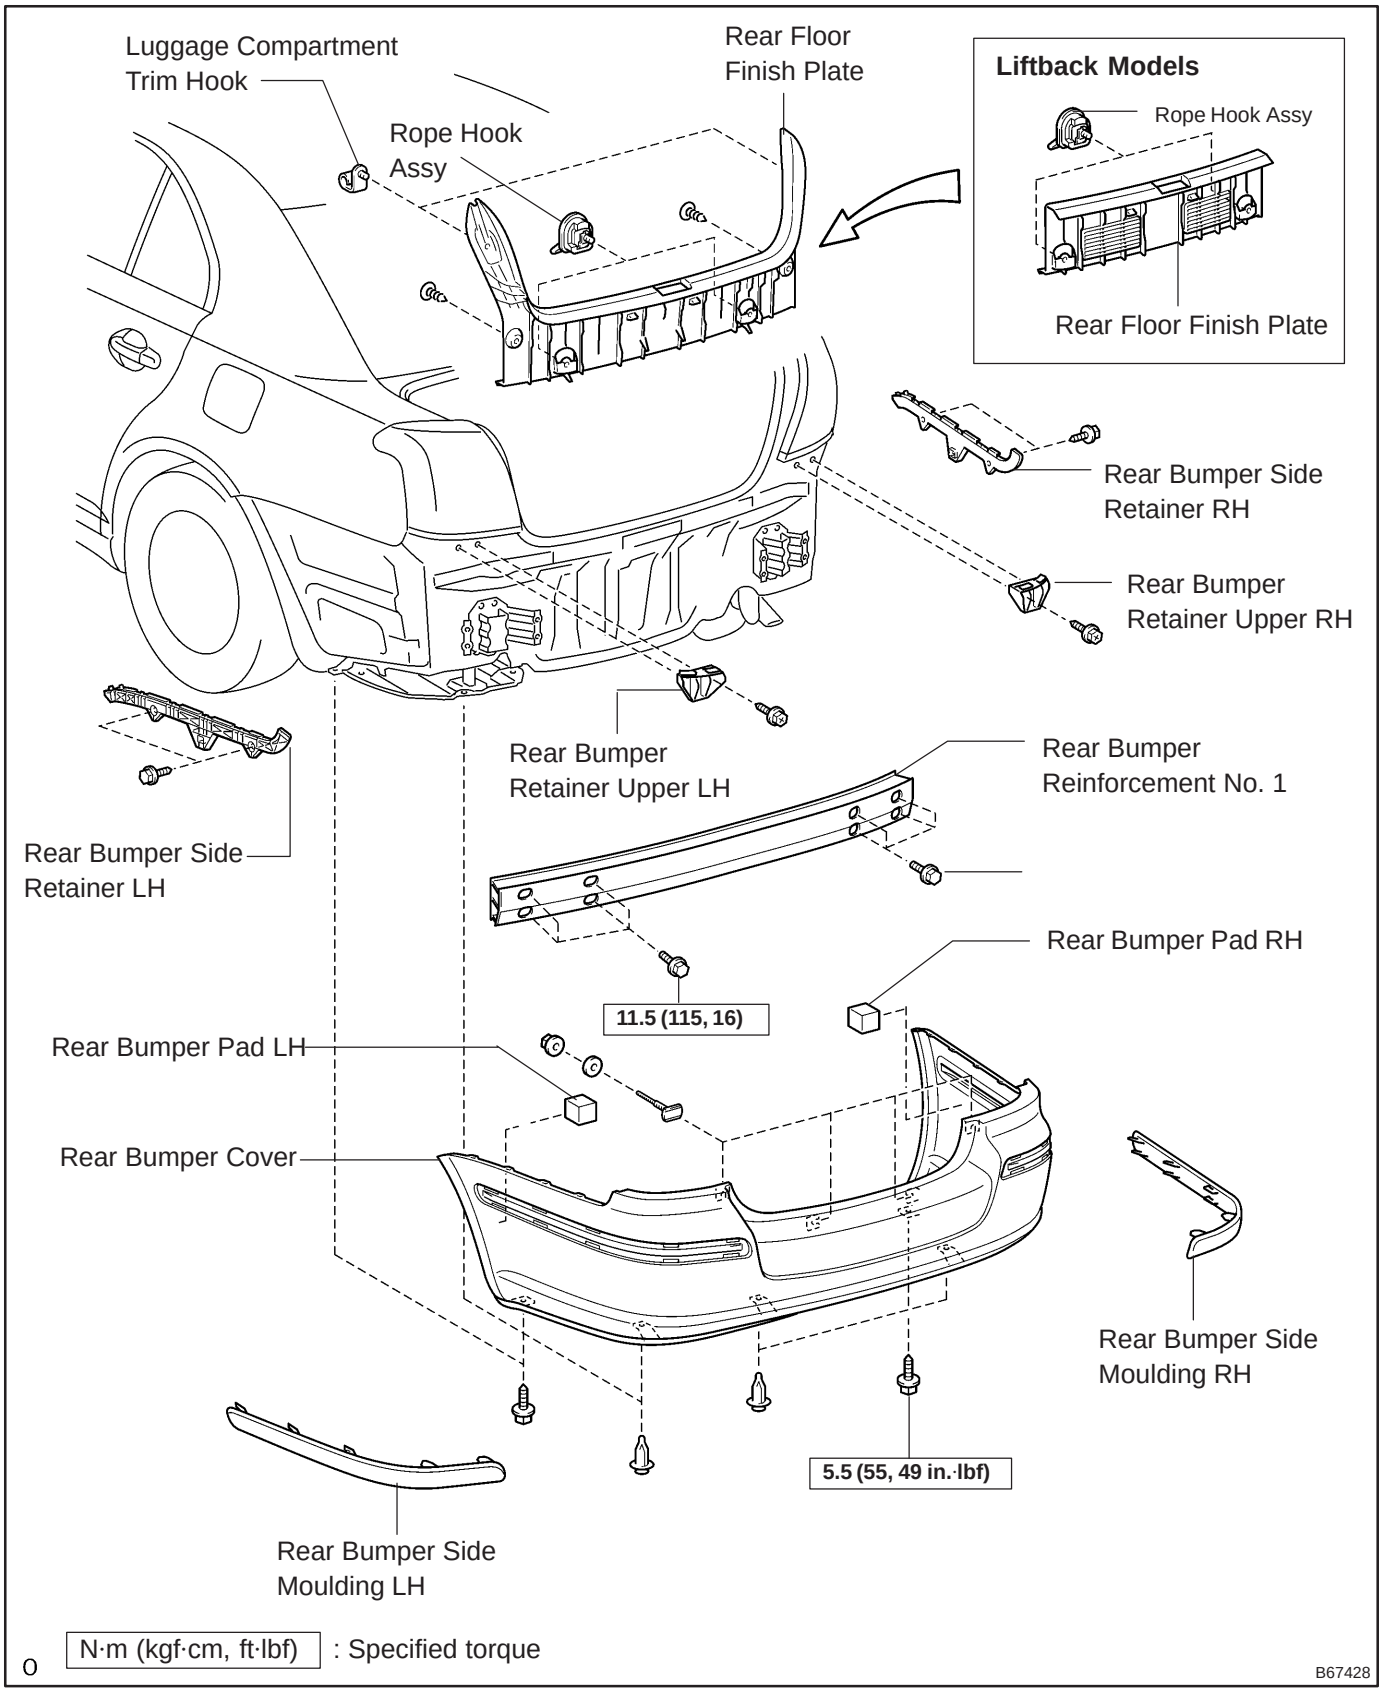
(a) w/ Fog lamp:
Connect the fog lamp connector.

(b) Engage the 6 claws and install the bumper cover.

(c) Install the 3 bolts and 2 clips.

(d) Install the spoiler.

(1) Install the spoiler covers LH and RH together.



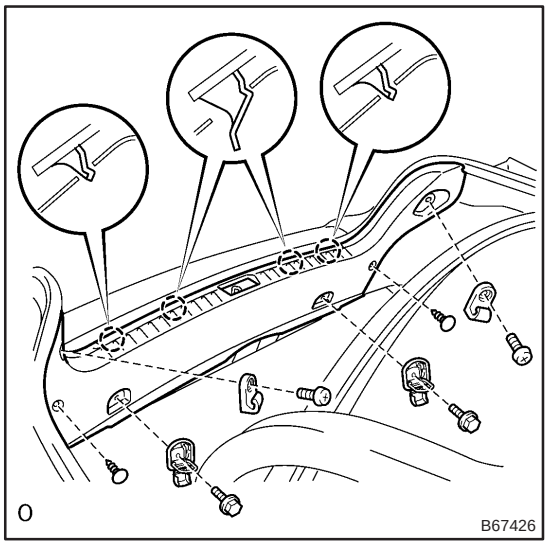
(2) Install the 6 retainers.

(3) Install the 9 screws and 10 claws.

REAR BUMPER (SEDAN/LIFTBACK)

COMPONENTS

760X1–01



760X2–01

REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE REAR FLOOR FINISH PLATE (SEDAN MODELS)

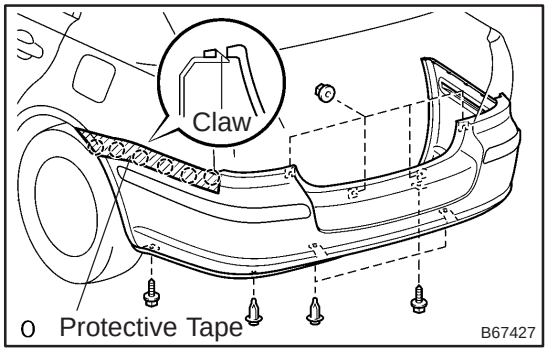
(a) Remove the 2 hooks and 2 rope hooks.

(b) Using a moulding remover, remove the 2 clips and finish plate.

(c) Using a screwdriver, disengage the 4 claws and finish plate.

HINT:

Tape the screwdriver tip before use.



2. REMOVE REAR FLOOR FINISH PLATE (LIFTBACK MODELS)

(a) Remove the 2 bolts and 2 rope hooks.

(b) Using a screwdriver, disengage the 4 claws and finish plate.

HINT:

Tape the screwdriver tip before use.

3. REMOVE REAR BUMPER COVER

(a) Put protective tape under the quarter panel.

(b) Remove the 2 screws, 4 nuts and 3 clips.

(c) Using a screwdriver, disengage the 14 claws and remove the bumper.

HINT:

Tape the screwdriver tip before use.

4. REMOVE REAR BUMPER REINFORCEMENT NO.1

(a) Remove the 8 bolts and reinforcement.

5. REMOVE REAR BUMPER SIDE RETAINER LH

(a) Remove the 2 screws.

(b) Using a screwdriver, remove the retainer.

HINT:

Tape the screwdriver tip before use.

6. REMOVE REAR BUMPER SIDE RETAINER RH

HINT:

Use the same procedures described for the LH side.

7. REMOVE REAR BUMPER RETAINER UPPER LH

(a) Remove the 2 screws.

(b) Using a screwdriver, remove the retainer.

HINT:

Tape the screwdriver tip before use.

8. REMOVE REAR BUMPER RETAINER UPPER RH

HINT:

Use the same procedures described for the LH side.

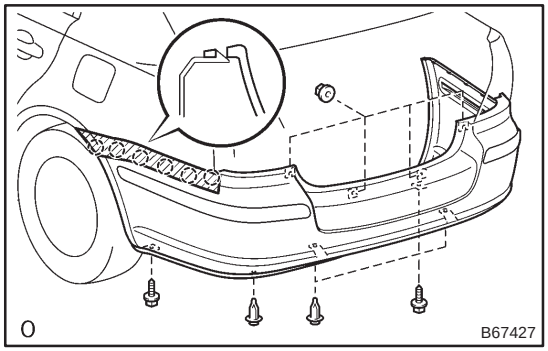
9. REMOVE REAR BUMPER SIDE MOULDING LH

(a) Using a screwdriver, disengage the 10 claws and remove the moulding.

HINT:

Tape the screwdriver tip before use.

10. REMOVE REAR BUMPER SIDE MOULDING RH



HINT:

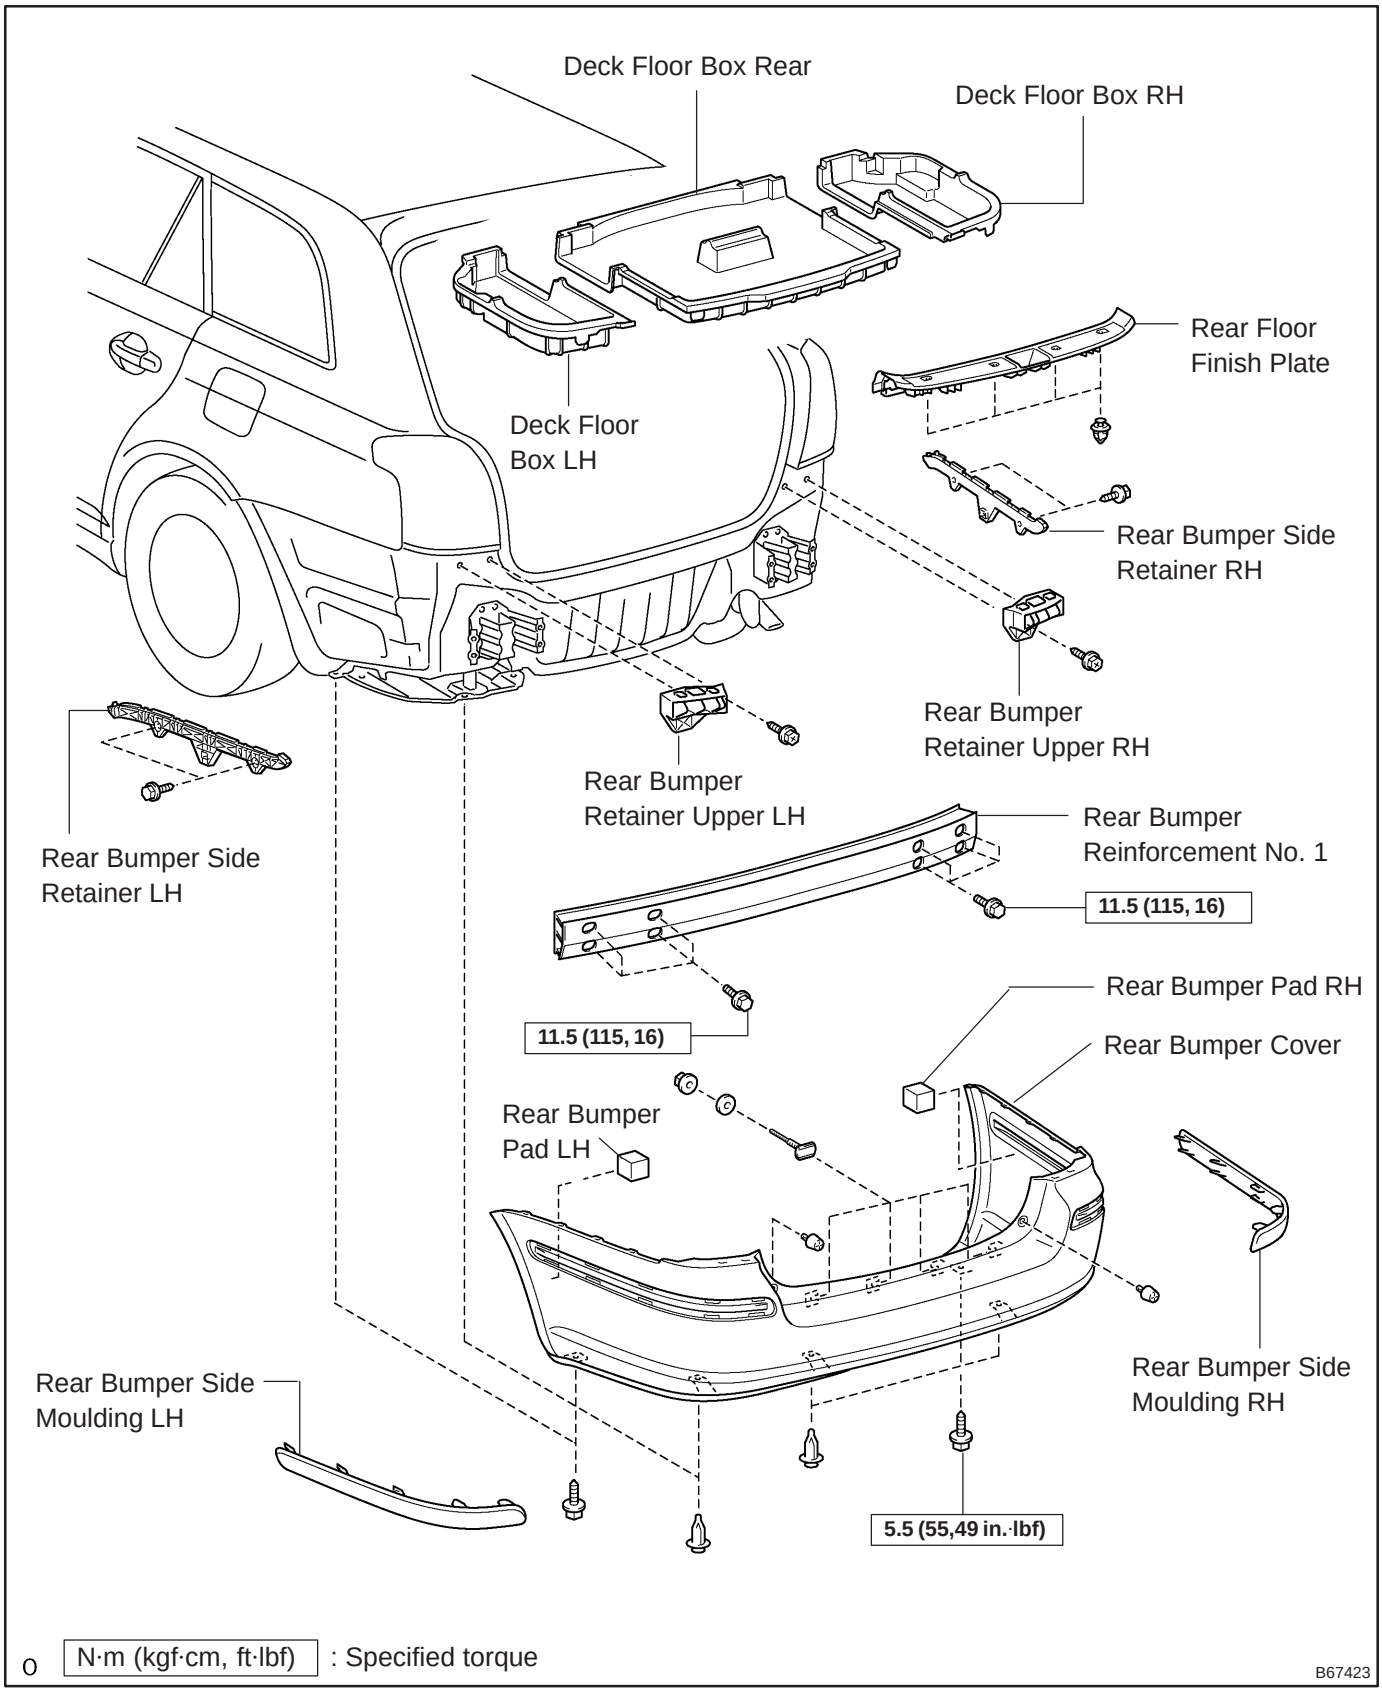
Use the same procedures described for the LH side.

11. INSTALL REAR BUMPER REINFORCEMENT NO.1

(a) Install the reinforcement with the 8 bolts.

Torque: 11.5 N·m (115 kgf·cm, 16 ft·lbf)

12. INSTALL REAR BUMPER COVER



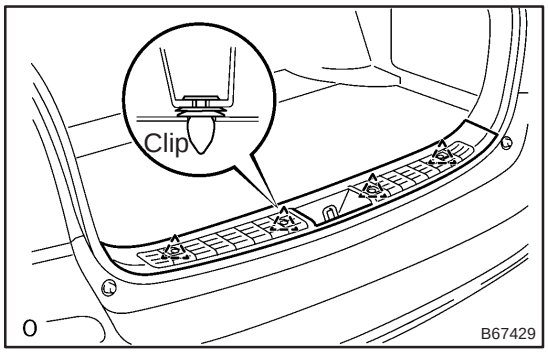
(a) Install the bumper cover with the 4 nuts, 2 screws and 3 clips.

Torque: 5.5 N·m (55 kgf·cm, 49 in.·lbf) for screw

REAR BUMPER (WAGON MODELS)

760X3–01

COMPONENTS



760X4–01

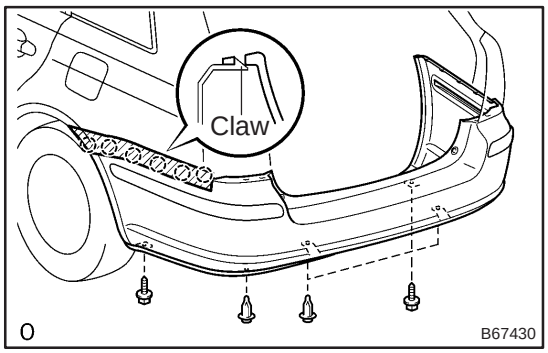
REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE REAR FLOOR FINISH PLATE

(a) Using a screwdriver, remove the 4 clips and finish plate.



HINT:

Tape the screwdriver tip before use.

2. REMOVE DECK FLOOR BOX REAR (See page 76–54)

3. REMOVE DECK FLOOR BOX LH (See page 76–54)

4. REMOVE DECK FLOOR BOX RH (See page 76–54)

5. REMOVE REAR BUMPER COVER

(a) Put protective tape under the quarter panel.

(b) Remove the 2 screws, 3 clips and 4 nuts.

(c) Using a screwdriver, disengage the 16 claws and remove the bumper cover.

HINT:

Tape the screwdriver tip before use.

6. REMOVE REAR BUMPER REINFORCEMENT NO.1

(a) Remove the 8 bolts and reinforcement.

7. REMOVE REAR BUMPER SIDE RETAINER LH

(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the 3 claws and remove the side retainer.

HINT:

Tape the screwdriver tip before use.

8. REMOVE REAR BUMPER SIDE RETAINER RH

HINT:

Use the same procedures described for the LH side.

9. REMOVE REAR BUMPER RETAINER UPPER LH

(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the claw and remove the retainer upper.

HINT:

Tape the screwdriver tip before use.

10. REMOVE REAR BUMPER RETAINER UPPER RH

HINT:

Use the same procedures described for the LH side.

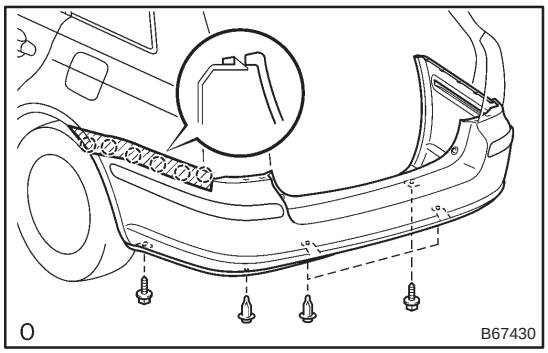
11. REMOVE REAR BUMPER SIDE MOULDING LH

(a) Using screwdriver, remove the moulding.

HINT:

Tape the screwdriver tip before use.

12. REMOVE REAR BUMPER SIDE MOULDING RH



HINT:

Use the same procedures described for the LH side.

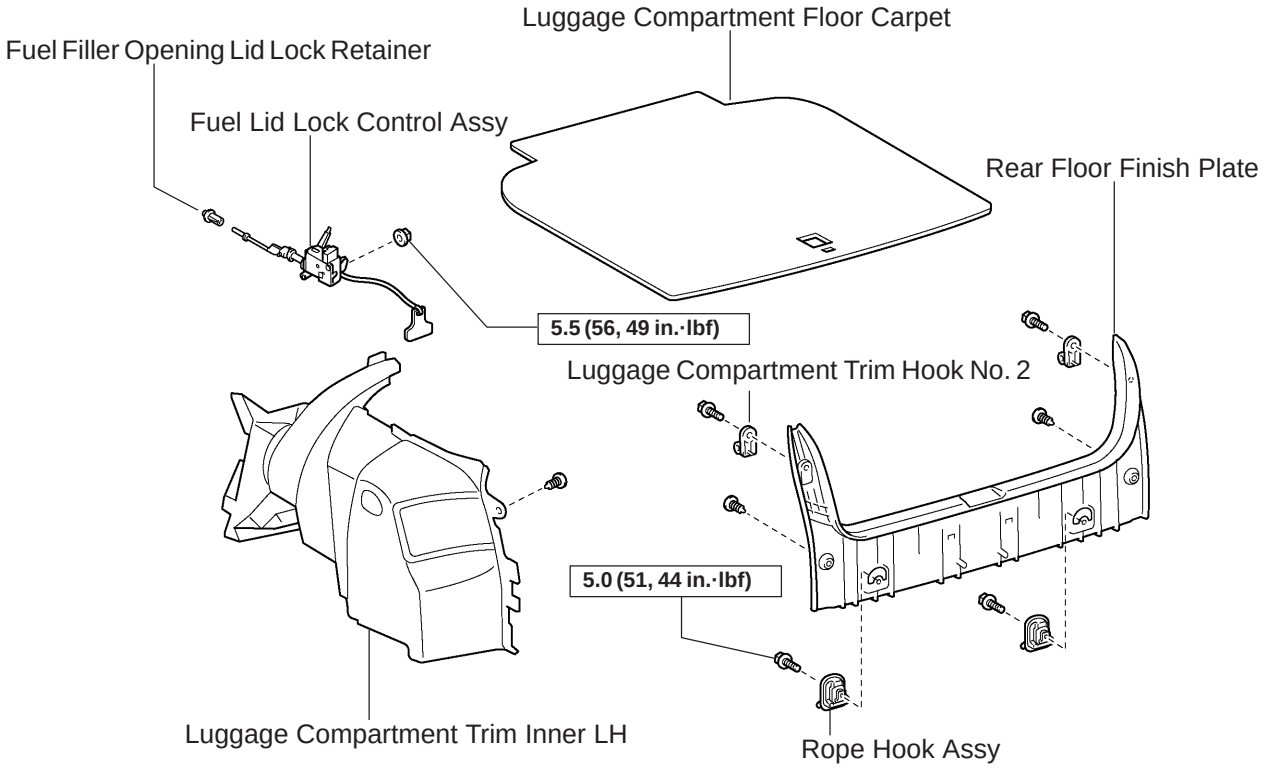
13. INSTALL REAR BUMPER REINFORCEMENT NO.1

(a) Install the reinforcement with the 8 bolts.

Torque: 11.5 N·m (115 kgf·cm, 16 ft·lbf)

14. INSTALL REAR BUMPER COVER

(a) Install the bumper cover with the 2 screws, 3 clips and 4 nuts.



Torque: 5.5 N·m (55 kgf·cm, 49 in.·lbf) for screw

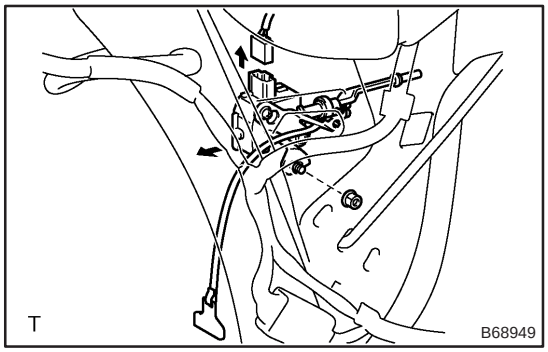
REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

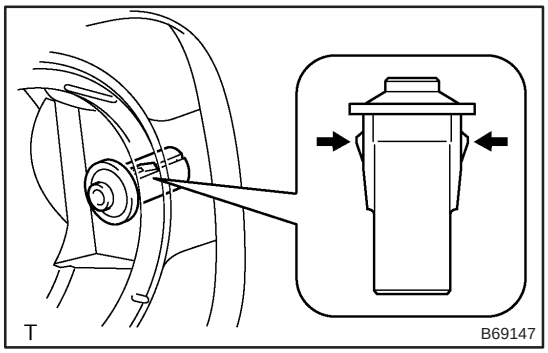
1. REMOVE LUGGAGE COMPARTMENT TRIM COVER INNER LH (SEDAN MODELS) (See page 76–36)



(a) Remove the luggage compartment floor carpet.
(b) Remove the 2 rope hooks.
(c) Remove the rear floor finish plate.
(d) Remove the 2 luggage compartment trim hooks.
(e) Remove the luggage compartment trim inner.

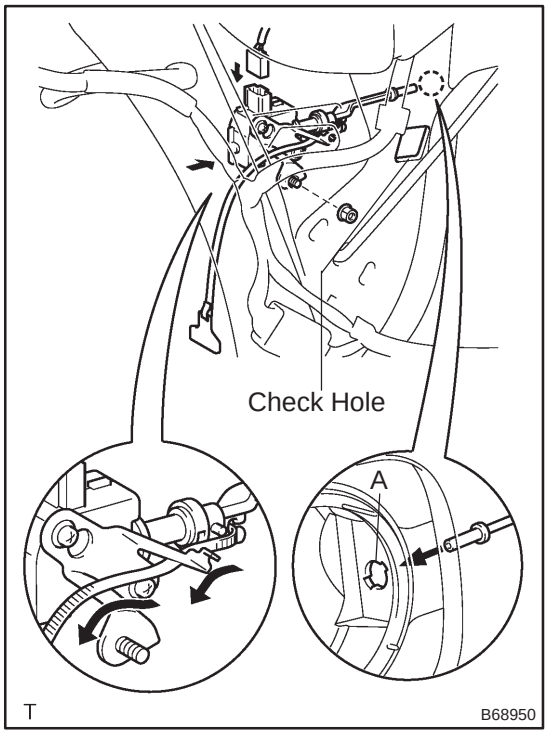
2. REMOVE DECK TRIM SIDE BOARD LH (LIFTBACK MODELS) (See page 76–45)

(a) Remove the 2 rope hooks.
(b) Remove the rear floor finish plate.
(c) Remove the rear door opening trim weatherstrip LH.
(d) Remove the rear door scuff plate LH.
(e) Remove the deck trim side board.



3. REMOVE DECK TRIM SIDE PANEL ASSY LH (WAGON MODELS) (See page 76–54)

(a) Remove the rear door opening trim weatherstrip LH
(b) Remove the rear door scuff plate.
(c) Remove the tonneau cover.
(d) Remove the deck board.
(e) Remove the deck floor box rear.
(f) Remove the deck floor box LH.
(g) Remove the deck floor box front.
(h) Remove the rear floor finish plate.
(i) Remove the luggage compartment trim hook No. 2.
(j) Remove the deck trim side board.

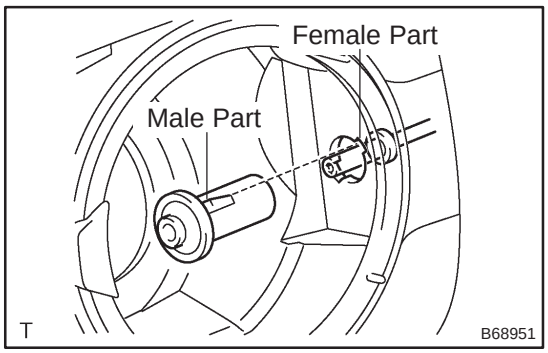


4. REMOVE FUEL LID LOCK CONTROL ASSY

(a) Disconnect the connector.
(b) Remove the nut and fuel lid lock control.

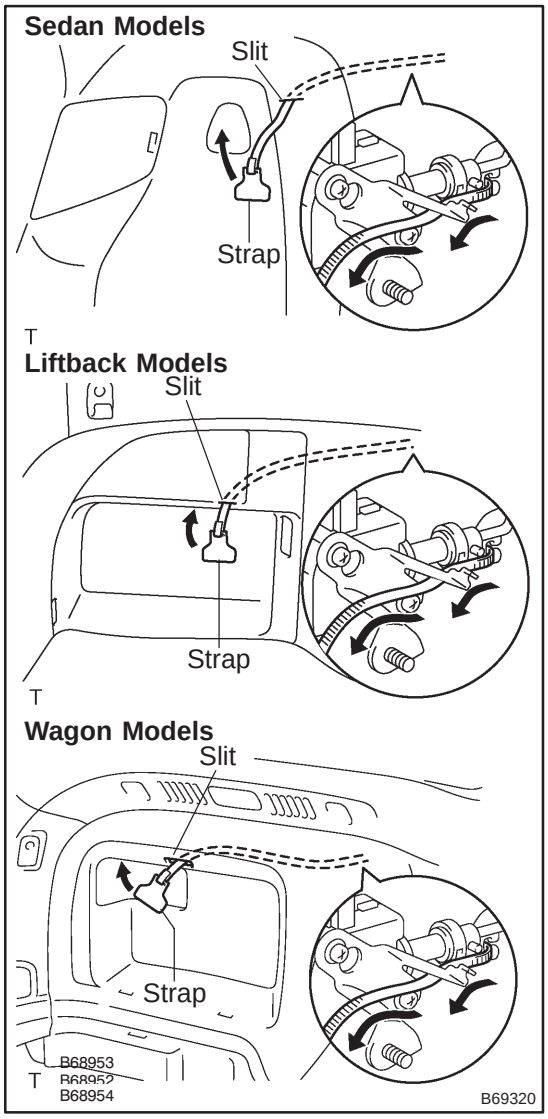
5. REMOVE FUEL FILLER OPENING LID LOCK RETAINER

(a) Remove the fuel filler opening lid lock retainer, as shown in the illustration.



6. INSTALL FUEL LID LOCK CONTROL ASSY

(a) Install the fuel lid lock control with the the nut.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

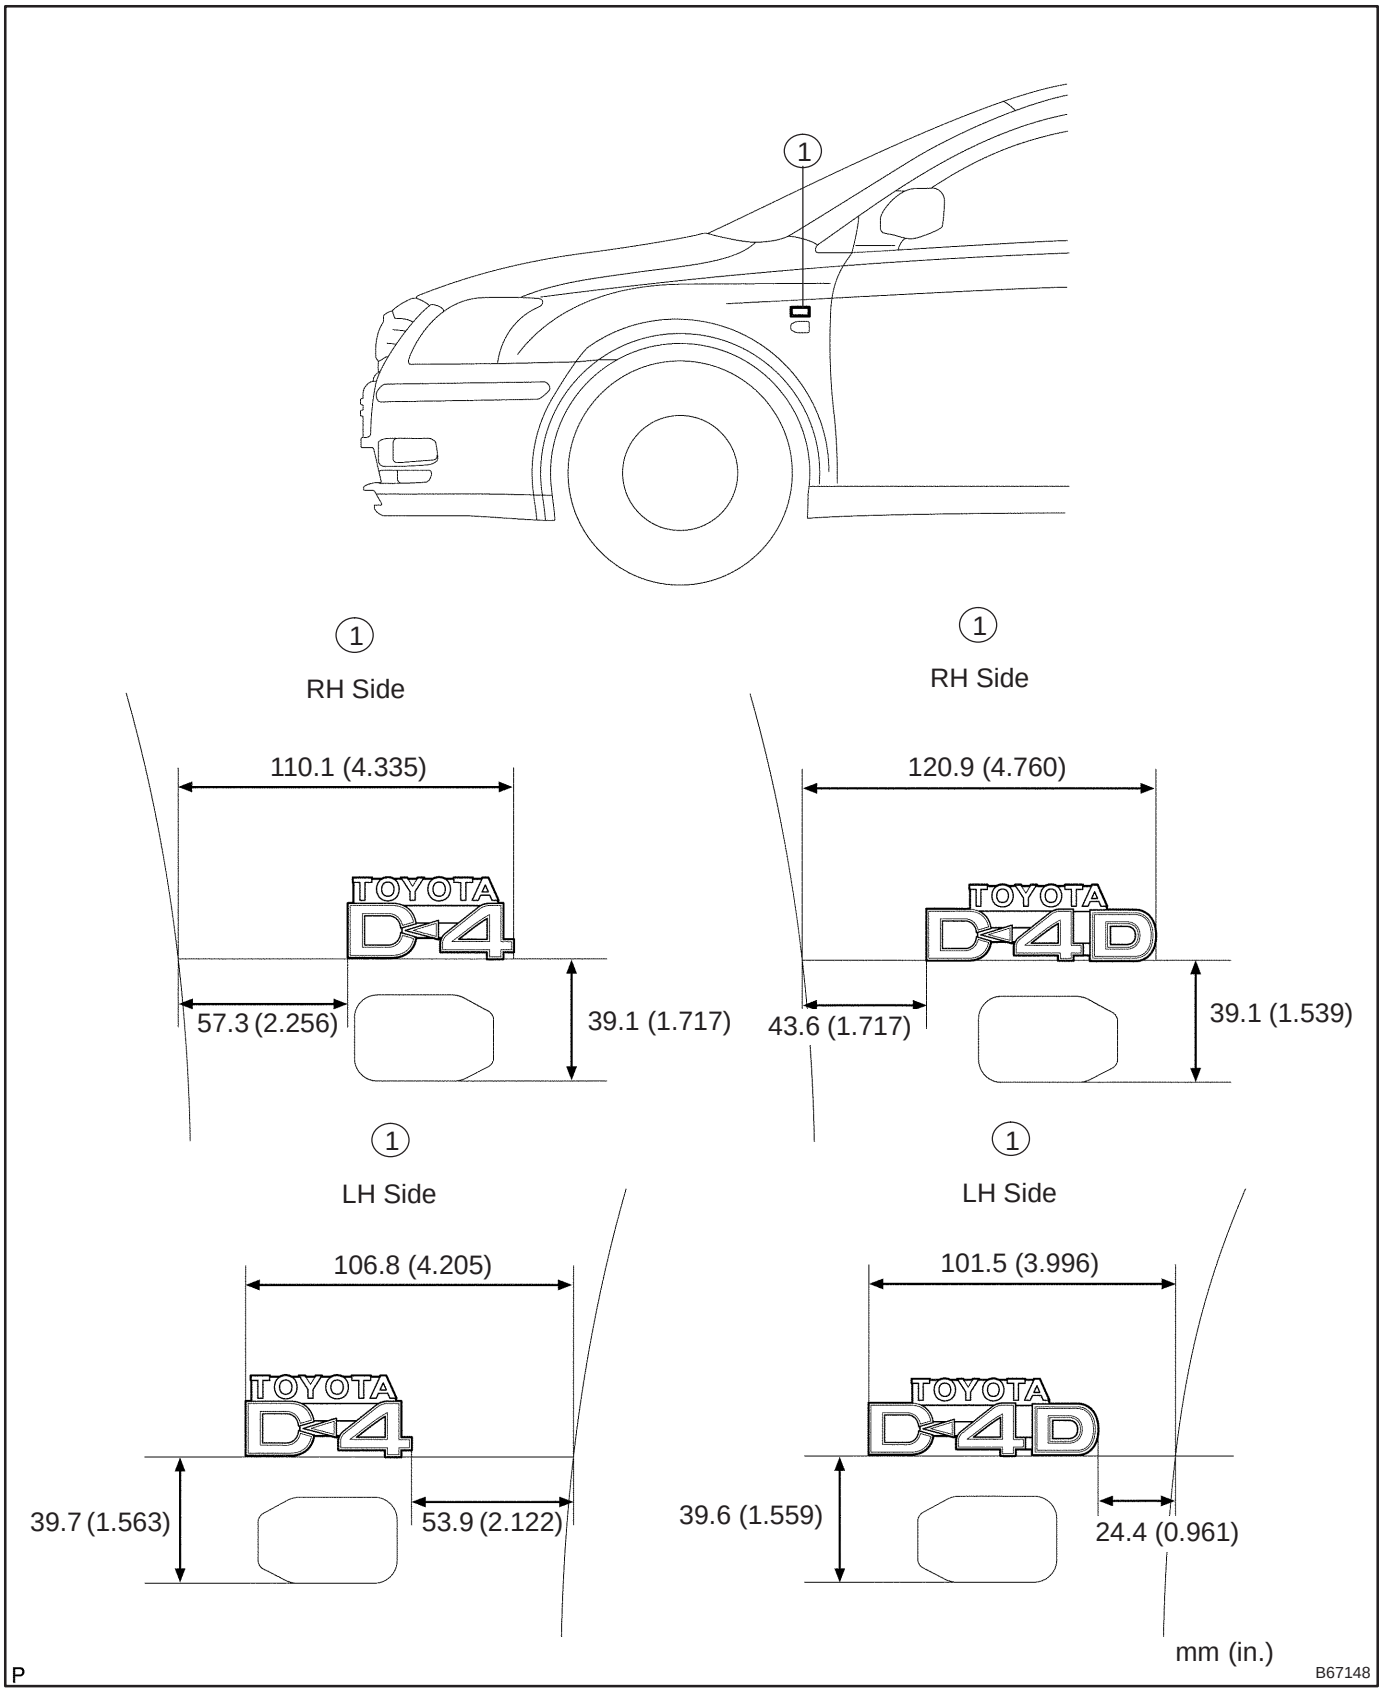


HINT:

Check to see that the tip of the lock is securely insearted into hole A, looking inside through the check hole.

7. INSTALL FUEL FILLER OPENING LID LOCK RETAINER

(a) Install the fuel filler opening lid lock retainer as shown in the illustration.



(b) Pass the strap through the slit on the trim as shown in the illustration.

(c) Attach a strap to the trim.

OUTSIDE MOULDING LH

760W5–01

REPLACEMENT

HINT:
On the RH side, use the same procedures as on the LH side.

1. REMOVE OUTSIDE MOULDING LH

(a) Using a heat light, heat the moulding.
Heating temprature: 40 – 60°C (104 – 140°F)

NOTICE:
Do not heat the moulding excessively.

(b) Tie both the piano wire ends to a wooden block or a similar object.

(c) Scrape tape off by pulling the piano wire and remove the moulding with reference pins remaining on the moulding.

NOTICE:
- **If reusing the moulding, take care not to damage the moulding.**
- **Do not damage the body.**

(d) Remove the moulding.

2. INSTALL OUTSIDE MOULDING LH

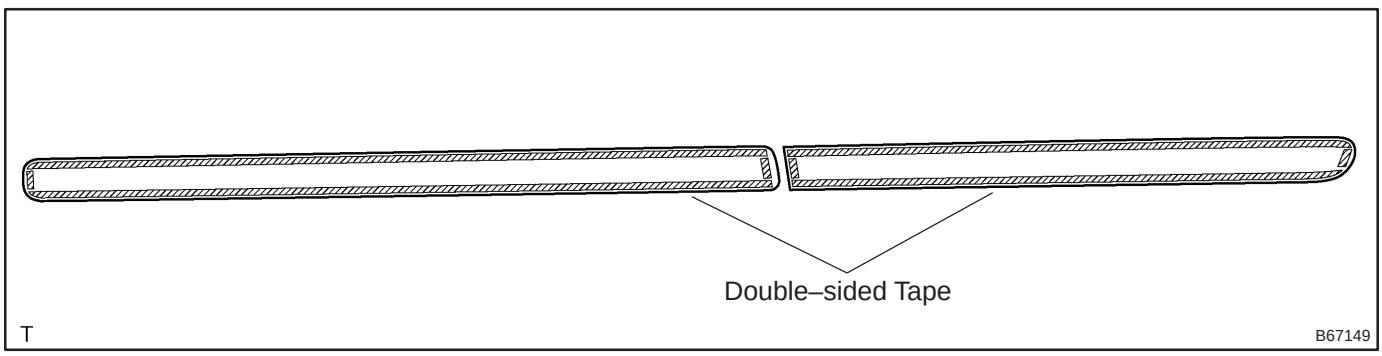
(a) Using a heat light, heat the body surface.
Heating temprature: 40 – 60°C (104 – 140°F)

NOTICE:
Do not heat the body excessively.

(b) Remove the tape from the body.

(c) Wipe off the stains with cleaner.

(d) Clean the moulding (if reusing the moulding).



(1) Using a heat light, heat the moulding.
Heating temprature: 20 – 30°C (68 – 86°F)

NOTICE:
Do not heat the moulding excessively.

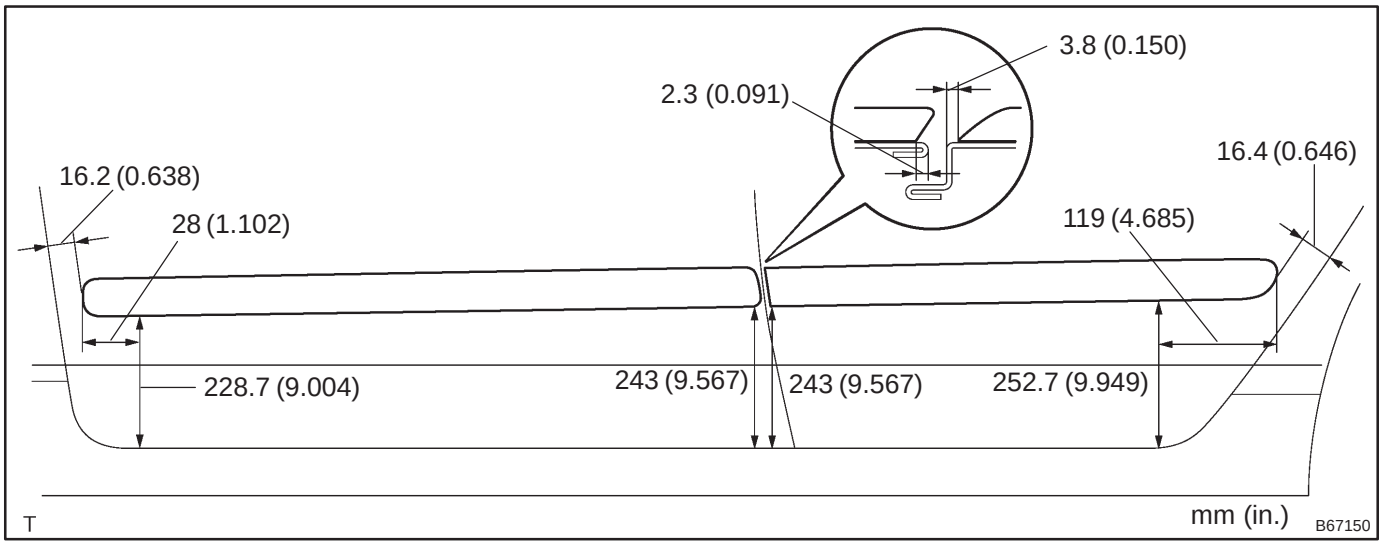
(2) Remove the tape from the moulding.

(3) Wipe off the stains with cleaner.

(4) Apply new double–sided tape to the moulding as shown in the illustration.

(e) Using a heat light, heat the body and moulding.
Heating temperature:

Body	40 – 60°C (104 – 140°F)
Moulding	20 – 30°C (68 – 86°F)



NOTICE:
Do not heat the body and moulding excessively.

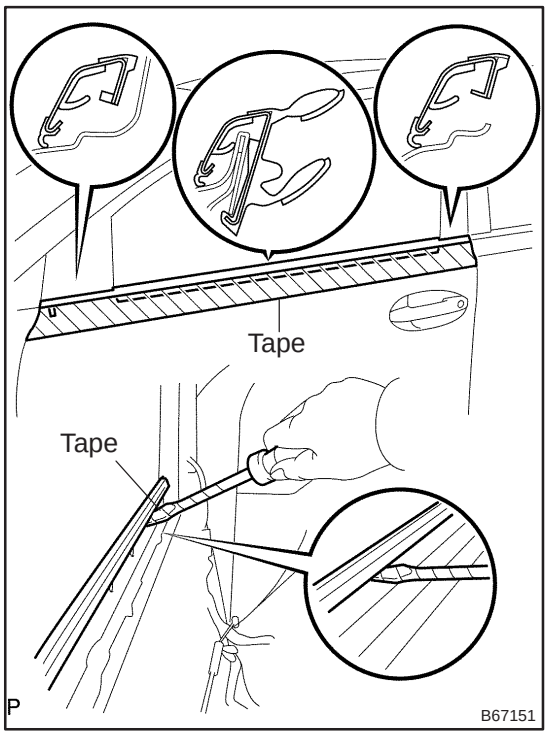
(f) Remove the peeling paper from the face of the moulding and attach the moulding securely to the vehicle body.

NOTICE:
Be careful that dirt or foreign objects do not stick to adhesive part when removeing the peeling paper.

(g) Push the moulding to the body, as shown in the illustration.

NOTICE:
Do not apply excessive force onto the moulding. Instead, apply steady pressure with your thumbs.

FRONT DOOR BELT MOULDING ASSY LH



760W6–01

REPLACEMENT

HINT:

- The installation is in the reverse order of the removal.
- On the RH side, use the same procedures as on the LH side.

1. **REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSY (W/O POWER WINDOW) (See page 75–8)**
2. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page 75–8)**
3. **REMOVE FRONT DOOR TRIM BASE LH (See page 75–8)**
4. **REMOVE FUEL LID OPENER SWITCH (See page 75–8)**
5. **REMOVE POWER WINDOW REGULATOR SWITCH ASSY (W/ POWER WINDOW) (See page 75–8)**
6. **REMOVE FRONT DOOR TRIM BOARD SUB–ASSY LH (See page 75–8)**
7. **REMOVE FRONT DOOR INSIDE HANDLE SUB–ASSY LH (See page 75–8)**
8. **REMOVE FRONT DOOR GLASS WEATHERSTRIP INNER LH (See page 75–8)**

9. **REMOVE FRONT DOOR BELT MOULDING ASSY LH**

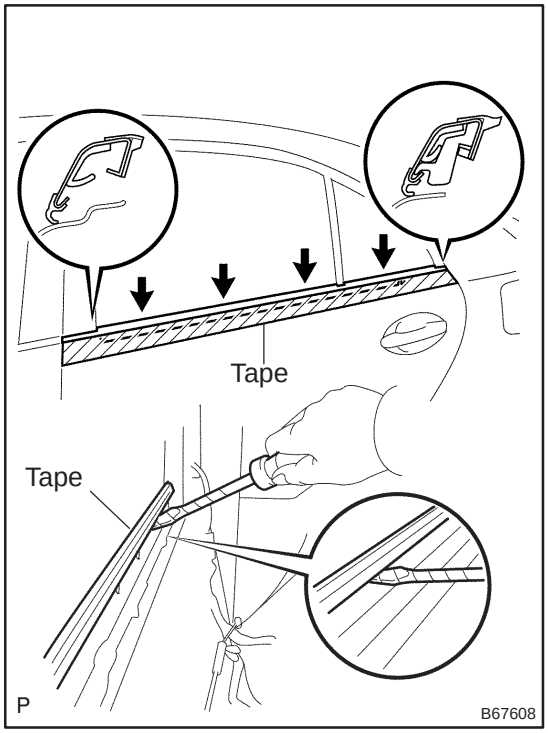
(a) Put protective tape under the moulding.

(b) Using a screwdriver or moulding remover, pry out the claws and remove the moulding.

HINT:

Tape the screwdriver tip before use.

REAR DOOR BELT MOULDING ASSY LH



760W7–01

REPLACEMENT

HINT:

- The installation is in the reverse order of the removal.
- On the RH side, use the same procedures as on the LH side.

1. **REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSY (See page 75–22)**
2. **REMOVE REAR DOOR TRIM BASE LH (See page 75–22)**
3. **REMOVE POWER WINDOW REGULATOR SWITCH ASSY REAR (W/ POWER WINDOW) (See page 75–22)**
4. **REMOVE REAR DOOR TRIM BOARD SUB–ASSY LH (See page 75–22)**
5. **REMOVE REAR DOOR GLASS WEATHERSTRIP INNER LH (See page 75–22)**
6. **REMOVE REAR DOOR SERVICE HOLE COVER LH (See page 75–22)**

7. **REMOVE REAR DOOR BELT MOULDING ASSY LH**

(a) Put protective tape under the moulding.

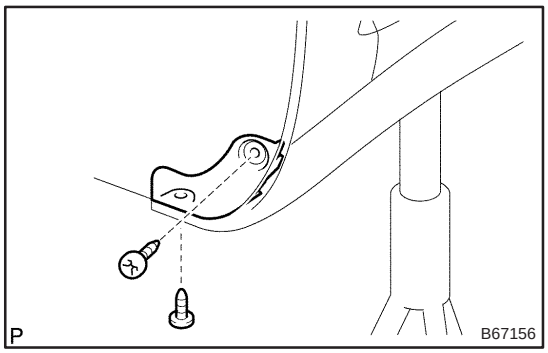
(b) Using a screwdriver or moulding remover, pry out the claws and remove the moulding.

HINT:

Tape the screwdriver tip before use.

ROCKER PANEL MOULDING LH

760W8–01

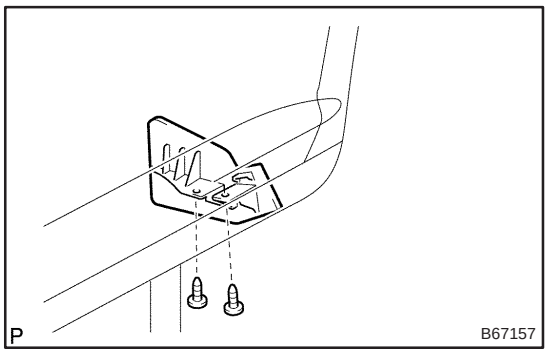


REPLACEMENT

HINT:

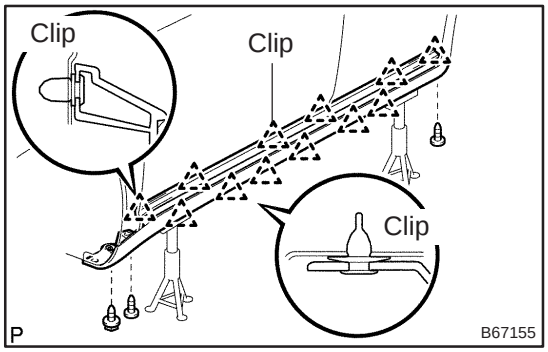
- The installation is in the reverse order of the removal.
- Use the same procedures on the RH side as on the LH side.

1. REMOVE FRONT WHEEL



2. REMOVE REAR WHEEL

3. REMOVE SIDE MUDGUARD FRONT LH



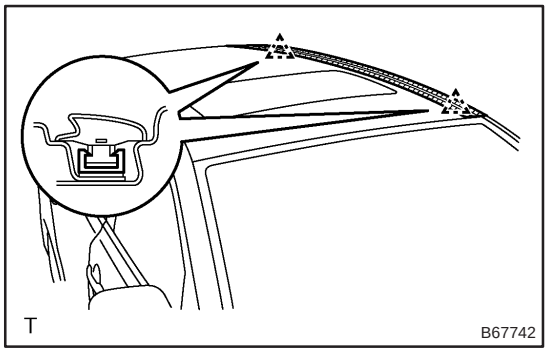
(a) Remove the 2 screws and mudguard.

(b) Remove the 2 screws and wheel house plate.

4. REMOVE REAR WHEEL HOUSE PLATE FRONT LH

(a) Remove the 2 screws and wheel house plate.

5. REMOVE ROCKER PANEL MOULDING LH



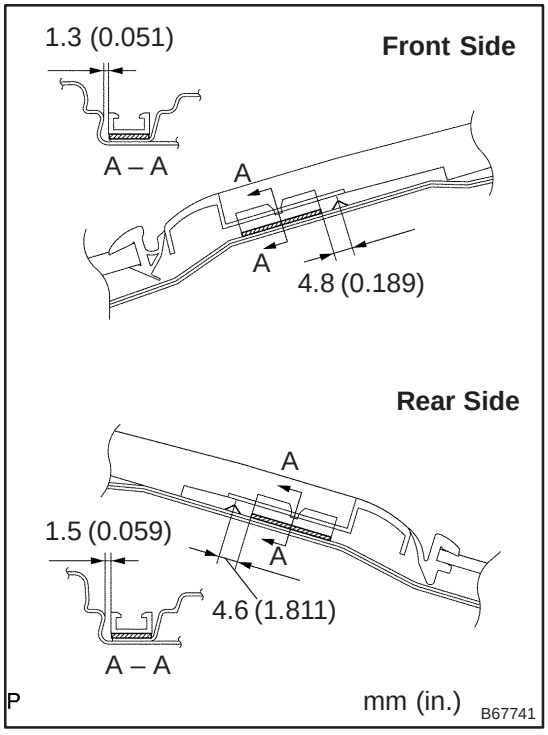
(a) Remove the 3 screws, 12 clips and moulding.

ROOF DRIP SIDE FINISH MOULDING CENTER LH

760WE–01

REPLACEMENT

HINT:
Use the same procedures on the RH side as on the LH side.



1. REMOVE ROOF DRIP SIDE FINISH MOULDING CENTER LH

(a) Put the protective tape around the circumference of the moulding.

(b) Using a remover for the roof moulding, release the disengage the clips both in the front and rear ends of the moulding, and then remove the moulding.

NOTICE:

- **Do not remove the clips.**
- **If that the clips are damaged or removed accidentally, exchange them for supplied ones.**

2. INSTALL ROOF DRIP SIDE FINISH MOULDING CENTER LH

NOTICE:

Only when exchanging the clips.

(a) Remove the tape that remains on the mounting surface of the body, and then clean the surface with white gasoline.

(b) Using a heat light, heat up the clip installation surfaces of the body and moulding.

Heating temperature:

Body	40 – 60°C (104 – 140°F)
Moulding	20 – 30°C (68 – 86°F)

NOTICE:

Do not heat the moulding and body excessively.

(c) Set the supplied clips in the positions as shown in the illustration and press–fit them by hand to install them.

NOTICE:

Install the moulding when 30 minutes or more have passed after press–fitting the clips.

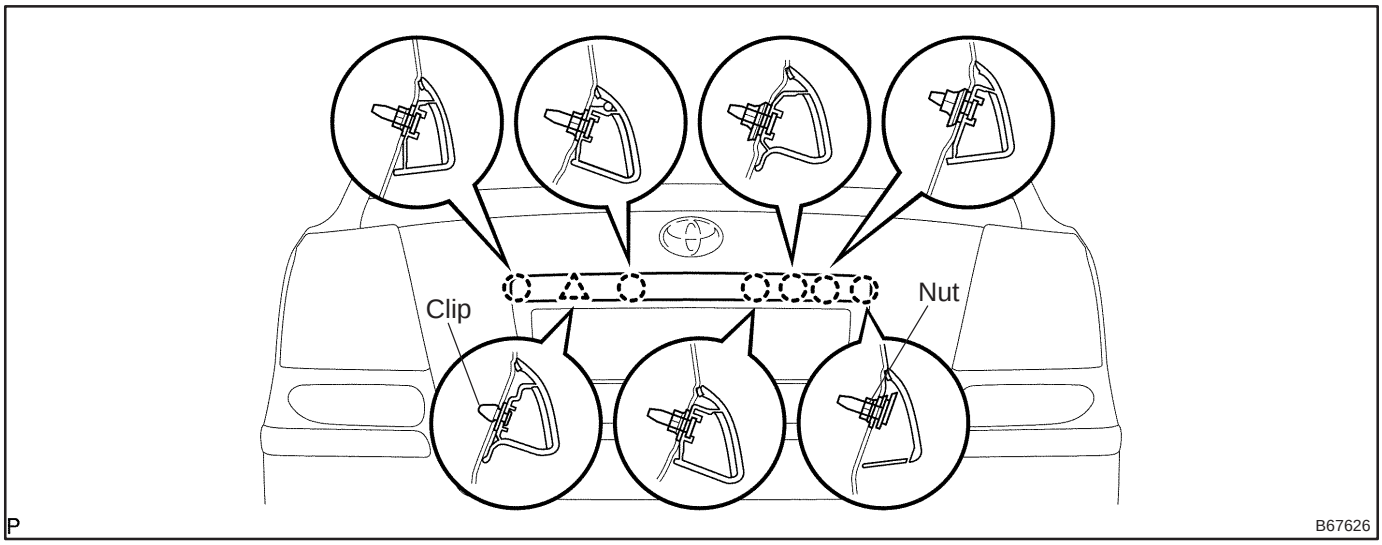
HINT:

- Initial hardening time: 30 minutes
- Perfect hardening time: 24 hours

LUGGAGE COMPARTMENT DOOR GARNISH SUB–ASSY OUTSIDE (SEDAN MODELS)

760W9–01

REPLACEMENT



HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE BACK DOOR TRIM COVER (See page 75–32)

2. REMOVE LUGGAGE COMPARTMENT DOOR GARNISH SUB–ASSY OUTSIDE

(a) Remove the 6 nuts, clip and garnish.

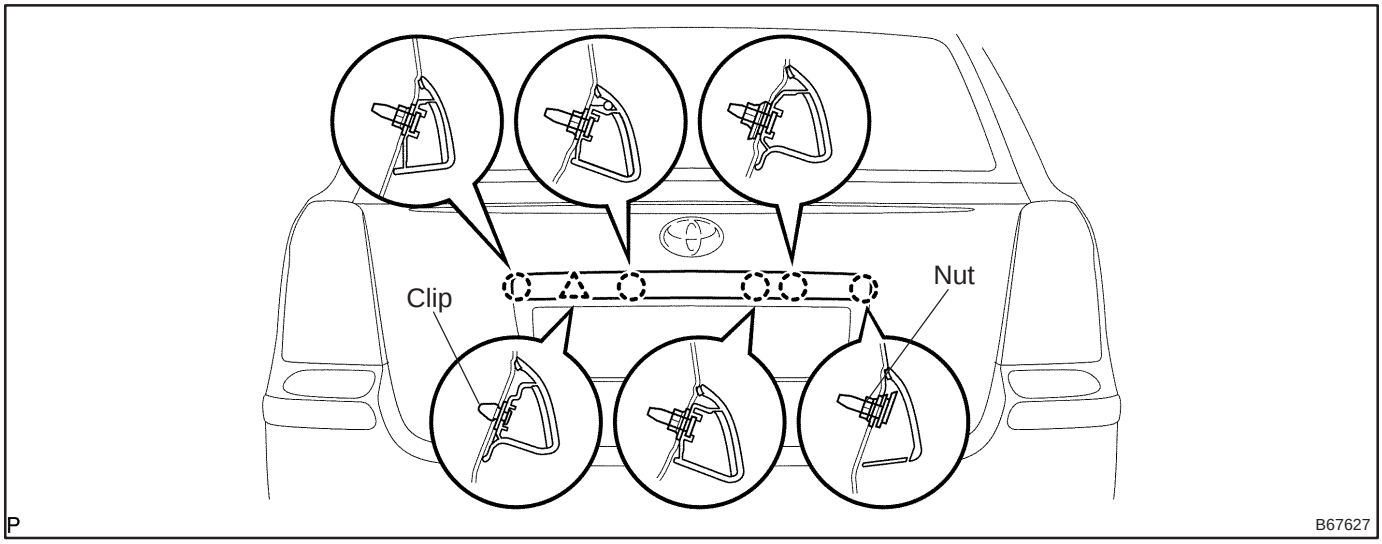
3. INSTALL BACK DOOR GARNISH SUB–ASSY OUTSIDE

(a) Install the garnish with the 6 nuts and clip.

Torque: 4.9 N·m (50 kgf·cm, 43 in.·lbf)

BACK DOOR GARNISH SUB–ASSY OUTSIDE (LIFTBACK MODELS)

760WA–01



REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. **REMOVE BACK DOOR TRIM PANEL ASSY UPPER (See page 75–40)**
2. **REMOVE BACK DOOR SIDE GARNISH LH (See page 75–40)**
3. **REMOVE BACK DOOR SIDE GARNISH RH (See page 75–40)**
4. **REMOVE BACK DOOR SIDE GARNISH CLIP (See page 75–40)**
5. **REMOVE BACK DOOR TRIM BOARD ASSY (See page 75–40)**
6. **REMOVE BACK DOOR GARNISH SUB–ASSY OUTSIDE (See page 75–40)**

(a) Remove the 5 nuts, clip and garnish.

7. **INSTALL BACK DOOR GARNISH SUB–ASSY OUTSIDE**

(a) Install the garnish with the 5 nuts and clip.

Torque: 4.9 N·m (50 kgf·cm, 43 in.·lbf)

BACK DOOR GARNISH SUB–ASSY OUTSIDE (WAGON MODELS)

760WB–01

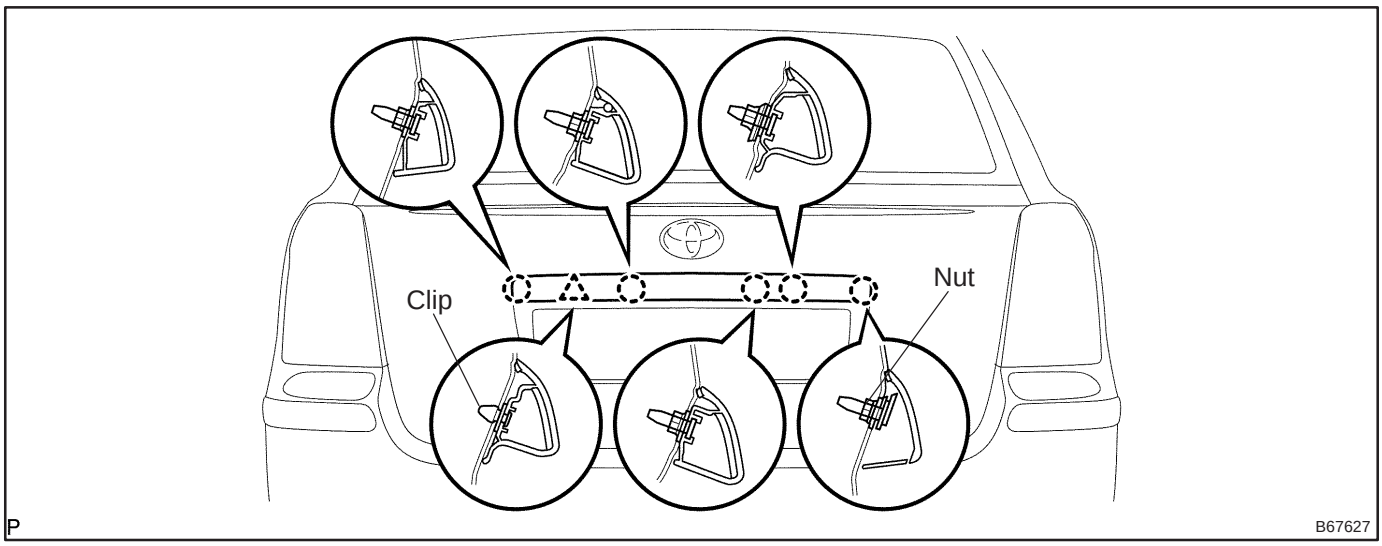
REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE BACK DOOR TRIM PANEL ASSY UPPER (See page 75–45)

2. REMOVE BACK DOOR SIDE GARNISH LH (See page 75–45)



3. REMOVE BACK DOOR SIDE GARNISH RH (See page 75–45)

4. REMOVE BACK DOOR TRIM BOARD ASSY (See page 75–45)

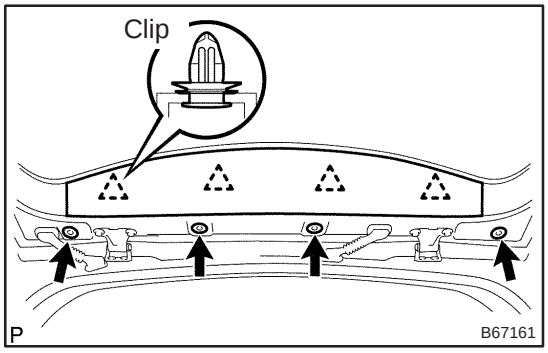
5. REMOVE DOOR PULL HANDLE (See page 75–45)

6. REMOVE BACK DOOR GARNISH SUB–ASSY OUTSIDE

(a) Remove the 5 nuts, clip and back door garnish.

7. INSTALL BACK DOOR GARNISH SUB–ASSY OUTSIDE

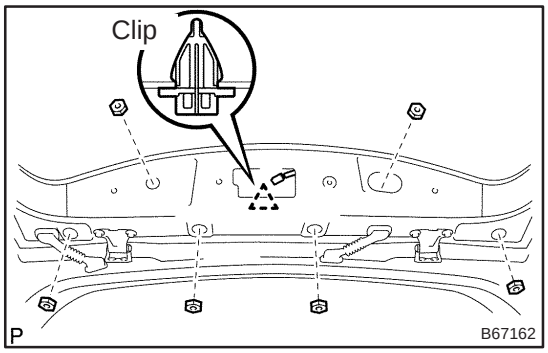
(a) Install the garnish with the 5 nuts and clip.



Torque: 4.9 N·m (50 kgf·cm, 43 in.·lbf)

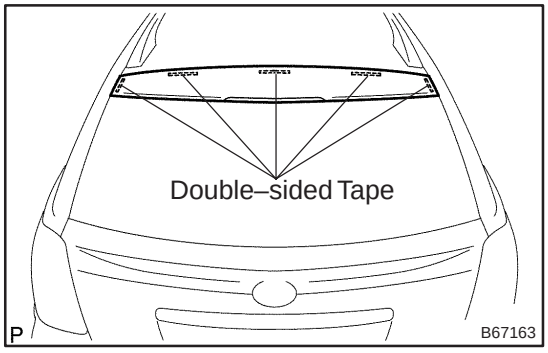
REAR SPOILER (WAGON MODELS)

760WD–01



REPLACEMENT

HINT:
The installation is in the reverse order of the removal.



1. REMOVE BACK DOOR TRIM PANEL ASSY UPPER

(a) Remove the 4 clips and door trim panel.
(b) Remove the 4 hole plugs.

2. REMOVE REAR SPOILER

(a) Disconnect the stop lamp connector.
(b) Remove the 6 nuts and clip.

(c) Using a heat light, heat the spoiler.
Heating temprature: 40 – 60°C (104 – 140°F)

NOTICE:

Do not heat the spoiler excessively.

(d) Lightly lift the spoiler at the right end or the left end.
(e) Cut the tape.
  (1) Tie both piano wire ends to a wooden block or similar object.
  (2) Cut the tape by pulling the piano wire.

NOTICE:

- **If reusing the rear spoiler, take care not to damage it.**
- **Be careful not to damage the back door.**

(f) Remove the spoiler.

3. INSTALL REAR SPOILER

(a) Clean the surface on the back door where the spoiler is to be attached.
  (1) Using a heat light, heat the back door contact surface.

Heating temprature: 40 – 60°C (104 – 140°F)

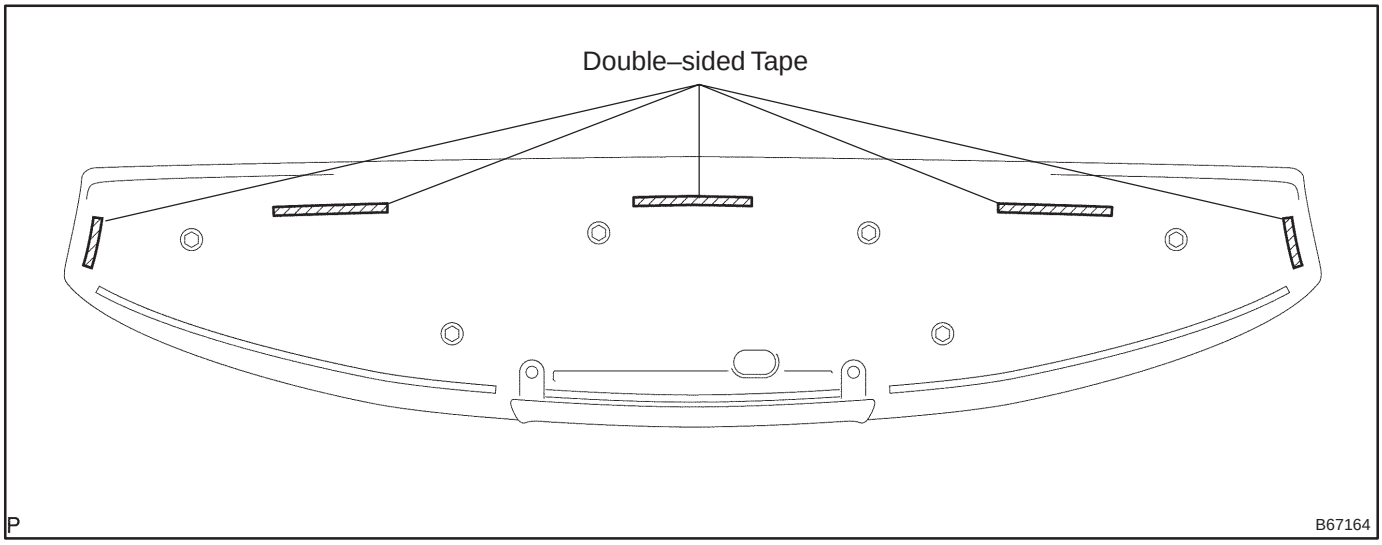
NOTICE:

Do not heat the back door excessively.

(2) Remove the tape from the back door.
(3) Wipe off the stains with cleaner.

(b) When reusing the spoiler:
Clean the spoiler.
(1) Using a heat light, heat the spoiler.
Heating temprature: 20 – 30°C (68 – 86°F)

NOTICE:
Do not heat the spoiler excessively.



(2) Remove the tape from the spoiler.
(3) Wipe off the stains with cleaner.

(c) Install the spoiler.
(1) Using a heat light, heat the door and spoiler.
Heating temperature:

Door	40 – 60°C (104 – 140°F)
Spoiler	20 – 30°C (68 – 86°F)

NOTICE:
Do not heat the door and spoiler excessively.

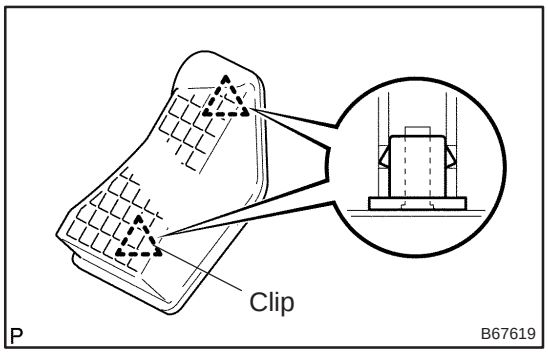
(2) Apply new double–sided tape to the spoiler, as shown in the illustration.

(3) Remove the peeling paper from the spoiler.

NOTICE:
Be careful that dirt or foreign objects do not stick to the adhesive part when removing the peeling paper.

(4) Install the spoiler with the 6 nuts.
Torque: 9.8 N·m (99 kgf·cm, 87 in.·lbf)

NOTICE:
Do not apply excessive force onto the spoiler. Instead, apply steady pressure with your thumbs.



(5) Connect the stop lamp connector.
(6) Install the 4 hole plugs.

FRONT FLOOR FOOTREST

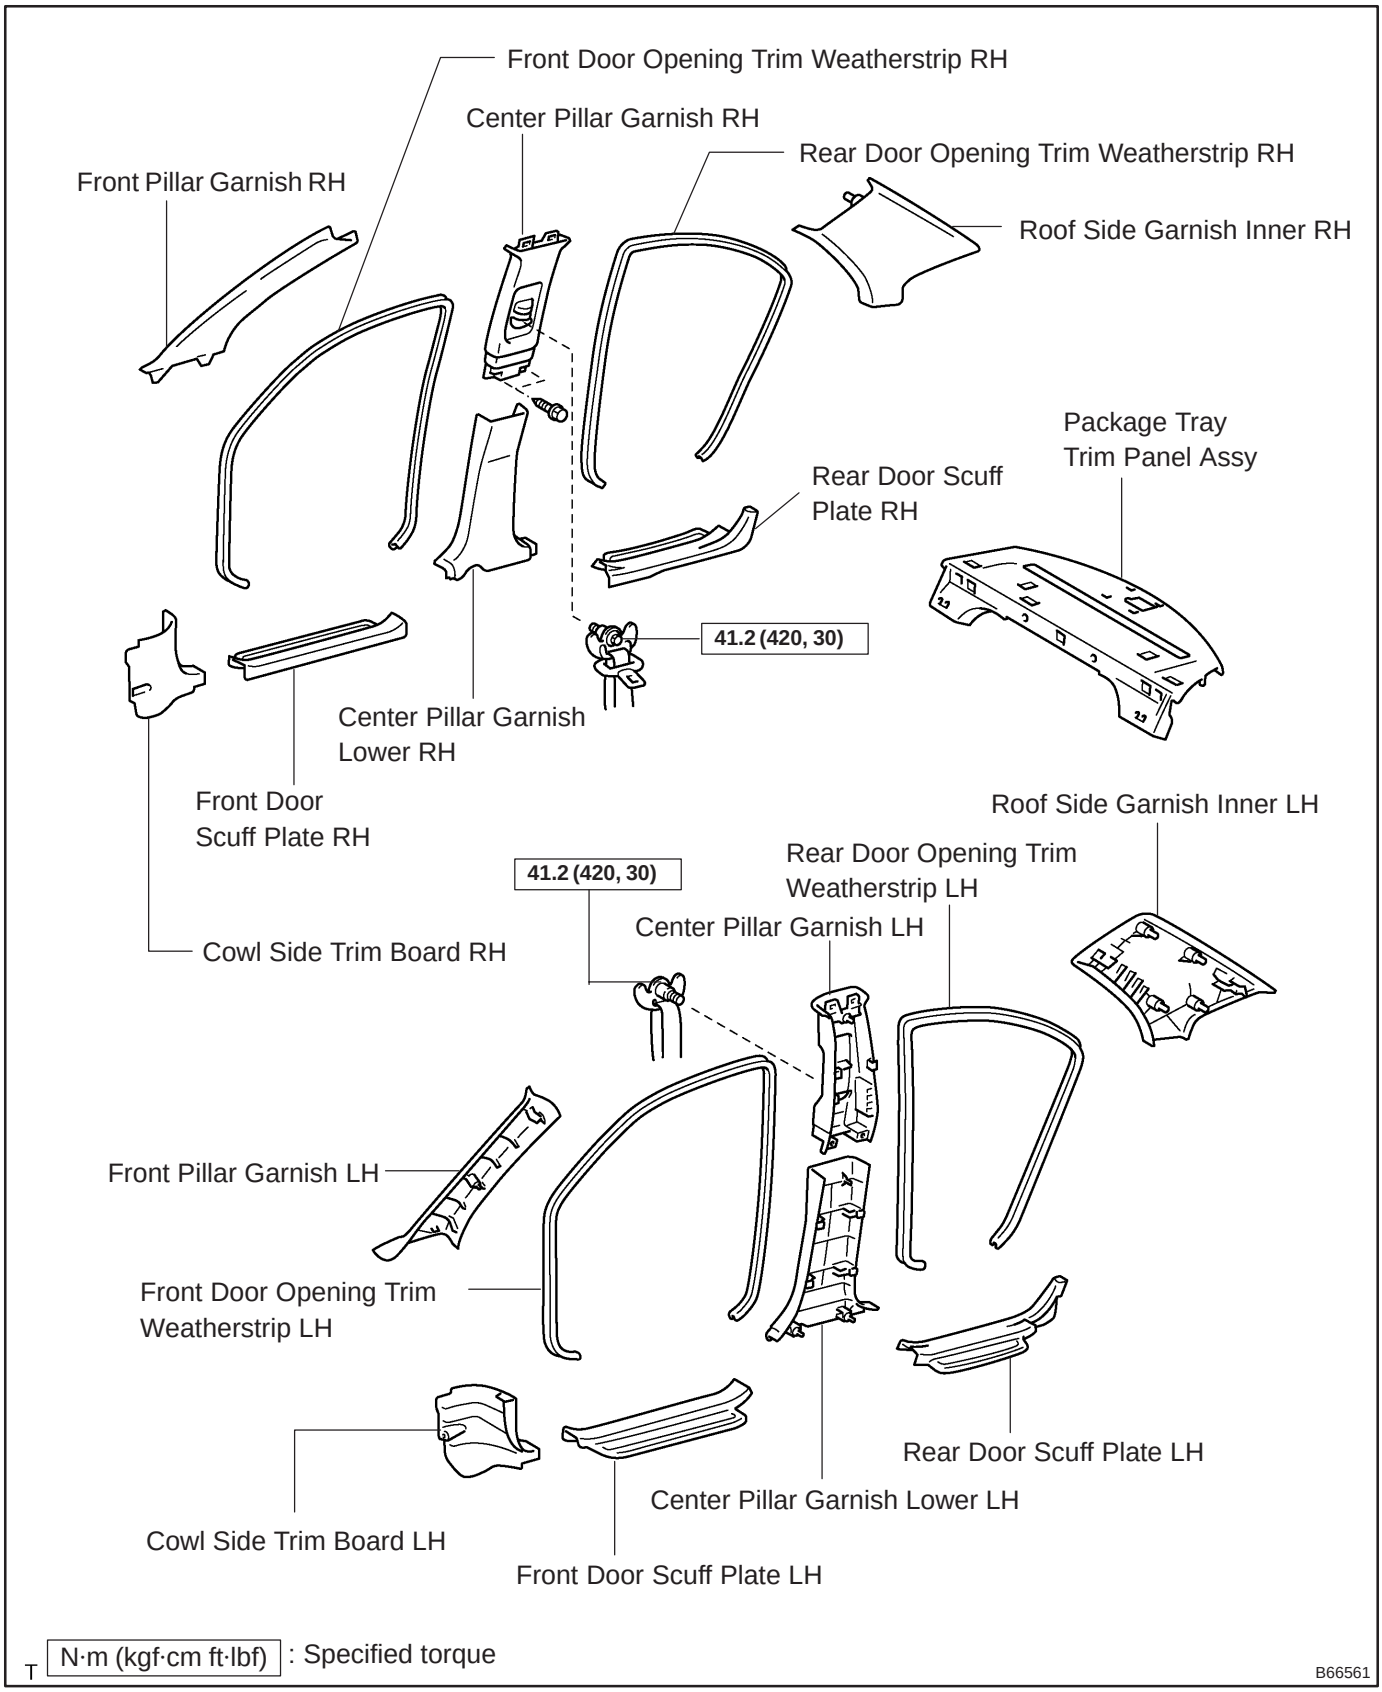
760WC–01

REPLACEMENT

HINT:
The installation is in the reverse order of the removal.

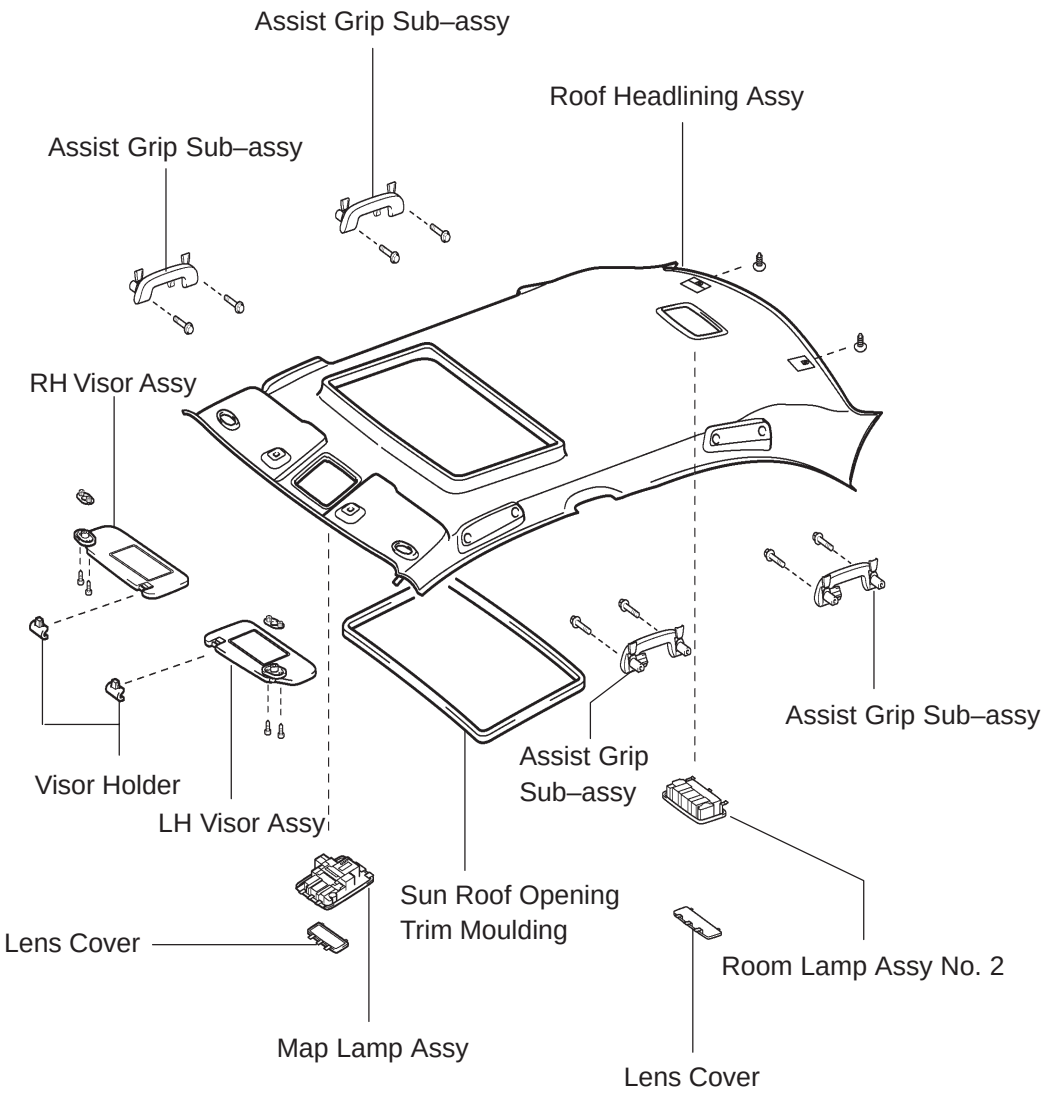
1. REMOVE FR FLOOR FOOTREST LH

(a) Using a screwdriver, disengage the 2 clips and remove the footrest.



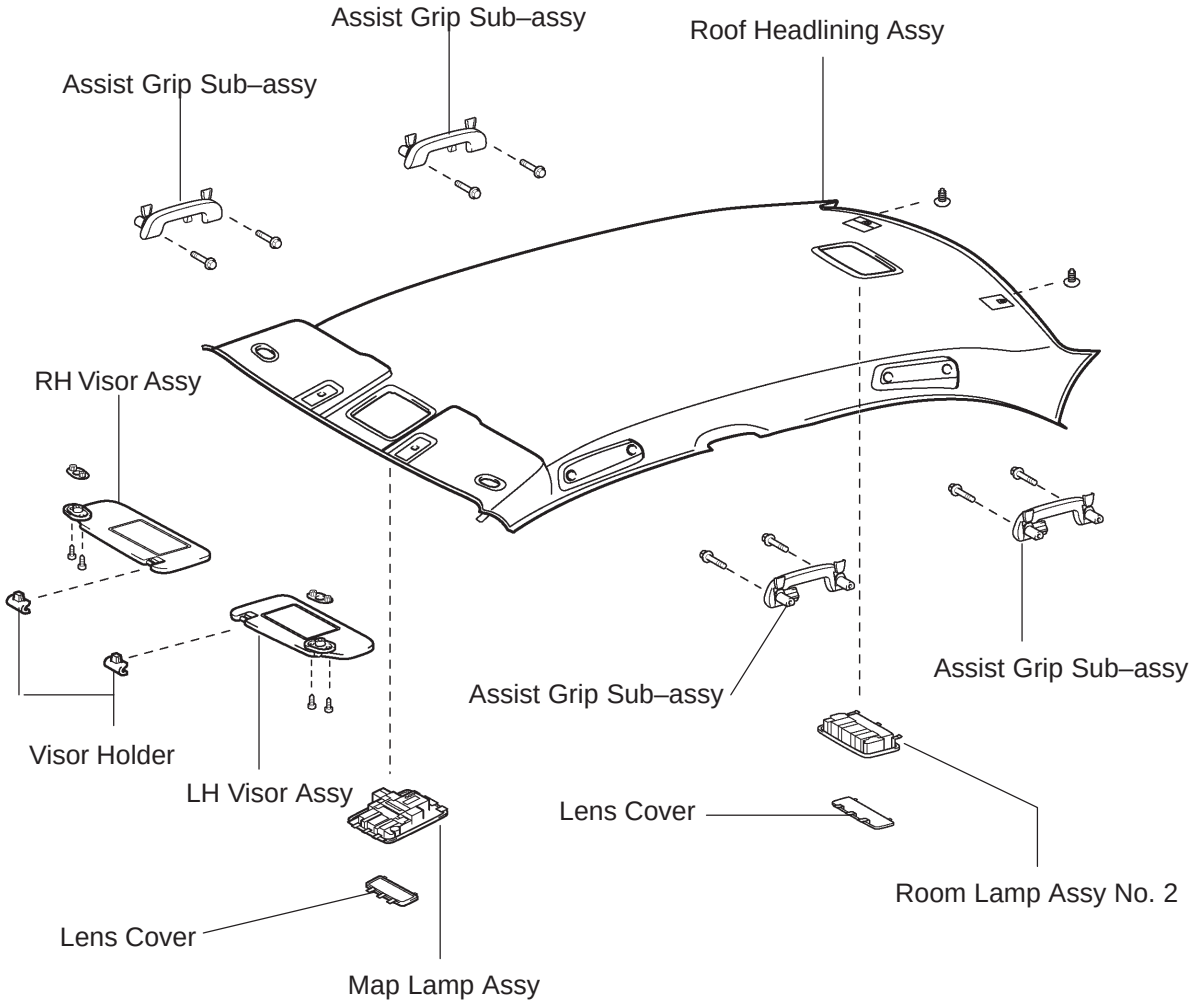
HINT:
Tape the screwdriver tip before use.

(b) Disengage the clips and then remove the 2 clips from the footrest.



ROOF HEADLINING ASSY (SEDAN MODELS)

760WT–01

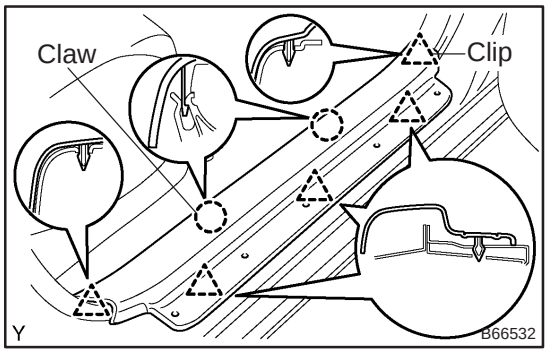


COMPONENTS

w/ Sliding Roof

w/o Sliding Roof

T



B66563

760WU–01

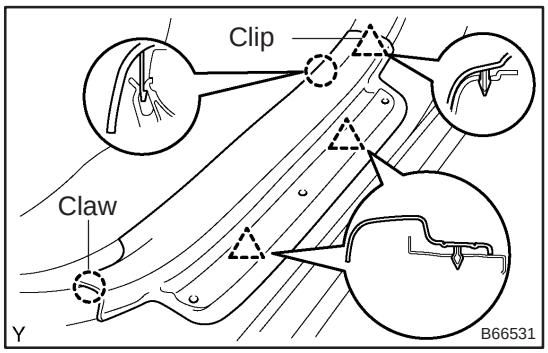
REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE FRONT DOOR SCUFF PLATE RH

(a) Using a screwdriver, disengage the 5 clips and 2 claws, and remove the scuff plate.



HINT:

Tape the screwdriver tip before use.

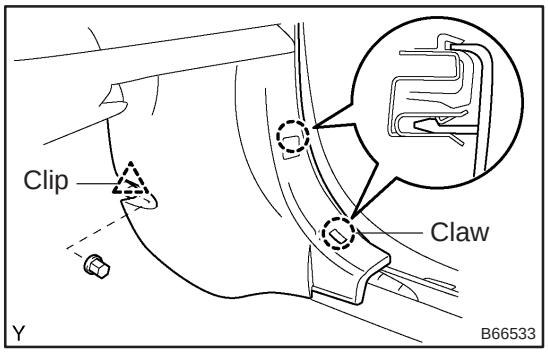
2. REMOVE FRONT DOOR SCUFF PLATE LH

HINT:

Use the same procedures described for the RH side.

3. REMOVE REAR DOOR SCUFF PLATE RH

(a) Using a screwdriver, disengage the 3 clips and 2 claws, and remove the scuff plate.



HINT:

Tape the screwdriver tip before use.

4. REMOVE REAR DOOR SCUFF PLATE LH

HINT:

Use the same procedures described for the RH side.

5. REMOVE COWL SIDE TRIM BOARD RH

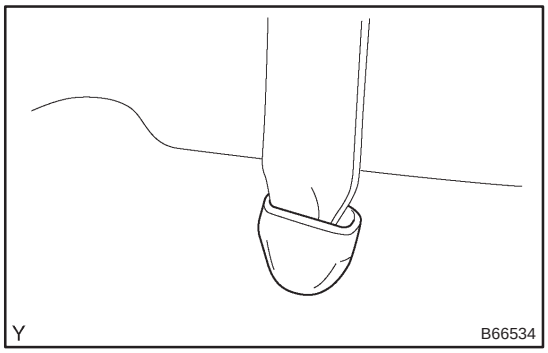
(a) Using a screwdriver, disengage the clip and 2 claw and remove the trim board.

HINT:

Tape the screwdriver tip before use.

6. REMOVE COWL SIDE TRIM BOARD LH

HINT:

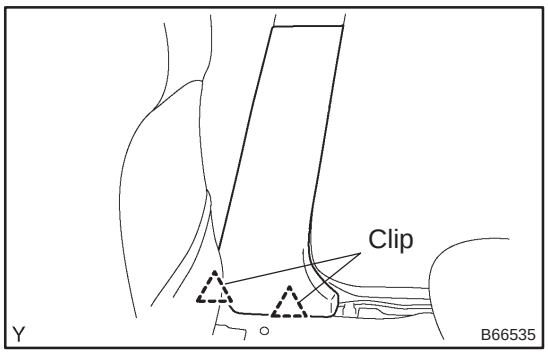


Use the same procedures described for the RH side.

7. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

8. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

9. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH



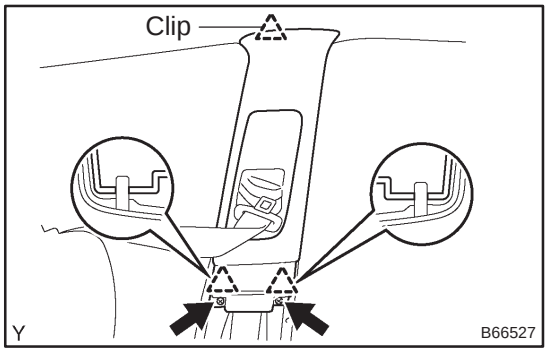
10. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

11. REMOVE CENTER PILLAR GARNISH LOWER RH

(a) Remove the floor anchor cover.

(b) Remove the bolt and outer belt on the floor anchor side.

(c) Using a screwdriver, disengage the 2 clips and remove the pillar garnish lower.



HINT:

Tape the screwdriver tip before use.

12. REMOVE CENTER PILLAR GARNISH LOWER LH

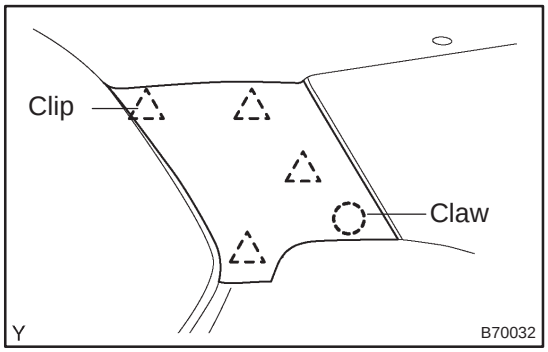
HINT:

Use the same procedures described for the RH side.

13. REMOVE CENTER PILLAR GARNISH UPPER RH

(a) Using a screwdriver, disengage the clip and 2 screws and remove the pillar garnish.

HINT:



Tape the screwdriver tip before use.

14. REMOVE CENTER PILLAR GARNISH UPPER LH

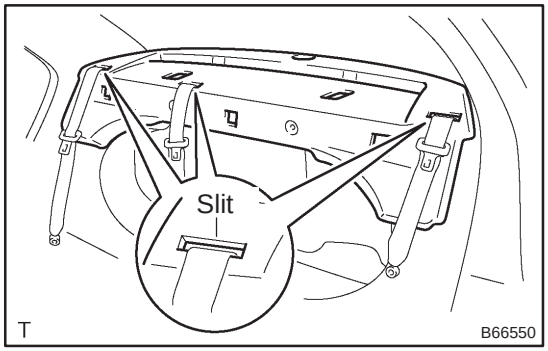
HINT:

Use the same procedures described for the RH side.

15. REMOVE REAR SEAT ASSY (See page 72–27, 72–32)

16. REMOVE ROOF SIDE GARNISH INNER RH

(a) Using a screwdriver, disengage the 4 clips and claw and remove the roof side garnish.



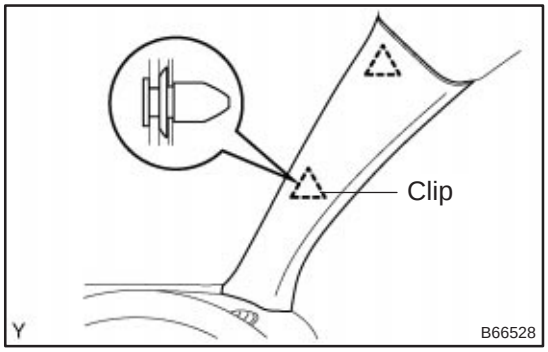
HINT:

Tape the screwdriver tip before use.

17. REMOVE ROOF SIDE GARNISH INNER LH

HINT:

Use the same procedures described for the RH side.

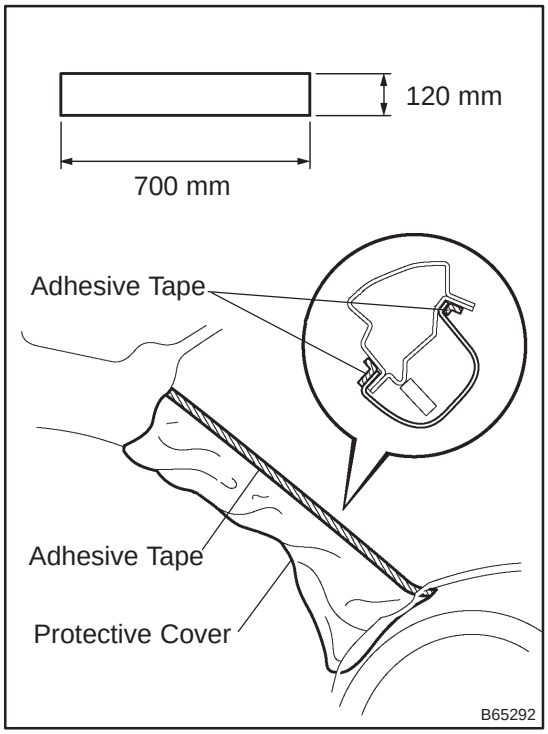


18. REMOVE PACKAGE TRAY TRIM PANEL ASSY

(a) Remove the 4 clips.

(b) Remove the roof package tray trim panel.

(c) Pull out the belt from the slit and remove the tray trim panel.



19. REMOVE FRONT PILLAR GARNISH RH

(a) Using a screwdriver, disengage the 2 clips and remove the pillar garnish.

HINT:

Tape the screwdriver tip before use.

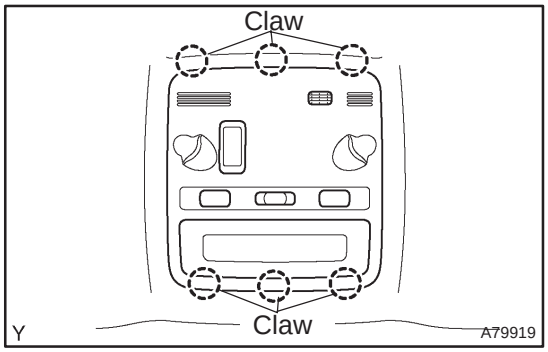
(b) Pull the garnish upward and remove from the instrument panel.

(c) w/ Curtain shield airbag:
Protect the curtain shield airbag LH.

(1) Thoroughly cover the airbag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with adhesive tape as shown in the illustration.

NOTICE:
Cover the curtain shield airbag with the protection cover as soon as the front pillar garnish is removed.

20. REMOVE FRONT PILLAR GARNISH LH



HINT:
Use the same procedures described for the RH side.

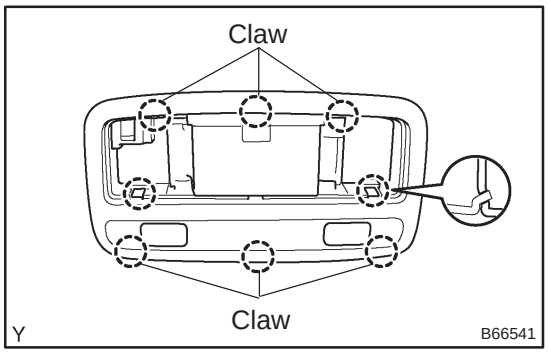
21. REMOVE RH VISOR ASSY

(a) Remove the 2 screws and visor.

22. REMOVE LH VISOR ASSY

(a) Remove the 2 screws and visor.

23. REMOVE MAP LAMP ASSY



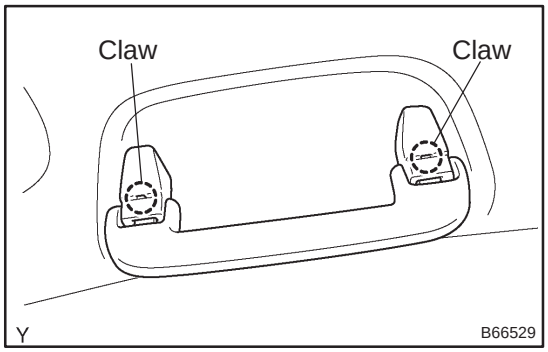
(a) Using a screwdriver, disengage the 6 claws and remove the lens cover.

HINT:
Tape the screwdriver tip before use.

(b) Remove the 2 screws.

(c) Using a moulding remover, disengage the claws.

(d) Disconnect the map lamp switch connector and sliding roof switch connector, and remove the map lamp.



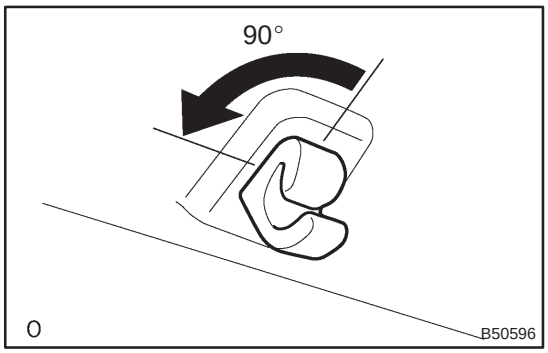
24. REMOVE ROOM LAMP ASSY NO.2

(a) Using a moulding remover, disengage the 8 claws and remove the lens cover.

HINT:
Tape the screwdriver tip before use.

(b) Using a moulding remover, disengage the claws.

(c) Disconnect the map lamp switch connector and remove the map lamp.

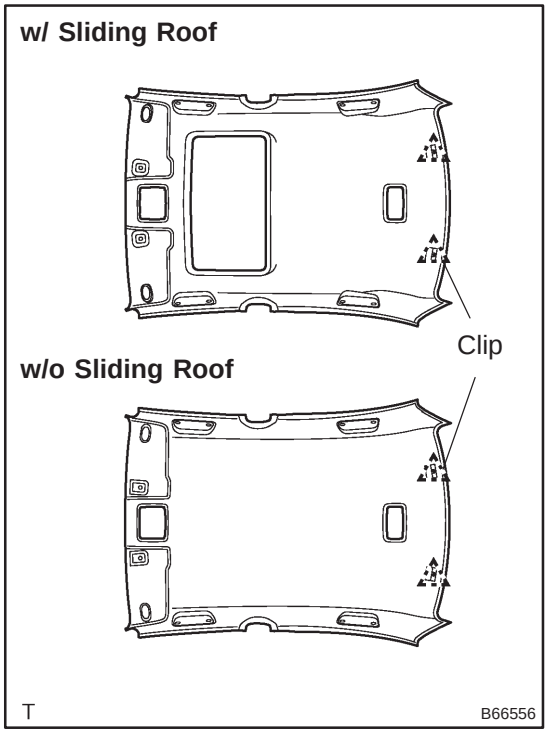


25. REMOVE ASSIST GRIP SUB–ASSY

(a) Using a screwdriver, disengage the 2 claws and remove the 2 assist grip covers.

HINT:

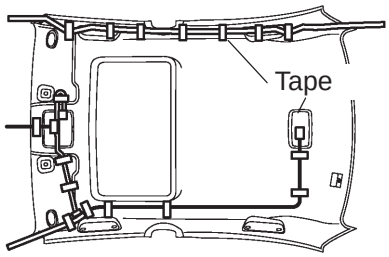
Tape the screwdriver tip before use.



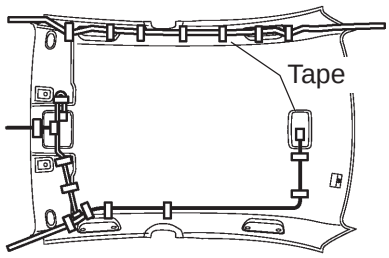
(b) Remove the 2 bolts and assist grip.

26. REMOVE VISOR HOLDER

(a) Remove the holder of the sun visor by turning it counter-clockwise.



27. REMOVE SUN ROOF OPENING TRIM MOULDING (W/ SLIDING ROOF)



28. REMOVE ROOF HEADLINING ASSY

(a) Using a clip remover, disengage the 2 clips and remove the roof headling.

w/ Sliding Roof

w/o Sliding Roof

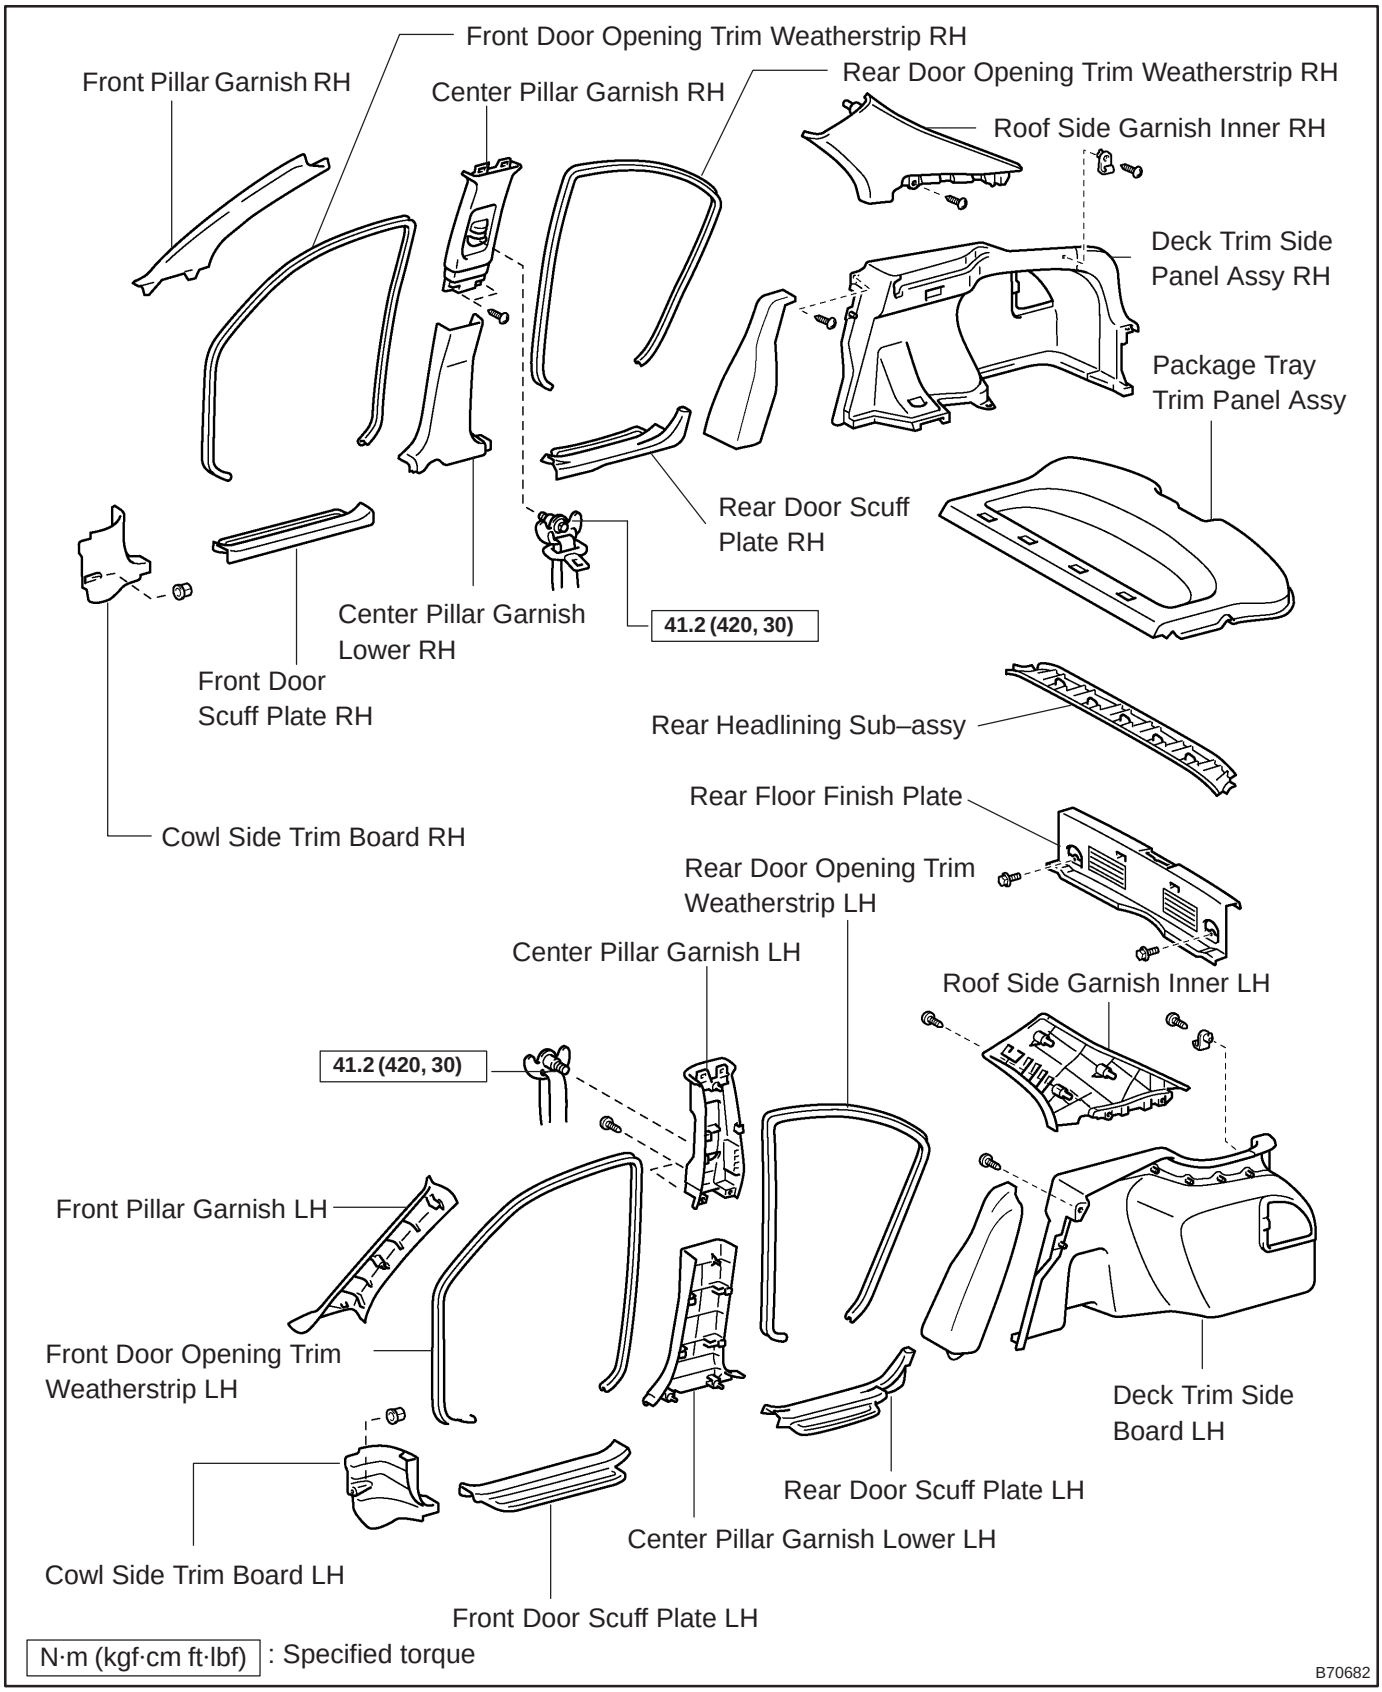
T B66553

29. INSTALL ROOF HEADLINING ASSY

(a) Align the markings, and then install the wire harness with tape.

NOTICE:

Attach the roof wire harness securely.



(b) Install the 2 clips.

30. INSTALL REAR SEAT ASSY (See page 72–27, 72–32)

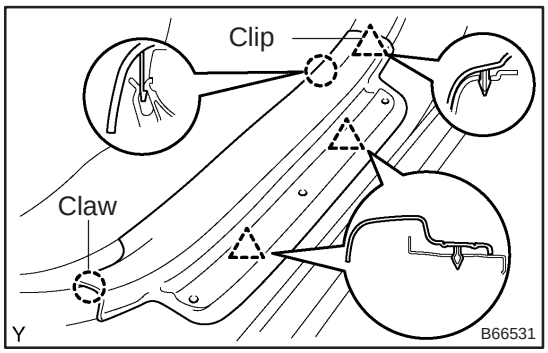
REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE FRONT DOOR SCUFF PLATE RH

(a) Using a screwdriver, disengage the 5 clips and 2 claws, and remove the scuff plate.



HINT:

Tape the screwdriver tip before use.

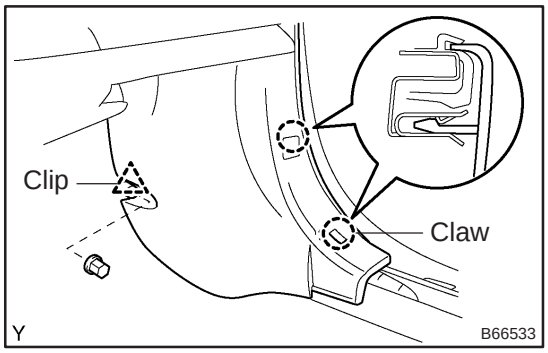
2. REMOVE FRONT DOOR SCUFF PLATE LH

HINT:

Use the same procedures described for the RH side.

3. REMOVE REAR DOOR SCUFF PLATE RH

(a) Using a screwdriver, disengage the 3 clips and 2 claws, and remove the scuff plate.



HINT:

Tape the screwdriver tip before use.

4. REMOVE REAR DOOR SCUFF PLATE LH

HINT:

Use the same procedures described for the RH side.

5. REMOVE COWL SIDE TRIM BOARD RH

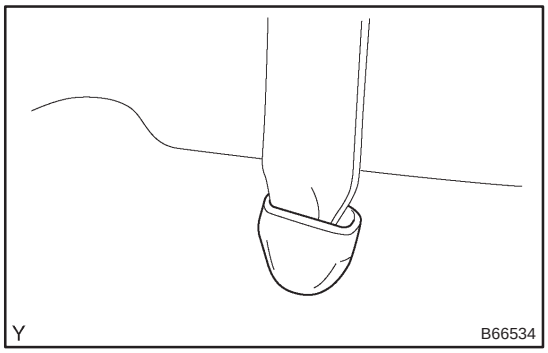
(a) Using a screwdriver, disengage the clip and 2 claws, and remove the trim board.

HINT:

Tape the screwdriver tip before use.

6. REMOVE COWL SIDE TRIM BOARD LH

HINT:

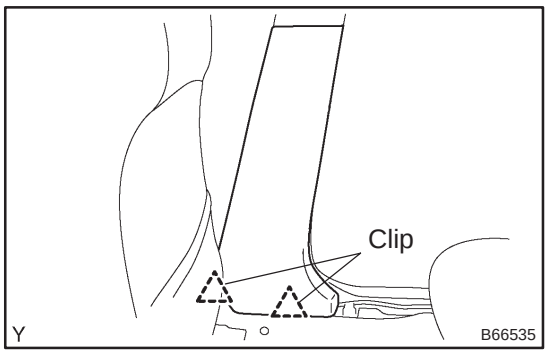


Use the same procedures described for the RH side.

7. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

8. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

9. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH



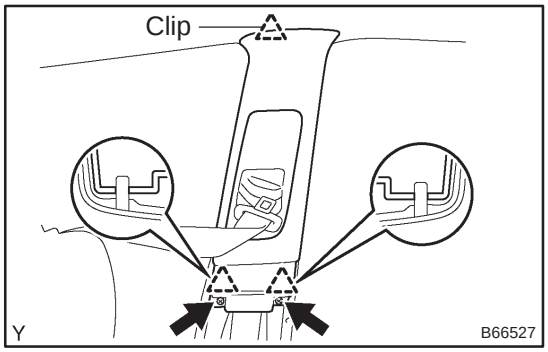
10. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

11. REMOVE CENTER PILLAR GARNISH LOWER RH

(a) Remove the floor anchor cover.

(b) Remove the bolt and the outer belt on the floor anchor side.

(c) Using a screwdriver, disengage the 2 clips and remove the pillar garnish.



HINT:

Tape the screwdriver tip before use.

12. REMOVE CENTER PILLAR GARNISH LOWER LH

HINT:

Use the same procedures described for the RH side.

13. REMOVE CENTER PILLAR GARNISH UPPER RH

(a) Using a screwdriver, disengage the clip and 2 screws, and remove the pillar garnish.

HINT:

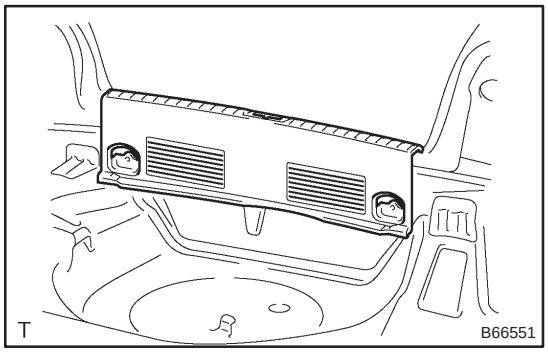
Tape the screwdriver tip before use.

14. REMOVE CENTER PILLAR GARNISH UPPER LH

HINT:

Use the same procedures described for the RH side.

15. REMOVE REAR SEAT ASSY (See page 72–21)



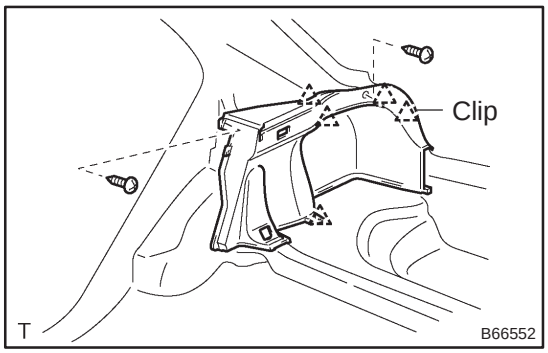
16. REMOVE REAR SIDE SEAT BACK ASSY RH

(a) Remove the bolt and seatback.

17. REMOVE REAR SIDE SEAT BACK ASSY LH

(a) Remove the bolt and seatback.

18. REMOVE PACKAGE TRAY TRIM PANEL ASSY



19. REMOVE REAR FLOOR FINISH PLATE

(a) Remove the 2 bolts.

(b) Using a screwdriver, disengage the 4 claws and remove the floor finish plate.

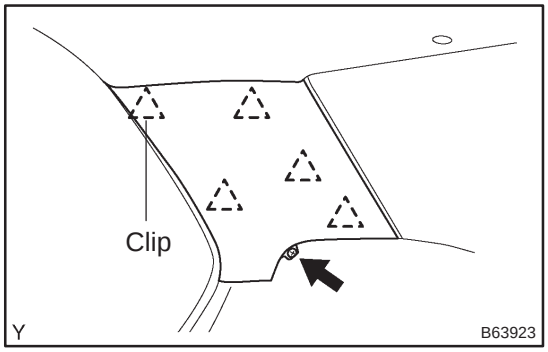
HINT:

Tape the screwdriver tip before use.

20. REMOVE DECK TRIM SIDE PANEL ASSY RH

(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the 5 clips and remove the deck trim side panel.



HINT:

Tape the screwdriver tip before use.

21. REMOVE DECK TRIM SIDE BOARD LH

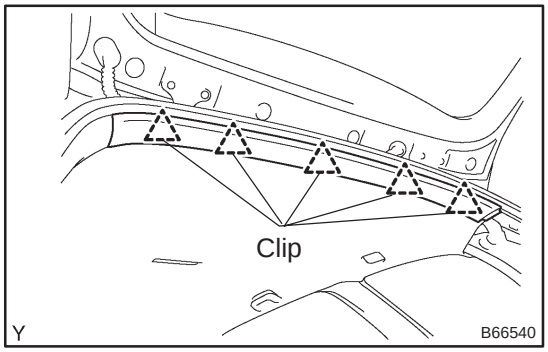
HINT:

Use the same procedures described for the RH side.

22. REMOVE ROOF SIDE GARNISH INNER RH

(a) Remove the screw.

(b) Using a screwdriver, disengage the 5 clips and remove the roof side garnish.



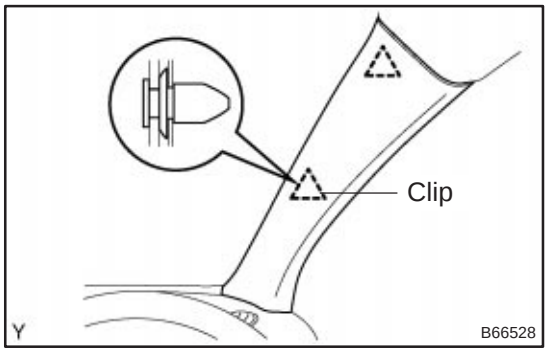
HINT:

Tape the screwdriver tip before use.

23. REMOVE ROOF SIDE GARNISH INNER LH

HINT:

Use the same procedures described for the RH side.

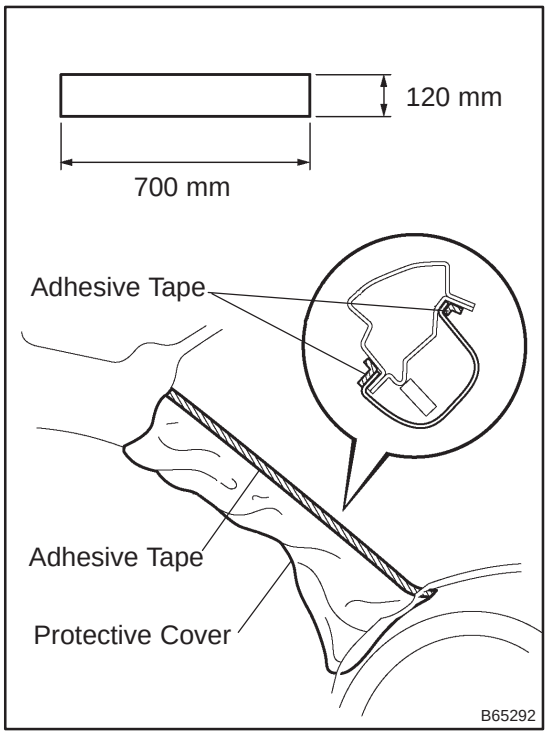


24. REMOVE ROOF HEADLINING TRIM SUB–ASSY REAR

(a) Using a screwdriver, disengage the 5 clips and remove the roof head lining trim.

HINT:

Tape the screwdriver tip before use.



25. REMOVE FRONT PILLAR GARNISH RH

(a) Using a screwdriver, disengage the 2 clips and remove the pillar garnish.

HINT:

Tape the screwdriver tip before use.

(b) Pull the garnish upward and remove if from the instrument panel.

(c) w/ Curtain shield airbag:

Protect the curtain shield airbag LH.

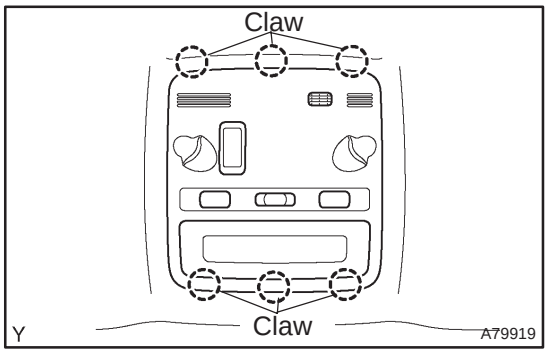
(1) Thoroughly cover the airbag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover in place with adhesive tape as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

26. REMOVE FRONT PILLAR GARNISH LH

HINT:



Use the same procedures described for the RH side.

27. REMOVE RH VISOR ASSY

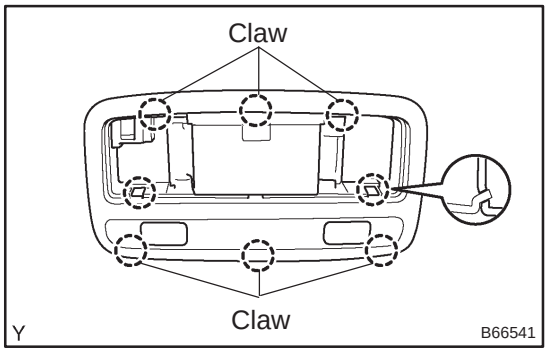
(a) Remove the 2 screws and visor.

28. REMOVE LH VISOR ASSY

(a) Remove the 2 screws and visor.

29. REMOVE MAP LAMP ASSY

(a) Using a screwdriver, disengage the 6 claws and remove the lens cover.



HINT:

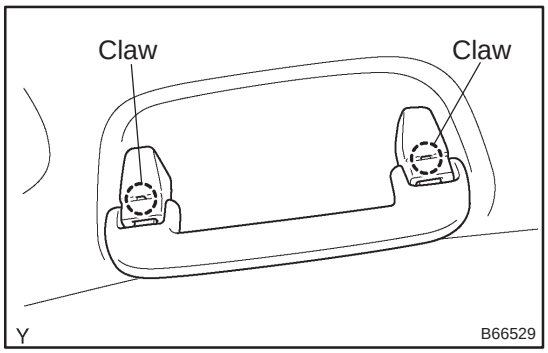
Tape the screwdriver tip before use.

(b) Remove the 2 screws.

(c) Using a moulding remover, disengage the claws.

(d) Disconnect the map lamp switch connector and sliding roof switch connector, and remove the map lamp.

30. REMOVE ROOM LAMP ASSY NO.2



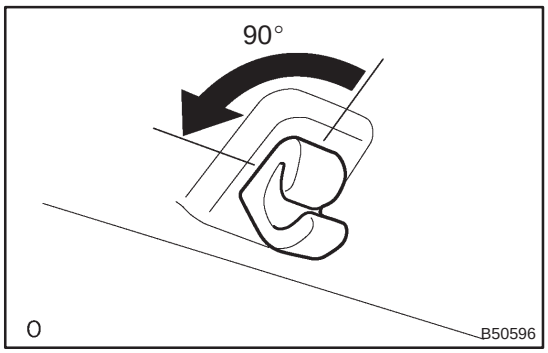
(a) Using a moulding remover, disengage the 8 claws and remove the lens cover.

HINT:

Tape the screwdriver tip before use.

(b) Using a moulding remover, disengage the claws.

(c) Disconnect the map lamp switch connector and remove the map lamp.

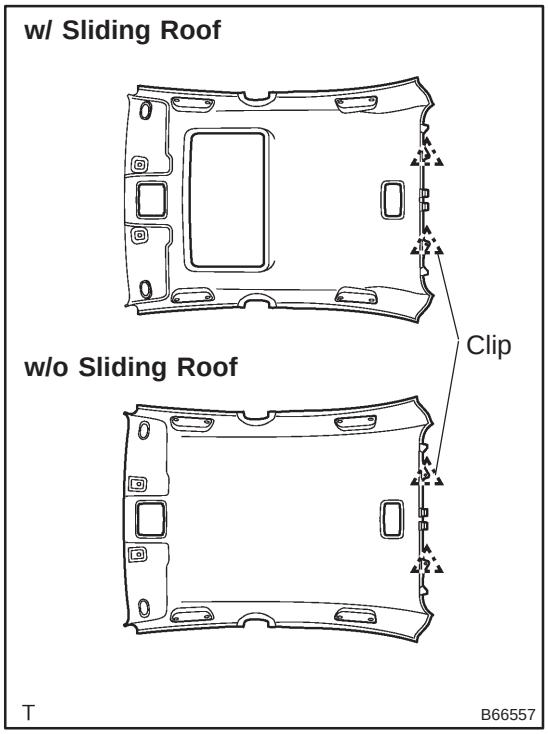


31. REMOVE ASSIST GRIP SUB–ASSY

(a) Using a screwdriver, disengage the 2 claws and remove the 2 assist grip covers.

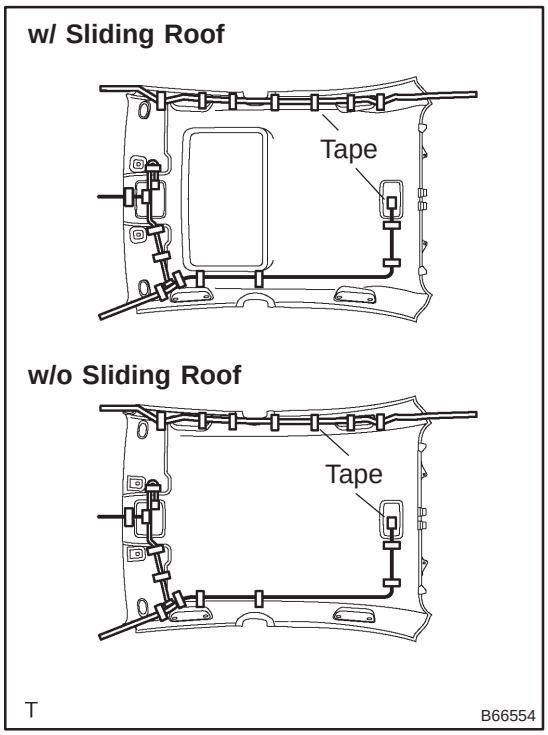
HINT:

Tape the screwdriver tip before use.



(b) Remove the 2 bolts and assist grip.

32. REMOVE VISOR HOLDER



(a) Remove the holder of the sun visor by turning it counterclockwise.

33. REMOVE SUN ROOF OPENING TRIM MOULDING (W/ SLIDING ROOF)

34. REMOVE ROOF HEADLINING ASSY

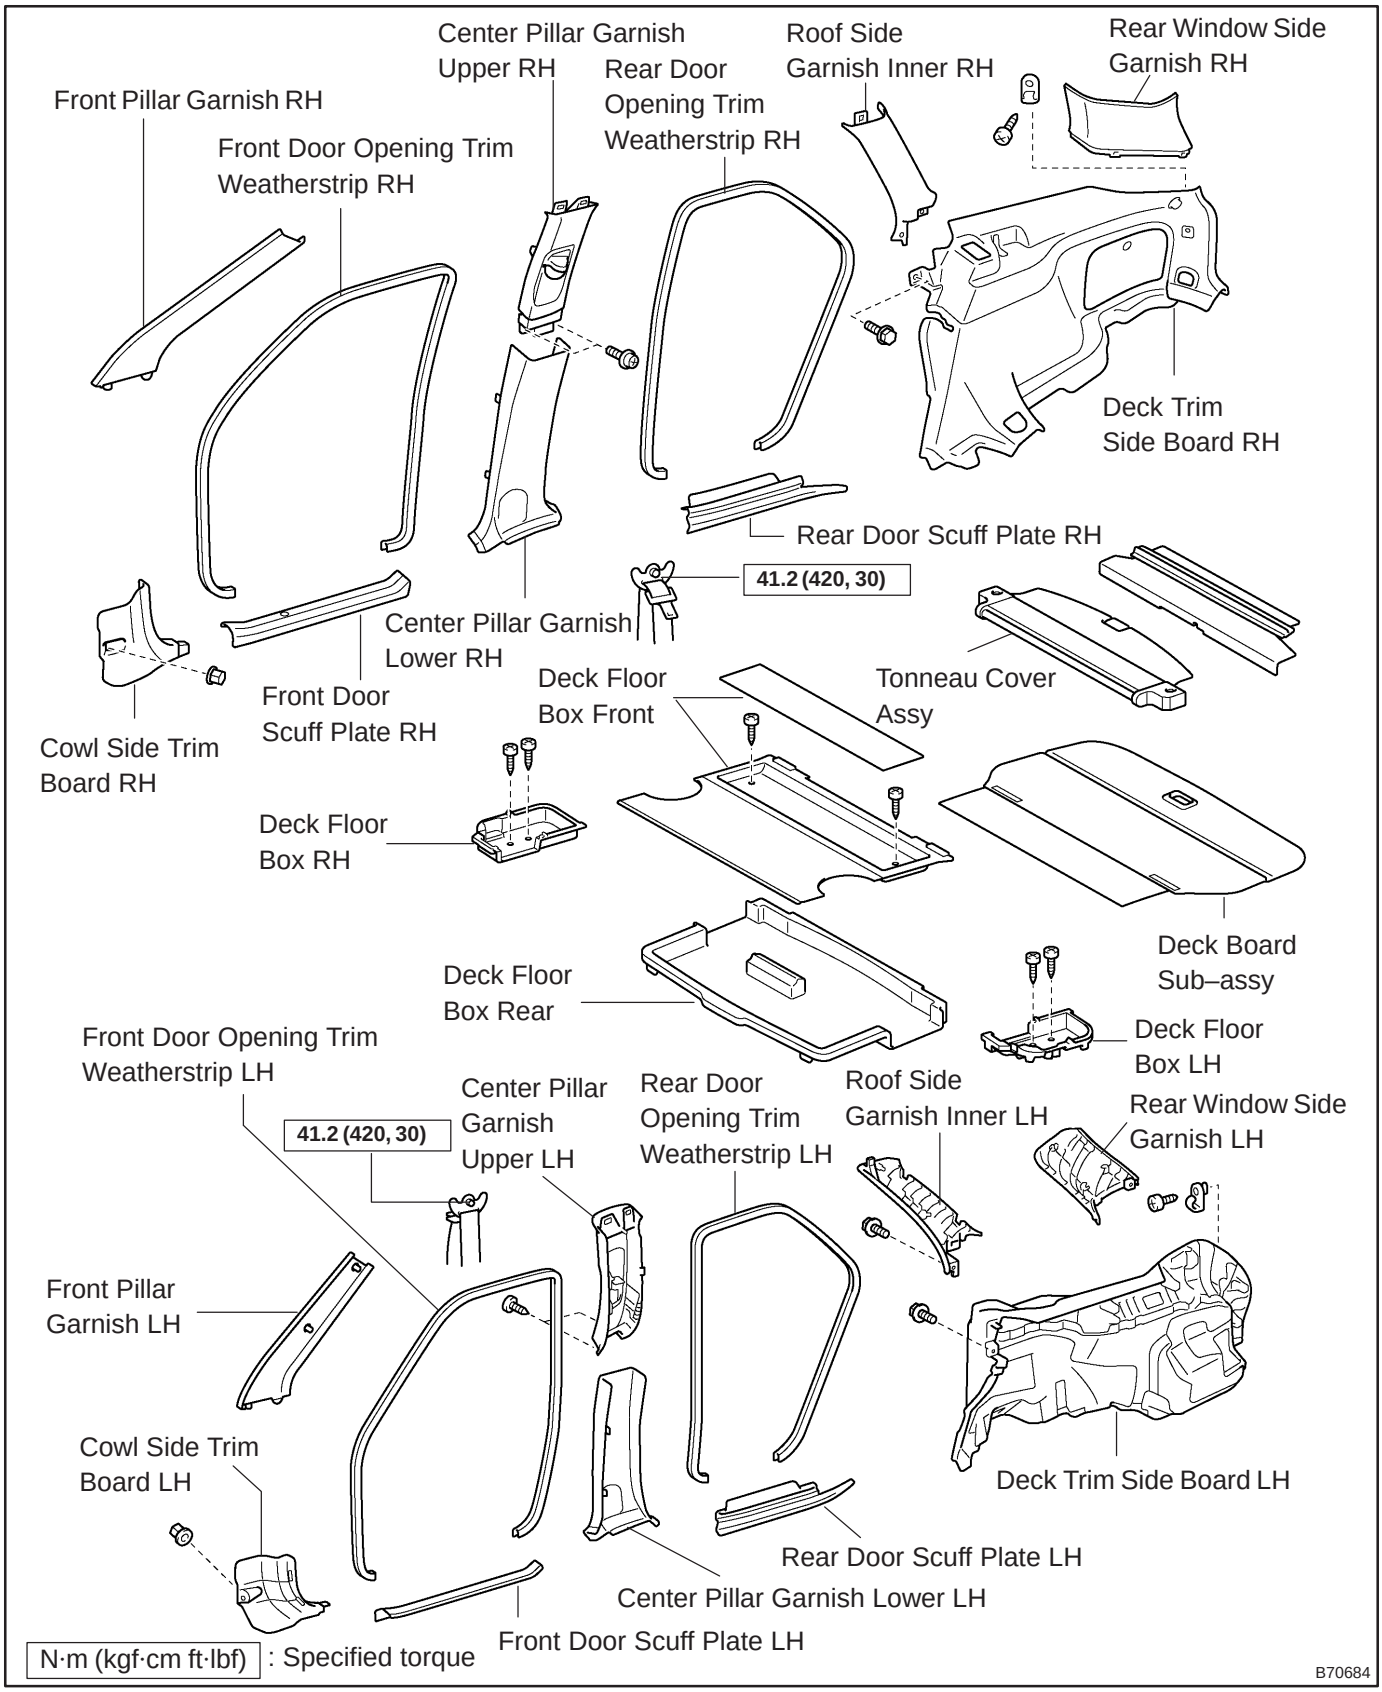
(a) Using a clip remover, disengage the 2 clips and remove the roof headling.

35. INSTALL ROOF HEADLINING ASSY

(a) Align the markings, and then install the wire harness with tape.

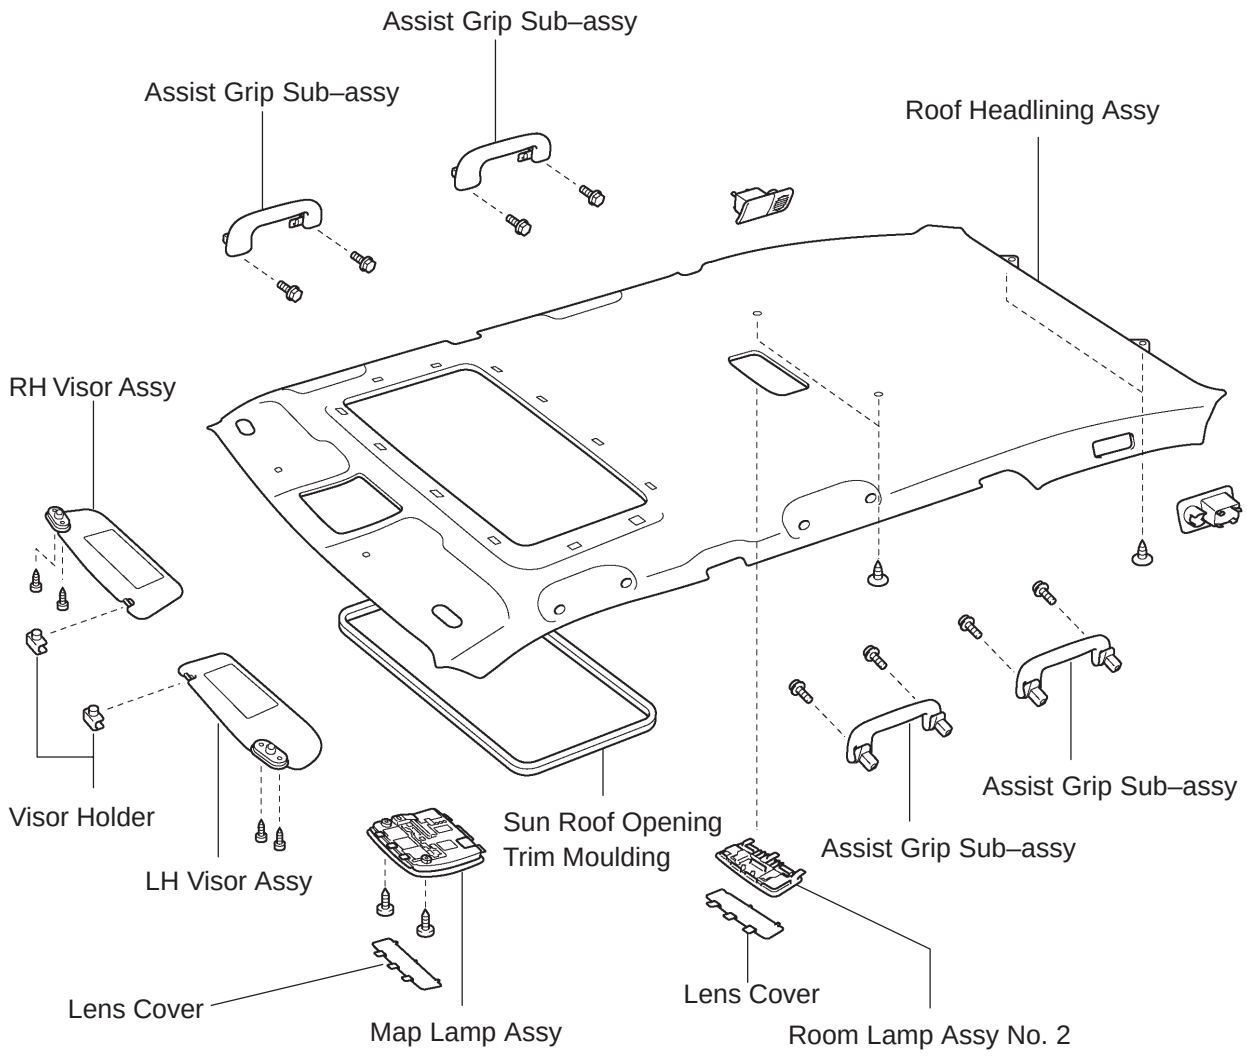
NOTICE:

Attach the roof wire harness securely.



(b) Install the 2 clips.

36. INSTALL REAR SEAT ASSY (See page 72–21)



ROOF HEADLINING ASSY (WAGON MODELS)

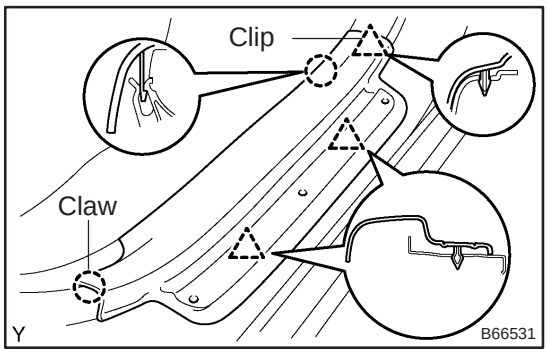
REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE FRONT DOOR SCUFF PLATE RH

(a) Using a screwdriver, disengage the 5 clips and 2 claws, and remove the scuff plate.



HINT:

Tape the screwdriver tip before use.

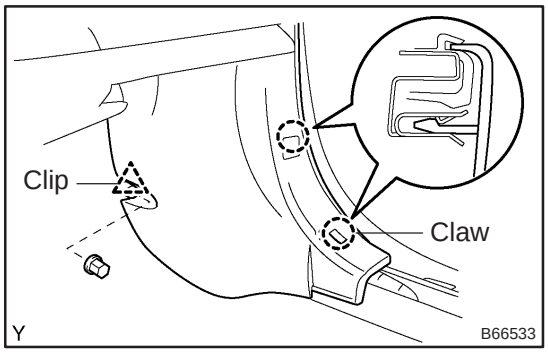
2. REMOVE FRONT DOOR SCUFF PLATE LH

HINT:

Use the same procedures described for the RH side.

3. REMOVE REAR DOOR SCUFF PLATE RH

(a) Using a screwdriver, disengage the 3 clips and 2 claws, and remove the scuff plate.



HINT:

Tape the screwdriver tip before use.

4. REMOVE REAR DOOR SCUFF PLATE LH

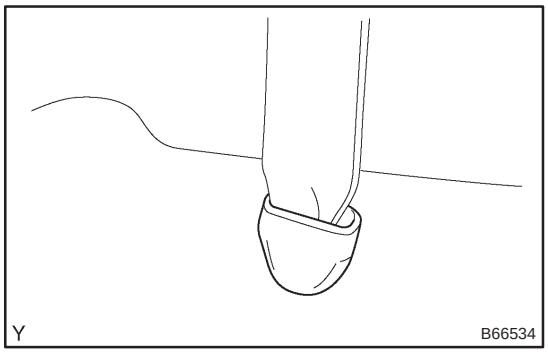
HINT:

Use the same procedures described for the RH side.

5. REMOVE COWL SIDE TRIM BOARD RH

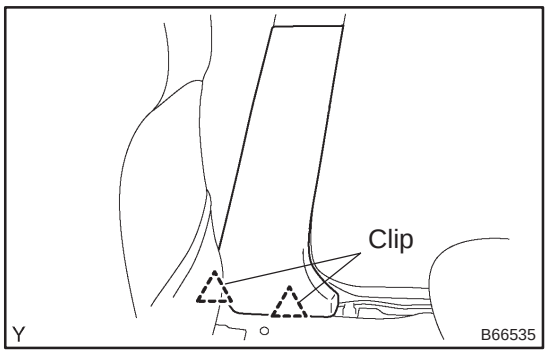
(a) Using a screwdriver, disengage the clip and 2 claws, and remove the trim board.

HINT:



Tape the screwdriver tip before use.

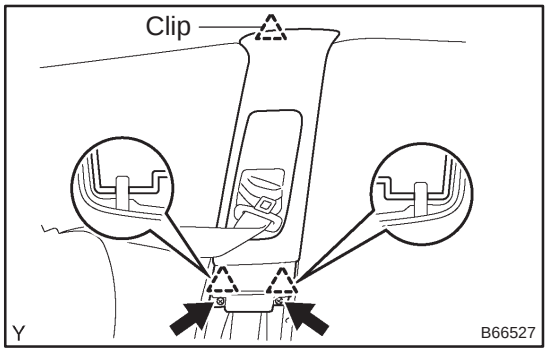
6. REMOVE COWL SIDE TRIM BOARD LH



HINT:

Use the same procedures described for the RH side.

7. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH
8. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH
9. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
10. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

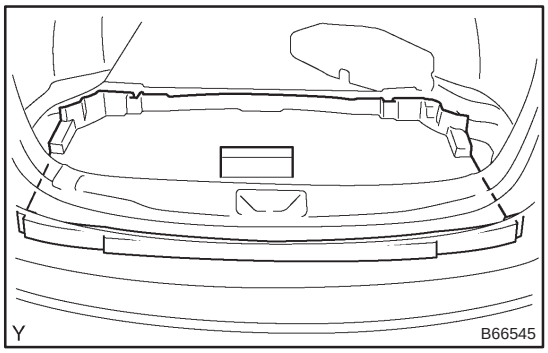


11. REMOVE CENTER PILLAR GARNISH LOWER RH
(a) Remove the floor anchor cover.
(b) Remove the bolt and outer belt on the floor anchor side.

(c) Using a screwdriver, disengage the 2 clips and remove the pillar garnish.

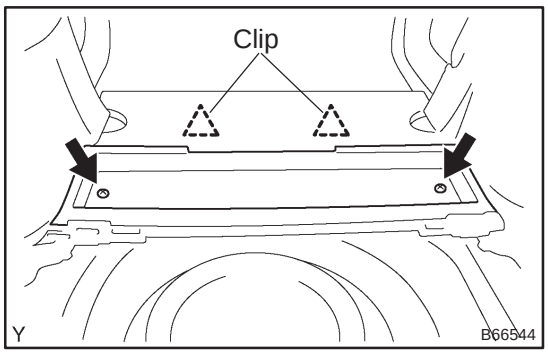
HINT:
Tape the screwdriver tip before use.

12. REMOVE CENTER PILLAR GARNISH LOWER LH
HINT:
Use the same procedures described for the RH side.



13. REMOVE CENTER PILLAR GARNISH UPPER RH
(a) Using a screwdriver, disengage the clip and 2 screws, and remove the pillar garnish.

HINT:
Tape the screwdriver tip before use.

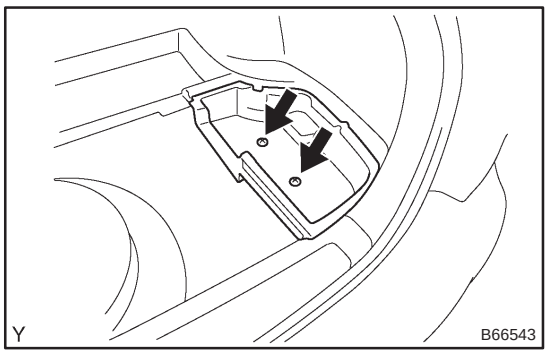


14. REMOVE CENTER PILLAR GARNISH UPPER LH
HINT:
Use the same procedures described for the RH side.
15. REMOVE REAR SEAT ASSY (See page 72–21)
16. REMOVE REAR SIDE SEAT BACK ASSY RH
(a) Remove the bolt and seatback
17. REMOVE REAR SIDE SEAT BACK ASSY LH
(a) Remove the bolt and seatback
18. REMOVE TONNEAU COVER ASSY
19. REMOVE BACK DOOR WEATHERSTRIP

20. REMOVE DECK BOARD SUB–ASSY

21. REMOVE DECK FLOOR BOX REAR

(a) Remove the deck floor box.

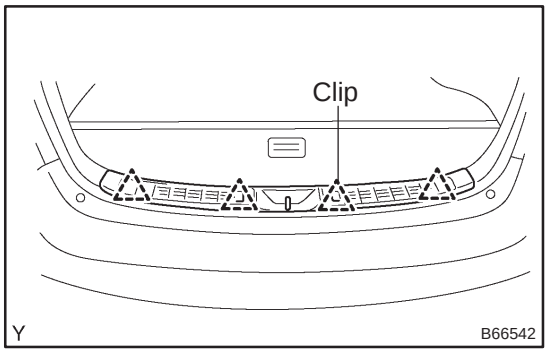


22. REMOVE DECK FLOOR BOX FRONT

(a) Using a screwdriver, disengage the 2 clips and 2 screws, and remove the deck floor box.

HINT:

Tape the screwdriver tip before use.

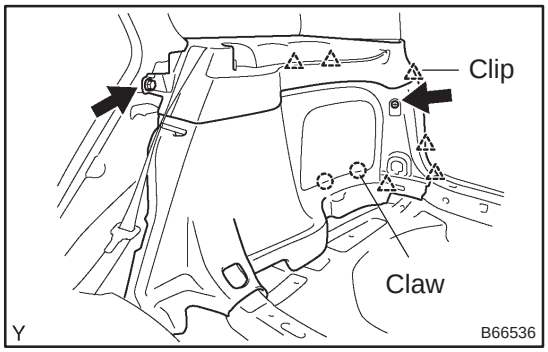


23. REMOVE DECK FLOOR BOX RH

(a) Remove the 2 screws and deck floor box.

24. REMOVE DECK FLOOR BOX LH

(a) Remove the 2 screws and deck floor box.



25. REMOVE REAR FLOOR FINISH PLATE

(a) Using a screwdriver, disengage the 4 clips and remove the floor finish plate.

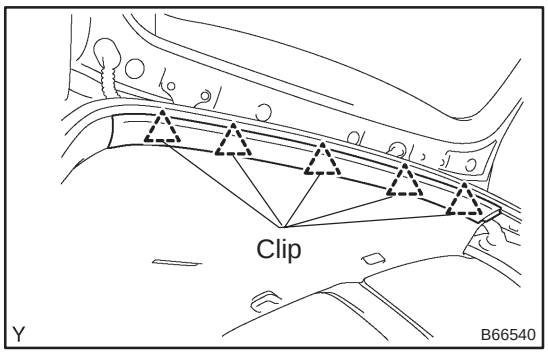
HINT:

Tape the screwdriver tip before use.

26. REMOVE DECK TRIM SIDE BOARD RH

(a) Remove the bolt and screw.

(b) Using a screwdriver, disengage the 5 clips and 2 claws, and remove the deck trim side board.



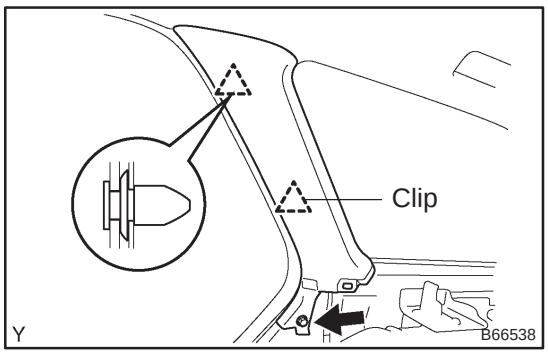
HINT:

Tape the screwdriver tip before use.

27. REMOVE DECK TRIM SIDE BOARD LH

HINT:

Use the same procedures described for the RH side.



28. REMOVE ROOF HEADLINING TRIM SUB–ASSY REAR

(a) Using a screwdriver, disengage the 5 clips and remove the roof headlining trim.

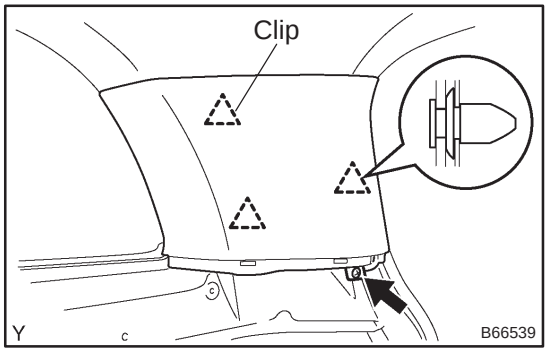
HINT:

Tape the screwdriver tip before use.

29. REMOVE ROOF SIDE GARNISH INNER RH

(a) Remove the bolt.

(b) Using a screwdriver, disengage the 2 clips and remove the window side garnish.



HINT:

Tape the screwdriver tip before use.

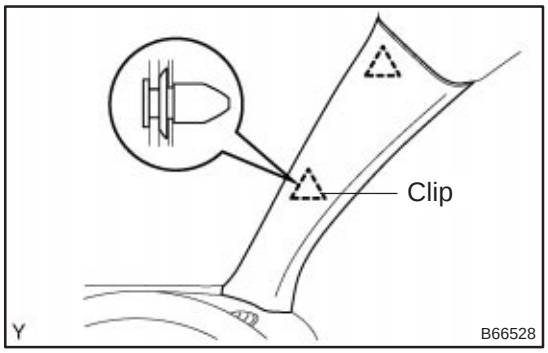
30. REMOVE ROOF SIDE GARNISH INNER LH

HINT:

Use the same procedures described for the RH side.

31. REMOVE REAR WINDOW SIDE GARNISH RH

(a) Using a screwdriver, disengage the 3 clips and screw, and remove the roof side garnish.



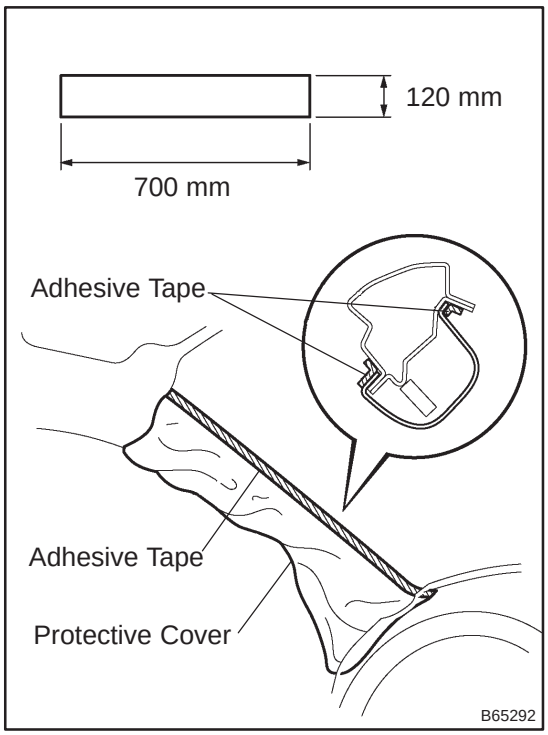
HINT:

Tape the screwdriver tip before use.

32. REMOVE REAR WINDOW SIDE GARNISH LH

HINT:

Use the same procedures described for the RH side.



33. REMOVE FRONT PILLAR GARNISH RH

(a) Using a screwdriver, disengage the 2 clips and remove the pillar garnish.

HINT:

Tape the screwdriver tip before use.

(b) Pull the garnish upward and remove if from the instrument panel.

(c) w/ Curtain shield airbag:

Protect the curtain shield airbag LH.

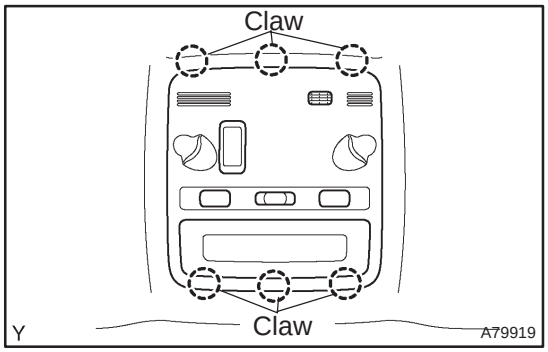
(1) Thoroughly cover the airbag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover in place with adhesive tape as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

34. REMOVE FRONT PILLAR GARNISH LH

HINT:



Use the same procedures described for the RH side.

35. REMOVE RH VISOR ASSY

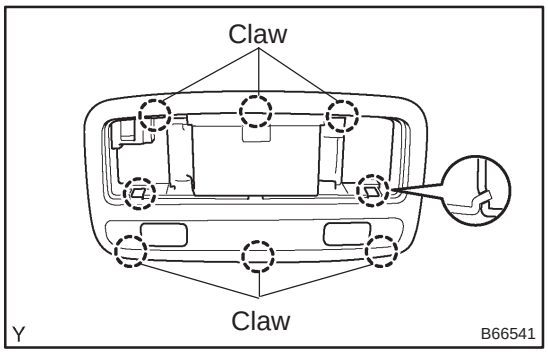
(a) Remove the 2 screws and visor.

36. REMOVE LH VISOR ASSY

(a) Remove the 2 screws and visor.

37. REMOVE MAP LAMP ASSY

(a) Using a screwdriver, disengage the 6 claws and remove the lens cover.



HINT:

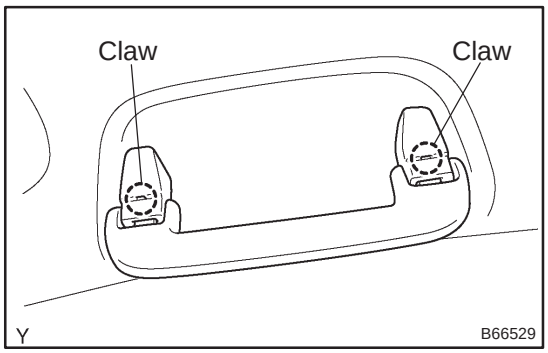
Tape the screwdriver tip before use.

(b) Remove the 2 screws.

(c) Using a moulding remover, disengage the claws.

(d) Disconnect the map lamp switch connector and sliding roof switch connector, and remove the map lamp.

38. REMOVE ROOM LAMP ASSY NO.2



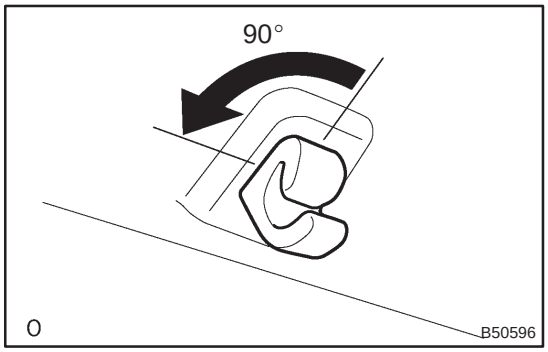
(a) Using a moulding remover, disengage the 8 claws and remove the lens cover.

HINT:

Tape the screwdriver tip before use.

(b) Using a moulding remover, disengage the claws.

(c) Disconnect the map lamp switch connector and remove the map lamp.

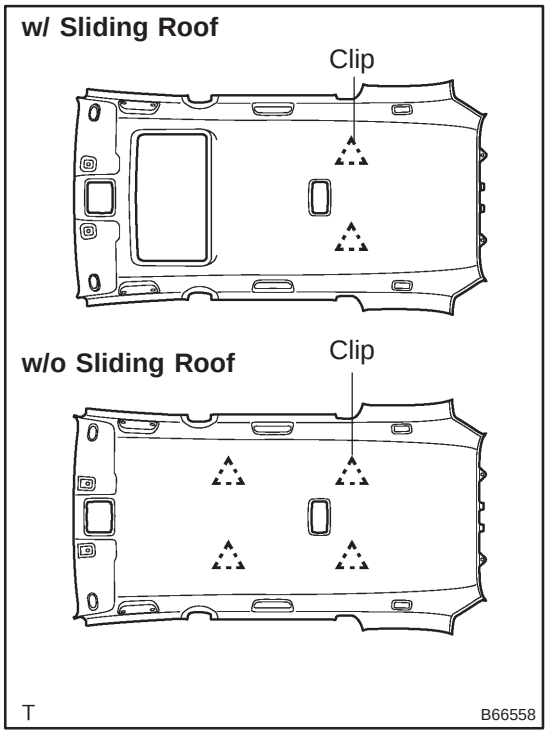


39. REMOVE ASSIST GRIP SUB–ASSY

(a) Using a screwdriver, disengage the 2 claws and remove the 2 assist grip covers.

HINT:

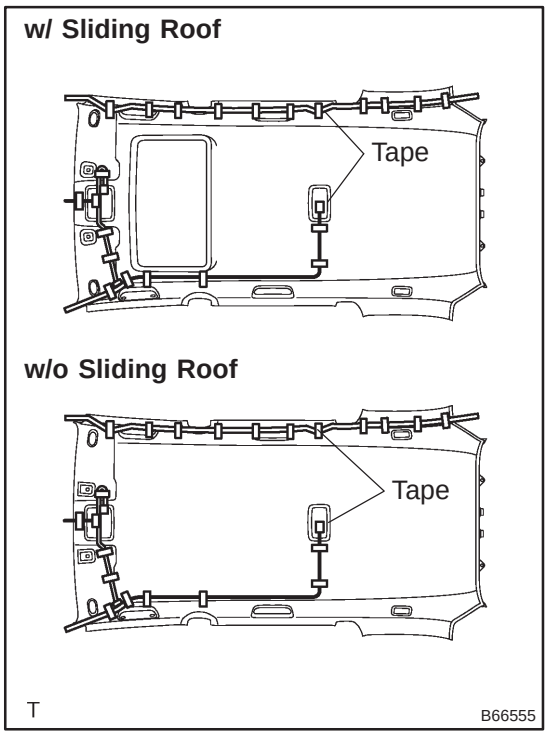
Tape the screwdriver tip before use.



(b) Remove the 2 bolts and assist grip.

40. REMOVE VISOR HOLDER

(a) Remove the holder of the sun visor by turning it counterclockwise.



41. REMOVE SUN ROOF OPENING TRIM MOULDING (W/ SLIDING ROOF)

42. REMOVE ROOF HEADLINING ASSY

(a) w/ Sliding roof:
Using a clip remover, disengage the 2 clips and remove the roof headling.

(b) w/o Sliding roof:
Using a clip remover, disengage the 4 clips and remove the roof headling.

43. INSTALL ROOF HEADLINING ASSY

(a) Align the markings, and then install the wire harness with tape.

NOTICE:

Attach the roof wire harness securely.

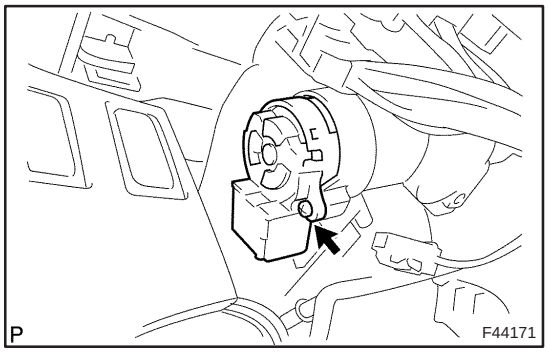
(b) w/ Sliding roof:
Install the 4 clips.

(c) wo/ Sliding roof:
Install the 2 clips.

44. INSTALL REAR SEAT ASSY (See page 72–21)

IGNITION OR STARTER SWITCH ASSY

80027–04



REPLACEMENT

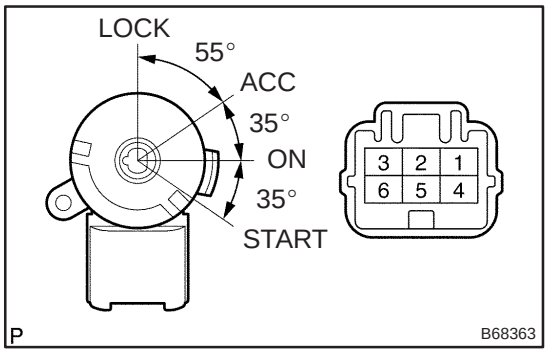
HINT:

The installation is in the reverse order of the removal.

1. REMOVE STEERING COLUMN COVER LWR (See page 50–9)

2. REMOVE STEERING COLUMN COVER UPR (See page 50–9)

3. REMOVE IGNITION OR STARTER SWITCH ASSY



(a) Disconnect the ignition switch and unlock warning switch connectors.

(b) Remove the clamp.

(c) Remove the screw and ignition switch.

80028–04

INSPECTION

1. INSPECT IGNITION OR STARTER SWITCH ASSY

(a) Inspect the switch resistance.

Standard:

Terminal No.	Switch Condition	Specified Condition
2 – 3	ACC	Below 1Ω
1 – 3	ON	
2 – 3		
4 – 6		
1 – 3	START	
4 – 5		
4 – 6		

If the result is not as specified, replace the switch.

HOW TO USE THIS MANUAL

010B2–08

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally, repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This manual explains the 1st process of ”Diagnosis” (placed in the ”Diagnostics” section), the 2nd process of ”Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting”, but the 3rd process of ”Final Inspection” is omitted.

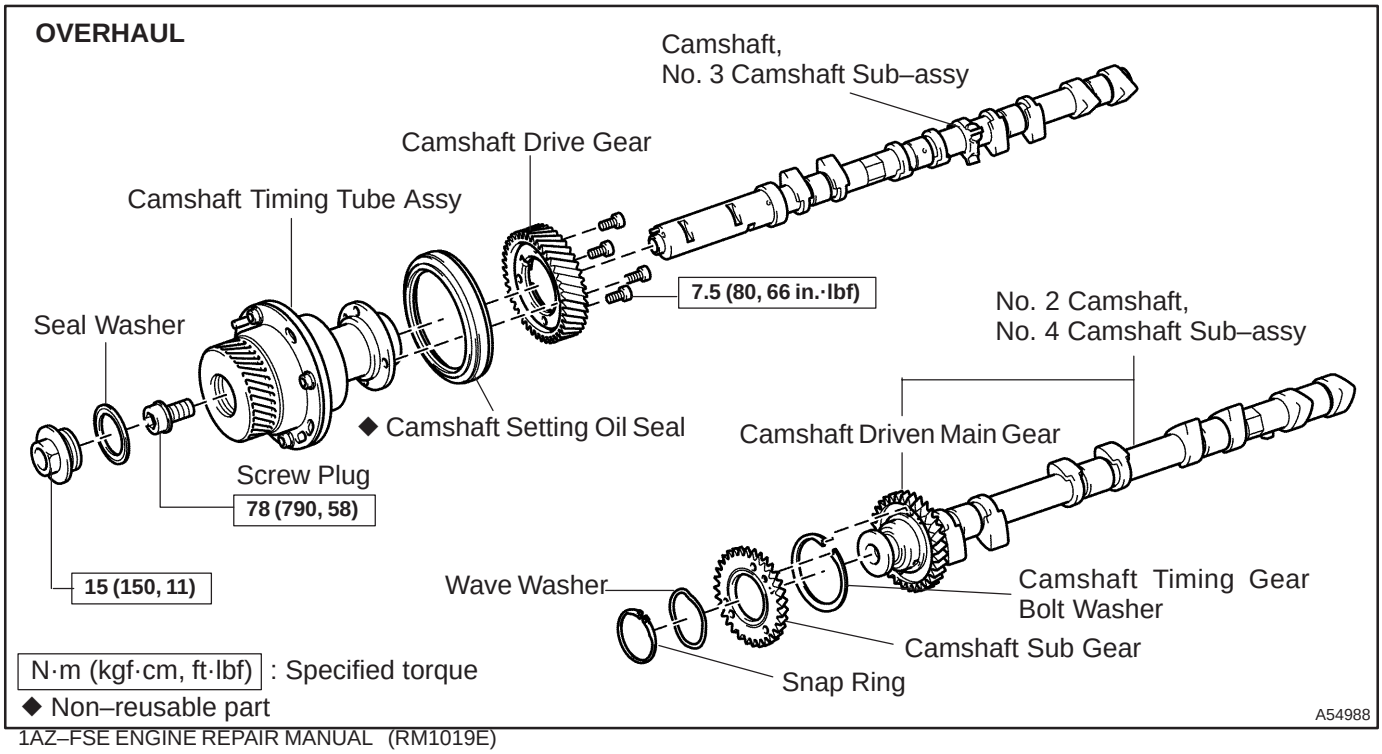
(d) The following essential operations are not written in this manual. However, these operations must be done in the practical situation.
(1) Operation with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX is provided as a section on the end of the book to guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.



4. REPAIR PROCEDURES

(a) Component drawing is placed under the title when necessary.

(b) Illustrations are placed as ”disassembled parts drawing” so that it enables you to understand the fitting condition of the components.

(c) Non–reusable parts, grease applied parts, precoated parts and tightening torque are specified in the components drawing.

Example:

(d) Tightening torque, oil applying position, and non–reusable parts are described as important points in the procedure.

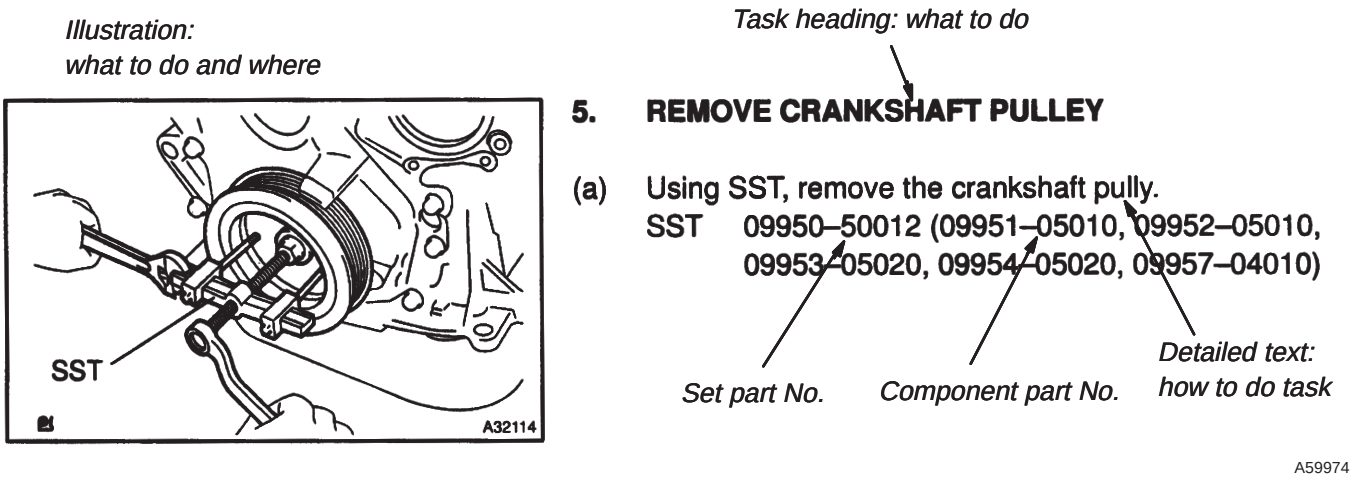
NOTICE:

There are cases where such information can only be indicated by an illustration. In that case, all the information such as torque, oil, etc. are described in the illustration.

(e) Installing procedure of operation items is performed in the reverse order of the removal, and only the important points are described.

(f) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(g) There may be a case where the illustrations of the similar models are used. In that case the details may be different from the actual vehicle.



(h) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.

(2) The task heading tells what to do.

(3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for a quick reference.

6. TERMS DEFINITION

CAUTION	Indicates the possibility of injury to you or other people.
NOTICE	Indicates the possibility of damage to the components being repaired.
HINT	Provides additional information to help you to perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:

Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION

010L5–01

PRECAUTION

1. TO PREVENT FROM ENTERING FOREIGN SUBSTANCES.

(a) When foreign substances such as dust, grain of sand or metallic dust enter inside of engine, it often causes functional failure of the engine.

(1) Precaution before disassembly.

- Remove adequately all sand and mud adhere to the outside of engine .

(2) Precaution at reassembly.

- Protect disassembled parts from dust by using vinyl sheet to cover.

2. TO PREVENT SCRATCHES ON THE PARTS.

(a) The existence of scratches on the contact and revolving surfaces often causes oil leak and seisure.

(1) Precautions at disassembly and reassembly.

- When disassemble the contact surface of the parts, use plastic hummer striking lightly. (Do not pry out by screwdriver).
- When fix the parts to the vise, do not directly catch it in the vise. Fix the parts through aluminum bar.

3. TO CLEAN AND WASH THE PARTS.

(a) Each parts needs to be well cleaned, washed, and dried by air, and apply specified oil before reassembly.

(1) Cleaning and washing by alkaline solvent is prohibited:

- Parts made of aluminum and rubber. (ex. cylinder head cover gasket etc.)

(2) Cleaning and washing by flushing oil (ex. kerosene, white gasoline etc.) is prohibited:

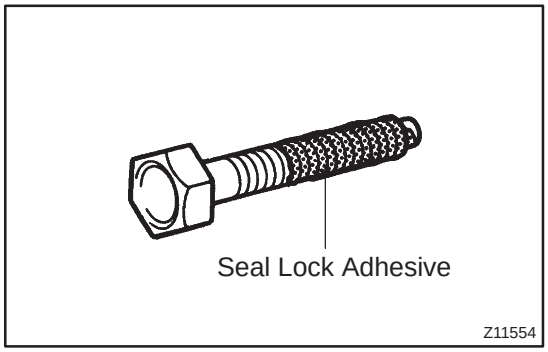
- Parts made of rubber. (ex. cylinder head cover gasket etc.)

4. POSITION AND DIRECTION OF EACH PARTS.

(a) Each parts needs to be reassembled as the same position and direction as it disassembled.

(1) Precautions at disassembly and reassembly.

- Follow the directions when the manual designates to mark the matchmark and/or direction mark.
- Disassembled parts needs to be put in order as disassembled, not to change position and/or direction.
- Follow the directions when the manual instructs the position and direction.



5. INSTALL ENGINE ASSEMBLY TO OVERHAUL STAND WHEN OVERHAUL THE ENGINE.

6. PUT THE DISASSEMBLED PARTS IN ORDER AS THEY DISASSEMBLED.

7. APPLY ENGINE OIL TO THE SLIDING AND ROTATING SURFACES.

8. NON–REUSABLE PARTS SUCH AS GASKET AND SEAL NEEDS TO BE CHANGED TO THE NEW PARTS.

9. BASIC REPAIR HINT

(a) Precoated Parts:

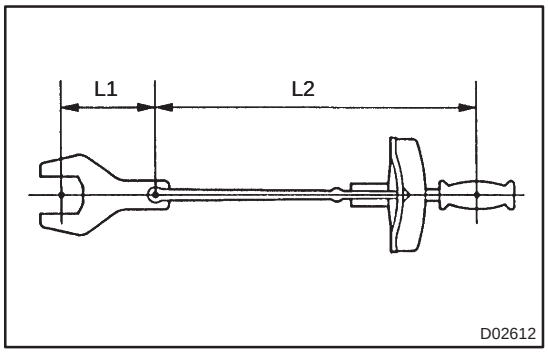
(1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

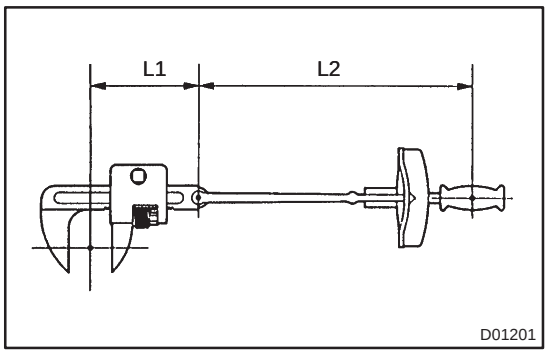
(3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

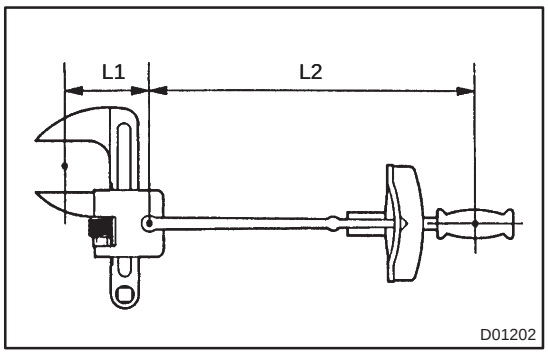
Do the torque checking with the lower limit value of the torque tolerance.



(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.



(b) Gaskets:



When necessary, use a sealer on gaskets to prevent leaks.

(c) Bolts, Nuts and Screws:

Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

(d) Torque When Using Extension Tool with Torque Wrench:

(1) In case of tightening by extending the entire length of the torque wrench combined with SST or tool, if you tighten until the reading of the torque wrench reached the specified torque value, the actual torque becomes excessive.

(2) In this text, only the specified torque is described. In case of using SST or extension tool, find the reading of the torque wrench by the formula.

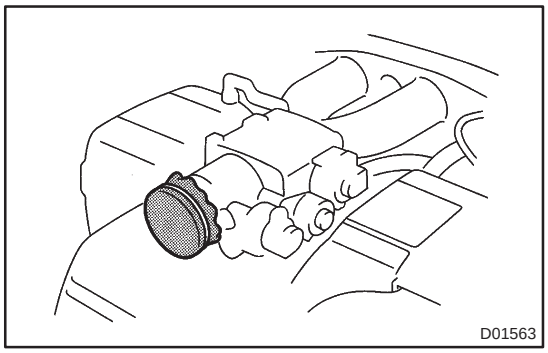
(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or tool (cm)
L2	Length of torque wrench (cm)

10. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) Place for Removing and Installing Fuel System Parts:

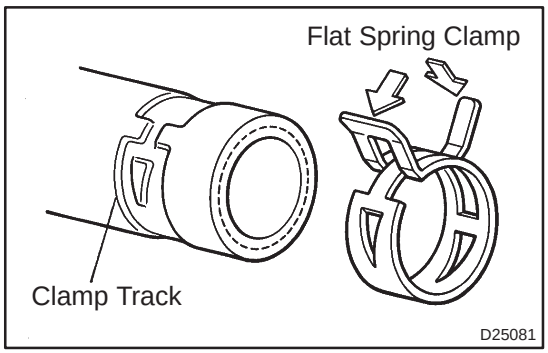
(1) Place with good air ventilation and without anything flammable such as welder, grinder, drill, electric motor or stove in the surroundings.



(2) Never work in a place like a pit or nearby pit as there is a possibility that vaporized fuel fills those places.

(b) Removing and Installing of Fuel System Parts:

(1) Prepare a fire extinguisher before starting the operation.



(2) For prevention of the static electricity, install a ground on the fuel changer, vehicle and fuel tank, and do not spray much water so as to prevent slipping.

(3) Never use any electric equipment like an electric motor or a working light as they may cause spark or high temperature.
(4) Never use an iron hammer as it may cause spark.
(5) Dispose the shop lag separately from any fuel deposit.

11. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal tip is mixed in the inlet pass, that may give a bad effect to the engine and turbo charger.
(b) When removing and installing of the inlet system parts, close the opening of the removed inlet system parts and the engine with a clean shop lag or gum tape.
(c) When installing the inlet system parts, check that there is no mixing of a metal tip.

12. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the depth of inserting portion and the clamp position to restore it surely.
(b) Change a deformed or dented into a new one.
(c) In case of reusing the hose, install the clamp on the hose where it has a clamp track.
(d) For a flat spring type clamp, make it adjust by adding force to the arrow mark direction after the installation.

TERMS

ABBREVIATIONS USED IN THIS MANUAL

010B9–09

Abbreviations	Meaning
ABS	Anti–Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACSD	Automatic Cold Start Device
A.D.D.	Automatic Disconnecting Differential
A/F	Air–Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
Approx.	Approximately
ASSY	Assembly
A/T, ATM	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
B/L	Bi–Level
B/S	Bore–Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
CB	Circuit Breaker
CCo	Catalytic Converter For Oxidation
CD	Compact Disc
CF	Cornering Force
CG	Center Of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current
DEF	Defogger

Abbreviations	Meaning
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
EBD	Electric Brake Force Distribution
ECAM	Engine Control And Measurement System
ECD	Electronic Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Control Transmission
ECU	Electronic Control Unit
ED	Electro–Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR–VM	EGR–Vacuum Modulator
ELR	Emergency Locking Retractor
EMPS	Electric Motor Power Steering
ENG	Engine
ESA	Electronic Spark Advance
ETCS–i	Electronic Throttle Control System–intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E–VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front–Engine Front–Wheel–Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
Fr	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front–Wheel–Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
HAC	High Altitude Compensator
H/B	Hatchback
H–FUSE	High Current Fuse

Abbreviations	Meaning
HI	High
HID	High Intensity Discharge (Head Lamp)
HSG	Housing
HT	Hard Top
HWS	Heated Windshield System
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick–Down
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left–Hand
LHD	Left–Hand Drive
L/H/W	Length, Height, Width
LLC	Long–Life Coolant
LNG	Liquified Natural Gas
LO	Low
LPG	Liquified Petroleum Gas
LSD	Limited Slip Differential
LSP & PV	Load Sensing Proportioning And Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MG1	Motor Generator No.1
MG2	Motor Generator No.2
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T, MTM	Manual Transmission (Transaxle)
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
No.	Number
O2S	Oxygen Sensor
O/D	Overdrive
OEM	Original Equipment Manufacturing

Abbreviations	Meaning
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On–board Refilling Vapor Recovery
O/S	Oversize
P & BV	Proportioning And Bypass Valve
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PTC	Positive Temperature Coefficient
PS	Power Steering
PTO	Power Take–Off
P/W	Power Window
R & P	Rack And Pinion
RAM	Random Access Memory
R/B	Relay Block
RBS	Recirculating Ball Type Steering
R/F	Reinforcement
RFS	Rigid Front Suspension
RH	Right–Hand
RHD	Right–Hand Drive
RLY	Relay
ROM	Read Only Memory
Rr	Rear
RRS	Rigid Rear Suspension
RWD	Rear–Wheel Drive
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold–Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
TACH	Tachometer
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer–Controlled System
TCV	Timing Control Valve
TDC	Top Dead Center
TEMP.	Temperature
TEMS	TOYOTA Electronic Modulated Suspension
TFT	Toyota Free–Tronic

Abbreviations	Meaning
TIS	Total Information System For Vehicle Development
T/M	Transmission
TMC	TOYOTA Motor Corporation
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.
TRC	Traction Control System
TURBO	Turbocharge
TWC	Three–Way Catalyst
U/D	Underdrive
U/S	Undersize
VCV	Vacuum Control Valve
VENT	Ventilator
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Stability Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT–i	Variable Valve Timing–intelligent
w/	With
WGN	Wagon
W/H	Wire Harness
w/o	Without
WU–TWC	Warm Up Three–way Catalytic Converter
WU–OC	Warm Up Oxidation Catalytic Converter
1st	First
2nd	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3rd	Third
4th	Fourth
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5th	Fifth

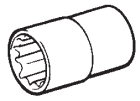
010BA–12

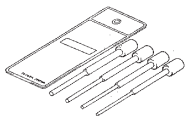
GLOSSARY OF SAE AND TOYOTA TERMS

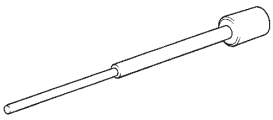
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

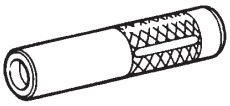
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI/INJ)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)

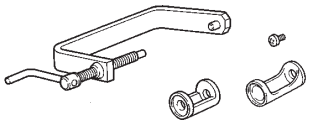
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel–Shutoff	–
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On–Board Diagnostic	On–Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Convert (OC), CCo
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E–ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter

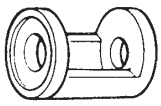


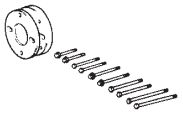


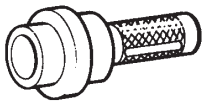












TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) Manifold Converter CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	–
3GR	Third Gear	–
4GR	Fourth Gear	–

030LM–05

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

ENGINE MECHANICAL

SERVICE DATA

031FM–01

Oil pump drive gear		
Gear diameter (w/chain)	Minimum	48.2 mm (1.898 in.)
Oil pump drive shaft gear		
Gear diameter (w/chain)	Minimum	48.2 mm (1.898 in.)
Crankshaft timing gear or sprocket		
Gear diameter (w/chain)	Minimum	51.6 mm (2.031 in.)
Chain tensioner slipper		
Wear	Maximum	1.0 mm (0.039 in.)
Chain vibration damper No.1		
Wear	Maximum	1.0 mm (0.039 in.)
Cylinder head set bolt		
Bolt length	Standard	161.3 to 162.7 mm (6.350 to 6.406 in.)
	Maximum	164.2 mm (6.465 in.)
Chain sub–assy		
Elongation	Maximum	115.4 mm (4.543 in.)
Camshaft timing gear or sprocket		
Sprocket diameter (w/chain)	Minimum	97.3 mm (3.831 in.)
Camshaft		
Circle runout	Maximum	0.05 mm (0.0020 in.)
Cam lobe height	Standard	45.510 to 45.610 mm (1.7917 to 1.7957 in.)
	Minimum	45.400 mm (1.7874 in.)
Camshaft No.2		
Circle runout	Maximum	0.05 mm (0.0020 in.)
Cam lobe height	Standard	45.983 to 46.083 mm (1.8104 to 1.8143 in.)
	Minimum	45.873 mm (1.8060 in.)
No. 1 journal diameter		35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other journal diameter		22.959 to 22.975 mm (0.9040 to 0.9045 in.)
Thrust clearance		
Intake	Standard	0.040 to 0.095 mm (0.0016 to 0.0037 in.)
	Maximum	0.11 mm (0.0043 in.)
Exhaust	Standard	0.080 to 0.135 mm (0.0032 to 0.0053 in.)
	Maximum	0.15 mm (0.0059 in.)
Oil clearance		
Intake No. 1 journal bearing mark 1	Standard	0.007 to 0.038 mm (0.0028 to 0.00150 in.)
Intake No. 1 journal bearing mark 2	Standard	0.008 to 0.038 mm (0.0031 to 0.00150 in.)
Intake No. 1 journal bearing mark 3	Standard	0.008 to 0.038 mm (0.0031 to 0.00150 in.)
Exhaust No. 1 journal	Standard	0.015 to 0.054 mm (0.0006 to 0.0021 in.)
Other journals	Standard	0.025 to 0.062 mm (0.00098 to 0.00244 in.)
Intake No. 1 journal	Maximum	0.07 mm (0.0028 in.)
Other journals	Maximum	0.10 mm (0.0039 in.)
Valve clearance	(Cold)	
Intake		0.19 to 0.29 mm (0.007 to 0.0114 in.)
Exhaust		0.30 to 0.40 mm (0.012 to 0.0160 in.)
Cylinder head		
Warpage		
Cylinder block side	Maximum	0.05 mm (0.0020 in.)
Intake manifold side	Maximum	0.08 mm (0.0031 in.)
Exhaust manifold side	Maximum	0.08 mm (0.0031 in.)
Inner compression spring		
Free length		45.7 mm (1.799 in.)
Deviation	Maximum	1.6 mm (0.063 in.)
Angle (reference)	Maximum	2°

Intake valve		
Overall length	Standard	101.71 mm (4.0043in.)
	Minimum	101.21 mm (3.9846in.)
Valve stem diameter		5.470 to 5.485 mm (0.2154 to 0.2159 in.)
Margin thickness	Standard	1.05 to 1.45 mm (0.041 to 0.057 in.)
	Minimum	0.5 mm (0.020 in.)
Exhaust valve		
Overall length	Standard	101.15 mm (3.9823in.)
	Minimum	100.70 mm (3.9646 in.)
Valve stem diameter		5.465 to 5.480 mm (0.2152 to 0.2157 in.)
Margin thickness	Standard	1.2 to 1.6 mm (0.047 to 0.063 in.)
	Minimum	0.75 mm (0.030 in.)
Intake valve guide bush		
Bushing inside diameter		5.510 to 5.530 mm (0.2169 to 0.2177 in.)
Oil clearance	Standard	0.025 to 0.060 mm (0.00098 to 0.00236 in.)
	Maximum	0.08 mm (0.0031 in.)
Diameter		10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Protrusion height		9.6 to 10.0 mm (0.3779 to 0.3937 in.)
Exhaust valve guide bush		
Bushing inside diameter		5.510 to 5.530 mm (0.2169 to 0.2177 in.)
Oil clearance	Standard	0.030 to 0.065 mm (0.0012 to 0.0026 in.)
	Maximum	0.10 mm (0.0039 in.)
Diameter		10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Protrusion height		9.6 to 10.0 mm (0.3779 to 0.3937 in.)
Valve lifter		
Lifter diameter		30.966 to 30.976 mm (1.2191 to 1.2195 in.)
Lifter bore diameter		31.009 to 31.025 mm (1.2208 to 1.2215 in.)
Oil clearance	Standard	0.033 to 0.059 mm (0.0013 to 0.0023 in.)
	Maximum	0.08 mm (0.0032 in.)
Ring w/head pin		
Protrusion height		3.0 to 5.5 mm (0.118 to 0.217 in.)
Connecting rod		
Thrust clearance	Standard	0.160 to 0.362 mm (0.0063 to 0.0143 in.)
	Maximum	0.362 mm (0.0143 in.)
Oil clearance	Standard	0.024 to 0.048 mm (0.0009 to 0.0019 in.)
	Maximum	0.08 mm (0.0031 in.)
Bushing inside diameter		22.005 to 22.014 mm (0.8663 to 0.8667 in.)
Oil clearance	Standard	0.005 to 0.011 mm (0.0002 to 0.0004 in.)
	Maximum	0.05 mm (0.0020 in.)
Out–of–alignment	Maximum per 100 mm (3.94 in.)	0.05 mm (0.0020 in.)
Rod twist	Maximum per 100 mm (3.94 in.)	0.15 mm (0.0059 in.)
Cylinder block		
Warpage	Maximum	0.05 mm (0.0020 in.)
Bore diameter	Standard	86.000 to 86.013 mm (3.3858 to 3.3863 in.)
Piston		
Piston diameter		85.927 to 85.937 mm (3.3829 to 3.3833 in.)
Piston oil clearance	Standard	0.063 to 0.086 mm (0.0025 to 0.0034 in.)
	Maximum	0.1 mm (0.0039 in.)
Piston ring		
Ring groove clearance	No. 1	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
	No. 2	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
	Oil (side rail)	0.070 to 0.150 mm (0.0028 to 0.0059 in.)
End gap	Standard No. 1	0.30 to 0.40 mm (0.0118 to 0.0157 in.)
	No. 2	0.47 to 0.62 mm (0.0185 to 0.0244 in.)
	Oil (side rail)	0.10 to 0.35 mm (0.0039 to 0.0138 in.)
	Maximum No. 1	0.89 mm (0.0350 in.)
	No. 2	1.37 mm (0.0539 in.)
	Oil (side rail)	0.73 mm (0.0287 in.)

Piston pin		
Bushing inside diameter		22.005 to 22.014 mm (0.8663 to 0.8667 in.)
Piston pin diameter		21.997 to 22.006 mm (0.8660 to 0.8664 in.)
Oil clearance	Standard	0.005 to 0.011 mm (0.0002 to 0.0004 in.)
	Maximum	0.005 mm (0.0020 in.)
Connecting rod bolt		
Diameter	Standard	7.2 to 7.3 mm (0.283 to 0.287 in.)
	Minimum	7.0 mm (0.276 in.)
Crankshaft		
Thrust clearance	Standard	0.040 to 0.240 mm (0.0016 to 0.0094 in.)
	Maximum	0.30 mm (0.0118 in.)
Thrust washer thickness		1.930 to 1.980 mm (0.0760 to 0.0780 in.)
Circle runout	Maximum	0.03 mm (0.0012 in.)
Main journal diameter		54.988 to 55.000 (2.1648 to 2.06535 in.)
Oil clearance	Standard	0.017 to 0.040 mm (0.0007 to 0.0016 in.)
	Maximum	0.07 mm (0.0028 in.)
Crank pin taper and out– of –round	Maximum	0.003 mm (0.0001 in.)
Crank pin diameter		47.990 to 48.000 mm (1.8894 to 1.8898 in.)
Crankshaft bearing cap set bolt		
Diameter	Standard	7.5 to 7.6 mm (0.295 to 0.299 in.)
	Minimum	7.2 mm (0.283 in.)

031FN–01

TORQUE SPECIFICATION

Part Tightened		N·m	kgf·cm	ft·lbf
Stiffening crankcase assy x Cylinder block		33	332	24

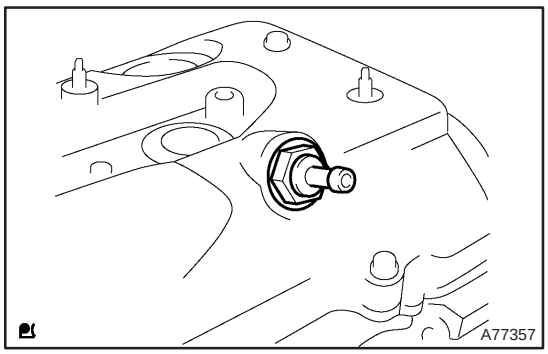
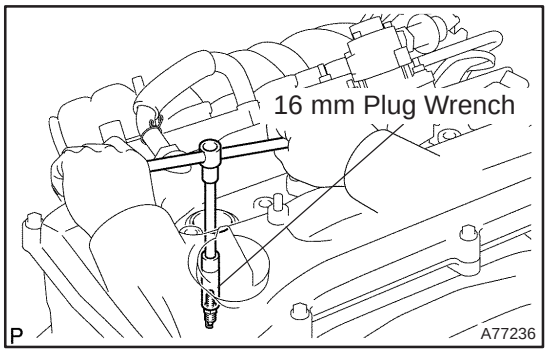
141BY–01

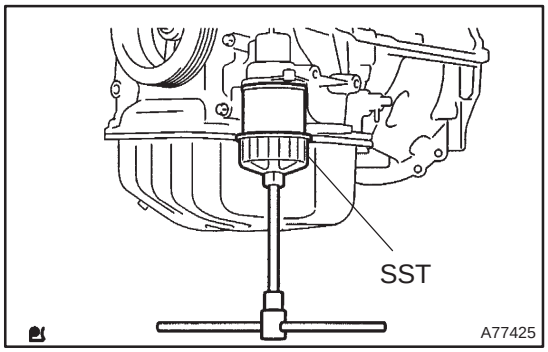


OVERHAUL

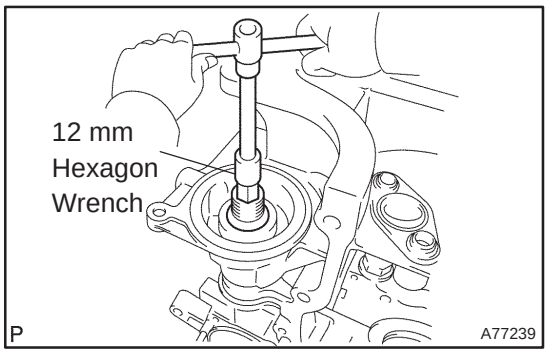


1. REMOVE OIL FILLER CAP SUB–ASSY

2. REMOVE OIL FILLER CAP GASKET

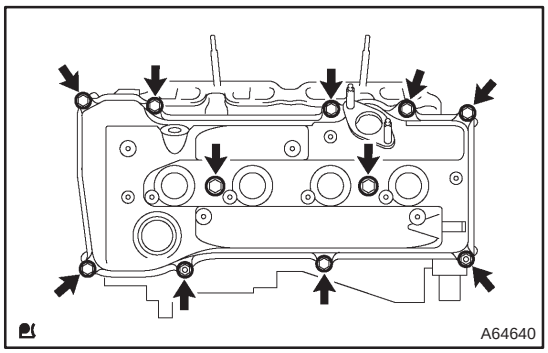


3. REMOVE VENTILATION VALVE SUB–ASSY



4. REMOVE SPARK PLUG

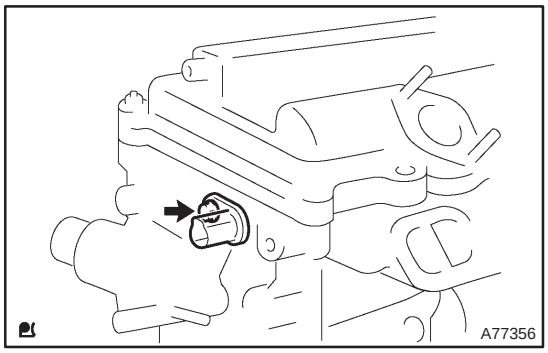
(a) Using a 16 mm plug wrench, remove the spark plugs.



5. REMOVE OIL FILTER SUB–ASSY

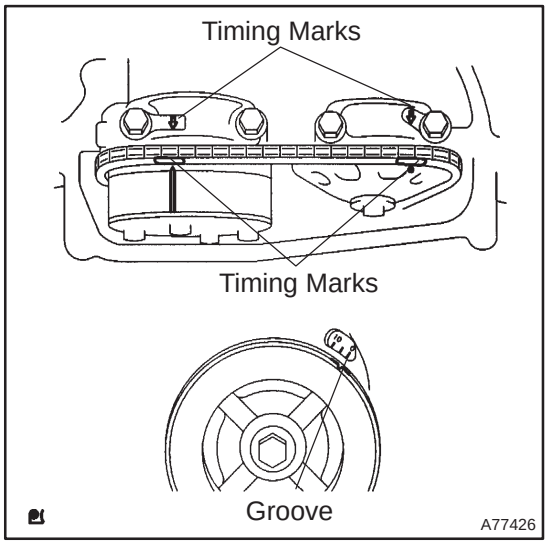
(a) Using SST, remove the oil filter.
SST 09228–06501

6. REMOVE OIL FILTER UNION



(a) Using a 12 mm socket hexagon wrench, remove the oil filter union.

7. REMOVE CYLINDER HEAD COVER SUB–ASSY

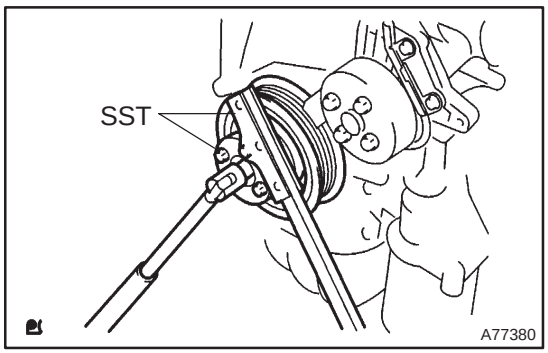


(a) Remove 9 bolts and 2 nuts from the cylinder head cover.
(b) Remove the cylinder head cover.

8. REMOVE CYLINDER HEAD COVER GASKET

9. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the bolt and the camshaft position sensor.

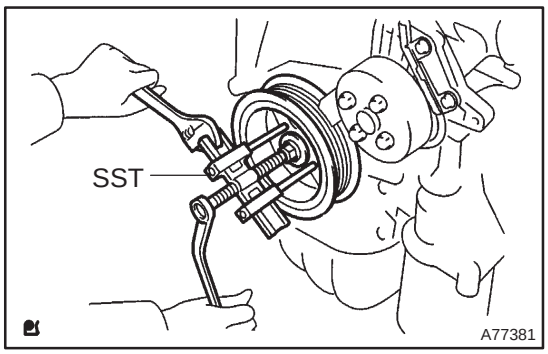


10. REMOVE CRANKSHAFT PULLEY

(a) Set No. 1 cylinder to TDC/ compression.

(1) Turn the crankshaft pulley, and align its groove with the timing mark ”0” of the timing chain cover.

(2) Check that the timing marks of the camshaft timing sprockets are aligned with the timing marks of the No. 1 bearing cap as shown in the illustration.



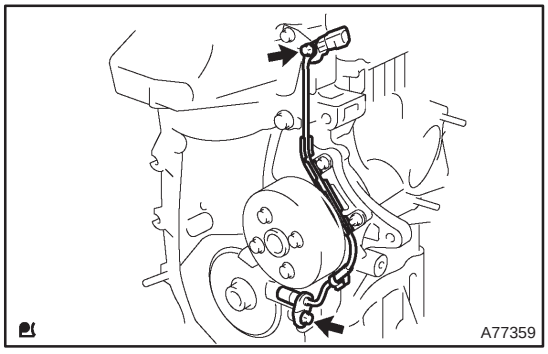
If not, turn the crankshaft 1 revolution (360°) and align the mark as above.

(b) Remove the crankshaft pulley.

(1) Using SST, fix the crankshaft pulley and loosen the pulley set bolt.

SST 09213–54015 (91651–60855), 09330–00021,

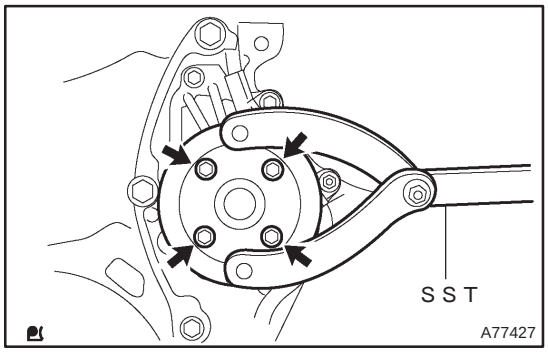
(2) Using the pulley set bolt and SST, remove the crankshaft pulley.



SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

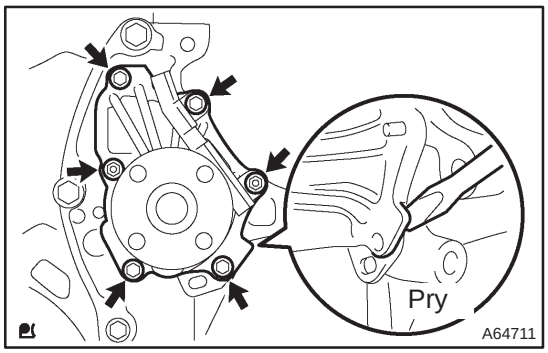
11. REMOVE CHAIN TENSIONER ASSY NO.1

NOTICE:



Do not turn the crankshaft.

(a) Separate a clamp.

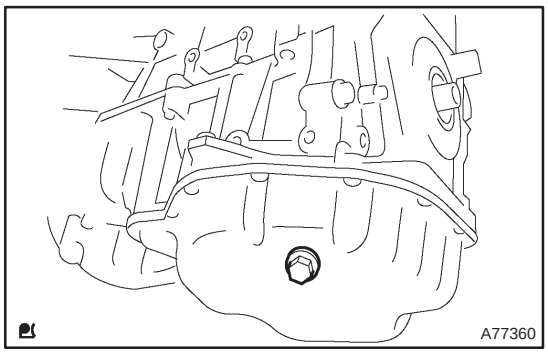


12. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the 2 bolts and the crankshaft position sensor.

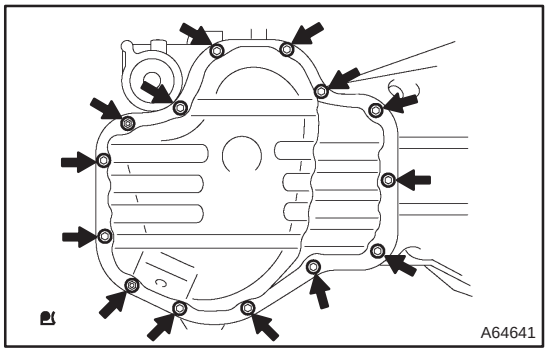
13. REMOVE WATER PUMP PULLEY

(a) Using SST, remove the 4 bolts and the water pump pulley.
SST 09960–10010 (09962–01000, 09963–00700)



14. REMOVE WATER PUMP ASSY

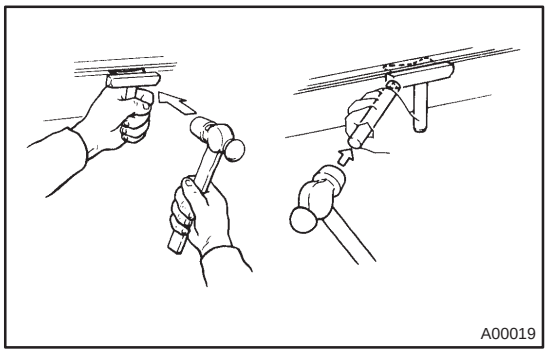
(a) Remove the 4 bolts, 2 nuts and clamp.



(b) Using a screw driver, pry between the water pump and cylinder block, and then remove the water pump.

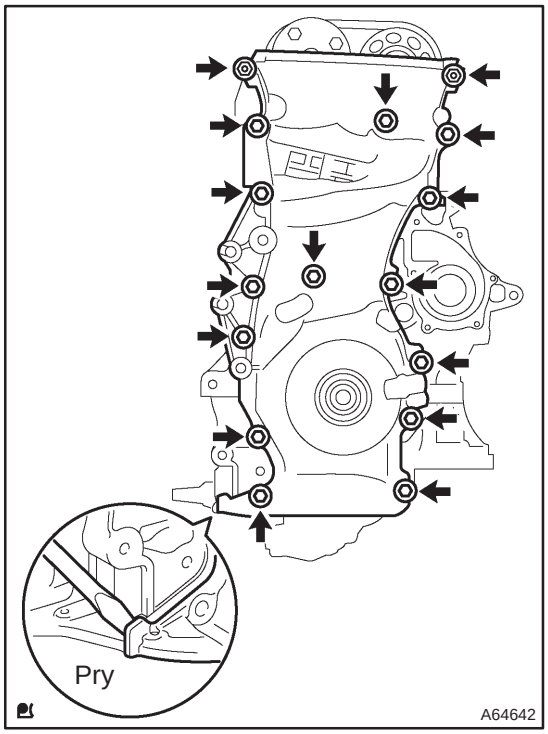
NOTICE:

Be careful not to damage the contact surface of the water pump and cylinder block.



15. REMOVE OIL PAN DRAIN PLUG

16. REMOVE OIL PAN SUB–ASSY



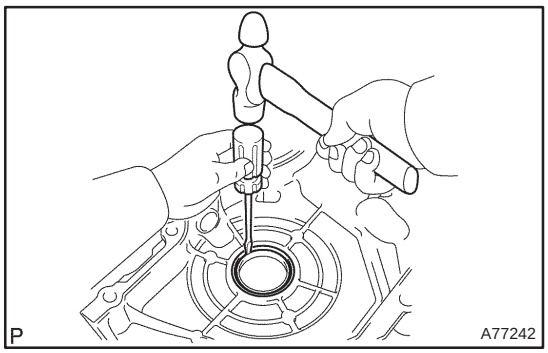
(a) Remove the 12 bolts and 2 nuts.

(b) Insert the blade of SST between the crank case, timing chain cover and oil pan, cut off applied sealer and remove the oil pan.
SST 09032–00100

NOTICE:

Be careful not to damage the contact surface of the timing chain cover, crank case and oil pan.

17. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY



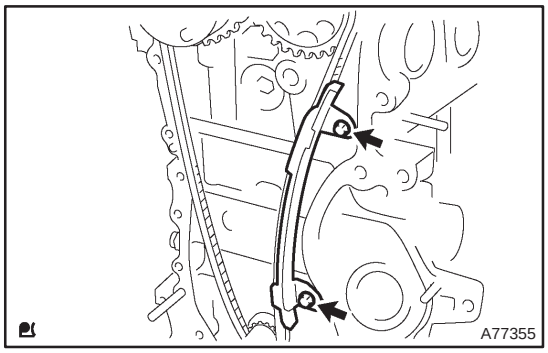
(a) Remove the 14 bolts and 2 nuts.

(b) Using a screwdriver, pry between the timing chain cover and cylinder head or cylinder block.

(c) Remove the timing chain cover.

NOTICE:

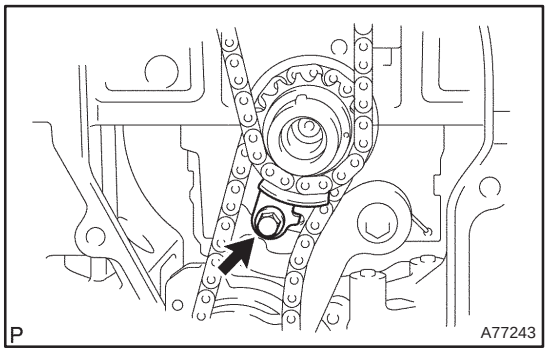
Be careful not to damage the contact surface of the timing chain cover, cylinder head and cylinder block.



18. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Using a screwdriver and a hammer, tap out the oil seal.

19. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1

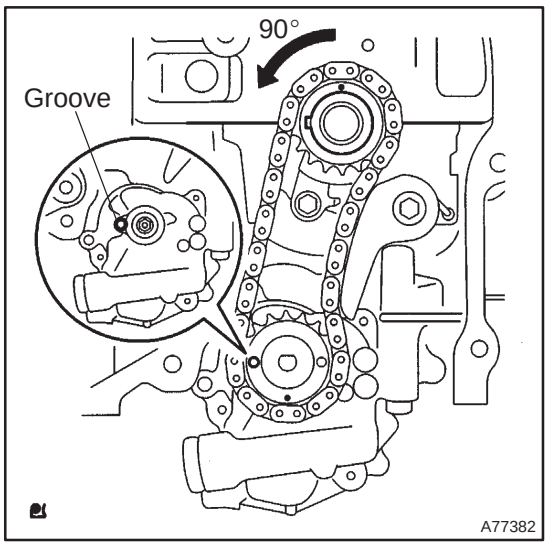


20. REMOVE CHAIN TENSIONER SLIPPER

(a) Remove the bolt and chain tensioner slipper.

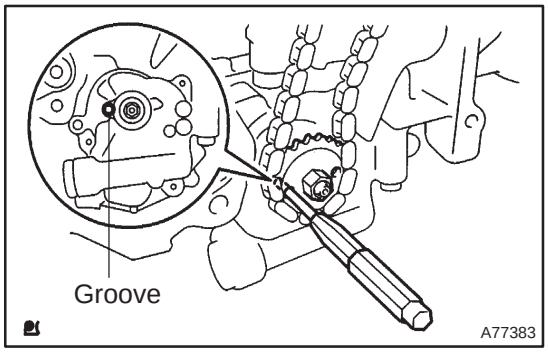
21. REMOVE CHAIN VIBRATION DAMPER NO.1

(a) Remove the 2 bolts and the chain vibration damper No. 1.



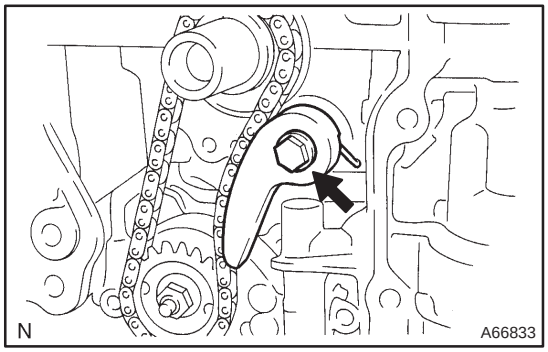
22. REMOVE TIMING CHAIN GUIDE

(a) Remove the bolt and the timing chain guide.



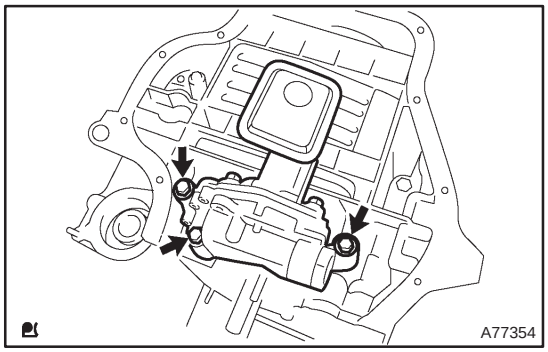
23. REMOVE CHAIN SUB–ASSY

24. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET

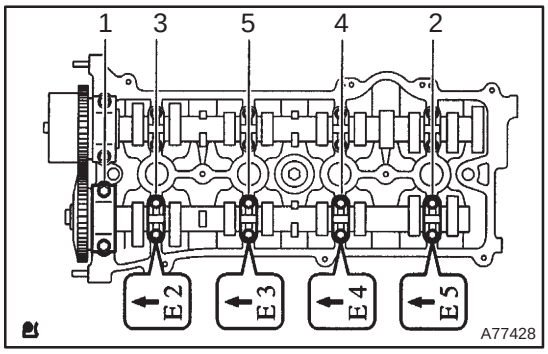


25. REMOVE NO.2 CHAIN SUB–ASSY

(a) Turn the crankshaft counterclockwise 90°, and align adjusting hole of the oil pump drive shaft gear with the groove of the oil pump.



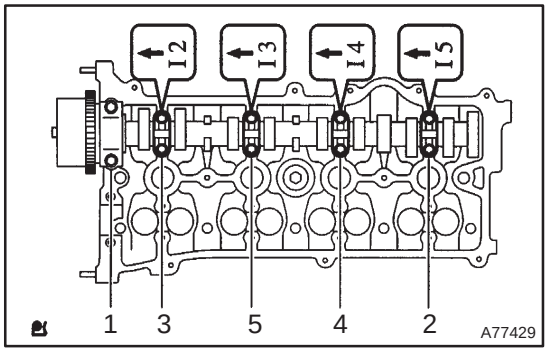
(b) Insert a 4 mm diameter bar in the adjusting hole drive shaft gear to lock in position, and remove the nut.



(c) Remove the bolt, chain tensioner and spring.

(d) Remove the oil pump drive shaft gear and chain No.2.

26. REMOVE OIL PUMP ASSY

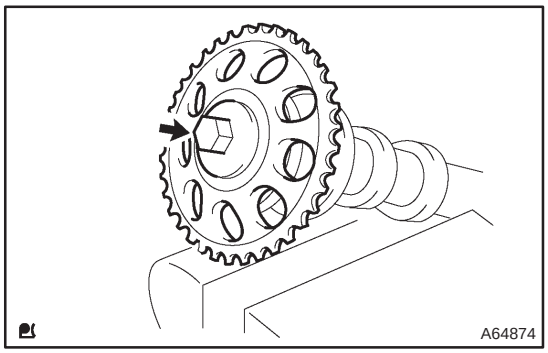


(a) Remove the 3 bolts, the remove then oil pump and gasket.

27. REMOVE NO.2 CAMSHAFT

(a) Remove the No. 2 and No. 3 camshaft bearing caps in the sequence shown in the illustration.

(b) Remove the No. 2 camshaft.

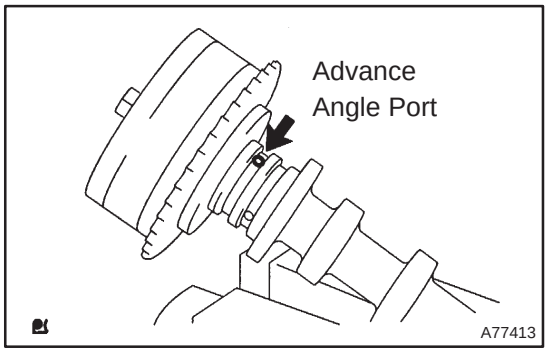


28. REMOVE CAMSHAFT

(a) Remove the No. 1 and No. 3 camshaft bearing caps in the sequence shown in the illustration.

(b) Remove the camshaft.

29. REMOVE CAMSHAFT BEARING NO.1

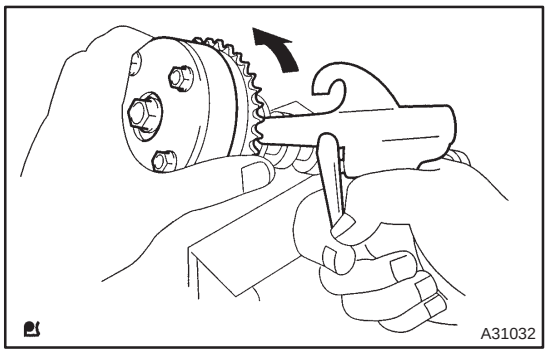


30. REMOVE CAMSHAFT TIMING GEAR OR SPROCKET

(a) Clamp the No. 2 camshaft in a vise, and remove the camshaft timing gear.

NOTICE:

Be careful not to damage the No. 2 camshaft.



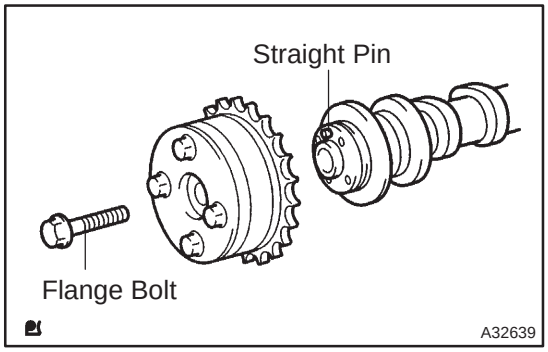
31. REMOVE CAMSHAFT TIMING GEAR ASSY

(a) Clamp the camshaft in a vise, and make sure the camshaft timing gear assembly does not move.

NOTICE:

Be careful not to damage the camshaft.

(b) Cover all the oil ports with vinyl tape expect the advance angle port as shown in the illustration.

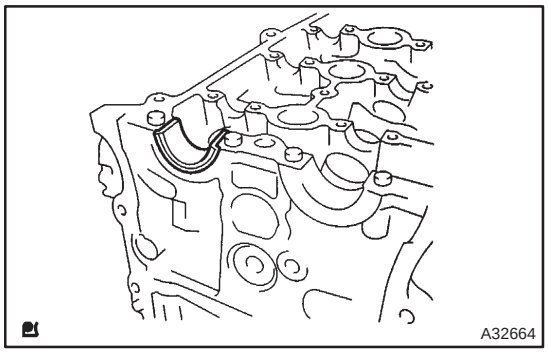


(c) Put air pressure into the oil port with 150 kPa (1.5 kgf/cm^2 21 psi), and turn the camshaft timing gear assembly to the advance direction (counterclockwise) by force.

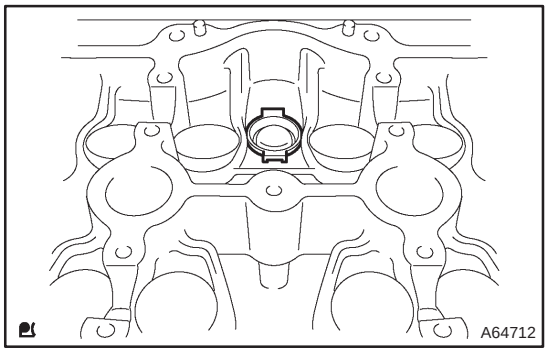
NOTICE:

Some oil spraying will occur. Be prepared to catch the spray with a shop rag.

HINT:

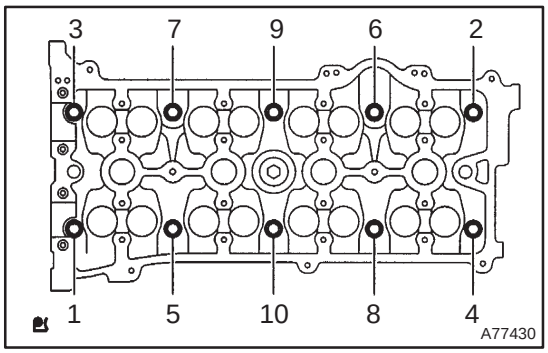


Depending on the pressure, the VVT timing sprocket may turn to the advance angle side without applying force by hand. Also, if the pressure can be hardly applied because of the air leakage from the port, it might be difficult to get the lock–pin to release.



(d) Remove the flange bolt from the camshaft timing gear assembly.

NOTICE:



- **Be sure not to remove the other 4 bolts.**
- **In case of reusing the camshaft timing gear assembly, release the straight pin lock first, and then install the gear.**

32. REMOVE CAMSHAFT BEARING NO.2

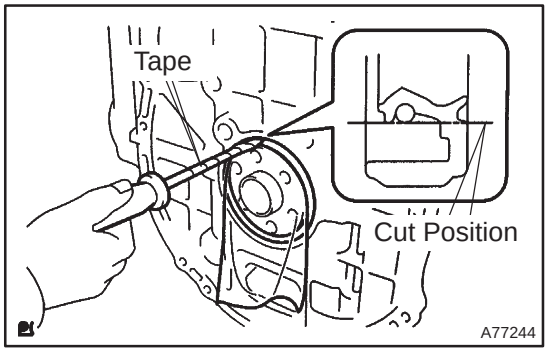
33. REMOVE CAMSHAFT HOUSING PLUG

34. REMOVE CYLINDER HEAD SUB–ASSY

(a) Using several steps, loosen the 10 cylinder head bolts with a 10 mm bi–hexagon wrench uniformly in the sequence shown.

(b) Remove 10 cylinder head bolts and plate washers.

NOTICE:



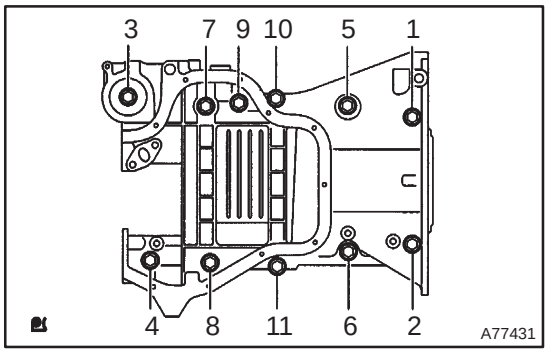
- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

35. REMOVE CYLINDER HEAD GASKET

36. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY

37. REMOVE OIL CONTROL VALVE FILTER

(a) Using a 12 mm hexagon wrench, remove the plug, gasket and oil control valve filter.



38. REMOVE ENGINE REAR OIL SEAL

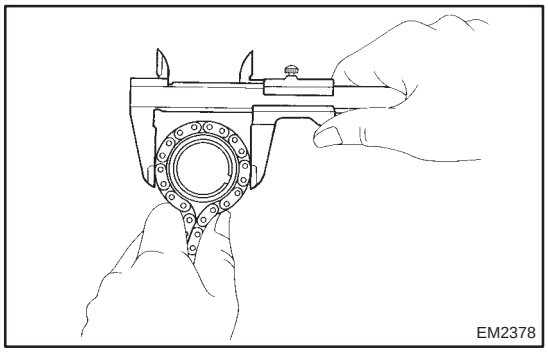
(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with the tip wrapped in tape, pry out the oil seal.

NOTICE:

After the removal, check the crankshaft is not damaged. If it is damaged, smooth the surface with 400 grit sand paper.

39. REMOVE STIFFENING CRANKCASE ASSY



(a) Loosen and remove the 11 bolts uniformly in several steps, in the sequence shown.

(b) Using a screw driver, remove the crankcase by prying the between the crankcase and cylinder block.

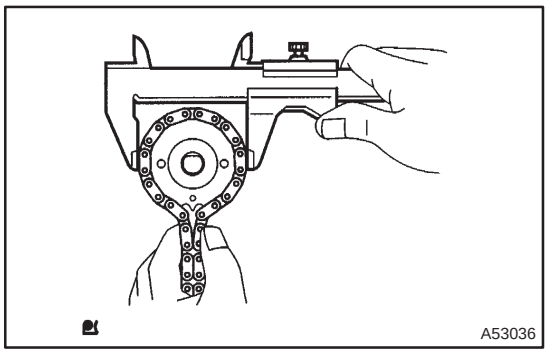
NOTICE:

Be careful not to damage the contact surfaces of the crankcase and cylinder block.

(c) Remove the O–ring from the cylinder block.

40. INSPECT OIL PUMP DRIVE GEAR

(a) Wrap the chain around the drive gear.



(b) Using vernier calipers, measure the drive gear diameter with the chain wrapped.

NOTICE:

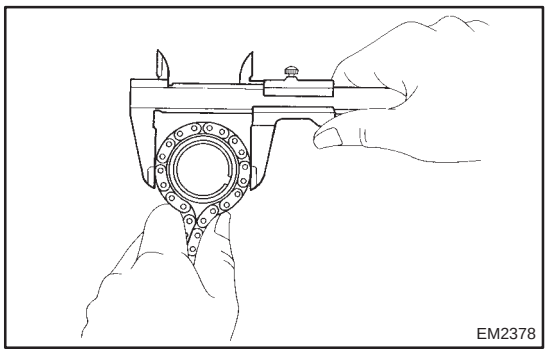
Vernier calipers must contact the chain rollers for the measuring.

Minimum gear diameter (w/chain): 48.2 mm (1.898 in.)

If the diameter is less than minimum, replace the chain and drive gear.

41. INSPECT OIL PUMP DRIVE SHAFT GEAR

(a) Wrap the chain around the drive shaft gear.



(b) Using vernier calipers, measure the drive shaft gear diameter with the chain wrapped.

NOTICE:

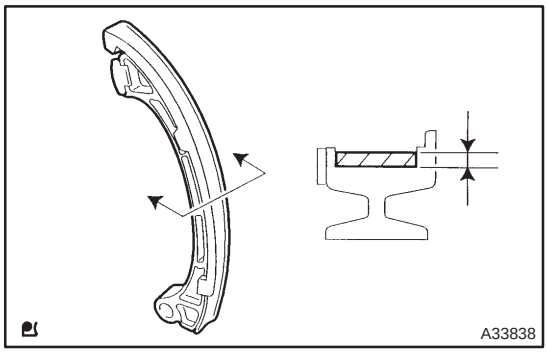
Vernier calipers must contact the chain rollers for the measuring.

Minimum gear diameter (w/chain): 48.2 mm (1.898 in.)

If the diameter is less than minimum, replace the chain and drive shaft gear.

42. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Wrap the chain around the timing gear.



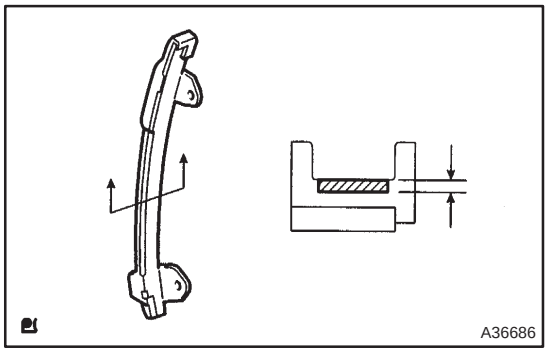
(b) Using vernier calipers, measure the timing gear diameter with the chain wrapped.

NOTICE:

Vernier calipers must contact the chain rollers for the measuring.

Minimum gear diameter (w/chain): 51.6 mm (2.031 in.)

If the diameter is less than minimum, replace the chain and timing gear.

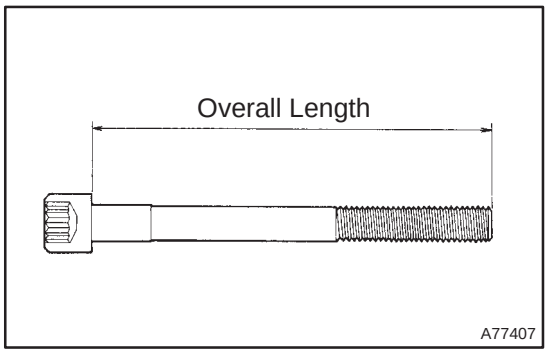


43. INSPECT CHAIN TENSIONER SLIPPER

(a) Measure the chain tensioner slipper wears.

Maximum wear: 1.0 mm (0.039 in.)

If the wear is greater than maximum, replace the chain tensioner slipper.

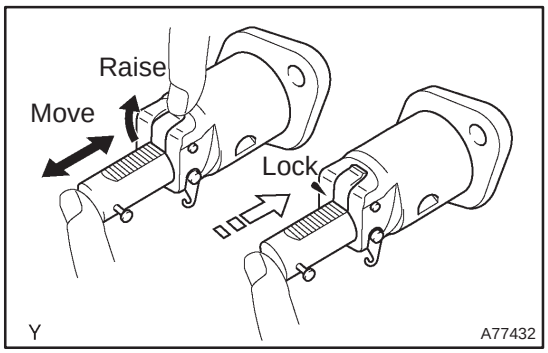


44. INSPECT CHAIN VIBRATION DAMPER NO.1

(a) Measure the chain vibration damper No. 1 wears.

Maximum wear: 1.0 mm (0.039 in.)

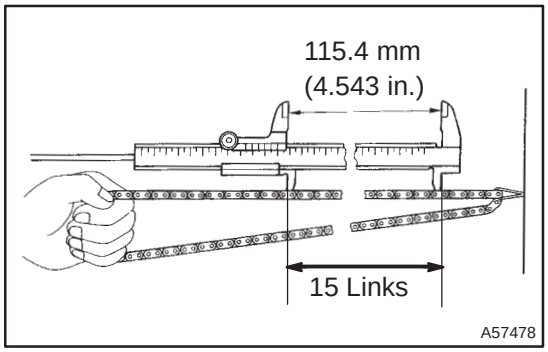
If the wear is greater than maximum, replace the chain vibration damper No. 1



45. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the length of head bolts from the seat to the end.

Standard bolt length:
161.3 to 162.7 mm (6.350 to 6.406 in.)
Maximum bolt length: 164.2 mm (6.465 in.)



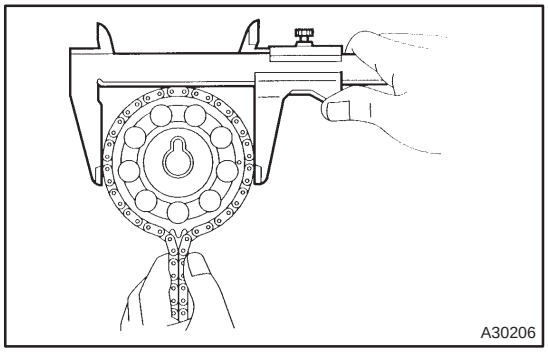
If the length is greater than maximum, replace the bolt.

46. INSPECT CHAIN TENSIONER ASSY NO.1

(a) Check the plunger moves smoothly when the ratchet pawl is raised, and when the ratchet pawl is released, the plunger is locked in place.

(b) Replace the ratchet pawl and check that the plunger is locked in place by the ratchet pawl and does not move when pushing with your finger.

47. INSPECT CHAIN SUB–ASSY



(a) Using vernier calipers, measure length of the 15 links with the chain dully stretched.

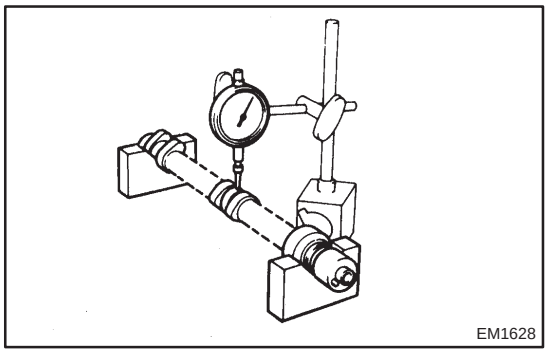
Maximum chain elongation: 115.4 mm (4.543 in.)

If the elongation is greater than maximum, replace the chain.

NOTICE:

Make the same measurements pulling at 3 or more random places to obtain an average length.

48. INSPECT CAMSHAFT TIMING GEAR OR SPROCKET

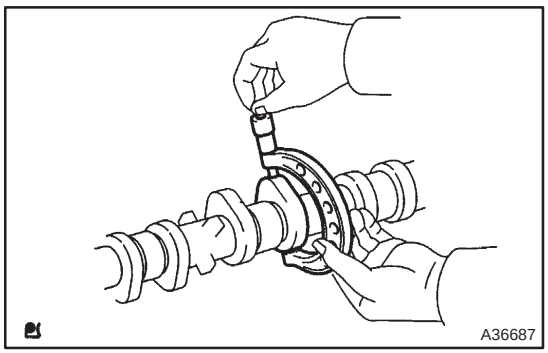


(a) Wrap the chain around the timing sprocket.

(b) Using vernier calipers, measure the timing sprocket diameter with the chain wrapped.

Minimum sprocket diameter (w/ chain):
97.3 mm (3.831 in.)

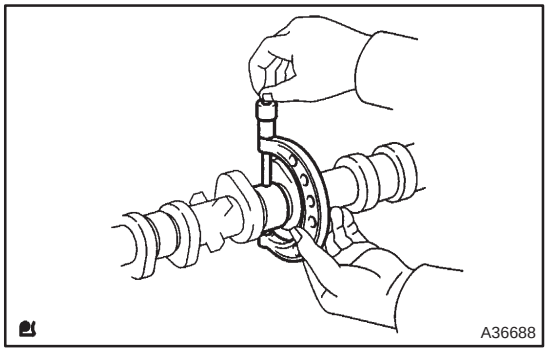
If the diameter is less than minimum, replace the chain and timing sprocket.



NOTICE:
Vernier calipers must contact the chain rollers for the measuring.

EM1628

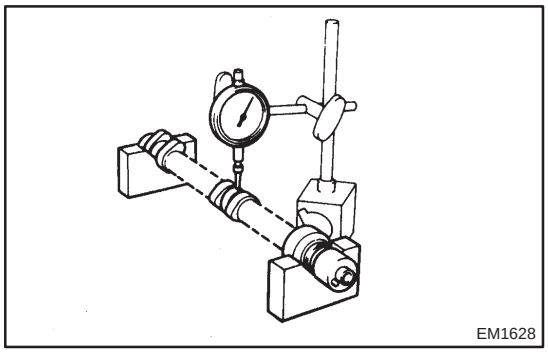
49. INSPECT CAMSHAFT



(a) Inspect the camshaft for runout.
(1) Place the camshaft on V–blocks.
(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout: 0.05 mm (0.0020 in.)

If the circle runout is greater than maximum, replace the camshaft.

A36687

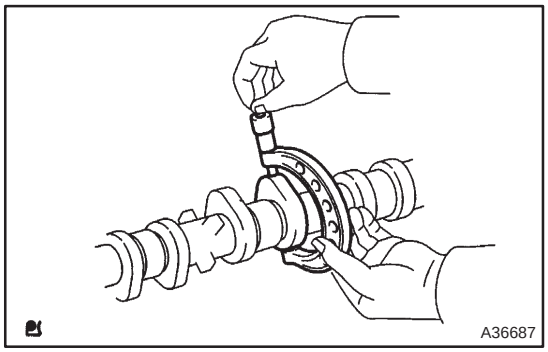


(b) Inspect cam lobe height.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
45.510 to 45.610 mm (1.7917 to 1.7957 in.)
Minimum cam lobe height: 45.400 mm (1.7874 in.)

If the cam lobe height is less than minimum, replace the camshaft.

A36688

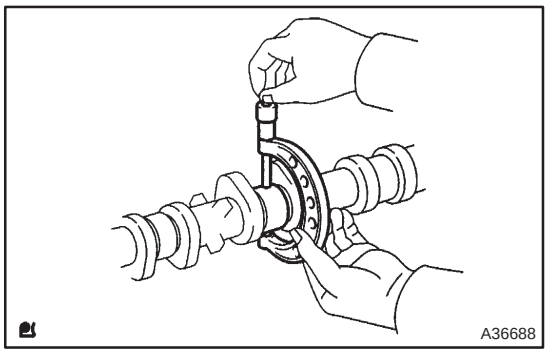
(c) Inspect camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Journal diameter:
No. 1 35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Others 22.959 to 22.975 mm (0.9040 to 0.9045 in.)



If the journal diameter is not as specified, check the oil clearance.

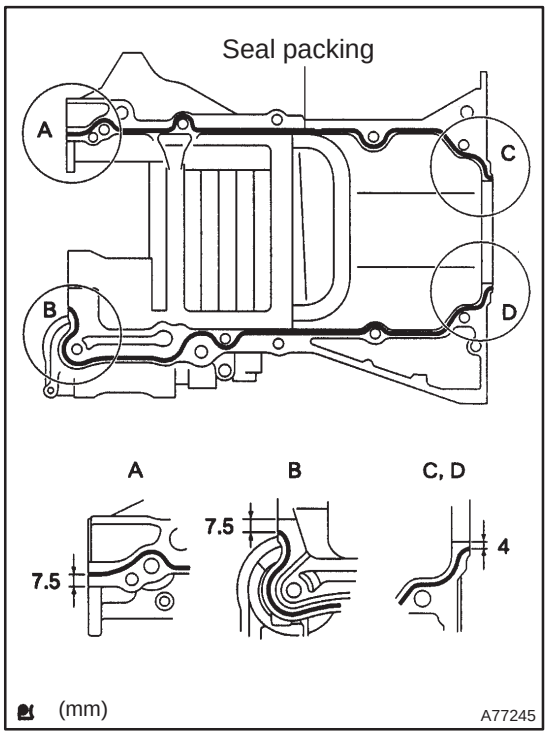
EM1628

50. INSPECT NO.2 CAMSHAFT



(a) Inspect the No. 2 camshaft for runout.
(1) Place the No. 2 camshaft on V–blocks.
(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout: 0.05 mm (0.0020 in.)

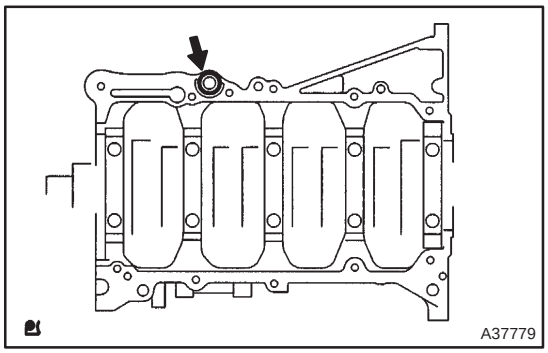
If the circle runout is greater than maximum, replace the No. 2 camshaft.



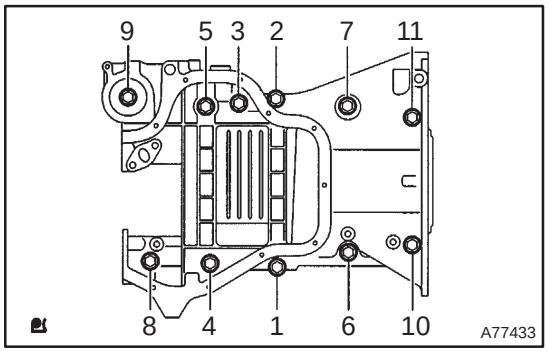
(b) Inspect cam lobe height.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
45.983 to 46.083 mm (1.8106 to 1.8143 in.)
Minimum cam lobe height: 45.873 mm (1.8060 in.)

If the cam lobe height is less than minimum, replace the No. 2 camshaft.

(c) Inspect camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Journal diameter:
No. 1 35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Others 22.959 to 22.975 mm (0.9040 to 0.9045 in.)

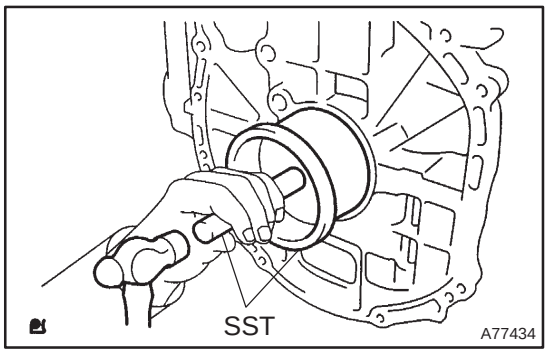


If the journal diameter is not as specified, check the oil clearance.



51. INSTALL STIFFENING CRANKCASE ASSY

(a) Apply a continuous bead (Diameter 2.5 to 3 mm (0.098 to 0.118 in.)) of seal packing on the places shown in the illustration.
Seal Packing: Part No. 08826 – 00080 or equivalent



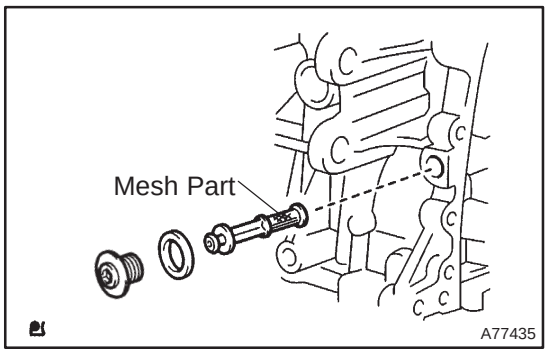
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

(b) Install a new O–ring to the place shown in the illustration.

(c) Tighten the 11 bolts in several steps in the sequence shown in the illustration.
Torque: 33 N·m (332 kgf·cm, 24 ft·lbf)

52. INSTALL ENGINE REAR OIL SEAL

(a) Apply MP grease to a new oil seal lip.

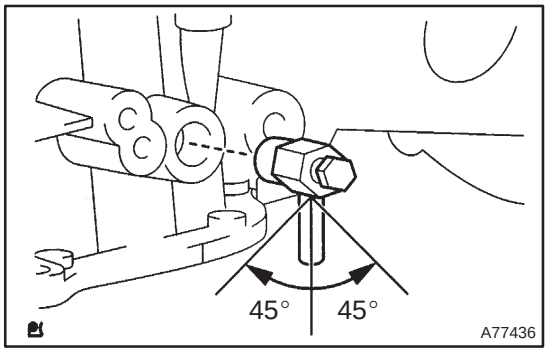


NOTICE:

Keep the lip free of foreign material.

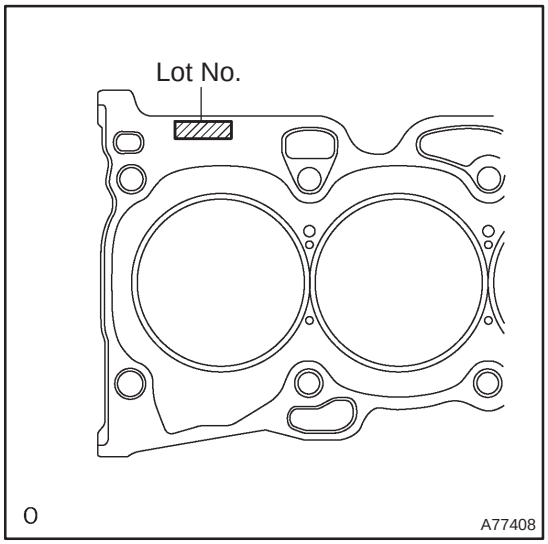
(b) Using SST and a hammer, equally tap the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223–15030, 09950–70010 (09951–07100)

NOTICE:



Wipe off extra grease on the crankshaft.

53. INSTALL OIL CONTROL VALVE FILTER

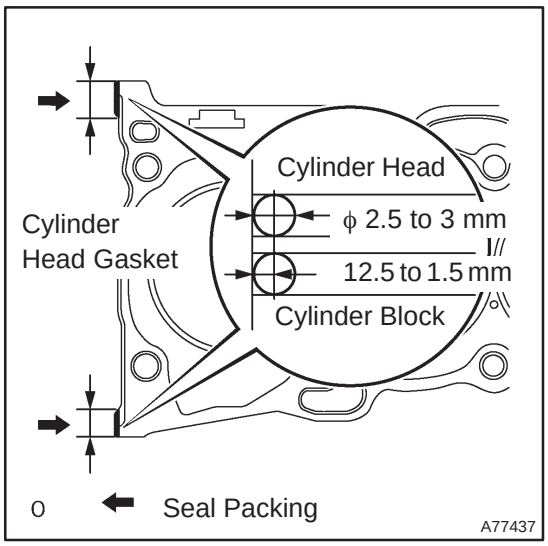


(a) Check that no foreign material on the mesh part of the filter.

(b) Using a 6 mm socket hexagon wrench, install the oil control valve filter with a new gasket.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

54. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY

(a) Install the water drain cock sub assembly within the range shown in the illustration.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)



55. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.

NOTICE:

- **Remove any oil from contact surface.**
- **Be careful of the installation direction.**
- **Place the cylinder head carefully in order not to damage the gasket with the bottom part of the head.**

56. INSTALL CYLINDER HEAD SUB–ASSY

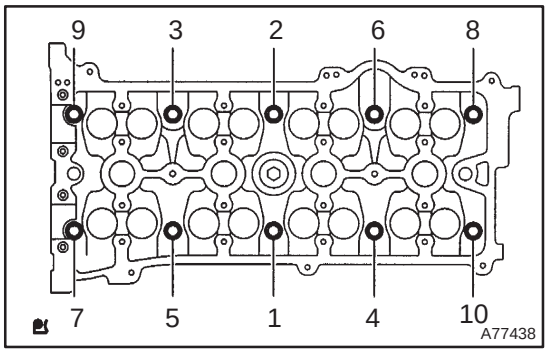
HINT:

The cylinder head bolts are tightened in 2 successive steps.

(a) Apply a continuous bead (Diameter 2.5 to 3.0 mm (0.098 to 0.118 in.)) of seal packing on the places as shown in the illustration.

Seal Packing: Part No. 08826 – 00080, or equivalent.

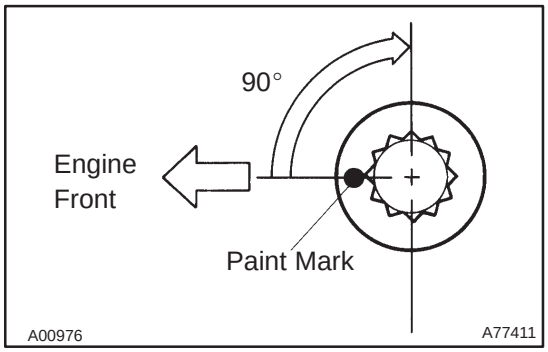
NOTICE:



- **Remove any oil from the contact surface.**
- **Install the cylinder head within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

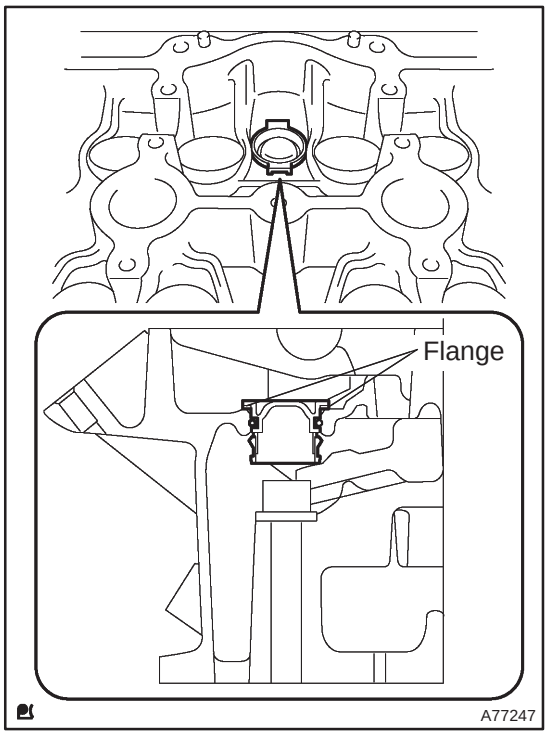
(b) Apply a light coat of engine oil on the threads of the cylinder head bolts.

(c) Install the bolts and plate washers to the cylinder head.



NOTICE:

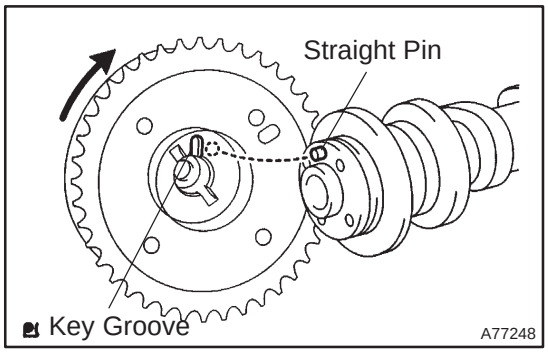
Do not drop the washers into the cylinder head.



(d) Using several steps tighten each bolt with a 10 mm bi–hexagon wrench uniformly in the sequence shown in the illustration.

Torque: 79 N·m (806 kgf·cm, 58 ft·lbf)

(e) Mark each cylinder head bolt head on the front side with paint.
(f) Retighten the cylinder head bolts by 90° in the same sequence shown as step (b).
(g) Check that each painted mark is now at a 90° angle to the front.



57. INSTALL CAMSHAFT HOUSING PLUG

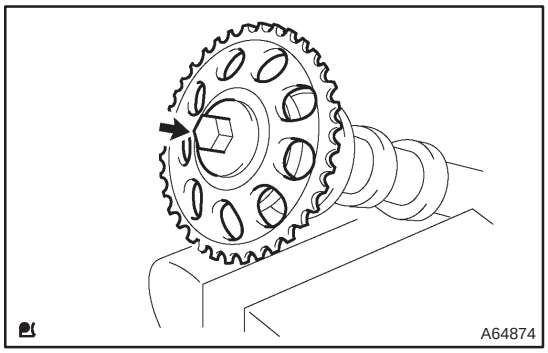
(a) Apply engine oil to a new O–ring, and install the camshaft housing plug.

NOTICE:

- **Install the plug with its flange portions faced the manifold.**
- **Insert the plug into the cylinder head until its flange portions reach the installation surface of the cylinder head.**

58. INSTALL CAMSHAFT BEARING NO.2

59. INSTALL CAMSHAFT TIMING GEAR ASSY



(a) Align the key groove of the camshaft timing gear with the straight pin located on the camshaft, then fit the timing gear into place.
(b) Turn the camshaft timing gear assembly to the left direction (as shown in the illustration) while pushing it lightly against the camshaft. Push further at the position where the pin gets into the groove.

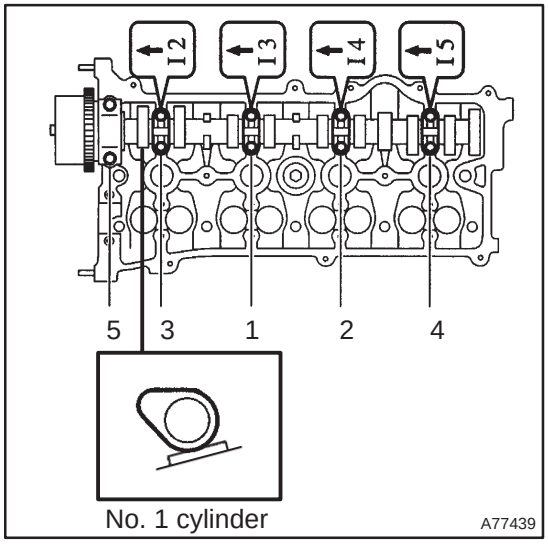
CAUTION:

Be sure not to turn the camshaft timing gear to the retard angle side (to the right angle).

(c) Check that there is no clearance between the gear's fringe and the camshaft.
(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 54 N·m (551 kgf·cm, 49 ft·lbf)

(e) Check that the camshaft timing gear assembly can move to the retard angle side (the right direction), and is locked at the most retarded position.

60. INSTALL CAMSHAFT TIMING GEAR OR SPROCKET



(a) Clamp the camshaft No. 2 in a vise, and install the camshaft No. 2 timing gear.

Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

NOTICE:

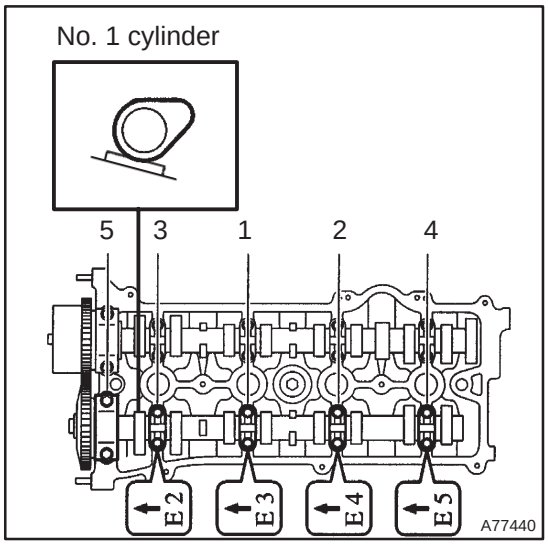
Be careful not to damage the No. 2 camshaft.

61. INSTALL CAMSHAFT BEARING NO.1

62. INSTALL CAMSHAFT

(a) Place the camshaft on the cylinder head as shown in the illustration.

(b) Tighten the camshaft bearing cap No. 1 and No. 3 in the sequence shown in the illustration.



Torque:

Bearing cap No. 1 30 N·m (301 kgf·cm, 22 ft·lbf)

Bearing cap No. 3 9 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:

- **Tighten the bolts after deciding the position for the thrust direction of the camshaft by bearing cap No. 1.**
- **Install the camshaft with its timing mark of camshaft timing gear upward.**

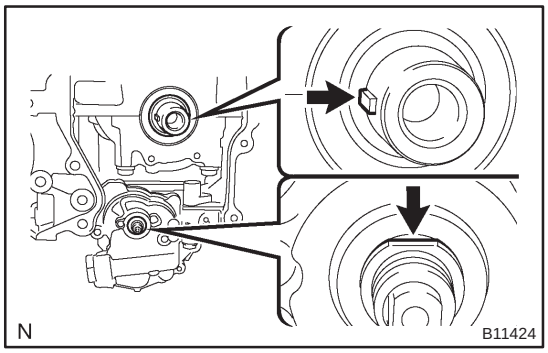
63. INSTALL NO.2 CAMSHAFT

(a) Place the No. 2 camshaft on the cylinder head as shown in the illustration.

(b) Tighten the camshaft bearing cap No. 2 and No. 3 in the sequence shown in the illustration.

Torque:

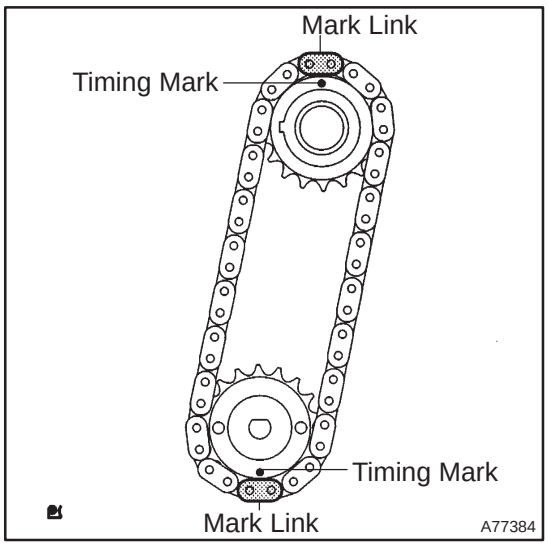
Bearing cap No. 2 30 N·m (301 kgf·cm, 22 ft·lbf)



Bearing cap No. 3 9 N·m (92 kgf·cm, 80 in.·lbf)

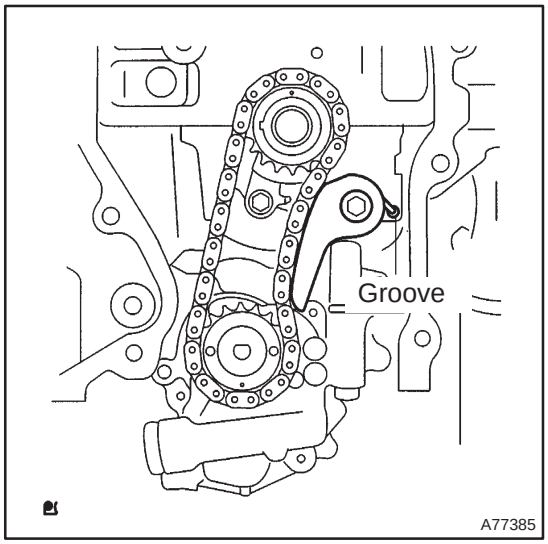
NOTICE:

- **Tighten the bolts after deciding the position for the thrust direction of the camshaft by bearing cap No. 2.**
- **Install the camshaft with its timing mark of camshaft timing gear upward.**

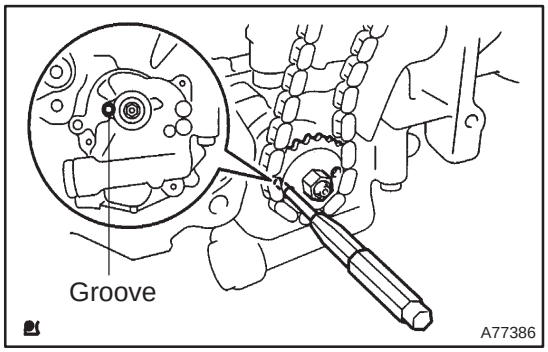


64. INSTALL OIL PUMP ASSY

(a) Install the oil pump assembly with the 3 bolts and a new gasket.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

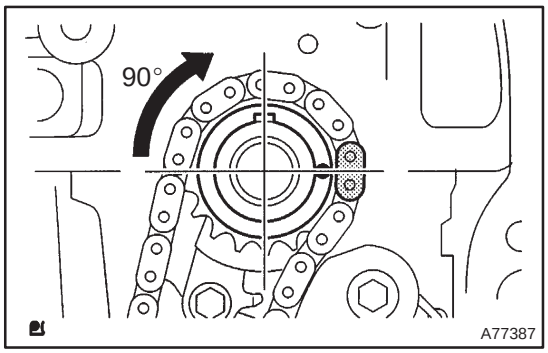


65. INSTALL NO.2 CHAIN SUB–ASSY

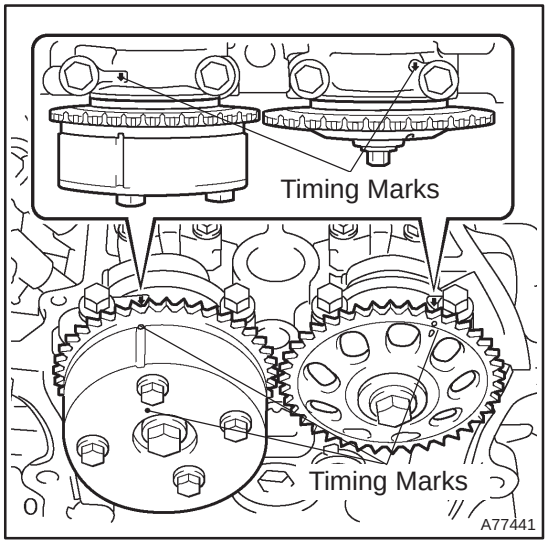


(a) Set the crankshaft key in the left side position.
(b) Turn the flat portion of the drive shaft upward.

(c) Align the mark links (yellow colored links) with the timing marks of the gears as shown in the illustration.
(d) With the chain wrapped, insert the gears to the crankshaft and oil pump shaft.
(e) Temporarily secure the oil pump drive shaft gear with a nut.



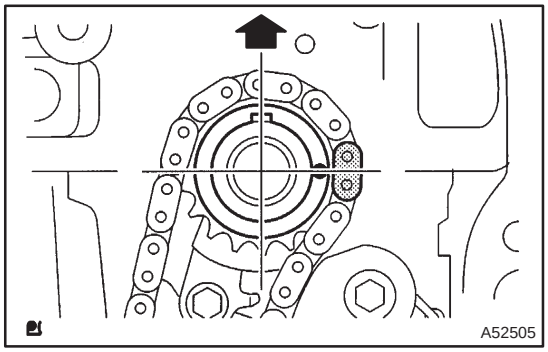
(f) Insert the damper spring into the adjusting hole of the cylinder block, and install the chain tensioner plate with the bolt.
Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)



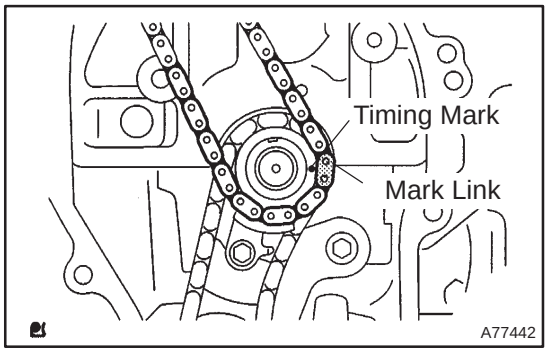
(g) Align the adjusting hole of the sprocket with the groove of the oil pump.

(h) Put a 4 mm diameter bar into the adjusting hole to lock in position, and assemble the nut.
Torque: 30 N·m (301 kgf·cm, 22 ft·lbf)

(i) Rotate the crankshaft 90° clockwise, and position the key of the crankshaft upward.

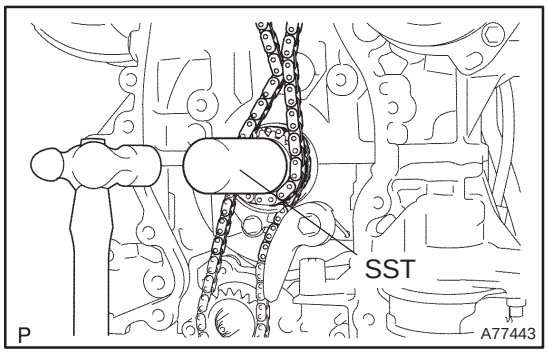


66. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

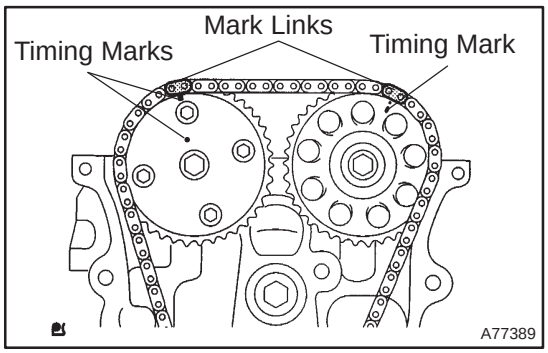


67. INSTALL CHAIN SUB–ASSY

(a) Set No. 1 cylinder to TDC/ compression.



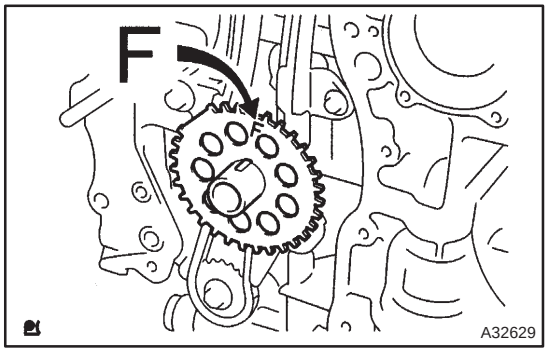
(1) Align the timing marks of the camshaft timing sprockets with the timing marks located on the No. 1 bearing caps.



(2) Using the crankshaft pulley bolt, turn the crankshaft and set the key on the crankshaft upward.

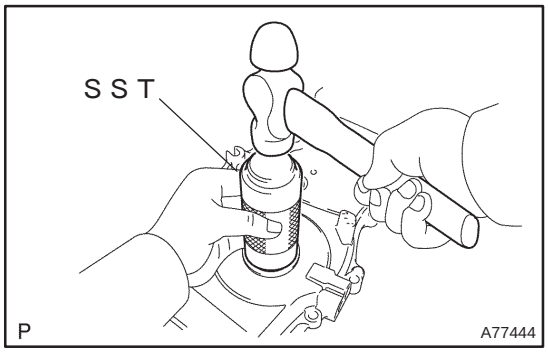
(b) Align the mark link (blue or orange colored link) with the timing mark located on the crankshaft timing gear.

(c) Using SST, install the sprocket.
SST 09309–37010



(d) Align the mark links (gold or yellow colored links) with each timing mark located on the camshaft timing gear, and on the timing sprocket to install the chain.

68. INSTALL TIMING CHAIN GUIDE
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

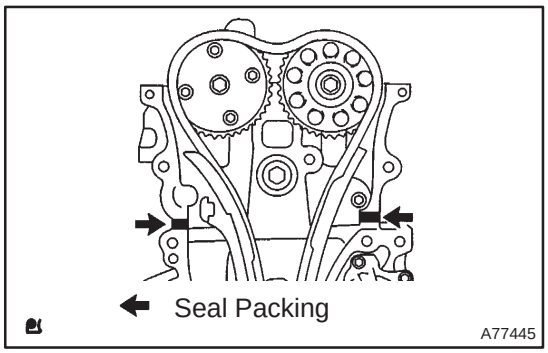


69. INSTALL CHAIN VIBRATION DAMPER NO.1
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

70. INSTALL CHAIN TENSIONER SLIPPER
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

71. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1

(a) Install the crankshaft position sensor plate with the ”F” mark facing forward.

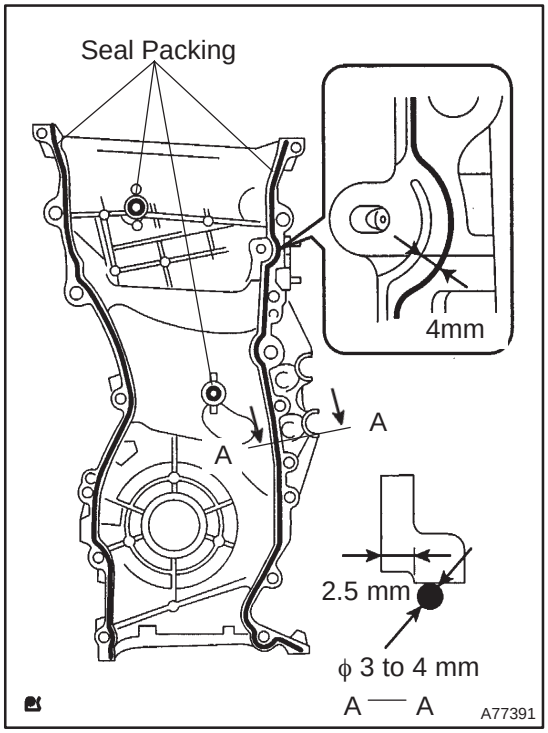


72. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

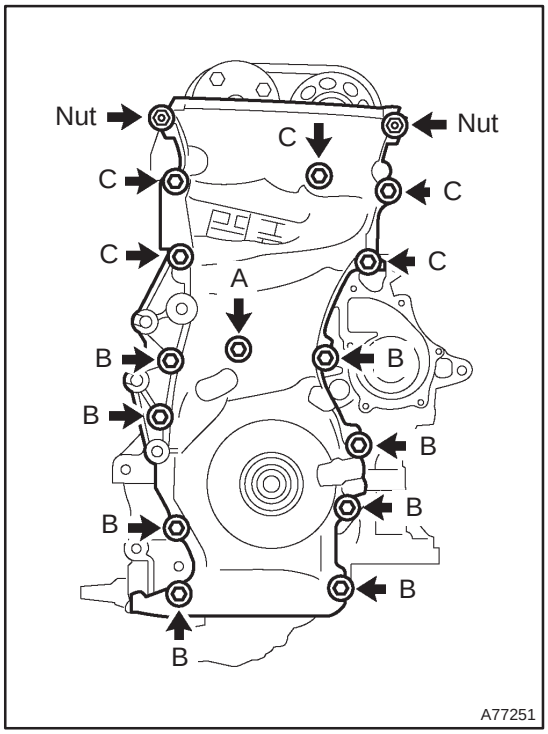
(a) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09223–22010

(b) Apply a light coat of MP grease to the lip of a new oil seal.

NOTICE:
Keep the lip free of foreign material.

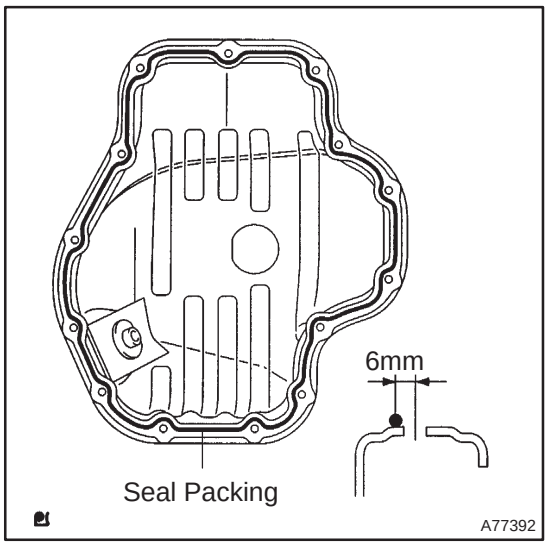


73. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY



NOTICE:
- **Remove any oil from the contact surface.**
- **Install the chain cover within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

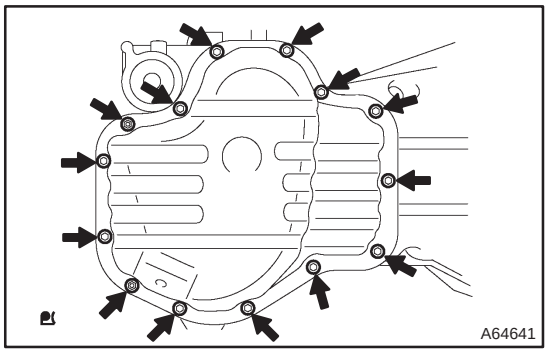
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.



(b) Apply a continuous bead (Diameter 2 mm (0.09 in.)) of seal packing as shown in the illustration.
Seal packing: Part No. 08826 – 00080 or equivalent

(c) Apply a continuous bead (Diameter 3 to 4 mm (0.118 to 0.157 in.)) of seal packing as shown in the illustration.
Seal packing: Part No. 08826 – 00080 or equivalent

(d) Install the timing chain cover with the 14 bolts and 2 nuts.
Torque:
Bolt A 9.0 N·m (92 kgf·cm, 80 in.·lbf)
Bolt B 21 N·m (214 kgf·cm, 15 ft·lbf)
Bolt C 43 N·m (438 kgf·cm, 32 ft·lbf)
Nut 9.0 N·m (92 kgf·cm, 80 in.·lbf)

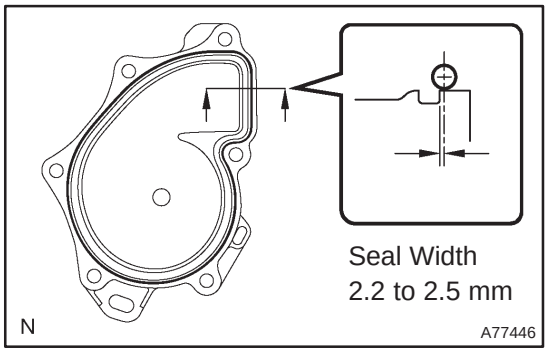


74. INSTALL OIL PAN SUB–ASSY

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surface of the cylinder block and oil pan.



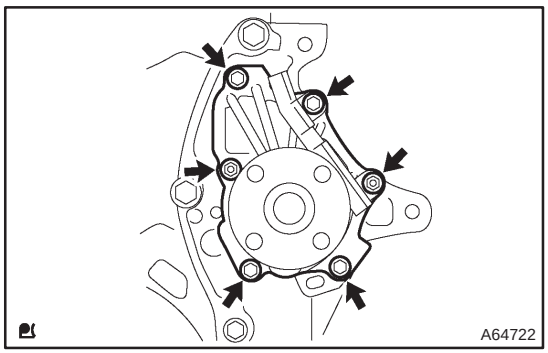
(b) Apply a continuous bead (Diameter 3 mm to 4 mm (0.079 to 0.118 in.)) of seal packing as shown in the illustration, and install the oil pan.
Seal packing: Part No. 08826 – 00080 or equivalent

(c) Install the oil pan with the 12 bolts and 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

75. INSTALL OIL PAN DRAIN PLUG

(a) Install the oil pan drain plug and a new gasket.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

76. INSTALL WATER PUMP ASSY



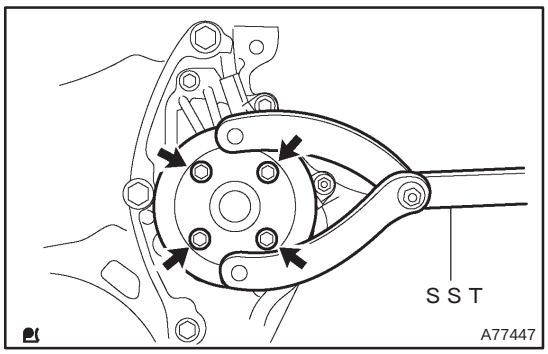
(a) Clean the contact surface of the cylinder block.

(b) Apply a continuous bead (Diameter 2.2 to 2.5 mm(0.087 to 0.098in.)) of seal packing to the outside edge of the water pump.

Seal packing: Part No. 08826 – 00100 or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the water pump within 5 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

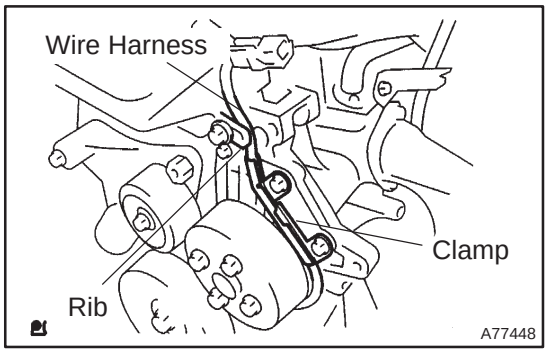


(c) Install the clamp and the water pump assembly with the 4 bolts and 2 nuts.

Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:

Tighten the outside bolts and nuts.

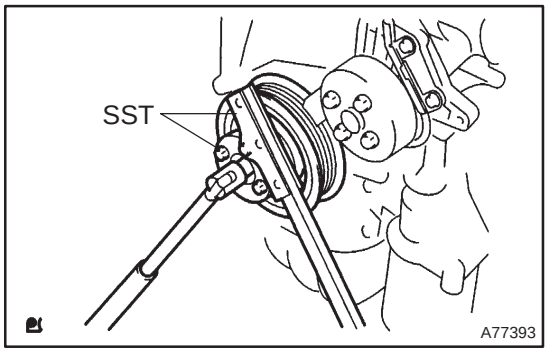


77. INSTALL WATER PUMP PULLEY

(a) Using SST, install the water pump pulley with the 4 bolts.

SST 09960–10010 (09962–01000, 09963–00700)

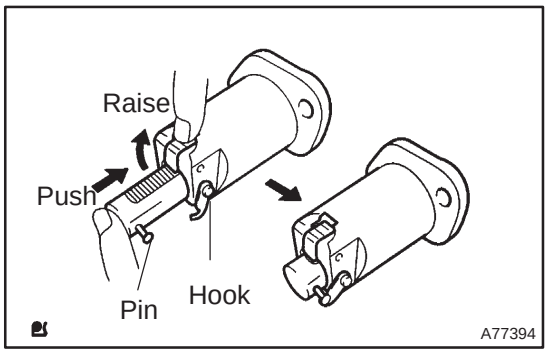
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)



78. INSTALL CRANKSHAFT POSITION SENSOR

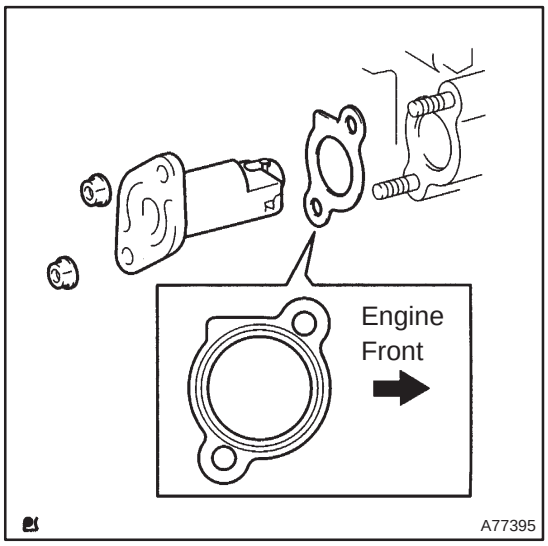
(a) Apply a light coat of engine oil to the O–ring.

(b) Install the crankshaft position sensor with the bolt.



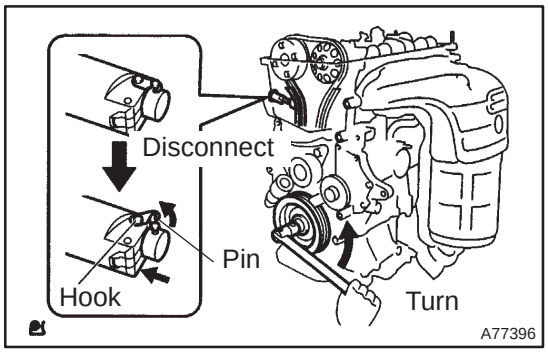
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

(c) Confirm the wire harness of the crankshaft position sensor is placed as shown in the illustration.



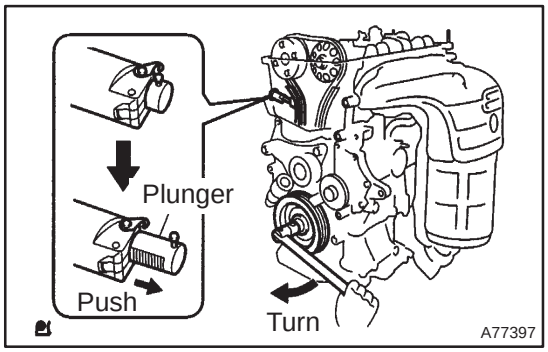
79. INSTALL CRANKSHAFT PULLEY

(a) Using SST, tighten the set bolt.
SST 09213–54015 (91651–60855), 09330–00021
Torque: 170 N·m (1,733 kgf·cm, 125 ft·lbf)

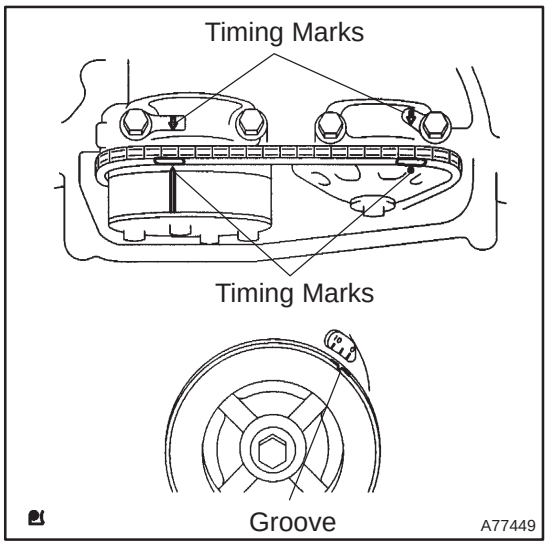


80. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger is locked in the position.

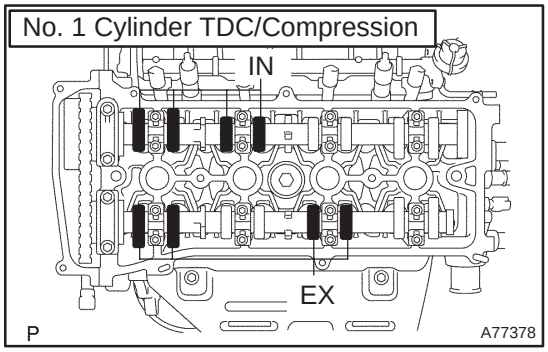


(b) Install a new gasket and the chain tensioner with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



NOTICE:
If the hook is disengaged while installing, re–apply the hook and then insert the chain tensioner.

(c) Turn the crankshaft pulley counterclockwise, and check that the plunger knock pin is free from the hook.

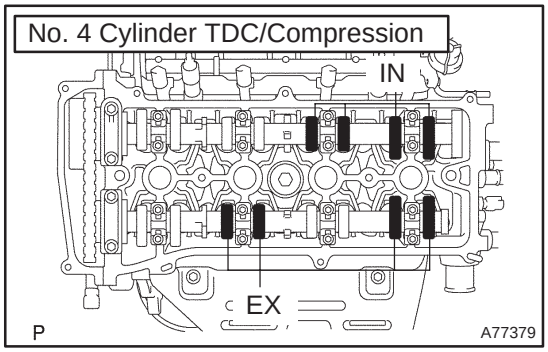


(d) Turn the crankshaft clockwise, and check that the plunger is extended.

81. INSPECT VALVE CLEARANCE

(a) Turn the crankshaft pulley, and align its groove with the timing mark ”0” of the timing chain cover.

(b) Check that the timing marks of the camshaft timing sprockets are aligned with the timing marks located on the No. 1 bearing cap as shown in the illustration.



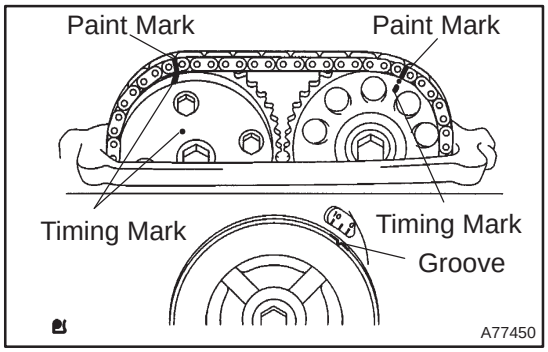
(c) Check only the valve indicated as shown in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and the camshaft.

(2) Record the our–of–specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

Valve clearance (cold):
Intake 0.19 to 0.29 mm (0.007 to 0.011 in.)
Exhaust 0.30 to 0.40 mm (0.012 to 0.016 in.)

(d) Turn the crankshaft 1 revolution (360°) clockwise, and set the No. 4 cylinder to TDC/compression.



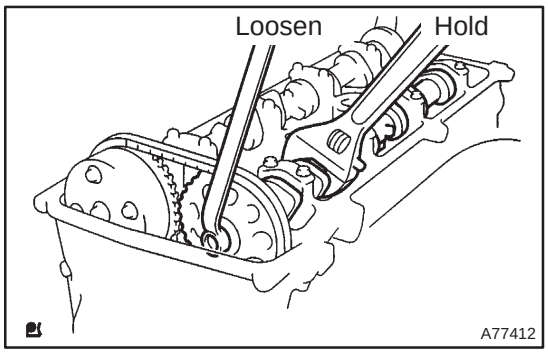
(e) Check only the valve indicated as shown in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and the camshaft.

(2) Record the out–of–specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

Valve clearance (cold):
Intake 0.19 to 0.29 mm (0.007 to 0.011 in.)
Exhaust 0.30 to 0.40 mm (0.012 to 0.016 in.)

82. ADJUST VALVE CLEARANCE

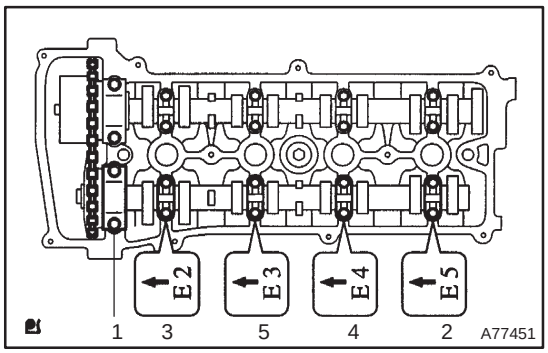


NOTICE:

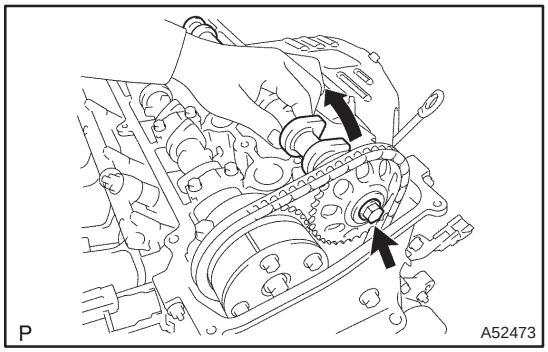
Do not turn the crankshaft without the chain tensioner.

(a) Turn the crankshaft 1 revolution (360°) clockwise, and set the No. 1 cylinder to TDC/compression.

(b) Place matchmarks on the timing chain and camshaft timing gear.



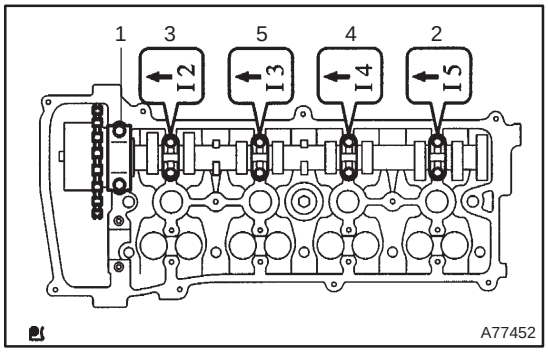
(c) Remove the 2 bolts and the chain tensioner.



(d) Fix the camshaft with a wrench, then loosen the camshaft timing gear set bolt.

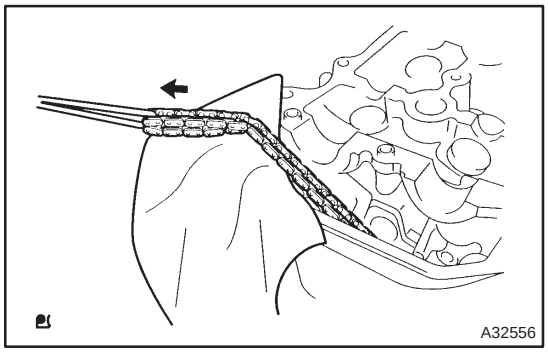
NOTICE:

Be careful not to damage the valve lifter.



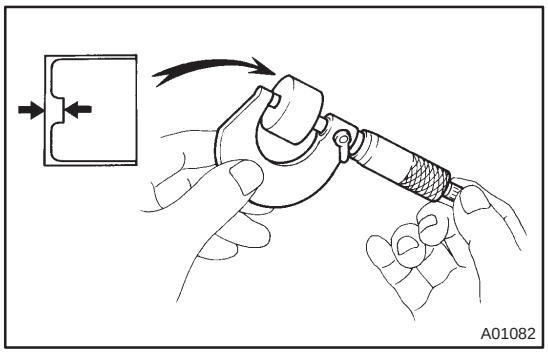
(e) Using several steps, loosen the camshaft bearing cap bolts on the No. 2 camshaft in the sequence shown in the illustration, and then remove the bearing caps.

(f) Raising the No. 2 camshaft, remove the set bolt.



(g) Remove the timing chain sprocket from the No. 2 camshaft with the timing chain assembled.

(h) Remove the timing chain sprocket from the timing chain.



(i) Using several steps, loosen the camshaft bearing cap bolts on the camshaft in the sequence shown in the illustration, then remove the bearing caps.

(j) Remove the intake camshaft.

(k) Tie the timing chain with a string.

(l) Using a micrometer, measure the thickness of the removed lifter.

(m) Calculate the thickness of a new lifter so that the valve clearance comes within the specified valve.

A	Thickness of the new lifter
B	Thickness of the used lifter
C	Measured valve clearance

Valve clearance:
Intake A = B + (C – 0.24 mm (0.0094 in.))
Exhaust A = B + (C – 0.35 mm (0.0138 in.))

EXAMPLE: (Intake)
Measure valve clearance = 0.44 mm (0.0173 in.)
0.44 mm (0.0173 in.) – 0.24 mm (0.0094 in.) = 0.20 mm (0.0079 in.)
(Measured – Specification = Excess clearance)
Used shim measurement = 5.30 mm (0.2087 in.)
0.20 mm (0.0079 in.) + 5.30 mm (0.2087 in.) = 5.50 mm (0.2165 in.)
(Excess clearance + Used shim = Ideal new shim)
Closest new shim = 5.50 mm (0.2165 in.) = Shim No. ”50”

HINT:

- Select a new lifter with a thickness as close as possible to the calculated values.
- Lifter are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.)
- Refer to new Lifter Thickness table on the following 2 pages.

Valve Lifter Selection Chart (Intake)

Measure clearance mm (in.) \ Installed lifter thickness mm (in.)	5.060 (0.1992)	5.080 (0.2000)	5.100 (0.2008)	5.120 (0.2016)	5.140 (0.2024)	5.160 (0.2031)	5.180 (0.2039)	5.200 (0.2047)	5.210 (0.2051)	5.220 (0.2055)	5.230 (0.2059)	5.240 (0.2063)	5.250 (0.2067)	5.260 (0.2071)	5.270 (0.2075)	5.280 (0.2079)	5.290 (0.2083)	5.300 (0.2087)	5.310 (0.2091)	5.320 (0.2094)	5.330 (0.2098)	5.340 (0.2102)	5.350 (0.2106)	5.360 (0.2110)	5.370 (0.2114)	5.380 (0.2118)	5.390 (0.2122)	5.400 (0.2126)	5.410 (0.2130)	5.420 (0.2134)	5.430 (0.2138)	5.440 (0.2142)	5.450 (0.2146)	5.460 (0.2150)	5.470 (0.2154)	5.480 (0.2157)	5.490 (0.2161)	5.500 (0.2165)	5.510 (0.2169)	5.520 (0.2173)	5.530 (0.2177)	5.540 (0.2181)	5.550 (0.2185)	5.560 (0.2189)	5.570 (0.2193)	5.580 (0.2197)	5.590 (0.2201)	5.600 (0.2205)	5.620 (0.2213)	5.640 (0.2220)	5.660 (0.2228)	5.680 (0.2236)	5.700 (0.2244)	5.720 (0.2252)	5.740 (0.2260)

Intake valve clearance (Cold):
0.19 to 0.29 mm (0.008 to 0.011 in.)

EXAMPLE:

The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.).

Replace the 5.250 mm (0.2067 in.) lifter with a new No. 42 lifter.

New Lifter Thickness mm (in.)

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness

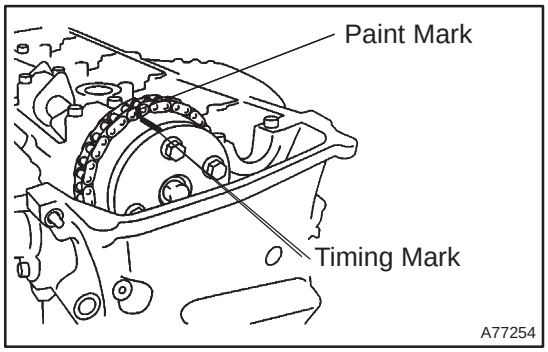
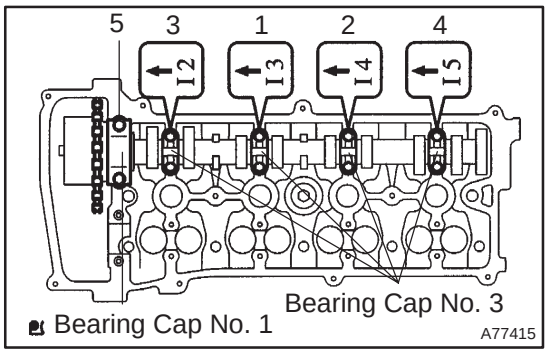
Exhaust valve clearance (Cold):
0.30 to 0.40 mm (0.0118 to 0.0157 in.)

EXAMPLE:



The 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.440 mm (0.0173 in.).

Replace the 5.340 mm (0.2102 in.) lifter with a new No. 44 lifter.



New lifter thickness mm (in.)

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness

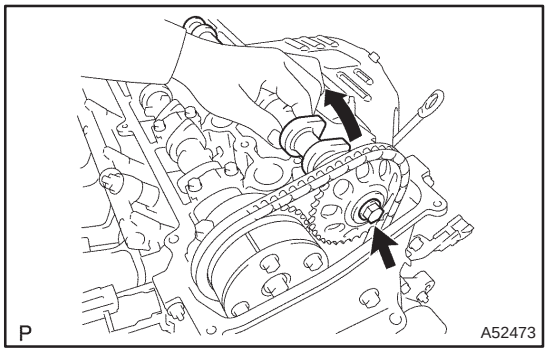
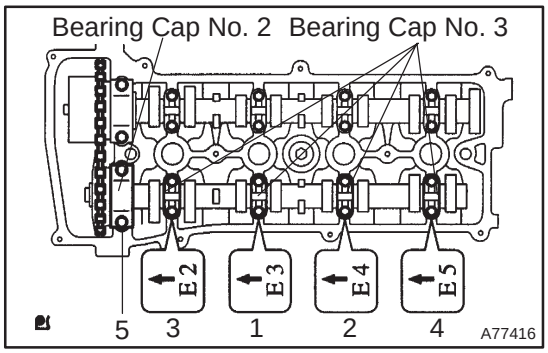
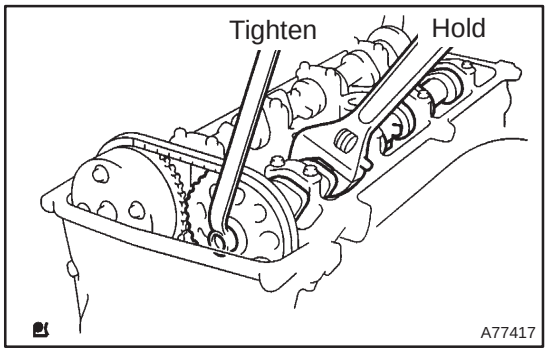
A77297



(n) Install the timing chain on the camshaft timing gear, with the painted links aligned with the timing marks on the camshaft timing sprockets.



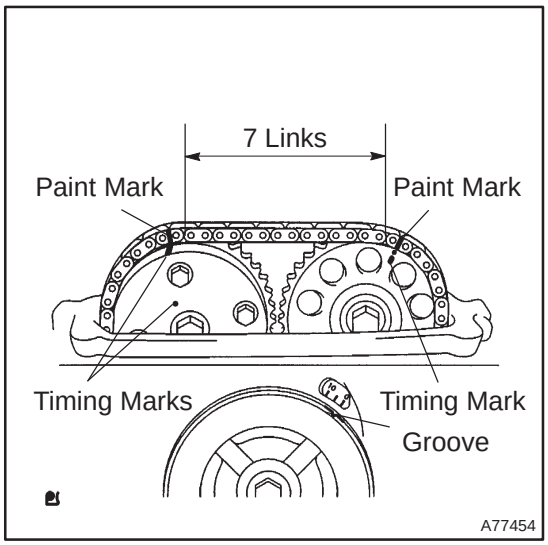
(o) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque:
Bearing cap No. 1 30 N·m (301 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0 N·m (92 kgf·cm, 80 in.·lbf)



(p) Put the camshaft No. 2 on the cylinder head with the painted links of chain aligned with the timing mark on the camshaft timing sprockets.

(q) Raising the No. 2 camshaft, tighten the set bolt temporarily.

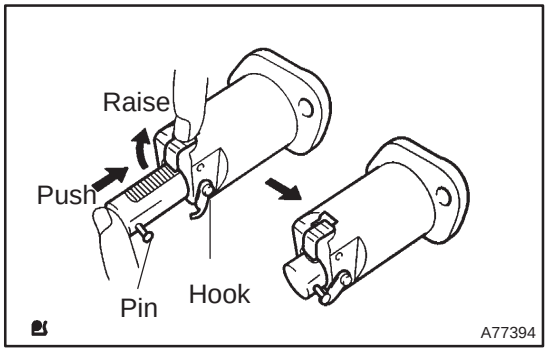
(r) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque:
Bearing cap No. 2 30 N·m (301 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0 N·m (92 kgf·cm, 80 in.·lbf)



(s) Fix the camshaft with a wrench, then tighten the camshaft timing gear set bolt.

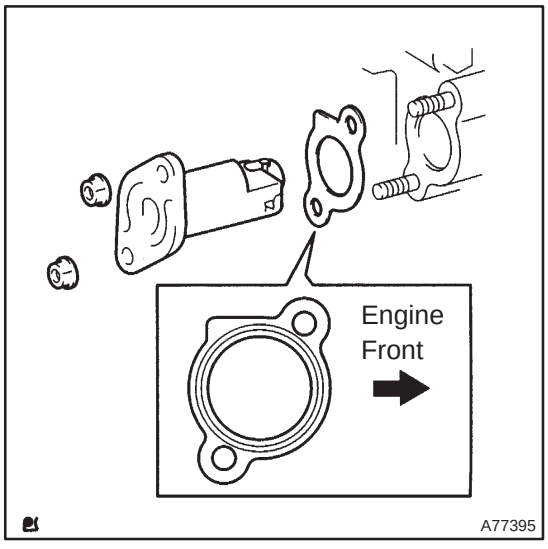
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

NOTICE:



Be careful not to damage the valve lifter.

(t) Check that each pair of the matchmarks are aligning as shown in the illustration.

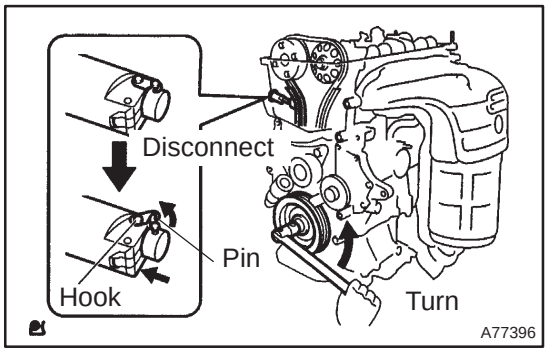


HINT:

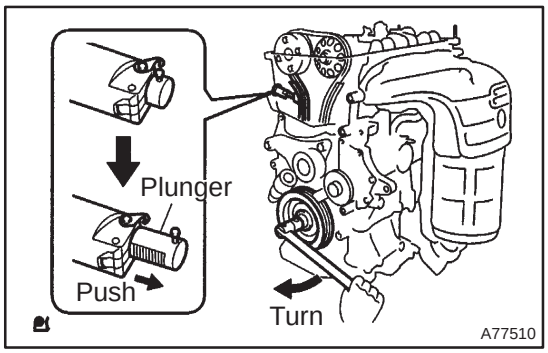
There are 7 links between the two paint marks.

(u) Install the chain tensioner.

(1) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger is locked in the position.



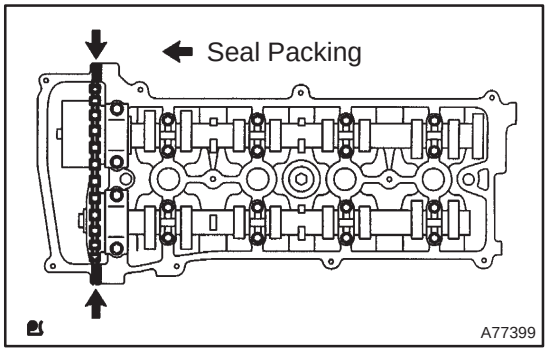
(2) Install a new gasket and the chain tensioner with the 2 nuts.



Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:

If the hook is disengaged from the pin, re–apply the hook then resume installation.

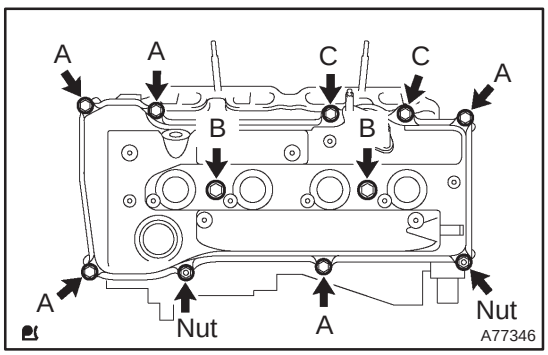


(3) Turn the crankshaft counterclockwise, and disengage the hook from the pin to free the plunger.

(4) Turn the crankshaft clockwise, and check that the plunger is pushed by the slipper.

83. INSTALL CAMSHAFT POSITION SENSOR
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

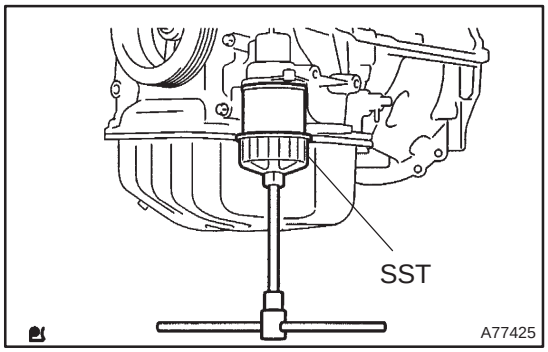
84. INSTALL CYLINDER HEAD COVER GASKET



85. INSTALL CYLINDER HEAD COVER SUB–ASSY

(a) Remove any old packing (FIPG) material.

(b) Apply seal packing to the 2 locations shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent



NOTICE:
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 5 minutes after applying seal packing.**
- **Do not expose seal packing to engine oil 2 hours after installing.**

(c) Install the cylinder head cover with the 8 bolts and 2 nuts.
Torque:
Bolt A 11 N·m (112 kgf·cm, 8 ft·lbf)
Bolt B 14 N·m (143 kgf·cm, 10 ft·lbf)
Bolt C 21 N·m (214 kgf·cm, 15 ft·lbf)
Nut 11 N·m (112 kgf·cm, 8 ft·lbf)

86. INSTALL OIL FILTER UNION

(a) Using a 12 mm hexagon wrench, install the oil filter union.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

87. INSTALL OIL FILTER SUB–ASSY

(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.

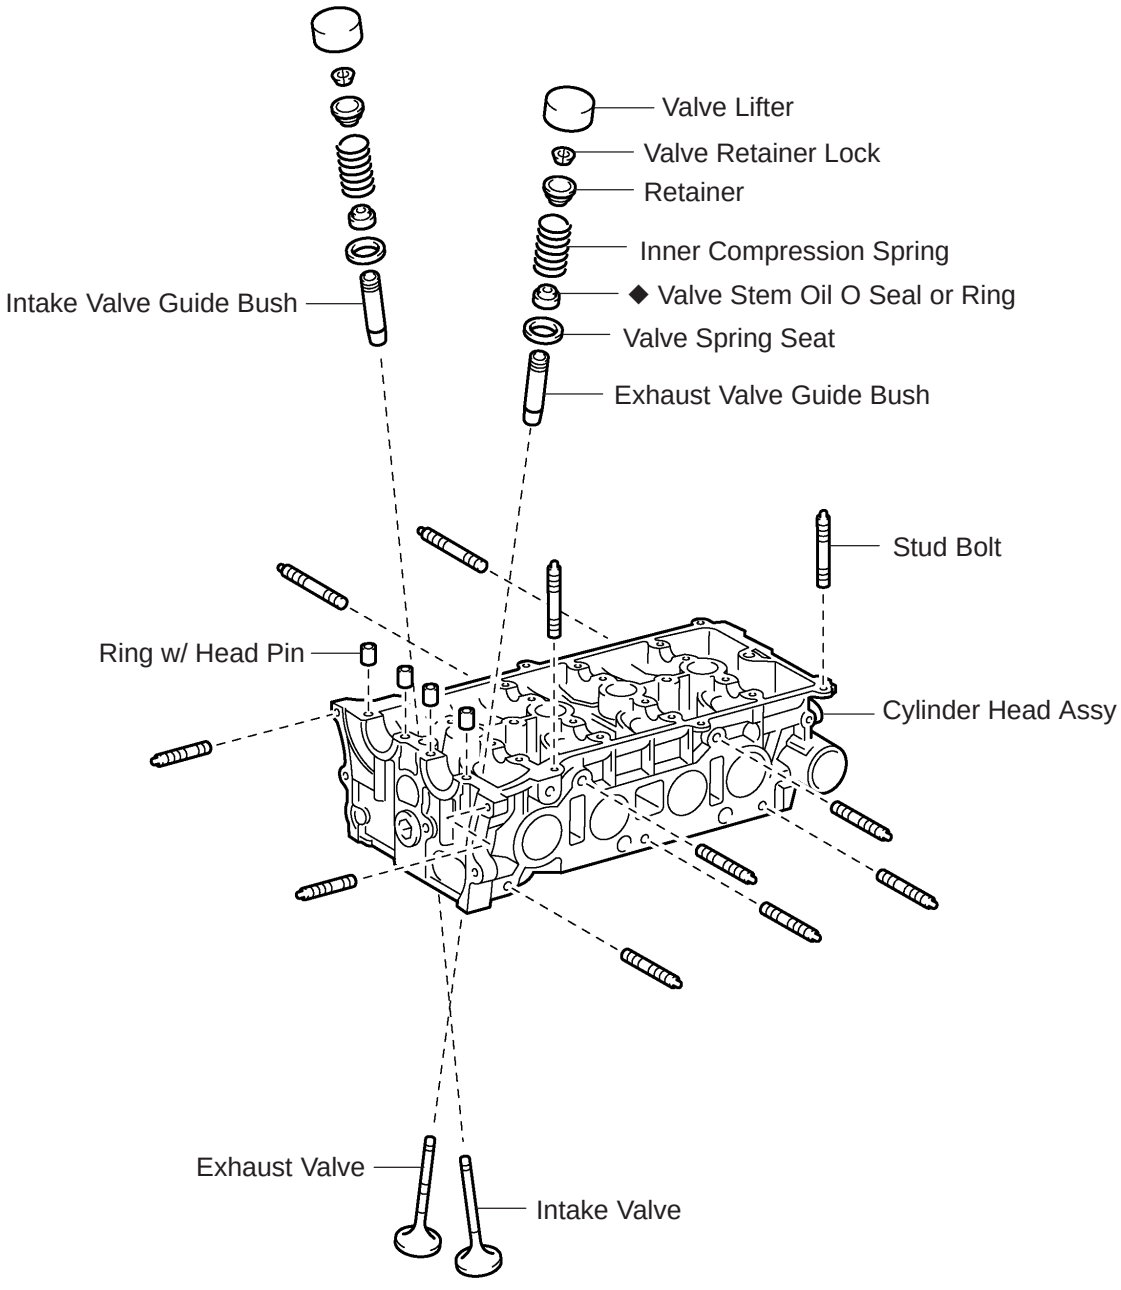
(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.

(d) Using SST, tighten it an additional 3/4 turn.
SST 09228–06501

88. INSTALL SPARK PLUG
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

89. INSTALL VENTILATION VALVE SUB–ASSY

(a) Apply adhesive on the threads of the ventilation valve.
Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)
Adhesive: Part No. 08833–00070 THREE BOND 1324 or equivalent



90. INSTALL OIL FILLER CAP GASKET

91. INSTALL OIL FILLER CAP SUB–ASSY

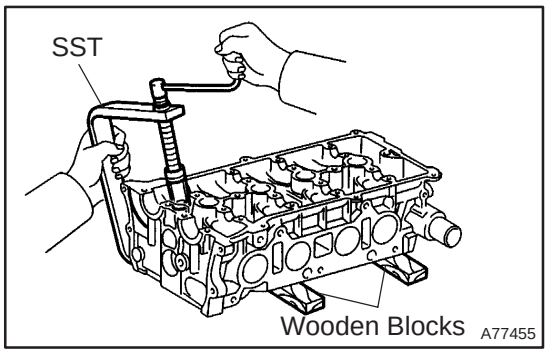
CYLINDER HEAD ASSY

COMPONENTS

141BV–01

◆ Non–reusable part

A77366



141BW–01

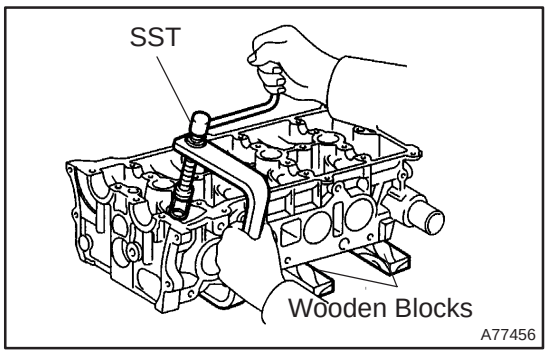
OVERHAUL

1. REMOVE VALVE LIFTER

HINT:

Store the valve liters in correct order, so that they can be returned to the original locations when re–assembling.

2. REMOVE INTAKE VALVE



(a) Using SST and wooden blocks, compress and remove the 8 valve spring retainer locks.
SST 09202–70020 (09202–00010)

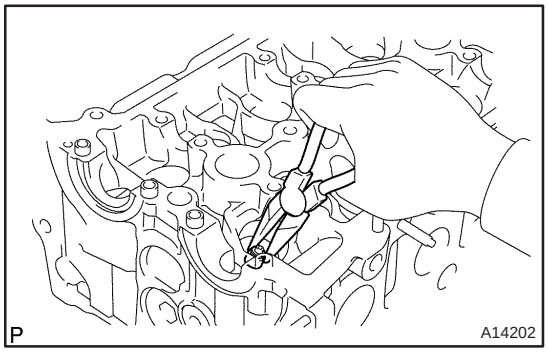
(b) Remove the parts below from the cylinder head.

1	Retainer
2	Valve spring
3	Intake valve

HINT:

Store the removed parts in correct order, so that they can be returned to the original locations when re–assembling.

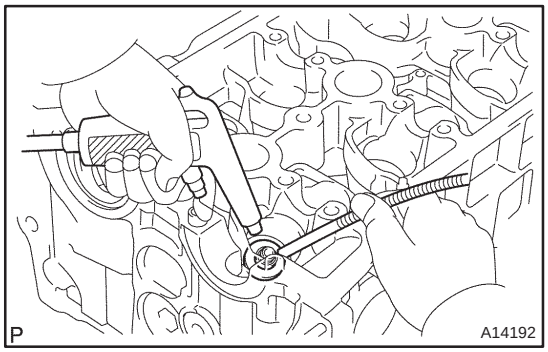
3. REMOVE EXHAUST VALVE



(a) Using SST and wooden blocks, compress and remove the 8 valve spring retainer locks.
SST 09202–70020 (09202–00010)

(b) Remove the parts below from the cylinder head.

1	Retainer
2	Valve spring
3	Intake valve

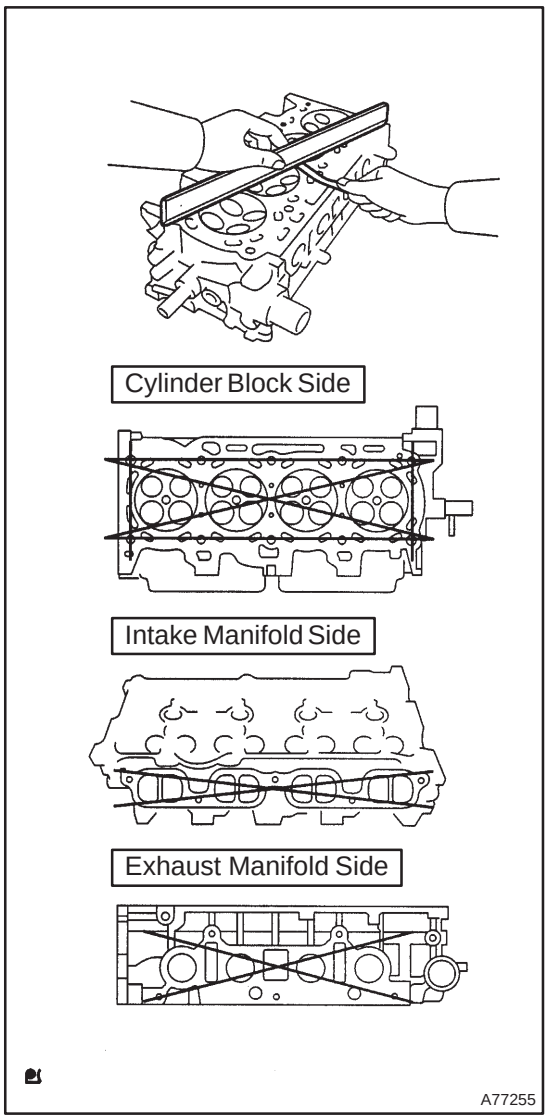


HINT:

Store the removed parts in correct order, so that they can be returned to the original locations when re–assembling.

4. REMOVE VALVE STEM OIL O SEAL OR RING

(a) Using needle–nose pliers, remove the oil seals.



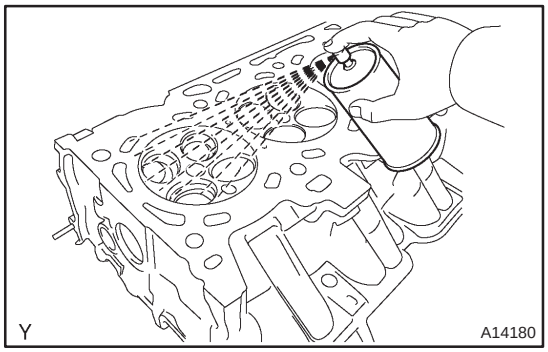
5. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the spring seat by blowing air.

HINT:

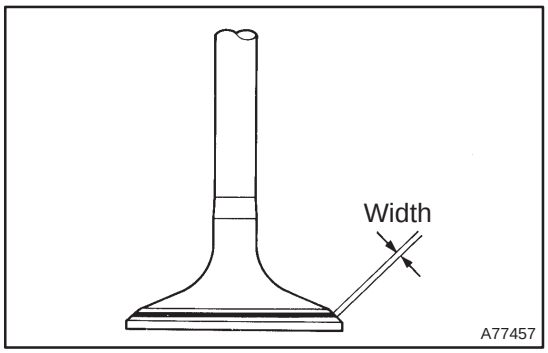
Store the removed parts in correct order, so that they can be returned to the original locations when re–assembling.

6. REMOVE STUD BOLT



7. INSPECT CYLINDER HEAD FOR FLATNESS

(a) Using a precision straight edge and a feeler gauge, measure the surface contacting the cylinder block and the manifolds for warpage.



Maximum warpage:
Cylinder block side 0.05 mm (0.0020 in.)
Intake manifold side 0.08 mm (0.0031 in.)
Exhaust manifold side 0.08 mm (0.0031 in.)

If warpage is greater than maximum, replace the cylinder head.

8. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrate, check the intake ports, exhaust ports and cylinder surface for cracks.

9. INSPECT VALVE SEATS

(a) Apply a light coat of prussian blue (or white lead) to the valve face.

(b) Lightly press the valve against the seat.

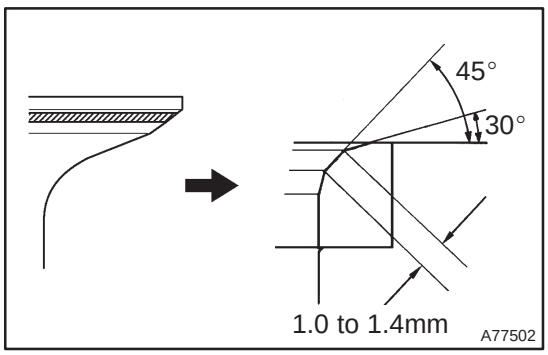
(c) Check the valve face and seat according to the following procedure.

(1) If blue appears 360° around the face, the valve is concentric. If not, replace the valve.

(2) If blue appears 360° around the valve seat, the guide and face are concentric. If not, resurface the seat.

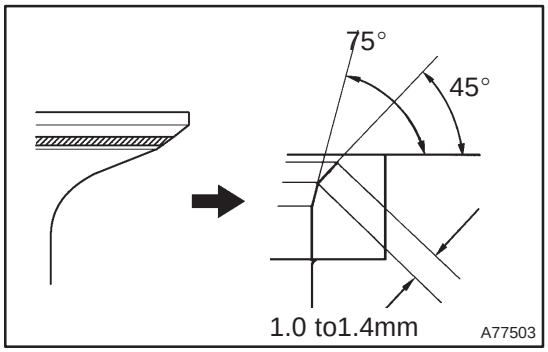
(3) Check that the seat contact is in the middle of the valve face with the width between 1.0 to 1.4 mm (0.039 to 0.055 in.).

10. REPAIR VALVE SEATS



NOTICE:

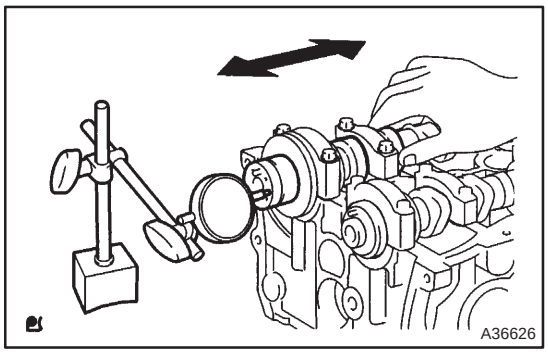
Releasing the seat–cutter pressure gradually helps to make smoother valve seat faces.



(a) Using a 45° cutter, cut valve face of the cylinder head a little wider than the specified valve seating width.

(b) Confirm that the valve fits the valve seat center portion. If not, re–cut the valve face with the 45° cutter.

(c) Adjust valve face with a 30° or 60° cutter to accurately fit the valve seat center portion.

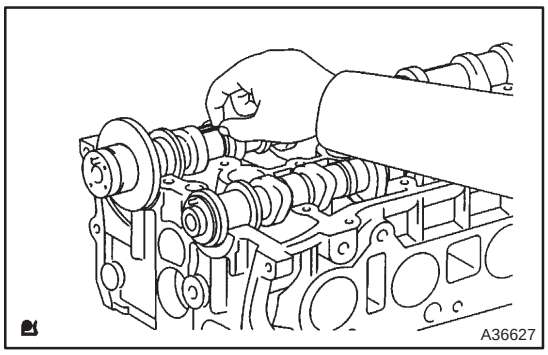


(1) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

(2) If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.

(d) Hand–lap the valve and valve seat with an abrasive compound.

(e) Recheck the valve seating position.



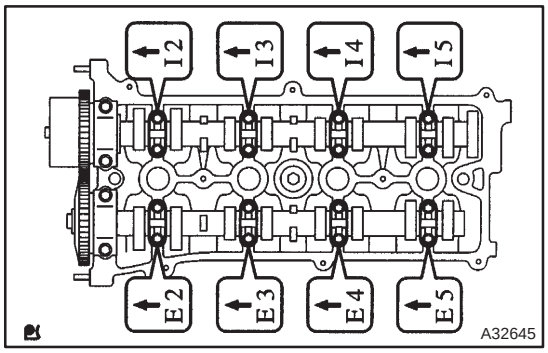
11. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts.

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
Intake 0.040 to 0.095 mm (0.0016 to 0.0037 in.)
Exhaust 0.080 to 0.135 m (0.0032 to 0.0053 in.)
Maximum thrust clearance:
Intake 0.11 mm (0.0043 in.)
Exhaust 0.15 mm (0.0059 in.)

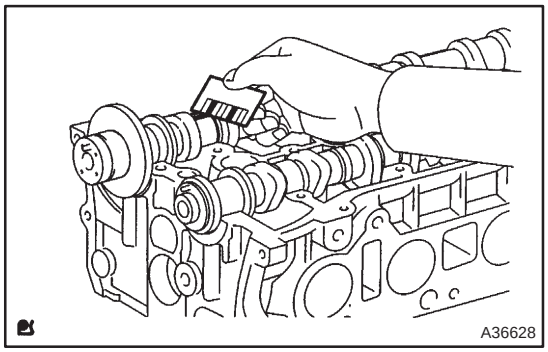
(c) If the thrust clearance is greater than maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.



12. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and camshaft journals.

(b) Place the camshafts on the cylinder head.

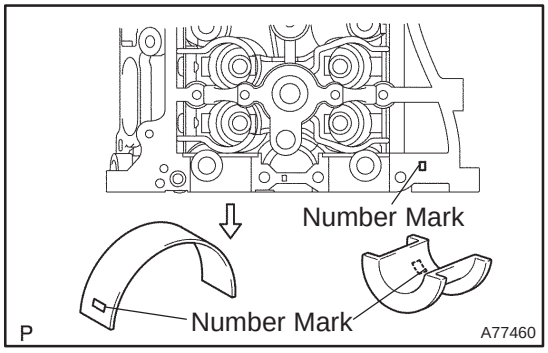


(c) Lay a strip of Plastigage across each of the camshaft journal.

(d) Install the bearing caps.

Torque:
No. 1 30 N·m (301 kgf·cm, 22 ft·lbf)
No. 2 30 N·m (301 kgf·cm, 22 ft·lbf)
No. 3 9 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:
Do not turn the camshaft.



(e) Remove the bearing cap, and measure the Plastigage at its widest point.

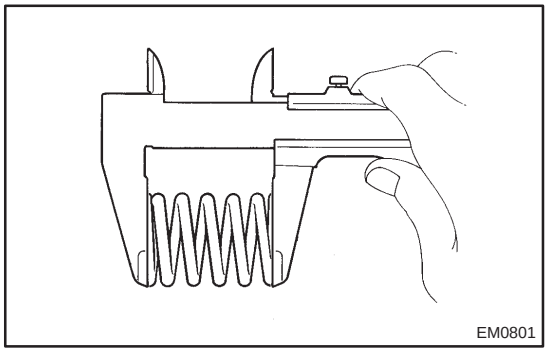
Standard oil clearance:
Intake No. 1 journal bearing mark 1
0.007 to 0.038 mm (0.0028 to 0.00150 in.)
Intake No. 1 journal bearing mark 2
0.008 to 0.038 mm (0.0031 to 0.00150 in.)
Intake No. 1 journal bearing mark 3
0.008 to 0.038 mm (0.0031 to 0.00150 in.)
Other journals
0.025 to 0.062 mm (0.00098 to 0.00244 in.)
Exhaust No. 1 journal
0.015 to 0.054 mm (0.0006 to 0.0021 in.)
Other journals
0.025 to 0.062 mm (0.00098 to 0.00244 in.)
Maximum oil clearance:
Intake No. 1 journal 0.07 mm (0.0028 in.)
Other journals 0.10 mm (0.0039 in.)

NOTICE:
Completely remove the Plastigage after the inspection.

(f) If the oil clearance is greater than maximum, replace the camshaft. If necessary, replace the cylinder head.

(g) If the oil clearance on No. 1 journal is greater than maximum, replace the bearing.

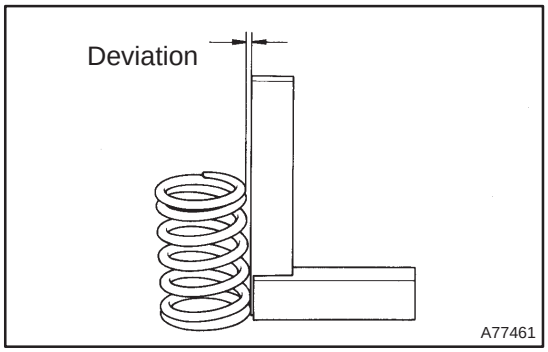
HINT:



Cylinder head journal bore diameter:

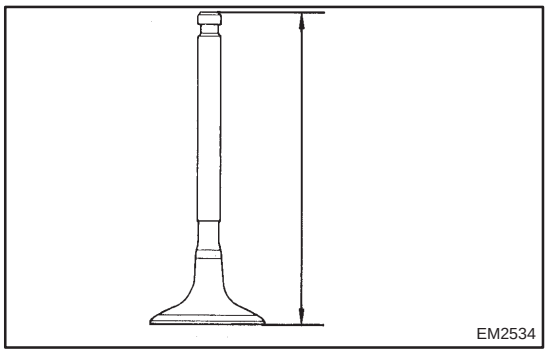
Mark "1"	40.000 to 40.008 mm (1.57480 to 1.57511 in.)
Mark "2"	40.009 to 40.017 mm (1.57515 to 1.57547 in.)
Mark "3"	40.018 to 40.025 mm (0.57551 to 1.57578 in.)

Standard bearing center wall thickness:

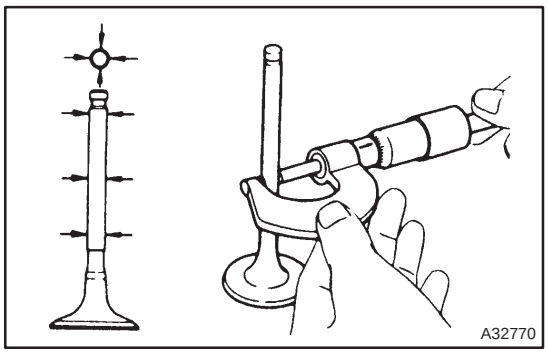


Mark "1"	2.000 to 2.004 mm (0.07874 to 0.07890 in.)
Mark "2"	2.005 to 2.008 mm (0.07894 to 0.07905 in.)
Mark "3"	2.009 to 2.012 mm (0.07909 to 0.07921 in.)

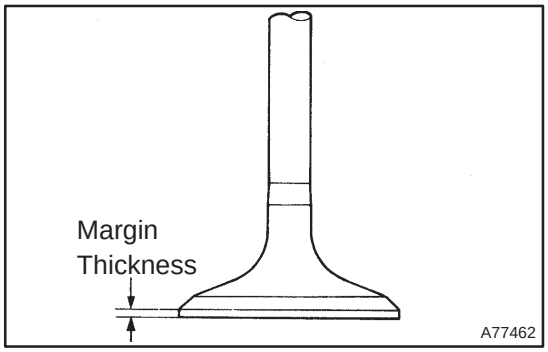
Camshaft journal diameter:
35.971 to 35.985 mm (1.41648 to 1.41673 in.)



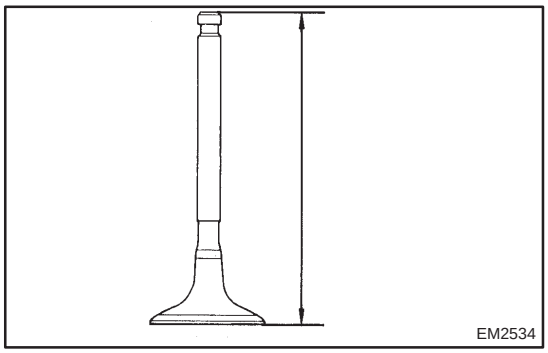
13. INSPECT INNER COMPRESSION SPRING



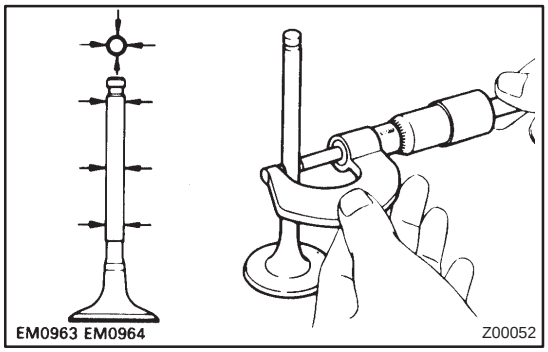
(a) Check the free length.
(1) Using vernier calipers, measure the free length of the valve spring.
Free length: 45.7 mm (1.799 in.)



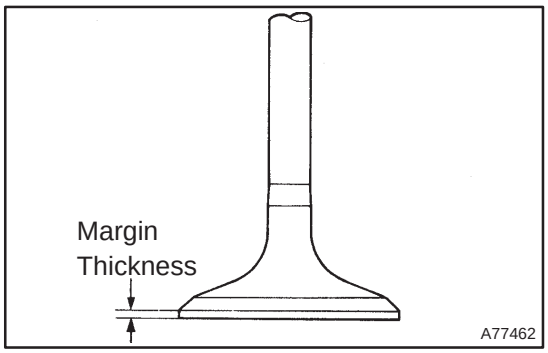
(b) Check the deviation.
(1) Using a steel square, measure the deviation of the valve spring.
Maximum deviation: 1.6 mm (0.063 in.)
Maximum angle (reference): 2°



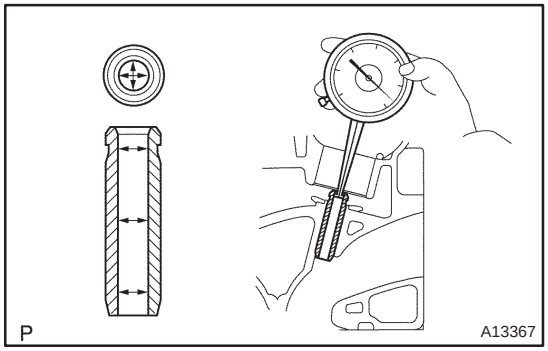
14. INSPECT INTAKE VALVE
(a) Check the valve overall length.
(1) Using vernier calipers, measure the valve overall length.
Standard overall length: 101.71 mm (4.0043 in.)
Minimum overall length: 101.21 mm (3.9846 in.)



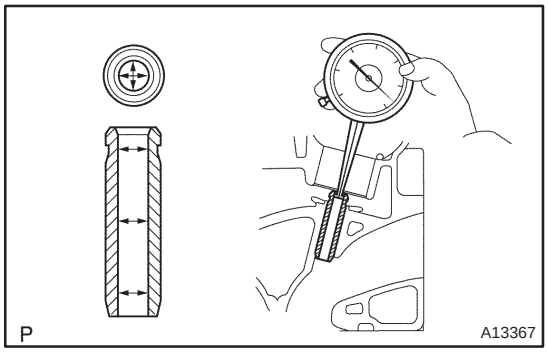
(b) Check the diameter of the valve stem.
(1) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.470 to 5.485 mm (0.2154 to 0.2159 in.)



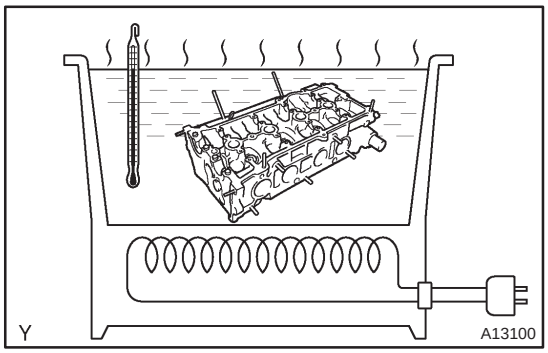
(c) Check the valve head margin thickness.
(1) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.05 to 1.45 mm (0.041 to 0.057 in.)
Minimum margin thickness: 0.75 mm (0.030 in.)



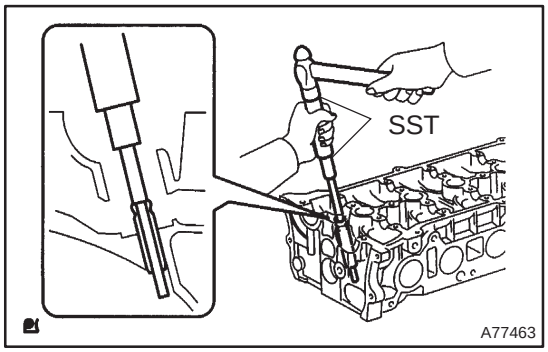
15. INSPECT EXHAUST VALVE
(a) Check the valve overall length.
(1) Using vernier calipers, measure the valve overall length.
Standard overall length: 101.15 mm (3.9823 in.)
Minimum overall length: 100.70 mm (3.9646 in.)



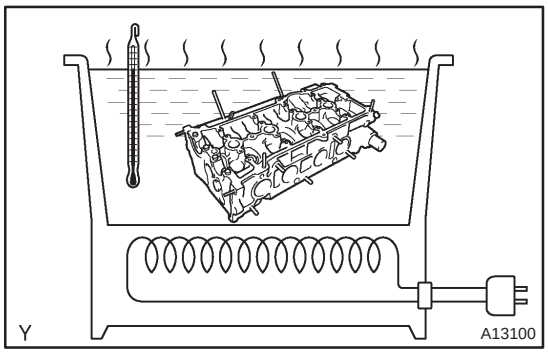
(b) Check the diameter of the valve stem.
(1) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.465 to 5.480 mm (0.2152 to 0.2157 in.)



(c) Check the valve head margin thickness.
(1) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.2 to 1.6 mm (0.047 to 0.063 in.)
Minimum margin thickness: 0.9 mm (0.035 in.)

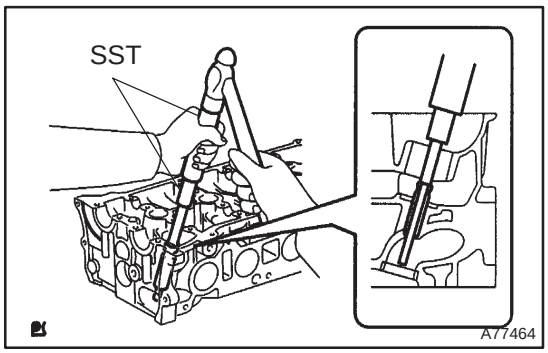


16. INSPECT INTAKE VALVE GUIDE BUSH
(a) Using a caliper gauge, measure the inside diameter of the guide bushing diameter.
Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)
(b) Subtract the valve stem diameter measurement from the guide bushing.
Standard oil clearance:
0.025 to 0.060 mm (0.00098 to 0.00236 in.)
Maximum oil clearance: 0.08 mm (0.0031 in.)



17. INSPECT EXHAUST VALVE GUIDE BUSH
(a) Using a caliper gauge, measure the inside diameter of the guide bushing diameter.
Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)
(b) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)
Maximum oil clearance: 0.10 mm (0.0039 in.)

18. REMOVE INTAKE VALVE GUIDE BUSH
(a) Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).

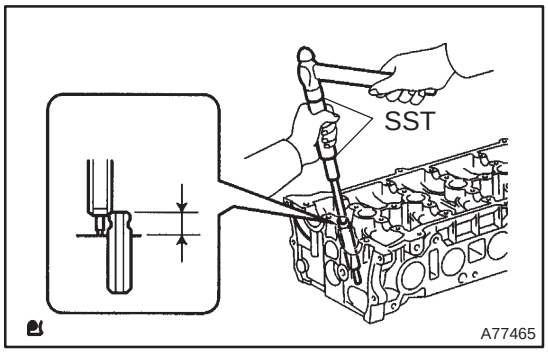


(b) Using SST and a hammer, tap out the guide bushing.
SST 09201–10000 (09201–01050), 09950–70010 (09951–07100)

19. REMOVE EXHAUST VALVE GUIDE BUSH

(a) Gradually heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Using SST and a hammer, tap out the guide bushing.
SST 09201–10000 (09201–01050), 09950–70010 (09951–07100)



20. INSTALL INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Diameter: 10.285 to 10.306 mm (0.4049 to 0.4057 in.)

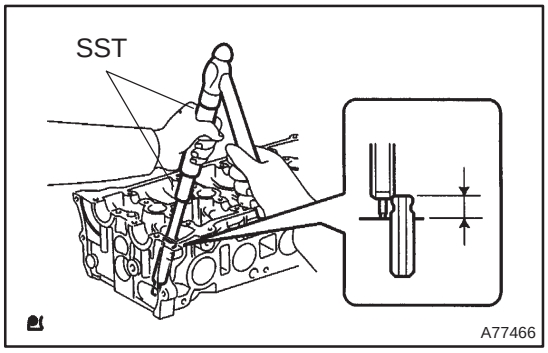
(b) Install the STD bushing if the diameter is within specified diameter.

HINT:

STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)

(c) Using SST and a hammer, tap in a new guide bushing to the specified protrusion height.
Protrusion height: 9.6 to 10.0 mm (0.3779 to 0.3937 in.)
SST 09201–10000 (09201–01050), 09950–70010 (09951–07100), 23801

(d) Using a sharp 5.5 mm reamer, ream the guide bushing to obtain the standard specified clearance between the guide bushing and valve stem.
Standard oil clearance:
0.025 to 0.060 mm (0.00098 to 0.00236 in.)



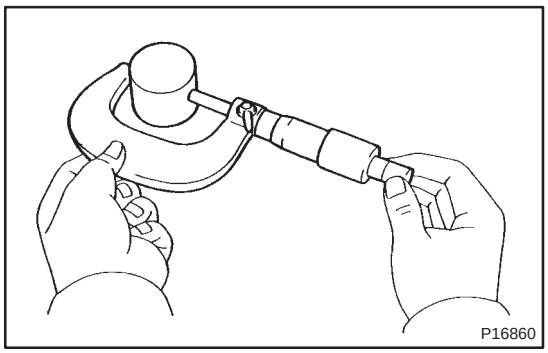
21. INSTALL EXHAUST VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Diameter: 10.285 to 10.306 mm (0.4049 to 0.4057 in.)

(b) Install the STD bushing if the diameter is within specified diameter.

HINT:

STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)



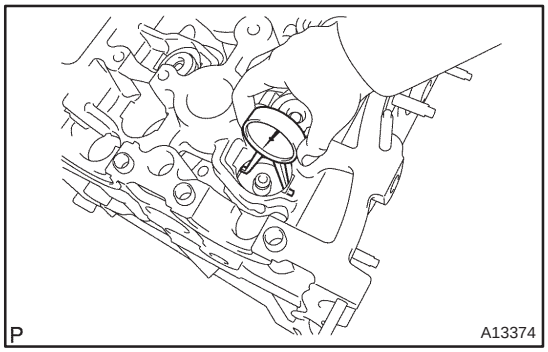
(c) Using SST and a hammer, tap in a new guide bushing to the specified protrusion height.

Protrusion height: 9.6 to 10.0 mm (0.3779 to 0.3937 in.)

(d) Using a sharp 5.5 mm reamer, ream the guide bushing to obtain the standard specified clearance between the guide bushing and valve stem.

SST 09201–10000 (09201–01050), 09950–70010 (09951–07100), 23801

Standard oil clearance:
0.030 to 0.065 mm (0.00118 to 0.00256 in.)

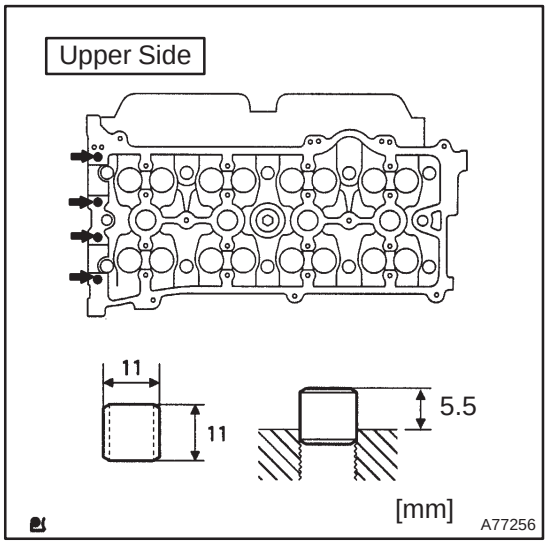


22. INSPECT VALVE LIFTER

(a) Check the lifter diameter.

(1) Using a micrometer, measure the lifter diameter.

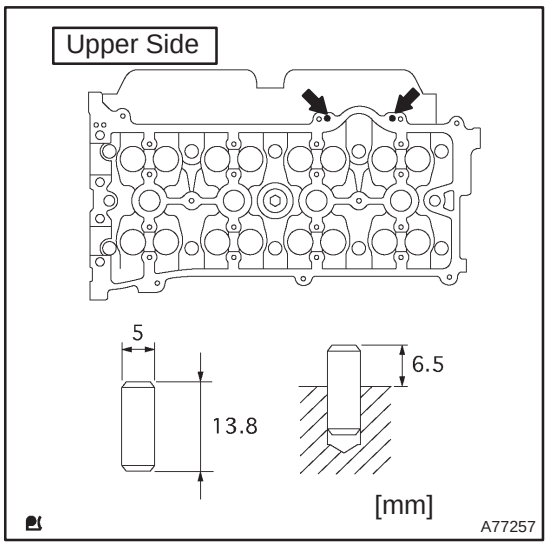
Lifter diameter:
30.966 to 30.976 mm (1.2191 to 1.2195 in.)



(b) Check the valve lifter oil clearance.

(1) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Lifter bore diameter:
31.009 to 31.025 mm (1.2208 to 1.2215 in.)

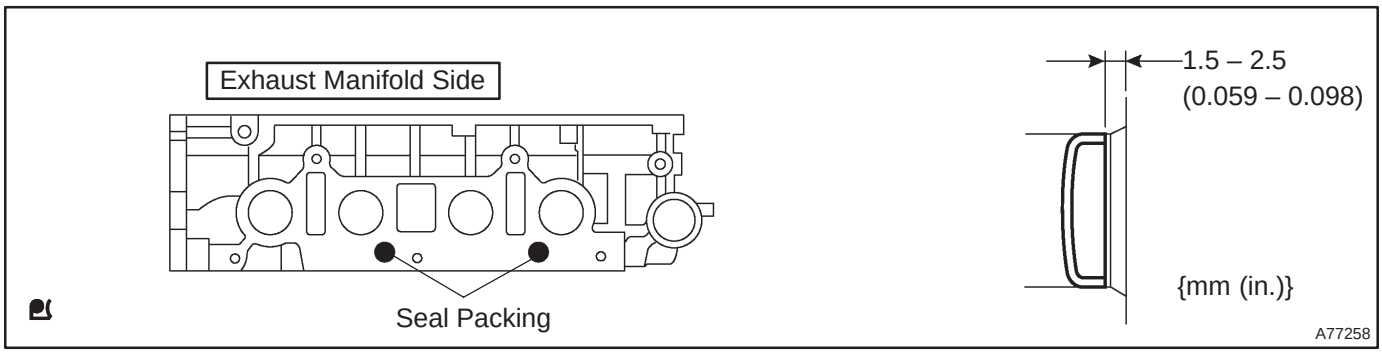


(c) Subtract the lifter diameter measurement from the lifter bore diameter measurement.

Standard oil clearance:
0.033 to 0.059 mm (0.0013 to 0.0023 in.)
Maximum oil clearance: 0.08 mm (0.0032 in.)

23. INSTALL RING W/HEAD PIN

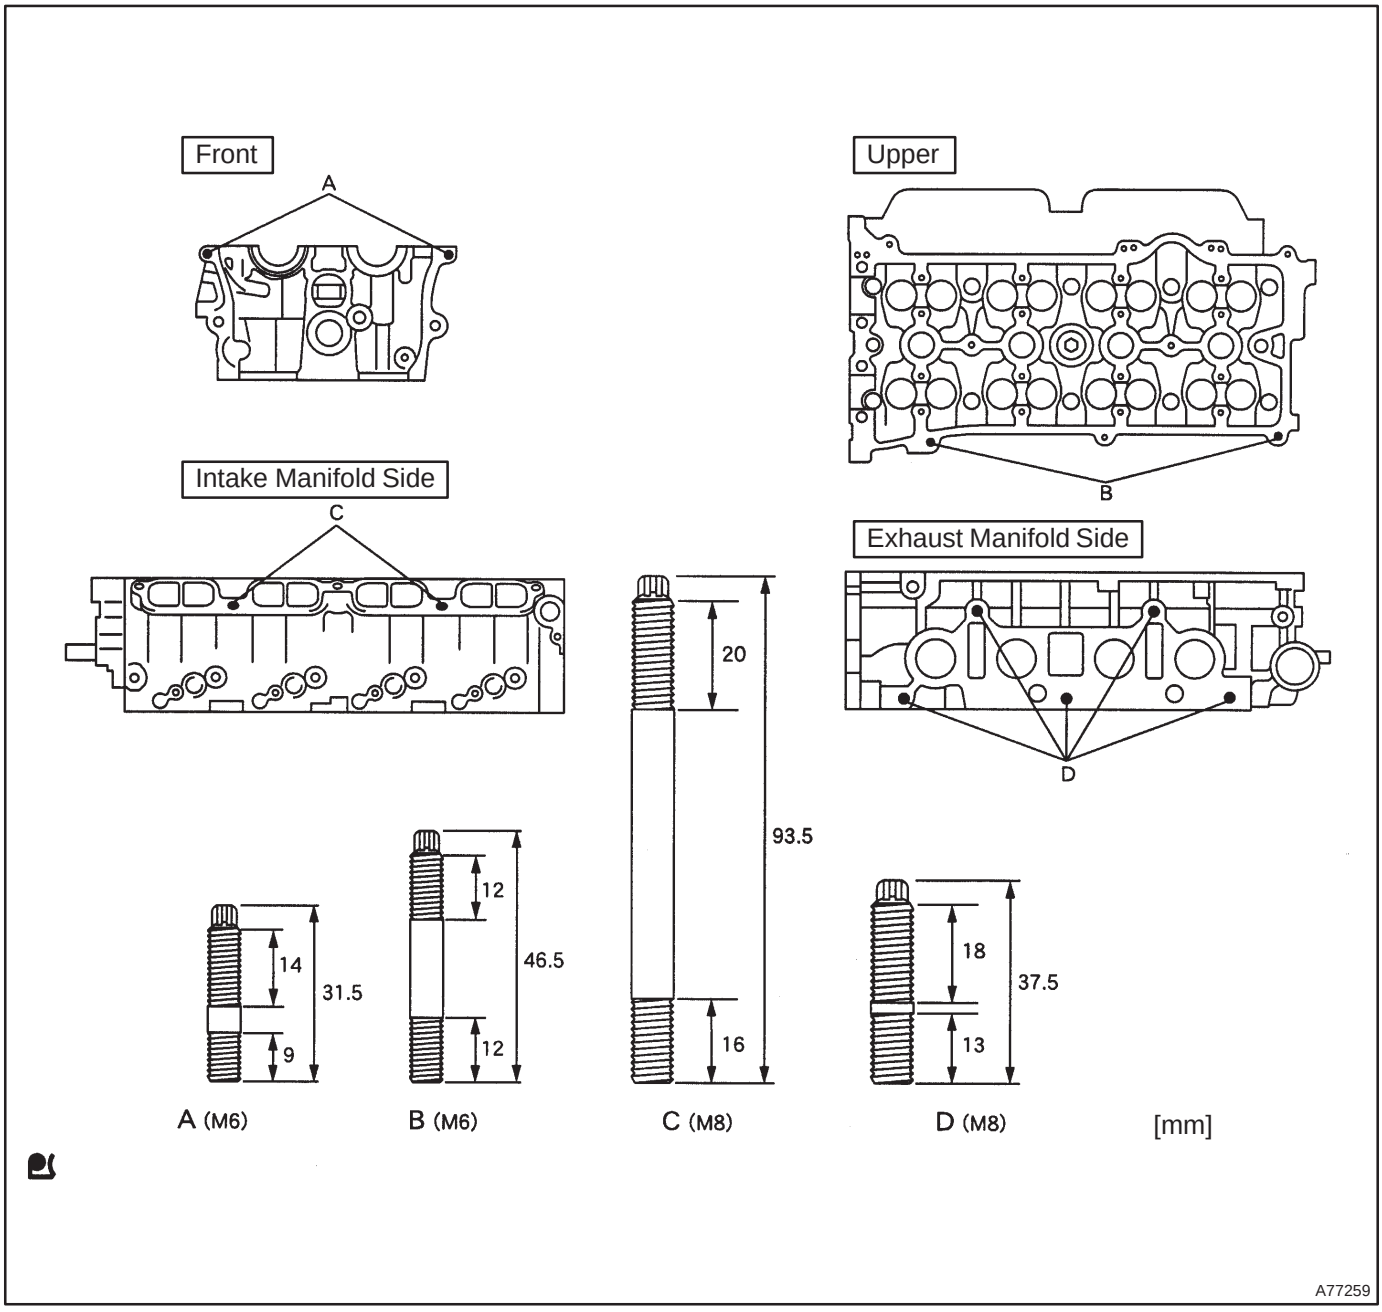
(a) Using a plastic–faced hammer, tap in a new ring pin to the specified protrusion height.
Protrusion height: 5.5 mm (0.217 in.)



24. INSTALL RING PIN

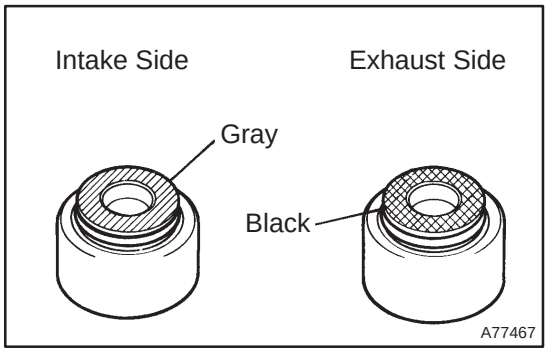
(a) Using a plastic–faced hammer, tap in a new ring pin to the specified protrusion height.
Protrusion height: 6.5 mm (0.256 in.)

25. INSTALL TIGHT PLUG



(a) Apply seal packing to the cylinder head as shown in the illustration.

(b) Using SST, tap in plug to the specified protrusion height.
SST 09950–60010 (09951–00180), 09950–70010 (09951–07100)
Protrusion height: 1.5 to 2.5 mm (0.059 to 0.098 in.)

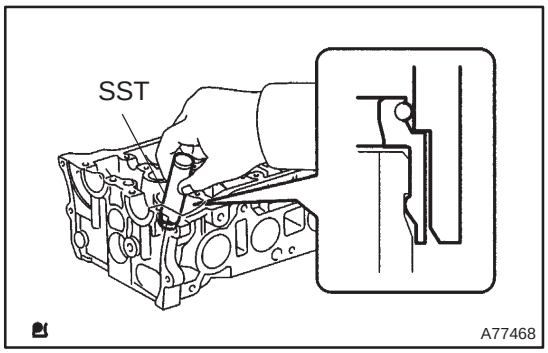


26. INSTALL STUD BOLT

Torque:
Bolt A 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Bolt B 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Bolt C 9.5 N·m (97 kgf·cm, 84 in.·lbf)
Bolt D 9.5 N·m (97 kgf·cm, 84 in.·lbf)

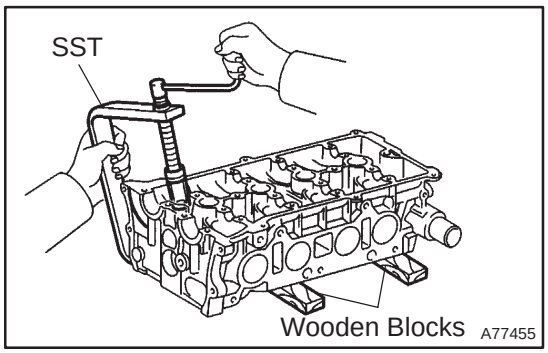
27. INSTALL VALVE SPRING SEAT

28. INSTALL VALVE STEM OIL O SEAL OR RING



(a) Apply a light coat of engine oil on new valve stem seals.

NOTICE:

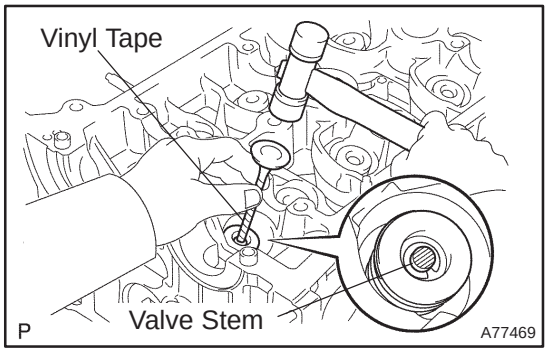


Pay much attention assembling the oil seal for intake and exhaust. Installing the wrong one may cause improper installation.

HINT:

The intake valve oil seal is gray and the exhaust valve oil seal is black.

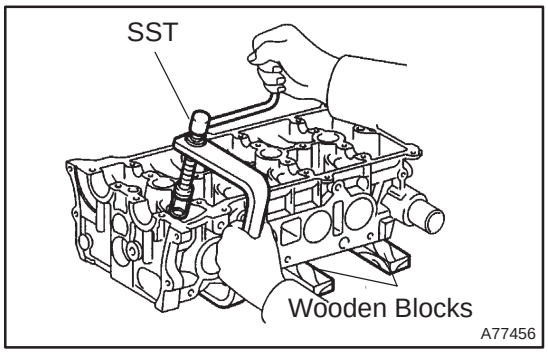
(b) Using SST, push in the oil seal.
SST 09201–41020



29. INSTALL INTAKE VALVE

(a) Install the parts below to the cylinder head.

1	Intake valve
2	Spring
3	Retainer

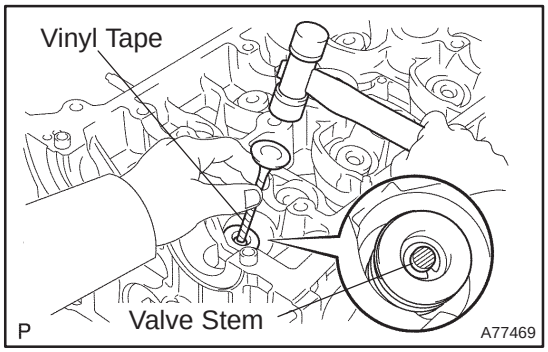


(b) Using SST and wooden blocks, compress and install 2 valve spring retainer locks.
SST 09202–70020 (09202–00010)

(c) Wrap the tip of a discarded valve with vinyl tape, place the discarded valve tip on the installed valve. Using a plastic–faced hammer, lightly tap the discarded valve head to ensure proper fitting of the installed valve.

NOTICE:

Be careful not to damage the valve stem tip.



30. INSTALL EXHAUST VALVE

(a) Install the parts below to the cylinder head.

1	Exhaust valve
2	Spring
3	Retainer

(b) Using SST and wooden blocks, compress and install 2 valve spring retainer locks.
SST 09202–70020 (09202–00010)

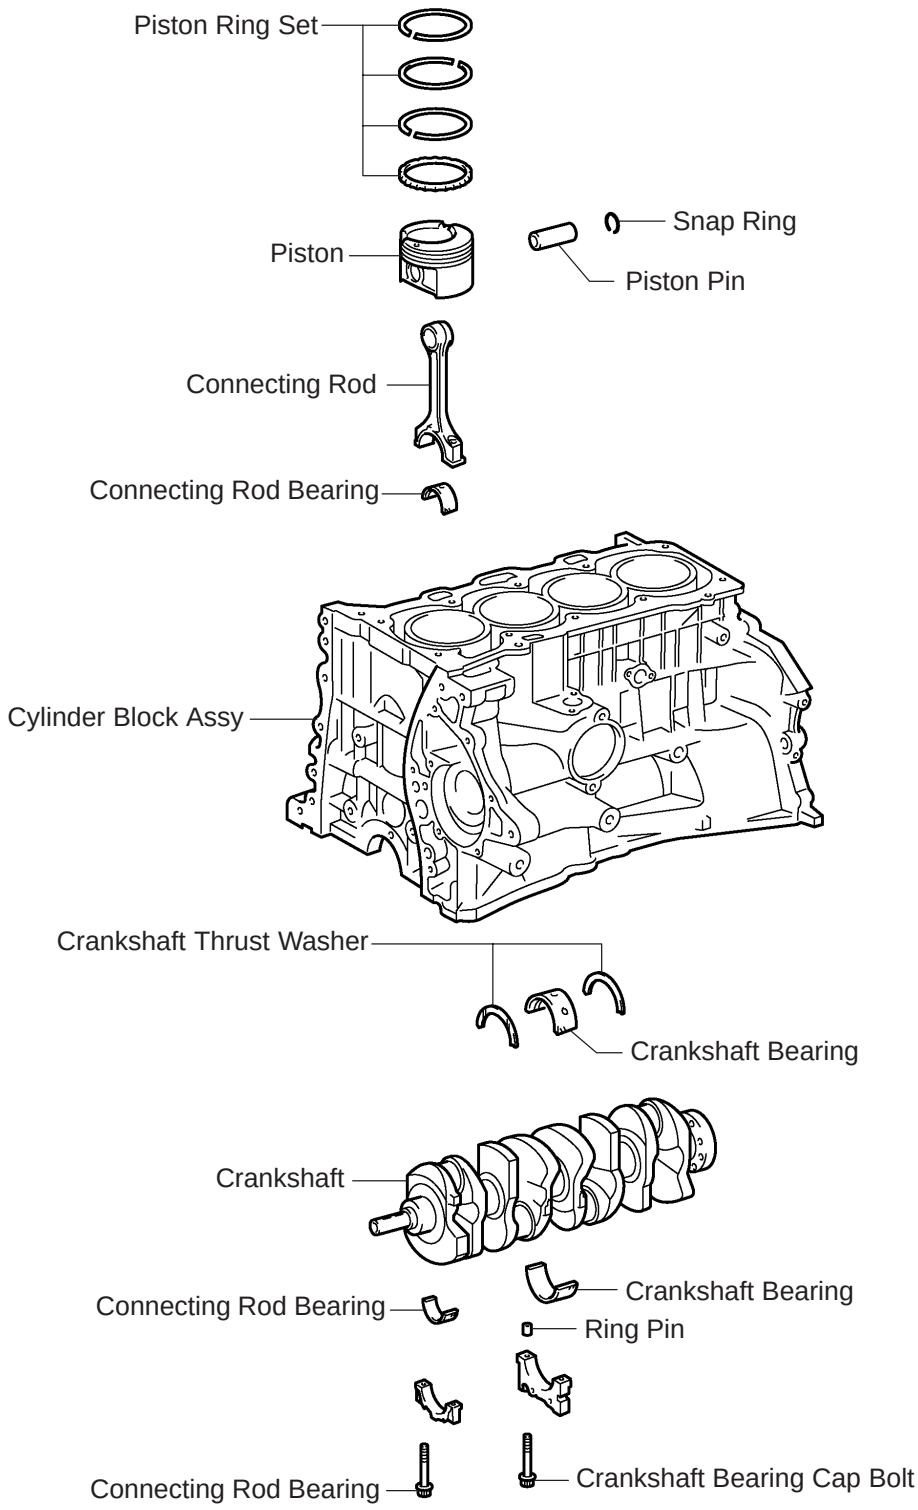
(c) Wrap the tip of a discarded valve with vinyl tape, place the discarded valve tip on the installed valve. Using a plastic–faced hammer, lightly tap the discarded valve head to ensure proper fitting of the installed valve.

NOTICE:

Be careful not to damage the valve stem tip.

31. INSTALL VALVE LIFTER

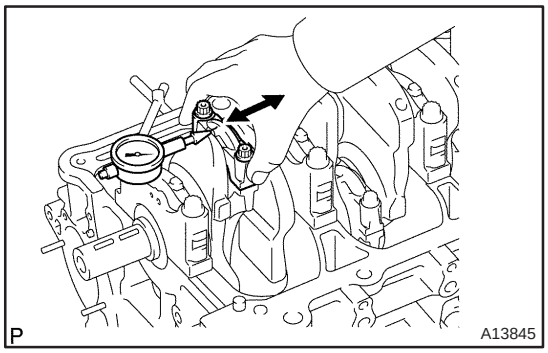
(a) Apply a light coat of engine oil on the valve lifter.



NOTICE:

Install the valve lifters to the original locations.

CYLINDER BLOCK ASSY



COMPONENTS

141BT–01

A77367

OVERHAUL

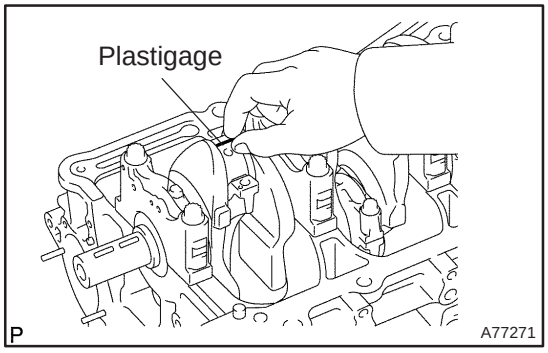
1. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.160 to 0.362 mm (0.0063 to 0.0143 in.)
Maximum thrust clearance: 0.362 mm (0.0143 in.)

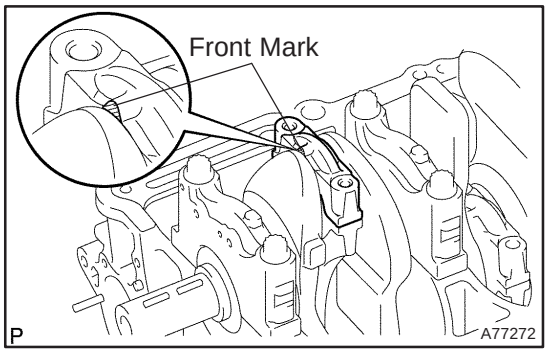
(b) If the thrust clearance is greater than maximum, replace the connecting rod assembly(s). If necessary, replace the crankshaft.

2. INSPECT CONNECTING ROD OIL CLEARANCE

HINT:
The connecting rod cap bolts are tightened in 2 successive steps.



(a) Check that the matchmarks on the connecting rod and cap are aligned to ensure correct reassembly.

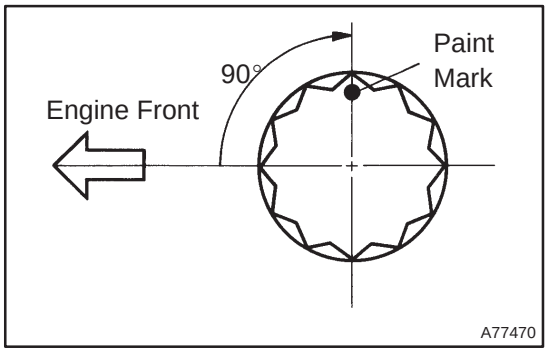


(b) Using a 12 mm socket wrench, remove the 2 connecting rod cap bolts.
SST 09011–38121

(c) Clean the crank pin and bearing.

(d) Check the crank pin and bearing for pitting and scratches.

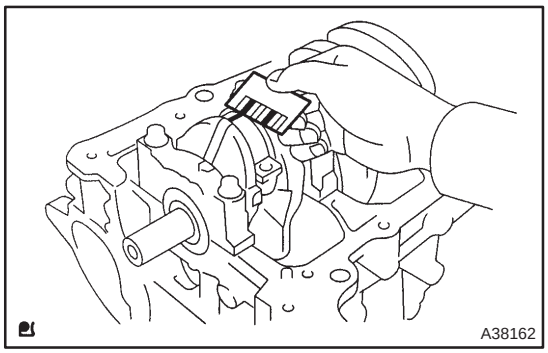
(e) Lay a strip of Plastigage on the crank pin.



(f) Check that the front mark of the connecting rod cap is facing the correct direction.

(g) Apply a light coat of engine oil on the threads of the connecting rod cap bolts.

(h) Using a 12 mm socket wrench, tighten the bolts in several steps with the specified torque.
SST 09011–38121
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)



(i) Place the front mark on each connecting rod cap bolt head with paint.

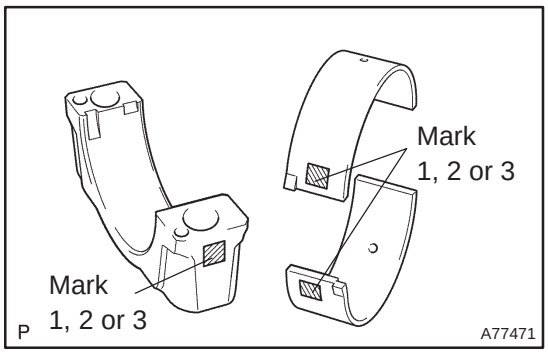
(j) Retighten the cap bolts by 90° as shown in the illustration.

NOTICE:

Do not turn the crankshaft.

(k) Remove the 2 bolts, connecting rod cap and lower bearing.

(l) Measure the Plastigage at its widest point.



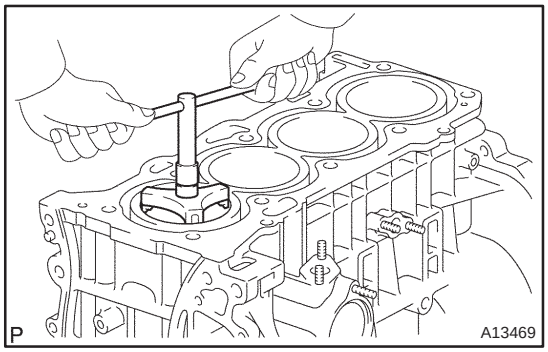
Standard oil clearance:

0.024 to 0.048 mm (0.0009 to 0.0019 in.)

Maximum oil clearance: 0.08 mm (0.0031 in.)

NOTICE:

Completely remove the Plastigage.



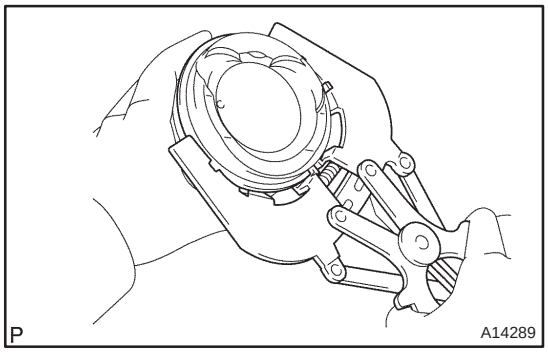
(m) If replacing the bearing, replace it with one having the same number as marked on the connecting rod. There are 3 sizes of standard bearings, marked ”1”, ”2” and ”3” accordingly.

HINT:

Standard bearing center wall thickness.

Mark 1	1.485 to 1.488 mm (0.0585 to 0.0586 in.)
Mark 2	1.488 to 1.491 mm (0.0586 to 0.0587 in.)
Mark 3	1.491 to 1.494 mm (0.0587 to 0.0588 in.)

3. REMOVE PISTON SUB–ASSY W/CONNECTING ROD

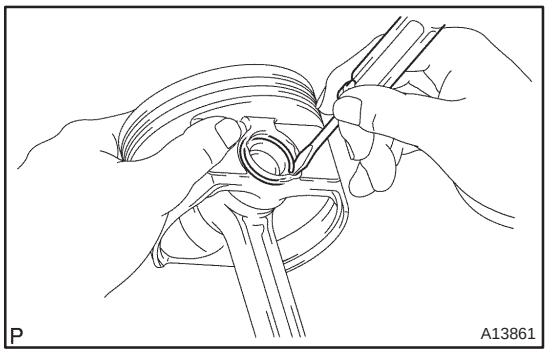


(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

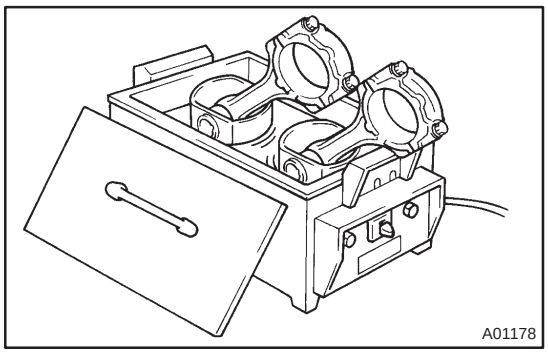
HINT:

- Keep the bearing, connecting rod and cap together.
- Store the piston and connecting rod assemblies in correct order so they can be returned to the original locations when re–installing.



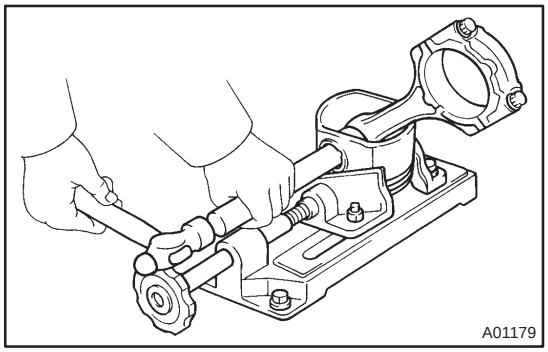
4. REMOVE CONNECTING ROD BEARING

5. REMOVE PISTON RING SET



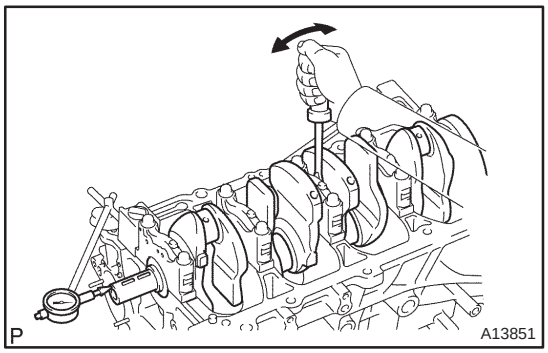
(a) Using a piston ring expander, remove the 2 compression rings.

(b) Remove the 2 side rails and oil ring by hand.



6. REMOVE PISTON

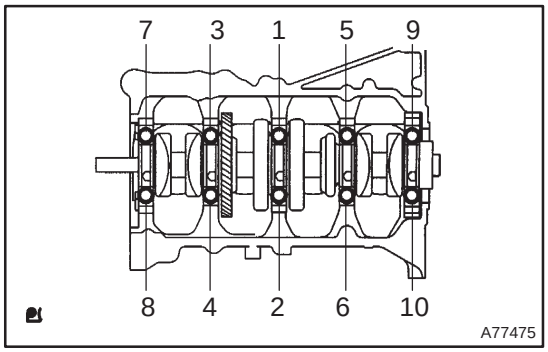
(a) Using a small screwdriver, pry out the 2 snap rings.



(b) Gradually heat the piston to 80 to 90 °C (176 to 194 °F).

(c) Using a plastic–faced hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:



- The piston and pin are a matched set.
- Store the pistons, pins, rings, connecting rods and bearings in correct order so that they can be returned to the original locations when re–assembling.

7. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.
Standard thrust clearance:
0.040 to 0.240 mm (0.0016 to 0.0094 in.)
Maximum thrust clearance: 0.30 mm (0.0118 in.)

(b) If the thrust clearance is greater than maximum, replace the thrust washers as a set.
Thrust washer thickness:
1.930 to 1.980 mm (0.0760 to 0.0780 in.)

8. REMOVE CRANKSHAFT

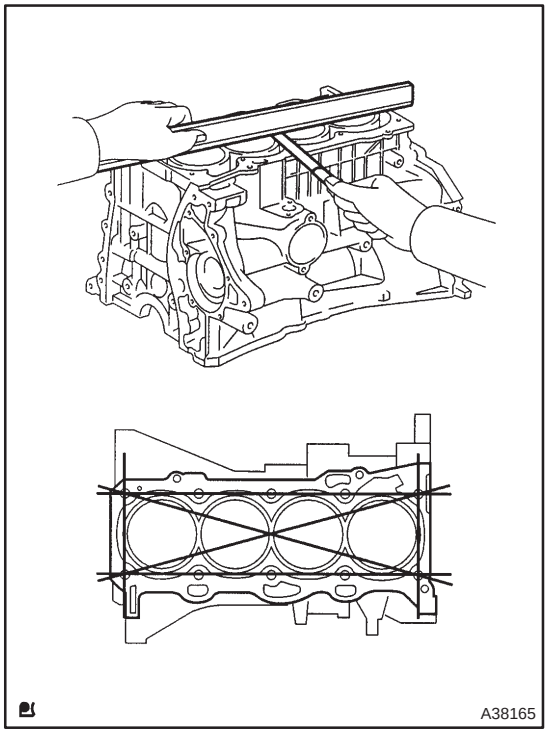
(a) Using several steps, loosen and remove the 10 bearing cap sub–assembly bolts uniformly in the sequence shown.

(b) Remove the bearing cap and the crankshaft.

9. REMOVE CRANKSHAFT THRUST WASHER UPPER

10. REMOVE CRANKSHAFT BEARING

NOTICE:

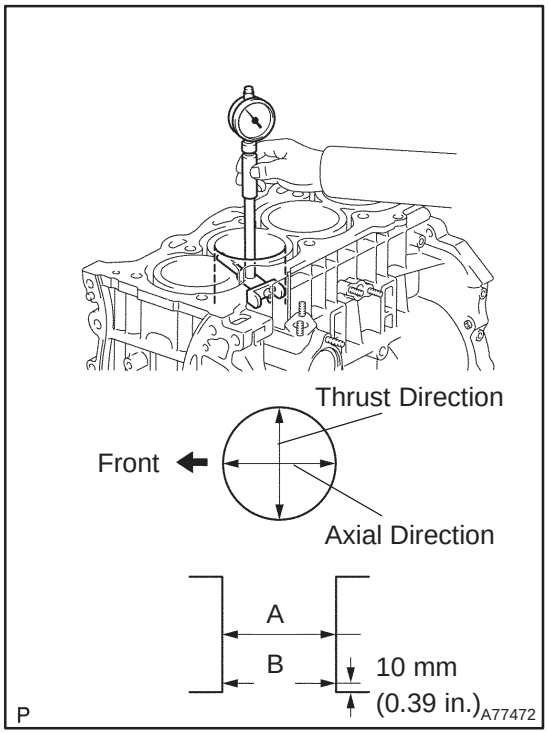


Store the bearings in correct order so they can be returned to the original locations when re–assembling.

11. REMOVE CRANKSHAFT BEARING NO.2

NOTICE:

Store the bearings in correct order so they can be returned to the original locations when re–assembling.

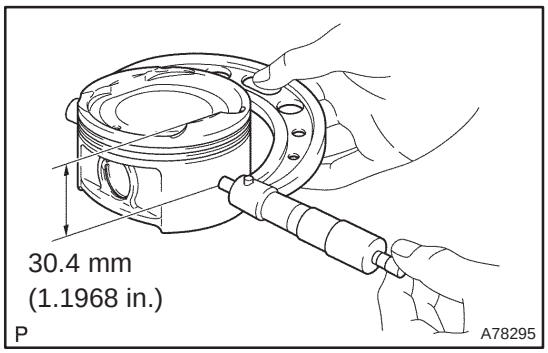


12. REMOVE STUD BOLT

13. INSPECT CYLINDER BLOCK FOR FLATNESS

(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head gasket for warpage.

Maximum warpage: 0.05 mm (0.0020 in.)



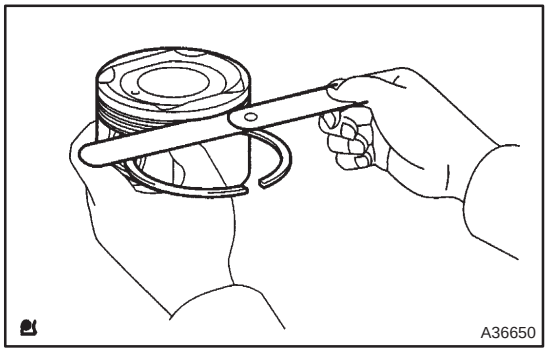
14. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A, B and C in the thrust and axial directions.

Standard diameter:
86.000 to 86.013 mm (3.3858 to 3.3863 in.)
Maximum diameter: 86.013 mm (3.3863 in.)

If the diameter is greater than maximum, replace the cylinder block.

15. INSPECT PISTON DIAMETER



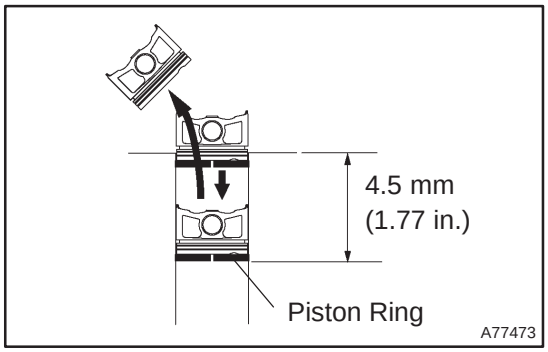
(a) Using a micrometer, measure the piston diameter at right angles to the piston pin center line, 30.4 mm (1.1968 in.) from the piston head.

Piston diameter:
85.927 to 85.937 mm (3.3829 to 3.3833 in.)

16. INSPECT PISTON CLEARANCE

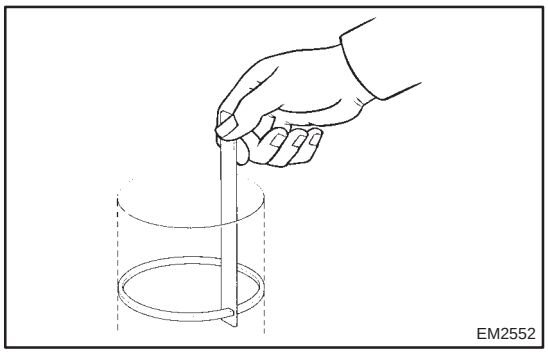
(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance: 0.063 to 0.086 mm (0.0025 to 0.0034 in.)
Maximum oil clearance: 0.1 mm (0.0039 in.)

(b) If the clearance is greater than maximum, replace all the 4 pistons. If necessary, replace the cylinder block.



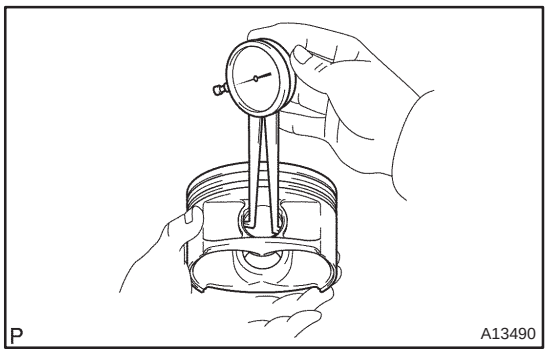
17. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between the piston ring and the wall of the ring groove.



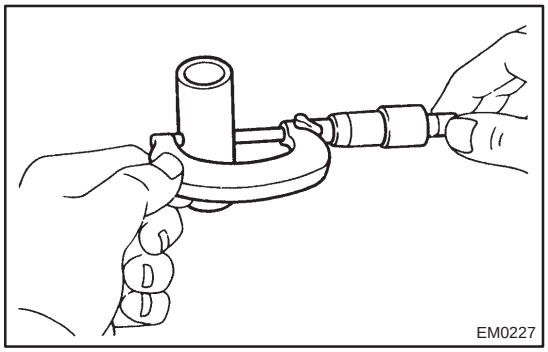
Ring groove clearance:

Piston Ring	mm (in.)
No. 1	0.020 to 0.007 (0.0008 to 0.0028)
No. 2	0.020 to 0.006 (0.0008 to 0.0024)
Oil ring (Side rail)	0.070 to 0.150 (0.0028 to 0.0059)

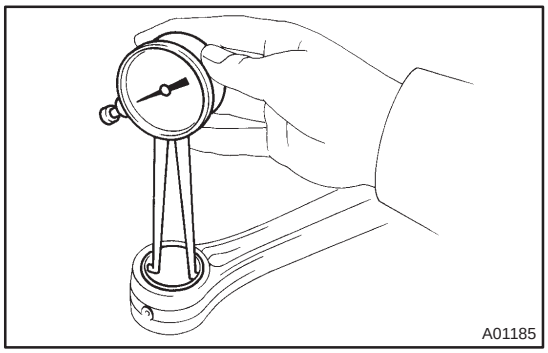


18. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 4.5 mm (1.77 in.) from the top of the cylinder block.

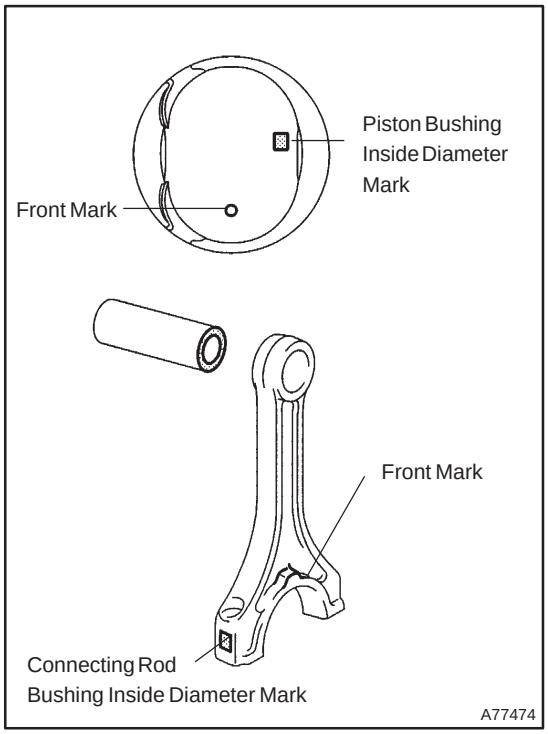


(b) Using a feeler gauge, measure the end gap.
Standard end gap:
No. 1 0.30 to 0.40 mm (0.0118 to 0.0157 in.)
No. 2 0.47 to 0.62 mm (0.0185 to 0.0244 in.)
Oil (side rail) 0.10 to 0.35 mm (0.0039 to 0.0138 in.)
Maximum end gap:
No. 1 0.89 mm (0.0350 in.)
No. 2 1.37 mm (0.0539 in.)
Oil (side rail) 0.73 mm (0.0287 in.)



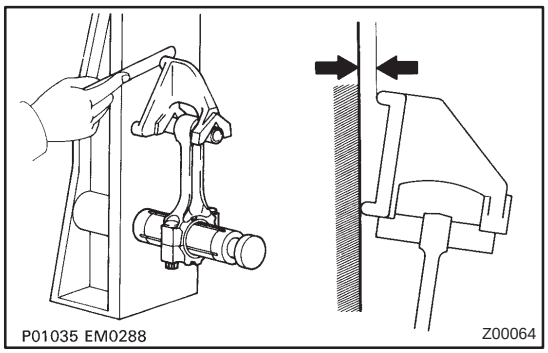
19. INSPECT PISTON PIN OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the piston bushing.
Bushing inside diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)



(b) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
21.997 to 22.009 mm (0.8660 to 0.8665 in.)

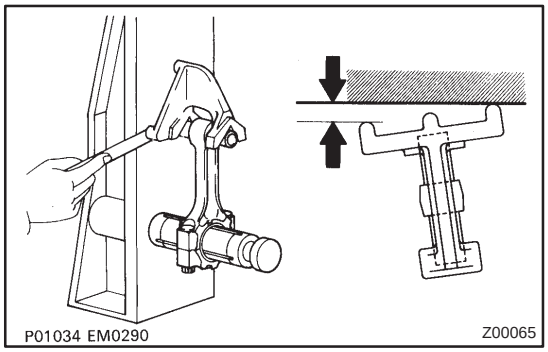
(c) Using a caliper gauge, measure the inside diameter of the connecting rod bushing.
Bushing inside diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)



(d) Subtract the piston pin diameter measurement from the piton pin hole diameter measurement.
Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance: 0.05 mm (0.0020 in.)

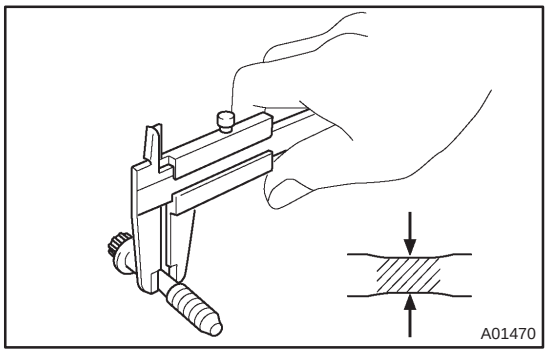
(e) If the oil clearance is greater than maximum, replace the connecting rod. If necessary, replace the piston and piston pin as a set.

(f) Subtract the piston pin diameter measurement from the bushing inside diameter measurement.
Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance: 0.05 mm (0.0020 in.)



(g) If the oil clearance is greater than maximum, replace the connecting rod. If necessary, replace the connecting rod and piston pin as a set.

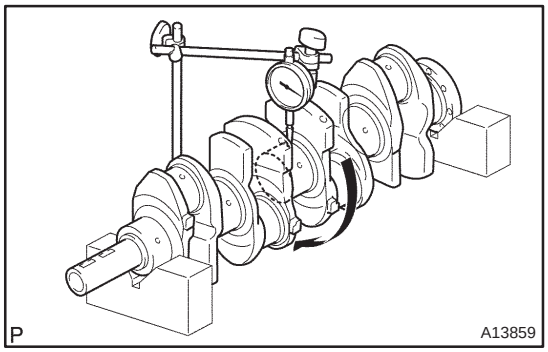
20. INSPECT CONNECTING ROD SUB–ASSY



(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.
(1) Check for misalignment.
Maximum misalignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

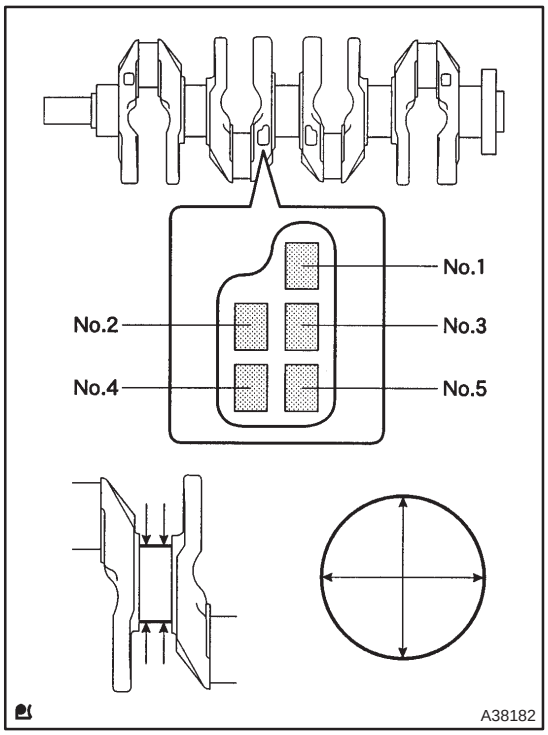
(b) If out–of alignment is greater than maximum, replace the connecting rod assembly.

(1) Check for twist.
Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)



(c) If twist is greater than maximum, replace the connecting rod assembly.

21. INSPECT CONNECTING ROD BOLT

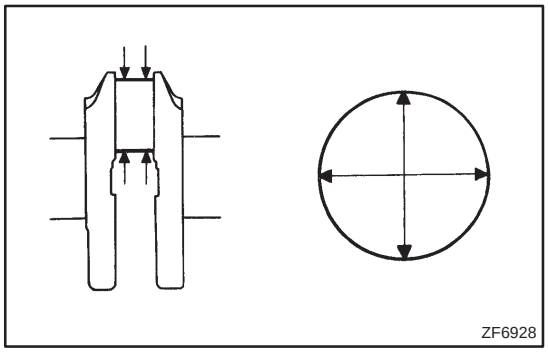


(a) Using a vernier calipers, measure the tension portion diameter of the bolt.
Standard diameter: 7.2 to 7.3 mm (0.283 to 0.287 in.)
Minimum diameter: 7.0 mm (0.276 in.)

(b) If the diameter is less than minimum, replace the bolt.

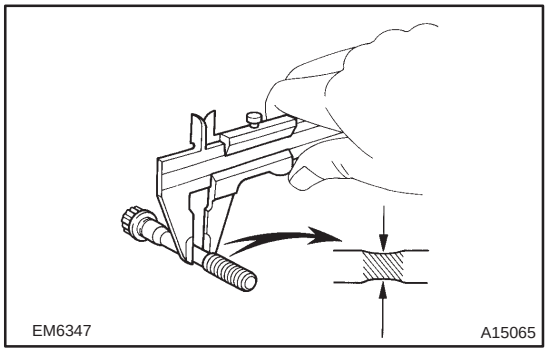
22. INSPECT CRANKSHAFT

(a) Using a dial indicator and V–blocks, measure the circle runout as shown in the illustration.
Maximum circle runout: 0.03 mm (0.0012 in.)



(b) Using a micrometer, measure the diameter of each main journal.
Diameter: 54.988 to 55.000 (2.1648 to 2.06535 in.)

(c) Check each main journal for taper and out–of–round as shown.
Maximum taper and out –of– round:
0.003 mm (0.0001 in.)

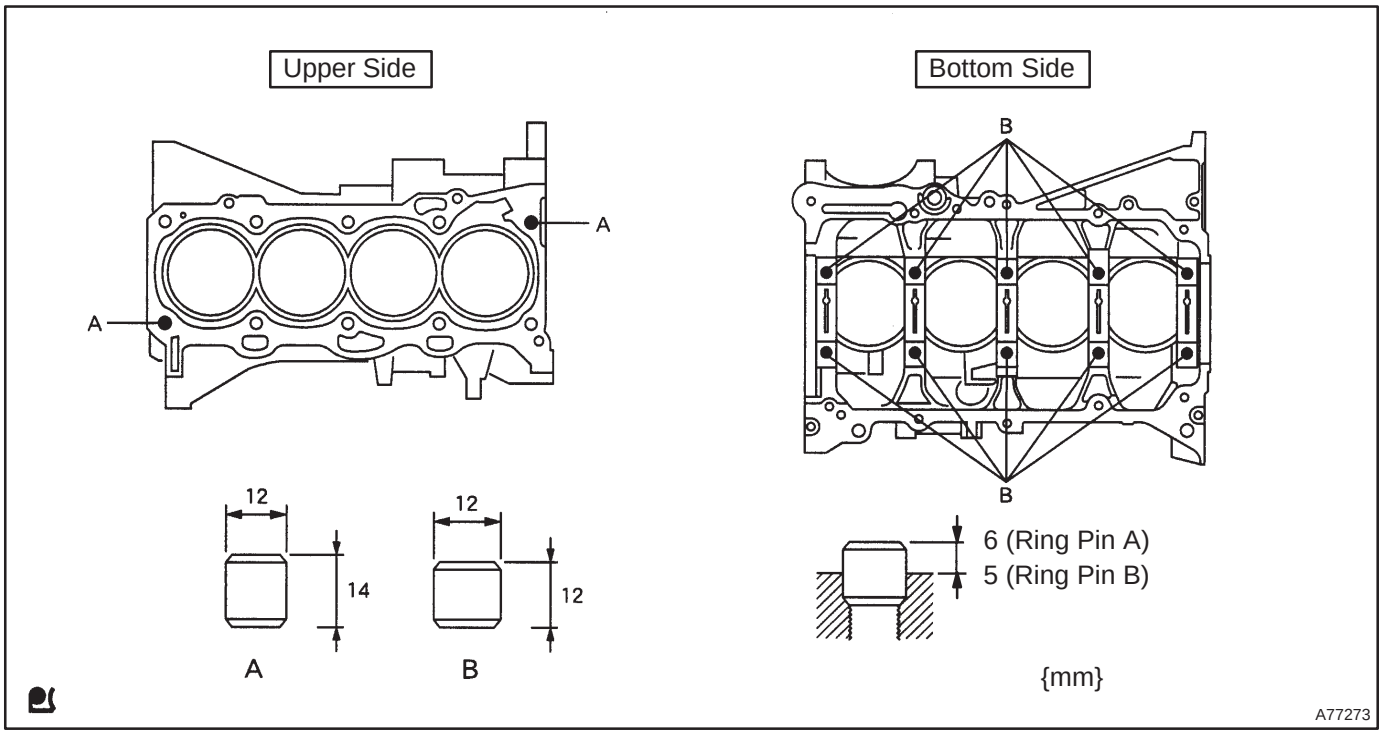


HINT:

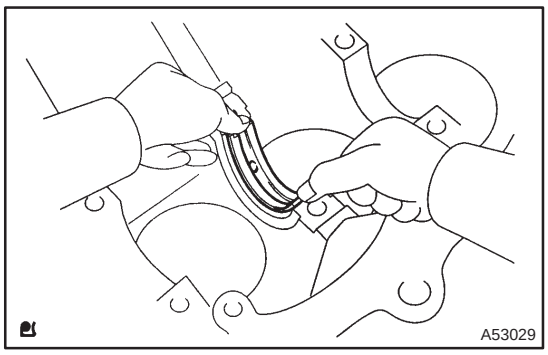
Mark	mm (in.)
0	54.998 to 55.000 (2.16528 to 2.16535)
1	54.996 to 54.998 (2.16520 to 2.16528)
2	54.994 to 54.996 (2.16512 to 2.16520)
3	54.992 to 54.994 (2.16504 to 2.16512)
4	54.990 to 54.992 (2.16496 to 2.16504)
5	54.988 to 54.990 (2.16490 to 2.16496)

(d) Using a micrometer, measure the diameter of each crank pin.
Diameter: 47.990 to 48.000 mm (1.8894 to 1.8898 in.)

(e) Check each crank pin for taper and out–of–round as shown.
Maximum taper and out–of–round:
0.003 mm (0.0001 in.)



23. INSPECT CRANKSHAFT BEARING CAP SET BOLT



(a) Using vernier calipers, measure the tension portion diameter of the bolt.
Standard diameter: 7.5 to 7.6 mm (0.295 to 0.299 in.)
Minimum diameter: 7.2 mm (0.283 in.)

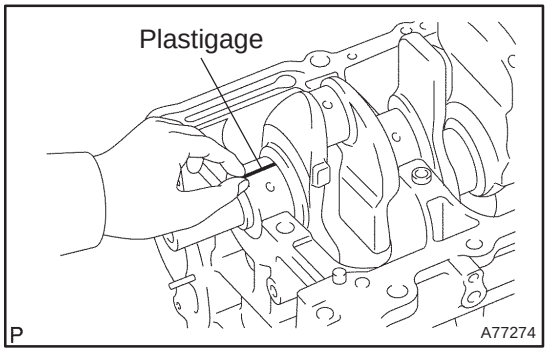
If the diameter is less than minimum, replace the bolt.

24. INSTALL RING PIN

(a) Using a plastic–faced hammer, tap into the ring pin.
Standard protrusion:
Ring pin A 6 mm (0.236 in.)
Ring pin B 5 mm (0.197 in.)

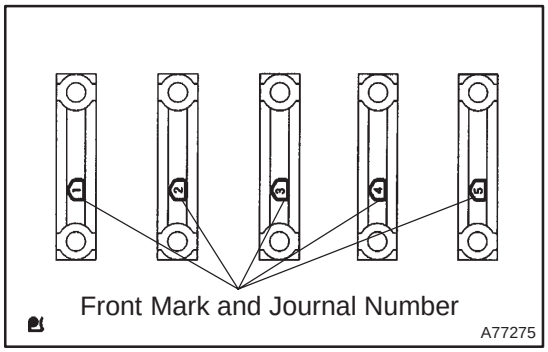
25. INSPECT CRANKSHAFT OIL CLEARANCE

NOTICE:



- **Clean the backside of the bearing and the bearing surface of the bearing cap and keep them free of oils.**
- **The bearing cap bolts are tightened in 2 progressive steps.**

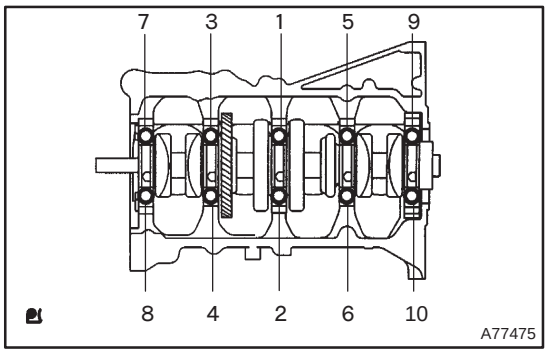
(a) Clean each main journal and bearing.



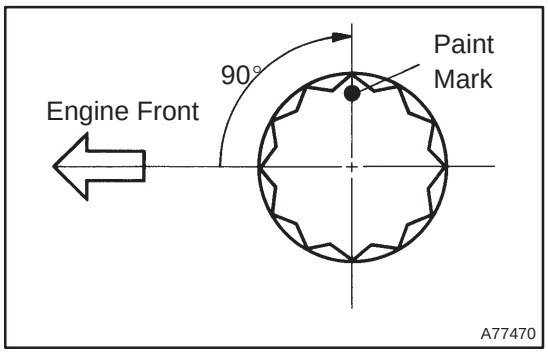
(b) Install the upper bearing with an oil groove on cylinder block.

(c) Install the lower bearing on the bearing cap sub assembly.

(d) Place the crankshaft on the cylinder block.



(e) Lay a strip of Plastigage across each journal.
SST 09011–38121

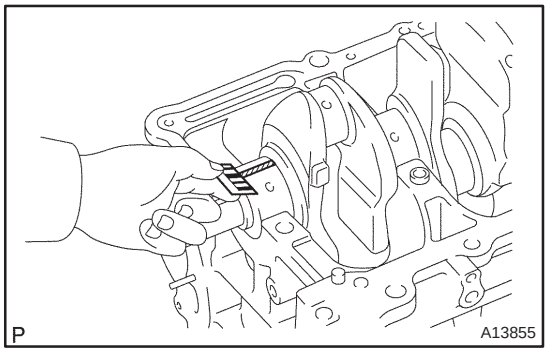


(f) Examine the front marks and install the bearing caps on the cylinder block.

(g) Apply a light coat of engine oil on the threads and under the bearing cap bolts.

(h) Using several steps, tighten the bolts with the specified torque in the sequence shown in the illustration.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

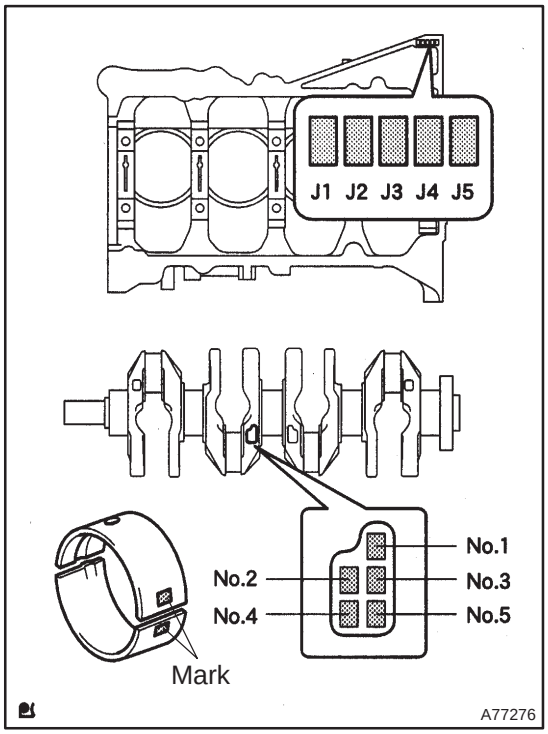
(i) Retighten the bolts in the same way as above with the specified torque.
Torque: 40 N·m (408 kgf·cm, 29 ft·lbf)



(j) Place the front mark on each bearing cap bolt head with paint.

(k) Retighten the bearing cap bolts by 90° in the same sequence as step (h).

(l) Check that each painted mark is now at a 90° angle to the front.



NOTICE:
Do not turn the crankshaft.

(m) Remove the bearing caps.

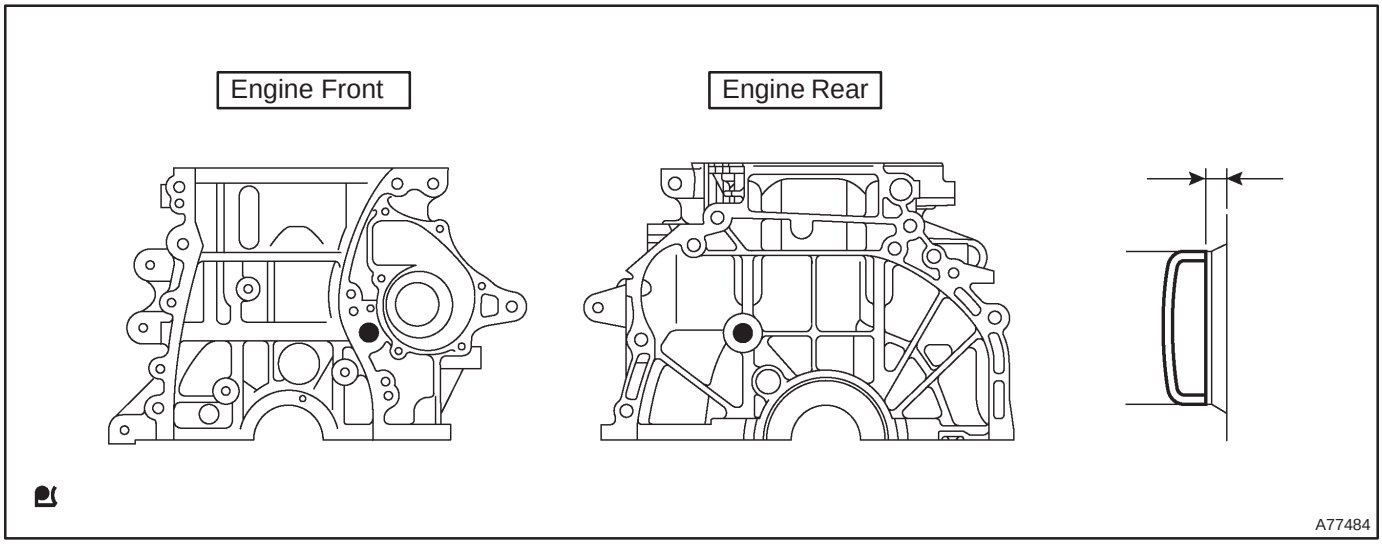
(n) Measure the Plastigage at its widest point.
Standard oil clearance:
0.017 to 0.040 mm (0.0007 to 0.0016 in.)
Maximum oil clearance: 0.07 mm (0.0028 in.)

NOTICE:
Completely remove the Plastigage.

(o) If using a standard bearing, replace it with one having the same number as old one. If the number of the bearing cannot be determined, select a proper bearing by putting together the numbers imprinted on the cylinder block and the crankshaft. The total number of this will determine an applicable bearing among the 4 standard bearings, marked ”1”, ”2”, ”3” and ”4”. For the details about selection, refer to the table and hint below.

Cylinder block + Crankshaft	0 to 2	3 to 5	6 to 8	9 to 11
Replacement bearing number	”1”	”2”	”3”	”4”

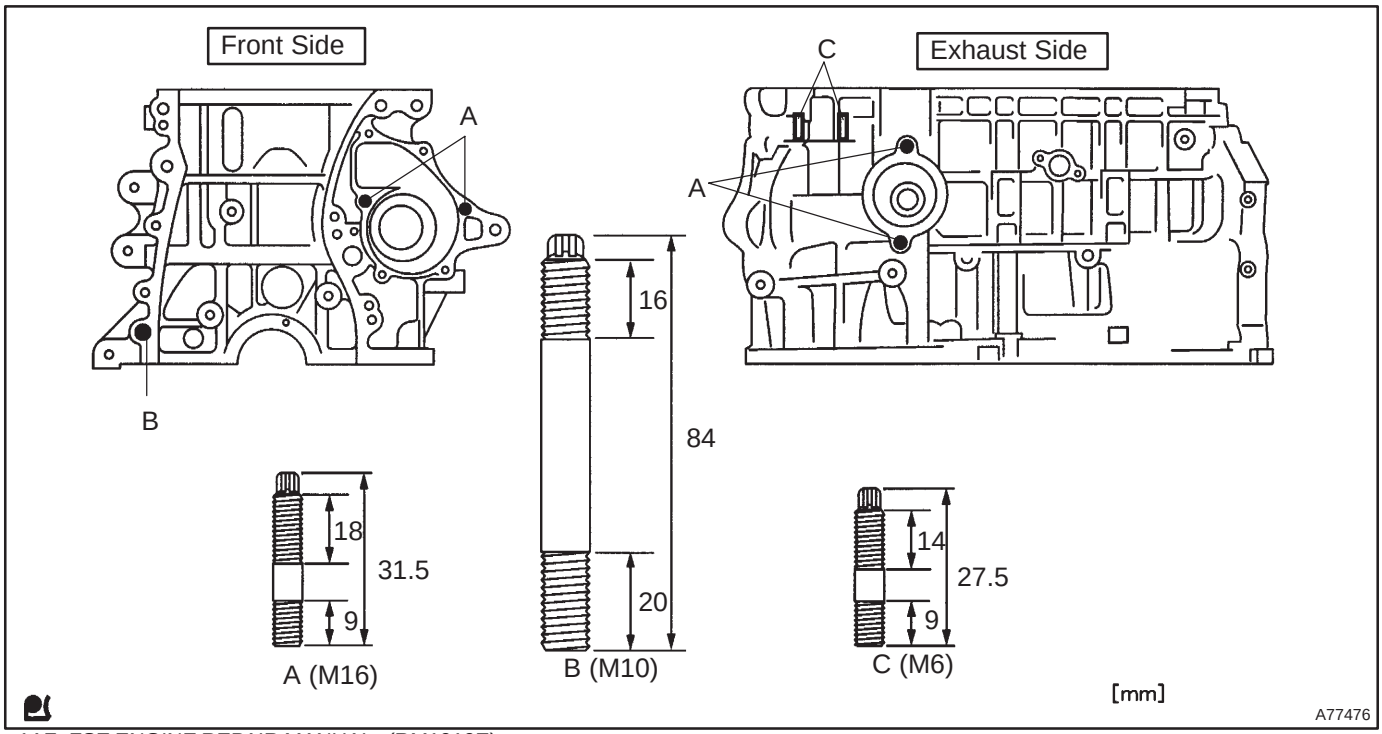
HINT:
EXAMPLE
Cylinder block with imprinted number ”4”
Crankshaft with imprinted number ”3”
”4” + ”3” = ”7”
Select the bearing with marked ”3”



Reference:

Item	Mark	mm (in.)
Cylinder block main journal bore diameter (A)	0	59.000 to 59.002 (2.08683 to 2.32291)
	1	59.003 to 59.004 (2.08694 to 2.32299)
	2	59.005 to 59.006 (2.08701 to 2.32307)
	3	59.007 to 59.009 (2.08708 to 2.32318)
	4	59.010 to 59.011 (2.08718 to 2.32326)
	5	59.012 to 59.013 (2.08725 to 2.32334)
	6	59.014 to 59.016 (2.08733 to 2.32346)
Crankshaft main journal diameter (B)	0	54.998 to 55.000 (1.94528 to 2.16535)
	1	54.996 to 54.998 (1.94521 to 2.16527)
	2	54.994 to 54.996 (1.94514 to 2.16519)
	3	54.992 to 54.994 (1.94507 to 2.16511)
	4	54.990 to 54.992 (1.94500 to 2.16504)
	5	54.988 to 54.990 (1.94493 to 2.16496)
Standard bearing center wall thickness	1	1.993 to 1.996 (0.07846 to 0.07858)
	2	1.996 to 1.999 (0.07858 to 0.07870)
	3	1.999 to 2.002 (0.07870 to 0.07882)
	4	2.002 to 2.005 (0.07882 to 0.07894)

26. INSTALL TIGHT PLUG

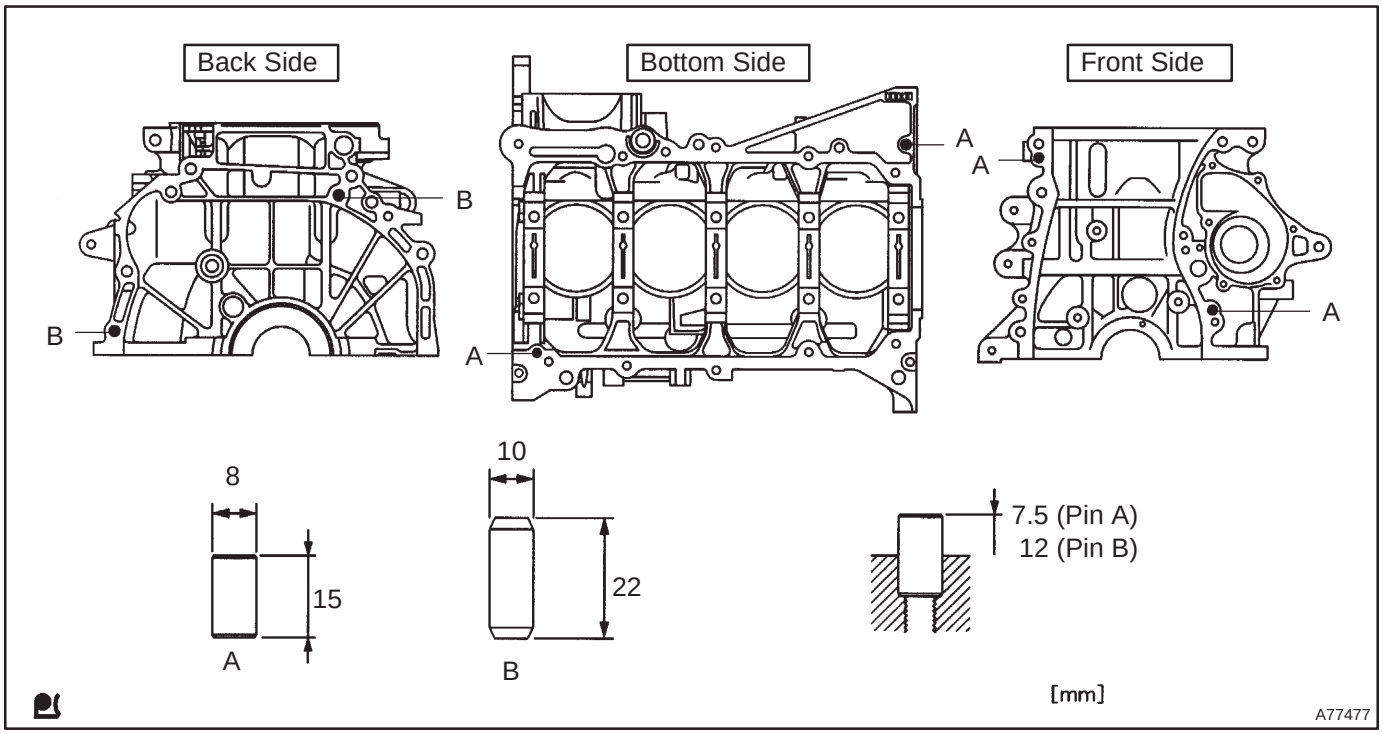


(a) Apply adhesive around tight plugs.
Adhesive: Part No. 08833–00070, THREE BOND 1324 or equivalent.

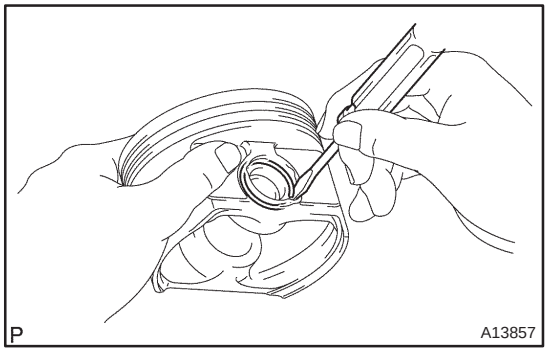
(b) Using SST, push in the tight plugs as shown in the illustration.
SST 09950–60010 (09951–00200), 09950–70010 (09951–07100)
Standard depth:
Engine front 1.7 to 2.7 mm (0.067 to 0.106 in.)
Engine rear 2.2 to 3.2 mm (0.087 to 0.126 in.)

27. INSTALL STUD BOLT

(a) Install the stud bolts as shown in the illustration.
Torque:
Stud bolt A 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Stud bolt B 10N·m (97 kgf·cm, 84 in.·lbf)
Stud bolt C 5.0N·m (51 kgf·cm, 44 in.·lbf)



28. INSTALL STRAIGHT PIN

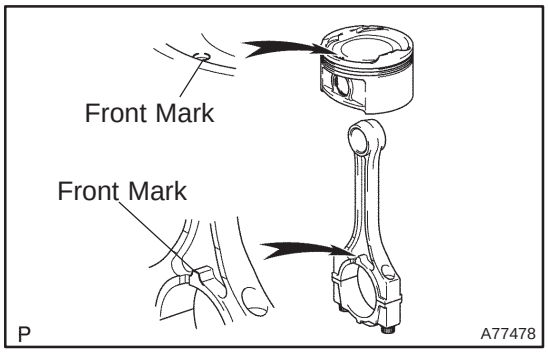


(a) Using a plastic–faced hammer, tap into the straight pin.

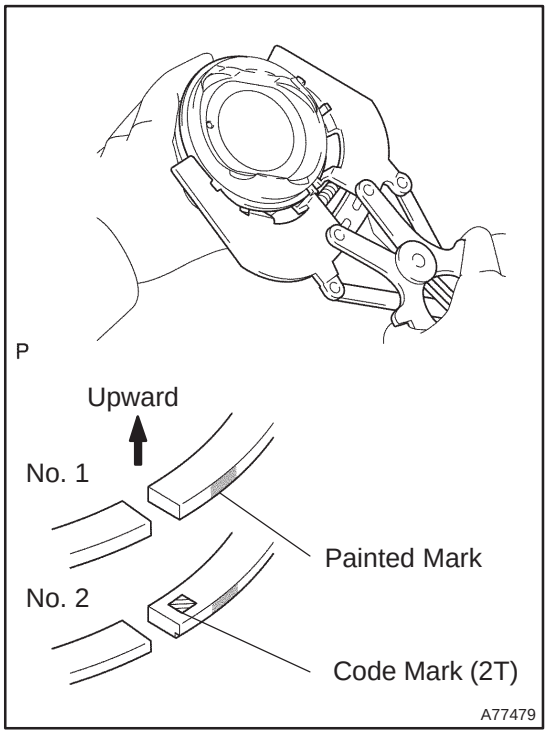
Standard protrusion

Pin A 7.5 mm (0.295 in.)

Pin B 12 mm (0.472 in.)



29. INSTALL PISTON

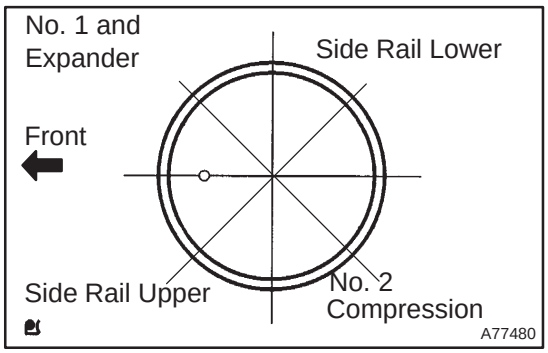


(a) Using a small screwdriver, install a new snap ring at one end of the piston pin hole.

(b) Gradually heat the piston to 80 to 90°C (176 to 194°F).

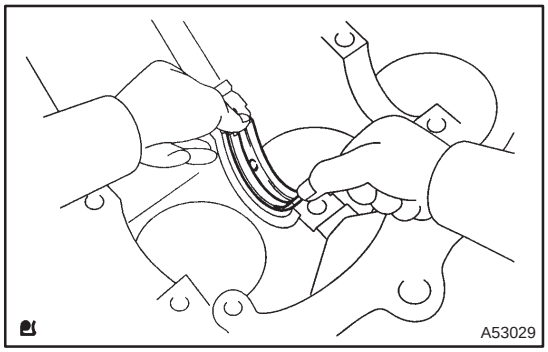
(c) Align the front mark of the piston with the front mark located on the connecting rod, and push in the piston with your thumb.

(d) Using a small screwdriver, install a new snap ring on the other end of the piston pin hole.



30. INSTALL PISTON RING SET

(a) Install the oil ring expander and 2 side rails by hand.

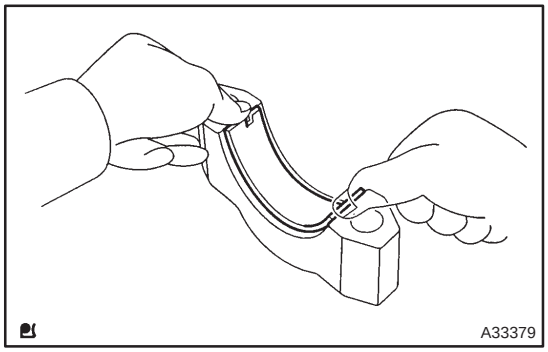


(b) Using a piston ring expander, install the 2 compression rings with the painted mark facing right side.

NOTICE:

Install the compression ring No. 2 with the code mark (2T) upward.

(c) Position the piston rings so that the ring ends are as shown.

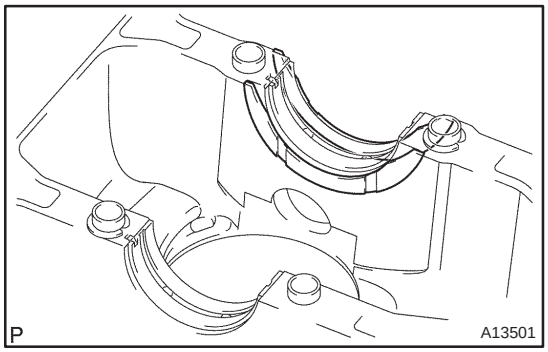


31. INSTALL CRANKSHAFT BEARING

(a) Install the upper bearing with an oil groove on cylinder block.

NOTICE:

Clean the back side of the bearing and the bearing surface of the cylinder block and keep them free of oils.

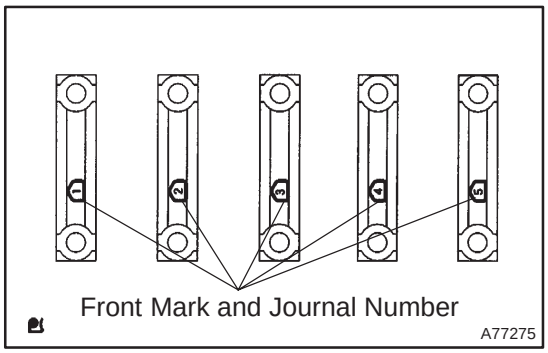


32. INSTALL CRANKSHAFT BEARING NO.2

(a) Install the lower bearing on bearing cap.

NOTICE:

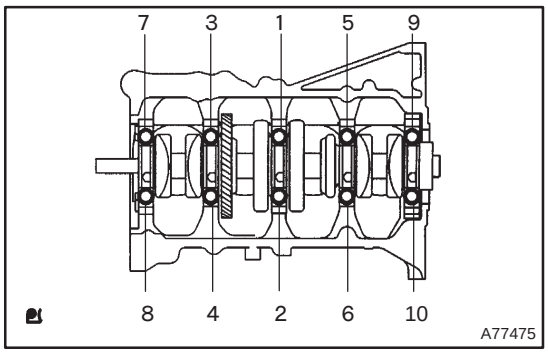
Clean the back side of the bearing and the bearing surface of the cylinder block and keep them free of oils.



33. INSTALL CRANKSHAFT THRUST WASHER UPPER

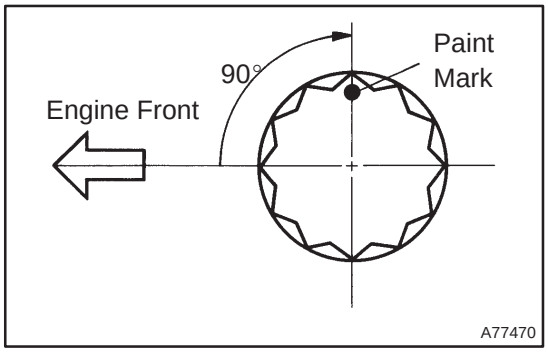
(a) Install the 2 thrust washers under the No. 3 journal position of the cylinder block with the oil grooves facing outward.

34. INSTALL CRANKSHAFT



(a) Apply engine oil on the upper bearing and install the crankshaft on the cylinder block.

(b) Apply engine oil on the lower bearing.

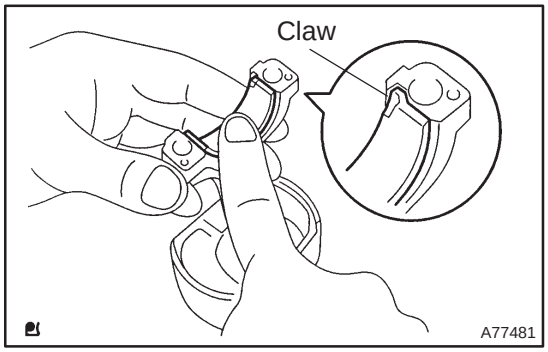


(c) Examine the front marks and install the bearing caps to the cylinder block.

(d) Apply a light coat of engine oil on the threads of the bearing cap bolts.

(e) Using several steps, tighten the bolts with the specified torque in the sequence shown in the illustration.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

(f) Retighten the bolts in the same way as above with the specified torque.
Torque: 40 N·m (408 kgf·cm, 29 ft·lbf)



(g) Place the front mark on each bearing cap bolt head with paint.

(h) Retighten the bearing cap bolts by 90° in the same sequence as step (e).

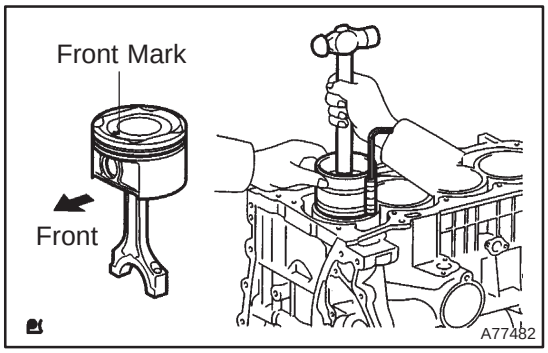
(i) Check that each painted mark is now at a 90° angle to the front.

(j) Check that the crankshaft turns smoothly.

35. INSTALL CONNECTING ROD BEARING

(a) Align the bearing claw with the groove of the connecting rod or connecting cap.

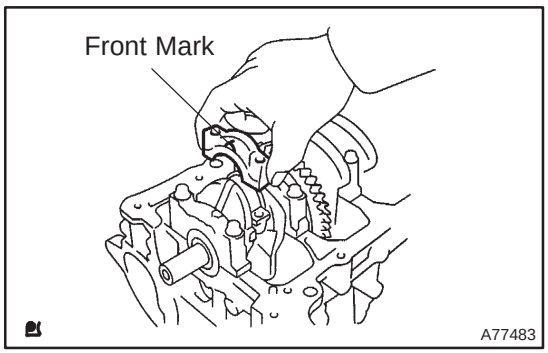
NOTICE:



Clean the back side of the bearing and the bearing surface of the bearing cap and keep them free of oils.

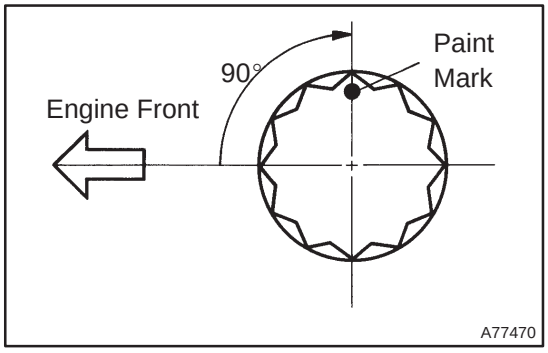
36. INSTALL PISTON SUB–ASSY W/CONNECTING ROD

NOTICE:



The connecting rod cap bolts are tightened in 2 progressive steps.

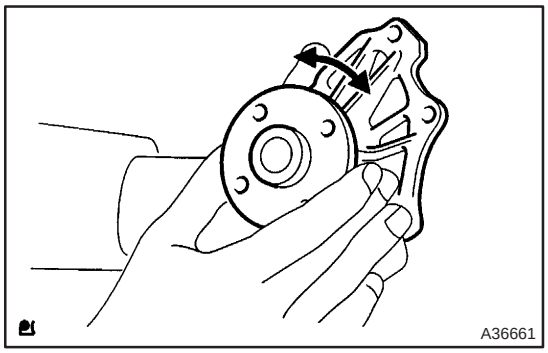
(a) Apply engine oil on the cylinder walls, the pistons, and the surfaces of connecting rod bearings.
(b) Check the position of the piston ring ends.



(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.

NOTICE:
Match the numbered connecting rod cap with the connecting rod.

(d) Check that the protrusion of the connecting rod cap is facing the correct direction.
(e) Apply a light coat of engine oil on the threads of the connecting rod cap bolts.
(f) Using a 12 mm socket wrench, tighten the bolts in several steps with the specified torque.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)
SST 09011–38121
(g) Place the front mark on each connecting cap bolt head with paint.
(h) Retighten the cap bolts by 90° as shown in the illustration.



(i) Check that each painted mark is at a 90° angle to the front.
(j) Check that the crankshaft turns smoothly.

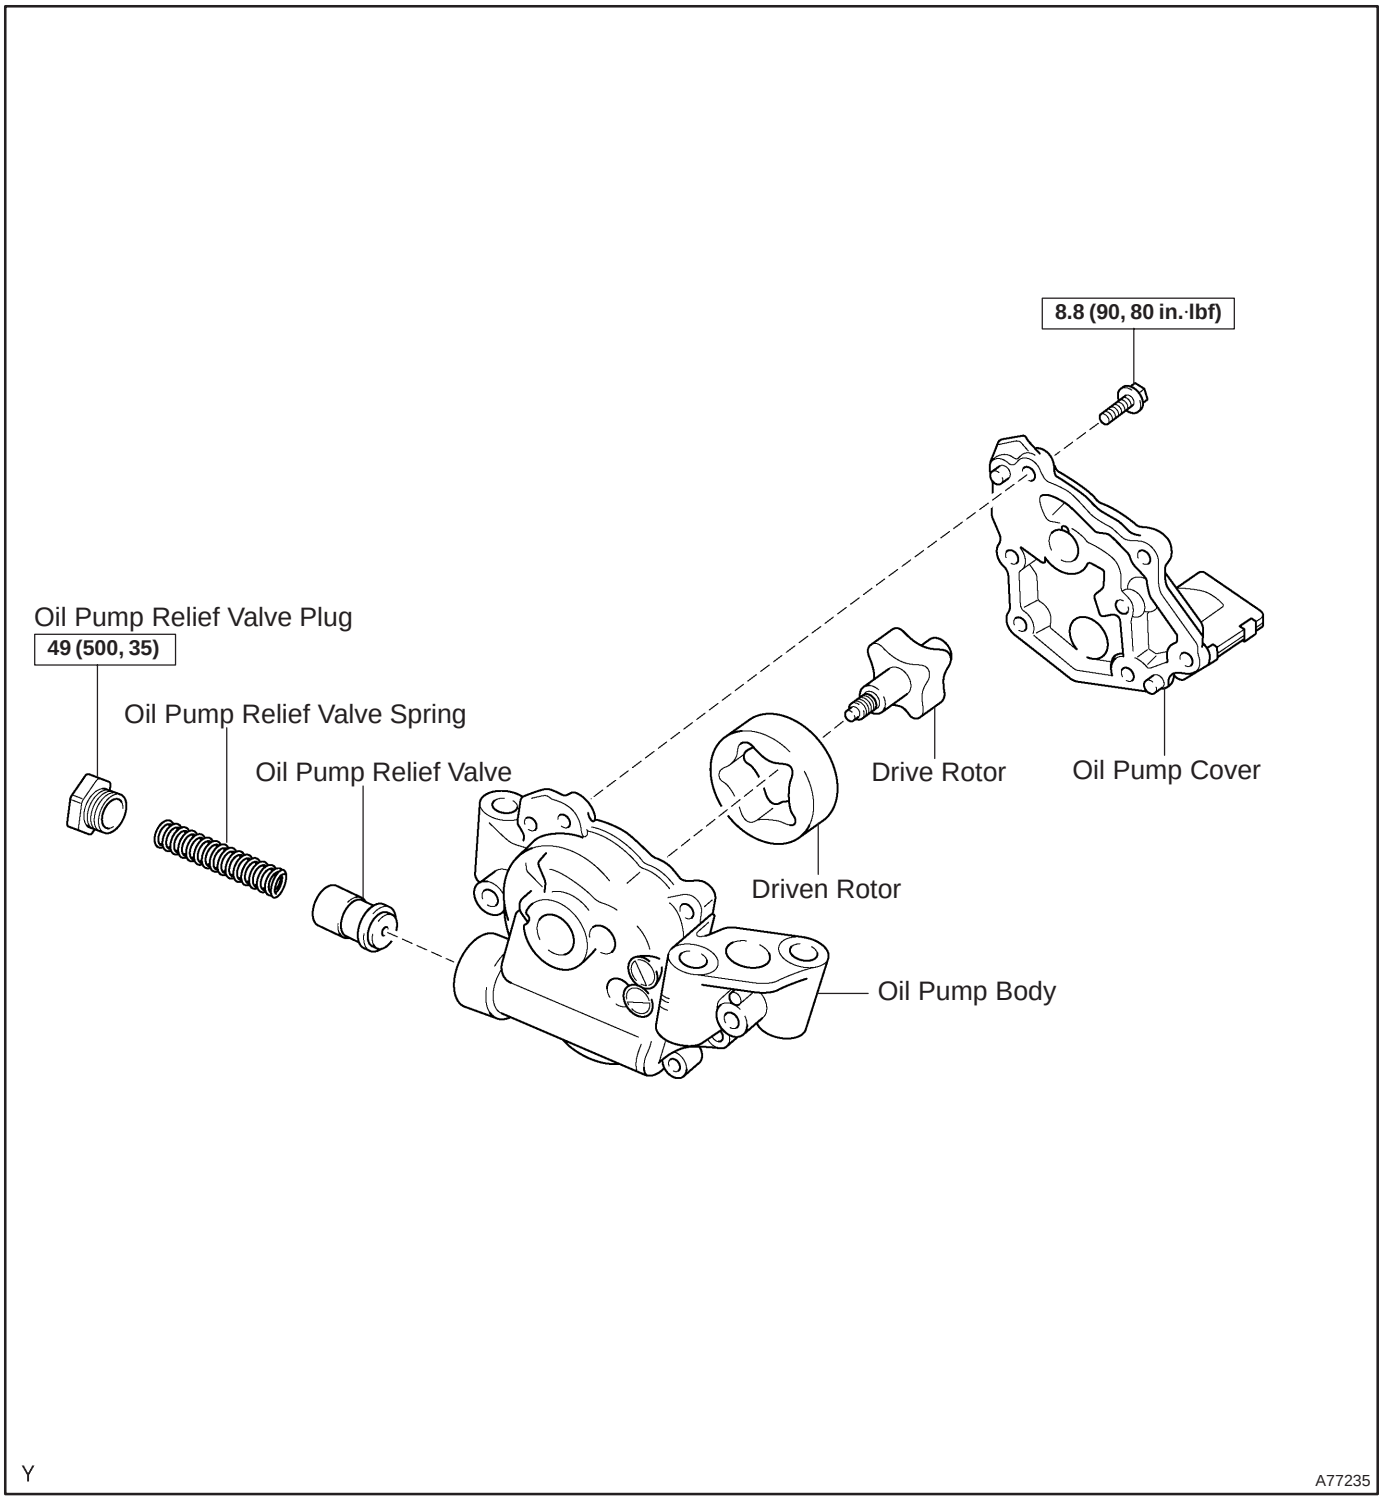
WATER PUMP ASSY

160MB–01

INSPECTION

1. INSPECT WATER PUMP ASSY

(a) Visually check the drain hole coolant leakage.



(b) Turn the pulley, and check that the water pump bearing moves smoothly and quietly.

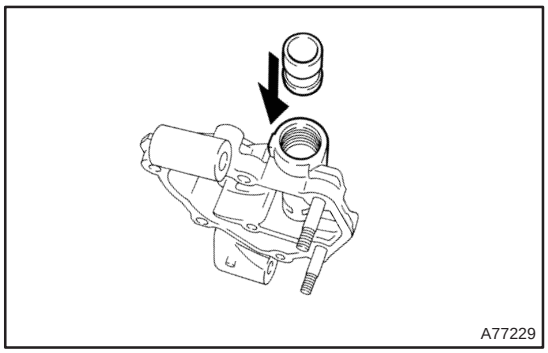
If necessary, replace the water pump.

OIL PUMP ASSY

COMPONENTS

170FL–01

170FM–01



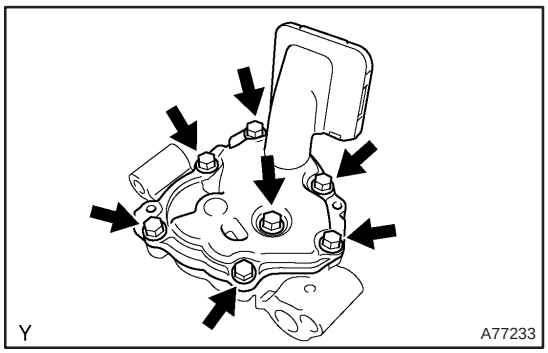
OVERHAUL

1. REMOVE OIL PUMP RELIEF VALVE PLUG

(a) Using a 27 mm socket wrench, remove the oil pump relief plug.
SST 09011–12271

2. REMOVE OIL PUMP RELIEF VALVE SPRING

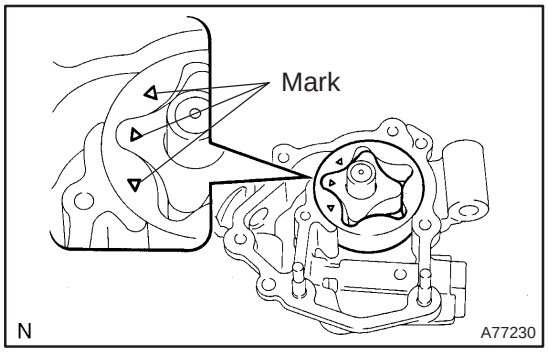
3. REMOVE OIL PUMP RELIEF VALVE



4. INSPECT OIL PUMP RELIEF VALVE

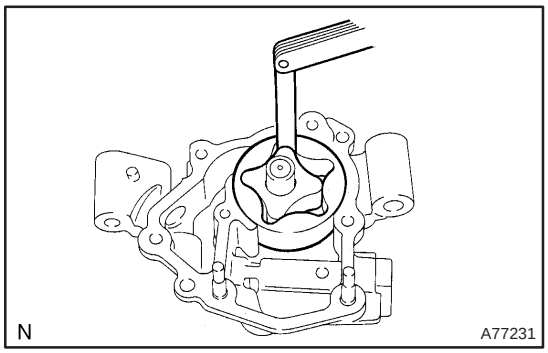
(a) Coat the oil pump relief valve with engine oil.

(b) Check that it falls smoothly into the oil pump relief valve hole by its own weight.



If it does not, replace the oil pump relief valve.

If necessary, replace the oil pump assembly.

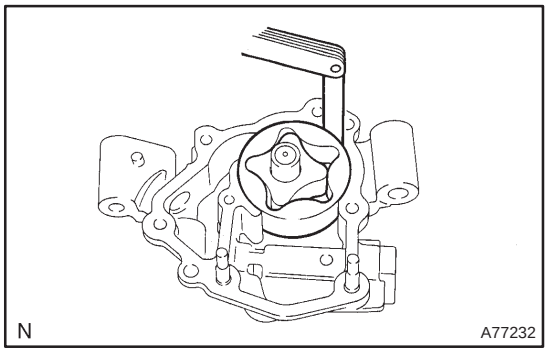


5. REMOVE OIL PUMP COVER

(a) Remove 7 bolts and the oil pump cover.

6. INSPECT OIL PUMP ROTOR SET

(a) Place the drive and driven rotors into the oil pump body with the marks facing the oil pump cover.

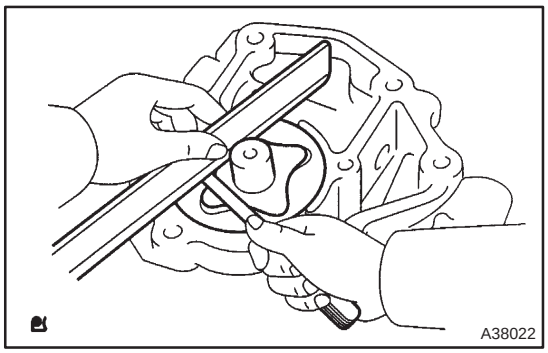


7. INSPECT ROTOR TIP CLEARANCE

(a) Using a feeler gauge, measure the clearance between the drive and driven rotor tip.

Standard tip clearance:
0.080 to 0.160 mm (0.0031 to 0.0063 in.)
Maximum tip clearance: 0.35 mm (0.0138 in.)

If the tip clearance is greater than maximum, replace the rotors as a set.

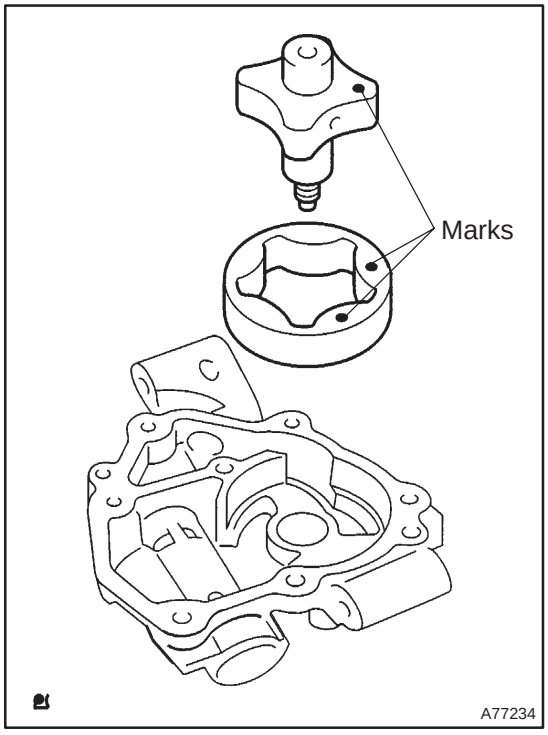


8. INSPECT ROTOR BODY CLEARANCE

(a) Using a feeler gauge, measure the clearance between the driven rotor and body.

Standard body clearance:
0.100 to 0.170 mm (0.0039 to 0.067 in.)
Maximum body clearance: 0.325 mm (0.0128 in.)

If the body clearance is greater than maximum, replace the rotors as a set. If necessary, replace the oil pump assembly.



9. INSPECT ROTOR SIDE CLEARANCE

(a) Using a feeler gauge and precision straight edge, measure the clearance between the rotors and precision straight edge.

Standard side clearance:
0.030 to 0.085 mm (0.0012 to 0.0033 in.)
Maximum side clearance: 0.16 mm (0.0063 in.)

If the side clearance is greater than maximum, replace the rotors as a set. If necessary, replace the oil pump assembly.

10. REMOVE OIL PUMP ROTOR SET

11. INSTALL OIL PUMP ROTOR SET

(a) Coat the drive rotor and driven rotor with engine oil.

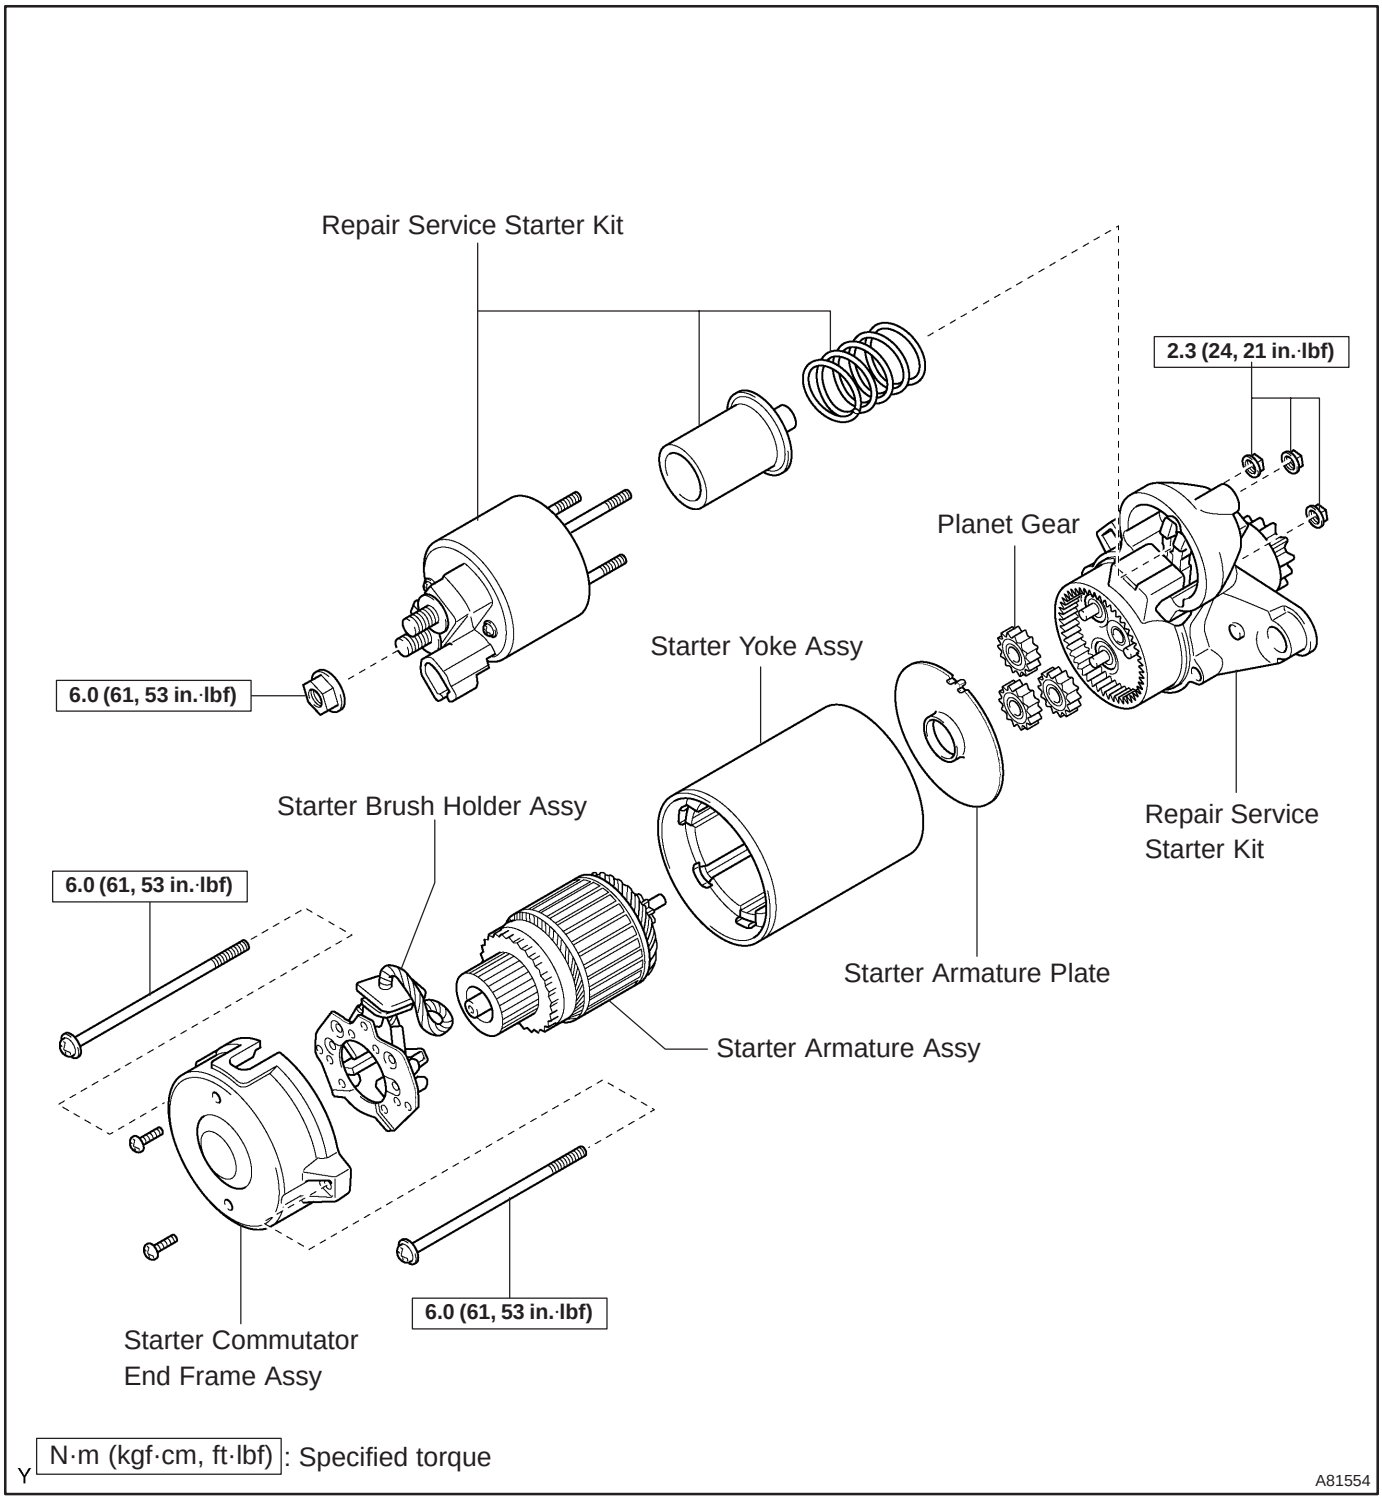
(b) Place the drive rotor and driven rotor into the pump body with marks facing the pump body cover.

12. INSTALL OIL PUMP COVER
Torque: 8.8 N·m (90 kgf·cm, 80 in.·lbf)

13. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the oil pump relief valve with engine oil, and insert the oil pump relief valve into oil pump body hole.

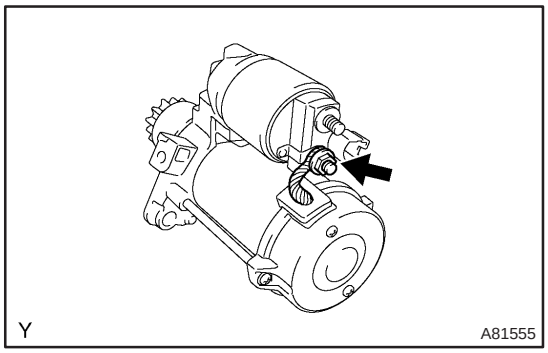
14. INSTALL OIL PUMP RELIEF VALVE SPRING



15. INSTALL OIL PUMP RELIEF VALVE PLUG

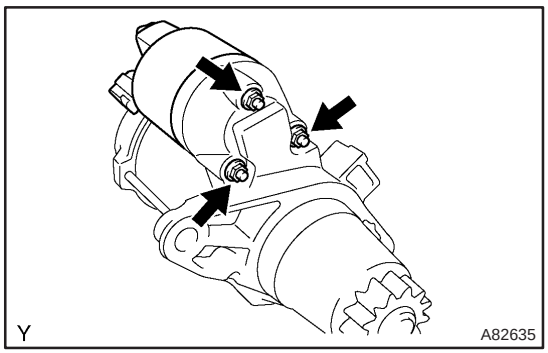
(a) Using a 27 mm socket wrench, install the oil pump relief valve plug.
Torque: 49 N·m (500 kgf·cm, 35 ft·lbf)
SST 09011–12271

STARTER ASSY



COMPONENTS

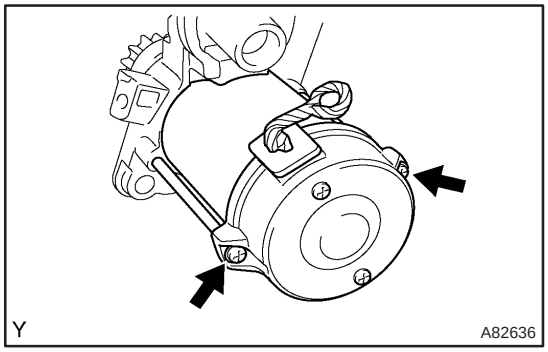
190OH–01



190OI–01

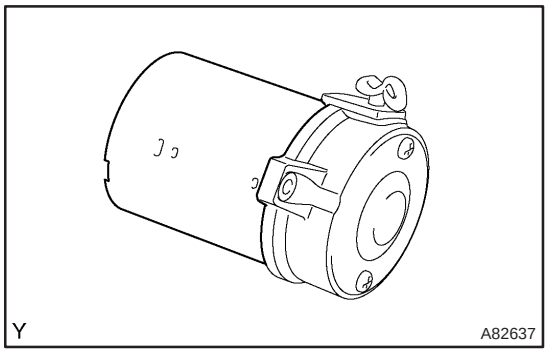
OVERHAUL

1. REMOVE REPAIR SERVICE STARTER KIT



(a) Remove the nut, and disconnect the lead wire from the repair service starter kit.

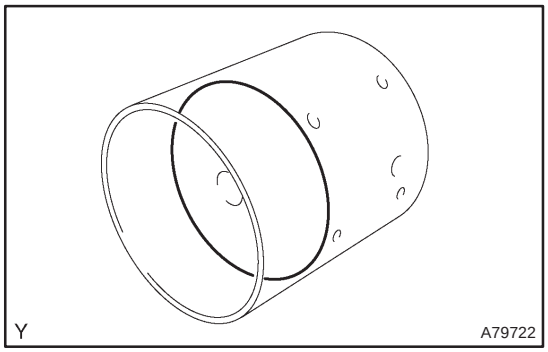
(b) Remove the 3 nuts holding the repair service starter kit to the starter housing.



(c) Remove the repair service starter kit.

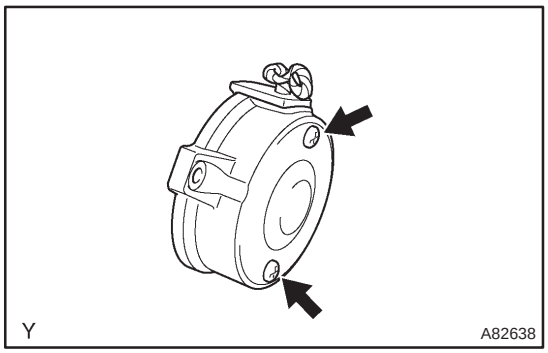
(d) Remove the return spring and plunger.

2. REMOVE STARTER YOKE ASSY



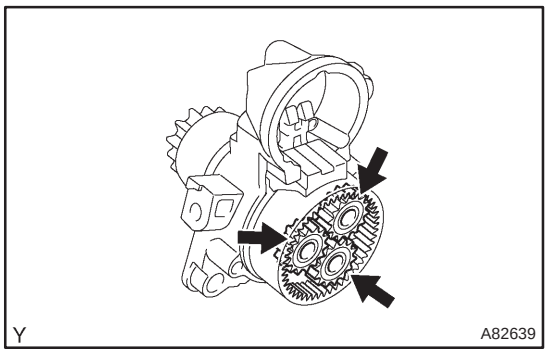
(a) Using a torx driver T25, remove the 2 through bolts and pull out the starter yoke together with the starter commutator end frame.

(b) Remove the starter yoke from the starter commutator end frame.



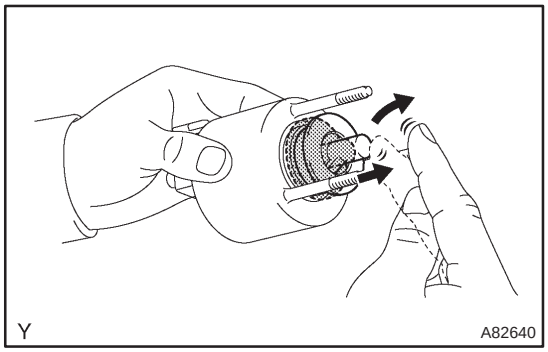
3. REMOVE STARTER ARMATURE ASSY

(a) Remove the starter armature assy from the starter yoke assy.



4. REMOVE STARTER ARMATURE PLATE

(a) Remove the armature plate from the starter yoke.

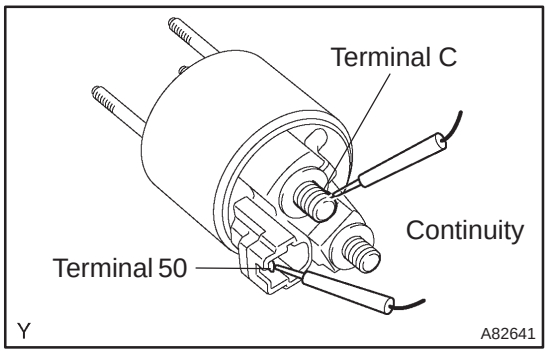


5. REMOVE STARTER BRUSH HOLDER ASSY

(a) Remove the 2 screws and brush holder assy from the commutator end frame.

6. REMOVE PLANET GEAR

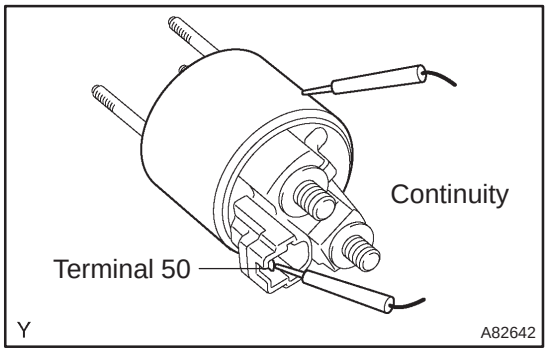
(a) Remove the 3 planet gears from the repair service starter kit.



7. INSPECT REPAIR SERVICE STARTER KIT

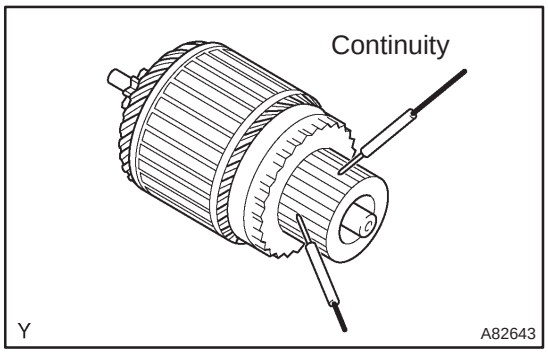
(a) Check the plunger.

(1) Push in the plunger and check that it returns quickly to its original position.



If necessary, replace the repair service starter kit.

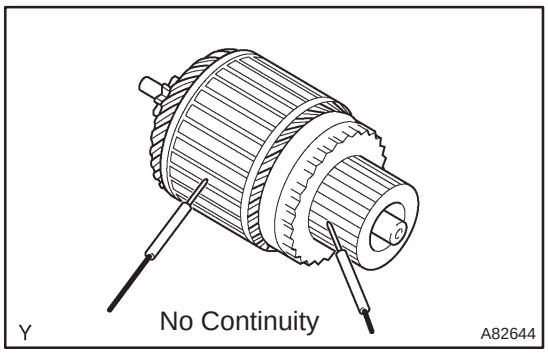
(b) Check the pull–in coil for open circuit.



(1) Using an ohmmeter, check that there is continuity between terminals 50 and C.

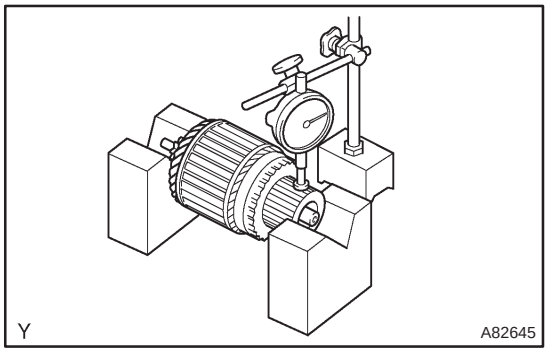
If there is no continuity, replace the repair service starter kit.

(c) Check if the hold–in coil has an open circuit.
(1) Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.



If there is no continuity, replace the repair service kit.

8. INSPECT STARTER ARMATURE ASSY

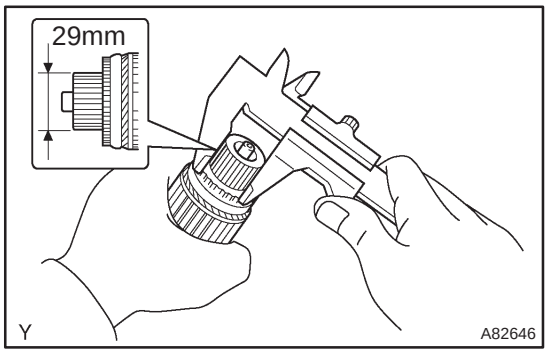


(a) Check the commutator for open circuit.
(1) Using an ohmmeter, check that there is continuity between the segments of the commutator.

If there is no continuity between any segments, replace the armature.

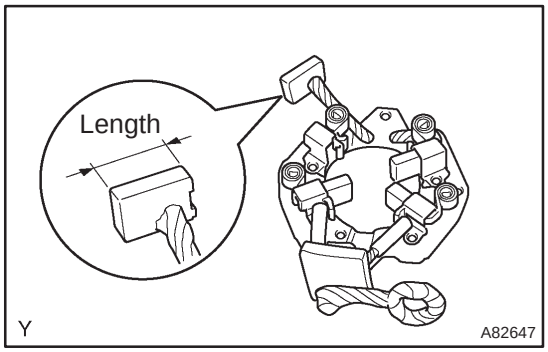
(b) Check the commutator for ground.
(1) Using an ohmmeter, check that there is no continuity between the commutator and the armature coil core.

If there is continuity, replace the armature.



(c) Check the commutator for dirty or burned surface.

If the surface is dirty or burnt, smooth the surface with 400–grit sandpaper.

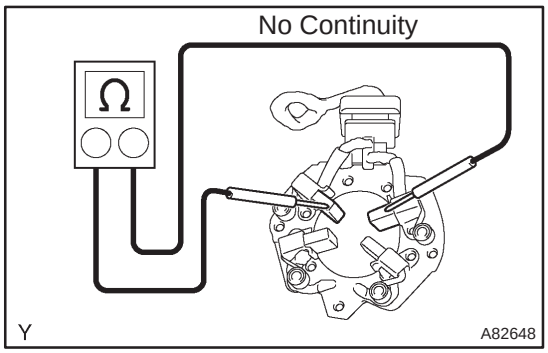


(d) Check for the commutator circuit runout.
(1) Place the commutator on V–blocks.
(2) Using a dial indicator, measure the circle runout.
Standard runout: 0.02 mm (0.0008 in.)
Maximum runout: 0.05 mm (0.0020 in.)

If the runout is greater than maximum, replace the armature.

(e) Using vernier calipers, measure the commutator diameter.
Standard length: 29 mm (1.142 in.)
Minimum length: 28 mm (1.102 in.)

If the diameter is less than minimum, replace the armature.

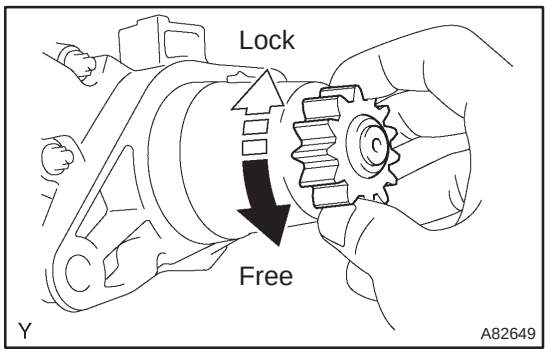


9. INSPECT STARTER BRUSH HOLDER ASSY

(a) Using vernier calipers, measure the brush length.

Standard length: 15.5 mm (0.610 in.)

Minimum length: 9.0 mm (0.354 in.)

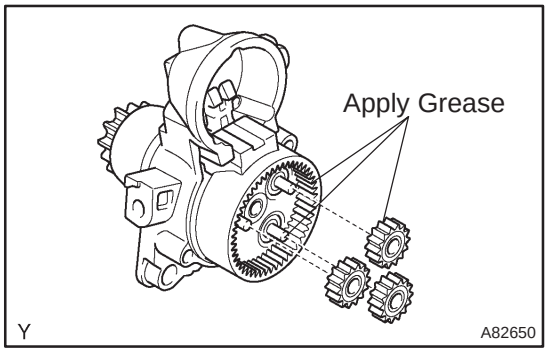


If the length is less than minimum, replace the starter brush holder assy.

(b) Check the brush holder.

(1) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (–) brush holders.

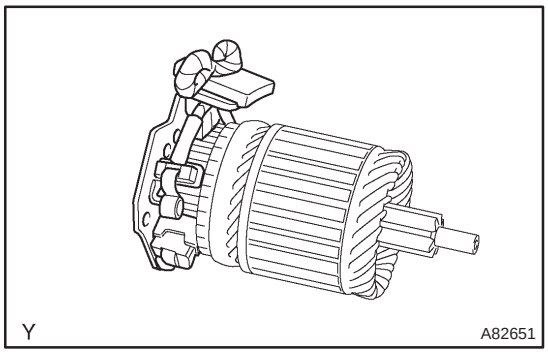
If there is continuity, repair or replace the starter commutator end frame assy.



10. INSPECT REPAIR SERVICE STARTER KIT

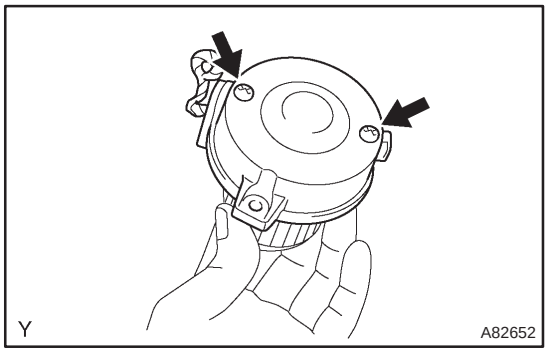
(a) Check the starter clutch.

(1) Rotate the clutch pinion gear counterclockwise and check that it turns freely. Try to rotate the clutch pinion gear clockwise and check that it locks.



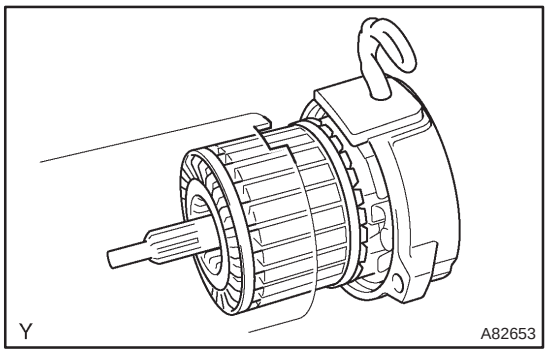
If necessary, replace the repair service starter kit.

11. INSTALL PLANET GEAR



(a) Apply grease to the planet gears and pin parts of the planetary shaft.

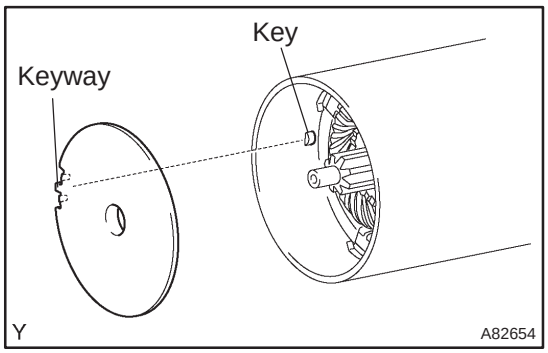
(b) Install the 3 planet gears.



12. INSTALL STARTER BRUSH HOLDER ASSY

(a) Install the brush holder to the starter armature assy.

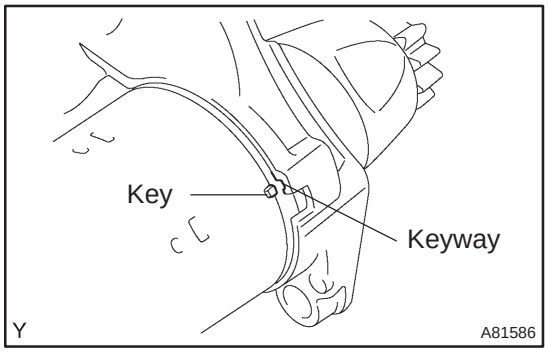
13. INSTALL STARTER COMMUTATOR END FRAME ASSY



(a) Install the commutator end frame with the 2 screws.

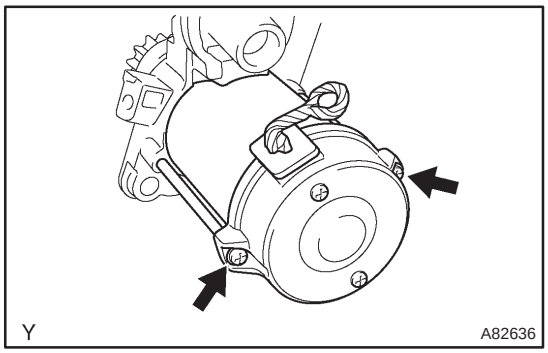
14. INSTALL STARTER ARMATURE ASSY

(a) Align the rubber with the convex cutout of starter yoke.



(b) Install starter armature with the brush holder to the starter yoke.

15. INSTALL STARTER ARMATURE PLATE



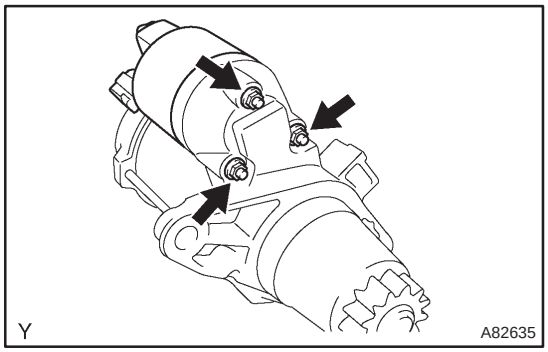
(a) Insert the starter armature plate to the starter yoke.

(b) Align the keyway of the starter plate with the key inside the starter yoke, and install the starter plate.

16. INSTALL STARTER YOKE ASSY

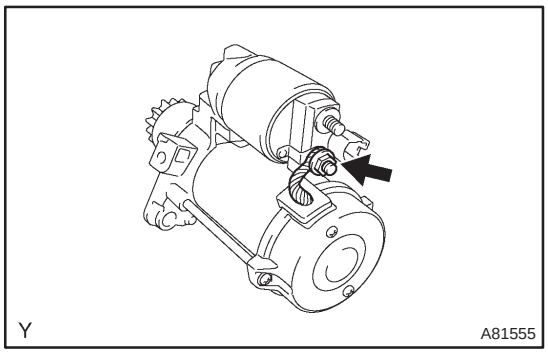
(a) Align the key of the starter yoke with the keyway located on the starter drive housing.

(b) Using a torx driver T25, install the starter yoke with the 2 through bolts.



Torque: 6.0 N·m (61 kgf·cm, 53 in.·lbf)

17. INSTALL REPAIR SERVICE STARTER KIT

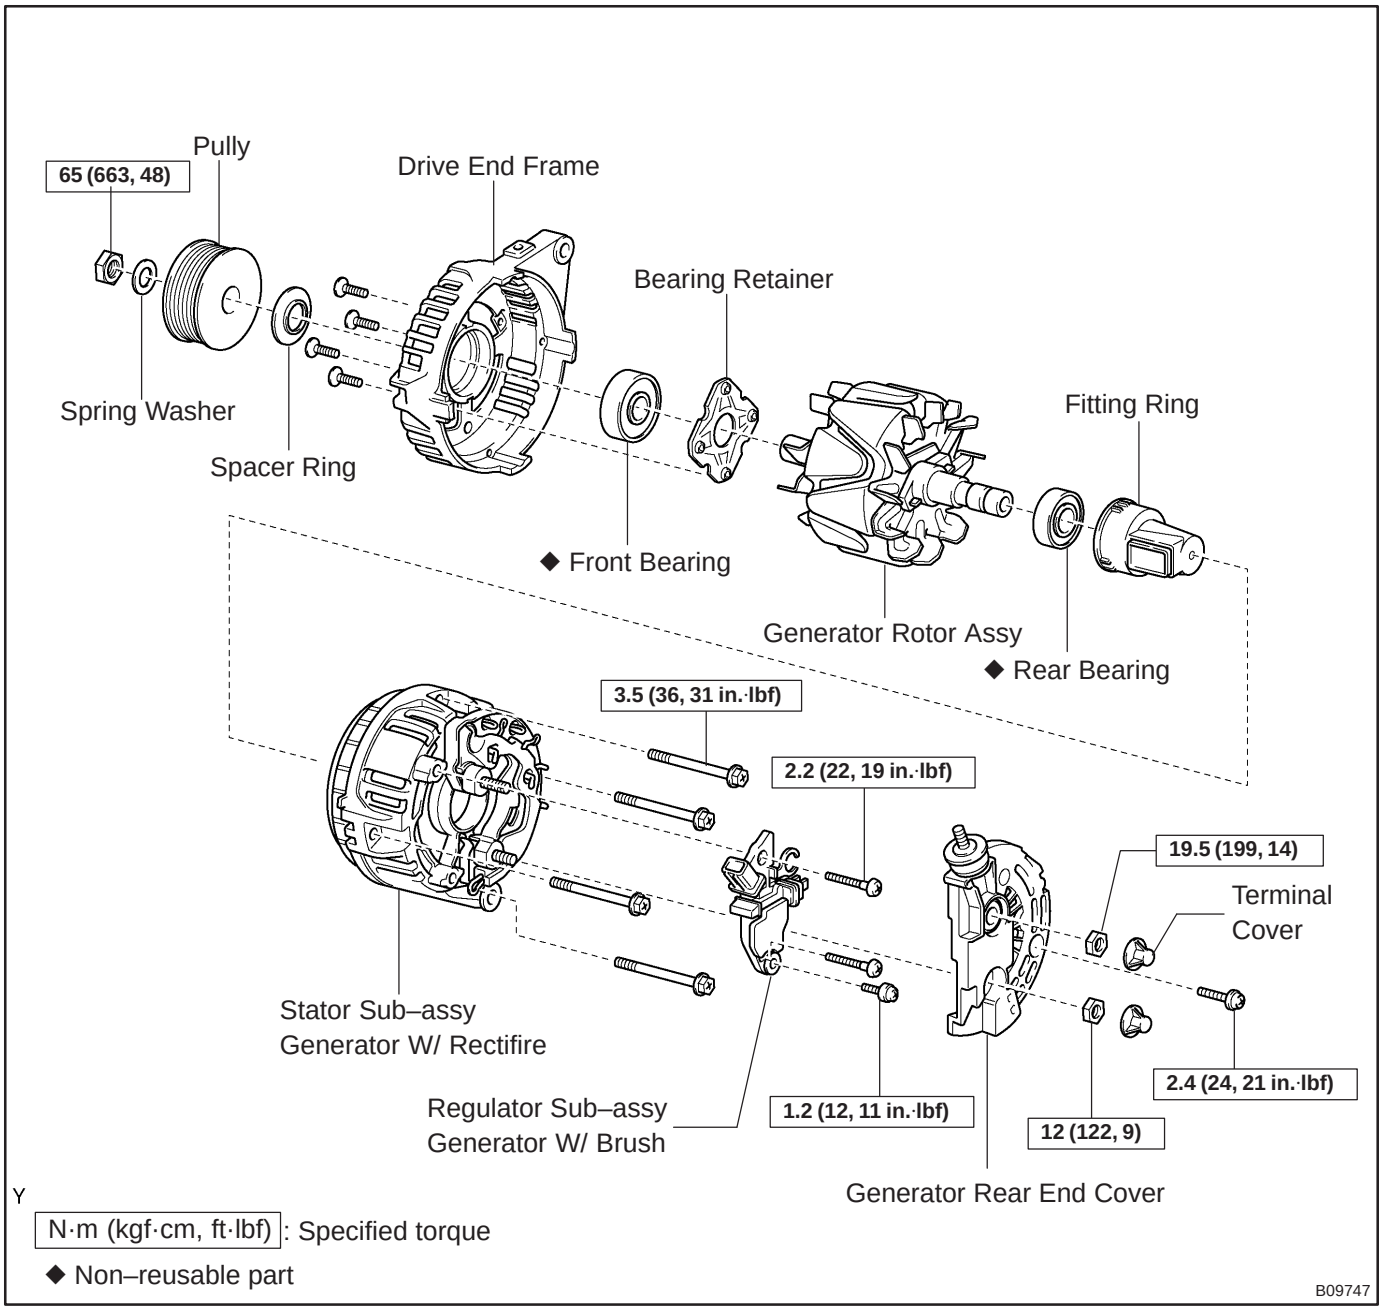


(a) Apply grease to the plunger and hook.

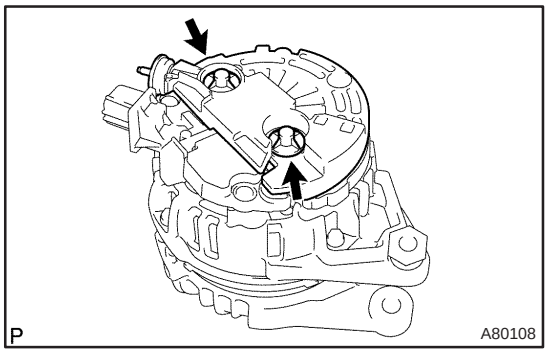
(b) Set the plunger and hook of the repair service starter kit to the drive lever.

(c) Install the plunger and return spring.

(d) Install the repair service starter kit with the 3 nuts.
Torque: 2.3 N·m (24 kgf·cm, 21 in.·lbf)



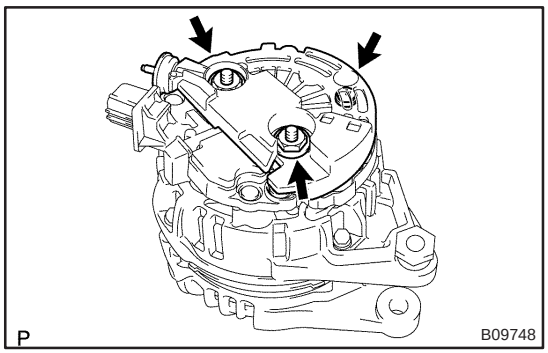
(e) Connect the lead wire to the repair service starter kit and then fasten it with the nut.
Torque: 6.0 N·m (61 kgf·cm, 53 in.·lbf)



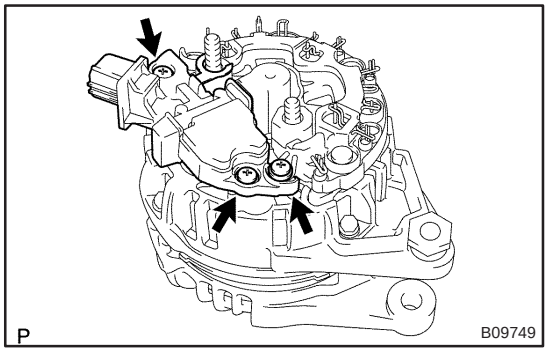
GENERATOR ASSY

COMPONENTS

190OJ–01



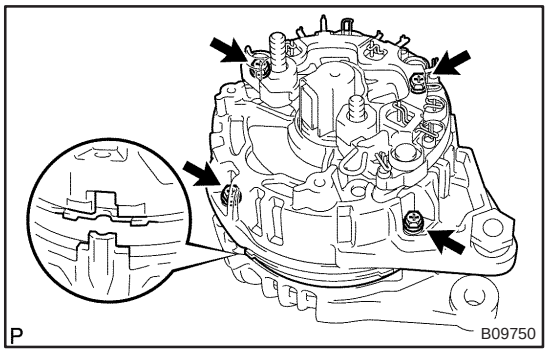
OVERHAUL



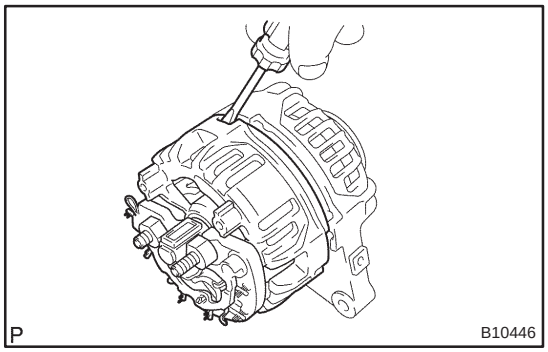
190OK–01

1. REMOVE GENERATOR REAR END COVER

(a) Remove the 2 terminal covers by turning them counterclockwise.

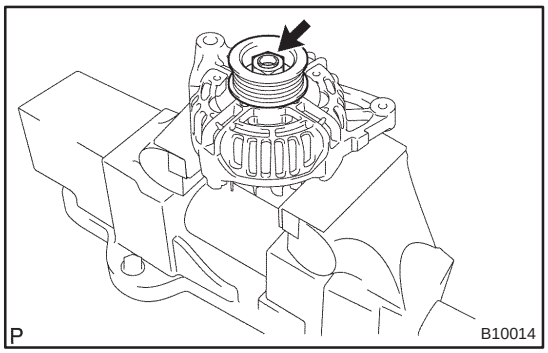


(b) Remove the screw and 2 nuts, and then detach the generator rear end cover.



2. REMOVE REGULATOR SUB–ASSY GENERATOR W/BRUSH

(a) Remove the 3 screws and the regulator sub–assy generator w/ brush.

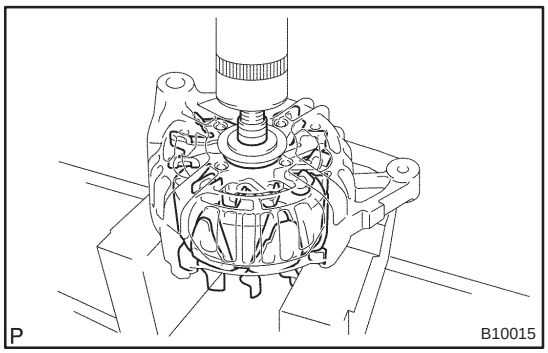


3. REMOVE STATOR SUB–ASSY GENERATOR W/RECTIFIRE

(a) Remove the 4 bolts.

(b) Using a screwdriver, pry out the stator sub–assy generator w/rectifire.

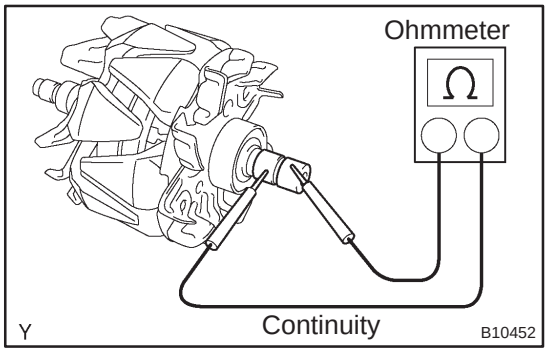
4. REMOVE BEARING SET GENERATOR



5. REMOVE PULLEY SET GENERATOR

(a) Clamp the swivel arm in a vise.

NOTICE:

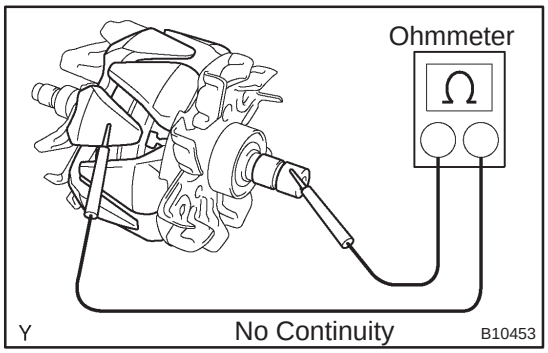


Be careful not to damage the fan.

(b) Using an impact wrench or internal serration on rotor shaft end together with a torque wrench,remove the nut and spring washer, then detach the pulley.

6. REMOVE GENERATOR ROTOR ASSY

(a) Using a press, press out the generator rotor assy and spacer ring.

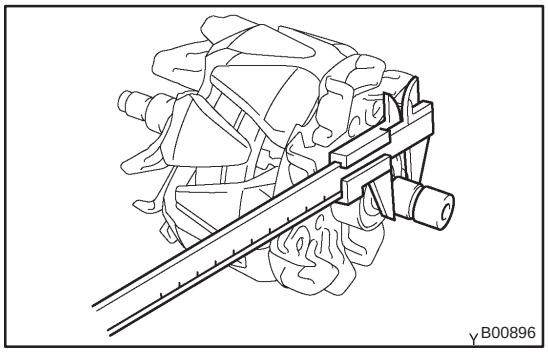


7. INSPECT GENERATOR ROTOR ASSY

(a) Inspect the generator rotor assy for open circuit.

(1) Using an ohmmeter, check that there is continuity between the slip rings.

Standard resistance: 2.27 to 2.53 Ω at 20°C (68°F)



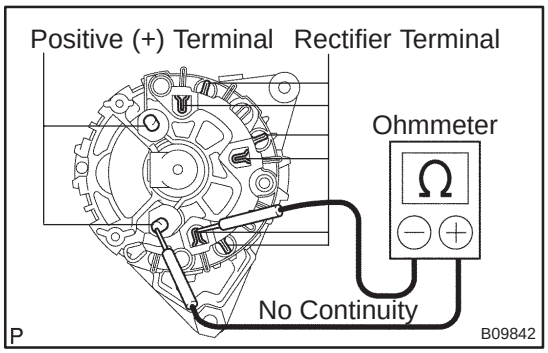
If there is no continuity, replace the generator rotor assy.

(b) Inspect the generator rotor assy for ground.

(1) Using an ohmmeter, check that there is no continuity between the slip ring and the generator rotor assy.

If there is continuity, replace the generator rotor assy.

(c) Inspect the slip rings.



(1) Check that the slip rings are not rough or scored.

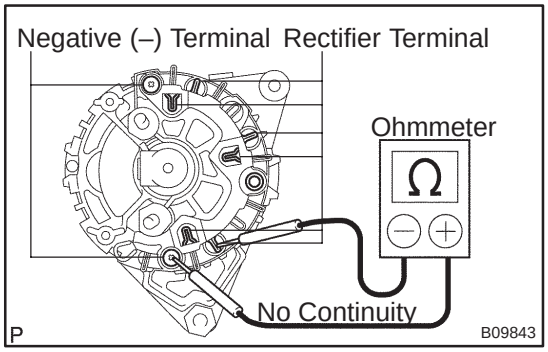
If rough or scored, replace the generator rotor assy.

(2) Using vernier calipers, measure the slip ring diameter.

Standard diameter: 15.3 to 15.5 mm (0.602 to 0.610 in.)
Minimum diameter: 14.3 mm (0.561 in.)

If the diameter is less than minimum, replace the generator rotor assy.

8. INSPECT STATOR SUB–ASSY GENERATOR W/RECTIFIRE



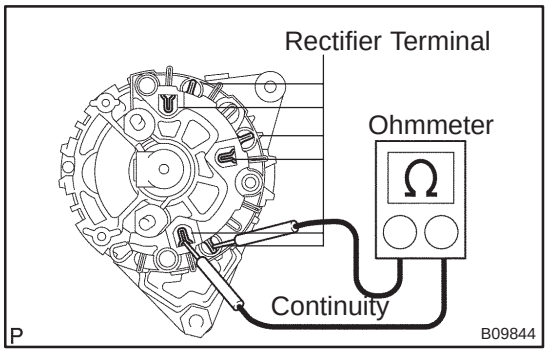
(a) Inspect the positive (+) rectifier.

(1) Using an ohmmeter, connect one tester probe to the positive (+) terminal and the other to each rectifier terminal.

(2) Reverse the polarity of the tester probes and repeat step (1).

(3) Check that one shows continuity and the other shows no continuity.

If result is not as specified, replace the stator sub–assy generator w/ rectifire.

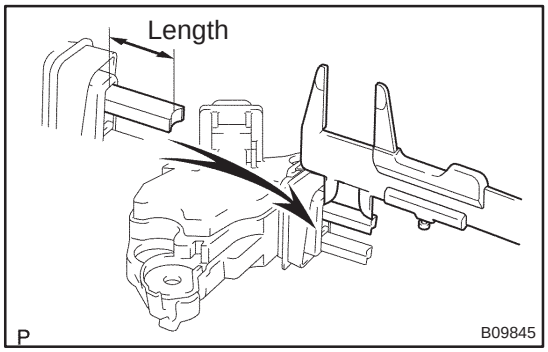


(b) Inspect the negative (–) rectifier.

(1) Using an ohmmeter, connect one tester probe to each negative (–) terminal and the other to each rectifier terminal.

(2) Reverse the polarity of the tester probes and repeat step (1).

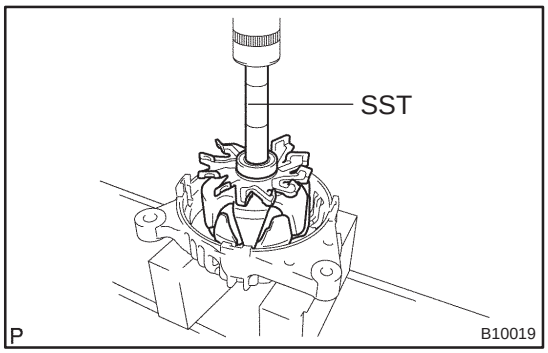
(3) Check that one shows continuity and the other shows no continuity.



If result is not as specified replace the stator sub–assy generator w/ rectifire.

(c) Inspect the stator for open circuit.

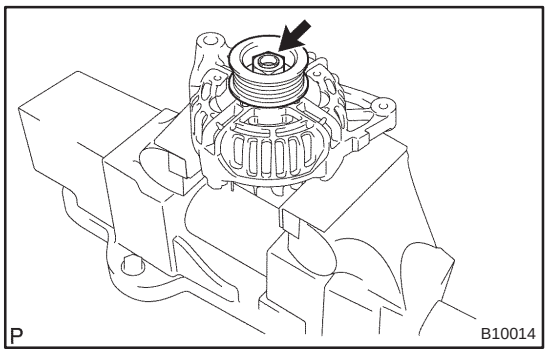
Using an ohmmeter, check that there is continuity between the rectifier terminals.



If there is no continuity, replace the stator sub–assy generator w/ rectifire.

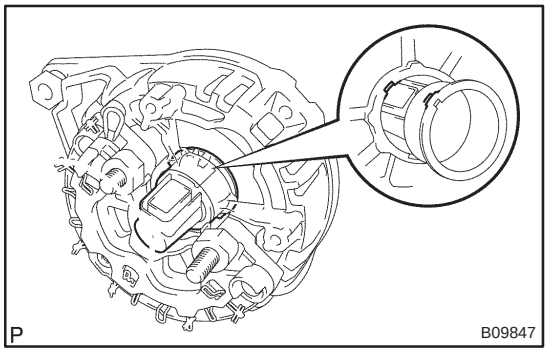
9. INSPECT BRUSH

(a) Using vernier calipers, measure the brush length.
Standard exposed length:
11.0 to 13.6 mm (0.433 to 0.535 in.)
Minimum exposed length: 1.5 mm (0.059 in.)



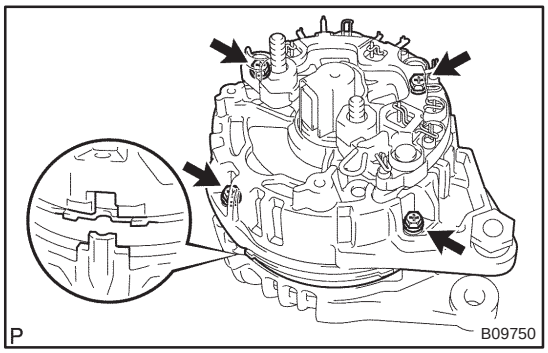
If the expose length is less than minimum, replace the voltage regulator and the brush assembly.

10. INSTALL GENERATOR ROTOR ASSY



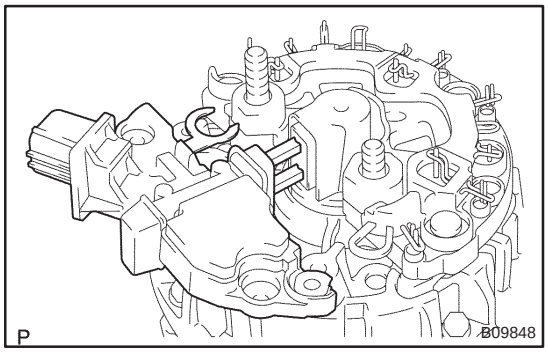
(a) Using SST and a press, press in the generator rotor assy.
SST 09285–76010

NOTICE:
Avoid misalignment during pressing



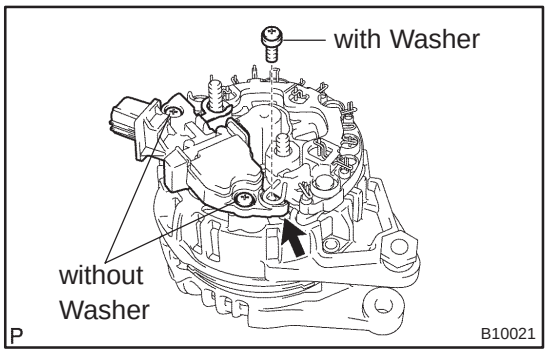
11. INSTALL PULLEY SET GENERATOR

(a) Clamp the rotor in a soft jaw vise.
(b) Install the pulley with the spring washer and nut.
Torque: 65 N·m (663 kgf·cm, 48 ft·lbf)



12. INSTALL BEARING SET GENERATOR

(a) Insert the fitting ring into in the position shown in the illustration.
(b) Align the key of the fitting ring with the keyway of the stator sub–assy generator w/ rectifire.
(c) Install the bearing.

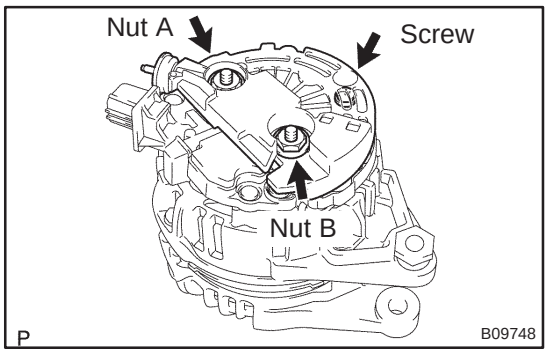


13. INSTALL STATOR SUB–ASSY GENERATOR W/RECTIFIRE

(a) Align the key of the drive end frame with the keyway of the stator sub–assy generator w/ rectifire.
(b) Install the stator sub–assy generator w/ rectifire with the 4 bolts.
Torque: 3.5 N·m (36 kgf·cm, 31 in.·lbf)

14. INSTALL REGULATOR SUB–ASSY GENERATOR W/BRUSH

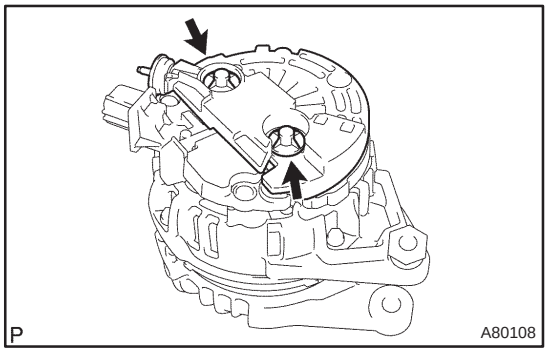
(a) Attach the brushes and the terminals to the rectifier end frame of the regulator sub–assy generator w/ brush.



(b) Install the regulator sub–assy generator w/ brush with the 3 screws.

HINT:

Install the screw with the plate washer to the position shown in the illustration.



Torque:
2.2 N·m (22 kgf·cm, 19 in.·lbf) for without washer
1.2 N·m (12 kgf·cm, 11 in.·lbf) for with washer

15. INSTALL GENERATOR REAR END COVER

(a) Install the generator rear end cover with the 2 nuts and the screw.

Torque:
19.5 N·m (199 kgf·cm, 14 ft·lbf) for nut A
12 N·m (122 kgf·cm, 9 ft·lbf) for nut B
2.4 N·m (24 kgf·cm, 21 in.·lbf) for screw

(b) Install the 2 terminal covers by turning them clockwise.

HOW TO USE THIS MANUAL TRANSAXLE REPAIR MANUAL

010BW–02

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This manual explains ”Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting”, but ”Final Inspection” is omitted.

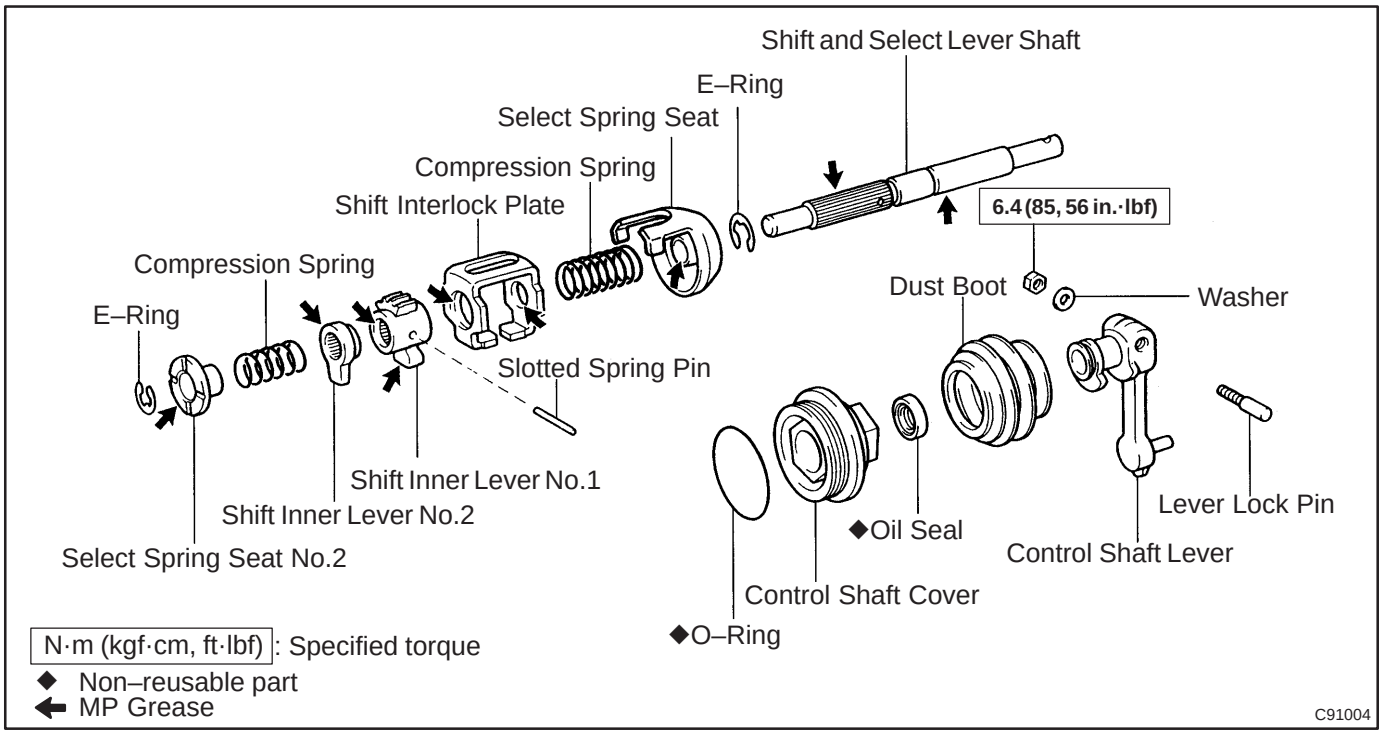
(d) The following essential operations are not written in this manual, however these operations must be done in the practical situation.
(1) Operation with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX is provided as a section on the end of the book to guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.



4. REPAIR PROCEDURES

(a) Component drawing is placed as the section or title when necessary.

(b) Illustrations of the parts catalog are placed as the ”disassembled parts drawing” so that it enables you to understand the fitting condition of the components.

(c) Non–reusable parts, grease applied parts, precoated parts and tightening torque are specified in the components drawing.

Example:

(d) Tightening torque, oil applying position, and non–reusable parts are described as important points in the procedure.

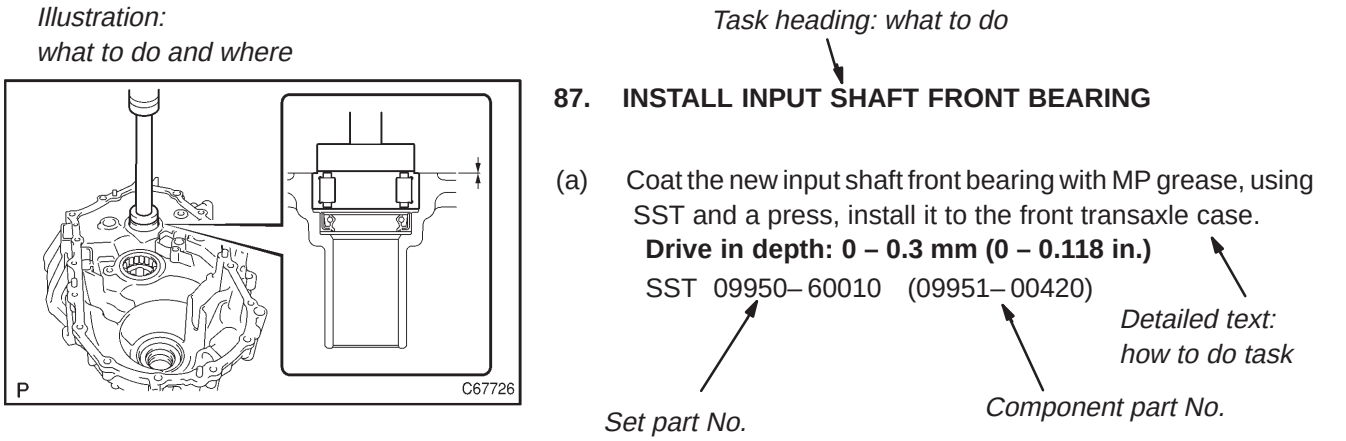
NOTICE:

There are cases where such information can only be indicated by an illustration. In that case, all the information such as torque, oil, etc. are described in the illustration.

(e) Installing procedure of operation items is performed in the reverse order of the removing, and only the important points are described.

(f) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(g) There may be a case where the illustrations of similar models are used. In that case the details may be different from the actual vehicle.



(h) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.

(2) The task heading tells what to do.

(3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for a quick reference.

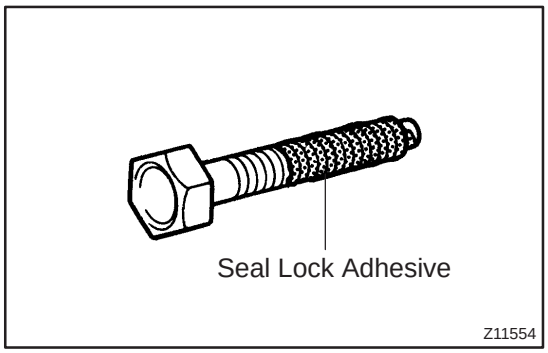
6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:



Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION FOR MANUAL TRANSAXLE REPAIR MANUAL

010BX–02

PRECAUTION

1. BASIC REPAIR HINT

(a) PRECOATED PARTS

(1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

(3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

Do the torque checking with the lower limit value of the torque tolerance.

(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.

(b) GASKETS

When necessary, use a sealer on gaskets to prevent leaks.

(c) BOLTS, NUTS AND SCREWS

Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

TERMS FOR MANUAL TRANSAXLE REPAIR MANUAL

ABBREVIATIONS USED IN THIS MANUAL

010BY–02

Abbreviations	Meaning
E/G	Engine
FIPG	Formed In Plce Gasket
MAX	Maximum
MIN	Minimum
MP	Multipurpose
M/T	Manual Transmission
N	Neutral
No.	Number
RH	Right–Hand
SPEC	Specification

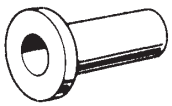
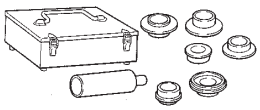
GLOSSARY OF SAE AND TOYOTA TERMS

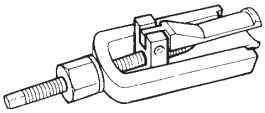
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their Toyota equivalents.

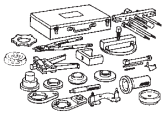
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	–
CAC	Charge Air Cooler	Inter cooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Potion	–
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Control Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only memory	Electrically Erasable Programmable Read Only memory (EEPROM), Erasable Programmable Read Only memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO2S)
IAC	Idol Air Control	Idol Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection
IFS	Inertia Fuel–Shutoff	–

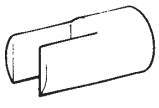
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_{2S})
OBD	On–Board Diagnostic	On–Board Diagnostic (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Converter (OC), CC_0
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	–
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU (Electronic Control Unit)
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	$CC_R + CC_O$
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor (Read Switch Type)
WOT	Wide Open Throttle	Full Throttle

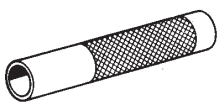


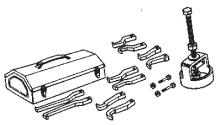












WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	Manifold Converter
3GR	Third Gear	–
4GR	Fourth Gear	–

	B	2.31 mm (0.0909 in.)
	C	2.37 mm (0.0933 in.)
	D	2.43 mm (0.0957 in.)
	E	2.49 mm (0.0980 in.)
	F	2.55 mm (0.1004 in.)
	G	2.61 mm (0.1028 in.)

Input shaft assy		
4th gear thrust clearance	STD	0.1 – 0.55 mm (0.0039 – 0.0217 in.)
	Max	0.55 mm (0.0217 in.)
3rd gear thrust clearance	STD	0.1 – 0.35 mm (0.0039 – 0.0138 in.)
	Max	0.35 mm (0.0138 in.)
4th gear radial clearance	STD	0.015 – 0.058 mm (0.0006 – 0.0023 in.)
	Max	0.058 mm (0.0023 in.)

3rd gear radial clearance	STD	0.015 – 0.058 mm (0.0006 – 0.0023 in.)
	Max	0.058 mm (0.0023 in.)
Input shaft runout	Min	0.015 mm(0.00059 in.)
Input shaft outer diameter	STD: Part A	24.885 – 24.900 mm (0.9797 – 0.9803 in.)
	Part B	28.991 – 29.006 mm (1.1413 – 1.1419 in.)
	Part C	30.985 – 31.000 mm (1.2198 – 1.2204 in.)
	Part D	24.985 – 25.000 mm (0.9836 – 0.9842 in.)
	Min: Part A	24.885 mm (0.9797 in.)
	Part B	28.991 mm (1.1413 in.)
	Part C	30.985 mm (1.2198 in.)
	Part D	24.985 mm (0.9836 in.)
4th gear clearance	STD	34.015 – 34.031 mm (1.3391 – 1.3398 in.)
	Max	34.031 mm (1.3398 in.)
3rd gear clearance	STD	36.015 – 36.031 mm (1.4179 – 1.4185 in.)
	Max	36.031 mm (1.4185 in.)
Synchronizer ring No.2 (For 4th gear) clearance		0.75 – 1.65 mm (0.0295 – 0.0649 in.)
Synchronizer ring No.2 (For 3rd gear) clearance		0.75 – 1.65 mm (0.0295 – 0.0649 in.)
Transmission hub sleeve No.2 clearance		0.15 – 0.35 mm (0.0059 – 0.0137 in.)
Clutch hub No.2 setting shaft snap ring clearance		0.1 mm (0.0039 in.) or less.
Clutch hub No.2 setting shaft snap ring thickness	0	2.30 mm (0.0906 in.)
	1	2.36 mm (0.0929 in.)
	2	2.42 mm (0.0953 in.)
	3	2.48 mm (0.0976 in.)
	4	2.54 mm (0.1000 in.)
	5	2.60 mm (0.1024 in.)
Input shaft rear bearing shaft snap ring clearance		0.1 mm (0.0039 in.) or less
Input shaft rear bearing shaft snap ring thickness	A	2.29 mm (0.0902 in.)
	B	2.35 mm (0.0925 in.)
	C	2.41 mm (0.0949 in.)
	D	2.47 mm (0.0972 in.)
	E	2.53 mm (0.0996 in.)
	F	2.59 mm (0.1020 in.)

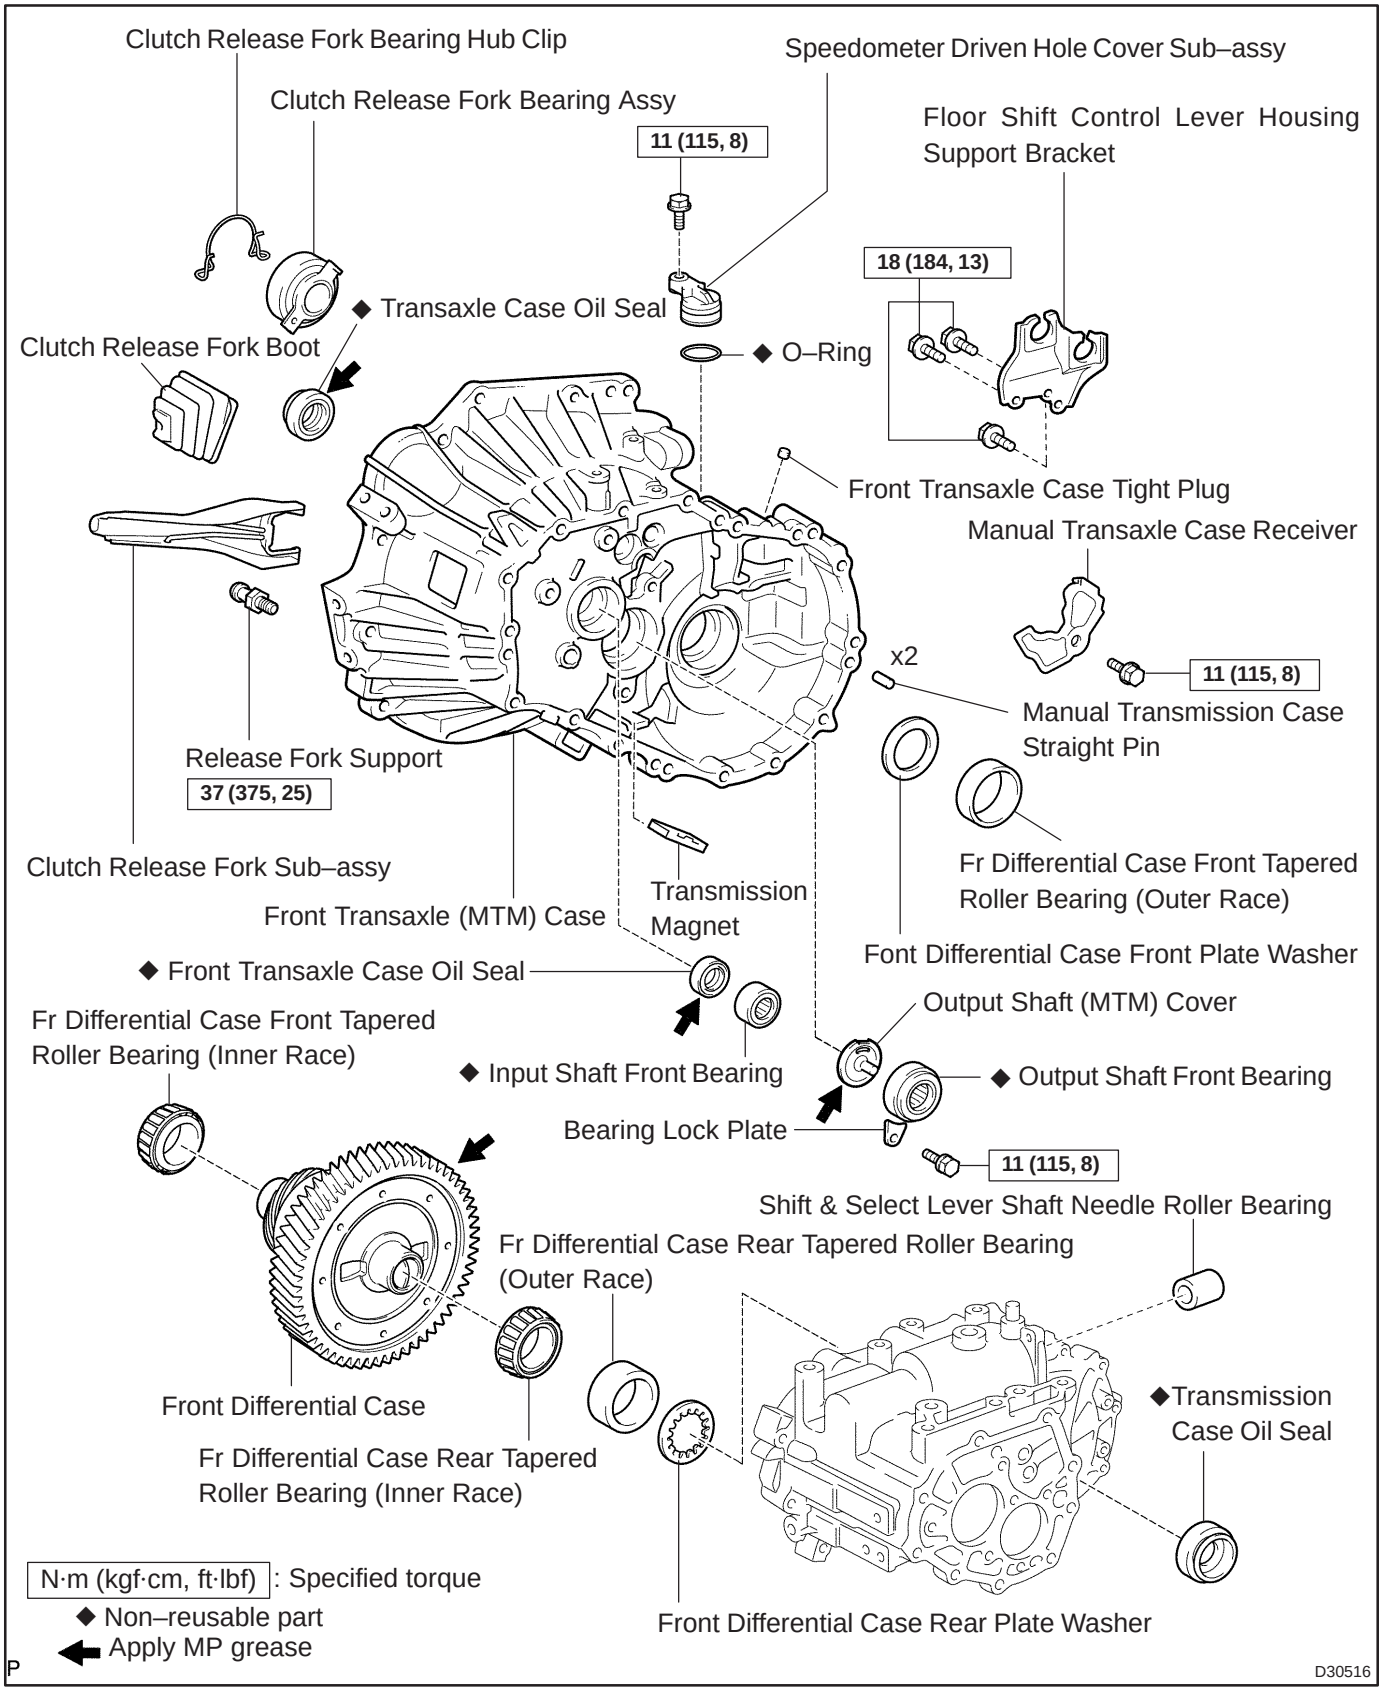
Output shaft assy		
1st gear thrust clearance	STD	0.10 – 0.40 mm (0.0039 – 0.0157 in.)
	Max	0.40 mm (0.0157 in.)
2nd gear thrust clearance	STD	0.1 – 0.45 mm (0.0039 – 0.0177 in.)
	Max	0.45 mm (0.0177 in.)
1st gear radial clearance	STD	0.015 – 0.058 mm (0.0006 – 0.0023 in.)
	Max	0.058 mm (0.0023 in.)
2nd gear radial clearance	STD	0.015 – 0.058 mm (0.0006 – 0.0023 in.)
	Max	0.058 mm (0.0023 in.)
Input shaft runout	Min	0.015 mm (0.0006 in.)
Input shaft outer diameter	Part A	31.985 –32.000 mm (1.2592 – 1.2598 in.)
	Part B	37.985 –38.000 mm (1.4955 – 1.2598 in.)
	Part C	32.985 –33.000 mm (1.2986 – 1.2992 in.)
2nd gear clearance	STD	38.015 –38.013 mm (1.4966 – 1.4972 in.)
	Max	38.031 mm (1.4972 in.)
1st gear clearance	STD	44.015 – 44.031 mm (1.7328 – 1.7335 in.)
	Max	44.031 mm (1.7335 in.)
1st gear thrust washer thickness	STD	5.975 – 6.025 mm (0.2352 – 0.2372 in.)
	Min	5.975 mm (0.2352 in.)
Synchronizer ring No.1 (for 2nd gear)clearance	STD	0.70 – 1.30 mm (0.0276 – 0.0512 in.)
	Min	0.70 mm (0.0276in.)
Synchronizer ring No.1 (for 1st gear)clearance	STD	0.75 – 1.65 mm (0.0295 – 6.8898 in.)
	Min	0.75 mm (0.0295 in.)
reverse gear and shift fork clearance	Max	0.35 mm (0.014 in.)

Clutch hub No.1 shaft snap ring clearance		0.1 mm (0.039 in.) or less
Clutch hub No.1 shaft snap ring thickness	A	2.50 mm (0.0984 in.)
	B	2.56 mm (0.1008 in.)
	C	2.62 mm (0.1031 in.)
	D	2.68 mm (0.1055 in.)
	E	2.74 mm (0.1079 in.)
	F	2.80 mm (0.1102 in.)

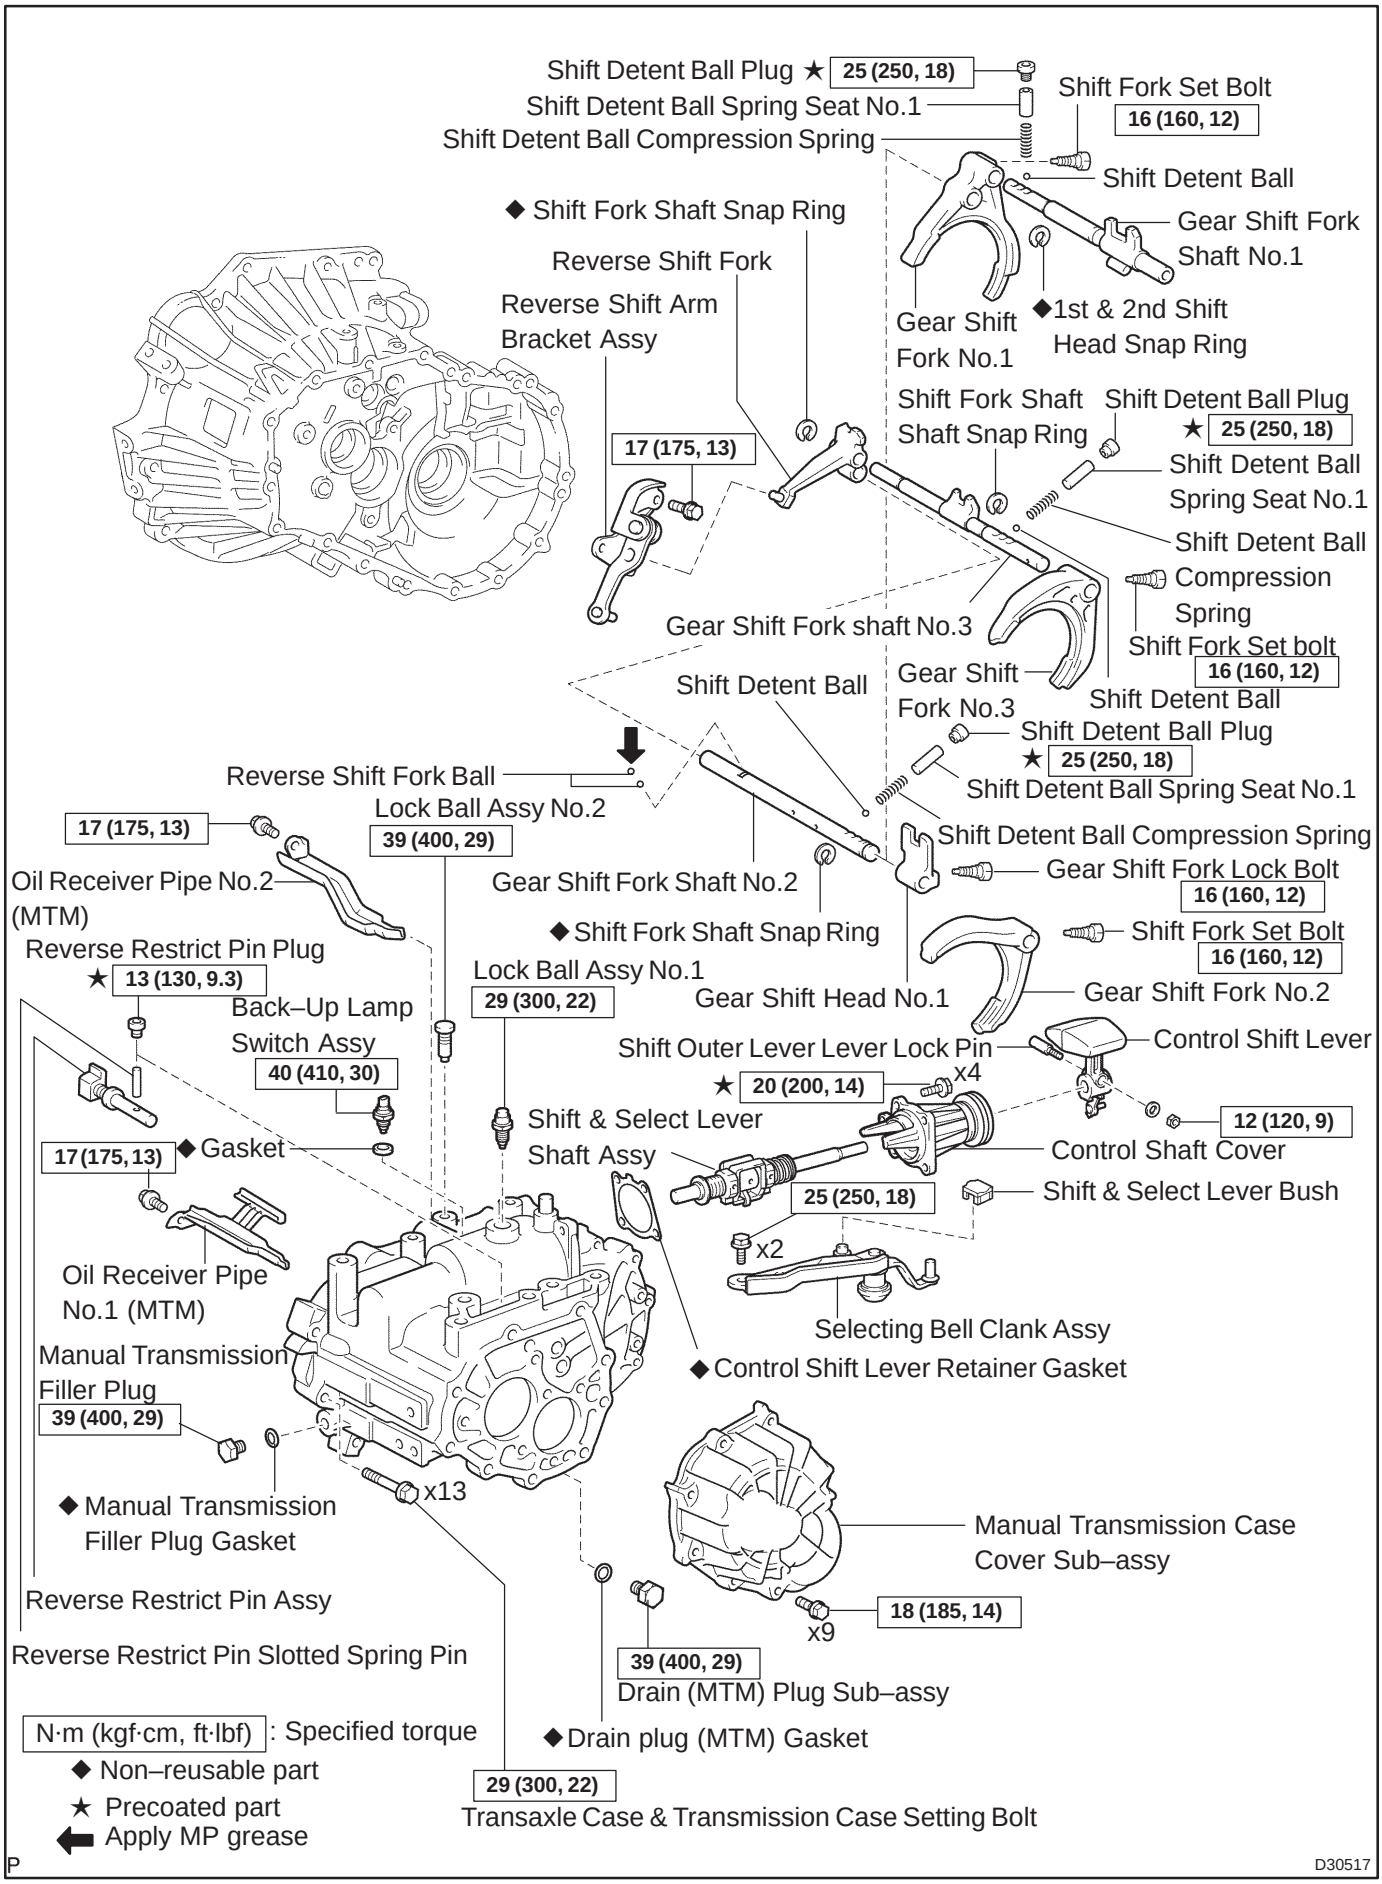
Sift & Select lever shaft assy	
Contorol shaft cover oil seal drive in depth	0.2 – 1.2 mm (0.079 – 0.0472 in.)
Sift lever slotted pin (for select inner lever) drivein depth	3.0 – 4.0 mm (0.1181 – 0.1575 in)
Sift lever slotted pin (for sift lever inner No.1) drivein depth	–0.5 – 0.5 mm (–0.0197 – 0.0197 in)
Sift lever slotted pin (for sift lever inner No.2) drivein depth	–0.5 – 0.5 mm (–0.0197 – 0.0197 in)

Differential case assy		
Front differential side gear backlash		0.05 – 0.20 mm (0.0020 – 0.0079 in.)
Front differential pinion thrust washer	Min	0.94 mm (0.03701 in.)
Front differential pinion shaft No.1 outer diameter	Min	16.982 mm (0.6685 in.)

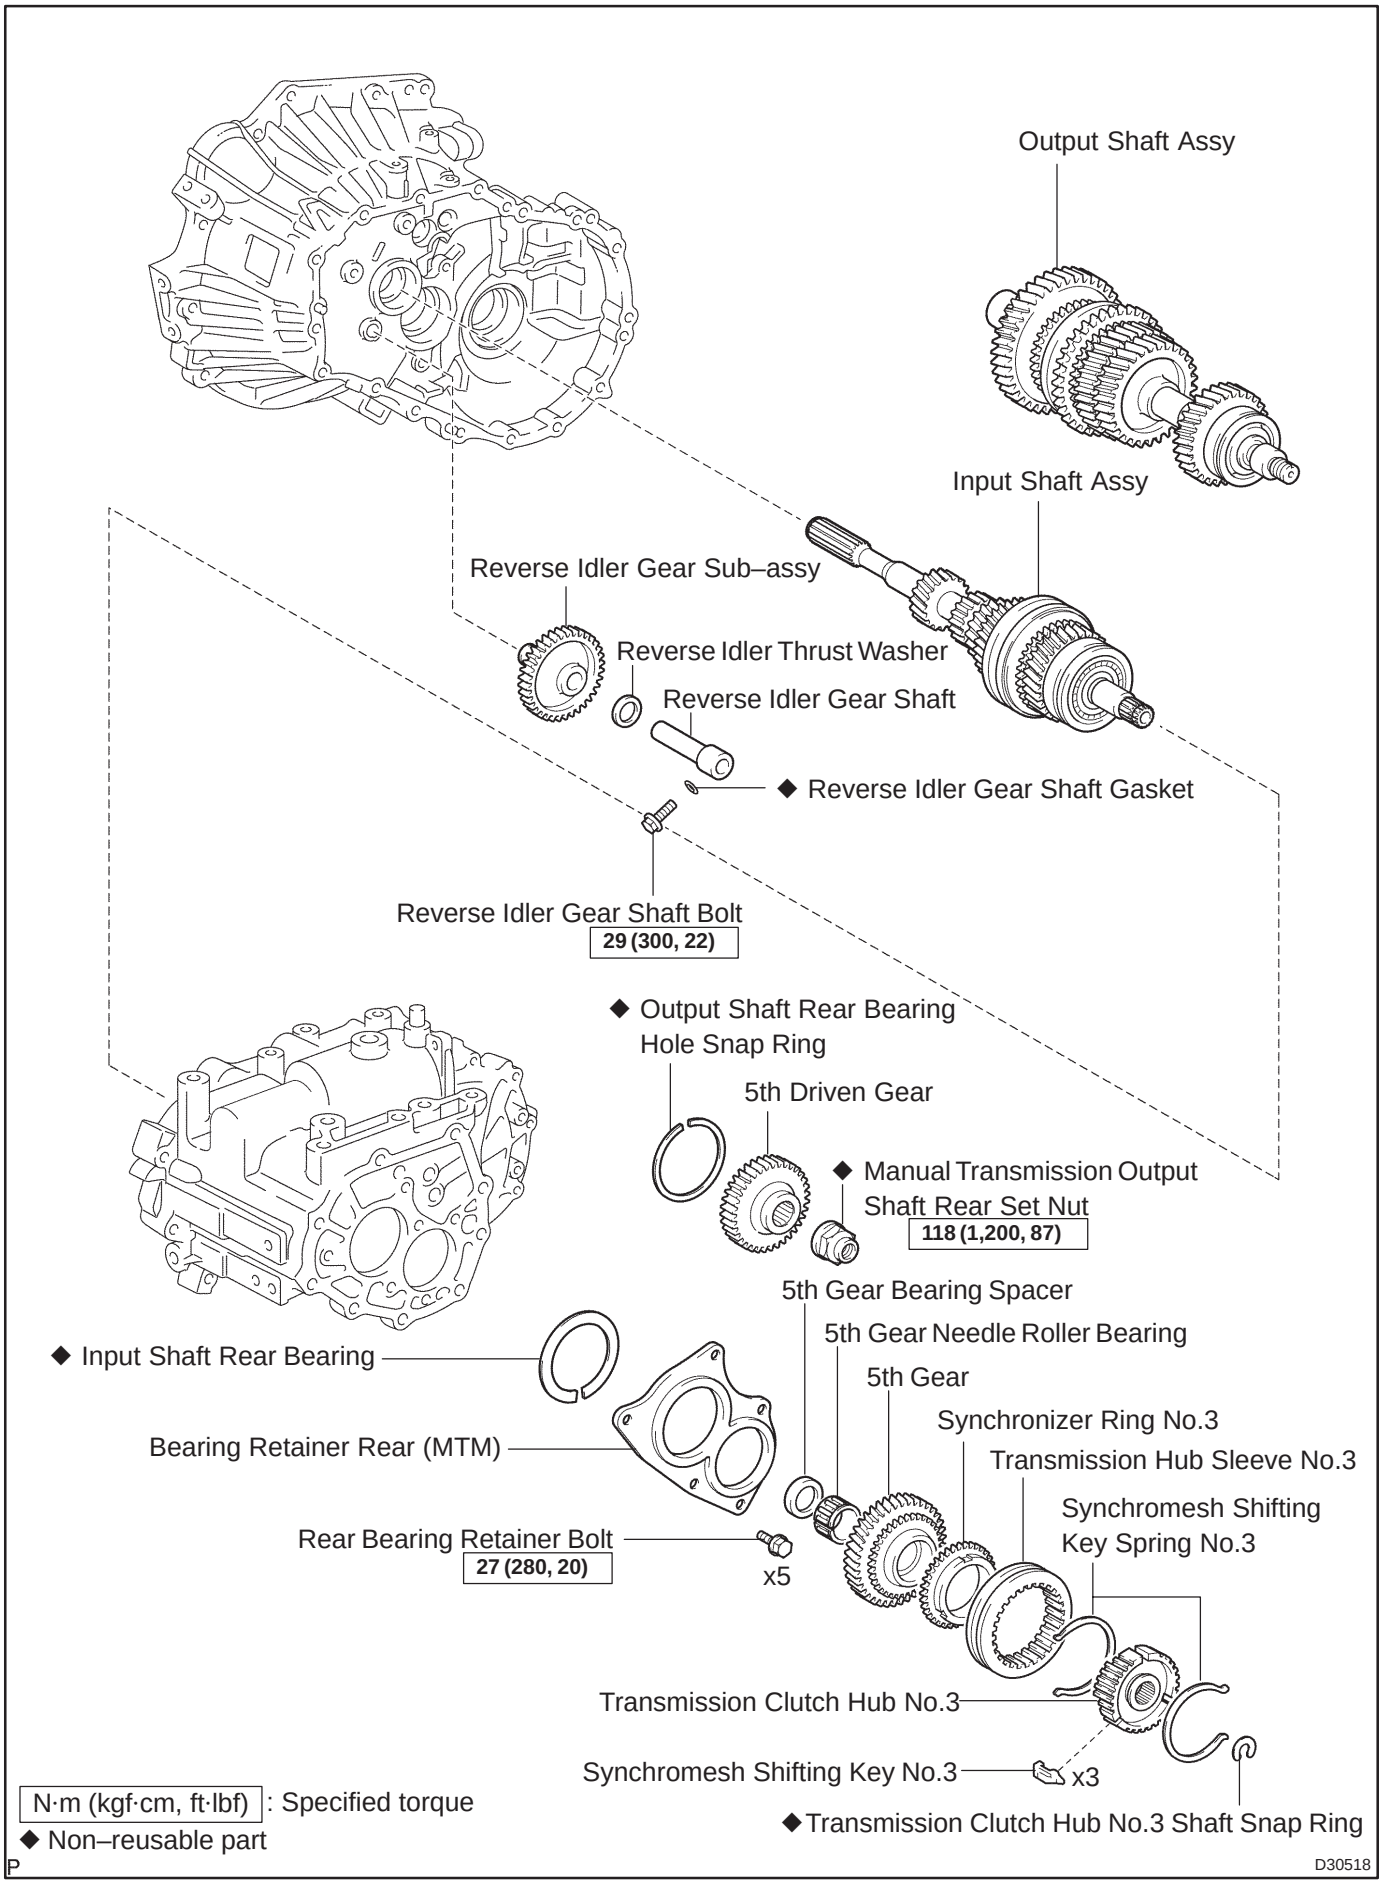
031EP–01



TORQUE SPECIFICATION



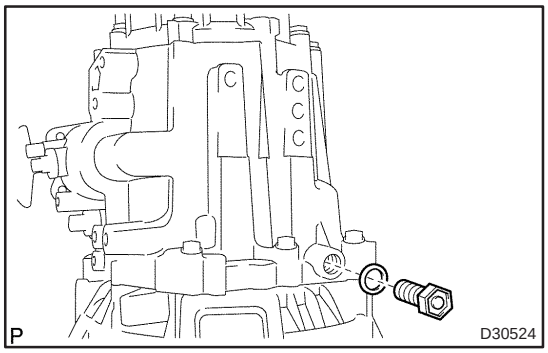
Part Tightened		N·m	kgf·cm	ft·lbf
Bearing lock plate × Front transaxle case		11	115	8.3
Oil receiver pipe No.1 × Manual transmission case		17	175	13
Oil receiver pipe No.2 × Manual transmission case		17	175	13
Reverse restrict pin plug × Manual transmission case		13	130	9.3
manual transaxle case receiver × Manual transmission case		11	8.3	8.3
Gear shift fork No.1 × Gear shift fork shaft No.1		16	160	12
Gear shift fork No.2 × Gear shift fork shaft No.2		16	160	12
Gear shift head No.1 × Gear shift fork shaft No.2		16	160	12
Reverse shift arm bracket assy × Front transaxle case		17	175	13
Manual transmission case × Front transaxle case	bolt	29	300	22
	nut	29	300	22
Reverse idler gear shaft bolt × Manual transmission case		29	300	22
Lock ball assy No.2 × Manual transmission case		39	400	29
Shift detent ball × Manual transmission case		25	250	18
Shift detent ball × Front transaxle case		25	250	18
Bearing retainer rear × Manual transmission case		27	280	20
Gear shift fork No.3 × Gear shift fork shaft		16	160	12
Manual transmission output shaft rear set nut × output shaft		118	1200	87
Manual transmission case cover × Manual transmission case		18	185	14
Control shaft cover × Manual transmission case		20	200	14
Control shift lever lock nut		12	122	8.9
Lock ball assy No.1 × Manual transmission case		29	300	22
Selecting bell crank assy × Manual transmission case		25	250	18
Floor shift control lever housing support bracket × Front transaxle case		18	184	13
Back–up lamp switch assy × Manual transmission case		40	410	30
Speedometer driven hole cover sub–assy × Manual transaxle		11	115	8.3
Release fork support × Front transaxle case		37	375	25
Manual transmission filler plug × Manual transaxle		39	400	29
Drain plug sub–assy × Manual transmission case		39	400	29
Selecting bell crank No.2 plate washer × Selecting bell crank		12	120	9
Front defferential ring gear × Front differential case		77	790	57



MANUAL TRANSAXLE ASSY (C250)

410DC–01

COMPONENTS



Shift Detent Ball Plug ★ 25 (250, 18)
Shift Detent Ball Spring Seat No.1
Shift Detent Ball Compression Spring
Shift Fork Set Bolt
16 (160, 12)
Shift Detent Ball
◆ Shift Fork Shaft Snap Ring
Reverse Shift Fork
Reverse Shift Arm Bracket Assy
Gear Shift Fork Shaft No.1
◆1st & 2nd Shift Head Snap Ring
Gear Shift Fork No.1
17 (175, 13)
Shift Fork Shaft Shaft Snap Ring
Shift Detent Ball Plug ★ 25 (250, 18)
Shift Detent Ball Spring Seat No.1
Shift Detent Ball Compression Spring
Gear Shift Fork shaft No.3
Shift Fork Set bolt 16 (160, 12)
Gear Shift Fork No.3
Shift Detent Ball
Shift Detent Ball
Shift Detent Ball Plug ★ 25 (250, 18)
Shift Detent Ball Spring Seat No.1
Reverse Shift Fork Ball
Lock Ball Assy No.2
17 (175, 13)
39 (400, 29)
Shift Detent Ball Compression Spring
Gear Shift Fork Lock Bolt 16 (160, 12)
Oil Receiver Pipe No.2 (MTM)
Gear Shift Fork Shaft No.2
◆ Shift Fork Shaft Snap Ring
Shift Fork Set Bolt 16 (160, 12)
Reverse Restrict Pin Plug ★ 13 (130, 9.3)
Lock Ball Assy No.1
29 (300, 22)
Gear Shift Head No.1
Gear Shift Fork No.2
Back–Up Lamp Switch Assy
40 (410, 30)
Shift Outer Lever Lever Lock Pin ★ 20 (200, 14) x4
Control Shift Lever
12 (120, 9)
17 (175, 13)
◆ Gasket
Shift & Select Lever Shaft Assy
Control Shaft Cover
25 (250, 18)
Shift & Select Lever Bush
x2
Oil Receiver Pipe No.1 (MTM)
Selecting Bell Clank Assy
Manual Transmission Filler Plug
39 (400, 29)
◆ Control Shift Lever Retainer Gasket
x13
◆ Manual Transmission Filler Plug Gasket
Manual Transmission Case Cover Sub–assy
Reverse Restrict Pin Assy
18 (185, 14)
x9
Reverse Restrict Pin Slotted Spring Pin
39 (400, 29)
Drain (MTM) Plug Sub–assy
N·m (kgf·cm, ft·lbf) : Specified torque
◆ Drain plug (MTM) Gasket
◆ Non–reusable part
★ Precoated part
Apply MP grease

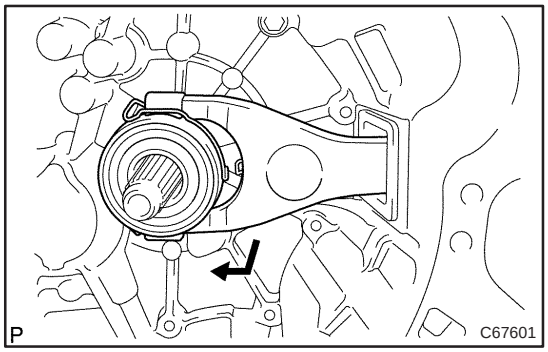
OVERHAUL

1. REMOVE MANUAL TRANSMISSION FILLER PLUG

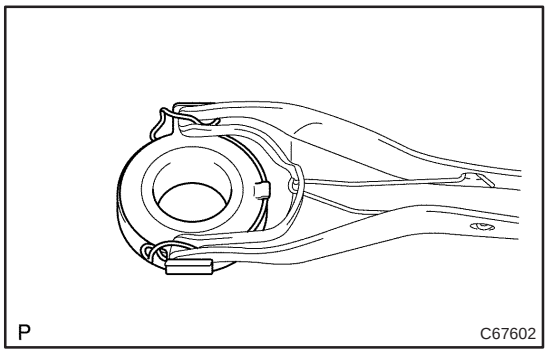
(a) Remove the manual transmission filler plug and gasket from the manual transmission case.



2. REMOVE DRAIN (MTM) PLUG SUB–ASSY

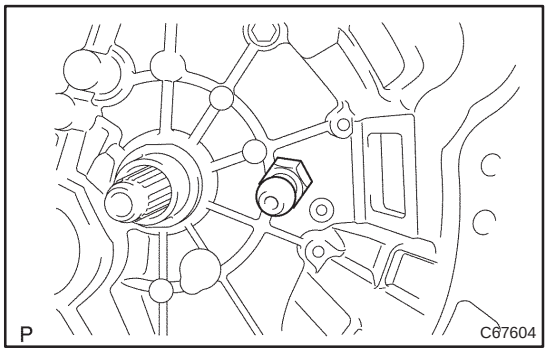
(a) Remove the drain plug and gasket from the manual transmission case.

3. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB–ASSY



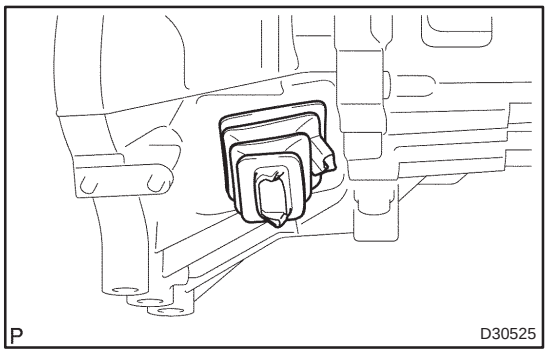
(a) Remove the bolt and speedometer driven hole cover sub–assy.

(b) Remove the O–ring from the speedometer driven hole cover sub–assy.



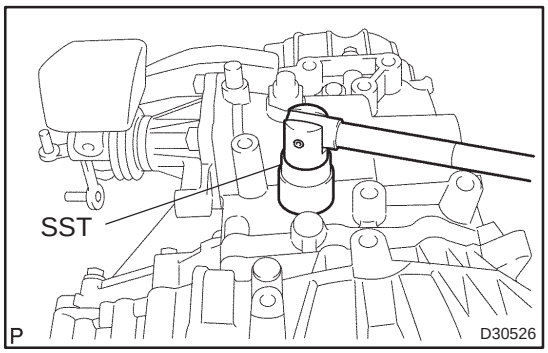
4. REMOVE CLUTCH RELEASE FORK SUB–ASSY

(a) Remove the clutch release fork sub–assy with clutch release bearing assy from the front transaxle case.



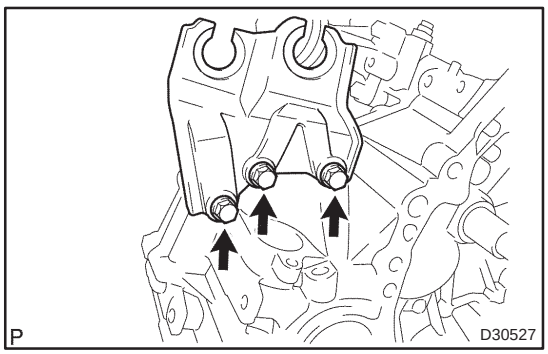
5. REMOVE CLUTCH RELEASE BEARING ASSY

(a) Remove the clutch release bearing clip and clutch release bearing assy from the clutch release fork sub–assy.



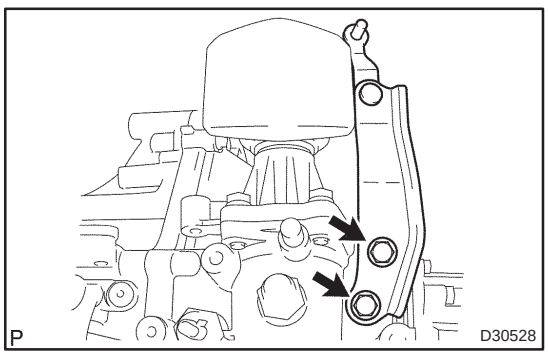
6. REMOVE RELEASE FORK SUPPORT

(a) Remove the clutch release fork support from the front transaxle case.



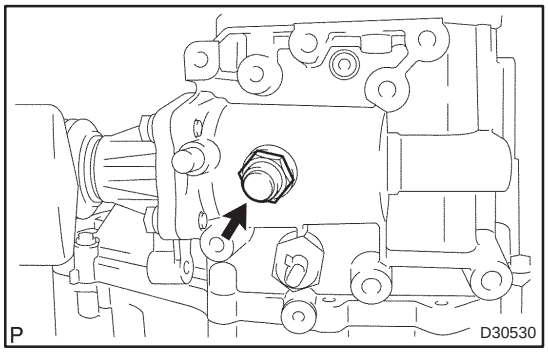
7. REMOVE CLUTCH RELEASE FORK BOOT

(a) Remove the clutch release fork boot from the front transaxle case.



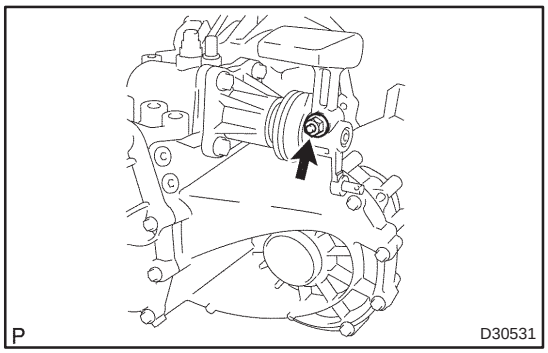
8. REMOVE BACK UP LAMP SWITCH ASSY

(a) Using SST, remove the back–up lamp switch assy and gasket from the manual transmission case.
SST 09817–16011



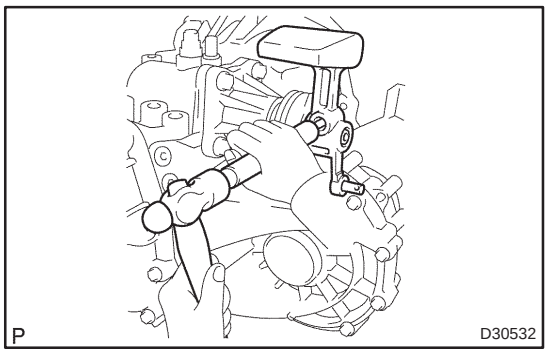
9. REMOVE FLOOR SHIFT CONTROL LEVER HOUSING SUPPORT BRACKET

(a) Remove the 3 bolts and control cable bracket from the front transaxle case.



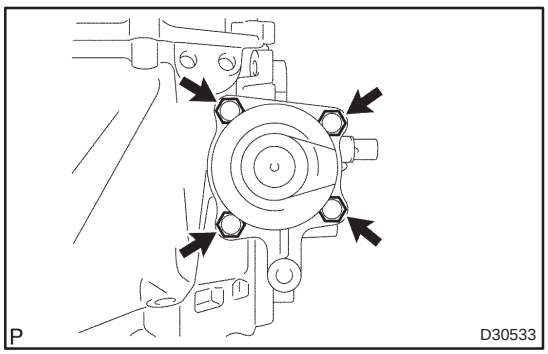
10. REMOVE SELECTING BELL CRANK ASSY

(a) Remove the 2 bolts and selecting bell crank assy from the manual transmission case.



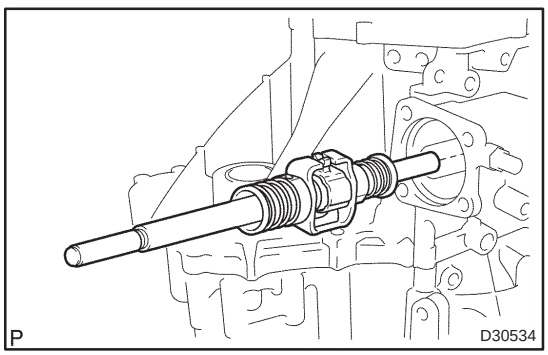
11. REMOVE LOCK BALL ASSY NO.1

(a) Remove the lock ball assy No.1 from the manual transmission case.



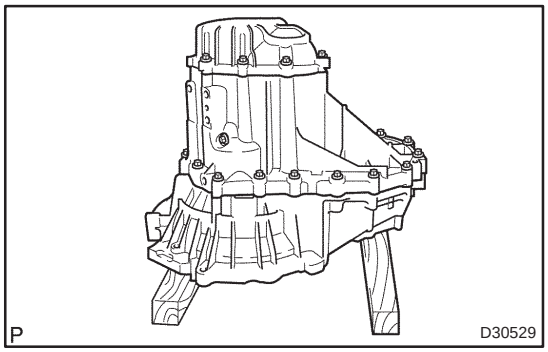
12. REMOVE CONTROL SHIFT LEVER

(a) Remove the nut and spring washer.



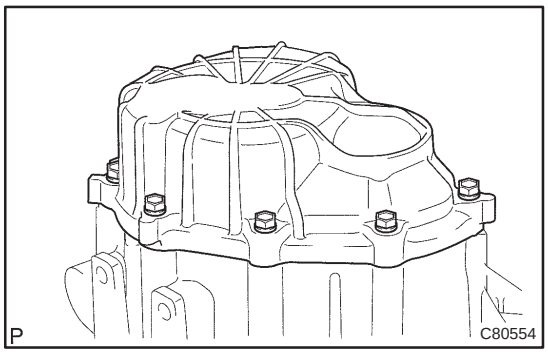
(b) Using a brass bar and a hammer, remove the shift outer lever lever lock pin.

(c) Remove the control shift lever.



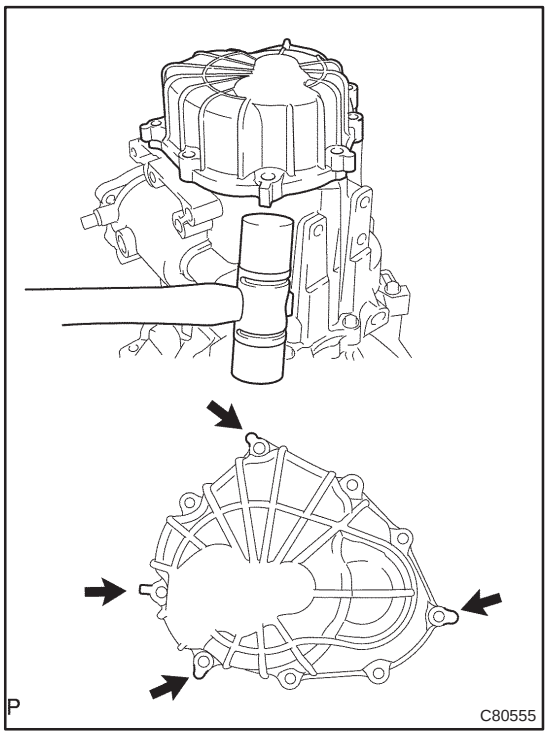
13. REMOVE CONTROL SHAFT COVER

(a) Remove the 4 bolts, control shaft cover and gasket from the manual transmission case.



14. REMOVE SHIFT & SELECT LEVER SHAFT ASSY

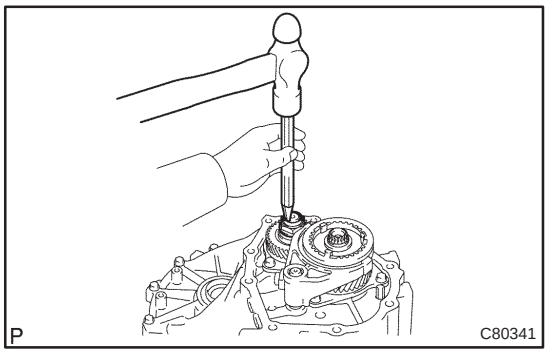
(a) Remove the shift & select lever shaft assy from the manual transmission case.



15. FIX MANUAL TRANSAXLE ASSY

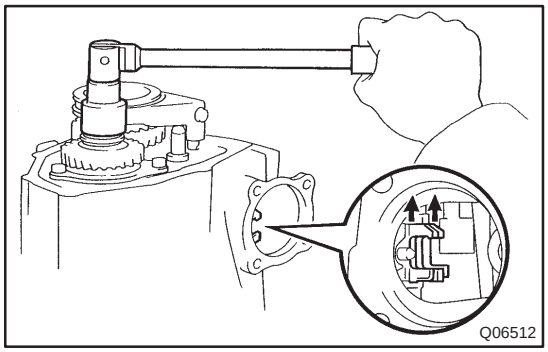
(a) Using 2 wooden blocks, fixing the manual transaxle assy.

16. REMOVE MANUAL TRANSMISSION CASE COVER SUB–ASSY



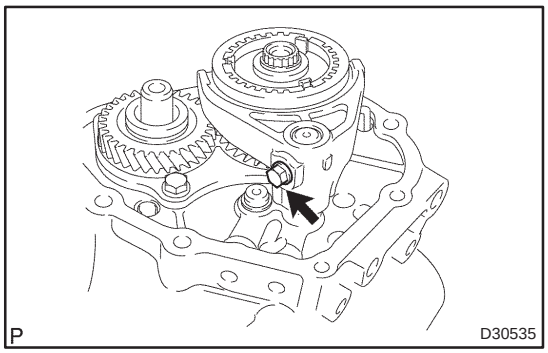
(a) Remove the 9 bolts.

(b) Carefully tap the projection of the manual transmission case cover sub–assy with a hammer and remove it.



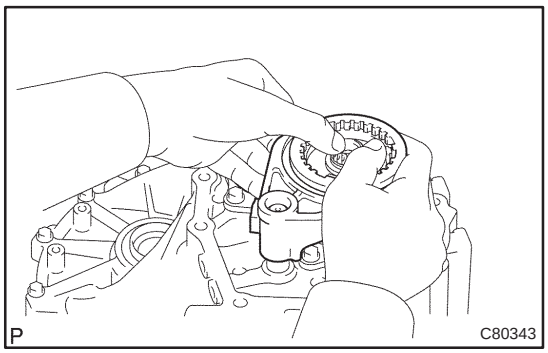
NOTICE:

Do not damage the manual transmission case sub–assy.

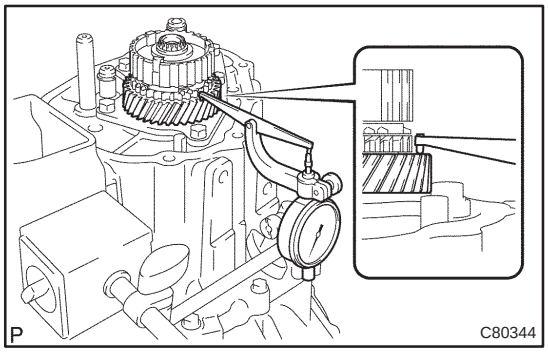


17. REMOVE MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Using a chisel and a hammer, loosen the staked part of the manual transmission output shaft rear set nut.

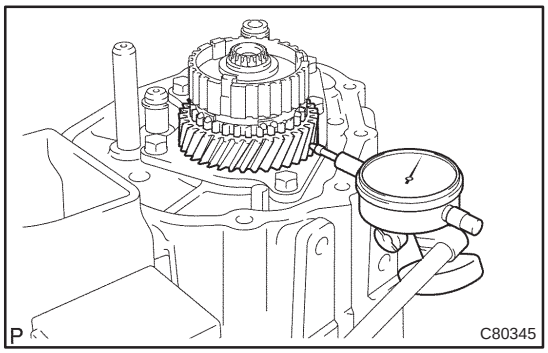


(b) Engage the gear to the double meshing.
(c) Remove the manual transmission output shaft rear set nut.
(d) Disengage the double meshing of the gear.



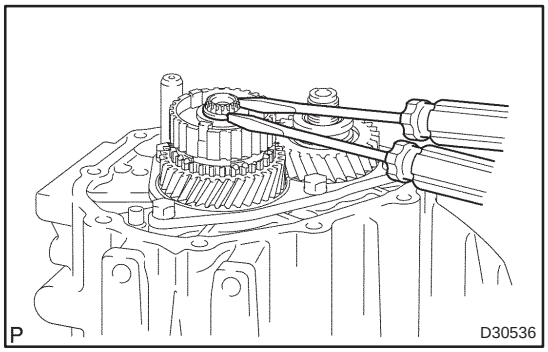
18. REMOVE GEAR SHIFT FORK NO.3

(a) Remove the shift fork set bolt from the gear shift fork No.3.



(b) Remove the No.3 hub sleeve and gear shift fork No.3 from the transmission clutch hub No.3.

19. INSPECT 5TH GEAR THRUST CLEARANCE

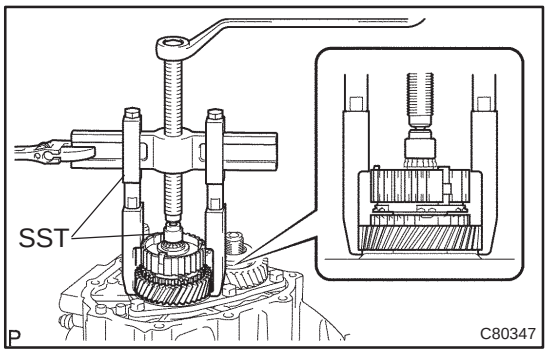


(a) Using a dial indicator, measure the thrust clearance.
Standard clearance:
0.10 – 0.57 mm (0.0039 – 0.0224 in.)
Maximum clearance:
0.57 mm (0.0224 in.)

20. INSPECT 5TH GEAR RADIAL CLEARANCE

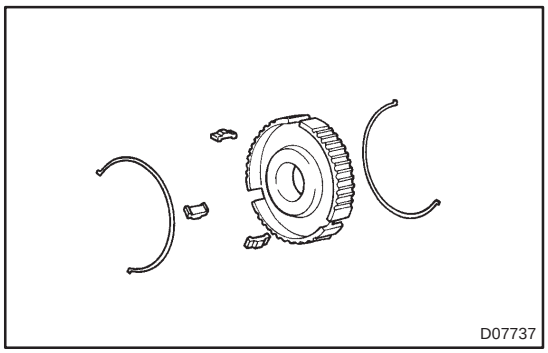
(a) Using a dial indicator, measure the radial clearance.
Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)

If the clearance exceeds the maximum, replace the gear needle roller bearing or shaft.



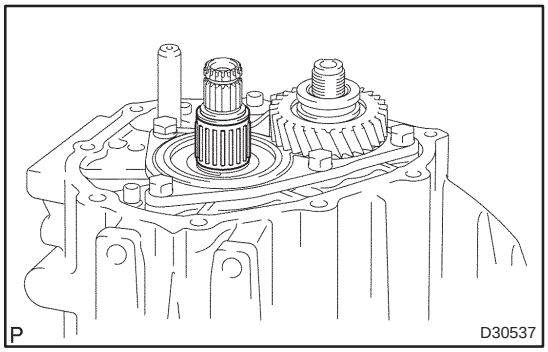
21. REMOVE TRANSMISSION CLUTCH HUB NO.3

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.



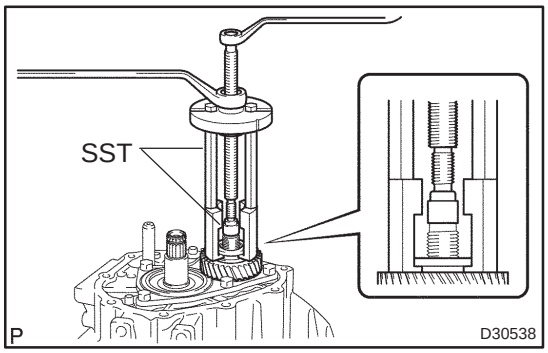
HINT:

Using a shop rug to prevent the snap ring from being scattered.



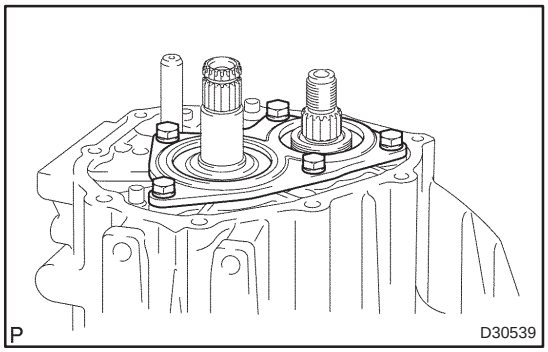
(b) Using SST, remove the transmission clutch hub No.3, 5th gear and synchronizer ring from the input shaft.

SST 09950–40011 (09951–04020, 09952–04010, 09953–04030, 09954–04010, 09955–04071, 09957–04010), 09950–60010 (09951–00200)



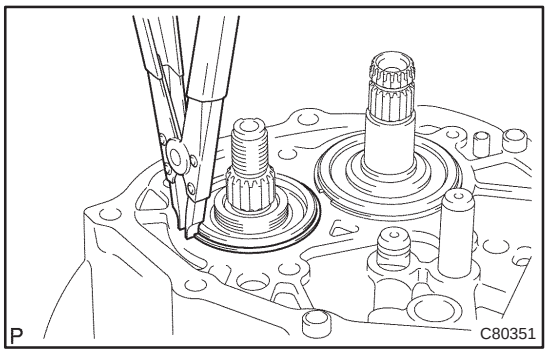
(c) Remove the 3 synchromesh shifting keys and 2 synchromesh shifting key springs from the transmission clutch hub No.3.

22. REMOVE 5TH GEAR NEEDLE ROLLER BEARING



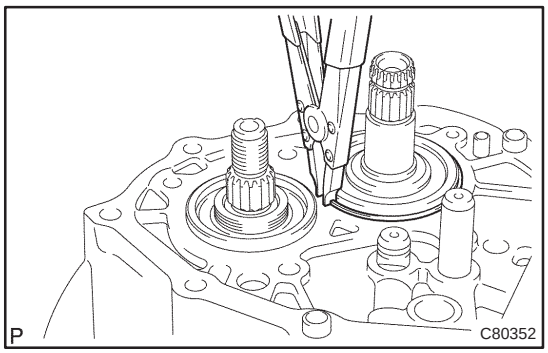
(a) Remove the 5th gear needle roller bearing and 5th gear bearing spacer from the input shaft.

23. REMOVE 5TH DRIVEN GEAR



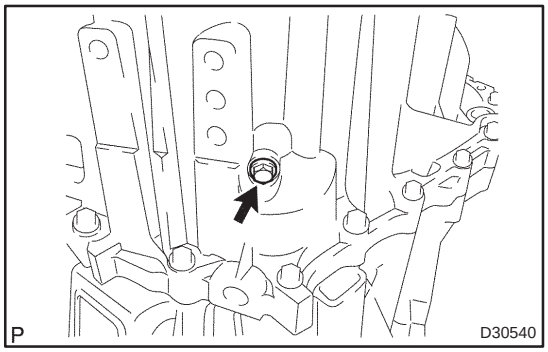
(a) Using SST, remove the 5th driven gear from the output shaft.

SST 09950–30012 (09951–03010, 09953–03010, 09954–03010, 09955–03011, 09957–04010), 09950–60010 (09951–00190)



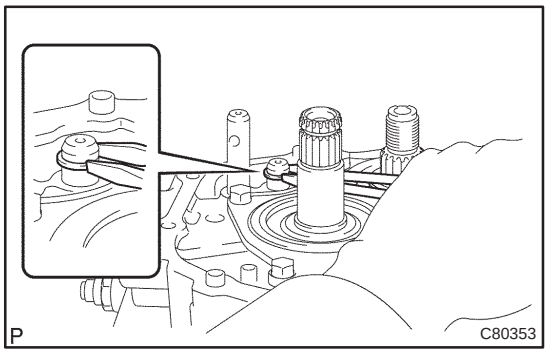
24. REMOVE BEARING RETAINER REAR (MTM)

(a) Remove the 5 bolts and bearing retainer rear from the manual transmission case.



25. REMOVE OUTPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, remove the output shaft rear bearing hole snap ring from the output shaft.

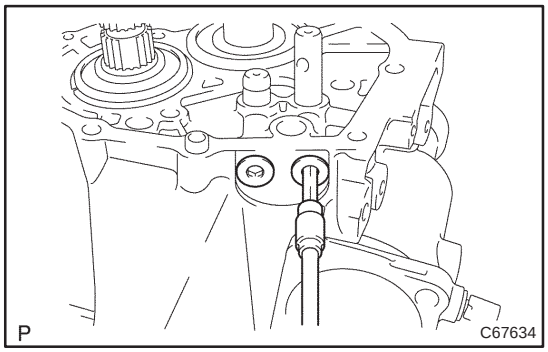


26. REMOVE INPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, remove the input shaft rear bearing hole snap ring from the input shaft.

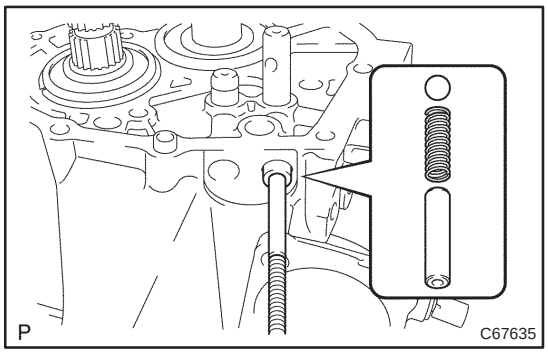
27. REMOVE REVERSE IDLER GEAR SHAFT BOLT

(a) Remove the reverse idler gear shaft bolt and reverse idler gear shaft gasket from the manual transmission case.



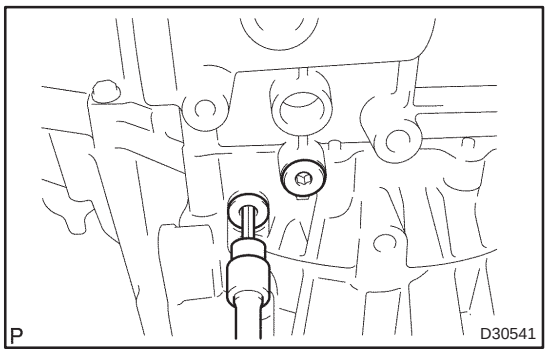
28. REMOVE SHIFT FORK SHAFT SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, tap out the snap ring.

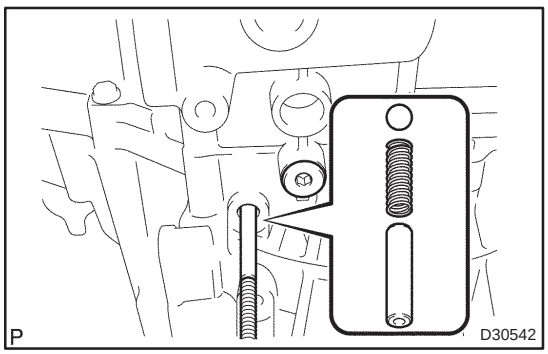


HINT:

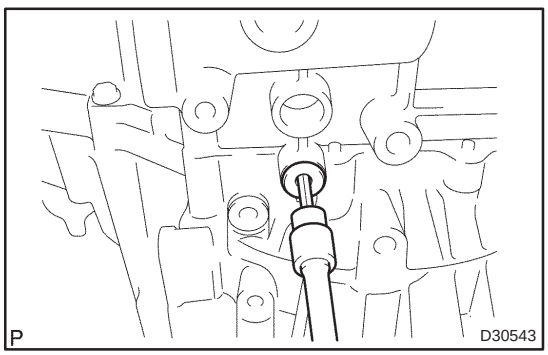
Using a shop rug to the shifting key spring from being scattered.



29. REMOVE SHIFT DETENT BALL

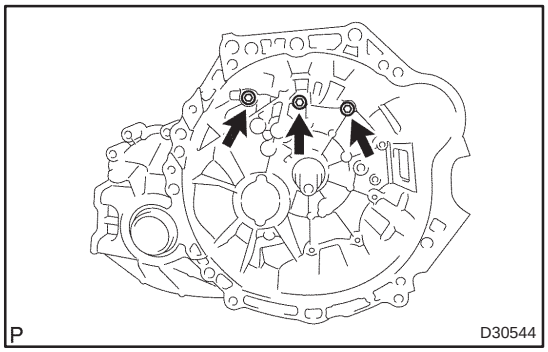


(a) Using a hexagon wrench, remove the 2 shift detent ball plugs from the manual transmission case.

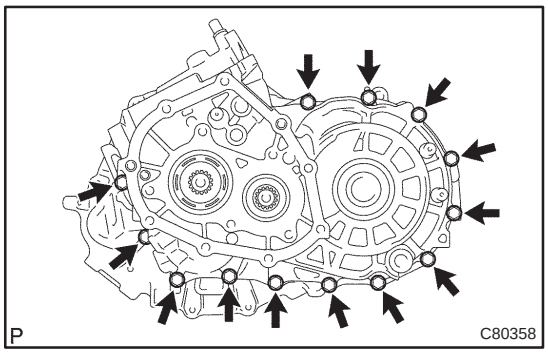


(b) Using a magnetic finger, remove the 2 seats, springs and balls from the manual transmission case.

(c) Using a hexagon wrench, remove the shift detent ball plug from the front transaxle case.

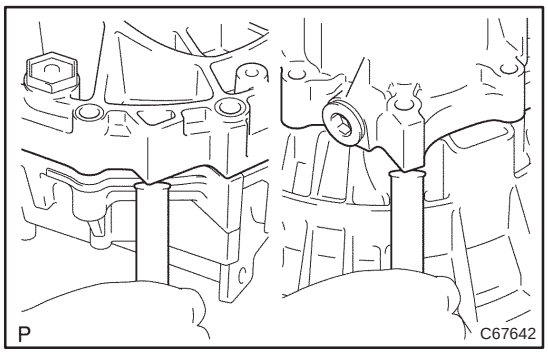


(d) Using a magnetic finger, remove the seat, spring and ball from the front transaxle case.

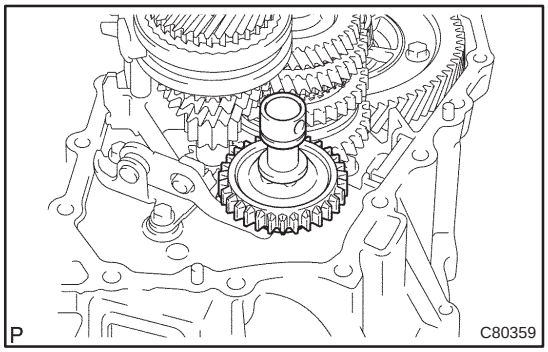


30. REMOVE LOCK BALL ASSY NO.2

(a) Using a hexagon wrench, remove the lock ball assy No.2 from the manual transmission case.

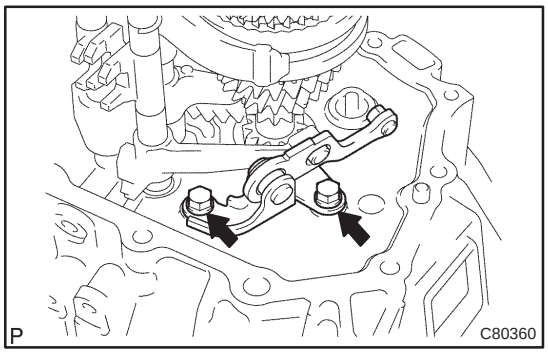


31. REMOVE MANUAL TRANSMISSION CASE

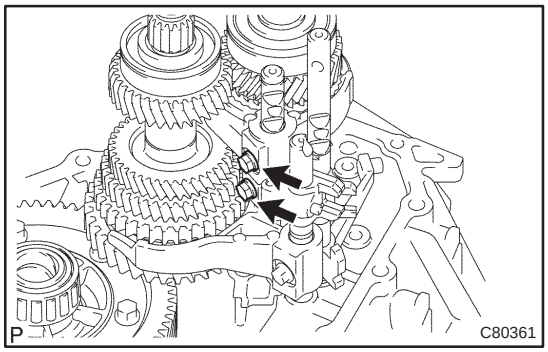


(a) Remove the 3 bolts from the front transaxle case.

(b) Remove the 13 bolts from the manual transmission case.

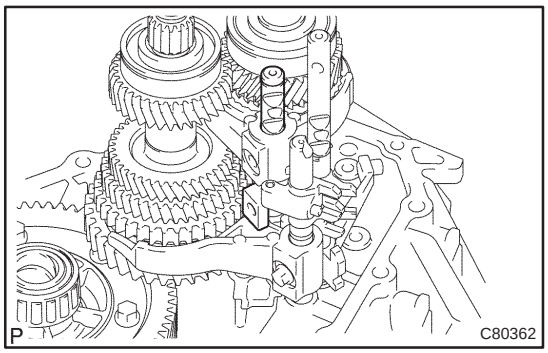


(c) Carefully tap the transmission case with a brass bar and hammer and remove it from the transaxle case.



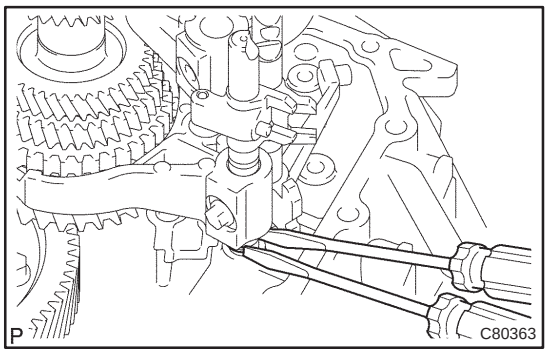
32. REMOVE REVERSE IDLER GEAR SUB–ASSY

(a) Remove the revers idler gear, thrust washer and reverse idler gear shaft from the front transaxle case.



33. REMOVE REVERSE SHIFT ARM BRACKET ASSY

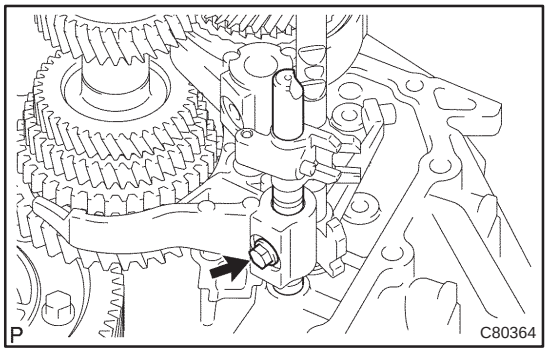
(a) Remove the 2 bolts and reverse shift arm bracket assy from the front transaxle case.



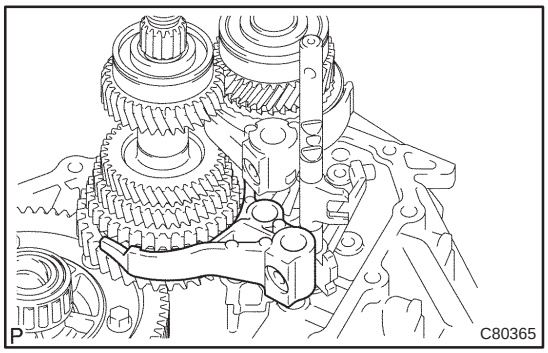
34. REMOVE GEAR SHIFT FORK SHAFT NO.2

(a) Remove the 2 bolts from the gear shift fork No.2 and gear shift head No.1.

(b) Remove the gear shift fork shaft No.2 and gear shift head No.1 from the front transaxle case.

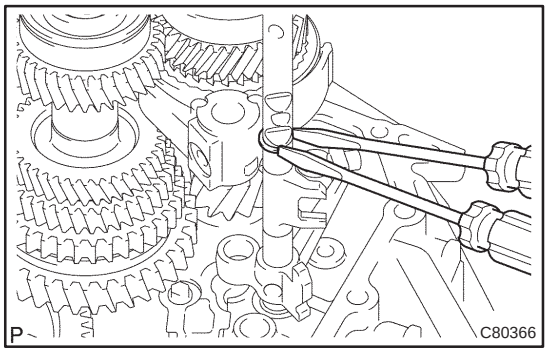


35. REMOVE GEAR SHIFT FORK SHAFT NO.1



(a) Using 2 screwdrivers and a hammer, tap out the snap rings.

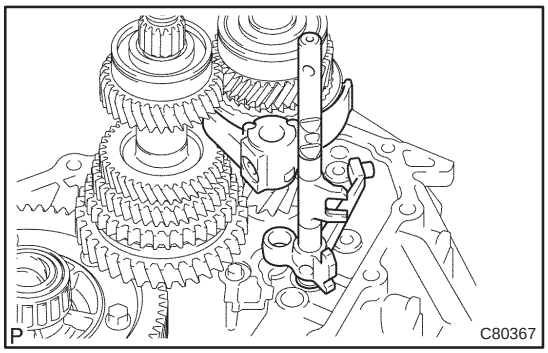
HINT:



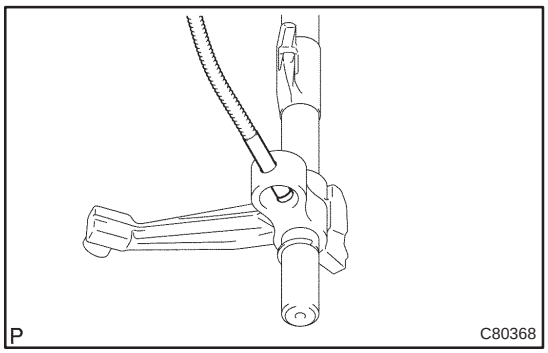
Using a shop rug to prevent the snap ring from being scattered.

(b) Remove the shift fork set bolt and gear shift fork shaft No.1 from the gear shift fork No.1.

(c) Remove the shift fork No.1.

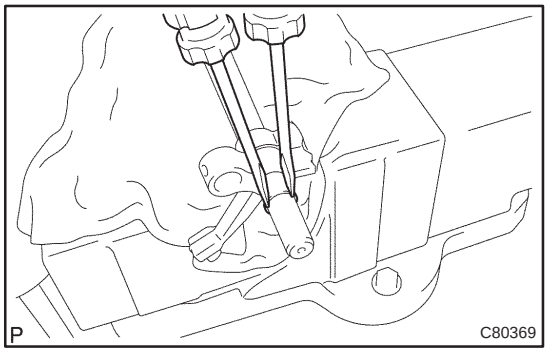


36. REMOVE GEAR SHIFT FORK SHAFT NO.3



(a) Using 2 screwdrivers and a hammer, tap out the snap ring from the gear shift fork shaft No.3.

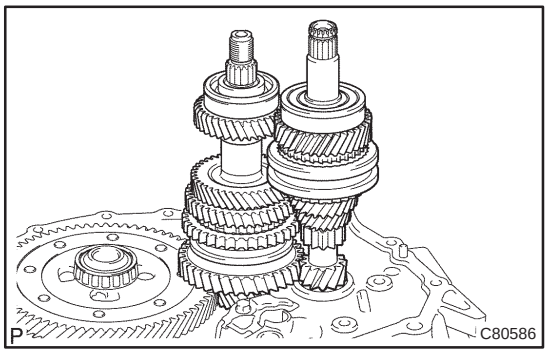
HINT:



Using a shop rug to prevent the snap ring from being scattered.

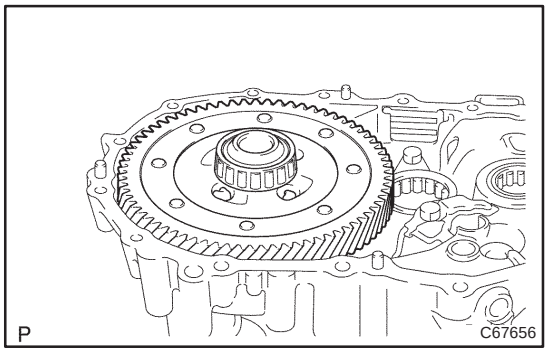
(b) Remove the shift fork shaft No.3, reverse shift fork and gear shift fork No.2 from the manual transaxle case.

(c) Using a magnetic finger, remove the 2 reverse shift fork balls from the reverse shift fork.



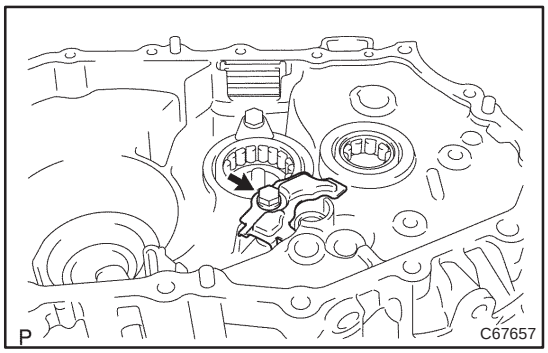
(d) Using 2 screwdrivers and a hammer, tap out the snap ring from the shift fork shaft No.3.

HINT:



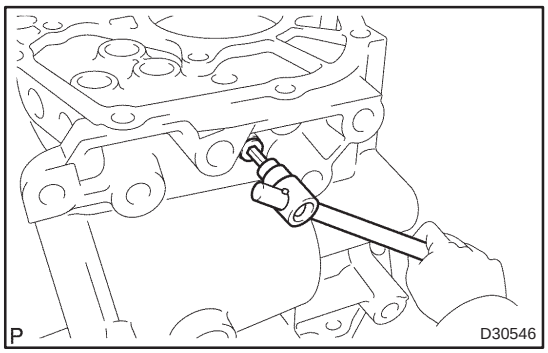
Using a shop rug to prevent the snap ring from being scattered.

(e) Remove the reverse shift fork from the gear shift fork shaft No.3.



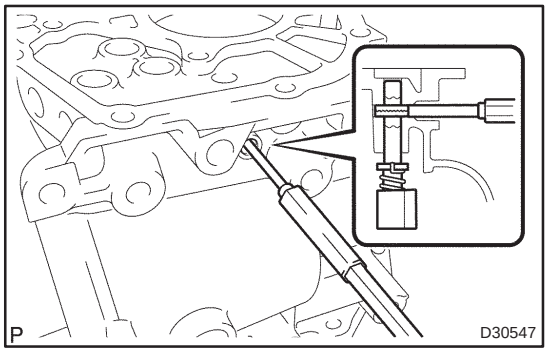
37. REMOVE INPUT SHAFT ASSY

(a) Remove the input shaft assy and output shaft assy from the front transaxle case.



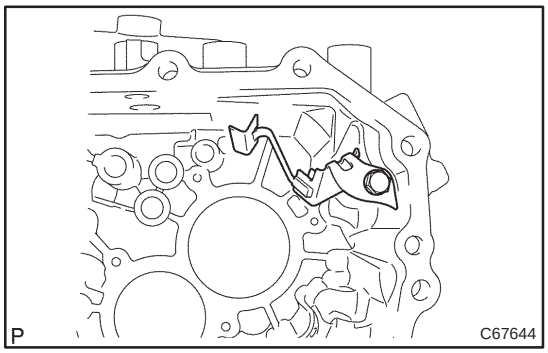
38. REMOVE DIFFERENTIAL CASE ASSY

(a) Remove the differential case assy from the front transaxle case.



39. REMOVE MANUAL TRANSAXLE CASE RECEIVER

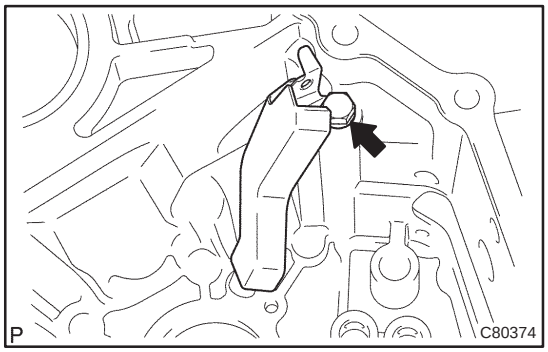
(a) Remove the bolt and manual transaxle case receiver from the front transaxle case.



40. REMOVE REVERSE RESTRICT PIN ASSY

(a) Using a hexagon wrench, remove the reverse restrict pin plug from the manual transmission case.

(b) Using a pin punch (ϕ 5 mm) and hammer, drive out the slotted spring pin and reverse restrict pin assy from the manual transmission case.

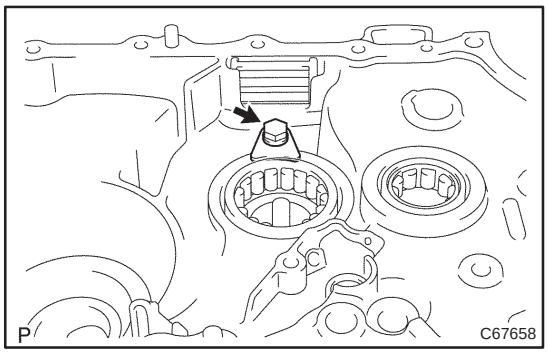


41. REMOVE OIL RECEIVER PIPE NO.1 (MTM)

(a) Remove the bolt and oil receiver pipe No.1 from the manual transmission case.

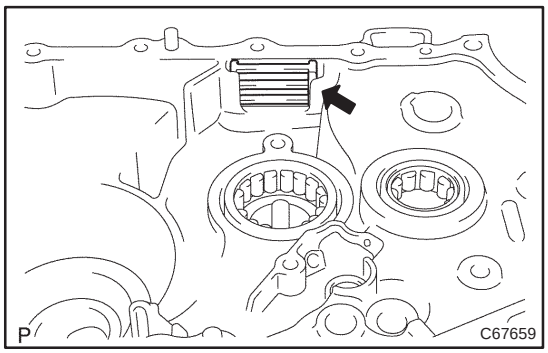
NOTICE:

Be careful not to damage the oil receiver pipe No.1.



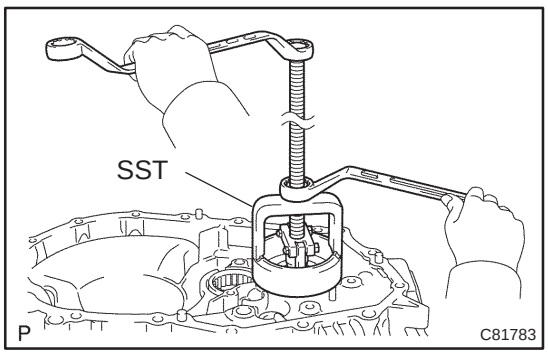
42. REMOVE OIL RECEIVER PIPE NO.2 (MTM)

(a) Remove the bolt and oil receiver pipe No.2 from the manual transmission case.



NOTICE:

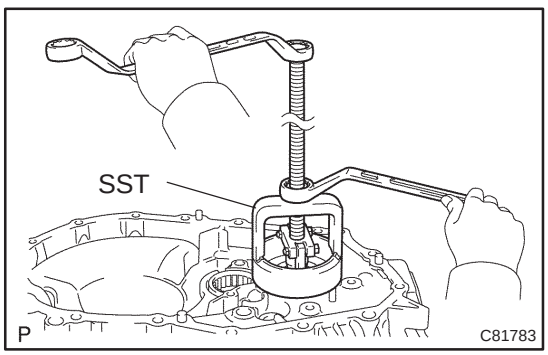
Be careful not to damage the oil receiver pipe No.2.



43. REMOVE BEARING LOCK PLATE

(a) Remove the bolt and bearing lock plate from the front transaxle case.

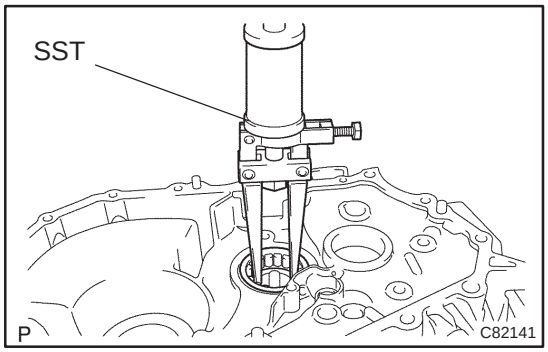
44. REMOVE TRANSMISSION MAGNET



(a) Remove the transmission magnet from the front transaxle case.

45. REMOVE INPUT SHAFT FRONT BEARING

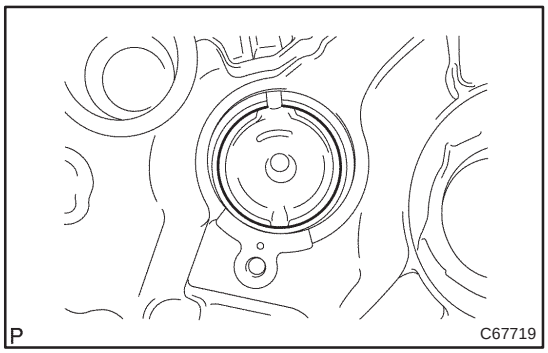
(a) Using SST, remove the input shaft front bearing from the front transaxle case.



SST 09612–65014 (09612–01050, 09612–01060)

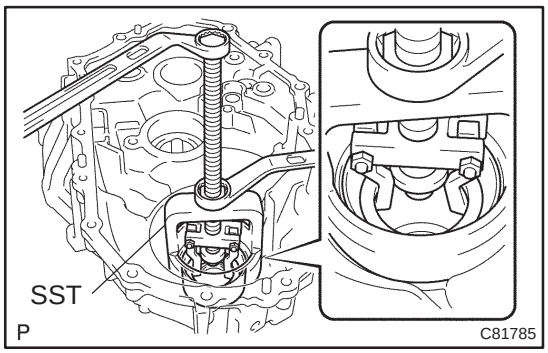
46. REMOVE FRONT TRANSAXLE CASE OIL SEAL

(a) Using SST, remove the front transaxle case oil seal from the front transaxle case.



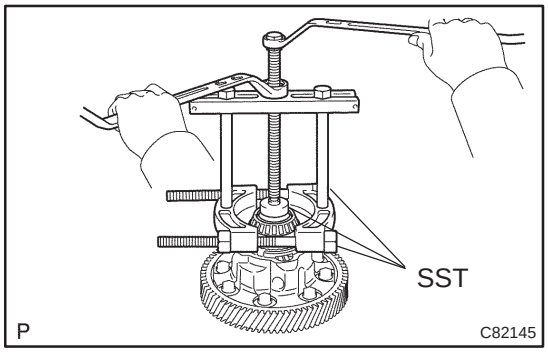
SST 09612–65014 (09612–01040, 09612–01050)

47. REMOVE OUTPUT SHAFT FRONT BEARING



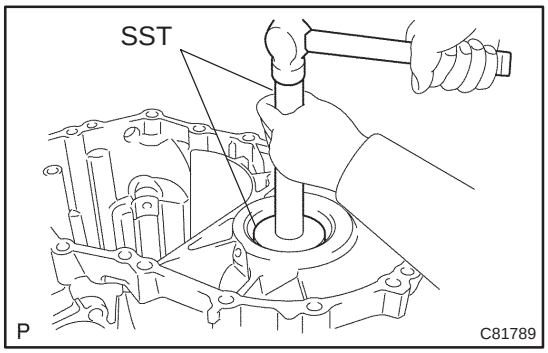
(a) Using SST, remove the output shaft front bearing from the front transaxle case.
SST 09308–00010

NOTICE:
Do not apply unreasonable force to the front transaxle case when installing it.



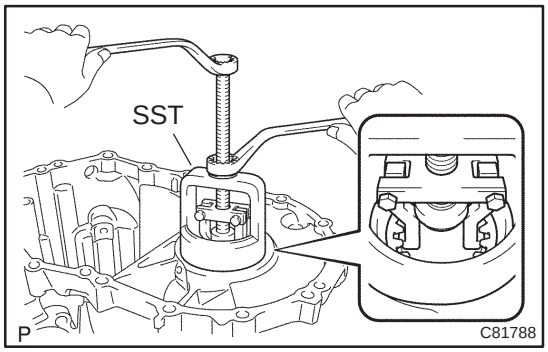
48. REMOVE OUTPUT SHAFT (MTM) COVER

(a) Remove the output shaft cover from the front transaxle case.



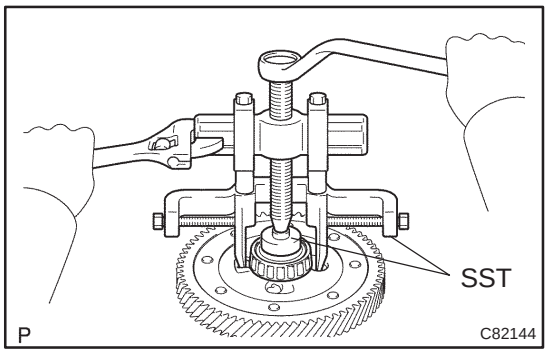
49. REMOVE FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case front tapered roller bearing (outer race) and shim from the front transaxle case.
SST 09612–65014 (09612–01040, 09612–01050),



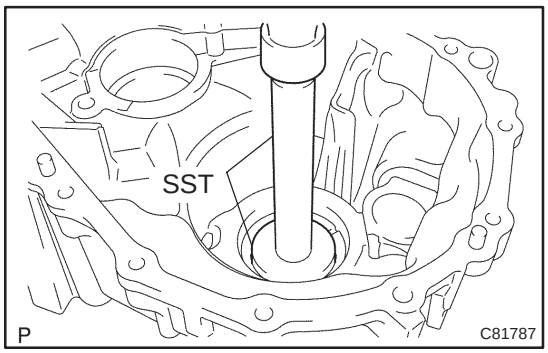
(b) Using SST, remove the front differential case front tapered roller bearing (inner race) from the front differential case.
SST 09950–00020, 09950–00030, 09950–40011 (09957–04010), 09950–60010 (09951–00360)

NOTICE:
Be careful not to damage bearing.



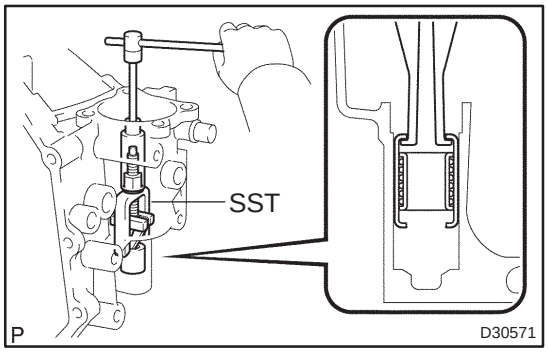
50. REMOVE TRANSAXLE CASE OIL SEAL

(a) Using SST and hammer, remove the transaxle case oil seal from the front transaxle case.
SST 09950–60010 (09951–00530), 09950–70010 (09951–07150)



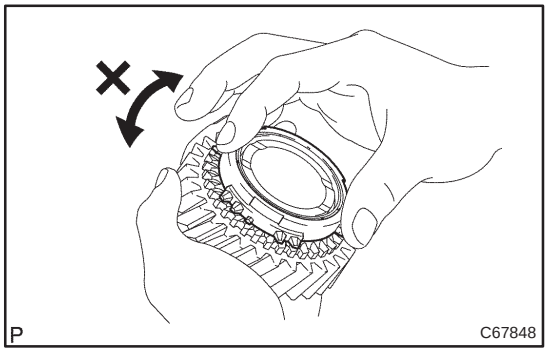
51. REMOVE FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case rear tapered roller bearing (outer race) and shim from the transmission case.
SST 09612–65014 (09612–01040, 09612–01050)



(b) Using SST and hammer, remove the front differential case rear tapered roller bearing (inner race) from the front differential case.
SST 09950–40011 (09951–04010, 09952–04010, 09953–04020, 09954–04010, 09955–04061, 09957–04010, 09958–04011), 09950–60010 (09951–00360)

NOTICE:
Be careful not to damage bearing.

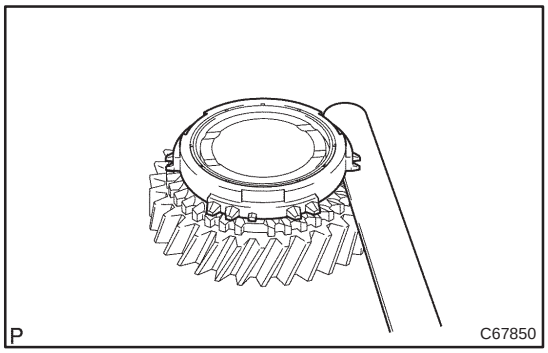


52. REMOVE TRANSMISSION CASE OIL SEAL

(a) Using SST and hammer, drive out the transmission case oil seal from the manual transmission case.
SST 09950–60010 (09951–00600), 09950–70010 (09951–07100)

53. REMOVE SHIFT & SELECT LEVER SHAFT NEEDLE ROLLER BEARING

(a) Using SST, remove the shift & select lever shaft needle roller bearing.
SST 09319–60020

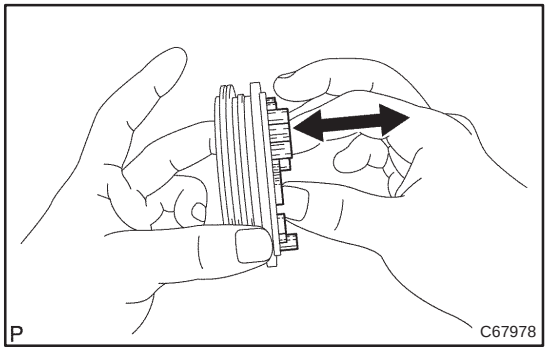


54. INSPECT SYNCHRONIZER RING NO.3

(a) Check for wear or damage.
(b) Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the gear cone, check that the ring locks.

If the braking effect is insufficient, apply a small amount of the fine lapping compound between the synchronizer ring and gear cone. Lightly rub the synchronizer ring and gear cone together.

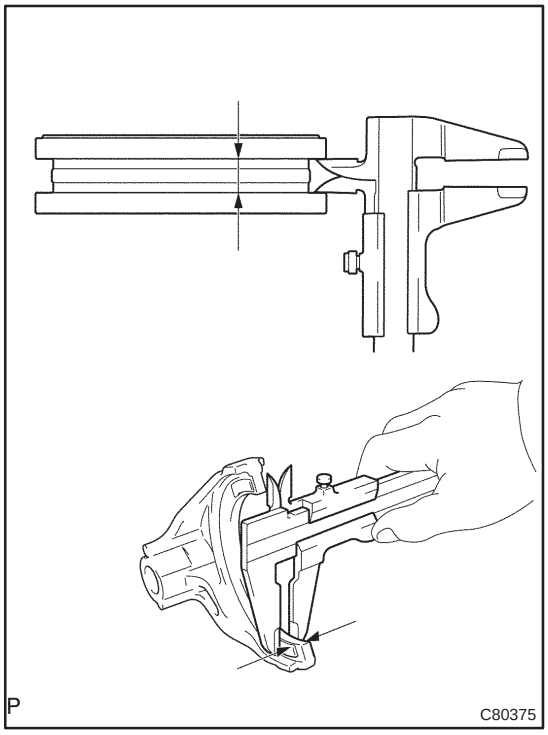
NOTICE:
Ensure the fine lapping compound is completely washed off after rubbing.



(c) Check again the breaking effect of the synchronizer ring.

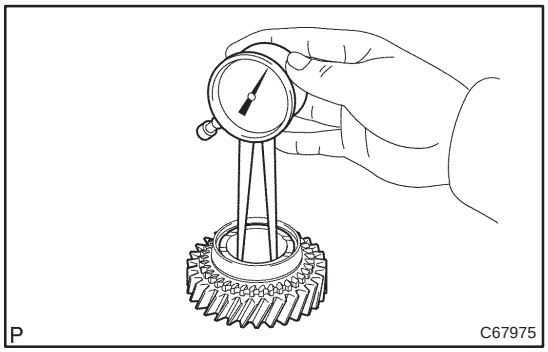
(d) Using a feeler gauge, measure the clearance between the synchronizer ring back and gear spline end.
Standard clearance:
0.75 – 1.65 mm (0.0295 – 0.0649 in.)
Minimum clearance: 0.75 mm (0.0295 in.)

If the clearance is less than minimum, replace the synchronizer ring and gear cone by applying a small amount of the fine lapping compound.



NOTICE:
Ensure the fine lapping compound is completely washed off after rubbing.

55. INSPECT TRANSMISSION HUB SLEEVE NO.3

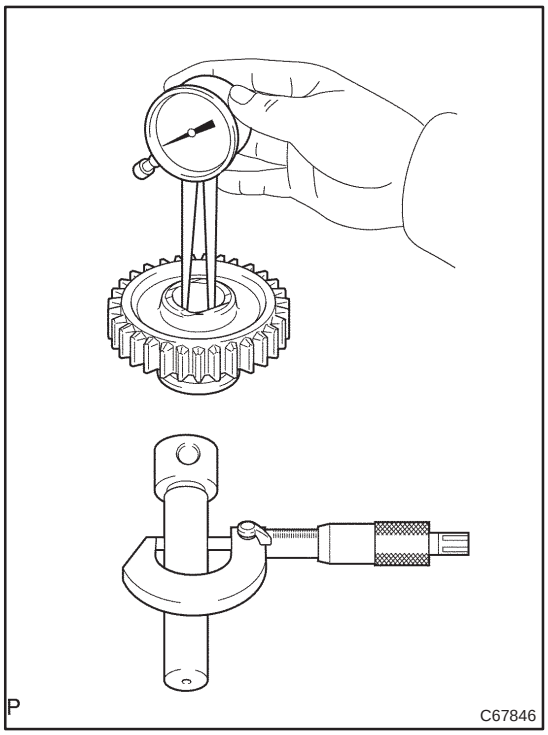


(a) Check the sliding condition between the transmission hub sleeve No.3 and transmission clutch hub No.3.

(b) Check that spline gear's of the transmission hub sleeve No.3 is not worn down.

(c) Using a vernier calipers, inspect the transmission hub sleeve No.3 and gear shift fork No.3 as shown in the illustration.
Standard clearance:
0.3 – 0.5 mm (0.0012 – 0.0020 in.)

If the clearance exceeds the standard clearance, replace the transmission hub sleeve No.3 and gear shift fork No.3.



56. INSPECT 5TH GEAR

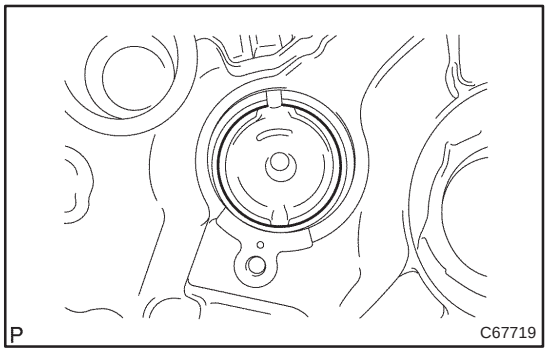
(a) Using a caliper gauge, inspect 5th gear as shown in the illustration.

Standard clearance:
29.915 – 29.931 mm (1.1778 – 1.1783 in.)

If the clearance exceeds the maximum, replace the 5th gear.

57. INSPECT REVERSE IDLER GEAR SUB–ASSY

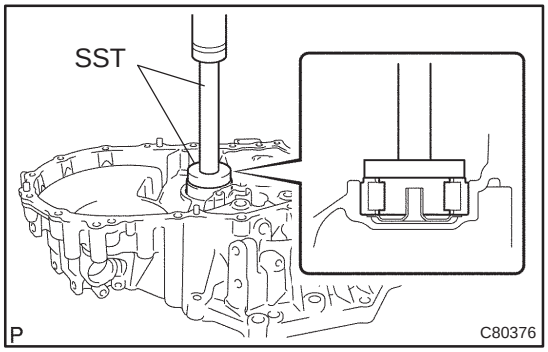
(a) Using a caliper gauge, inspect the reverse idler gear sub–assy as shown in the illustration.



Standard clearance:
18.040 – 18.058 mm (0.7102 – 0.7109 in.)
Maximum clearance:
18.058 mm (0.7109 in.)

If the clearance exceeds the maximum, replace idler gear.

(b) Using a micrometer, inspect the reverse idler gear shaft as shown in the illustration.

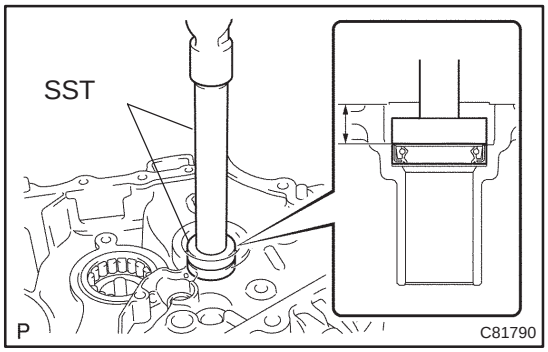


Standard outer diameter:
17.966 – 17.984 mm (0.7073 – 0.7080 in.)
Minimum outer diameter:
17.966 mm (0.7073 in.)

If the outer diameter exceeds the minimum, replace the reverse idler gear shaft.

58. INSTALL OUTPUT SHAFT (MTM) COVER

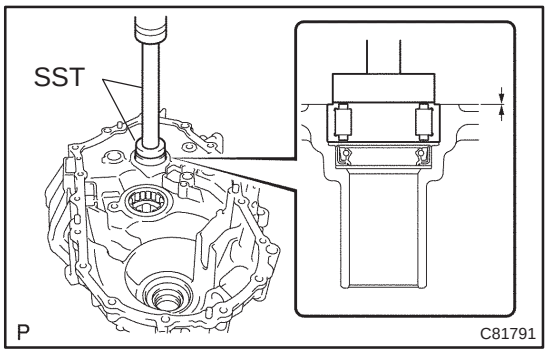
(a) Coat the output shaft cover with MP grease and install it to the front transaxle case.



59. INSTALL OUTPUT SHAFT FRONT BEARING

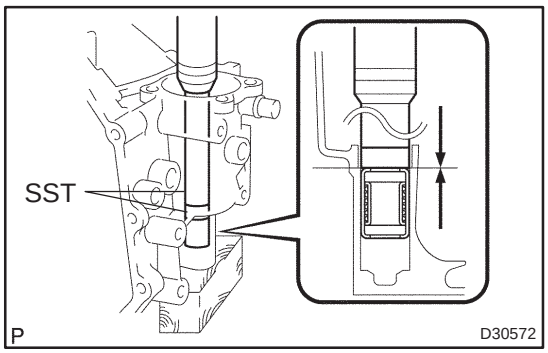
(a) Coat the new output shaft front bearing with gear oil, using SST and a press, install it.

SST 09950–60010 (09951–00550), 09950–70010 (09951–07150)



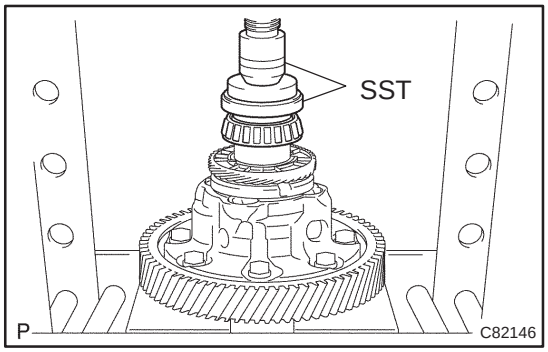
NOTICE:
Be careful not to damage the output shaft front bearing.

60. INSTALL FRONT TRANSAXLE CASE OIL SEAL



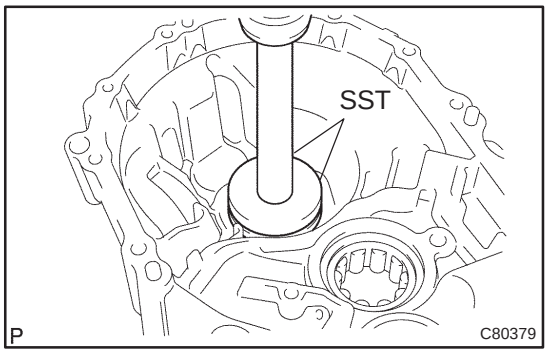
(a) Using SST and a hammer, install a new front transaxle case oil seal to the front transaxle case.
SST 09950–60010 (09951–00370), 09950–70010 (09951–07150)
Drive in depth: 15.6 – 16.0 mm (0.6141 – 0.6299 in.)

(b) Coat the lip of the front transaxle case oil seal with MP grease.



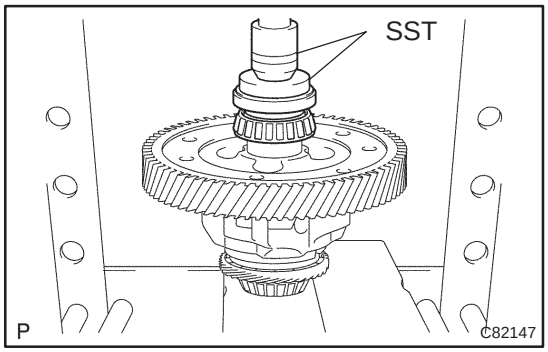
61. INSTALL INPUT SHAFT FRONT BEARING

(a) Coat the new input shaft front bearing with MP grease, using SST and a press, install it to the front transaxle case.
SST 09950–60010 (09951–00420), 09950–70010 (09951–07150)
Drive in depth: 0 – 0.3 mm (0 – 0.0118 in.)



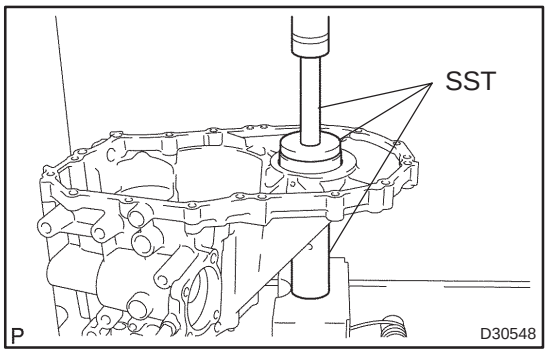
62. INSTALL SHIFT & SELECT LEVER SHAFT NEEDLE ROLLER BEARING

(a) Using SST, install the shift & select lever shaft needle roller bearing.
SST 09950–60010 (09951–00220), 09950–70010 (09951–07100)
Drive in depth: 0 – 0.5 mm (0 – 00020 in.)



63. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case front tapered roller bearing (inner race) to the front differential case.
SST 09350–32014 (09351–32120), 09950–60010 (09951–00530)

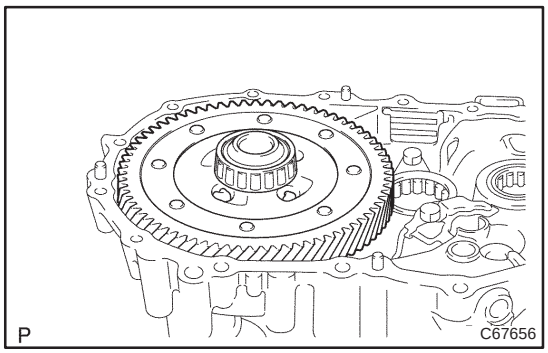


(b) Using SST and a press, install the front differential case front tapered roller bearing (outer race) with shim to the front transaxle case.
SST 09950–60020 (09951–00680), 09950–70010 (09951–07150)

64. INSTALL FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install front differential case rear tapered roller bearing (inner race) to the front differential case.

SST 09350–32014 (09351–32120), 09950–60010 (09951–00530)

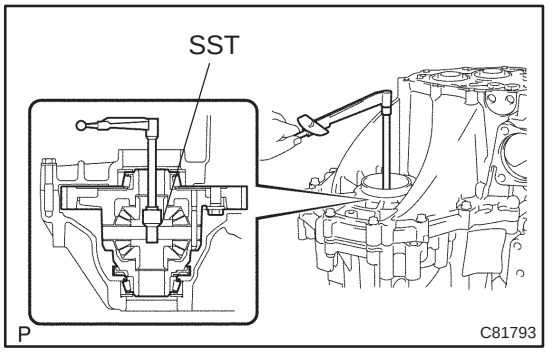


(b) Using SST and a press, front differential case rear tapered roller bearing (outer race) with shim to the transmission case.

SST 09309–36010, 09950–60020 (09951–00710), 09950–70010 (09951–07150)

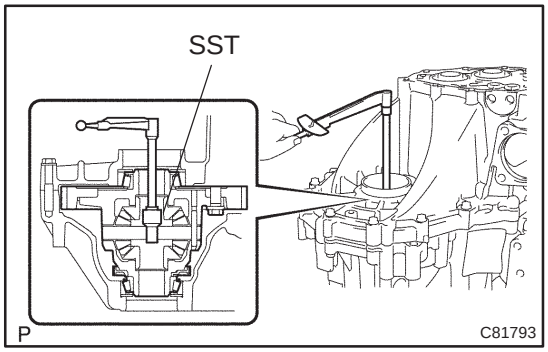
HINT:

Use a front differential case washer rear of the same thickness as the removed one.



65. ADJUST DIFFERENTIAL SIDE BEARING PRELOAD

(a) Coat the differential case assy with gear oil, install it to the front transaxle case.



(b) Install the manual transmission case with 16 bolts.

Torque: 29 N·m (300 kgf·cm, 22 ft·lbf)

(c) Using SST and a torque wrench, turn the differential case assy right and left 2 or 3 times to allow the bearings to settle.

SST 09564–32011

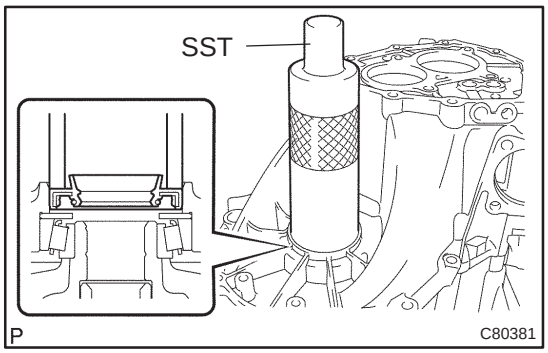
(d) Using SST and a torque wrench, measure the preload.

SST 09564–32011

Preload (at starting):

New bearing:

0.78 – 1.57 N·m (7.95 – 16.0 kgf·cm, 6.9 – 13.89 in.·lbf)

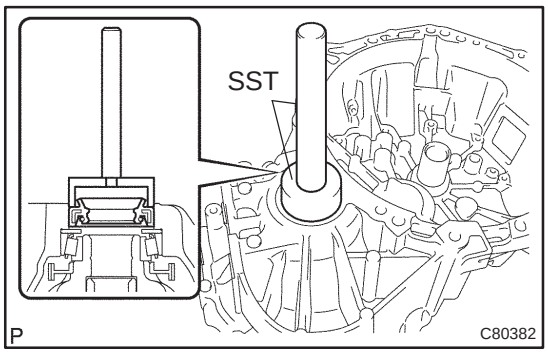


(e) Select another shim.

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
AA	2.10 (0.0827)	LL	2.60 (0.1024)
BB	2.15 (0.0846)	MM	2.65 (0.1043)
CC	2.20 (0.0866)	NN	2.70 (0.1063)

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
DD	2.25 (0.0886)	PP	2.75 (0.1083)
EE	2.30 (0.0906)	QQ	2.80 (0.1102)
FF	2.35 (0.0925)	RR	2.85 (0.1122)
GG	2.40 (0.0945)	SS	2.90 (0.1142)
HH	2.45 (0.0965)	TT	2.95 (0.1161)
JJ	2.50 (0.0984)	UU	3.00 (0.1181)
KK	2.55 (0.1004)	–	–

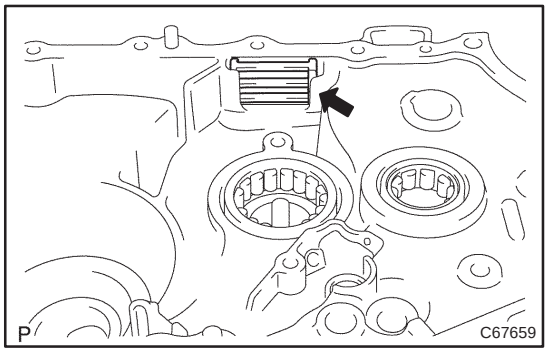
(f) Remove the 16 bolts and manual transmission case.



(g) Remove the differential case assy.

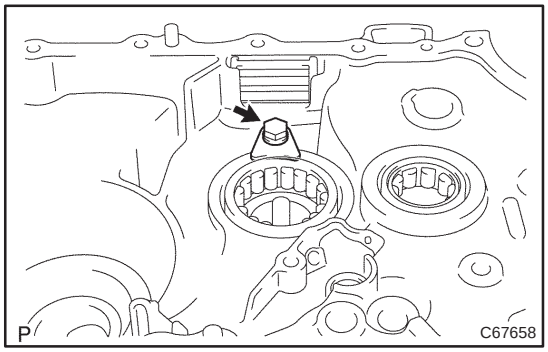
66. INSTALL TRANSMISSION CASE OIL SEAL

(a) Using SST and a hammer, install the transmission case oil seal to the manual transmission case.
SST 09316–60011 (09316–00011)
Drive in depth:
9.6 – 10.2 mm (0.3779 – 0.4015 in.)



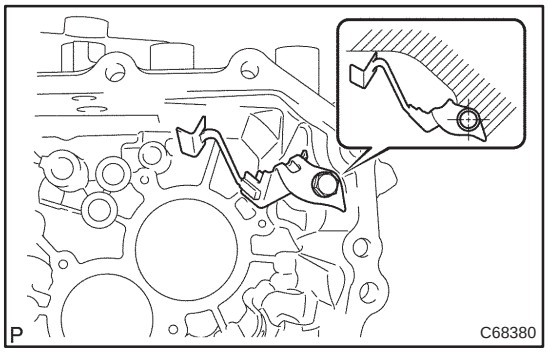
(b) Coat the lip of the front transmission case oil seal with MP grease.

67. INSTALL TRANSAXLE CASE OIL SEAL



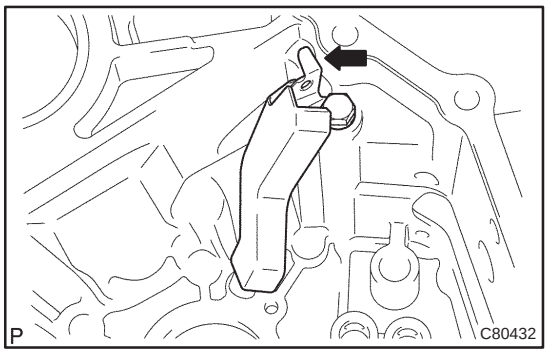
(a) Using SST and a hammer, install the transaxle case oil seal to the front transaxle case.
Drive in depth: 1.6 – 2.2 mm (0.0629 – 0.0866 in.)
SST 09710–20011 (09710–06071), 09950–70010 (09951–07150)

(b) Coat the lip of the front transaxle case oil seal with MP grease.



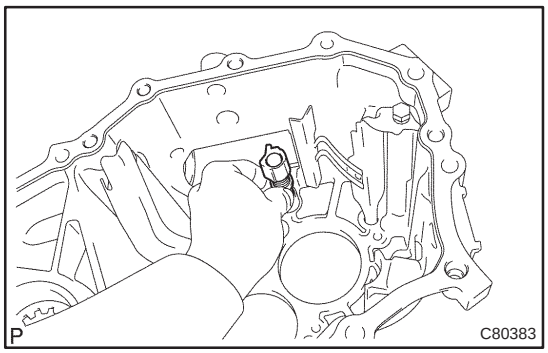
68. INSTALL TRANSMISSION MAGNET

(a) Clean the transmission magnet to the front transaxle case.



69. INSTALL BEARING LOCK PLATE

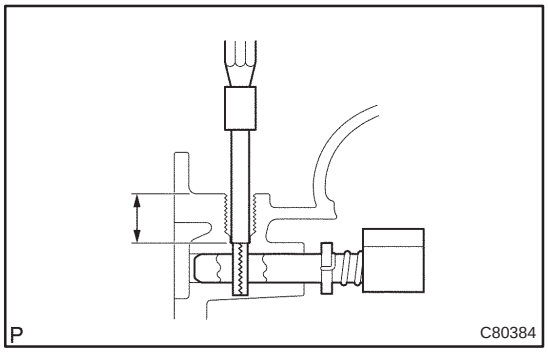
(a) Install the bearing lock plate with bolt.
Torque: 11 N·m (115 kgf·cm, 8.3 ft·lbf)



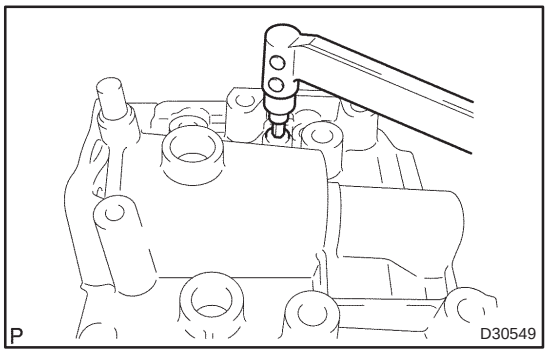
70. INSTALL OIL RECEIVER PIPE NO.1 (MTM)

(a) Install the oil receiver pipe No.1 with bolt to the manual transmission case.
Torque: 17 N·m (175 kgf·cm, 13 ft·lbf)

71. INSTALL OIL RECEIVER PIPE NO.2 (MTM)



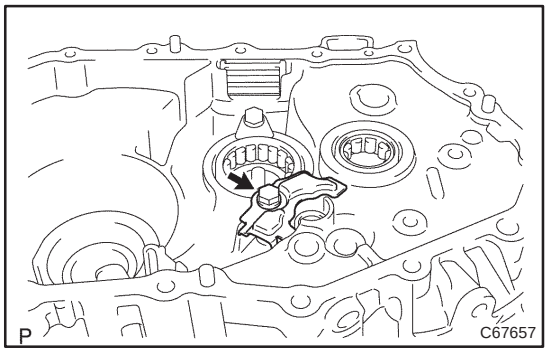
(a) Install the oil receiver pipe No.2 with bolt to the manual transmission case.
Torque: 17 N·m (175 kgf·cm, 13 ft·lbf)



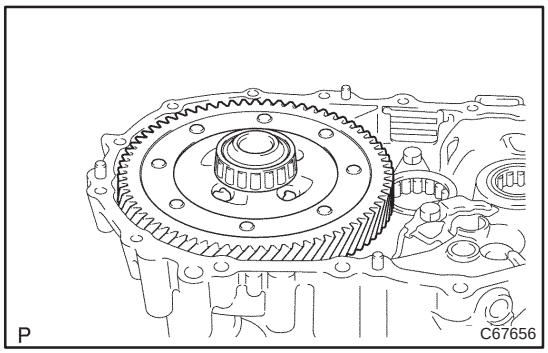
72. INSTALL REVERSE RESTRICT PIN ASSY

(a) Install the reverse restrict pin assy to the manual transmission case.

HINT:
Do not set the reverse restrict pin assy in incorrect orientation.

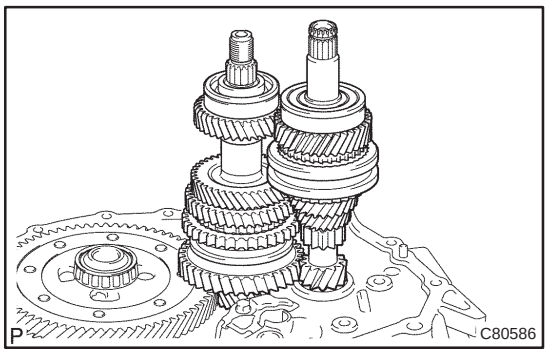


(b) Using a pin punch (ϕ 5 mm) and hammer, install the slotted pin to the restrict pin assy.
Drive in depth: 15.5 – 16.5 mm (0.6102 – 0.6496 in.)



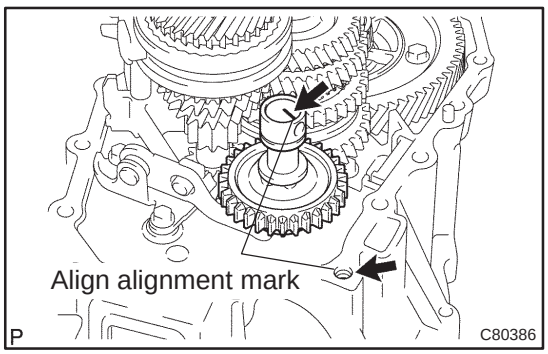
(c) Apply sealant to the reverse restrict pin plug.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent

(d) Using a hexagon wrench and torque wrench install the reverse restrict pin plug to the manual transmission case.
Torque: 13 N·m (130 kgf·cm, 9.3 ft·lbf)



73. INSTALL MANUAL TRANSAXLE CASE RECEIVER

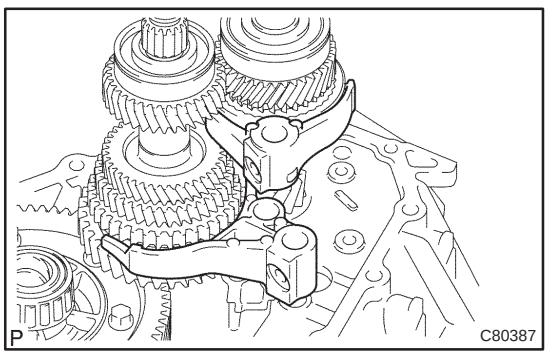
(a) Install the manual transaxle case receiver with bolt to the front transaxle case.
Torque: 11 N·m (115 kgf·cm, 8.3 ft·lbf)



74. INSTALL DIFFERENTIAL CASE ASSY

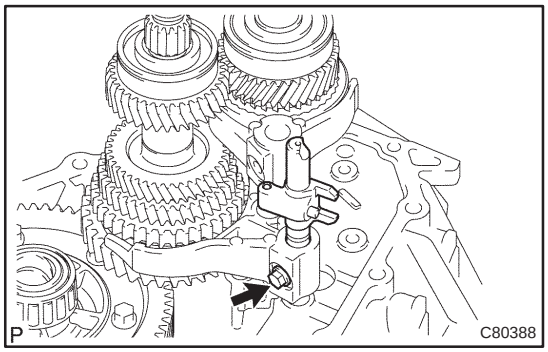
(a) Coat the differential case tapered roller bearing with gear oil, install them to the front transaxle case.

75. INSTALL INPUT SHAFT ASSY



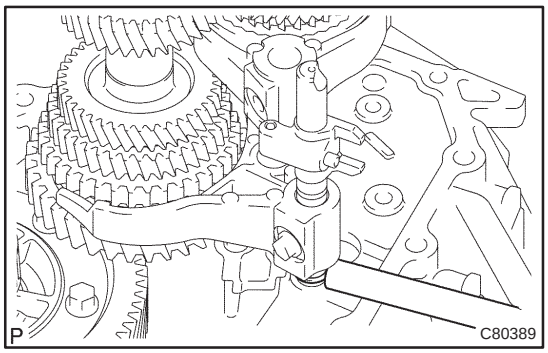
(a) Coat sliding and rotating surface of the input and output shafts with gear oil, install them to the transaxle case.

76. INSTALL REVERSE IDLER GEAR SUB–ASSY

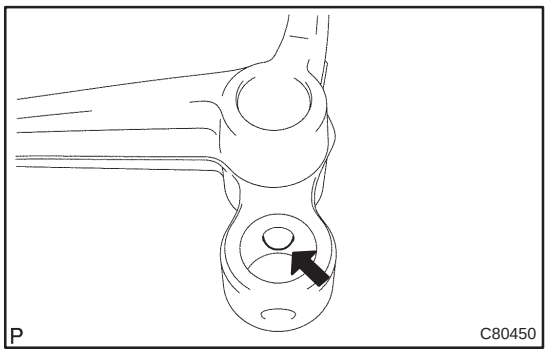


(a) Coat the reverse idler gear, shim and reverse idler gear shaft with gear oil, install them.

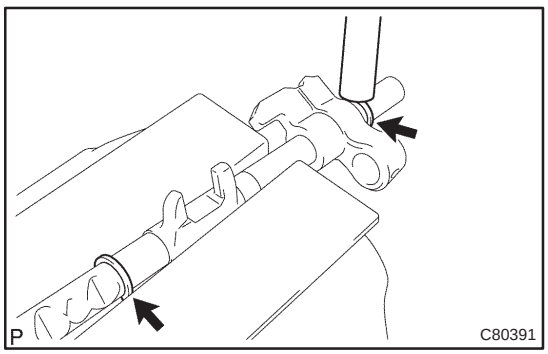
HINT:
Align the mark on the reverse idler gear shaft with the bolt hole shown in the illustration.



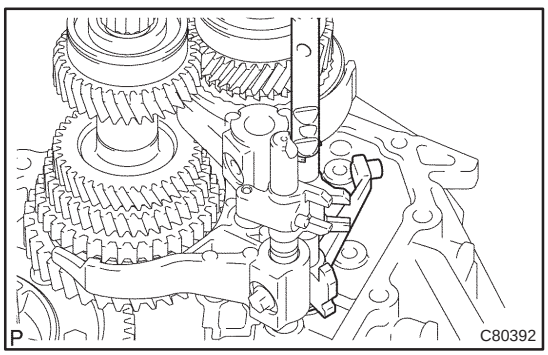
77. INSTALL GEAR SHIFT FORK SHAFT NO.1



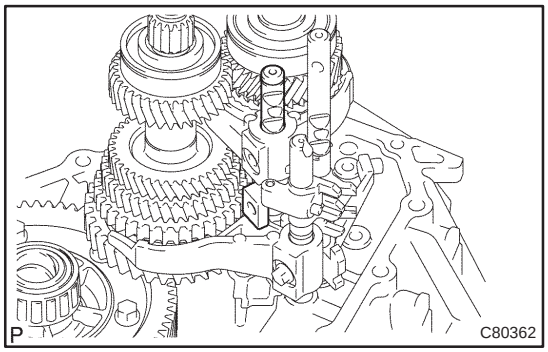
(a) Coat the gear shift fork No.1 and gear shift fork No.2 with gear oil, install them.



(b) Coat the gear shift fork shaft No.1 with gear oil, install it.
(c) Apply sealant to the shift fork lock bolt.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
(d) Install the gear shift fork lock bolt.
Torque: 16 N·m (160 kgf·cm, 12 ft·lbf)

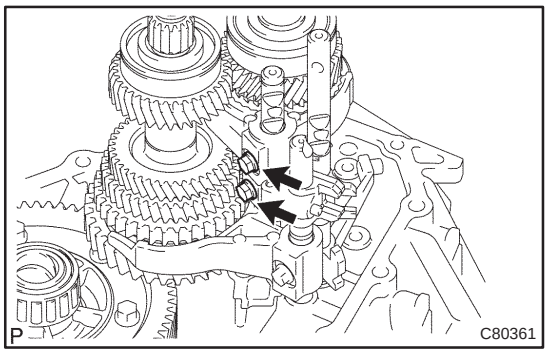


(e) Using a brass bar and hammer, install the shaft snap ring to the gear shift fork shaft No.1.

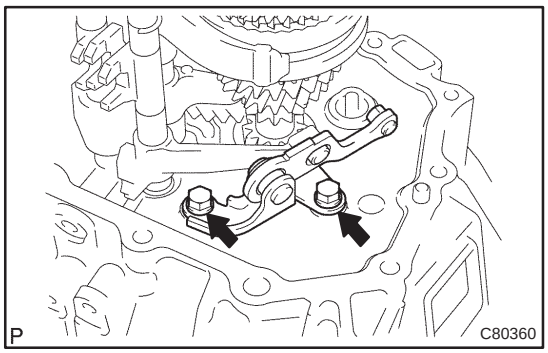


78. INSTALL GEAR SHIFT FORK SHAFT NO.3
(a) Coat the 2 shift fork balls with MP grease, install them to the reverse shift fork.
(b) Install reverse shift fork to the shift fork shaft No.3.

(c) Using a brass bar and hammer, install 2 shift fork shaft snap rings to the shift fork shaft No.3.

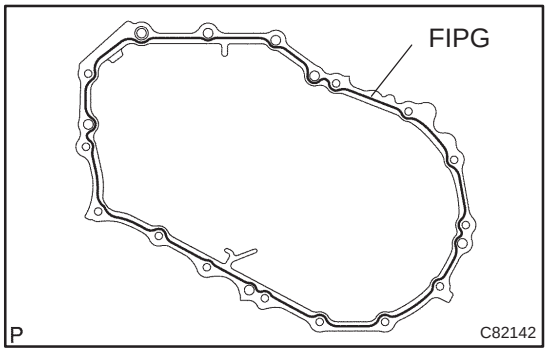


(d) Coat the shift fork shaft No.3 with gear oil, install it.



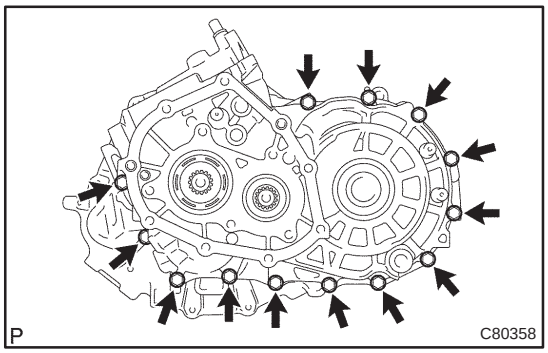
79. INSTALL GEAR SHIFT FORK SHAFT NO.2

(a) Coat the gear shift head No.1 and gear shift fork shaft No.2 with gear oil, install them.

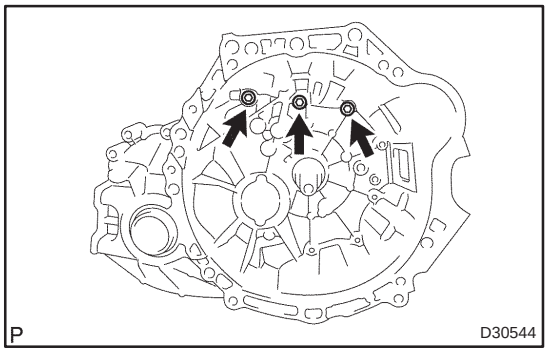


(b) Coat the 2 shift lock bolts with sealant, install them to the gear shift fork No.2 and shift head No.1.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 16 N·m (160 kgf·cm, 12 ft·lbf)

80. INSTALL REVERSE SHIFT ARM BRACKET ASSY

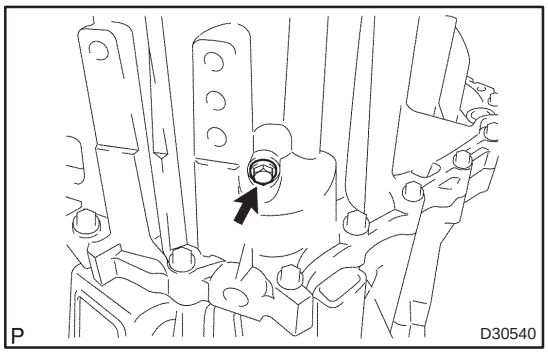


(a) Install the reverse shift arm bracket assy with 2 bolts to the front transaxle case.
Torque: 17 N·m (175 kgf·cm, 13 ft·lbf)

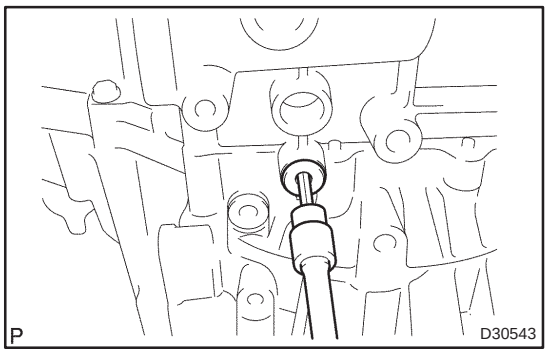


81. INSTALL MANUAL TRANSMISSION CASE

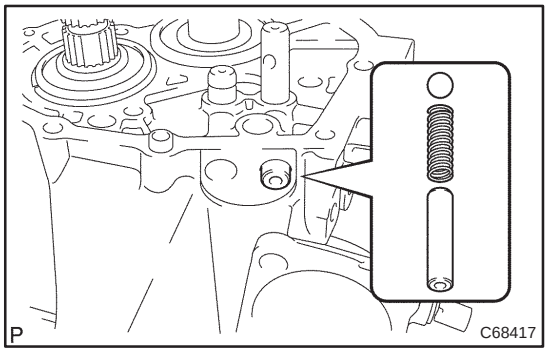
(a) Apply FIPG to the manual transmission case, as shown to the illustration.
FIPG:
Part No. 08826–00090, THREE BOND 1281 or equivalent



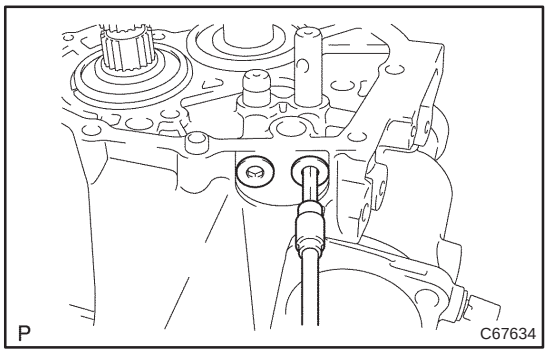
NOTICE:
Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be remove and reapplied.



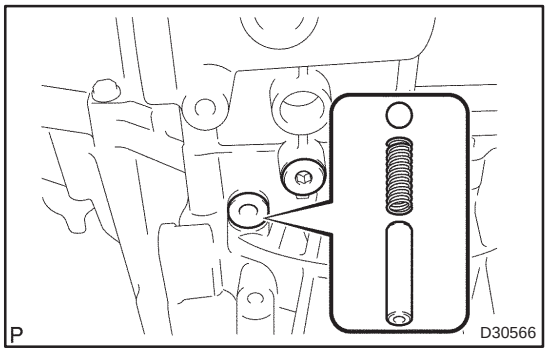
(b) Coat the 13 bolts with sealant, install to the manual transmission case.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 29 N·m (300 kgf·cm, 22 ft·lbf)



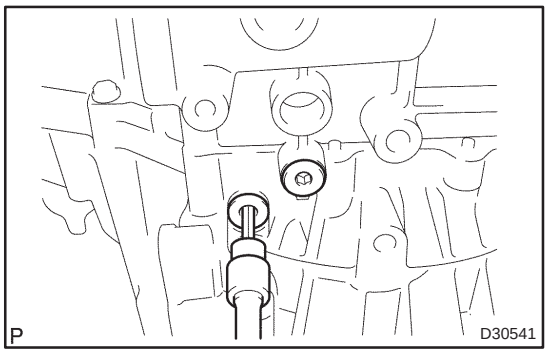
(c) Coat the 3 bolts with sealant, install to the front transaxle case.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 29 N·m (300 kgf·cm, 22 ft·lbf)



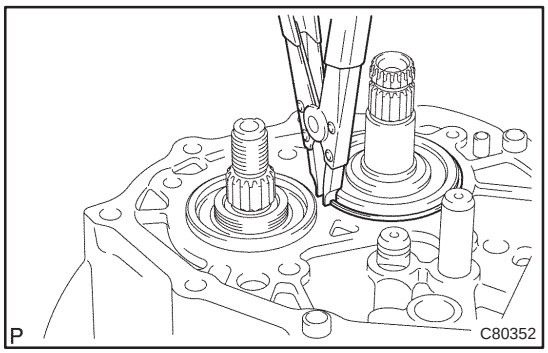
82. INSTALL REVERSE IDLER GEAR SHAFT BOLT
(a) Coat the reverse idler gear shaft bolt with sealant, install it with new gasket.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 29 N·m (300 kgf·cm, 22 ft·lbf)



83. INSTALL LOCK BALL ASSY NO.2
(a) Coat the lock ball assy No.2 with sealant, install it with a hexagon wrench.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

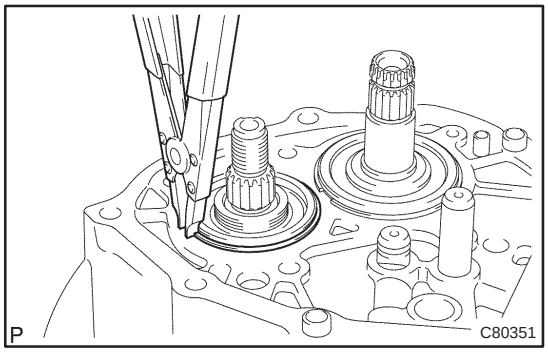


84. INSTALL SHIFT DETENT BALL
(a) Install the 2 shift detent balls, 2 shift detent ball springs with 2 shift detent ball spring seat No.1 to the manual transmission case.

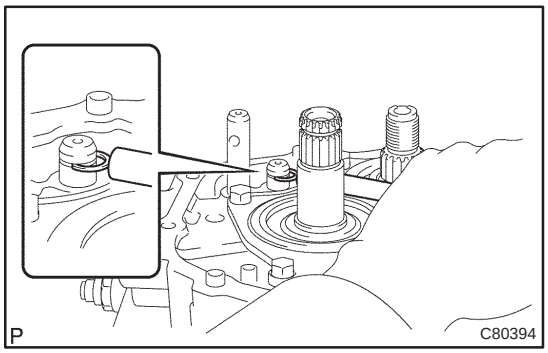


(b) Coat the 2 shift detent ball plugs with sealant, install them with a hexagon wrench.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

(c) Install the shift detent ball, shift detent ball compression spring and shift detent ball spring seat No.1 to the front transaxle case.

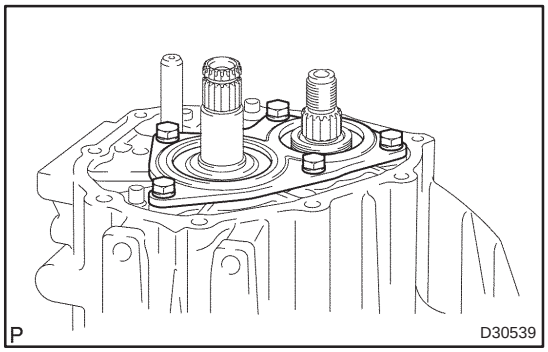


(d) Coat the shift detent ball plug with sealant, install it with using a hexagon wrench.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)



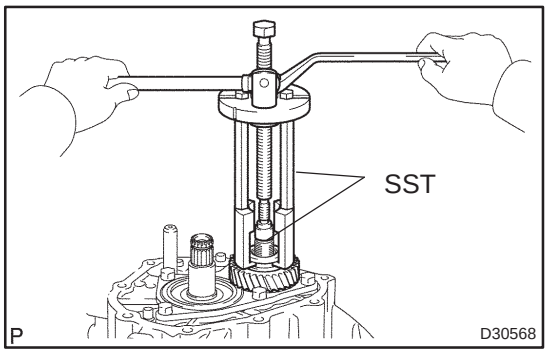
85. INSTALL INPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, install the input shaft rear bearing hole snap ring to the input shaft.



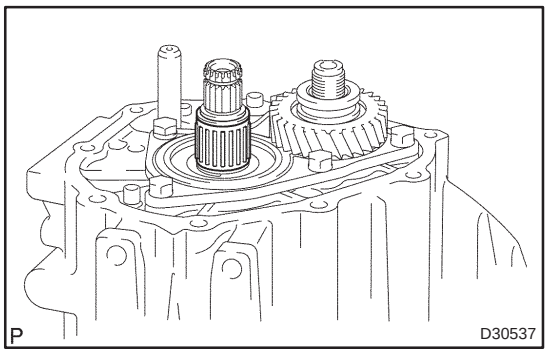
86. INSTALL OUTPUT SHAFT REAR BEARING HOLE SNAP RING

(a) Using a snap ring expander, install the output shaft rear bearing hole snap ring to the output shaft.



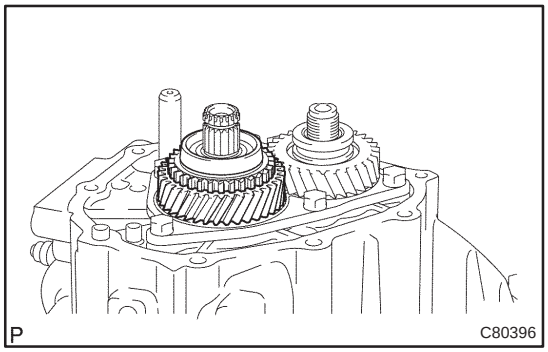
87. INSTALL SHIFT FORK SHAFT SHAFT SNAP RING

(a) Using a brass bar and hammer, install the shift fork shaft snap ring to the shift fork shaft No.2.



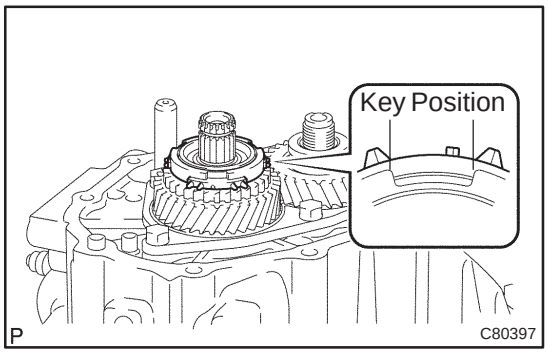
88. INSTALL BEARING RETAINER REAR (MTM)

(a) Coat the 5 bolts with sealant, install them and bearing retainer rear to the manual transmission case.
Torque: 27 N·m (280 kgf·cm, 20 ft·lbf)



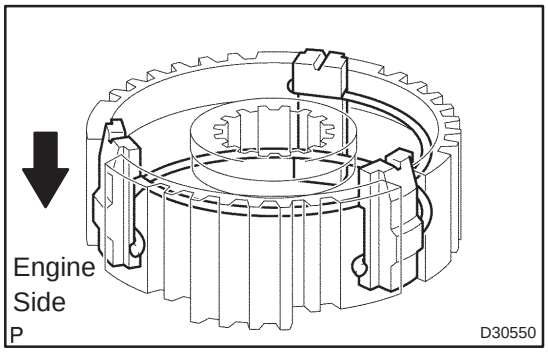
89. INSTALL 5TH DRIVEN GEAR

(a) Using SST, install the 5th driven gear to the output shaft.
SST 09950–30012 (09951–03010, 09953–03010, 09954–03010, 09955–03011, 09956–03020)



90. INSTALL 5TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 5th gear needle roller bearing and spacer with gear oil, install them to the input shaft.

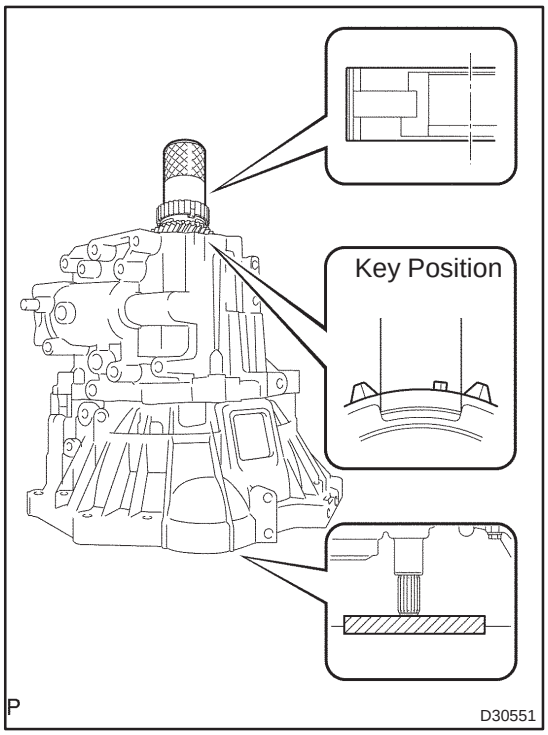


91. INSTALL 5TH GEAR

(a) Coat the 5th gear with gear oil, install it to the input shaft.

92. INSTALL SYNCHRONIZER RING NO.3

(a) Coat the synchronizer ring No.3 with gear oil, install it to the 5th gear.



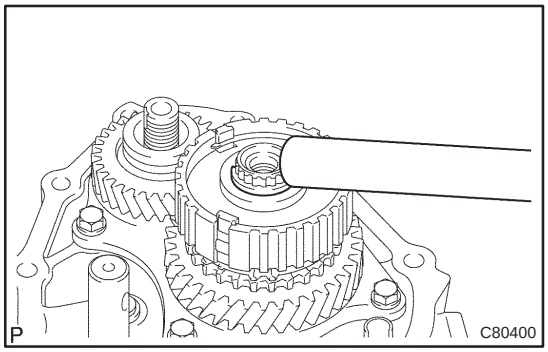
93. INSTALL TRANSMISSION CLUTCH HUB NO.3

(a) Install the 3 synchromesh shifting keys and 2 synchromesh shifting key springs to the transmission clutch hub No.3.

HINT:

Do not set both openings of the shifting key springs in the same position.

(b) Using SST and a hammer, install the transmission clutch hub No.3 to the input shaft.



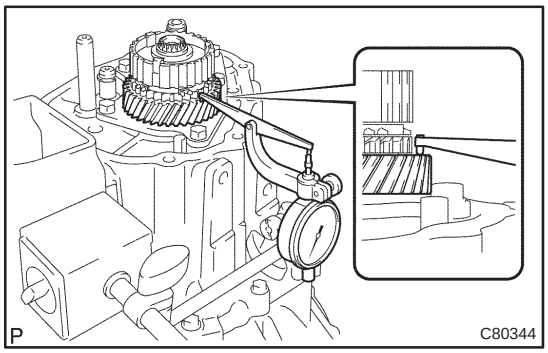
SST 09636–20010

NOTICE:

- **Make sure the direction of the transmission clutch hub No.3.**
- **Attach the transmission clutch hub No.3 with checking position of the spline on synchronizer ring and synchromesh fitting key No.3.**
- **Check that the 5th gear is rotating.**

HINT:

Place the suitable sized wooden block to supports the transaxle assy.

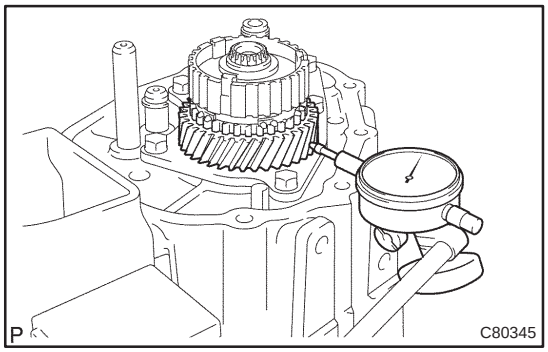


(c) Select a snap ring that will allow minimum axial play.

Clearance: 0.1 mm or less

Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
A	2.25 (0.0886)	E	2.49 (0.0980)
B	2.31 (0.0909)	F	2.55 (0.1004)
C	2.37 (0.0933)	G	2.61 (0.1028)
D	2.43 (0.0957)		

(d) Using a brass bar and hammer, install the snap ring to the input shaft.

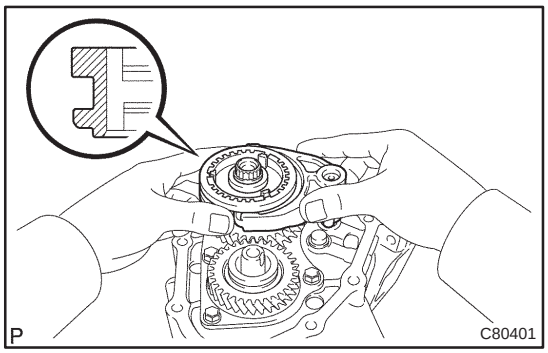


94. INSPECT 5TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, inspect the 5th gear thrust clearance.

Standard clearance:
0.1 – 0.57 mm (0.0039 – 0.02244 in.)
Maximum clearance:
0.57 mm (0.02244 in.)

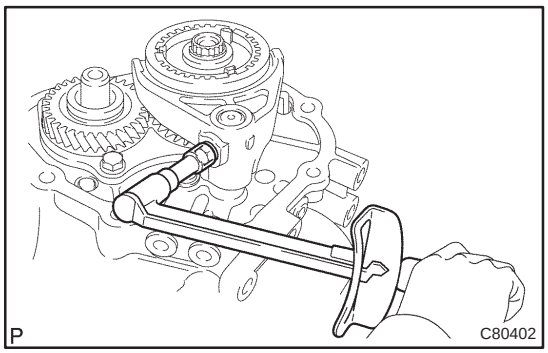
If the clearance exceeds the maximum, replace the gear, needle roller bearing or shaft.



95. INSPECT 5TH GEAR RADIAL CLEARANCE

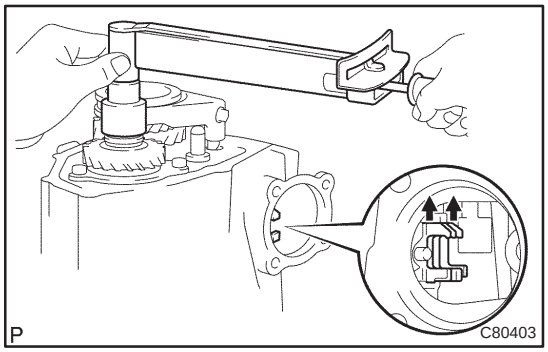
(a) Using a dial indicator, inspect the 5th gear radial clearance.

Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)



If the clearance exceeds the maximum, replace the gear, needle roller bearing or shaft.

96. INSTALL GEAR SHIFT FORK NO.3

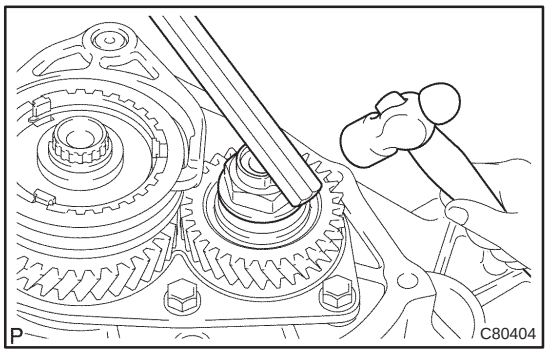


(a) Coat the transmission clutch hub sleeve No.3 with gear oil, install it and gear shift fork No.3 to the transmission clutch hub No.3.

HINT:
Do not set the transmission clutch hub No.3 in incorrect orientation.

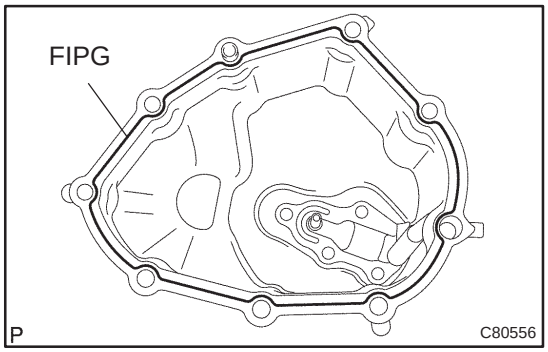
(b) Coat the gear shift fork lock bolt with sealant, install it to the gear shift fork No.3.

Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 16 N·m (160 kgf·cm, 12 ft·lbf)



97. INSTALL MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Engage the gear double meshing.



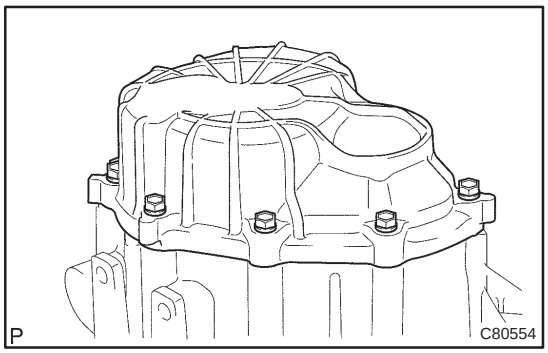
(b) Install the new manual transmission output shaft rear set nut.

Torque: 118 N·m (1200 kgf·cm, 87 ft·lbf)

(c) Using a chisel and hammer, stake the manual transmission output shaft rear set nut.

(d) Disengage the gear double meshing.

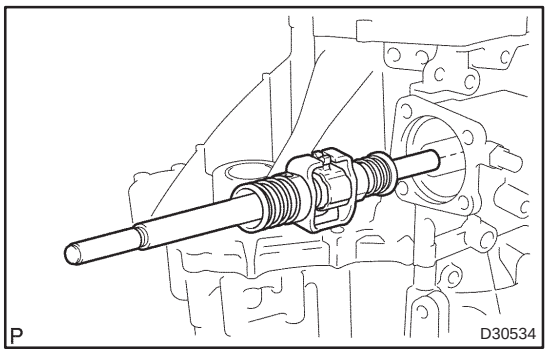
98. INSTALL MANUAL TRANSMISSION CASE COVER SUB–ASSY



(a) Apply FIPG to the transaxle case, cover as shown to the illustration.

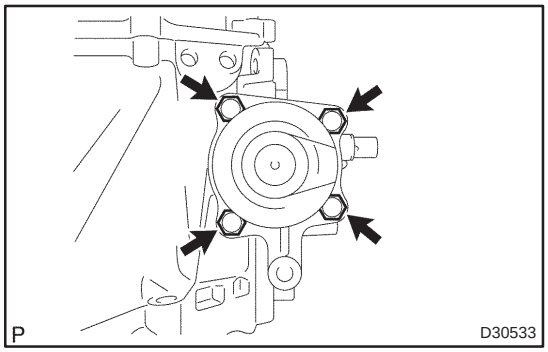
FIPG:

Part No. 08826–00090, THREE BOND 1281



NOTICE:

Parts must be assembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

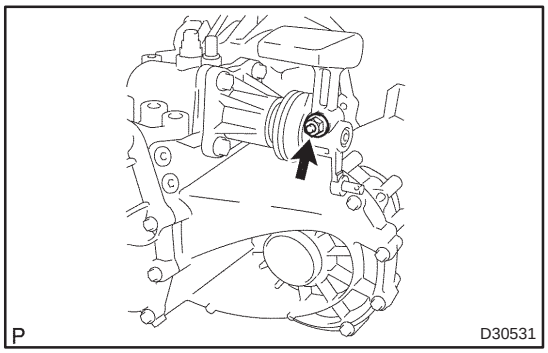


(b) Install the 9 bolts with manual transmission case cover to the manual transmission case.

Torque: 18 N·m (185 kgf·cm, 14 ft·lbf)

99. INSTALL SHIFT & SELECT LEVER SHAFT ASSY

(a) Coat the sift & select lever shaft assy with gear oil, install it to the manual transmission case.



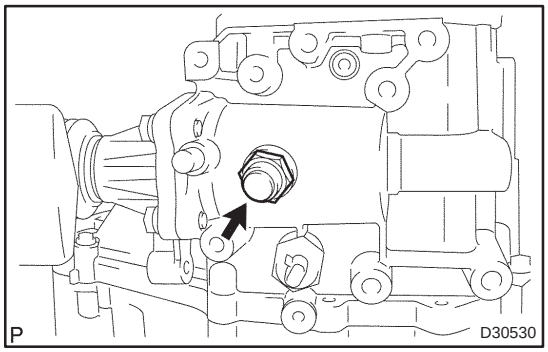
100. INSTALL CONTROL SHAFT COVER

(a) Coat the 4 bolts with sealant, install the new gasket, control shaft cover with the bolt.

Sealant:

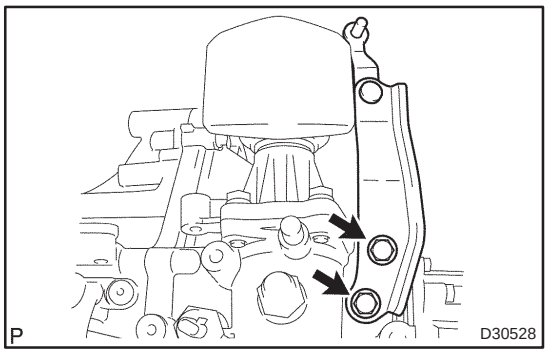
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent

Torque: 20 N·m (200 kgf·cm, 14 ft·lbf)



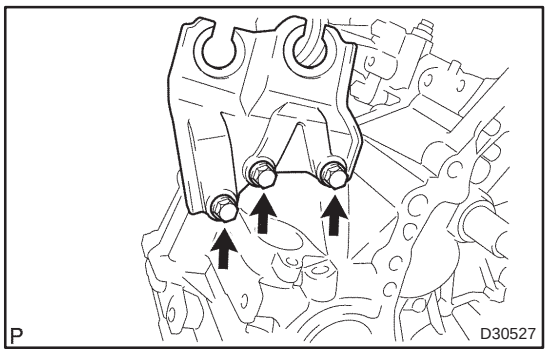
101. INSTALL CONTROL SHIFT LEVER

(a) Install the control shift lever with shift outer lever lever lock pin to the shift & select lever shaft assy.



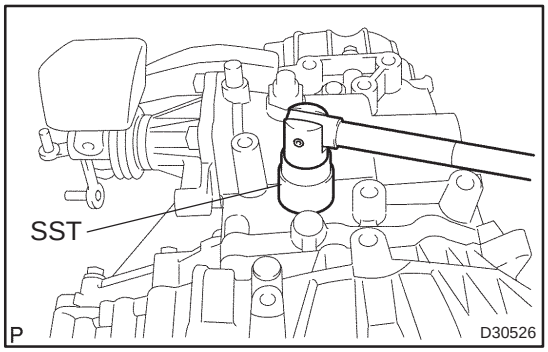
(b) Install the spring washer with nut.

Torque: 12 N·m (122 kgf·cm, 8.9 ft·lbf)



102. INSTALL LOCK BALL ASSY NO.1

(a) Coat the lock ball assy No.1 with sealant, install it to the manual transmission case.
Torque: 29 N·m (300 kgf·cm, 22 ft·lbf)
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent

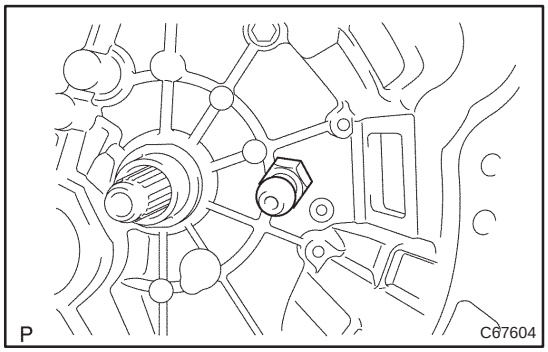


103. INSTALL SELECTING BELL CRANK ASSY

(a) Install the 2 bolts with selecting bell crank assy to the manual transmission case.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

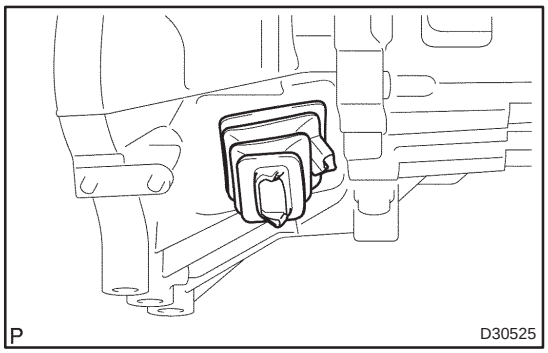
104. INSTALL FLOOR SHIFT CONTROL LEVER HOUSING SUPPORT BRACKET

(a) Install the 3 bolts with floor shift control lever housing support bracket to the front transaxle case.
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)



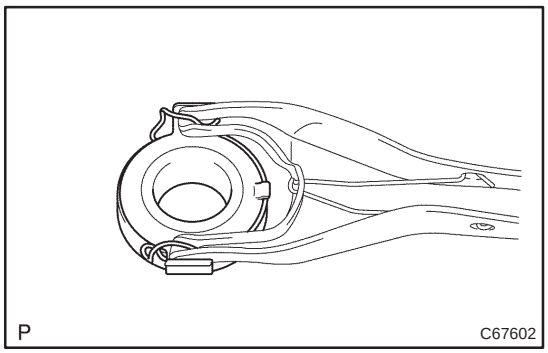
105. INSTALL BACK UP LAMP SWITCH ASSY

(a) Using SST, install the back up lamp switch assy with new gasket to the manual transmission case.
SST 09817–16011
Torque: 40 N·m (410 kgf·cm, 30 ft·lbf)



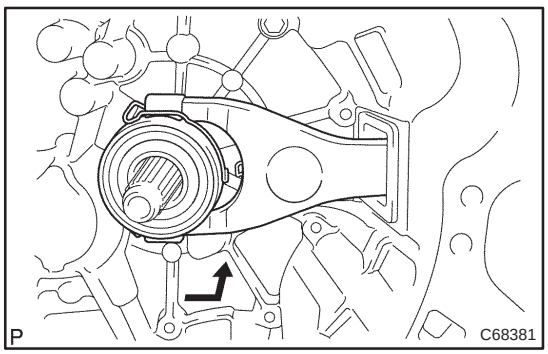
106. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB–ASSY

(a) Install a new O–ring to the speedometer driven hole cover sub–assy.
(b) Install the bolt with speedometer driven hole cover sub–assy to the manual transaxle case.
Torque: 11 N·m (115 kgf·cm, 8.3 ft·lbf)



107. INSTALL RELEASE FORK SUPPORT

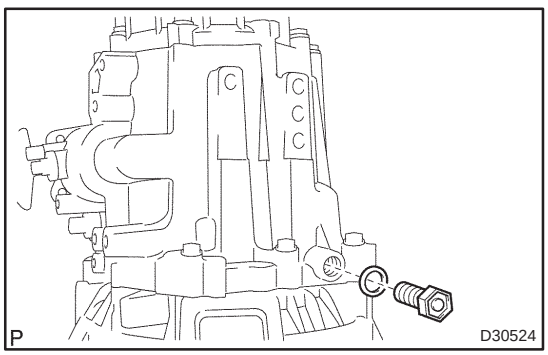
(a) Install the release fork support to the front transaxle case.
Torque: 37 N·m (375 kgf·cm, 25 ft·lbf)



108. INSTALL CLUTCH RELEASE FORK BOOT

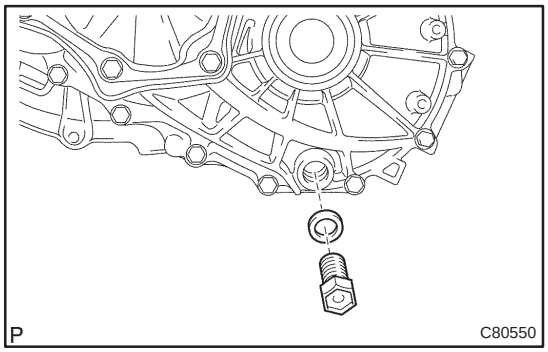
(a) Install the clutch release fork boot to the front transaxle case.

109. INSTALL CLUTCH RELEASE BEARING ASSY



(a) Coat the clutch release bearing assy with release hub grease, install it to the clutch release fork sub–assy.
Sealant:
Part No. 08887–01806, RELEASE HUB GREASE or equivalent

110. INSTALL CLUTCH RELEASE FORK SUB–ASSY

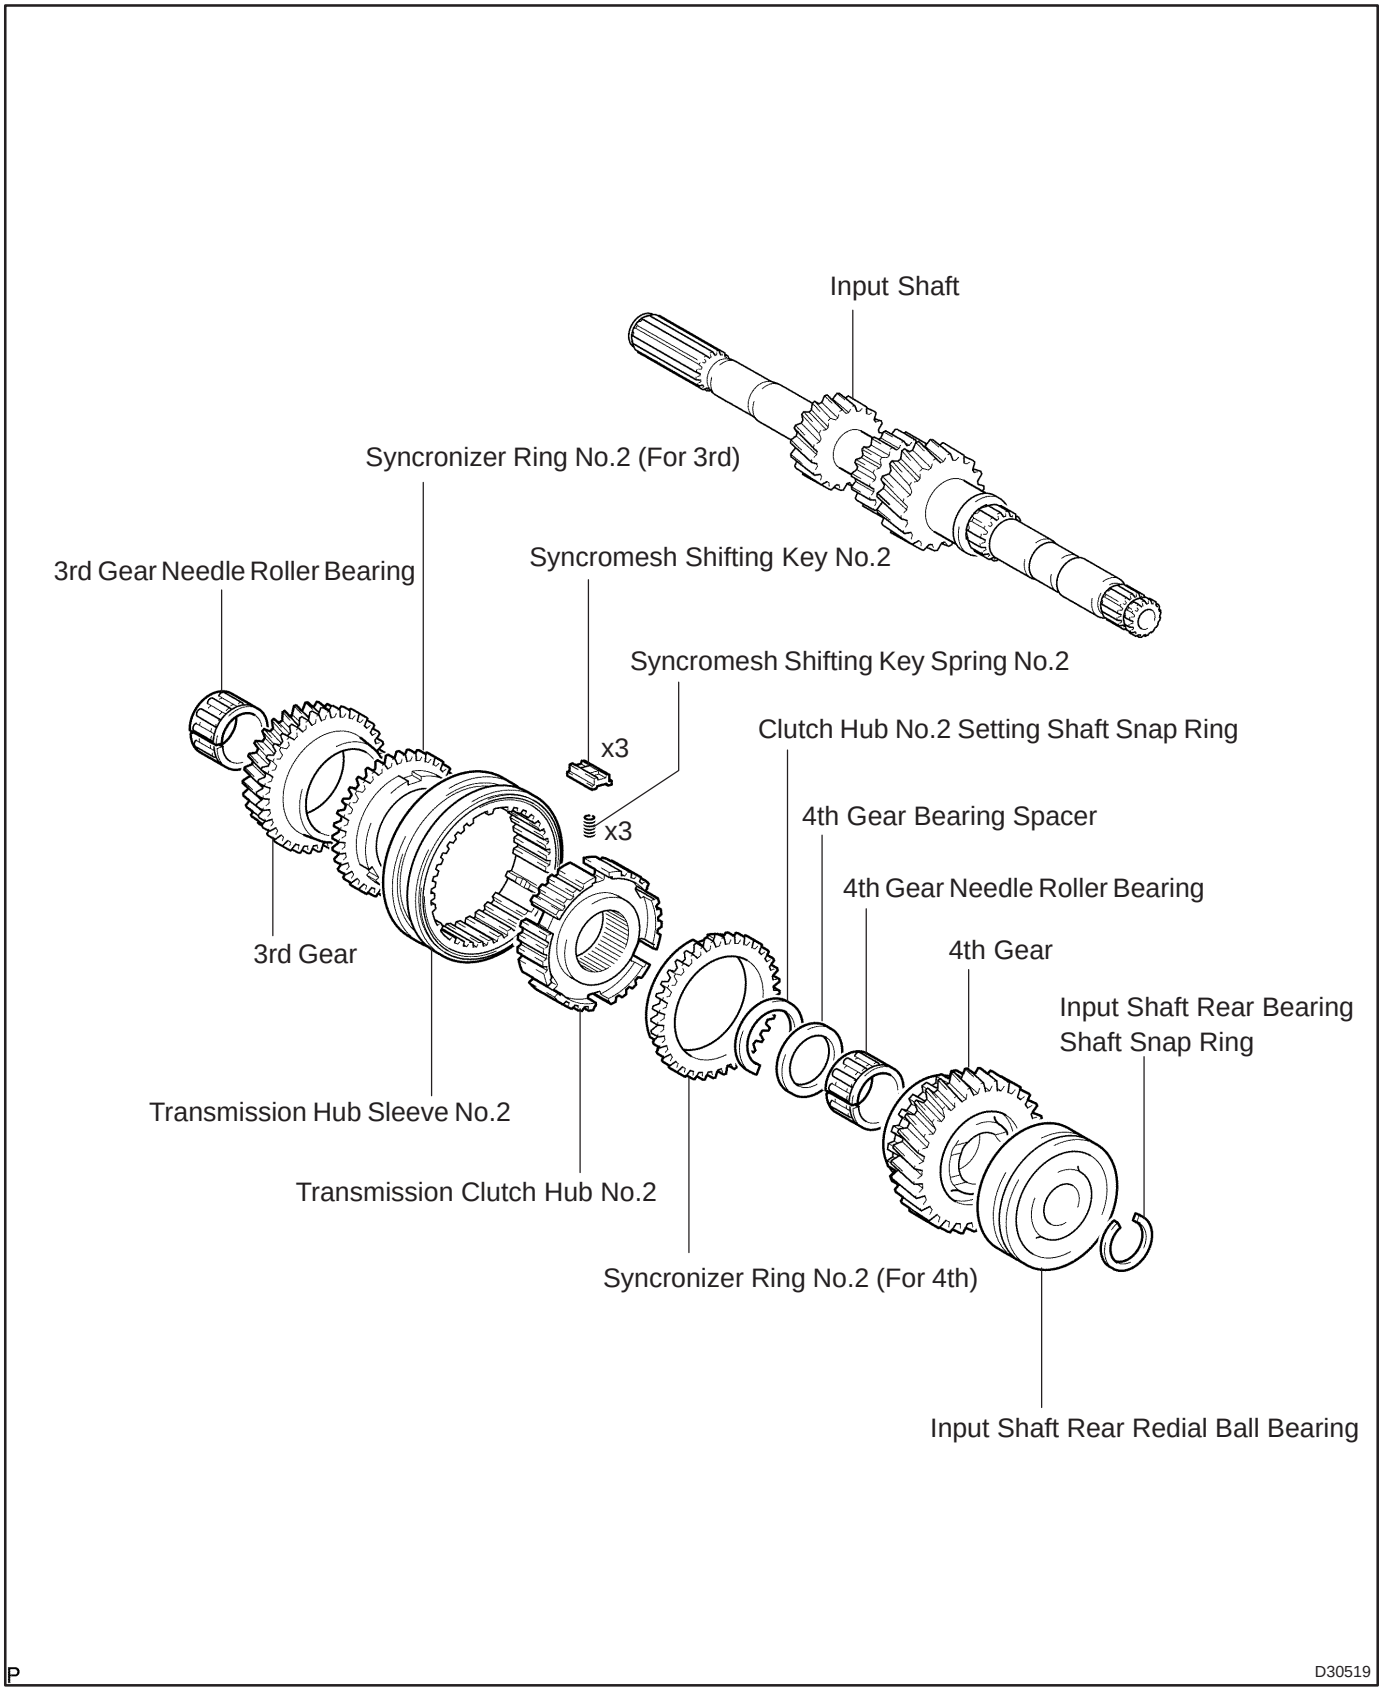


(a) Install the clutch release fork sub–assy to the input shaft.
Sealant:
Part No. 08887–01806, CLUTCH SPLINE GREASE or equivalent

(b) Apply clutch spline grease to the input shaft spline.

111. INSTALL MANUAL TRANSMISSION FILLER PLUG

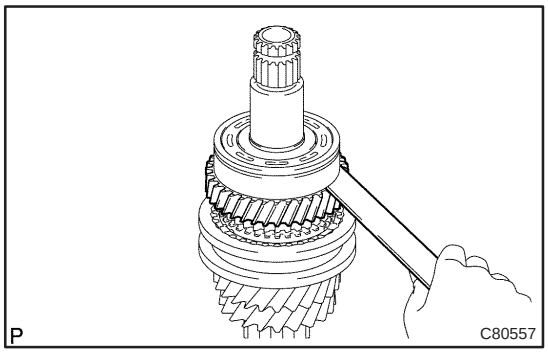
(a) Install the manual transmission filler plug with new gasket to the manual transmission case.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)



112. INSTALL DRAIN (MTM) PLUG SUB–ASSY

(a) Install the drain plug with new gasket to the manual transmission case.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

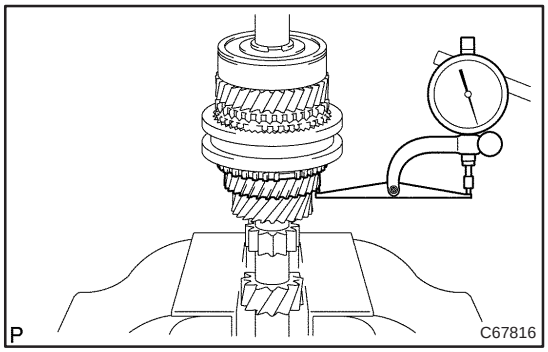
INPUT SHAFT ASSY (C250)



COMPONENTS

410DE–01

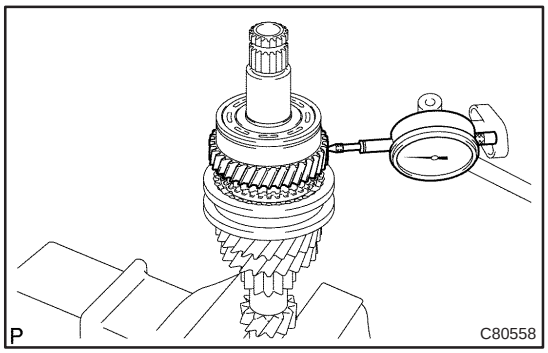
410DF–01



OVERHAUL

1. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 4th gear thrust clearance.

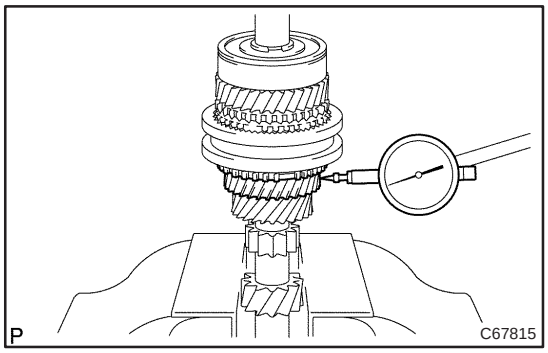


Standard clearance:
0.1 – 0.55 mm (0.0039 – 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

2. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 3rd gear thrust clearance.

Standard clearance:
0.1 – 0.35 mm (0.0039 – 0.0138 in.)
Maximum clearance:
0.35 mm (0.0138 in.)

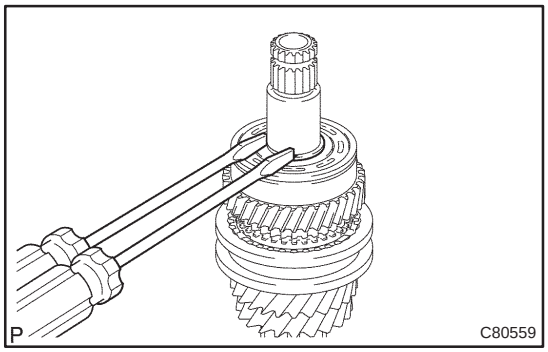


3. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance between the gear and shaft.

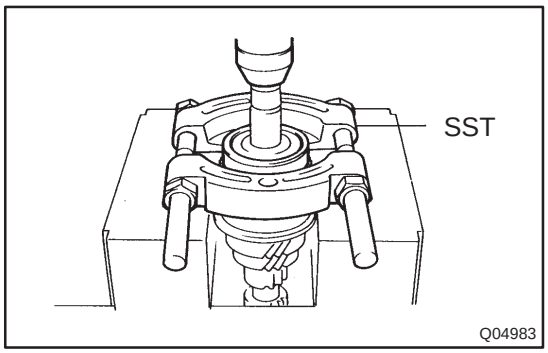
Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)

If the clearance exceeds the maximum, replace the gear, needle roller bearing or shaft.



4. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance between the gear and shaft.

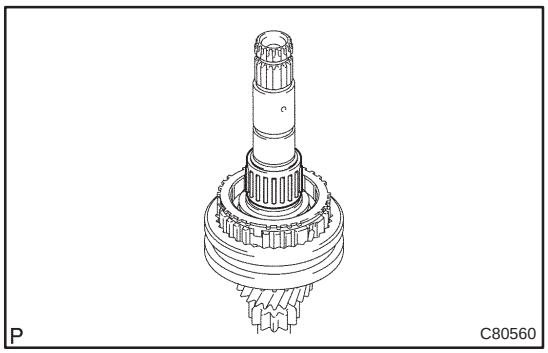


Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)

If the clearance exceeds the maximum, replace the gear, needle roller bearing or shaft.

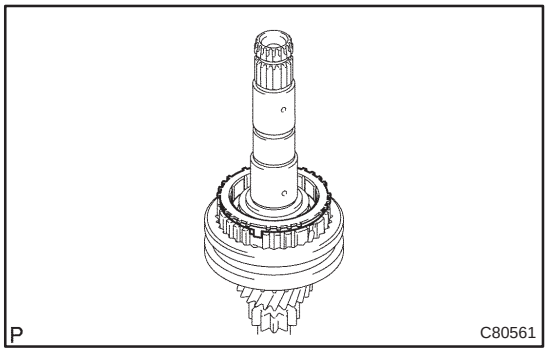
5. REMOVE 4TH GEAR

(a) Using 2 screwdrivers and a hammer, remove the input shaft rear bearing shaft snap ring from input shaft.



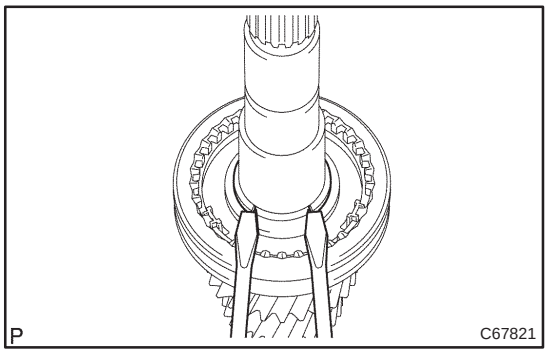
(b) Using SST and a press, remove the input shaft radial ball bearing rear and 4th gear from input shaft.

NOTICE:



Do not tighten SST excessively.

SST 09950–00020

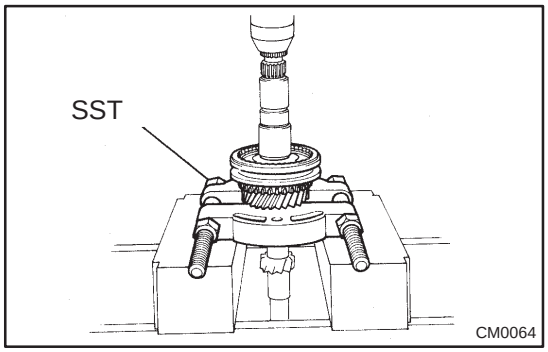


6. REMOVE 4TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 4th gear needle roller bearing and 4th gear bearing spacer from input shaft.

7. REMOVE SYNCHRONIZER RING NO.2 (FOR FOURTH SYNCHRONIZER RING)

(a) Remove synchronizer ring No.2 from transmission clutch hub No.2.

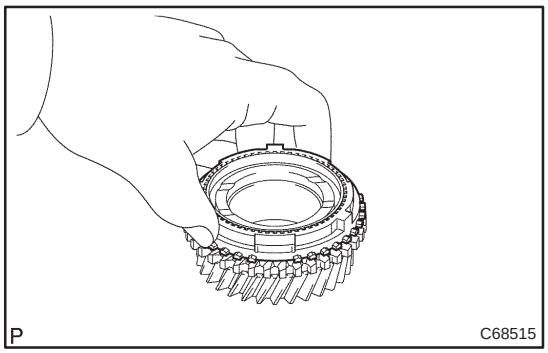


8. REMOVE 3RD GEAR

(a) Using 2 screwdrivers and a hammer, remove the clutch hub No.2 setting shaft snap ring from the input shaft.

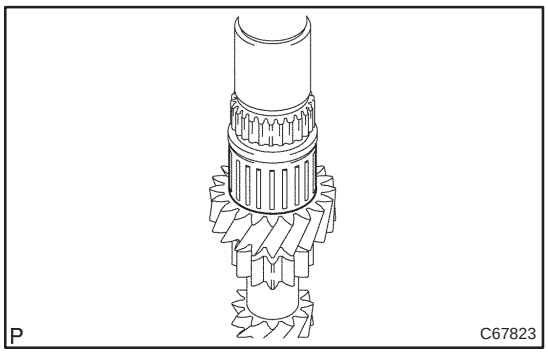
NOTICE:

Using a shop rug to prevent the snap ring from being scattered.



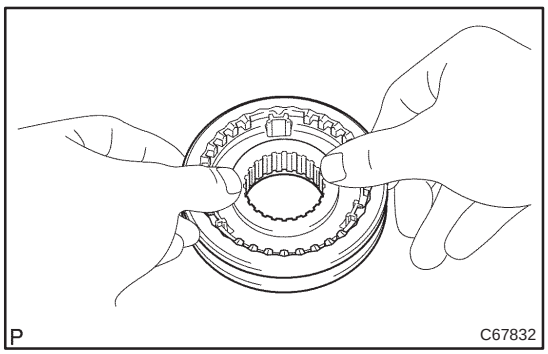
(b) Using SST and a press, remove the transmission clutch hub No.2 and 3rd gear from the input shaft.

NOTICE:



Do not tighten SST excessively.

SST 09950–00020

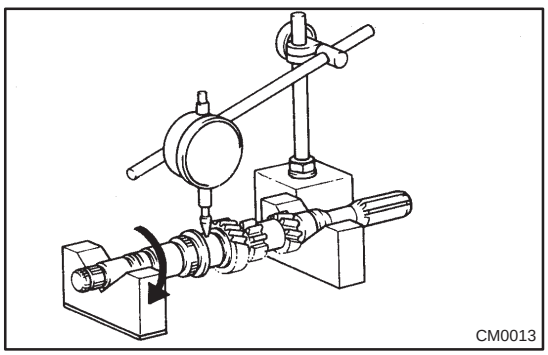


9. REMOVE SYNCHRONIZER RING NO.2 (FOR THIRD SYNCHRONIZER RING)

(a) Remove the synchronizer ring No.2 from the 3rd gear.

10. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

(a) Remove the 3rd gear needle roller bearing from the input shaft.

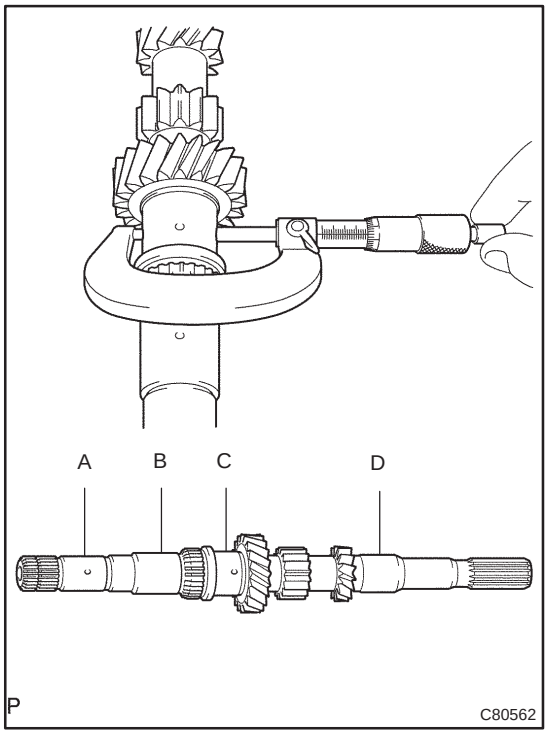


11. REMOVE TRANSMISSION HUB SLEEVE NO.2

(a) Remove the transmission hub sleeve No.2, 3 synchromesh shifting keys No.2 and 3 synchromesh shifting key springs No.2 from the transmission clutch hub No.2.

NOTICE:

Using a waste to prevent the shifting key and shifting key spring from being scattered.

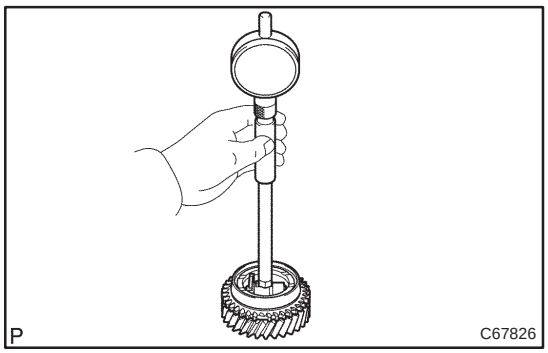


12. INSPECT INPUT SHAFT

(a) Using a dial indicator, check the shaft runout.

Maximum runout: 0.015 mm (0.00059 in.)

If the runout exceeds the maximum, replace the input shaft.

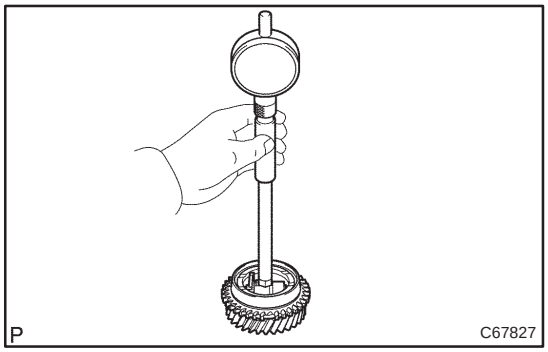


(b) Using a micrometer, measure the outer diameter of the input shaft journal surface.

Standard outer diameter:
Part A: 24.885 – 24.900 mm (0.9797 – 0.9803 in.)
Part B: 28.991 – 29.006 mm (1.1413 – 1.1419 in.)
Part C: 30.985 – 31.000 mm (1.2198 – 1.2204 in.)
Part D: 24.985 – 25.000 mm (0.9836 – 0.9842 in.)
Minimum outer diameter:
Part A: 24.885 mm (0.9797 in.)
Part B: 28.991 mm (1.1413 in.)
Part C: 30.985 mm (1.2198 in.)
Part D: 24.985 mm (0.9836 in.)

If the outer diameter is less than the minimum, replace the input shaft.

SST 99999–60009

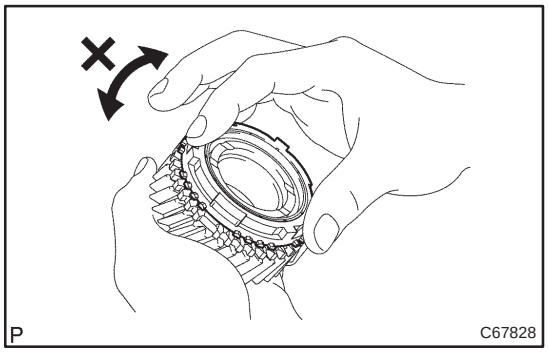


13. INSPECT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 4th gear.

Standard clearance:
34.015 – 34.031 mm (1.3391 – 1.3398 in.)
Maximum clearance:
34.031 mm (1.3398 in.)

If the clearance exceeds the maximum, replace the 4th gear.



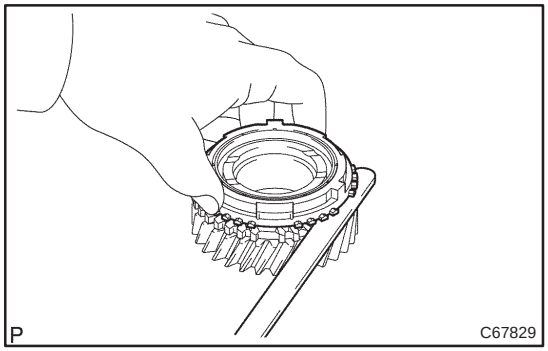
14. INSPECT 3RD GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.

Standard clearance:
36.015 – 36.031 mm (1.4179 – 1.4185 in.)
Maximum clearance:
36.031 mm (1.4185 in.)

If the clearance exceeds the maximum, replace the 3rd gear.

15. INSPECT SYNCHRONIZER RING NO.2 (FOR FOURTH SYNCHRONIZER RING)



(a) Coat the 4th gear cone with gear oil. Check the braking effect of the synchronizer ring No.2. Turn the synchronizer ring No.2 in one direction while pushing it to the 4th gear cone. Check that the ring locks.

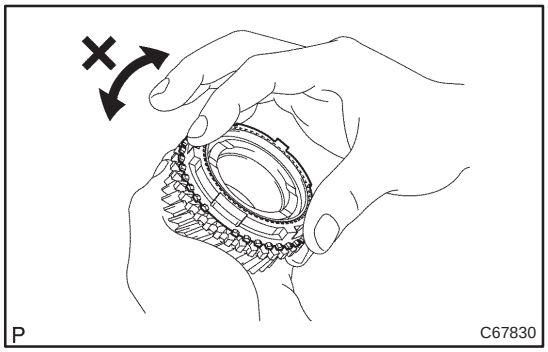
If the braking effect is insufficient, apply a small amount of the fine lapping compound between the synchronizer ring No.2 and 4th gear cone. Lightly rub the synchronizer ring No.2 and 4th gear cone together.

NOTICE:

Ensure the fine lapping compound is completely washed off after rubbing.

(b) Check again the braking effect of the synchronizer ring No.2.

(c) Using a feeler gauge, measure the clearance between the synchronizer ring No.2 back and 4th gear spline end.



Standard clearance:

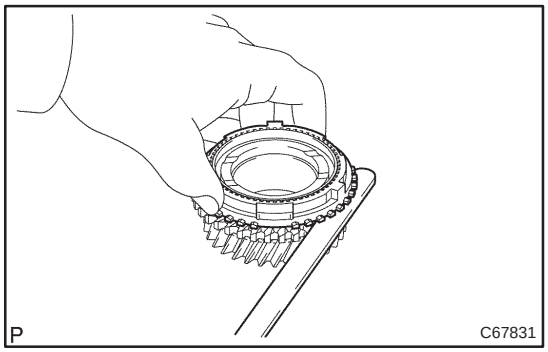
0.75 – 1.65 mm (0.0295 – 0.0649 in.)

If the clearance is less than the minimum, replace the synchronizer ring and apply a small amount of the fine lapping compound on 4th gear cone.

NOTICE:

Ensure the fine lapping compound is completely washed off after rubbing.

16. INSPECT SYNCHRONIZER RING NO.2 (FOR THIRD SYNCHRONIZER RING)



(a) Coat the 3rd gear cone with gear oil. Check the braking effect of the synchronizer ring No.2. Turn the synchronizer ring No.2 in one direction while pushing it to the 3rd gear cone. Check that the ring locks.

If the braking effect is insufficient, apply a small amount of the fine lapping compound between the synchronizer ring No.2 and 3rd gear cone. Lightly rub the synchronizer ring No.2 and 3rd gear cone together.

NOTICE:

Ensure the fine lapping compound is completely washed off after rubbing.

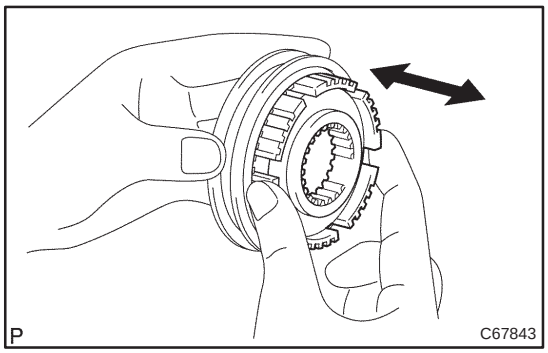
(b) Check again the braking effect of the synchronizer ring No.2.

(c) Using a feeler gauge, measure the clearance between the synchronizer ring No.2 back and 3rd gear spline end.

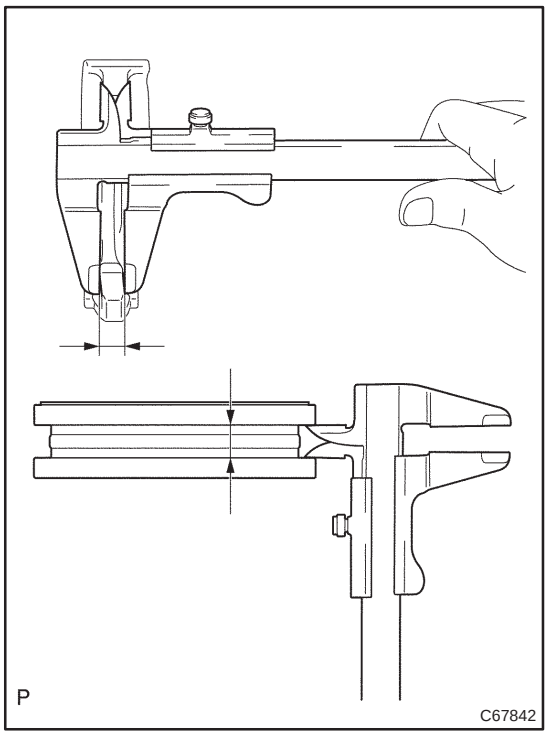
Standard clearance:

0.75 – 1.65 mm (0.0295 – 0.0649 in.)

If the clearance is less than the minimum, replace the synchronizer ring No.2 and apply a small amount of the fine lapping compound on the 3rd gear cone.



NOTICE:

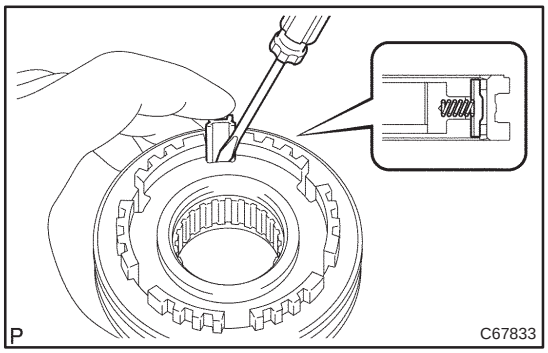


Ensure the fine lapping compound is completely washed off after rubbing.

17. INSPECT TRANSMISSION HUB SLEEVE NO.2

(a) Check the sliding condition between the transmission hub sleeve No.2 and transmission clutch hub No.2.

(b) Check that the spline gear's edges of the transmission hub sleeve No.2 is not worn down.

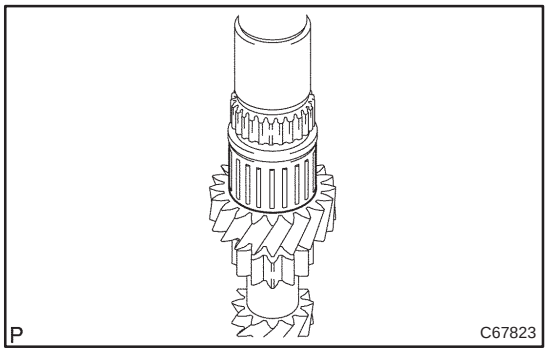


(c) Using a vernier calipers, inspect the transmission hub sleeve No.2 and gear shift fork No.2 as shown in the illustration.

Standard clearance:

0.15 – 0.35 mm (0.0059 – 0.0137 in.)

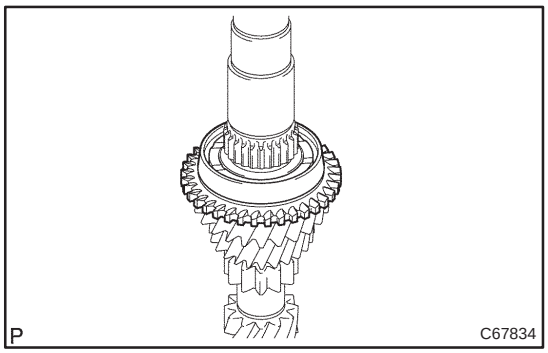
If the clearance exceeds the standard clearance, replace the transmission hub sleeve No.2 and gear shift fork No.2.



18. INSTALL TRANSMISSION HUB SLEEVE NO.2

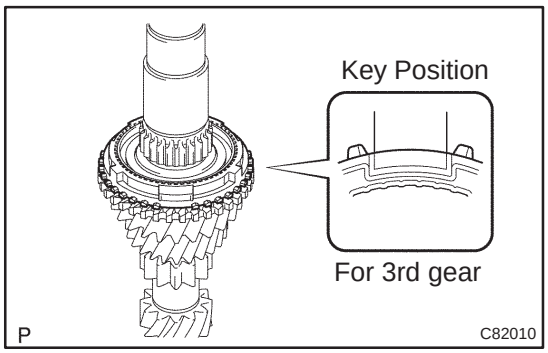
(a) Coat the transmission hub sleeve No.2 with gear oil, install it to the transmission clutch hub No.2.

NOTICE:



Do not set the transmission hub sleeve No.2 and the transmission clutch hub in incorrect orientation.

(b) Install the 2 synchromesh key springs with 3 synchromesh shifting keys No.2 to the transmission clutch hub No.2.

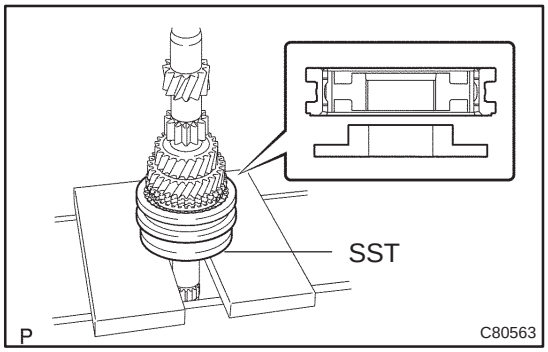


19. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Coat the 3rd gear needle roller bearing with gear oil, install it to the input shaft.

20. INSTALL 3RD GEAR

(a) Coat the 3rd gear with gear oil, install it to the input shaft.

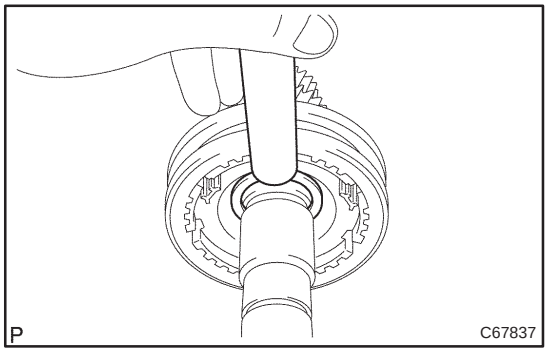


21. INSTALL SYNCHRONIZER RING NO.2 (FOR THIRD SYNCHRONIZER RING)

(a) Coat the synchronizer ring No.2 with gear oil, install it to the 3rd gear.

HINT:

The synchronizer ring No.2 (for 3rd) is a gray color.

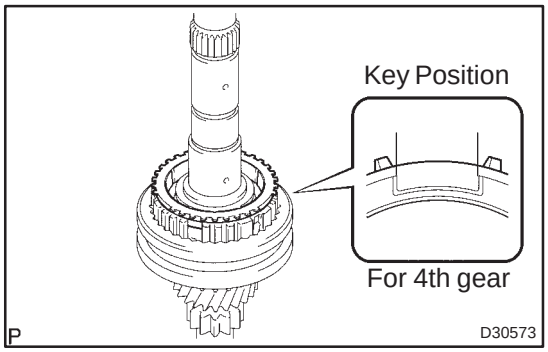


22. INSTALL TRANSMISSION CLUTCH HUB NO.2

(a) Using SST and a press, install the transmission clutch hub No.2 to the input shaft.

SST 09316–60011 (09316–00021)

NOTICE:

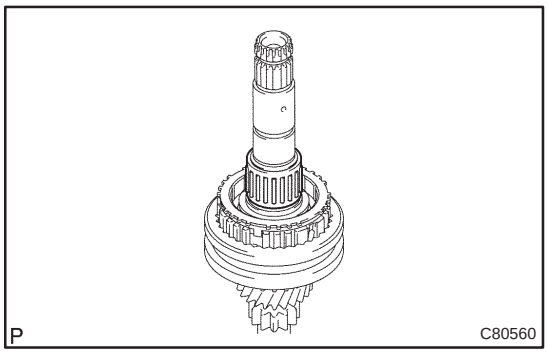


Paying attention to the proper position, fit the synchro-mesh shifting key into the groove of the synchronizer ring.

(b) Select a snap ring that will allow the minimum axial play.

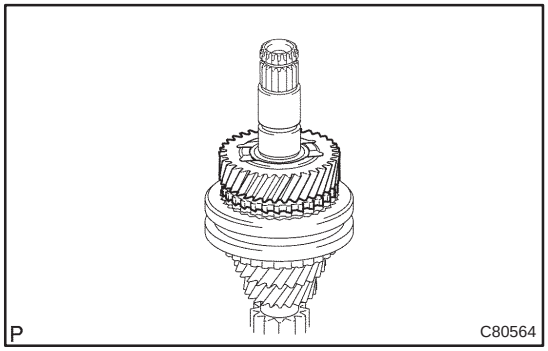
Standard clearance:
0.1 mm (0.0039 in.) or less.

Mark	Thickness mm (in)	Mark	Thickness mm (in)
0	2.30 (0.0906)	3	2.48 (0.0976)
1	2.36 (0.0929)	4	2.54 (0.1000)
2	2.42 (0.0953)	5	2.60 (0.1024)



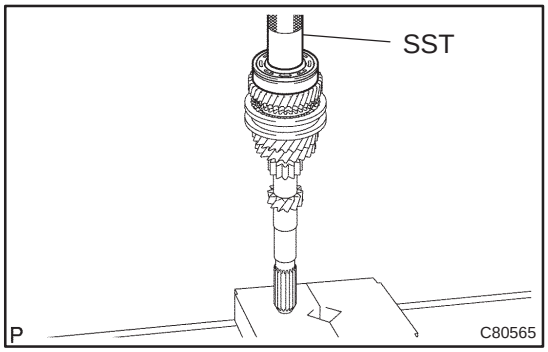
23. INSTALL SYNCHRONIZER RING NO.2 (FOR FOURTH SYNCHRONIZER RING)

(a) Coat the synchronizer ring No.2 with gear oil, install it to the transmission clutch hub No.2.



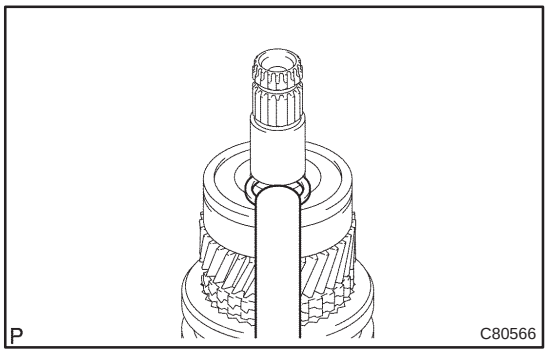
HINT:

The synchronizer ring No.2 (for 4th) is a yellow copper color.



24. INSTALL 4TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 4th gear needle roller bearing and 4th gear bearing spacer with gear oil, install it to the transmission clutch hub No.2.

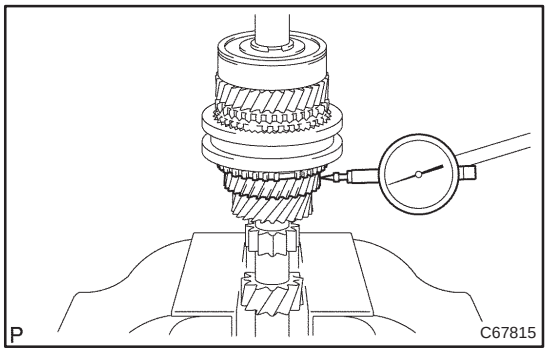


25. INSTALL 4TH GEAR

(a) Coat the 4th gear with gear oil, install it to the input shaft.

26. INSTALL INPUT SHAFT REAR RADIAL BALL BEARING

(a) Using SST and a press, install the input shaft rear radial ball bearing to the input shaft.

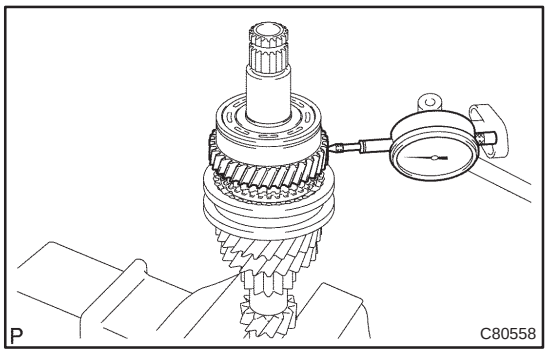


(b) Select a snap ring that will allow minimum axial play.

Standard clearance:
0.1 mm (0.0039 in.) or less

Mark	Thickness mm (in)	Mark	Thickness mm (in)
A	2.29 (0.0901)	D	2.47 (0.0972)
B	2.35 (0.0925)	E	2.53 (0.0996)
C	2.41 (0.0948)	F	2.59 (0.1019)

If the clearance is less than the limit, replace the input shaft rear radial ball bearing.

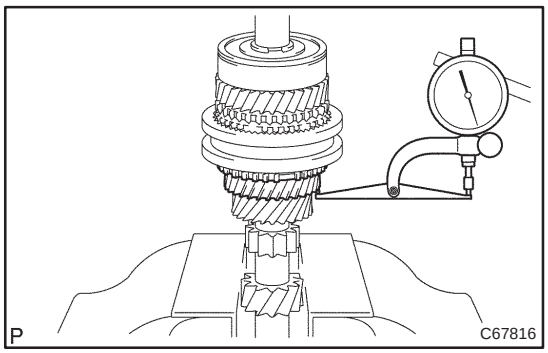


27. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance between the 3rd gear.

Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)

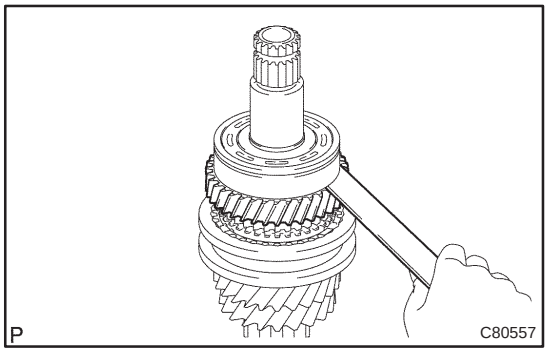
If the clearance is less than the limit, replace the 3rd gear.



28. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the radial clearance between the 4th gear.

Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)



If the clearance is less than the limit, replace the 4th gear.

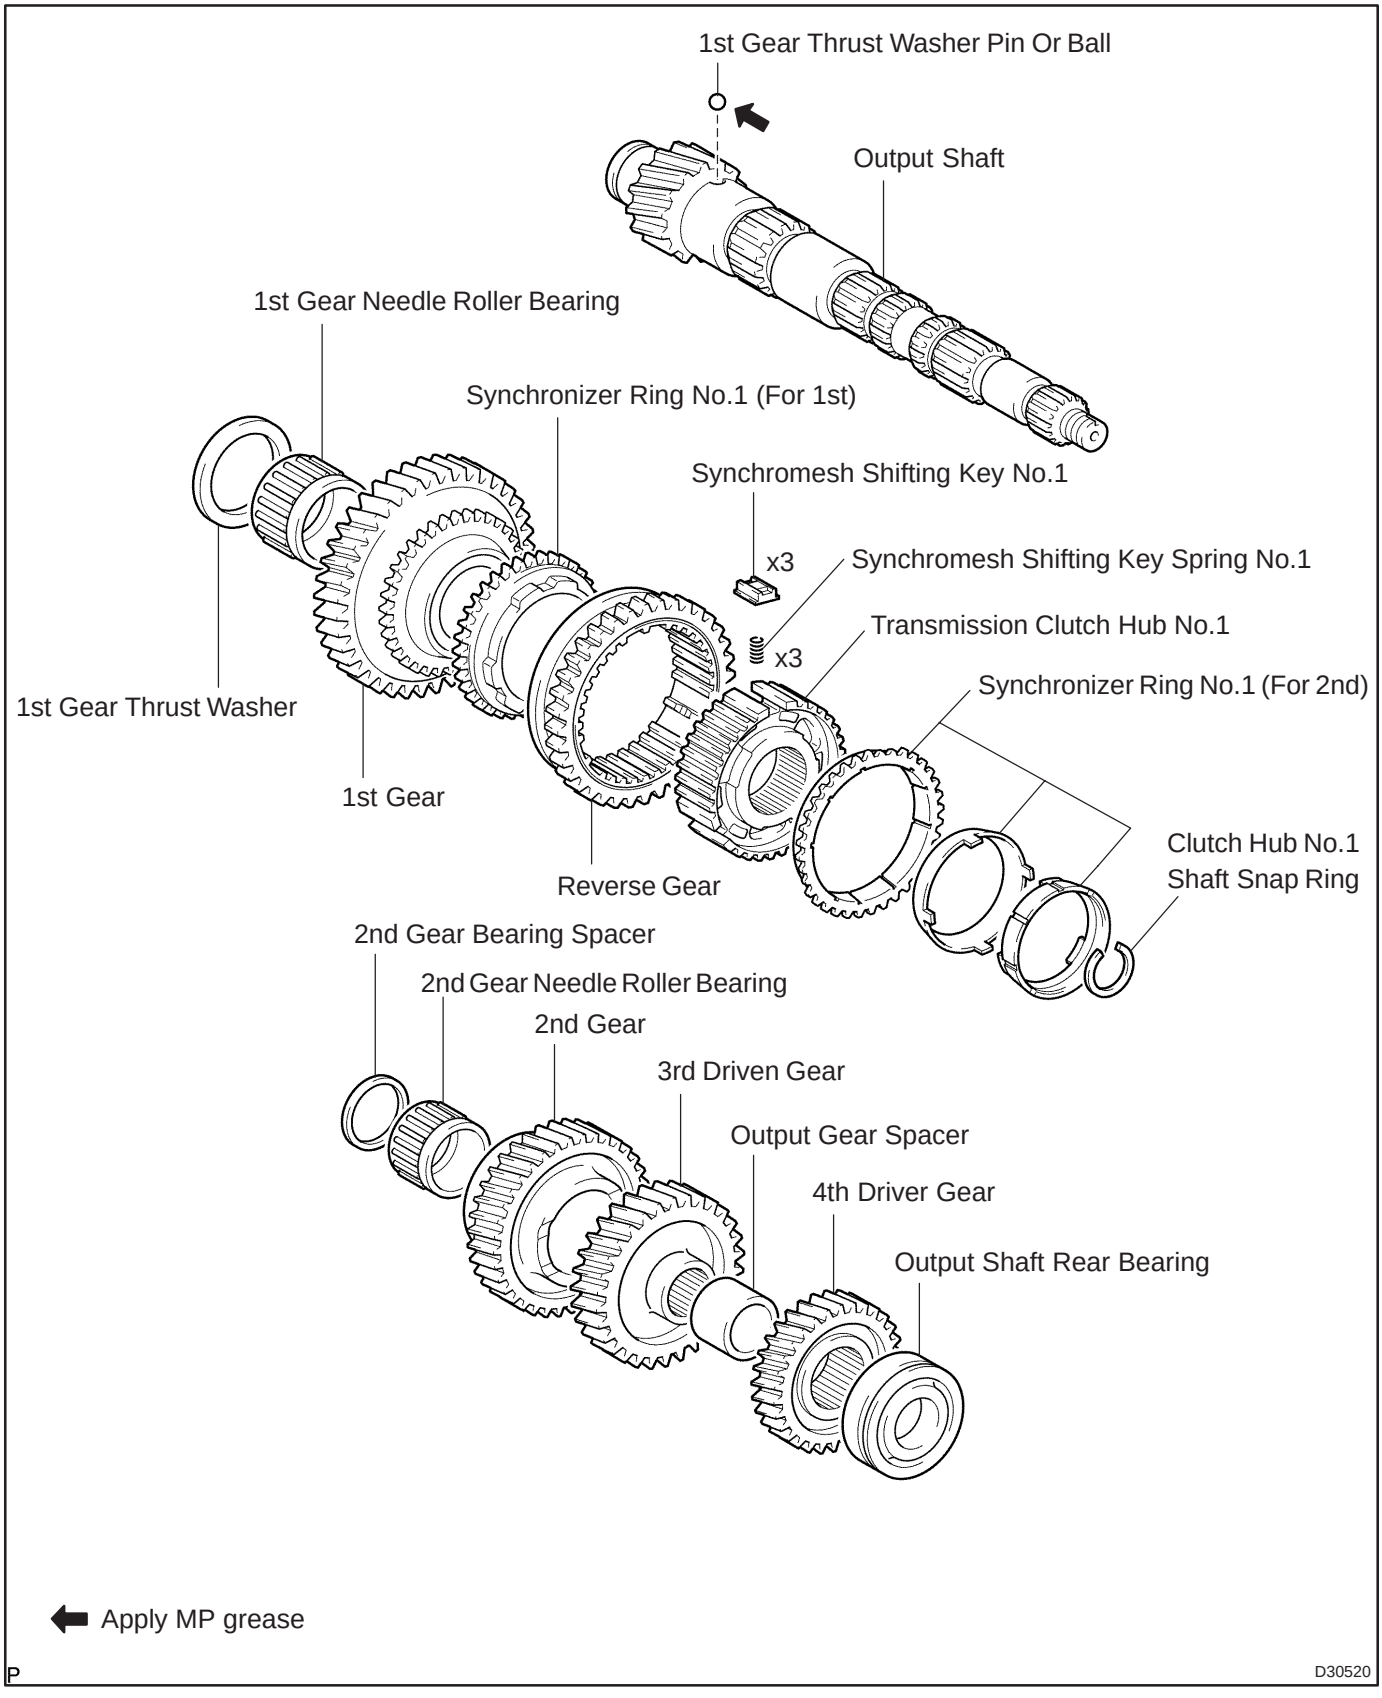
29. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 3rd thrust clearance.

Standard clearance:
0.1 – 0.35 mm (0.0039 – 0.0138 in.)

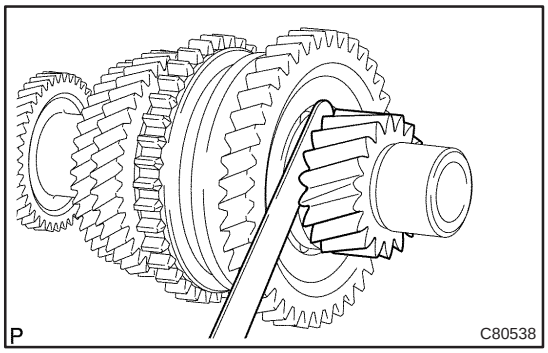
30. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 4th thrust clearance.



Standard clearance:
0.1 – 0.55 mm (0.0039 – 0.0217 in.)

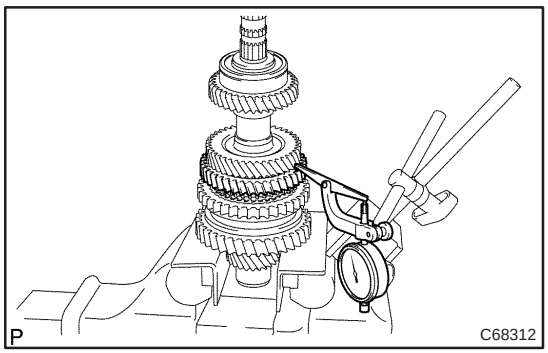
If the clearance is less than the limit, replace the 4th gear.



OUTPUT SHAFT ASSY (C250)

COMPONENTS

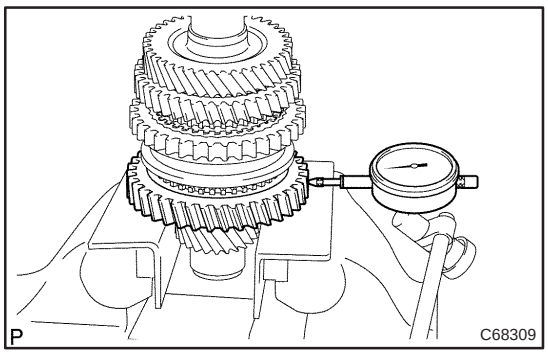
410DG–01



OVERHAUL

1. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 1st gear thrust clearance.

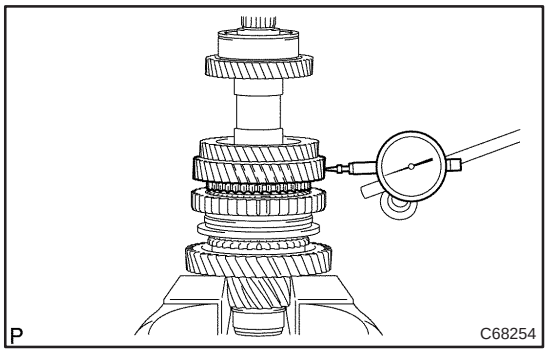


Standard clearance:
0.10 – 0.40 mm (0.0039 – 0.0157 in.)
Maximum clearance:
0.40 mm (0.0157 in.)

2. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:
0.1 – 0.45 mm (0.0039 – 0.0177 in.)
Maximum clearance:
0.45 mm (0.0177 in.)

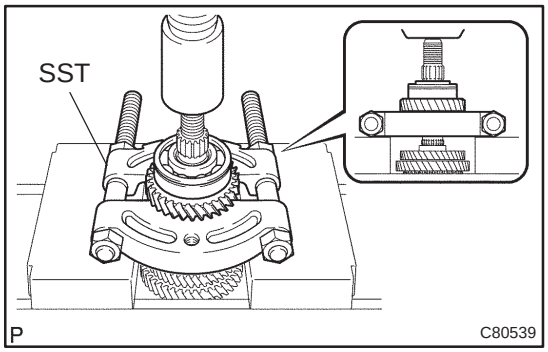


3. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance between the gear and shaft.

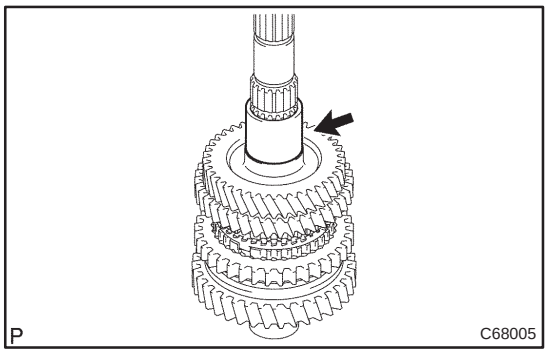
Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)

If the clearance exceeds the maximum, replace the 1st gear needle roller bearing.



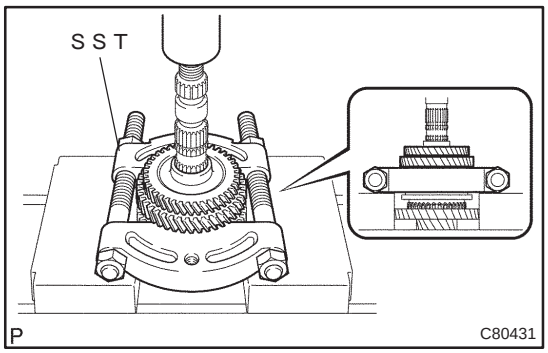
4. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance between the gear and shaft.



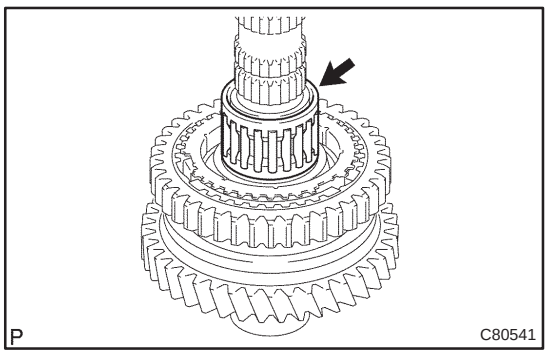
Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)

If the clearance exceeds the maximum, replace the 2nd gear needle roller bearing.



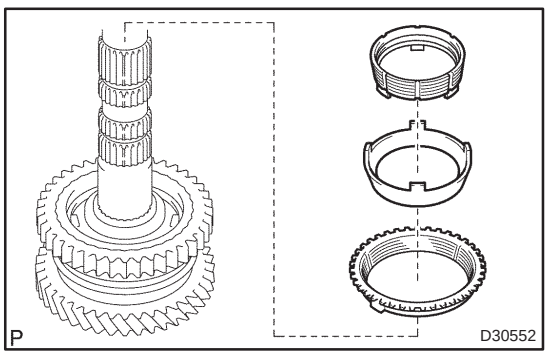
5. REMOVE 4TH DRIVEN GEAR

(a) Using SST and a press, remove the output shaft bearing rear and 4th driven gear from the output shaft.
SST 09950–00020



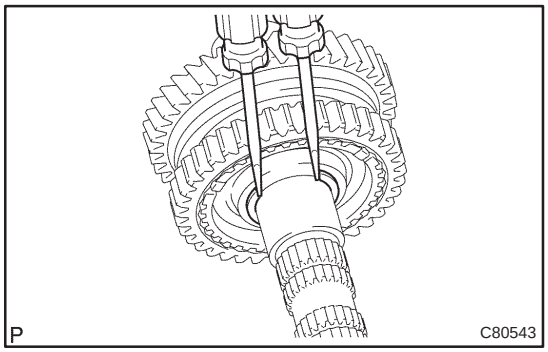
6. REMOVE OUTPUT GEAR SPACER

(a) Remove the output gear spacer from the output shaft.



7. REMOVE 2ND GEAR

(a) Using SST, remove the 3rd driven gear and 2nd gear from the out put shaft.
SST 09950–00020

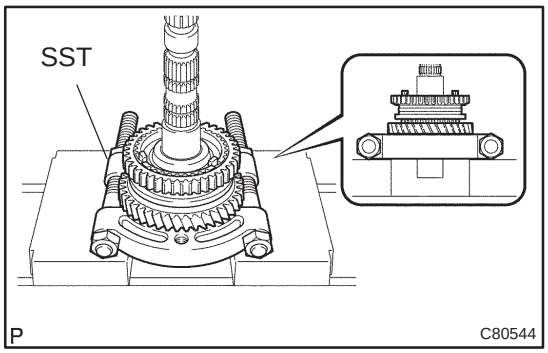


8. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd gear needle roller bearing and 2nd gear bearing spacer from the output shaft.

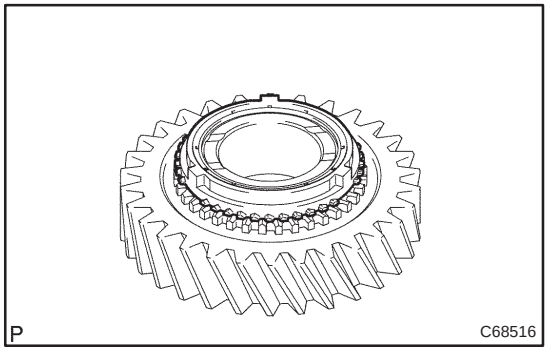
9. REMOVE SYNCHRONIZER RING NO.1 (FOR SECOND SYNCHRONIZER RING)

(a) Remove the synchronizer ring No.1 from the output shaft.



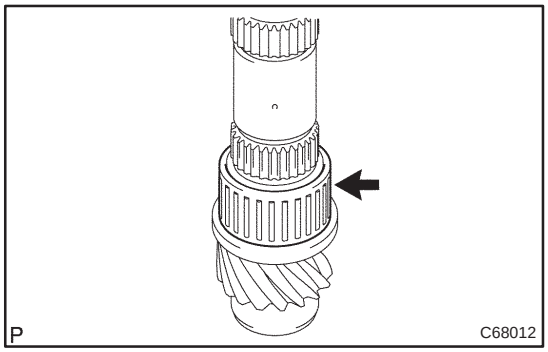
10. REMOVE 1ST GEAR

(a) Using 2 screwdrivers and a hammer, remove the clutch hub No.1 shaft snap ring from the output shaft.



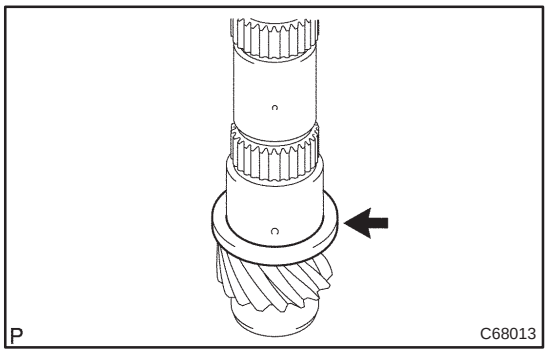
HINT:

Using a shop rug to prevent the shaft snap ring from being scatted.



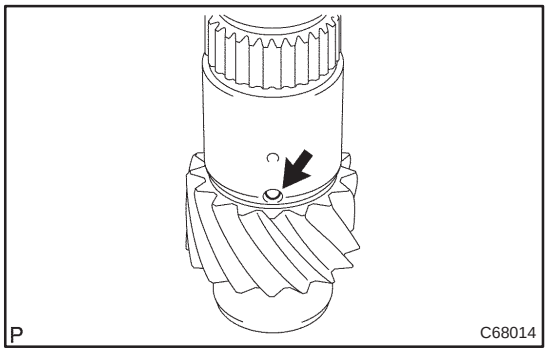
(b) Using SST and a press, remove the clutch hub No.1 assy and 1st gear from the output shaft.

SST 09950–00020



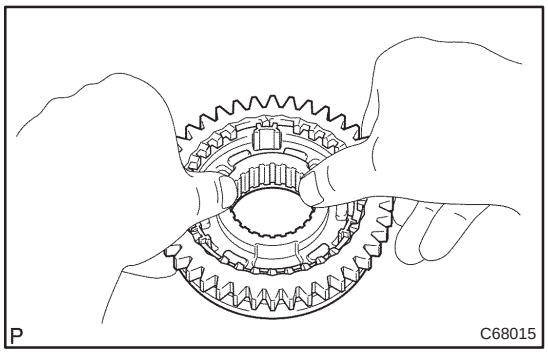
11. REMOVE SYNCHRONIZER RING NO.1 (FOR FIRST SYNCHRONIZER RING)

(a) Remove the synchronizer ring No.1 from the 1st gear.



12. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the output shaft.

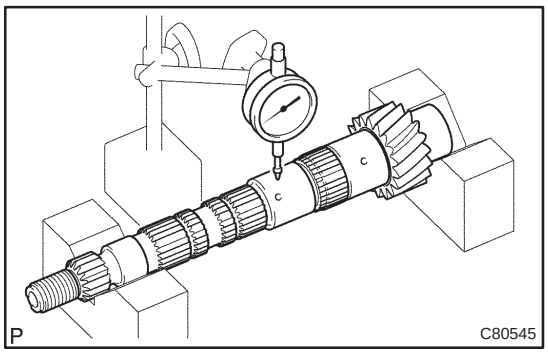


13. REMOVE 1ST GEAR THRUST WASHER

(a) Remove the 1st gear thrust washer from the output shaft.

14. REMOVE 1ST GEAR THRUST WASHER PIN OR BALL

(a) Remove the 1st gear thrust washer pin or ball from the output shaft.

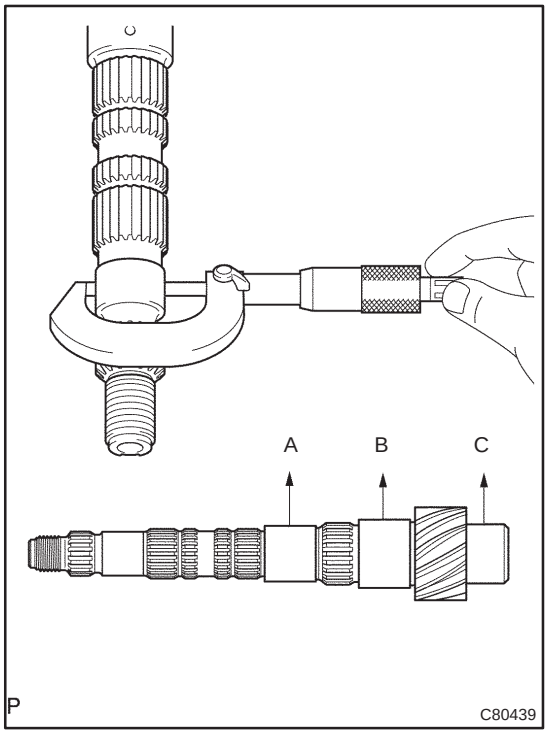


15. REMOVE REVERSE GEAR

(a) Remove the reverse gear, 3 synchromesh shifting keys and 3 synchromesh keys springs.

HINT:

Using a waste to prevent the shifting key and shifting key spring from being scatted.



16. INSPECT OUTPUT SHAFT

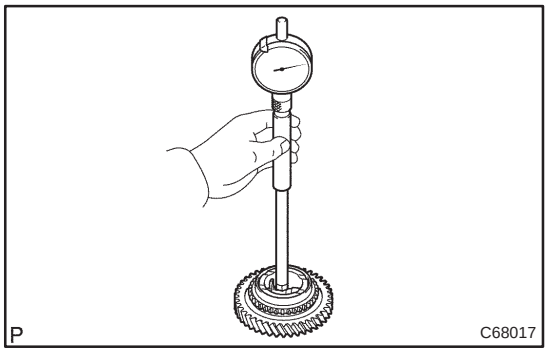
(a) Using a dial indicator, check the shaft runout.

Minimum runout: 0.015 mm (0.0006 in.)

If the runout exceeds the maximum, replace the output shaft.

(b) Using a micrometer, measure the outer diameter of the output shaft journal surface.

Standard outer diameter:



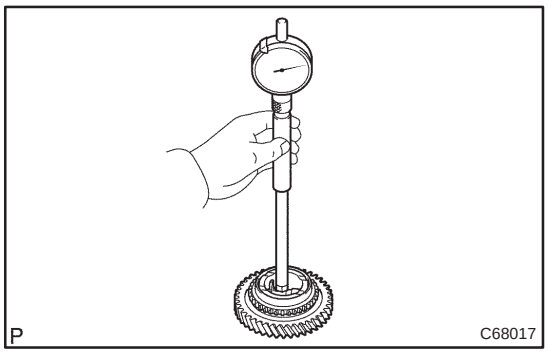
Part A: 31.985 –32.000 mm (1.2592 – 1.2598 in.)

Part B: 37.985 –38.000 mm (1.4955 – 1.2598 in.)

Part C: 32.985 –33.000 mm (1.2986 – 1.2992 in.)

If the outer diameter is less than the minimum, replace the output shaft.

SST 99999–60009

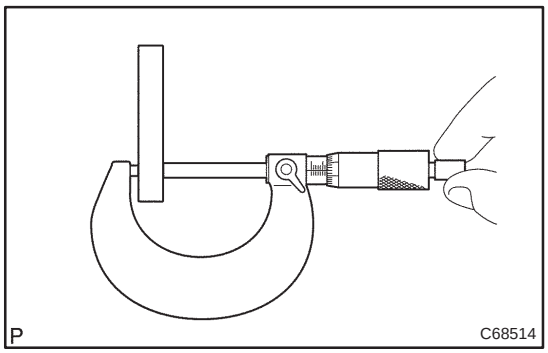


17. INSPECT 2ND GEAR

(a) Using a cylinder gauge, measure the clearance of the 2nd gear.

Standard clearance:
38.015 – 38.031 mm (1.4966 – 1.4972 in.)
Maximum clearance:
38.031 mm (1.4972 in.)

If the clearance exceeds the maximum, replace the 1st gear.

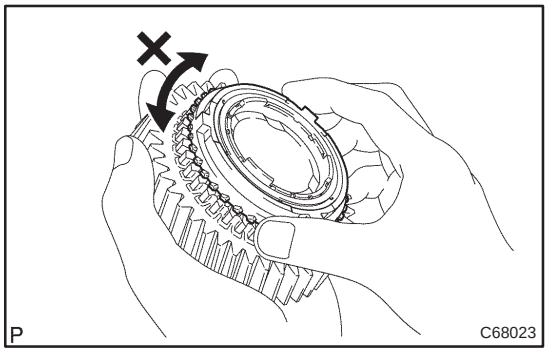


18. INSPECT 1ST GEAR

(a) Using a cylinder gauge, measure the clearance of the 1st gear.

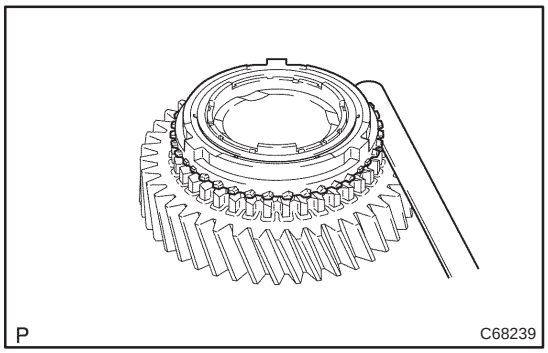
Standard clearance:
44.015 – 44.031 mm (1.7328 – 1.7335 in.)
Maximum clearance:
44.031 mm (1.7335 in.)

If the clearance exceeds the maximum, replace the 1st gear.



19. INSPECT 1ST GEAR THRUST WASHER

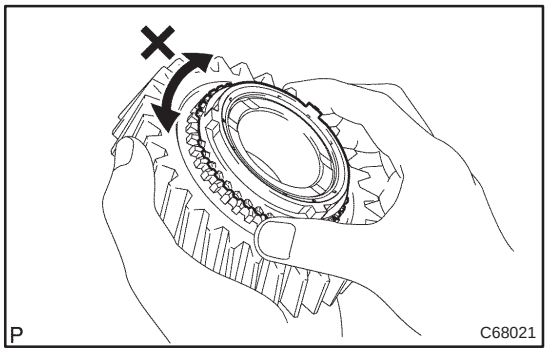
(a) Using a micrometer, measure the 1st gear thrust washer.



Standard thickness:
5.975 – 6.025 mm (0.2352 – 0.2372 in.)
Minimum thickness:
5.975 mm (0.2352 in.)

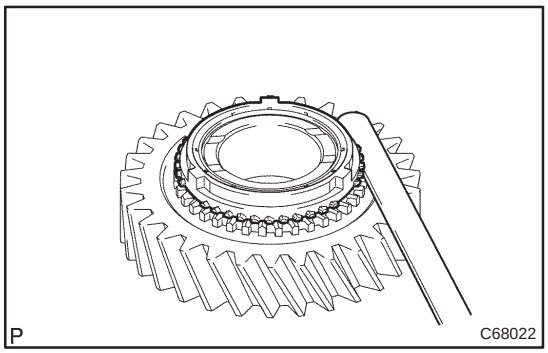
If the clearance exceeds the minimum, replace the 1st gear.

20. INSPECT SYNCHRONIZER RING NO.1 (FOR SECOND SYNCHRONIZER RING)



(a) Coat the 2nd gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the gear cone. Check that the ring locks.

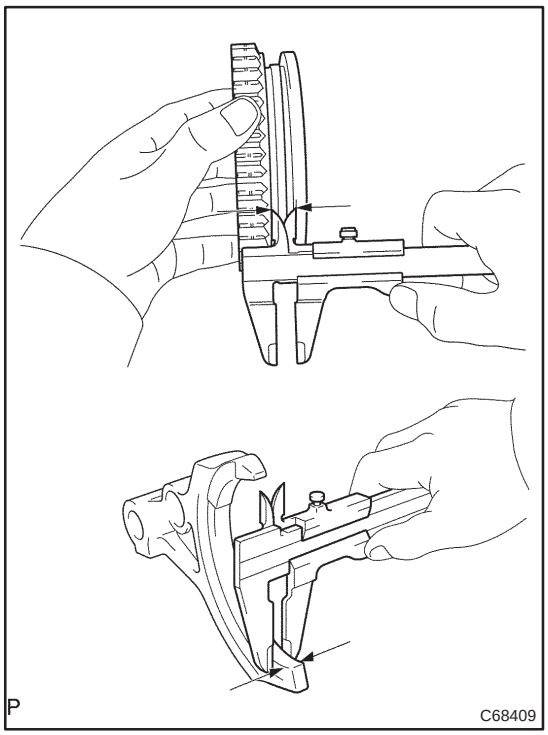
(b) Using a feeler gauge, measure the clearance between the synchronizer ring back and gear spline end.



Standard clearance:
0.70 – 1.30 mm (0.0276 – 0.0512 in.)
Minimum clearance:
0.70 mm (0.0276in.)

If the clearance is less than the minimum, replace the synchronizer ring.

21. INSPECT SYNCHRONIZER RING NO.1 (FOR FIRST SYNCHRONIZER RING)

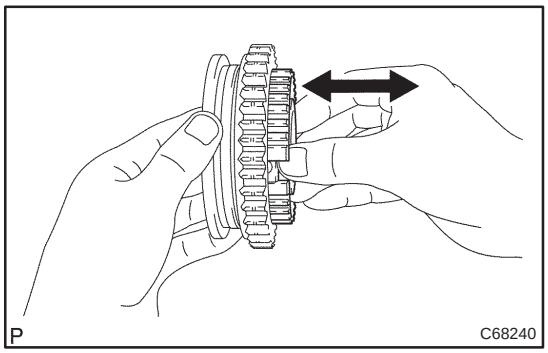


(a) Coat the 1st gear cone with gear oil. Check the braking effect of the synchronizer ring. Turn the synchronizer ring in one direction while pushing it to the gear cone. Check that the ring locks.

(b) Using a feeler gauge, measure the clearance between the synchronizer ring back and gear spline end.

Standard clearance:
0.75 – 1.65 mm (0.0295 – 0.0650 in.)
Minimum clearance:
0.75 mm (0.0295 in.)

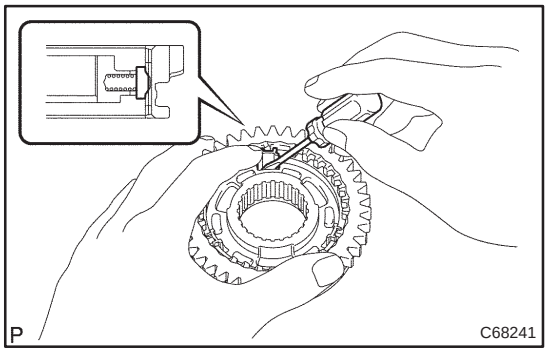
If the clearance is less than the minimum, replace the synchronizer ring.



22. INSPECT REVERSE GEAR

(a) Using a vernier caliper, measure the clearance between the reverse gear and shift fork.

Maximum clearance: 0.35 mm (0.014 in.)

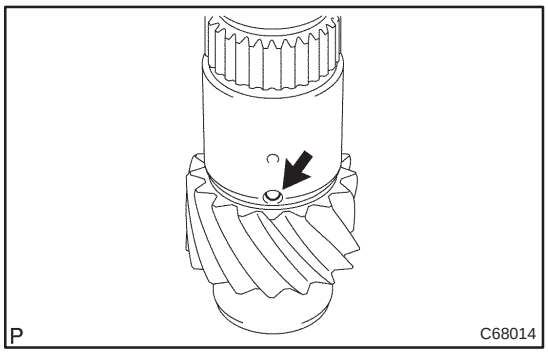


If the clearance exceeds the maximum, replace the shift form or reverse gear.

23. INSPECT TRANSMISSION CLUTCH HUB NO.1

(a) Check that the transmission clutch hub No.1 and reverse gear slides smoothly.

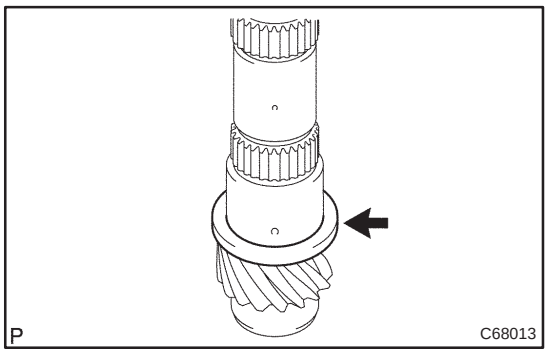
(b) Check that the spline gear's edges of the reverse gear is not worn down.



24. INSTALL REVERSE GEAR

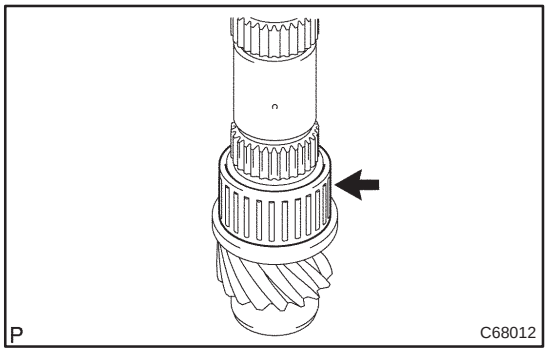
(a) Coat the reverse gear with gear oil, install it to the transmission clutch hub No.1.

HINT:



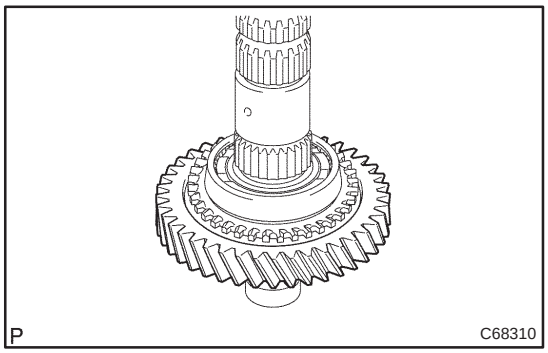
Do not set the reverse gear and transmission clutch hub No.1 in incorrect orientation.

(b) Install the 3 synchromesh shifting key springs and 3 synchromesh shifting keys.



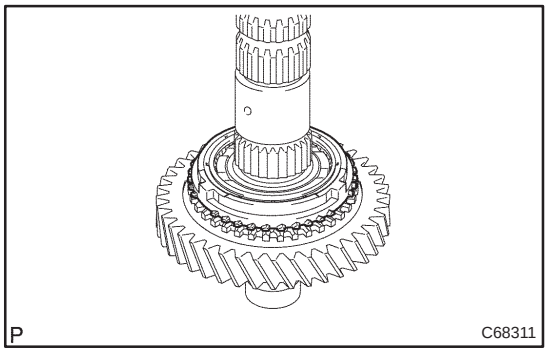
25. INSTALL 1ST GEAR THRUST WASHER PIN OR BALL

(a) Coat the 1st gear thrust washer pin or ball with gear oil, install it to the output shaft.



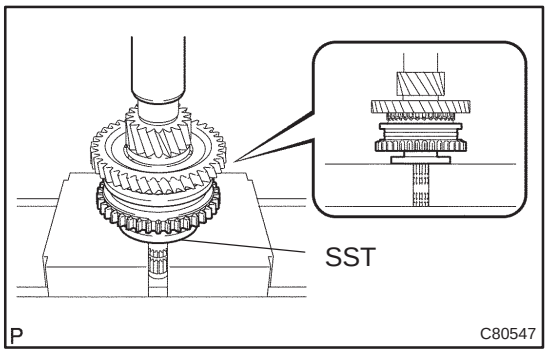
26. INSTALL 1ST GEAR THRUST WASHER

(a) Coat the 1st gear thrust washer with gear oil, install it to the output shaft.



27. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Coat the 1st gear needle roller bearing with gear oil, install it to the output shaft.

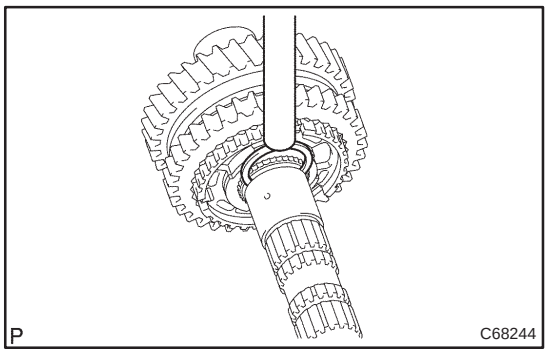


28. INSTALL 1ST GEAR

(a) Coat the 1st gear with gear oil, install it to the output shaft.

29. INSTALL SYNCHRONIZER RING NO.1 (FOR FIRST SYNCHRONIZER RING)

(a) Coat the synchronizer ring No.1 with gear oil, install it to the 1st gear.



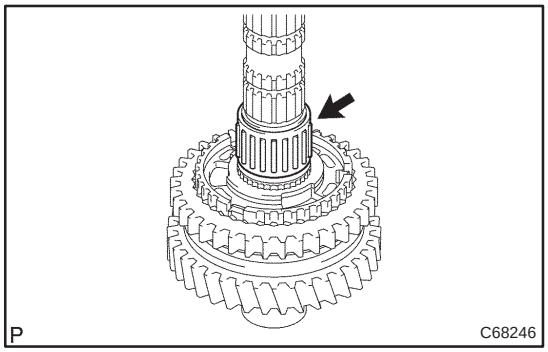
30. INSTALL TRANSMISSION CLUTCH HUB NO.1

(a) Using SST and a press, install the transmission clutch hub No.1 to the output shaft

SST 09316–60011 (09316–00031)

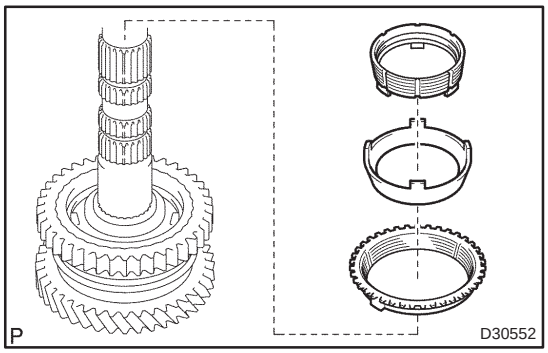
HINT:

- The 1st gear can be turned.
- While checking the 1st gear thrust washer pin or ball is inserted into the groove of the 1st gear thrust washer, press and fit the clutch hub No.1.



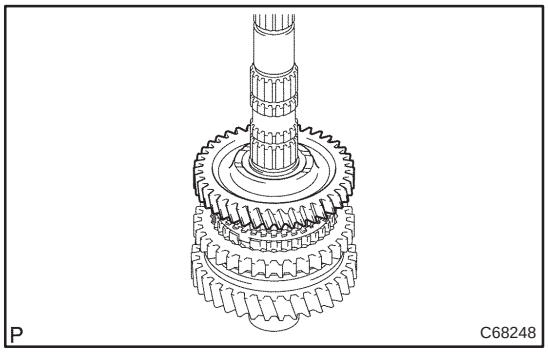
(b) Select a snap ring that will allow the minimum axial play.

Standard clearance:
0.1 mm (0.039 in.) or less



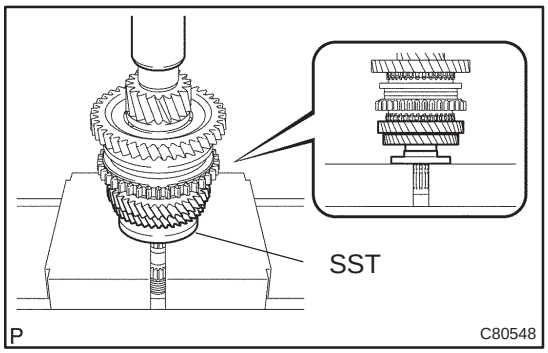
Mark	Thickness mm (in.)	Mark	Thickness mm (in.)
A	2.50 (0.0984)	D	2.68 (0.1055)
B	2.56 (0.1008)	E	2.74 (0.1079)
C	2.62 (0.1031)	F	2.80 (0.1102)

(c) Using brass bar and hammer, install the snap ring to the output shaft.



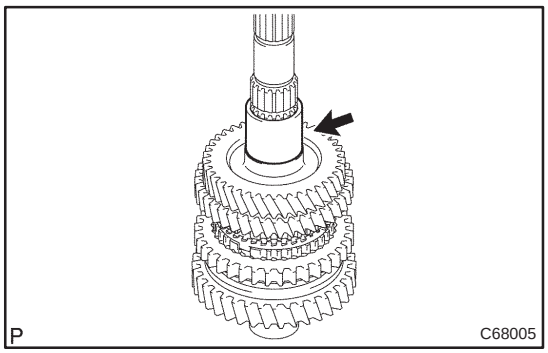
31. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing and 2nd gear bearing spacer with gear oil, install them to the output shaft.



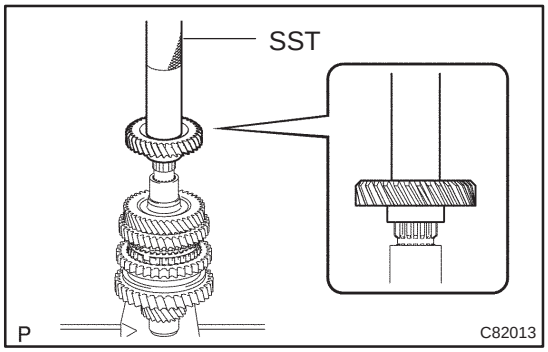
32. INSTALL SYNCHRONIZER RING NO.1 (FOR SECOND SYNCHRONIZER RING)

(a) Coat the synchronizer ring No.1 with gear oil, install it to the 2nd gear.



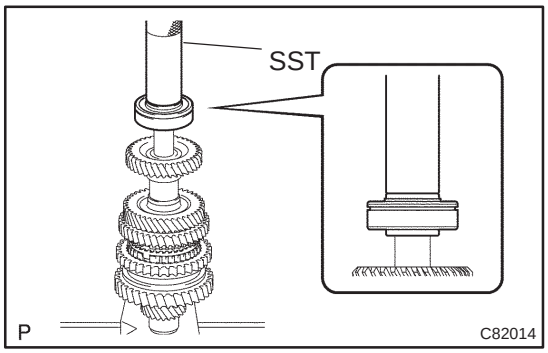
33. INSTALL 2ND GEAR

(a) Coat the 2nd gear with gear oil, install it to the output shaft.



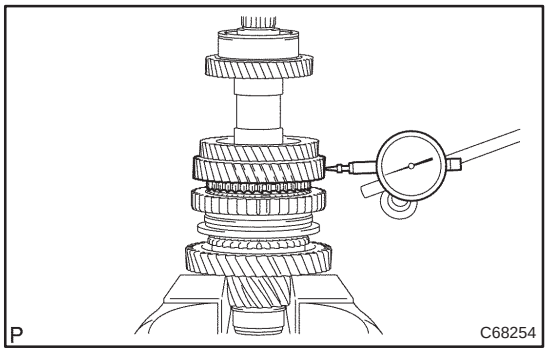
34. INSTALL 3RD DRIVEN GEAR

(a) Using SST and a press, install the 3rd driven gear to the output shaft.
SST 09950–00020



35. INSTALL OUTPUT GEAR SPACER

(a) Install the output gear spacer to the output shaft.

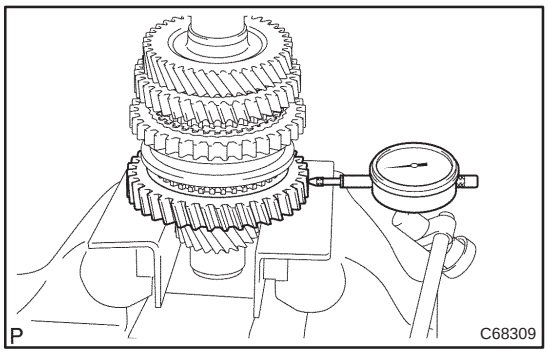


36. INSTALL 4TH DRIVEN GEAR

(a) Using SST and a press, 4th driven gear to the output shaft.
SST 09612–22011

37. INSTALL OUTPUT SHAFT REAR BEARING

(a) Using SST and a press, install the output shaft rear bearing to the output shaft.
SST 09612–22011

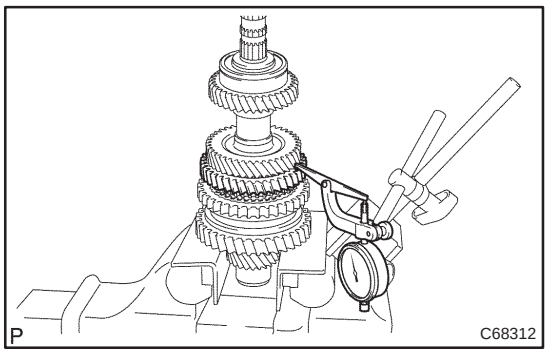


38. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance between the gear and shaft.

Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)

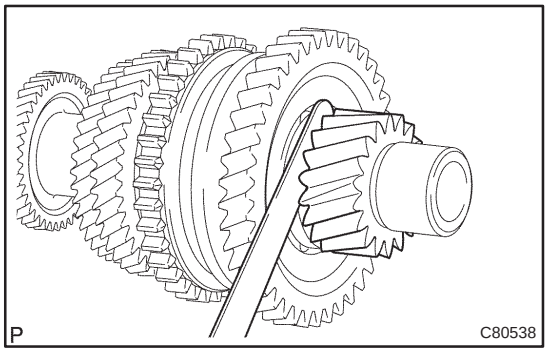
If the clearance exceeds the maximum, replace the 2nd gear or needle roller bearing.



39. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance between the gear and shaft.

Standard clearance:
0.015 – 0.058 mm (0.0006 – 0.0023 in.)
Maximum clearance:
0.058 mm (0.0023 in.)



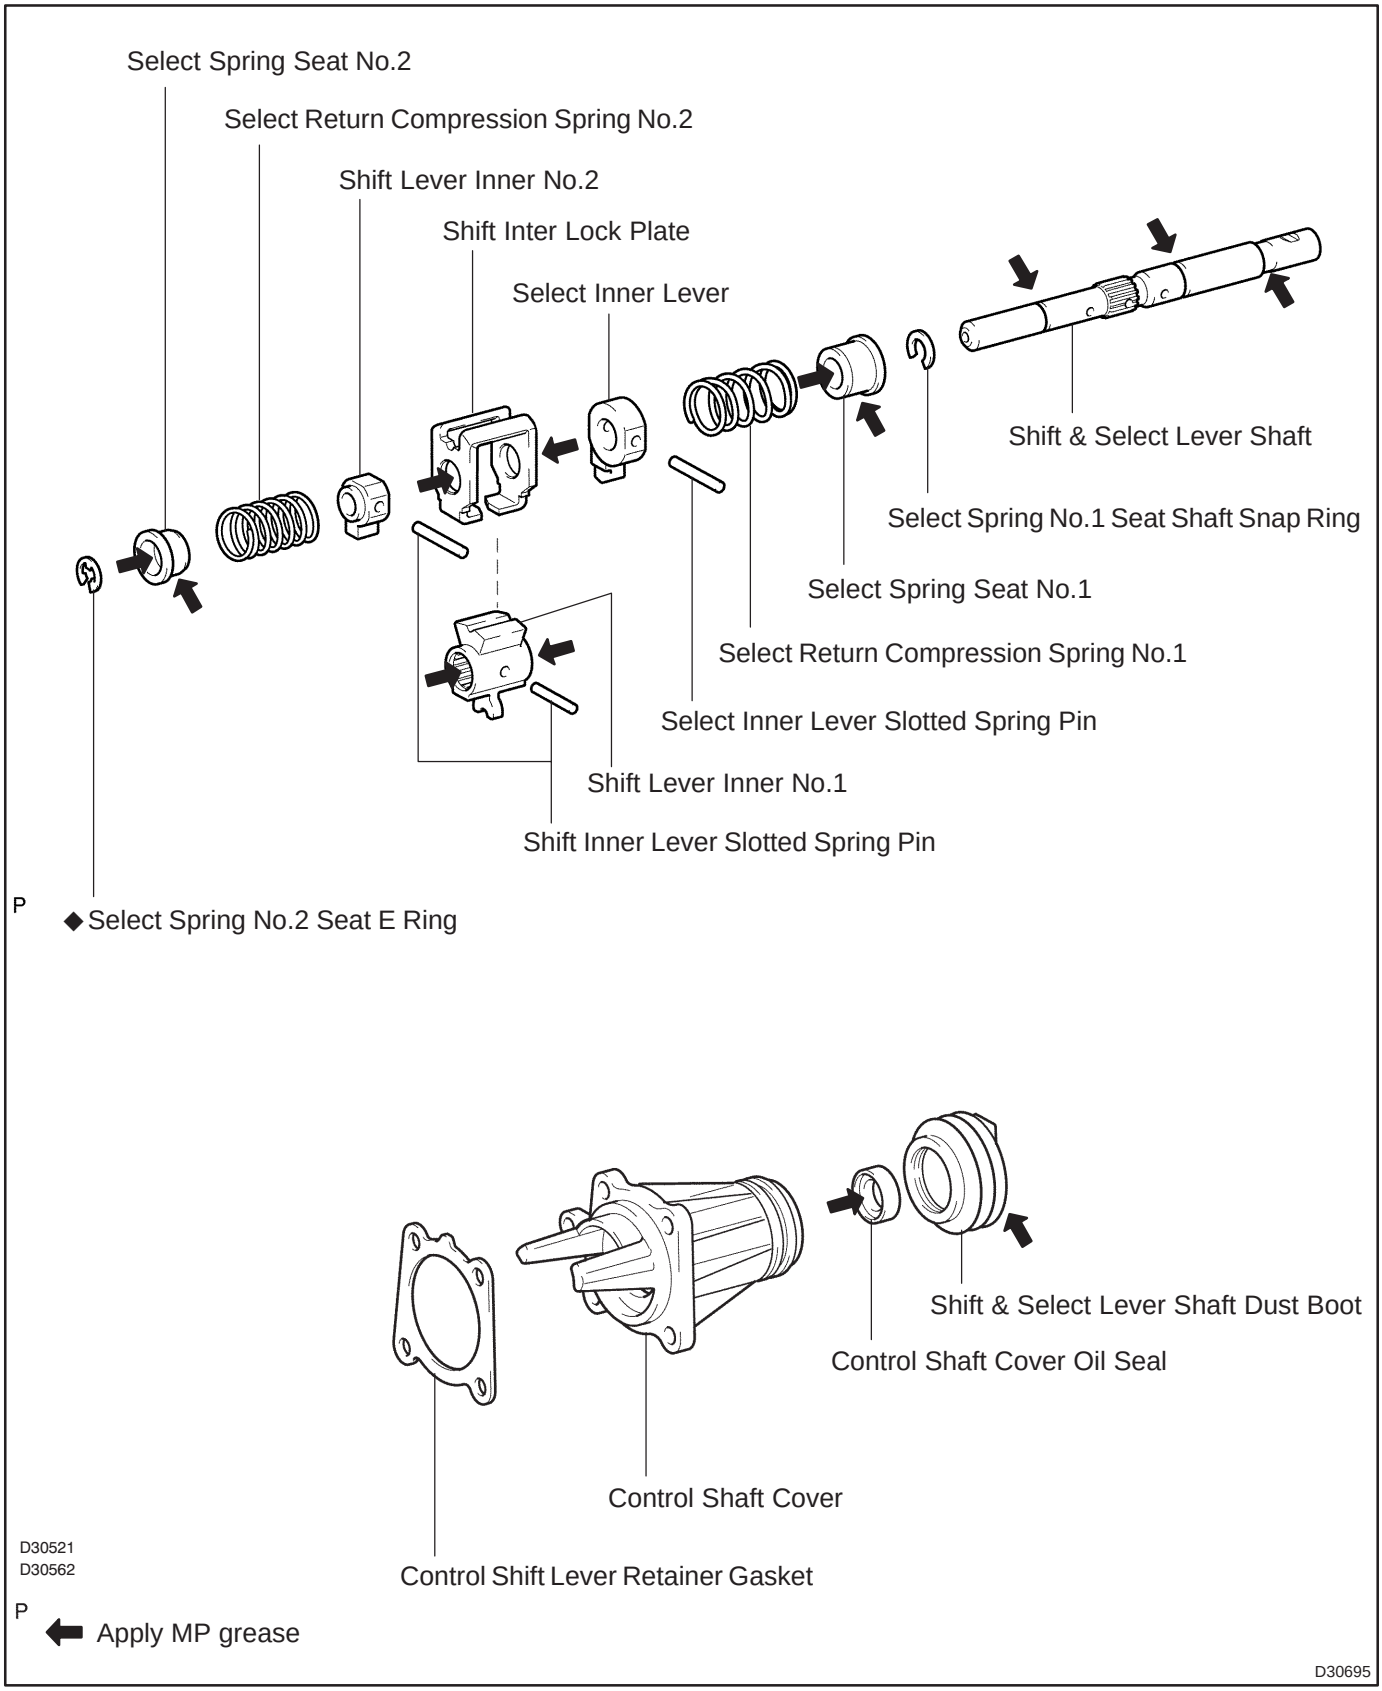
If the clearance exceeds the maximum, replace the 1st gear, needle roller bearing.

40. INSPECT 2ND GEAR THRUST CLEARANCE

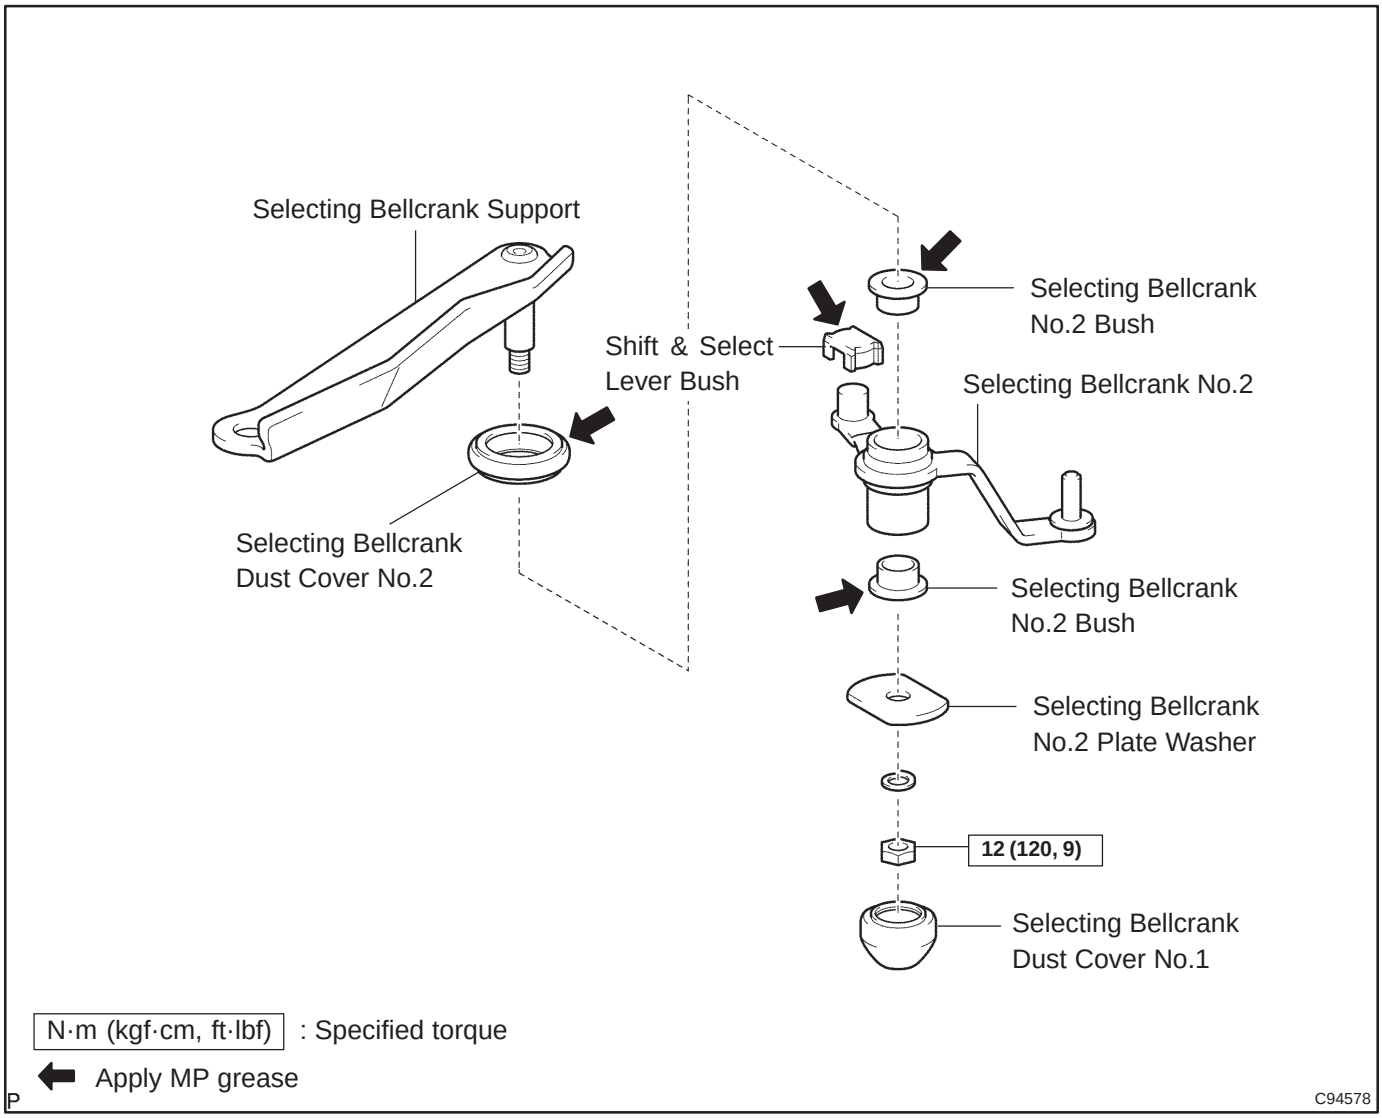
(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:
0.1 – 0.45 mm (0.0039 – 0.0177 in.)
Maximum clearance:
0.45 mm (0.0177 in.)

41. INSPECT 1ST GEAR THRUST CLEARANCE



(a) Using a feeler gauge, measure the 1st gear thrust clearance.



Standard clearance:
0.10 – 0.40 mm (0.0039 – 0.0157 in.)
Maximum clearance:
0.40 mm (0.0157 in.)

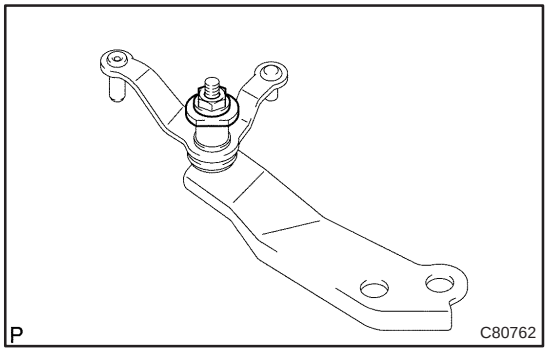
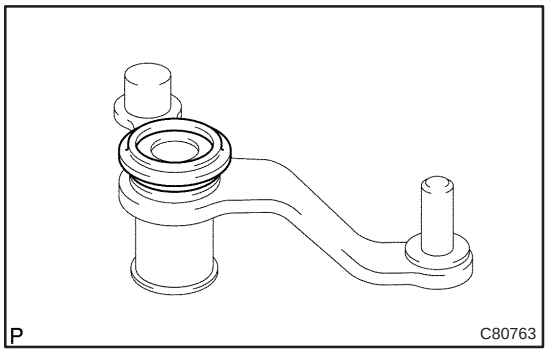
OVERHAUL



1. REMOVE SHIFT & SELECT LEVER BUSH

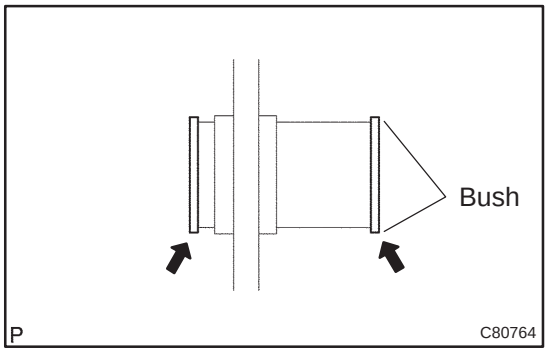
(a) Remove the shift & select lever bush from the selecting bell crank assy.

2. REMOVE SELECTING BELLCRANK DUST COVER NO.1



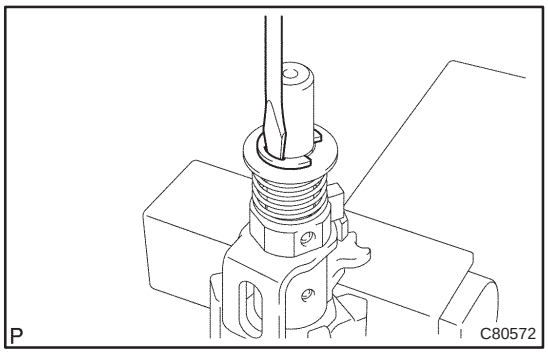
(a) Remove the selecting bellcrank dust cover No.1 from the selecting bellcrank assy.

3. REMOVE SELECTING BELL CRANK NO.2



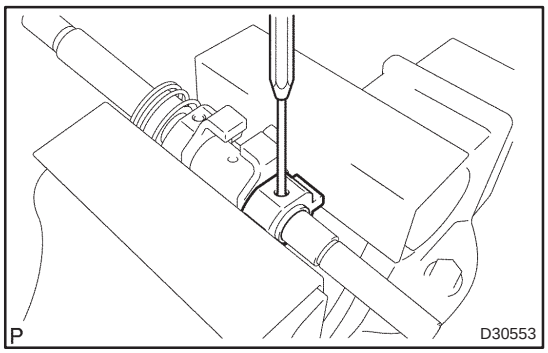
(a) Remove the nut, spring washer and selecting bellcrank No.2 plate washer.

(b) Remove selecting bellcrank No.2 from the selecting bellcrank support.



4. REMOVE SELECTING BELLCRANK DUST COVER NO.2

(a) Remove the selecting bellcrank dust cover No.2 from the selecting bellcrank No.2.

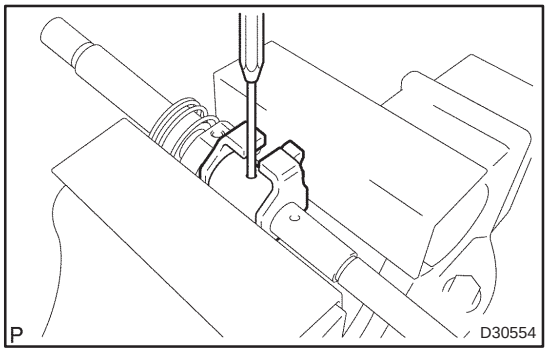


5. REMOVE SELECTING BELLCRANK NO.2 BUSH

(a) Remove the 2 selecting bellcrank No.2 bushes from the selecting bellcrank.

6. REMOVE SELECT SPRING SEAT NO.2

(a) Using a screwdriver, remove the select spring seat No.2 E–ring, select spring seat No.2 and select return spring No.2 from the shift & select lever shaft.

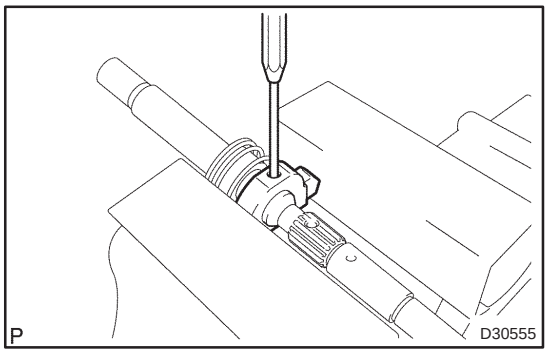


7. REMOVE SHIFT LEVER INNER NO.2

(a) Using a pin punch (ϕ 5mm) and hammer, remove the shift inner lever slotted pin and shift lever inner No.2 from the shift & select lever shaft.

HINT:

Make sure of the orientation of the shift lever inner No.2.

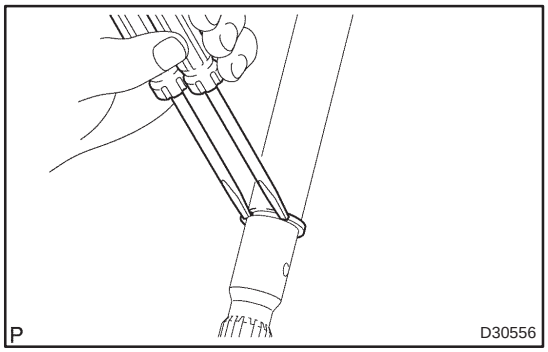


8. REMOVE SHIFT LEVER INNER NO.1

(a) Using a pin punch (ϕ 5mm) and hammer, remove the shift inner lever slotted pin, shift lever inner No.1 and shift inter lock plate from the shift & select lever shaft.

HINT:

Make sure of the orientation of the shift lever inner No.1.



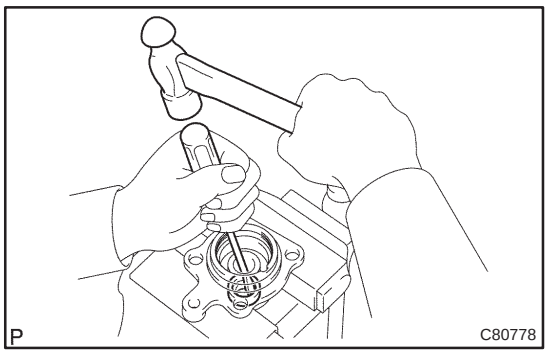
9. REMOVE SELECT INNER LEVER

(a) Using a pin punch (ϕ 5mm) and hammer, remove the select inner lever slotted pin, select inner lever select return spring No.1 and select return spring No.1 seat from shift & select lever shaft.

HINT:

Make sure of the orientation of the select inner lever.

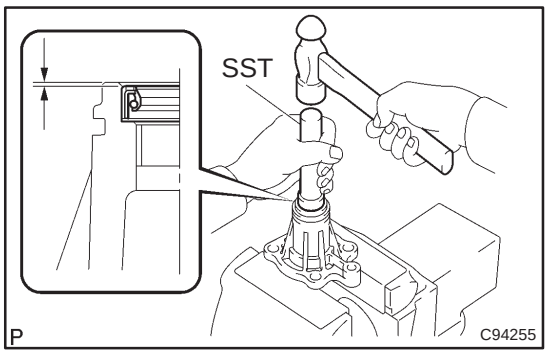
10. REMOVE SELECT SPRING NO.1 SEAT SHAFT SNAP RING



(a) Using 2 screwdrivers and a hammer, remove the select spring No.1 seat shaft snap ring.

NOTICE:

Do not damage the shaft.



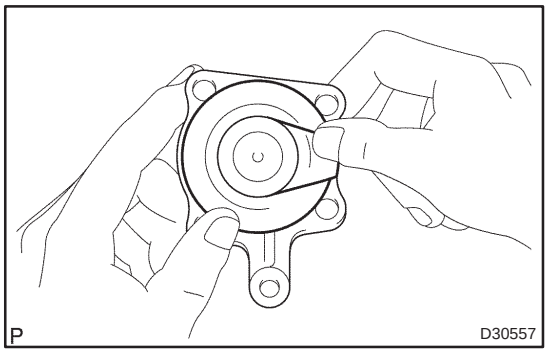
11. REMOVE SHIFT & SELECT LEVER SHAFT DUST BOOT

(a) Remove the shift & select lever shaft dust boot from the shift & select lever shaft.

12. REMOVE CONTROL SHAFT COVER OIL SEAL

(a) Using a screwdriver remove the control shaft cover oil seal from the control shaft cover.

13. INSTALL CONTROL SHAFT COVER OIL SEAL



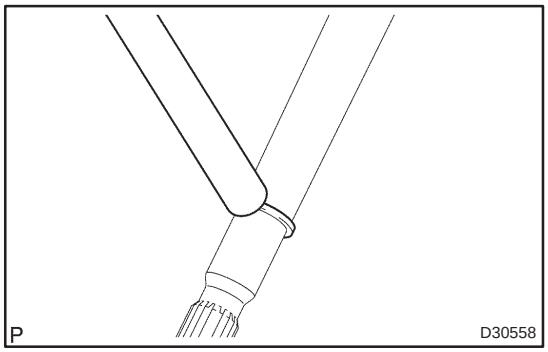
(a) Using SST and a hammer, install the new control shaft cover oil seal to the control shaft cover.

SST 09950–60010 (09951–00220), 09950–70010 (09951–07100)

Drive in depth:

0.2 – 1.2 mm (0.079 – 0.0472 in.)

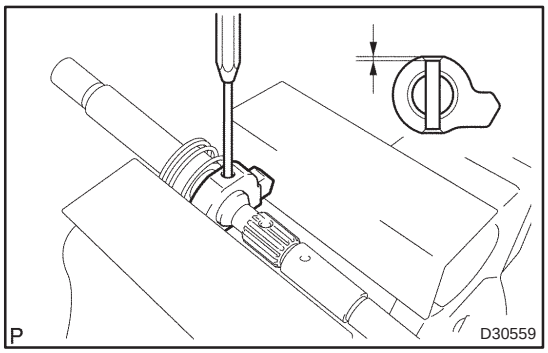
(b) Coat the control shaft cover oil seal with MP grease.



14. INSTALL SHIFT & SELECT LEVER SHAFT DUST BOOT

(a) Coat the shift & select lever shaft dust boot with MP grease.

(b) Install the shift & select lever shaft dust boot to the shift & select lever shaft.

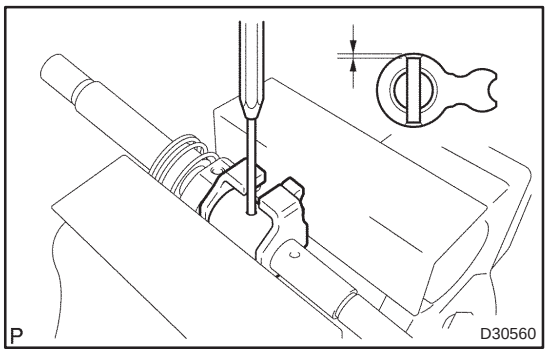


HINT:

Install the boot with the projection up and the hole side down.

15. INSTALL SELECT SPRING NO.1 SEAT SHAFT SNAP RING

(a) Coat the shift & select lever shaft with MP grease, install it and snap ring with a brass bar and hammer.

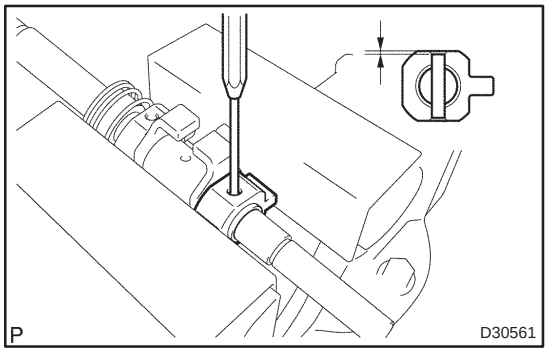


16. INSTALL SELECT INNER LEVER

(a) Coat the select spring No.1 seat with MP grease.

(b) Using a pin punch (ϕ 5mm) and hammer, install the select spring No.1 seat, select return spring No.1, select inner lever and shift & select lever slotted pin to the shift & select lever.

Drive in depth: 3.0 – 4.0 mm (0.1181 – 0.1575 in)

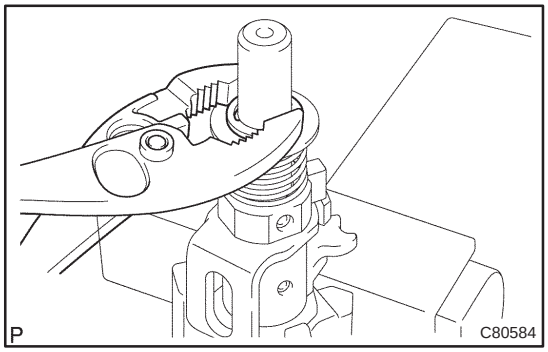


17. INSTALL SHIFT LEVER INNER NO.1

(a) Coat the shift inter lock plate and shift lever inner No.1 with MP grease.

(b) Using a pin punch (ϕ 5mm) and hammer, install the shift inter lock plate, shift lever inner No.1 and shift lever slotted pin to the shift & select lever shaft.

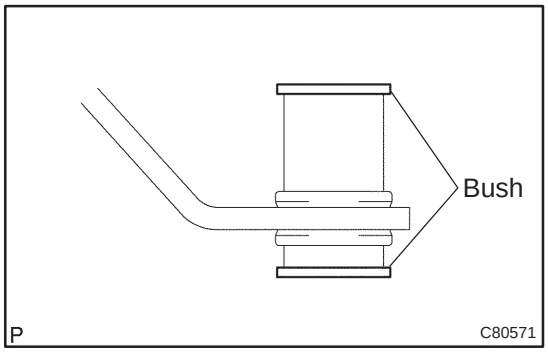
Drive in depth: –0.5 – 0.5 mm (–0.0197 – 0.0197 in)



18. INSTALL SHIFT LEVER INNER NO.2

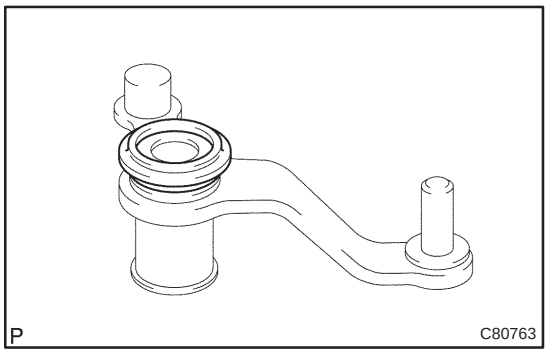
(a) Coat the shift lever inner No.2 with Mp grease.

(b) Using a pin punch (ϕ 5mm) and hammer, install the shift lever inner No.2 E–ring and shift inner lever slotted pin to the shift & select lever shaft.



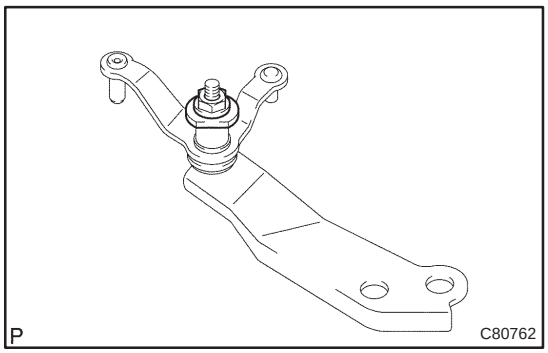
Drive in depth: –0.5 – 0.5 mm (–0.0197 – 0.0197 in)

19. INSTALL SELECT SPRING SEAT NO.2



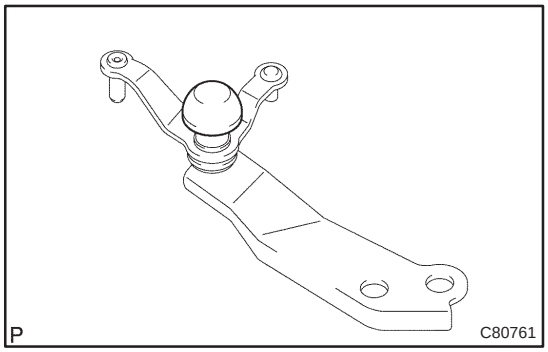
(a) Coat the select spring seat No.2 with MP grease.

(b) Install the select spring seat No.2, select return spring No.2. Using a plier, install a new select spring seat No.2 E–ring to the shift & select lever shaft.



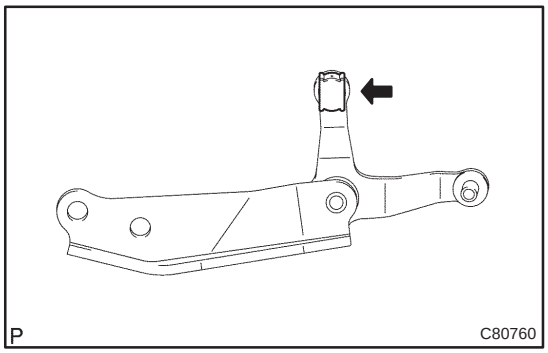
20. INSTALL SELECTING BELLCRANK NO.2 BUSH

(a) Coat the 2 selecting bellcrank No.2 bushes with MP grease, install it to the selecting bellcrank.



21. INSTALL SELECTING BELLCRANK DUST COVER NO.2

(a) Coat the selecting bellcrank dust cover No.2 with MP grease, install it to the selecting bell crank.

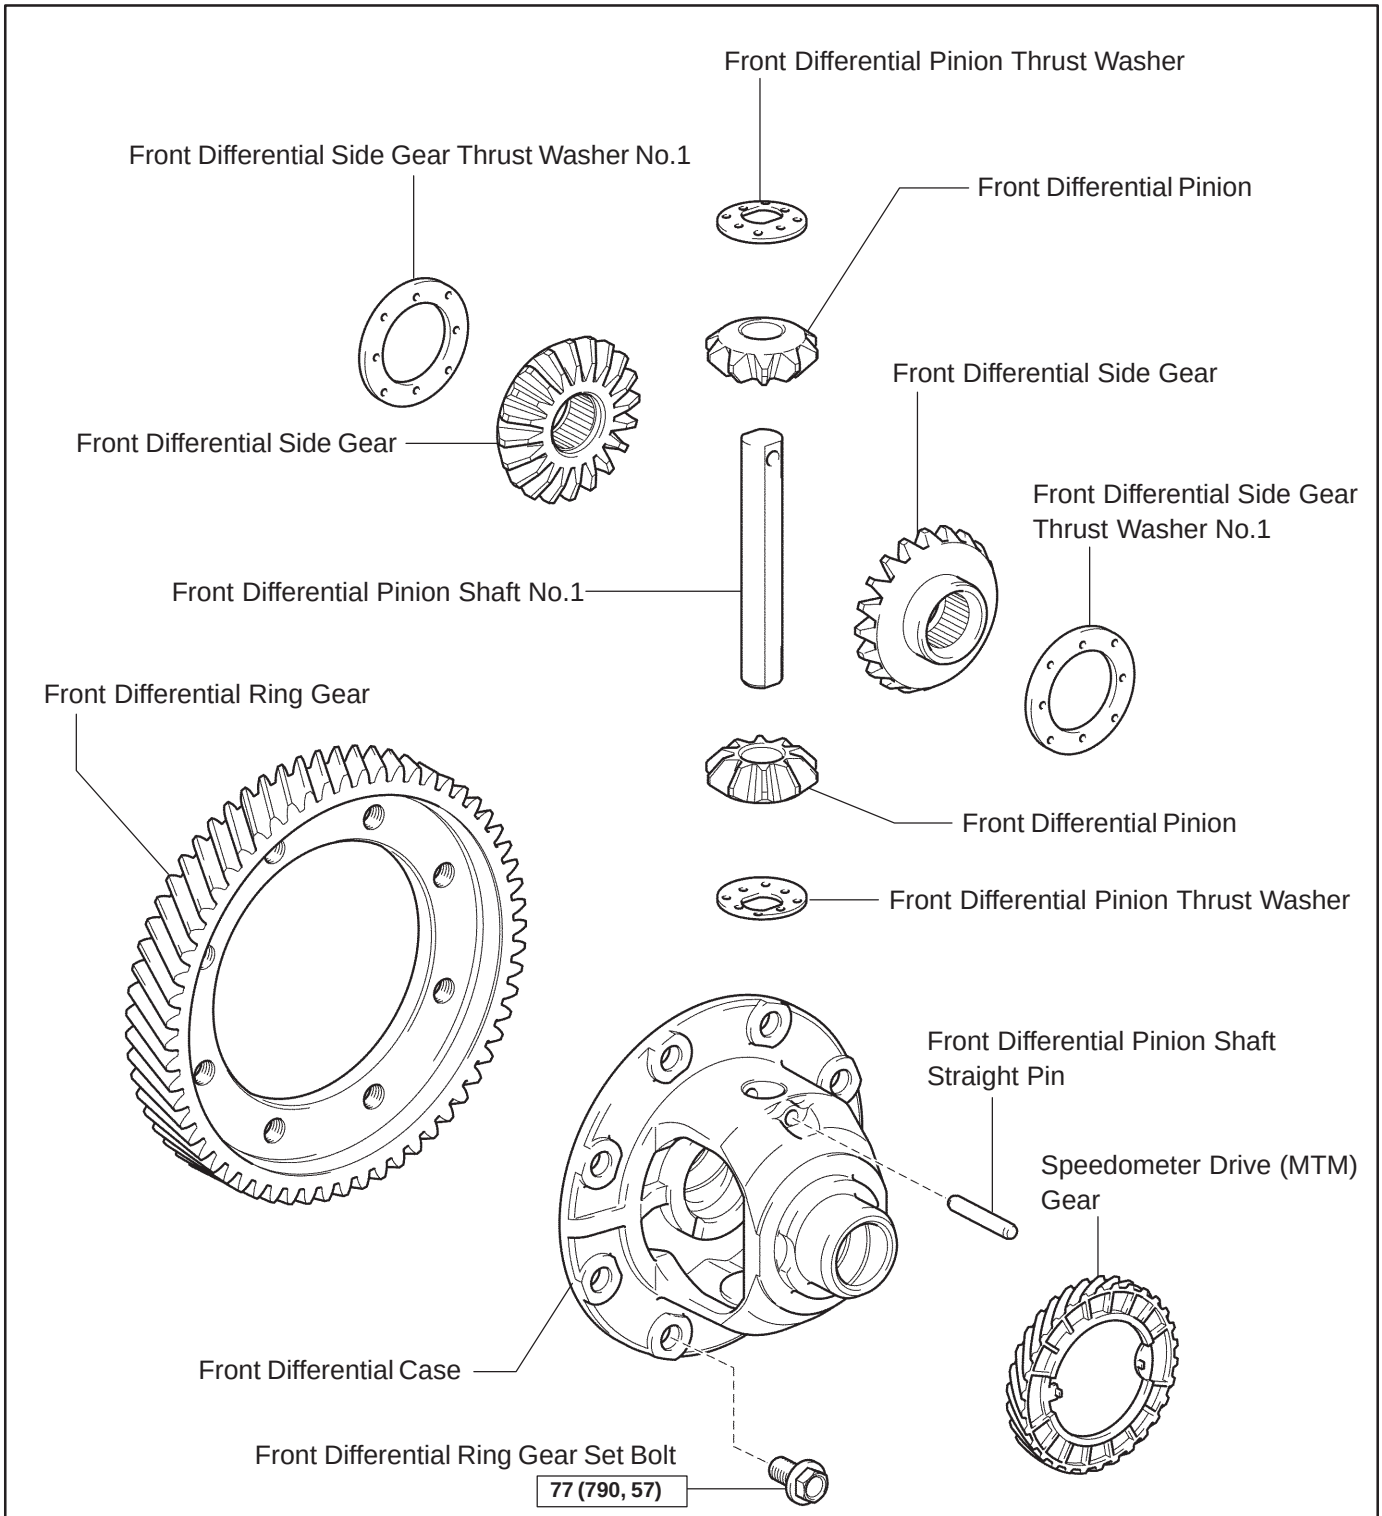


22. INSTALL SELECTING BELL CRANK NO.2

(a) Install the selecting bellcrank, selecting bell crank No.1 plate washer, spring washer and nut.
Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

23. INSTALL SELECTING BELLCRANK DUST COVER NO.1

(a) Install the selecting bellcrank dust cover No.1 to the selecting bell crank assy.



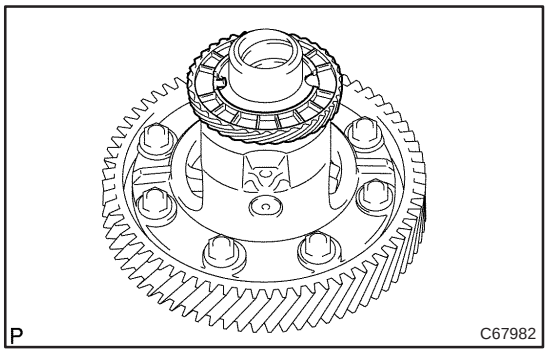
24. INSTALL SHIFT & SELECT LEVER BUSH

(a) Install shift & select lever bush to the selecting bell crank assy.

DIFFERENTIAL CASE ASSY (C250)

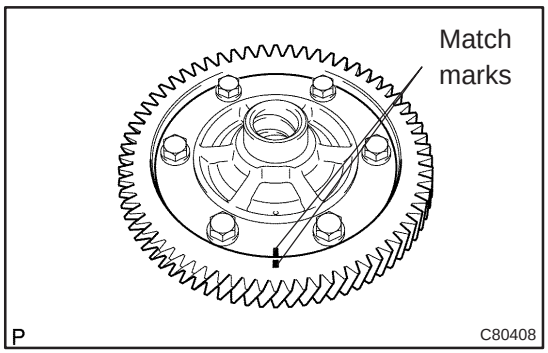
COMPONENTS

410DK–01



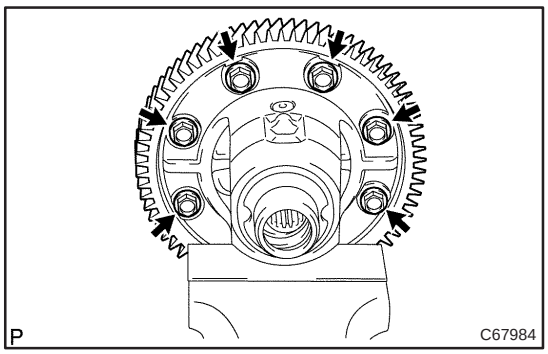
C88990
P

N·m (kgf·cm, ft·lbf): Specified torque



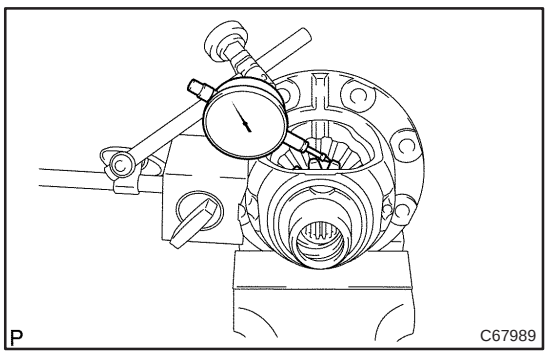
D30564

OVERHAUL



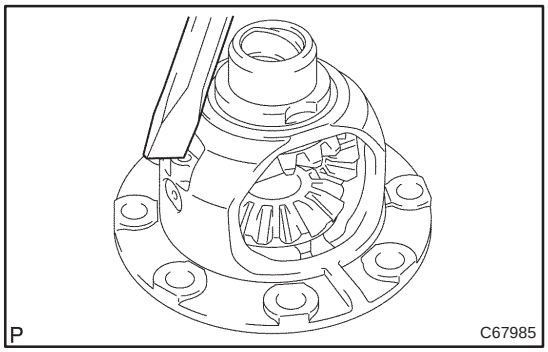
1. REMOVE SPEEDOMETER DRIVE (MTM) GEAR

(a) Remove the speedometer drive gear from the front differential case.



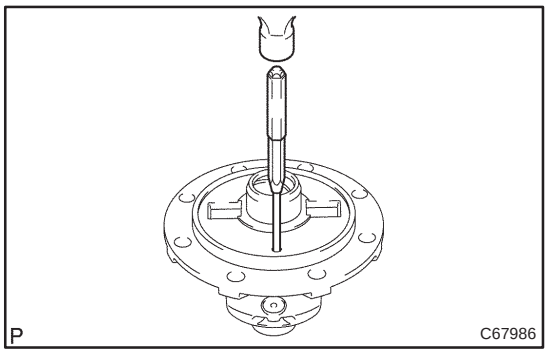
2. REMOVE FRONT DIFFERENTIAL RING GEAR

(a) Place match marks on the from the front differential ring gear and from the front differential case.



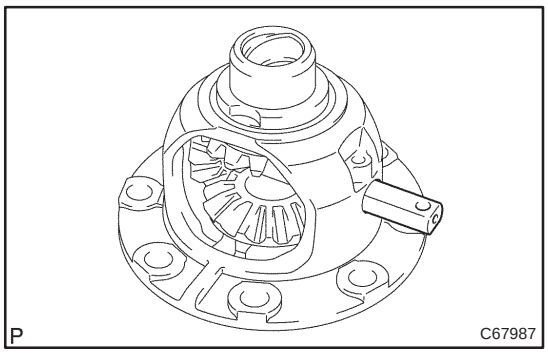
(b) Remove the 8 bolts. Using a hammer, remove the front differential ring gear from the front differential case.

3. INSPECT FRONT DIFFERENTIAL SIDE GEAR BACKLASH



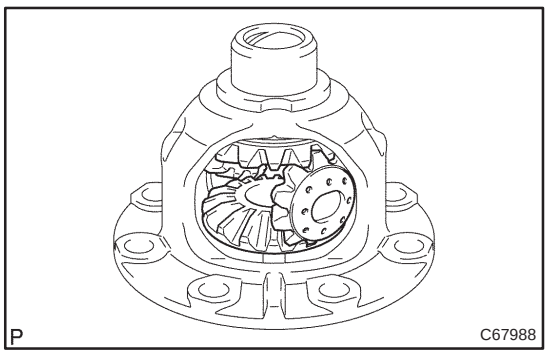
(a) Fixing the front differential pinion to the from the front differential case side. Using a dial indicator, measure the front differential side gear back lash.

Standard backlash:
0.05 – 0.20 mm (0.0020 – 0.0079 in.)



4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

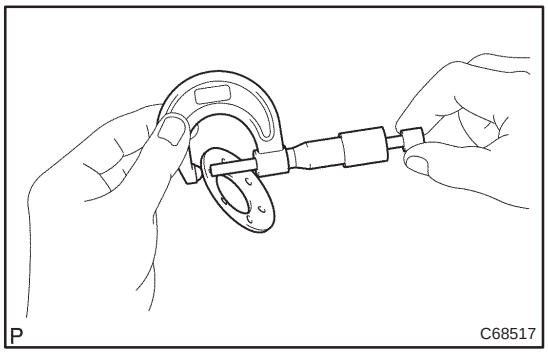
(a) Using a chisel and hammer, loosen the staked part of the front differential case.



(b) Using a pin punch (ϕ 3 mm) and a hammer, remove the front differential pinion shaft straight pin from the front differential case.

5. REMOVE FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Remove the front differential pinion shaft No.1 from the front differential case.

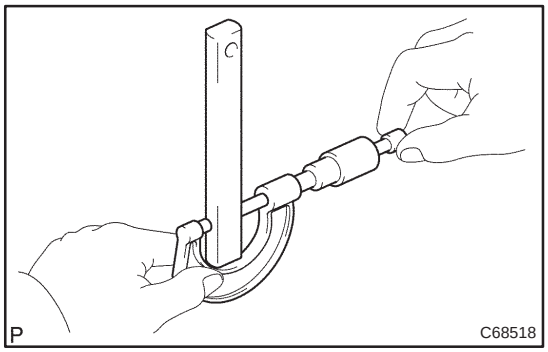


6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions , front differential pinion thrust washers and front differential side gear thrust washers No.1 from the front differential case.

HINT:

Revolving the front differential pinion, remove the 2 pinions, pinion thrust washers and side gear thrust washers.

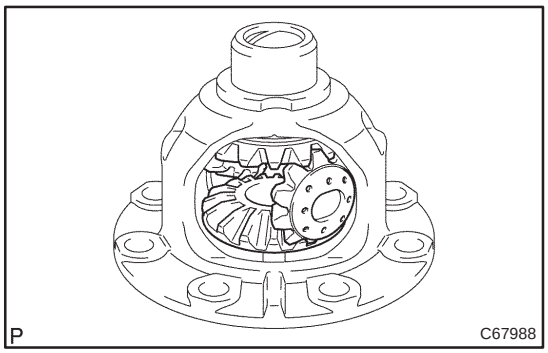


7. INSPECT FRONT DIFFERENTIAL PINION THRUST WASHER

(a) Using a micrometer, measure the thickness of the front differential pinion thrust washer.

Minimum thickness: 0.94 mm (0.03701 in.)

If the thickness exceed the minimum, replace the front differential pinion thrust washer.



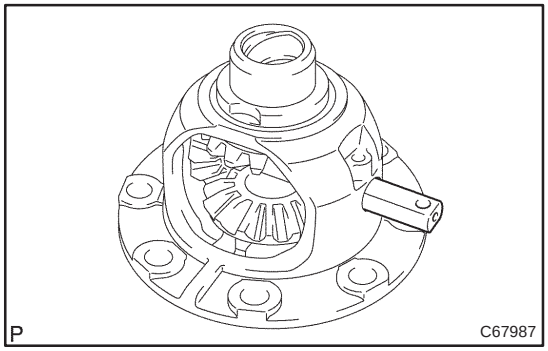
8. INSPECT FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Using a micrometer, measure the outer diameter of the front differential pinion shaft No.1.

Minimum outer diameter: 16.982 mm (0.6685 in.)

If the outer diameter exceed the minimum, replace the front differential pinion shaft No.1.

9. INSTALL FRONT DIFFERENTIAL SIDE GEAR

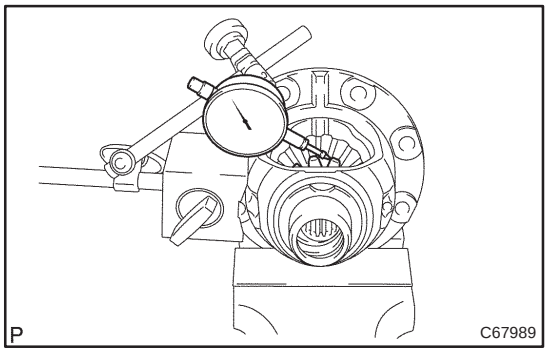


(a) Coat the sliding and rotating surface of the front differential side gear with MP grease.

(b) Install the 2 front differential side gear thrust washers to the 2 front differential side gear.

(c) Install the 2 front differential pinions with front differential washers to the front differential case.

HINT:



Revolving the front differential pinion, install the 2 front differential pinions with front differential washers.

10. INSTALL FRONT DIFFERENTIAL PINION SHAFT NO.1

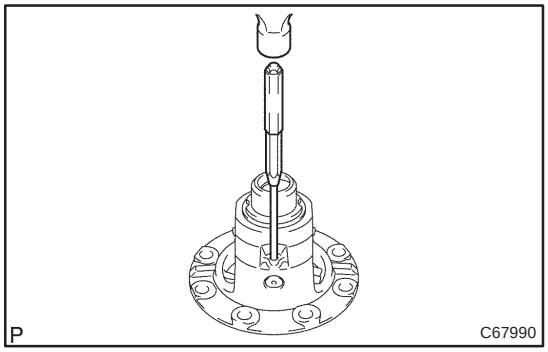
(a) Coat the front differential pinion shaft No.1 with MP grease.

(b) Install the front differential pinion shaft No.1 to the front differential case so that the hole for the front differential pinion shaft straight pin is aligned with the hole in the front differential case.

11. ADJUST FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Fixing the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.

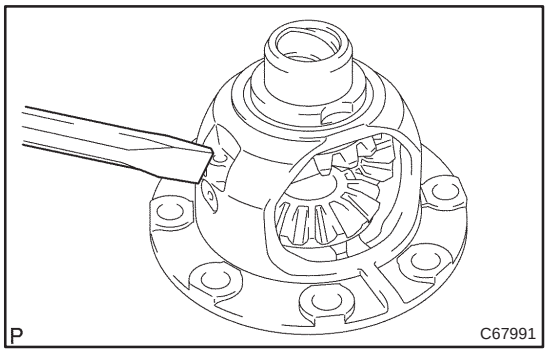
Standard backlash:



0.05 – 0.20 mm (0.0020 – 0.0079 in.)

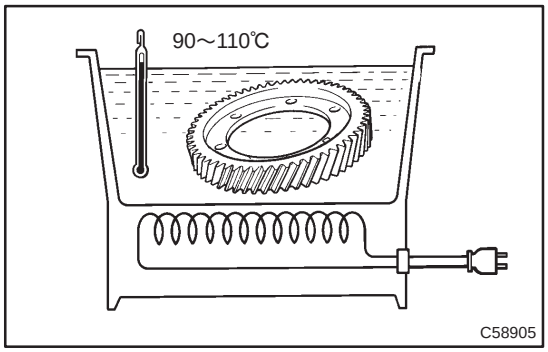
HINT:

- Because the thrust washer does not have any mark for distinction, measure the thickness with a micrometer to select a proper thrust washer.
- Select washers of the same thickness for both the right and left.



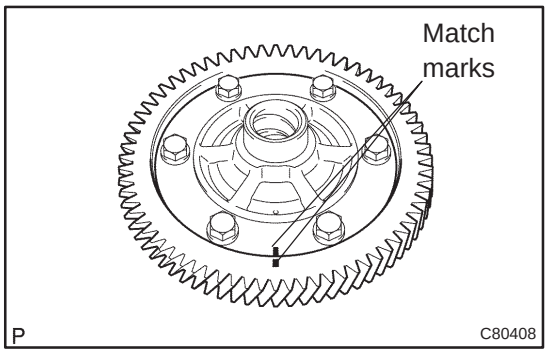
Thrust washer thickness

Parts No.	Thickness mm (in.)
41361 – 22140	0.95 (0.0374 in.)
41361 – 22020	1.00 (0.0394 in.)
41361 – 22150	1.05 (0.0413 in.)
41361 – 22030	1.10 (0.0433 in.)
41361 – 22160	1.15 (0.0452 in.)
41361 – 22040	1.20 (0.0472 in.)



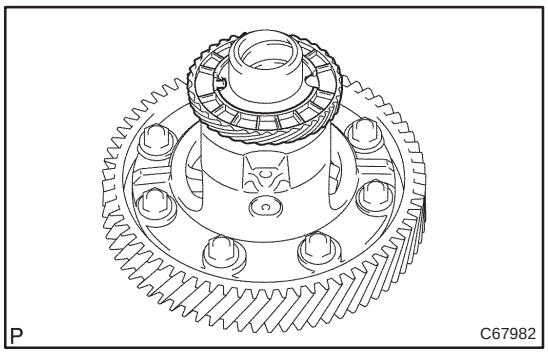
12. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch (ϕ 3mm) and hammer, install the front differential pinion shaft straight pin to the front differential case.



(b) Using a chisel and hammer, stake the front differential case hole.

13. INSTALL FRONT DIFFERENTIAL RING GEAR



(a) Using a heater, heat the front differential ring gear to 90 – 110 °C (194.0 – 230.0 °F.)

(b) Clean the contact surface of the front differential case.

(c) Aligning the both match marks, quickly install the front differential ring gear to the front differential case.

(d) Install the 8 bolts.
Torque: 77 N·m (790 kgf·cm, 57 ft·lbf)

14. INSTALL SPEEDOMETER DRIVE (MTM) GEAR

(a) install the speedometer drive gear to the front differential case.

HOW TO USE THIS AUTOMATIC TRANSAXLE REPAIR MANUAL

0103A–07

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This manual explains" Removing and Installing, Replacing, Disassembling ,Instaling and Checking, Adjusting" , but" Final inspection" is omitted.

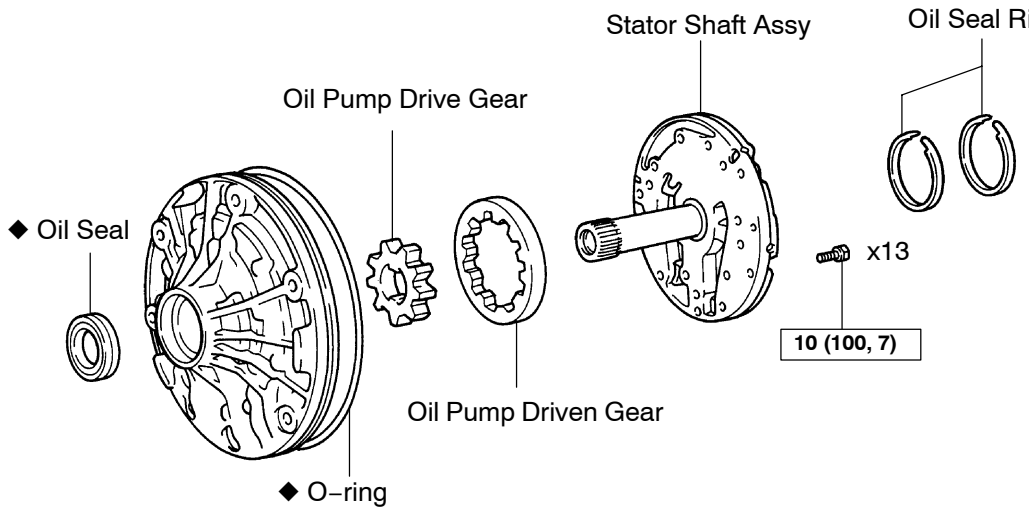
(d) The following essential operations are not written in this manual, however these operations must be done in the practical situation.
(1) Operation with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX is provided as a section on the end of the book to guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.



4. REPAIR PROCEDURES

(a) Component drawing is placed as the section or title when necessary.

(b) Illustrations of the parts catalog are placed as the" disassembled parts drawing" so that it enables you to understand the fitting condition of the components.

(c) Non–reusable parts, grease applied parts, precoated parts and tightening torque are specified in the components drawing.

Example:

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non–reusable part

(d) Tightening torque, oil applying position, and non–reusable parts are described as important points in the procedure.

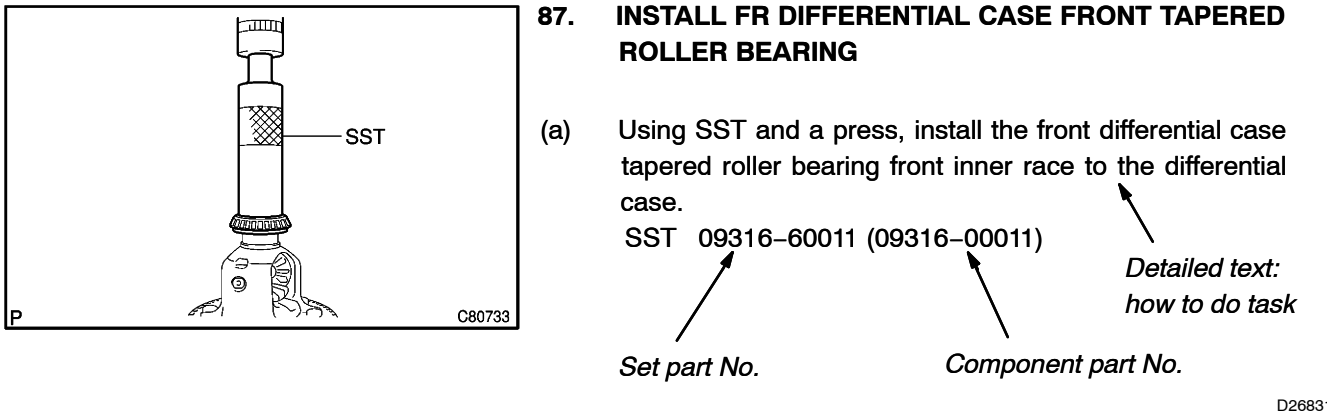
NOTICE:

There are cases where such information can only be indicated by an illustration. In that case, all the information such as torque, oil, etc are described in the illustration.

(e) Installing procedure of operation item is performed in the reverse order of the removing, and only the important points are described.

(f) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(g) There may be a case where the illustrations of similar models are used. In that case the details may be different from the actual vehicle.



(h) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.

(2) The task heading tells what to do.

(3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for a quick reference.

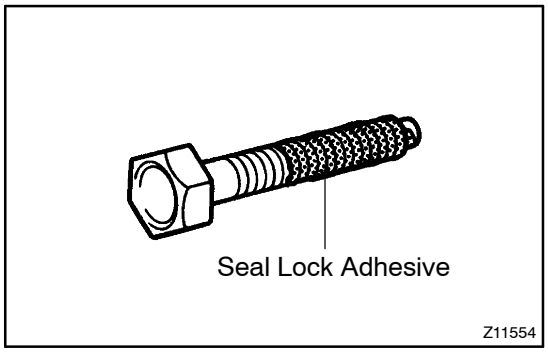
6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:



Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION FOR AUTOMATIC TRANSAXLE REPAIR MANUAL

PRECAUTION

0103B–07

1. BASIC REPAIR HINT

(a) PRECOATED PARTS

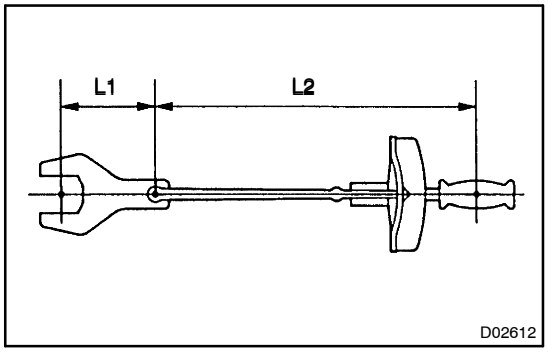
(1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

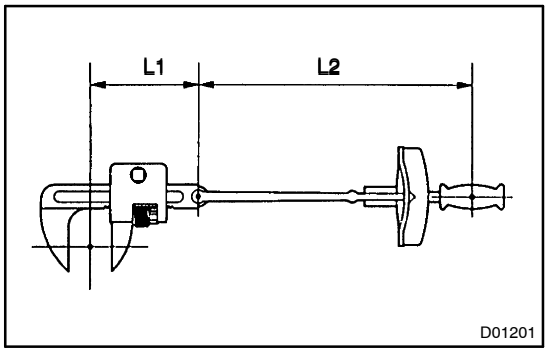
(3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

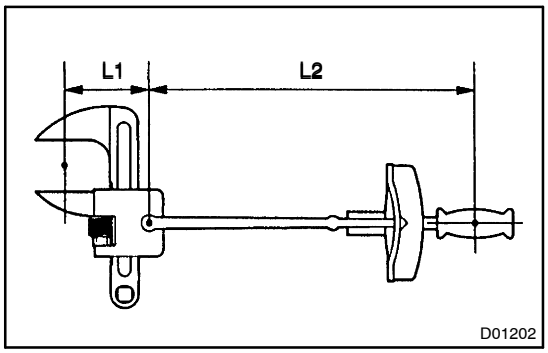
Do the torque checking with the lower limit value of the torque tolerance.



(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.



(b) GASKETS



When necessary, use a sealer on gaskets to prevent leaks.

(c) BOLTS, NUTS AND SCREWS

Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

(d) TORQUE WHEN USING EXTENSION TOOL WITH TORQUE WRENCH

(1) In case of tightening by extending the entire length of the torque wrench combined with SST or tool, if you tighten until the reading of the torque wrench reached the specified torque value, the actual torque becomes excessive.

(2) In this text, only the specified torque is described. In case of using SST or extension tool, find the reading of the torque wrench by the formula.

(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or tool (cm)
L2	Length of torque wrench (cm)

TERMS FOR AUTOMATIC TRANSAXLE REPAIR MANUAL

0103C–05

ABBREVIATIONS USED IN THIS MANUAL

Abbreviations	Meaning
ASSY	Assembly
ATF	Automatic Transaxle Fluid
B_3	U/D Brake
C_2	Reverse Clutch
C_3	U/D Clutch
FIPG	Formed In Place Gasket
O/D	Overdrive
SSM	Special Service Materials
SST	Special Service Tools
U/D	Underdrive
w/	With
w/o	Without
1st	First
2nd	Second

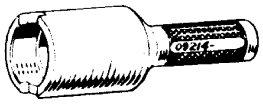
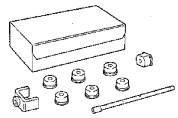
GLOSSARY OF SAE AND TOYOTA TERMS

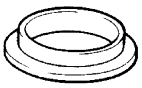
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their Toyota equivalents.

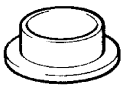
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )––ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	–
CAC	Charge Air Cooler	Inter cooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Potion	–
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Control Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only memory	Electrically Erasable Programmable Read Only memory (EEPROM), Erasable Programmable Read Only memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO2S)
IAC	Idol Air Control	Idol Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection
IFS	Inertia Fuel–Shutoff	–

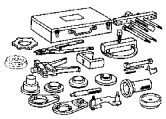
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_{2S})
OBD	On–Board Diagnostic	On–Board Diagnostic (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Converter (OC), CC_0
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	–
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU (Electronic Control Unit)
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	$CC_R + CC_O$
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor (Read Switch Type)
WOT	Wide Open Throttle	Full Throttle

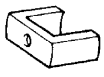


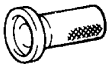


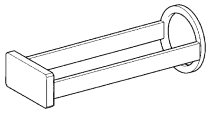












WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	Manifold Converter
3GR	Third Gear	–
4GR	Fourth Gear	–

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

AUTOMATIC TRANSMISSION / TRANSAXLE

0305K–11

SERVICE DATA

Oil pump		
Body clearance	STD	0.10 – 0.17 mm (0.0039 – 0.0067 in.)
	Max.	0.17 mm (0.0067 in.)
Tip clearance	STD	0.07 – 0.15 mm (0.0028 – 0.0059 in.)
	Max.	0.15 mm (0.0059 in.)
Side clearance	STD	0.02 – 0.05 mm (0.0008 – 0.0020 in.)
	Max.	0.05 mm (0.0020 in.)
Drive gear thickness	Mark	
	A	11.690 – 11.699 mm (0.4602 – 0.4606 in.)
	B	11.700 – 11.709 mm (0.4606 – 0.4610 in.)
	C	11.710 – 11.720 mm (0.4610 – 0.4614 in.)
	D	11.721 – 11.730 mm (0.4615 – 0.4618 in.)
	E	11.731 – 11.740 mm (0.4619 – 0.4622 in.)
Driven gear thickness	Mark	
	A	11.690 – 11.699 mm (0.4602 – 0.4606 in.)
	B	11.700 – 11.709 mm (0.4606 – 0.4610 in.)
	C	11.710 – 11.720 mm (0.4610 – 0.4614 in.)
	D	11.721 – 11.730 mm (0.4615 – 0.4618 in.)
	E	11.731 – 11.740 mm (0.4619 – 0.4622 in.)
Pump body bushing inside diameter	STD	38.113 – 38.138 mm (1.50050 – 1.50149 in.)
	Max.	38.188 mm (1.50346 in.)
Stator shaft bushing inside diameter	STD	21.500 – 21.526 mm (0.84646 – 0.84748 in.)
	Max.	21.57 mm (0.8492 in.)

Multiple disc clutch		
Inside diameter	STD	23.025 – 23.045 mm (0.9065 – 0.9073 in.)
	Max.	23.09 mm (0.9091 in.)

Forward clutch		
Pack clearance		1.00 – 1.25 mm (0.0394 – 0.4921 in.)
Return spring free length		26.74 mm (1.0528 in.)
Flange thickness	Mark	
	1	3.00 mm (0.1181 in.)
	2	3.15 mm (0.1240 in.)
	3	3.30 mm (0.1299 in.)
	4	3.45 mm (0.1358 in.)
	5	3.60 mm (0.1417 in.)

Reverse clutch		
Pack clearance:		0.60 – 0.82 mm (0.02362 – 0.03228 in.)
Flange thickness	Mark	
	1	3.0 mm (0.118 in.)
	2	3.1 mm (0.122 in.)
	3	3.2 mm (0.126 in.)
	4	3.3 mm (0.130 in.)
	5	3.4 mm (0.134 in.)
	6	3.5 mm (0.138 in.)
	7	3.6 mm (0.142 in.)

Direct clutch & O/D clutch		
Pack clearance		0.61 – 0.83 mm (0.02401 – 0.03268 in.)
Return spring free length		25.91 mm (1.0201 in.)
Flange thickness	Mark	
	0	2.5 mm (0.098 in.)
	1	2.6 mm (0.102 in.)
	2	2.7 mm (0.106 in.)
	3	2.8 mm (0.110 in.)
	4	2.9 mm (0.114 in.)
	5	3.0 mm (0.118 in.)
	6	3.1 mm (0.122 in.)

2nd brake		
Pack clearance		0.62 – 0.91 mm (0.0244 – 0.0358 in.)
Return spring free length		16.61 mm (0.6539 in.)
Flange thickness	Mark	
	1	3.0 mm (0.118 in.)
	2	3.1 mm (0.122 in.)
	3	3.2 mm (0.126 in.)
	4	3.3 mm (0.130 in.)
	5	3.4 mm (0.134 in.)
	6	3.5 mm (0.138 in.)
	7	3.6 mm (0.142 in.)

U/D clutch		
Pack clearance		1.51 – 1.71 mm (0.0594 – 0.0673 in.)
U/D clutch drum bushing inside diameter	STD	37.06 – 37.08 mm (1.4591 – 1.4598 in.)
	Max.	37.13 mm (1.4618 in.)
Return spring free length		17.14 mm (0.6752 in.)
Flange thickness	Mark	
	1	3.0 mm (0.118 in.)
	2	3.1 mm (0.122 in.)
	3	3.2 mm (0.126 in.)
	4	3.3 mm (0.130 in.)
	5	3.4 mm (0.134 in.)

U/D brake		
Pack clearance		1.81 – 2.20 mm (0.0713 – 0.0866 in.)
Return spring free length		14.04 mm (0.5528 in.)
Flange thickness	Mark	
	1	3.0 mm (0.118 in.)
	2	3.2 mm (0.126 in.)
	3	3.4 mm (0.134 in.)

1st & reverse brake		
Pack clearance		1.16 – 1.35 mm (0.0457 – 0.0531in.)
Return spring free length		15.53 mm (0.6114 in.)
Flange thickness	Mark	
	1	1.8 mm (0.071 in.)
	2	1.9 mm (0.075 in.)
	3	2.0 mm (0.079 in.)
	4	2.1 mm (0.083 in.)
	5	2.2 mm (0.087 in.)
	6	2.3 mm (0.091 in.)
	7	2.4 mm (0.094 in.)
	8	2.5 mm (0.098 in.)

U/D planetary gear	
Preload (at 60 rpm)	0.50 – 1.42 N·m (5.1 – 14.5 kgf·cm, 0.06 – 0.17 in.·lbf)

Front planetary gear		
Turning torque (at 60 rpm)	New Bearing	0.51 – 1.02 N·m (5.1 – 10.0 kgf·cm, 4.4 – 8.7 in.·lbf)
	Used Bearing	0.26 – 0.51 N·m (2.7 – 5.2 kgf·cm, 2.3 – 4.5 in.·lbf)

Input shaft	
End play	0.262 – 1.249 mm (0.0103 – 0.0492 in.)

Transaxle rear cover	
Bearing press fit depth	20.55 – 21.25 mm (0.8091 – 0.8366 in.)

Transmission valve body		
Valve body installation bolt length	A	41 mm (1.614 in.)
	B	57 mm (2.244 in.)
	C	25 mm (0.984 in.)

Accumulator			
Spring		Free length/Outer diameter	Color
B_3	Inner	62.00 (2.4409) / 15.50 (0.610)	Purple
	Outer	74.23 (2.9224) / 16.50 (0.649)	Purple
C_2		60.96 (2.3999) / 14.10 (0.555)	Yellow
C_3		72.20 (2.8425) / 19.0 (0.748)	Colorless

Front differential(U151E)		
Backlash		0.05 – 0.20 mm (0.0020 – 0.0079 in.)
Thrust washer thickness	Mark	
	–	1.625 mm (0.0640 in.)
	–	1.725 mm (0.0679 in.)
	–	1.825 mm (0.0719 in.)
Praload (at 60 rpm)	New bearing	0.20 – 0.69 N·m (2.0 – 7.0 kgf·cm, 1.8 – 6.1 in.·lbf)
	Used bearing	0.10 – 0.35 N·m (1.0 – 3.6 kgf·cm, 0.9 – 3.1 in.·lbf)
Flange thickness	Mark	
	0	2.00 mm (0.0787 in.)
	1	2.05 mm (0.0807 in.)
	2	2.10 mm (0.0827 in.)

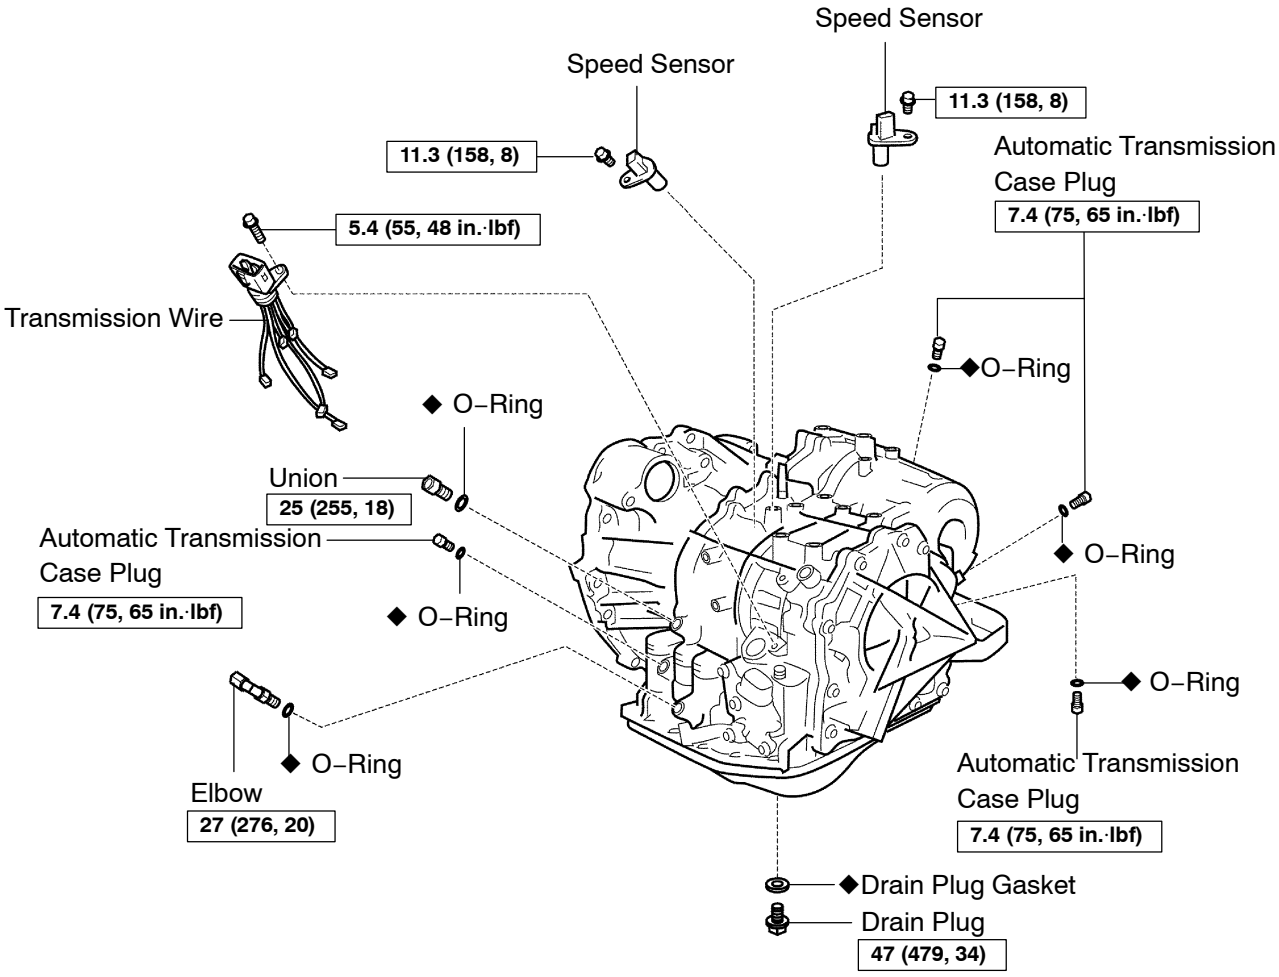
TORQUE SPECIFICATION



Part Tightened		N·m	kgf·cm	ft·lbf
Differential gear lube apply tube x Transaxle housing		9.8	100	87 in.·lbf
Front planetary gear lock nut		210–350	2141–3569	155–258
Brake apply tube clamp x Transaxle case		5.4	55	48 in.·lbf
Transaxle case No. 1 plug x Transaxle rear cover		7.4	75	65 in.·lbf
Transaxle rear cover x Transaxle case	Bolt A	19	190	14
	Other bolt	25	250	18
Pawl shaft clamp x Transaxle case		9.8	100	87 in.·lbf
Oil pump assy x Transaxle case		22	226	16
Transaxle housing x Transaxle case	Bolt A	25	255	18
	Bolt B	33	337	24
	Bolt C	29	295	21
	Bolt D	22	226	16
Automatic transmission case plug x Transaxle housing		7.4	75	65 in.·lbf
Automatic transmission case plug x Transaxle case		7.4	75	65 in.·lbf
Parking lock pawl bracket x Transaxle case		20	205	15
Manual detent spring x Transaxle case	Bolt A	20	205	15
	Bolt B	12	120	9
Transmission wire x Transaxle housing		5.4	55	48 in.·lbf
Transmission valve body x Transaxle case		11	110	8
ATF temperature sensor clamp x Transmission valve body		6.6	67	58 in·lbf
Valve body oil strainer assy x Transmission valve body		11	110	8
Automatic transaxle oil pan sub–assy x Transaxle case		7.8	80	69 in.·lbf
Drain plug x Automatic transaxle oil pan sub–assy		49	500	36
Speed sensor x Transaxle case		11	115	8
Oil cooler tube union x Transaxle case	Union	27	276	20
	Elbow	27	276	20
Park/neutral start switch x nut		6.9	70	61 in.·lbf
Park/neutral start switch x Bolt		5.4	55	48 in.·lbf
Park/neutral start switch x Control shaft lever		13	130	9
Speedometer driven hole cover sub–assy x Transaxle case		6.9	70	61
Oil pump body x Stator shaft assy		9.8	100	87 in.·lbf
Line pressure control solenoid assy x Transmission valve body assy		6.6	67	58 in.·lbf
Shift solenoid valve SL1x Transmission valve body assy		6.6	67	58 in.·lbf
Shift solenoid valve SL2x Transmission valve body assy		10.8	110	8
Shift solenoid valve SL3x Transmission valve body assy		6.6	67	58 in.·lbf
Shift solenoid valve S4x Transmission valve body assy		10.8	110	8
Shift solenoid valve DSL x Transmission valve body assy		10.8	110	8
Front differential case x Front differential ring gear		95.1	970	70

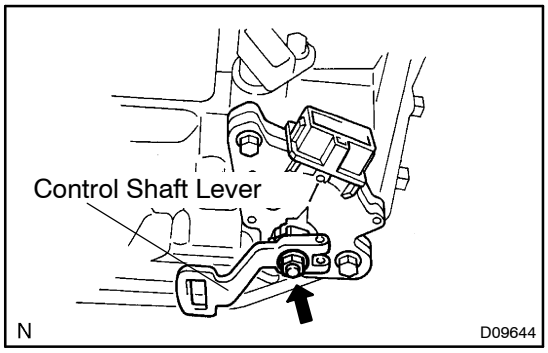
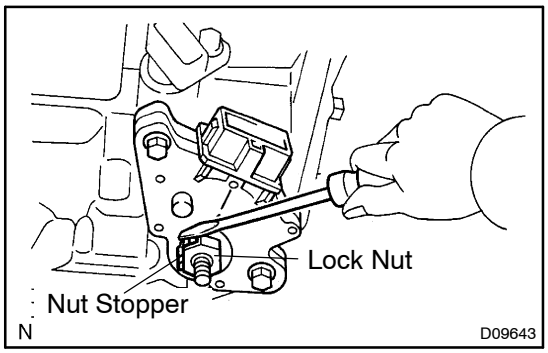
AUTOMATIC TRANSAXLE ASSY (U151E/U151F)



4010K–01

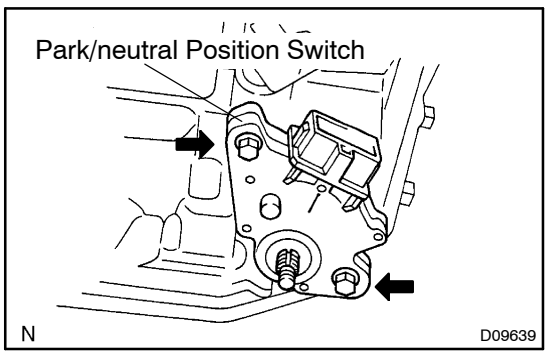
OVERHAUL

1. REMOVE SPEEDOMETER DRIVEN HOLE (ATM) COVER SUB–ASSY



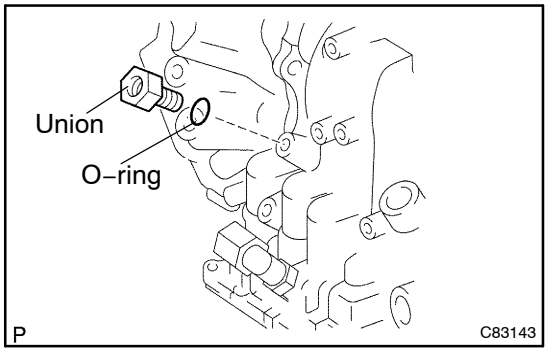
(a) Remove the bolt and speedometer driven hole cover sub–assy from the transaxle assy.

(b) Remove the O–ring from the speedometer driven hole cover.



2. REMOVE PARK/NEUTRAL POSITION SWITCH ASSY

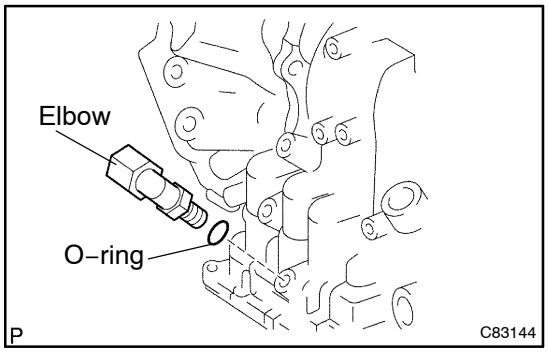
(a) Remove the nut, washer and control shaft lever.



(b) Using a screwdriver, unstake the nut stopper, and remove the lock nut and nut stopper.

(c) Remove the 2 bolts and pull out the park/neutral position switch.

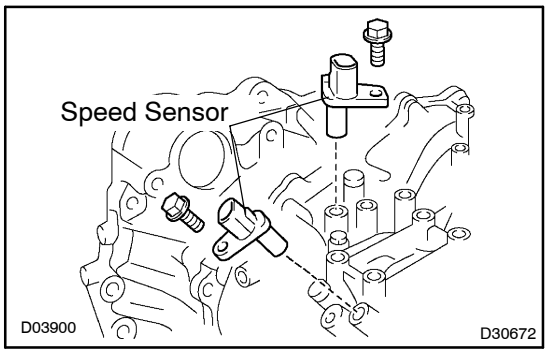
3. REMOVE BREATHER PLUG HOSE



(a) Remove the breather plug hose from the transaxle case.

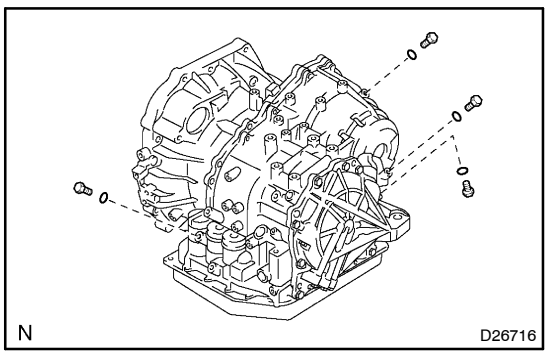
4. REMOVE OIL COOLER TUBE UNION (INLET OIL COOLER UNION)

(a) Remove the union.



(b) Remove the O–ring from the union.

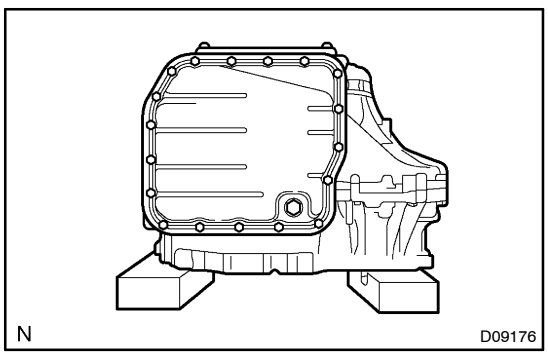
5. REMOVE OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)



(a) Remove the elbow.

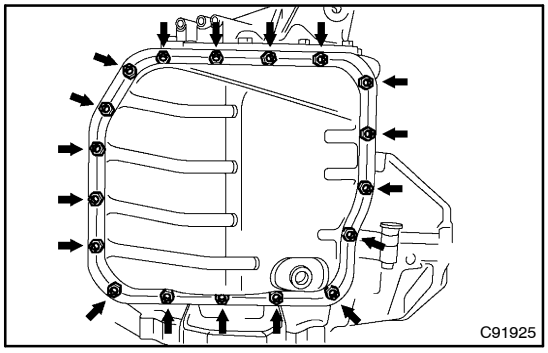
(b) Remove the O–ring from the elbow.

6. REMOVE SPEED SENSOR



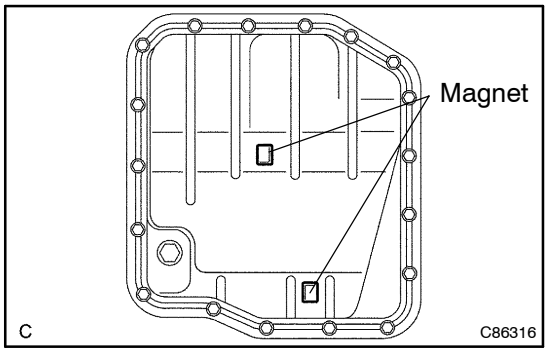
(a) Remove the 2 bolts and the 2 speed sensors from the transaxle assy.

7. REMOVE TRANSAXLE CASE NO.1 PLUG



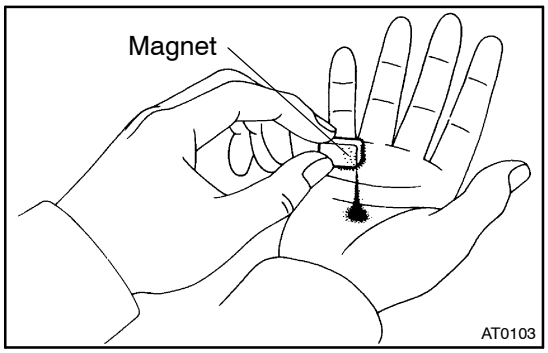
(a) Remove the 4 transaxle case No. 1 plugs from the transaxle case.

(b) Remove the 4 O–rings from the 4 transaxle case No.1 plugs.



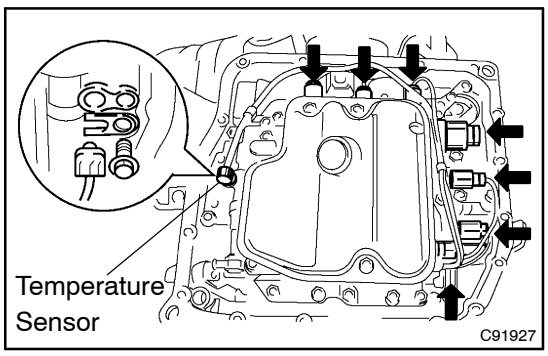
8. FIX AUTOMATIC TRANSAXLE ASSY

(a) Fix the transaxle assy.

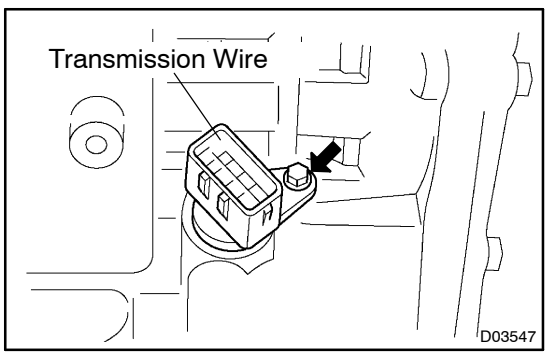


9. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Remove the 18 bolts, oil pan and gasket.

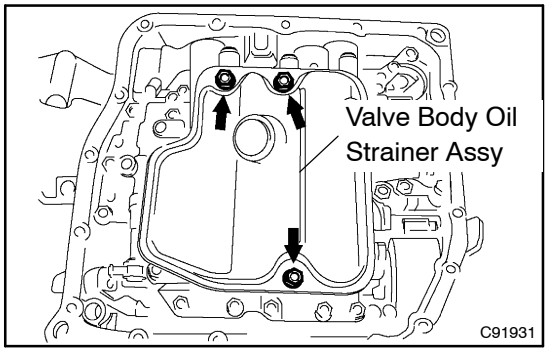


(b) Remove the 2 magnets from the oil pan.



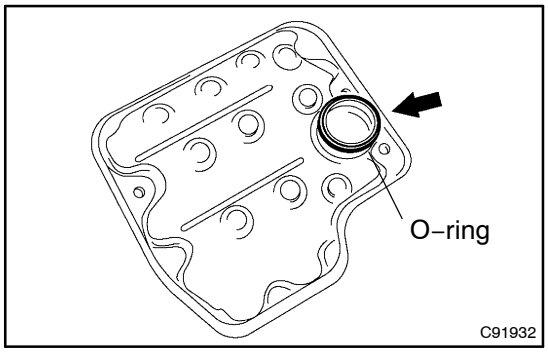
10. INSPECT TRANSMISSION OIL CLEANER MAGNET

(a) Remove the magnets and use them to collect any steel chips. Examine the chips and particles in the pan and on the magnet to determine what type of wear has occurred in the transaxle:
Steel (magnetic).... bearing, gear and plate wear
Brass (non–magnetic).... bushing wear



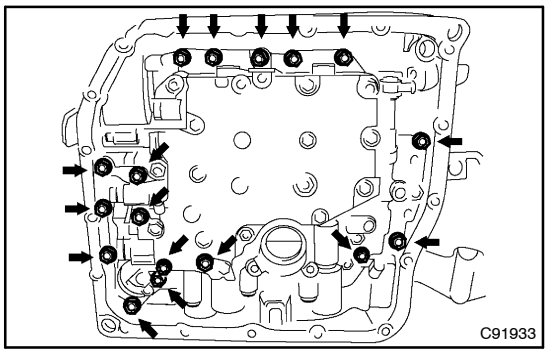
11. DISCONNECT TRANSMISSION WIRE

(a) Remove the 7 connectors from the shift solenoid valves.
(b) Remove the bolt, lock plate and ATF temperature sensor.



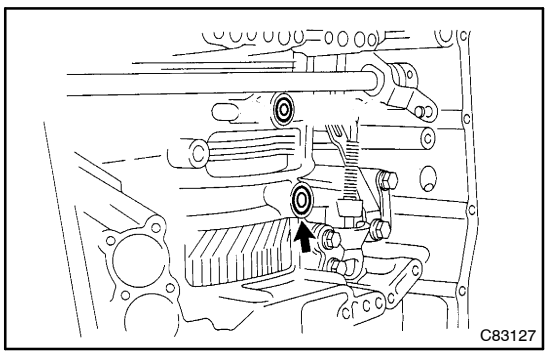
12. REMOVE TRANSMISSION WIRE

(a) Remove the bolt and transmission wire from the transaxle case.

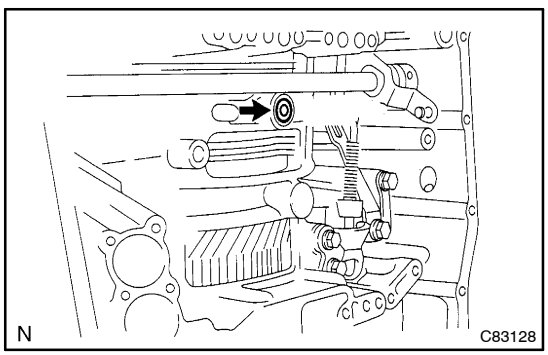


13. REMOVE VALVE BODY OIL STRAINER ASSY

(a) Remove the 3 bolts and oil strainer.

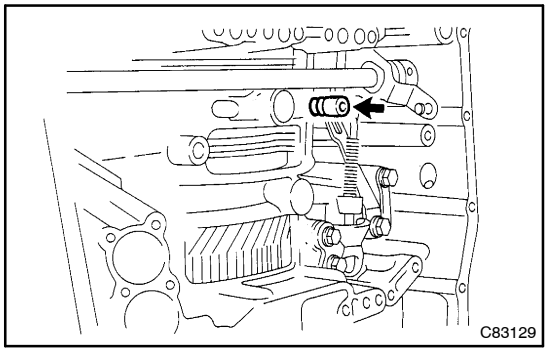


(b) Remove the O–ring from the oil strainer.



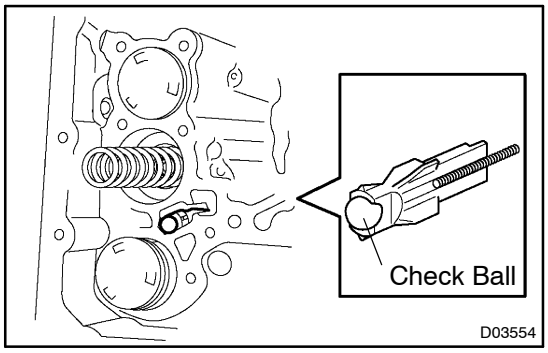
14. REMOVE TRANSMISSION VALVE BODY ASSY

(a) Support the valve body assy and remove the 17 bolts and valve body assy.



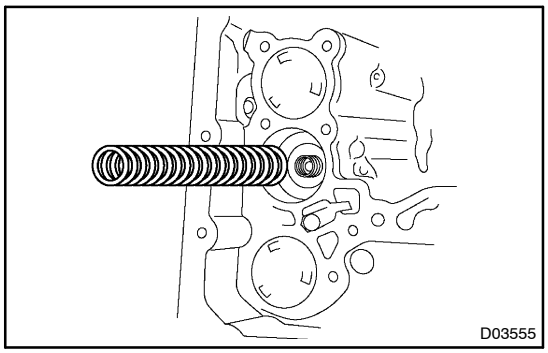
15. REMOVE GOVERNOR APPLY GASKET NO.1

(a) Remove the governor apply gasket No.1 from the transaxle case.



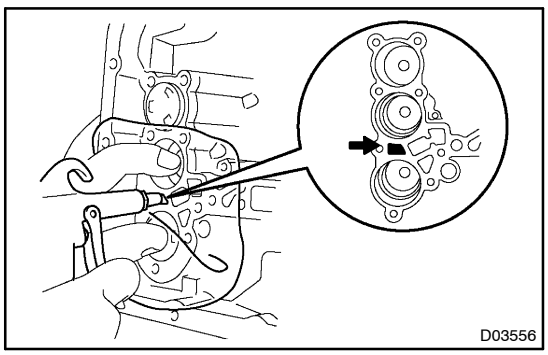
16. REMOVE TRANSAXLE CASE 2ND BRAKE GASKET

(a) Remove the transaxle case 2nd brake gasket from the transaxle case.



17. REMOVE BRAKE DRUM GASKET

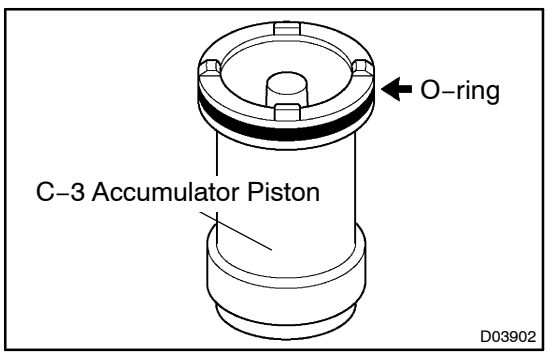
(a) Remove the brake drum gasket from the transaxle case.



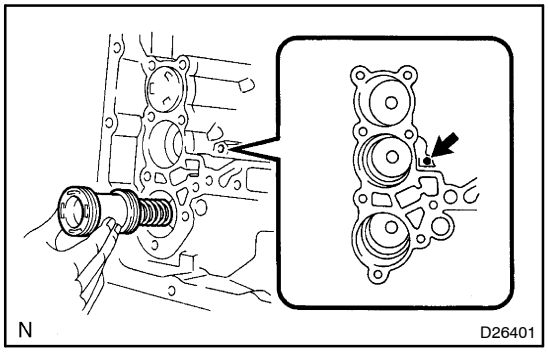
18. REMOVE CHECK BALL BODY

(a) Remove the check ball body and spring from the transaxle case.

19. REMOVE C–3 ACCUMULATOR PISTON



(a) Remove the spring from the C–3 accumulator piston.

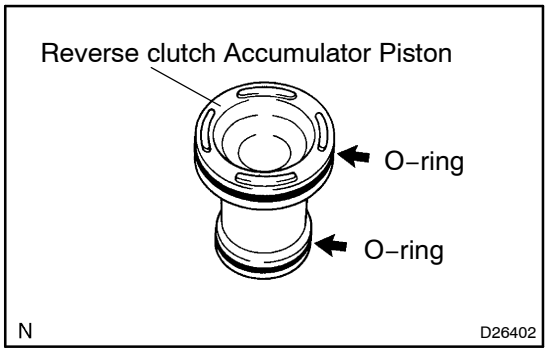


(b) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the C–3 accumulator piston.

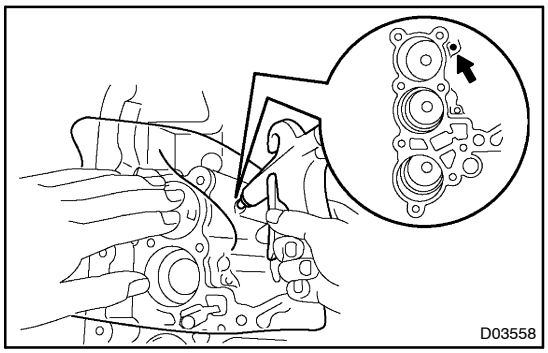
NOTICE:

- **Blowing off the air may cause the piston to jump–out. When removing the piston, hold it by your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

(c) Remove the O–ring from the C–3 accumulator piston.



20. REMOVE REVERSE CLUTCH ACCUMULATOR PISTON

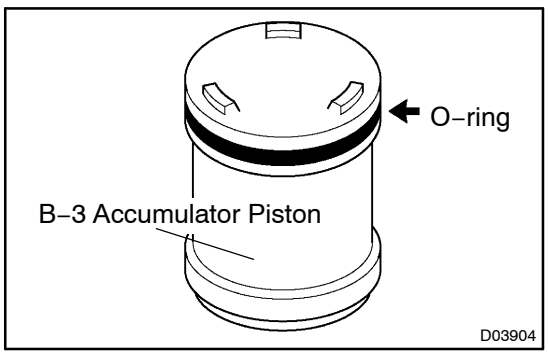


(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the reverse accumulator piston and spring.

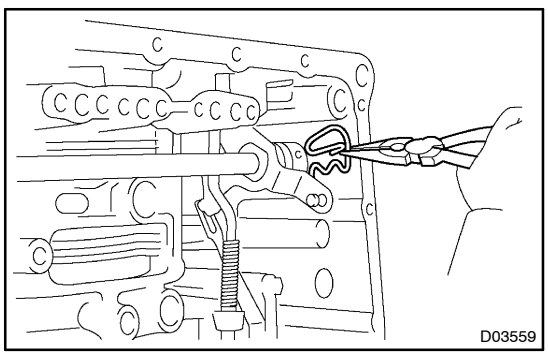
NOTICE:

- **Blowing off the air may cause the piston to jump–out. When removing the piston, hold it by your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

(b) Remove the 2 O–rings from the reverse clutch accumulator piston.



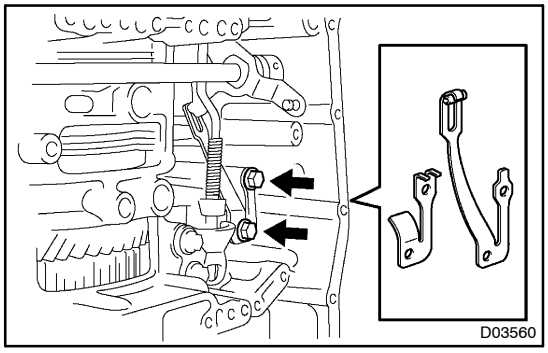
21. REMOVE B–3 ACCUMULATOR PISTON



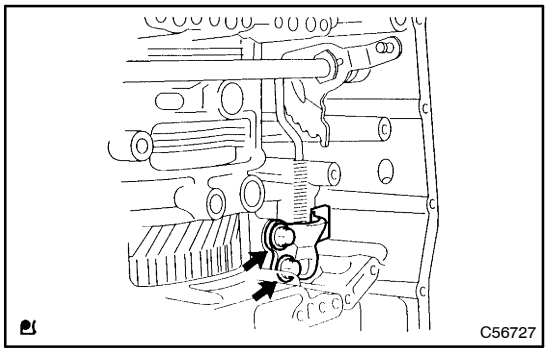
(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the B–3 accumulator piston and 2 springs.

NOTICE:

- **Blowing off the air may cause the piston to jump–out. When removing the piston, hold it by your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

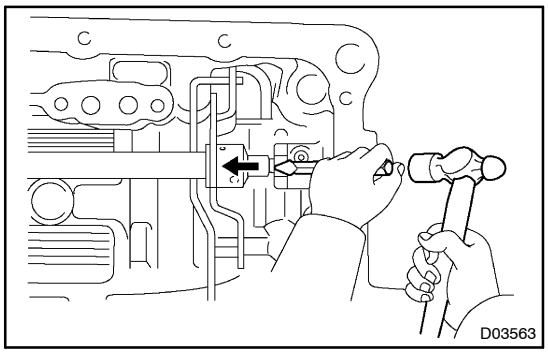


(b) Remove the O–ring from the B–3 accumulator piston.



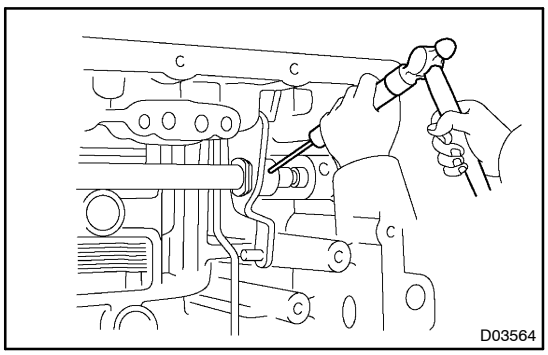
22. REMOVE MANUAL VALVE LEVER SHAFT RETAINER SPRING

(a) Using a needle–nose pliers, remove the manual valve lever shaft retainer spring.



23. REMOVE MANUAL DETENT SPRING SUB–ASSY

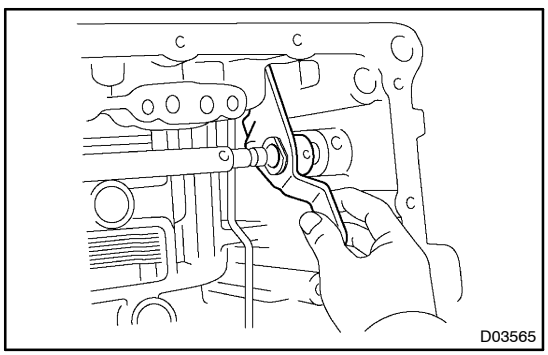
(a) Remove the 2 bolts, the manual detent spring sub–assy and cover.



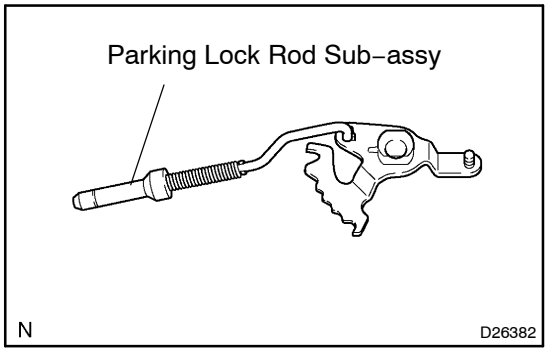
24. REMOVE PARKING LOCK PAWL BRACKET

(a) Remove the 2 bolts and parking lock pawl bracket.

25. REMOVE MANUAL VALVE LEVER SUB–ASSY



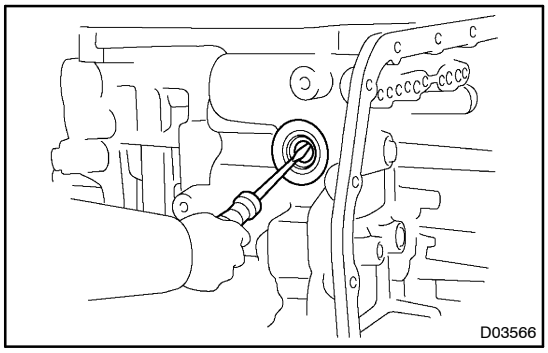
(a) Using a chisel and hammer, cut off and remove the spacer.



(b) Using a pin punch (ϕ35 mm) and hammer, drive out the pin.

HINT:

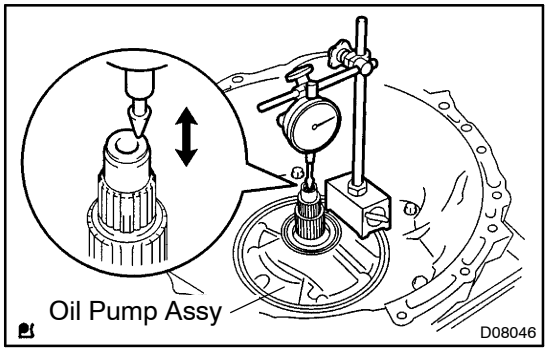
Slowly drive out the pin so that it will not fall into the transaxle case.



(c) Remove the manual valve lever shaft and manual valve lever.

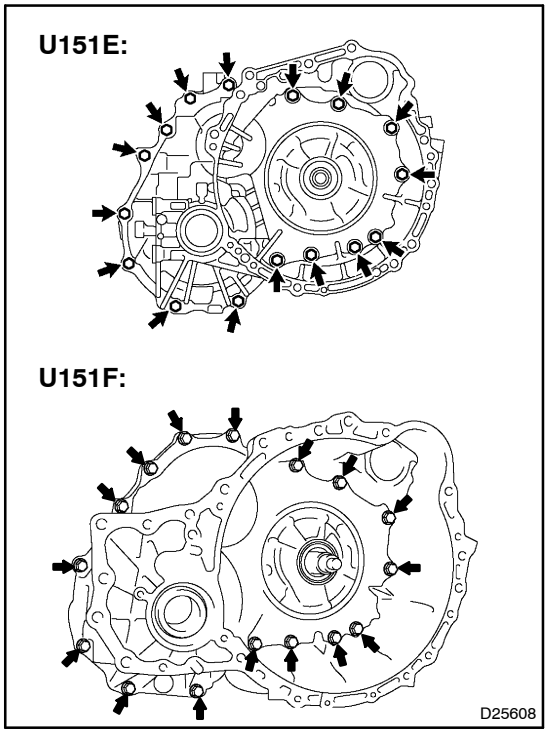
26. REMOVE PARKING LOCK ROD SUB–ASSY

(a) Remove the parking lock rod from the manual valve lever.



27. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Using a screwdriver, remove the oil seal from the transaxle case.

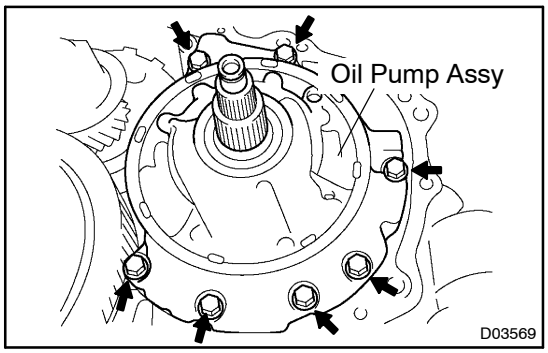


28. FIX AUTOMATIC TRANSAXLE ASSY

(a) Fix the transaxle case with the oil pump side facing up.

29. INSPECT INPUT SHAFT ENDPLAY

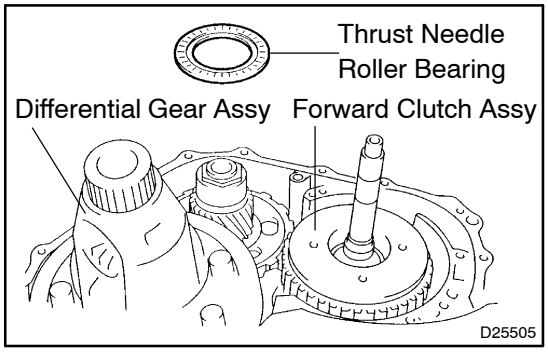
(a) Using a dial indicator, measure the input shaft endplay.
Endplay: 0.262 – 1.244 mm (0.01 – 0.049 in.)



30. REMOVE TRANSAXLE HOUSING

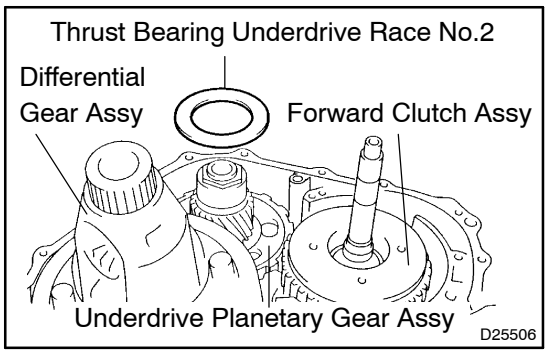
(a) Remove the 16 bolts.

(b) Tap on the circumference of the transaxle housing with a plastic hammer to remove the transaxle housing from the transaxle case.



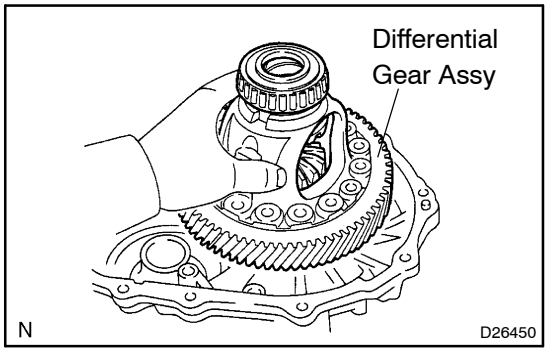
NOTICE:

Differential may be accidentally removed when the transaxle housing is removed.



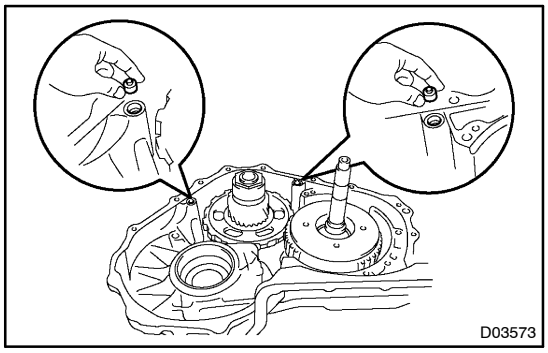
31. REMOVE OIL PUMP ASSY

(a) Remove the 7 bolts and oil pump from the transaxle case.



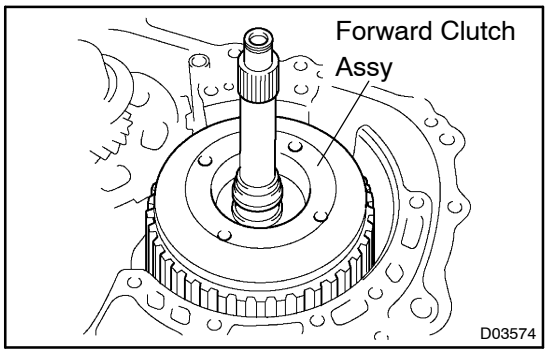
32. REMOVE THRUST NEEDLE ROLLER BEARING

(a) Remove the thrust needle roller bearing from the underdrive planetary gear assy.



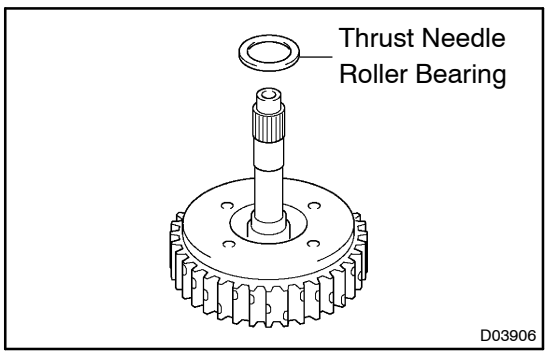
33. REMOVE THRUST BEARING UNDERDRIVE RACE NO.2

(a) Remove the thrust bearing underdrive race No. 2 from the underdrive planetary gear assy.



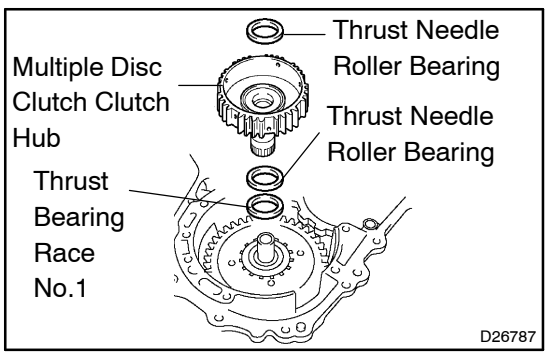
34. REMOVE DIFFERENTIAL GEAR ASSEMBLY

(a) Remove the differential gear assy from the transaxle case.



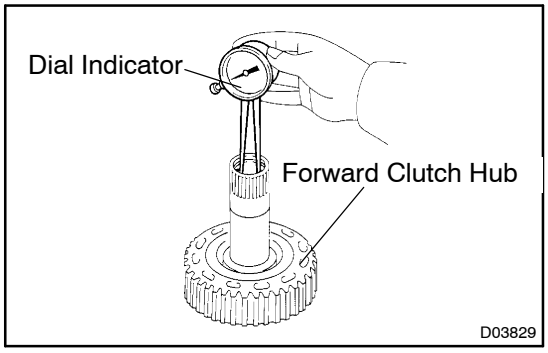
35. REMOVE OVERDRIVE BRAKE GASKET

(a) Remove the 2 overdrive brake gaskets from the transaxle case.



36. REMOVE FORWARD CLUTCH ASSY

(a) Remove the forward clutch assy from the transaxle case.

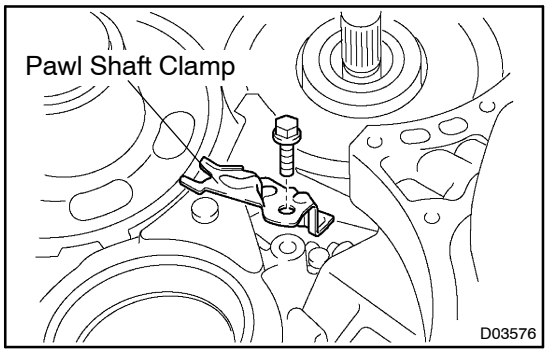


(b) Remove the thrust needle roller bearing from the forward clutch.

37. REMOVE MULTIPLE DISC CLUTCH CLUTCH HUB

(a) Remove the thrust needle roller bearing, multiple disc clutch clutch hub, thrust needle roller bearing and thrust bearing race No.1 from the transaxle case.

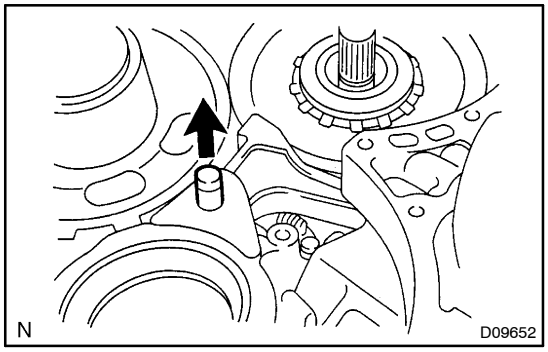
38. INSPECT MULTIPLE DISC CLUTCH CLUTCH HUB



(a) Using a dial indicator, measure the inside diameter of the forward clutch hub bushing

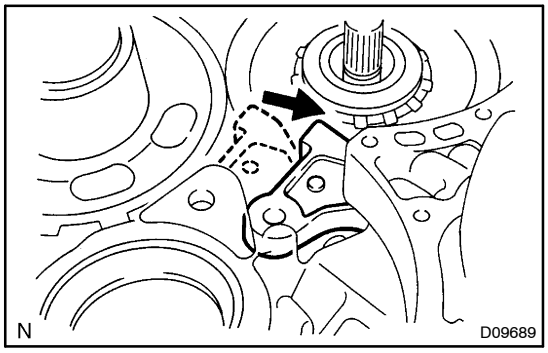
Standard inside diameter:
23.025 – 23.046 mm (0.9065 – 0.9073 in.)
Maximum inside diameter: 23.09 mm (0.9091 in.)

NOTICE:



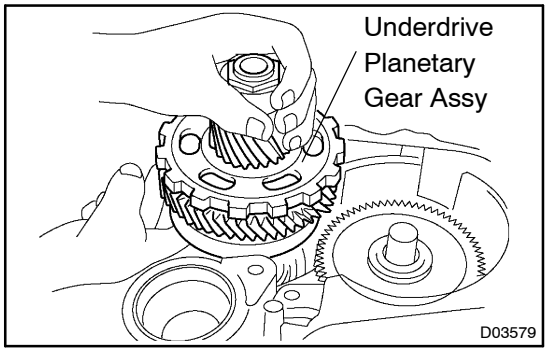
- **When the diameter is over the maximum, replace the multiple disc clutch hub with new one.**
- **Check the contact surface of the bush in the direct clutch shaft. If any scratch or discolor is identified, replace the direct clutch sub–assy with new one.**

If the inside diameter is greater than the maximum, replace the forward clutch hub.



39. REMOVE UNDERDRIVE PLANETARY GEAR ASSY

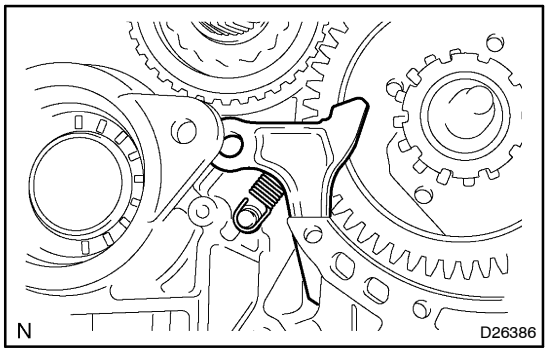
(a) Remove the bolt and pawl shaft clamp.



(b) Remove the parking lock pawl shaft.

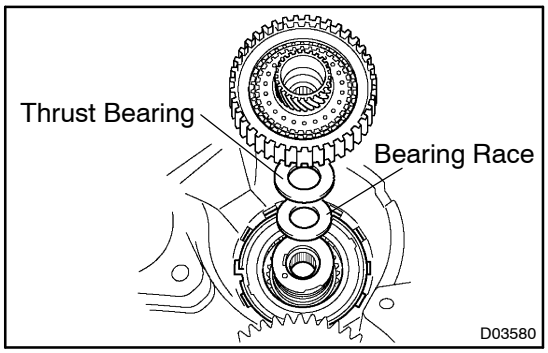
(c) Push the parking lock pawl.

HINT:



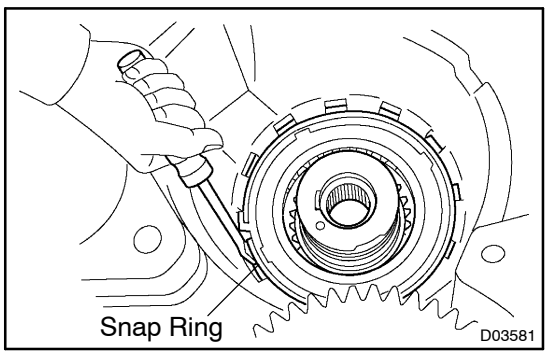
Failure to do so will cause interference when the underdrive planetary gear is removed.

(d) Remove the underdrive planetary gear assy from the transaxle case.



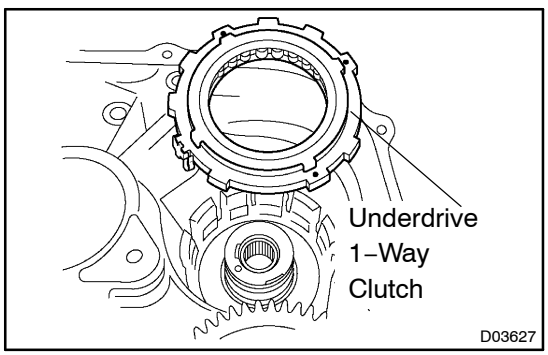
NOTICE:

Be careful so that the underdrive planetary gear assy will not fall out.



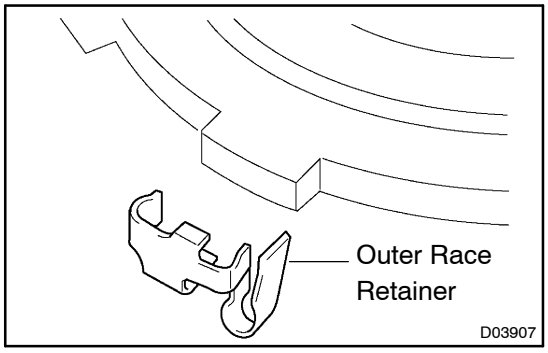
40. REMOVE PARKING LOCK PAWL

(a) Remove the spring, pawl pin and parking lock pawl.

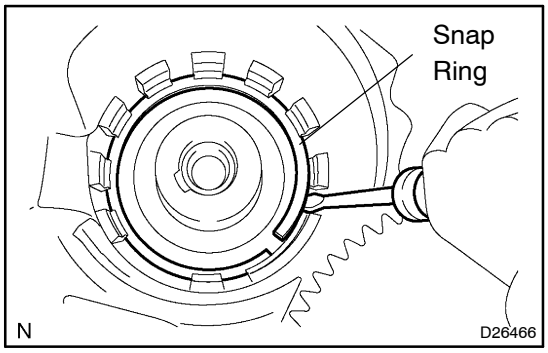


41. REMOVE UNDERDRIVE CLUTCH ASSY

(a) Remove the underdrive clutch assy, thrust bearing and bearing race from the transaxle case.

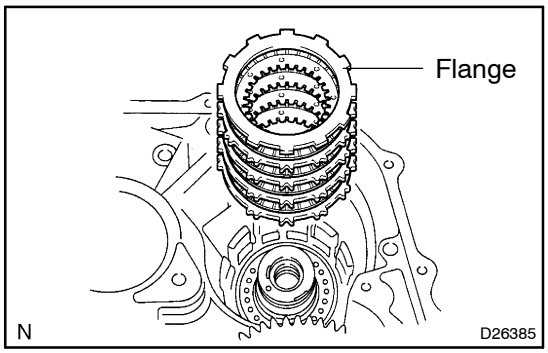


42. REMOVE UNDERDRIVE 1 WAY CLUTCH ASSY

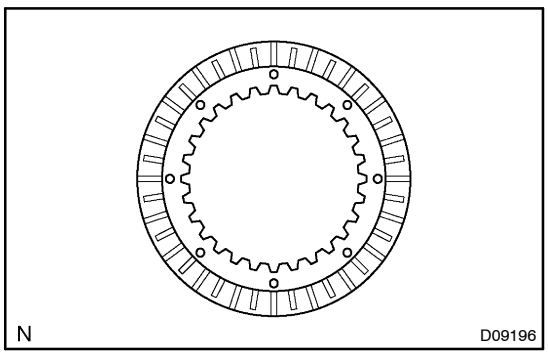


(a) Using a screwdriver, remove the snap ring from the transaxle case.

(b) Remove the underdrive 1–way clutch from the transaxle case.



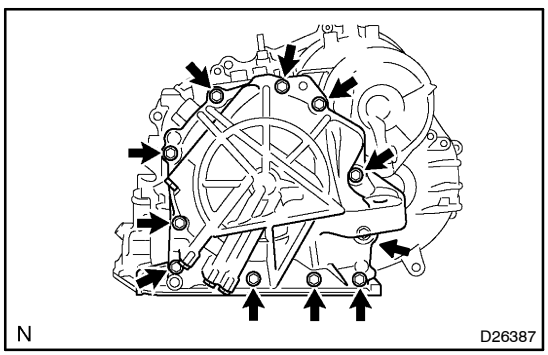
(c) Remove the outer race retainer from the 1–way clutch.



43. REMOVE UNDERDRIVE CLUTCH DISC NO.2

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 4 discs and 4 plates from the transaxle case.

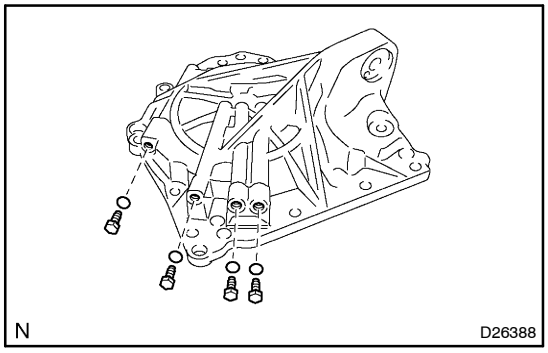


44. INSPECT UNDERDRIVE CLUTCH DISC NO.2

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.

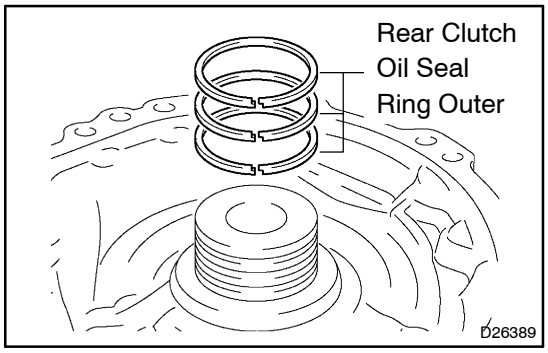
NOTICE:



- **If the lining of the disc comes off or discolors, or even if a part of the groove is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

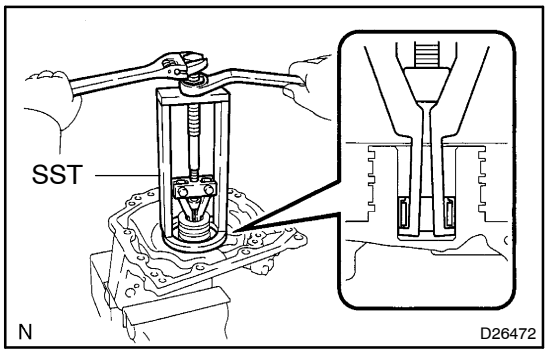
45. REMOVE TRANSAXLE REAR COVER SUB–ASSY

(a) Remove the 11 bolts.



(b) Tap in the circumference of the rear cover with a plastic hammer to remove the transaxle rear cover from the transaxle case.

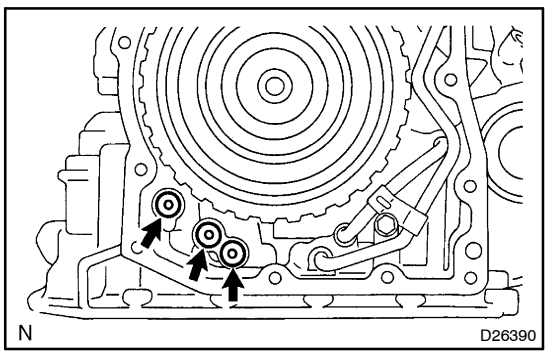
46. REMOVE TRANSAXLE CASE NO.1 PLUG



(a) Remove the 4 transaxle case No.1 plugs from the transaxle rear cover.

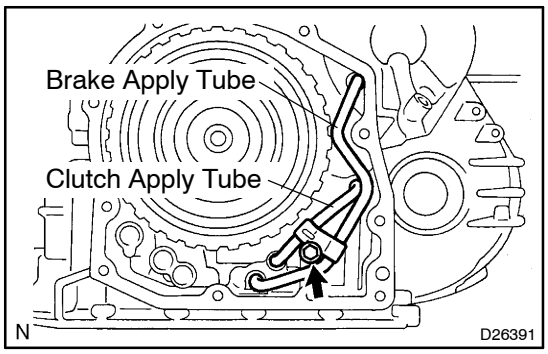
(b) Remove the 4 O–rings from the 4 transaxle case No.1 plugs.

47. REMOVE REAR CLUTCH OIL SEAL RING OUTER



(a) Remove the 3 rear clutch oil seal rings from the transaxle rear cover.

48. REMOVE NEEDLE ROLLER BEARING

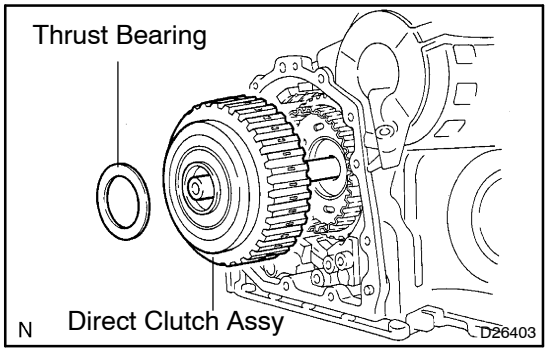


(a) Using SST, remove the needle–roller bearing from the transaxle rear cover.

SST 09387–00041 (09387–01021, 09387–01030, 09387–01040)

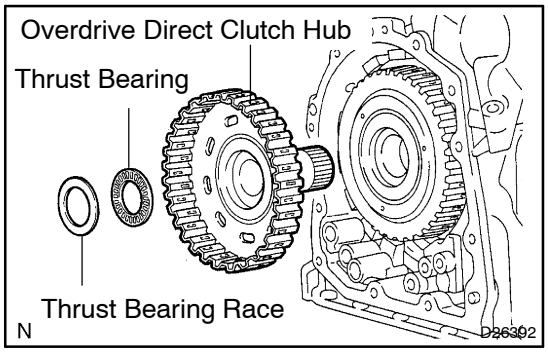
49. REMOVE GOVERNOR APPLY GASKET NO.1

(a) Using a screwdriver, remove the 3 apply gaskets.



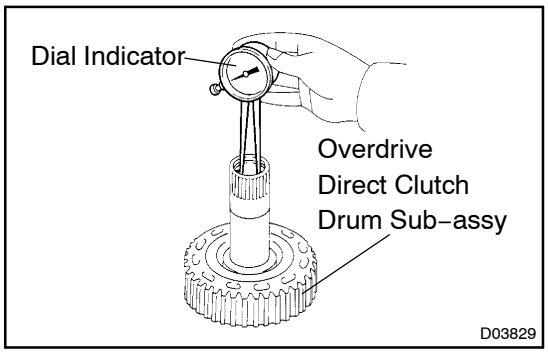
50. REMOVE BRAKE APPLY TUBE

(a) Remove the bolt, clamp and brake apply tube.



(b) Remove the clutch apply tube.

(c) Remove the brake apply tube from the clamp.



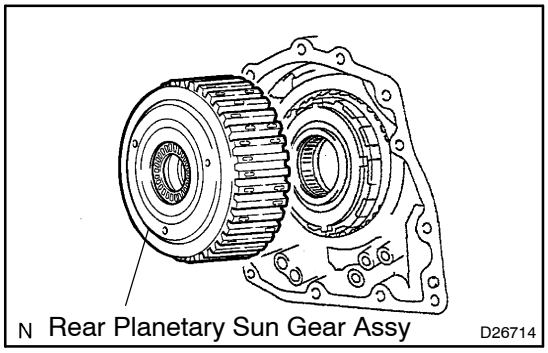
51. REMOVE DIRECT CLUTCH ASSY

(a) Remove the thrust bearing and the direct clutch assy from the transaxle case.

52. REMOVE OVERDREVE DIRECT CLUTCH HUB SUB–ASSY

(a) Remove the thrust bearing race, thrust bearing and overdrive direct clutch hub from the planetary gear assy.

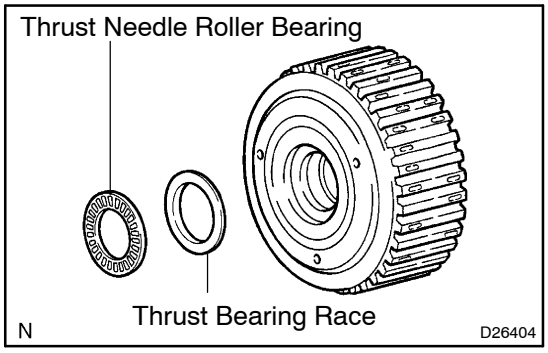
53. INSPECT OVERDRIVE DIRECT CLUTCH DRUM SUB–ASSY



(a) Using a dial indicator, measure the inside diameter of the forward clutch hub bushing.

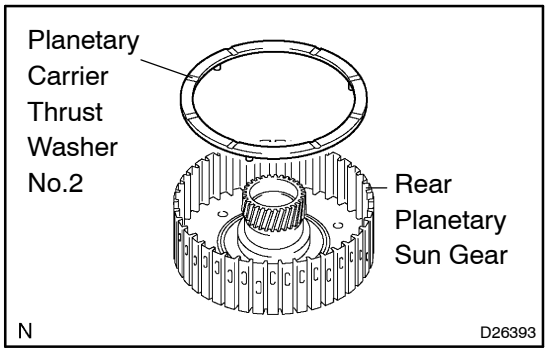
Standard inside diameter:
23.025 – 23.046 mm (0.9065 – 0.9073 in.)
Maximum inside diameter: 23.09 mm (0.9091 in.)

NOTICE:

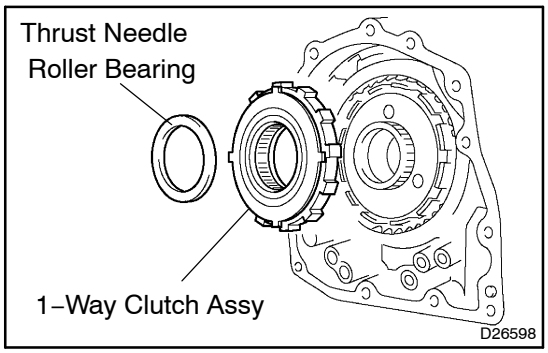


- **When the diameter is over the maximum, replace the multiple disc clutch hub with new one.**
- **Check the contact surface of the bush in the direct clutch shaft. If any scratch or discolor is identified, replace the direct clutch sub–assy with new one.**

If the inside diameter is greater than the maximum, replace the forward clutch hub.

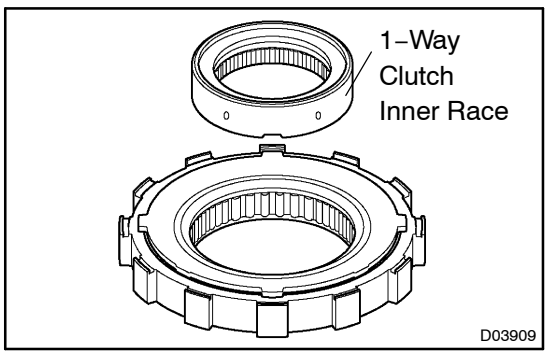


54. REMOVE REAR PLANETARY SUN GEAR ASSY

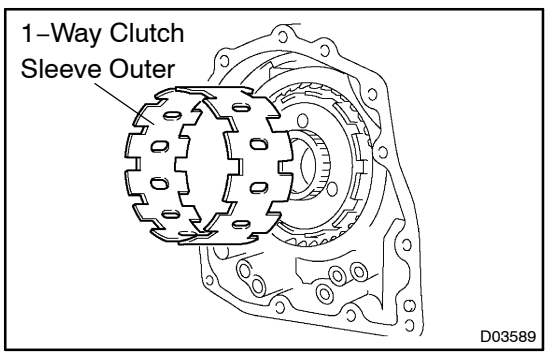


(a) Remove the rear planetary sun gear assy from the transaxle case.

(b) Remove the thrust needle roller bearing and thrust bearing race from the rear planetary sun gear assy.

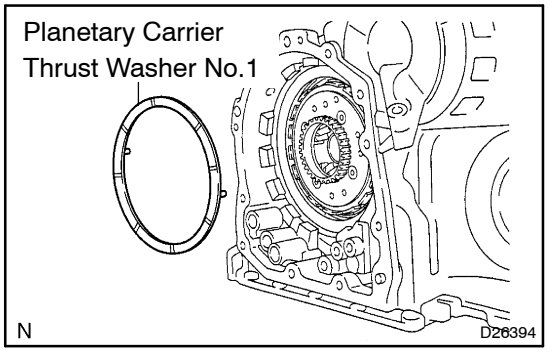


(c) Remove the planetary carrier thrust washer No.2 from the rear planetary sun gear assy.

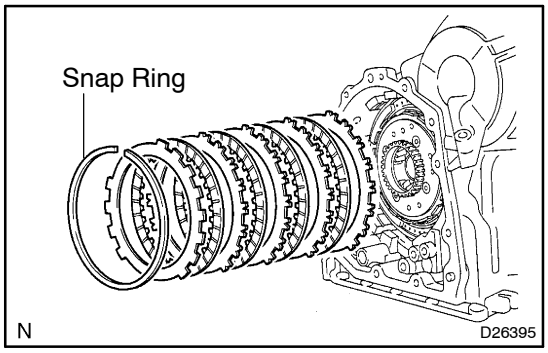


55. REMOVE 1 WAY CLUTCH ASSY

(a) Remove the 1–way clutch assy and the thrust needle roller bearing from the transaxle case.



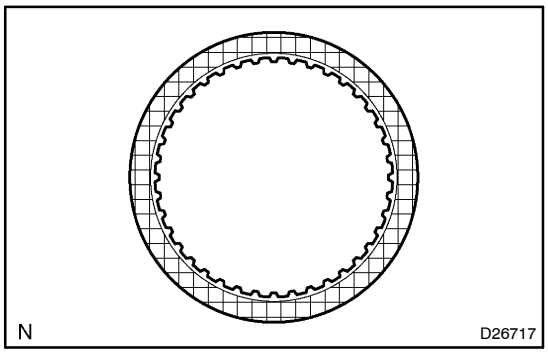
(b) Remove the 1–way clutch inner race from the 1–way clutch assy.



56. REMOVE 1WAY CLUTCH SLEEVE OUTER

(a) Remove the 1–way clutch sleeve outer from the transaxle case.

57. REMOVE PLANETARY CARRIER THRUST WASHER NO.1

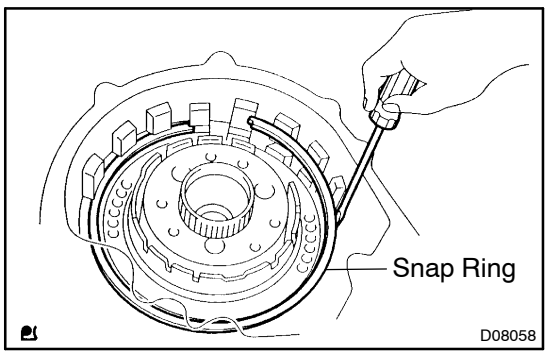


(a) Remove the planetary carrier thrust washer No.1 from the planetary gear assy.

58. REMOVE 2ND BRAKE CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

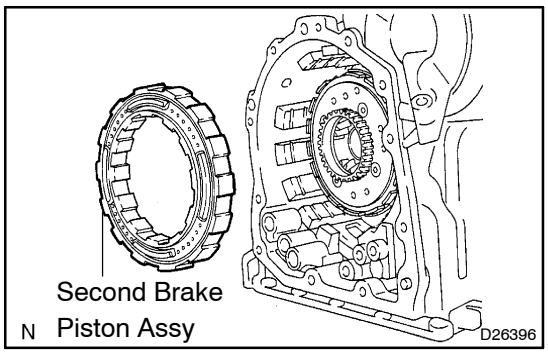
(b) Remove the flange, 4 discs and 4 plates from the transaxle case.



59. INSPECT 2ND BRAKE CLUTCH DISC

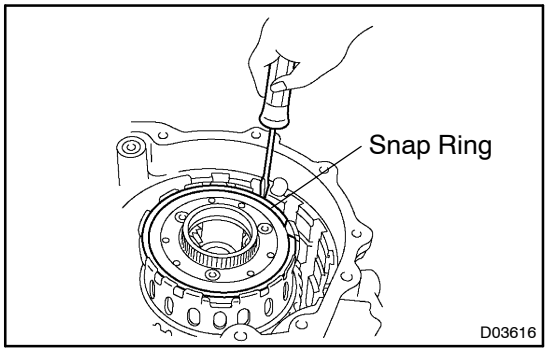
(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.



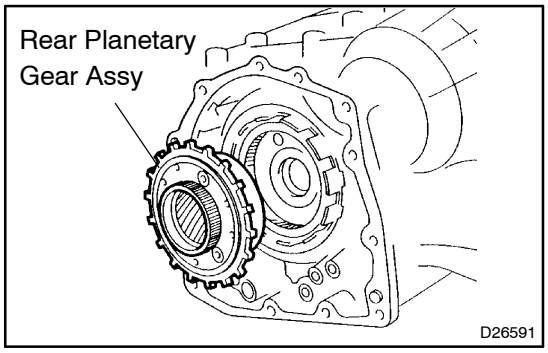
NOTICE:

- **If the lining of the disc comes off or discolors, or even if a part of the groove is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

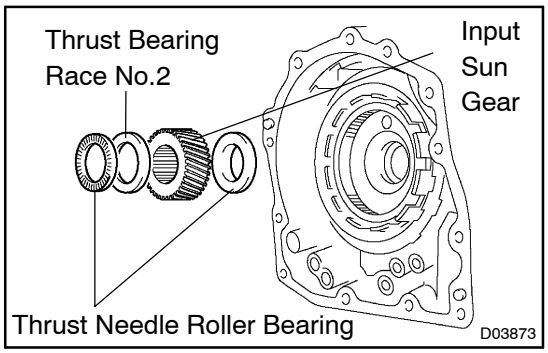


60. REMOVE SECOND BRAKE PISTON ASSY

(a) Using a screwdriver, remove the snap ring.

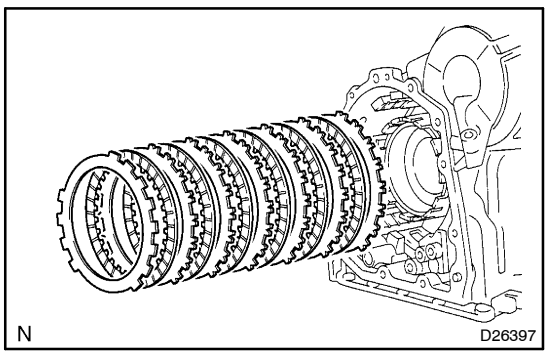


(b) Remove the second brake piston assy from the transaxle case.

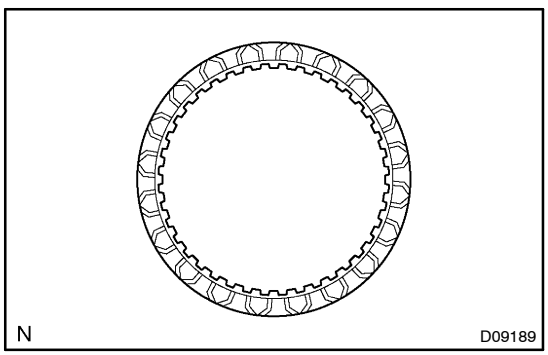


61. REMOVE REAR PLANETARY GEAR ASSY

(a) Using a screwdriver, remove the snap ring.



(b) Remove the rear planetary gear assy from the transaxle case.

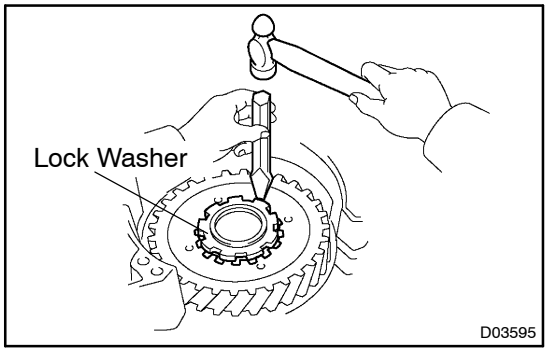


62. REMOVE INPUT SUN GEAR

(a) Remove the 2 thrust needle roller bearings, thrust bearing race No.2 and input sun gear from the transaxle case.

63. REMOVE 1ST & REVERSE BRAKE CLUTCH DISC

(a) Remove the flange, 6 discs and 6 plates from the transaxle case.



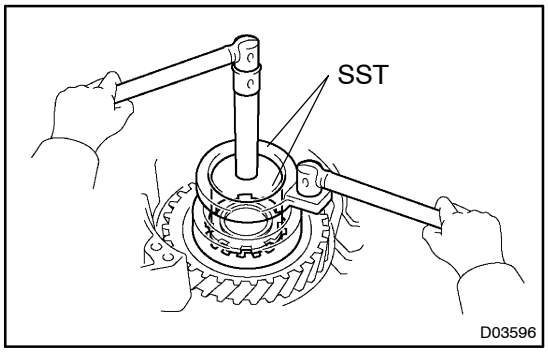
64. INSPECT 1ST & REVERSE BRAKE CLUTCH DISC

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

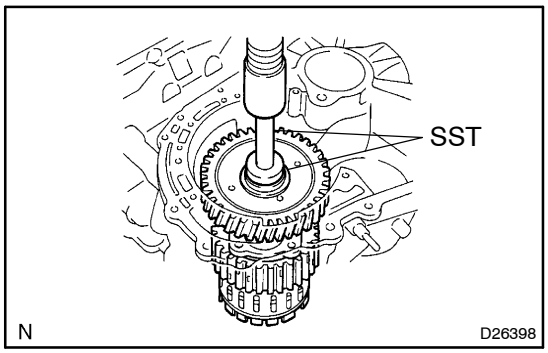
If necessary, replace them.

NOTICE:

- **If the lining of the disc comes off or discolors, or even if a part of the groove is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

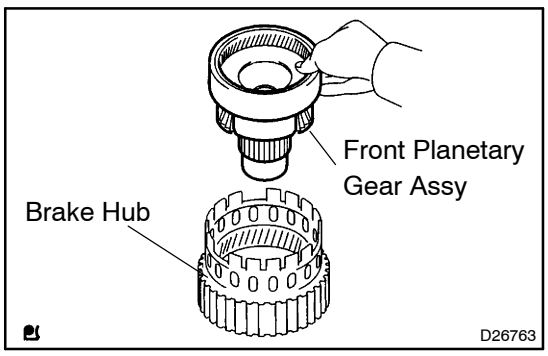


65. REMOVE FRONT PLANETARY GEAR ASSY

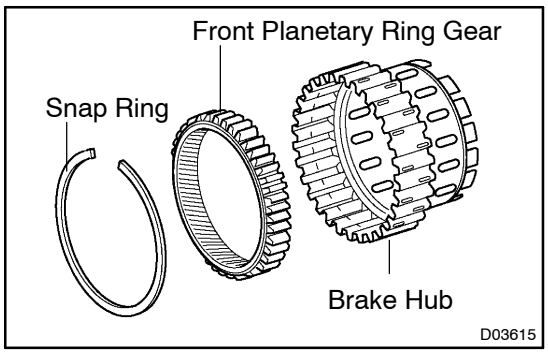


(a) Using a chisel and hammer, unstake the lock washer.

NOTICE:

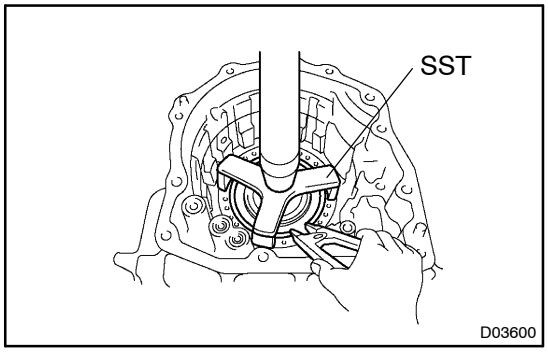


Push down all claws of the washer. Otherwise SST cannot be fully pressed against the nut, and cannot loosen the nut.



(b) Using SST, remove the nut.
SST 09387–00030, 09387–00080

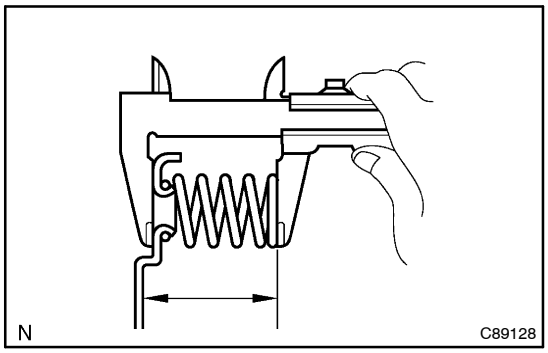
(c) Using SST and a press, remove the front planetary gear assy from the counter drive gear.
SST 09950–60010 (09951–00450), 09950–70010 (09951–07100)



(d) Remove the front planetary gear assy from the brake hub.

66. REMOVE FRONT PLANETARY RING GEAR

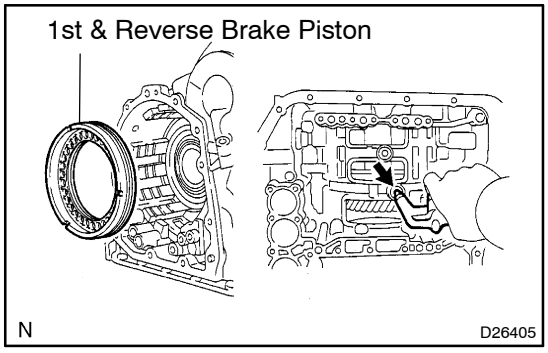
(a) Using a screwdriver, remove the snap ring and front planetary ring gear from the brake hub.



67. REMOVE 1ST & REVERSE BRAKE RETURN SPRING SUB–ASSY

(a) Place SST on the return spring, and compress the return spring with a press.
SST 09387–00070

(b) Using a snap ring expander, remove the snap ring.

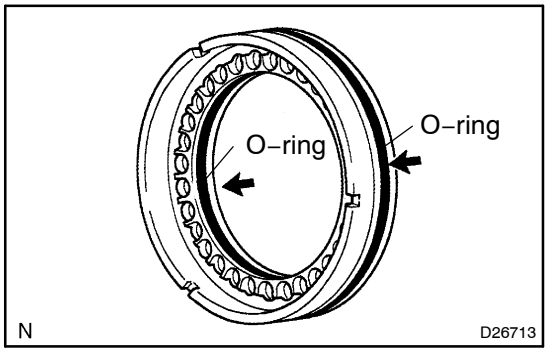


NOTICE:

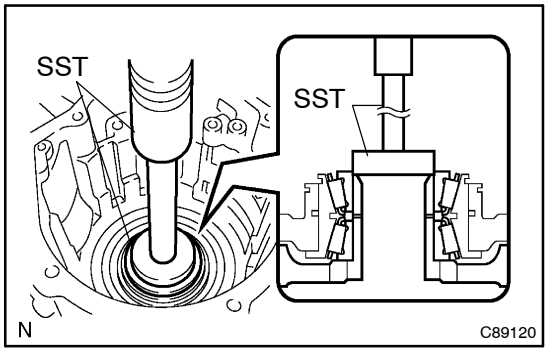
- **Stop the press when the spring sheet is lowered 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, to prevent the spring sheet from deforming.**
- **Do not expand the snap ring excessively.**

68. INSPECT 1ST & REVERSE BRAKE RETURN SPRING SUB–ASSY

(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 17.61 mm (0.6933 in.)



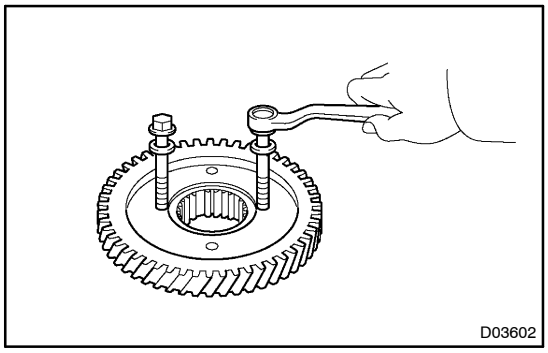
69. REMOVE 1ST & REVERSE BRAKE PISTON



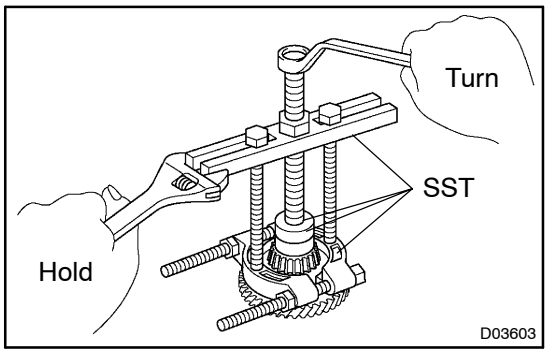
(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove 1st & reverse brake piston.

NOTICE:

- **Blowing off the air may cause the piston to jump–out. When removing the piston, hold it by your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**



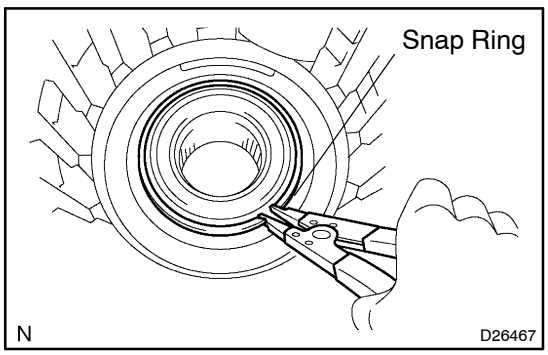
(b) Remove the 2 O–rings from the 1st & reverse brake piston.



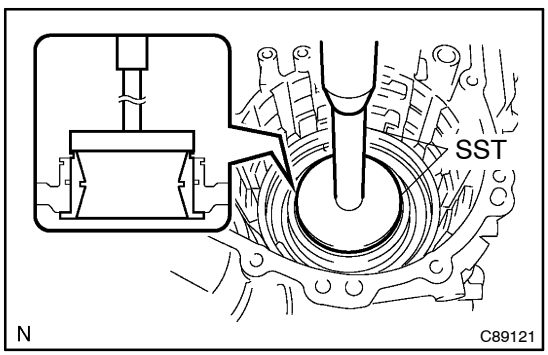
70. REMOVE COUNTER DRIVE GEAR

(a) Using SST and a press, remove the counter drive gear from the transaxle case.

SST 09950–60010 (09951–00590), 09950–70010 (09951–07100)



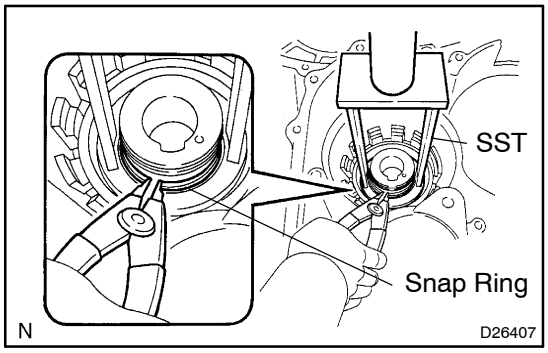
(b) As shown in the illustration, tighten 2 bolts evenly and make clearance of approx. 20.0 mm (0.797 in.) between the counter drive gear and the inner race.



(c) Using SST, remove the tapered roller bearing.

SST 09950–60010 (09951–00590), 09950–70010 (09951–07100), 09950–00020, 09950–00030, 09950–40011 (09957–04010)

71. REMOVE COUNTER DRIVE GEAR BEARING

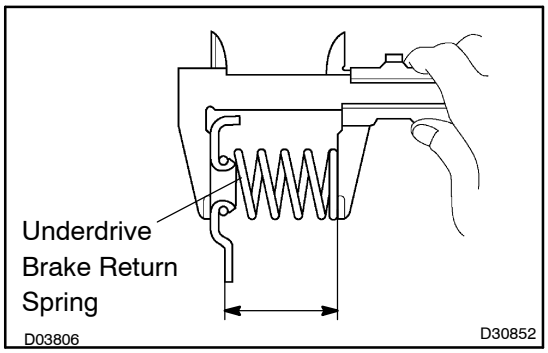


(a) Using a snap ring expander, remove the snap ring.

(b) Using SST and a press, remove the bearing outer race.

SST 09950–60020 (09951–00910), 09950–70010 (09951–07100)

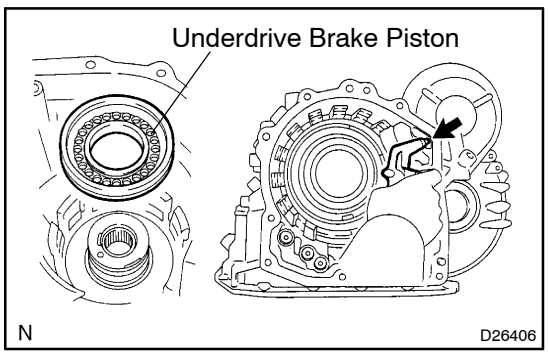
72. REMOVE BREATHER PLUG NO.2 (ATM)



73. REMOVE UNDERDRIVE BRAKE RETURN SPRING SUB–ASSY

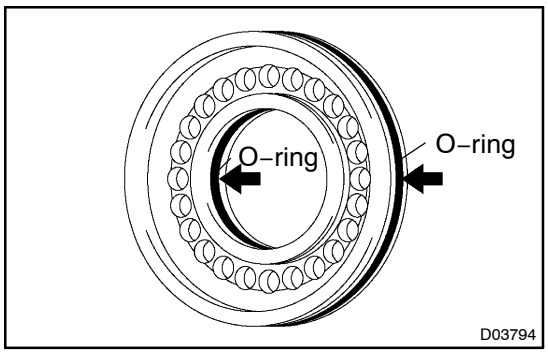
(a) Place SST on the return spring, and compress the return spring with a press.
SST 09387–00020

(b) Using a snap ring expander, remove the snap ring.



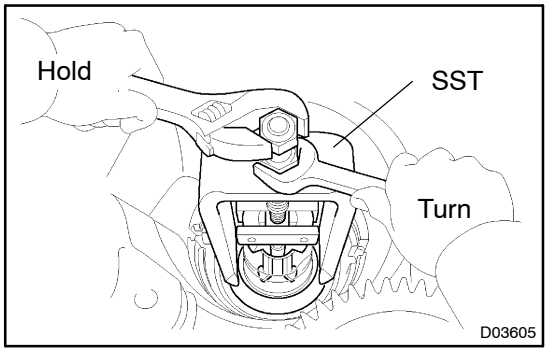
NOTICE:

- **Stop the press when the spring sheet is lowered 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, to prevent the spring sheet from deforming.**
- **Do not expand the snap ring excessively.**



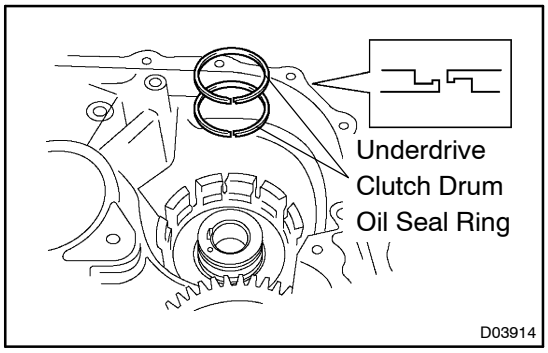
74. INSPECT UNDERDRIVE BRAKE RETURN SPRING SUB–ASSY

(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 13.24 mm (0.5213 in.)



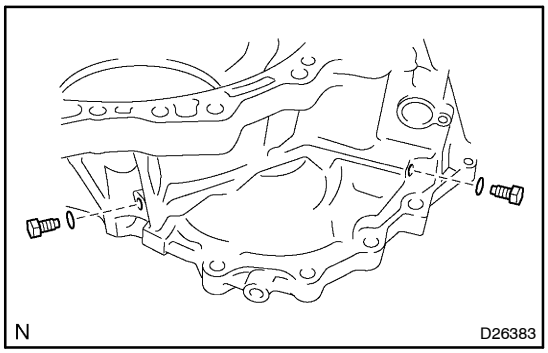
75. REMOVE UNDERDRIVE BRAKE PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the underdrive brake piston.



(b) Remove the 2 O–rings from the underdrive brake piston.

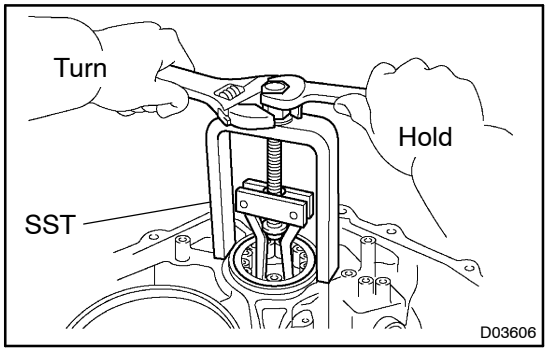
76. REMOVE NEEDLE ROLLER BEARING



(a) Using SST, remove the needle–roller bearing from the transaxle case.

SST 09387–00041 (09387–01010, 09387–01030, 09387–01040)

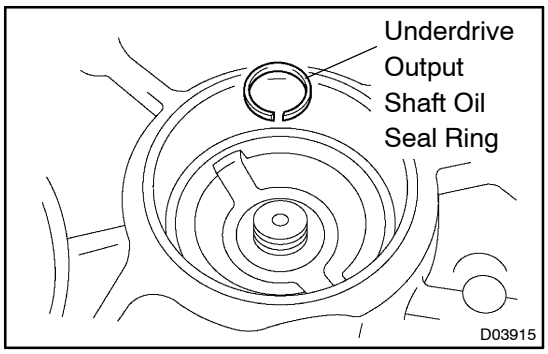
77. REMOVE UNDERDRIVE CLUTCH DRUM OIL SEAL RING



(a) Remove the 2 oil seal rings from the transaxle case.

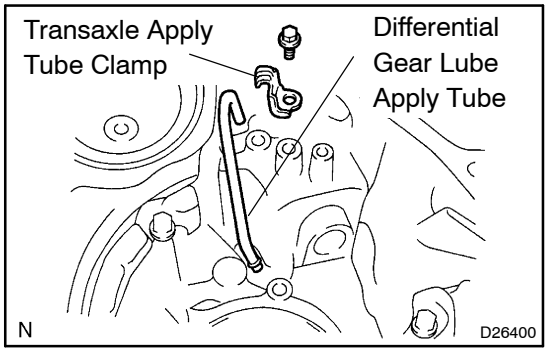
78. REMOVE TRANSAXLE CASE NO.1 PLUG

(a) Remove the 2 transaxle case No. 1 plugs.



(b) Remove the 2 O–rings from the 2 transaxle case No. 1 plugs.

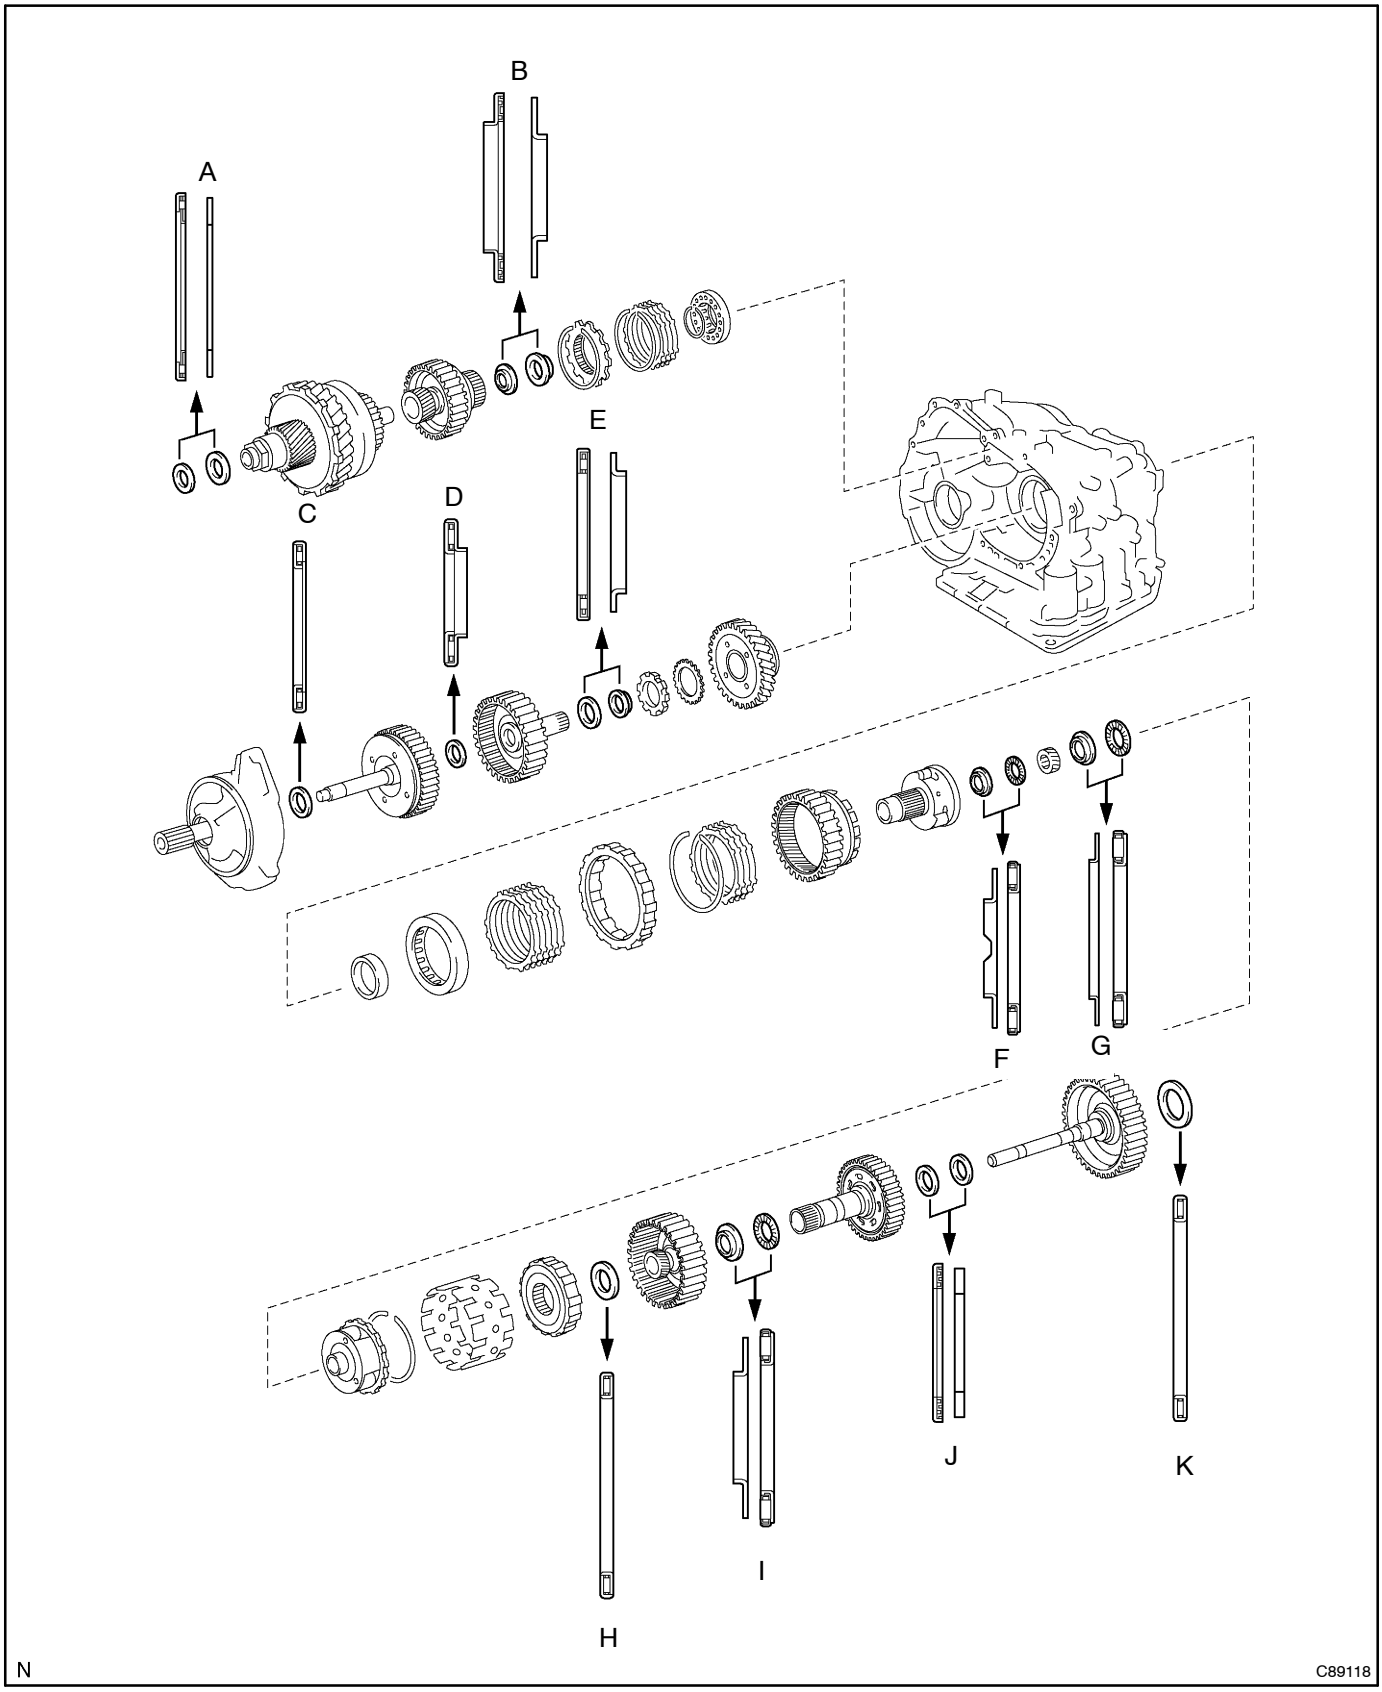
79. REMOVE UNDERDRIVE CYLINDRICAL ROLLER BEARING



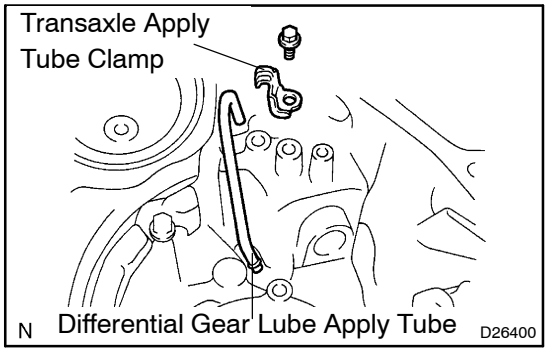
(a) Using SST, remove the underdrive cylindrical roller bearing from the transaxle case.

SST 09514–35011

80. REMOVE UNDERDRIVE OUTPUT SHAFT OIL SEAL RING



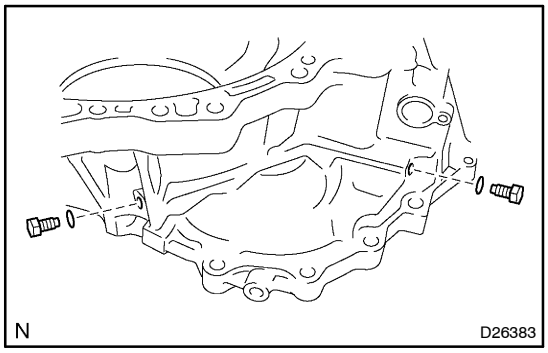
(a) Remove the oil seal ring from the transaxle housing.



81. REMOVE DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Remove the bolt, transaxle apply tube clamp and differential gear lube apply tube from the transaxle housing.

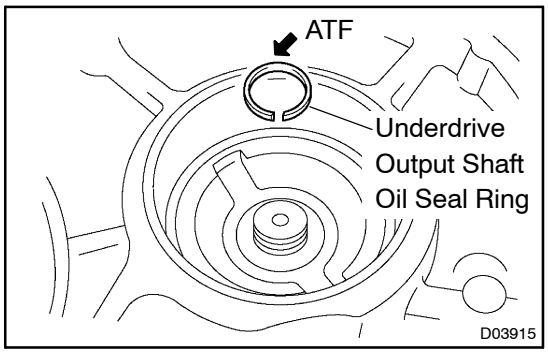
82. BEARING POSITION



Mark	Front Race Diameter Inside / Outside mm (in.)	Thrust Bearing Diameter Inside / Outside mm (in.)	Rear Race Diameter Inside / Outside mm (in.)
A	–	57.2 (2.252) / 84.96 (3.3449)	56.4 (2.220) / 83.0 (3.268)
B	–	37.73 (1.4854) / 58.0 (2.283)	–
C	–	33.85 (1.3327) / 52.2 (2.055)	–
D	24.94 (0.982)	23.5 (0.925) / 44.0(1.732)	–
E	–	36.3 (1.429) / 51.93 (2.044)	34.5 (1.358) / 48.35 (1.904)
F	34.35 (1.352) / 56.57 (2.227)	32.45 (1.278) / 56.48 (2.223)	–
G	40.15 (1.581) / 59.25 (2.333)	38.65 (1.522) / 59.79 (2.354)	38.65 (1.522) / 59.25 (2.332)
H	–	53.6 (2.110) / 69.6 (2.740)	–
I	33.02 (1.3) / 45.8 (1.803)	31.85 (1.254) / 57.3 (2.256)	–
J	–	24.79 (0.976) / 39.5 (1.555)	23.6 (0.929) / 37.95 (1.494)
K	–	56.3 (2.216) / 75.96 (2.991)	–

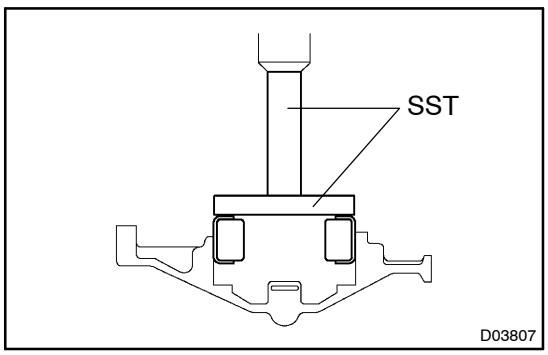
83. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Install the differential gear lube apply tube and transaxle apply tube clamp with the bolt to the transaxle housing.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)



NOTICE:
Make sure to insert the pipe to the stopper.

84. INSTALL TRANSAXLE CASE NO.1 PLUG

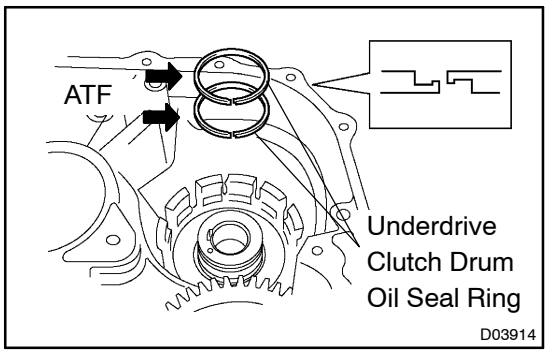


(a) Install the 2 new O–rings to the 2 transaxle case No.1 plugs.

(b) Install the 2 transaxle case No.1 plugs to the transaxle rear cover.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

85. INSTALL UNDERDRIVE OUTPUT SHAFT OIL SEAL RING

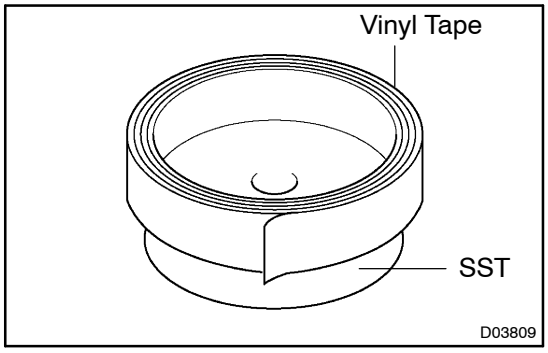
(a) Coat the new oil seal ring with ATF and install it to the transaxle housing.



86. INSTALL UNDERDRIVE CYLINDRICAL ROLLER BEARING

(a) Coat the underdrive cylindrical roller bearing with ATF.

(b) Using SST and a press, install the underdrive cylindrical roller bearing.
SST 09950–60020 (09951–00810), 09950–70010 (09951–07100)

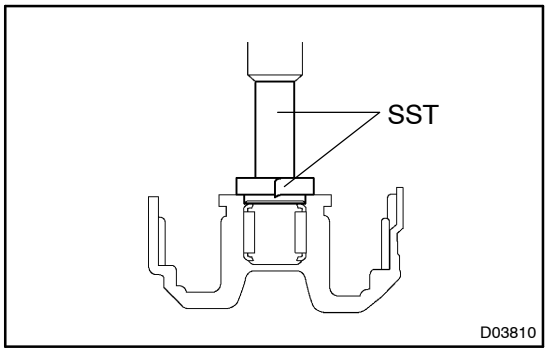


NOTICE:
Do not apply excessive pressure to it.

87. INSTALL UNDERDRIVE CLUTCH DRUM OIL SEAL RING

(a) Coat the 2 new oil seal rings with ATF, install them to the transaxle rear cover.

NOTICE:
- **Do not expand the gap of the oil seal ring too much.**
- **Fix the hooks certainly. Confirm the smooth rotation.**



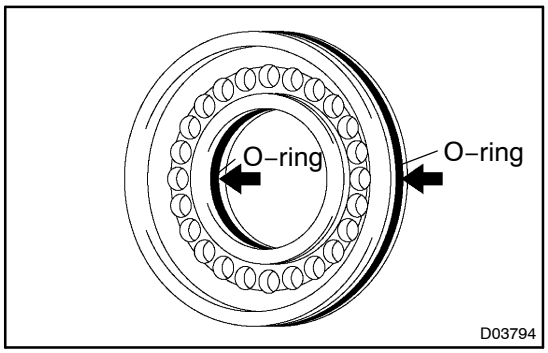
88. INSTALL NEEDLE ROLLER BEARING

(a) Wind a vinyl tape around SST at the place 4.0 mm (0.157 in.) above from the bottom end until the thickness of the wound tape is about 5.0 mm (0.197 in.).

NOTICE:

Clean SST to remove deposited oil, before winding a vinyl tape.

(b) Coat the needle roller bearing with ATF.

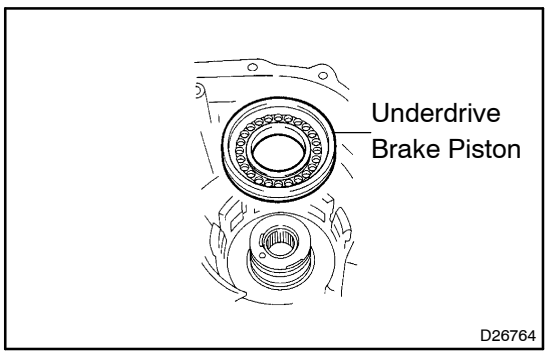


(c) Using SST and a press, install the needle–roller bearing to the transaxle case.

SST 09950–60010 (09951–00320), 09950–70010 (09951–07100)

NOTICE:

When the wound vinyl tape contacts the transaxle case, stop press–fitting.

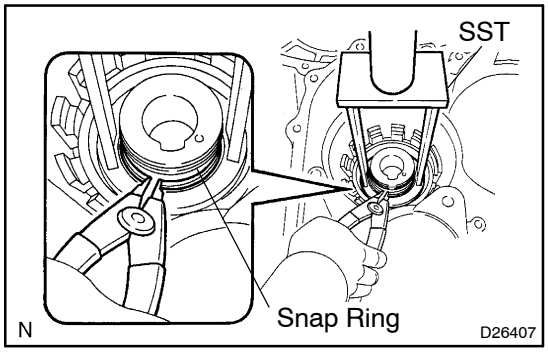


89. INSTALL UNDERDRIVE BRAKE PISTON

(a) Coat the 2 new O–rings with ATF, install them to the underdrive brake piston.

NOTICE:

- **Assemble the O–ring carefully not to have a twist and a pinching.**
- **Apply enough ATF to the O–ring prior to assembling.**



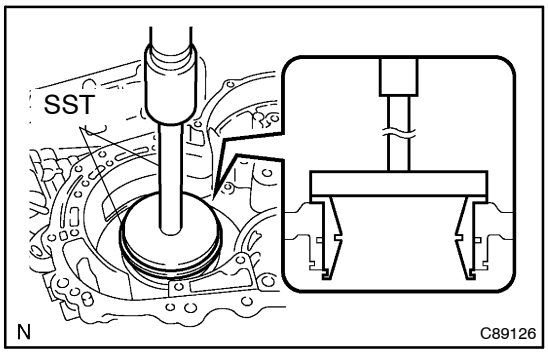
(b) Coat the underdrive brake piston with ATF.

(c) Install the underdrive brake piston to the transaxle case.

NOTICE:

Be careful not to damage the O–ring.

90. INSTALL UNDERDRIVE CLUTCH RETURN SPRING SUB–ASSY



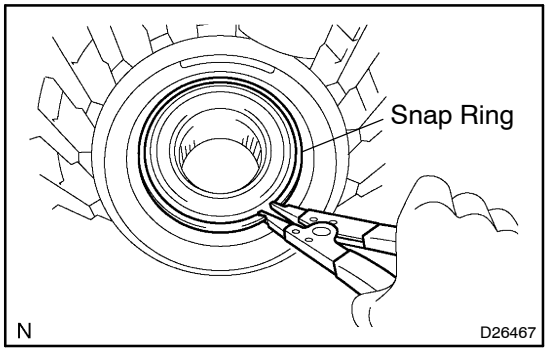
(a) Place SST on the return spring and compress the return spring with a press.
SST 09387–00020

(b) Using a snap ring expander, install the snap ring to the transaxle case.

NOTICE:

- **Stop the press when the spring sheet is lowered 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, to prevent the spring sheet from deforming.**
- **Do not expand the snap ring excessively.**
- **Installing the spring sub–assembly, check all of the springs are fit in the piston correctly.**
- **The snap ring should be fixed surely in the groove of the transaxle case.**

91. INSTALL BREATHER PLUG NO.2 (ATM)

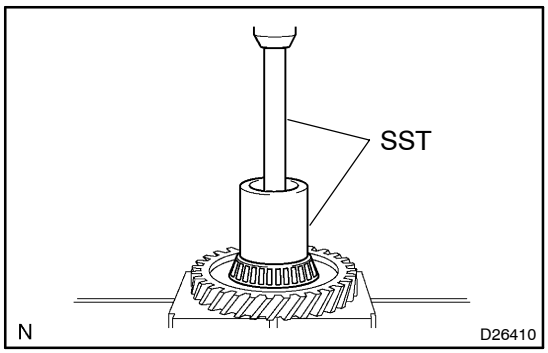


92. INSTALL COUNTER DRIVE GEAR BEARING

(a) Coat the counterdrive gear bearing with ATF.

(b) Using SST and a press, install the bearing outer race.
SST 09950–60020 (09951–01030), 09950–70010 (09951–07150), 09649–17010

NOTICE:

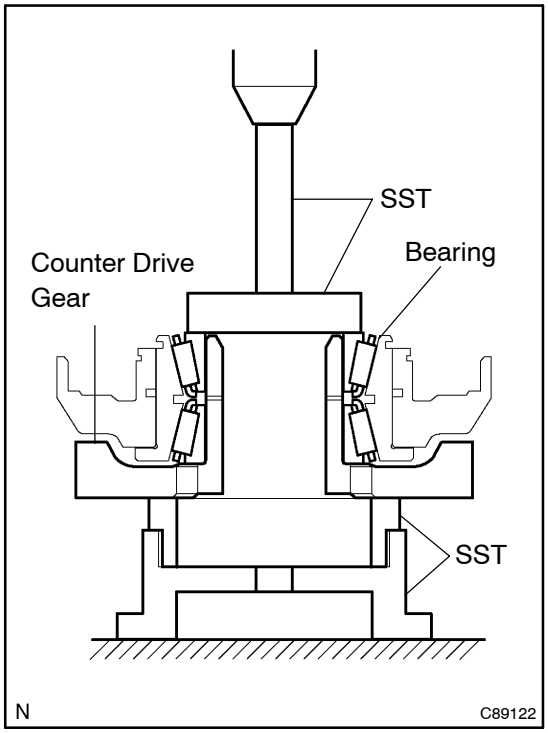


- **Do not apply excessive pressure to it.**
- **Press–fit the bearing outer race until it contacts the transaxle case.**

(c) Using a snap ring expander, install the snap ring.

NOTICE:

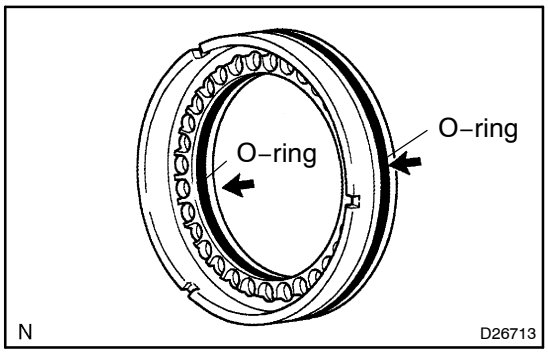
Face the white mark side of the snap ring up.



93. INSTALL COUNTER DRIVE GEAR

(a) Coat the couterdrive gear with ATF.

(b) Using SST and a press, install the tapered roller bearing to the counter drive gear.
SST 09950–70010 (09951–07150), 09649–17010

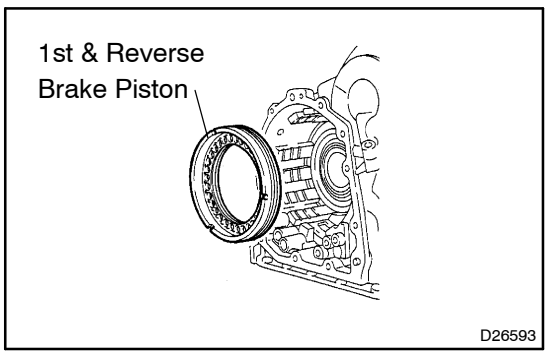


NOTICE:

Do not apply excessive pressure to it.

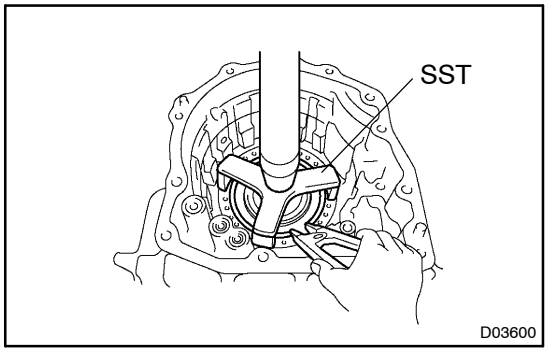
(c) Using SST and a press, install the counter drive gear and bearing to the transaxle case.
SST 09223–15030, 09527–17011, 09950–60020 (09951–00750), 09950–70010 (09951–07150)

NOTICE:
Do not apply excessive pressure to it.



94. INSTALL 1ST & REVERSE BRAKE PISTON

(a) Coat the 2 new O–rings with ATF.

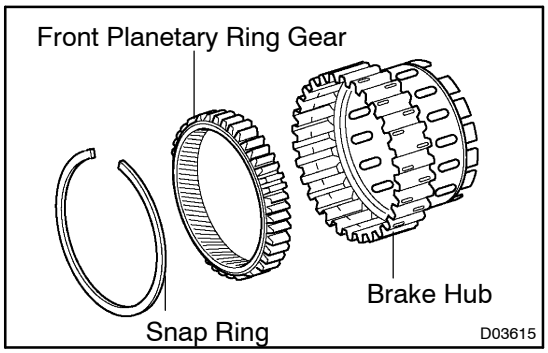


(b) Install the 2 O–rings to the 1st & reverse brake piston.

NOTICE:
- **Assemble the O–ring carefully not to have a twist and a pinching.**
- **Apply enough ATF to the O–ring prior to assembling.**

(c) Coat a 1st & reverse brake piston with ATF, install it to the transaxle case.

NOTICE:
Be careful not to damage the O–ring.



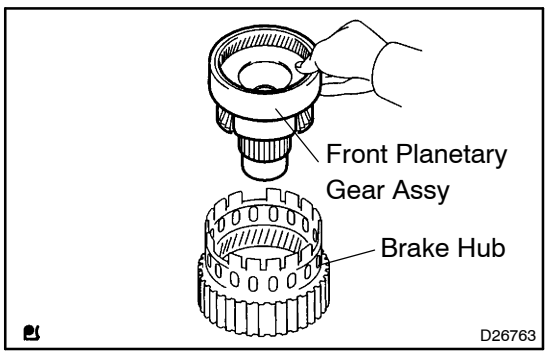
95. INSTALL 1ST & REVERSE BRAKE RETURN SPRING SUB–ASSY

(a) Place SST on the return spring and compress the return spring with a press.
SST 09387–00070

(b) Using a snap ring expander, install the snap ring to the transaxle case.

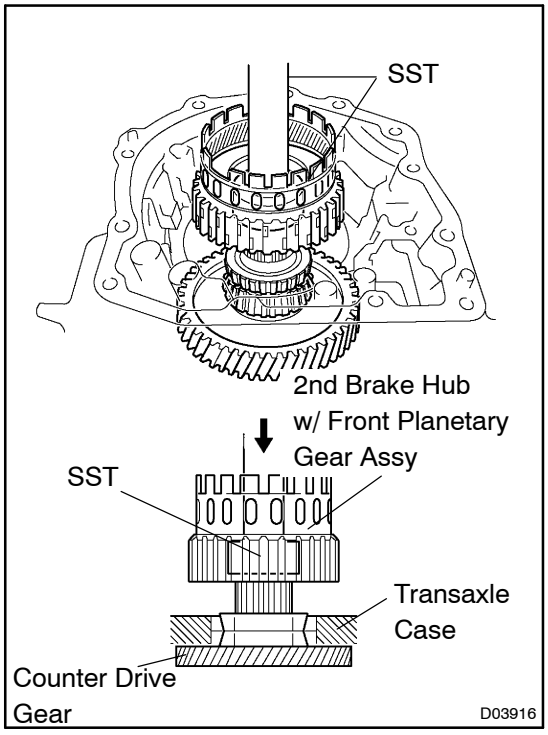
NOTICE:

- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, preventing the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**
- **Installing the spring sub–assembly, check all of the springs are fit in the piston correctly.**
- **The snap ring should be fixed surely in the groove of the cylinder.**
- **Fix the snap ring to the inside of the claw of the spring seat surely.**



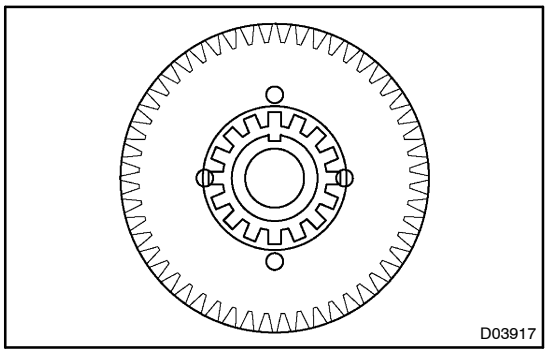
96. INSTALL FRONT PLANETARY RING GEAR

(a) Using a screwdriver, install the front planetary ring gear and snap ring to the brake hub.



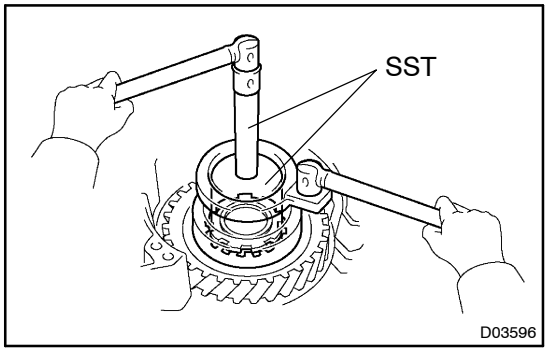
NOTICE:

Confirm the snap ring is fixed in the groove of the brake hub correctly.



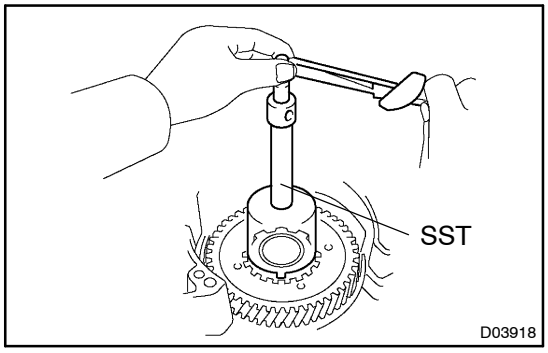
97. INSTALL FRONT PLANETARY GEAR ASSY

(a) Install the front planetary gear assy to the brake hub.



(b) Using SST and a press, press–fit the front planetary gear assy.
SST 09950–60010 (09951–00500), 09950–70010 (09951–07100)

NOTICE:
- **Do not apply excessive pressure to it.**
- **Press the inner race of LH tapered roller bearing, counter gear and front planetary gear assembly to the position where no pre–load should be applied to one pair of tapered roller bearings (left and right).**



(c) Install the new washer, as shown in the illustration.

(d) Using SST, install the nut.
SST 09387–00030, 09387–00080
Torque: 210 – 350 N·m
(2,141 kgf·cm, 155 ft·lbf – 3,569 kgf·cm, 258 ft·lbf)

NOTICE:
Assemble the washer after pressing each part, then tighten the nut to minimum tightening torque.

(e) Using SST and a torque wrench, measure the turning torque of the bearing while rotating SST at 60 rpm. When the measured value is not within the specified value, gradually tighten the nut until it reaches the specified value.

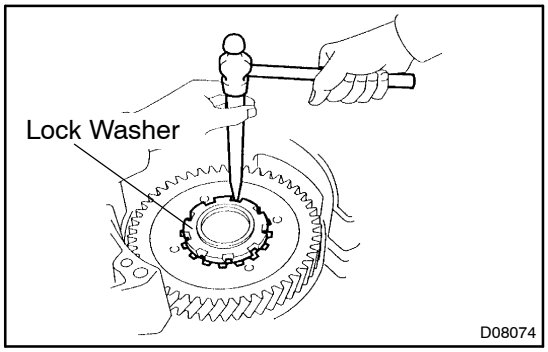
SST 09387–00080

Turning torque at 60 rpm:

New Bearing

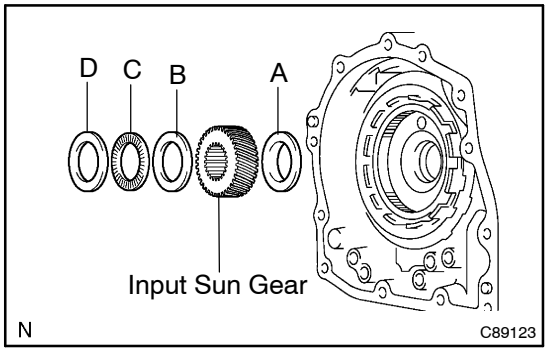
0.51 – 1.02 N·m (5.1 – 10.0 kgf·cm, 4.4 – 8.7 in.·lbf)

Used Bearing



0.26 – 0.51 N·m (2.7 – 5.2 kgf·cm, 2.3 – 4.5 in.·lbf)

HINT:



Use a torque wrench with a fulcrum length of 160 mm (6.3 in.).

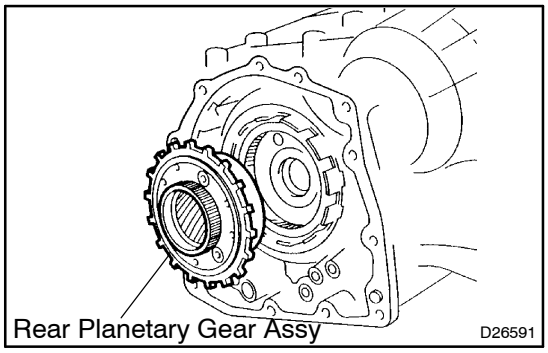
(f) Tighten the nut gradually until the specified rotation torque of tapered roller bearing is measured.

Torque: 350 N·m (3,569 kgf·cm, 258 ft·lbf) (a limit)

(g) Using a chisel and hammer, stake the front lock washer.

98. INSTALL INPUT SUN GEAR

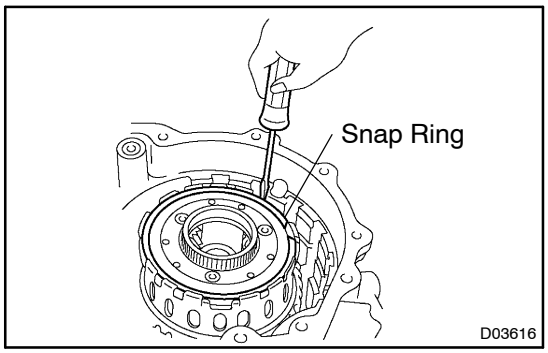
(a) Coat the 2 thrust bearings with ATF.



(b) Install the 2 thrust bearings, the bearing race and the front planetary sun gear to the front planetary gear assy.

NOTICE:

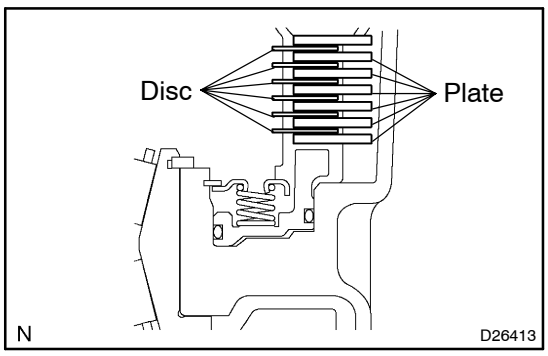
- **Install the bearing race on the side of the front planetary carrier. Be careful about the orientation of the race.**
- **Installing thrust bearing and front sun gears, be careful about the orientation of the parts.**
- **Install the bearing race on the side of the front sun gear. Be careful about the orientation of the race.**
- **Install the thrust bearing and the race after holding the parts on the rear planetary carrier by applying grease. Be sure the assembling order.**



Thrust bearing and bearing race diameter: mm (in.)

	inside	outside
Thrust Bearing, A	32.5 (1.28)	56.5 (2.224)
Bearing Race, B	40.2 (1.583)	59.3 (2.335)
Thrust Bearing, C	38.6 (1.520)	59.7 (2.35)
Bearing Race, D	38.6 (1.520)	59.3 (2.335)

99. INSTALL REAR PLANETARY GEAR ASSY

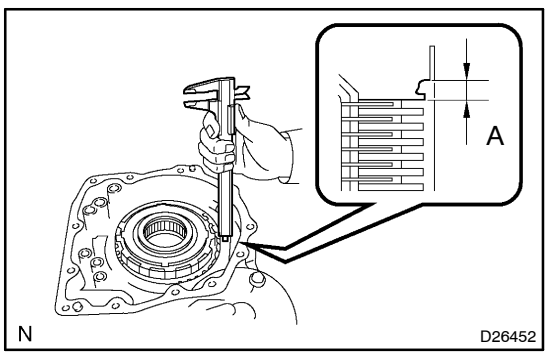


(a) Install the rear planetary gear assy to the rear planetary ring gear.

(b) Using a screwdriver, install the snap ring.

NOTICE:

Confirm the snap ring is fixed in the groove of the 1st & reverse brake hub correctly.



100. INSTALL 1ST & REVERSE BRAKE CLUTCH DISC

(a) Coat the 6 discs with ATF.

(b) Install the 6 plates and 6 discs.

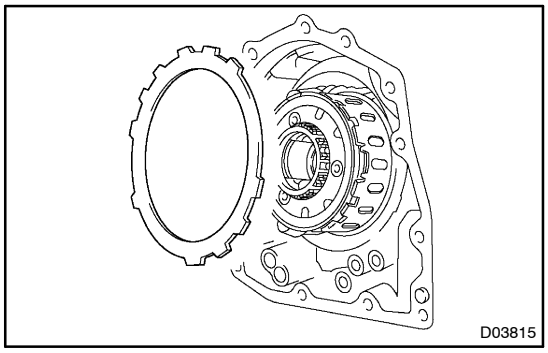
NOTICE:

Be careful about the order of discs, plates and flange assembly.

101. INSPECT PACK CLEARANCE OF FIRST & REVERSE BRAKE

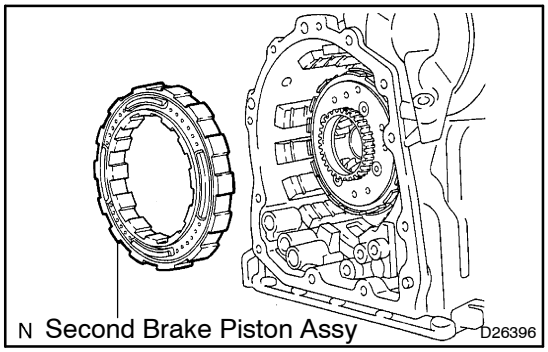
(a) Using vernier calipers, measure the distance between the disc surface and the contact surface of the 2nd brake cylinder and transaxle case(Dimension A).

(b) Select an appropriate flange so that the pack clearance will meet the specified value.



Pack clearance: 1.16 – 1.35 mm (0.0457 – 0.0531 in.)

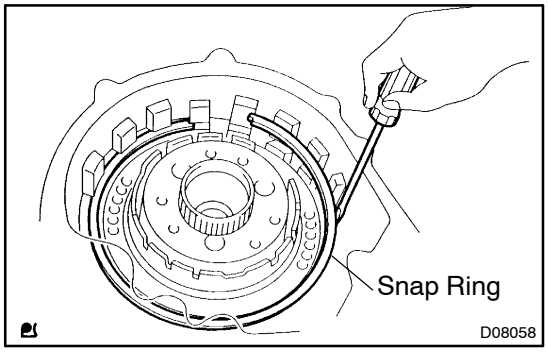
HINT:



Piston stroke = Dimension A –Flange thickness

Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
1	1.8 (0.071)	5	2.2 (0.087)
2	1.9 (0.075)	6	2.3 (0.091)
3	2.0 (0.079)	7	2.4 (0.094)
4	2.1 (0.083)	8	2.5 (0.098)



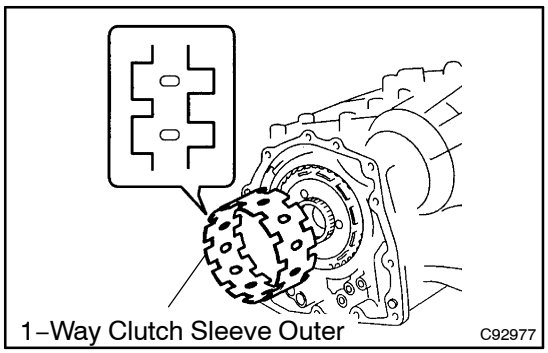
(c) Install the flange.

102. INSTALL SECOND BRAKE PISTON ASSY

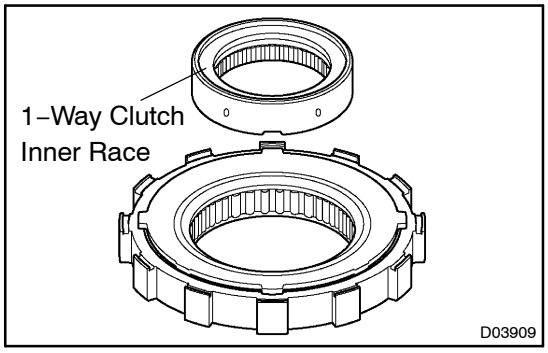
(a) Install the second brake piston assy to the transaxle case.

(b) Install the snap ring and measure the inside diameter.
Inside diameter: More than 167 mm (6.57 in.)

NOTICE:



- **Because the taper snap ring has the positioning direction, check it when installing.**
- **When the diameter does not meet the specified value, replace the snap ring with new one.**
- **After assembling, confirm that there is no clearance between the second brake cylinder and the fitting surface of the cylinder in the transaxle case.**

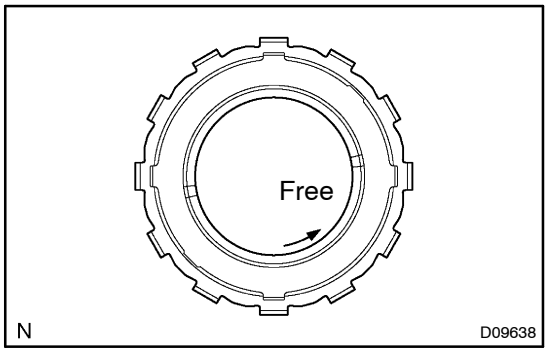


103. INSTALL 1WAY CLUTCH SLEEVE OUTER

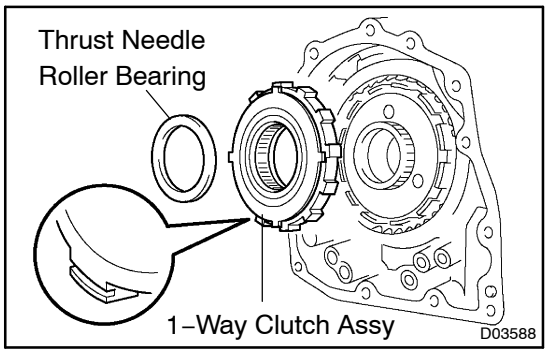
(a) Install the 1–way clutch sleeve outer to the 2nd brake cylinder assy.

NOTICE:

Check the positioning direction of the outer sleeve.



104. INSTALL 1 WAY CLUTCH ASSY

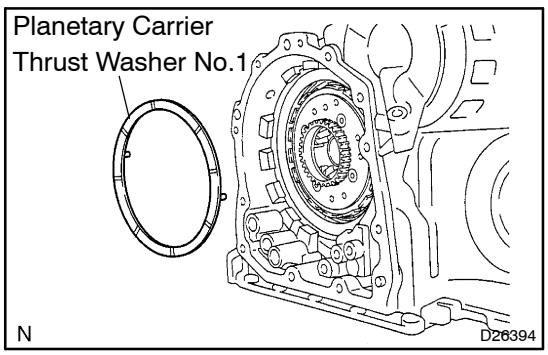


(a) Install the 1–way clutch inner race to the 1–way clutch.

NOTICE:

- **Check the direction of the inner race.**
- **Confirm that the discrimination mark can be seen by the worker.**

(b) Check the rotating direction of 1–way clutch for the lock or free operation, as shown in the illustration.



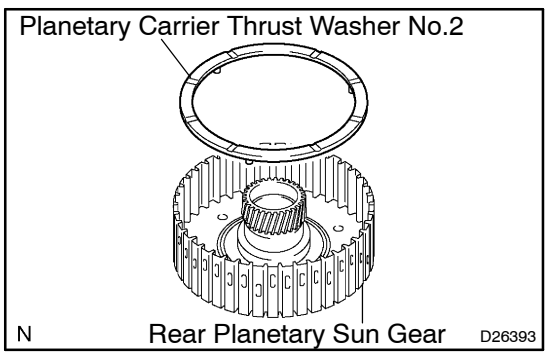
(c) Install the 1–way clutch and thrust needle roller bearing to the 1–way clutch sleeve outer.

Bearing diameter: mm (in.)

	Inside	Outside
Bearing	53.6 (2.110)	69.4 (2.732)

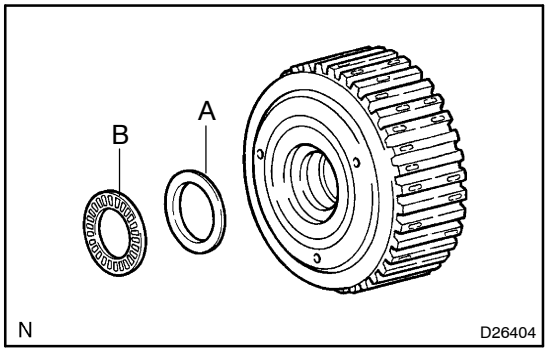
NOTICE:

Install the thrust bearing properly so that no–colored race will be visible.



105. INSTALL PLANETARY CARRIER THRUST WASHER NO.1

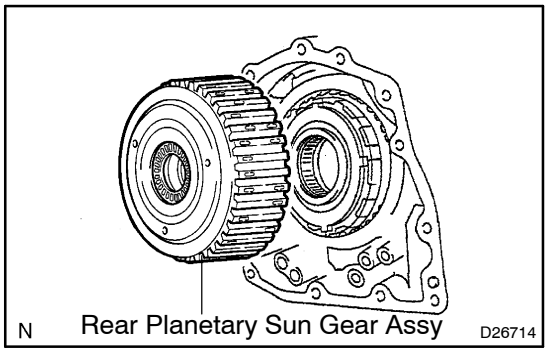
(a) Coat the planetary carrier thrust washer No. 1 with yellow petrolatum, install it onto the planetary sun gear assy.



NOTICE:

After assembling, confirm that the projection should be fixed surely in the hole of the planetary sun gear assembly.

106. INSTALL REAR PLANETARY SUN GEAR ASSY



(a) Coat the planetary carrier thrust washer No. 2 with yellow petrolatum, install it onto the rear planetary sun gear.

(b) Coat the bearing with yellow petrolatum, install it onto the rear planetary sun gear.

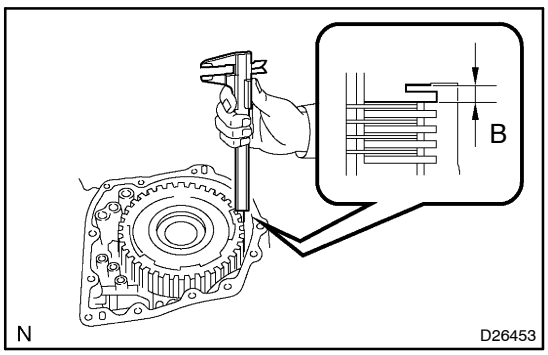
Bearing diameter: mm (in.)

	Inside	Outside
Race, A	33.0 (1.299)	45.4 (1.787)
Bearing, B	31.85 (1.254)	45.2 (1.78)

(c) Install the rear planetary sun gear assy to the rear planetary gear.

NOTICE:

Installing the rear planetary sun gear assembly, confirm that the B1 discs engage.



107. INSTALL 2ND BRAKE CLUTCH DISC

(a) Coat the 4 discs with ATF.

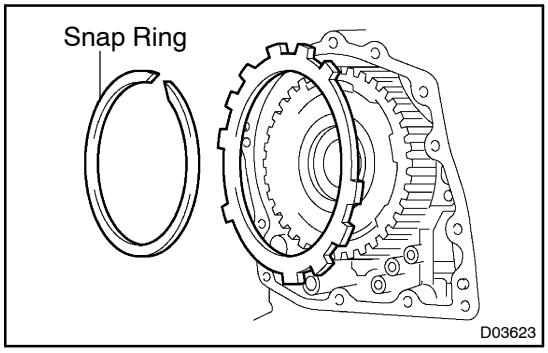
(b) Install the 4 discs and 4 plates to the transaxle case.

(c) Temporarily install the snap ring.

108. INSPECT PACK CLEARANCE OF SECOND BRAKE

(a) Using a vernier calipers, measure the distance between the disc surface and snap ring surface (Dimension B).

(b) Select an appropriate flange so that the pack clearance will meet the specified value.

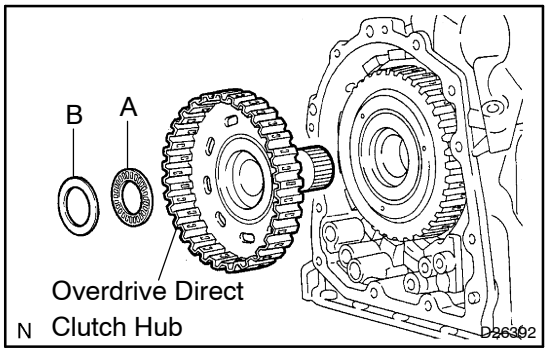


Pack clearance: 0.62 – 0.91 mm (0.0244 – 0.0358 in.)

HINT:

Piston stroke = Dimension B – Flange thickness – Snap ring thickness 1.6 mm (0.063 in.)

Flange thickness: mm (in.)



Mark	Thickness	Mark	Thickness
1	3.0 (0.118)	5	3.4 (0.134)
2	3.1 (0.122)	6	3.5 (0.138)
3	3.2 (0.126)	7	3.6 (0.142)
4	3.3 (0.130)	8	–

(c) Temporarily remove the snap ring, attach the selected flange and restore the snap ring.

NOTICE:

Secure the snap ring so that its gap is visible through the groove of the transaxle case.

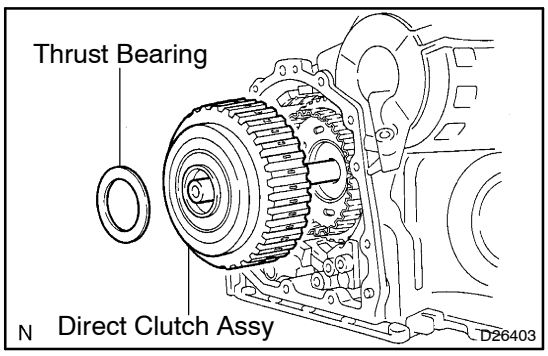
109. INSTALL OVERDREVE DIRECT CLUTCH HUB SUB–ASSY

(a) Install the direct clutch hub to the planetary gear assy.

NOTICE:

Be careful not to damage the bush inside of the overdrive clutch hub during instaling.

(b) Coat the thrust bearing with ATF.



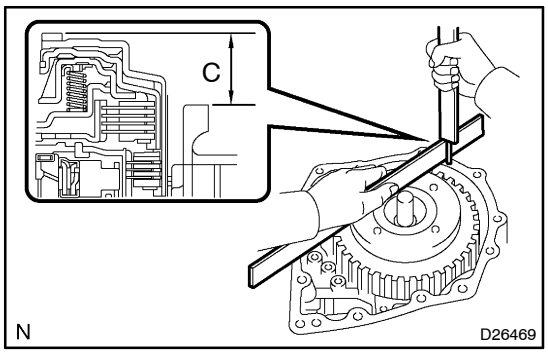
(c) Install the bearing race and the thrust bearing to the direct clutch hub.

NOTICE:

Installing the bearing, hold the part on the side of the overdrive clutch hub.

Bearing and race diameter: mm (in.)

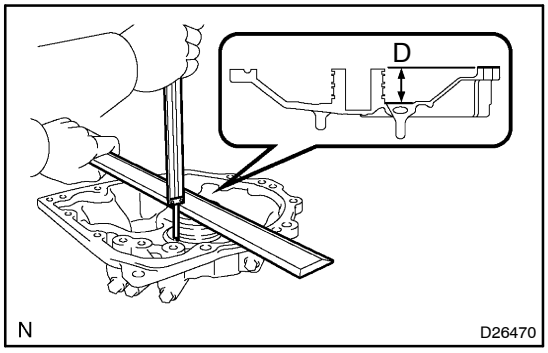
	Inside	Outside
Bearing, A	24.7 (0.972)	39.5 (1.555)
Race, B	23.6 (0.929)	38.0 (1.496)



110. INSTALL DIRECT CLUTCH ASSY

(a) Coat the thrust bearing with ATF.

(b) Install the direct clutch assy and thrust bearing to the rear planetary sun gear assy.



NOTICE:

The disc in the direct clutch should completely match with the hub attached outside the rear planetary sun gear. Otherwise, the rear cover can not be installed.

(c) Clean the connecter part of the transaxle case and the rear cover.

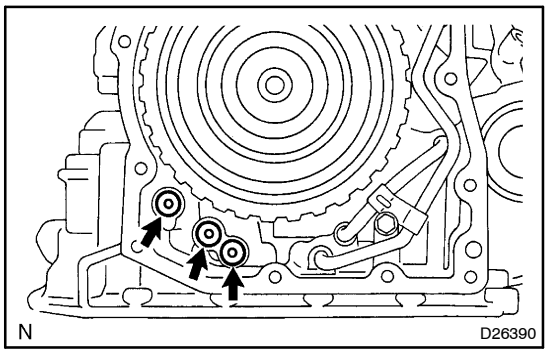
(d) As shown in the illustration, place a straight edge on the direct clutch drum and measure the distance between transaxle case and the straight edge using vernier calipers (Dimension C).

(e) Using vernier calipers and a simple straightedge, measure the position shown in the illustration.

(f) Calculate the end play value using the following formula. Select a thrust bearing which satisfies the end play value and install it.

End play: 0.244 – 0.901 mm (0.0096 – 0.0355 in.)

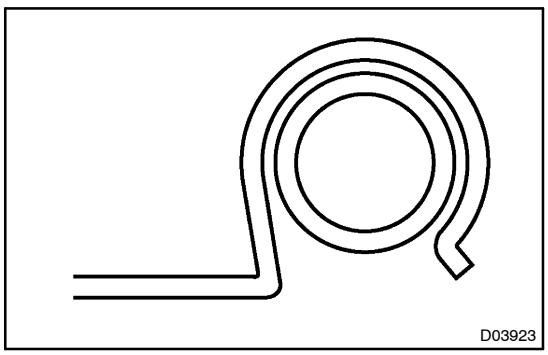
NOTICE:



Make sure that the no colored race side is facing the direct clutch assy.

HINT:

End play = Dimension D – Dimension C

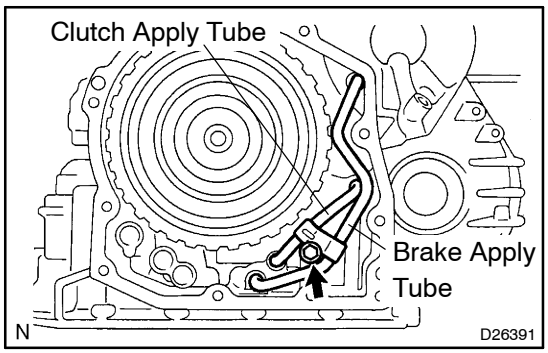


Bearing thickness and diameter : mm (in.)

Thickness	Inside	Outside
3.6 (0.1417)	56.3 (2.217)	75.7 (2.980)
3.8 (0.1496)	56.3 (2.217)	75.7 (2.980)

111. INSTALL GOVERNOR APPLY GASKET NO.1

(a) Install the 3 new governor apply gaskets No. 1 to the transaxle case.



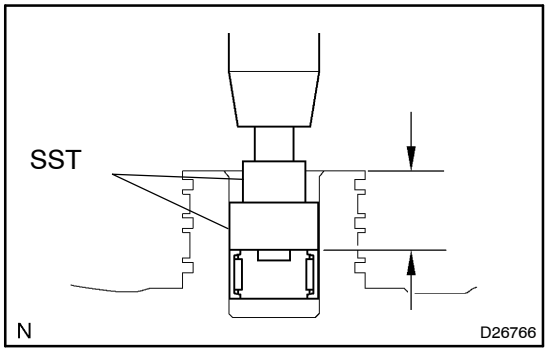
112. INSTALL BRAKE APPLY TUBE

(a) Install the clamp to the brake apply tube.

NOTICE:

Make sure to install the clamp to the apply tube before installing the apply tube to the transaxle case. This prevents the apply tube from being deformed or damaged.

(b) Install the clutch apply tube.

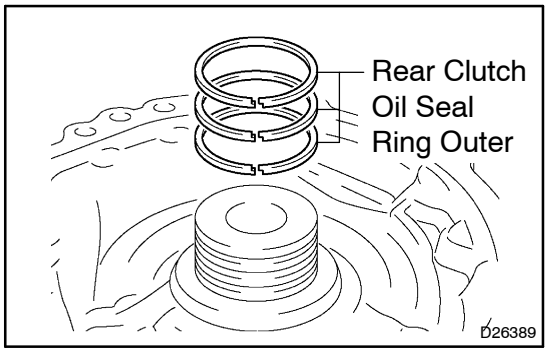


(c) Install the brake apply tube and a bolt to the transaxle case.

Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

NOTICE:

Each pipe should be securely inserted until it reaches the stopper.



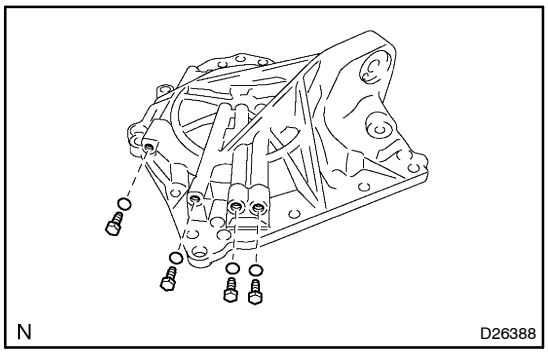
113. INSTALL NEEDLE ROLLER BEARING

(a) Using SST and a press, install the needle roller bearing to the transaxle rear cover.
SST 09950–60010 (09951–00230, 09952–06010)
Press fit depth: 20.55 – 21.25 mm (0.8091 – 0.8366 in.)

NOTICE:

- **Face the inscribed mark side of the bearing race up.**
- **Repeat the press fit until the specified value is obtained.**

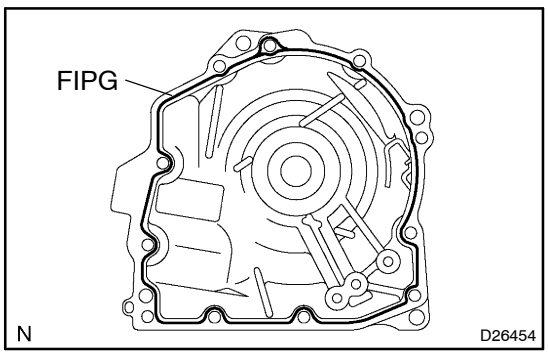
(b) Coat a needle roller bearing with ATF.



114. INSTALL REAR CLUTCH OIL SEAL RING OUTER

(a) Coat the 3 new rear clutch oil seal rings with ATF, install them to the transaxle rear cover.

NOTICE:

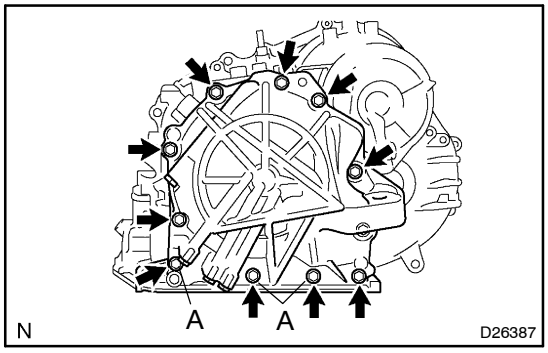


The snap ring should be fixed certainly in the groove of the drum.

115. INSTALL TRANSAXLE CASE NO.1 PLUG

(a) Install the 4 new O–ring to the 4 transaxle case No. 1 plugs.

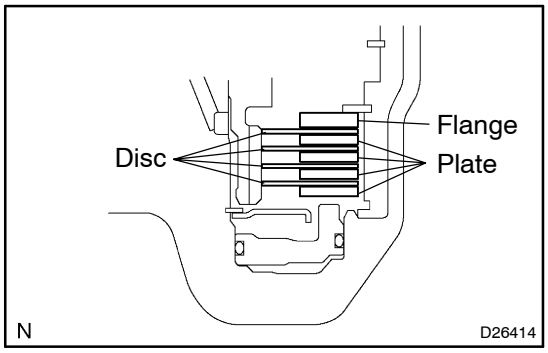
(b) Install the 4 transaxle case No. 1 plugs to the transaxle rear cover.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)



116. INSTALL TRANSAXLE REAR COVER SUB–ASSY

(a) Remove any packing material and be careful not to get oil on the contacting surfaces of the transaxle rear cover or the transaxle case.

(b) Apply FIPG to the cover.
FIPG:
Part No. 08826–00090, THREE BOND 1281 or equivalent.

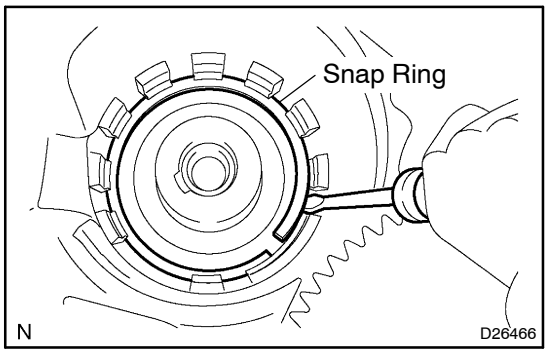


NOTICE:

Concerning about the amount of the FIPG application, the amount should be controlled to from even sealing film on entire flange surface and have slight protrusion of the FIPG all around of the connecting area. The FIPG shall be applied continuously on the flange. (Reference value of the section diameter: ϕ1.2)

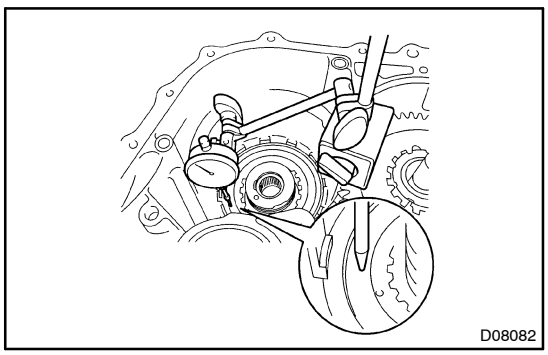
(c) Apply liquid sealer to the "A" bolt threads.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent.

(d) Install the 11 bolts.
Torque:
Bolt A: 19.0 N·m (190 kgf·cm, 14 ft·lbf)
Other bolt: 25.0 N·m (250 kgf·cm, 18 ft·lbf)



117. INSTALL UNDERDRIVE CLUTCH DISC NO.2

(a) Coat the 4 discs with ATF.



(b) Install the 4 discs, 4 plates and flange to the transaxle case.

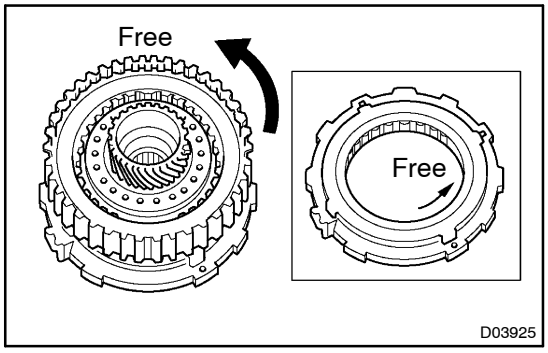
NOTICE:
Be careful about the order of discs, plate and flange assembly.

(c) Using a screwdriver, install the snap ring.

NOTICE:
The snap ring should be fixed certainly in the groove of the drum.

118. INSPECT PACK CLEARANCE OF UNDERDRIVE BRAKE

(a) Using a dial indicator, measure the underdrive brake pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).
Pack clearance: 1.81 – 2.20 mm (0.0713 – 0.0866 in.)

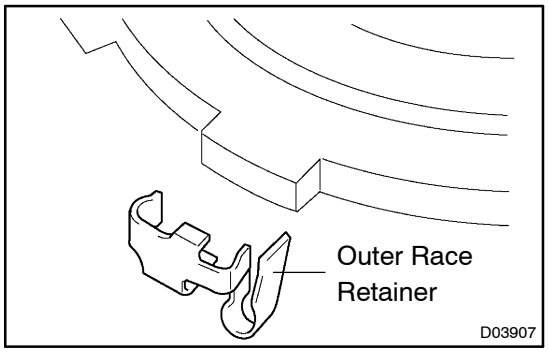


HINT:
Select an appropriate flange from the table below so that it will meet the specified value.

Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
1	3.0 (0.118)	4	3.1 (0.122)
2	3.2 (0.126)	5	3.3 (0.130)
3	3.4 (0.134)	–	–

(b) Temporally remove the snap ring and attach to the flange.

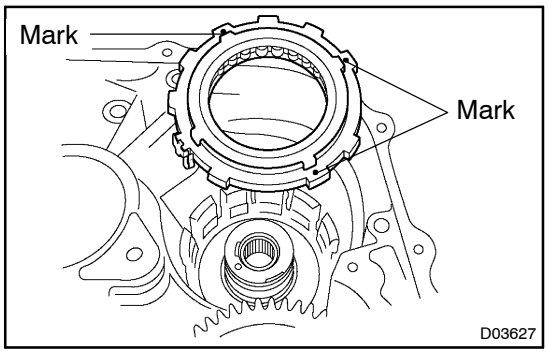


(c) Restore the snap ring.

119. INSPECT UNDERDRIVE 1 WAY CLUTCH ASSY

(a) Install the underdrive clutch assy to the 1–way clutch.

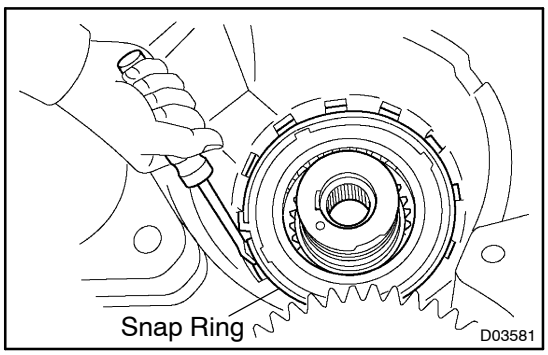
(b) Rotate the underdrive clutch assy to check the rotating direction for the lock or free operation.



120. INSTALL UNDERDRIVE 1 WAY CLUTCH ASSY

(a) Install the outer race retainer to the 1–way clutch.

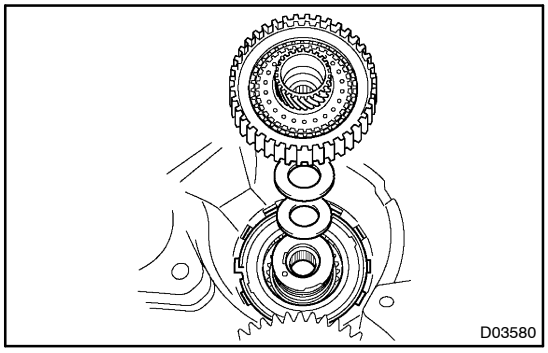
NOTICE:



Fix the outer race retainer to the external tooth of the one way clutch surely.

(b) Install the 1–way clutch to the transaxle case.

NOTICE:



Make sure that the mark on the 1–way clutch outer race is visible.

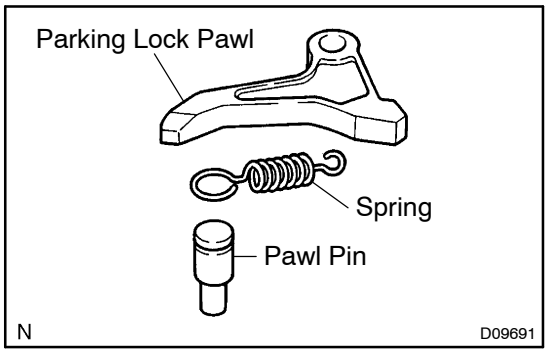
(c) Using a screwdriver, install the snap ring to the transaxle case.

NOTICE:

The snap ring should be fixed certainly in the groove of the transaxle case as the gap exists except in the lock of teeth.

121. INSTALL UNDERDRIVE CLUTCH ASSY

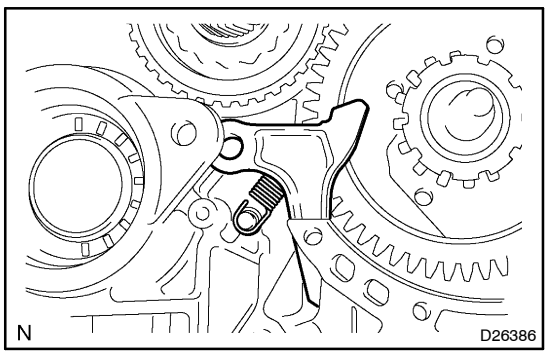
(a) Coat the bearing and bearing race with petroleum jelly, install them onto the underdrive clutch.



Bearing and bearing race diameter: mm (in.)

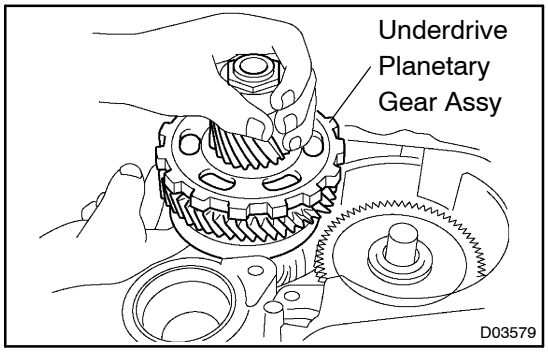
	Inside	Outside
Bearing	37.73 (1.4854)	58.0 (2.2835)
Race	29.9 (1.1772)	55.5 (2.185)

(b) Install the underdrive clutch assy to the transaxle case.



NOTICE:

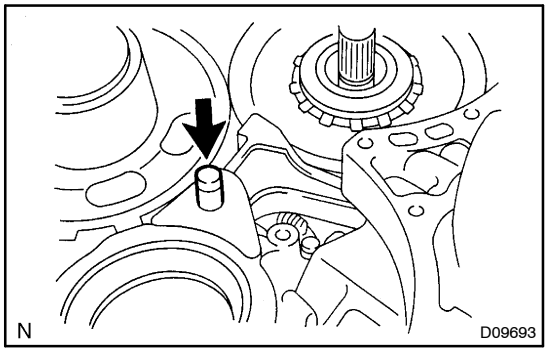
Installing the underdrive clutch drum sub–assy, be sure not to damage the oil seal ring.



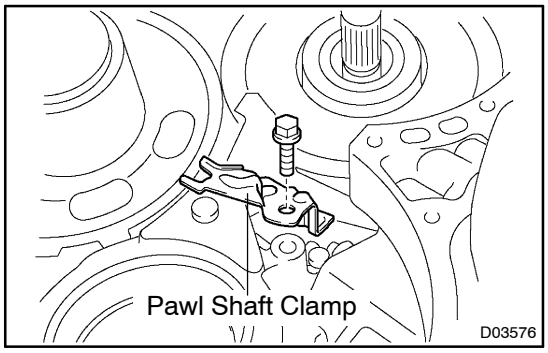
122. INSTALL PARKING LOCK PAWL

(a) Install the pawl pin and spring to the parking lock pawl.

(b) Temporarily install the parking lock pawl, shaft and spring to the transaxle case, as shown in the illustration.

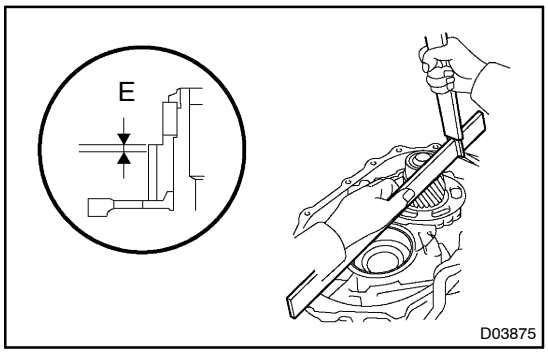


123. INSTALL UNDERDRIVE PLANETARY GEAR ASSY



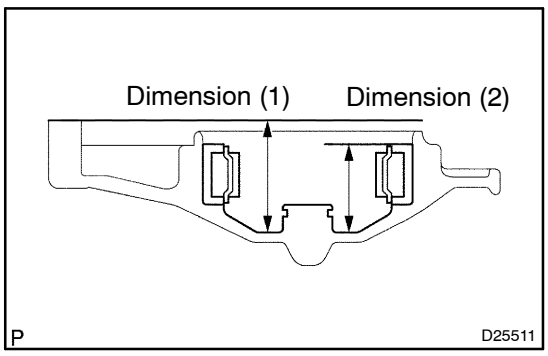
(a) Install the underdrive planetary gear assy to the transaxle case.

NOTICE:

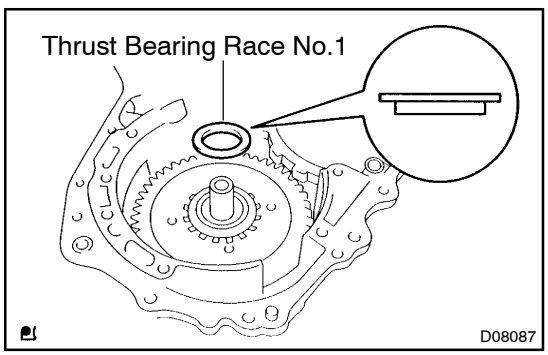


Engage all the discs of underdrive clutch and hub splines of the underdrive planetary gear assy firmly and assemble them securely.

(b) Install the parking lock pawl shaft.



(c) Install the pawl shaft clamp with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

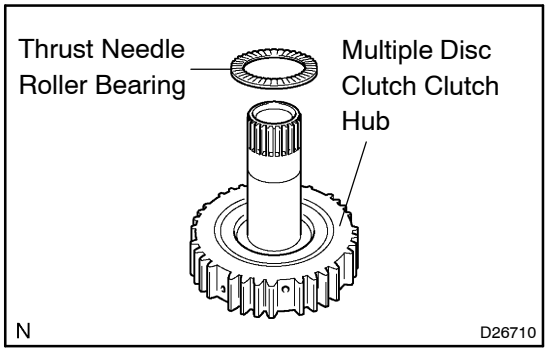


(d) Using a straight edge and vernier calipers as shown in the illustration, measure the gap between the top of the differential drive pinion in the underdrive planetary gear and contact surface of the transaxle case and housing (Dimension E).

NOTICE:
Note down the dimension E as it is necessary for the following process.

(e) As shown in the illustration, measure the 2 places of the transaxle housing, calculate the dimension F using the formula.

NOTICE:
Note down the dimension F as it is necessary for the following process.
HINT:
Dimension F = Dimension (1) – Dimension (2)

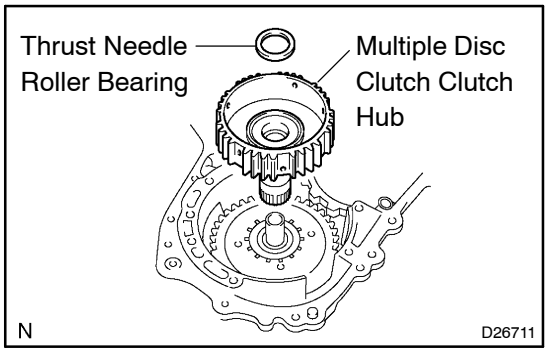


124. INSTALL MULTIPLE DISC CLUTCH CLUTCH HUB

(a) Install the thrust bearing race No.1 to the transaxle case while checking its direction.

Bearing race diameter: mm (in.)

	Inside	Outside
Bearing race	39.5 (1.555)	45.8 (1.803)

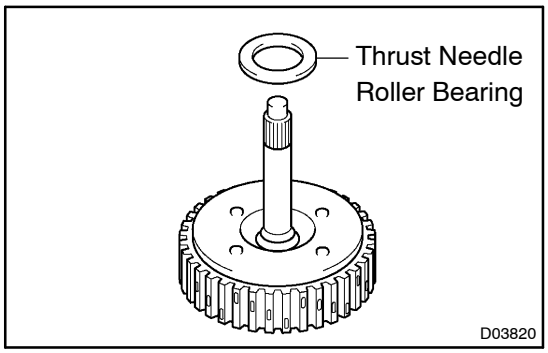


(b) Coat the thrust needle roller bearing and race with yellow petrolatum, install them onto the multiple disc clutch hub.

Thrust bearing and race diameter: mm (in.)

	Inside	Outside
Thrust Bearing	36.4 (1.433)	52.2 (2.055)

(c) Coat the needle roller bearing with ATF.



(d) Install the needle roller bearing to the multiple clutch hub.

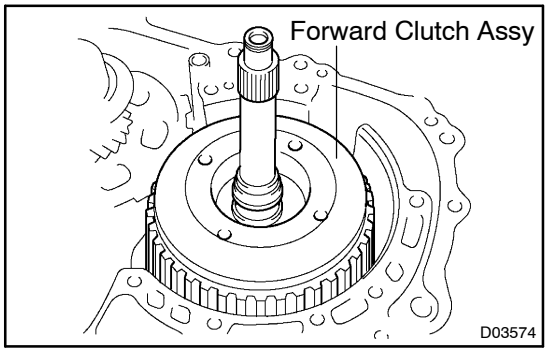
Bearing diameter: mm (in.)

	Inside	Outside
Bearing	23.6 (0.929)	44 (1.732)

(e) Install the multiple clutch hub to the transaxle case.

125. INSTALL FORWARD CLUTCH ASSY

(a) Coat the thrust needle roller bearing with ATF.

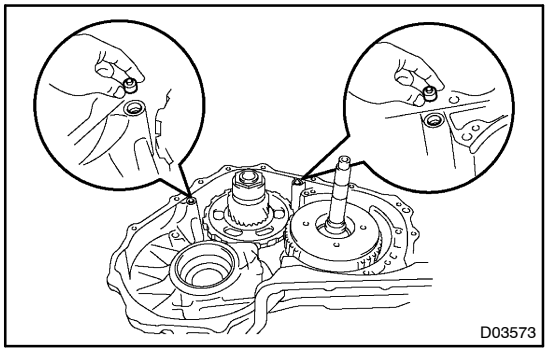


(b) Install the thrust needle roller bearing to the forward clutch.

Thrust bearing diameter: mm (in.)

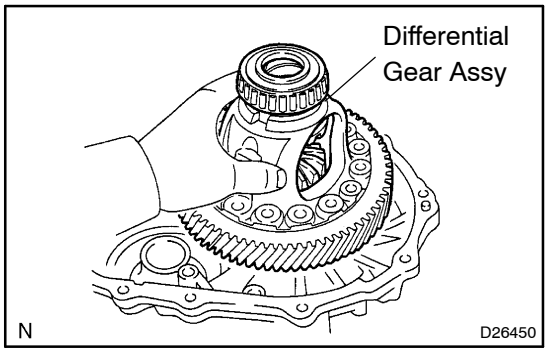
	Inside	Outside
Thrust Bearing	33.58 (1.3220)	51.9 (2.043)

NOTICE:



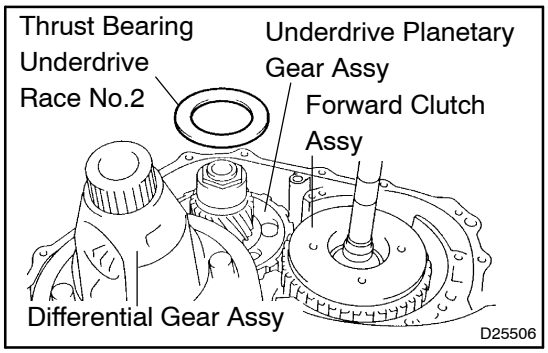
Install the thrust bearing properly so that the no colored race or blue ink jet race will be visible.

(c) Install the forward clutch to the forward clutch assy.



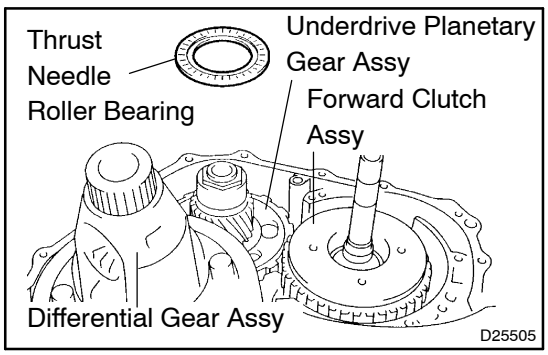
NOTICE:

- **Align the splines of all discs in the forward clutch with those of multiple clutch hub to assemble them securely.**
- **Be careful not to damage the bush inside of the forward clutch hub during installing.**



126. INSTALL OVERDRIVE BRAKE GASKET

(a) Install the 2 new overdrive brake gaskets.



127. INSTALL DIFFERENTIAL GEAR ASSEMBLY

(a) Install the differential gear assy to the transaxle case.

128. INSTALL THRUST BEARING UNDERDRIVE RACE NO.2

(a) Install the thrust bearing underdrive race No.2 to the underdrive planetary gear assy.

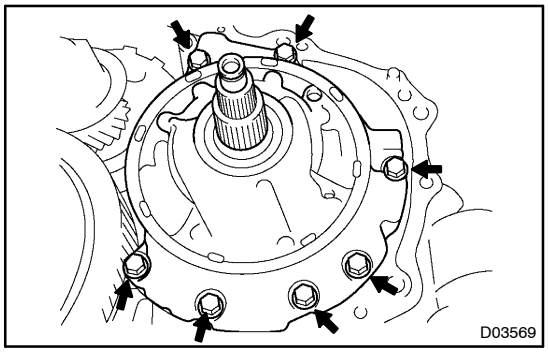
129. INSTALL THRUST NEEDLE ROLLER BEARING

(a) Coat the thrust needle roller bearing with ATF.

(b) Calculate the end play value using the following formula and values of Dimension E and F that ware measured when installing cylindrical roller bearing and underdrive planetary gear. Select an appropriate underdrive planetary gear thrust bearing race No. 2 which satisfies the specified end play value, and install it.

End play: 0.498 – 0.993 mm (0.01961 – 0.03909 in.)

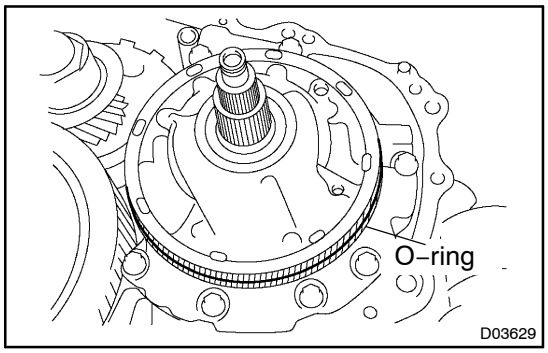
HINT:



End play = Dimension F – Dimension E – thrust bearing thickness 2.5 mm (0.0984 in.) – underdrive thrust bearing race No. 2 thickness.

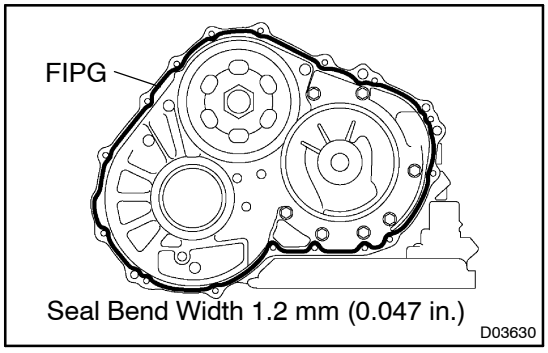
Race thickness: mm (in.)

F – E	Thickness
Less than 7.72 (0.3039)	3.5 (0.138)
7.72 (0.3039)	3.8 (0.150)



Bearing and bearing race diameter: mm (in.)

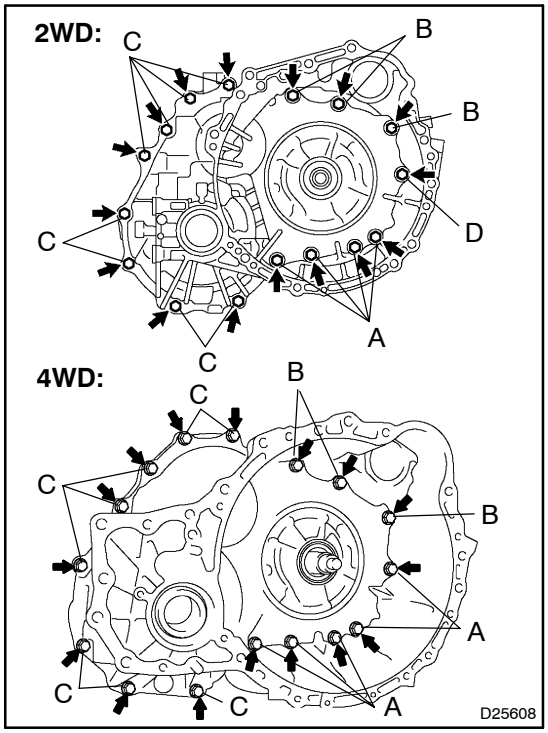
	Inside	Outside
Bearing	57.2 (2.252)	84.96 (3.345)
Bearing race	56.4 (2.22)	83 (3.268)



130. INSTALL OIL PUMP ASSY

(a) Install the oil pump to the transaxle case with the 7 bolts.
Torque: 22.0 N·m (226 kgf·cm, 16 ft·lbf)

(b) Coat the O–ring of oil pump with ATF.

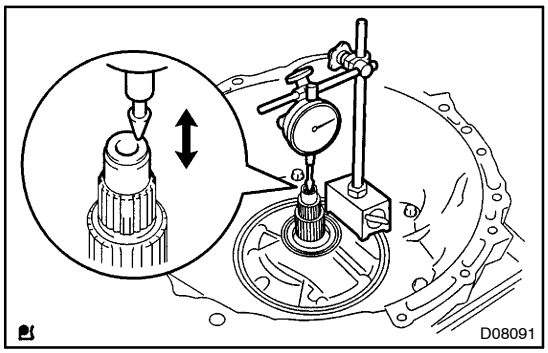


NOTICE:
Confirm the input shaft rotates smoothly with the manual operation after assembling the oil pump.

131. INSTALL TRANSAXLE HOUSING

(a) Remove any parking material and be careful not to get oil on the contacting surface of the transaxle case or transaxle housing.

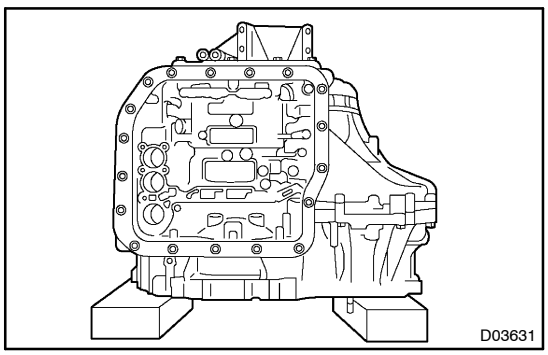
(b) Apply FIPG to the transaxle case.
FIPG:
Part No. 08826–00090, THREE BOND 1281 or equivalent



(c) Install the transaxle housing and 16 bolts to the transaxle case.

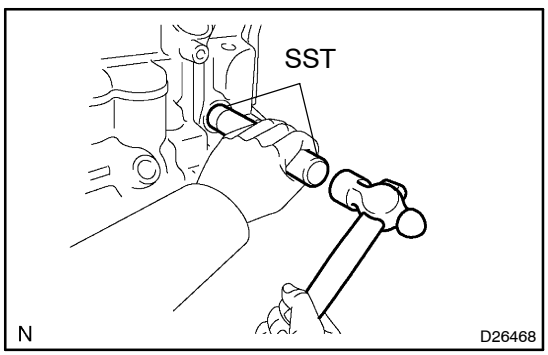
Torque:
Bolt A: 25 N·m (255 kgf·cm, 18 ft·lbf)
Bolt B: 33 N·m (337 kgf·cm, 24 ft·lbf)
Bolt C: 29 N·m (295 kgf·cm, 21 ft·lbf)
Bolt D: 22 N·m (226 kgf·cm, 16.0 ft·lbf)

HINT:
Apply seal packing or equivalent to the bolt A and D.



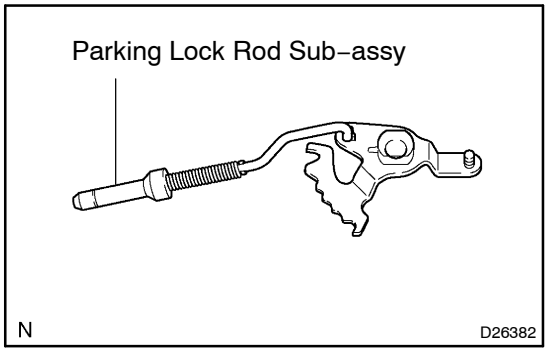
Seal packing:
THREE BOND 2403 or equivalent
Bolt length:
Bolt A: 50 mm (1.969 in.)
Bolt B: 50 mm (1.969 in.)
Bolt C: 42 mm (1.654 in.)
Bolt D: 72 mm (2.835 in.)

NOTICE:
Because the bolt A is a seal bolt, apply the seal packing to new bolts and tighten them within 10 minutes after application.



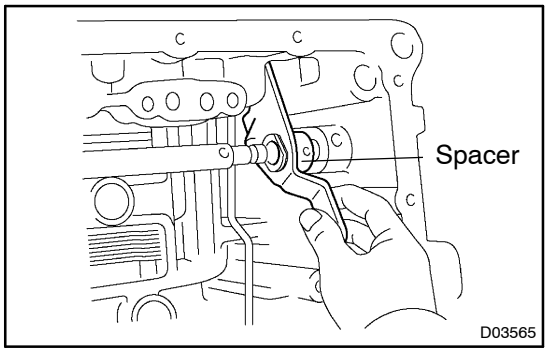
132. INSPECT INPUT SHAFT ENDPLAY

(a) Using a dial indicator, measure the input shaft end play.
End play: 0.262 – 1.249 mm (0.0100 – 0.0494 in.)



133. FIX AUTOMATIC TRANSAXLE ASSY

(a) Fix the transaxle assy.

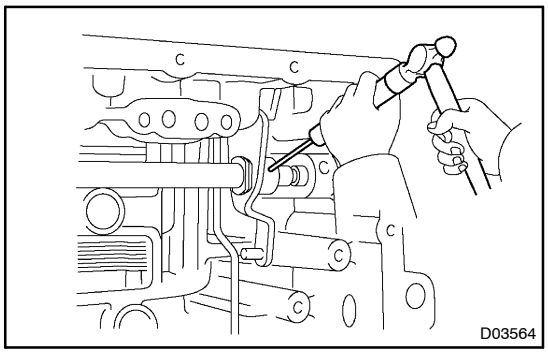


134. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

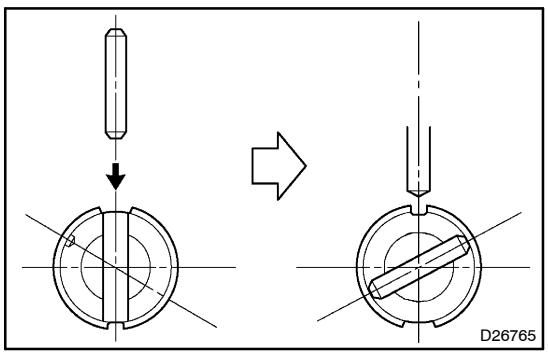
(a) Coat a new oil seal with MP grease.
(b) Install the oil seal to the transaxle case.
SST 09950–60010 (09951–00230), 09950–70010 (09951–07100)
Oil seal drive in depth: 0 ± 0.5 mm (0 ± 0.0197 in.)

135. INSTALL PARKING LOCK ROD SUB–ASSY

(a) Install the parking lock rod to the manual valve lever.



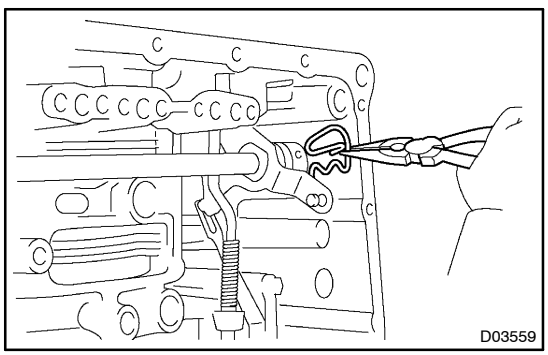
136. INSTALL MANUAL VALVE LEVER SUB–ASSY



(a) Install a new spacer and manual valve lever shaft to the transaxle case.

NOTICE:

Do not damage on the oil seal during assembling the shaft to the transaxle case.

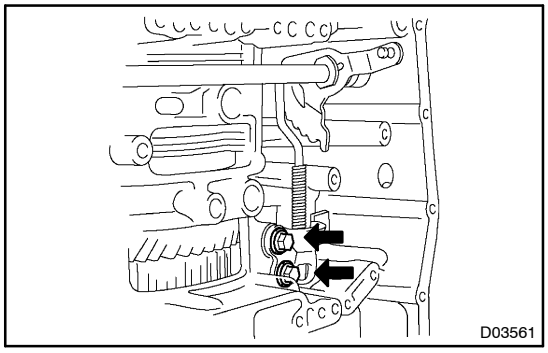


(b) Using a pin punch and hammer, drive in a new pin.

(c) Turn the spacer and the lever shaft to align the small hole for locating the staking position in the spacer with the staking position mark on the lever shaft.

(d) Using a pin punch, stake the spacer through the small hole.

(e) Check that the spacer does not turn.



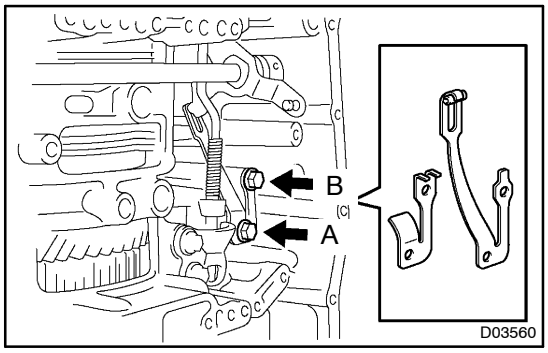
137. INSTALL MANUAL VALVE LEVER SHAFT RETAINER SPRING

(a) Using needle–nose pliers, install the retainer spring.

NOTICE:

Hang the spring on the shaft certainly.

138. INSTALL PARKING LOCK PAWL BRACKET



(a) Install the parking lock pawl bracket with the 2 bolts.

Torque: 20 N·m (205 kgf·cm, 15 ft·lbf)

Bolt length: 25 mm (0.984 in.)

NOTICE:

Be sure the parking rod is placed between the parking pawl and the guide of the parking bracket when the parking bracket is assembled.

139. INSTALL MANUAL DETENT SPRING SUB–ASSY

(a) Install the manual detent spring with the 2 bolts.

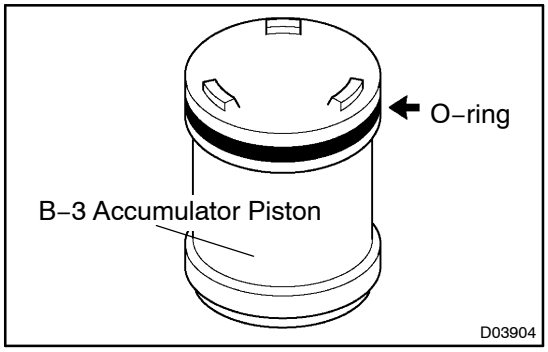
NOTICE:

Make sure to install the manual detent spring and cover in this order.

HINT:

Tighten them in the order, A and B.

Torque:



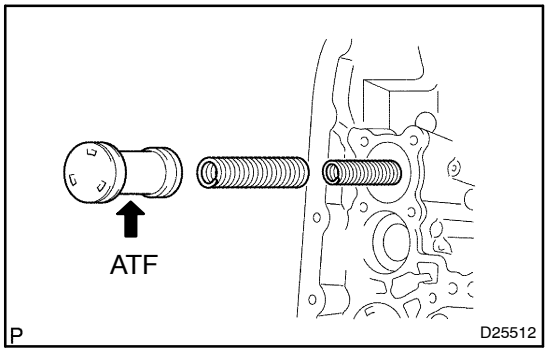
Bolt A: 20 N·m (205 kgf·cm, 15 ft·lbf)

Bolt B: 12 N·m (120 kgf·cm, 9 ft·lbf)

Bolt length:

Bolt A: 27 mm (1.063 in.)

Bolt B: 16 mm (0.630 in.)

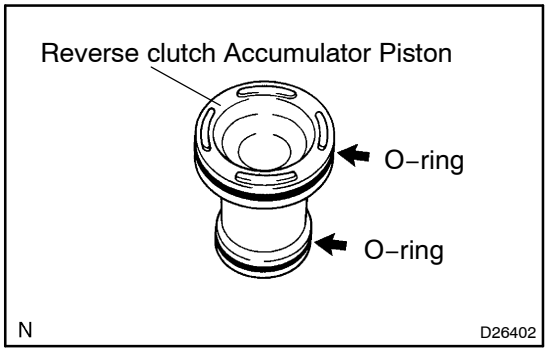


140. INSTALL B–3 ACCUMULATOR PISTON

(a) Coat a new O–ring with ATF, install it to the B–3 accumulator piston.

NOTICE:

Install the O–ring to the accumulator piston and the accumulator sleeve not to have a twist and a protrusion. Moreover, apply enough ATF prior to assembling. Be sure to the installed position.



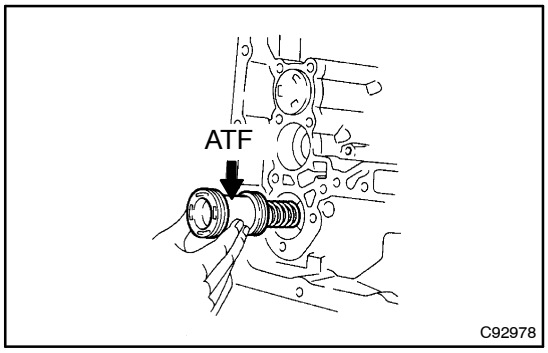
(b) Coat the piston with ATF, install it to the transaxle case.

NOTICE:

Install the springs to each accumulator piston with checking of the identification color or each spring.

Accumulator spring:

Free length Outer diameter mm (in.)	Color
Inner 62.00 (2.4409) / 15.50 (0.610)	Purple
Outer 74.23 (2.9224) / 21.70 (0.854)	Purple

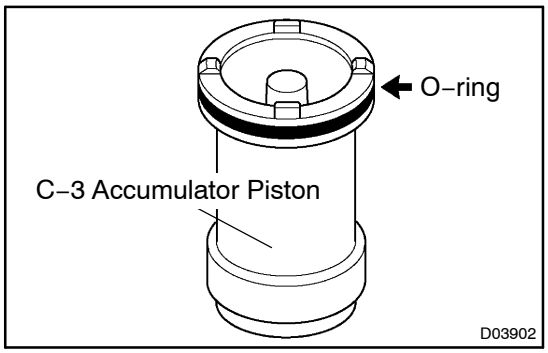


141. INSTALL REVERSE CLUTCH ACCUMULATOR PISTON

(a) Coat the 2 new O–rings with ATF, install them to the reverse accumulator piston.

NOTICE:

Install the O–ring to the accumulator piston and the accumulator sleeve not to have a twist and a protrusion. Moreover, apply enough ATF prior to assembling. Be sure to the installed position.



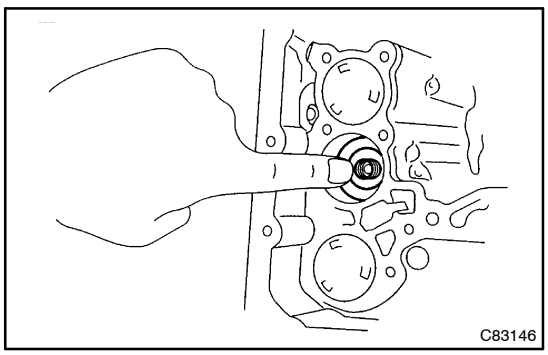
(b) Coat the piston with ATF, install it to the transaxle case.

NOTICE:

Install the springs to each accumulator piston with checking of the identification color or each spring.

Accumulator spring:

Free length Outer diameter mm (in.)	Color
60.96 (2.3999) / 14.10 (0.555)	Yellow

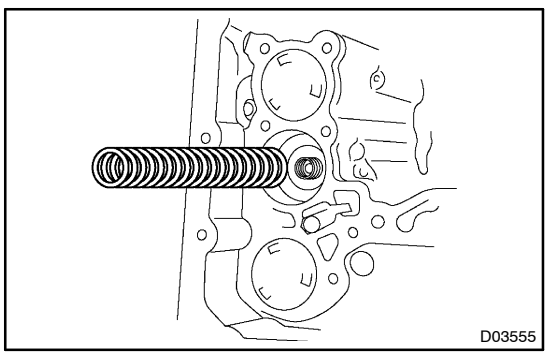


142. INSTALL C–3 ACCUMULATOR PISTON

(a) Coat a new O–ring with ATF, install it to the C–3 accumulator piston.

NOTICE:

Install the O–ring to the accumulator piston and the accumulator sleeve not to have a twist and a protrusion. Moreover, apply enough ATF prior to assembling. Be sure to the installed position.

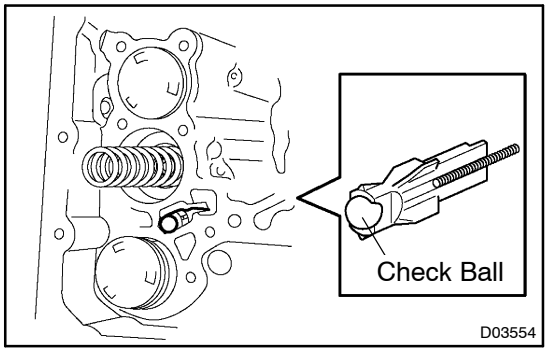


(b) Coat the piston with ATF, install it to the transaxle case.

NOTICE:

Install the springs to each accumulator piston with checking of the identification color or each spring.

Accumulator spring:

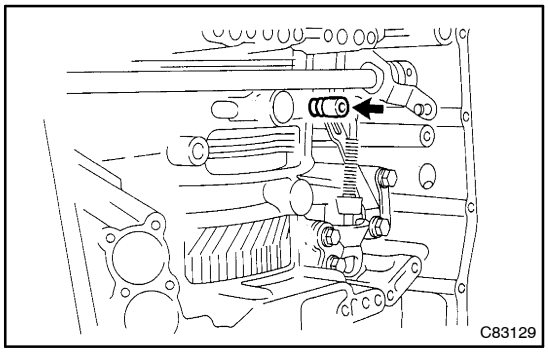


Free length Outer diameter mm (in.)	Color
72.20 (2.8425) / 19.0 (0.748)	Colorless

(c) Install the spring from the C–3 accumulator piston.

NOTICE:

Install the springs to each accumulator piston with checking of the identification color or each spring.



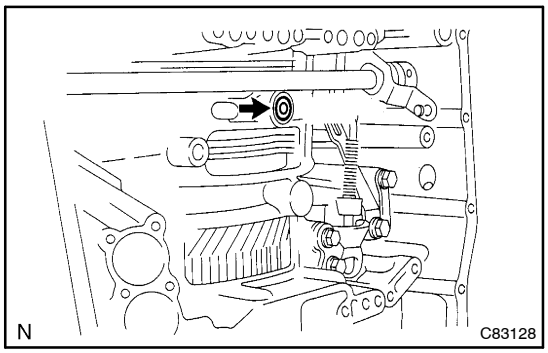
143. INSTALL CHECK BALL BODY

(a) Coat the check ball body with ATF.

(b) Install the check ball body and spring.

NOTICE:

Regarding the installation of the spring for the check ball body, be sure to place the spring in the hole in the ball body. Be careful about the parts orientation.

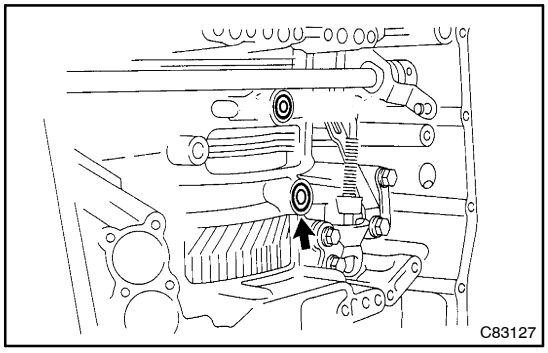


144. INSTALL BRAKE DRUM GASKET

(a) Coat a new brake drum gasket with ATF, install it to the transaxle case.

NOTICE:

Be sure not to damage the lip portion of the transaxle case brake gasket when inserting the gasket to the case. Moreover, apply enough ATF to the gasket prior to assembling. Also, be careful about the parts orientation.

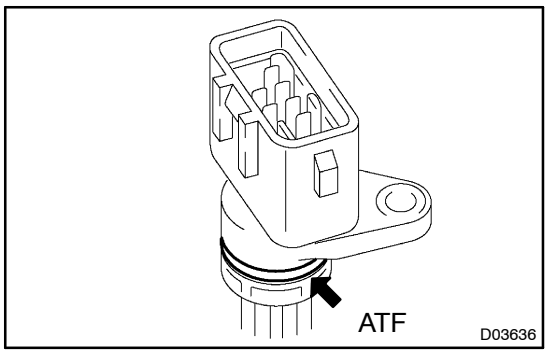


145. INSTALL TRANSAXLE CASE 2ND BRAKE GASKET

(a) Coat a new transaxle case 2nd brake gasket with ATF, install it to the transaxle case.

NOTICE:

Be sure not to damage the lip portion of the transaxle case brake gasket when inserting the gasket to the case. Moreover, apply enough ATF to the gasket prior to assembling. Also, be careful about the parts orientation.

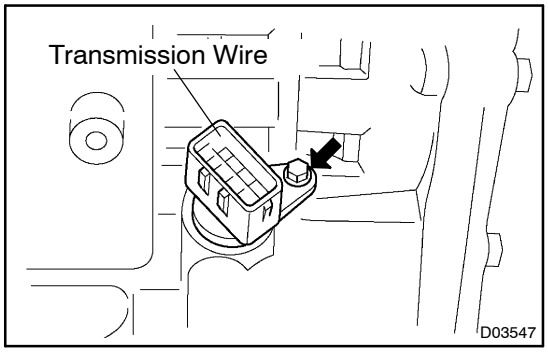


146. INSTALL GOVERNOR APPLY GASKET NO.1

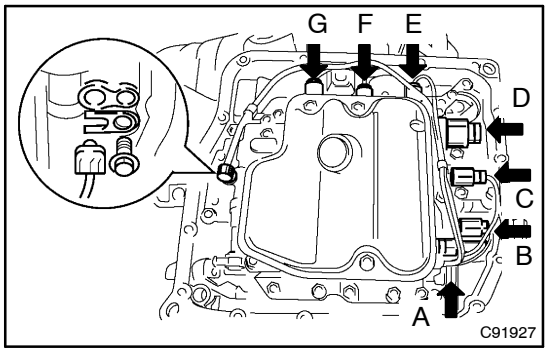
(a) Coat a new governor apply gasket No. 1 with ATF, install it to the transaxle case.

NOTICE:

Be sure not to damage the lip portion of the transaxle case brake gasket when inserting the gasket to the case. Moreover, apply enough ATF to the gasket prior to assembling. Also, be careful about the parts orientation.



147. INSTALL TRANSMISSION WIRE



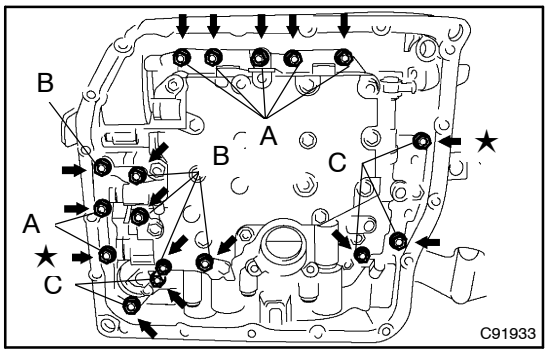
(a) Coat a new O–ring with ATF, install it to the transmission wire.

NOTICE:

Be careful about the O–ring not to have a twist, a protrusion and a pinching during installing the wire transmission to the transaxle case. Moreover, apply enough ATF to the O–ring prior to assembling.

(b) Install the transmission wire retaining bolt.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

148. CONNECT TRANSMISSION WIRE



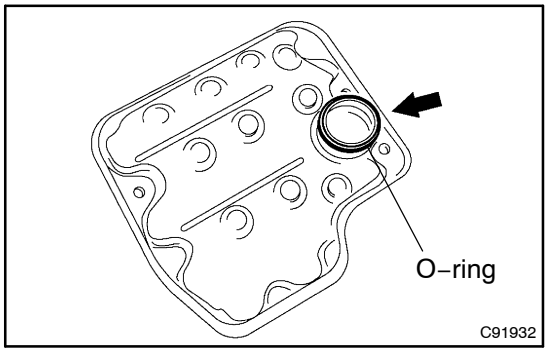
(a) Coat a O–ring of the ATF temperature sensor with ATF.

(b) Install the ATF temperature sensor, with the lock plate and bolt.
Torque: 6.6 N·m (67 kgf·cm, 58 in.·lbf)

(c) Connect the 7 solenoid connectors.

NOTICE:

- **Connect the connector to A, B, C, D, E, F, G, from shorter one.**
- **Apply ATF to the bolt.**

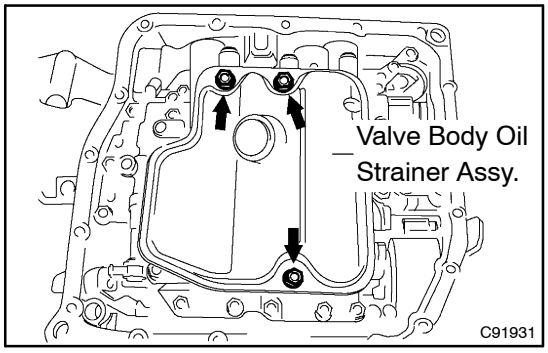


149. INSTALL TRANSMISSION VALVE BODY ASSY

(a) Make sure that the manual valve lever position, install the valve body with 17 bolts to the transaxle case.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 41 mm (1.614 in.)
Bolt B: 57 mm (2.244 in.)
Bolt C: 25 mm (0.984 in.)

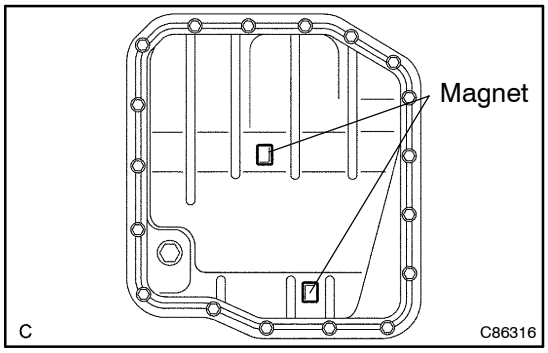
NOTICE:

- **Push the valve body against the accumulator piston spring and the check ball body to install it.**
- **When installing the valve body to the transaxle case, do not hold the solenoids.**
- **Tighten temporarily those bolts marked by ★ in the illustration first because they are positioning bolts.**



150. INSTALL VALVE BODY OIL STRAINER ASSY

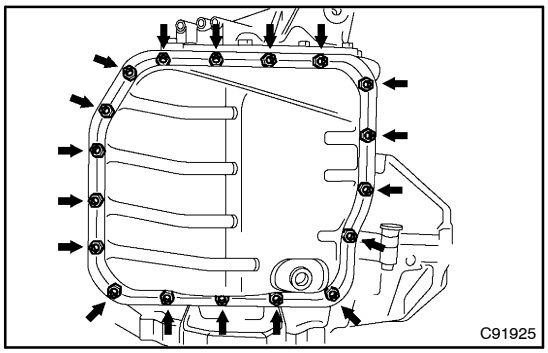
(a) Coat a new O–ring with ATF, install it to the oil strainer.



NOTICE:

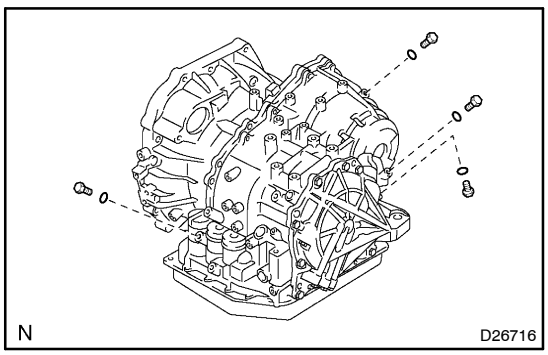
Assemble the O–ring carefully not to have a twist and a pinching. Moreover, apply enough ATF to the O–ring prior to assembling.

(b) Install the oil strainer and 3 bolts to the valve body.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



NOTICE:
Apply ATF to the bolts.

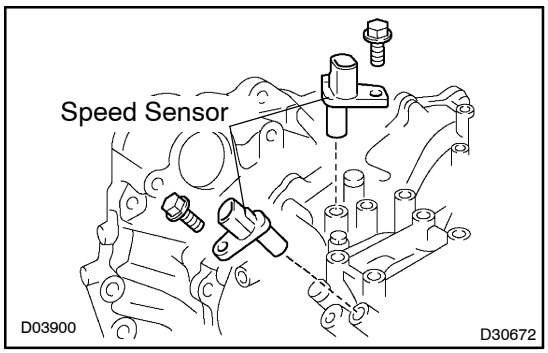
151. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY



(a) Install the 2 magnets in the oil pan.

(b) Apply seal packing or equivalent to new 18 bolts.
Seal packing:
THREE BOND 2430 or equivalent

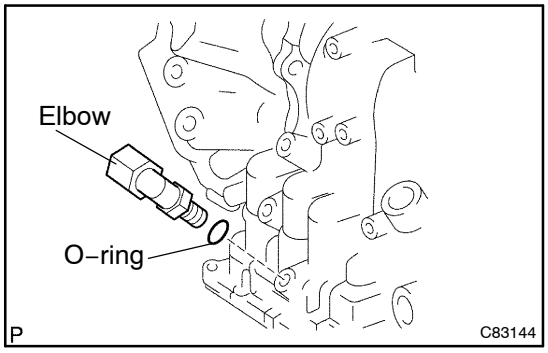
(c) Install the new oil pan gasket with the 18 bolts to the transaxle case.
Torque: 7.8 N·m (80 kgf·cm, 69 in.·lbf)



NOTICE:
- **Because the bolts should be seal bolts, apply seal packing to new bolts and tighten them within 10 minutes after application.**
- **Remove any oil or grease from the contacting surface of the transaxle case and the oil pan with the gasket completely before the oil pan to the case.**

152. INSTALL TRANSAXLE CASE NO.1 PLUG

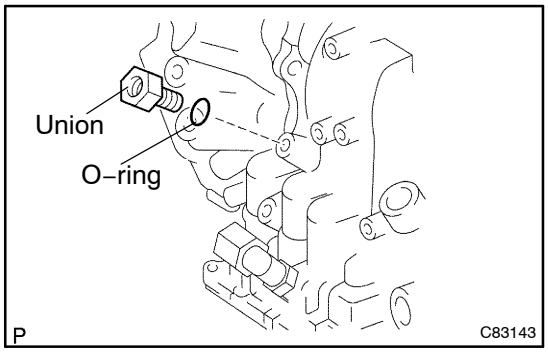
(a) Coat the 4 new O–rings with ATF, install them to the 4 transaxle case No. 1 plugs.



(b) Install the 4 transaxle case No. 1 plugs to the transaxle case.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

153. INSTALL SPEED SENSOR

(a) Install them to the 2 sensors.

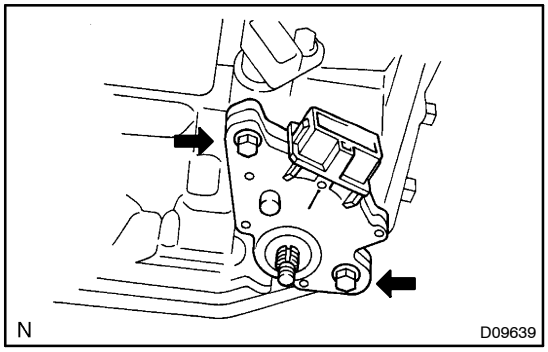


(b) Install the 2 sensors to the transaxle case with the 2 bolts.
Torque: 11.0 N·m (115 kgf·cm, 8 ft·lbf)

154. INSTALL OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)

(a) Coat a new O–ring with ATF, install it to the elbow.

(b) Install the elbow to the transaxle case.
Torque: 27 N·m (276 kgf·cm, 20 ft·lbf)

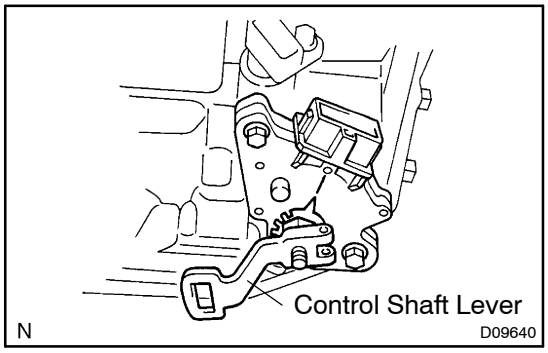


155. INSTALL OIL COOLER TUBE UNION (INLET OIL COOLER UNION)

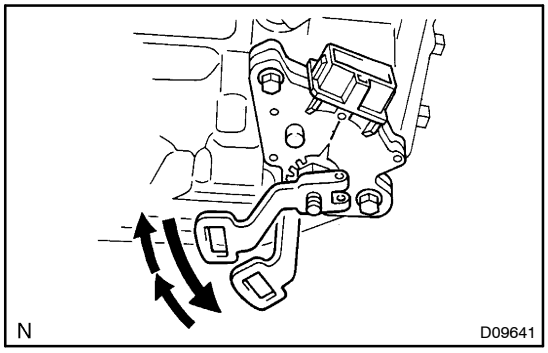
(a) Coat a new O–ring with ATF, install it to the union.

(b) Install the union to the transaxle case.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

156. INSTALL BREATHER PLUG HOSE

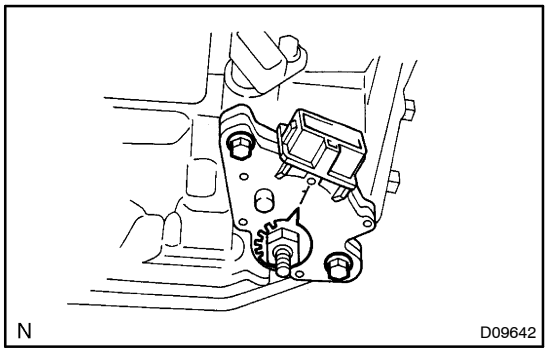


(a) Install the breather plug hose into the transaxle case certainly.

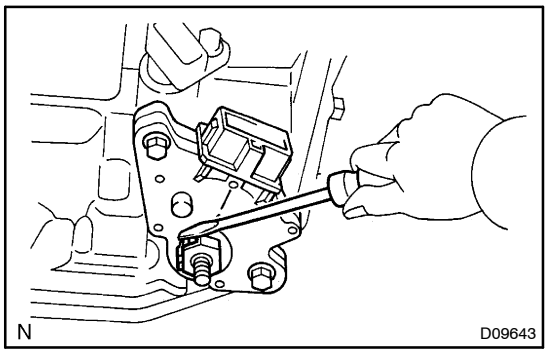


157. INSTALL PARK/NEUTRAL POSITION SWITCH ASSY

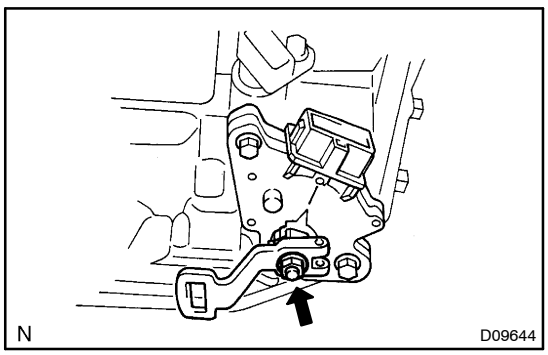
(a) Install the park/neutral position switch onto the manual valve lever shaft and temporarily install the 2 adjusting bolts.



(b) Install a new nut stopper and nut.
Torque: 6.9 N·m (70 kgf·cm, 61 in.·lbf)



(c) Temporarily install control shaft lever.

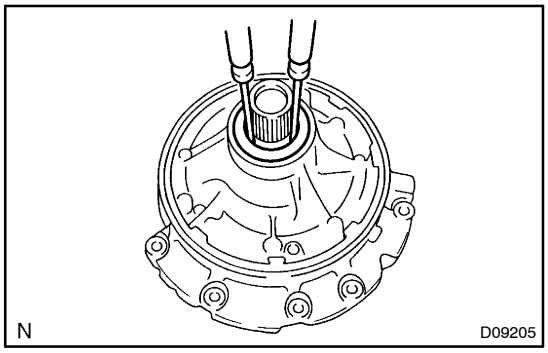


(d) Turn the lever counterclockwise until it stops, and then turn it clockwise 2 notches.
(e) Remove the control shaft lever.

(f) Align the groove with neutral basic line.
(g) Tighten the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

(h) Using a screwdriver, stake the nut with the nut stopper.

(i) Install the control shaft lever, washer and nut.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)



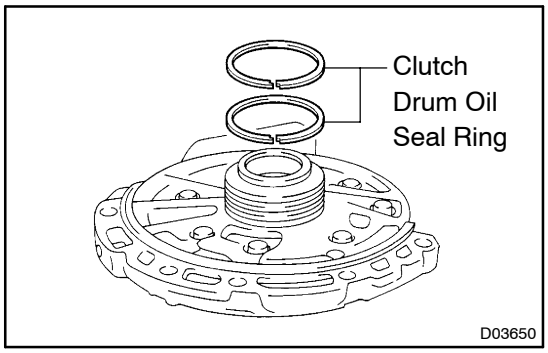
158. INSTALL SPEEDOMETER DRIVEN HOLE (ATM) COVER SUB–ASSY

(a) Coat a new O–ring with ATF and install it to the speedometer driven hole cover.
(b) Install the bolt and speedometer driven hole cover sub–assy to the transaxle assy.
Torque: 6.9 N·m (70 kgf·cm, 61 ft·lbf)

OIL PUMP ASSY (U151E/U151F)

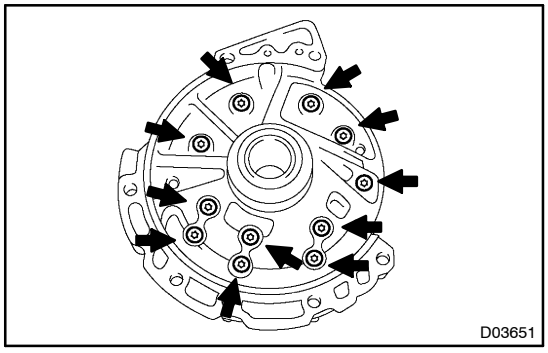
OVERHAUL

4006F–03



1. INSPECT OIL PUMP ASSY

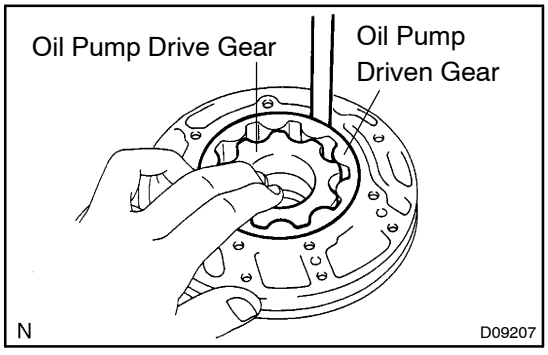
(a) Turn the drive gear with 2 screwdrivers and make sure it rotates smoothly.



NOTICE:

Be careful not to damage the oil seal lip.

2. REMOVE CLUTCH DRUM OIL SEAL RING



(a) Remove the 2 clutch drum oil seal rings.

3. REMOVE STATOR SHAFT ASSY

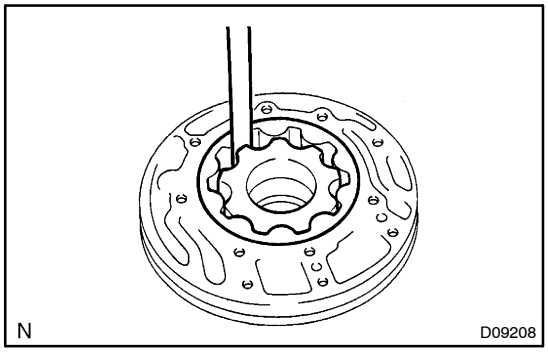
(a) Using a torx socket (T30), remove the 11 bolts and stator shaft.

(b) Keep the gears in assembling order.

4. INSPECT CLEARANCE OF OIL PUMP ASSEMBLY

(a) Push the driven gear to one side of the body.

(b) Using a feeler gauge, measure the clearance.

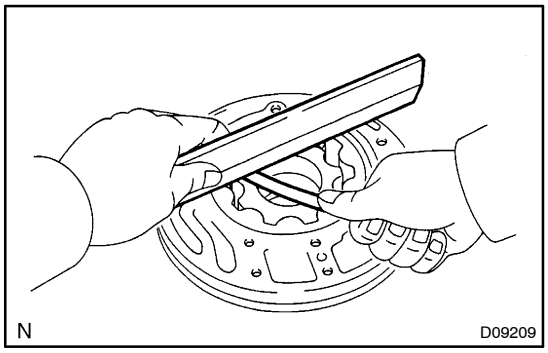


Standard body clearance:

0.10 – 0.17 mm (0.0039 – 0.0067 in.)

Side clearance: 0.02 – 0.05 mm (0.001 – 0.02 in.)

Maximum body clearance: 0.17 mm (0.0067 in.)



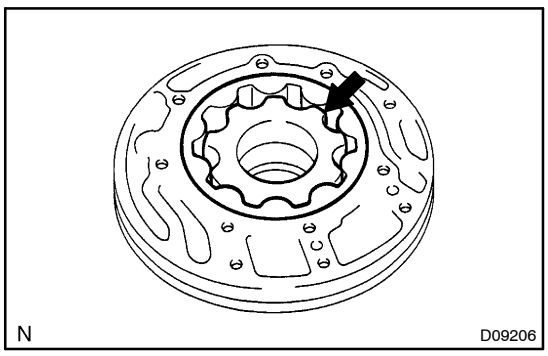
If the body clearance is greater than the maximum, replace the oil pump body sub–assy.

(c) Using a feeler gauge measure the tip clearance between the driven gear teeth and drive gear teeth.

Standard tip clearance:
0.07 – 0.15 mm (0.0028 – 0.0059 in.)
Maximum tip clearance: 0.15 mm (0.0059 in.)

If the tip clearance is greater than the maximum, replace the oil pump body sub–assy.

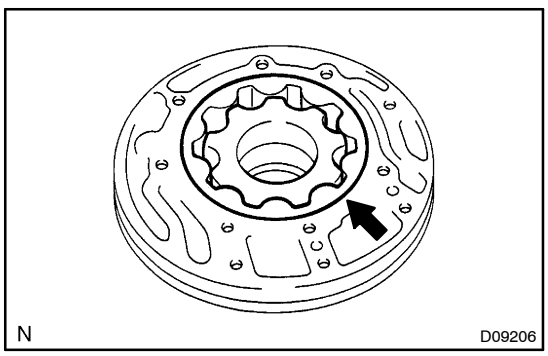
(d) Using a straight edge and feeler gauge, measure the side clearance of both gears.



Standard side clearance:
0.02 – 0.05 mm (0.0008 – 0.0020 in.)
Maximum side clearance: 0.05 mm (0.0020 in.)

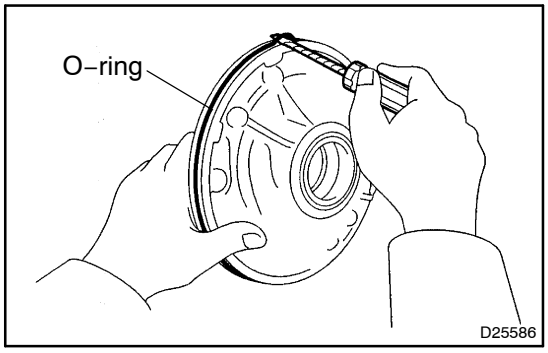
Drive gear thickness: mm (in.)

Mark	Thickness
A	11.690 – 11.699 (0.4602 – 0.4606)
B	11.700 – 11.709 (0.4606 – 0.4610)
C	11.710 – 11.720 (0.4610 – 0.4614)
D	11.721 – 11.730 (0.4615 – 0.4618)
E	11.731 – 11.740 (0.4619 – 0.4622)



Driven gear thickness: mm (in.)

Mark	Thickness
A	11.690 – 11.699 (0.4602 – 0.4606)
B	11.700 – 11.709 (0.4606 – 0.4610)
C	11.710 – 11.720 (0.4610 – 0.4614)
D	11.721 – 11.730 (0.4615 – 0.4618)
E	11.731 – 11.740 (0.4619 – 0.4622)

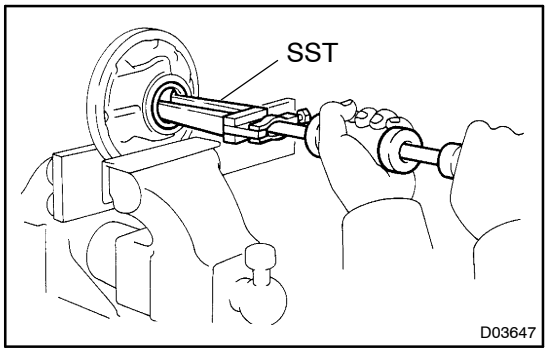


5. REMOVE FRONT OIL PUMP DRIVE GEAR

(a) Remove the front oil pump drive gear.

6. REMOVE FRONT OIL PUMP DRIVEN GEAR

(a) Remove the front oil pump driven gear.

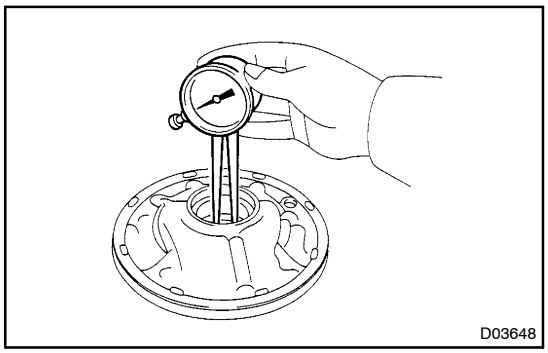


7. REMOVE FRONT OIL PUMP BODY O–RING

(a) Using a screwdriver, remove the O–ring.

HINT:

Tape the screwdriver before use.



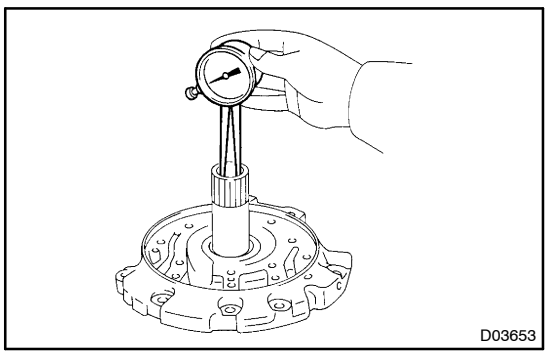
8. REMOVE FRONT OIL PUMP OIL SEAL

(a) Mount oil pump in a soft jaw vise.

(b) Using SST, remove the oil seal from the oil pump body.

SST 09308–00010

9. INSPECT FR OIL PUMP & GEAR BODY SUB–ASSY



(a) Using a dial indicator, measure the inside diameter of the oil pump body bushing.

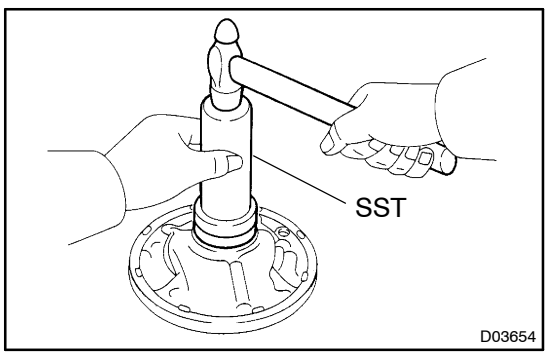
Standard inside diameter:

38.113 – 38.138 mm (1.50051 – 1.50149 in.)

Maximum inside diameter: 38.188 mm (1.50346 in.)

If the inside diameter is greater than the maximum, replace the oil pump body sub–assy.

10. INSPECT STATOR SHAFT ASSY



(a) Using a dial indicator, measure the inside diameter of the stator shaft.

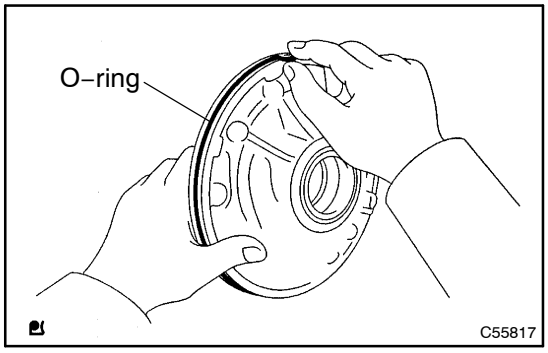
Standard inside diameter:

21.500 – 21.526 mm (0.84646 – 0.84748 in.)

Maximum inside diameter: 21.57 mm (0.8492 in.)

If the indicator diameter is greater than maximum, replace the stator shaft.

11. INSTALL FRONT OIL PUMP OIL SEAL



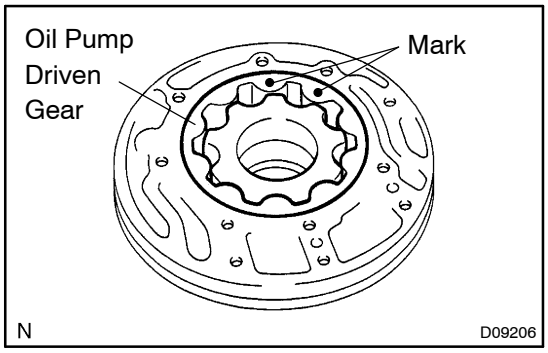
(a) Using SST and a hammer, install a new oil seal to the oil pump body.

SST 09350–32014 (09351–32140)

HINT:

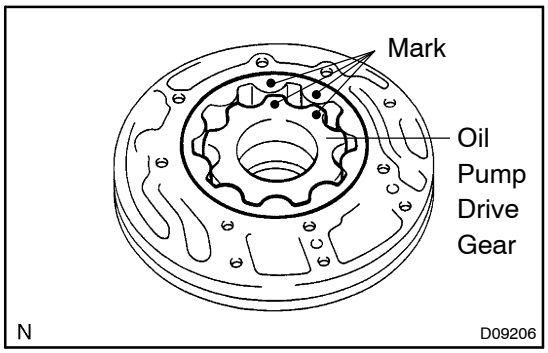
The seal end should be flat with the outer edge of the oil pump.

(b) Coat the lip of the oil seal with MP grease.



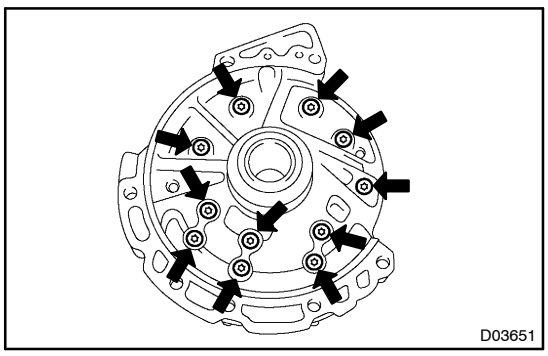
12. INSTALL FRONT OIL PUMP BODY O–RING

(a) Coat the new O–ring with ATF, install it to the oil pump body.



NOTICE:

Assemble the O–ring carefully not to have a twist and a pinching. Moreover, apply enough ATF to the O–ring prior to assembling.

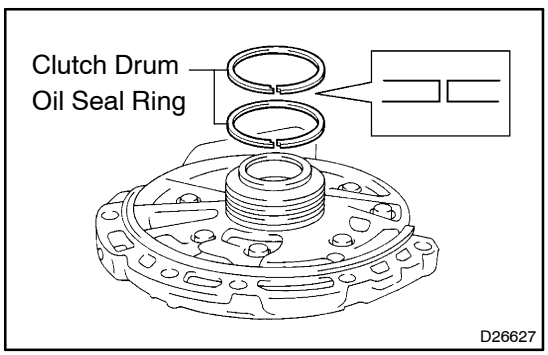


13. INSTALL FRONT OIL PUMP DRIVEN GEAR

(a) Coat the front oil pump driven gear with ATF, install it to the oil pump body with the marked side up.

14. INSTALL FRONT OIL PUMP DRIVE GEAR

(a) Coat the front oil pump drive gear with ATF, install it to the oil pump body with the marked side up.

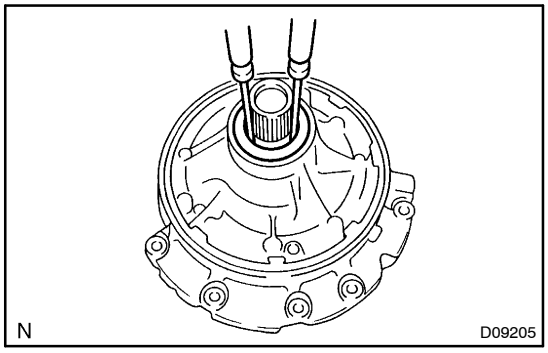


15. INSTALL STATOR SHAFT ASSY

(a) Set the stator shaft aligned with each bolt hole.

(b) Using a torx socket (T30), install the 11 bolts.

Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)



16. INSTALL CLUTCH DRUM OIL SEAL RING

(a) Coat the 2 new clutch drum oil seal rings with ATF.

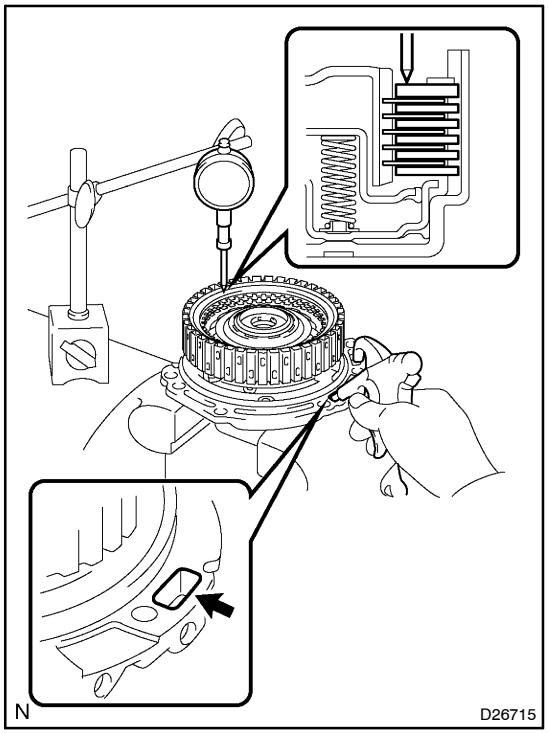
(b) Install the 2 new clutch drum oil seal rings.

NOTICE:

Do not expand the ring ends excessively.

17. INSPECT OIL PUMP ASSY

(a) Turn the drive gear with 2 screwdrivers and make sure it rotates smoothly.



NOTICE:

Be careful not to damage the oil seal lip.

FORWARD CLUTCH ASSY (U151E/U151F)

400H1-02

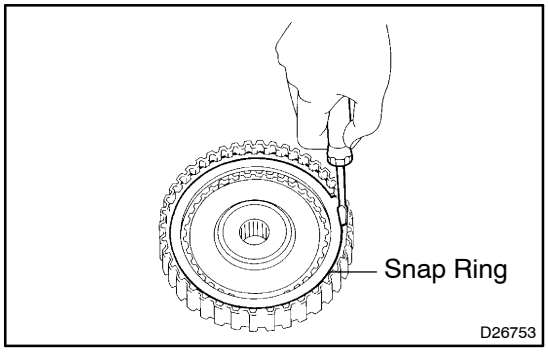
OVERHAUL

1. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

(a) Install the forward clutch on the oil pump.

NOTICE:

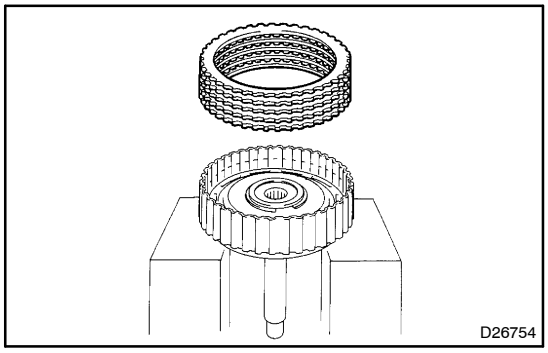
Be careful not to damage the oil seal ring of oil pump.



(b) Using a dial indicator, measure the forward clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

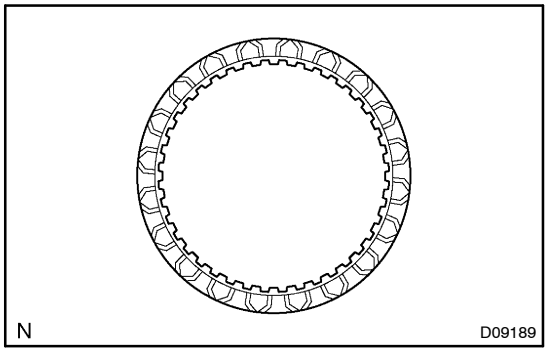
Pack clearance: 1.00 – 1.25 mm (0.0394 – 0.4921 in.)

If the clearance is not within standard, inspect the discs, plates and flange.



HINT:

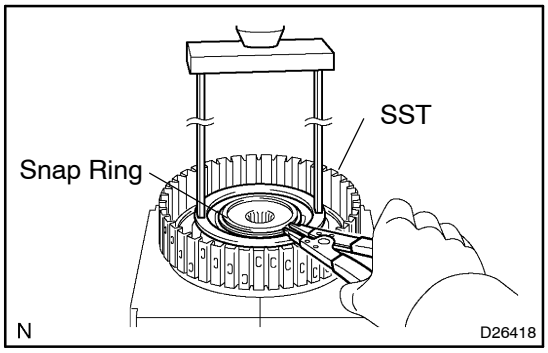
As the opening is large, cover it with a shop rug to prevent the compressed air from being released.



2. REMOVE FORWARD MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 5 discs and 5 plates from the input shaft assy.



3. INSPECT FORWARD MULTIPLE DISC CLUTCH CLUTCH DISC

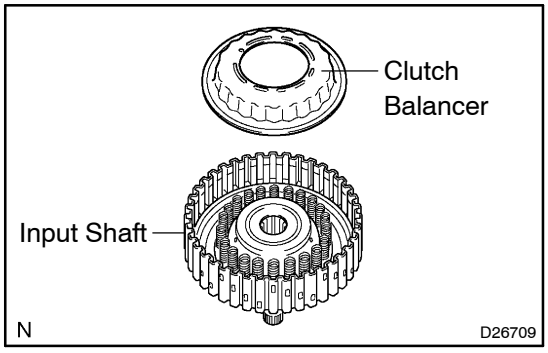
(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.

HINT:

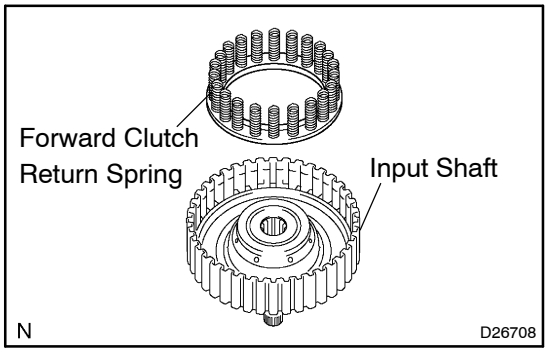
- If the lining of the disc comes off or discolors, or even if replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

4. REMOVE FORWARD CLUTCH RETURN SPRING SUB–ASSY



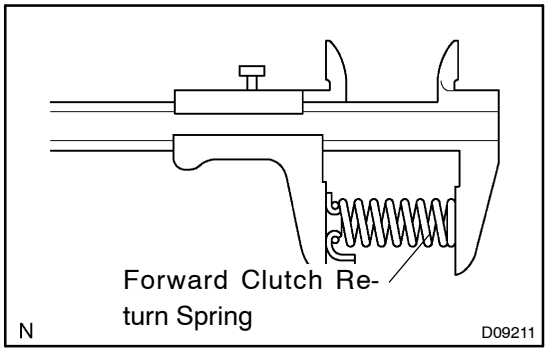
(a) Place SST on the spring retainer and compress the return spring with a press.

SST 09387–00020



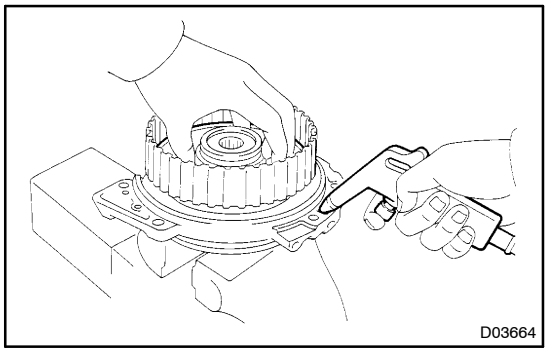
(b) Using a snap ring expander, remove the snap ring.

NOTICE:



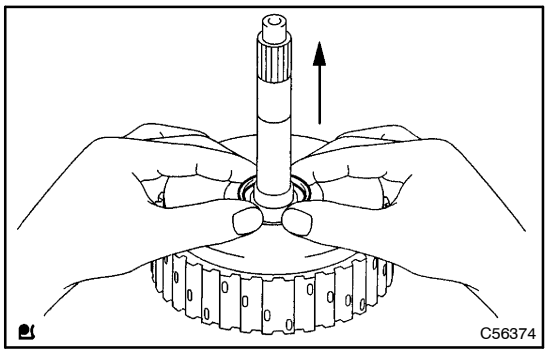
- **Stop the press when the spring sheet is lowered 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, preventing the spring sheet from deforming.**
- **Do not expand the snap ring excessively.**

(c) Remove the clutch balancer from the input shaft.



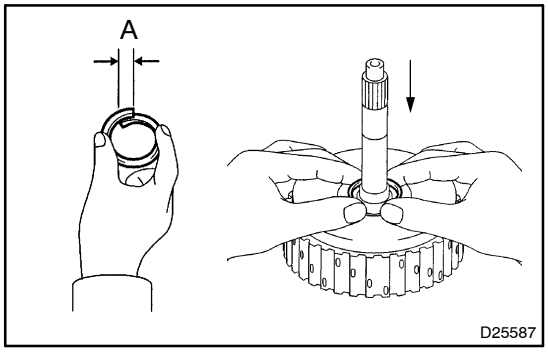
(d) Remove the forward clutch return spring from the input shaft.

5. INSPECT FORWARD CLUTCH RETURN SPRING SUB–ASSY



(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 26.74 mm (1.0528 in.)

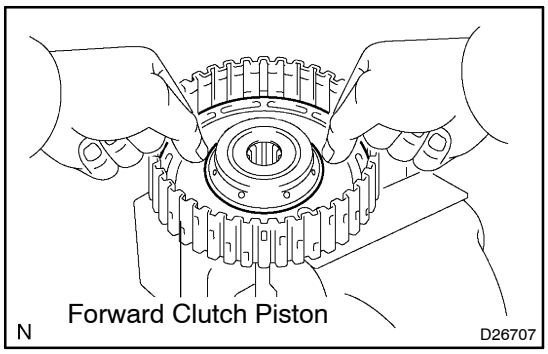
6. REMOVE FORWARD CLUTCH PISTON SUB–ASSY



(a) Place the forward clutch drum onto the oil pump.
(b) Holding the forward clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil pump to remove the forward clutch piston.

HINT:
When the piston cannot be removed as it is slanted, either blow the air again with the protruding side pushed, or remove the piston using the needle nose plier with vinyl tape on the tip.

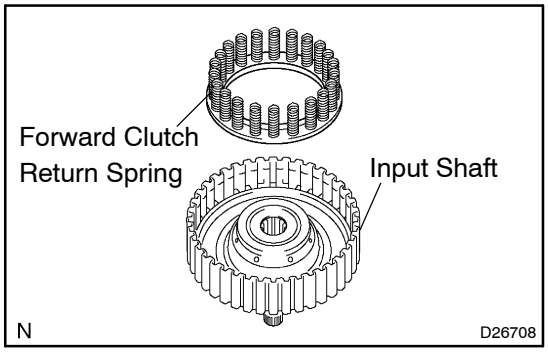
7. REMOVE INPUT SHAFT OIL SEAL RING



(a) Remove the input shaft oil seal ring to the input shaft.

8. INSTALL INPUT SHAFT OIL SEAL RING

(a) Compress the new input shaft oil seal ring from both sides to reduce dimension A.
Dimension A: 5 mm (0.197 in.)
(b) Coat the oil seal ring with ATF and install it to the input shaft.

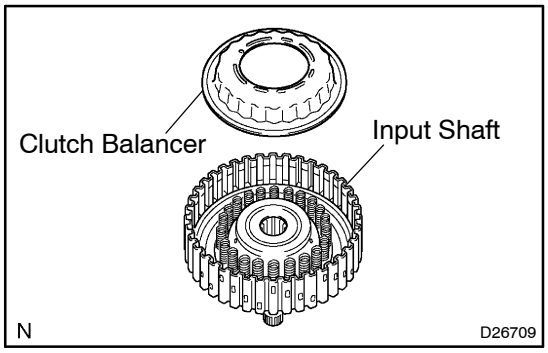


NOTICE:
Do not expand the gap of the oil seal ring too much. Fix the hooks certainly.

9. INSTALL FORWARD CLUTCH PISTON SUB–ASSY

(a) Coat the forward clutch piston with ATF, and install it to the input shaft.

NOTICE:
Be careful not to damage the lip seal of the forward clutch piston.

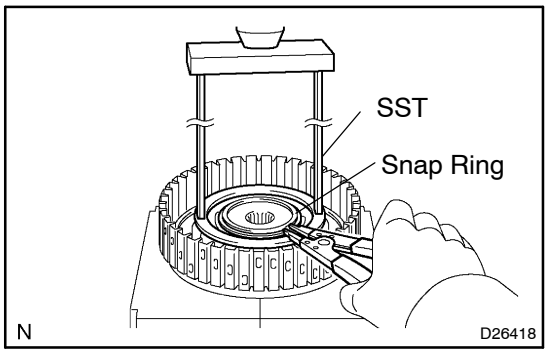


10. INSTALL FORWARD CLUTCH RETURN SPRING SUB–ASSY

(a) Install the return spring to the input shaft.

NOTICE:

Installing the spring sub–assembly, check all of the springs are fit in the piston correctly.

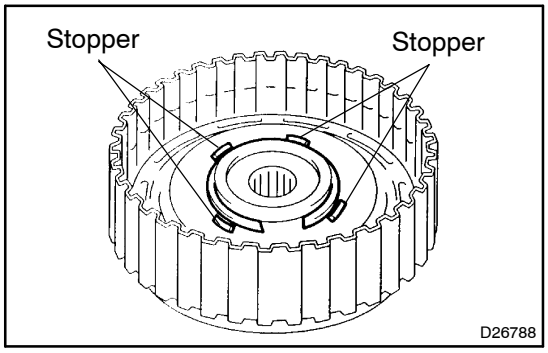


(b) Coat the clutch balancer with ATF.

(c) Install the clutch balancer to the input shaft.

NOTICE:

- **Be careful not to damage the lip seal of the forward clutch balancer.**
- **Install the clutch balancer carefully not to have a pinching and any other defects at the sealing lip.**
- **Apply enough ATF to the sealing lip prior to assembling.**

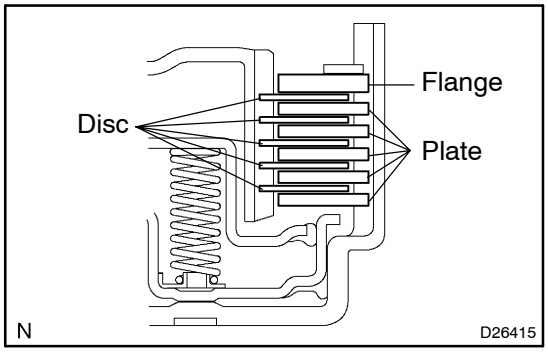


(d) Place SST on the clutch balancer, and compress the clutch balancer with a press.
SST 09387–00020

(e) Install the snap ring with a snap ring expander.

(f) Be sure the end gap of the snap ring is not aligned with the spring retainer claw.

NOTICE:

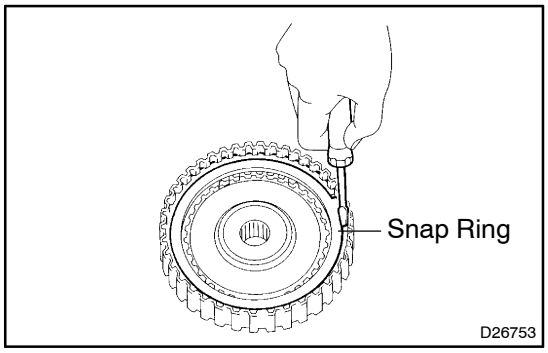


- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

(g) Set the end gap of the snap ring in the piston shown in the illustration.

NOTICE:

The end gap of the snap ring should not coincide with any of the stoppers.



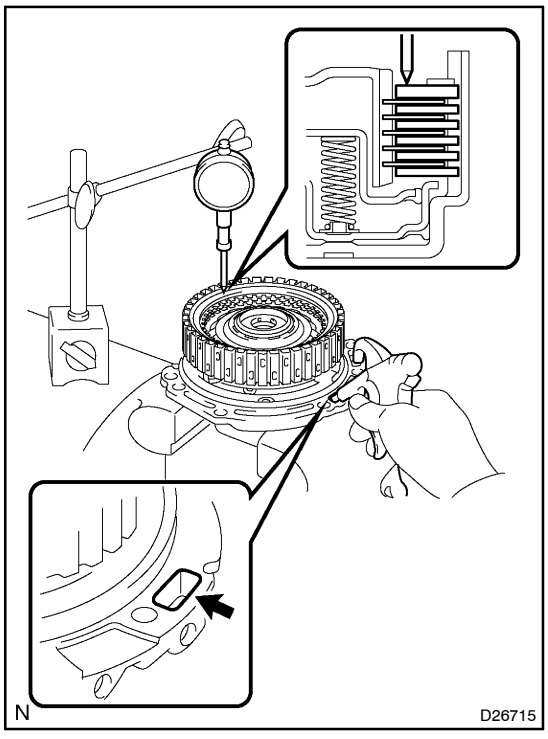
11. INSTALL FORWARD MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Coat the 5 discs with ATF.

(b) Install the 5 plates, 5 discs and flange input shaft.

NOTICE:

Be careful about the order of discs, plates and flange assembly.



(c) Using a screwdriver, install the snap ring.

(d) Check that the end gap of the snap ring is not aligned with one of the cutouts.

NOTICE:

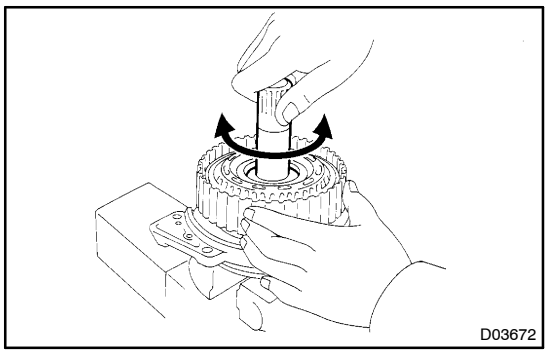
The snap ring should be fixed certainly in the groove of the drum.

12. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

(a) Using a dial indicator, measure the forward clutch pack clearance while applying and releasing compressed air (392 kgf·cm^2, 4.0 kPa, 57 psi).

Pack clearance: 1.00 – 1.25 mm (0.0394 – 0.4921 in.)

If the piston stroke is less than the minimum, parts may have been assembled incorrectly. Check and reassemble again.



If the clearance is not standard, select another flange.

HINT:

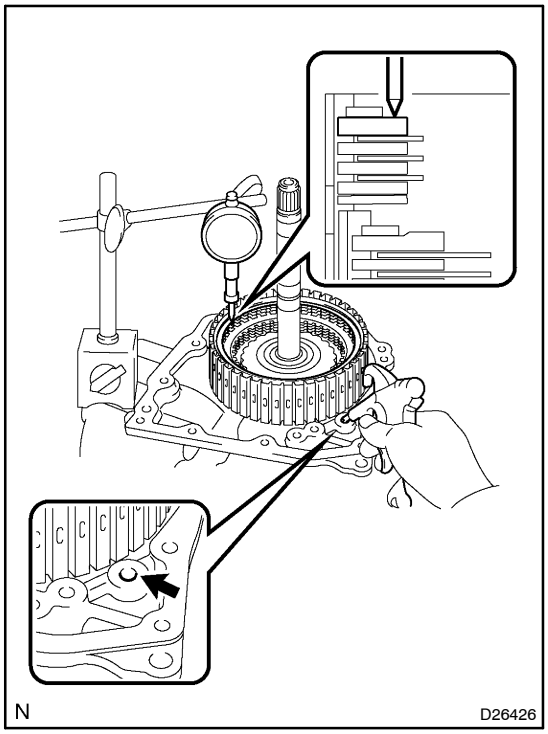
There are 5 different flanges in thickness.

Flange thickness: mm (in.)

No.	Thickness	No.	Thickness
1	3.00 (0.1181)	4	3.45 (0.1358)
2	3.15 (0.1240)	5	3.60 (0.1417)
3	3.30 (0.1299)	–	–

13. INSPECT FORWARD MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Check if the disc lightly rotates when rotating the forward clutch assy after inserting the multiple disc clutch into it.



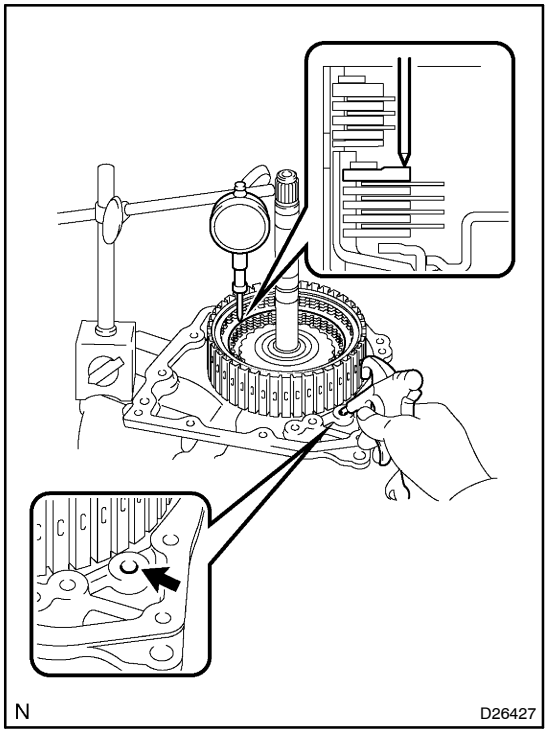
NOTICE:

Do not place the forward clutch assy in a vise.

DIRECT CLUTCH ASSY (U151E/U151F)

400H2–02

OVERHAUL



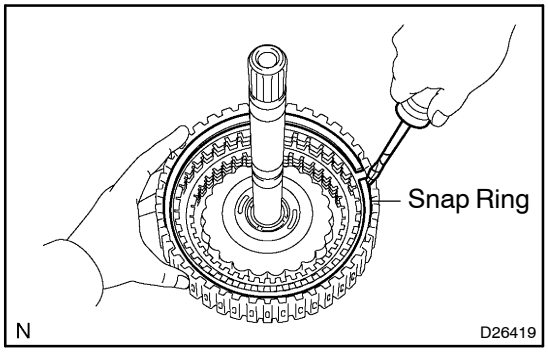
1. INSPECT PACK CLEARANCE OF REVERSE CLUTCH

(a) Install the intermediate shaft and needle roller bearing on the transaxle rear cover .

(b) Using a dial indicator, measure the reverse clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

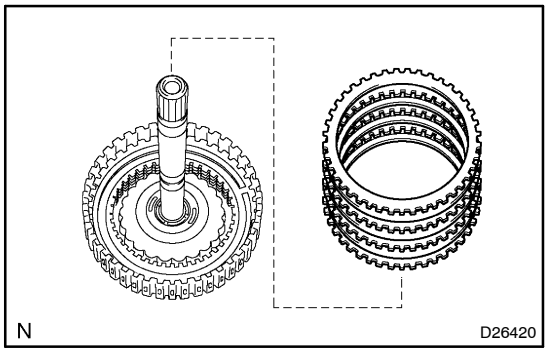
Pack clearance:0.60 – 0.82 mm (0.02362 – 0.03228 in.)

If the pack clearance is not within standard, inspect the discs, plates and flange.



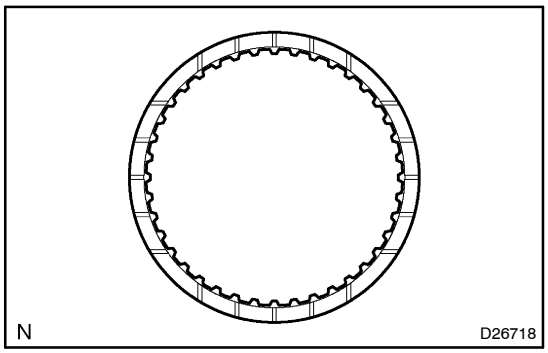
2. INSPECT PACK CLEARANCE OF DIRECT CLUTCH & OVERDRIVE CLUTCH

(a) Using a dial indicator, measure the direct clutch & overdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).



Pack clearance:0.61 – 0.83 mm (0.02401 – 0.03268 in.)

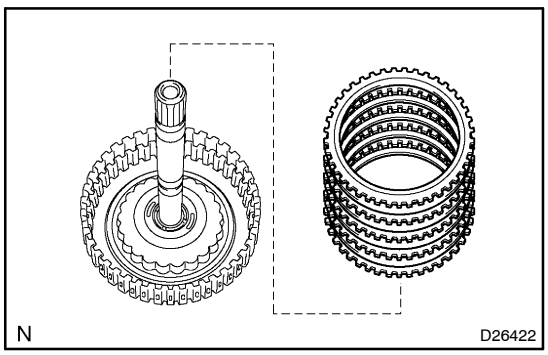
If the pack clearance is not within standard, inspect the discs, plates and flange.



3. REMOVE DIRECT MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Using a screwdriver, remove the snap ring from the intermediate shaft.

(b) Remove the flange, 3 discs,, 3 plates and cushion plate from the intermediate shaft.

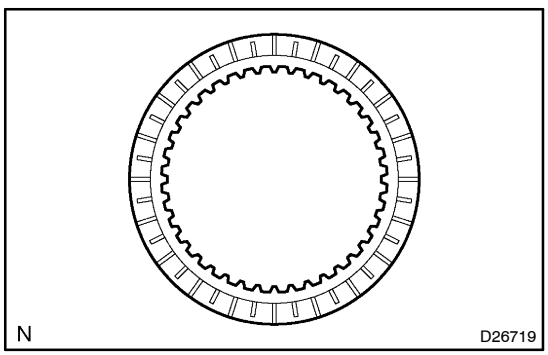


4. INSPECT DIRECT MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.

HINT:

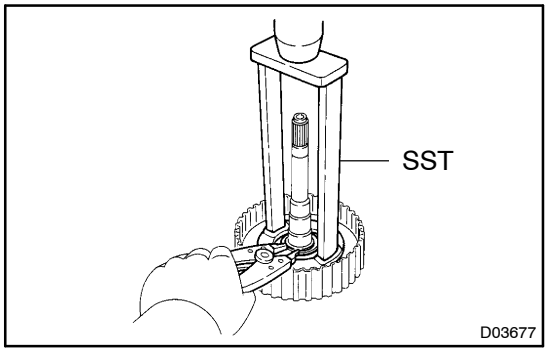


- If the lining of the disc comes off or discolors, or even if a part of the groove is defaced, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

5. REMOVE OVERDRIVE DIRECT CLUTCH DISC

(a) Using a screwdriver, remove the snap ring from the intermediate shaft.

(b) Remove the flange, 4 discs and 4 plates from the intermediate shaft.



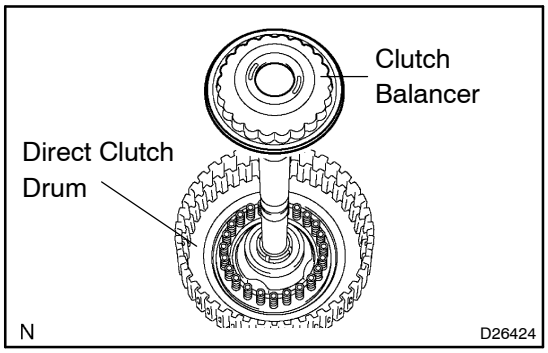
6. INSPECT OVERDRIVE DIRECT CLUTCH DISC

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.

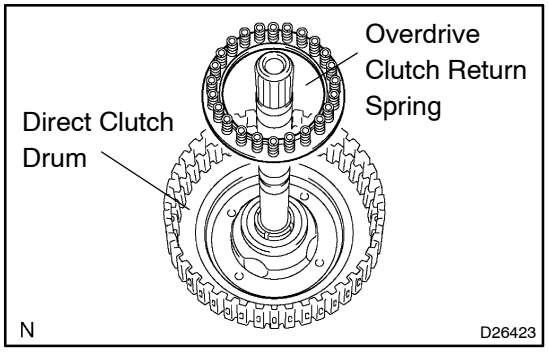
HINT:

- If the lining of the disc comes off or discolors, or even if a part of the groove is defaced, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



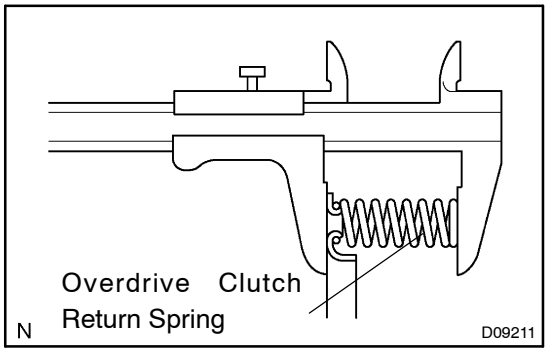
7. REMOVE OVERDRIVE CLUTCH RETURN SPRING SUB–ASSY

(a) Place SST on the clutch balancer and compress the spring with a press.
SST 09387–00020



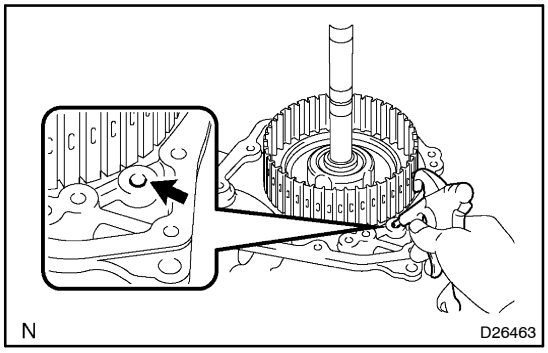
(b) Using a snap ring expander, remove the snap ring from the direct clutch drum.

NOTICE:



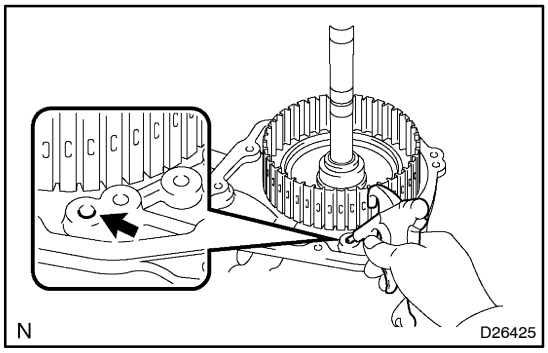
- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

(c) Remove the clutch balancer from the direct clutch drum.



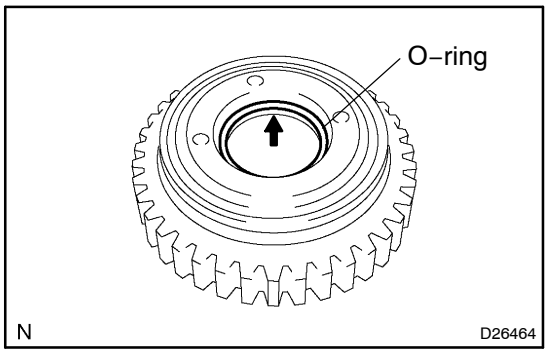
(d) Remove the overdrive clutch return spring from the direct clutch drum.

8. INSPECT OVERDRIVE CLUTCH RETURN SPRING SUB–ASSY



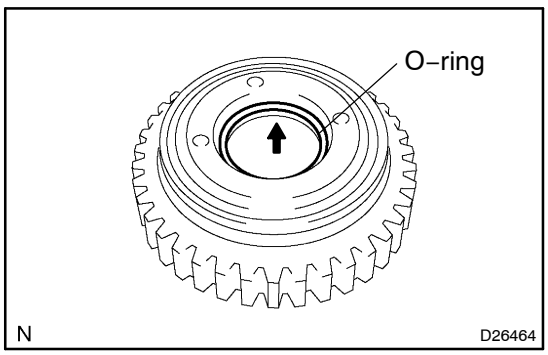
(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 25.91 mm (1.0201 in.)

9. REMOVE OVERDRIVE DIRECT CLUTCH PISTON



(a) Install intermediate shaft on the transaxle rear cover.

(b) Holding the direct clutch piston with your hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle rear cover to remove the direct clutch piston.

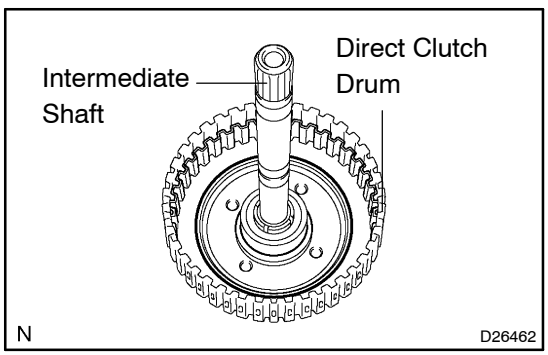


10. REMOVE OVERDRIVE DIRECT CLUTCH DRUM SUB–ASSY

(a) Holding the direct clutch drum by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle rear cover to remove the direct clutch drum.

11. REMOVE OVERDRIVE DIRECT CLUCH O–RING

(a) Using a screwdriver, remove the O–ring from the direct clutch drum.

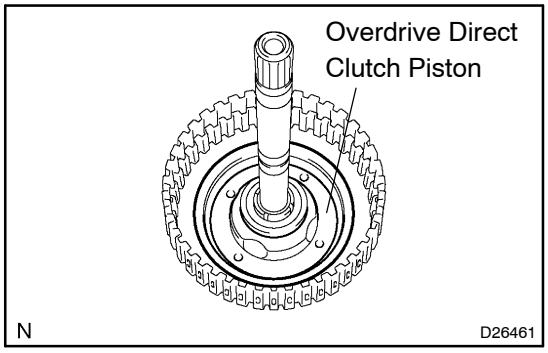


12. INSTALL OVERDRIVE DIRECT CLUCH O–RING

(a) Coat a O–ring with ATF, and install it to the direct clutch drum.

NOTICE:

Assemble the O–ring carefully not to have a twist and a pinching.

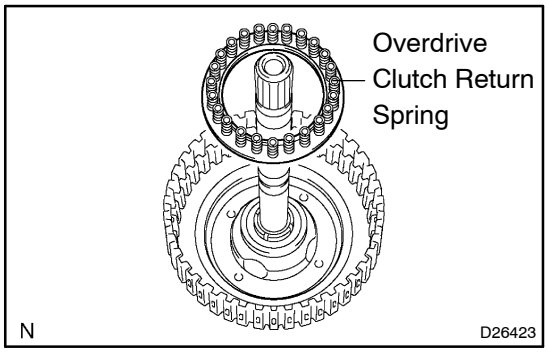


13. INSTALL OVERDRIVE DIRECT CLUTCH DRUM SUB–ASSY

(a) Coat the direct clutch drum with ATF, and install it to the intermediate shaft.

NOTICE:

- **Be careful not to damage the O–ring.**
- **Be careful not to damage the lip seal of the direct clutch drum.**

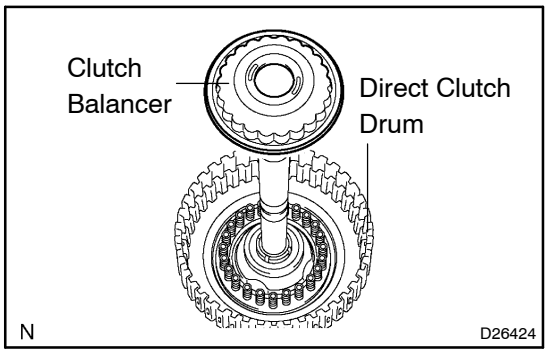


14. INSTALL OVERDRIVE DIRECT CLUTCH PISTON

(a) Apply the overdrive direct clutch piston with ATF, and install it to the direct clutch drum.

NOTICE:

Be careful not to damage the lip seal of the direct clutch piston.

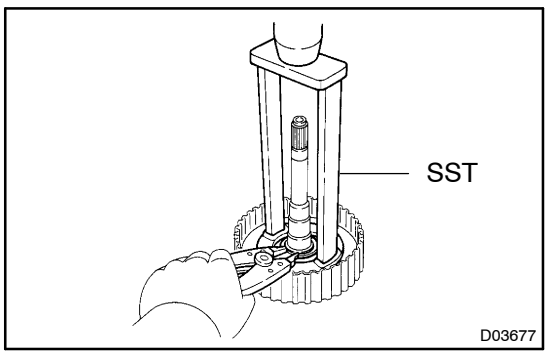


15. INSTALL OVERDRIVE CLUTCH RETURN SPRING SUB–ASSY

(a) Install the piston return spring to the direct clutch drum.

NOTICE:

Installing the spring sub–assembly, check all of the springs are fit in the piston correctly.

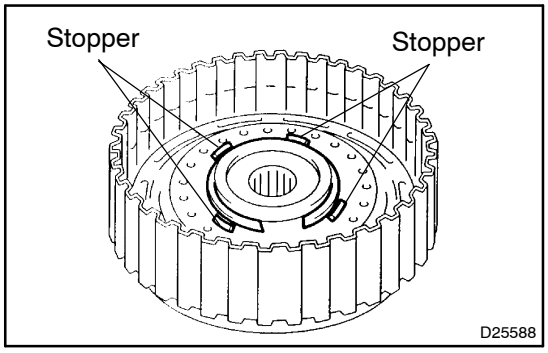


(b) Coat the clutch balancer with ATF.

(c) Install the clutch balancer to the direct clutch drum.

NOTICE:

- **Be careful not to damage the lip seal of the direct clutch balancer.**
- **Install the clutch balancer carefully not to have a pinching and any other defects at the sealing lip.**
- **Apply enough ATF to the sealing lip prior to assembling.**

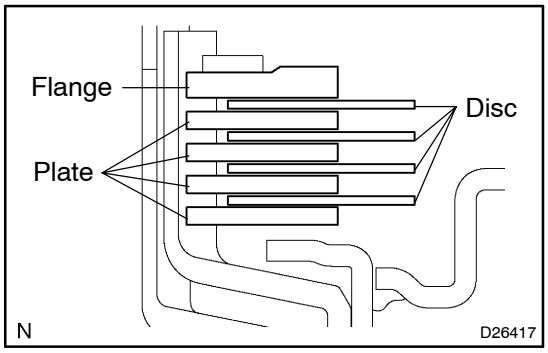


(d) Place SST on the clutch balancer and compress the piston return spring with a press.
SST 09387–00020

(e) Using a snap ring expander, install the snap ring to the direct clutch drum.

(f) Be sure the end gap of the snap ring is not aligned with the spring retainer claw.

NOTICE:

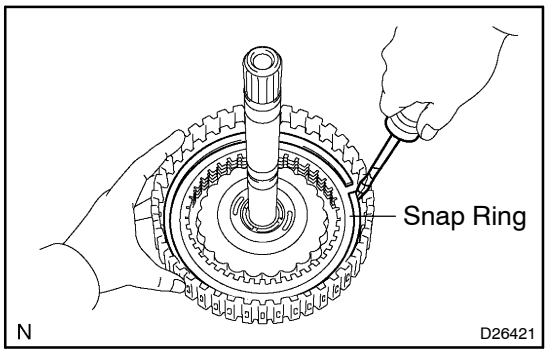


- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring grove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

(g) Set the end gap of the snap ring in the piston shown in the illustration.

NOTICE:

The end gap of the snap ring should not coincide with any of the stoppers.



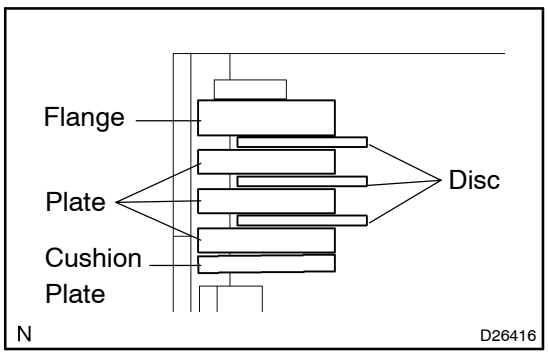
16. INSTALL OVERDRIVE DIRECT CLUTCH DISC

(a) Coat the 4 discs with ATF.

(b) Install the 4 plates, 4 discs and flange to the intermediate shaft.

NOTICE:

Be careful about the order of discs, plates and flange assembly.

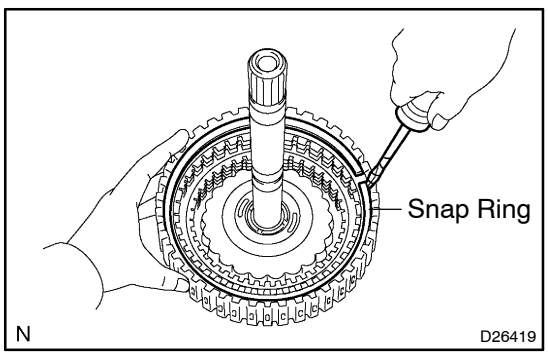


(c) Using a screwdriver, install the snap ring.

(d) Check that the end gap of the snap ring is not aligned with one of the cutouts.

NOTICE:

The snap ring should be fixed certainly in the groove of the drum.



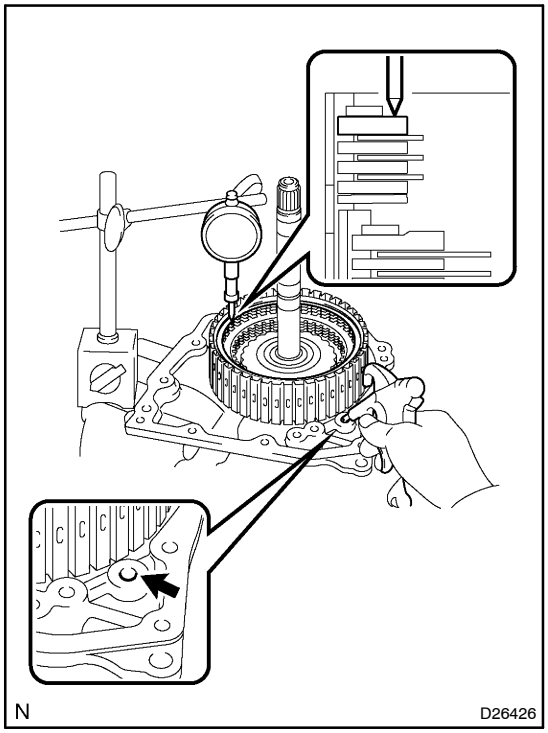
17. INSTALL DIRECT MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Apply the 3 discs with ATF.

(b) Install the cushion plate, 3 plates, 3 discs and flange to the intermediate shaft.

NOTICE:

- **Install the cushion plate with the mark on the white surface facing to plate.**
- **Be careful about the order of discs, plates and flange assembly.**



(c) Using a screwdriver, install the snap ring.

(d) Check that the end gap of the snap ring is not aligned with one of the cutouts.

NOTICE:

The snap ring should be fixed certainly in the groove of the drum.

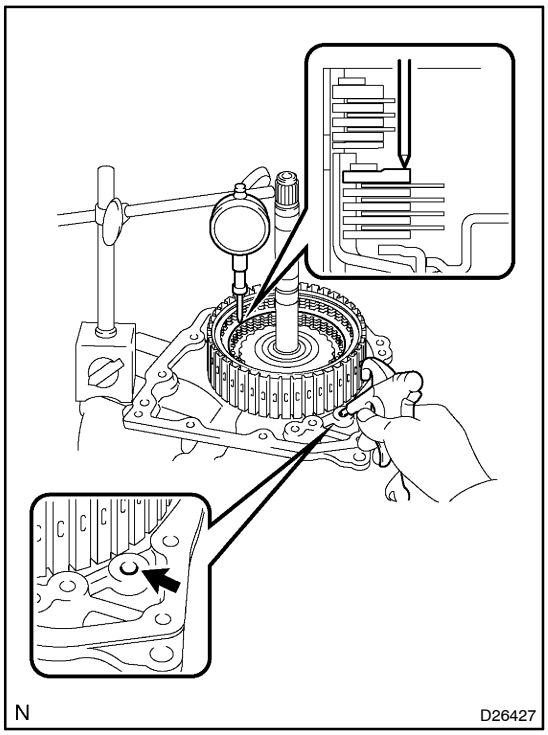
18. INSPECT PACK CLEARANCE OF REVERSE CLUTCH

(a) Install the intermediate shaft on the transaxle rear cover.

(b) Using a dial indicator, measure the direct clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:0.60 – 0.82 mm (0.02362 – 0.03228 in.)

If the pack clearance is less than the minimum, parts may have been assembled incorrectly, so check and reassemble again.



If the stroke is not within standard, select another flange.

HINT:

There are 6 flanges of different thickness.

Flange thickness: mm (in.)

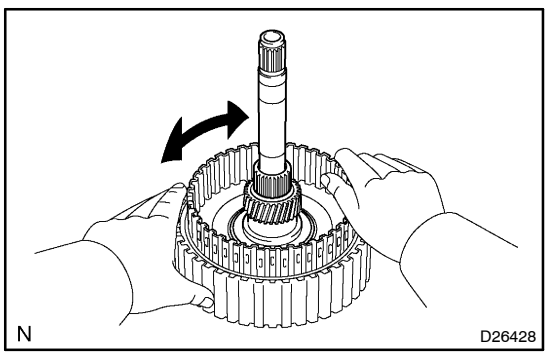
No.	Thickness	No.	Thickness
1	3.0 (0.118)	5	3.4 (0.134)
2	3.1 (0.122)	6	3.5 (0.138)
3	3.2 (0.126)	7	3.6 (0.142)
4	3.3 (0.130)	–	–

19. INSPECT PACK CLEARANCE OF DIRECT CLUTCH & OVERDRIVE CLUTCH

(a) Using a dial indicator, measure the direct clutch & overdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:0.61 – 0.83 mm (0.02401 – 0.03268 in.)

If the pack clearance is less than the minimum, parts may have been assembled incorrectly, so check and reassemble again.



If the stroke is not within standard, select another flange.

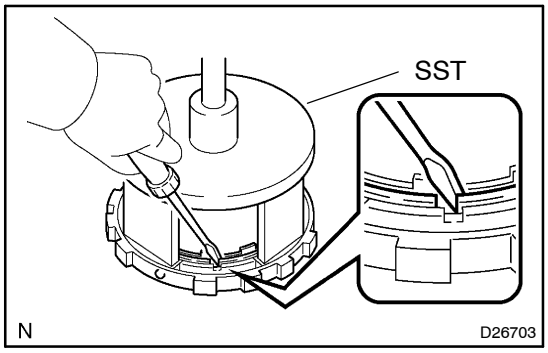
HINT:

There are 7 flanges in different thickness.

Flange thickness: mm (in.)

No.	Thickness	No.	Thickness
0	2.5 (0.098)	4	2.9 (0.114)
1	2.6 (0.102)	5	3.0 (0.118)
2	2.7 (0.106)	6	3.1 (0.122)
3	2.8 (0.110)	–	–

(b) Check that the disc rotates when rotating the disc after inserting the rear planetary sun gear.

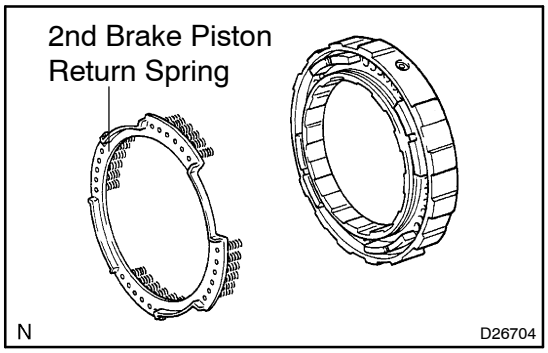


NOTICE:

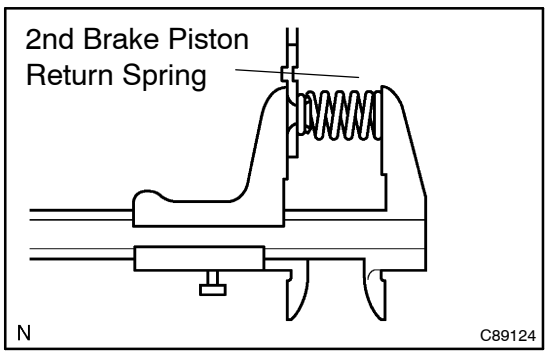
Do not place the rear planetary sun gear in a vise.

SECOND BRAKE PISTON ASSY (U151E/U151F)

4006I–03



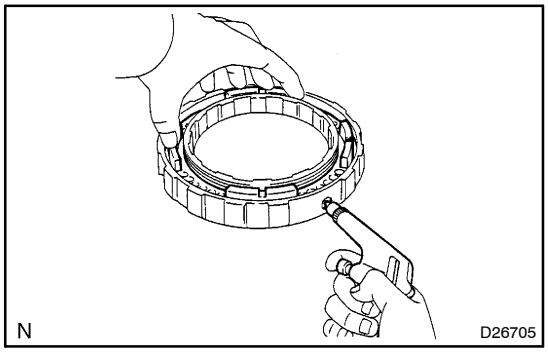
OVERHAUL



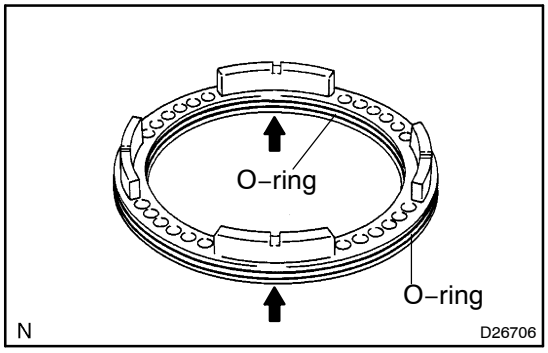
1. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB–ASSY

(a) Place SST on the return spring and compress.
SST 09387–00060

(b) Using a screwdriver, remove the snap ring.

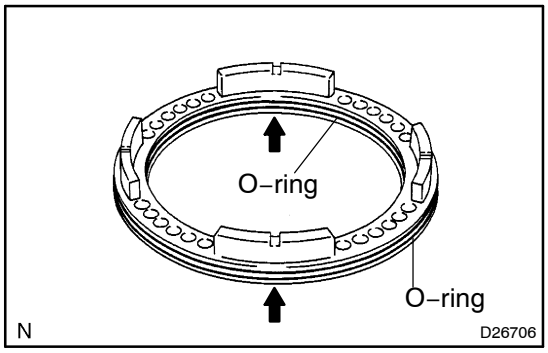


(c) Remove the 2nd brake piston return spring.



2. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB–ASSY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 16.61 mm (0.6539 in.)

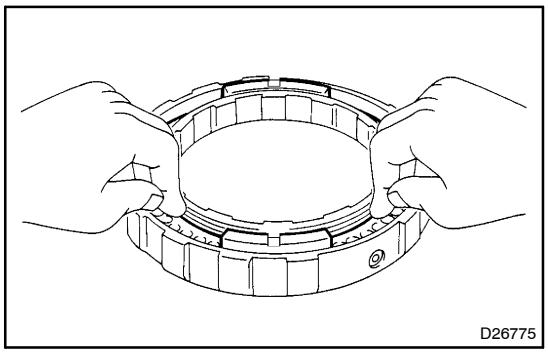


3. REMOVE 2ND BRAKE PISTON

(a) Hold the 2nd brake piston and apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the 2nd brake cylinder to remove the 2nd brake piston.

4. REMOVE 2ND BRAKE PISTON O–RING

(a) Remove the 2 O–rings from the 2nd brake piston.

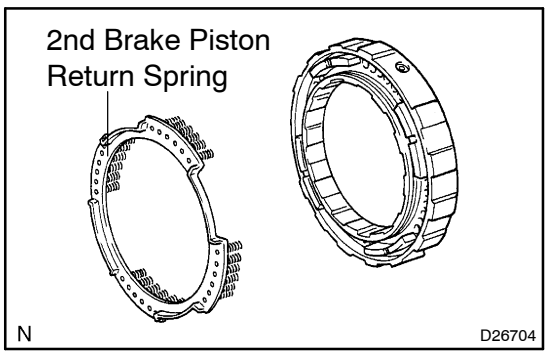


5. INSTALL 2ND BRAKE PISTON O–RING

(a) Apply the 2 new O–rings with ATF, install them in the 2nd brake piston.

NOTICE:

Assemble the O–ring carefully not to have a twist and a pinching.

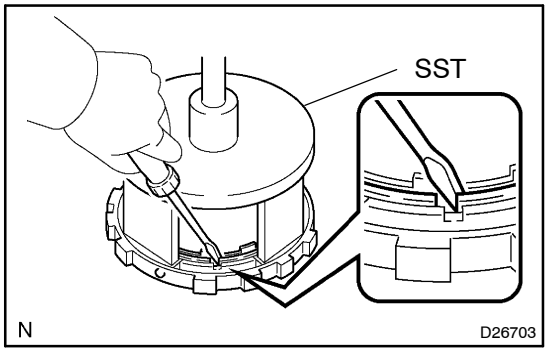


6. INSTALL 2ND BRAKE PISTON

(a) Apply the 2nd brake piston with ATF, and install it to the 2nd brake cylinder.

NOTICE:

Be careful not to damage the O–ring.



7. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB–ASSY

(a) Install the 2nd brake piston return spring.

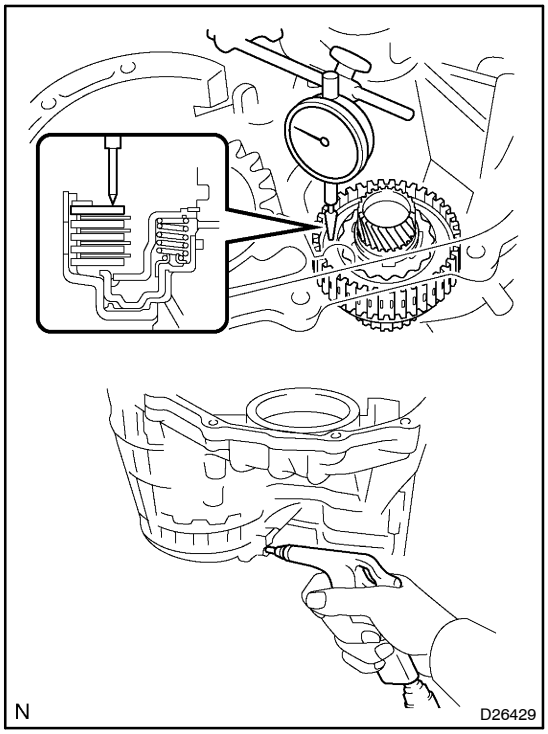
NOTICE:

Installing the spring sub–assembly, check all of the springs are fit in the piston correctly.

(b) Place SST on the piston return spring, and compress the piston return spring with a press.
SST 09387–00060

(c) Using a screwdriver, install the snap ring.

(d) Be sure the end gap of the snap ring is not aligned with the spring retainer claw.



NOTICE:

- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove.**
- **This prevents the spring sheet from being deformed.**

UNDERDRIVE CLUTCH ASSY (U151E/U151F)

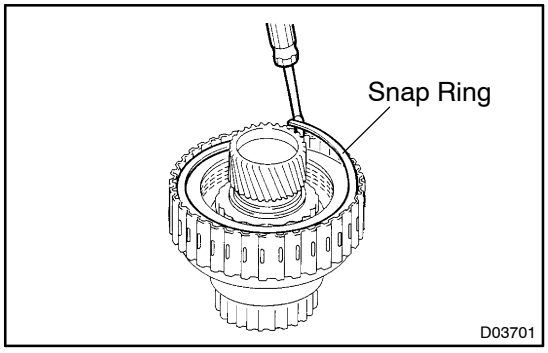
400H3–02

OVERHAUL

1. INSPECT UNDERDRIVE PACK CLEARANCE

(a) Install the underdrive clutch to the transaxle case.

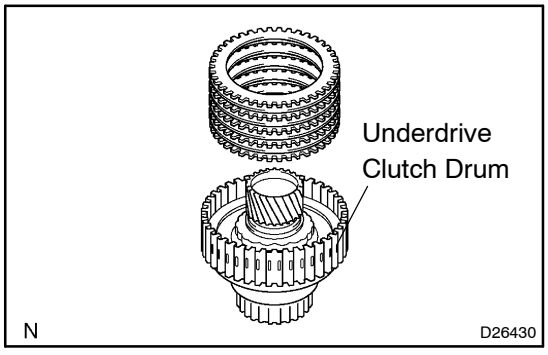
NOTICE:



Be careful not to damage the oil seal rings.

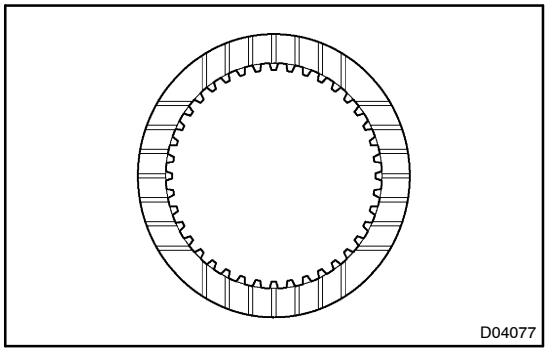
(b) Install a dial indicator as shown in the illustration.

(c) Measure the underdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).



Pack clearance: 1.51 – 1.71 mm (0.0594 – 0.0673 in.)

If the pack clearance is not within standard, inspect the discs, plates and flange.

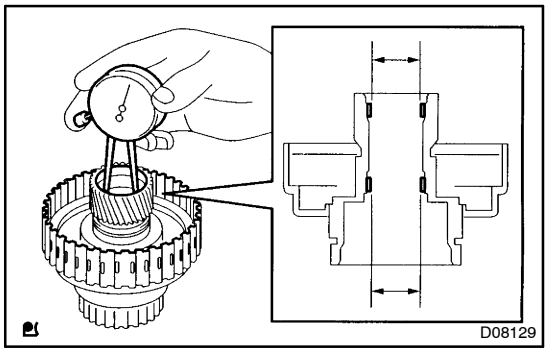


2. REMOVE UNDERDRIVE CLUTCH FLANGE NO.2 HOLE SNAP RING

(a) Using a screwdriver, remove the underdrive clutch flange No.2 snap ring.

3. REMOVE UNDERDRIVE CLUTCH DISC NO.1

(a) Remove the flange, 4 discs and 4 plates from the underdrive clutch drum.

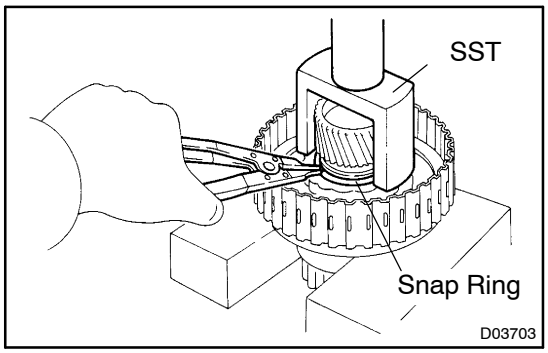


4. INSPECT UNDERDRIVE CLUTCH DISC NO.1

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt. If necessary, replace them.

HINT:

- If the lining of the disc comes off or discolors, or even if a part of the groove is defaced, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



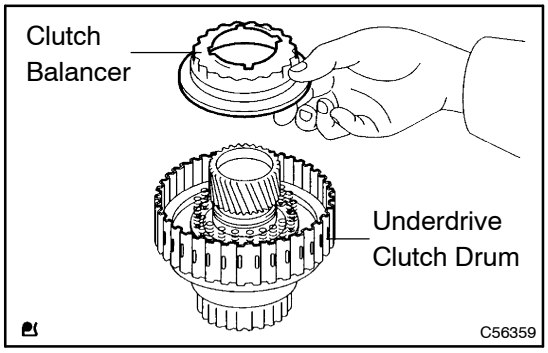
5. INSPECT UNDERDRIVE CLUTCH DRUM SUB–ASSY

(a) Using a dial indicator, measure the inside diameter of the underdrive clutch drum bushing.

Standard drum bushing:
37.06 – 37.08 mm (1.4591 – 1.4598 in.)
Maximum drum bushing: 37.13 mm (1.4618 in.)

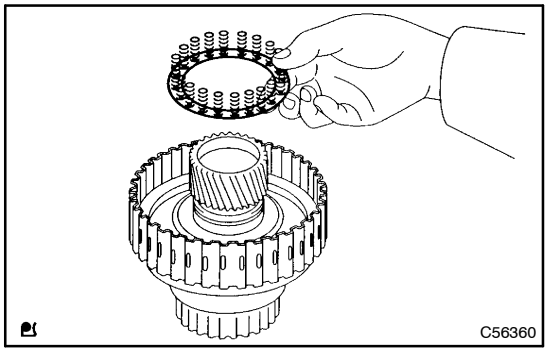
If the inside diameter is greater than the maximum, replace the underdrive clutch drum.

6. REMOVE UNDERDRIVE CLUTCH RETURN SPRING SUB–ASSY



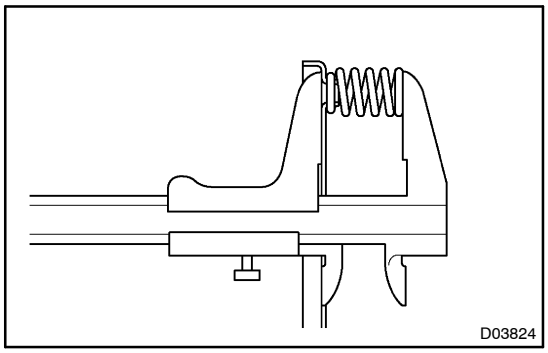
(a) Place SST on the clutch balancer and compress the spring with a press.

SST 09350–32014 (09351–32070)



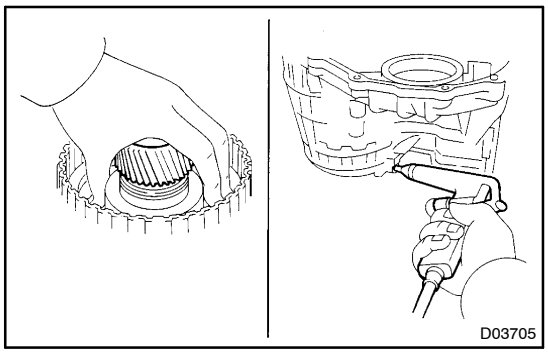
(b) Using a snap ring expander, remove the snap ring.

NOTICE:



- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

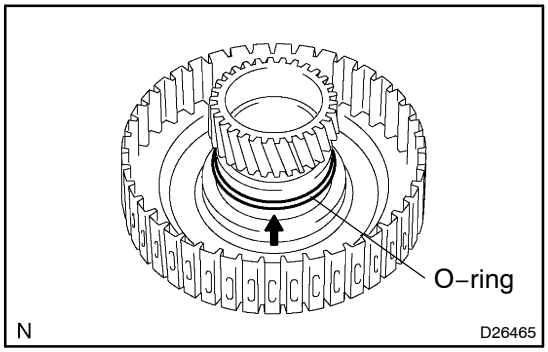
(c) Remove the clutch balancer from the underdrive clutch drum.



(d) Remove the return spring from the underdrive clutch drum.

7. INSPECT UNDERDRIVE CLUTCH RETURN SPRING SUB–ASSY

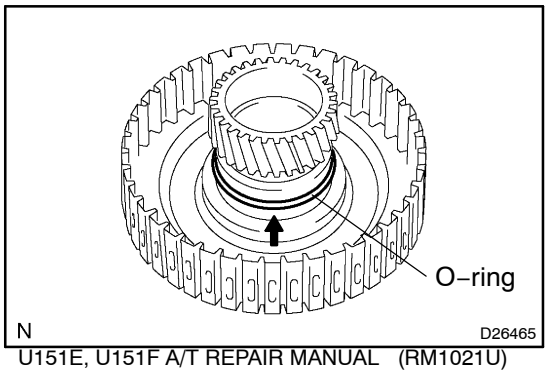
(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 17.14 mm (0.6752 in.)



8. REMOVE UNDERDRIVE CLUTCH PISTON SET

(a) Install the underdrive clutch to the transaxle case.

NOTICE:

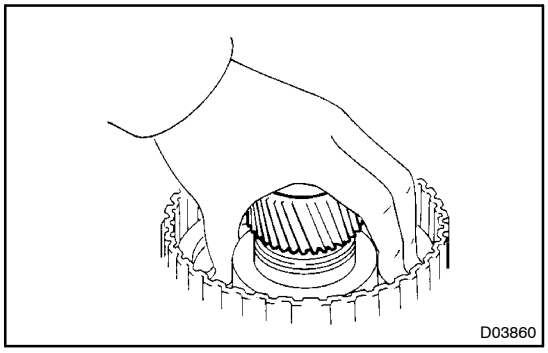


Be careful not to damage the oil seal ring.

(b) Holding the underdrive clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the underdrive clutch piston.

9. REMOVE UNDERDRIVE CLUTCH DRUM O–RING

(a) Using a screwdriver, remove the O–ring from the underdrive clutch drum.

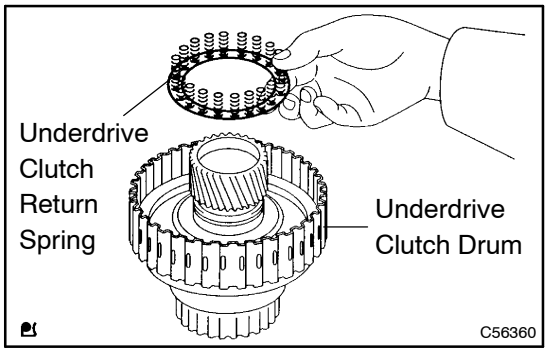


10. INSTALL UNDERDRIVE CLUTCH DRUM O–RING

(a) Apply the new O–ring with ATF, install it to the underdrive clutch drum.

NOTICE:

Assemble the O–ring carefully not to have a twist and a pinching.

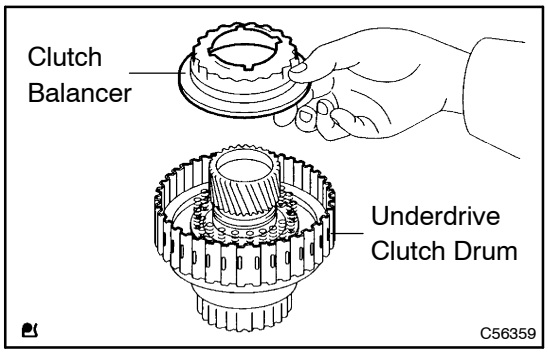


11. INSTALL UNDERDRIVE CLUTCH PISTON SET

(a) Coat the underdrive clutch piston with ATF, install it to the underdrive clutch piston drum.

NOTICE:

- **Be careful not to damage the O–ring.**
- **Be careful not to damage the lip seal of the piston.**

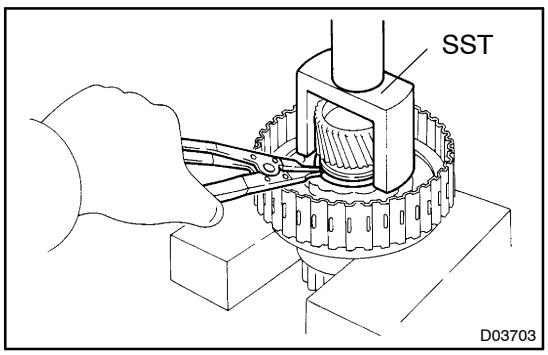


12. INSTALL UNDERDRIVE CLUTCH RETURN SPRING SUB–ASSY

(a) Install the return spring to the underdrive clutch drum.

NOTICE:

Installing the spring sub–assembly, check all of the springs are fit in the piston correctly.

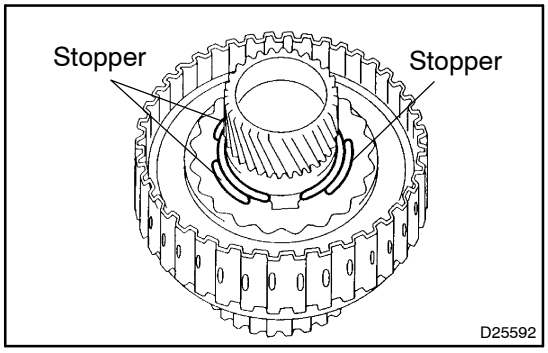


(b) Coat the clutch balancer with ATF.

(c) Install the clutch balancer to the underdrive clutch drum.

NOTICE:

Be careful not to damage the lip seal of the clutch balancer.

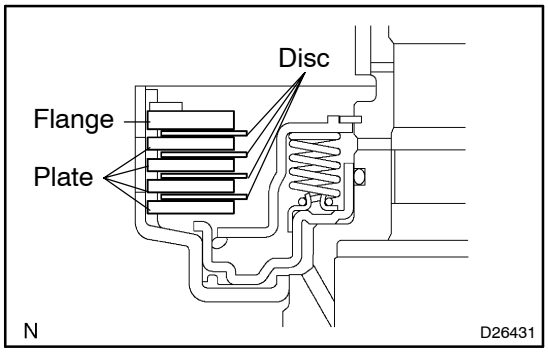


(d) Place SST on the clutch balancer and compress the piston return spring with a press.
SST 09350–32014 (09351–32070)

(e) Using a snap ring expander, install the snap ring to the underdrive clutch drum.

(f) Be sure the end gap of the snap ring is not aligned with the spring retainer claw.

NOTICE:

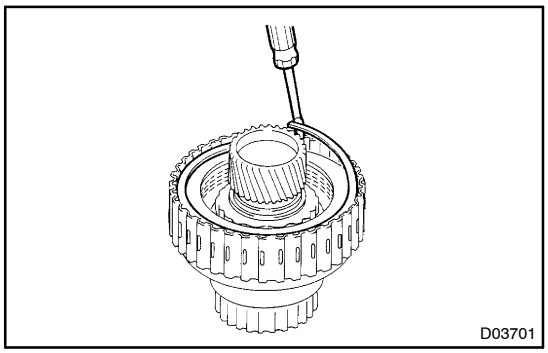


- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring grove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

(g) Set the end gap of the snap ring in the underdrive clutch drum shown in the illustration.

NOTICE:

The end gap of the snap ring should not coincide with any of the stopper.



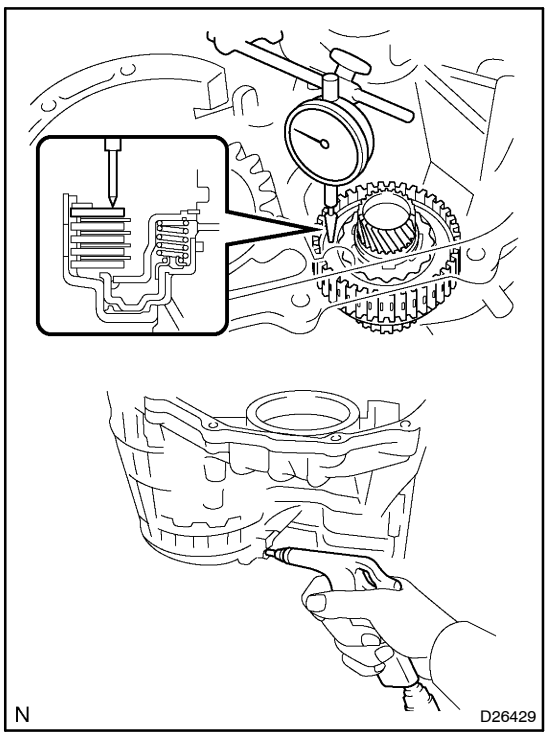
13. INSTALL UNDERDRIVE CLUTCH DISC NO.1

(a) Apply the 4 discs with ATF.

(b) Install the 4 plates, 4 discs and flange to the underdrive clutch drum.

NOTICE:

Be careful about the order of discs, plates and flange assembly.



14. INSTALL UNDERDRIVE CLUTCH FLANGE NO.2 HOLE SNAP RING

(a) Using a screwdriver, install the underdrive clutch flange No.2 hole snap ring.

(b) Check that the end gap of snap ring is not aligned with one of the cutouts.

NOTICE:

The snap ring should be fixed certainly in the groove of the drum.

15. INSPECT UNDERDRIVE PACK CLEARANCE

(a) Install the underdrive clutch to the transaxle case.

NOTICE:

Be careful not to damage the oil seal ring.

(b) Set a dial indicator as shown in the illustration.

(c) Measure the underdrive clutch piston stroke while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

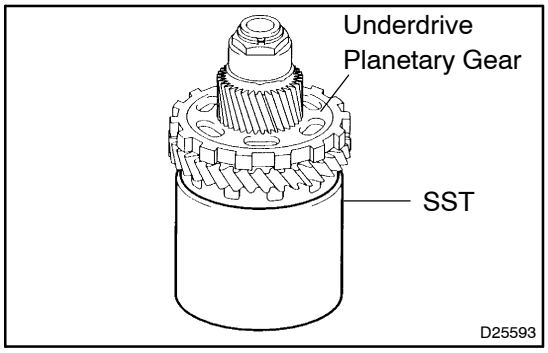
Park clearance: 1.51 – 1.71 mm (0.0594 – 0.0673 in.)

If the pack clearance is less than the minimum, parts may have been assembled incorrectly, so check and reassemble again.

If the pack clearance is not within standard, select another flange.

HINT:

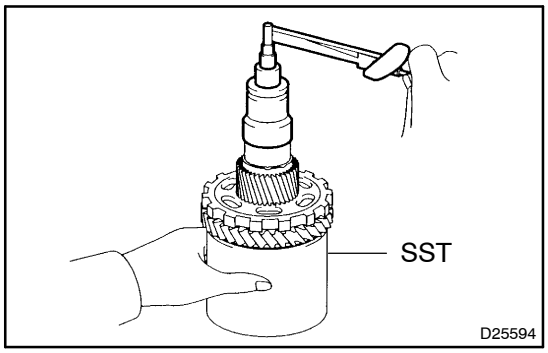
There are 5 flanges in different thickness.



Flange thickness: mm (in.)

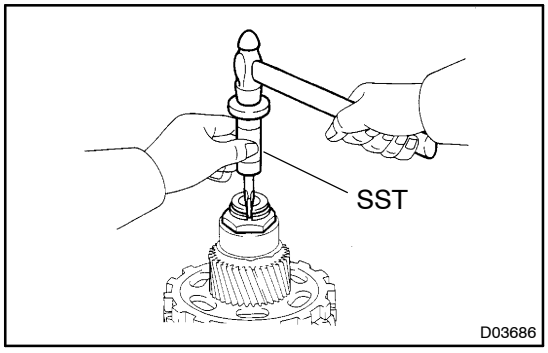
Mark	Thickness	Mark	Thickness
1	3.0 (0.118)	4	3.1 (0.122)
2	3.2 (0.126)	5	3.3 (0.130)
3	3.4 (0.134)	–	–

UNDERDRIVE PLANETARY GEAR ASSY (U151E/U151F)



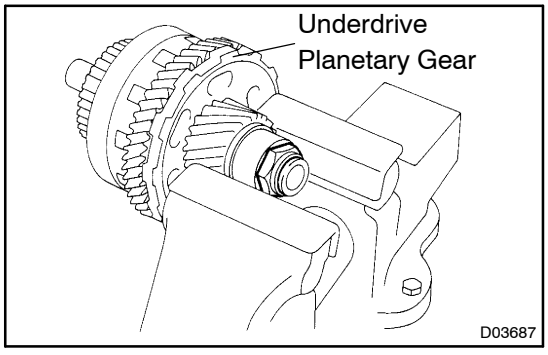
4006K–03

OVERHAUL



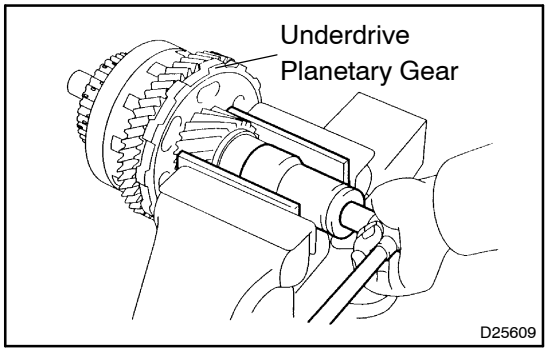
1. INSPECT UNDERDRIVE PLANETARY GEAR PRELOAD

(a) Using SST, fix the underdrive planetary gear assy.
SST 09387–00050



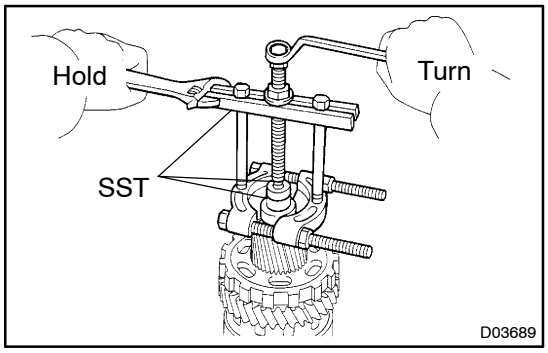
(b) Using SST and a torque wrench, measure the turning torque of underdrive planetary gear assy while rotating the torque wrench at 60 rpm.
SST 09387–00050
Turning torque at 60 rpm.:
0.50 – 1.42 N·m (5.1 – 14.5 kgf·cm, 0.06 – 0.17 in.·lbf)

HINT:
Use a torque wrench with a fulcrum length of 160 mm (6.3 in.).



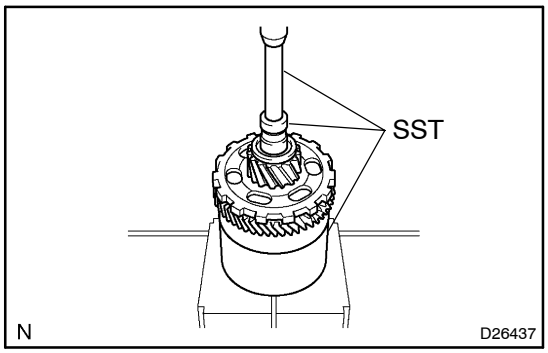
2. REMOVE FRONT PLANETARY GEAR NUT

(a) Using SST, loosen the staked part of the lock nut.
SST 09930–00010 (09931–00010, 09931–00020), 09387–00050



(b) Clamp the underdrive planetary gear in soft jaw vise.

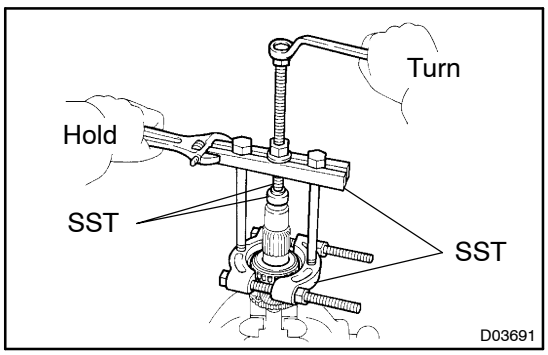
NOTICE:
Be careful not to damage the differential drive pinion.



(c) Using a socket wrench, remove the lock nut.

3. REMOVE CYLINDRICAL ROLLER BEARING RACE INNER

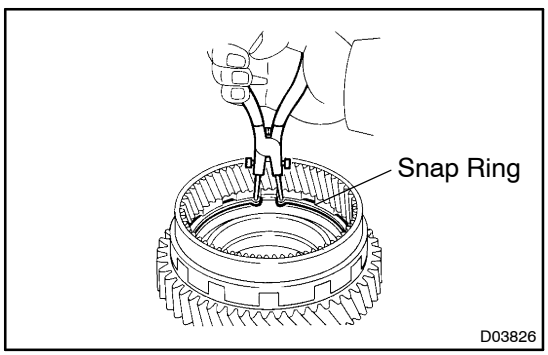
(a) Using SST, remove the cylindrical roller bearing race inner.



SST 09950–00020, 09950–00030, 09950–60010 (09951–00320), 09950–40011 (09957–04010)

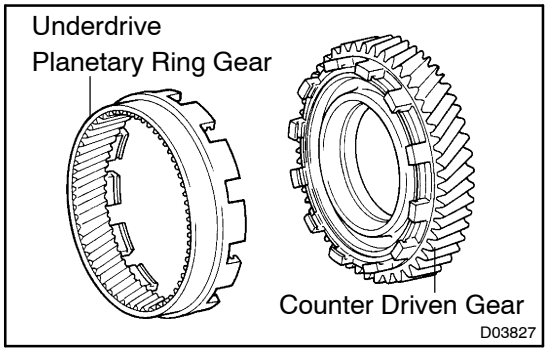
4. REMOVE UNDERDRIVE PLANETARY GEAR ASSY

(a) Using SST and a press, remove the differential drive pinion, parking lock gear, counter driven gear with underdrive planetary ring gear and front tapered roller bearing.



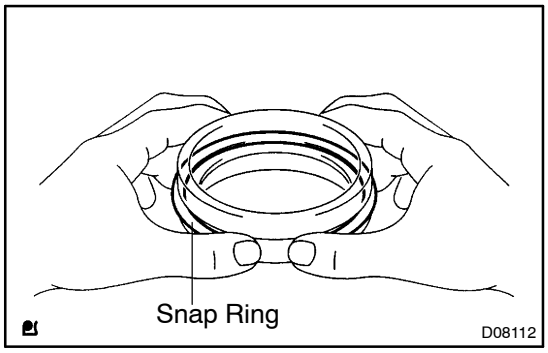
SST 09950–60010 (09951–00320), 09387–00050

(b) Clamp the underdrive planetary gear in soft jaw vise.



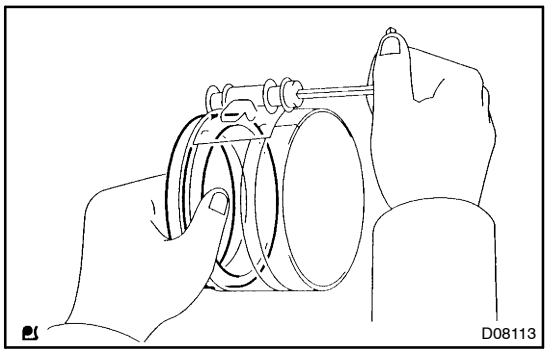
(c) Using SST, remove the rear tapered roller bearing form the underdrive planetary gear.

SST 09950–00020, 09950–00030, 09950–60010 (09951–00320), 09950–40011 (09957–04010)

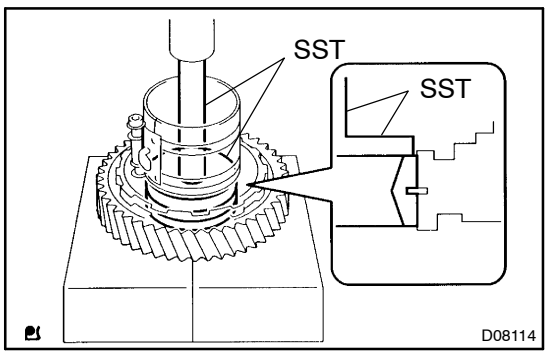


5. REMOVE UNDERDRIVE PLANETARY RING GEAR

(a) Using a snap ring pliers, remove the snap ring.



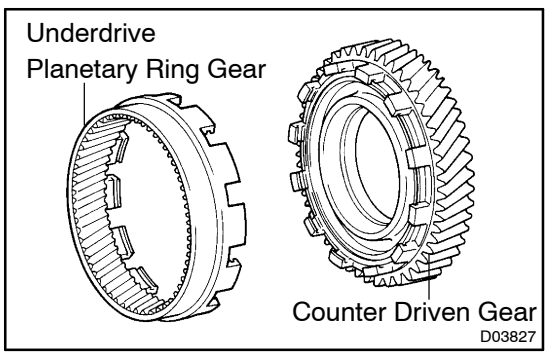
(b) Remove the underdrive planetary ring gear from the counter driven gear.



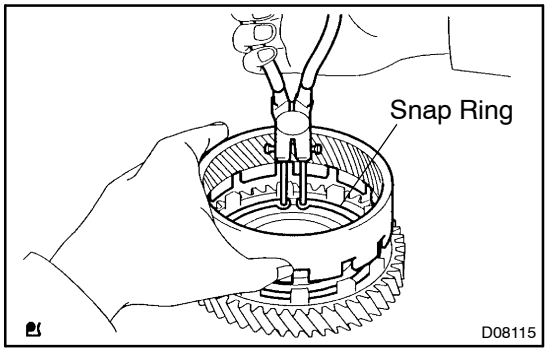
6. INSTALL UNDERDRIVE PLANETARY RING GEAR

(a) Install a new snap ring to the outer race of the tapered roller bearing.

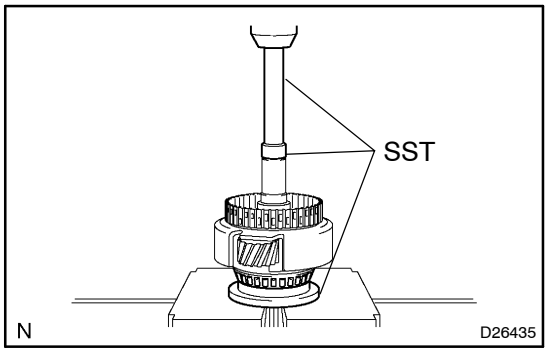
HINT:
When replacing the bearing, also replace the counter driven gear with a new one.



(b) Using a piston ring compressor, squeeze the snap ring.



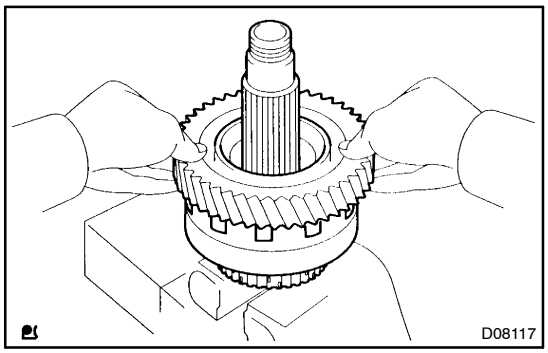
(c) Using SST and a press, press in the outer race of the tapered roller bearing.
SST 09950–60020 (09951–00890), 09950–70010 (09951–07100)



NOTICE:
Be sure not to damage on the snap ring during the outer race installation.

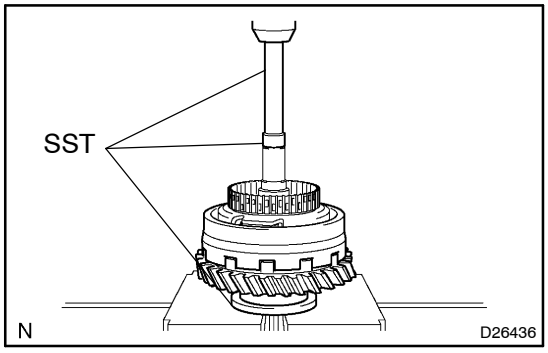
(d) Install the underdrive planetary ring gear to the counter driven gear.

(e) Using a snap ring pliers, install the snap ring.



7. INSTALL UNDERDRIVE PLANETARY GEAR ASSY

(a) Using a press, press the rear tapered roller bearing to the underdrive planetary gear.

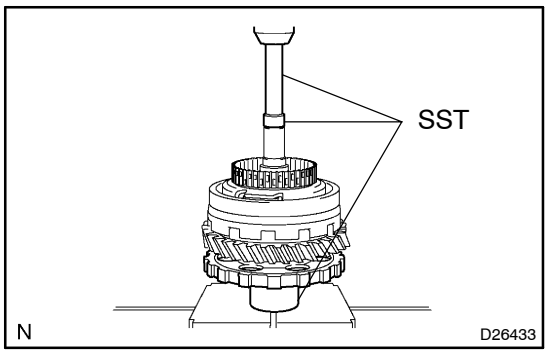


SST 09502–12010, 09950–60010 (09951–00260), 09950–70010 (09951–07100), 09316–20011

NOTICE:

Press the bearing until it becomes flat at the bottom.

(b) Install the counter driven gear with planetary ring gear to the underdrive planetary gear.

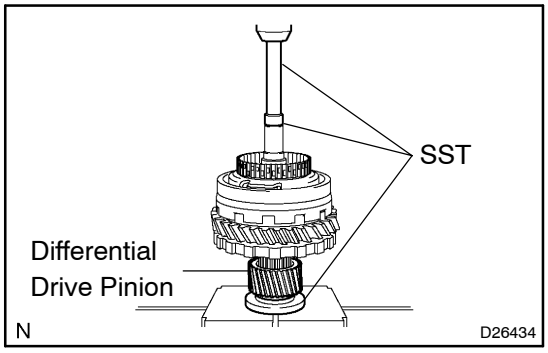


(c) Using SST and a press, press in the front tapered roller bearing.

SST 09502–12010, 09950–60010 (09951–00260), 09950–70010 (09951–07100), 09316–20011

NOTICE:

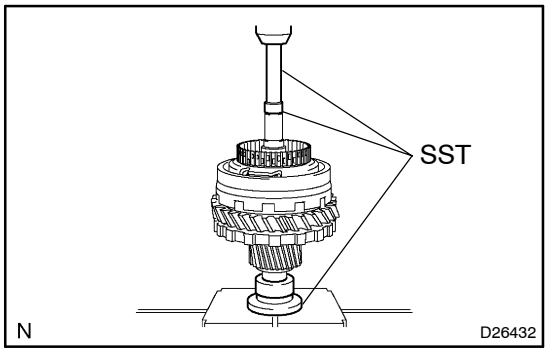
Press the counter driven gear while rotating it.



(d) Using a press, press in the parking lock gear.

SST 09502–12010, 09950–60010 (09951–00260), 09950–70010 (09951–07100), 09316–20011

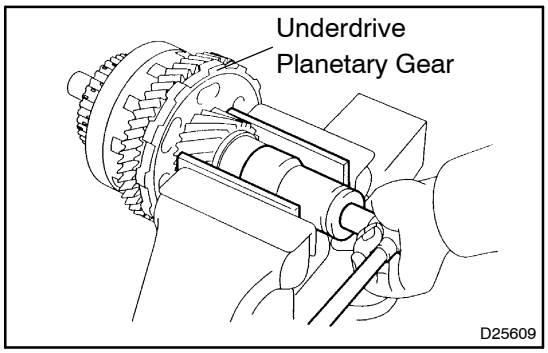
NOTICE:



Press the counter driven gear while rotating it.

8. INSTALL DIFFERENTIAL DRIVE PINION

(a) Using a press, press the differential drive pinion.
SST 09726–40010, 09950–60010 (09951–00260), 09950–70010 (09951–07100)

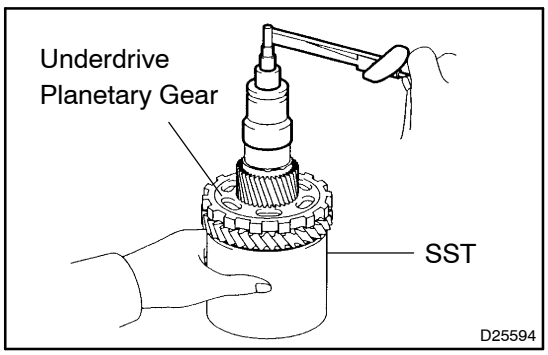


NOTICE:
Press the counter driven gear while rotating it.

9. INSTALL CYLINDRICAL ROLLER BEARING RACE INNER

(a) Using a press, press the cylindrical roller bearing race inner.
SST 09506–35010, 09950–60010 (09951–00260), 09950–70010 (09951–07100)

NOTICE:
Press the counter driven gear while rotating it.



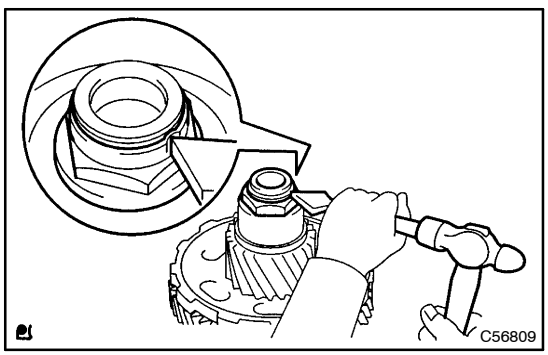
10. INSTALL FRONT PLANETARY GEAR NUT

(a) Clamp the underdrive planetary gear in soft jaw vise.

NOTICE:
Be careful not to damage the differential drive pinion.

(b) Using a socket wrench, install a new lock nut.
Torque: 280 N·m (2,855 kgf·cm, 207 in.·lbf)

HINT:
Use a torque wrench with a fulcrum length of 750 mm (29.53 in.).

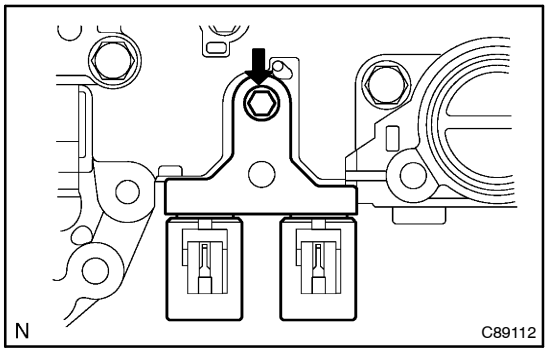


11. INSPECT UNDERDRIVE PLANETARY GEAR PRELOAD

(a) Using SST and a torque wrench, measure the turning torque of underdrive planetary gear assy while rotating the torque wrench at 60 rpm.
SST 09387–00050
Turning torque at 60 rpm.:
0.5 – 1.42 N·m (5.1 – 14.5 kgf·cm, 0.06 – 0.17 in.·lbf)

HINT:
Use a torque wrench with a fulcrum length of 160 mm (6.30 in.).

(b) Using a pin punch and hammer, stake the lock nut.

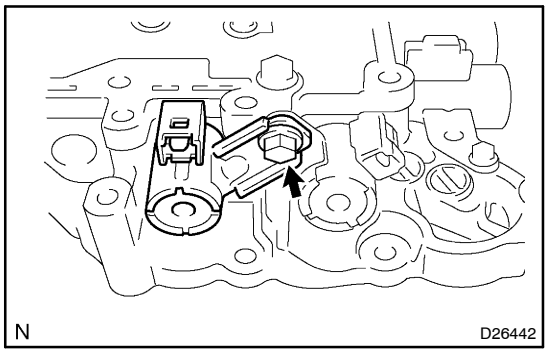


NOTICE:
Make sure that there are no cracks on the nut.

TRANSMISSION VALVE BODY ASSY (U151E/U151F)

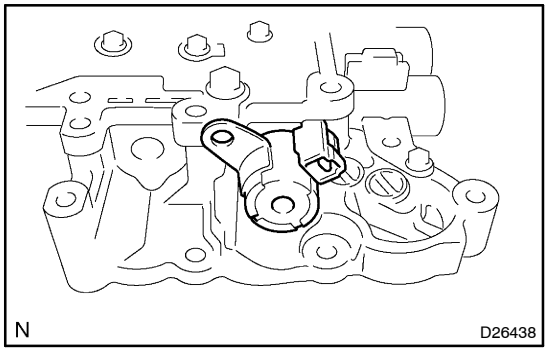
4010J–01

OVERHAUL



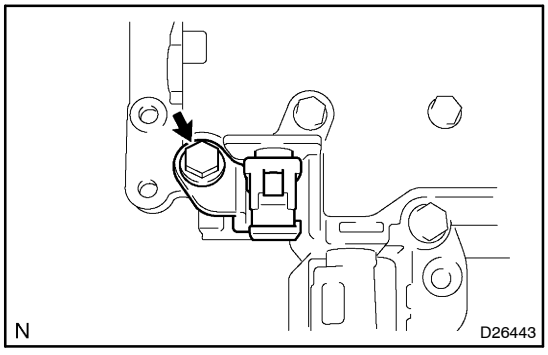
1. REMOVE SHIFT SOLENOID VALVE SL3

(a) Remove the bolt and shift solenoid valve SL3 from the valve body assy.



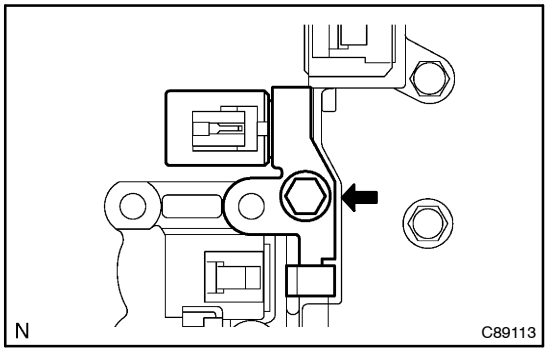
2. REMOVE LINE PRESSURE CONTROL SOLENOID ASSY

(a) Remove the shift solenoid valve SLT from the valve body assy.



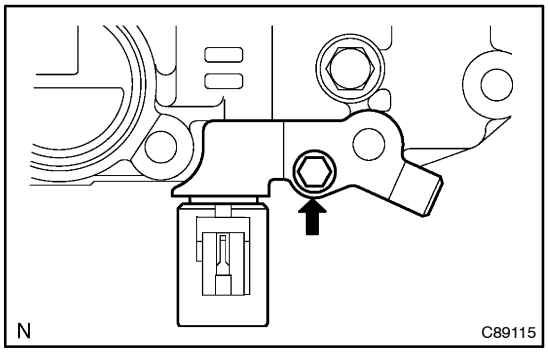
3. REMOVE SHIFT SOLENOID VALVE S4

(a) Remove the bolt and shift solenoid valve S4 from the valve body assy.



4. REMOVE SHIFT SOLENOID VALVE SR

(a) Remove the shift solenoid valve SR from the valve body assy.



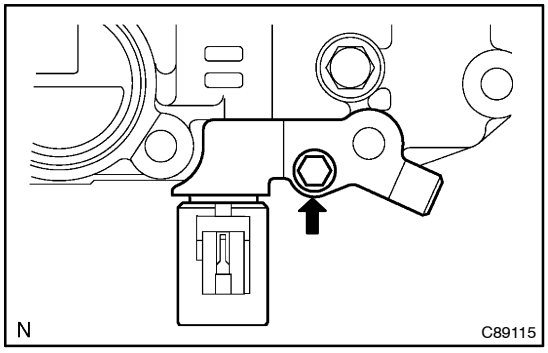
5. REMOVE SHIFT SOLENOID VALVE DSL

(a) Remove the bolt and shift solenoid valve DSL from the valve body assy.

6. REMOVE SHIFT SOLENOID VALVE SL2

(a) Remove the bolt and shift solenoid valve SL2 from the valve body assy.

7. REMOVE SHIFT SOLENOID VALVE SL1

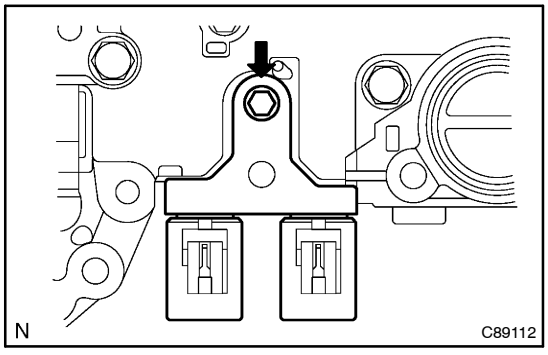


(a) Remove the bolt and shift solenoid valve SL1 from the valve body assy.

8. REMOVE MANUAL VALVE

(a) Remove the manual valve from the valve body assy.

9. INSTALL MANUAL VALVE



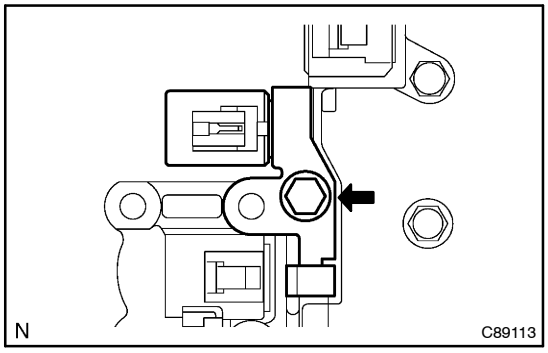
(a) Install the manual valve to the valve body assy.

10. INSTALL SHIFT SOLENOID VALVE SL1

(a) Install the shift solenoid valve SL1 to the valve body assy with the bolt.

Torque: 6.6 N·m (67 kgf·cm, 58 in.·lbf)

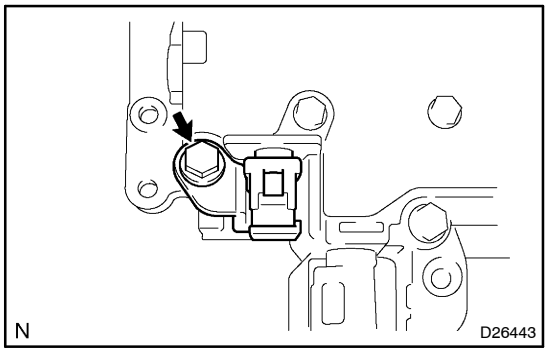
11. INSTALL LINE PRESSURE CONTROL SOLENOID ASSY



(a) Install the shift solenoid valve SLT to the valve body assy with the bolt.

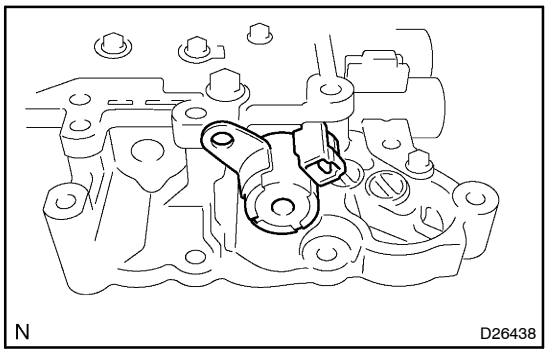
Torque: 6.6 N·m (67 kgf·cm, 58 in.·lbf)

12. INSTALL SHIFT SOLENOID VALVE SL3



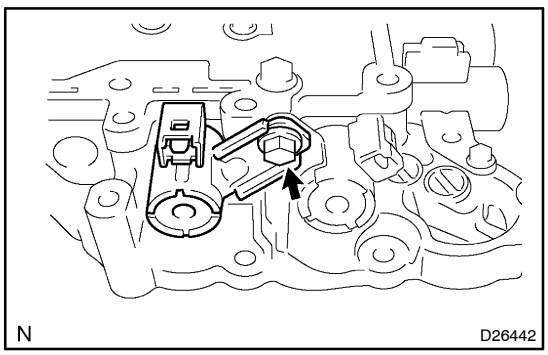
(a) Install the shift solenoid valve SL3 to the valve body assy with the bolt.

Torque: 6.6 N·m (67 kgf·cm, 58 in.·lbf)



13. INSTALL SHIFT SOLENOID VALVE SL2

(a) Install the shift solenoid valve SL2 to the valve body assy with the bolt.
Torque: 10.8 N·m (110 kgf·cm, 8 ft·lbf)

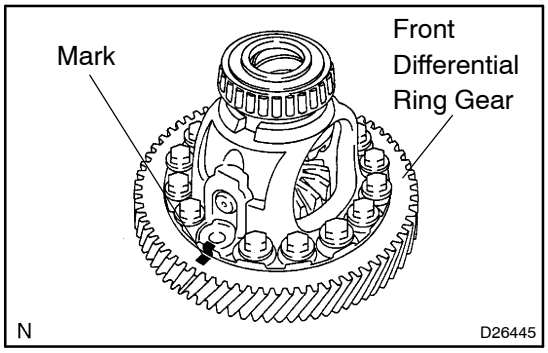


14. INSTALL SHIFT SOLENOID VALVE DSL

(a) Install the shift solenoid valve DSL to the valve body assy with the bolt.
Torque: 10.8 N·m (110 kgf·cm, 8 ft·lbf)

15. INSTALL SHIFT SOLENOID VALVE SR

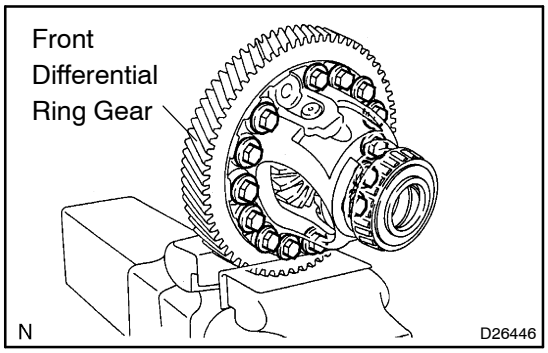
(a) Install the shift solenoid valve SR to the valve body assy.



16. INSTALL SHIFT SOLENOID VALVE S4

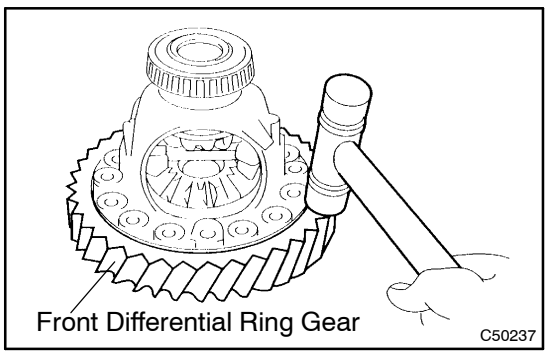
(a) Install the shift solenoid valve S4 to the valve body assy with the bolt.
Torque: 10.8 N·m (110 kgf·cm, 8 ft·lbf)

FRONT DIFFERENTIAL ASSY (U151E)

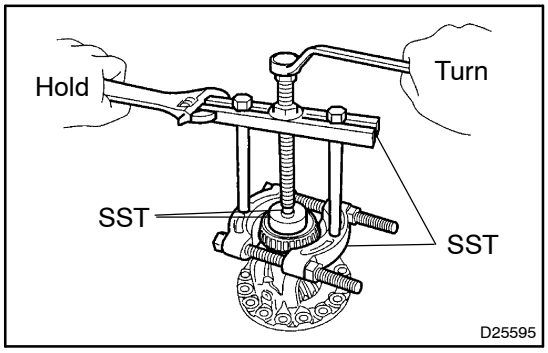


OVERHAUL

4006M–03

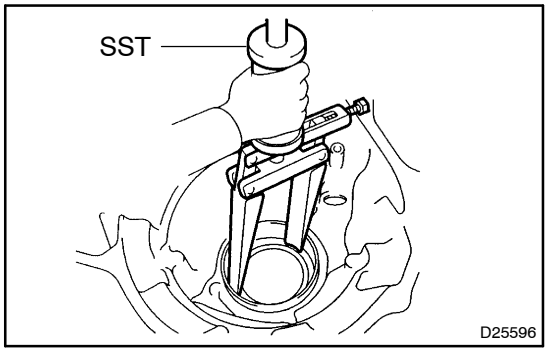


1. REMOVE FRONT DIFFERENTIAL RING GEAR

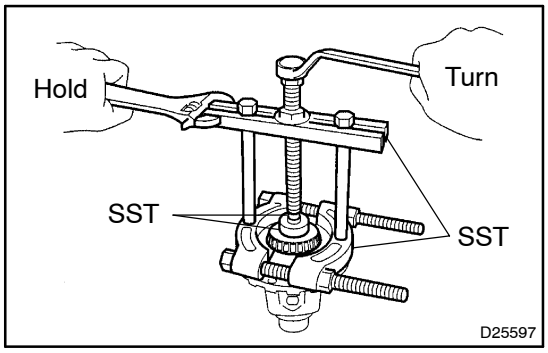


(a) Place the match–marks on the front differential ring gear and differential case.

(b) Remove the 14 bolts.



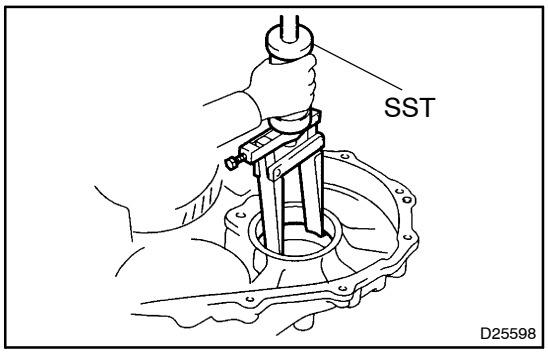
(c) Using a plastic hammer, tap on the front differential ring gear to remove it from the case.



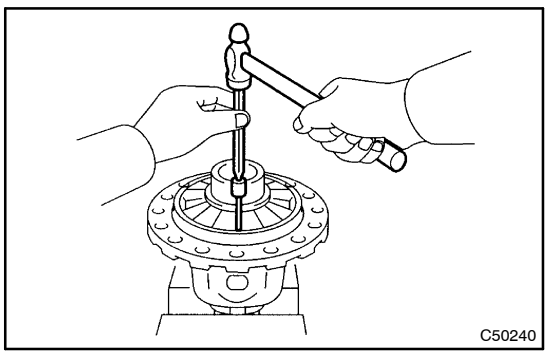
2. REMOVE FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case front differential tapered roller bearing from the differential case.

SST 09950–00020, 09950–00030, 09950–60010 (09951–00490), 09950–40011 (09957–04010)



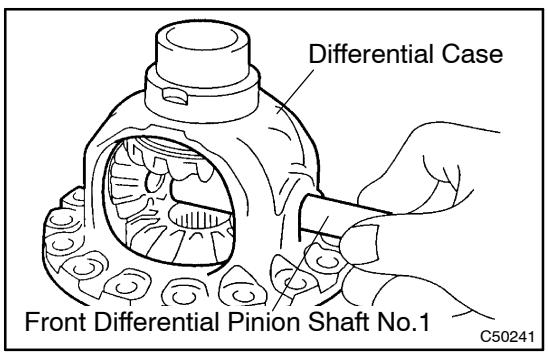
(b) Using SST, remove the front differential case front tapered roller bearing outer race.
SST 09308–00010



3. REMOVE FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

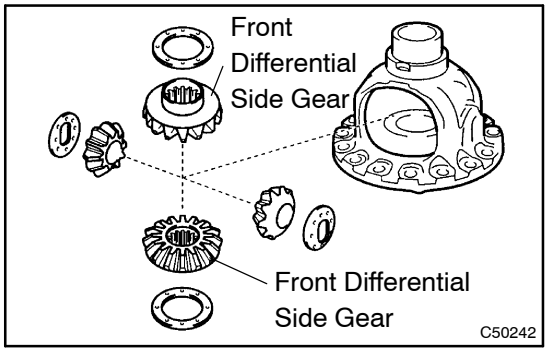
(a) Using SST, remove the front differential case rear tapered roller bearing from the differential case.
SST 09950–00020, 09950–00030, 09950–60010 (09951–00490), 09950–40011 (09957–04010)

(b) Using SST, remove the front differential case rear tapered roller bearing outer race.
SST 09308–00010



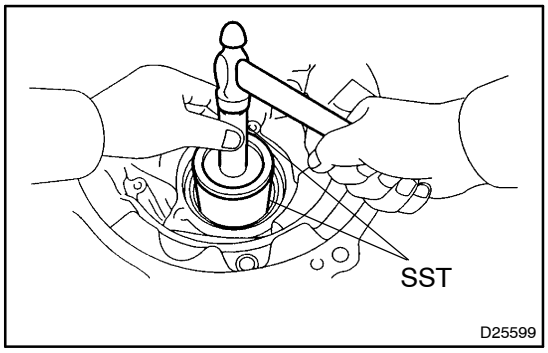
4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch and hammer, install the straight pin.



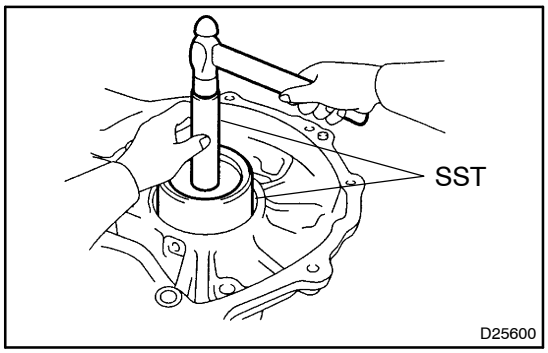
NOTICE:

Before removing the straight pin, unstake it with a pin punch.



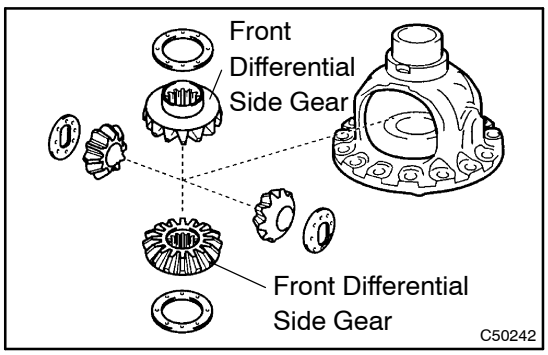
5. REMOVE FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Remove the front differential pinion shaft No.1 from the differential case.



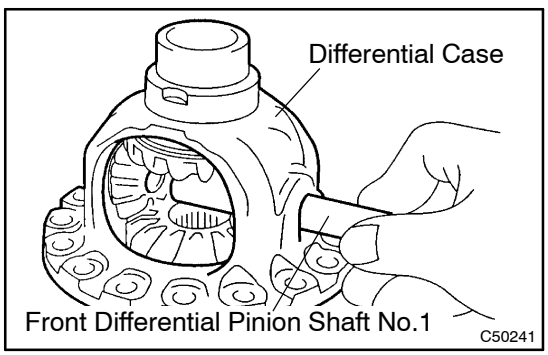
6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 pinion thrust washers, 2 front differential side gears and 2 side gear thrust washers from the differential case.



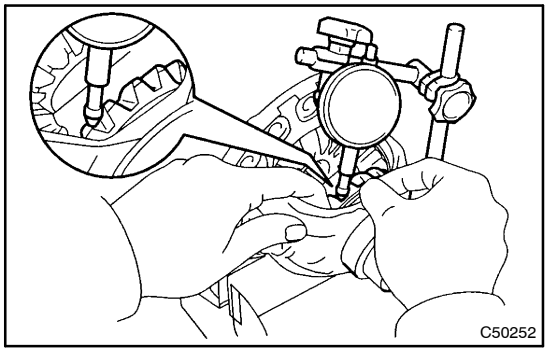
7. REMOVE TRANSAXLE HOUSING OIL SEAL

(a) Using SST, remove the oil seal.
SST 09950–70010 (09951–07100), 09215–00013 (09215–00471)



8. REMOVE DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Using SST, remove the oil seal.
SST 09950–70010 (09951–07100), 09608–10010

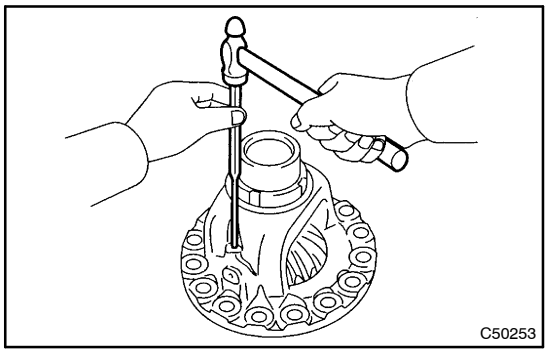


9. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) Apply the 2 front differential side gears, 2 side gear thrust washers, 2 front differential pinions and 2 pinion thrust washers with ATF and install them to the differential case.

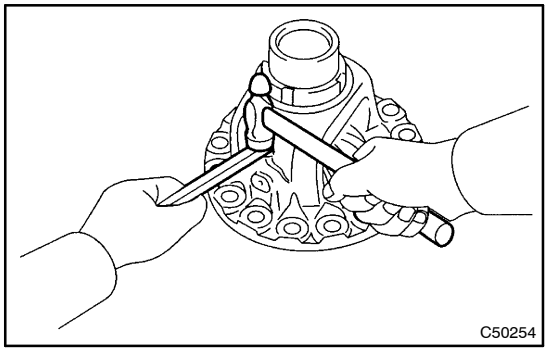
10. INSTALL FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Apply the front differential pinion shaft No.1 with ATF, install it to the differential case.



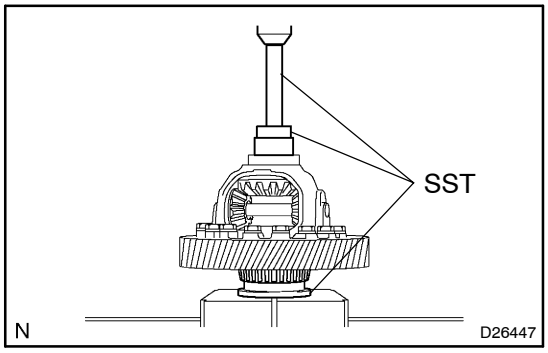
11. INSPECT BACKLASH

(a) Using a dial indicator, inspect the backlash of the side gear.



Standard backlash:
0.05 – 0.20 mm (0.0020 – 0.0079 in.)
Thrust washer thickness

Mark	Thickness
–	1.625 mm (0.0640 in.)
–	1.725 mm (0.0679 in.)
–	1.825 mm (0.0719 in.)

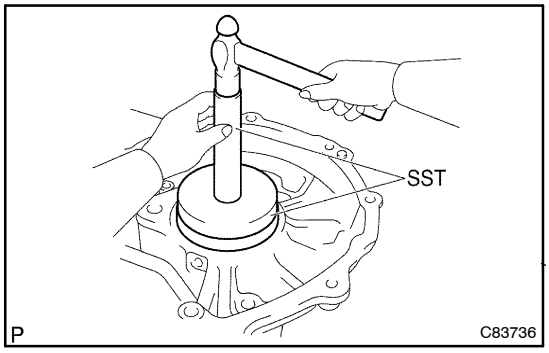


12. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

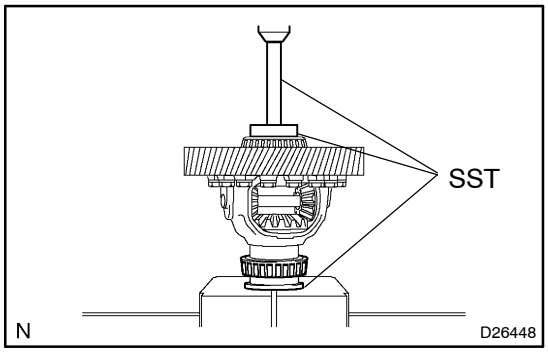
(a) Using a pin punch and hammer, install the pinion shaft straight pin.

(b) Using a chisel and hammer, stake the differential case.

NOTICE:
Stake it after adjusting the backlash.



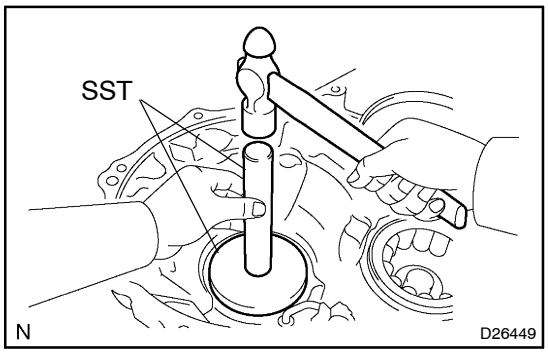
13. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING



(a) Using SST and a press, install the front differential case rear tapered roller bearing to the differential case.

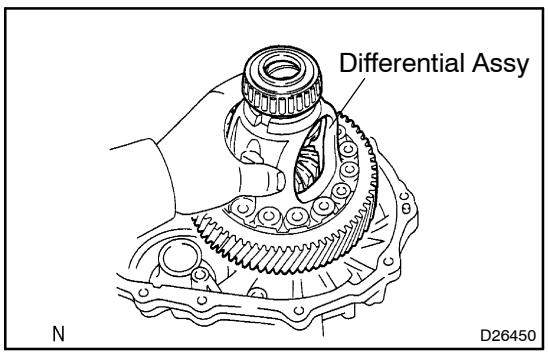
SST 09316–12010, 09550–60010 (09951–00490), 09950–70010 (09951–07100)

NOTICE:
Do not make a damage on the bearing cage during the bearing inner race installation.



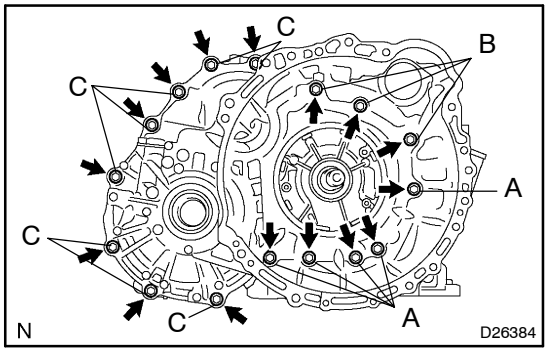
(b) Using SST and a hammer, install the front differential case tapered roller bearing front outer race to the transaxle housing.
SST 09550–60010 (09951–00490), 09950–60020 (09951–00910)

14. INSTALL FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING



(a) Using SST and a press, install the front differential case front tapered roller bearing to the differential case.
SST 09316–12010, 09550–60010 (09951–00490), 09950–70010 (09951–07100)

NOTICE:
Do not make a damage on the bearing cage during the bearing inner race installation.



(b) Using SST and a hammer, install the front differential case tapered roller bearing front outer race to the transaxle housing.
SST 09950–70010 (09951–07150), 09950–60020 (09951–00890)

NOTICE:
Clearance is not allowed between the bearing and transaxle housing.

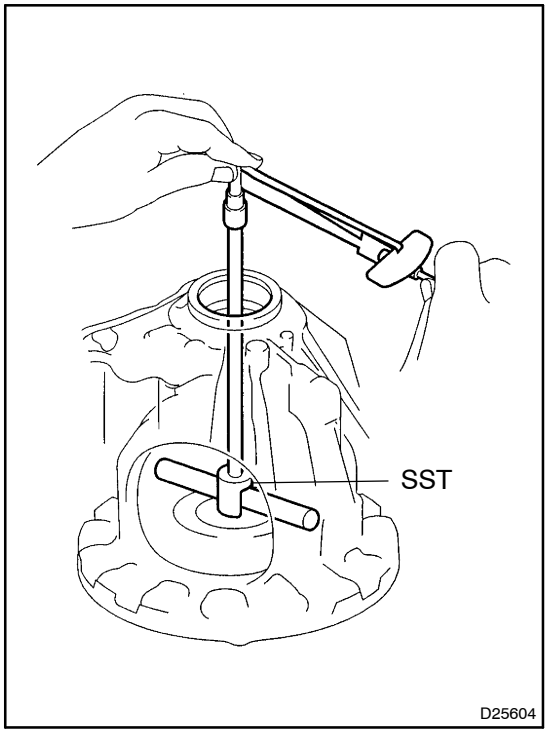
15. ADJUST DIFFERENTIAL SIDE BEARING RRELOAD

(a) Install the differential assy to the transaxle case.

(b) Clean the matching surfaces of the transaxle case and transaxle housing.

(c) Install the transaxle housing to the transaxle case and tighten them with the 16 bolts.

Torque:
Bolt A: 25 N·m (255 kgf·cm, 18 ft·lbf)
Bolt B: 33 N·m (337 kgf·cm, 24 ft·lbf)
Bolt C: 29 N·m (295 kgf·cm, 21 ft·lbf)
Bolt D: 22 N·m (226 kgf·cm, 16.0 ft·lbf)



HINT:

Apply seal packing or equivalent to the A and D.

Seal packing:
THREE BOND 2403 or equivalent
Bolt length:
Bolt A: 50 mm (1.969 in.)
Bolt B: 50 mm (1.969 in.)
Bolt C: 42 mm (1.654 in.)
Bolt D: 72 mm (2.835 in.)

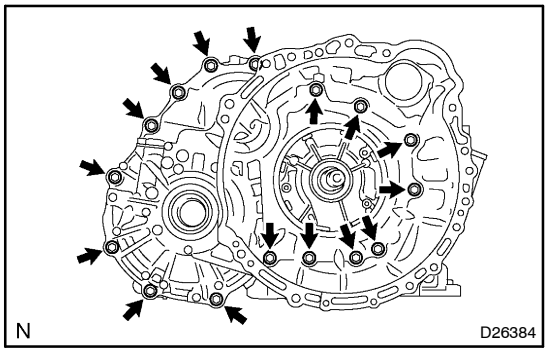
HINT:

Usually, bolt A is a non–reusable bolt. In this case, however, it can be used after cleaning it.

(d) Using SST, turn the differential assy right and left 2 or 3 times to settle the bearing.
SST 09564–32011

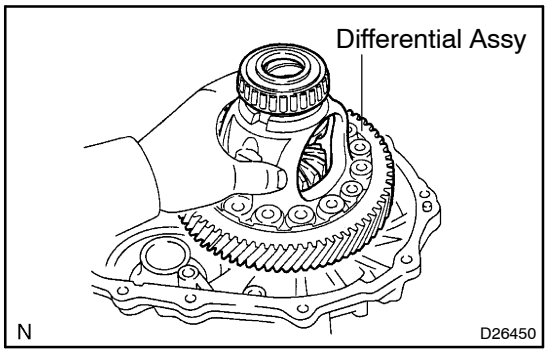
(e) Using SST and a torque wrench, measure the turning torque of the differential.
SST 09564–32011

Turning torque at 60 rpm:
New bearing
0.20 – 0.69 N·m (2.0 – 7.0 kgf·cm, 1.8 – 6.1 in.·lbf)
Used bearing
0.10 – 0.35 N·m (1.0 – 3.6 kgf·cm, 0.9 – 3.1 in.·lbf)



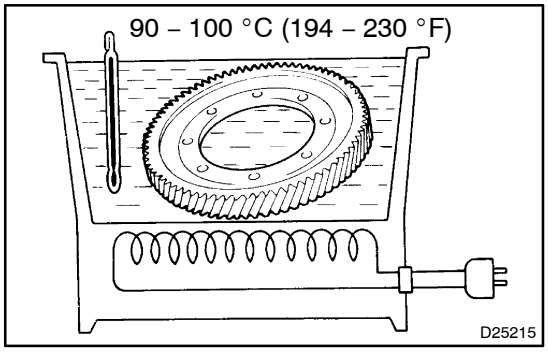
HINT:

If the turning torque is not within the specified value, refer to the table below to select a thrust washer which turning torque is within the specified value.



Flange thickness: mm (in.)

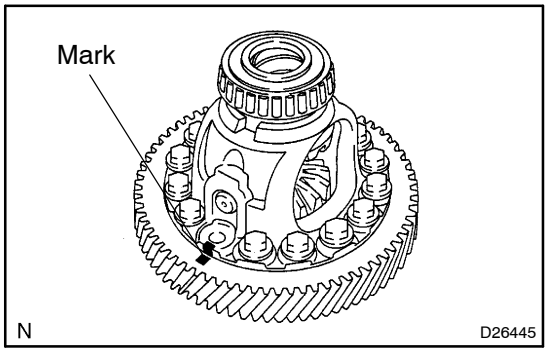
Mark	Thickness	Mark	Thickness
0	2.00 (0.0787)	9	2.45 (0.0965)
1	2.05 (0.0807)	A	2.50 (0.0984)
2	2.10 (0.0827)	B	2.55 (0.1004)
3	2.15 (0.0846)	C	2.60 (0.1024)
4	2.20 (0.0866)	D	2.65 (0.1043)
5	2.25 (0.0886)	E	2.70 (0.1063)
6	2.30 (0.0906)	F	2.75 (0.1083)



Mark	Thickness	Mark	Thickness
7	2.35 (0.0925)	G	2.80 (0.1102)
8	2.40 (0.0945)	H	2.85 (0.1122)

(f) Remove the 16 bolts and the transaxle housing.

(g) Remove the differential assy.

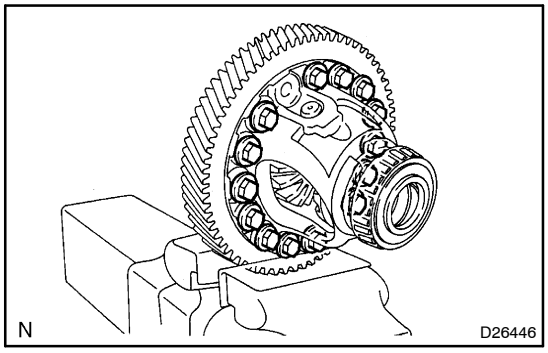


16. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Using ATF and heater, heat the front differential ring gear to 90 – 110 °C (194.0 – 230.0 °F).

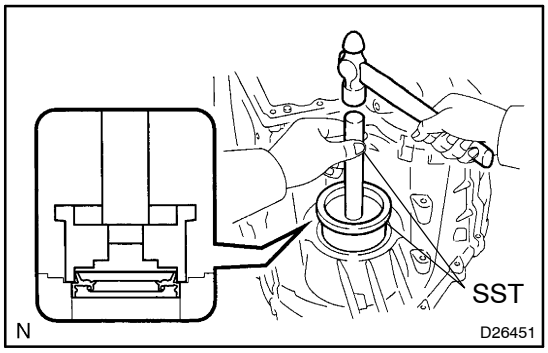
NOTICE:

Do not overheat the ring gear to 110 °C (230.0 °F) or more.



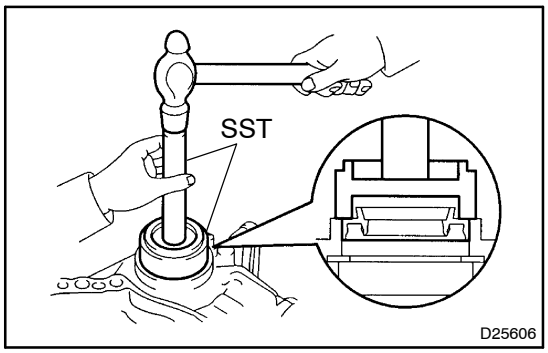
(b) Clean the contact surface of the front differential case.

(c) Align the match–marks, install the front differential ring gear case quickly.



NOTICE:

Do not install the bolts while the ring gear is hot.

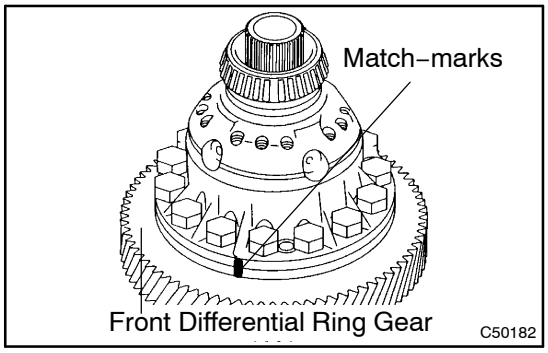


(d) Tighten the 14 bolts.
Torque: 95.0 N·m (970 kgf·cm, 70 ft·lbf)

NOTICE:
Tighten the bolts a little at a time in diagonal order.

17. INSTALL TRANSAXLE HOUSING OIL SEAL

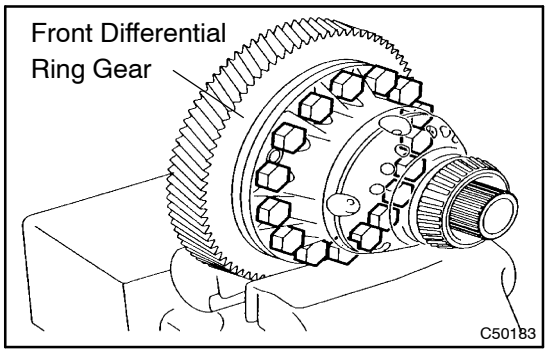
(a) Using SST and a hammer, install a new oil seal.
(b) Apply the rip of oil seal with a little MP grease.
SST 09223–15020, 09950–70010 (09951–07150)
Oil seal drive in depth: 0 ± 0.5 mm (0 ± 0.0197 in.)



18. INSTALL DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

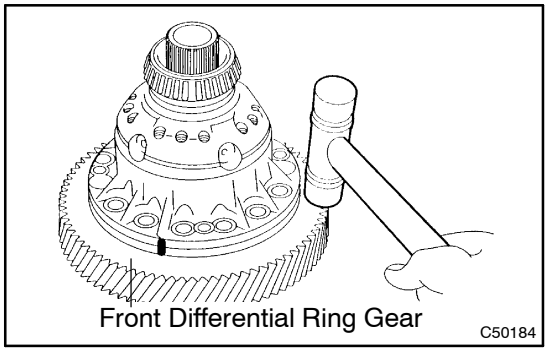
(a) Using SST and a hammer, drive into a new oil seal.
(b) Apply the lip of the oil seal with a little MP grease.
SST 09710–30050, 09950–70010 (09951–07150)
Oil seal drive in depth: 0 ± 0.5 mm (0 ± 0.0197 in.)

FRONT DIFFERENTIAL ASSY (U151F)

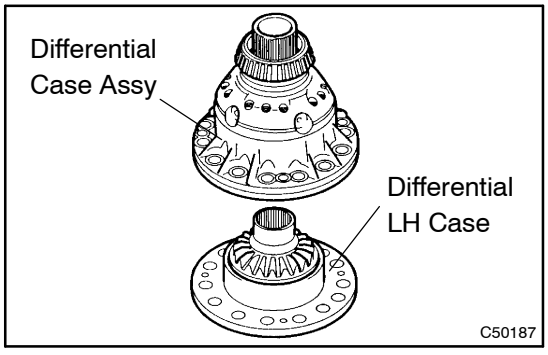


4006N–02

OVERHAUL

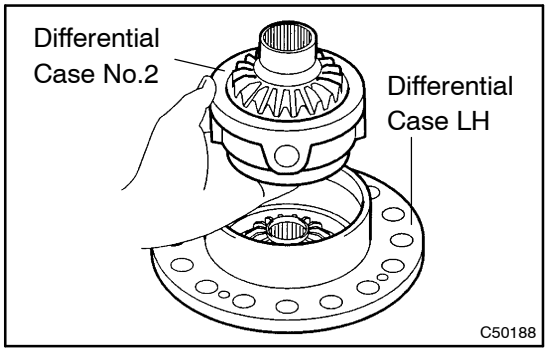


1. REMOVE FRONT DIFFERENTIAL RING GEAR

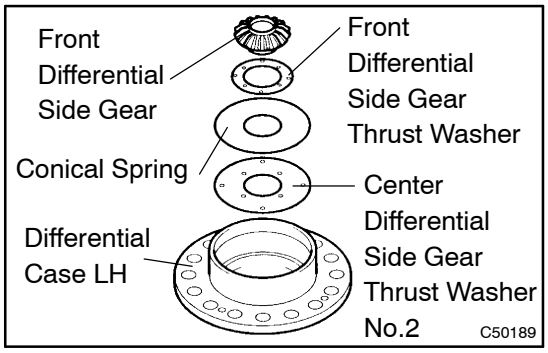


(a) Place the match–marks on the ring gear and differential case.

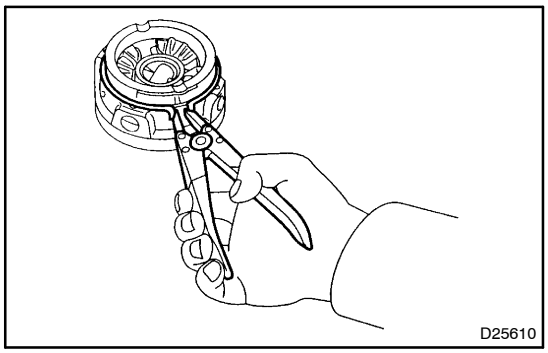
(b) Remove the 16 bolts.



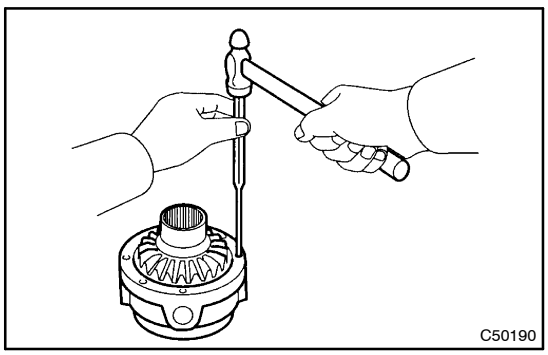
(c) Using a plastic hammer, tap on the ring gear to remove it from the case.



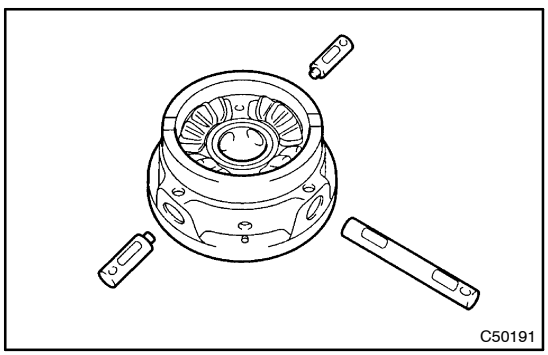
2. REMOVE FRONT DIFFERENTIAL SIDE GEAR



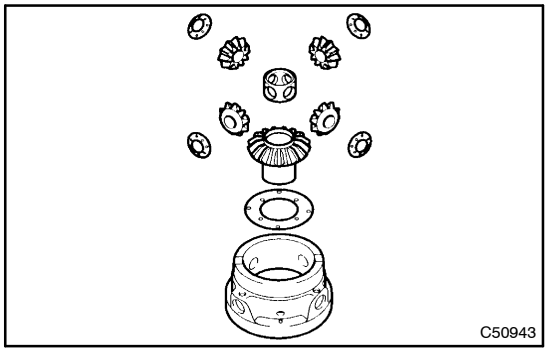
(a) Remove the differential LH case from the differential case assy.



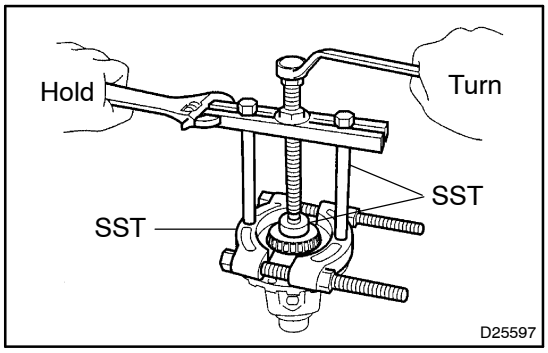
(b) Remove the differential case No.2 from the differential case LH.



(c) Remove the front differential side gear, front differential side gear thrust washer, conical spring and center differential side gear thrust washer No.2 from the differential case LH.

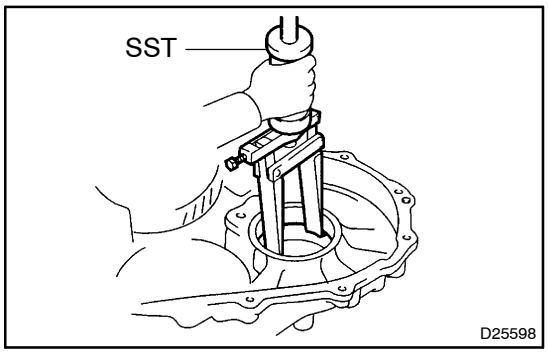


(d) Using a snap ring expander, remove the pinion shaft spacer snap ring.

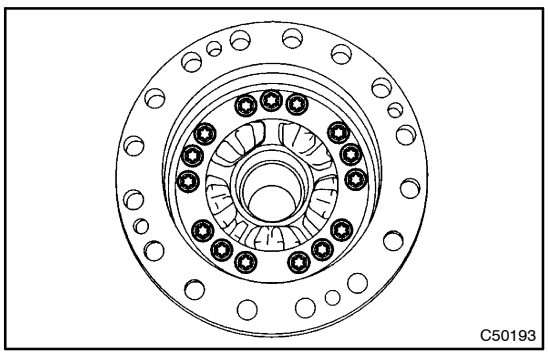


(e) Using a pin punch and a hammer, remove 3 straight pins.

(f) Remove the center differential pinion shaft and 2 differential pinion shafts.

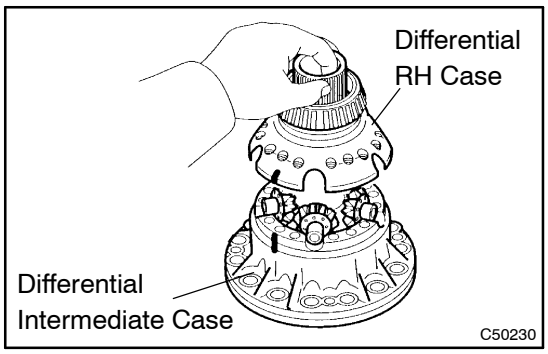


(g) Remove 4 front differential pinions, 4 front differential pinion thrust washers, front differential pinion shaft holder, front differential planetary ring gear and differential side gear thrust washer No. 1.

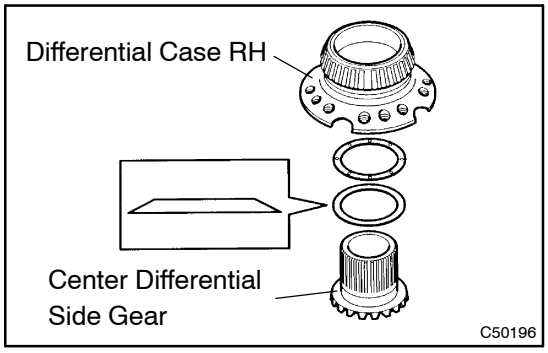


3. REMOVE FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case rear tapered roller bearing from the differential case.
SST 09950–00020, 09950–00030, 09950–60010 (09951–00480)

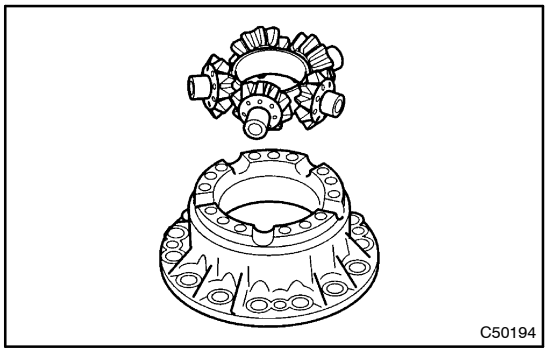


(b) Using SST, remove the front differential case rear tapered roller bearing outer race and differential case washer.
SST 09308–00010

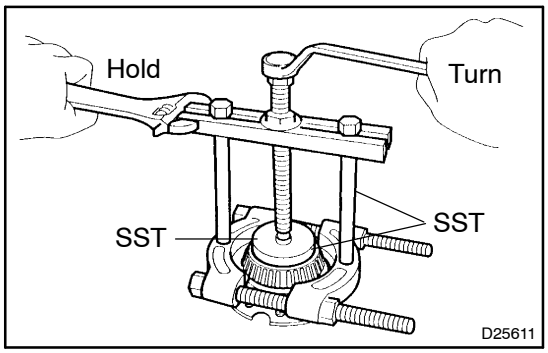


4. REMOVE CENTER DIFFERENTIAL PINION

(a) Using torx socket (T50), remove the 15 bolts.

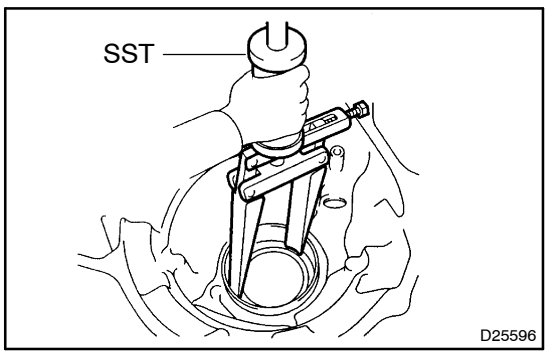


(b) Place the matchmarks on the differential intermediate case and differential case.



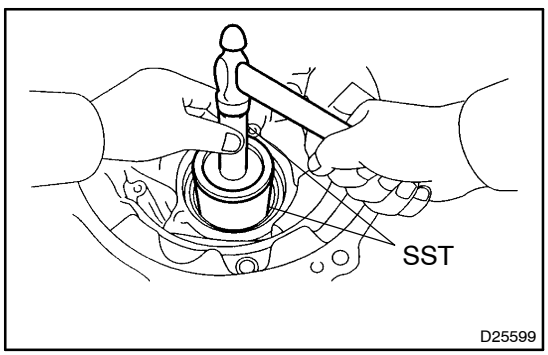
(c) Remove the differential intermediate case from the differential case RH.

(d) Remove the center differential side gear, conical spring washer and center differential side gear thrust washer No. 1 RH from the differential case RH.



(e) Remove the differential spider, 5 center differential pinions and 5 center differential pinion thrust washers from the differential intermediate case.

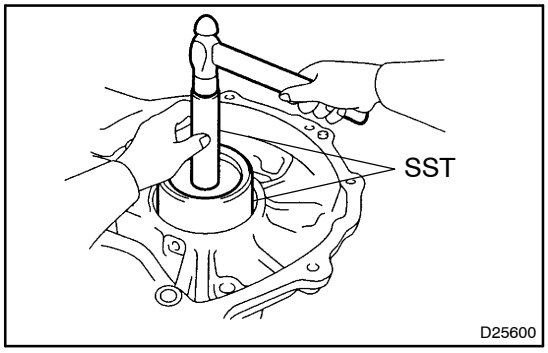
5. REMOVE FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING



(a) Using SST, remove the front differential case front tapered roller bearing from the differential case.

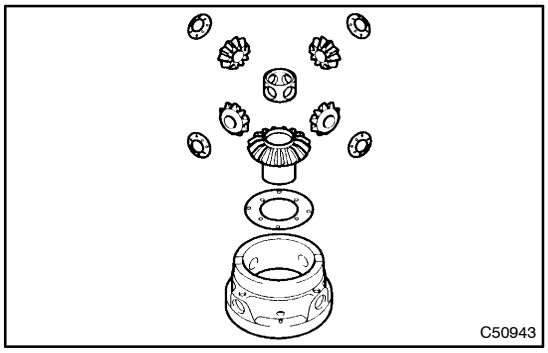
SST 09950–00020, 09950–00030, 09950–60010 (09951–00600)

(b) Using SST, remove the front differential case front tapered roller bearing outer race and differential case washer.



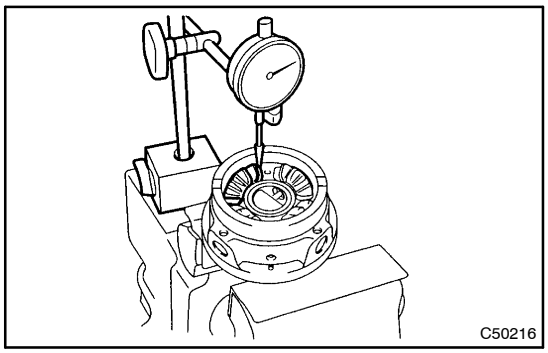
SST 09308–00010

6. REMOVE TRANSAXLE HOUSING OIL SEAL



(a) Using SST, remove the oil seal.

SST 09950–70010 (09951–07100), 09649–17010

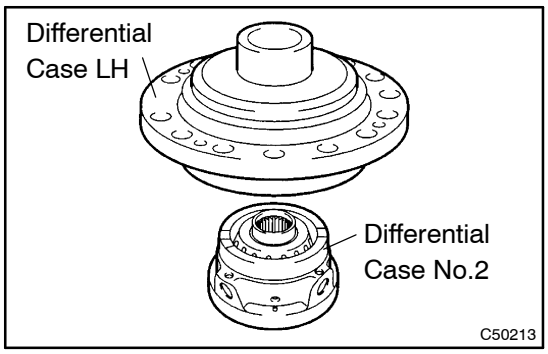


7. REMOVE DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Using SST, remove the oil seal.
SST 09950–70010 (09951–07100), 09608–10010

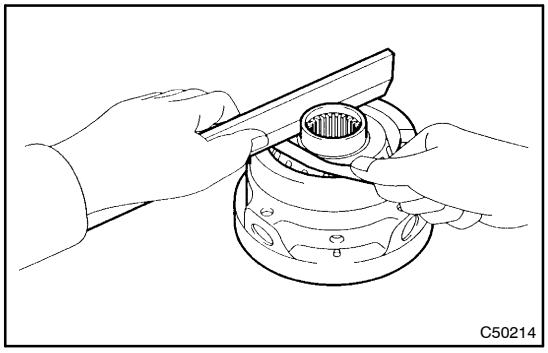
8. INSTALL DIFFERENTIAL CASE SUB–ASSY NO.2

(a) Coat the front differential side gear thrust washer No.1, front differential planetary ring gear, front differential pinion No.2, front differential pinion thrust washer No.2, front differential pinion shaft holder, front differential pinion shaft and 2 differential pinion shafts with ATF, install them to the differential case No.2.



(b) Using a dial indicator, measure the backlash of one pinion gear while holding the front differential side gear toward the case.
Standard backlash:
0.05 – 0.20 mm (0.0020 – 0.0079 in.)

NOTICE:
Do not mount the surface of front differential case which contacts with bushing in a vise.



If the backlash is not within the specified value, refer to the table below and select a thrust washer which will ensure that the backlash is within the specified value.

Thrust washer thickness: mm (in.)

Mark	Thickness	Mark	Thickness
A	0.95 (0.0373)	F	1.20 (0.0472)
B	1.00 (0.0393)	G	1.25 (0.0492)
C	1.05 (0.0413)	H	1.30 (0.0512)
D	1.10 (0.0433)	J	1.35 (0.0532)
E	1.15 (0.0453)	K	1.40 (0.0552)

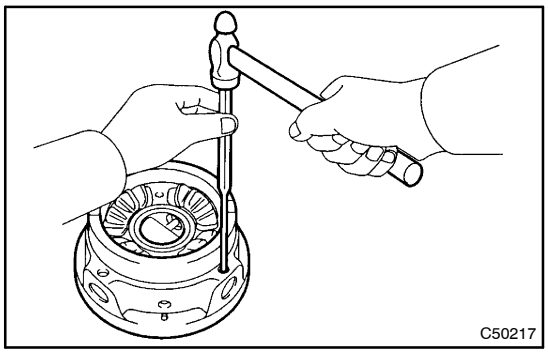
(c) Engage the front differential side gear to the above mentioned front differential case.
(d) Install the differential case LH to the front differential case and measure its center.
(e) After that, remove the differential case LH.

C50214

(f) Using a straight edge and feeler gauge, measure the clearance between the front differential case and the front differential side gear.

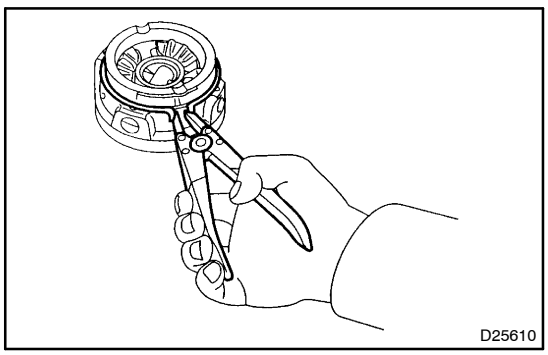
t= Thrust washer thickness

L= Clearance



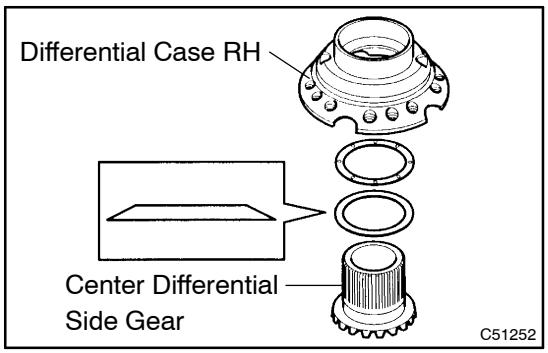
t= L–0.162 – 0.265 mm (0.0064 – 0.0104 in.)

If the clearance is not within the specified value, refer to the table below and select a thrust washer which will ensure that the clearance is within the specified value.



Thrust washer thickness: mm (in.)

Mark	Thickness	Mark	Thickness
A	0.95 (0.0373)	F	1.20 (0.0472)
B	1.00 (0.0393)	G	1.25 (0.0492)
C	1.05 (0.0413)	H	1.30 (0.0512)
D	1.10 (0.0433)	J	1.35 (0.0532)
E	1.15 (0.0453)	K	1.40 (0.0552)



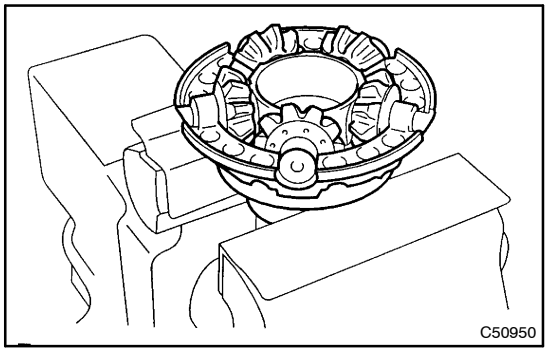
If the clearance is not within the specified value, parts may have been assembled incorrectly, so check and reassemble it.

C50217

(g) Using a pin punch and a hammer, install 3 straight pins.

D25610

(h) Using a snap ring expander, install the pinion shaft spacer snap ring.

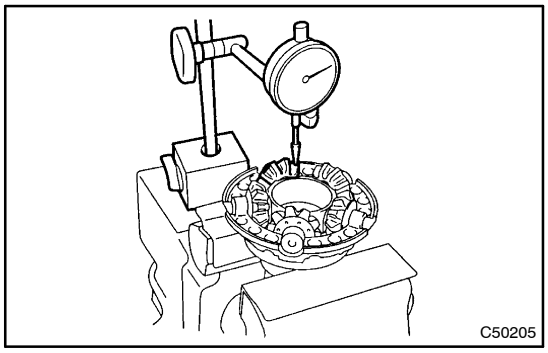


C51252

9. INSTALL CTR DIFFERENTIAL PLANETARY GEAR ASSY

(a) Install the center differential side gear, conical spring washer and center differential side gear thrust washer No.2 RH from the differential case RH.

HINT:



Ensure that the conical washers is installed correctly.

C50950

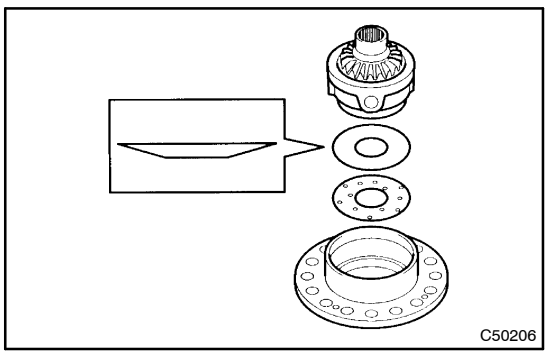
(b) Hold the differential case RH by vice. Install the center differential pinion and pinion thrust washer to the differential spider and install them to the differential case RH.

NOTICE:

When holding the differential case RH by vise, be sure to place an aluminum sheet between them and use a minimum force.

C50205

(c) Pressing and holding the differential spider toward the differential case RH, measure the pinion's backlash with a dial indicator as illustrated.

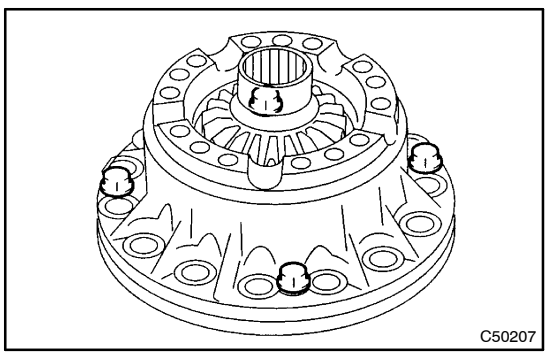


Standard backlash:

0.05 – 0.20 mm (0.0020 – 0.0079 in.)

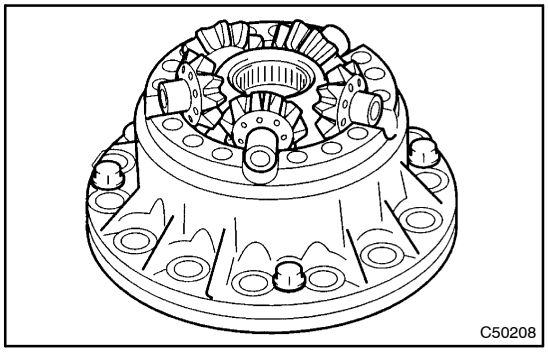
If the backlash is not within the specified value, refer to the table below and select a thrust washer which will ensure that the backlash is within the specified value.

Thrust washer thickness: mm (in.)



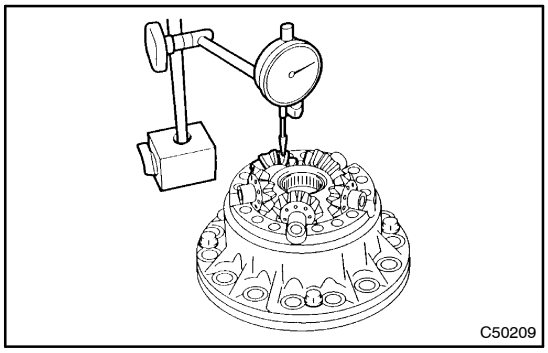
Mark	Thickness	Mark	Thickness
MA	0.80 (0.0313)	MH	1.15 (0.0453)
MB	0.85 (0.0333)	MJ	1.20 (0.0472)
MC	0.90 (0.0353)	MK	1.25 (0.0492)
MD	0.95 (0.0373)	ML	1.30 (0.0512)
ME	1.00 (0.0393)	MM	1.35 (0.0532)
MF	1.05 (0.0413)	MN	1.40 (0.0552)
MG	1.10 (0.0433)	–	–

C50206



(d) Temporarily install the differential side gear thrust washer No.2 LH, center differential side gear conical spring washer and differential case No.2 to the differential case LH.

HINT:



Ensure that the conical washers is installed correctly.

C50207

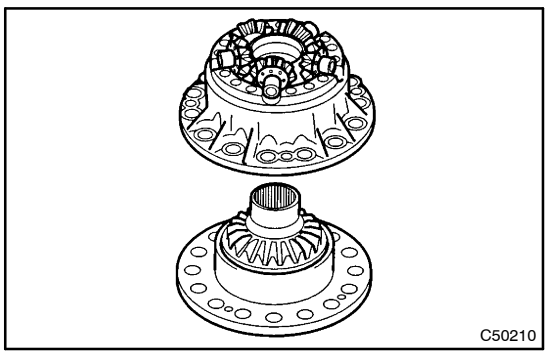
(e) Install the differential intermediate case to the above and fix them with 4 bolts.

C50208

(f) Remove the differential spider, 5 center differential pinions and 5 center differential pinion thrust washers from the differential case RH. Put them in the differential intermediate case and fix the case.

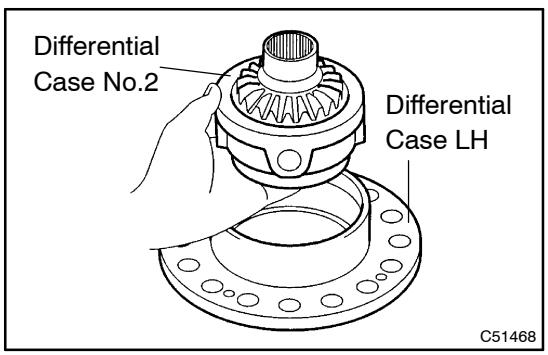
C50209

(g) Pressing and holding the differential spider toward the differential intermediate case, measure the pinion's backlash with a dial indicator.



Standard backlash:

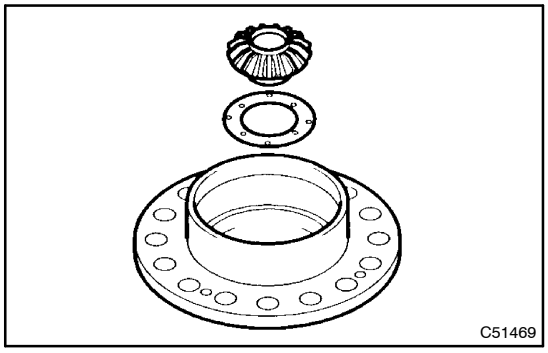
0.05 – 0.20 mm (0.0020 – 0.0079 in.)



If the backlash is not within the specified value, refer to the table below and select a thrust washer which will ensure that the backlash is within the specified value.

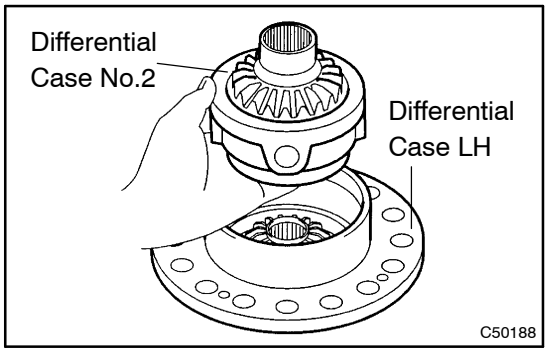
Thrust washer thickness: mm (in.)

Mark	Thickness	Mark	Thickness
MA	0.80 (0.0313)	MH	1.15 (0.0453)
MB	0.85 (0.0333)	MJ	1.20 (0.0472)
MC	0.90 (0.0353)	MK	1.25 (0.0492)
MD	0.95 (0.0373)	ML	1.30 (0.0512)
ME	1.00 (0.0393)	MM	1.35 (0.0532)
MF	1.05 (0.0413)	MN	1.40 (0.0552)
MG	1.10 (0.0433)	–	–



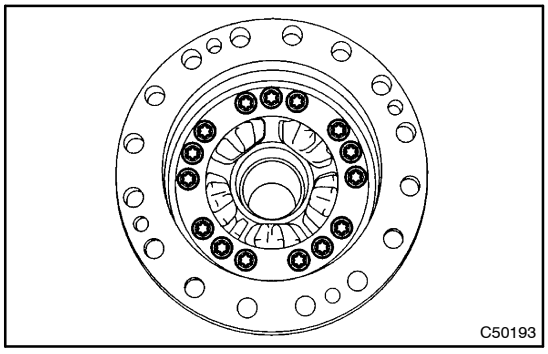
C50210

(h) Remove the 4 bolts and disconnect the differential case LH from the differential intermediate case.



C51468

(i) Remove the differential case No.2 from the differential case LH.

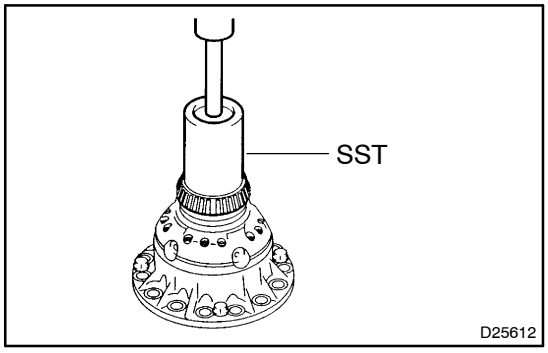


C51469

(j) Install the selected differential side gear thrust washer No. 2 LH and center differential planetary gear to the differential case LH.

C50188

(k) Install the differential case No. 2 to the differential case LH again.



C50193

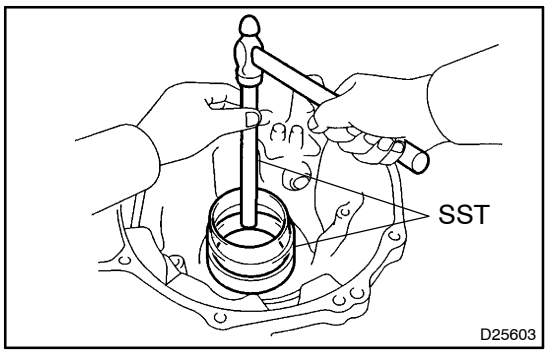
(l) Install the adjusted differential case RH to the intermediate case and tighten the 15 bolts using a torx socket wrench (T50).

Torque: 63 N·m (642 kgf·cm, 46 ft·lbf)

NOTICE:

Align the matchmarks.

D25612



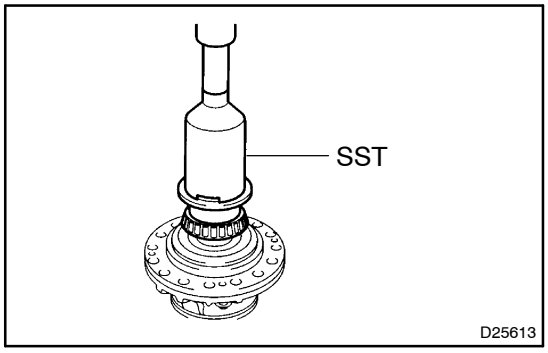
10. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case tapered roller bearing FR to the differential case.

SST 09950–70010 (09951–07100), 09649–17010

NOTICE:

Do not make a damage on the bearing cage during the bearing inner race installation.



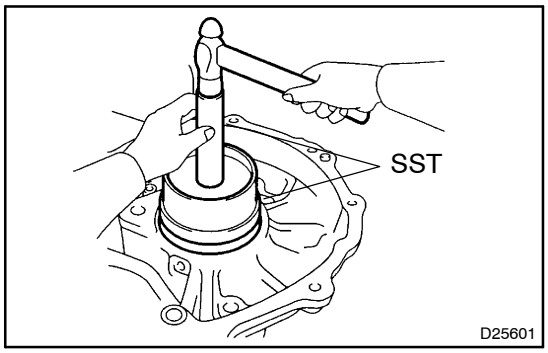
D25603

(b) Using SST, install the outer race of the tapered roller bearing FR.

SST 09527–17011, 09950–60020 (09951–01030)

NOTICE:

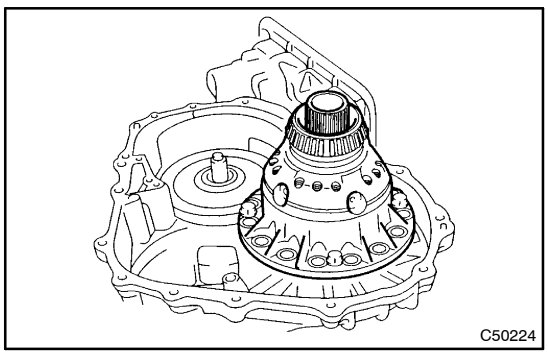
Clearance is not allowed between the plate washer and transaxle housing.



11. INSTALL FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case tapered roller bearing RR to the differential case.
SST 09316–20011, 09214–76011

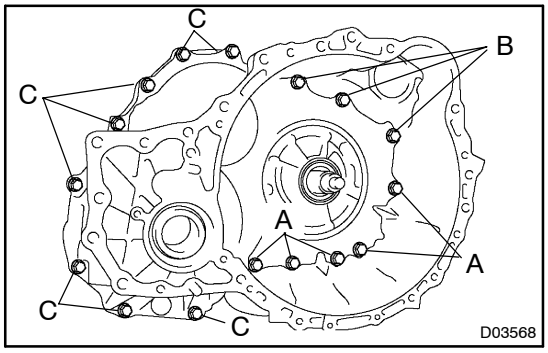
NOTICE:
Do not make a damage on the bearing cage during the bearing inner race installation.



(b) Install the front differential case shim RR to the transaxle case.

If the bearing is new, check to select a front differential case shim RR of proper thickness starting from the thinner ones.
If the bearing is reused, check to select a front differential case shim RR starting from the same thickness as one installed before disassembly.

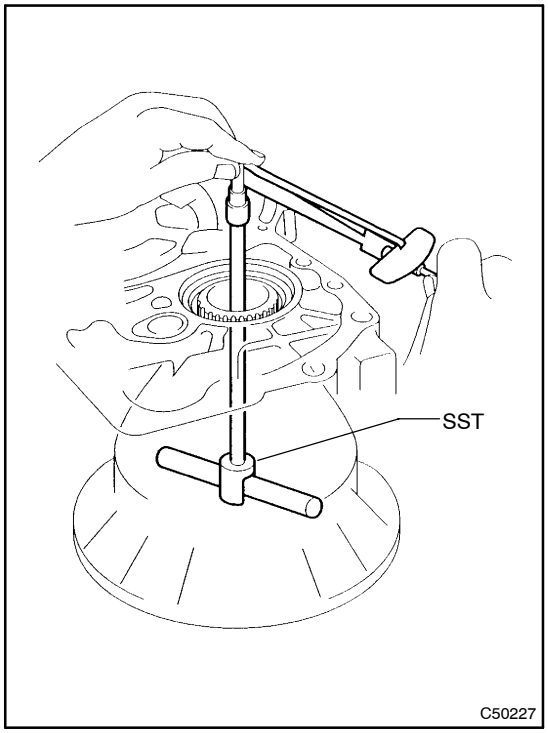
(c) Using SST, install the outer race of the front differential case tapered roller bearing RR.
SST 09950–60020 (09951–00890), 09950–70010 (09951–07100)



NOTICE:
Clearance is not allowed between the differential case shim and transaxle case.

12. ADJUST TAPERED POLLER BEARING PRELOAD

(a) Install the intermediate case to the differential case LH and fix them with 4 bolts.

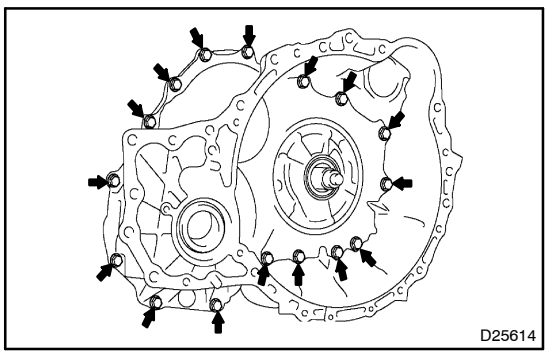


(b) Install the differential assy to the transaxle case.

(c) Clean the matching surfaces of the transaxle case and transaxle housing.

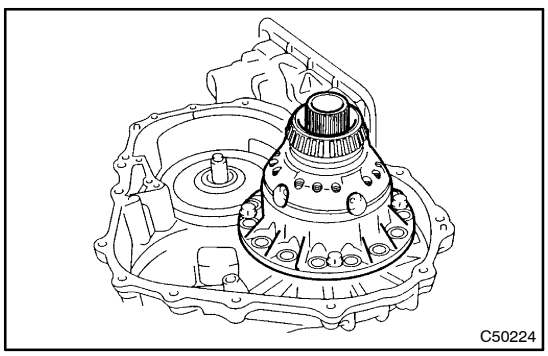
(d) Install the transaxle housing to the transaxle case and tighten them with the 16 bolts.
Torque:
Bolt A: 25 N·m (255 kgf·cm, 18 ft·lbf)
Bolt B 33 N·m (337 kgf·cm, 24 ft·lbf)
Bolt C 29 N·m (295 kgf·cm, 21 ft·lbf)
Bolt length:
Bolt A: 50 mm (1.969 in.)
Bolt B: 50 mm (1.969 in.)
Bolt C: 42 mm (1.654 in.)

HINT:
Usually, bolt A is a non–reusable bolt. In this case, however, it can be used after cleaning it.



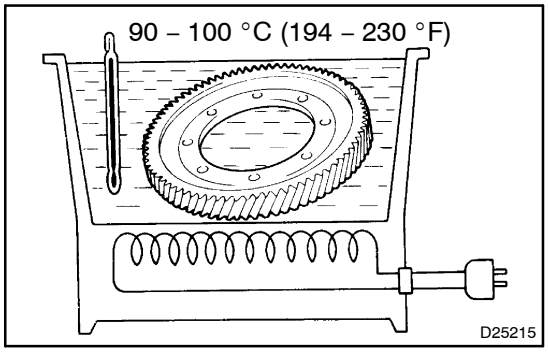
(e) Using SST, turn the differential assy right and left 2or 3 times to allow the bearing settle.
SST 09564–32011

(f) Using SST and a torque wrench, measure the turning torque of the differential case assy.
SST 09564–32011
Turning torque at 60 rpm:
New bearing
0.20 – 0.69 N·m (2.0 – 7.0 kgf·cm, 1.8 – 6.1 in.·lbf)
Used bearing
0.10 – 0.35 N·m (1.0 – 3.6 kgf·cm, 0.9 – 3.1 in.·lbf)



HINT:
If the turning torque is not within the specified value, refer to the table below and select a thrust washer which turning torque is within the specified value.

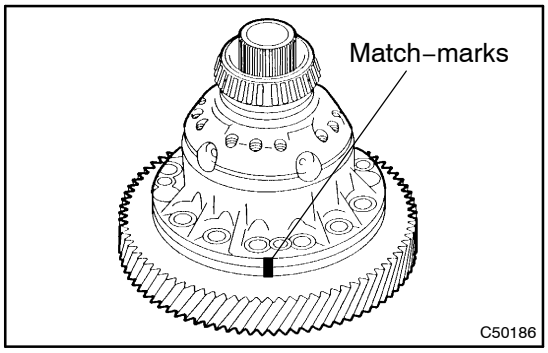
Flange thickness: mm (in.)



Mark	Thickness	Mark	Thickness
0	2.00 (0.0787)	9	2.45 (0.0965)
1	2.05 (0.0807)	A	2.50 (0.0984)
2	2.10 (0.0827)	B	2.55 (0.1004)
3	2.15 (0.0846)	C	2.60 (0.1024)
4	2.20 (0.0866)	D	2.65 (0.1043)
5	2.25 (0.0886)	E	2.70 (0.1063)
6	2.30 (0.0906)	F	2.75 (0.1083)
7	2.35 (0.0925)	G	2.80 (0.1102)
8	2.40 (0.0945)	H	2.85 (0.1122)

(g) Remove the 16 bolts and the transaxle housing.

(h) Remove the differential assy.

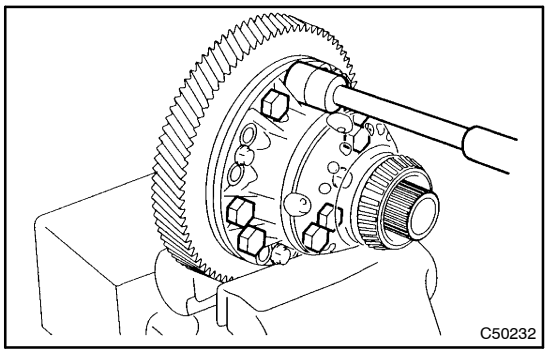


13. INSTALL FRONT DIFFERENTIAL RING GEAR

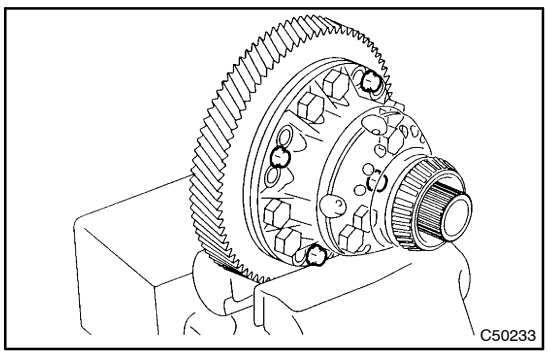
(a) Using ATF and heater, heat the front differential ring gear to 90 – 110 °C. (194.0 – 230.0 °F)

NOTICE:

Do not overheat the ring gear to 110 °C (230.0 °F) or more.



(b) Clean the contact surface of the front differential case.



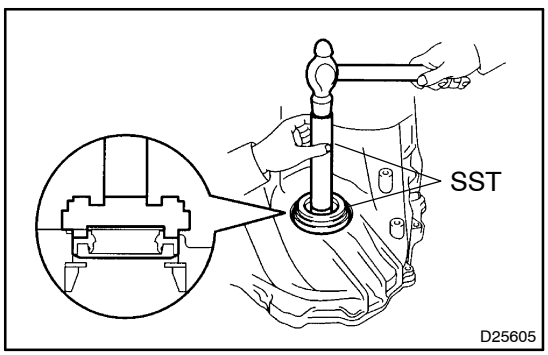
(c) Set the match–marks, install the front differential ring gear case quickly.

NOTICE:

Do not install the bolts while the ring gear is hot.

(d) Temporarily install the 8 bolts as shown in the illustration.

(e) Remove the 4 bolts shown in the illustration.



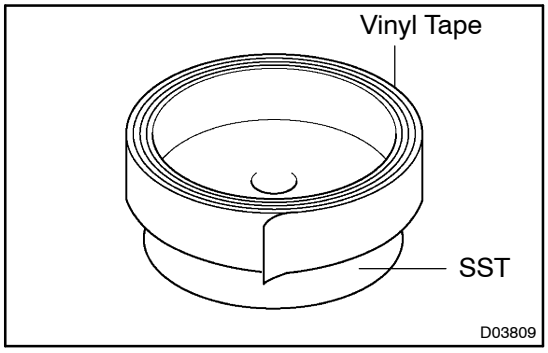
(f) Temporarily install the remaining 8 set bolts.

(g) Fully tighten the set bolts.

Torque: 95.1 N·m (970 kgf·cm, 70 ft·lbf)

NOTICE:

Tighten the bolts a little at a time in diagonal order.

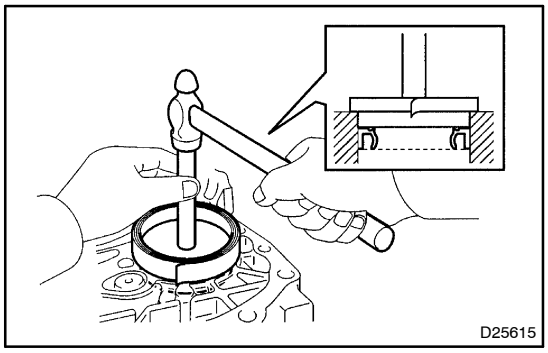


14. INSTALL DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Using SST and a hammer, install a new oil seal.

SST 09223–15020, 09950–70010 (09951–07100)

(b) Coat the rip of oil seal with a little MP grease.



15. INSTALL TRANSAXLE HOUSING OIL SEAL

(a) Wind a vinyl tape around SST at the place 6.0 mm (0.236 in.) above from the bottom end until the thickness of the wound tape is about 5.0 mm (0.197 in.).
SST 09950–60020 (09951–00730)

NOTICE:
Remove foreign matter such as grease on the SST before winding the tape.

(b) Coat the rip of oil seal with a little MP grease.

(c) Using SST, install a new oil seal.
SST 09950–60020 (09951–00730), 09950–70010 (09951–07150)
Standard press in depth:
5.5 – 6.5 mm (0.217 – 0.256 in.)

NOTICE:
Stop pressing when the would vinyl tape is contact with the transaxle housing.

HOW TO USE THIS MANUAL

010B2–20

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally, repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing/Installing, Replacing, Disassembling/Reassembling, Checking and Adjusting
3. Final Inspection

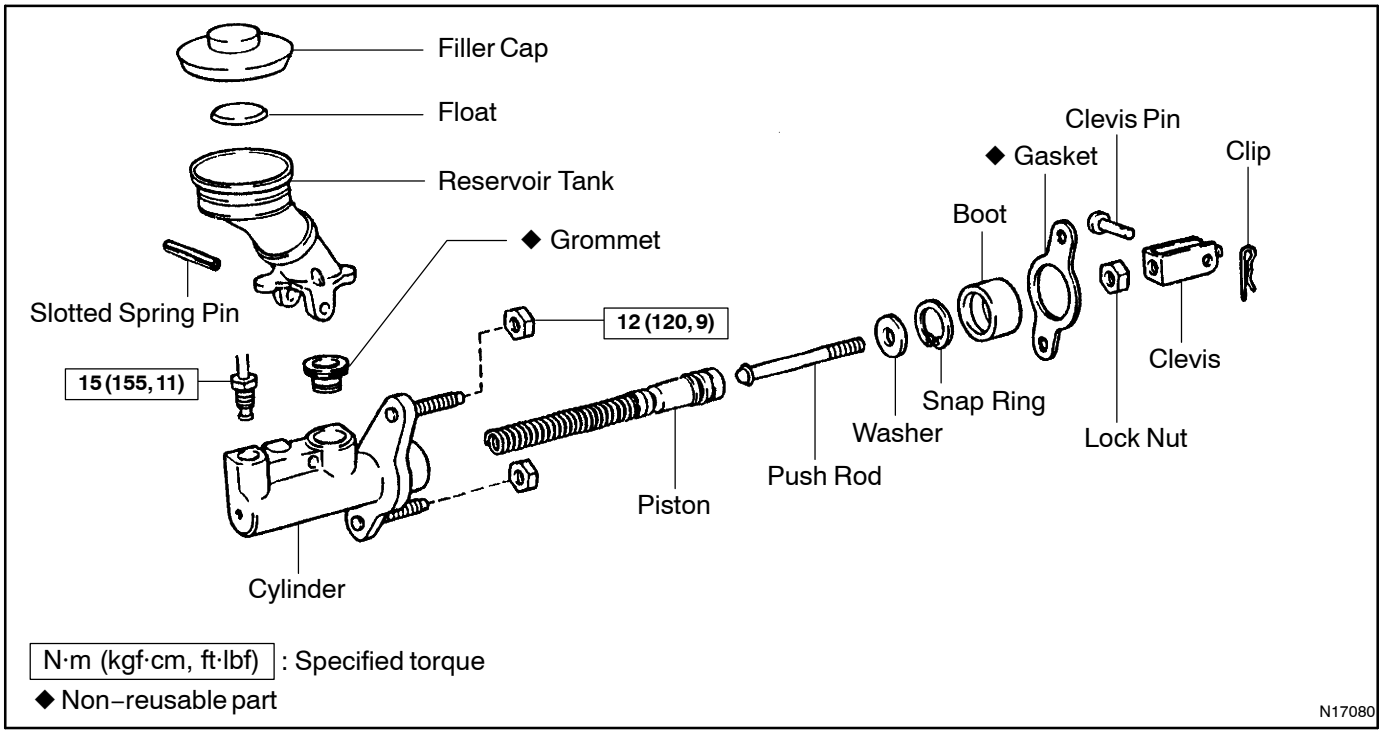
(c) This manual explains the 1st process of ”Diagnosis” (found in the ”Diagnostics” section), the 2nd process of ”Removing and Installing, Replacing, Disassembling, Installing and Checking, and Adjusting”, but the 3rd process of ”Final Inspection” is omitted.

(d) The following essential operations are not written in this manual. However, these operations must be performed in actual situations.
(1) Operations with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the book as a reference to help you find the item to be repaired.

3. PREPARATION



(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repair situation. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.

4. REPAIR PROCEDURES

(a) Component drawing is placed under the title where necessary.

(b) Non–reusable parts, grease application area, precoated parts and tightening torque are specified in the component drawings.

Example:

(c) Tightening torque, grease application area, and non–reusable parts are described as important points in the procedures.

NOTICE:

There are cases where such information can only be explained by using an illustration. In these cases, all the information such as torque, oil, etc. are described in the illustration.

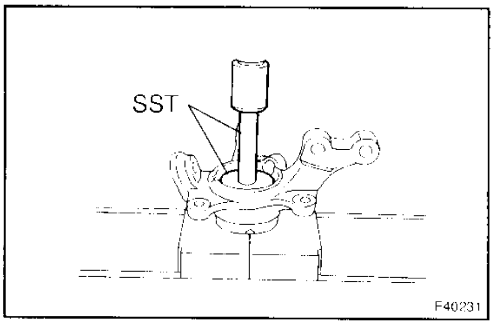
(d) Installing procedures are performed in the reverse order of the removal and only the important points are described.

(e) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notices are placed.

(f) There may be a case where the illustrations of similar models are used. In that case, specific details may be different from the actual vehicle.

(g) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.



(2) The task heading tells what to do.

(3) The explanation text tells how to perform the task and gives other information such as specifications and warnings.

Example:

Illustration:

what to do and where

Task heading: what to do

14. INSTALL FRONT AXLE HUB LH BEARING

(a) Using SST and a press, install a new bearing to the steering knuckle. ← *Detailed text: how to perform task*

SST 09950–60020 (09951–00720), 09950–70010 (09951–07100)

Set part No

Component part No.

D31009

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always are written in bold type to stand out from the rest of the test.

5. SERVICE SPECIFICATIONS

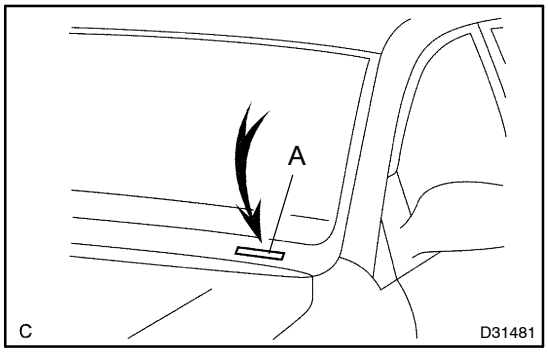
(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for quick reference.

6. TERMS DEFINITION

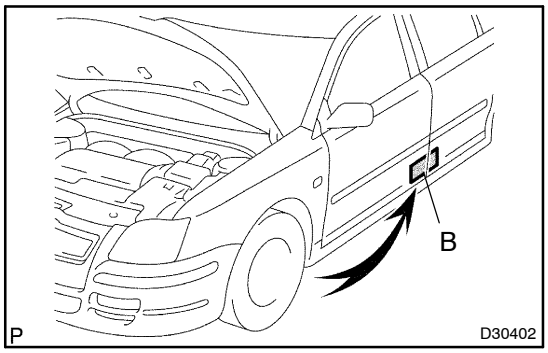
CAUTION	Indicates the possibility of injury to you or other people.
NOTICE	Indicates the possibility of damage to the components being repaired.
HINT	Provides additional information to help you to perform the repair efficiently.

7. SI UNIT

(a) The units given in this manual are primarily expressed according to the SI UNIT (International System of Units), and alternately expressed in the metric system and in the English System.



Example:

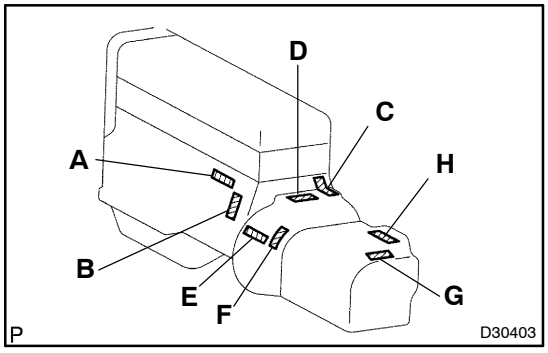


Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

IDENTIFICATION INFORMATION

VEHICLE IDENTIFICATION AND SERIAL NUMBERS

010SB–01



1. VEHICLE IDENTIFICATION NUMBER

(a) The vehicle identification number is stamped on the vehicle identification number plate and the certification label, as shown in the illustration.

A: Vehicle Identification Number Plate

B: Certification Label

2. ENGINE SERIAL NUMBER AND TRANSAXLE SERIAL NUMBER

(a) The engine serial number is stamped on the cylinder block of the engine and the transmission serial number is stamped on the housing as shown in the illustration.

A: 1CD–FTV

B: 1AZ–FE, 1AZ–FSE, 2AZ–FSE

C: 1ZZ–FE, 3ZZ–FE

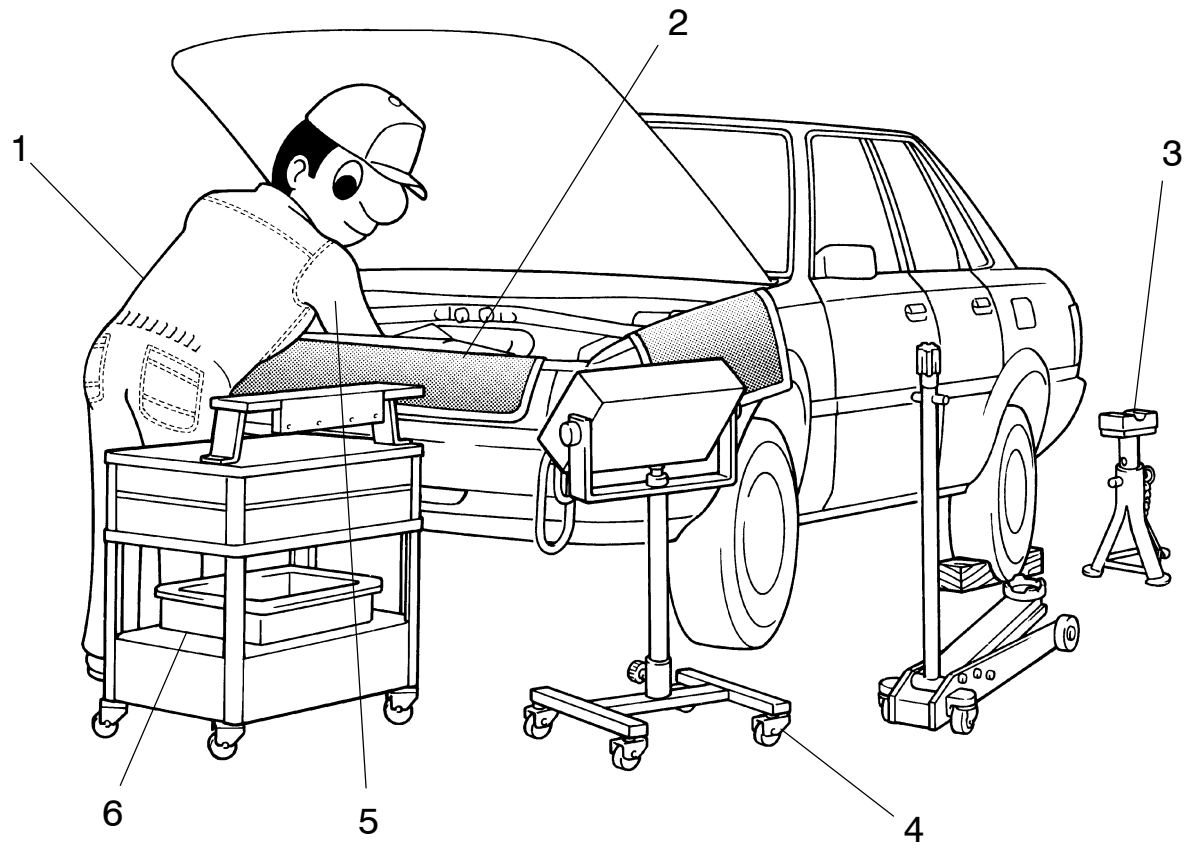
D: C50, C250

E: U241E, U151E

F: E354, E357

G: U241E, U151E

H: U341E

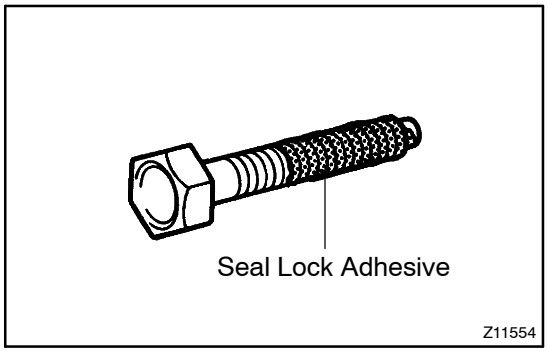


REPAIR INSTRUCTION

010LF–03

PRECAUTION

1. BASIC REPAIR HINT



(a) HINTS ON OPERATIONS

1	Looks	• Always wear a clean uniform. • Hat and safety shoes must be worn.
2	Vehicle protection	• Set a grill cover, fender cover, seat cover and floor mat before starting operation.
3	Safe operation	• When working with 2 or more persons, be sure to check the safety of one another. • When working with the engine running, pay attention to providing ventilation for exhaust fumes in the workshop. • When working with high–temperatures, rotating, moving or vibrating parts, be careful not to burn or injure yourself. • When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use safety equipment.
4	Preparation of tools and measuring gauge	• Before starting repairs, prepare the tool stand, SST, gauge, oil, shop rag and parts for replacement.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of the trouble condition and perform effective operation. • Before removing the parts, check the general condition of the assembly, and for deformation and damage. • When the structure is complicated, take a notes or make matchmarks as not to make mistakes that affect the function of the parts. • Clean and wash the removed parts if necessary and assemble them after a thorough check.
6	Removed parts	• Place the removed parts in the correct order to avoid mixing them up or making them dirty. • As for non–reusable parts such as gaskets, O–rings, and self–locking nuts, replace them with new ones following the instructions in this manual. • Organize the parts that were replaced in a box and show them to the customer.

(b) JACKING UP AND SUPPORTING VEHICLE

(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations (See page 01–19).

(c) PRECOATED PARTS

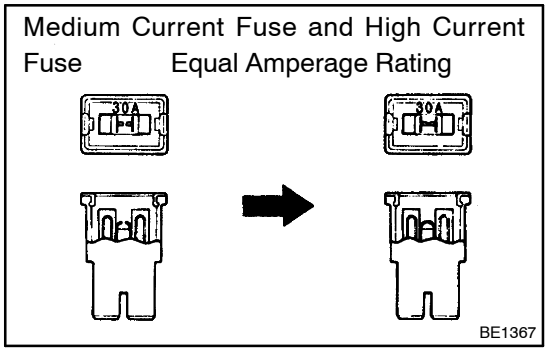
(1) Precoated parts such as bolts, nuts, etc., are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

(3) When reusing precoated parts, clean off the old adhesive and dry the part with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

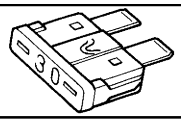
Check the torque with the lower limit value of the torque tolerance.

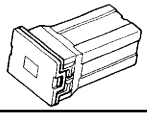


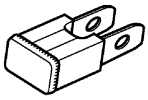
(4) Depending on the seal lock agent to be applied, there may be cases where it is necessary to leave it for a specified time until it hardens.

(d) GASKETS

(1) When necessary, use a sealer on gaskets to prevent leaks.







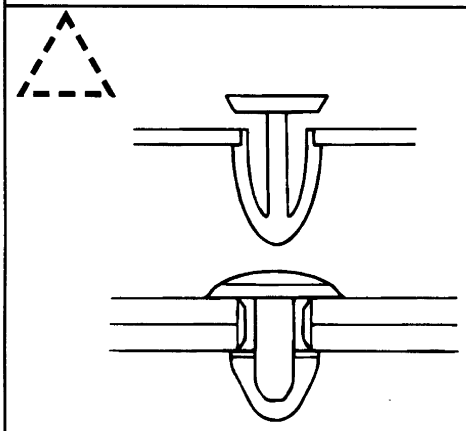
(e) BOLTS, NUTS AND SCREWS

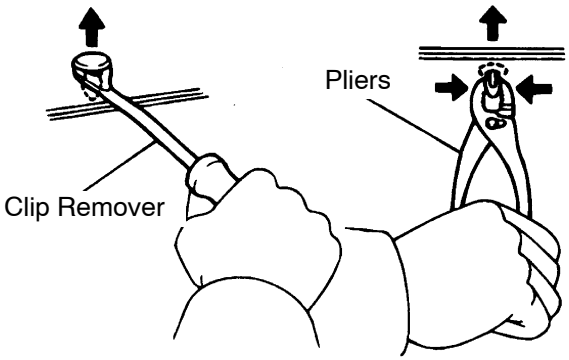
(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.

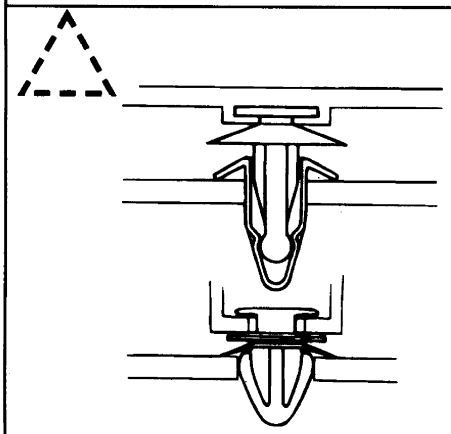
(f) FUSES

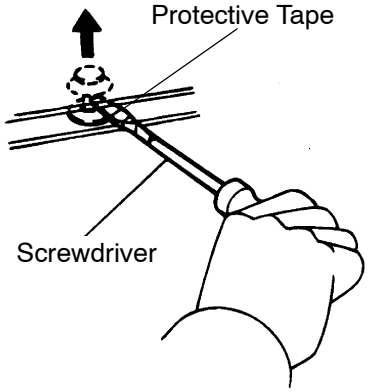
(1) When replacing fuses, be sure that a new fuse has the correct amperage rating. DO NOT exceed the rating, or use one with a lower rating.

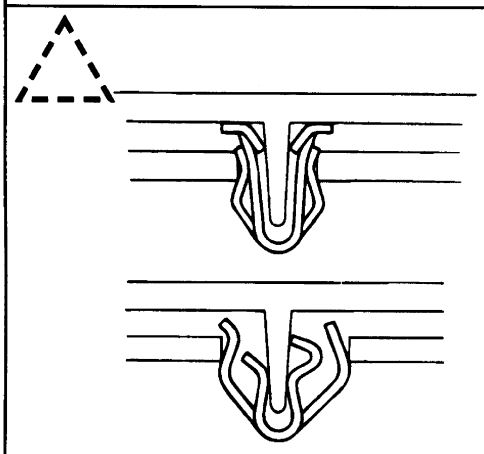
Illustration	Symbol	Part Name	Abbreviation
 BE5594	 IN0365	FUSE	FUSE
 BE5595	 IN0366	MEDIUM CURRENT FUSE	M–FUSE
 D27353	 IN0367	HIGH CURRENT FUSE	H–FUSE

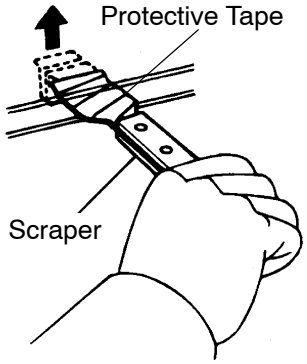






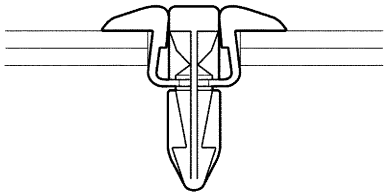


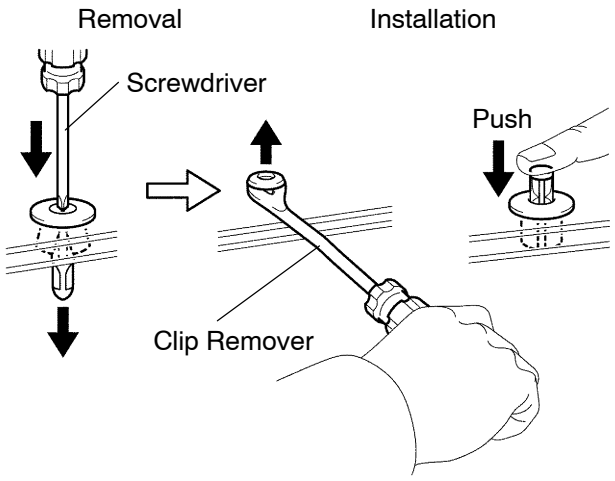


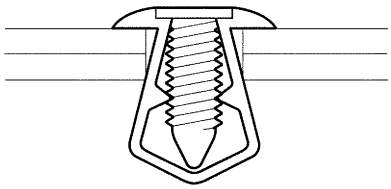


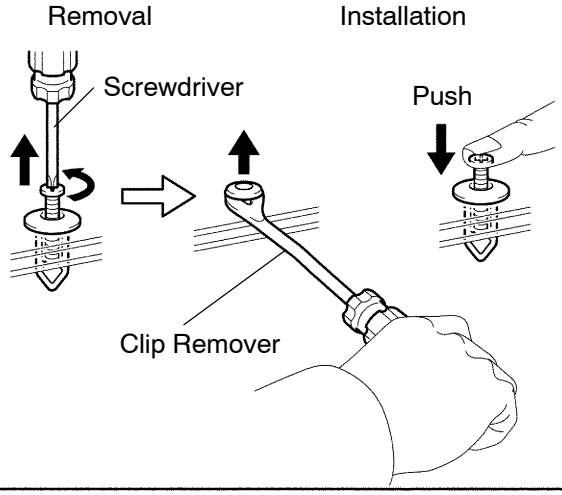
V35002

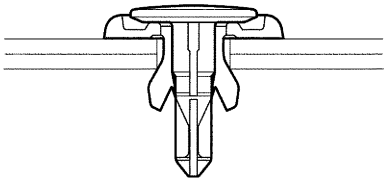
(g) CLIPS

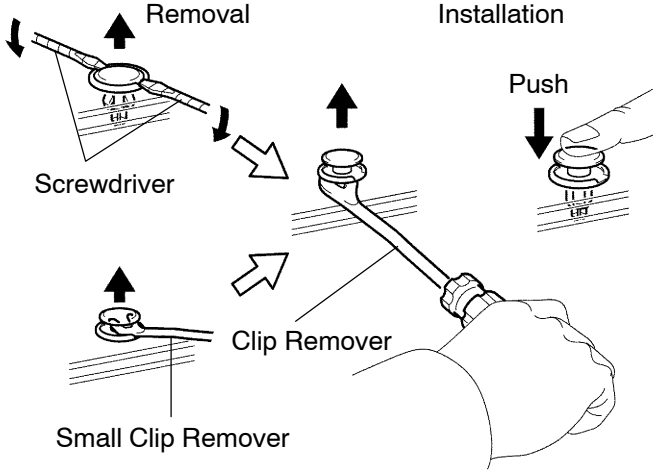








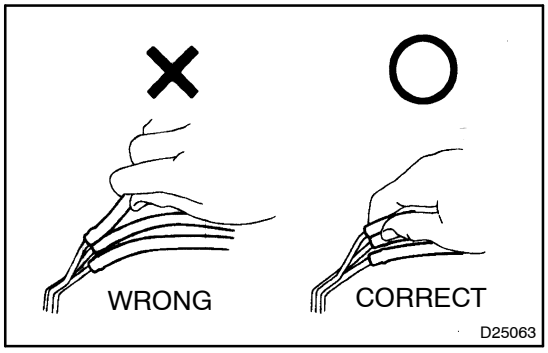




(1) The removal and installation methods of typical clips used in body parts are shown in the table below.

HINT:

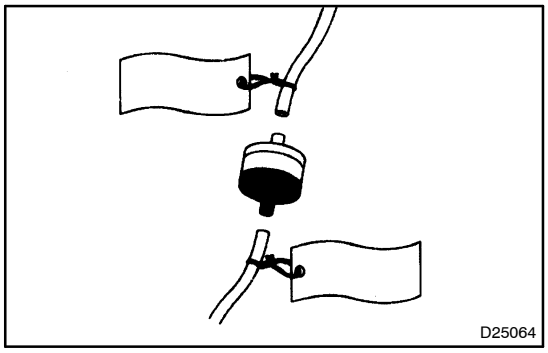
If the clip is damaged during the procedure, always replace it with a new clip.



Shape (Example)	Removal/Installation
	
	
	

D25786

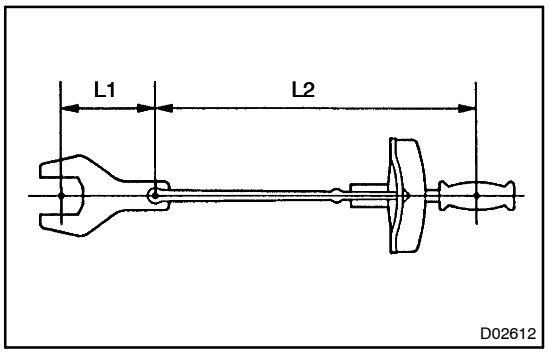
Shape (Example)	Removal/Installation
	
	
	



P

V35006

(h) REMOVAL AND INSTALLATION OF VACUUM HOSES

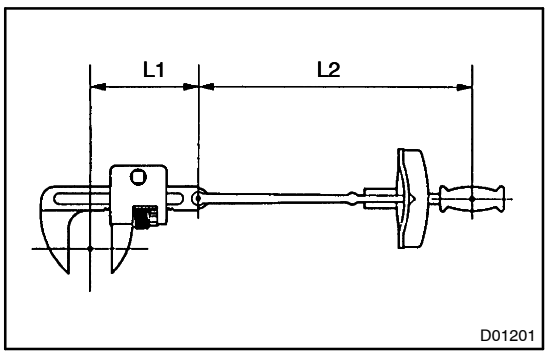


(1) To disconnect vacuum hoses, pull them by holding the end, not the middle of the hose.

(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing the job, make a double check whether the vacuum hoses are properly connected. A label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. Use a step–down adapter for adjustment. Once the hose has been stretched, it may leak air.



(i) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL

(1) When the torque wrench is combined with SST or an extension tool to extend the length, and you tighten until the torque wrench reads the specified torque value, the actual torque becomes excessive.

(2) In this manual, only the specified torque is described. In case of using SST or extension tool, calculate the reading of the torque wrench by the following formula.

(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or extension tool (cm)
L2	Length of torque wrench (cm)

2. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

HINT:

The AVENSIS is equipped with an SRS (Supplemental Restraint System), which includes the driver airbag, front passenger airbag, instrument panel passenger airbag, instrument panel lower airbag, side airbag, curtain shield and seat belt pretensioner.

Failure to carry out the service operations in the correct sequence could cause the supplemental restraint system to unexpectedly deploy while servicing. This could cause a serious accident.

Furthermore, if a mistake is made when servicing the supplemental restraint system, it is possible that the SRS will fail to operate when required. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully. Then follow the correct procedures described in this manual.

(a) GENERAL NOTICE

(1) Malfunction symptoms of the supplemental restraint system are difficult to confirm so the diagnostic trouble codes become the most important source of information when troubleshooting. When troubleshooting the supplemental restraint system, always check the diagnostic trouble codes before disconnecting the battery (See Pub. No. RM1018E on 05–1184).

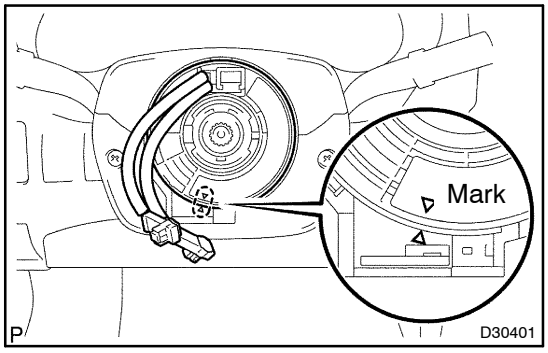
(2) Work must be started after 90 seconds from the time that the ignition switch is turned to the LOCK position and the negative (–) terminal cable is disconnected from the battery.
(The supplemental restraint system is equipped with a back–up power source. So, if work is started within 90 seconds after disconnecting the negative (–) terminal cable from the battery, the SRS may deploy).
When the negative (–) terminal cable is disconnected from the battery, memory of the clock and audio systems is cancelled. So, before starting work, make a record of the contents recorded in each memory system. Then, when work is finished, reset the clock and audio systems as before.

(3) Even in the case of a minor collision where the SRS does not deploy, the horn button assembly, instrument panel passenger airbag assembly and seat belt pretensioner should be inspected (See Pub. No. RM1018E on 60–19 and 60–9).

(4) Never use the SRS related parts from another vehicle. When replacing the parts, replace them with new parts.

(5) Before repairs, remove the airbag sensor if impacts are likely to be applied to the sensor during repairs.

(6) Never disassemble and repair the center airbag sensor assembly, side airbag sensor assembly, horn button assembly, instrument panel passenger airbag assembly, front seat airbag assembly, instrument panel lower airbag assembly, curtain shield airbag assembly or seat belt pretensioner.



(7) If the center airbag sensor assembly, the side airbag sensor assembly, the horn button assembly, the instrument panel passenger airbag assembly, the instrument panel lower airbag assembly have been dropped, or if there are cracks, dents or other defects in the case, bracket or connector, replace them with new ones.

(8) Do not directly expose the airbag sensor assembly, the side airbag sensor assembly, the horn button assembly, the instrument panel passenger airbag assembly, the instrument panel lower airbag assembly or the seat belt pretensioner to hot air or flames.

(9) Use a volt/ohmmeter with high impedance (10 kΩ/V minimum) for troubleshooting an electrical circuits.

(10) Information labels are attached to the SRS components. Follow the instructions on the notices.

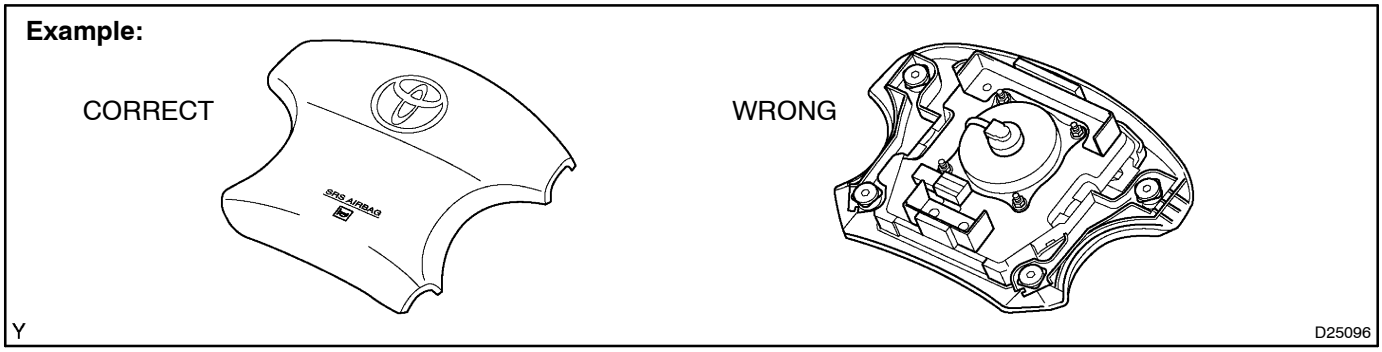
(11) After work on the supplemental restraint system is completed, check the SRS warning light (See Pub. No. RM1018E on 05–1184)

(b) SPIRAL CABLE (in Combination Switch)

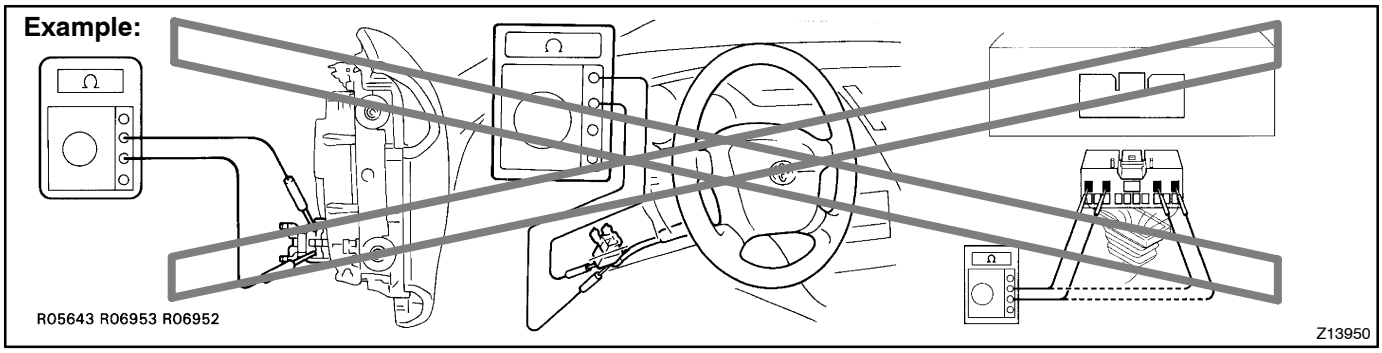
(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, otherwise cable disconnection and other troubles may occur. Refer to Pub. No. RM1018E on 60–26 of this manual concerning the correct installation of the steering wheel.

(c) HORN BUTTON ASSEMBLY (with Airbag)

(1) When removing the horn button assembly or handling a new horn button, it should be placed with the top of the pad surface facing upward. Placing it with the pad surface facing downward may lead to a serious accident if the airbag deploys for some reasons. Also, do not place anything on top of the horn button.



(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous).



(3) Grease should not be applied to the horn button assembly, and the pad should not be cleaned with any type of detergent.

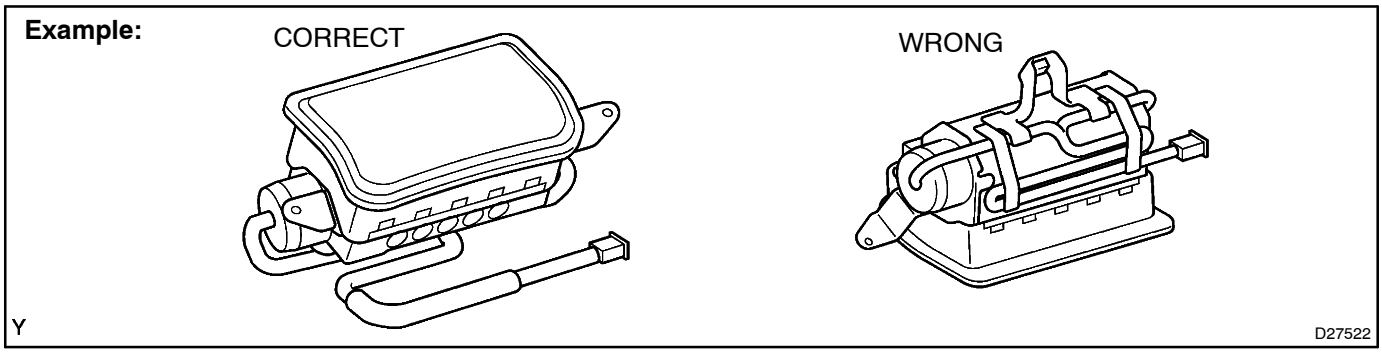
(4) Store the horn button assembly where the ambient temperature remains below 93˚C (200˚F), without high humidity and away from electrical noise.

(5) When using electric welding, disconnect the airbag connector (4 yellow pins) under the steering column near the combination switch connector before starting work.

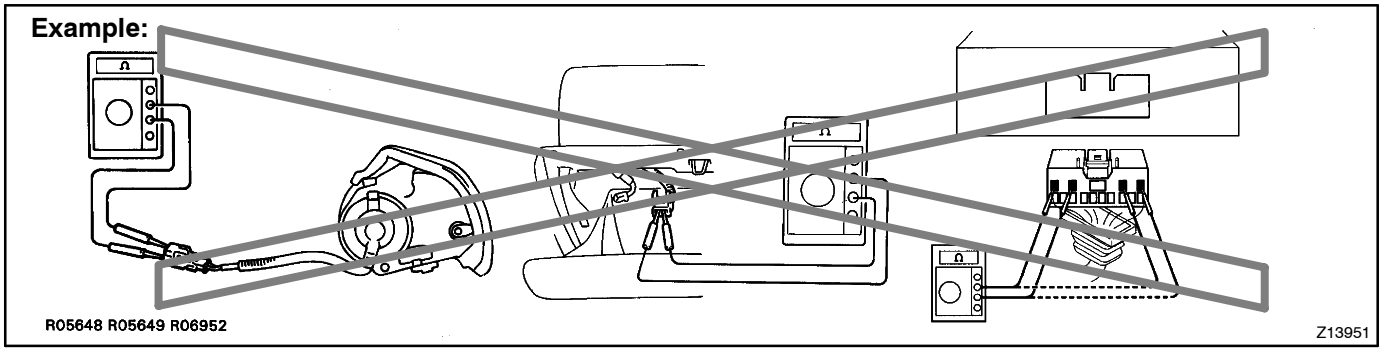
(6) When disposing the vehicle or the horn button assembly unit, the airbag should be deployed using SST before disposal (See Pub. No. RM1018E on 60–19).
Activate in a safe place away from electrical noise.

(d) INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY

(1) Always place a removed or new instrument panel passenger airbag assembly with the airbag inflation direction facing upward. Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag deploys.



(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous).



(3) Grease should not be applied to the instrument panel passenger airbag assembly and the airbag door should not be cleaned with detergents of any kind.

(4) Store the airbag assembly where the ambient temperature remains below 93°C (200°F), without high humidity and away from electrical noise.

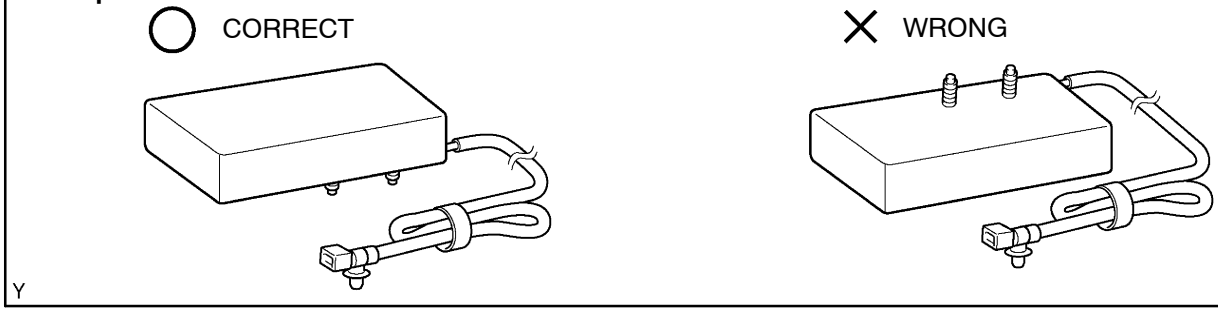
(5) When using electric welding, disconnect the airbag connector (4 yellow pins) installed on the assembly before starting work.

(6) When disposing of a vehicle or the airbag assembly unit, the airbag should be deployed using SST before disposal (See Pub. No. RM1018E on 60–30).
Activate in a safe place away from electrical noise.

(e) FRONT SEAT AIRBAG ASSEMBLY

(1) Always place a removed or new front seat airbag assembly with the airbag inflating direction facing upward.
Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag deploys.

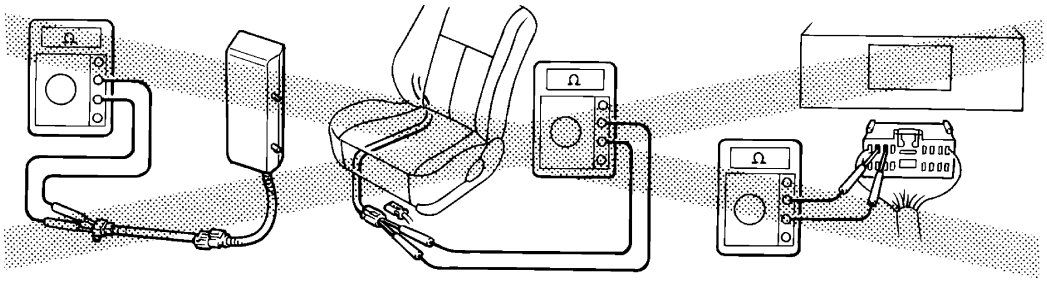
(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous.).



(3) Grease should not be applied to the front seat airbag assembly and the airbag door should not be cleaned with detergents of any kind.

(4) Store the airbag assembly where the ambient temperature remains below 93°C (200°F), without high humidity and away from electrical noise.

(5) When using electric welding, first disconnect the airbag connector (2 yellow pins) installed on the assembly before starting work.



(6) When disposing of a vehicle or the airbag assembly unit, the airbag should be inflated using SST before disposal (See Pub. No. RM1018E on 60–47).
Activate in a safe place away from electrical noise.

Example:

Y D26612

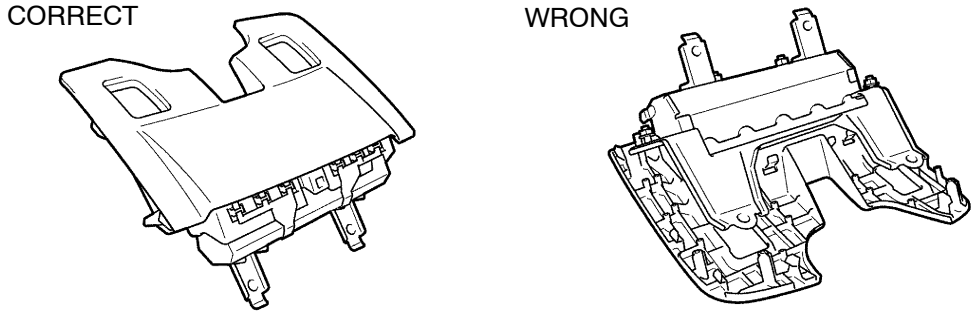
Example:

B01546

(f) INSTRUMENT PANEL LOWER AIRBAG ASSEMBLY

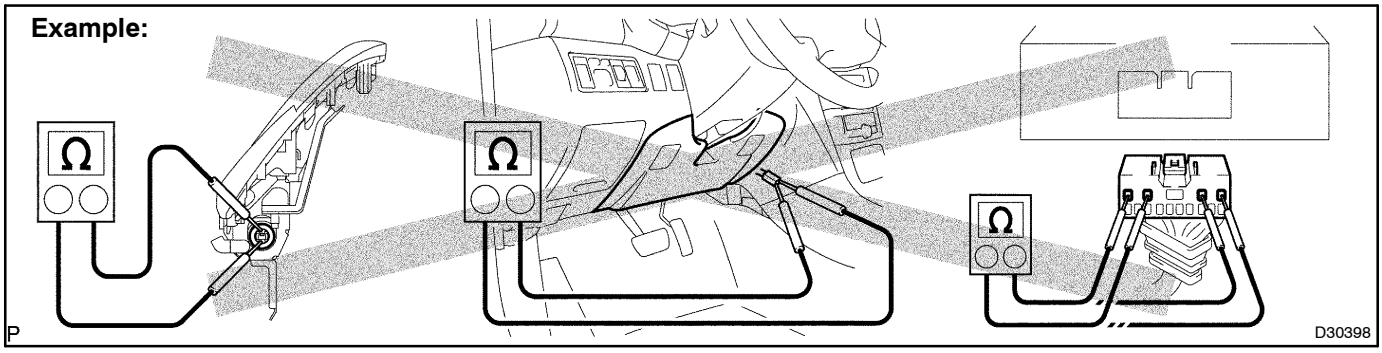
(1) Always place a removed or new instrument panel lower airbag assembly with the airbag inflating direction facing upward.
Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag deploys.

(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous.).



(3) Grease should not be applied to the instrument panel lower airbag assembly and the airbag door should not be cleaned with detergents of any kind.

(4) Store the instrument panel lower airbag assembly where the ambient temperature remains below 93°C (200°F), without high humidity and away from electrical noise.



(5) When using electric welding, first disconnect the airbag connector (2 yellow pins) installed on the instrument panel lower airbag assembly before starting work.

(6) When disposing of a vehicle or the instrument panel lower airbag assembly alone, the airbag should be inflated using an SST before disposal (See Pub. No. RM1018E on 60–55).
Activate in a safe place away from electrical noise.

Example:

P D30399

(g) CURTAIN SHIELD AIRBAG ASSEMBLY

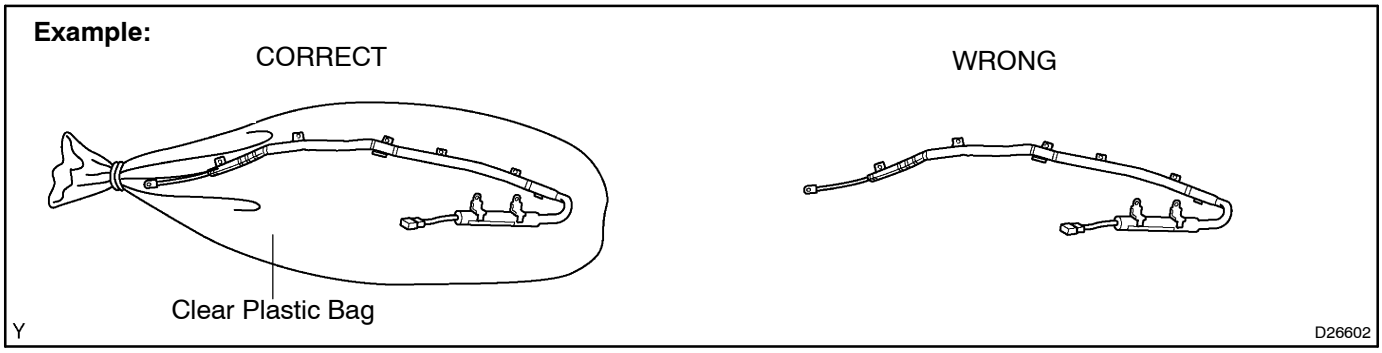
(1) Always place the removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.

NOTICE:

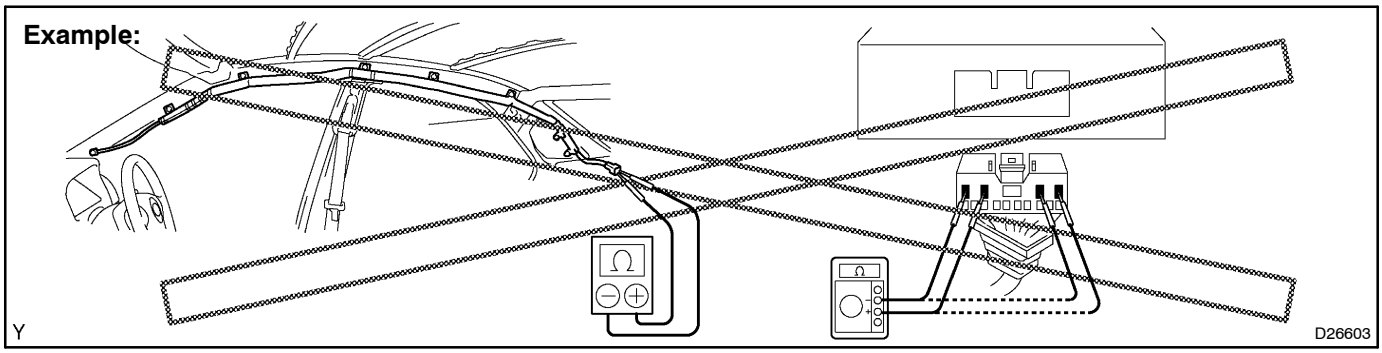
Protection bag is not re–useable.

CAUTION:

Never disassemble the curtain shield airbag assembly.



(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous).



(3) Grease should not be attached to the curtain shield airbag assembly, and the surface should not be cleared with detergents of any kind.

(4) Store the airbag assembly where the ambient temperature remains below 93°C (200°F), without high humidity and away from electrical noise.

(5) When using electric welding, first disconnect the airbag connector (4 yellow pins) from the instrument panel before starting work.

(6) When disposing of a vehicle or the curtain shield airbag assembly alone, the airbag should be deployed using SST before the disposal (See Pub. No. RM1018E on 60–41). Active in a safe place away from electrical noise.

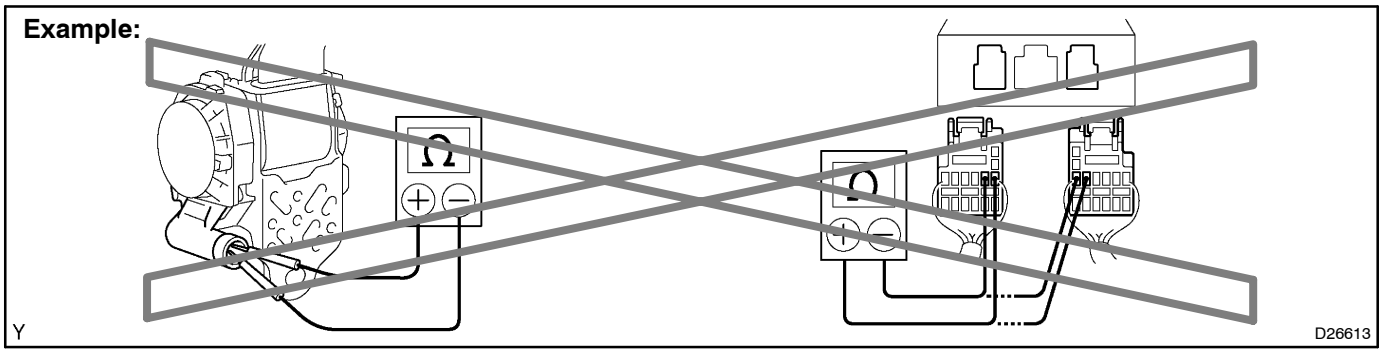
(h) SEAT BELT PRETENSIONER

(1) Never measure the resistance of the seat belt pretensioner (This may cause the seat belt pretensioner to activate, which is very dangerous.).

(2) Never disassemble the seat belt pretensioner.

(3) Never install the seat belt pretensioner in another vehicle.

(4) Store the seat belt pretensioner where the ambient temperature remains below 80˚C (176˚F) without high humidity and away from electrical noise.



(5) When using electric welding, first disconnect the connector (2 yellow pins) before starting work.

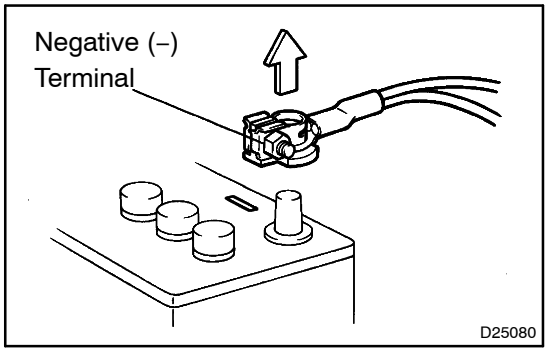
(6) When disposing of a vehicle or the seat belt pretensioner alone, the seat belt pretensioner should be activated before disposal (See Pub. No. RM1018E on 61–9). Perform the operation in a safe place away from electrical noise.

(7) The seat belt pretensioner is hot after being activation so allow some time for it to cool down sufficiently before disposal. Never apply water to cool down the seat belt pretensioner.

(8) Oil or water should not be put on the front seat outer belt, and the front seat outer belt should be cleaned with the appropriate detergents.

Example:

(i) AIRBAG SENSOR ASSEMBLY



(1) Never reuse the airbag sensor assembly involved in a collision where the SRS has deployed.

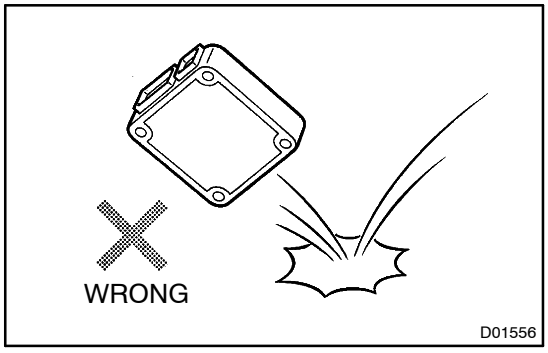
(2) The connectors to the airbag sensor assembly should be connected or disconnected with the sensor mounted on the floor. If the connectors are connected or disconnected while the airbag sensor assembly is not mounted to the floor, it could cause the supplemental restraint system to deploy potentially resulting in injury.

(3) Work must be started after 90 seconds from the time the ignition switch is turned to the ”LOCK” position and the negative (–) terminal cable is disconnected from the battery, even if only loosening the set bolts of the airbag sensor assembly.

(j) WIRE HARNESS AND CONNECTOR

(1) The SRS wire harness is integrated with the instrument panel wire harness assembly. All the connectors in the system are a standard yellow color. If the SRS wire harness becomes disconnected or the connector becomes broken due to an accident, etc., repair or replace it.

3. ELECTRONIC CONTROL



(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL

(1) Before performing electronic work, disconnect the battery negative (–) terminal cable beforehand in order to prevent it from shorting and burning out.

(2) When disconnecting and installing the terminal cable, turn the ignition switch and lighting switch OFF, and loosen the terminal nut completely. Perform these operations without twisting or prying the terminal.

(3) When the battery terminal cable is removed, the memories of the clock, radio, DTCs, etc. are erased. So before removing it, check them and make a note of their settings.

(4) When the battery negative (–) terminal cable is disconnected, memories of various systems are erased. Therefore, refer to the PRE–CHECK for each system to make sure whether or not the system needs to be initialized after the battery negative (–) terminal cable is disconnected. If necessary, be sure to initialize the system.

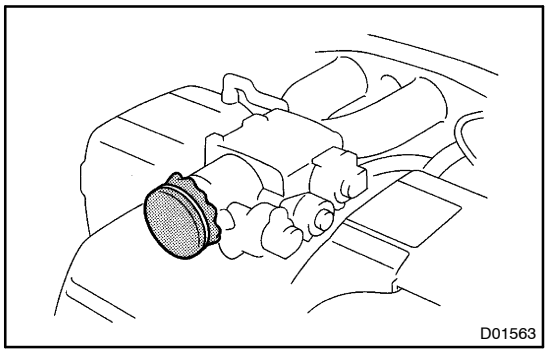
(b) HANDLING OF ELECTRONIC PARTS

(1) Do not open the cover or case of the ECU unless absolutely necessary (If the IC terminals are touched, the IC may be rendered inoperative by static electricity).

(2) To disconnect electronic connectors, pull the connector itself, not the wires.

(3) Be careful not to drop electronic components, such as sensors or relays. If they are dropped on a hard floor, they should be replaced and not be reused.

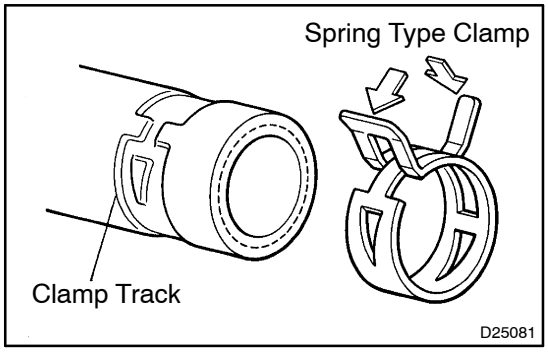
(4) When cleaning the engine with steam, protect the electronic components, air filter and emission–related components from water.



(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.

(6) When checking the continuity at the wire connector, insert the tester probe carefully to prevent terminals from bending.

4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

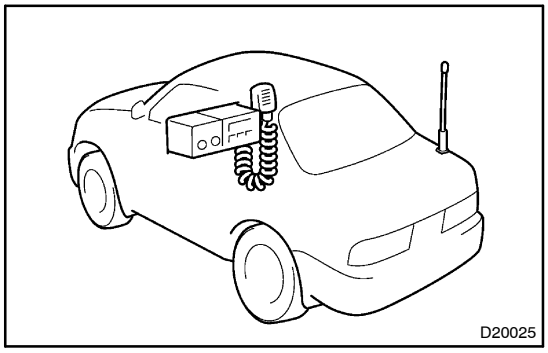


(a) PLACE FOR REMOVING AND INSTALLING OF FUEL SYSTEM PARTS
  (1) Work in a place with good air ventilation and without anything that could cause combustion around you such as a welder, grinder, drill, electric motor or stove.
  (2) Never work in a place such as a pit or nearby a pit, as there is a possibility that vaporized fuel will collect in those places.

(b) REMOVING AND INSTALLING OF FUEL SYSTEM PARTS
  (1) Prepare a fire extinguisher before starting operations.
  (2) To prevent static electricity, install a ground on the fuel changer, vehicle and fuel tank, and do not spray much water so as to prevent slipping.
  (3) Never use any electric equipment like an electric motor or a working light, as they may create sparks or a high temperature.
  (4) Never use an iron hammer, as it may create sparks.
  (5) Dispose of shop rags containing fuel deposits separately.

D01563

5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS



(a) If any metal tip is mixed in the inlet pass, this may give a bad effect to the engine and turbocharger.
(b) When removing and installing the inlet system parts, close the opening of the removed inlet system parts and the engine with a clean waste cloth or gum tape.
(c) When installing the inlet system parts, check that no metal particles have entered.

D25081

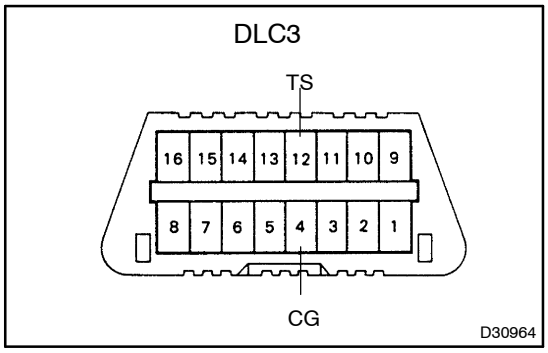
6. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the depth of the inserting portion and the clamp position to restore it surely.
(b) Replace a deformed or dented clamp for a new one.
(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.
(d) For a spring type clamp, adjust it by adding force to the arrow mark direction after the installation.

D20025

7. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

(a) Install the antenna as far away from the ECU and sensors of the vehicle electronic systems as possible.
(b) Install an antenna feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details of the ECU and sensors locations, refer to the section on applicable components.
(c) Prevent the antenna feeder from getting entangled with the other wiring, and keep the antenna feeder separate from other wiring as much as possible.
(d) Check that the antenna and feeder are correctly adjusted.
(e) Do not install any high–powered mobile communication system.



8. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TRC) SYSTEM

(a) NOTICES WHEN USING 2–WHEEL DRUM TESTER

(1) When using a 2–wheel drum tester such as a speedometer tester, a combination tester of speedometer and brake, chassis dynamometer or else, always turn the TRC system off via the TRC OFF switch before measurement.

NOTICE:

TRC system OFF condition can be confirmed by the indication, "TRC OFF", of the indicator light in the combination meter.

9. FOR VEHICLES EQUIPPED WITH VEHICLE SKID CONTROL (VSC) SYSTEM

(a) NOTICES WHEN USING DRUM TESTER

(1) When using a drum tester, be sure to start the engine with the ignition OFF, and connect SST to the terminals TS and CG of the DLC3 before measurement in order to prohibit the VSC operation.

SST 09843–18040

NOTICE:

- **Confirm that the VSC warning light blinks.**
- **VSC system will be reset when the engine is restarted.**
- **Fasten the vehicle with lock chains.**

(b) NOTICES OF RELATED OPERATIONS TO VSC

(1) Do not carry out unnecessary installation and removal as it might disorder the adjustment of related parts to VSC.

(2) Be sure to carry out the preparation for operation and the confirmation of operation completion in accordance with the instruction of the text and when the related operations to VSC are performed.

10. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline flows into the converter, it may cause overheating and is a fire hazard. To prevent this, observe the following precautions.

(a) Use only unleaded gasoline.

(b) Avoid prolonged idling.
Avoid idling the engine for more than 20 minutes.

(c) Avoid a spark jump test.

(1) Perform a spark jump test only when absolutely necessary. Perform this test as rapidly as possible.

(2) While testing, never race the engine.

(d) Avoid a prolonged engine compression measurement.
Engine compression measurements must be performed as rapidly as possible.

(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

010B5–17

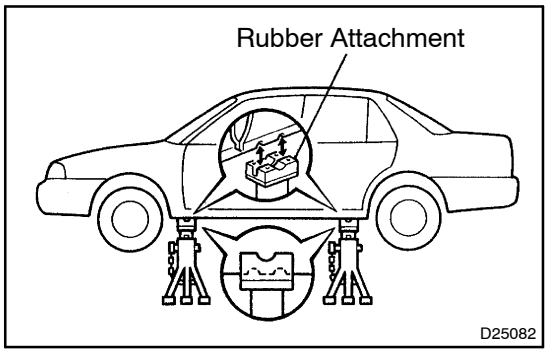
VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP

(a) As a rule, the vehicle must be unloaded when jacking up. Never jack up or lift up the vehicle loaded with things of heavy weight.

(b) When removing any parts of heavy weight like the engine and transmission, the center of gravity of the vehicle moves. Place a balance weight so as to keep it from rolling, or hold the jacking support location using the mission jack.

2. NOTICE FOR USING 4 POST LIFT



(a) Follow the instruction manual for a safety operation.

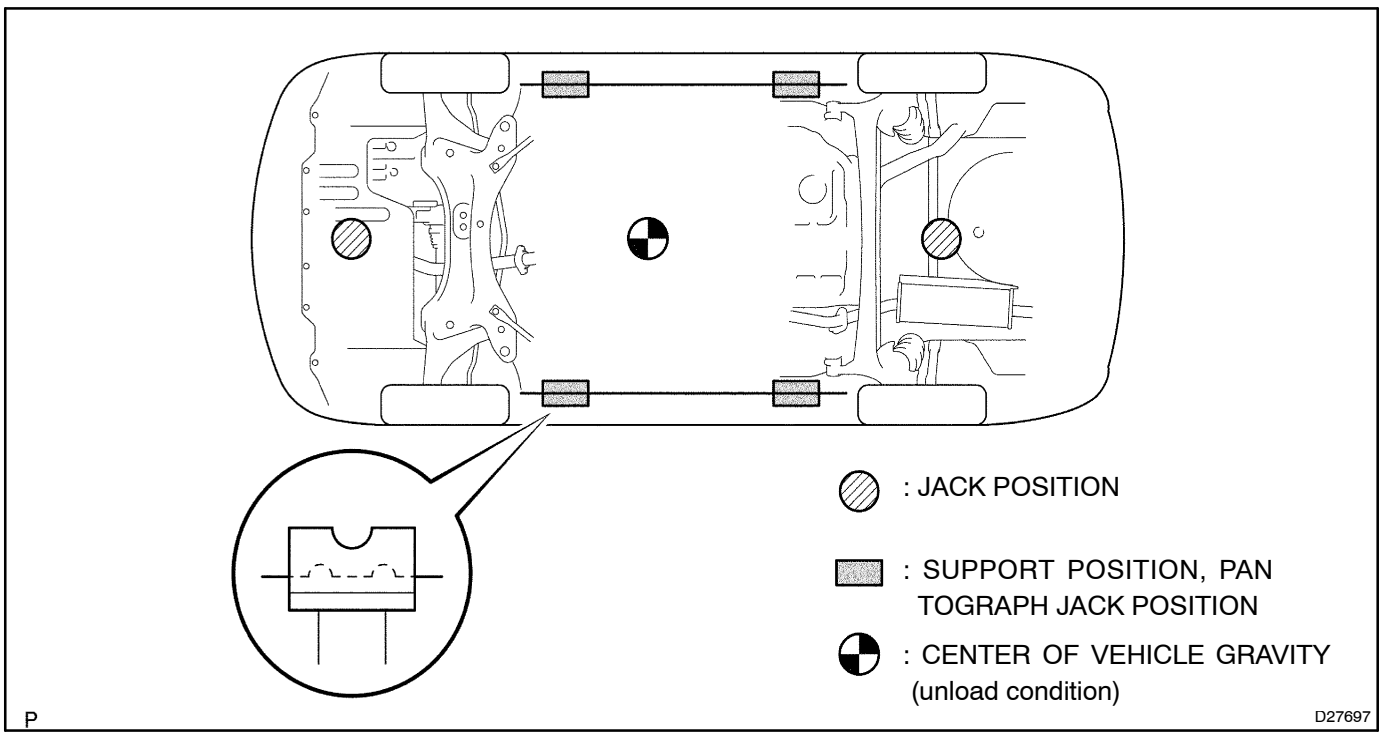
(b) Do not damage tires or wheels with a free wheel beam.

(c) Using a wheel stopper, fix the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work in the flat place using a wheel stopper at all times.

(b) Use a safety stand with a rubber attachment, as shown in the illustration.



(c) Support the specified location with a jack and safety stand accurately.

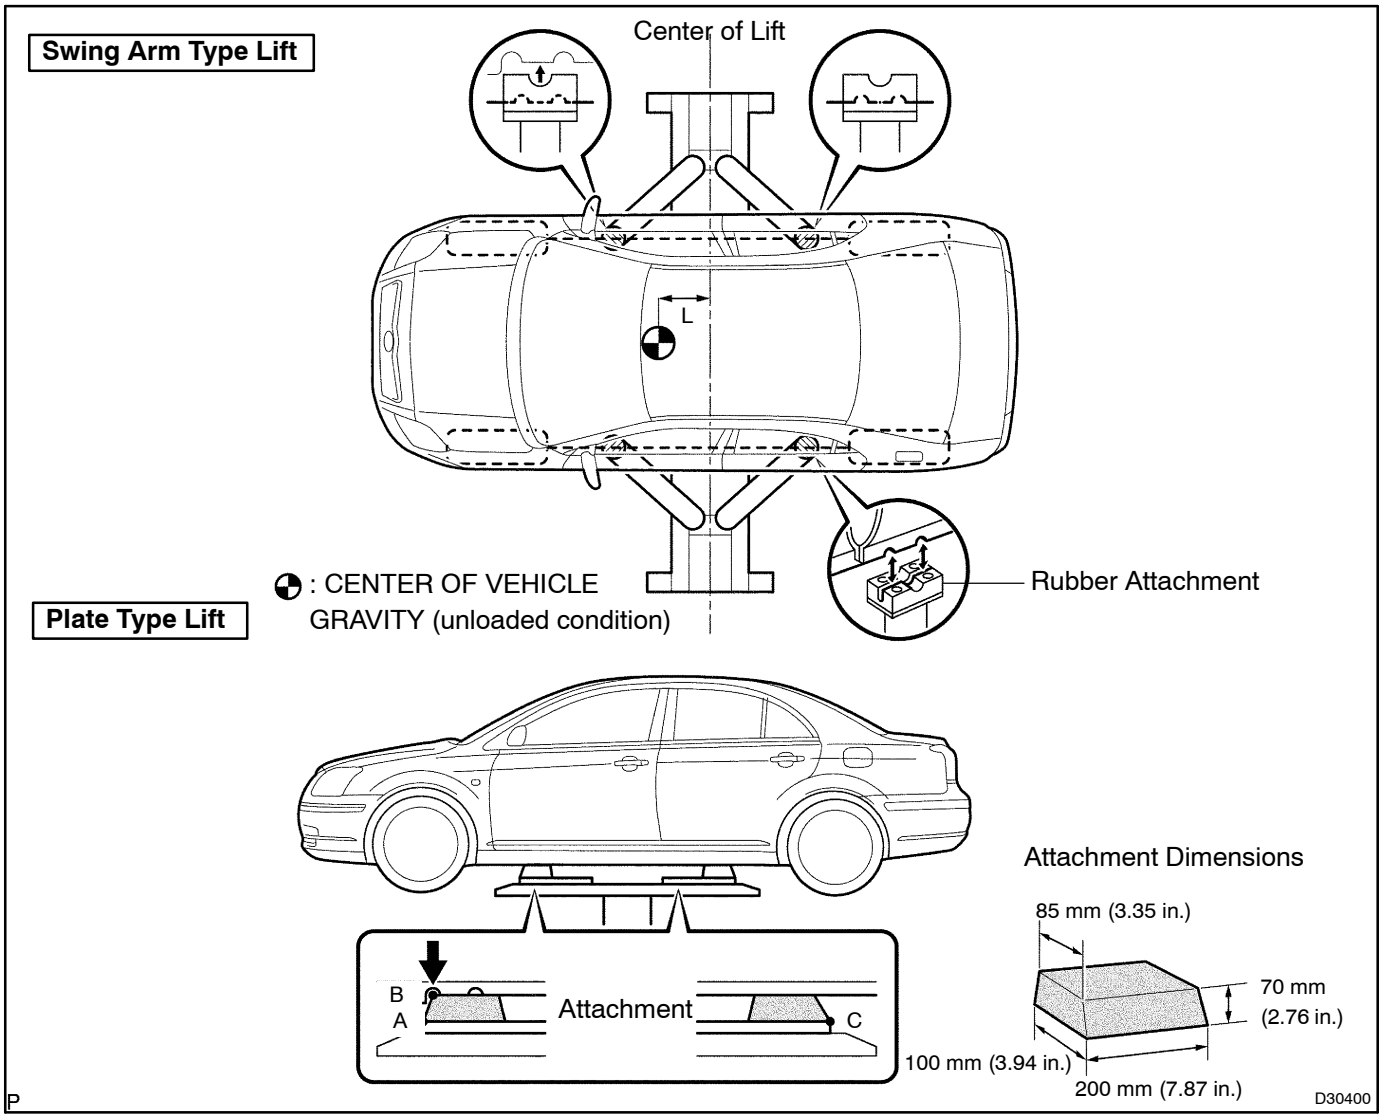
(d) When jacking up the front wheels, release the parking brake and place wheel stoppers only behind the rear wheels. When jacking up the rear wheels, place wheel stoppers only in front of the front wheels.

(e) Do not work or leave the vehicle supported only by a jack. Be sure to support the vehicle with a safety stand.

(f) When jacking up only the front wheels or only the rear wheels, place wheel stoppers to both sides of the wheels that contact ground.

(g) When jacking down the vehicle with its front wheels jacked up, release the parking brake and place wheel stoppers only in front of the rear wheels. When jacking down the vehicle with its rear wheels jacked up, place wheel stoppers only behind the front wheels.

4. NOTICE FOR USING SWING ARM TYPE LIFT



(a) Follow the instruction manual of the lift for a safe operation.
(b) Use a cradle with a rubber attachment, as shown in the illustration.
(c) Set in the vehicle so as to make its center of gravity as close as possible to the center of the lift. (”L” becomes short.)
(d) Place the vehicle horizontally by adjusting the height of the cradle, and match the groove of the cradle and the safety stand support location accurately.
(e) Be sure to lock the swing arm during the operation.
(f) Lift the vehicle up until the tires float, and shake the vehicle to make sure that the vehicle is stable.

5. NOTICE FOR USING PLATE TYPE LIFT

(a) Follow the instruction manual of the lift for a safe operation.
(b) Use a plate lift attachment.
(c) Be sure to set the vehicle to the specified position.

Right and left set position	• Place the vehicle over the center of the lift.
Front and rear set position	• Align the cushion gum ends of the plate with the attachment lower ends (A and C). • Align the attachment upper end (B) with the rocker flange front side notch.

(d) Lift the vehicle up until the tires float a bit, and shake the vehicle to make sure that the vehicle is stable.

HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS

010B6–18

GENERAL INFORMATION

There are many ECU controlled systems used in the AVENSIS. In general, ECU controlled system are considered to be very intricate and require a high level of technical knowledge and expert skill to troubleshoot. The fact is, however, that if you proceed by inspecting the circuits one by one, troubleshooting of these systems is not complex. If you have adequate understanding of the system and basic knowledge of electricity, the problem can be accurately diagnosed and fixed. This manual is designed based on the above principle to help service technicians perform accurate and effective troubleshooting, and is compiled for the following major ECU controlled systems:

The troubleshooting procedures are described on the following pages.

System	Page
1. SFI System [2AZ–FSE]	05–1
2. ECD System [1CD–FTV]	05–253
3. Electronic Controlled Automatic Transmission [ECT] [U151E]	05–525

FOR USING HAND–HELD TESTER

- Before using the tester, the tester's operator manual should be read thoroughly.
- If the tester cannot communicate with the ECU controlled systems when you have connected the cable of tester to the DLC3 with the ignition switch and tester turned ON, there is a problem on the vehicle side or tester side.
  (1) If the communication is normal when the tester is connected to another vehicle, inspect the diagnosis data link line (Bus⊕line) or ECU power circuit of the vehicle.
  (2) If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself, so perform the Self Test procedures outlined in the Tester Operator's Manual.

010B7–18

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

Carry out troubleshooting in accordance with the procedures on the following page. Here, only the basic procedures are shown. Details are provided in the Diagnostics Section, showing the most effective methods for each circuit. Confirm the troubleshooting procedures first for the relevant circuit before beginning troubleshooting of that circuit.

1	Vehicle brought to workshop

2	Customer problem analysis

(a) Ask the customer about the conditions and environment when the problem occurred.

3	Symptom confirmation and DTC (and freeze frame data) check

(a) Check the battery positive voltage.
Voltage: 11 to 14 V (Engine stopped)

(b) Visually check the wire harness, connectors and fuses for open and short, etc.

(c) Warm up the engine to the normal operating temperature.

(d) Confirm the problem symptoms and conditions, and check for DTCs according to the related chart.

OK → **Go to step 5**

NG

4	DTC chart

(a) Check the results obtained in step 3, then confirm the inspection procedures for the system or the part which should be checked using the DTC chart.

→ **Go to step 6**

5	Problem symptoms chart

(a) Check the results obtained in step 3, then confirm the inspection procedures for the system or the part which should be checked using the problem symptoms table.

6	Circuit inspection or parts inspection

(a) Confirm the circuit for the system or the part which should be checked using the problem symptoms table or the results obtained in step 4.

7	Repair

(a) Repair the affected system or part in accordance with the instructions in step 6.

8	Confirmation test

(a) After completing repairs, confirm that the problem has been solved (If the problem does not recur, perform a confirmation test under the same conditions and in the same environment as when it occurred for the first time).

END

CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, the problem symptoms must be confirmed accurately, meaning that all preconceptions must be set aside in order to make an accurate judgement. To ascertain what the problem symptoms are, it is extremely important to ask the customer about the problem and conditions when it occurred.
- The following 5 items are important points in the problem analysis. Past problems which are thought to be unrelated and the repair history, etc. may also help in some cases. Therefore, as much information as possible should be gathered and its relationship with the problem symptoms should be correctly ascertained for use as reference in troubleshooting. A customer problem analysis table is provided for your use in the Diagnostics Section for each system.

Important Points with Customer Problem Analysis

- What ––––– Vehicle model, system name
- When ––––– Date, time, occurrence frequency
- Where ––––– Road conditions
- Under what conditions? ––––– Running conditions, driving conditions, weather conditions
- How did it happen? ––––– Problem symptoms

(Sample) Supplemental restraint system check sheet.

CUSTOMER PROBLEM ANALYSIS CHECK

Supplemental Restraint System Check Sheet **Inspector's Name**

Customer's Name		**Registration No.**	
		Registration Year	/ /
		Frame No.	
Date Vehicle Brought In	/ /	**Odometer Reading**	**km miles**

Date Problem First Occurred	/ /
Weather	☐ Fine ☐ Cloudy ☐ Rainy ☐ Snowy ☐ Other
Temperature	Approx.

Vehicle Operation	☐ Starting ☐ Idling ☐ Driving [☐ Constant speed ☐ Acceleration ☐ Deceleration ☐ Other]

SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

- The diagnostic system in AVENSIS has various functions. The first function is the Diagnostic Trouble Code (DTC) Check, in which a malfunction in the signal circuits to the ECU is stored in code form in the ECU memory. Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly. By using these check functions, it is possible to quickly narrow down potential problem areas and troubleshooting can be performed effectively. The diagnostic functions are incorporated in the following systems in the AVENSIS.

System	Diagnostic Trouble Code Check	Input Signal Check (Sensor Check)	Diagnostic Test Mode (Active Test)
SFI System [2AZ–FSE]	○ (with Check Mode)	○	○
ECD System [1CD–FTV]	○ (with Check Mode)	○	○
Electronically Controlled Automatic Transmission [ECT] [U151E]	○ (with Check Mode)	○	–

- In the DTC check, it is very important to determine whether the problem indicated by the DTC is still occurring or has occurred in the past but returned to normal at present. In addition during the problem symptom check, it a check must be made on whether the malfunction indicated by the DTC is directly related to the problem symptom or not. For this reason, the DTC should be checked before and after symptom confirmation to determine the current conditions. If this is not done, it may, depending on the case, result in unnecessary troubleshooting for systems that are operating normally. This would make more difficult to detect the problem area or to try to repair irrelevant areas. Therefore, always follow the procedures in the correct order and perform the DTC check.
- A flow chart showing how to proceed with troubleshooting using the diagnostic trouble code (DTC) check is shown the this page. This flow chart shows how to utilize the DTC check effectively. Then, by carefully checking the results, this chart indicates how to proceed either to the DTC troubleshooting or to the troubleshooting of the problem symptoms table.

1 **DTC check**

2 **Make a note of DTCs displayed and then clear the memory**

3 **Symptom confirmation**

a	Symptoms exist
b	No symptoms exist

a → **Go to step 5**

b

4 **Simulation test using the symptom simulation methods**

5	DTC check

a	DTC displayed
b	Normal code displayed

a → **Troubleshooting of problem indicated by DTC**

b

6	Symptom confirmation

a	No symptoms exist
b	Symptoms exist

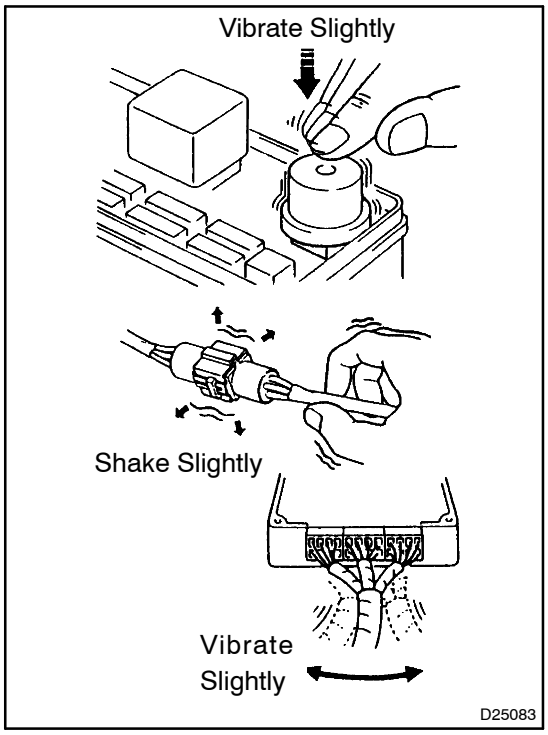
If a DTC is displayed in the initial DTC check, it indicates that a trouble may have occurred in a wire harness or connector in that circuit in the past. Therefore, check the wire harness and connectors (See page 01–32).

a → **System normal**

b

Troubleshooting of each problem symptom

The problem is still occurring in a place other than the diagnostic circuit (The DTC displayed first is either for a past problem or a secondary problem).



SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occurs. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. No matter how much experience a technician has, or how skilled he may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will tend to overlook something important in the repair operation and make a wrong guess somewhere, which will only lead to a standstill. For example, for a problem which only occurs when the engine is cold, or for a problem which occurs due to vibration caused by the road during driving, etc., the problem can never be determined when the engine is hot or when the vehicles is at a standstill. Since vibration, heat or water penetration (moisture) is a likely cause for the problem which is difficult to reproduce, the symptom simulation tests introduced here are effective measures in a point that the external causes are applied to the vehicle in a stationary condition.

Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms should be confirmed, and the problem area or parts must also be discovered. To do so, reduce the possible problem circuits according to the symptoms before starting this type of test and have the hand–held tester connected beforehand. After that, carry out the symptom simulation test, judging whether the circuit being tested is defective or normal and also confirming the problem symptoms at the same time. Refer to the problem symptoms table of each system to narrow down the possible causes of the symptom.

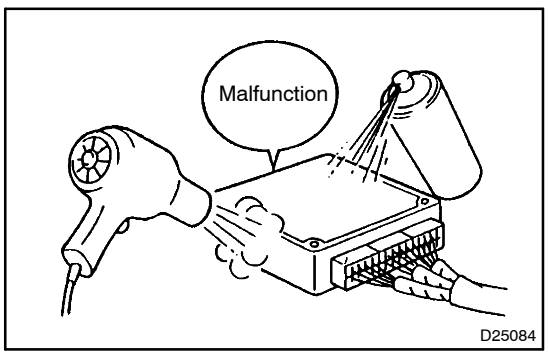
1. VIBRATION METHOD: When vibration seems to be the major cause.

(a) PART AND SENSOR

(1) Apply slight vibration with your finger to the part of the sensor considered to be the problem cause and check whether the malfunction occurs.

HINT:

Applying strong vibration to relays may result in open relays.



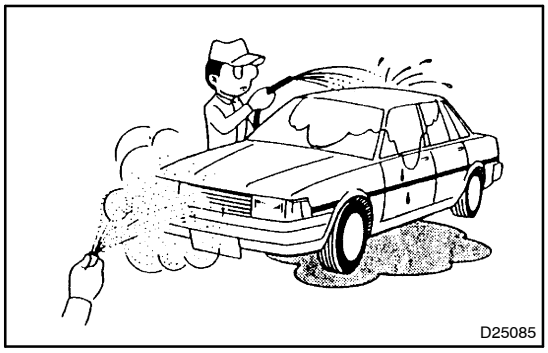
(b) CONNECTORS

(1) Slightly shake the connector vertically and horizontally.

(c) WIRE HARNESS

(1) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.



2. HEAT METHOD: If the problem seems to occur when the area in question is heated.

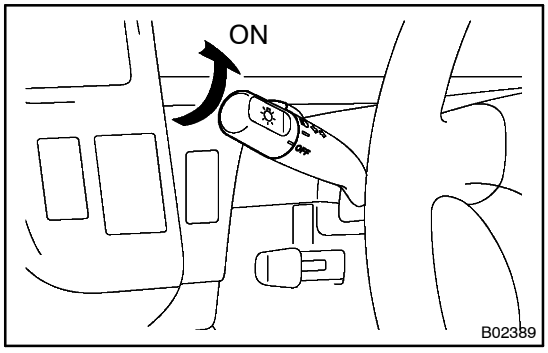
(a) Heat the component that is the possible cause of the malfunction with a hair dryer or similar object. Check if the malfunction occurs.

NOTICE:

- **Do not heat the components to more than 60°C (140°F) (Temperature is limited to keep the components from being damaged).**

- **Do not apply heat directly to the parts in the ECU.**

3. WATER SPRINKLING METHOD: When the malfunction seems to occur on a rainy day or in high–humidity.



(a) Sprinkle water onto the vehicle and check if the malfunction occurs.

NOTICE:

- **Never sprinkle water directly onto the engine compartment, but indirectly change the temperature and humidity by spraying a mist of water onto the radiator front surface.**
- **Never apply water directly onto the electronic components.**

HINT:

If a vehicle is subject to water leakage, the leaking water may contaminate the ECU. When testing a vehicle with a water leakage problem, this factor must also be considered.

4. OTHERS: If the malfunction seems to occur when electrical load is excessive.

(a) Turn on all the electrical equipment including the heater blower, headlights, rear window defogger, etc., and check if the malfunction occurs.

DIAGNOSTIC TROUBLE CODE CHART

The inspection procedures are shown in the table below. This table allows efficient and accurate troubleshooting using the diagnostic trouble codes displayed in the diagnostic trouble code chart. Proceed with troubleshooting in accordance with the inspection procedures listed in the diagnostic chart corresponding to the diagnostic trouble codes displayed. The diagnostic trouble code chart for the Supplemental Restraint System is shown below as an example.

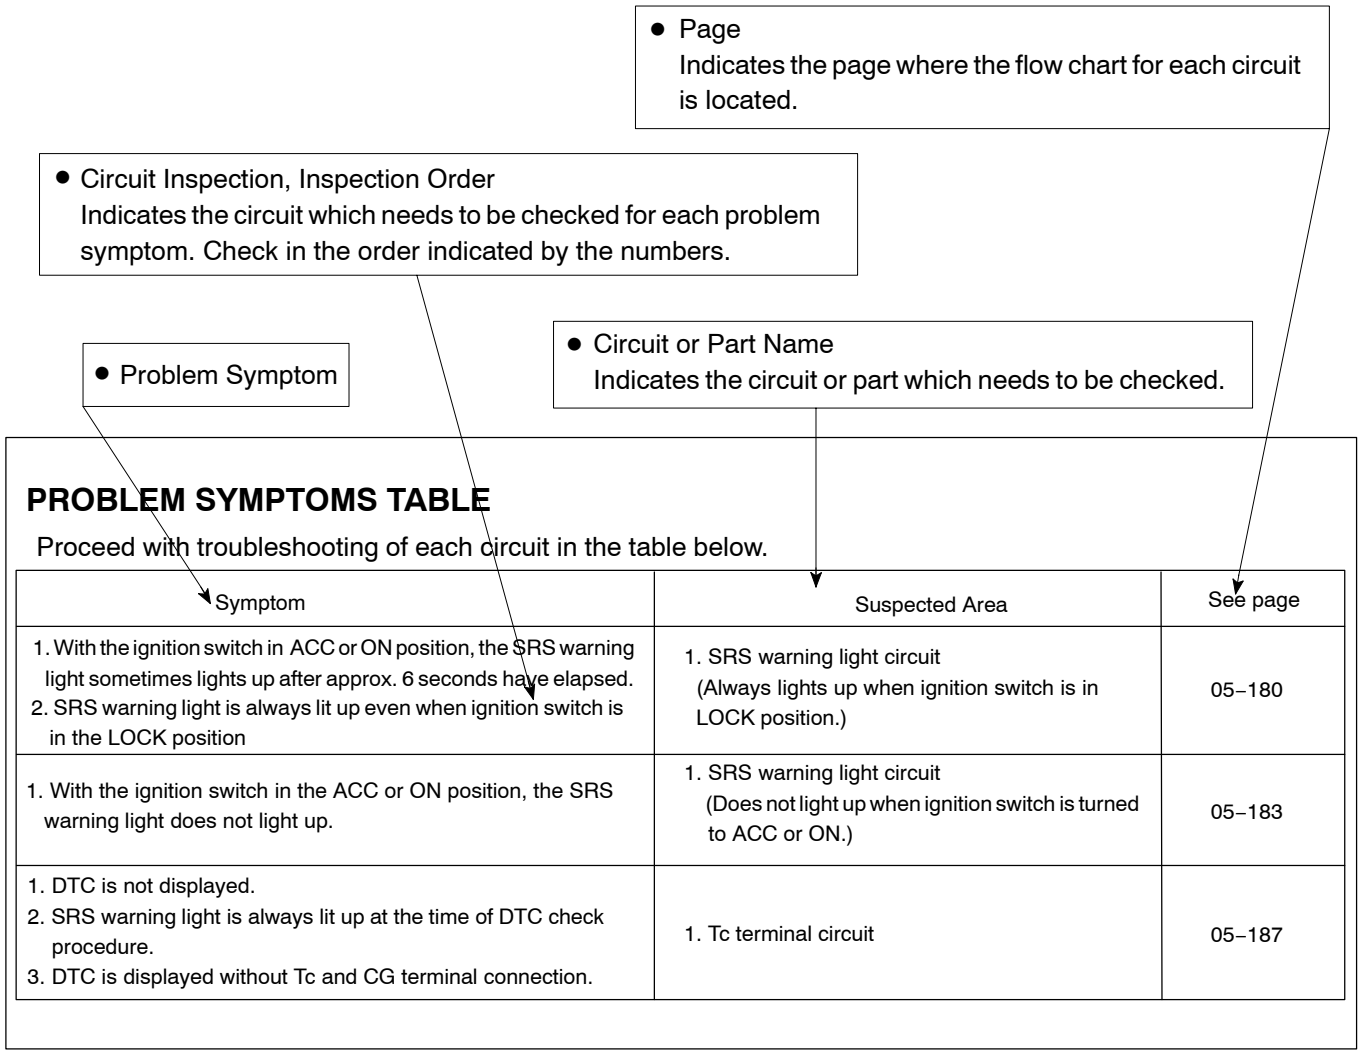
- DTC No.
  Indicates the diagnostic trouble code.
- Page or Instructions
  Indicates the page where the inspection procedures for each circuit is to be found, or gives instructions for checking and repairs.

- Trouble Area
  Indicates the suspect areas of the problem.

- Detection Item
  Indicates the system or details of the problem.

DIAGNOSTIC TROUBLE CODE CHART

If a malfunction code is displayed during the DTC check, check the circuit for that code listed in the table below (Proceed to the page given for that circuit).



DTC No. (See page)	Detection Item	Trouble Area	SRS Warning Light
B0100/13 (05–119)	● Short in D squib circuit	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0101/14 (05–124)	● Open in D squib circuit	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0102/11 (05–128)	● Short in D squib circuit (to ground)	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0103/12 (05–132)	● Short in D squib circuit (to B+)	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0105/53 (05–136)	● Short in P squib circuit	● Front passenger airbag assembly (squib) ● Airbag sensor assembly ● Wire harness	ON
B0106/54	● Open in P squib circuit	● Front passenger airbag assembly (squib) ● Airbag sensor assembly ● Wire harness	
	b circuit (to Ground)	● Front passenger airbag assembly (squib) ● Airbag sensor assembly ● Wire harness	

PROBLEM SYMPTOMS TABLE

The suspected circuits or parts for each problem symptom are shown in the table below. Use this table to troubleshoot the problem when a Normal code is displayed in the diagnostic trouble code chart but the problem is still occurring. Numbers in the table indicate the inspetion order in which the circuits or parts should be checked.

HINT:

When the problem is not detected by the diagnostic system even though the problem symptom is present, it may be that the problem is occurring outside the detection range of the diagnostic system.

PROBLEM SYMPTOMS TABLE

Proceed with troubleshooting of each circuit in the table below.

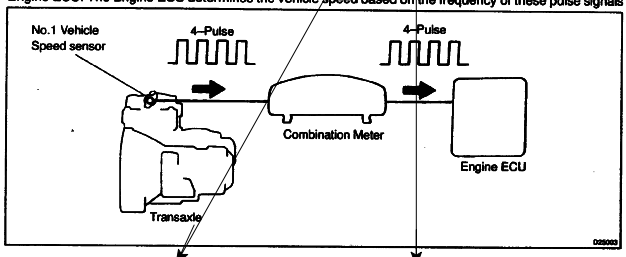
Symptom	Suspected Area	See page
1. With the ignition switch in ACC or ON position, the SRS warning light sometimes lights up after approx. 6 seconds have elapsed. 2. SRS warning light is always lit up even when ignition switch is in the LOCK position	1. SRS warning light circuit (Always lights up when ignition switch is in LOCK position.)	05–180
1. With the ignition switch in the ACC or ON position, the SRS warning light does not light up.	1. SRS warning light circuit (Does not light up when ignition switch is turned to ACC or ON.)	05–183
1. DTC is not displayed. 2. SRS warning light is always lit up at the time of DTC check procedure. 3. DTC is displayed without Tc and CG terminal connection.	1. Tc terminal circuit	05–187

CIRCUIT INSPECTION

How to read and use each page is shown below.

● Circuit Description
The major role and, operation of the circuit and its component parts are explained.

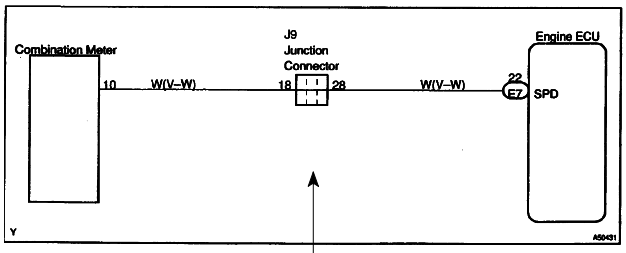
● Diagnostic Trouble Code No. and Detection Item



● Indicates the diagnostic trouble codes, diagnostic trouble code settings and suspect areas for a problem.

● Inspection Procedures
Use the inspection procedures to determine if the circuit is normal or abnormal. If it is abnormal, use it to determine whether the problem is located in the sensors, actuators, wire harness or ECU.

DTC P0500/42 VEHICLE SPEED SENSOR MALFUNCTION



CIRCUIT DESCRIPTION

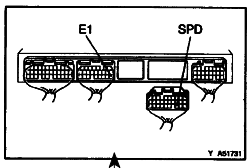
The vehicle speed sensor outputs a 4–pulse signal for every revolution of the rotor shaft, which is rotated by the transmission output shaft via the driven gear. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the Engine ECU. The Engine ECU determines the vehicle speed based on the frequency of these pulse signals

DTC No.	DTC Detecting Condition	Trouble Area
P0500/42	During vehicle is being driven, no vehicle speed sensor signal to engine ECU (2 trip detection logic)	• Combination meter • Open or short in No.1 vehicle speed sensor circuit • No.1 vehicle speed sensor • Engine ECU

WIRING DIAGRAM

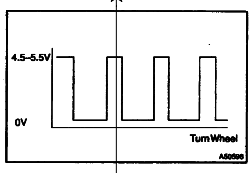
● Wiring Diagram
This shows a wiring diagram of the circuit.
Use this diagram together with ELECTRICAL WIRING DIAGRAM to thoroughly understand the circuit.
Wire colors are indicated by an alphabetical code.
B = Black, L = Blue, R = Red, BR = Brown,
LG = Light Green, V = Violet, G = Green,
O = Orange, W = White, GR = Gray, P = Pink,
Y = Yellow, SB = Sky Blue
The first letter indicates the basic wire color and the second letter indicates the color of the stripe.

INSPECTION PROCEDURE



1 READ VALUE OF VEHICLE SPEED VALUE(SPEEDOMETER OPERATION)

(a) Select data monitor on the hand–held tester.
(b) Perform a test drive of the vehicle.
(c) Read the vehicle speed on the hand–held tester.
RESULT: The same as the speed displayed on the speed meter.

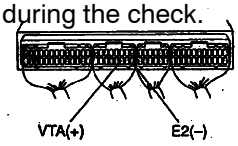


NG > REPLACE COMBINATION METER ASSY

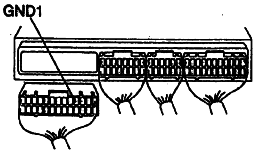
OK

2 INSPECT ECU

(a) Check the output waveform.
HINT:
Using the oscilloscope function of hand–held tester, it is possible to check the function between the engine ECU and the knock control sensor. The waveform shown in the illustration is an example without noise and chattering.
(1) Connect the hand–held tester between the terminals SPD of the engine ECU E7 connector and E1 of the engine ECU E8 connector.
(2) Select the oscilloscope function on the hand–held tester. (Refer to the hand–held tester's instruction book for operating instructions.)
RESULT: Voltage is intermittently generated



ITEM	CONTENTS
TERMINAL	SPD⇔E1
EQUIPMENT SET	5V/DIV, 20ms/DIV
CONDITION	Running at 20 km/h



HINT:
• The multitude gets shorter as the engine speed becomes faster.

OK > CHECK AND REPLACE ECU

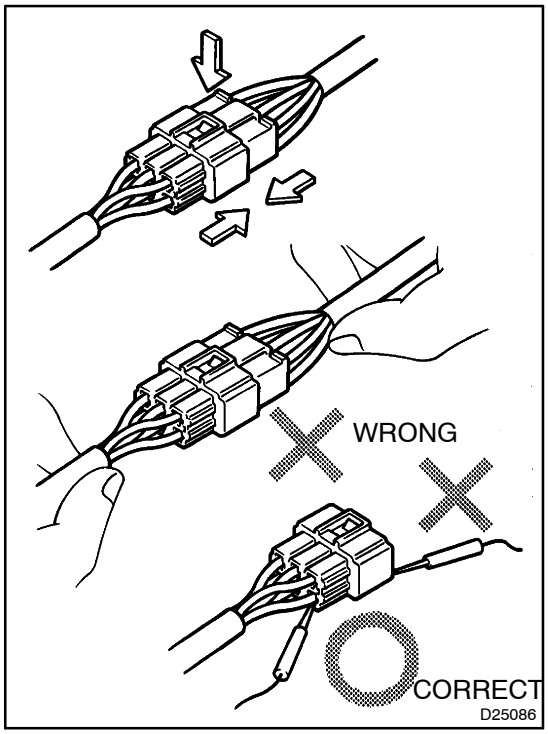
NG

● Indicates the condition of the connector of the ECU during the check.

Connector being checked is connected.
Connections of tester are indicated by (+), (–) after terminals name.

Connector being checked is disconnected.
For inspection of connector with body ground, there is nothing about the body ground written down.

D25842



010B8–13

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) RESISTANCE MEASURING CONDITION OF ELECTRONIC PARTS

(1) Unless stated, all resistance is measured at an ambient temperature of 20°C (68°F). As the resistance may be outside the specifications if measured at high temperatures immediately after the vehicle has been running, measurements should be made when the engine has cooled down.

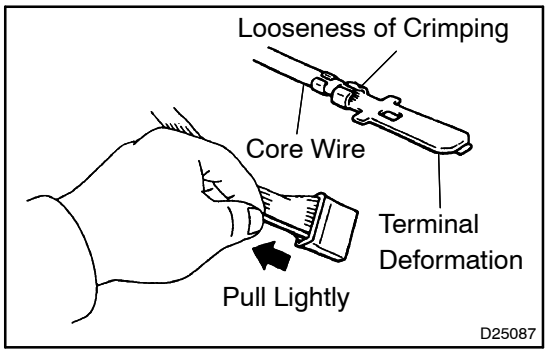
(b) HANDLING OF CONNECTOR

(1) When removing the connector with lock, press the connector in the direction of the engagement and remove the lock by lightly pressing the lock claw.

(2) When removing the connector, do not hold the harness, but hold the connector.

(3) Before connecting the connector, check that there is no deformation, damage or missing terminals.

(4) The connector with a lock should be securely connected until it makes a ”click” sound.

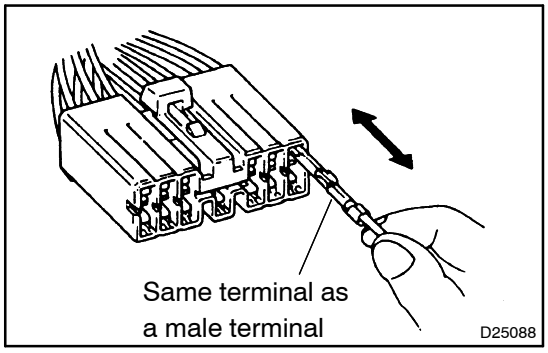


(5) When checking the connector with a Toyota electrical tester, check it from the backside (harness side) of the connector using a mini test lead.

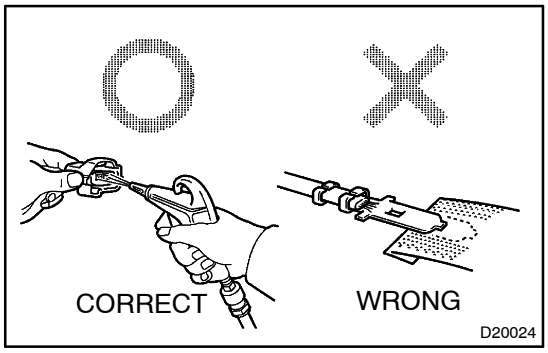
NOTICE:

- **As a water proof connector cannot be checked from the backside, check by connecting the sub–harness.**
- **Do not damage the terminals by moving the inserted tester needle.**

(c) CONNECTOR CHECKING POINTS



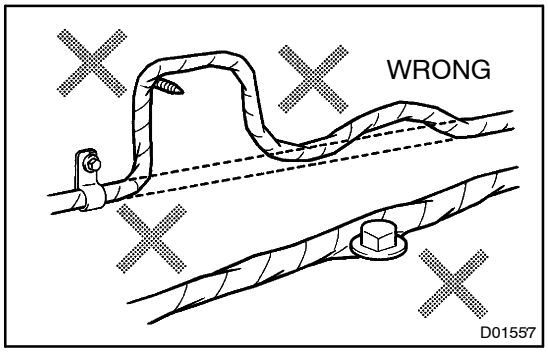
(1) Checking when the connector is connected:
By holding the connector, check the inserted condition and locking efficiency (engaged condition).



(2) Checking when the connector is removed:
Check by lightly pulling the wire harness (missing terminal, terminal crimping condition, core wire break).
Check visually for any rust, metal particles, water and bent terminals (rust, mixing of foreign object, terminal deformation).

NOTICE:

When testing a gold–plated female terminal, always use a gold–plated male terminal.



(3) Checking of the contact pressure of the terminal:
Prepare a spare male terminal.
Insert it into a female terminal, check the engaged condition and sliding resistance.

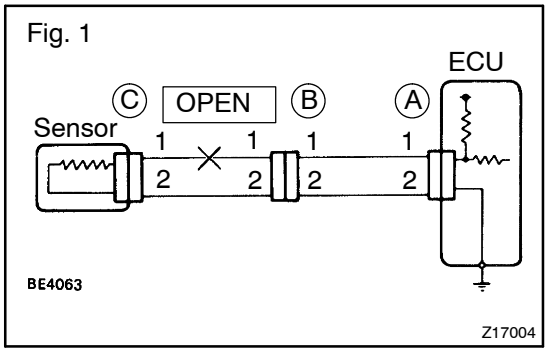
(d) REPAIR METHOD OF CONNECTOR TERMINAL

(1) If there is any dirt on the terminal, clean the contact point using an air gun or shop rag. Never polish the contact point using sandpaper as the platings may come off.

(2) In case of abnormal contact pressure, replace the female terminal. However, if a male terminal is gold–plated (gold color), use gold–plated female terminal and if it is silver–plated (silver color), use silver–plated female terminal.

(e) HANDLING OF WIRE HARNESS

(1) When removing the wire harness, check the positioning of the wiring and clamping before starting work in order to be able to restore it correctly.



(2) Never twist, pull or loosen the wire harness more than necessary.

(3) Never allow the wire harness to come into contact with a high–temperature, rotating, moving, vibrating or sharp (edge of the panel, tip of the screw, etc.) part.

(4) When installing parts, never let the wire harness be interfered with.

(5) Never cut or break the cover of the wire harness. If one is cut or broken, replace it or securely repair it with electrical tape.

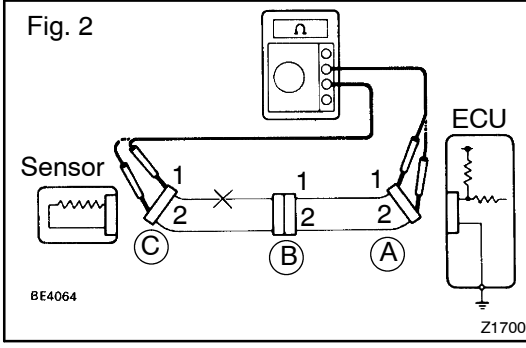


Fig. 1

2. CHECK OPEN CIRCUIT

(a) For the open circuit in the wire harness in Fig. 1, perform a continuity check in step (b) or a voltage check in step (c) to locate the section.

Fig. 2

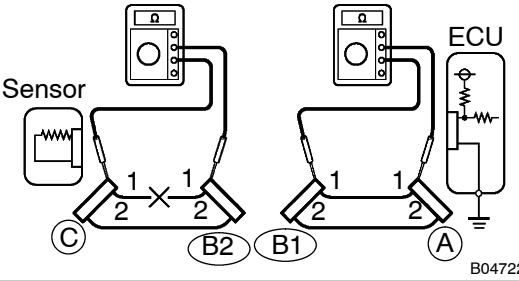
(b) Check the continuity.

(1) Disconnect connectors A and C and measure the resistance between them.

Resistance: 1 Ω or less

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.



In the case of Fig. 2:

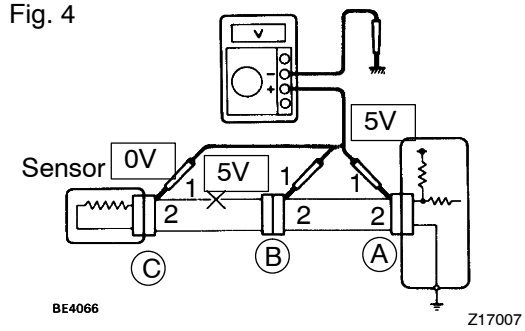
Between terminal 1 of connector A and terminal 1 of connector C → No continuity (open)

Between terminal 2 of connector A and terminal 2 of connector C → Continuity

Therefore, the cause is an open circuit between terminal 1 of connector A and terminal 1 of connector C.

Fig. 3

(2) Disconnect connector B and measure the resistance between the connectors.



In the case of Fig. 3:

Between terminal 1 of connector A and terminal 1 of connector B1 → Continuity

Between terminal 1 of connector B2 and terminal 1 of connector C → No continuity (open)

Therefore, the cause is an open circuit between terminal 1 of connector B2 and terminal 1 of connector C.

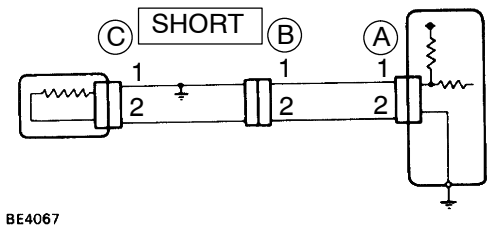
Fig. 4

(c) Check the voltage.

(1) In a circuit in which voltage is applied (to the ECU connector terminal), an open circuit can be checked by conducting a voltage check.

As shown in Fig. 4, with each connector still connected, measure the voltage between the body ground and terminal 1 of connector A at the ECU 5 V output terminal, terminal 1 of connector B, and terminal 1 of connector C, in that order.

(2) If the results are:



5 V: Between terminal 1 of connector A and body ground

5 V: Between terminal 1 of connector B and body ground

0 V: Between terminal 1 of connector C and body ground

Therefore, the cause is an open circuit in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

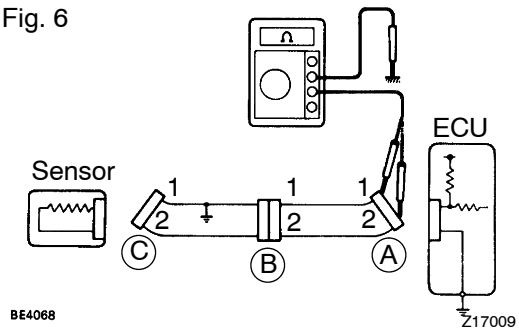


Fig. 5

3. CHECK SHORT CIRCUIT

(a) If the wire harness is ground shorted as shown in Fig. 5, locate the section by conducting a continuity check with the body ground in step (b).

Fig. 6

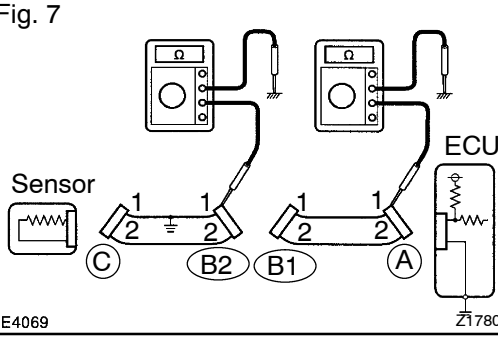
(b) Check the continuity with the body ground.

(1) Disconnect connectors A and C and measure the resistance between terminals 1 and 2 of connector A and the body ground.

Resistance: 10 kΩ or higher

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.



In the case of Fig. 6:

Between terminal 1 of connector A and body ground → Continuity (short)

Between terminal 2 of connector A and body ground → No continuity

Therefore, the cause is a short circuit between terminal 1 of connector A and terminal 1 of connector C.

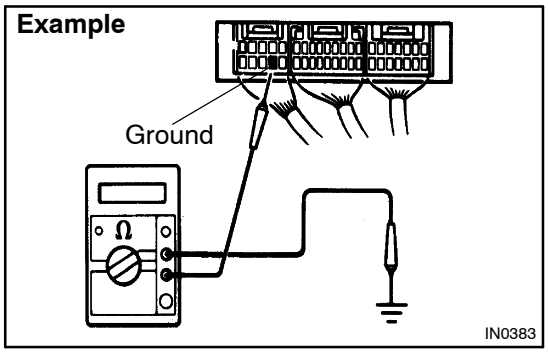
Fig. 7

(2) Disconnect connector B and measure the resistance between terminal 1 of connector A and the body ground, and terminal 1 of connector B2 and the body ground.

In the case of Fig. 7:

Between terminal 1 of connector A and body ground → No continuity

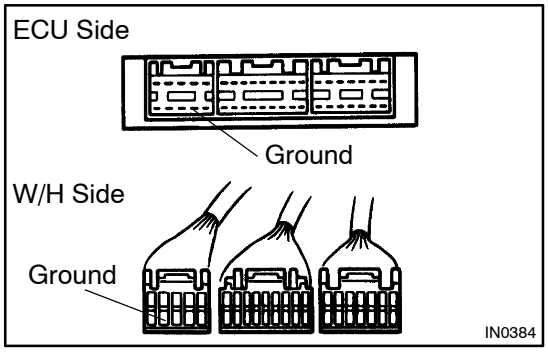
Between terminal 1 of connector B2 and body ground → Continuity (short)



Therefore, the cause is a short circuit between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:



- **Start an inspection of the connector from the backside of the connector on the wire harness side with the connector connected to the ECU.**
- **When no measurement condition is specified, perform the inspection with the engine stopped and also the ignition switch ON.**

(a) First check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. In this case, replace the ECU with one that functions normally and check if the symptoms appear.

(1) Measure the resistance between the ECU ground terminal and body ground.

Resistance: 1 Ω or less

(2) Disconnect the ECU connector, check the ground terminals on the ECU side and wire harness side for bends and check the contact pressure.

TERMS

ABBREVIATIONS USED IN THIS MANUAL

010B9–18

Abbreviations	Meaning
ABS	Anti–Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System

ECU	Electronic Control Unit
ED	Electro–Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR–VM	EGR–Vacuum Modulator
ELR	Emergency Locking Retractor
EMPS	Electric Motor Power Steering
ENG	Engine
ESA	Electronic Spark Advance
ETCS–i	Electronic Throttle Control System–intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E–VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front–Engine Front–Wheel–Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
Fr	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front–Wheel–Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
HAC	High Altitude Compensator
H/B	Hatchback

Abbreviations	Meaning
H–FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Head Lamp)
HSG	Housing
HT	Hard Top
HWS	Heated Windshield System
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick–Down
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left–Hand
LHD	Left–Hand Drive
L/H/W	Length, Height, Width
LLC	Long–Life Coolant
LNG	Liquified Natural Gas
LO	Low
LPG	Liquified Petroleum Gas
LSD	Limited Slip Differential
LSP & PV	Load Sensing Proportioning And Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MG1	Motor Generator No.1
MG2	Motor Generator No.2
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T, MTM	Manual Transmission (Transaxle)
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
No.	Number
O2S	Oxygen Sensor
O/D	Overdrive

Abbreviations	Meaning
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On–board Refilling Vapor Recovery
O/S	Oversize
P & BV	Proportioning And Bypass Valve
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PTC	Positive Temperature Coefficient
PS	Power Steering
PTO	Power Take–Off
P/W	Power Window
R & P	Rack And Pinion
RAM	Random Access Memory
R/B	Relay Block
RBS	Recirculating Ball Type Steering
R/F	Reinforcement
RFS	Rigid Front Suspension
RH	Right–Hand
RHD	Right–Hand Drive
RLY	Relay
ROM	Read Only Memory
Rr	Rear
RRS	Rigid Rear Suspension
RWD	Rear–Wheel Drive
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold–Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
TACH	Tachometer
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer–Controlled System
TCV	Timing Control Valve
TDC	Top Dead Center
TEMP.	Temperature
TEMS	TOYOTA Electronic Modulated Suspension

Abbreviations	Meaning
TFT	Toyota Free–Tronic
TIS	Total Information System For Vehicle Development
T/M	Transmission
TMC	TOYOTA Motor Corporation
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.
TRC	Traction Control System
TURBO	Turbocharge
TWC	Three–Way Catalyst
U/D	Underdrive
U/S	Undersize
VCV	Vacuum Control Valve
VENT	Ventilator
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Stability Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT–i	Variable Valve Timing–intelligent
w/	With
WGN	Wagon
W/H	Wire Harness
w/o	Without
WU–TWC	Warm Up Three–way Catalytic Converter
WU–OC	Warm Up Oxidation Catalytic Converter
1st	First
2nd	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3rd	Third
4th	Fourth
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5th	Fifth

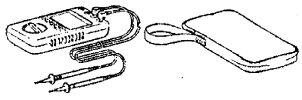
010BA–21

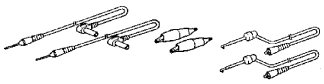
GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )––ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI/INJ)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)

HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel–Shutoff	–
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On–Board Diagnostic	On–Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Convert (OC) Catalytic Converter for Oxidation (CCo)
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E–ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter





TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) Manifold Converter CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	–
3GR	Third Gear	–
4GR	Fourth Gear	–

DIAGNOSTICS

SST

	09011–12271	Socket Wrench for 27 mm	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003)
	09023–00100	Union Nut Wrench 10 mm	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003)
	09023–12700	Union Nut Wrench 17mm	VALVE CLEARANCE(1CD–FTV)(From September, 2003) PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003)
	09023–12900	Union Nut Wrench 19mm	VALVE CLEARANCE(2AZ–FSE) PARTIAL ENGINE ASSY(2AZ–FSE) CHAIN SUB–ASSY(2AZ–FSE) CAMSHAFT(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE)
	09023–38200	Union Nut Wrench 12mm	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003)
	09023–38400	Union Nut Wrench 14mm	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003)
	09032–00100	Oil Pan Seal Cutter	CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE)

	09213–54015	Crankshaft Pulley Holding Tool	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003) PARTIAL ENGINE ASSY(2AZ–FSE) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) ENGINE REAR OIL SEAL(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	(09213–70020)	Bolt	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	(91651–60855)	Bolt	PARTIAL ENGINE ASSY(2AZ–FSE) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) ENGINE REAR OIL SEAL(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	09223–15030	Oil Seal & Bearing Replacer	ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003) ENGINE REAR OIL SEAL(2AZ–FSE)
	09223–22010	Crankshaft Front Oil Seal Replacer	TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)

	09223–46011	Crankshaft Front Oil Seal Replacer	CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003)
	09248–55050	Valve Clearance Adjust Tool Set	VALVE CLEARANCE(1CD–FTV)(From September, 2003)
	(09248–05510)	Valve Lifter Press	VALVE CLEARANCE(1CD–FTV)(From September, 2003)
	(09248–05520)	Valve Lifter Stopper	VALVE CLEARANCE(1CD–FTV)(From September, 2003)
	09249–63010	Torque Wrench Adaptor	FAN AND GENERATOR V BELT(2AZ–FSE) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	09268–46021	Nozzle Holder Retaining Nut Wrench	PARTIAL ENGINE ASSY(2AZ–FSE)
	09301–00210	Clutch Guide Tool	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003)
	09301–00220	Clutch Guide Tool	ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	09316–60011	Transmission & Transfer Bearing Replacer	CRANKSHAFT SEAL(1CD–FTV)(From September, 2003)
	(09316–00011)	Replacer Pipe	CRANKSHAFT SEAL(1CD–FTV)(From September, 2003)

	09330–00021	Companion Flange Holding Tool	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003) PARTIAL ENGINE ASSY(2AZ–FSE) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) ENGINE REAR OIL SEAL(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	(09330–00030)	Pin	PARTIAL ENGINE ASSY(2AZ–FSE)
	09520–01010	Drive Shaft Remover Attachment	ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	09520–24010	Differential Side Gear Shaft Puller	ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	(09520–32040)	Shocker Set	ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	09628–62011	Boll Joint Puller	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	09670–00010	Front Crossmember Guide Tool	ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	09817–33190	Sensor Socket Wrench	PARTIAL ENGINE ASSY(2AZ–FSE)
	09843–18030	Tacho–pulse Pickup Wire No.2	ENGINE(2AZ–FSE)

	09843–18040	Diagnosis Check Wire No.2	ENGINE(1CD–FTV)(From September, 2003) ENGINE(2AZ–FSE)
	09930–00010	Drive Shaft Nut Chisel	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003)
	09950–50013	Puller C Set	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	(09951–05010)	Hanger 150	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)

	(09952–05010) Slide Arm	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	(09953–05010) Center Bolt 100	CRANKSHAFT SEAL(1CD–FTV)(From September, 2003)
	(09953–05020) Center Bolt 150	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	(09954–05021) Claw No.2	CRANKSHAFT SEAL(1CD–FTV)(From September, 2003) CHAIN SUB–ASSY(2AZ–FSE) CYLINDER HEAD GASKET(2AZ–FSE) TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL(2AZ–FSE)
	(09954–05031) Claw No.3	PARTIAL ENGINE ASSY(1CD–FTV)(From September, 2003) TIMING BELT(1CD–FTV)(From September, 2003) CAMSHAFT(1CD–FTV)(From September, 2003) CYLINDER HEAD GASKET(1CD–FTV)(From September, 2003) CRANKSHAFT SEAL(1CD–FTV)(From September, 2003)

	09950–70010	Handle Set	ENGINE REAR OIL SEAL(1CD–FTV)(From September, 2003) ENGINE REAR OIL SEAL(2AZ–FSE)

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

ENGINE CONTROL SYSTEM

031TB–01

SERVICE DATA

2AZ–FSE:

Camshaft timing oil control valve assy		
Resistance	1 (–) – 2 (+)	6.9 to 7.9 Ω at 20°C (68°F)
Mass air flow meter		
Resistance	4 (THA) – 5 (E2)	13.6 to 18.4 kΩ at –20°C (–4°F) 2.21 to 2.69 kΩ at 20°C (68°F) 0.493 to 0.667 kΩ at 60°C (140°F)
Engine coolant temperature sensor		
Resistance	1 (E2) – 2 (THW)	2.32 to 2.59 kΩ at 20°C (68°F) 0.310 to 0.326 kΩ at 80°C (176°F)
Throttle body assy		
Resistance	1 (M–) – 2 (M+)	0.3 to 100 Ω at 20°C (68°F)
	3 (E2) – 5 (VC)	1.2 to 3.2 kΩ at 20°C (68°F)
Knock sensor		
Resistance	1 (Ground) – 2 (Output)	120 to 280 kΩ at 20°C (68°F)
Accelerator pedal rod assy		
Resistance	3 (EP1) – 6 (VCP1)	2.25 to 4.75 kΩ
	1 (EP2) – 4 (VCP2)	2.25 to 4.75 kΩ
Voltage	3 (EP1) – 5 (VPA1)	0.4 to 4.6 V
	1 (EP2) – 2 (VPA2)	0.9 to 4.7 V
Main relay		
Resistance	3 – 5	10 kΩ or higher
	3 – 5 (Apply battery voltage to terminal 1 and 2)	Below 1 Ω
Circuit opening relay		
Resistance	3 – 5	10 kΩ or higher
	3 – 5 (Apply battery voltage to terminal 1 and 2)	Below 1 Ω

1CD–FTV:

Mass air flow meter		
Resistance	2 (THA) – 1 (E2)	
	at –20°C (–4°F)	12.5 to 16.9 kΩ
	at 20°C (68°F)	2.19 to 2.67 kΩ
	at 60°C (140°F)	0.50 to 0.68 kΩ
Intake shutter assy		
Resistance	1 (VC) – 2 (E2)	4.0 to 8.0 kΩ
Accelerator pedal assy		
Resistance	VPA1 – EP1	5.0 kΩ or less
	VPA2 – EP2	5.0 kΩ or less
	VCP1 – EP1	1.5 to 6.0 kΩ
	VCP2 – EP2	1.5 to 6.0 kΩ
Diesel turbo inlet air temperature sensor		
Resistance	at 20°C (68°F)	2.21 to 2.65 kΩ
Crankshaft position sensor		
Resistance	at cold	1630 to 2740 Ω
	at hot	2065 to 3225 Ω
Camshaft position sensor		
Resistance	at cold	1630 to 2740 Ω
	at hot	2065 to 3225 Ω
Diesel engine engine coolant temperature sensor		
Resistance	at 20°C (68°F)	2.32 to 2.59 kΩ
	at 80°C (176°F)	0.310 to 0.326 kΩ
Fuel temperature sensor		
Resistance	THF – E2	
	at 20°C (68°F)	2.21 to 2.69 kΩ
	at 80°C (176°F)	0.287 to 0.349 kΩ

EDU relay	
Specified condition 3 – 5	10 kΩ or higher
3 – 5 (When battery voltage is applied to terminals 1 and 2)	Below 1 Ω
EFI main relay	
Specified condition 3 – 5	10 kΩ or higher
3 – 5 (When battery voltage is applied to terminals 1 and 2)	Below 1 Ω

FUEL

SERVICE DATA

031E0–02

2AZ–FSE:

Fuel pressure		
	at idle	196 to 588 kPa (2 to 6 kgf/cm^2, 28 to 85 psi)
	Engine stopped	147 kPa (1.5 kgf/cm^2, 21 psi) or more
Fuel high pressure	at idle	9.5 to 10.5 MPa (97 to 107 kgf/cm^2, 1,380 to 1,520 psi)
Fuel injector assy		
Resistance	1 – 2	2.55 to 2.85 Ω at 20°C (68°F)
Fuel pump assy		
Resistance	1 – 2	1.19 to 1.39 Ω at 20°C (68°F)
Fuel pump assy		
Resistance	4 – 5	0.2 to 3.0 Ω at 20°C (68°F)
Compression spring (Exhaust pipe assy center x Exhaust pipe assy tail)		
Free length	Minimum	38.5 mm (1.516 in.)

1CD–FTV:

Injection or supply pump assy		
Resistance	at 20°C (68°F)	1.6 to 2.6 Ω
Injector assy		
Resistance	at 20°C (68°F)	0.45 to 1.45 Ω
Common rail assy		
Resistance	PR – E2	16.4 kΩ or less
	PR2 – E2S	16.4 kΩ or less
	VC – PR	3 kΩ or less
	VCS – PR2	3 kΩ or less
Pressure discharge valve		
Resistance	at 20°C (68°F)	0.45 to 1.45 Ω
Fuel heater assy		
Resistance	at 20°C (68°F)	0.5 to 20 Ω
Level warning switch		
Specified condition	When raising the float	Below 1 Ω
	When letting the float down	10 kΩ or higher
Fuel temperature sensor		
Resistance	at 20°C (68°F)	2.21 to 2.69 Ω
	at 80°C (176°F)	0.287 to 0.349 Ω

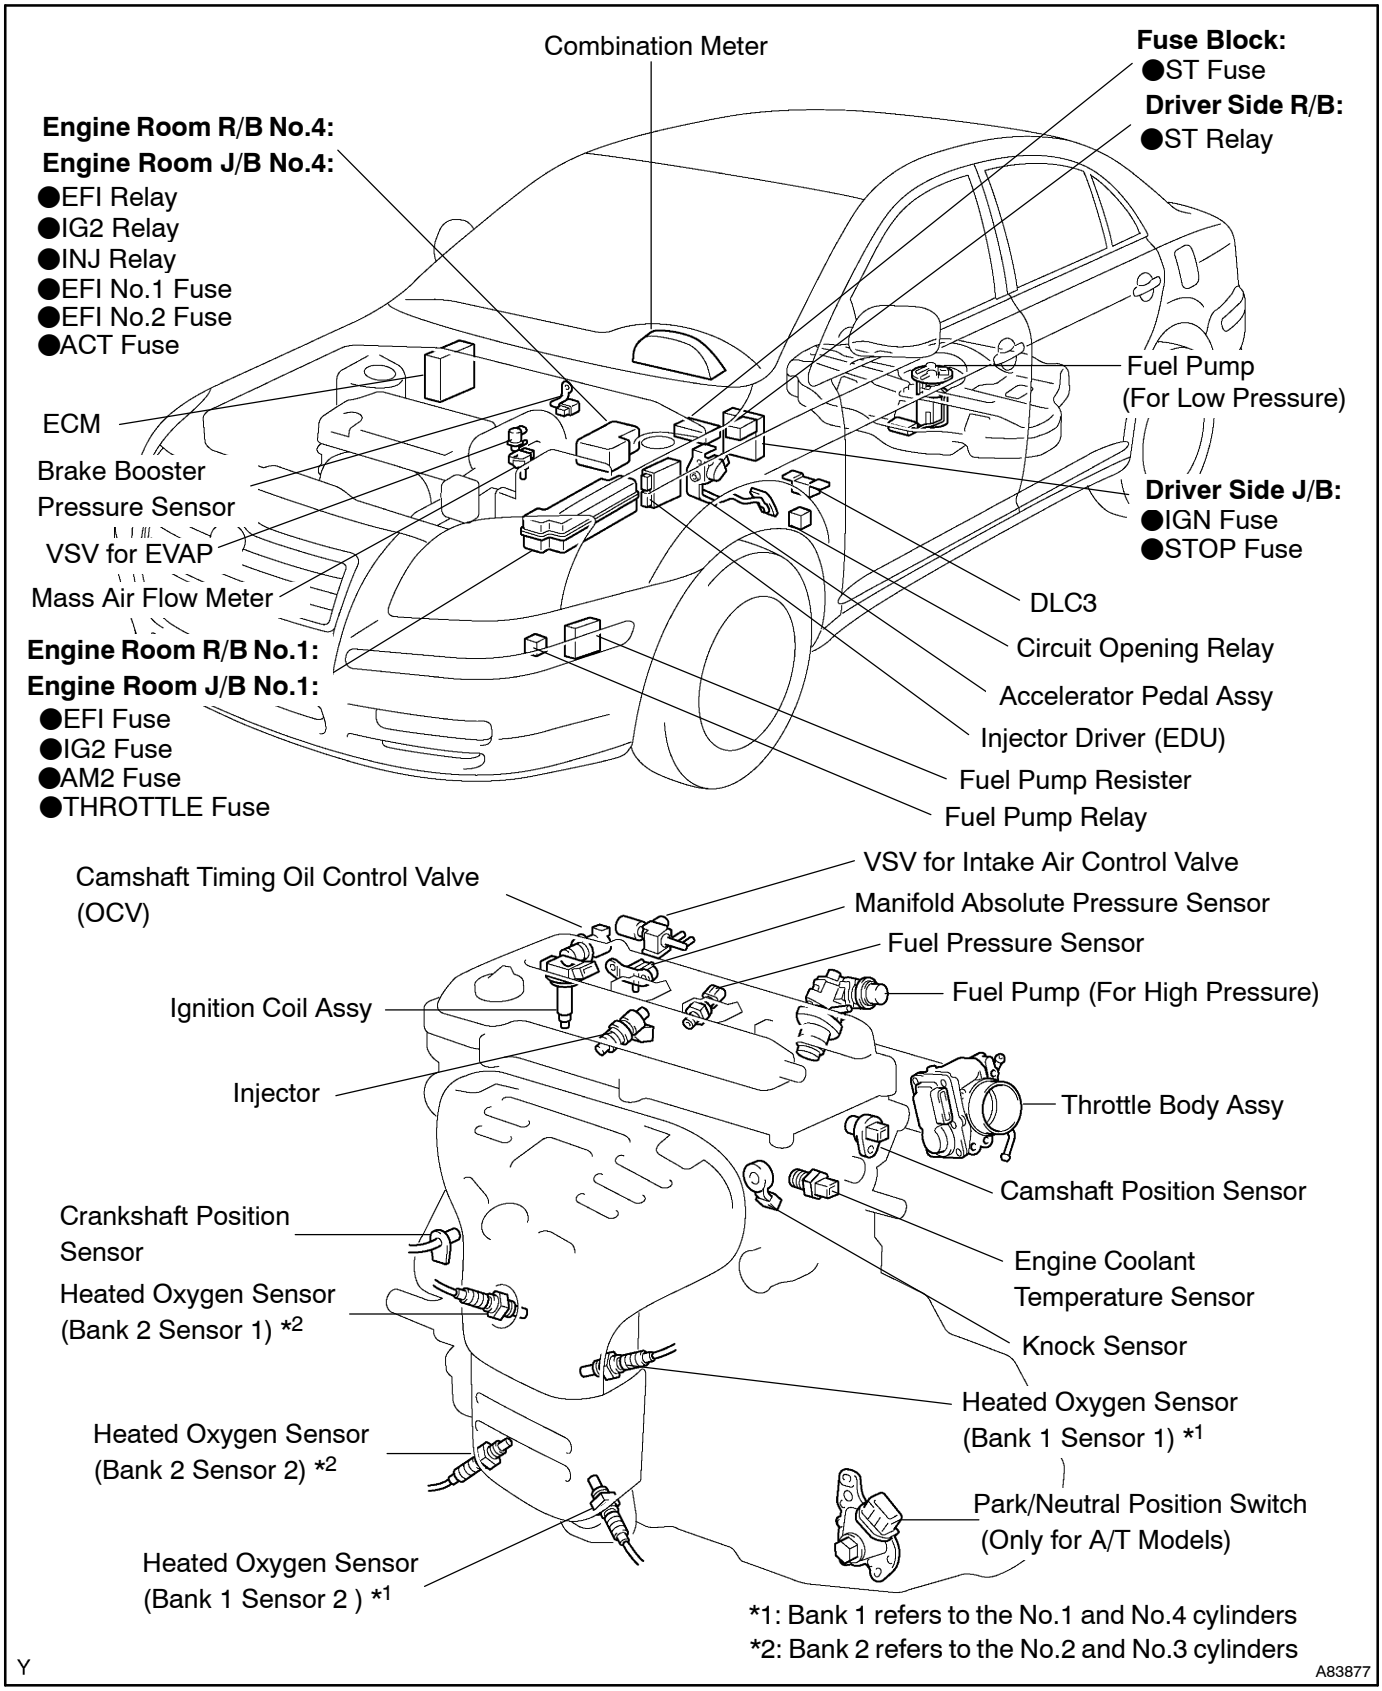
PRECAUTION

NOTICE:



Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.

HINT:

Initialization can not be completed by only removing the battery.

05CDV–02

LOCATION

05CDS–02

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The hand–held tester can be used at step 3, 4, 5, 7 and 10.

1	VEHICLE BROUGHT TO WORKSHOP

2	CUSTOMER PROBLEM ANALYSIS (See page 05–6)

3	CONNECT THE HAND–HELD TESTER TO DLC3

HINT:
If the display indicates a communication fault in the tool, inspect the DLC3.

4	CHECK DTC AND FREEZE FRAME DATA (See page 05–19)

HINT:
Record or print DTC and freeze frame data, if needed.

5	CLEAR DTC AND FREEZE FRAME DATA (See page 05–19)

6	VISUAL INSPECTION

7	SETTING THE CHECK (TEST) MODE DIAGNOSIS (See page 05–20)

8	PROBLEM SYMPTOM CONFIRMATION

HINT:
If the engine does not start, perform steps 10 and 12 first.

A	Malfunction does not occur
B	Malfunction occurs

B → GO TO STEP 10

A

9	SYMPTOM SIMULATION

10	DTC CHECK (See page 05–19)

A	Malfunction code
B	No code

B → GO TO STEP 12

A

11	DTC CHART (See page 05–31)

GO TO STEP 14

12	BASIC INSPECTION (See page 05–8)

A	Wrong parts not confirmed
B	Wrong parts confirmed

B → GO TO STEP 17

A

13	PROBLEM SYMPTOMS TABLE (See page 05–10)

A	Wrong circuit confirmed
B	Wrong parts confirmed

B → GO TO STEP 17

A

14	CHECK ECM POWER SOURCE CIRCUIT (See page 05–236)

15	CIRCUIT INSPECTION

A	Malfunction not confirmed
B	Malfunction confirmed

B → GO TO STEP 18

A

16	CHECK FOR INTERMITTENT PROBLEMS (See page 05–7)

GO TO STEP 18

17	PARTS INSPECTION

18	IDENTIFICATION OF PROBLEM

19	ADJUSTMENT AND/OR REPAIR

CUSTOMER PROBLEM ANALYSIS CHECK

ENGINE CONTROL SYSTEM Check Sheet

Inspector's Name _____

Customer's Name		VIN	
Date Vehicle Brought in		Production Date	
License Plate No.		Odometer Reading	km miles

Problem Symptoms	☐ Engine does not Start	☐ Engine does not crank ☐ No initial combustion ☐ No complete combustion
	☐ Difficult to Start	☐ Engine cranks slowly ☐ Other _____
	☐ Poor Idling	☐ Incorrect first idle ☐ Idling rpm is abnormal ☐ High (rpm) ☐ Low (rpm) ☐ Rough idling ☐ Other _____
	☐ Poor Driveability	☐ Hesitation ☐ Back fire ☐ Muffler explosion (after–fire) ☐ Surging ☐ Knocking ☐ Other _____
	☐ Engine Stall	☐ Soon after starting ☐ After accelerator pedal depressed ☐ After accelerator pedal released ☐ During A/C operation ☐ Shifting from N to D ☐ Other _____
	☐ Others	

Data Problem Occurred		
Problem Frequency		☐ Constant ☐ Sometimes (times per day/month) ☐ Once only ☐ Other _____
Condition When Problem Occurs	Weather	☐ Fine ☐ Cloudy ☐ Rainy ☐ Snowy ☐ Various/Other _____
	Outdoor Temperature	☐ Hot ☐ Warm ☐ Cool ☐ Cold (approx. ____ °C/____ °F)
	Place	☐ Highway ☐ Suburbs ☐ Inner City ☐ Uphill ☐ Downhill ☐ Rough road ☐ Other _____
	Engine Temp.	☐ Cold ☐ Warming up ☐ After Warming up ☐ Any temp. ☐ Other _____
	Engine Operation	☐ Starting ☐ Just after starting (min.) ☐ Idling ☐ Racing ☐ Driving ☐ Constant speed ☐ Acceleration ☐ Deceleration ☐ A/C switch ON/OFF ☐ Other _____

Condition of check engine warning lamp (CHK ENG)		☐ Remains on ☐ Sometimes lights up ☐ Does not light up
DTC Inspection	Normal mode (Pre–check)	☐ Normal ☐ Malfunction code(s) (code) ☐ Freeze frame data ( )
	Check Mode	☐ Normal ☐ Malfunction code(s) (code) ☐ Freeze frame data ( )

05HHW–01

CHECK FOR INTERMITTENT PROBLEMS

HINT:

Hand–held tester only:

Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect when the ECM is in check mode with a hand–held tester. In check mode, the ECM uses 1 trip detection logic, which has a higher sensitivity to malfunctions than normal mode (default) using uses 2 trip detection logic.

(a) Clear the DTCs (see page 05–19).
(b) Set the check mode (see page 05–20).
(c) Perform a simulation test (see page 01–22).
(d) Check the connector and terminal (see page 01–32).
(e) Wiggle the harness and the connector (see page 01–32).

05HHY–01

BASIC INSPECTION

When the malfunction is not confirmed in the DTC check, troubleshooting should be carried out in all the possible circuits considered as causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location causing the problem can be found quickly and efficiently. Therefore, using this check is essential in the engine troubleshooting.

1 CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and ignition switch OFF.

	OK	NG
Voltage	11 V or more	Less than 11 V

NG → **CHARGE OR REPLACE BATTERY**

OK

2 CHECK IF ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–10**

OK

3 CHECK IF ENGINE STARTS

NG → **GO TO STEP 7**

OK

4 CHECK AIR FILTER

(a) Visually check that the air filter is not excessively dirty or oily.

NG → **REPLACE AIR FILTER**

OK

5 CHECK IDLE SPEED (See page 14–1)

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–10**

OK

6	CHECK IGNITION TIMING (See page 14–1)

NG → PROCEED TO PAGE 18–1 AND CONTINUE TO TROUBLESHOOT

OK

PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–10

7	CHECK FUEL PRESSURE (See page 11–4)

NG → PROCEED TO PAGE 11–1 AND CONTINUE TO TROUBLESHOOT

OK

8	CHECK FOR SPARK (See page 18–1)

NG → PROCEED TO PAGE 18–1 AND CONTINUE TO TROUBLESHOOT

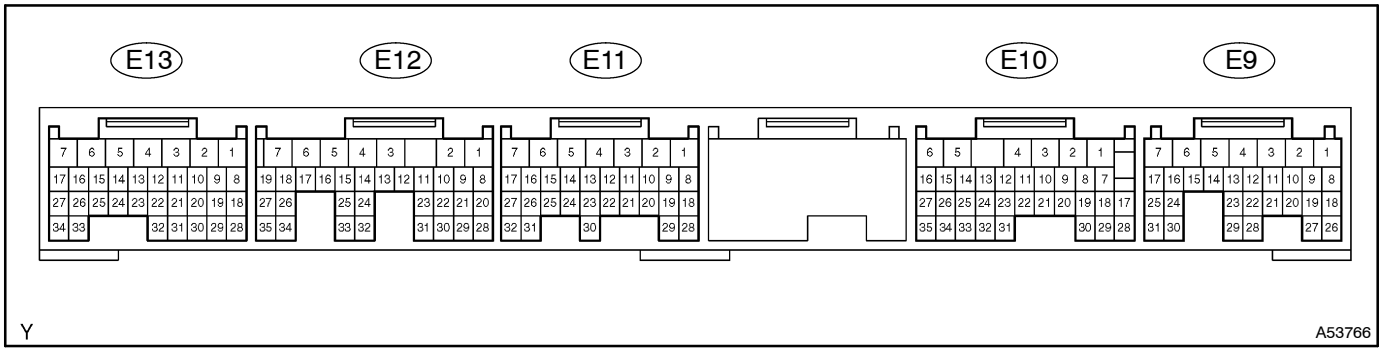
OK

PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–10

05CDX–02

PROBLEM SYMPTOMS TABLE

When the malfunction is not confirmed in the diagnostic trouble code check and the problem still can not be confirmed in the basic inspection, proceed to this matrix chart and troubleshoot according to the numbered order given below.



Symptom	Suspected Area	See page
Engine does not crank (Does not start)	1. Starter	19–1
	2. Starter relay	19–1
	3. Park/neutral position switch	*1
No initial combustion (Does not start)	1. ECM power source circuit	05–236
	2. Ignition coil assy	05–167
	3. Fuel pump control circuit	05–241
	4. Injector circuit	05–136
No complete combustion (Does not start)	1. Ignition coil assy	05–167
	2. Fuel pump control circuit	05–241
	3. Injector circuit	05–136
Difficult to start (Engine cranks normally)	1. Starter signal circuit	05–249
	2. Ignition coil assy	05–167
	3. Spark plug	18–3
	4. Compression	14–1
	5. Injector circuit	05–136
	6. Fuel pump control circuit	05–241
Difficult to start with cold engine	1. Starter signal circuit	05–249
	2. Injector circuit	05–136
	3. Ignition coil assy	05–167
	4. Spark plug	18–3
	5. Fuel pump control circuit	05–241
Difficult to start with hot engine	1. Starter signal circuit	05–249
	2. Injector circuit	05–136
	3. Ignition coil assy	05–167
	4. Spark plug	18–3
	5. Fuel pump control circuit	05–241
High engine idle speed (Poor idling)	1. ECM power source circuit	05–236
	2. Park/neutral position switch	*1
	3. Back up power source circuit	05–199
Low engine idle speed (Poor idling)	1. Park/neutral position switch	*1
	2. Injector circuit	05–136
	3. Back up power source circuit	05–199
	4. Fuel pump control circuit	05–241
Rough idling (Poor idling)	1. Mass air flow meter circuit	05–55
	2. Vacuum sensor circuit	05–61
	3. Injector circuit	05–136
	4. Fuel pump control circuit	05–241
	5. Ignition coil assy	05–167
	6. Compression	14–1
	7. Back up power source circuit	05–199
Hunting (Poor idling)	1. Mass air flow meter circuit	05–55
	2. Vacuum sensor circuit	05–61
	3. ECM power source circuit	05–236
Hesitation/Poor acceleration (Poor driveability)	1. Mass air flow meter circuit	05–55
	2. Vacuum sensor circuit	05–61
	3. Injector circuit	05–136
	4. Ignition coil assy	05–167
	5. Fuel pump control circuit	05–241
Muffler explosion after fire (Poor driveability)	1. Ignition coil assy	05–167
	2. Spark plug	18–3
	3. Injector circuit	05–136

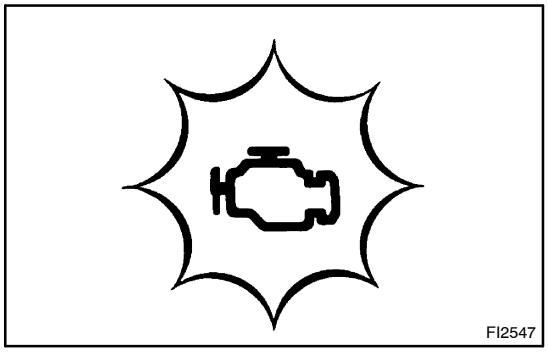
Symptom	Suspected Area	See page
Surging (Poor driveability)	1. Spark plug 2. Injector circuit	18–3 05–136
Engine stalls soon after starting	1. Mass air flow meter circuit 2. Vacuum sensor circuit	05–55 05–61
Engine stalls after accelerator pedal depressed	1. Mass air flow meter circuit 2. Vacuum sensor circuit	05–55 05–61
Engine stalls after accelerator pedal release	1. Mass air flow meter circuit 2. Vacuum sensor circuit 3. ECM	05–55 05–61 05–12
Engine stalls during A/C operation	1. A/C signal circuit (Compressor circuit) 2. ECM	*1 05–12
Engine stalls when shifting from N to D	1. Park/neutral position switch	*1

*1: See page 40–8 of Pub. No. RM1018E AVENSIS.

05CDW–02

TERMINALS OF ECM

Each ECM terminal's standard normal voltage is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminals No.)" for the terminals to be inspected. The standard normal voltage between the terminals is shown under "STD Voltage".
Use the illustration above as a reference for the ECM terminals.



Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	STD Voltage
BATT (E9–3) – E1 (E11–1)	B–Y – BR	Battery (for measuring the battery voltage and for the ECM memory)	Always	9 to 14 V
+BM (E10–6) – E1 (E11–1)	G–Y – BR	Power source of throttle motor	Always	9 to 14 V
IGSW (E9–9) – E1 (E11–1)	B–W – BR	Ignition switch	Ignition switch ON	9 to 14 V
+B (E9–1) – E1 (E11–1)	B–R – BR	Power source of ECM	Ignition switch ON	9 to 14 V
+B2 (E9–2) – E1 (E11–1)	B–R – BR	Power source of ECM	Ignition switch ON	9 to 14 V
MREL (E9–8) – E1 (E11–1)	GR – BR	EFI relay	Ignition switch ON	9 to 14 V
IREL (E10–35) – E1 (E11–1)	V – BR	INJ relay	Ignition switch ON	9 to 14 V
VC (E13–18) – E2 (E13–28)	R–W – BR	Power source of sensor (a specific voltage)	Ignition switch ON	4.5 to 5.5 V
VTA1 (E13–21) – E2 (E13–28)	L–W – BR	Throttle position sensor (for the engine control)	Ignition switch ON, Accelerator pedal fully released	0.4 to 1.0 V
VTA1 (E13–21) – E2 (E13–28)	L–W – BR	Throttle position sensor (for the engine control)	Ignition switch ON, Accelerator pedal fully depressed	3.2 to 4.8 V
VTA2 (E13–31) – E2 (E13–28)	B–R – BR	Throttle position sensor (for the sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	2.1 to 3.1 V
VTA2 (E13–31) – E2 (E13–28)	B–R – BR	Throttle position sensor (for the sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully depressed	4.5 to 5.5 V
VPA (E9–22) – EPA (E9–28)	G – Y	Accelerator pedal position sensor (for the engine control)	Ignition switch ON, Accelerator pedal fully released	0.5 to 1.1 V
VPA (E9–22) – EPA (E9–28)	G – Y	Accelerator pedal position sensor (for the engine control)	Ignition switch ON, Accelerator pedal fully depressed	2.5 to 4.6 V
VPA2 (E9–23) – EPA2 (E9–29)	W – Y	Accelerator pedal position sensor (for the sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	1.5 to 2.9 V
VPA2 (E9–23) – EPA2 (E9–29)	W – Y	Accelerator pedal position sensor (for the sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully depressed	3.5 to 5.5 V
VCPA (E9–26) – EPA (E9–28)	B – Y	Power source of accelerator pedal position sensor (for VPA)	Ignition switch ON	4.5 to 5.5 V

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	STD Voltage
VCP2 (E9–27) – EPA2 (E9–29)	B – Y	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch ON	4.5 to 5.5 V
VG (E13–30) – EVG (E13–29)	L–Y – G	Mass air flow meter	Idling, P or N position, A/C switch OFF	0.5 to 3.0 V
THA (E13–20) – E2 (E13–28)	GR – BR	Intake air temperature sensor	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
THW (E13–19) – E2 (E13–28)	B–W – BR	Engine coolant temperature sensor	Idling, Coolant temperature 80°C (176°F)	0.2 to 1.0 V
#1 (E13–1) – E01 (E13–7) #2 (E13–2) – E01 (E13–7) #3 (E13–3) – E01 (E13–7) #4 (E13–4) – E01 (E13–7)	G–W – W–B W–R – W–B R–W – W–B W–L – W–B	Injector	Ignition switch ON	9 to 14 V
#1 (E13–1) – E01 (E13–7) #2 (E13–2) – E01 (E13–7) #3 (E13–3) – E01 (E13–7) #4 (E13–4) – E01 (E13–7)	G–W – W–B W–R – W–B R–W – W–B W–L – W–B	Injector	Idling	Pulse generation (See page 05–136)
IJF1 (E13–25) – E01 (E13–7)	R–B – W–B	Injector	Idling	Pulse generation (See page 05–136)

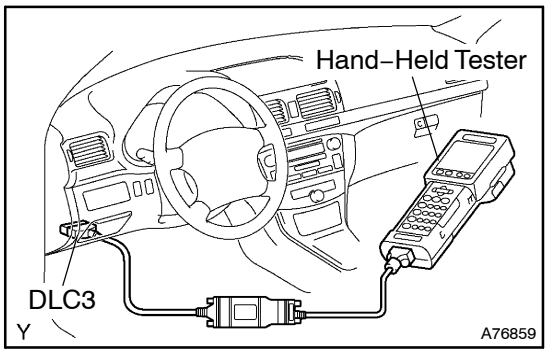
OX1A (E12–22) – E2 (E13–28)	B – BR	Heated oxygen sensor	Maintain engine speed at 2,500 rpm for 2 minutes after warming up	Pulse generation (See page 05–82)
OX1B (E12–21) – O1B– (E11–26)	B – W	Heated oxygen sensor	Maintain engine speed at 2,500 rpm for 2 minutes after warming up	Pulse generation (See page 05–82)
OX2A (E12–23) – E2 (E13–28)	R – BR	Heated oxygen sensor	Maintain engine speed at 2,500 rpm for 2 minutes after warming up	Pulse generation (See page 05–82)
OX2B (E12–29) – O2B– (E11–31)	R – G	Heated oxygen sensor	Maintain engine speed at 2,500 rpm for 2 minutes after warming up	Pulse generation (See page 05–82)
HT1A (E12–5) – E03 (E11–7) HT1B (E12–25) – E03 (E11–7) HT2A (E12–4) – E03 (E11–7) HT2B (E12–33) – E03 (E11–7)	Y – W–B P – W–B L – W–B L–B – W–B	Heated oxygen sensor heater	Idling	Below 3.0 V
HT1A (E12–5) – E03 (E11–7) HT1B (E12–25) – E03 (E11–7) HT2A (E12–4) – E03 (E11–7) HT2B (E12–33) – E03 (E11–7)	Y – W–B P – W–B L – W–B L–B – W–B	Heated oxygen sensor heater	Ignition switch ON	9 to 14 V
KNK1 (E12–1) – EKNK (E12–2)	B – W	Knock sensor	Maintain engine speed at 4,000 rpm after warming up	Pulse generation (See page 05–156)

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	STD Voltage
OC1+ (E11–16) – OC1– (E11–15)	W–G – Y–B	Camshaft timing oil control valve (OCV)	Ignition switch ON	Pulse generation (See page 05–41)
EVP1 (E13–34) – E01 (E13–7)	W–G – W–B	VSV for EVAP	Ignition switch ON	9 to 14 V
SCV (E13–5) – E1 (E11–1)	L–B – BR	VSV for IACV	Ignition switch ON	9 to 14 V
PIM (E13–33) – E2 (E13–28)	G–W – BR	Vacuum sensor	Ignition switch ON	3.3 to 3.9 V
PIM (E13–33) – E2 (E13–28)	G–W – BR	Vacuum sensor	Apply vacuum of 26.7 kPa (200 mmHg, 7.9 in.Hg)	2.6 to 3.0 V
PB (E13–26) – E2 (E13–28)	Y – BR	Brake booster pressure sensor	Ignition switch ON	3.3 to 3.9 V
PB (E13–26) – E2 (E13–28)	Y – BR	Brake booster pressure sensor	Apply vacuum of 26.7 kPa (200 mmHg, 7.9 in.Hg)	2.6 to 3.0 V
PR (E13–23) – E2 (E13–28)	Y–G – BR	Fuel pressure sensor	Idling	2.1 to 3.2 V
FP+ (E12–6) – E01 (E13–7) FP– (E12–3) – E01 (E13–7)	R – BR G – BR	Spill valve	Idling	Pulse generation (See page 05–207)
STA (E13–17) – E1 (E11–1)	B–Y – BR	Starter signal	Shift position in neutral, Ignition switch START	6.0 V or more
STP (E10–19) – E1 (E11–1)	G–W – BR	Stop lamp switch	Brake pedal depressed	9 to 14 V
STP (E10–19) – E1 (E11–1)	G–W – BR	Stop lamp switch	Brake pedal released	Below 1.5 V
ST1– (E10–12) – E1 (E11–1)	G–W – BR	Stop lamp switch	Ignition switch ON, Brake pedal depressed	Below 1.5 V
ST1– (E10–12) – E1 (E11–1)	G–W – BR	Stop lamp switch	Ignition switch ON, Brake pedal released	7.5 to 14 V
W (E9–11) – E1 (E11–1)	W – W–B	CHK ENG	Idling	9 to 14 V
W (E9–11) – E1 (E11–1)	W – W–B	CHK ENG	Ignition switch ON	Below 3.0 V
ELS (E9–12) – E1 (E11–1)	G – BR	Electric load	Taillight switch ON, Defogger switch ON	7.5 to 14 V
ELS (E9–12) – E1 (E11–1)	G – BR	Electric load	Taillight switch OFF, Defogger switch OFF	0 to 1.5 V
TACH (E9–5) – E1 (E11–1)	GR–R – BR	Engine speed	Idling	Pulse generation
SPD (E10–17) – E1 (E11–1)	V–W – W–B	Speed signal from combination meter	Ignition switch ON, Rotate driving wheel slowly	4.5 to 5.5 V
TC (E9–20) – E1 (E11–1)	W–L – BR	Terminal TC of DLC 3	Ignition switch ON	9 to 14 V
SIL (E9–18) – E1 (E11–1)	W–G – BR	Terminal SIL of DLC3	Connect the hand–held tester to DLC3	Pulse generation
PSW (E11–10) – E1 (E11–1)	G – BR	Power steering oil pressure switch	While turning the steering wheel	Below 1.5 V
F/PS (E9–14) – E1 (E11–1)	LG–B – BR	Airbag sensor assembly	Ignition switch ON	Below 1.5 V

05HI0–01



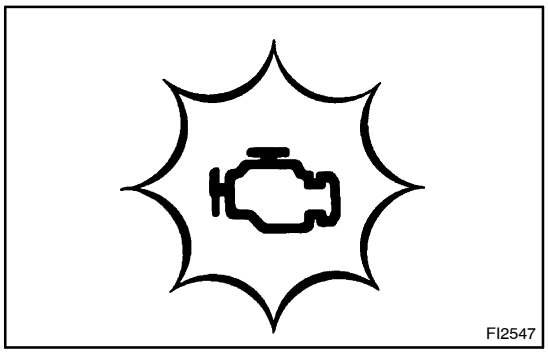
DIAGNOSIS SYSTEM

FI2547

1. DESCRIPTION for EURO–OBD (European spec.)

- When troubleshooting Euro–OBD vehicles, the only difference from the usual troubleshooting procedure is that you connect an OBD scan tool complying with ISO 15031–4 or a hand–held tester to the vehicle, and read the various data output from the vehicle's ECM.
- Euro–OBD regulations require that the vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in: 1) the emission control system / components, or 2) the powertrain control components (which affect vehicle emissions), or 3) the computer. In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by ISO 15031–4 are recorded in the ECM memory (see page 05–31).

If the malfunction does not reoccur in 3 consecutive trips, the CHK ENG goes off automatically but the DTCs remain recorded in the ECM memory.

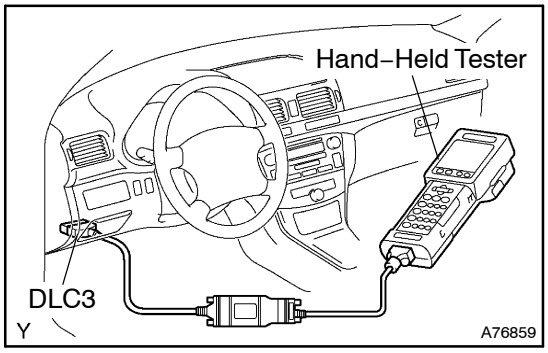


A76859

- To check the DTCs, connect the OBD scan tool or hand–held tester to Data Link Connector 3 (DLC3) on the vehicle. The OBD scan tool or hand–held tester also enables you to erase the DTCs and check the freeze frame data and various forms of engine data. (See the instruction manual for the OBD scan tool or the hand–held tester).
- DTCs include ISO controlled codes and manufacturer controlled codes. ISO controlled codes must be set according to the ISO, while manufacturer controlled codes can be set by a manufacturer within certain restrictions (see the DTC chart on page 05–31).
- The diagnosis system operates in normal mode during normal vehicle use. In "normal mode", 2 trip detection logic* is used to ensure accurate detection of malfunctions. A "check mode", is also available to technicians as an option. In "check mode", 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions (hand–held tester only)
  (see page 05–19).
- *2 trip detection logic:
  When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned OFF and then ON again, and the same malfunction is detected again, the CHK ENG will illuminate (2nd trip).

- Freeze frame data:
  The freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

Priorities for troubleshooting:
When multiple DTCs occur, find out the order in which the DTCs should be inspected by checking the component's DTC chart. If no instructions are written in the DTC chart, check DTCs in the following order of priority:



(a) DTCs other than fuel trim malfunction DTCs (P0171, P0172, P0174 and P0175) and misfire DTCs (P0300 to P0304).
(b) Fuel trim malfunction DTCs (P0171, P0172, P0174 and P0175).
(c) Misfire DTCs (P0300 to P0304).

FI2547

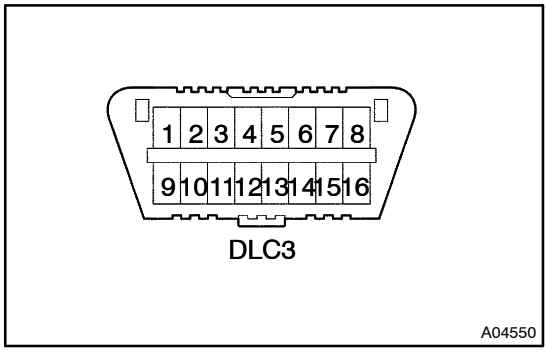
2. DESCRIPTION for M–OBD (Except European spec.)

- When troubleshoot Multiplex OBD (M–OBD) vehicles, the only difference from the usual troubleshooting procedure is that you connect the hand–held tester to the vehicle, and read the various data output from the vehicle's ECM.
- The vehicle's on–board computer illuminates the check engine warning lamp (CHK ENG) on the instrument panel when the computer detects a malfunction in the computer itself or in drive system components. In addition, the applicable Diagnostic Trouble Codes (DTCs) are recorded in the ECM memory (see page 05–31).

If the malfunction does not recur, the CHK ENG goes off be disappeared by turning the ignition switch to OFF, but the recorded DTCs remain in the ECM memory.

A76859

- To check the DTCs, connect the hand–held tester to the Data Link Connector 3 (DLC3) on the vehicle or connect terminals TC and CG on the DLC3(DTCs will be displayd on the multi–information display).
- The diagnosis system operates in normal mode during normal vehicle use. In "normal mode", 2 trip detection logic* is used to ensure accurate detection of malfunctions. A "check mode", is also available to technicians as an option. In "check mode", 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions (hand–held tester only)
  (see page 05–20).



- *2 trip detection logic:
  When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned OFF and then ON again, and the same malfunction is detected again, the CHK ENG will illuminate (2nd trip).
- Freeze frame data:
  The freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

Priorities for troubleshooting:
When multiple DTCs occur, find out the order in which the DTCs should be inspected by checking the component's DTC chart. If no instructions are written in the DTC chart, check DTCs in the following order of priority:

(a) DTCs other than fuel trim malfunction DTCs (P0171, P0172, P0174 and P0175) and misfire DTCs (P0300 to P0304).
(b) Fuel trim malfunction DTCs (P0171, P0172, P0174 and P0175).
(c) Misfire DTCs (P0300 to P0304).

3. CHECK DLC3.

(a) The vehicle's ECM uses the ISO 9141–2 (Euro–OBD)/ ISO 14230(M–OBD) communication protocol. The terminal arrangement of the DLC3 complies with ISO 15031–03 and matches the ISO 9141–2/ ISO 14230 format.

Symbol	Terminal No.	Name	Reference Terminal	Result	Condition
SIL	7	Bus "+" line	5 – Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	9 to 14 V	Always

HINT:
Connect the cable of the OBD II scan tool or the hand–held tester to the DLC3, turn the ignition switch ON and attempt to use the hand–held tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.

- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself, so consult the Service Department listed in the tool's instruction manual.

4. INSPECT BATTERY VOLTAGE

Battery voltage: 11 to 14 V

If voltage is below 11 V, recharge the battery before proceeding.

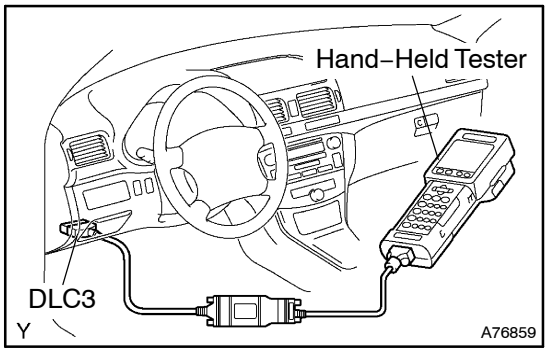
5. CHECK CHK ENG

(a) The CHK ENG comes on when the ignition switch is turned to ON and the engine is not running.

HINT:

If the CHK ENG is not illuminated, troubleshoot the CHK ENG circuit (see page 05–251).

(b) When the engine is started, the CHK ENG should not illuminate. If the lamp remains on, the diagnosis system has detected a malfunction or abnormality in the system.



05HI1–01

DTC CHECK/CLEAR

NOTICE:

Hand–held tester only:

When the diagnosis system is changed from normal mode to check mode or vice–versa, all DTCs and freeze frame data recorded in normal mode will be erased. Before changing modes, always check and make a note of DTCs and freeze frame data.

1. CHECK DTC (Using the hand–held tester)

(a) Connect the hand–held tester to the DLC3.

(b) Turn the ignition switch to ON.

(c) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. For the hand–held tester, select the item: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODEDS.

HINT:

If you need help with the hand–held tester, refer to its instruction book.

(d) See page 05–31 to confirm the details of the DTCs.

2. FREEZE FRAME DATA

(a) Connect the hand–held tester to the DLC3.

(b) Turn the ignition switch to ON.

(c) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. For the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / FREEZE FRAME DATA.

HINT:

If you need help with the hand–held tester, refer to its instruction book.

3. CLEAR DTCs AND FREEZE FRAME DATA (using the hand–held tester)

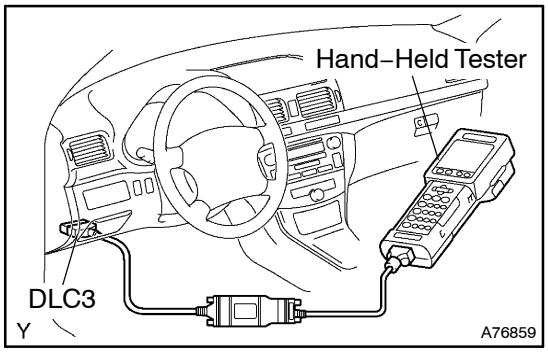
(a) Connect the hand–held tester to the DLC3.

(b) Turn the ignition switch to ON. (Do not start the engine start)

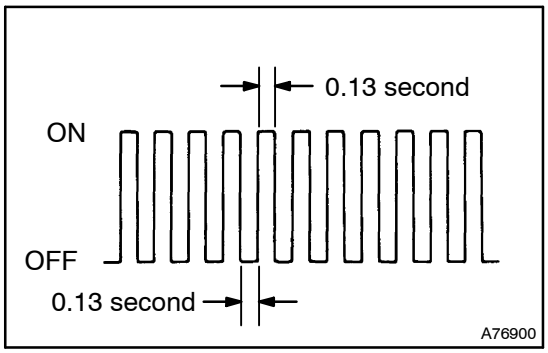
(c) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. For the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES.

HINT:

If you need help with the hand–held tester, refer to its instruction book.



4. CLEAR DTCs AND FREEZE FRAME DATA (not using the hand–held tester)



(a) Remove the EFI and THROTTLE fuses from the engine room R/B No. 1 for more than 60 seconds, or disconnect the battery terminal for more than 60 seconds. When disconnecting the battery terminal, perform the ”INITIALIZE” procedure.

05HI2–01

CHECK MODE PROCEDURE

HINT:
Hand–held tester only:
Check mode has a higher sensitivity to detect malfunctions and can detect malfunctions that normal mode cannot detect.
Check mode can also detect all the malfunctions that normal mode can detect.

1. CHECK MODE PROCEDURE(Using the hand–held tester)

(a) Make sure that the items below are true.
  (1) Battery positive voltage 11 V or more.
  (2) Throttle valve fully closed.
  (3) Transmission in the P or N position.
  (4) A/C switched to OFF.
(b) Turn the ignition switch to OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Change the ECM to check mode with the hand–held tester. Make sure the CHK ENG flashes as shown in the illustration.

NOTICE:
All DTCs and freeze frame data recorded will be erased if: 1) the hand–held tester is used to change the ECM from normal mode to check mode or vice–versa; or 2) during check mode, the ignition switch is turned from ON to ACC or OFF.

(f) Start the engine. The CHK ENG should turn off after the engine starts.
(g) Simulate the conditions of the malfunction described by the customer.
(h) After simulating the malfunction conditions, use the hand–held tester diagnosis selector to check the DTC, freeze frame data and other data.
(i) After checking the DTC, inspect the applicable circuit.

2. CLEAR DTCs (Using the hand–held tester)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Erase DTCs and freeze frame data with the hand–held tester. For the hand–held tester: 1) enter the following menus: DIAGNOSIS ENHANCED OBD II / DTC INFO / CLEAR CODES; and 2) press YES.

HINT:
If you need help with the hand–held tester, refer to its instruction book.

3. CLEAR DTCs (Not using the hand–held tester)

(a) Disconnect the battery terminal or remove the EFI and THROTTLE fuses from the engine room R/B No. 1 for more than 60 seconds.

(b) Remove the EFI and THROTTLE fuse from the engine room R/B No.1 for more than 60 seconds, or disconnect the battery terminal for more than 60 seconds. When disconnecting the battery terminal, perform the ”INITIALIZE” procedure.

05HI3–01

FAIL–SAFE CHART

If any of the following codes is recorded, the ECM enters the fail–safe mode.

DTC No.	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P0031 P0032 P0037 P0038 P0051 P0052 P0057 P0058	Faulty heater circuit is turned off	Ignition switch is turned to OFF
P0100 P0102 P0103	Ignition timing is calculated from engine RPM and TP (Throttle Position)	”Pass” condition is detected
P0105 P0107 P0108	• Intake air pressure is controlled with a calculated value in proportion to the throttle opening angle and the engine speed • Limit the engine speed to 3,000 rpm or less	”Pass” condition is detected
P0110 P0112 P0113	IAT (Intake Air Temperature) is fixed at 20°C (68°F)	”Pass” condition is detected
P0115 P0117 P0118	ECT (Engine Coolant Temperature) is fixed at 80°C (176°F)	”Pass” condition is detected
P0120 P0121 P0122 P0123 P0220 P0222 P0223 P2135	If the Electronic Throttle Control System (ETCS) has a malfunction, the ECM cuts off current to the throttle control motor. The throttle control valve returns to a predetermined opening angle (approximately 16°) by the force of the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel–cut) and ignition timing in accordance with the accelerator pedal opening angle to enable the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and slowly, the vehicle can be driven slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.	”Pass” condition is detected, and then the ignition switch is turned to OFF
P0190 P0191	• Stop the high–pressure pump operation • Limit the engine speed to 2,000 rpm or less	”Pass” condition is detected, and then the ignition switch is turned to OFF
P0200	Turn off the INJ relay and cut the power for the EDU	”Pass” condition is detected, and then the ignition switch is turned to OFF
P0201 P0202 P0203 P0204	• Stop fuel injection for an abnormal cylinder and related other cylinders • Limit the engine speed to 3,000 rpm or less	”Pass” condition is detected, and then the ignition switch is turned to OFF
P0325 P0327 P0328	Maximum ignition timing retardation	Ignition switch is turned to OFF
P0351 P0352 P0353 P0354	Stop fuel injection for all the cylinders	”Pass” condition is detected
P0604 P0606 P0607 P0657	Turn off the power for the throttle motor, return the throttle valve in position using the return spring, and fuel cut intermittent	”Pass” condition is detected, and then the ignition switch is turned to OFF
P1235	• Stop the high–pressure pump operation • Limit the engine speed to 2,000 rpm or less	”Pass” condition is detected, and then the ignition switch is turned to OFF
P2008	Force IACV to close	”Pass” condition is detected, and then the ignition switch is turned to OFF

DTC No.	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P2102 P2103 P2111 P2112 P2118 P2119	Turn off the power for the throttle motor, return the throttle valve in position using the return spring, and fuel cut intermittent	”Pass” condition is detected, and then the ignition switch is turned to OFF
P2120 P2121 P2122 P2123 P2125 P2127 P2128 P2138	• If both VPA1 and VPA2 are malfunctioning: Engine RPM is fixed at idle • If either of VPA1 or VPA2 is malfunctioning: Fuel cut intermittently	”Pass” condition is detected, and then the ignition switch is turned to OFF

05HI4–01

DATA LIST/ACTIVE TEST

1. DATA LIST

HINT:

Using the hand–held tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to shorten labor time.

NOTICE:

In the table below, the values listed under ”Normal Condition” are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.
(b) Turn the ignition switch to OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) Select the item: DIAGNOSIS / OBD/MOBD / DATA LIST.
(g) According to the display on the tester, perform the DATA LIST.

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *1	Diagnostic Note
INJECTOR	Injection period of the No. 1 cylinder/ Min.: 0 ms, Max.: 32.64 ms	Idling: 0.5 to 1.3 ms	—
IGN ADVANCE	Ignition timing advance for No. 1 cylinder/ Min.: –64 deg., Max.: 63.5 deg	Idling: BTDC 4 to 23˚	—
CALC LOAD	Calculated load by ECM/ Min.: 0 %, Max.: 100 %	• Idling: 12 to 27 % • Running without load (2,500 rpm): 10 to 25 %	—
MAF	Air flow rate from MAF meter/ Min.: 0 gm/s, Max.: 655 gm/s	• Idling: 2.0 to 4.7 gm/s • Running without load (2,500 rpm): 7.0 to 14.0 gm/s	If value is approximately 0.0 gm/s: • Mass air flow meter power source circuit open • VG circuit open or short If the value is 160.0 gm/s or more: • E2G circuit open
MAP	Absolute pressure inside intake manifold/ Min.: 0 kPa, Max.: 224 kPa	• Idling: 24 to 36 kPa • Running without load (2,500 rpm): 20 to 32 kPa	If value is approximately 0.0 kPa: • PIM circuit short If the value is 142.0 kPa or more: • VC circuit open or short • PIM circuit open • E2 circuit open
ENGINE SPD	Engine speed/ Min.: 0 rpm, Max.: 16383 rpm	Idling: 625 to 725 rpm	—
COOLANT TEMP	Coolant temperature/ Min.: –40°C, Max.: 140°C	After warming up: 80 to 96˚C (176 to 203˚F)	If value is –40 °C or 140 °C, sensor circuit is open or shorted
INTAKE AIR	Intake air temperature/ Min.: –40°C, Max.: 140°C	Equivalent to ambient air temperature (after cold soak)	If value is –40 °C or 140 °C, sensor circuit is open or shorted
THROTTLE POS	Absolute throttle position sensor/ Min.: 0 %, Max.: 100 %	• Throttle fully closed: 10 to 24 % • Throttle fully open: 64 to 96 %	Read the value with ignition switch ON (Do not start engine)
CTP SW	Closed throttle position switch/ ON or OFF	• Throttle fully closed: ON • Throttle open: OFF	—
VEHICLE SPD	Vehicle speed/ Min.: 0 km/h, Max.: 255 km/h	Actual vehicle speed	Speed indicated on speedometer
ACCEL POS #1	Accelerator pedal position sensor No.1 output voltage/ Min.: 0 V, Max.: 5 V	• Accelerator pedal released: 0.5 to 1.1 V • Accelerator pedal depressed: 2.5 to 4.6 V	Read the value with ignition switch ON (Do not start engine)

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *1	Diagnostic Note
ACCEL POS #2	Accelerator pedal position sensor No.2 output voltage/ Min.: 0 V, Max.: 5 V	• Accelerator pedal released: 1.5 to 2.9 V • Accelerator pedal depressed: 3.5 to 5.5 V	Read the value with ignition switch ON (Do not start engine)
THROTTLE POS #2	Throttle position sensor No.2 output voltage/ Min.: 0 V, Max.: 5 V	• Throttle fully closed: 2.1 to 3.1 V • Throttle fully open: 4.5 to 5.5 V	Read the value with ignition switch ON (Do not start engine)
THROTTLE TARGT	Target position of throttle valve/ Min.: 0 V, Max.: 5 V	Idling: 0.4 to 1.1 V	—
THROTTLE OPN DUTY	Throttle motor opening duty ratio/ Min.: 0 %, Max.: 100 %	Throttle fully closed: 0 %	• When accelerator pedal is depressed, duty ratio is increased • Read the value with ignition switch ON (Do not start engine)
THROTTLE CLS DUTY	Throttle motor closed duty ratio/ Min.: 0 %, Max.: 100 %	Throttle fully closed: 0 %	• When accelerator pedal is released quickly, duty ratio is increased • Read the value with ignition switch ON (Do not start engine)
THROTTLE MOT	Whether or not throttle motor control is permitted/ ON or OFF	Idling: ON	—
ETCS MAG CLUTCH	Electromagnetic clutch/ ON or OFF	Idling: ON	
+BM	Whether or not electric throttle control system power is inputted/ ON or OFF	Idling: ON	—
ACCEL IDL POS	Whether or not accelerator pedal position sensor is detecting idle/ ON or OFF	Idling: ON	—
THROTTLE IDL POS	Whether or not throttle position sensor is detecting idle/ ON or OFF	Idling: ON	—
FAIL #1	Whether or not fail safe function is executed/ ON or OFF	ETCS has failed: ON	—
FAIL #2	Whether or not fail safe function is executed/ ON or OFF	ETCS has failed: ON	—
THROTTLE INITIAL	Throttle fully closed learned value Min.: 0 V, Max.: 5 V	0.5 to 0.9 V	—
ACCEL LEARN VAL	Accelerator fully closed learned value Min.: 0 V, Max.: 5 V	0.4 to 1.4 V	—
THROTTLE MOT	Throttle motor current Min.: 0 A, Max.: 20 A	Idling: 0 to 3.0 A	—
ETCS MAG CLUTCH	Electromagnetic clutch current Min.: 0 A, Max.: 2.5 A	Idling: ON	
O2S B1 S1	Heated oxygen sensor output voltage for bank 1 sensor 1/ Min.: 0 V, Max.: 1.275 V	Driving (50 km/h, 31 mph): 0.1 to 0.9 V	Performing the INJ VOL or A/F CONTROL function of the ACTIVE TEST enables the technician to check the voltage output of each sensor
O2S B1 S2	Heated oxygen sensor output voltage for bank 1 sensor 2/ Min.: 0 V, Max.: 1.275 V	Driving (50 km/h, 31 mph): 0.1 to 0.9 V	Performing the INJ VOL or A/F CONTROL function of the ACTIVE TEST enables the technician to check the voltage output of each sensor

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *1	Diagnostic Note
O2S B2 S1	Heated oxygen sensor output voltage for bank 2 sensor 1/ Min.: 0 V, Max.: 1.0 V	Driving (50 km/h, 31 mph): 0.1 to 0.9 V	Performing the INJ VOL or A/F CONTROL function of the ACTIVE TEST enables the technician to check the voltage output of each sensor
O2S B2 S2	Heated oxygen sensor output voltage for bank 2 sensor 2/ Min.: 0 V, Max.: 1.0 V	Driving (50 km/h, 31 mph): 0.1 to 0.9 V	Performing the INJ VOL or A/F CONTROL function of the ACTIVE TEST enables the technician to check the voltage output of each sensor
SHORT FT #1	Short–term fuel trim of bank 1/ Min.: –100 %, Max.: 100%	0 ± 20 %	This item is short–term fuel compensation used to maintain air–fuel ratio at stoichiometric air–fuel ratio
LONG FT #1	Long–term fuel trim of bank 1/ Min.: –100 %, Max.: 100 %	0 ± 20 %	This item is overall long–term fuel compensation that helps to maintain air–fuel ratio at stoichiometric air–fuel ratio (steadies long term deviations of short–term fuel trim from central value)
TOTAL FT #1	Total fuel trim of bank 1/ Min.: 0.5, Max.: 1.496	Idling: 0.5 to 1.4	—
SHORT FT #2	Short–term fuel trim of bank 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	This item is short–term fuel compensation used to maintain air–fuel ratio at stoichiometric air–fuel ratio
LONG FT #2	Long–term fuel trim of bank 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	This item is overall long–term fuel compensation that helps to maintain air–fuel ratio at stoichiometric air–fuel ratio (steadies long term deviation of short–term fuel trim from central value)
TOTAL FT #2	Total fuel trim of bank 2/ Min.: 0.5, Max.: 1.496	Idling: 0.5 to 1.4	—
O2FT B1 S1	Short–term fuel trim associated with the bank 1 sensor 1/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #1
O2FT B1 S2	Short–term fuel trim associated with the bank 1 sensor 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #1
O2FT B2 S1	Short–term fuel trim associated with the bank 2 sensor 1/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #2
O2FT B2 S2	Short–term fuel trim associated with the bank 2 sensor 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #2

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *1	Diagnostic Note
FUEL SYS #1	Fuel system status (Bank1) / OL or CL or OL DRIVE or OL FAULT or CL FAULT	Idling after warming up: CL	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor(s) as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but one of heated oxygen sensors, which is used for fuel control, is malfunctioning
FUEL SYS #2	Fuel system status (Bank2) / OL or CL or OL DRIVE or OL FAULT or CL FAULT	Idling after warming up: CL	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor(s) as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but one of heated oxygen sensors, which is used for fuel control, is malfunctioning
FC IDL	Fuel cut idle/ ON or OFF	Fuel cut operation: ON	FC IDL= ”ON” when throttle valve fully closed and engine speed is over 1,500 rpm
O2 LR B1 S1	Oxygen sensor lean rich bank 1 sensor 1: Response time for oxygen sensor output to switch from lean to rich/ Min.: 0 ms, Max.: 16,711 ms	Idling after warming up: 0 to 1,000 msec	—
O2 LR B2 S1	Oxygen sensor lean rich bank 2 sensor 1: Response time for oxygen sensor output to switch from lean to rich/ Min.: 0 ms, Max.: 16,711 ms	Idling after warming up: 0 to 1,000 msec	—
O2 RL B1 S1	Oxygen sensor rich lean bank 1 sensor 1: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,711 ms	Idling after warming up: 0 to 1,000 msec	—
O2 RL B2 S1	Oxygen sensor rich lean bank 2 sensor 1: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,711 ms	Idling after warming up: 0 to 1,000 msec	—
STARTER SIG	Starter signal/ ON or OFF	Cranking: ON	—
A/C SIG	A/C signal/ ON or OFF	A/C ON: ON	—
PNP SW [NSW] *2	Park/neutral position switch signal/ ON or OFF	P or N position: ON	—

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *1	Diagnostic Note
ELECT LOAD SIG	Electrical load signal/ ON or OFF	• Taillight switch ON: ON • Defogger switch ON: ON	—
STOP LIGHT SW	Stop lamp switch/ ON or OFF	• Brake pedal depressed: ON • Brake pedal released: OFF	—
PS OIL PRESS SW	Power steering signal/ ON or OFF	• While turning the steering wheel: ON • While not turning the steering wheel: OFF	The idle–up control is performed when power steering signel is ON
PS SIGNAL	Power steering signal/ ON or OFF	When the steering wheel is turned: ON	This signal is usually ON status until the IG switch is turned to OFF
FUEL SP CTL PMP	Fuel pump speed control status/ ON or OFF	Idling: ON Cranking: OFF	
SCV VSV	VSV status for intake air control valve/ ON or OFF	VSV operation: ON	—
FUEL PUMP/ SPD	Fuel pump/speed status/ ON/H or OFF/M,L	Idling: ON	—
EVAP VSV	VSV status for EVAP control/ ON or OFF	VSV operating: ON	VSV for EVAP is controlled by the ECM (ground side duty control)
VVT CTRL B1	VVT control status (bank 1)/ ON or OFF	VVT system operation: ON	—
IGNITION	Ignition counter/ Min.: 0, Max.: 400	0 to 400	—
CYL #1, #2, #3, #4	Misfire ratio of the cylinder 1 to 4/ Min.: 0 %, Max.: 50 %	0 %	This item is displayed in only idling
MISFIRE LOAD	Engine load for first misfire range/ Min.: 0 g/rev, Max.: 3.98 g/rev	Misfire 0: 0 g/rev	—
MISFIRE RPM	Engine RPM for first misfire range/ Min.: 0 rpm, Max.: 6,375 rpm	Misfire 0: 0 rpm	—
FC TAU	Fuel Cut TAU: Fuel cut during very light load/ ON or OFF	Fuel cut operating: ON	The fuel cut is being performed under very light load to prevent the engine combustion from becoming incomplete
O2 RL B1 S2	Oxygen sensor rich lean bank 1 sensor 2: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,700 ms	Idling after warming up: 0 to 1,000 msec.	—
O2 RL B2 S2	Oxygen sensor rich lean bank 2 sensor 2: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,700 ms	Idling after warming up: 0 to 1,000 msec.	—
O2 RL B1 S2	Oxygen sensor rich lean bank 1 sensor 2: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,702.5 ms	Idling after warming up: 0 to 1,000 msec.	—
O2 RL B2 S2	Oxygen sensor rich lean bank 2 sensor 2: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,702.5 ms	Idling after warming up: 0 to 1,000 msec.	—
CHECK MODE	Check mode/ ON or OFF	Check mode ON: ON	See page 05–20

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *1	Diagnostic Note
CHK ENG ON RUN DIST	Distance since activation of check engine warning light/ Min.: 0 km, Max.: 65,535 km	When there is no DTC: 0 km	—
FUEL PRESS	Fuel high pressure inside fuel delivery pipe/ Min.: 0 MPa, Max.: 819 MPa	• Idling: 8 to 13 MPa • Running without load (3,000 rpm): 9.5 to 10.5 MPa	—

*1: If no conditions are specifically stated for ”Idling”, the shift lever is in the N or P position, the A/C switch is OFF and all accessory switches are OFF.
*2: For A/T only

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as a first step of troubleshooting is one method to shorten diagnostic time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch to OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST.
(g) According to the display on the tester, perform the ACTIVE TEST.

Hand–held Tester Display	Test Details	Diagnostic Note
INJ VOL	[Test Details] Control the injection volume Min.: –12.5 %, Max.: 25 % [Vehicle Condition] Engine speed: 3,000 rpm or less	• All injectors are tested at once • Injection volume is gradually changed between –12.5 and 25 %
A/F CONTROL	[Test Details] Control the injection volume –12.5 or 25 % (Change the injection volume –12.5 % or 25 %) [Vehicle Condition] Engine speed: 3,000 rpm or less	Following A/F CONTROL procedure enables the technician to check and graph voltage output of both the heated oxygen sensors To display the graph, enter ACTIVE TEST / A/F CONTROL / USER DATA, select ”O2S B1S1 and B1S2” or ”O2S B2S1 and B2S2” by pressing ”YES” followed by ”ENTER” and then ”F4”
SCV VSV	[Test Details] Activate the VSV for intake air control valve ON or OFF	—
FUEL PMP SP CTL	[Test Details] Activate the fuel pump speed control ON or OFF	—
EVAP (PURGE) VSV	[Test Details] Activate the VSV for EVAP (Purge) control ON or OFF	—
FUEL PUMP / SPD	[Test Details] Control the fuel pump / speed ON or OFF	—
VVT CTRL B1	[Test Details] Activate the VVT system (Bank 1) ON or OFF	• ON: Rough idle or engine stall • OFF: Normal engine speed
TC/TE1	[Test Details] Connect the TC and TE1 ON or OFF	—
FC IDL PROHBT	[Test Details] Control the idle fuel cut prohibit ON or OFF	—

05CID–02

DIAGNOSTIC TROUBLE CODE CHART

HINT:

Parameters listed in the chart may be different than your readings depending on the type of instrument used and other factors.

During the DTC check, refer to the table below if a malfunction code is displayed. For details about each code, refer to the page number in the DTC Chart's left column.

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0010 (05–41)	Camshaft Position "A" Actuator Circuit (Bank 1)	• Open or short in OCV circuit • OCV • ECM	○	○
P0011 (05–44)	Camshaft Position "A" –Timing Over– Advanced or System Performance (Bank 1)	• Valve timing • OCV • Camshaft timing gear assy • ECM	○	○
P0012 (05–41)	Camshaft Position "A" –Timing Over– Retarded (Bank 1)	• Valve timing • OCV • Camshaft timing gear assy • ECM	○	○
P0016 (05–48)	Crankshaft Position – Camshaft Position Correlation (Bank 1 Sensor A)	• Mechanical system (Timing chain has jumped a tooth, chain stretched) • ECM	○	○
P0031 (05–49)	Oxygen Sensor Heater Circuit Low (Bank 1 Sensor 1) *7	• Open or short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 1 Sensor 1) *7 • EFI relay • EFI No. 2 fuse • ECM	○	○
P0032 (05–49)	Oxygen Sensor Heater Circuit High (Bank 1 Sensor 1) *7	• Open or short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 1 Sensor 1) *7 • EFI relay • ECM	○	○
P0037 (05–49)	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2) *7	• Open in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 1 Sensor 2) *7 • EFI relay • EFI No. 2 fuse • ECM	○	○
P0038 (05–49)	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2) *7	• Short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 1 Sensor 2) *7 • EFI relay • ECM	○	○
P0051 (05–49)	Oxygen Sensor Heater Circuit Low (Bank 2 Sensor 1) *8	• Open in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 2 Sensor 1) *8 • EFI relay • EFI No. 2 fuse • ECM	○	○
P0052 (05–49)	Oxygen Sensor Heater Circuit High (Bank 2 Sensor 1) *8	• Short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 2 Sensor 1) *8 • EFI relay • ECM	○	○
P0057 (05–49)	Oxygen Sensor Heater Control Circuit Low (Bank 2 Sensor 2) *8	• Open in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 2 Sensor 2) *8 • EFI relay • EFI No. 2 fuse • ECM	○	○
P0058 (05–49)	Oxygen Sensor Heater Control Circuit High (Bank 2 Sensor 2) *8	• Short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater (Bank 2 Sensor 2) *8 • EFI relay • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0100 (05–55)	Mass or volume Air Flow Circuit	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM	○	○
P0102 (05–55)	Mass or volume Air Flow Circuit Low Input	• Open in mass air flow meter circuit • Short in ground circuit • Mass air flow meter • ECM	○	○
P0103 (05–55)	Mass or volume Air Flow Circuit High Input	• Open in mass air flow meter circuit (EVG circuit) • Short in mass air flow meter circuit (+B circuit) • Mass air flow meter • ECM	○	○
P0105 (05–61)	Manifold Absolute Pressure/ Barometric Pressure Circuit	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • ECM	○	○
P0107 (05–61)	Manifold Absolute Pressure/ Barometric Pressure Circuit Low Input	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • ECM	○	○
P0108 (05–61)	Manifold Absolute Pressure/ Barometric Pressure Circuit High Input	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • ECM	○	○
P0110 (05–66)	Intake Air Temperature Circuit	• Open or short in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM	○	○
P0112 (05–66)	Intake Air Temperature Circuit Low Input	• Short in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM	○	○
P0113 (05–66)	Intake Air Temperature Circuit High Input	• Open in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM	○	○
P0115 (05–70)	Engine Coolant Temperature Circuit	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM	○	○
P0116 (05–74)	Engine Coolant Temperature Circuit Range/Performance Problem	• Engine coolant temperature sensor	○	○
P0117 (05–70)	Engine Coolant Temperature Circuit Low Input	• Short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM	○	○
P0118 (05–70)	Engine Coolant Temperature Circuit High Input	• Open in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM	○	○
P0120 (05–75)	Throttle/Pedal Position Sensor/ Switch "A" Circuit	• Throttle position sensor (built in throttle body) • ECM	○	○
P0121 (05–81)	Throttle/Pedal Position Sensor/ Switch "A" Circuit Range/Performance Problem	• Throttle position sensor (built in throttle body)	○	○
P0122 (05–75)	Throttle/Pedal Position Sensor/ Switch "A" Circuit Low Input	• Throttle position sensor (built in throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM	○	○
P0123 (05–75)	Throttle/Pedal Position Sensor/ Switch "A" Circuit High Input	• Throttle position sensor (built in throttle body) • Open in VTA1 circuit • Open in E2 circuit • VC and VTA1 circuit are short–circuited • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0130 *3 (05–82)	Oxygen Sensor Circuit (Bank 1 Sensor 1) *7	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1 Sensor 1) *7 • Heated oxygen sensor heater (Bank 1 Sensor 1) *7 • EFI relay • Air induction system • Fuel pressure • Injector • ECM	○	○
P0133 *3 (05–94)	Oxygen Sensor Circuit Slow Response (Bank 1 Sensor 1) *7	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1 Sensor 1) *7 • Heated oxygen sensor heater (Bank 1 Sensor 1) *7 • EFI relay • Air induction system • Fuel pressure • Injector • ECM	○	○
P0134 (05–101)	Oxygen Sensor Circuit No Activity Detected (Bank 1 Sensor 1) *7	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1 Sensor 1) *7 • Heated oxygen sensor heater (Bank 1 Sensor 1) *7 • EFI relay • Air induction system • Fuel pressure • PCV hose connection • PCV valve and hose • Injector • Gas leakage in exhaust system • ECM	○	○
P0136 *3 (05–109)	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2) *7	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1 Sensor 2) *7 • Heated oxygen sensor heater (Bank 1 Sensor 2) *7 • EFI relay	○	○
P0150 *3 (05–82)	Oxygen Sensor Circuit (Bank 2 Sensor 1) *8	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 2 Sensor 1) *8 • Heated oxygen sensor heater (Bank 2 Sensor 1) *8 • EFI relay • Air induction system • Fuel pressure • Injector • ECM	○	○
P0153 *3 (05–94)	Oxygen Sensor Circuit Slow Response (Bank 2 Sensor 1) *8	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 2 Sensor 1) *8 • Heated oxygen sensor heater (Bank 2 Sensor 1) *8 • EFI relay • Air induction system • Fuel pressure • Injector • ECM	○	○
P0154 (05–101)	Oxygen Sensor Circuit No Activity Detected (Bank 2 Sensor 1) *8	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 2 Sensor 1) *8 • Heated oxygen sensor heater (Bank 2 Sensor 1) *8 • EFI relay • Air induction system • Fuel pressure • PCV hose connection • PCV valve and hose • Injector • Gas leakage in exhaust system • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0156 *3 (05–109)	Oxygen Sensor Circuit Malfunction (Bank 2 Sensor 2) *8	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 2 Sensor 2) *8 • Heated oxygen sensor heater (Bank 2 Sensor 2) *8 • EFI relay	○	○
P0171 *3 (05–115)	System too Lean (Bank 1) *7	• Air induction system • Injector blockage • Mass air flow meter • Manifold absolute pressure sensor • Engine coolant temperature sensor • Fuel pressure • Gas leakage in exhaust system • Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1 Sensor 1) *7 • Heated oxygen sensor heater (Bank 1 Sensor 1) *7 • EFI relay • PCV valve and hose • PCV hose connection • ECM	○	○
P0172 *3 (05–115)	System too Rich (Bank 1) *7	• Injector leakage or blockage • Mass air flow meter • Manifold absolute pressure sensor • Engine coolant temperature sensor • Ignition system • Fuel pressure • Gas leakage in exhaust system • Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1 Sensor 1) *7 • ECM	○	○
P0174 *3 (05–115)	System too Lean (Bank2) *8	• Air induction system • Injector blockage • Mass air flow meter • Manifold absolute pressure sensor • Engine coolant temperature sensor • Fuel pressure • Gas leakage in exhaust system • Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 2 Sensor 1) *8 • Heated oxygen sensor heater (Bank 2 Sensor 1) *8 • EFI relay • PCV valve and hose • PCV hose connection • ECM	○	○
P0175 *3 (05–115)	System too Rich (Bank2) *8	• Injector leakage or blockage • Mass air flow meter • Manifold absolute pressure sensor • Engine coolant temperature sensor • Ignition system • Fuel pressure • Gas leakage in exhaust system • Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 2 Sensor 1) *8 • ECM	○	○
P0190 (05–127)	Fuel Rail Pressure Sensor Circuit	• Open or short in fuel pressure sensor circuit • Fuel pressure sensor • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0191 (05–131)	Fuel Rail Pressure Sensor Circuit Range/Performance	• Open or short in high–pressure fuel pump (spill valve) circuit • High–pressure fuel pump • Low–pressure fuel pump • Fuel pipe • Fuel relief valve • Fuel pressure regulator • ECM	○	○
P0200 (05–136)	Injector Circuit/Open	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM	○	○
P0201 (05–136)	Injector Circuit/Open – (Cylinder 1)	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM	○	○
P0202 (05–136)	Injector Circuit/Open – (Cylinder 2)	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM	○	○
P0203 (05–136)	Injector Circuit/Open – (Cylinder 3)	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM	○	○
P0204 (05–136)	Injector Circuit/Open – (Cylinder 4)	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM	○	○
P0220 (05–75)	Throttle/Pedal Position Sensor/ Switch "B" Circuit	• Throttle position sensor (built in throttle body) • ECM	○	○
P0222 (05–75)	Throttle/Pedal Position Sensor/ Switch "B" Circuit Low Input	• Throttle position sensor (built in throttle body) • Short in VTA2 circuit • Open in VC circuit • ECM	○	○
P0223 (05–75)	Throttle/Pedal Position Sensor/ Switch "B" Circuit High Input	• Throttle position sensor (built in throttle body) • Open in VTA2 circuit • Open in E2 circuit • VC and VTA2 circuit are short–circuited • ECM	○	○
P0230 (05–141)	Fuel Pump Primary Circuit	• Open or short in fuel pump relay circuit • Fuel pump relay • ECM	—	○
P0300 *3 (05–146)	Random/Multiple Cylinder Misfire Detected	• Open or short in engine wire harness • Connector connection • Vacuum hose connection • Ignition system • Injector • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve clearance • Valve timing • PCV hose connection • PCV hose • ECM	○*2	○
P0301 *3 (05–146)	Cylinder 1 Misfire Detected	• Same as DTC P0300	○*2	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0302 *3 (05–146)	Cylinder 2 Misfire Detected	• Same as DTC P0300	○*2	○
P0303 *3 (05–146)	Cylinder 3 Misfire Detected	• Same as DTC P0300	○*2	○
P0304 *3 (05–146)	Cylinder 4 Misfire Detected	• Same as DTC P0300	○*2	○
P0325 (05–156)	Knock Sensor 1 Circuit (Bank 1 or Single Sensor)	• Knock sensor • Knock sensor (under–torqued or loose) • ECM	○	○
P0327 (05–156)	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)	• Short in knock sensor circuit • Knock sensor • ECM	○	○
P0328 (05–156)	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)	• Open in knock sensor circuit • Knock sensor • ECM	○	○
P0335 (05–160)	Crankshaft Position Sensor ”A” Circuit	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft position sensor plate No. 1) • ECM	○	○
P0339 (05–160)	Crankshaft Position Sensor ”A” Circuit Intermittent	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft position sensor plate No. 1) • ECM	—	○
P0340 (05–164)	Camshaft Position Sensor ”A” Circuit (Bank 1 or Single Sensor)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing gear • Jumped tooth of timing chain • ECM	○	○
P0341 (05–164)	Camshaft Position Sensor ”A” Circuit Range/Performance (Bank 1 or Single Sensor)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing gear • Jumped tooth of timing chain • ECM	○	○
P0351 (05–167)	Ignition Coil ”A” Primary/Secondary Circuit	• Ignition system • Open or short in IGF and IGT circuits between ignition coil with igniter and ECM (ignition coil circuit 1) • Ignition coil with igniter (ignition coil 1) • IG2 relay • ECM	○	○
P0352 (05–167)	Ignition Coil ”B” Primary/Secondary Circuit	• Ignition system • Open or short in IGF and IGT circuits between ignition coil with igniter and ECM (ignition coil circuit 2) • Ignition coil with igniter (ignition coil 2) • IG2 relay • ECM	○	○
P0353 (05–167)	Ignition Coil ”C” Primary/Secondary Circuit	• Ignition system • Open or short in IGF and IGT circuits between ignition coil with igniter and ECM (ignition coil circuit 3) • Ignition coil with igniter (ignition coil 3) • IG2 relay • ECM	○	○
P0354 (05–167)	Ignition Coil ”D” Primary/Secondary Circuit	• Ignition system • Open or short in IGF and IGT circuits between ignition coil with igniter and ECM (ignition coil circuit 4) • Ignition coil with igniter (ignition coil 4) • IG2 relay • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0420 *3 (05–174)	Catalyst System Efficiency Below Threshold (Bank 1)	• Gas leakage in exhaust system • Heated oxygen sensor • Three–way catalytic converter (inside exhaust manifold)	○	○
P0430 *3 (05–174)	Catalyst System Efficiency Below Threshold (Bank 2)	• Gas leakage in exhaust system • Heated oxygen sensor • Three–way catalytic converter (inside exhaust manifold)	○	○
P0443 (05–179)	Evaporative Emission Control System Purge Control Valve Circuit	• Open of short in VSV circuit for EVAP • VSV for EVAP • ECM	○	○
P0500 (05–183)	Vehicle Speed Sensor ”A”	• Combination meter • Open or short in speed sensor circuit • Vehicle speed sensor • ECM • Skid control ECU • Clutch or brake slips or gear is broken	○	○
P0503 (05–183)	Vehicle Speed Sensor ”A” Intermittent/Erratic/high	• Combination meter • Open or short in vehicle speed sensor circuit • Vehicle speed sensor • ECM • Skid control ECU • Clutch or brake slips or gear is broken	—	○
P0504 (05–185)	Brake Switch Correlation	• Short in stop lamp switch signal circuit • Stop lamp switch • ECM	—	○
P0505 *3 (05–189)	Idle Air Control System	• Electric throttle control system • Air induction system • PCV hose connection	○	○
P0555 (05–191)	Brake Booster Pressure Sensor Circuit	• Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Vacuum hose • ECM	○	○
P0556 (05–194)	Brake Booster Pressure Sensor Circuit Range/Performance	• Vacuum hose (between the brake booster and intake manifold, the brake booster and brake booster pressure sensor, and the intake manifold and manifold absolute pressure sensor) • Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Manifold absolute pressure sensor • Brake booster • Open or short in stop lamp switch circuit • Stop lamp switch • ECM	○	○
P0557 (05–191)	Brake Booster Pressure Sensor Circuit Low Input	• Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Vacuum hose • ECM	○	○
P0558 (05–191)	Brake Booster Pressure Sensor Circuit High Input	• Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Vacuum hose • ECM	○	○
P0560 (05–199)	System Voltage	• Open in back–up power source circuit • ECM	○	○
P0571 (*5)	Brake Switch ”A” Circuit	• Cruise control system	—	○
P0604 (05–202)	Internal Control Module Random Access Memory (RAM) Error	• ECM	○	○
P0606 (05–202)	ECM/PCM Processor	• ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0607 (05–202)	Control Module Performance	• ECM	○	○
P0617 (05–203)	Starter Relay Circuit High	• Short in Park/Neutral position switch (A/T) • Park/Neutral position switch (A/T) • Ignition switch • ECM	○	○
P0657 (05–202)	Actuator Supply Voltage Circuit / Open	• ECM	○	○
P0705 *4 (05–566)	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	• Electronic controlled automatic transmission (ECT)	○	○
P0710 *4 (05–571)	Transmission Fluid Temperature Sensor ”A” circuit	• Electronic controlled automatic transmission (ECT)	○	○
P0711 *3,4 (05–574)	Transmission Fluid Temperature Sensor ”A” Performance	• Electronic controlled automatic transmission (ECT)	○	○
P0712 *4 (05–574)	Transmission Fluid Temperature Sensor ”A” Circuit Low Input	• Electronic controlled automatic transmission (ECT)	○	○

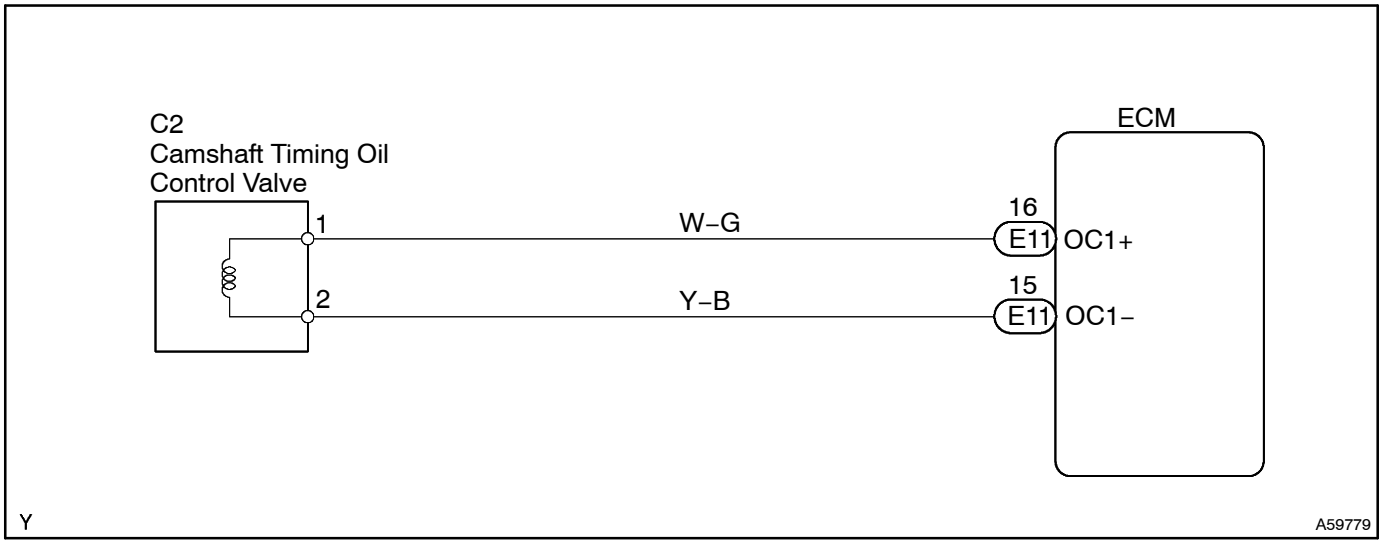
DTC	P0010	CAMSHAFT POSITION ”A” ACTUATOR CIRCUIT (BANK 1)

HINT:
This is the troubleshooting procedure of the oil control valve (OCV).



CIRCUIT DESCRIPTION

The Variable Valve Timing (VVT) system includes the ECM, the Oil Control Valve (OCV) and the VVT controller. The ECM sends a target ”duty–cycle” control signal to the OCV. This control signal, applied to the OCV, regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed based on engine operation conditions such as intake air volume, throttle position and engine coolant temperature.
The ECM controls the OCV based on the signals output from several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As result, the relative position between the camshaft and the crankshaft is optimized, and the engine torque improves, fuel economy improves, and exhaust emissions decrease. The ECM detects the actual valve timing using signals from the camshaft position sensor and the crankshaft position sensor. The ECM performs feedback control and verifies target valve timing.

DTC No.	DTC Detection Condition	Trouble Area
P0010	Open or short in OCV circuit	• Open or short in OCV circuit • OCV • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

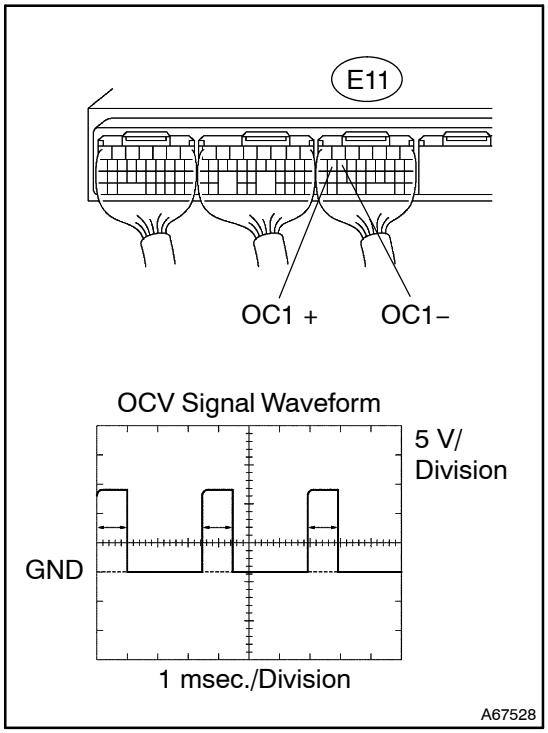
1	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OPERATE OCV)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and warm it up.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / VVT CTRL B1.
(e) Using the hand–held tester, operate the OCV and check the engine speed.

Standard:

Tester Operation	Specified Condition
OCV is OFF	Normal engine speed
OCV is ON	Rough idle or engine stall

OK → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**



NG

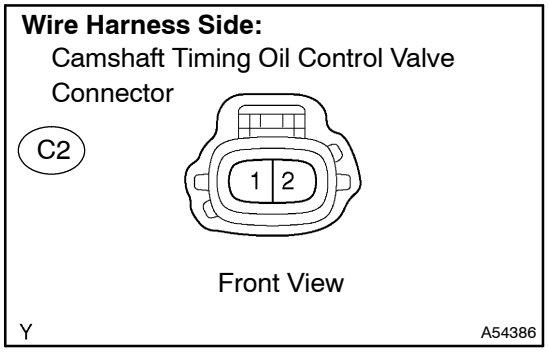
2	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV) (See page 10–2)

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY**

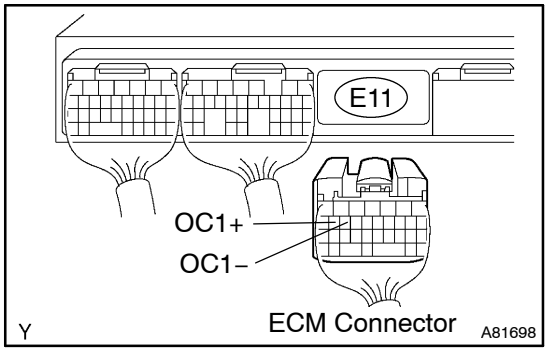
OK

3 INSPECT ECM(OCV SIGNAL)

(a) Inspect using an oscilloscope.
(b) During idling, check the waveform between the specified terminals of the E11 ECM connectors.



Standard:



Tester Connection	Specified Condition
OC1+ (E11–16) – OC1– (E11–15)	Correct waveform is as shown

NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

4 CHECK HARNESS AND CONNECTOR(ECM – OCV)

(a) Disconnect the C2 OCV connector.
(b) Disconnect the E11 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
OCV (C2–1) – OC1+ (E11–16)	Below 1 Ω
OCV (C2–2) – OC1– (E11–15)	

Standard (Check for short):

Tester Connection	Specified Condition
OCV (C2–1) or OC1+ (E11–16) – Body ground	10 kΩ or higher
OCV (C2–2) or OC1– (E11–15) – Body ground	

(d) Reconnect the OCV connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

DTC	P0011	CAMSHAFT POSITION ”A” –TIMING OVER–ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

DTC	P0012	CAMSHAFT POSITION ”A” –TIMING OVER–RETARDED (BANK 1)

CIRCUIT DESCRIPTION

Refer to DTC P0010 on page 05–41.

DTC No.	DTC Detection Condition	Trouble Area
P0011	Advanced cam timing: After engine is warmed up, valve timing does not change from current valve timing while driving at engine speed of 400 to 4,000 rpm (1 trip detection logic)	• Valve timing • OCV • Camshaft timing gear assy • ECM
P0012	Retarded cam timing: After engine is warmed up, valve timing does not change from current valve timing while driving at engine speed of 400 to 4,000 rpm (2 trip detection logic)	• Valve timing • OCV • Camshaft timing gear assy • ECM

WIRING DIAGRAM

Refer to DTC P0010 on page 05–41.

INSPECTION PROCEDURE

HINT:

The problem of advanced OCV	P0011
The problem of retarded OCV	P0012

- If DTC P0011 or P0012 is displayed, check VVT system circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK VALVE TIMING(CHECK FOR LOOSE AND A JUMPED TOOTH OF TIMING CHAIN) (See page 14–6)**

NG → **ADJUST VALVE TIMING (See page 14–45)**

OK

2	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OPERATE OCV)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and warm it up.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item: DIAGNOSIS / OBD/MPBD / ACTIVE TEST / VVT CTRL B1.
(e) Using the hand–held tester, operate the OCV and check the engine speed.
Standard:

Tester Operation	Specified Condition
OCV is OFF	Normal engine speed
OCV is ON	Rough idle or engine stall

NG → **Go to step 4**

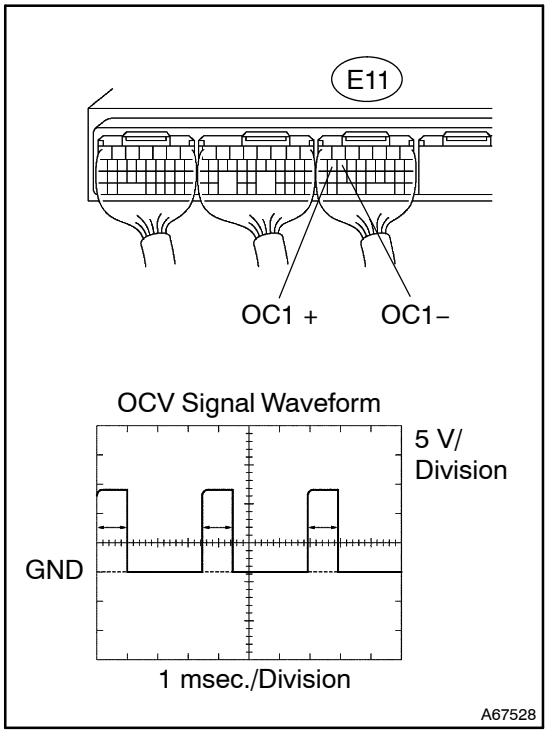
OK

3	CHECK IF DTC OUTPUT REOCCURS

(a) Clear the DTC.
(1) Erase the code using one of the following methods: 1) use the hand–held tester, 2) disconnect the battery terminal, 3) remove the EFI and ETCS fuses for 60 seconds or more.

NOTICE:
When disconnecting the battery terminal, perform the ”INITIALIZE” procedure.

(b) Start the engine and warm it up.
(c) Drive the vehicle around for 10 minutes or more.
(d) Read output DTC using the hand–held tester.



Standard: No DTC output.

HINT:
*: DTC P0011 or P0012 is output when a foreign object in engine oil is caught in some part of the system. These codes will stay registered even if the system returns to normal after a short time. Foreign objects are filtered out by the oil filter.

OK → **VVT SYSTEM OK ***

NG

4	INSPECT ECM(OCV SIGNAL)

(a) Inspect using an oscilloscope.
(b) During idling, check the waveform between the specified terminals of the E11 ECM connectors.

Standard:

Tester Connection	Specified Condition
OC1+ (E11–16) – OC1– (E11–15)	Correct waveform is as shown

NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

5	INSPECT OIL CONTROL VALVE FILTER

NG → **REPLACE OIL CONTROL VALVE FILTER**

OK

6	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV) (See page 10–2)

OK → **Go to step 8**

NG

7	REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV)

GO

8	INSPECT CAMSHAFT TIMING GEAR ASSY (See page 14–64)

OK → **Go to step 10**

NG

9	REPLACE CAMSHAFT TIMING GEAR ASSY (See page 14–64)

GO

10	CHECK BLOCKAGE(OCV, OIL CHECK VALVE AND OIL HOLE)

NG > REPAIR OR REPLACE

OK

11	CHECK CHECK IF DTC OUTPUT REOCCURS

(a) Clear the DTC.
  (1) Erase the code using one of the following methods: 1) use the hand–held tester, 2) disconnect the battery terminal, 3) remove the EFI and ETCS fuses for 60 seconds or more.

NOTICE:
When disconnecting the battery terminal, perform the ”INITIALIZE” procedure.

(b) Start the engine and warm it up.
(c) Drive the vehicle around for 10 minutes or more.
(d) Read output DTC using the hand–held tester.

Standard: No DTC output.

HINT:
*: DTC P0011 or P0012 is output when a foreign object in engine oil is caught in some part of the system. These codes will stay registered even if the system returns to normal after a short time. Foreign objects are filtered out by the oil filter.

OK > VVT SYSTEM OK*

NG

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0016	CRANKSHAFT POSITION – CAMSHAFT POSITION CORRELATION (BANK 1 SENSOR A)

CIRCUIT DESCRIPTION

Refer to DTC P0335 on page 05–160.

DTC No.	DTC Detection Condition	Trouble Area
P0016	Deviation in crankshaft position sensor signal and camshaft position sensor (bank 1) signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped a tooth, chain stretched) • ECM

WIRING DIAGRAM

Refer to DTC P0335 on page 05–160.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK VALVE TIMING(CHECK FOR LOOSE AND A JUMPED TOOTH OF TIMING CHAIN) (See page 14–45)

NG → ADJUST VALVE TIMING (See page 14–45) (REPAIR OR REPLACE TIMING CHAIN)

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0031	OXYGEN SENSOR HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

DTC	P0032	OXYGEN SENSOR HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1)

DTC	P0037	OXYGEN SENSOR HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2)

DTC	P0038	OXYGEN SENSOR HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2)

DTC	P0051	OXYGEN SENSOR HEATER CONTROL CIRCUIT LOW (BANK 2 SENSOR 1)

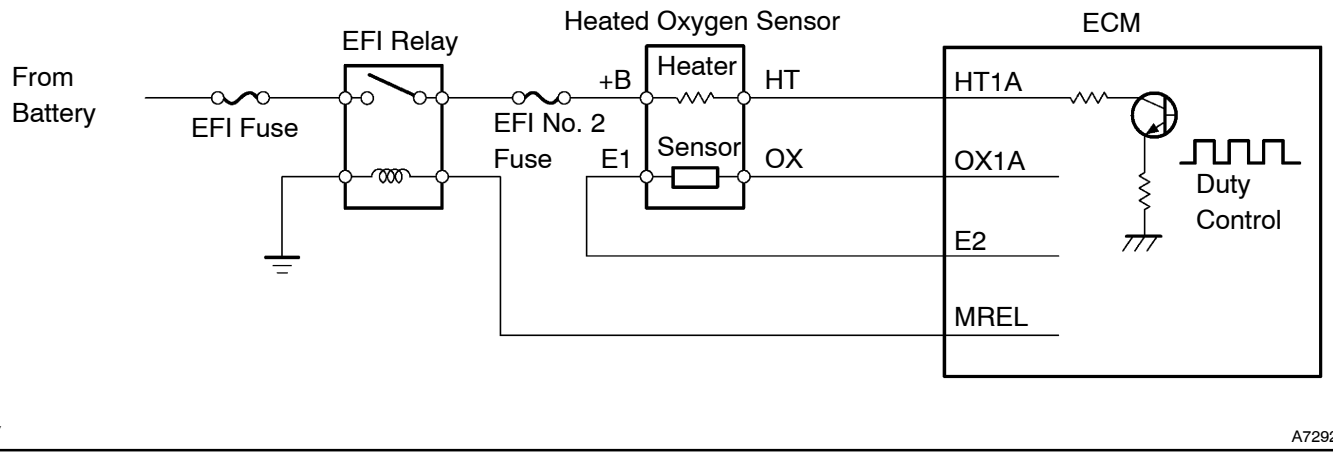
DTC	P0052	OXYGEN SENSOR HEATER CONTROL CIRCUIT HIGH (BANK 2 SENSOR 1)

DTC	P0057	OXYGEN SENSOR HEATER CONTROL CIRCUIT LOW (BANK 2 SENSOR 2)

DTC	P0058	OXYGEN SENSOR HEATER CONTROL CIRCUIT HIGH (BANK 2 SENSOR 2)

HINT:

- Bank 1 refers to the No. 1 and No. 4 cylinders.
- Bank 2 refers to the No. 2 and No. 3 cylinders.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.



CIRCUIT DESCRIPTION

Refer to DTC P0130 on page 05–82.

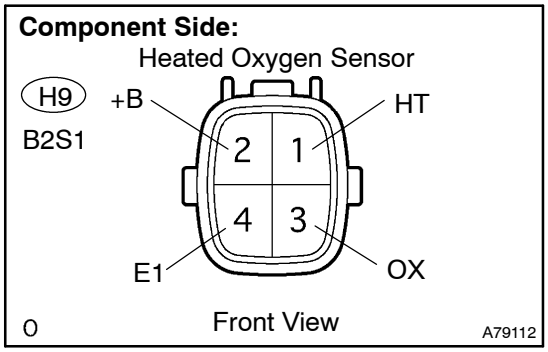
HINT:

The ECM provides a pulse width modulated control circuit to adjust current through the heater. The heated oxygen sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (Bank 1 Sensor 1 System Drawing)

DTC No.	DTC Detection Condition	Trouble Area
P0031 P0037 P0051 P0057	(1) Heated current is 0.2 A or less when heater operates with +B voltage between 10.5 V and 11.5 V (1 trip detection logic) (2) Heated current is 0.25 A or less when heater operates with +B greater than 11.5 V (1 trip detection logic)	• Open in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • EFI relay • EFI No. 2 fuse • ECM
P0032 P0038 P0052 P0058	When heater operates, heater current exceeds 2 A (1 trip detection logic)	• Short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • EFI relay • ECM

WIRING DIAGRAM



Refer to DTC P0130 on page 05–82.

INSPECTION PROCEDURE

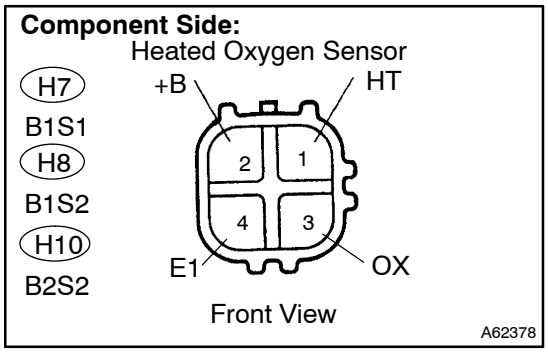
HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)

(a) Disconnect the H7, H8, H9 or H10 heated oxygen sensor connector.

(b) Measure the resistance between the terminals of the heated oxygen sensor connector.

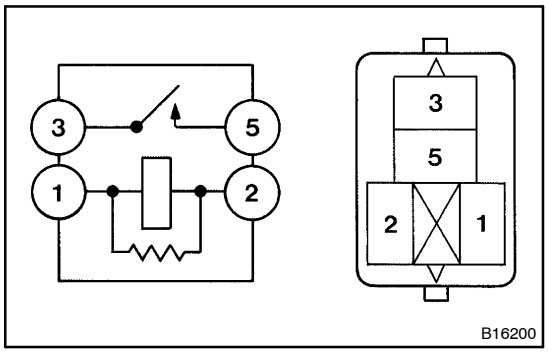


Standard (Bank 2 sensor 1):

Tester Connection	Resistance
1 (HT) – 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) – 4 (E1)	10 kΩ or higher

Standard (Except Bank 2 sensor 1):

Tester Connection	Resistance
1 (HT) – 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) – 4 (E1)	10 kΩ or higher



(c) Reconnect the heated oxygen sensor connector.

NG → **REPLACE HEATED OXYGEN SENSOR**

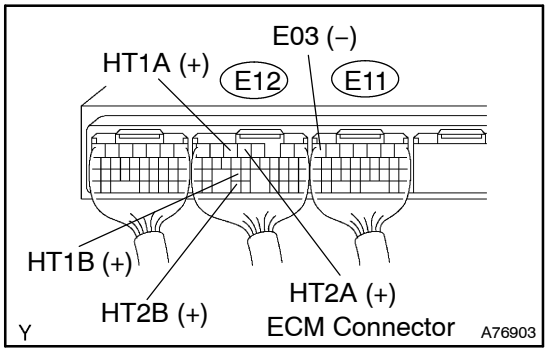
OK

2 INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B No. 4.

(b) Check for continuity in the EFI relay.

Standard:



Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)

(c) Reinstall the EFI relay.

NG → **REPLACE EFI RELAY**

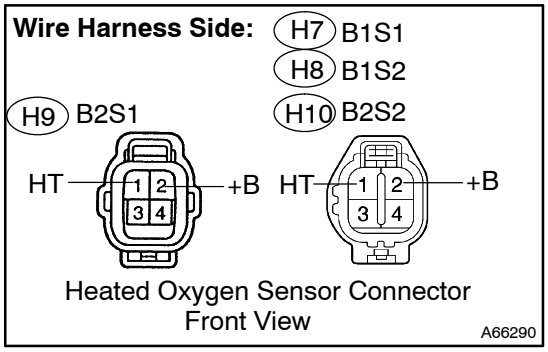
OK

3	INSPECT ECM(HT1A, HT1B, HT2A OR HT2B VOLTAGE)

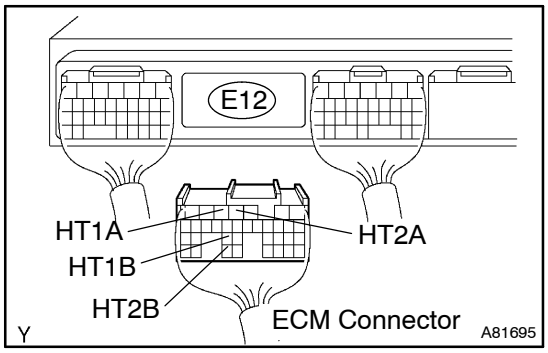
(a) Turn the ignition switch to ON.
(b) Measure the voltage between the applicable terminals of the E11 and E12 ECM connectors.

Standard:

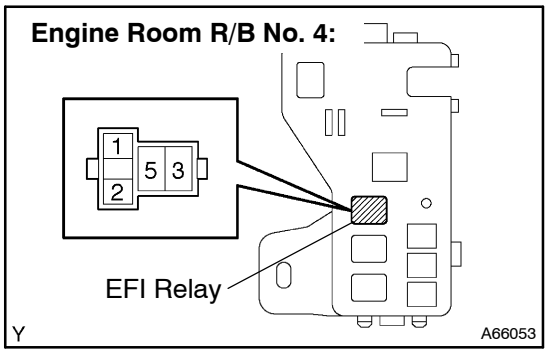
Tester Connection	Specified Condition
HT1A (E12–5) – E03 (E11–7)	9 to 14 V
HT1B (E12–25) – E03 (E11–7)	9 to 14 V
HT2A (E12–4) – E03 (E11–7)	9 to 14 V
HT2B (E12–33) – E03 (E11–7)	9 to 14 V



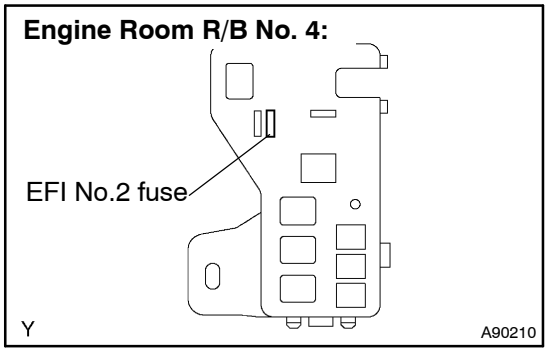
HINT:



- The HT1A means the heated oxygen sensor bank 1 sensor 1.
- The HT1B means the heated oxygen sensor bank 1 sensor 2.
- The HT2A means the heated oxygen sensor bank 2 sensor 1.
- The HT2B means the heated oxygen sensor bank 2 sensor 2.



OK → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSİS)**



NG

4 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM, HEATED OXYGEN SENSOR – EFI RELAY)

(a) Check the harness and connector between the ECM and heated oxygen sensor connectors.

(1) Disconnect the H7, H8, H9 or H10 heated oxygen sensor connector.

(2) Disconnect the E12 ECM connector.

(3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
HT (H7–1) – HT1A (E12–5)	Below 1 Ω
HT (H8–1) – HT1B (E12–25)	Below 1 Ω
HT (H9–1) – HT2A (E12–4)	Below 1 Ω
HT (H10–1) – HT2B (E12–33)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
HT (H7–1) or HT1A (E12–5) – Body ground	10 kΩ or higher
HT (H8–1) or HT1B (E12–25) – Body ground	10 kΩ or higher
HT (H9–1) or HT2A (E12–4) – Body ground	10 kΩ or higher
HT (H10–1) or HT2B (E12–33) – Body ground	10 kΩ or higher

(4) Reconnect the heated oxygen sensor connector.

(5) Reconnect the ECM connector.

(b) Check the harness and connector between the heated oxygen sensor and EFI relay.

(1) Inspect the EFI No.2 fuse.

- Remove the EFI No.2 fuse from the engine room R/B No. 4.
- Check for continuity in the EFI No.2 fuse.

Standard: Continuity

- Reinstall the EFI No. 2 fuse.

(2) Disconnect the H7, H8, H9 or H10 heated oxygen sensor connector.

(3) Remove the EFI relay from the engine room R/B No. 4.

(4) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
+B (H7–2) – Engine room R/B No. 4 (EFI relay terminal 3)	Below 1 Ω
+B (H8–2) – Engine room R/B No. 4 (EFI relay terminal 3)	Below 1 Ω
+B (H9–2) – Engine room R/B No. 4 (EFI relay terminal 3)	Below 1 Ω
+B (H10–2) – Engine room R/B No. 4 (EFI relay terminal 3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
+B (H7–2) or Engine room R/B No. 4 (EFI relay terminal 3) – Body ground	10 kΩ or higher
+B (H8–2) or Engine room R/B No. 4 (EFI relay terminal 3) – Body ground	10 kΩ or higher
+B (H9–2) or Engine room R/B No. 4 (EFI relay terminal 3) – Body ground	10 kΩ or higher
+B (H10–2) or Engine room R/B No. 4 (EFI relay terminal 3) – Body ground	10 kΩ or higher

(5) Reconnect the heated oxygen sensor connector.
(6) Reinstall the EFI relay.

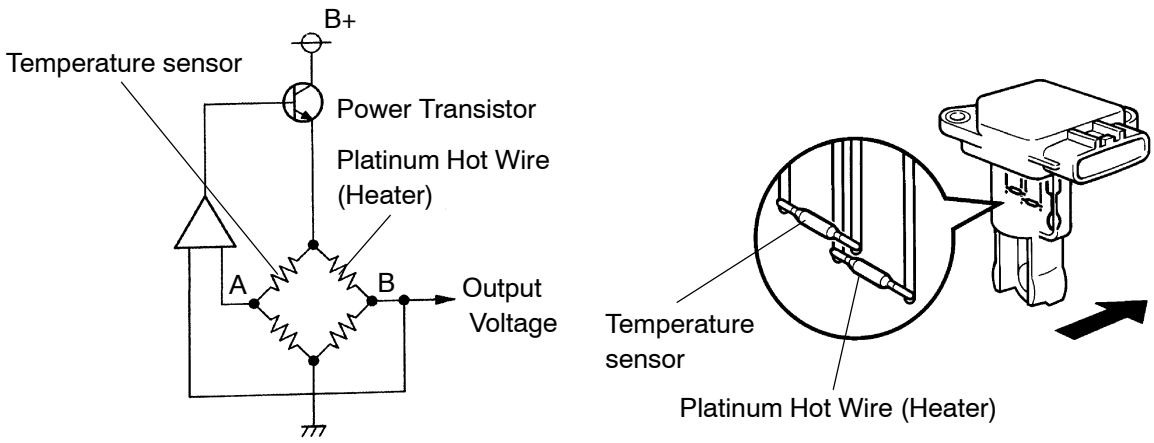
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0100	MASS OR VOLUME AIR FLOW CIRCUIT

DTC	P0102	MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT



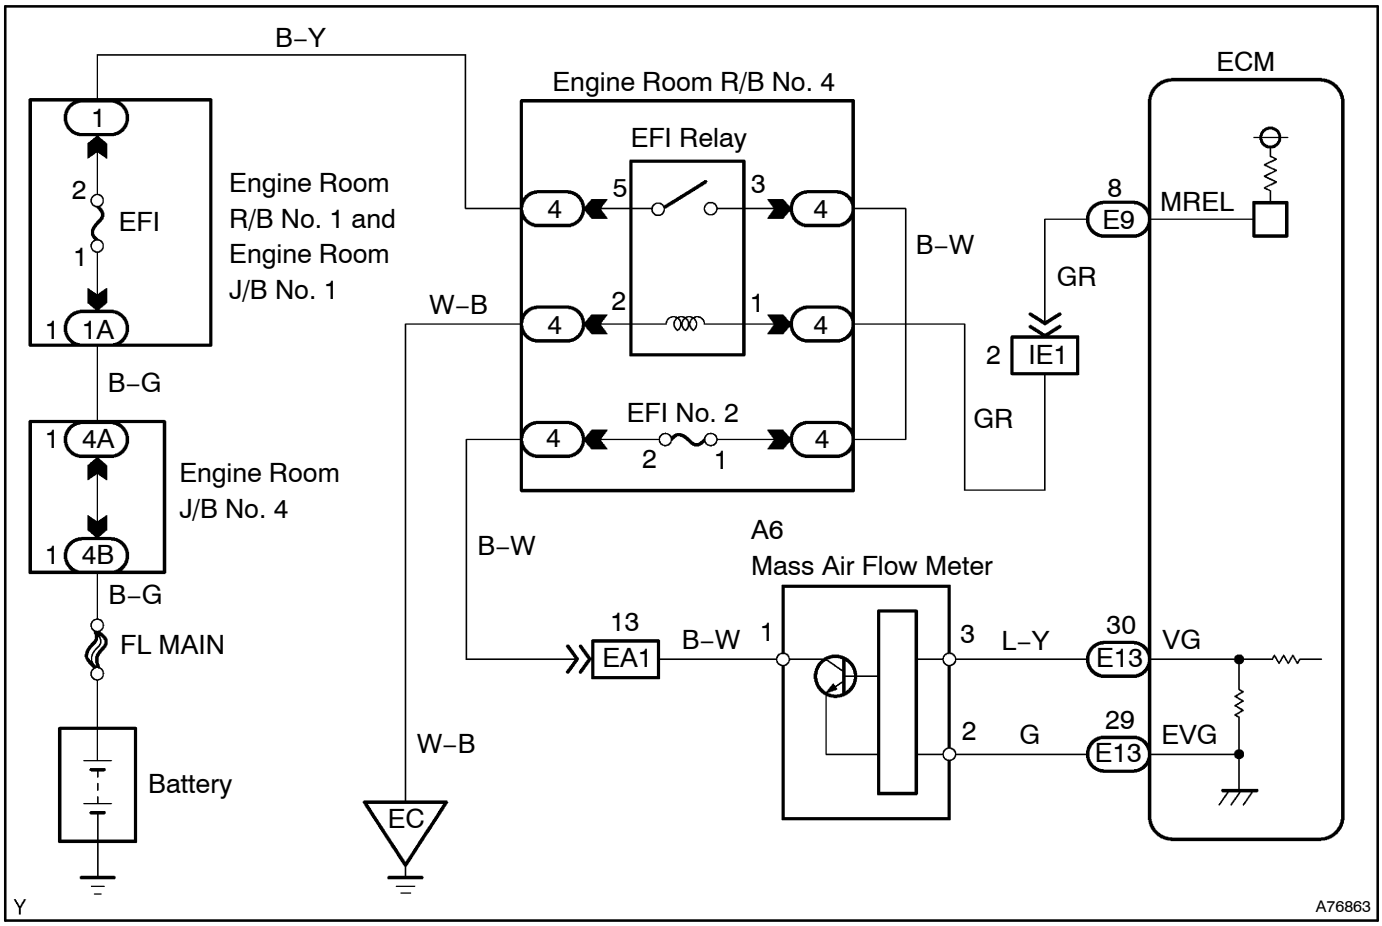
DTC	P0103	MASS OR VOLUME AIR FLOW CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

The MAF (Mass Air Flow) meter measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and provide a proper air–fuel ratio. Inside the MAF meter, there is a heated platinum wire exposed to the flow of intake air.

By applying a specific current to the wire, the ECM heats this wire to a given temperature. The flow of incoming air cools the wire and an internal thermistor, changing their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components in the MAF meter. The voltage level is proportional to the airflow through the sensor and the ECM interprets this voltage as the intake air amount.

The circuit is constructed so that the platinum hot wire and temperature sensor provide a bridge circuit, with the power transistor controlled so that the potential of A and B remains equal to maintain the set temperature.



DTC No.	DTC Detection Condition	Trouble Area
P0100	Open or short in mass air flow meter circuit for more than 3 seconds at engine speed of 4,000 rpm or less	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM
P0102	Open or short in mass air flow meter circuit for more than 3 seconds at engine speed of 4,000 rpm or less	• Open in mass air flow meter circuit • Short in ground circuit • Mass air flow meter • ECM
P0103	Open in mass air flow meter circuit for more than 3 seconds (EVG circuit) at engine speed of 4,000 rpm or less Short in mass air flow meter circuit for more than 3 seconds (+B circuit) at engine speed of 4,000 rpm or less	• Open in mass air flow meter circuit (EVG circuit) • Short in mass air flow meter circuit (+B circuit) • Mass air flow meter • ECM

HINT:
After confirming DTC P0100, P0102 or P0103, use the hand–held tester to confirm the air flow rate from the DIAGNOSIS / OBD/MOBD / DATA LIST / ALL.

Air flow rate (gm/s)	Malfunction
Approximately 0.0	• Mass air flow meter power source circuit open • VG circuit open or short
271.0 or more	• EVG circuit open

WIRING DIAGRAM

INSPECTION PROCEDURE

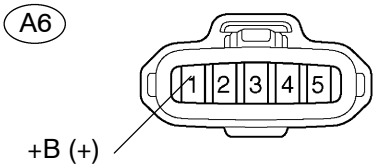
HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 READ VALUE OF HAND–HELD TESTER(MASS AIR FLOW RATE)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Turn the hand–held tester ON.
(d) On the hand–held tester, selsct the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAF.
(e) Read the values.
Result:

Air flow rate (gm/s)	Proceed to
0.0	A
271.0 or more	B
Between 1.0 and 270.0 (*1)	C

*1: The value must be changed when the throttle valve is opened or closed.



B → **Go to step 6**

C → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–7)**

A

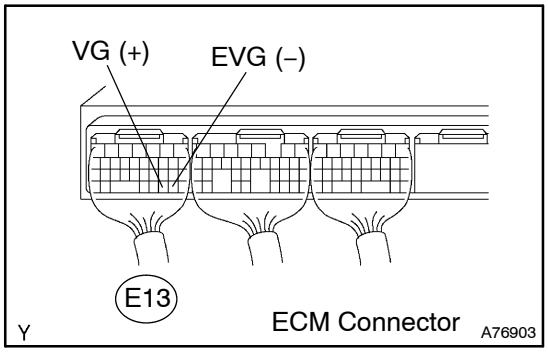
2 INSPECT MASS AIR FLOW METER(POWER SOURCE)

Wire Harness Side:
Mass Air Flow Meter Connector

Front View

Y A54396

(a) Disconnect the A6 mass air flow meter connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminal of the wire harness side connector and body ground.
Standard:



Tester Connection	Specified Condition
+B (A6–1) – Body ground	9 to 14 V

(d) Reconnect the mass air flow meter connector.

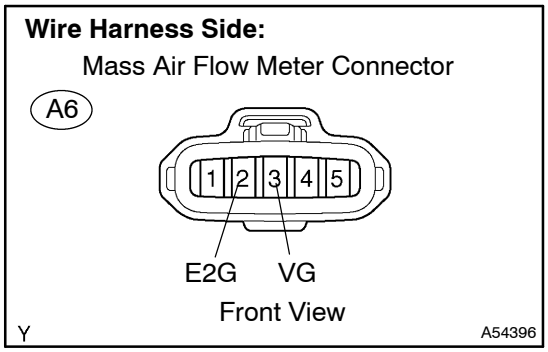
NG → **Go to step 5**

OK

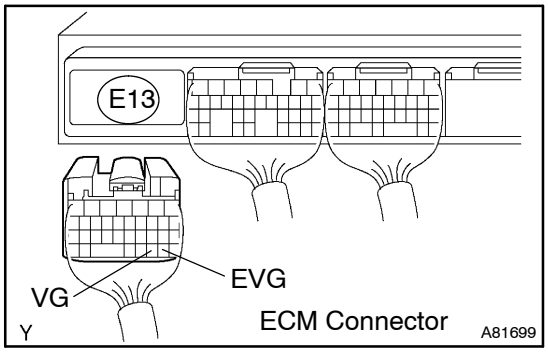
3 INSPECT ECM(VG VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.

Standard:



Tester Connection	Condition	Specified Condition
VG (E13–30) – EVG (E13–29)	Engine is idling	0.5 to 3.0 V



HINT:
The shift position should be P or N and the A/C switch should be turned OFF.

OK → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

NG

4 CHECK HARNESS AND CONNECTOR(ECM – MASS AIR FLOW METER)

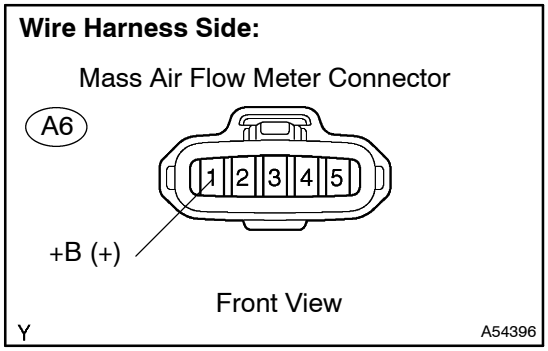
(a) Disconnect the A6 mass air flow meter connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

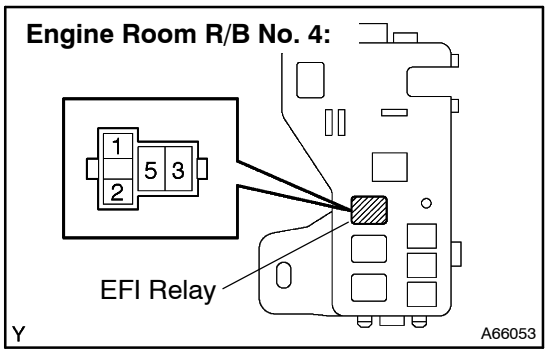
Tester Connection	Specified Condition
VG (A6–3) – VG (E13–30)	Below 1 Ω
E2G (A6–2) – EVG (E13–29)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
VG (A6–3) or VG (E13–30) – Body ground	10 kΩ or higher



(d) Reconnect the mass air flow meter connector.
(e) Reconnect the ECM connector.



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MASS AIR FLOW METER

5 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – EFI RELAY)

(a) Inspect the EFI No. 2 fuse.
  (1) Remove the EFI No. 2 fuse from the engine room R/B No. 4.
  (2) Check for continuity in the EFI No. 2 fuse.
  Standard: Continuity
  (3) Reinstall EFI No. 2 fuse.

(b) Remove the EFI relay from the engine room R/B No. 4.

(c) Disconnect the A6 mass air flow meter connector.

(d) Measure the resistance between the wire harness side connectors.

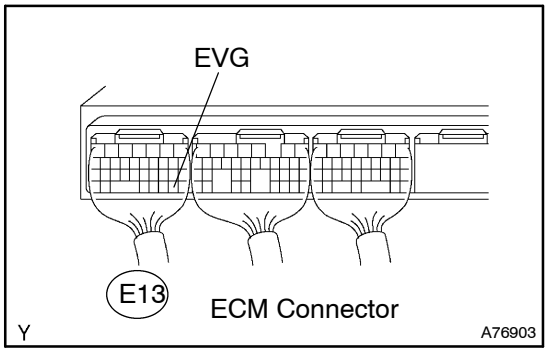
Standard (Check for open):

Tester Connection	Specified Condition
+B (A6–1) – Engine room R/B No. 4 (EFI relay terminal 3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
+B (A6–1) or Engine room R/B No. 4 (EFI relay terminal 3) – Body ground	10 kΩ or higher

(e) Reconnect the mass air flow meter connector.



(f) Reinstall the EFI relay.

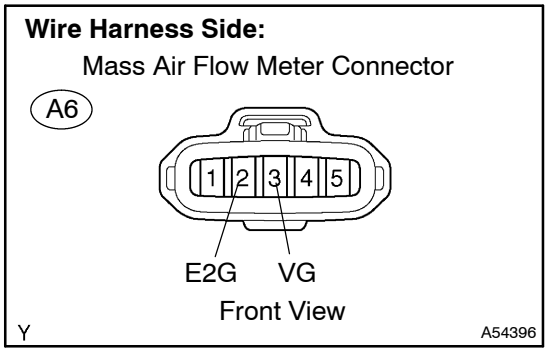
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

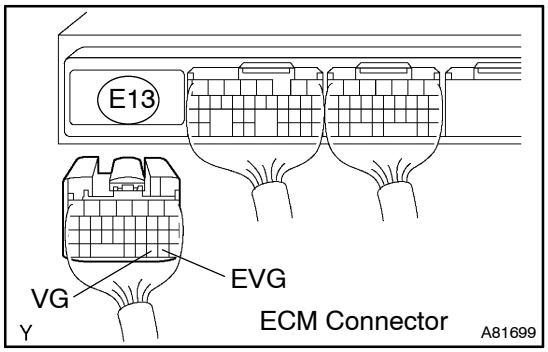
CHECK FOR ECM POWER SOURCE CIRCUIT (See Page 05–236)

6 INSPECT ECM(SENSOR GROUND)

(a) Measure the resistance between the terminal of the E13 ECM connector and body ground.



Standard:



Tester Connection	Specified Condition
EVG (E13–29) – Body ground	Below 1 Ω

NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

7 CHECK HARNESS AND CONNECTOR(ECM – MASS AIR FLOW METER)

(a) Disconnect the A6 mass air flow meter connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
VG (A6–3) – VG (E13–30)	Below 1 Ω
E2G (A6–2) – EVG (E13–29)	Below 1 Ω

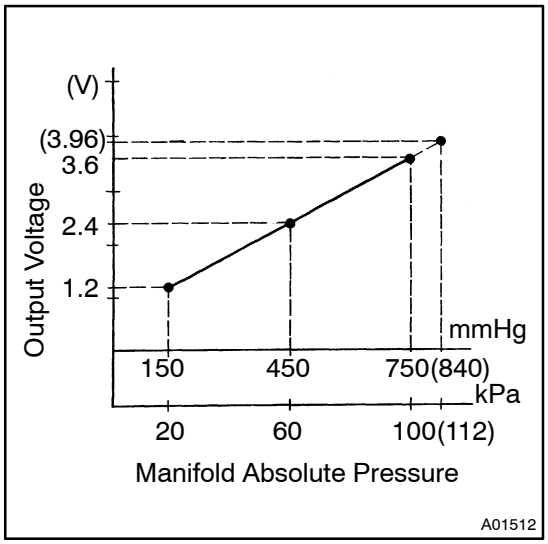
Standard (Check for short):

Tester Connection	Specified Condition
VG (A6–3) or VG (E13–30) – Body ground	10 kΩ or higher

(d) Reconnect the mass air flow meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



REPLACE MASS AIR FLOW METER

DTC	P0105	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT

DTC	P0107	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT

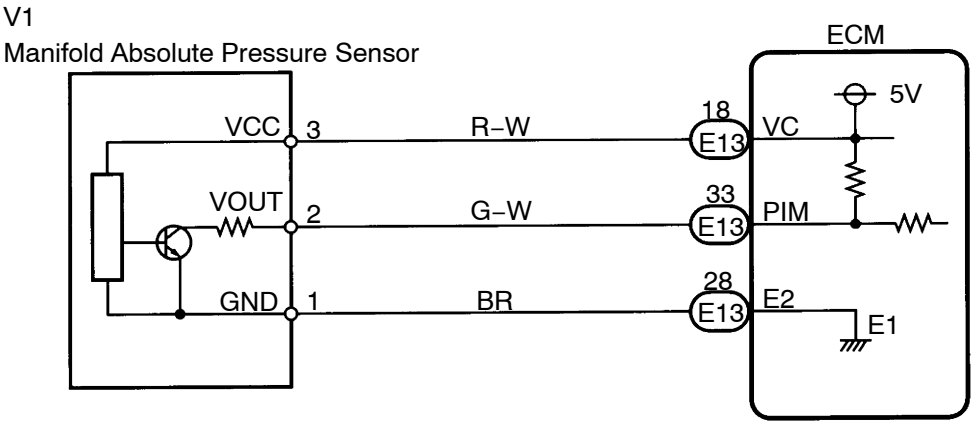
DTC	P0108	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

By a built–in sensor unit, the manifold absolute pressure sensor detects the intake manifold pressure as a voltage. The ECM then determines the basic injection duration and basic ignition advance angle based on this voltage.

Since the manifold absolute pressure sensor does not use the atmospheric pressure as a standard, but senses the absolute pressure inside the intake manifold (the pressure in proportion to the preset absolute vacuum 0), it is not influenced by fluctuations in the atmospheric pressure due to high altitude and other factors. This permits it to control the air–fuel ratio at the proper level under all conditions.

If the ECM detects the DTC P0105, P0107 or P0108, it operates the fail–safe function, keeping the ignition timing and fuel injection volume constant and making it possible to drive the vehicle.



DTC No.	DTC Detection Condition	Trouble Area
P0105	Open or short in manifold absolute pressure sensor circuit for 0.5 second or more	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • ECM
P0107	Open in manifold absolute pressure sensor circuit for 0.5 second or more	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • ECM
P0108	Short in manifold absolute pressure sensor circuit for 0.5 second or more	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • ECM

HINT:

After confirming DTC P0105, P0107 or P0108, use the hand–held tester to confirm the manifold absolute pressure in DIAGNOSIS / OBD/MOBD / DATA LIST / ALL.

Manifold Absolute Pressure (kPa)	Malfunction
Approximately 0	• PIM circuit short
142 or more	• VC circuit open or short • PIM circuit open • E2 circuit open

WIRING DIAGRAM

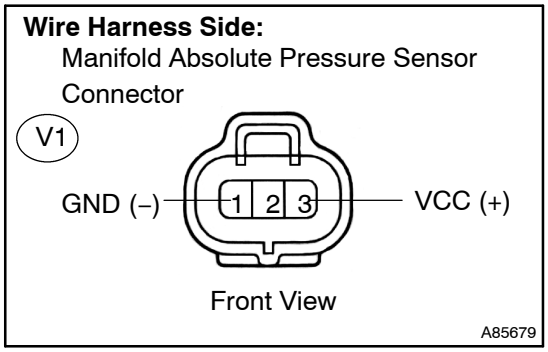
INSPECTION PROCEDURE

HINT:

- If DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(INTAKE MANIFOLD ABSOLUTE PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the hand–held tester ON.
(d) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAP.
(e) Read the values.
Pressure: Same as the atmospheric pressure
Result:



Manifold Absolute Pressure (kPa)	Proceed to
142 or more	A
0.0	B
OK (Same as actual atmospheric pressure) (*1)	C

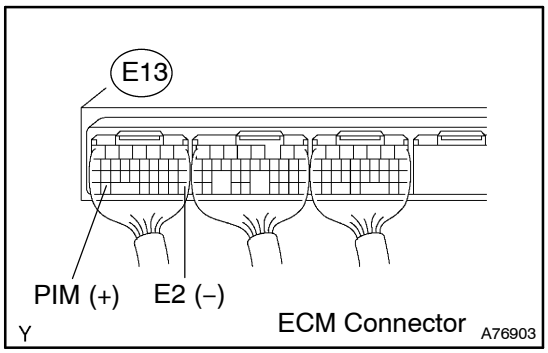
*1: The value must be changed when the engine is run or stopped.

B	**Go to step 3**
C	**CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

A

2 INSPECT MANIFOLD ABSOLUTE PRESSURE SENSOR(VCC VOLTAGE)

(a) Disconnect the V1 manifold absolute pressure sensor connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the specified terminals of the V1 manifold absolute pressure sensor connector.



Standard:

Tester Connection	Specified Condition
VCC (V1–3) – GND (V1–1)	4.5 to 5.5 V

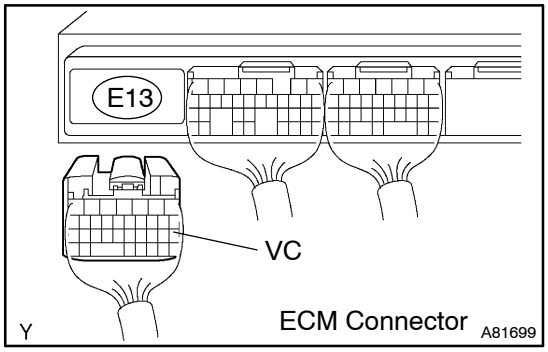
NG → **Go to step 4**

OK

3 INSPECT ECM(PIM VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.

Standard:



Tester Connection	Specified Condition
PIM (E13–33) – E2 (E13–28)	3.4 to 3.8 V

NG → **Go to step 5**

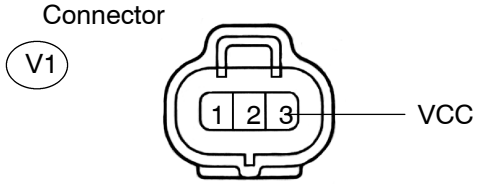
OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

4	CHECK HARNESS AND CONNECTOR(ECM – MANIFOLD ABSOLUTE PRESSURE SENSOR)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the V1 manifold absolute pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):



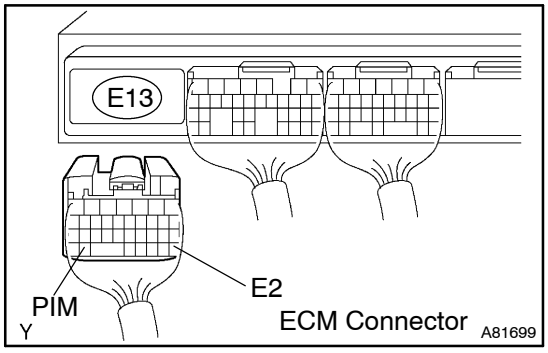
Tester Connection	Specified Condition
VC (E13–18) – VCC (V1–3)	Below 1 Ω

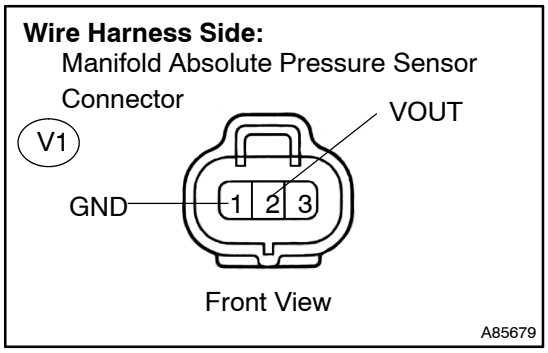
Standard (Check for short):

Tester Connection	Specified Condition
VC (E13–18) or VCC (V1–3) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the manifold absolute pressure sensor connector.

Wire Harness Side:
Manifold Absolute Pressure Sensor Connector





NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

5	CHECK HARNESS AND CONNECTOR(ECM – MANIFOLD ABSOLUTE PRESSURE SENSOR)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the V1 manifold absolute pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
PIM (E13–33) – VOUT (V1–2)	Below 1 Ω
E2 (E13–28) – GND (V1–1)	Below 1 Ω

Standard (Check for short):

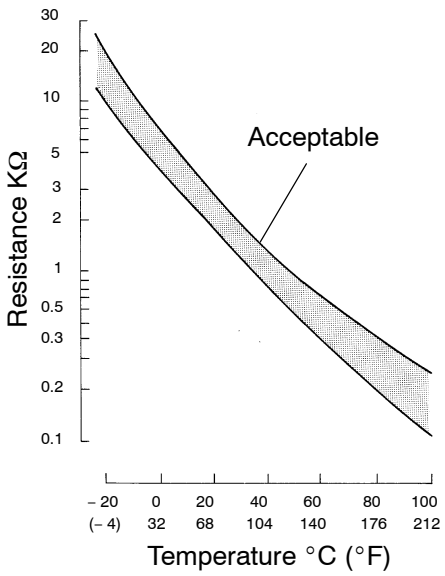
Tester Connection	Specified Condition
PIM (E13–33) or VOUT (V1–2) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the manifold absolute pressure sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR



DTC	P0110	INTAKE AIR TEMPERATURE CIRCUIT

DTC	P0112	INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT

DTC	P0113	INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT

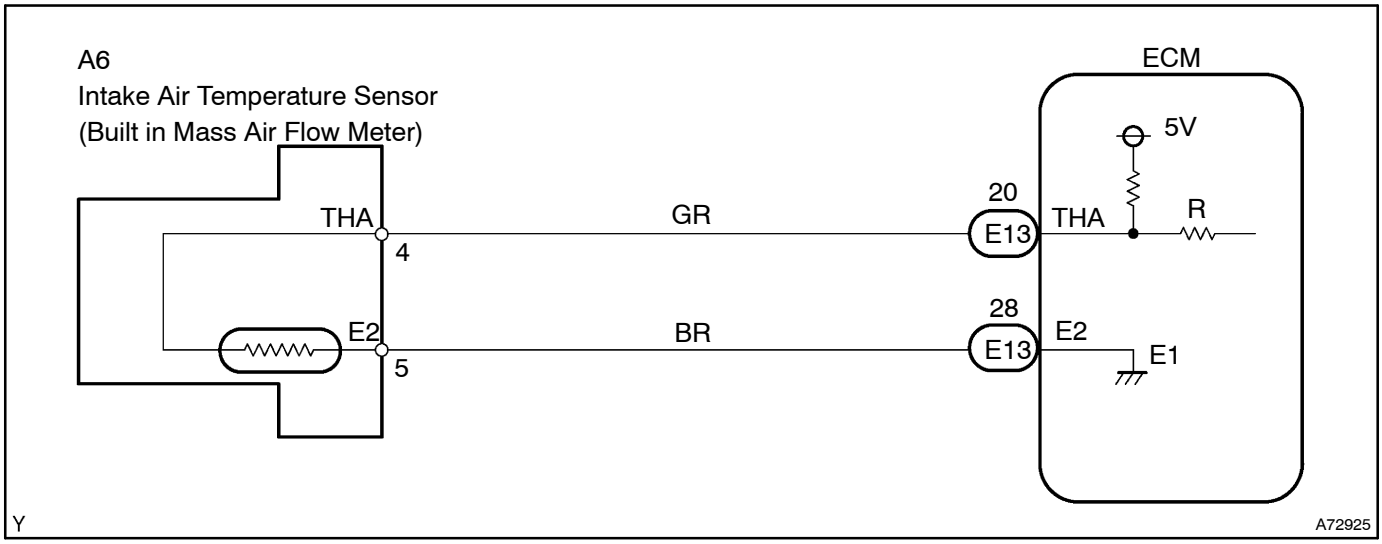
CIRCUIT DESCRIPTION

(Figure 1)

The intake air temperature (IAT) sensor, mounted on the mass air flow (MAF) meter, monitors the intake air temperature. The IAT sensor has a thermistor that varies its resistance depending on the temperature of the intake air. When the air temperature is low, the resistance in the thermistor increases. When the temperature is high, the resistance drops. The variations in resistance are reflected as voltage changes to the ECM terminal. (See Figure 1).

The intake air temperature sensor is connected to the ECM. The 5 V power source voltage in the ECM is applied to the intake air temperature sensor from terminal THA (THAR) via resistor R.

That is, the resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes in accordance with changes in the intake air temperature, the voltage at terminal THA (THAR) also changes. Based on this signal, the ECM increases the fuel injection volume to improve the driveability during cold engine operation.



DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0110	Step 1	Open or short in intake air temperature sensor circuit for 0.5 second	• Open or short in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM
P0112	Step 4	Short in intake air temperature sensor circuit for 0.5 second	• Short in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM
P0113	Step 2	Open in intake air temperature sensor circuit for 0.5 second	• Open in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM

HINT:

After confirming DTC P0110, P0112 or P0113, use the hand–held tester to confirm the intake air temperature DIAGNOSIS / OBD/MOBD / DATA LIST / ALL.

Temperature Displayed	Malfunction
–40°C (–40°F)	Open circuit
140°C (284°F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

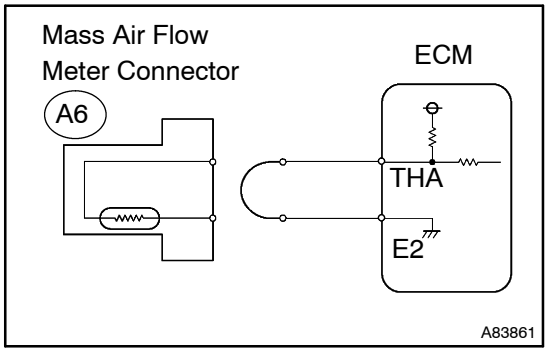
- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(INTAKE AIR TEMPERATURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, selsct the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR.
(d) Read the values.
Temperature: Same value as the ambient air temperature
Result:

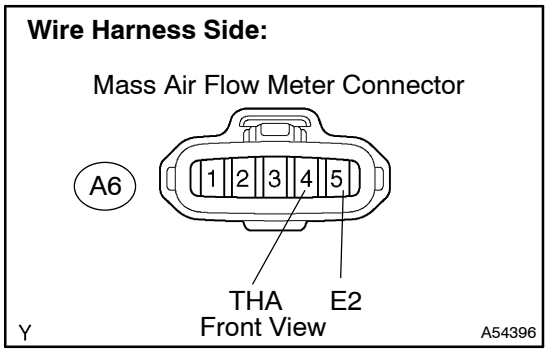
Display	Proceed to
–40°C (–40°F)	A
140°C (284°F) or more	B
OK (Same as ambient air temperature)	C

HINT:



- If there is an open circuit, the hand–held tester indicates –40°C (–40°F).
- If there is a short circuit, the hand–held tester indicates 140°C (284°F) or more.

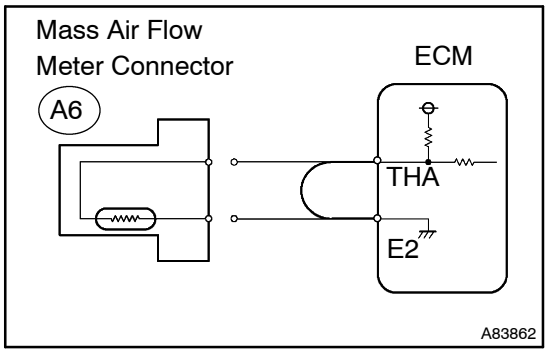
B → **Go to step 4**



C → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

A

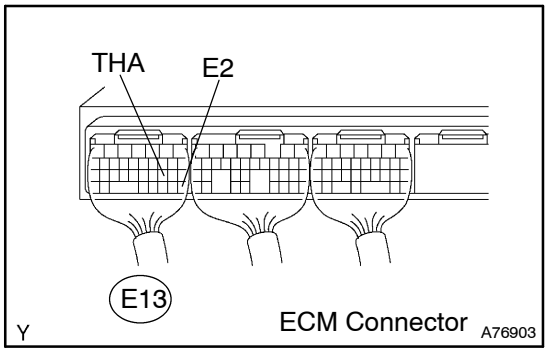
2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN HARNESS)



(a) Disconnect the A6 mass air flow meter connector.
(b) Connect terminals THA and E2 of the mass air flow meter wire harness side connector.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR.
(g) Read the values.
Temperature value: 140°C (284°F) or more
(h) Reconnect the mass air flow meter connector.

OK	CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE MASS AIR FLOW METER

NG

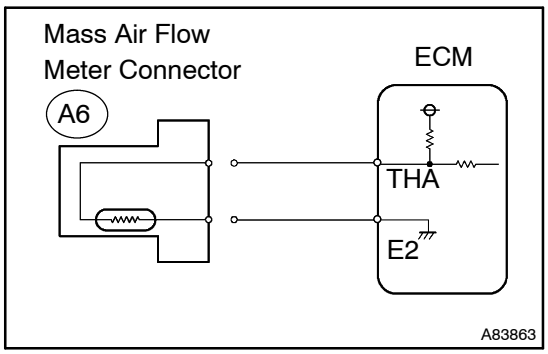


3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the A6 mass air flow meter connector.
(b) Connect terminals THA and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check on the ECM connector.

(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) On the hand–held tester, selset the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR.
(g) Read the values.
Temperature value: 140°C (284°F) or more
(h) Reconnect the mass air flow meter connector.

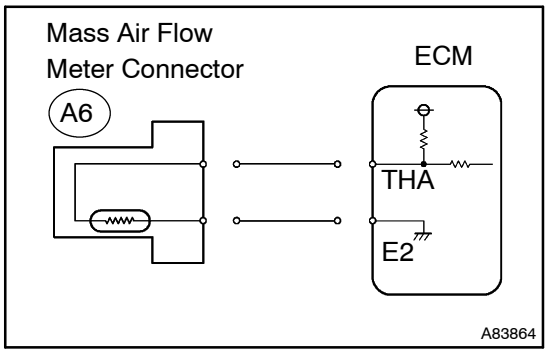


OK	REPAIR OR REPLACE HARNESS OR CONNECTOR

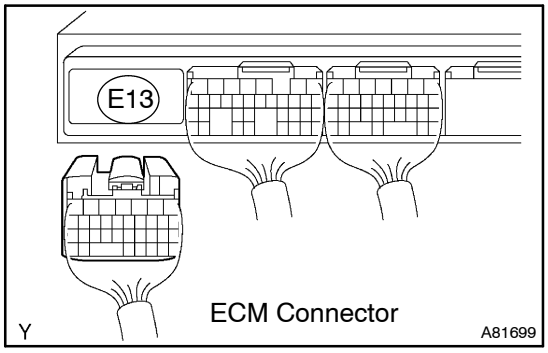
NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, REPLACE ECM
(See page 10–65 of Pub. No. RM1018E AVENSIS)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN HARNESS)



(a) Disconnect the A6 mass air flow meter connector.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to ON.
(d) Turn the hand–held tester ON.
(e) On the hand–held tester, select the item: DIAGNOSIS / MOBD / DATA LIST / ALL / INTAKE AIR.
(f) Read the values.
Temperature value: –40°C (–40°F)
(g) Reconnect the mass air flow meter connector.



OK → **REPLACE MASS AIR FLOW METER**

NG

5 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the A6 mass air flow meter connector.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR.
(g) Read the values.
Temperature value: –40°C (–40°F)
(h) Reconnect the ECM connector.
(i) Reconnect the mass air flow meter connector.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0115	ENGINE COOLANT TEMPERATURE CIRCUIT

DTC	P0117	ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT

DTC	P0118	ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT

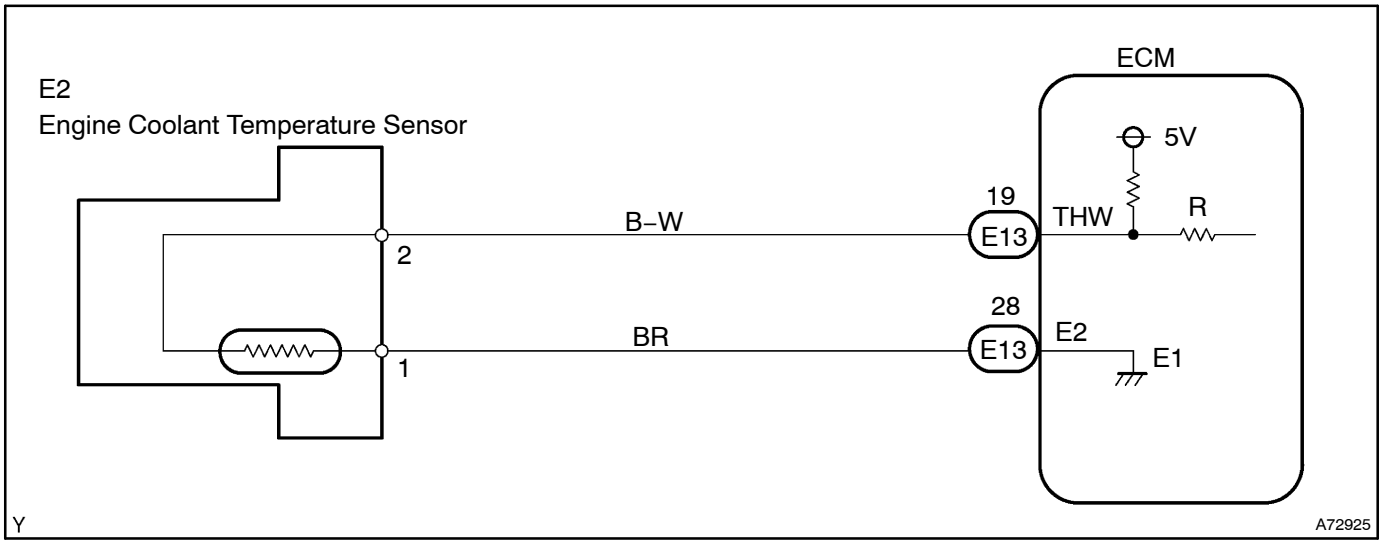
CIRCUIT DESCRIPTION

A thermistor is built in the engine coolant temperature sensor and changes the resistance value according to the engine coolant temperature.

The structure of the sensor and connection to the ECM is the same as those of the intake air temperature sensor.

HINT:

If the ECM detects the DTC P0115, P0117 or P0118, it operates the fail–safe function in which the engine coolant temperature is assumed to be 80 °C (176 °F).



DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0115	Step 1	Open or short in engine coolant temperature sensor circuit for 0.5 second	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM
P0117	Step 4	Short in engine coolant temperature sensor circuit for 0.5 second	• Short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM
P0118	Step 2	Open in engine coolant temperature sensor circuit for 0.5 second	• Open in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM

HINT:

After confirming DTC P0115, P0117 or P0118, use the hand–held tester to confirm the engine coolant temperature in DIAGNOSIS / OBD/MOBD / DATA LIST / ALL.

Temperature Displayed	Malfunction
–40°C (–40°F)	Open circuit
140°C (284°F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

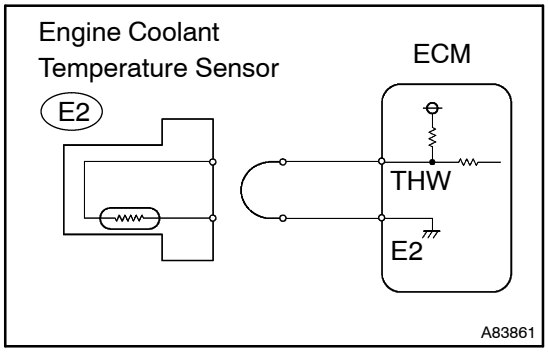
- If DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(ENGINE COOLANT TEMPERATURE)

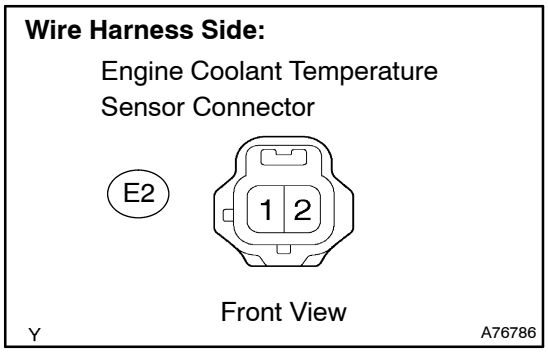
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP.
(d) Read the values.
Temperature: 80 to 95°C (176 to 203°F) after warming up
Result:

Display	Proceed to
–40°C (–40°F)	A
140°C (284°F) or more	B
OK (Same as actual engine coolant temperature)	C

HINT:



- If there is an open circuit, the hand–held tester indicates –40°C (–40°F).
- If there is a short circuit, the hand–held tester indicates 140°C (284°F) or more.

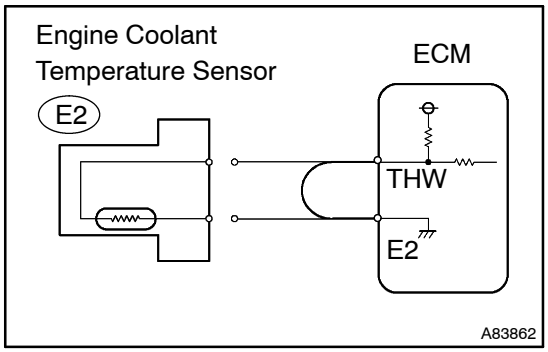


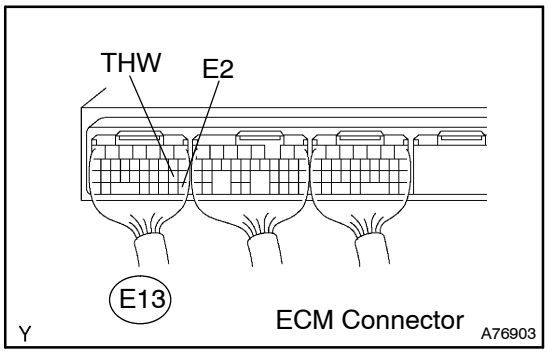
B → **Go to step 4**

C → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN HARNESS)





(a) Disconnect the E2 engine coolant temperature sensor connector.
(b) Connect terminals 1 and 2 of the engine coolant temperature sensor wire harness side connector.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP.
(g) Read the values.
Temperature value: 140°C (284°F) or more
(h) Reconnect the engine coolant temperature sensor connector.

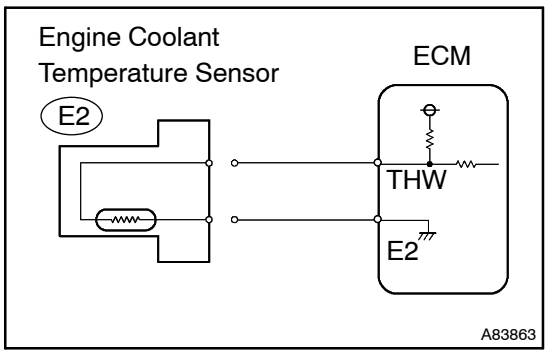
OK	**CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE ENGINE COOLANT TEPMERATURE SENSOR**

NG

3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the E2 engine coolant temperature sensor connector.
(b) Connect terminals THW and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check on the ECM connector.



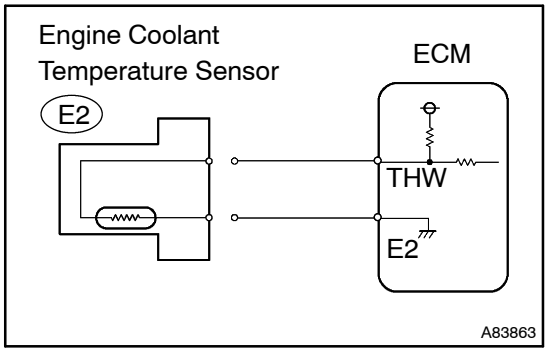
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP.
(g) Read the values.
Temperature value: 140°C (284°F) or more
(h) Reconnect the engine coolant temperature sensor connector.

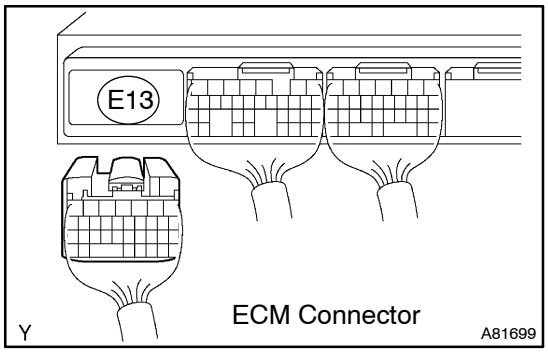
OK	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, REPLACE ECM
(See page 10–65 of Pub. No. RM1018E AVENSIS)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN HARNESS)





(a) Disconnect the E2 engine coolant temperature sensor connector.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to ON.
(d) Turn the hand–held tester ON.
(e) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP.
(f) Read the values.
Temperature value: –40°C (–40°F)
(g) Reconnect the engine coolant temperature sensor connector.

OK	REPLACE ENGINE COOLANT TEMPERATURE SENSOR

NG

5 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the E2 engine coolant temperature sensor connector.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP.
(g) Read the values.
Temperature: –40°C (–40°F)
(h) Reconnect the ECM connector.
(i) Reconnect the engine coolant temperature sensor connector.

OK	REPAIR OR REPLACE HARNESS OR CONNECTOR

NG

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0116	ENGINE COOLANT TEMPERATURE CIRCUIT RANGE/PERFORMANCE PROBLEM

CIRCUIT DESCRIPTION

Refer to DTC P0115 on page 05–70.

DTC No.	DTC Detection Condition	Trouble Area
P0116	(1) With the engine coolant temperature was –40°C (–40°F) or more but less than 60°C (140°F) when the engine was started, and if conditions (a) and (b) are met: (a) Vehicle has accelerated and decelerated. (b) Engine coolant temperature remains within 3°C (5.4°F) of the initial engine coolant temperature (2 trip detection logic) (2) If the engine coolant temperature is more than 60°C (140°F) when the engine is started and the vehicle has accelerated and decelerated (3) If the engine coolant temperature sensor records a temperature variation below 1°C (1.8°F) successively 6 times (6 trip detection logic)	• Engine coolant temperature sensor

INSPECTION PROCEDURE

HINT:

- If DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

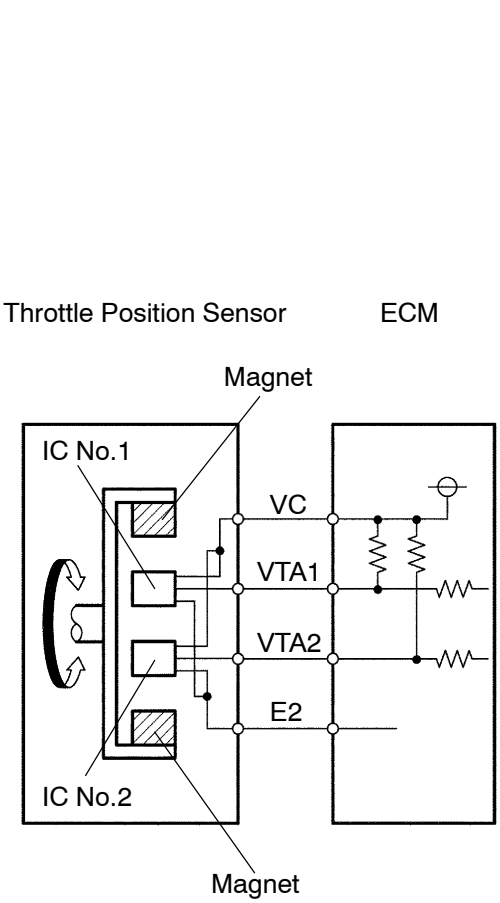
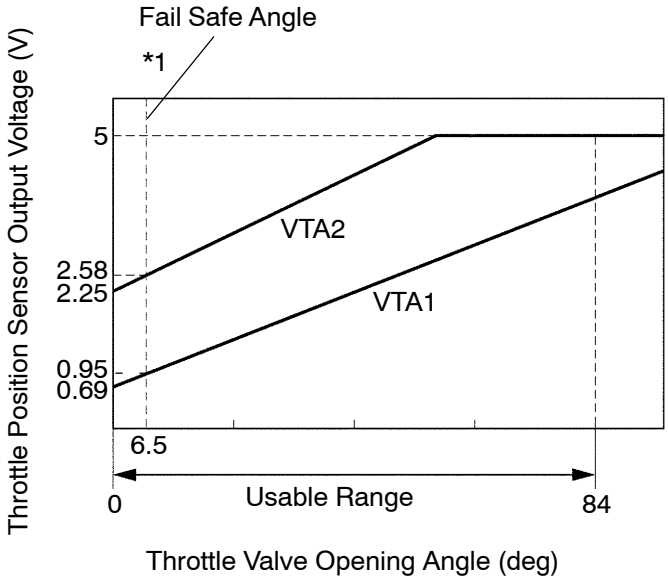
DTC	**P2135**	**THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A”/”B” VOLTAGE CORRELATION**

HINT:
This is the purpose of troubleshooting on the throttle position sensor.



CIRCUIT DESCRIPTION



HINT:

- This Electrical Throttle Control System (ETCS) does not use a throttle cable.
- This throttle position sensor uses 2 hall ICs.

The throttle position sensor is mounted on the throttle body and it detects the opening angle of the throttle valve. This sensor is electronically controlled and uses Hall–effect elements, so that accurate control and reliability can be obtained. The throttle position sensor has 2 sensor elements / 2 signal output: VTA1 and VTA2. VTA1 used to detect the throttle opening angle and VTA2 is used to detect malfunctions in VTA1. Voltage applied to VTA1 and VTA2 change between 0V and 5V in proportion to the opening angle of the throttle valve. There are several checks that the ECM performs to confirm proper operation of the throttle position sensor and VTA1.

The ECM judges the current opening angle of the throttle valve from these signals input from terminals VTA1 and VTA2, and the ECM controls the throttle motor to make the throttle valve angle properly in response to driver inputs.

Throttle Valve Fully Closed
(Throttle Position expressed as percentage
(VTA1) 10 to 24 %)

Throttle Valve Fully Opened
(Throttle Position expressed as percentage
(VTA1) 64 to 96 %)

*1: Fail Safe Angle 7°
(Throttle Position expressed as percentage
(VTA1) about10 to 16 %)

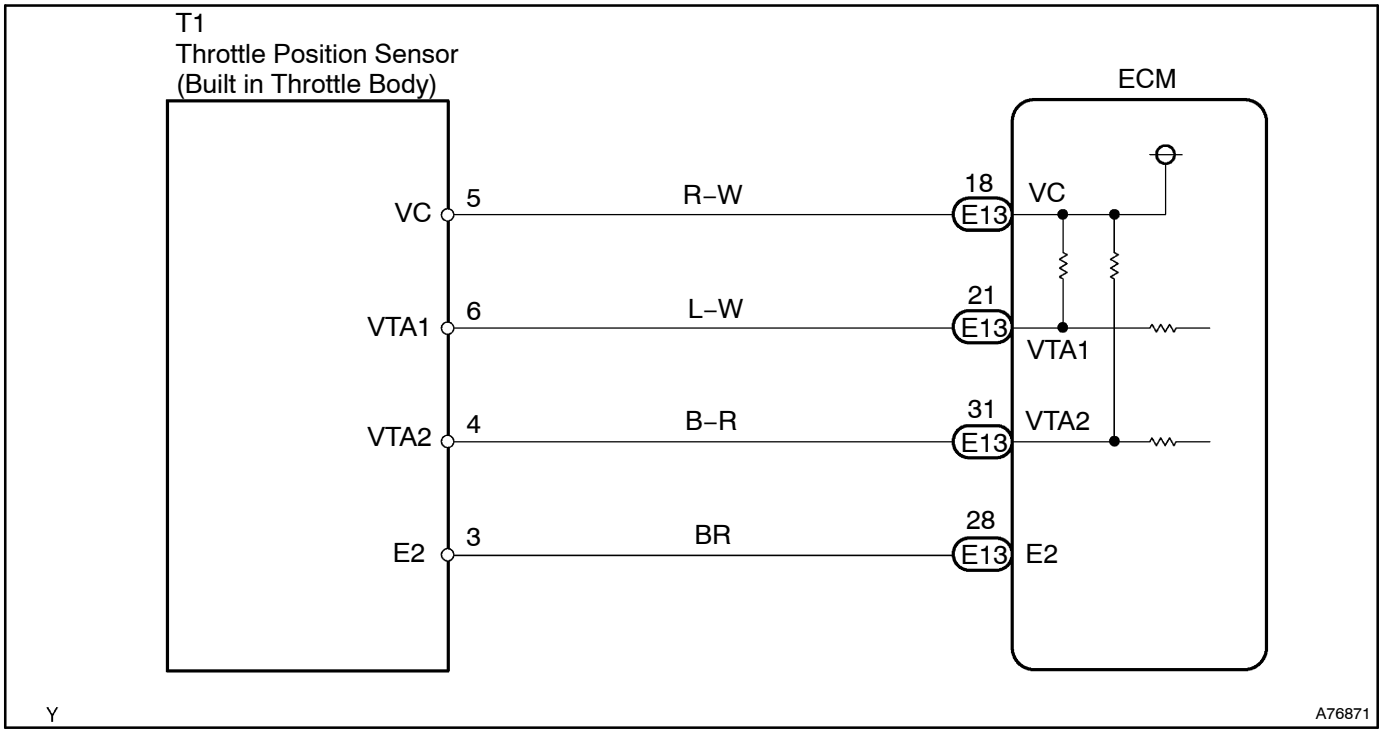
A19755

A19802

DTC No.	DTC Detection Condition	Trouble Area
Condition (a) of DTC P0120, P0122, P0123, P0220, P0222 or P0223 continues for 2 seconds (Open or short in the throttle position sensor circuit)		
P0120	Detection conditions for DTCs P0122 and P0123 are not satisfied but condition (a) is satisfied (a) VTA1 is "0.2 V or less" or "4.8 V or more"	• Throttle position sensor (built in throttle body) • ECM
P0122	(a) VTA1 is 0.2 V or less	• Throttle position sensor (built in throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM
P0123	(a) VTA1 is 4.8 V or more	• Throttle position sensor (built in throttle body) • Open in VTA1 circuit • Open in E2 circuit • VC and VTA1 circuits are short–circuited • ECM
P0220	Detection conditions for DTCs P0222 and P0223 are not satisfied but condition (a) is satisfied (a) VTA2 is "0.5 V or less" or "4.8 V or more" and VTA1 is "0.2 V or more" and "1.8 V or less"	• Throttle position sensor (built in throttle body) • ECM
P0222	(a) VTA2 is 0.5 V or less	• Throttle position sensor (built in throttle body) • Short in VTA2 circuit • Open in VC circuit • ECM
P0223	(a) VTA2 is "4.8 V or more" and VTA1 is "0.2 V or more" or "1.8 V or less"	• Throttle position sensor (built in throttle body) • Open in VTA2 circuit • Open in E2 circuit • VC and VTA2 circuits are short–circuited • ECM
P2135	Condition (a) continues for 0.5 second or more, or condition (b) continues for 0.4 second or more: (a) Difference between VTA1 and VTA2 is 0.02 V or less (b) VTA1 is "0.2 V or less" and VTA2 is "0.5 V or less"	• VTA1 and VTA2 circuits are short–circuited • Throttle position sensor (built in throttle body) • ECM

NOTICE:

When a malfunction is detected, the throttle valve is locked at a certain opening angle. Also, the whole electronically controlled throttle operation is cancelled until the system returns to normal and the ignition switch is turned OFF.



HINT:

- After confirming DTCs, use the hand–held tester to confirm the throttle valve opening percentage and closed throttle position switch condition.
- The THROTTLE POS means VTA1 signal as well as the THROTTLE POS #2 for the VTA2 signal.

Reference (Normal condition):

Tester display	Accelerator pedal fully released	Accelerator pedal fully depressed
THROTTLE POS	10 to 24 %	64 to 96 %
THROTTLE POS #2	2.1 to 3.1 V	4.5 to 5.5 V

WIRING DIAGRAM

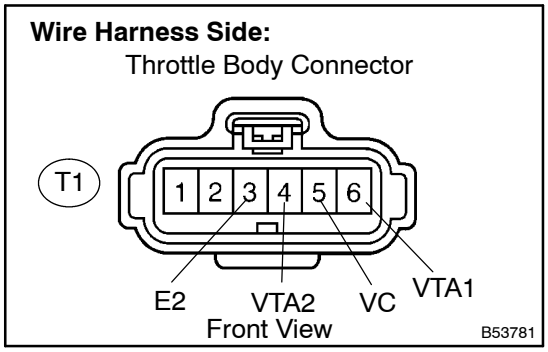
INSPECTION PROCEDURE

HINT:

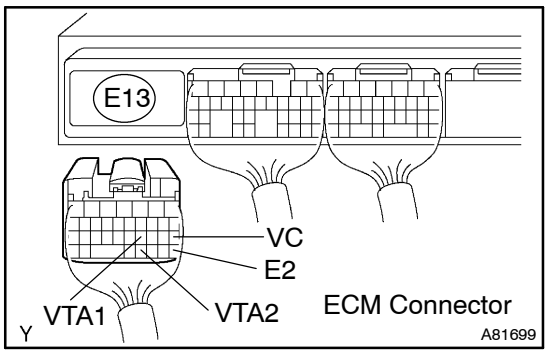
- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 READ VALUE OF HAND–HELD TESTER(THROTTLE POS AND THROTTLE POS #2)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, select the items: DIAGNOSIS / OBD/MOBD / DATA LIST / ETCS / THROTTLE POS and THROTTLE POS #2.
(d) Read the values.



Result:



Throttle position expressed as percentage and voltage				Trouble area	Proceed to
Accelerator pedal released		Accelerator pedal depressed			
THROTTLE POS (VTA1)	THROTTLE POS #2 (VTA2)	THROTTLE POS (VTA1)	THROTTLE POS #2 (VTA2)		
0 %	0 to 0.2 V	0 %	0 to 0.2 V	VC circuit open	A
100 %	4.5 to 5.5 V	100 %	4.5 to 5.5 V	E2 circuit open	
0 % or 100 %	2.1 to 3.1 V (Fail safe)	0 % or 100 %	2.1 to 3.1 V (Fail safe)	VTA1 circuit open or ground short	
About 16 % (Fail safe)	0 to 0.2 or 4.5 to 5.5 V	About 16 % (Fail safe)	0 to 0.2 or 4.5 to 5.5 V	VTA2 circuit open or ground short	
10 to 24 %	2.1 to 3.1 V	64 to 96 % (Does not fail safe)	4.5 to 5.5 V (Does not fail safe)	Throttle position sensor circuit is normal	B

B → **Go to step 5**

A

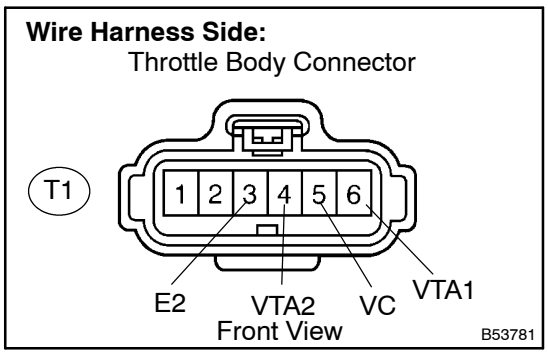
2 CHECK HARNESS AND CONNECTOR(THROTTLE POSITION SENSOR – ECM)

(a) Disconnect the T1 throttle body connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
VC (T1–5) – VC (E13–18)	Below 1 Ω
VTA1 (T1–6) – VTA1 (E13–21)	Below 1 Ω
VTA2 (T1–4) – VTA2 (E13–31)	Below 1 Ω
E2 (T1–3) – E2 (E13–28)	Below 1 Ω

Standard (Check for short):



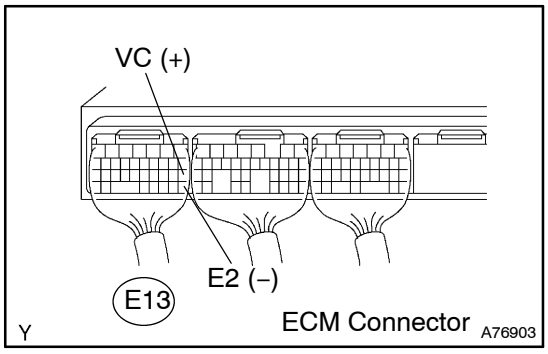
Tester Connection	Specified Condition
VC (T1–5) or VC (E13–18) – Body ground	10 kΩ or higher
VTA1 (T1–6) or VTA1 (E13–21) – Body ground	10 kΩ or higher
VTA2 (T1–4) or VTA2 (E13–31) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the throttle body connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT ECM(VC VOLTAGE)



(a) Disconnect the T1 throttle body connector.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.
(c) Reconnect the throttle body connector.

Standard:

Tester Connection	Specified Condition
VC (E13–18) – E2 (E13–28)	4.5 to 5.5 V

(d) Reconnect the throttle body connector.

NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

4	REPLACE THROTTLE BODY ASSY (See page 10–8)

GO

5	READ OUTPUT DTC(SEE IF THROTTLE POSTION SENSOR DTCS ARE OUTPUT AGAIN)

(a) Clear the DTCs (see page 05–19).
(b) Start the engine.
(c) Drive the engine at idle for 15 seconds or more.
(d) Read DTCs (see page 05–19).

Result:

Display (DTC output)	Proceed to
P0120, P0122, P0123, P0220, P0222, P0223 and/or P2135	A
No output	B

B → **SYSTEM OK**

A

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0121	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT RANGE/PERFORMANCE PROBLEM

HINT:
This is the troubleshooting procedure of the throttle position sensor.

CIRCUIT DESCRIPTION

Refer to DTC P0120 on page 05–75.

DTC No.	DTC Detection Condition	Trouble Area
P0121	Difference between VTA1 and VTA2 deviates from the threshold for 2.0 seconds	Throttle position sensor (built in throttle body)

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**REPLACE THROTTLE BODY ASSY (See page 10–8)**

DTC	P0130	OXYGEN SENSOR CIRCUIT (BANK 1 SENSOR 1)

DTC	P0150	OXYGEN SENSOR CIRCUIT MALFUNCTION (BANK 2 SENSOR 1)

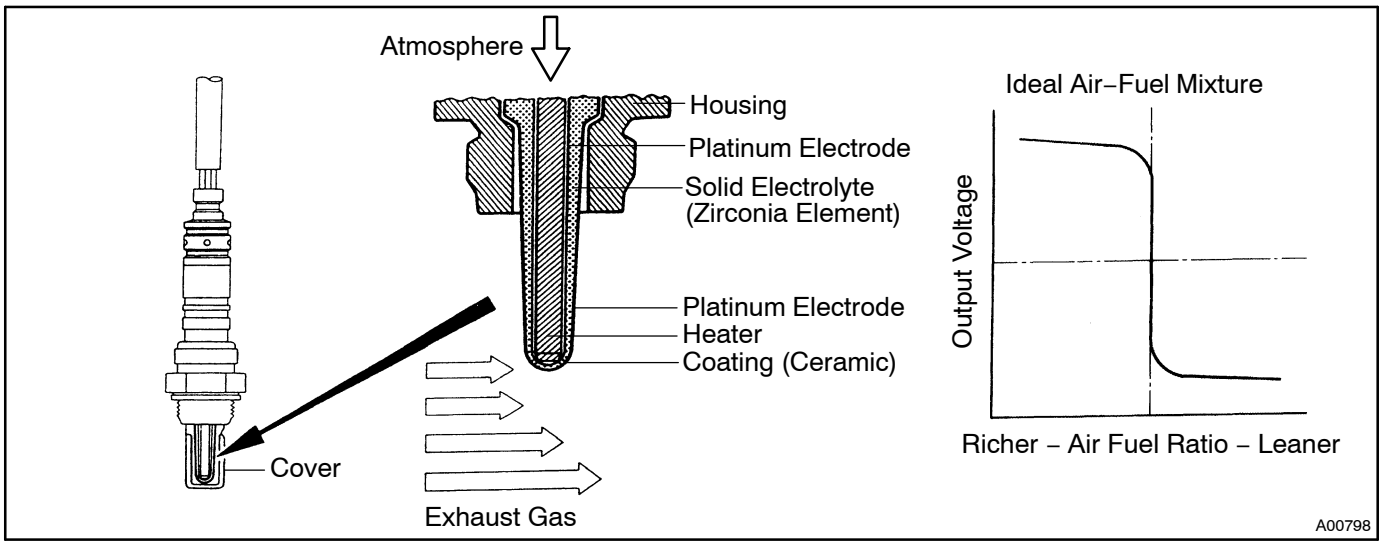
DTC	P2195	OXYGEN SENSOR SIGNAL STUCK LEAN (BANK 1 SENSOR 1)

DTC	P2196	OXYGEN SENSOR SIGNAL STUCK RICH (BANK 1 SENSOR 1)

DTC	P2197	OXYGEN SENSOR SIGNAL STUCK LEAN (BANK 2 SENSOR 1)

DTC	P2198	OXYGEN SENSOR SIGNAL STUCK RICH (BANK 2 SENSOR 1)

CIRCUIT DESCRIPTION



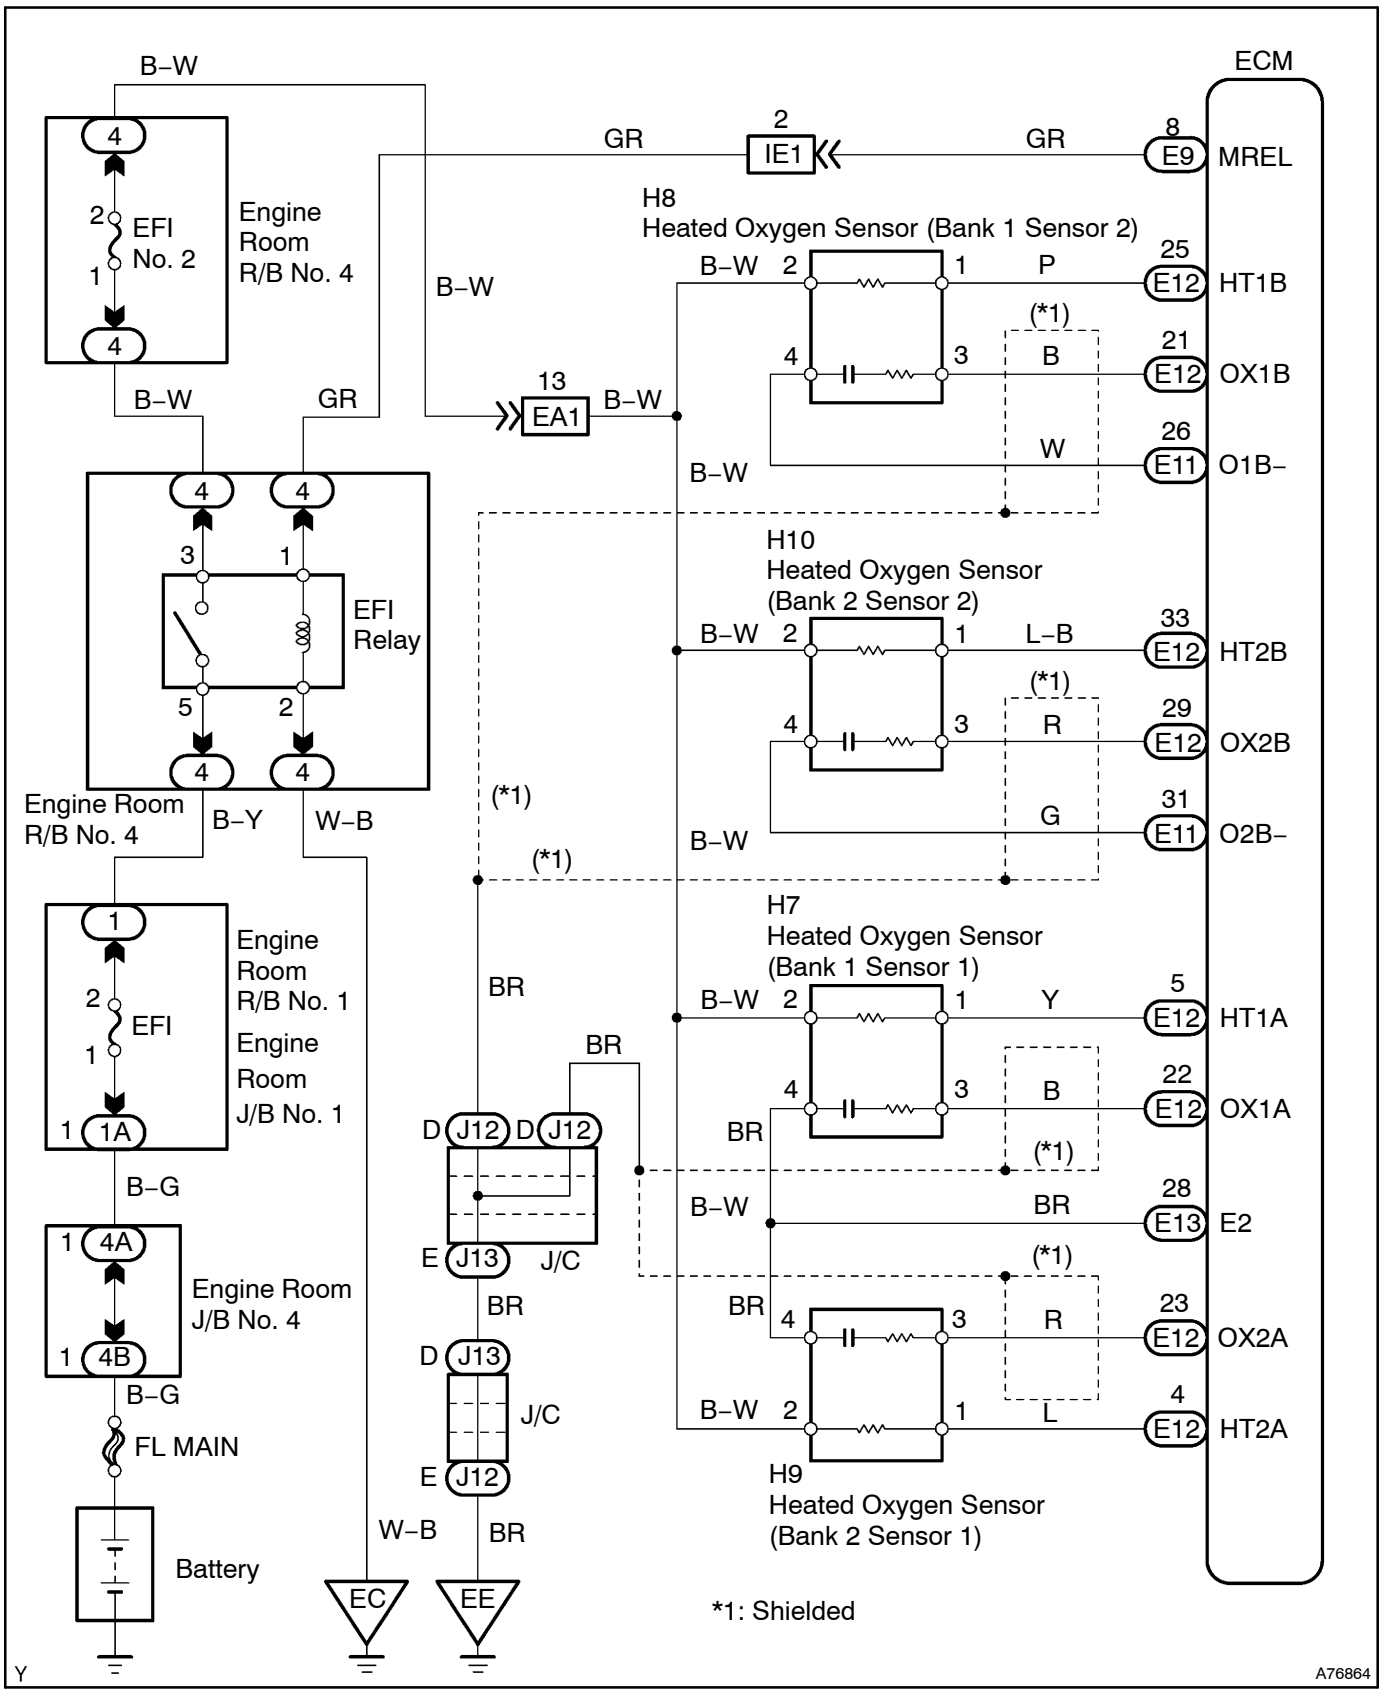
To obtain a high purification rate for the CO, HC and NOx components of the exhaust gas, a three–way catalytic converter is used. For the most efficient use of the three–way catalytic converter, the air–fuel ratio must be precisely controlled so that it is always close to the stoichiometric air–fuel ratio.

The heated oxygen sensor has the characteristic whereby its output voltage changes suddenly in the vicinity of the stoichiometric air–fuel ratio. This is used to detect the oxygen concentration in the exhaust gas and to provide the ECM with feedback to control the air–fuel ratio.

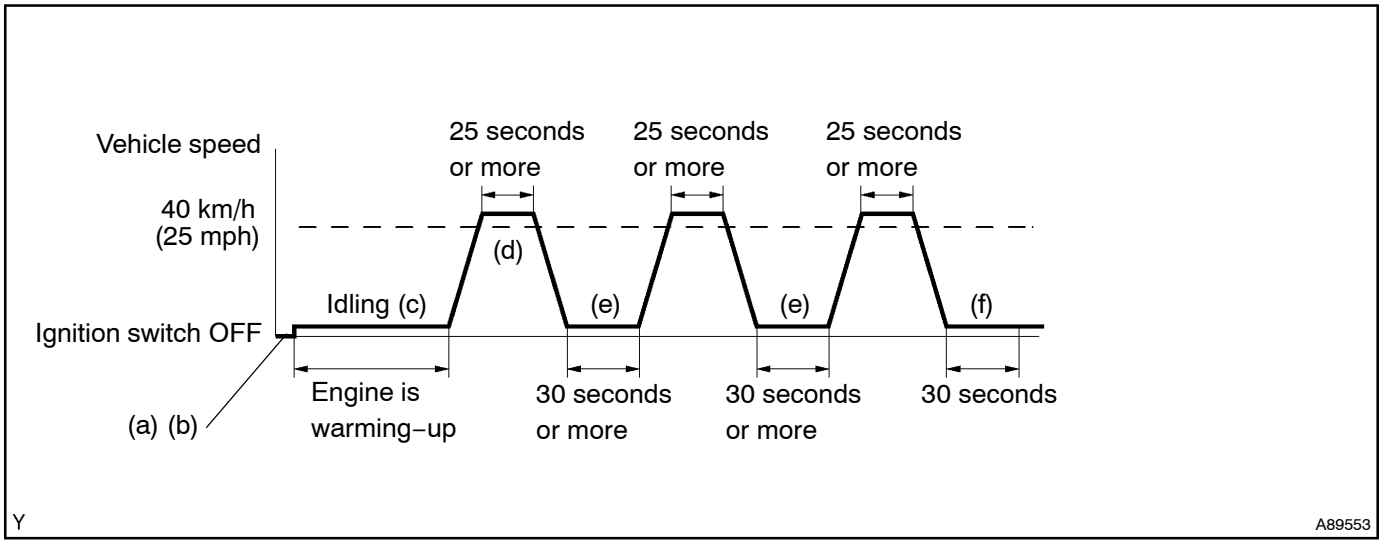
When the air–fuel ratio becomes LEAN, the oxygen concentration in the exhaust gas increases. And the heated oxygen sensor informs the ECM of the LEAN condition (low voltage, i. e. less than 0.45 V).

When the air–fuel ratio is RICHER than the stoichiometric air–fuel ratio, the oxygen concentration in the exhaust gas is reduced. And the heated oxygen sensor informs the ECM of the RICH condition (high voltage, i. e. more than 0.45 V). The ECM judges whether the air–fuel ratio is RICH or LEAN by voltage from the heated oxygen sensor, and controls the injection timing accordingly. However, if the malfunction of the heated oxygen sensor causes abnormal voltage output, the ECM becomes unable to perform the accurate air–fuel ratio control.

The heated oxygen sensors include a heater which heats the zirconia element. The heater is controlled by the ECM. When the intake air volume is low (the temperature of the exhaust gas is low), the current flows to the heater in order to heat the sensor for the accurate oxygen concentration detection.



DTC No.	DTC Detection Condition	Trouble Area
P0130 P0150	After engine is warmed up, output voltage of heated oxygen sensor remains at 0.4 V or more, or 0.55 V or less, during idling (2 trip detection logic)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 1) • Heated oxygen sensor heater (Bank 1, 2 Sensor 1) • EFI relay • Air induction system • Fuel pressure • Injector • ECM
P2195 P2197	After engine is warmed up, output voltage of heated oxygen sensor remains at 0.55 V or less, during idling (2 trip detection logic)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 1) • Heated oxygen sensor heater (Bank 1, 2 Sensor 1) • EFI relay • Air induction system • Fuel pressure • Injector • ECM
P2196 P2198	After engine is warmed up, output voltage of heated oxygen sensor remains at 0.4 V or more, during idling (2 trip detection logic)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 1) • Heated oxygen sensor heater (Bank 1, 2 Sensor 1) • EFI relay • Air induction system • Fuel pressure • Injector • ECM



HINT:

- Bank 1 refers to the No. 1 and No. 4 cylinders.
- Bank 2 refers to the No. 2 and No. 3 cylinders.
- Sensor 1 refers to the sensor closest to the engine assembly.
- The output voltage of the heated oxygen sensor and the short–term fuel trim value can be read using the hand–held tester.

WIRING DIAGRAM

CONFIRMATION DRIVING PATTERN

(a) Connect the hand–held tester to the DLC3.
(b) Switch the hand–held tester from normal mode to check mode (see page 05–20).
(c) Start the engine and let the engine idle.
(d) Drive the vehicle at 40 km/h (25 mph) or more for 25 seconds or more.
(e) Let the engine idle for 30 seconds or more. Perform steps (d) and (e) at least 3 times.
(f) Let the engine idle for 30 seconds.

HINT:

If malfunction exists, the CHK ENG will be illuminated during step (f).

NOTICE:

If the conditions in this test are not strictly followed, no malfunction will be detected.

If you do not have the hand–held tester, turn the ignition switch to OFF after performing steps from (c) to (f), then perform steps (c) to (f) again.

INSPECTION PROCEDURE

HINT:

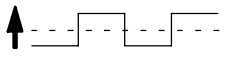
Hand–held tester only:

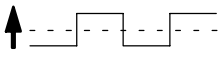
It is possible the malfunctioning area can be found using the ACTIVE TEST A/F CONTROL operation. The A/F CONTROL operation can determine if the A/F sensor, heated oxygen sensor or other potential trouble areas are malfunctioning or not.

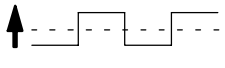
(a) Perform the ACTIVE TEST A/F CONTROL operation.

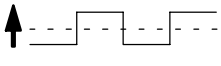
HINT:

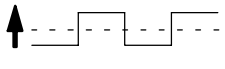
The A/F CONTROL operation lowers the injection volume 12.5% or increases the injection volume 25%.

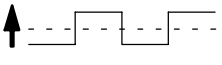


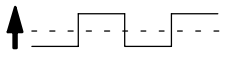


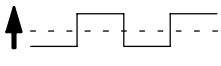












(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch to ON.
(3) Warm up the engine by running the engine at 2,500 rpm for approximately 3 minutes.
(4) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL.
(5) Perform the A/F CONTROL operation with the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.5 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:

There is a delay of few seconds in the sensor 1 (front sensor) output, and there is about 20 seconds delay at maximum in the sensor 2 (rear sensor).

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Main suspect trouble area
Case 1	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	—
Case 2	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following A/F CONTROL procedure enables the technician to check and graph the voltage outputs of both the heated oxygen sensor.
To display the graph, enter ACTIVE TEST/ A/F CONTROL/USER DATA, then select ”O2S B1S1 and O2S B1S2” or ”O2S B2S1 and O2S B2S2” by pressing the ”YES” button followed by the ”ENTER” button and then the ”F4” button.

NOTICE:

If the vehicle is short of fuel, the air–fuel ratio becomes LEAN and heated oxygen sensor DTCs will be recorded, and the CHK ENG then illuminates.

HINT:

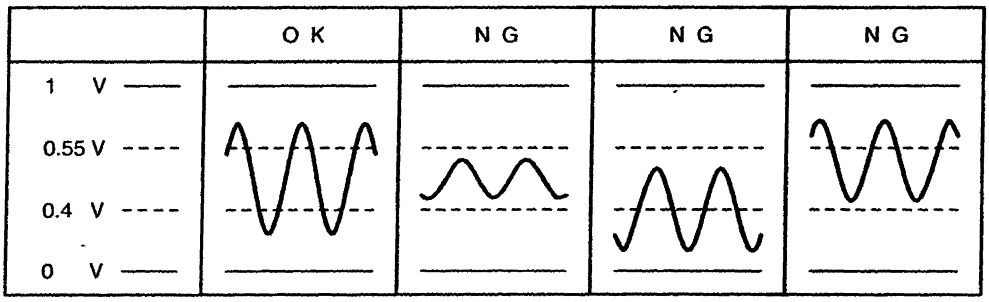
- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand−held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A high heated oxygen sensor (sensor 1) voltage (0.5 V or more) could be caused by a rich air–fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air–fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO HEATED OXYGEN SENSOR DTCS)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
P0130, P0150, P2195, P2196, P2197 and/or P2198	A
P0130, P0150, P2195, P2196, P2197 or P2198 and other DTCs	B



HINT:
If any other codes besides P0130, P0150, P2195, P2196, P2197 and/or P2198 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART**
(See page 05–31)

A

2	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / O2S B1S1 or O2S B2S1.
(d) Warm up the heated oxygen sensor with the engine speed at 2,500 rpm for approximately 90 seconds.
(e) Read the output voltage of the heated oxygen sensor during idling.
Heated oxygen sensor (sensor 1) output voltage:
Alternates repeatedly between less than 0.4 V and more than 0.55 V (see the following table).

P18349

NG	Go to step 5

OK

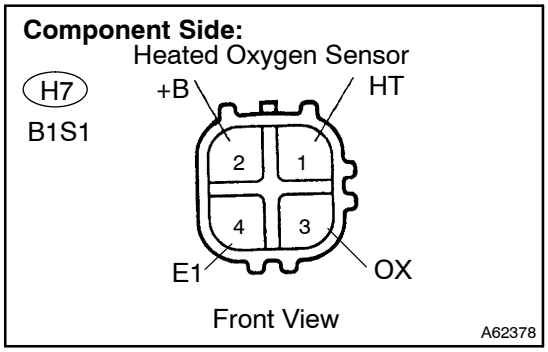
3	PERFORM CONFIRMATION DRIVING PATTERN

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

4	READ OUTPUT DTC(SEE IF HEATED OXYGEN SENSOR DTCS ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:



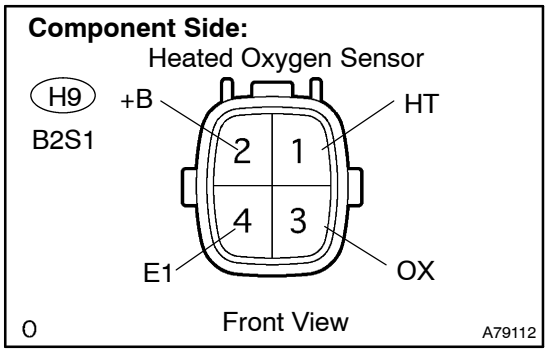
Display (DTC output)	Proceed to
P0130, P0150, P2195, P2196, P2197 and/or P2198	A
No output	B

B	CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

A

REPLACE HEATED OXYGEN SENSOR

5 INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)

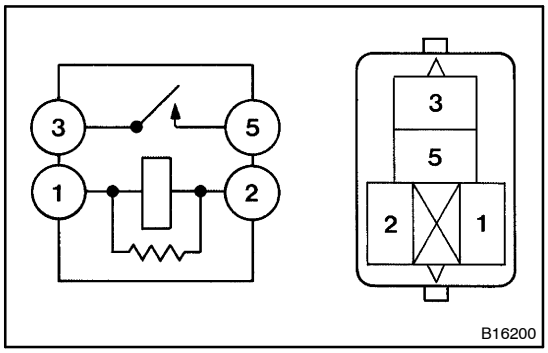


(a) Disconnect the H7 or H9 heated oxygen sensor connector.

(b) Measure the resistance between the terminals of the heated oxygen sensor connector.

Standard (Bank 1, 2 Sensor 1):

Tester Connection	Resistance
1 (HT) – 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) – 4 (E1)	10 kΩ or higher



(c) Reconnect the heated oxygen sensor connector.

NG → **REPLACE HEATED OXYGEN SENSOR**

OK

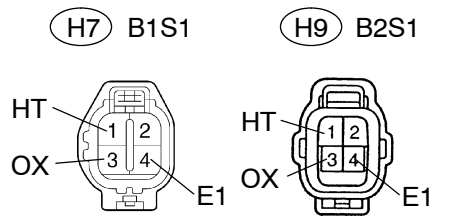
6 INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B No. 4.

(b) Check for continuity in the EFI relay.

Standard:

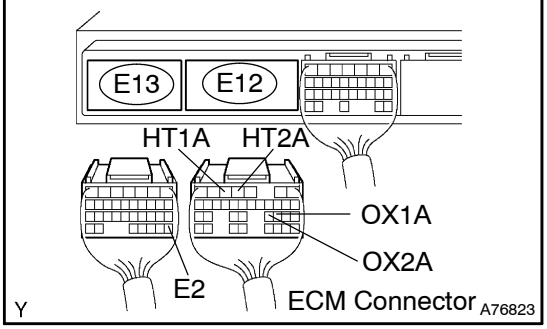
Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)



(c) Reinstall the EFI relay.

NG → **REPLACE EFI RELAY**

OK



7 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM)

Wire Harness Side:

Heated Oxygen Sensor Connector

A76821

(a) Disconnect the H7 or H9 heated oxygen sensor connector.

(b) Disconnect the E12 and E13 ECM connectors.

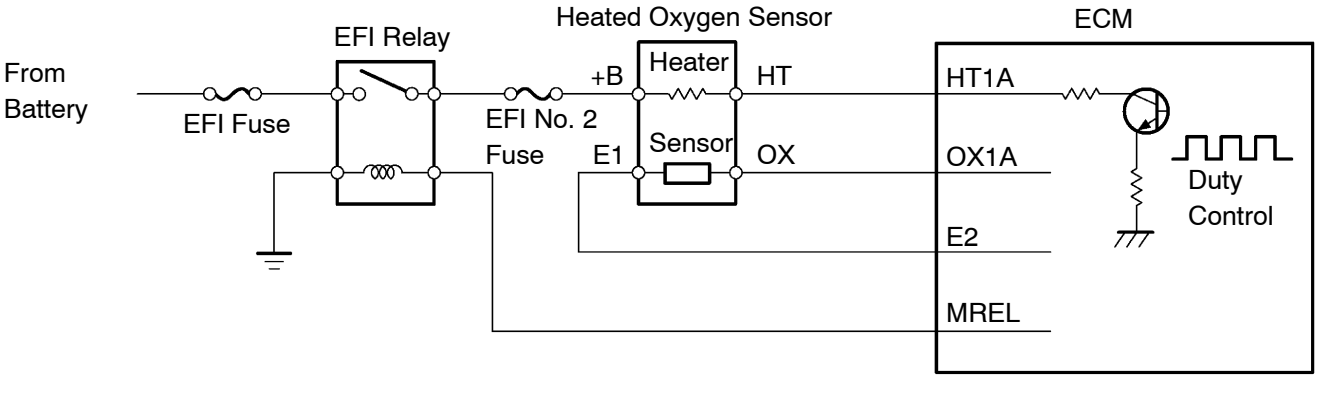
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
OX (H7–3) – OX1A (E12–22)	Below 1 Ω
HT (H7–1) – HT1A (E12–5)	Below 1 Ω
E1 (H7–4) – E2 (E13–28)	Below 1 Ω
OX (H9–3) – OX2A (E12–23)	Below 1 Ω
HT (H9–1) – HT2A (E12–4)	Below 1 Ω
E1 (H9–4) – E2 (E13–28)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
OX (H7–3) or OX1A (E12–22) – Body ground	10 kΩ or higher
HT (H7–1) or HT1A (E12–5) – Body ground	10 kΩ or higher
OX (H9–3) or OX2A (E12–23) – Body ground	10 kΩ or higher
HT (H9–1) or HT2A (E12–4) – Body ground	10 kΩ or higher



(d) Reconnect the heated oxygen sensor connector.

(e) Reconnect the ECM connector.

HINT:

- The OX1A and HT1A means the heated oxygen sensor bank 1 sensor 1.
- The OX2A and HT2A means the heated oxygen sensor bank 2 sensor 1.

Reference (Bank 1 Sensor 1 System Drawing)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	CHECK AIR INDUCTION SYSTEM

(a) Check for vacuum leaks in the air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

9	CHECK FUEL PRESSURE(LOW PRESSURE) (See page 11–4)

NG → CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

10	CHECK FUEL PRESSURE(HIGH PRESSURE) (See page 11–4)

NG → CHECK AND REPLACE FUEL PUMP, FUEL PRESSURE SENSOR, WIRING AND FUEL LEAKAGE

OK

11	CONFIRM IF ANY MISFIRING DTCS WERE PRESENT AT STEP 1

(a) Misfiring DTC P0301, P0302, P0303 and/or P0304 was present at step 1.

NO → REPLACE HEATED OXYGEN SENSOR

YES

12	REPLACE FUEL INJECTOR ASSY (See page 11–13)

HINT:
If one or more the misfiring DTCs P0301, P0302, P0303 and/or P0304 were present at step 1, replace the injector(s) mounted on the misfiring cylinder(s) that is referred by the DTC(s) with normal injector(s).

GO

13	PERFORM CONFIRMATION DRIVING PATTERN

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

14	READ OUTPUT DTC(SEE IF HEATED OXYGEN SENSOR DTCS ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
P0130, P0150, P2195, P2196, P2197 and/or P2198	A
No output	B

B → **REPLACE FUEL INJECTOR ASSY**

A

REPLACE HEATED OXYGEN SENSOR

DTC	P0133	OXYGEN SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1)

DTC	P0153	OXYGEN SENSOR CIRCUIT SLOW RESPONSE (BANK 2 SENSOR 1)

CIRCUIT DESCRIPTION

Refer to DTC P0130 on page 05–82.

DTC No.	DTC Detection Condition	Trouble Area
P0133 P0153	(1) After engine has been warmed up, if response time that heated oxygen sensor output voltage reaches from RICH to LEAN, or from LEAN to RICH, is 0.6 second or more during idling (2 trip detection logic) (2) If response time of heated oxygen sensor output voltage in one RICH–LEAN cycle is 9 seconds or more (M/T vehicle: 5.5 seconds or more) during idling (2 trip detection logic)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 1) • Heated oxygen sensor heater (Bank 1, 2 Sensor 1) • EFI relay • Air induction system • Fuel pressure • Injector • ECM

HINT:

- Bank 1 refers to the No. 1 and No. 4 cylinders.
- Bank 2 refers to the No. 2 and No. 3 cylinders.
- Sensor 1 refers to the sensor closest to the engine assembly.

WIRING DIAGRAM

Refer to DTC P0130 on page 05–82.

INSPECTION PROCEDURE

HINT:

Hand–held tester only:

It is possible the malfunctioning area can be found using the ACTIVE TEST A/F CONTROL operation. The A/F CONTROL operation can determine if the A/F sensor, heated oxygen sensor or other potential trouble areas are malfunctioning or not.

(a) Perform the ACTIVE TEST A/F CONTROL operation.

HINT:

The A/F CONTROL operation lowers the injection volume 12.5% or increases the injection volume 25%.

(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch to ON.
(3) Warm up the engine by running the engine at 2,500 rpm for approximately 3 minutes.
(4) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL.
(5) Perform the A/F CONTROL operation with the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:

+25 % → rich output: More than 0.5 V

–12.5 % → lean output: Less than 0.4 V

NOTICE:

There is a delay of few seconds in the sensor 1 (front sensor) output, and there is about 20 seconds delay at maximum in the sensor 2 (rear sensor).

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Main suspect trouble area
Case 1	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	—
Case 2	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following A/F CONTROL procedure enables the technician to check and graph the voltage outputs of both the heated oxygen sensor.
To display the graph, enter ACTIVE TEST/ A/F CONTROL/USER DATA, then select ”O2S B1S1 and O2S B1S2” or ”O2S B2S1 and O2S B2S2” by pressing the ”YES” button followed by the ”ENTER” button and then the ”F4” button.

NOTICE:

If the vehicle is short of fuel, the air–fuel ratio becomes LEAN and heated oxygen sensor DTCs will be recorded, and the CHK ENG then illuminates.

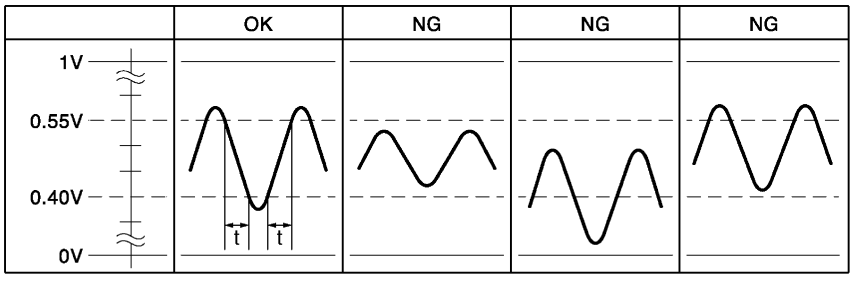
HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A high heated oxygen sensor (sensor 1) voltage (0.5 V or more) could be caused by a rich air–fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air–fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0133 AND/OR P0153)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0133 and/or P0153	A
P0133 or P0153 and other DTCs	B



HINT:
- If any other codes besides P0133 and/or P0153 are output, perform troubleshooting for those DTCs first.
- If a misfiring DTC(s) is present, record the DTC(s) that indicates misfiring cylinder(s), then proceed to A.

B → **GO TO RELEVANT DTC CHART** (See page 05–31)

A

2	READ VALUE OF HAND–HELD TESTER(HEATED OXYGEN SENSOR DURING IDLING)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / O2S B1S1 or O2S B2S1.
(d) Warm up the heated oxygen sensor with the engine speed at 2,500 rpm for approximately 90 seconds.
(e) Read the output voltage of the heated oxygen sensor during idling.
Heated oxygen sensor output voltage:
Alternates repeatedly between less than 0.4 V and more than 0.55 V, and period of "t" must be less than 1.0 second (see the following table).

N

A73686

NG → **Go to step 5**

OK

3	PERFORM CONFIRMATION DRIVING PATTERN (See page 05–82)

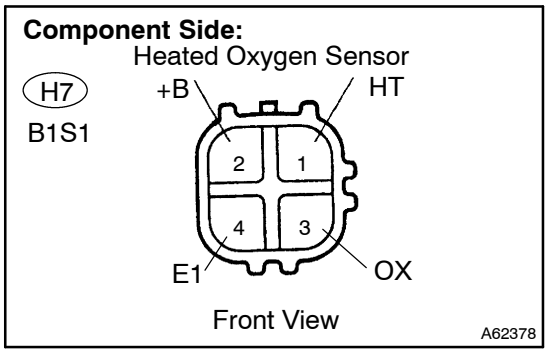
HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

4	READ OUTPUT DTC(SEE IF DTC P0133 AND/OR P0153 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:



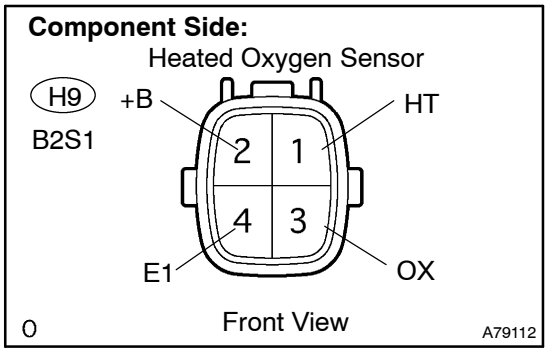
Display (DTC output)	Proceed to
P0133 and/or P0153	A
No output	B

B → CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

A

REPLACE HEATED OXYGEN SENSOR

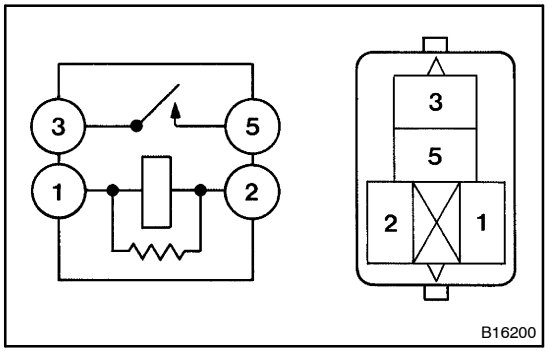
5	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)



(a) Disconnect the H7 or H9 heated oxygen sensor connector.
(b) Measure the resistance between the terminals of the heated oxygen sensor connector.

Standard (Bank 1, 2 Sensor 1):

Tester Connection	Resistance
1 (HT) – 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) – 4 (E1)	10 kΩ or higher



(c) Reconnect the heated oxygen sensor connector.

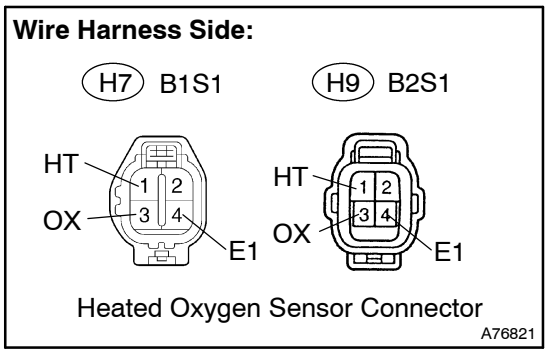
NG → REPLACE HEATED OXYGEN SENSOR

OK

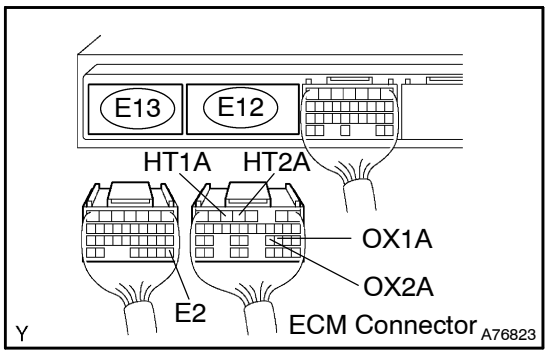
6 INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B No. 4.
(b) Check for continuity in the EFI relay.

Standard:



Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)



(c) Reinstall the EFI relay.

NG → REPLACE EFI RELAY

OK

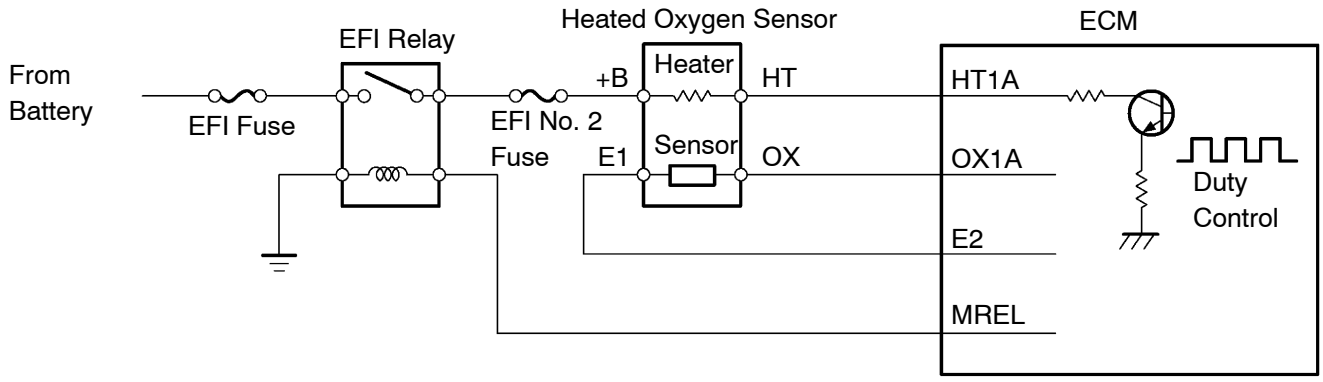
7 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM)

(a) Disconnect the H7 or H9 heated oxygen sensor connector.
(b) Disconnect the E12 and E13 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
OX (H7–3) – OX1A (E12–22)	Below 1 Ω
HT (H7–1) – HT1A (E12–5)	Below 1 Ω
E1 (H7–4) – E2 (E13–28)	Below 1 Ω
OX (H8–3) – OX2A (E12–23)	Below 1 Ω
HT (H8–1) – HT2A (E12–4)	Below 1 Ω
E1 (H8–4) – E2 (E13–28)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
OX (H7–3) or OX1A (E12–22) – Body ground	10 kΩ or higher
HT (H7–1) or HT1A (E12–5) – Body ground	10 kΩ or higher
OX (H8–3) or OX2A (E12–23) – Body ground	10 kΩ or higher
HT (H8–1) or HT2A (E12–4) – Body ground	10 kΩ or higher

(d) Reconnect the heated oxygen sensor connector.
(e) Reconnect the ECM connector.

HINT:

- The OX1A and HT1A means the heated oxygen sensor bank 1 sensor 1.
- The OX2A and HT2A means the heated oxygen sensor bank 2 sensor 1.

NG	REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

9	CHECK FUEL PRESSURE(LOW PRESSURE) (See page 11–4)

NG	CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

10	CHECK FUEL PRESSURE(HIGH PRESSURE) (See page 11–4)

NG	CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

11	CONFIRM IF ANY MISFIRING DTCS WERE PRESENT AT STEP 1

(a) Misfiring DTC P0301, P0302, P0303 and/or P0304 was present at step 1.

NO	REPLACE HEATED OXYGEN SENSOR

YES

12	REPLACE FUEL INJECTOR ASSY (See page 11–13)

HINT:
If one or more the misfiring DTCs P0301, P0302, P0303 and/or P0304 were present at step 1, replace the injector(s) mounted on the misfiring cylinder(s) that is referred by the DTC(s) with normal injector(s).

GO

13	PERFORM CONFIRMATION DRIVING PATTERN (See page 05–82)

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

14	READ OUTPUT DTC(SEE IF DTC P0133 AND/OR P0153 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn push the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0133 and/or P0153	A
No output	B

B → REPLACE FUEL INJECTOR ASSY

A

REPLACE HEATED OXYGEN SENSOR

DTC	P0134	OXYGEN SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1)

DTC	P0154	OXYGEN SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 2 SENSOR 1)

CIRCUIT DESCRIPTION

Refer to DTC P0130 on page 05–82.

DTC No.	DTC Detection Condition	Trouble Area
P0134 P0154	After engine is warmed up, heated oxygen sensor (sensor 1) output does not indicate RICH (greater than 0.45 V) even once when conditions (a), (b), (c), (d) and (e) continue for at least 65 seconds (1 trip detection logic): (a) Engine speed: 1,400 rpm or more (b) Vehicle speed: 130 km/h (81 mph) (c) Throttle valve is not fully closed (d) 180 seconds or more after starting engine (e) Engine coolant temperature is more than 40 °C (104°F)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 1) • Heated oxygen sensor heater (Bank 1, 2 Sensor 1) • EFI relay • Air induction system • Fuel pressure • PCV hose connection • PCV valve and hose • Injector • Gas leakage in exhaust system • ECM

HINT:

- After confirming DTCs P0134 and P0154, confirm the output voltage of the heated oxygen sensor (bank 1, 2 sensor 1) in the DIAGNOSIS / OBD/MOBD / DATA LIST / ALL using the hand–held tester If the output voltage of the heated oxygen sensor is less than 0.1 V, the heated oxygen sensor circuit may be open or short.
- Bank 1 refers to the No. 1 and No. 4 cylinders.
- Bank 2 refers to the No. 2 and No. 3 cylinders.
- Sensor 1 refers to the sensor closest to the engine assembly.

WIRING DIAGRAM

Refer to DTC P0130 on page 05–82.

INSPECTION PROCEDURE

HINT:

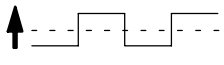
Hand–held tester only:

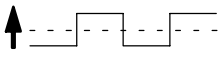
It is possible the malfunctioning area can be found using the ACTIVE TEST A/F CONTROL operation. The A/F CONTROL operation can determine if the A/F sensor, heated oxygen sensor or other potential trouble areas are malfunctioning or not.

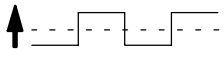
(a) Perform the ACTIVE TEST A/F CONTROL operation.

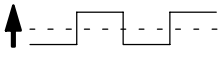
HINT:

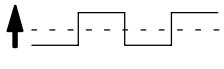
The A/F CONTROL operation lowers the injection volume 12.5% or increases the injection volume 25%.

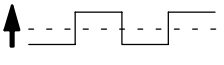


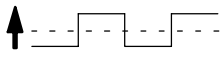


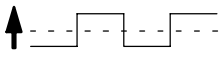












(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch to ON.
(3) Warm up the engine by running the engine at 2,500 rpm for approximately 3 minutes.
(4) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL.
(5) Perform the A/F CONTROL operation with the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.5 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:

There is a delay of few seconds in the sensor 1 (front sensor) output, and there is about 20 seconds delay at maximum in the sensor 2 (rear sensor).

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Main suspect trouble area
Case 1	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	—
Case 2	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 %  Output voltage Almost no reaction **NG**	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following A/F CONTROL procedure enables the technician to check and graph the voltage outputs of both the heated oxygen sensor.
To display the graph, enter ACTIVE TEST/ A/F CONTROL/USER DATA, then select ”O2S B1S1 and O2S B1S2” or ”O2S B2S1 and O2S B2S2” by pressing the ”YES” button followed by the ”ENTER” button and then the ”F4” button.

NOTICE:

If the vehicle is short of fuel, the air–fuel ratio becomes LEAN and heated oxygen sensor DTCs will be recorded, and the CHK ENG then illuminates.

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand−held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A high heated oxygen sensor (sensor 1) voltage (0.5 V or more) could be caused by a rich air–fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air–fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0134 AND/OR P0154)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0134 and/or P0154	A
P0134 or P0154” and other DTCs	B

HINT:

- If any other codes besides P0134 and/or P0154 are output, perform troubleshooting for those DTCs first.
- If a misfiring DTC(s) is present, record the DTC(s) that indicates misfiring cylinder(s), then proceed to A.

B → **GO TO RELEVANT DTC CHART**
(See page 05–31)

A

2	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Warm up the engine to the normal operating temperature above 75°C (169°F).
(d) Read the output voltage of the heated oxygen sensor (sensor 1) when the engine rpm is suddenly increased.

HINT:
Quickly accelerate the engine to 4,000 rpm 3 times using the accelerator pedal.

Standard:
Heated oxygen sensor (sensor 1) outputs a RICH signal (0.45 V or more) at least once.

NG → **Go to step 6**

OK

3	PERFORM CONFIRMATION DRIVING PATTERN (See page 05–82)

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

4	READ OUTPUT DTC(SEE IF DTC P0134 AND/OR P0154 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Enter the following menus: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTC using the hand–held tester.

Result:

Display (DTC output)	Proceed to
No output	A
P0134 and/or P0154	B

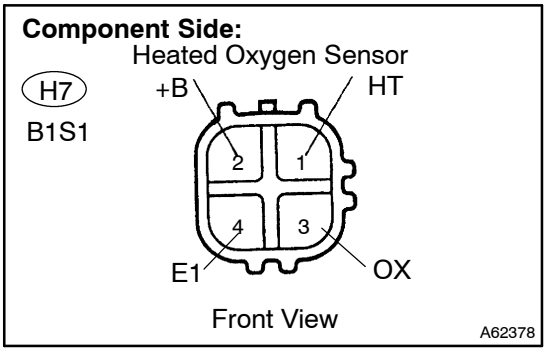
B → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

A

5	CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST

NO → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

YES



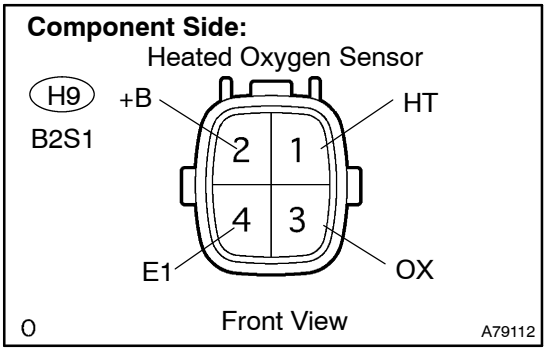
DTC IS CAUSED BY RUNNING OUT OF FUEL (DTC P0134 AND/OR P0154)

6	CHECK CONNECTION OF PCV HOSE

NG → REPAIR OR REPLACE PCV HOSE

OK

7	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)

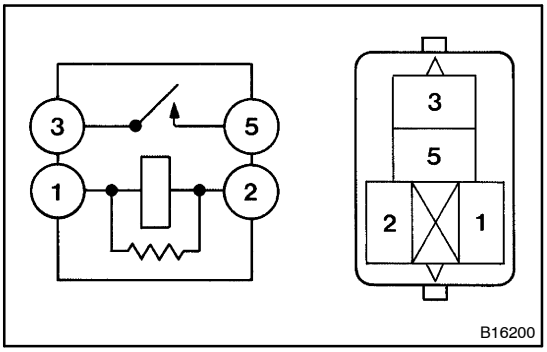


(a) Disconnect the H7 or H9 heated oxygen sensor connector.

(b) Measure the resistance between the terminals of the heated oxygen sensor connector.

Standard (Bank 1, 2 Sensor 1):

Tester Connection	Resistance
1 (HT) – 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) – 4 (E1)	10 kΩ or higher



(c) Reconnect the heated oxygen sensor connector.

NG → REPLACE HEATED OXYGEN SENSOR

OK

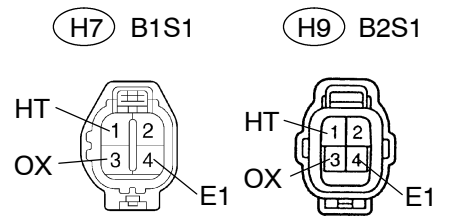
8	INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B No. 4.

(b) Check for continuity in the EFI relay.

Standard:

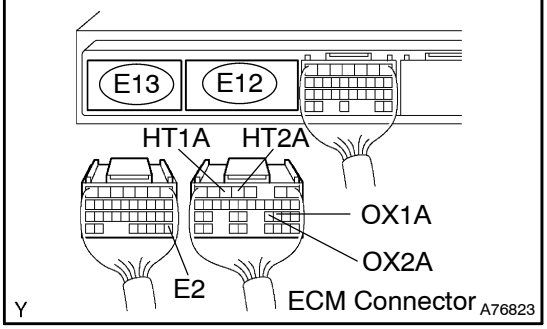
Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)



(c) Reinstall the EFI relay.

NG → REPLACE EFI RELAY

OK



9 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM)

Wire Harness Side:

Heated Oxygen Sensor Connector

A76821

A76823

(a) Disconnect the H7 or H9 heated oxygen sensor connector.

(b) Disconnect the E12 and E13 ECM connectors.

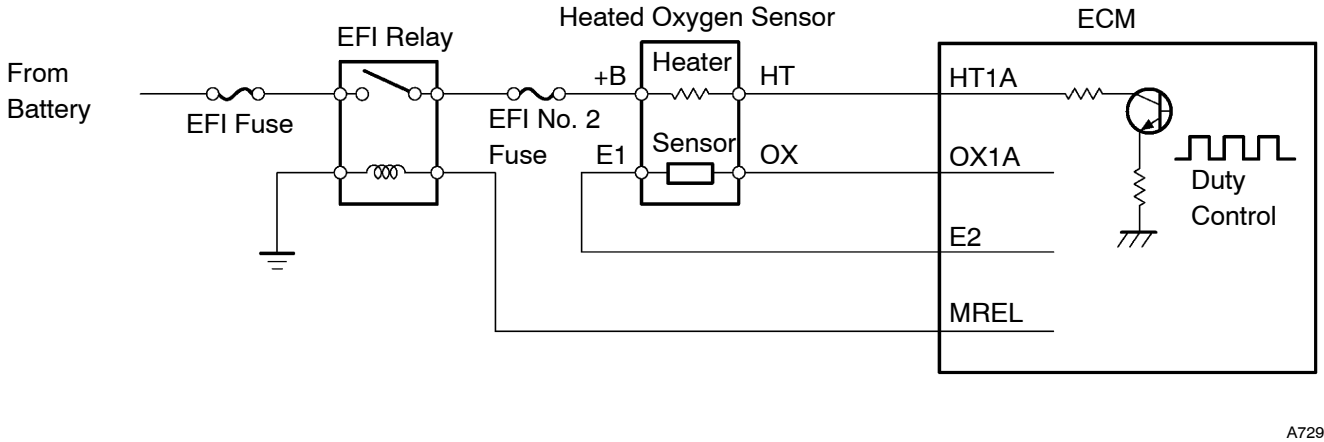
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
OX (H7–3) – OX1A (E12–22)	Below 1 Ω
HT (H7–1) – HT1A (E12–5)	Below 1 Ω
E1 (H7–4) – E2 (E13–28)	Below 1 Ω
OX (H8–3) – OX2A (E12–23)	Below 1 Ω
HT (H8–1) – HT2A (E12–4)	Below 1 Ω
E1 (H8–4) – E2 (E13–28)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
OX (H7–3) or OX1A (E12–22) – Body ground	10 kΩ or higher
HT (H7–1) or HT1A (E12–5) – Body ground	10 kΩ or higher
OX (H8–3) or OX2A (E12–23) – Body ground	10 kΩ or higher
HT (H8–1) or HT2A (E12–4) – Body ground	10 kΩ or higher



(d) Reconnect the heated oxygen sensor connector.

(e) Reconnect the ECM connector.

HINT:

- The OX1A and HT1A means the heated oxygen sensor bank 1 sensor 1.
- The OX2A and HT2A means the heated oxygen sensor bank 2 sensor 1.

Reference (Bank 1 Sensor 1 System Drawing)

A72920

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	CHECK WHETHER MISFIRE IS OCCURRED OR NOT BY MONITORING DTC AND DATA LIST

NG → PERFORM TROUBLESHOOTING FOR MISFIRE (See page 05–146)

OK

11	CHECK AIR INDUCTION SYSTEM

(a) Check for vacuum leaks in the air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

12	CHECK FUEL PRESSURE(LOW PRESSURE) (See page 11–4)

NG → CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

13	CHECK FUEL PRESSURE(HIGH PRESSURE) (See page 11–4)

NG → CHECK AND REPLACE FUEL PUMP, FUEL PRESSURE SENSOR, WIRING AND FUEL LEAKAGE

OK

14	CHECK FOR EXHAUST GAS LEAKS

NG → REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT (See Page 15–2)

OK

15	CONFIRM IF ANY MISFIRING DTCS WERE PRESENT AT STEP 1

(a) Misfiring DTC P0301, P0302, P0303 and/or P0304 was present at step 1.

NO → REPLACE HEATED OXYGEN SENSOR

YES

16	REPLACE FUEL INJECTOR ASSY (See page 11–13)

HINT:
If one or more the misfiring DTCs P0301, P0302, P0303 and/or P0304 were present at step 1, replace the injector(s) mounted on the misfiring cylinder(s) that is referred by the DTC(s) with normal injector(s).

GO

17	PERFORM CONFIRMATION DRIVING PATTERN (See page 05–82)

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

18	READ OUTPUT DTC(SEE IF DTC P0134 AND/OR P0154 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0134 and/or P0154	A
No output	B

B → REPLACE FUEL INJECTOR ASSY

A

REPLACE HEATED OXYGEN SENSOR

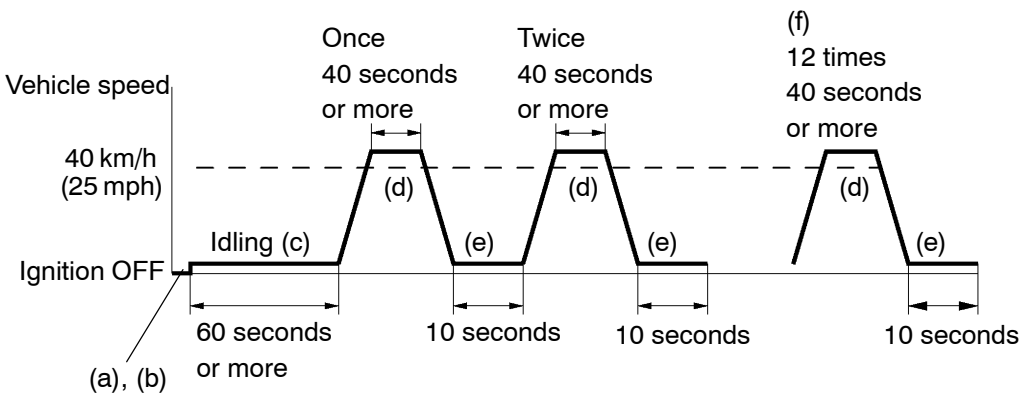
DTC	P0136	OXYGEN SENSOR CIRCUIT MALFUNCTION (BANK 1 SENSOR 2)

DTC	P0156	OXYGEN SENSOR CIRCUIT MALFUNCTION (BANK 2 SENSOR 2)

CIRCUIT DESCRIPTION

Refer to DTC P0130 on page 05–82.

DTC No	DTC Detection Condition	Trouble Area
P0136 P0156	If the following two conditions are satisfied at a time (2 trip detection logic): (a) The ECM records cycles which the vehicle runs and stops 8 times or more (b) There was no change in the rich and lean output from heated oxygen sensor (sensor 2) for the 360 seconds under air–fuel ratio feedback control (Throttle was not closed)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 2) • Heated oxygen sensor heater (Bank 1, 2 Sensor 2) • EFI relay



HINT:

- Bank 1 refers to the No. 1 and No. 4 cylinders.
- Bank 2 refers to the No. 2 and No. 3 cylinders.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

WIRING DIAGRAM

Refer to DTC P0130 on page 05–82.

CONFIRMATION DRIVING PATTERN

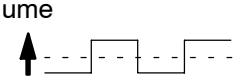
(a) Connect the hand–held tester to the DLC3.
(b) Switch the hand–held tester from normal mode to check mode (see page 05–20).
(c) Start the engine and let it idle for 60 seconds or more.
(d) Drive the vehicle at 40 km/h (25 mph) or more for 40 seconds or more.
(e) Let the engine idle for 10 seconds or more.
(f) Perform steps (d) and (e) 12 times.

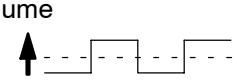
HINT:
If a malfunction exists, the CHK ENG will be illuminated during step (f).

NOTICE:
If the conditions in this test are not strictly followed, no malfunction will be detected. If you do not have the hand–held tester, turn the ignition switch to OFF after performing steps from (c) to (f), then perform steps (c) to (f) again.

INSPECTION PROCEDURE

HINT:
Hand–held tester only:
It is possible the malfunctioning area can be found using the ACTIVE TEST A/F CONTROL operation. The A/F CONTROL operation can determine if the A/F sensor, heated oxygen sensor or other potential trouble areas are malfunctioning or not.





(a) Perform the ACTIVE TEST A/F CONTROL operation.

HINT:
The A/F CONTROL operation lowers the injection volume 12.5% or increases the injection volume 25%.

(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch to ON.
(3) Warm up the engine by running the engine at 2,500 rpm for approximately 3 minutes.
(4) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL.
(5) Perform the A/F CONTROL operation with the engine in an idle condition (press the right or left button).

Result:
Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.5 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:
There is a delay of few seconds in the sensor 1 (front sensor) output, and there is about 20 seconds delay at maximum in the sensor 2 (rear sensor).

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Main suspect trouble area
Case 1	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  OK	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  OK	—
Case 2	Injection volume +25 % –12.5 %  Output voltage Almost no reaction NG	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  OK	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 %  Output voltage More than 0.5 V Less than 0.4V  OK	Injection volume +25 % –12.5 %  Output voltage Almost no reaction NG	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 %  Output voltage Almost no reaction NG	Injection volume +25 % –12.5 %  Output voltage Almost no reaction NG	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following A/F CONTROL procedure enables the technician to check and graph the voltage outputs of both the heated oxygen sensor.
To display the graph, enter ACTIVE TEST/ A/F CONTROL/USER DATA, then select ”O2S B1S1 and O2S B1S2” or ”O2S B2S1 and O2S B2S2” by pressing the ”YES” button followed by the ”ENTER” button and then the ”F4” button.

NOTICE:
If the vehicle is short of fuel, the air–fuel ratio becomes LEAN and heated oxygen sensor DTCs will be recorded, and the CHK ENG then illuminates.

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A high heated oxygen sensor (sensor 1) voltage (0.5 V or more) could be caused by a rich air–fuel mixture. Check for conditions that would cause the engine to run rich.

- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air–fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0136 AND/OR P0156)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
P0136 and/or P0156	A
P0136 or P0156 and other DTCs	B

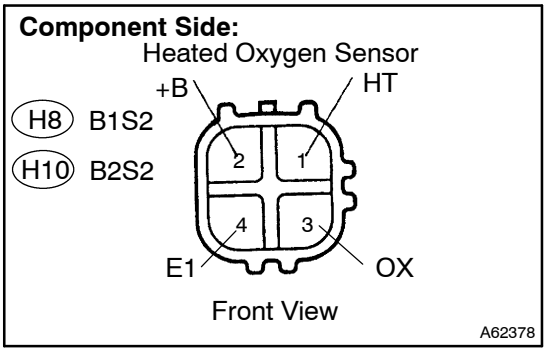
HINT:
If any other codes besides P0136 and/or P0156 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–31)**

A

2	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) After warming up the engine, run the engine at 2,500 rpm for 3 minutes.
(e) Read the output voltage of the heated oxygen sensor when the engine speed is suddenly increased.



HINT:
Quickly accelerate the engine to 4,000 rpm 3 times by using the accelerator pedal.

The output voltage of heated oxygen sensor (sensor 2): Alternates from 0.4 V or less to 0.5 V or more.

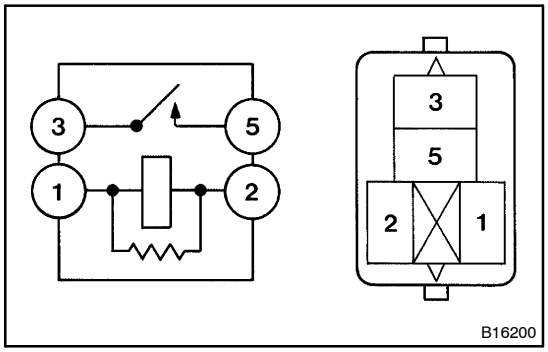
OK → **Go to step 6**

NG

3	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)

(a) Disconnect the H8 or H10 heated oxygen sensor connector.
(b) Measure the resistance between the terminals of the heated oxygen sensor connector.

Standard (Bank 1, 2 Sensor 2):



Tester Connection	Resistance
1 (HT) – 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) – 4 (E1)	10 kΩ or higher

(c) Reconnect the heated oxygen sensor connector.

NG → **REPLACE HEATED OXYGEN SENSOR**

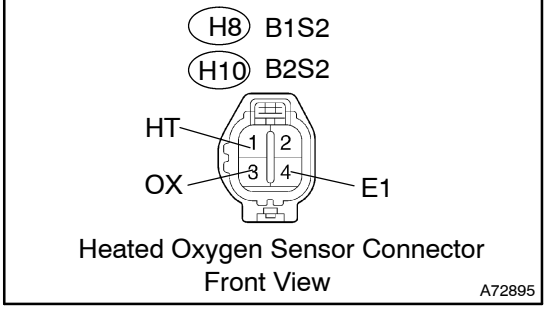
OK

4 INSPECT EFI RELAY

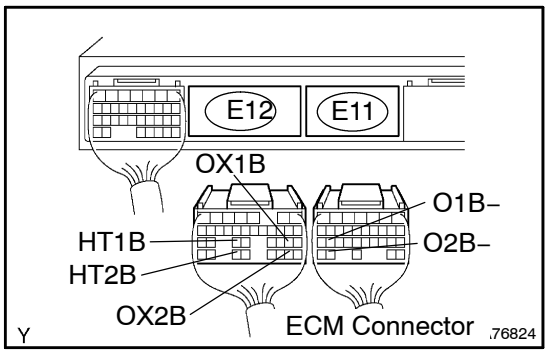
(a) Remove the EFI relay from the engine room R/B No. 4.
(b) Check for continuity in the EFI relay.

Standard:

Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)



(c) Reinstall the EFI relay.



NG → REPLACE EFI RELAY

OK

5 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM)

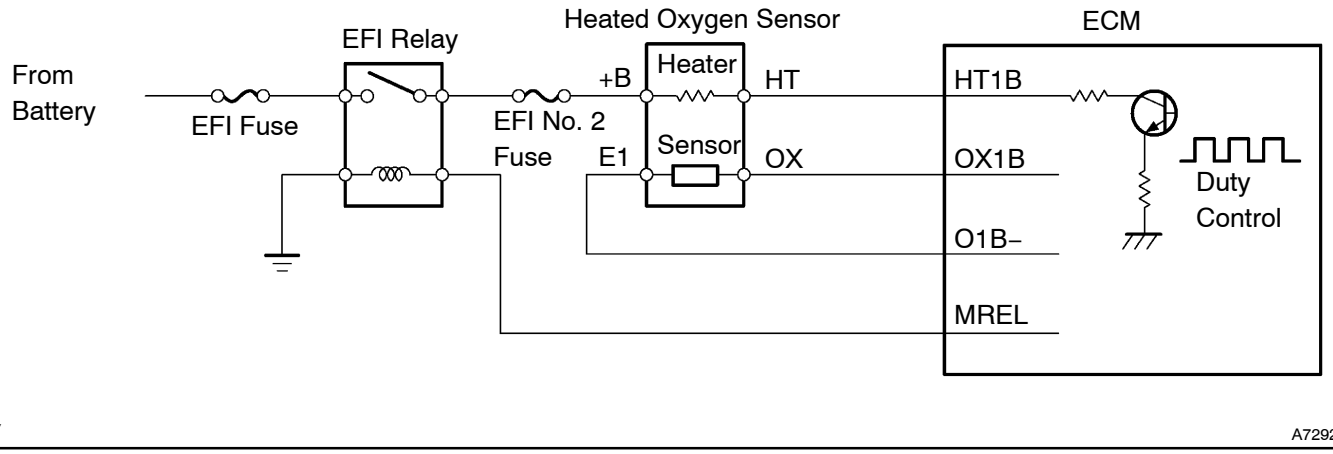
Wire Harness Side:

(a) Disconnect the H8 or H10 heated oxygen sensor connector.
(b) Disconnect the E11 and E12 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
OX (H8–3) – OX1B (E12–21)	Below 1 Ω
HT (H8–1) – HT1B (E12–25)	Below 1 Ω
E1 (H8–4) – O1B– (E11–26)	Below 1 Ω
OX (H10–3) – OX2B (E12–29)	Below 1 Ω
HT (H10–1) – HT2B (E12–33)	Below 1 Ω
E1 (H10–4) – O2B– (E11–31)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
OX (H8–3) or OX1B (E12–21) – Body ground	10 kΩ or higher
HT (H8–1) or HT1B (E12–25) – Body ground	10 kΩ or higher
OX (H10–3) or OX2B (E12–29) – Body ground	10 kΩ or higher
HT (H10–1) or HT2B (E12–33) – Body ground	10 kΩ or higher

(d) Reconnect the heated oxygen sensor connector.
(e) Reconnect the ECM connector.

HINT:

- The OX1B and HT1B means the heated oxygen sensor bank 1 sensor 2.
- The OX2B and HT2B means the heated oxygen sensor bank 2 sensor 2.

Reference (Bank 1 Sensor 2 System Drawing)

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE HEATED OXYGEN SENSOR

6	PERFORM CONFIRMATION DRIVING PATTERN

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

7	READ OUTPUT DTC(SEE IF DTC P0136 AND/OR P0156 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
No output	A
P0136 and/or P0156	B

B	REPLACE HEATED OXYGEN SENSOR

A

CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

DTC	P0171	SYSTEM TOO LEAN (BANK 1)

DTC	P0172	SYSTEM TOO RICH (BANK 1)

DTC	P0174	SYSTEM TOO LEAN (BANK 2)

DTC	P0175	SYSTEM TOO RICH (BANK 2)

CIRCUIT DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection time. The fuel trim includes the short–term fuel trim and the long–term fuel trim.

The short–term fuel trim is the short–term fuel compensation used to maintain the air–fuel ratio at stoichiometric air–fuel ratio. The signal from the heated oxygen sensor indicates whether the air–fuel ratio is RICH or LEAN compared to the stoichiometric air–fuel ratio. This variance triggers a reduction in the fuel volume if the air–fuel ratio is RICH, and an increase in the fuel volume if it is LEAN.

The short–term fuel trim varies from the central value due to individual engine differences, wear over time and changes in operating environment. The long–term fuel trim, which controls overall fuel compensation, steadies long–term deviations of the short–term fuel trim from the central value.

If both the short–term fuel trim and the long–term fuel trim are LEAN or RICH beyond a certain value, it is detected as a malfunction and the CHK ENG is illuminated and a DTC is set.

DTC No.	DTC Detection Condition	Trouble Area
P0171 P0174	When air–fuel ratio feedback is stable after warming up engine, fuel trim is considerably in error on LEAN side (2 trip detection logic)	• Air induction system • Injector blockage • Mass air flow meter • Manifold absolute pressure sensor • Engine coolant temperature sensor • Fuel pressure • Gas leakage in exhaust system • Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 1) • Heated oxygen sensor heater (Bank 1, 2 Sensor 1) • EFI relay • PCV valve and hose • PCV hose connection • ECM
P0172 P0175	When air–fuel ratio feedback is stable after warming up engine, fuel trim is considerably in error on RICH side (2 trip detection logic)	• Injector leakage or blockage • Mass air flow meter • Manifold absolute pressure sensor • Engine coolant temperature sensor • Ignition system • Fuel pressure • Gas leakage in exhaust system • Open or short in heated oxygen sensor circuit • Heated oxygen sensor (Bank 1, 2 Sensor 1) • ECM

HINT:

- When DTC P0171 or P0174 is recorded, the actual air–fuel ratio is on the LEAN side. When DTC P0172 or P0175 is recorded, the actual air–fuel ratio is on the RICH side.
- If the vehicle runs out of fuel, the air–fuel ratio is LEAN and DTC P0171 or P0174 is recorded. The CHK ENG then comes on.
- If the total of the short–term fuel trim value and long–term fuel trim value is within ± 25 % (engine coolant temperature is greater than 75°C), the system is functioning normally.
- Bank 1 refers to the No. 1 and No. 4 cylinders.
- Bank 2 refers to the No. 2 and No. 3 cylinders.

WIRING DIAGRAM

Refer to DTC P0130 on page 05–82.

INSPECTION PROCEDURE

HINT:

Hand–held tester only:

It is possible the malfunctioning area can be found using the ACTIVE TEST A/F CONTROL operation. The A/F CONTROL operation can determine if the A/F sensor, heated oxygen sensor or other potential trouble areas are malfunctioning or not.

(a) Perform the ACTIVE TEST A/F CONTROL operation.

HINT:

The A/F CONTROL operation lowers the injection volume 12.5% or increases the injection volume 25%.

(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch to ON.
(3) Warm up the engine by running the engine at 2,500 rpm for approximately 3 minutes.
(4) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL.
(5) Perform the A/F CONTROL operation with the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.5 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:

There is a delay of few seconds in the sensor 1 (front sensor) output, and there is about 20 seconds delay at maximum in the sensor 2 (rear sensor).

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Main suspect trouble area
Case 1	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	—
Case 2	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following A/F CONTROL procedure enables the technician to check and graph the voltage outputs of both the heated oxygen sensor.
To display the graph, enter ACTIVE TEST/ A/F CONTROL/USER DATA, then select ”O2S B1S1 and O2S B1S2” or ”O2S B2S1 and O2S B2S2” by pressing the ”YES” button followed by the ”ENTER” button and then the ”F4” button.

NOTICE:

If the vehicle is short of fuel, the air–fuel ratio becomes LEAN and heated oxygen sensor DTCs will be recorded, and the CHK ENG then illuminates.

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A high heated oxygen sensor (sensor 1) voltage (0.5 V or more) could be caused by a rich air–fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air–fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0171, P0172, P0174 AND/OR P0175)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0171, P0172, P0174 and/or P0175	A
P0171, P0172, P0174 or P0175 and other DTCs	B

HINT:
- If any other codes besides P0171, P0172, P0174 and/or P0175 are output, perform troubleshooting for those DTCs first.
- If a misfiring DTC(s) is present, record the DTC(s) that indicates misfiring cylinder(s), then proceed to A.

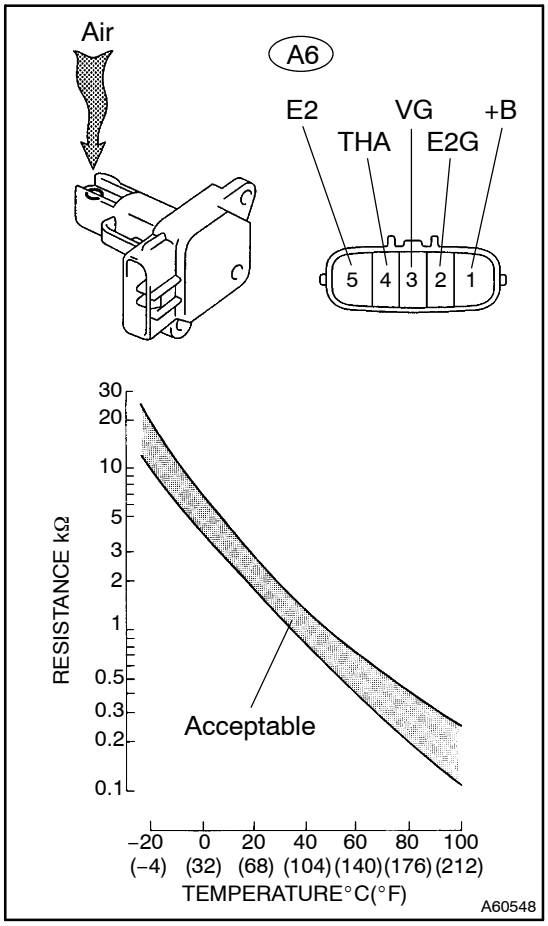
B → **GO TO RELEVANT DTC CHART** (See page 05–31)

A

2	CHECK AIR INDUCTION SYSTEM

(a) Check for vacuum leaks in the air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**



OK

3	CHECK CONNECTION OF PCV HOSE

NG → **REPAIR OR REPLACE PCV HOSE**

OK

4 INSPECT MASS AIR FLOW METER

(a) Remove the mass air flow meter.

(b) Inspect output voltage.

(1) Apply battery voltage across terminals +B and E2G.

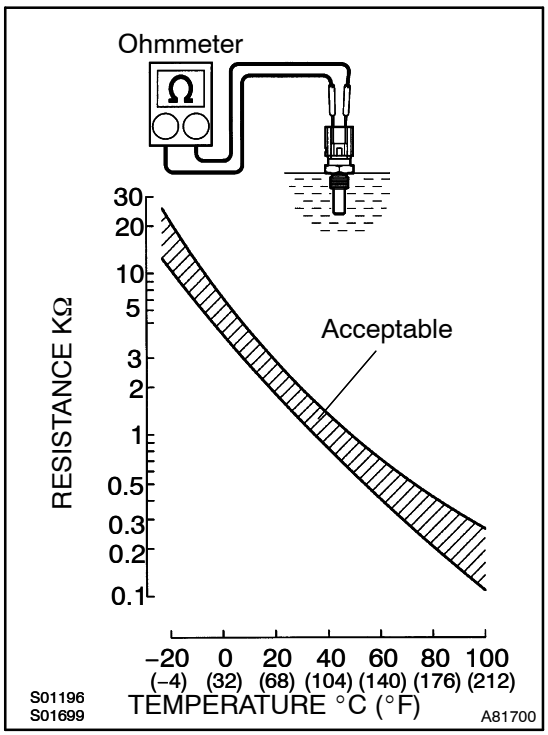
(2) Connect the positive (+) tester prove to terminal VG, and negative (–) tester prove to terminal E2G.

(3) Blow air into the mass air flow meter, and check that the voltage fluctuates.

(c) Resistance inspection.

(1) Measure the resistance between the terminals of the mass air flow meter.

Standard:



Tester Connection	Temperature	Specified Condition
THA (A6–4) – E2 (A6–5)	–20 °C (–4 °F)	13.6 to 18.4 kΩ
THA (A6–4) – E2 (A6–5)	20 °C (68 °F)	2.21 to 2.69 kΩ
THA (A6–4) – E2 (A6–5)	60 °C (140 °F)	0.49 to 0.67 kΩ

(d) Reinstall the mass air flow meter.

NG → **REPLACE MASS AIR FLOW METER**

OK

5	INSPECT ENGINE COOLANT TEMPERATURE SENSOR(RESISTANCE)

(a) Remove the engine coolant temperature sensor.
(b) Measure the resistance between the terminals of the engine coolant temperature sensor.
Standard:

Tester Connection	Temperature	Specified Condition
1 – 2	20°C (68°F)	2.32 to 2.59 kΩ
1 – 2	80°C (176°F)	0.310 to 0.326 kΩ

NOTICE:
When checking the engine coolant temperature sensor in water, be careful not to allow water to contact the terminals. After checking, dry the sensor.
HINT:
Alternate procedure: Connect an ohmmeter to the installed engine coolant temperature sensor and read the resistance. Use an infrared thermometer to measure the engine temperature in the immediate vicinity of the sensor. Compare these values to the resistance/temperature graph. Change the engine temperature (warm up or allow to cool down) and repeat the test.
(c) Reinstall the engine coolant temperature sensor.

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

6	CHECK FOR SPARK AND IGNITION (See page 18–1)

NG → **REPAIR OR REPLACE**

OK

7	CHECK FUEL PRESSURE(LOW PRESSURE) (See page 11–4)

NG → **CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER**

OK

8	CHECK FUEL PRESSURE(HIGH PRESSURE) (See page 11–4)

NG → **CHECK AND REPLACE FUEL PUMP, FUEL PRESSURE SENSOR, WIRING AND FUEL LEAKAGE**

OK

9	CHECK FOR EXHAUST GAS LEAKAGE

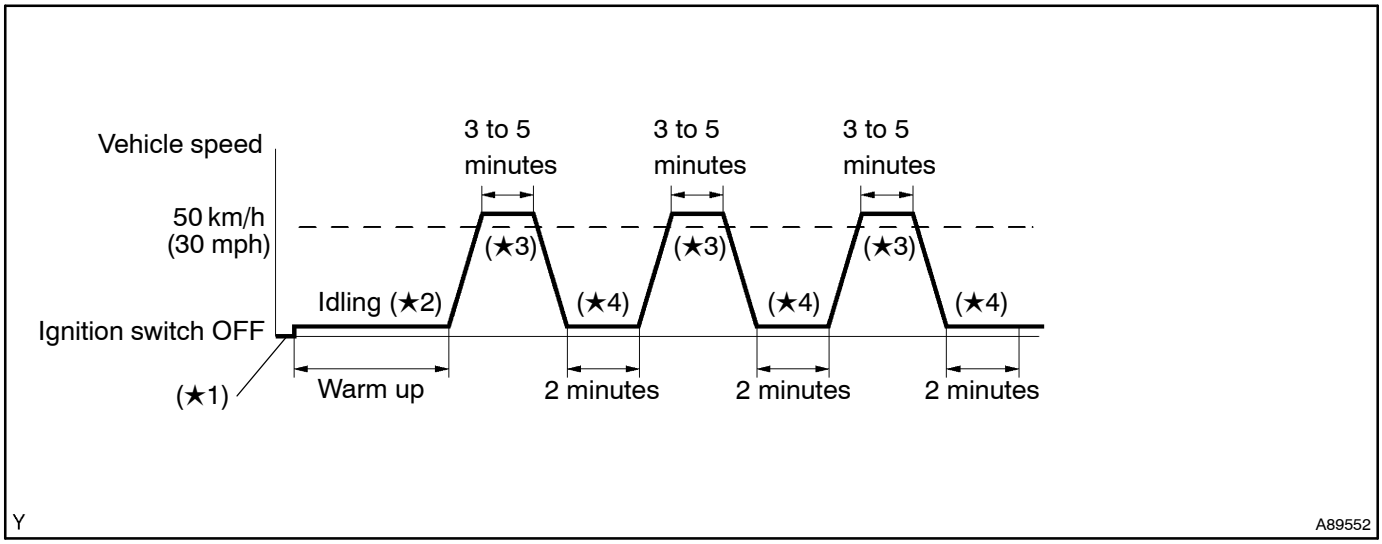
NG → REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT

OK

10	CONFIRM IF ANY MISFIRING DTCS WERE PRESENT AT STEP 1

(a) Misfiring DTC P0301, P0302, P0303 and/or P0304 was present at step 1.

NO → Go to step 14



YES

11	REPLACE FUEL INJECTOR ASSY (See page 11–13)

HINT:
If one or more the misfiring DTCs P0301, P0302, P0303 and/or P0304 were present at step 1, replace the injector(s) mounted on the misfiring cylinder(s) that is referred by the DTC(s) with normal injector(s).

GO

12	PERFORM CONFIRMATION DRIVING PATTERN

(a) Disconnect the battery cable for more than 1 minute (clear learning value of the air fuel ratio). (★1)
(b) Connect the hand–held tester to the DLC3. (★1)
(c) Switch the hand–held tester from normal mode to check mode (see page 05–20). (★1)
(d) Start the engine and let it idle until engine coolant temperature reaches 75 °C (167 °F) or higher. (★2)
(e) Drive the vehicle at 50 km/h (30 mph) or more for 3 minutes or more. (★3)
(f) Let the engine idle for approximately 2minutes. (★4)
(g) Perform steps (e) and (f) at least 3 times.

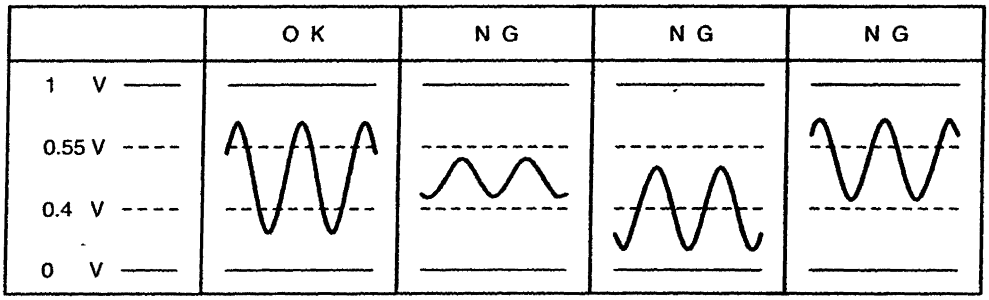
HINT:
If a malfunction exists, the MIL will be illuminated during step (g).

NOTICE:
If the conditions in this test are not strictly followed, no malfunction will be detected.
If you do not have the hand–held tester, turn the ignition switch to OFF after performing steps from (d) to (g), then perform steps (d) to (g) again.

GO

13	READ OUTPUT DTC(SEE IF DTC P0171, P0172, P0174 AND/OR P0175 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:



Display (DTC output)	Proceed to
P0171, P0172, P0174 and/or P0175	A
No output	B

B → **REPLACE FUEL INJECTOR ASSY**

A

14	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR (BANK 1, 2 SENSOR 1))

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / O2S B1S1 or O2S B2S1.
(d) Warm up the heated oxygen sensor with the engine speed at 2,500 rpm for approximately 90 seconds.
(e) Read the output voltage of the heated oxygen sensor during idling.
The output voltage of heated oxygen sensor (sensor 1):
Alternates repeatedly between less than 0.4 V and more than 0.55 V (See the following table).

P18349

NG → **Go to step 21**

OK

15	PERFORM CONFIRMATION DRIVING PATTERN (See step 12)

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

16	READ OUTPUT DTC(SEE IF DTC P0171, P0172, P0174 AND/OR P0175 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
P0171, P0172, P0174 and/or P0175	A
No output	B

B → **Go to step 20**

A

17	REPLACE HEATED OXYGEN SENSOR

GO

18	PERFORM CONFIRMATION DRIVING PATTERN (See step 12)

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

19	READ OUTPUT DTC(SEE IF DTC P0171, P0172, P0174 AND/OR P0175 ARE OUTPUT AGAIN)

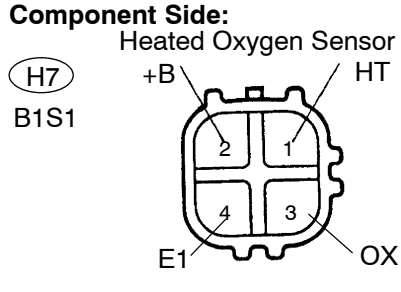
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
No output	A
P0171, P0172, P0174 and/or P0175	B

B → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS) AND PERFORM CONFIRMATION DRIVING PATTERN (See ptep 12)**

A



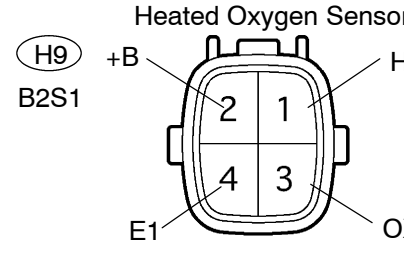
20	CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST

NO → CHECK FOR INTERMITTENT PROBLEMS (See page 05–7)

YES

DTC IS CAUSED BY RUNNING OUT OF FUEL (DTCS P0171, P0172, P0174 AND/OR P0175)

21	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)

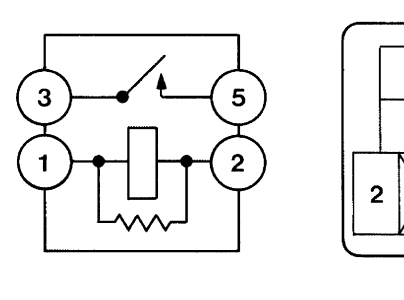


(a) Disconnect the H7 or H9 heated oxygen sensor connector.

(b) Measure the resistance between the terminals of the heated oxygen sensor connector.

Standard (Bank 1, 2 Sensor 1):

Tester Connection	Resistance
1 (HT) – 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT) – 4 (E1)	10 kΩ or higher



(c) Reconnect the heated oxygen sensor connector.

NG → REPLACE HEATED OXYGEN SENSOR

OK

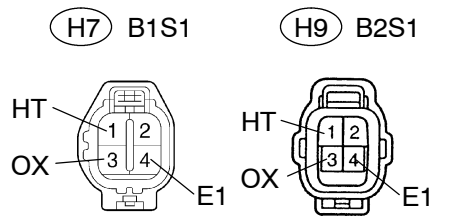
22	INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B No. 4.

(b) Check for continuity in the EFI relay.

Standard:

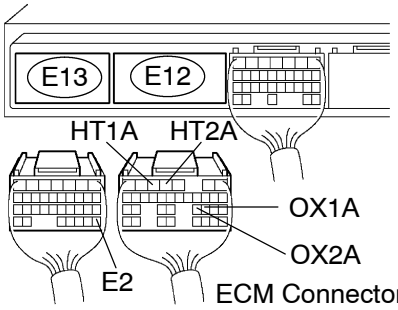
Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)



(c) Reinstall the EFI relay.

NG → REPLACE EFI RELAY

OK



23 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM)

Wire Harness Side:

Heated Oxygen Sensor Connector
Front View

A76821

A76823

(a) Disconnect the H7 or H9 heated oxygen sensor connector.

(b) Disconnect the E12 and E13 ECM connectors.

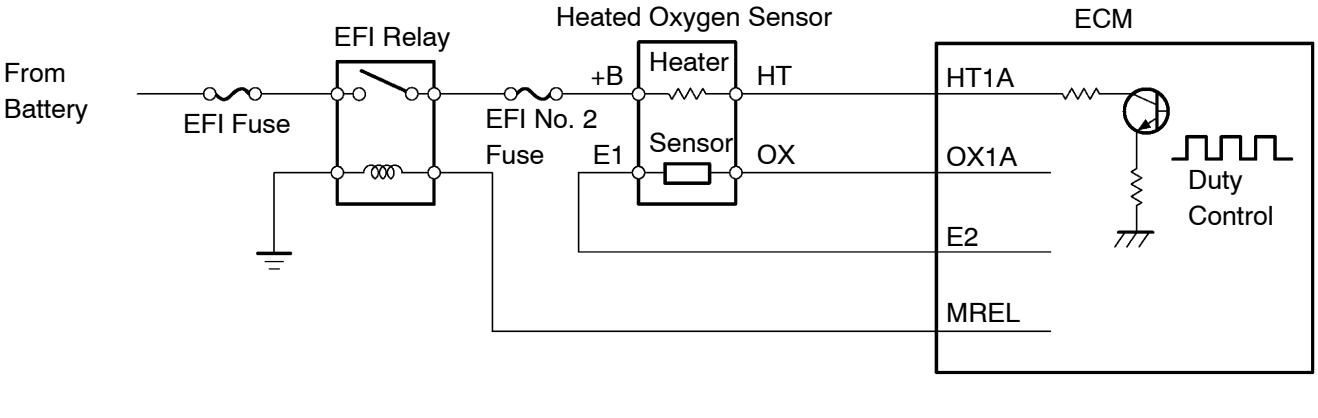
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
OX (H7–3) – OX1A (E12–22)	Below 1 Ω
HT (H7–1) – HT1A (E12–5)	Below 1 Ω
E1 (H7–4) – E2 (E13–28)	Below 1 Ω
OX (H9–3) – OX2A (E12–23)	Below 1 Ω
HT (H9–1) – HT2A (E12–4)	Below 1 Ω
E1 (H9–4) – E2 (E13–28)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
OX (H7–3) or OX1A (E12–22) – Body ground	10 kΩ or higher
HT (H7–1) or HT1A (E12–5) – Body ground	10 kΩ or higher
OX (H9–3) or OX2A (E12–23) – Body ground	10 kΩ or higher
HT (H9–1) or HT2A (E12–4) – Body ground	10 kΩ or higher



(d) Reconnect the heated oxygen sensor connector.

(e) Reconnect the ECM connector.

HINT:

- The OX1A and HT1A means the heated oxygen sensor bank 1 sensor 1.
- The OX2A and HT2A means the heated oxygen sensor bank 2 sensor 1.

Reference (Bank 1 Sensor 1 System Drawing)

A72920

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

24	REPLACE HEATED OXYGEN SENSOR

GO

25	PERFORM CONFIRMATION DRIVING PATTERN (See step 12)

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

26	READ OUTPUT DTC(SEE IF DTC P0171, P0172, P0174 AND/OR P0175 ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

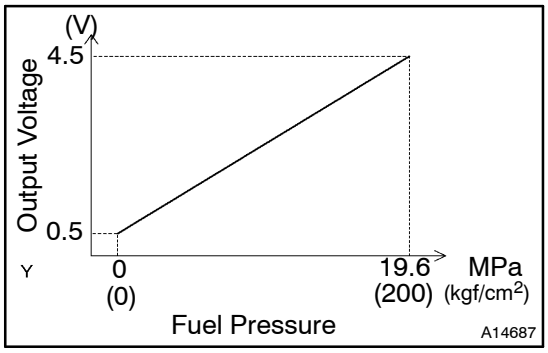
Result:

Display (DTC output)	Proceed to
No output	A
P0171, P0172, P0174 and/or P0175	B

B → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS) AND PERFORM CONFIRMATION DRIVING PATTERN (See ptep 12)**

A

27	CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST



NO → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

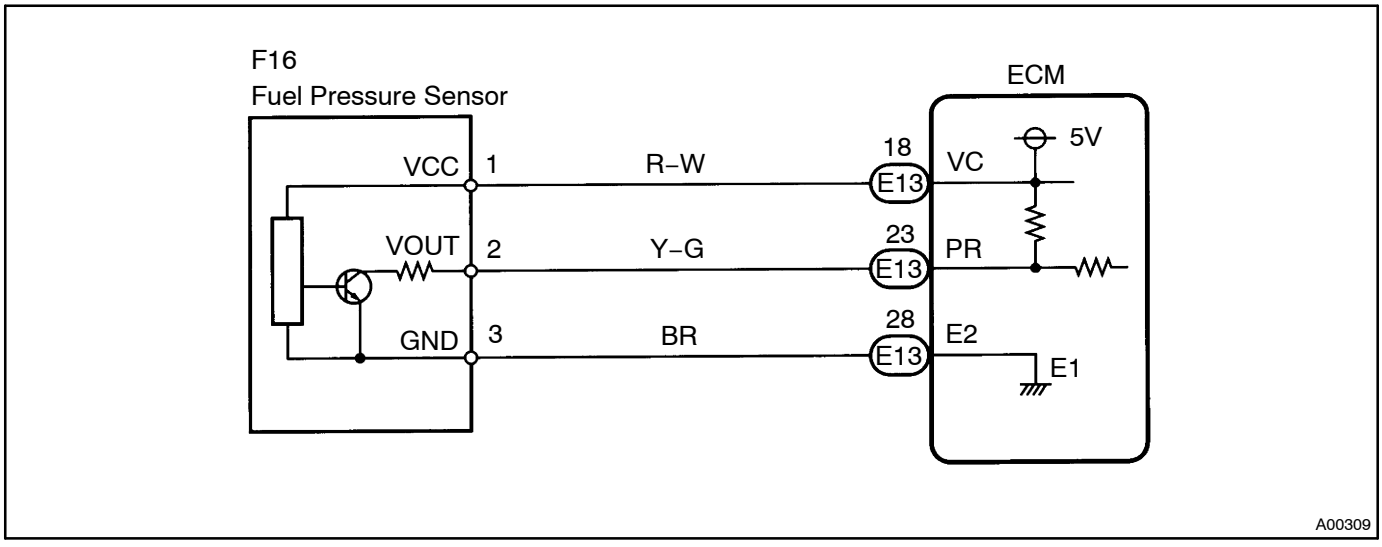
YES

DTC IS CAUSED BY RUNNING OUT OF FUEL (DTCS P0171, P0172, P0174 AND/OR P0175)

DTC P0190 FUEL RAIL PRESSURE SENSOR CIRCUIT

CIRCUIT DESCRIPTION

The fuel pressure sensor is installed on a fuel delivery pipe and detects the fuel pressure. It controls of feedback the pump discharge in order to keep the fuel at target pressure 8 to 13 MPa (81.6 to 132.6 kgf/cm^2, 1,160 to 1,885 psi) by the ECM.



DTC No.	DTC Detection Condition	Trouble Area
P0190	Open or short in fuel pressure sensor circuit	• Open or short in fuel pressure sensor circuit • Fuel pressure sensor • ECM

HINT:

After confirming DTC P0190, use the hand–held tester to confirm the fuel pressure in the delivery pipe in DIAGNOSIS / OBD/MOBD / DATA LIST / ALL.

Fuel Pressure (MPa)	Malfunction
Approximately 0	• PR circuit short
19.6 or more	• VC circuit open or short • PR circuit open • E2 circuit open

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

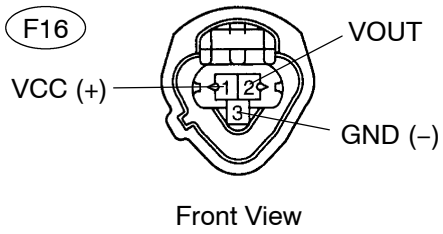
- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 READ VALUE OF HAND–HELD TESTER(FUEL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Turn the hand–held tester ON.
(d) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL PRESS. Read the values.
Pressure: 8 to 13 MPa (81.6 to 132.6 kgf/cm^2, 1,160 to 1,885 psi)
Result:

Fuel Pressure (MPa)	Proceed to
19.6 or more	A
0.0	B
OK (8 to 13 MPa (81.6 to 132.6 kgf/cm^2, 1,160 to 1,885 psi)) (*1)	C

*1: The value must be changed when the engine is run or stopped.



B → **Go to step 3**

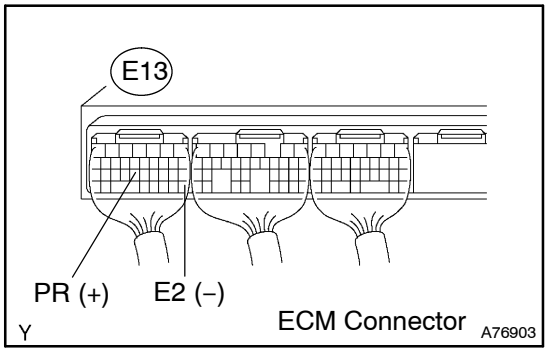
C → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

A

2 INSPECT FUEL PRESSURE SENSOR(VCC VOLTAGE)

Wire Harness Side:
Fuel Pressure Sensor Connector

Front View
A59674



(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the F16 fuel pressure sensor connector.
Standard:

Tester Connection	Specified Condition
VCC (F16–1) – GND (F16–3)	4.5 to 5.5 V

NG → **Go to step 4**

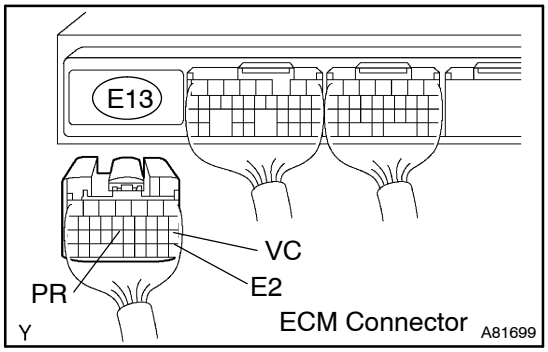
OK

3 INSPECT ECM(PR VOLTAGE)

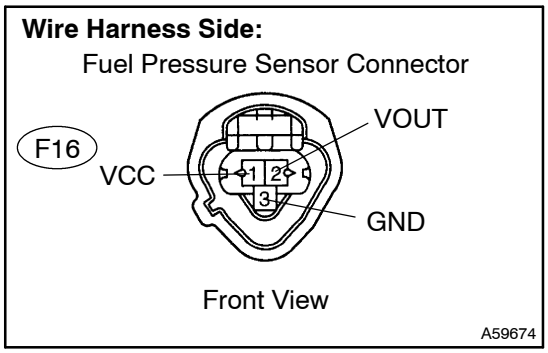
(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.

Standard:

Tester Connection	Specified Condition
PR (E13–23) – E2 (E13–28)	2.1 to 3.2 V at 25°C (77°F)



HINT:
The fuel pressure in the delivery pipe is 8 to 13 MPa (81.6 to 132.6 kgf/cm^2, 1,160 to 1,885 psi)



NG → **Go to step 5**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

4 CHECK HARNESS AND CONNECTOR(ECM – FUEL PRESSURE SENSOR)

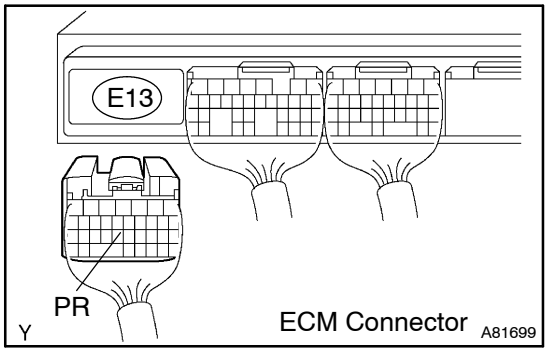
(a) Disconnect the E13 ECM connector.
(b) Disconnect the F16 fuel pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
VC (E13–18) – VCC (F16–1)	Below 1 Ω
PR (E13–23) – VOUT (F16–2)	Below 1 Ω
E2 (E13–28) – GND (F16–3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
VC (E13–18) or VCC (F16–1) – Body ground	10 kΩ or higher
PR (E13–23) or VOUT (F16–2) – Body ground	10 kΩ or higher



(d) Reconnect the ECM connector.
(e) Reconnect the fuel pressure sensor connector.

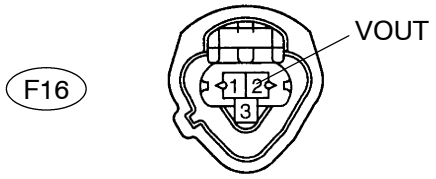
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

5 CHECK HARNESS AND CONNECTOR(ECM – FUEL PRESSURE SENSOR)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the F16 fuel pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.



Standard (Check for short):

Tester Connection	Specified Condition
PR (E13–23) or VOUT (F16–2) – Body ground	10 kΩ or higher

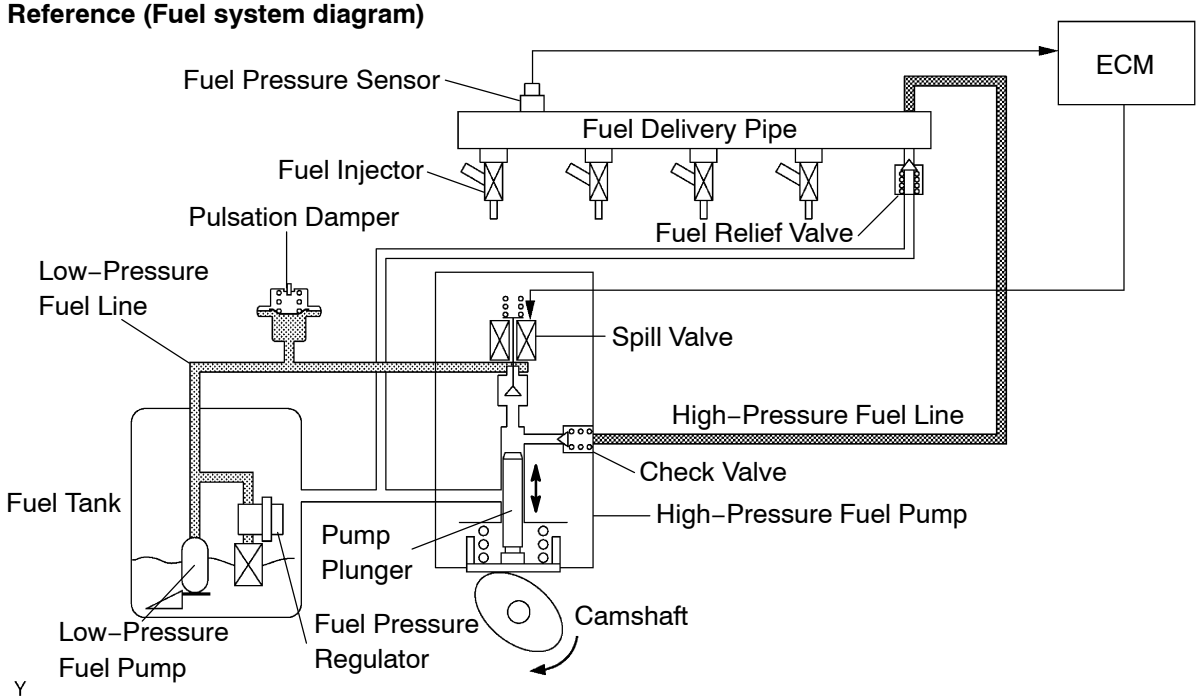
(d) Reconnect the ECM connector.
(e) Reconnect the fuel pressure sensor connector.

Wire Harness Side:

Fuel Pressure Sensor Connector

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



REPLACE FUEL PRESSURE SENSOR

DTC	P0191	FUEL RAIL PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE

CIRCUIT DESCRIPTION

The high–pressure fuel system consists of the spill valve, pump plunger, check valve, fuel relief valve and fuel pressure sensor. The spill valve opens and closes the low–pressure fuel line (from the fuel tank), the pump plunger operated by the camshaft pressurizes fuel, the check valve mechanically opens and closes the high–pressure fuel line (to the fuel delivery pipe), the fuel relief valve prevents fuel pressure from becoming extremely high, and the fuel pressure sensor located on the fuel delivery pipe monitors fuel pressure.
The high–pressure fuel pump is mounted on the cylinder head cover, and its plunger is operated by the cam located between cylinders #3 and #4 on the intake camshaft. Let the plunger moves up and down by the camshaft rotations, it produces vacuum to suck fuel and pressurizes the fuel. This fuel then pushes the check valve open and flows into the fuel delivery pipe. The ECM opens and closes the spill valve to regulate the fuel pressure to the target fuel pressure 8 to 13 MPa (81.6 to 132.6 kgf/cm^2, 1,160 to 1,885 psi). In order to obtain and maintain the target pressure, the ECM monitors the fuel pressure using the fuel pressure sensor and performs the feedback control.
If the internal fuel pressure of the fuel delivery pipe exceeds the standard pressure 14 MPa (142.8 kgf/cm^2, 2,030 psi), the fuel relief valve installed on gateway of the fuel delivery pipe discharges the fuel pressure and then returns the fuel back to the fuel tank.

Reference (Fuel system diagram)

DTC No.	DTC Detection Condition	Trouble Area
P0191	After the fuel pressure is stable for 3 seconds or more, the following condition (a) or (b) continues for more than 10 seconds: (a) ECM did not command that the high–pressure fuel pump opens the spill valve, but fuel pressure increases 3 MPa (30.6 kgf/cm^2, 435 psi) (b) Despite ECM commanded that the high–pressure fuel pump opens the spill valve, fuel pressure decreases 5 MPa (51.0 kgf/cm^2, 725 psi)	• Open or short in high–pressure fuel pump (spill valve) circuit • High–pressure fuel pump • Low–pressure fuel pump • Fuel pipe • Fuel relief valve • Fuel pressure regulator • ECM

WIRING DIAGRAM

Refer to DTC P1235 on page 05–207.

INSPECTION PROCEDURE

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0191)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0191	A
P0191 and other DTCs	B

HINT:
If any other codes besides P0191 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–31)**

A

2	READ VALUE OF HAND–HELD TESTER(FUEL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Turn the hand–held tester ON.
(d) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL PRESS. Read the values.
Pressure: 8 to 13 MPa (81.6 to 132.6 kgf/cm^2, 1,160 to 1,885 psi)

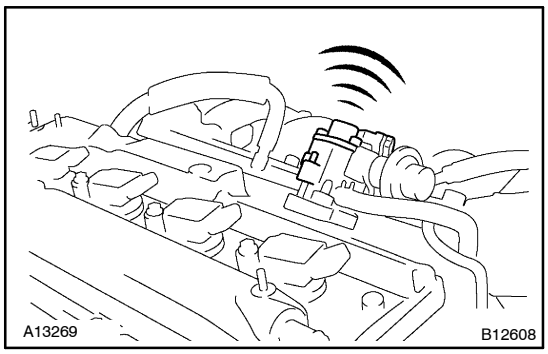
NG → **Go to step 10**

OK

3	CHECK FUEL PRESSURE(LOW PRESSURE) (See page 11–4)

NG → **Go to step 12**

OK



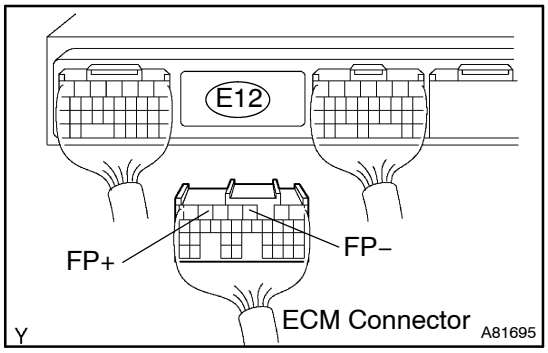
4	CHECK FOR FUEL LEAKS(HIGH PRESSURE)

(a) Check if there is leakage in the fuel pipe located between the high–pressure fuel pump and the injectors.

NG → **REPAIR OR REPLACE COMPONENTS WHICH CAUSE FUEL LEAKS**

OK

5	CHECK FUEL PUMP(HIGH PRESSURE)



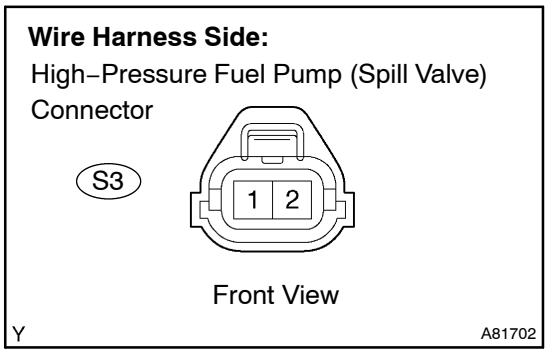
(a) With the engine running or cranking, use a sound scope to check that there is the normal operating sounds of the fuel pump (high–pressure) when it is operated.
Standard:
There is the operating sounds of the fuel pump (high–pressure).

NG → **REPAIR OR REPLACE FUEL PUMP ASSY**

OK

6	CHECK HARNESS AND CONNECTOR(ECM – HIGH PRESSURE FUEL PUMP (SPILL VALVE))

(a) Disconnect the E12 ECM connector.
(b) Disconnect the S3 high–pressure fuel pump (spill valve) connector.
(c) Check the resistance between the wire harness side connectors.



Standard (Check for open):

Tester Connection	Specified Condition
FP+ (E12–6) – Fuel pump (S3–1)	Below 1 Ω
FP– (E12–3) – Fuel pump (S3–2)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
FP+ (E12–6) or Fuel pump (S3–1) – Body ground	10 kΩ or higher
FP– (E12–3) or Fuel pump (S3–2) – Body ground	10 kΩ or higher

(1) Reconnect the ECM connector.
(2) Reconnect the high–pressure fuel pump (spill valve) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	CHECK IF DTC OUTPUT REOCCURS(SEE IF DTC P0191 IS OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0191	A
No output	B

B → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

A

8	REPLACE FUEL RELIEF VALVE ASSY

GO

9	CHECK IF DTC OUTPUT REOCCURS(SEE IF DTC P0191 IS OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0191	A
No output	B

B → **SYSTEM OK**

A

REPLACE FUEL PUMP ASSY (HIGH PRESSURE)

10	CHECK OPERATION OF FUEL PUMP(LOW PRESSURE) (See page 11–4)

OK → **Go to step 3**

NG

11	CHECK VOLTAGE FUEL PUMP(LOW PRESSURE) (See page 11–7)

OK → **Go to step 3**

NG

CHECK FOR FUEL PUMP CONTROL CIRCUIT (See page 05–241)

12	CHECK FOR FUEL LEAKS(LOW PRESSURE)

(a) Check if there is leakage in the fuel pipe located between the fuel tank and the high–pressure fuel pump.

NG → REPAIR OR REPLACE COMPONENTS WHICH CAUSE FUEL LEAKS

OK

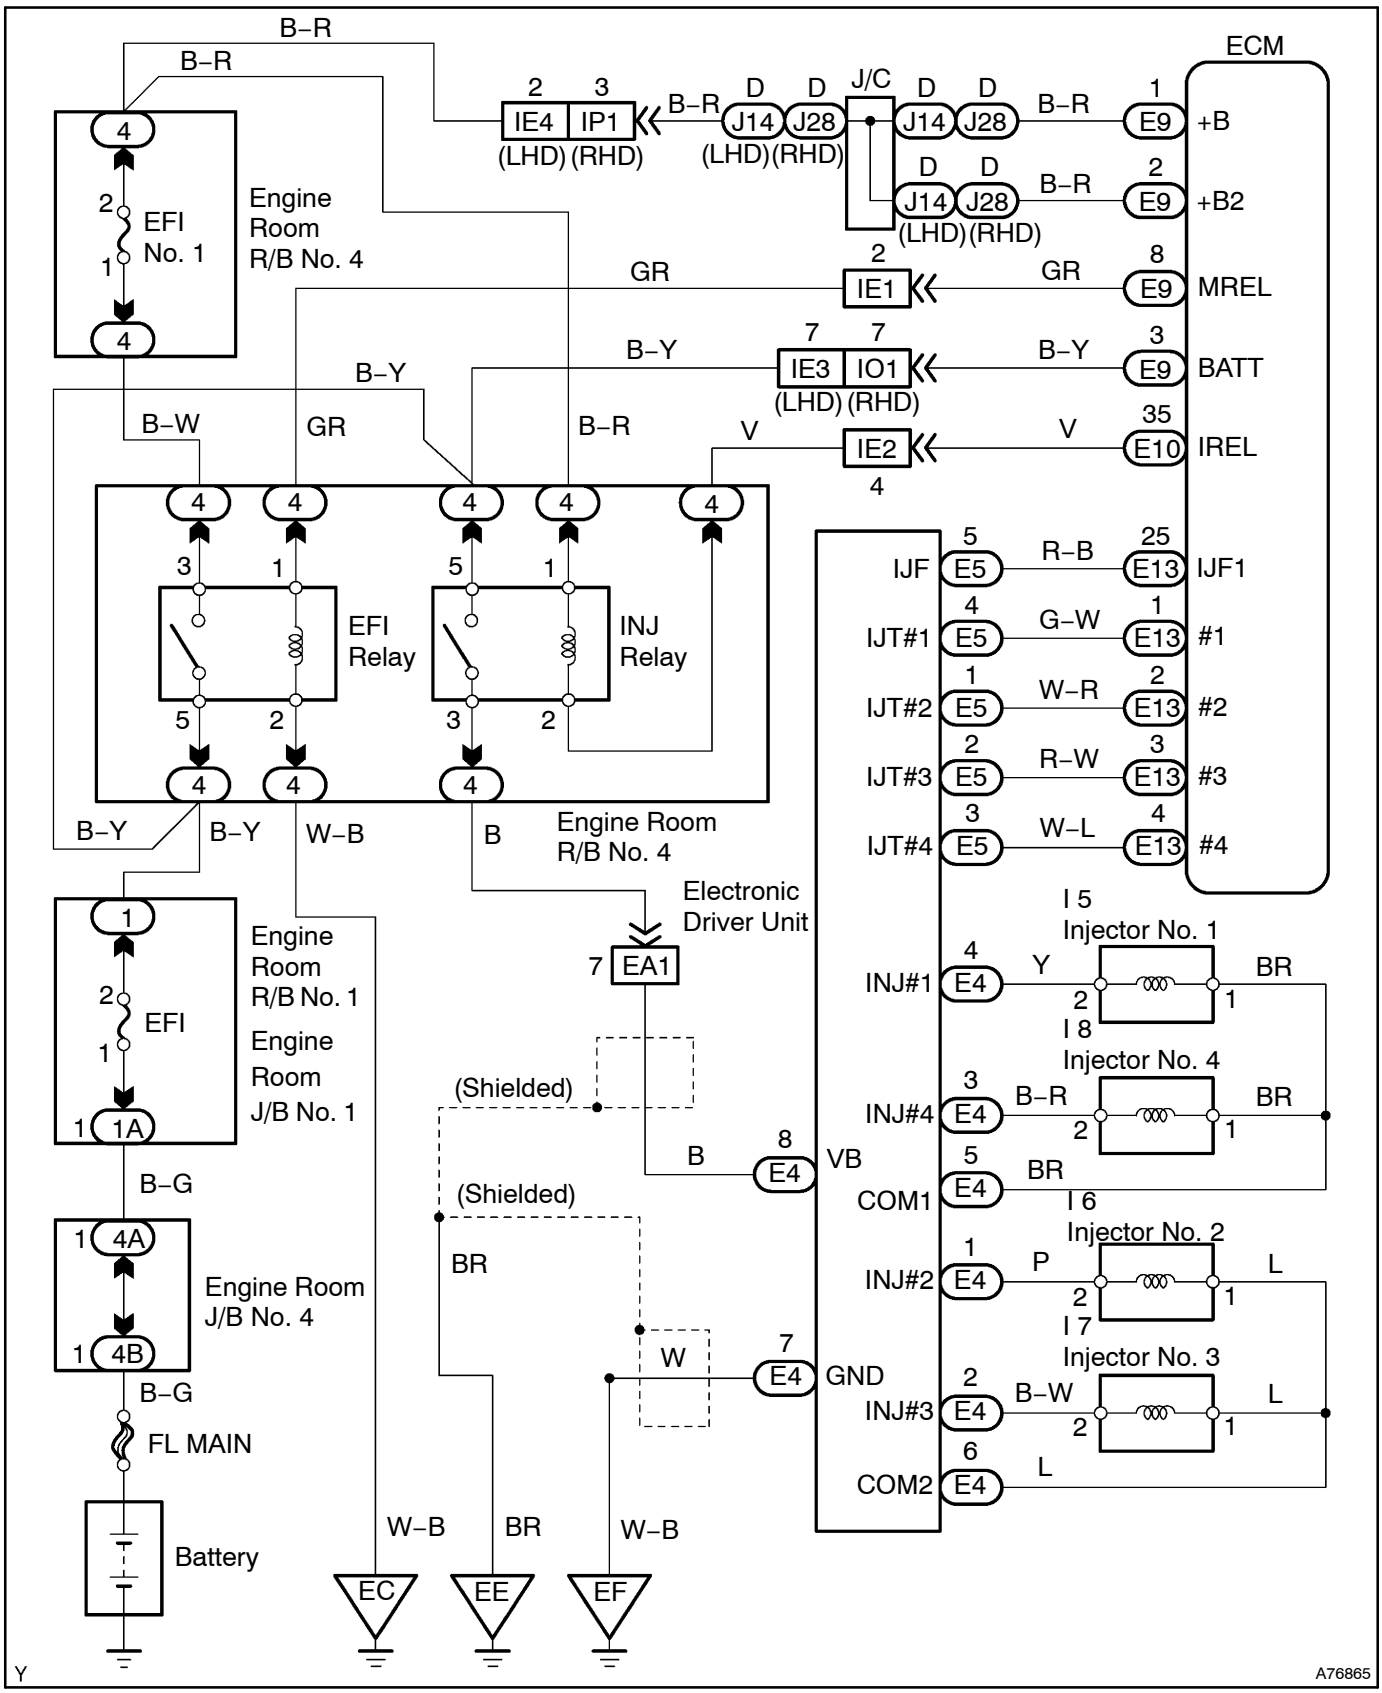
REPLACE FUEL PRESSURE REGULATOR ASSY

DTC	P0200	INJECTOR CIRCUIT / OPEN

DTC	P0201	INJECTOR CIRCUIT / OPEN – (CYLINDER 1)

DTC	P0202	INJECTOR CIRCUIT / OPEN – (CYLINDER 2)

DTC	P0203	INJECTOR CIRCUIT / OPEN – (CYLINDER 3)



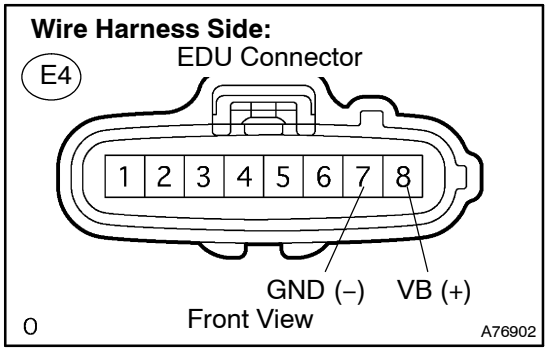
DTC	P0204	INJECTOR CIRCUIT / OPEN – (CYLINDER 4)

CIRCUIT DESCRIPTION

The Electronic Driver Unit (EDU) has been adopted to operate the injector at high speed. The EDU enables the injector to drive in high–speed rate under high–pressure fuel condition using its internal DC/DC converter that provides high voltage and quick–charging system.
The ECM constantly monitors the EDU. If the ECM detects abnormal condition, it will stop the engine.

DTC No.	DTC Detection Condition	Trouble Area
P0200	No IJF signals to ECM despite crankshaft rotating 10 times (1 trip detection logic)	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM
P0200	No IJF signals to ECM despite crankshaft rotating 20 times during cranking (2 trip detection logic)	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM
P0201 P0202 P0203 P0204	No IJF signals of each cylinder to ECM 20 times successively (1 trip detection logic)	• Open or short in EDU circuit • EDU (Injector driver) • Fuel injector assy • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

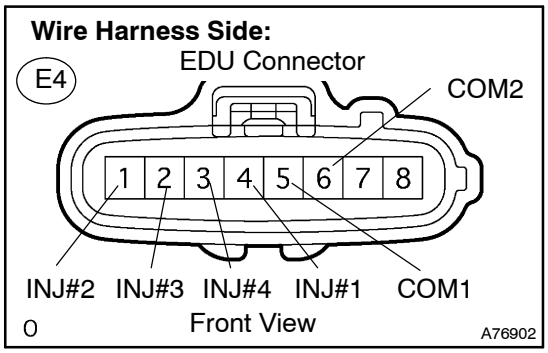
HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT INJECTOR DRIVER(POWER SOURCE OF EDU)

(a) Disconnect the E4 EDU connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the specified terminals of the EDU connector.

Standard:



Tester Connection	Specified Condition
VB (E4–8) – GND (E4–7)	9 to 14 V

(d) Reconnect the EDU connector.

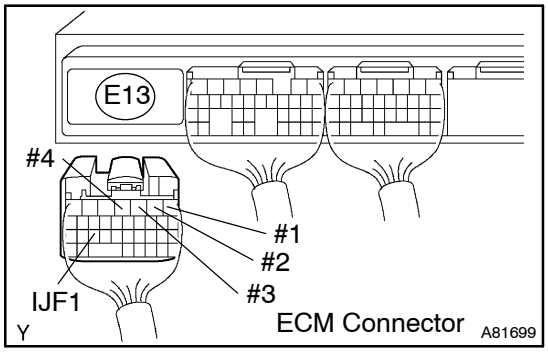
NG → **CHECK EDU POWER SOURCE CIRCUIT**

OK

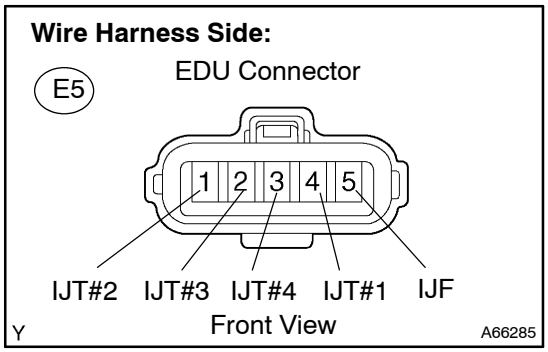
2	CHECK HARNESS AND CONNECTOR(EDU – FUEL INJECTOR)

(a) Disconnect the E4 EDU connector.
(b) Measure the resistance between the specified terminals of the EDU connector.

Standard:



Tester Connection	Specified Condition
INJ#1 (E4–4) – COM1 (E4–5)	2.55 to 2.85 Ω at 20 °C (68 °F)
INJ#2 (E4–1) – COM2 (E4–6)	2.55 to 2.85 Ω at 20 °C (68 °F)
INJ#3 (E4–2) – COM2 (E4–6)	2.55 to 2.85 Ω at 20 °C (68 °F)
INJ#4 (E4–3) – COM1 (E4–5)	2.55 to 2.85 Ω at 20 °C (68 °F)



(c) Reconnect the EDU connector.

NG → **Go to step 6**

OK

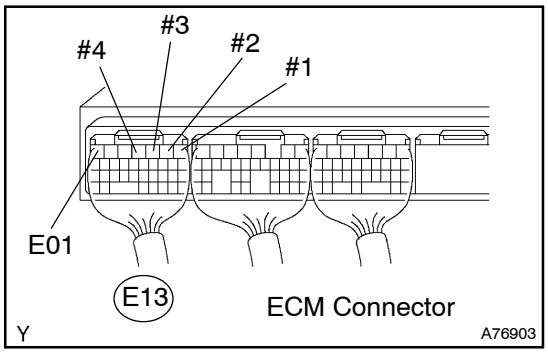
3 CHECK HARNESS AND CONNECTOR(ECM – EDU)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the E5 EDU connector.
(c) Measure the resistance between the wire harness side connectors.

Standard (Check for open):

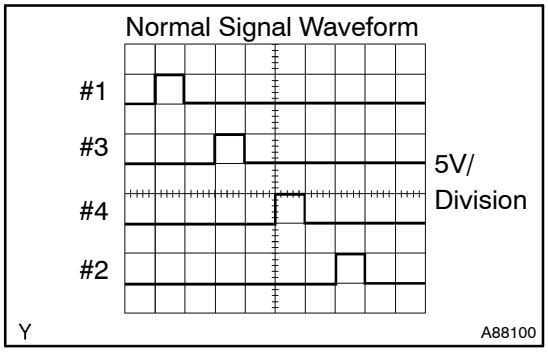
Tester Connection	Specified Conditio
IJF1 (E13–25) – IJF (E5–5)	Below 1 Ω
#1 (E13–1) – IJT#1 (E5–4)	Below 1 Ω
#2 (E13–2) – IJT#2 (E5–1)	Below 1 Ω
#3 (E13–3) – IJT#3 (E5–2)	Below 1 Ω
#4 (E13–4) – IJT#4 (E5–3)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
IJF1 (E13–25) or IJF (E5–5) – Body ground	10 kΩ or higher
#1 (E13–1) or IJT#1 (E5–4) – Body ground	10 kΩ or higher
#2 (E13–2) or IJT#2 (E5–1) – Body ground	10 kΩ or higher
#3 (E13–3) or IJT#3 (E5–2) – Body ground	10 kΩ or higher
#4 (E13–4) or IJT#4 (E5–3) – Body ground	10 kΩ or higher

(1) Reconnect the ECM connector.
(2) Reconnect the EDU connector.



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

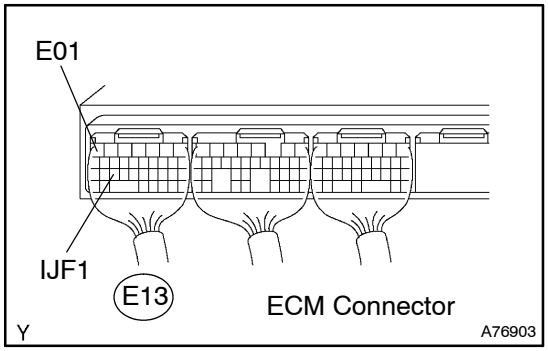
4 CHECK ECM(#1, #2, #3 AND #4 VOLTAGE)

(a) Connect an oscilloscope to terminals #1 to #4 and E01 of the E13 ECM harness side connector.

(b) With the engine cranking or idling, check the signal waveform.

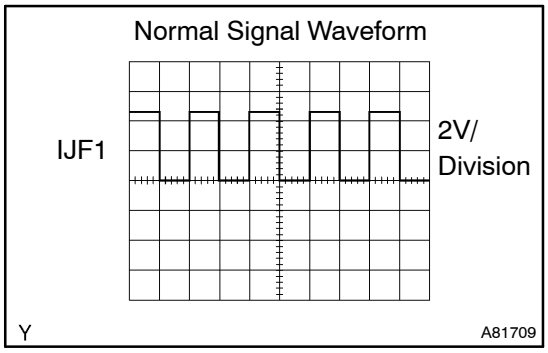
Standard:

Signal waveform appears as shown in the illustration.



HINT:

Check the waveform before the ECM detects the DTC(s) and enters the fail–safe mode, because the ECM will no more indicate the voltage output once it enters the fail–safe mode.



NG → REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

OK

5 CHECK ECM(IJF1 VOLTAGE)

(a) Connect an oscilloscope to terminals IJF1 and E01 of the E13 ECM harness side connector.

(b) With the engine cranking or idling, check the signal waveform.

Standard:

Signal waveform appears as shown in the illustration.

HINT:

Check the waveform before the ECM detects the DTC(s) and enters the fail–safe mode, because the EDU will no more indicate the voltage output once the ECM enters the fail–safe mode.

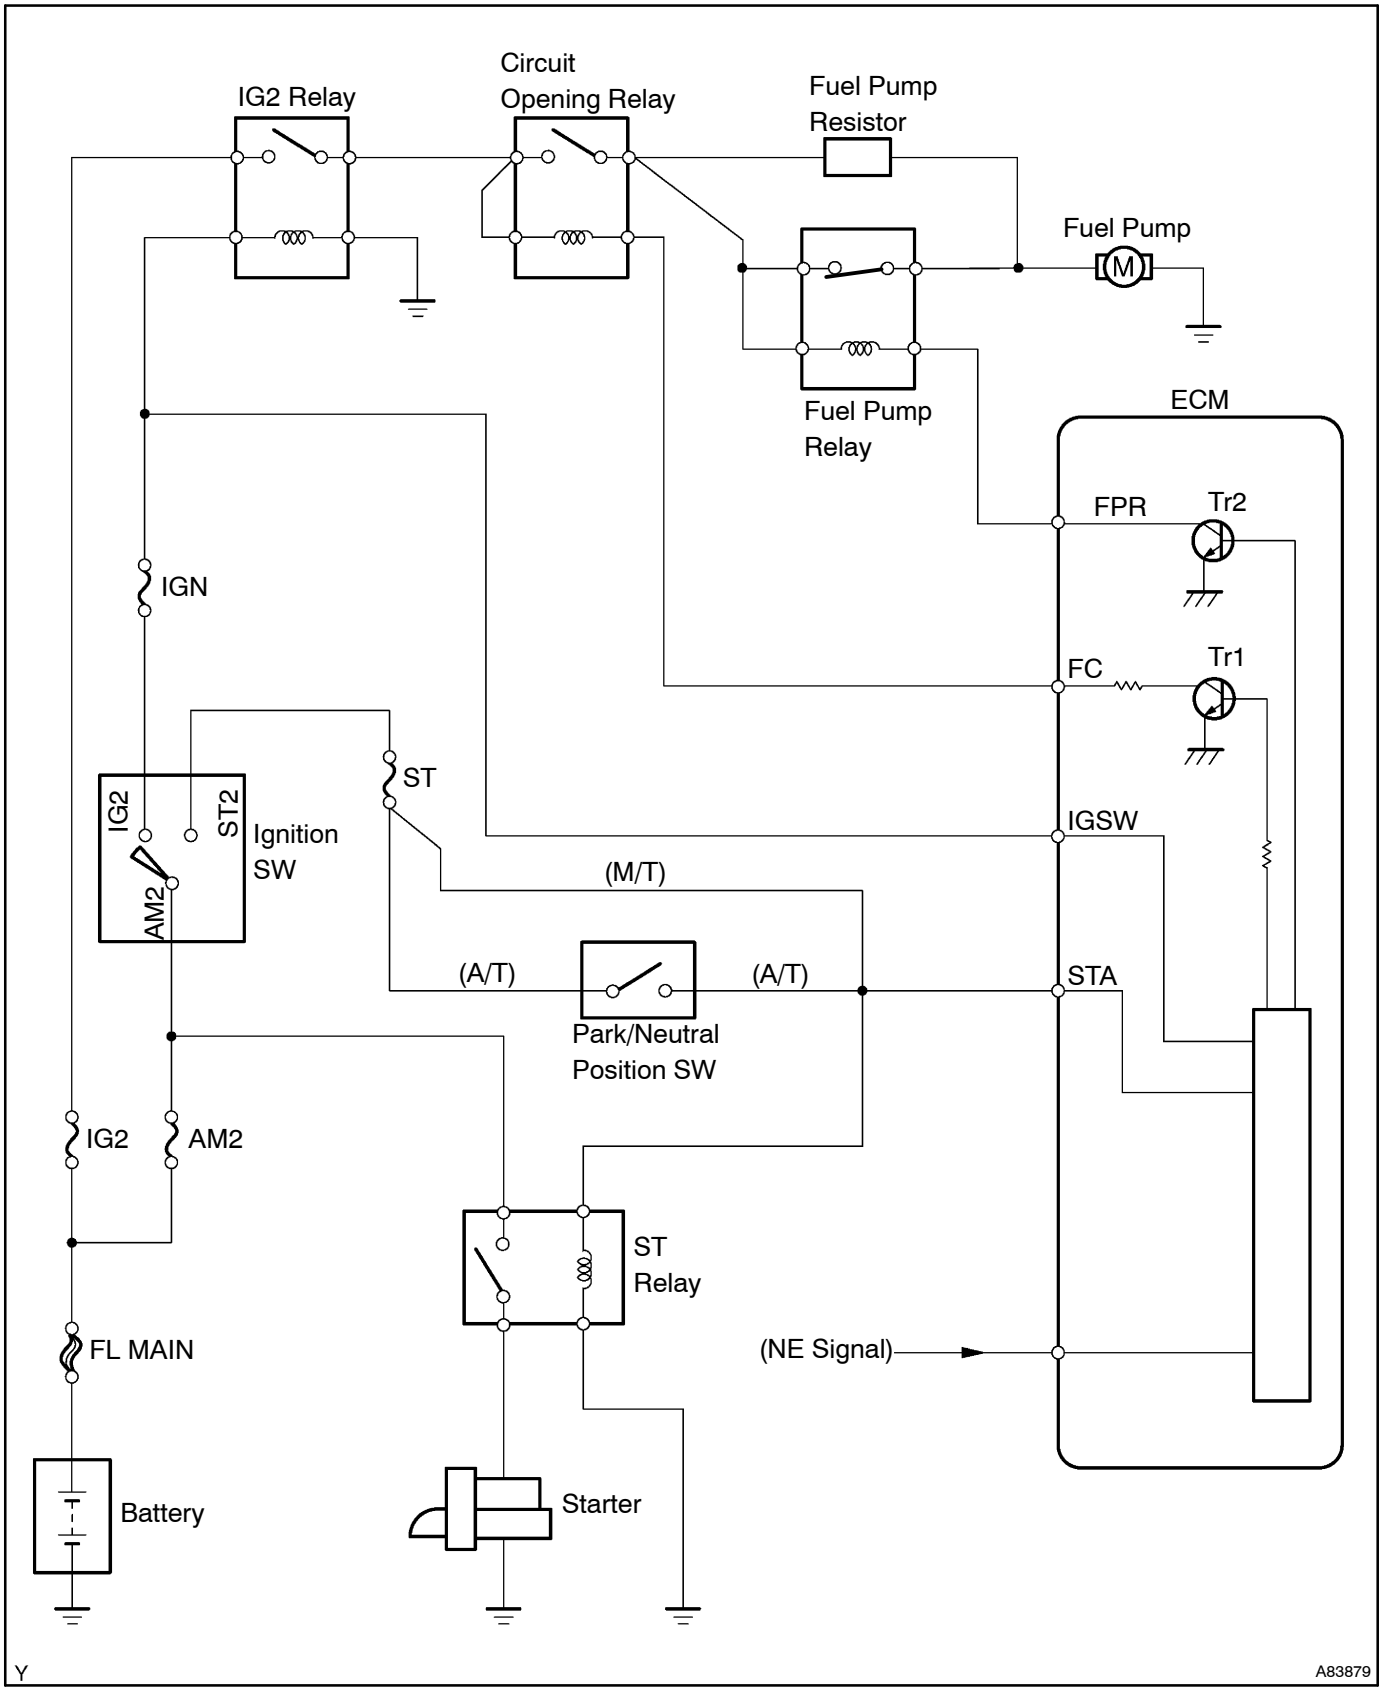
NG → REPLACE INJECTOR DRIVER

OK

CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

6 INSPECT FUEL INJECTOR ASSY (See page 11–7)

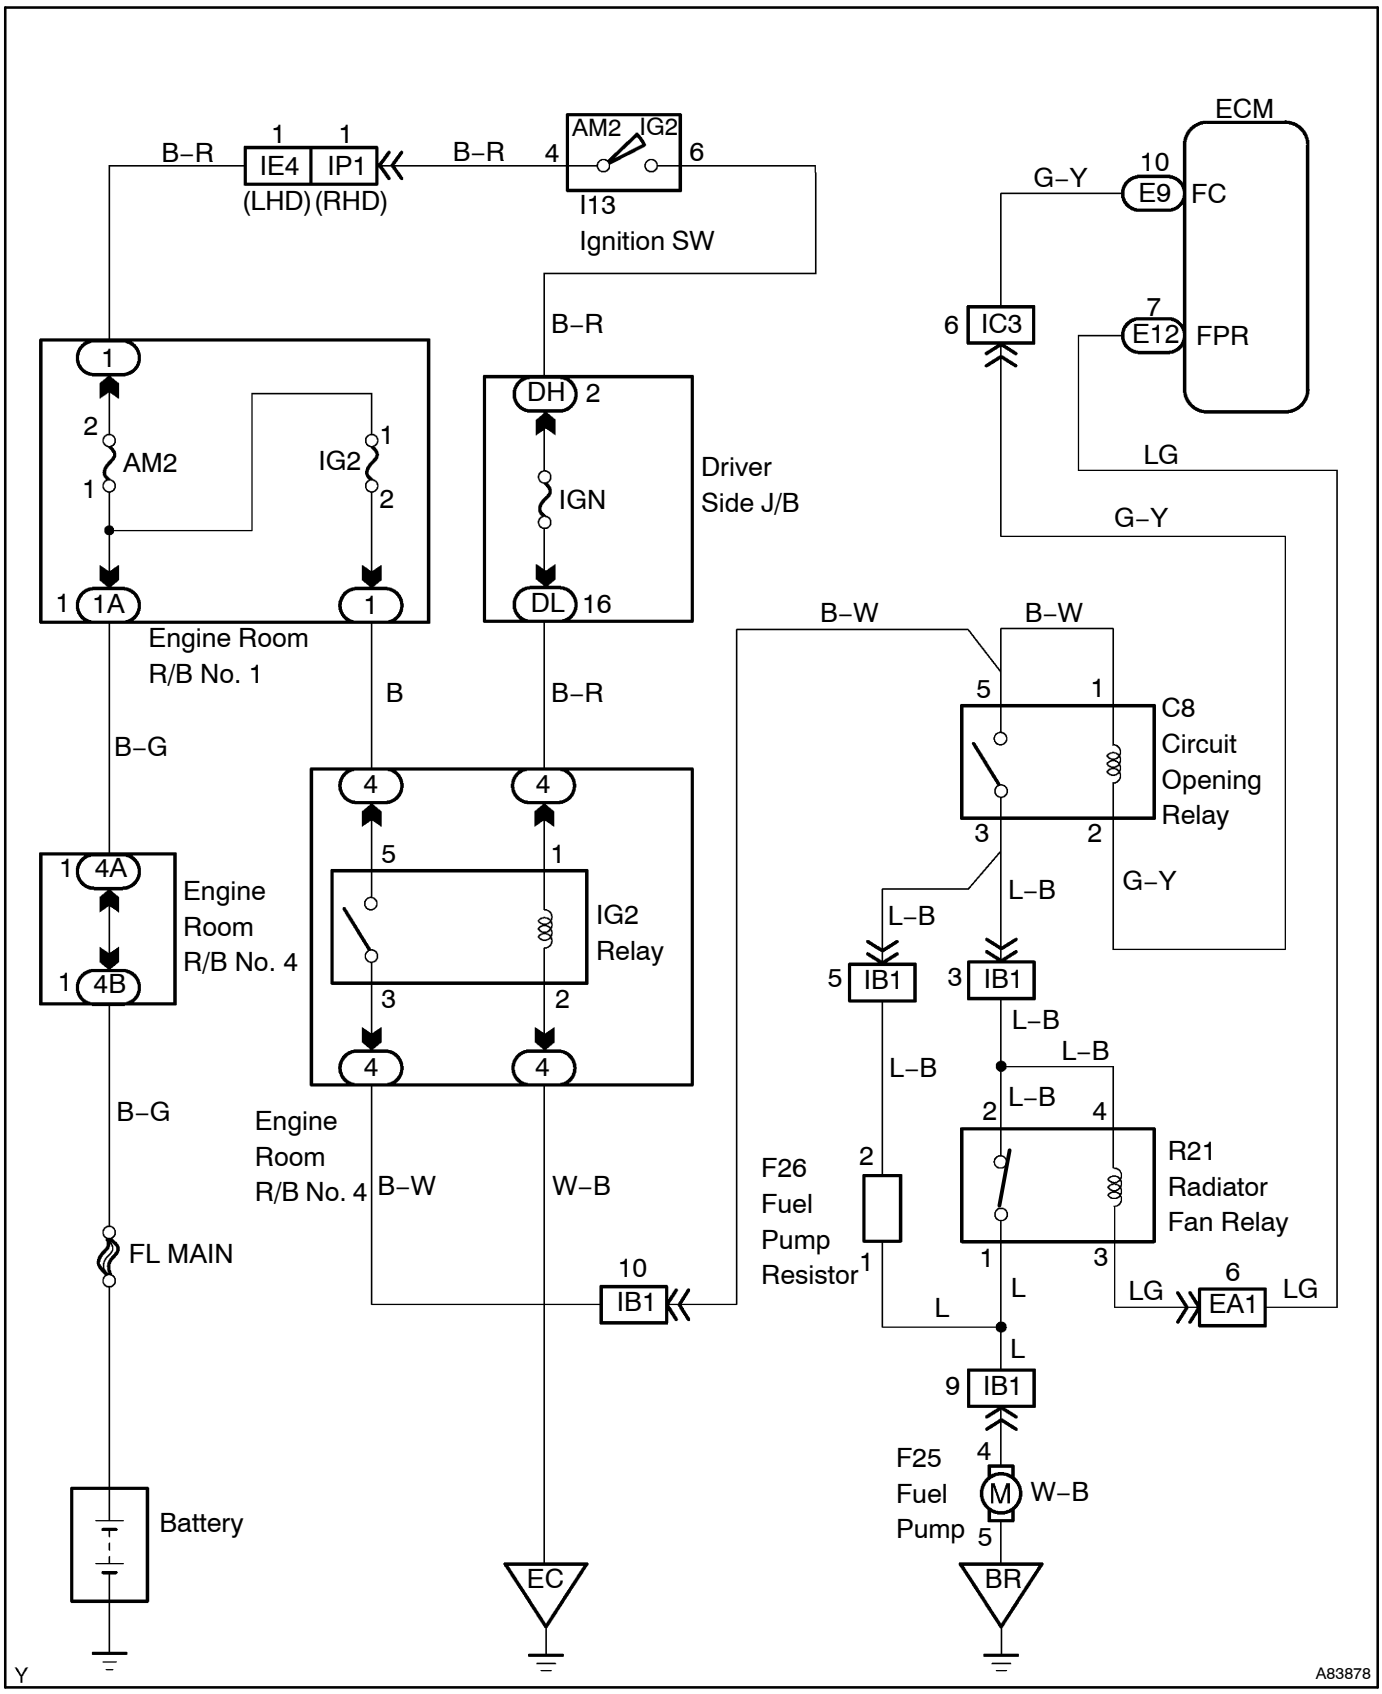
NG → REPLACE FUEL INJECTOR ASSY (See Page 11–13)



OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

DTC	P0230	FUEL PUMP PRIMARY CIRCUIT

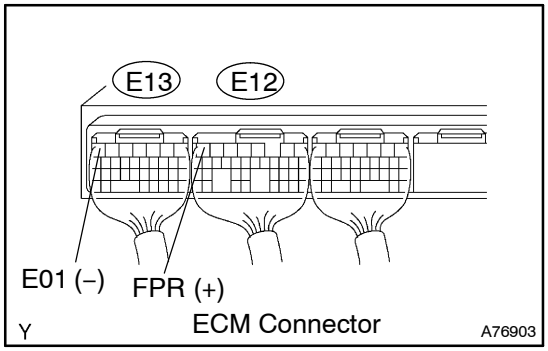


CIRCUIT DESCRIPTION

When the engine is cranked, current flows from terminal ST of the ignition switch to the starter relay coil and also current flows to terminal STA of the ECM (STA signal).
When the STA signal and NE signal are input to the ECM, the Tr1 is turned ON, current flows to the coil of the circuit opening relay, the relay switches on, power is supplied to the fuel pump, and the fuel pump operates.
While the NE signal is generated (engine running), the ECM keeps the Tr1 ON (circuit opening relay ON) and the fuel pump also keeps operating.
The fuel pump speed is controlled at two levels (high speed or low speed) by the engine condition (starting, light load, heavy load). When the engine starts (STA ON), the Tr2 in the ECM is OFF, so the fuel pump relay closes and positive battery voltage is applied directly to the fuel pump. The fuel pump operates at high speed. During idling or under light loads, Tr2 goes ON, and then power is supplied to the fuel pump via the fuel pump resistor. The fuel pump operates at low speed.

DTC No	DTC Detection Condition	Trouble Area
P230	Open or short in fuel pump circuit	• Open or short in fuel pump relay circuit • Fuel pump relay • ECM

WIRING DIAGRAM



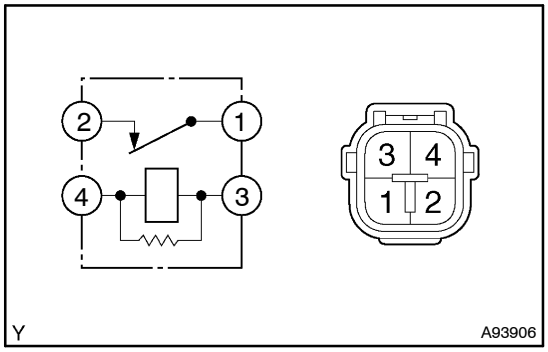
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT ECM(FPR VOLTAGE)

(a) Measure the voltage between the applicable terminals of the E12 and E13 ECM connectors.



Standard:

Tester Connection	Condition	Specified Condition
FPR (E12–7) – E01 (E13–7)	STA signal ON	9 to 14 V
FPR (E12–7) – E01 (E13–7)	STA signal OFF	0 to 3 V

NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

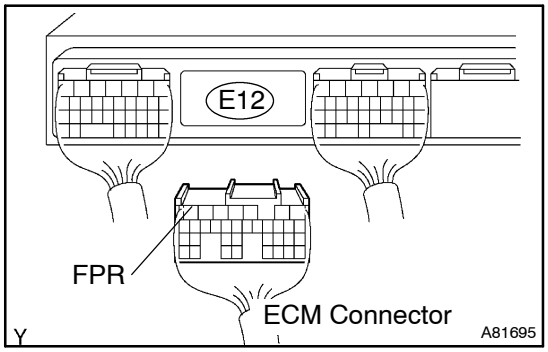
OK

2	INSPECT RADIATOR FAN RELAY

(a) Remove the R21 radiator fan relay.

(b) Check for continuity in the radiator fan relay.

Standard:



Tester Connection	Specified Condition
3 – 4	Continuity
1 – 2	Continuity
1 – 2	No Continuity (Apply battery voltage to terminals 3 and 4)

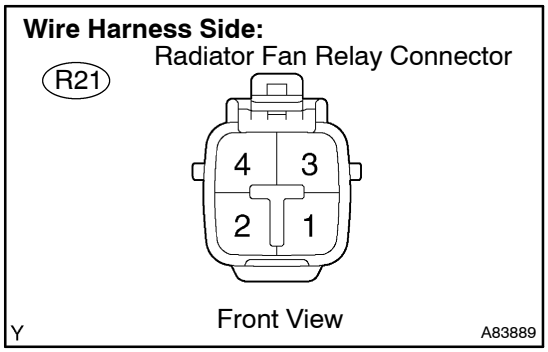
(c) Reinstall the fuel pump relay.

NG → **REPLACE FUEL PUMP RELAY**

OK

3 CHECK HARNESS AND CONNECTOR(RADIATOR FAN RELAY – ECM)

(a) Disconnect the E12 ECM connector.
(b) Remove the radiator fan relay.
(c) Check the resistance between the wire harness side connectors.



Standard (Check for open):

Tester Connection	Specified Condition
FPR (E12–7) – Radiator fan relay (R21–3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
FPR (E12–7) – Rdiator fan relay (R21–3) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reinstall the radiator fan relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0300	RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED

DTC	P0301	CYLINDER 1 MISFIRE DETECTED

DTC	P0302	CYLINDER 2 MISFIRE DETECTED

DTC	P0303	CYLINDER 3 MISFIRE DETECTED

DTC	P0304	CYLINDER 4 MISFIRE DETECTED

CIRCUIT DESCRIPTION

When a misfire occurs in the engine, hydrocarbons (HC) enter the exhaust in high concentrations. If this HC concentration is high enough, there could be an increase in exhaust emissions levels. High concentrations of HC can also cause to temperature of the catalyst to increase, possibly damaging the catalyst. To prevent this increase in emissions and limit the possibility of thermal damage, the ECM monitors the misfire rate. When the temperature of the catalyst reaches a point of thermal degradation, the ECM will blink the CHK ENG. For monitoring misfire, the ECM uses both the camshaft position sensor and the crankshaft position sensor. The camshaft position sensor is used to identify misfiring cylinders and the crankshaft position sensor is used to measure variations in the crankshaft rotation speed. The misfire counter increments when crankshaft rotation speed variations exceed threshold values.

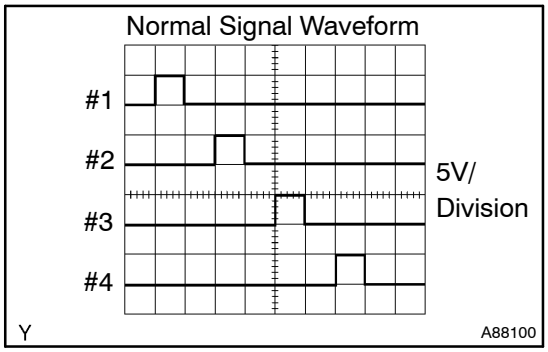
If the misfiring rate exceeds the threshold value and could cause emissions deterioration, the ECM illuminates the CHK ENG.

HINT:

- For any particular 200 revolutions of the engine, misfiring which would result in overheating of catalyst is detected. This cause CHK ENG to blink (1 trip detection logic).
- For any particular 1,000 revolutions of the engine, misfiring which would result in a deterioration of emissions is detected. This illuminates CHK ENG (2 trip detection logic).

DTC No.	DTC Detection Condition	Trouble Area
P0300	Misfiring of random cylinders is detected	• Open or short in engine wire harness • Connector connection • Vacuum hose connection • Ignition system • Injector • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve clearance • Valve timing • PCV hose connection • PCV hose • ECM
P0301 P0302 P0303 P0304	Misfiring of each cylinder is detected	• Open or short in engine wire harness • Connector connection • Vacuum hose connection • Ignition system • Injector • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve clearance • Valve timing • PCV hose connection • PCV hose • ECM

HINT:



When several codes for a misfiring cylinder are recorded repeatedly but no random misfire code is recorded, it indicates that the misfires have been detected and recorded at different times.

Reference: Inspection using oscilloscope

With the engine idling, check the waveform between terminals #1 to #4 and E01 of the ECM connectors.

HINT:

The correct waveform is as shown.

WIRING DIAGRAM

Refer to DTC P0200 on page 05–136 for the wiring diagram of the injector system.

Refer to DTC P0351 on page 05–167 for the wiring diagram of the ignition system.

CONFIRMATION DRIVING PATTERN

(a) Connect the hand–held tester to the DLC3.
(b) Record DTCs and freeze frame data.
(c) Switch the hand–held tester from normal mode to check mode (see page 05–20).
(d) Read the value on the misfire counter for each cylinder when idling. If the value is displayed on the misfire counter, skip the following procedure of confirmation driving.
(e) Drive the vehicle several times with the engine speed, load and its surrounding range shown with ENGINE SPD, CALC LOAD in the freeze frame data or MISFIRE RPM, MISFIRE LOAD in the DATA LIST.

If you have no hand–held tester, turn the ignition switch to OFF after the symptom is simulated once. Then repeat the simulation process again.

HINT:

In order to memorize the misfire DTC, it is necessary to drive with MISFIRE RPM, MISFIRE LOAD in the DATA LIST for the period of time in the chart below. Take care not to turn the ignition switch to OFF. Turning the ignition switch to OFF switches the diagnosis system from check mode to normal mode and all DTCs, freeze frame data and other data are erased.

Engine Speed	Time
Idling	3 minutes and 30 seconds or more
1,000 rpm	3 minutes or more
2,000 rpm	1 minutes and 30 seconds or more
3,000 rpm	1 minute or more

(f) Check if there is misfire and DTC and the freeze frame data. Record the DTCs, freeze frame data and misfire counter data.
(g) Turn the ignition switch to OFF and wait at least for 5 seconds.

INSPECTION PROCEDURE

HINT:

- If DTCs besides misfire DTCs are memorized simultaneously, troubleshoot the non–misfire DTCs first.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If the misfire does not occur when the vehicle is brought to the workshop, the misfire can be confirmed by reproducing the condition of the freeze frame data. Also, after finishing the repair, confirm that there is no misfire (see confirmation driving pattern).

When only a general misfire fault code like P0300 is stored:

- Erase the general misfire fault code from the hand–held tester.
- Start the engine and drive the confirmation patten.
- Read the value of the misfire ratio for each cylinder. Or read the DTC.
- Perform repairs on the cylinder that has a high misfire ratio. Or repair the cylinder indicated by the DTC.
- After finishing repairs, drive the confirmation pattern again and confirm that no misfire occurs.
- When any one of SHORT FT #1, LONG FT #1, SHORT FT #2 and LONG FT #2 in the freeze frame data is over the range of ±20 %, there is a possibility that the air–fuel ratio is becoming RICH (–20 % or less) or LEAN (+20 % or more).
- When COOLANT TEMP in the freeze frame data is less than 80°C (176°F), there is a possibility of misfire only during engine warm–up.
- If the misfire cannot be reproduced, the following reasons may apply: 1) the vehicle has low fuel, 2) improper fuel is being used, and 3) the ignition plug is contaminated.
- Be sure to check the value on the misfire counter after the repair.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO MISFIRE DTCS)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result :

Display	Proceed to
P0300, P0301, P0302, P0303 and/or P0304	A
P0300, P0301, P0302, P0303 or P0304 and other DTCs	B

HINT:
If any other codes besides P0300, P0301, P0302, P0303 and/or P0304 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–31)**

A

2	CHECK WIRE HARNESS, CONNECTOR AND VACUUM HOSE IN ENGINE ROOM

(a) Check the connection conditions of the wire harness and connector.
(b) Check the piping the vacuum hose.
(c) Check the vacuum hose for disconnection or breakage.

NG → **REPAIR OR REPLACE, THEN CONFIRM THAT THERE IS NO MISFIRE**

OK

3	CHECK CONNECTION OF PCV HOSE

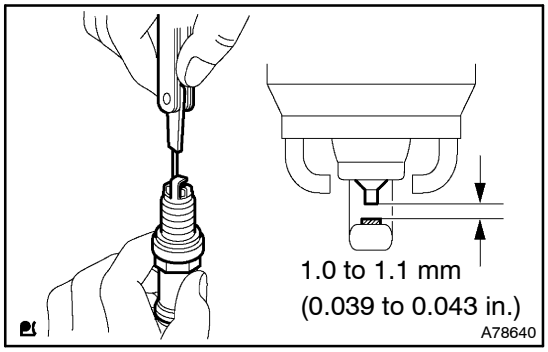
NG → **REPAIR OR REPLACE PCV HOSE**

OK

4 READ VALUE OF HAND–HELD TESTER(NUMBER OF MISFIRE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select each item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / CYL#1 to CYL#4.
(e) Read the number of misfire on each cylinder on the hand–held tester.

HINT:
When a misfire is not reproduced, be sure to branch below based on the stored DTC.



Result:

High Misfire Rate Cylinder	Proceed to
1 or 2 cylinders	A
More than 3 cylinders	B

B → **Go to step 12**

A

5 CHECK SPARK PLUG AND SPARK OF MISFIRING CYLINDER

(a) Remove the ignition coil with igniter assembly.
(b) Remove the spark plug.
(c) Check the spark plug type.

Recommended spark plug:

DENSO made	SK20BR11

(d) Check the spark plug electrode gap.

Electrode gap: 1.0 to 1.1 mm (0.039 to 0.043 in.)
Maximum electrode gap: 1.3 mm (0.051 in.)

NOTICE:
If adjusting the gap of a new spark plug, bend only the base the ground electrode. Do not touch the tip. Never attempt to adjust the gap on a used plug.

(e) Check the electrode for carbon deposits.
(f) Perform a spark test.

CAUTION:
Each injector connector must be disconnected.
NOTICE:
Do not crank the engine for more than 2 seconds.

(1) Install the spark plug to the ignition coil with igniter, and connect the ignition coil with igniter connector.
(2) Disconnect the injector connectors.
(3) Ground the spark plug.
(4) Check if spark occurs while the engine is being cranked.

Standard: Spark jumps across electrode gap.

(g) Reinstall the spark plug.
(h) Reinstall the ignition coil with igniter.

NG → **Go to step 19**

OK

6	CHECK CYLINDER COMPRESSION PRESSURE OF MISFIRING CYLINDER (See page 14–1)

NG → REPAIR OR REPLACE

OK

7	CHECK VALVE CLEARANCE OF MISFIRING CYLINDER (See page 14–6)

NG → ADJUST VALVE CLEARANCE (See page 14–6)

OK

8	REPLACE FUEL INJECTOR OF MISFIRING CYLINDER

(a) Read the DTC and check which of the cylinders causes the misfiring DTC (see page 11–7).
(b) Remove the injector of the misfiring cylinder and other normal injector (see page 11–13).
(c) Swap the injector of misfiring cylinder for the normal injector.

GO

9	PERFORM CONFIRMATION DRIVING PATTERN

HINT:
Clear all DTCs prior to performing the confirmation driving pattern.

GO

10	READ OUTPUT DTC(SEE IF MISFIRE DTCS ARE OUTPUT AGAIN)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
P0300, P0301, P0302, P0303 and/or P0304	A
No output	B

B → REPLACE FUEL INJECTOR ASSY

A

11	SWITCH STEP BY NUMBER OF MISFIRE CYLINDER(REFER TO RESULT OF STEP 4)

- If the result of step 4 is ”1 or 2 cylinders”, proceed to A.
- If the result of step 4 is ”more than 3 cylinders”, proceed to B.

B → CHECK FOR INTERMITTENT PROBLEMS

A

12	CHECK VALVE TIMING(CHECK FOR LOOSE AND JUMPED TOOTH OF TIMING BELT)

NG → ADJUST VALVE TIMING

OK

13	CHECK FUEL PRESSURE(LOW PRESSURE) (See page 11–4)

NG → CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

14	CHECK FUEL PRESSURE(HIGH PRESSURE) (See page 11–4)

NG → CHECK AND REPLACE FUEL PUMP, FUEL PRESSURE SENSOR, WIRING AND FUEL LEAKAGE

OK

15	READ VALUE OF HAND–HELD TESTER(INTAKE AIR TEMPERATURE AND MASS AIR FLOW RATE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Check the intake air temperature.
  (1) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR. Read the values.

  Temperature: Equivalent to ambient air temperature
(d) Check the air flow rate.
  (1) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAF. Read the values.

  Standard:

Condition	Air flow rate (gm/s)
Ignition switch ON (do not start engine)	0
Idling	4 to 6
Running without load (2,500 rpm)	13 to 20
Idling to quickly accelerating	Air flow rate fluctuates

NG → **REPLACE MASS AIR FLOW METER**

OK

16	INSPECT ENGINE COOLANT TEMPERATURE SENSOR

(a) Remove the engine coolant temperature sensor.
(b) Measure the resistance between the terminals of the engine coolant temperature sensor.

  Standard:

Tester Connection	Temperature	Specified Condition
1 – 2	20°C (68°F)	2.32 to 2.59 kΩ
1 – 2	80°C (176°F)	0.310 to 0.326 kΩ

NOTICE:
When checking the engine coolant temperature sensor in water, be careful not to allow water to contact the terminals. After checking, dry the sensor.
HINT:
Alternate procedure: Connect an ohmmeter to the installed engine coolant temperature sensor and read the resistance. Use an infrared thermometer to measure the engine temperature in the immediate vicinity of the sensor. Compare these values to the resistance/temperature graph. Change the engine temperature (warm up or allow to cool down) and repeat the test.
(c) Reinstall the engine coolant temperature sensor.

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

17	INSPECT MANIFOLD ABSOLUTE PRESSURE SENSOR

NG → REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR

OK

18	SWITCH STEP BY NUMBER OF MISFIRE CYLINDER(REFER TO RESULT OF STEP 4)

- If the result of step 4 is ”1 or 2 cylinders”, proceed to A.
- If the result of step 4 is ”more than 3 cylinders”, proceed to B.

B → AGAIN GO TO STEP 5

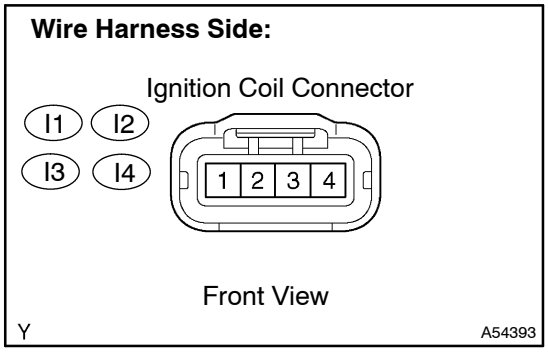
A

CHECK FOR INTERMITTENT PROBLEMS (See page 05–7)

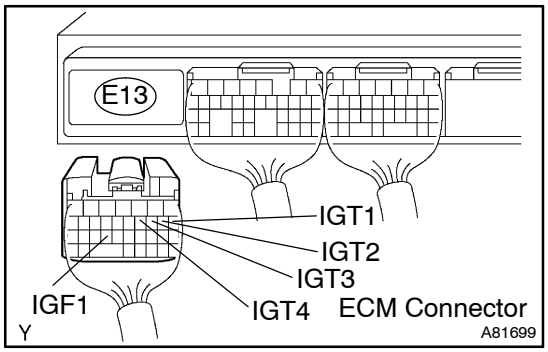
19	CHANGE NORMAL SPARK PLUG AND CHECK SPARK OF MISFIRING CYLINDER

(a) Change for a normal spark plug.
(b) Perform a spark test.

CAUTION:
Absolutely disconnect the each injector connector.
NOTICE:
Do not crank the engine for more than 2 seconds.



(1) Install the spark plug to the ignition coil, and connect the ignition coil connector.
(2) Disconnect the injector connectors.
(3) Ground the spark plug.
(4) Check if spark occurs while the engine is being cranked.



Standard: Spark jumps across electrode gap.

OK → REPLACE SPARK PLUG

NG

20	CHECK HARNESS AND CONNECTOR OF MISFIRING CYLINDER(IGNITION COIL ASSY – ECM)

(a) Check the harness and connectors between the ignition coil and ECM (IGF terminal).
(1) Disconnect the I1, I2, I3 or I4 ignition coil connector.
(2) Disconnect the E13 ECM connector.
(3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Ignition coil (I1–2) – IGF1 (E13–24)	Below 1 Ω
Ignition coil (I2–2) – IGF1 (E13–24)	Below 1 Ω
Ignition coil (I3–2) – IGF1 (E13–24)	Below 1 Ω
Ignition coil (I4–2) – IGF1 (E13–24)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Ignition coil (I1–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher
Ignition coil (I2–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher
Ignition coil (I3–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher
Ignition coil (I4–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher

(4) Reconnect the ECM connector.
(5) Reconnect the ignition coil connector.

(b) Check the harness and connectors between the ignition coil and ECM (IGT terminal).
(1) Disconnect the I1, I2, I3 or I4 ignition coil connector.
(2) Disconnect the E13 ECM connector.
(3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Ignition coil (I1–3) – IGT1 (E13–8)	Below 1 Ω
Ignition coil (I2–3) – IGT2 (E13–9)	Below 1 Ω
Ignition coil (I3–3) – IGT3 (E13–10)	Below 1 Ω
Ignition coil (I4–3) – IGT4 (E13–11)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Ignition coil (I1–3) or IGT1 (E13–8) – Body ground	10 kΩ or higher
Ignition coil (I2–3) or IGT2 (E13–9) – Body ground	10 kΩ or higher
Ignition coil (I3–3) or IGT3 (E13–10) – Body ground	10 kΩ or higher
Ignition coil (I4–3) or IGT4 (E13–11) – Body ground	10 kΩ or higher

(4) Reconnect the ECM connector.
(5) Reconnect the ignition coil connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

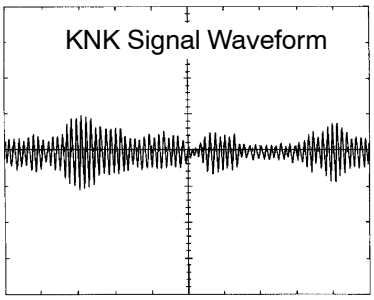
REPLACE IGNITION COIL ASSY (THEN CONFIRM THAT THERE IS NO MISFIRE)

DTC	P0325	KNOCK SENSOR 1 CIRCUIT (BANK 1 OR SINGLE SENSOR)

DTC	P0327	KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR)

DTC	P0328	KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR)

CIRCUIT DESCRIPTION



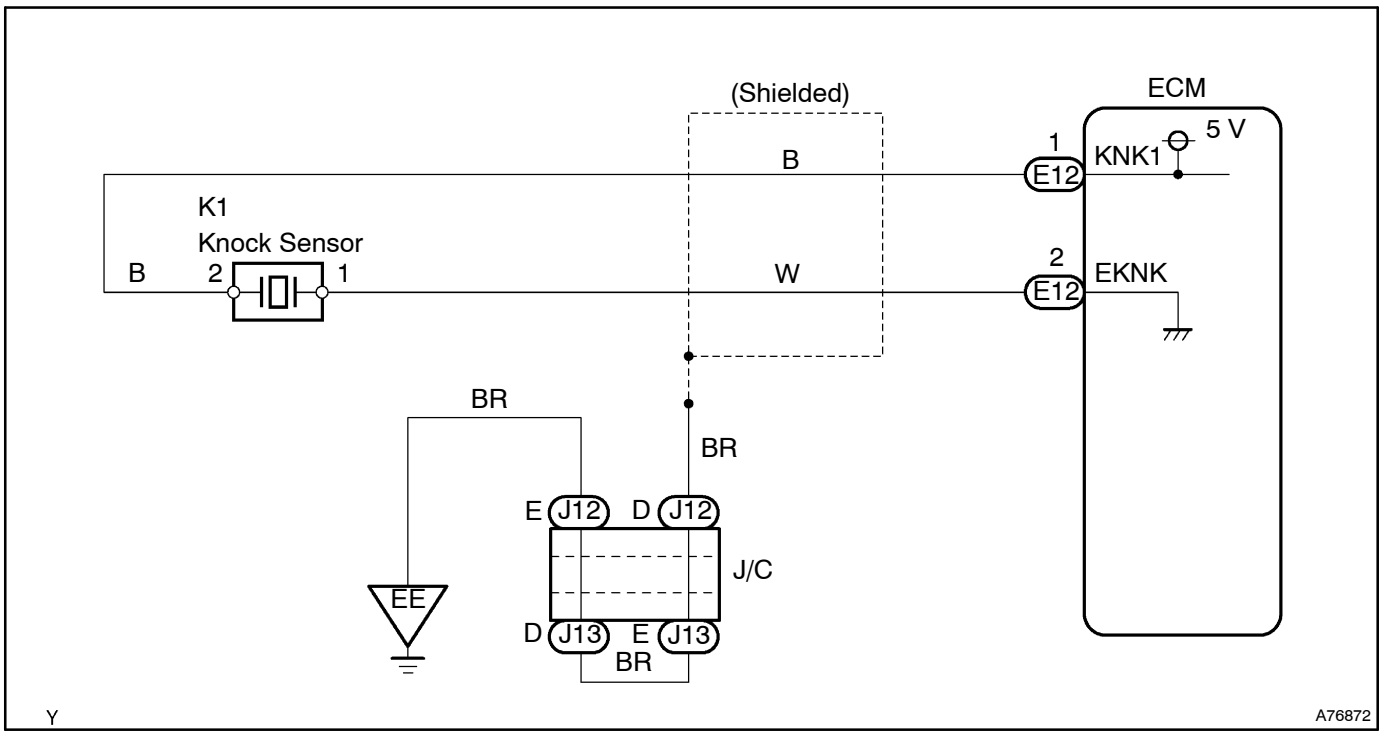
The flat type engine knock sensor (non–resonant type) has a structure that can detect vibration in a wide frequency range, from about 6 kHz to 15 kHz.

The sensor, located on the cylinder block, detects spark knock. When ”spark knock” occurs, the knock sensor picks–up vibrates in a specific frequency range. When the ECM detects signal voltage in this frequency range, it retards the ignition timing to suppress knocking. The ECM also senses background engine noise with the knock sensor and uses this noise to check for faults in the sensor.

DTC No.	DTC Detection Condition	Trouble Area
P0325	Output voltage of the knock sensor decreases below a threshold value (Threshold varies according to engine speeds)	• Knock sensor • Knock sensor (under–torqued or loose) • ECM
P0327	Output voltage of the knock sensor is 0.5 V or less	• Short in knock sensor circuit • Knock sensor • ECM
P0328	Output voltage of the knock sensor is 4.5 V or more	• Open in knock sensor circuit • Knock sensor • ECM

HINT:

If the ECM detects any one of above conditions, it operates the fail–safe function in which the corrective retard angle value is set to the maximum value.



Reference: Inspection using the oscilloscope.

HINT:

The correct waveform is as shown on the left.

Item	Details
Terminal	KNK1 – EKNK
Equipment Settings	0.01 to 10 V/ Division, 0.01 to 10 msec./ Division
Condition	After warming up the engine, keep the engine speed at 4,000 rpm.

WIRING DIAGRAM

INSPECTION PROCEDURE

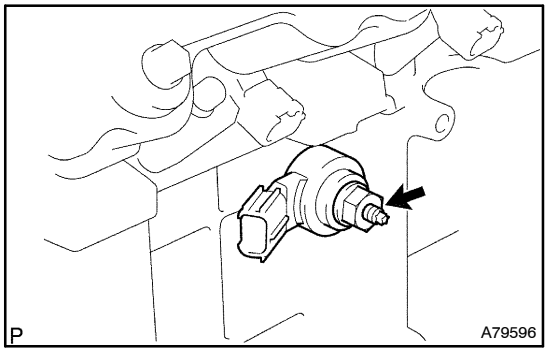
HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ OUTPUT DTC

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.

Result :



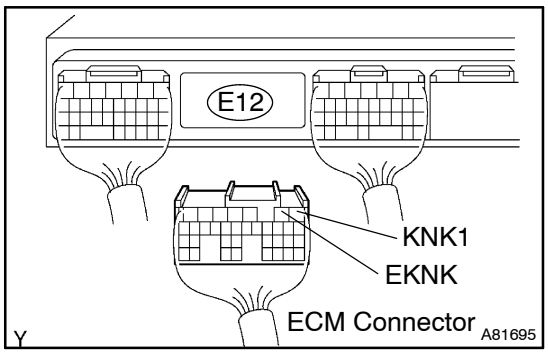
Display (DTC output)	Proceed to
P0325	A
P0325, P0327 and/or P0328	B
No output	C

B → **Go to step 3**

C → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**

A

2 CHECK KNOCK SENSOR



(a) Check the knock sensor installation.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

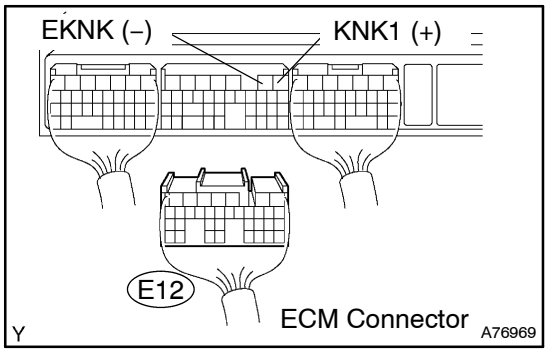
NG → **TIGHTEN SENSOR**

OK

REPLACE KNOCK SENSOR

3 CHECK HARNESS AND CONNECTOR(ECM – KNOCK SENSOR)

(a) Disconnect the E12 ECM connector.
(b) Check the resistance between the wire harness side connector.
Standard:



Tester Connection	Specified Condition
KNK1 (E12–1) – EKNK (E12–2)	120 to 280 kΩ at 20°C (68°F)

(c) Reconnect the ECM connector.

NG → **Go to step 5**

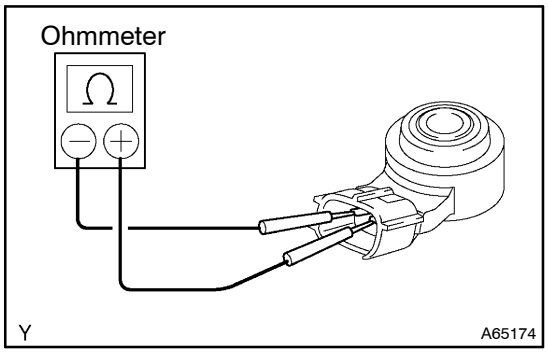
OK

4 INSPECT ECM(KNK1 VOLTAGE)

(a) Disconnect the E12 ECM connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the applicable terminals of the ECM connector.
Standard:

Tester Connection	Specified Condition
KNK1 (E12–1) – EKNK (E12–2)	4.5 to 5.5 V

(d) Reconnect the ECM connector.



NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

NOTICE:
Fault may be intermittent. Check harness and connectors carefully and its result.

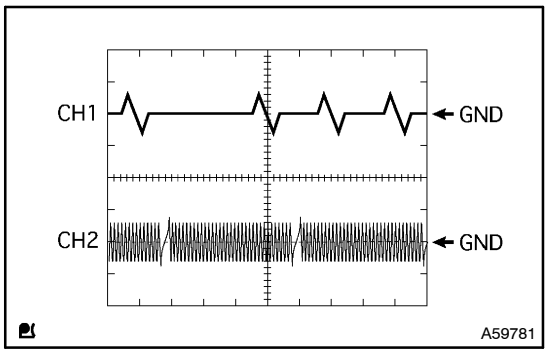
5 INSPECT KNOCK SENSOR

(a) Remove the knock sensor.
(b) Measure the resistance between the terminals.
Standard: 120 to 280 kΩ at 20°C (68°F)
(c) Reinstall the knock sensor.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

NG → **REPLACE KNOCK SENSOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR



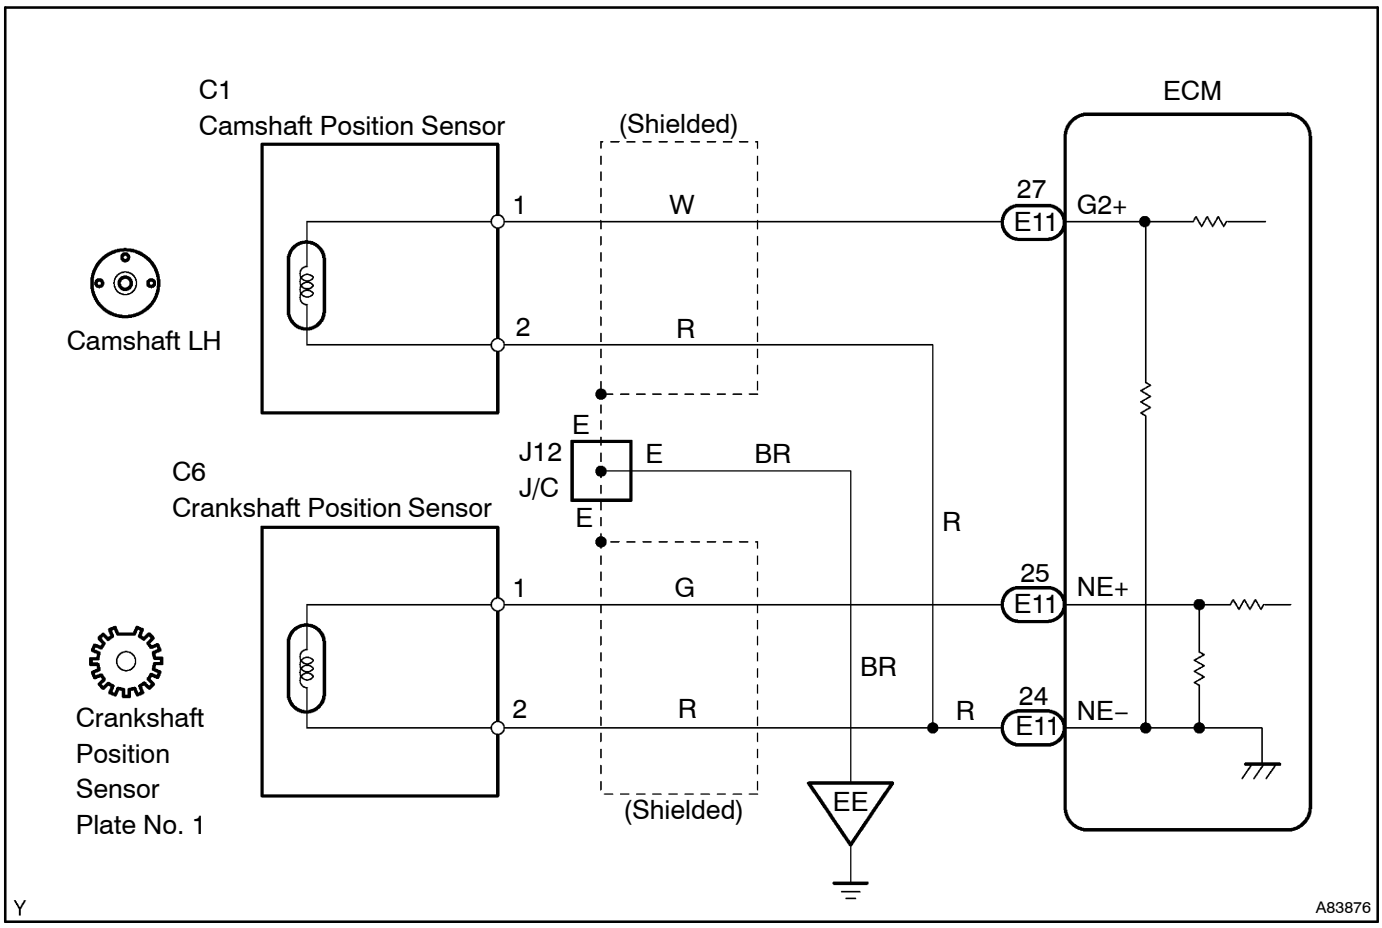
DTC	P0335	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT

DTC	P0339	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT INTERMITTENT

CIRCUIT DESCRIPTION

The crankshaft position sensor system consists of a crankshaft position sensor plate and a pick–up coil. The sensor plate has 34 teeth and is installed on the crankshaft. The pick–up coil is made of an iron core and magnet. The sensor plate rotates and as each tooth passes through the pick–up coil, a pulse signal is created. The pick–up coil generates 34 signals for each engine revolution. Based on these signals, the ECM calculates the crankshaft position and engine RPM. Using these calculations, the fuel injection time and ignition timing are controlled.

DTC No.	DTC Detection Condition	Trouble Area
P0335	(1) No crankshaft position sensor (NE) signal to ECM during cranking for 3 seconds or more (2 trip detection logic) (2) No crankshaft position sensor (NE) signal to ECM at engine speed of 600 rpm or more (2 trip detection logic)	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft position sensor plate No. 1) • ECM
P0339	No crankshaft position sensor signal to ECM for 0.05 second or more, and conditions (a), (b) and (c) are met (1 trip detection logic): (a) Engine speed is 1,000 rpm or more (b) STA signal is OFF (c) 3 seconds or more has been lapsed after STA signal is switched from ON to OFF	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft position sensor plate No. 1) • ECM



Reference: Inspection using the oscilloscope.

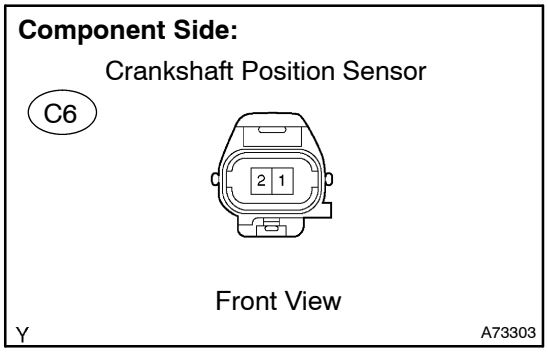
HINT:

The correct waveforms are as shown on the left.

Item	Details
Terminal	CH1: G2+ – NE– CH2: NE+ – NE–
Equipment Setting	5 V/Division, 20 ms/Division
Condition	During Cranking or idling

WIRING DIAGRAM

INSPECTION PROCEDURE



HINT:

- If no trouble is found in troubleshooting of DTC P0335 troubleshoot the engine mechanical system.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

- Read value of hand–held tester
  (a) Connect the hand–held tester to the DLC3.
  (b) Start the engine and turn the hand–held tester ON.
  (c) Select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / ENGINE SPD.

The engine speed can be observed in DATA LIST using the hand–held tester. If there is no NE signals from the crankshaft position sensor despite the engine revolving, the engine speed will be indicated as zero. If voltage output from the crankshaft position sensor is insufficient, the engine speed will be indicated as lower PRM (than the actual RPM).

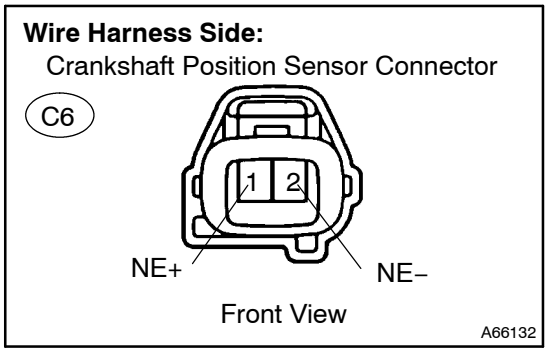
1 INSPECT CRANKSHAFT POSITION SENSOR(RESISTANCE)

(a) Disconnect the C6 crankshaft position sensor connector.
(b) Measure the resistance between the terminals of the crankshaft position sensor.

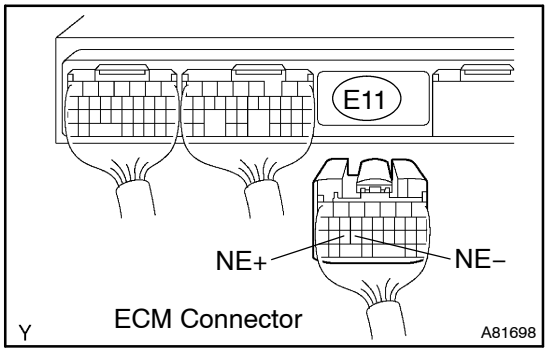
Standard:

Tester Connection	Specified Condition
1 – 2	985 to 1,600 Ω at cold
1 – 2	1,265 to 1,890 Ω at hot

NOTICE:



The terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately –10°C to 50°C (14°F to 122°F). "Hot" means approximately 50°C to 100°C (122°F to 212°F).



(c) Reconnect the crankshaft position sensor connector.

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

2 CHECK HARNESS AND CONNECTOR(ECM – CRANKSHAFT POSITION SENSOR)

(a) Disconnect the C6 crankshaft position sensor connector.
(b) Disconnect the E11 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Crankshaft position sensor (C6–1) – NE+ (E11–25)	Below 1 Ω
Crankshaft position sensor (C6–2) – NE– (E11–24)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Crankshaft position sensor (C6–1) or NE+ (E11–25) – Body ground	10 kΩ or higher
Crankshaft position sensor (C6–2) or NE– (E11–24) – Body ground	10 kΩ or higher

(d) Reconnect the crankshaft position sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK SENSOR INSTALLATION(CRANKSHAFT POSITION SENSOR)

(a) Check the crankshaft position sensor installation.

NG → TIGHTEN SENSOR

OK

4	INSPECT CRANKSHAFT POSITION SENSOR PLATE NO.1(TOOTH OF SIGNAL PLATE)

(a) Remove the crankshaft position sensor plate No. 1.
(b) Check the teeth of the signal plate.

NG → REPLACE CRANKSHAFT POSITION SENSOR PLATE NO.1

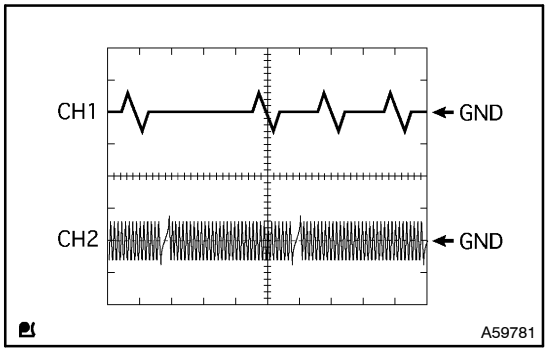
OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0340	CAMSHAFT POSITION SENSOR ”A” CIRCUIT (BANK 1 OR SINGLE SENSOR)

DTC	P0341	CAMSHAFT POSITION SENSOR ”A” CIRCUIT RANGE/PERFORMANCE (BANK 1 OR SINGLE SENSOR)

CIRCUIT DESCRIPTION



The Camshaft Position sensor (G2 signal), like the Crankshaft Position sensor, consists of a magnet and an iron core wrapped in copper wire. The camshaft has 3 teeth and the Camshaft Position sensor is installed so that it can detect these teeth passing by. When the camshaft rotates and the teeth pass by the Camshaft Position sensor, the magnet on the Camshaft Position sensor creates a magnetic field and voltage is generated in the copper wire. When the crankshaft makes two rotation, voltage will be generated in the Camshaft Position sensor 3 times.

The NE signal plate (crankshaft timing pulley) has 34 teeth and is installed to the crankshaft. The NE signal sensor generates 34 signals at every engine revolution. Using the NE signal, the ECM detects both crankshaft angle and engine speed. In order to locate the top dead center position of the No. 1 cylinder, the ECM uses the G2 and NE signals.

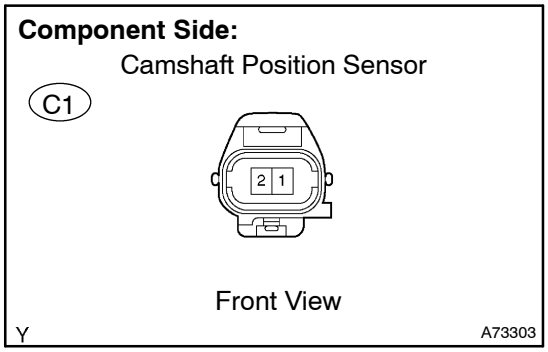
DTC No.	DTC Detection Condition	Trouble Area
P0340	• No camshaft position sensor (G2) signal to ECM during cranking for 4 seconds or more (2 trip detection logic) • No camshaft position sensor (G2) signal to ECM at engine speed of 600 rpm or more for 5 seconds or more (1 trip detection logic)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing gear • Jumped tooth of timing chain • ECM
P0341	While crankshaft rotates twice, camshaft position sensor (G2) signal will be input to ECM 12 times or more (1 trip detection logic)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing gear • Jumped tooth of timing chain • ECM

HINT:

- DTC P0340 indicates a malfunction related to the camshaft position sensor (+) circuit. (Wire harness [ECM – camshaft position sensor] and camshaft position sensor.)
- DTC P0341 indicates a malfunction related to the camshaft position sensor (–) circuit. (Wire harness [ECM – camshaft position sensor] and camshaft position sensor.)

Reference: Inspection using the oscilloscope.
HINT:
The correct waveforms are as shown on the left.

Item	Details
Terminal	CH1: G2+ – NE– CH2: NE+ – NE–
Equipment Setting	5 V/Division, 20 ms/Division
Condition	During Cranking or idling



WIRING DIAGRAM

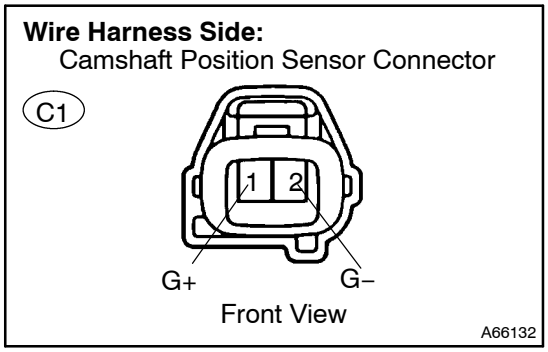
Refer to DTC P0335 on page 05–160.

INSPECTION PROCEDURE

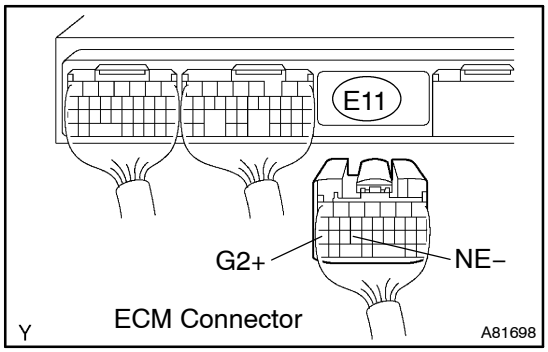
HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT CAMSHAFT POSITION SENSOR(RESISTANCE)

(a) Disconnect the C1 camshaft position sensor connector.
(b) Measure the resistance between the terminals of the camshaft position sensor.
Standard:



Tester Connection	Specified Condition
1 – 2	835 to 1,400 Ω at cold
1 – 2	1,060 to 1,645 Ω at hot



NOTICE:
The terms ”cold” and ”hot” refer to the temperature of the coils. ”Cold” means approximately –10°C to 50°C (14°F to 122°F). ”Hot” means approximately 50°C to 100°C (122°F to 212°F).
(c) Reconnect the camshaft position sensor connector.

NG → **REPLACE CAMSHAFT POSITION SENSOR**

OK

2 CHECK HARNESS AND CONNECTOR(ECM – CAMSHAFT POSITION SENSOR)

(a) Disconnect the C1 camshaft position sensor connector.
(b) Disconnect the E11 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Camshaft position sensor (C1–1) – G2+ (E11–27)	Below 1 Ω
Camshaft position sensor (C1–2) – NE– (E11–24)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Camshaft position sensor (C1–1) or G2+ (E11–27) – Body ground	10 kΩ or higher
Camshaft position sensor (C1–2) or NE– (E11–24) – Body ground	10 kΩ or higher

(d) Reconnect the camshaft position sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK SENSOR INSTALLATION(CAMSHAFT POSITION SENSOR)

(a) Inspect the camshaft position sensor installation.

NG → **TIGHTEN SENSOR**

OK

4 INSPECT CAMSHAFT

(a) Remove the camshafts (see page 14–64).
(b) Check the camshaft lobes.

NG → **REPLACE CAMSHAFT (See Page 14–64)**

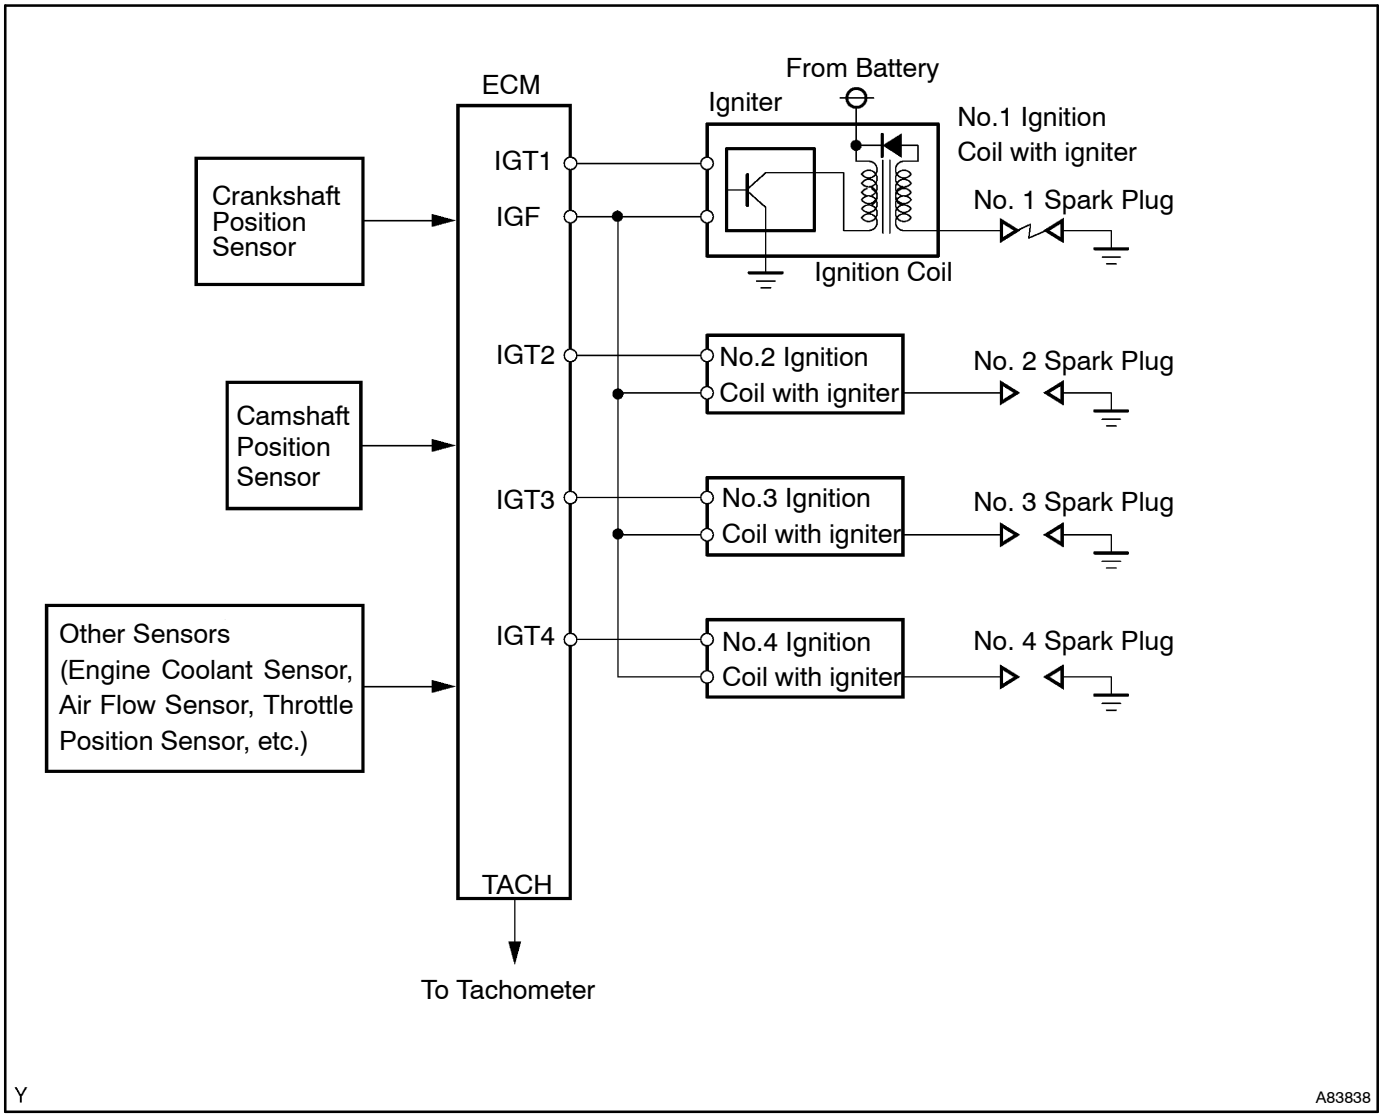
OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0351	IGNITION COIL ”A” PRIMARY/SECONDARY CIRCUIT

DTC	P0352	IGNITION COIL ”B” PRIMARY/SECONDARY CIRCUIT

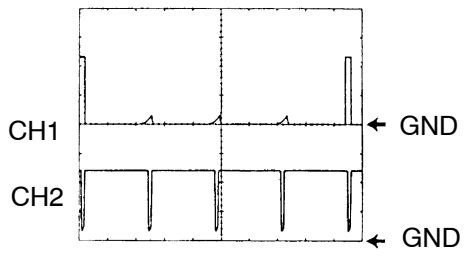
DTC	P0353	IGNITION COIL ”C” PRIMARY/SECONDARY CIRCUIT



DTC	P0354	IGNITION COIL ”D” PRIMARY/SECONDARY CIRCUIT

HINT:

- These DTCs indicate a malfunction related to the primary circuit.
- If DTC P0351 is displayed, check No. 1 ignition coil with igniter circuit.
- If DTC P0352 is displayed, check No. 2 ignition coil with igniter circuit.
- If DTC P0353 is displayed, check No. 3 ignition coil with igniter circuit.
- If DTC P0354 is displayed, check No. 4 ignition coil with igniter circuit.



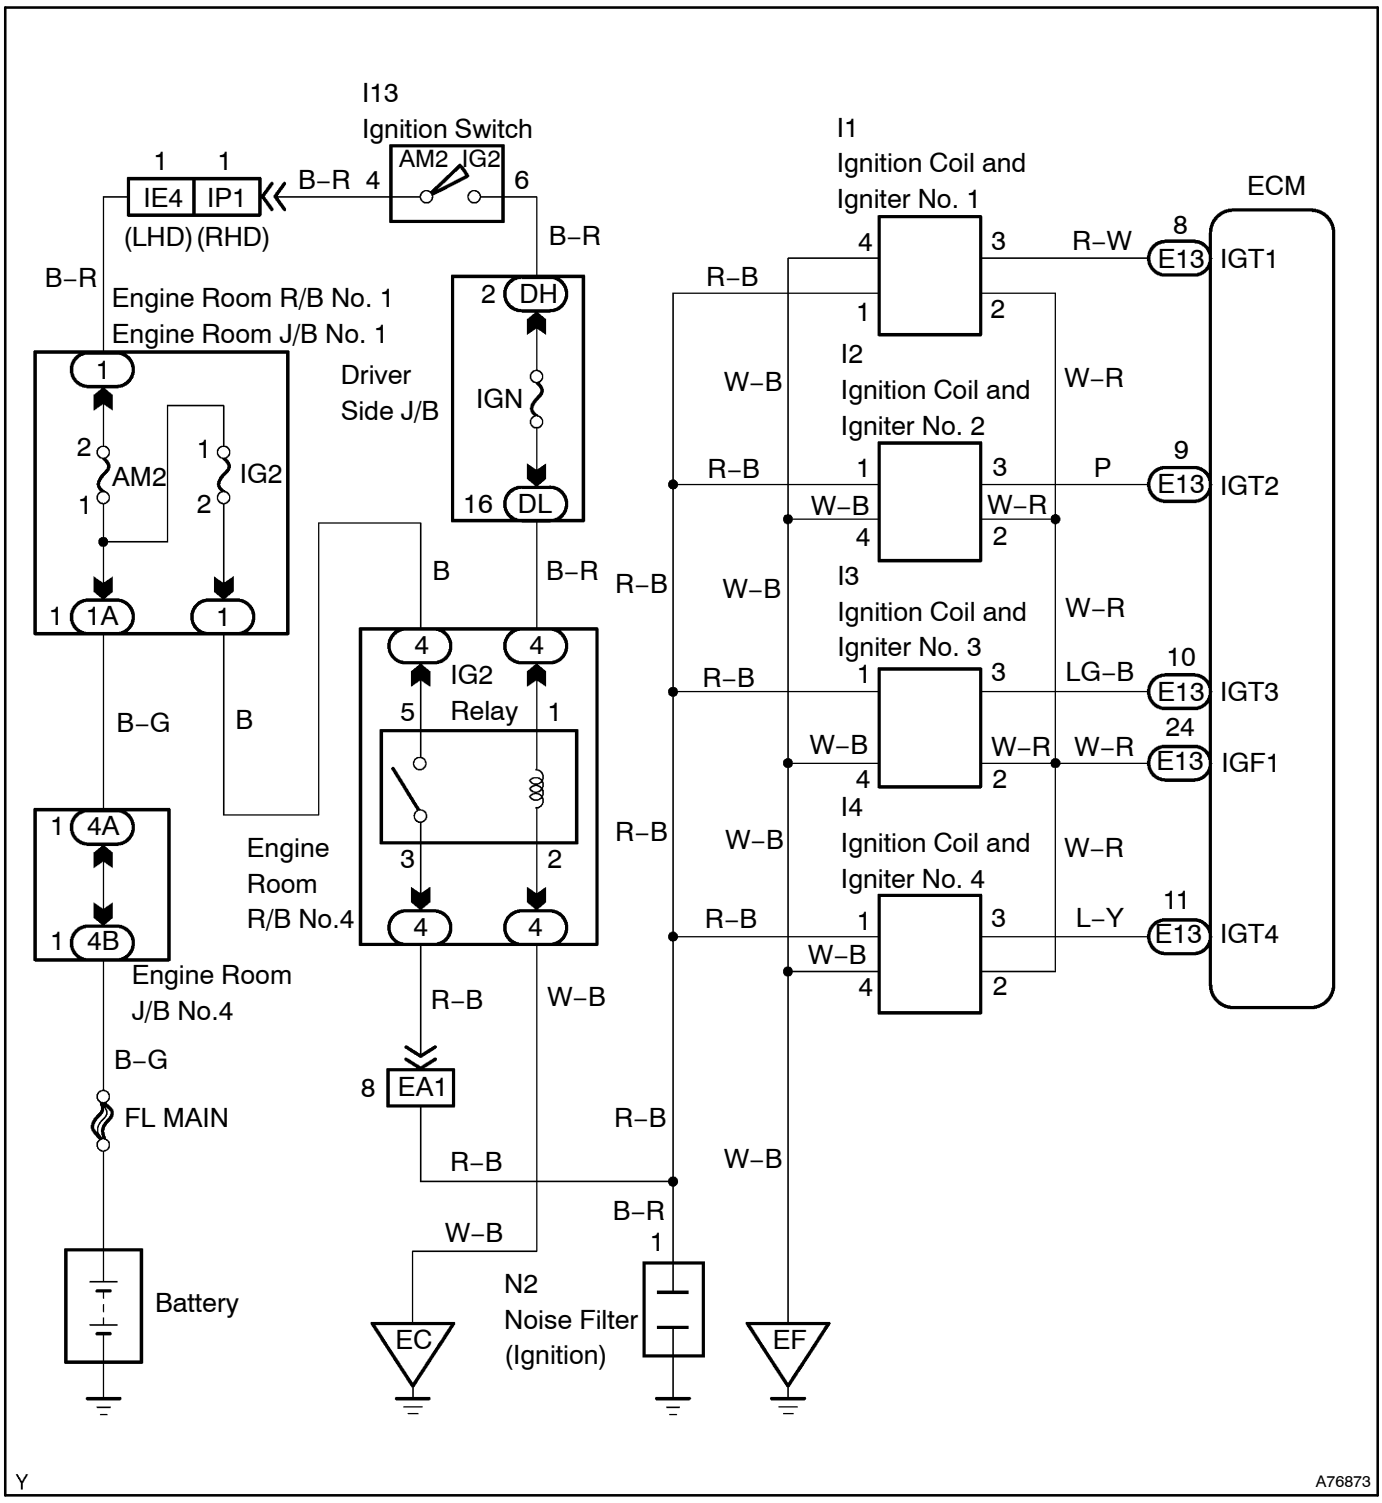
CIRCUIT DESCRIPTION

A Direct Ignition System (DIS) is used on this vehicle. The DIS improves the ignition timing accuracy, reduces high–voltage loss, and enhances the overall reliability of the ignition system by eliminating the distributor.
The DIS is a 1–cylinder ignition system which ignites one cylinder with one ignition coil. In the 1–cylinder ignition system, the one spark plug is connected to the end of the secondary winding. High voltage generated in the secondary winding is applied directly to the spark plug. The spark of the spark plug passes from the center electrode to the ground electrode.
The ECM determines the ignition timing and outputs the ignition signals (IGT) for each cylinder. Using the ignition (IGT) signal, the ECM turns on and off the power transistor inside the igniter and this switches on and off the current to the primary coil. When the current flow to the primary coil is cut off, high–voltage is generated in the secondary coil and this voltage is applied to the spark plugs to spark inside the cylinders. As the ECM cuts the current to the primary coil, the igniter sends back the ignition confirmation (IGF) signal for each cylinder ignition to the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0351 P0352 P0353 P0354	No IGF signal to ECM while engine is running	• Ignition system • Open or short in IGF and IGT circuit between ignition coil with igniter and ECM (ignition coil circuit 1 through 4) • Ignition coil with igniter (ignition coil 1 through 4) • IG2 relay • ECM

Normal Signal Waveforms

A35500



Reference: Inspection using the oscilloscope.

HINT:

The correct waveforms are as shown on the left.

Item	Details
Terminal	CH1: IGT1, IGT2, IGT3, IGT4 – E1 CH2: IGF1 – E1
Equipment Setting	2 V/Division, 20 ms/Division
Condition	While the engine is cranking or idling

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

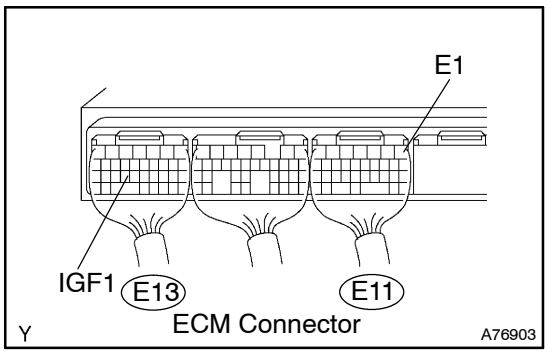
1	PERFORM SIMULATION TEST(CHECK DTC)

(a) Read the DTC and check which of the cylinders causes the DTC (see page 05–19).
(b) Clear the DTC (see page 05–19).
(c) Swap the ignition coil with igniter of the cylinder that is referred by the DTC for the others.

NOTICE:

Do not swap the ignition coil with igniter connector for the others.

(d) Start the engine.
(e) Read the DTC (see page 05–19).



Result:

Display (DTC output)	Proceed to
P0351, P0352, P0353, and/or P0354	A
Other than shown above	B

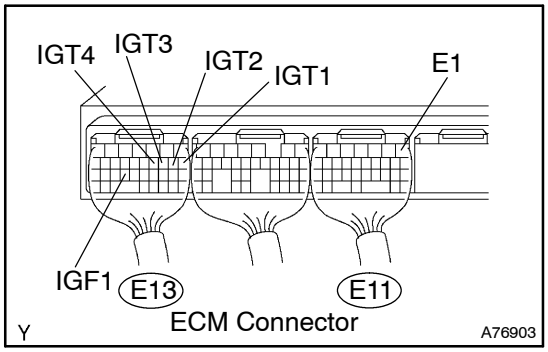
B → **REPLACE IGNITION COIL ASSY**

A

2	INSPECT ECM(IGF1 VOLTAGE)

(a) Disconnect the I1, I2, I3 or I4 ignition coil connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the specified terminals of the E11 and E13 ECM connector.

Standard:



Tester Connection	Specified Condition
IGF1 (E13–24) – E1 (E11–1)	4.5 to 5.5 V

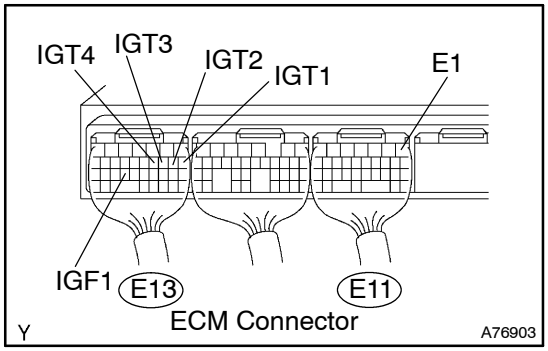
(d) Reconnect the ignition coil connector.

NG → **REPLACE ECM (See page 10–65 Pub. No. RM1018E AVENSIS)**

OK

3 INSPECT ECM(IGT1, IGT2, IGT3 OR IGT4 VOLTAGE)

(a) Measure the voltage between the applicable terminals of the E11 and E13 ECM connectors when the engine is cranked.



Standard:

Tester Connection	Specified Condition
IGT1 (E13–8) – E1 (E11–1)	Between 0.1 V and 4.5 V
IGT2 (E13–9) – E1 (E11–1)	Between 0.1 V and 4.5 V
IGT3 (E13–10) – E1 (E11–1)	Between 0.1 V and 4.5 V
IGT4 (E13–11) – E1 (E11–1)	Between 0.1 V and 4.5 V

NG → **REPLACE ECM (See page 10–65 Pub. No. RM1018E AVENSIS)**

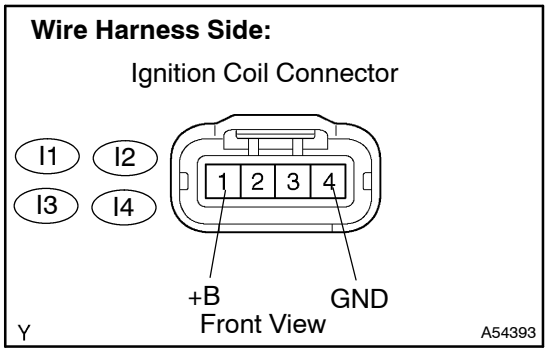
OK

4 INSPECT ECM(IGT1, IGT2, IGT3 OR IGT4 VOLTAGE)

(a) Disconnect the I1, I2, I3 or I4 ignition coil connector.

(b) Measure the voltage between the applicable terminals of the E11 and E13 ECM connectors when the engine is cranked.

Standard:



Tester Connection	Specified Condition
IGT1 (E13–8) – E1 (E11–1)	4.5 V or more
IGT2 (E13–9) – E1 (E11–1)	4.5 V or more
IGT3 (E13–10) – E1 (E11–1)	4.5 V or more
IGT4 (E13–11) – E1 (E11–1)	4.5 V or more

(c) Reconnect the ignition coil connector.

NG → **REPLACE ECM (See page 10–65 Pub. No. RM1018E AVENSIS)**

OK

5 CHECK IGNITION COIL ASSY(POWER SOURSE)

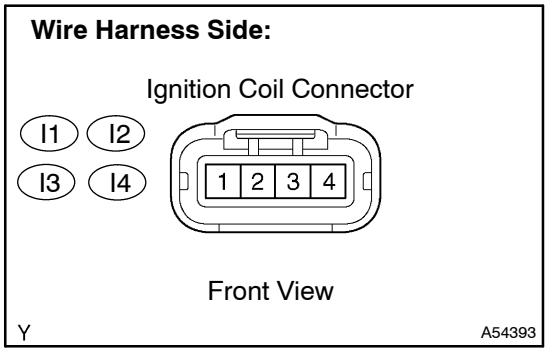
(a) Disconnect the I1, I2, I3 or I4 ignition coil connector.

(b) Check the resistance between terminal GND of the ignition coil connector and body ground.

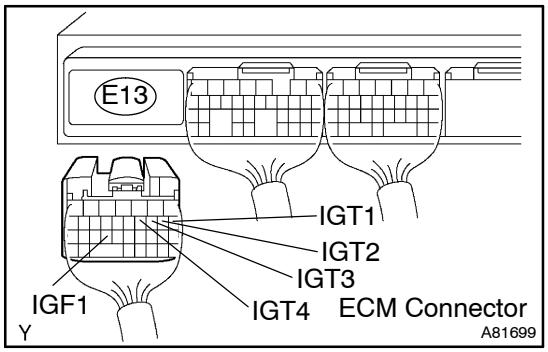
Standard: 1 Ω or less

(c) Turn the ignition switch to ON.

(d) Measure the voltage between terminals +B and GND of the ignition coil connector.



Standard: 9 to 14 V



(e) Reconnect the ignition coil connector.

NG → **Go to step 7**

OK

6 CHECK HARNESS AND CONNECTOR(ECM – IGNITION COIL)

(a) Check the harness and connector between the ignition coil and ECM (IGF terminal) connectors
(1) Disconnect the I1, I2, I3 or I4 ignition coil connector.
(2) Disconnect the E13 ECM connector.
(3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Ignition coil (I1–2) – IGF1 (E13–24)	Below 1 Ω
Ignition coil (I2–2) – IGF1 (E13–24)	Below 1 Ω
Ignition coil (I3–2) – IGF1 (E13–24)	Below 1 Ω
Ignition coil (I4–2) – IGF1 (E13–24)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Ignition coil (I1–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher
Ignition coil (I2–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher
Ignition coil (I3–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher
Ignition coil (I4–2) or IGF1 (E13–24) – Body ground	10 kΩ or higher

(4) Reconnect the ignition coil connector.
(5) Reconnect the ECM connector.

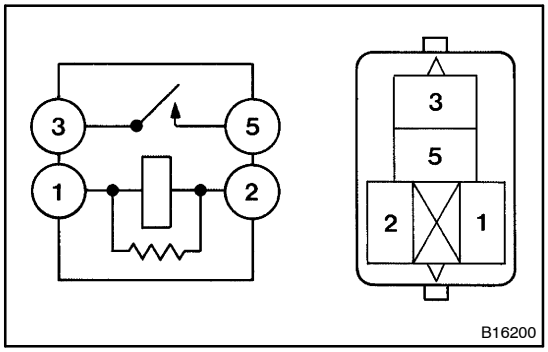
(b) Check the harness and connector between the ignition coil and ECM (IGT terminal) connectors
(1) Disconnect the I1, I2, I3 or I4 ignition coil connector.
(2) Disconnect the E13 ECM connector.
(3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Ignition coil (I1–3) – IGT1 (E13–8)	Below 1 Ω
Ignition coil (I2–3) – IGT2 (E13–9)	Below 1 Ω
Ignition coil (I3–3) – IGT3 (E13–10)	Below 1 Ω
Ignition coil (I4–3) – IGT4 (E13–11)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Ignition coil (I1–3) or IGT1 (E13–8) – Body ground	10 kΩ or higher
Ignition coil (I2–3) or IGT2 (E13–9) – Body ground	10 kΩ or higher
Ignition coil (I3–3) or IGT3 (E13–10) – Body ground	10 kΩ or higher
Ignition coil (I4–3) or IGT4 (E13–11) – Body ground	10 kΩ or higher



(4) Reconnect the ignition coil connector.
(5) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

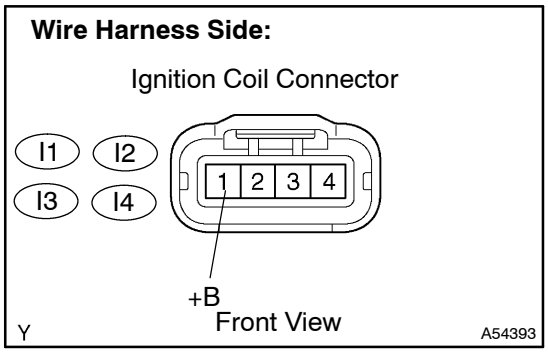
REPLACE IGNITION COIL ASSY

7 INSPECT IG2 RELAY

(a) Remove the IG2 relay from the engine room R/B No. 4.
(b) Check for continuity in the IG2 relay.

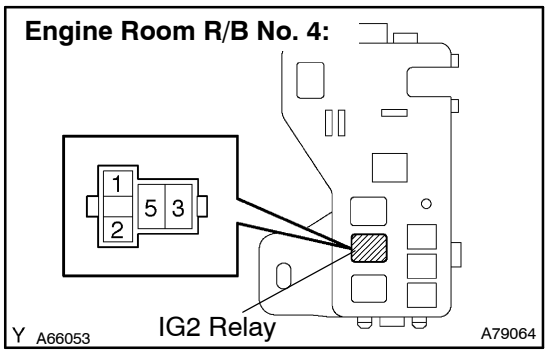
Standard:

Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)



(c) Reinstall the IG2 relay.

NG → **REPLACE IG2 RELAY**



OK

8 CHECK HARNESS AND CONNECTOR(IG2 RELAY – IGNITION COIL)

Wire Harness Side:

Engine Room R/B No. 4:

(a) Disconnect the I1, I2, I3 or I4 ignition coil connector.
(b) Remove the IG2 relay from the engine room R/B No. 4.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
+B (I1–1) – Engine room R/B No. 4 (IG2 relay terminal 3)	Below 1 Ω
+B (I2–1) – Engine room R/B No. 4 (IG2 relay terminal 3)	Below 1 Ω
+B (I3–1) – Engine room R/B No. 4 (IG2 relay terminal 3)	Below 1 Ω
+B (I4–1) – Engine room R/B No. 4 (IG2 relay terminal 3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
+B (I1–1) or Engine room R/B No. 4 (IG2 relay terminal 3) – Body ground	10 kΩ or higher
+B (I2–1) or Engine room R/B No. 4 (IG2 relay terminal 3) – Body ground	10 kΩ or higher
+B (I3–1) or Engine room R/B No. 4 (IG2 relay terminal 3) – Body ground	10 kΩ or higher
+B (I4–1) or Engine room R/B No. 4 (IG2 relay terminal 3) – Body ground	10 kΩ or higher

(d) Reconnect the ignition coil connector.
(e) Reinstall the IG2 relay.

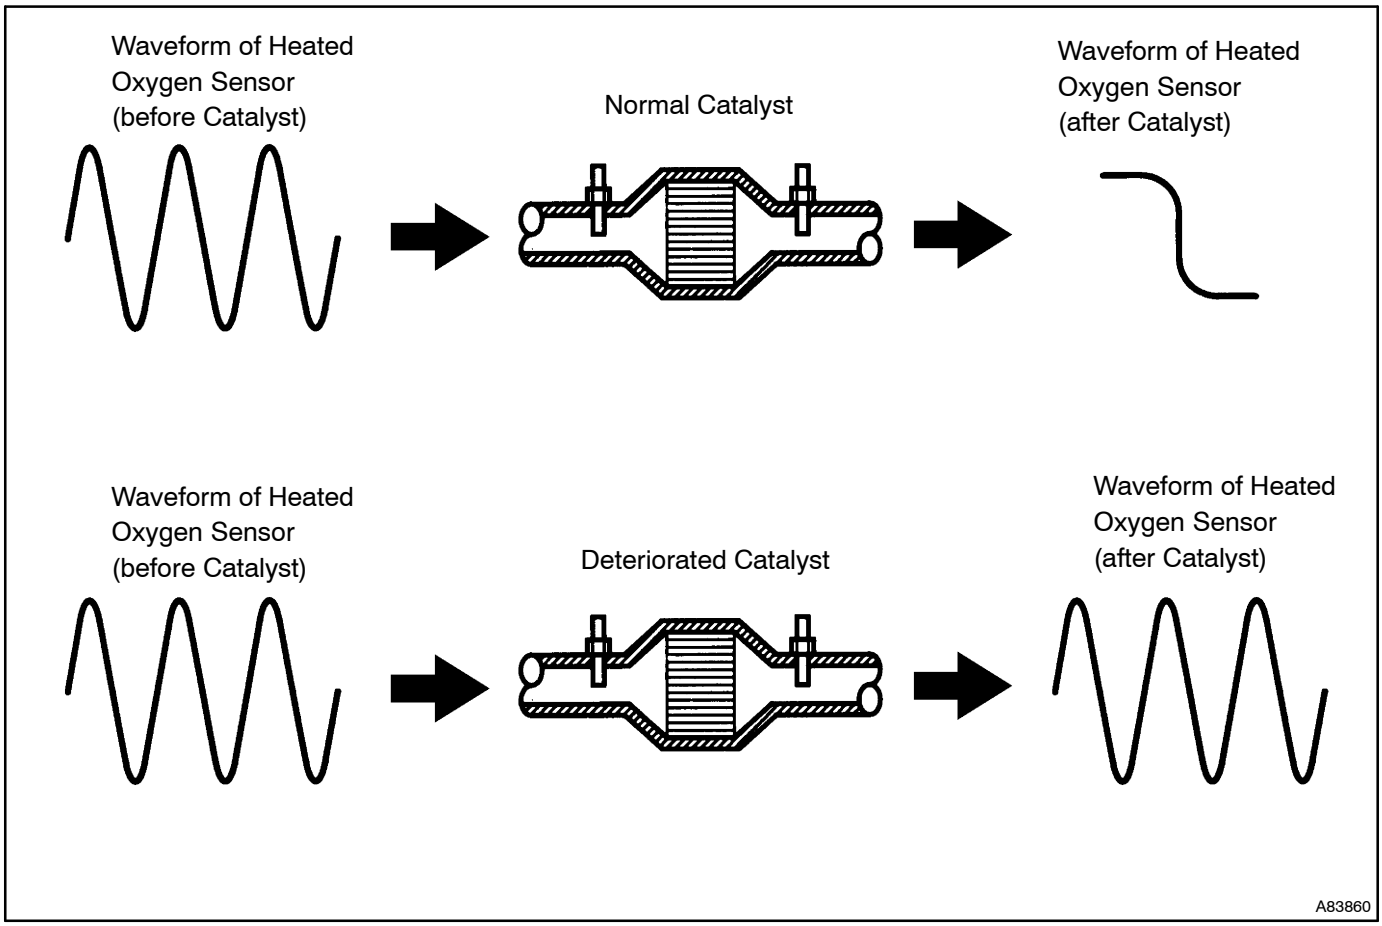
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR FUEL PUMP CONTROL CIRCUIT (See page 05–241)

DTC	P0420	CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1)

DTC	P0430	CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 2)



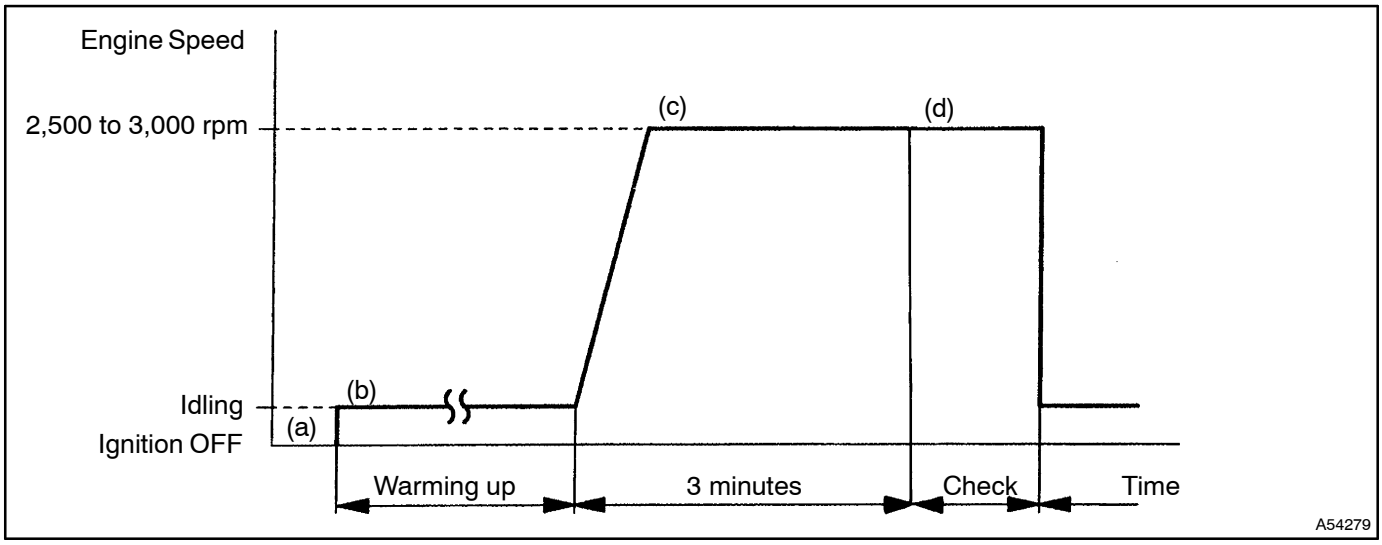
CIRCUIT DESCRIPTION

The ECM compares the 2 waveforms of the heated oxygen sensors located before and after the catalyst to determine whether or not the catalyst performance has deteriorated.

Air–fuel ratio feedback compensation keeps the waveform of the heated oxygen sensor in front of the catalyst alternates between back and forth, from RICH to LEAN.

If the catalyst is functioning normally, the waveform of the heated oxygen sensor behind the catalyst switches back and forth between RICH and LEAN much more slowly than the waveform of the heated oxygen sensor in front of the catalyst.

When both waveforms change at a similar rate, it indicates that the catalyst performance has deteriorated.



DTC No.	DTC Detection Condition	Trouble Area
P0420 P0430	After engine and catalyst are warmed up, and while vehicle is driven within set vehicle speed and engine speed ranges, waveforms of heated oxygen sensors have the same amplitude (2 trip detection logic)	• Gas leakage in exhaust system • Heated oxygen sensor • Three–way catalytic converter (inside exhaust manifold)

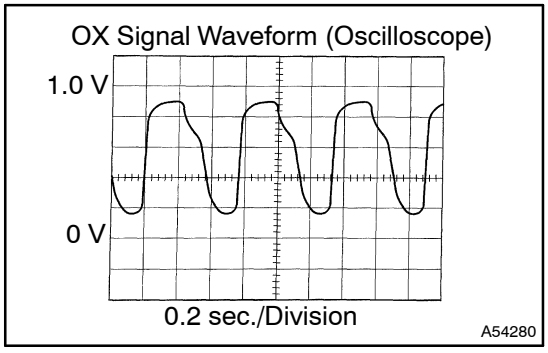
HINT:

- Bank 1 refers to the No. 1 and No. 4 cylinders.
- Bank 2 refers to the No. 2 and No. 3 cylinders.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

CONFIRMATION ENGINE RACING PATTERN

HINT:

Follow this procedure to active and condition the heated oxygen sensors prior to observation of their respective waveform output.



(a) Connect the hand–held tester to the DLC3, or connect the oscilloscope probe between terminals OX1A (bank 1, sensor 1), OX2A (bank 1, sensor 2), OX1B (bank 2, sensor 1), OX2B (bank 2, sensor 2) and E2 of the ECM connectors.

(b) Start the engine and warm it up with all accessories switched OFF until the engine coolant temperature becomes stable.

(c) Run the engine at 2,500 to 3,000 rpm for approximately 3 minutes.

(d) First, check the waveforms of each front heated oxygen sensor (OX1A and OX2A) at the engine speed of 2,500 to 3,000 rpm. The voltage output should alternate between 0 V and 1 V as shown.

(e) Then, check the waveform of each rear heated oxygen sensor (OX1B and OX2B) likewise.

HINT:

If the voltage fluctuation of either of the rear heated oxygen sensors is similar to the respective front sensors' waveform output, it may be that the three–way catalytic converter has deteriorated.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO P0420 AND/OR P0430)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0420 and/or P0430	A
P0420 or P0430 and other DTCs	B

HINT:
If any other codes besides P0420 and/or P0430 are output, perform troubleshoot for those DTCs first.

B → GO TO RELEVANT DTC CHART (See page 05–31)

A

2	CHECK FOR EXHAUST GAS LEAKS

NG → REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT (See Page 15–2)

OK

3	INSPECT HEATED OXYGEN SENSOR(BANK 1, 2 SENSOR 1) (See page 05–82)

Refer to the hint below.

NG → REPLACE HEATED OXYGEN SENSOR

OK

4	INSPECT HEATED OXYGEN SENSOR(BANK 1, 2 SENSOR 2) (See page 05–82)

Refer to the hint below.

NG → REPLACE HEATED OXYGEN SENSOR

OK

REPLACE THREE–WAY CATALYTIC CONVERTER (EXHAUST MANIFOLD, AND REAR CATALYTIC CONVERTER)

HINT:
Hand–held tester only:
It is possible the malfunctioning area can be found using the ACTIVE TEST A/F CONTROL operation. The A/F CONTROL operation can determine if the A/F sensor, heated oxygen sensor or other potential trouble areas are malfunctioning or not.
(a) Perform the ACTIVE TEST A/F CONTROL operation.
HINT:
The A/F CONTROL operation lowers the injection volume 12.5% or increases the injection volume 25%.
(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch to ON.
(3) Warm up the engine by running the engine at 2,500 rpm for approximately 3 minutes.
(4) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL.
(5) Perform the A/F CONTROL operation with the engine in an idle condition (press the right or left button).

Result:

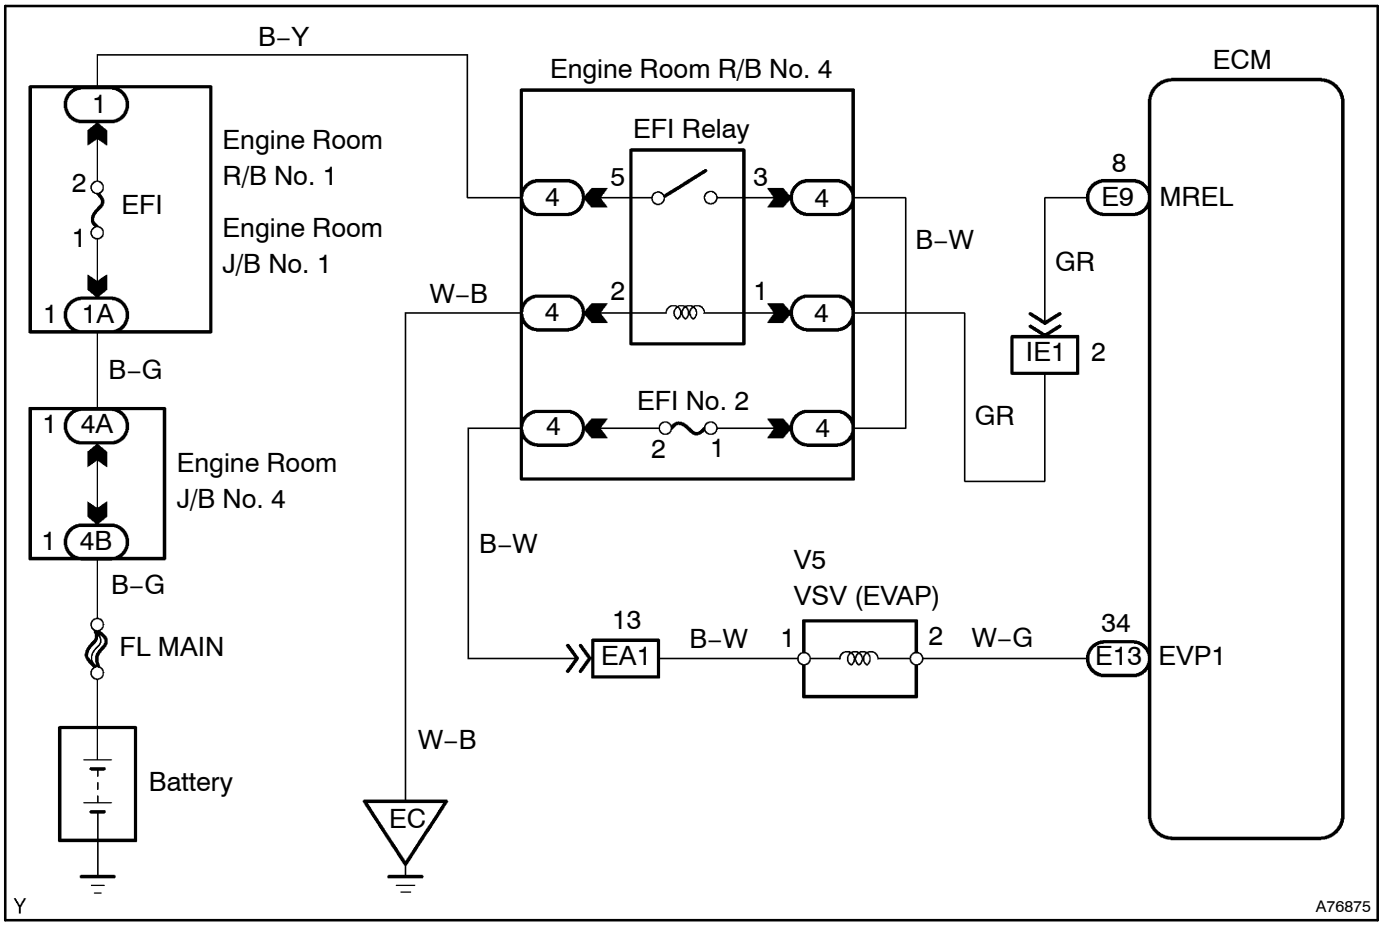
Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.5 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:
There is a delay of few seconds in the sensor 1 (front sensor) output, and there is about 20 seconds delay at maximum in the sensor 2 (rear sensor).

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Main suspect trouble area
Case 1	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	—
Case 2	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 % Output voltage More than 0.5 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Injection volume +25 % –12.5 % Output voltage Almost no reaction **NG**	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following A/F CONTROL procedure enables the technician to check and graph the voltage outputs of both the heated oxygen sensor.
To display the graph, enter ACTIVE TEST/ A/F CONTROL/USER DATA, then select ”O2S B1S1 and O2S B1S2” or ”O2S B2S1 and O2S B2S2” by pressing the ”YES” button followed by the ”ENTER” button and then the ”F4” button.

DTC	P0443	EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT



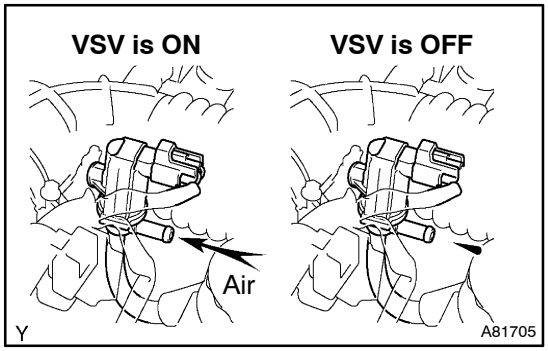
CIRCUIT DESCRIPTION

To reduce HC emissions, evaporated fuel from the fuel tank is routed through the charcoal canister to the intake manifold for combustion in the cylinders.

The ECM changes the duty signal to the VSV for EVAP so that the intake amount of HC emissions is appropriate for the driving conditions (engine load, engine speed, vehicle speed, etc.) after the engine is warmed up.

DTC No.	DTC Detection Condition	Trouble Area
P0443	Proper response to ECM command does not occur	• Open of short in VSV for EVAP circuit • VSV for EVAP • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	PERFORM ACTIVE TEST BY HAND–HELD TESTER(VSV FOR EVAP)

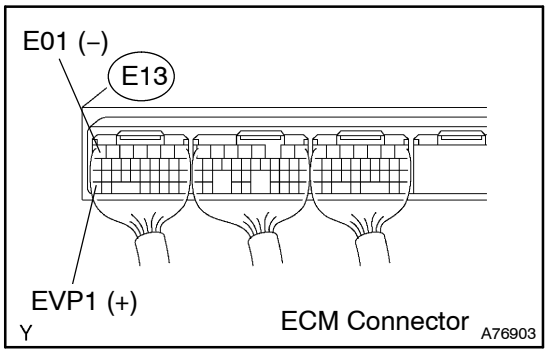
(a) Disconnect the vacuum hose from the VSV for EVAP.
(b) Start the engine.
(c) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / EVAP VSV (press the right or left button).
(d) When the VSV for EVAP is operated by the hand–held tester, check whether the disconnected hose applies suction to your finger.

Standard:

Tester Operation	Specified Condition
VSV is ON	Disconnected hose applies suction to your finger
VSV is OFF	Disconnected hose applies no suction to your finger

(e) Reconnect the vacuum hose.

OK → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)**



NG

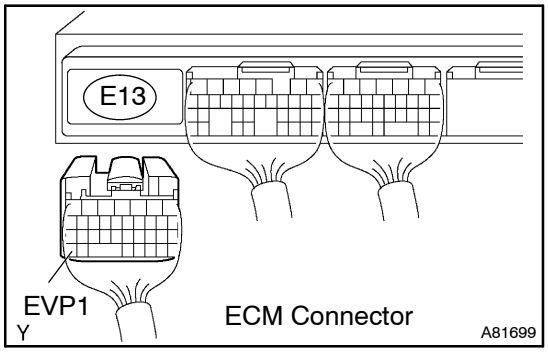
2	INSPECT VACUUM SWITCHING VALVE ASSY NO.1(VSV FOR EVAP) (See page 12–3)

NG → **REPLACE VACUUM SWITCHING VALVE ASSY NO.1 (VSV FOR EVAP)**

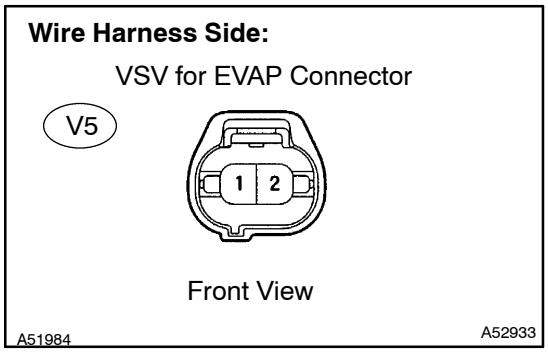
OK

3	INSPECT ECM(EVP1 VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.



Standard:



Tester Connection	Specified Condition
EVP1 (E13–34) – E01 (E13–7)	9 to 14 V

OK → **CHECK AND REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

NG

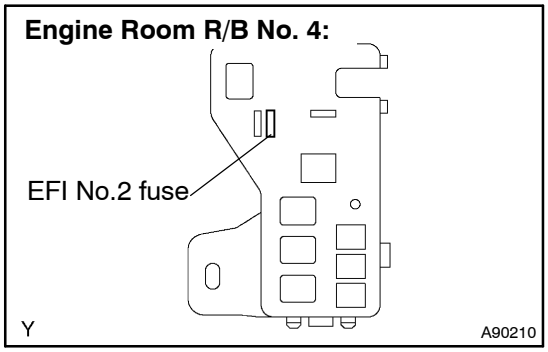
4	CHECK HARNESS AND CONNECTOR(ECM – VSV FOR EVAP)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the V5 VSV for EVAP connector.
(c) Check the resistance between the wire harness side connectors.

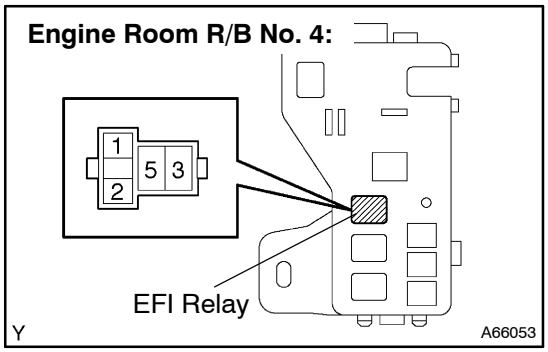
Standard (Check for open):

Tester Connection	Specified Condition
VSV for EVAP (V5–2) – EVP1 (E13–34)	Below 1 Ω

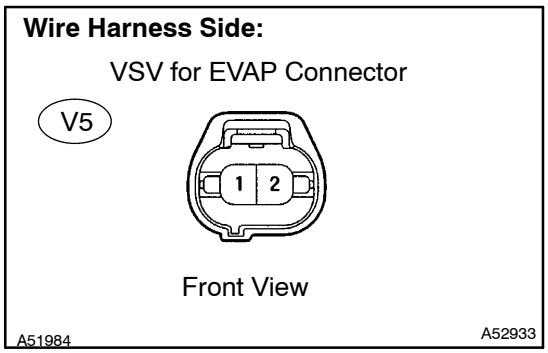
Standard (Check for short):



Tester Connection	Specified Condition
VSV for EVAP (V5–2) or EVP1 (E13–34) – Body ground	10 kΩ or higher



(d) Reconnect the ECM connector.
(e) Reconnect the VSV for EVAP connector.



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK HARNESS AND CONNECTOR(EFI RELAY – VSV FOR EVAP)

(a) Inspect the EFI No. 2 fuse.
  (1) Remove the EFI No. 2 fuse from the engine room R/B No. 4.
  (2) Check for continuity in the EFI No. 2 fuse.
  Standard: Continuity
  (3) Reinstall the EFI No. 2 fuse.
(b) Remove the EFI relay from the engine room R/B No. 4.
(c) Disconnect the V5 VSV for EVAP connector.
(d) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Engine room R/B No.4 (EFI relay terminal 3) – VSV for EVAP (V5–1)	Below 1 Ω

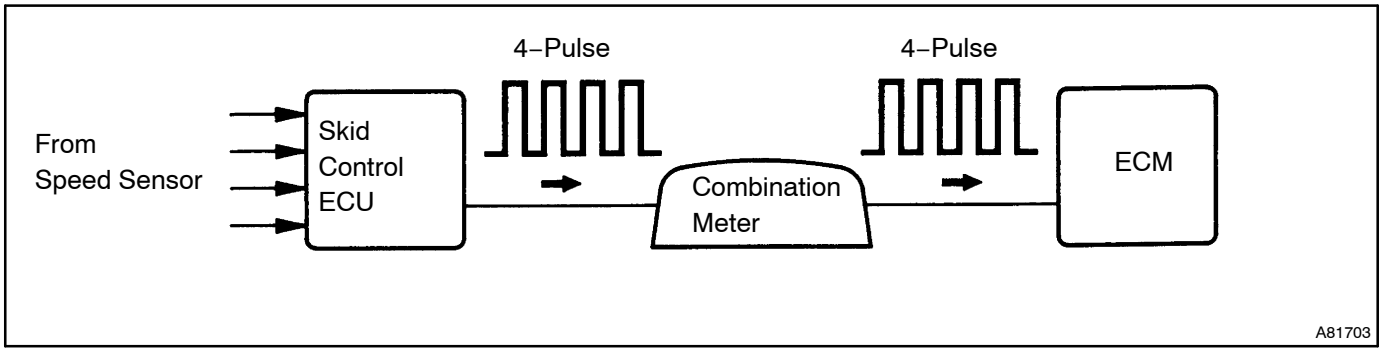
Standard (Check for short):

Tester Connection	Specified Condition
Engine room R/B No.4 (EFI relay terminal 3) or VSV for EVAP (V5–1) – Body ground	10 kΩ or higher

(e) Reinstall the EFI relay.
(f) Reconnect the VSV for EVAP connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

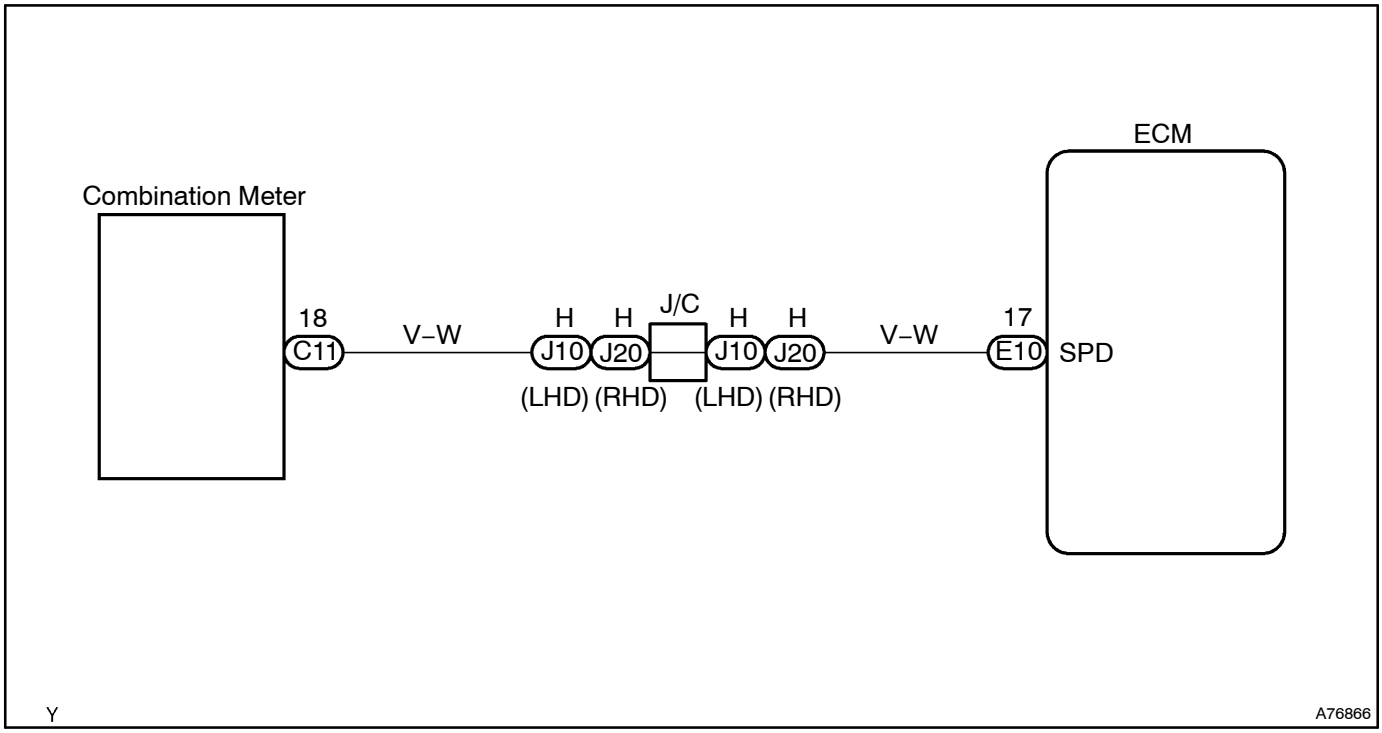
OK



CHECK FOR ECM POWER SOURCE CIRCUIT (See page 05–236)

DTC	P0500	VEHICLE SPEED SENSOR ”A”

DTC	P0503	VEHICLE SPEED SENSOR ”A” INTERMITTENT/ERRATIC/HIGH



CIRCUIT DESCRIPTION

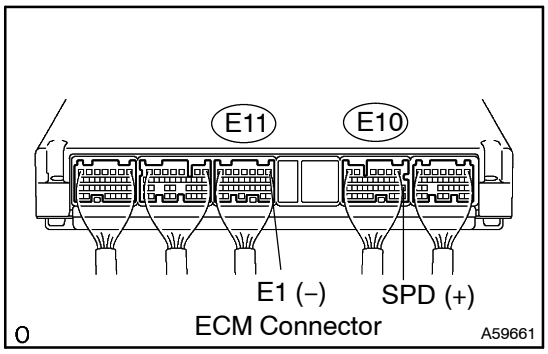
The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. The skid control ECU converts these wheel speed signals into a 4–pulse signal and outputs it to the ECM via the combination meter. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC No.	DTC Detection Condition	Trouble Area
P0500 P0503	No vehicle speed sensor signal to ECM under the following condition (1 trip detection logic): (a) Vehicle is being driven	• Combination meter • Open or short in vehicle speed sensor circuit • Vehicle speed sensor • ECM • Skid control ECU • Clutch or brake slips or gear is broken

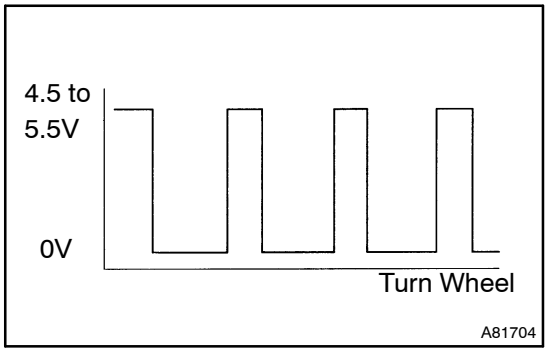
WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.



1	CHECK OPERATION OF SPEEDOMETER



(a) Drive the vehicle and check if the operation of the speedometer in the combination meter is normal.
HINT:
The vehicle speed sensor is operating normally if the speedometer display is normal.

NG → **CHECK SPEEDOMETER CIRCUIT (See page 05–1510 of Pub. No. RM1018E AVENSIS)**

OK

2	INSPECT ECM(SPD VOLTAGE)

(a) Shift the lever to the neutral position.
(b) Jack up the vehicle.
(c) Turn the ignition switch to ON.
(d) Check the voltage between the specified terminals of the E10 and E11 ECM connectors as the wheel is turned slowly.
Standard:

Tester Connection	Specified Condition
SPD (E10–17) – E1 (E11–1)	Generated intermittently

HINT:
The output voltage should fluctuate up and down similarly to the diagram on the left as the wheel is turned slowly.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

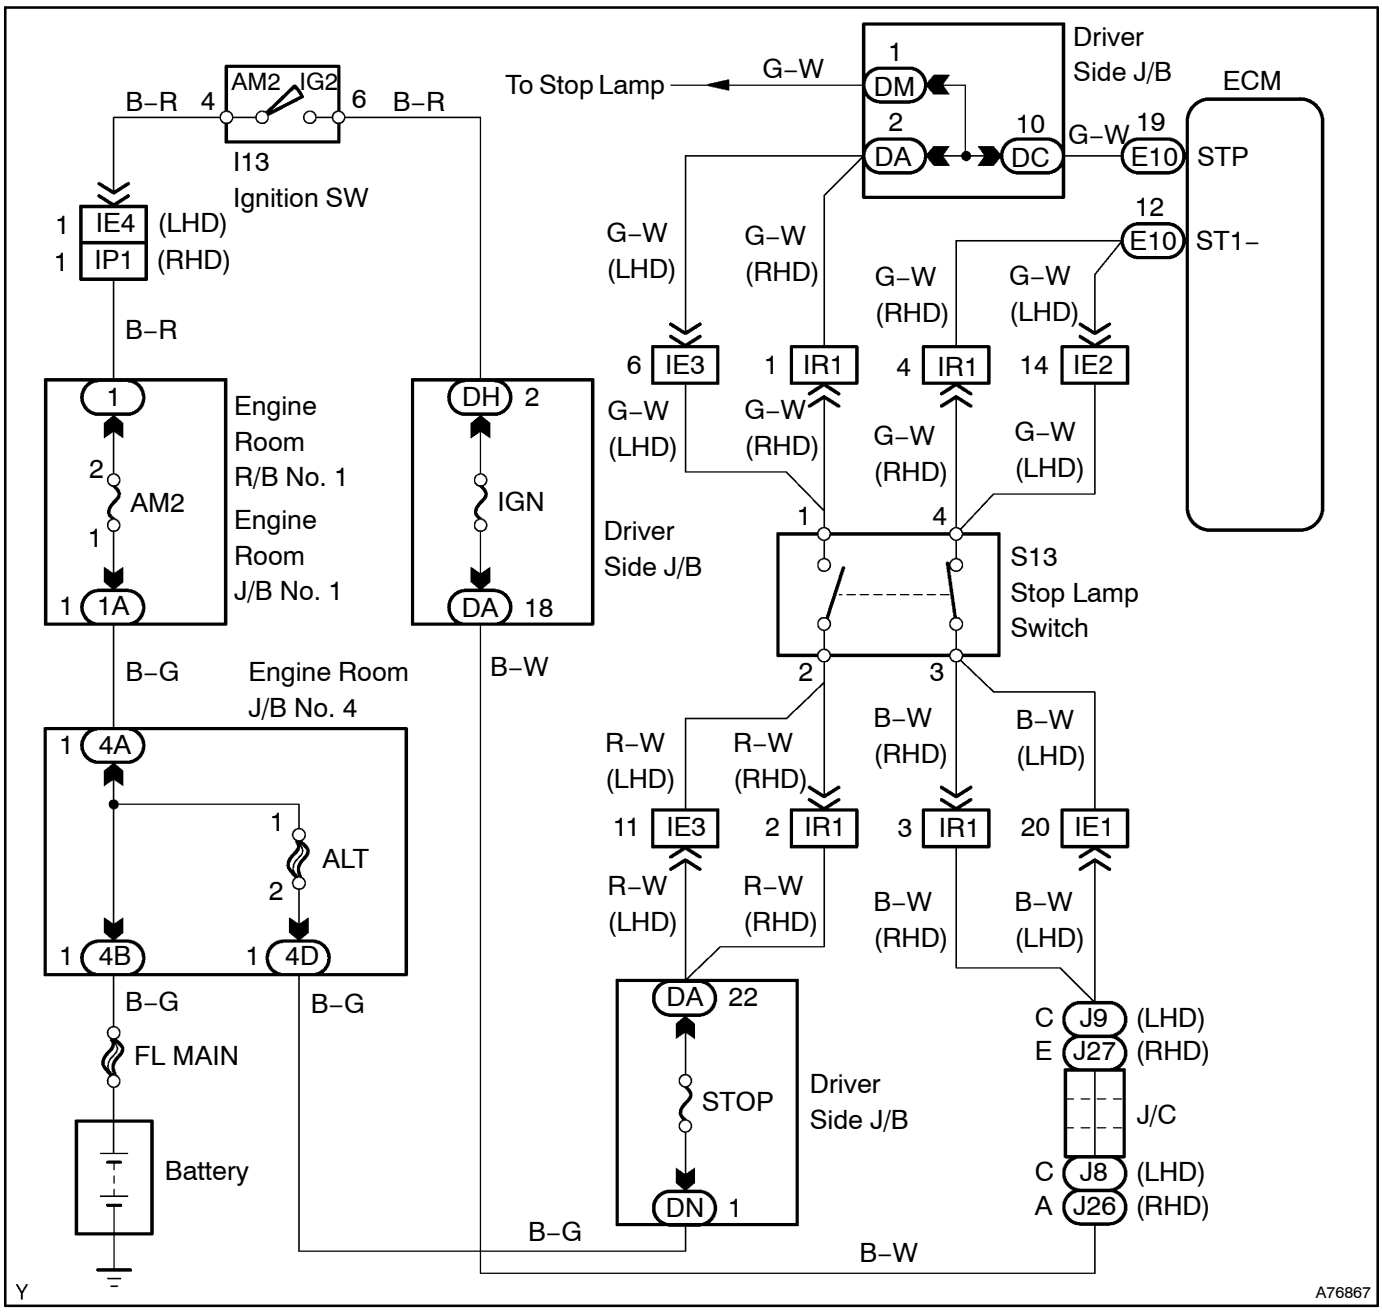
OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P0504	BRAKE SWITCH ”A”/”B” CORRELATION

CIRCUIT DESCRIPTION

In addition to turning on the stop lamps, the stop lamp switch signals are used for a variety of engine, transmission, and suspension functions as well as being an input for diagnostic checks. It is important that the switch operates properly, therefore this switch is designed with two complementary signal output: STP and ST1–. The ECM analyzes these signal output to detect malfunctions in the stop lamp switch.



HINT:

Normal condition is as shown in the table.

Signal	Brake pedal released	In transition	Brake pedal depressed
STP	OFF	ON	ON
ST1–	ON	ON	OFF

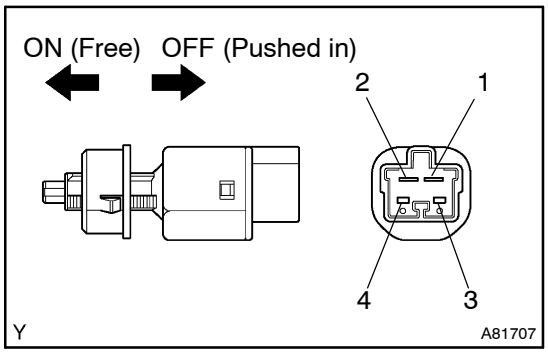
DTC No.	DTC Detection Condition	Trouble Area
P0504	Condition (a), (b) and (c) continue for 0.5 second or more: (a) Ignition switch ON (b) Brake pedal released (c) STP signal is OFF when the ST1– signal is OFF	• Short in stop lamp switch signal circuit • Stop lamp switch • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.



1 CHECK OPERATION OF STOP LAMP

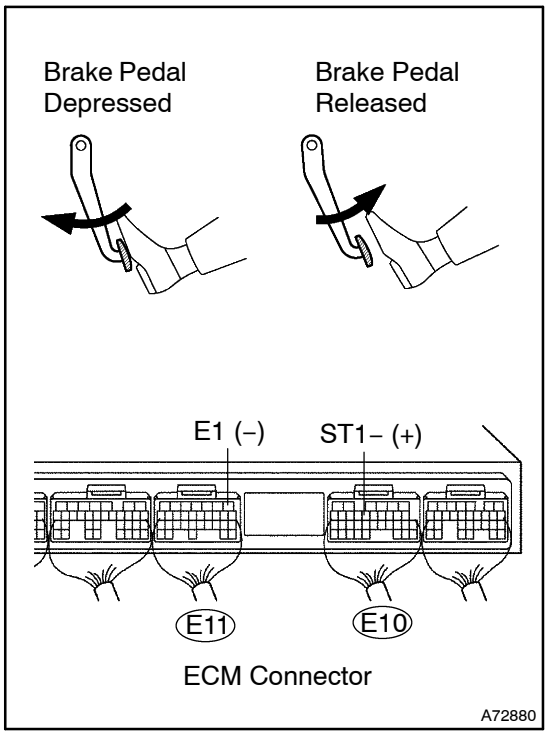
(a) Check if the stop lamps go on and off normally when the brake pedal is depressed and released.

NG → **REPAIR OR REPLACE STOP LAMP SWITCH CIRCUIT**

OK

2 INSPECT STOP LAMP SWITCH ASSY

(a) Check for continuity between each pair of the terminals when the switch is ON and OFF.



Standard:

Switch Position	Tester Connection	Specified Condition
Switch pin free	1 – 2	Continuity
Switch pin free	3 – 4	No continuity
Switch pin pushed in	1 – 2	No Continuity
Switch pin pushed in	3 – 4	Continuity

NG → **REPLACE STOP LAMP SWITCH ASSY**

OK

3 READ VALUE OF HAND–HELD TESTER(STP SIGNAL AND ST1– VOLTAGE)

(a) Turn the ignition switch to ON.

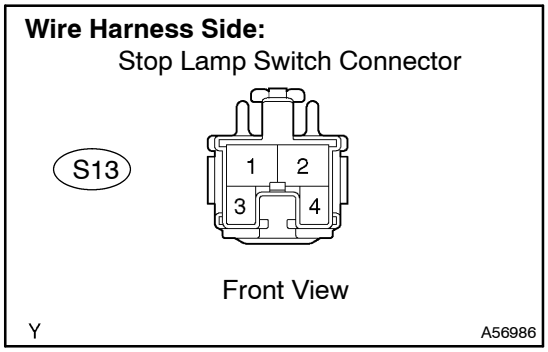
(b) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STOP LIGHT SW. Read the values.

Standard:

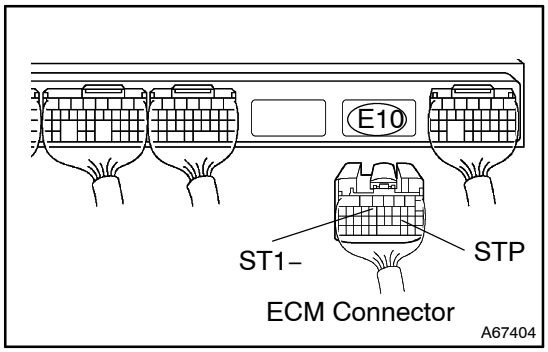
Brake Pedal	Specified Condition
Depressed	STP Signal ON
Released	STP Signal OFF

(c) Measure the voltage between the terminals of the E10 and E11 ECM connectors.

Standard:



Tester Connection	Brake Pedal	Specified Condition
ST1– (E10–12) – E1 (E11–1)	Depressed	Below 1.5 V
ST1– (E10–12) – E1 (E11–1)	Released	7.5 to 14 V



NG → **Go to step 4**

OK

CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

4 CHECK HARNESS AND CONNECTOR(ECM – STOP LAMP SWITCH)

(a) Disconnect the S13 stop lamp switch connector.
(b) Disconnect the E10 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Stop lamp switch (S13–1) – STP (E10–19)	Below 1 Ω
Stop lamp switch (S13–4) – ST1– (E10–12)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Stop lamp switch (S13–1) or STP (E10–19) – Body ground	10 kΩ or higher
Stop lamp switch (S13–4) or ST1– (E10–12) – Body ground	10 kΩ or higher

(d) Reconnect the stop lamp switch connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC P0505 IDLE AIR CONTROL SYSTEM

CIRCUIT DESCRIPTION

The idle speed is controlled by the Electric Throttle Control System (ETCS).
ETCS is composed of the throttle motor which operates the throttle valve, the throttle position sensor which detects the opening angle of the throttle valve, the accelerator pedal position sensor which detects the accelerator pedal position,and the one valve type throttle body.
The ECM controls the throttle motor to make the throttle valve opening angle properly for the target idle speed.

DTC No.	DTC Detection Condition	Trouble Area
P0505	Idle speed continues to vary greatly from target speed (2 trip detection logic)	• Electric throttle control system • Air induction system • PCV hose connection

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0505)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:

Display (DTC output)	Proceed to
P0505	A
P0505 and other DTCs	B

HINT:
If any other codes besides P0505 are output, perform troubleshoot for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–31)**

A

2 CHECK CONNECTION OF PCV HOSE

NG → **REPAIR OR REPLACE PCV HOSE**

OK

3	CHECK AIR INDUCTION SYSTEM

(a) Check for vacuum leaks in the air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

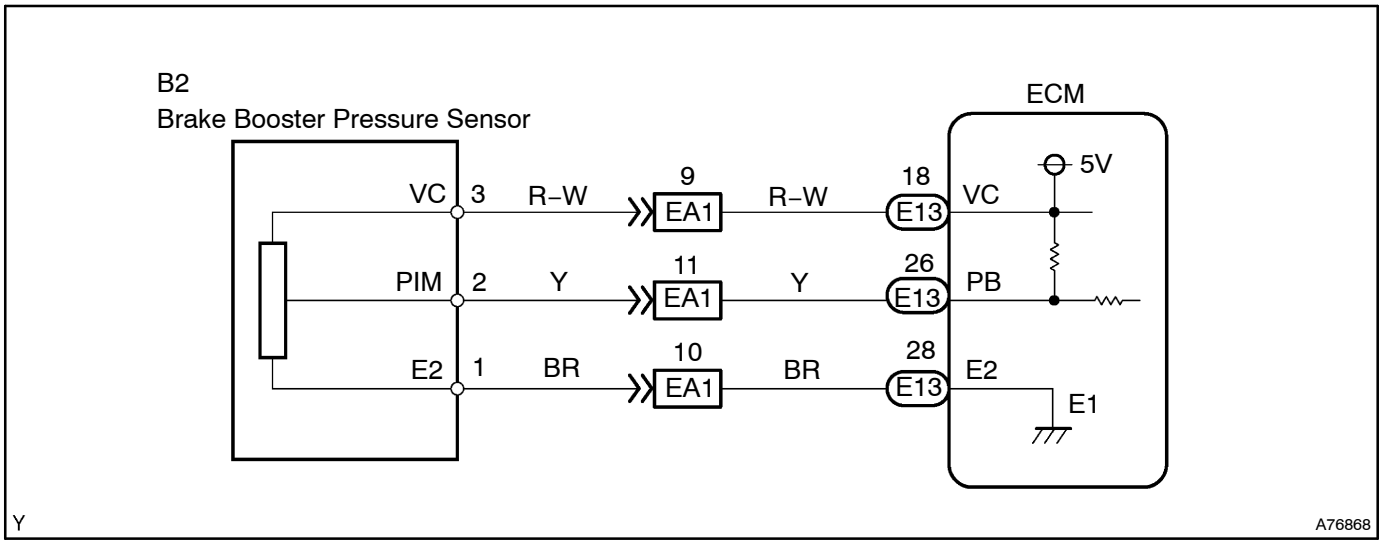
OK

CHECK ELECTRIC THROTTLE CONTROL SYSTEM (See page 10–1)

DTC	P0555	BRAKE BOOSTER PRESSURE SENSOR CIRCUIT

DTC	P0557	BRAKE BOOSTER PRESSURE SENSOR CIRCUIT LOW INPUT

DTC	P0558	BRAKE BOOSTER PRESSURE SENSOR CIRCUIT HIGH INPUT



CIRCUIT DESCRIPTION

The brake booster pressure sensor detects internal pressure of the brake booster as voltage. A structure of the sensor and its connection to the ECM are the same as those of the intake air pressure sensor (refer to DTC P0105 on page 05–61).

In order to purify emission gas when starting a cold engine, drastically retard the ignition timing to quickly activate tha catalyst. Upon this, the throttle valve is opened larger than the throttle opening angle with a warm engine, therefore the intake manifold pressure will be closer to atmospheric pressure. If the negative pressure (vacuum) applied inside the brake booster drops, the ECM cancels the drastic retarding timing and introduces the negative pressure (vacuum) into the intake manifold, and the ECM then resumes the drastic retarding timing after the brake booster negative pressure (vacuum) is ensured at required level.

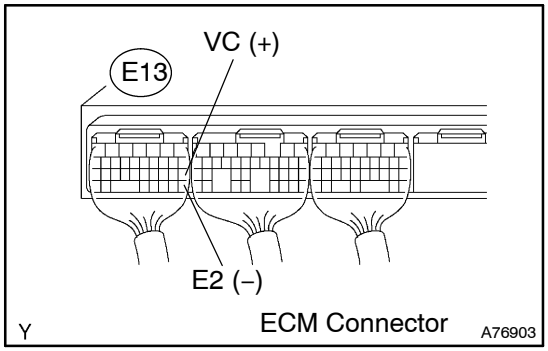
DTC No.	DTC Detection Condition	Trouble Area
P0555	Open or short in brake booster pressure sensor circuit for 5 seconds or more	• Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Vacuum hose • ECM
P0557	Open in brake booster pressure sensor circuit for 5 seconds or more	• Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Vacuum hose • ECM
P0558	Short in brake booster pressure sensor circuit for 5 seconds or more	• Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Vacuum hose • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.



1 CHECK VACUUM HOSES(BRAKE BOOSTER PRESSURE SENSOR – BRAKE BOOSTER, INTAKE MANIFOLD – BRAKE BOOSTER)

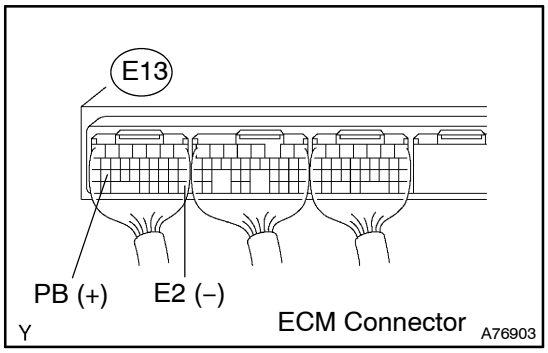
(a) Check that the vacuum hoses are connected correctly.
(b) Check that the vacuum hoses are not loose or disconnected.
(c) Check the vacuum hoses and tubes for clogs, cracks, holes, damage, or blockage.

NG → **REPAIR OR REPLACE VACUUM HOSES**

OK

2 INSPECT ECM(VC VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.



Standard:

Tester Connection	Specified Condition
VC (E13–18) – E2 (E13–28)	4.5 to 5.5 V

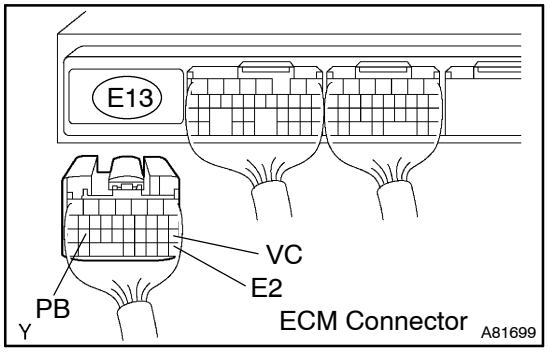
NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

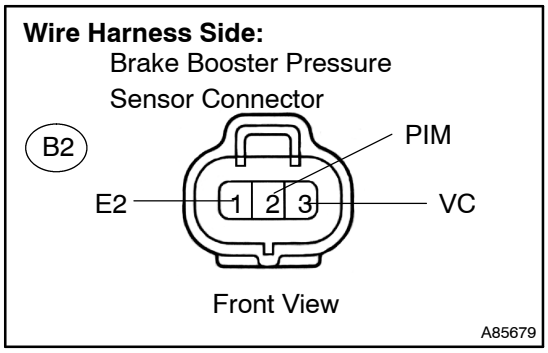
3 INSPECT ECM(PB VOLTAGE)

(a) Measure the voltage between the specified terminals of the E13 ECM connector.

Standard:



Tester Connection	Condition	Specified Condition
PB (E13–26) – E2 (E13–28)	Ignition switch ON (do not start engine)	0.5 to 4.5 V
PB (E13–26) – E2 (E13–28)	Idling	0.5 to 4.5 V



NG → **Go to step 4**

OK

CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

4	CHECK HARNESS AND CONNECTOR(ECM – BRAKE BOOSTER PRESSURE SENSOR)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the B2 brake booster pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

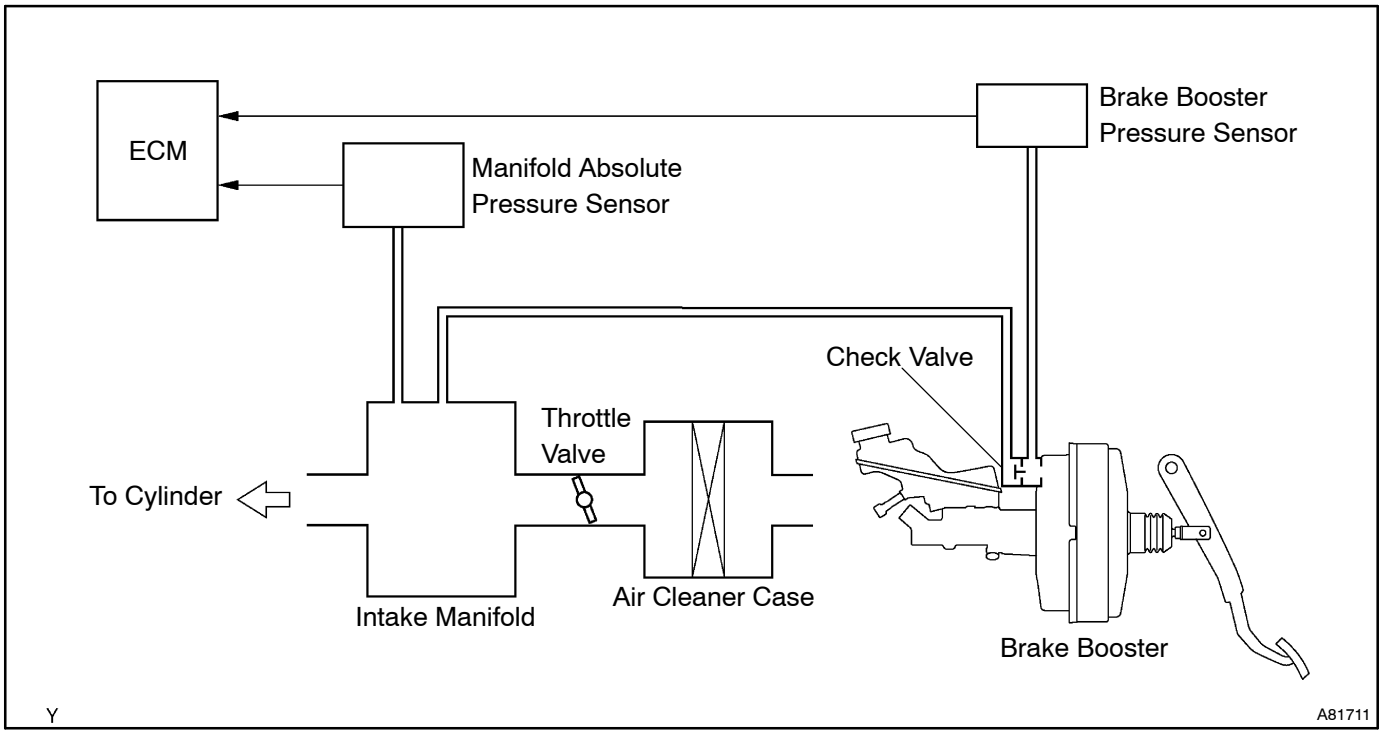
Tester Connection	Specified Condition
VC (E13–18) – VC (B2–3)	Below 1 Ω
PB (E13–26) – PIM (B2–2)	Below 1 Ω
E2 (E13–28) – E2 (B2–1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
VC (E13–18) or VC (B2–3) – Body ground	10 kΩ or higher
PB (E13–26) or PIM (B2–2) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the brake booster pressure sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

REPLACE BRAKE BOOSTER PRESSURE SENSOR

DTC	P0556	BRAKE BOOSTER PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE

CIRCUIT DESCRIPTION

Refer to DTC P0555 on page 05–191.

DTC No.	DTC Detection Condition	Trouble Area
P0556	When any one of the following conditions (a), (b), (c) or (d) is satisfied (1 trip detection logic): (a) If pressure inside the intake manifold is low, the brake booster internal pressure is 38 kPa (285 mmHg, 11.2 in.Hg) or more higher than the intake manifold internal pressure and this condition remains for more than 10 seconds (Pressure leaks caused by hose disconnection, etc) (b) Pressure inside the brake booster stays low or at fixed level, despite the vehicle has driven and stopped 10 times (Vacuum stuck caused by hose clogged, etc) (c) While the brake pedal is released, the pressure inside the brake booster is 32 kPa (240 mmHg, 9.4 in.Hg) or more higher than the intake manifold internal pressure and this condition remains for more than 1 second (Pressure leaks) (d) After running the engine for more than 100 seconds with the brake pedal released and the negative pressure (vacuum) has accumulated in the brake booster, the following two conditions are satisfied despite depressing the brake pedal for more than 1 second (Vacuum stuck): • Internal pressure of the brake booster does not increase • Internal pressure of the brake booster is 32 kPa (240 mmHg, 9.4 in.Hg) or more lower than the internal pressure of the intake manifold	• Vacuum hose (between the brake booster and intake manifold, the brake booster and brake booster pressure sensor, and the intake manifold and manifold absolute pressure sensor) • Open or short in brake booster pressure sensor circuit • Brake booster pressure sensor • Manifold absolute pressure sensor • Brake booster • Open or short in stop lamp switch circuit • Stop lamp switch • ECM

WIRING DIAGRAM

Refer to DTC P0555 on page 05–191.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO P0556)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result :

Display	Proceed to
P0556	A
P0556 and other DTCs	B

HINT:
If any other codes besides P0556 are output, perform troubleshoot for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–31)**

A

2	READ VALUE OF HAND–HELD TESTER(INTAKE MANIFOLD ABSOLUTE PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Warm up the engine.
(c) Turn the hand–held tester ON.
(d) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAP. Read the values with the shift lever in the N position.
Standard :

Condition	Intake Manifold Absolute Pressure
Ignition switch ON (do not start engine)	70 to 110 kPa (525 to 825 mmHg, 20.7 to 32.5 in.Hg)
Running without load (2,500 rpm)	20 to 35 kPa (150 to 263 mmHg, 5.9 to 10.4 in.Hg)

NG → **Go to step 7**

OK

3	READ VALUE OF HAND–HELD TESTER(STOP LAMP SWITCH)

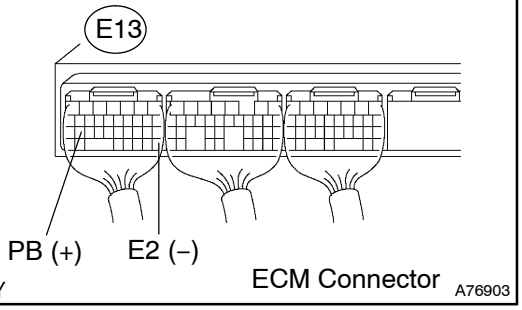
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STOP LIGHT SW. Read the values.

Result :

Brake Pedal	STP Signal
Depressed	ON
Released	OFF

NG → **CHECK AND REPAIR STOP LAMP SWITCH CIRCUIT**

OK



4	CHECK VACUUM HOSES(BRAKE BOOSTER PRESSURE SENSOR – BRAKE BOOSTER, INTAKE MANIFOLD – BRAKE BOOSTER)

(a) Check that the vacuum hoses are connected correctly.
(b) Check that the vacuum hoses are not loose or disconnected.
(c) Check the vacuum hoses and tubes for clogs, cracks, holes, damage, or blockage.

NG → **REPAIR OR REPLACE VACUUM HOSES**

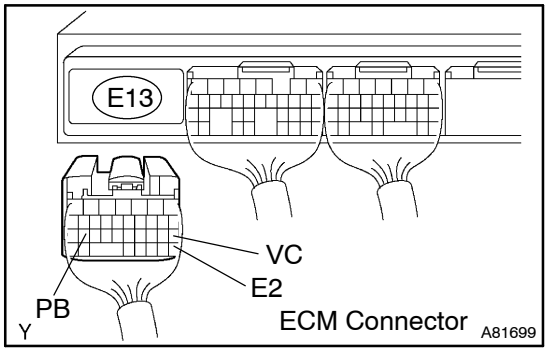
OK

5	INSPECT ECM(PB VOLTAGE)

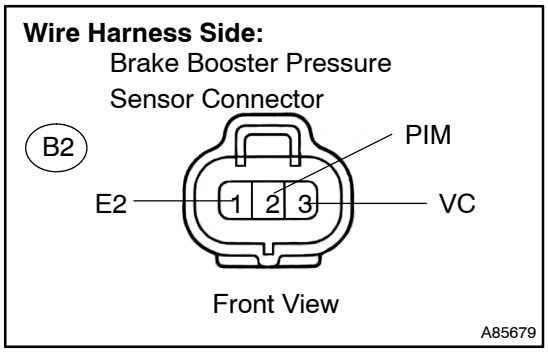
(a) Disconnect the vacuum hose from the brake booster pressure sensor.
(b) Turn the ignition switch to ON.
(c) Using the MITYVAC (Hand–Held Vacuum Pump), apply a vacuum to the brake booster pressure sensor, measure the voltage between the specified terminals of the E13 ECM connector.

Standard:

Tester Connection	Vacuum Pump Operation	Specified Condition
PB (E13–26) – E2 (E13–28)	0 kPa (0 mmHg, 0 in.Hg)	3.3 to 3.9 V
PB (E13–26) – E2 (E13–28)	40 kPa (300 mmHg, 11.8 in.Hg)	2.1 to 2.7 V
PB (E13–26) – E2 (E13–28)	80 kPa (600 mmHg, 23.6 in.Hg)	0.9 to 1.5 V



(d) Reconnect the vacuum hose.



NG → **Go to step 6**

OK

CHECK FUNCTION OF BRAKE BOOSTER
(See page 32–17,32–21 of Pub. No. RM1018E AVENSIS)

6 CHECK HARNESS AND CONNECTOR(ECM – BRAKE BOOSTER PRESSURE SENSOR)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the B2 brake booster pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
VC (E13–18) – VC (B2–3)	Below 1 Ω
PB (E13–26) – PIM (B2–2)	Below 1 Ω
E2 (E13–28) – E2 (B2–1)	Below 1 Ω

Standard (Check for short):

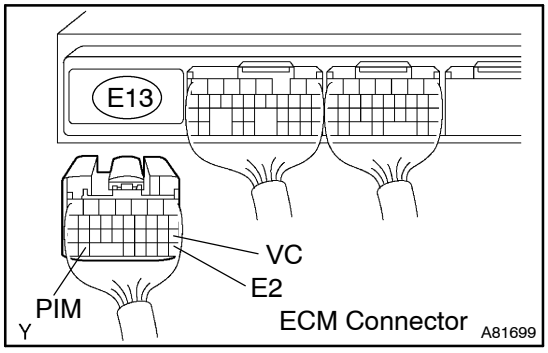
Tester Connection	Specified Condition
VC (E13–18) or VC (B2–3) – Body ground	10 kΩ or higher
PB (E13–26) or PIM (B2–2) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the brake booster pressure sensor connector.

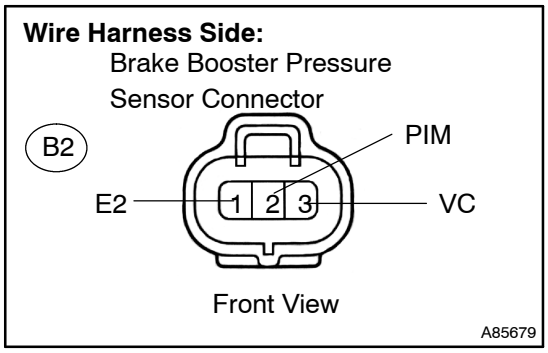
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BRAKE BOOSTER PRESSURE SENSOR



7 CHECK VACUUM HOSES(MANIFOLD ABSOLUTE PRESSURE SENSOR – INTAKE MANIFOLD)



(a) Check that the vacuum hose is connected correctly.
(b) Check that the vacuum hose is not loose or disconnected.
(c) Check the vacuum hose for clogs, cracks, holes, damage, or blockage.

NG → **REPAIR OR REPLACE VACUUM HOSES**

OK

8	CHECK HARNESS AND CONNECTOR(ECM – MANIFOLD ABSOLUTE PRESSURE SENSOR)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the V1 manifold absolute pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
VC (E13–18) – VCC (V1–3)	Below 1 Ω
PIM (E13–33) – VOUT (V1–2)	Below 1 Ω
E2 (E13–28) – GND (V1–1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
VC (E13–18) or VCC (V1–3) – Body ground	10 kΩ or higher
PIM (E13–33) or VOUT (V1–2) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the manifold absolute pressure sensor connector.

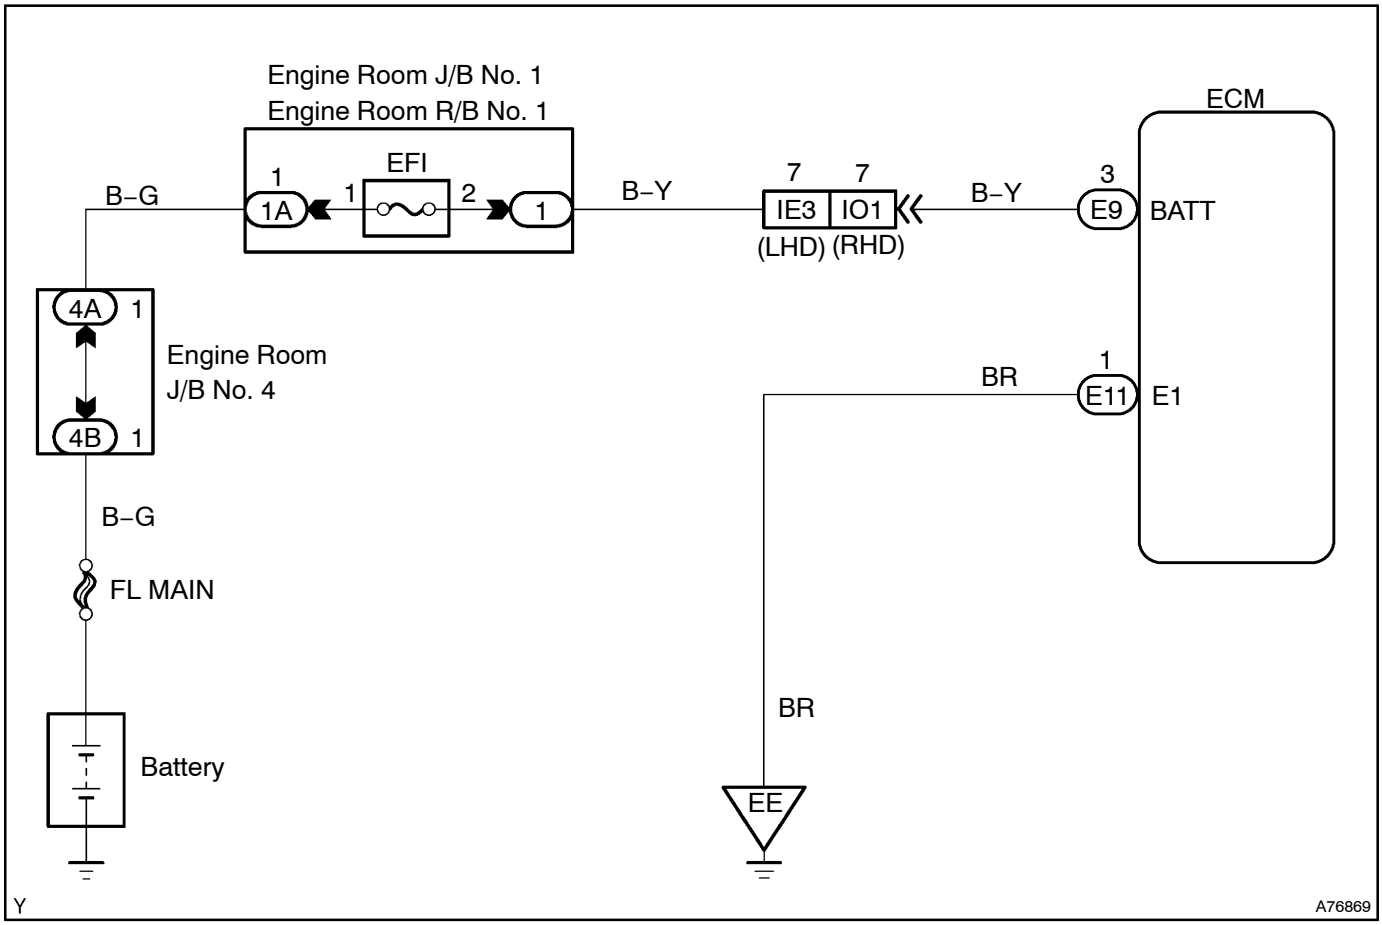
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR

DTC	P0560	SYSTEM VOLTAGE

CIRCUIT DESCRIPTION



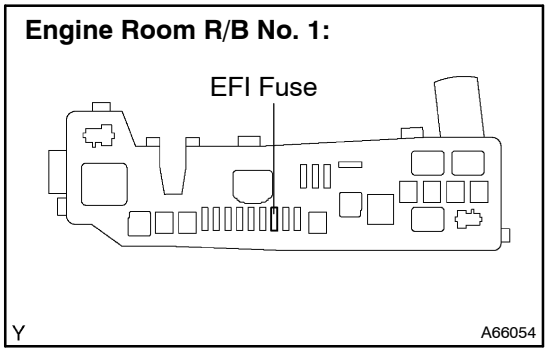
The battery supplies electricity to the ECM even when the ignition switch is OFF. This electricity allows the ECM to store data such as DTC history, freeze frame data, fuel trim values, and other data. If the battery voltage falls below a minimum level, the ECM will conclude that there is a fault in the power supply circuit. The next time the engine start, the ECM will turn on the MIL and a DTC will be set.

DTC No.	DTC Detection Condition	Trouble Area
P0560	Open in back–up power source circuit	• Open in back–up power source circuit • ECM

HINT:

If DTC P0560 is present, the ECM is unable to store other DTCs.

WIRING DIAGRAM

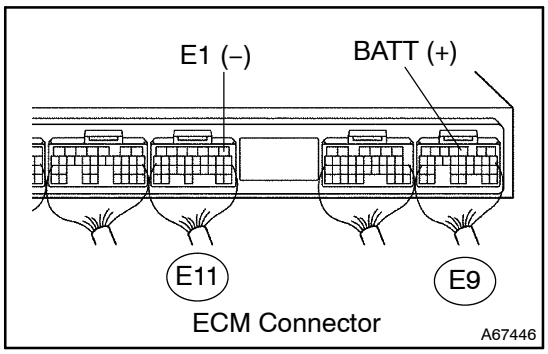


INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 INSPECT FUSE(EFI FUSE)



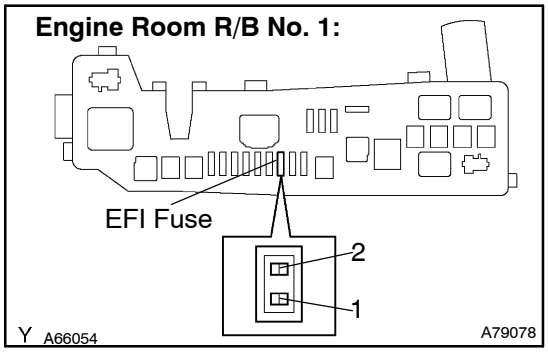
(a) Remove the EFI fuse from the engine room R/B No. 1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity
(c) Reinstall the EFI fuse.

NG → **CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED EFI FUSE**

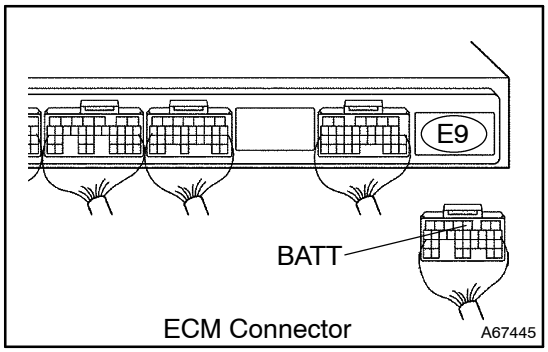
OK

2 INSPECT ECM(BATT VOLTAGE)

(a) Measure the voltage between the terminals of the E9 and E11 ECM connectors.
Standard:



Tester Connection	Specified Condition
BATT (E9–3) – E1 (E11–1)	9 to 14 V



NG → **Go to step 3**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

3 CHECK HARNESS AND CONNECTOR(ECM – EFI FUSE, EFI FUSE – BATTERY)

(a) Check the harness and connector between the EFI fuse and ECM.
  (1) Remove the EFI fuse from the engine room R/B No.1.
  (2) Disconnect the E9 ECM connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Engine room R/B No. 1 (EFI fuse terminal 2) – BATT (E9–3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Engine room R/B No. 1 (EFI fuse terminal 2) or BATT (E9–3) – Body ground	10 kΩ or higher

  (4) Reinstall the EFI fuse.
  (5) Reconnect the ECM connector.

(b) Check the harness and connector between the EFI fuse and battery.
  (1) Remove the EFI fuse from the engine room R/B No.1.
  (2) Disconnect the positive battery terminal.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Battery positive terminal – Engine room R/B No. 1 (EFI fuse terminal 1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Battery positive terminal or Engine room R/B No. 1 (EFI fuse terminal 1) – Body ground	10 kΩ or higher

  (4) Reinstall the EFI fuse.
  (5) Reconnect the positive battery terminal.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ENGINE ROOM RELAY BLOCK

DTC	P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC	P0606	ECM/PCM PROCESSOR

DTC	P0607	CONTROL MODULE PERFORMANCE

DTC	P0657	ACTUATOR SUPPLY VOLTAGE CIRCUIT/OPEN

CIRCUIT DESCRIPTION

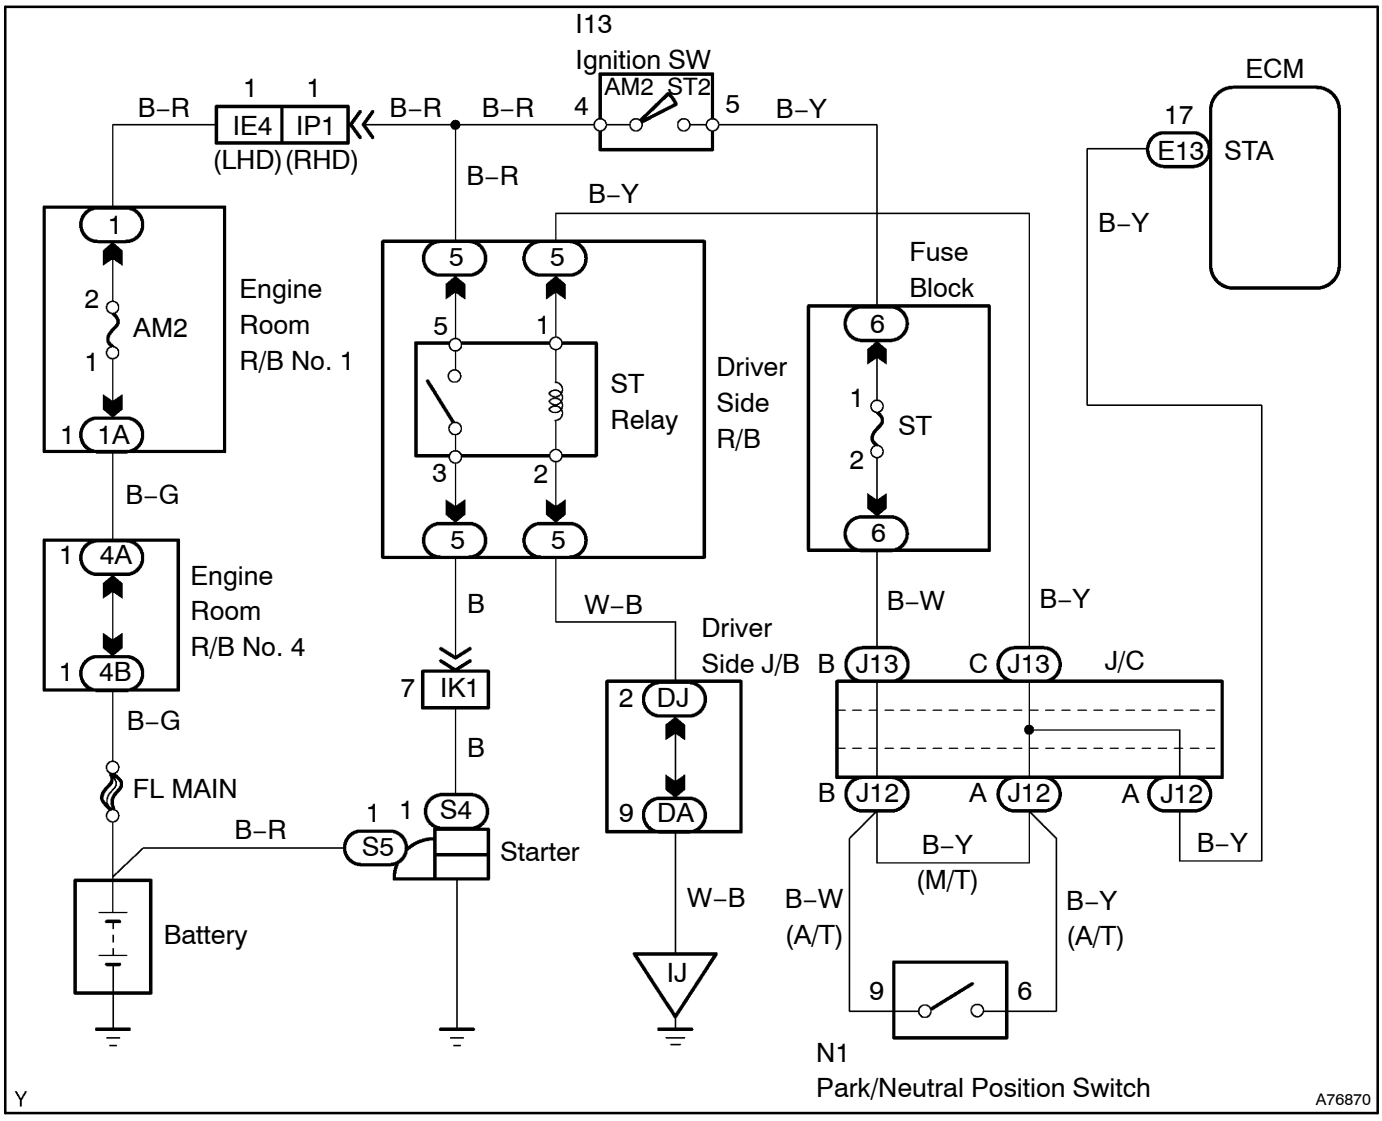
DTC No.	DTC Detection Condition	Trouble Area
P0604 P0606 P0607 P0657	ECM internal error	ECM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**



DTC	P0617	STARTER RELAY CIRCUIT HIGH

CIRCUIT DESCRIPTION

While the engine is being cranked, the positive battery voltage is applied to terminal STA of the ECM.
If the vehicle is being driven and the ECM detects the starter control signal (STA), the ECM concludes that the starter control circuit is malfunctioning. The ECM will turn on the CHK ENG and a DTC is set.

DTC No.	DTC Detection Condition	Trouble Area
P0617	When all conditions (a), (b) and (c) are satisfied with battery (+B) voltage 10.5 V or more for 20 seconds: (a) Vehicle speed greater than 12 mph (20 km/h) (b) Engine speed greater than 1,000 rpm (c) STA signal ON	• Short in Park/Neutral position switch (A/T) • Park/Neutral position switch (A/T) • Ignition switch • ECM

WIRING DIAGRAM

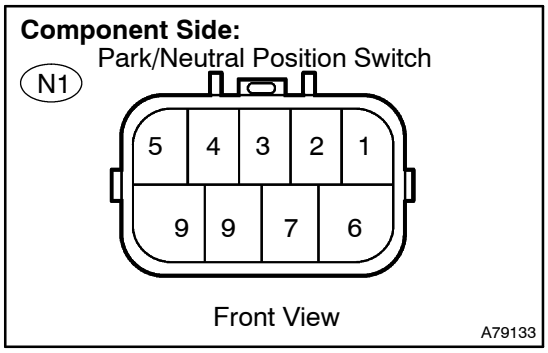
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(STARTER SIGNAL)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STARTER SIG. Read the values.



Result:

Ignition Switch Position	ON	START
STA Signal	OFF	ON

OK → **Go to step 6**

NG

2	INSPECT PARK/NEUTRAL POSITION SWITCH ASSY

(a) Disconnect the N1 park/neutral position switch connector.
(b) Check the resistance between each terminal shown below when the shift lever is moved to each position.

Standard:

Shift Position	Tester Connection	Specified Condition
P	1 – 3, 6 – 9	Below 1 Ω
R	2 – 3	Below 1 Ω
N	3 – 5, 6 – 9	Below 1 Ω
D	3 – 7	Below 1 Ω
2	3 – 4	Below 1 Ω
L	3 – 8	Below 1 Ω

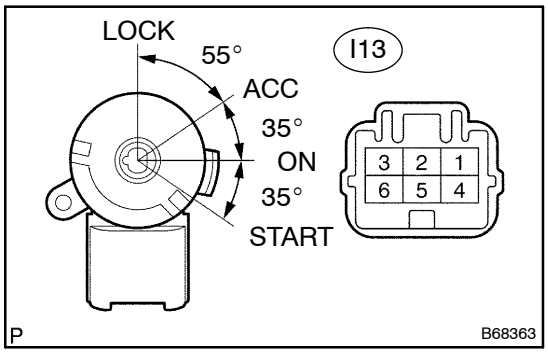
(c) Reconnect the park/neutral position switch connector.

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSY (GO TO STEP 3 AFTER THE REPLACEMENT)**

OK

3 READ VALUE OF HAND–HELD TESTER(STARTER SIGNAL)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STARTER SIG. Read the values.



Result:

Ignition Switch Position	ON	START
STA Signal	OFF	ON

OK → **SYSTEM OK**

NG

4 INSPECT IGNITION OR STARTER SWITCH ASSY

(a) Disconnect the I13 ignition switch connector.
(b) Measure the resistance between the connector terminals shown in the chart below.

Standard:

Switch Position	Tester Connection	Specified Condition
LOCK	All Terminals	10 kΩ or higher
ACC	2–3	Below 1 Ω
ON	1–3, 2–3, 4–6	Below 1 Ω
START	1–3, 4–5, 4–6	Below 1 Ω

(c) Reconnect the ignition switch connector.

NG → **REPLACE IGNITION OR STARTER SWITCH ASSY (GO TO STEP 5 AFTER THE REPLACEMENT)**

OK

5 READ VALUE OF HAND–HELD TESTER(STARTER SIGNAL)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STARTER SIG. Read the values.

Result:

Ignition Switch Position	ON	START
STA Signal	OFF	ON

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	CHECK IF DTC OUTPUT REOCCURS

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Erease DTC, enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODE; and press YES.
(d) Drive the vehicle more than 25 mph (40 km/h) for 20 seconds or more.
(e) Check DTC reoccur.

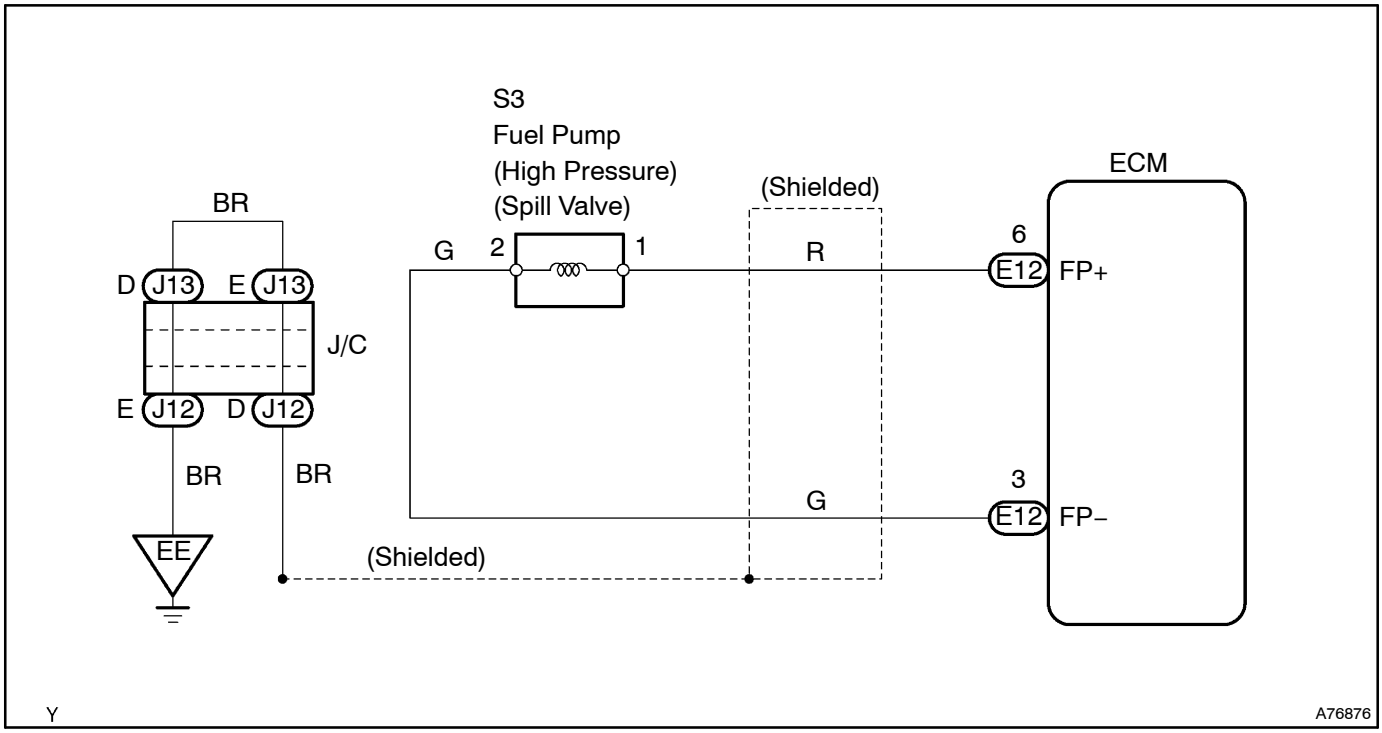
Result:

Display (DTC output)	Proceed to
P0617	A
No output	B

B → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–7)**

A →

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

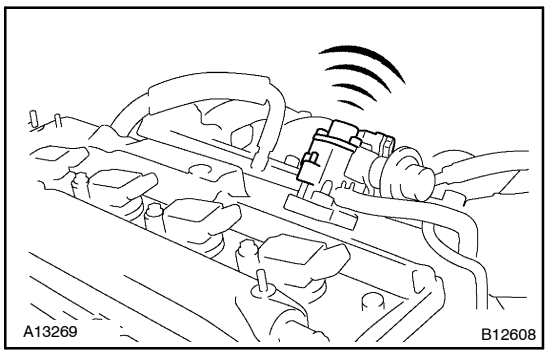


DTC	P1235	HIGH PRESSURE FUEL PUMP CIRCUIT

CIRCUIT DESCRIPTION

The fuel pump (high pressure) is an electronically controlled plunger type fuel pump which is driven by the cam provided on the intake camshaft rear end on the cylinder head.
The fuel pump (high pressure) increases the pressure of the fuel supplied from the fuel pump (low pressure) in the fuel tank to 8 to 13 MPa (81.6 to 132.6 kgf/cm^2, 1,160 to 1,885 psi) according to the operating condition, and it feeds the fuel to the fuel delivery pipe.

DTC No.	DTC Detection Condition	Trouble Area
P1235	Open or short in fuel pump (high pressure) circuit for 1 second or more	• Open or short in fuel pump (high pressure) • Fuel pump (high pressure) • ECM

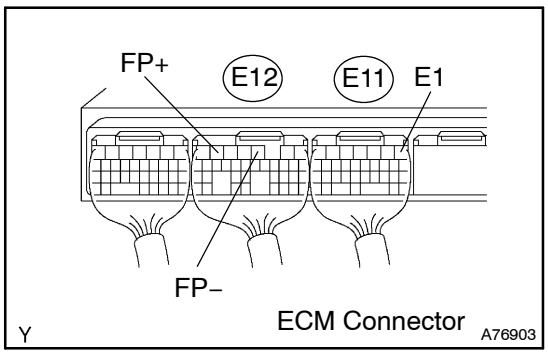


WIRING DIAGRAM

INSPECTION PROCEDURE

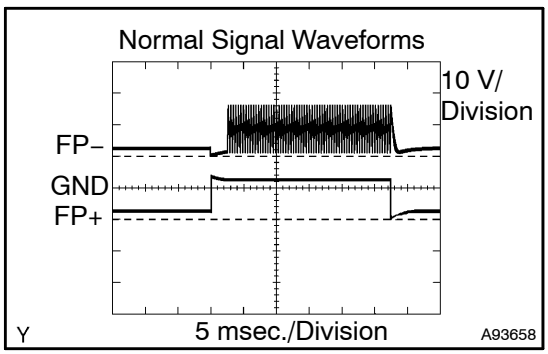
HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OPERATION OF FUEL PUMP(HIGH PRESSURE)



(a) With the engine running or cranking, use a sound scope to check that there is the normal operating sounds of the fuel pump (high–pressure) when it is operated.
Standard:
There is the operating sounds of the fuel pump (high–pressure).

NG → **REPLACE FUEL PUMP (HIGH PRESSURE)**



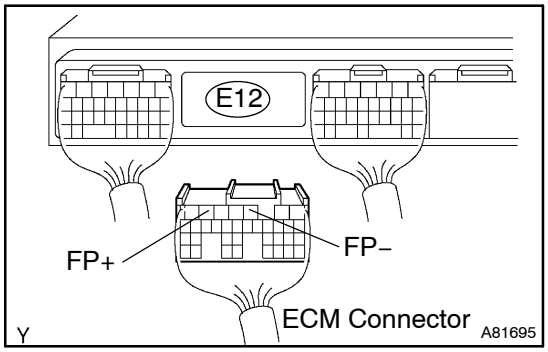
OK

2	INSPECT ECM(FP+ AND FP– VOLTAGE)

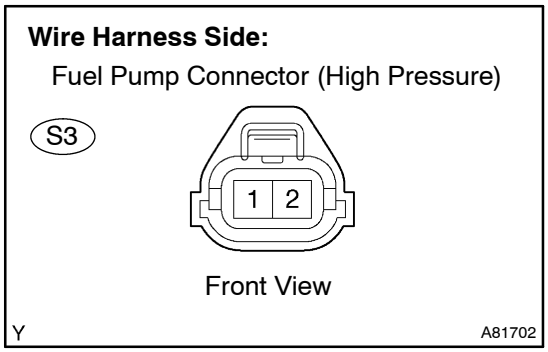
(a) Start the engine, and check the waveforms between terminals FP+ and E1, and FP– and E1 of the E11 and E12 ECM connectors.

HINT:
The correct waveform is as shown in the illustration.

NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**



OK



3	CHECK FUEL PUMP(HIGH PRESSURE) (See page 11–7)

NG → **REPLACE FUEL PUMP(HIGH PRESSURE)**

OK

4 CHECK HARNESS AND CONNECTOR(FUEL PUMP (HIGH PRESSURE) – ECM)

(a) Disconnect the E12 ECM connector.
(b) Disconnect the S3 fuel pump (high pressure) connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
FP+ (E12–6) – Fuel pump (S3–1)	Below 1 Ω
FP– (E12–3) – Fuel pump (S3–2)	Below 1 Ω

Standard (Check for short):

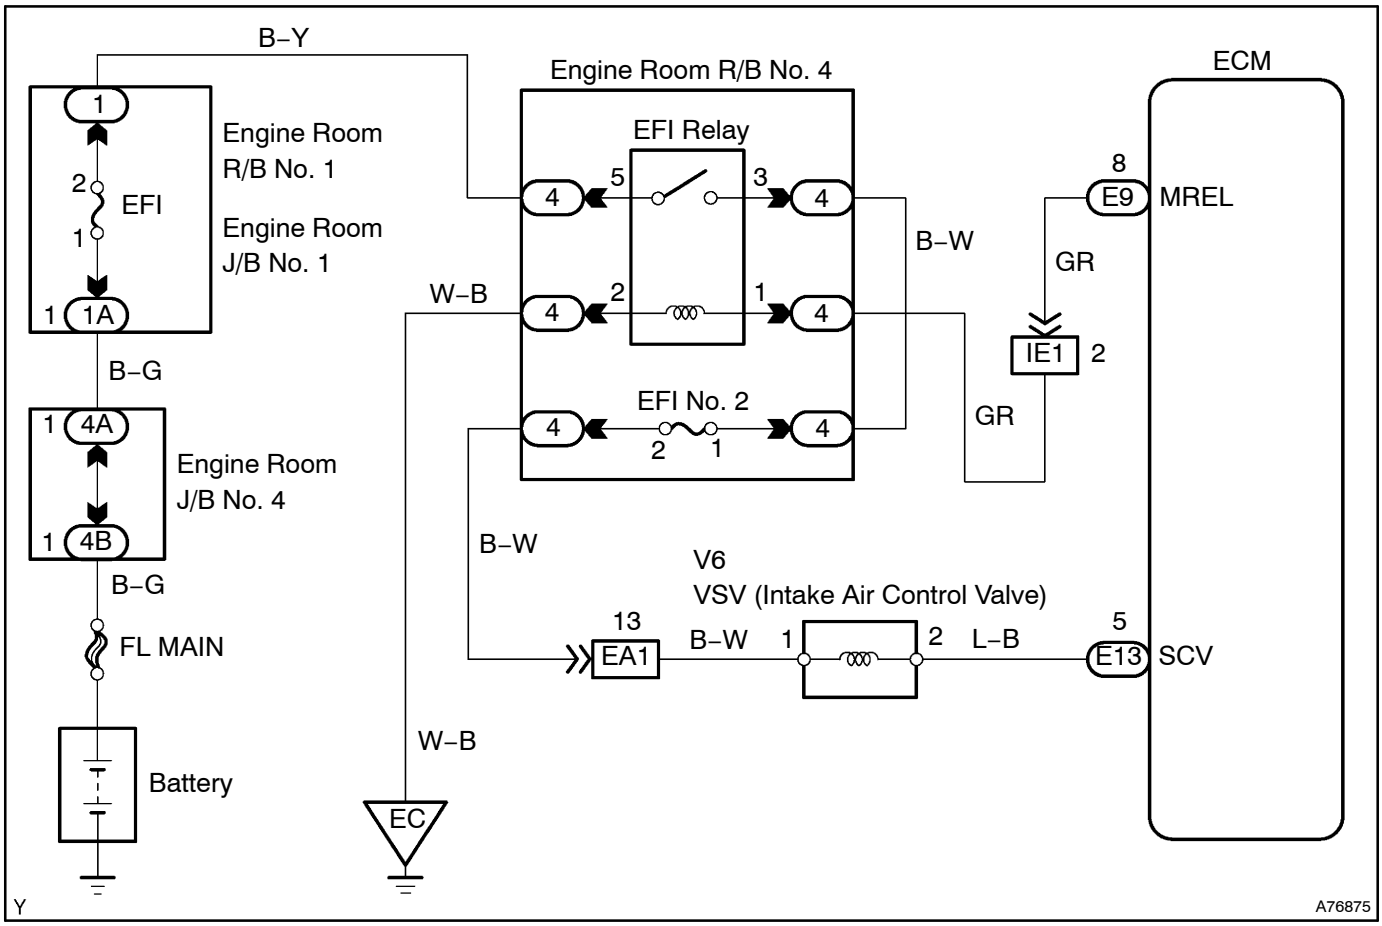
Tester Connection	Specified Condition
FP+ (E12–6) or Fuel pump (S3–1) – Body ground	10 kΩ or higher
FP– (E12–3) or Fuel pump (S3–2) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) REconnect the fuel pump (high pressure) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)



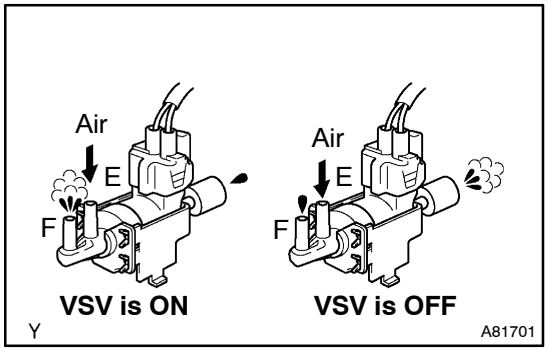
DTC	P2008	INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 1)

CIRCUIT DESCRIPTION

The Intake Air Control Valve (IACV) is opened and shut by the actuator with intake manifold vacuum. It stabilizes the engine combustion. The IACV operation generates swirl air flow in the cylinder.

DTC No.	DTC Detection Condition	Trouble Area
P2008	Open or short in VSV for IACV circuit 0.5 second or more (2 trip detection logic)	• Open of short in VSV for IACV circuit • VSV for IACV • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	PERFORM ACTIVE TEST BY HAND–HELD TESTER(VSV FOR IACV)

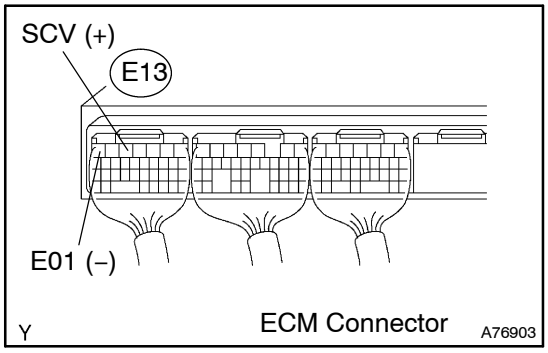
(a) Disconnect the vacuum hose from the VSV for IACV.
(b) Turn the ignition switch to ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / SCV VSV (press the right or left button).
(d) Check the VSV for IACV operation when it is operated by the hand–held tester.

Standard:

Tester Operation	Specified Condition
VSV is ON	Air from port E flows out through port F
VSV is OFF	Air does not flow from port E to port F

NG → **Go to step 2**

OK



CHECK FOR INTERMITTENT PROBLEMS (See Page 05–7)

2	INSPECT VACUUM SWITCHING VALVE ASSY NO.1(VSV FOR IACV) (See page 12–3)

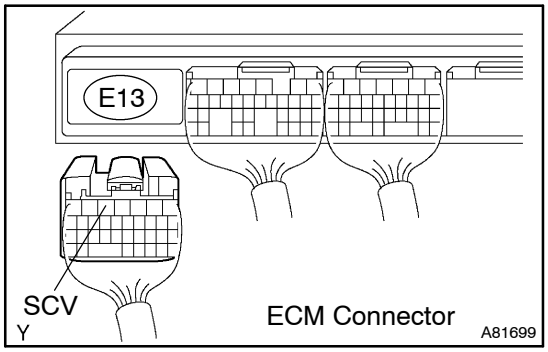
NG → **REPLACE VACUUM SWITCHING VALVE ASSY NO.1 (VSV FOR IACV)**

OK

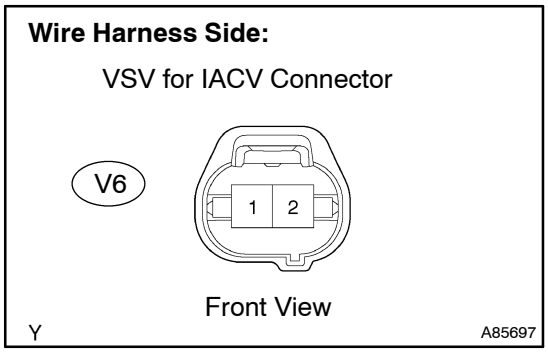
3	INSPECT ECM(SCV VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.

Standard:



Tester Connection	Specified Condition
SCV (E13–5) – E01 (E13–7)	9 to 14 V



NG → **Go to step 4**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

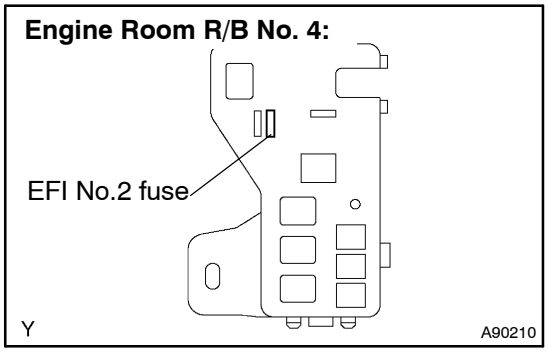
4 CHECK HARNESS AND CONNECTOR(ECM – VSV FOR IACV)

(a) Disconnect the V6 VSV for IACV connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

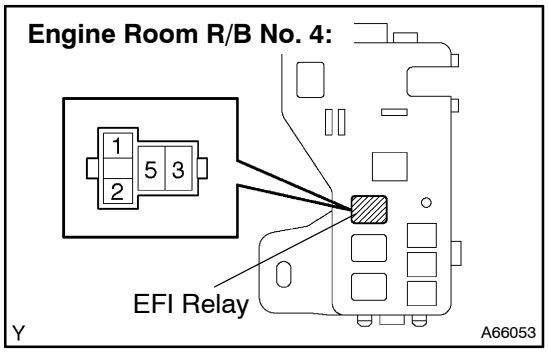
Standard (Check for open):

Tester Connection	Specified Condition
VSV for IACV (V6–2) – SCV (E13–5)	Below 1 Ω

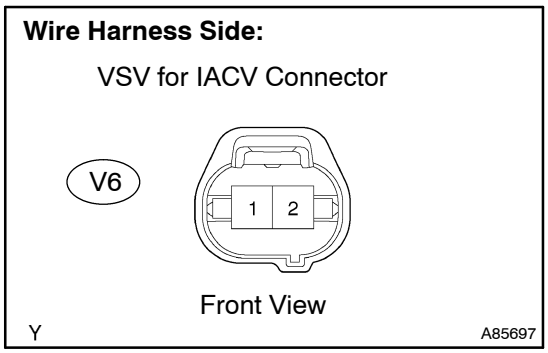
Standard (Check for short):



Tester Connection	Specified Condition
VSV for IACV (V6–2) or SCV (E13–5) – Body ground	10 kΩ or higher



(d) Reconnect the VSV for IACV connector.
(e) Reconnect the ECM connector.



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK HARNESS AND CONNECTOR(EFI RELAY – VSV FOR IACV)

(a) Inspect the EFI No. 2 fuse.
  (1) Remove the EFI No. 2 fuse from the engine room R/B No. 4.
  (2) Check for continuity in the EFI No. 2 fuse.
  Standard: Continuity
  (3) Reinstall the EFI No. 2 fuse.
(b) Remove the EFI relay from the engine room R/B No. 4.
(c) Disconnect the V6 VSV for IACV connector.
(d) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
VSV for IACV (V6–1) – Engine room R/B No. 4 (EFI relay terminal 3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
VSV for IACV (V6–1) or Engine room R/B No. 4 (EFI relay terminal 3) – Body ground	10 kΩ or higher

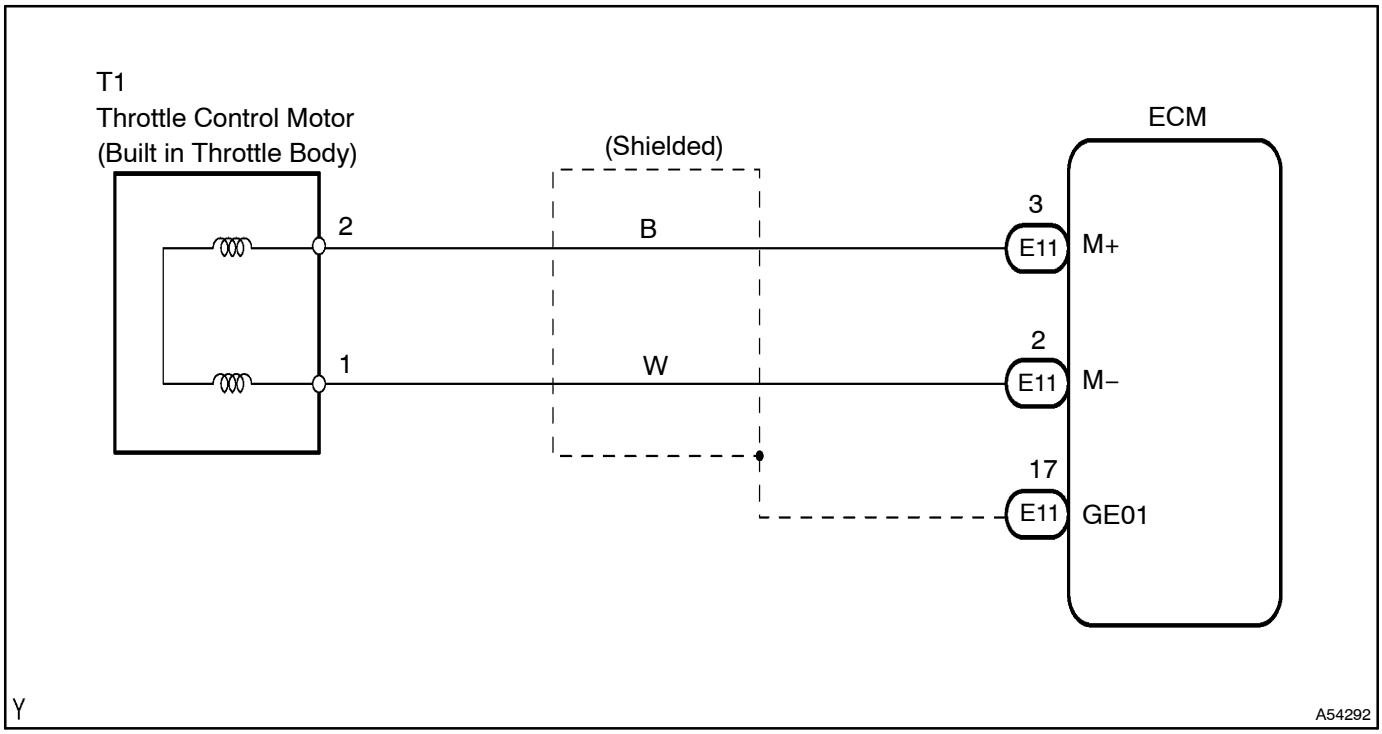
(e) Reinstall the EFI relay.
(f) Reconnect the VSV for IACV connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR ECM POWER SOURCE CIRCUIT (See page 05–236)

DTC	P2102	THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT LOW



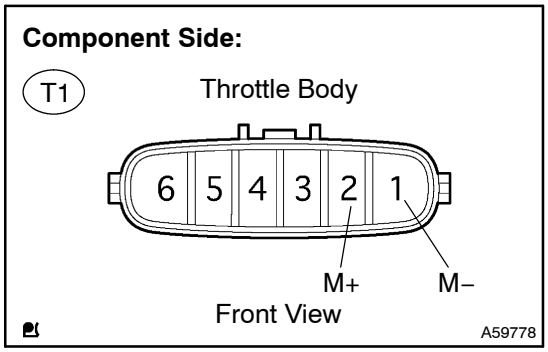
DTC	P2103	THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT HIGH

CIRCUIT DESCRIPTION

The throttle motor is operated by the ECM and it opens and closes the throttle valve.
The opening angle of the throttle valve is detected by the throttle position sensor which is mounted on the throttle body. The throttle position sensor provides feedback to the ECM. This feedback allows the ECM to control the throttle motor and monitor the throttle opening angle as the ECM responds to driver input.
HINT:
This Electrical Throttle Control System (ETCS) does not use a throttle cable.

DTC No.	DTC Detection Condition	Trouble Area
P2102	Conditions (a) and (b) continue for 2.0 seconds: (1 trip detection logic) (a) Throttle control motor output duty greater than 80 % (b) Throttle control motor current less than 0.5 A	• Open in throttle control motor circuit • Throttle control motor • ECM
P2103	Either of following conditions is met. (1 trip detection logic) • Throttle control motor current 10 A or more (0.1 second) • Throttle control motor current 7A or more (0.6second)	• Short in throttle control motor circuit • Throttle control motor • Throttle valve • Throttle body assembly • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

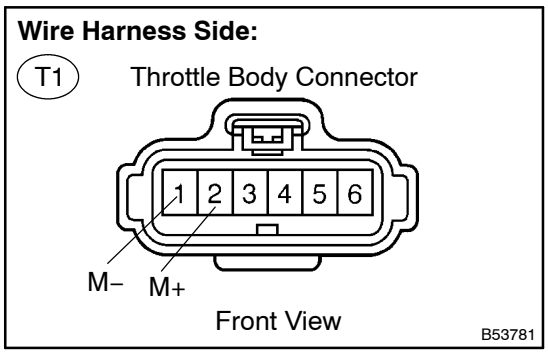
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT THROTTLE BODY ASSY(RESISTANCE OF THROTTLE CONTROL MOTOR)

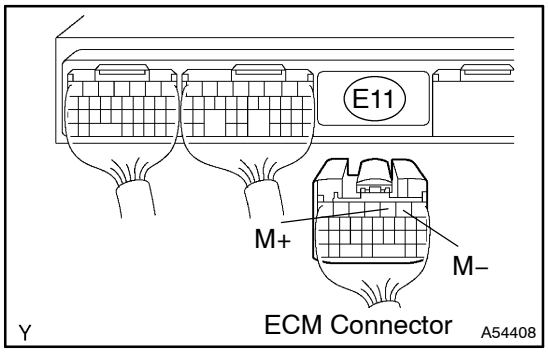
(a) Disconnect the T1 throttle body connector.

(b) Measure the resistance between terminals of the throttle body.

Standard:



Tester Connection	Specified Condition
M+ (T1–2) – M– (T1–1)	0.3 to 100 Ω at 20°C (68°F)



(c) Reconnect the throttle body connector.

NG → **REPLACE THROTTLE BODY ASSY (See page 10–8)**

OK

2	CHECK HARNESS AND CONNECTOR(THROTTLE CONTROL MOTOR – ECM)

(a) Disconnect the T1 throttle body connector.

(b) Disconnect the E11 ECM connector.

(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
M+ (T1–2) – M+ (E11–3)	Below 1 Ω
M– (T1–1) – M– (E11–2)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
M+ (T1–2) or M+ (E11–3) – Body ground	10 kΩ or higher
M– (T1–1) or M– (E11–2) – Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.

(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT THROTTLE BODY ASSY(VISUALLY CHECK THROTTLE VALVE)

(a) Check between the throttle valve and the housing for foreign objects.
Also, check if the valve can open and close smoothly.

NG → **REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

DTC	P2111	THROTTLE ACTUATOR CONTROL SYSTEM – STUCK OPEN

DTC	P2112	THROTTLE ACTUATOR CONTROL SYSTEM – STUCK CLOSED

CIRCUIT DESCRIPTION

The throttle motor is operated by the ECM and it opens and closes the throttle valve using gears. The opening angle of the throttle valve is detected by the throttle position sensor, which is mounted on the throttle body. The throttle position sensor provides feedback to the ECM to control the throttle motor and set the throttle valve angle in response to driver input.

HINT:

This Electrical Throttle Control System (ETCS) does not use a throttle cable.

DTC No.	DTC Detection Condition	Trouble Area
P2111	Throttle valve opening angle is stuck during ECM orders to close (1 trip detection logic)	• Throttle control motor circuit • Throttle control motor • Throttle body • Throttle valve
P2112	Throttle valve opening angle is stuck during ECM orders to open (1 trip detection logic)	• Throttle control motor circuit • Throttle control motor • Throttle body • Throttle valve

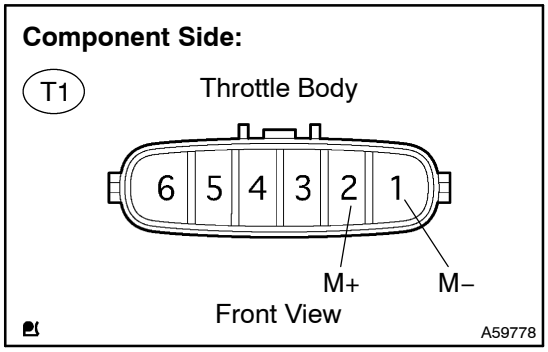
WIRING DIAGRAM

Refer to DTC P2102 on page 05–214.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.



1	INSPECT THROTTLE BODY ASSY(VISUALLY CHECK THROTTLE VALVE)

(a) Check if a foreign object has been caught between the throttle valve and the housing.

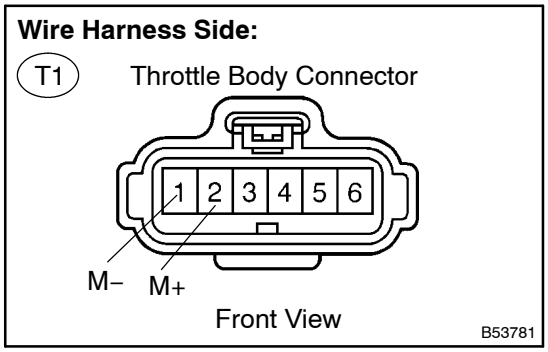
NG → REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY

OK

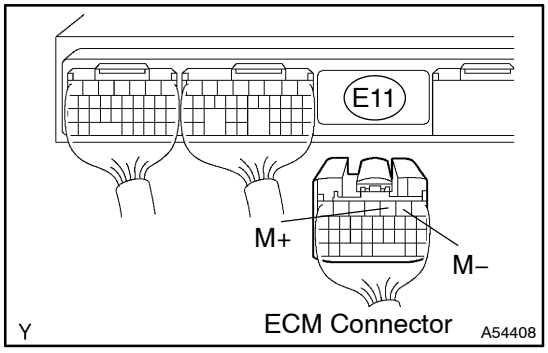
2 INSPECT THROTTLE BODY ASSY(RESISTANCE OF THROTTLE CONTROL MOTOR)

(a) Disconnect the T1 throttle body connector.
(b) Measure the resistance between terminals of the throttle body.

Standard:



Tester Connection	Specified Condition
M+ (T1–2) – M– (T1–1)	0.3 to 100 Ω at 20°C (68°F)



(c) Reconnect the throttle body connector.

NG → **REPLACE THROTTLE BODY ASSY (See Page 10–8)**

OK

3 CHECK HARNESS AND CONNECTOR(THROTTLE CONTROL MOTOR – ECM)

(a) Disconnect the T1 throttle body connector.
(b) Disconnect the E11 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

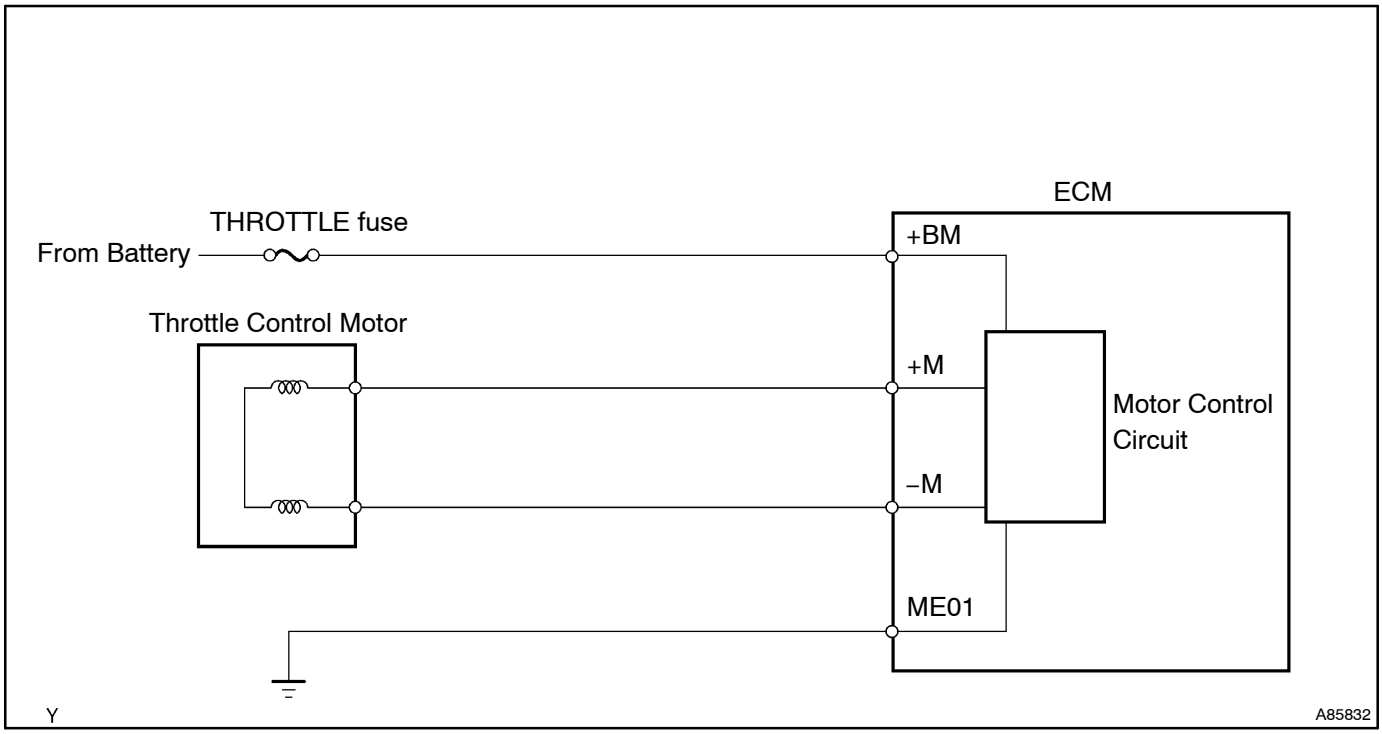
Tester Connection	Specified Condition
M+ (T1–2) – M+ (E11–3)	Below 1 Ω
M– (T1–1) – M– (E11–2)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
M+ (T1–2) or M+ (E11–3) – Body ground	10 kΩ or higher
M– (T1–1) or M– (E11–2) – Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.
(e) Reconnect the ECM connector.

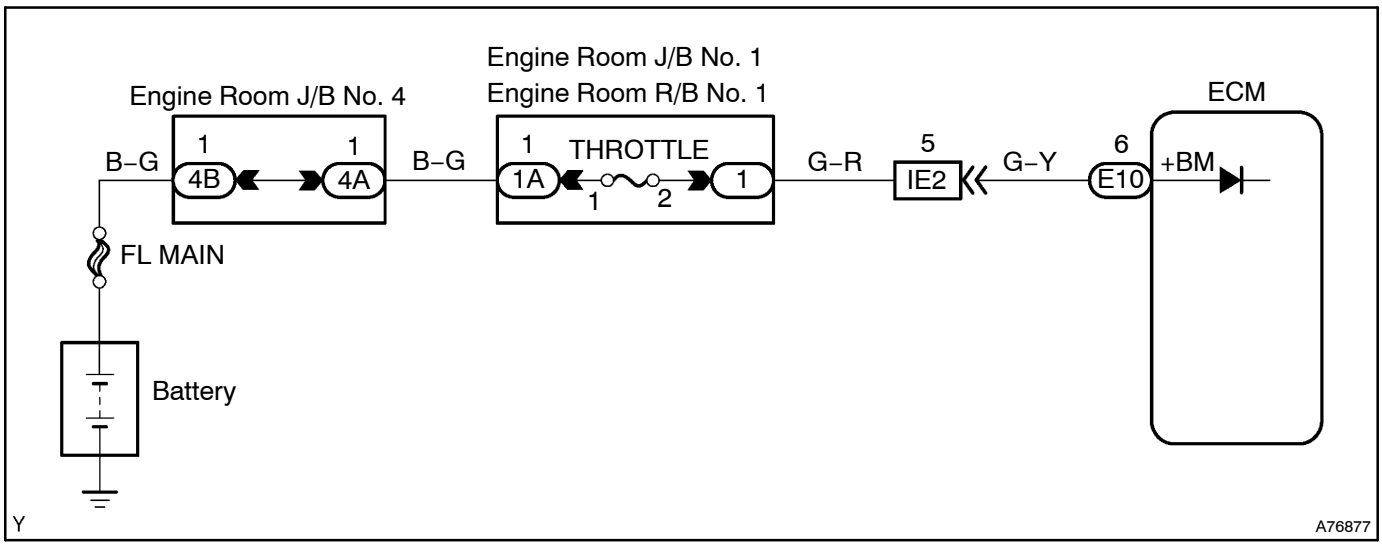
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

CHECK FOR INTERMITTENT PROBLEMS (See page 05–7)

DTC	P2118	THROTTLE ACTUATOR CONTROL MOTOR CURRENT RANGE/PERFORMANCE

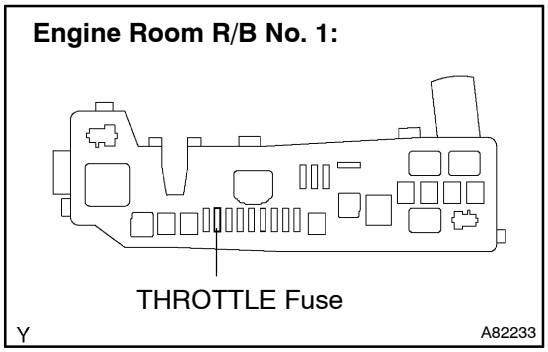


CIRCUIT DESCRIPTION

The Electronic Throttle Control System (ETCS) has a dedicated power supply circuit. The voltage (+BM) is monitored and when the voltage is low (less than 4V), the ECM concludes that the ETCS has a fault and current to the throttle control motor is cut.
When the voltage becomes unstable, the ETCS itself becomes unstable. For this reason, when the voltage is low, the current to the motor is cut. If repairs are made and the system has returned to normal, turn the ignition switch to OFF. The ECM then allows current to flow to the motor and the motor can be restarted.
HINT:
This Electrical Throttle Control System (ETCS) does not use a throttle cable.

DTC No.	DTC Detection Condition	Trouble Area
P2118	Open in ETCS power source circuit (+BM) (1 trip detection logic)	• Open in ETCS power source circuit • THROTTLE fuse • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

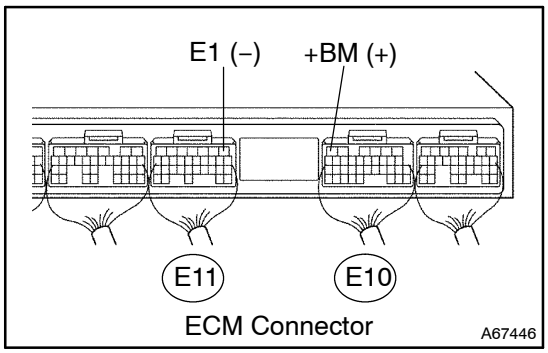
HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK FUSE(THROTTLE FUSE)

(a) Remove the THROTTLE fuse from the engine room R/B No. 1.

(b) Check for continuity in the THROTTLE fuse.



Standard: Continuity

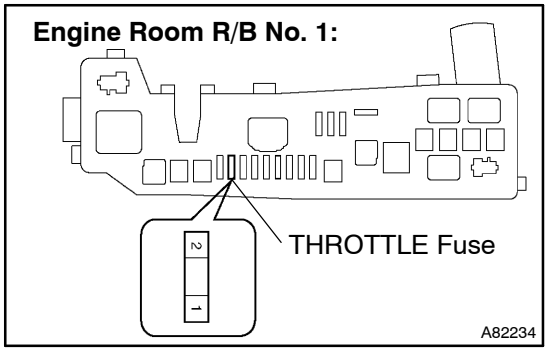
(c) Reinstall the THROTTLE fuse.

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED TO FUSE**

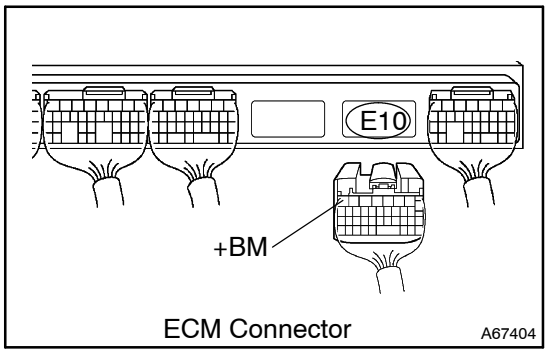
OK

2	INSPECT ECM(+BM VOLTAGE)

(a) Measure the voltage between the specified terminals of the E10 and E11 ECM connectors.



Standard:



Tester Connection	Specified Condition
+BM (E10–6) – E1 (E11–1)	9 to 14 V

OK	REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

NG

3	CHECK HARNESS AND CONNECTOR(ECM – THROTTLE FUSE, THROTTLE FUSE – BATTERY)

(a) Check the harness and the connector between the THROTTLE fuse and the ECM.
  (1) Remove the THROTTLE fuse from the engine room R/B No. 1.
  (2) Disconnect the E10 ECM connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Engine room R/B No. 1 (THROTTLE fuse terminal 2) – +BM (E10–6)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Engine room R/B No. 1 (THROTTLE fuse terminal 2) or +BM (E10–6) – Body ground	10 kΩ or higher

  (4) Reinstall the THROTTLE fuse.
  (5) Reconnect the ECM connector.

(b) Check the harness and the connector between the THROTTLE fuse and the battery.
  (1) Remove the THROTTLE fuse from the engine room R/B No. 1.
  (2) Disconnect the positive battery cable.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Battery positive cable – Engine room R/B No. 1 (THROTTLE fuse terminal 1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Battery positive cable or Engine room R/B No. 1 (THROTTLE fuse terminal 1) – Body ground	10 kΩ or higher

  (4) Reinstall the THROTTLE fuse.
  (5) Reconnect the positive battery cable.

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

CHECK AND REPLACE ENGINE ROOM RELAY BLOCK

DTC	P2119	THROTTLE ACTUATOR CONTROL THROTTLE BODY RANGE/PERFORMANCE

CIRCUIT DESCRIPTION

The Electric Throttle Control System (ETCS) is composed of a throttle motor that operates the throttle valve, a throttle position sensor that detects the opening angle of the throttle valve, an accelerator pedal position sensor that detects the accelerator pedal position, and the ECM that controls the ETCS system.
The ECM operates the throttle motor to position the throttle valve for proper response to driver inputs. The throttle position sensor, mounted on the throttle body, detects the opening angle of the throttle valve and provides this signal to the ECM so that the ECM can regulate the throttle motor.

DTC No.	DTC Detection Condition	Trouble Area
P2119	Throttle opening angle continues to vary greatly from target throttle opening angle (1 trip detection logic)	• Electric throttle control system • ECM

WIRING DIAGRAM

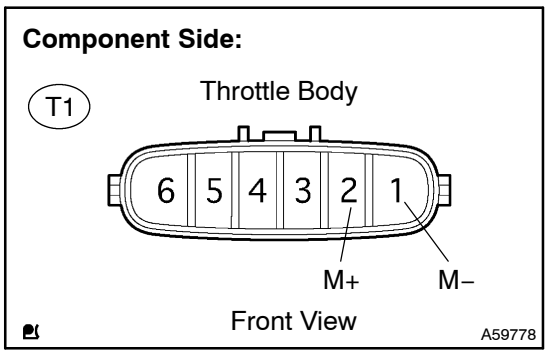
Refer to DTC P2102 on page 05–214.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P2119)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the hand–held tester.
Result:



Display (DTC output)	Proceed to
P2119	A
P2119 and other DTCs	B

HINT:
If any other codes besides P2119 are output, perform troubleshoot for those DTCs first.

B	GO TO RELEVANT DTC CHART (See page 05–31)

A

2 INSPECT THROTTLE BODY ASSY

(a) Disconnect the T1 throttle body connector.
(b) Measure the resistance between the terminals of the throttle body.
Standard:

Tester Connection	Specified Condition
M+ (T1–2) – M– (T1–1)	0.3 to 100 Ω at 20°C (68°F)

(c) Reconnect the throttle body connector.

NG → **REPLACE THROTTLE BODY ASSY (See Page 10–8)**

OK

3 REPLACE ECM AND CLEAR DTC(CHECK IF DTC OUTPUT RECURS)

(a) Replace the ECM.
(b) Clear the DTC (see page 05–19).
(c) Start and warm up the engine.
(d) Run the engine at idle for 15 seconds or more.
(e) Read the DTC using the hand–held tester (see page 05–19).
Standard: No DTC output.

OK → **NORMAL**

NG

REPLACE THROTTLE BODY ASSY (See Page 10–8)

DTC	P2120	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D” CIRCUIT

DTC	P2122	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D” CIRCUIT LOW INPUT

DTC	P2123	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D” CIRCUIT HIGH INPUT

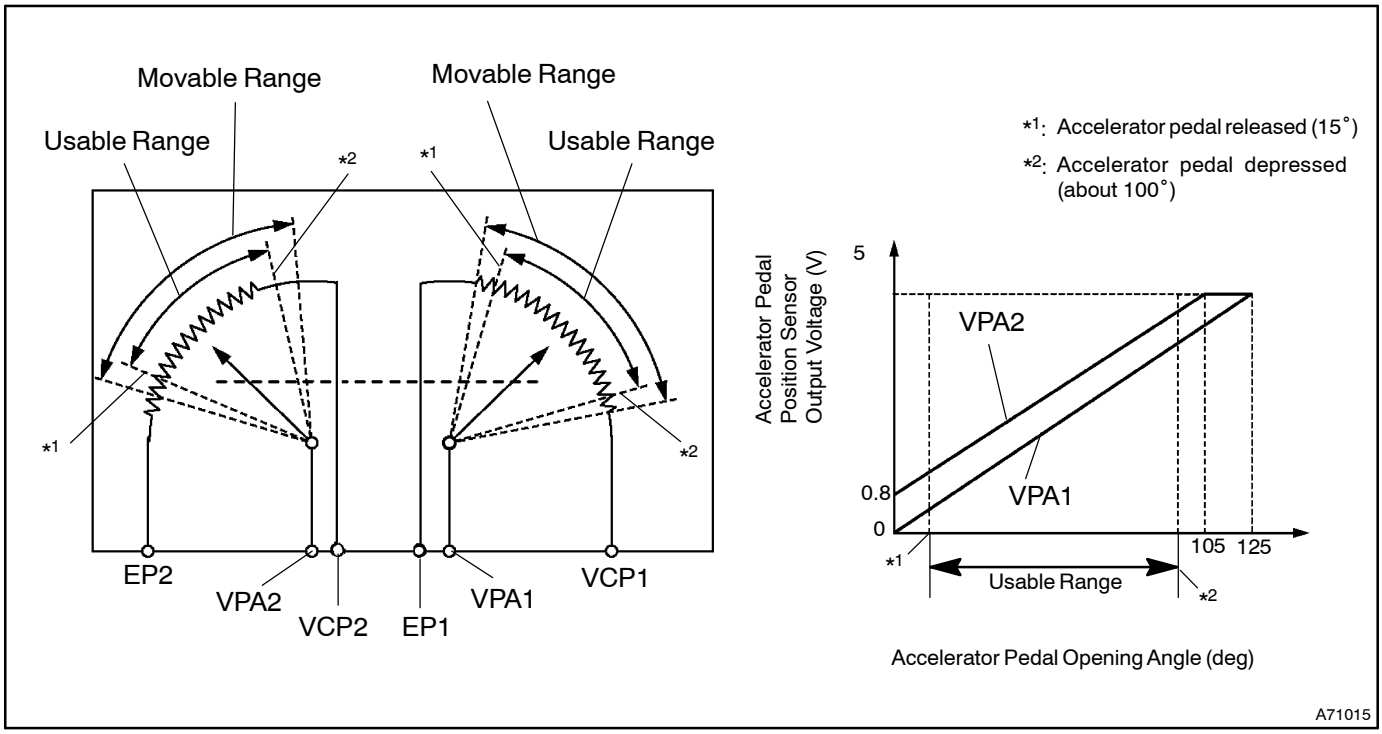
DTC	P2125	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”E” CIRCUIT

DTC	P2127	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”E” CIRCUIT LOW INPUT

DTC	P2128	THROTTLE/PEDAL POSITION SENSOR/ SWITCH ”E” CIRCUIT HIGH INPUT

DTC	P2138	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D”/”E” VOLTAGE CORRELATION

HINT:
This is the repair procedure for the accelerator pedal position sensor.



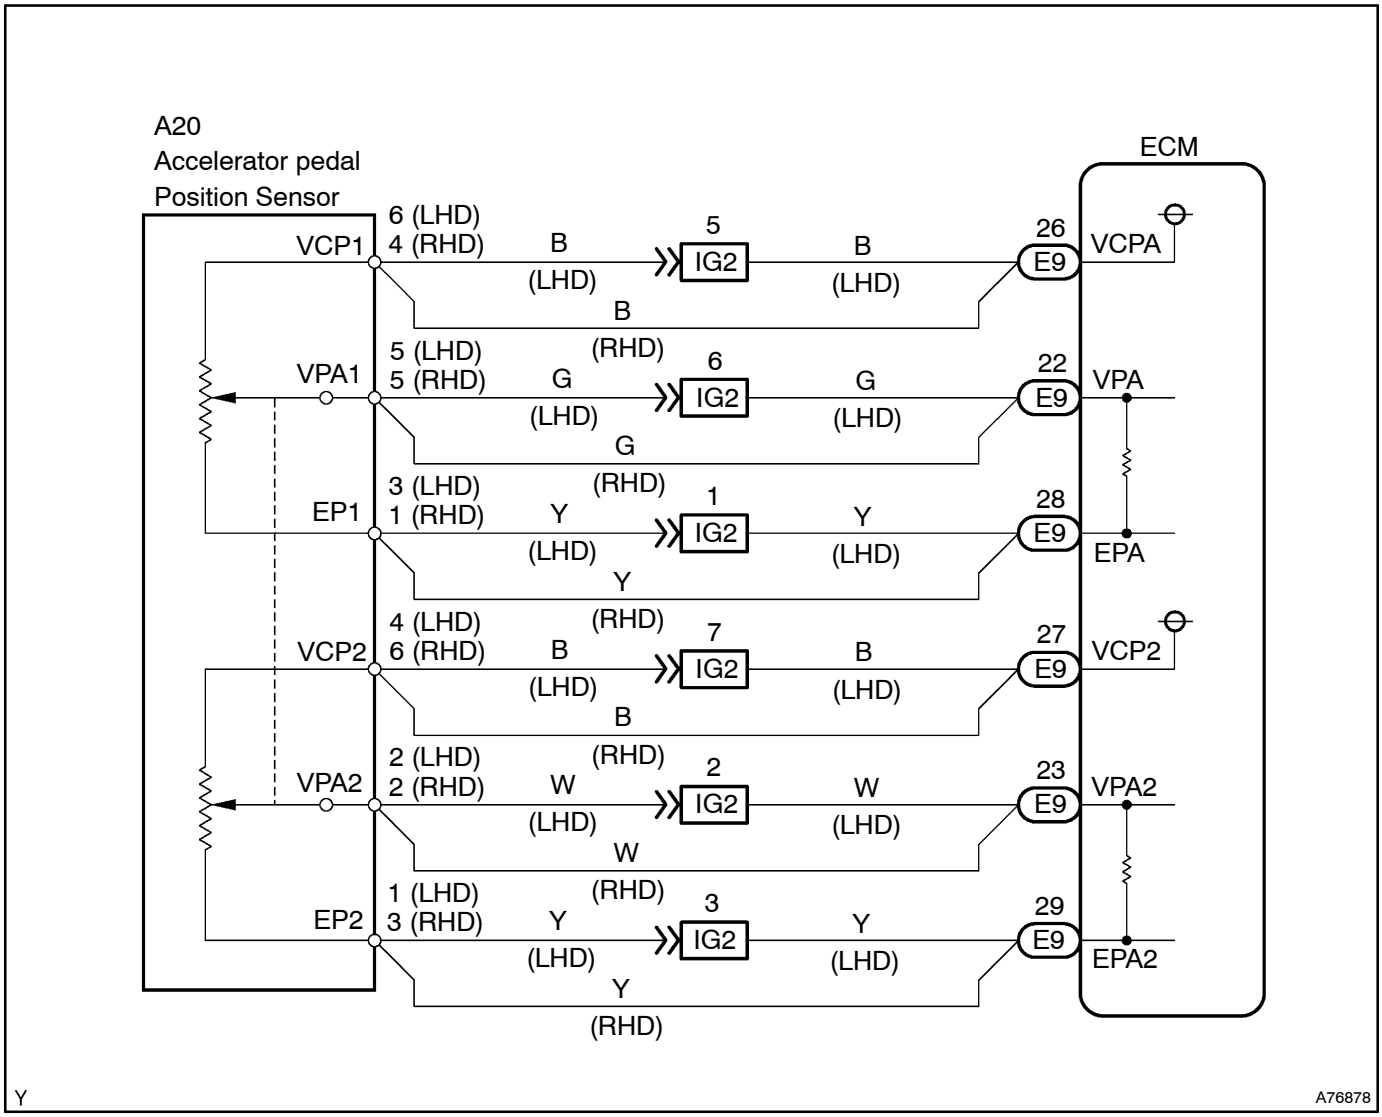
CIRCUIT DESCRIPTION

HINT:

- This Electrical Throttle Control System (ETCS) does not use a throttle cable.
- This accelerator pedal position sensor is a non–contact type.

The accelerator pedal position sensor is mounted on the accelerator pedal bracket. The accelerator pedal position sensor has 2 sensor elements / signal output: VPA1 and VPA2. VPA1 is used to detect the actual accelerator pedal angle (used for engine control) and VPA2 is used to detect malfunctions in VPA1. Voltage change of VPA1 and VPA2 change between 0V and 5V depending on the accelerator pedal angle.

The ECM monitors the accelerator pedal angle from VPA1 and VPA2 signal output, and controls the throttle motor based on these signals.



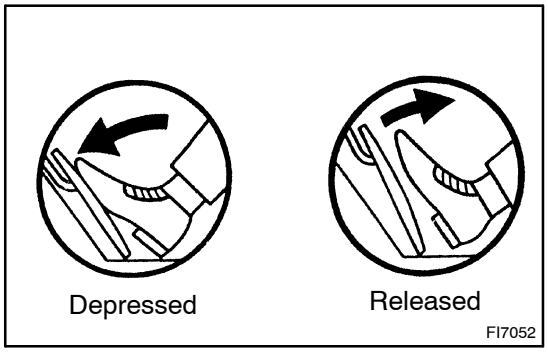
DTC No.	DTC Detection Condition	Trouble Area
P2120	Condition (a) continues for 0.5 second or more: (a) VPA is 0.2 V or less, or 4.8 V or more	• Accelerator pedal position sensor • ECM
P2122	Condition (a) continues for 0.5 second or more when accelerator pedal is fully released: (a) VPA is 0.2 V or less	• Accelerator pedal position sensor • Open in VCPA circuit • VPA circuit open or ground short • ECM
P2123	Condition (a) continues for 2.0 seconds or more: (a) VPA is 4.8 V or more	• Accelerator pedal position sensor • Open in EPA circuit • ECM
P2125	Condition (a) continues for 0.5 second or more: (a) VPA2 is 0.5 V or less, or 4.8 V or more	• Accelerator pedal position sensor • ECM
P2127	Condition (a) continues for 0.5 second or more when accelerator pedal is fully released: (a) VPA2 is 0.5 V or less	• Accelerator pedal position sensor • Open in VCP2 circuit • VPA2 circuit open or ground short • ECM
P2128	Conditions (a) and (b) continue for 2.0 seconds or more: (a) VPA2 is 4.8 V or more (b) VPA is 0.2 V or more, and 3.45 V or less	• Accelerator pedal position sensor • Open in EPA2 circuit • ECM
P2138	Condition (a) or (b) continues for 2.0 seconds or more: (a) Difference between VPA and VPA2 is 0.02 V or less (b) VPA is 0.2 V or less and VPA2 is 0.5 V or less	• VPA and VPA2 circuit are short–circuit • Accelerator pedal position sensor • ECM

HINT:

After confirming DTC P2120, P2122, P2123, P2125, P2127, P2128 and P2138, confirm the throttle valve opening using the hand–held tester.

Trouble area	Accelerator pedal position expressed as voltage output			
	Accelerator pedal released		Accelerator pedal depressed	
	ACCEL POS #1	ACCEL POS #2	ACCEL POS #1	ACCEL POS #2
VCP circuit open	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V
VPA circuit open or ground short	0 to 0.2 V	1.2 to 2.0 V	0 to 0.2 V	3.4 to 5.3 V
VPA2 circuit open or ground short	0.5 to 1.1 V	0 to 0.2 V	2.6 to 4.5 V	0 to 0.2 V
EP circuit open	4.5 to 5.5 V	4.5 to 5.5 V	4.5 to 5.5 V	4.5 to 5.5 V

WIRING DIAGRAM



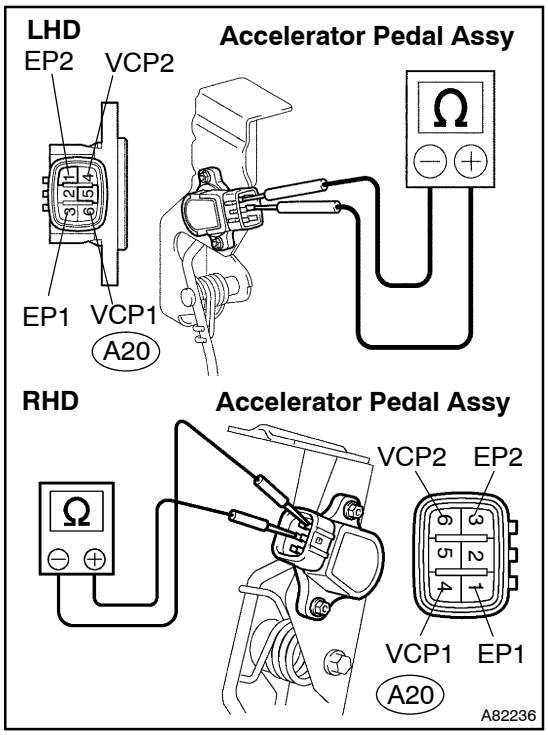
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(ACCEL POS #1 AND ACCEL POS #2)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ETCS / ACCEL POS #1 and ACCEL POS #2. Read the values.



Standard:

Accelerator Pedal	ACCEL POS #1	ACCEL POS #2
Released	0.5 to 1.1 V	1.5 to 2.9 V
Depressed	2.5 to 4.6 V	3.5 to 5.5 V

OK → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

NG

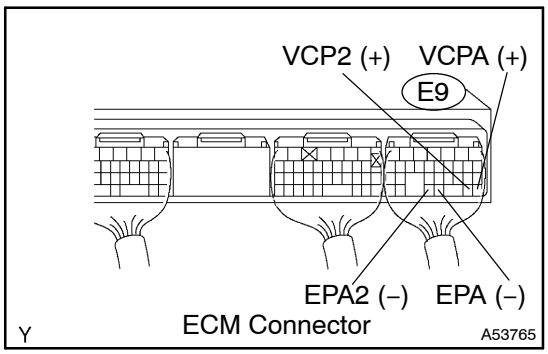
2	INSPECT ACCELERATOR PEDAL ASSY(ACCELERATOR PEDAL POSITION SENSOR)

(a) Disconnect the A20 accelerator pedal position sensor connector.
(b) Measure the resistance between each terminal.

Standard (LHD):

Tester Connection	Specified Condition
EP1 (A20–3) – VCP1 (A20–6)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (A20–1) – VCP2 (A20–4)	2.25 to 4.75 kΩ at 20°C (68°F)

Standard (RHD):



Tester Connection	Specified Condition
EP1 (A20–1) – VCP1 (A20–4)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (A20–3) – VCP2 (A20–6)	2.25 to 4.75 kΩ at 20°C (68°F)

(c) Reconnect the accelerator pedal position sensor connector.

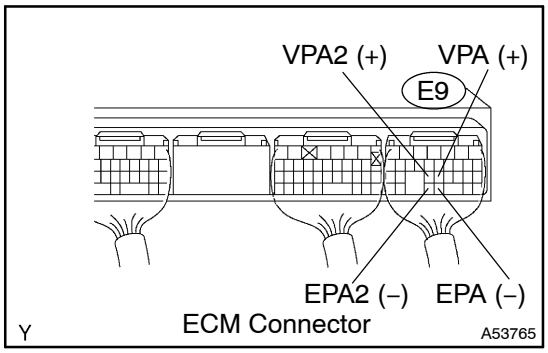
NG → **REPLACE ACCELERATOR PEDAL ASSY**

OK

3 INSPECT ECM(VCPA AND VCP2 VOLTAGE)

(a) Disconnect the A20 accelerator pedal position sensor connector.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the terminals of the E9 ECM connector.

Standard:



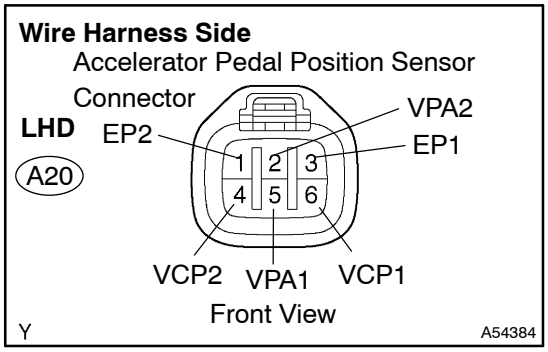
Tester Connection	Specified Condition
VCPA (E9–26) – EPA (E9–28)	4.5 to 5.5 V
VCP2 (E9–27) – EPA2 (E9–29)	4.5 to 5.5 V

(d) Reconnect the accelerator pedal position sensor connector.

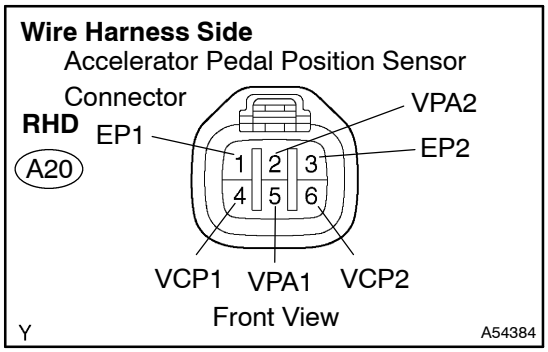
NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

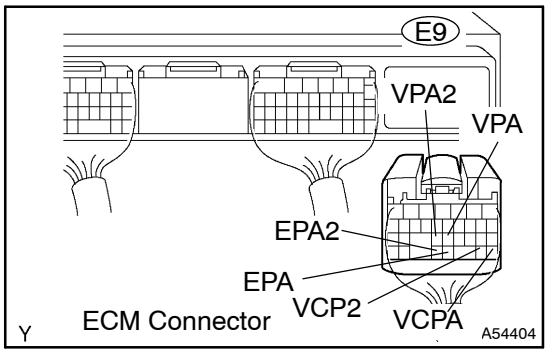
4 INSPECT ECM(VPA AND VPA2 VOLTAGE)



(a) Turn the ignition switch to ON.
(b) Measure the voltage between the terminals of the E9 ECM connector.



Accelerator Pedal Position	Tester Connection	Specified Condition
Released	VPA (E9–22) – EPA (E9–28)	0.5 to 1.1 V
Depressed	VPA (E9–22) – EPA (E9–28)	2.5 to 4.6 V
Released	VPA2 (E9–23) – EPA2 (E9–29)	1.5 to 2.9 V
Depressed	VPA2 (E9–23) – EPA2 (E9–29)	3.5 to 5.5 V



OK → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

NG

5 CHECK HARNESS AND CONNECTOR(ACCELERATOR PEDAL POSITION SENSOR – ECM)

(a) Disconnect the A20 accelerator pedal position sensor connector.

(b) Disconnect the E9 ECM connector.

(c) Check the resistance between the wire harness side connectors.

Standard (LHD):

(Check for open)

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–3) – EPA (E9–28)	Below 1 Ω
VCP1 (A20–6) – VCPA (E9–26)	Below 1 Ω
VPA2 (A20–2) – VPA2 (E9–23)	Below 1 Ω
EP2 (A20–1) – EPA2 (E9–29)	Below 1 Ω
VCP2 (A20–4) – VCP2 (E9–27)	Below 1 Ω

(Check for Short)

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–3) or EPA (E9–28) – Body ground	10 kΩ or higher
VCP1 (A20–6) or VCPA (E9–26) – Body ground	10 kΩ or higher
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	10 kΩ or higher
EP2 (A20–1) or EPA2 (E9–29) – Body ground	10 kΩ or higher
VCP2 (A20–4) or VCP2 (E9–27) – Body ground	10 kΩ or higher

Standard (RHD):

(Check for open)

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–1) – EPA (E9–28)	Below 1 Ω
VCP1 (A20–4) – VCPA (E9–26)	Below 1 Ω
VPA2 (A20–2) – VPA2 (E9–23)	Below 1 Ω
EP2 (A20–3) – EPA2 (E9–29)	Below 1 Ω
VCP2 (A20–6) – VCP2 (E9–27)	Below 1 Ω

(Check for Short)

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–1) or EPA (E9–28) – Body ground	10 kΩ or higher
VCP1 (A20–4) or VCPA (E9–26) – Body ground	10 kΩ or higher
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	10 kΩ or higher
EP2 (A20–3) or EPA2 (E9–29) – Body ground	10 kΩ or higher
VCP2 (A20–6) or VCP2 (E9–27) – Body ground	10 kΩ or higher

(d) Reconnect the accelerator pedal position sensor connector.

(e) Reconnect the ECM connector.

NG	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

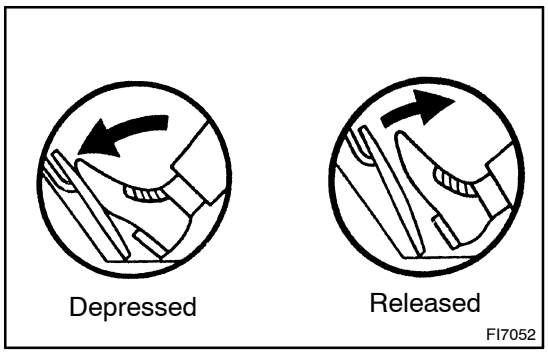
DTC	P2121	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D” CIRCUIT RANGE/PERFORMANCE

HINT:
This is the repair procedure of accelerator pedal position sensor.

CIRCUIT DESCRIPTION

Refer to DTC P2120 on page 05–224.

DTC No.	DTC Detection Condition	Trouble Area
P2121	Condition (a) and (b) continue for 0.5 second: (a) Difference between VPA1 and VPA2 deviates from the standard (b) Idling is OFF	• Open or short in accelerator pedal position sensor circuit • Accelerator pedal position sensor • ECM



WIRING DIAGRAM

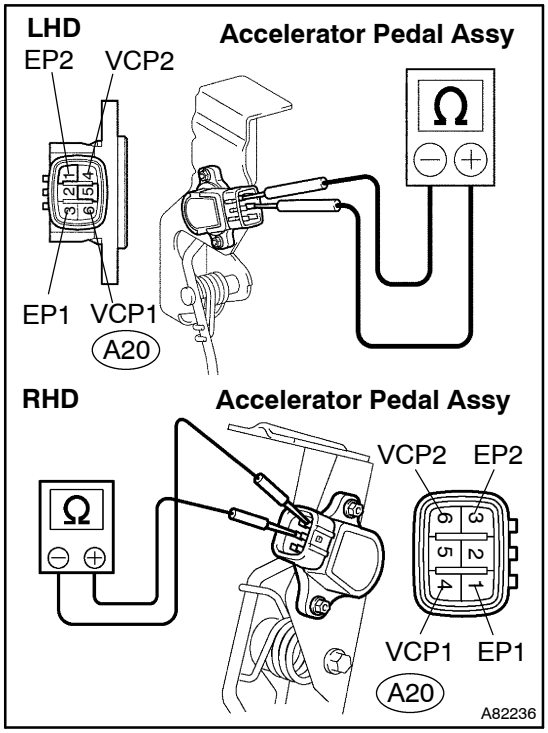
Refer to DTC P2120 on page 05–224.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(ACCEL POS #1 AND ACCEL POS #2)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ETCS / ACCEL POS #1 and ACCEL POS #2. Read the values.



Standard:

Accelerator Pedal	ACCEL POS #1	ACCEL POS #2
Released	0.5 to 1.1 V	1.5 to 2.9 V
Depressed	2.5 to 4.6 V	3.5 to 5.5 V

OK → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

NG

2 INSPECT ACCELERATOR PEDAL ASSY(ACCELERATOR PEDAL POSITION SENSOR)

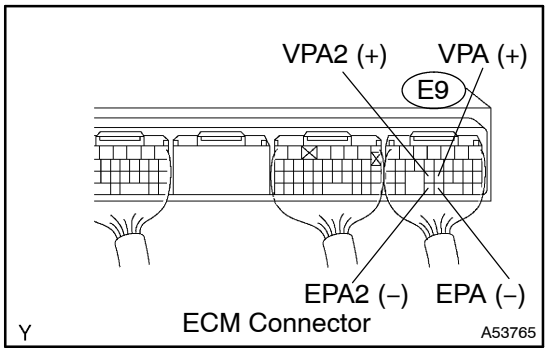
(a) Disconnect the A20 accelerator pedal position sensor connector.

(b) Measure the resistance between each terminal.

Standard (LHD):

Tester Connection	Resistance
EP1 (A20–3) – VCP1 (A20–6)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (A20–1) – VCP2 (A20–4)	2.25 to 4.75 kΩ at 20°C (68°F)

Standard (RHD):



Tester Connection	Resistance
EP1 (A20–1) – VCP1 (A20–4)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (A20–3) – VCP2 (A20–6)	2.25 to 4.75 kΩ at 20°C (68°F)

(c) Reconnect the accelerator pedal position sensor connector.

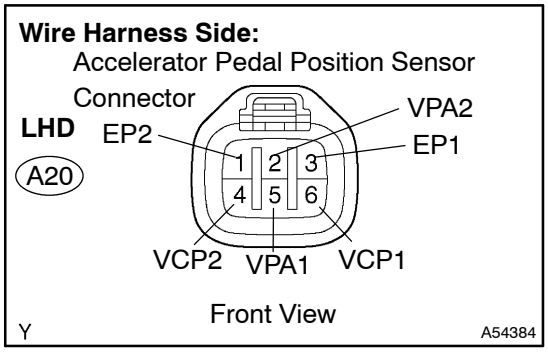
NG → **REPLACE ACCELERATOR PEDAL ASSY**

OK

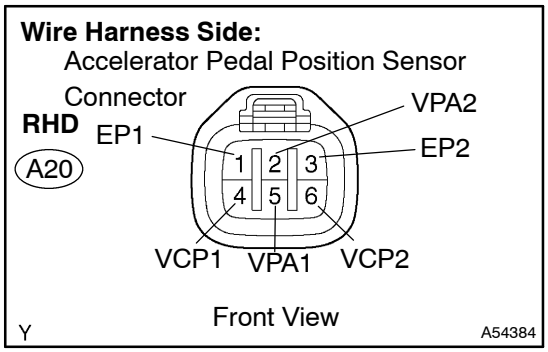
3 INSPECT ECM(VPA AND VPA2 VOLTAGE)

(a) Turn the ignition switch to ON.

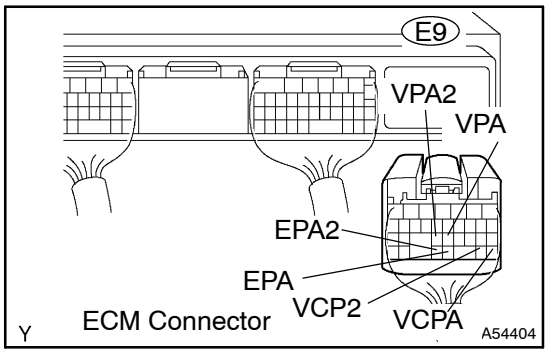
(b) Measure the voltage between the terminals of the E9 ECM connector.



Standard:



Accelerator Pedal Position	Tester Connection	Specified Condition
Released	VPA (E9–22) – EPA (E9–28)	0.5 to 1.1 V
Depressed	VPA (E9–22) – EPA (E9–28)	2.5 to 4.6 V
Released	VPA2 (E9–23) – EPA2 (E9–29)	1.5 to 2.9 V
Depressed	VPA2 (E9–23) – EPA2 (E9–29)	3.5 to 5.5 V



OK → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

NG

4 CHECK HARNESS AND CONNECTOR(ACCELERATOR PEDAL POSITION SENSOR – ECM)

(a) Disconnect the accelerator pedal position sensor connector.

(b) Disconnect the E9 ECM connector.

(c) Check the resistance between the wire harness side connectors.

Standard (LHD):

(Check for open)

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–3) – EPA (E9–28)	Below 1 Ω
VCP1 (A20–6) – VCPA (E9–26)	Below 1 Ω
VPA2 (A20–2) – VPA2 (E9–23)	Below 1 Ω
EP2 (A20–1) – EPA2 (E9–29)	Below 1 Ω
VCP2 (A20–4) – VCP2 (E9–27)	Below 1 Ω

(Check for Short)

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–3) or EPA (E9–28) – Body ground	10 kΩ or higher
VCP1 (A20–6) or VCPA (E9–26) – Body ground	10 kΩ or higher
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	10 kΩ or higher
EP2 (A20–1) or EPA2 (E9–29) – Body ground	10 kΩ or higher
VCP2 (A20–4) or VCP2 (E9–27) – Body ground	10 kΩ or higher

Standard (RHD):

(Check for open)

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–1) – EPA (E9–28)	Below 1 Ω
VCP1 (A20–4) – VCPA (E9–26)	Below 1 Ω
VPA2 (A20–2) – VPA2 (E9–23)	Below 1 Ω
EP2 (A20–3) – EPA2 (E9–29)	Below 1 Ω
VCP2 (A20–6) – VCP2 (E9–27)	Below 1 Ω

(Check for Short)

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–1) or EPA (E9–28) – Body ground	10 kΩ or higher
VCP1 (A20–4) or VCPA (E9–26) – Body ground	10 kΩ or higher
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	10 kΩ or higher
EP2 (A20–3) or EPA2 (E9–29) – Body ground	10 kΩ or higher
VCP2 (A20–6) or VCP2 (E9–27) – Body ground	10 kΩ or higher

(d) Reconnect the accelerator pedal position sensor connector.

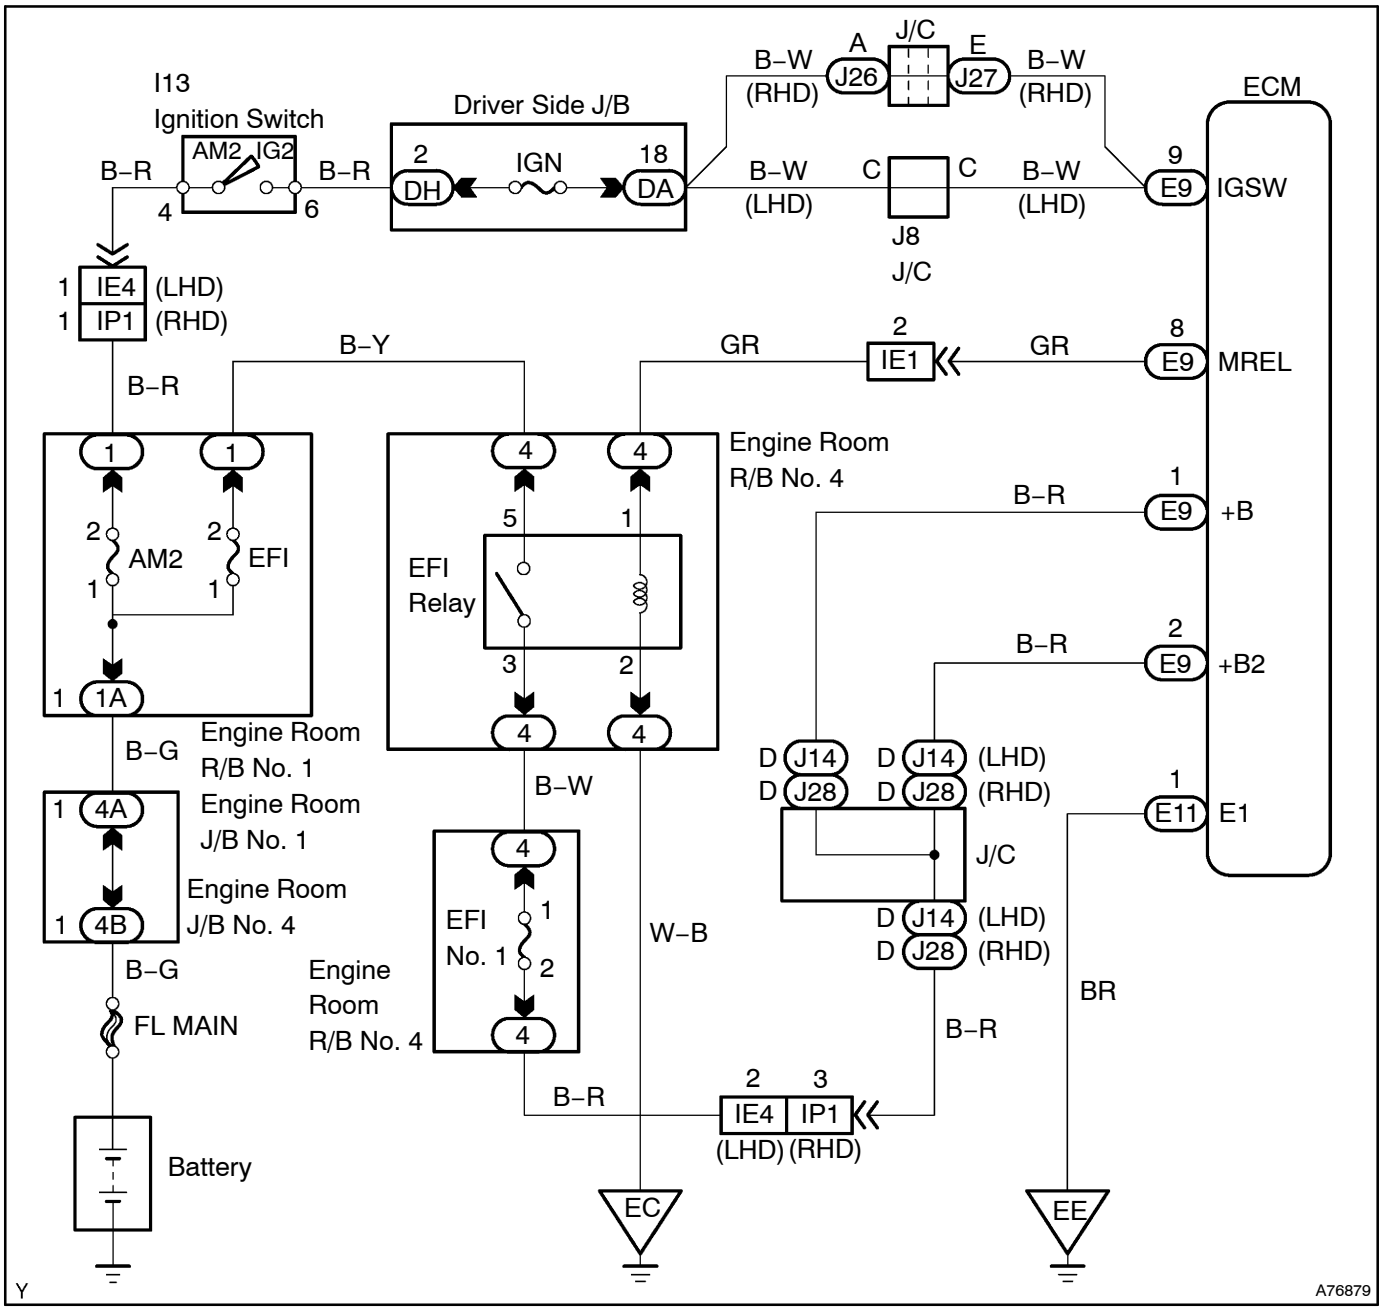
(e) Reconnect the ECM connector.

NG	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

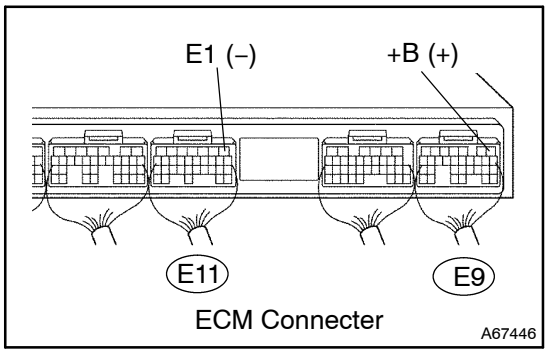
ECM POWER SOURCE CIRCUIT



CIRCUIT DESCRIPTION

When the ignition switch is turned ON, the positive battery voltage is applied to terminal IGSW of the ECM and the EFI relay (Markied: EFI) control circuit in the ECM sends a signal to terminal MREL of the ECM switching on the EFI relay.

This signal causes current to flow to the coil, closing the contacts of the EFI relay and supplying power to terminals +B and +B2 of the ECM.

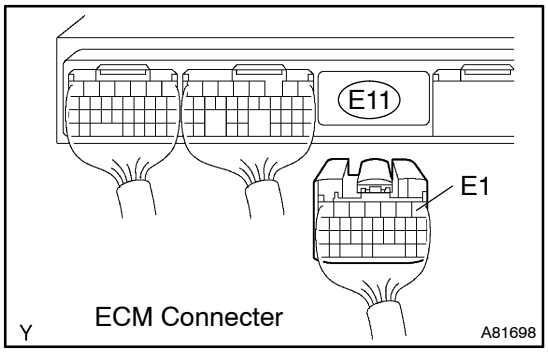


If the ignition switch is turned OFF, the ECM holds the EFI relay on for maximum of 2 seconds to allow for the initial setting of the throttle valve.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT ECM(+B VOLTAGE)



(a) Turn the ignition switch to ON.
(b) Measure the voltage between the terminals of the E9 and E11 ECM connectors.
Standard:

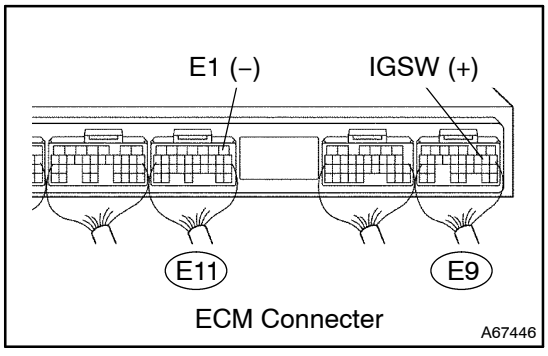
Tester Connection	Specified Condition
+B (E9–1) – E1 (E11–1)	9 to 14 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page 05–10)**

NG

2 CHECK HARNESS AND CONNECTOR(ECM – BODY GROUND)

(a) Disconnect the negative (–) battery terminal.
(b) Disconnect the E11 ECM connectors.
(c) Check the resistance between the wire harness side connector.
Standard (Check for open):



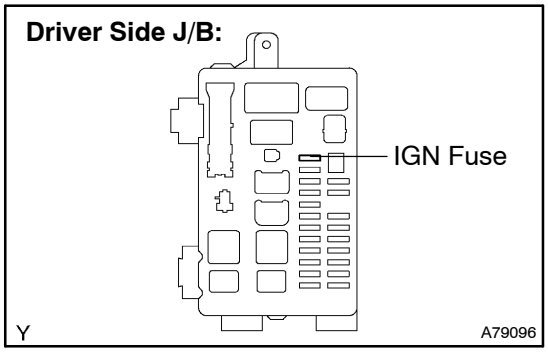
Tester Connection	Specified Condition
E1 (E11–1) – Body ground	Below 1 Ω

(d) Reconnect the ECM connector.
(e) Reconnect the negative battery terminal.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT ECM(IGSW VOLTAGE)



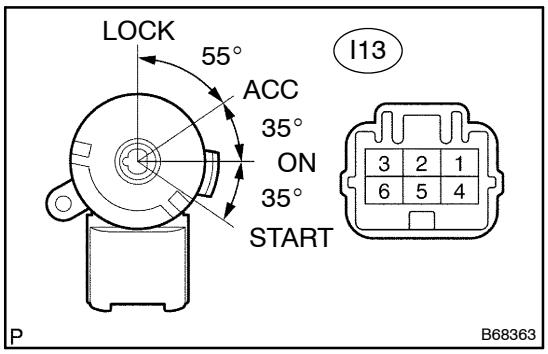
(a) Turn the ignition switch to ON.
(b) Measure the voltage between the terminals of the E9 and E11 ECM connectors.
Standard:

Tester Connection	Specified Condition
IGSW (E9–9) – E1 (E11–1)	9 to 14 V

OK → **Go to step 6**

NG

4 CHECK FUSE(IGN FUSE)



(a) Remove the IGN fuse from the driver side J/B.
(b) Check for continuity in the IGN fuse.
Standard: Continuity
(c) Reinstall the IGN fuse.

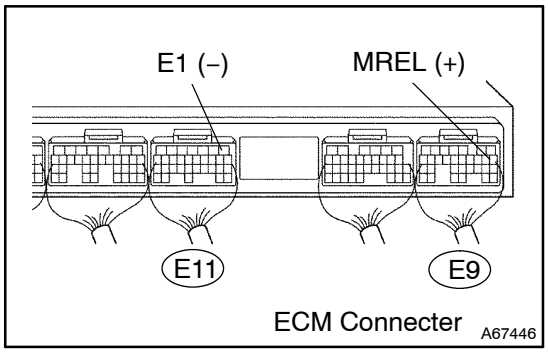
NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED TO FUSE**

OK

5 INSPECT IGNITION OR STARTER SWITCH ASSY

(a) Disconnect the I13 ignition switch connector.
(b) Measure the resistance between the connector terminals shown in the chart below.
Standard:

Switch Position	Tester Connection	Specified Condition
LOCK	All Terminals	10 kΩ or higher
ACC	2–3	Below 1 Ω
ON	1–3, 2–3, 4–6	Below 1 Ω
START	1–3, 4–5, 4–6	Below 1 Ω



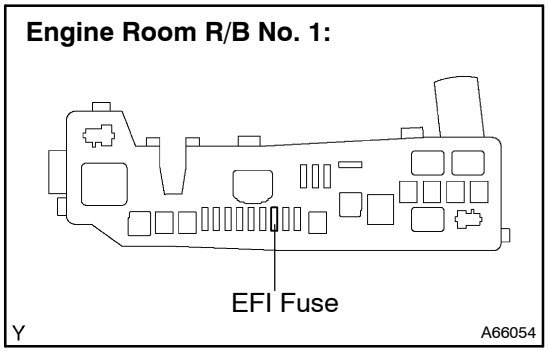
(c) Reconnect the ignition switch connector.

NG → **REPLACE IGNITION OR STARTER SWITCH ASSY (GO TO NEXT STEP 6 AFTER THE REPLACEMENT)**

OK

CHECK AND REPAIR HARNESS AND CONNECTOR(BATTERY – IGNITION SWITCH, IGNITION SWITCH – ECM)

6 INSPECT ECM(MREL VOLTAGE)



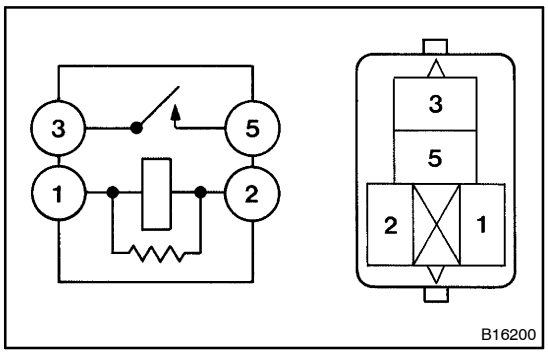
(a) Turn the ignition switch to ON.
(b) Measure the voltage between the terminals of the E9 and E11 ECM connectors.
Standard:

Tester Connection	Specified Condition
MREL (E9–8) – E1 (E11–1)	9 to 14 V

NG → **REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

7 CHECK FUSE(EFI FUSE)



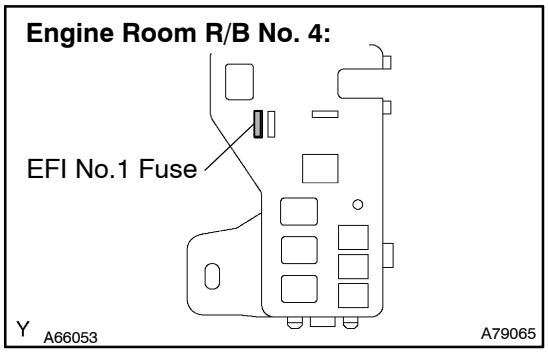
(a) Remove the EFI fuse from the engine room R/B No. 1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity
(c) Reinstall the EFI fuse.

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED TO FUSE**

OK

8 INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B No. 4.
(b) Check for continuity in the EFI relay.
Standard:



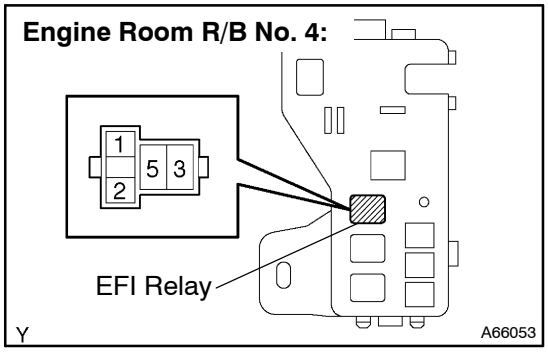
Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)

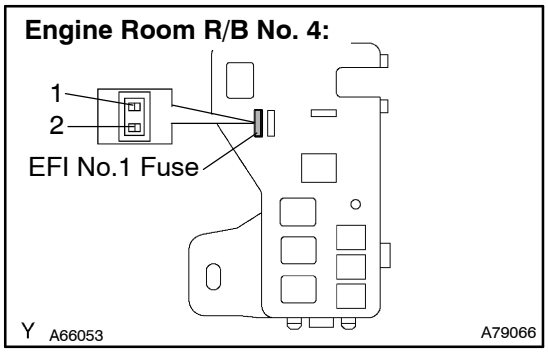
(c) Reinstall the EFI relay.

NG → **REPLACE EFI RELAY**

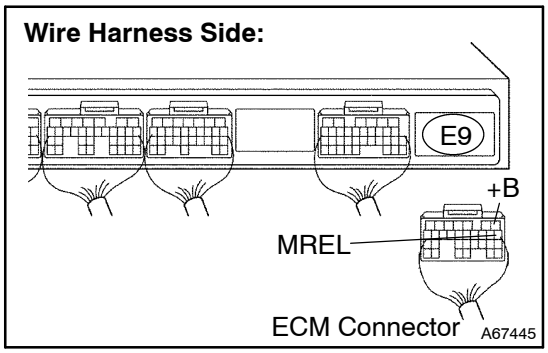
OK

9 CHECK FUSE(EFI NO.1 FUSE)





(a) Remove the EFI No. 1 fuse from the engine room R/B No. 4.
(b) Check for continuity in the EFI No. 1 fuse.
Standard: Continuity
(c) Reinstall the EFI No. 1 fuse.



NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED TO FUSE**

OK

10 CHECK HARNESS AND CONNECTOR(EFI RELAY – ECM, EFI RELAY – BODY GROUND)

(a) Check harness and connector between the EFI relay and the ECM connector.

(1) Remove the EFI relay from the engine room R/B No. 4.

(2) Remove the EFI No.1 fuse from the engine room R/B No. 4.

(3) Disconnect the E9 ECM connector.

(4) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Engine room R/B No. 4 (EFI relay terminal 1) – MREL (E9–8)	Below 1 Ω
Engine room R/B No. 4 (EFI relay terminal 3) – Engine room R/B No. 4 (EFI No. 1 fuse terminal 1)	Below 1 Ω
Engine room R/B No. 4 (EFI No. 1 fuse terminal 2) – +B (E9–1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Engine room R/B No. 4 (EFI relay terminal 1) or MREL (E9–8) – Body ground	10 kΩ or higher
Engine room R/B No. 4 (EFI relay terminal 3) or Engine room R/B No. 4 (EFI No. 1 fuse terminal 1) – Body ground	10 kΩ or higher
Engine room R/B No. 4 (EFI No. 1 fuse terminal 2) or +B (E9–1) – Body ground	10 kΩ or higher

(5) Reinstall the EFI relay.

(6) Reinstall the EFI No. 1 fuse.

(7) Reconnect the ECM connector.

(b) Check harness and connector between the EFI relay and the body ground.

(1) Remove the EFI relay from the engine room R/B No. 4.

(2) Check the resistance between the wire harness side connector and the body ground.

Standard (Check for open):

Tester Connection	Specified Condition
Engine room R/B No. 4 (EFI relay terminal 2) – Body ground	Below 1 Ω

(3) Reinstall the EFI relay.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CHECK AND REPAIR HARNESS AND CONNECTOR(TERMINAL +B OF ECM – BATTERY POSITIVE TERMINAL)

FUEL PUMP CONTROL CIRCUIT

CIRCUIT DESCRIPTION

Refer to DTC P0230 on page 05–141.

WIRING DIAGRAM

Refer to DTC P0230 on page 05–141.

INSPECTION PROCEDURE

1	CHECK FUEL PUMP OPERATION (See page 11–4)

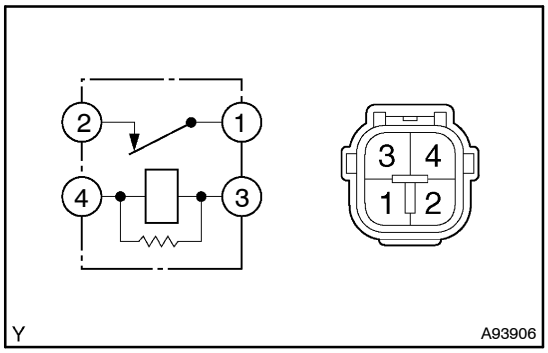
(a) Check if there is pressure in the fuel inlet hose.

HINT:

If there is fuel pressure, you will hear the sound of fuel flowing.

OK ⇒ Go to step 9

NG



2	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OPERATION OF CIRCUIT OPENING RELAY)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and warm it up.
(c) Turn the ignition switch to ON.
(d) Select the item: DIAGNOSIS / OBD/MOBD / ACTIVE TEST / FUEL PUMP/SPD.
(e) Check the relay operation when it is operated by the hand–held tester.
Standard: Operating sound can be heard from the relay.

OK ⇒ Go to step 4

NG

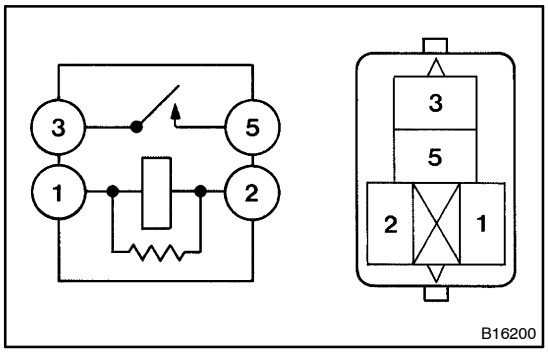
3	INSPECT RADIATOR FAN RELAY

(a) Remove the R21 radiator fan relay.
(b) Check for continuity in the radiator fan relay relay.
Standard:

Tester Connection	Specified Condition
1 – 2	Continuity
3 – 4	Continuity
1 – 2	No Continuity (Apply battery voltage to terminals 3 and 4)

(c) Reinstall the radiator fan relay relay.

NG ⇒ REPLACE FUEL PUMP RELAY



OK

4	INSPECT FUEL PUMP ASSY (See page 11–7)

NG → REPLACE FUEL PUMP ASSY

OK

5	INSPECT CIRCUIT OPENING RELAY

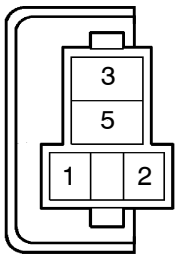
(a) Remove the C8 circuit opening relay.

(b) Check for continuity in the circuit opening relay.

Standard:

Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)

(c) Reinstall the circuit opening relay.

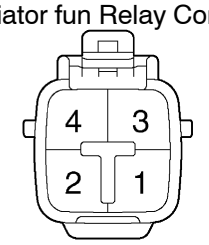


NG → REPLACE CIRCUIT OPENING RELAY

OK

6	CHECK HARNESS AND CONNECTOR(CIRCUIT OPENING RELY – RADIATOR FAN RELAY, RADIATOR FAN RELAY – FUEL PUMP, FUEL PUMP – BODY GROUND)

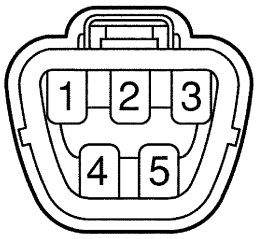
Wire Harness Side:



C8

Circuit Opening Relay Connector A79099

Wire Harness Side:



R21 Radiator fun Relay Connector

Y Front View A83889

Wire Harness Side:

F25

P Fuel Pump Connector A67586

(a) Check the harness and the connector between the circuit opening relay and the radiator fan relay.
  (1) Remove the C8 circuit opening relay.
  (2) Remove the R21 radiator fan relay.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Circuit opening relay (C8–3) – Radiator fun relay (R21–2)	Below 1 Ω
Circuit opening relay (C8–3) – Radiator fun relay (R21–4)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Circuit opening relay (C8–3) or Radiator fun relay (R21–2) – Body ground	10 kΩ or higher
Circuit opening relay (C8–3) or Radiator fun relay (R21–4) – Body ground	10 kΩ or higher

  (4) Reinstall the circuit opening relay.
  (5) Reinstall the radiator fan relay relay.

(b) Check the harness and the connector between the fuel pump relay and the fuel pump.
  (1) Remove the R21 radiator fan relay.
  (2) Disconnect the F25 fuel pump connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Radiator fun relay (R21–1) – Fuel pump (F25–4)	Below 1 Ω

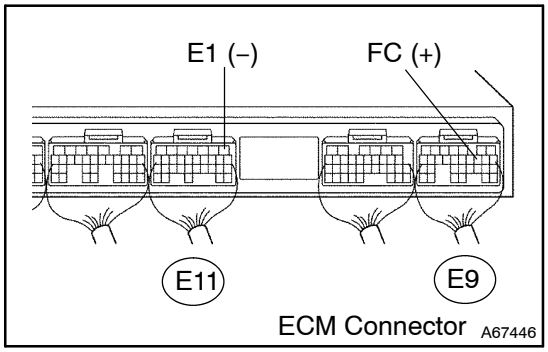
Standard (Check for short):

Tester Connection	Specified Condition
Radiator fun relay (R21–1) or Fuel pump (F25–4) – Body ground	10 kΩ or higher

  (4) Reinstall the radiator fan relay.
  (5) Disconnect the fuel pump connector.

(c) Check the harness and the connector between the fuel pump relay and the body ground.
  (1) Disconnect the F25 fuel pump connector.
  (2) Check the resistance between the wire harness side connector and body ground.

Standard (Check for open):



Tester Connection	Specified Condition
Fuel pump (F25–5) – Body ground	Below 1 Ω

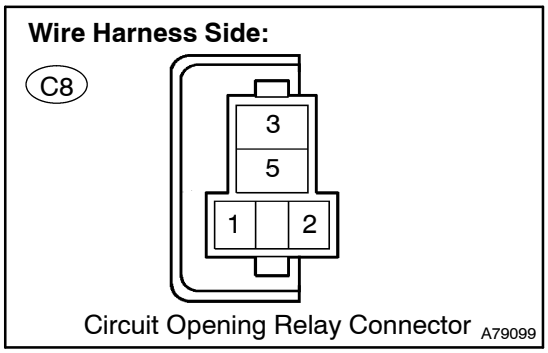
  (3) Disconnect the fuel pump connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

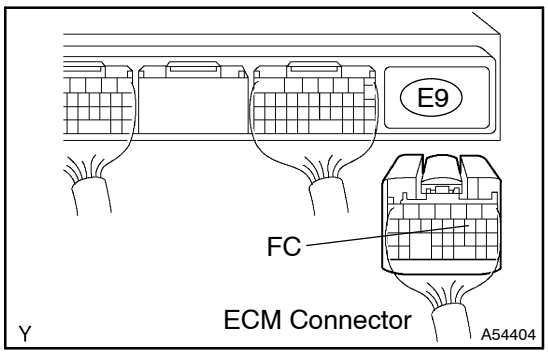
OK

7 INSPECT ECM(FC VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the terminals of the E9 and E11 ECM connectors.



Standard:



Tester Connection	Specified Condition
FC (E9–10) – E1 (E11–1)	9 to 14 V

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page 05–10)**

OK

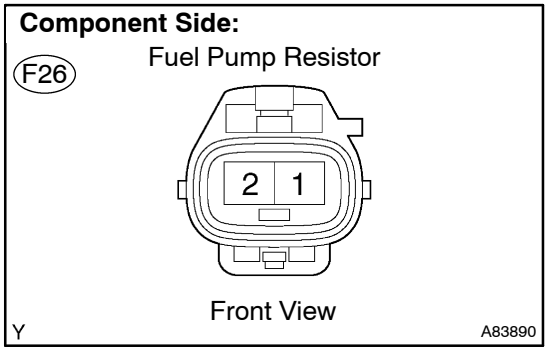
8 CHECK HARNESS AND CONNECTOR(ECM – CIRCUIT OPENING RELAY)

(a) Remove the C8 circuit opening relay.
(b) Disconnect the E9 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Circuit opening relay (C8–2) – FC (E9–10)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
Circuit opening relay (C8–2) or FC (E9–10) – Body ground	10 kΩ or higher

(d) Reinstall the circuit opening relay.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

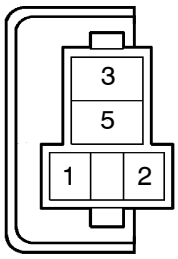
9 INSPECT FUEL PUMP RESISTOR

(a) Disconnect the F26 fuel pump resistor connector.
(b) Check the resistance between the terminals of the fuel pump resistor.

Standard:

Terminal No.	Specified condition
1 – 2	0.30 to 0.34 Ω at 20°C (68°F)

(c) Reconnect the fuel pump resistor connector.



NG → **REPLACE FUEL PUMP RESISTOR**

OK

10 CHECK HARNESS AND CONNECTOR(CIRCUIT OPENING RELAY – FUEL PUMP RESISTOR, FUEL PUMP – FUEL PUMP RESISTOR)

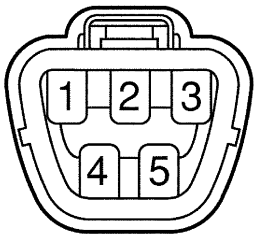
Wire Harness Side:

C8

Circuit Opening Relay Connector A79099

Wire Harness Side:

F26 Fuel Pump Resistor Connector



Front View

Y A83891

Wire Harness Side:

F25

Fuel Pump Connector

P A67586

(a) Check the harness and the connector between the circuit opening relay and the fuel pump resistor.
  (1) Remove the C8 circuit opening relay.
  (2) Disconnect the F26 fuel pump resistor connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Circuit opening relay (C8–3) – Fuel pump resistor (F26–2)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Circuit opening relay (C8–3) or Fuel pump resistor (F26–2) – Body ground	10 kΩ or higher

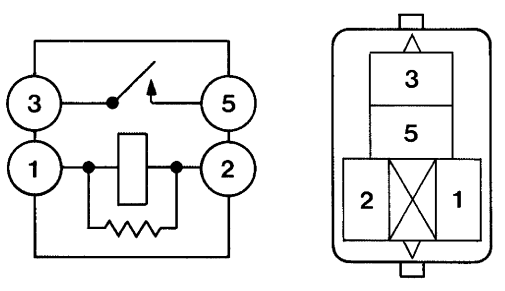
  (4) Reinstall the circuit opening relay.
  (5) Reconnect the fuel pump resistor connector.

(b) Check the harness and the connector between the fuel pimp resistor and the fuel pump resistor.
  (1) Disconnect the F25 fuel pump connector.
  (2) Disconnect the F26 fuel pump resistor connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Fuel pump (F25–4) – Fuel pump resistor (F26–1)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
Fuel pump (F25–4) or Fuel pump resistor (F26–1) – Body ground	10 kΩ or higher

  (4) Reconnect the fuel pump connector.
  (5) Reconnect the fuel pump resistor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (See page 10–65 of Pub. No. RM1018E AVENSIS)**

OK

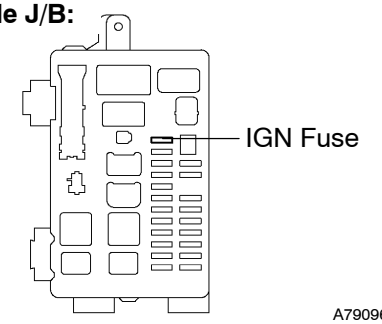
11 INSPECT IG2 RELAY

B16200

(a) Remove the IG2 relay from the engine room R/B No. 4.
(b) Check for continuity in the IG2 relay.

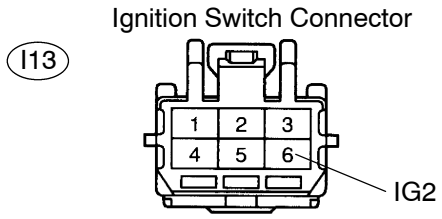
Standard:

Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No Continuity
3 – 5	Continuity (Apply battery voltage to terminals 1 and 2)



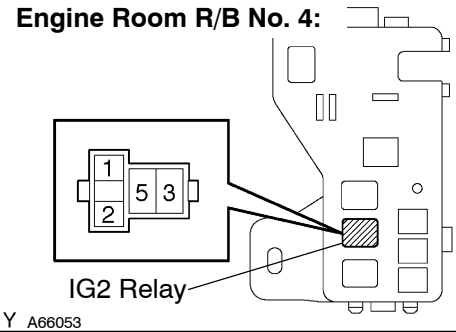
(c) Reinstall the IG2 relay.

NG → REPLACE IG2 RELAY

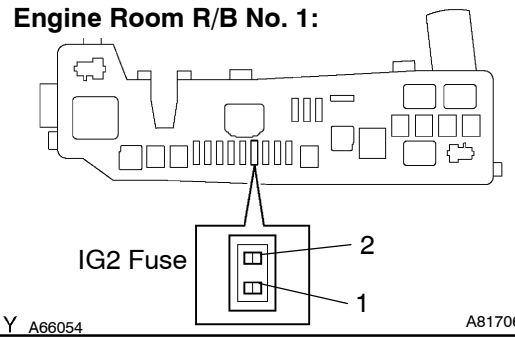


OK

12	CHECK HARNESS AND CONNECTOR(IGNITION SWITCH – IG2 RELAY, IG2 FUSE – IG2 RELAY)



Driver Side J/B:



Wire Harness Side:

Engine Room R/B No. 4:

Engine Room R/B No. 1:

(a) Check the harness and the connector between the ignition switch and the IG2 relay.

(1) Inspect the IGN fuse.

- Remove the IGN fuse from the driver side J/B.
- Check for continuity in the IGN fuse.

Standard: Continuity

- Reinstall the IGN fuse.

(2) Disconnect the I13 ignition switch connector.

(3) Remove the IG2 relay from the engine room R/B No. 4.

(4) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
IG2 (I13–6) – Engine room R/B No. 4 (IG2 relay terminal 1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
IG2 (I13–6) or Engine room R/B No. 4 (IG2 relay terminal 1) – Body ground	10 kΩ or higher

(5) Reconnect the ignition switch connector.

(6) Reinstall the IG2 relay.

(b) Check the harness and the connector between the IG2 fuse and the IG2 relay.

(1) Remove the IG2 fuse from the engine room R/B No. 1.

(2) Remove the IG2 relay from the engine room R/B No. 4.

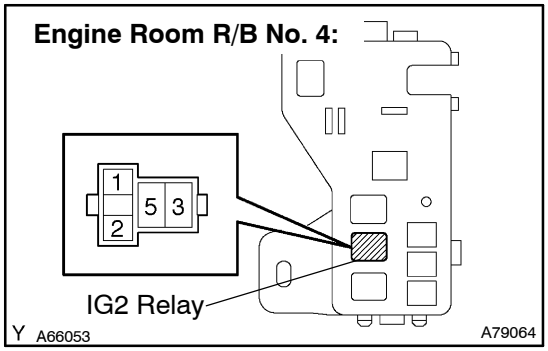
(3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

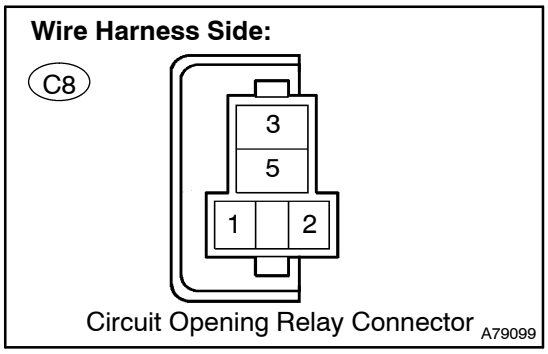
Tester Connection	Specified Condition
Engine room R/B No. 1 (IG2 fuse terminal 2) – Engine room R/B No. 4 (IG2 relay terminal 5)	Below 1 Ω

Standard (Check for short):

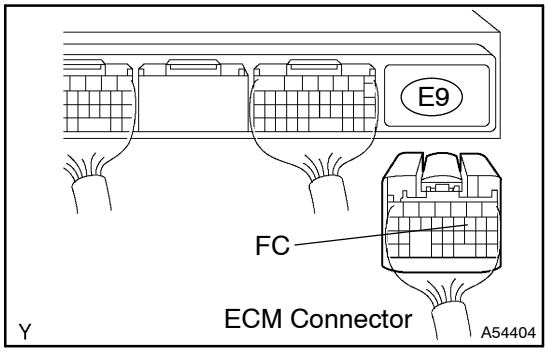
Tester Connection	Specified Condition
Engine room R/B No. 1 (IG2 fuse terminal 2) or Engine room R/B No. 4 (IG2 relay terminal 5) – Body ground	10 kΩ or higher



(4) Reinstall the IG2 fuse.



(5) Reinstall the IG2 relay.



NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

13	CHECK HARNESS AND CONNECTOR(IG2 RELAY – CIRCUIT OPENING RELAY, CIRCUIT OPENING RELAY – ECM)

(a) Check the harness and the connector between the IG2 relay and the circuit opening relay.
  (1) Remove the IG2 relay from the engine room R/B No. 4.
  (2) Remove the C8 circuit opening relay.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Engine room R/B No. 4 (IG2 relay terminal 3) – Circuit opening relay (C8–1)	Below 1 Ω
Engine room R/B No. 4 (IG2 relay terminal 3) – Circuit opening relay (C8–5)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Engine room R/B No. 4 (IG2 relay terminal 3) or Circuit opening relay (C8–1) – Body ground	10 kΩ or higher
Engine room R/B No. 4 (IG2 relay terminal 3) or Circuit opening relay (C8–5) – Body ground	10 kΩ or higher

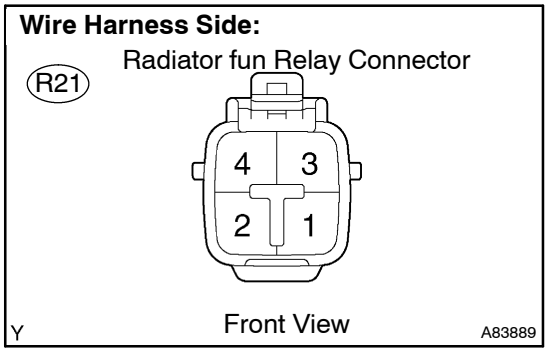
  (4) Reinstall the IG2 relay.
  (5) Reinstall the circuit opening relay.

(b) Check the harness and the connector between the circuit opening relay and the ECM.
  (1) Remove the C8 circuit opening relay.
  (2) Disconnect the E9 ECM connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Circuit opening relay (2) – FC (E9–10)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
Circuit opening relay (2) or FC (E9–10) – Body ground	10 kΩ or higher

  (4) Reinstall the circuit opening relay.
  (5) Reconnect the ECM connector.

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

14 CHECK HARNESS AND CONNECTOR(RADIATOR FAN RELAY – ECM)

(a) Check the harness and the connector between the radiator fan relay and the ECM.
   (1) Remove the R21 radiator fan relay.
   (2) Disconnect the E12 ECM connector.
   (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Radiator Fan relay (R21–3) – FPR (E12–7)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Radiator Fan relay (R21–3) or FPR (E12–7) – Body ground	10 kΩ or higher

   (4) Reinstall the radiator fan relay.
   (5) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

STARTER SIGNAL CIRCUIT

CIRCUIT DESCRIPTION

When the engine is cranked, the intake air flow is slow, so fuel vaporization is poor. A rich mixture is therefore necessary in order to achieve good startability. While the engine is being cranked, the battery voltage is applied to terminal STA of the ECM. The starter signal is mainly used to increase the fuel injection volume for the starting injection control and after–start injection control.

WIRING DIAGRAM

Refer to DTC P0617 on page 05–203.

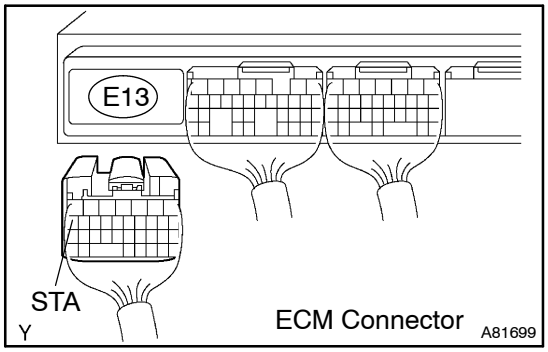
INSPECTION PROCEDURE

HINT:

This diagnostic troubleshooting procedure is on the premise that the engine is being cranked under normal conditions. If the engine does not crank, proceed to the problem symptoms table on page 05–10.

1	READ VALUE OF HAND–HELD TESTER(STARTER SIGNAL)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) On the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STARTER SIG. Read the values.



Result:

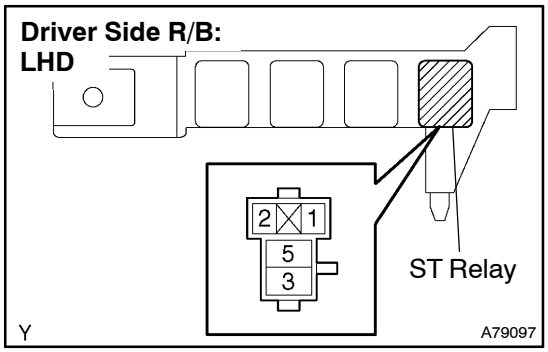
Ignition Switch Position	ON	START
STA Signal	OFF	ON

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page 05–10)**

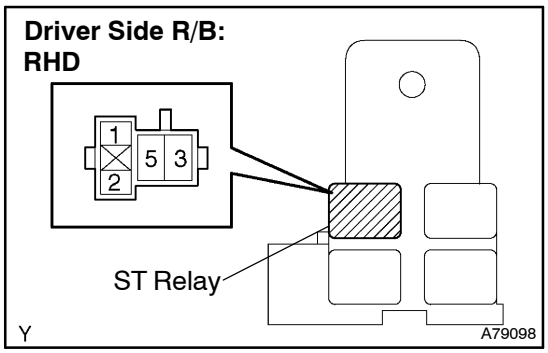
NG

2 CHECK HARNESS AND CONNECTOR(ECM – STARTER RELAY)

(a) Disconnect the E13 ECM connector.
(b) Remove the ST relay from the driver side R/B.
(c) Check the resistance between the wire harness side connectors.



Standard (Check for open):



Tester Connection	Specified Condition
STA (E13–17) – Driver side R/B (ST relay terminal 1)	Below 1 Ω

Standard (Check for short):

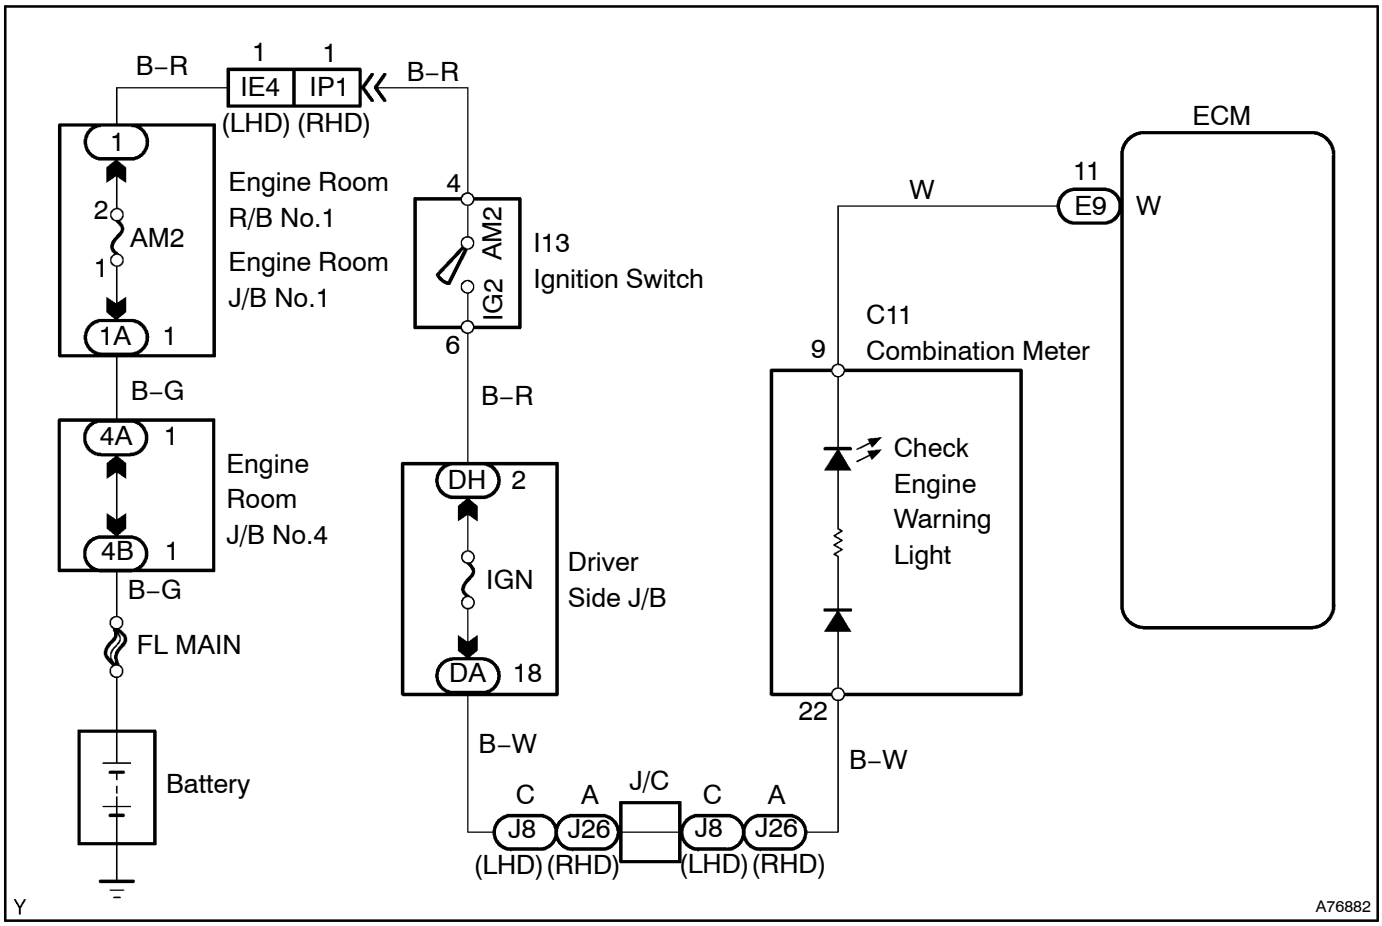
Tester Connection	Specified Condition
STA (E13–17) or Driver side R/B (ST relay terminal 1) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the ST relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)



CHECK ENGINE WARNING LIGHT CIRCUIT

CIRCUIT DESCRIPTION

The CHK ENG is used to indicate the ECM's detection of a vehicle malfunction.
The instrument panel IGN fuse provides the circuit power and the ECM provides the circuit ground that illuminates the CHK ENG.

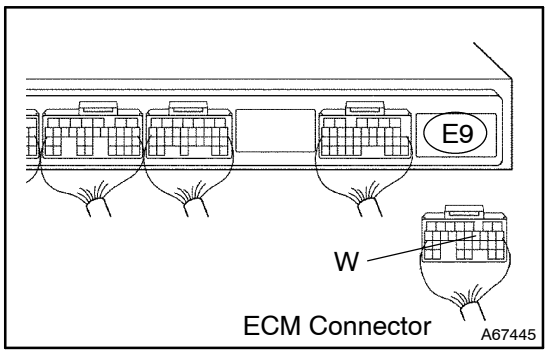
CHK ENG operations should be checked visually:
The CHK ENG should be illuminated when the ignition is first turned to ON. If the CHK ENG is always ON or OFF, use the hand–held tester and follow the procedures below to determine the cause of the problem.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Troubleshoot each trouble symptom in accordance with the chart below.

CHK ENG remains on	Start inspection from step 1
CHK ENG is not illuminated	Start inspection from step 3



1	CLEAR DTC

(a) Connect the hand–held tester to the DLC 3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Read the DTC (see page 05–19).
(d) Clear the DTC (see page 05–19).
(e) Check that the CHK ENG is not illuminated.
Standard: CHK ENG is not illuminated

OK	REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page 05–7)

NG

2	CHECK HARNESS AND CONNECTOR(CHECK FOR SHORT IN WIRE HARNESS)

(a) Disconnect the E9 ECM connector.
(b) Turn the ignition switch to ON.
(c) Check that the CHK ENG is not illuminated.
Standard: CHK ENG is not illuminated
(d) Reconnect the ECM connector.

NG	CHECK AND REPAIR HARNESS AND CONNECTOR

OK

REPLACE ECM (See page 10–65 of Pub. No. RM1018E AVENSIS)

3	CHECK CHK ENG CONDITION

(a) Check that the CHK ENG is illuminated when turning the ignition switch to ON.
Standard: CHK ENG is illuminated

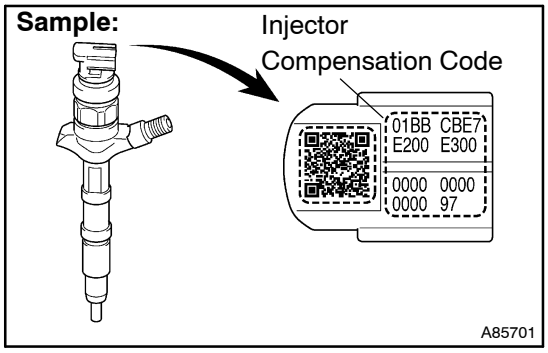
OK	SYSTEM OK

NG

4	INSPECT COMBINATION METER ASSY(CHK ENG CIRCUIT)

(a) See the combination meter troubleshooting procedure on page 05–10.

NG	REPAIR OR REPLACE BULB OR COMBINATION METER ASSEMBLY



OK

CHECK AND REPAIR HARNESS AND CONNECTOR (COMBINATION METER – ECM)

ECD SYSTEM (1CD–FTV)(From September, 2003)

PRECAUTION

05DVP–02

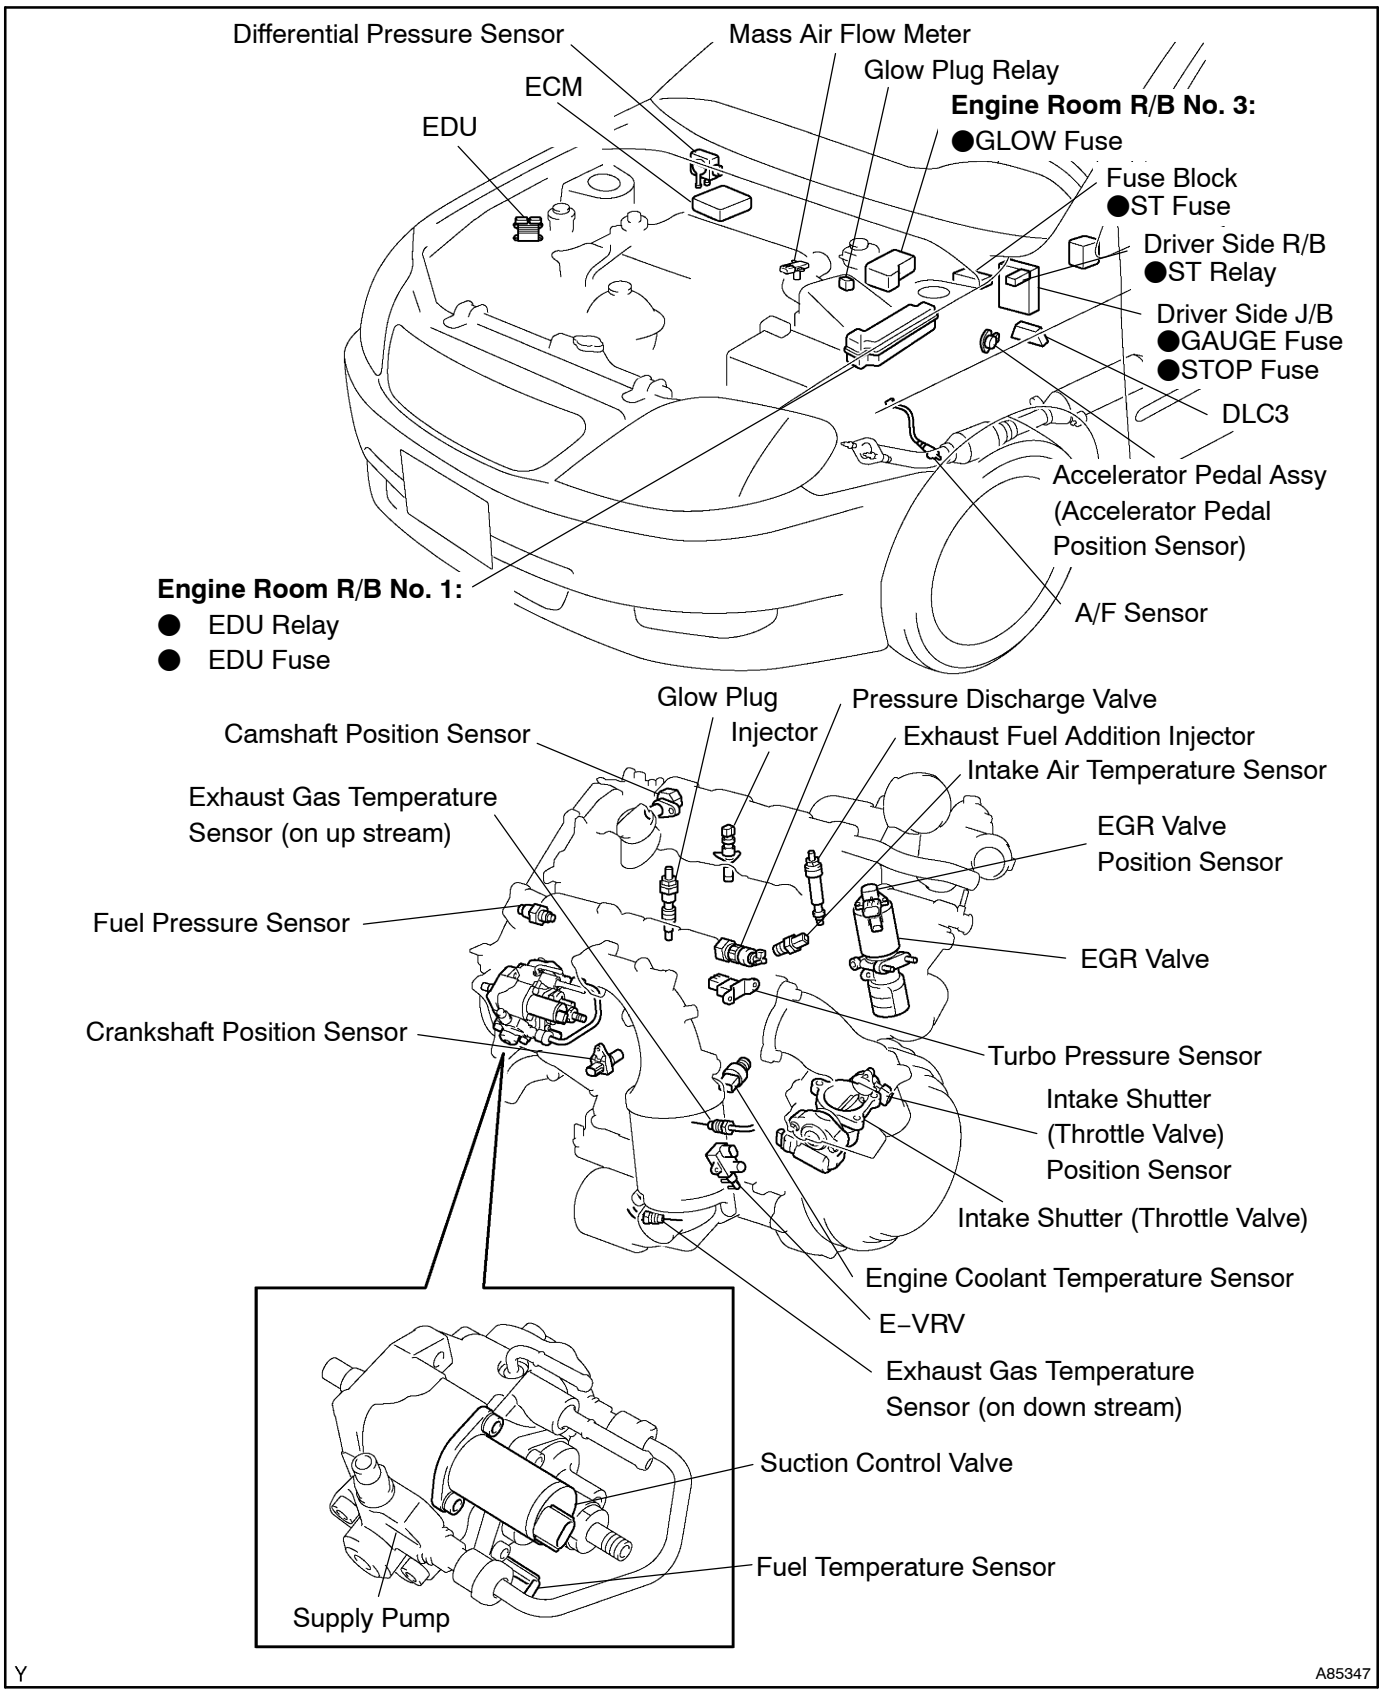
1. INJECTOR COMPENSATION CODE

(a) Since each injector has its own fuel injection characteristic, the ECM compensates this by slightly modifying injection duration in order to optimize fuel injection volume. Compensating data for the optimum injection volume, in the form of a 30–digit–alphanumeric value, has been imprinted on the head portion of each injector as the injector compensation code.

(b) The injector compensation code will be required to register to the ECM when replacing the injectors or the ECM (see page 05–277).

(c) If an incorrect injector compensation code was registered to the ECM, it may rattle the engine assembly or the engine idling may become rough. In addition, it may become a cause of engine failure or shorten the life of the engine.

2. DIFFICULT TO ENGINE START, ENGINE STALL OR BLACK SMOKE



(a) If the customer's problem description is applicable to one of the following problems, refer to the troubleshooting on the pages shown below:

(1) Engine start difficulties, or engine stall, see page 05–502.

(2) Black smoke, see page 05–512.

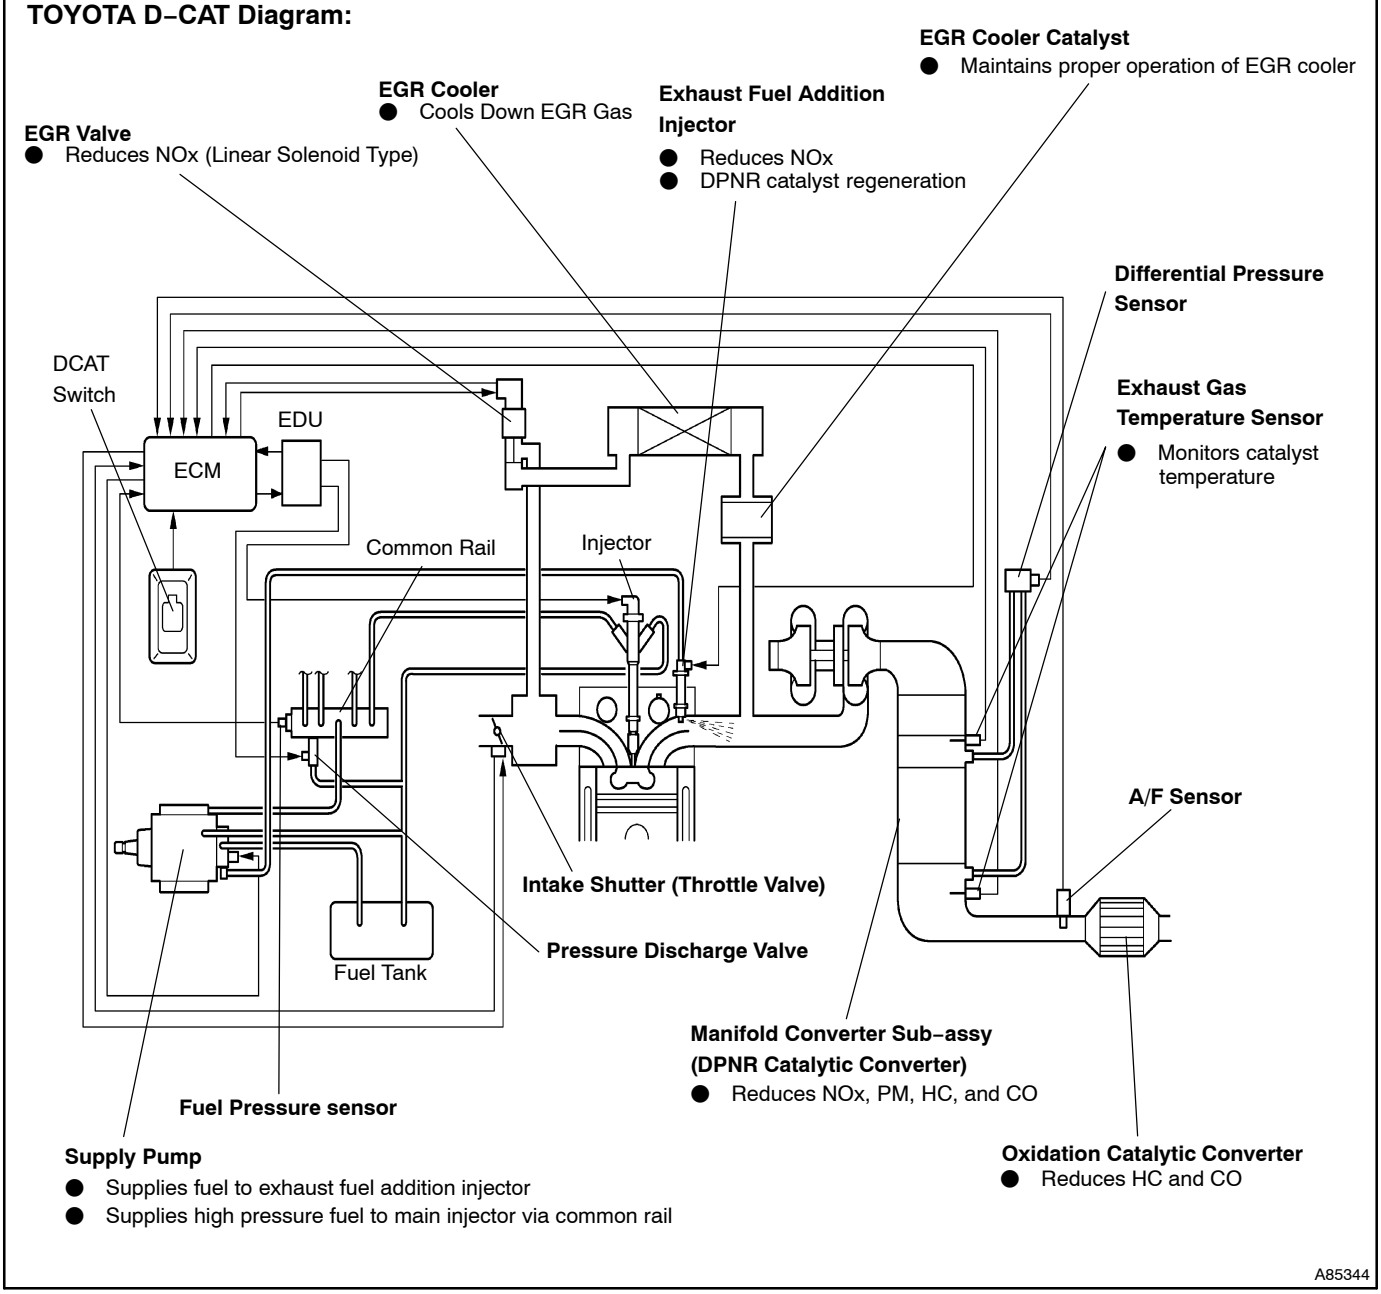
SYSTEM DESCRIPTION

1. ENGINE CONTROL SYSTEM

Engine Control System Diagram:

Y

A91210



2. TOYOTA D–CAT DESCRIPTION

(a) TOYOTA D–CAT:

Diesel Clean Advanced Technology (TOYOTA D–CAT) comprehensively regulates engine control (consists of a catalytic system and a fuel injection system) that purifies both particulate matter (PM) and nitrogen oxides (NOx) discharged by diesel engines.

The catalytic system purifies hydrocarbons (HC) and carbon monoxides (CO), and reduces PM and NOx with a catalytic converter with the Diesel Particulate–NOx Reduction system (DPNR). The fuel injection system adds fuel into the exhaust port using the exhaust fuel addition injector to produce RICH state for NOx reduction and maintain a proper catalyst temperature for DPNR catalyst regeneration.

TOYOTA D–CAT Diagram:

(b) TOYOTA D–CAT COMPONENTS:

Component	Description
DPNR catalytic converter	Reduces HC, CO, PM, and NOx.
Exhaust fuel addition injector	Adds fuel into the exhaust port in order to produce RICH air–fuel ratio for NOx reduction. Also, raises catalyst temperature for DPNR catalyst regeneration.
Exhaust gas temperature sensor	Used for estimating DPNR catalytic converter temperature and adjusting fuel addition by ECM while DPNR catalyst regeneration is performed. Also, detects DPNR catalytic converter temperature to prevent the catalytic converter temperature from rising too high.
Differential pressure sensor	Detects the volume of PM deposits in and incorrect vacuum hose arrangement on the DPNR catalytic converter.
A/F sensor	Used for controlling air–fuel ratio. By controlling the air–fuel ratio, combustion control for low temperature combustion and DPNR catalyst regeneration are properly regulated.

(c) DIAGNOSTICS TROUBLE CODES (DTCS) TABLE FOR TOYOTA D–CAT:

HINT:

This table indicates typical DTC combinations for each malfunction occurrence.

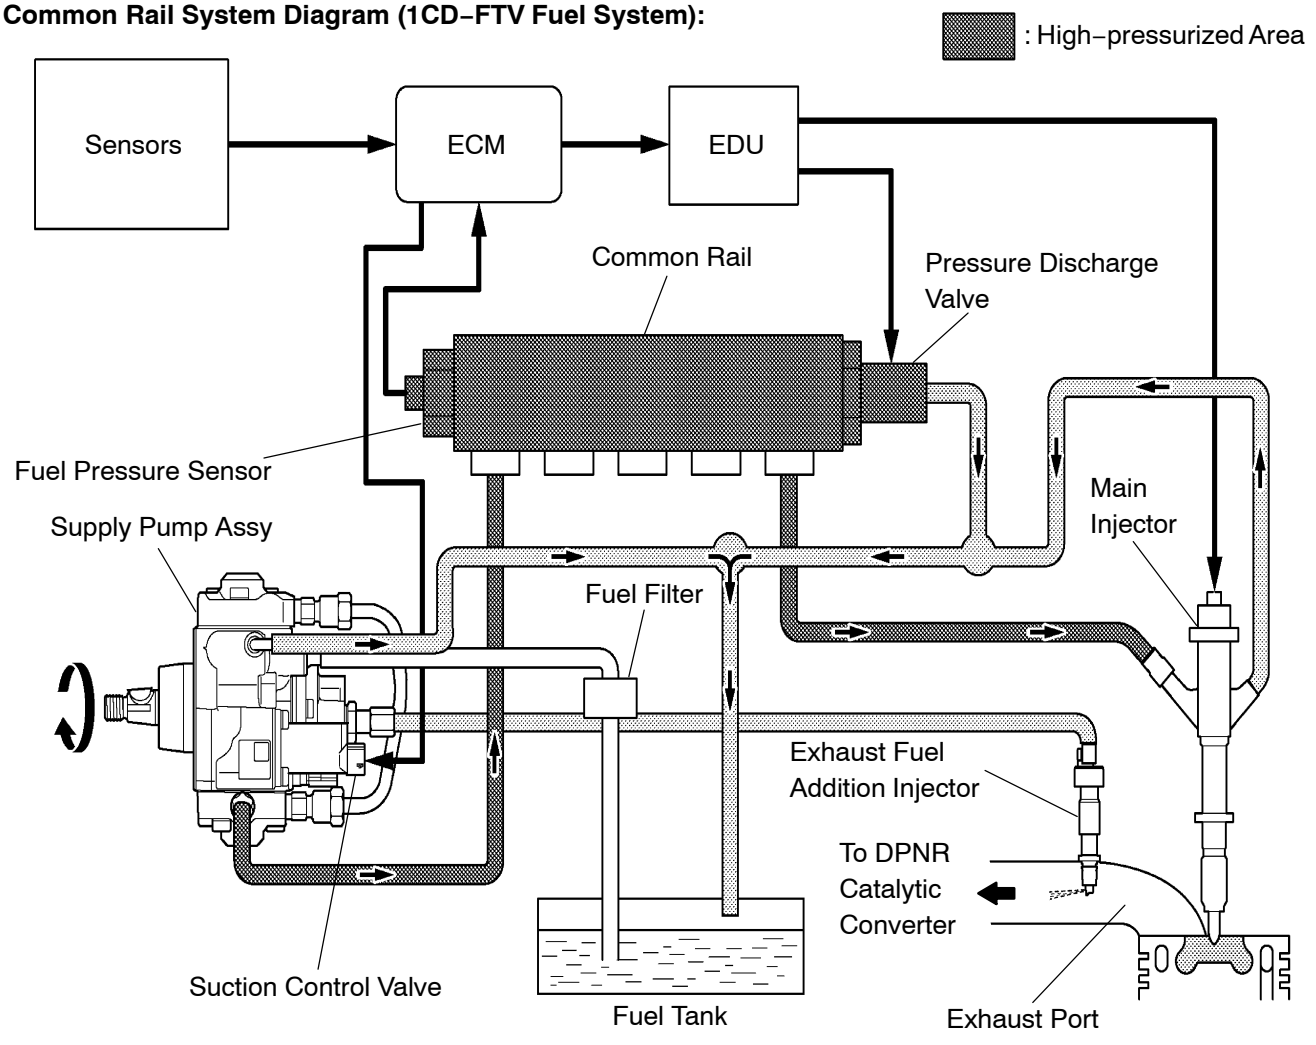
Fuel leaks	Fuel leaks in fuel addition injector	S
Supply pump	Correct fuel pressure cannot be fed to the exhaust fuel addition injector	T

(d) DIAGNOSTICS TROUBLE CODE DESCRIPTION FOR TOYOTA D–CAT:

DTC No.	Description
P0031	Open or short in A/F sensor or heater circuit (Low output)
P0544	Open or short in exhaust gas temperature sensor circuit (Up stream)
P0545	Open or short in exhaust gas temperature sensor circuit (Up stream) (Low output)
P0546	Open or short in exhaust gas temperature sensor circuit (Up stream) (High output)
P1386	TOYOTA D–CAT fuel addition system malfunction
P1425	Open or short in differential pressure sensor circuit
P1426	Differential pressure sensor is clogged or has incorrect vacuum hose arrangement
P1427	Open or short in differential pressure sensor circuit (Low output)
P1428	Open or short in differential pressure sensor circuit (High output)
P2002	DPNR Catalytic converter malfunction
P2031	Open or short in exhaust gas temperature sensor circuit (Down stream)
P2032	Open or short in exhaust gas temperature sensor circuit (Down stream) (Low output)
P2033	Open or short in exhaust gas temperature sensor circuit (Down stream) (High output)
P2047	Open in exhaust fuel addition injector circuit
P2238	Open or short in A/F sensor or heater circuit (Low output)
P2239	Open or short in A/F sensor or heater circuit (High output)

3. COMMON RAIL SYSTEM DESCRIPTION

(a) COMMON RAIL SYSTEM:



The common rail system stores high–pressurized fuel supplied from the supply pump in the common rail and injects it using the injectors. Fuel injection timing and fuel injection volume are regulated by the ECM; it provides an electric current to the solenoid valve of the injector with the EDU to regulate them.

By storing high–pressurized fuel produced in the supply pump in the common rail, this system can always offer stable fuel injection pressure regardless of the engine speed and engine load, even if a driving speed is low. In addition, this system uses the injector that opens and closes its fuel passage with the Two–Way Valve (TWV) therefore both the fuel injection time and volume are precisely regulated by the ECM.

The ECM monitors internal fuel pressure of the common rail with the fuel pressure sensor and commands the supply pump to supply fuel to obtain a target internal pressure, approximately 30 to 180 MPa (306 to 1,835 kgf/cm^2, 4,351 to 26,106 psi). The ECM opens and closes the pressure discharge valve to improve controllability for the common rail internal fuel pressure.

This system has two split fuel injections. It performs ”pilot–injection” as subsidiary fuel injection prior to the main fuel injection to make combustion soft, and this helps to reduce engine vibration and noise.

Common Rail System Diagram (1CD–FTV Fuel System):

(b) COMMON RAIL SYSTEM COMPONENTS:

Component	Description
Common rail	Stores high–pressurized fuel produced by the supply pump
Supply pump	Operated by the crankshaft, and supplies high–pressure fuel to the common rail
Injector	Injects fuel to the combustion chamber based on signals from the ECM
Fuel pressure sensor	Monitors internal fuel pressure of the common rail and sends signals to the ECM
Pressure discharge valve	Based on signals from the ECM, opens the valve when sudden deceleration is occurred, or when the ignition switch is OFF to prevent the fuel pressure from becoming too high
Suction control valve	Based on signals from the ECM, adjusts fuel volume supplied to the common rail and regulates the internal fuel pressure

(c) DIAGNOSTICS TROUBLE CODES (DTCS) TABLE FOR COMMON RAIL SYSTEM:

HINT:

This table indicates typical DTC combinations for each malfunction occurrence.

( ): Potential DTCs

DTC No.	A	B	C	D	E	F	G	H	I	J	K	L

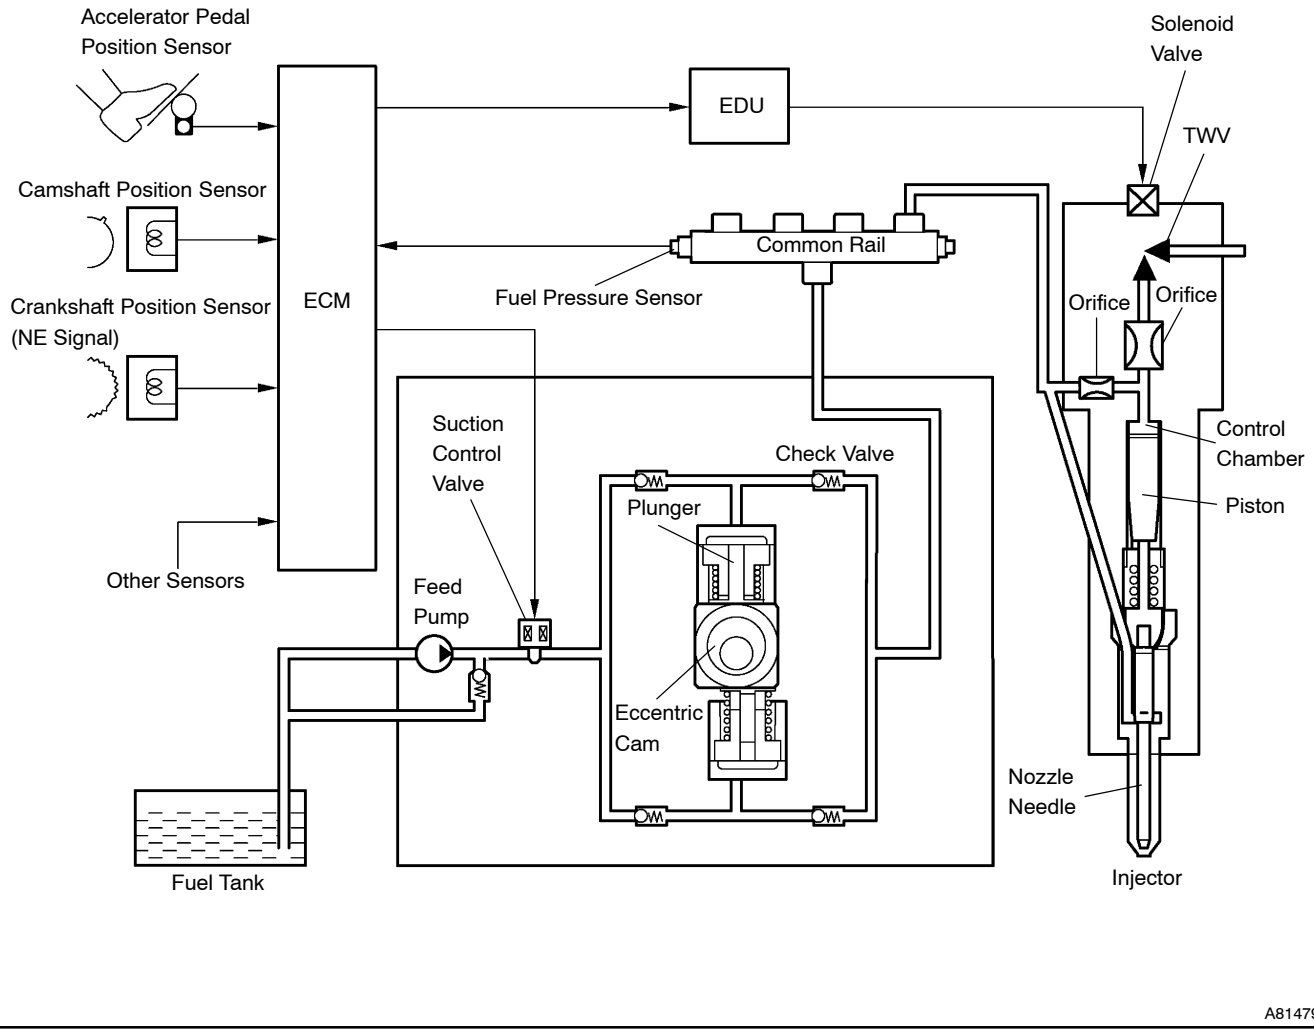
Trouble Area	Malfunction	Refer to
Injector	Open or short in injector circuit	A
	Stuck open	B
	Stuck close	C
Fuel pressure sensor	Open or short in fuel pressure sensor circuit or pressure sensor output fixed	D
Pressure discharge valve	Open or short in pressure discharge valve circuit	E
	Stuck open	F
	Stuck close	G
Suction control valve	Open or short in suction control valve circuit	H
	Stuck open	I
	Stuck close	J
EDU	Faulty EDU	K
Common rail system (Fuel system)	Fuel leaks in high–pressurized area	L

(d) DIAGNOSTICS TROUBLE CODE DESCRIPTION FOR COMMON RAIL SYSTEM:

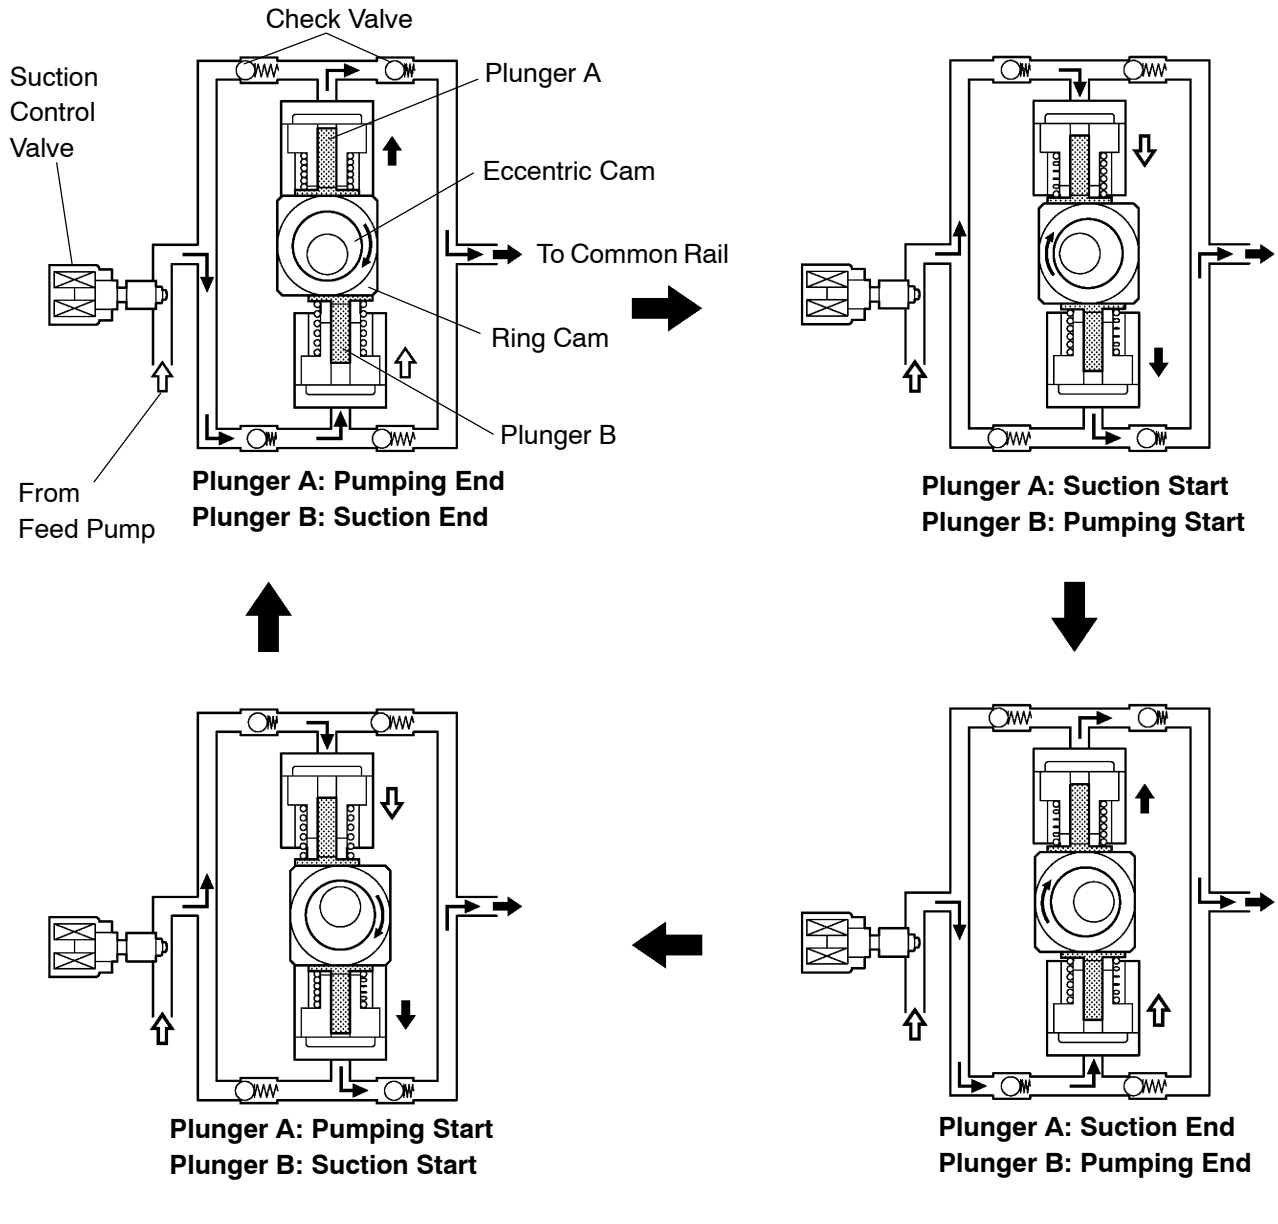


DTC No.	Description
P0087	Fuel pressure sensor output status at fixed value
P0088	Internal fuel pressure too high (200 MPa [2,039 kgf/cm^2, 29,007 psi] or more)
P0093	Fuel leaks in high–pressurized area
P0190	Open or short in fuel pressure sensor circuit (Low or high output)
P0191	Fuel pressure sensor output out of range (Low output)
P0192	Open or short in fuel pressure sensor circuit (High output)
P0193	Open or short in fuel pressure sensor circuit (Sensor 1 and/or 2 relation)
P0200	Open or short in EDU or injector circuit
P0627	Open or short in suction control valve circuit
P1229	Fuel over–feed
P1238	Injection malfunction, exclude open or short in injector circuit
P1271	Open or short in pressure discharge valve circuit
P1272	Closed malfunction of the pressure discharge valve

4. INJECTION CONTROL SYSTEM DESCRIPTION

The ECM controls the fuel injection system by using the injectors and supply pump. The ECM determines the fuel injection volume and timing by controlling both duration and timing of energization to the solenoid valve in the injector, and determines the injection pressure by controlling the suction control valve located on the supply pump.

The feed pump is used to pump fuel from the fuel tank into the supply pump.



Injection Control Diagram:

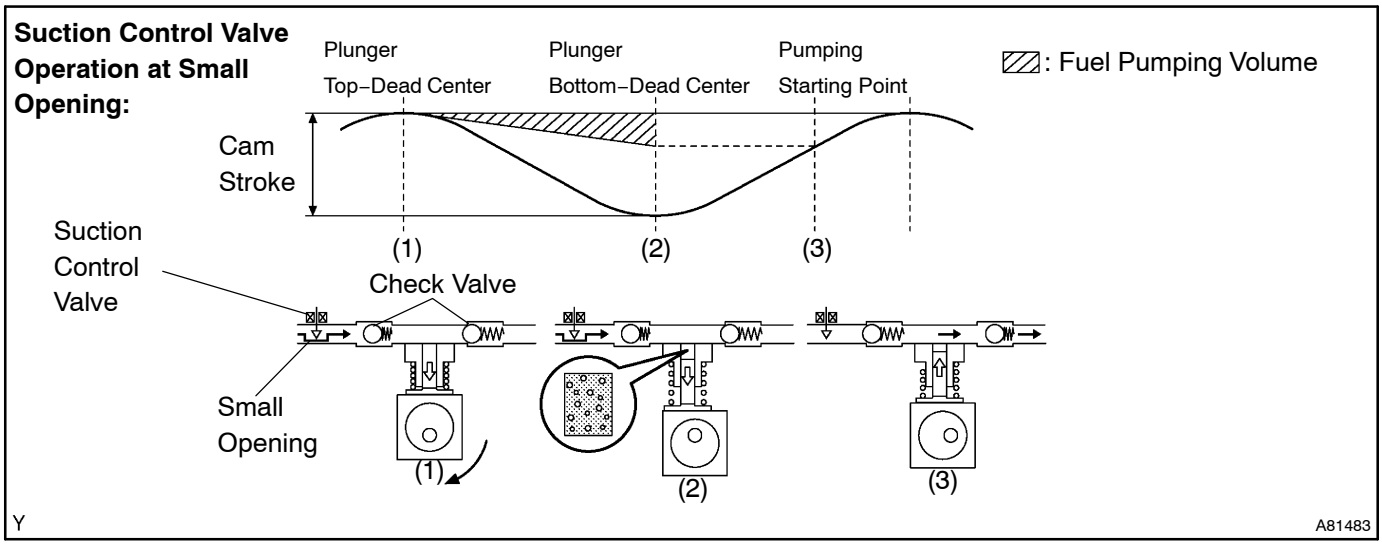
5. SUPPLY PUMP OPERATION SYSTEM DESCRIPTION

The rotation of the eccentric cam causes the ring cam pushes plunger A upward as illustrated below. The spring force pulls plunger B (located on the opposite of plunger A) upward. As a result, plunger B draws the fuel in, and plunger A pumps the fuel at the same time.

Supply Pump Operation Diagram:

6. SUCTION CONTROL VALVE OPERATION SYSTEM DESCRIPTION

HINT:



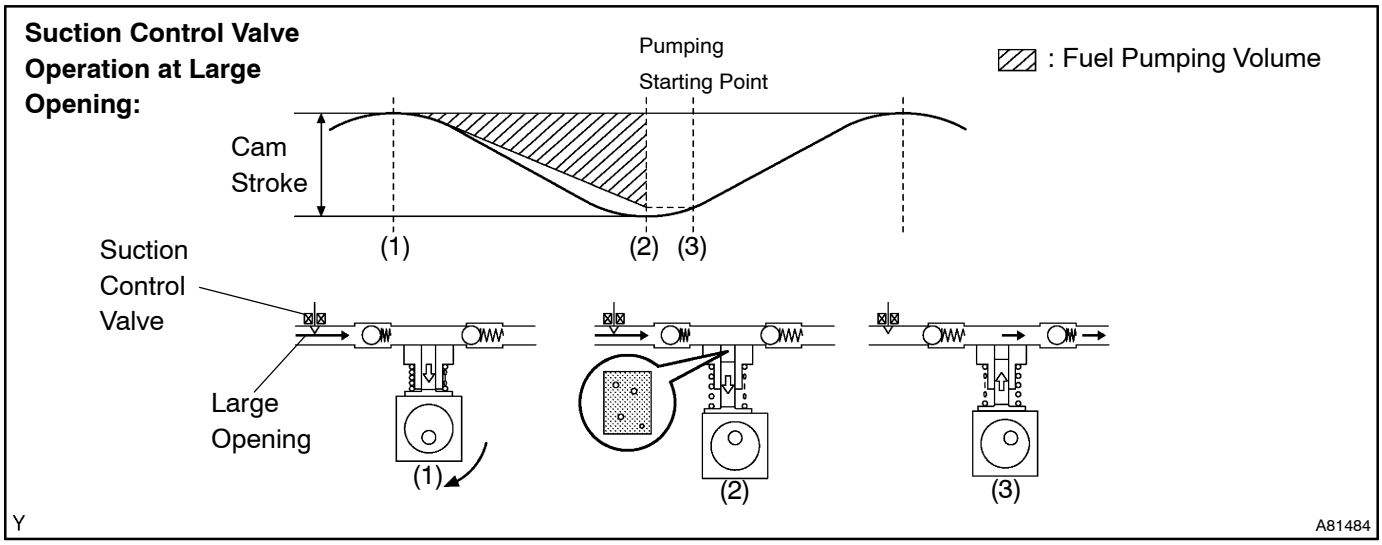
The ECM controls the suction control valve operation to regulate the fuel volume that is pumped by the supply pump to the common rail. This control is performed to adjust the internal fuel pressure of the common rail to the targeted injection pressure.

(a) Small opening of the suction control valve:

(1) When the opening of the suction control valve is small, the fuel suction path is kept narrow. Therefore the transferable fuel volume is reduced.

(2) The suction volume becomes small due to the narrow path despite the plunger stroke being full. The difference between the geometrical volume and suction volume creates vacuum.

(3) Pumping will start at the time when the fuel pressure becomes higher than the common rail pressure.



(b) Large opening of the suction control valve:

(1) When the opening of the suction control valve is large, the fuel suction path is kept wide. Therefore the transferable fuel volume is increased.

(2) If the plunger stroke is full, the suction volume becomes large because of the wide path.

(3) Pumping will start at the time when the fuel pressure becomes higher than the common rail pressure.

HOW TO PROCEED WITH TROUBLESHOOTING

054JB–11

The hand–held tester can be used at step 3, 4, 5, 7, 10.

1	VEHICLE BROUGHT TO WORKSHOP

2	CUSTOMER PROBLEM ANALYSIS (See page 05–269)

3	CONNECT THE HAND–HELD TESTER TO DLC3

HINT:
If the display indicates a communication fault in the tool, inspect DLC3.

4	CHECK DTC AND FREEZED FRAME DATA (See page 05–299)

HINT:
Record or print DTCs and Freezed Frame Data, if needed.

5	CLEAR DTC AND FREEZED FRAME DATA (See page 05–290)

6	VISUAL INSPECTION

7	SET CHECK (TEST) MODE DIAGNOSIS (See page 05–291)

8	PROBLEM SYMPTOM CONFIRMATION

HINT:
If the engine does not start, perform step 10 and 12 first.

A	Malfunction does not occur
B	Malfunction occurs

B → GO TO STEP 10

A

9	SYMPTOM SIMULATION (See page 05–282)

10	DTC CHECK (See page 05–290)

A	Malfunction code
B	No code

B → GO TO STEP 12

A

11	PROCEED TO DTC CHART (See page 05–299)

GO TO STEP 14

12	BASIC INSPECTION (See page 05–271)

A	Not confirm wrong parts
B	Confirm wrong parts

B → GO TO STEP 17

A

13	PROCEED TO PROBLEM SYMPTOMS TABLE (See page 05–282)

A	Confirm wrong circuit
B	Confirm wrong Parts

B → GO TO STEP 17

A

14	CHECK ECM POWER SOURCE CIRCUIT (See page 05–489)

15	CIRCUIT INSPECTION

A	Not confirm malfunction
B	Confirm malfunction

B → GO TO STEP 18

A

16	CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

GO TO STEP 18

17	PARTS INSPECTION

18	PROBLEM IDENTIFICATION

19	ADJUSTMENT AND/OR REPAIR

20	CONFIRMATION TEST

END

054JC–11

CUSTOMER PROBLEM ANALYSIS CHECK

ENGINE CONTROL SYSTEM Check Sheet

Inspector's Name _____

Customer's Name		VIN	
Production Date		Date Vehicle Brought in	
Licence Plate No.		Odometer Reading	km miles

Problem Symptoms	☐ Engine does not Start	☐ Engine does not crank ☐ No initial combustion ☐ No complete combustion
	☐ Difficult to Start	☐ Engine cranks slowly ☐ Other _____
	☐ Poor Idling	☐ Incorrect first idle ☐ Idling rpm is abnormal ☐ High (rpm) ☐ Low (rpm) ☐ Rough idling ☐ Other _____
	☐ Poor Driveability	☐ Hesitation ☐ Back fire ☐ Muffler explosion (after–fire) ☐ Surging ☐ Knocking ☐ Other _____
	☐ Engine Stall	☐ Soon after starting ☐ After accelerator pedal depressed ☐ After accelerator pedal released ☐ During A/C operation ☐ Shifting from N to D ☐ Other _____

	Check Mode	☐ Normal	☐ Malfunction code(s) (code) ☐ Freeze frame data ( )

05DVY–02

CHECK FOR INTERMITTENT PROBLEMS

HINT:

Hand–held tester only:

Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect when the ECM is in check mode with a hand–held tester. In check mode, the ECM uses 1 trip detection logic, which has a higher sensitivity to malfunctions than normal mode (default) using 2 trip detection logic.

(a) Clear DTCs (see page 05–290).
(b) Switch normal mode to check mode using the hand–held tester (see page 05–291).
(c) Perform a simulation test (see page 01–22).
(d) Check the connectors and terminals (see page 01–32).
(e) Wiggle the harness and connectors (see page 01–32).

05I7H–01

BASIC INSPECTION

When the malfunction is not confirmed in the DTC check, troubleshooting should be carried out in all the possible circuits considered as causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location causing the problem can be found quickly and efficiently. Therefore, using this check is essential in the engine troubleshooting.

1 CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and ignition switch OFF.

	OK	NG
Voltage	11 V or more	Less than 11 V

NG → **CHARGE OR REPLACE BATTERY**

OK

2 CHECK IF ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–282**

OK

3 CHECK AIR FILTER

(a) Visually check if the air filter is not contaminated with dirt or oil.

NG → **CLEAN OR REPLACE**

OK

4 CHECK FUEL QUALITY

(a) Check that only diesel fuel is used.
(b) Check that the fuel does not contain any impurity.

NG → **REPLACE FUEL**

OK

5 CHECK ENGINE OIL (See page 17–9)

NG → **ADD OR REPLACE**

OK

6	CHECK ENGINE COOLANT (See page 16–15)

NG → REPLACE ENGINE COOLANT (See page 16–19)

OK

7	CHECK IDLE SPEED AND MAXIMUM SPEED (See page 14–87)

NG → REPLACE INJECTION OR SUPPLY PUMP ASSY (See page 11–58)

OK

8	CHECK DIAGNOSTIC CIRCUIT

NG → REPAIR OR REPLACE

OK

9	CHECK VACUUM PUMP

NG → REPAIR OR REPLACE VACUUM PUMP

OK

PROCEED TO PROBLEM SYMPTOMS TABLE (See page 05–282)

05DVV–02

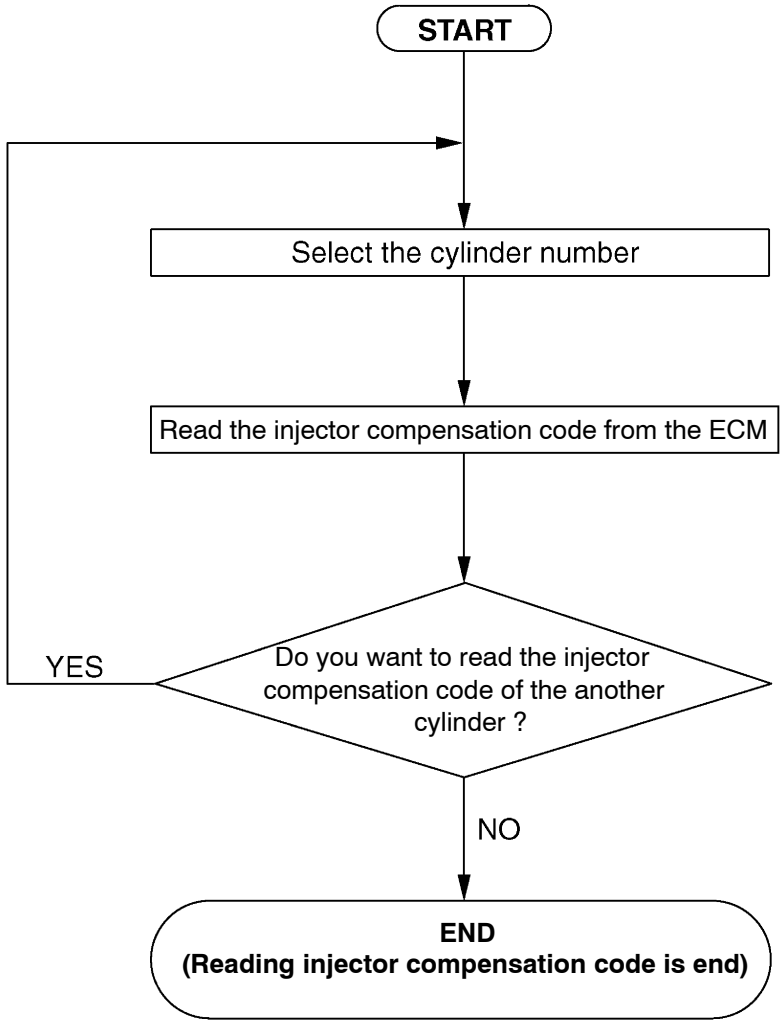
READING REGISTERED DATA

NOTICE:

- **The injector compensation code will be required to register with the ECM when replacing injectors or the ECM.**
- **If an incorrect injector compensation code was registered with the ECM, it may rattle the engine assembly or the engine idling may become rough. In addition, it may become a cause of engine failure or shorten the life of the engine.**

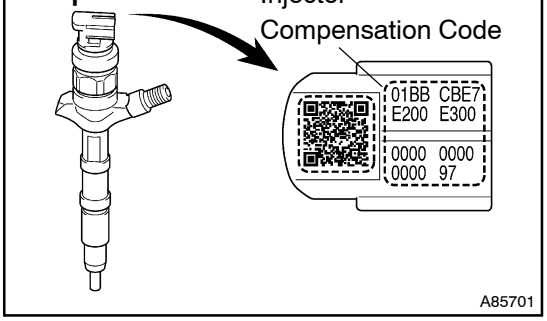
1. If you replace the ECM with a new one, register all the injector compensation codes with the new ECM as follows:

(a) Prior to replacing the ECM, read all the injector compensation codes stored in the existing ECM using the hand–held tester, and then write them down (see page 05–273).
(b) After replacing the ECM, enter the written injector compensation codes into the ECM using the hand–held tester (see page 05–277).
(c) Turn the ignition switch to OFF and turn the hand–held tester OFF, then wait for 30 seconds or more.
(d) Turn the ignition switch to ON and turn the hand–held tester ON, then clear DTC P1601 using the hand–held tester (see page 05–290).



2. If you replace the injector with a new one, register its compensation code of the new injector as follows:

(a) Replace an injector.
(b) Read a new injector's compensation code which is imprinted on the head portion of the injector.
(c) Enter the compensation code into the ECM using the hand–held tester (see page 05–277).
(d) Turn the ignition switch to OFF and turn the hand–held tester OFF, then wait for 30 seconds or more.
(e) Turn the ignition switch to ON and turn the hand–held tester ON, then clear DTC P1601 using the hand–held tester (see page 05–290).



HINT:

- In order to optimize the injector's fuel injection characteristic, the ECM compensates the injection duration by each cylinder. The ECM stores and uses compensating data in the form of a 30–digit–alphanumeric value that is imprinted on the head portion of each injector as the injector compensation code.
- If you installed a new injector, its own injector compensation code is needed to register with the ECM. Also, if you replaced the ECM, the compensation codes of all the injectors are needed to register because the new ECM dose not have the codes until they are registered.
- Once the ECM is replaced, DTC P1601 will be present when turning the ignition switch to ON. This is to inform you that the injector compensation codes are required to register with the ECM. In order to clear the DTC, register the compensation codes first, then turn the ignition switch to OFF and wait for 30 seconds or more.

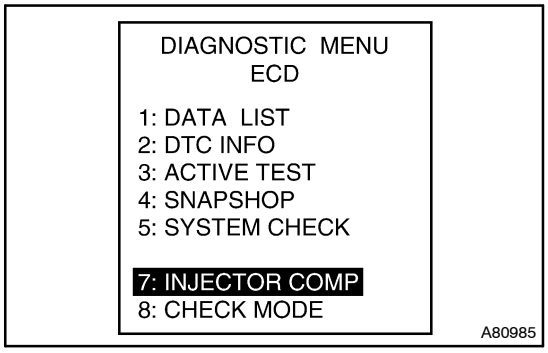
Process of reading injector compensation code(s):

Y A91211

3. READ INJECTOR COMPENSATION CODE

(a) Connect the hand–held tester to the DLC 3.

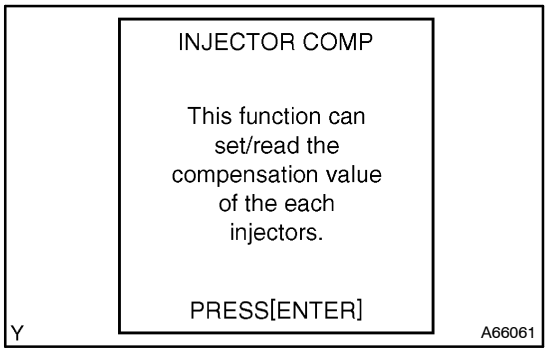
(b) Turn the ignition switch to ON.



(c) Turn the hand–held tester ON.

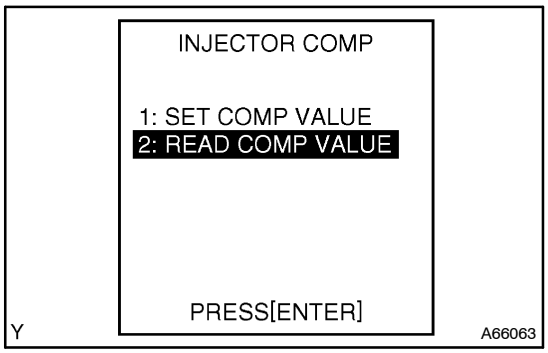
NOTICE:

Do not start the engine in this operation.

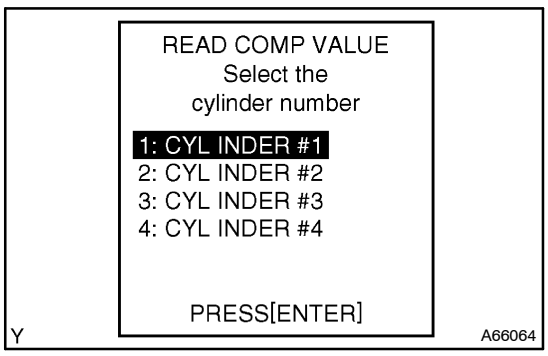


HINT:

Injector compensation code is imprinted on the head portion of the injector.

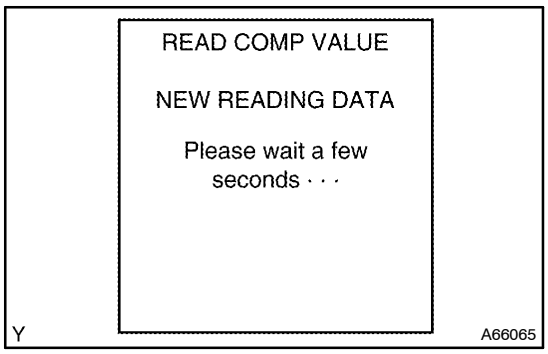


(d) Enter ”DIAGNOSIS / OBD/MOBD / DIAGNOSTIC MENU ECD” and select the item ”INJECTOR COMP”.

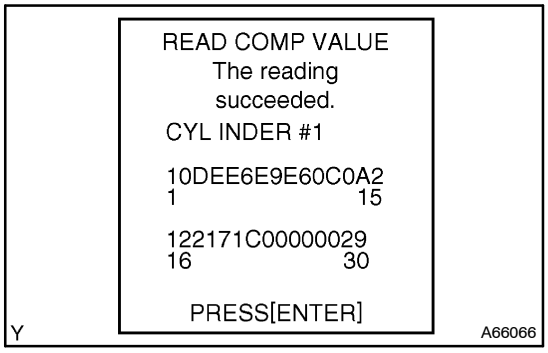


(e) Press the ”ENTER” button on the hand–held tester.

(f) Press the ”ENTER” button again.



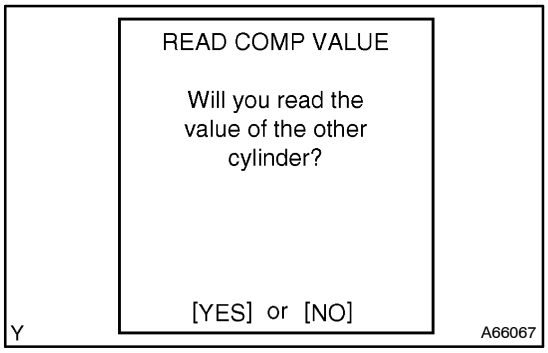
(g) Select ”READ COMP VALUE” and press the ”ENTER” button.



(h) Select a cylinder number which you want to read the compensation code.

(i) Press the ”ENTER” button.

(j) Wait until the next screen comes up.



(k) Confirm the 30–digit–alphanumeric code which is displayed on the hand–held tester. This is the injection compensation code for the cylinder.

HINT:

The code shown in the illustration is an example.

(l) Press the ”ENTER” button to exit this screen.

(m) Press the ”NO” button to complete the confirmation.

HINT:

- If you want to read other compensation codes for the other cylinders, press the ”YES” button instead of ”NO”.
- By pressing the ”NO” button, the hand–held tester returns to the ”DIAGNOSTIC MENU ECD” screen.

05DVW–02

REGISTRATION

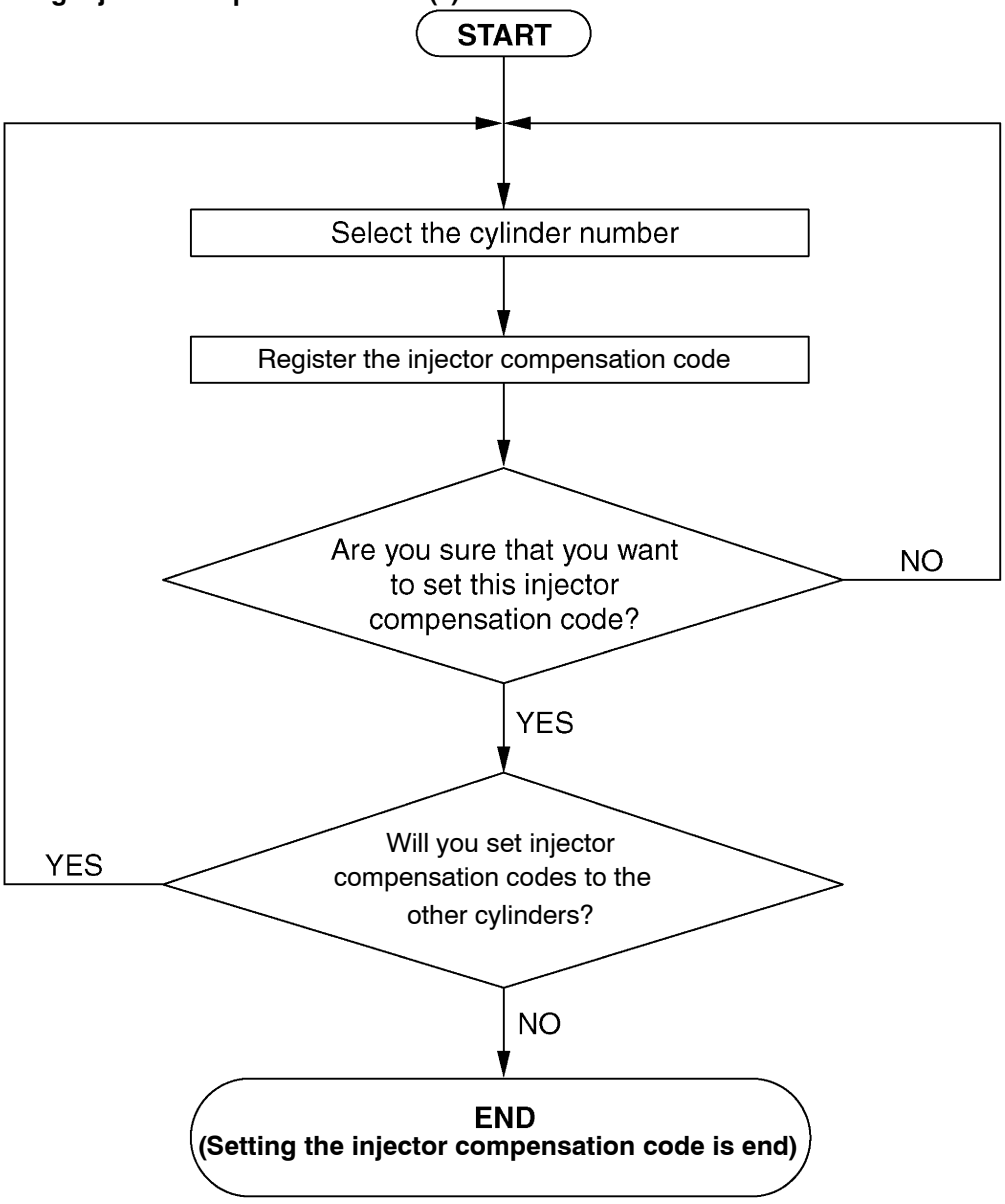
NOTICE:

- **The injector compensation code will be required to register with the ECM when replacing injectors or the ECM.**
- **If an incorrect injector compensation code was registered with the ECM, it may rattle the engine assembly or the engine idling may become rough. In addition, it may become a cause of engine failure or shorten the life of the engine.**

1. If you replace the ECM with a new one, register all the injector compensation codes with the new ECM as follows:

(a) Prior to replacing the ECM, read all the compensation codes stored in the existing ECM using the hand–held tester, and then write them down (see page 05–273).

(b) After replacing the ECM, enter the written compensation codes into the ECM using the hand–held tester (see page 05–277).



(c) Turn the ignition switch to OFF and turn the hand–held tester OFF, then wait for 30 seconds or more.

(d) Turn the ignition switch to ON and turn the hand–held tester ON, then clear DTC P1601 using the hand–held tester (see page 05–290).

HINT:

- In order to optimize the injector's fuel injection characteristic, the ECM compensates the injection duration by each cylinder. The ECM stores and uses compensating data in the form of a 30–digit–alphanumeric value that is imprinted on the head portion of each injector as the injector compensation code.
- If you installed a new injector, its own injector compensation code is needed to register with the ECM. Also, if you replaced the ECM, the compensation codes of all the injectors are needed to register because the new ECM dose not have the codes until they are registered.
- Once the ECM is replaced, DTC P1601 will be present when turning the ignition switch to ON. This is to inform you that the injector compensation codes are required to register with the ECM. In order to clear the DTC, register the compensation codes first, then turn the ignition switch to OFF and wait for 30 seconds or more.

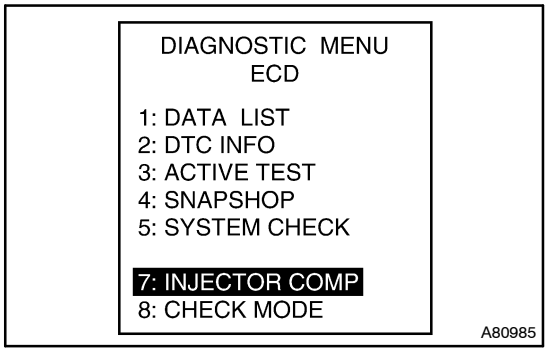
Process of setting injector compensation code(s):

Y A91212

2. SET INJECTOR COMPENSATION CODE

(a) Connect the hand–held tester to the DLC 3.

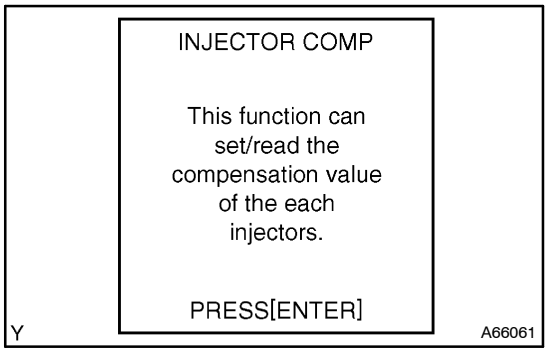
(b) Turn the ignition switch to ON.



(c) Turn the hand–held tester ON.

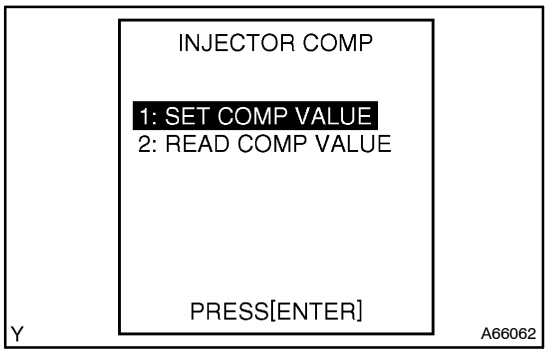
NOTICE:

Do not start the engine in this operation.

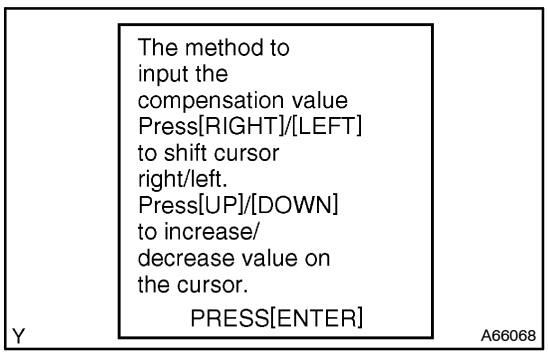


HINT:

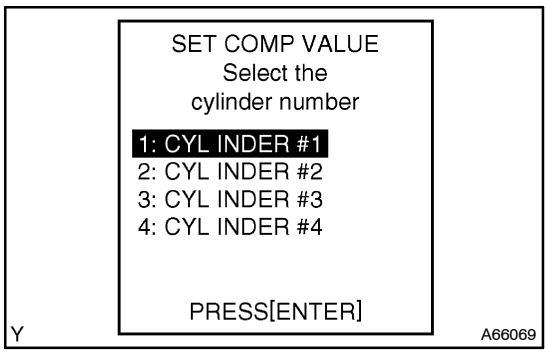
Injector compensation code is imprinted on the head portion of the injector.



(d) Enter ”DIAGNOSIS / OBD/MOBD / DIAGNOSTIC MENU ECD” and select the item ”INJECTOR COMP”.

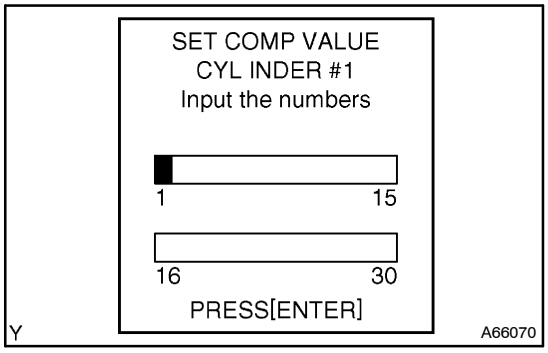


(e) Press the ”ENTER” button on the hand–held tester.

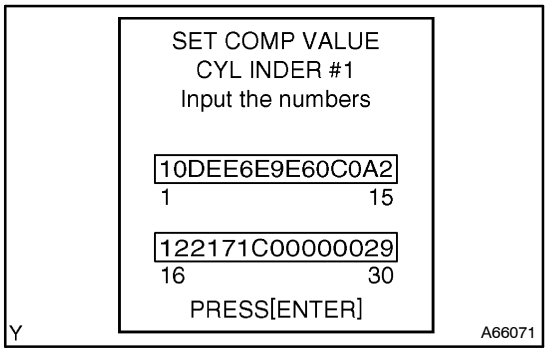


(f) Press the ”Enter” button again.

(g) Select ”SET COMP VALUE” and press the ”ENTER” button.

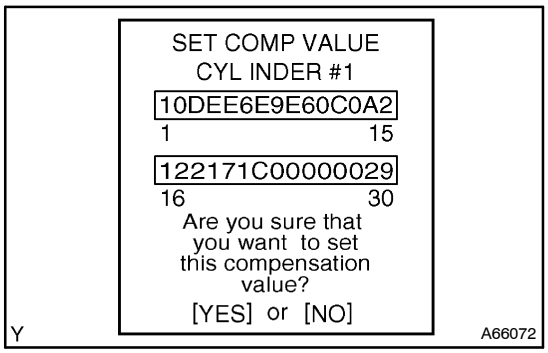


(h) Press the ”ENTER” button.



(i) Select a cylinder number which you want to register the compensation code.

(j) Press the ”ENTER” button.

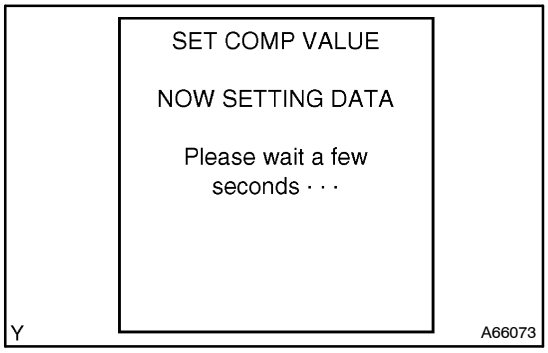


(k) Input the compensation code (30–digit–alphanumeric value).

(l) After inputting, press the ”ENTER” button.

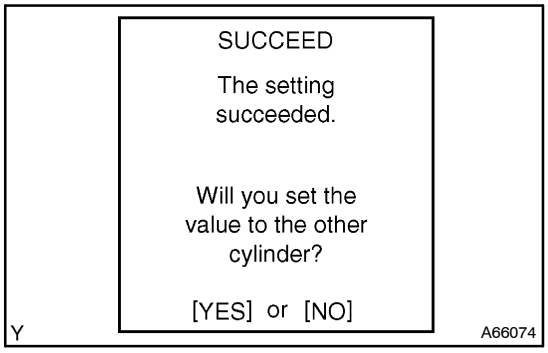
(m) Press the ”ENTER” button again.

(n) Confirm the injection compensation code displayed on the hand–held tester.



NOTICE:

Be careful not to register a wrong compensation code to the ECM. If a wrong code is set to the ECM, rough idling or engine rattling may result. In addition, it may become a cause of engine failure or shorten the life of the engine.



HINT:

- The code shown in the illustration is an example.
- If a wrong compensation code was entered on the hand–held tester, select the ”NO” button to correct the error (Back to step [g]).

(o) Press the ”YES” button to set the code to the ECM.

(p) Wait until the next screen comes up.

(q) Press the ”NO” button to complete the registration.

HINT:

- If you want to register other compensation codes for the other cylinders, press the ”YES” button instead of ”NO”.
- By pressing the ”NO” button, the hand–held tester returns to the ”DIAGNOSTIC MENU ECD” screen.

(r) Turn the ignition switch to OFF and wait for 30 seconds or more.

054JF–11

PROBLEM SYMPTOMS TABLE

When the malfunction is not confirmed in the DTC check and the problem still cannot be confirmed in the basic inspection, proceed to this table and troubleshoot according to the priority order given below.

Symptom	Suspect Area	See Page
Does not crank (Difficult to start)	1. Starter	*
	2. Starter relay	*
	3. Engine coolant temperature sensor	10–22
Difficult to start with cold engine	1. STA signal circuit	*
	2. Injector	11–42
	3. Fuel filter	*
	4. Compression	14–87
	5. ECM	*
	6. Supply pump	11–42
	7. Fuel pressure sensor	*
	8. Intake shutter (throttle valve)	10–22
	9. Glow system	*
	10.Manifold converter (DPNR catalytic converter)	–
	11.Exhaust fuel addition injector	–
Difficult to start with warm engine	1. STA signal circuit	*
	2. Injector	11–42
	3. Fuel filter	*
	4. Compression	14–87
	5. ECM	*
	6. Supply pump	11–42
	7. Fuel pressure sensor	*
	8. Intake shutter (throttle valve)	10–22
	9. Manifold converter (DPNR catalytic converter)	–
	10.Exhaust fuel addition injector	–
Engine stalls soon after starting	1. Fuel filter	*
	2. Injector	11–42

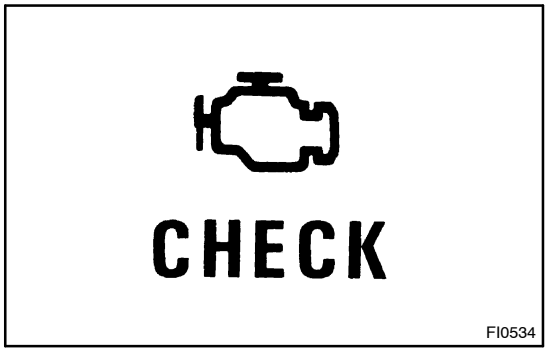
TERMINALS OF ECM

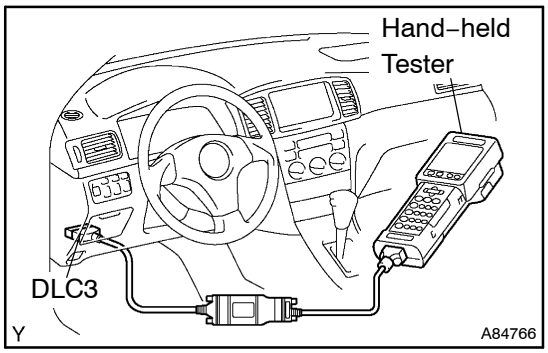


HINT:
Each ECM terminal's standard voltage is shown in the table below.
In the table, first follow the information under "Symbols (Terminals No.)". Look under "Tester Connection" for the terminals to be inspected. The standard voltage between the terminals is shown under "STD Voltage (V)".
Use the illustration above as a reference for the ECM terminals.

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	STD Voltage (V)
BATT (E10–2) – E1 (E12–7)	B–Y – BR	Battery (for measuring the battery voltage and for the ECM memory)	Always	9 to 14
IGSW (E9–9) – E1 (E12–7)	B–W – BR	Ignition switch	Ignition switch ON	9 to 14
+B (E9–1) – E1 (E12–7)	B–W – BR	Power source of ECM	Ignition switch ON	9 to 14
MREL (E9–8) – E1 (E12–7)	GR – BR	ECD relay	Ignition switch ON	9 to 14
			Ignition switch OFF	0 to 1.5
VC (E13–18) – E1 (E12–7)	R–W – BR	Power source of sensor (a specific voltage)	Ignition switch ON	4.5 to 5.5
VPA (E9–22) – EPA (E9–28)	G – Y	Accelerator pedal position sensor (for the engine control)	Ignition switch ON, Accelerator pedal fully released	0.5 to 1.1
			Ignition switch ON, Accelerator pedal fully depressed	2.6 to 4.5
VPA2 (E9–23) – EPA2 (E9–29)	W – Y	Accelerator pedal position sensor (for the sensor malfunction detection)	Ignition switch ON, Accelerator pedal fully released	1.2 to 2.0
			Ignition switch ON, Accelerator pedal fully depressed	3.4 to 5.3
VCPA (E9–26) – EPA (E9–28)	B – Y	Power source of accelerator pedal position sensor (for VPA)	Ignition switch ON	4.5 to 5.5
VCP2 (E9–27) – EPA2 (E9–29)	B – Y	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch ON	4.5 to 5.5
VG (E12–24) – EVG (E12–32)	G – L–Y	Mass air flow meter	Idling	0.5 to 3.4
THA (E13–31) – E2 (E13–28)	G–R – BR	Intake air temperature sensor	Idling, Intake air temperature at 20°C (68°F)	0.5 to 3.4
THIA (E13–20) – E2 (E13–28)	GR – BR	Intake air temperature sensor	Idling, Intake air temperature at 80°C (176°F)	0.3 to 0.9
THW (E13–19) – E2 (E13–28)	B–W – BR	Engine coolant temperature sensor	Idling, Engine coolant temperature at 80°C (176°F)	0.2 to 1.0

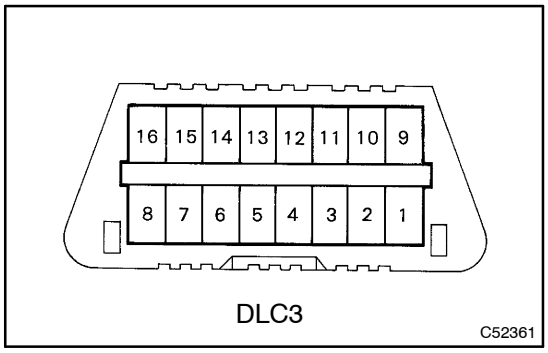
Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	STD Voltage (V)
STA (E9–7) – E1 (E12–7)	B–Y – BR	Starter signal	Cranking	6.0 or more
#1 (E13–24) – E1 (E12–7) #2 (E13–23) – E1 (E12–7) #3 (E13–22) – E1 (E12–7) #4 (E13–21) – E1 (E12–7)	G–W – BR W–R – BR R–W – BR W–L – BR	Injector	Idling	Pulse generation (See page 05–368)
G+ (E12–23) – G– (E12–31)	P – L	Camshaft position sensor	Idling	Pulse generation (See page 05–384)
NE+ (E13–27) – NE– (E13–34)	G – R	Crankshaft position sensor	Idling	Pulse generation (See page 05–381)
STP (E10–15) – E1 (E12–7)	G–W – BR	Stop lamp switch	Ignition switch ON, Brake pedal depressed	7.5 to 14
			Ignition switch ON, Brake pedal released	0 to 1.5
ST1– (E10–14) – E1 (E12–7)	G–W – BR	Stop lamp switch (opposite to STP)	Brake pedal depressed	0 to 1.5
			Brake pedal released	7.5 to 14
TC (E9–11) – E1 (E12–7)	W–L – BR	Terminal TC of DLC 3	Ignition switch ON	9 to 14
W (E9–12) – E1 (E12–7)	W – BR	Check engine warning light (CHK ENG)	CHK ENG illuminated	0 to 3
			CHK ENG not illuminated	9 to 14
SPD (E10–17) – E1 (E12–7)	V–W – BR	Speed signal from combination meter	Ignition switch ON, Rotate driving wheel slowly	Pulse generation (See page 05–408)
SIL (E9–18) – E1 (E12–7)	W–G – BR	Terminal SIL of DLC3	Connect the hand–held tester to the DLC3	Pulse generation
PIM (E12–28) – E2 (E13–28)	W–R – BR	Turbo pressure sensor	Applied negative pressure of 40 kPa (300 mmHg, 11.8 in.Hg)	1.4 to 2.0
			Same as atmospheric pressure	2.0 to 2.6
			Applied positive pressure of 69 kPa (518 mmHg, 20.4 in.Hg)	3.0 to 3.6
IREL (E9–10) – E1 (E12–7)	Y – BR	EDU relay	Ignition switch OFF	9 to 14
			Idling	0 to 1.5
TACH (E9–4) – E1 (E12–7)	GR–R – BR	Engine speed	Idling	Pulse generation
VCS (E12–2) – E2S (E12–1)	R–W – BR	Common rail pressure sensor	Ignition switch ON	4.5 to 5.5
PCR1 (E13–26) – E2 (E13–28)	P – BR	Common rail pressure sensor (main)	Idling	1.8 to 2.1
PCR2 (E13–33) – E2 (E13–28)	P–B – BR	Common rail pressure sensor (sub)	Idling	1.2 to 1.5
GREL (E9–15) – E1 (E12–7)	R – BR	Glow plug relay	Cranking	9 to 14
			Idling	0 to 1.5
THF (E13–29) – E2 (E13–28)	L – BR	Fuel temperature sensor	Ignition switch ON	0.5 to 3.4
ALT (E13–8) – E1 (E12–7)	B–L – BR	Generator (Alternator) duty signal	Idling	Pulse generation
PCV+ (E13–2) – PCV– (E13–1)	LG–R – LG	Suction control valve	Idling	Pulse generation (See page 05–429)
PRD (E13–32) – E1 (E12–7)	R–L – BR	Pressure relief valve drive signal	Ignition switch OFF	4 to 6.5
INJF (E13–25) – E1 (E12–7)	R–B – BR	EDU	Idling	Pulse generation (See page 05–368)
VN (E13–10) – E1 (E12–7)	W – BR	VRV (for VN turbocharger)	Ignition switch ON	Pulse generation (See page 05–312)
AF2+ (E10–35) – E1 (E12–7)	B – BR	A/F sensor	Ignition switch ON	3.0 to 3.6
AF2– (E10–34) – E1 (E12–7)	W – BR			2.7 to 3.3
HAF2 (E12–5) – E1 (E12–7)	L–R – BR	A/F sensor heater duty signal	Idling	Pulse generation
FIV (E13–3) – E1 (E12–7)	L–R – BR	Exhaust fuel addition injector	Engine warmed up, Idling, Every 1 to 2 minutes	Pulse generation (See page 05–470)

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	STD Voltage (V)
THCO (E12–30) – E2 (E13–28)	B–Y – BR	Exhaust gas temperature sensor	Engine warmed up, Idling	4.6 to 4.9
THCI (E12–22) – E2 (E13–28)	B – BR			
EGRS (E12–3) – E2 (E13–28)	R–L – BR	EGR valve duty signal	Engine warmed up, Idling	Pulse generation (See page 05–393)
EGLS (E12–33) – E2 (E13–28)	R – BR	EGR valve position sensor	Ignition switch ON	0.6 to 1.4
PEX (E12–20) – E2 (E13–28)	W – BR	Differential pressure sensor	Ignition switch ON, differential pressure at 0 kPa	1.2 to 1.8
VLU (E12–29) – E2 (E13–28)	L–W – BR	Intake shutter (throttle valve) position sensor	Ignition switch ON, Intake shutter (throttle valve) fully opened	3.0 to 4.0
			Ignition switch ON, Intake shutter (throttle valve) fully closed	0.4 to 1.0
LUSL (E12–4) – E2 (E13–28)	G–R – BR	Intake shutter (throttle valve) duty signal	Engine warmed up, Racing engine	Pulse generation (See page 05–403)



05I7I–01

DIAGNOSIS SYSTEM



1. DESCRIPTION

- When troubleshooting Euro–OBD vehicles, the only difference from the usual troubleshooting procedure is that you connect an OBD scan tool complying with ISO 15031–4 or a hand–held tester to the vehicle, and read the various data output from the vehicle's ECM.
- Euro–OBD regulations require that the vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in the emission control system / components or in the power train control components which affect vehicle emissions, or a malfunction in the computer. In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by ISO 15031–4 are recorded in the ECM memory (see page 05–299). If the malfunction does not reoccur in 3 consecutive trips, the CHK ENG goes off automatically but the DTCs remain recorded in the ECM memory.

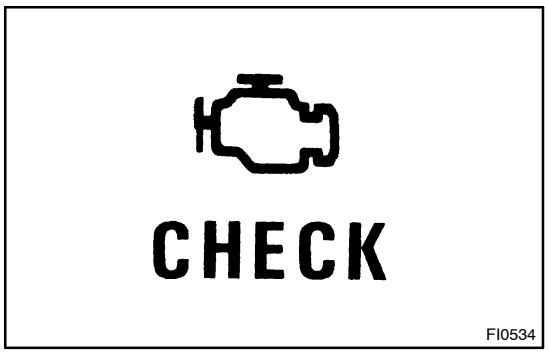
- To check the DTCs, connect the OBD scan tool or hand–held tester to Data Link Connector 3 (DLC3) on the vehicle. The OBD scan tool or hand–held tester also enables you to erase the DTCs and check the freeze frame data and various forms of engine data. (For operating instructions, see the OBD scan tool's instruction book.)
- DTCs include ISO controlled codes and manufacturer controlled codes. ISO controlled codes must be set as prescribed by the ISO, while manufacturer controlled codes can be set by the manufacturer within the prescribed limits (see DTC chart on page 05–299).
- The diagnosis system operates in normal mode during normal vehicle use. It also has check (test) mode for technicians to simulate malfunction symptoms and troubleshoot. Most DTCs use 2 trip detection logic* to prevent erroneous detection, and to ensure a thorough malfunction detection. By switching the ECM to check mode using hand–held tester when troubleshooting, a technician can cause the CHK ENG to illuminate for a malfunction that is only detected once or momentarily. (Hand–held tester only) (see page 05–291)
- * 2 trip detection logic
  When a malfunction is first detected, the pending fault code is stored in the ECM memory (1st trip). If the same malfunction is detected again during the second drive test, this second detection causes the CHK ENG to illuminate (2nd trip). (However, the ignition switch must be turned OFF between the 1st trip and 2nd trip.)

- Freeze frame data
  Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

2. CHECK DLC3

(a) The vehicle's ECM uses the ISO 9141–2(Euro–OBD) communication protocol. The terminal arrangement of the DLC3 complies with ISO 15031–03 and matches the ISO 9141–2 format.

Symbol	Terminal No.	Name	Reference Terminal	Result	Condition
SIL	7	Bus "+" line	5 – Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	9 to 14 V	Always



HINT:
Connect the cable of the hand–held tester to the DLC3, turn the ignition switch to ON and attempt to use the hand–held tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.

- If the communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If the communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tester itself, so consult the Service Department listed in its instruction manual.

3. INSPECT BATTERY VOLTAGE

Battery voltage: 11 to 14 V

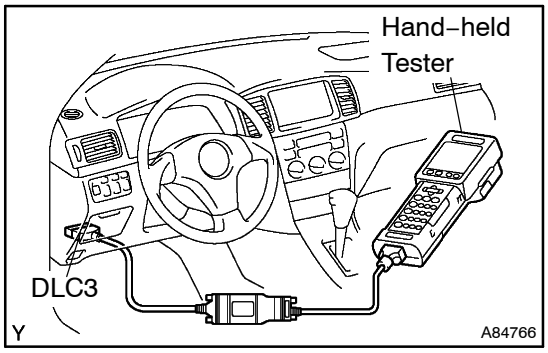
If voltage is below 11V, recharge the battery before proceeding.

4. CHECK CHK ENG

(a) The CHK ENG comes on when the ignition switch is turned to the ON position and the engine is not running.

HINT:
If the CHK ENG is not illuminated, troubleshoot the combination meter circuit (see page 05–299).

(b) When the engine is started, the CHK ENG should turn off. If the CHK ENG illuminates again, the diagnosis system has detected a malfunction or abnormality in the system.



05DVR–02

DTC CHECK/CLEAR

NOTICE:

Hand–held tester only:

When the diagnosis system is switched from normal mode to check mode, it erases all DTCs and freeze frame data recorded in normal mode. So before switching modes, always check the DTCs and freeze frame data, and then write them down.

1. DTC CHECK (Using the hand–held tester)

(a) Connect the hand–held tester to the DLC3.

(b) Turn the ignition switch to ON and turn the hand–held tester ON.

(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES.

(d) Read DTCs.

HINT:

- You can see also PENDING CODES which means malfunction is first detected at 1st driving cycle.
- If you need help with the hand–held tester, refer to its instruction book.

(e) See page 05–299 to confirm the details of the DTCs.

2. FREEZE FRAME DATA

(a) Connect the hand–held tester to the DLC3.

(b) Turn the ignition switch to ON and turn the hand–held tester ON.

(c) Select the item: DIAGNOSIS / OBD/MOBD / FREEZE FRAME DATA.

(d) Read the freeze frame data.

HINT:

If you need help with the hand–held tester, refer to its instruction book.

3. CLEAR DTCs AND FREEZE FRAME DATA (Using the hand–held tester)

(a) Connect the hand–held tester to the DLC3.

(b) Turn the ignition switch to ON and turn the hand–held tester ON. (Do not start the engine)

(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES.

(d) Clear DTCs and freeze frame data.

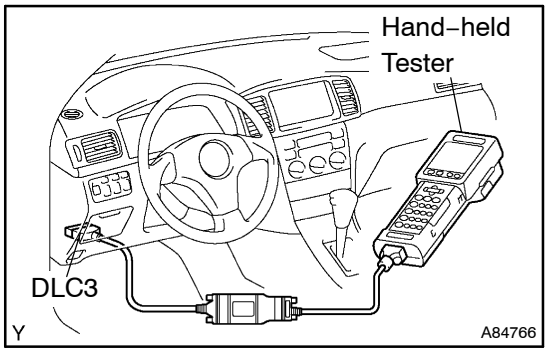
HINT:

If you need help with the hand–held tester, refer to its instruction book.

4. CLEAR DTCs AND FREEZE FRAME DATA (Not using the hand–held tester)

(a) Disconnect the battery terminal or remove the ECD fuse from the engine room R/B for more than 60 seconds.

05DVS–02



CHECK MODE PROCEDURE

HINT:

Hand–held tester only:

Check mode has a higher sensitivity to detect malfunctions and can detect malfunctions that normal mode cannot detect.

Check mode can also detect all the malfunctions that normal mode can detect.

1. CHECK MODE PROCEDURE(Using the hand–held tester)

(a) Turn the ignition switch to OFF.

(b) Connect the hand–held tester to the DLC3.

(c) Turn the ignition switch to ON and turn the hand–held tester ON.

(d) Select the item: DIAGNOSIS / OBD/MOBD / CHECK MODE.

NOTICE:

All DTCs and freeze frame data recorded will be erased if: 1) the hand–held tester is used to change the ECM from normal mode to check mode or vice versa; or 2) during check mode, the ignition switch is turned from ON to ACC or OFF.

(e) Start the engine. The CHK ENG should turn off after the engine starts.

(f) Simulate condition of the malfunction described by the customer or freeze frame data.

(g) After simulating the malfunction condition, use the hand–held tester diagnosis selector to check the DTCs, freeze frame data and other data.

(h) After checking the DTCs, inspect the applicable parts.

2. CLEAR DTCs (Using the hand–held tester)

(a) Connect the hand–held tester to the DLC3.

(b) Turn the ignition switch to ON and turn the hand–held tester ON. (Do not start the engine)

(c) Select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES.

(d) Clear DTCs and freeze frame data.

HINT:

If you need help with the hand–held tester, refer to its instruction book.

(e) Disconnect the battery terminal or remove the ECD fuse from the engine room R/B for more than 60 seconds.

05DVX–02

FAIL–SAFE CHART

1. FAIL–SAFE CHART

If any of the following codes is recorded, the engine ECM enters the fail–safe mode.

DTC No.	Detection Item	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P0031	Oxygen (A/F) Sensor heater Control Circuit Low (Bank 1 Sensor 1)	Limits the engine power	”Pass” condition detected
P0087	Fuel Rail/System Pressure – Too Low	Limits the engine power	Ignition switch OFF
P0088	Fuel Rail/System Pressure – Too High	Limits the engine power	Ignition switch OFF
P0093	Fuel System Leak Detected – Large Leak	After shunt driving control is performed for 1 minute, engine stalls	Ignition switch OFF
P0095	Intake Air Temperature Sensor 2 Circuit	Intake air (intake manifold) temperature is fixed at 145°C (293°F)	”Pass” condition detected
P0097	Intake Air Temperature Sensor 2 Circuit Low		
P0098	Intake Air Temperature Sensor 2 Circuit High		
P0100	Mass or Volume Air Flow Circuit	Limits the engine power	”Pass” condition detected
P0102	Mass or Volume Air Flow Meter Circuit Low Input		
P0103	Mass or Volume Air Flow Meter Circuit High Input		
P0105	Manifold Absolute Pressure/Barometric Pressure Circuit	Turbo pressure is fixed value	”Pass” condition detected
P0107	Manifold Absolute Pressure/Barometric Pressure Circuit Low Input		
P0108	Manifold Absolute Pressure/Barometric Pressure Circuit High Input		
P0110	Intake Air Temperature Circuit	Intake air (built in mass air flow meter) temperature is fixed value	”Pass” condition detected
P0112	Intake Air Temperature Circuit Low Input		
P0113	Intake Air Temperature Circuit High Input		
P0115	Engine Coolant Temperature Circuit	Fuel temperature sensor is specified value	”Pass” condition detected
P0117	Engine Coolant Temperature Circuit Low Input		
P0118	Engine Coolant Temperature Circuit High Input		
P0120	Throttle/Pedal Position Sensor/Switch ”A” Circuit	Limits the engine power	Ignition switch OFF
P0122	Throttle/Pedal Position Sensor/Switch ”A” Circuit Low Input		
P0123	Throttle/Pedal Position Sensor/Switch ”A” Circuit High Input		
P0168	Fuel Temperature Too High	Limits the engine power	”Pass” condition detected
P0180	Fuel Temperature Sensor ”A” Circuit	Fuel temperature is fixed at 40°C (104°F)	”Pass” condition detected
P0182	Fuel Temperature Sensor ”A” Circuit Low Input		
P0183	Fuel Temperature Sensor ”A” Circuit High Input		

DTC No.	Detection Item	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P0190	Fuel Rail Pressure Sensor Circuit	Limits the engine power	Ignition switch OFF
P0191	Fuel Rail Pressure Sensor Circuit Range/Performance		
P0192	Fuel Rail Pressure Sensor Circuit Low Input		
P0193	Fuel Rail Pressure Sensor Circuit High Input		
P0200	Injector Circuit/Open	Limits the engine power	Ignition switch OFF
P0234	Turbo/Super Charger Overboost Condition	Limits the engine power	Ignition switch OFF
P0335	Crankshaft Position Sensor ”A” Circuit	Limits the engine power	”Pass” condition detected
P0340	Camshaft Position Sensor ”A” Circuit (Bank 1 or Single Sensor)	Limits the engine power	”Pass” condition detected
P0400	Exhaust Gas Recirculation Flow	Limits the engine power	Ignition switch OFF
P0405	Exhaust Gas Recirculation Sensor ”A” Circuit Low	Limits the engine power	Ignition switch OFF
P0406	Exhaust Gas Recirculation Sensor ”A” Circuit High		
P0488	Exhaust Gas Recirculation Throttle Position Control Range/Performance	Limits the engine power	Ignition switch OFF
P0500	Vehicle Speed Sensor ”A”	Vehicle speed is fixed at 0 km/h (0 mph)	”Pass” condition detected
P0544	Exhaust Gas Temperature Sensor Circuit (Bank1 Sensor 1)	Limits the engine power	Ignition switch OFF
P0545	Exhaust Gas Temperature Sensor Circuit Low (Bank1 Sensor 1)		
P0546	Exhaust Gas Temperature Sensor Circuit High (Bank1 Sensor 1)		
P0627	Fuel Pump Control Circuit / Open	Limits the engine power	”Pass” condition detected
P1229	Fuel Pump System	Limits the engine power	Ignition switch OFF
P1251	Turbo/Super Charger Overboost Condition (Too High)	Limits the engine power	Ignition switch OFF
P1271	Fuel Regulator Circuit Malfunction (EDU Drive)	Limits the engine power	Ignition switch OFF
P1272	Fuel Pressure Regulator Malfunction	Limits the engine power	Ignition switch OFF
P1386	Injector For Exhaust Fuel Addition	• Low or excess fuel addition volume: No fail–safe operation • Low fuel addition volume: Limits the engine power (Driving at engine speed of up to approximately 80 km/h [50 mph] is permitted) • Stuck open: Limits the engine power (Driving at engine speed of up to approximately 10 km/h [6 mph] is permitted)	Ignition switch OFF
P1425	Differential Pressure Sensor Circuit	Differential pressure is fixed value	Ignition switch OFF
P1427	Differential Pressure Sensor Circuit Low		
P1428	Differential Pressure Sensor Circuit High		
P1611	IC Circuit Malfunction	Limits the engine power	Ignition switch OFF
P2002	Particulate Trap Efficiency Below Threshold (Bank 1)	Limits the engine power	Ignition switch OFF

DTC No.	Detection Item	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P2031	Exhaust Gas Temperature Sensor Circuit (Bank1 Sensor 2)	Limits the engine power	Ignition switch OFF
P2032	Exhaust Gas Temperature Sensor Circuit Low (Bank1 Sensor 2)		
P2033	Exhaust Gas Temperature Sensor Circuit High (Bank1 Sensor 2)		
P2047	Reductant Injector Circuit/Open (Bank 1 Unit 1)	Limits the engine power	Ignition switch OFF
P2120	Throttle/Pedal Position Sensor/Switch ”D” Circuit	Limits the engine power	Ignition switch OFF
P2121	Throttle/Pedal Position Sensor/Switch ”D” Circuit Range/Performance		
P2122	Throttle/Pedal Position Sensor/Switch ”D” Circuit Low Input		
P2123	Throttle/Pedal Position Sensor/Switch ”D” Circuit High Input		
P2125	Throttle/Pedal Position Sensor/Switch ”E” Circuit		
P2127	Throttle/Pedal Position Sensor/Switch ”E” Circuit Low Input		
P2128	Throttle/Pedal Position Sensor/Switch ”E” Circuit High Input		
P2138	Throttle/Pedal Position Sensor/Switch ”D”/”E” Voltage Correlation		
P2226	Barometric Pressure Circuit	Atmospheric pressure is fixed value	”Pass” condition detected
P2228	Barometric Pressure Circuit Low Input		
P2229	Barometric Pressure Circuit High Input		
P2237	Oxygen Sensor Pumping Current Circuit/Open (For A/F Sensor) (Bank 1 Sensor 1)	Limits the engine power	”Pass” condition detected
P2238	Oxygen Sensor Pumping Current Circuit/Low (For A/F Sensor) (Bank 1 Sensor 1)	Limits the engine power	”Pass” condition detected or Ignition switch OFF
P2239	Oxygen Sensor Pumping Current Circuit/High (For A/F Sensor) (Bank 1 Sensor 1)	Limits the engine power	”Pass” condition detected

05DVU–02

DATA LIST/ACTIVE TEST

1. DATA LIST

HINT:

Using the hand–held tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading DATA LIST early in troubleshooting is one way to shorten labor time.

NOTICE:

In the table below, the values listed under ”Normal Condition” are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.
(b) Turn the ignition switch to OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to ON.
(e) Turn the hand–held tester ON.
(f) Enter the following menus: DIAGNOSIS / OBD/MOBD / DATA LIST.
(g) According to the display on the tester, read DATA LIST.

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *	Diagnostic Note
INJ VOLUME	Injection volume/ Min.: 0 mm^3, Max.: 1279.98 mm^3	Idling: 3 to 10 mm^3	—
ENGINE SPD	Engine speed/ Min.: 0 rpm, Max.: 16383.75 rpm	Idling: 750 to 850 rpm	—
MAF	Air flow rate from MAF meter status/ Min.: 0 gm/s, Max.: 655.35 gm/s	• Idling: 3.2 to 4.7 gm/s • Running without load (2,500 rpm): 13.1 to 18.9 gm/s	If the value is approximately 0.0 gm/s: • Mass air flow meter power source circuit open • VG circuit open or short If the valve is 160 gm/s or more: • E2G circuit open
PIM	Absolute pressure inside intake manifold/ Min.: 0 kPa, Max.: 224 kPa	Ignition switch ON: Same as atmospheric pressure	Engine is not running
COOLANT TEMP	Coolant temperature/ Min.: –40°C, Max.: 215°C	After warming up: 75 to 95˚C (167 to 203˚F)	If the value is ”–40°C” or ”140°C or more”, sensor circuit is open or shorted
INTAKE AIR	Intake air temperature/ Min.: –40°C, Max.: 215°C	Equivalent to air temperature at the intake manifold	
FUEL TEMP	Fuel temperature status/ Min.: –40°C, Max.: 215°C	Actual fuel temperature	
ACCEL POSITION	Accel position status/ Min.: 0 %, Max.: 100 %	• Accelerator pedal released: 10 to 22 % • Accelerator pedal depressed: 52 to 90 %	Read the value with ignition switch ON (Do not start engine)
VEHICLE SPD	Vehicle speed/ Min.: 0 km/h, Max.: 255 km/h	Actual vehicle speed	Speed indicated on speedometer
THROTTLE POS	Throttle position sensor status/ Min.: 0 %, Max.: 100 %	• Throttle fully closed: 98 % • Throttle fully open: 0 %	100 % when the engine is at rest
COMN RAIL	Common rail pressure status/ Min.: 0 MPa, Max.: 255 MPa	• Idling: 30 to 40 MPa • Engine running at 3,000 rpm: 50 to 100 MPa	—
AMBI TEMP SENS	Ambient temperature sensor status/ Min.: –40°C, Max.: 215°C	Actual atmospheric air temperature	If the value is ”–40°C” or ”140°C or more”, sensor circuit is open or shorted

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *	Diagnostic Note
INJ VOL FB #1	Injection volume correction for cylinder 1/ Min.: –10 mm^3, Max.: 10 mm^3	Idling: –3.0 to 3.0 mm^3	—
INJ VOL FB #2	Injection volume correction for cylinder 2/ Min.: –10 mm^3, Max.: 10 mm^3	Idling: –3.0 to 3.0 mm^3	—
INJ VOL FB #3	Injection volume correction for cylinder 3/ Min.: –10 mm^3, Max.: 10 mm^3	Idling: –3.0 to 3.0 mm^3	—
INJ VOL FB #4	Injection volume correction for cylinder 4/ Min.: –10 mm^3, Max.: 10 mm^3	Idling: –3.0 to 3.0 mm^3	—
M–INJ/PILOT ON	Pilot–injection ON timing of main injector/ Min.: 0 μs Max.: 65,535 μs	Idling: 600 to 1,200 μs	—
M–INJ/PILOT OFF	Pilot–injection OFF timing of main injector/ Min.: 0 μs Max.: 65,535 μs	Idling: 600 to 1,200 μs	—
PILOT–INJ	Pilot–injection/ Min.: 0 μs, Max.: 65,535 μs	Idling: 400 to 700 μs	—
INJ FB VALUE	Injection volume feedback learning value/ Min.: –10 mm^3, Max.: 9,092 mm^3	Idling: –4.0 to 4.0 mm^3	—
STOP LIGHT SW	Stop lamp switch/ ON or OFF	• Brake pedal depressed: ON • Brake pedal released: OFF	—
STARTER SIG	Starter signal/ ON or OFF	Cranking: ON	—
CHECK MODE	Check mode/ ON or OFF	Check mode ON: ON	—
EGR VALVE POS	EGR position sensor status/ Min.: 0 V, Max.: 5 V	• Closed: 4.0 V • Open: 2.1 V	—
MIL ON RUN DIST	Travel distance after check engine warning light (CHK ENG) was illuminated/ Min.: 0 km, Max.: 65,535 km	Actual travel distance after check engine warning light was illuminated	—
AFS B1 S1	A/F sensor output voltage for bank 1 sensor 1/ Min.: 0 V, Max.: 7.999 V	Idling 2.8 to 3.8 V	—
DPNR DIFF PRESS	DPNR differential pressure/ Min.: –5 kPa, Max.: 100 kPa	Idling: approximately 0 kPa	—
GENERATOR	Generator (alternator) duty ratio status/ Min.: 0 %, Max.: 100 %	Idling: 10 to 100 %	—
EX TEMP IN	Exhaust gas temperature for IN/ Min.: 0°C, Max.: 1000°C	Actual exhaust gas temperature (on up stream)	—
EX TEMP OUT	Exhaust gas temperature for OUT/ Min.: 0°C, Max.: 1000°C	Actual exhaust gas temperature (on down stream)	—
EX FUEL ADD FB	Exhaust fuel addition correction value/ Min.: 0, Max.: 2	Vicinity of 1.0	—
AF FT B1 S1	Short–term fuel trim associated with the bank 1 sensor 1/ Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) = Correction to lean • Stoichiometric Air–fuel ratio=1 • Value greater than 1 (1.001 to 1.999) = Correction to rich	—

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *	Diagnostic Note
ATM PRESSURE	Atmospheric pressure value/ Min.: 0 kPa, Max.: 150 kPa	Actual atmospheric pressure	—
INJ PRS FB VAL	Injection pressure correction value/ Min.: –500 mm^3/s, Max.: 500 mm^3/s	Idling: –400 to 400 mm^3/s	—
ATM LEARN VAL	Atmospheric pressure learning value/ Min.: 0 V, Max.: 5 V	Ignition switch ON: 1.35 to 2.12 V	—
DIFF SEN FB VAL	Differential pressure correction value/ Min.: –10 kPa, Max.: 10 kPa	Idling: –1.5 to 1.5 kPa	—
EGR LEARN VAL	EGR valve learning value/ Min.: 0 V, Max.: 5 V	Idling: 3.5 to 4.5 V	—
DPNR REJU (PM)	Result of DPNR catalyst regeneration (PM)/ ON or OFF	• DPNR catalyst regeneration (PM) ON: ON • DPNR catalyst regeneration (PM) OFF: OFF	—
DPNR REJU (S)	Result of DPNR catalyst regeneration (S)/ ON or OFF	• DPNR catalyst regeneration (S) ON: ON • DPNR catalyst regeneration (S) OFF: OFF	—

*: If no conditions are specifically stated for "Idling," it means the A/C switch is OFF and all accessory switches are OFF.

2. ACTIVE TEST

HINT:

Performing ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing ACTIVE TEST as a first step of troubleshooting is one of the methods to shorten diagnostic time.

It is possible to display DATA LIST during ACTIVE TEST.

(a) Turn the ignition switch to OFF.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to ON.
(d) Turn the hand–held tester ON.
(e) Enter the following menus: DIAGNOSIS / OBD/MOBD / ACTIVE TEST.
(f) According to the display on the tester, perform ACTIVE TEST.

Hand–held Tester Display	Test Details	Diagnostic Note
TC/TE1	Same condition as the connection of TC and TE1 ON or OFF	—
FUEL LEAK TEST	Maintain the engine speed at 2,000 rpm, and pressurize the common rail internal fuel pressure to 175 MPa ON or OFF	Confirm that there is no leak in the fuel system when the common rail internal fuel pressure is pressurized high
INJECTOR CUT #1	Stop injection of Injector No. 1 ON or OFF	—
INJECTOR CUT #2	Stop injection of Injector No. 2 ON or OFF	—
INJECTOR CUT #3	Stop injection of Injector No. 3 ON or OFF	—
INJECTOR CUT #4	Stop injection of Injector No. 4 ON or OFF	—
DPNR REJU (PM)	DPNR catalyst regeneration (PM) Raise temperature of DPNR to more than 600°C (1,112°F) by adding fuel intermittently using the exhaust fuel addition injector	—
DPNR REJU (S)	DPNR catalyst regeneration (S) Raise temperature of DPNR to more than 600°C (1,112°F) by adding fuel intermittently using the exhaust fuel addition injector	—

054JD–11

DIAGNOSTIC TROUBLE CODE CHART

HINT:

Parameters listed in the chart may be different than your readings depending on the type of instrument used and other factors.

During the DTC check, refer to the table below if a malfunction code is displayed. For details about each code, refer to the page number in the DTC Chart's left column.

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0031 (05–305)	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)	• Open in A/F sensor heater circuit • A/F sensor heater • A/F sensor heater relay • ECM	○	○
P0045 (05–312)	Turbo/Super Charger Boost Control Solenoid Circuit / Open	• VRV • Open or short in VRV circuit • ECM	○	○
P0087 (05–314)	Fuel Rail/System Pressure – Too Low	• Open or short in fuel pressure sensor circuit • Fuel pressure sensor • ECM	○	○
P0088 (05–321)	Fuel Rail/System Pressure – Too High	• Supply pump (Suction control valve) • Pressure discharge valve • Short in supply pump (Suction control valve) circuit • Open in pressure discharge valve circuit • ECM	○	○
P0093 (05–328)	Fuel System Leak Detected – Large Leak	• Fuel line between supply pump and common rail • Fuel line between common rail and injector • Supply pump • Common rail • Injector (P1238 is set simultaneously) • Pressure discharge valve • Open or short in EDU circuit (P0200 is set simultaneously) • Open or short in injector circuit (P0200 and P1238 are set simultaneously) • EDU (P0200 is set simultaneously) • ECM	○	○
P0095 (05–331)	Intake Air Temperature Sensor 2 Circuit	• Open or short in diesel turbo inlet air temperature sensor circuit • Diesel turbo inlet air temperature sensor • ECM	○	○
P0097 (05–331)	Intake Air Temperature Sensor 2 Circuit Low		○	○
P0098 (05–331)	Intake Air Temperature Sensor 2 Circuit High		○	○
P0100 (05–336)	Mass or Volume Air Flow Circuit	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM	○	○
P0101 (05–341)	Mass or Volume Air Flow Circuit Range/Performance Problem	• Mass air flow meter	○	○
P0102 (05–336)	Mass or Volume Air Flow Meter Circuit Low Input	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM	○	○
P0103 (05–336)	Mass or Volume Air Flow Meter Circuit High Input		○	○
P0105 (05–342)	Manifold Absolute Pressure/ Barometric Pressure Circuit	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • Turbocharger assembly • EGR valve assembly • ECM	○	○
P0106 (05–346)	Manifold Absolute Pressure/ Barometric Pressure Circuit Range/Performance Problem	• Manifold absolute pressure sensor	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0107 (05–342)	Manifold Absolute Pressure/ Barometric Pressure Circuit Low Input	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • Turbocharger assy • EGR valve assy • ECM	○	○
P0108 (05–342)	Manifold Absolute Pressure/ Barometric Pressure Circuit High Input		○	○
P0110 (05–347)	Intake Air Temperature Circuit	• Open or short in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM	○	○
P0112 (05–347)	Intake Air Temperature Circuit Low Input		○	○
P0113 (05–347)	Intake Air Temperature Circuit High Input		○	○
P0115 (05–352)	Engine Coolant Temperature Circuit	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM	○	○
P0116 (05–356)	Engine Coolant Temperature Circuit Range/Performance Problem	• Engine coolant temperature sensor	○	○
P0117 (05–352)	Engine Coolant temperature Circuit Low Input	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM	○	○
P0118 (05–352)	Engine Coolant temperature Circuit High Input		○	○
P0120 (05–357)	Throttle/Pedal Position Sensor/ Switch "A" Circuit	• Open or short in intake shutter (throttle valve) position sensor circuit • Intake shutter (throttle valve) position sensor • ECM	○	○
P0122 (05–357)	Throttle/Pedal Position Sensor/ Switch "A" Circuit Low Input	• Intake shutter (throttle valve) position sensor • Open or short in VLU circuit • Open in VC circuit • ECM	○	○
P0123 (05–357)	Throttle/Pedal Position Sensor/ Switch "A" Circuit High Input	• Intake shutter (throttle valve) position sensor • Open in E2 circuit • VC and VTA circuits are short–circuited • ECM	○	○
P0168 (05–361)	Fuel Temperature Too High	• Fuel temperature sensor	○	○
P0180 (05–362)	Fuel Temperature Sensor "A" Circuit	• Open or short in fuel temperature sensor circuit • Fuel temperature sensor • ECM	○	○
P0182 (05–362)	Fuel Temperature Sensor "A" Circuit Low Input		○	○
P0183 (05–362)	Fuel Temperature Sensor "A" Circuit High Input		○	○
P0190 (05–314)	Fuel Rail Pressure Sensor Circuit	• Open or short in fuel pressure sensor circuit • Fuel pressure sensor • ECM	○	○
P0191 (05–367)	Fuel Rail Pressure Sensor Circuit Range/Performance	• Fuel pressure sensor	○	○
P0192 (05–314)	Fuel Rail Pressure Sensor Circuit Low Input	• Open or short in fuel pressure sensor circuit • Fuel pressure sensor • ECM	○	○
P0193 (05–314)	Fuel Rail Pressure Sensor Circuit High Input		○	○
P0200 (05–368)	Injector Circuit / Open	• Open or short in EDU circuit • Injector • EDU • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0234 (05–376)	Turbo/Super Charger Overboost Condition	• VRV • Open or short in VRV circuit • Turbocharger	○	○
P0299 (05–376)	Turbo/Super Charger Under-boost	• EGR valve • Vacuum hose • ECM	○	○
P0335 (05–381)	Crankshaft Position Sensor ”A” Circuit	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft timing pulley) • ECM	○	○
P0339 (05–381)	Crankshaft Position Sensor ”A” Circuit Intermittent		—	○
P0340 (05–384)	Camshaft Position Sensor ”A” Circuit (Bank 1 or Single Sensor)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing pulley • ECM	○	○
P0380 (05–386)	Glow Plug/Heater Circuit ”A”	• Open or short in glow plug circuit • Glow fuse • Glow plug relay • Glow plug • ECM	○	○
P0400 (05–393)	Exhaust Gas Recirculation Flow	• EGR valve stuck • EGR valve does not move smoothly • Open or short in EGR circuit • Open or short in EGR valve position sensor circuit • EGR valve position sensor • ECM	○	○
P0405 (05–399)	Exhaust Gas Recirculation Sensor ”A” Circuit Low	• Open or short in EGR valve position sensor circuit • EGR valve position sensor • ECM	○	○
P0406 (05–399)	Exhaust Gas Recirculation Sensor ”A” Circuit High		○	○
P0488 (05–403)	Exhaust Gas Recirculation Throttle Position Control Range/ Performance	• Intake shutter stuck • Intake shutter does not move smoothly • Open or short in intake shutter circuit • Open or short in intake shutter position sensor circuit • Intake shutter position sensor (built in intake shutter valve) • ECM	○	○
P0500 (05–408)	Vehicle Speed Sensor ”A”	• Open or short in speed sensor circuit • Speed sensor • Combination meter • ECM • Skid control ECU	○	○
P0504 (05–411)	Brake Switch ”A”/”B” Correlation	• Short in stop lamp switch signal circuit • Stop lamp switch • ECM	—	○
P0544 (05–415)	Exhaust Gas Temperature Sensor Circuit (Bank1 Sensor 1)	• Open or short in exhaust gas temperature sensor (on up stream) circuit • Exhaust gas temperature sensor (on up stream) • ECM	○	○
P0545 (05–415)	Exhaust Gas Temperature Sensor Circuit Low (Bank1 Sensor 1)		○	○
P0546 (05–415)	Exhaust Gas Temperature Sensor Circuit High (Bank1 Sensor 1)		○	○
P0560 (05–422)	System Voltage	• Open in back–up power source circuit • Low battery voltage • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0606 (05–425)	ECM/PCM Processor	• ECM	—	—
P0607 (05–425)	Control Module Performance		○	○
P0622 (05–426)	Generator Field "F" Terminal Circuit	• Open in generator (alternator) circuit • Generator (alternator) • Drive belt • ECM	○	○
P0627 (05–429)	Fuel Pump Control Circuit / Open	• Open or shot in suction control valve circuit • Suction control valve • ECM	○	○
P1229 (05–321)	Fuel Pump System	• Short in supply pump (suction control valve) circuit • Supply pump (suction control valve) • ECM	○	○
P1238 (05–431)	Injector Malfunction	• Injector • EDU (P0200 is set simultaneously) • Open or short in engine wire harness (P0200 is set simultaneously) • Connector connection (P0200 is set simultaneously) • Compression pressure • Valve clearance • Valve timing • ECM	○	○
P1251 (05–376)	Turbo/Super Charger Overboost Condition (Too High)	• VRV • Open or short in VRV circuit • Turbocharger • EGR valve • Vacuum hose • ECM	○	○
P1271 (05–435)	Fuel Regulator Circuit Malfunction (EDU Drive)	• Open or short in pressure discharge valve circuit • Open or short in pressure discharge valve itself • EDU • ECM	○	○
P1272 (05–435)	Fuel Pressure Regulator Malfunction	• Open or short in pressure discharge valve circuit (P1271 is set simultaneously) • Pressure discharge valve • Supply pump • ECM	○	○
P1386 (05–444)	Injector For Exhaust Fuel Addition	• Open or short in exhaust fuel addition injector circuit • Exhaust fuel addition injector • DPNR catalytic converter (Manifold converter sub–assy) • Open in exhaust temperature sensor circuit • A/F sensor • Exhaust gas temperature sensor • Supply pump assy • Mass air flow meter • Fuel leaks in exhaust fuel addition injector • Main injector • Cylinder compression pressure • Valve clearance • Valve timing • Air intake system has blockages • Air intake system has leakage • Exhaust system has blockages • Exhaust system has leakage • EGR system has blockages • EGR system has leakage • ECM	○	○

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P1425 (05–457)	Differential Pressure Sensor Circuit	• Open or short in differential pressure sensor circuit • Incorrect arrangement differential pressure sensor hose piping • Differential pressure sensor • ECM	○	○
P1426 (05–462)	Differential Pressure Sensor (Installation)	• Incorrect arrangement differential pressure sensor hose piping • Differential pressure sensor vacuum hose is clogged • Blockage in vacuum transmitting pipe sub–assy • Differential pressure sensor • ECM	○	○
P1427 (05–457)	Differential Pressure Sensor Circuit Low	• Open or short in differential pressure sensor circuit • Incorrect arrangement differential pressure sensor hose piping • Differential pressure sensor • ECM	○	○
P1428 (05–457)	Differential Pressure Sensor Circuit High		○	○

*1: Check that the check engine warning light (CHK ENG) is illuminated.

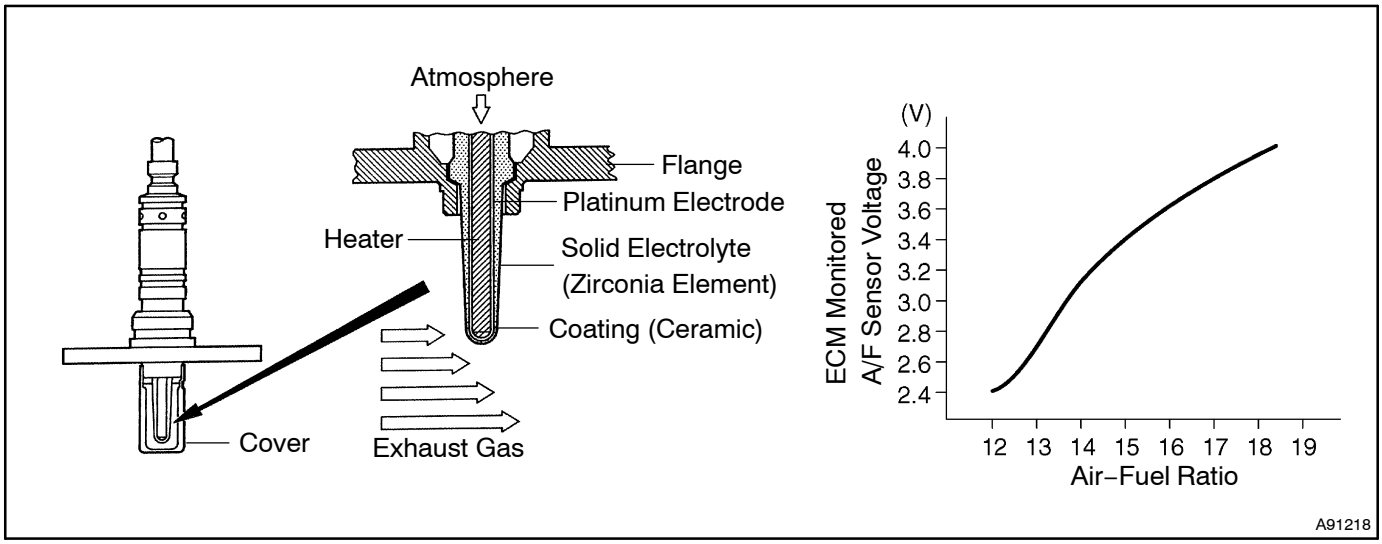
DTC	P0031	OXYGEN (A/F) SENSOR HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

HINT:

- For more information on the A/F sensor and TOYOTA D–CAT (*1), see page 05–255.
- If P0031 is present, refer to the diagnostic trouble codes (DTCs) table for the TOYOTA D–CAT on page 05–255.
- This DTC is related to the A/F sensor, although the caption is the oxygen sensor.

*1: Diesel Clean Advanced Technology.

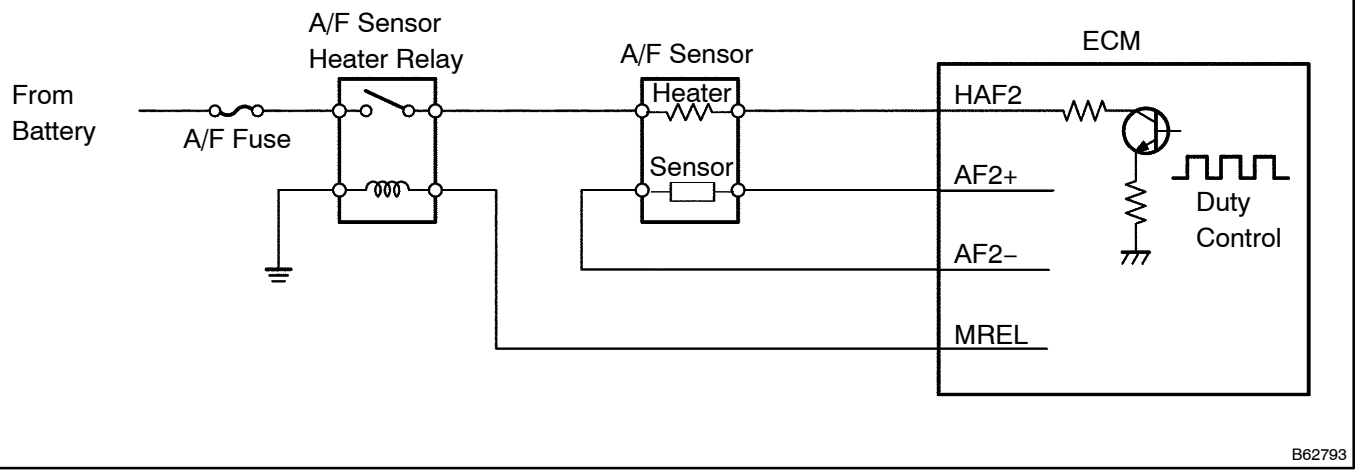
CIRCUIT DESCRIPTION



The A/F sensor has the characteristic that it provides output voltage which is proportional to the existing air–fuel ratio. The A/F sensor output voltage (*2) is used to provide the ECM with feedback to control the air–fuel ratio.

The A/F sensor is located after the DPNR (*3) catalytic converter. This sensor has been developed based on structure and technology of a sensor that is being used for gasoline engines. Its cover portion of the sensor has been changed for application of use to the diesel engine with TOYOTA D–CAT in order to eliminate influence of the sensor temperature and particulate matter (PM).

In order to reduce both PM and nitrogen oxides (NOx), the ECM adjusts the air–fuel ratio to slightly RICH (but it is LEAN compared with a stoichiometric air–fuel ratio) with signals from the A/F sensor, if needed. When the ECM exercises DPNR catalyst regeneration by adding fuel using the exhaust fuel addition injector, the air–fuel ratio is also properly adjusted through the sensor.

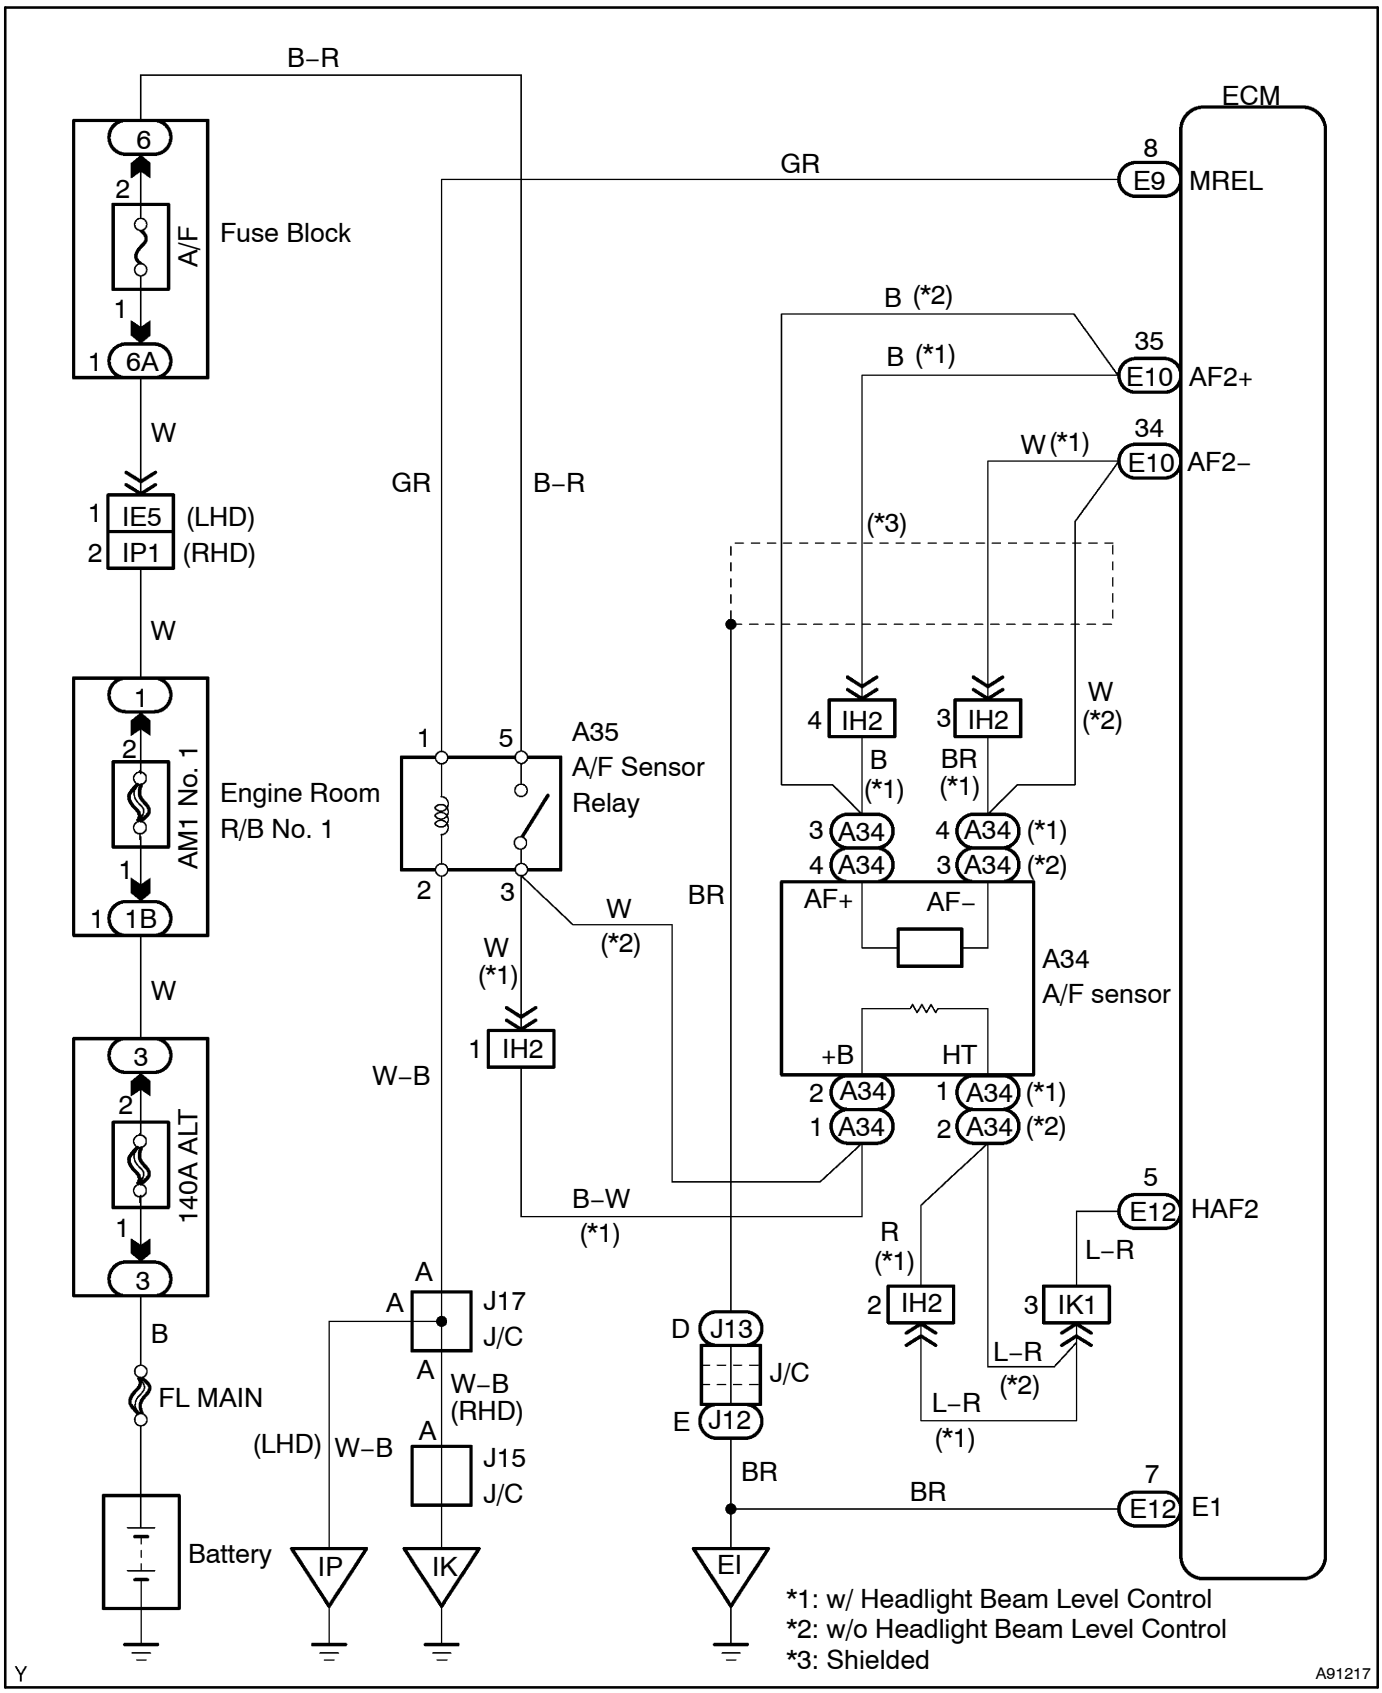


*2: The voltage value changes inside the ECM only.

*3: Diesel Particulate–NOx Reduction system.

HINT:
The ECM provides a pulse width modulated control circuit to adjust current through the heater. The A/F sensor heater circuit uses a relay on the B+ side of the circuit.

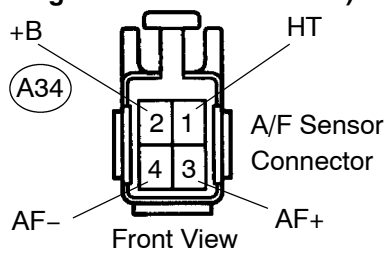
Reference:



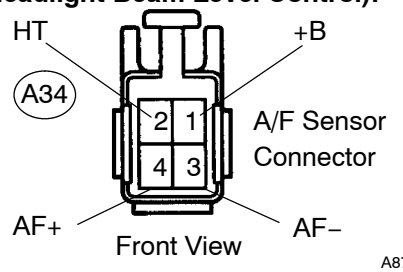
DTC No.	DTC Detection Condition	Trouble Area
P0031	Heated current is 1.5 A or less when the heater operates (1 trip detection logic)	• Open in A/F sensor heater circuit • A/F sensor heater • A/F sensor heater relay • ECM

MONITOR DESCRIPTION

The inner surface of the A/F sensor element is exposed to outside air. The outer surface of the sensor element is exposed to exhaust gases. The sensor element is made of platinum coated zirconia and includes an integrated heating element. The zirconia element generates small voltage when there is a large difference in the oxygen concentrations of the exhaust and the outside air. The platinum coating amplifies the voltage generation. When heated, the sensor becomes very efficient. If the temperature of the exhaust is low, the sensor will not generate useful voltage signals without supplemental heating. The ECM regulates the supplemental heating using a duty–cycle approach to regulate the average current in the heater element. If the heater current is out of the normal range, the sensor's output signals will be inaccurate and the ECM can not regulate the air–fuel ratio properly. When the heater current is out of the normal operating range, the ECM interprets this as a malfunction and sets a DTC.



WIRING DIAGRAM



INSPECTION PROCEDURE

1 INSPECT AIR FUEL RATIO SENSOR(RESISTANCE)

Component Side
(w/ Headlight Beam Level Control):

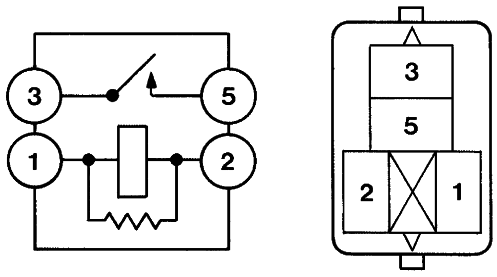
Component Side
(w/o Headlight Beam Level Control):

(a) Disconnect the A34 A/F sensor connector.
(b) Measure the resistance between the terminals of the A/F sensor.

Resistance (w/ Headlight beam level control):

Tester Connection	Specified Condition
HT (1) – +B (2)	0.86 to 1.1 Ω at 20°C (68°F)

Resistance (w/o Headlight beam level control):



Tester Connection	Specified Condition
HT (2) – +B (1)	0.86 to 1.1 Ω at 20°C (68°F)

(c) Reconnect the A/F sensor connector.

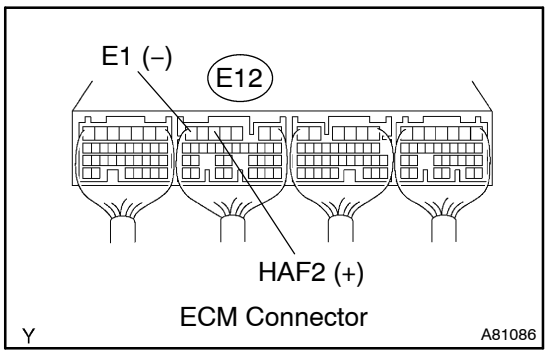
NG → **REPLACE AIR FUEL RATIO SENSOR**

OK

2 INSPECT AIR FUEL RATIO SENSOR HEATER RELAY

(a) Remove the A/F sensor heater relay.
(b) Inspect the A/F sensor heater relay.

Standard:



Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage to terminals 1 and 2)

(c) Reinstall the A/F sensor heater relay.

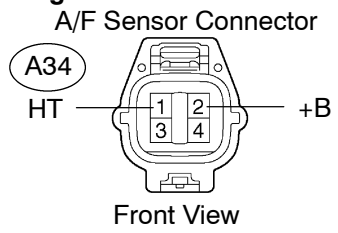
NG → **REPLACE AIR FUEL RATIO SENSOR HEATER RELAY**

OK

3 INSPECT ECM(A/F SENSOR HEATER VOLTAGE)

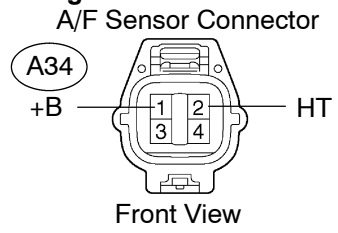
(a) Turn the ignition switch to ON.
(b) Measure the voltage between the applicable terminals of the E12 ECM connector.

Standard:

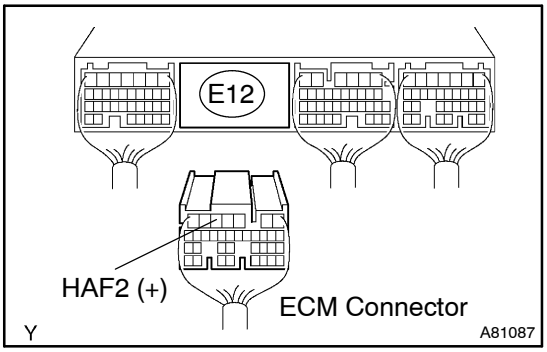


Tester Connection	Specified Condition
HAF2 (E12–5) – E1 (E12–7)	9 to 14 V

NG

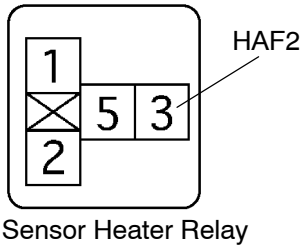


OK → **REPLACE ECM (See page 10–29)**



4 CHECK HARNESS AND CONNECTOR(A/F SENSOR – ECM, A/F SENSOR – A/F SENSOR HEATER RELAY)

Wire Harness Side
(w/ Headlight Beam Level Control):



Wire Harness Side
(w/o Headlight Beam Level Control):

Wire Harness Side:

(a) Check the harness and the connectors between the ECM and the A/F sensor.
(1) Disconnect the A34 A/F sensor connector.
(2) Disconnect the E12 ECM connector.
(3) Check the resistance between the wire harness side connectors.

Standard (Check for open)
(w/ Headlight beam level control):

Tester Connection	Specified Condition
HT (A34–1) – HAF2 (E12–5)	Below 1 Ω

Standard (Check for open)
(w/o Headlight beam level control):

Tester Connection	Specified Condition
HT (A34–2) – HAF2 (E12–5)	Below 1 Ω

Standard (Check for short)
(w/ Headlight beam level control):

Tester Connection	Specified Condition
HT (A34–1) or HAF2 (E12–5) – Body ground	10 kΩ or higher

Standard (Check for short)
(w/o Headlight beam level control):

Tester Connection	Specified Condition
HT (A34–2) or HAF2 (E12–5) – Body ground	10 kΩ or higher

(4) Reconnect the A/F sensor connector.
(5) Reconnect the ECM connector.

(b) Check the harness and connectors between the A/F sensor connector and the A/F sensor heater relay.
(1) Disconnect the A34 A/F sensor connector.
(2) Remove the A/F sensor heater relay from the engine room R/B.
(3) Check the resistance between the wire harness side connectors.

Standard (Check for open)
(w/ Headlight beam level control):

Tester Connection	Specified Condition
+B (A34–2) – A/F sensor heater relay (3)	Below 1 Ω

Standard (Check for open)
(w/o Headlight beam level control):

Tester Connection	Specified Condition
+B (A34–1) – A/F sensor heater relay (3)	Below 1 Ω

Standard (Check for short)
(w/ Headlight beam level control):

Tester Connection	Specified Condition
+B (A34–2) or A/F sensor heater relay (3) – Body ground	10 kΩ or higher

Standard (Check for short)
(w/o Headlight beam level control):

Tester Connection	Specified Condition
+B (A34–1) or A/F sensor heater relay (3) – Body ground	10 kΩ or higher

(4) Reconnect the A/F sensor connector.
(5) Reinstall the A/F sensor heater relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

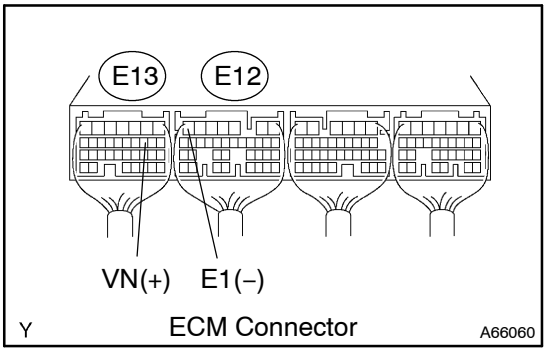
DTC	P0045	TURBO/SUPER CHARGER BOOST CONTROL SOLENOID CIRCUIT / OPEN

CIRCUIT DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
P0045	Open or short in VRV circuit for 0.5 second or more (1 trip detection logic)	• VRV • Open or short in VRV circuit • ECM

WIRING DIAGRAM

Refer to DTC P0234 on page 05–376.

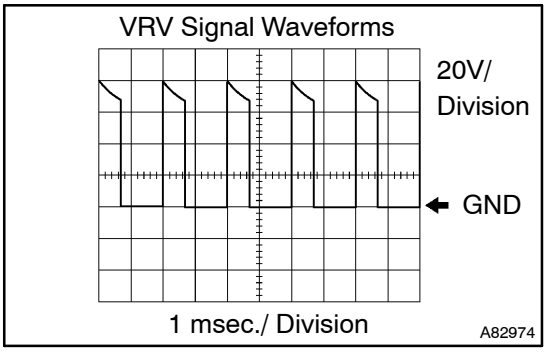


INSPECTION PROCEDURE

1	INSPECT VACUUM REGULATING VALVE ASSY (See page 13–8)

NG → REPLACE VACUUM REGULATING VALVE ASSY

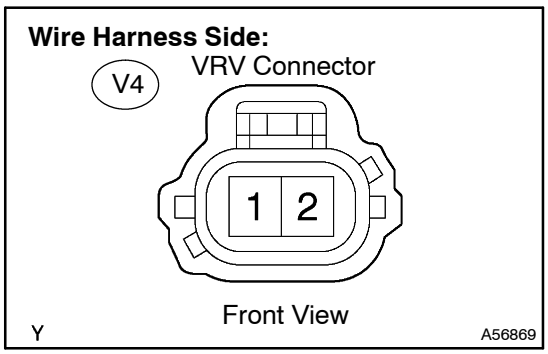
OK



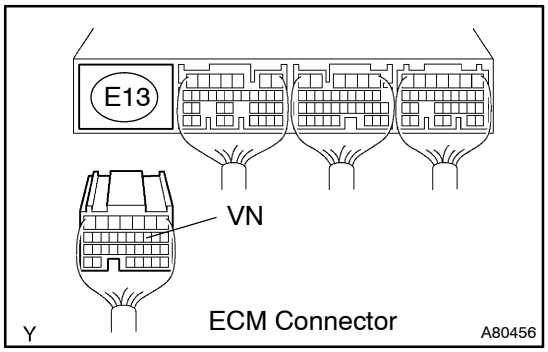
2	INSPECT ECM(VN VOLTAGE)

(a) Inspect using the oscilloscope.
(b) During idling, check the waveform between terminals E12 and E13 of the ECM connectors.

Standard:



Tester Connection	Specified Condition
VN (E13–10) – E1 (E12–7)	Correct waveform is as shown



OK → REPLACE ECM (See page 10–29)

NG

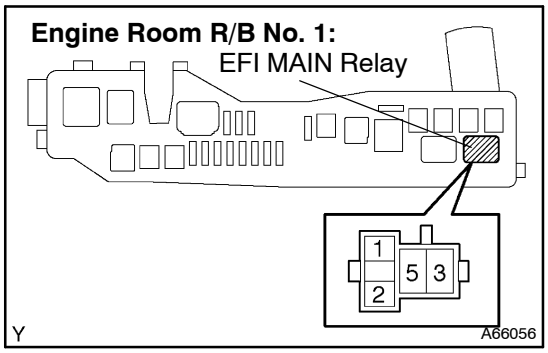
3 CHECK HARNESS AND CONNECTOR(VRV – ECM)

(a) Disconnect the V4 VRV connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

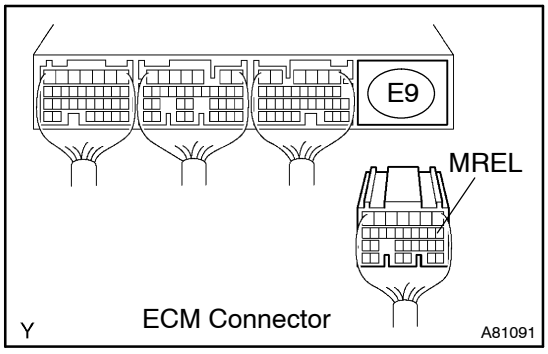
Standard (Check for open):

Tester Connection	Specified Condition
VN (E13–10) – (V4–2)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
VN (E13–10) or (V4–2) – Body ground	10 kΩ or higher



(d) Reconnect the VRV connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK HARNESS AND CONNECTOR(VRV – EFI MAIN RELAY)

(a) Remove the EFI MAIN relay from the engine room R/B No. 1.
(b) Disconnect the E9 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
EFI MAIN relay (1) – MREL (E9–8)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
EFI MAIN relay (1) or MREL (E9–8) – Body ground	10 kΩ or higher

(d) Reinstall the EFI MAIN relay.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

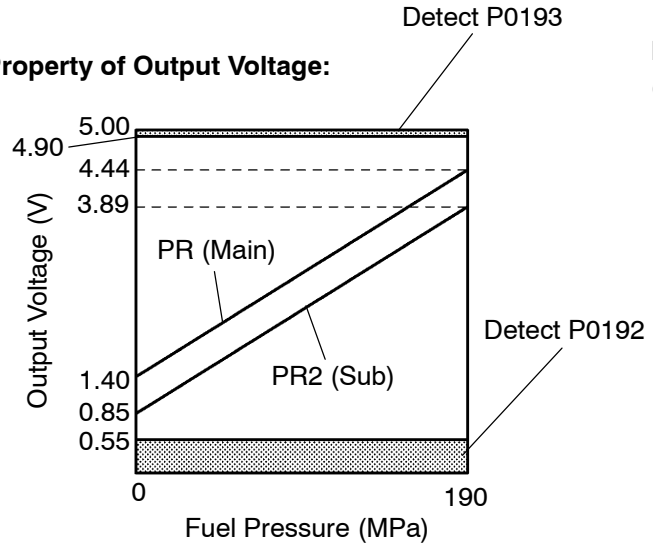
DTC	P0087	FUEL RAIL/SYSTEM PRESSURE – TOO LOW

DTC	P0190	FUEL RAIL PRESSURE SENSOR CIRCUIT

DTC	P0192	FUEL RAIL PRESSURE SENSOR CIRCUIT LOW INPUT

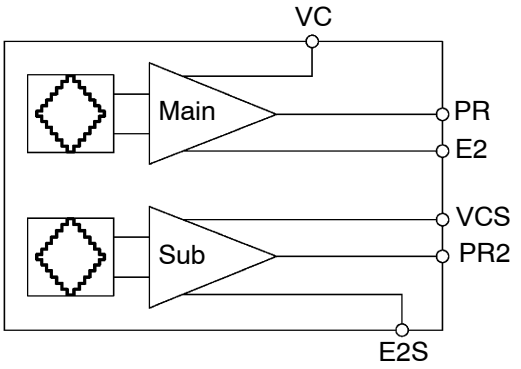
DTC	P0193	FUEL RAIL PRESSURE SENSOR CIRCUIT HIGH INPUT

HINT:



- For more information on the fuel pressure sensor and the common rail system, see page 05–255.
- If P0087, P0190, P0192 and/or P0193 is present, refer to the diagnostic trouble codes (DTCs) table for fuel system on page 05–255.

CIRCUIT DESCRIPTION



The ECM monitors internal fuel pressure of the common rail using the fuel pressure sensor and controls the suction control valve to regulate the internal fuel pressure to the target pressure, approximately 30 to 180 MPa (306 to 1,835 kgf/cm^2, 4,351 to 26,106 psi).

The pressure sensor is a semiconductor pressure sensor that varies electric resistance when applying pressure to its silicon. This sensor output voltage changes in proportion to the internal fuel pressure. The sensor has been designed as a duplicate circuit, and its main (PR) circuit is used under normal condition. Even if either of the sensor circuit is failed, the other normal circuit will be used to monitor the internal fuel pressure.

Property of Output Voltage:

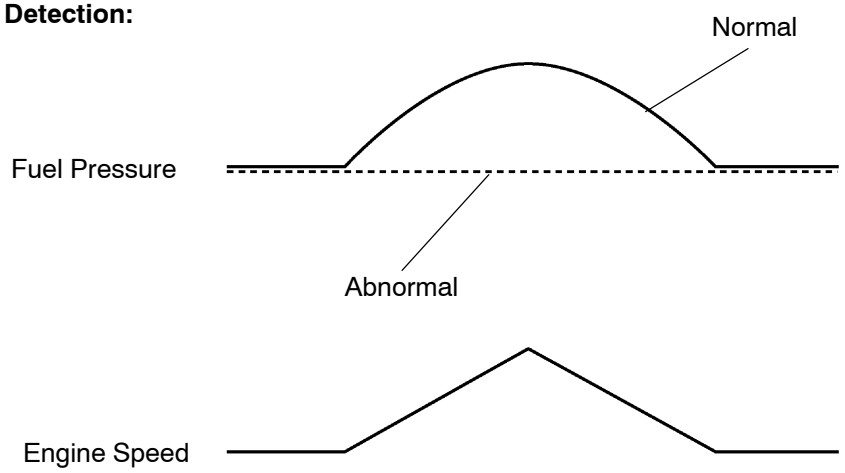
Internal Structure of the Pressure Sensor (Duplicates System):

Y A91222

DTC No.	DTC Detection Condition	Trouble Area
P0087	Fuel pressure sensor output voltage stays at fixed value (1 trip detection logic)	• Open or short in fuel pressure sensor circuit • Fuel pressure sensor • ECM
P0190	Fuel pressure sensor output voltage is 0.55 V or less, or 4.9 V or more for 0.5 second (1 trip detection logic)	
P0192	Fuel pressure sensor output voltage is 0.55 V or less for 0.5 second (1 trip detection logic)	
P0193	Fuel pressure sensor output voltage is 4.9 V or more for 0.5 second (1 trip detection logic)	

HINT:
After confirming DTC P0087, P0190, P0192 and P0193, check the internal fuel pressure of the common rail in "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL" using the hand–held tester.

Reference:



Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
Running the engine at 2,500 rpm (No engine load)	Approximately 50 to 100

MONITOR DESCRIPTION

P0087 (Fuel pressure sensor output stays at fixed value):
Under normal condition, an internal fuel pressure of the common rail usually fluctuates 1 to 2 MPa (10 to 20 kgf/cm^2, 145 to 290 psi) even if the driving condition is constant. The internal fuel pressure is approximately 30 to 40 MPa (306 to 408 kgf/cm^2, 4,351 to 5,801 psi) at idling, and it increases to approximately 50 to 100 MPa (510 to 1,020 kgf/cm^2, 7,251 to 14,503 psi) when running the engine at 2,500 rpm. This DTC is set if there is no fluctuation in the internal fuel pressure.
If this DTC is present, the ECM enters the fail–safe mode and limits the engine power. The fail–safe mode continues until the ignition switch is turned to OFF.

P0190, P0192 and P0193 (Open or short in fuel pressure sensor circuit):
These DTCs are set if the fuel pressure sensor output voltage is out of the standard range. The DTCs stand for open or short malfunction of the sensor circuit.
If these DTCs are present, the ECM enters the fail–safe mode and limits the engine power. The fail–safe mode continues until the ignition switch is turned to OFF.

P0087 Malfunction Detection:

MONITOR STRATEGY

P0087:

Required sensors	Fuel pressure sensor
Frequency of operation	Continuous
Duration	1 second
CHK ENG operation	1 driving cycle

P0190:

Required sensors	Fuel pressure sensor
Frequency of operation	Continuous
Duration	0.5 second
CHK ENG operation	1 driving cycle

P0192:

Required sensors	Fuel pressure sensor
Frequency of operation	Continuous
Duration	0.5 second
CHK ENG operation	1 driving cycle

P0193:

Required sensors	Fuel pressure sensor
Frequency of operation	Continuous
Duration	0.5 second
CHK ENG operation	1 driving cycle

TYPICAL ENABLING CONDITIONS

P0087:

Item	Specification	
	Minimum	Maximum
Engine speed	500 rpm	–
Battery voltage	8 V	–
Fuel volume	5 mm^3	–
The monitor will not run if the fuel pressure sensor circuit (P0190, P0192 and P0193) is malfunctioning		

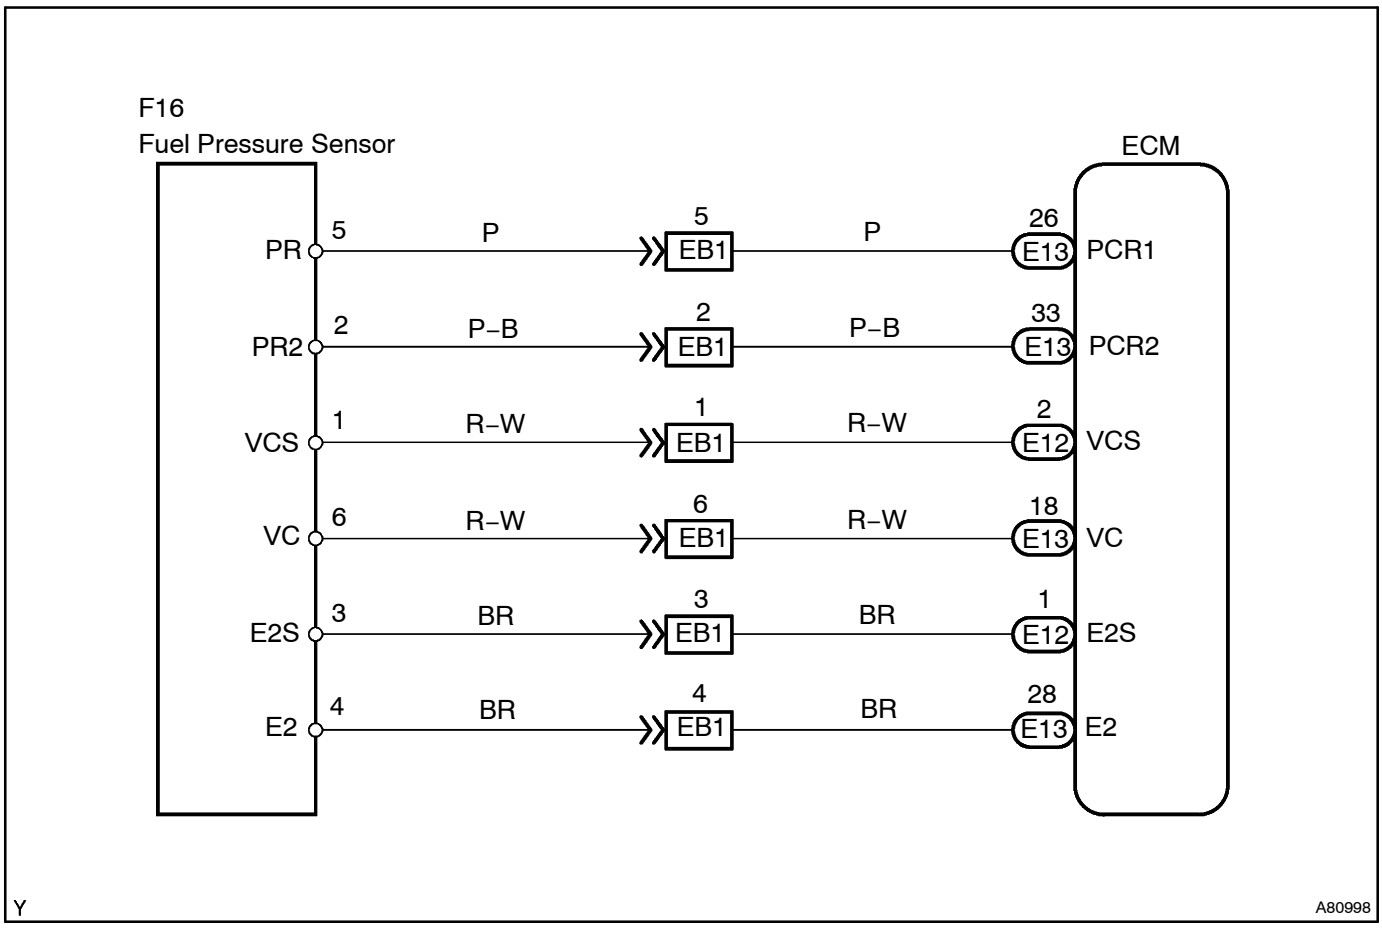
TYPICAL MALFUNCTION THRESHOLDS

P0087:

Detection Criteria	Threshold
Changing value of fuel pressure	Virtually no fluctuation

P0190:

Detection Criteria	Threshold
Fuel pressure sensor output voltage	Less than 0.55 V or more than 4.9 V



P0192:

Detection Criteria	Threshold
Fuel pressure sensor output voltage	Less than 0.55 V

P0193:

Detection Criteria	Threshold
Fuel pressure sensor output voltage	More than 4.9 V

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- After completing repairs, check that P0087 is not present again.
- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(FUEL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL”.
(e) Check that internal fuel pressure of the common rail is within the specification below.
Reference:

Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
2,500 rpm (No engine load)	Approximately 50 to 100

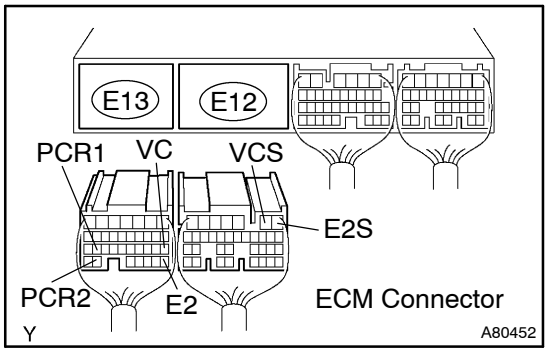
NG → **Go to step 3**

OK

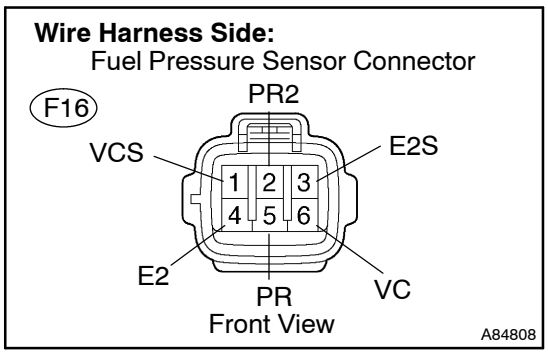
2 CHECK IF DTCS OUTPUT RECUR(FUEL PRESSURE SENSOR DTCS)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES".
(d) Clear the DTCs.
(e) Let the engine idle for 60 seconds, and repeat quick engine RPM acceleration (to 2,500 rpm) for 30 seconds.
(f) Select the item "DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES".
(g) Read DTCs.

Result:



Display (DTC output)	Proceed to
P0087, P0190, P0192 and/or P0193	A
No output	B



B → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)**

A

REPLACE ECM (See page 10–29)

3 CHECK HARNESS AND CONNECTOR(FUEL PRESSURE SENSOR – ECM)

(a) Disconnect the E12 and E13 ECM connectors.
(b) Disconnect the F16 fuel pressure sensor connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
PCR1 (E13–26) – PR (F16–5)	Below 1 Ω
PCR2 (E13–33) – PR2 (F16–2)	
VCS (E12–2) – VCS (F16–1)	
VC (E13–18) – VC (F16–6)	
E2 (E13–28) – E2 (F16–4)	
E2S (E12–1) – E2S (F16–3)	

Standard (Check for short):

Tester Connection	Specified Condition
PCR1 (E13–26) or PR (F16–5) – Body ground	10 kΩ or higher
PCR2 (E13–33) or PR2 (F16–2) – Body ground	
VCS (E12–2) or VCS (F16–1) – Body ground	
VC (E13–18) or VC (F16–6) – Body ground	
E2 (E13–28) or E2 (F16–4) – Body ground	
E2S (E12–1) or E2S (F16–3) – Body ground	

(d) Reconnect the ECM connectors.
(e) Reconnect the fuel pressure sensor connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE COMMON RAIL ASSY (FUEL PRESSURE SENSOR) (See page 11–67)

DTC	P0088	FUEL RAIL/SYSTEM PRESSURE – TOO HIGH

DTC	P1229	FUEL PUMP SYSTEM

HINT:

- For more information on the supply pump (suction control valve) and the common rail system, see page 05–255.
- If P0088 and/or P1229 is present, refer to the diagnostic trouble codes (DTCs) table for the fuel system on page 05–255.

CIRCUIT DESCRIPTION

Refer to the description on page 05–255.

DTC No.	DTC Detection Condition	Trouble Area
P0088	• Internal fuel pressure of the common rail is too high: The fuel pressure exceeds 200 MPa (2,039 kgf/cm^2, 29,007 psi) (1 trip detection logic)	• Supply pump (Suction control valve) • Pressure discharge valve • Short in supply pump (Suction control valve) circuit • Open in pressure discharge valve circuit • ECM
P1229	• Fuel over–feed: Internal fuel pressure is beyond the target fuel pressure despite the ECM closing the suction control valve (1 trip detection logic)	• Short in supply pump (Suction control valve) circuit • Supply pump (Suction control valve) • ECM

HINT:

After confirming DTC P0088 and P1229, check the fuel rail pressure in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL” using the hand–held tester.

Reference:

Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
2,500 rpm (No engine load)	Approximately 50 to 100

MONITOR DESCRIPTION

P0088 (Internal fuel pressure too high):

The ECM will set this DTC if the fuel pressure inside the common rail is beyond 200 MPa (2,039 kgf/cm^2, 29,007 psi). This DTC indicates that the suction control valve may be stuck open, or there may be short in its circuit, and the pressure discharge valve may be stuck closed, or there may be open in its circuit.

If this DTC is present, the ECM enters the fail–safe mode and limits the engine power. The fail–safe mode continues until the ignition switch is turned to OFF.

P1229 (Fuel over–feed):

The ECM will set this DTC if the actual fuel pressure inside the common rail stays higher than the target fuel pressure, despite the ECM closing the suction control valve. This DTC represents that the suction control valve may be stuck open, or there may be short in its circuit. Under this condition, the pressure discharge valve operates frequently.

If this DTC is present, the ECM enters the fail–safe mode and limits the engine power. The fail–safe mode continues until the ignition switch is turned to OFF.

MONITOR STRATEGY

P0088:

Required sensors	Fuel pressure sensor
Frequency of operation	Continuous
Duration	1 second
CHK ENG operation	1 driving cycle

P1229:

Required sensors	Fuel pressure sensor
Frequency of operation	Continuous
Duration	1 minute
CHK ENG operation	1 driving cycle

TYPICAL ENABLING CONDITIONS

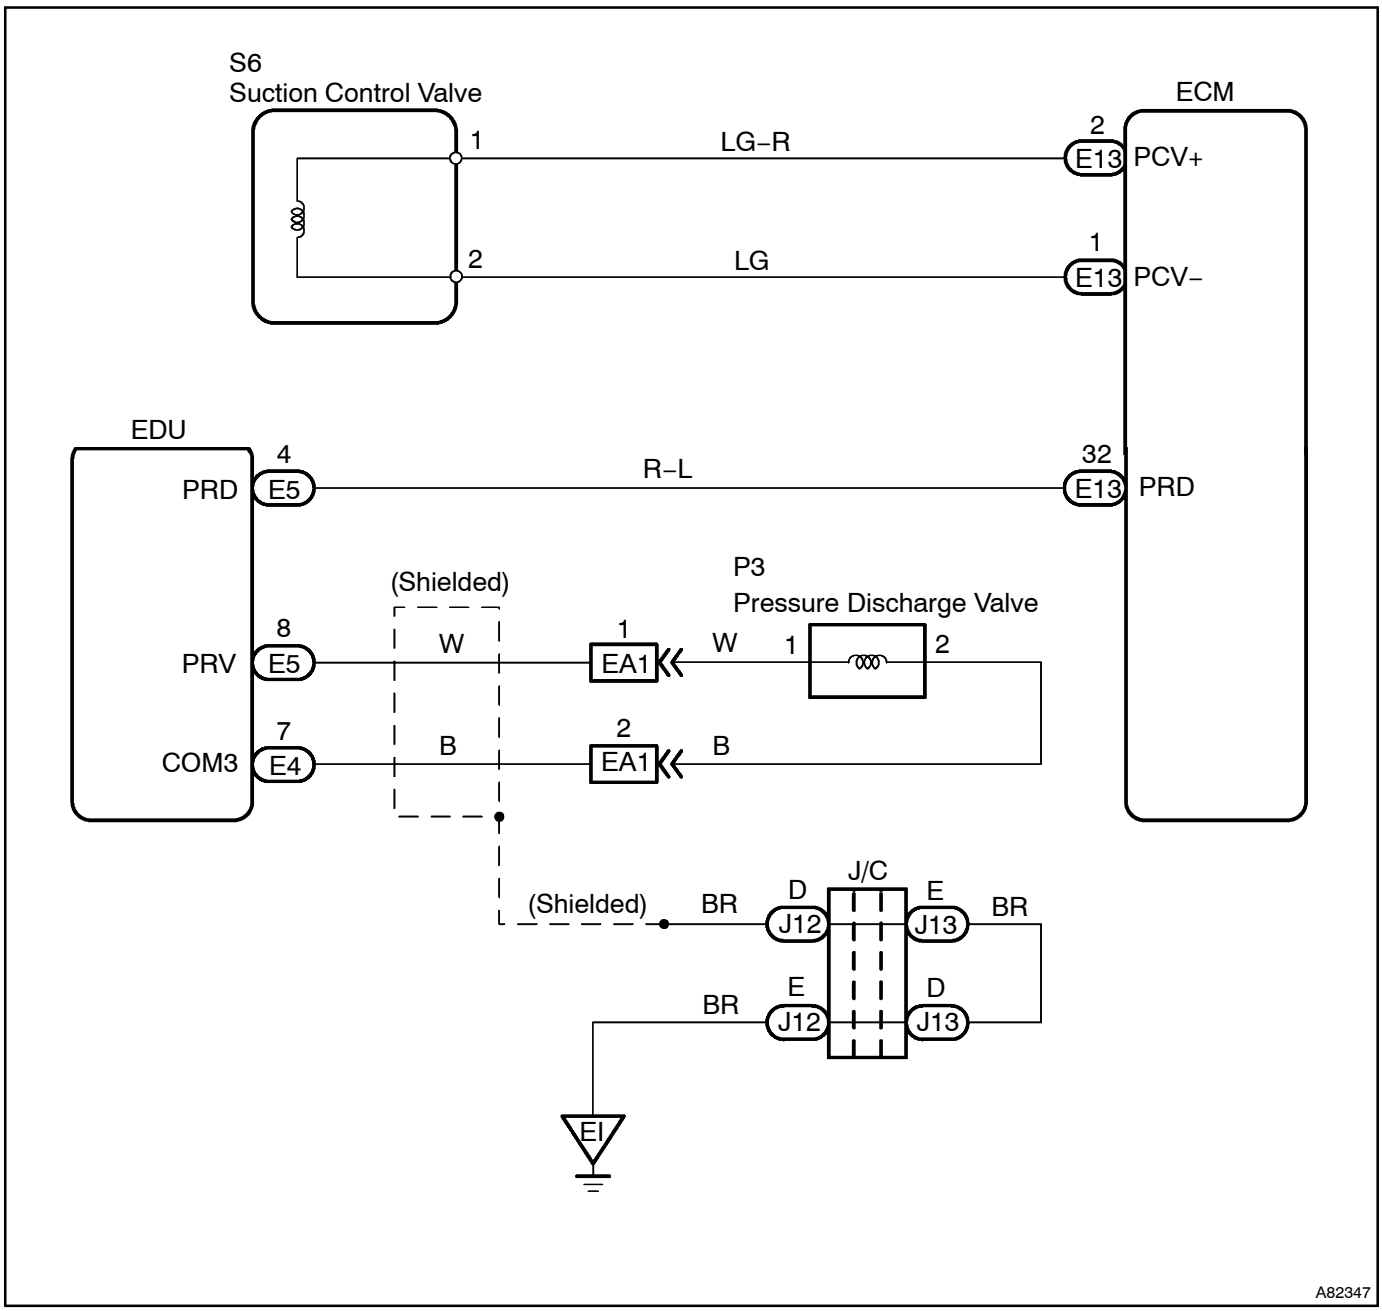
P0088:

Specification
The monitor will not run if the fuel pressure sensor, or suction control valve circuit, or pressure discharge valve is malfunctioning

P1229:

Item	Specification
Target fuel pressure variation	Small
The monitor will not run if the fuel pressure sensor, or suction control valve circuit, or pressure discharge valve is malfunctioning	

TYPICAL MALFUNCTION THRESHOLDS



P0088:

Detection Criteria	Threshold
Fuel pressure sensor	200 MPa (2,039 kgf/cm^2, 29,007 psi) or more

P1229:

Item	Threshold
The internal fuel pressure of the common rail with the suction control valve closed	Stays at higher than targeted fuel pressure
Behavior of the pressure discharge valve	Frequently operates

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0088 AND/OR P1229)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.
Result:

Display (DTC output)	Proceed to
P0088, or P0088 and P1229	A
P1229	B
P0190, P0191, P0192, P0193 and/or P1271	C
P1272	D

B → **Go to step 4**

C → **GO TO RELEVANT DTC CHART (See page 05–299)**

D → **Go to step 3**

A

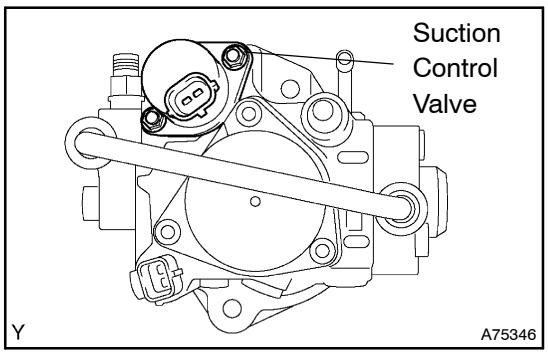
2	READ OUTPUT DTC(SEE IF DTC P1272 IS OUTPUT)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES”.
(d) Clear the DTCs.
(e) Start the engine and turn the ignition switch to OFF. Wait for 10 seconds and then restart the engine and turn the ignition switch to OFF again.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(g) Read DTCs.
Result:

Display (DTC output)	Proceed to
P1272	A
No output	B

B → **Go to step 4**

A



3	REPLACE COMMON RAIL ASSY(PRESSURE DISCHARGE VALVE) (See page 11–67)

GO

CHECK IF DTCS OUTPUT RECUR (DTC P0088 AND/OR P1229 OUTPUT AGAIN)

HINT:
After clearing the DTCs, drive the vehicle at 50 km/h (31 mph) for 5 minutes, and then confirm that P0088 and/or P1229 is not present again.

4 INSPECT INJECTION OR SUPPLY PUMP ASSY(SUCTION CONTROL VALVE)

(a) Measure the resistance between the terminals of the suction control valve.
Standard: 1.9 to 2.3 Ω at 20°C (68°F)

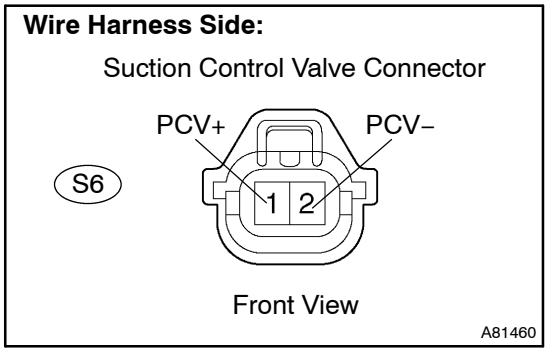
NG → **REPLACE INJECTION OR SUPPLY PUMP ASSY (SUCTION CONTROL VALVE)** (See page 11–58)

OK

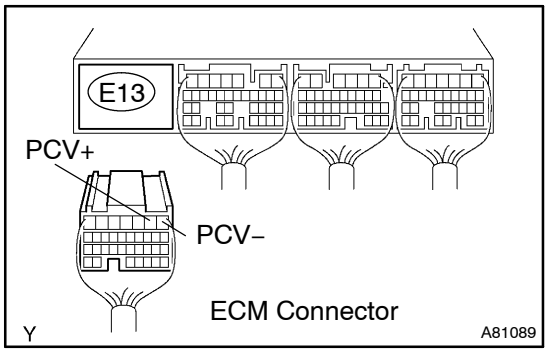
5 READ OUTPUT DTC(SEE IF DTC P1229 IS OUTPUT)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES”.
(d) Clear the DTCs.
(e) Disconnect the suction control valve connector and then start the engine. Wait for 1 minute.

HINT:
If the engine does not start, the suction control valve is normal. Therefore proceed to step 6.



(f) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(g) Read DTCs.
Result:



Display (DTC output)	Proceed to
No output	A
P1229	B

B → **REPLACE INJECTION OR SUPPLY PUMP ASSY (SUCTION CONTROL VALVE)** (See page 11–58)

A

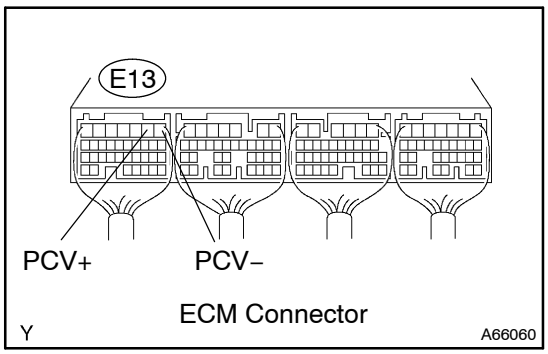
6 CHECK HARNESS AND CONNECTOR(SUCTION CONTROL VALVE – ECM)

(a) Disconnect the S6 suction control valve connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connector.

Standard (Check for open):

Tester Connection	Specified Condition
PCV+ (S6–1) – PCV+ (E13–2)	Below 1 Ω
PCV– (S6–2) – PCV– (E13–1)	

Standard (Check for short):

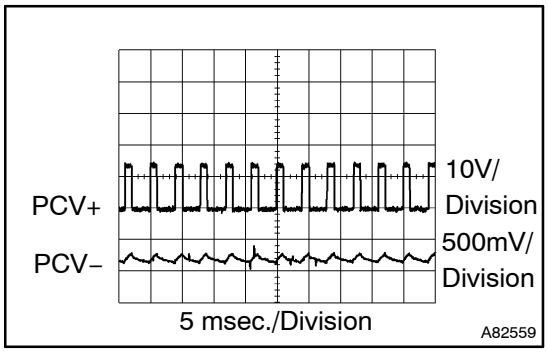


Tester Connection	Specified Condition
PCV+ (S6–1) or PCV+ (E13–2) – Body ground	10 kΩ higher
PCV– (S6–2) or PCV– (E13–1) – Body ground	

(d) Reconnect the suction control valve connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



7 INSPECT ECM(PCV VOLTAGE)

(a) Inspect using the oscilloscope.
(b) During cranking or idling, check the waveform between the specified terminals of the E13 ECM connector.

Standard :

Tester Connection	Specified Condition
PCV+ (E13–2) – PCV– (E13–1)	Correct waveform is as shown

NG → **REPLACE ECM (See page 10–29)**

OK

CHECK IF DTCS OUTPUT RECUR (DTC P0088 AND/OR P1229)

HINT:
After clearing the DTCs, drive the vehicle at 50 km/h (31 mph) for 5 minutes, and then confirm that P0088 and/or P1229 is not present again.

DTC	P0093	FUEL SYSTEM LEAK DETECTED – LARGE LEAK

HINT:

- If DTC P1229 is detected, P0093 (fuel leaks in high–pressurized area) may be detected simultaneously. Because of the extremely high internal fuel pressure in the common rail opens the pressure limiter, and the ECM may interpret this as a fault and set P0093.
- For more information on the common rail system, see page 05–255.
- If P0093 is present, refer to the diagnostic trouble codes (DTCs) table for the fuel system on page 05–255.

CIRCUIT DESCRIPTION

Refer to the description on page 05–255.

DTC No.	DTC Detection Condition	Trouble Area
P0093	Fuel leaks in high–pressurized area (1 trip detection logic)	• Fuel line between supply pump and common rail • Fuel line between common rail and injector • Supply pump • Common rail • Injector (P1238 is set simultaneously) • Pressure discharge valve • Open or short in EDU circuit (P0200 is set simultaneously) • Open or short in injector circuit (P0200 and P1238 are set simultaneously) • EDU (P0200 is set simultaneously) • ECM

HINT:

After confirming DTC P0093, check the internal fuel pressure of the common rail in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL” using the hand–held tester.

Reference:

Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
2,500 rpm (No engine load)	Approximately 50 to 100

MONITOR DESCRIPTION

P0093 (Fuel leaks in high–pressurized area):

This DTC stands for fuel leaks that are existing in high–pressurized area in the common rail system. The ECM constantly monitors the internal fuel pressure of the common rail after the engine is started, and the ECM then will set this DTC if the drop of the internal fuel pressure is large when injecting the fuel.

In the common rail system, high–pressurized fuel, approximately 30 to 180 MPa (306 to 1,835 kgf/cm^2, 4,351 to 26,106 psi), is always applied to the high–pressurized area including the supply pump, common rail, injector and piping. The ECM adjusts the suction control valve control current (by applying duty ratio signal) to obtain the target internal fuel pressure.

If this DTC is present, the ECM enters the fail–safe mode. The fail–safe mode suspends both fuel injection and supply pump operation, and then stops the engine. Before stopping the engine, the ECM permits driving the vehicle for 1 minute. The fail–safe mode continues until the ignition switch is turned to OFF.

MONITOR STRATEGY

Required sensors	Fuel pressure sensor
Frequency of operation	Continuous
Duration	1 second
CHK ENG operation	1 driving cycle

TYPICAL ENABLING CONDITIONS

Item	Specification	
	Minimum	Maximum
Engine speed	600 rpm	–
The monitor will not run if the fuel pressure sensor, suction control valve circuit, or pressure discharge valve is malfunctioning		

TYPICAL MALFUNCTION THRESHOLDS

Threshold
Drop of the internal fuel pressure is large when injecting fuel

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0093)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.
Result:

Display (DTC output)	Proceed to
P0093	A
P0093 and P1238	B
P0093 and P0200 and/or P1271	C

HINT:
If any other codes besides P0093 are output, perform troubleshooting for those DTCs first.

B → **Go to step 3**

C → **GO TO RELEVANT DTC CHART** (See page 05–299)

A

2	CHECK FUEL LEAKAGE(IN HIGH–PRESSURIZED FUEL PARTS AND AREA)

(a) Visually check the supply pump, injector and fuel line located between the supply pump and common rail for fuel leaks or fuel pressure leaks. Also, perform the same on the fuel line between the common rail and the injector (see page 11–67, 11–46).

HINT:
There is possibility that fuel leaks inside the components (supply pump, etc) have been occurred.

NG → **REPAIR OR REPLACE**

OK

3	READ VALUE OF HAND–HELD TESTER(COMPENSATION OF INJECTION VOLUME FOR EACH CYLINDER)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INJ VOLUME FB” and read its value displayed on the hand–held tester.
Result:

Result	Compensatory Injection Volume (mm^3)
Standard	–3 to 3
Maximum	–4.9 to 4.9

NG → **REPLACE INJECTOR ASSY (See page 11–46)**

OK

4	PERFORM ACTIVE TEST USING HAND–HELD TESTER(FUEL LEAK TEST)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / FUEL LEAK TEST”.
(e) Check for fuel leaks in the high–pressurized area.

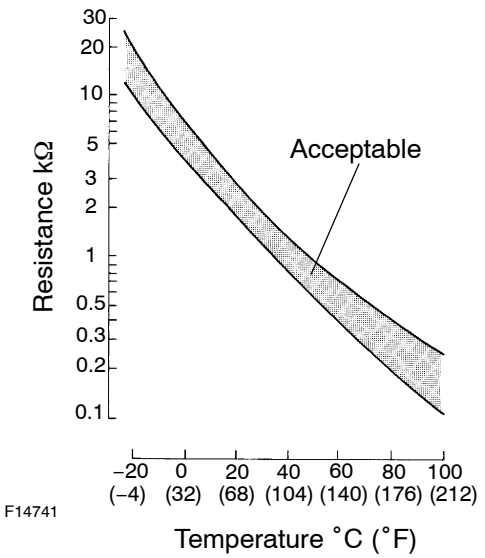
GO

CHECK IF DTC OUTPUT RECURS (DTC P0093)

HINT:
- After clearing the DTC, let the engine idle for 1 minute and then run it at 2,500 rpm for 30 seconds.
- At the same time, check the fuel pressure inside the common rail in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL” using the hand–held tester.
- The internal fuel pressure of the common rail must be stable under each driving condition.

Reference:

Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
2,500 rpm (No engine load)	Approximately 50 to 100



DTC	P0095	INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT

DTC	P0097	INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT LOW

DTC	P0098	INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT HIGH

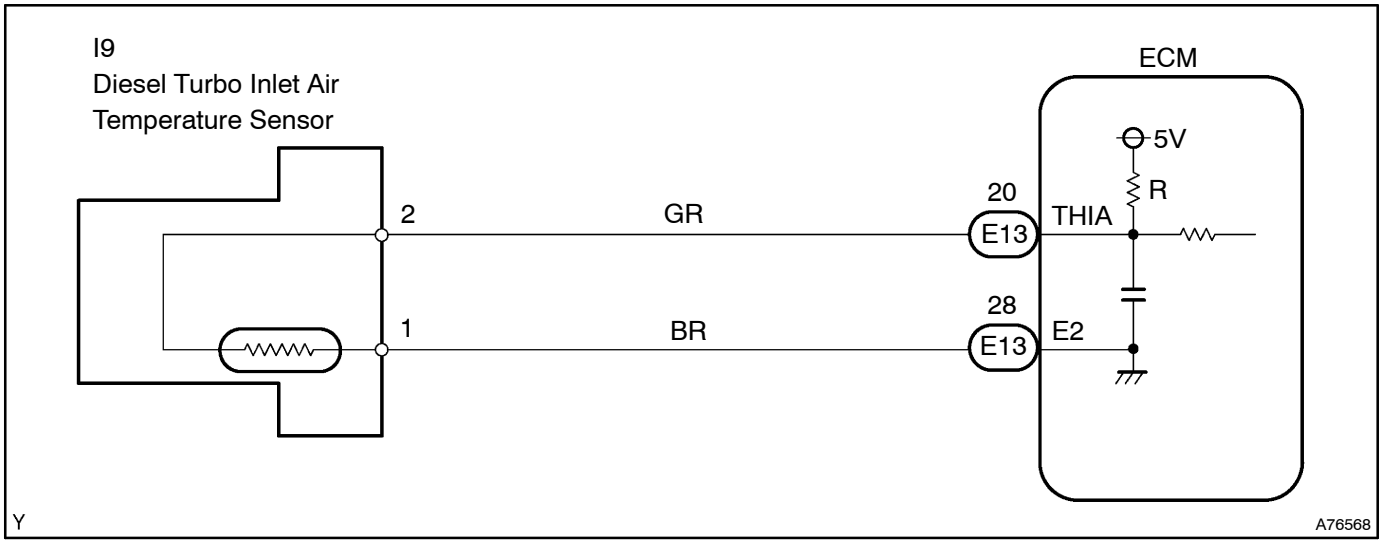
CIRCUIT DESCRIPTION

(Figure 1)

The diesel turbo inlet air temperature sensor is built into the intake air connector and senses the intake air temperature. A thermistor built in the sensor changes the resistance value according to the intake air temperature. The lower the intake air temperature, the greater the thermistor resistance value, and the higher the intake air temperature, the lower the thermistor resistance value (see figure 1).

The intake air temperature sensor is connected to the ECM. The 5 V power source voltage in the ECM is applied to the intake air temperature sensor from terminal THIA via resistor R. Resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes in accordance with changes in the intake air temperature, the potential at terminal THIA also changes. Based on this signal, the ECM corrects the fuel injection volume to improve the driveability with a cold engine.

DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0095	Step 1	Open or short in diesel turbo inlet air temperature sensor circuit for 0.5 second (1 trip detection logic)	• Open or short in diesel turbo inlet air temperature sensor circuit • Diesel turbo inlet air temperature sensor • ECM
P0097	Step 4	• Short in diesel turbo inlet air temperature sensor circuit for 0.5 second (Sensor resistance value is less than 25 Ω [Sensor output voltage is less than 0.05 V]) (1 trip detection logic)	
P0098	Step 2	• Open in diesel turbo inlet air temperature sensor circuit for 0.5 second (Sensor resistance value is more than 156 kΩ [Sensor output voltage is more than 4.9 V]) (1 trip detection logic)	



HINT:

After confirming DTC P0095, P0097 or P0098, check the intake air temperature in the ”DIAGNOSIS / OBD/ MOBD / DATA LIST / ALL / AMBI TEMP SENS” using the hand–held tester.

Reference:

Temperature Displayed	Malfunction
–40°C (–40°F)	Open circuit
140°C (284°F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

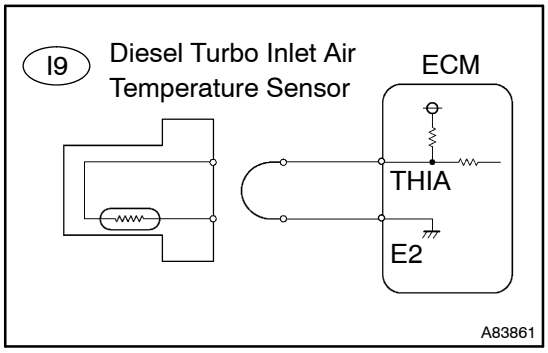
HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

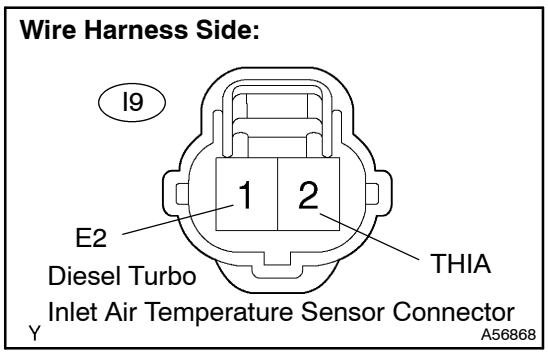
1 READ VALUE OF HAND–HELD TESTER(INTAKE AIR TEMPERATURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AMBI TEMP SENS" and read its value displayed on the hand–held tester.
Standard: Same value as air temperature at the intake manifold.
Result:

Temperature Displayed	Proceed to
–40°C (–40°F)	A
140°C (284°F) or more	B
OK (Same as air temperature near to intake manifold)	C



HINT:
- If there is an open circuit, the hand–held tester indicates –40°C (–40°F).
- If there is a short circuit, the hand–held tester indicates 140°C (284°F) or more.

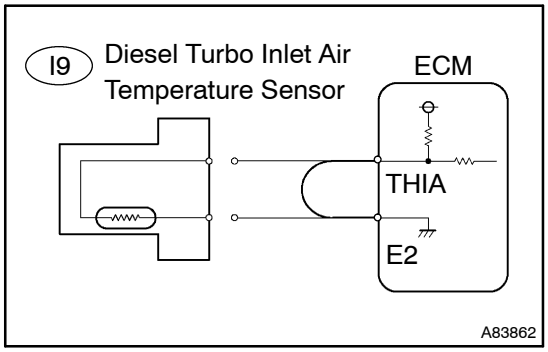


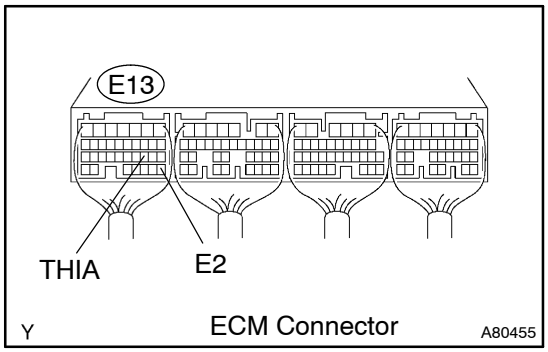
B → **Go to step 4**

C → **CHECK FOR INTERMITTENT PROBLEMS** **(See page 05–270)**

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN WIRE HARNESS)





(a) Disconnect the I9 diesel turbo inlet air temperature sensor connector.
(b) Connect terminals 1 and 2 of the diesel turbo inlet air temperature sensor wire harness side connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AMBI TEMP SENS" and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the diesel turbo inlet air temperature sensor connector.

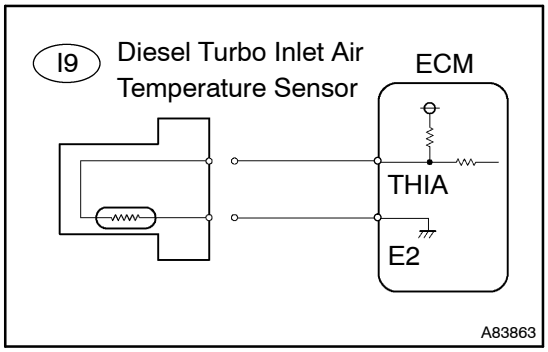
OK → **CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE DIESEL TURBO INLET AIR TEMPERATURE SENSOR**

NG

3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the I9 diesel turbo inlet air temperature sensor connector.
(b) Connect terminals THIA and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check on the ECM connector.



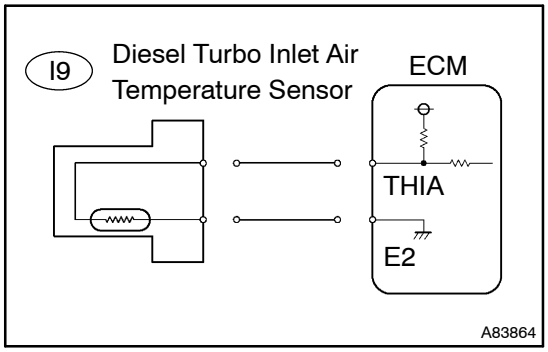
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AMBI TEMP SENS” and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the diesel turbo inlet air temperature sensor connector.

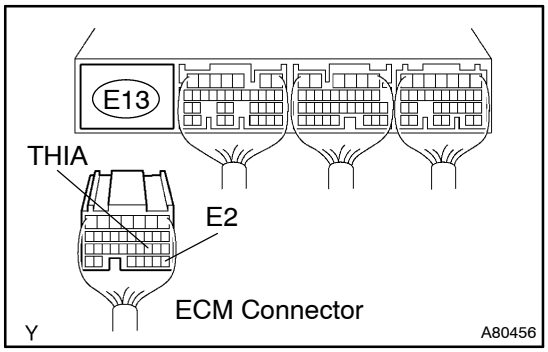
OK	REPAIR OR REPLACE HARNESS OR CONNECTOR

NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, REPLACE ECM (See page 10–29)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN WIRE HARNESS)





(a) Disconnect the I9 diesel turbo inlet air temperature sensor connector.
(b) Connect the hand–held tester to the DLC 3.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AMBI TEMP SENS” and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(e) Reconnect the diesel turbo inlet air temperature sensor connector.

OK	REPLACE DIESEL TURBO INLET AIR TENPERATURE SENSOR

NG

5 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the I9 diesel turbo inlet air temperature sensor connector.
(b) Disconnect the E13 ECM connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AMBI TEMP SENS” and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(f) Reconnect the diesel turbo inlet air temperature sensor connector.
(g) Reconnect the ECM connector.

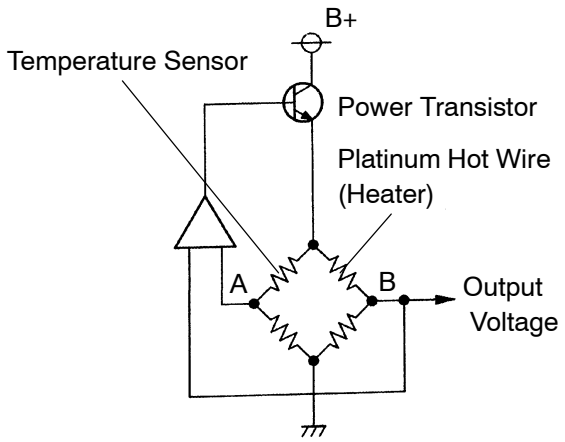
OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

REPLACE ECM (See page 10–29)

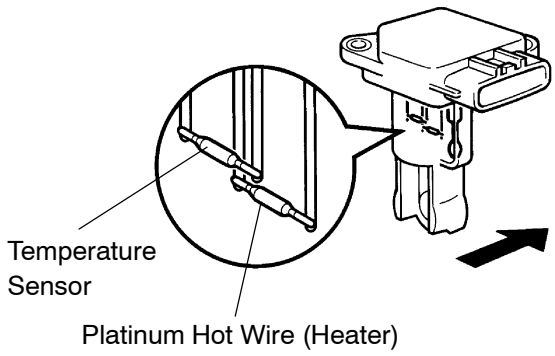
DTC	P0100	MASS OR VOLUME AIR FLOW CIRCUIT

DTC	P0102	MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT



DTC	P0103	MASS OR VOLUME AIR FLOW CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION



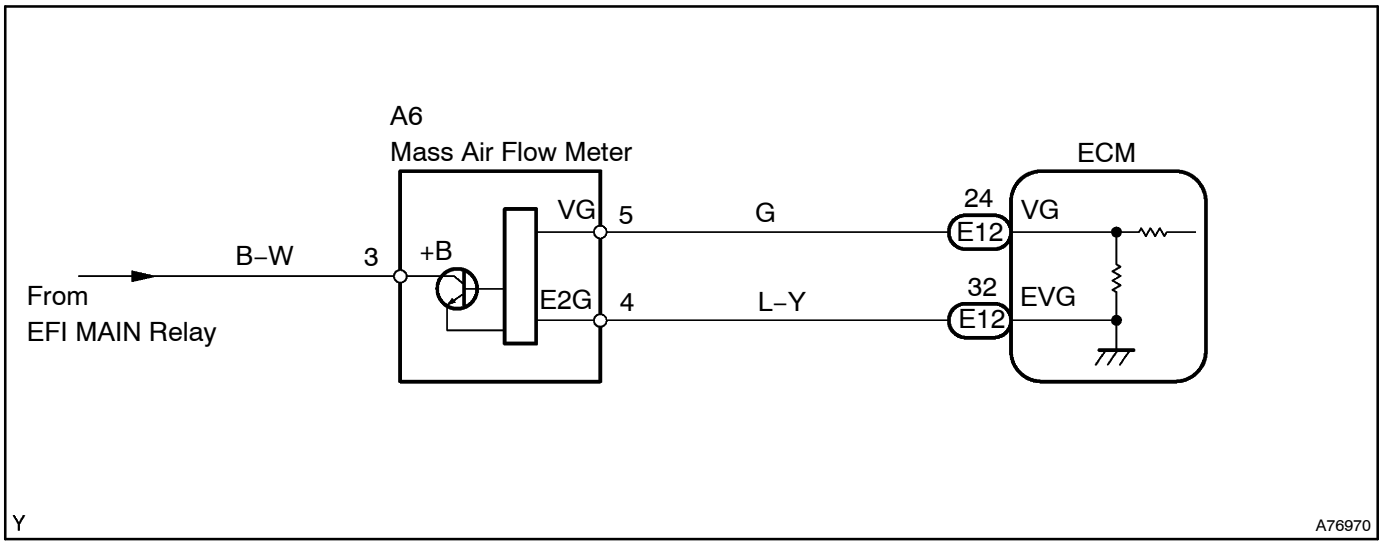
The mass air flow meter uses a platinum hot wire. The mass air flow meter consists of a platinum hot wire, a temperature sensor and a control circuit installed in a plastic housing. The mass air flow meter works on the principle that the hot wire and temperature sensor located in the intake air by–pass of the housing detect any changes in the intake air temperature.

The hot wire is maintained at the predetermined temperature by controlling the current flow through the hot wire. This current flow is then measured as the output voltage of the mass air flow meter.

The circuit is constructed so that the platinum hot wire and temperature sensor provide a bridge circuit, with the power transistor controlled so that the potential of A and B remains equal to maintain the predetermined temperature.

FI6929
A09074

A85670



DTC No.	DTC Detection Condition	Trouble Area
P0100	Open or short in mass air flow meter circuit for more than 3 seconds with engine speed at 4,000 rpm or less (1 trip detection logic)	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM
P0102	Open in mass air flow meter circuit for more than 3 seconds with engine speed at 4,000 rpm or less (1 trip detection logic)	
P0103	Short in mass air flow meter circuit for more than 3 seconds with engine speed at 4,000 rpm or less (1 trip detection logic)	

HINT:
After confirming DTC P0100, P0102 or P0103, check the mass air flow ratio in the ”DIAGNOSIS / OBD/ MOBD / DATA LIST / ALL / MAF” using the hand–held tester.

Reference:

Air Flow Value (gm/s)	Malfunction
Approximately 0.0	• Open in Mass air flow meter power source circuit • Open or short in VG circuit
174.0 or more	• Open in EVG circuit

WIRING DIAGRAM

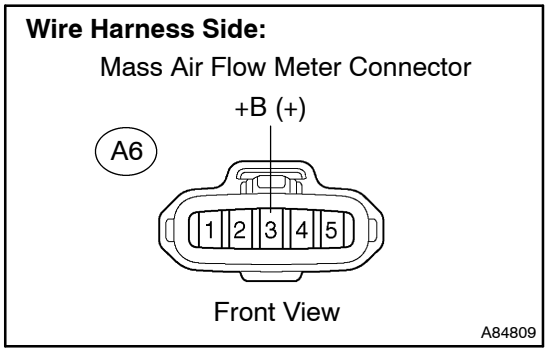
INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(MASS AIR FLOW RATE)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Turn the hand–held tester ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAF” and read its value displayed on the hand–held tester.

Result:



Air flow rate (gm/s)	Proceed to
0.0	A
174.0 or more	B
Between 1 and 173.0 (*1)	C

*1: The value must be changed when the throttle valve is opened or closed.

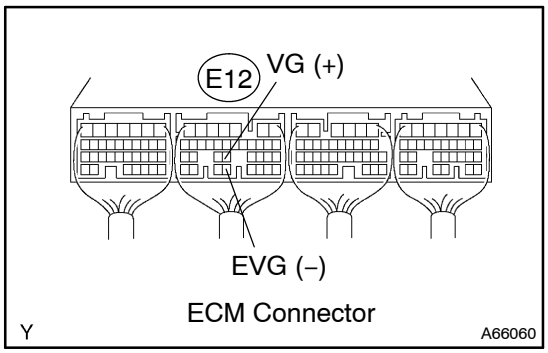
B	**Go to step 6**
C	**CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)**

A

2 INSPECT MASS AIR FLOW METER(POWER SOURCE)

(a) Turn the ignition switch to ON.
(b) Disconnect the A6 mass air flow meter connector.
(c) Measure the voltage between the terminal of the wire harness side connector and the body ground.

Standard:



Tester Connection	Specified Condition
+B (A6–3) – Body ground	9 to 14 V

(d) Reconnect the mass air flow meter connector.

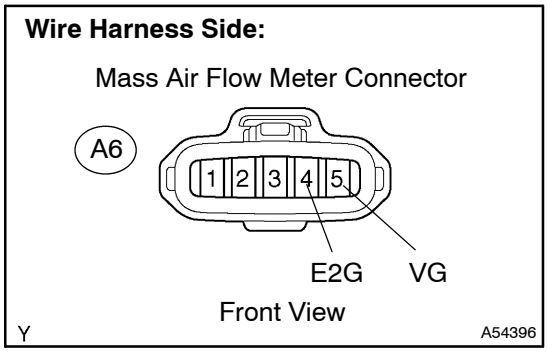
NG → **Go to step 5**

OK

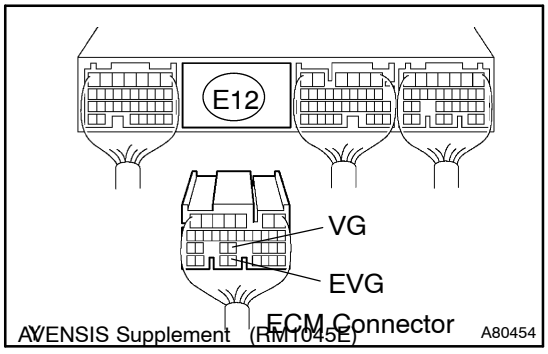
3 INSPECT ECM(VG VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E12 ECM connector.

HINT:
The A/C switch should be turned OFF.



Standard:



Tester Connection	Condition	Specified Condition
VG (E12–24) – EVG (E12–32)	Engine is idling	0.5 to 3.4 V

OK → **REPLACE ECM (See page 10–29)**

NG

4 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – ECM)

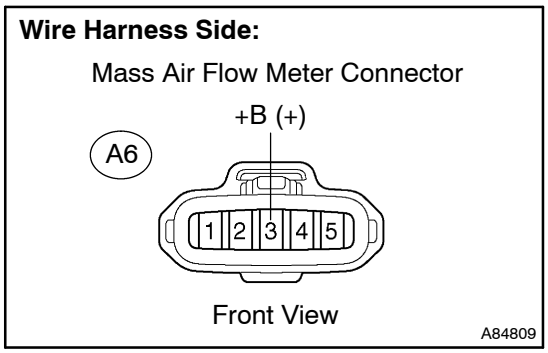
(a) Disconnect the A6 mass air flow meter connector.
(b) Disconnect the E12 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

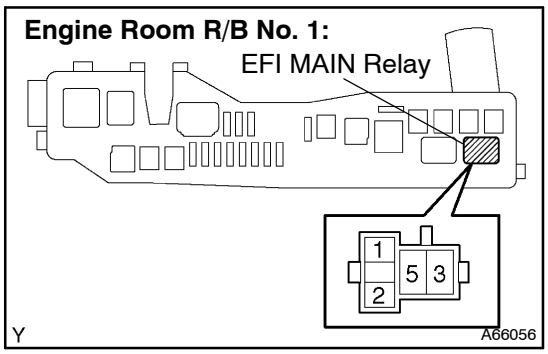
Tester Connection	Specified Condition
VG (A6–5) – VG (E12–24)	Below 1 Ω
E2G (A6–4) – EVG (E12–32)	

Standard (Check for short):

Tester Connection	Specified Condition
VG (A6–5) or VG (E12–24) – Body ground	10 kΩ or higher



(d) Reconnect the mass air flow meter connector.
(e) Reconnect the ECM connector.



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MASS AIR FLOW METER

5 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – EFI MAIN RELAY)

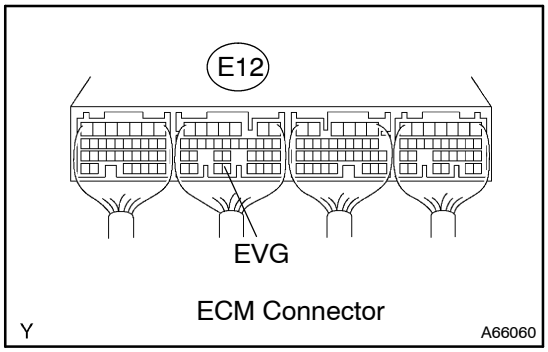
(a) Disconnect the A6 mass air flow meter connector.
(b) Remove the EFI MAIN relay from the engine room R/B No. 1.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
+B (A6–3) – EFI MAIN relay (3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
+B (A6–3) or EFI MAIN relay (3) – Body ground	10 kΩ or higher



(d) Reconnect the mass air flow meter connector.
(e) Reinstall the EFI MAIN relay.

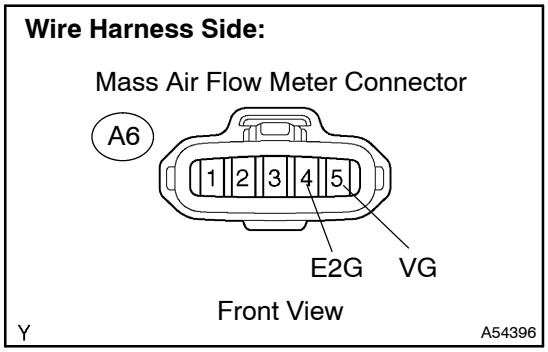
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

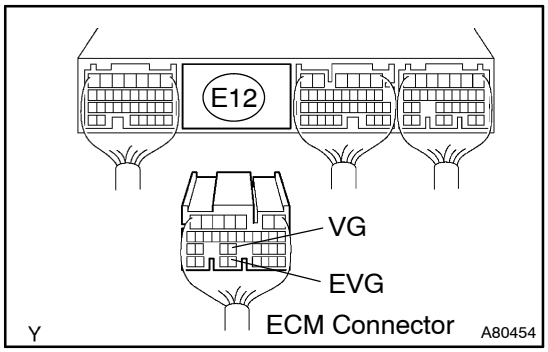
CHECK ECM POWER SOURCE CIRCUIT (See page 05–489)

6 INSPECT ECM(SENSOR GROUND)

(a) Check the resistance between the terminal of the E12 ECM connector and body ground.



Standard:



Tester Connection	Specified Condition
EVG (E12–32) – Body ground	Below 1 Ω

NG → REPLACE ECM (See page 10–29)

OK

7 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – ECM)

(a) Disconnect the A6 mass air flow meter connector.
(b) Disconnect the E12 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
VG (A6–5) – VG (E12–24)	Below 1 Ω
E2G (A6–4) – EVG (E12–32)	

Standard (Check for short):

Tester Connection	Specified Condition
VG (A6–5) or VG (E12–24) – Body ground	10 kΩ or higher

(d) Reconnect the mass air flow meter connector.
(e) Reinstall the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MASS AIR FLOW METER

DTC	P0101	MASS OR VOLUME AIR FLOW CIRCUIT RANGE/PERFORMANCE PROBLEM

CIRCUIT DESCRIPTION

Refer to DTC P0100 on page 05–336.

DTC No.	DTC Detection Condition	Trouble Area
P0101	After engine is warmed up, condition (a) continues for more than 10 seconds at idling: (2 trip detection logic) (a) Mass air flow meter output greater than 2.2 V	• Mass air flow meter
	Conditions (a) and (b) continue for more than 6 seconds with engine speed at 2,000 rpm or more: (2 trip detection logic) (a) VTA greater than 0.1 V (b) Mass air flow meter output less than 0.25 V	

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0101)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

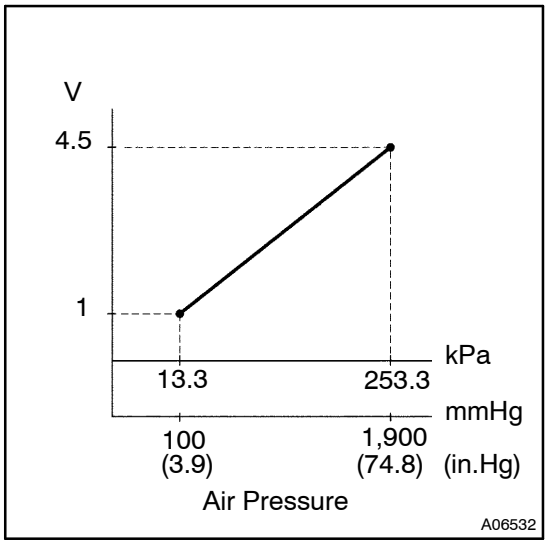
Display (DTC output)	Proceed to
P0101 and other DTCs	A
P0101	B

HINT:

If any other codes besides P0101 are output, perform troubleshoot for those DTCs first.

B → REPLACE MASS AIR FLOW METER

A



GO TO RELEVANT DTC CHART (See page 05–299)

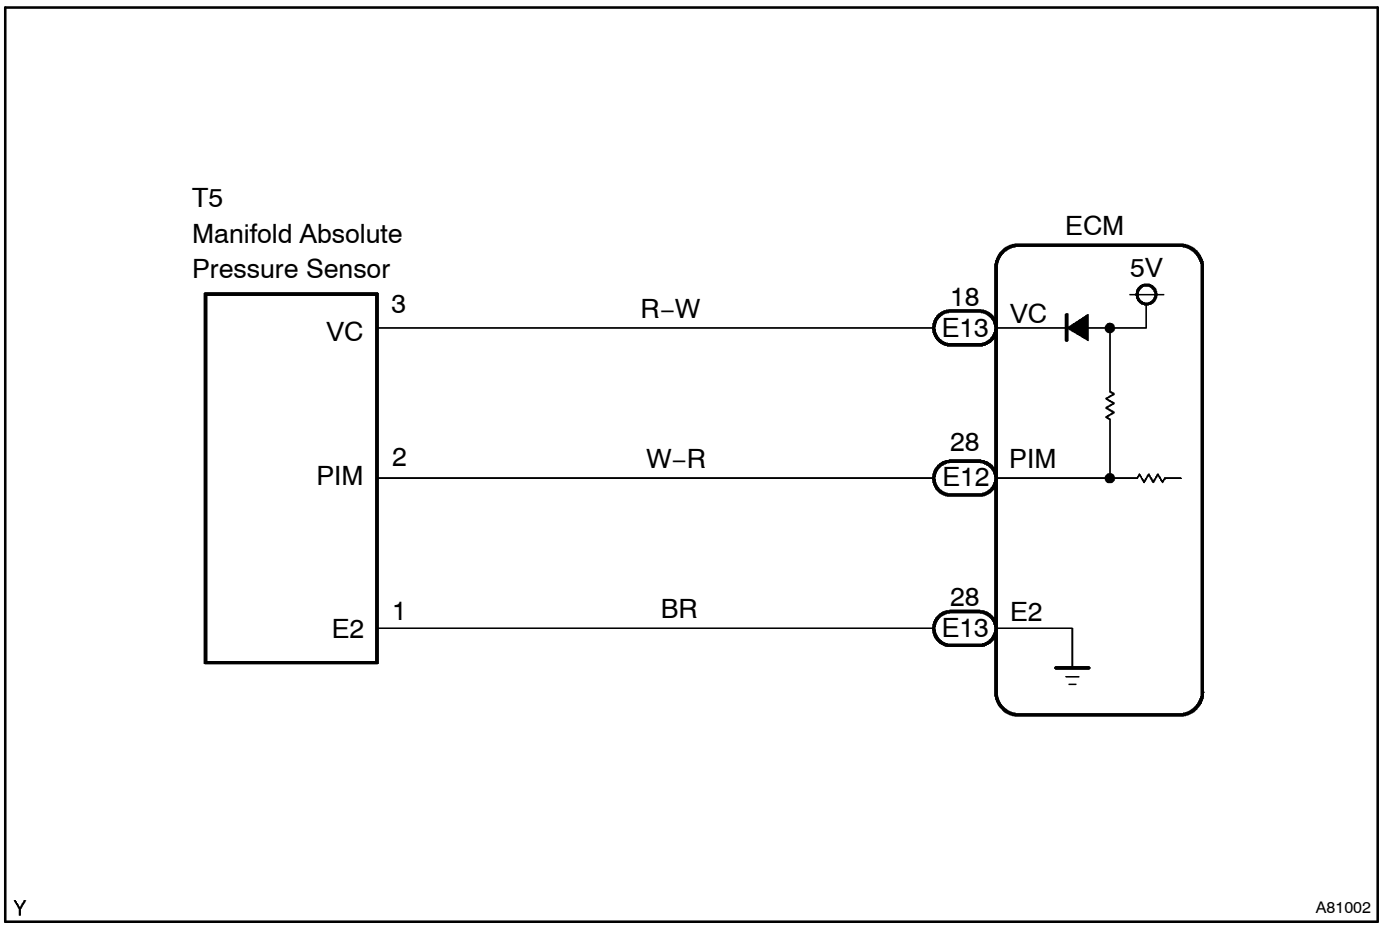
DTC	P0105	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT

DTC	P0107	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT

DTC	P0108	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

By a built–in sensor unit, the manifold absolute pressure sensor detects the intake manifold pressure as voltage. The ECM then determines the basic injection duration and basic injection advance angle based on this voltage.
Since the manifold absolute pressure sensor does not use the atmospheric pressure as a standard level, but senses the absolute pressure inside the intake manifold (the pressure in proportion to the preset absolute vacuum 0), it is not influenced by fluctuations in the atmospheric pressure due to high altitude and other factors. This permits the ECM to control the air–fuel ratio at the proper level under all conditions.



DTC No.	DTC Detection Condition	Trouble Area
P0105 P0107 P0108	Open or short in manifold absolute pressure sensor circuit for 0.5 second or more (1 trip detection logic)	• Open or short in manifold absolute pressure sensor circuit • Manifold absolute pressure sensor • Turbocharger assembly • EGR valve assembly • ECM

HINT:
After confirming DTC P0105, P0107 or P0108, check the intake manifold pressure in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / PIM” using the hand–held tester.

Reference:

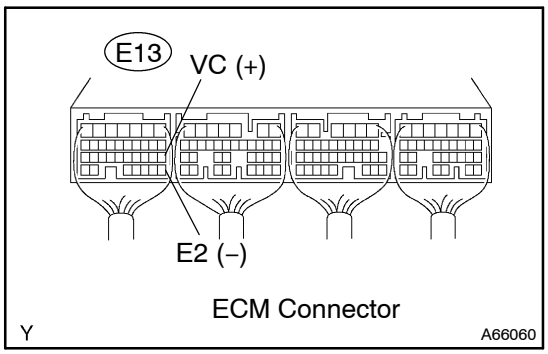
Intake Manifold Pressure (kPa)	Malfunction
Approximately 0	• Short in PIM circuit
250 or more	• Open or short in VC circuit • Open in PIM circuit • Open in E2 circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.



1	READ VALUE OF HAND–HELD TESTER(MANIFOLD ABSOLUTE PRESSURE)

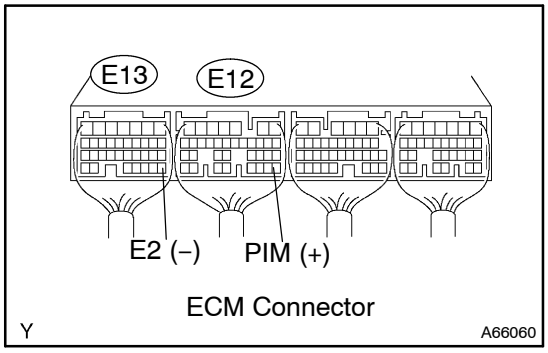
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / PIM” and read its value displayed on the hand–held tester.
Standard: Same value as the actual atmospheric pressure.

OK	CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

NG

2 INSPECT ECM(VC VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.



Standard:

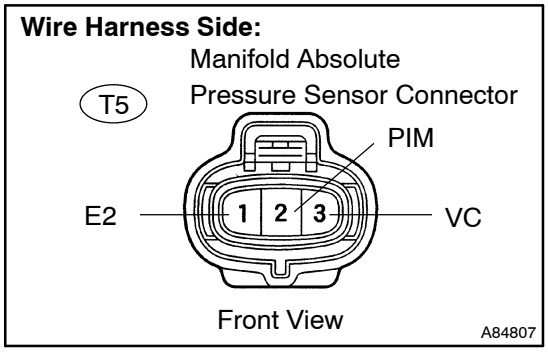
Tester Connection	Specified Condition
VC (E13–18) – E2 (E13–28)	4.5 to 5.5 V

NG → **REPLACE ECM (See page 10–29)**

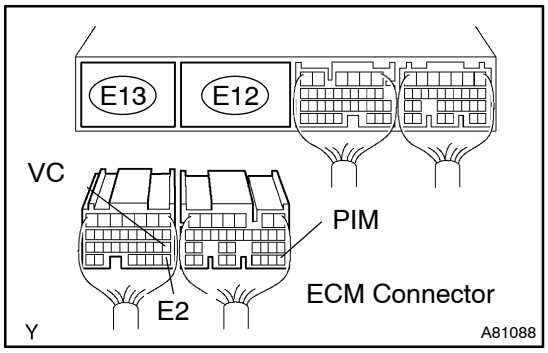
OK

3 INSPECT ECM(PIM VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the terminals of the E12 and E13 ECM connectors.



Standard:



Tester Connection	Condition	Specified Condition
PIM (E12–28) – E2 (E13–28)	Applied negative pressure of 40 kPa (300 mmHg, 11.8 in.Hg)	1.4 to 2.0 V
PIM (E12 – 28) – E2 (E13–28)	Same as atmospheric pressure	2.0 to 2.6 V
PIM (E12 – 28) – E2 (E13–28)	Applied positive pressure of 69 kPa (518 mmHg, 20.4 in.Hg)	3.0 to 3.6 V

NG → **REPLACE ECM (See page 10–29)**

OK

4 CHECK HARNESS AND CONNECTOR(MANIFOLD ABSOLUTE PRESSURE SENSOR – ECM)

(a) Disconnect the T5 manifold absolute pressure sensor connector.
(b) Disconnect the E12 and E13 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

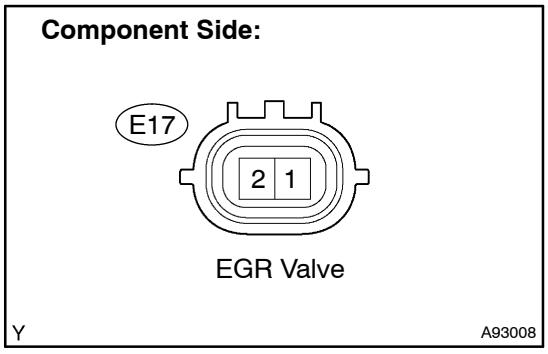
Tester Connection	Specified Condition
PIM (T5–2) – PIM (E12–28)	Below 1 Ω
VC (T5–3) – VC (E13–18)	
E2 (T5–1) – E2 (E13–28)	

Standard (Check for short):

Tester Connection	Specified Condition
PIM (T5–2) or PIM (E12–28) – Body ground	10 kΩ higher
VC (T5–3) or VC (E13–18) – Body ground	
E2 (T5–1) or E2 (E13–28) – Body ground	

(d) Reconnect the manifold absolute pressure sensor connector.
(e) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

5 INSPECT TURBOCHARGER SUB–ASSY (See page 13–6)

NG → **REPLACE TURBOCHARGER SUB–ASSY (See page 13–12)**

OK

6 INSPECT EGR VALVE ASSY(RESISTANCE)

(a) Disconnect the E17 EGR valve connector.
(b) Measure the resistance between the terminals of the EGR valve connector.

Standard:

Tester Connection	Specified Condition
1 – 2	4.0 to 6.0 Ω at 20°C (68°F)

(c) Reconnect the EGR valve connector.

NG → **REPLACE EGR VALVE ASSY (See page 14–166)**

OK

REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR

DTC	P0106	MANIFOLD ABSOLUTE PRESSURE/ BAROMETRIC PRESSURE CIRCUIT RANGE/ PERFORMANCE PROBLEM

CIRCUIT DESCRIPTION

Refer to DTC P0105 on page 05–342.

DTC No.	DTC Detection Condition	Trouble Area
P0106	Voltage output of the manifold absolute pressure sensor is out of the standard range (2 trip detection logic)	• Manifold absolute pressure sensor

INSPECTION PROCEDURE

HINT:

- If DTCs P0105, P0107, and P0108 are output simultaneously, the manifold absolute pressure sensor circuit may be open or short. Perform troubleshooting for those DTCs first.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0106)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P0106	A
P0106 and other DTCs	B

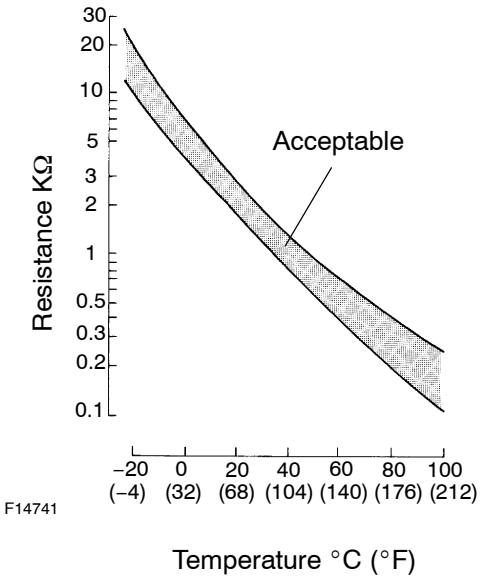
HINT:

If any other codes besides P0106 are output, perform troubleshooting for those DTCs first.

B → GO TO RELEVANT DTC CHART (See page 05–299)

A

REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR



DTC	P0110	INTAKE AIR TEMPERATURE CIRCUIT

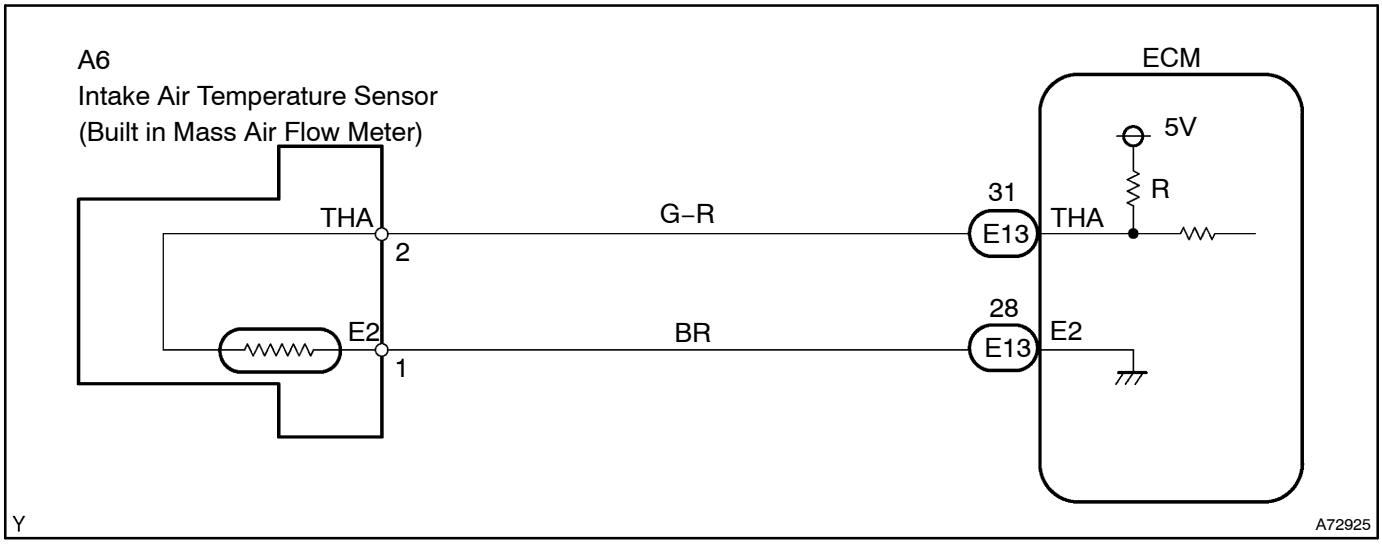
DTC	P0112	INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT

DTC	P0113	INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

(Figure 1)

The intake air temperature sensor is built in the mass air flow meter and senses the intake air temperature.
A thermistor built in the sensor changes the resistance value according to the intake air temperature.
The lower the intake air temperature is, the greater the thermistor resistance value becomes, and the higher the intake air temperature is, the lower the thermistor resistance value becomes (see figure 1).
The intake air temperature sensor is connected to the ECM. The 5 V power source voltage in the ECM is applied to the intake air temperature sensor from terminal THA (THAR) via resistor R.
The resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes in accordance with changes in the intake air temperature, the potential at terminal THA (THAR) also changes. Based on this signal, the ECM increases the fuel injection volume to improve the driveability with a cold engine.



DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0110	Step 1	Open or short in intake air temperature sensor circuit for 0.5 second (1 trip detection logic)	• Open or short in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM
P0112	Step 4	Short in intake air temperature sensor circuit for 0.5 second (1 trip detection logic)	
P0113	Step 2	Open in intake air temperature sensor circuit for 0.5 second (1 trip detection logic)	

HINT:
After confirming DTC P0110, P0112 or P0113, check the intake air temperature in the ”DIAGNOSIS / OBD/ MOBD / DATA LIST / ALL” using the hand–held tester.

Reference:

Temperature Displayed	Malfunction
–40˚C (–40˚F)	Open circuit
140˚C (284˚F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

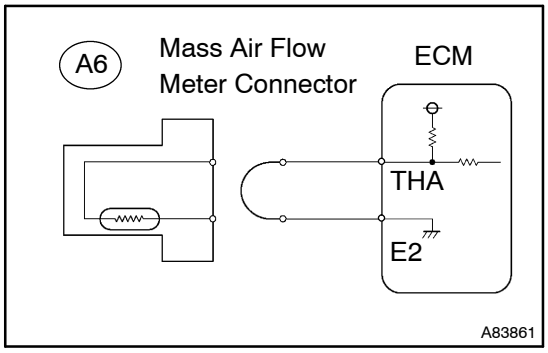
1	READ VALUE OF HAND–HELD TESTER(INTAKE AIR TEMPERATURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.

Temperature: Same value as air temperature at the intake manifold.

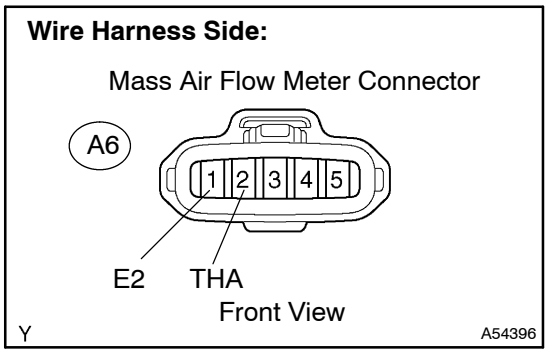
Result:

Temperature Displayed	Proceed to
–40˚C (–40˚F)	A
140˚C (284˚F) or more	B
OK (Same as air temperature near to intake manifold)	C



HINT:

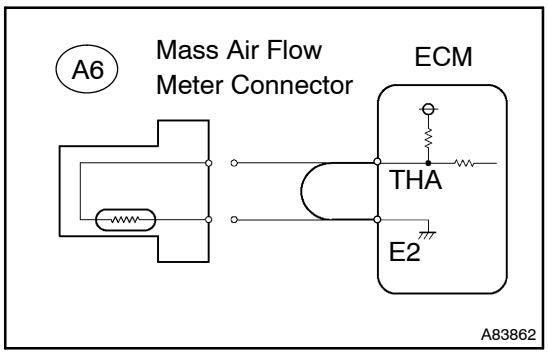
- If there is an open circuit, the hand–held tester indicates –40˚C (–40˚F).
- If there is a short circuit, the hand–held tester indicates 140˚C (284˚F) or more.



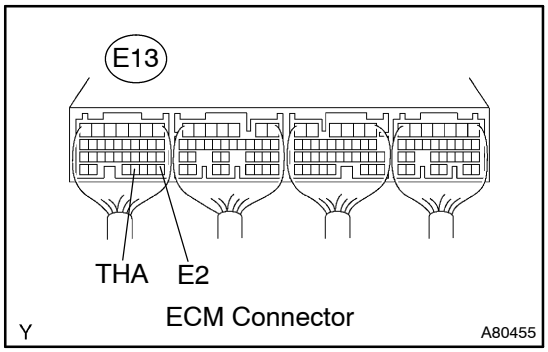
B	Go to step 4
C	CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN WIRE HARNESS)



(a) Disconnect the A6 mass air flow meter connector.
(b) Connect terminals 1 and 2 of the mass air flow meter wire harness side connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the and–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the mass air flow meter connector.



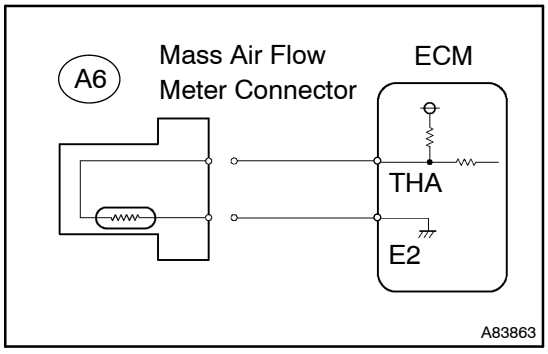
OK	CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE MASS AIR FLOW METER

NG

3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the A6 mass air flow meter connector.
(b) Connect terminals THA and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check on the ECM connector.



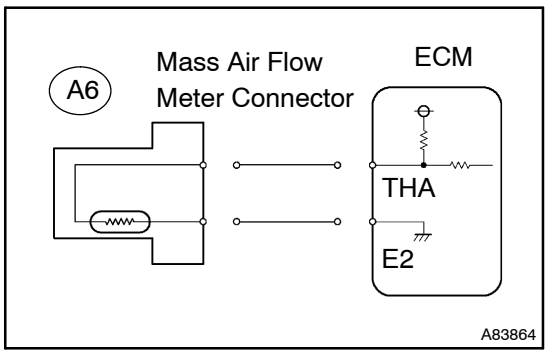
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the and–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the mass air flow meter connector.

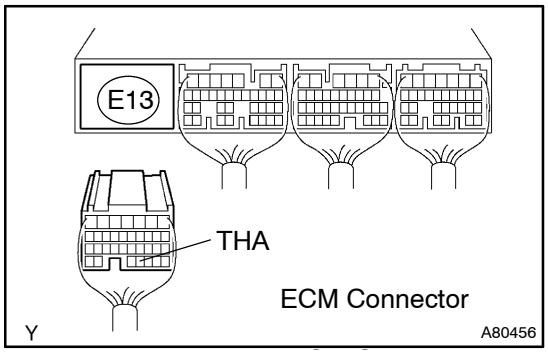
OK	REPAIR OR REPLACE HARNESS OR CONNECTOR

NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, REPLACE ECM (See page 10–29)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN WIRE HARNESS)





(a) Disconnect the A6 mass air flow meter connector.
(b) Connect the hand–held tester to the DLC 3.
(c) Turn the ignition switch to ON and turn the and–held tester ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(e) Reconnect the mass air flow meter connector.

OK	REPLACE MASS AIR FLOW METER

NG

5	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the A6 mass air flow meter connector.
(b) Disconnect the E13 ECM connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the and–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(f) Reconnect the ECM sensor connector.
(g) Reconnect the mass air flow meter connector.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

REPLACE ECM (See page 10–29)

DTC	P0115	ENGINE COOLANT TEMPERATURE CIRCUIT

DTC	P0117	ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT

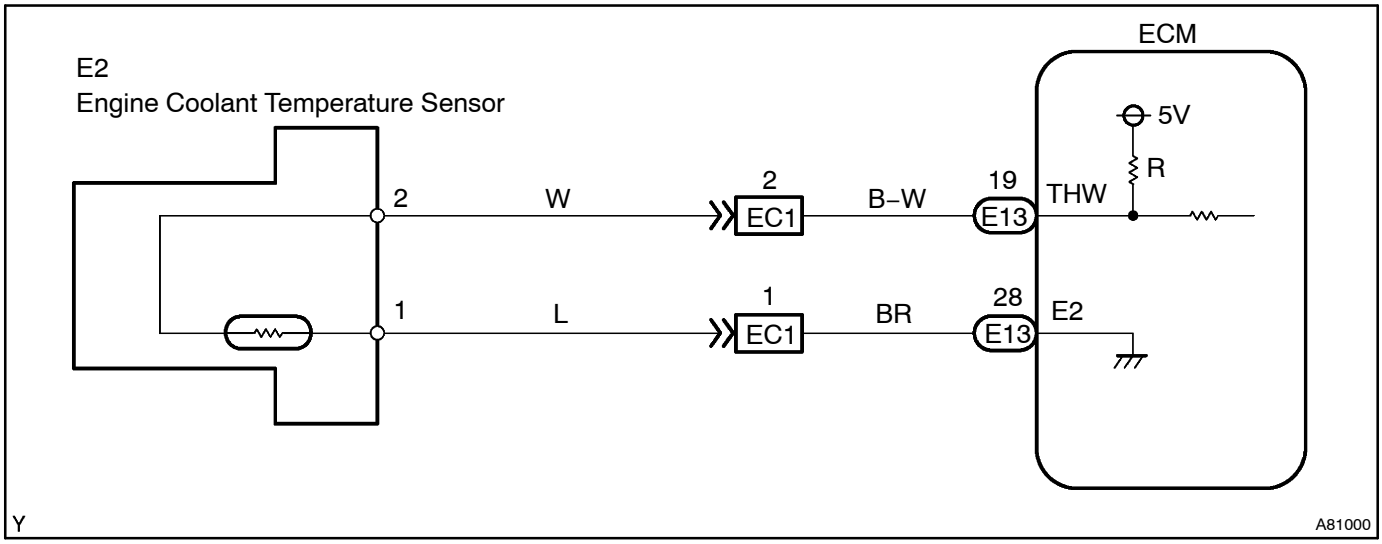
DTC	P0118	ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

A thermistor built in the engine coolant temperature sensor changes its resistance value according to the engine coolant temperature.

The structure of the sensor and connection to the ECM is the same as those of the intake air temperature sensor.

DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0115	Step 1	Open or short in engine coolant temperature sensor circuit for 0.5 second (1 trip detection logic)	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM
P0117	Step 4	• Short in engine coolant temperature sensor circuit for 0.5 second (Sensor resistance value is less than 79 Ω) (1 trip detection logic)	
P0118	Step 2	• Open in engine coolant temperature sensor circuit for 0.5 second (Sensor resistance value is more than 156 kΩ) (1 trip detection logic)	



HINT:

After confirming DTC P0115, P0117 or P0118, check the engine coolant temperature in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL” using the hand–held tester.

Reference:

Temperature Displayed	Malfunction
–40°C (–40°F)	Open circuit
140°C (284°F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

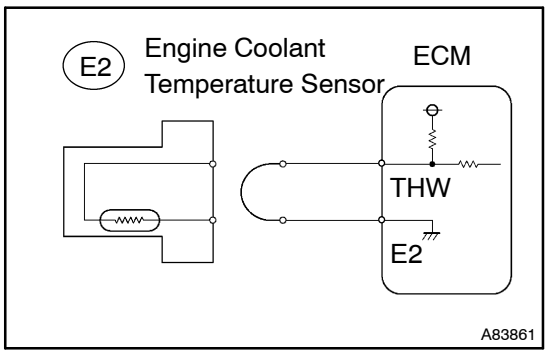
- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(ENGINE COOLANT TEMPERATURE)

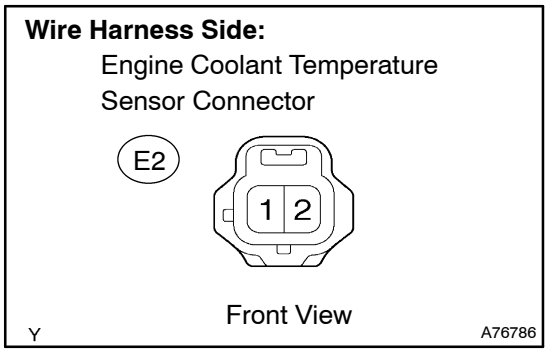
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP" and read its value displayed on the hand–held tester.
Standard: 75 to 95°C (167 to 203°F) after warming up the engine.
Result:

Temperature Displayed	Proceed to
–40°C (–40°F)	A
140°C (284°F) or more	B
OK (Same as actual engine coolant temperature)	C

HINT:



- If there is an open circuit, the hand–held tester indicates –40°C (–40°F).
- If there is a short circuit, the hand–held tester indicates 140°C (284°F) or more.

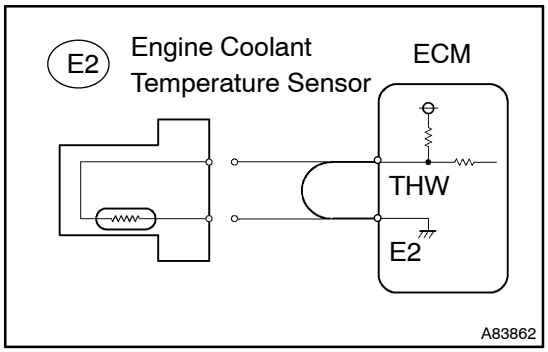


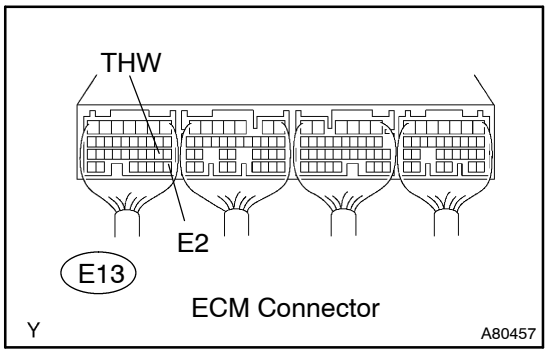
B	Go to step 4

C	CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN WIRE HARNESS)





(a) Disconnect the E2 engine coolant temperature sensor connector.
(b) Connect terminals 1 and 2 of the engine coolant temperature sensor wire harness side connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the engine coolant temperature sensor connector.

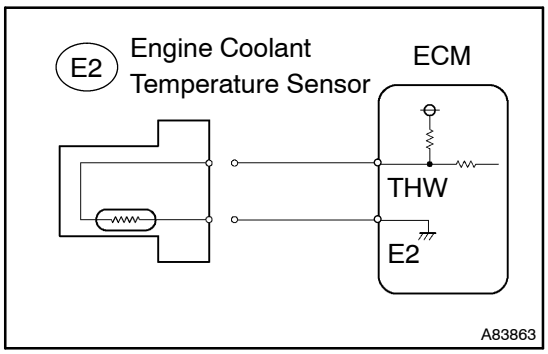
OK	**CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE ENGINE COOLANT TEPMERATURE SENSOR**

NG

3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the E2 engine coolant temperature sensor connector.
(b) Connect terminals THW and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check on the ECM connector.



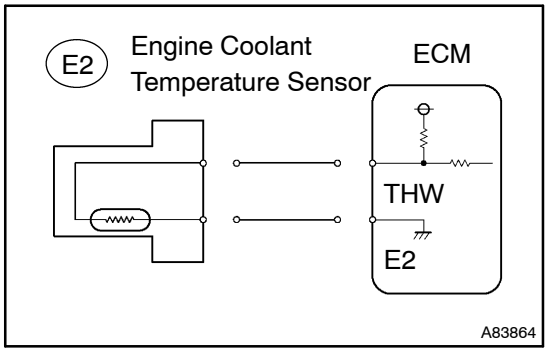
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the engine coolant temperature sensor connector.

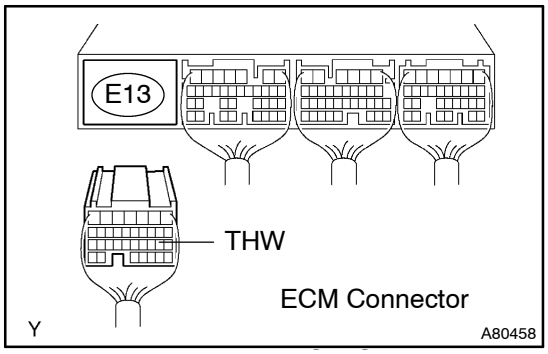
OK	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, REPLACE ECM (See page 10–29)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN WIRE HARNESS)





(a) Disconnect the E2 engine coolant temperature sensor connector.
(b) Connect the hand–held tester to the DLC 3.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP" and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(e) Reconnect the engine coolant temperature sensor connector.

OK	**REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

NG

5 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the E2 engine coolant temperature sensor connector.
(b) Disconnect the E13 ECM connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP" and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(f) Reconnect the engine coolant temperature sensor connector.
(g) Reconnect the ECM connector.

OK	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

REPLACE ECM (See page 10–29)

DTC	P0116	ENGINE COOLANT TEMPERATURE CIRCUIT RANGE/PERFORMANCE PROBLEM

CIRCUIT DESCRIPTION

Refer to DTC P0115 on page 05–352.

DTC No.	DTC Detection Condition	Trouble Area
P0116	If the engine coolant temperature between was –40°C (–40°F) and 60°C (140°F) at engine start, and condition (a) and (b) are met: (2 trip detection logic) (a) Vehicle is driven at varying speeds (under acceleration and deceleration) (b) Engine coolant temperature remains within 3°C (37°F) of the engine starting temperature	• Engine coolant temperature sensor
	If the engine coolant temperature was more than 90°C (194°F) at engine start, and conditions (a) and (b) are met: (6 trip detection logic) (a) Vehicle is driven at varying speeds (under acceleration and deceleration) (b) Engine coolant temperature remains within 1°C (34°F) of the engine starting temperature, and this is successively recorded 6 times	

MONITOR DESCRIPTION

The engine coolant temperature sensor is used to monitor the engine coolant temperature. The engine coolant temperature sensor has a thermistor that varies its resistance depending on the temperature of the engine coolant. When the coolant temperature is low, the resistance in the thermistor increases. When the temperature is high, the resistance drops. The variations in resistance are reflected in the voltage output from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the engine coolant temperature. When the sensor's voltage output is virtually in no variation, the ECM interprets this as a fault in the engine coolant temperature sensor and sets a DTC.

Examples:

1) Upon starting the engine, the engine coolant temperature was between –40°C (–40°F) and 60°C (140°F). If after driving for a few minutes, the engine coolant temperature still remains within 3°C (37°F) of the staring temperature, a DTC will be set. (2 trip detection logic)

2) Upon starting the engine, the engine coolant temperature was over 90°C (194°F). If after driving for a few minutes, the engine coolant temperature still remains within 1°C (34°F) of the starting temperature, a DTC will be set. (6 trip detection logic)

INSPECTION PROCEDURE

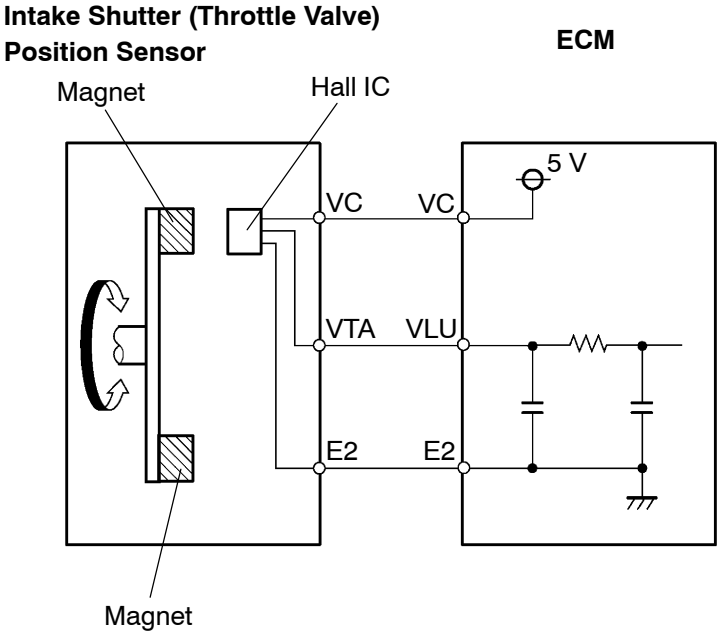
HINT:

- If DTCs P0115, P0116, P0117 and P0118 are output simultaneously, the engine coolant temperature sensor circuit may be open or short. Perform troubleshooting for those DTCs first.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

DTC	P0120	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT

DTC	P0122	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT LOW INPUT

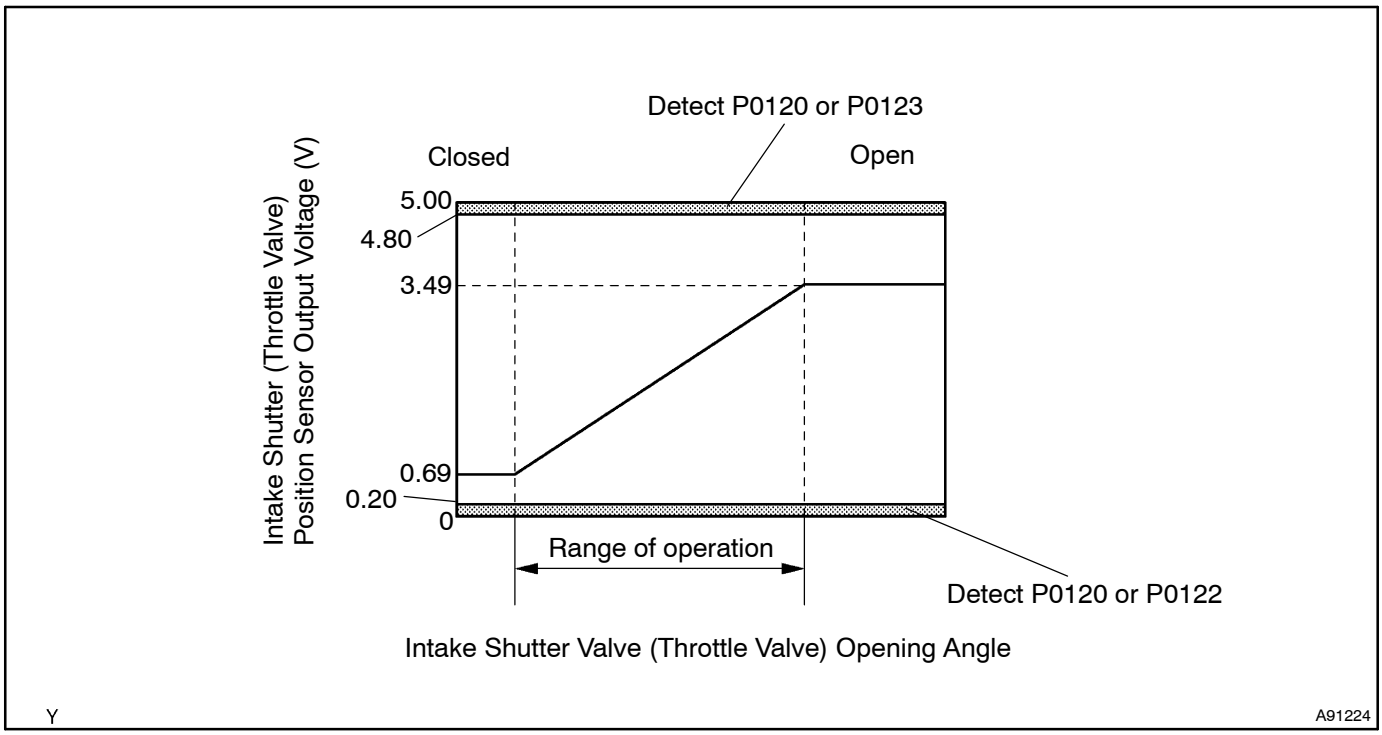


DTC	P0123	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT HIGH INPUT

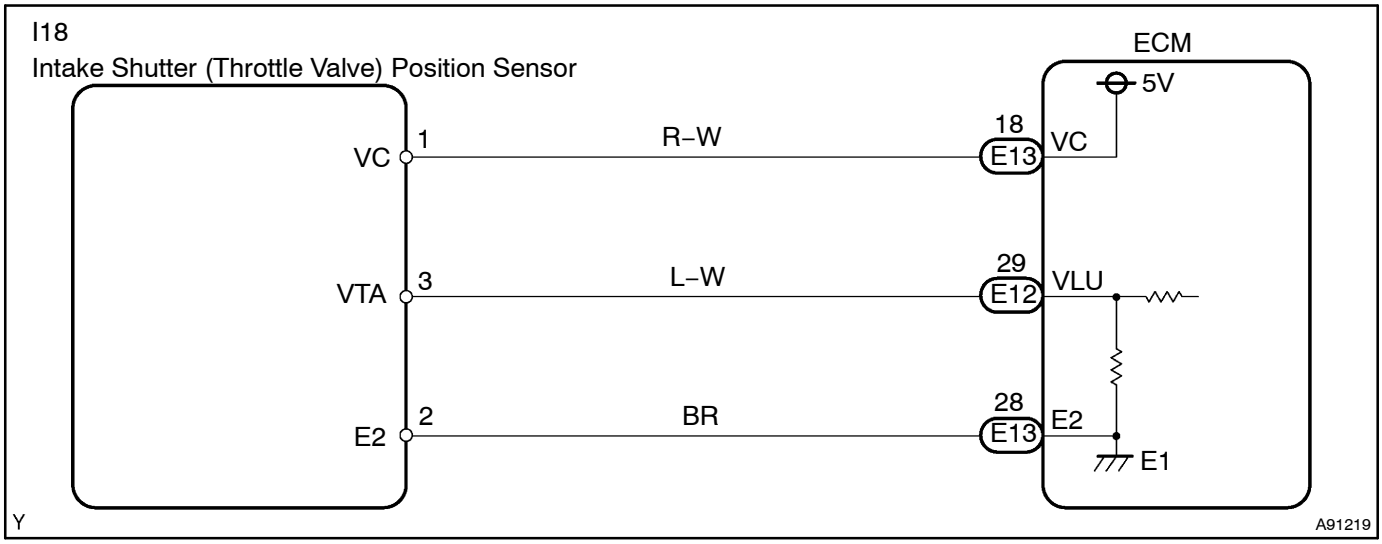
HINT:

- This is the purpose of troubleshooting the intake shutter (throttle valve) position sensor.
- This electrical throttle system does not use a throttle cable.
- This intake shutter position sensor is a non–contact type.

CIRCUIT DESCRIPTION



The intake shutter (throttle valve) position sensor is mounted on the intake shutter body and it detects the opening angle of the intake shutter. This sensor is electronically controlled and uses Hall–effect elements. The ECM judges the vehicle driving conditions from this signals input from terminal VLU, uses them as one of the conditions for EGR control etc.

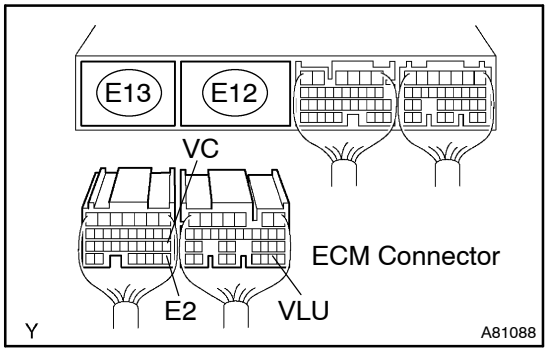


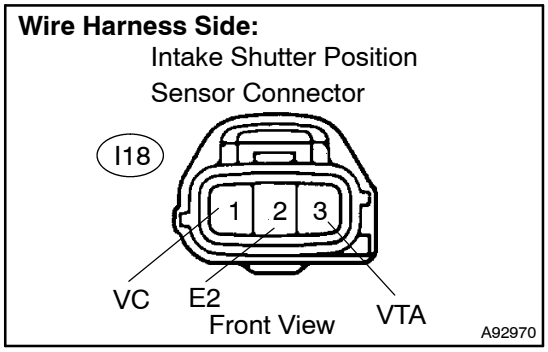
DTC No.	DTC Detection Condition	Trouble Area
Condition of DTC P0120, P0122 or P0123 continues for 3 seconds (Open or short in intake shutter [throttle valve] position sensor circuit)		
P0120	Intake shutter position sensor output (VLU) flutters up and down beyond the normal operating range (Less than 0.2 V or more than 4.8 V) (1 trip detection logic)	• Open or short in intake shutter position sensor circuit • Intake shutter position sensor • ECM
P0122	Intake shutter position sensor output (VLU) is less than 0.2 V (1 trip detection logic)	• Intake shutter position sensor • Open or short in VLU circuit • Open in VC circuit • ECM
P0123	Intake shutter position sensor output (VLU) is more than 4.8 V (1 trip detection logic)	• Intake shutter position sensor • Open in E2 circuit • VC and VLU circuits are short–circuited • ECM

MONITOR DESCRIPTION

When output voltage of the intake shutter position sensor deviates from the normal operating range (between 0.2 V and 4.8 V) for more than 3 seconds, the ECM interprets this as malfunction of the sensor circuit, and illuminates the CHK ENG.

WIRING DIAGRAM





INSPECTION PROCEDURE

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK HARNESS AND CONNECTOR(INTAKE SHUTTER (THROTTLE VALVE) POSITION SENSOR – ECM)

(a) Disconnect the I18 intake shutter position sensor connector.

(b) Disconnect the E12 and E13 ECM connectors.

(c) Measure the resistance between the terminals of the E12 and E13 ECM connectors.

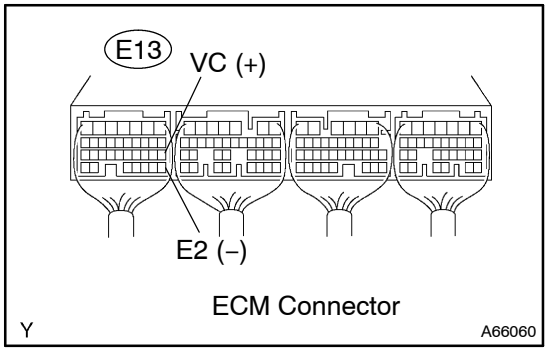
Standard:

Tester Connection	Intake Shutter	Specified Condition
VC (E13–18) – E2 (E13–28)	—	2.5 to 5.9 kΩ
VLU (E12–29) – E2 (E13–28)	Fully closed	0.2 to 5.7 kΩ
	Fully open	2.0 to 10.2 kΩ

(d) Measure the resistance between the terminals of the E12 ECM connector.

Standard (Check for short):

Tester Connection	Specified Condition
VC (E13–18) – Body ground	10 kΩ or higher
VLU (E12–29) – Body ground	



(e) Reconnect the intake shutter position sensor connector.

(f) Reconnect the ECM connectors.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2 INSPECT ECM(VC VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.
Standard:

Tester Connection	Specified Condition
VC (E13–18) – E2 (E13–28)	4.5 to 5.5 V

NG → REPLACE ECM (See page 10–29)

OK

3 REPLACE INTAKE SHUTTER ASSY (THROTTLE VALVE) (See page 10–27)

GO

4 CHECK IF DTC OUTPUT RECURS(DTC P0120, P0122 AND/OR P123)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES”.
(d) Clear the DTCs.
(e) Let the engine idle for 60 seconds and perform quick acceleration engine RPM (to 2,500 rpm) for 30 seconds.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(g) Read DTCs.
Result:

Display (DTC output)	Proceed to
P0120, P0122 and/or P0123	A
No output	B

B → SYSTEM OK

A

REPLACE ECM (See page 10–29)

DTC P0168 FUEL TEMPERATURE TOO HIGH

CIRCUIT DESCRIPTION

Refer to DTC P0180 on page 05–362.

DTC No.	DTC Detection Condition	Trouble Area
P0168	If the fuel temperature between was 35°C (95°F) and 60°C (140°F) at engine start, and condition (a) and (b) are met: (2 trip detection logic) (a) Vehicle is driven at varying speeds (under acceleration and deceleration) (b) Fuel temperature remains within 3°C (37°F) of the engine starting temperature	• Fuel temperature sensor
	If the fuel temperature was more than 60°C (140°F) at engine start, and conditions (a) and (b) are met: (6 trip detection logic) (a) Vehicle is driven at varying speeds (under acceleration and deceleration) (b) fuel temperature remains within 1°C (34°F) of the engine starting temperature, and this is successively recorded 6 times	

INSPECTION PROCEDURE

HINT:

- If DTCs P0180, P0182 and P0183 are output simultaneously, the fuel temperature sensor circuit may be open or short. Perform troubleshooting for those DTCs first.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0168)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P0168	A
P0168 and other DTCs	B

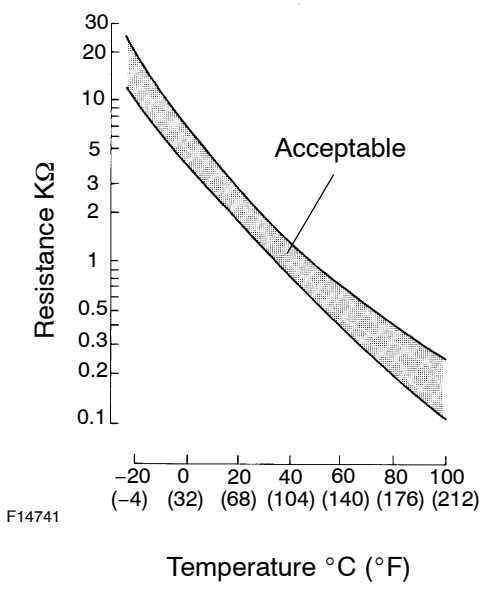
HINT:

If any other codes besides P0168 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–299)**

A

REPLACE FUEL TEMPERATURE SENSOR



DTC	P0180	FUEL TEMPERATURE SENSOR ”A” CIRCUIT

DTC	P0182	FUEL TEMPERATURE SENSOR ”A” CIRCUIT LOW INPUT

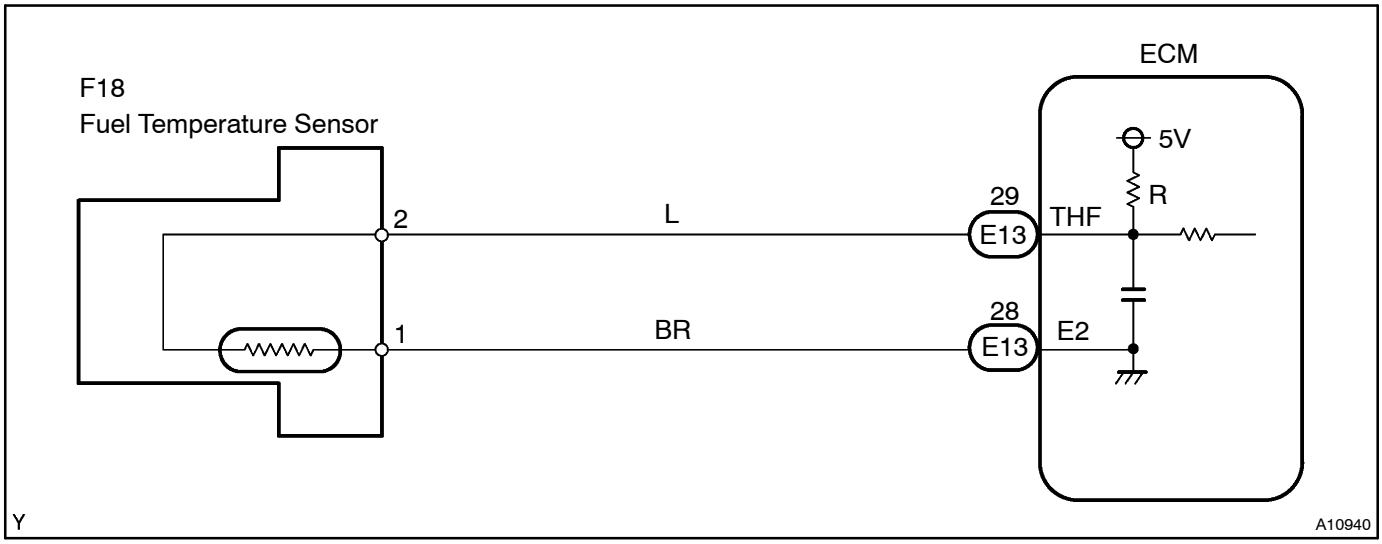
DTC	P0183	FUEL TEMPERATURE SENSOR ”A” CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

(Figure 1)

The fuel temperature sensor senses the fuel temperature. A thermistor built into the sensor changes the resistance value according to the fuel temperature. The lower the fuel temperature is, the greater the thermistor resistance becomes, and the higher the fuel temperature is, the lower the thermistor resistance becomes (see figure 1).

The fuel temperature sensor is connected to the ECM. The 5 V power source voltage in the ECM is applied to the fuel temperature sensor from terminal THF via resistor R. The resistor R and the fuel temperature sensor are connected in series. When the resistance value of the fuel temperature sensor changes in accordance with the fuel temperature, the voltage at terminal THF also changes. Based on this signal, the ECM corrects the pressure control compensation of the supply pump and an error.



DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0180	Step 1	Open or short in fuel temperature sensor circuit for 0.5 second (1 trip detection logic)	• Open or short in fuel temperature sensor circuit • Fuel temperature sensor • ECM
P0182	Step 4	Short in fuel temperature sensor circuit for 0.5 second (1 trip detection logic)	
P0183	Step 2	Open in fuel temperature sensor circuit for 0.5 second (1 trip detection logic)	

HINT:
After confirming DTC P0180, P0182 or P0183, check the fuel temperature in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL TEMP” using the hand–held tester.

Reference:

Temperature Displayed	Malfunction
–40˚C (–40˚F)	Open circuit
140˚C (284˚F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

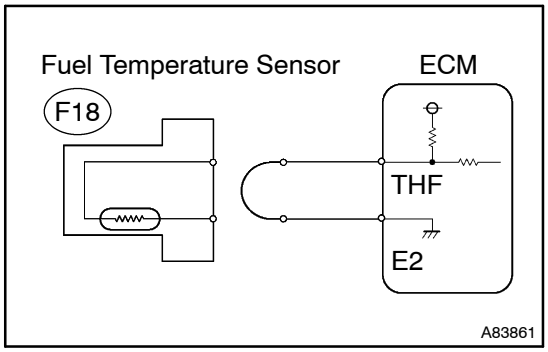
HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(FUEL TEMPARATURE)

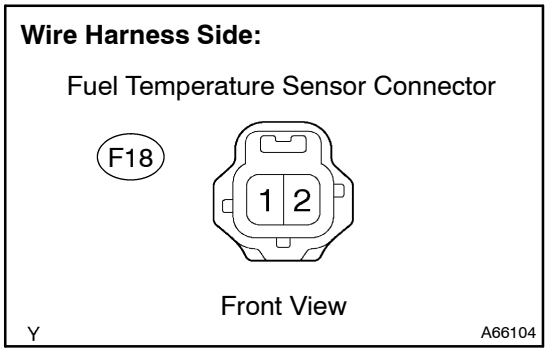
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL TEMP” and read its value displayed on the hand–held tester.
Temperature: Same value as the actual fuel temperature.
Result:

Temperature Displayed	Proceed to
–40˚C (–40˚F)	A
140˚C (284˚F) or more	B
OK (Same as actual fuel temperature)	C



HINT:

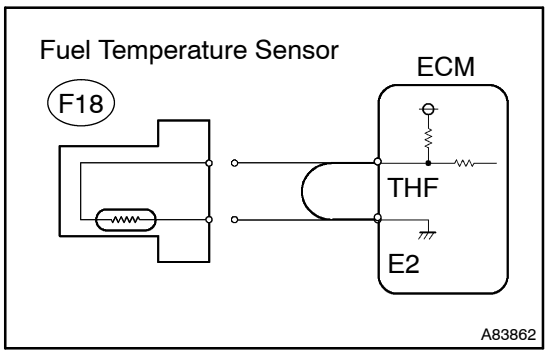
- If there is an open circuit, the hand–held tester indicates –40˚C (–40˚F).
- If there is a short circuit, the hand–held tester indicates 140˚C (284˚F) or more.



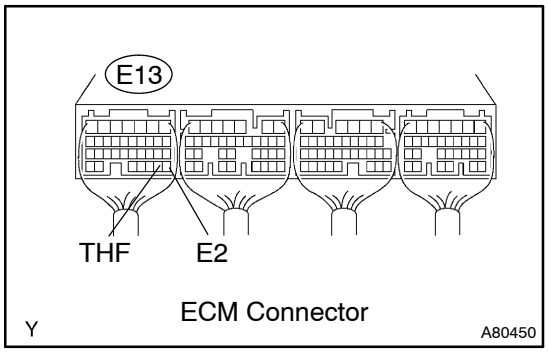
B	Go to step 4
C	CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN WIRE HARNESS)



(a) Disconnect the F18 fuel temperature sensor connector.
(b) Connect terminals 1 and 2 of the fuel temperature sensor wire harness side connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL TEMP” and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the fuel temperature sensor connector.



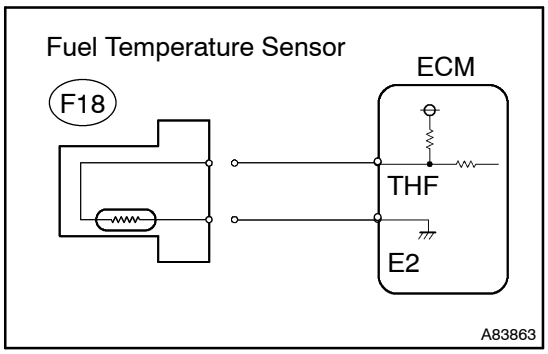
OK	CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE FUEL TEMPERATURE SENSOR

NG

3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the F18 fuel temperature sensor connector.
(b) Connect terminals THF and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check on the ECM connector.



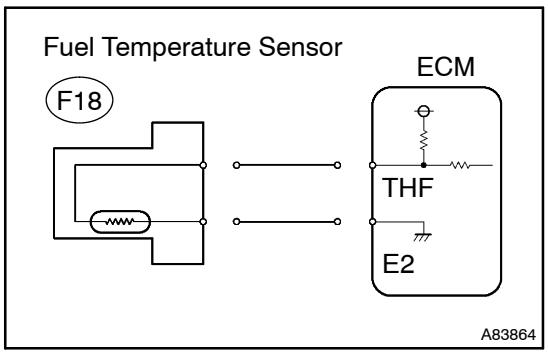
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL TEMP" and read its value displayed on the hand–held tester.
Standard: 140°C (284°F) or more
(f) Reconnect the fuel temperature sensor connector.

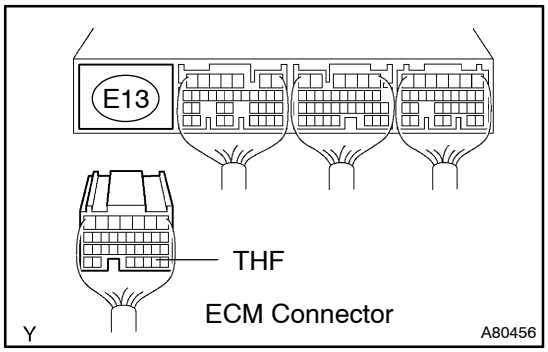
OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, REPLACE ECM (See page 10–29)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN WIRE HARNESS)





(a) Disconnect the F18 fuel temperature sensor connector.
(b) Connect the hand–held tester to the DLC 3.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL TEMP" and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(e) Reconnect the fuel temperature sensor connector.

OK → **REPLACE FUEL TEMPERATURE SENSOR**

NG

5	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the F18 fuel temperature sensor connector.
(b) Disconnect the E13 ECM connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / FUEL TEMP” and read its value displayed on the hand–held tester.
Standard: –40°C (–40°F)
(f) Reconnect the fuel temperature sensor connector.
(g) Reconnect the ECM connector.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

REPLACE ECM (See page 10–29)

DTC	P0191	FUEL RAIL PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE

CIRCUIT DESCRIPTION

Refer to DTC P0087 on page 05–314.

INSPECTION PROCEDURE

HINT:

- If DTCs P0087, P0190, P0192, and P0193 are output simultaneously, the manifold absolute pressure sensor circuit may be open or short. Perform troubleshooting for those DTCs first.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

DTC No.	DTC Detection Condition	Trouble Area
P0191	Voltage output of the fuel pressure sensor for the common rail is out of the standard range (1 trip detection logic)	• Fuel pressure sensor

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0191)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P0191	A
P0191 and other DTCs	B

HINT:

If any other codes besides P0191 are output, perform troubleshoot for those DTCs first.

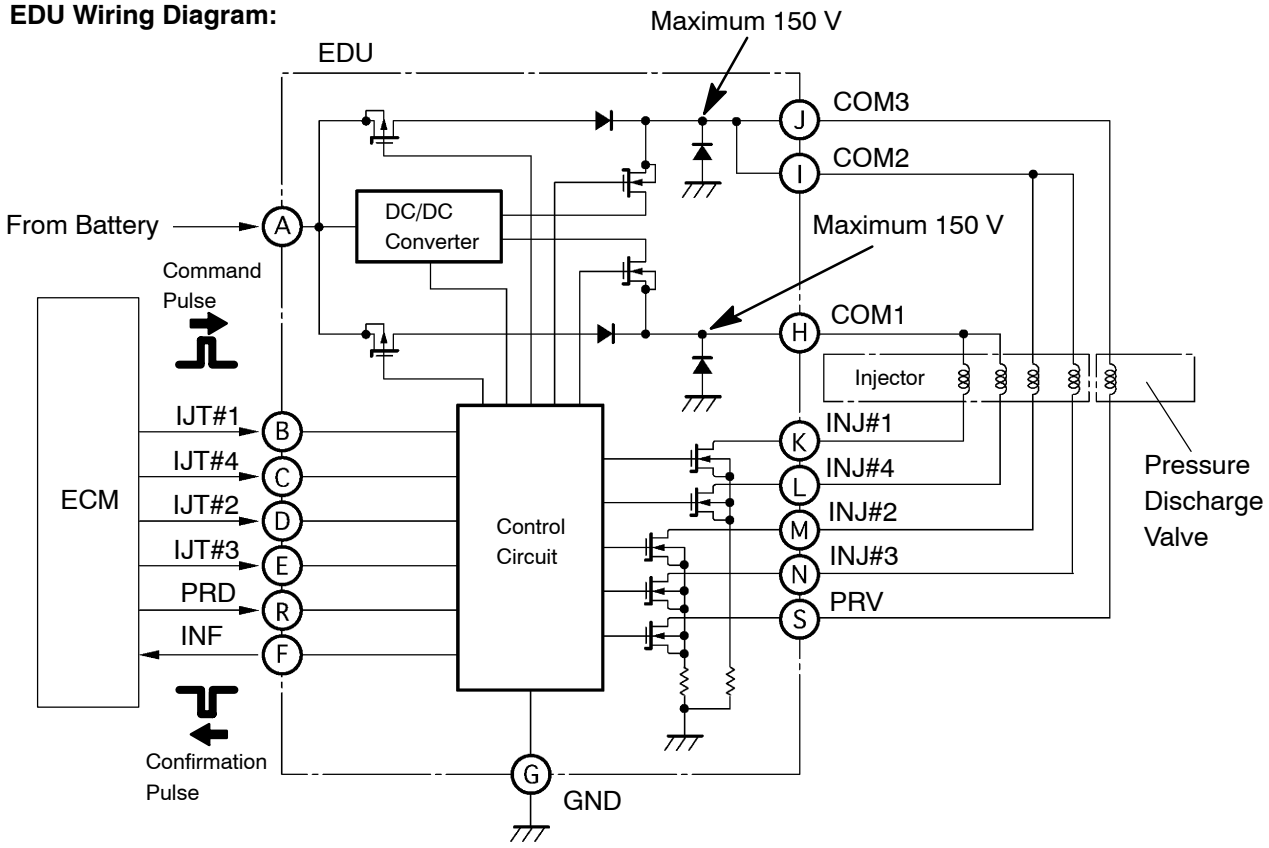
B → **GO TO RELEVANT DTC CHART (See page 05–299)**

A

REPLACE COMMON RAIL ASSY (FUEL PRESSURE SENSOR) (See page 11–67)

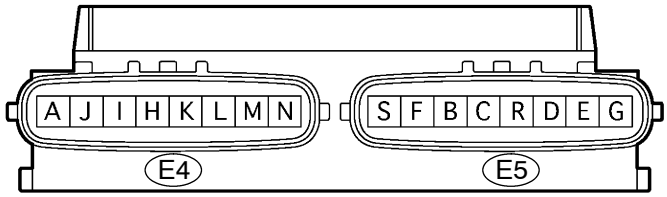
DTC	P0200	INJECTOR CIRCUIT / OPEN

HINT:



- For more information on the EDU, see page 05–255.
- If P0200 is present, refer to the diagnostic trouble codes (DTCs) table for the fuel system on page 05–255.

CIRCUIT DESCRIPTION



The EDU has been adopted to drive the injector at high speeds. The EDU has realized the high–speed driving under high–pressurized fuel conditions using the DC/DC converter that provides a high–voltage, and the quick–charging system.

Soon after the EDU receives an injection command (IJT) signal from the ECM, the EDU responds to the command with injector injection confirmation (IJF) signal when the current is applied to the injector.

EDU Wiring Diagram:

EDU Connector

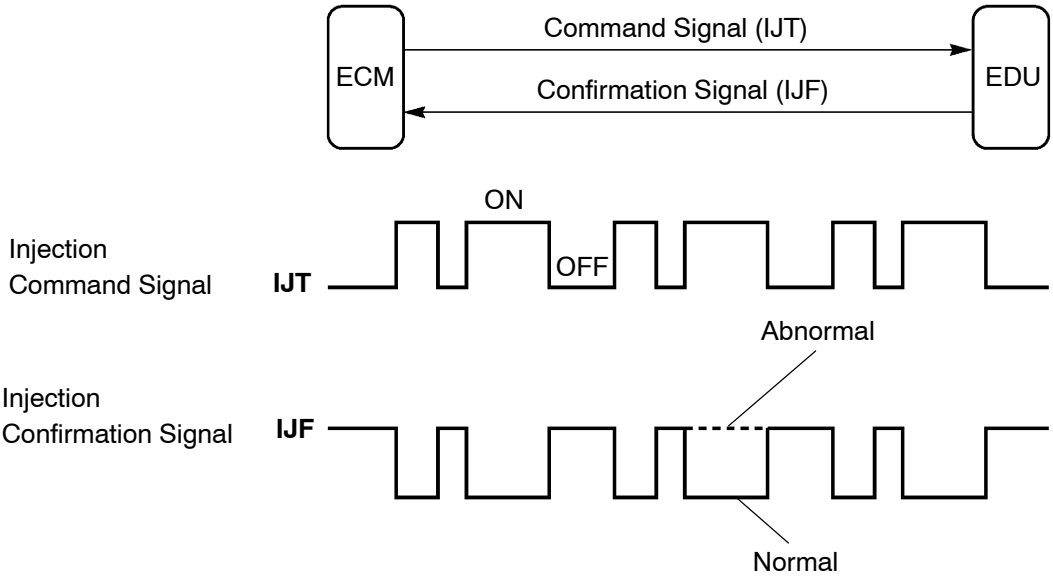
Warning: Terminal J, I, H, K, L, M, N and S are high voltage

Y A81481

DTC No.	DTC Detection Condition	Trouble Area
P0200	• Open or short in EDU or injector circuit After engine is started, there is no injection confirmation (IJF) signal from EDU to ECM, despite the ECM sending injection command (IJT) signal to the EDU (1 trip detection logic)	• Open or short in EDU circuit • Injector • EDU • ECM

MONITOR DESCRIPTION

P0200 (Open or short in EDU or injector circuit):



ECM continuously monitors both injection command (IJT) signal and injection confirmation (IJF) signal. This DTC will be set if the ECM judges that the number of IJT signals and IJF signals are inconsistent.

The injectors are grounded over a FET (field effect transistor) and a serial resistor. This resistor creates a voltage drop, which is monitored by the EDU, in relation to the current drawn by the injector. When the injector current becomes too high, the voltage drop over the resistor becomes higher than a specified level and for that injector no IJF signal is sent to the ECM.

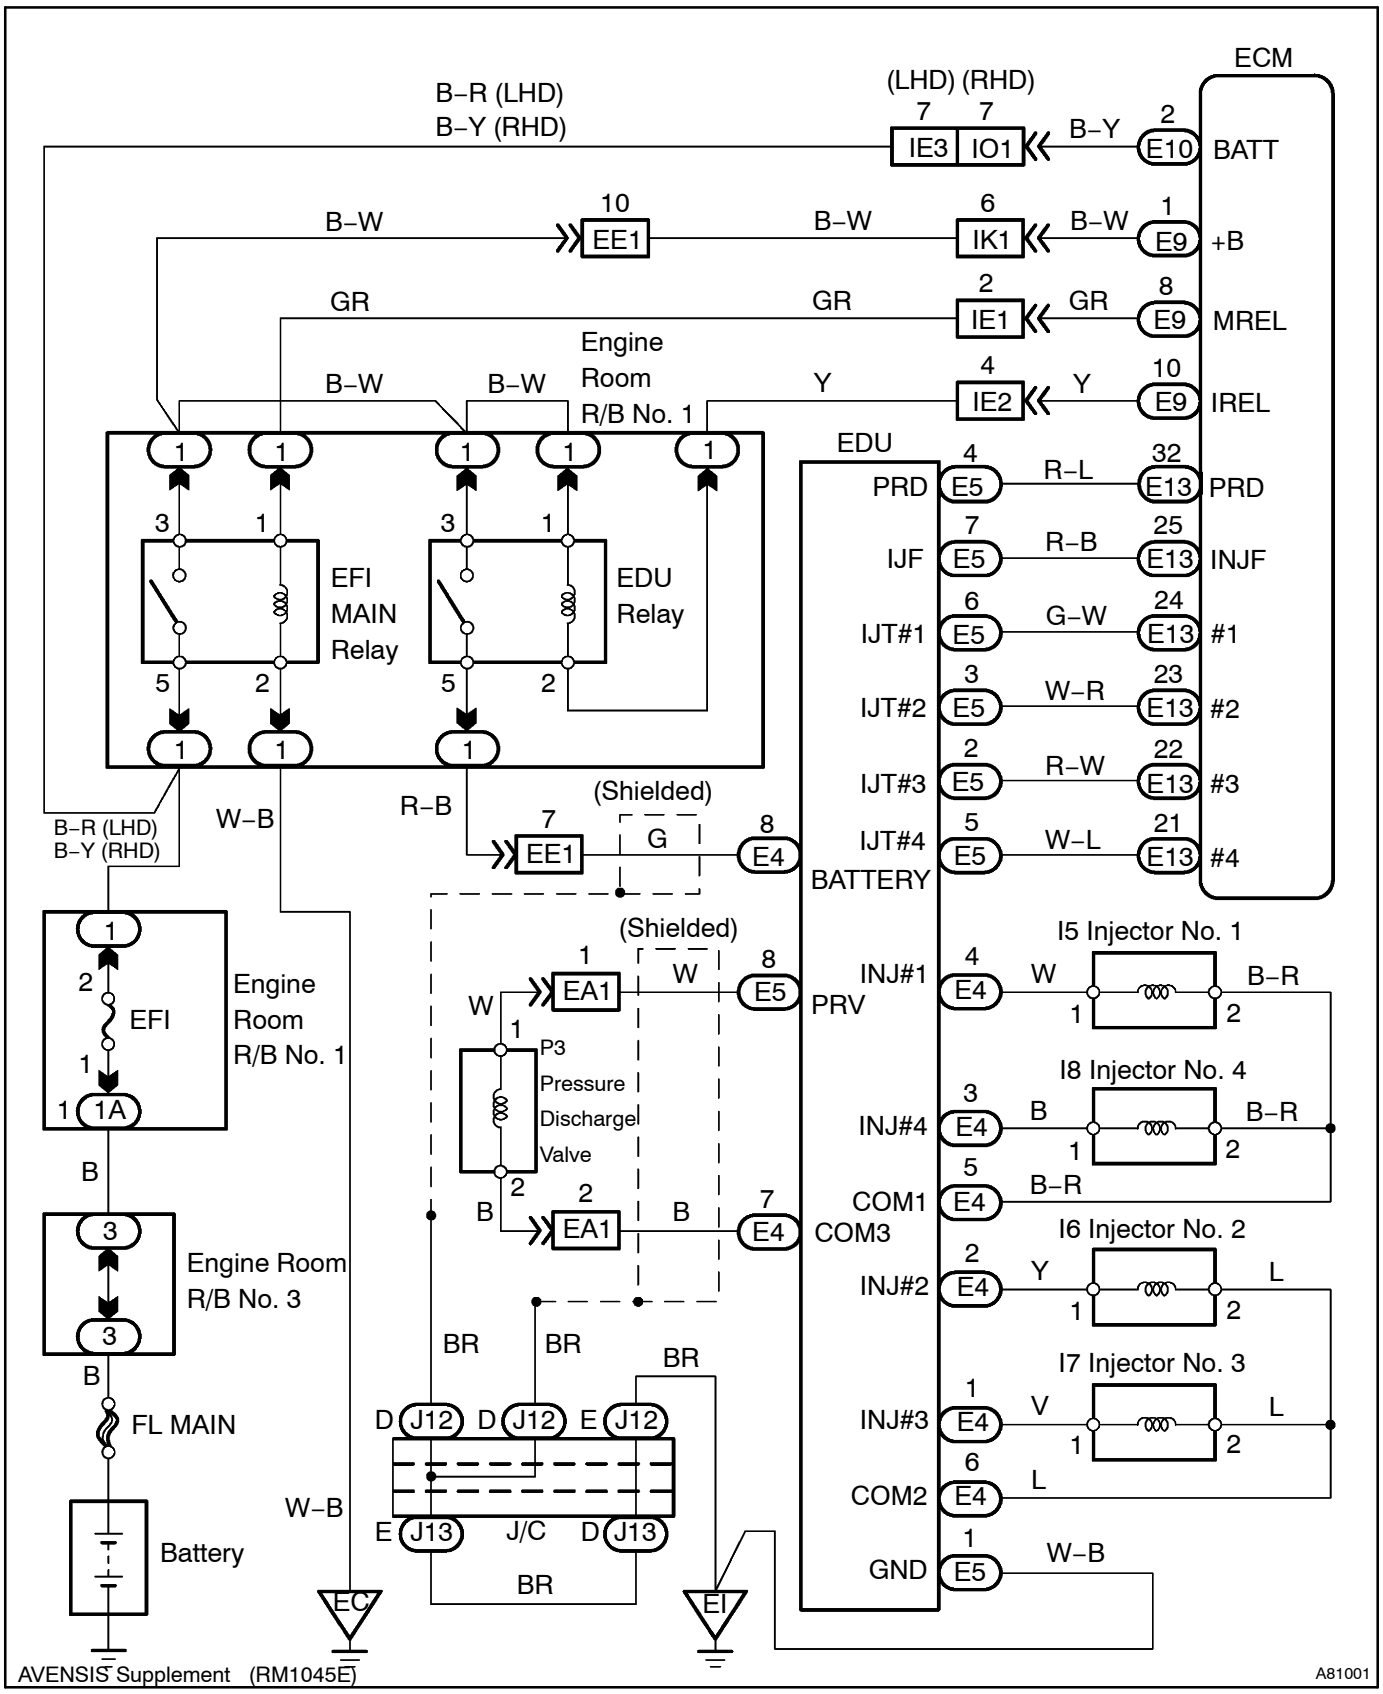
P0200 refers to a malfunction of the injector drive circuit (EDU) or injector circuit.

If this DTC is present, the ECM enters the fail–safe mode and limits the engine power. The fail–safe mode continues until the ignition switch is turned to OFF.

Malfunction Detection:

MONITOR STRATEGY

Required Sensors	IJF signal from EDU
Frequency of operation	Continuous
Duration	10 seconds
CHK ENG Operation	1 driving cycle

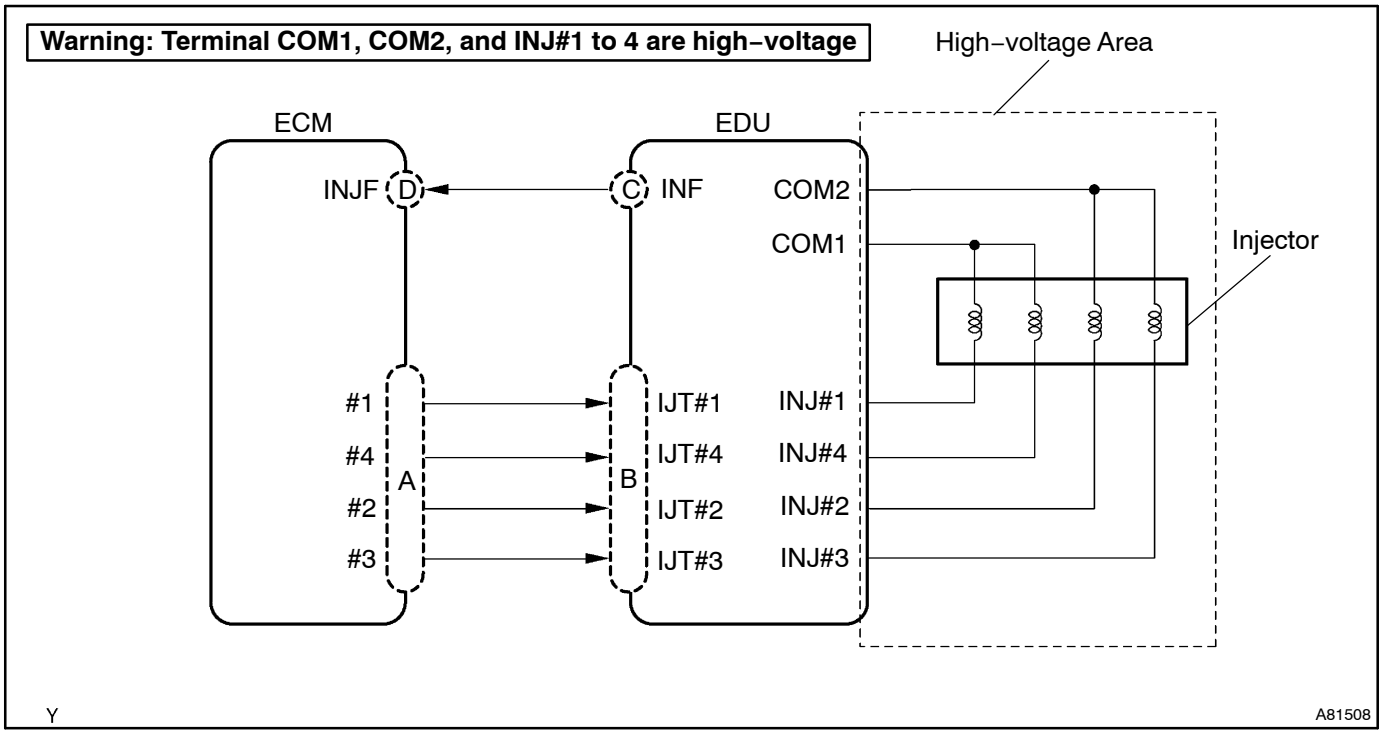


TYPICAL ENABLING CONDITIONS

Item	Specification	
	Minimum	Maximum
Engine speed	500 rpm	–
Battery voltage	11 V	–
Ignition switch	ON	

TYPICAL MALFUNCTION THRESHOLDS

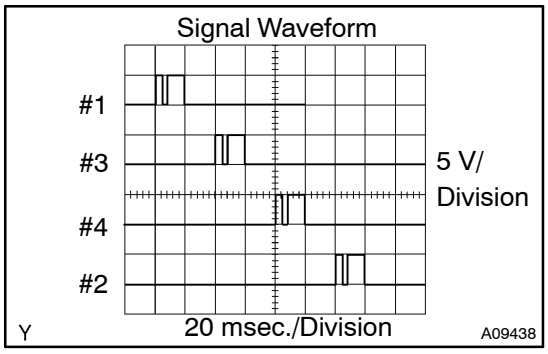
Threshold
If injection missing counter* is accumulated the specified number of times successively, or if injection missing counter for one of the cylinders is accumulated the specified number of times successively (Approximately 1 second or more) *: Injection missing counter increments when no IJF signal from the EDU is sent despite the ECM sending the IJT signals



WIRING DIAGRAM

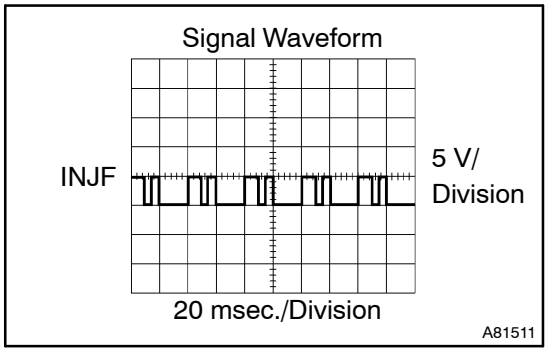
PULSE GENERATION INSPECTION

HINT:



Problem area can be identified by checking the waveform at the following terminals.

HINT:



If you check the ECM side first, inspect the following A and D in sequence. If you check the EDU side first, inspect the following B and C in sequence. This shortens inspecting time.

Malfunction Point	Trouble Area
A	• ECM
B (if A is normal)	• Open or short in "#1 to #4 (ECM)" – "IJT#1 to IJT#4 (EDU)" harness or connector
C (if A and B are normal)	• Open or short in "INJ#1 to INJ#4 (EDU)" – "COM1 and/or COM2" (EDU) circuit • Injector • EDU
D (if A, B and C are normal)	• Open or short in "INJ (EDU)" – "INJF (ECM)" circuit (P1271 is set simultaneously)

(a) Reference: Inspection using the oscilloscope.
During idling, the correct waveform is as shown in the diagram on the left.

Inspection Points	Specified Condition
A and B	Correct waveform is as shown

(b) Reference: Inspection using the oscilloscope.
During idling, the correct waveform is as shown in the diagram on the left.

Inspection Points	Specified Condition
C and D	Correct waveform is as shown

INSPECTION PROCEDURE

HINT:

- If P0200 and P1271 are present simultaneously, there is open in the INJF wire harness between the EDU and ECM, or there is open in the wire harness for both injector and pressure discharge valve.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDTION TO DTC P0200)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.
Result:

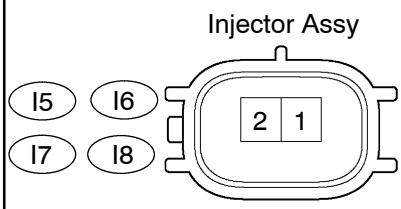
Display (DTC output)	Proceed to
P0200 and P1238	A
P0200	B

B → **Go to step 3**

A

2	READ VALUE OF HAND–HELD TESTER(COMPENSATION OF INJECTION VOLUME BETWEEN CYLINDERS)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INJ VOLUME FB” and read its value displayed on the hand–held tester.
Result:



Result	Compensatory Injection Volume (mm^3)
Standard	–3 to 3
Maximum	–4.9 to 4.9

(e) Inspect and repair the cylinder that has an improper compensation value according to the following steps.

GO

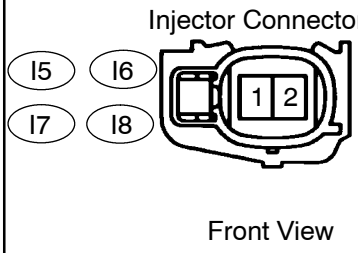
3 INSPECT INJECTOR ASSY

Component Side:

(a) Disconnect the I5, I6, I7 or I8 injector connectors.
(b) Measure the resistance between the terminals of the injector assy.

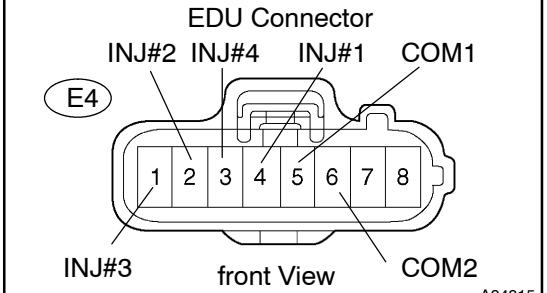
Standard:

Tester Connection	Specified Condition
1 – 2	0.85 to 1.05 Ω at 20°C (68°F)



(c) Reconnect the injector connector.

NG → **REPLACE INJECTOR ASSY (See page 11–46)**



OK

4 CHECK HARNESS AND CONNECTOR(EDU – INJECTOR ASSY)

Wire Harness Side:

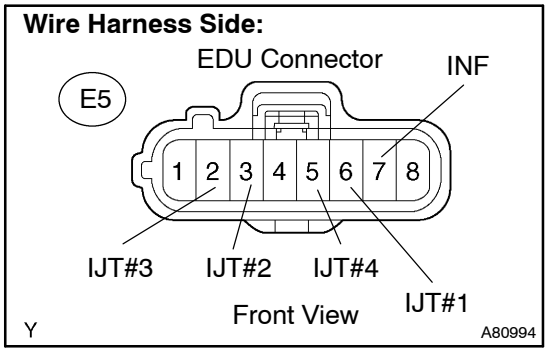
Wire Harness Side:

(a) Check the harness and connector between the injector and EDU (INJ terminal).
(1) Disconnect the I5, I6, I7, or I8 injector connector.
(2) Disconnect the E4 EDU connector.
(3) Check the resistance between the wire harness side connectors.

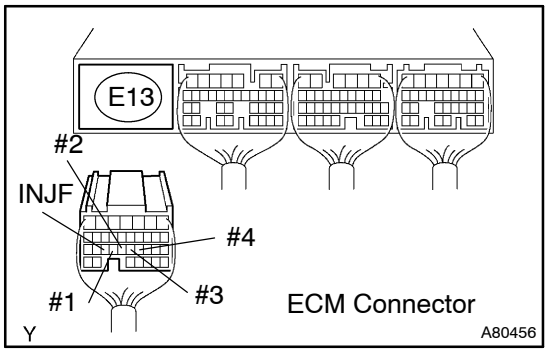
Standard (Check for open):

Tester Connection	Specified Condition
Injector (I5–1) – INJ#1 (E4–4)	Below 1 Ω
Injector (I6–1) – INJ#2 (E4–2)	
Injector (I7–1) – INJ#3 (E4–1)	
Injector (I8–1) – INJ#4 (E4–3)	
Injector (I5–2) – COM1 (E4–5)	
Injector (I6–2) – COM2 (E4–6)	
Injector (I7–2) – COM2 (E4–6)	
Injector (I8–2) – COM1 (E4–5)	

Standard (Check for short):



Tester Connection	Specified Condition
Injector (I5–1) or INJ#1 (E4–4) – Body ground	10 kΩ or higher
Injector (I6–1) or INJ#2 (E4–2) – Body ground	
Injector (I7–1) or INJ#3 (E4–1) – Body ground	
Injector (I8–1) or INJ#4 (E4–3) – Body ground	
Injector (I5–2) or COM1 (E4–5) – Body ground	
Injector (I6–2) or COM2 (E4–6) – Body ground	
Injector (I7–2) or COM2 (E4–6) – Body ground	
Injector (I8–2) or COM1 (E4–5) – Body ground	



(4) Reconnect the injector connector.
(5) Reconnect the EDU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

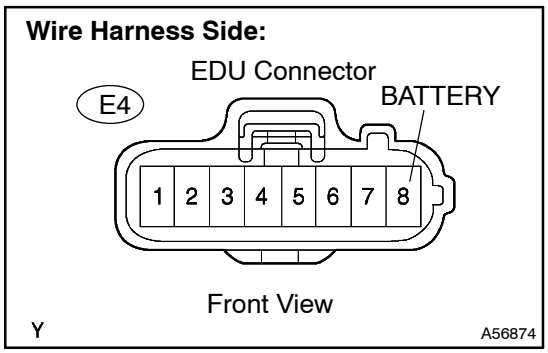
5 CHECK HARNESS AND CONNECTOR(EDU – ECM)

(a) Disconnect the E5 EDU connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the terminals of the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
IJT#1 (E5–6) – #1 (E13–24)	Below 1 Ω
IJT#2 (E5–3) – #2 (E13–23)	
IJT#3 (E5–2) – #3 (E13–22)	
IJT#4 (E5–5) – #4 (E13–21)	
INF (E5–7) – INJF (E13–25)	

Standard (Check for short):



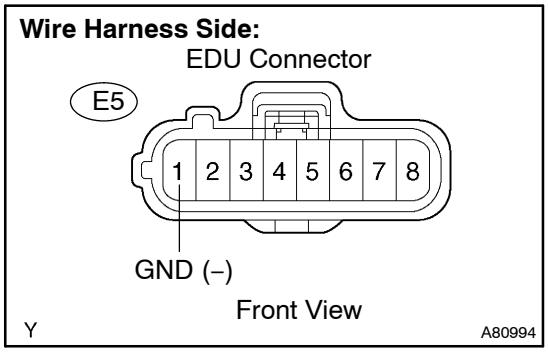
Tester Connection	Specified Condition
#1 (E13–24) or IJT#1 (E5–6) – Body ground	10 kΩ or higher
#2 (E13–23) or IJT#2 (E5–3) – Body ground	
#3 (E13–22) or IJT#3 (E5–2) – Body ground	
#4 (E13–21) or IJT#4 (E5–5) – Body ground	
INJF (E13–25) or INF (E5–7) – Body ground	

(d) Reconnect the EDU connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

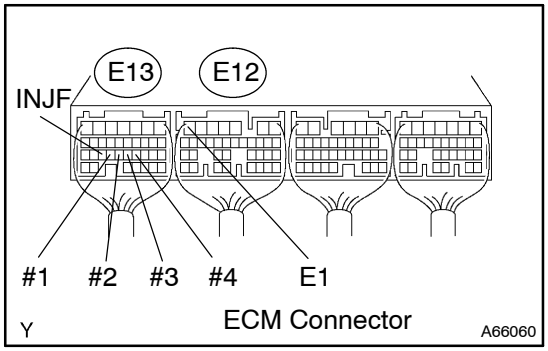
6 INSPECT INJECTOR DRIVER(BATTERY VOLTAGE)



(a) Disconnect the E4 and E5 EDU connectors.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the specified terminals of the EDU connectors.

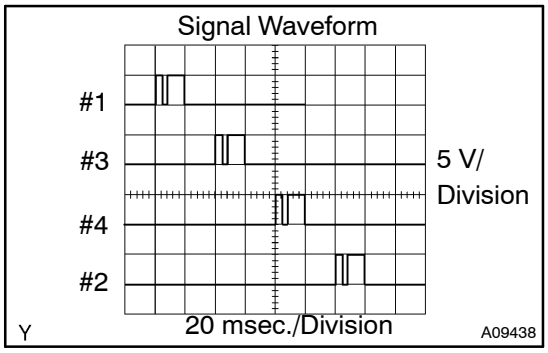
Standard:

Tester Connection	Specified Condition
BATTERY (E4–8) – GND (E5–1)	9 to 14 V

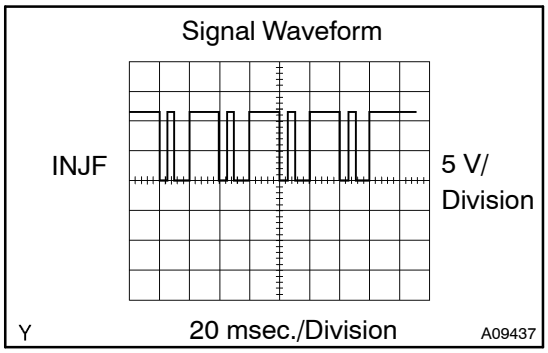


(d) Reconnect the EDU connectors.

NG → CHECK INJECTOR DRIVER POWER SOURCE CIRCUIT (BATTERY – EDU)



OK



7 INSPECT ECM(INJECTOR VOLTAGE)

(a) Inspect using the oscilloscope.
(b) During idling, check the waveform between the specified terminals of the E12 and E13 ECM connectors.
Standard:

Tester Connection	Specified Condition
#1 (E13–24) – E1 (E12–7)	Correct waveform is as shown
#2 (E13–23) – E1 (E12–7)	
#3 (E13–22) – E1 (E12–7)	
#4 (E13–21) – E1 (E12–7)	
INJF (E13–25) – E1 (E12–7)	

NG → REPLACE ECM (See page 10–29)

OK

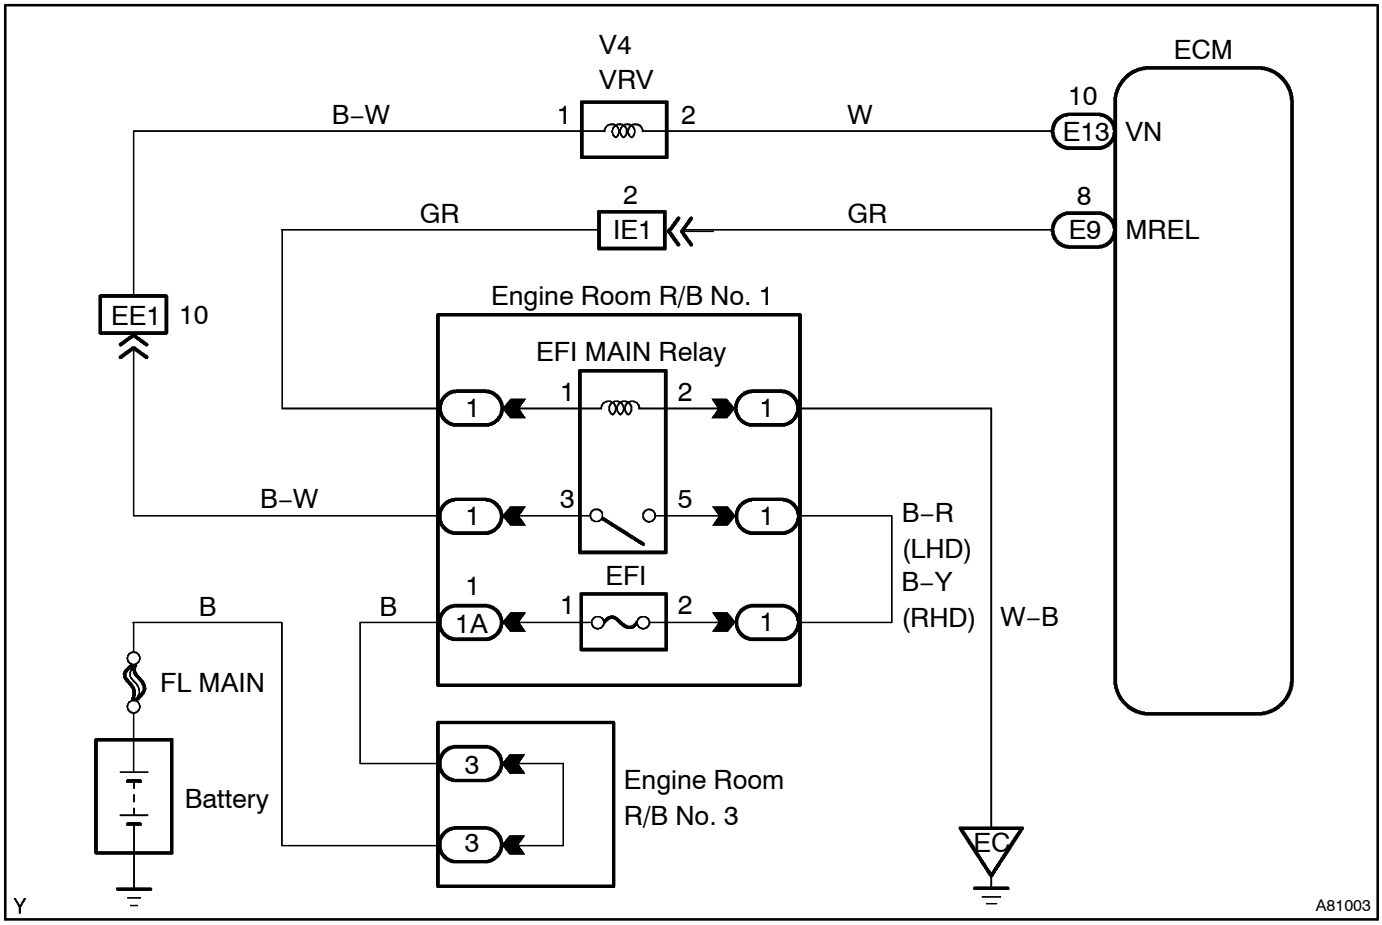
8 REPLACE INJECTOR DRIVER

GO

CHECK IF DTC OUTPUT RECURS (DTC P0200)

HINT:
After clearing the DTC, start the engine and let it idle for 30 seconds, and then confirm that P0200 is not present again.

DTC	P0234	TURBO/SUPER CHARGER OVERBOOST CONDITION



DTC	P0299	TURBO/SUPER CHARGER UNDERBOOST

DTC	P1251	TURBO/SUPER CHARGER OVERBOOST CONDITION (TOO HIGH)

CIRCUIT DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
P0234 P0299 P1251	When the condition that the turbocharger pressure exceeds the standard value for 0.5 second or more (1 trip detection logic)	• VRV • Open or short in VRV circuit • Turbocharger • Vacuum hose • EGR valve • ECM
	Actual turbocharger pressure is deviated 20 kPa (150 mmHg, 5.9 in.Hg) or more from the simulated target pressure for 60 seconds (1 trip detection logic)	

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0234, P0299 AND/OR P1251)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.
Result:

Display (DTC output)	Proceed to
P0234, P0299 and/or P1251	A
P0234, P0299 and/or P1251 and other DTCs	B

B → **GO TO RELEVANT DTC CHART (See page 05–299)**

A

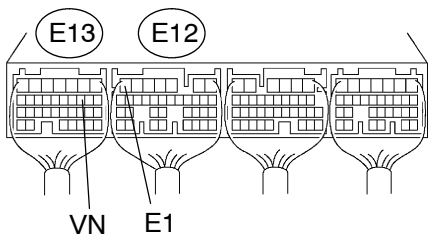
2	CONNECTION OF VACUUM HOSES

HINT:
Check the vacuum hoses of turbocharger system connections.

NG → **REPAIR OR REPLACE VACUUM HOSES**

OK

3	CHECK VACUUM HOSES(CHECK VACUUM BETWEEN TURBOCHARGER – VRV FOR TURBO CHARGER)



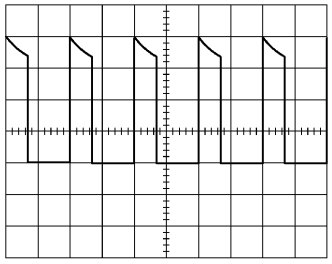
(a) Using a three–way connector, connect a vacuum gauge to the hoses between the E–VRV and turbocharger.
(b) Warm up the engine coolant temperature to above 75°C (167°F).
(c) Check the vacuum at the engine speed of 900 rpm.
Result:

Proceed to	Vacuum
A	0 kPa (0 mmHg, 0 in.Hg) to 50 kPa (375 mmHg, 14.8 in.Hg)
B	Above 50 kPa (375 mmHg, 14.8 in.Hg)

B → **Go to step 8**

A

4	INSPECT ECM(VN VOLTAGE)



Y ECM Connector A66060

(a) Inspect using the oscilloscope.
(b) During idling, check the waveform between the specified terminals of the E12 and E13 ECM connectors.

Standard:

Tester Connection	Specified Condition
VN (E13–10) – E1 (E12–7)	Correct waveform is as shown

E–VRV Signal Waveforms

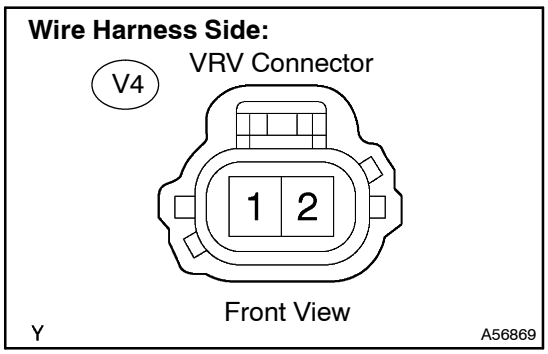
1 msec./ Division A05967

OK → REPLACE ECM (See page 10–29)

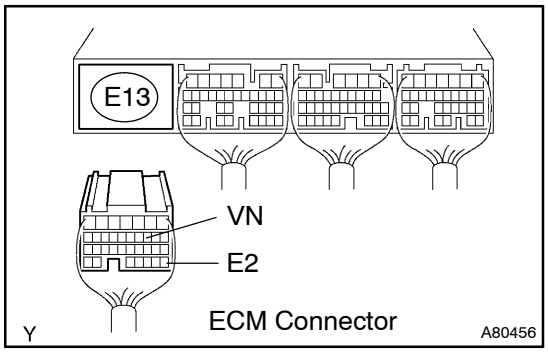
NG

5	INSPECT VACUUM REGULATING VALVE ASSY(OPERATION) (See page 13–8)

NG → REPLACE VACUUM REGULATING VALVE ASSY



OK



6	INSPECT VACUUM REGULATING VALVE ASSY(RESISTANCE) (See page 13–8)

NG → REPLACE VACUUM REGULATING VALVE ASSY

OK

7 CHECK HARNESS AND CONNECTOR(VRV – ECM)

(a) Disconnect the V4 VRV connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

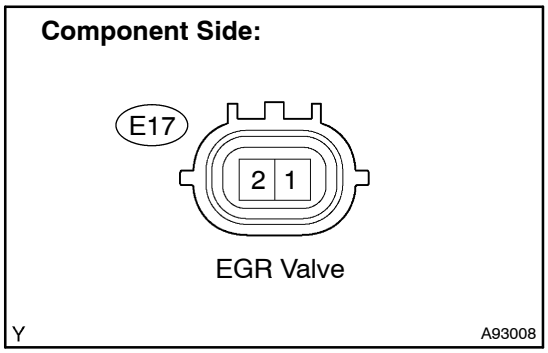
Tester Connection	Specified Condition
VN (E13–10) – (V4–2)	Below 1 Ω
E2 (E13–28) – (V4–1)	

Standard (Check for short):

Tester Connection	Specified Condition
VN (E13–10) or (V4–2) – Body ground	10 kΩ or higher
E2 (E13–28) or (V4–1) – Body ground	

(d) Reconnect the VRV connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**



OK

8 INSPECT TURBOCHARGER SUB–ASSY (See page 13–6)

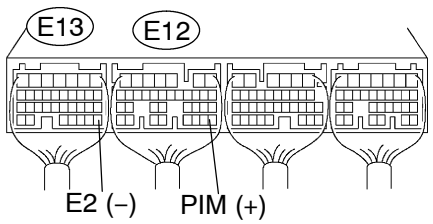
NG → **REPLACE TURBOCHARGER SUB–ASSY (See page 13–12)**

OK

9 INSPECT EGR VALVE ASSY

(a) Disconnect the E17 EGR valve connector.
(b) Measure the resistance between the terminals of the EGR valve.

Standard:



Tester Connection	Specified Condition
1 – 2	6.8 Ω at 20°C (68°F)

(c) Reconnect the EGR valve connector.

NG → **REPLACE EGR VALVE ASSY (See page 14–108)**

OK

10 CHECK AND REPLACE MANIFOLD ABSOLUTE SENSOR

ECM Connector

Y A66060

(a) Turn the ignition switch to ON.

(b) Measure the voltage between the terminals of the E12 and E13 ECM connectors.

Standard:

Tester Connection	Condition	Specified Condition
PIM (E12–28) – E2 (E13–28)	Applied negative pressure of 40 kPa (300 mmHg, 11.8 in.Hg)	1.4 to 2.0 V
PIM (E12 – 28) – E2 (E13–28)	Same as atmospheric pressure	2.0 to 2.6 V
PIM (E12 – 28) – E2 (E13–28)	Applied positive pressure of 69 kPa (518 mmHg, 20.4 in.Hg)	3.0 to 3.6 V

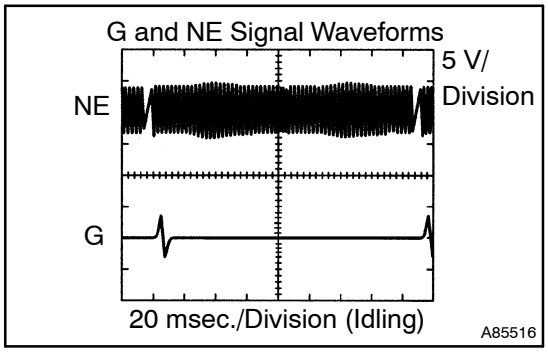
HINT:

Even if the voltage output from the manifold absolute sensor is within the standard level, there may be a problem in the sensor by age deterioration.

NG → **REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR**

OK

REPLACE ECM (See page 10–29)

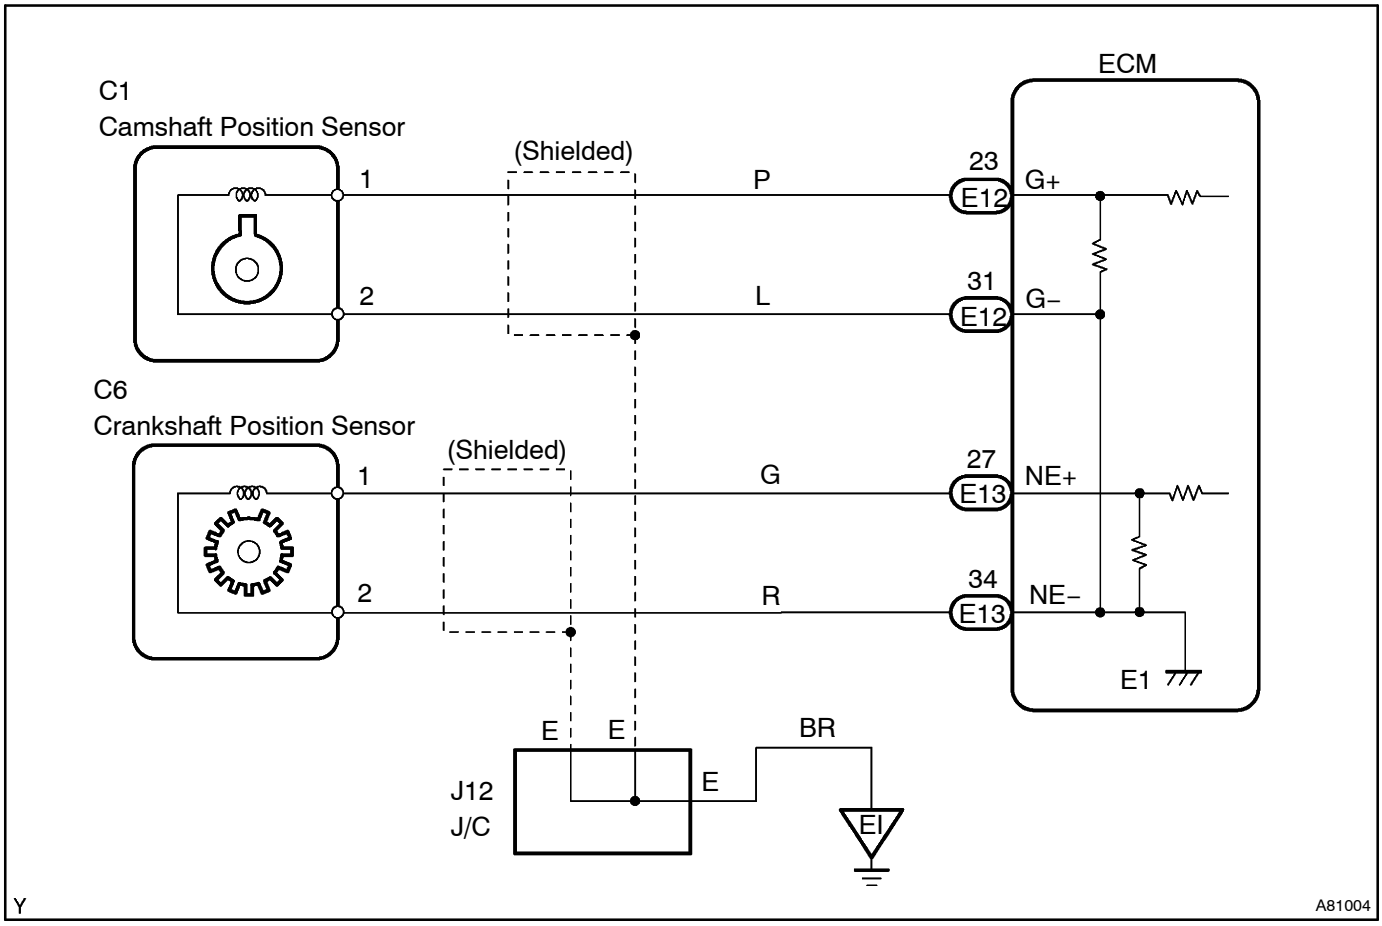


DTC	P0335	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT

DTC	P0339	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT INTERMITTENT

CIRCUIT DESCRIPTION

Crankshaft position sensor (NE signal) consists of a magnet, iron core and pickup coil.
The NE signal plate has 34 teeth and is installed on the crankshaft timing pulley. The NE signal sensor generates 34 signals of every engine revolution. The ECM detects the standard crankshaft angle based on the G signal from the camshaft position sensor, and the actual crankshaft angle and the engine speed by the NE signal.



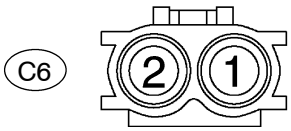
DTC No.	DTC Detection Condition	Trouble Area
P0335	No crankshaft position sensor signal to ECM during cranking (2 trip detection logic)	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft timing pulley) • ECM
	No crankshaft position sensor signal to ECM at engine speed of 650 rpm or more (2 trip detection logic)	
P0339	In conditions (a), (b) and (c), no crankshaft position sensor (NE) signal for 0.05 second or more (1 trip detection logic) (a) Engine revolution is 1,000 rpm or more (b) STA signal is OFF (c) 3 seconds or more has lapsed after STA signal was switched from ON to OFF	

Reference: Inspection using the oscilloscope.
During idling, the correct waveform is as shown in the diagram on the left.

Tester Connection	Specified Condition
NE+ (E13–27) – NE– (E13–34)	Correct waveform is as shown

WIRING DIAGRAM

INSPECTION PROCEDURE



HINT:

- If no trouble is found in troubleshooting of DTC P0335, troubleshoot the engine mechanical system.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT CRANKSHAFT POSITION SENSOR(RESISTANCE)

Component Side:

Crankshaft Position Sensor

A78431

(a) Disconnect the C6 crankshaft position sensor connector.

(b) Measure the resistance between the terminals of the crankshaft position sensor.

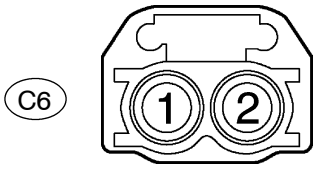
Standard:

Tester Connection	Specified Condition
1 – 2	1,630 to 2,740 Ω at cold
	2,065 to 3,225 Ω at hot

NOTICE:

"Cold" and "Hot" shown above mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).

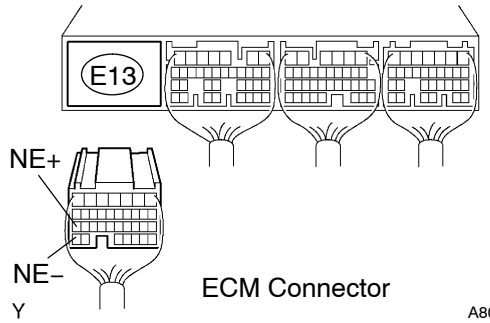
(c) Reconnect the crankshaft position sensor connector.



NG → REPLACE CRANKSHAFT POSITION SENSOR

OK

2 CHECK HARNESS AND CONNECTOR(CRANKSHAFT POSITION SENSOR – ECM)



Wire Harness Side:

Crankshaft Position Sensor Connector

Front View

A76790

ECM Connector

Y

A80459

(a) Disconnect the C6 crankshaft position sensor connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Crankshaft position sensor (C6–1) – NE+ (E13–27)	Below 1 Ω
Crankshaft position sensor (C6–2) – NE– (E13–34)	

Standard (Check for short):

Tester Connection	Specified Condition
Crankshaft position sensor (C6–1) or NE+ (E13–27) – Body ground	10 kΩ or higher
Crankshaft position sensor (C6–2) or NE– (E13–34) – Body ground	

(d) Reconnect the crankshaft position sensor connector.
(e) Reconnect the ECM connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK SENSOR INSTALLATION(CRANKSHAFT POSITION SENSOR)

NG → TIGHTEN SENSOR

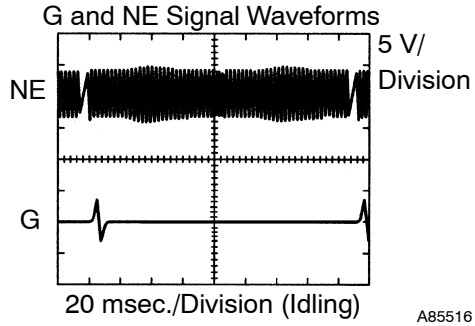
OK

4 CHECK CRANKSHAFT POSITION SENSOR PLATE(TEETH OF SENSOR PLATE(CRANKSHAFT TIMING PULLEY))

(a) Check the teeth of the sensor plate.

NG → REPLACE CRANKSHAFT POSITION SENSOR PLATE (CAMSHAFT TIMING PULLEY)

OK



REPLACE ECM (See page 10–29)

DTC	P0340	CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR)

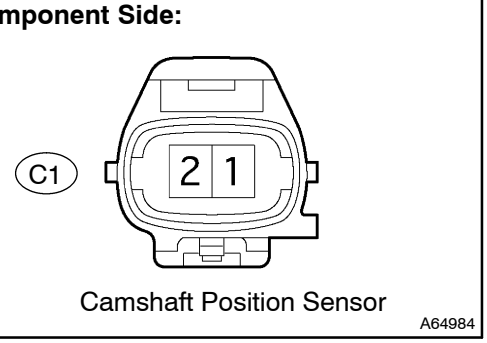
CIRCUIT DESCRIPTION

Camshaft position sensor (G signal) consists of a magnet, iron core and pickup coil.
The G signal plate has one tooth on its outer circumference and is installed on the camshaft timing pulley. When the camshafts rotate, the protrusion on the signal plate and the air gap on the pickup coil change, causing fluctuations in the magnetic field and generating voltage in the pickup coil.
The ECM detects each cylinder position based on a combination of the G signal and a signal from the crankshaft position sensor (NE signal).

DTC No.	DTC Detection Condition	Trouble Area
P0340	No camshaft position sensor signal to ECM during cranking (2 trip detection logic)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing pulley • ECM
	No camshaft position sensor signal to ECM at engine speed of 650 rpm or more (1 trip detection logic)	

Reference: Inspection using the oscilloscope.
During idling the correct waveform is as shown in the diagram on the left.

Tester Connection	Specified Condition
G+ (E12–23) – G– (E12–31)	Correct waveform is as shown



WIRING DIAGRAM

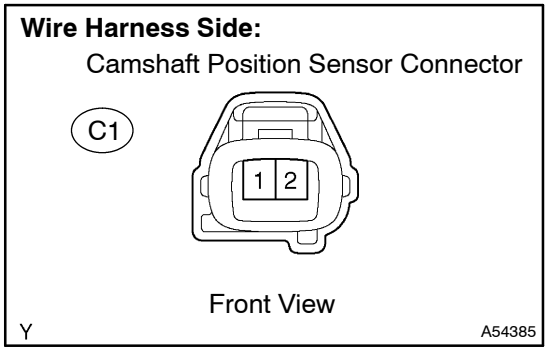
Refer to DTC P0335 on page 05–381.

INSPECTION PROCEDURE

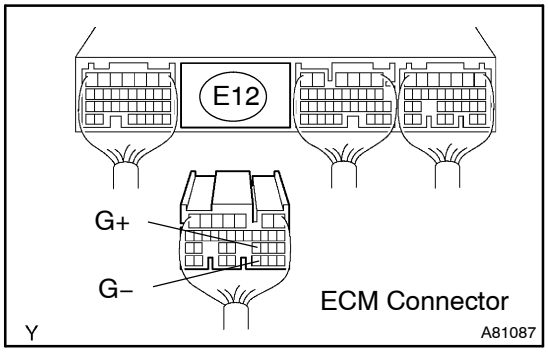
HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT CAMSHAFT POSITION SENSOR

(a) Disconnect the C1 camshaft position sensor connector.
(b) Measure the resistance between the terminals of the crankshaft position sensor.
Standard:



Tester Connection	Specified Condition
1 – 2	835 to 1,400 Ω at cold
	1,060 to 1,645 Ω at hot



NOTICE:
"Cold" and "Hot" shown above mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).
(c) Reconnect the camshaft position sensor.

NG → REPLACE CAMSHAFT POSITION SENSOR

OK

2 CHECK HARNESS AND CONNECTOR(CAMSHAFT POSITION SENSOR – ECM)

(a) Disconnect the C1 camshaft position sensor connector.
(b) Disconnect the E12 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Camshaft position sensor (C1–1) – G+ (E12–23)	Below 1 Ω
Camshaft position sensor (C1–2) – G– (E12–31)	

Standard (Check for short):

Tester Connection	Specified Condition
Camshaft position sensor (C1–1) or G+ (E12–23) – Body ground	10 kΩ or higher
Camshaft position sensor (C1–2) or G– (E12–31) – Body ground	

(d) Reconnect the camshaft position sensor connector.
(e) Reconnect the ECM connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK SENSOR INSTALLATION(CAMSHAFT POSITION SENSOR)

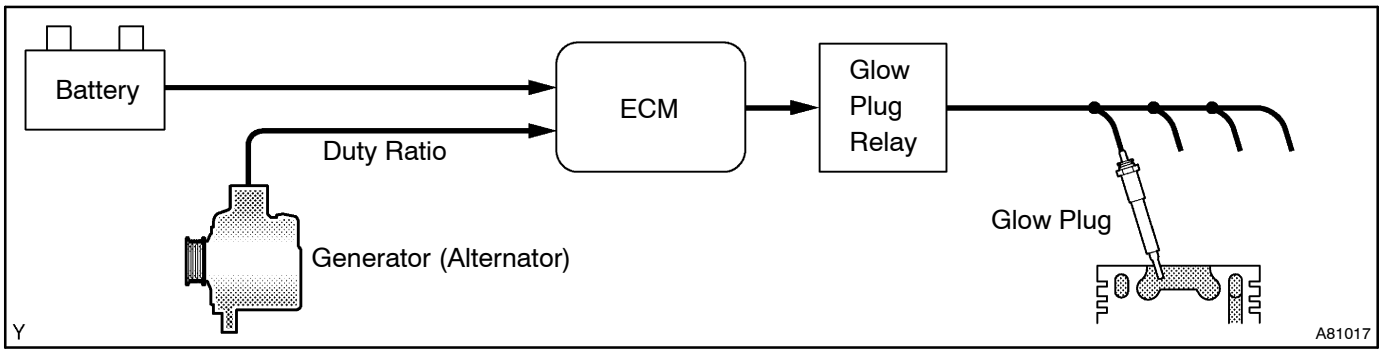
NG → TIGHTEN SENSOR

OK

4 CHECK CAMSHAFT TIMING PULLEY(TEETH OF PLATE)

(a) Check the teeth of the signal plate.

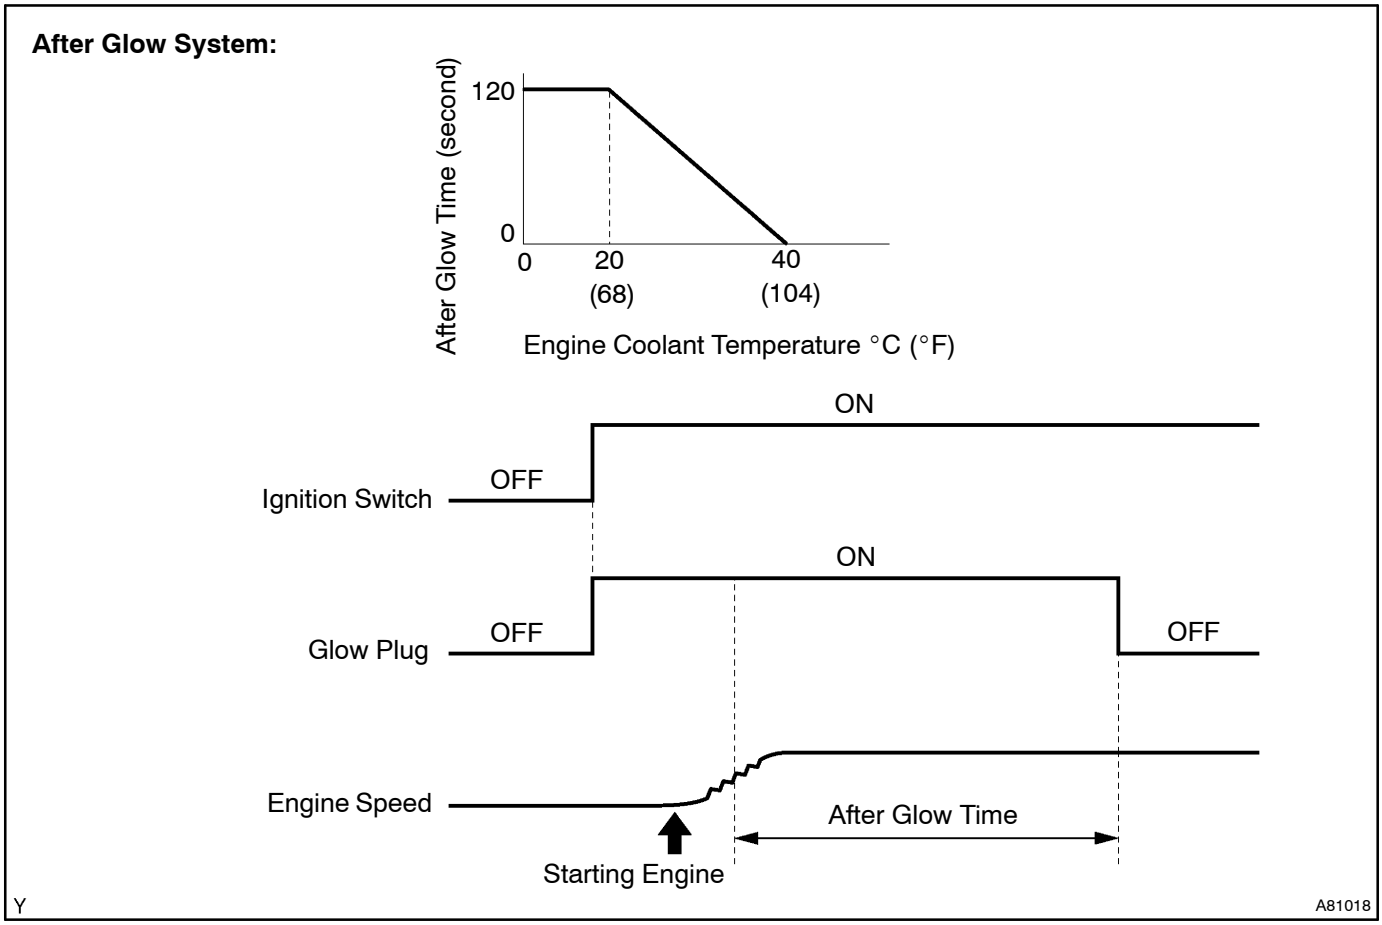
NG → REPLACE CAMSHAFT TIMING PULLEY



OK

REPLACE ECM (See page 10–29)

DTC	P0380	GLOW PLUG/HEATER CIRCUIT ”A”



CIRCUIT DESCRIPTION

The glow plug is mounted inside the engine combustion chamber. To ensure the efficient engine starting with a cold engine, the ECM calculates a time interval of the current needs to flow through the glow plug depending on the starting engine coolant temperature when the ignition switch is turned to ON. The ECM then turns on the glow plug relay and permits the current to flow through the glow plug based on the ECM’s calculated time. The glow plug is then heated and enhances fuel combustion with a cold engine.
This DTC will be set if there is open in glow plug itself or its circuit.

HINT:
After the engine is started, the ECM performs an ”after–glow” for a certain period of time. In proportion to the actual engine coolant temperature, the time period varies. The after–grow reduces diesel engine knocking, white smoke and engine noises with a cold engine.

After Glow System:

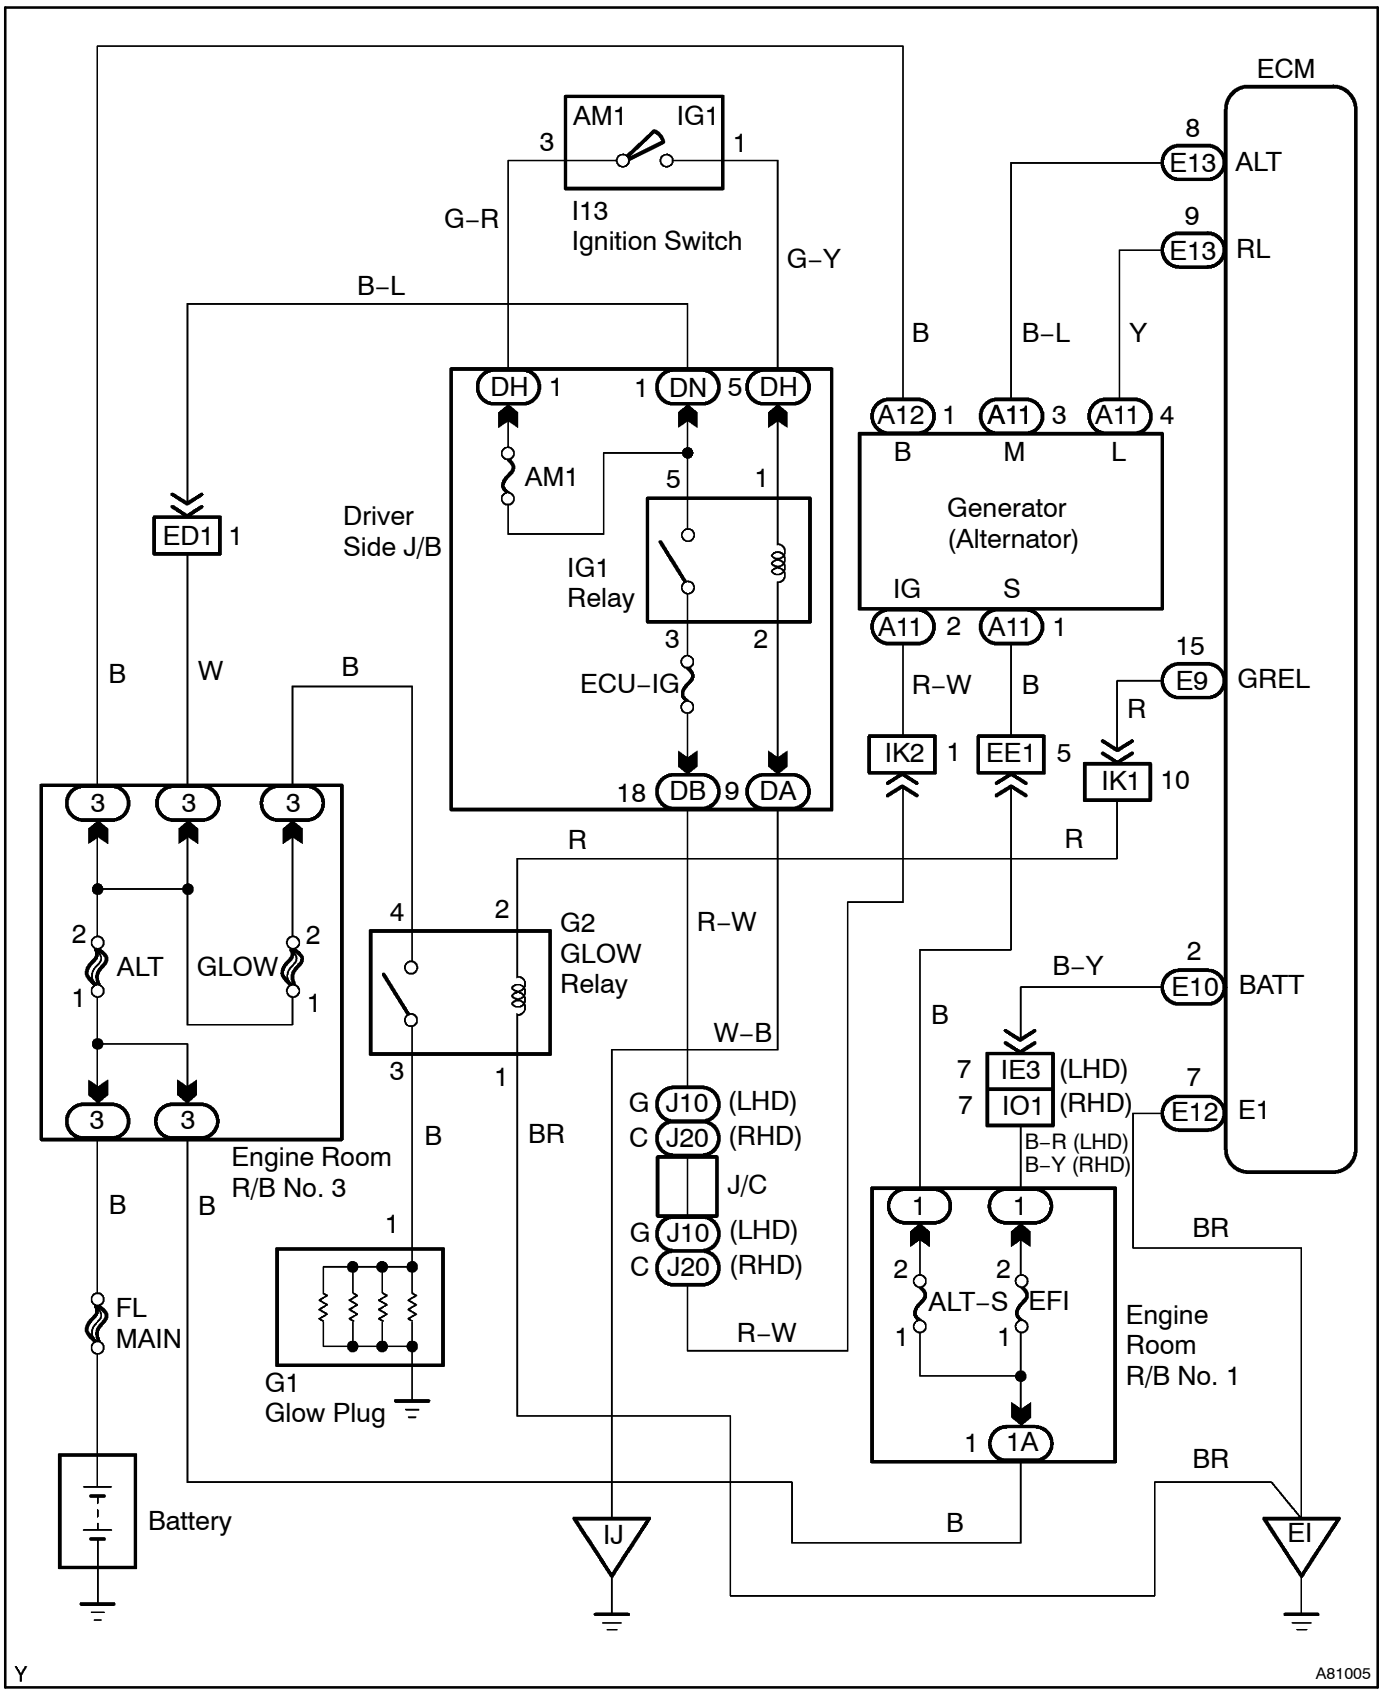
DTC No.	DTC Detection Condition	Trouble Area
P0380	When the glow plug is turned from ON to OFF, or vice versa, conditions (a) and (b) are satisfied: (2 trip detection logic) (a) Battery voltage does not change (b) Duty signal from terminal M of the generator (alternator) does not change	• Open or short in glow plug circuit • Glow fuse • Glow plug relay • Glow plug • ECM

MONITOR DESCRIPTION

When starting a cold engine, the ECM supplies current to the glow plug for a certain period of time. As supplying the current to the glow plug is terminated, the large current is suddenly cut off, therefore the battery voltage then varies and also the output (duty ratio) from terminal M of the generator (alternator) varies. If these variations are not occurred when the glow plug is turned from ON to OFF, or vice versa, the ECM judges the current has not been supplied to the glow plug, and interprets this as open malfunction of the glow plug or glow plug circuit.

MONITOR STRATEGY

Required Sensors	Glow plug circuit
Frequency of operation	Twice per driving cycle
Duration	3 minutes
CHK ENG Operation	2 driving cycles



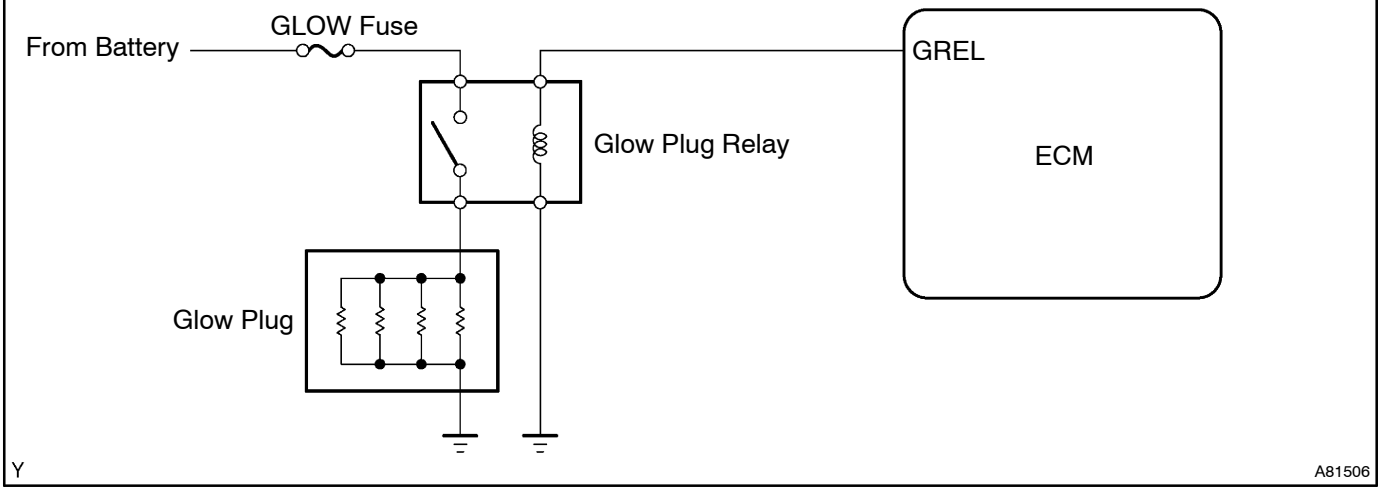
TYPICAL ENABLING CONDITIONS

Item	Specification	
	Minimum	Maximum
Battery voltage	11 V	–
Engine speed	700 rpm	2,000 rpm
Engine coolant temperature	–	40°C (104°F)
Engine speed is stable	–	
Time after engine start	8 seconds	–
Any switches that vary electrical load have not been being operated	–	
The monitor will not run if the generator (alternator) circuit is malfunctioning		

TYPICAL MALFUNCTION THRESHOLDS

Threshold
When the battery voltage, or output (duty ratio) from terminal M of the generator (alternator) does not change, despite the ECM turning the glow plug from ON to OFF, or vice versa

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- After completing repairs, confirm that P0380 is not present again.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

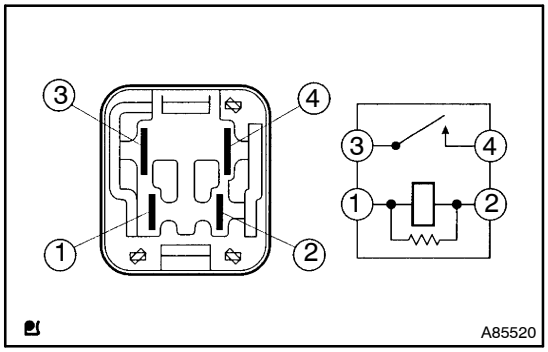
Glow System Wiring Diagram:

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P0380)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P0380	A
P0380 and P0622	B



HINT:

If any other codes besides P0380 and P0622 are output, perform troubleshooting for those DTCs first.

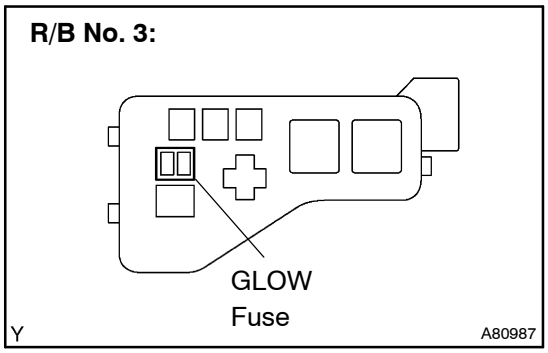
B → **GO TO RELEVANT DTC CHART** (See page 05–299)

A

2 INSPECT GLOW PLUG RELAY ASSY

(a) Remove the glow plug relay.
(b) Check for continuity in the glow plug relay.
(1) Check that there is continuity between the terminals.

Standard:



Tester Connection	Specified Condition
3 – 4	No continuity
	Continuity (Apply battery voltage to terminals 1 and 2)
1 – 2	Continuity

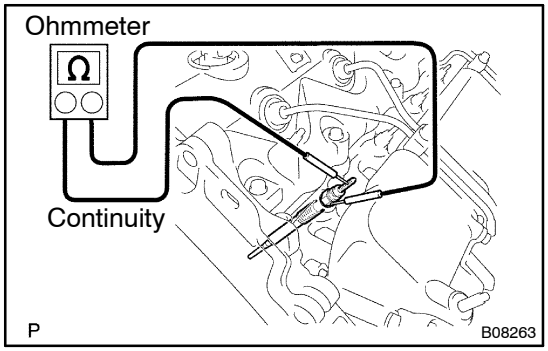
(c) Reinstall the glow plug relay.

NG → **REPLACE GLOW PLUG RELAY ASSY**

OK

3 INSPECT FUSE(GLOW FUSE)

(a) Remove the GLOW fuse from the R/B No. 3.
(b) Check for continuity in the GLOW fuse.



Standard: Continuity

(c) Reinstall the GLOW fuse.

NG → **CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED TO FUSE**

OK

4 INSPECT GLOW PLUG ASSY

(a) Disconnect the glow plug wire.
(b) Measure the resistance in the glow plug.

Standard:

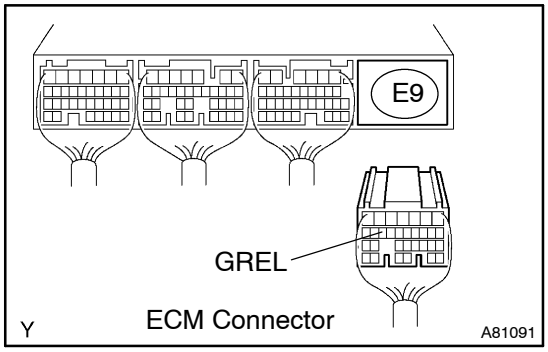
Tester Connection	Specified Condition
Glow plug terminal – Body ground	Approximately 1.1 Ω at 20°C (68°F)

NOTICE:

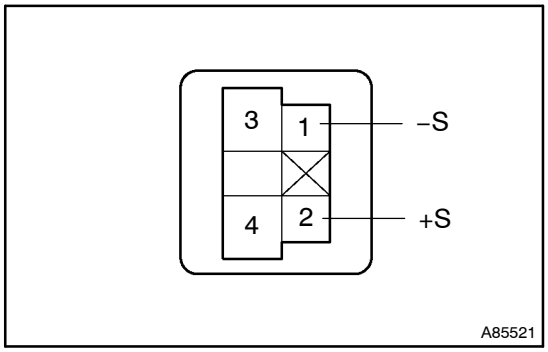
- **Exercise extreme care not to damage the glow plug pipes. Damaging them could cause an open circuit, or shorten the life of the glow plugs.**
- **Keep the glow plug free of oil and fuel while cleaning.**
- **Wipe any oil off the terminal and Bakelite washer with a clean–dry cloth during inspection.**
- **Do not apply more than 11 V to the glow plug as it could cause an open circuit.**

(c) Reconnect the glow plug wire.

NG → REPLACE GLOW PLUG ASSY (See page 19–33 of Pub. No. RM1018E AVENSIS REPAIR MANUAL)



OK



5 INSPECT GLOW PLUG ASSY(INSTALLATION)

NG → TIGHTEN GLOW PLUG

OK

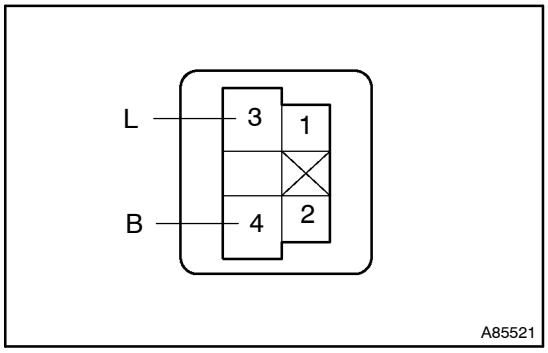
6 CHECK HARNESS AND CONNECTOR(GLOW PLUG RELAY – ECM, AND GLOW PLUG RELAY – BODY GROUND)

(a) Disconnect the E9 ECM connector.
(b) Remove the glow plug relay.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
+S (Glow plug relay terminal 2) – GREL (E9–15)	Below 1 Ω
–S (Glow plug relay terminal 1) – Body ground	

Standard (Check for short):



Tester Connection	Specified Condition
GREL (E9–15) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reinstall the glow plug relay.

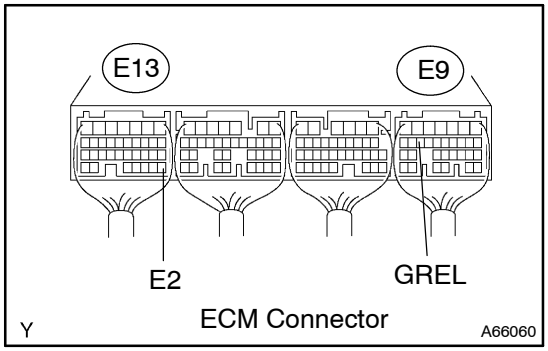
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7 CHECK HARNESS AND CONNECTOR(GLOW PLUG RELAY – GLOW PLUG, AND GLOW PLUG RELAY – BATTERY)

(a) Remove the glow plug relay.
(b) Disconnect the glow plug wire.
(c) Check the resistance between the wire harness.

Standard (Check for open):



Tester Connection	Specified Condition
L (Glow plug relay terminal 3) – Glow plug wire	Below 1 Ω
B (Glow plug relay terminal 4) – Positive terminal of the battery	

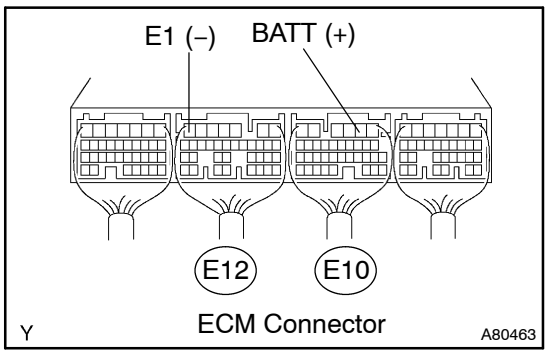
(d) Reinstall the glow plug relay.
(e) Reconnect the glow plug wire.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8 INSPECT ECM(GREL VOLTAGE)

(a) Turn the ignition switch to START.
(b) Measure the voltage between the specified terminals of the E9 and E13 ECM connectors.



Standard:

Tester Connection	Condition	Specified Condition
GREL (E9–15) – E2 (E13–28)	Engine coolant temperature is 40°C (104°F) or less	9 to 14 V

NG → REPLACE ECM (See page 10–29)

OK

9 INSPECT ECM(BATT VOLTAGE)

(a) Measure the voltage between the specified terminals of the E10 and E12 ECM connectors.

Standard:

Tester Connection	Specified Condition
BATT (E10–2) – E1 (E12–7)	9 to 14 V

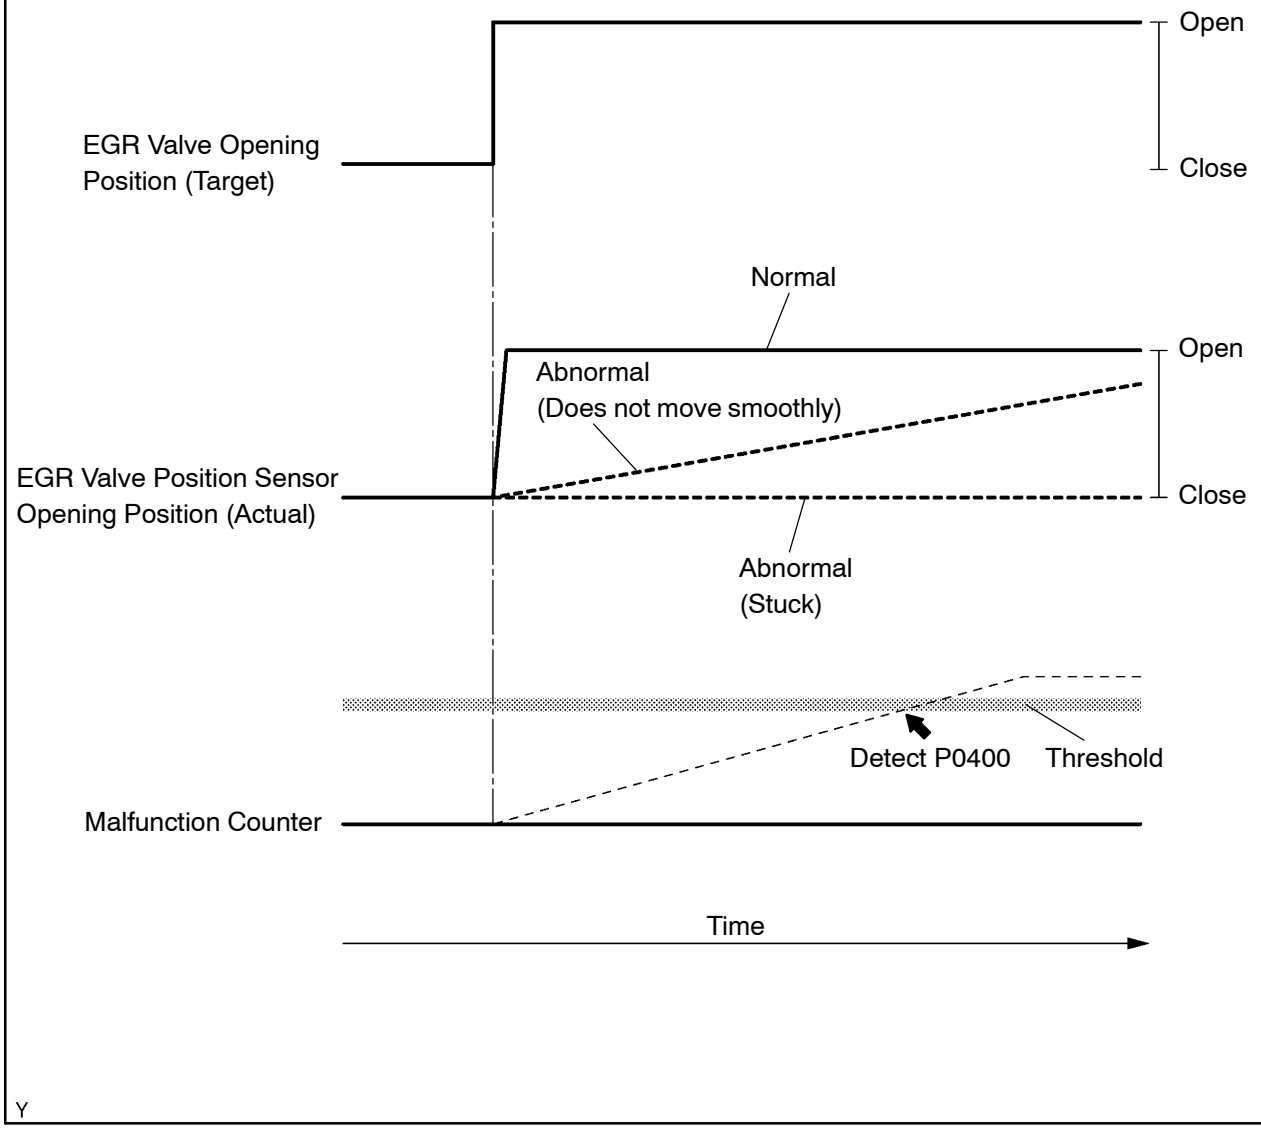
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY – ECM)

OK

CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

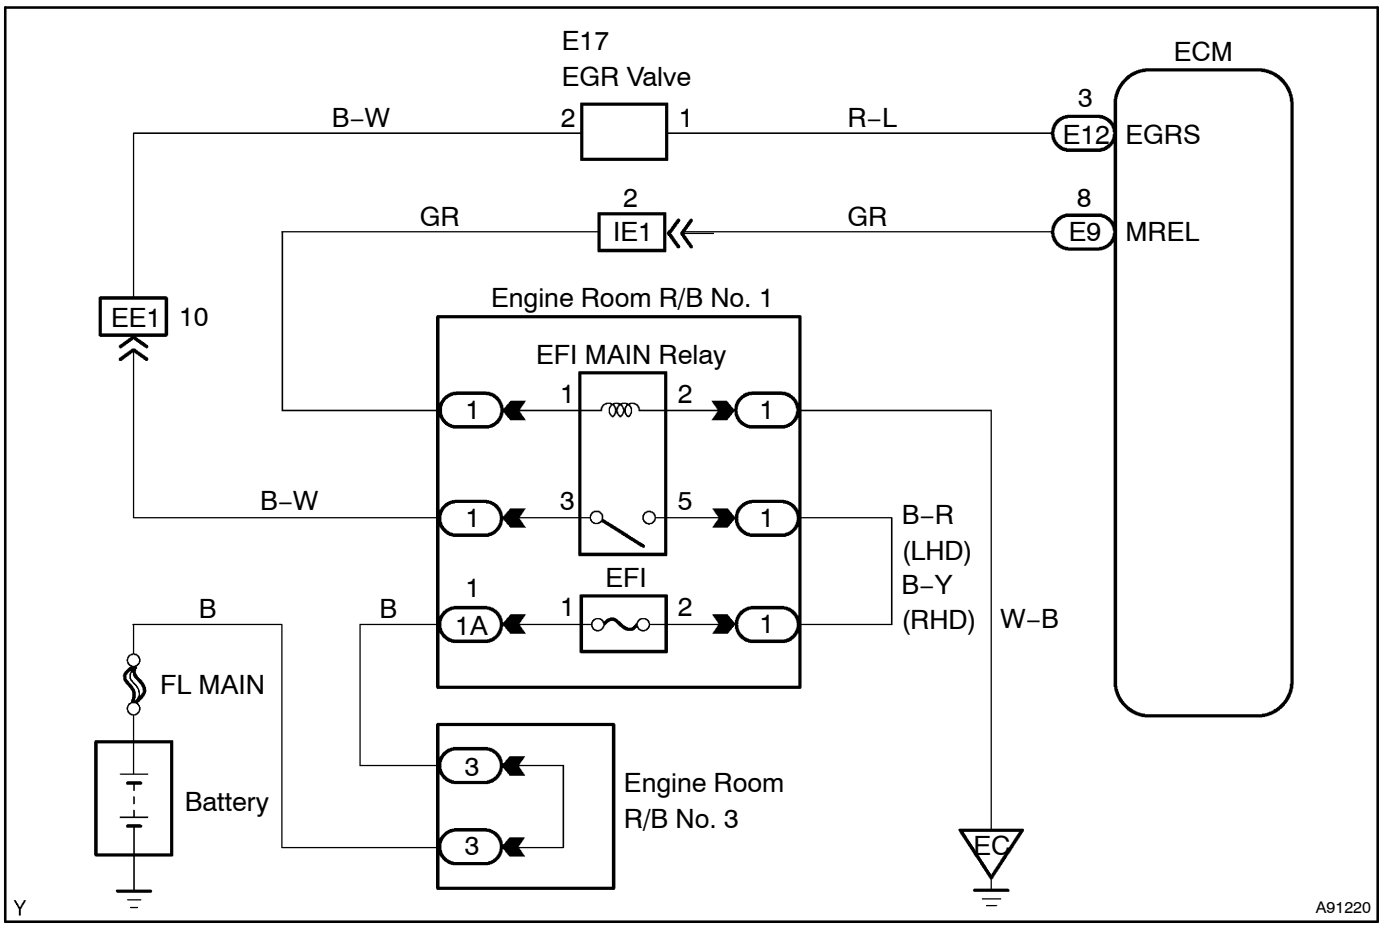
DTC	P0400	EXHAUST GAS RECIRCULATION FLOW

CIRCUIT DESCRIPTION



The EGR system recirculates exhaust gases, and which is controlled to the proper volume to be suited every driving condition. The recirculated gas mingles with the intake air, therefore the EGR system can slow down engine combustion and let the combustion temperature down. This helps reduce a NOx emission.
In order to increase a circulatory efficiency, the ECM adjusts the lift amount of the EGR valve and intake shutter valve (throttle valve).

DTC No.	DTC Detection Condition	Trouble Area
P0400	Target and actual positions of the EGR valve is different (1 trip detection logic)	• EGR valve stuck • EGR valve does not move smoothly • Open or short in EGR circuit • Open or short in EGR valve position sensor circuit • EGR valve position sensor • ECM



MONITOR DESCRIPTION

When the target and actual positions of the EGR valve is different, the ECM interprets this as malfunction of the EGR valve and illuminates the CHK ENG.

Malfunction Detection:

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the hand−held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air−fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- After engine warm−up, DTC P0400 malfunction is set 1 second or more passed after quickly accelerating the engine from idling.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO P0400)

(a) Connect the hand−held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand−held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed
P0400	A
P0400 and P0405 and/or P0406	B

HINT:
If any other codes besides P0400 are output, perform troubleshooting for those DTCs first.

B → GO TO RELEVANT DTC CHART (See page 05–299)

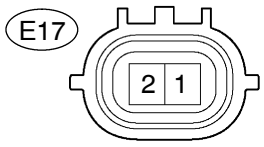
A

2 READ VALUE OF HAND–HELD TESTER(EGR VALVE POS)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL EGR VALVE POS” and read its value displayed on the hand–held tester.

Result:

Condition	Result	Proceed to
After engine warm–up, quickly accelerate the engine from idling to 3,000 rpm by using accelerator pedal	Constant or changes slowly	A
	Smooth changes from approximately 3.0 V to approximately 2.0 V	B



HINT:
EGR valve closed: EGR VALVE POS is 4.0 V
EGR valve open: EGR VALVE POS is 2.1 V

B → CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

A

3 INSPECT EGR VALVE ASSY(RESISTANCE)

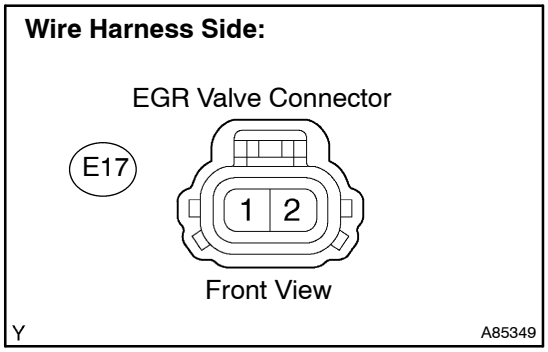
Component Side:

EGR Valve

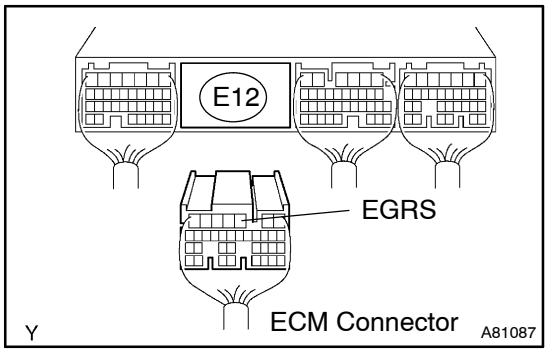
Y A93008

(a) Disconnect the E17 EGR valve connector.
(b) Measure the resistance between the terminals of the EGR valve.

Standard:



Tester Connection	Specified Condition
1 – 2	approximately 7.0 Ω at 20°C (68°F)



(c) Reconnect the EGR valve connector.

NG → REPLACE EGR VALVE ASSY (See page 14–108)

OK

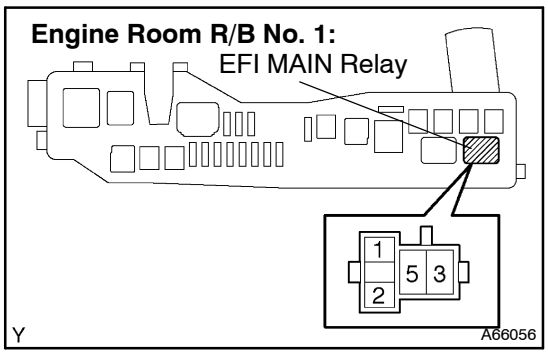
4 CHECK HARNESS AND CONNECTOR(EGR VALVE ASSY – ECM)

(a) Disconnect the E17 EGR valve connector.
(b) Disconnect the E12 ECM connector.
(c) Check the resistance between the wire harness side connectors.

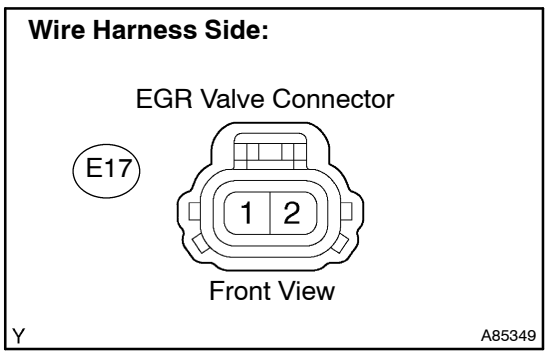
Standard (Check for open):

Tester Connection	Specified Condition
EGRS (E12–3) – EGR valve (E17–1)	Below 1 Ω
E2 (E13–28) – (E17–2)	

Standard (Check for short):



Tester Connection	Specified Condition
EGRS (E12–3) or EGR valve (E17–1) – Body ground	10 kΩ or higher



(d) Reconnect the EGR valve connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

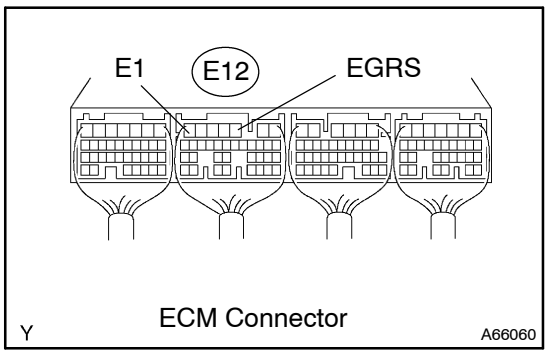
5 CHECK HARNESS AND CONNECTOR(EGR VALVE – EFI MAIN RELAY)

(a) Remove the EFI MAIN relay from the engine room R/B No. 1.
(b) Disconnect the E17 EGR valve connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
EFI MAIN relay (1) – EGR valve (E17–2)	Below 1 Ω

Standard (Check for short):

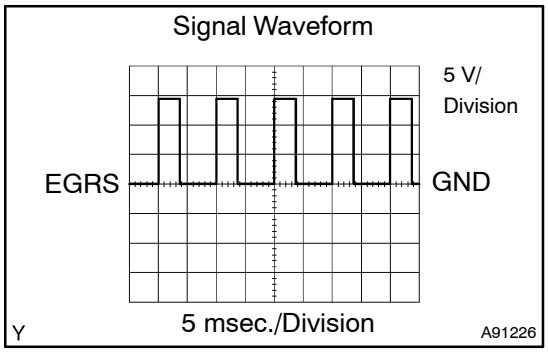


Tester Connection	Specified Condition
EFI MAIN relay (1) or EGR valve (E17–8) – Body ground	10 kΩ or higher

(d) Reinstall the EFI MAIN relay.
(e) Reconnect the EGR valve connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



6 INSPECT ECM(EGR VALVE ASSY VOLTAGE)

(a) Inspect using the oscilloscope.
(b) During idling, check the waveform between the specified terminals of the E12 ECM connector.

Standard:

Tester Connection	Specified Condition
EGRS (E12–3) – E1 (E12–7)	Correct waveform is as shown

NG → **REPLACE ECM (See page 10–29)**

OK

REPLACE EGR VALVE ASSY (See page 14–108)

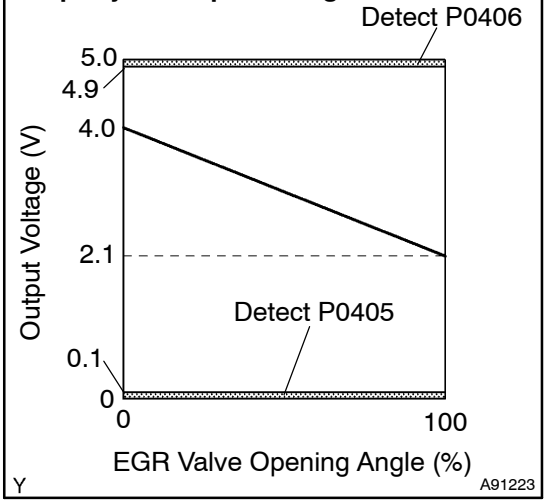
DTC	P0405	EXHAUST GAS RECIRCULATION SENSOR ”A” CIRCUIT LOW

DTC	P0406	EXHAUST GAS RECIRCULATION SENSOR ”A” CIRCUIT HIGH

CIRCUIT DESCRIPTION

The EGR valve position sensor is mounted on the EGR valve and used for detecting the lift amount of the valve. The lift amount detected by the sensor is provided to the ECM as feedback, the ECM then regulates the lift amount of the valve in accordance with engine running condition.

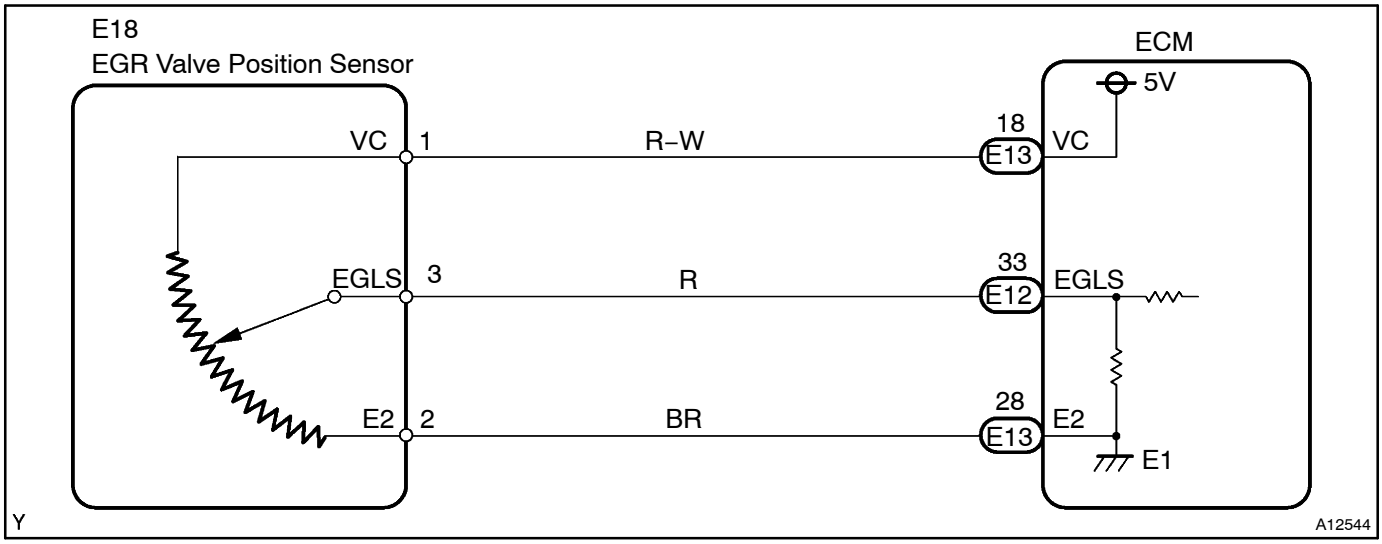
DTC No.	DTC Detection Condition	Trouble Area
P0405	EGR valve position sensor output voltage is less than 0.1 V for more than 0.5 second (1 trip detection logic)	• Open or short in EGR valve position sensor circuit • EGR valve position sensor • ECM
P0406	EGR valve position sensor output voltage is more than 4.9 V for more than 0.5 second (1 trip detection logic)	



HINT:

After confirming DTC P0405 and P0406, check the EGR valve opening angle condition in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EGR VALVE POS” using the hand–held tester.

Result		Condition
Ignition switch ON (Engine is stop)	Idling after warmed up	
Changes between 2.1 V and 4.0 V		Normal
Less than 0.1 V		P0405 (Low input voltage)
More than 4.9 V		P0406 (High input voltage)

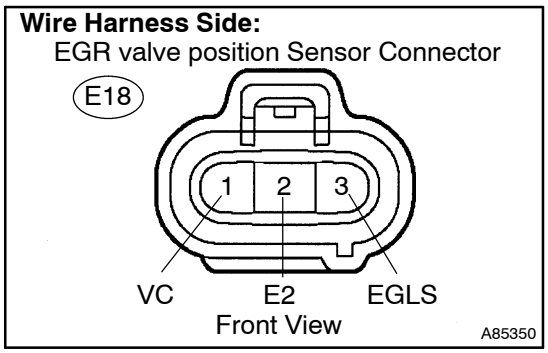


MONITOR DESCRIPTION

Property of Output Voltage:

When output voltage of the EGR valve position sensor deviates from the normal operating range (between 0.1 V and 4.9 V) for more than 0.5 second, the ECM interprets this as malfunction of the sensor circuit, and illuminates the CHK ENG.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK HARNESS AND CONNECTOR(EGR VALVE POSITION SENSOR VOLTAGE)

(a) Disconnect the E18 EGR valve position sensor connector.

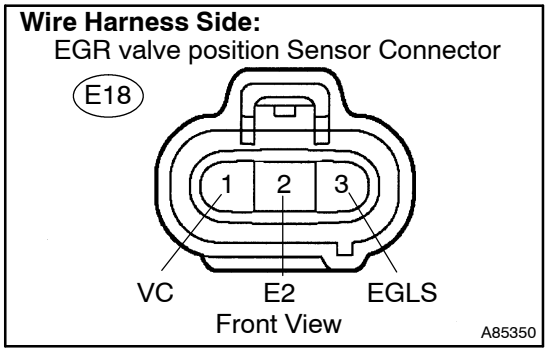
(b) Measure the voltage between the specified terminals of the E18 EGR valve position sensor connector.

Standard:

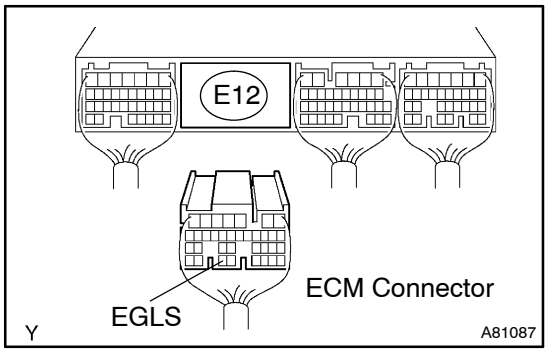
Tester Connection	Specified Condition
VC (E18–1) – E2 (E18–2)	4.5 to 5.5 V

(c) Reconnect the EGR valve position sensor connector.

NG → **Go to step 4**



OK



2	INSPECT EGR VALVE POSITION SENSOR(RESISTANCE) (See page 12–9)

NG → **REPLACE EGR VALVE POSITION SENSOR (See page 14–108)**

OK

3 CHECK HARNESS AND CONNECTOR(EGR VALVE POSITION SENSOR – ECM)

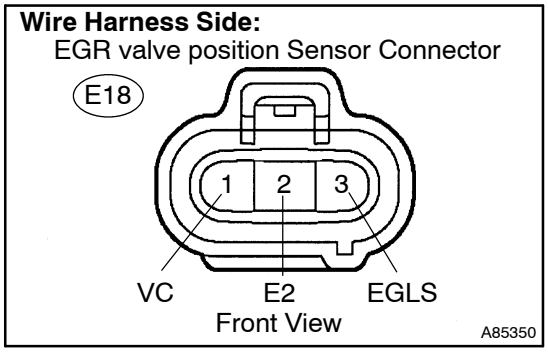
(a) Disconnect the E18 EGR valve position sensor connector.
(b) Disconnect the E12 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

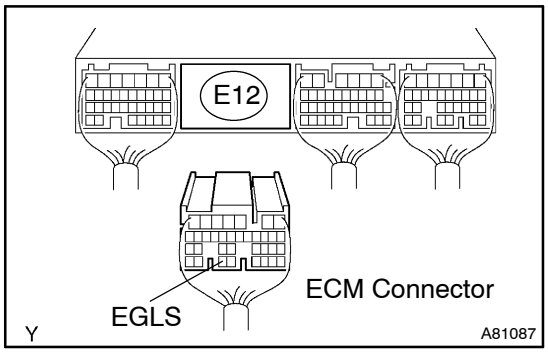
Tester Connection	Specified Condition
EGLS (E18–3) – EGLS (E12–33)	Below 1 Ω
E2 (E18–2) – E2 (E13–28)	

Standard (Check for short):

Tester Connection	Specified Condition
EGLS (E18–3) or EGLS (E12–33) – Body ground	10 kΩ or higher



(d) Reconnect the EGR valve position sensor connector.
(e) Reconnect the ECM connector.



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

4 CHECK HARNESS AND CONNECTOR(EGR VALVE POSITION SENSOR – ECM)

(a) Disconnect the E18 EGR valve position sensor connector.
(b) Disconnect the E12 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
EGLS (E18–3) – EGLS (E12–33)	Below 1 Ω
E2 (E18–2) – E2 (E13–28)	

Standard (Check for short):

Tester Connection	Specified Condition
EGLS (E18–3) or EGLS (E12–33) – Body ground	10 kΩ or higher

(d) Reconnect the EGR valve position sensor connector.
(e) Reconnect the ECM connector.

NG	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

DTC	P0488	EXHAUST GAS RECIRCULATION THROTTLE POSITION CONTROL RANGE/PERFORMANCE

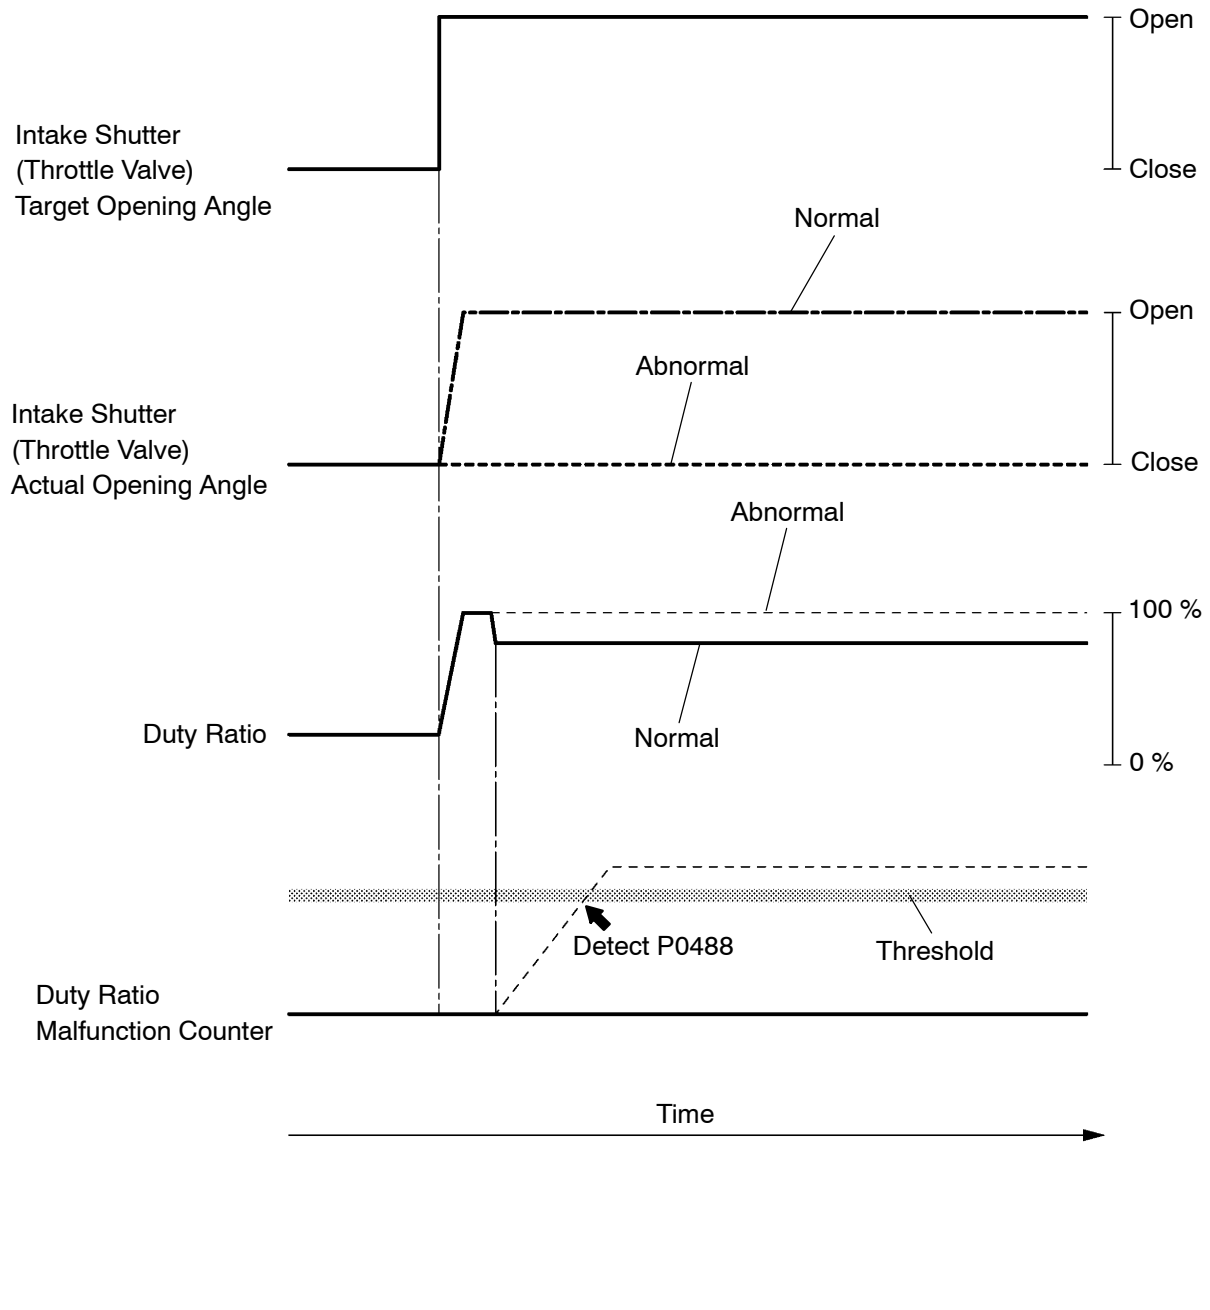
CIRCUIT DESCRIPTION

The ECM opens and closes the intake shutter valve (throttle valve) using the rotary solenoid type actuator. Upon opening and closing the valve, the exhaust gas recirculation volume is properly controlled. Also, engine vibration and noise will be reduced by closing the valve when the engine is stopped.

DTC No.	DTC Detection Condition	Trouble Area
P0488	Duty ratio during valve movement control stuck in its maximum or minimum value for more than 1 second (1 trip detection logic)	• Intake shutter stuck • Intake shutter does not move smoothly • Open or short in intake shutter circuit • Open or short in intake shutter position sensor circuit • Intake shutter position sensor (built in intake shutter valve) • ECM

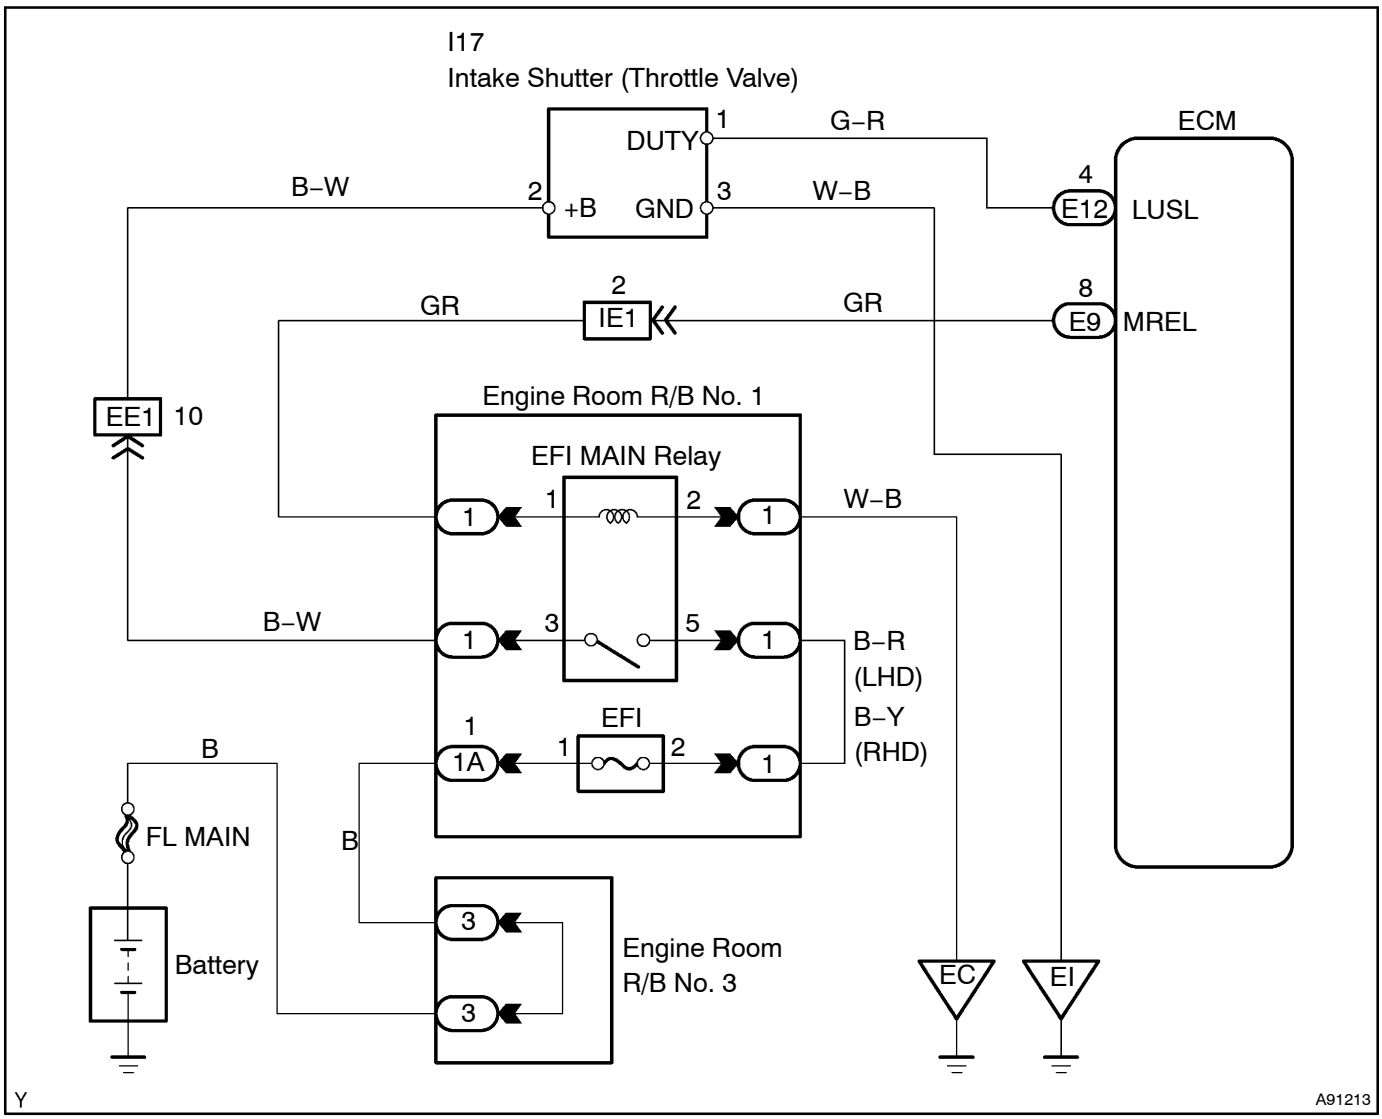
HINT:

After confirming DTC P0488, check the intake shutter position in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / THROTTLE POS” using the hand–held tester.



Reference:

Condition	Intake Shutter (Throttle Valve) Position
Quickly accelerate the engine from idling to 3,000 rpm	Opening angle varies smoothly



MONITOR DESCRIPTION

ECM opens and closes the intake shutter (throttle valve) by adjusting duration of current flowing to the rotary solenoid with the duty ratio. If the intake shutter does not move smoothly or stuck, the duty ratio during the valve movement control increases or decreases largely, the ECM judges the intake shutter abnormal and illuminates the CHK ENG.

Malfunction Detection:

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the hand−held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air−fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- After engine warm−up, DTC P0488 malfunction is set 1 second or more passed after quickly accelerating the engine from idling.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO P0488)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P0488	A
P0488 and P0120, P0122 and/or P0123	B

HINT:
If any other codes besides P0488 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART**
(See page 05–299)

A

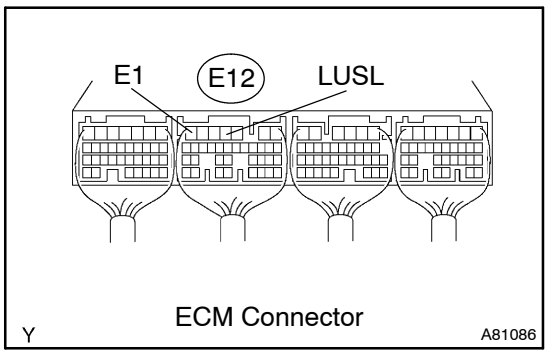
2	READ OUTPUT DTC(DTC P0488 OUTPUT)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and push the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES”.
(d) Clear the DTCs.
(e) Start the engine and perform quick engine RPM acceleration from idling to 3,000 rpm 3 times.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(g) Read DTCs.

Result:

Display (DTC output)	Proceed to
P0488	A
No output	B

HINT:
The normal operation of the intake shutter (throttle valve) is as follows.

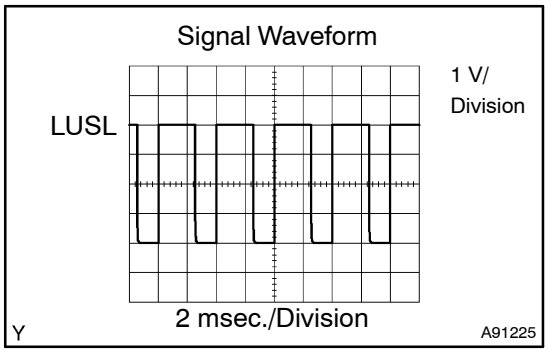


Reference:

Condition	Throttle Position
Quickly accelerate the engine from idling to 3,000 rpm	Opening angle varies smoothly

B → **CHECK FOR INTERMITTENT PROBLEMS**
(See page 05–270)

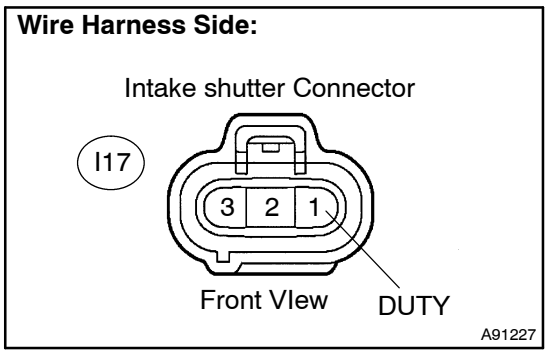
A



3 INSPECT ECM(LUSL VOLTAGE)

(a) Inspect using the oscilloscope.
(b) During rev–up, check the waveform between the specified terminals of the E12 ECM connector.

Standard:



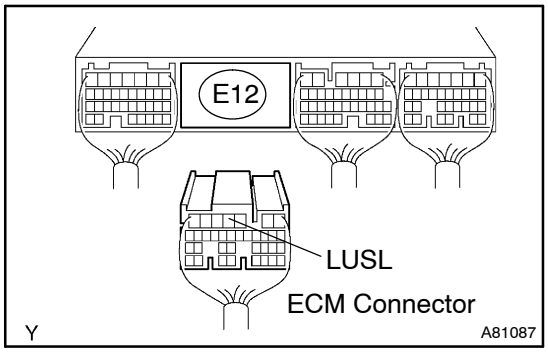
Tester Connection	Specified Condition
LUSL (E12–4) – E1 (E19–7)	Correct waveform is as shown

NG → **REPLACE ECM (See page 10–29)**

OK

4 CHECK HARNESS AND CONNECTOR(INTAKE SHUTTER (THROTTLE VALVE) – ECM)

(a) Disconnect the I17 intake shutter connector.
(b) Disconnect the E12 ECM connector.
(c) Check the resistance between the wire harness side connectors.



Standard (Check for open):

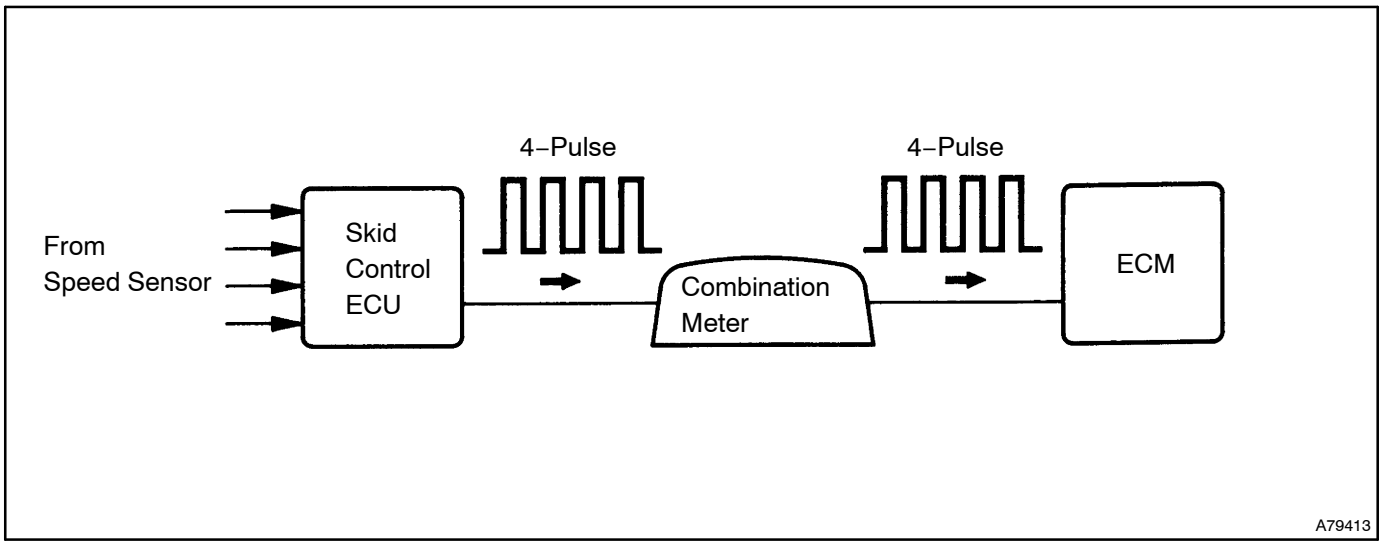
Tester Connection	Specified Condition
LUSL (E12–4) – DUTY (I17–1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
LUSL (E12–4) or DUTY (I17–1) – Body ground	10 kΩ or higher

(d) Reconnect the intake shutter connector.
(e) Reconnect the ECM connector.

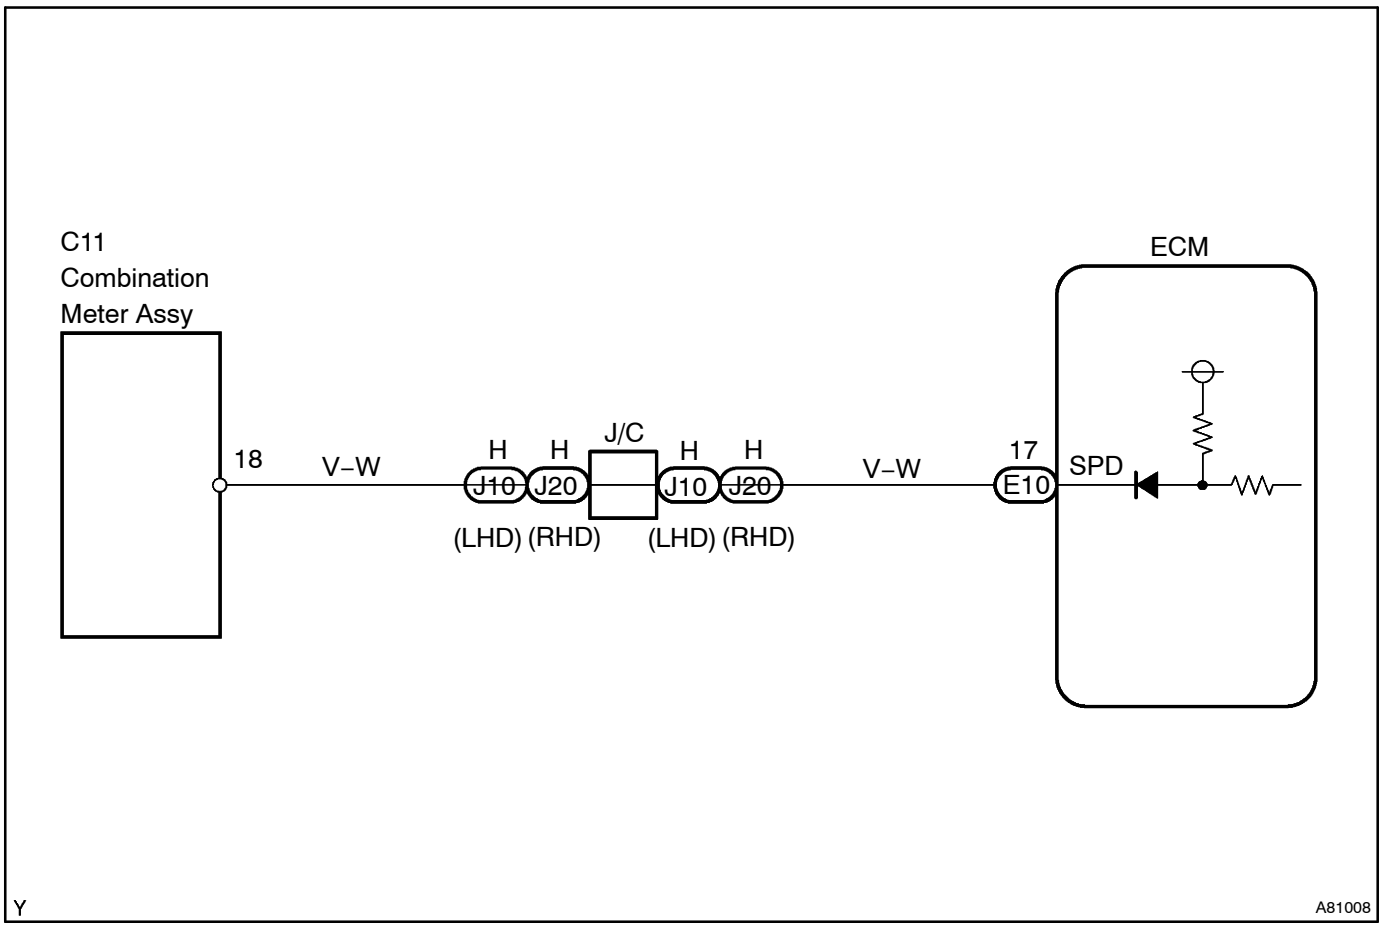
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

REPLACE INTAKE SHUTTER ASSY (THROTTLE VALVE) (See page 10–27)

DTC	P0500	VEHICLE SPEED SENSOR ”A”



CIRCUIT DESCRIPTION

The speed sensor for skid control ECU detects the wheel speed and sends the appropriate signals to the skid control ECU.
The skid control ECU converts these signals into a 4–pulse signal and outputs it to the combination meter. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the ECM. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC No.	DTC Detection Condition	Trouble Area
P0500	Conditions (a), (b) and (c) continue for 7 seconds or more: (2 trip detection logic) (a) Engine coolant temperature is more than 70°C (158°F) (b) Engine speed is between 2,000 and 3,500 rpm (c) Speed signal is not entering to ECM	• Open or short in speed sensor circuit • Speed sensor • Combination meter • ECM • Skid control ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

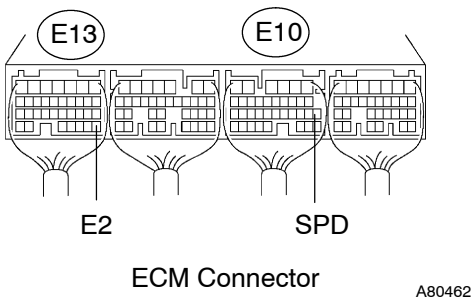
HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the operation of the speedometer in the combination meter is normal.
HINT:
The vehicle speed sensor is operating normally if the speedometer display is normal.

NG → CHECK SPEEDOMETER CIRCUIT (INCLUDE SPEED SENSOR)

OK

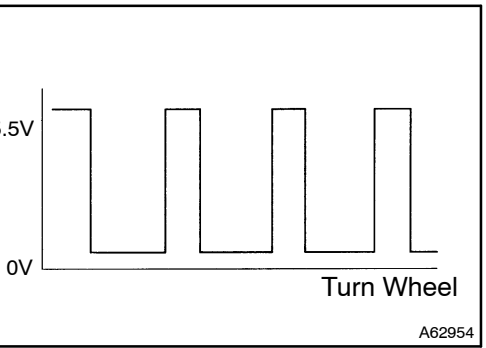


2 READ VALUE OF HAND–HELD TESTER(VEHICLE SPEED)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / VEHICLE SPD".
(e) Check the vehicle speed at the engine speed of 2,000 rpm or more when the vehicle is running.
Standard: Same value as the actual vehicle speed.

YES → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)**

NO



3 INSPECT ECM(SP1 VOLTAGE)

(a) Shift the transmission gear selector lever to the neutral position.
(b) Jack up the vehicle.
(c) Turn the ignition switch to ON.
(d) Check the voltage between the specified terminals of the E10 and E13 ECM connectors as the wheel is turned slowly.
Standard:

Tester Connection	Specified Condition
SPD (E10–17) – E2 (E13–28)	Generated intermittently

HINT:
The output voltage should fluctuate up and down similarly to the diagram on the left when the wheel is turned slowly.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

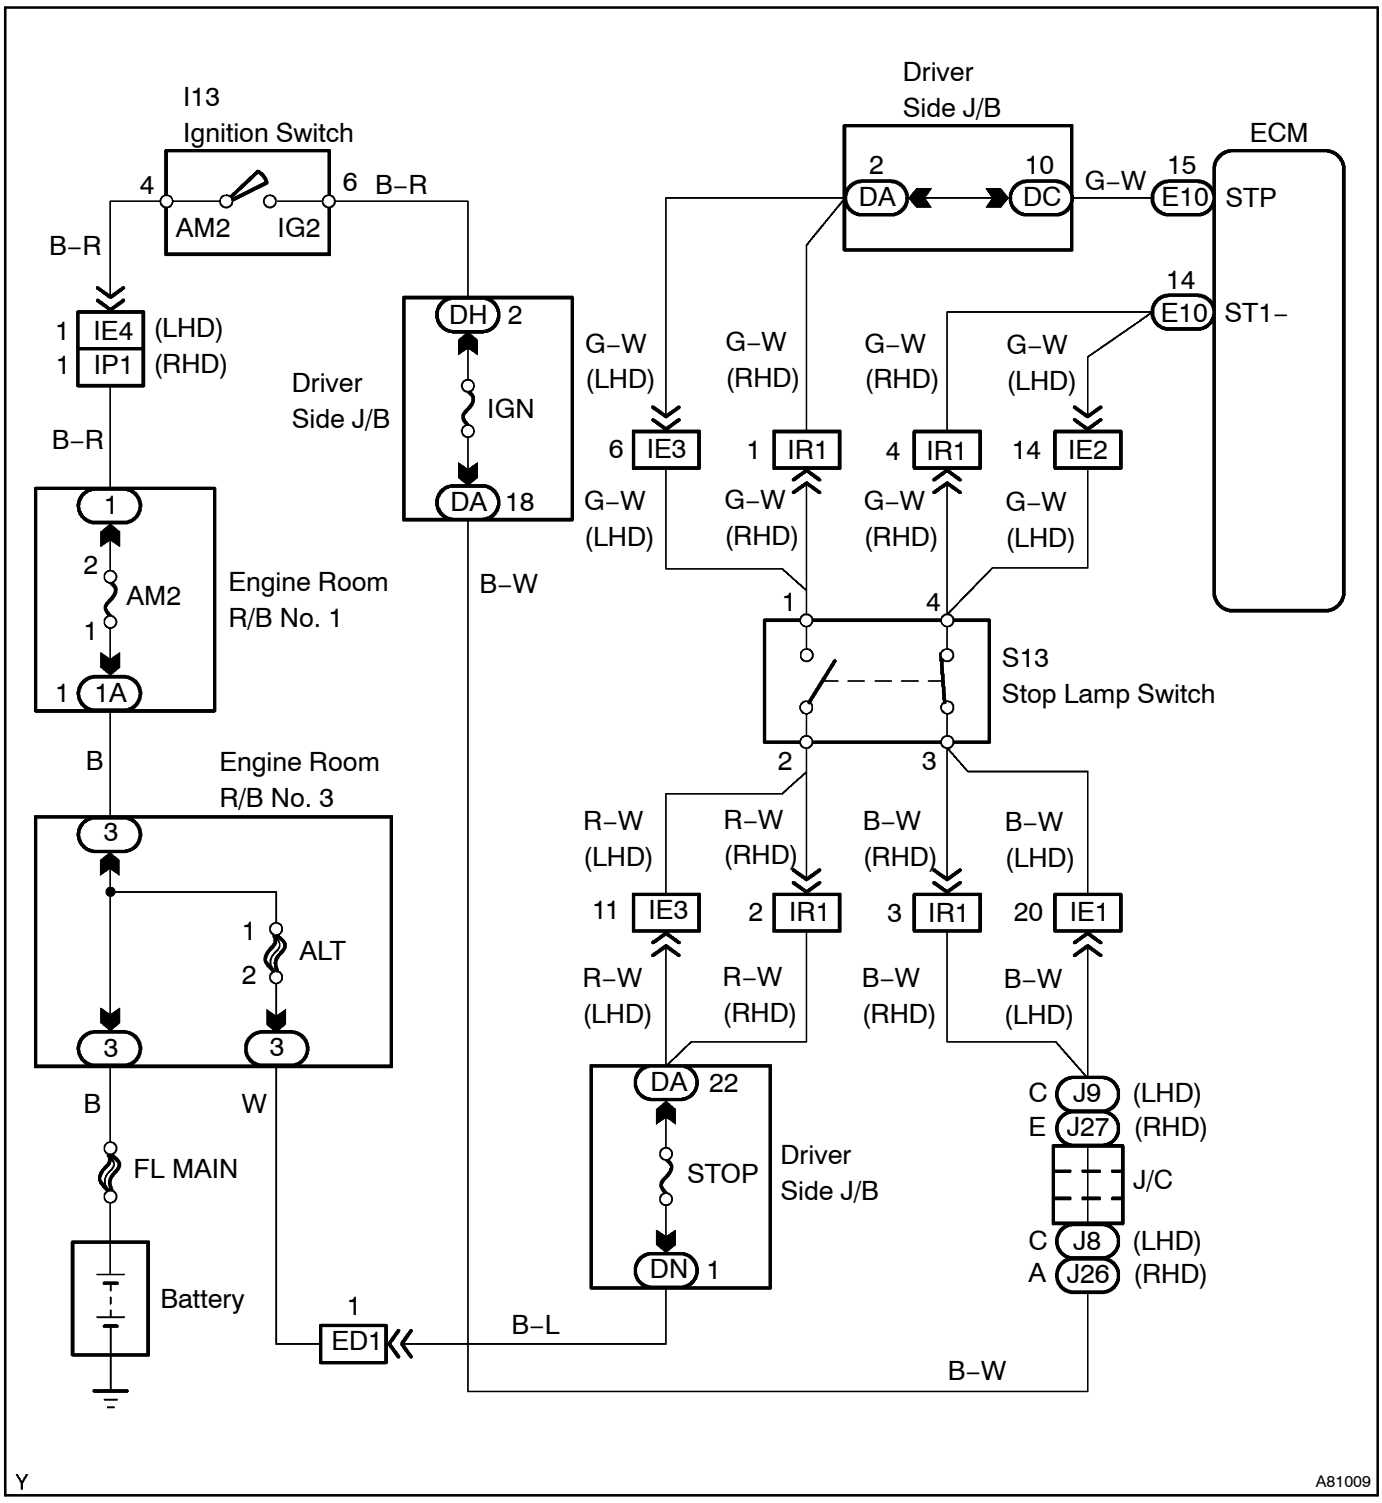
REPLACE ECM (See page 10–29)

DTC P0504 BRAKE SWITCH "A"/"B" CORRELATION

CIRCUIT DESCRIPTION

In this system, the signal of the stop lamp switch is used to judge whether the brake system is abnormal or not.

The stop lamp switch has a duplex system (signals STP and ST1–) to detect abnormality. When the signals of depressing and releasing the brake pedal are detected simultaneously, the ECM interprets this as malfunction of the stop lamp switch.



HINT:

Normal condition is as shown in the table below.

Signal	Brake Pedal Released	In Transition	Brake Pedal Depressed
STP	OFF	ON	ON
ST1–	ON	ON	OFF

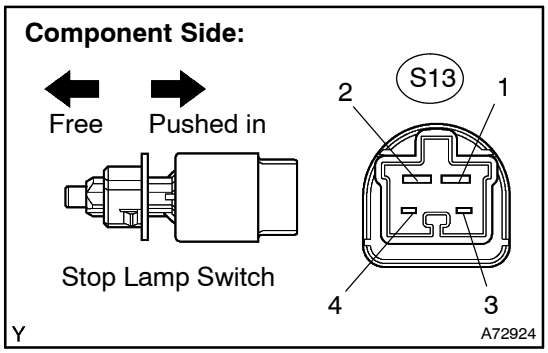
DTC No.	DTC Detection Condition	Trouble Area
P0504	Conditions (a) and (b) continue for 0.5 second or more: (1 trip detection logic) (a) Ignition switch is in ON (b) STP signal is OFF when the ST1– signal is OFF (when brake pedal is released)	• Short in stop lamp switch signal circuit • Stop lamp switch • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.



1 CHECK OPERATION OF STOP LAMP

(a) Check if the stop lamps go on and off normally when the brake pedal is depressed and released.

NG → **REPAIR OR REPLACE STOP LAMP SWITCH CIRCUIT**

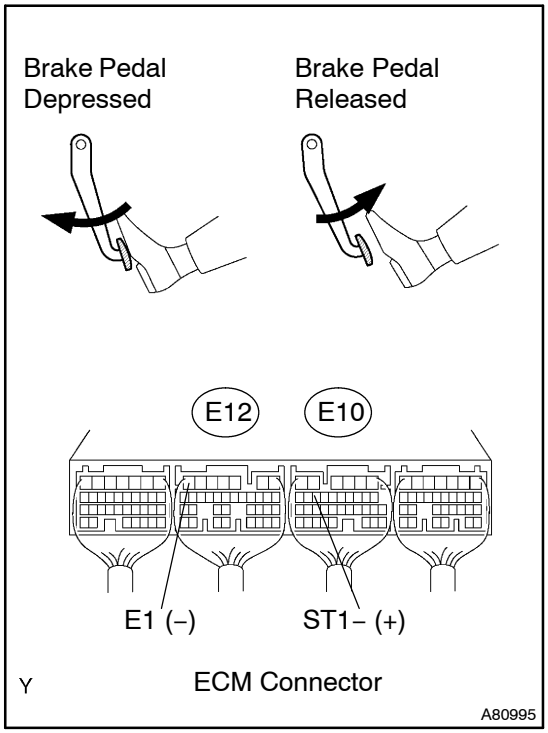
OK

2 INSPECT STOP LAMP SWITCH ASSY

(a) Remove the S13 stop lamp switch.

(b) Check for continuity between each pair of the terminals.

Standard:



Switch Position	Tester Connection	Specified Condition
Switch pin free	1 – 2	Continuity
	3 – 4	No continuity
Switch pin pushed in	1 – 2	No continuity
	3 – 4	Continuity

(c) Reinstall the stop lamp switch.

NG → **REPLACE STOP LAMP SWITCH ASSY**

OK

3 READ VALUE OF HAND–HELD TESTER(STP SIGNAL AND ST1– VOLTAGE)

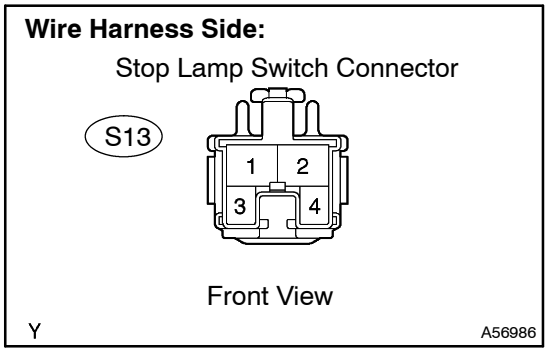
(a) Turn the ignition switch to ON.

(b) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STOP LIGHT SW" and read its value displayed on the hand–held tester.

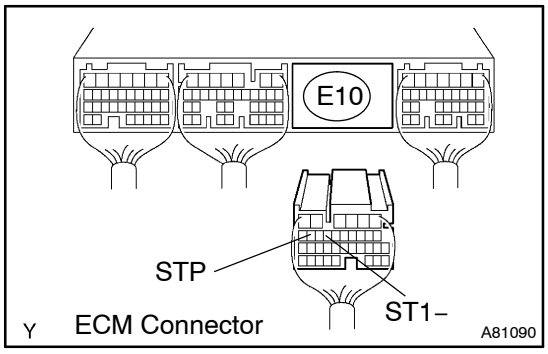
Standard:

Brake Pedal	Specified Condition
Depressed	STP signal ON
Released	STP signal OFF

(c) Measure the voltage between the specified terminals of the E10 and E12 ECM connectors.



Standard:



Tester Connection	Brake Pedal	Specified Condition
ST1– (E10–14) – E1 (E12–7)	Depressed	Below 1.5 V
	Released	7.5 to 14 V

OK → **CHECK FOR INTERMITTENT PROBLEMS** **(See page 05–270)**

NG

4 CHECK HARNESS AND CONNECTOR(STOP LAMP SWITCH – ECM)

(a) Disconnect the S13 stop lamp switch connector.
(b) Disconnect the E10 ECM connector.
(c) Measure the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Stop lamp switch (S13–1) – STP (E10–15)	Below 1 Ω
Stop lamp switch (S13–3) – ST1– (E10–14)	

Standard (Check for short):

Tester Connection	Specified Condition
Stop lamp switch (S13–1) or STP (E10–15) – Body ground	10 kΩ or higher
Stop lamp switch (S13–3) or ST1– (E10–14) – Body ground	

(d) Reconnect the ECM connector.
(e) Reconnect the stop lamp switch connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

DTC	P0544	EXHAUST GAS TEMPERATURE SENSOR CIRCUIT (BANK 1 SENSOR 1)

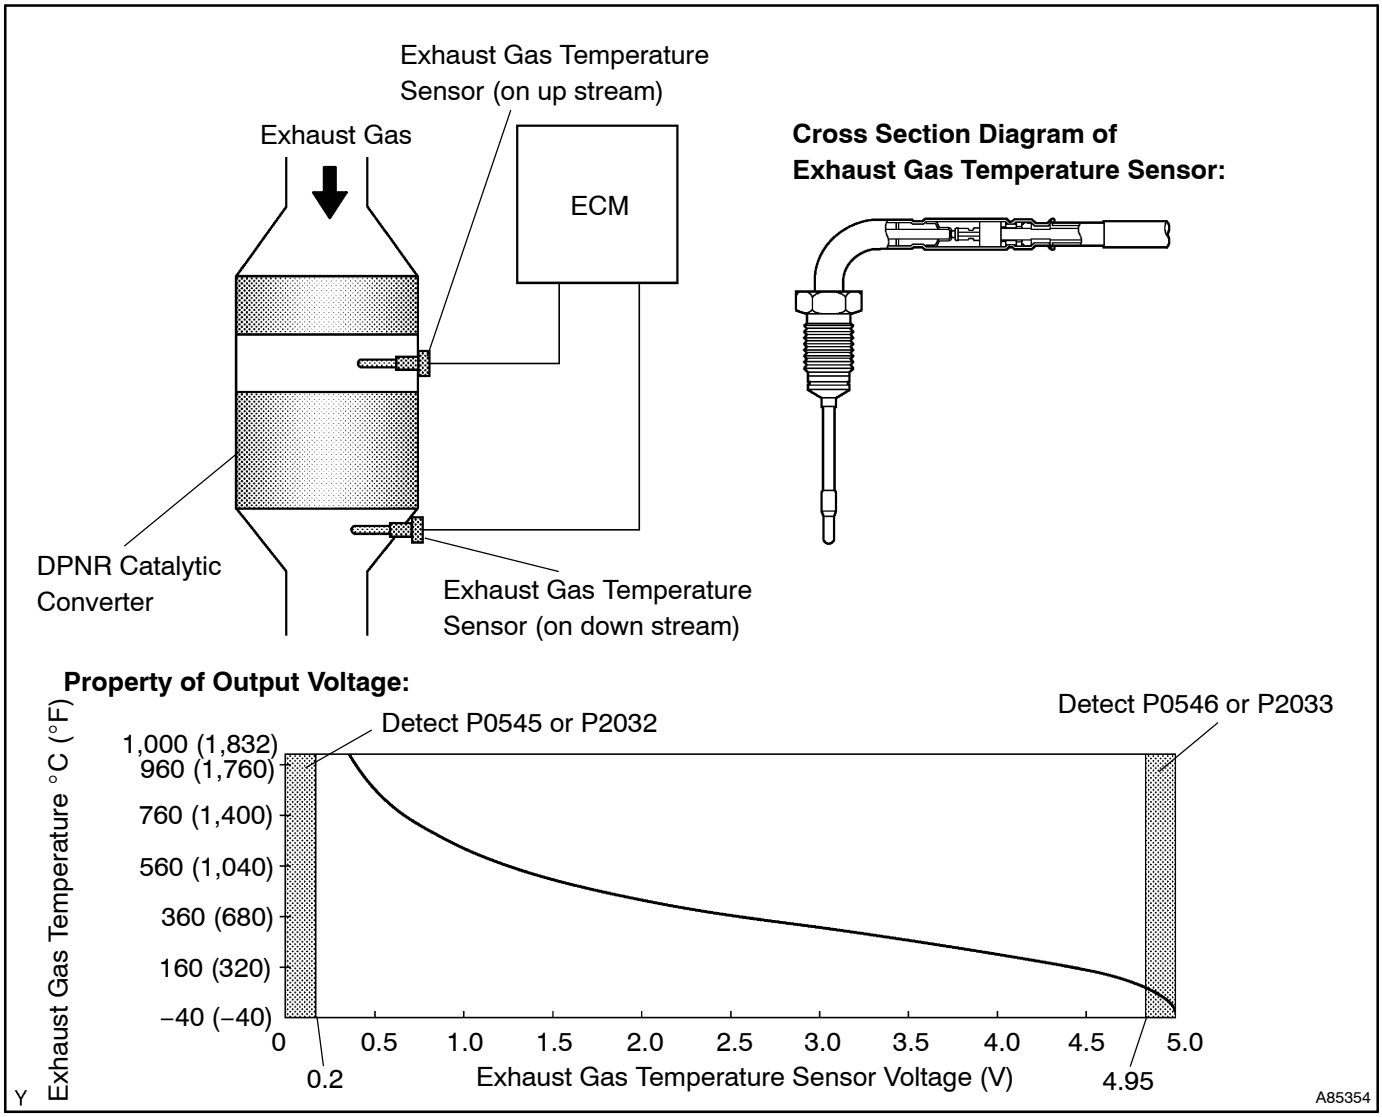
DTC	P0545	EXHAUST GAS TEMPERATURE SENSOR CIRCUIT LOW (BANK 1 SENSOR 1)

DTC	P0546	EXHAUST GAS TEMPERATURE SENSOR CIRCUIT HIGH (BANK 1 SENSOR 1)

DTC	P2031	EXHAUST GAS TEMPERATURE SENSOR CIRCUIT (BANK 1 SENSOR 2)

DTC	P2032	EXHAUST GAS TEMPERATURE SENSOR CIRCUIT LOW (BANK 1 SENSOR 2)

DTC	P2033	EXHAUST GAS TEMPERATURE SENSOR CIRCUIT HIGH (BANK 1 SENSOR 2)



HINT:

- For more information on the exhaust gas temperature sensor and TOYOTA D–CAT (*1), see page 05–255.
- If P0544, P0545, P0546, P2031, P2032, and/or P2033 is present, refer to the diagnostic trouble codes (DTCs) table for TOYOTA D–CAT on page 05–255.
- Sensor 1 represents a sensor located upstream on the DPNR (*2) catalytic converter.
- Sensor 2 represents a sensor located downstream on the DPNR catalytic converter.

*1: Diesel Clean Advanced Technology.

*2: Diesel Particulate–NOx Reduction system.

CIRCUIT DESCRIPTION

The exhaust gas temperature sensors are installed before and after the DPNR (*1) catalytic converter and senses the exhaust gas temperature.

A thermistor built in the sensor changes the resistance value according to the exhaust gas temperature. The lower the exhaust gas temperature is, the greater the thermistor resistance value becomes, and the higher the exhaust gas temperature is, the lower the thermistor resistance value becomes.

The exhaust gas temperature sensor is connected to the ECM. The 5 V power source voltage in the ECM is applied to the exhaust gas temperature sensor from terminal THCI (on up stream) and THCO (on down stream) via resistor R.

The resistor R and the exhaust gas temperature sensor are connected in series. When the resistance value of the exhaust gas temperature sensor changes in accordance with changes in the exhaust gas temperature, the potential at terminals THCI (on up stream) and THCO (on down stream) also changes. Based on this signal, when DPNR catalyst regeneration is needed, the ECM operates the exhaust fuel addition injector to obtain target temperature of the DPNR catalytic converter through the sensor 1. In addition, the ECM monitors an increasing rate in the temperature of the DPNR catalytic converter with the sensor 2.

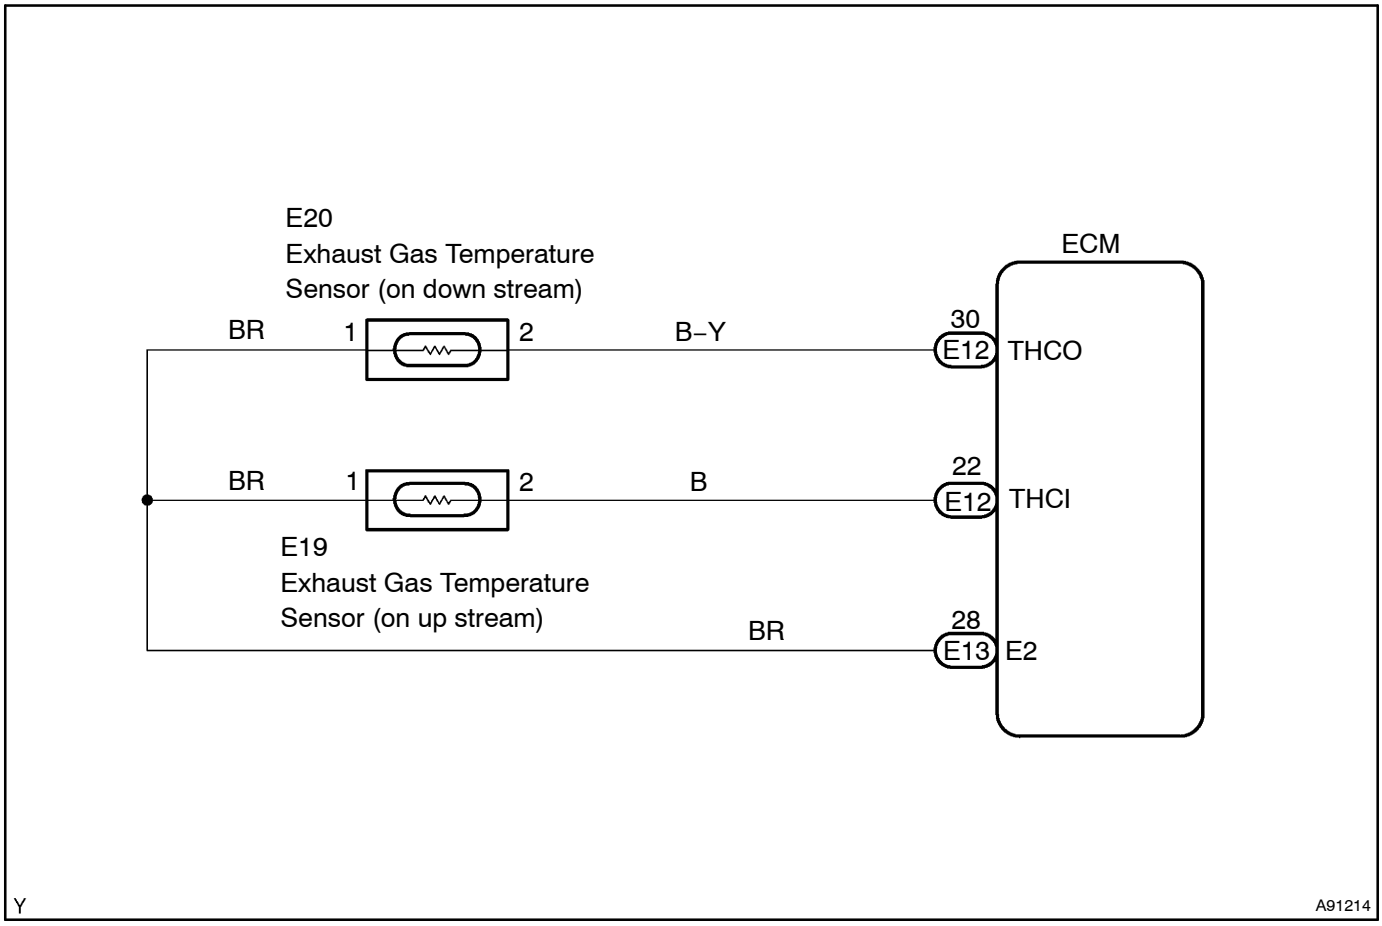
*1: Diesel Particulate–NOx Reduction system.

DTC No.	DTC Detection Condition	Trouble Area
P0544	Sensor 1 output is less than 0.2 V or more than 4.95 V for 3 seconds or more (1 trip detection logic)	• Open or short in exhaust gas temperature sensor (on up stream) circuit • Exhaust gas temperature sensor (on up stream) • ECM
P0545	Sensor 1 output is less than 0.2 V for 3 seconds or more (1 trip detection logic)	
P0546	Sensor 1 output is more than 4.95 V for 3 seconds or more (1 trip detection logic)	
P2031	Sensor 2 output is less than 0.2 V or more than 4.95 V for 3 seconds or more (1 trip detection logic)	• Open or short in exhaust gas temperature sensor (on down stream) circuit • Exhaust gas temperature sensor (on down stream) • ECM
P2032	Sensor 2 output is less than 0.2 V for 3 seconds or more (1 trip detection logic)	
P2033	Sensor 2 output is more than 4.95 V for 3 seconds or more (1 trip detection logic)	

HINT:

- DTC P1386 (Exhaust fuel addition injector malfunction) will be present if there is an open malfunction in the exhaust gas temperature sensor circuit.
- Sensor 1 represents a sensor located up stream on the DPNR (*1) catalytic converter.
- Sensor 2 represents a sensor located down stream on the DPNR catalytic converter.
- After confirming DTC P0544, P0545, P0546, P2031, P2032 and P2033, check the upstream and downstream exhaust gas temperature in the "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN)" and "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (OUT)" using the hand–held tester.

*1: Diesel Particulate–NOx Reduction system.



Reference:

Condition	Exhaust Gas Temperature	Exhaust Gas Temperature Sensor Condition
Idling after warm–up	Constant at 50 to 700°C (122 to 1,292°F)	Normal
	0°C (32°F)	Short circuit
	1,000°C (1,832°F)	Open circuit

MONITOR DESCRIPTION

In order to detect abnormality in the exhaust gas temperature sensor at any time, the ECM always monitors output voltage from the sensor. When the sensor output voltage after engine warm–up deviates from the normal operating range (between 0.2 V and 4.95 V) for more than 3 seconds, the ECM interprets this as malfunction of the sensor circuit, and illuminates the CHK ENG.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 READ VALUE OF HAND–HELD TESTER(EXHAUST GAS TEMPERATURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN)” and ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (OUT)” and read its value displayed on the hand–held tester.

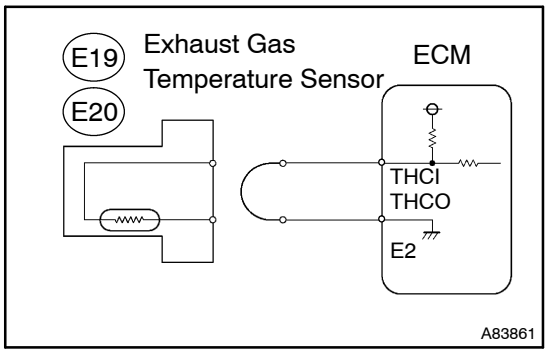
Standard:

Same as the actual exhaust gas temperature (50 to 700°C [122 to 1,292°F] during idling after warm–up), and varies after maintaing the engine speed of 3,000 rpm for 1 minute after accelerating the engine from idling to 3,000 rpm.

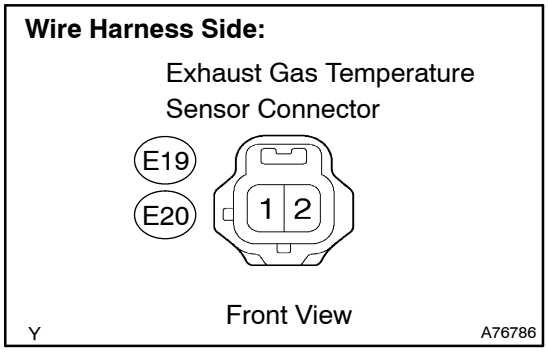
Result:

Temperature Displayed	Proceed to
1,000°C (1,832°F)	A
0°C (32°F) (After engine warm–up)	B
OK: same as the actual exhaust gas temperature (50 to 700°C [122 to 1,292°F] during idling after warm–up), and varies after maintaing the engine speed of 3,000 rpm for 1 minute after accelerating the engine from idling to 3,000 rpm	C

HINT:



- If there is an short circuit, the hand–held tester always indicates 0°C (32°F).
- If there is a open circuit, the hand–held tester always indicates 1,000°C (1,832°F).



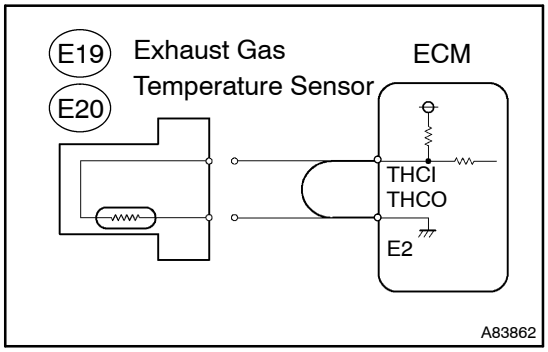
B → **Go to step 4**

C → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)**

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN WIRE HARNESS)

(a) Disconnect the E19 or E20 exhaust gas temperature sensor connector.
(b) Connect terminals 1 and 2 of the exhaust gas temperature sensor wire harness side connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN)” and ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (OUT)” and read its value displayed on the hand–held tester.

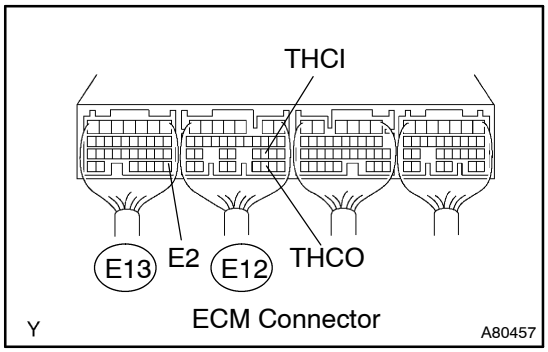


Standard: 0°C (32°F)

(f) Reconnect the exhaust gas temperature sensor connector.

OK	CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE EXHAUST GAS TEMPERATURE SENSOR (See page 14–108)

NG

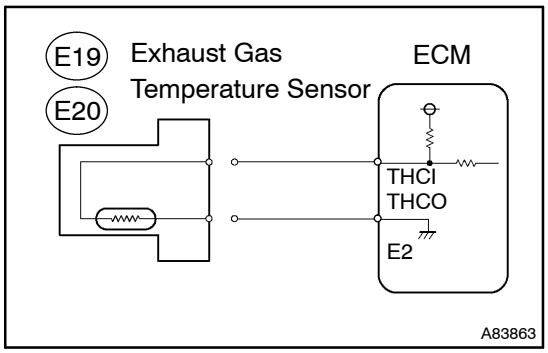


3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the E19 or E20 exhaust gas temperature sensor connector.
(b) Connect terminals THCI and E2 or THCO and E2 of the E12 and E13 ECM connectors.

HINT:
Before checking, do a visual and contact pressure check on the ECM connector.

(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN)” and ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (OUT)” and read its value displayed on the hand–held tester.
Standard: 0°C (32°F)
(f) Reconnect the exhaust gas temperature sensor connector.

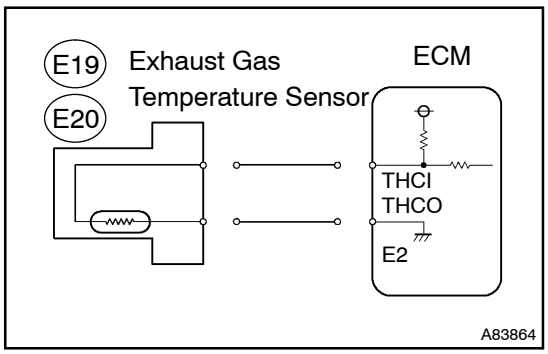


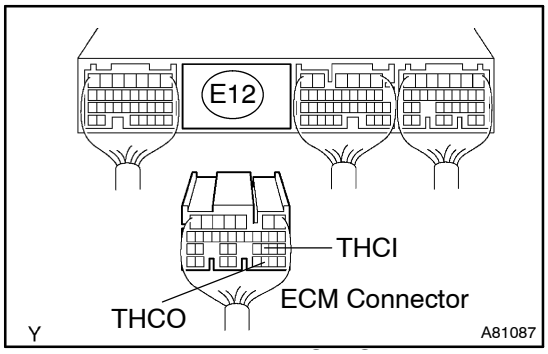
OK	REPAIR OR REPLACE HARNESS OR CONNECTOR

NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, REPLACE ECM (See page 10–29)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN WIRE HARNESS)





(a) Disconnect the E19 or E20 exhaust gas temperature sensor connector.
(b) Connect the hand–held tester to the DLC 3.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN)” and ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (OUT)” and read its value displayed on the hand–held tester.
Standard: 1,000°C (1,832°F)
(e) Reconnect the exhaust gas temperature sensor connector.

OK	REPLACE EXHAUST GAS TEMPERATURE SENSOR (See page 14–108)

NG

5	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

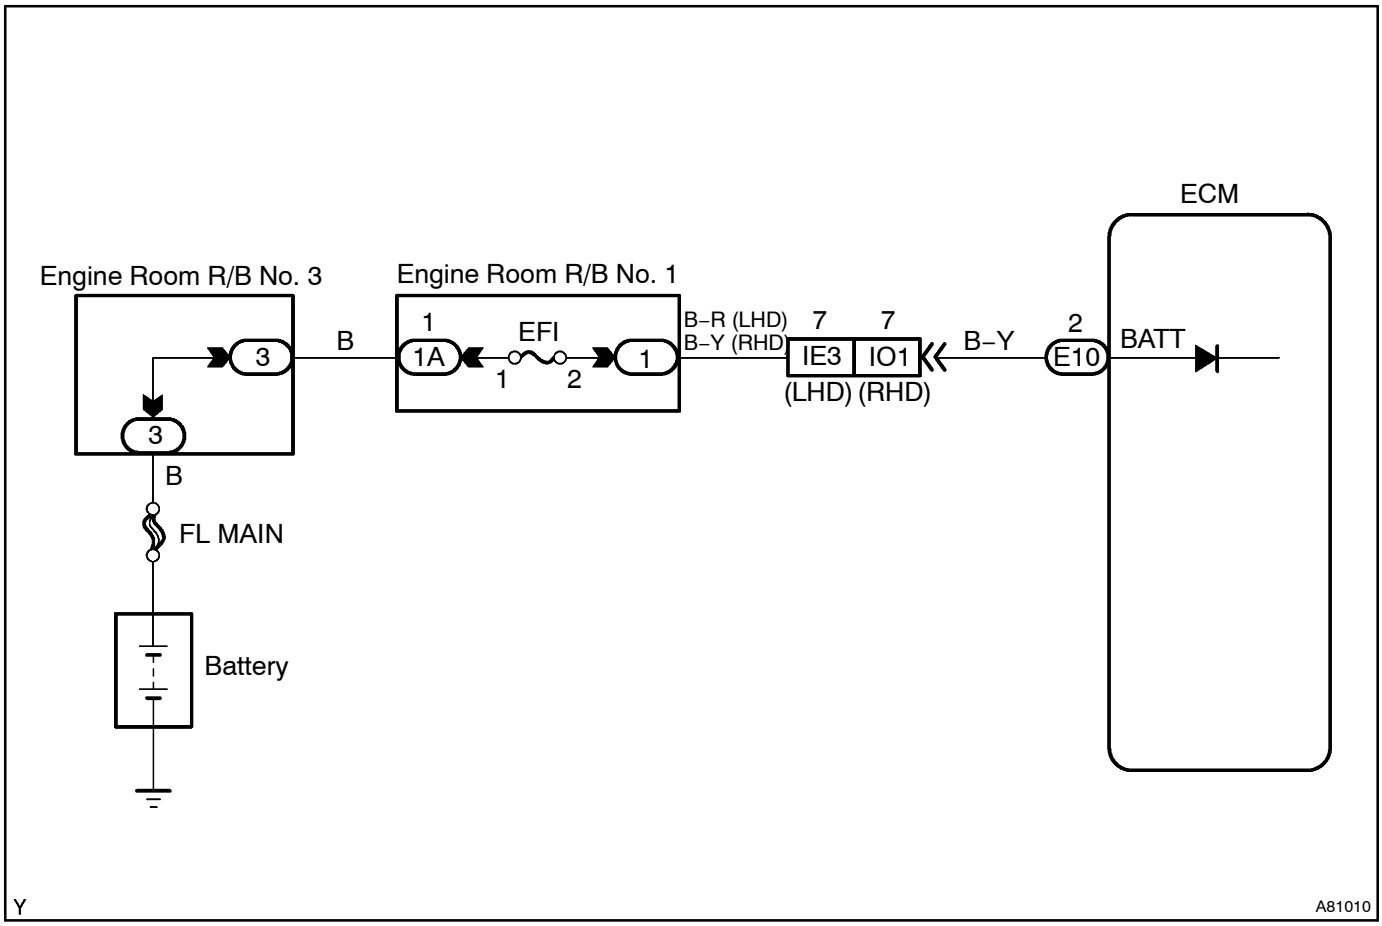
(a) Disconnect the E19 or E20 exhaust gas temperature sensor connector.
(b) Disconnect the E12 ECM connector.
(c) Connect the hand–held tester to the DLC 3.
(d) Turn the ignition switch to ON and turn the hand–held tester ON.
(e) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN)" and "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (OUT)" and read its value displayed on the hand–held tester.
Standard: 1,000°C (1,832°F)
(f) Reconnect the exhaust gas temperature sensor connector.
(g) Reconnect the ECM connector.

OK	REPAIR OR REPLACE HARNESS OR CONNECTOR

NG

REPLACE ECM (See page 10–29)

DTC	P0560	SYSTEM VOLTAGE

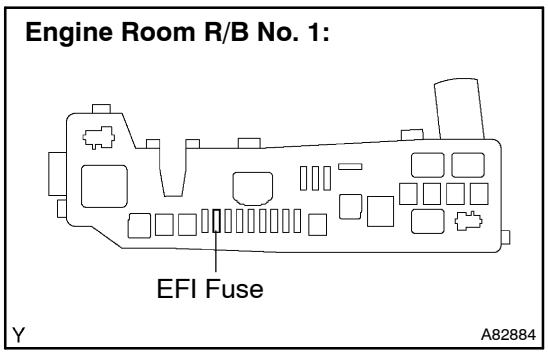


CIRCUIT DESCRIPTION

While the ignition switch is OFF, the battery voltage is supplied to terminal BATT of the ECM for storing DTCs and fuel injection feedback learning values.

DTC No.	DTC Detection Condition	Trouble Area
P0560	Condition (a) or (b) continues: (a) Significant decrease in battery voltage (b) Open in back–up power source circuit (1 trip detection logic)	• Open in back–up power source circuit • Low battery voltage • ECM

HINT:
If DTC P0560 appears, the ECM does not store other DTCs.

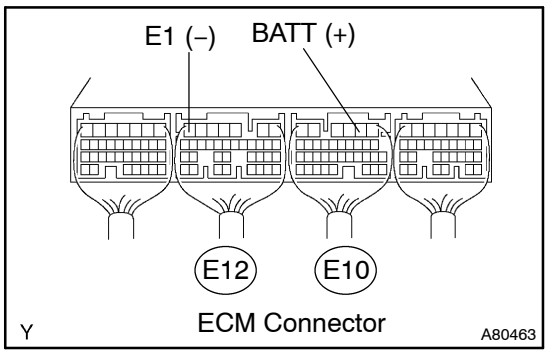


WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK FUSE(EFI FUSE)

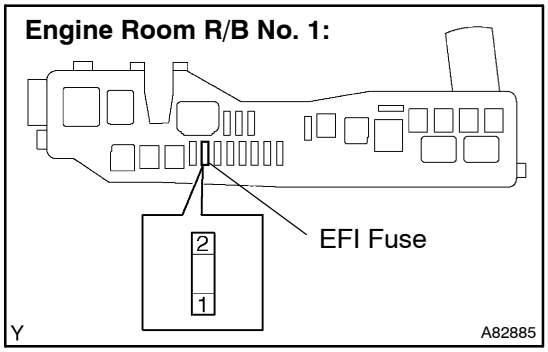


(a) Remove the EFI fuse from the engine room R/B No. 1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity
(c) Reinstall the EFI fuse.

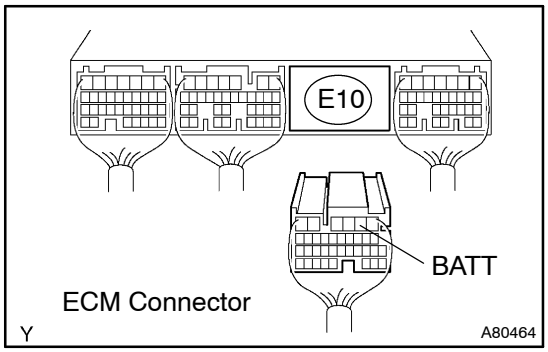
NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED TO FUSE**

OK

2 INSPECT ECM(BATT VOLTAGE)



(a) Measure the voltage between the specified terminals of the E10 and E12 ECM connectors.
Standard:



Tester Connection	Specified Condition
BATT (E10–2) – E1 (E12–7)	9 to 14 V

OK → **REPLACE ECM (See page 10–29)**

NG

3	CHECK HARNESS AND CONNECTOR(EFI FUSE – ECM, EFI FUSE – BATTERY)

(a) Check the harness and connectors between the EFI fuse and ECM.
  (1) Remove the EFI fuse from the engine room R/B No.1.
  (2) Disconnect the E10 ECM connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
EFI fuse (2) – BATT (E10–2)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
EFI fuse (2) or BATT (E10–2) – Body ground	10 kΩ or higher

  (4) Reinstall the EFI fuse.
  (5) Reconnect the ECM connector.

(b) Check the harness and connectors between the EFI fuse and battery.
  (1) Remove the EFI fuse from the engine room R/B No. 1.
  (2) Disconnect the positive battery cable.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Battery positive cable – EFI fuse (1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
Battery positive cable or EFI fuse (1) – Body ground	10 kΩ or higher

  (4) Reinstall the EFI fuse.
  (5) Reconnect the positive battery terminal.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT BATTERY(VOLTAGE) (See page 19–26 of Pub. No. RM1018E AVENSIS REPAIR MANUAL)

NG → **REPAIR OR REPLACE BATTERY**

OK

REPLACE JUNCTION BLOCK

DTC	P0606	ECM/PCM PROCESSOR

DTC	P0607	CONTROL MODULE PERFORMANCE

DTC	P1611	IC CIRCUIT MALFUNCTION

CIRCUIT DESCRIPTION

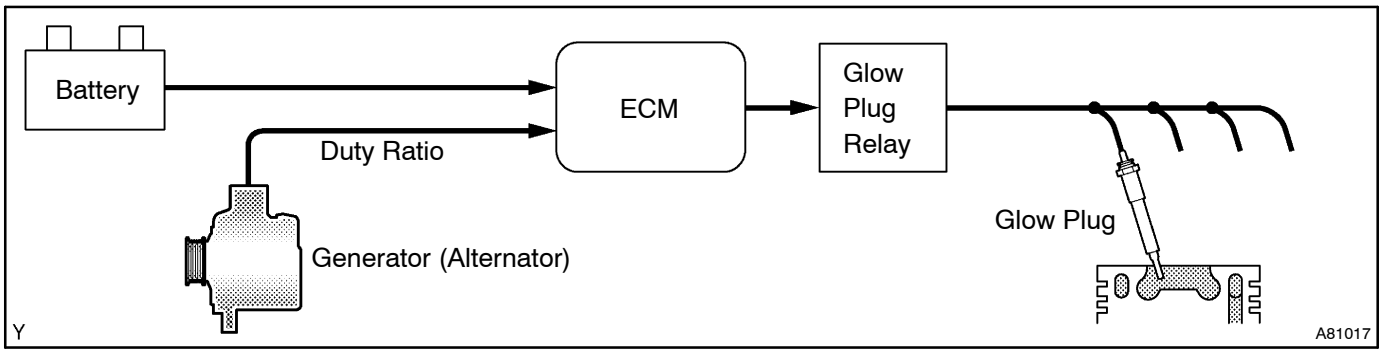
DTC No.	DTC Detection Condition	Trouble Area
P0606 P0607 P1611	ECM internal error (1 trip detection logic)	• ECM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

REPLACE ECM (See page 10–29)



DTC P0622 GENERATOR FIELD ”F” TERMINAL CIRCUIT

CIRCUIT DESCRIPTION

While the generator (alternator) is generating current, a duty ratio is sent from terminal M of the generator to the ECM terminal ALT. This duty ratio is used for detecting an open malfunction of the generator circuit and DTC P0380.

HINT:

DTC P0380 is prepared for indicating an open or short malfunction in the glow plug circuit. If this DTC is detected, inspect the glow plug circuit. (See page 05–386)

DTC No.	DTC Detection Condition	Trouble Area
P0622	No duty ratio from terminal M of the generator (alternator) at the engine running (1 trip detection logic)	• Open in generator (alternator) circuit • Generator (alternator) • Drive belt • ECM

HINT:

After confirming DTC P0622, check the internal fuel pressure of the common rail in the ”DIAGNOSIS / OBD/ MOBD / DATA LIST / ALL / GENERATOR” using the hand–held tester.

Result:

Engine Speed	Generator Duty Ratio (%)
Idling	10 to 100
When increasing engine speed	Generator duty ratio drops
When decreasing engine speed	Generator duty ratio rises

MONITOR DESCRIPTION

The ECM will detect a generator (alternator) failure or an open malfunction of the circuit, if the duty ratio is not output from terminal M of the generator (alternator) despite running the engine.

MONITOR STRATEGY

Required Sensors	Generator (alternator) circuit
Frequency of operation	Continuous
Duration	10 seconds
CHK ENG Operation	1 driving cycle

TYPICAL ENABLING CONDITIONS

Item	Specification	
	Minimum	Maximum
Battery voltage	11 V	–
Engine speed	700 rpm	2,000 rpm

TYPICAL MALFUNCTION THRESHOLDS

Threshold
There is no duty ratio output from terminal M of the generator (alternator)

WIRING DIAGRAM

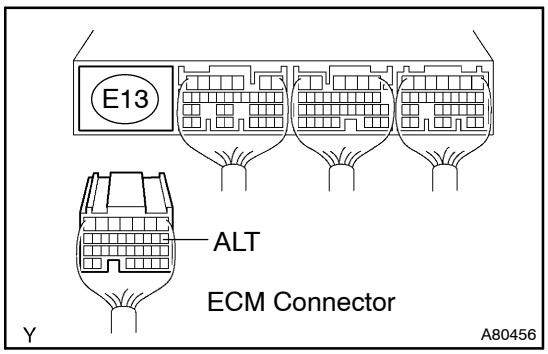
Refer to DTC P0380 on page 05–386.

INSPECTION PROCEDURE

HINT:

- If different DTCs related to different systems that have terminal E2 as the ground terminal are output simultaneously, terminal E2 may have an open circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK IF CHARGE LAMP IS ILLUMINATED



HINT:

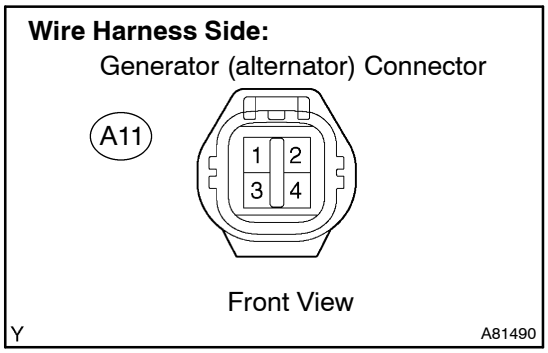
Run the engine at 2,000 rpm, and check if the charge lamp located in the combination meter remains illuminated.

YES → **Go to step 3**

NO

2 CHECK HARNESS AND CONNECTOR(GENERATOR (ALTERNATOR) – ECM)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the A11 generator (alternator) connector.
(c) Check the resistance between the wire harness side connectors.



Standard (Check for open):

Tester Connection	Specified Condition
ALT (E13–8) – M (A11–3)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
ALT (E13–8) or M (A11–3) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the generator (alternator) connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT DRIVE BELT (See page 14–87)

NG → REPAIR OR REPLACE DRIVE BELT (See page 14–269 of Pub. No. RM1018E AVENSIS REPAIR MANUAL)

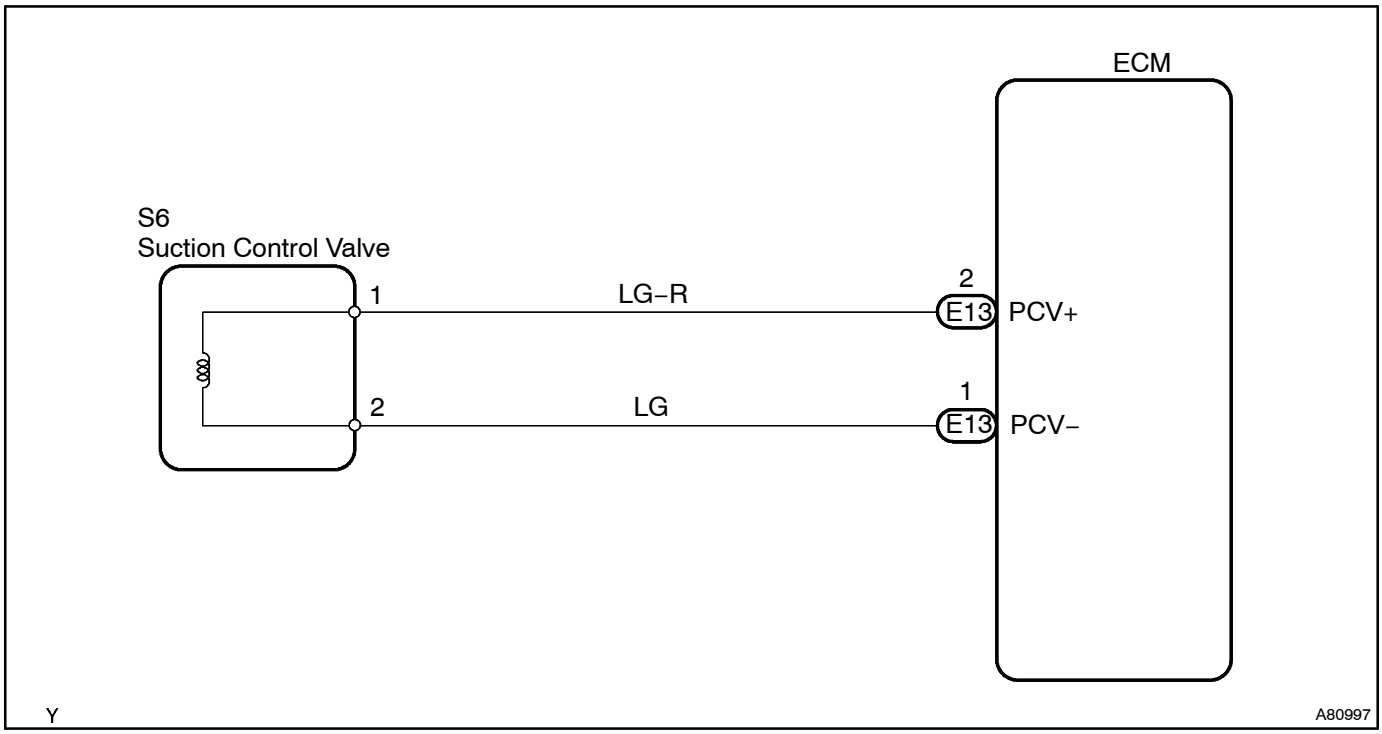
OK

4	INSPECT CHARGING SYSTEM (See page 19–26 of Pub. No. RM1018E AVENSIS REPAIR MANUAL)

GO

CHECK IF DTC OUTPUT RECURS (DTC P0622)

HINT:
After clearing the DTC, start the engine and let it idle for 10 seconds or more, and then confirm that P0622 is not present again.



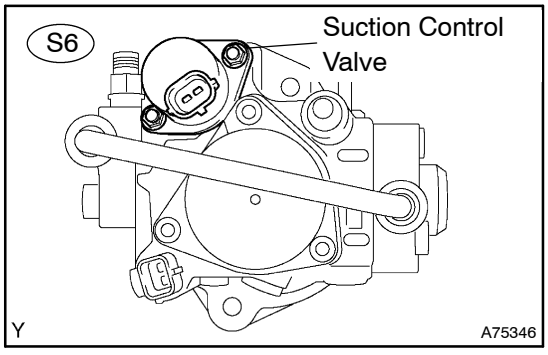
DTC P0627 FUEL PUMP CONTROL CIRCUIT / OPEN

CIRCUIT DESCRIPTION

Refer to the description on page 05–255.

DTC No.	DTC Detection Condition	Trouble Area
P0627	Open or short in suction control valve circuit for more than 0.5 second (1 trip detection logic)	• Open or short in suction control valve circuit • Suction control valve • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

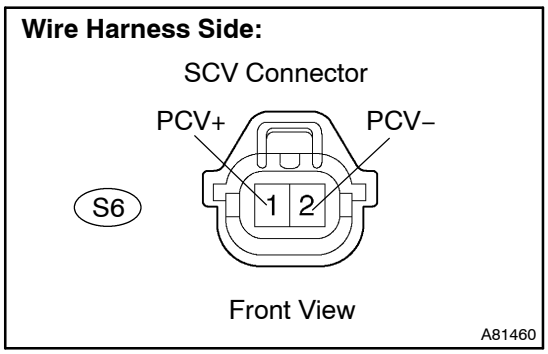
HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT INJECTION OR SUPPLY PUMP ASSY

(a) Disconnect the S6 suction control valve connector.

(b) Measure the resistance between the terminals of the suction control valve.



Standard: 1.9 to 2.3 Ω at 20°C (68°F)

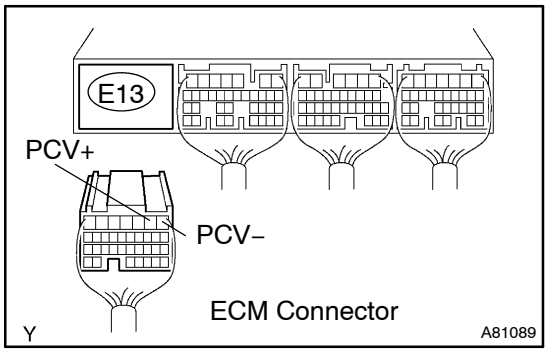
(c) Reconnect the suction control valve connector.

NG → **REPLACE INJECTION OR SUPPLY PUMP ASSY (SUCTION CONTROL VALVE) (See page 11–58)**

OK

2 CHECK HARNESS AND CONNECTOR(SUCTION CONTROL VALVE – ECM)

(a) Disconnect the S6 suction control valve connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connector.

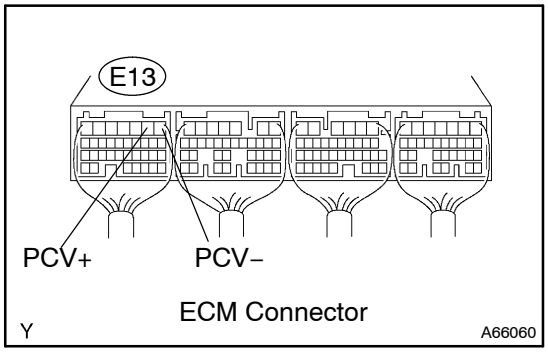


Standard (Check for open):

Tester Connection	Specified Condition
PCV+ (S6–1) – PCV+ (E13–2)	Below 1 Ω
PCV– (S6–2) – PCV– (E13–1)	

Standard (Check for short):

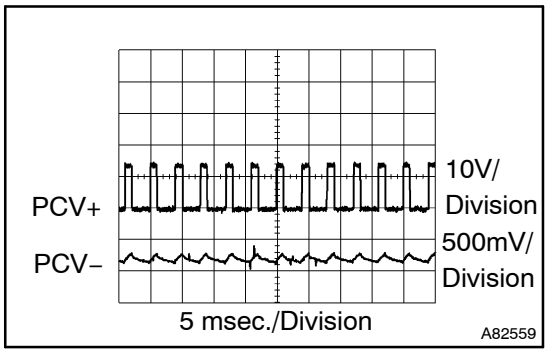
Tester Connection	Specified Condition
PCV+ (S6–1) or PCV+ (E13–2) – Body ground	10 kΩ or higher
PCV– (S6–2) or PCV– (E13–1) – Body ground	



(d) Reconnect the suction control valve connector.
(e) Reconnect ECM connector.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



3 INSPECT ECM(PCV VOLTAGE)

(a) Inspect using the oscilloscope.
(b) During cranking or idling, check the waveform between the specified terminals of the E13 ECM connector.

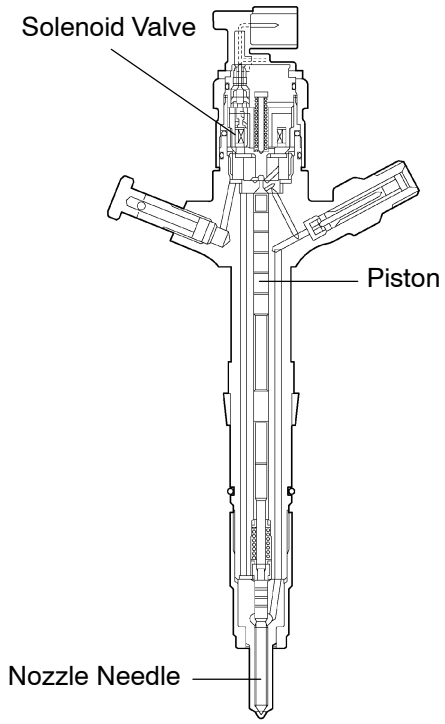
Standard :

Tester Connection	Specified Condition
PCV+ (E13–2) – PCV– (E13–1)	Correct waveform is as shown

NG → **REPLACE ECM (See page 10–29)**

OK

CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)



DTC P1238 INJECTOR MALFUNCTION

HINT:

- For more information on the injector and the common rail system, see page 05–255.
- If P1238 is present, refer to the diagnostic trouble codes (DTCs) table for the fuel system on page 05–255.

CIRCUIT DESCRIPTION

Injector Cross Section Diagram:

The ECM detects combustion deterioration for a specific cylinder.

HINT:

- The cylinder, which has compensation value for INJ VOL that varies from other cylinders, may be malfunctioning.
- If DTC P0093 (Fuel leaks in high–pressure area) is present simultaneously, leakage malfunction of the cylinder probably be occurred.
- If DTC P0200 (Open or short in EDU or injector circuit) is present simultaneously, there probably be faulty circuit located between the ECM and the injector including the EDU.
- If only DTC P1238 (Injector malfunction) is present, probably injector mechanical malfunction or insufficient compression (valve clearance etc) has occurred, not an open or short malfunction of the ECM, EDU and injector circuit.
- Solenoid valve of the injector is the same type that of the pressure discharge valve.

DTC No.	DTC Detection Condition	Main Trouble Area	Related Trouble Area
P1238	Engine speed fluctuation is large when idling (2 trip detection logic)	• Injector • EDU (P0200 is set simultaneously) • Open or short in engine wire harness (P0200 is set simultaneously) • Connector connection (P0200 is set simultaneously) • Compression pressure • Valve clearance	• Valve timing • ECM

HINT:

After confirming DTC P1238, check the internal fuel pressure in ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL” using the hand–held tester.

Reference:

Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
2,500 rpm (No engine load)	Approximately 50 to 100

MONITOR DESCRIPTION

P1238 (Injection malfunction, exclude open or short in injector circuit):

This DTC will be set if the engine speed fluctuation between each cylinder is large. The ECM monitors changes in the crankshaft rotation speed using the crankshaft position sensor for detecting poor combustion. Also, it identifies a faulty cylinder using the camshaft position sensor. The fluctuation counter increments when irregular crankshaft rotation speed variation exceeds the threshold at idling. Therefore, either one of the cylinders has very poor combustion (Rough idle), the ECM sets this DTC.

MONITOR STRATEGY

Required Sensors	Crankshaft position sensor
Frequency of operation	Continuous
Duration	10 minutes
CHK ENG Operation	2 driving cycles

TYPICAL ENABLING CONDITIONS

Item	Specification	
	Minimum	Maximum
Engine	At idling	
Engine speed	500 rpm	–
Engine coolant temperature	20°C (68°F)	–

TYPICAL MALFUNCTION THRESHOLDS

Threshold
The number of irregular changes in the crankshaft rotation speed

HINT:

The number of irregular changes in the crankshaft rotation speed indicates the insufficient combustion.

WIRING DIAGRAM

Refer to DTC P0200 on page 05–368.

INSPECTION PROCEDURE

HINT:

- If DTCs other than P1238 are present simultaneously, first perform troubleshooting for them.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P1238)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P1238	A
P1238 and other DTCs	B

HINT:

If any other codes besides P1238 are output, perform troubleshooting for those DTCs first.

B → GO TO RELEVANT DTC CHART (See page 05–299)

A

2 CHECK WIRE HARNESS AND CONNECTOR IN ENGINE ROOM

HINT:
Check the wire harness and connector connections.

NG → REPAIR OR REPLACE

OK

3 READ VALUE OF HAND–HELD TESTER(COMPENSATION OF INJECTION VOLUME BETWEEN CYLINDERS FOR IDENTIFYING MALFUNCTION CYLINDER)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INJ VOLUME FB #1, #2, #3 and #4" and read its value displayed on the hand–held tester.
Standard:

Result	Compensatory Injection Volume (mm^3)
Standard	4.9 or less

HINT:
Usually compensation injection value is 3.0 mm^3 or less.
(d) Cylinders that have a compensation value which is more than standard value shown above are considered to be faulty cylinders. Use the following steps to inspect and repair the cylinder.
Result:

Result	Proceed to
Faulty cylinder is not identified	A
Faulty cylinder is identified	B

B → Go to step 5

A

4 PERFORM ACTIVE TEST USING HAND–HELD TESTER(INJECTION CUT FOR IDENTIFYING MALFUNCTION CYLINDER)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Turn the hand–held tester ON.
(d) Select the item "DIAGNOSIS / OBD/MOBD / ACTIVE TEST / INJECTOR CUT #1, #2, #3 and #4".
(e) Check the four cylinders in sequence to identify a faulty cylinder by performing the power–balance inspection.

HINT:
If the engine idling stays normal despite cutting off the fuel injection, the cylinder is malfunctioning.

GO

5	CHECK CYLINDER COMPRESSION PRESSURE OF MALFUNCTION CYLINDER (See page 14–87)

NG → REPAIR OR REPLACE

OK

6	CHECK VALVE CLEARANCE OF MALFUNCTION CYLINDER (See page 14–90)

NG → ADJUST VALVE CLEARANCE (See page 14–90)

OK

7	CHECK IF DTC OUTPUT RECURS(DTC P1238)

HINT:
After clearing the DTC, let the engine idle for 10 minutes after warm–up, and then confirm that P1238 is not present again.

OK → CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

NG

8	REPLACE INJECTOR ASSY (See page 11–46)

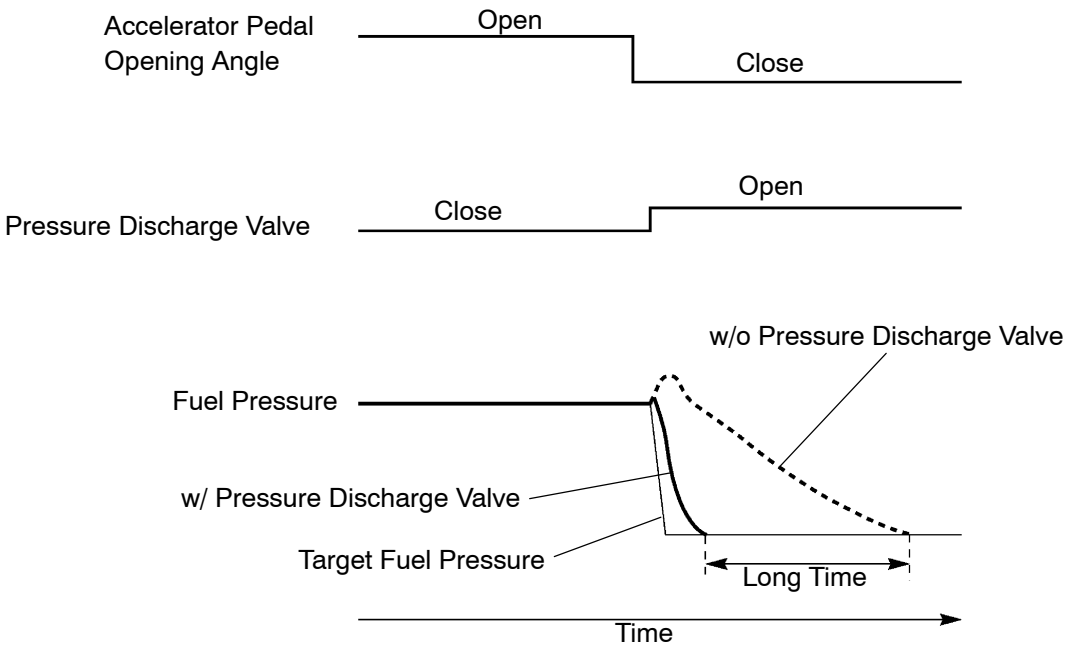
GO

CHECK IF DTC OUTPUT RECURS (DTC P1238)

HINT:
After clearing the DTC, let the engine idle for 10 minutes after warm–up, and then confirm that P1238 is not present again.

DTC	P1271	FUEL REGULATOR CIRCUIT MALFUNCTION (EDU DRIVE)

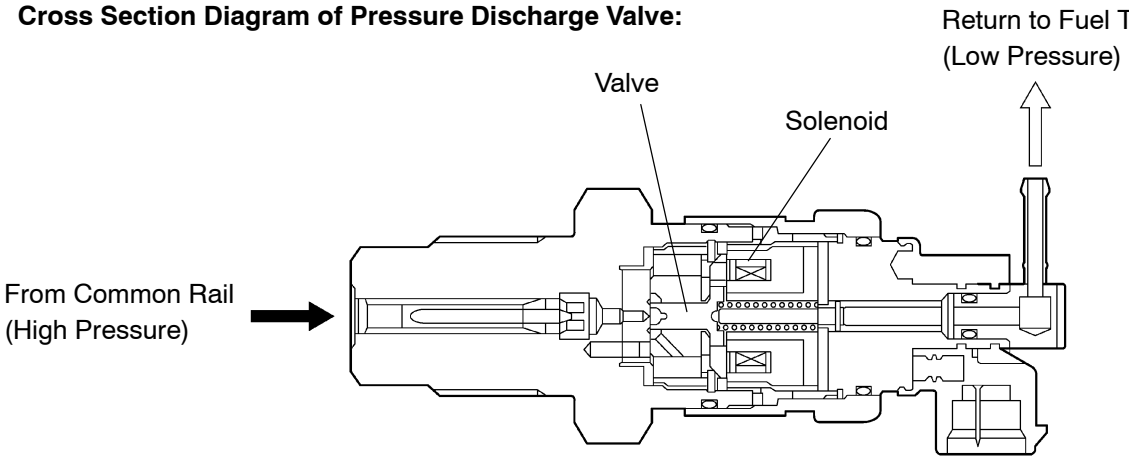
DTC	P1272	FUEL PRESSURE REGULATOR MALFUNCTION



HINT:

- For more information on the pressure discharge valve and the common rail system, see page 05–255.
- For more information on the EDU, see page 05–255.
- If P1271 and/or P1272 is present, refer to the diagnostic trouble codes (DTCs) table for the fuel system on page 05–255.

CIRCUIT DESCRIPTION



The ECM controls the internal fuel pressure of the common rail by opening and closing the pressure discharge valve. When sudden deceleration is occurred, the internal fuel pressure will temporarily become higher than usual and combustion noise may result, therefore the ECM will open the valve temporarily to discharge the pressure inside the common rail. Also, the pressure discharge valve opens when the ignition switch is turned to OFF, and the internal pressure is then promptly discharged.

Pressure Discharge Valve Operation by Sudden Deceleration:

HINT:
The solenoid valve of the pressure discharge valve is the same type that of the injector solenoid valve.

Cross Section Diagram of Pressure Discharge Valve:

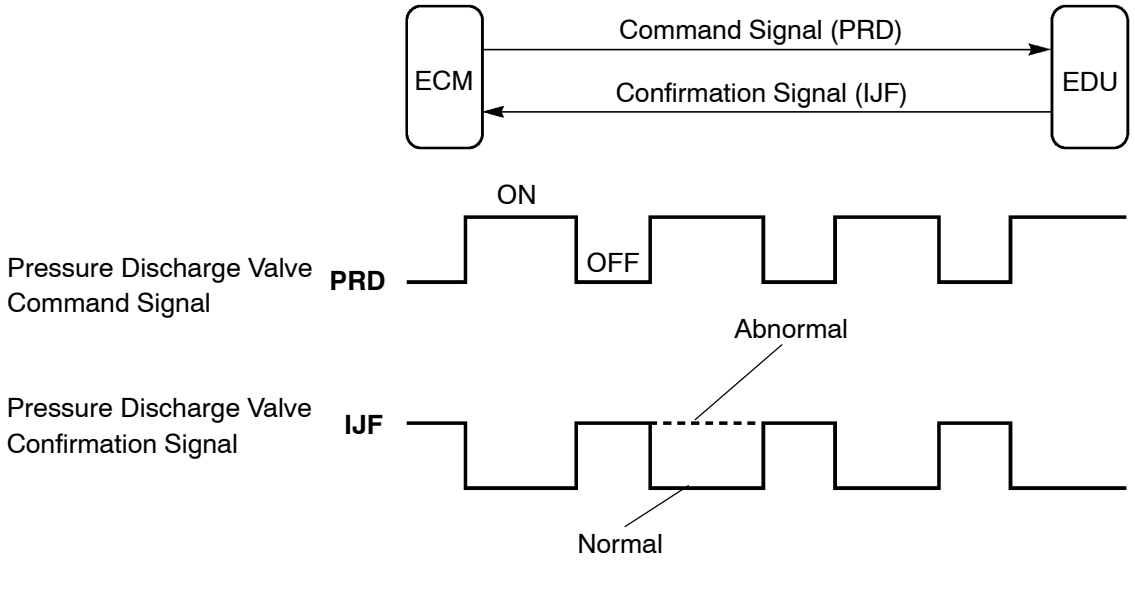
DTC No.	DTC Detection condition	Trouble Area
P1271	• Open or short in pressure discharge valve circuit There is no valve opening confirmation (IJF) signal from EDU to ECM despite the ECM sending valve opening command (PRD) signal after the engine is started (1 trip detection)	• Open or short in pressure discharge valve circuit • Open or short in pressure discharge valve itself • EDU • ECM
P1272	• Pressure discharge valve closed malfunction Actual pressure decreasing rate deviates from the simulated pressure decreasing rate after the ignition switch is turned to OFF (2 trip detection)	• Open or short in pressure discharge valve circuit (P1271 is set simultaneously) • Pressure discharge valve • Supply pump • ECM

HINT:
After confirming DTC P1271 and/or P1272, check the fuel pressure inside the common rail in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL” using the hand–held tester.

Reference:

Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
2,500 rpm (No engine load)	Approximately 50 to 100

MONITOR DESCRIPTION



P1271 (Open or short in pressure discharge valve circuit):

This DTC will be set if there is no valve opening confirmation (IJF) signal from the EDU to the ECM, despite the ECM commanding the pressure discharge valve to open with the EDU. This DTC refers to an open or short malfunction of the pressure discharge valve circuit, therefore the malfunction that the valve is stuck open or closed can be excluded.

The EDU monitors the current supplied to the pressure discharge valve and indicates that the current flows into the valve. If the current exceeds the specified level, the EDU interprets this as the IJF signal is low.

If this DTC is present, the ECM enters the fail–safe mode and limits the engine power. The fail–safe mode continues until the ignition switch is turned to OFF.

P1271 Malfunction:

P1272 (Closed malfunction of the pressure discharge valve):

The pressure discharge valve will open and discharge the internal fuel pressure from the common rail to the fuel tank when the ignition switch is turned to OFF. In this event, the ECM compares the actual dropping rate of the internal fuel pressure and the simulated dropping rate. If the ECM judges the actual dropping rate is smaller than the simulation, the ECM then judges that the valve has stuck closed and sets this DTC. This DTC detection will be activated if the internal fuel pressure does not drop below the specified level after the ignition switch has been turned to OFF.

If this DTC is present, the ECM enters the fail–safe mode and limits the engine power. The fail–safe mode continues until the ignition switch is turned to OFF.

MONITOR STRATEGY

P1271:

Required sensors	EDU
Frequency of operation	Continuous
Duration	3 seconds
CHK ENG operation	1 driving cycle

P1272:

Required sensors	Fuel pressure sensor
Frequency of operation	Once per driving cycle
Duration	1 second
CHK ENG operation	2 driving cycles

TYPICAL ENABLING CONDITIONS

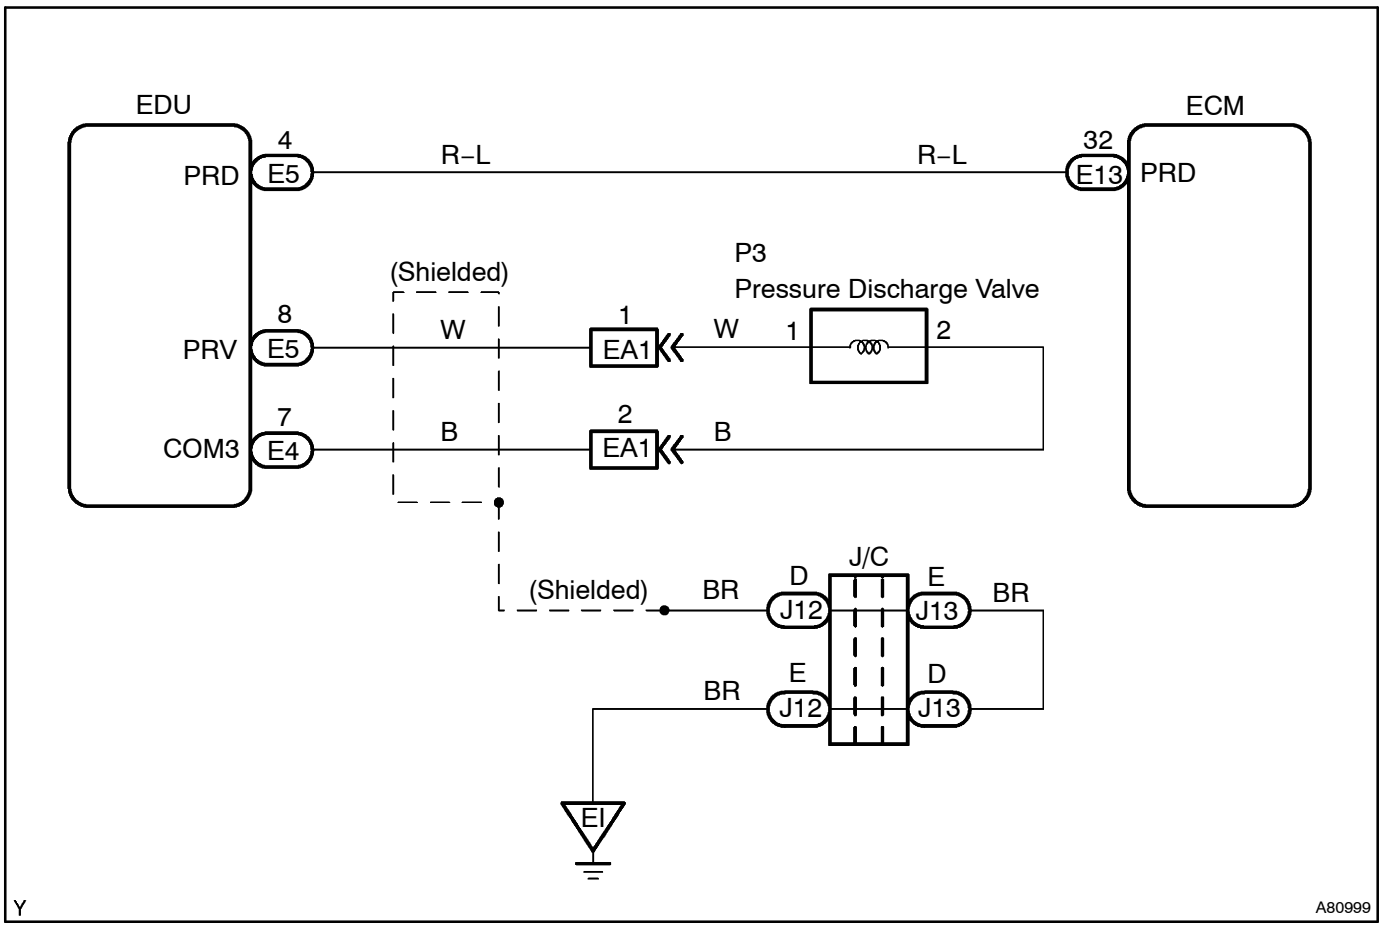
P1271:

Specification
Drive the vehicle at 50 km/h (31 mph) with the 3rd gear and then decelerate it by completely releasing the accelerator pedal

P1272:

Item	Specification	
	Minimum	Maximum
Fuel pressure	30 MPa (306 kgf/cm^2, 4,351 psi)	–
Fuel temperature	0°C (32°F)	–
Battery voltage	11 V	–
The monitor will not run if the fuel pressure sensor, pressure discharge valve circuit, or fuel temperature sensor is malfunctioning		

TYPICAL MALFUNCTION THRESHOLDS

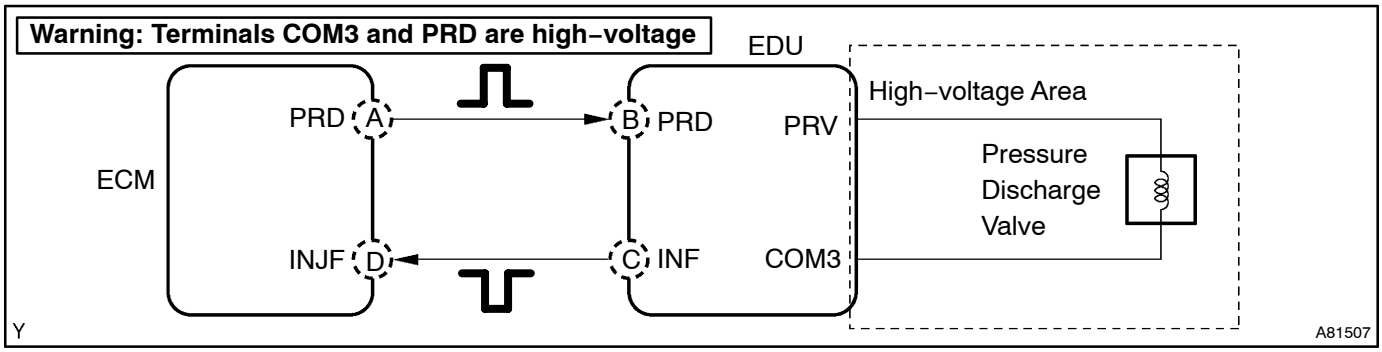


P1271:

Threshold
If the confirmation signals from the EDU is not present, despite the ECM sending the command signals regularly during decelerating

P1272:

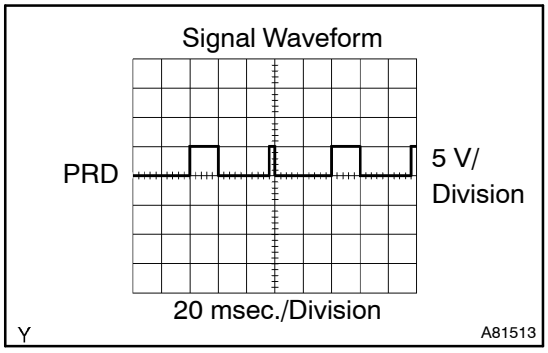
Threshold
If the internal pressure stays beyond the specified level after the ignition switch was turned to OFF



WIRING DIAGRAM

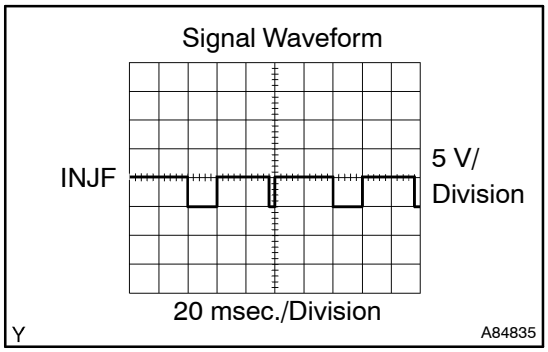
PULSE GENERATION INSPECTION

HINT:



Problem area can be identified by checking the waveform at the following terminals.

HINT:



If you check the ECM side first, inspect the following A and D in sequence. If you check the EDU side first, inspect the following B and C in sequence. This shortens inspecting time.

Inspection Point	Trouble Area
A	• ECM
B (If A is normal)	• Open or short in "PRD (ECM)" – "PRD (EDU)" circuit
C (If A and B are normal)	• Open or short in "PRV (EDU)" – "COM3 (EDU)" circuit • Pressure discharge valve • EDU
D (If A, B and C are normal)	• Open or short in "INF (EDU)" – "INJF (ECM)" circuit (P0200 is set simultaneously)

(a) Reference: Inspection using the oscilloscope.
During idling, the correct waveform is as shown in the diagram on the left.

Inspection Point	Specified Condition
A and B	Correct waveform is as shown

(b) Reference: Inspection using the oscilloscope.
During idling, the correct waveform is as shown in the diagram on the left.

Inspection Point	Specified Condition
C and D	Correct waveform is as shown

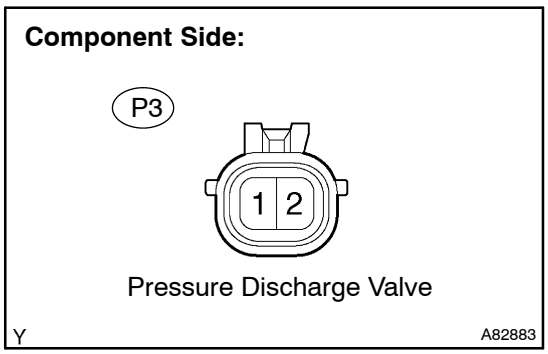
INSPECTION PROCEDURE

HINT:

- After completing repairs, confirm that P1271 and/or P1272 is not present again.
- If P0200 and P1271 are present simultaneously, there is open in the INJF wire harness between the EDU and ECM, or there is open in the wire harness for both injector and pressure discharge valve.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ OUTPUT DTC(DTC P1271 AND/OR P1272)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.



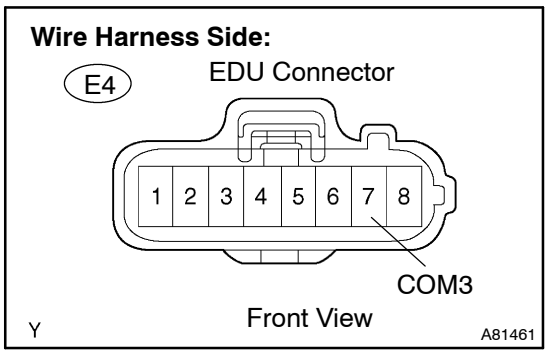
Result:

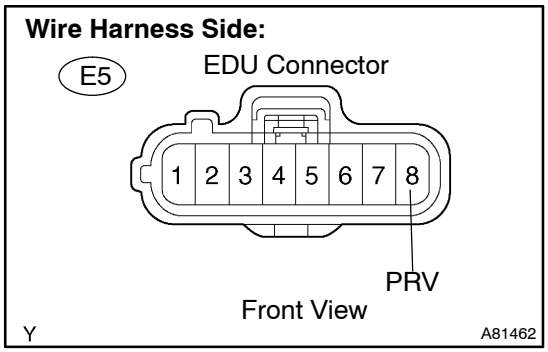
Display (DTC output)	Proceed to
P1271 and/or P1272	A
P1272	B

B → **Go to step 8**

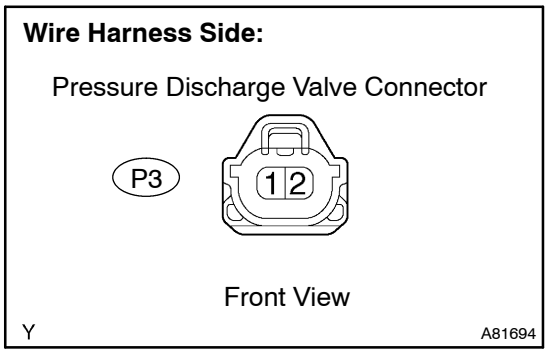
A

2 INSPECT COMMON RAIL ASSY (PRESSURE DISCHARGE VALVE)





(a) Disconnect the P3 pressure discharge valve connector.
(b) Measure the resistance between the terminals of the pressure discharge valve.
Standard: 0.85 to 1.05 Ω at 20°C (68°F)
(c) Reconnect the pressure discharge valve connector.



NG → **REPLACE COMMON RAIL ASSY (PRESSURE DISCHARGE VALVE) (See page 11–67)**

OK

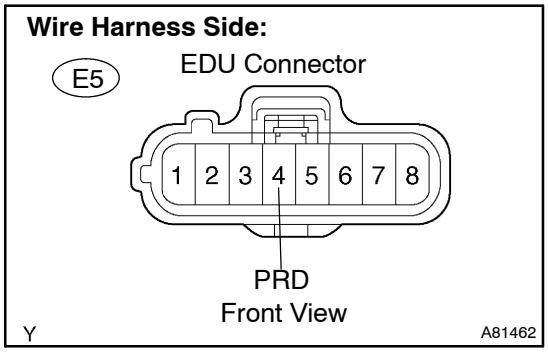
3 CHECK HARNESS AND CONNECTOR(PRESSURE DISCHARGE VALVE – EDU)

(a) Disconnect the E4 and E5 EDU connectors.
(b) Disconnect the P3 pressure discharge valve connector.
(c) Check the resistance between the wire harness side connectors.

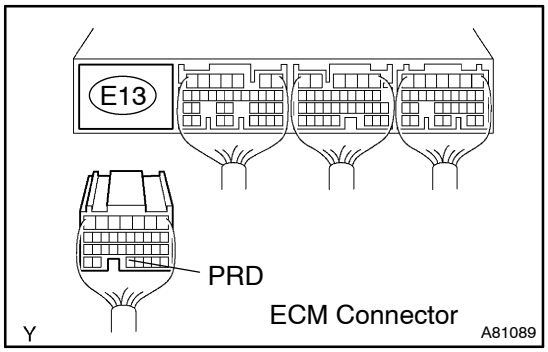
Standard (Check for open):

Tester Connection	Specified Condition
COM3 (E4–7) – (P3–2)	Below 1 Ω
PRV (E5–8) – (P3–1)	

Standard (Check for short):



Tester Connection	Specified Condition
COM3 (E4–7) or (P3–2) – Body ground	10 kΩ or higher
PRV (E5–8) or (P3–1) – Body ground	



(d) Reconnect the EDU connectors.
(e) Reconnect the pressure discharge valve connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

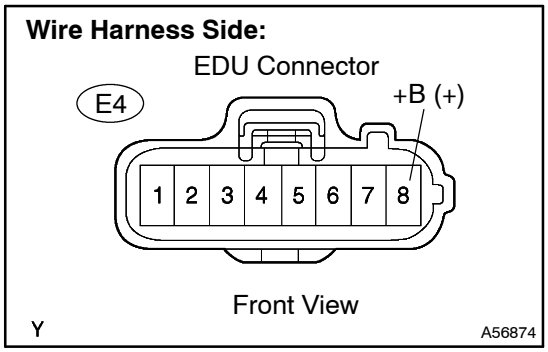
4 CHECK HARNESS AND CONNECTOR(EDU – ECM)

(a) Disconnect the E5 EDU connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
PRD (E5–4) – PRD (E13–32)	Below 1 Ω

Standard (Check for short):



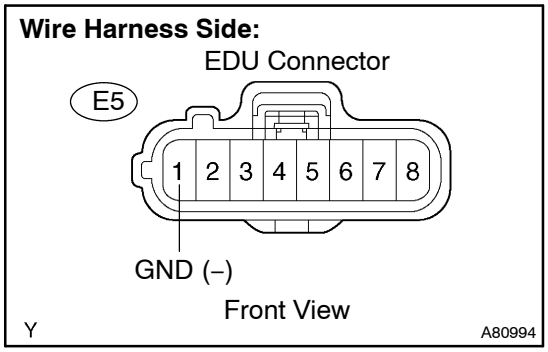
Tester Connection	Specified Condition
PRD (E5–4) or PRD (E13–32) – Body ground	10 kΩ or higher

(d) Reconnect the EDU connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

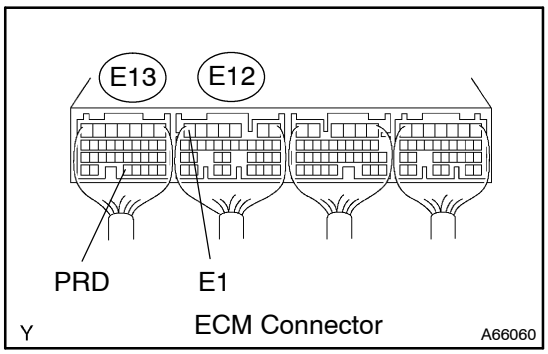
5 INSPECT INJECTOR DRIVER(BATTERY VOLTAGE)



(a) Disconnect the E4 and E5 EDU connectors.
(b) Turn the ignition switch to ON.
(c) Measure the voltage between the specified terminals of each EDU connector.

Standard:

Tester Connection	Specified Condition
+B (E4–8) – GND (E5–1)	9 to 14 V

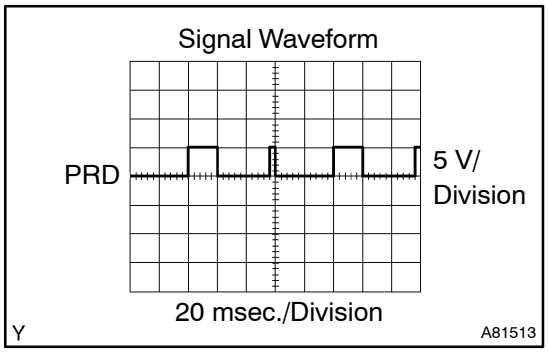


(d) Reconnect the EDU connectors.

NG → **CHECK INJECTOR DRIVER POWER SOURCE CIRCUIT (EDU – BATTERY)**

OK

6	INSPECT ECM(PRD VOLTAGE)



(a) Inspect using the oscilloscope.
(b) Drive the vehicle at 50 km/h (31 mph) with the third gear, and then decelerate by releasing the accelerator pedal.
(c) Check the waveform between the specified terminal of the E12 and E13 ECM connectors.

Standard:

Tester Connection	Specified Condition
PRD (E13–32) – E1 (E12–7)	Correct waveform is as shown

HINT:
Alternative Inspection:
Run the engine at 2,500 rpm for 10 seconds and then decrease the engine speed to an idle with the accelerator pedal completely released.

NG → **REPLACE ECM (See page 10–29)**

OK

7	REPLACE INJECTOR DRIVER

GO

CHECK IF DTCS OUTPUT RECUR (DTC P1271 AND/OR P1272)

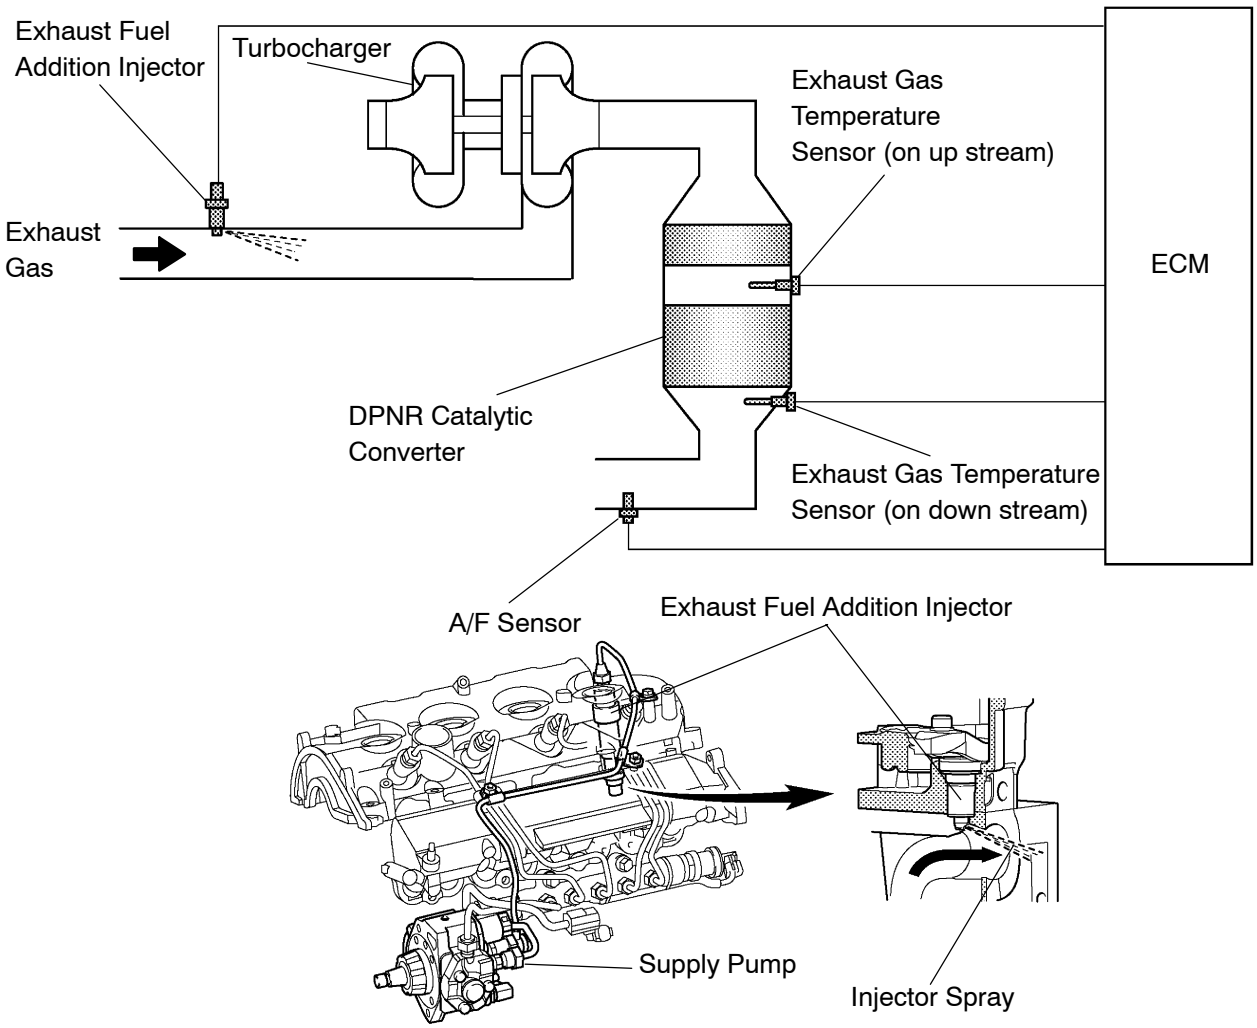
HINT:
P1271:
After clearing the DTC, drive the vehicle at 50 km/h (31 mph) with the third gear and then decelerate by releasing the accelerator pedal. Check that P1271 is not present.
P1272:
After clearing the DTC, start and stop the engine twice, and then confirm that P1272 is not present.

8	REPLACE COMMON RAIL ASSY(PRESSURE DISCHARGE VALVE) (See page 11–67)

GO

CHECK IF DTCS OUTPUT RECUR (DTC P1271 AND/OR P1272)

HINT:
P1271:
After clearing the DTC, drive the vehicle at 50 km/h (31 mph) with the third gear and then decelerate by releasing the accelerator pedal. Check that P1271 is not present.
P1272:
After clearing the DTC, start and stop the engine twice, and then confirm that P1272 is not present.



DTC	P1386	INJECTOR FOR EXHAUST FUEL ADDITION

HINT:

- For more information on the exhaust fuel addition injector and TOYOTA D–CAT (*1), see page 05–255.
- If P1386 is present, refer to the diagnostic trouble codes (DTCs) table for TOYOTA D–CAT on page 05–255.
- ”Learning value” used in here represents a correction learning value of the fuel addition volume to raise the DPNR (*2) catalyst temperature to a target range.

*1: Diesel Clean Advanced Technology.
*2: Diesel Particulate–NOx Reduction system.

CIRCUIT DESCRIPTION

The exhaust fuel addition injector is mounted on the exhaust port of the cylinder head, and low pressure is provided to the injector by the feed pump in the supply pump. This injector adds fuel by a control signal from the ECM.

This injector is used for two different controls: DPNR catalyst regeneration and nitrogen oxides (NOx) reduction.

Under the DPNR catalyst regeneration control, the injector adds fuel to raise a catalyst temperature.

In the other control, the injector helps the air–fuel ratio become RICH. As a result, NOx in the exhaust gas will be reduced in response to the RICH air–fuel ratio.

DTC No.	DTC Detection Condition	Main Trouble Area	Related Trouble Area
P1386	• Excess or low fuel addition volume from exhaust fuel addition injector: When air–fuel ratio deviates from a value estimated by ECM while the injector adds fuel (1 trip detection logic)	• Open or short in exhaust fuel addition injector circuit • Exhaust fuel addition injector • DPNR catalytic converter (Manifold converter sub–assy)	• Open in exhaust temperature sensor circuit • A/F sensor • Exhaust gas temperature sensor • Supply pump assy • Mass air flow meter • Fuel leaks in exhaust fuel addition injector • Main injector • Cylinder compression pressure • Valve clearance • Valve timing • Air intake system has blockages • Air intake system has leakage • Exhaust system has blockages • Exhaust system has leakage • EGR system has blockages • EGR system has leakage • ECM
	• Low fuel addition volume from exhaust fuel addition injector: When learning value (*3) exceeds standard level (1 trip detection logic)		
	• Exhaust fuel addition injector nozzle stuck open: When air–fuel ratio becomes RICHER than standard level, or exhaust gas temperature reaches higher than standard level (1 trip detection logic)		

*3: Correction learning value of the fuel addition volume to raise the DPNR catalyst temperature to a target range.

HINT:

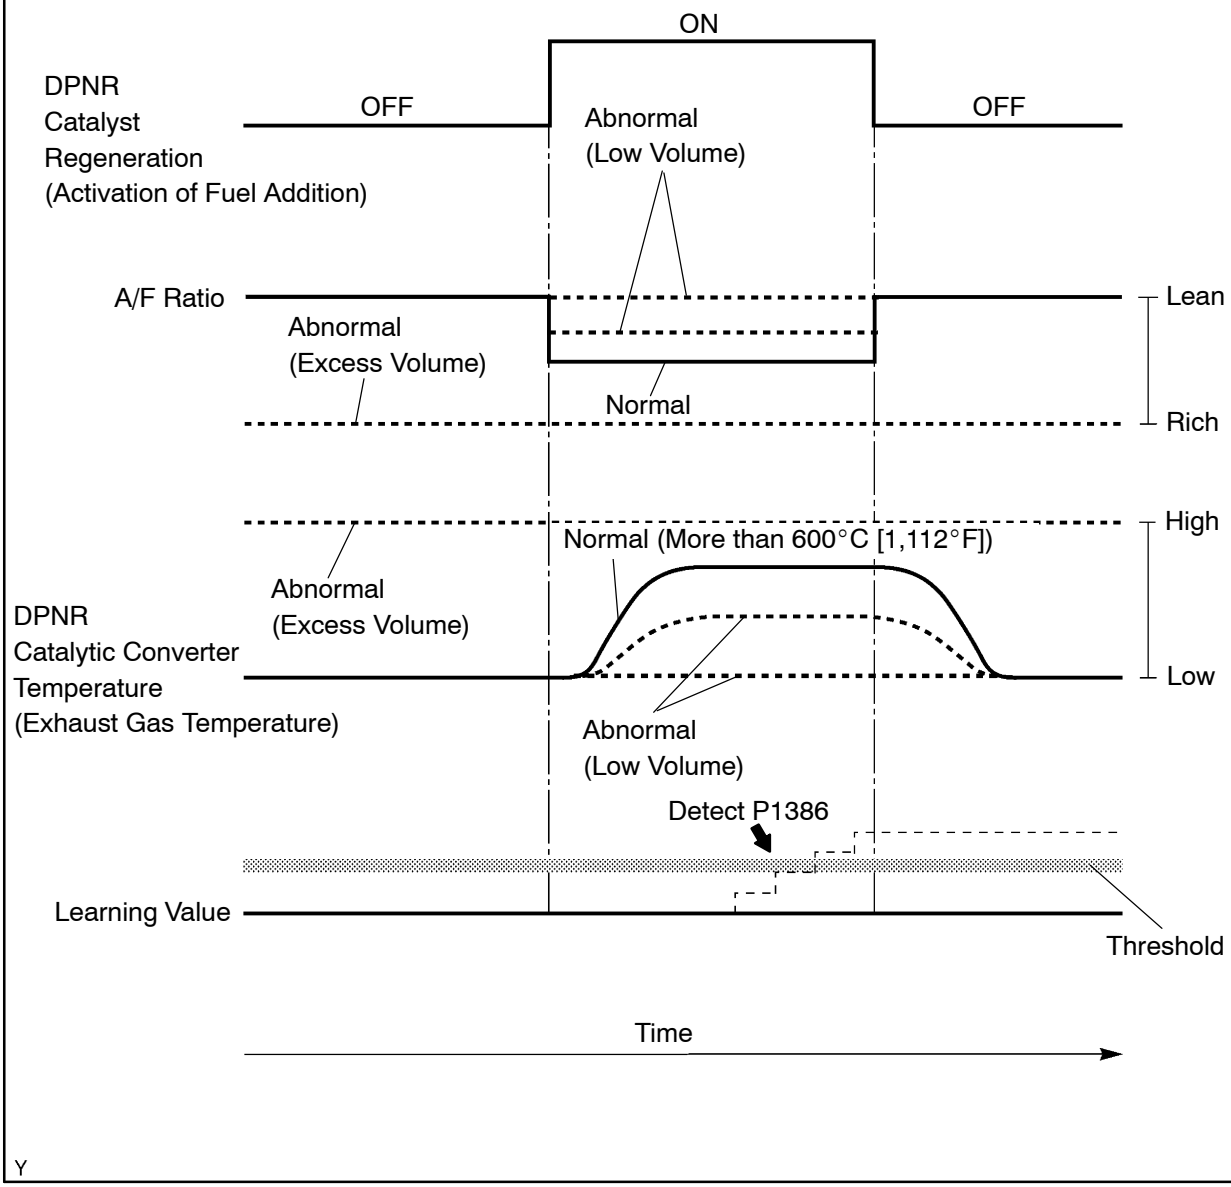
DTC P2047 (Reductant injector circuit/open [bank1 unit1]) will be present if there is an open malfunction in the exhaust fuel addition injector circuit.

MONITOR DESCRIPTION

HINT:
”Learning value” used in here represents a correction learning value of the fuel addition volume to raise the DPNR (*4) catalyst temperature to a target range.
*4: Diesel Particulate–NOx Reduction system.
In order to detect malfunction in the exhaust fuel addition injector, the ECM monitors: the air–fuel ratio, DPNR catalytic temperature and learning value.

- When the exhaust fuel addition injector adds fuel during NOx reduction, the ECM monitors the air–fuel ratio when the exhaust fuel addition injector adds fuel. If the air–fuel ratio is too RICH or too LEAN against the ECM predetermined air–fuel ratio, the ECM judges the fuel addition volume small or large, and illuminates the CHK ENG. In this malfunction, there is no fail–safe operation.

- The ECM always monitors the DPNR catalytic converter temperature and the air–fuel ratio. When the temperature reaches higher than its usual level or the air–fuel ratio becomes extremely RICH, the ECM judges that the injector has stuck open and illuminates the CHK ENG. If this malfunction occurs, the ECM enters the fail–safe mode to limits its acceptable vehicle speed to approximately 10 km/h (6 mph) at maximum by restraining the engine power.



- Under DPNR catalyst regeneration, the ECM monitors the learning value. Normally, the learning value for the DPNR catalyst regeneration is in the vicinity of 1.0. Thus the learning value is at 1.4 or more for a certain period of time, the ECM judges the fuel addition volume from the injector insufficient and illuminates the CHK ENG. If this malfunction occurs, the ECM enters the fail–safe mode to limit its acceptable vehicle speed to approximately 80 km/h (50 mph) at maximum by restraining the engine power.

Malfunction Condition by Fail–Safe Operation:

Fail–Safe Operation	Malfunction Condition	Malfunction Detection Condition	Drive Pattern
No fail–safe operation	Low or excess fuel addition volume from the exhaust fuel addition injector	When the exhaust fuel addition injector adds fuel during NOx reduction, if actual air–fuel ratio deviates from a value estimated by the ECM when the exhaust fuel addition injector adds fuel	After engine warm–up, perform DPNR REJU (PM) in the ACTIVE TEST menu using the hand–held tester, and drive at constant vehicle speed within 50 to 100 km/h (31 to 62 mph) for more than 15 minutes
Limits engine power by permitting driving at vehicle speed of approximately 10 km/h (6 mph) at maximum	Exhaust fuel addition injector has stuck open	DPNR catalytic converter temperature reaches higher than 800°C (1,472°F) or air–fuel ratio is less than approximately 12 for a couple of seconds	Idling engine for more than 5 minutes (*5)
Limits engine power by permitting driving at vehicle speed of approximately 80 km/h (50 mph) at maximum (HINT: DPNR catalyst regeneration is prohibited)	Low fuel addition volume from the exhaust fuel addition injector	Under DPNR catalyst regeneration, when learning value of 1.4 or more continues for a certain period of time (*6)	After engine warm–up, perform DPNR REJU (PM) in the ACTIVE TEST menu using the hand–held tester, and drive at constant vehicle speed within 50 to 100 km/h (31 to 62 mph) for more than 30 minutes

*5: The DPNR catalytic converter temperature will not reach 800°C (1,472°F) or higher during idling even if the exhaust fuel addition injector has stuck open.
*6: While the DPNR catalyst regeneration is exercised, the ECM raises the DPNR catalytic converter temperature to more than approximately 600°C (1,112°F) by adding fuel using the exhaust fuel addition injector. If the temperature does not reach that temperature regardless of the attempt, the correction learning value of the fuel addition volume increments to raise the DPNR catalytic converter temperature to a target range.

Malfunction Detection:

WIRING DIAGRAM

Refer to DTC P2047 on page 05–470.

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- ”Learning value” used in here represents a correction learning value of the fuel addition volume to raise the DPNR catalyst temperature to a target range.

1 CHECK OTHER DTC OUTPUT(IN ADDITION TO P1386)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P1386	A
P1386 and other DTCs	B

HINT:
If any other codes besides P1386 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–299)**

A

2 CHECK FAIL–SAFE CONDITION

(a) Check the condition of fail–safe operation while the CHK ENG is being illuminated.

Result:

Condition of Fail–Safe Operation	Proceed to
Permits driving at vehicle speed of approximately 10 km/h (6 mph) at maximum	A
Permits driving at vehicle speed of approximately 80 km/h (50 mph) at maximum	B
No fail–safe operation	C

B → **Go to step 7**

C → **Go to step 4**

A

3 READ VALUE OF HAND–HELD TESTER(EXHAUST GAS TEMPERATURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON. (Do not start the engine)
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN)” and ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (OUT)” and read its value displayed on the hand–held tester.

Result:

Temperature Displayed	Proceed to
OK (Same value as actual exhaust gas temperature)	A
1,000°C (1,832°F)	B

HINT:
If there is a open circuit, the hand–held tester indicates 1,000°C (1,832°F).

B → GO TO DTC P0544, P0545, P0546, P2031, P2032 AND P2033 (RELATED TO EXHAUST GAS TEMPERATURE SENSOR) (See page 05–415)

A

4 PERFORM ENGINE RPM ACCELERATION(WHITE SMOKE AND FUEL SMELL)

CAUTION:
Stop the engine immediately if you observe that there is white smoke or a fuel smell during the following inspection. Fuel may be leaked from the exhaust fuel addition injector.

(a) Remove the battery cable for 1 minute, and then reconnect the cable.
(b) After the engine starts, promptly accelerate the engine to approximately 3,000 rpm with no load 3 times.
(c) Check for white smoke in exhaust gases.
(d) Check for a smell in exhaust gases.

Result:

Result	Proceed to
Other than above	A
Either white smoke or fuel smells in exhaust gases	B

B → Go to step 17

A

5 READ VALUE OF HAND–HELD TESTER(A/F RATIO)

CAUTION:
Stop the engine immediately if you observe that there is white smoke or a fuel smell during the following inspection. Fuel may be leaked from the exhaust fuel addition injector.

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AF FT B1 S1”.
(e) Read the air–fuel ratio displayed on the tester after 3–minute idling.

Result:

A/F Ratio	Proceed to
More than 12	A
Less than 12	B

B → Go to step 17

A

6 READ VALUE OF HAND–HELD TESTER(EXHAUST GAS TEMPERATURE)

CAUTION:
Stop the engine immediately if you observe that there is white smoke or a fuel smell during the following inspection. Fuel may be leaked from the exhaust fuel addition injector.

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN) and EX TEMP (OUT)".
(e) Check that exhaust gas temperature is within the specification below.
Result:

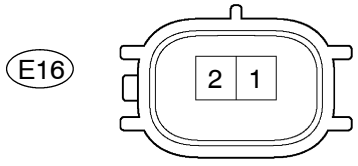
Condition	Exhaust Gas Temperature (°C)
Idling after engine warm–up	Constant at approximately 50 to 700 (122 to 1,292°F)

NG → **GO TO DTC P0544, P0545, P0546, P2031, P2032 AND P2033 (RELATED TO EXHAUST GAS TEMPERATURE SENSOR) (See page 05–415)**

OK

7 READ VALUE OF HAND–HELD TESTER(A/F RATIO)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AF FT B1 S1".
(e) After warming up the engine, check if the air–fuel ratio varies when accelerating the engine from idling to 3,000 rpm by fully depressing the accelerator pedal 3 times.
Result:



Air–fuel Ratio	Proceed to
Varies	OK
Not varies once	NG

NG → **GO TO DTC P2237, P2238 AND P2239 (RELATED TO A/F SENSOR) (See page 05–484)**

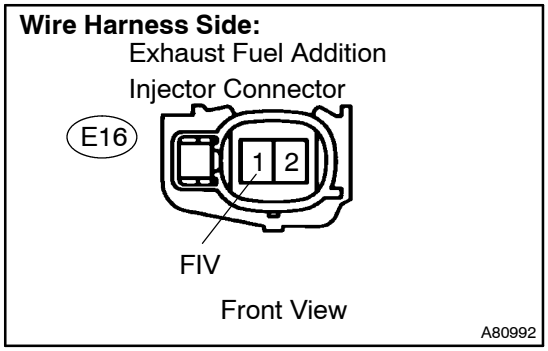
OK

8 INSPECT EXHAUST FUEL ADDITION INJECTOR ASSY(RESISTANCE)

Component Side:
Exhaust Fuel Addition Injector

Y A81503

(a) Disconnect the E16 exhaust fuel addition injector connector.
(b) Measure the resistance between the terminals of the exhaust fuel addition injector.
Standard:



Tester Connection	Specified Condition
1 – 2	11.6 to 12.4 Ω at 20°C (68°F)

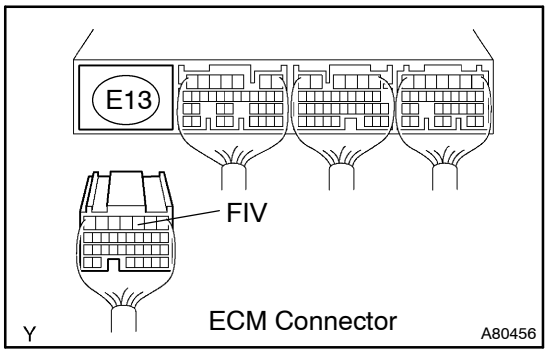
(c) Reconnect the exhaust fuel addition injector connector.

NG	REPLACE EXHAUST FUEL ADDITION INJECTOR ASSY (See page 14–166)

OK

9 CHECK HARNESS AND CONNECTOR(EXHAUST FUEL ADDITION INJECTOR – ECM)

(a) Disconnect the E16 exhaust fuel addition injector connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.



Standard (Check for open):

Tester Connection	Specified Condition
FIV (E13–3) – (E16–1)	Below 1 Ω
E2 (E13–28) – (E16–2)	

Standard (Check for short):

Tester Connection	Specified Condition
FIV (E13–3) or (E16–1) – Body ground	10 kΩ or higher

(d) Reconnect the exhaust fuel addition injector connector.
(e) Reconnect the ECM connector.

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

10 CHECK FUEL LEAKAGE(IN EXHAUST FUEL ADDITION INJECTOR)

(a) Visually check if there is no fuel leak between the supply pump and exhaust fuel addition injector.

HINT:

- Primary pressure of maximum 1 MPa (10 kgf/cm^2, 145 psi) is provided from a feed pump inside the supply pump to the exhaust fuel addition injector.
- There is possibility that fuel leaks inside the components (supply pump, etc) have been occurred.

NG	REPAIR OR REPLACE

OK

11	READ VALUE OF HAND–HELD TESTER(COMPENSATION OF INJECTION VOLUME FOR EACH CYLINDER)

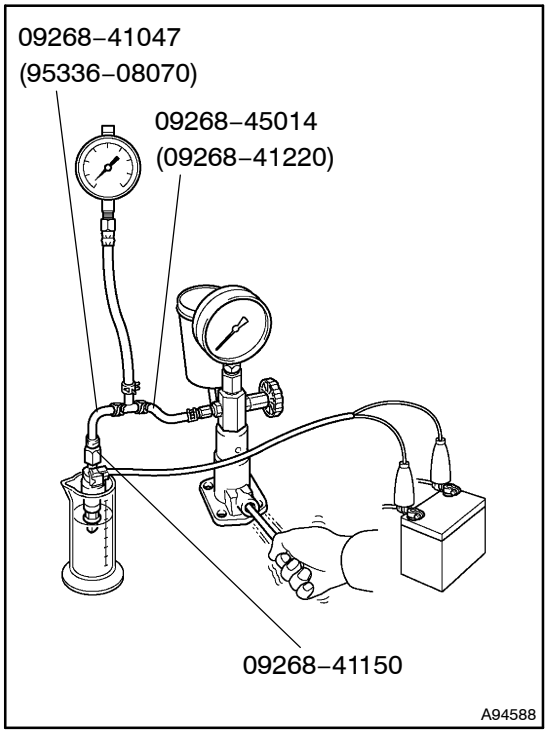
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INJ VOLUME FB” and read its value displayed on the hand–held tester.
Result:

Result	Proceed to
Compensatory Injection Volume is more than 3.0 mm^3	A
Compensatory Injection Volume is 3.0 mm^3 or less	B

HINT:
Usually compensation injection volume is 3.0 mm^3 or less.

B → **Go to step 13**

A



12	CHECK ENGINE COMPONENTS PARTS

(a) Check that there is no abnormality in the main injector, cylinder compression pressure, valve timing and valve clearance.
(b) Check that there is no leakage or blockage in the air intake, exhaust and EGR systems.

NG → **REPAIR OR REPLACE**

OK

13 INSPECT EXHAUST FUEL ADDITION INJECTOR ASSY(INJECTION VOLUME)

(a) Remove the exhaust fuel addition injector.
(b) Attach a exhaust fuel addition injector to a nozzle tester.
(c) Apply pressure of 0.29 MPa (3.0 kgf/cm^2, 42 psi) to the nozzle tester.
(d) Connect SST (Wire) to the exhaust fuel addition injector.
Standard:

Condition	Result
Let the injector undisturbed for 1minute with fuel pressurized	No leak from the injector
Applies battery voltage to the injector	Fuel is emitted from the injector

HINT:
- Injection volume after letting the exhaust fuel addition injector undisturbed for 10 seconds with the pressurized fuel applied as follows.
Reference: 25 cm^3 (1.5 cuin.)
- The reference is informative values, thus, your reading will be out of this range on account of measuring condition errors etc.
- Check that a nozzle of the exhaust fuel addition injector is not clogged.

(e) Reinstall the exhaust fuel addition injector.

NG → **REPLACE EXHAUST FUEL ADDITION INJECTOR ASSY (See page 14–166)**

OK

14 PERFORM ACTIVE TEST USING HAND–HELD TESTER(DPNR CATALYST REGENERATION)

(a) Clear the learning value by removing the negative battery for more than 1 minute.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / DPNR REJU (PM)”.
(e) After warming up the engine, drive the vehicle at constant vehicle speed within 50 to 100 km/h (31 to 62 mph) (with smooth throttle operations) for more than 15 minutes.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AF FT B1 S1”.
(g) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN) and EX TEMP (OUT)”.
(h) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX FUEL ADD FB”.
(i) Check that the exhaust gas temperatures (EX TEMP [IN] and [OUT]) and the learning value (EX FUEL ADD FB) are within the specification below.
Result:

Result	Proceed to
Exhaust gas temperature does not reach higher than 600°C (1,112°F)	A
Exhaust gas temperature reaches higher than 600°C (1,112°F), and the learning value remains in the vicinity of 1.0	B

B → CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)

A

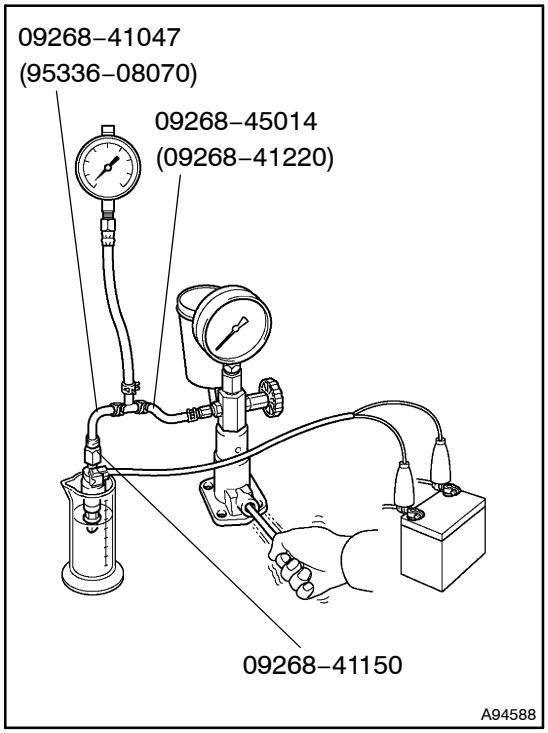
15	REPLACE EXHAUST FUEL ADDITION INJECTOR ASSY (See page 14–166)

GO

16	PERFORM ACTIVE TEST USING HAND–HELD TESTER(DPNR CATALYST REGENERATION)

(a) Clear the learning value by removing the negative battery cable for more than 1 minute.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to ON and turn the hand–held tester ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / DPNR REJU (PM)”.
(e) After warming up the engine, drive the vehicle at constant vehicle speed within 50 to 100 km/h (31 to 62 mph) (with smooth throttle operations) for more than 15 minutes.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / AF FT B1 S1”.
(g) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN) and EX TEMP (OUT)”.
(h) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX FUEL ADD FB”.
(i) Check that the exhaust gas temperatures (EX TEMP [IN] and [OUT]) and the learning value (EX FUEL ADD FB) are within the specification below.

Result:



Result	Proceed to
Exhaust gas temperature does not reach higher than 600°C (1,112°F)	A
Exhaust gas temperature reaches higher than 600°C (1,112°F), and the learning value remains in the vicinity of 1.0	B

B → SYSTEM OK

A

REPLACE MANIFOLD CONVERTER SUB–ASSY (DPNR CATALYTIC CONVERTER) (See page 14–108)

17 INSPECT EXHAUST FUEL ADDITION INJECTOR ASSY(INJECTION VOLUME)

(a) Remove the exhaust fuel addition injector.
(b) Attach a exhaust fuel addition injector to a nozzle tester.
(c) Apply pressure of 0.29 MPa (3.0 kgf/cm^2, 42 psi) to the nozzle tester.
(d) Connect SST (Wire) to the exhaust fuel addition injector.
Standard:

Condition	Result
Let the injector undisturbed for 1minute with fuel pressurized	No leak from the injector
Applies battery voltage to the injector	Fuel is emitted from the injector

HINT:
- Injection volume after letting the exhaust fuel addition injector undisturbed for 10 seconds with the pressurized fuel applied as follows.
  Reference: 25 cm^3 (1.5 cuin.)
- The reference is informative values, thus, your reading will be out of this range on account of measuring condition errors etc.
- Check that a nozzle of the exhaust fuel addition injector is not clogged.

(e) Reinstall the exhaust fuel addition injector.

NG → **REPLACE EXHAUST FUEL ADDITION INJECTOR ASSY (See page 14–166)**

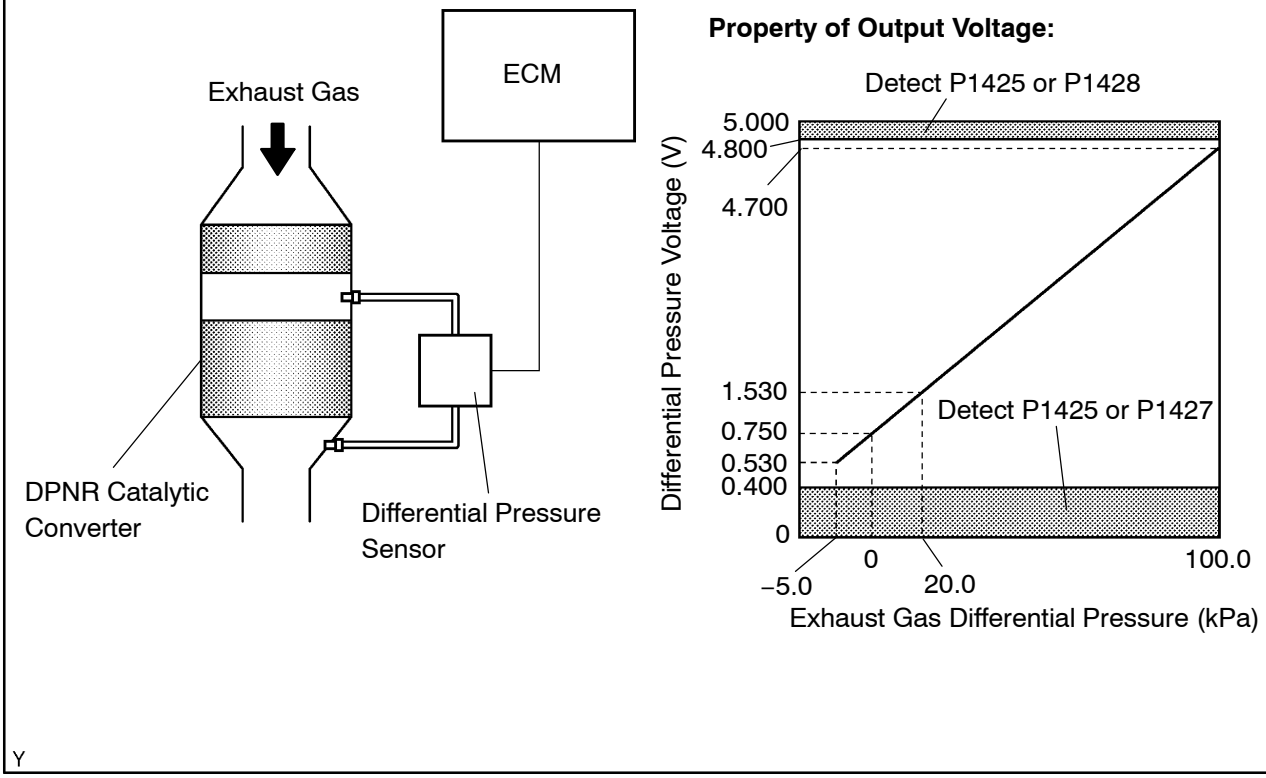
OK

GO TO DTC P1238 (RELATED MAIN INJECTOR) (See page 05–431)

HINT:
- If any one of the main injectors is in a closed valve malfunction, rough idle will result. Compensatory injection volume learning values of each cylinder can be read by using the hand–held tester. When the value is more than 3.0 mm^3, the cylinder is malfunctioning.
- Usually compensation injection volume is 3.0 mm^3 or less.

DTC	P1425	DIFFERENTIAL PRESSURE SENSOR CIRCUIT

DTC	P1427	DIFFERENTIAL PRESSURE SENSOR CIRCUIT LOW



DTC	P1428	DIFFERENTIAL PRESSURE SENSOR CIRCUIT HIGH

HINT:

- For more information on the differential pressure sensor and TOYOTA D–CAT (*1), see page 05–255.
- If P1425, P1427 and/or P1428 is present, refer to the diagnostic trouble codes (DTCs) table for TOYOTA D–CAT on page 05–255.

*1: Diesel Clean Advanced Technology.

CIRCUIT DESCRIPTION

Two sensible portions of the differential pressure sensor are mounted before and after the DPNR (*2) catalytic converter and monitor exhaust gas differential pressure. The sensor itself is located far from the engine assembly to reduce the influence of vibration, and is a semiconductor–type that is not influenced by exhaust gases.

The ECM compares the exhaust gas pressure before and after DPNR catalytic converter by monitoring the pressure using the up–and downstream sensible portions of the differential pressure sensor. If difference between the pressure before and after the catalytic converter exceeds a standard level, the ECM judges that the catalytic converter has clogged with particulate matter (PM). When once the ECM judges it, the ECM begins to exercise the DPNR catalyst regeneration.

When output voltage of the sensor deviates from the normal operating range, the ECM interprets this as malfunction of the sensor circuit, and sets DTC P1425, P1427, or P1428 and then illuminates the CHK ENG.

*2: Diesel Particulate–NOx Reduction system.

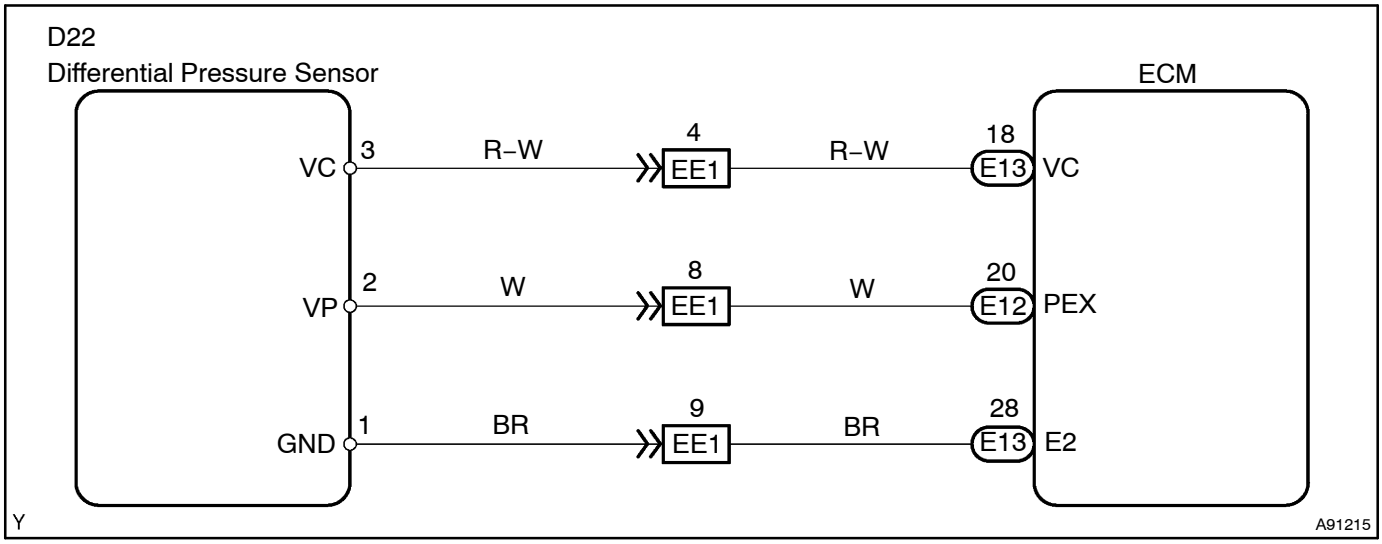
HINT:

If vacuum hoses of the differential pressure sensor for up–and downstream sensible portions are connected to a upside down, the ECM interprets this as abnormal pressure difference, therefore DTC P1426 (Differential Pressure Sensor [Installation]) will be set and the CHK ENG will illuminate.

DTC No.	DTC Detection Condition	Trouble Area
P1425	Differential pressure sensor output voltage is less than 0.4 V, or more than 4.8 V for 3 seconds or more (1 trip detection logic)	• Open or short in differential pressure sensor circuit • Incorrect arrangement differential pressure sensor hose piping • Differential pressure sensor • ECM
P1427	Differential pressure sensor output voltage is less than 0.4 V for 3 seconds or more (1 trip detection logic)	
P1428	Differential pressure sensor output voltage is more than 4.8 V for 3 seconds or more (1 trip detection logic)	

HINT:

- DTC P1426 (Differential pressure sensor [installation]) will be present if there is incorrect vacuum hose arrangement of the differential pressure sensor.
- After confirming DTC P1425, P1427 and P1428, check the differential pressure in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / DPNR DIFF PRESS ” using the hand–held tester.



Reference:

Engine Condition	Differential Pressure Output	Sensor Condition
Ignition Switch ON	Approximately 0 kPa	Normal
Always	3 kPa	Open or short circuit
3,000 rpm (No engine load)	Negative output	Incorrect arrangement of hose piping

MONITOR DESCRIPTION

In order to detect abnormality in the differential pressure sensor at any time, the ECM always monitors output voltage from the sensor. When the sensor output voltage deviates from the normal operating range (between 0.4 V and 4.8 V) for more than 3 seconds, the ECM interprets this as malfunction of the sensor circuit and illuminates the CHK ENG.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE OF HAND–HELD TESTER(DIFFERENTIAL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / DPNR DIFF PRESS”.
(d) Check that differential pressure is within the specification below.
Result:

Condition	Differential Pressure	Proceed to
Always	–5 kPa or less	A
Ignition Switch ON	–4 kPa to 98 kPa	B
Always	99 kPa	C

B → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)**

C → **Go to step 3**

A

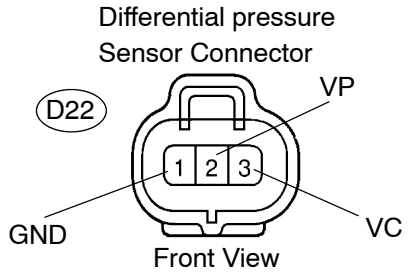
2	CHECK CONNECTION OF VACUUM HOSE(DIFFERENTIAL PRESSURE SENSOR – VACUUM TRANSMITTING PIPE)

(a) Check if vacuum hose arrangement between the differential pressure sensor and the vacuum transmitting pipe is not incorrect arrangement (see page 14–108).
(b) Check that there is no exhaust gas leak between the differential pressure sensor and the vacuum transmitting pipe (see page 14–108).

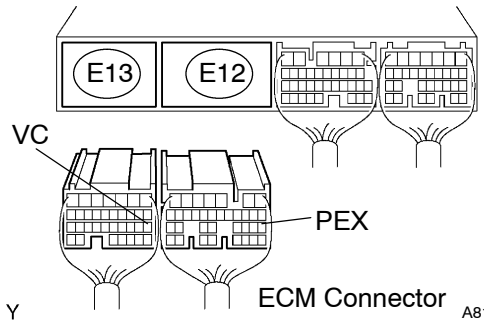
NG → **CORRECT TO NORMAL CONNECTION**

OK

3	CHECK BLOCKAGE(DIFFERENTIAL PRESSURE SENSOR)



CAUTION:
Be careful for being burned by exhaust gases during the following inspection.
(a) Disconnect the vacuum hose (both up–and downstream) on the differential pressure sensor side.
(b) Start the engine.
(c) Check if there is exhaust gas pulsations from both vacuum hoses during idling.



NG → **REPLACE CLOGGED PARTS (See page 14–108)**

OK

4	CHECK HARNESS AND CONNECTOR(DIFFERENTIAL PRESSURE SENSOR – ECM)

Wire Harness Side:

(a) Disconnect the D22 differential pressure sensor connector.
(b) Disconnect the E12 and E13 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
PEX (E12–20) – VP (D22–2)	Below 1 Ω
VC (E13–18) – VC (D22–3)	
E2 (E13–28) – GND (D22–1)	

Standard (Check for short):

Tester Connection	Specified Condition
PEX (E12–20) or VP (D22–2) – Body ground	10 kΩ or higher
VC (E13–18) or VC (D22–3) – Body ground	

(d) Reconnect the differential pressure sensor connector.
(e) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE DIFFERENTIAL PRESSURE SENSOR ASSY (See page 14–108)

DTC	P1426	DIFFERENTIAL PRESSURE SENSOR (INSTALLATION)

HINT:

- For more information on the differential pressure sensor and TOYOTA D–CAT (*1), see page 05–255.
- If P1426 is present, refer to the diagnostic trouble codes (DTCs) table for TOYOTA D–CAT on page 05–255.

*1: Diesel Clean Advanced Technology.

CIRCUIT DESCRIPTION

Refer to DTC P1425, P1427 and P1428 on page 05–457.

DTC No.	DTC Detection Condition	Trouble Area
P1426	When output voltage from the differential pressure sensor indicates positive pressure as negative pressure (and vice versa) (1 trip detection logic)	• Incorrect arrangement differential pressure sensor hose piping • Differential pressure sensor vacuum hose is clogged • Blockage in Vacuum transmitting pipe sub–assy • Differential pressure sensor • ECM

HINT:

- DTC P1425 (Differential pressure sensor circuit), DTC P1427 (Differential pressure sensor circuit low) and/or DTC P1428 (Differential pressure sensor high) will be present if there is an open or short malfunction in the differential pressure sensor circuit.
- After confirming DTC P1426, check the differential pressure in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / DPNR DIFF PRESS ” using the hand–held tester.

  Reference:

Engine Condition	Differential Pressure Output	Sensor Condition
Ignition Switch ON	Approximately 0 kPa	Normal
Always	3 kPa	Open or short circuit
3,000 rpm (No engine load)	Negative output	Incorrect arrangement of hose piping

MONITOR DESCRIPTION

In order to detect abnormality in the differential pressure sensor, the ECM always monitors output voltage from the sensor. When the sensor output voltage is a reversal of positive and negative pressure, the ECM interprets this as incorrect vacuum hose arrangement of the sensor, or judges that the vacuum hoses have clogged, thus the CHK ENG will be illuminated.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO P1426)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.
Result:

Display (DTC output)	Proceed to
P1426	A
P1426 and other DTCs	B

HINT:
If any other codes besides P1426 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–299)**

A

2	CHECK CONNECTION OF VACUUM HOSE(DIFFERENTIAL PRESSURE SENSOR – VACUUM TRANSMITTING PIPE)

(a) Check if vacuum hose arrangement between the differential pressure sensor and the vacuum transmitting pipe has not incorrect (see page 14–108).
(b) Check that there is no exhaust gas leak between the differential pressure sensor and the vacuum transmitting pipe (see page 14–108).

NG → **CORRECT TO NORMAL CONNECTION**

OK

3	CHECK BLOCKAGE(DIFFERENTIAL PRESSURE SENSOR)

CAUTION:
Be careful for being burned by exhaust gases during the following inspection.
(a) Disconnect the vacuum hose (both up–and downstream) on the differential pressure sensor side.
(b) Start the engine.
(c) Check if there is exhaust gas pulsations from both vacuum hoses during idling.

NG → **REPLACE CLOGGED PARTS (See page 14–108)**

OK

4	READ VALUE OF HAND–HELD TESTER(DIFFERENTIAL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / DPNR DIFF PRESS”.
(d) Check that differential pressure is within the specification below.
Result:

Engine Condition	Differential Pressure Output	Sensor Condition
Ignition Switch ON	Approximately 0 kPa	Normal
Always	3 kPa	Open or short circuit
3,000 rpm (No engine load)	Negative output	Incorrect arrangement of hose piping

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–270)**

NG

REPLACE DIFFERENTIAL PRESSURE SENSOR ASSY (See page 14–108)

DTC	P1601	INJECTOR CORRECTION CIRCUIT MALFUNCTION (EEPROM)

NOTICE:

- **If an incorrect injector compensation code was registered with the ECM, it may rattle the engine assembly or the engine idling may become rough. In addition, it may become a cause of engine failure or shorten the life of the engine.**

1. If you replace the ECM with a new one, register all the injector compensation codes with the new ECM as follows:

(a) Prior to replacing the ECM, read all the compensation codes stored in the existing ECM using the hand–held tester, and then write them down (see page 05–273).

(b) After replacing the ECM, enter the written compensation codes into the ECM using the hand–held tester (see page 05–277).

(c) Turn the ignition switch to OFF and wait for 30 seconds or more.

(d) Turn the ignition switch to ON, then clear DTC P1601 using the hand–held tester (see page 05–290).

HINT:

- In order to optimize the injector's fuel injection characteristic, the ECM compensates the injection duration by each cylinder. The ECM stores and uses compensating data in the form of a 30–digit–alphanumeric value that is imprinted on the head portion of each injector as the injector compensation code.
- If you installed a new injector, its own injector compensation code is needed to register with the ECM. Also, if you replaced the ECM, the compensation codes of all the injectors are needed to register because the new ECM dose not have the codes until they are registered.
- Once the ECM is replaced, DTC P1601 will be present when turning the ignition switch to ON. This is to inform you that the injector compensation codes are required to register with the ECM. In order to clear the DTC, register the compensation codes first, then turn the ignition switch to OFF and wait for 30 seconds or more.

CIRCUIT DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
P1601	Injector compensation code is not registered (1 trip detection logic)	• Injector compensation code • ECM
	Wrong injector compensation code is registered (1 trip detection logic)	

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK INJECTOR COMPENSATION CODE (See page 05–273)

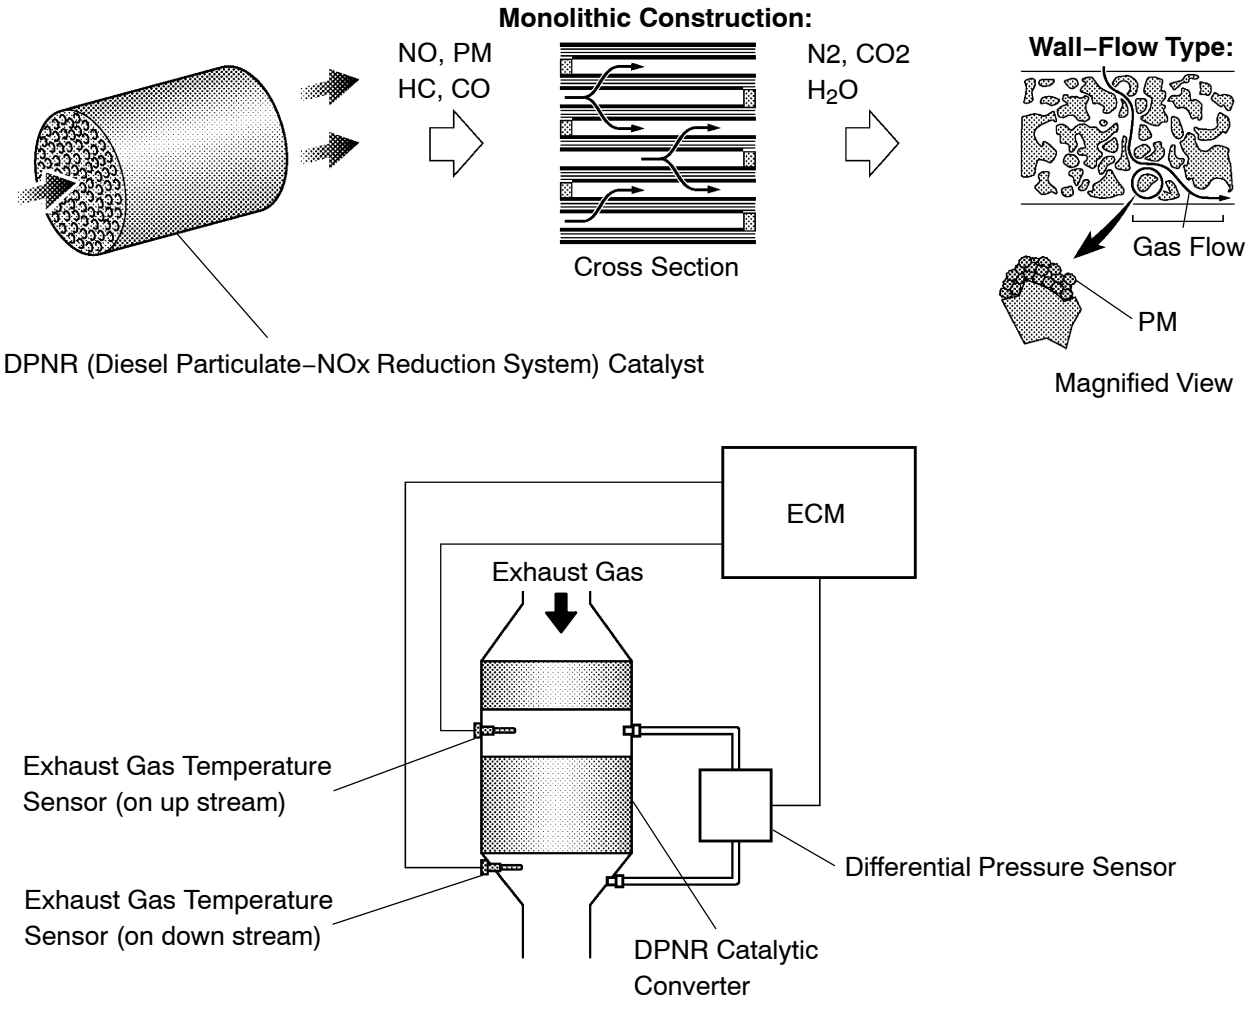
NG → SET INJECTOR COMPENSATION CODE (See page 05–277)

OK

REPLACE ECM (See page 10–29)

DTC	P2002	PARTICULATE TRAP EFFICIENCY BELOW THRESHOLD (BANK1)

HINT:



- For more information on the DPNR (*1) catalytic converter and TOYOTA D–CAT (*2), see page 05–255.
- If P2002 is present, refer to the diagnostic trouble codes (DTCs) table for TOYOTA D–CAT on page 05–255.

*1: Diesel Particulate–NOx Reduction system.

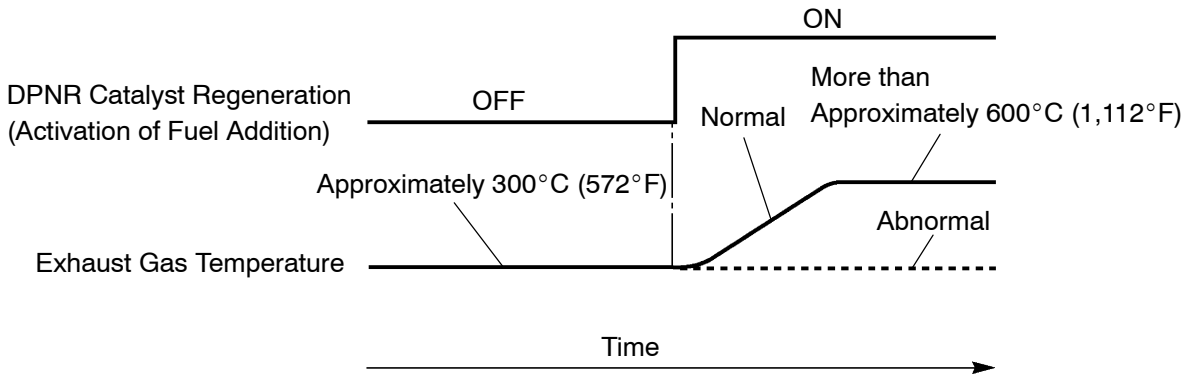
*2: Diesel Clean Advanced Technology.

CIRCUIT DESCRIPTION

DPNR (Diesel Particulate–NOx Reduction System):

DPNR catalyst has ability to reduce nitrogen oxides (NOx) and particulate matter (PM) in addition to purification of hydrocarbons (HC) and carbon monoxides (CO). DPNR material is monolithic construction. Its inlets and outlets block up with each other, and its surface is coated with NOx absorptive deduction–type catalyst. Because exhaust gases flow through micro–cavities inside walls, it is called ”wall–flow” type.

DTC No.	DTC Detection Condition	Trouble Area
P2002	Condition (a) or (b) is met (1 trip detection logic): (a) Differential pressure exceeds a standard level for more than 10 seconds (b) Exhaust gas temperature does not raise during DPNR catalyst regeneration	• DPNR catalytic converter (Manifold converter sub–assy) • Differential pressure sensor • Differential pressure sensor vacuum hose is clogged • Blockage in Vacuum transmitting pipe sub–assy • Exhaust gas temperature sensor • Exhaust gas leaks in TOYOTA D–CAT • Mass air flow meter • ECM



MONITOR DESCRIPTION

In order to detect abnormality in the DPNR (*3) catalytic converter, the ECM monitors an exhaust gas temperature as well as a differential pressure of the exhaust gas. For monitoring the differential pressure, the ECM compares the up–and downstream pressure of the DPNR catalytic converter. If the difference between the pressure is large, the ECM judges that the DPNR has contaminated or deteriorated, and then illuminates the CHK ENG.

Furthermore, the ECM monitors increase in the exhaust gas temperature while the exhaust fuel addition injector adds fuel under DPNR catalyst regeneration. The exhaust gas temperature during the DPNR catalyst regeneration normally rises from approximately 300°C (572°F) to approximately 600°C (1,112°F) or higher. If the temperature does not rise even if a certain period of time has elapsed, the ECM interprets this as malfunction of the DPNR and illuminates the CHK ENG.

*3: Diesel Particulate–NOx Reduction system.

Malfunction Detection:

Y A91205

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If (exhaust gas) differential pressure (DPNR DIFF PRESS) of the DPNR catalytic converter does not virtually develop when increasing the engine speed, the DPNR catalytic converter may be malfunctioning.

1 CHECK OTHER DTC OUTPUT(IN ADDITION TO P2002)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:

Display (DTC output)	Proceed to
P2002	A
P2002 and other DTCs	B

HINT:
If any other codes besides P2002 are output, perform troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–299)**

A

2 READ VALUE OF HAND–HELD TESTER(DIFFERENTIAL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / DPNR DIFF PRESS”.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAF”.
(f) Check that differential pressure.

Result:

Engine Speed (Vehicle is stop)	Differential Pressure (kPa)	Proceed to
3,000 rpm (No engine load)	Less than MAF rate (mass air flow rate) × 0.4	A
3,000 rpm (No engine load)	More than MAF rate (mass air flow rate) × 0.4	B

HINT:

- If the differential pressure is more than a value that the intake air amount (MAF: g/sec) is multiplied by 0.4, DTC P2002 (Particulate Trap Efficiency Below Threshold [Bank 1]) will be present.
- The standards for the differential pressure sensor are as follows.

Reference:

Engine Condition	Differential Pressure Output	Sensor Condition
Ignition Switch ON	Approximately 0 kPa	Normal
Always	3 kPa	Open or short circuit
3,000 rpm (No engine load)	Negative output	Incorrect arrangement of hose piping

B → **Go to step 4**

A

3	READ VALUE OF HAND–HELD TESTER(EXHAUST GAS TEMPERETURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / EX TEMP (IN) and EX TEMP (OUT)”.
(e) Check that exhaust gas temperature is within the specification below.
Reference:

Condition	Exhaust Gas Temperature (°C)
Idling after engine warm–up	Constant at approximately 50 to 700 (122 to 1,292°F) *3

*3: There should be no noise.

NG → **REPAIR OR REPLACE EXHAUST GAS TEMPERATURE SENSOR, HARNESS OR CONNECTOR**

OK

4	CHECK BLOCKAGE(DIFFRENTIAL PRESSURE SENSOR)

CAUTION:
Be careful for being burned by exhaust gases during the following inspection.
(a) Disconnect the vacuum hose (both up–and downstream) on the differential pressure sensor side.
(b) Start the engine.
(c) Check if there is exhaust gas pulsations from both vacuum hoses during idling.

NG → **REPLACE CLOGGED PARTS (See page 14–108)**

OK

5	CHECK FOR EXHAUST GAS LEAKS

(a) Check that there is no exhaust gas leak in the exhaust system components and differential pressure sensor vacuum hoses.

NG → **REPAIR OR REPLACE LEAKAGE POINT**

OK

REPLACE MANIFOLD CONVERTER SUB–ASSY (See page 14–108)

DTC	P2047	REDUCTANT INJECTOR CIRCUIT/OPEN (BANK 1 UNIT 1)

HINT:

- For more information on the exhaust fuel addition injector and TOYOTA D–CAT (*1), see page 05–255.
- If P2047 is present, refer to the diagnostic trouble codes (DTCs) table for TOYOTA D–CAT on page 05–255.

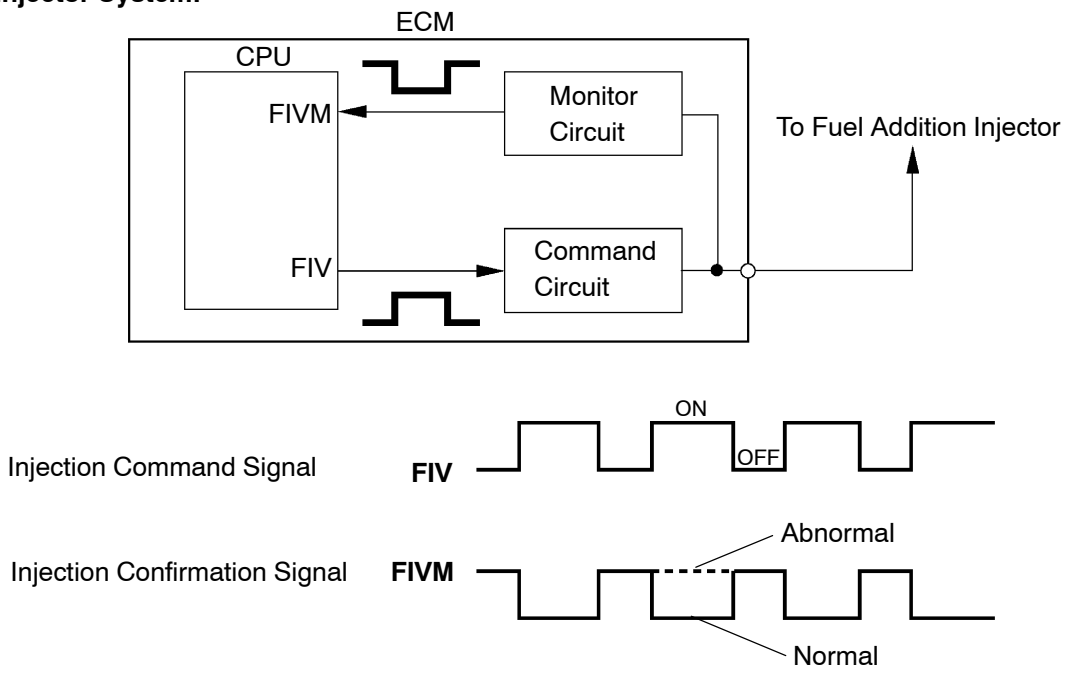
*1: Diesel Clean Advanced Technology.

CIRCUIT DESCRIPTION

Refer to DTC P1386 on page 05–444.

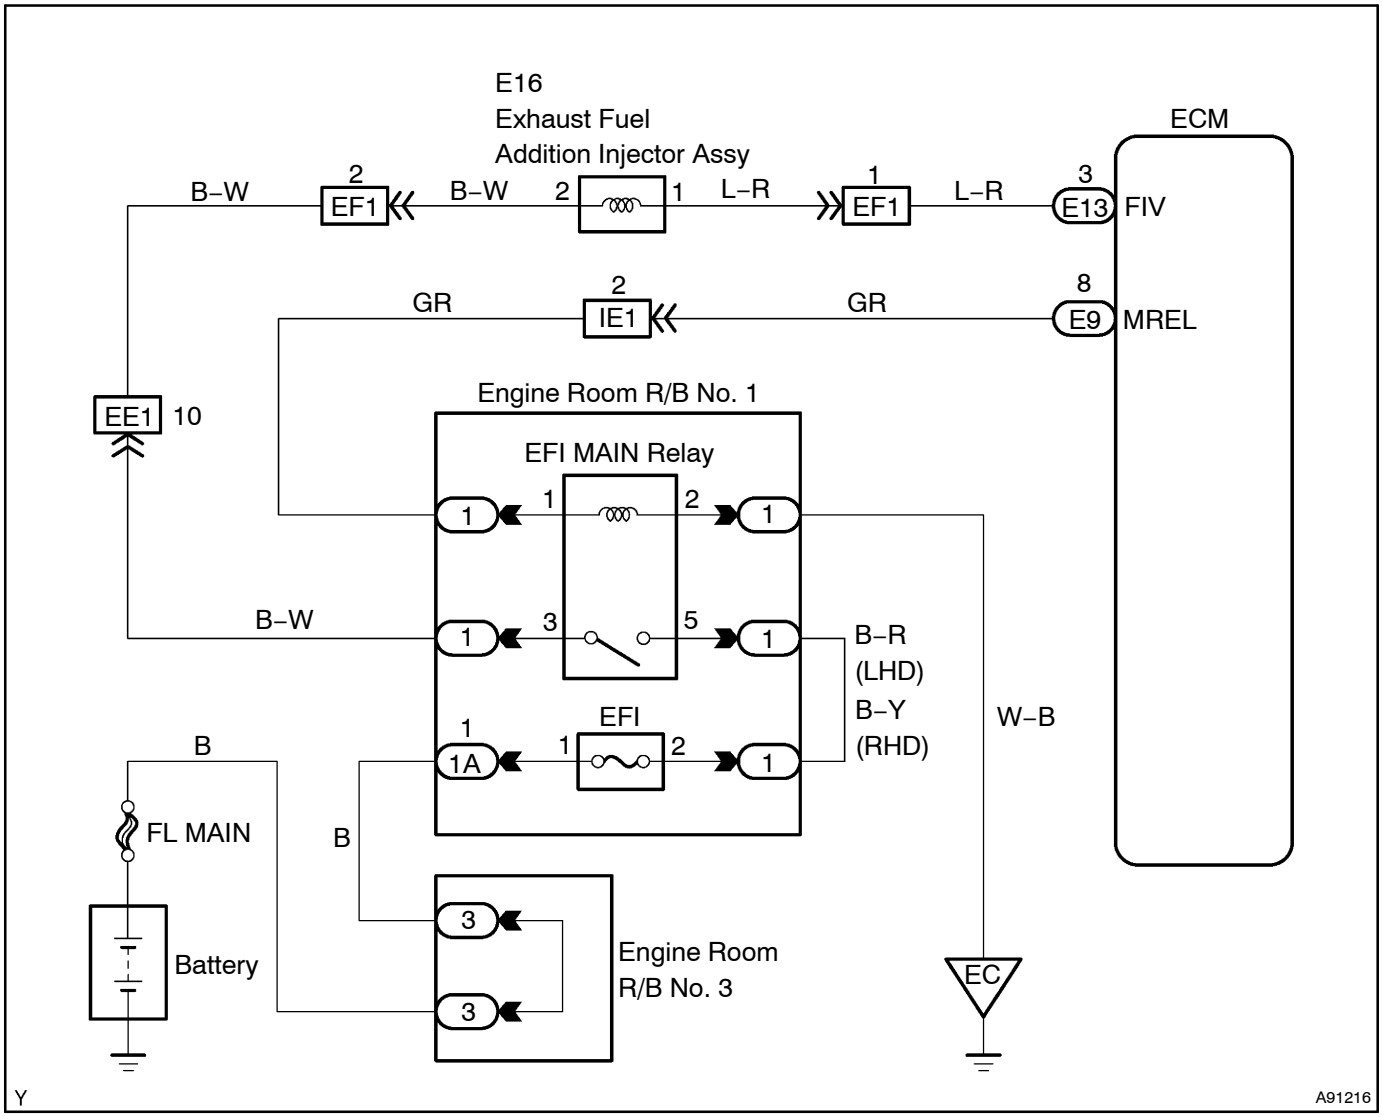
DTC No.	DTC Detection Condition	Trouble Area
P2047	• Open or short in EDU or injector circuit There is no injection confirmation (FIVM) signal from monitor circuit to CPU, despite the CPU sending injection command (FIV) signal to the command circuit (1 trip detection logic)	• Open in exhaust fuel addition injector circuit • Exhaust fuel addition injector • ECM

HINT:



DTC P1386 (injector for exhaust fuel addition) will be present if there is an open malfunction in the exhaust fuel addition injector circuit.

MONITOR DESCRIPTION



In order to detect abnormality in the fuel addition injector, an internal CPU of the ECM monitors injection command (FIV) signals and injection confirmation (FIVM) signals. The FIV signal is sent from the CPU to the (exhaust) fuel addition injector via a dive circuit inside the ECM. The FIVM signal, originally it is output current from the internal drive circuit of the ECM, is transmitted to the CPU via a monitor circuit. By receiving the FIVM signal, the ECM judges that the current is truly applied to the (exhaust) fuel addition injector.

This DTC will be set if the ECM judges that the number of signals of the FIV and the FIVM are inconsistent.

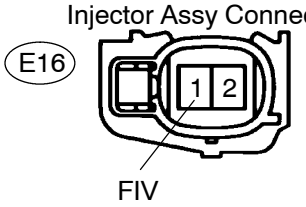
Fuel Addition Injector System:

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.



1	**INSPECT EXHAUST FUEL ADDITION INJECTOR ASSY(RESISTANCE) (See page 12–7)**

(a) Disconnect the E16 exhaust fuel addition injector assy connector.
(b) Disconnect the E13 ECM connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
FIV (E13–3) – (E16–1)	Below 1 Ω
E2 (E13–28) – (E16–2)	

Standard (Check for short):

Tester Connection	Specified Condition
FIV (E13–3) or (E16–1) – Body ground	10 kΩ or higher

(d) Reconnect the exhaust fuel addition injector assy connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

DTC	P2120	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D” CIRCUIT

DTC	P2122	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D” CIRCUIT LOW INPUT

DTC	P2123	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D” CIRCUIT HIGH INPUT

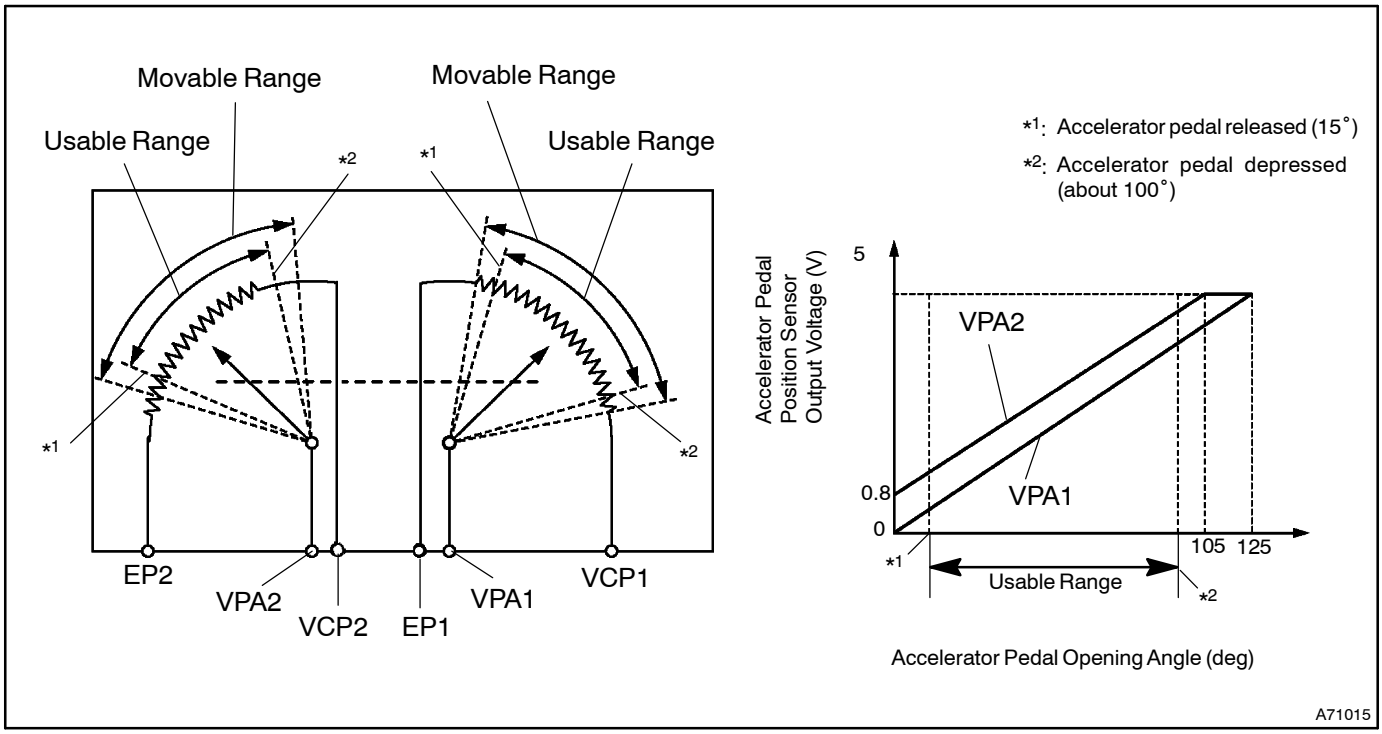
DTC	P2125	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”E” CIRCUIT

DTC	P2127	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”E” CIRCUIT LOW INPUT

DTC	P2128	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”E” CIRCUIT HIGH INPUT

DTC	P2138	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”D”/”E” VOLTAGE CORRELATION

HINT:
This is the procedure of troubleshooting the accelerator pedal position sensor.



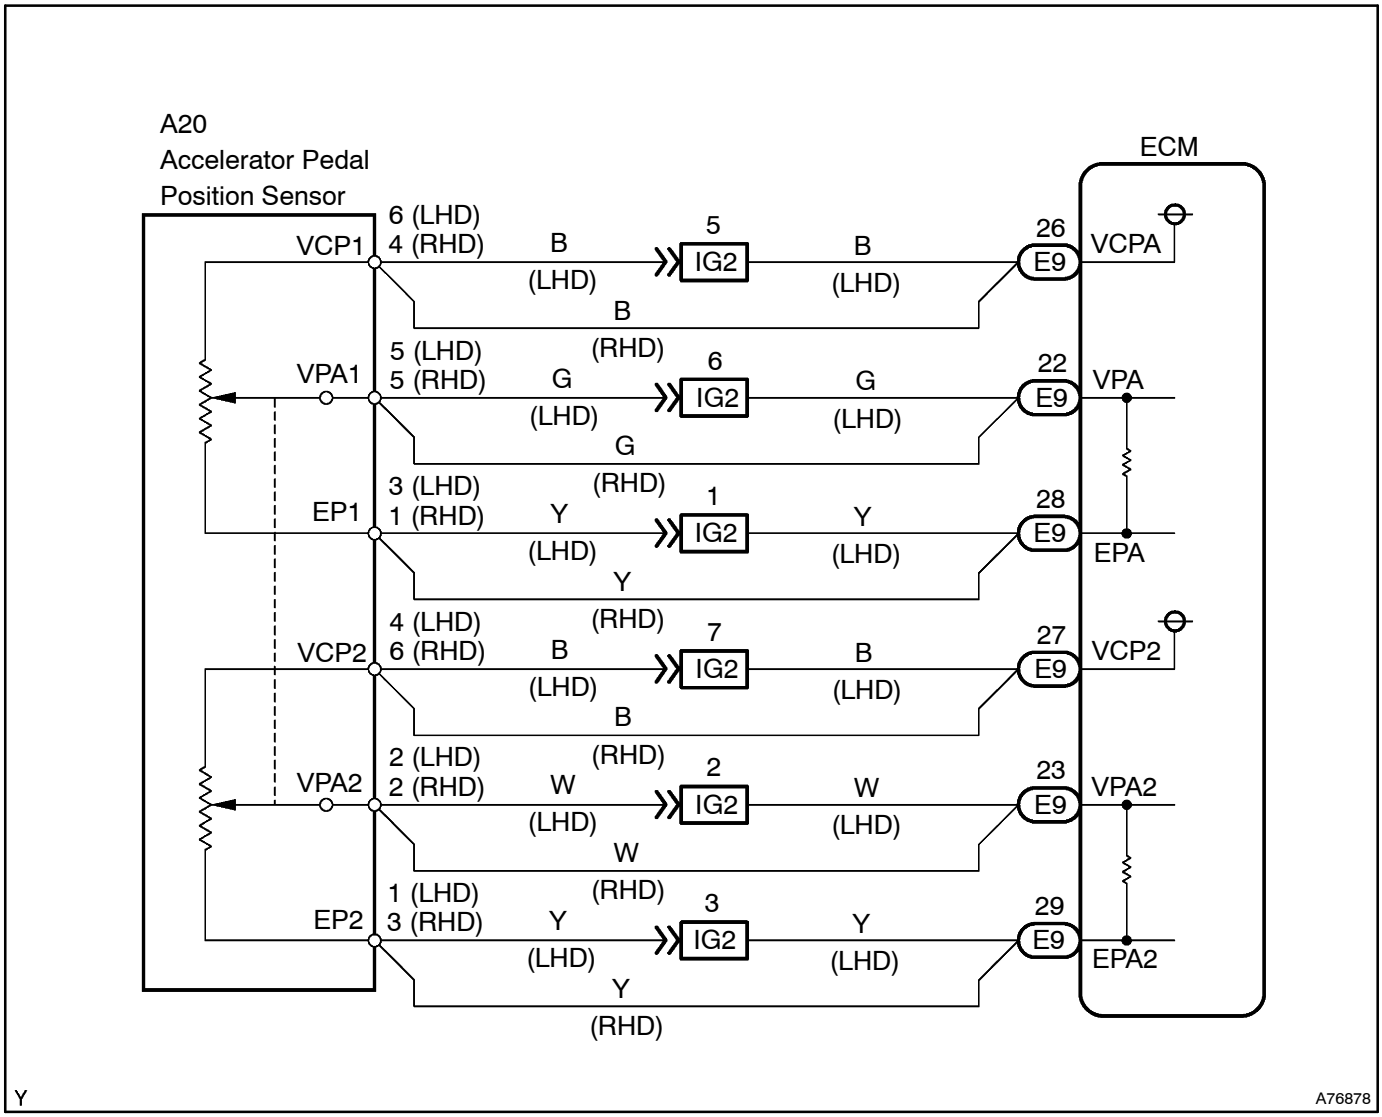
CIRCUIT DESCRIPTION

HINT:

This electrical throttle system does not use a throttle cable.

The accelerator pedal position sensor is mounted on the accelerator pedal bracket and it has the 2 sensors to detect the accelerator position and malfunction of the accelerator position sensor itself.

In the accelerator pedal position sensor, the voltage applied to pedal terminals VPA1 and VPA2 of the ECM changes between 0 V and 5 V in proportion to the opening angle of the accelerator pedal. The VPA1 is a signal to indicate the actual accelerator pedal opening angle which is used for the engine control, and the VPA2 is a signal to indicate the information about the opening angle which is used for detecting malfunction. The ECM judges the current accelerator pedal opening angle with the signals from pedal terminals VPA1 and VPA2, and the ECM controls the throttle motor based on these signals.

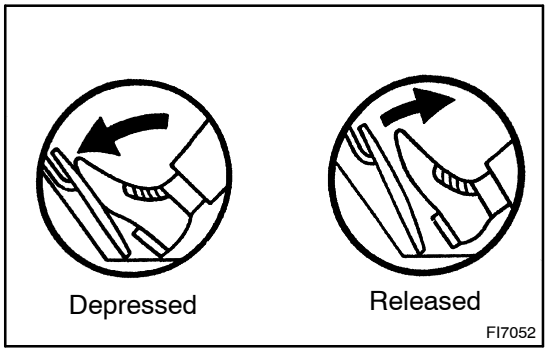


DTC No.	DTC Detection Condition	Trouble Area
P2120	Condition (a) continues for 0.5 second or more: VPA is less than 0.2 V for when accelerator pedal is fully released, or VPA is more than 4.8 V	• Open or short in accelerator pedal position sensor circuit • Accelerator pedal position sensor • ECM
P2122	VPA is less than 0.2 V for 0.5 second or more when accelerator pedal is fully released	
P2123	VPA is more than 4.8 V for 2.0 seconds or more	
P2125	Condition (a) continues for 0.5 second or more: (a) VPA2 less than 0.5 V when accelerator pedal is fully released, or VPA2 is more than 4.8 V when VPA is between 0.2 V and 3.45 V	
P2127	VPA2 less than 0.5 V for 0.5 second or more when accelerator pedal is fully released	
P2128	VPA2 is more than 4.8 V for 2.0 seconds or more when VPA between 0.2 V and 3.45 V	
P2138	Condition (a) or (b) continues for 2.0 seconds or more: (a) Difference between VPA and VPA2 is less than 0.02 V (b) VPA is less than 0.2 V and VPA2 is less than 0.5 V	

HINT:
After confirming DTC P2120, P2122, P2123, P2125, P2127, P2128 and P2138, check the accelerator pedal position sensor output voltage using the hand–held tester.

Reference:

Trouble Area	Accelerator Pedal Position (Voltage Output)			
	Accelerator Pedal Released		Accelerator Pedal Depressed	
	ACCEL POS #1	ACCEL POS #2	ACCEL POS #1	ACCEL POS #2
Normal condition	0.5 to 1.1 V	1.2 to 2.0 V	2.6 to 4.5 V	3.4 to 5.3 V
VCP circuit open	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V
VPA circuit open or ground short	0 to 0.2 V	1.2 to 2.0 V	0 to 0.2 V	3.4 to 5.3 V
VPA2 circuit open or ground short	0.5 to 1.1 V	0 to 0.2 V	2.6 to 4.5 V	0 to 0.2 V
EP circuit open	4.5 to 5.5 V	4.5 to 5.5 V	4.5 to 5.5 V	4.5 to 5.5 V



WIRING DIAGRAM

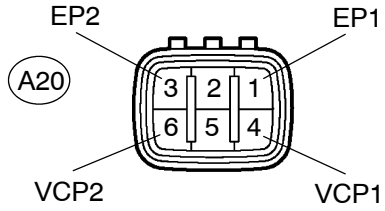
INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 READ VALUE OF HAND–HELD TESTER(ACCEL POS #1 AND ACCEL POS #2)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ETCS / ACCEL POS #1 and ACCEL POS #2” and read its value displayed on the hand–held tester.

Standard:



Accelerator Pedal	ACCEL POS #1	ACCEL POS #2
Released	0.5 to 1.1 V	1.2 to 2.0 V
Depressed	2.6 to 4.5 V	3.4 to 5.3 V

OK → **REPLACE ECM (See page 10–29)**

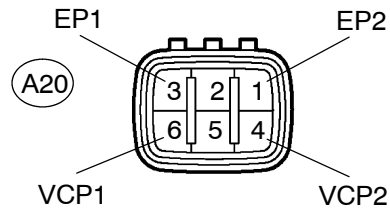
NG

2 INSPECT ACCELERATOR PEDAL ASSY(ACCELERATOR PEDAL POSITION SENSOR)

Component Side (RHD):

(a) Disconnect the A20 accelerator pedal position sensor connector.
(b) Measure the resistance between each terminal.

Standard (RHD):

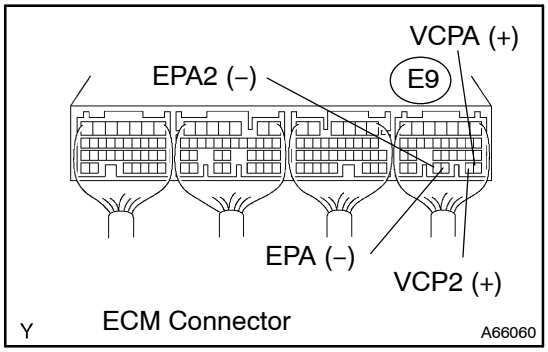


Tester Connection	Specified Condition
EP1 (1) – VCP1 (4)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (3) – VCP2 (6)	

Standard (LHD):

Tester Connection	Specified Condition
EP1 (3) – VCP1 (6)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (1) – VCP2 (4)	

(c) Reconnect the accelerator pedal position sensor connector.



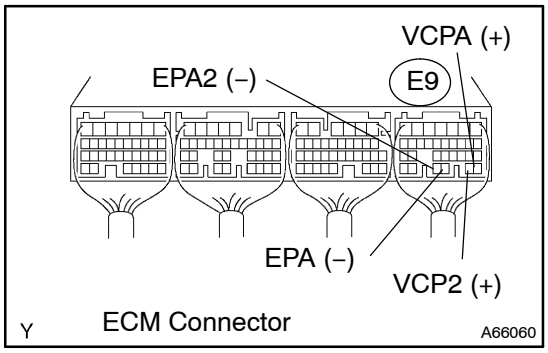
Component Side (LHD):

NG → **REPLACE ACCELERATOR PEDAL ASSY (See page 10–66 of Pub. No. RM1018E AVENSIS REPAIR MANUAL)**

OK

3 INSPECT ECM(VCPA AND VCP2 VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E9 ECM connector.



Standard:

Tester Connection	Specified Condition
VCPA (E9–26) – EPA (E9–28)	4.5 to 5.5 V
VCP2 (E9–27) – EPA2 (E9–29)	

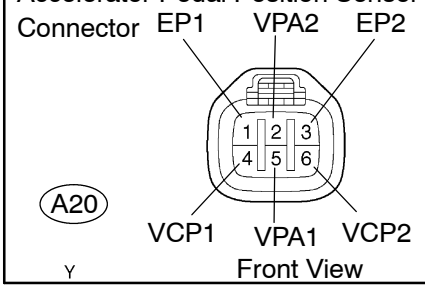
NG → **REPLACE ECM (See page 10–29)**

OK

4 INSPECT ECM(VPA AND VPA2 VOLTAGE)

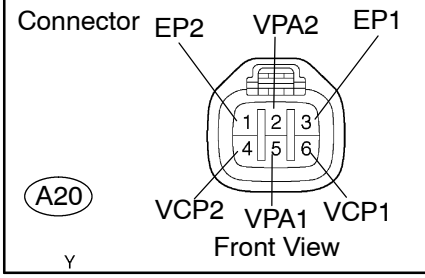
(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E9 ECM connector.

Standard:

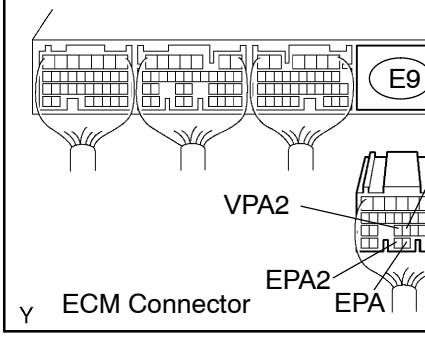


Accelerator Pedal Position	Tester Connection	Specified Condition
Released	VPA (E9–22) – EPA (E9–28)	0.5 to 1.1 V
Depressed		2.6 to 4.5 V
Released	VPA2 (E9–23) – EPA2 (E9–29)	1.2 to 2.0 V
Depressed		3.4 to 5.3 V

OK → **REPLACE ECM (See page 10–29)**



NG



5 CHECK HARNESS AND CONNECTOR(ACCELERATOR PEDAL POSITION SENSOR – ECM)

Wire Harness Side (RHD):

Wire Harness Side (LHD):

(a) Disconnect the A20 accelerator pedal position sensor connector.

(b) Disconnect the E9 ECM connector.

(c) Check the resistance between the wire harness side connectors.

Standard (Check for open) (RHD):

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–1) – EPA (E9–28)	
VCP1 (A20–4) – VCPA (E9–26)	
VPA2 (A20–2) – VPA2 (E9–23)	
EP2 (A20–3) – EPA2 (E9–29)	
VCP2 (A20–6) – VCP2 (E9–27)	

Standard (Check for open) (LHD):

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–3) – EPA (E9–28)	
VCP1 (A20–6) – VCPA (E9–26)	
VPA2 (A20–2) – VPA2 (E9–23)	
EP2 (A20–1) – EPA2 (E9–29)	
VCP2 (A20–4) – VCP2 (E9–27)	

Standard (Check for short) (RHD):

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–1) or EPA (E9–28) – Body ground	
VCP1 (A20–4) or VCPA (E9–26) – Body ground	
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	
EP2 (A20–3) or EPA2 (E9–29) – Body ground	
VCP2 (A20–6) or VCP2 (E9–27) – Body ground	

Standard (Check for short) (LHD):

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–3) or EPA (E9–28) – Body ground	
VCP1 (A20–6) or VCPA (E9–26) – Body ground	
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	
EP2 (A20–1) or EPA2 (E9–29) – Body ground	
VCP2 (A20–4) or VCP2 (E9–27) – Body ground	

(d) Reconnect the accelerator pedal position sensor connector.

(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

DTC	P2121	THROTTLE/PEDAL POSITION SENSOR/ SWITCH ”D” CIRCUIT RANGE/ PERFORMANCE

CIRCUIT DESCRIPTION

Refer to DTC P2120 on page 05–473.

DTC No.	DTC Detection Condition	Trouble Area
P2121	Conditions (a) and (b) continue for 0.5 second: (a) Difference between VPA and VPA2 exceeds the threshold (b) IDL is OFF	• Accelerator pedal position sensor circuit • Accelerator pedal position sensor • ECM

HINT:

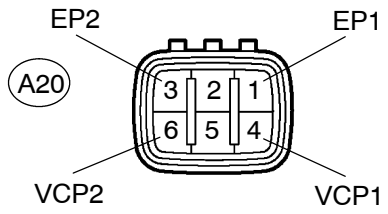
After confirming DTC P2121, check the accelerator pedal position sensor output voltage using the hand–held tester.

Reference:

Trouble Area	Accelerator Pedal Position (Voltage Output)			
	Accelerator Pedal Released		Accelerator Pedal Depressed	
	ACCEL POS #1	ACCEL POS #2	ACCEL POS #1	ACCEL POS #2
Normal condition	0.5 to 1.1 V	1.2 to 2.0 V	2.6 to 4.5 V	3.4 to 5.3 V
VCP circuit open	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V
VPA circuit open or ground short	0 to 0.2 V	1.2 to 2.0 V	0 to 0.2 V	3.4 to 5.3 V
VPA2 circuit open or ground short	0.5 to 1.1 V	0 to 0.2 V	2.6 to 4.5 V	0 to 0.2 V
EP circuit open	4.5 to 5.5 V	4.5 to 5.5 V	4.5 to 5.5 V	4.5 to 5.5 V

WIRING DIAGRAM

Refer to DTC P2120 on page 05–473.

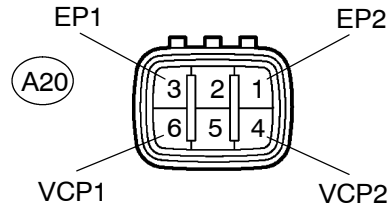


INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 INSPECT ACCELERATOR PEDAL ASSY(ACCELERATOR PEDAL POSITION SENSOR)



Component Side (RHD):

Accelerator Pedal Position Sensor

A84814

Component Side (LHD):

Accelerator Pedal Position Sensor

A84814

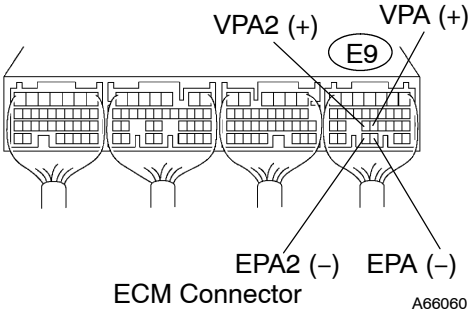
(a) Disconnect the A20 accelerator pedal position sensor connector.

(b) Measure the resistance between each terminal.

Standard (RHD):

Tester Connection	Specified Condition
EP1 (1) – VCP1 (4)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (3) – VCP2 (6)	

Standard (LHD):



Tester Connection	Specified Condition
EP1 (3) – VCP1 (6)	2.25 to 4.75 kΩ at 20°C (68°F)
EP2 (1) – VCP2 (4)	

(c) Reconnect the accelerator pedal position sensor connector.

NG → **REPLACE ACCELERATOR PEDAL ASSY (See page 10–66 of Pub. No. 1018E AVENSIS REPAIR MANUAL)**

OK

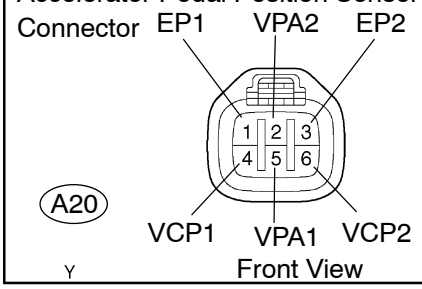
2 INSPECT ECM(VPA AND VPA2 VOLTAGE)

ECM Connector

A66060

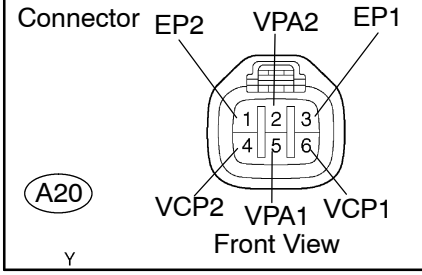
(a) Turn the ignition switch to ON.

(b) Measure the voltage between the specified terminals of the E9 ECM connector.

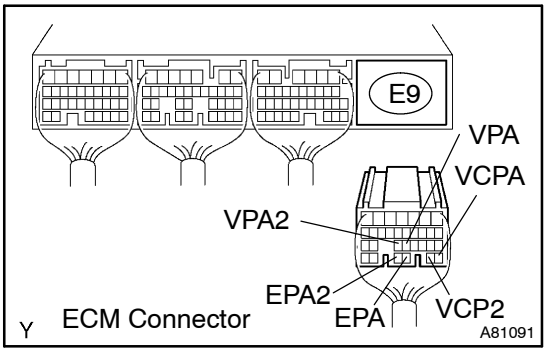


Accelerator Pedal Position	Tester Connection	Specified Condition
Released	VPA (E9–22) – EPA (E9–28)	0.5 to 1.1 V
Depressed		2.6 to 4.5 V
Released	VPA2 (E9–23) – EPA2 (E9–29)	1.2 to 2.0 V
Depressed		3.4 to 5.3 V

OK → **REPLACE ECM (See page 10–29)**



NG



3 CHECK HARNESS AND CONNECTOR(ACCELERATOR PEDAL POSITION SENSOR – ECM)

Wire Harness Side (RHD):

Wire Harness Side (LHD):

(a) Disconnect the A20 accelerator pedal position sensor connector.

(b) Disconnect the E9 ECM connector.

(c) Check the resistance between the wire harness side connectors.

Standard (Check for open) (RHD):

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–1) – EPA (E9–28)	
VCP1 (A20–4) – VCPA (E9–26)	
VPA2 (A20–2) – VPA2 (E9–23)	
EP2 (A20–3) – EPA2 (E9–29)	
VCP2 (A20–6) – VCP2 (E9–27)	

Standard (Check for open) (LHD):

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–3) – EPA (E9–28)	
VCP1 (A20–6) – VCPA (E9–26)	
VPA2 (A20–2) – VPA2 (E9–23)	
EP2 (A20–1) – EPA2 (E9–29)	
VCP2 (A20–4) – VCP2 (E9–27)	

Standard (Check for short) (RHD):

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–1) or EPA (E9–28) – Body ground	
VCP1 (A20–4) or VCPA (E9–26) – Body ground	
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	
EP2 (A20–3) or EPA2 (E9–29) – Body ground	
VCP2 (A20–6) or VCP2 (E9–27) – Body ground	

Standard (Check for short) (LHD):

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–3) or EPA (E9–28) – Body ground	
VCP1 (A20–6) or VCPA (E9–26) – Body ground	
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	
EP2 (A20–1) or EPA2 (E9–29) – Body ground	
VCP2 (A20–4) or VCP2 (E9–27) – Body ground	

(d) Reconnect the accelerator pedal position sensor connector.

(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ACCELERATOR PEDAL ASSY
(See page 10–66 of Pub. No. RM1018E AVENSIS REPAIR MANUAL)

DTC	P2226	BAROMETRIC PRESSURE CIRCUIT

DTC	P2228	BAROMETRIC PRESSURE CIRCUIT LOW INPUT

DTC	P2229	BAROMETRIC PRESSURE CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

To detect atmospheric pressure, the atmospheric pressure sensor built in the ECM is used in the common rail system. Following the changes in the atmospheric pressure, the ECM corrects the fuel injection volume, timing and duration, and adjusts the common rail internal fuel pressure for optimizing combustion.

DTC No.	DTC Detection Condition	Trouble Area
P2226 P2228 P2229	Atmospheric pressure sensor malfunction (1 trip detection logic)	• ECM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

REPLACE ECM (See page 10–29)

DTC	P2227	BAROMETRIC PRESSURE CIRCUIT RANGE/PERFORMANCE

CIRCUIT DESCRIPTION

To detect atmospheric pressure, the atmospheric pressure sensor built in the ECM is used in the common rail system. Following the changes in the atmospheric pressure, the ECM corrects the fuel injection volume, timing and duration, and adjusts the common rail internal fuel pressure for optimizing combustion.

DTC No.	DTC Detection Condition	Trouble Area
P2227	Atmospheric pressure sensor malfunction (2 trip detection logic)	• ECM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT(IN ADDITION TO DTC P2227)

(a) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
P2227 and other DTCs	A
P2227	B

HINT:

If any other codes besides P2227 are output, perform troubleshooting for those DTCs first.

B → **REPLACE ECM (See page 10–29)**

A

GO TO RELEVANT DTC CHART (See page 05–299)

DTC	P2237	OXYGEN (A/F) SENSOR PUMPING CURRENT CIRCUIT/OPEN (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2238	OXYGEN (A/F)SENSOR PUMPING CURRENT CIRCUIT LOW (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2239	OXYGEN (A/F) SENSOR PUMPING CURRENT CIRCUIT HIGH (FOR A/F SENSOR)(BANK 1 SENSOR 1)

HINT:

- For more information on the A/F sensor and TOYOTA D–CAT (*1) system, see page 05–255.
- If P2237, P2238 and/or P2239 is present, refer to the diagnostic trouble codes (DTCs) table for TOYOTA D–CAT system on page 05–255.
- These DTCs are recorded when A/F sensor has malfunction, although the caption is the oxygen sensor.

*1: Diesel Clean Advanced Technology.

CIRCUIT DESCRIPTION

Refer to DTC P0031 on page 05–305.

DTC No.	DTC Detecting Condition	Trouble Area
P2237	ECM internal error (10 seconds) (1 trip detection logic)	• ECM
P2238	• A/F sensor circuit low (bank 1 sensor 1) AF+ is less than 0.4 V for 5.0 seconds or more (1 trip detection logic)	Main trouble area: Open in A/F sensor circuit • Open or short in A/F sensor circuit • A/F sensor • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuit • ECM
P2239	• A/F sensor circuit high (bank 1 sensor 1) AF+ is more than 4.4 V for 5.0 seconds or more (1 trip detection logic)	Main trouble area: Short in A/F sensor circuit • Open or short in A/F sensor circuit • A/F sensor • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuit • ECM

MONITOR DESCRIPTION

The A/F sensor has a characteristic that it varies its voltage output in proportion to the air–fuel ratio. If impedance (alternating current resistance) or voltage output of the sensor extraordinarily deviates from the standard range, the ECM interprets this as an open or short malfunction of the A/F sensor circuit.

WIRING DIAGRAM

Refer to DTC P0031 on page 05–305.

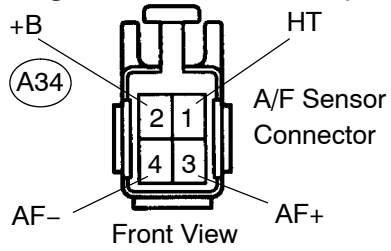
INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK OTHER DTC(IN ADDITION TO P2237)

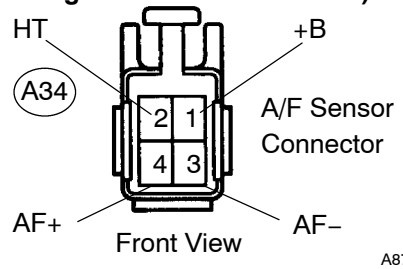
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.

Result:



Display (DTC output)	Proceed to
P2237 and P2238 and/or P2239	A
P2237	B

B → **REPLACE ECM (See page 10–29)**



A

2 INSPECT AIR FUEL RATIO SENSOR(RESISTANCE)

Component Side
(w/ Headlight Beam Level Control):

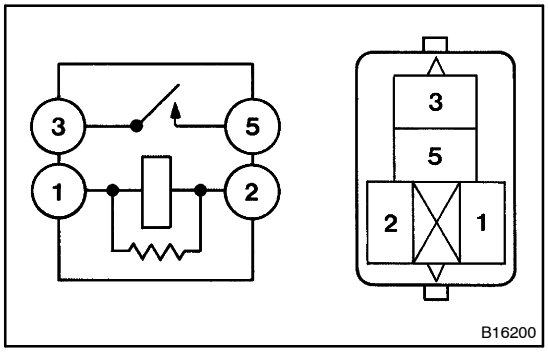
Component Side
(w/o Headlight Beam Level Control):

(a) Disconnect the A34 A/F sensor connector.
(b) Measure the resistance between the terminals of the A/F sensor.

Resistance (w/ Headlight beam level control):

Tester Connection	Specified Condition
HT (1) – +B (2)	0.86 to 1.1 Ω at 20°C (68°F)

Resistance (w/o Headlight beam level control):



Tester Connection	Specified Condition
HT (2) – +B (1)	0.86 to 1.1 Ω at 20°C (68°F)

(c) Reconnect the A/F sensor connector.

NG → **REPLACE AIR FUEL RATIO SENSOR**

OK

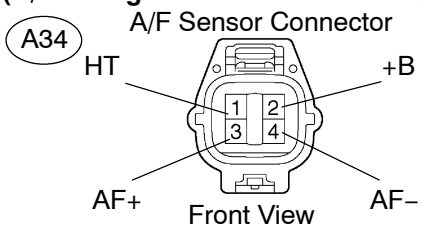
3	INSPECT AIR FUEL RATIO SENSOR HEATER RELAY

(a) Remove the A/F sensor heater relay.

(b) Check for continuity in the A/F sensor heater relay.

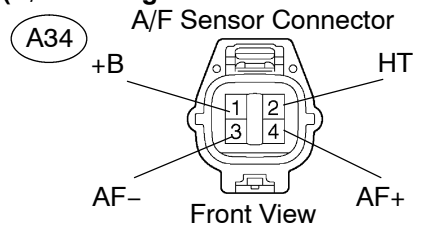
Standard:

Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage to terminals 1 and 2)

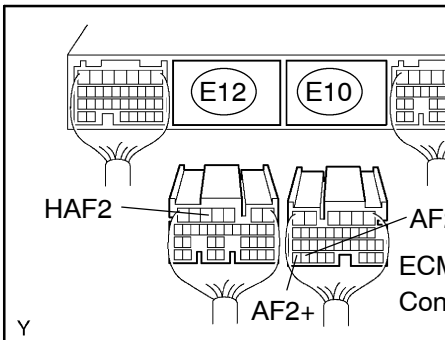


(c) Reinstall the A/F sensor heater relay.

NG → **REPLACE AIR FUEL RATIO SENSOR HEATER RELAY**



OK



4 CHECK HARNESS AND CONNECTOR(A/F SENSOR – ECM)

Wire Harness Side
(w/ Headlight Beam Level Control):

Wire Harness Side
(w/o Headlight Beam Level Control):

(a) Disconnect the A34 A/F sensor connector.
(b) Disconnect the E10 and E12 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

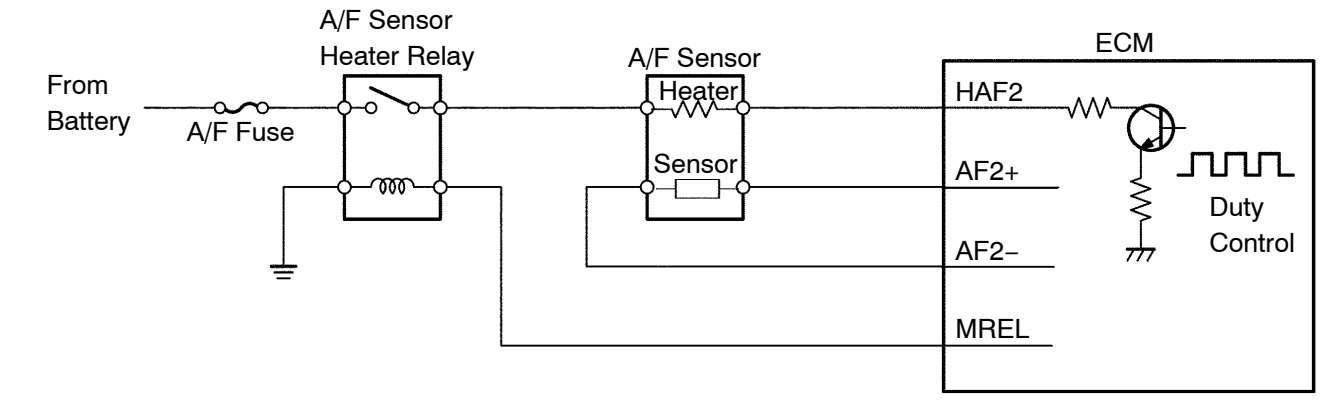
Standard (Check for open)
(w/ Headlight beam level control):

Tester Connection	Specified Condition
AF+ (A34–3) – AF2+ (E10–35)	Below 1 Ω
AF– (A34–4) – AF2– (E10–34)	
HT (A34–1) – HAF2 (E12–5)	

Standard (Check for open)
(w/o Headlight beam level control):

Tester Connection	Specified Condition
AF+ (A34–4) – AF2+ (E10–35)	Below 1 Ω
AF– (A34–3) – AF2– (E10–34)	
HT (A34–2) – HAF2 (E12–5)	

Standard (Check for short)
(w/ Headlight beam level control):



Tester Connection	Specified Condition
AF+ (A34–3) or AF2+ (E10–35) – Body ground	10 kΩ or higher
AF– (A34–4) or AF2– (E10–34) – Body ground	
HT (A34–1) or HAF2 (E12–5) – Body ground	

Standard (Check for short)
(w/o Headlight beam level control):

Tester Connection	Specified Condition
AF+ (A34–4) or AF2+ (E10–35) – Body ground	10 kΩ or higher
AF– (A34–3) or AF2– (E10–34) – Body ground	
HT (A34–2) or HAF2 (E12–5) – Body ground	

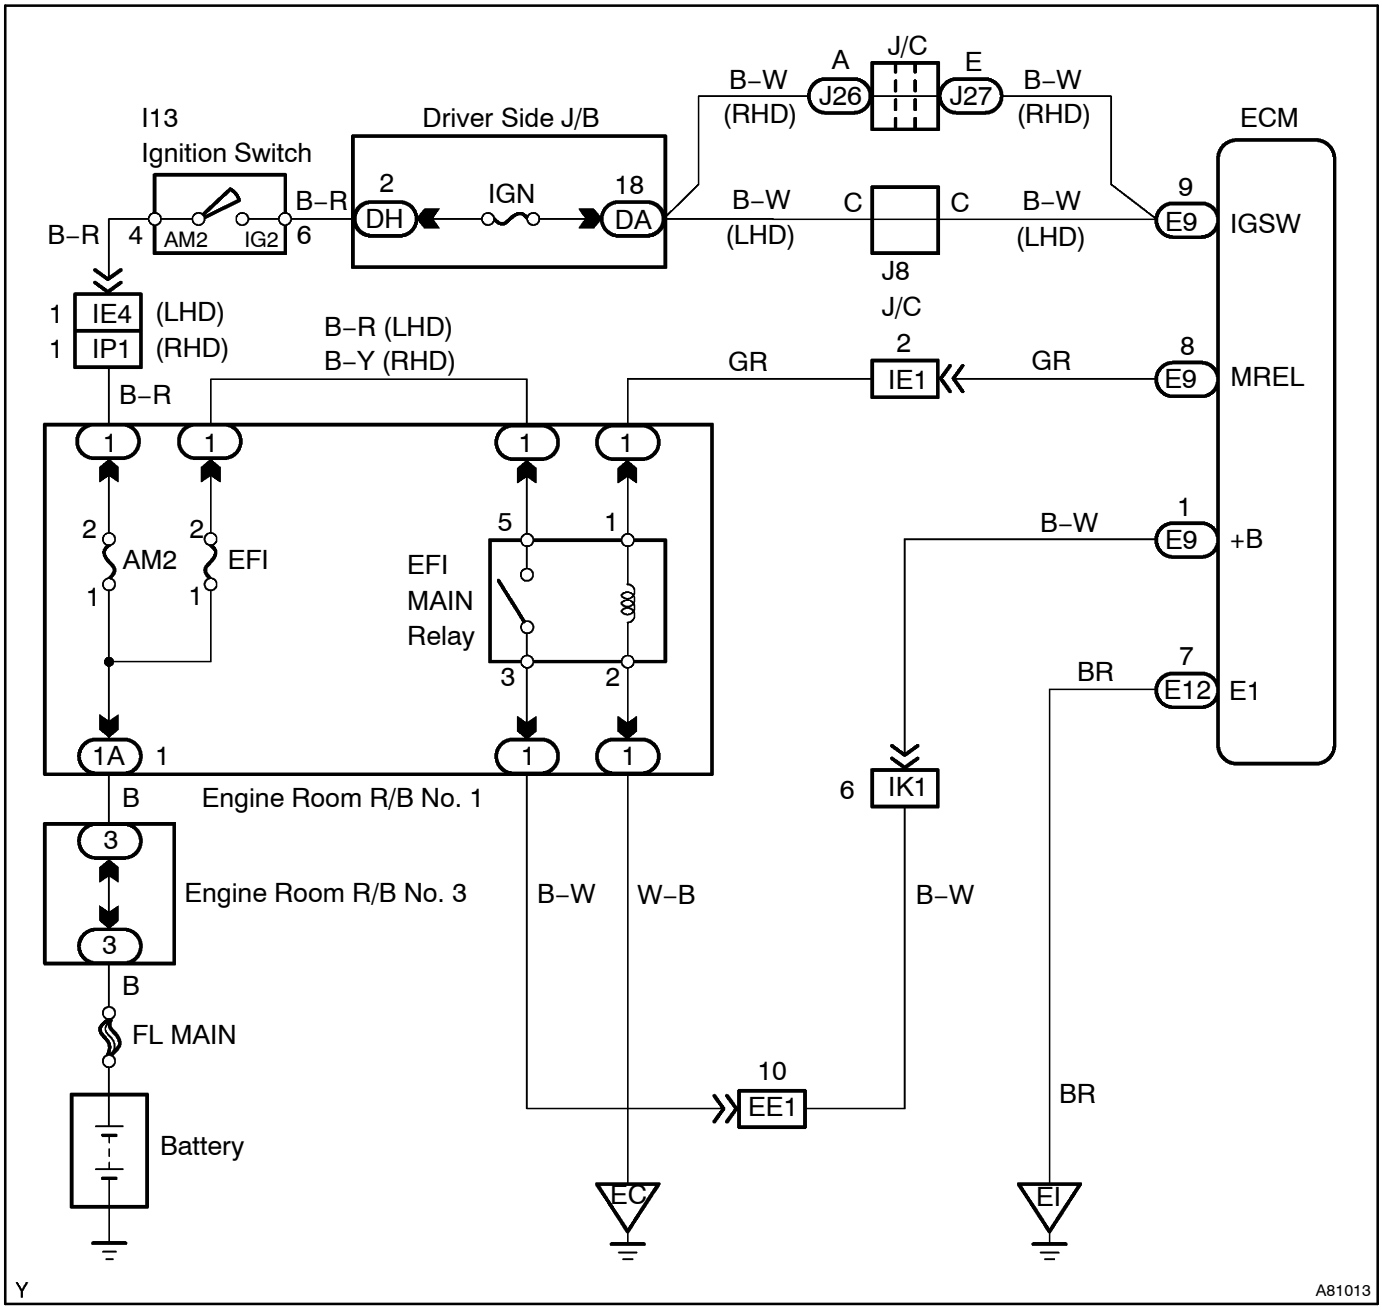
(d) Reconnect the A/F sensor connector.
(e) Reconnect the ECM connectors.

Reference:

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

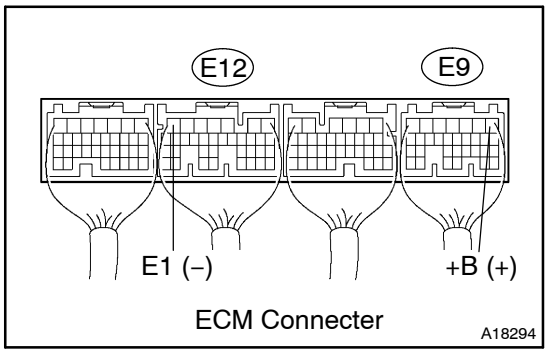
REPLACE ECM (See page 10–29)



ECM POWER SOURCE CIRCUIT

CIRCUIT DESCRIPTION

When the ignition switch is turned to ON, the positive battery voltage is applied to terminal IGSW of the ECM and the EFI MAIN relay control circuit in the ECM sends a signal to terminal MREL of the ECM switching on the EFI MAIN relay.

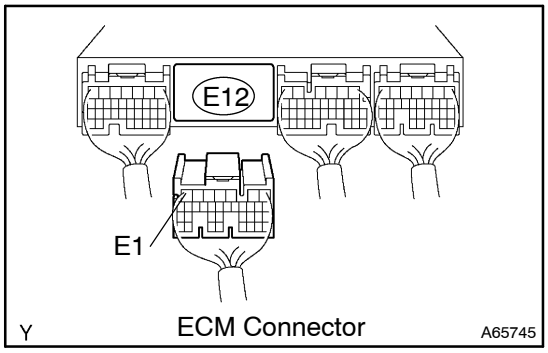


This signal causes current to flow to the coil, closing the contacts of the EFI MAIN relay and supplying power to terminal +B of the ECM.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT ECM(+B VOLTAGE)



(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E9 and E12 ECM connectors.
Standard:

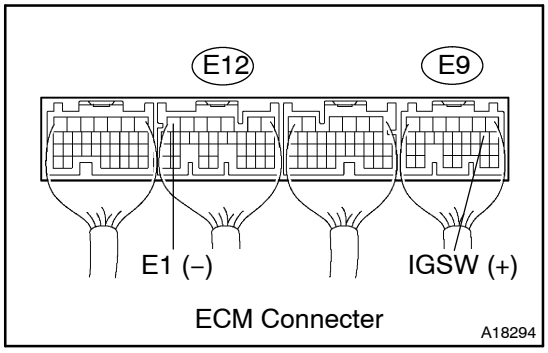
Tester Connection	Specified Condition
+B (E9–1) – E1 (E12–7)	9 to 14 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN PROBLEM SYMPTOMS TABLE (See page 05–282)**

NG

2 CHECK HARNESS AND CONNECTOR(ECM – BODY GROUND)

(a) Disconnect the E12 ECM connector.
(b) Check the resistance between the wire harness side connectors.
Standard (Check for open):



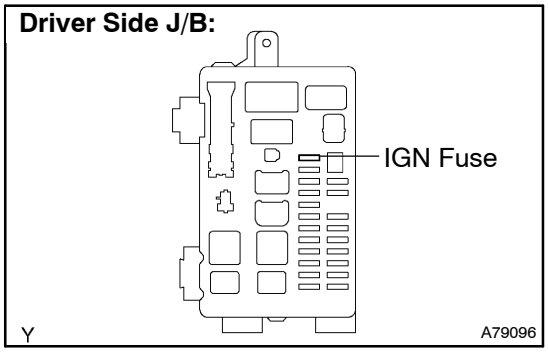
Tester Connection	Specified Condition
E1 (E12–7) – Body ground	Below 1 Ω

(c) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT ECM(IGSW VOLTAGE)



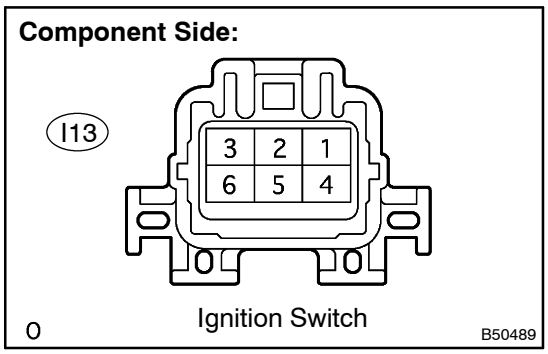
(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E9 and E12 ECM connectors.
Standard:

Tester Connection	Specified Condition
IGSW (E9–9) – E1 (E12–7)	9 to 14 V

OK → **Go to step 6**

NG

4 INSPECT FUSE(IGN FUSE)



(a) Remove the IGN fuse from the driver side J/B.
(b) Check for continuity in the IGN fuse.
Standard: Continuity
(c) Reinstall the IG2 fuse.

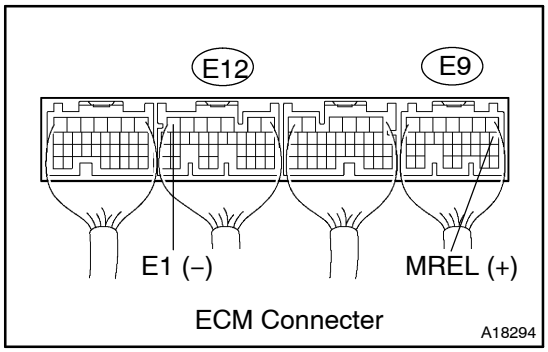
NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED TO FUSE**

OK

5 INSPECT IGNITION OR STARTER SWITCH ASSY

(a) Disconnect the I13 ignition switch connector.
(b) Check for continuity between the connector terminals shown in the chart below.
Standard:

Switch	Tester Connection	Specified Condition
LOCK	All Terminals	No continuity
ACC	1–3	Continuity
ON	1–2, 1–3, 2–3, 5–6	Continuity
START	4–5, 4–6, 5–6, 1–2	Continuity



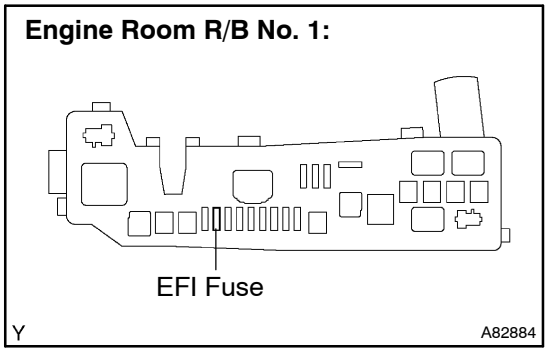
(c) Reconnect the ignition switch connector.

NG → **REPLACE IGNITION OR STARTER SWITCH ASSY**

OK

CHECK AND REPAIR HARNESS AND CONNECTOR (BATTERY – IGNITION SWITCH, IGNITION SWITCH – ECM)

6 INSPECT ECM(MREL VOLTAGE)



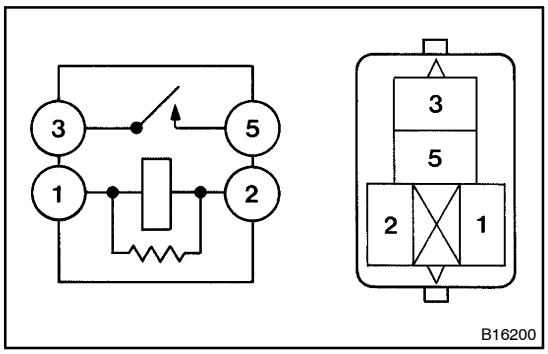
(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E9 and E12 ECM connectors.
Standard:

Tester Connection	Specified Condition
MREL (E9–8) – E1 (E12–7)	9 to 14 V

NG → **REPLACE ECM (See page 10–29)**

OK

7 INSPECT FUSE(EFI FUSE)



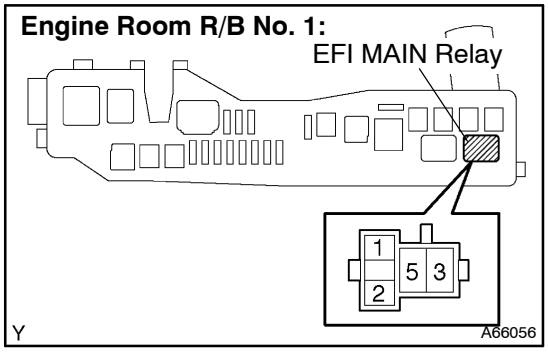
(a) Remove the EFI fuse from the engine room R/B No. 1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity
(c) Reinstall the EFI fuse.

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED TO FUSE**

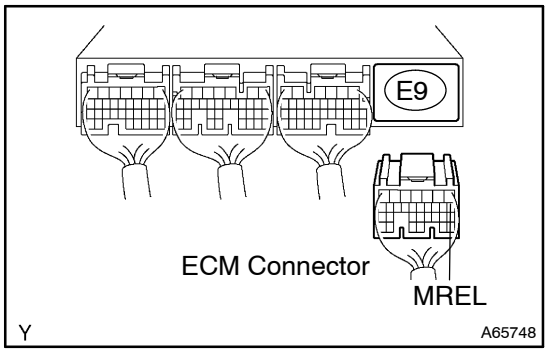
OK

8 INSPECT EFI MAIN RELAY

(a) Remove the EFI MAIN relay from the engine room R/B No. 1.
(b) Check for continuity in the EFI MAIN relay.
Standard:



Tester Connection	Specified Condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage to terminals 1 and 2)



(c) Reinstall the EFI MAIN relay.

NG → **REPLACE EFI MAIN RELAY**

OK

9	CHECK HARNESS AND CONNECTOR(EFI MAIN RELAY – ECM, EFI MAIN RELAY – BODY GROUND)

(a) Check the harness and connector between the EFI MAIN relay and ECM.
  (1) Remove the EFI MAIN relay from the engine room R/B No. 1.
  (2) Disconnect the E9 ECM connector.
  (3) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
EFI MAIN relay (1) – MREL (E9–8)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
EFI MAIN relay (1) or MREL (E9–8) – Body ground	10 kΩ or higher

  (4) Reinstall the EFI MAIN relay.
  (5) Reconnect the ECM connector.

(b) Check the harness and connector between the EFI MAIN relay and body ground.
  (1) Remove the EFI MAIN relay from the engine room R/B No. 1.
  (2) Check the resistance between the wire harness side connector and body ground.

Standard (Check for open):

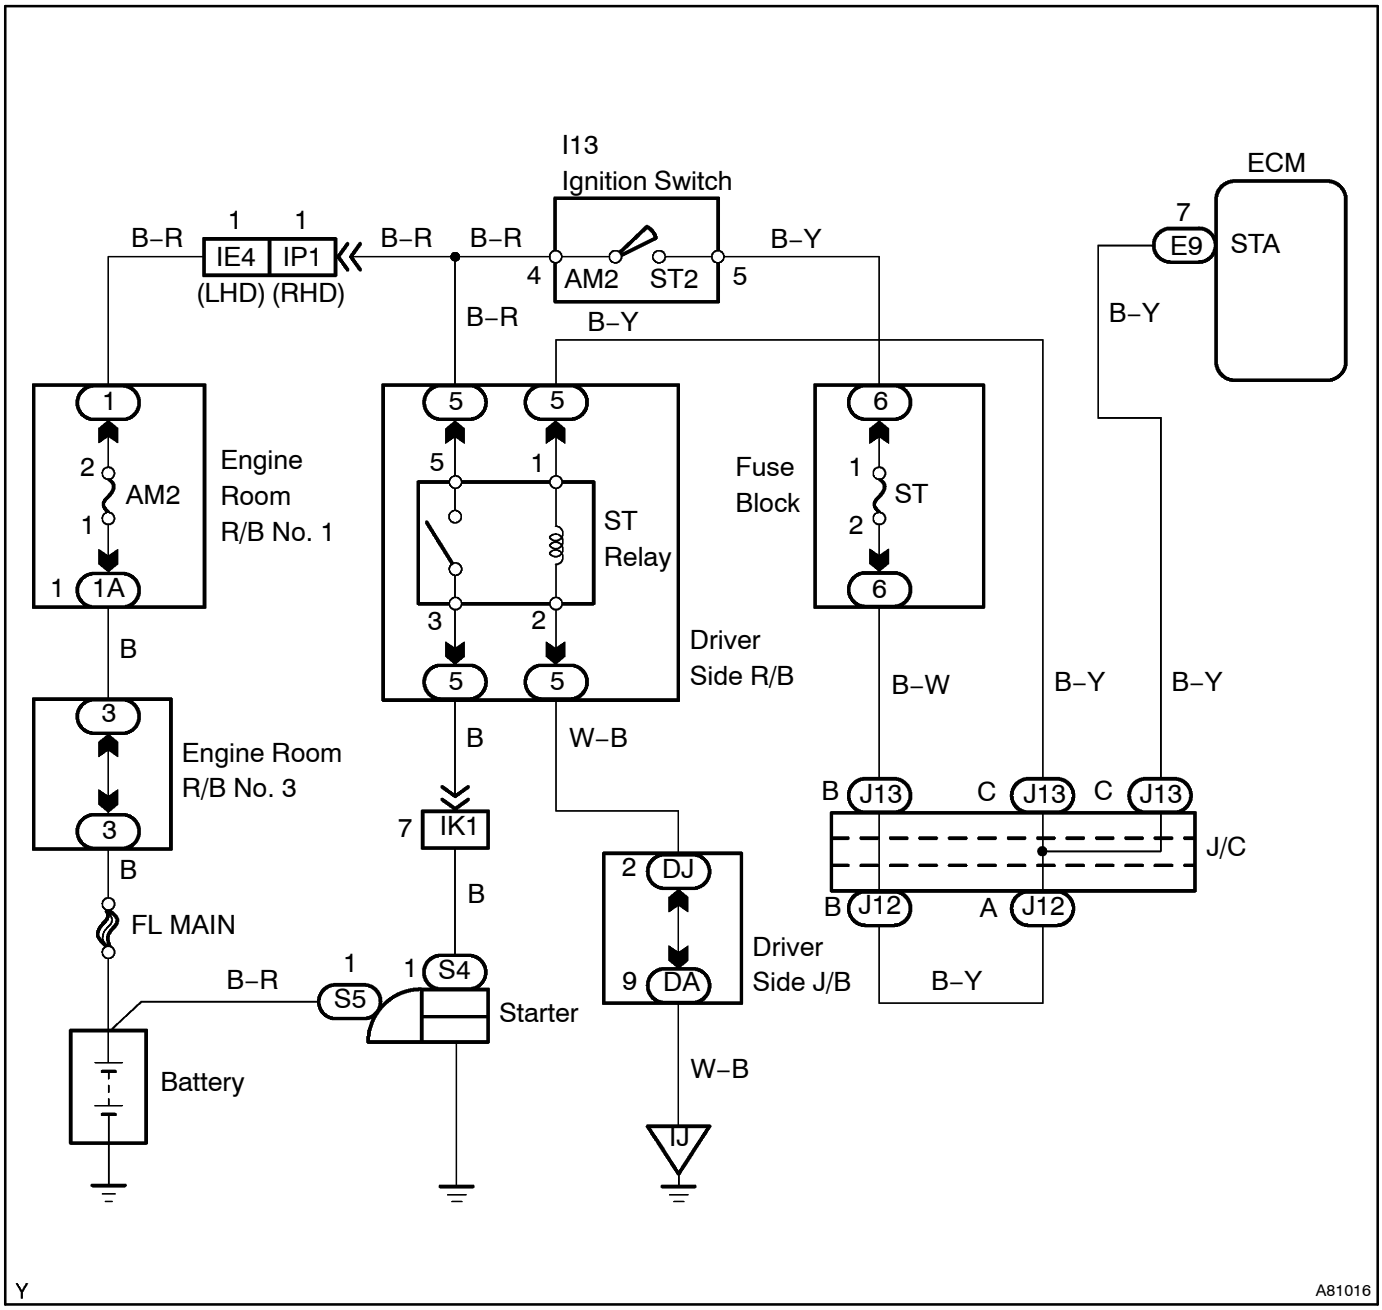
Tester Connection	Specified Condition
EFI MAIN relay (2) – Body ground	Below 1 Ω

  (3) Reinstall the EFI MAIN relay.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CHECK AND REPAIR HARNESS AND CONNECTOR (TERMINAL +B OF ECM – BATTERY POSITIVE TERMINAL)



STARTER SIGNAL CIRCUIT

CIRCUIT DESCRIPTION

HINT:

While the engine is being cranked, current flows from terminal ST2 of the ignition switch to the ST relay coil and also current flows to terminal STA of the ECM (STA signal).

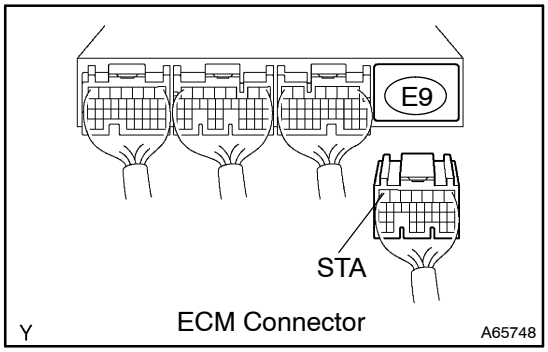
WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
This chart is on the premise that the engine is cranked normally. If the engine is not cranked, proceed to the problem symptoms table on page 05–282.

1	READ VALUE OF HAND–HELD TESTER(STA SIGNAL)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STARTER SIG" and read its value displayed on the hand–held tester.



Standard:

Ignition Switch Position	ON	START
STARTER SIG	OFF	ON

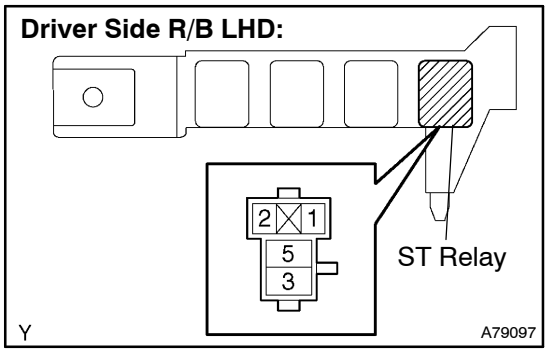
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN PROBLEM SYMPTOMS TABLE (See page 05–282)**

NG

2 CHECK HARNESS AND CONNECTOR(ECM – ST RELAY)

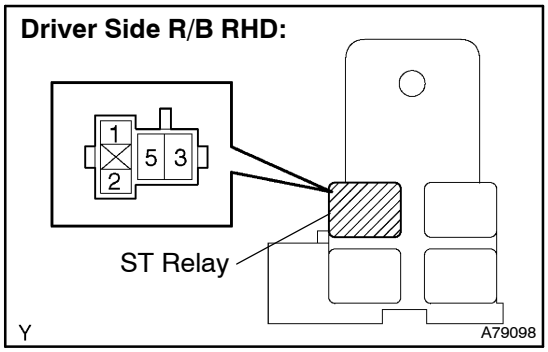
(a) Disconnect the E9 ECM connector.
(b) Remove the ST relay from the driver side R/B.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):



Tester Connection	Specified Condition
ST relay (1) – STA (E9–7)	Below 1 Ω

Standard (Check for short):



Tester Connection	Specified Condition
ST relay (1) or STA (E9–7) – Body ground	10 kΩ or higher

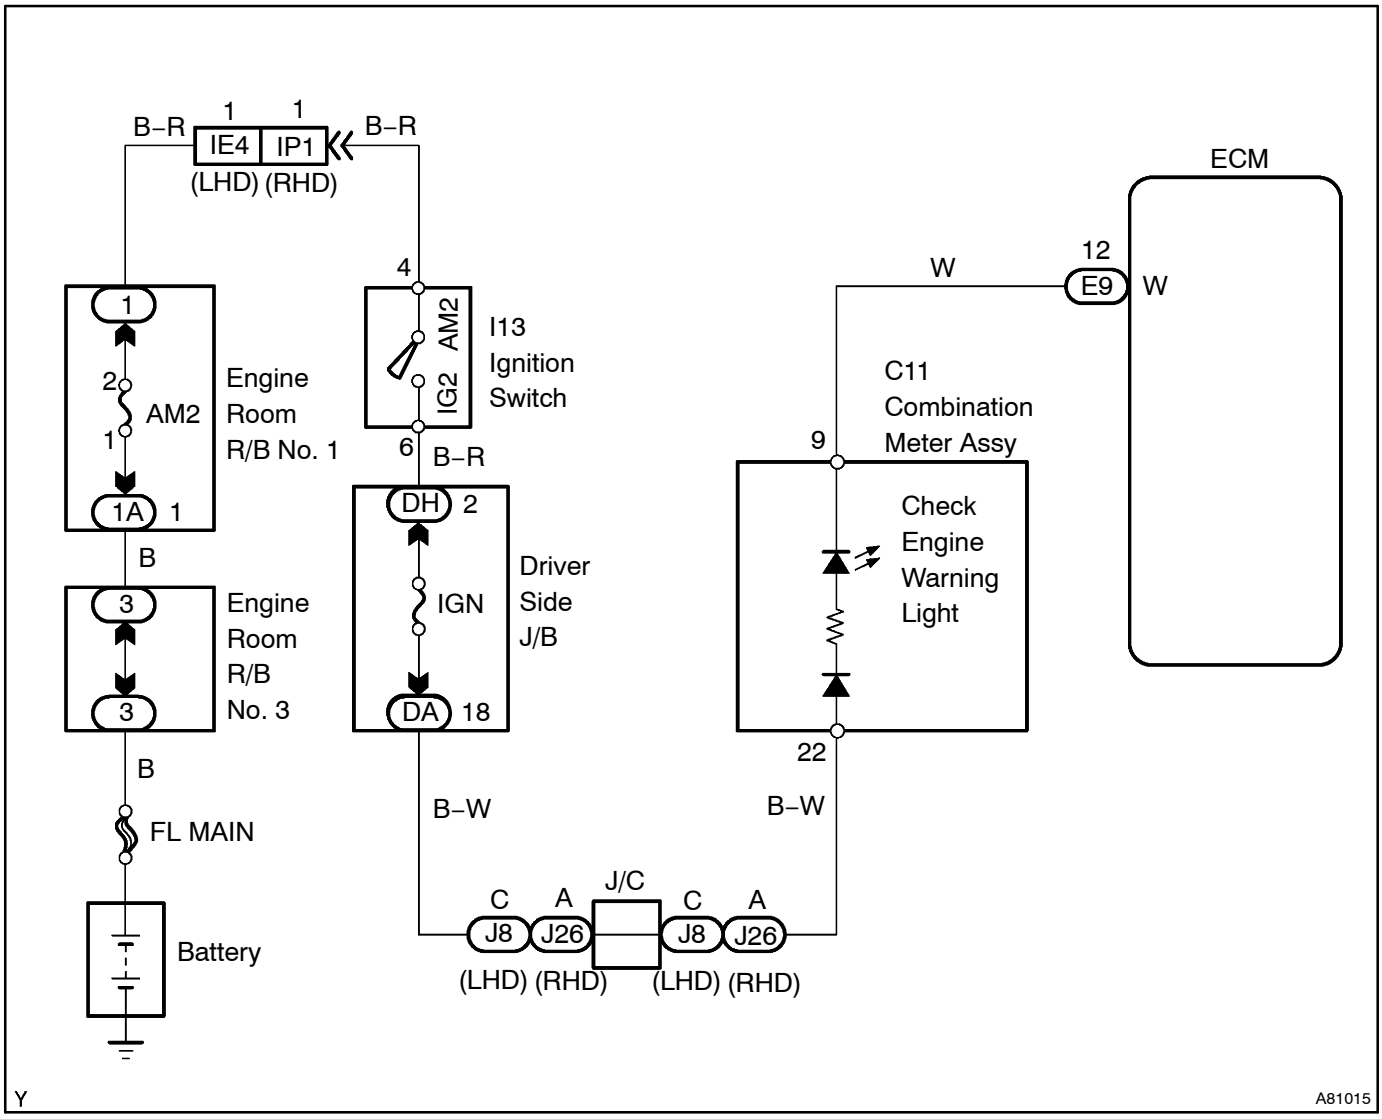
(d) Reconnect the ECM connector.
(e) Reinstall the ST relay.

Driver Side R/B LHD:

Driver Side R/B RHD:

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



REPLACE ECM (See page 10–29)

CHECK ENGINE WARNING LIGHT CIRCUIT

CIRCUIT DESCRIPTION

If the ECM detects a trouble, the CHK ENG is illuminated. At this time, the ECM records the DTC in its memory.

WIRING DIAGRAM

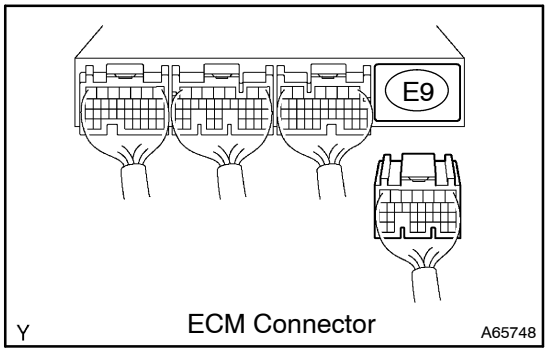
INSPECTION PROCEDURE

HINT:

Troubleshoot each trouble symptom in accordance with the chart below .

Reference:

Result	Proceed to
CHK ENG remains on	Start inspection from step 1
CHK ENG is not illuminated	Start inspection from step 3



1	CLEAR DTC

(a) Connect the hand–held tester to the DLC 3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read DTCs.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES”.
(f) Clear the DTCs.
(g) Check that the CHK ENG is not illuminated.
Standard: CHK ENG is not illuminated.

OK → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page 05–299)**

NG

2	CHECK HARNESS AND CONNECTOR(CHECK FOR SHORT IN WIRE HARNESS)

(a) Disconnect the E9 ECM connector.
(b) Turn the ignition switch to ON.
(c) Check that the CHK ENG is not illuminated.
Standard: CHK ENG is not illuminated.
(d) Reconnect the ECM connector.

OK → **REPLACE ECM (See page 10–29)**

NG

CHECK AND REPAIR HARNESS AND CONNECTOR

3	CHECK CHK ENG CONDITION

(a) Check that the CHK ENG is illuminated when the ignition switch is turned to ON.
Standard: CHK ENG is illuminated.

OK → **SYSTEM OK**

NG

4	INSPECT COMBINATION METER ASSY(CHECK ENGINE WARNING LIGHT CIRCUIT)

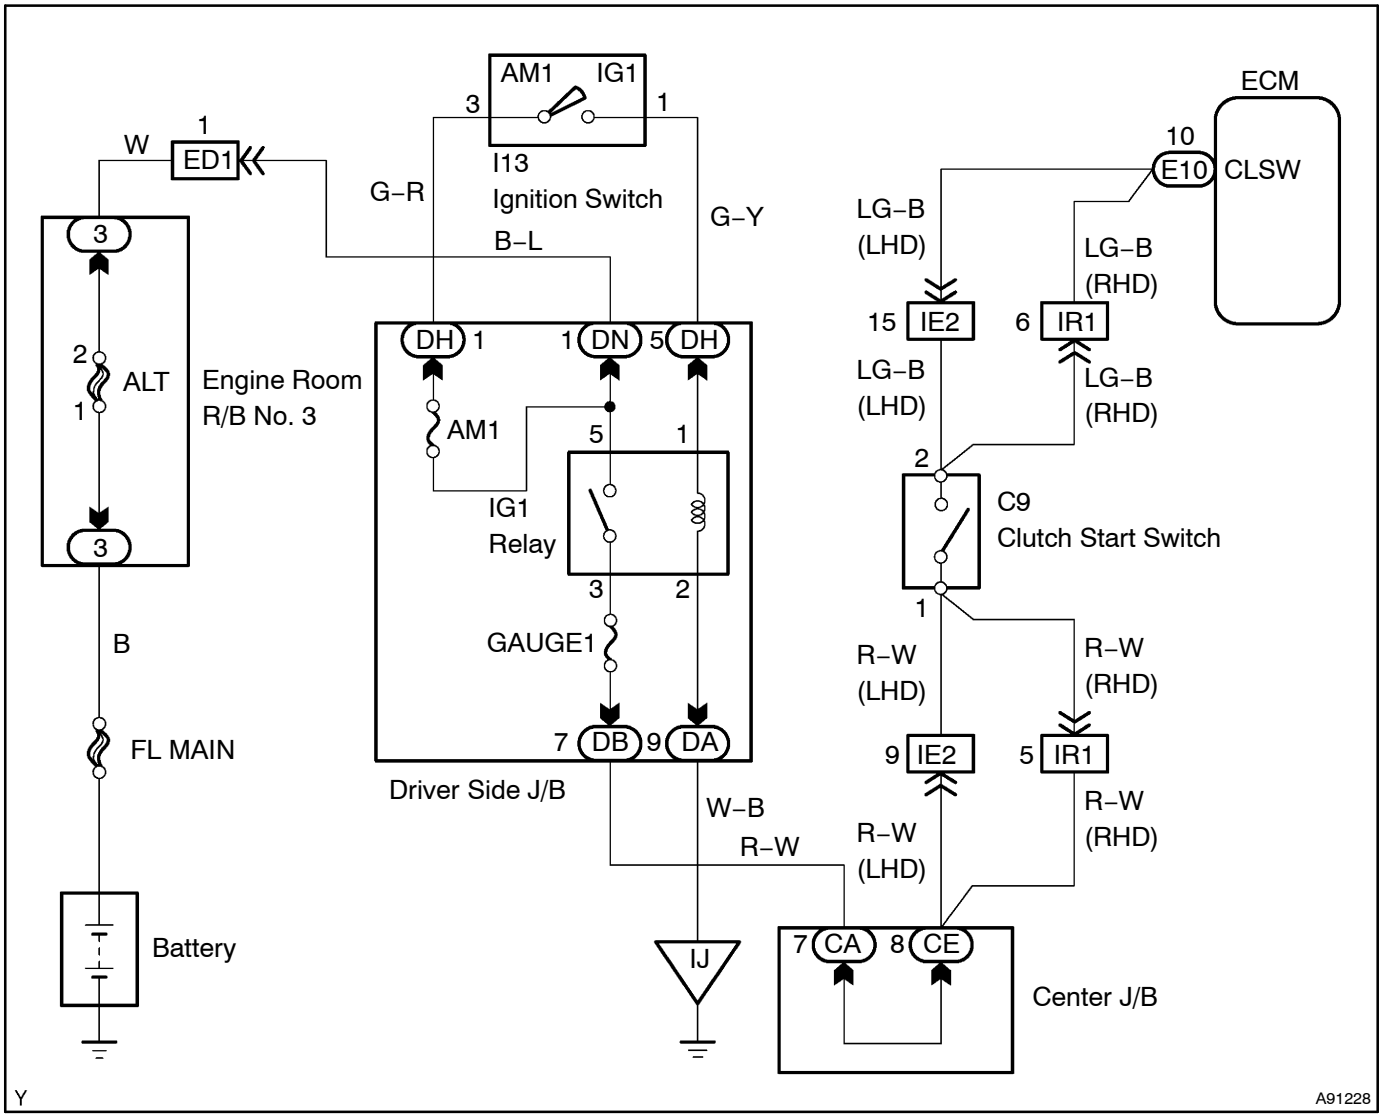
NG → **REPAIR OR REPLACE BULB OR COMBINATION METER ASSEMBLY**

OK

CHECK AND REPAIR HARNESS AND CONNECTOR (COMBINATION METER – ECM)

CLUTCH SWITCH CIRCUIT

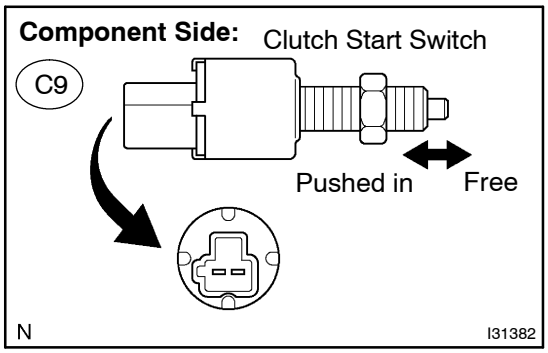
CIRCUIT DESCRIPTION



The clutch switch is mounted on the clutch pedal. The switch is turned ON when depressing the clutch pedal, and sends a signal to the ECM.

HINT:

Normal condition is as shown in the table below.



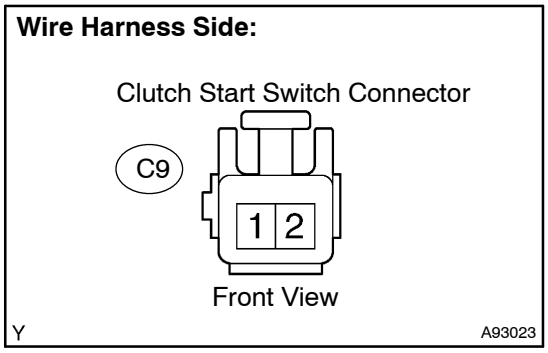
Clutch Pedal Condition	Clutch Start Switch (CLSW) Terminal of ECM (Voltage)
Depressed	9 to 14 V
Released	0 V

WIRING DIAGRAM

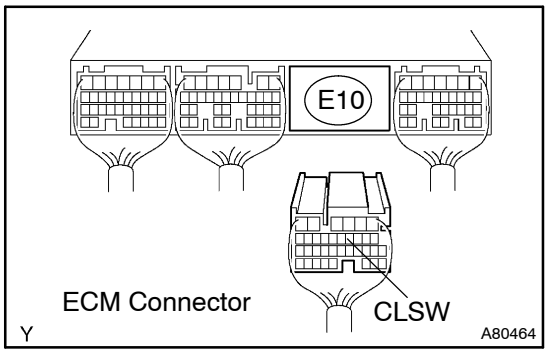
INSPECTION PROCEDURE

1 INSPECT CLUTCH START SWITCH ASSY(RESISTANCE)

(a) Remove the C9 clutch start switch.
(b) Check for continuity between each pair of the terminals.
Standard:



Switch Position	Specified Condition
Switch pin free	No continuity
Switch pin pushed in	Continuity



(c) Reinstall the clutch start switch.

NG → **REPLACE CLUTCH START SWITCH ASSY**

OK

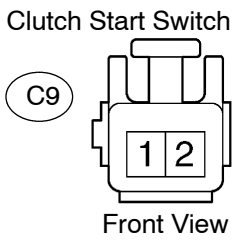
2 CHECK HARNESS AND CONNECTOR(CLUTCH START SWITCH – ECM)

(a) Disconnect the C9 clutch start switch connector.
(b) Disconnect the E10 ECM connector.
(c) Check the resistance between the wire harness side connector.
Standard (Check for open):

Tester Connection	Specified Condition
CLSW (E10–10) – (C9–2)	Below 1 Ω

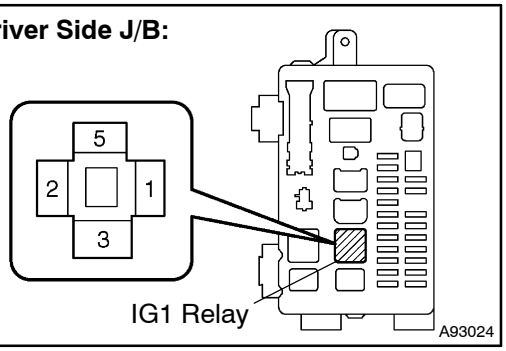
Standard (Check for short):

Tester Connection	Specified Condition
CLSW (E10–10) or (C9–2) – Body ground	10 kΩ or higher



(d) Reconnect the clutch start switch connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

3	CHECK HARNESS AND CONNECTOR(CLTCH START SWITCH – IG1 RELAY)

Wire Harness Side:

Driver Side J/B:

(a) Disconnect the C9 clutch start switch connector.
(b) Remove the IG1 relay from the driver side J/B.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
IG1 relay (3) – Clutch start switch (C9–1)	Below 1 Ω

Standard (Check for short):

Tester Connection	Specified Condition
IG1 relay (3) or Clutch start switch (C9–1) – Body ground	10 kΩ or higher

(d) Reconnect the clutch start switch connector.
(e) Reinstall the IG1 relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page 10–29)

DIFFICULT TO ENGINE START AND ENGINE STALL

HINT:
Specified values in the following troubleshooting flowchart are the reference information.
Because of resultant values in DATA LIST vary depending on measuring conditions, or vehicle's model years. Do not judge the vehicle normal even if the DATA LIST values indicate a standard level. There is a possibility that factors of the malfunction are hiding.

INSPECTION PROCEDURE

1 READ OUTPUT DTCS(RELATED TO ENGINE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES".
(d) Read DTCs.
Result:

Display (DTC Output)	Proceed to
Other than engine–related DTCs (See page 05–266)	A
DTCs related to the engine (See page 05–299)	B

B → **REPAIR OR REPLACE ENGINE CONTROL SYSTEM ACCORDING TO DTC OUTPUT (See page 05–299)**

A

2 CHECK OPERATION OF ENGINE CRANKING

(a) Check the operation of the engine cranking.
(b) Compare the operation with that of a normal engine of the same model, and carefully check if there is no difference between them.

NG → **CHECK AND REPAIR BATTERY, CHARGING SYSTEM, STARTER ASSY AND STARTING SYSYTEM**

OK

3 READ VALUE OF HAND–HELD TESTER(FUEL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL" and read its value displayed on the hand–held tester.
Reference:

Item	Inspection Condition	Reference Value
COMN RAIL	Cranking, engine coolant temperature is 0°C (32°F) or more	30 MPa

NG → **BLEED AIR FOR FUEL SYSTEM**

OK

4	CHECK INITIAL COMBUSTION

(a) Check that initial combustion occurs.
Result:

Result	Proceed to
NG (Cold engine)	A
NG (Hot engine)	B
OK	C

B → **Go to step 6**

C → **Go to step 7**

A

5	CHECK INDICATOR LIGHTING TIME AND AFTER GLOW TIME (See page 05–386)

HINT:
DTC P0380 (2 trip detection logic when the engine coolant temperature is less than 40°C [104°F]) will be present if there is an open or short malfunction in the glow plug circuit.

NG → **REPAIR OR REPLACE PRE–HEATING SYSTEM**

OK

6	READ VALUE OF HAND–HELD TESTER(FUEL PRESSURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL”.
(e) Check that an internal fuel pressure of the common rail is within specification below.
Standard:

Engine Speed	Fuel Pressure (MPa)
Idling	Approximately 30 to 40
2,500 rpm (No engine load)	Approximately 50 to 100

NG → **Go to step 12**

OK

7 CHECK AIR INTAKE SYSTEM AND EXHAUST SYSTEM

(a) Remove the air cleaner filter.
(b) Inspect the EGR valve operation.
  (1) Start the engine and warm it up.
  (2) Check that a clicking sound is heard from the EGR valve when the vacuum hose is disconnected from EGR valve with the engine in an idle.
(c) Inspect the intake shutter (throttle valve) operation.
  (1) Start the engine.
  (2) Check if the intake shutter (throttle valve) fully opens when accelerating the engine speed.

HINT:
Under quick accelerating of the engine speed, the EGR valve is fully closed and the intake shutter is fully opened. If the systems are normal, the volume of the black smoke will result in decrease.

NG → **CHECK AND REPAIR LOCATION WHERE MALFUNCTION EXIST**

OK

8 READ VALUE OF HAND–HELD TESTER

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COMN RAIL, INJ VOLUME and INJ TIMING” and read its value displayed on the hand–held tester.
  Standard:

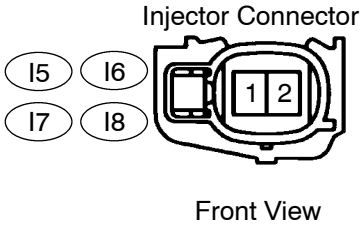
Item	Engine Speed *	Reference Value
COMN RAIL	Idling	30 to 40 MPa
COMN RAIL	2,000 rpm (No engine load)	35 to 80 MPa
COMN RAIL	3,000 rpm (No engine load)	50 to 100 MPa
INJ VOLUME	Idling	3 to 10 mm^3
INJ VOLUME	2,000 rpm (No engine load)	3 to 10 mm^3
INJ VOLUME	3,000 rpm (No engine load)	5 to 12 mm^3
INJ TIMING	Idling	–1 to 5°CA
INJ TIMING	2,000 rpm (No engine load)	0 to 4°CA
INJ TIMING	3,000 rpm (No engine load)	1 to 5°CA

*: If no conditions are specifically stated for ”Idling”, it means the A/C switch is OFF and all accessory switches are OFF.

NG → **Go to step 13**

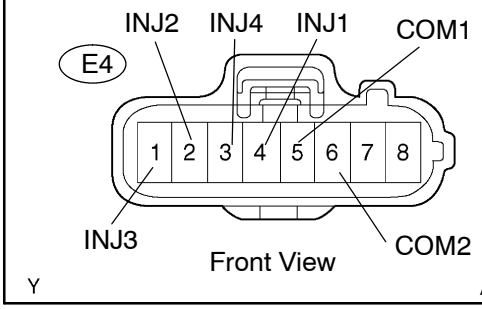
OK

9	INSPECT CYLINDER COMPRESSION PRESSURE (See page 14–87)



NG → CHECK AND REPAIR ENGINE

OK



10	CHECK HARNESS AND CONNECTOR(INJECTOR – EDU)

HINT:
DTC P0200 (1 trip detection logic) will be present if there is an open or short malfunction in the EDU circuit.

Wire Harness Side:

Wire Harness Side: EDU Connector

(a) Disconnect the I5, I6, I7, or I8 injector connector.
(b) Disconnect the E4 EDU connector.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Injector (I5–1) – INJ1 (E4–4)	Below 1 Ω
Injector (I6–1) – INJ2 (E4–2)	
Injector (I7–1) – INJ3 (E4–1)	
Injector (I8–1) – INJ4 (E4–3)	
Injector (I5–2) – COM1 (E4–5)	
Injector (I6–2) – COM2 (E4–6)	
Injector (I7–2) – COM2 (E4–6)	
Injector (I8–2) – COM1 (E4–5)	

Standard (Check for short):

Tester Connection	Specified Condition
Injector (I5–1) or INJ1 (E4–4) – Body ground	10 kΩ or higher
Injector (I6–1) or INJ2 (E4–2) – Body ground	
Injector (I7–1) or INJ3 (E4–1) – Body ground	
Injector (I8–1) or INJ4 (E4–3) – Body ground	
Injector (I5–2) or COM1 (E4–5) – Body ground	
Injector (I6–2) or COM2 (E4–6) – Body ground	
Injector (I7–2) or COM2 (E4–6) – Body ground	
Injector (I8–2) or COM1 (E4–5) – Body ground	

(d) Reconnect the injector connector.
(e) Reconnect the EDU connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

11 PERFORM ACTIVE TEST BY HAND–HELD TESTER(INJECTOR CUT #1 TO #4)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / INJECTOR CUT #1 to #4”.
(d) Check the engine idling condition while the fuel injection of each cylinder is cut by the hand–held tester.
Result:

Engine Idle Condition	Proceed to
Becomes unstable	A
Does not change	B

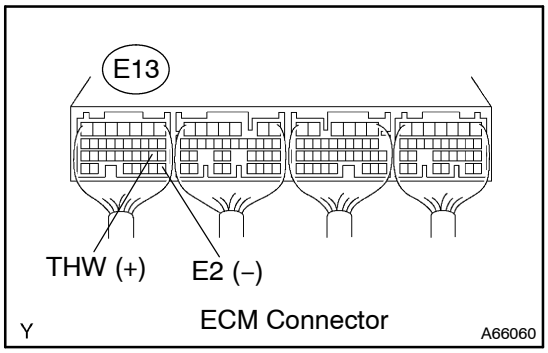
HINT:
Replace the injector mounted on the cylinder that causes rough idling.

B → **GO TO DTC P1238 (See page 05–431)**

A

REPLACE INJECTOR DRIVER

12 CHECK IF FUEL IS BEING SUPPLIED TO SUPPLY PUMP



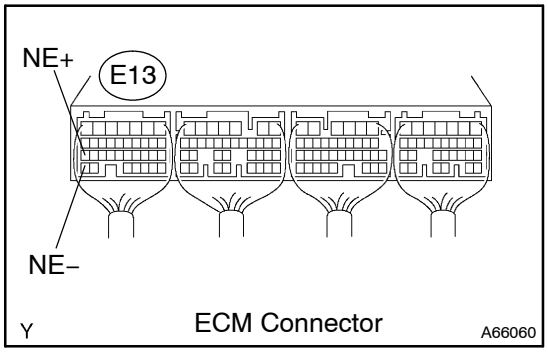
(a) Disconnect the inlet hose from the supply pump.
(b) Operate the priming pump and check that the fuel is being supplied to the supply pump.

OK → **REPLACE INJECTION OR SUPPLY PUMP ASSY (See page 11–58)**

NG

CHECK AND REPAIR FUEL PIPING CLOG (INCLUDING FUEL FREEZING) (FUEL TANK – SUPPLY PUMP)

13 INSPECT ECM(THW VOLTAGE)

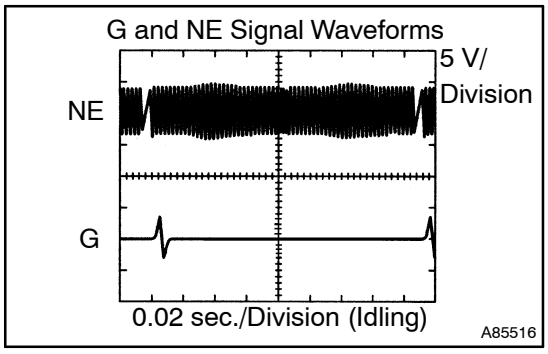


(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.
Standard:

Tester Connection	Condition	Specified Condition
THW (E13–19) – E2 (E13–28)	Idling, engine coolant temperature at 60 to 120°C (140 to 248°F)	0.2 to 1.0 V

NG → **Go to step 17**

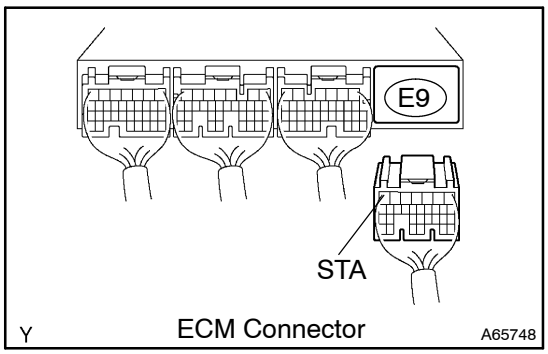
OK



14 INSPECT ECM(NE SIGNAL)

(a) Inspect using the oscilloscope.
(b) During idling, check the waveform between the specified terminals of the E13 ECM connector.

Standard:



Tester Connection	Specified Condition
NE+ (E13–27) – NE– (E13–34)	Correct waveform is as shown

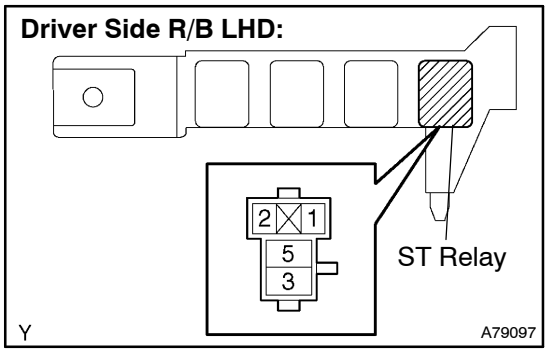
NG → **Go to step 18**

OK

15 CHECK HARNESS AND CONNECTOR(ECM – STARTER RELAY)

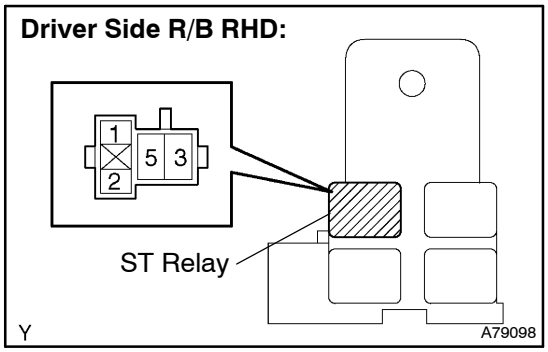
(a) Disconnect the E9 ECM connector.
(b) Remove the ST relay from the driver side R/B.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):



Tester Connection	Specified Condition
ST relay (1) – STA (E9–7)	Below 1 Ω

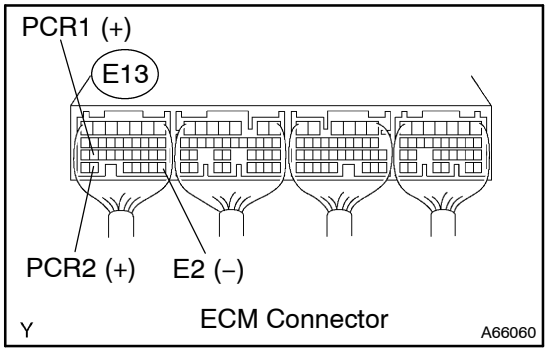
Standard (Check for short):



Tester Connection	Specified Condition
ST relay (1) or STA (E9–7) – Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reinstall the ST relay.

Driver Side R/B LHD:



Driver Side R/B RHD:

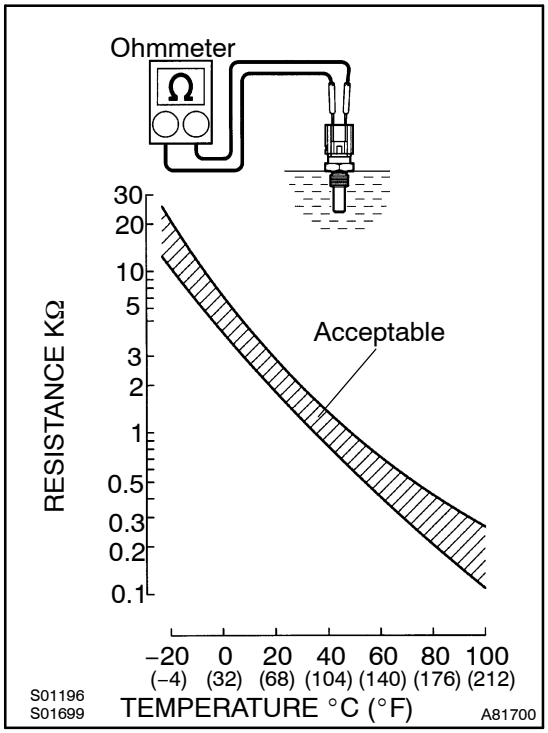
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

16 INSPECT ECM(PCR1 AND PCR2 VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.

Standard:



Tester Connection	Condition	Specified Condition
PCR1 (E13–26) – E2 (E13–28)	Idling	1.8 to 2.1 V
PCR2 (E13–33) – E2 (E13–28)	Idling	1.2 to 1.5 V

NG → **Go to step 19**

OK

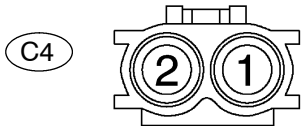
REPLACE ECM (See page 10–29)

17 INSPECT ENGINE COOLANT TEMPERATURE SENSOR

(a) Remove the engine coolant temperature sensor.
(b) Measure the resistance between the terminals.
Standard:
2.32 to 2.59 kΩ at 20°C (68°F)
0.310 to 0.326 kΩ at 80°C (176°F)

NOTICE:
If you check the engine coolant temperature sensor in water, be careful not to allow water to contact the terminals. After checking, dry the sensor.

HINT:
Alternate procedure: Connect an ohmmeter to the installed engine coolant temperature sensor and read the resistance. Use an infrared thermometer to measure the engine temperature in the immediate vicinity of the sensor. Compare these values to the resistance/temperature graph. Change the engine temperature (warm up or allow to cool down) and repeat the test.
(c) Reinstall the engine coolant temperature sensor.



NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

18 INSPECT CRANKSHAFT POSITION SENSOR

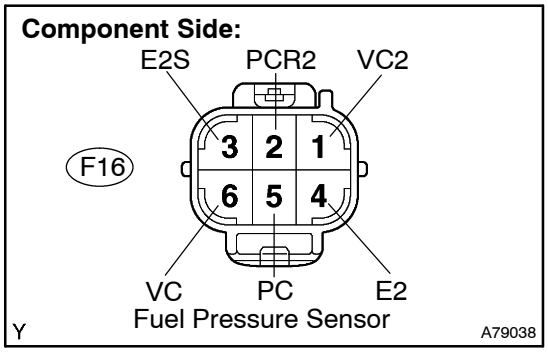
Component Side:

Crankshaft Position Sensor

A78431

(a) Disconnect the C4 crankshaft position sensor connector.
(b) Measure the resistance between terminals 1 and 2.
Standard:

Tester Connection	Specified Condition
1 – 2	1,630 to 2,740 Ω at cold
	2,065 to 3,225 Ω at hot



NOTICE:
"Cold" and "Hot" shown above mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).
(c) Reconnect the crankshaft position sensor connector.

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

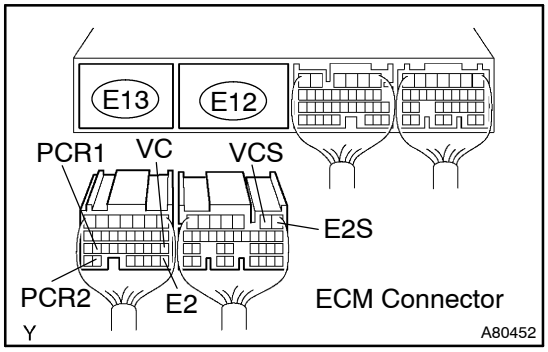
OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

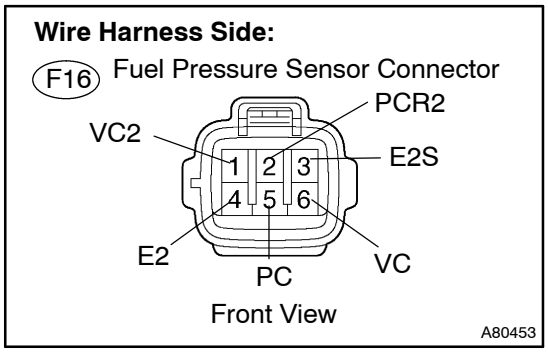
19 INSPECT COMMON RAIL ASSY(FUEL PRESSURE SENSOR)

(a) Disconnect the F16 fuel pressure sensor connector.
(b) Measure the resistance between each pair of the terminals of the fuel pressure sensor.

Standard:



Tester Connection	Specified Condition
PC (F16–5) – E2 (F16–4)	16.4 kΩ or less
PCR2 (F16–2) – E2S (F16–3)	16.4 kΩ or less
PC (F16–5) – VC (F16–6)	3 kΩ or less
PCR2 (F16–2) – VC2 (F16–1)	3 kΩ or less



(c) Reconnect the fuel pressure sensor connector.

NG → **REPLACE COMMON RAIL ASSY (FUEL PRESSURE SENSOR) (See page 11–67)**

OK

20 CHECK HARNESS AND CONNECTOR(FUEL PRESSURE SENSOR – ECM)

(a) Disconnect the F16 fuel pressure sensor connector.
(b) Disconnect the E12 and E13 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
PCR1 (E13–26) – PC (F16–5)	Below 1 Ω
PCR2 (E13–33) – PCR2 (F16–2)	
VCS (E12–2) – VC2 (F16–1)	
VC (E13–18) – VC (F16–6)	
E2 (E13–28) – E2 (F16–4)	
E2S (E12–1) – E2S (F16–3)	

Standard (Check for short):

Tester Connection	Specified Condition
PCR1 (E13–26) or PC (F16–5) – Body ground	10 kΩ or higher
PCR2 (E13–33) or PCR2 (F16–2) – Body ground	
VCS (E12–2) or VC2 (F16–1) – Body ground	
VC (E13–18) or VC (F16–6) – Body ground	
E2 (E13–28) or E2 (F16–4) – Body ground	
E2S (E12–1) or E2S (F16–3) – Body ground	

(d) Reconnect the fuel pressure sensor connector.
(e) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

21	REPLACE ECM (See page 10–29)

NG → REPLACE INJECTION OR SUPPLY PUMP ASSY (See page 11–58)

OK

END

BLACK SMOKE

HINT:
Specified values in the following troubleshooting flowchart are the reference information.
Because of resultant values in DATA LIST vary depending on measuring conditions, or vehicle's model years. Do not judge the vehicle normal even if the DATA LIST values indicate a standard level. There is a possibility that factors of the malfunction are hiding.

INSPECTION PROCEDURE

1 READ OUTPUT DTCS(RELATED TO ENGINE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to ON and turn the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES".
(d) Read DTCs.
Result:

Display (DTC Output)	Proceed to
Other than engine–related DTCs (See page 05–266)	A
DTCs related to the engine (See page 05–299)	B

B → **REPAIR OR REPLACE ENGINE CONTROL SYSTEM ACCORDING TO DTC OUTPUT (See page 05–299)**

A

2 READ VALUE OF HAND–HELD TESTER

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and push the hand–held tester ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INJ VOLUME and INJ VOL FB #1 to #4" and read its value displayed on the hand–held tester.
Standard:

Item	Engine Speed *	Reference Value
INJ VOLUME	Idling (No engine load)	3 to 10 mm^3
INJ VOL FB #1	Idling (No engine load)	–4.9 to 4.9 mm^3
INJ VOL FB #2	Idling (No engine load)	–4.9 to 4.9 mm^3
INJ VOL FB #3	Idling (No engine load)	–4.9 to 4.9 mm^3
INJ VOL FB #4	Idling (No engine load)	–4.9 to 4.9 mm^3

*: If no conditions are specifically stated for "Idling", it means the A/C switch is OFF and all accessory switches are OFF.

NG → **Go to step 11**

OK

3	PERFORM ENGINE RPM ACCELERATION

HINT:
If exhaust gas contain excessive black smoke, perform the following steps.
(a) Accelerate the engine speed up to the maximum RPM with no load 20 times.
(b) Check the volume of the black smoke in the exhaust gas.
Result:

Result	Proceed to
Black smoke is faded	OK
Black smoke remains in the exhaust gas	NG

HINT:
Deposited soot in the exhaust system is a source of the excessive black smoke.

NG → **Go to step 4**

OK

END

4	CHECK AIR INTAKE SYSTEM AND EXHAUST SYSTEM

(a) Remove the air cleaner filter.
(b) Inspect the EGR valve operation.
(1) Start the engine and warm it up.
(2) Check that a clicking sound is heard from the EGR valve when the vacuum hose is disconnected from EGR valve with the engine in an idle.
(c) Inspect the intake shutter (throttle valve) operation.
(1) Start the engine.
(2) Check if the intake shutter fully opens when accelerating the engine speed.

HINT:
Under quick accelerating of the engine speed, the EGR valve is fully closed and the intake shutter is fully opened. If the systems are normal, the volume of the black smoke will result in decrease.

NG → **Go to step 5**

OK

CHECK AND REPAIR LOCATION WHERE MALFUNCTION EXIST

5	READ VALUE OF HAND–HELD TESTER(MASS AIR FLOW RATE)

HINT:
DTC P0100, P0102 or P0103 (1 trip detection logic) will be present if there is an open or short malfunction in the mass air flow (MAF) meter, or P0101 (2 trip detection logic) will be present if there is other malfunction in the MAF meter.

(a) Disconnect the throttle control motor connector.
(b) Disconnect the EGR valve connector.
(c) Connect the hand–held tester to the DLC3.
(d) Start the engine and turn the hand–held tester ON.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAF” and read its value displayed on the hand–held tester.

Result:

Engine Speed Condition	Air Flow Rate (gm/s)
800 rpm	4 to 9

(f) Reconnect the throttle control motor connector.
(g) Reconnect the EGR valve connector.

NG → **REPLACE MASS AIR FLOW METER**

OK

6	CHECK TURBOCHARGING PRESSURE (See on page 13–6)

NG → **REPLACE TURBOCHARGER SUB–ASSY (See page 13–12)**

OK

7	READ VALUE OF HAND–HELD TESTER

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Enter "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL".
(d) Select the following items in order and read values displayed on the hand–held tester respectively.
(1) COMN RAIL
(2) PUMP VCM ANGLE
(3) INJ VOLUME
(4) M–INJ/PILOT ON
(5) M–INJ/PILOT OFF
(6) PILOT–INJ
(7) INJ TIMING
(8) INJ VOL FB #1 to #4

Reference:

Item	Engine Speed *	Reference Value
COMN RAIL	Idling	30 to 40 MPa
COMN RAIL	2,000 rpm (No engine load)	35 to 80 MPa
COMN RAIL	3,000 rpm (No engine load)	50 to 100 MPa
INJ VOLUME	Idling	3 to 10 mm^3
INJ VOLUME	2,000 rpm (No engine load)	3 to 10 mm^3
INJ VOLUME	3,000 rpm (No engine load)	5 to 12 mm^3
M–INJ/PILOT ON	Idling	600 to 1,200 μs
M–INJ/PILOT OFF	Idling	0 μs
PILOT–INJ	Idling	400 to 700 μs
INJ TIMING	Idling	–1 to 5°CA
INJ TIMING	2,000 rpm (No engine load)	0 to 4°CA
INJ TIMING	3,000 rpm (No engine load)	1 to 5°CA
INJ VOL FB #1	Idling	–4.9 to 4.9 mm^3
INJ VOL FB #2	Idling	–4.9 to 4.9 mm^3
INJ VOL FB #3	Idling	–4.9 to 4.9 mm^3
INJ VOL FB #4	Idling	–4.9 to 4.9 mm^3

*: If no conditions are specifically stated for "Idling", it means the A/C switch is OFF and all accessory switches are OFF.

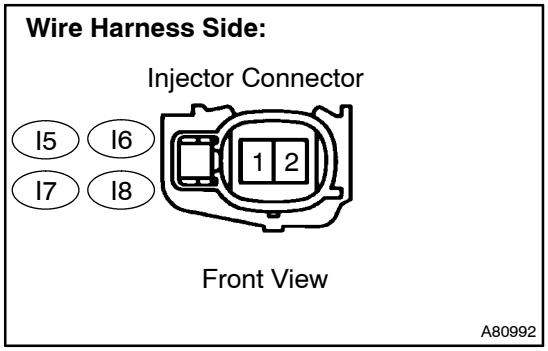
Result:

Result	Proceed to
Within the reference value	A
One of the INJ VOL FB #1 to #4 indicates out of the reference value	B
Other than above	C

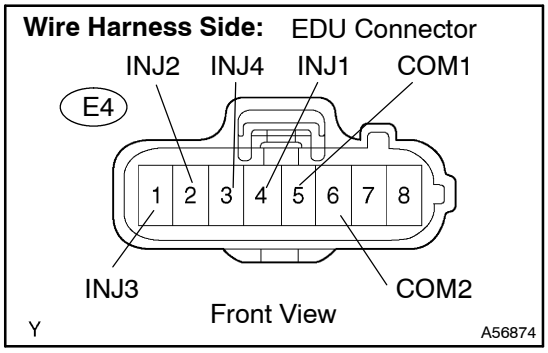
B → **GO TO DTC P1238 (See page 05–431)**

C → **Go to step 11**

A



8	INSPECT CYLINDER COMPRESSION PRESSURE (See page 14–87)



NG → **CHECK AND REPAIR ENGINE**

OK

9 CHECK HARNESS AND CONNECTOR(INJECTOR – EDU)

HINT:
DTC P0200 (1 trip detection logic) will be present if there is an open or short malfunction in the EDU circuit.

(a) Disconnect the I5, I6, I7, or I8 injector connector.
(b) Disconnect the E4 EDU connector.
(c) Measure the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
Injector (I5–1) – INJ1 (E4–4)	Below 1 Ω
Injector (I6–1) – INJ2 (E4–2)	
Injector (I7–1) – INJ3 (E4–1)	
Injector (I8–1) – INJ4 (E4–3)	
Injector (I5–2) – COM1 (E4–5)	
Injector (I6–2) – COM2 (E4–6)	
Injector (I7–2) – COM2 (E4–6)	
Injector (I8–2) – COM1 (E4–5)	

Standard (Check for short):

Tester Connection	Specified Condition
Injector (I5–1) or INJ1 (E4–4) – Body ground	10 kΩ or higher
Injector (I6–1) or INJ2 (E4–2) – Body ground	
Injector (I7–1) or INJ3 (E4–1) – Body ground	
Injector (I8–1) or INJ4 (E4–3) – Body ground	
Injector (I5–2) or COM1 (E4–5) – Body ground	
Injector (I6–2) or COM2 (E4–6) – Body ground	
Injector (I7–2) or COM2 (E4–6) – Body ground	
Injector (I8–2) or COM1 (E4–5) – Body ground	

(d) Reconnect the injector connector.
(e) Reconnect the EDU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

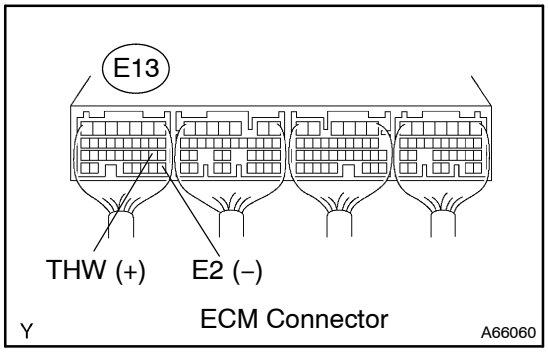
OK

10 PERFORM ACTIVE TEST BY HAND–HELD TESTER(INJECTOR CUT #1 TO #4)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and turn the hand–held tester ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / INJECTOR CUT #1 to #4”.
(d) Check the engine idling condition while the fuel injection of each cylinder is cut by the hand–held tester.

Result:

Engine Idle Condition	Proceed to
Becomes unstable	A
Does not change	B



HINT:
Replace the injector mounted on the cylinder that causes rough idling.

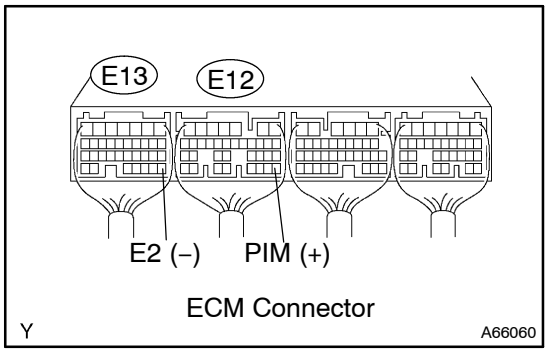
B → GO TO DTC P1238 (See page 05–431)

A

REPLACE INJECTOR DRIVER

11 INSPECT ECM(THW VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.



Standard:

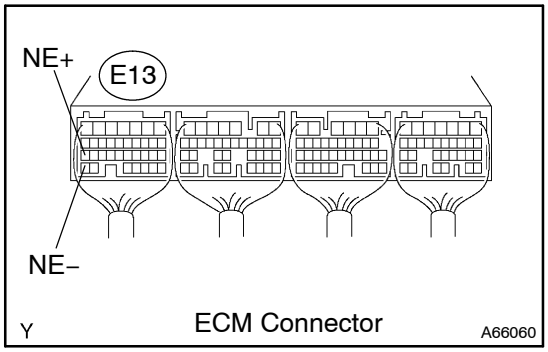
Tester Connection	Condition	Specified Condition
THW (E13–19) – E2 (E13–28)	Idling, engine coolant temperature is 60 to 120°C (140 to 248°F)	0.2 to 1.0 V

NG → Go to step 17

OK

12 INSPECT ECM(PIM VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E12 and E13 ECM connectors.

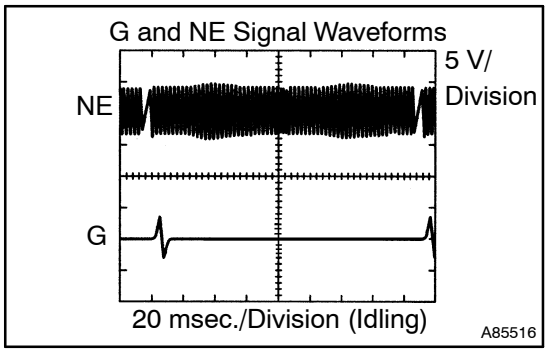


Standard:

Tester Connection	Condition	Specified Condition
PIM (E12–28) – E2 (E13–28)	Applied negative pressure of 40 kPa (300 mmHg, 11.8 in.Hg)	1.4 to 2.0 V
PIM (E12 – 28) – E2 (E13–28)	Same as atmospheric pressure	2.0 to 2.6 V
PIM (E12 – 28) – E2 (E13–28)	Applied positive pressure of 69 kPa (518 mmHg, 20.4 in.Hg)	3.0 to 3.6 V

NG → Go to step 18

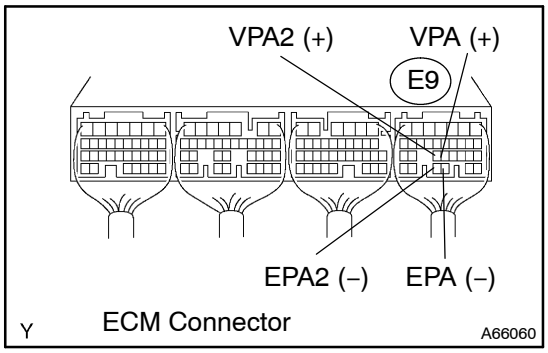
OK



13 INSPECT ECM(NE SIGNAL)

(a) Inspect using the oscilloscope.
(b) During idling, check the waveform between the specified terminals of the E13 ECM connector.

Standard:



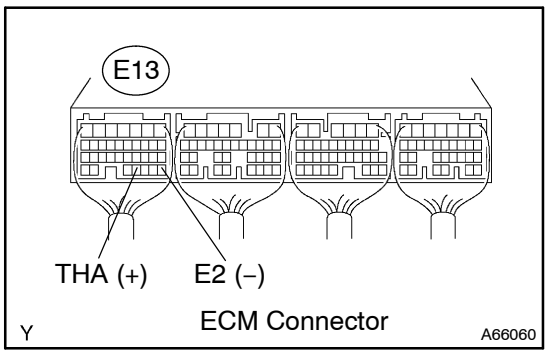
Tester Connection	Specified Condition
NE+ (E13–27) – NE– (E13–34)	Correct waveform is as shown

NG → **Go to step 19**

OK

14 INSPECT ECM(VPA AND VPA2 VOLTAGE)

(a) Turn the ignition switch to ON.
(b) Measure the voltage between the specified terminals of the E9 ECM connector.



Standard:

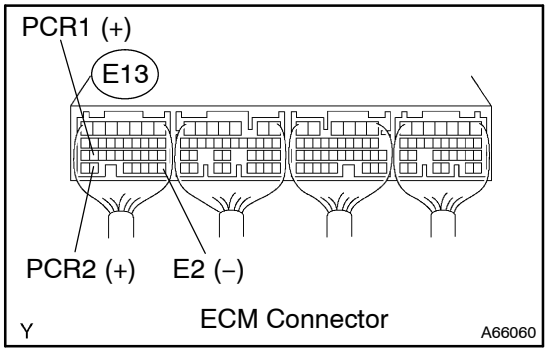
Accelerator Pedal Position	Tester Connection	Specified Condition
Released	VPA (E9–22) – EPA (E9–28)	0.5 to 1.1 V
Depressed		2.5 to 4.6 V
Released	VPA2 (E9–23) – EPA2 (E9–29)	1.5 to 2.9 V
Depressed		3.5 to 5.5 V

NG → **Go to step 20**

OK

15 INSPECT ECM(THA VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.



Standard:

Tester Connection	Condition	Specified Condition
THA (E13–31) – E2 (E13–28)	Idling, intake air temperature at 20°C (68°F)	0.5 to 3.4 V

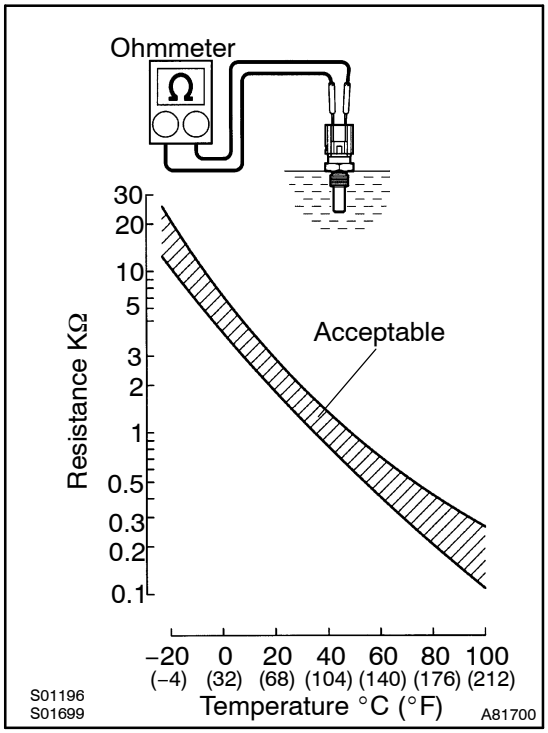
NG → **Go to step 21**

OK

16 INSPECT ECM(PCR1 AND PCR2 VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the specified terminals of the E13 ECM connector.

Standard:



Tester Connection	Condition	Specified Condition
PCR1 (E13–26) – E2 (E13–28)	Idling	1.8 to 2.1 V
PCR2 (E13–33) – E2 (E13–28)	Idling	1.2 to 1.5 V

NG → **Go to step 22**

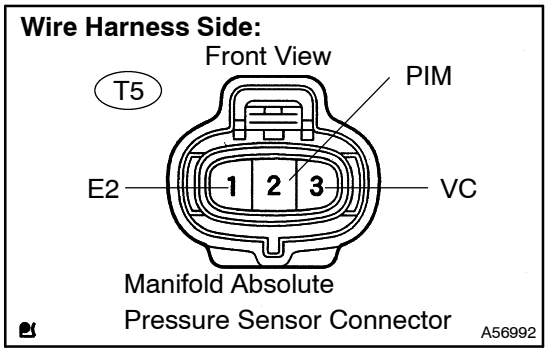
OK

REPLACE ECM (See page 10–29)

17 INSPECT ENGINE COOLANT TEMPERATURE SENSOR

(a) Remove the engine coolant temperature sensor.
(b) Measure the resistance between the terminals.
Standard:
2.32 to 2.59 kΩ at 20°C (68°F)
0.310 to 0.326 kΩ at 80°C (176°F)

NOTICE:
If you check the engine coolant temperature sensor in water, be careful not to allow water to contact the terminals. After checking, dry the sensor.



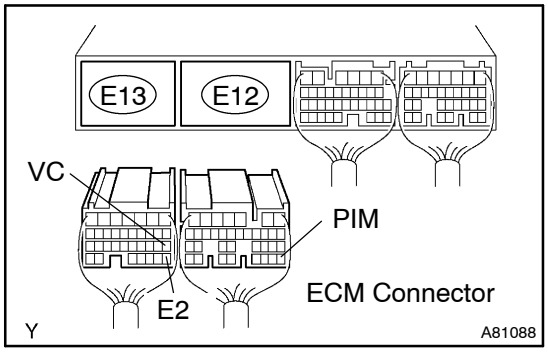
HINT:
Alternate procedure: Connect an ohmmeter to the installed engine coolant temperature sensor and read the resistance. Use an infrared thermometer to measure the engine temperature in the immediate vicinity of the sensor. Compare these values to the resistance/temperature graph. Change the engine temperature (warm up or allow to cool down) and repeat the test.
(c) Reinstall the engine coolant temperature sensor.

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

18 CHECK HARNESS AND CONNECTOR(MANIFOLD ABSOLUTE PRESSURE SENSOR – ECM)



(a) Disconnect the T5 manifold absolute pressure sensor connector.
(b) Disconnect the E13 and E12 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

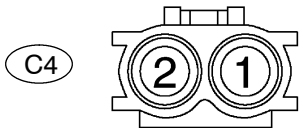
Standard (Check for open):

Tester Connection	Specified Condition
PIM (T5–2) – PIM (E12–28)	Below 1 Ω
VC (T5–3) – VC (E13–18)	
E2 (T5–1) – E2 (E13–28)	

Standard (Check for short):

Tester Connection	Specified Condition
PIM (T5–2) or PIM (E12–28) – Body ground	10 kΩ or higher
VC (T5–3) or VC (E13–18) – Body ground	
E2 (T5–1) or E2 (E13–28) – Body ground	

(d) Reconnect the manifold absolute pressure sensor connector.
(e) Reconnect the ECM connectors.



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MANIFOLD ABSOLUTE PRESSURE SENSOR

19 INSPECT CRANKSHAFT POSITION SENSOR

Component Side:

Crankshaft Position Sensor

A78431

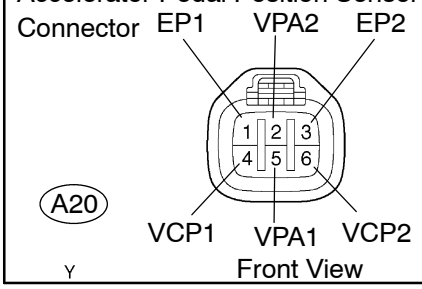
(a) Disconnect the C4 crankshaft position sensor connector.
(b) Measure the resistance between terminals 1 and 2.

Standard:

Tester Connection	Specified Condition
1 – 2	1,630 to 2,740 Ω at cold
	2,065 to 3,225 Ω at hot

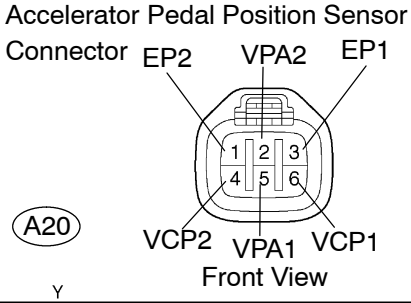
NOTICE:
"Cold" and "Hot" shown above mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).

(c) Reconnect the crankshaft position sensor connector.

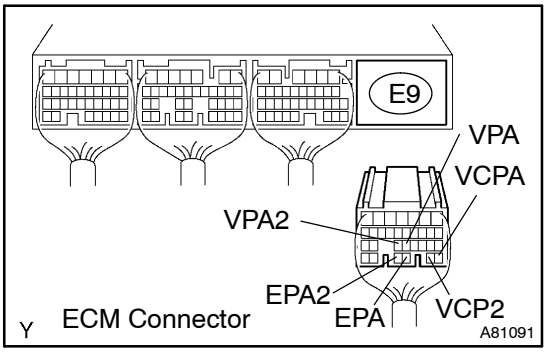


NG → REPLACE CRANKSHAFT POSITION SENSOR

OK



REPAIR OR REPLACE HARNESS OR CONNECTOR



20 CHECK HARNESS AND CONNECTOR(ACCELERATOR PEDAL POSITION SENSOR – ECM)

Wire Harness Side (RHD):

Wire Harness Side (LHD):

(a) Disconnect the A20 accelerator pedal position sensor connector.

(b) Disconnect E9 the ECM connector.

(c) Check the resistance between the wire harness side connectors.

Standard (Check for open) (RHD):

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–1) – EPA (E9–28)	
VCP1 (A20–4) – VCPA (E9–26)	
VPA2 (A20–2) – VPA2 (E9–23)	
EP2 (A20–3) – EPA2 (E9–29)	
VCP2 (A20–6) – VCP2 (E9–27)	

Standard (Check for open) (LHD):

Tester Connection	Specified Condition
VPA1 (A20–5) – VPA (E9–22)	Below 1 Ω
EP1 (A20–3) – EPA (E9–28)	
VCP1 (A20–6) – VCPA (E9–26)	
VPA2 (A20–2) – VPA2 (E9–23)	
EP2 (A20–1) – EPA2 (E9–29)	
VCP2 (A20–4) – VCP2 (E9–27)	

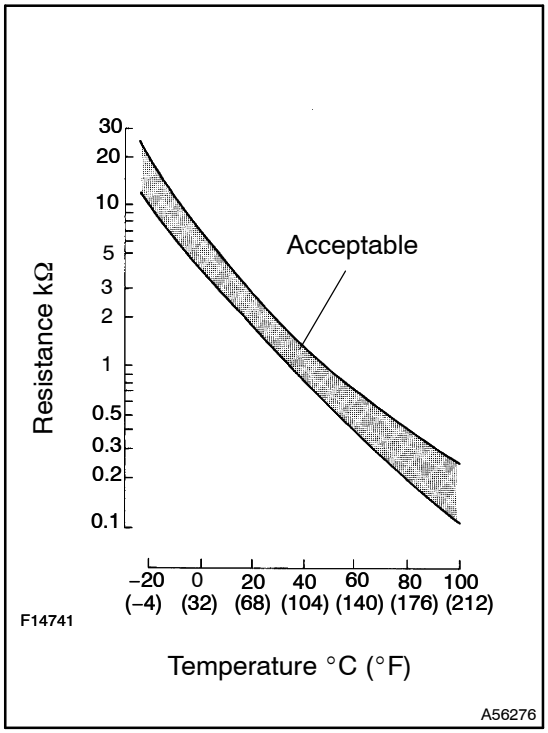
Standard (Check for short) (RHD):

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–1) or EPA (E9–28) – Body ground	
VCP1 (A20–4) or VCPA (E9–26) – Body ground	
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	
EP2 (A20–3) or EPA2 (E9–29) – Body ground	
VCP2 (A20–6) or VCP2 (E9–27) – Body ground	

Standard (Check for short) (LHD):

Tester Connection	Specified Condition
VPA1 (A20–5) or VPA (E9–22) – Body ground	10 kΩ or higher
EP1 (A20–3) or EPA (E9–28) – Body ground	
VCP1 (A20–6) or VCPA (E9–26) – Body ground	
VPA2 (A20–2) or VPA2 (E9–23) – Body ground	
EP2 (A20–1) or EPA2 (E9–29) – Body ground	
VCP2 (A20–4) or VCP2 (E9–27) – Body ground	

(d) Reconnect the accelerator pedal position sensor connector.



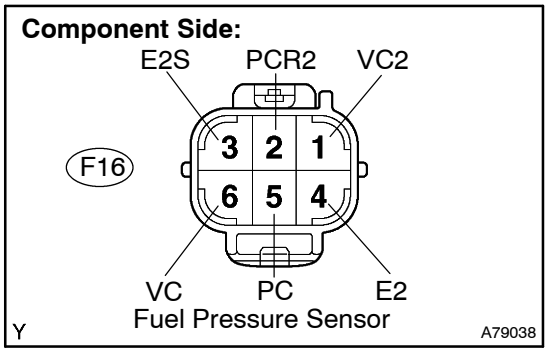
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ACCELERATOR PEDAL ASSY (ACCELERATOR PEDAL POSITION SENSOR) (See page 10–66 of Pub. No. RM1018E AVENSIS REPAIR MANUAL)

21 INSPECT DIESEL TURBO INLET AIR TENPERATURE SENSOR



(a) Remove the diesel turbo inlet air temperature sensor.
(b) Measure the resistance between the terminals.
Standard:
2.21 to 2.65 kΩ at 20°C (68°F)
(c) Reinstall the diesel turbo inlet air temperature sensor.

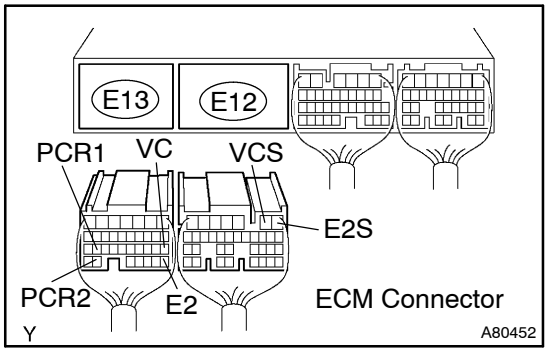
NG → **REPLACE DIESEL TURBO INLET AIR TENPERATURE SENSOR**

OK

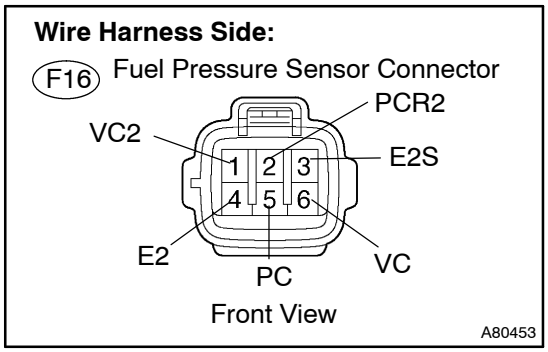
REPAIR OR REPLACE HARNESS OR CONNECTOR

22 INSPECT COMMON RAIL ASSY(FUEL PRESSURE SENSOR)

(a) Disconnect the F16 fuel pressure sensor connector.
(b) Measure the resistance between each terminal of the fuel pressure sensor connector.
Standard:



Tester Connection	Specified Condition
PC (F16–5) – E2 (F16–4)	16.4 kΩ or less
PCR2 (F16–2) – E2S (F16–3)	16.4 kΩ or less
PC (F16–5) – VC (F16–6)	3 kΩ or less
PCR2 (F16–2) – VC2 (F16–1)	3 kΩ or less



(c) Reconnect the fuel pressure sensor connector.

NG → **REPLACE COMMON RAIL ASSY (FUEL PRESSURE SENSOR) (See page 11–67)**

OK

23	CHECK HARNESS AND CONNECTOR(FUEL PRESSURE SENSOR – ECM)

(a) Disconnect the F16 fuel pressure sensor connector.
(b) Disconnect the E12 and E13 ECM connectors.
(c) Check the resistance between the wire harness side connectors.

Standard (Check for open):

Tester Connection	Specified Condition
PCR1 (E13–26) – PC (F16–5)	Below 1 Ω
PCR2 (E13–33) – PCR2 (F16–2)	
VCS (E12–2) – VC2 (F16–1)	
VC (E13–18) – VC (F16–6)	
E2 (E13–28) – E2 (F16–4)	
E2S (E12–1) – E2S (F16–3)	

Standard (Check for short):

Tester Connection	Specified Condition
PCR1 (E13–26) or PC (F16–5) – Body ground	10 kΩ or higher
PCR2 (E13–33) or PCR2 (F16–2) – Body ground	
VCS (E12–2) or VC2 (F16–1) – Body ground	
VC (E13–18) or VC (F16–6) – Body ground	
E2 (E13–28) or E2 (F16–4) – Body ground	
E2S (E12–1) or E2S (F16–3) – Body ground	

(d) Reconnect the fuel pressure sensor connector.
(e) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

24	REPLACE ECM (See page 10–29)

NG → **REPLACE INJECTION OR SUPPLY PUMP ASSY (See page 11–58)**

OK

END

ELECTRONIC CONTROLLED AUTOMATIC TRANSAXLE [ECT] (U151E)

05CVL–02

PRECAUTION

NOTICE:

Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assy, engine assy or ECM (see page 05–541).

HINT:

Initialization can not be completed by only disconnecting the battery terminal.

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transmission/transaxle) is an automatic transmission/transaxle that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, controls the shift point, and selects the appropriate shift pattern based on driver habits and road conditions. As a result, fuel efficiency and power transmission/transaxle performance are improved.

Shift shock has been reduced by controlling the engine and transmission/transaxle simultaneously.

In addition, the ECT has the following features:

- Diagnostic function.
- Fail–safe function when a malfunction occurs.

056IH–05

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The ECM of this system is connected to the multiplex communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the multiplex communication system.
- The hand–held tester can be used at steps 3, 4, 6, and 9.

1	**Vehicle Brought to Workshop**

2	**Customer Problem Analysis (SEE PAGE 05–533)**

3	**Connect the hand–held tester to DLC3**

4	**Check and Clear DTC and Freeze Frame Data (SEE PAGE 05–557)**

5	**Visual Inspection**

6	**Setting the Check Mode Diagnosis (SEE PAGE 05–558)**

7	**Problem Symptom Confirmation (SEE PAGE 05–534)**

- **Symptom does not occur: Go to step 8**
- **Symptom occur: Go to step 9**

8	**Symptom Simulation (SEE PAGE 01–22)**

9	**DTC Check (SEE PAGE 05–557)**

- **DTC is not output: Go to step 10**
- **DTC is output: Go to step 17**

DTC Check	1st Time	☐ Normal code ☐ Malfunction code (DTC)
	2nd Time	☐ Normal code ☐ Malfunction code (DTC)

05JL4–01

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the ATF (Automatic Transmission Fluid) temperature 50 to 80˚C (122 to 176˚F) in the normal operation.

(a) D position test:

Shift into the D position and fully depress the accelerator pedal and check the following points.

(1) Check up–shift operation.

Check that 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up–shifts take place, and that the shift points conform to the automatic shift schedule (see page 03–33).

HINT:

5th Gear Up–shift Prohibition Control

- ATF temperature is –2 ˚C (28 ˚F) or less.

5th and 4th Gear Lock–up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60 ˚C (140 ˚F) or less.

(2) Check for shift shock and slip.

Check for shock and slip at the 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up–shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up–shifting from 1 → 2, 2 → 3, 3 → 4 and 4 → 5 while driving with the shift lever in the D position, and check while driving in the lock–up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick–down operation.

Check vehicle speeds when the 2nd to 1st, 3rd to 2nd, 4th to 3rd, and 5th to 4th kick–downs take place while driving with the shift lever in the D position. Confirm that each speed is within the applicable vehicle speed range indicated in the automatic shift schedule (see page 03–33).

(5) Check for abnormal shock and slip at kick–down.

(6) Check the lock–up mechanism.

- Drive in D position (5th gear), at a steady speed (lock–up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

- There is no lock–up function in the 1st, 2nd and 3rd gear.
- 4th lock–up operates while uphill–downhill control is active in the D position.
- If there is a big jump in engine speed, there is no lock–up.

(b) S position test

Shift to the S position, depress the accelerator pedal and check the following points:

(1) Check shift operation.

- While driving in the D position and 5th gear, shift into the S position and back to the D position. Check that the gear change 5 → 4 down–shift and 4 → 5 up–shift can be performed.
- With the shift lever in the S position (while the vehicle is stopped), shift into the "+" position to check that the shift position on the combination meter changes as follows: 1 → 2, 2 → 3, 3 → 4 and 4 → 5.
- While driving in the 4(S) position and 4th gear (at a vehicle speed of approximately 40 to 50 km/h (25 to 31 mph)), shift into the "–" position and check if the 3rd gear down–shift occurs and the engine brake performs properly.
- While driving in the 3(S) position and 3rd gear (at a vehicle speed of approximately 30 to 40 km/h (19 to 25 mph)), shift into the "–" position and check if the 2nd gear down–shift occurs and the engine brake performs properly.
- While driving in the 2(S) position and 2nd gear (at a vehicle speed of approximately 20 to 30 km/h (12 to 19 mph)), shift into the "–" position and check if the 1st gear down–shift occurs and the engine brake performs properly.

HINT:

Manual shift (S position) is prohibited under either of the following conditions:

- Down–shifting may cause engine overrun.
- The driver continuously down–shifts. (Down–shifting to 1st gear may not be performed.)

(c) R position test:

Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.

CAUTION:

Before conducting this test ensure that the test area is free from people and obstruction.

(d) P position test:

Stop the vehicle on a grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

(e) Uphill/downhill control function test:

(1) Check that the gear does not up–shift to the 4th or 5th gear while the vehicle is driving uphill.

(2) Check that the gear automatically down–shifts from the 5th to 4th or from the 4th to 3rd gear when brake is applied while the vehicle is driving downhill.

05JL5–01

MECHANICAL SYSTEM TESTS

1. PERFORM MECHANICAL SYSTEM TESTS

(a) Measure the stall speed.

The object of this test is to check the overall performance of the transaxle and engine by measuring the stall speeds in the D and R positions.

NOTICE:

- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F).**
- **Do not continuously run this test for longer than 10 seconds.**
- **To ensure safety, do this test in a wide, clear level area which provides good traction.**
- **The stall test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is doing the test.**

(1) Chock the 4 wheels.

(2) Connect an hand–held tester to the DLC3.

(3) Fully apply the parking brake.

(4) Keep your left foot pressed firmly on the brake pedal.

(5) Start the engine.

(6) Shift into the D position. Press all the way down on the accelerator pedal with your right foot.

(7) Quickly read the stall speed at this time.

Stall speed: 2,250 ± 150 rpm

(8) Do the same test in the R position.

Stall speed: 2,250 ± 150 rpm

Evaluation:

Problem	Possible cause
(a) Stall engine speed is low in D and R positions	• Engine power output may be insufficient • Stator one–way clutch not operating properly HINT: If the value is less than the specified value by 600 rpm or more, the torque converter could be faulty.
(b) Stall engine speed is high in D position	• Line pressure is too low • Forward clutch slipping • U/D (Underdrive) brake slipping • U/D (Underdrive) one–way clutch not operating properly • No.1 one–way clutch not operating properly
(c) Stall engine speed is high in R position	• Line pressure is too low • Reverse clutch slipping • 1st and reverse brake slipping • U/D (Underdrive) brake slipping
(d) Stall engine speed is high in D and R positions	• Line pressure is too low • Improper fluid level

(b) Measure the time lag.

(1) When the shift lever is shifted while the engine is idling, there will be a certain time lapse or lag before the shock can be felt. This is used for checking the condition of the direct clutch, forward clutch, and 1st and reverse brake.

NOTICE:

- **Perform the test at the normal operating ATF temperature 50 to 80°C (122 to 176°F).**
- **Be sure to allow 1 minute interval between tests.**
- **Perform the test three times, and measure the time lags. Calculate the average value of the three time lags.**

(2) Connect an hand–held tester to the DLC3.

(3) Fully apply the parking brake.

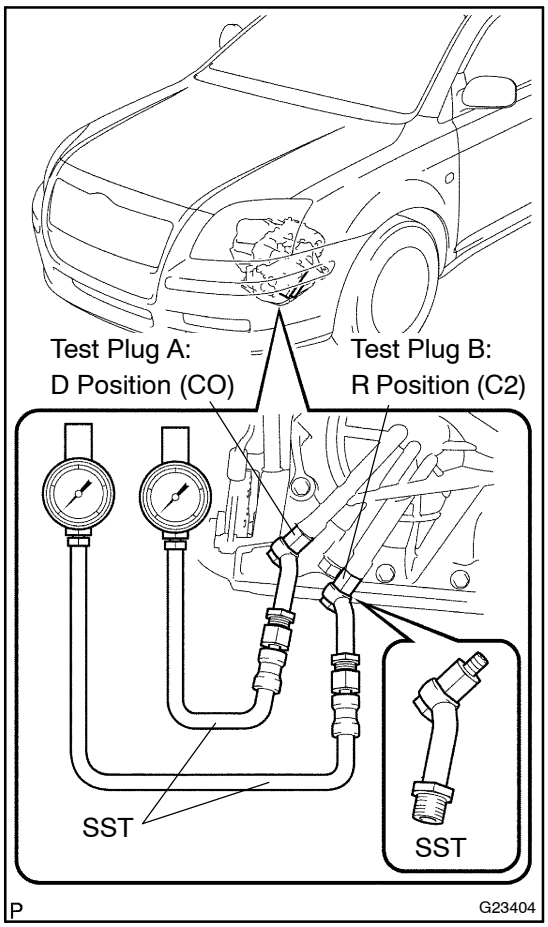
(4) Start and warm up the engine and check idle speed.

Idle speed: approx. 700 rpm (In N position and A/C OFF)

(5) Shift the lever from N to D position. Using a stop watch, measure the time from when the lever is shifted until the shock is felt.

Time lag: N → D less than 1.2 seconds

(6) In the same way, measure the time lag for N → R.



Time lag: N → R less than 1.5 seconds

Evaluation (If N → D or N → R time lag is longer than the specified):

Problem	Possible cause
N → D time lag is longer	• Line pressure is too low • Forward clutch worn • No.1 one–way clutch not operating properly • U/D (Underdrive) one–way clutch not operating • U/D (Underdrive) brake worn
N → R time lag is longer	• Line pressure is too low • Reverse clutch worn • 1st and reverse brake worn • U/D (Underdrive) brake worn

05JL6–01

HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.

NOTICE:

- **Perform the test at the normal operation fluid temperature the 50 to 80°C (122 to 176°F)**
- **The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.**
- **Be careful to prevent SST hose from interfering with the exhaust pipe.**
- **This check must be conducted after checking and adjusting engine.**
- **Perform under condition that A/C is OFF.**
- **When conducting stall test, do not continue more than 10 seconds.**

(1) Warm up the ATF (Automatic Transmission Fluid).

(2) Lift the vehicle up.

(3) Remove the engine under cover.

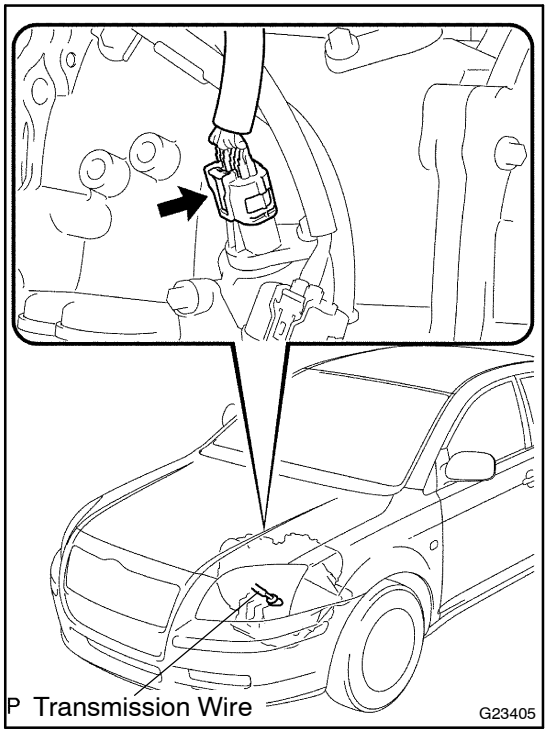
(4) Connect hand–held tester to DLC3.

(5) Remove the test plug A on the transaxle case front left side and install the SST.

SST 09992–00095 (09992– 00231, 09992–00271)

NOTICE:

There is a difference in installation point between D position and R position.



(6) Start the engine.

(7) Using hand–held tester, shift to D position and hold 3rd gear by active test, and measure the line pressure in idling.

Specified line pressure:

Condition	D position
Idling	372 to 412 kPa (3.8 to 4.2 kgf/cm^2, 54 to 60 psi)

(8) Turn the ignition switch off.

(9) Disconnect the connector of the transmission wire.

HINT:

Disconnect the connector only when performing the D position stall test.

(10) Start the engine.

(11) Firmly depress the brake pedal, shift to the D position, depress the accelerator pedal all the way down and check the line pressure while the stall test is performed.

Specified line pressure:

Condition	D position
Stall test	931 to 1,031 kPa (9.5 to 10.5 kgf/cm^2, 135 to 150 psi)

(12) Turn the ignition switch off.

(13) Remove the SST, install the test plug A.

(14) Remove the test plug B, install the SST and start engine.

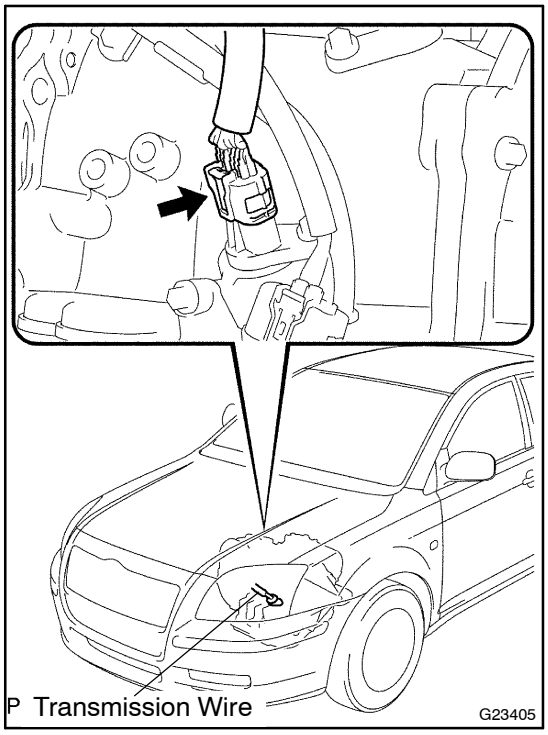
SST 09992–00095 (09992– 00231, 09992–00271)

(15) Connect the transmission wire connector, depress the brake pedal firmly, shift to the R position and check that the line pressure while the engine is idling and during the stall test.

Specified line pressure:

Condition	R position
Idling	672 to 742 kPa (6.9 to 7.6 kgf/cm^2, 97 to 108 psi)
Stall test	1,768 to 1,968 kPa (18.0 to 20.1 kgf/cm^2, 256 to 285 psi)

(16) Remove the SST, install the test plug B.



(17) Clear the DTC.

Evaluation:

Problem	Possible cause
If the measured values at all position are higher	• Shift solenoid valve (SLT) defective • Regulator valve defective
If the measured values at all position are lower	• Shift solenoid valve (SLT) defective • Regulator valve defective • Oil pump defective • U/D (Underdrive) direct clutch defective
If pressure is low in the D position only	• D position circuit fluid leak • Forward clutch defective
If pressure is low in the R position only	• R position circuit fluid leak • Reverse clutch defective • 1st and reverse brake defective

05JL7–01

MANUAL SHIFTING TEST

1. PERFORM MANUAL SHIFTING TEST

HINT:

- With this test, it can be determined whether the trouble occurs in the electrical circuit or is a mechanical problem in the transaxle.
- If any abnormalities are found in the following test, the problem is in the transaxle itself.

(a) Disconnect the transmission wire connector.

(b) Drive with the transmission wire disconnected.
Shifting the shift lever to the D position to check whether the shifting condition changes the table below.

Shift Position	Shifting Condition
D	No Shift (Not Change)

HINT:

When driving with the transmission wire disconnected, the gear position will be as follows:

- When the shift lever is in the D position, the gear is held in the 4th position.
- When the shift lever is in the R or the P position, the gear is also in the R or the P position respectively.

(c) Connect the transmission wire connector.

(d) Clear the DTC (see page 05–557).

05JL8–01

INITIALIZATION

1. RESET MEMORY

CAUTION:

Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assy, engine assy or ECM.

NOTICE:

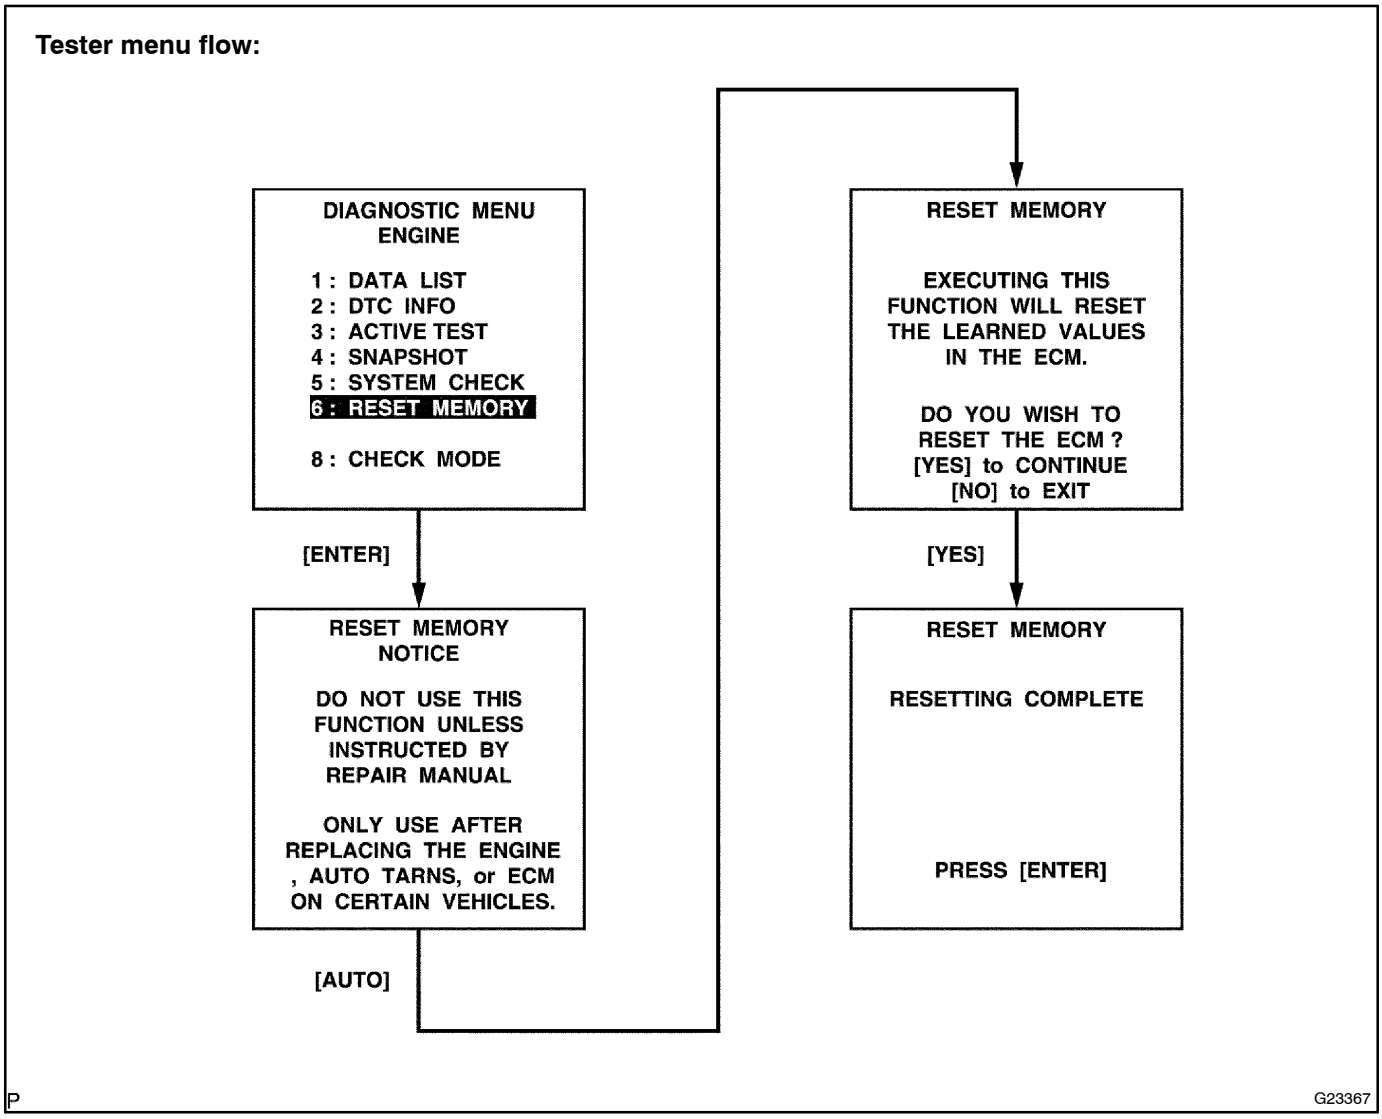
Hand–held tester only

HINT:

The ECM memorizes the condition that the ECT controls the automatic transaxle assy and engine assy according to those characteristics. Therefore, when the automatic transaxle assy, engine assy, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

Reset procedure is as follows.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position and push the hand–held tester main switch on.
(d) Select the item ”DIAGNOSIS / OBD/MOBD”.
(e) Perform the reset memory procedure from the ENGINE menu.



CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST (see page 05–534) described earlier.

HINT:

The ECM is learned by performing the ROAD TEST.

Tester menu flow:

05JL9–01

MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

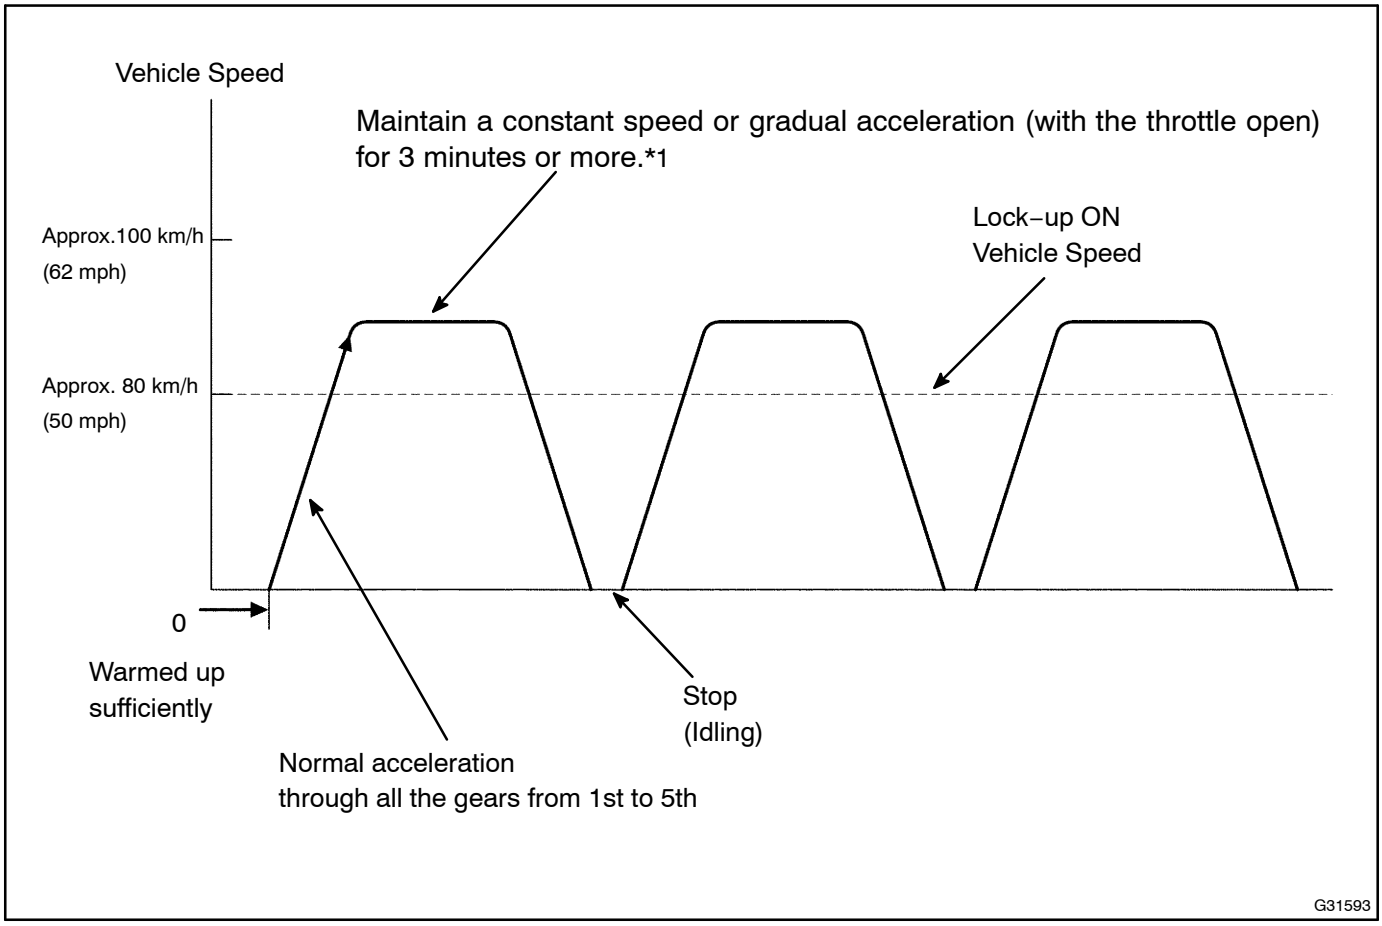
(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT malfunctions. (The DTCs may not be detected due the actual driving conditions. And some codes may not be detected through this drive pattern).

HINT:

Preparation for driving

- Warm up the engine sufficiently. (Engine coolant temperature is 60 °C (140 °F) or higher)
- Drive the vehicle when the atmospheric temperature is –10 °C (14 °F) or higher. (Malfunction is not detected when the atmospheric temperature is –10 °C (14 °F) or less)

Driving note



- Drive the vehicle through all gears.
  Stop → 1st → 2nd → 3rd → 4th → 5th → 5th (lock–up ON).
- Perform engine brake test in the S position.
  While driving in the 5(S) position and 5th gear lock–up, shift into the "–" position and down–shift from 5th to 4th, 4th to 3rd, 3rd to 2nd, 2nd to 1st.
  Check that the engine brake performs properly whenever down–shift takes place.
- Repeat the above driving pattern three times or more.

NOTICE:

- **When using the hand–held tester, monitor status can be found in the "DIAGNOSIS / OBD/MOBD / DATA LIST".**
- **In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors) the drive pattern can be resumed and, in most cases, the monitor can be completed.**

CAUTION:

Perform this drive pattern on a level road as much as possible and strictly observe the posted speed limits and traffic laws while driving.

HINT:

*1: Drive at such a speed in the uppermost gear, to engage lock–up. The vehicle can be driven at a speed lower than that in the above diagram under the lock–up condition.

NOTICE:

It is necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (ATF temperature sensor malfunction).

056IN–05

PROBLEM SYMPTOMS TABLE

HINT:

If a normal code is displayed during the diagnostic trouble code check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.

The Matrix Chart is divided into 2 chapters.

1. **Chapter 1: Electronic Circuit Matrix Chart**

- Refer to the table below when the trouble cause is considered to be electrical.
- If the instruction ”Proceed to next circuit inspection shown on matrix chart” is given in the flow chart of each circuit, proceed to the circuit with the next highest number in the table to continue the check.
- If the trouble still occurs even though there are no abnormalities in any of the other circuits, check and replace the ECM.

HINT:

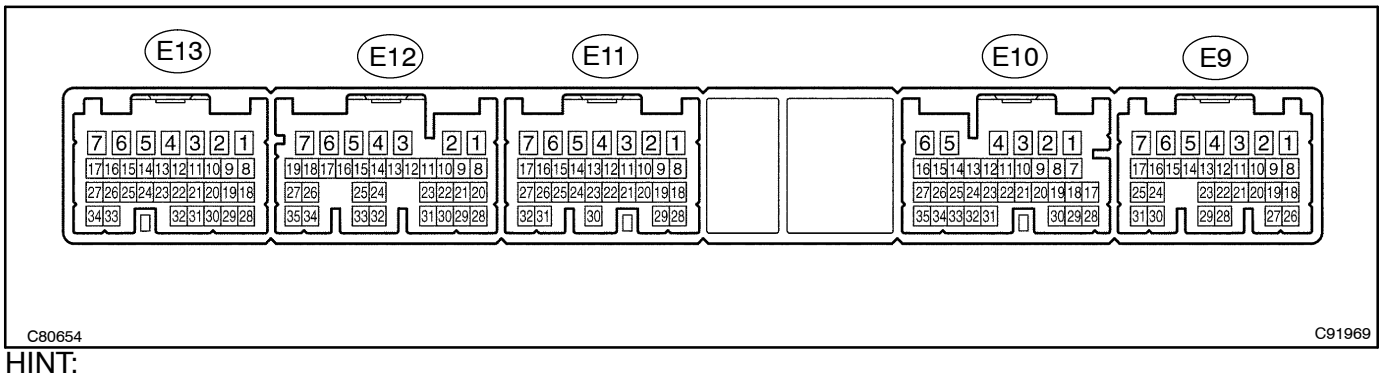
*1: When the circuit on which mark *1 is attached is a malfunction, DTC could be output (see page 05–564).

*2: LHD

Symptom	Suspect Area	See page
No down–shift (A particular gear, from 1st to 4th gear, is not down–shifted)	1. Shift solenoid valve (SL1) circuit *1 2. Shift solenoid valve (SL2) circuit *1 3. Shift solenoid valve (SL3) circuit *1 4. Shift solenoid valve (SR) circuit *1 5. ECM	05–589 05–601 05–610 05–598 01–32
No down–shift (5th → 4th)	1. Park/neutral position switch circuit *1 2. Shift solenoid valve (S4) circuit *1 3. ECM	05–566 05–595 01–32
No up–shift (A particular gear, from 1st to 4th gear, is not up–shifted)	1. Shift solenoid valve (SL1) circuit *1 2. Shift solenoid valve (SL2) circuit *1 3. ECM	05–589 05–601 01–32
No up–shift (4th → 5th)	1. Park/neutral position switch circuit *1 2. Shift solenoid valve (S4) circuit *1 3. ECM	05–566 05–595 01–32
No lock–up	1. Shift solenoid valve (DSL) circuit *1 2. Stop light switch circuit *1 3. Engine coolant temp. sensor circuit *1 4. ECM	05–582 05–580 05–31 01–32
No lock–up off	1. Shift solenoid valve (DSL) circuit *1 2. ECM	05–582 01–32
Shift point too high or too low	1. Throttle position sensor circuit *1 2. Shift solenoid valve (SLT) circuit *1 3. ECM	05–31 05–622 01–32
Up–shift to 5th from 4th while engine is cold	1. Engine coolant temp. sensor circuit *1 2. ECM	05–31 01–32
No gear change by shifting into ”+” or ”–” while the shift lever is in the S position	1. Transmission control switch circuit 2. ECM	05–625 01–32
Harsh engagement (N → D)	1. Shift solenoid valve (SL1) circuit *1 2. ECM	05–589 01–32
Harsh engagement (Lock–up)	1. Shift solenoid valve (SL2) circuit *1 2. ECM	05–601 01–32
Harsh engagement (Any driving position)	1. Shift solenoid valve (SLT) circuit *1 2. ECM	05–622 01–32
Poor acceleration	1. Shift solenoid valve (SLT) circuit *1 2. ECM	05–622 01–32

No kick–down	1. Kick–down switch circuit *2 2. ECM	05–634 01–32
Engine stalls when starting off or stopping	1. Shift solenoid valve (DSL) circuit *1 2. ECM	05–582 01–32
ECT SNOW (ECTS) does not operate	1. Shift solenoid valve (SLT) circuit *1 2. Pattern select (SNOW/ECTS) switch circuit 3. ECM	05–622 05–630 01–32
Malfunction in shifting	1. Park/neutral position switch circuit *1 2. Transmission control switch circuit 3. ECM	05–566 05–625 01–32

2. Chapter 2: On–Vehicle Repair and Off–Vehicle Repair (★: U151E, U151F AUTOMATIC TRANSAXLE Repair Manual Pub. No. RM1021U) (★1: Refer to Repair Manual RM1018E)



Symptom	Suspect Area	See page
Vehicle does not move in forward position and in reverse positions	1. Valve body assy 2. U/D brake (B_3) 3. Torque converter clutch	40–19 ★ ★1
Vehicle does not move in R position	1. Valve body assy 2. Reverse clutch (C_2) 3. 1st & reverse brake (B_2)	40–19 ★ ★
No up–shift (1st → 2nd)	1. Valve body assy 2. 2nd & O/D brake (B_1)	40–19 ★
No up–shift (2nd → 3rd)	1. Valve body assy 2. Direct and O/D clutch (C_0)	40–19 ★
No up–shift (3rd → 4th)	1. Valve body assy 2. 2nd & O/D brake (B_1)	40–19 ★
No up–shift (4th → 5th)	1. Valve body assy 2. U/D clutch (C_3)	40–19 ★
No down–shift (5th → 4th)	Valve body assy	40–19
No down–shift (4th → 3rd)	Valve body assy	40–19
No down–shift (3rd → 2nd)	Valve body assy	40–19
No down–shift (2nd → 1st)	Valve body assy	40–19
No lock–up or No lock–up off	1. Valve body assy 2. Torque converter clutch	40–19 ★1
Harsh engagement (N → D)	1. Valve body assy 2. C_1 accumulator 3. Forward clutch (C_1) 4. One–way clutch No.1 (F_1) 5. U/D one–way clutch (F_2)	40–19 ★ ★ ★ ★
Harsh engagement (Lock–up)	1. Valve body assy 2. Torque converter clutch	40–19 ★1
Harsh engagement (N → R)	1. Valve body assy 2. C_2 accumulator 3. Reverse clutch (C_2) 4. 1st & reverse brake (B_2)	40–19 ★ ★ ★
Harsh engagement (1st →2nd → 3rd → 4th → 5th)	Valve body assy	40–19
Harsh engagement (1st → 2nd)	1. Valve body assy 2. 2nd & O/D brake (B_1)	40–19 ★
Harsh engagement (2nd → 3rd)	1. Valve body assy 2. C_0 accumulator 3. Direct and O/D clutch (C_0)	40–19 ★ ★
Harsh engagement (3rd → 4th)	1. Valve body assy 2. 2nd & O/D brake (B_1)	40–19 ★
Harsh engagement (4th → 5th)	1. Valve body assy 2. C_3 accumulator 3. U/D clutch (C_3)	40–19 ★ ★
Harsh engagement (5th → 4th)	1. Valve body assy 2. B_3 accumulator	40–19 ★

Slip or shudder (Forward and reverse: After warm–up)	1. Valve body assy 2. Oil strainer 3. Direct and O/D clutch (C_0) 4. Forward clutch (C_1) 5. U/D clutch (C_3) 6. 2nd & O/D brake (B_1) 7. U/D brake (B_3) 8. One–way clutch No.1 (F_1) 9. U/D one–way clutch (F_2) 10.Torque converter clutch	40–19 40–19 ★ ★ ★ ★ ★ ★ ★ ★1
Slip or shudder (Particular position: Just after engine starts)	Torque converter clutch	★1
Slip or shudder (R position)	1. Reverse clutch (C_2) 2. 1st & reverse brake (B_2)	★ ★
Slip or shudder (1st)	1. Forward clutch (C_1) 2. One–way clutch No.1 (F_1) 3. U/D one–way clutch (F_2)	★ ★
Slip or shudder (2nd)	2nd & O/D brake (B_1)	★
Slip or shudder (3rd)	Direct and O/D clutch (C_0)	★
Slip or shudder (4th)	2nd & O/D brake (B_1)	★
Slip or shudder (5th)	U/D clutch (C_3)	★
No engine braking (1st – 4th: D position)	U/D brake (B_3)	★
No engine braking (1st: L (1) position)	1. Valve body assy 2. 1st & reverse brake (B_2)	40–19 ★
No engine braking (2nd: 2 position)	1. Valve body assy 2. 2nd & O/D brake (B_1)	40–19 ★
No engine braking (3rd: 3 position)	U/D brake (B_3)	★
Poor acceleration (All positions)	Torque converter clutch	★1
Poor acceleration (5th)	1. U/D clutch (C_3) 2. U/D planetary gear unit	★ ★
Engine stalls when starting off or stopping	Torque converter clutch	★1
No kick–down	Valve body assy	40–19

05JLA–01

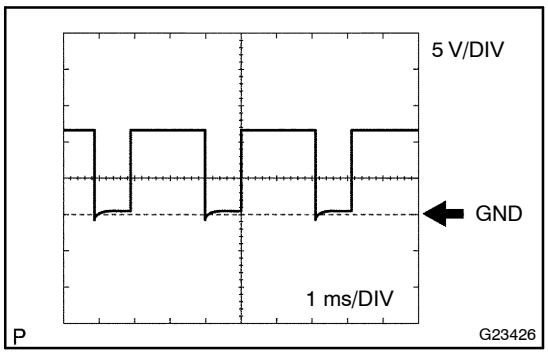
TERMINALS OF ECM

1. ECM

HINT:

Each ECM terminal's standard voltage is shown in the table below.

In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to inspected. The standard voltage between the terminals is shown under "Specific Condition".



Use the illustration above as a reference for the ECM terminals.

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D (E10–10) – E1 (E11–1)	LG–B – BR	D shift position switch signal	IG switch ON and shift lever D and S position	10 to 14 V
↑	↑	↑	IG switch ON and shift lever except D and S position	Below 1 V
R (E10–11) – E1 (E11–1)	R–Y – BR	R shift position switch signal	IG switch ON and shift lever R position	10 to 14 V
↑	↑	↑	IG switch ON and shift lever except R position	Below 1 V
SPD (E10–17) – E1 (E11–1)	V–W – BR	Speed signal	Vehicle speed 20 km/h (12 mph)	Pulse generation (See waveform 8)
STP (E10–19) – E1 (E11–1)	G–W – BR	Stop lamp switch signal	Brake pedal is depressed	7.5 to 14 V
↑	↑	↑	Brake pedal is released	Below 1.5 V
SFTD (E10–21) – E1 (E11–1)	B – BR	Down shift switch signal	IG switch ON and shift lever S position	10 to 14 V
↑	↑	↑	IG switch ON and shift lever "–" position (Down shift)	Below 1 V
SFTU (E10–22) – E1 (E11–1)	R – BR	Up shift switch signal	IG switch ON and shift lever S position	10 to 14 V
↑	↑	↑	IG switch ON and shift lever "+" position (Up shift)	Below 1 V
SPT1 (E10–20) – E1 (E11–1)	L – BR	S shift position switch signal	IG switch ON and shift lever S position	10 to 14 V
↑	↑	↑	IG switch ON and shift lever except S position	Below 1 V
P (E9–6) – E1 (E11–1)	W–L – BR	Park position switch signal	IG switch ON and shift lever P position	10 to 14 V
↑	↑	↑	IG switch ON and shift lever except P position	Below 1 V
N (E7–7) – E1 (E11–1)	R – BR	Neutral position switch signal	IG switch ON and shift lever N position	10 to 14 V
↑	↑	↑	IG switch ON and shift lever except N position	Below 1 V

DSL (E12–11) – E1 (E11–1)	L–B – BR	DSL solenoid signal	Vehicle speed 65 km/h (40 mph), lock–up (ON to OFF)	Pulse generation (See waveform 2)
SR (E12–9) – E1 (E11–1)	BR–W – BR	SR solenoid signal	IG switch ON	Below 1 V
↑	↑	↑	3rd, 4th or 5th gear	10 to 14 V
↑	↑	↑	1st or 2nd gear	Below 1 V
S4 (E12–10) – E1 (E11–1)	L – BR	S4 solenoid signal	IG switch ON	Below 1 V
↑	↑	↑	5th gear	10 to 14 V
↑	↑	↑	Except 5th gear	Below 1 V
SL3+ (E12–15) – SL3– (E12–14)	L–W – L–R	SL3 solenoid signal	Engine idle speed	Pulse generation (See waveform 3)
SL2+ (E12–17) – SL2– (E12–16)	R – R–B	SL2 solenoid signal	Engine idle speed	Pulse generation (See waveform 4)
SL1+ (E12–19) – SL1– (E12–18)	Y – Y–B	SL1 solenoid signal	Engine idle speed	Pulse generation (See waveform 5)
NC+ (E12–26) – NC– (E12–34)	LG – LG–B	Speed sensor (NC) signal	Vehicle speed 30 km/h (19 mph): (3rd gear) Engine speed 1,400 rpm	Pulse generation (See waveform 6)
NT+ (E12–27) – NT– (E12–35)	B–O – B	Speed sensor (NT) signal	Vehicle speed 20 km/h (12 mph)	Pulse generation (See waveform 7)
SLT+ (E12–13) – SLT– (E12–12)	P–L – P	SLT solenoid signal	Engine idle speed	Pulse generation (See waveform 1)
THO (E12–32) – E2 (E13–28)	V – BR	ATF temperature sensor signal	ATF temperature: 115 °C (239 °F) or more	Below 1.5 V
KD *1 (E10–30) – E1 (E11–1)	W – BR	Kick–down switch signal	IG switch ON and Accelerator pedal is depressed	Below 1 V
↑	↑	↑	IG switch ON and Accelerator pedal is released	10 to 14 V

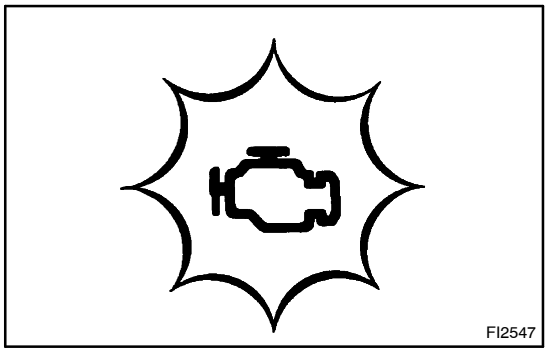
05JLB–01

DIAGNOSIS SYSTEM

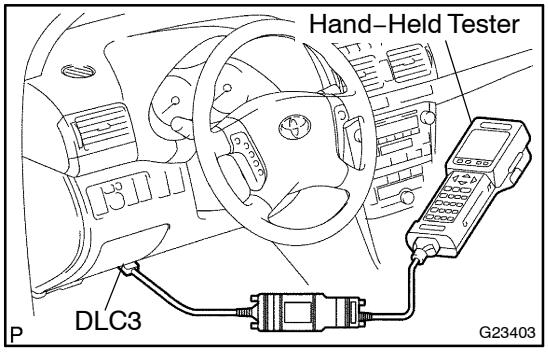
1. DESCRIPTION for EURO–OBD (European spec.)



- When troubleshooting Euro–OBD vehicles, the only difference from the usual troubleshooting procedure is that you connect an OBD scan tool complying with ISO 15031–4 or a hand–held tester to the vehicle, and read the various data output from the vehicle's ECM.
- Euro–OBD regulations require that the vehicle's on–board computer illuminates the check engine warning light (CHK ENG (MIL)) on the instrument panel when the computer detects a malfunction in: 1) the emission control system / components, or 2) the powertrain control components (which affect vehicle emissions), or 3) the computer. In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by ISO 15031–4 are recorded in the ECM memory (see page 05–564).

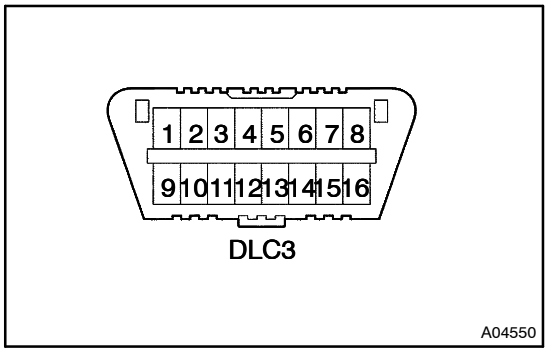
If the malfunction does not reoccur in 3 consecutive trips, the CHK ENG (MIL) goes off automatically but the DTCs remain recorded in the ECM memory.

- To check the DTCs, connect the OBD scan tool or hand–held tester to Data Link Connector 3 (DLC3) on the vehicle. The OBD scan tool or hand–held tester also enables you to erase the DTCs and check the freeze frame data and various forms of engine data. (See the instruction manual for the OBD scan tool or the hand–held tester).
- DTCs include ISO controlled codes and manufacturer controlled codes. ISO controlled codes must be set according to the ISO, while manufacturer controlled codes can be set by a manufacturer within certain restrictions (see the DTC chart on page 05–564).
- The diagnosis system operates in normal mode during normal vehicle use. In "normal mode", 2 trip detection logic* is used to ensure accurate detection of malfunctions. A "check mode", is also available to technicians as an option. In "check mode", 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions (hand–held tester only)
  (see page 05–557).
- *2 trip detection logic:
  When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned OFF and then ON again, and the same malfunction is detected again, the CHK ENG (MIL) will illuminate (2nd trip).



- Freeze frame data:
  The freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

2. DESCRIPTION for M–OBD (Except European spec.)



- When troubleshoot Multiplex OBD (M–OBD) vehicles, the only difference from the usual troubleshooting procedure is that you connect the hand–held tester to the vehicle, and read the various data output from the vehicle's ECM.
- The vehicle's on–board computer illuminates the check engine warning lamp (CHK ENG (MIL)) on the instrument panel when the computer detects a malfunction in the computer itself or in drive system components. In addition, the applicable Diagnostic Trouble Codes (DTCs) are recorded in the ECM memory (see page 05–564).

If the malfunction does not recur, the CHK ENG (MIL) goes off be disappeared by turning the ignition switch to OFF, but the recorded DTCs remain in the ECM memory.

- To check the DTCs, connect the hand–held tester to the Data Link Connector 3 (DLC3) on the vehicle or connect terminals TC and CG on the DLC3(DTCs will be displayd on the multi–information display).
- The diagnosis system operates in normal mode during normal vehicle use. In "normal mode", 2 trip detection logic* is used to ensure accurate detection of malfunctions. A "check mode", is also available to technicians as an option. In "check mode", 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions (hand–held tester only)
  (see page 05–558).
- *2 trip detection logic:
  When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned OFF and then ON again, and the same malfunction is detected again, the CHK ENG (MIL) will illuminate (2nd trip).

- Freeze frame data:
  The freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air–fuel ratio was lean or rich, and other data from the time the malfunction occurred.

3. CHECK DLC3.

(a) The vehicle's ECM uses the ISO 9141–2 (Euro–OBD)/ ISO 14230(M–OBD) communication protocol. The terminal arrangement of the DLC3 complies with ISO 15031–03 and matches the ISO 9141–2/ ISO 14230 format.

Symbol	Terminal No.	Name	Reference Terminal	Result	Condition
SIL	7	Bus "+" line	5 – Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	9 to 14 V	Always

HINT:

If your display shows "UNABLE TO CONNECT TO VEHICLE" when you have connected the cable of hand–held tester to the DLC3, turned the ignition switch to the ON position and operated the hand–held tester, there is a problem on the vehicle side or tool side.

- If communication is normal when the tool is connected to another vehicle, inspect DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to another vehicle, the problem is probably in the tool itself, so consult the Service Department listed in the tool's instruction manual.

4. INSPECT BATTERY VOLTAGE

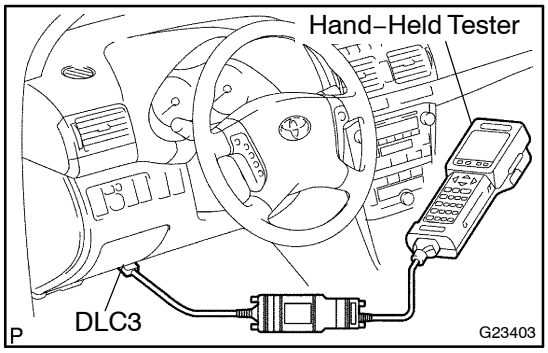
(a) Measure the battery voltage.

Battery Voltage: 11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.

5. CHECK CHK ENG (MIL)

(a) The CHK ENG (MIL) comes on when the ignition switch is turned to ON position and the engine is not running.



HINT:

If the CHK ENG (MIL) is not illuminated, troubleshoot the CHK ENG (MIL) circuit (see page 05–251).

(1) When the engine is started, the CHK ENG (MIL) should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

05JLC–01

DTC CHECK/CLEAR

1. DTC CHECK (NORMAL MODE)

NOTICE:

Hand–held tester only:

When the diagnostic system is switched from the normal mode to the check mode, all the DTCs and freeze frame data recorded in the normal mode will be erased. So before switching modes, always check the DTCs and freeze frame data, and note them down.

(a) Checking DTCs using the hand–held tester.

(1) Turn the ignition switch off.

(2) Connect the hand–held tester to DLC3.

(3) Turn the ignition switch to the ON position.

(4) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. For the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODEDS.

HINT:

If you need help with the hand–held tester, refer to its instruction book.

(5) See page 05–564 to confirm the details of the DTCs.

2. DTC CLEAR

(a) When using the hand–held tester:

Clearing the DTCs.

(1) Connect the hand–held tester to the DLC3.

(2) Turn the ignition switch to the ON position. (Do not start the engine start)

(3) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. For the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES.

HINT:

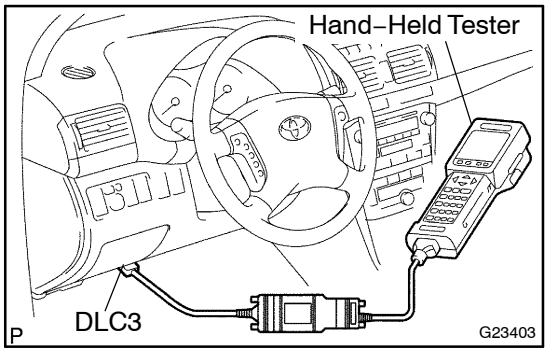
If you need help with the hand–held tester, refer to its instruction book.

(b) When not using the hand–held tester:

Clearing the DTCs.

(1) Disconnecting the battery terminal or remove the EFI and THROTTLE fuses from the engine room R/B for 60 seconds or more. But if you disconnect the battery terminal, you should do the ”INITIALIZE ” procedure.

05JLD–01



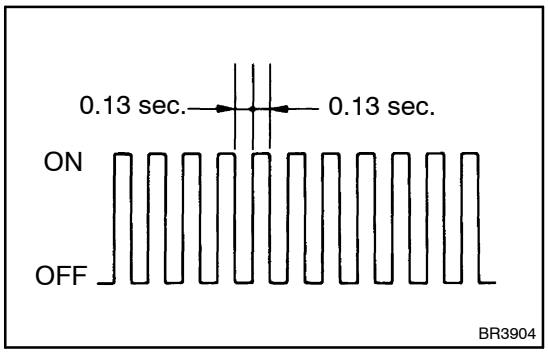
CHECK MODE PROCEDURE

1. DTC CHECK (CHECK MODE)

HINT:

Hand–held tester only:

Compared to the normal mode, the check mode has more sensing ability to detect malfunctions. Furthermore, the same diagnostic items which are detected in the normal mode can also be detected in the check mode.



(a) Procedure for Check Mode using the hand–held tester.

(1) Check the initial conditions.
- Battery positive voltage 11 V or more
- Throttle valve fully closed
- Transaxle in the P or N position
- A/C switch is off

(2) Turn the ignition switch off.

(3) Connect the hand–held tester to the DLC3.

(4) Turn the ignition switch to the ON position.

(5) Switch the hand–held tester from the normal mode to the check mode (Check that the MIL flashes).

NOTICE:

If the hand–held tester switches the ECM from the normal mode to the check mode or vice–versa, or if the ignition switch is turned from the ON position to the ACC or LOCK position during the check mode, the DTC and freeze frame data will be erased.

(6) Start the engine (MIL goes off after the engine starts).

(7) Perform ”MONITOR DRIVE PATTERN” for the ECT test (see page 05–543).
(Or, simulate the conditions of the malfunction described by the customer).

NOTICE:

Leave the ignition switch in the ON position until you have checked the DTCs, etc.

(8) After simulating malfunction conditions, use the hand–held tester diagnosis selector to check the DTCs and freeze frame data, etc.

HINT:

Be sure not to turn the ignition switch off, as turning it off switches the diagnosis system from the check mode to the normal mode, which erases all the DTCs, etc.

(9) After checking the DTC, inspect the applicable circuit.

2. DTC CLEAR

(a) When using the hand–held tester:
Clearing the DTCs.
(1) Connect the hand–held tester to the DLC3.
(2) Turn the ignition switch to the ON position. (Do not start the engine start)
(3) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. For the hand–held tester, select the item: DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES.

HINT:
If you need help with the hand–held tester, refer to its instruction book.

(b) When not using the hand–held tester:
Clearing the DTCs.
(1) Disconnecting the battery terminal or remove the EFI and THROTTLE fuses from the engine room R/B for 60 seconds or more. But if you disconnect the battery terminal, you should do the ”INITIALIZE ” procedure.

05JLE–01

FAIL–SAFE CHART

1. FAIL–SAFE

This function minimizes the loss of the ECT functions when any malfunction occurs in each sensor or solenoid.

(a) ATF (Automatic Transmission Fluid) temperature sensor:
When the ATF temperature sensor has a malfunction, 5th upshift is prohibited.

(b) Counter gear speed sensor NC (Speed sensor NC):
When the counter gear speed sensor has a malfunction, 5th upshift is prohibited.

(c) Shift solenoid valve DSL:
When the solenoid valve DSL has a malfunction, the current to the solenoid valve is stopped. This stops lock–up control, then fuel economy decreases.

(d) Shift solenoid valve SL1, SL2, SL3 and S4:

Fail safe function:

If either of the shift solenoid valve circuits develops an open or short, the ECM turns the other shift solenoid "ON" and "OFF" in order to shift into the gear positions shown in the table below.

Manual shifting as shown in the following table must be done (In case of a short circuit, the ECM stops sending the current to the short circuit solenoid).

Even if starting the engine in the fail–safe mode, the gear position remain in the same position.

○ : ON △ : According to Flex Lock–up × : OFF

→ : Condition in the normal operation is shown on the left of "→".
Condition in the fail–safe mode is shown on the right of "→".

Normal	Solenoid Valve	SL1	○	×	○	×	×
		SL2	○	○	×	△	△
		SL3	×	×	×	○	○
		S4	×	×	×	×	○
	Gear Position		1st	2nd	3rd	4th	5th
SL1 Malfunction (During driving at 1st or 2nd)	Solenoid Valve	SL1	×				
		SL2	○	○	×→○	△→○	△→○
		SL3	×	×	×	○→×	○→×
		S4	×	×	×	×	○→×

05JLF–01

DATA LIST/ACTIVE TEST

1. DATA LIST

HINT:

According to the DATA LIST displayed by the hand–held tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST”.
(g) According to the display on tester, read the ”DATA LIST”.

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
STOP LIGHT SW	Stop light SW Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	–
REVERSE	PNP SW Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	When the shift lever position displayed on the hand–held tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page 05–566.
DRIVE	PNP SW Status/ ON or OFF	Shift lever position is; D and S: ON Except D and S: OFF	↑
SHIFT	Actual Gear Position/ 1st, 2nd, 3rd, 4th or 5th	Shift lever position is; • D: 1st, 2nd, 3rd, 4th or 5th • S: 1st, 2nd, 3rd, 4th or 5th	–
LOCK UP SOL	Lock Up Solenoid Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	–
SOLENOID (SLT)	Shift Solenoid SLT Status/ ON or OFF	• Accelerator pedal is depressed: OFF • Accelerator pedal is released: ON	–
AT FLUID TEMP	ATF Temp. Sensor Value/ min.: –40°C (–40°F) max.: 215°C (419°F)	• After Stall Test; Approx. 80°C (176°F) • Equal to ambient temperature when the engine is cold	If the value is ”–40°C (–40°F)” or ”215°C (419°F)”, ATF temp. sensor circuit is opened or shorted.
SPD (NC)	Counter Gear Speed/ display: 50 r/min	[HINT] 3rd when shift lever position is D position (After warming up the engine); • Intermediate shaft speed (NC) becomes close to the engine speed.	–

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST”.
(g) According to the display on tester, perform the ”ACTIVE TEST”.

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press ”→” button: Shift up • Press ”←” button: Shift down	Possible to check the operation of the shift solenoid valves.
LOCK UP	[Test Details] Control the shift solenoid DSL to set the automatic transaxle to the lock–up condition. [Vehicle Condition] Vehicle Speed: 60 km/h (37 mph) or more, and 5th gear	Possible to check the DSL operation.
LINE PRESS UP *	[Test Details] Operate the shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped. • IDL: ON [HINT] OFF: Line pressure up (When the active test of ”LINE PRESS UP” is performed, the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	–

*: ”LINE PRESS UP” in the ACTIVE TEST is performed to check the line pressure changes by connecting the SST to the automatic transaxle, which is used in the HYDRAULIC TEST (see page 05–538) as well.

HINT:

The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.

056IK–05

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the parts listed in the table below and proceed to the page given.

HINT:

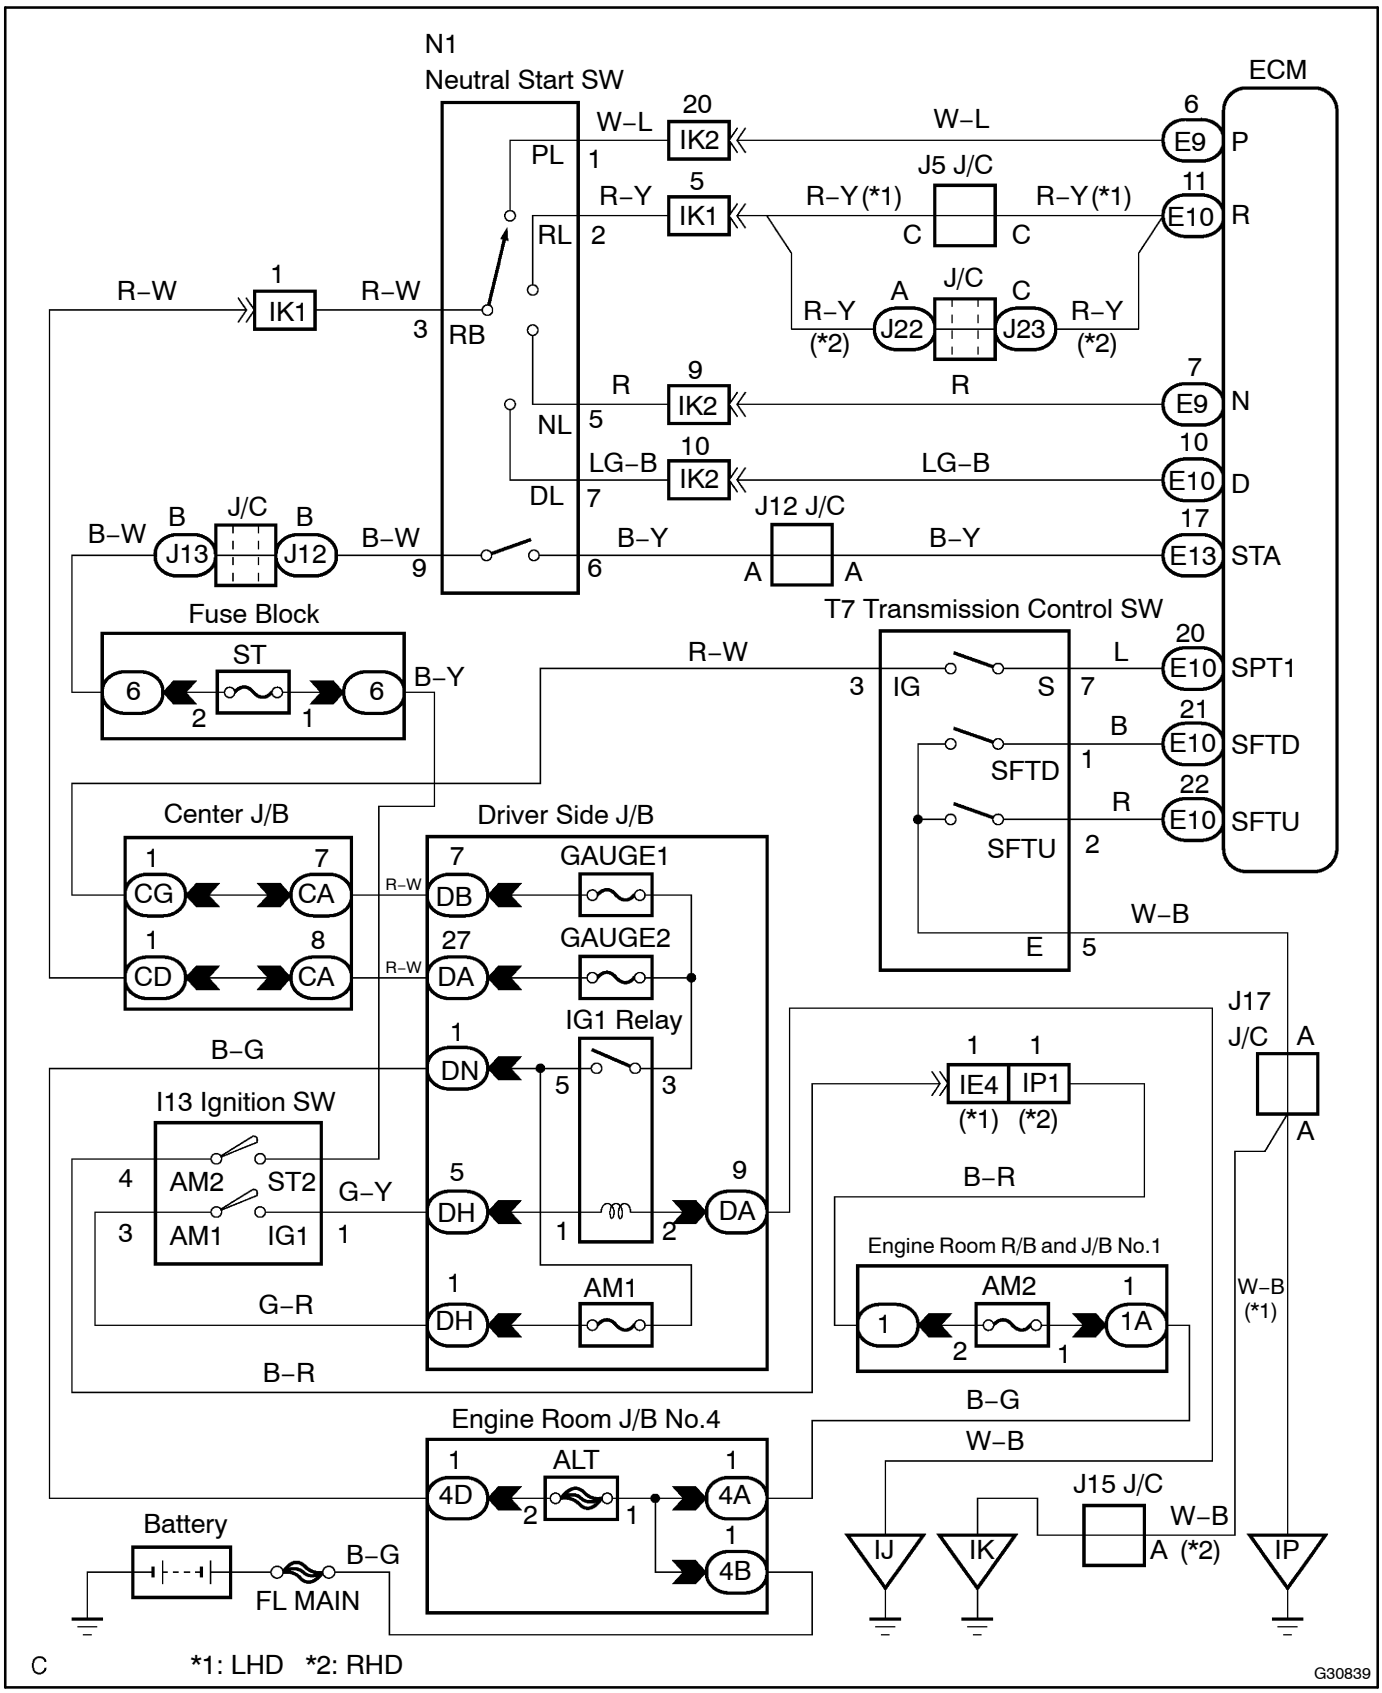
- *1 : ● ... MIL (Malfunction Indicator Lamp) light up
- *2 : "○" mark means ECM memorizes the malfunction code if the ECM detects the DTC detection condition.
- This DTC may be output when the clutch, brake and gear components etc. inside the automatic transaxle are damaged.

DTC No. (See Page)	Detection Item	Trouble Area	MIL *1	Memory *2
P0500 (05–183)	Vehicle Speed Sensor "A"	• Combination meter • Open or short in vehicle speed sensor circuit • Vehicle speed sensor • ECM	●	○
P0705 (05–566)	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	• Open or short in park/neutral position switch circuit • Park/neutral position switch • ECM	●	○
P0710 (05–571)	Transmission Fluid Temperature Sensor "A" Circuit	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM	●	○
P0711 (05–574)	Transmission Fluid Temperature Sensor "A" Performance	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM	●	○
P0712 (05–571)	Transmission Fluid Temperature Sensor "A" Circuit Low Input	• Short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM	●	○
P0713 (05–571)	Transmission Fluid Temperature Sensor "A" Circuit High Input	• Open in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM	●	○
P0717 (05–577)	Turbine Speed Sensor Circuit No Signal	• Open or short in transmission revolution sensor NT (speed sensor NT) circuit • Transmission revolution sensor NT (speed sensor NT) • ECM • Automatic transaxle assembly	●	○
P0724 (05–580)	Brake Switch "B" Circuit High	• Short in stop light switch circuit • Stop light switch • ECM	●	○
P0741 (05–582)	Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve DSL)	• Shift solenoid valve DSL remains open or closed • Valve body is blocked • Shift solenoid valve DSL • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • Line pressure is too low • ECM	●	○
P0743 (05–586)	Torque Converter Clutch Circuit Electrical (Shift Solenoid Valve DSL)	• Open or short in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM	●	○
P0746 (05–589)	Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1)	• Shift solenoid valve SL1 remains open or closed • Valve body is blocked • Shift solenoid valve SL1 • Automatic transaxle (clutch, brake or gear etc.) • ECM	●	○

P0748 (05–592)	Pressure Control Solenoid ”A” Electrical (Shift Solenoid Valve SL1)	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • ECM	●	○
P0766 (05–595)	Shift Solenoid ”D” Performance (Shift Solenoid Valve S4)	• Shift solenoid valve S4 remains open or closed • Valve body is blocked • Shift solenoid valve S4 • Automatic transaxle (clutch, brake or gear etc.) • ECM	●	○
P0771 (05–598)	Shift Solenoid ”E” Performance (Shift Solenoid Valve SR)	• Shift solenoid valve SR remains open or closed • Valve body is blocked • Shift solenoid valve SR • Automatic transaxle (clutch, brake or gear etc.) • ECM	●	○
P0776 (05–601)	Pressure Control Solenoid ”B” Performance (Shift Solenoid Valve SL2)	• Shift solenoid valve SL2 remains open or closed • Valve body is blocked • Shift solenoid valve SL2 • Automatic transaxle (clutch, brake or gear etc.) • ECM	●	○
P0778 (05–604)	Pressure Control Solenoid ”B” Electrical (Shift Solenoid Valve SL2)	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM	●	○
P0793 (05–607)	Intermediate Shaft Speed Sensor ”A”	• Open or short in transmission revolution sensor NC (speed sensor NC) circuit • Transmission revolution sensor NC (speed sensor NC) • ECM	●	○
P0796 (05–610)	Pressure Control Solenoid ”C” Performance (Shift Solenoid Valve SL3)	• Shift solenoid valve SL3 remains open or closed • Valve body is blocked • Shift solenoid valve SL3 • Automatic transaxle (clutch, brake or gear etc.) • ECM	●	○
P0798 (05–613)	Pressure Control Solenoid ”C” Electrical (Shift Solenoid Valve SL3)	• Open or short in shift solenoid valve SL3 circuit • Shift solenoid valve SL3 • ECM	●	○
P0982 (05–616)	Shift Solenoid ”B” Control Circuit Low (Shift Solenoid Valve S4)	• Short in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM	●	○
P0983 (05–616)	Shift Solenoid ”B” Control Circuit High (Shift Solenoid Valve S4)	• Open in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM	●	○
P0985 (05–619)	Shift Solenoid ”E” Control Circuit Low (Shift Solenoid Valve SR)	• Short in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM	●	○
P0986 (05–619)	Shift Solenoid ”E” Control Circuit High (Shift Solenoid Valve SR)	• Open in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM	●	○
P2716 (05–622)	Pressure Control Solenoid ”D” Electrical (Shift Solenoid Valve SLT)	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • ECM	●	○

DTC	P0705	TRANSMISSION RANGE SENSOR CIRCUIT MALFUNCTION (PRNDL INPUT)

CIRCUIT DESCRIPTION



The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0705	(A) Any 2 or more signals of the following are ON simultaneously (2–trip detection logic) • P input signal is ON. • N input signal is ON. • R input signal is ON. • D input signal is ON. (B) When any of following conditions is met for 2.0 sec. or more in the S position (2–trip detection logic) • P input signal is ON. • N input signal is ON. • R input signal is ON.	• Open or short in park/neutral position switch circuit • Park/neutral position switch • ECM

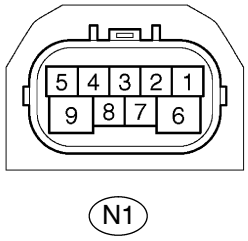
MONITOR DESCRIPTION

The park/neutral position switch detects the shift lever position and sends a signal to the ECM.
For security, the park/neutral position switch detects the shift lever position so that engine can be started only when the vehicle is in P or N shift position.
When the park/neutral position switch sends more than one signal at a time from switch positions P, R, N or D, the ECM interprets this as a fault in the switch. The ECM will turn on the MIL and store the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:



According to the DATA LIST displayed by the hand–held tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Push the ”ON” button of the hand–held tester.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST”.
(f) According to the display on tester, read the ”DATA LIST”.

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
REVERSE	PNP SW Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	When the shift lever position displayed on the hand–held tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
DRIVE	PNP SW Status/ ON or OFF	Shift lever position is; D and S: ON Except D and S: OFF	↑

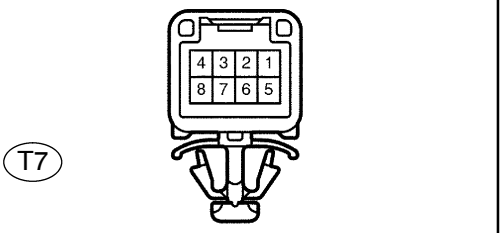
1 INSPECT PARK/NEUTRAL POSITION SWITCH ASSY

Switch Side:
(Connector Front View):

N C91579

(a) Disconnect the park/neutral position switch connector.
(b) Measure resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard:



Shift Position	Tester Connection	Specified Condition
P	1 – 3 and 6 – 9	Below 1 Ω
Except P	↑	10 kΩ or higher
R	2 – 3	Below 1 Ω
Except R	↑	10 kΩ or higher
N	3 – 5 and 6 – 9	Below 1 Ω
Except N	↑	10 kΩ or higher
D, S, ”+” and ”–”	3 – 7	Below 1 Ω
Except D, S, ”+” and ”–”	↑	10 kΩ or higher

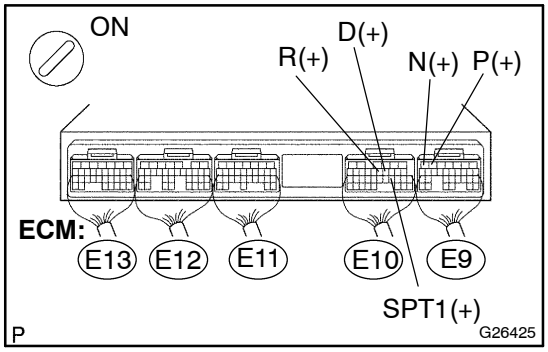
NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSY**

OK

2	INSPECT SHIFT LOCK CONTROL UNIT ASSY(TRANSMISSION CONTROL SWITCH)

Switch Side:
(Connector Front View):

(a) Connect the park/neutral position switch connector.
(b) Disconnect the transmission control switch connector of shift lock control unit assy.
(c) Measure resistance according to the value(s) in the table below when the shift lever is moved to each position.



Standard:

Shift Position	Tester Connection	Specified Condition
S, "+" and "–"	3 – 7	Below 1 Ω
Except S, "+" and "–"	↑	10 kΩ or higher

NG → **REPLACE SHIFT LOCK CONTROL UNIT ASSY**

OK

3	CHECK HARNESS AND CONNECTOR(PARK/NEUTRAL POSITION SWITCH – ECM)

(a) Connect the transmission control switch connector of shift lock control unit assy.

(b) Turn the ignition switch to the ON position, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard:

Shift Position	Tester connection	Specified condition
P	E9 – 6 (P) – Body ground	10 to 14 V
Except P	↑	Below 1 V
N	E9 – 7 (N) – Body ground	10 to 14 V
Except N	↑	Below 1 V
R	E10 – 11 (R) – Body ground	10 to 14 V*
Except R	↑	Below 1 V
D and S	E10 – 10 (D) – Body ground	10 to 14 V
Except D and S	↑	Below 1 V
S, "+" and "–"	E10 – 20 (SPT1) – Body ground	10 to 14 V
Except S, "+" and "–"	↑	Below 1 V

HINT:

*: The voltage will drop slightly due to lighting up of the back up light.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK →

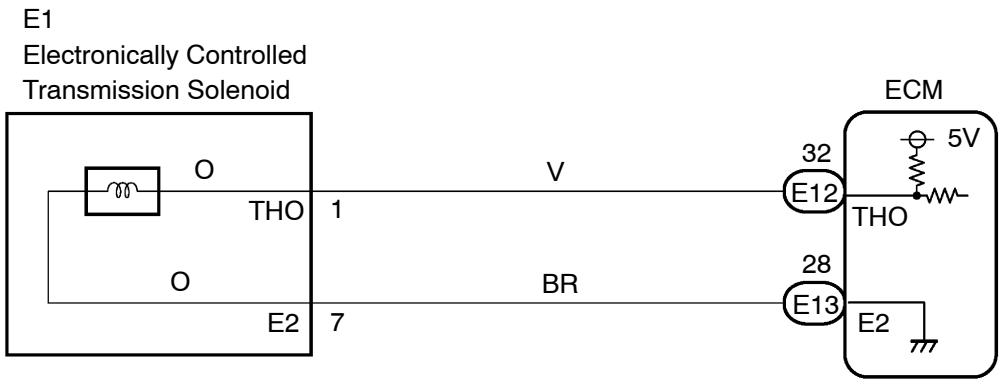
REPLACE ECM (SEE PAGE 10–29)

DTC	P0710	TRANSMISSION FLUID TEMPERATURE SENSOR ”A” CIRCUIT

DTC	P0712	TRANSMISSION FLUID TEMPERATURE SENSOR ”A” CIRCUIT LOW INPUT

DTC	P0713	TRANSMISSION FLUID TEMPERATURE SENSOR ”A” CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION



The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.
The ECM applies a voltage to the temperature sensor through ECM terminal THO.
The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.
One terminal of the sensor is grounded so that the sensor resistance decreases and the voltage goes down as the temperature becomes higher.
The ECM calculates the fluid temperature based on the voltage signal.

DTC No.	DTC Detection Condition	Trouble Area
P0710	(a) and (b) is detected momentary within 0.5 sec. when neither P0712 or P0713 is not detected (1–trip detection logic) (a) ATF temperature sensor resistance is less than 79 Ω. (b) ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 sec., the malfunction switches from (a) to (b) or from (b) to (a)	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM
P0712	ATF temperature sensor resistance is less than 79 Ω for 0.5 sec. or more (1–trip detection logic)	• Short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM
P0713	ATF temperature sensor resistance is more than 156 kΩ when 15 minutes or more after the engine start DTC is detected for 0.5 sec. or more (1–trip detection logic)	• Open in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM

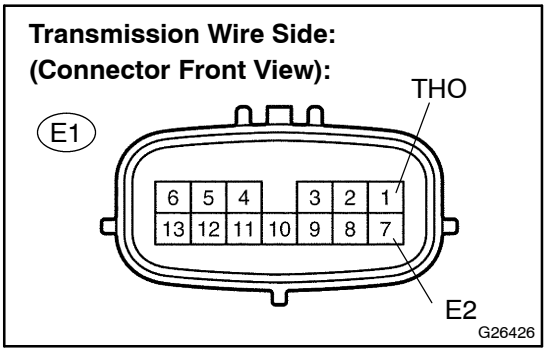
MONITOR DESCRIPTION

The automatic transmission fluid (ATF) temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and the ECM detects an opens or shorts in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω*1 or more than 156 kΩ*2, the ECM interprets this as a fault in the ATF sensor or wiring. The ECM will turn on the MIL and store the DTC.
*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.
*2: –40°C (–40°F) is indicated regardless of the actual ATF temperature.
HINT:
The ATF temperature can be checked on the hand–held tester display.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
According to the DATA LIST displayed by the hand–held tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.



(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST”.
(g) According to the display on tester, read the ”DATA LIST”.

Item	Measurement Item/ Range (display)	Normal Condition
AT FLUID TEMP	ATF Temp. Sensor Value/ min.: –40°C (–40°F) max.: 215°C (419°F)	Approx. 80°C (176°F) (After Stall Test)

HINT:
When DTC P0712 is output and hand–held tester output is 150°C (302°F), there is a short circuit.
When DTC P0713 is output and hand–held tester output is –40°C (–40°F), there is an open circuit.
Measure the resistance between terminal THO1 (THO) and body ground.

Temperature Displayed	Malfunction
–40˚C (–40˚F)	Open circuit
150˚C (302˚F) or more	Short circuit

1 INSPECT TRANSMISSION WIRE(ATF TEMPERATURE SENSOR)

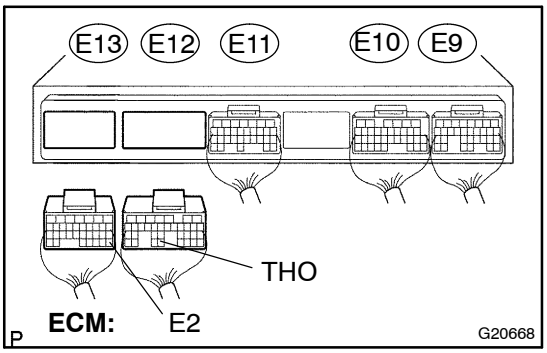
(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition
1 (THO) – 7 (E2)	79 Ω to 156 kΩ

(c) Measure the resistance according to the value(s) in the table below.



Standard (Check for short):

Tester Connection	Specified Condition
1 (THO) – Body ground	10 kΩ or higher
7 (E2) – Body ground	↑

NG → **REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)**

OK

2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission wire connector to the transaxle.

(b) Disconnect the ECM connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition
E12 – 32 (THO) – E13 – 28 (E2)	79 Ω to 156 kΩ

(d) Measure the resistance according to the value(s) in the table below.

Standard (Check for short):

Tester Connection	Specified Condition
E12 – 32 (THO) – Body ground	10 kΩ or higher
E13 – 28 (E2) – Body ground	↑

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

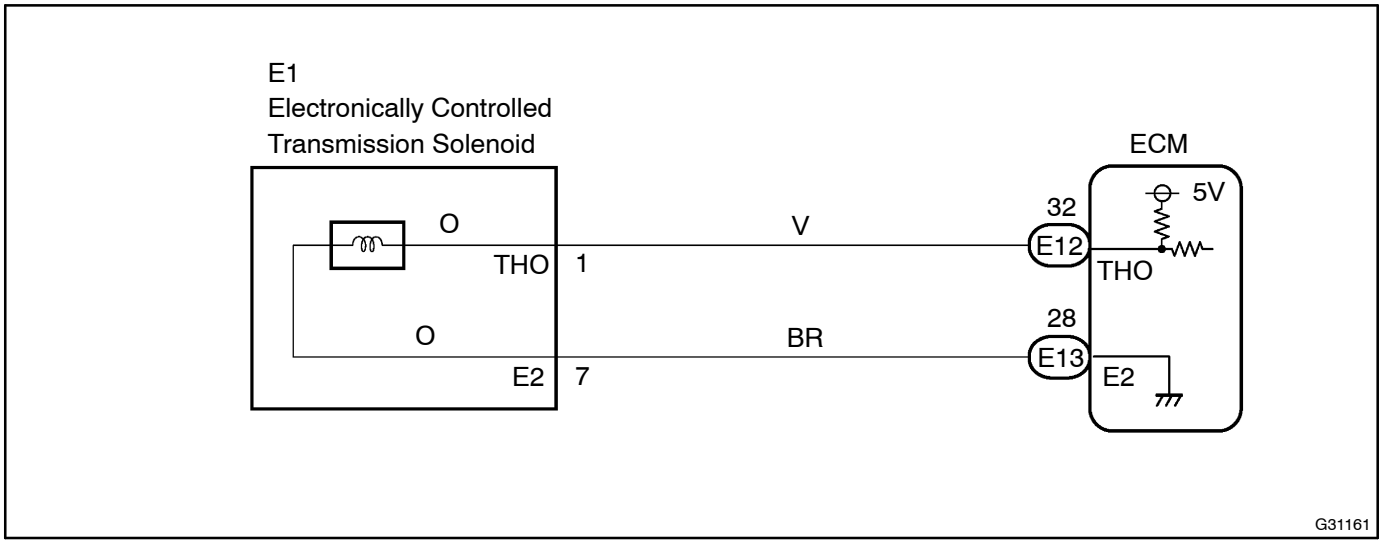
REPLACE ECM (SEE PAGE 10–29)

DTC	P0711	TRANSMISSION FLUID TEMPERATURE SENSOR "A" PERFORMANCE

CIRCUIT DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0711	(A) Both (a) and (b) are detected: (2–trip detection logic) (a) Intake air and engine coolant temperatures are more than –10°C (14°F) at engine start (b) After normal driving for over 19 min. and 8 km (5 mile) or more, ATF temp. is less than 10°C (50°F) (B) When engine coolant temp. is less than 35°C (95°F) at engine start, the ATF temp. is 110°C (230°F) or more after 17 min. of engine start (2–trip detection logic).	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM



MONITOR DESCRIPTION

The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects an opens or shorts in the ATF temperature circuit or a fault of the ATF temperature sensor.

After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 10°C (50°F) after running the vehicle for a certain period, the ECM interprets this as a fault, and turns on the MIL.

When the ATF temperature is 110°C (230°F) or more after 17 minutes of engine cold start, the ECM also determines this as a fault, turns on the MIL, and stores the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
According to the DATA LIST displayed by the hand–held tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST”.
(g) According to the display on tester, read the ”DATA LIST”.

Item	Measurement Item/ Range (display)	Normal Condition
AT FLUID TEMP	ATF Temp. Sensor Value/ min.: –40°C (–40°F) max.: 215°C (419°F)	Approx. 80°C (176°F) (After Stall Test)

HINT:
When DTC P0712 is output and hand–held tester output is 150°C (302°F), there is a short circuit.
When DTC P0713 is output and hand–held tester output is –40°C (–40°F), there is an open circuit.
Measure the resistance between terminal THO1 (THO) and body ground.

Temperature Displayed	Malfunction
–40°C (–40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 second).
When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1	CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0711)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
Only ”P0711” is output	A
”P0711” and other DTCs	B

HINT:
If any other codes besides ”P0711” is output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (SEE PAGE 05–564)**

A

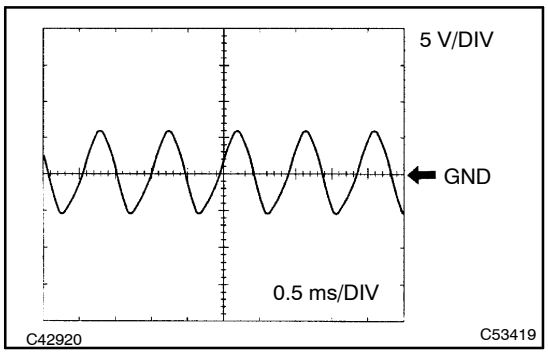
2	CHECK TRANSAXLE FLUID LEVEL

OK:

Automatic transaxle fluid level is correct.

NG → **ADD FLUID**

OK



REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

DTC	P0717	TURBINE SPEED SENSOR CIRCUIT NO SIGNAL

CIRCUIT DESCRIPTION

This sensor detects the rotation speed of the input turbine. By comparing the input turbine speed signal (NT) with the counter gear speed sensor signal (NC), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus, providing smooth gear shift.

DTC No.	DTC Detection Condition	Trouble Area
P0717	ECM detects conditions (a), (b) and (c) continuity for 5 sec. or more: (1–trip detection logic) (a) Vehicle speed: 50 km/h (31 mph) or more (b) Park/neutral position switch (NSW and R) is OFF (c) Speed sensor (NT): less than 300 rpm	• Open or short in transmission revolution sensor NT (speed sensor NT) circuit • Transmission revolution sensor NT (speed sensor NT) • ECM

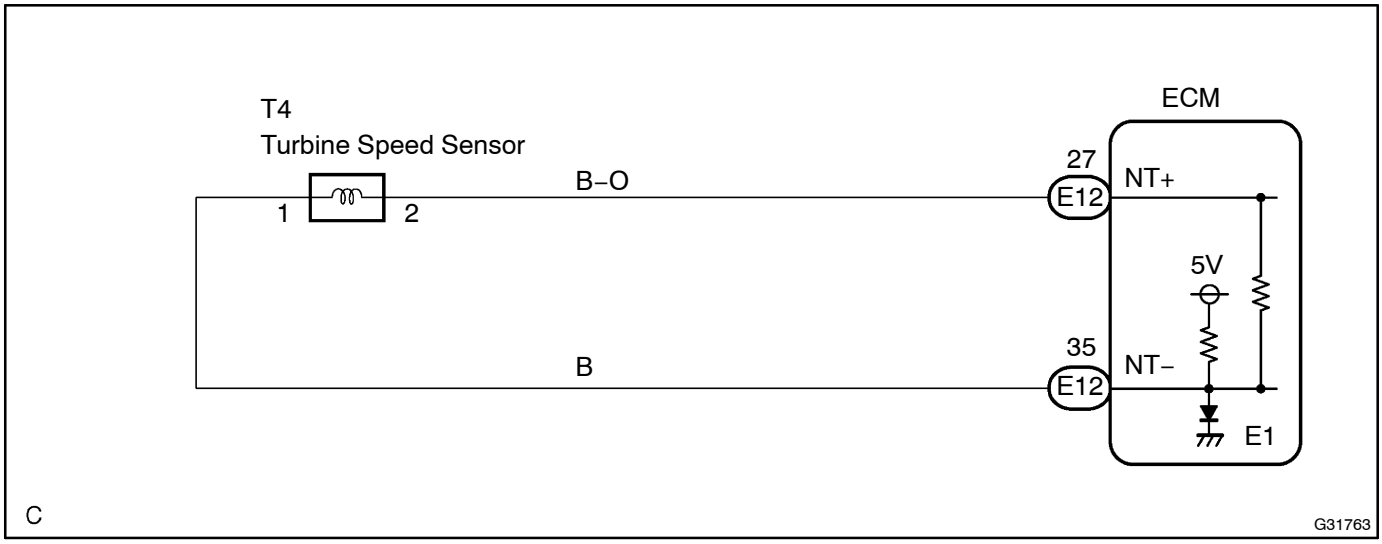
Reference (Using an oscilloscope):

Check the waveform between the terminals NT+ and NT– of the ECM connector.

Standard: Refer to the illustration.

Terminal	NT+ – NT–
Tool setting	5V/DIV, 0.5ms/DIV
Vehicle condition	Vehicle speed 20 km/h (12 mph)

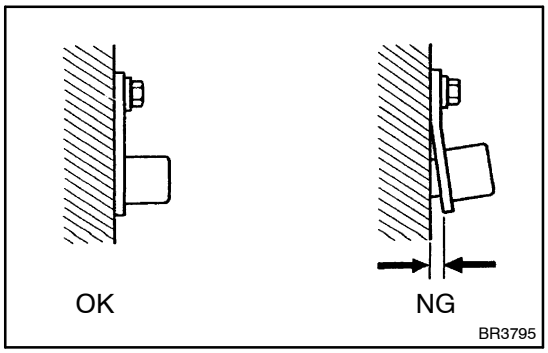
MONITOR DESCRIPTION



The NT terminal of the ECM detects a revolution signal from the speed sensor (NT) (input RPM). The ECM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).

While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the input shaft revolution is less than 300 rpm*1 although the output shaft revolution is more than 1,000 rpm*2, the ECM detects the trouble, illuminates the MIL and stores the DTC.

*1: Pulse is not output or is irregularly output.

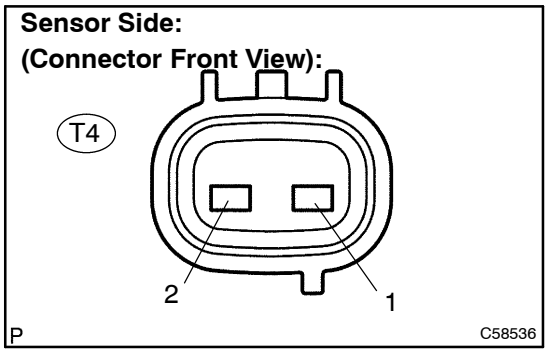


*2: The vehicle speed is 50 km/h (31 mph) or more.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT SPEED SENSOR INSTALLATION

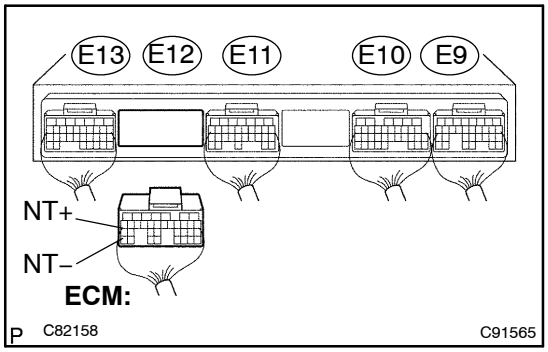


(a) Check the speed sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG → **REPLACE SPEED SENSOR(NT)**

OK

2 INSPECT SPEED SENSOR(NT)



(a) Disconnect the speed sensor connector from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.
Standard:

Tester Connection	Specified Condition 20 °C (68 °F)
1 – 2	560 to 680 Ω

NG → **REPLACE SPEED SENSOR(NT)**

OK

3 CHECK HARNESS AND CONNECTOR(SPEED SENSOR – ECM)

(a) Connect the speed sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
E12 – 27 (NT+) – E12 – 35 (NT–)	560 to 680 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard (Check for short):

Tester Connection	Specified Condition
E12 – 27 (NT+) – Body ground	10 kΩ or higher
E12 – 35 (NT–) – Body ground	↑

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

DTC	P0724	BRAKE SWITCH ”B” CIRCUIT HIGH

CIRCUIT DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in lock–up condition, when brakes are suddenly applied.
When the brake pedal is depressed, this switch sends a signals to the ECM. Then the ECM cancels the operation of the lock–up clutch while braking is in progress.

DTC No.	DTC Detecting Condition	Trouble Area
P0724	The stop light switch remains ON even when the vehicle is driven in a GO (30 km/h) and STOP (3 km/h) fashion 10 times. (2–trip detection logic).	• Short in stop light switch signal circuit • Stop light switch • ECM

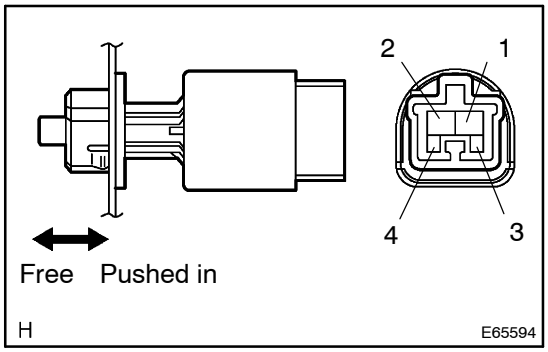
MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains on. When the stop light switch remains ON during ”stop and go” driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 3 km/h (2 mph)) and go (30 km/h (19 mph) or more) ten times for two driving cycles in order to detect malfunction.

WIRING DIAGRAM

See page 05–185.

INSPECTION PROCEDURE



HINT:

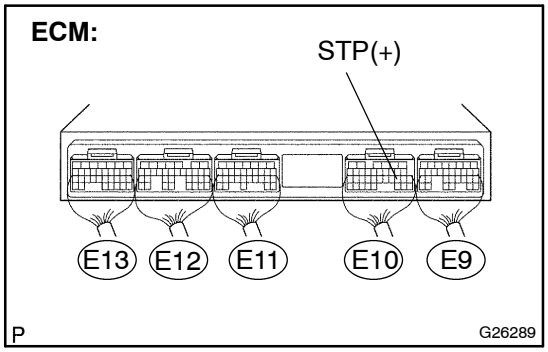
According to the DATA LIST displayed by the hand–held tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Push the ”ON” button of the hand–held tester.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST”.
(f) According to the display on tester, read the ”DATA LIST”.

Item	Measurement Item/ Range (display)	Normal Condition
STOP LIGHT SW	Stop light SW Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF

1 INSPECT STOP LAMP SWITCH ASSY

(a) Remove the stop lamp switch assy.
(b) Measure the resistance according to the value(s) in the table below.



Standard:

Switch position	Tester Connection	Specified Condition
Switch pin free	1 – 2	Below 1 Ω
Switch pin pushed in	↑	10 kΩ or higher
Switch pin free	3 – 4	10 kΩ or higher
Switch pin pushed in	↑	Below 1 Ω

NG → **REPLACE STOP LAMP SWITCH ASSY**

OK

2 CHECK HARNESS AND CONNECTOR(STOP LAMP SWITCH ASSY – ECM)

(a) Install the stop lamp switch assy.
(b) Measure the voltage according to the value(s) in the table below when the brake pedal is depressed and released.

Standard:

Condition	Tester Connection	Specified Condition
Brake pedal is depressed	E10 – 19 (STP) – Body ground	10 to 14 V
Brake pedal is released	↑	Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

DTC	P0741	TORQUE CONVERTER CLUTCH SOLENOID PERFORMANCE (SHIFT SOLENOID VALVE DSL)

SYSTEM DESCRIPTION

The ECM uses the signals from the throttle position sensor, Air–flow meter, turbine (input) speed sensor, intermediate (counter) shaft speed sensor and crankshaft position sensor to monitor the engagement condition of the lock–up clutch.

Then the ECM compares the engagement condition of the lock–up clutch with the lock–up schedule in the ECM memory to detect a mechanical problems of the shift solenoid valve DSL, valve body and torque converter clutch.

DTC No.	DTC Detection Condition	Trouble Area
P0741	Lock–up does not occur when driving in lock–up range (normal driving at 80 km/h [50 mph]), or lock–up remains ON in lock–up OFF range (2–trip detection logic)	• Shift solenoid valve DSL remains open or closed • Valve body is blocked • Shift solenoid valve DSL • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • Line pressure is too low • ECM

MONITOR DESCRIPTION

Torque converter lock–up is controlled by the ECM based on speed sensor (NT), speed sensor (NC), engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and gear selection. The ECM determines the lock–up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to counter gear rpm (NC). When conditions are appropriate, the ECM requests ”lock–up” by applying control voltage to shift solenoid DSL. When the DSL is turned on, solenoid DSL applies pressure to the lock–up relay valve and locks the torque converter clutch.

If the ECM detects no lock–up after lock–up has been requested or if it detects lock–up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve DSL or lock–up system performance. The ECM will turn on the MIL and store the DTC.

Example:

When any of the following is met, the system judges it as a malfunction.

(a) There is a difference in rotation between before and after torque converters even when the ECM commands lock–up.
(Engine speed is at least 75 rpm greater than input turbine speed.)

(b) There is no difference in rotation between before and after torque converters even when the ECM commands lock–up off.
(The difference between engine speed and input turbine speed is less than 35 rpm.)

INSPECTION PROCEDURE

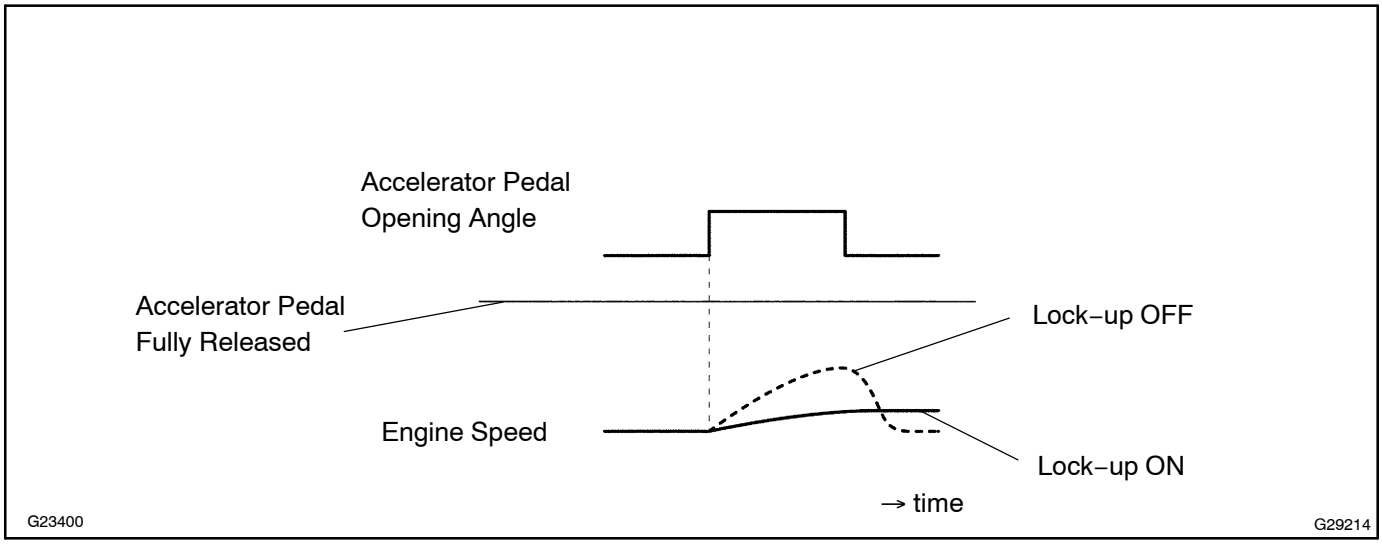
HINT:

Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST”.
(g) According to the display on tester, perform the ”ACTIVE TEST”.

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid DSL to set the automatic transaxle to the lock–up condition. [Vehicle Condition] Vehicle Speed: 60 km/h (37 mph) or more	Possible to check the DSL operation.



HINT:

- This test can be conducted when the vehicle speed is 60 km/h (37 mph) or more.
- This test can be conducted with the 5th gear.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

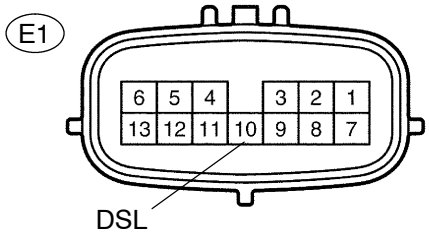
- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock–up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock–up may be turned off.)

1 CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0741)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
Only ”P0741” is output	A
”P0741” and other DTCs	B



HINT:
If any other codes besides ”P0741” is output, perform the troubleshooting for those DTCs first.

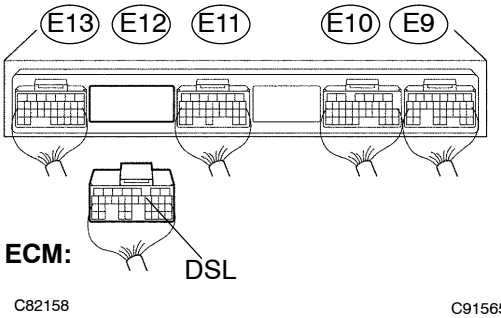
B → **GO TO RELEVANT DTC CHART (SEE PAGE 05–564)**

A

2 INSPECT TRANSMISSION WIRE(DSL)

Transmission Wire Side:
(Connector Front View):

(a) Disconnect the transmission wire connector from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.



Standard:

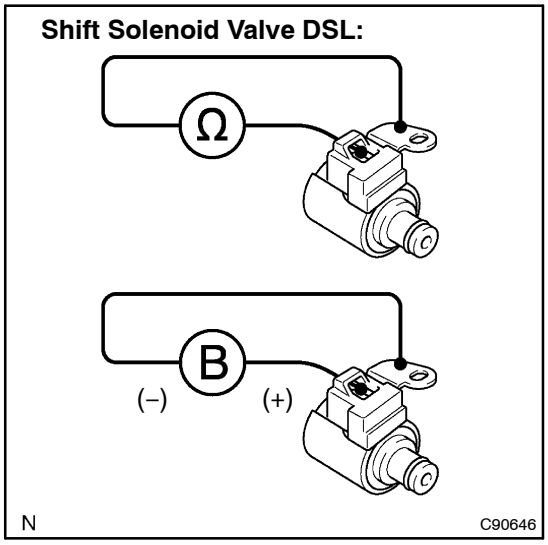
Tester Connection	Specified Condition 20°C (68°F)
10 – Body ground	11 to 13 Ω

NG → **Go to step 4**

OK

3 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission wire connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.



Standard:

Tester Connection	Specified Condition 20°C (68°F)
E12 – 11 (DSL) – Body ground	11 to 13 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

4	INSPECT SHIFT SOLENOID VALVE(DSL)

(a) Remove the shift solenoid valve DSL.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (DSL) – Solenoid Body (DSL)	11 to 13 Ω

(c) Connect positive (+) lead to the terminal of solenoid connector, negative (–) lead to the solenoid body.

OK:

The solenoid valve makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(DSL)**

OK

5	CHECK TRANSMISSION WIRE (SEE PAGE 01–32)

OK:

The connectors and pins are securely installed.

There is no open or short on the wire harness.

NG → **REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)**

OK

6	INSPECT TRANSMISSION VALVE BODY ASSY(See chapter 2 in the problem symptoms table) (SEE PAGE 05–545)

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSY (SEE PAGE 40–19)**

OK

7	INSPECT TORQUE CONVERTER CLUTCH ASSY (See Pub. No. RM1018E, page 40–37)

OK:

The torque converter clutch operates normally.

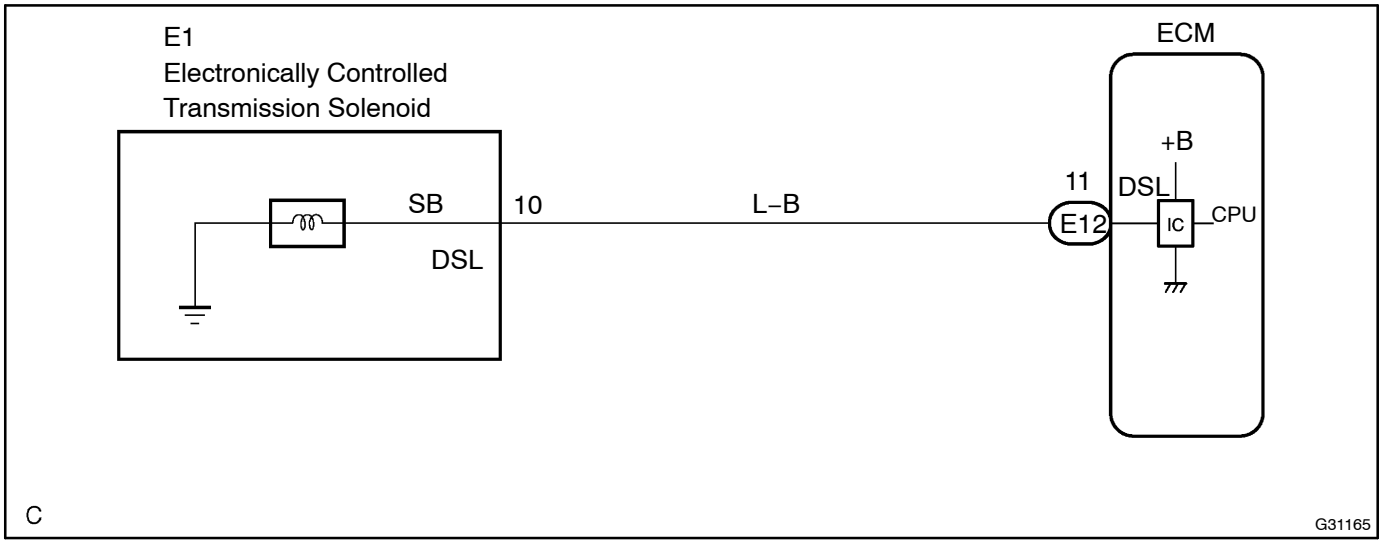
NG → **REPLACE TORQUE CONVERTER CLUTCH ASSY**

OK

REPAIR AUTOMATIC TRANSAXLE ASSY (SEE PAGE 40–1)

DTC	P0743	TORQUE CONVERTER CLUTCH CIRCUIT ELECTRICAL (SHIFT SOLENOID VALVE DSL)

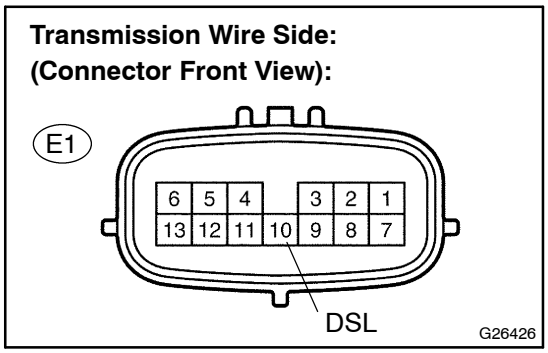
CIRCUIT DESCRIPTION



The shift solenoid valve DSL is turned ”ON” and ”OFF” by signals from the ECM in order to control the hydraulic pressure operation, the lock–up relay valve, which then the controls operation of the lock–up clutch.

DTC No.	DTC Detection Condition	Trouble Area
P0743	Either (a) or (b) is detected at 1 time: (2 trip detection logic) (a) Solenoid resistance is 8 Ω or less short circuit when solenoid is energized (b) Solenoid resistance is 100 kΩ or more open circuit when solenoid is not energized	• Open or short in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM

MONITOR DESCRIPTION



Torque converter lock–up is controlled by the ECM based on engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and shift range selection. The ECM determines the lock–up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to counter gear rpm (NC). When conditions are appropriate, the ECM requests ”lock–up” by applying control voltage to shift solenoid DSL. When the DSL is opened, solenoid DSL applies pressure to the lock–up relay valve and locks the torque converter clutch. If the ECM detects an open or short in the DSL solenoid circuit, the ECM interprets this as a fault in the DSL solenoid or circuit. The ECM will turn on the MIL and store the DTC.

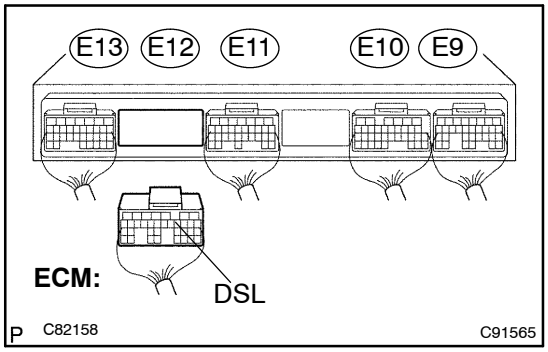
WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE(DSL)

(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.



Standard:

Tester Connection	Specified Condition 20°C (68°F)
10 – Body ground	11 to 13 Ω

NG → **Go to step 3**

OK

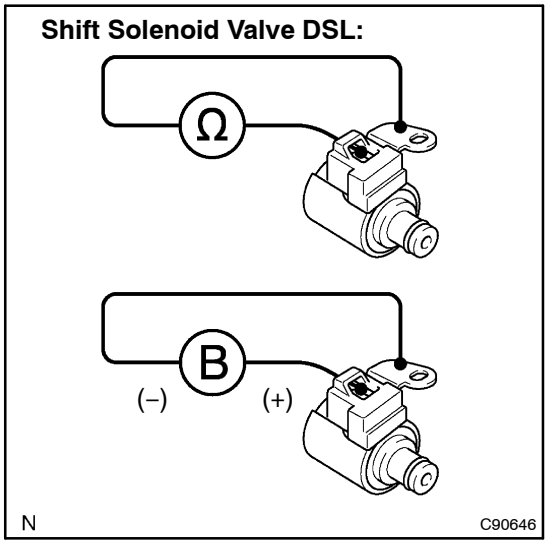
2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission wire connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard:



Tester Connection	Specified Condition 20°C (68°F)
E12 – 11 (DSL) – Body ground	11 to 13 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

3 INSPECT SHIFT SOLENOID VALVE(DSL)

(a) Remove the shift solenoid valve DSL.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (DSL) – Solenoid Body (DSL)	11 to 13 Ω

(c) Connect positive (+) lead to the terminal of solenoid connector, negative (–) lead to the solenoid body.

OK:

The solenoid valve makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(DSL)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

DTC	P0746	PRESSURE CONTROL SOLENOID ”A” PERFORMANCE (SHIFT SOLENOID VALVE SL1)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves and valve body.

DTC No.	DTC Detecting Condition	Trouble Area
P0746	The gear required by the ECM does not match the actual gear when driving (2–trip detection logic)	• Shift solenoid valve SL1 remains open or closed • Valve body is blocked • Shift solenoid valve SL1 • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not same, the ECM illuminates the MIL.
Example:
When either condition (a) or (b) is met, the ECM detects a malfunction.
(a) The ECM commands the 1st gear, but the actual gear is 2nd.
(b) The ECM commands the 2nd gear, but the actual gear is 1st.

INSPECTION PROCEDURE

HINT:

Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Push the ”ON” button of the hand–held tester.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / SHIFT”.
(f) According to the display on tester, perform the ”ACTIVE TEST”.

HINT:

While driving, the shift position can be forcibly changed with the hand–held tester.

Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (see page 05–560).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press ”→” button: Shift up • Press ”←” button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the hand–held tester.

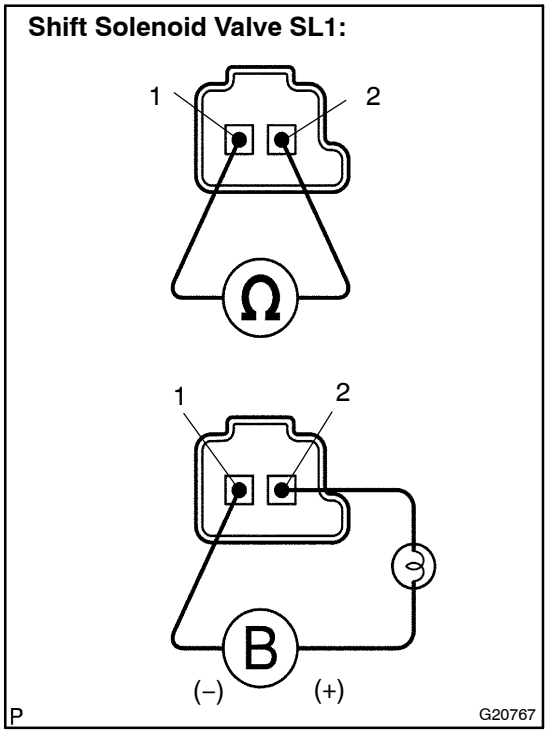
1	CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0746)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
Only ”P0746” is output	A
”P0746” and other DTCs	B

HINT:



If any other codes besides ”P0746” is output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (SEE PAGE 05–564)**

A

2	INSPECT SHIFT SOLENOID VALVE(SL1)

Shift Solenoid Valve SL1:

(a) Remove the shift solenoid valve SL1.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SL1)**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSY(See chapter 2 in the problem symptoms table) (SEE PAGE 05–545)

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSY (SEE PAGE 40–19)**

OK

4	INSPECT TORQUE CONVERTER CLUTCH ASSY (See Pub. No. RM1018E, page 40–37)

OK:

The torque converter clutch operates normally.

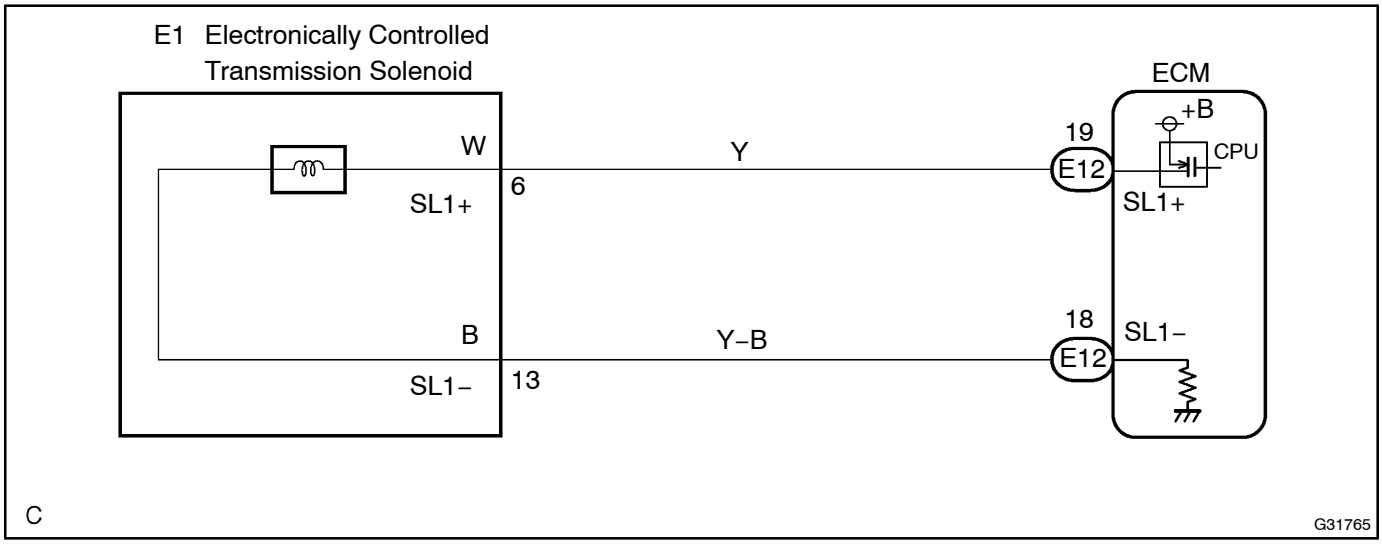
NG → **REPLACE TORQUE CONVERTER CLUTCH ASSY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSY (SEE PAGE 40–1)

DTC	P0748	PRESSURE CONTROL SOLENOID ”A” ELECTRICAL (SHIFT SOLENOID VALVE SL1)

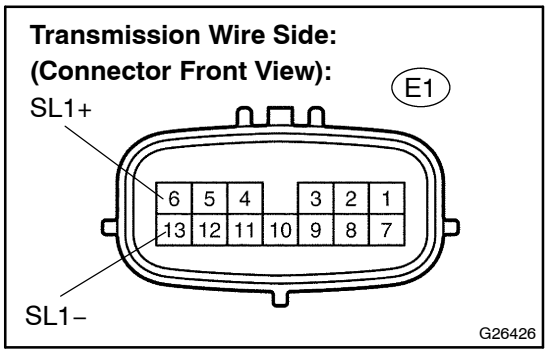
CIRCUIT DESCRIPTION



Shifting from 1st to 5th is performed in combination with ”ON” and ”OFF” operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which is controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0748	ECM checks for an open or short circuit in shift solenoid valves SL1 (1–trip detection logic) • Output signal duty equals to 100%	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • ECM

MONITOR DESCRIPTION



The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail–safe function and turns the other shift solenoid valves in good condition ”ON/OFF” (In case of an open or short circuit, the ECM stops sending current to the circuit.) (see page 05–560).

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE(SL1)

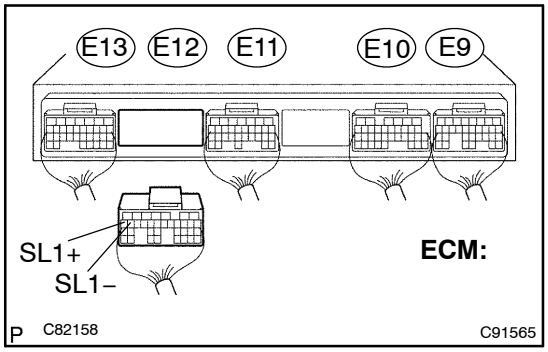
(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
6 (SL1+) – 13 (SL1–)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.



Standard (Check for short):

Tester Connection	Specified Condition
SL1+ – Body ground	10 kΩ or higher
SL1– – Body ground	↑

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission connector to the transaxle.

(b) Disconnect the connector from the ECM.

(c) Measure the resistance according to the value(s) in the table below.

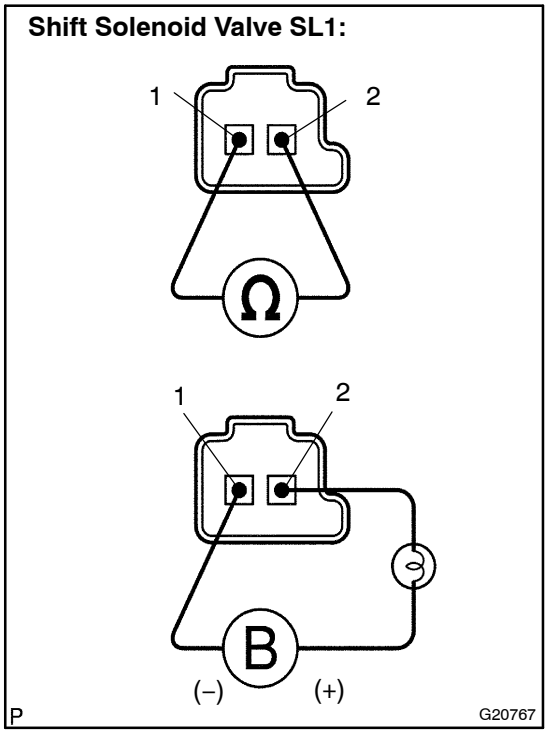
Standard:

Tester Connection	Specified Condition 20°C (68°F)
E12 – 19 (SL1+) – E12 – 18 (SL1–)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard (Check for short):

Tester Connection	Specified Condition
E12 – 19 (SL1+) – Body ground	10 kΩ or higher
E12 – 18 (SL1–) – Body ground	↑



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

3 INSPECT SHIFT SOLENOID VALVE(SL1)

Shift Solenoid Valve SL1:

(a) Remove the shift solenoid valve SL1.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SL1)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

DTC	P0766	SHIFT SOLENOID ”D” PERFORMANCE (SHIFT SOLENOID VALVE S4)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves and valve body.

DTC No.	DTC Detecting Condition	Trouble Area
P0766	The gear required by the ECM does not match the actual gear when driving (2–trip detection logic)	• Shift solenoid valve S4 remains open or closed • Valve body is blocked • Shift solenoid valve S4 • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not same, the ECM illuminates the MIL and stores the DTC.

INSPECTION PROCEDURE

HINT:
Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Push the ”ON” button of the hand–held tester.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / SHIFT”.
(f) According to the display on tester, perform the ”ACTIVE TEST”.

HINT:
While driving, the shift position can be forcibly changed with the hand–held tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (see page 05–560).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press ”→” button: Shift up • Press ”←” button: Shift down	Possible to check the operation of the shift solenoid valves.

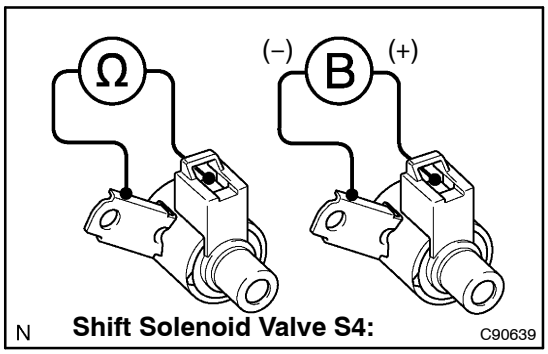
HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the hand–held tester.

1	CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0766)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read the DTCs using the hand–held tester.

Result:



Display (DTC output)	Proceed to
Only ”P0766” is output	A
”P0766” and other DTCs	B

HINT:
If any other codes besides ”P0766” is output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (SEE PAGE 05–564)**

A

2	INSPECT SHIFT SOLENOID VALVE(S4)

(a) Remove the shift solenoid valve S4.
(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (S4) – Solenoid Body (S4)	11 to 15 Ω

(c) Connect positive (+) lead to the terminal of solenoid connector, negative (–) lead to the solenoid body.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(S4)**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSY(See chapter 2 in the problem symptoms table) (SEE PAGE 05–545)

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSY (SEE PAGE 40–19)**

OK

4	**INSPECT TORQUE CONVERTER CLUTCH ASSY (See Pub. No. RM1018E, page 40–37)**

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSY (SEE PAGE 40–1)

DTC	P0771	SHIFT SOLENOID ”E” PERFORMANCE (SHIFT SOLENOID VALVE SR)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves and valve body.

DTC No.	DTC Detecting Condition	Trouble Area
P0771	The gear required by the ECM does not match the actual gear when driving (2–trip detection logic)	• Shift solenoid valve SR remains open or closed • Valve body is blocked • Shift solenoid valve SR • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not same, the ECM illuminates the MIL and stores the DTC.

INSPECTION PROCEDURE

HINT:
Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Push the ”ON” button of the hand–held tester.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / SHIFT”.
(f) According to the display on tester, perform the ”ACTIVE TEST”.

HINT:
While driving, the shift position can be forcibly changed with the hand–held tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (see page 05–560).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press ”→” button: Shift up • Press ”←” button: Shift down	Possible to check the operation of the shift solenoid valves.

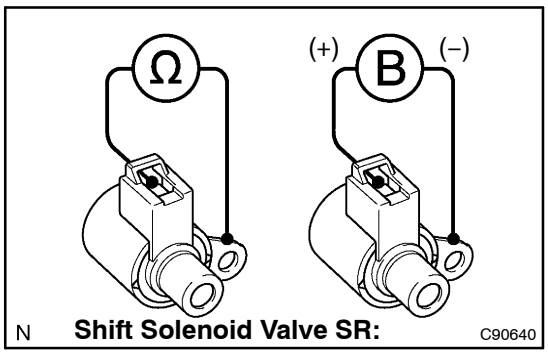
HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the hand–held tester.

1	CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0771)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read the DTCs using the hand–held tester.

Result:



Display (DTC output)	Proceed to
Only ”P0771” is output	A
”P0771” and other DTCs	B

HINT:
If any other codes besides ”P0771” is output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (SEE PAGE 05–564)**

A

2	INSPECT SHIFT SOLENOID VALVE(SR)

(a) Remove the shift solenoid valve SR.
(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (SR) – Solenoid Body (SR)	11 to 15 Ω

(c) Connect positive (+) lead to the terminal of solenoid connector, negative (–) lead to the solenoid body.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SR)**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSY(See chapter 2 in the problem symptoms table) (SEE PAGE 05–545)

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSY (SEE PAGE 40–19)**

OK

4	**INSPECT TORQUE CONVERTER CLUTCH ASSY (See Pub. No. RM1018E, page 40–37)**

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSY (SEE PAGE 40–1)

DTC	P0776	PRESSURE CONTROL SOLENOID ”B” PERFORMANCE (SHIFT SOLENOID VALVE SL2)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves and valve body.

DTC No.	DTC Detecting Condition	Trouble Area
P0776	The gear required by the ECM does not match the actual gear when driving (2–trip detection logic)	• Shift solenoid valve SL2 remains open or closed • Valve body is blocked • Shift solenoid valve SL2 • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not same, the ECM illuminates the MIL and stores the DTC.

INSPECTION PROCEDURE

HINT:
Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Push the ”ON” button of the hand–held tester.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / SHIFT”.
(f) According to the display on tester, perform the ”ACTIVE TEST”.

HINT:
While driving, the shift position can be forcibly changed with the hand–held tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (see page 05–560).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press ”→” button: Shift up • Press ”←” button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:

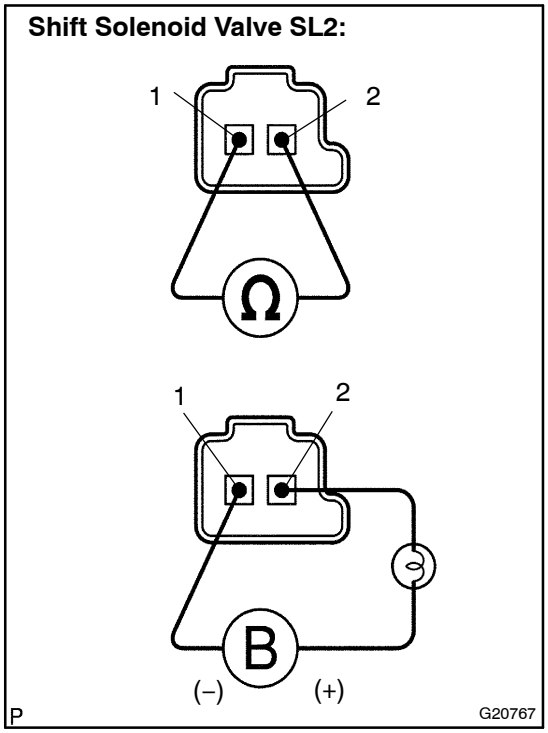
- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the hand–held tester.

1 CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0776)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
Only ”P0776” is output	A
”P0776” and other DTCs	B



HINT:
If any other codes besides ”P0776” is output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (SEE PAGE 05–564)**

A

2 INSPECT SHIFT SOLENOID VALVE(SL2)

Shift Solenoid Valve SL2:

(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SL2)**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSY(See chapter 2 in the problem symptoms table) (SEE PAGE 05–545)

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSY (SEE PAGE 40–19)

OK

4	INSPECT TORQUE CONVERTER CLUTCH ASSY (See Pub. No. RM1018E, page 40–37)

OK:

The torque converter clutch operates normally.

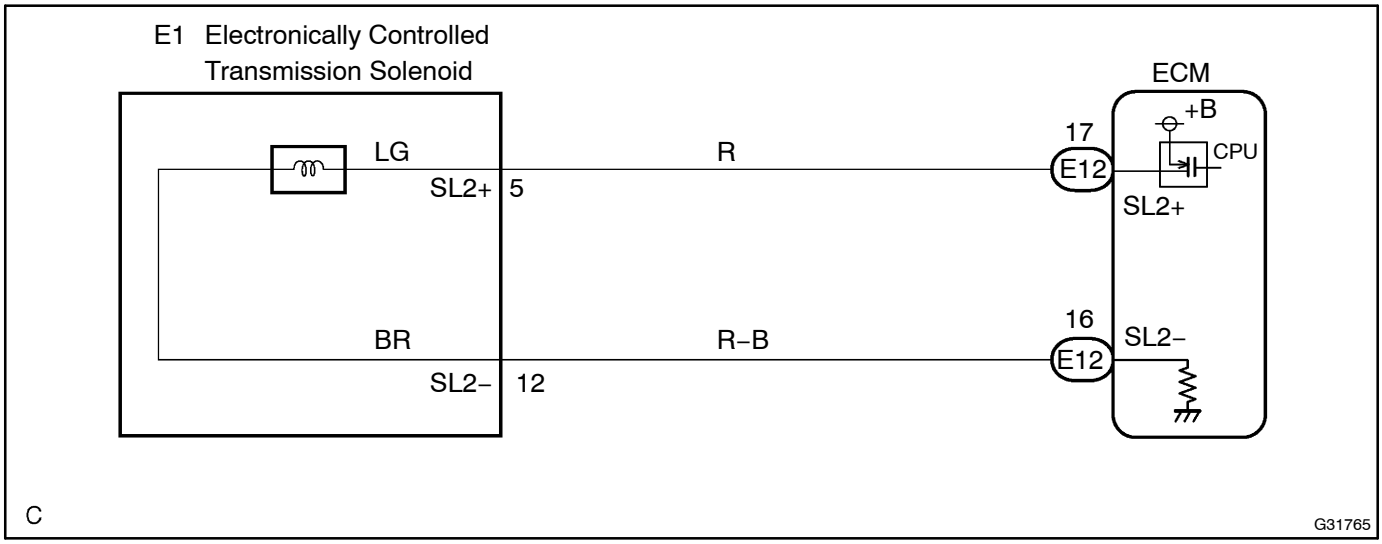
NG → REPLACE TORQUE CONVERTER CLUTCH ASSY

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSY (SEE PAGE 40–1)

DTC	P0778	PRESSURE CONTROL SOLENOID ”B” ELECTRICAL (SHIFT SOLENOID VALVE SL2)

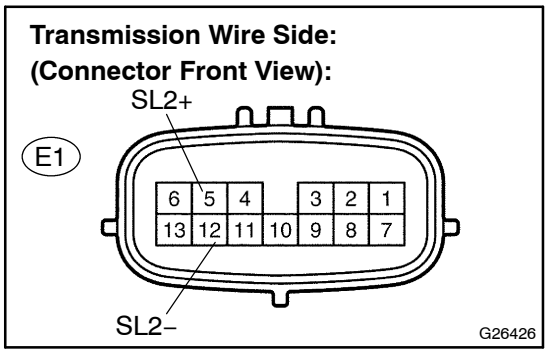
CIRCUIT DESCRIPTION



Shifting from 1st to 5th is performed in combination with ”ON” and ”OFF” operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which is controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0778	ECM checks for an open or short circuit in shift solenoid valves SL2 (1–trip detection logic) Hybrid IC for solenoid indicates fail.	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM

MONITOR DESCRIPTION



The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail–safe function and turns the other shift solenoid valves in good condition ”ON/OFF” (In case of an open or short circuit, the ECM stops sending current to the circuit.) (see page 05–560).

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE(SL2)

(a) Disconnect the transmission wire connector from the transaxle.

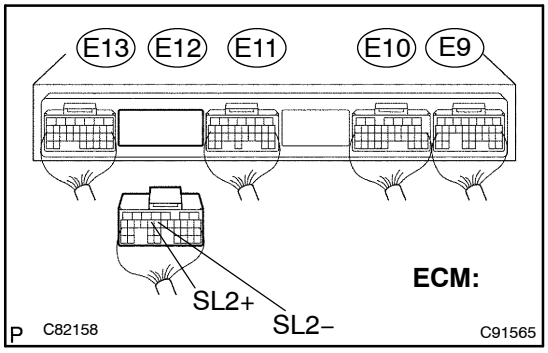
(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
5 (SL2+) – 12 (SL2–)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.

OK:



Standard (Check for short):

Tester Connection	Specified Condition
5 (SL2+) – Body ground	10 kΩ or higher
12 (SL2–) – Body ground	↑

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission connector to the transaxle.

(b) Disconnect the connector from the ECM.

(c) Measure the resistance according to the value(s) in the table below.

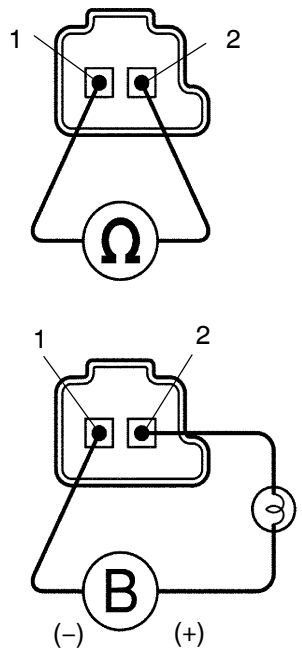
Standard:

Tester Connection	Specified Condition 20°C (68°F)
E12 – 17 (SL2+) – E12 – 16 (SL2–)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard (Check for short):

Tester Connection	Specified Condition
E12 – 17 (SL2+) – Body ground	10 kΩ or higher
E12 – 16 (SL2–) – Body ground	↑



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

3 INSPECT SHIFT SOLENOID VALVE(SL2)

Shift Solenoid Valve SL2:

(a) Remove the shift solenoid valve SL2.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

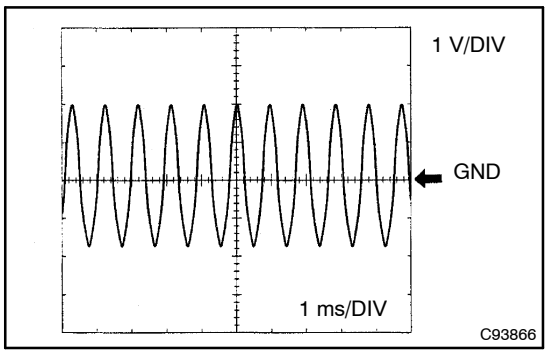
(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SL2)**

OK



REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

DTC	P0793	INTERMEDIATE SHAFT SPEED SENSOR "A"

CIRCUIT DESCRIPTION

This sensor detects the rotation speed of the counter gear. By comparing the counter gear speed signal (NC) with the direct clutch speed sensor signal (NT), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus smooth gear shifting is performed.

DTC No.	DTC Detection Condition	Trouble Area
P0793	ECM detects conditions (a), (b) and (c) continuity for 5 sec. or more: (1–trip detection logic) (a) Vehicle speed: 50 km/h (31 mph) or more (b) Park/neutral position switch (NSW) is OFF (c) Speed sensor (NC): less than 300 rpm	• Open or short in transmission revolution sensor NC (speed sensor NC) circuit • Transmission revolution sensor NC (speed sensor NC) • ECM

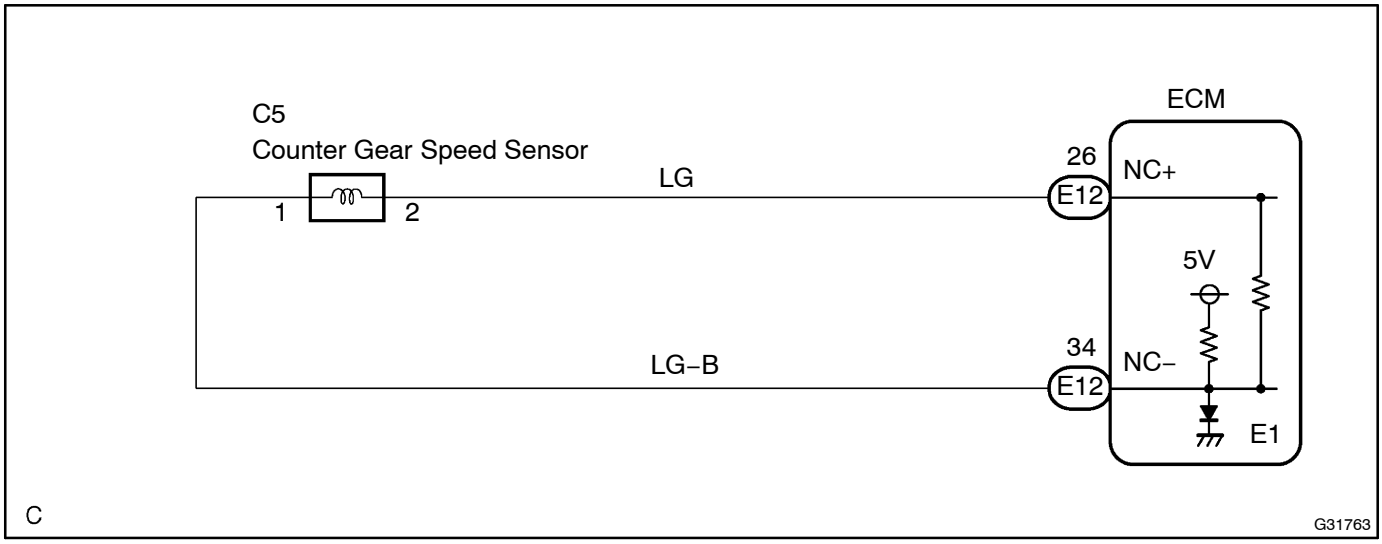
Reference (Using an oscilloscope):

Check the waveform between the terminals NC+ and NC– of the ECM connector.

Standard: Refer to the illustration.

Terminal	NC+ – NC–
Tool setting	1V/DIV, 1ms/DIV
Vehicle condition	Vehicle speed 30 km/h (19 mph): (3rd gear) Engine speed 1,400 rpm

MONITOR DESCRIPTION



The NC terminal of ECM detects a revolution signal from the speed sensor (NC) (counter gear rpm). The ECM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).

While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the counter gear revolution is less than 300 rpm*1 although the output shaft revolution is more than 1,000 rpm*2, the ECM detects the trouble, illuminates the MIL and stores the DTC.

*1: Pulse is not output or is irregularly output.

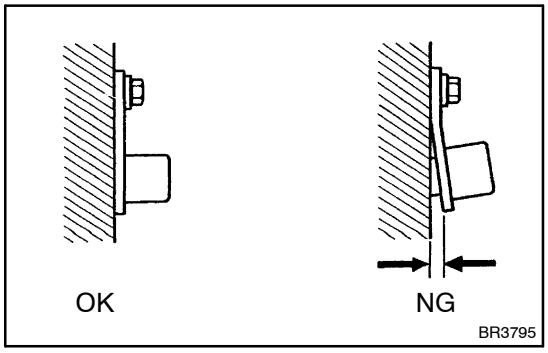
*2: The vehicle speed is 50 km/h (31 mph) or more.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

According to the DATA LIST displayed by the hand–held tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.



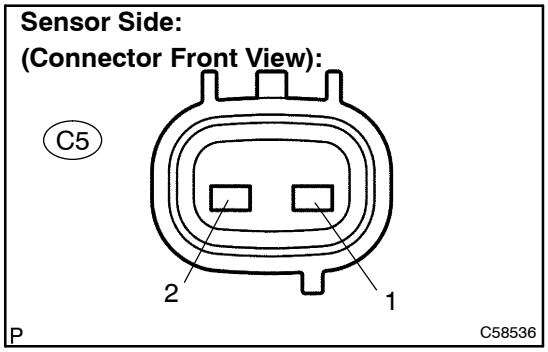
(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST”.
(g) According to the display on tester, read the ”DATA LIST”.

Item	Measurement Item/ Range (display)	Normal Condition
SPD (NC)	Counter Gear Speed/ display: 50 r/min	[HINT] 3rd when shift lever position is D position (After warming up the engine); • Intermediate shaft speed (NC) becomes close to the engine speed.

HINT:

- SPD (NC) is always 0 while driving:
  Open or short in the sensor or circuit.
- SPD (NC) is always more than 0 and less than 300 rpm while driving the vehicle at 50 km/h (31 mph) or more:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1	INSPECT SPEED SENSOR INSTALLATION



(a) Check the speed sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

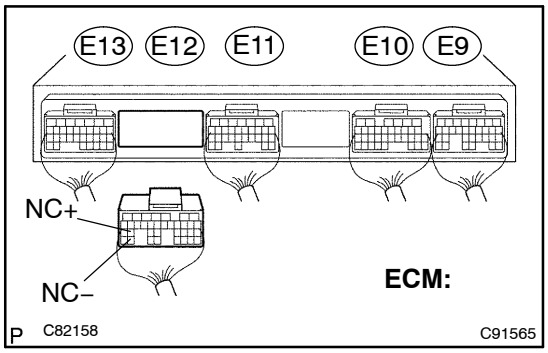
NG → **REPLACE SPEED SENSOR(NC)**

OK

2 INSPECT SPEED SENSOR(NC)

(a) Disconnect the speed sensor connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.



Standard:

Tester Connection	Specified Condition 20 °C (68 °F)
1 – 2	560 to 680 Ω

NG → **REPLACE SPEED SENSOR(NC)**

OK

3 CHECK HARNESS AND CONNECTOR(SPEED SENSOR – ECM)

(a) Connect the speed sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20 °C (68 °F)
E12 – 26 (NC+) – E12 – 34 (NC–)	560 to 680 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard (Check for short):

Tester Connection	Specified Condition
E12 – 26 (NC+) – Body ground	10 kΩ or higher
E12 – 34 (NC–) – Body ground	↑

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

DTC	P0796	PRESSURE CONTROL SOLENOID ”C” PERFORMANCE (SHIFT SOLENOID VALVE SL3)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical troubles of the shift solenoid valves and valve body.

DTC No.	DTC Detecting Condition	Trouble Area
P0796	The gear required by the ECM does not match the actual gear when driving (2–trip detection logic)	• Shift solenoid valve SL3 remains open or closed • Valve body is blocked • Shift solenoid valve SL3 • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not same, the ECM illuminates the MIL and stores the DTC.

INSPECTION PROCEDURE

HINT:
Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Turn the ignition switch off.
(b) Connect the hand–held tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Push the ”ON” button of the hand–held tester.
(e) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / SHIFT”.
(f) According to the display on tester, perform the ”ACTIVE TEST”.

HINT:
While driving, the shift position can be forcibly changed with the hand–held tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (see page 05–560).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press ”→” button: Shift up • Press ”←” button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:

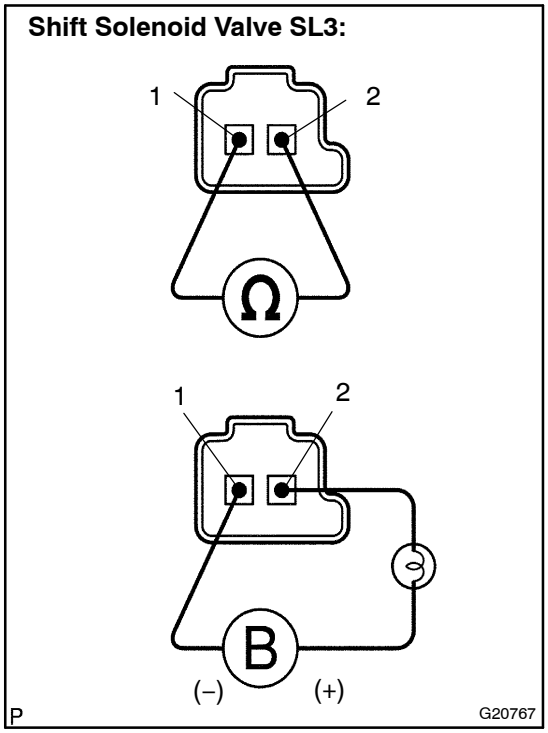
- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the hand–held tester.

1 CHECK OTHER DTCS OUTPUT(IN ADDITION TO DTC P0796)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch to the ON position and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES”.
(d) Read the DTCs using the hand–held tester.

Result:

Display (DTC output)	Proceed to
Only ”P0796” is output	A
”P0796” and other DTCs	B



HINT:
If any other codes besides ”P0796” is output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (SEE PAGE 05–564)**

A

2 INSPECT SHIFT SOLENOID VALVE(SL3)

Shift Solenoid Valve SL3:

(a) Remove the shift solenoid valve SL3.
(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SL3)**

OK

3	**INSPECT TRANSMISSION VALVE BODY ASSY(See chapter 2 in the problem symptoms table) (SEE PAGE 05–545)**

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSY (SEE PAGE 40–19)**

OK

4	**INSPECT TORQUE CONVERTER CLUTCH ASSY (See Pub. No. RM1018E, page 40–37)**

OK:

The torque converter clutch operates normally.

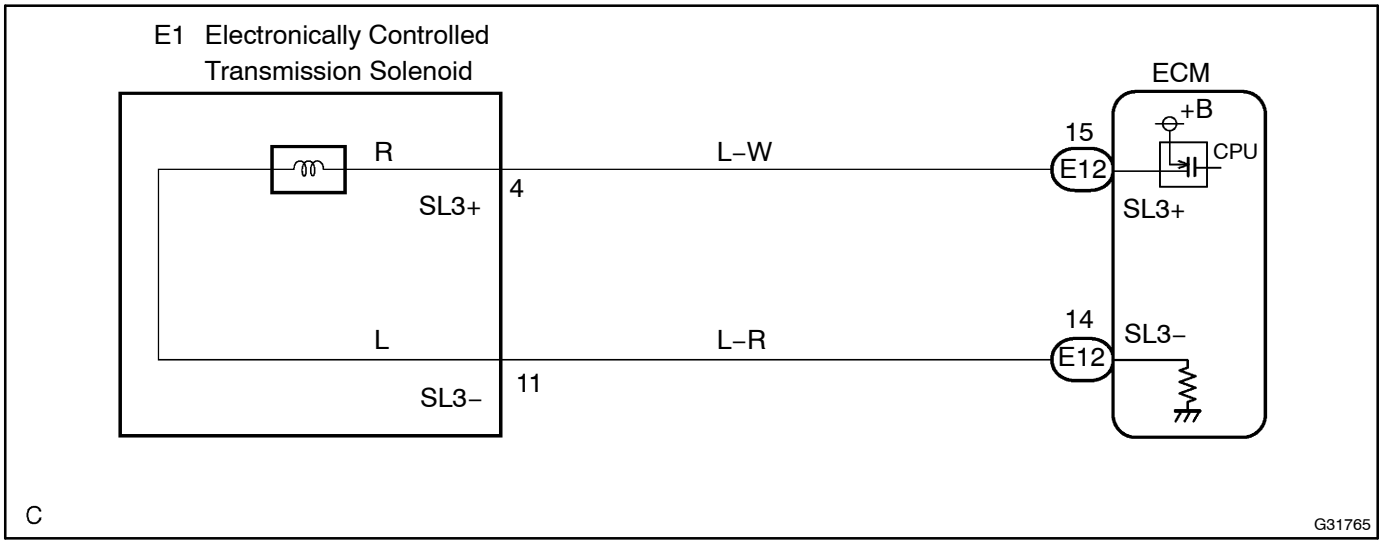
NG → **REPLACE TORQUE CONVERTER CLUTCH ASSY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSY (SEE PAGE 40–1)

DTC	P0798	PRESSURE CONTROL SOLENOID ”C” ELECTRICAL (SHIFT SOLENOID VALVE SL3)

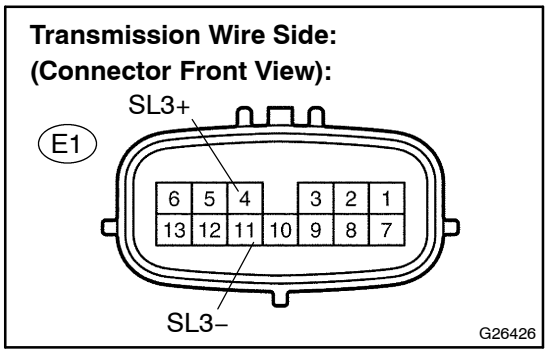
CIRCUIT DESCRIPTION



Shifting from 1st to 5th is performed in combination with ”ON” and ”OFF” operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which is controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0798	ECM checks for an open or short circuit in shift solenoid valves SL3 (1–trip detection logic) • Output signal duty equals to 100%	• Open or short in shift solenoid valve SL3 circuit • Shift solenoid valve SL3 • ECM

MONITOR DESCRIPTION



The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail–safe function and turns the other shift solenoid valves in good condition ”ON/OFF” (In case of an open or short circuit, the ECM stops sending current to the circuit.) (see page 05–560).

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE(SL3)

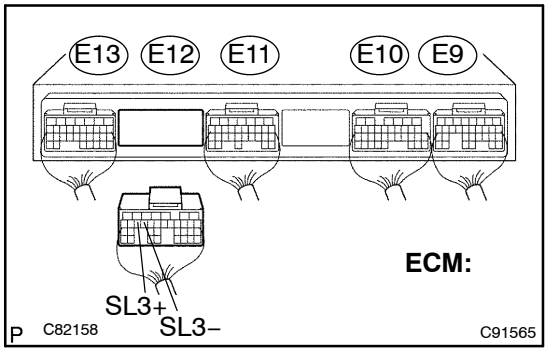
(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
4 (SL3+) – 11 (SL3–)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.



Standard (Check for short):

Tester Connection	Specified Condition
4 (SL3+) – Body ground	10 kΩ or higher
11 (SL3–) – Body ground	↑

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission connector to the transaxle.

(b) Disconnect the connector from the ECM.

(c) Measure the resistance according to the value(s) in the table below.

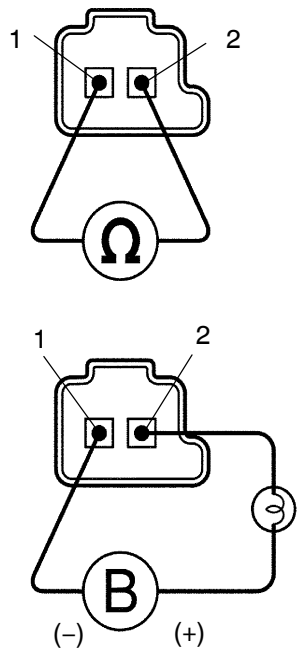
Standard:

Tester Connection	Specified Condition 20°C (68°F)
E12 – 15 (SL3+) – E12 – 14 (SL3–)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard (Check for short):

Tester Connection	Specified Condition
E12 – 15 (SL3+) – Body ground	10 kΩ or higher
E12 – 14 (SL3–) – Body ground	↑



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

3 INSPECT SHIFT SOLENOID VALVE(SL3)

Shift Solenoid Valve SL3:

(a) Remove the shift solenoid valve SL3.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SL3)**

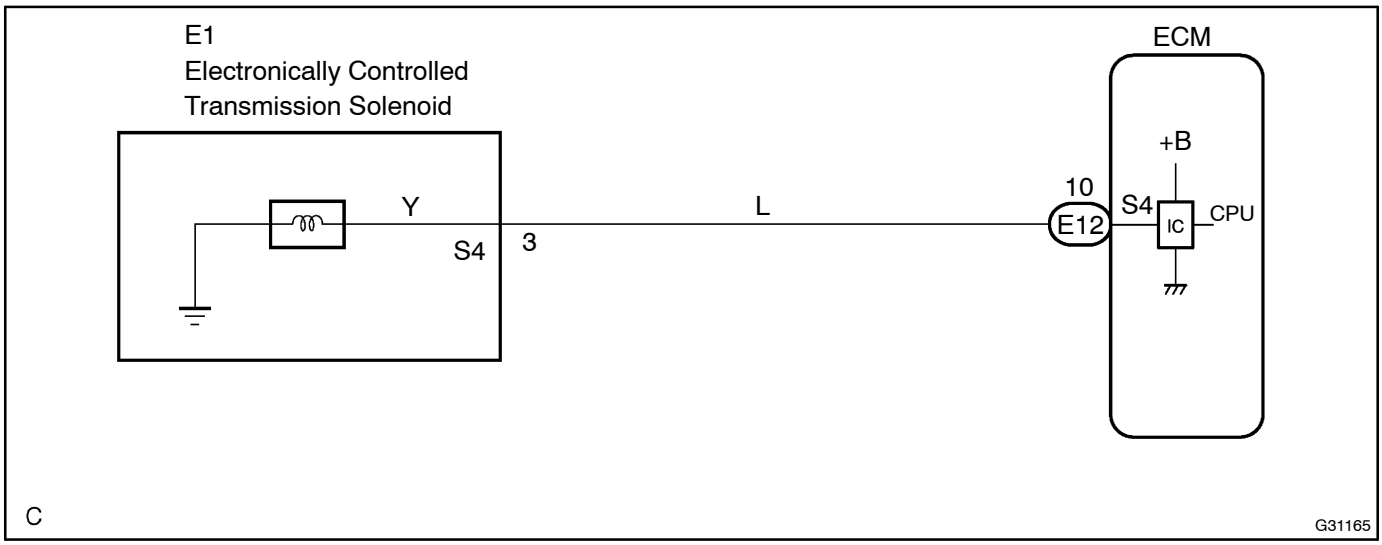
OK

REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

DTC	P0982	SHIFT SOLENOID ”D” CONTROL CIRCUIT LOW (SHIFT SOLENOID VALVE S4)

DTC	P0983	SHIFT SOLENOID ”D” CONTROL CIRCUIT HIGH (SHIFT SOLENOID VALVE S4)

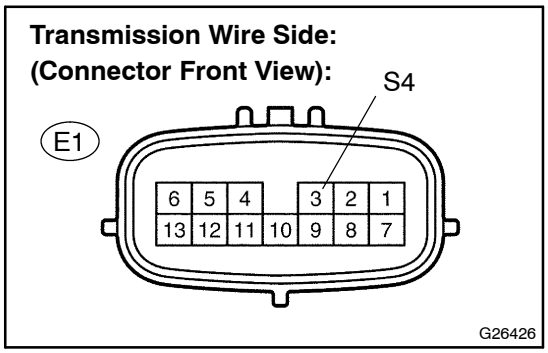
CIRCUIT DESCRIPTION



Shifting from 1st to 5th is performed in combination with ”ON” and ”OFF” operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which is controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0982	ECM detects short in solenoid valve S4 circuit 2 times when solenoid valve S4 is operated (1–trip detection logic)	• Short in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM
P0983	ECM detects open in solenoid valve S4 circuit 2 times when solenoid valve S4 is not operated (1–trip detection logic)	• Open in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM

MONITOR DESCRIPTION



The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail–safe function and turns the other shift solenoid valves in good condition ”ON/OFF” (In case of an open or short circuit, the ECM stops sending current to the circuit.) (see page 05–560).

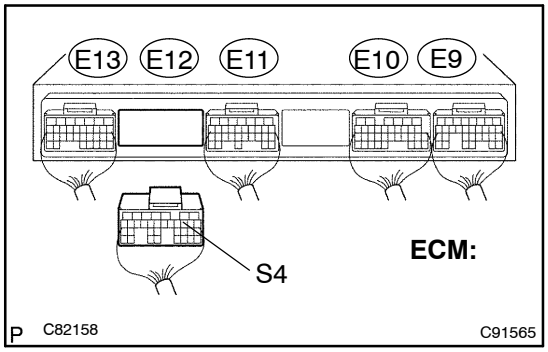
WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE(S4)

(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.



Standard:

Tester Connection	Specified Condition 20°C (68°F)
3 – Body ground	11 to 15 Ω

NG → **Go to step 3**

OK

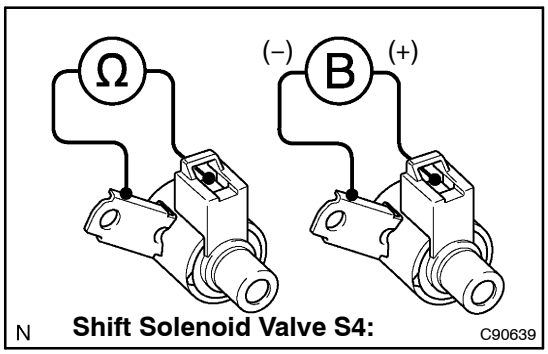
2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission connector to the transaxle.

(b) Disconnect the connector from the ECM.

(c) Measure the resistance according to the value(s) in the table below.

Standard:



Tester Connection	Specified Condition 20°C (68°F)
E12 – 10 (S4) – Body ground	11 to 15 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

3	INSPECT SHIFT SOLENOID VALVE(S4)

(a) Remove the shift solenoid valve S4.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (S4) – Solenoid Body (S4)	11 to 15 Ω

(c) Connect positive (+) lead to the terminal of solenoid connector, negative (–) lead to the solenoid body.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(S4)**

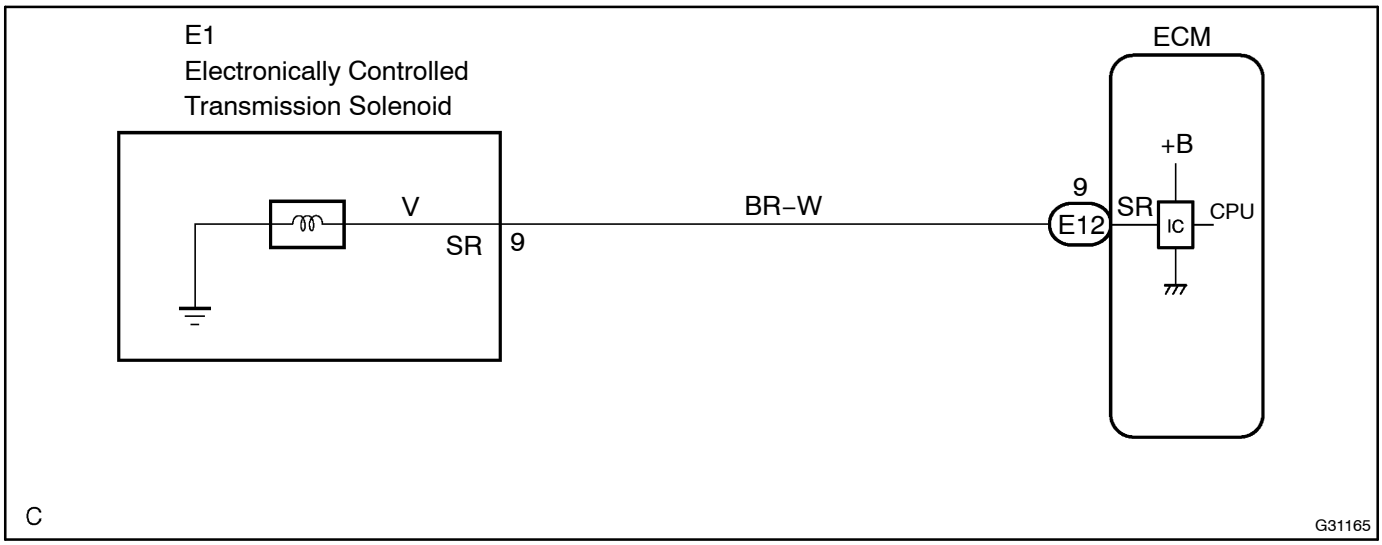
OK

REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

DTC	P0985	SHIFT SOLENOID ”E” CONTROL CIRCUIT LOW (SHIFT SOLENOID VALVE SR)

DTC	P0986	SHIFT SOLENOID ”E” CONTROL CIRCUIT HIGH (SHIFT SOLENOID VALVE SR)

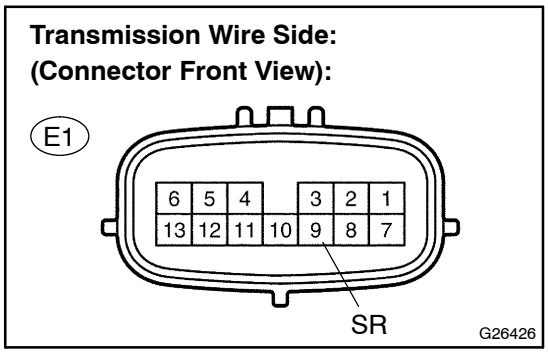
CIRCUIT DESCRIPTION



Shifting from 1st to 5th is performed in combination with ”ON” and ”OFF” operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which is controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valve to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0985	ECM detects short in solenoid valve SR circuit 2 times when solenoid valve SR is operated (1–trip detection logic)	• Short in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM
P0986	ECM detects open in solenoid valve SR circuit 2 times when solenoid valve SR is not operated (1–trip detection logic)	• Open in shift solenoid valve SR circuit • Shift solenoid valve SR • ECM

MONITOR DESCRIPTION



The ECM commands gear shifts by turning the shift solenoid valves ”ON/OFF”. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail–safe function and turns the other shift solenoid valves in good condition ”ON/OFF” (In case of an open or short circuit, the ECM stops sending current to the circuit.) (see page 05–560).

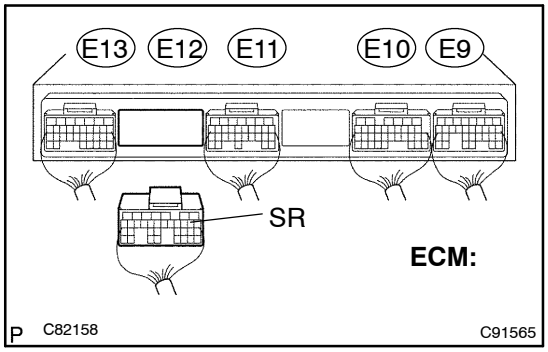
WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE(SR)

(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.



Standard:

Tester Connection	Specified Condition 20°C (68°F)
9 – Body ground	11 to 15 Ω

NG → **Go to step 3**

OK

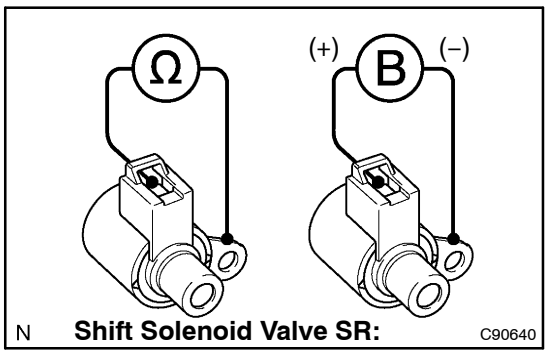
2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission connector to the transaxle.

(b) Disconnect the connector from the ECM.

(c) Measure the resistance according to the value(s) in the table below.

Standard:



Tester Connection	Specified Condition 20°C (68°F)
E12 – 9 (SR) – Body ground	11 to 15 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

3	INSPECT SHIFT SOLENOID VALVE(SR)

(a) Remove the shift solenoid valve SR.

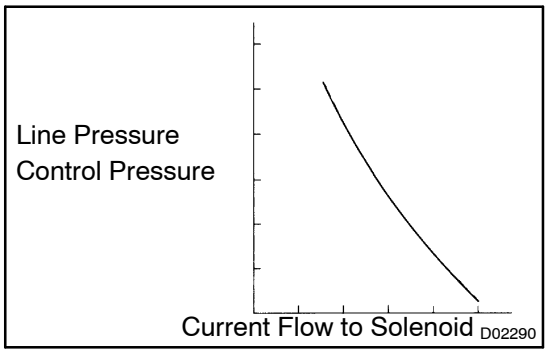
(b) Measure the resistance according to the value(s) in the table below.

Standard:

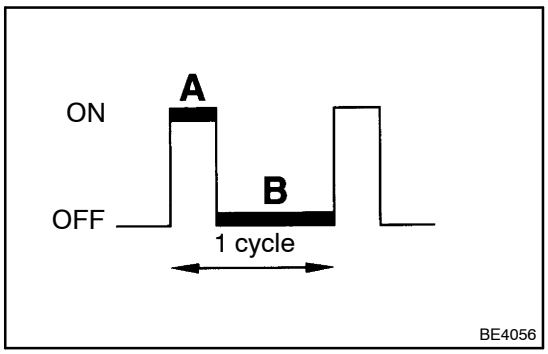
Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (SR) – Solenoid Body (SR)	11 to 15 Ω

(c) Connect positive (+) lead to the terminal of solenoid connector, negative (–) lead to the solenoid body.

OK:



The solenoid makes an operating noise.



NG → **REPLACE SHIFT SOLENOID VALVE(SR)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

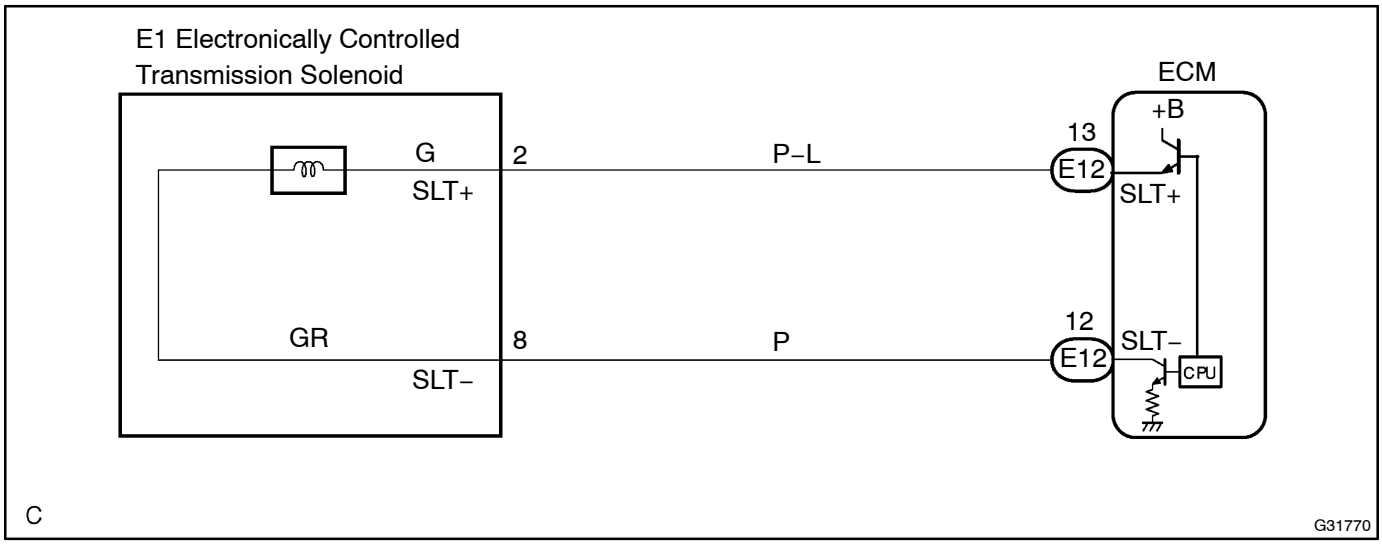
DTC	P2716	PRESSURE CONTROL SOLENOID ”D” ELECTRICAL (SHIFT SOLENOID SLT)

CIRCUIT DESCRIPTION

The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty cycle of the SLT solenoid valve to control hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.

(*): Duty Ratio

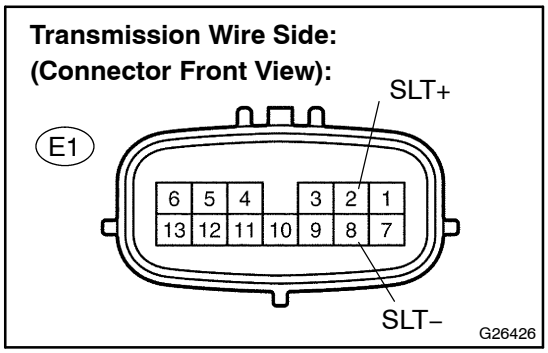
The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non–continuity, then



Duty Ratio=A/(A+B) x 100 (%)

DTC No.	DTC Detection Condition	Trouble Area
P2716	Condition (a) or (b) below is detected 1 sec. or more: (1–trip detection logic) (a) SLT– terminal: 0V (b) SLT– terminal: 12V	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • ECM

MONITOR DESCRIPTION



When an open or short in the linear solenoid valve (SLT) circuit is detected, the ECM interprets this as a fault. The ECM will turn ON the MIL and store the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE(SLT)

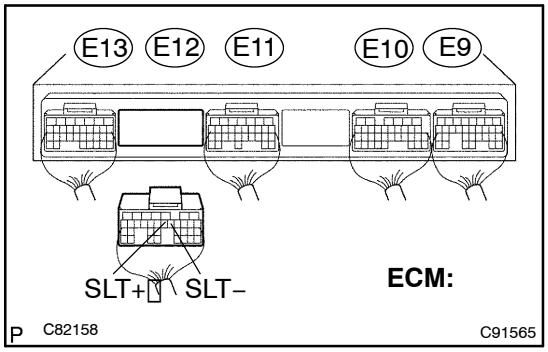
(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
2 (SLT+) – 8 (SLT–)	5.0 to 5.6 kΩ

(c) Measure the resistance according to the value(s) in the table below.



Standard (Check for short):

Tester Connection	Specified Condition
2 (SLT+) – Body ground	10 kΩ or higher
8 (SLT–) – Body ground	↑

NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR(TRANSMISSION WIRE – ECM)

(a) Connect the transmission wire connector to the transaxle.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

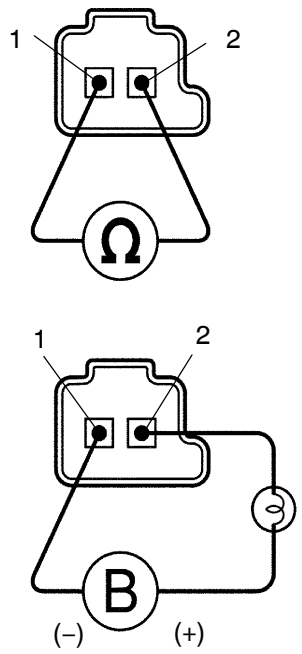
Standard:

Tester Connection	Specified Condition 20°C (68°F)
E12 – 13 (SLT+) – E12 – 12 (SLT–)	5.0 to 5.6 kΩ

(d) Measure the resistance according to the value(s) in the table below.

Standard (Check for short):

Tester Connection	Specified Condition
E12 – 13 (SLT+) – Body ground	10 kΩ or higher
E12 – 12 (SLT–) – Body ground	↑



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

REPLACE ECM (SEE PAGE 10–29)

3 INSPECT SHIFT SOLENOID VALVE(SLT)

Shift Solenoid Valve SLT:

(a) Remove the shift solenoid valve (SLT).

(b) Measure the resistance according to the value(s) in the table below.

Standard:

Tester Connection	Specified Condition 20°C (68°F)
1 – 2	5.0 to 5.6 Ω

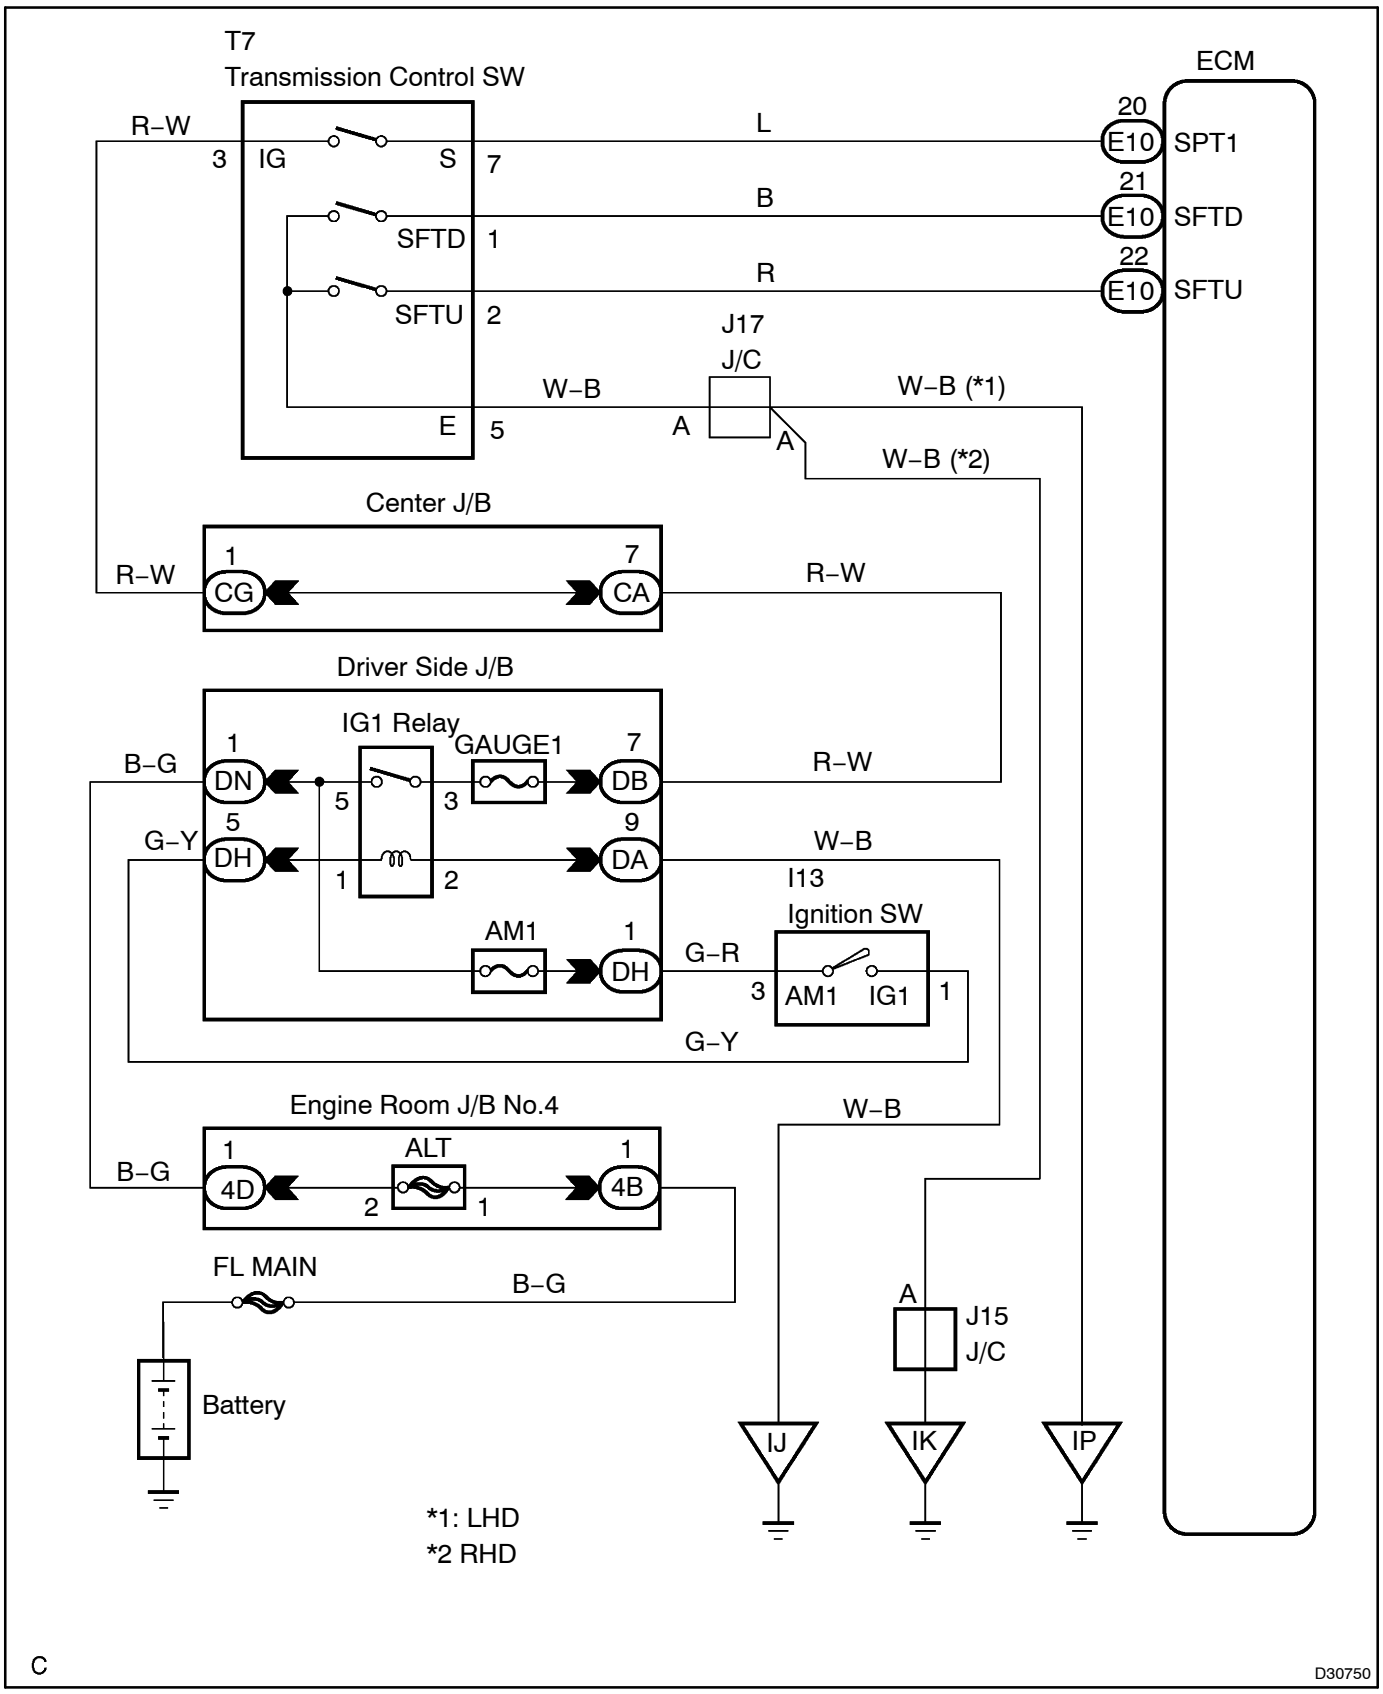
(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (–) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE(SLT)**

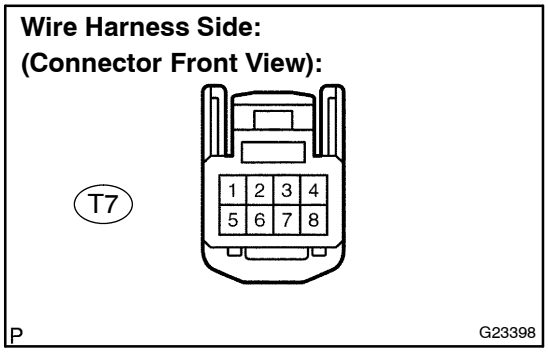
OK



REPAIR OR REPLACE TRANSMISSION WIRE (SEE PAGE 40–16)

TRANSMISSION CONTROL SWITCH CIRCUIT

CIRCUIT DESCRIPTION



When moving the shift lever into the S position using the transmission control switch, it is possible to switch the shift range position between ”1” (first range) and ”5” (fifth range).
Shifting up ”+” once raises one shift range position, and shifting down ”–” lowers one shift range position.

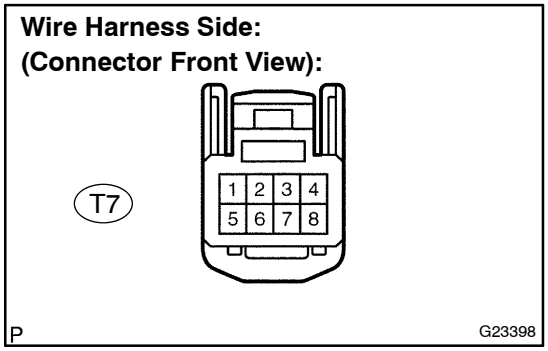
WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR(BATTERY – TRANSMISSION CONTROL SWITCH)

(a) Disconnect the transmission control switch connector of shift lock control unit assy.

(b) Measure the voltage according to the value(s) in the table below.



Standard:

Switch Condition	Tester Connection	Specified Condition
IG switch ON	3 – Body ground	10 to 14 V
IG switch OFF	↑	Below 1 V

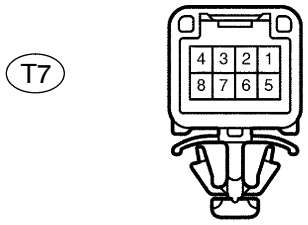
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

2 CHECK HARNESS AND CONNECTOR(TRANSMISSION CONTROL SWITCH – BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard:



Tester Connection	Specified Condition
5 – Body ground	Below 1 Ω

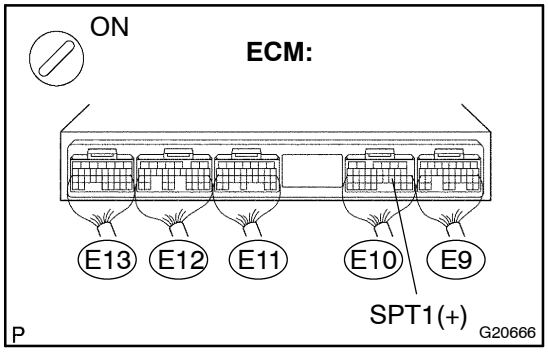
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

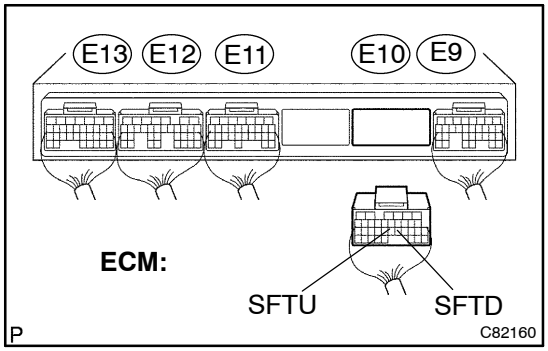
3 INSPECT SHIFT LOCK CONTROL UNIT ASSY(TRANSMISSION CONTROL SWITCH)

Switch Side:
(Connector Front View):

(a) Measure resistance between each terminal of shift lock control unit assy when the shift lever is moved to each position.



Standard:



Shift Position	Tester Connection	Specified Condition
S, "+" and "–"	3 – 7	Below 1 Ω
Except S, "+" and "–"	↑	10 kΩ or higher
Press continuously "+" (Up shift)	2 – 5	Below 1 Ω
S	↑	10 kΩ or higher
Press continuously "–" (Down shift)	1 – 5	Below 1 Ω
S	↑	10 kΩ or higher

NG → **REPLACE SHIFT LOCK CONTROL UNIT ASSY**

OK

4 CHECK HARNESS AND CONNECTOR(TRANSMISSION CONTROL SWITCH – ECM)

(a) Connect the transmission control switch connector of shift lock control unit assy.

(b) Turn the ignition switch to the ON position, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard:

Shift Position	Tester Connection	Specified Condition
S, "+" and "–"	E10 – 20 (SPT1) – Body ground	10 to 14 V
Except S, "+" and "–"	↑	Below 1 V

(c) Turn the ignition switch to the LOCK position.

(d) Disconnect the ECM connector.

(e) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

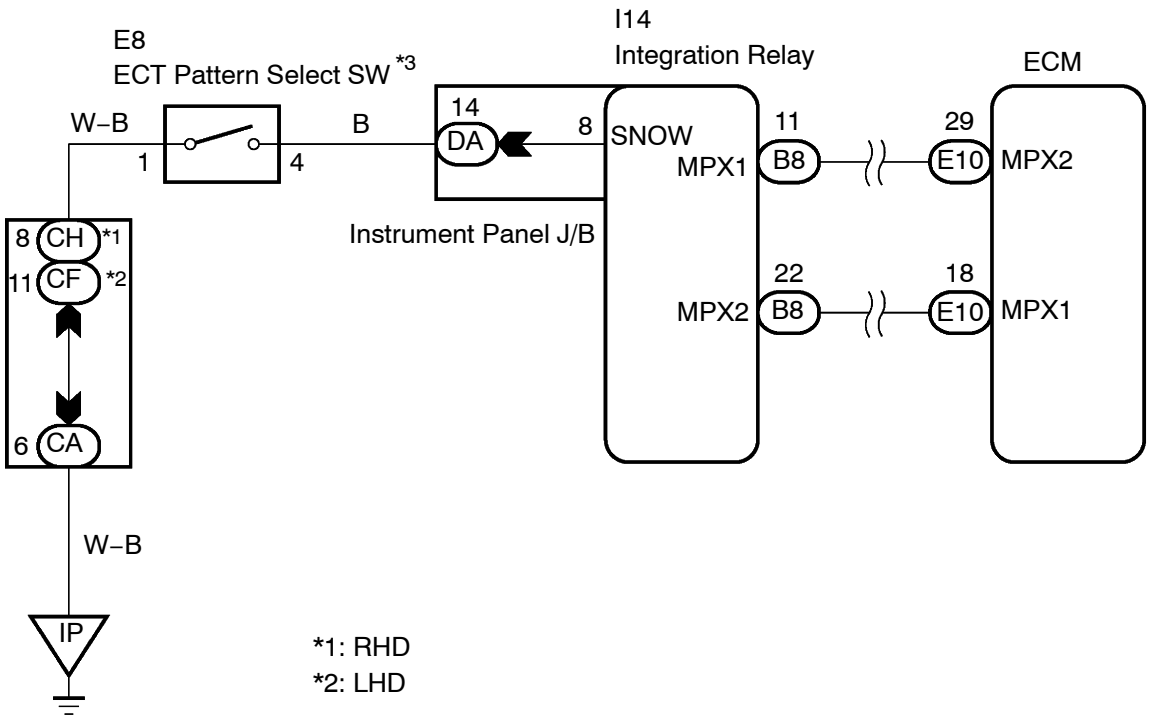
Standard:

Shift Position	Tester Connection	Specified Condition
Press continuously "+" (Up shift)	E10 – 22 (SFTU) – Body ground	Below 1 Ω
S	↑	10 kΩ or higher
Press continuously "–" (Down shift)	E10 – 21 (SFTD) – Body ground	Below 1 Ω
S	↑	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (SEE PAGE 05–545)



PATTERN SELECT SWITCH CIRCUIT

CIRCUIT DESCRIPTION

Integration relay receives pattern select switch information, and sends it through the multiplex communication system to the ECM.

ECT SNOW is the system that operates the throttle motor to control engine output to reduce skidding of the driving wheels, guarantee takeoff acceleration, driving straightness and turning stability.

WIRING DIAGRAM

(*3) Pattern Select Switch (ECT SNOW Switch)

When the ECT SNOW switch is pushed, the switch contact is made and the ECT SNOW mode is selected.

To cancel the ECT SNOW mode, push the ECT SNOW switch once again. The ECT SNOW mode is automatically cancelledout when the ignition switch is turned ”OFF”.

C

D30688

INSPECTION PROCEDURE

1	DRIVING TEST

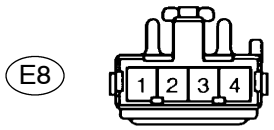
(a) Start the engine.
(b) Turn the ECT SNOW switch ”OFF” (Normal drive mode).
(c) Confirm vehicle response by driving from a parked position to fully depressing the accelerator pedal.
(d) Turn the ECT SNOW switch ”ON” and perform the same check as (c).
Confirm that there is a difference between ECT SNOW switch ”ON” and ”OFF”.

HINT:

- Driving test should be done on a paved road (a nonskid road).
- Make sure not to use the TRAC system when testing a vehicle equipped with one.

OK:

There is a difference in acceleration between ”ON” and ”OFF”.



NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (SEE PAGE 05–545)

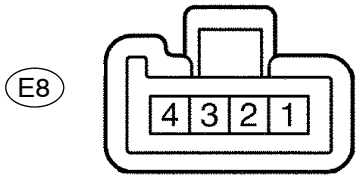
2	CHECK HARNESS AND CONNECTOR(PATTERN SELECT SWITCH ASSY – BODY GROUND)

Wire Harness Side:
(Connector Front View):

B59192

(a) Disconnect the connector of pattern select switch.
(b) Measure the resistance according to the value(s) in the table below.

Standard:



Tester Connection	Specified Condition
1 – Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

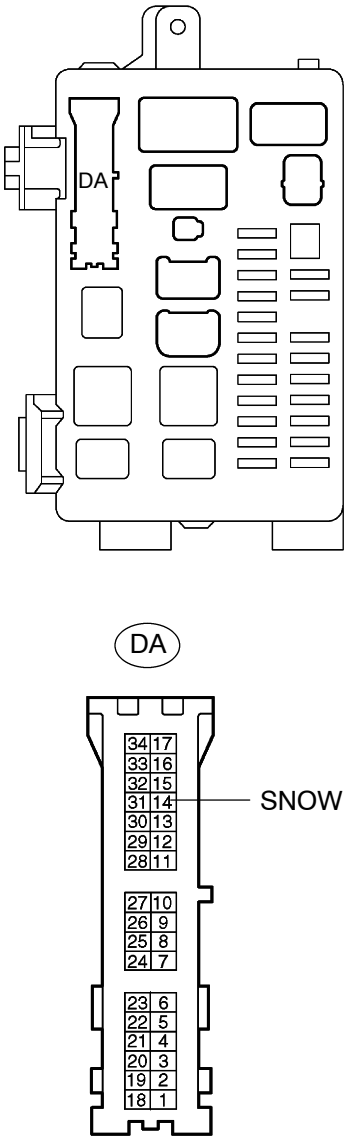
3 INSPECT PATTERN SELECT SWITCH ASSY

Switch Side:
(Connector Front View):

(a) Measure the resistance according to the value(s) in the table below.

Standard:

Switch Condition	Tester Connection	Specified Condition
Press continuously Pattern select switch (SNOW)	1 – 4	Below 1 Ω
Release Pattern select switch (SNOW)	↑	10 kΩ or higher



NG → **REPLACE PATTERN SELECT SWITCH ASSY**

OK

4 CHECK HARNESS AND CONNECTOR(PATTERN SELECT SWITCH ASSY – INTEGRATION RELAY)

Instrument Panel J/B Assy

Vehicle Front Side:

(a) Connect the connector of pattern select switch.

(b) Disconnect the instrument panel J/B assy (integration relay) connector.

(c) Measure the resistance between terminal SNOW of instrument panel J/B assy (integration relay) connector and body ground.

Standard:

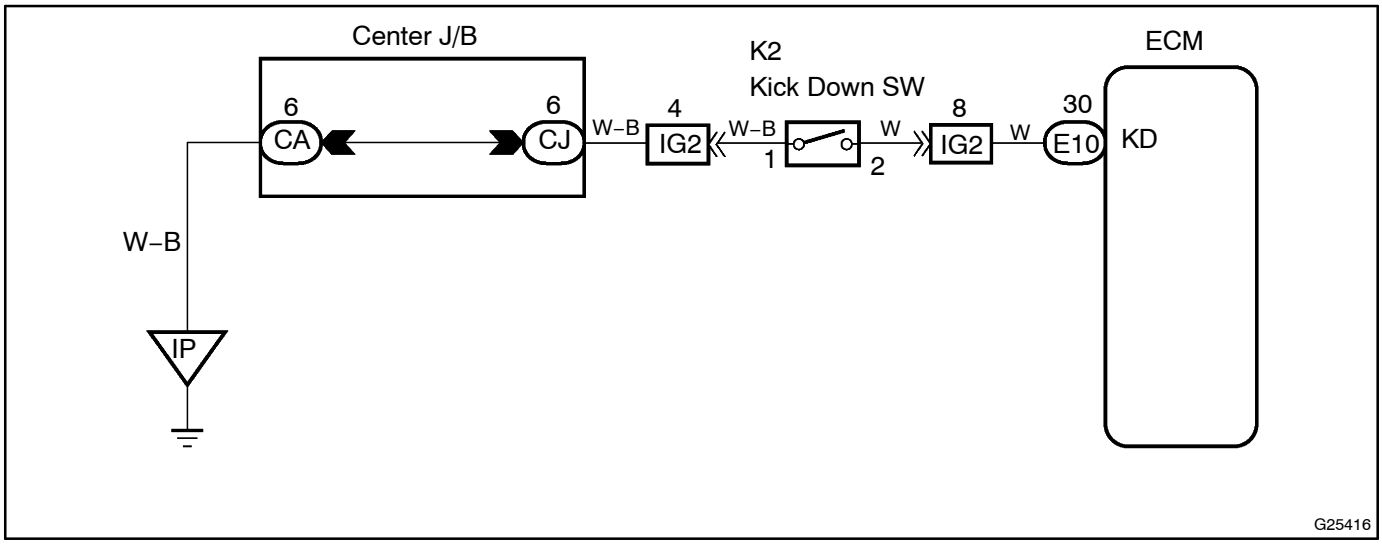
Switch Condition	Tester Connection	Specified Condition
Press continuously Pattern select switch (SNOW)	DA – 14 (SNOW) – Body ground	Below 1 Ω
Release Pattern select switch (SNOW)	↑	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (SEE PAGE 05–545)

KICK DOWN SWITCH CIRCUIT

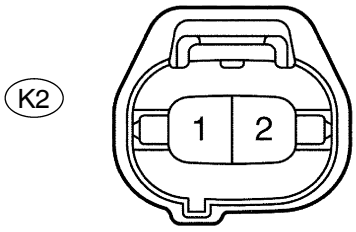


CIRCUIT DESCRIPTION

The kick–down switch is turned ON when the accelerator pedal is fully depressed and a signal is sent to the ECM.

When the kick–down switch is turned ON, the ECM controls gear shifting according to the programmed shift diagrams.

If a short circuit develops in the kick–down switch, the ECM disregards the kick–down signals and controls shifting at the normal shift points.



WIRING DIAGRAM

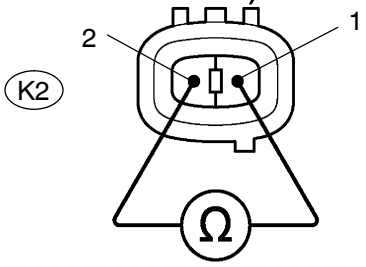
INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR(KICK DOWN SWITCH – BODY GROUND)

Wire Harness Side:
(Connector Front View):

(a) Disconnect the kick–down switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard:



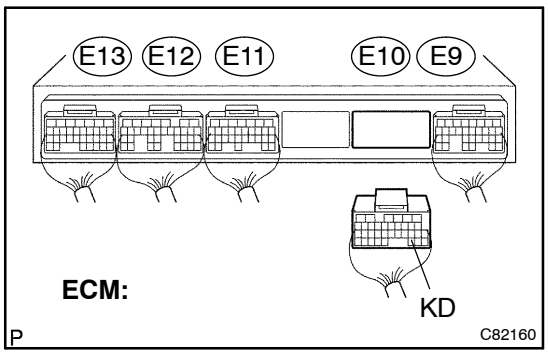
Tester Connection	Specified Condition
1 – Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**

OK

2 INSPECT KICK DOWN SWITCH

Switch Side:
(Connector Front View):



(a) Measure resistance according to the value(s) in the table below when kick–down switch is ON and OFF.
Standard:

Switch Condition	Tester Connection	Specified Condition
Press continuously (Kick–down switch is ON)	1 – 2	Below 1 Ω
Release (Kick–down switch is OFF)	↑	10 kΩ or higher

NG → **REPLACE KICK DOWN SWITCH**

OK

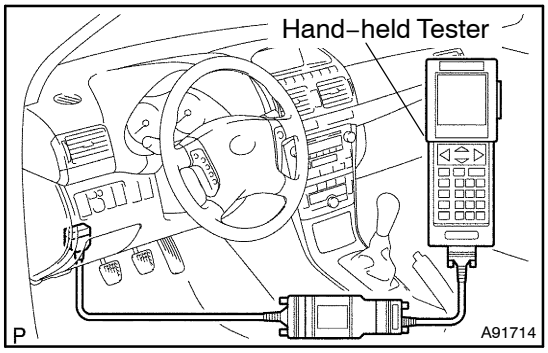
3 CHECK HARNESS AND CONNECTOR(KICK DOWN SWITCH – ECM)

(a) Connect the kick–down switch connector.
(b) Disconnect the ECM connector.
(c) Measure resistance according to the value(s) in the table below when accelerator pedal is fully depressed or not.

Standard:

Switch Condition	Tester Connection	Specified Condition
Fully depressed (Kick–down switch is ON)	E10 –30 (KD) – Body ground	Below 1 Ω
Release (Kick–down switch is OFF)	↑	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SEE PAGE 01–32)**



OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (SEE PAGE 05–545)

SFI SYSTEM (2AZ–FSE)

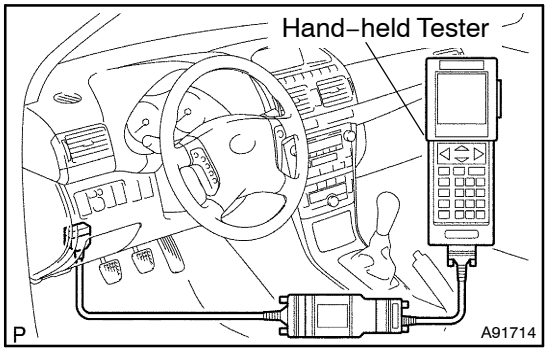
ON–VEHICLE INSPECTION

100LU–01

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Start the engine and warm it up.
(d) Select the VVT from the ACTIVE TEST menu.
(e) Inspect the engine speed when the OCV is operated with the hand–held tester.

Standard:



Condition	Specified Condition
VVT system is OFF (OCV is OFF)	Normal engine speed
VVT system is ON (OCV is ON)	Rough idle or engine stalled

If the result is not as specified, replace the camshaft timing oil control valve.

2. INSPECT THROTTLE BODY ASSY

(a) Listen to the throttle control motor operating sounds.
  (1) Turn the ignition switch ON.
  (2) When pressing the accelerator pedal position sensor lever, listen to the running sound of the motor. Make sure no friction noise comes from the motor.

If friction noise exists, replace the throttle body.

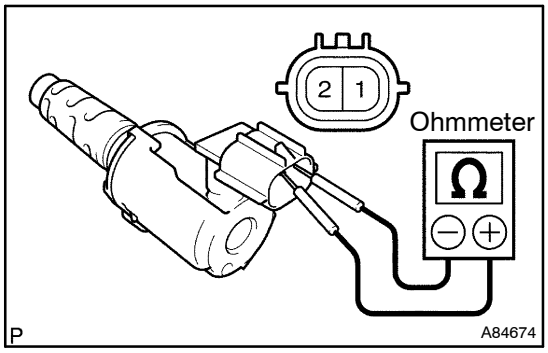
(b) Inspect the throttle position sensor.
  (1) Connect the hand–held tester to the DLC3.
  (2) Turn the ignition switch ON.
  (3) Check that the engine warning light does not light up.
  (4) Under CURRENT DATA, the throttle valve opening percentage (THROTTLE POS) should be within the standard value range below.

Standard throttle valve opening percentage:
60 % or more

NOTICE:
When checking the standard throttle valve opening percentage, the transmission should be in the neutral position.

If the percentage is less than 60 %, replace the throttle body.

3. INSPECT ACCELERATOR PEDAL ROD ASSY



(a) Turn the ignition switch ON. Under CURRENT DATA, the voltage of the throttle position sensor should be within the standard value range below.

Standard: 0.6 to 1.0 V

If the voltage is not as specified, replace the accelerator pedal rod.

100LV–01

INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY

(a) Inspect the resistance.

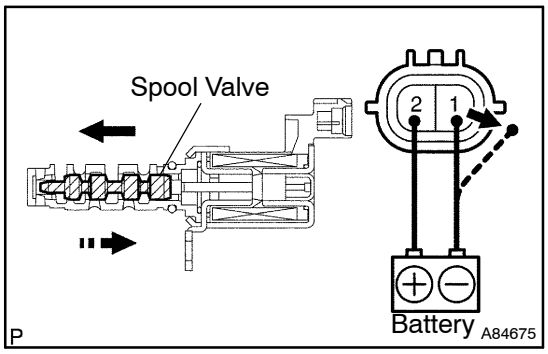
(1) Using an ohmmeter, measure the resistance between the terminals.

Standard:

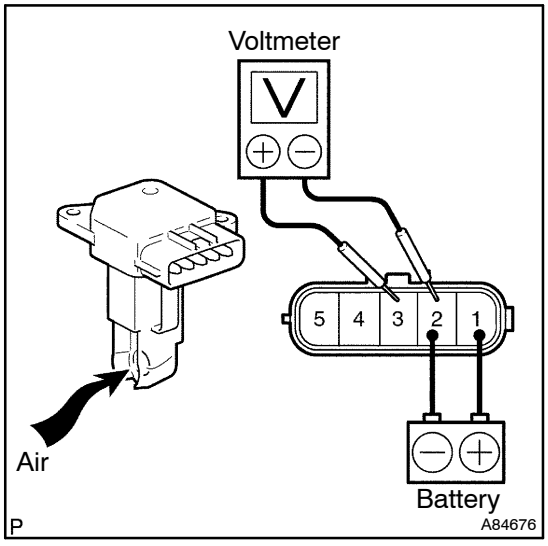
Tester Connection	Specified Condition
1 (–) – 2 (+)	6.9 to 7.9 Ω at 20°C (68°F)

If the resistance is not as specified, replace the camshaft timing oil control valve.

(b) Check the operation.



(1) Connect the positive (+) lead from the battery to terminal 2 and negative (–) lead to terminal 1, then check the movement of the spool valve.



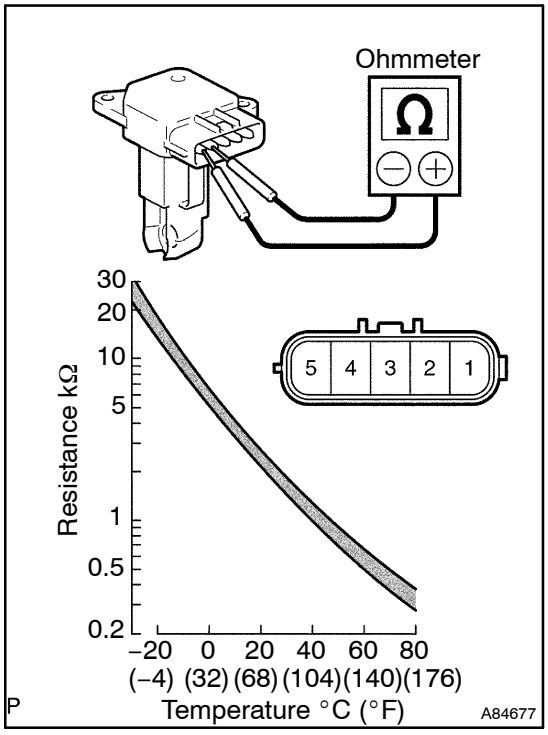
NOTICE:

Confirm that the spool valve moves freely and does not stick in any position.

HINT:

Bad returning of the spool valve resulted from catching foreign objects cause subtle leak to the advanced direction. In that case, DTC can be detected.

2. INSPECT MASS AIR FLOW METER



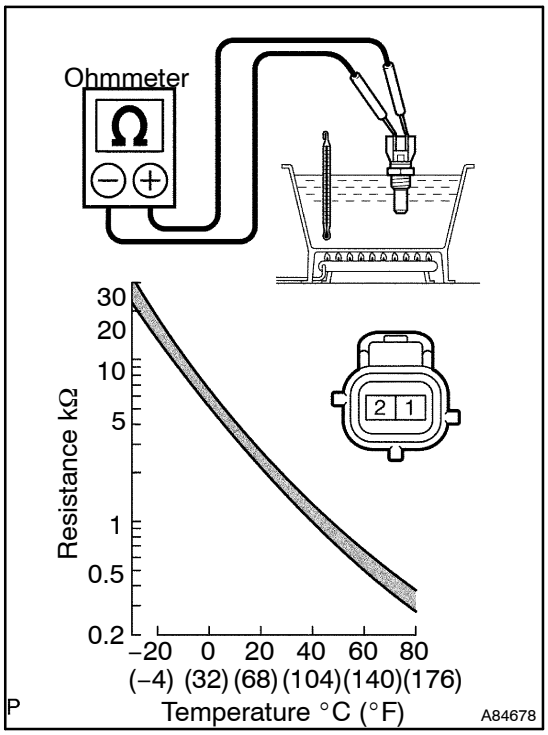
(a) Check the operation.

(1) Apply battery voltage across terminals 1 (+B) and 2 (E2G).

(2) Using a voltmeter, connect the positive (+) tester probe to terminal 3(VG), and negative (–) tester probe to terminal 2 (E2G).

(3) Blow air into the mass air flow meter, then check that the voltage fluctuates.

If the operation is not as specified, replace the mass air flow meter.



(b) Inspect the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard:

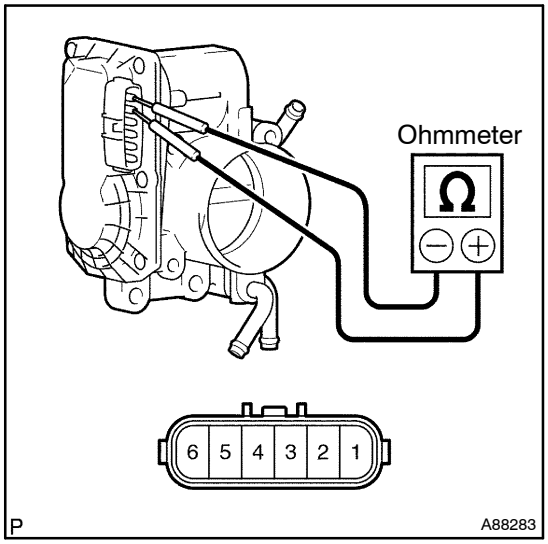
Tester connection	Specified Condition
4 (THA) – 5 (E2)	13.6 to 18.4 kΩ at –20°C (–4°F)
4 (THA) – 5 (E2)	2.21 to 2.69 kΩ at 20°C (68°F)
4 (THA) – 5 (E2)	0.493 to 0.667 kΩ at 60°C (140°F)

If the resistance is not as specified, replace the mass air flow meter.

3. INSPECT ENGINE COOLANT TEMPERATURE SENSOR

(a) Inspect the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.



Standard:

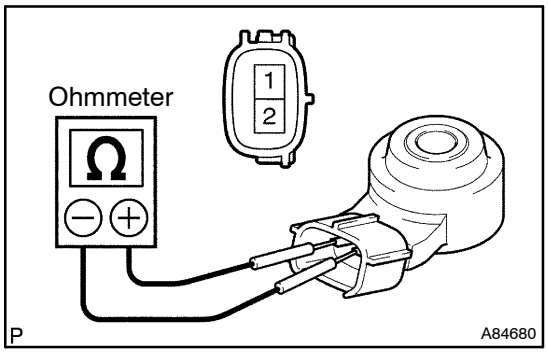
Tester connection	Specified Condition
1 (E2) – 2 (THW)	2.32 to 2.59 kΩ at 20°C (68°F)
1 (E2) – 2 (THW)	0.310 to 0.326 kΩ at 80°C (176°F)

NOTICE:

In case of checking the engine coolant temperature sensor in water, be careful not to allow water to go into the terminals, and after checking, dry the engine coolant temperature sensor.

If the resistance is not as specified, replace the engine coolant temperature sensor.

4. INSPECT THROTTLE BODY ASSY



(a) Inspect the resistance.

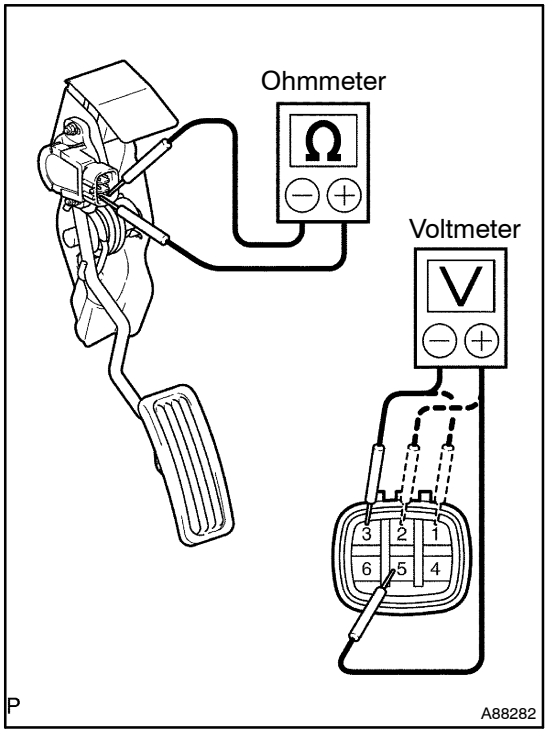
(1) Using an ohmmeter, measure the resistance between the terminals.

Standard:

Tester Connection	Specified Condition
1 (M–) – 2 (M+)	0.3 to 100 Ω at 20°C (68°F)
3 (E2) – 5 (VC)	1.2 to 3.2 kΩ at 20°C (68°F)

If the resistance is not as specified, replace the throttle body.

5. INSPECT KNOCK SENSOR



(a) Inspect the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard:

Tester Connection	Specified Condition
1 (Ground) – 2 (Output)	120 to 280 kΩ at 20°C (68°F)

If the resistance is not specified, replace the knock sensor.

6. INSPECT ACCELERATOR PEDAL ROD ASSY

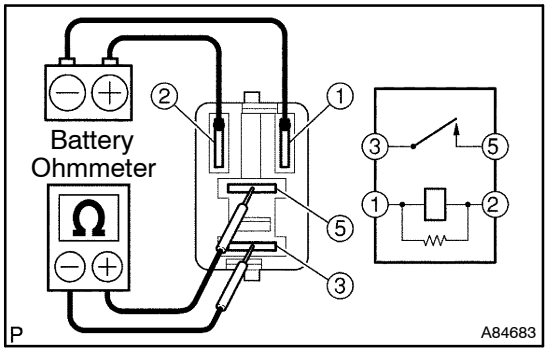
(a) Inspect the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

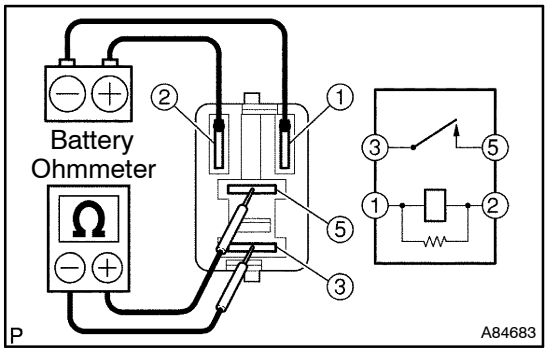
Standard:

Tester Connection	Specified Condition
3 (EP1) – 6 (VCP1)	2.25 to 4.75 kΩ
1 (EP2) – 4 (VCP2)	2.25 to 4.75 kΩ

If the resistance is not as specified, replace the accelerator pedal rod.



(b) Inspect the voltmeter.



(1) Using a voltmeter, measure the voltage between the terminals.

Standard:

Tester Connection	Specified Condition
3 (EP1) – 5 (VPA1)	0.4 to 4.6 V
1 (EP2) – 2 (VPA2)	0.9 to 4.7 V
